

This turbulence was underscored when a staggering \$64 million took flight from Huobi in just one weekend, driving its total value locked (TVL) down by nearly 20%. Starting July with a robust \$3.13 billion, the TVL now dances around the \$2.5 billion mark, as per DeFiLlama stats. Justin Sun, the force behind Tron and a Global Advisor at Huobi, attempted to dispel the clouds of uncertainty. Terming the rumors as “FUD”, he voiced his confidence in the future arcs of both Tron and Huobi. But a glance at Huobi’s financial charts paints a different story. A descending triangle shows that the price of Huobi has been on a sharp downward path for two years now. Though there’s a shimmer of hope for a price rebound, scaling the daunting \$3.00 resistance wall is a question mark. Some Huobi holders see the writing on the wall, especially with the move toward decentralization. As such, they are selling off their HT tokens in an attempt to secure POMD tokens before the first presale sells out completely. Cathie Wood’s Bitcoin (BTC) ETF Prophecy Amid Pomerdodge (POMD) Presale Surge Cathie Wood of ARK Investment Management is buzzing with anticipation, suggesting that the SEC might approve not just one, but multiple spot Bitcoin ETFs in one sweeping move. However, the SEC’s track record paints a different story. They’ve been cautious, only allowing futures-based Bitcoin ETFs, with Volatility Shares Trust being a notable beneficiary. ARK Invest’s own spot Bitcoin ETF proposal is on the SEC’s table, and the decision clock ticks away with a deadline of Aug. 13. The choices? Approval, rejection, or maybe just pushing the decision into overtime. Bitcoin rose from \$24,800 to \$31,800 due to the bullish news surrounding the possibility of a Bitcoin ETF. However, after a month of sideways price action, Bitcoin has dropped below the \$30,000 support zone to a price of \$29,300. The market is understandably hesitant and cautious, especially as Gensler, the new SEC Chair, is not shy about his hatred for Bitcoin. While Bitcoin waits for news, the Pomerdodge presale continues to move forward with no care for the ETF’s fate. Find out more about the Pomerdodge (POMD) Presale Today Website: <https://pomerdodge.com/> Telegram Community: <https://t.me/pomerdodge>

- XRP hit a 4-month low of \$0.4226 with a decline of over 17.30%. - Litecoin experienced a decline of more than 15% in the last 24 hours. The trillion-dollar crypto market witnesses yet another notable 24-hour drop of over 6%. Prices of the largest crypto members declining to further lows as Bitcoin (BTC) dropped below \$26,500 and Ethereum (ETH) below \$1,700 drew major attention. Amid this downtrend, Ripple’s XRP and Litecoin (LTC) recorded maximum double-digit losses in the last 24 hours. Since July, these two cryptocurrencies sustained their trending spot on the headlines with their prominent events Litecoin halving and XRP’s legal victory against the SEC. With a sudden decline, XRP and LTC have led the crypto losers in the last 24 hours. On August 17, the cryptocurrency XRP hit a 4-month low of \$0.4226 and became the second top loser of the day with a decline of over 17.30%. On the other hand, Litecoin reached a 9-month low of \$61.76, with a decline of more than 15% in the last 24 hours. Moreover, the downtrend is expected to continue in the upcoming days as the cryptocurrencies clearly show bearish momentum. XRP Marks Its New 4-Month-Low At the time of writing, the trading price of XRP is \$0.4918, with a decline of over 17% in the last 24 hours. However, the trading volume of XRP has experienced a massive surge of 71.18%. Litecoin (LTC) Touches Down 8-Month-Low At press time, Litecoin is trading at \$64.14, with a decline of over 15% in the last 24 hours. The daily trading volume of LTC has experienced an increase of 25.97%, according to CoinMarketCap. Adding to that, the top cryptocurrencies in the crypto market have experienced the same pattern in the last 24 hours. The sudden downtrend in the crypto market comes after the Chinese property giant Evergrande Group filed for bankruptcy protection in the U.S. as it seeks to restructure its \$300 billion debt. The world’s largest cryptocurrency, Bitcoin (BTC), has fallen below the \$27K mark with a decline of around 7%. Polygon (MATIC) hit a new low this year reaching \$0.5464. Moreover, popular cryptocurrencies, including Ethereum (ETH), Shiba Inu (SHIB), Dogecoin (DOGE), Solana (SOL), and Cardano (ADA), are experiencing bearish momentum. Will the crypto market break the bearish momentum? Share your thoughts by tweeting us at @The\_NewsCrypto

- This is a huge win for Coinbase and the cryptocurrency ecosystem as a whole. - Coinbase Financial Markets is now a licensed Futures Commission Merchant (FCM). The National Futures Association of the US CFTC has granted Coinbase Financial Markets, a futures commission merchant registered with the CFTC, approval to provide crypto futures trading to qualified consumers in the US. Despite a lawsuit by the US SEC, this is a huge win for Coinbase and the cryptocurrency ecosystem as a whole. Coinbase Financial Markets is now a licensed Futures Commission Merchant (FCM) according to the National Futures Association. According to an official post published on August 16, this would enable Coinbase to provide cryptocurrency futures trading directly to its clients in the United States. Pushing Crypto Adoption In September of 2021, Coinbase applied to the NFA to get registered as an FCM. With the help of the CFTC, the cryptocurrency exchange has implemented all of the necessary measures to ensure the safety of its users. The firm intends to promote economic liberty by working with authorities to get product approvals. It also helps in making the safest and most reliable goods and services possible. Coinbase Financial Markets now provides access to regulated derivatives products for clients in the United States. Now, Coinbase is the first cryptocurrency exchange to provide both spot trading and regulated leveraged crypto futures. It will make the crypto market more accessible in the United States without putting users at risk. As of last week, Coinbase customers in Canada may make use of the Interac e-Transfers thanks to the company’s cooperation with Peoples Trust Company. Since it is Coinbase’s second-most crypto-aware foreign market, the exchange has big hopes to grow there as well. Highlighted Crypto News Today:

The Cosmos (ATOM) and Polkadot (DOT) cryptocurrencies have been on a bearish run during the past 30 days, and as a result, a lot of investors have begun to diversify their holdings. However, another cryptocurrency has managed to capture a significant level of attention, Everlodge. Through this upcoming real estate investment platform, anyone will be able to get into luxury properties with as little as \$100. Join us as we dive deeper into each project to see how far they can climb. - Cosmos to reach between \$10.17 to \$11.26 in value by the end of the year - Polkadot expected to climb to \$6.64

at its maximum point - Everlodge can surge by 10x from its current value Find Out How To Buy Everlodge (ELDG) Cosmos (ATOM) Dips In Value Cosmos (ATOM) as a cryptocurrency has gone in a downward direction and is showing bearish signs. Investors are now eyeing its current \$8.58 price and wondering if it can actually surge in value. According to the Cosmos price analytical data, in the past week, it had a low point at \$8.58. Its high point was \$9.09. In addition, in the past 30 days, it dipped by 10.5%, and in the past week, itâ€™s been down by 4.2%. Moreover, according to the on-chart data, it has a market cap of \$2,508,978,448, a trading volume of \$96,351,673, and is ranked 30th. Subsequently, based on the Cosmos price prediction, the cryptocurrency has the potential to reach between \$10.17 to \$11.26.

Polkadot (DOT) Price Down on Monthly Chart The Polkadot (DOT) cryptocurrency, on the other hand, has also showcased entry into the red zone. As for its current value, the Polkadot crypto traded at \$4.99 on August 4, 2023. During the past week, the cryptocurrency had its low point of value at \$4.98, with its high point at \$5.26. Moreover, the total decrease in the past month was by 4.1%, and in the past year, by 38.1%. As for its on-chart analytics, it has a market cap of \$6,292,072,738, a trading volume of \$108,032,424, and is ranked 12th. Analysts have taken all of this into consideration, and according to the Polkadot price prediction, it can reach between \$5.99 to \$6.64 by the end of the year. First, however, it needs to break past the \$6 price barrier.

Everlodge (ELDG) To Surge Up To 10x Everlodge, has gained a high level of appeal in investor circles, and analysts are calling it the next altcoin that can surge by 10x. Itâ€™s an upcoming project that can make investments in real estate accessible to anyone from anywhere globally. Through the usage of the platform, anyone can make financial investments in hotels, vacation homes, and luxury villas on top of the blockchain. An NFT gets minted on top of the network, and then itâ€™s split into smaller fragments. Here, anyone can buy even the most expensive villas. Instead of paying \$3 million upfront, for example, they can just make an investment of \$100, as it would get split into thousands of fragments. Moreover, unlike traditional platforms, because itâ€™s based on the blockchain, itâ€™s accessible globally. Subsequently, this significantly lowers the barrier of entry surrounding the process of diversifying with real estate. Everlodge will also feature a dedicated marketplace. Here, anyone will be able to invest in fractional real estate on the blockchain. They will be able to co-own anything and even get passive income.

During the early stage of the presale, the ELDG token trades at just \$0.01. Analysts have predicted that it can surge in value soon and, as a result, represents a solid opportunity for massive ROI. Find out more about the Everlodge (ELDG) Presale Website: <https://www.everlodge.io/> Telegram: <https://t.me/everlodge>

- Binance CEO CZ raised his support for the self-custody wallets. - Binance increased the maximum order limit for OTC trading across 16 cryptocurrencies. Changpeng Zhao, the CEO of the worldâ€™s largest crypto exchange, Binance, stated that he is supportive of self-custody wallets. Moreover, self-custody wallets are not without risks. Through this tweet reply, CZ raised his support for the self-custody wallets. Self custody wallets are not without risks. â€œ CZ ðŸ™‚ Binance (@cz\_binance) August 11, 2023 I am supportive of self custody, IF you know what you are doing. Stay #SAFU! <https://t.co/KnCxfNAXkd> On August 11, Changpeng Zhao replied to the tweet, mentioning that he is supportive of Self custody. A crypto writer tweeted that generating wallets using Libbitcoinâ€™s Bitcoin Explorer, as described in the appendix to Mastering Bitcoin. Moreover, he added that if you do, your funds are at risk or have already been stolen. CZ tweeted that self-custody wallets are not without risks. He also explains that this vulnerability is due to random number generators using a 32-bit seed. That is not sufficiently random against modern cracking such as GPUs. Moreover, Trust Wallet and Binance wallets didnâ€™t use this for seed phrase generation. Binance Increased the Trading Limits for SHIB Recently, Binance increased the maximum order limit for over-the-counter (OTC) trading across 16 cryptocurrencies and 37 trading pairs. The OTC trading portal allows investors to place large amounts of buy and sell directly without disrupting the market. The crypto exchange includes the dog-themed memecoins Shiba Inu and Dogecoin. And also added some popular cryptocurrencies Bitcoin, Ethereum, XRP, Polygon, BNB, Solana, and Litecoin to the list. According to the report, the exchange is continuously working to evaluate and increase high-quality assets and trading pairs on the OTC trading platform. The trading price of Shiba Inu (SHIB) has experienced a surge after Binanceâ€™s announcement. At the time of writing, the Shiba Inu trading price is \$0.00001004, with an increase of over 3.08% in the last 24 hours. The trading volume of SHIB has experienced a surge of 3%, according to CoinMarketCap.

- Solana (SOL) stands out as a top performer, gaining 8.01% in the past 7 days and trading above \$24. - Solana outpaces rivals, witnessing a 15% surge in locked funds in the past month. In a week of volatile price action in the global cryptocurrency market, Solana (SOL) has emerged as a top performer, currently trading above \$24 and possessing a significant 8.01% gain in the past 7 days. The coinâ€™s recent surge has ignited speculation among investors, about the potential breach of the \$30 resistance threshold. Also, SOLâ€™s trading volume exceeded \$359 million in the last 24 hours, and the coinâ€™s rise has sparked speculation among investors about its potential to breach the \$30 resistance level. One of the driving factors behind Solanaâ€™s surge has been its remarkable growth in terms of total value locked (TVL). Notably outpacing its competitor, Ethereum. Solana witnessed a substantial 15% increase in the funds locked within its ecosystem just last month. This surge in locked funds has propelled Solana to climb the ranks, securing its position as the 9th largest chain in terms of locked assets, according to data from DeFi Llama. Recorded a remarkable leap from \$205.11 million at the beginning of the year to \$322.95 million at present. Solana (SOL) Will Hit \$30? Solanaâ€™s (SOL) daily chart shows that the asset has traded positively in the past 24-hour market time. Bullish price action on the cryptocurrency indicates that it is trading above the Exponential Moving Average (EMA), signaling a potentially strong uptrend and positive momentum in its price. On the other hand, the Relative Strength Index (RSI) currently hovers at 57.74, suggesting a balanced between overbought and oversold conditions. As the RSI maintains this delicate balance, the crypto community remains on the edge of its seat. Awaiting further developments that could herald SOLâ€™s ascent beyond the \$30

threshold. According to CoinMarketCap, Solana traded at \$24.64, soaring 2% in the last 24-hour and 12% in the past month. Highlighted Crypto News Shiba Inu's Impact on Dogecoin Explored: Insights from Market Analyst

BitPay, a renowned crypto payment provider, has unveiled its latest feature, BitPay Bill Pay. This new feature enables users to pay their bills using a selection of around a dozen cryptocurrencies, including popular ones like Shiba Inu, Dogecoin, Litecoin, XRP, Bitcoin, and Ethereum. The introduction of BitPay Bill Pay marks a significant leap in the adoption of cryptocurrencies in everyday transactions. Through a strategic collaboration with Method Financial, BitPay has facilitated the option for its clients to settle a wide array of bills, including mortgages and personal bank loans. With this development, BitPay clients can conveniently make payments to over 5,000 companies offering various services. The process of using BitPay's Bill Pay is designed to be straightforward. Users simply need to connect their bills to the BitPay app, link a compatible cryptocurrency wallet, and they're ready to make payments. According to Stephe Pair, the CEO of BitPay, entering the realm of bill payments marks a significant step in crypto adoption. He highlights that this advancement is particularly valuable for unbanked individuals who can now access this payment method without relying on traditional banking infrastructure. Shiba Inu's "Shibarium" Nears Reality In a separate development, Shiba Inu's lead developer, Shytoshi Kusama, has made a notable revelation. Responding to a post by the founder of the PawZone project, which supports the upcoming "Shibarium," Kusama confirmed that the concept is indeed on its way. His enigmatic post and a GIF shared on social media indicate his determination and enthusiasm for the forthcoming Blockchain Futurist Conference, where he is expected to deliver a speech. The Shiba Inu community is buzzing with anticipation for what this development might entail for the popular meme coin's ecosystem.

- PEPE is trading at \$0.000001203 post a 12.70% pump. - A whale purchased 807B PEPE tokens by selling 1M USDC. On Wednesday, PEPE, a deflationary memecoin faced a sudden pump of around 10.78% according to CoinMarketCap, a crypto analytics platform. This surge is despite the fact that a recent whale dumped a huge amount of PEPE when it was trading at \$0.000001121. Overall, the whale sold 2.26 trillion PEPE worth \$2.53 million over a \$707K loss. A whale dumped all 2.26T \$PEPE(\$2.53M) at an average price of \$0.000001121 just now, with a loss of \$707K. " Lookonchain (@lookonchain) August 7, 2023 The whale spent 1,102 \$ETH(\$2.01M) to buy \$BALD before, but only got 189 \$ETH(\$346K) back, with a loss of 912 \$ETH(\$1.67M).<https://t.co/HF8aZpLGXS> pic.twitter.com/xtFApeQr9m On the other hand, the same whale has purchased BALD tokens by selling over 1.1K Ethereum (ETH) worth \$2.01M. Considerably, the current status of PEPE seems bullish and the investors are rushing harder for PEPE purchase. A whale spent 1M \$USDC to buy 807B \$PEPE at \$0.000001239 7 hrs ago after the price of \$PEPE increased.<https://t.co/P03KsDrZFj> pic.twitter.com/0hiw6ewDjp " Lookonchain (@lookonchain) August 9, 2023 From the reports of DeBank, it is noted that another whale acquired a whole of 807B PEPE tokens when the trading price hit \$0.000001239. Spending a million of USD Coin (USDC), this transaction has been reported with a gas fee of about 0.033 ETH. Current Status of PEPE Being launched on April 2023, PEPE has gained massive popularity among the crypto community next to the other popular memecoins like Shiba Inu (SHIB), and Dogecoin (DOGE). As per CoinMarketCap, PEPE is trading at \$0.000001225 with a market capitalization of around \$464.32M in the last 24 hours. The trading volume has crossed more than 100% at the time of writing. Moreover, the circulation supply of the PEPE is around 93% which is 391.79 trillion PEPE of its total supply. Also, PEPE remarks as the top gainer of the day across other cryptocurrencies. The buyers are held in large purchases of PEPE and there is no surprise of spotting yet another whale appearance in the market. Again, the technical stats depict a huge buying signal with a green dominance showing growth. Highlighted Crypto News Today:

- Elon affirmed that X won't launch any crypto token. - Crypto investors on FUD; DOGE falls by 1.15% in 24H. The second week of August started with a boom in the crypto market where the unfortunate announcement spread around. The Boss of Twitter (known as "X"™), Elon Musk has denied the launch of a crypto token for X. Following this denial of scam and rumors by Elon, Dogecoin (DOGE) went on an abrupt surge of over 2% which led to bullish momentum. As per the previous view on DOGE, it felt evident that Elon's promotion had an impact. As of a recent update, Elon Musk said, "Never will X launch a crypto token." Elon Musk Blowing Cryptocurrencies According to Forbes, Elon's declaration creates wild speculation which might blow up the prices of cryptocurrencies like Bitcoin (BTC), Ethereum (ETH), Ripple (XRP), and Dogecoin (DOGE). Certain crypto analysts have predicted that the bearish sentiment might affect crypto trading. As it was believed that Elon promoted DOGE, now it doesn't reflect the same whereas the recent surge on Friday has fallen by 1.15% according to CoinMarketCap. The global crypto market cap has decreased by 0.08% compared to the previous day. With the chance of the crypto market breaking down the wall, Elon's stance of bringing up the price is higher. However, Elon considers the unlikely rumors being spread with no proper affirmation from X. On August 6, 2023, Elon tweeted, "We just keep making X better and better every day." Meanwhile, Mark Zuckerberg, the CEO of Facebook (termed "Meta"™) commented, "Threads will copy and become better and better too." Irrespective of the crypto community, the newer version of Twitter, X has bought changes into trading. The use of eToro if X doesn't work as a crypto trading platform, might be useless. By the way, the curiosity of eToro was awakening at the moment of its arrival and Elon had an optimistic view over cryptocurrencies. Confusingly, the crypto investors are yet trading and the digital form of currencies might rule the nation in the future days as UPIs do up to date. The crypto market faces criticalities during the end of Q3. Challengingly, Q4 might turn effective towards the crypto market and its growth. Related Crypto News:

- Messari's report on Cardano has revealed key metrics on dApp transactions. - Cardano climbed the TVL ranks from 34th to 21st among all chains through 2023. Bringing up promising developments in blockchain technology with innovation has been the activity of Cardano (ADA) in recent times.

Meanwhile, crypto investors await the usual monthly performance in the crypto market. The overall crypto market is currently down by 0.42% in the last 24H at the time of writing. Alongside, the trading volume of ADA has drastically fallen by 33.20% in its current circulation supply of around 35,017,542,397 ADA which is nearly 78% of its total supply. Also, the market capitalization dropped comparatively over the last week. Thus, losing out the 7th spot to Dogecoin, and now ranking in the 8th position as per CoinMarketCap. Cardano's Q2 2023 Analysis Messari, the leading provider of crypto market intelligence products has shed light on the performance of Cardano in Q2 2023. This gives key insights including the Cardano transactions on the Quarter on Quarter (QoQ) variation in the decentralized applications (dApps) along with the overall technical measures. State of @Cardano Q2 2023 â€” Messari (@MessariCrypto) August 4, 2023 With a dedicated community of users and developers, Cardano has demonstrated staying power. In Q2, average daily dapp transactions were up 49%, TVL up 10%, and 199% YTD. @redvelvetzip dives in. <https://t.co/MNhyNJvIPq> Providing prioritized security and sustainability to the dApps, Cardano proceeds ahead toward the Voltaire phase together with the group of community developers supported by multiple entities. As of June 30, 2023, the percentage change of QoQ in Cardano noted from various sources is pointed out by Messari. The average daily volume of dApps trades increased by 49% quarter over quarter. While Minswap's growth was the highest, other new dApps helped the overall rise. TVL (USD) was up 9.7% QoQ and 198.6% YTD. Cardano climbed the TVL ranks from 34th to 21st among all chains through 2023. Hydra Proposed topologies, enthusiasm from ecosystem teams, and an exhibited demo all indicate that work is proceeding apace. Cardano's Development As per crypto analyst Ali, Cardano's Github repository performance in development activities has been 3x compared to Ethereum's. The analyst also mentioned that Cardano's Founder, Charles Hoskinson, and the IOHK team deeply raced as 3rd generation blockchain platform. When comparing @Cardano's dev activity to @Ethereum, the dedication of @IOHK\_Charles @InputOutputHK's team shines through. #Cardano's Github repository boasts 3x the development activity of #Ethereum. [pic.twitter.com/mIiqKvRDa7](https://pic.twitter.com/mIiqKvRDa7) â€” Ali (@ali\_charts) August 4, 2023 The efficient work with their dedication has proven results on Cardano over the graph metrics shared by Ali. The GitHub repository is been actively performing well and is robust with strong network security. On the other hand, several dApps of Cardano aren't set to launch by the 2023 end due to their challenges and operational factors. Yet, the surge in other parameters might give a boost to evolve over this situation. Related Crypto News:

- Bullish BAT price prediction for 2023 is \$0.2909 to \$0.3820. - Basic Attention Token (BAT) price might reach \$0.5 soon. - Bearish BAT price prediction for 2023 is \$0.1606. In this Basic Attention Token (BAT) price prediction for 2023, 2024-2030, we will analyze the price patterns of BAT by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. [TABLE OF CONTENTS | INTRODUCTION | BASIC ATTENTION TOKEN \(BAT\) PRICE PREDICTION 2023 | BASIC ATTENTION TOKEN \(BAT\) PRICE PREDICTION 2024, 2025, 2026-2030 | CONCLUSION | FAQ |](#) Basic Attention Token (BAT) Current Market Status | Current Price | \$0.204 | 24 â€” Hour Price Change | 1.90% Down | 24 â€” Hour Trading Volume | \$31,647,076 | Market Cap | \$303,860,452 | Circulating Supply | 1,489,852,087 BAT | All â€” Time High | \$1.92 (On Nov 28, 2021) | All â€” Time Low | \$0.06621 (On Jul 16, 2017) | What is Basic Attention Token (BAT) | TICKER | BAT | BLOCKCHAIN | Ethereum | CATEGORY | Utility Token | LAUNCHED ON | May 2017 | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Basic Attention Token (BAT) is the utility token of a blockchain-based digital advertising platform of Brave. The Brave web browser is a secure, privacy-focused browser. BAT can be regarded as the Ethereum Ad Token that was launched as an ERC-20 token in 2017. A Basic Attention Token (BAT) is used as the payment token rewarded to users for viewing ads via Brave. Users, content creators, and advertisers deploy BAT as a mode of exchange. With BAT, Brave browsers confer even more privacy and anonymity to internet users. Basic Attention Token 24H Technicals (Source: TradingView) Basic Attention Token (BAT) Price Prediction 2023 Basic Attention Token (BAT) ranks 103rd on CoinMarketCap in terms of its market capitalization. The overview of the Basic Attention Token price prediction for 2023 is explained below with a daily time frame. BAT/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, Basic Attention Token (BAT) laid out a Horizontal Channel Pattern, Horizontal channel also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the price of Basic Attention Token (BAT) was recorded at \$1.92. If the pattern trend continues, then the price of BAT might reach the resistance levels of \$0.2317, \$0.3308, and \$0.5808. If the trend reverses, then the price of BAT may fall to the support of \$0.1629. Basic Attention Token (BAT) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Basic Attention Token (BAT) in 2023. BAT/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Basic Attention Token (BAT) for 2023. | Resistance Level 1 | \$0.2909 | Resistance Level 2 | \$0.3820 | Support Level 1 | \$0.2140 | Support Level 2 | \$0.1606 | BAT Resistance & Support Levels Basic Attention Token (BAT) Price Prediction 2023 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (BAT) are shown in the chart below. BAT/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Basic Attention Token (BAT) market in 2023. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.1980 Price = \$0.2044 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 52.48 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Basic Attention Token (BAT) Price

Prediction 2023 – ADX, RVI In the below chart, we analyze the strength and volatility of Basic Attention Token (BAT) using the following technical analysis indicators – Average Directional Index (ADX) and Relative Volatility Index (RVI). BAT/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Basic Attention Token (BAT).

INDICATOR	PURPOSE	READING	INFERENCE
Average Directional Index (ADX)	Strength of the trend momentum	36.7275	StrongTrend
Relative Volatility Index (RVI)	Volatility over a specific period	59.39 <50 = Low >50 = High	High volatility

Comparison of BAT with BTC, ETH Let us now compare the price movements of Basic Attention Token (BAT) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs BAT Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of BAT is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of BAT also increases or decreases respectively. Basic Attention Token (BAT) Price Prediction 2024, 2025 – 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Basic Attention Token (BAT) between 2024, 2025, 2026, 2027, 2028, 2029 and 2030.

Year	Bullish Price	Bearish Price
Basic Attention Token (BAT) Price Prediction 2024	\$0.8	\$0.2
Basic Attention Token (BAT) Price Prediction 2025	\$1.4	\$0.4
Basic Attention Token (BAT) Price Prediction 2026	\$2.1	\$0.9
Basic Attention Token (BAT) Price Prediction 2027	\$3	\$1
Basic Attention Token (BAT) Price Prediction 2028	\$3.7	\$1.2
Basic Attention Token (BAT) Price Prediction 2029	\$4.9	\$1.5
Basic Attention Token (BAT) Price Prediction 2030	\$5.5	\$1.6

Conclusion If Basic Attention Token (BAT) establishes itself as a good investment in 2023, this year would be favorable to the cryptocurrency. In conclusion, the bullish Basic Attention Token (BAT) price prediction for 2023 is \$0.3802. Comparatively, if unfavorable sentiment is triggered, the bearish Basic Attention Token (BAT) price prediction for 2023 is \$0.1606. If the market momentum and investors’ sentiment positively elevates, then Basic Attention Token (BAT) might hit \$0.5. Furthermore, with future upgrades and advancements in the Basic Attention Token ecosystem, BAT might surpass its current all-time high (ATH) of \$1.92. and mark its new ATH. FAQ 1. What is Basic Attention Token (BAT)? Basic Attention Token (BAT) is the utility token of a blockchain-based digital advertising platform of Brave. The Brave web browser is a secure, privacy-focused browser. 2. Where can you purchase Basic Attention Token (BAT)? Basic Attention Token (BAT) has been listed on many crypto exchanges which include Binance, OKX, Deepcoin, Bybit, and Bittrue. 3. Will Basic Attention Token (BAT) reach a new ATH soon? With the ongoing developments and upgrades within the Basic Attention Token Platform, BAT has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Basic Attention Token (BAT)? On Nov 28, 2021, Basic Attention Token (BAT) reached its new all-time high (ATH) of \$1.92. 5. What is the lowest price of Basic Attention Token (BAT)? According to CoinMarketCap, BAT hit its all-time low (ATL) of \$0.06621, On Jul 16, 2017. 6. Will Basic Attention Token (BAT) reach \$0.5? If Basic Attention Token (BAT) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.5 soon. 7. What will be Basic Attention Token (BAT) price by 2024? Basic Attention Token (BAT) price is expected to reach \$0.8 by 2024. 8. What will be Basic Attention Token (BAT) price by 2025? Basic Attention Token (BAT) price is expected to reach \$1.4 by 2025. 9. What will be Basic Attention Token (BAT) price by 2026? Basic Attention Token (BAT) price is expected to reach \$2.1 by 2026. 10. What will be Basic Attention Token (BAT) price by 2027? Basic Attention Token (BAT) price is expected to reach \$3 by 2027. - Shiba Inu community experiences significant excitement as SHIB’s price surges, leading to a surge in large transactions. - 260% increase in high-value transactions, totaling \$27 million in one day, adds to the momentum. - SHIB’s meteoric rise linked to a 13% spike, reaching a two-month high, and fueled by Dogecoin scrutiny and Shibarium anticipation. The Shiba Inu community is witnessing a significant surge in excitement as the SHIB experiences a substantial increase in price, leading to a surge in large transactions. According to crypto intelligence portal IntoTheBlock, there has been a remarkable 260% surge in high-value transactions involving the Shiba Inu, amounting to \$100,000 or more, within the past 24 hours. This surge in large transactions amounts to a staggering \$27 million, contributing to a total of 5.25 trillion SHIB transactions in a single day. Shiba Inu price spiked recently The price surge of the SHIB began on Friday, coinciding with a wave of enthusiasm for dog-themed meme coins. The Shiba Inu witnessed an impressive 13% increase, reaching its highest value in the past two months. Consequently, the market cap of SHIB also soared by an astounding \$500 million. While the exact reasons behind this sudden trend remain speculative, some suggest that the scrutiny surrounding Dogecoin (DOGE), particularly related to potential crypto payments on the platform formerly known as Twitter, could have played a role. Additionally, the community’s heightened interest in SHIB might be attributed to the anticipation surrounding the release of Shibarium, a recent development in the Shiba Inu ecosystem. As the SHIB community endeavors to comprehend the factors contributing to this remarkable surge, the overall excitement and speculative discussions surrounding the token continue to fuel its momentum.

In the fast-paced and ever-evolving world of finance, cryptocurrencies have emerged as a revolutionary force, captivating the imagination of investors and tech enthusiasts alike. Among the multitude of digital assets, several cryptocurrencies have been making waves in the market, especially during challenging moments. Let’s dive into the captivating world of cryptocurrency to explore the top 10 cryptocurrencies that have the potential to ignite the global crypto market in August 2023 and unravel the trends propelling their growth. Bitcoin (BTC) Bitcoin (BTC), the oldest gem in the market which was created in 2009 by Satoshi Nakamoto. However, Bitcoin’s price has skyrocketed as it’s become a household name. In Jan 2017, one Bitcoin was about \$1014. As of July 29, 2023, a single Bitcoin’s

price was around \$29,278. It has seen a growth of more than 3000%. At the time of writing, Bitcoin traded at \$29,274 with a market cap of \$569 billion, which is 48.2% of the market share. Bitcoin (BTC) Price Chart (Source: Tradingview) The BTC daily price chart indicates that the current price action has dropped below the short-term 50-day exponential moving average (50 EMA), signaling an attempt to enter a bearish state. The moving average currently stands at \$29,470. Also, taking the daily RSI into account, it is evident that BTC has fallen below the neutral zone (at 43). If BTC crosses its resistance level of \$29,947 it may reach \$30,374 soon. Ethereum (ETH) Ethereum (ETH), is a smart network and the second largest cryptocurrency. In February 2017, one ETH was \$10 now one ETH valued at \$1,871. Ethereum (ETH) Price Chart (Source: Tradingview) At the time of writing, Ethereum (ETH) traded at \$1,871. The ETH daily price chart indicates that the current price action has nears the short-term 50 EMA, signaling an attempt of correlation. The moving average currently stands at \$1,873. Also, the daily RSI shows ETH nears to the neutral zone (at 48). If ETH crosses its resistance level of \$1,917 it may reach \$2,018 soon. XRP (XRP) Ripple (XRP) showed its strong growth after a year following the Ripple partial victory against the SEC. XRP (XRP) Price Chart (Source: Tradingview) At the time of writing, XRP traded at \$0.7087. The XRP daily price chart indicates that the current price action nears the short-term 50 EMA), signaling an attempt of correlation. The moving average currently stands at \$0.717. With a neutral RSI zone (57), crossing its resistance level of \$0.9427 may propel it to reach \$1.3663. Binance Coin (BNB) The world's largest crypto exchange Binance native cryptocurrency BNB has attracted investors with its multi chain capabilities. Also, It is one of the most traded tokens in the world. Binance Coin (BNB) Price Chart (Source: Tradingview) At the time of writing, BNB traded at \$241, displaying a bullish attempt above the 50 EMA, and could potentially reach \$364 if it surpasses the resistance level of \$299. Dogecoin (DOGE) Originally created as a joke, Dogecoin has become a significant player with a market cap of over \$10 billion. It currently trades at \$0.07811, signaling a potential bullish state as it surpasses the 50 EMA, with a neutral RSI zone (62.83). Crossing its resistance level of \$0.09667 may lead to \$0.13152. Dogecoin (DOGE) Price Chart (Source: Tradingview) Cardano (ADA) Somewhat later to the crypto scene, Cardano is notable for its early embrace of proof-of-stake validation. By eliminating the competitive, problem-solving part of transaction verification found in platforms such as Bitcoin, this solution minimizes transaction time, energy usage, and environmental effect. Cardano (ADA) Price Chart (Source: Tradingview) At the time of writing, Cardano traded at \$0.3103. The ADA daily price chart indicates that the current price action has soared above the short-term 50 EMA, signaling an attempt to enter a bullish state. The moving average currently stands at \$0.3095. Also, the daily RSI shows that Cardano stands in the neutral zone (at 52.41). If ADA crosses its resistance level of \$0.3029 it may reach \$0.4140 soon. Solana (SOL) Solana, which was created to support decentralized financial (DeFi) applications, decentralized apps (DApps), and smart contracts, is based on a unique hybrid proof-of-stake and proof-of-history method that allows it to process transactions rapidly and safely. The platform is powered by SOL, Solana's native cryptocurrency. Solana (SOL) Price Chart (Source: Tradingview) SOL trades at \$25.12, showcasing potential bullishness above the 50 EMA, with a neutral RSI zone (58.78). Breaking its resistance level of \$48.92 may lead to \$81.96. Litecoin (LTC) Litecoin (LTC) is a cryptocurrency known for its emphasis on fast, secure, and low-cost transactions, utilizing the potential of blockchain technology. As the Litecoin halving approaches, there is anticipation for a potential price rally. Litecoin (LTC) Price Chart (Source: Tradingview) At present, Litecoin is trading at \$91.13. The daily price chart indicates a decline below the short-term 50 EMA, suggesting a possible bearish phase. The moving average currently stands at \$91.40. The daily RSI is approaching the neutral zone at 46.91. Should Litecoin cross its resistance level of \$97.54, it may potentially reach \$134. Polygon (MATIC) Polygon (MATIC) stands out as the first user-friendly platform for Ethereum scaling and infrastructure development. The upcoming launch of Polygon 2.0 with the native currency transfer of POL adds to its appeal. Polygon (MATIC) Price Chart (Source: Tradingview) As of now, Polygon is trading at \$0.7114. The daily price chart shows a nearness to the short-term 50 EMA, indicating a possible correlation. The moving average currently stands at \$0.7257. The daily RSI hovers around the neutral zone at 46.91. In case MATIC crosses its resistance level of \$0.9800, it may potentially reach \$1.2782. Shiba Inu (SHIB) Shiba Inu (SHIB) stands as the second-largest meme coin in the market, transitioning into a utility token. The SHIB Army eagerly awaits the launch of its layer 2 blockchain, Shibarium. Shiba Inu (SHIB) Price Chart (Source: Tradingview) As of the latest data, Shiba Inu is trading at \$0.000008317. The daily price chart reveals that the current price action has surged above the short-term 50 EMA, suggesting a potential bullish trend. The moving average currently sits at \$0.00000797. With a daily RSI indicating a neutral zone at 63.04, Shiba Inu's price may see further growth if it crosses its resistance level of \$0.00000804, potentially reaching \$0.00000968 soon.

- Elon Musk feels that the rebranding of the Twitter logo to Doge has had no notable impact. - Musk is portrayed as one of the constant supporters of Shiba Inu dog-based memecoins. Twitter, the social media platform, has rebranded itself from Twitter to X. Users are more excited about the rebranding and sharing their thoughts on it. A reply from the Twitter boss and Tesla CEO Elon Musk regarding his previous Twitter logo change to a Shiba Inu dog sparks speculations among the crypto community. We rebranded to a Shiba Inu dog for a while. No impact. " Elon Musk (@elonmusk) July 25, 2023 On July 25, an engineer from company "X" sarcastically tweeted that even if the social media platform rebranded to a donkey, he would still only scroll for 6 hours daily. The tweet came after the platform underwent a rebranding as "X." This statement from the user caught the attention of Elon Musk, who retweeted, "We rebranded the Shiba Inu dog for a while. No impact." The playful tweet by the user about the Twitter rebranding has gone viral. Musk has been continuously showing a peculiar interest in memecoins over a long period of time. His actions have directly impacted the trading price of the memecoins, especially on his favorite Dogecoin (DOGE). Elon Musk's Previous Rebranding Had No Impact Before rebranding Twitter to X, Elon Musk changed the Twitter logo to a Shiba Inu dog. The change has become more controversial and raised the question of whether he is promoting the popular memecoin DOGE with the logo change. Moreover, the trading price of Dogecoin also experienced an increase after the

logo change. The Tesla CEO feels that the rebranding of the Shiba Inu dog logo has had no impact. In the crypto market, he is known for his Doge-related tweets. Whenever he posts a hint about the memecoin, it directly reflects on the Dogecoin (DOGE) price, resulting mostly in surges. Recently, after the Twitter rebranding, DOGE experienced a massive surge. However, Musk stated that the rebranding had no impact on the social media platform.

- Shiba Inu (SHIB) witnesses significant value surge: Over 20 trillion SHIB reach break-even point. - SHIB and DOGE among top-performing cryptocurrencies: Both coins experience notable price gains. - Enthusiasm grows as SHIB turn profitable: Speculation surrounds factors behind the price movement. In a recent turn of events, the Shiba Inu (SHIB) has witnessed a notable increase in value, resulting in a significant number of coins reaching their break-even point. According to data from IntoTheBlock, over 20 trillion SHIB have now regained their "initial" value as a direct consequence of the recent price movement. The surge occurred when SHIB reached a crucial level of \$0.0000076, leading to a 3.69% gain within the following 12 hours. This price movement aligns with a broader trend in the cryptocurrency space, with Dogecoin (DOGE) also experiencing a substantial 12% surge over the past three days. Shiba Inu and Dogecoin earn top performing coin spot As a result of this rally, both SHIB and DOGE have earned spots among the top-performing cryptocurrencies in the market. The significant increase in SHIB's value has resulted in more than 20 trillion SHIB transitioning from losses to profits, signifying the scale of the current rally. Notably, this surge represents around 50% of all Shiba Inu tokens currently in circulation that have now turned profitable. The Shiba Inu and Dogecoin communities are abuzz with euphoria and excitement as enthusiasts celebrate their newfound profitability. While some attribute the surge to speculative trading and market sentiment, others point to speculation surrounding Twitter's rebranding to X and the potential use of DOGE on the platform as possible factors behind the price movement.

- Twitter rebranded as "X" to align with Elon Musk's vision of an "everything app." - CEO Linda Yaccarino hinted at "X" potentially focusing on payments and banking features. - On July 5, Twitter acquired money transmitter licenses in multiple states to expand financial services. The microblogging site Twitter has completed its rebranding process and officially changed its name to "X," in line with CEO Elon Musk's ambitious vision to transform the platform into an "everything app." The rebranding signals the company's intention to expand beyond its traditional social media roots and venture into new territories. Twitter CEO Linda Yaccarino recently shared some intriguing insights into the company's future plans in a memo reported by CNBC. She hinted at X's potential focus on payments and banking features, indicating that the platform aims to become a comprehensive financial service provider. Also, Musk has long expressed interest in offering fintech services on the platform, including peer-to-peer transactions, savings accounts, debit cards, and more. As part of this endeavor, on July 5, Twitter successfully acquired money transmitter licenses from Arizona, Michigan, Missouri, and New Hampshire, signaling its commitment to expanding its financial services within these states. The licenses will enable X to facilitate money transfers, enhancing its capabilities beyond a mere social media platform. Notably, the rebranded platform will continue to develop experiences in video, audio, messaging, and banking. With the goal of delivering delightful user experiences across various domains. Elon Musk's Love for Crypto Elon Musk is known for his affinity for cryptocurrencies, especially Dogecoin (DOGE). In a symbolic gesture, Musk changed both the Twitter logo to "X" and his location to "X, TX". Where "X" represents the new logo of Twitter and "TX" is the symbol for Dogecoin. However, his tweets and statements would significantly impact the price of DOGE. At the time of writing, DOGE's price had climbed over 9.11% to \$0.07759. Further, the microblogging site currently provides real-time updates on the status of stocks and cryptocurrencies, displaying their current prices for users. With Twitter's transformation into X and its potential foray into the financial services industry. The company appears poised to reshape the digital landscape. Further solidify Elon Musk's vision of an "everything app" that incorporates multiple functionalities to delight users worldwide.

- Russian President Vladimir Putin signed the digital ruble bill into law on July 24. - The Russian government's central bank will be in charge of the digital ruble's infrastructure. The legislation governing the digital ruble has been approved and will go into effect on August 1, 2023, with the exception of one restriction. Article 3 is scheduled to go into effect in Russia in August 2024. Moreover, it amends various federal laws, notably those pertaining to bankruptcy and inheritance. According to a government document, Russian President Vladimir Putin signed the digital ruble bill into law on July 24. Also, this means that Russia is going ahead with its central bank digital currency (CBDC). Third Form of Money Moreover, the new law gives the Russian central bank the green light to begin testing CBDC with actual users in August. Trials were originally planned to begin in April in conjunction with 13 local banks, including major players like Sberbank. The Russian government's central bank will be in charge of maintaining and protecting the digital ruble network as stipulated by the new legislation. The digital ruble's only function is to facilitate transactions and wire transfers; it is not an asset in and of itself. Furthermore, it is anticipated that the digital ruble will function as a third form of money, joining the cash and non-cash rubles now in use. Also, Elvira Nabiullina, governor of the Bank of Russia, allegedly said on July 24 that the CBDC would not be mandatory and that the usage of the digital ruble will be up to people to choose. Moreover, Deputy Governor of the Bank of Russia Olga Skorobogatova has said that widespread use of the digital ruble in Russia is not expected until 2025 or 2027. Highlighted Crypto News Today: Dogecoin Whales Accumulate Billions: Speculating on Their Intentions

- The last time Litecoin had this type of problem was from August 2021 to January 2022. - The expert implied that the impending halving would be a good opportunity to make a sale. The Litecoin (LTC) halving, set to occur in early August, is currently one of the most awaited events in the crypto

industry. On-chain expert @Ali\_Charts has speculated that the event may have an unexpected outcome, drawing on the anticipation around the halving event over the last few months. #Litecoin | Each time the number of new LTC addresses surpassed 350,000 in the last five years, a significant price correction followed. " Ali (@ali\_charts) July 23, 2023 More than 690,000 #LTC addresses were recently created, suggesting the upcoming #halving could be a "sell the news" event.

pic.twitter.com/FBsokPgaYA The crypto researcher speculated that the number of Litecoin wallet addresses had grown significantly in recent times. This may be an ominous indication for the LTC price, which may soon experience a precipitous decline. Impending Sell-off Ahead? The data shows that in the last five years, whenever the number of LTC addresses surpassed 350,000, the price of LTC dropped significantly. The last time Litecoin had this type of problem was from August 2021 to January 2022. On-chain data implies a significant price crash as LTC miners prepare for the effect of the block reward halving. Ali pointed out that in anticipation of the halving event, which will take place in the next 8 days, more than 690,000 LTC addresses had been generated lately. He implied that the impending halving would be a good opportunity to make a sale. Possible outcomes include increased selling pressure and transient price changes. He concludes that Litecoin investors may be holding in expectation of the anticipated price spike in LTC after the halving. A sell-off or enormous accumulation are both possible outcomes. On the other hand, the upcoming halving of Litecoin's supply might lead to significant price appreciation. This view is grounded on the deflationary impact that the halving will have. Since the creation of new coins will slow down. If this trend continues, together with rising demand for LTC, it might be a recipe for sustained price appreciation over the medium to long term.

- Elon Musk's recent tweet influenced Dogecoin's price volatility. - The Memecoin market undergoes a bearish season with sluggish price movements. Elon Musk, the CEO of Tesla and owner of Twitter, has a playful habit of occasionally expressing his fondness for memecoins. On a recent Wednesday, he continued this trend by tweeting about the popular dog-themed cryptocurrency, Dogecoin (DOGE), which resulted in a sudden 4% price jump within just a few minutes. Doges ftw pic.twitter.com/bl0trQ7BdU " Elon Musk (@elonmusk) July 19, 2023 However, the effect seemed short-lived, as the price (\$0.072) quickly went back down to its previous level (\$0.0697). This led some to wonder if the "Elon Effect" was weakening, especially compared to a previous incident in Q2 of 2023. It is when Elon Musk's DOGE tweet accepted it as payment and the conversion of the Twitter logo to the Dogecoin logo caused it to surge significantly. Elon Musk's DOGE tweet provided some relief from a bearish trend, but the DOGE price remains distant from the all-time high of the month. Whereas the trading volume of it stands at \$420,620,838, representing a 43.78% increase. Is it a Memecoin "Bearish" Season? Currently, the memecoin market appears to be experiencing a bearish season. At the start of 2023, they were on a green zone trend. Moving forward, today, alongside the Dogecoin, its siblings like Pepe, Shiba Inu, and Floki struggled to initiate a bullish rally and break free from the bearish zone or flat price movement. For instance, PEPE's value surged only by 4.73% in the past seven days, with the current price standing at \$0.0000015 after a 1.17% decline today. Similarly, SHIB is priced at \$0.0000008, witnessing a substantial 92% decrease from its all-time high, with a 2.61% drop in trading volume. Meanwhile, FLOKI experienced a 2% decline over the week, with the current price at \$0.000024, representing a 1.78% decrease in the past 24 hours and a trading volume decline of 11.81%. Analyzing the factors behind the memecoin red forest, sources reveal that as the memecoin is crowding up with the entry of new coins and its copycat version pulls them out of the green zone. Summing up, the recent movements in the memecoin market suggest a bearish trend. However, the market remains unpredictable, and the influence of figures like Elon Musk on cryptocurrency prices continues to be a subject of debate among investors and enthusiasts alike.

The recent H1 2023 report released by CoinMarketCap (CMC) provides valuable insights into the cryptocurrency market's performance and key trends during the second quarter of the year. The report highlights several noteworthy findings that shed light on the industry's recent developments. Cryptocurrencies were worth \$1.17 trillion in the second quarter, up 48% year-to-date. Q2's market value was almost identical to Q1's, making it seem like an unsuccessful quarter in crypto. In Q1, the bitcoin price doubled, L2s like Arbitrum and ZK grew, and product improvements and Blur's token issuance boosted the NFT market. However, Q2 did not deliver revolutionary advancements. Instead, Q2 had a "memecoin season" and BRC20 tokens, which were noticeable but not as enthusiastic as the previous quarter. Key highlights include: Total Spot Trade Volume of the Top 20 Cryptocurrency Exchanges: The CMC Crypto Fear and Greed Index increased from 30 (Fear) to 52 (Neutral) at the end of the first quarter, signaling a substantial market change. Total Spot Trade Volume for the Top 20 Cryptocurrency Exchanges peaked in March and then fell by around 36% quarter over quarter to reach an almost stagnant \$523 billion per month by the end of June. The top 10 sectors by YTD market cap growth: VR/AR (704%) and AI & Big Data (323%) are dominating the market narrative, while bluechip DeFi initiatives and Infrastructure are making a solid return. Some of them are Lending & Borrowing (149%), Derivatives (75%), Storage (86%), and Interoperability (58%). The Memes sector had the most new listings YTD with around 260 coins. AI & Big Data contributed 61 coins, while DeFi added 47. Bitcoin Price and Key Events: Bitcoin Ordinals increased its user base in Q1. This was followed by the dramatic U.S. bank collapse. From there BTC price started climbing and breached the \$30k mark. Several events unfolded, however, the BTC price still managed to stay above the \$30k level. Ethereum Price and Events: The year started with the SSV network launching a \$50M ecosystem fund. This was followed by Vitalik Buterin calling to improve the Ethereum network as a form of payment, in the last week of February. Similar to BTC, Ethereum price started climbing post U.S. bank collapses and breached the \$2k mark. However, it was not able to maintain above that level for long. Most Popular Coins and Sectors: The Memes sector had a boom in H1 2023, with PEPE driving the rally. Due to technological developments, Cardano attracted attention while Ethereum (ETH) remained the preferred choice for Smart Contracts. Terra Classic dominated attention in DeFi, while SingularityNET and Fetch.ai experienced a

rise in interest in AI & Big Data. Most Community Engagement: As one of the currencies that CMC users put to watchlists the most, PEPE joined venerable memecoins Dogecoin and Shiba Inu. Memes, which also happened to be the most popular sector in CMC Community, attracted the greatest participation. Explosive pumps for currencies like PEPE, SNEK, and LADYS occurred during the Memecoin season in April and May. Top Performing Coins in H1 2023: Tokens from the Arbitrum and Optimism ecosystems, such as Pendle (PENDLE), Radiant Capital (RDNT), and Velodrome Finance (VELO), were among the top gainers in H1 2023. Significant rallies were also seen on layer-one blockchains including Dione Protocol (DIONE), Conflux (CFX), and Injective (INJ). Additionally, top performances included tokens with an AI focus like SingularityNET (AGIX) and Render (RNDR). Bitcoin ETF: BlackRock and other industry pioneers filed for a Bitcoin spot ETF in June 2023, raising hopes for the SEC's approval. The \$9.5 billion in assets held by the existing global crypto ETFs and ETPs demonstrates the significant demand for regulated crypto products. Decentralized Physical Infrastructure Networks: A trending narrative, DePIN (Decentralized real Infrastructure) permits the sharing of physical goods and services via token incentives and access made possible by staking, burning, or buying tokens or NFTs. Helium (decentralized wireless infrastructure), IoTeX (Internet-of-Things hub), Arweave, and Filecoin (decentralized storage) are notable participants in this nascent market. Real World Assets: The DeFi ecosystem is attempting to implement credit market protocols like Maple Finance and Goldfinch so that Real-World Assets (RWAs) may be traded on-chain. Further developments in the RWA field are anticipated for H2 2023 and beyond, with consumer-ready goods perhaps debuting by year's end. Liquid Staking Derivatives (LSDs): Liquid Staking Derivatives (LSDs) saw a sharp increase in activity in H1 2023, mostly as a result of the Ethereum Shapella update. Total value locked (TVL) increased significantly for market leaders Lido and Rocket Pool. By the end of June, LSD platforms had accounted for more than one-third of Ethereum's TVL, with Lido reaching a peak share of around 75%. Platforms like Pendle, Lybra, and Flashstake saw huge rises in TVL, and this trend is anticipated to continue for the remainder of 2023, as did the related LSDfi landscape. Restaking: With the release of EigenLayer in H1 2023, users were able to reuse staked ETH or liquid staked ETH tokens for increased profit and shared security. After the mainnet's introduction, EigenLayer's Restaking Smart Contracts swiftly attained their maximum limits and showed strong demand. The platform is anticipated to draw greater attention and spur the development of new enterprises as it expands its capacity for restaking. zkSync: In 2023, zkSync, a layer-2 Ethereum-based solution that competed with Optimism and Arbitrum, gained popularity. ZkSync's TVL has increased significantly since the debut of its alpha mainnet in March 2023, reaching \$686 million by H1 2023 with more than 1.1 million unique wallets and 1.38 million transactions. ZkSync will be a major factor in 2023 thanks to an impending zkSync airdrop and other projects that want to debut on the platform. Modular Blockchains (Celestia): By segregating execution, settlement, consensus, and data availability into separate levels, modular blockchains like Celestia seek to resolve the blockchain trilemma. FTX Bankruptcy Updates: As of April 2023, over \$7.3 billion in liquid assets have been secured, bringing relief to clients. Creditors have been issued a "Customer Bar Date" of September 29, 2023, and the restructuring process is proceeding. Although compensation to debtors is not anticipated until at least H2 2024, the FTX legal team is contemplating reopening the exchange. Most Viewed Coins in Different Regions: The most popular cryptocurrency in the world in H1 2023, Bitcoin (BTC), continued to dominate altcoins. While PEPE gained popularity everywhere outside South America, Shiba Inu (SHIB) and Baby Doge Coin (BabyDoge) were also widely used memecoins. Except for Asia and Africa, where scaling solutions like Polygon (MATIC) and Arbitrum (ARB) respectively gained favor, Ethereum (ETH) remained popular in most locations. Countries with the Highest Number of Users on CMC: The US continues to lead the world in terms of cryptocurrency users on CMC, accounting for 17.4% of all traffic in the first quarter of 2023. With varied percentages of users, India, Turkey, Germany, Brazil, and Vietnam are the next. Users in Europe and Asia make up the bulk of the remaining traffic. The report from CMC covers the state of the crypto market in the first quarter, including significant trends and performance metrics for each market sector. Participants in the sector and potential investors may benefit greatly from these insights in order to better comprehend current trends and make sound decisions.

- Financial Conduct Authority (FCA) of the United Kingdom has released a new guideline - FCA has observed an increasing use of memes in crypto communications without firms realizing the need to comply. The development affects meme coins including Dogecoin and PEPE. The Financial Conduct Authority (FCA) of the United Kingdom has released a new guideline aimed at addressing the noncompliance of crypto memes with promotional guidelines. The FCA has observed an increasing use of memes in crypto communications without firms realizing the need to comply with its guidelines. FCA's development affects meme coins. This development potentially impacts meme coins such as Dogecoin (DOGE), Shiba Inu (SHIB), and Pepe Coin (PEPE), which were created as internet memes and often communicate with their communities using memes. The FCA emphasizes that these meme coins should adhere to its guidelines or face potential legal consequences, including a two-year jail term. The FCA guideline suggests that crypto memes promoting digital currencies may require a disclaimer to comply with advertising standards. The introduction of regulations by the FCA is not unprecedented in the digital currency ecosystem, and established projects like Dogecoin (DOGE) have experienced similar regulatory scrutiny in the past. Meme coins are known for their volatility, and the sharing of memes can significantly influence the price movements of these assets. This is particularly evident when influential figures like Elon Musk engage in sharing Shiba Inu themes, which some interpret as signals for the underlying asset.

- Lummis emphasized the need for a transparent crypto environment post-XRP verdict. The Senator's work is indicative of rising awareness among legislators. On Twitter, Wyoming Republican Senator Cynthia Lummis emphasized the significance of the latest court judgment by Judge Analisa Torres that the Ripple-associated token XRP is not a security. Senator Lummis tweeted on the verdict and its implications for crypto regulation, stressing their importance. According to her, this judgment shows

that Congress must act quickly. In order to pass a sweeping crypto framework that puts consumer safety first. The Senator, a long-time crypto advocate, emphasized the need for a transparent crypto environment in supporting innovation and protecting investors. The Senator stressed the need to protect Howey Test's judicial precedent. She referred to the legislation she co-introduced with Senator Kirsten Gillibrand, known as the Lummis-Gillibrand bill. Investment and Growth Stifled Moreover, the goal of this legislation is to standardize the way digital assets are regulated under the Howey Test as used by the Southern District of New York. The senator's request for action in the Senate is not without validity. The crypto sector as a whole is likely to be affected by the continuing legal dispute between Ripple Labs and the SEC. The case's resolution may have far-reaching implications for the future of digital asset regulation in the United States. Furthermore, the lack of consensus on how to regulate the nascent blockchain industry has stifled investment and new business creation. To what extent Senator Lummis's request for statutory clarity in the crypto market will be met by Congress remains to be seen as the case develops. Her work, however, is indicative of a rising awareness among legislators. That the crypto economy needs innovative regulation in order to reach its full potential. Highlighted Crypto News Today: Dogecoin Price Struggling for a Trend Reversal; Awaiting Breakout

- Solana (SOL) market cap surged over 106% in the last 30 days. - Solana and Cardano are in close competition, with a 2% difference in market caps. The so-called "Ethereum Killers" Solana (SOL) and Cardano (ADA), emerged as strong competitors in the global crypto market. Following the Ripple (XRP) victory against the U.S. SEC, both cryptocurrencies have gained significant momentum, with Solana experiencing a remarkable surge in market capitalization. Over the past month, Solana's market cap has surged by a staggering 106%, jumping from \$5.77 billion to \$11.93 billion, which was recorded on July 14th. This achievement marks the highest level for Solana since November 2022, underlining its growing influence and investor confidence. As a result of this surge, Solana has surpassed well-established cryptocurrencies such as Litecoin (LTC), Tron (TRX), Polygon (MATIC), and Dogecoin (DOGE), securing the 8th position in terms of market cap. Solana (SOL) vs Cardano (ADA) Solana's bullish momentum continues, allowing SOL to reclaim its market position. Currently, Solana is closely competing with Cardano (ADA), which currently holds a market cap of \$11.55 billion. The market cap difference between Cardano and Solana is just 2%, with Cardano holding a slightly higher market cap compared to Solana. This intensifying competition between the two cryptos further highlights the significance of their achievements and the strong demand. At the time of writing, Solana (SOL) is traded at \$27.99, with a market cap of over \$11.30 billion. In the past 24 hours, SOL has experienced a 5% price increase and a notable 30% surge within a week. Since the beginning of the year, Solana has witnessed an astonishing growth of 181%, and currently SOL holds a 24 hour trading volume of \$1.7 billion. On the other hand, Cardano (ADA) is currently trading at \$0.33 with a market cap of \$11.55 billion. In the past 24 hours, ADA has seen a 1.4% price rise and has gained 17% in a week. In addition, Cardano has a 24-hour trading volume of \$548 million, which is 50% lower than Solana. These statistics highlight the positive performance of both Solana and Cardano, showcasing their substantial gains over various timeframes. - BABYDOGE started a quadrillion token burn poll. - 99% of voting reports "yes burn them!" as it remains in deflation. On a recent note, Baby Doge Coin (BABYDOGE) has crossed the crypto market with effective massive burns and transactions. The community keeps planning the demand and multiple dumps in the last few days. This is with respect to the deflation that piles up the economic revenue in the crypto market. However, the Baby Doge Coin (BABYDOGE) has given a new proposal seeking votes from the crypto communities. A new proposal is LIVE Should we burn the farm reward tokens approximately 1.2 quadrillion on the BNB network? "Baby Doge (@BabyDogeCoin) July 12, 2023 This ensures Baby Doge remains deflationary. Vote now on Snapshot: <https://t.co/pqZgKM6HgQ> Furthermore, this reflects the fact of BABYDOGE remains deflationary with assured activity. The additional source of information is that the coin shares a live proposal of burning the farm reward tokens. Effectively, the token burn ranges between 1 to 2 quadrillion on the BNB network. Is Burning Farm Reward Tokens Worth? The proposal mainly focuses on disabling the core farms that run currently so that there will be little activity. From Wednesday, the voting is kept active and it ends by this Saturday. For now, the current result of the poll on snapshot falls to 99% "Yes Burn them!" and the rest 1% says "No Leave them!". The ones who support the BABYDOGE burn are around 165 trillion in numbers whereas the rest includes 1.7 trillion. The voting system is set to be single-choice voting so that the strict note on casting a vote of either yes or no, is made. The crypto enthusiasts have no comments on this vote cast yet, there is an expectation that BABYDOGE would expand its community with limited supply in demand. Related Crypto News:

- Bittrue adds LEASH, a token from the Shiba Inu trifecta, gaining attention from the Shiba Inu team. - Trading starts on July 12, with withdrawals available on July 13. - Dogecoin Killer and SHIB are top-trending cryptocurrencies on CoinMarketCap. Bittrue, a crypto exchange, has recently listed a token called Doge Killer (LEASH), which is part of the Shiba Inu trifecta. This meme coin ranked 385th on CoinMarketCap, has gained attention from the Shiba Inu team, particularly from marketing specialist @LucieSHIB, who expressed excitement with a "Woof!" comment. Bittrue will begin LEASH trading on July 12 Bittrue has announced that trading for LEASH against the USDT stablecoin will commence on July 12 at 10:00 a.m. (UTC), with withdrawals becoming available on July 13 at 10:00 a.m. (UTC). Despite this listing news, the price of LEASH has experienced a significant decline of 27% since Sunday. As of now, Dogecoin Killer is being traded at \$424 against USDT on the OKX crypto exchange. Additionally, Dogecoin Killer and SHIB, both part of the SHIB ecosystem, have been among the top-trending cryptocurrencies on CoinMarketCap. In a recent blog post, Shytoshi Kusama, the pseudonymous leader of Shiba Inu, mentioned LEASH while discussing the tokens associated with the SHIB ecosystem and

- Baby Doge Coin continues to burn a huge number of tokens. - Currently, the BABYDOGE is falling by 2.76% in the crypto market. A silent-breaking BABYDOGE burn has become the highlighter of the crypto community over the last 24 hours. This effective Baby Doge Coin (BABYDOGE), the meme cryptocurrency just burnt its tokens at a jaw-dropping state. ðŸ”¥ðŸ”¥ðŸ”¥ Æ” Burn BabyDoge (@babydogeburn\_) July 10, 2023 314,729,120,128 (~\$421) #BABYDOGE tokens burned from the total supply in the past hour #BabyDogeCoin #BabyDogeArmy @BabyDogeCoinhttps://t.co/SWAwuHd210 The absolute drop in the circulation supply of the Baby Doge Coin in the town has made a critical move in the total supply and demand. And, the current market capitalization of the same tends to fall by 1.76% at a value of \$203.7 million. Sustainability of Baby Doge Coin However, the global crypto market capitalization is kept decreasing at a gradual level of depreciation overall compared to the last day. The BABYDOGE burn tracker reports and accounts for the current burn stats. An abrupt change in trading volume has become surprising since the market is low by 16.65% with a value of \$2.71 million. This is with respect to the current circulation supply of 36.15% in its total value. So far, over the last 24 hours, it is reported that a certain set of BABYDOGE burn happened. The most worthiest BABYDOGE burn is accounted to be 136,297,352,058 worth nearly \$188 and the highest of all is 314,729,120,128 worth approximately \$421. As per the CoinMarketCap, the current market price is \$0.000000001337 and is depreciating at 2.76%. The trading volume is rating at \$2.58M with a fall of \$23.21%. With this, crypto enthusiasts hope that this continuous burn create a huge demand in the crypto market. Related Crypto News:

- Multichain protocol said that they will be temporarily pausing their operations. - The protocol is still struggling with technical troubles and the absence of its CEO. It seems that a multi-million dollar exploit was perpetrated on the Multichain bridge on Thursday, July 6. A statement from the Multichain protocol said that they will be temporarily pausing their operations. According to estimates, multi-chain assets on the cross-chain protocol Multichain worth a total of over \$125 million outflowed a number of wallets. With all of its assets in wBTC, USDC, USDT, and other altcoins flowing out, the Fantom Bridge seems to face the largest exploit of \$122 million. Also, the Multichain Protocol quickly said they will be looking into the situation. The Protocol stated: Æ”The lockup assets on the Multichain MPC address have been moved to an unknown address abnormally. The team is not sure what happened and is currently investigating. It is recommended that all users suspend the use of Multichain services and revoke all contract approvals related to Multichain.Æ” Struggle Continues More than a month has passed with Multichain still struggling with technical troubles and the absence of its CEO. On crypto Twitter, many began to worry that Multichain had been hacked. After three mysterious withdrawals were made from the platformÆ”s Fantom, Moonriver, and Dogecoin bridge contracts. Popular crypto researcher Colin Wu used data from deExplorer to claim that some users are exchanging Fantom chain assets for other chains through DLN Trade at a discount. Moreover, recent trades reveal that 1 Fantom USDC can be exchanged for 0.9 BSC USDC, 0.88 Polygon USDT, and more, representing a discount of almost 10%. Recently, Binance also halted trading in eight cryptocurrencies connected to the Multichain protocol. Highlighted Crypto News Today: Binance InvestorsÆ” FUD Peaks With Executives Exit, CZ Responds

- A money transmitter license is required before a business may provide money transfers. - The firm apparently has plans to allow crypto services on the platform in the near future. It seems that Elon MuskÆ”s Twitter business, Twitter Payments LLC, has been granted its first money transmitter licenses in the states of Michigan, New Hampshire, and Missouri. A money transmitter license is required before a business may provide money transfers or other forms of electronic payment. This is not the same as a license to sell, since its purpose is to safeguard customers of enterprises that allow the transfer of funds between individuals rather than only between corporations. If and when Twitter Payments launches, it is yet unknown what services will be available. No one knows when the corporation will get its licenses from the fifty different states in the United States where it has applied. Crypto Payment Services Not Far Musk and CEO Linda Yaccarino have not provided many specifics thus yet, and thatÆ”s assuming they get all necessary clearances. Twitter Payments, according to sources with knowledge of the companyÆ”s intentions, would first provide fiat currency transaction capabilities, perhaps comparable to those offered by PayPal. The firm apparently has plans to allow crypto services on the platform in the near future. MuskÆ”s open support for crypto and specifically Dogecoin is known to all. It has also been speculated that Twitter Payments, under a project codenamed Æ”Twitter Coin,Æ” may release its own coin and accompanying wallet. Some of the adjustments have been met with mixed reviews. TwitterÆ”s rate limiter, a feature that restricts the number of postings a user may read in a certain period, has been adjusted so that free users can read no more than 500 in that time. - Dogecoin, the popular dog-themed memecoin, emerged as the top gainer. - The Aave trading price has experienced an increase of over 7.53%. The crypto market has continued to capture the attention of investors with its rapid growth and global acceptance. The crypto market has experienced a new trend of 2.0 version memecoins. These cryptocurrencies were showing a massive surge in a short period of time. Some cryptocurrencies have emerged as top performers, with a remarkable price surge in the constantly evolving crypto market. Dogecoin (DOGE), Aptos (APT), and Aave (AAVE) emerged as the top gainers of the day. These cryptocurrencies have exceeded expectations, skyrocketed in value, and attracted the interest of the whole crypto industry. Dogecoin (DOGE) The popular dog-themed memecoin, Dogecoin (DOGE), emerged as the top gainer. DOGE continued to show significant growth in recent times, even with the arrival of new versions of memecoin. Elon Musk, the CEO of Tesla, has played a crucial role in DogecoinÆ”s trading price. Recently, Elon Musk responded to the random tweet, saying, Æ”Dogs Rock.Æ” Whenever Musk tweets about DOGE, it directly impacts the trading price of the memecoin. At the

time of writing, the trading price of Dogecoin is around \$0.07073, with a massive surge of over 4.37% in the last 24 hours. The trading volume of the DOGE has experienced an increase of 33.24%, according to CoinMarketCap. Moreover, the trading price of Dogecoin shows a bullish intent, which is expected to continue in the upcoming days. Aptos (APT) Aptos (APT) is an innovative public blockchain that focuses mainly on offering high throughput and strong security for smart contracts. The cryptocurrency experienced a significant gain in the last 24 hours. Recently, Aptos was listed among the top 10 traded assets on South Korea's largest crypto exchange, Upbit. The dominance of Korean traders, recognized for frequently driving crypto rallies, in Aptos's price increases is another important element that may have contributed. At the time of writing, the trading price of Aptos is around \$7.89, with an increase of over 4.61% in the last 24 hours. The trading volume of the APT has experienced a surge of over 165.72%, according to CoinMarketCap. Aave (AAVE) Aave is the second-biggest DeFi protocol in the world. It is also the largest decentralized lending network, with a TVL of more than \$9.26 billion. Recently, the Aave trading price has experienced a significant movement. The sudden surge in the Aave's price has attracted investor interest. The remarkable performance takes the surge to more than 5% in the last 24 hours. At the time of writing, the trading price of Aave is around \$78.33, with an increase of over 7.53% in the last 24 hours. The trading volume of Aave has experienced a massive increase of over 100.17%, according to CoinMarketCap. The crypto market has seen remarkable growth, with certain cryptocurrencies emerging as top gainers. These cryptocurrencies have experienced remarkable price increases, providing profitable investment opportunities. However, It is crucial to remember that the crypto market is still highly speculative and volatile. Highlighted Crypto News Today:

- Verge (XVG) crypto has experienced an impressive surge, surpassing 250%. - This surge has positioned Verge as the top gainer in the crypto market. Verge (XVG), the prolonged dead crypto currency, has experienced an unprecedented surge in trading volume, skyrocketing by a staggering 383% within the last 24 hours to record \$507 million. Also, the Verge (AVG) price soared over 300% in a week. This remarkable rally in the crypto has propelled Verge to claim the coveted title of the top trending cryptocurrency in the crypto market, leaving enthusiasts and investors astounded by its performance. Why Verge (XVG) Price Pumping? Verge (XVG), a cryptocurrency known for its emphasis on privacy and anonymity. The crypto currency initially launched as DogeCoinDark in October 2014, rebranded to Verge in February 2016 for wider adoption and operates on the Bitcoin source code, distinct from the meme coin Dogecoin (DOGE). However, during this whirlwind period, Verge has attracted an overwhelming wave of bullish sentiment, as investors scramble to seize the opportunity presented by its surging value. At the time of writing, Verge (XVG) traded at \$0.005783, which is the highest value since May 2022. Also, the cryptocurrency price climbed over 25% in the last 24 hours and 300% in a week. In addition, Verge (XVG) market cap soared over 15% in a day to \$95 million. The questions have arisen regarding the legitimacy of this sudden price increase. Speculation has emerged, suggesting the possibility of manipulation by seasoned cryptocurrency investors. Commonly known as "whales," who may be attempting to sell off their large holdings. However, the surge in Verge's market capitalization serves as a stark reminder of the potential gains and risks associated with investing in the volatile world of cryptocurrencies.

- SHIB2.0 has recently taken the spotlight with its remarkable surge in value. - The trading price of the memecoin has experienced a surge of 60.84%. The crypto market has continued to evolve with the arrival of new memecoins. Those memecoins have captured the attention of investors with sudden price surges. SHIB2.0, the recently launched memecoin, has experienced a massive surge after its launch. Among the vast array of memecoins that have emerged, SHIB2.0 has recently taken the spotlight, captivating the crypto community with its remarkable surge in value. The memecoin SHIB2.0 launched on June 29. After the launch, the memecoin's trading price immediately pumped up. Moreover, with the significant surge, the new memecoin has reached its all-time high of \$0.00614 on its launch day. The latest Evolution of Memecoins SHIB2.0 is the latest version of Memecoin, joining the recent trend of 2.0 versions of popular meme coins. There are other memecoins, including Dogecoin 2.0 and Pepe 2.0. Moreover, the newly launched memecoin SHIB2.0 is listed on the crypto exchange Uniswap. The significant performance of the memecoin is expected to attract more crypto exchanges to get listed in the upcoming days. While Shiba Inu (SHIB) and other memecoins face challenging market conditions, the sudden surge of SHIB 2.0 has taken over the crypto market. SHIB2.0 has experienced a rise of 60.84% in the last 24 hours. Meme coins are still all the rage in the crypto market, with investors and traders always on the lookout for the next great thing. At the time of writing, the trading price of SHIB2.0 is around \$0.002889, with a massive surge of over 60.84% in the last 24 hours. The trading volume of the memecoin is around \$788,965, with a decline of around 68.61%, according to CoinMarketCap. The market cap of the memecoin is around \$2,091,387. Moreover, the total circulating supply for SHIB2.0 is one billion. SHIB2.0 Impact on the Memecoin Sector The emergence of 2.0 tokens has sparked a revolution within the memecoin sector. These new versions of memecoins have quickly gained attention for their remarkable performances, which are now beginning to impact the other memecoins. Pepe, the frog-themed memecoin, has shown a massive increase of 17.01%, resulting in a trading price of \$0.000001805. The trading volume of the Pepe memecoin has experienced an increase of 249.35%. Moreover, Shiba Inu also witnessed a surge in trading prices recently. This raises the question of whether the memecoin season is back. The remarkable performances of these upgraded versions have captured the attention of investors. Early buyers have been taking their profits, and this may be creating attractive possibilities for new purchasers. However, as the memecoin sector continues to evolve, it becomes crucial for investors to closely monitor its performances, developments, and market dynamics. According to the data, Since no whales have yet shown up at the party, it is clear that the price has every opportunity to skyrocket. - Twitter imposes temporary viewing limits due to data scraping and manipulation. - Elon Musk increases post limits for verified and unverified accounts. Twitter, the popular social media platform, has imposed temporary limits on the number of posts users can view per day due to what Elon Musk, Twitter executive chairman, called "extreme levels of data scraping and system manipulation." Users had been experiencing issues such as missing timelines and receiving "rate limit exceeded" messages, resulting in the hashtag #TwitterDown #TwitterFail trending. Initially, verified accounts were restricted to 6,000 posts per day, unverified accounts to 600, and new unverified accounts to 300. However, Elon Musk later announced an increase in the limits to 8,000, 800, and 400, respectively. Shortly after, he tweeted again, stating the new limits as 10,000, 1,000, and 500. Rate limits increasing soon to 8000 for verified, 800 for unverified & 400 for new unverified <https://t.co/fuRcJLifTn> "Elon Musk (@elonmusk) July 1, 2023" Elon Musk justified these restrictions, saying they aim to encourage users to spend less time on the platform and engage with the real world. He emphasized that the changes are temporary measures to combat the aforementioned issues. Twitter users are hopeful that these adjustments will alleviate the problems and enhance their overall experience on the platform.

- Bitcoin has completed Q1 2023 with a trending price surge of 72.3%. - The Fear and Greed Index has a current reading of 60. The crypto market has witnessed a lot of ups and downs in 2023. It continues to attract investors and traders with its resilience and volatility. The major traditional banks have recognized the potential of cryptocurrencies and are stepping up crypto adoption. [Market Overview](#) #Bitcoin price trades above \$30K "CryptoRank Platform (@CryptoRank\_io) July 1, 2023" The Top-10 are traded in different directions: \$LTC +12.5%, \$DOGE +3.95%, \$XRP -1.21% Market capitalization: \$1.30T (+0.07%) The #BTC dominance: 45.45% (-1.14%) Fear & Greed Index: 59 (Greed) [pic.twitter.com/0TrAHovXa7](https://pic.twitter.com/0TrAHovXa7) According to the report, Bitcoin (BTC), the world's largest cryptocurrency by market capitalization, has maintained its trading price above the \$30 mark, providing some relief to crypto investors. However, the other altcoins in the top ten list have been trading in different directions, with some surging while others experiencing minor corrections. The Bitcoin Trading Price Holds Strong Despite the challenging market environment and regulatory issues. Bitcoin has maintained its position above the \$30,000 mark. The stability of the Bitcoin trading price has helped the market recover from the SEC's continuous lawsuit against the leading crypto firms. Moreover, with that stability, the BTC dominance, representing Bitcoin's share of the total crypto market, has experienced a slight decline of 1.14%, reaching 45.45%. Bitcoin has completed Q2 with a trading price surge of around 7%. Due to the significant bullish movement, BTC has completed Q1 2023 with a trending price surge of 72.3%, according to the report. Despite minor fluctuations, the overall market capitalization has remained relatively stable. It stands at \$1.30 trillion with a marginal increase of 0.07%. The Fear and Greed Index, a widely followed sentiment indicator that gauges the emotions and behavior of market participants, has a current reading of 60. It falls into the Greed category, indicating a predominantly positive sentiment among investors. Mixed Performance Among Top Altcoins: While Bitcoin has shown strong stability, the top altcoins in the crypto market have experienced varied performances over the recent period. Litecoin (LTC) has experienced a significant surge, with an increase of 12.5%. As investors wait for the most anticipated Litecoin Halving event. Dogecoin (DOGE), the popular memecoin, has also experienced a surge of around 3.95%. However, Ripple (XRP) has encountered a minor setback, recording a 1.21% decline. And also, Solana (SOL) and Ethereum (ETH) have experienced declines of 3.28% and 0.73%, respectively. The current crypto market overview reveals a mixed trend among the top cryptocurrencies. While Bitcoin maintains its position as the leading cryptocurrency, the other altcoins in the crypto market are showing signs of potential growth. At the time of writing, the trading price of Bitcoin is around \$30,576, with an increase of over 0.29% in the last 24 hours. The trading volume of Bitcoin has experienced a decline of 65.37%, according to CoinMarketCap. Highlighted Crypto News Today:

- Kim Jones, creative director of Dior Menswear, created a pair of trainers dubbed the B33. - Each shoe will have its own digital equivalent, which will verify the sneaker's authenticity. Dior, the high-end fashion label, has introduced a new collection of men's sneakers that come with their own non-fungible token (NFT) and utilize the Ethereum network. Dior announced in a tweet on Friday that Kim Jones, creative director of Dior Menswear, created a pair of trainers dubbed the B33 for the label's upcoming Fall 2023 collection for men. The NFT and online authentication mechanisms are what make these trainers special. Each shoe will have a "digital twin," an NFT created on the Ethereum blockchain. This is identical to the physical shoe. This implies that each shoe will have its own digital equivalent. Which will verify the sneaker's authenticity and provide consumers peace of mind. The retail price of the B33 trainers is \$1,350, and there will only be 470 pairs available. Avoiding Blockchain Terms The B33 shoe line will expand to include six more designs, all of which will have an NFC chip embedded in the right footsole. The encrypted key connected with this chip will provide the user with access to a customized digital environment. Shoe buyers may verify the legitimacy of their footwear and have access to additional premium features on the website. These new variations will cost an average of \$1,100. Dior's use of blockchain technology is not surprising, given LVMH's recent interest in Web3 and cryptocurrency. Also, Dior's statement stands apart because of the company's conscious decision to avoid using any blockchain-related terms. Moreover, Dior has opted to avoid promoting the B33 shoe line using LVMH's previously popularised buzzwords such as Web3 and NFTs. Also, the cryptocurrency landscape is dynamic, which is constantly introducing new coins to

100,000,000 | | All Time High | \$61.30 (On March 31, 2022) | What is Waves (WAVES)? WAVES is the native token of the Waves blockchain launched in 2016. This blockchain enables users to create new and custom crypto tokens. Also, it allows developers to create and launch decentralized apps (dApps) via custom smart contracts. The ledgers on Waves operate on leased proof-of-stake (LPoS), a special PoS consensus mechanism. LPoS lets users participate in the block validation process by leasing their WAVES tokens in specialized nodes. WAVES is deployed in the governance of the blockchain and can be staked or leased for rewards. These payment tokens can be traded on its native Waves exchange and even on third-party centralized exchanges (CEXs). Waves (WAVES) Price Prediction 2023 Waves (WAVES) ranks 122nd on CoinMarketCap in terms of its market capitalization. The overview of the Waves price prediction for 2023 is explained below with a daily time frame. In the above chart, Waves (WAVES) laid out a right-angled descending broadening wedge, which is a bullish reversal pattern. The pattern is an inverted ascending triangle because it is made up of two converging lines with a horizontal line for the resistance and a bearish downward slant for the support. At the time of analysis, the price of Waves (WAVES) was recorded at \$2.13. If the pattern trend continues, then the price of WAVES might reach the resistance levels of \$2.438 and \$4.541. If the trend reverses, then the price of WAVES may fall to the support of \$1.320. Waves (WAVES) Resistance Support Levels The chart given below elucidates the possible resistance and support levels of Waves (WAVES) in 2023. From the above chart, we can analyze and identify the following as the resistance and support levels of Waves (WAVES) for 2023. | Resistance Level | \$3.268 | | Resistance Level 2 | \$5.198 | | Resistance Level 3 | \$2.085 | | Support Level 1 | \$1.331 | As per the above analysis, if Waves's (WAVES) bulls take the lead, then it might hit and break through its resistance level of \$5.198. Conversely, if Waves's (WAVES) bears dominate the trend, the price of WAVES might plunge to \$1.331. Waves (WAVES) Price Prediction 2023 " RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Waves (WAVES) are shown in the chart below. The technical analysis indicator Relative Volume (RVOL) is used to measure the trading volume of an asset in relation to its recent average volumes. It is typically calculated by dividing the current day's trading volume by the average volume over a specified period, such as the past 20 or 50 trading days. Also, it helps traders in identifying unusual trading activity and changes in market sentiment. At the time of analysis, the RVOL of Waves (WAVES) was found below the cutoff line. Thus, it denotes a weak volume of participants trading in the current trend. The next technical indicator is the Moving Average (MA). This momentum indicator is used to smooth out price data and identify trends in the market. It helps in calculating the average price of an asset over a specific period. Particularly, the 50-day moving average (50 MA) evaluates the average closing price of the asset over the past 50 days. When the price of an asset is above 50MA, it is considered to be in an uptrend (bullish), and if laid below 50MA, it is in a downtrend (bearish). Notably, in the above chart, the WAVES price lies above 50 MA (short-term), indicating its upward. Hence, WAVES is in a bullish state. Although this is the current state, a trend reversal might occur. Next up is the Relative Strength Index (RSI). Significantly, this analysis indicator helps traders to determine the strength and momentum of an asset's price movement over a specific period. In this analysis, the RSI is calculated by comparing the average gains and losses of the asset over the past 14 periods. The resulting value lies between a range of 0 and 100. Hence, the readings above 70 indicate an overbought state, and below 30 indicate an oversold state. Significantly, traders often use the RSI to identify potential trend reversals or to confirm the trend's direction. For instance, if an asset is in an uptrend and the RSI reaches an overbought reading of 70, it may suggest that the asset is due for a pullback or correction. Conversely, if an asset is in a downtrend and the RSI is in an oversold reading of 30, it may suggest a potential reversal. At the time of analysis, the RSI of WAVES is at 64.90. Therefore, this indicates WAVES is nearly overbought state. Waves (WAVES) Price Prediction 2023 " ADX, RVI In the below chart, we analyze the strength and volatility of Waves (WAVES) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). To analyze the strength of the trend momentum, let us take note of the Average Directional Index (ADX). The ADX value is derived from the two directional movement indicators (DMI) such as +DI and -DI and is expressed between 0 to 100. According to the data on the above chart, the ADX of WAVES lies in the range of 31.537 pointing out a strong trend. The above chart also displays another technical indicator " the Relative Volatility Index (RVI). This indicator measures the volatility of an asset's price movement over a specific period. With respect to the chart's data, the RVI of WAVES lies below 50, indicating low volatility. Comparison of WAVES with BTC, ETH Let us now compare the price movements of Waves (WAVES) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of WAVES is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of WAVES also increases or decreases respectively. Waves (WAVES) Price Prediction 2024-2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Waves (WAVES) between 2024 and 2030. Waves (WAVES) Price Prediction 2024 If bulls dominate the price momentum and trend patterns, then Waves (WAVES) might successfully test and surpass its resistance levels to hit \$7 by 2024. Waves (WAVES) Price Prediction 2025 The significant upgrades in the Waves Ecosystem might persuade the entry of an increased number of investors. This may eventually boost the Waves (WAVES) price to reach \$9 by 2025. Waves (WAVES) Price Prediction 2026 If Waves (WAVES) successfully tests its major resistance levels and continues to move upside, then it would rally to hit \$11. Waves (WAVES) Price Prediction 2027 If Waves (WAVES) sustains major resistance levels and stands as a better investment option in the market, then WAVES would rally to hit \$13. Waves (WAVES) Price Prediction 2028 If Waves (WAVES) holds a positive market sentiment amid the highly-volatile crypto market by driving significant price rallies, then WAVES would hit \$15 by 2028. Waves (WAVES) Price Prediction 2029 If investors flock in and continue to place their bets on Waves (WAVES), then the crypto would witness major spikes. Hence, WAVES might hit \$17 by 2029. Waves (WAVES) Price Prediction 2030 By 2030, the WAVES price might rally to \$19 if the trend momentum aligns in favor of Waves. Furthermore, WAVES would hold a positive market sentiment and be labeled as a long-term investment with highly profitable ROI. Conclusion If Waves (WAVES) establishes

itself as a good investment in 2023, this year would be favorable to the cryptocurrency. In conclusion, the bullish Waves (WAVES) price prediction for 2023 is \$5.198. Comparatively, the bearish Waves (WAVES) price prediction for 2023 is \$1.331. If there is a positive elevation in the market momentum and investors' sentiment, then Waves (WAVES) might hit \$5. Furthermore, with future upgrades and advancements in the Waves ecosystem, WAVES might surpass its current all-time high (ATH) of \$62.36 and mark its new ATH. FAQ 1. What is Waves (WAVES)? - Baby Doge Coin unveiled an exciting integration with WalletConnect. - Users can buy the BabyDoge with their own fiat currency on BabyDogeSwap. Baby Doge Coin, the popular dog-themed memecoin, has recently made a groundbreaking announcement that will fuel its development and expand its potential within the crypto market. The memecoin unveiled an exciting integration with WalletConnect, an open protocol connecting wallets to Dapps. We're thrilled to announce that <https://t.co/UAopqn3msj> has now fully integrated @WalletConnect V2! [pic.twitter.com/hDFn0ac7s4](https://t.co/hDFn0ac7s4) Baby Doge (@BabyDogeCoin) June 27, 2023 On June 27, Baby Doge Coin introduced an upgraded version of the BabyDogeSwap through the integration of WalletConnect. It allows users to connect their wallets. Moreover, users can swap any token on the Binance Smart Chain by connecting their wallets. BabyDogeSwap offers swap fees as low as 0.09%. Users can create a liquidity farm with their own tokens. No coding is required to create a liquidity farm. Moreover, the burn portal option allows users to burn the BabyDoge for lower fees. On BabyDogeSwap, users are able to buy BabyDoges with their own fiat money. Baby Doge Coin Reveals Unique Virtual Crypto Card On June 18, BabyDoge made its first announcement on the BabyDogeSwap. It especially offers a virtual crypto card. Users can create and fund virtual Mastercard or Visa prepaid cards with their BabyDoge. Through this, users can own a unique prepaid card for Baby Doge Coin. In the virtual card, users can hold up to a \$5000 balance limit and refill anytime they want. The balance will be held in USD. There is no limit to buying cards users can own as many as they want. This integration marks a significant milestone for the memecoin, creating new possibilities for users and signaling the increasing adoption of memecoins in the crypto market. With WalletConnect's seamless wallet integration, users will now have a convenient and secure way to swap tokens with Baby Doge Coin and explore the possibilities it offers. Constant Expansion and Development by the Memecoin The integration of BabyDoge with WalletConnect has made headlines in the crypto space. It boosts the confidence of the BabyDoge community. The update of BabyDogeSwap by BabyDoge has received a great welcome in the crypto community. According to BabyDogeSwap, there have been 427 token swaps in the last 24 hours. BabyDoge has continually shown its drive to expand and develop within the constantly evolving crypto market. The memecoin has continuously developed its ecosystem with new upgrades and integrations. Recently, BabyDoge created a milestone within the memecoin community. It becomes the first memecoin community to set a world record for helping to save dogs. At the time of writing, the trading price of the Baby Doge Coin is around \$0.00000000151, with a decline of over 0.20% in the past 24 hours. The trading volume of BabyDoge has experienced a decrease of 10.63%, according to CoinMarketcap. The recent update from BabyDoge is expected to boost its trading price in the coming days.

The crypto market has witnessed many ups and downs in recent months. Thus, it has become challenging for investors to find a project that can multiply their investment. Moreover, investors want to avoid investing in meme coins like Baby DogeCoin (BabyDoge) and Floki Inu (FLOKI) as they have turned highly bearish and speculative. In the meantime, experts have observed a bullish run by Tradecurve. They are confident that this project can set new growth records, and become a blue-chip project in the coming months. Baby Doge Coin (BabyDoge) Listed On Dubai-based Exchange The Baby Doge Coin (BabyDoge) community is in panic as the project's market value has been declining for the past many weeks. Subsequently, the trading price of Baby Doge Coin (BabyDoge) has plunged by around 27% in the past 30 days. At the time of writing, Baby Doge Coin (BabyDoge) is available to trade at \$0.0000000021. However, Baby Doge Coin investors are hopeful about the latest development in the BabyDoge ecosystem. Recently, Baby Doge Coin (BabyDoge) was listed by a Dubai-based crypto exchange, CetoEx. This can cause an increase in the trade volume, and user base of Baby Doge Coin (BabyDoge). Meanwhile, Baby Doge Coin (BabyDoge) has suffered a major exploit on its network, which can prompt investors to move away from the meme coin. 84% Of Floki Inu (FLOKI) Holders Are Losing Money Despite new partnerships and developments, Floki Inu (FLOKI) has not been able to trade in the green zone. In the latest event, Floki Inu (FLOKI) secured a listing on the WOOX exchange. Earlier, Floki Inu (FLOKI) had partnered with Binance Pay and AliExpress to increase its use cases. However, the latest data from IntoTheBlock has raised questions about the profitability of Floki Inu (FLOKI). The continuously declining price of Floki Inu (FLOKI) has made investors worried. According to the latest data, 84% of Floki Inu (FLOKI) holders are suffering losses, and 2% are at the break-even point. Currently, Floki Inu (FLOKI) is changing hands at \$0.000026, after suffering a crash of 16% on the 30-day price chart. Tradecurve Emerges As The Brightest Star The number of crypto users is projected to soar to 1 billion in the next four years. Moreover, a report has indicated that 60% of crypto owners want to keep their assets in exchanges. It simply indicates that the crypto trading industry will surge in the coming years. However, traders are aggrieved with the existing crypto exchanges due to several issues, such as limited trading options and high transaction fees. But now, Tradecurve has come up with a solution to these issues. It is an all-inclusive exchange that allows people to trade multiple assets through a single user interface. Here, people can invest in cryptocurrencies, equities, forex, and various other assets. Further, it never asks for any personal information during sign-up, which makes it more desirable than privacy-infringing platforms like Coinbase and Binance. The platform has a Copy Trading feature, where novice traders can learn from professionals. TCRV will be the native crypto of the platform, and its owners will receive exclusive deposit bonuses, staking rewards, and discounts on transaction fees. More than 33% of the TCRV presale stage 4 tokens are sold out. To date, the buying price of a TCRV token has increased to \$0.018 from \$0.01 (up 80% already). Early TCRV investors can get 50x profit during the presale, and 100x ROI after the tokens' listing on Uniswap, and other leading exchanges.

- The price of the SHIB surged from \$0.000008019 to \$0.000007476 in a day. - The layer 2 blockchain

Shibarium launch is expected to launch in July. Shiba Inu (SHIB), also known as “the Dogecoin killer,” is facing difficulties maintaining its position in a challenging market environment. The current market decline has intensified the struggle for SHIB as investors eagerly anticipate the launch of “Shibarium,” a highly anticipated layer-2 blockchain. However, concerns are mounting due to the lack of progress in the network’s deployment, especially in the wake of recent volatility in SHIB prices. The long-awaited Shibarium holds significant promise for SHIB investors. As it aims to enable token burns and facilitate SHIB transactions with reduced gas fees. However, the delay in its launch has cast a shadow of doubt on SHIB’s price. That the memecoin still not recovered from the earlier low. Also, while the other top cryptocurrencies showed positive gains, the meme token declined by more than 14% in the last 30 days. Shiba Inu (SHIB) Witnesses Volatility Over the last weekend, the meme coin experienced a notable downturn, plunging from \$0.000008 to \$0.000005. But following the recent upward momentum in the crypto market, the Shiba Inu price surged by over 5.5% in a week to reclaim the \$0.000007 levels. Further, SHIB has also experienced a wave of bearish sentiment. That fueled by Elon Musk’s suspension of the Shiba Inu burn tracking Twitter account, which was activated today. As a result, SHIB’s price dropped from \$0.000008019 to a 24-hour low of \$0.000007476. At the time of writing, SHIB traded at \$0.000007555 with a 24-hour trading volume of \$105 million, which is up around 2%. Also, the memecoin price soared over 12 in the last 14 days and holds a market cap of \$4.4 billion. In addition, Shiba Inu is currently in the sell zone, which means it may increase its value in the future. Further, the prolonged delay in the release of Shibarium continues to weigh on investor confidence. And Shiba Inu developer Shytoshi Kusama hints that the layer 2 solution will be made public in the upcoming month. Recommended for you

In recent years, Indian crypto exchanges increased in numbers while playing crucial roles in bolstering the adoption of cryptocurrencies. Significantly, India is one of the prominent countries for the crypto industry as it has vast users who emerged in the sector. Crypto adoption across the nation has been attributed to various factors. While crypto enthusiasts embrace the rising wave of digital currencies, crypto exchanges serve as the intermediaries connecting them to the transformative ecosystem. However, the Indian government gives a push towards the regulation of cryptocurrencies. This has influenced a notable surge and plunge in the crypto industry. Indian officials have been seeking to set up a clear regulatory framework for monitoring cryptos and address issues like user protection and money laundering. Overall, the objective is to balance between promoting innovation and ensuring a secure and transparent environment for crypto users. Indian crypto exchanges have played a pivotal role in encouraging crypto adoption in India. Furthermore, the Indian crypto ecosystem is evolving and expanding, offering potential ventures for traders, investors, and blockchain supporters. Several crypto exchanges have registered in India and are opting for comprehensive regulation policies. Additionally, in a significant move towards expanding its global presence, KoinBX, the emerging top Indian crypto exchange, has secured European Union Trademark registration. Europe has also been actively working on establishing a complete regulatory framework for cryptocurrencies and related activities. KoinBX Makes the Global Move Crypto exchange KoinBX is extending its global presence by foraying into diverse economies, marking its first step with Europe. It holds a competitive advantage in cultivating a dedicated user base. Currently, the exchange upholds its successful registration under European Union Intellectual Property. Several European countries have implemented licensing and registration regimes for crypto exchanges and virtual asset service providers (VASPs). However, few of them have actively embraced blockchain and crypto to become hubs for innovation. With a determined stride, the Indian crypto exchange embarks on its crypto journey, aiming to cater to crypto enthusiasts worldwide with a plethora of services. The exchange gained popularity among youngsters and has become a go-to platform for millennials who value its seamless trading experience and user-friendly infrastructure. Furthermore, its consistent ascent in the CoinMarketCap ranking list speaks volumes. Meanwhile, its impressive array of features and robust security measures to protect user funds have garnered widespread acclaim among users. In a unique offering, KoinBX enables direct trading of various cryptos against the Indian Rupees (INR), setting itself apart from other platforms. Inclusive of mainstream cryptocurrencies such as Bitcoin (BTC) and stablecoins, KoinBX goes beyond by supporting a wide range of altcoins like Ethereum (ETH), Dogecoin (DOGE), Cardano (ADA), and more for trading against INR. With a transaction fee of approximately 0.2% and a minimum investment requirement of 100 INR, it aligns with other Indian exchanges in terms of fees and entry threshold. Furthermore, crypto exchanges, investors, and enthusiasts unitedly accelerate crypto adoption worldwide. Although, KoinBX is one of the emerging popular Indian crypto exchanges, its crucial step towards global expansion by venturing into Europe showcases its commitment to its users. The journey of KoinBX is in sync with the evolving nature and trends of the crypto industry. As India and Europe continue to fine-tune their legal frameworks, the crypto sector in both nations holds enormous potential for traders, investors, and blockchain supporters.

- Coinbase succeeded in its effort to submit customer complaints to private arbitration. - The Supreme Court dismissed the second case, which the exchange asked to review. Coinbase, a leading crypto exchange platform, succeeded in its effort to submit customer complaints to private arbitration. The U.S. Supreme Court backs the crypto exchange’s request to postpone customer lawsuits. Coinbase has achieved a significant legal victory in its ongoing battle to resolve customer lawsuits through private arbitration. The U.S. Supreme Court has recently ruled in favor of the crypto exchange in customer lawsuits. This decision comes as a significant win for the exchange. Consumer’s Lawsuit Against Coinbase On March 22, the crypto exchange Coinbase revealed that Former Coinbase exchange users had filed claims at the Supreme Court of the United States in two separate cases on the exchange. The lawsuit by the consumer stated that Coinbase violated California law and that the customer had lost more than \$30,000 in the crypto market. The customer, named Abraham Bielski, has filed a lawsuit against the crypto exchange. He claimed that in 2021, a fraudster stole more than \$30,000 from his Coinbase account. The lawsuit claims that the exchange broke the Electronic Funds

Transfer Act by failing to look into or credit Bielski's account. The other lawsuit was filed by former customers, who claimed that Coinbase breached California law against deceptive marketing by attracting individuals into paying to participate in the sweepstakes in 2021. That also offers prizes in the popular cryptocurrency Dogecoin. After Coinbase's request that the Supreme Court considers the issue, the proceeding regarding the sweepstakes was halted until the end of March. Moreover, the court announces that the decision is due by June. Supreme Court Rules in Exchange Favor According to the report, in a 5-4 decision, the justices overruled a lower court's judgment concerning a user who filed a lawsuit after a fraudster stole money from his account. The crypto exchange filed its appeal and argued that the claims should have been arbitrated. The lower court has allowed the proposed class action case to proceed. The Supreme Court dismissed the second case, which the exchange asked to review. Coinbase pursues appeals aimed at resolving disputes through private arbitration, which is frequently preferred by businesses over litigation. The crypto exchange claims that arbitration required under its user agreement for the settlement of concerns. And that under the Federal Arbitration Act, which governs dispute resolution proceedings through arbitration. Arbitration, a method of alternative dispute resolution, has become increasingly popular among companies. It offers a range of benefits, including lower costs, faster resolutions, and confidentiality. The U.S. high court ruled that the lawsuit claimed by one of the exchange's users could not proceed until the exchange defends an appeal of a lower court ruling. The Supreme Court didn't add the crypto issues that Coinbase is facing from the U.S. Securities and Exchange Commission. The decision comes after U.S. SEC filings against the leading crypto exchanges, including Coinbase. The legal victory in the customer lawsuit expected to boost the exchange's confidence in the fight against the SEC.

- Pepe has shown a massive increase of 73.28% in the last seven days. - The memecoin has crossed the 125,000 mark in its holder count. The world of cryptocurrencies has witnessed a fascinating evolution, with the rise and fall of various memecoins capturing the attention of investors in the crypto market. Pepe, the frog-themed memecoin, has recently experienced a significant surge in its trading price. The memecoin has captured the attention of investors and is experiencing an upswing in value. Pepe has shown a massive increase of 73.28% in the last seven days. After the long memecoin season, the top cryptocurrency in the crypto market comes into play, making memecoin go down. The dominant memecoins, such as Dogecoin and Shiba Inu, are experiencing a downward trend. Pepe's unexpected rise surprised the crypto market. Pepe Achieves a Significant Milestone On June 22, Pepe announced that the memecoin had achieved a significant milestone in its holder count. The official Pepe Twitter account posted that the memecoin has crossed the 125,000 mark in its holder count. gm " Pepe (@pepecoineth) June 22, 2023 today we celebrate breaching 125k on-chain \$pepe holders ðŸŒŸ's 128.6k total, 121.9k on ETH, 5.7k on BNB, and 997 on SARB pic.twitter.com/t2F0a6qver As of now, there are 128,600 holders in total, with 121,900 on the Ethereum network, 5,700 on the BNB chain, and 997 on the Arbitrum network. This significant growth in the community of Pepe holders reflects the memecoin's increasing popularity as well as its trading price. The spike in the number of holders took place as Pepe's price experienced a significant surge of 70% in a short period of time. The memecoin is surging upward as it sets to record its fourth consecutive day of advances. A rising token holder count may be a sign of community expansion and also signifies a collective belief in its long-term potential. Holder count continues to be a crucial indicator of interest in a particular crypto asset. Memecoin Shows an Unexpected Surge Pepe showed a significant surge after the launch, making investors believe in the memecoin. The world's largest crypto exchange, Binance, has listed the memecoin after the massive increase. However, after the Binance listing, the memecoin experienced a continuous decline. This raises the question of whether Binance listed memecoin too soon. After that, the memecoin continued to show a decline in its trading price. The investors lost interest in Pepe as Binance Flexible Loan announced the delisting of Pepe as a borrowable asset. However, Pepe's unexpected surge turned investors toward the memecoin again. The exponential increase in both value and trading volume captured the attention of investors seeking potential high-risk, high-reward opportunities. While investors are focusing on Bitcoin, the world's largest cryptocurrency by market capitalization, reaching the \$30K mark for the second time in 2023, the popular memecoin Pepe's recent surge turns investors back to the memecoin again. The remarkable surge takes the memecoin to the top of the gainer's list. At the time of writing, the trading price of the Pepe is around \$0.000001564, with an increase of around 17.03% in the last 24 hours. The trading volume of the memecoin has experienced a massive increase of 52%, according to CoinMarketCap. The continuous surge strengthens Pepe's position in the top 100 cryptocurrency lists on CoinMarketCap. Currently, Pepe holds the 63rd rank on CoinMarketCap. Moreover, it is expected to move above the top 50 sooner.

- Top 10 cryptocurrencies are BNB, XRP, DOGE, TRX, LTC, DOT, SHIB, ATOM, LINK, and UNI - Bitcoin holds a market dominance of 49.5%. Bitcoin (BTC), the global leader in the cryptocurrency market, experienced a significant surge of over 8%, reaching the \$29,000 range. This impressive price movement has had a ripple effect throughout the market, causing several top altcoins to display gains and chart a positive trajectory. In addition the second largest cryptocurrency Ethereum (ETH) climbs about 5.5% to \$1,820. The BTC price propelled by two major developments. The world's leading asset management firm, BlackRock, has announced its intention to launch a Bitcoin Exchange-Traded Fund (ETF) and Deutsche Bank has made a request for a cryptocurrency custody license. The sudden surge in Bitcoin price has attracted renewed investor interest and injected optimism into the crypto market. Further, the top altcoins follow suit with green charts. Let's look at top 10 cryptocurrencies and its price actions. Binance Coin (BNB) - Market Cap: \$39B - 24-H Trading Volume: \$657M Despite the downfall in the past few days, which led by the Binance vs SEC lawsuit, BNB seems to be experiencing some gains. At the time of writing, BNB traded at \$247, which soared about 2.6% in a day and its trading volume skyrockets around 75%. Ripple (XRP) - Market Cap: \$26B - 24-H Trading Volume: \$1B Recently, Ripple grabs attention in the crypto community as the Ripple vs SEC lawsuit nears ending. Also, the SEC-Ripple case's final decision will have significant effects on the cryptocurrency market and may

set a precedent for how cryptocurrencies should be categorized and regulated. At the time of writing, XRP traded at \$0.495, which rose about 2.5% in a day and the 24 hours trading volume soared 35%.

Dogecoin (DOGE) - Market Cap: \$9B - 24-H Trading Volume: \$280M Dogecoin is the popular memecoin and a favorite coin for Twitter CEO Elon Musk. Also, it never fails to attract crypto investors and enthusiasts. At the time of writing, DOGE traded at \$0.06467 with a price surge of over 3.6% in a day and 4% in a week. Also, the meme coin trading volume is up about 84%.

TRON (TRX) - Market Cap: \$6B - 24-H Trading Volume: \$215M At the time of writing, TRON traded at \$0.07044 with a price rally of over 2.5%. Also, recently Arkham, the groundbreaking platform offering comprehensive crypto intelligence, announced the complete integration of the TRON network.

Litecoin (LTC) - Market Cap: \$6B - 24-H Trading Volume: \$707M Litecoin price increased over 9.5% in the last 24 hours and 8.5% in the past to trade as at \$84.43. Also, LTC 24 hours trading volume skyrockets over 126%.

Polkadot (DOT) - Market Cap: \$6B - 24-H Trading Volume: \$707M Recently Polkadot has unveiled a new network upgrade, introducing significant modifications to its blockchain. DOT price surged over 5.5% in a day to reach \$4.69 range. And the altcoins trading volume is up 50%.

Shiba Inu (SHIB) - Market Cap: \$4B - 24-H Trading Volume: \$128M Shiba Inu is the second largest meme coin. But now it is booming with its later 2 blockchain Shibarium launch, which created hype over the community. SHIB traded at \$0.000007289 with a price surge of 2% in the last 24 hours and 5.5% in the past week.

Cosmos (ATOM) - Market Cap: \$3B - 24-H Trading Volume: \$98M Next to Polkadot, we have Cosmos with a price rally of more than 5.5%. DOT traded at \$8.84 with a trading volume surge of 56%. Following these gains, the ATOM market still hints towards an impending bullish scenario.

Chainlink (LINK) - Market Cap: \$3B - 24-H Trading Volume: \$201M At the time of writing, Chainlink traded at \$5.35 with a rise of approximately 5.5% in a day and 24 hours trading volume rise of 60%. Further, Chainlink launched NFT Floor Price Feeds, which combines decentralized oracle networks with the pricing methodology of Coinbase Cloud. This solution provides developers with reliable and top-notch data on the floor prices of NFTs.

Uniswap (UNI) - Market Cap: \$3B - 24-H Trading Volume: \$54M Uniswap is the largest decentralized crypto exchange. At the time of writing, Uniswap price soared more than 3% in the last 24 hours and 2% in the past week to trade at \$4.54. Also, UNI trading Volume increased 3%.

- The investing approach of Spot DCA mitigates risk and weather market volatility. - Spot DCA allows consumers to take advantage of pricing trends across time. Binance CEO CZ announced the introduction of Spot DCA (Dollar-Cost Averaging) on the Binance Spot platform amidst continuing regulatory issues including a recent lawsuit brought by the U.S. Securities and Exchange Commission (SEC). The biggest cryptocurrency exchange aims to protect its customers' assets and lessen the effects of market fluctuations. Weathering Market Volatility

Binance, in its most recent blog post, announced the debut of Spot DCA in an effort to improve users' trading experiences and dampen the effects of market volatility. This ground-breaking capability allows users to routinely buy and sell assets at predefined price points and intervals, mitigating the impact of market swings. Moreover, the investing approach of dollar-cost averaging has been used successfully by many to mitigate risk and weather market volatility. Users may set up their accounts with a cryptocurrency exchange. So that their transactions are automatically executed at defined intervals regardless of the asset's current market price. Furthermore, Spot DCA allows consumers to take advantage of pricing trends across time. Thus, mitigating the impact of price spikes and dips. Also, trading bots may be built up in Spot DCA to automatically place buy and sell orders depending on user-defined criteria. This allows users to benefit from market downturns by stocking up on assets at reduced costs while locking in gains when asset values rise beyond a predetermined "take-profit" threshold. The SEC has launched a lawsuit against Binance, and the exchange has been the subject of other regulatory actions. Binance is being sued for allegedly running an unlicensed exchange, selling unlicensed securities, and mixing consumer cash with company assets. Recently, the duo has reached a settlement which was further approved by the Court. Recommended For You:

- "Explain This Bob" account had over 400,000 followers. - Twitter has not acted against the Bob Token account. Following Elon Musk's accusation of being a "scam crypto account," the Twitter account of the widely-known meme coin-associated AI bot "Explain This Bob" has been suspended. On June 18, Elon Musk took to Twitter to accuse the account of being a scam, and shortly after his tweet, the bot's account was suspended. This sure looks like a scam crypto account. If so, it will be suspended. "Elon Musk (@elonmusk) June 18, 2023 Utilizing Open AI's GPT-4 model, ExplainThisBob, an AI-powered bot designed to simplify complex tweets by breaking them down into more easily understandable language. When tagged in a tweet, it would provide an 'explanation' of that particular tweet. Furthermore, the project had a connection to the Bob Token (BOB), an ERC-20 memecoin that released in April 2023. By suspending the account, Musk's previous favorable impression of the bot has taken a complete turn, contradicting his earlier tweet on April 20 where he openly declared 'I love Bob' in response to one of its tweets. This specific tweet is also prominently featured on the project's website. Despite the suspension of the ExplainThisBob account, Twitter has not implemented any measures against the Bob Token account. Reports indicate that BOB's current price stands at \$0.00001908, accompanied by a 24-hour trading volume of \$8,801,002. Over the past 24 hours, BOB has witnessed an decrease of 8.5%. - Elon Musk has publicly promoted Dogecoin on multiple occasions. - The complaint states that Musk took use of his large Twitter following to manipulate. The million-dollar class action lawsuit filed against Elon Musk for insider trading of cryptocurrency Dogecoin took a new turn today. Elon Musk's lawyer Alex Spiro revealed that Mr. Musk does not own any Dogecoin wallets that were part of price manipulation. Earlier, a class action lawsuit was filed against the billionaire for allegedly manipulating price of Dogecoin and cashing out \$95 Million in pump dump. Manipulating the Market Late in May, a group of DOGE investors revised their case, accusing Musk of deceptive practices that

inflated the price of the currency. The complaint states that Musk took use of his large Twitter following and subsequent participation on NBC's Saturday Night Live to manipulate the cryptocurrency market in his favor. Elon Musk has publicly promoted Dogecoin on multiple occasions mostly to his large number of twitter followers. It was always believed that the billionaire is actually a Dogecoin holder. The ongoing proceedings in the lawsuit filed against Elon Musk particularly mention Dogecoin wallets that benefitted from Elon Musk's tweets between April 3rd, 2023 to April 9th, 2023. As reported by NY Post, his lawyer in court blasted the plaintiff's lawyer for assuming that the wallet in trial belong to billionaire Elon Musk. He argued that the sole basis for the lawsuit is that these wallets belong to Elon and which is in fact wrong. As falsely reported by many popular publishers, Elon Musk does not own any Dogecoin, but actually he has publicly admitted to owning cryptocurrencies including Dogecoin. He may have other wallets which were never a part of the pump dump. So, this FUD that Elon Musk is not owning any Dogecoin may be actually untrue. In a tweet from, October 2021, Elon Musk shared that he owns Bitcoin, Ethereum, and Dogecoin.

- BitPay will facilitate the use of cryptocurrencies by fans and the general public. - The professional basketball team is now indirectly backing the adoption of DOGE and XRP. The London Lions, a professional basketball club in the United Kingdom, has taken a tentative step into the crypto realm by forming a partnership with BitPay to accept digital currencies for goods purchases. In a first for the crypto and sports worlds, the alliance essentially means the professional basketball team is now indirectly backing the adoption of popular digital currencies such as Dogecoin (DOGE), and XRP. Moreover, BitPay facilitates the use of cryptocurrencies by fans and the general public who want to purchase team jerseys and accessories. BitPay supports a wide variety of digital currencies. Including Dogecoin, XRP, Shiba Inu (SHIB), Bitcoin (BTC), and Ethereum (ETH), among others. Bitpay-Bridging the Gap As one of the most widely used crypto payment systems in the Web 3.0 era. BitPay is helping to bridge the gap between traditional businesses and the cryptocurrency ecosystem. Last year, it was reported that BitPay had assisted Spanish Airlines in starting to accept cryptocurrency payments for airline tickets. Through strategic alliances, the payment processor has increased the number of businesses that are interested in cryptocurrencies. The London Lions basketball club's collaboration with BitPay is well-known. Although it is not the first example of a sponsorship contract between a sports team and the cryptocurrency industry. Mark Cuban, owner of the Dallas Mavericks and a vocal proponent of cryptocurrency, made history in 2021. When the franchise became the first NBA franchise to accept DOGE as payment for product sales. The London Lions' decision to back Dogecoin, XRP, and other cryptocurrencies might serve as a model for future adoption by mainstream businesses.

- The global crypto market cap climbs about 3.75% to \$1.07 trillion. - Bitcoin (BTC) price surged to the \$26.5K range. In a significant development for the cryptocurrency market, major digital currencies closed the week with notable gains, driven by the news of BlackRock's plans to launch a Bitcoin exchange-traded fund (ETF). The announcement by BlackRock, one of the world's largest asset management firms, has captured the attention of investors and ignited a fresh wave of optimism. The BlackRock Bitcoin ETF plan has generated excitement in the cryptocurrency community as well. The potential entrance of such a reputable player into the crypto market is seen as a validation of the digital asset class and a potential catalyst for wider adoption. Crypto Market Hits New Weekly High As the news broke, the leading cryptocurrencies, including Bitcoin (BTC) and Ethereum (ETH), experienced an uptrend. That drives the global crypto market cap to jump by over 3.75% to \$1.07 trillion. Bitcoin reaches a new high for the week. At the time of writing, BTC traded at \$26,593, with a surge of 4.09% in a day and 3.5% in a week. ETH climbed about 4.5% in the last 24 hours. Top altcoins, such as Binance Coin (BNB) and XRP, gained 4.50% and 3.23%, respectively. In addition, Solana (SOL), Cardano (ADA), and Quant (QNT) also experienced significant surges, which were 7.75%, 4.14%, and 13.5% increases, accordingly. Further, leading memecoins Dogecoin (DOGE) and Shiba Inu (SHIB) also soared and displays the meme coin frenzy has not yet ended. Moreover, investors are closely monitoring the developments surrounding BlackRock's Bitcoin ETF plans, as they could open the door for institutional investors who have been waiting for a regulated investment vehicle to enter the crypto space. An ETF provides a more accessible and familiar investment avenue, potentially attracting a broader range of investors seeking exposure to cryptocurrencies.

- Baby Doge Coin price surged over 6% in the last 24 hours. - BabyDoge trending on Twitter with over 1.3m tweets. Significant things are happening in the meme coin realm and cryptocurrency market while the industry faces major challenges from regulators. A popular meme token, Baby Doge Coin (BabyDoge), is trending over Crypto Twitter with a notable price rally. BabyDoge was inspired by its renowned counterpart, Dogecoin, which witnessed a remarkable 6% price surge today. This surge comes as the latest development in a series of positive trends that have propelled the token to new heights in recent weeks. At the time of writing, BabyDoge price had climbed about 5% to \$0.000000001439 with a 24-hour trading volume of over \$3 million, which soared about 26.5%. Baby Doge Coin surged by 6.5% in a week and has a market cap of over \$217 million. In addition, the meme token RSI indicates that BABYDOGE is in an extremely overbought stage, which means it may have a correction in its price. Further, BABYDOGE recently made headlines with a historic burn of 206 quadrillion tokens valued at around 294 million. Despite the burn, there is still a sizable supply of 152 quadrillion BabyDoge tokens in use. The rise of BabyDoge resulted in its emergence as a prominent player in this flourishing landscape. Moreover, social media platforms have played a pivotal role in catapulting Baby Doge Coin's popularity. Also, the recent surge in price reflects the community's optimism and confidence in Baby Doge Coin's long-term prospects. Recommended for you

- Bakkt decided to delist three cryptocurrencies due to regulatory uncertainties. - Robinhood was the first exchange to say it would stop supporting all three cryptocurrencies. Following the United States Securities and Exchange Commission's (SEC) designation of several cryptocurrencies as investment

contracts earlier this week, digital currency trading platform Bakkt Inc will delist Cardano (ADA), Solana (SOL), and Polygon (MATIC). The crypto exchange based in Georgia, USA, decided to delist three cryptocurrencies due to regulatory uncertainties. Marc D'Annunzio, the company's general counsel, told that this move was being made "until there is further clarity on how to compliantly offer a more extensive list of coins." Concerns Over Liquidity Rises Due to the SEC's lawsuit against Bittrex, Bakkt, which is known to offer fewer digital currencies than the industry standard, delisted Algorand (ALGO) and Decentraland (MANA) a few months ago. Bakkt has decided to err on the side of caution in light of the increasing scope of industry crackdowns and to efficiently handle the limited number of assets present on its platform. Bitcoin (BTC), Ethereum (ETH), Dogecoin (DOGE), Litecoin (LTC), USD Coin (USDC), and Shiba Inu (SHIB) are the only cryptocurrencies that may be traded on Bakkt at the moment. Delisting of the designated digital currencies by the SEC is quickly becoming a significant trend, and experts in the field have raised concerns that this may reduce the liquidity of the tokens in question. Robinhood was the first exchange to say it would stop supporting all three cryptocurrencies. Its delisting cannot be considered less damaging than Bakkt's since, unlike Bakkt, it allowed users the ability to trade the three impacted tokens until the 27 of this month. Following Robinhood's lead, eToro said that its American clients would no longer be able to trade in any of the three cryptocurrencies until further clarification was provided by regulators. As the trend of delisting grows, experts in the field are curious as to which service will be the next to follow suit. DUBLIN (BUSINESS WIRE) – "The "Global Cryptocurrency Market Size, Share, Growth Analysis, By Type, By Process, By Application" Industry Forecast 2022-2028" report has been added to ResearchAndMarkets.com's offering. The global cryptocurrency market size was valued at USD 4.06 billion in 2021 and is poised to grow from USD 4.57 billion in 2022 to USD 13.18 billion by 2030, growing at a CAGR of 12.5% in the forecast period (2023-2030). Cryptocurrency is a digital or virtual currency that uses cryptography for security and operates independently of a central bank. It is a decentralized form of currency that allows for secure and anonymous transactions, and its value is determined by market demand. Cryptocurrency has gained popularity in recent years and is used for a wide range of purposes, including as an investment, for online transactions, and as a means of payment. Segments covered in this report The Global Cryptocurrency Market is segmented on the basis of Type, Process, Application, and Region. Based on Type, the Cryptocurrency Market is segmented into Bitcoin, Ethereum, Bitcoin Cash, Ripple, and Others. Based on Process, the Cryptocurrency Market is segmented into Mining, Transaction. Based on Application, the Cryptocurrency Market is segmented into Trading, Remittance, Payment, and Others. Based on region, the global Cryptocurrency market is segmented into North America, Europe, Asia-Pacific, South America, and MEA. Driver The cryptocurrency market is the increasing adoption of blockchain technology. Blockchain is a decentralized and secure method of storing data, and it is the underlying technology behind most cryptocurrencies. Additionally, the growing popularity of cryptocurrency as an investment asset is driving the growth of the market. Cryptocurrencies are seen as a high-risk, high-reward investment opportunity, and their value has been increasing in recent years. Furthermore, the increasing use of cryptocurrency for online transactions and payments is driving the adoption of cryptocurrency as a mainstream form of currency. Restrain The cryptocurrency market is regulatory uncertainty. Cryptocurrency is not yet regulated in many countries, and this has led to concerns around fraud, money laundering, and other criminal activities. Additionally, the lack of understanding and awareness of cryptocurrency among the general public can limit its adoption. Finally, the volatility of cryptocurrency prices can be a concern for investors, as the value of cryptocurrencies can fluctuate rapidly. Trend The cryptocurrency market is the increasing use of cryptocurrency for cross-border payments. Cryptocurrency allows for fast, secure, and low-cost cross-border transactions, and this is driving the adoption of cryptocurrency by businesses and individuals. Another trend is the increasing use of cryptocurrency for remittances, where it is being used to send money to friends and family in different countries. Additionally, there is a growing interest in the use of cryptocurrency for micropayments and online purchases, where it can provide a more efficient and secure method of payment. Finally, the development of new cryptocurrencies and blockchain-based applications is a key trend in the market, as it is driving innovation and growth in the industry. - Crypto Investors can earn passive income with Fancy Crypto. - Fancy Crypto offers a range of cloud mining services. Generating passive income with cryptocurrency can be an exciting opportunity. While there are no guaranteed methods. Here, cryptocurrency mining has emerged as a sector that attracts individuals seeking passive income. In the current economic climate, it can be challenging to find a reliable and profitable investment opportunity. However, "Fancy Crypto" is one platform that aims to simplify cloud mining and enable easy entry into this field without the need for expensive hardware or technical expertise. Fancy Crypto Benefits Investors Cloud mining has made crypto mining more accessible than ever before. Individuals with limited technical knowledge or resources can participate in mining activities. Cloud mining platform Fancy Crypto provides a user-friendly interface that simplifies the process. Fancy Crypto gained popularity with over 360,000 satisfied users worldwide and is known for providing reliable hash rates. Also, it stands out among global competitors by offering

hash rates ranging from 2 to 10 percent, surpassing other platforms. With Fancy Crypto, users can enjoy a hassle-free mining experience. Their advanced technological expertise ensures a smooth and seamless process, eliminating hidden costs and complex contracts often encountered on other platforms. In addition, transparency and risk-free operations are key features of Fancy Crypto. However, Fancy Crypto offers a range of cloud mining packages, such as Bitcoin (BTC), Ethereum (ETH), Litecoin (LTC), Dogecoin (DOGE), and Ethereum Classic (ETC). With an affordable starting investment of just \$10, individuals can embark on their mining journey through this package. In exchange, users can anticipate a daily return of \$0.10, providing a steady stream of earnings from their mining activities. Beginners can start with a minimal investment of \$10, which guarantees a fixed return of \$10.15. Experienced users have the opportunity to invest \$100 for four days with a fixed return of \$105.3. In Ethereum Cloud Mining, with an investment of \$350 for five days, users can expect a fixed return of \$378. Litcom Cloud Mining offers substantial returns. If users invest \$800 for ten days, they will yield a fixed return of \$944. In Dogecoin Cloud Mining, the memecoin enthusiast can get a return of \$1938.75 if they invest \$1500 for fifteen days. Ethereum Classic Mining presents a longer-term investment opportunity, requiring \$3000 for 28 days, but providing a fixed return of \$4806.7. Finally, for those seeking the potential rewards of Bitcoin, Bitcoin Cloud Mining offers an investment of \$5000 for fifty-six days, with a fixed return of \$11580. Fancy Crypto also offers a referral program, enabling users to earn rewards by inviting others to join the platform. Through this program, affiliates can receive a 3% commission on purchase orders made by their referrals. This presents an additional opportunity for users to enhance their earnings and maximize their profits. However, while the crypto platform is facing a lot of scrutiny, Fancy Crypto may be an alternative opportunity for users to earn income. Remember, it's important to conduct thorough research and due diligence before investing in any platform or service. - Memecoins show signs of an imminent bull run. - Rebound from a Downtrend Week Ignites Community Hope. Memecoins dominated the cryptocurrency market in the first quarter of 2023, attracting immediate attention and fostering a positive market sentiment due to their humorous nature. However, the current situation has undergone a notable change. The market's inherent volatility has made the past month less favorable for memecoins, leading the community to question the sustainability of the hype. Nevertheless, today's slight rebound offers a glimmer of hope. Despite price fluctuations, memecoins continue to captivate crypto enthusiasts' interest. They frequently introduce updates and advancements to remain relevant. For example, Shiba Inu introduced Shibarium, and Floki Inu launched an educational platform. These developments contribute to the gradual rebound, indicating the potential for another bull run in the future. Baby Doge Coin Regarding specific memecoins, Baby Doge Coin has gained attention as a rising star in the memeworld. It currently stands at a price of \$0.000000001415 with a surge of 2.26%. Despite a drastic decline of 19.19% last month, it demonstrates resilience. Market analysts attribute the start of this rebound to Baby Doge Coin's recent partnership with North Shore Animal League, the world's largest animal rescue and adoption organization. Shiba Inu Shiba Inu remains a popular topic among memecoins, especially with the introduction of Shibarium. Although it faced a bearish trend last week, experiencing a 15.3% decline with an all-time low price of \$0.000005892. But with Shiba Inu maintaining a strong community base, Today it initiated a price surge, reaching a maximum surge of 1.78% with a price of \$0.000006809. While Shiba Inu encounters challenges with price surges, its future moves suggest a potential role in the anticipated bull run. Dogecoin As for Dogecoin, the oldest memecoin, struggles to compete in the rebound price surge game. Currently priced at \$0.06172, ranging from a low of \$0.06076 to a high of \$0.06245, it experiences high market volatility. However, compared to the significant 11.18% decline observed last week, there are signs of a positive rebound. And part of this high market-cap memecoin gang, FLOKI is currently still in the redzone following a dark week of 21.54% decline. In conclusion, the memecoin community maintains a cautious yet hopeful outlook following today's rebound, believing that a bull run is on the horizon.

- SHIB is struggling to keep its momentum. - The price has dropped considerably over the past few weeks. - SHIB price drop can be attributed to the recent SEC lawsuit and its effects. The Shiba Inu token (SHIB), previously hailed as the "Dogecoin Killer," is currently facing challenges as the cryptocurrency market contends with regulatory scrutiny. SHIB has experienced a decline of approximately 20% in its value, resulting in a price level of \$0.000006 and diminishing its profitability to a modest 7%. Consequently, SHIB has become one of the less performant tokens in the current market. Shiba Inu's price drop, thanks to SEC? The recent lawsuits by the SEC against Coinbase and Binance have seemingly had an impact on the broader market, including Shiba Inu. These legal disputes have generated uncertainty and triggered a widespread sell-off of various digital assets, as investors adopt a cautious approach due to regulatory concerns. SHIB's selling volume has witnessed a notable increase, indicating a bearish market sentiment. This sudden surge in selling activity highlights the challenges associated with holding SHIB as an asset. Additionally, these developments have raised concerns about the future prospects of Shiba Inu. In terms of market performance, Shiba Inu had previously exhibited remarkable resilience. During the 2021 bull run, it surpassed expectations by achieving gains exceeding 2,000,000%. Its substantial rally and enthusiasm surrounding the meme coin garnered significant market attention. However, recent market dynamics appear to have worked against it in the past few years.

- ADA, SOL, MATIC, SHIB and DOGE laid two daily red candles consecutively. - Polygon (MATIC) recorded its one-year-low whereas SHIB hits a two-year-low. - The cryptocurrency market declined 5% in the last 24h to its 2-month-low. The global cryptocurrency market dropped 5% over the last 24 hours, displaying the wild crashes of altcoins. Among them, Cardano (ADA), Solana (SOL), and Polygon (MATIC) recorded

alarming price drops. Memecoins like Shiba Inu (SHIB) and Dogecoin (DOGE) were also spotted on the list of cryptocurrencies that displayed startling losses. On Friday, the renowned crypto and stock trading platform Robinhood announced its decision to delist these 3 cryptocurrencies that SEC claimed as securities. Let us decode the extremely negative downtrend of SOL, MATIC, and ADA. Additionally, let us also look into the staggering price actions of SHIB and DOGE. Solana (SOL) exhibited a maximum 24-hour loss of 27.47%. Pulling up two consecutive daily red candles, SOL bottomed to its 5-month-low at \$12.80 during the Asian morning hours. As per data from TradingView, at the time of analysis, the RSI of SOL was 23.05, confirming its stance in the oversold zone. Polygon (MATIC) dropped by 24.71% in the last 24 hours, displaying its deep foray into the red bearish zone. MATIC hit its one-year low at \$0.5089 during the Asian morning hours. After laying two consecutive daily red candles, the oversold MATIC traded at \$0.5875 at press time, as per CoinMarketCap. Cardano (ADA) displayed a fall of 24% over the past day. The crypto had marked its new 5-month-low at \$0.22. ADA is currently in an extremely oversold state, as its relative strength index (RSI) was 16.55. According to CMC, at the time of writing, the price of ADA was \$0.2405. Shiba Inu (SHIB) fell 21.85% in the last 24 hours. Shockingly, SHIB tanked down to its 2-year-low. As per TradingView, the memecoin marked its new low at \$0.0000543. SHIB confirms its oversold state with its RSI of 16.78, as recorded during analysis. At press time, Shiba Inu traded at \$0.00006204. Dogecoin (DOGE) the dominant memecoin declined by 11.79% over the past 24 hours. DOGE recorded its 11-month-low at \$0.053 during the Asian morning hours. One distressing thing to be noted is despite Elon Musk, the so-called Dogefather, tweeting about Doge, Dogecoin's price continued to be under the spell of bears. At press time, DOGE traded at \$0.05976 with no hint of reversal. Meanwhile, BNB Coin (BNB) and XRP the two other victims of the SEC's regulatory crackdown exhibited notable price drops. At press time, BNB was down 8.4% trading at \$236.1. Per contra, XRP fell 6.58% to trade at \$0.487. - Baby Doge Coin (BABYDOGE) has partnered with Animal League. - BABYDOGE facing a huge drop of around \$19.19 over the past 7 days. One of the popular memecoins, Baby Doge Coin (BABYDOGE) has moved forward with a partnership. The world's largest animal rescue and adoption organization, North Shore Animal League has started saving dogs by supporting BABYDOGE. The @BabyDogeCoin Mobile Unit on the move, helping dogs find forever homes! Baby Doge (@BabyDogeCoin) June 9, 2023 Thru our partnership with @AnimalLeague, we're saving doges & having real life impact! We're proud to help our four legged friends in need & honored to be part of such a great cause. #BabyDogeArmy <https://t.co/E3444c2WwN> The rescue dogs are given life through these shelter partners which actually has a real-life impact. Animal League, in Washington, New York, is proud enough to help this cause and this supports adoption as well. The Baby Doge Coin has fallen by 19.19% considering the last 7 days of its pricing according to CoinMarketCap, the value it holds currently is \$0.00000001578. Over the last 24 hours, the trading volume is evolving to the sky at an increase of 72.80% and is currently \$3M as per the crypto market. Meanwhile, there are chances for Baby Doge Coin to bounce back from the loss it has faced since the current supply is 36.22%. Yet, the burns happen regularly. And, this Animal League brought effective support to BABYDOGE. Meanwhile, this could also be the turning point. Recommended For You:

- As of June 27, 2023, support for the three cryptocurrencies will be discontinued. - Robinhood presently offers only 18 cryptocurrencies. Robinhood announced on Friday that it would cease supporting some of the cryptocurrencies it is currently offering on its platform, possibly as a result of the U.S. Securities and Exchange Commission's (SEC) lawsuits against two of the top crypto exchanges, Binance and Coinbase, recently. In spite of the fact that Cardano (ADA), Polygon (MATIC), and Solana (SOL) are all in the top 10 currencies in terms of market capitalization, the company has made the decision to end support for these cryptocurrencies. It is not clear if the platform would remove other cryptocurrencies from its offering or not. SEC Crackdown After Effects The cryptocurrency market is moving more or less sideways in anticipation of the US Federal Reserve's interest rate decision on June 14, 2023, but none of the three coins, Cardano (ADA), Polygon (MATIC), or Solana (SOL), showed any immediate response to the announcement of Robinhood delisting. Although the firm did not state the litigation against Coinbase and Binance as the basis for the delisting, that is widely believed to be the case. Several crypto tokens have already been approved as securities by the US Securities and Exchange Commission. Moreover, since the recent litigation, the regulatory office has added 16 more tokens to the 67 it already considered securities. The business said that as of June 27, 2023, support for the three cryptocurrencies will be discontinued on Robinhood crypto. The organization stated: "Based on our latest review, we've decided to end support for Cardano (ADA), Polygon (MATIC), and Solana (SOL) on June 27th, 2023 at 6:59 PM ET. No other coins are affected and your crypto is still safe on Robinhood." Furthermore, Bitcoin, Ethereum, Litecoin, Dogecoin, and Shiba Inu, among others, will still be tradeable on the platform, however. Robinhood presently offers only 18 cryptocurrencies and with the above three gone, it comes down to 15. Recommended For You: Robinhood Evaluating Cryptocurrency Offerings Amidst SEC's Crackdown

Like any other industry with many moving components, volatility is always present in the cryptocurrency sector. Today, we explore two notable projects like Shiba Inu and Tradecurve and the shifting sentiments surrounding their price performance. While Shiba Inu has experienced a period of stagnation, analysts are increasingly bullish on Tradecurve, which many see as a rising presale star, highlighting the potential for long-term growth in the coming days. Summary - Shiba Inu unable to see any price increases - Falling TVL could signal a liquidity crisis for Shiba Inu - Tradecurve presale to see a substantial long-term growth Shiba Inu (SHIB) and its Stagnating Journey Shiba Inu, which came after the success of Dogecoin, initially gained attention since many individuals viewed it as the Dogecoin killer. The project garnered significant interest from retail investors, driven by social

media hype and community enthusiasm. However, in recent times, Shiba Inu's price has been relatively stagnant, struggling to break through key resistance levels and regain the momentum it once enjoyed. Shiba Inu rose to prominence at the height of the 2021 bull market by leading price surges that attracted much media attention. As a result, the Total Value Locked (TVL) of ShibaSwap, the decentralized exchange linked to Shiba Inu, increased to an astonishing \$1.75 billion. According to Defillama, the once-so-soaring TVL has suffered a severe setback and has fallen to only \$24.64 million. This sharp decrease in TVL may soon cause further Shiba Inu price drops. The overall bearish trend in the crypto market has also severely impacted the Shiba Inu value, which now sits at \$0.000008499 with a market cap of \$5B. This is a drop of 1.98% in the last 24 hours, and with all technical indicators in the red, this token could continue falling in the near term. Tradecurve (TCRV) displays bullish sentiments while Shiba Inu's price has remained relatively stagnant, analysts are increasingly focusing on Tradecurve. This upcoming trading platform will change online trading by closing the gap between centralized and decentralized exchanges. It will introduce a unique trading platform where users may find high liquidity, low trading fees, and access to multiple asset classes on one account. The bullish sentiments surrounding Tradecurve can be attributed to several factors. The platform's innovative approach to online trading, leveraging automation and AI-driven trading bots, has garnered attention from traders seeking to improve profitability and efficiency. This Ethereum-based trading platform offers a unique and comprehensive trading experience by allowing users to trade stocks, forex, commodities, and cryptocurrencies within a single account. This integrated approach brings convenience and versatility to traders, enabling them to diversify their investment portfolios seamlessly. Traders can leverage opportunities across various markets, leveraging their expertise and capitalizing on emerging trends. This integration promotes a more efficient and streamlined trading experience, empowering users to explore different markets and potentially maximize their investment returns. Not only that, all traders may open an account using an email, link it to a crypto wallet, and begin trading. With this in mind, those more privacy-conscious will find the perfect platform in Tradecurve as it will not impose any intrusive sign-up KYC requirements. This is a big difference from well-known entities such as Robinhood and eToro, which seem to overlook privacy. This is just one aspect of the Tradecurve platform, as users will find a high leverage starting at 500:1, a metaverse trading academy for beginners, and a social trading feature where users may copy trades from experienced investors by subscribing to them. Discounts on subscription fees can be obtained by holding the TCRV native token, which is now in Stage 3 of its presale and costs just \$0.015. With a token smart contract audit by Cybercope and a team KYC audit performed by Assure DeFi, buyers should rest easy knowing that Tradecurve is a safe investment option. These circumstances are why analysts are so bullish about Tradecurve as they predict its presale raising \$20M and rivaling established players such as Binance and Coinbase after its launch. A significant 100x jump is also expected for TCRV after it is launched and listed on a noteworthy Tier-1 CEX. If you want this potential chart-topping crypto, follow the links below and earn a 25% deposit bonus. For more information about the Tradecurve presale:

- Cryptocurrency market experiences turbulence following SEC action against Binance. - Bitcoin and Ethereum prices decline, impacting overall market sentiment. - Stablecoins maintain stability amid market volatility, playing a crucial role. The global cryptocurrency market has been significantly jolted, including digital currencies such as Bitcoin (BTC) and Polygon (MATIC). This disturbance is mainly due to the recent measures undertaken by the U.S. Securities and Exchange Commission (SEC) against Binance, a leading cryptocurrency exchange. Market Instability and Dipping Prices Bitcoin, the leading cryptocurrency and a household name in the digital currency world, has experienced a significant price drop, landing at \$25,750.49. This decrease from previous highs leads to an approximate market capitalization of about \$499 billion. Following suit, Ethereum (ETH), the runner-up in terms of market capitalization, also experienced a fall in its price to \$1,815.36, resulting in a total market cap of nearly \$218 billion. Despite this dip, Ethereum remains integral to many blockchain initiatives, securing its significant standing in the market. Moreover, the regulatory actions have had a prominent effect on Binance's native token, BNB. The current price of BNB stands at \$278.47 after experiencing considerable price volatility over the past week. The total market cap of BNB is around \$43 billion. Stablecoins Prove Their Worth in Turbulent Times In contrast to the general downward trend in the market, stablecoins like Tether (USDT) and USD Coin (USDC) held their ground. Each token continued to be valued at approximately \$1.00, proving its resilience. The combined market cap for these stablecoins comes to around \$112 billion, underscoring their critical role in providing liquidity and a stable harbor in the volatile crypto market. Other altcoins, such as XRP, Cardano (ADA), Dogecoin (DOGE), Solana (SOL), and Polygon (MATIC), also witnessed price fluctuations. While some experienced a decrease in their market cap, others managed to maintain relative stability. In conclusion, analysts suggest that the prevailing market downturn is primarily attributed to the SEC's recent actions against Binance. This regulatory step-up indicates the growing scrutiny of cryptocurrency exchanges and the broader digital asset sector. The repercussions of this regulatory move on Binance may create a ripple effect across the entire market, considering Binance's considerable clout in the cryptocurrency world. - A suspicious tweet from Baby Doge has caught the attention. - Ethereum has more users and activity than the BNB chain. Baby Doge Coin (BabyDoge), the popular memecoin, has become the talk of the crypto market. BabyDoge has gained great attention from investors by making some big moves in the crypto market. Recently, the memecoin set a world record by burning 100 quadrillion tokens on Ethereum. A suspicious tweet from Baby Doge has caught the attention of the crypto community. The memecoin has replied to the crypto enthusiast's question on choosing Ethereum (ETH) instead of the BNB chain. Moreover, the BabyDoge was initially created by the BNB chain. BabyDoge made a bold statement with that tweet. Baby Doge Coin has replied that Ethereum (ETH) has more users and activity than the BNB

chain. And also, the ETH network is more decentralized. Some people will not use the BNB chain. The response from the memecoin turned a big thing around in the crypto community. At the time of writing, the trading price of Baby Doge Coin is around \$0.000000001983, with a decline of 3.63% in the last 24 hours. The trading volume of BabyDoge has witnessed a decline of 0.03%, according to CoinMarketCap.

HappyMiner is a cloud mining company that allows individuals to return investment through its cloud mining services. The company is pleased to announce new affordable cloud mining plans. To address the latest innovation, HappyMiner announces new affordable cloud mining plans. It enables individuals to invest in cryptocurrency mining while minimizing the associated costs. By offering affordable cloud mining plans, HappyMiner helps to democratize the mining industry and make it accessible to a broader audience. Including more, with the opportunity of \$10, HappyMiner offers users a chance to acquire cryptocurrency. Additionally, the mining process is fully automated, meaning users can start mining with just a few clicks. HappyMiner provides exceptional services around-the-clock. In addition, the platform's new plans offer credible features that attract investors, such as: - Those that sign up receive \$10 right away. They will receive \$0.80 daily, which they may use to purchase the Primary Mining package daily. - There is a \$100 minimum deposit requirement. The users can create their cryptocurrency business without huge investments. - An easy and quick start procedure. In only a few minutes, register and begin mining Bitcoin. - On HappyMiner, users can daily benefit from cloud hash contracts (review available withdrawal methods on their website). - The users can leave the cloud mining industry at any time with HappyMiner. - The daily yield rate ranges from 8%, depending on the selected crypto package. - HappyMiner offers an affiliate program with 4.5% lifetime rewards. - It gives the opportunity to choose from different crypto contracts. - No overhead or electricity fees. - 24-hour online support. - DDoS and SSL protect the system. Let's take a closer look at these packages: 1. Free Primary Mining: This contract is valid for 1 day and priced at \$10. Its fixed return is \$10.8 2. Bitcoin Mining: This contract is valid for 3 days and priced at \$100. Its fixed return is \$104.5 3. Litecoin Mining: This contract is valid for 7 days and priced at \$500. Its fixed return is \$563.4 4. BitcoinCash Mining: This contract is valid for 15 days and is priced at \$1200. Its fixed return is \$1545 5. Dogecoin Mining: This contract is valid for 30 days and is priced at \$3000. Its fixed return is \$4890 6. Dashcoin Mining: This contract is valid for 60 days and is priced at \$6400. It has a fixed return of \$15280 7. Filecoin Mining: This contract is valid for 90 days and is priced at \$9600. Its fixed return is \$29644 HappyMiner brings solutions for both experienced traders and newcomers to the market who are looking to participate in mining. The company brings game-changing development to the industry as it opens up the world of cryptocurrency mining to a wider audience and allows more individuals to take advantage of the potential rewards. The platform is truly disrupting the market and paving the way for the new era of cryptocurrency mining. According to the CEO of HappyMiner, "Our mission is to make cryptocurrency mining accessible and affordable for everyone. - BabyDoge is getting ready to introduce a multi-chain token locker. - 85 token locks have already been created on the live Binance Smart Chain (BSC). - A multi-chain token locker provides users with flexibility and security. The well-known cryptocurrency BabyDoge is getting ready to introduce its eagerly anticipated multi-chain token locker. However, this is an important advancement meant to increase accessibility and convenience for users. The future token locker will enable users to safely lock their tokens and support a number of blockchain networks, including Binance Smart Chain (BSC). Multi-Chain Token Locker Introduced by BabyDoge The BNB chain is already up and running, and 85 locks have already been made as the enormously good response. This initial accomplishment demonstrates the community's confidence in and enthusiasm for BabyDoge's creative ideas. BabyDoge intends to serve a wider range of customers. However, this makes token locking available to a wider audience by adding support for Ethereum and other chains like Polygon. Depending on their individual requirements, customers will have the freedom to select their preferred blockchain network for token locking through the multi-chain token locker. This gives customers a chance to take advantage of the distinctive advantages of each blockchain. Some of the advantages include BSC's low fees, Ethereum's vast acceptance, and Polygon's scalability. Token locking is essential for securing cryptocurrency investments since it shields customers from hazards, including scams, market instability, and ruses. Regardless of the blockchain network they choose, BabyDoge's multi-chain token locker offers consumers a safe and effective way to lock their tokens. Multi-chain. #BabyDoge token locker going live soon ! " Baby Doge (@BabyDogeCoin) May 30, 2023 BNB chain is currently live with 85 locks created thus far. [pic.twitter.com/57BnTRksLQ](https://pic.twitter.com/57BnTRksLQ) BabyDoge uses cutting-edge technology and smart contract methods to ensure strong security measures. The launch of the multi-chain token locker provides customers with the chance to diversify their investment approaches. Users can reduce the risks related to the functioning of a single blockchain by dispersing their tokens among other blockchain networks. With this diversification approach, returns may be maximized while portfolio resilience is improved.

The adoption of Polygon and Ethereum as supporting blockchain networks has greatly increased BabyDoge's reach throughout the cryptocurrency industry. The established status of Ethereum as a top blockchain platform offers BabyDoge a significant chance to access this broad network. Similarly, individuals looking for efficiency will find Polygon to be an appealing option due to its scalability and affordable transactions. - Today, Snek (SNEK) recorded a new all-time high of \$0.001188. - SNEK's price had soared by 45% in the last 24 hours. Cardano-based meme coin SNEK has garnered a lot of attention from the crypto community, which has helped SNEK coin reach its peak. SNEK emerged in the cryptocurrency marketplace on May 15 and has since recorded a huge spike in attention and price as it competes with Dogecoin and Shiba Inu, even though it is only in its first month. Also, the memecoin has reached a new all-time high every day. As the Snek coin becomes the eighth largest meme coin, as per its official announcement. At the time of writing, the SNEK price had soared by 45% in the past day to trade at \$0.001119. Also today, SNEK reached an all-time high of \$0.001188. SNEK has a market cap of \$89 million and a 24-hour trading volume of \$7 million, which rose about 120%. Snek (SNEK) Price Chart (Source: CoinMarketCap) What is SNEK Memecoin Shiba Inu and Dogecoin, two of the most well-known meme coins, have changed the story over time with groundbreaking technological advancements. Also, the memecoins have received a lot of support from cryptocurrency investors due to their potential to increase significantly. However, the new meme token SNEK project aims to create an inclusive and sustainable community on the Cardano blockchain and provide token holders with a rewarding experience, as per the Snek website. Further, the website does not show a roadmap. There are 25 Cardano-based meme coins, including Hosky Token, DGAF, and A SHIB. However, Snek is the first to have had a significant impact in terms of its price movement and social media presence. Moreover, the largest centralized cryptocurrency exchange, MEXC Global, is listing this new memecoin, SNEK, on its trading platform.

Every investor should leverage on-chain data and investors who do not will inevitably fall behind those who do. The new scaling solution released by Shiba Inu (SHIB) developers has crossed a significant milestone, with total transactions passing 13 million. And more excitingly still, Tradecurve (TCRV), a new DeFi trading platform, has attracted enormous presale investment fully visible on-chain. Analysts expect the nascent protocol to raise more than \$20 million before the presale ends and could even break presale funding records. Tradecurve (TCRV) Onboards 100,000 Traders Tradecurve is leveling up the on-chain trading experience bringing the best from centralized and decentralized services. The protocol offers institutional-level liquidity matching that of centralized entities with deep order books whilst retaining the core features of DeFi: fully permissionless and traders keep custody of their assets. Tradecurve puts traders first, and with increasingly aggressive and restrictive regulation, more and more retail traders cannot access advanced trading tools. There is no KYC for Tradecurve, and traders can begin with only an email address. TCRV, the platform token, powers the ecosystem, unlocking social trading features, access to trading competitions and prizes, the metaverse Academy, and Tradecurve's back-tested artificial intelligence (AI) trading algorithms. With transparent pricing, low latency, and access to forex, commodities, stock, and crypto markets with minimal commissions. Tradecurve leads a new standard for on-chain trading, and analysts have already forecast a 5,000% surge for the platform token before the presale closes. TCRV employs a dynamic demand-driven model meaning the price will increase in tandem with demand as the presale progresses. Investors who want to capture the most upside need to act fast. Shiba Inu (SHIB) Scaling Solution Passes 13 Million Transactions Shiba Inu (SHIB), the notorious Dogecoin Killer, has seen a swell of adoption of its layer two chain Shibarium. The metrics show that the Shiba Inu (SHIB) layer two has processed 13 million transitions with more than 16 million unique wallet addresses. Shiba Inu (SHIB) was launched anonymously in 2020 by Ryoshi and had a peculiar start as a project with 50% of the total supply sent to Vitalik Buterin and 50% deposited in a Uniswap liquidity pool. Vitalik burnt 90% of the Shiba Inu (SHIB) tokens sent to him and sold the other 10% to fund charity initiatives. Shiba Inu (SHIB) continued this burn strategy launching one of the most extensive burning campaigns seen in crypto, with more than 40% of the total supply burnt to date. Long-term Shiba Inu (SHIB) holders have a good reason to be excited with the amount of traction Shibarium has generated, and analysts remain similarly confident, forecasting Shiba Inu (SHIB) trading between \$0.0002093 and \$0.0002544 in 2024. For more information about TCRV presale tokens: - Website: <https://tradecurve.io/> - Buy presale: <https://app.tradecurve.io/sign-up> - Twitter: <https://twitter.com/Tradecurveapp> - Telegram: [https://t.me/tradecurve\\_official](https://t.me/tradecurve_official)

- OKX holds \$10 billion in bitcoin (BTC), ether (ETH), Tether (USDT), and other assets. - The exchange's solvency has been independently verifiable by users since April. In an attempt to set a new benchmark for openness and trust in the cryptocurrency sector, OKX, a cryptocurrency exchange located in Seychelles, has released its seventh proof-of-reserves (PoR) report. OKX holds \$10 billion in bitcoin (BTC), ether (ETH), Tether (USDT), and other assets, according to a recent report. Moreover, OKX has been audited and found to have reserve ratios of 103% for Bitcoin, 103% for Ethereum, and 103% for US Dollar Tether as of May 19, 2023. Not only does the PoR include the likes of USD Coin (USDC), Ripple (XRP), Dogecoin (DOGE), Solana (SOL), and Tron (TRX), but also 19 more prominent cryptocurrencies. Eyeing Rapid Expansion the exchange's solvency has been independently verifiable by users since April. Thanks to the Zero-Knowledge Scalable Transparent Argument of Knowledge (zk-STARK) protocol. The zk-STARK system protects the privacy of its users by concealing their account balances. Users will be able to confirm that all client deposits have been accounted for by comparing the net equity of user assets to exchange reserves. Thanks to the zk-STARK technological update that the cryptocurrency exchange announced its plans to execute back in March. It's important to note that OKX's BTC, ETH, and USDT reserves fell by \$400 million, to \$8.8 billion in USD value in May. From the \$10.4 billion reported in April. OKX is continuing its advocacy for more crypto sector

openness while also launching an international growth initiative. The Seychelles-based company submitted an application to the French financial regulators AMF and ACPR last week, seeking registration as a Digital Asset Service Provider (DASP). OKX said earlier this month that it will open an office in Turkey, as part of its international expansion plan. - Leading the group is Quant (QNT), demonstrating its expanding importance in the cryptocurrency industry. - The second position goes to Binance Coin (BNB), which is supported by a robust ecosystem and utility. - SHIB and FLOKI, two meme-inspired currencies, are gaining a lot of traction. Keeping up with the newest trends and hot coins is crucial in the fast-paced world of cryptocurrency. By monitoring the most popular coins, CoinGecko, a well-known cryptocurrency data tool, offers insightful information about the market. We present to you the top 10 coins that received the most attention from the CoinGecko community during the past seven days. Hottest Coins Based on Community Votes Quant (QNT) has become the coin with the most votes, highlighting its expanding significance in the cryptocurrency industry. Quant has a market value of \$1,567,420,412 and is well-known for its cutting-edge blockchain technologies. Moreover, the second-place finisher, Binance Coin (BNB), confirms its status as the top utility token. BNB has a market worth of \$49,582,427,413 and is still growing thanks to its robust ecosystem and usefulness on the Binance exchange. As a dynamic participant in the decentralized finance (DeFi) market, Stargate Finance (STG) has won the support of a sizable portion of the community. Additionally, STG, which has a market valuation of \$137,267,821, provides distinctive DeFi solutions that appeal to investors. However, Fantom's (FTM) lightning-fast and scalable blockchain platform draws notice. Furthermore, with a market cap of \$947,297,926, Fantom promotes itself as a strong rival in the cryptocurrency space. As the digital silver to Bitcoin's gold, Litecoin (LTC) maintains a strong position as the fifth most popular coin. With a \$6,672,076,009 market cap, LTC is still a reputable and well-liked cryptocurrency that draws both users and investors. The sixth-place finish of TRON (TRX) highlights the company's desire to completely transform the entertainment sector. Furthermore, with a \$6,982,233,336 market value, TRX intends to give content producers a decentralized platform, promoting the use of blockchain-based entertainment. The seventh most popular coin, Smooth Love Potion (SLP), focuses on the nexus of cryptocurrencies and gaming. SLP, which has a market valuation of \$93,383,365, is the money used in the well-known play-to-earn blockchain game Axie Infinity, enticing both investors and players. The popularity of Shiba Inu (SHIB) has increased as a result of Dogecoin's success. SHIB, which has a \$5,185,237,406 market value, has been quite popular in the cryptocurrency world. This is because of its branding, which draws inspiration from memes and its broad appeal. Bitgert (BRISE), which provides a decentralized marketplace for goods and services, promotes itself as a disruptive force in the e-commerce sector. With a \$117,358,565 market capitalization, BRISE seeks to reinvent online shopping experiences and give shoppers and sellers more control. The top 10 list is concluded by Floki Inu (FLOKI), which capitalized on the meme coin craze and piqued traders' and investors' interest. The market capitalization of FLOKI, which bears the name of Elon Musk's cherished dog, has reached \$334,575,091. This demonstrates the potential of meme-driven cryptocurrencies. However, the votes cast by the CoinGecko community provide insight into the general opinion and interest in these coins.

- Ethereum Whale's valuation jumped from \$20.5 million to \$391 million. - The address ranks 221 on the list of top Ethereum accounts with 58.8K ETH. The crypto market has continued to witness the tremendous hype of memecoins since the beginning of 2023. A torrent of events "from Shiba Inu's Shibarium, and Dogecoin's Twitter came to viral PEPE and emerging new memecoins" locked investors in the memecoin season. In the middle of this meme frenzy, trade patterns of crypto whales are keenly detected on the crypto radar. A crypto whale tracker @cyrilXBT on Twitter highlighted the activity of one of the top 300 Ethereum whales. The whale address 0x46f8 skyrocketed nearly 1800% in valuation in a year from \$20.5 million to \$391 million. According to the on-chain data from Etherscan, the account had initiated 1,803 transactions involving 256 assets on the Ethereum blockchain. At press time, reportedly, it held 58,885 ETH. Notably, the whale accumulated and holds 4.88 trillion SHIB in the balance alongside the other insignificant memecoins. It acquired metaverse tokens such as Decentraland (MANA), Render Token (RNDR), The Sandbox (SAND), Gala (GALA), Axie Infinity (AXS), ApeCoin (APE) and Enjin Coin (ENJ). Additionally, the account's portfolio included Web3 tokens such as Basic Attention Token (BAT), Audius (AUDIO), Chiliz (CHZ) and tokens of DeFi protocols "ANKR, CRV, AMP, and so on. - Brave Wallet integrates Shiba Inu payments, allowing users to transact. - BitPay's protocol enables the seamless integration of SHIB into Brave Wallet's ecosystem. In recent news, Brave Wallet, a popular cryptocurrency wallet, has taken a significant step towards expanding the payment options for Shiba Inu (SHIB) holders. The wallet has enabled SHIB payments at over 250 retailers, opening up new avenues for the growing cryptocurrency's usability and adoption. BREAKING! @brave wallet enables \$SHIB payments at 250+ retailers. pic.twitter.com/4r3FauKnpX " SHIB HODLER (@ShibaInuHodler) May 24, 2023 Following the collaboration of Brave Wallet with BitPay, the Shiba Inu payments are integrated. However, this supports the retailers to utilize the SHIB holdings for various transactions in multiple sectors. Expanding Crypto Payment Options for SHIB The expansion of Shiba Inu's payment options aligns with Brave Wallet's mission to provide users with seamless and secure experiences in the cryptocurrency space. By incorporating SHIB into its ecosystem, Brave Wallet aims to enhance the utility of the token. Henceforth, it promotes adoption among users. Shiba Inu, often referred to as the "Dogecoin killer," gained significant attention and popularity. The reason is due to its meme-inspired branding and vibrant community. With this integration, SHIB holders can now actively participate in the cryptocurrency economy and utilize their tokens for everyday purchases. The collaboration aims to enhance the utility and adoption of SHIB. Meanwhile, the increasing acceptance of SHIB for payments concerning retailers promotes the growth of significant DeFi on daily

basis transactions. This also shows the effectiveness of digital assets in the crypto market.

Pepe (PEPE) is one of the latest meme coins to become a part of the cryptocurrency industry. It has instantly gained a solid audience and has climbed the ladder regarding its market capitalization. This meme-coin was recently added to Mercado Bitcoin, Brazil's largest exchange. Despite this latest listing, Pepe (PEPE) has rapidly decreased in value, and investors are worried. Experienced traders are now looking at the presale of Tradecurve and its native TRCV cryptocurrency. The project is undergoing Stage 2 of its presale, and it is predicted that it can explode in value by 100x upon launch. Pepe (PEPE) Gets Listed on Top of Mercado Bitcoin, But Its Value Decreases Inspired by Dogecoin and Shiba Inu, Pepe (PEPE) is a meme-based cryptocurrency, and it is inspired by the "Pepe the Frog" meme and mascot. The artist behind the meme is Matt Furie, and the token has taken the Web3 space by storm regarding its growth and overall popularity. This altcoin was launched in April of 2023 by a team of anonymous developers, and the supply of Pepe (PEPE) tokens is capped at 420,690,000,000,000. The developers also claimed that there is no formal team or roadmap and that the cryptocurrency is useless and intended for entertainment. Yet, as of May 22, Pepe (PEPE) is 67th out of the top 100 crypto-list regarding its market capitalization. The largest exchange in Latin America, Mercado Bitcoin, listed the Pepe (PEPE) token on May 12, 2023. It is clear based on this that Pepe (PEPE) initially exploded in value, as in the last 30 days, it increased by 552.3%. However, as of May 22, 2023, it trades at \$0.00000158. Within the last two weeks, however, Pepe (PEPE) decreased in value by 27.1%, and in the last week alone, it dropped by 7.7%. Tradecurve (TCRV) Can Dominate The Web3 Space As a Hybrid Exchange Tradecurve is a hybrid trading exchange combining the best elements in centralized and decentralized exchanges. Users can trade forex, stocks, commodities, and crypto on top of the platform in a truly borderless way. After the collapse of FTX and centralized banks, it was clear to many people that letting centralized institutions have full control over their assets was a bad idea. Getting investors' trust became much more difficult for other exchanges, and many turned to completely decentralized solutions. The Tradecurve team knows this and will implement Proof of Reserves (PoR) to ensure high transparency. Moreover, unlike other exchanges, on top of Tradecurve, users will not need to complete a KYC procedure or give up personal data. To use Tradecurve, users need to open an account using their email address and decide what cryptocurrency they will deposit. Upon depositing the crypto, it will be used as collateral, and they can trade any stock or derivative available on the platform. Beginners that are unfamiliar with how trading works will be able to access a dedicated academy for trading. Any trader on top of Tradecurve can access benefits such as high leverage starting from 500:1, algorithmic trading, negative balance protection, and the lowest fees in the industry. During its Stage 2 presale, the TCRV token trades at just \$0.012. It will increase to \$0.015 in the upcoming stage, so investors will want to get it early to experience the most significant returns. Tradecurve will be a main competitor to top trading platforms like OKX, Huobi, Robinhood, and others, and the team plans on onboarding 100,000 users within the first three months of its launch. Analysts predict that, upon launch, TCRV can spike in value by 100x. For more information about the Tradecurve presale see links below: - Website: <https://tradecurve.io/> - Buy presale: <https://app.tradecurve.io/sign-up> - Twitter: <https://twitter.com/Tradecurveapp> - Telegram: [https://t.me/tradecurve\\_official](https://t.me/tradecurve_official)

- BabyDoge has announced 100Q tokens burn on June 1. - Currently, more than 659B tokens (\$1,327) are burnt before hours. One of the popular memecoins, Baby Doge Coin (BabyDoge) has announced the massive burn of around 100 quadrillion tokens. The schedule is mentioned in the original Twitter handle of BabyDoge to be on 1st June 2023. June 1st we will be burning 100 quadrillion #BabyDoge ðŸ™¥ [pic.twitter.com/p17XqH72M5](https://pic.twitter.com/p17XqH72M5) " Baby Doge (@BabyDogeCoin) May 23, 2023 Currently, Baby Doge Coin is traded at a 2.25% increase over the last 24 hours in accordance with the reports of CoinMarketCap. Recent Updates on Baby Doge Coin More recently, BabyDoge is listed on Giottus, one of the Indian cryptocurrency exchanges. Additionally, Forbes Tech has also listed BabyDoge as a digital asset. On the other hand, it is reported that 205 quadrillion tokens of Baby Doge Coin are been burnt. It remarks a total worth of \$432 million till May 21st, 2023. However, in the past 2 hours, more than 659 billion tokens are burnt which reports the highest burn of the day. This burn values \$1,327 as per the current market price. Following this, 99,021,743,969 tokens are burnt over the last 30 mins which is \$200 worth of the total supply in circulation. Meanwhile, the CoinMarketCap reports the market price of BabyDoge as \$0.000000002056 with a 2.25% increase compared to the previous day. Furthermore, the current trading volume is \$3,867,749 with 36.29% of tokens in circulation. The announcement of 100Q tokens burn in the upcoming week, would be a heat breaker as predicted. - BTC and ETH are showing historically low levels of weekly trading volume. - The trading volume has dried up since the beginning of the March price rally. The crypto market has experienced a downtrend in recent times. The trading volume of the largest assets by market capitalization is plummeting to too low levels and has shown historically low levels of weekly trading volume. ðŸ™¥% The largest assets in #crypto are seeing historically low levels of weekly trading volume. #Altcoin volume, in particular, has really dried up. When combining just \$BTC & \$ETH volume, this is the 2nd lowest threshold we are seeing since September, 2019. <https://t.co/1V2tPno7jD> [pic.twitter.com/tegItbDuen](https://pic.twitter.com/tegItbDuen) " Santiment (@santimentfeed) May 22, 2023 Santiment, the social and financial analyst, has reported that Bitcoin (BTC) and Ethereum (ETH) are showing historically low levels of weekly trading volume. Specifically, the altcoin volume has dried up. Combining BTC and ETH volume, this is the second-lowest threshold since September 2019. Moreover, the trading volume has dried up since the beginning of the March price rally. The crypto market's top market capitalization saw its lowest combined volume over the year. At the time of writing, the trading price of Bitcoin is around \$26,854, with an increase of 0.32% in the last 24 hours. The trading volume of BTC has increased by over 27.56%, according to CoinMarketCap.

- This news broke just two days after Robert F. Kennedy Jr. announced the same. - On stage, Ramaswamy displayed a QR code that, when scanned, leads to a donation page. Vivek Ramaswamy is the second US presidential contender in 2024 to announce that he would take Bitcoin contributions. Saying, "Give \$1 to Robert F. Kennedy Jr. made history by becoming the first U.S. presidential contender to take Bitcoin as campaign contributions. When Ramaswamy took the stage at Bitcoin 2023 in Miami, Florida, he said, "Let's make the 2024 election a referendum on fiat currency." Multiple Cryptocurrencies Accepted On stage, Ramaswamy displayed a QR code that, when scanned, leads to a donation page accepting a variety of payment methods, including Bitcoin and its smallest unit of currency, the satoshi. Ramaswamy has chosen BitPay as his Bitcoin contribution processing provider. Bitcoin Cash, Ether, ApeCoin, Litecoin, Dogecoin, and Shiba Inu are just some of the altcoins that BitPay accepts. Donations made by citizens and permanent residents of the United States up to \$6,600 for the campaign are not tax deductible. Donors will be given a non-fungible token (NFT), with the message "After donating, come back to claim your NFT." shown on the contribution page. The Kansas House of Representatives proposed a \$100 limit on cryptocurrency political contributions in February. The recipient must "immediately convert" cryptocurrency donations under \$100 into U.S. dollars, use the monies in any way other than cryptocurrency, and not hoard any of the cryptocurrency. However, President Biden made cryptocurrencies a focal point of his opposition to a debt solution at the G7 conference that would protect wealthy tax evaders and cryptocurrency speculators at the expense of one million Americans who rely on government food help.
