

undergoing modifications to convert it to Proof of Stake, Ethereum is still based on Proof of Work. Elon Musk, crypto analysts, and everyone connected to the crypto world are concerned about Bitcoin's energy use, and nations that host miners are as well. According to the CCRi research, Proof of Stake networks use less than 0.001 percent of the Bitcoin network.

- Theft of cryptocurrencies has increased by 516 percent since 2020. - Cryptocurrency investment is on the rise throughout the world. As more people participate in crypto markets. There has been an increase in frauds and thefts of cryptocurrency. Covid-related uncertainty has led to a rise in popularity for virtual currencies like Bitcoin and Ethereum. The cryptocurrency investment is on the rise throughout the world. The emergence of decentralized finance (DeFi) is primarily responsible for the increase in crypto-related frauds and thefts. According to Chainalysis, a blockchain analytics company, the rise in theft and fraud was largely responsible for the increase in losses caused by crypto-related crime, up 79% over a year. Most cryptocurrency-related crimes in 2021 were committed via hacking of crypto firms, with scamming and theft coming in second and third. According to the analytics firm, this is another cautionary tale for individuals dipping their toes into the crypto industry's new DeFi market. Conventional financial transactions, such as getting a loan, are becoming more challenging to complete without the involvement of traditional financial institutions, such as banks. A smart contract, a programmable code, replaces banks and attorneys in the DeFi system. Rug Pull Scam There is no need for a central middleman. This contract is published on a public blockchain like Ethereum or Solana and runs when particular cases are satisfied. Theft of cryptocurrencies has increased by 516 percent since 2020. Seventy-two percent of the total stolen monies came via the DeFi protocols. More than \$7.8 billion worth of cryptocurrencies was lost due to frauds, an 82% increase. Most of this money came from a rug pull scam. In which developers establish what look to be real cryptocurrency companies before stealing the money from investors and vanishing.

- Cryptocurrencies for the most part have gone in the same direction as equities. - Year-to-date, Bitcoin is down almost 18 percent. Coins like Solana and Terra have seen significant increases in the past 24 hours. After a rough start to the year, bringing the market into the green for the month of February. According to CoinMarketCap, the price of bitcoin has increased by 4% since yesterday. While the price of ether has risen by 9.9% since yesterday. After a grueling start to the year that cryptocurrency prices fell to their lowest levels since the middle of last year, the market is finally recovering. In January, Solana had a bottom of around \$86 and was up 17.82% at \$107. While Terra hit a low of about \$43 and was up 11% at \$52. Investors Are Optimistic Both Solana and Terra have lost 40% and 43% of their value since the beginning of the year. Year-to-date, Bitcoin is down almost 18 percent. The Fed-related worries that gripped markets last month prompted investors to flee riskier assets like equities and cryptocurrencies. Rates will be hiked, and the Fed's balance sheet will be reduced as part of an effort to limit inflation. This will eliminate liquidity that has supported the prices of a wide variety of financial assets. Fed worries seem to be fading. Cryptocurrencies for the most part have gone in the same direction as equities even though Bitcoin has long been marketed as an investment or hedge against stock market volatility. Over the following days and weeks, 78 percent of JPMorgan's polled customers said they wanted to raise their equity exposure to take advantage of the stock market's rebound.

Tampa, Florida, United States, 31st January, 2022, Chainwire Backed by \$500M+ Worth Of Node Network Infrastructure Supporting Increasing Relay Demand On Its Network. Pocket Network, an infrastructure middleware protocol which facilitates decentralized cloud computing and abundant bandwidth on full nodes to other applications in Web3 across 37 blockchains, including Ethereum, Polygon, Solana, Fuse and Harmony, reports record-breaking growth in protocol revenue, relays, nodes, and node revenue. In the last 90 days (November, December, January), developers have routed ~16+ billion relays (or API calls) through Pocket Network which generated over \$215+ million in total protocol revenue as shown by on-chain metrics on Token Terminal of which \$191+ million was paid out to node runners. This 90-day feat demonstrates Pocket Network's significant growth trajectory at present compared to just \$14.8 million in total protocol network revenue in the previous 90 days (August, September, October) of last year and comes off the back of their latest strategic funding round. This jump in network revenue has attracted newly staked nodes to the Pocket Network which now has over 24,000 full nodes (at a cost of 15,000 POKT per node) worth \$500M+ with on-going plans to add new layer 1s and Web3 applications, projecting the network to reach billions of relays per day by mid-2022. This blazing trail of growth can be attributed to the momentum in strength of blockchain ecosystems, native-token accessibility, combined with the network effects generated through the increase in usage and node revenue and further proof that Pocket Network has found protocol-market fit. We have been consistently doubling our growth monthly over the last 6 months, says Michael O'Rourke, CEO at Pocket Network. We remain focused on what is important and that is the traction of the protocol which we have been working on since 2017. It is remarkable to see people around the world providing infrastructure where usage fuels real revenue for node runners. Based mostly on organic industry demand and spurred by recent Web2 centralized cloud providers having outages which affected many well known applications, Pocket Network supported an increase of more than 60% in average daily relays. The economic flywheel incentivization of independent node runners to support each blockchain is where the bulk of Pocket Network's revenue is distributed. For instance every relay that is served on Pocket Network, .01 POKT is minted. Of that .01 POKT, the node who served the relay is rewarded 89% (.0089 POKT), the Pocket DAO receives 10% (.001 POKT), and the block producer receives the remaining 1% (.0001 POKT). All nodes in the network have an opportunity to produce a block, but their chances are proportional to their stake. This economic formula drives quality network coverage allowing applications like DeFi Kingdoms play-to-earn game to be successful amongst 2000+ more highly trafficked dApps utilizing Pocket Network which reduces the risk of service downtime to near zero. As an industry first mover in offering a full-node incentive based protocol, Pocket Network meaningfully encourages and incentivizes niche cloud providers around the world which commercially have been less viable over the last decade with massively well known incumbents dominating the traditional market, and aims to provide Web3 with a much more compatible infrastructure network. About Pocket Network Pocket Network, a blockchain data ecosystem for Web3 applications is a platform built for applications that uses cost-efficient economics to coordinate and distribute data at scale. It enables seamless and secure interactions between blockchains and across applications. With Pocket, the use of blockchains can be simply integrated into websites, mobile apps, IoT and more, giving developers the freedom to put blockchain enabled applications into the ecosystem of every mainstream consumer. For more information visit pokt.network. Contacts Marketing Director - Amy Kelly Petruzzella - Pocket Network - amy@pokt.network - +1 813.537.3100

Since the crypto market is huge, the strength of cryptocurrencies is measured with their market capitalization and trading volume. Several crypto tokens are based on different blockchains having various features and solutions for addressing challenges. Moreover, there are coins based on the Polkadot ecosystem, BSC ecosystem, Solana, and Avalanche ecosystems. Now, let's look at the cryptocurrencies which are based on the Polkadot ecosystem. According to CoinMarketCap, the top three Polkadot-based crypto tokens by volume are Polkadot (DOT), Chainlink (LINK), and Kusama (KSM). After the market crash, this week has witnessed quite a bullish run where most of the trading charts depict a greenish pattern. Thus, seeing a gradual recovery has set a sweet spot for traders and investors. Polkadot-based crypto tokens have already initiated a bullish rally where the top three tokens have surged over 3% within the last 24 hours. Polkadot-Based Tokens Polkadot (DOT) initiates the list as the top Polkadot ecosystem-based token which rallies nearly 2.8% within a day. Additionally, Polkadot aims to achieve levels of security and scalability by combining many blockchains. The platform also allows data or assets to transfer between blockchains. At the time of writing, DOT was trading at \$18.53 with a trading volume of \$825,939,147 in the last 24-hours. The next Polkadot-based crypto-token in the list is Chainlink (LINK). Moreover, Six months ago, Chainlink data oracles began to connect with Polkadot's core network. It provides app developers with new options for creating programs and services. Currently, LINK is trading at \$16.25 with a trading volume of \$7,575,970,642 within a day. Furthermore, the top third Polkadot-based token is Kusama (KSM). Kusama Network (KSM) is a canary network for Polkadot, which means it acts as a relatively close replica of the Polkadot blockchain for testing new features before they are launched on the main network. Additionally, the current trading value of KSM is \$170.28 with a trading volume of \$1,435,210,883. Significantly, these crypto tokens are the top three Polkadot-based tokens which are listed by volume.

PayPal is considering launching its own cryptocurrency stablecoin as a means of sending and receiving payments. PayPal confirmed to Bloomberg on Friday, January 7th, that it is currently investigating a PayPal stablecoin. Developer Steve Moser found code for PayPal Coin, a stablecoin backed by the US dollar, in the PayPal app. Jose Fernandez da Ponte, PayPal SVP of crypto and digital currencies stated that we are exploring a stablecoin; if and when we seek to move forward, we will, of course, work closely with relevant regulators. A PayPal spokesperson verified that the code and photos originated from the company's blockchain, crypto, and digital currencies division's internal hackathon. PayPal's stablecoin plans were revealed when a PayPal Coin logo that was included on the company's iPhone app as part of its exploratory testing into its own token was shared with the media. The startup already allows retail consumers to purchase and trade a limited number of cryptocurrencies including Bitcoin, Ethereum, Litecoin, and Bitcoin Cash, for as little as \$1. PayPal has typically been used for retail and peer-to-peer payments rather than investing. When PayPal first introduced the option to purchase and trade cryptocurrency, it was ecstatic with the response and the app's stickiness. By tying a PayPal wallet to bank accounts and credit or debit cards, PayPal is heavily reliant on existing payment rails. The average transaction cost to PayPal is 0.81%. Customers who pay using credit and debit cards rather than bank account balances or PayPal balances, naturally, cost the organisation extra. PayPal is now one of the world's largest wallet providers, with over 400 million customers. However, when digital currencies become more widespread, there will be far more competition in the wallet space. Already, Diem is a stablecoin developed by Meta Platforms Inc., formerly Facebook, and Visa Inc. has permitted a stablecoin backed by the US dollar to settle a transaction with the network. PayPal will also get the funds faster with a stablecoin than with debit or credit cards, thus lowering costs. PayPal may save a large amount of money on transaction costs by using a high transaction throughput blockchain like Solana. The company does not presently enable customers to buy or sell Solana (SOL) on its platform, and it is unknown which blockchain it will utilise to distribute its stablecoin. The true impact of a PayPal Coin depends on how the company implements the stablecoin. It has the potential to integrate crypto into regular payment systems, but it also has the risk of becoming just another stablecoin. Several years ago, crypto enthusiasts could only dream of such a scenario, before Bitcoin traded in five-figure territory, which shows just how far it has become within a short period of time.

Stamford, CT, United States, 28th January, 2022, Chainwire The partnership was announced by RAILGUN Privacy DAO on January 27th through CoinDesk. The partnership between RAILGUN Privacy DAO and DCG is a significant milestone for the privacy industry. The partnership is valued at \$7.2M allocated directly to the RAILGUN DAO treasury to pay for the tokens went directly to the Railgun DAO treasury without ever interacting with a centralized team or authority. Additionally, Digital Currency Group intends to integrate the Railgun smart contract to preserve privacy across the strategies and activities of its subsidiaries. Digital Currency Group, valued at over \$10B last year, has a business portfolio that includes: Grayscale Investments (largest institutional trading firm, with \$60B AUM), leading crypto media company CoinDesk, mining company Foundry, OTC institutional trading desk Genesis, and recently acquired Luno (the retail-focused exchange with over 5 million customers across 40 countries). Through a collection of smart contracts that verify zero-knowledge proofs, the Railgun team has built a privacy system directly on Ethereum and other Layer-1 protocols, from which you can interact with decentralized exchanges, lending platforms, and popular smart contract applications, says Matt Beck, director of investments at DCG, said in a statement. Railgun fills a clear gap in the market, and solves the privacy problem that everyone who uses crypto will come across. Image credit: Shubham Dhage / @theshubhamdhage / Unsplash Attorney Edward P. Fricker, who advised on the deal, also commented, we're very new to have a large investor send funds to a fully decentralized DAO treasury in support of a project, without any admin key or multisig team. This was a very interesting deal to work on from a lawyer's point of view. DCG's business portfolio fits the profile of firms with a use case for Railgun. Public wallets and unshielded DeFi activity pose significant threats to actors across the industry, however, the outsized risk for large institutional funds can potentially disrupt institutional adoption. Farming pools, early project investments, decentralized finance strategies, and underperforming investments are all publicly revealed on-chain a significant departure from the opaque infrastructure and reporting of traditional finance. Use of the Railgun contract across DCG properties would provide significant advantages in shielding activities from wallet-watchers and competitors, without limiting the breadth of strategies the firm is able to deploy. The partnership is a key milestone for Railgun with benefits extending beyond access to capital. Railgun receives the dual benefit of increasing the RailgunDAO treasury and a proof-of-concept from a key user demographic (large institutional trading and investment firms). DCG's active use of Railgun is a major vote of confidence in the security and future outlook of their smart contract. Through Luno's 5 million user network, and DCG's ownership of CoinDesk,

the partnership also signals a massive boost in exposure with retail traders to complement the interest from other institutions paying attention. About Digital Currency Group Digital Currency Group, a strategic investment firm focused on digital currency and blockchain, has quickly established itself as the epicenter of the blockchain industry. Founded in 2015 by Barry Silbert, the firm was founded on the conviction Bitcoin and blockchain technology will drive economic and social change. The group's mission is to accelerate the development of a better financial system by building businesses to fill market gaps, while also offering strategic investments and access to DCG's extensive professional network. As a strategic investor, Digital Currency Group supports projects with access to capital, the group's deeply extensive network, as well as the collective knowledge and insights to help companies grow and scale. Their portfolio of subsidiaries consists of Grayscale Investments, CoinDesk, Genesis, Luno, and Foundry - a conglomerate of companies covering institutional & retail trading, news media, and institutional mining verticals. To date, Digital Currency Group is building and supporting the largest early-stage investment portfolio in the digital currency and blockchain ecosystem. About Railgun A small community of passionate and skilled privacy enthusiasts are developing RAILGUN, a privacy and anonymity system built directly on-chain on Ethereum. RAILGUN is a collection of smart contracts that verify zero-knowledge proofs, allowing users to make, send or receive transactions without revealing any assets, amounts, or identities. In much the same way, it also allows users to interact with smart contracts, such as those used for DEX trading, yield farming and other dapps (decentralized apps). RAILGUN keeps your actions secret, protecting user privacy without having to leave the safety and liveliness of the Ethereum ecosystem. Originally launched in July 2021 on Ethereum, the contributors have since launched on Binance Smart Chain, Polygon and Solana - with accompanying governance tokens for each chain. Initially funded by a research grant from the Right to Privacy Foundation, the direction of the protocol is now fully decentralized - directed entirely by the RailgunDAO. - David Marcus seemed to confess that the crypto winter had already begun. The last time this occurred BTC dropped by as much as 80% from its ATH. After the Federal Reserve of the United States announced on Wednesday that it would be lowering the size of its balance sheet, there was a brief decline in the market that saw Bitcoin trading around \$37,000 after providing a sigh of short-term relief around \$39,000. There are fears among cryptocurrency investors that the worst is yet to come after the dramatic decline in bitcoin and other digital currency prices in recent weeks. Read More: Bitcoin Price Prediction Just as Bitcoin's value continues to fall, the whole crypto market has lost over \$1 trillion in value since its all-time high, with popular tokens like ether and Solana following suit. Ethereum's value has dropped by more than half since its high in November, while Solana's value has plummeted by a whopping 65 percent. Big Bears Dominate Market Some crypto investors are concerned about the -crypto winter, which refers to big bear markets in the young digital currency market. The last time this occurred, between late 2017 and early 2018, bitcoin dropped by as much as 80% from its all-time highs, which was similar to the most recent event. Popular analyst Lark Davis tweeted a video shedding light on the ongoing crypto winter used by the media and various analysts. Have a look at the tweet: Don't be fooled by what is happening in crypto right now! <https://t.co/7Kv9QJw6Uj> - Lark Davis (@thecryptolark) January 27, 2022 The former head of crypto at Facebook-parent Meta, David Marcus, seemed to confess that the crypto winter had already begun. David remarked in a tweet on Monday: -it's during crypto winters that the best entrepreneurs build the better companies. This is the time again to focus on solving real problems vs. pumping tokens.

San Francisco, USA, 26th January, 2022, Chainwire Winning Projects Building Payment, NFT, Play-to-Earn & Music Applications Utilizing Zebec's Continuous Money Stream Technology Zebec Previously Announced Partnership with Visa to Bring Continuous Money Streams to Global Payment Network Zebec, the first continuous and programmable cash stream protocol on Solana, announces the winners of its first global hackathon hosted with support from the Solana Foundation. The five winners of the hackathon were chosen from more than 250 projects and will now participate in the Zebec Launchpad program to further incubate and scale applications utilizing the company's innovative payment technology. Unlike traditional financial settlement systems that move money on a one-time basis and require intermediaries who charge fees and take multiple days to process transactions, Zebec's money streams can be started instantly and programmed as the user wishes. Zebec Pay, the company's initial application, is the first tax compliant, on-chain payroll processing system enabling employees to be paid by the second - in USDC or other stablecoins - have immediate access to their money. Zebec launched in late 2021 with support from Republic Capital, Republic Capital, Shima Capital, Breyer Capital and other leading crypto investors. The company recently became the first Solana-based project accepted to Visa's prestigious FinTech Fast Track program, which supports innovative startups revolutionizing digital payments. Over the past several weeks, hundreds of developers participated in the Ship 2021 Hackathon to develop new ways to transform digital investments, payments, subscriptions and more. Five projects were selected as winners and will now receive financial and development support to further scale and implement their ideas: - Cryptocurrency Hire: Enables crypto companies to hire talent and pay freelancers for their services with Sol, USDC and USDT through an integrated payment stream with Zebec Pay. - NFT Soul: Provides a platform for NFT collectors to showcase their collections and charge exhibition fees. NFT Soul has integrated Zebec Pay SDK to charge users fees on Sol, USDC and USDT to watch premium NFT collections. - BOOK-D-Page: Allows authors to charge readers on a page-by-page basis as they consume content. - War: The Conquer: A play-to-earn (P2E) game based on the history of Unification of Nepal plans to integrate Zebec Pay SDK to distribute rewards in real-time to its users. - Zebec Music: Enables artists to be paid instantly for every stream of their songs. - Almost every financial transaction can be transformed with Zebec's programmable, continuous cash stream technology, said Sam Thapaliya, founder of Zebec. - We're incredibly excited to see the creative ways developers are already building an ecosystem that will make everyday payments easier and faster while also giving people unprecedented freedom to control their money like never before. About Zebec Zebec Protocol is the first programmable cash flow protocol on Solana, enabling real-time and continuous streams of payments and financial transactions for payroll, investments and more. The automatic money streams made possible through the Zebec Protocol allow businesses, employees and consumers to completely reimagine how they are paid, how they invest and how they buy products or services. - The most significant price was valued at roughly \$170,000. - Only Solana (SOL) tokens could be used to place the bids. An online auction of a hat worn by Melania Trump during a 2018 visit to the White House with President Emmanuel Macron of France has become a victim of the crypto market crisis. Trump decided to put on an online auction of the white, broad-brimmed hat and a watercolor painting with an animated depiction of her wearing the hat dubbed a non-fungible token (NFT). According to a press statement from Trump in early January, advertising the auction, the three-piece package dubbed -Head of State Collection, 2022- was expected to open with a minimum bid of around \$250,000. Only SOL, Solana -blockchain's cryptocurrency, could be used to place the bids, and at the time, SOL was worth around \$170 per token. A Portion of Proceeds to Assist Foster Care Children However, the value of SOL and most other cryptocurrencies have fallen significantly in recent weeks. Before the close of the auction, each SOL was valued at approximately \$95. Early Tuesday evening, there seemed to be just a few offers on Trump's items, and the most significant price was valued at roughly \$170,000, with the precise dollar worth moving with the turbulent crypto market. Wednesday morning, the auction was scheduled to end at 2:59 a.m. Even if Trump's goal price isn't met, the winning offer might still be higher. However, the opening offer will be substantially lower than what she had intended. According to Trump's statement, -a portion of the proceeds would be utilized to assist foster care children with access to computer science and technology educational programs.

AscendEX is excited to announce the listing of the Synthetify token, SNY, under the trading pair SNY/USDT on the AscendEX platform, starting January 25 at 2 p.m. UTC. Synthetify is a multi-collateralized, decentralized exchange of synthetic assets built on Solana. The platform aims to provide a bridge between cryptocurrencies, stocks, fiat currencies, and other financial instruments directly from one location. Synthetify solves critical problems seen on other synthetic asset platforms including high fees, long confirmation times, and losses caused by arbitrage during sharp market moves. Unlike other layer-1 blockchains, Solana prioritizes convenience by offering fast, low-cost transactions, making it the ideal host for synthetic asset exchanges like Synthetify. While a handful of Synthetify's competitors also operate in the Solana ecosystem, Synthetify offers unique capabilities that allow it to better service its customers. For example, Synthetify features crypto assets both inside and outside of the Solana ecosystem, as well as key features such as minting and exchanging synthetic assets. Synthetify will also allow its users to short crypto assets in the coming weeks, further diversifying itself from other platforms in the space. Synthetify Token (SNY) is the platform's native token, which allows users to participate in the protocol by staking SNY in a smart contract and posting it as a collateral for creation of synthetic assets. Although Synthetify allows users to stake a variety of tokens, the use of SNY comes with several benefits. With SNY, users have the ability to participate in debt pools and earn pro-rata fees for providing liquidity, vote in governance decisions for the future development of the platform, and receive discounts on swap fees. With a wealth of professional experience in crypto and finance, Synthetify's team is well-equipped to understand the growing needs of its user base. The platform's developers are highly concentrated on curating a top-tier user experience through continuing to improve upon Synthetify's features and performance. Synthetify is currently active on mainnet and working to build strong partnerships with Solana-based projects to develop a promising future, full of possibilities, for synthetic assets. About AscendEX AscendEX is a global cryptocurrency financial platform servicing more than one million institutional and retail traders with the resources needed to obtain more value from their crypto investments. Operating at the nexus of centralized finance and decentralized finance, AscendEX's platform features access to margin, futures, and spot trading, a robust wallet infrastructure, and staking support for over 200 industry-leading blockchain projects, all producing industry leading yields and returns, further driving the growth of the crypto ecosystem. In efforts to cultivate scalable and secure forms of decentralized financing, AscendEX has emerged as a leading platform by ROI on its -initial exchange offerings- through supporting some of the industry's most innovative projects from the DeFi ecosystem. To learn more about how AscendEX leverages best practices from both Wall Street and the cryptocurrency ecosystem to extract the highest value per dollar to its users, please visit: - Website: <https://ascendex.com> - Twitter: https://twitter.com/AscendEX_Global - Telegram: <https://t.me/AscendEXEnglish> - Medium: <https://medium.com/ascendex> About Synthetify Synthetify is a multi-collateralized, decentralized exchange of synthetic assets built on Solana. The platform aims to provide a bridge between cryptocurrencies, stocks, fiat currencies, and other financial instruments directly from one decentralized exchange. Synthetify solves critical problems seen on other synthetic asset platforms, like high fees, long confirmation times, and losses caused by arbitrage during sharp market moves. As a world class digital asset exchange, LBank continues to focus on providing its users quality projects to participate in. Here is a weekly report made by LBank Exchange presenting this week's exciting new listings and a summary of the ones listed last week, offering users more information to help better understand these unique opportunities. New Listings on LBank Exchange Scheduled this week starting on 24th Jan. For a more complete list, please follow our twitter @LBank_Exchange Project: METIS Listing date: 24th Jan. Key words: DAO, NFT, ERC20, Official Website: <https://www.meritinsider.com/> - News Integrated: The decentralized autonomous company (DAO) is a new type of infrastructure, differentiating factor that makes it easy for any developers, builders, or community leaders to build their applications and communities. Project: ATOL Listing date: 24th Jan. Key words: DEFI, listed on Bithumb, AscendEX (Bitmax), Mainnet Official Website: <https://rizon.world/> About: Rizon is a Tendermint-core-based blockchain platform that develops modules to support the transformation of off-chain services into on-chain services. These modules provide users with blockchain-based services, boosting the inflow of ecosystem participants and the diversification of businesses that utilize the platform. The mission of Rizon is to provide a platform for businesses to interoperate with each other through the Cosmos IBC (Inter-blockchain communication) module. Project: CCP Listing date: 25th Jan. Key words: GAMEFI, ERC20 Official Website: <https://cryptocoinpay.co/> About: CryptoCoinPay public chain is more suitable for use as a distributed bookkeeping platform, where buyers can check their transactions (private or commercial) that took place on the network. As a trusted platform, CryptoCoinPay offers not only a secure and convenient depository for sellers, but also a clear consumer service for buyers, using the blockchain to innovatively combine the best book protection features available on the market today and incorporating the unique features of CCP digital assets. Project: TOSC Listing date: 26th Jan. Key words: ERC20 Official Website: <https://tosblock.com/> About: TOSC is a utility token for blockchain payments. In order to solve the problems of speed and price volatility that occur when making payments using cryptocurrency, TOSC uses a hybrid payment system consisting of a public blockchain and a private blockchain.

Project: YOSHI Listing date: 26th Jan. Key words: DEFI, listed on pancake, spookyswap, spiritswap, sushiswap, BSC & FTM Official Website: <https://yoshi.exchange> About: Yoshi.exchange is a DEX aggregator on Binance Smart Chain and Fantom Opera networks aiming to become the close-cycle utility payment system by implementing non-custodial wallet mobile application and fiat on-ramp payments (both of them are coming soon). There is a \$YOSHI utility token with the support of Binance Smart Chain and Fantom Opera at the moment with the support of other blockchains in the future and an already functioning Uniswap bridge. The main goal of Yoshi.exchange is to facilitate entry threshold for newcomers and to simplify the user experience for the current consumers. Yoshi.exchange aggregates popular DEX platforms including AnySwap, SpookySwap, SushiSwap, PancakeSwap with even more DEXs coming soon. Project: GALAXY Listing date: 27th Jan. Key words: Mainnet, XRPL ripple protocol, listed on Bitrue, Sologenic DEX, XUMM DEX, IndoEX Official Website: <https://www.galaxycoins.org/> About: Galaxy is a token on the XRPL that will help future generations voyage into space. The private Aerospace industry has been steadily growing over several years, and we see the potential in the market for a neutral coin that all these emerging giants can use. By creating an NFT marketplace that features exclusive aerospace artwork, vehicle designs, and oddities from around the galaxy, we will help our partners complete their missions. Project: ADEN Listing date: 27th Jan. Key words: GAMEFI, listed on pancake, coinbit, BSC Official Website: <https://adene.io/> About: Adene is an NFT gaming platform to create NFTs out of slot machines by utilizing technology of BSC Chainlink and Solana. Project: BEE Listing date: 27th Jan. Key words: public chain, initial listing, ERC20 Official Website: <https://www.herbbee.co.uk/> About: Herbbee uses Bee token to buy honey and subscribe to CRYSTAL AVATAR and buy land. Bee token is Ethereum smart chain main net-based utility and playing bee token that is used inside and outside of our universe. Our Bee is for honey purchases, staking Bee, and can also receive various benefits such as when uploading real Short-Form reviews can get reward for events and participating in initiatives. Project: GENCAP Listing date: 27th Jan. Key words: initial listing, PST, ERC20 Official Website: <https://gencoincapital.finance/> About: GenCoin Capital Token is a multi-function token that is uniquely designed to reward holders. One function of the token is Capital Investment, where the project will invest in other cryptocurrency projects to produce a yield. This yield is used to fund buybacks within GenCoin Capital to help maintain growth, as well as fund our Charity Initiatives. The second function of the project is a Giveaway utility in which holders are eligible to win giveaways that happen consistently throughout the project. Our first big charity initiative will be directed towards mental health awareness. The project will be working in the community to host charity donations and events to help give back. Summary of Last Week's Listings â€ January 17th to Jan 23rd, 2021 - Name: GLMR - Weekly gain: 2994% - Official Website: <https://gari.network/> - Name: PSY - Weekly gain: 85% - Official Website: <https://psyoptions.io/> - Name: CLIFF - Weekly gain: 71% - Official Website: <https://cliffordinu.io/> - Name: STEP - Weekly gain: 31% - Official Website: <https://walkwithstep.io/> - Name: VOLT - Weekly gain: 31% - Official Website: <https://voltinu.in/> - Name: BTT - Weekly gain: 27% - Official Website: <https://www.bittorrent.com/token/btt/> - Name: DXB - Official Website: <https://dxbpay.cc/> - Name: CRFI - Official Website: <https://www.crossfmain.com/> - Name: WOOP - Official Website: <https://woonkly.com> - Name: BES - Official Website: <https://bes-libes.io/> About LBank Exchange LBank Exchange, founded in 2015, is an innovative global trading platform for various crypto assets. - Ethereum has fallen by 49% from its November high of \$4,878.26. - Ethereum's main rival, Solana, has dropped 4.65% in the previous day. Overnight, the price of bitcoin fell below \$35,000, settling at \$35,268 on CoinMarketCap, slowly rising on Saturday morning. Many coins have seen a steady rise, and the bulls are holding tight. After a six-month respite, bitcoin's 24-hour low of \$34,020.27 saw the cryptocurrency fall back to depths not seen since July 2021. After reaching a record high of \$69k on November 10th of last year, the price of Bitcoin has been steadily declining, with the sell-off ramping up in recent weeks. Moreover, it isn't limited to Bitcoin. Ethereum, the second-largest cryptocurrency in terms of market capitalization, is also declining. Read More: [Bitcoin Price Prediction](#) Read More: [Ethereum Price Prediction](#) Ethereum, like Bitcoin, has fallen by 49% from its November high of \$4,878.26. In the last 24 hours, popular tokens on the Ethereum network have not withstood the sell-off. Whales in Action At present, Ethereum's main rival, Solana, has dropped 4.65% in the previous day, trading at just under \$100 after a meteoric rise last year. Many coin prices have gone back a year with the current price decline. WatcherGuru tweeted a picture stating the price of significant coins the same day last year. Have a look at the tweet. On this day last year \$BTC: \$33,005.76 \$ETH: \$1,236.51 \$ADA: \$0.3496 \$BNB: \$40.86 \$VET: \$0.03141 \$AVAX: \$12.72 \$LUNA: \$0.8133 \$SOL: \$3.35 \$DOGE: \$0.008523 \$MATIC: \$0.0313 \$AXS: \$0.6362 \$MANA: \$0.1582 \$SAND: \$0.10941 â€ Watcher.Guru (@WatcherGuru) January 23, 2022 According to newly released statistics, the Largest Ethereum (ETH) whales worldwide are devouring stablecoins, and other altcoins as Bitcoin (BTC) continues to struggle around \$35,000. As per whale-monitoring bot WhaleStats, the top 1,000 non-exchange Ethereum wallets reportedly bought stablecoins, including USD Coin (USDC), Tether, and Binance USD, as well as ETH, in the previous seven days.

On the first day of trade, Chingari, an Indian-based short video-making app, revealed that its native token, GARI, has reached the \$100 million mark in trading volume. The Indian Tiktok reached the milestone just hours after being launched on Huobi Global, Kucoin, OKEx, FTX, MEXC Global, and Gate.io, among others. BTXEC, CoinW, BitMart, Zebpay, Hotbit, Bitbns, and LATOKEN are among the 12 biggest centralized crypto exchanges that presently list the GARI coin. During its first listing on January 18, 2021, GARI became the first of its sort to be listed on more than 10 exchanges at the same time. The Chingari app, which is accessible on iOS and Android app stores, was launched in 2018 and has quickly received attention in India and South Asia, paving the way for the shift to decentralized social media platforms. The GARI token was unveiled three years later to great hoopla, with Salman Khan, the iconic Bollywood actor-turned-brand ambassador revealing the token in front of millions of Indians last October. The GARI token was introduced to the public only about two months after its creation in an oversubscribed initial decentralized exchange (DEX) offering, IDO, on Solana's SolRazr launchpad, raising \$4 million dollars in a matter of minutes. Republic, Galaxy Digital, Alameda Research, Solana Capital, and Kraken Ventures are among GARI's major investors. Later, as Chingari surged to the top of India's social media app rankings, media exposure and market for the token skyrocketed to great heights. While the country's prohibition on Facebook and Tiktok aided Chingari's rise to fame as a leading social media app, the app's success is mostly due to its creator benefits and censorship-free network to all its users. The app was named India's #1 application on Google Play Store in 2021, with more than 32 million active monthly users and more than 100 million downloads. The recent achievement demonstrates Chingari's and GARI's ability to transform the video-sharing market, with the goal of defeating Web2 large tech behemoths like Tiktok, Youtube, and Instagram. Furthermore, such high volumes demonstrate traders' and investors' excitement about what is yet to come on Chingari's platform. Despite this success, the GARI token will be merged into the Chingari app, giving the game's 30 million users access to a whole new world. The token, which is based on Solana, allows users to tip their favorite creators and artists instantly, efficiently, and affordably. Participants who make, post, and watch videos on the app will also be rewarded with GARI. Ultimately, the token strives to allow artists to create, share, buy, and sell on the Chingari e-commerce arena, due to its strong community. On the platform, users can also make NFTs (short films) that allow users to buy products from or communicate with their favourite content providers. About Chingari Chingari, which launched in 2018, is a platform for creators that allows them to upload short films and earn money through merchandise shops, subscriptions, and unique ways to communicate with their followers. Chingari has been branded the 'TikTok of India,' and it has more than filled the void left by the banning of TikTok and a number of other social media applications in India. The app has exploded in popularity after it was updated in June 2020 to better fit with their crypto and creator focus. The number of active users on Chingari has grown at an exponential rate, reaching milestones of 100,000, 1 million, 10 million, and finally 100 million. About GARI GARI, the Chingari app's native token, debuted in October 2021, with a creator-centric strategy and additional incentives to encourage content creation. The token became the first cryptocurrency to be listed on all six major centralized crypto exchanges at the same time, including FTX, Huobi, and OKEx.

AscendEX is excited to announce the listing of the Solanium Token (SLIM) under the trading pair SLIM/USDT on AscendEX starting January 20 at 2 p.m. UTC. Solanium is a decentralized platform for fundraising and trading on the Solana blockchain. The platform includes a top-tier Solana launchpad, staking mechanisms for SLIM, wallet management, governance, and a soon to be deployed DEX. Users are able to stake SLIM tokens to receive rewards. Users can manage their Solana wallet and participate in the protocol's governance. The platform will give high priority to the development of both the user interface and user experience, as these are part of the core foundations that some feel are currently lacking within the Solana ecosystem. All major Solana wallets will be supported by the platform. The platform will extend to any connected wallet with in-line wallet management. Users do not have to leave the platform to see their token balances, send or receive tokens, or manage token accounts. The platform allows users to stake Solanium's SLIM token to receive vSLIM token. vSLIM token qualifies users for fee distribution, voting right, and access to exclusive launchpad pools. The staking protocol is based on time-weighted voting. Users can time-lock SLIM tokens. The longer the time-lock, the bigger the vSLIM 'boost', the more vSLIM tokens users receive. The time-weight voting mechanism will be based on Curve.fi DAO voting, with a lower maximum locking time. The first phase of the governance on Solanium will be a mix between a centralized solution and blockchain voting. There will be a centralized app where users can sign with their wallet and cast a vote. The votes will be saved in the database of the application. There are multiple community incentives planned that are tightly integrated into the platform, introducing users from every level to the Solana ecosystem and the Solanium Platform. AscendEX is excited to work with the Solanium team and help support the Solana ecosystem. About AscendEX AscendEX is a global cryptocurrency financial platform servicing more than one million institutional and retail traders with the resources needed to obtain more value from their crypto investments. Operating at the nexus of centralized finance and decentralized finance, AscendEX's platform features access to margin, futures, and spot trading, a robust wallet infrastructure, and staking support for over 200 industry-leading blockchain projects, all producing industry leading yields and returns, further driving the growth of the crypto ecosystem. In efforts to cultivate scalable and secure forms of decentralized financing, AscendEX has emerged as a leading platform by ROI on its initial exchange offerings through supporting some of the industry's most innovative projects from the DeFi ecosystem. To learn more about how AscendEX leverages best practices from both Wall Street and the cryptocurrency ecosystem to extract the highest value per dollar to its users, please visit: Website: <https://ascendex.com> Twitter: https://twitter.com/AscendEX_Global Telegram: <https://t.me/AscendEXEnglish> Medium: <https://medium.com/ascendex> About Solanium Solanium is a decentralized platform for fundraising and trading on the Solana blockchain. The platform includes a DEX UI, staking, wallet management, governance and a launchpad. Users can stake SLIM tokens to receive rewards. Solanium is the go-to platform for the Solana blockchain. Users can manage their Solana wallet and participate in their protocol's governance. The platform will give high priority to both User Interface and User Experience, as this is one of the core principles that are currently lacking within the Solana ecosystem. The meteoric rise of blockchain technology in the past decade is nothing but spectacular. Bitcoin's rise coupled with the growth of smart contract chains is enticing every global industry to try its hand at blockchain technology. Its decentralized, transparent, and secure nature sees blockchain technology offer industries, companies, and governments a new light into the digital future. With the advantages of blockchain being witnessed across almost every industry, demand for blockchain ecosystems and protocols is at its peak. As the crypto and blockchain market grows rapidly, many developers and projects are investing loads of money to research and develop protocols that increase the value and innovation of their blockchain ecosystem. Across 2021, blockchain ecosystems such as Solana, Avalanche, and Terra money (LUNA) saw wild growth rates in value, community growth, and development â€ signaling the importance of building a sustainable blockchain ecosystem. In this piece, we focus on a list of top blockchain ecosystems with the potential to massively gain value across 2022, their technology stack, features, and solutions they offer. A clear path to value growth in 2022 1. Ethereum It must be a cliché by now seeing Ethereum mentioned as a top prospect coin despite being in the blockchain space since 2015. However, Ethereum has proven to stand the test of time and boasts of the largest blockchain developers community in

Mumbai, India, 17th January, 2022, Chngari, the leading video sharing app in India, has achieved another first with the historic parallel listing of its native \$GARI token on six of the world's leading centralized cryptocurrency exchanges. Breaking new ground yet again, \$GARI has become the world's first cryptocurrency to launch simultaneously on six trading platforms – Huobi Global, FTX, KuCoin, Gate io, OKEX and MEXC Global. \$GARI is the native cryptocurrency token of Chingari, a short-video sharing platform that now ranks as the number one social media application in India on the Google Play store. The \$GARI token was launched in October 2021 amid great fanfare by the company's Bollywood superstar brand ambassador Salman Khan, and followed up with a record-breaking IDO via its Initial DEX offering on the SolRazr launchpad last month. The \$GARI token is built on Solana, an Indian-developed alternative to the Ethereum blockchain that offers the advantage of much faster transaction speeds and lower associated costs. \$GARI is a social token that will empower the Chingari platform to set up their own commerce ecosystem where they can sell physical goods, as well as a non-fungible tokens (NFTs) marketplace, and enable fans to fund their favorite artists. The aim is to build an economy, in which users will also be able to obtain \$GARI tokens for creating or watching content on the platform. Chingari is the most popular social media app to experiment with cryptocurrency so far. The app has been downloaded more than 100 million times and counts over 32 million active monthly users, meaning \$GARI has the key advantage of being able to tap into Chingari's enormous existing audience. To date, few other cryptocurrency tokens have had such a large potential user base at launch. \$GARI's listing on some of the world's leading centralized crypto exchanges will generate yet more buzz around Chingari's innovative project. Huobi Global, FTX, KuCoin and Gate are all ranked among the world's

To date, few other cryptocurrency tokens have had such a large potential user base at launch. \$GARI's listing on some of the world's leading centralized crypto exchanges will generate yet more buzz around Chingari's innovative project. Huobi Global, FTX, KuCoin and Gate are all ranked among the world's

top ten exchanges in terms of volume traded, traffic and liquidity, while OKEX ranked in the top 20 and MEXC Global sits in 26th place. @Chingari is bringing the web3 revolution to the creator economy with its \$GARI token,â Chingari CEO Sumit Ghosh said in a statement. â\$GARI will enable 30 million monthly active users of the Chingari Short video app to get on-chain. For the first time in the history of blockchain, an app will onboard millions of users on-chain from the day of its launch. The Chingari and \$GARI teams and the entire community are super excited about its launch and listing!â Traders will be able to buy and sell \$GARI tokens on Huobi Global, FTX, KuCoin, Gate , OKex and MEXC Global from 13:00 UTC on January 18, 2022. About Chingari Chingari is a short video sharing app built to cater to Indian audiences that allows users to create and share videos with incredible filters and games, shop for merchandise, send messages and more. With more than 85 million downloads and 32 million active users, Chingari is one of Indiaâs fastest-growing social media platforms and the most popular app of its kind. Zürich, Switzerland, 17th January, 2022, Chainwire Cloudname, a pioneer NFT-based domain investing service, has announced the launch of its new innovative platform for the tokenization and trading of domain names to bring improved liquidity to the market and give the crypto world access to an asset class that is ripe for democratization. Domain name investing is one of the internetâs oldest money-making machines, with web addresses being resold for thousands of dollars. Consulting firm BCG estimated that dot-com (.com) domain names, on average, sell for around \$2,000 in the secondary market. That presents investors with attractive upside potential from the typical retail price of \$10 to \$16. Still, some high-end web addresses have been resold for millions of dollars. Earlier this year, Tesla Inc. reportedly bought the tesla.com domain name for roughly \$11 million. Despite the high potential returns, domain investing is popular only among a certain group of internet entrepreneurs because of challenges including liquidity, valuation and high price tags for premium domains. Low liquidity is a result of the reality that it takes domain investors months or years to find suitable buyers. Lack of liquidity generally discourages new entrants because many of them cannot afford to have their money locked in assets that cannot be readily converted to cash. Democratizing Domain Investing With NFT âDomains are the real estate of the virtual world and their value grows along with the wider digital economy. Current data suggests that the digital economy is growing rapidly, thanks to the acceleration of digitalization in different industriesâ Cloudname co-founder and CEO Davide Vicini said. âWe are now using NFTs to democratize access market so that anyone can invest in both existing and new domain names, including blockchain domains like ENS and Handshake.â The Cloudname Domain Trading Platform solves the problem of liquidity and high price tags for premium domains by allowing anybody to invest in a fraction of the entirety of a domain portfolio using NFT. The platform also supports the trading of domains in real-time. Price Discovery for Domain Names There are currently no standardized ways to determine the value of domains in real-time. The Cloudname Domain Trading Platform solves this problem by providing a suite of price discovery tools. The platform integrates with more than 20 third-party APIs to provide access to all the pricing factors of a domain name, including earlier similar transactions, third-party appraisal, social mentioning and semantic analytics & prediction tools The Cloudname Domain Trading Platform also features revolutionary analytics and prediction tools for spotting trends that could help generate ideas for potentially high-value domains. The platform uses artificial intelligence to analyze data from different social media channels to find market trends before they become a buzz. Domain Investing Across Multiple Blockchains Cloudname is coming to the market with the goal of democratizing domain investing for everyone. Therefore, the Cloudname Domain Trading Platform was built to run across multiple blockchain networks including Ethereum, Binance Smart Chain (BSC), Polygon and Solana. About Cloudname Cloudname is a Web 3.0 marketplace for tokenizing, fractionalizing, investing and trading both traditional and blockchain domain names as NFTs. Cloudname provides simple, yet powerful tools for discovering new domain investment opportunities as well as meaningful data to help domainers make smart decisions. - Itâs still up about 1,900 percent over the previous year. - Dogecoin might rise in value if more businesses accept the token. This morning, the price of the worldâs most popular and most significant digital currency, Bitcoin, fell below \$43,000. Since the beginning of the year, Bitcoin has lost roughly 7% of its value. Meanwhile, according to CoinMarketCap, the worldwide cryptocurrency market cap remains unchanged at \$2.19 trillion today. Elon Musk recently announced that Tesla is accepting Dogecoin for its products, including the âGiga Texasâ belt buckle and miniature electric car models. Dogecoin prices rose 25% due to Muskâs announcement that Tesla will use digital currency as a payment option. Dogecoin: Still Positive However, the coinâs value fell by more than 5% yesterday. Although Dogecoin has had a recent dip, it is still up over 19 percent over the past week. There has been a 75% drop in the value of Dogecoin from its all-time high in May last year. Itâs still up about 1,900 percent over the previous year, despite recent turbulence in larger crypto markets and significant drops in its token price. Read More: Dogecoin Price Prediction Since Dogecoin does not have an underlying blockchain service network like Ethereum, Solana, or Cardano. The driving force may only influence its price via currency acceptance and speculation. Dogecoin might rise in value if more businesses accept the token as a means of payment or if more trading platforms provide the ability to purchase and sell the cryptocurrency. According to CoinMarketCap, the Dogecoin price today is \$0.170846 USD with a 24-hour trading volume of \$1,088,010,111 USD. Dogecoin has been down 5.55% in the last 24 hours.

- Bankless puts out a report on ETH surges from Q4 2020 to Q4 2021. - ETH has shot up 1777% from Q4 2020 to Q4 2021. - DeFi has exploded to about 770% up from Q4 2020 to Q4 2021. The second largest crypto in the world, in terms of market cap, the Ethereum (ETH) is obviously one of the most anticipated. Indeed it has come up a long way still maintaining its supremacy over the altcoin industry. In spite of this, one of the most profuse online crypto analysis platforms and investment advisory, the Bankless posts a tweet, regarding itâs report on ETH. Upon the tweet Bankless terms, that as protocols unusually donât put up their yearly statistics, they have completely published the report on ETH from Q4 2020 to Q4 2021. Companies issue quarterly reports. Protocols donât. So we did instead. ðŸ”” The State of Ethereum | Q4 Report @BenGiovie compares Q4â20 to Q4â21. The numbers are telling! Weâre bullish on protocol & ecosystem growth. And we have the numbers to prove it.https://t.co/QWC1Ysg1e3 â Bankless ðŸ”” (@BanklessHQ) January 13, 2022 ETH Surge Between Q4 2020 to Q4 2021 Though be something of the past, the past records are obviously vital in the crypto industry, solely on the basis of market analysis. According to the Ethereum report by Bankless, a complete project like Ethereum has surpassed effortlessly in almost all itâs attributes together for the year 2021. Regardless, it was in the Q4 of 2021 that ETH even hit itâs still current ATH of \$4,860. In addition, on comparing the Q4 of 2020 with Q4 of 2021, ETH has massively exploded in all terms. Also, the complete revenue shot up from \$231.4 million to a whopping \$4.34 billion for the overall ETH platform. This accounts to a massive surge of 1,777% rise in itâs revenue on comparing Q4 of 2020 to Q4 of 2021. One of the major reasons for this surge on ETH also accounts to the platformâs increase in active users during Q4 of 2021. The active users rose upto 34% on Q4 of 2021 alone. DeFiâs Boost for ETH Apart from the other attributes based upon the ETH blockchain, the Decentralized Finance (DeFi) obviously plays a major role for ETH such surges in between the period of Q4 of 2020 to Q4 of 2021. Similarly, taking into account the DeFi surges between Q4 of 2020 to Q4 of 2021, the sector has witnessed a striking surge of overall about 770%. In addition, the overall Total Value Locked (TVL) has surged up from \$17.73 billion to \$154.2 billion astonishingly. Amongst this, the Curve plays the major role as it alone holds about \$20 billion TVL.

- Many people found Buterinâs polls amusing and have commented. - Cardano (ADA) came out on top in the first poll. The co-founder of Ethereum, Vitalik Buterin, set up a Twitter poll for the Ethereum community Thursday. Buterin asked his followers to choose between BTC, USD, SOL, and ADA as their preferred currency in his first tweet. Their options in the second tweet were TRON, BNB, CNY, or NEO. Buterin tweeted: âeYou get up in 2035 and 80% of all transactions and financial savings on the earth are in a single foreign money thatâs not ETH. Which might you like it to be?â Read More: Ethereum Price Prediction A total of 600,697 people voted in the first primary ballot, while 358,743 people voted in the second primary ballot. Cardano (ADA) came out on top in the first poll, with Bitcoin (BTC) and Solana (SOL) followed (SOL). Binance currency (BNB) and Neo (NEO) came in second and third, respectively, in the second voting (NEO). TRON acquired the first spot on the second poll. Solana has the Potential to Displace Ethereum However, stablecoins are not included in Buterinâs initial poll of the most valuable cryptocurrencies. Many people found Buterinâs polls amusing and have commented and liked them on social media. Still, others have questioned his motivations for posting them, the number of cryptocurrencies he included, whether or not votes were cast by bots and the likelihood that 80 percent of transactions will be in a single foreign currency. Buterinâs poll results merely represent the popularity of specific cryptocurrencies among his followers and Twitter users, and they do not influence the real-world popularity of a certain cryptocurrency, according to others. Bank of America, on the other hand, feels that Solana has the potential to displace Ethereum as the dominant cryptocurrency.

- Ruan started his first venture capital firm, Skylight Investment. - Ruan founded Alisimba Technologies in Chinaâs capital city of Beijing. The achievements of Yubo Ruan, who is just 25, are probably beyond the imaginations of most of his contemporaries. When he was a high school student, Ruan founded Alisimba Technologies in Chinaâs capital city of Beijing with the help of 13 innovation prizes and five patents. Ruan started his first venture capital firm, Skylight Investment, while still in college to make investments in cutting-edge technology that had the potential to challenge the status quo. 8 Decimal Capital, his second venture capital firm, was founded in 2017 with a specific emphasis on blockchain and cryptocurrency startups. This time around, the serial businessman is going for the decentralized banking dream with his new lending venture, Parallel Finance, to billion people. It is supported by some of the most notable venture capitalists in the industry, including Sequoia Capital, Peter Thielâs Founders Fund and Polychain, Pantera Capital and more. In August, the company raised \$22 million in a Series A fundraising round, bringing its total capital raised to \$150 million. The Value of Arriving Early In early 2014, Ruan was introduced to crypto. He encountered a bunch of Bitcoin and Ethereum miners, he was working on his first firm, Solana (SOL) and Polkadot (DOT) which used to take billions of dollars to pay for while overseeing the \$60 million VC fund at 8 Decimal Capital, according to Ruan. Read More: Solana Price Prediction Read More: Polkadot Price Prediction The early stakes have been well-rewarded. It was approximately lunchtime on Friday, and Solana, the fifth-largest cryptocurrency by market value, was selling at roughly \$148 per coin. Polkadot was trading at \$27 per coin. Looking for long-term opportunities, he considers the founderâs qualities, fair and not too low, and the impact of the network as the three main criteria to consider for a potential investment.

- Vitalik continued the discussion by adding a fresh set of alternatives to the poll. - Over 600,000 people voted, with 42 percent choosing ADA as the winner. Poll for Ethereum community. You wake up in 2035 and 80% of all transactions + savings in the world are in one currency that is not ETH. Which would you prefer it to be? â vitalik.eth (@VitalikButerin) January 13, 2022 Cryptocurrencyâs second most popular coin, Ethereum, has a strong community and following. Founder Vitalik asked the public which crypto would be a suitable alternative to Ethereum, and the response was enthusiastic. Cardano (ADA) won a Twitter vote organized by Ethereum inventor Vitalik Buterin, with 3.1 million followers. Read More: Ethereum Price Prediction Read More: Cardano Price Prediction According to an ADA whale, Cardanoâs community is one of the largest in crypto, and itâs not solely motivated by profits. The Twitter account suggests that it may be time to quit resisting the trend and fully embrace it in the tweets. However, Vitalik continued the discussion by adding a fresh set of alternatives to the poll. A good way to put things in perspective is Vitalikâs recent survey of the Ethereum community, in which he asked people to guess which currency would account for 80% of all global transactions and savings in the year 2035. Over 600,000 people voted, with 42 percent choosing ADA as the winner. Voters could select between BTC, USD, SOL, and ADA. Read More: Bitcoin Price Prediction Read More: Solana Price Prediction Cardano (ADA) Beats TRON Still! Cardanoâs ADA comes out on top only from just one tweet. Despite this, Vitalik tweeted the second set of options with the same explanation and received 358 thousand votes. BNB, TRON, CNY, and NEO were the choices this time. This puts TRX at roughly 184 thousand votes, although TRON received 51.3 percent of the votes. A total of 252 thousand people cast ballots for ADA in the previous poll. Read More: Binance Coin Price Prediction Read More: TRON Network Price Prediction Most cryptocurrency owners, investors, and fans keep an eye on Cardanoâs ADA, although Ethereum continues to be one of the most popular options.

- Many started marketing their own initiatives in reaction to Buterin. - On Twitter, Buterin seemed to be having a low-key day. What is Ethereum co-founder Vitalik Buterinâs goal for today? To find out which cryptocurrency the Ethereum community thinks is the most viable alternative to the Bitcoin currency. According to him, the most popular currency other than ETH will be the most widely accepted payment method and a store of wealth in 13 years. Poll for Ethereum community. You wake up in 2035, and 80% of all transactions + savings in the world are in one currency that is not ETH. Which would you prefer it to be? â vitalik.eth (@VitalikButerin) January 13, 2022 Bitcoin Dominates Yet Again Bitcoin holds a commanding lead in Buterinâs first poll, with over 401,000 votes. With 29.4 percent of the vote, Cardano fell to second place after briefly taking the top

spot. Solana is currently the leading alt-ethereum killer, at moving up from third position (14 percent). Fewer than 1% of respondents believed that the US dollar would still be the world's dominant currency in 2035. With more than 147,000 votes, Binance Coin has a 39 percent vote share in a separate survey. Neo comes in third, with Tron a distant fourth. Many started marketing their own initiatives in reaction to Buterin. The co-founder of Dogecoin also promoted his humorous currency in the comment section. Furthermore, Tesla started taking DOGE for select goods yesterday, and the price went up by 17 percent. Some experts, like JPMorgan's Nikolaos Panigirtzoglou, fear Ethereum will continue to lose market share this year owing to scalability issues despite its stellar year. Ethereum had a phenomenal year in 2021. On Twitter, Buterin seemed to be having a low-key day. As a result, Vitalik Buterin, Ethereum co-founder, recently requested that his Twitter followers provide him with instances of the wackiest criticism he has received. Finally, the billionaire recalls being referred to as an "alien crackhead" at one time in his career.

AscendEX is thrilled to announce the listing of the Battle of Guardians Share Token (BGS) under the trading pair BGS/USDT on AscendEX starting on January 14th at 2 p.m. UTC. Battle of Guardians (BOG) is a real-time, multiplayer NFT fighting game that allows players to utilize their NFT assets as fighting avatars in an all-out battle of skills, where heightened skill is recognized with in-game rewards. Developed in Unreal Engine and built atop the Solana Network, BOG was designed with multiplayer capabilities that allow global players to engage in fierce, multi-realm battles in the expansive Sci-Fi game ecosystem. The project currently offers a selection of 30 unique NFTs and is equipped with an NFT Synthesis feature that allows players to upgrade the tier of their fighting avatars. BOG is being developed for PC-based gaming, with iOS and Android cross-platform multiplayer features becoming available in the future. Recently, the play-to-earn model has become the standard for new-to-market, blockchain-based gaming ecosystems. The convergence of gaming and finance through NFTs has become an exciting and interactive way for players of games and owners of NFTs, to earn real-world rewards. BOG aims to emphasize the acceptance aspect of the play-to-earn movement by offering multiple modes of play. In BOG gameplay, players can battle in Player vs. Environment (PvE), Player vs. Player (PvP), or Tournament modes, using their collection of NFT avatars. With a tiered system of playable NFTs, a variety of gaming modes, and a rewards model in place, BOG will become the go-to platform for players to test their skills and agility while earning rewards in-game. A unique feature of BOG's NFT structure is the ability for players to rent NFTs, which adds yet another revenue stream for players looking to leverage the BOG ecosystem. Owners of specific NFTs can rent their assets out to players who are eager to play the game, but do not yet want to commit to purchasing their own asset. By implementing this mechanism, both established players and inquisitive newcomers can earn increased in-game rewards, maximizing the utility of the NFTs featured in the BOG game. To further incentivize players for continued gameplay and reward players for remarkable in-game achievements, Battle of Guardians will feature two tokens: the Battle of Guardians Share token (BGS) and the Fighting Points token (FP). Both tokens will be utilized within the game's various modes for purchasing NFT characters and in-game assets, whereas BGS can uniquely be leveraged as a governance token to contribute to the development of the game. Players will also have the ability to stake their BGS tokens to generate additional yield and further their involvement in the BOG ecosystem. AscendEX is excited to debut the trading of the BGS token and support the growth of the play-to-earn GameFi Ecosystem. ## About AscendEX AscendEX is a global cryptocurrency financial platform servicing more than one million institutional and retail traders with the resources needed to obtain more value from their crypto investments. Operating at the nexus of centralized finance and decentralized finance, AscendEX's platform features access to margin, futures, and spot trading, a robust wallet infrastructure, and staking support for over 200 industry-leading blockchain projects, all producing industry leading yields and returns, further driving the growth of the crypto ecosystem. In efforts to cultivate scalable and secure forms of decentralized financing, AscendEX has emerged as a leading platform by ROI on its "initial exchange offerings" through supporting some of the industry's most innovative projects from the DeFi ecosystem. To learn more about how AscendEX leverages best practices from both Wall Street and the cryptocurrency ecosystem to extract the highest value per dollar to its users, please visit: Website: <https://ascendex.com> Twitter: https://twitter.com/AscendEX_Global Telegram: <https://t.me/AscendEXEnglish> Medium: <https://medium.com/ascendex> About Battle of Guardians Battle of Guardians is a real-time multiplayer NFT Fighting Game that allows players to utilize their NFT asset as Fighters in the battlefield. Battle of Guardians is multiplayer ready, built by a game studio with 7+ years of experience. Tallinn, Estonia, 13th January, 2022, Chainwire IQ Protocol provides Mysterium token holders completely risk-free and collateral-free staking rewards whilst supporting a circular subscription model for platform users. IQ Protocol, the world's first risk-free, collateral-less DeFi solution for blockchain subscriptions, today announced integration with the decentralized VPN, Mysterium Network. Due to the nature of blockchain technology, cryptocurrency transactions must always be instant, one-off payments. The IQ Protocol is an industry-first DeFi solution that introduces timed tokens, creating a subscription model for crypto projects that provide ongoing services. This innovation brings the power of DeFi to non-DeFi services, like Mysterium, creating a circular SaaS economy. This is the first pool IQ Protocol launched on Polygon after launching a PARSIQ pool on BSC earlier in 2020. "Ethereum and Solana are the next chains on the roadmap of a truly multichain solution. Mysterium is powered by a global network of more than 10,000 nodes. Users stake MYST in order to run a node and provide VPN and proxy services to global users and B2B clients from both Web2 and Web3. Now, \$MYST token holders can stake their tokens in the Mysterium Delegation Pool, and nodes can rent tokens they need from this Pool. Tokens are rented for a pre-agreed time limit and a percentage of a node's earnings is automatically paid out to Pool Stakers. "Mysterium are providing a vital service to the decentralized ecosystem, and we're delighted to support their continued growth with the integration of IQ Protocol," says IQ Labs CEO, Tom Tirman. "Mysterium will now be able to offer staking and lending incentives to \$MYST token holders within a non-inflationary tokenomic model in which yields are generated from actual real-world use cases, and not necessarily influenced by market volatility. This is the first of many staking pools we have lined up in Q1 as we move towards the launch of our native token, \$IQT. "IQ Protocol was designed by the original team behind PARSIQ, a real-time blockchain monitoring platform that connects blockchain activity to off-chain applications and devices. In the run-up to the launch of the IQ Protocol Governance Token, whitelist initiatives are currently active across all social media channels. Mysterium's BETA version of the IQ Space pool is now open to all \$MYST holders who'd like to stake their tokens. Rewards will be paid in \$MYST. "About IQ Labs Launched recently to take over the continued development and deployment of the IQ Protocol (previously overseen by PARSIQ) this new separate entity will be leading the way in blazing a path towards crypto subscription services and risk-free, collateral-less loans of NFTs and DeFi tokens. Website: iqspace.blog | iqlabs.medium.com | www.twitter.com/iqlabs_official | www.discord.com/invite/dApUa87ns7 Telegram: t.me/iqprotocol About Mysterium Network An open-source, Swiss-based company founded in 2017, Mysterium is rewiring the internet so it's secure, free and accessible for all. Mysterium's decentralized VPN is currently available for Android, Mac and Windows. Mysterium dVPN plugs into a global network of residential nodes, one of the fastest growing online communities decentralizing the web. This open marketplace allows anyone to rent their unused bandwidth and IP address with those in need, protecting others against censorship, surveillance, and cybercrime. AscendEX is thrilled to announce the listing of the Nova Finance Token (NOVA) under the trading pair NOVA/USDT starting on Jan. 13 at 2 p.m. UTC. Nova Finance is a portfolio management platform, built on Solana, that allows users to access decentralized protocols without the need to learn and understand complex financial management skills. Users are invited to create a portfolio of assets to automatically generate returns through yield strategies, while executing investment strategies such as dollar-cost averaging, take-profit calls, and much more. The main area of focus and innovation for Nova is its programmable asset framework "a set of rules that both crypto enthusiasts and non-sophisticated DeFi participants can use to embed, or program, their investment thesis into an asset. Nova utilizes market data to recognize trends and adjust asset composition directly on-chain to suit the ever-changing investment landscape. Through yield generating services, Nova automatically optimizes additional gains, reducing downside risk in an efficient manner. The platform also offers access to a wide range of assets beyond cryptocurrencies, including NFTs and securitized tokens, as well as more obscure types of digital assets. Participants utilizing the programmable asset framework 1 receive an output token, called an NAsset, representing the assets the user has deployed within the framework. Importantly, the composition of an NAsset can change over time depending on any instructions implemented. The NAsset can also represent additional assets produced through the instructions assigned to the NAsset. Furthermore, the framework features a primary governance oriented token, Nova token. Acting as a significant weighting factor in the governance system, it allows holders to create, and vote on, on-chain governance proposals to determine future features and parameters of Nova Finance. AscendEX is proud to list NOVA and support Nova Finance in offering decentralized finance protocols that expand economic opportunities to a wide variety of users. About AscendEX AscendEX is a global cryptocurrency financial platform servicing more than one million institutional and retail traders with the resources needed to obtain more value from their crypto investments. Operating at the nexus of centralized finance and decentralized finance, AscendEX's platform features access to margin, futures and spot trading, a robust wallet infrastructure, and staking support for over 200 industry-leading blockchain projects, all producing industry leading yields and returns, further driving the growth of the crypto ecosystem. In efforts to cultivate scalable and secure forms of decentralized financing, AscendEX has emerged as a leading platform by ROI on its "initial exchange offerings" through supporting some of the industry's most innovative projects from the DeFi ecosystem. INTERNET CITY, DUBAI, Jan. 12, 2022 "LBank Exchange, a global digital asset trading platform, will list Woonkly Power (WOOP) on January 17, 2022. For all users of LBank Exchange, the WOOP/USDT trading pair will be officially available for trading at 16:00 (UTC+8) on January 17, 2022. NFT (Non-Fungible Token) market has become one of the most successful markets in the crypto space as its value and popularity have been growing exponentially in recent years. As a decentralized social network, Woonkly is here to decentralize social posts by restoring power to the user while allowing them to monetize in a new way through NFTs and through gamification. Its native token Woonkly Power (WOOP) will be listed on LBank Exchange at 16:00 (UTC+8) on January 17, 2022, to further expand its global reach and help it achieve its vision. Introducing Woonkly Metasocial Network Woonkly Metasocial Network is a Decentralized Social Network where all posts are converted into NFTs directly, where users have full control of their data and where the content is not uploaded to a server but to users' computers through IPFS (interplanetary file system) allowing the creation of a decentralized global directory of creators, influencers, talents, users and metaverses, interacting with each other and creating new ways to monetize content. Creators can upload their audiovisual works and establish royalties for them. Almost any type of media file is eligible to be converted to an NFT. From songs to video clips, from podcasts to books, from selfies to metaverse lands. The mission of Woonkly is to allow creators, influencers, talents, gamers, metaverses, users, and games to have a point of reference to monetize and socialize in a decentralized way. Its vision is to become the world directory between reality and the metaverse, connecting creators, influencers, and brands internationally with metaverses, play-to-earn games, and users. Currently, Woonkly works on 2 Blockchains, the BSC network, and the Ethereum network. It will soon be included in the Avalanche and Solana networks and in the future, it will migrate to its own public blockchain. About WOOP Token As the utility token of Woonkly created on BSC, Woonkly Power (WOOP) reduces by 50% the commissions in the purchase and sale of NFTs in the social network, the income from advertising, or any other services provided by the platform. It's also the only token that can buy or sell Woonkly.com Super Powers and the only token for programs such as Woonkly Gallery House and Woonkly Creators House. The total supply of WOOP is 1 billion (i.e. 1,000,000,000). 41.5% of it is currently owned by the Community, 40% is allocated to the team and advisors, 15% is reserved for award ecosystem, marketing, and operation, 1% is provided for liquidity which is locked for 12 months, and the rest 2.5% is provided for liquidity in Exchanges. The 1 billion of WOOPs are pre-mined and no more can be created, which means that the number of WOOPs in circulation is finite and non-

inflationary. The WOOP token will be listed on LBANK Exchange at 16:00 (UTC+8) on January 17, 2022, investors who are interested in Woonkly investment can easily buy and sell WOOP on LBANK Exchange by then. The listing of WOOP on LBANK Exchange will undoubtedly help it further expand its business and draw more attention in the market. Learn More about WOOP Token: Official Website: <https://woonkly.com> Telegram: <https://t.me/woonklyen> Twitter: <https://twitter.com/woonklyen> Facebook: <https://www.facebook.com/woonkly/> Instagram: <https://www.instagram.com/woonkly> About LBANK Exchange LBANK Exchange, founded in 2015, is an innovative global trading platform for various crypto assets. LBANK Exchange provides its users with safe crypto trading, specialized financial derivatives, and professional asset management services. It has become one of the most popular and trusted crypto trading platforms with over 6.4 million users from now more than 210 regions around the world. As every crypto user knows the current state of the crypto industry, there isn't a need for an explanation regarding the bearish run. Since the start of the new year, the market has crashed and led to a depressed state for traders and investors. As the Federal Reserve tightened the regulation for cryptocurrencies, the users are facing this state of dipping period. Despite the crackdown, some altcoins are performing well with new implementations from their ecosystem. Similarly, Kadena (KDA) has surged up in price value within the last 24-hours to over 20%. Kadena is one of the potential crypto tokens in the market with more updates from its network. Kadena is a proof-of-work platform that combines a Layer 1 public chain protocol with a Layer 2 network to deliver high throughput while keeping security and scalability in mind. The platform intends to apply blockchain technology to real-world scenarios, with tools and services that are ready for mass use. Market Status And Launch Of ImmuneFi Currently, Kadena (KDA) is trading at a price value of \$10.43 with a total trading volume of \$61,847,459 in the past 24-hours. According to Coinmarketcap, KDA has climbed up to 20% within a day and holds 69th rank. The current circulating supply of KDA is 166,890,458 coins. Moreover, KDA is available to trade on top exchanges like KuCoin, Gate.io, BKEX, Hotbit, and ZT. The price action of KDA has soared from \$8.55 to \$10.44 within a day which seems a quite beneficial change. Significantly, the price changes have been witnessed following the launch of ImmuneFi. The network announced the entry of a leading bug bounty platform for DeFi with largest bounties. Following this, Port Finance has also launched its Bug bounty program on ImmuneFi. As per the updates, this announcement became official on January 12, 2022, while Port Finance is a suite of money market products built on Solana. Since the updates, the price value of KDA has been surging while creating expectations from holders. If this trend continues then it might take a while to hit its previous all-time high.

- Terra has a community-based governance model. - Terra coins may now be purchased on the platform by potential buyers. The leading blockchain protocol for algorithmic stablecoins, Terra is now live on OpenOcean. Terra coins, both LUNA and UST may now be purchased on the platform by potential buyers. Terra is one of the fastest-growing cryptocurrencies on the market. When Shiba Inu, Dogecoin, Litecoin, and others got it into the top ten cryptocurrencies, Terra outperformed them all. I'm Thrilled to announce @terra_money, the leading blockchain protocol for algorithmic stablecoins, now live on @OpenOcean! I'm OpenOcean! We're hiring IYES (@OpenOceanGlobal) January 10, 2022 I get best rates & maximum returns across leading DEXes @loop_finance & @terraswap_io Dive into Terra on OpenOcean today! More info <https://t.co/kkgdb2IQVM> Terra's current market capitalization, according to CoinMarketCap, is \$32.707 billion, making it the 9th biggest cryptocurrency. In the year 2021, the cryptocurrency's price had risen by over 15,000 percent. Decentralized financial infrastructure and blockchain protocol Terra (LUNA) present various novel market notions. An oracle system and smart contracts introduce people to digital currency on the network. Strong emphasis on interoperability LUNA has several advantages for investors, thus so many are drawn to it. Payments, logistics, infrastructure, and decentralized app development are available via this platform. Stablecoin development is also supported. Additionally, Terra places a strong emphasis on interoperability. The network supports multiple chains. There are plans to spread the LUNA protocol to additional major blockchain networks in the future. Currently, LUNA is only available on Ethereum and Solana. One of the team's main objectives is to replace the cumbersome payment value chain with a transparent one. Read More: [Ethereum Price Prediction](#) Read More: [Solana Price Prediction](#) Aside from this, Terra has a community-based governance model. Voting privileges are granted to validate users in the event of critical network changes. Technical adjustments, enhancements, and a slew of other things may be included in these revisions. As a general rule, any validator may propose new features for consideration by the community. Recommended for you

- Altcoins such as MATIC, EGLD, LUNA, DOT might outperform in Q2 of 2022. - In the last year, Polygon (MATIC) has achieved many milestones. - LUNI on Terra has come up with its first overview of LUNILAND. For crypto investors, the crypto-verse corrections have created newer opportunities. Searching and finding a capable and potential cryptocurrency is a never-ending process as day by day the crypto industry was expanding with new altcoins. Among top-performing cryptocurrencies, altcoins such as Polygon (MATIC), Elrond (EGLD), Terra (LUNA), and Polkadot (DOT) might outperform in Q2 of 2022. Polygon (MATIC) Even though Polygon (MATIC), a well-known cryptocurrency but it has been failed to impress, with its sack full of initiatives and use cases. According to the recent update, the developers have chalked updates and suggestions on the present state of Polygon. Proof of Stake. More so, the Polygon team has been working on various solutions to improve the capabilities of the platform. Moreover, in the last year Polygon has achieved many milestones which include 100M+ wallets, 3K+ applications, 1B+ transactions, Web 3.0 initiatives, and some more. According to CoinMarketCap, at the time of writing, MATIC's price is trading at \$2.03 with a 24-hour trading volume of \$1,339,622,718. The circulating supply of MATIC is 7.16B MATIC. It can be traded in top crypto exchanges such as Binance, OKEx, CoinTiger, FTX, and Huobi Global. Elrond (EGLD) Consecutively, the Elrond team has launched the Maiar Exchange, which allows users to trade USDC with the Elrond token. This created hype in the industry. The Maiar decentralized exchange (DEX) has attracted significant total value locked (TVL) and adoption and has managed to add new products, features, and improvements. Furthermore, the recent listing of Elrond on Huobi Global gives exposure to 10M+ new users who will get access to Elrond. Thus, Huobi Global is one of the largest exchanges in the crypto industry, and this listing will drive more traffic to Elrond. At press time, EGLD's price is trading at \$196.77 with a 24-hour trading volume of \$121,865,324. The circulating supply of EGLD is 19,990,636.12 EGLD. It can be traded in top crypto exchanges namely, Binance, OKEx, FTX, Huobi Global, and Bybit. Terra (LUNA) Terra is one of the projects in the crypto industry that was creating a notable buzz in the industry. Its users get access to a host of projects outside the Terra ecosystem that air drop for LUNA stakers. A project developed on Terra, LUNI on Terra has come up with its first overview of LUNILAND. This will be the first Metaverse with plots and passive income on Terra. Eventually, Terra set to commit \$139 Million in 5 different DeFi projects across Ethereum, Polygon, and Solana to enhance the utility of UST. Henceforth, as per CoinMarketCap, LUNA price is trading at \$71.67 with 24-hour trading volume of \$2,838,833,055. The circulating supply of LUNA is 358,442,578.20 LUNA. It can be traded in top crypto exchanges such as Binance, OKEx, Huobi Global, Bybit, and KuCoin. Polkadot (DOT) Polkadot's parachain auctions are one of the network's biggest USPs, similarly, Polkadot and parachains are now spelled in chorus. The report by Messari reveals that in last year out of 53 most leading fund managers 21 have actively invested in DOT, making it one of the most sought-after assets. Even more, several crowd loans active for the next auctions, nearly 10.1% of all DOT tokens are locked up for crowd loans for parachain slots. Additionally, as per CoinMarketCap, Polkadot (DOT) price was trading at \$24.42 with 24-hour trading volume of \$1,622,682,526. The circulating supply of DOT is 987,579,314.96 DOT. It can be traded in top crypto exchanges such as Binance, OKEx, CoinTiger, and FTX.

- SMB is a collection of 5,000 randomly produced 24x24 pixel monkeys. - CryptoPunks NFT avatar sold for \$500 million in October. Non-fungible tokens (NFTs) have never been more popular. OpenSea, Axie, and Rarible are fantastic NFT markets to use while offering an NFT marketplace development service beneficial for organizations entering the Blockchain Ocean. Decentralized finance, smart contracts, and NFTs are built on Ethereum. Despite its popularity, the platform is under stiff competition. While Ethereum and Solana have supporters, Ethereum is the most popular because it has the most transparent Dapp ecosystem. These opponents have some notable contrasts that cannot be overlooked. Moreover, cryptocurrency, applications, and worldwide payments all reside on Ethereum's blockchain. Ether has a restricted transaction rate. It is also quite congested, forcing users to either pay a hefty charge or wait in line, allowing alternative blockchains to thrive. Solana Blockchain handles 3000 transactions per second and can handle 50k-65k transactions per second. Network validators can process transactions quicker, allowing the network to handle over 50000 per second. CryptoPunk Vs Solana Monkey Business NFT SMB is a collection of 5,000 24x24 pixel monkeys created at random and preserved on the Solana blockchain. SMB is a grassroots NFT initiative. In October, SMB #1355 sold for \$2 million. Furthermore, users with a Solana Monkey Business NFT have access to the MonkeDAO, Solana's first NFT DAO. CryptoPunks, an early NFT initiative on the Ethereum blockchain, inspired the NFT standard. The project includes 10,000 pixel-art figures, including human, zombie, ape, and extraterrestrial "punks." Each "punk" has unique traits and accessories. Moreover, using Ethereum's flash loans, a CryptoPunks NFT avatar sold for \$500 million in October. Aside from that, the year's most costly CryptoPunk was #4156 (\$10.26 million).

- Ethereum has much more open-source developers than Bitcoin. - Polkadot has more significant development activity than other big coins. Ethereum still has a larger pool of developers than any of its competitors, but the rival's pool is expanding quickly. Research firm Electric Capital revealed data on the blockchain development environment on Thursday. It found that Ethereum rivals Polkadot, Solana, and Binance Smart Chain (BSC) are expanding faster than Ethereum. It showed that Ethereum has much more open-source developers than Bitcoin, with over 4,000 working each month. New developers contributed more than 34,000 lines to the blockchain in 2021, breaking the previous record of more than 18,400. Research from Electric Capital states that Polkadot is presently the second-largest blockchain ecosystem behind Ethereum. Polkadot has a far more significant development activity than other big cryptocurrencies; thus, this isn't unexpected. Solana Lags Behind Despite the NFT buzz, Solana has lagged behind Polkadot in total developers, which Polkadot leads behind Ethereum with 14k developers. In addition, Polkadot's parachains and the auctions that followed lately become well-known. Moonbeam, the first winner of the parachain auction, will finish its second phase of launch on Polkadot within a few days. In addition, as soon as this is accomplished, the network's users will utilize the EVM. However, Polkadot had already started its second round of auctions before Moonbeam could finish its launch. On the other hand, Composable Finance is vying for the seventh position after Efinity's victory in the sixth slot. As Polkadot continues to attract more developers, it might one day become a DeFi center of choice.

- Amidst the market crash the talks around altcoins are on the rise. Many take to Twitter depicting their views vividly. It's been the third consecutive day as the market is still down. However, the talks regarding the Bitcoin (BTC) or the other altcoins are never down though. In spite of this, CoinTrendz, an all in all platform with profuse market follow ups for 24/7 has listed out the top ten cryptos on trend with respect to their mentioning's in Twitter. They are as follows, Top 10 Mentions on Twitter in the last hour \$BTC \$SHIB \$ETH \$SOL \$ONE \$LINK \$DOGE \$FTM \$ADA \$VLX I'm CoinTrendz.com (@CoinTrendz) January 8, 2022 More on our Free Bot: <https://t.co/zBdS1Kw72I> I'm pic.twitter.com/YNRwE1TW1 1. Bitcoin (BTC) Bitcoin (BTC) has been mentioned 502 times on Twitter for the past hour. As the king of cryptos, BTC even tops the charts in this too, and it's obvious. Currently BTC trades at extreme lows of \$41,294.71 with the graphs still low at 1.74% down, for the past 24 hours. 2. Shiba Inu (SHIB) Shiba Inu (SHIB) is rather a controversy, with massive surges at the Q4 of 2021, defeating it's primary rival the Dogecoin (DOGE), SHIB emerged out with complete success at end of 2021. Subsequently, according to the stats, SHIB is all geared up for 2022, with 453 mentions in twitter. Currently SHIB trades at lows of \$0.0002856 with the graphs still low at 2.50% down, for the past 24 hours. 3. Ethereum (ETH) Ethereum (ETH) and BTC remain the top affected cryptos in the current market crash. In spite of this, ETH has been mentioned 295 times on Twitter. Currently ETH trades at lows of \$3,131.87 with the graphs still low at 1.97% down, for the past 24 hours. 4. Solana (SOL) Solana (SOL) looking for the opportunity to kill ETH, has been so far mentioned 187 times on Twitter. Currently SHIB trades at \$139.71 with the graphs up at 0.81, for the past 24 hours. 5. Harmony (ONE) The Harmony (ONE) is the first altcoin which doesn't come upon the top ten to get high mentions of 118 on Twitter. Currently ONE trades at lows of \$0.3007 with the graphs still low at 1.92% down, for the past 24 hours. 6. Chainlink (LINK) The Chainlink (LINK) has been mentioned so far 75 times on Twitter in the past hour. Currently LINK trades at lows of \$24.53 with the graphs extremely low at 8.42% down, for the past 24 hours. 7. Dogecoin (DOGE) The Dogecoin (DOGE) is quite disappointing though, with being mentioned only 63 times, despite being one of the prominent altcoins among the top ten. Currently DOGE trades at lows of \$0.1517 with the graphs still low at 1.96% down, for the

past 24 hours. 8. Fantom (FTM) The Fantom (FTM) has been crashing as low as \$2.26, with the graphs plunging low at 17.53% down, for the past 24 hours. However, FTM has been mentioned about 61 times on Twitter in the past hour, surpassing Cardano (ADA). 9. Cardano (ADA) Despite huge expectations for ADA in 2022, taking the past hour into consideration, ADA has been mentioned only 58 times. Currently ADA trades at lows of \$1.18 with the graphs still low at 3.78% down, for the past 24 hours. 10. Velas (VLX) The Velas (VLX) is one of the most highly anticipated altcoins for the year 2022. Accordingly, itâ€™s been mentioned on Twitter 52 times in the past hour. Currently VLX trades at lows of \$12.72% with the graphs still low at 12.72% down, for the past 24 hours.

- Curve Finance now has the biggest TVL of \$23 billion. - Lidoâ€™s TVL dropped 14.03 percent among the top 10 protocols during a week. In recent days, the value of the crypto market has fallen and is now also visible in total value locked trapped in decentralized finance. From \$255.84 billion to \$233.95 billion, the TVL in DeFi has fallen 8.55 percent in only four days. Curve Finance now has the biggest TVL of \$23 billion, giving it a lead of more than 9.84 percent. Convex Finance, MakerDAO, Aave, WBTC, and Instadapp followed respectively. Lidoâ€™s TVL dropped 14.03 percent among the top 10 protocols during a week. As the price of bitcoin (BTC) dropped, so did the value of the decentralized exchanges, Uniswap and WBTC. Ethereum on Top On Saturday, Ethereum held \$147.9 billion TVL, the biggest of any blockchain. The TVL of Ethereum now accounts for 58.18 percent of all DeFi TVL. Terra (\$16.61 billion), Binance Smart Chain (\$15.33 billion), Avalanche (\$10.93 billion), Solana (\$10.03 billion), and Fantom (\$5.67 billion) are the following five most valuable cryptocurrencies, in that order. Cross-chain bridges 30-day figures reveal today that the TVL has decreased by 10.4 percent. Polygonâ€™s TVL, with \$6.1 billion, was the leading cross-chain bridge on Saturday. Next are Avalanche (\$5.4 billion), Ronin (\$4.9 billion), and Arbitrum (\$2.8 billion). There have been a few top-performing smart contract crypto assets in the previous seven days: FUSE, CPH, NOAHP, ONE, ICP, and LINK. Poa Network (POA), Gather (GTH), Dusk Network (DUSK), Kadena (KDA), Enigma (ENG), and Oneledger (OLT) are the six worst-performing smart contract crypto assets this week.

- Direct-chain storage offers some protection against 51-percent assaults. - Cross-chain bridges do not have the same degree of security. For blockchain technology, interoperability aids in the issue of assets and data interconnecting across chains. Data and value exchange between two parties using the same blockchain platform, such as Bitcoin, Litecoin or Ethereum, has become easy. However, the same cannot be stated for data and value exchange between two parties using different blockchain platforms. As a result, the digital transfer becomes much more difficult due to the expanding diversity of blockchain networks used by enterprises throughout the globe. It is expected that interoperability would help to relieve these issues and make it easier for parties to trade across different blockchains. Future of Multi-chain Ecosystems When Vitalik Buterin tweeted a link to a Reddit article this morning, he spoke about the future of multi-chain ecosystems and raised reservations about cross-chain ecosystems. My argument for why the future will be "multi-chain" but it will not be "cross-chain": there are fundamental limits to the security of bridges that hop across multiple "zones of sovereignty". From <https://t.co/73g16UvUA3A>: pic.twitter.com/tEYz8v5596 â€” Vitalik Buterin (@vitalikbuterin) January 7, 2022 According to Buterinâ€™s reasoning, the â€œfundamental security limits of bridgesâ€ are what make cross-chain interactions problematic. For Buterin, direct-chain storage (e.g., Ethereum, Solana) offers some protection against 51-percent assaults. There is no way that hackers can propose blocks that would take away a personâ€™s crypto even if they can censor or reverse the transactions. On the other hand, Cross-chain bridges do not have the same degree of security, according to Buterin. If an attacker deposits their ETH onto a Solana (SOL) bridge to obtain Solana-wrapped Ether (WETH) and then reverts that transaction on the Ethereum side. As soon as the Solana (SOL) side confirms it, it will cause catastrophic losses on other participants for whom the coins are locked in the SOL-WETH contract, as the wrapped tokens are no longer backed by the initial on a 1:1 ratio.

The crash in the crypto industry since the start of the new year has gathered disappointment for the traders and holders. The actions of the Federal Reserve seem to be the story behind the decline of the crypto market. As per the tightened regulations from the Federal Reserve have held down the cryptocurrency prices which results in a crashdown. Bitcoinâ€™s price has currently sloped down around \$41,000 while the total market capitalization of cryptocurrencies dipped to \$2.1 trillion. Letâ€™s dip into the top cryptocurrencies to purchase during its bearish rally that has a catalyst which are ETH, NEAR, and ATOM. Three Strong Altcoins Ethereum is the most valuable altcoin among the cryptocurrencies which offers the best transformation for holders. As of now, ETH has crashed over 35% since its lowest price at the start of October 2021. The tightening regulations from the Fed are the reason for the decline, which results in a depressed state for investors. On the other hand, Terra and Solana are shaping to be the ETH-killers in the market. Moreover, the Ethereum network is in the transition period as its framework is converted from proof-of-work to proof-of-stake technology. This transition will address the challenges that the Ethereum network faces. Furthermore, ETHâ€™s launch of the London Hard fork aided in raising the price value in 2021; as such, Ethereumâ€™s price value tends to rise following a major update. NEAR is the next top altcoin which is an ever-growing network gaining more popularity. Significantly, NEAR has become one among the best performing cryptocurrencies last year which has soared to 887% from its lowest level in October. Following the release of Nightshade sharding technology, the NEAR protocol had huge gains. This is a technique for breaking down blocks into shards in order to increase speed. The initial phase of the sharding process will be a major catalyst for the NEAR price to rise. Consequently, Cosmos (ATOM) is another strong altcoin that has bounced towards an upward trend in the past few months. ATOM is a cryptocurrency that powers a network of blockchains that are meant to scale and work together. The upcoming bridge will help in the price surge of cryptocurrency. Besides, this bridge opens up the connection between apps created by Cosmos with apps built using Ethereum. Furthermore, these cryptocurrencies have the catalyst and are easy to invest during these sell-offs.

- The Polygon network has grown to more than 10 million active members. - Some spend hundreds of dollars a month to use the ETH network. Let us look at the predicted coins to end in the top 3 this year-end by popular analyst Lark Davis. Top 5 #crypto coins end of 2022 will be â€” Lark Davis (@TheCryptoLark) January 7, 2022 1 #Bitcoin 2 #Ethereum 3 #Polygon 4 #Solana 5 #Cardano and just for fun \$shib in 6th place Do you agree? Bitcoin (BTC) Bitcoin had a bad start to the New Year, similar to many significant coins. Furthermore, it has corrected marginally. Short-term declines are possible for the benchmark cryptocurrency because of macroeconomic variables. According to past reports, some analysts feel that risk assets may experience a short to a mid-term period of volatility but would eventually profit from increased interest rates. Bloombergâ€™s Senior Commodity Strategist Mike McGlone is sure that the cryptocurrency will reach \$100,000 by 2022. The well-known crypto analyst Lark Davis also announced his top list of currencies by 2022 end, which included Bitcoin as number 1, Ethereum (ETH) as number 2, and Cardano (ADA) as number 3. Vitalik Buterin, co-founder of Ethereum, presented a novel â€œmultidimensionalâ€ gas charge mechanism. He believes that customers would save money on gas if he implemented a system that charges varying rates based on the resource being utilized. Since the launch of DeFi in the summer of 2020, high Ethereum gas costs have been a chronic issue. Some spend hundreds of dollars a month to use the network. The expert predicts that Ethereum will finish the year in second place. Polygon (MATIC) An organization with over 20 million MATIC tokens recently purchased 4.84 million tokens, totaling \$10.8 million, according to data from WhaleStats. Also, in 2021, Polygon said that it received 7,200 new developers in December alone. Since its launch, the network has grown to more than 10 million active members. Even though Polygon is now rated 14th on CoinMarketCap, the expert has predicted finishing the year in third place.

Singapore, Singapore, 7th January, 2022, Chainwire ClearDAO announced its project token CLH will list on KuCoin on Jan 7th 13:00 UTC. The CLH/USDT trading pair will become available to users of the exchange. ClearDAO is the first KuCoin Spotlight project of 2022. ClearDAO has raised 3 million dollars in seed and private sales. Strategic investors include Huobi Ventures, LD Capital, KuCoin Labs, WOO Ventures, Gate.io, Redline DAO, VRM, Stillwater Research and others. ClearDAO is building a decentralized crypto derivatives factory to provide developers with SDK and tools to accelerate the development of crypto derivatives and marketplaces. To date, the project has completed the template development of options, notes, perpetual futures, and CDS. The project has a multi-blockchain strategy and already supports Ethereum, BSC, Solana and Arbitrum. Compared to traditional finance, the derivatives sector in the crypto industry is in its infancy. The 3 major pain points are: - Lack of derivative variety. - Absence of risk management. No derivatives for new asset classes such as NFTs. As DeFi matures and institutions embrace crypto, ClearDAO believes the market share of derivatives will increase for the foreseeable future. By enabling developers to create bespoke derivatives and lowering the barrier of entry, ClearDAO is accelerating the growth of the derivatives sector. User experience is a core focus at ClearDAO. The project has launched a proof-of-concept barrier trading marketplace on several testnets a month ago. Since then, over 3000 participants have tried the marketplace and provided user feedbacks. ClearDAO aims to provide a clean and simple user interface so users can intuitively complete the trades they wish to execute. According to project roadmap, ClearDAO will launch the Clear SDK v1.0 in Q1 of 2022. In the same quarter, the project will kick off developer program to provide promising dev teams with technical support, funding and marketing resources. The ClearDAO ecosystem will consist of multiple derivatives exchanges run by multiple teams, offering users with very different types of derivative products. CLH/USDT trading pair is now live on KuCoin and Gate.io. About ClearDAO ClearDAO is tackling the DeFi derivatives space by building the infrastructure for customizable derivatives. The Clear SDK provides templates and tools that enable developers and traders to easily create options, notes, futures, and swaps and launch marketplaces to facilitate the trading of these products. We are building a multi-chain ecosystem where member exchanges offer unique derivative products, all powered by ClearDAO. â€” Website: <https://cleardao.com/> â€” Twitter: https://twitter.com/clear_dao â€” Telegram: <https://t.me/cleardao> â€” Medium: https://medium.com/@clear_dao Contacts PR - Heidi - heidi@cleardao.com

Zug, Switzerland, 6th January, 2022, Autonomy Network, an off-the-shelf decentralized automation protocol, is thrilled to introduce AutoSwap, the first ever dApp to offer limit order, stop loss, impermanent loss protection, and recurring payment features for Binance Smart Chain-based DEXes such as PancakeSwap. The dApp will also be available on Ethereum, Polygon, Avalanche, Solana and other chains only on the first 24hrs that these features are available in the dApp ecosystem. By offering a decentralized platform where traders can create bespoke derivatives and lowering the barrier of entry, AutoSwap aims to help users better manage risk and boost returns without having to stare at the screen 24/7. Since the crypto markets are open around the clock, traders can automate their orders using Autonomy to stay active in the market even when they are asleep. James Key, the co-founder of Autonomy Network, commented, â€œBy introducing both limit orders and stop losses to DEXes for the first time ever on any blockchain, Autonomy has enabled DEXes to have the same features as centralized exchanges. Since most of crypto trading volume is not in market orders, this means that the main inhibitor of the growth of DEXes has been removed and is the final nail in the coffin for the dominance of centralized exchanges, allowing most of the volume to move over to DEXes.â€ Leading DEXes on multiple blockchains have partnered with Autonomy to offer their users the same features available on centralized exchanges. With trading volumes of DEXes growing exponentially, lack of automated solutions such as limit orders, stop losses, recurring payments, and impermanent loss protection had become a real pain point for DeFi users. SokuSwap, a multi-chain, decentralized exchange, has successfully integrated Autonomy on the Binance Smart Chain. Pangolin is integrating Autonomyâ€™s limit orders, stop losses, and impermanent loss prevention features on Avalanche. It aims to improve its overall usability and provide better risk management to users and LPs by integrating Autonomy. Soon ApeSwap will also have Autonomy-powered limit orders on Binance Smart Chain. Autonomy Network enables DeFi users to set up arbitrary actions to be triggered under arbitrary conditions, in a decentralized and guaranteed way. It is not just limited to trading. It could integrate with decentralized exchanges, lending protocols, DAO management tools, or even metaverse and NFT projects. For instance, SushiSwapâ€™s lending platform Kashi has decided to natively integrate Autonomy to offer automating self-liquidations. These integrations are happening even before Autonomy Network launches its token. The protocol is preparing for its Initial DEX Offering (IDO) in February. About Autonomy Network Autonomy Network is the leading decentralized automation protocol building critical automation infrastructure for Web3 dApps. Autonomy Network helps DEXes across Ethereum, Binance, Avalanche, Polygon, and other chains and Layer-2 solutions increase their volumes by enabling them to offer users a wider range of features such as limit orders, impermanent loss protection, recurring payments, and more. - AAX exchange witnesses 140% surges in trading volume in Q4 of 2021. - Q4 AAX has received more than 200K new users. - AAX now offers trading of more than 150 crypto pairs. The AAX exchange is indeed one of the oldest crypto exchanges. Besides, it was the first to be powered by the Millennium Exchange matching engine and also the first exchange to be listed in the London stock exchange. In addition, the global exchange goes on the motto that crypto is for everyone. Also, AAX exchange focuses on bringing Bitcoin (BTC) and many other digital assets to about 96% of the entire population of the world. The 140% Surge in Q4 2021 According to various statistical reports, the overall retail trading of AAX has risen to

about 140% in the Q4 of 2021. During the Q4 period, the AAX witnessed the average trading volume for the daily 24 hours hitting \$1 billion. Moreover, the Q4 trade volume radically surpassed that of Q3 evidently. The Q4 also witnessed the entry of more than 200K new users, opening their wallets and accounts upon the AAX. Apart from this, the social media followers for the AAX exchange was also on rise for the Q4 of 2021, reaching more than 150% compared to the previous Q3. Furthermore, the traffic for the website hit 2 million all being unique visitors for the AAX website. The team from AAX terms that majority of the cryptos responsible for the surge in Q4 accounts to the BTC, Ethereum (ETH), Shiba Inu (SHIB), Solana (SOL) and Polygon (MATIC). Another major aspect for the peak in Q4 for the AAX exchange owes to its new offerings to the users, in addition to increasing the trading pairs. In such terms, now the AAX offers more than 150 trading combination pairs along with more than 130 altcoins to be traded. Views of the R&D team of AAX The head of the Research and Development team of AAX, Ben Caselin states that the crypto market has opened up itself, majorly due to the entry of the Non-Fungible Tokens(NFT), Decentralized Finance (DeFi), blockchain and NFT gamings and much more. Accordingly, Caselin states that all these attributes of the crypto have created a completely new arena and variety of options for investing in the crypto market. In addition, Caselin points out that the AAX exchange will be driving only upon the needs of the users and people in the platform. Amidst all this, Ben Caselin determines that the year 2022, will be even more out performing 2021 and attaining new ATH.

- The top three altcoins for the year 2022, are Velas (VLX), Kadena (KDA) and Moonriver (MOVR). - These three altcoins are based on holding them on a long run and not a short time period. For the year 2022, the expectations are always high and people tend to look towards the brighter side in broader perspectives for the altcoins. The expectations are on rise greater and greater as each year the number of people into cryptocurrencies obviously rises. In such terms, the following are the top three altcoins, which we consider are worthwhile and best for immediate investment for the year 2022. According to these points, we have narrowed down to three altcoins, Velas (VLX), Kadena (KDA) and Moonriver (MOVR). The Velas (VLX) The Velas (VLX) is actually the world's fastest EVM based blockchain and the native token for the platform is VLX. The Velas project is actually one of the most anticipated projects very very similar to that of the Solana (SOL). Major key features of the Velas network is that it could process upto 75,000 transactions per second, with utmost security as well as the fees being extremely negligible. It is as if it is almost free. Being such a robust project, following the footsteps of Solana, the prospects are extremely high for Velas. At present the price of VLX is soaring up with gains of 18.10% for the past 24 hours from the time of writing. In addition, the ATH of VLX is \$0.51, and the current price being \$0.80, for sure the next ATH will be quite massive. Throughout 2022, VLX is expected highly, with gradual increase in its market cap at the same time. The Kadena (KDA) The Kadena is a blockchain ecosystem which provides all sorts of attributes and services one can expect from a blockchain. The KDA is the native token of the Kadena platform, upon which the entire ecosystem works. As mentioned, the KDA is the second in our list, as the potential for KDA in 2022 is as high as ever for it. At present the price of KDA stands at \$11.46, at 0.23% gains in the past 24 hours. Note that the altcoin started below a dollar and now it's at \$11. The last ATH of KDA went up to a whopping \$24.16 in August 2021. Therefore, for the year 2022, the surge is for sure, as KDA will evidently surpass it's current ATH. The potential with the project adds credibility overall. The Moonriver (MOVR) The Moonriver (MOVR) project is actually a smart contract parachain based on the Kasuma. In addition to this, it is completely compatible with the Ethereum (ETH) and a partner to the Moonbeam network too. In addition to this, the Moonriver is also on full EVM implementation along with Web3 compilation too. With such a profuse project much ahead towards the future, the growth of it's native token, the MOVR has been quite astonishing in 2021. Currently, the price of MOVR stands at \$189.97, at a surge of 0.31% for the past 24 hours. The overall journey of MOVR has been quite remarkable, with ATH of \$485 approximately. In spite of such a progressive graph so far, MOVR will be hitting another new ATH throughout 2022, surpassing 2021.

Tel Aviv, Israel, 4th January, 2022, Play-to-earn venture MonkeyBall has capped off a multi-month process by launching its \$MBS token. The team will focus on the upcoming Monkey NFT Drops to celebrate that crucial milestone, bringing more attention to the project and what the team aims to achieve. MonkeyBall is pleased to announce the launch of its \$MBS token, which can be traded across multiple exchanges and trading platforms. The token will serve multiple purposes in the broader MonkeyBall metaverse, including gaining access to the in-game store, buying Breeding capsules to create new MonkeyBall Monkeys, and much more. The upcoming Monkey NFT Drop marks another significant milestone for the project. Gaining access to an NFT ensures you can play the upcoming MonkeyBall game and offers intriguing benefits to features that launch before the game goes live. Early access includes exposure to: - Pioneers Gear-Up Camp: a way to collect consumable game items and supplies for free. - In-Game Store: buying various heavily discounted consumable items and breeding capsules to train Monkey players. - Breeding season: the ability to buy new Breeding captures to create new generations of MonkeyBall Monkeys. Bred Monkeys can be used as players or sold to other players. - PvE Game Mode: Playing games against the environment to better understand the game's mechanics and how to level up characters. The upcoming NFT drop for MonkeyBall will feature Gen-0 Monkeys. Breeding these creatures will result in Gen-1 Monkeys, and so forth. The ultimate goal is to ensure sufficient teams and leagues to facilitate matchmaking. Monkeys will have various appearances, core game skills, perks, rarity level, and gameplay skills. Interest in the MonkeyBall ventures has risen strongly over the past few months. DraftKings' founders, along with Solana Capital, Republic, NFX, iAngels, and Longhash, backed the project through a \$3 million round in October 2021. Moreover, the team raised an undisclosed amount of funding from Alameda Research, VCG, and other investors in December 2021. Both rounds complement MonkeyBall's initial DEX offering (IDO) on StarLaunch in November. MonkeyBall is developed on the Solana blockchain with the Unity game engine as a play-to-earn soccer game. The developers aim to provide high production value and AAA gaming accessible to everyone. Players will manage a team of four monkeys playing matches against other users. Additionally, players will earn \$MBS tokens for every game they win, allowing them to buy stadiums and attend other players' matches. Exploring those two latter options entitles users to additional rewards. About MonkeyBall: MonkeyBall is the next-gen esports game on the metaverse that enables players to Create, Play, Compete, and Earn. MonkeyBall combines high-production-value, multiplayer gaming with Solana blockchain, NFTs, and decentralized finance to deliver an exciting, turn-based, play-to-earn soccer game that's easy to learn yet hard to master. - Cardano (ADA) has numerous development launches all prepared for 2022. - Cardano's Layer2 solution- Hydra all set to launch in 2022. - Ranks first upon development activities for the year 2021. Getting into the top ten cryptocurrencies could be quite a challenge. However, remaining and maintaining the position among the top ten is the toughest part. In such terms, the Cardano (ADA) is exponentially considered one of the most stable and well established crypto among the top ten. The fact that apart from just being another cryptocurrency or altcoin, Cardano is solely upon its strong blockchain platform and network. Moreover, the ADA, native token of Cardano, is actually completely dependent on its blockchain platform evidently. With numerous developments in the network continuously throughout 2021, Cardano is all set to unleash itself for the year 2022. Highlights of 2021 Accordingly, one of the major outbreaks for Cardano for the year 2021, is that it has been ranked as the first among all cryptocurrencies in regards to the platform's research and developments. Apart from this, the Cardano blockchain is also ranked the first for blockchain developments for the year 2021 too. Despite all this, the year 2021, for ADA regarding the price has not been so bright. This is due to the fact that all developments upon a platform would bring impacts to the native token's prices only in the long run and not in a short time period. However, it was in the year 2021, that ADA hit its yet current ATH of \$2.96 in the month of September. ADA for 2022 As many analysts depict that all the developments done in the year 2021, will bear the fruits for the altcoin in the year 2022. In spite of this, the probable price predicted for ADA for the year 2022 is \$5! However, this could be achieved only upon the witness of various break levels throughout. Firstly, ADA has to hit the target of \$1.50. If this happens then ADA will witness a surge of 32% evidently, hitting finally at \$1.98, for the first quarter of 2022. Apart from the price surge, Cardano is all set to launch its much awaited Layer2 scalability solution, the Hydra. Hydra will be focusing the financial transactions completely for the Cardano platform. It is expected the transactions per second will multiply by many times with Hydra. In addition, this ultimately increases scalability, putting other blockchain networks like Ethereum (ETH) and Solana (SOL) at stake!

- The Avalanche blockchain can handle over 4,500 transactions per second. - Kadena can process 480,000 transactions per second, surpassing Bitcoin. Investors looking to diversify their portfolios might consider altcoins. In contrast to ethereum, most of the other over 10,000 cryptocurrencies are yet to establish a reputation. Let's take a quick look at the top 3 coins with great potential ahead. Kadena Developers may build high-quality decentralized applications using Kadena's blockchain platform. The digital currency's value has risen by about 8,000% in a year. Businesses may eliminate customer transaction expenses by using Kadena's crypto gas station, and customers only pay a small amount in transaction fees. Investors expect Kadena will beat other coins in 2022, despite the recent present decrease. In 2022, Kadena has all the tools it needs to soar to new heights. Avalanche Avalanche is the quickest smart contract platform. The Avalanche blockchain can handle over 4,500 transactions per second. Thanks to its innovative consensus engine, Avalanche can process far more Visa-level transactions per second. AVAX also has a limited supply, which means it won't be diluted by inflation like other platforms. Staking promotes the locking of huge sums of tokens for particular times, lowering circulating supply and increasing demand, resulting in a price rise. Its native token soared almost 3,000 percent. Avalanche already has around 160 projects. It earns more revenue from Dapps than Solana. Ethereum Despite some severe hurdles, Ethereum generated a return of more than 5X last year. With the Ethereum 2.0 update, the blockchain should be able to process 100,000 transactions per second. There will be significant reductions in transaction fees as well. These new features are expected to entice more developers to the Ethereum blockchain. Ethereum is now second only to Bitcoin in terms of market capitalization, with a market worth of almost \$445 billion.

- Cryptomiso reports the number of commits to a GitHub project. - Kusama and Polkadot closely follow Cardano in the top three. According to aggregated development activity, Cardano, Kusama, Polkadot, and Ethereum are among the top 20 most active blockchain projects in the year 2021. When looking at the number of people actively contributing to a project's GitHub repository, one may get a sense of the scope of the development community. For the year 2021, Cardano is the clear leader in this measure, thanks to its 53 active daily contributors. The Trust Wallet token, with 28 developers, and Filecoin, with 22 developers, are two more prominent projects with large daily active developers. Attendance in Solana's Hackathons shows a strong interest among developers in the token. At the first hackathon in October 2020, 1000 people signed up to participate. It subsequently rose to 3000 for the Solana X Serum DeFi Hackathon in February of 2021. Furthermore, 13000 for the Solana Season Hackathon in May of the same year. Cardano's Most Prolific Contributors Committing a modification to a repository on GitHub is known as the commit operation. Cryptomiso reports the number of commits to a GitHub project. The Trust Wallet Token project has had 8193 commits in the past year, while the Solana token has seen 4552. gromakovsky and volnovm are Cardano's most prolific contributors between September 2016 and January 2022, with 2200 and 837 commits, respectively. Short-term market fluctuations may not influence the team's monthly commitment. In order to work on a functional product and improving its features so that they may meet their long-term goals. Kusama and Polkadot closely follow Cardano in the top three, while Ethereum came in fourth. According to CoinMarketCap, the Cardano price today is \$1.35 USD. Moreover, it has a 24-hour trading volume of \$876,870,267 USD. Cardano has been down 0.70% in the last 24 hours.

- AVAX was unable to surpass its December beginning-of-month high of \$127. - Solana has been up 1.82% in the last 24 hours. In 2022, these are the top three altcoins to keep an eye on. Solana (SOL) Solana (SOL) is one of the world's most popular blockchain platforms at the moment. It's a popular choice in the blockchain world due to its speed and safety. It relies on historical evidence, which means it's also gentle on the environment. In only eight months, Solana's value increased by more than 5,077 percent, making it a popular cryptocurrency in 2021 and a coin to look out for in 2022 as well. According to CoinMarketCap, the Solana price today is \$177.40 USD with a 24-hour trading volume of \$1,083,000,985 USD. Solana has been up 1.82% in the last 24 hours. Avalanche (AVAX) It has recently been revealed that AVAX investors are purchasing thousands of dollars worth of stablecoins and other altcoins regularly, according to WhaleStats. Avalanche was unable to surpass its December beginning-of-month high of \$127. In the wake of a significant rejection, many previously supported areas succumbed to bearish pressure. A re-test of the \$104 and \$101 levels seemed anticipated. According to CoinMarketCap, the Avalanche price today is \$115.22 USD with a 24-hour trading volume of \$847,668,543 USD. Avalanche has been up 4.47% in the last 24 hours. Cosmos (ATOM) Cosmos has been one of the best-performing big crypto-assets. As of this writing, it has broken through numerous important resistance points, including the \$24 level. Over the last two weeks, ATOM has seen a significant increase in demand and strength. At the \$32.4-\$32.7 retracement level confluence, trading activity has increased as the price rises. According to CoinMarketCap, the Cosmos price today is \$35.41 USD with a 24-hour trading volume of \$1,293,188,080 USD. Cosmos has been down 0.37% in the last 24 hours.

- Bitcoin has been the industry's most popular cryptocurrency for over a decade. - ETHER surpassed Bitcoin in terms of growth rate in 2021. Bitcoin, the world's first digital currency, is a significant accomplishment. Bitcoin (BTC) has been the industry's most popular cryptocurrency for over a decade. The digital token has long been favored because of its supply-demand, durability, transactional ease, and censorship resistance. Let us look at the top 3 coins that are set to capture Bitcoin's No.1 position soon. Ethereum (ETH) is Bitcoin's main competitor, and it has also had a spectacular year so far. ETHER surpassed Bitcoin in terms of growth rate in 2021, and many cryptocurrency experts predicted that ETHER could soon surpass Bitcoin as the most valuable cryptocurrency in the world. Following Bitcoin's trail is one of Ethereum's most well-known smart contracts and decentralized applications (dApps), which is the most popular blockchain platform. Solana (SOL) is another top performer, creating an app quickly and cheaply, such as the minting of non-fungible tokens (NFTs). Investors' preference for blockchains with smart contract capabilities is responsible for Solana's recent surge in value. While NFT and the rivalry in this field are heating up, Solana has reaped the benefits of growing DeFi's popularity. Basic Attention Token (BAT) is a digital currency on the Ethereum network, meant to support advertising and tipping functionality in the privacy-focused Brave web browser. The true worth of BAT is determined by Brave's broad acceptance as a browser alternative to Chrome, Safari, and Firefox. There has been an increase in overall supply on exchanges of more than BAT \$10,000,000 (\$12.2 million). In reality, whales accounted for \$60 million of the total sales, up from \$7 million.

- In 2021, Solana returned about 12,650 percent. - Avalanche is a popular Ethereum alternative. Most cryptocurrencies had a bad December. Many prominent cryptocurrencies are trading considerably below recent highs as investors flee risky investments. Consequently, the crypto market will likely remain turbulent in the next year as well. Let's look at the top 3 cryptos to watch out for in 2022. 1. Ethereum Based on market value, Ethereum is already the second-largest cryptocurrency. It also has the most common blockchain. Surprisingly, almost 40 of the top 100 cryptocurrencies are based on the ETH platform. Ethereum may have a better year in 2021. Phase 2 of the Ethereum 2.0 upgrade is due in 2022. This will apply to the whole Ethereum network. Moreover, the upgraded Ethereum blockchain will be speedier, scalable, less energy-intensive, and have reduced transaction costs by 2023. 2. Solana In 2021, Solana returned about 12,650 percent. Furthermore, this followed a broad cryptocurrency sell-off in the latter two months of the year. However, Solana is the fifth-largest cryptocurrency by market cap for two reasons. Its blockchain can handle up to 65,000 transactions per second. And it just costs around \$0.00025 every transaction. These benefits have enticed many new developers. Moreover, Solana boasts the fastest-growing crypto ecosystem with over 400 projects. Moreover, these initiatives include NFT marketplaces and a variety of DeFi applications. 3. Avalanche Based on the market cap, Avalanche is the third strongest cryptocurrency. After an almost 3,350 percent rise in 2021, it's significant enough to be ranked 11th on CoinMarketCap's top cryptocurrencies list. Furthermore, Avalanche is a popular Ethereum alternative. In several aspects, Avalanche outperforms Solana. Moreover, the revenue from decentralized applications is also higher than Solana. Avalanche outruns Solana in one crucial section. Adding a transaction takes less than two seconds, making it the quickest blockchain that supports smart contracts.

- Dogecoin is stumbling after its infamous fall while XRP remains in limbo. - Like our society, a shift in the crypto world is approaching. For Bitcoin and other crypto assets, 2021 was one of the most exciting years in recent times. NFTs and the metaverse entered a new phase as values of various crypto tokens on various blockchains skyrocketed. With 2022 rapidly approaching, crypto traders have begun scheming towards a new year. Crypto supporters expect a change in the crypto directory's market cap ranks. Recently, a slew of useful digital currencies has emerged. There has been a massive rise in NFTs, metaverse projects, along with Terra (LUNA), Polygon (MATIC), Avalanche (AVAX), Solana (SOL) protocols. The flawless surge has left projects like Cardano and XRP in the dust. Rearrangement of Market Cap Rankings The aforementioned cryptocurrency growth measures, together with fundamentals, usefulness, and advancements, have been propellants. Industry supporters expect a rearrangement in the market cap rankings. Many projects have a much faster growth rate than lesser performing alts. Cardano, XRP, and Dogecoin are among the digital currencies recently hampered. Since the Alonzo hard fork, Cardano price has been drifting in a confined range. Dogecoin is stumbling after its infamous fall, while XRP remains in limbo. Cardano's year-to-date gains are 593.8 percent, while XRP's are 276.4 percent. Terra, Polygon, and Avalanche are up 1069.7%, 13,434.7%, and 3,431.3% respectively. Polkadot, Crypto.com currency, Decentraland, and The Sandbox are probable top-10 cryptocurrencies like our society, a shift in the crypto world is approaching. With so many higher-performing coins, the lower-performing coins will gradually fade away. However, the slower performers may soon pick up speed as well.

- FTM has soared in value due to its rapid expansion. - The platform can provide a definitive decision in one second. Toward the end of 2021, Fantom, a scalable EVM-compliant blockchain, shows significant development. Ethereum (ETH) seems to have another "new-generation" competition besides Terra (LUNA). This week, Fantom's total value locked (TVL) increased by 100%, while Terra's (LUNA) doubled. Fantom (FTM), Solana (SOL), and Polygon (MATIC) are the most popular smart contract platforms (TVL) after \$LUNA (+21.73%). "Miles Deutscher (@milesdeutscher) December 26, 2021 Fantom's TVL is approaching ATHs despite being -35% from its price ATH. Only a matter of time before its price finally reflects the vibrant ecosystem that's rapidly growing on \$FTM. pic.twitter.com/yKNYNLY40K Fantom has overtaken Tron as the most valuable smart contract platform, with a total value locked of \$5.6 billion. It may also beat MATIC, which is recognized for its cheap costs and rapid transaction processing if it attracts another \$100 million from Dapp's customers. Sophisticated Consensus Process Fantom Blockchain's fundamental native asset, FTM, has soared in value due to its rapid expansion. Since December 21, 2021, it has increased by about 80% in value. Thanks to the protocol's multiple distinguishing features, the platform has its unique attribute. This means that Fantom's scalability, speed, and low-cost result from the DAG it employs. Using a sophisticated consensus process, the platform can provide a definitive decision in one second. To put it in perspective, Solana's time was 11 seconds, but Avalanche's was just 3 seconds. The network now processes over 10,000 TPS and plans to reach 300,000 TPS. A rising spike multiple times is possible because of FTM's lower market capital. Keeping it undervalued compared to its competitors. The decreased market cap-to-TVL ratio further reduces its worth. The price of FTM might rise if the ratio of Solana, Avalanche, and Ethereum is similar to that of FTM. According to CoinMarketCap, the Fantom price today is \$2.35 USD with a 24-hour trading volume of \$1,315,393,076 USD. Fantom is up 8.70% in the last 24 hours.

- Crypto industry has so far performed the best for the year 2021. - Overall crypto industry market cap amounts to \$3 Trillion. - Certain hurdles pose for the year 2022 to overcome. Looking back for the past decade, the year 2021 has so far been the best year for the crypto industry. Though there were certain worse downfalls and market crashes, many altcoins including the Bitcoin (BTC) sprung up to their till date ATHs. Apart from that in terms of technological developments, market cap expansion and much more, the year 2021 outpaced. Moreover, 2021 proved to be such a market cap expander, as now the overall industry's market cap amounts to over \$3 trillion. Many highlights, such as the surges of Ethereum (ETH), Dogecoin (DOGE) and the last quarter buster, the Shiba Inu (SHIB) all played a significant role. With all this intact, the CEO of the global crypto exchange, the FTX, Sam Bankman-Fried puts forth his views on the ride of the crypto industry so far and for the future year 2022, yet to come. The Crypto Industry So Far Accordingly, the CEO Sam Bankman-Fried (SBF) points out statistically that at present there are over 200 million people holding cryptos. In addition, SBF terms that numerous developments were done over time. From the emerging of the blockchain technology to giving birth to many of its attributes such as the smart contracts, Decentralized Finance (DeFi), Non-Fungible Token (NFT), and much more, has transformed the entire crypto industry completely. Furthermore, the major game players for the year 2021 account to the evolution of blockchain gaming, NFT blockchain gaming and the latest trending and depicted to be the future, the Metaverse. The Road Ahead for 2022 The CEO, SBF shoots out that the year 2022 ahead would not be an easy ride for the crypto industry. Indeed, he terms that there are a few major obstacles that the industry has to overcome in order to succeed for the upcoming year. Firstly, SBF addresses the issues with the scalability of the blockchains. He terms that no blockchain technology yet now could process over a thousand transactions per second. Secondly, the obstacles in terms of security. SBF points out that the vulnerability for the industry to hacks, cyber crimes and thefts are on the rise, and yet couldn't be controlled. Proper security and proper enforcement has to be made accordingly, states SBF. Third, is in regards with the regulations. SBF states that all the regulations have to be unified and clearly explained to the people indulging into the industry. Lack of knowledge and awareness owes to be major hurdles for the crypto industry.

The total value of all cryptocurrencies fell by 2.33 percent to \$2.39 trillion. - Bitcoin has fallen below the \$50,000 mark due to the bearish trend. In the last days of the year, the value of global cryptocurrencies plunged into the red. The total value of all cryptocurrencies fell by 2.33 percent to \$2.39 trillion. Another small factor contributing to the decline in value is the selling of coins by investors who are reaping the benefits of the year's end and the December holiday season. According to CoinMarketCap, the current Bitcoin price is \$49,256.67 USD with a trading volume of \$28,079,893,740 USD in the last 24 hours. In the previous twenty-four hours, the price of bitcoin has dropped by 3.12 percent. The bitcoin price, the world's oldest coin, has fallen below the \$50,000 mark due to the bearish trend. The current price of Ethereum is \$3,928.67 USD with a trading volume of \$13,860,088,244 USD, according to CoinMarketCap. In the previous twenty-four hours, the price of Ethereum has dropped by 3.32 percent. The vast majority of cryptocurrencies were trading in the downtrend. Moreover, Solana, SHIB and AVAX all are in red. Binance Gets a Stronghold in MENA According to the crypto exchange, CBB has become the first regulator in the Middle East and North Africa (MENA) area to approve a Binance business in principle. The incorporation and registration of a new firm, "Binance Canada Capital Markets Inc." have been completed and approved by Canada's Financial Transactions and Reports Analysis Centre. As of December 27, Binance, the world's biggest cryptocurrency exchange by volume, has gained in-principle authorization from Bahrain's central bank to operate as a crypto-asset service provider.

The year 2021 has given huge changes in the charts of cryptocurrencies from the beginning. Along with more improvements in the industry the crypto market has experienced a strong bullish run and bearish pattern as well. Several coins have witnessed a high surge in its price action and increase in market cap value. As per the recent updates, the CryptoDiffer, a social account that offers news and updates of the crypto industry from Twitter has listed top 15 gainers. The list consists of top 15 crypto gainers in 2021 where AXS captures the first spot. The 15 gainers are AXS, OMI, SAND, XYO, LUNA, FTM, SOL, KDA, VRA, BAKE, TEL, ONE, MANA, and RNDR. These crypto tokens have surged in price action as well as in market cap value YTD. TOP 15 GAINERS IN 2021 \$AXS \$OMI \$SAND \$XYO \$MATIC \$LUNA \$FTM \$SOL \$KDA \$VRA \$BAKE \$TEL \$ONE \$MANA \$RNDR pic.twitter.com/xrSMR0mp4 "CryptoDiffer (@CryptoDiffer) December 27, 2021 Top Gainers In 2021 The first cryptocurrency in the list is Axie Infinity (AXS) which is a gaming token that has surged in popularity and price value. AXS is set to be the lead for several gaming platforms that integrate the "play-to-earn" mechanism. At the time of writing, AXS was trading at \$110.77 which is 3.46% up in the past 24-hours and soared 21% within a week. The next token is Ecomi (OMI) which is currently trading at \$0.0066 and 3.14% up in the last 24-hours. Following that, the other gaming token takes place which is The Sandbox (SAND). Currently, SAND is trading at \$6.69 and it has nearly surged to 39% within the past week. The next tokens on the list are XYO, MATIC, LUNA which have gained 16509%, 16012%, 14873% respectively year-to-date. Then comes Fantom (FTM) and Solana (SOL) in the list where on the other hand, FTM has increased in TVL surpassing the value of SOL and LUNA. As of now, FTM has gained 13602% while SOL surged 13239% within a year. Consequently next on the list are KDA, VRA, BAKE, TEL, and ONE. These crypto tokens have bounced more than 6000% year-to-date. Kadena is one among the strong potential tokens which has generated huge gains to its holders. The token KDA has increased over 1000% in a year while its current trading price is \$16.05. The final two gainers in 2021 are MANA and RNDR where MANA soared huge within a short span of time. The YTD statistics indicate that MANA surged over 4793% whereas RNDR increased to 4771% with the market cap volume of \$5.11B and \$821M each. Among several gainers of the crypto industry these are the top gainers which have improvised in its ecosystem and price action.

As simple as it seems, this year has probably witnessed both upward and downward momentum in the crypto industry. The investors and traders have gone through crypto ups and downs, and the line of the crypto market has been very volatile. With several cryptocurrencies, many altcoins have performed well, and many cryptocurrencies which hyped the traders and ended in gaining steam. Similarly, Fantom is one among the potential altcoin which has produced a notable change in the last quarter of 2021. Fantom is a decentralized, permissionless, open-source smart contract platform for decentralized apps (dApps) and digital assets, and it's one of a number of blockchain networks designed to compete with Ethereum. As a matter of fact, it seems like

itâ€™s time for Ethereum to witness a new competitor apart from Terra (LUNA). A scalable EVM-compatible blockchain, Fantom has increased in TVL with a 21.73% surge in price within the last 7 days. Fantom Dapps Surge Four top-tier smart contracts platforms have seen double-digit increases in total value locked (TVL) which are LUNA, FTM, SOL, and MATIC. Consequently, Fantom surpassed the smart contract platform Tron (TRX) with nearly \$5.6 billion in TVL. Fantom has the potential to defeat Polygon, but it is achievable if it attracts more than \$100 million from its dapps. The top performers in TVL rankings are Terra (LUNA). Fantom (FTM), Solana (SOL), and Polygon (MATIC) If Fantom increases in TVL by 100%, then it can surpass SOL and AVX. Moreover, FTM has soared nearly 70% within a week. Its change and surge in TVL might be the reason for FTMâ€™s price change. AT the time of writing, FTM was trading at \$2.29 which was 10.66% up for the past 24-hours.

- Bitcoin emerged as the most talked-about cryptocurrency. - Twitter is considering incorporating cryptocurrencies into the site. The phrase “social media” has become associated with Facebook, Instagram, Twitter, and YouTube, but this is likely to alter in the near future. SocialFiâ€™s integration with the rise of new social networks could be a key factor in the spread of blockchain technology. According to a study, the number of people talking about cryptocurrency on social media increased by more than 400% in 2021. Mentions from technical specialists, blockchain experts, CEOs, and fintech professionals have been proven to have a greater influence on driving cryptocurrency conversations. Elon Musk has had a major influence on the crypto industry and is a catalyst for top cryptos like Bitcoin and Dogecoin. By accepting Dogecoin as a form of payment, Tesla CEO Elon Musk has fueled an increase in interest in Dogecoin. When it came to social media conversations, Bitcoin emerged as the most talked-about cryptocurrency. Polkadot, Binance Coin, Tether, Solana, and Shiba Inu were the next top five cryptos. Meta Takes Over Facebook Facebook is expected to have over 2.89 billion users. Facebook meanwhile, has recently made significant progress in its transition to the next generation of the Internet. Now known as Meta, the company plans to build the largest social media metaverse in the world. The introduction of cryptocurrencies and blockchain to nearly 3 billion people around the world could be facilitated by this and Facebookâ€™s cryptocurrency Diem. Furthermore, Twitter is considering incorporating cryptocurrencies into the site, including features such as Bitcoin tipping for creators. Reddit is also rumored to be working on an NFT marketplace.

Rio de Janeiro, Brazil, 23rd December, 2021. Chainwire The growth of the GameFi market within the crypto ecosystem has seen tremendous growth in the past year and is showing all the signs for an upward trajectory in the impending future. As such, Elfin Kingdom, one of the most promising projects in the play-to-earn space has reported a successful closure of its private and strategic sales round with a funding of \$5.25 million. A cohort of high-caliber investors participated in this funding round led by Binance Labs, as well as strategic contributions from key players like Alameda Research, and notable guilds like Merit Circle, GGG, and Bayz. Elfin Kingdom is a unique play-to-earn platform that seamlessly fuses the best applications of DeFi (decentralized finance) and GameFi into one gaming metaverse. In the Elfin Kingdom, users have the opportunity to capture Elfins on their magnificent journeys. There are multiple types of Elfins with different traits and skills, and gamers can feed, battle, and mine them to change their form and abilities in order to reach higher levels. Bringing financial education to the masses with a strong focus on Latin American and Southeast Asian economies, Elfin Kingdom aims to make financial education less intimidating and easier to grasp for the masses through their fun and interactive gaming model, while providing opportunities for users to supplement their incomes. The platform is currently built on the Binance Smart Chain (BSC) network and has plans to integrate with other high throughput, low transaction fees networks such as Solana in the near future. Says Juan Ibañez, CEO, Elfin Kingdom: “we are at an exciting stage of blockchain technology where P2E games are now providing a viable career option for millions of users across the globe. Our team is very confident that this investment round will assist us in rapidly scaling our platform and accelerating our go-to-market plans, while positively impacting the lives of people in developing economies.” Brad Lim, Investment Director of Binance Labs, said: “Elfin Kingdom is a GameFi project with huge potential. Elfin Kingdom introduces a new form of GameFi, which is combined with DeFi; eventually, players can stake partnered DeFi project tokens within the games for extra benefits. We believe that Elfin Kingdom can bring a “free to play” model to this industry.” Elfin Kingdom plans to go live in Q1 of 2022. About Elfin Kingdom Elfin Kingdom is a GameFi project merging decentralized finance yield farming and non-fungible tokens with gamified elements in a play-to-earn platform that lets users collect, battle, and farm to earn more with their crypto. In Elfin Kingdom, players choose their own roles and decide how to take advantage of all the provided opportunities. Through a built-in banking system, every role can maximize its earnings with a clever strategy. - Avalanche has been up 11.38% in the last 24 hours. - AVAX has already recouped all of its losses from this monthâ€™s price declines. With Avalanche being one of the largest DeFi blockchains globally, it has attracted a large number of investors in recent months. Having over a hundred protocols, it is vying for the number four place of Solana, which has a similar number of protocols. In contrast to the rest of the market, AVAX has already recouped all of its losses from this monthâ€™s price declines. The cryptocurrency has seen a dramatic increase in money and involvement in the network this month, which is quite rare for the currency. As a starting point, the number of transactions processed on the blockchain each day surpassed 700,000 for the first time. As of mid-December, Avalanche estimates that the C-Chain has approximately 537k monthly active wallets. Even though Avalanche lost more than \$5 billion in TVL in early December because of the bearishness, it is now reclaiming its position. Listing on Kraken to a large extent, this increase may be attributed to Krakenâ€™s statement that the cryptocurrency will be listed there. Deposits for the cryptocurrency are already being accepted. And trade will begin on December 21st. In the wake of Circleâ€™s deployment of the USDC stablecoin, this news has surfaced. AVAX Futures and Margin Trading on Kraken, on the other hand, are not currently available to investors. Investors, on the other hand, have been soaring. As a result, the daily transaction volume has increased from \$293 million to \$1.3 billion, nearly 370 percent. According to CoinMarketCap, the Avalanche price today is \$116.87 USD with a 24-hour trading volume of \$2,210,717,834 USD. Avalanche has been up 11.38% in the last 24 hours.

- The HBAR currency lost 55 percent of its value in November. - The price of LUNA went up by 10 percent to a new all-time high of \$81. Ethereum launched a solid recovery surge above \$3,750 and \$3,800. Even the 100-hour SMA was breached. However, the price could not overcome resistance between \$4,040 and \$4,050. The price hit a high of \$4,035 before reversing direction. The support levels of \$4,000 and \$3,950 were violated. Hedera (HBAR) As many as 39 organizations from as many as 11 sectors may participate on the Hedera Hashgraph governing council at any one time. They are in command of the Hedera codebase, voting on platform choices, and running the networkâ€™s initial public nodes. The HBAR currency lost 55 percent of its value in November, making it a terrible month for investors. This support level of \$0.218 provided enough demand for the coin price to revert upwards. There has been a 40 percent increase from the lowest support level, and the price is now heading towards \$0.5. According to CoinMarketCap, the Hedera price today is \$0.309627 USD with a 24-hour trading volume of \$205,358,429 USD. Avalanche (AVAX) Avalanche, one of the most prominent DeFi blockchains globally, has lately gained an enormous amount of interest from potential investors. Almost as many protocols as Solana make it a serious contender for fourth place. Despite the general marketâ€™s increasing caution in anticipation of more price decreases, AVAX has already recovered most of the monthâ€™s losses this month. The network has experienced a significant increase in funding and participation, which is unusual for an altcoin. According to CoinMarketCap, the Avalanche price today is \$103.87 USD with a 24-hour trading volume of \$1,105,599,439 USD. Terra (LUNA) A blockchain protocol, Terra uses fiat-pegged stablecoins to facilitate worldwide payments with price stability. It is safe to say that Terraform Labsâ€™ native currency, LUNA, has managed to evade the current bear market. To put it another way, the price of LUNA went up by 10 percent to a new all-time high of \$81. According to CoinMarketCap, the Terra price today is \$79.17 USD with a 24-hour trading volume of \$2,846,097,657 USD. The phase of a market correction is the critical state for the traders and investors to cross until its recovery. Most leading altcoins will play along with the trap of crackdown in the crypto market but also will generate huge gains in the recovery phase. Thus the top altcoins which are currently leading the bullish rally of the market are LUNA, MANA, and HBAR. As a matter of fact, the popular altcoins which represent a solid bullish run are Cardano (ADA) and Solana (SOL). These two altcoins have surged nearly 2% each as per weekend statistics, while other top altcoins display the range of 0.1% to 0.5% gain. LUNA Enters Top 10 Significantly, Luna has captured its place in the top 10 cryptocurrencies during the crackdown of the crypto market surpassing DOT, AVAX, and DOGE. According to Coingecko, the 30-day statistics of LUNA displays a gain of 85% and 25% up for the past week. Moreover, it takes the 9th rank in the crypto market. Currently, LUNA is just 4% lower than its all-time high where it is struggling to break the resistance level. On the other hand, Decentraland (MANA) is quite a potential token that still remains to run upwards. While the market experiences a downturn, MANA represents as a leading strong altcoin in this recovery phase. At the time of writing, MANA is trading at \$3.29 which has dropped 3.19% within the last 24-hours. Consequently, Hedera (HBAR) has also shown its strength during this recovery phase of the crypto market. When leading cryptocurrencies are representing a downturn, HBAR shows an upward movement with a gain of nearly 29% within a week. It currently holds the 28th rank being one among the potential altcoins in the industry. However, these are the top altcoins that lead the way for other altcoins with a bullish rally. - Star Atlas is a Solana-based virtual metaverse. - The testnet for Mines of Dalarnia has over 100,000 players. In the case of Metaverse Coins, investors are eager to get in on the ground floor with a relatively small market capitalization. In contrast to the multi-billion dollar valuation of many Metaverse currencies, many low-cap projects are undervalued. Let us look at the top 3 Metaverse coins having a market value under \$250 million. MINES OF DALARNIA (DAR) In Mines of Dalarnia, players may combine in-game products to enhance their characterâ€™s abilities and equip them. Combatants and unique items may be found in an Mod-like realm. The testnet for Mines of Dalarnia has over 100,000 players, making it a popular game. According to CoinMarketCap, the Mines of Dalarnia price today is \$1.93 USD with a 24-hour trading volume of \$29,968,031 USD. Moreover, it has a market cap of \$237,526,175 USD. STAR ATLAS (ATLAS) Star Atlas is a Solana-based virtual metaverse. One of the most eagerly expected products on the market today is Star Atlas. Furthermore, players are exploring and building their own space colonies, exploring new planets, and exploring interplanetary ecosystem of Star Atlas. According to CoinMarketCap, the Star Atlas price today is \$0.107757 USD with a 24-hour trading volume of \$25,176,833 USD. Moreover, it has a market cap of \$232,754,376 USD. PHANTASMA (SOUL) Future technology will be built on Phantasma blockchain, which promises to improve user experience and increase developer revenue. Furthermore, SOUL and KCAL power a dual-token economy that is key to the concept. Unlike SOUL, KCAL handles transaction fees, NFT minting, and smart contracts. According to CoinMarketCap, the Phantasma price today is \$2.27 USD with a 24-hour trading volume of \$4,687,019 USD. Moreover, it has a market cap of \$233,909,887 USD.

- The U.S SEC maintains the same strong opposition for BTC ETF. - Unofficially it seems the BTC ETF for Grayscale and Bitwise will get rejected. - The official approval or disapproval will be out in February, 2022. It seems the United States Securities and Exchange Commission (SEC) will always be in firm denial for any sorts of upbringings in the crypto industry. True to the fact, the fight for the Bitcoin (BTC) to be treated into an Exchange Traded Fund (ETF) would not get passed through legally through the SEC. Moreover, the SEC has maintained firm upon its decisions ever since. In spite of all this, the SEC postpones the decision of approval for two big firms applicants for the BTC ETF. These are the Grayscale Bitcoin Trustâ€™s BTC ETF and the Bitwise Bitcoin ETP trust. The Decision Delay Upon an official announcement from the SEC which came out on December 15, states that the decisions for approval of the BTC ETFs of Grayscale and Bitwise will be on hold furthermore. The decisions for approval are postponed for both the firmâ€™s proposals. In addition, the SEC reveals that the decision of whether to approve or disapprove the BTC ETF for Bitwise will be finalized on February and that for the Grayscale on February 6. On the other hand, Bitwise Asset management was the first to file for the BTC ETF of the two on October 1. Though Bitwise has already joined the Bitcoin futures ETF, they themselves have dropped their application for it in November. Indeed, they had higher hopes for their BTC ETF counterpart. Likewise, Grayscale put itâ€™s application proposal for the BTC ETF by October 19. The SECâ€™s Comments Accordingly, the SEC states that postponing the decision is just in-order to gain more time for

the clear understanding and deeper research of the proposals. Moreover, they term that this will enable them with sufficient time to look into any changes and the comments to be reviewed. Also, the comments of SEC were the same and common for both Bitwise and Grayscale.

- Major VCs invested more than \$4 billion in this area in 2021. - A record \$23 billion was spent on NFTs this year. New records have been specified by DappRadar's annual Dapp Industry Report, which was issued today. Compared to 2020, this year's growth in the blockchain industry was sevenfold, with more than two million daily active wallets connected to Dapps. A record \$23 billion was spent on NFTs this year, thanks to celebrities, sports teams, and major corporations. A 500% spike in price and a \$16.7 billion value for the top 100 virtual land holdings resulted from Facebook's rebranding as Meta. As a result of Axie Infinity's play-to-earn revolution, 1.4 million people engaged with games Dapps daily, which is nearly half of the industry's use. Major VCs invested more than \$4 billion in this area in 2021 because of its social relevance in underdeveloped countries like the Philippines and Venezuela. DappRadar Head of Finance and Research Modesta Masoli: "We've seen crucial progression in the Dapp space this year, placing us on the cusp of mass adoption. While 2020 was 'The Year of DeFi', 2021 is certainly 'The Year of NFTs', with gaming thrown in bulk over the last quarter. As these three categories converge, 2022 will, I expect, come to be known as 'The Year of the Metaverse', with project supporting and helping navigate this complex, cross-chain and cross-category paradigm stealing the spotlight." Recent Obstacles Had Negligible Impact Despite recent exchange breaches and chilling regulation, there has been a seven-fold rise in total value locked in the sector year-on-year, reaching \$200 billion in 2021. Third-place finisher Avalanche and second-place finisher BSC rounded out the top three, with TVL totals of \$22.75 billion and \$12.48 billion, respectively. Avalanche and Solana are separated by Terra, which comes in at number four. With \$27 billion invested in cryptocurrencies and blockchain businesses, this was a record-breaking year for the blockchain industry. The mainstreaming of Dapps and the entry of major companies into the market suggests that Dapps will soon become a daily part of people's lives. Monthly industry assessments from DappRadar analyze the blockchain industry's progress in the 2021 Dapp Industry Report. The monthly Blockchain Gaming Report and the bi-weekly New Dapps Report are also available.

- The forecasts influenced analysts' reactions to the news. - The year-end policy attempts to boost employment and stabilize prices. After the Federal Reserve decided to keep interest rates unchanged, Bitcoin and the rest of the crypto market gained ground. The year-end policy attempts to boost employment and stabilize prices. Financial and cryptocurrency markets greeted the Fed's official press statement. The statement read: "With progress on vaccinations and strong policy support, indicators of economic activity and employment have continued to strengthen; Overall financial conditions remain accommodative, in part reflecting policy measures to support the economy and the flow of credit to U.S. households and businesses." It's still a long way to cover the forecasts influenced analysts' reactions to the news. Short-term, it's a welcome shift since investors may borrow to keep expanding. Long-term investors, meanwhile, pointed to the Federal Reserve's intentions to hike interest rates three times next year to combat inflation. The price on December 15 closed at over \$49,000, a 1.5% rise over the previous day's low of \$46,530 and a 5% gain over the previous day's high. The Federal Reserve's comments directly correlated with Bitcoin's price. In reaction to Bitcoin's spike in value, most of the top 100 cryptocurrencies rose in value as well. Avalanche (AVAX) is presently the top gainer, up 18%. The USDC stablecoin introduction on its network seems to have aided the astonishing rise. However, Solana has seen double-digit daily price rises since the beginning of the month. Ethereum, on the other hand, rose 5%, breaking the \$4000 psychological barrier.

- At Ubisoft, Mr Boloas worked on many Assassin's Creed titles. - Decentraland and The Sandbox have already been valued in the billions. In 2022, metaverse crypto games will be the greatest craze. Most projects are still in the planning phases, although leaders like Decentraland and The Sandbox have already been valued in the billions. The crypto-ecosystem is continually evolving, revealing new treasures. Three overlooked Solana-based Metaverse crypto games to watch in 2022. GENOPETS Genopets is the world's first NFT game. Imagine PokemonGo, but with Solana and a play-to-earn approach. The game's move-to-earn feature lets users earn tokens by moving their Genopets. Your Genopet's style and performance may be improved with the tokens. SYNERGY LAND Synergy Land, an ARPG play-to-earn Metaverse game, is also underestimated. Solana. Moreover, Synergy Land is an undervalued project since its CEO, Carlos Boloas, worked at Ubisoft for three years. At Ubisoft, Mr Boloas worked on many Assassin's Creed titles. Synergy Land boasts over 10 more animators with years of design and 3D modeling expertise. A workable product by the end of 2020 may make Synergy Land a hit in 2022. ALIENS VS PEOPLE Aliens VS People is the first-ever multiplayer NFT game on the Solana blockchain. It's an interplanetary war game powered by NFT avatars. On December 19th, the team will meet in public. Users' wallet addresses are submitted using a Google doc form. The top fifteen most active users will each get a free NFT avatar on their discord channel. A game to watch for 2022 since the community already exists.

- Yesterday, XRP was aiming to break over the \$0.80 barrier. - BTC might recover to \$42,447 by the end of the week. Bulls couldn't sustain the bears' pressure, and the top 10 cryptocurrencies fell with Bitcoin (BTC). Only Solana (SOL) rose 0.20 percent. Bitcoin (BTC) yesterday. Bitcoin (BTC) price traded mostly in a side-channel and is near the \$40k level. During the day, the price broke through this barrier, but only recently did it hold. A mild bullish momentum developed around the two-hour EMA55. Bulls have been unable to generate traction above this level of average pricing for almost a month. Each time, the bears retake control and push the BTC price down below the EMA55. The two seemed to have solidified their position above average at the end of November. Early this month, a powerful negative trend pulled the price back to the September lows to \$42,447. If the pair's average price level reverses, BTC might recover to \$42,447 by the end of the week. According to CoinMarketCap, the Bitcoin price today is \$48,933.07 USD with a 24-hour trading volume of \$36,222,481,423 USD. Ethereum (ETH) The Ethereum (ETH) price rose over \$3,800 yesterday and has breached the \$4000 psychological barrier although it is still below the two-hour EMA55. Volumes do not suggest a poor rebound. If the bulls fail to breach above the average price level, the Ether price may drop below \$3,400 by the end of the week. According to CoinMarketCap, the Ethereum price today is \$4,017.20 USD with a 24-hour trading volume of \$26,656,926,880 USD. XRP (XRP) Yesterday, XRP was aiming to break over the \$0.80 barrier and finally broke it. Moreover, the price breached the two-hour EMA55, locking the pair in a month-long local downturn. If the XRP price returns above the average level with substantial buyer support, a rise above \$0.90 is feasible. If buyers fail to establish traction over the EMA55, the monthly slump may extend below \$0.70. According to CoinMarketCap, the XRP price today is \$0.826443 USD with a 24-hour trading volume of \$2,958,134,349 USD.

- Due to the glitch, Shiba Inu briefly reached the top slot. - WatcherGuru first said that it couldn't tell if a hack or a bug caused the anomaly. After CoinMarketCap had a technical difficulty, the value of crypto assets increased for a brief moment. On a brief time, CoinMarketCap, a well-known crypto price aggregator, provided eye-popping figures for the prices of crypto assets, as well as their market capitalization and other data. The price of various assets, including Bitcoin, surged to \$1.5 quadrillion due to the error, which was eventually remedied. Aside from Solana, Cardano, and Wrapped Bitcoin, the value of other cryptocurrencies, including stablecoins like Binance USD, USD Coin, and DAI, had risen to over \$10 million apiece. Shiba Inu Acquired the Top Spot Due to the glitch, Shiba Inu briefly reached the top slot in the cryptocurrency market capitalization rankings, despite its low value of \$5,536. There was also a general surge in the market value of bitcoin, which reached \$20 quintillion. How did it feel to be a trillionaire for a couple hours? "I, @CoinMarketCap (@CoinMarketCap) December 14, 2021 After a few hours, the aggregator decided to ask its Twitter followers how they felt about being a trillionaire. Observing how the crypto community responds to this fresh issue will be fascinating. Some individuals think it's a joke, while others feel their currency's worth is legitimate. WatcherGuru first said that it couldn't tell if a hack or a bug caused the anomaly but then changed its mind and stated that it couldn't say for sure. JUST IN: CoinMarketCap, one of the largest crypto information sources in the world has reportedly been hacked. pic.twitter.com/Fln9R86tDQ @WatcherGuru (@WatcherGuru) December 14, 2021 Other responses from cryptocurrency holders reveal that programs relying on the site, such as TrustWallet, were also impacted by the incorrect price.

Singapore, Singapore, 15th December, 2021, Chainwire Slope Finance, the first mobile wallet built on Solana which has gained phenomenal traction in the mobile-first market, has announced its partnership with MoonPay, a leading crypto payments infrastructure company, to offer an industry-first wallet with a fiat on-ramp into the Solana ecosystem. This partnership offers easy access to Slope's quarter of a million users who are embracing the full spectrum of offerings from cryptocurrency purchases to NFT minting capability. The partnership with MoonPay significantly reduces the barriers of access to blockchain by enabling users to participate directly through traditional fiat payment methods. This allows users to use debit cards or Apple Pay methods to convert from their own local fiat currency to dollars when making purchases. Ivan Soto-Wright, Co-Founder and CEO of MoonPay, said: "From the very beginning, MoonPay has worked to simplify fiat-to-crypto transactions so that more people can have access to this remarkable technology. Partnering with leaders in the mobile space such as Slope is a giant step in this direction, and we're delighted to see where it leads us." This is a timely partnership given the extraordinary consumer interest in the NFT market. With Slope Finance offering minting, floor prices, and leveraging of NFTs, this will give a new level of power to users of the platform. MoonPay is a rapidly growing company that at just two and a half years old had the largest and highest valued Series A for any bootstrapped crypto company globally. It's the ultimate partner to join Slope on this journey. Contacts - Lucas - hello@slope.finance

SolRazr has come forward with the news of their scheduled hosting of the biggest IDO launchpad ever. Through its \$GARI token, the Solana-based venture platform will be a base for launching new coins, cryptocurrency projects and for raising liquidity. With this development, SolRazr pioneers India's social network in issuing cryptocurrency tokens. The platform features an active community of over 32 million users alongside almost 85 million downloads so far. \$GARI is the social token of Chingari App. Among the apps offerings include specialized videos, a long library of songs, super-realistic AR filters and other content in 20+ different languages. GARI token links different types of stakeholders using the platform, some of whom drive the ecosystem. Drivers of the Chingari ecosystem - Content creators - Viewers - Advertisers - Developers Coming forward to express his excitement for the project, Sreekanth Kalapur, Co-Founder of SolRazr talked about how the \$GARI token launching in SolRazr will be a landmark in the crypto world to help creators on the Chingari app to develop their e-commerce ecosystem using physical products, NFTs, and directly collecting payments from users. Vijay Kalanji, also in his Co-Founder capacity at SolRazr, came forward to explain how the team ensured the process of buying \$GARI is made as smooth and effortless as possible. Thanks to this convenience, users do not have to apply for the whitelist for them to win the lottery. All they have to do is navigate to the IDO process. The Chingari platform boasts of an aggregate user base of more than 75 million users and counting. The platform is strategically positioned to meet users where social media entertainment, brand community and cryptocurrencies intersect. Developed on the Solana blockchain, \$GARI token allows content creators using the app to develop their own e-commerce space, integrating real items, develop NFT projects, and enable consumers in funding the artists they support. The CEO and Co-Founder of Chingari, Sumit Ghosh, also explains how they choose SolRazr to introduce the IDO token sale because it also run on Solana. In his comments, the CEO also expressed his confidence on the platform's ability to deliver a fair and completely transparent process. The \$GARI-Chingari association flawlessly brings cryptocurrency to its ideal and intended user base by means of a procedural introduction of GARI. This is through user-friendly mechanics of the application. Thanks to the step-by-step advancement of token usage, there is now more long-term adoption that is also supported by the efficient learning curve for current users. In the same way, GARI intends to offer an identical short form and easy-to-understand tool for new entrants in the crypto space. While the integration of the \$GARI reward program, developers are reinventing the future of entertainment. This is geared towards the development of fresher and more interactive videos on the app. Popular film star Salman Khan, in his ambassadorial position for the \$GARI brand supports that this will indeed be an amazing journey moving forward. During its recent live sale on the Republic platform, \$GARI raised almost \$12.3 million in a 24-hour span. As a crowd-equity platform, Republic is a base for startups, real estate, gaming, and cryptocurrency investments. Chingari also has a previous record raising more than \$19 million through the support of over 30 venture funds together with independent investors.

Singapore, Singapore, 13th December, 2021, Chainwire ClearDAO announced today the barrier option marketplace on Arbitrum testnet is now open for public alpha. This is the first proof-of-concept marketplace built on the Clear SDK. The deployment on Arbitrum testnet comes after the deployment on BSC testnet two weeks ago. As an open and inclusive infrastructure offering multiple blockchain ecosystems, ClearDAO is expected to also deploy on Solana and other layer 1 and 2 solutions in the near future. ClearDAO is a decentralized derivatives factory where DeFi developers can use the Clear SDK to build bespoke derivative products and launch derivative exchanges. The marketplace on Arbitrum testnet offers options on

BTC, ETH and basket of cryptos. The option products available on ClearDAO are barrier knockout options, not the standard vanilla options available elsewhere. The marketplace has a easy-to-navigate user interface where a 4 x 4 matrix displays the options of different maturities (1 day, 3 days, 7 days, 14 days) and barrier levels (5%, 7.5%, 10%, 15%). They offer different risk profiles and expected return to traders. Traders can trade both calls and puts to enhance returns and manage risks of their existing portfolios. In traditional finance, the barrier of entry to OTC derivatives are extremely high and are often exclusive to institutional investors. DeFi in many ways aims to replicate the traditional finance but without the walls that keep the majority out. As DeFi matures and participants become more sophisticated, the need to hedge crypto portfolio risks will rise. There are currently no customizable derivatives in DeFi that tailor to the need of the buyers, and this is the problem ClearDAO is solving. Currently in the cryptocurrency industry, the role of market makers and liquidity providers are highly accessible to most participants, including individuals and institutions. This is also true at ClearDAO, where automated market making algorithm is deployed in the marketplace to allow anyone to participate as a liquidity provider and a liquidity taker. The governance aspect of the ClearDAO ecosystem is expected in 2022. Community members will be able to collectively decide the development path of the project. ClearDAO recently closed a \$2.5 million private round fund raising. According to the project roadmap, the Clear SDK will be available in Q4 of 2021. In the same quarter the project is expected to deploy on Solana devnet. DAO governance and marketplace mainnet deployment is targeted for Q1 of 2022. Arbitrum Testnet Demo: <https://demo-arbitrum.org/About-ClearDAO> The ClearDAO aims to create a DeFi derivative ecosystem where Clear SDK developers from all over the world can build on ClearDAO decentralized exchanges offering unique derivative products ClearDAO Website: www.cleardao.com contacts - cleardao@cleardao.com hello@cleardao.com

The entire world was experiencing an era of cryptocurrency, where many digital assets went to peak in price value. Most of the cryptocurrencies' values have multiplied in the year 2021 earning more users as well. This year has been a sweet spot for the crypto industry as the value of the crypto market has climbed over 500,000% since the start. The meme-currencies and the gaming-tokens were the talks of the town in this recent trend of the crypto industry. From these cryptocurrencies, there are four tokens in which if an investor has invested about \$10,000 then it would turn to \$1 million. The four crypto-tokens are SHIB, AXS, SAND, and SOL. Cryptocurrencies are "To The Moon" The first crypto-token is the famous one among the crypto industry which is Shiba Inu (SHIB). SHIB's price value has skyrocketed since the start of this year, surging from \$0.000000000073 to \$0.000037. It has increased in value by losing six zeros and has delivered about 50,000,000% gain YTD. Thus, an investment of \$10,000 in SHIB would be \$5 million now. Axie Infinity (AXS) is the second cryptocurrency that generated more gains this year. It is a gaming platform that has been the best performer of the year being a leader for many gaming tokens. Since the popularity of AXS went on fire, many gaming platforms followed it and began to rise in value. An investment in Axie Infinity for \$10,000 at the start of this year would be \$2.18 million now. The third popular token is The Sandbox (SAND) which is similar to Axie Infinity. The Sandbox is about monetizing the metaverse which allows users to interact in a 3D environment. This blockchain-based gaming platform incentivizes users to create virtual worlds and engage with others in them. The price value has soared from \$0.04 to \$3.78, thus a \$10,000 investment would be \$1.4 million now. Consequently, the final crypto-token is Solana (SOL) which has skyrocketed to \$110.1. The Solana is a high-speed blockchain that is built up to support a value of 1 billion tokens. It has a total supply of 1 billion tokens, an investment of \$10,000 would be nearly \$1.2 million right now. Furthermore, among the past few years, this year has been the hype for the crypto industry.

- Cardano (ADA) is down 5% and has broken below USD 1.32. - BNB couldn't hold above USD 600, a new slide began. As a result, Bitcoin's price failed to break the USD 50,000 barrier, and BTC fell below USD 49,000 support. It is down over 2%, around USD 48,500. However, most big cryptocurrencies are down 3-10% today, while BTC is up 3%. Except for XRP, which is flat following a big surge over USD 0.90. ETH fell 5% and is around USD 4,200. ADA is down 5% and has broken below USD 1.32. The next big support is at USD 1.18, and below USD 0.90. ADA's price failed to rise above USD 1.32, and is down 5% and has broken below USD 1.32. The next major support is at USD 1.30. A closing below USD 1.30 might trigger a slide towards USD 1.20. BNB couldn't hold above USD 600, a new slide began. The USD 585 support was broken. It is already trading below USD 580 and may fall to USD 565, from whence it may fall to USD 550. Solana (SOL) fell 6% and touched USD 180. Any more losses may bring the market near USD 165. The first barrier is at USD 188, and it might increase to USD 200.

Road Town, British Virgin Islands, 8th December, 2021, OpenOcean, world's leading DeFi & CeFi full aggregation protocol, is delighted to announce the successful aggregation of Arbitrum as well as its leading decentralized exchanges like Uniswap v3, Balancer v2, SushiSwap, Curve, DODO, Synapse, and Swapr. It will enable OpenOcean users to trade with maximum returns on multiple Ethereum Layer-2 constructions. On the one hand, we know our users are trading on Ethereum and have been requesting us to aggregate more Layer-2 solutions to access cost efficient and fast trading while still being in the Ethereum ecosystem. On the other hand, we also know that some of our users have been hesitant or directly reluctant to trade on Ethereum due to the cost. With the Arbitrum aggregation we mash two potatoes with one fork and our users can swap around the trading universe with one-stop trading on OpenOcean said Cindy Wu, Co-founder of OpenOcean Arbitrum, a Layer-2 scaling solution on top of Ethereum, has recently gained serious commitment from large players and a rapid increase in total value locked (TVL). The network is developed with optimistic rollup technology that executes transactions on Layer-2 and submits the data to Layer-1. Its DeFi experience is the same as Layer-1 except for the transaction cost, which is dramatically lower than Ethereum. We are thrilled to have Open Ocean joining the Arbitrum ecosystem. Low-slippage aggregated DEX trading is a phenomenal use case of Arbitrum's low cost and instant confirmation, providing an excellent experience for DEX traders. From Steven Goldfeder, CEO of Offchain Labs. OpenOcean is an integral part of Web3, offering users maximum returns on decentralized assets across multiple networks without charging additional fees. The aggregation of Layer-2 constructions gives the option to further reduce the fees users end up paying on Ethereum due to network congestion. Due to its stellar technology, team and timely launch, Arbitrum has become the undisputed Layer-2 leader with 40%+ market share of the Layer-2 TVL. It also boasts the most volume and the highest number of users among Ethereum's Layer-2 constructions. About Arbitrum Developed by Offchain Labs, Arbitrum is an optimistic Rollup scaling solution for Ethereum. It instantly scales apps, reducing costs and increasing capacity, without sacrificing Ethereum's security. Porting contracts to Arbitrum requires no code changes or downloads as Arbitrum is fully compatible with most existing Ethereum developer tooling. Arbitrum has launched Arbitrum One on Ethereum mainnet and the team is already working with hundreds of projects that are building on Arbitrum One. For more information, please visit: <https://offchainlabs.com/About-OpenOcean> OpenOcean is the world's first DeFi and CeFi full aggregator. OpenOcean's intelligent routing algorithm finds the best price and low slippage for traders across centralized and decentralized exchanges with no additional fees. As a one-stop trading entrance, it has aggregated major DEXes across public chains, including Ethereum and Layer 2, Binance Smart Chain, Avalanche, Polygon, Solana, Fantom, HECO, TRON, Ontology, and a CEX (Binance). OpenOcean will continue to support cross-chain swaps via bridges and cross-chain protocols, aggregate more DeFi and CeFi products, and launch intelligent management services. For more information, please visit: <https://blog.openocean.finance/> Stay tuned: Website | Twitter | Telegram Contacts - Cindy Wu - contact@openocean.finance

Singapore, Singapore, 7th December, 2021, Chainwire Leading global digital asset exchange, Gate.io, has quickly become the sixth largest crypto futures platform in the world, having risen from fifteenth place just over two months ago. The rate at which the platform has grown far outpaced competitors, cementing Gate.io's place in the futures market. According to data provided by CoinGecko, Gate.io's 24-hour crypto futures trading volume exceeded \$7.1 billion, pushing the exchange to the sixth position worldwide in terms of trading volume. Gate.io provides futures contracts for more than 185 USDT-paired and 25 BTC-paid assets including Bitcoin, Ethereum, Solana, Litecoin, Shiba Inu and Sandbox. Gate.io's crypto futures platform has grown tremendously over the last month as turbulent market conditions became more apparent. Favourable word-of-mouth and the variety of products being offered has been the leading contributors to the growth of our futures platform. We've been taking users' feedback and suggestions to heart in further expanding our offerings, said Marie Tatibouet, Chief Marketing Officer at Gate.io. The futures platform allows users to trade on a platform that offers high liquidity and stability, having proven itself to remain operational even during turbulent market conditions. Users are able to trade over 200 contract pairs on the platform with some of the lowest fees in the industry, while exploring some of its innovative features such as contract bonuses, reverse positions, advanced contract analysis and quantitative trading solutions. On December 15th, Gate.io will launch the world's first crypto futures trading championship, a campaign aimed at rewarding the users who have made our platform what it is today. With up to \$2 million in prizes to be won, Gate.io intends on using the campaign to elevate its world class trading platform. In addition to providing a powerful futures trading platform, Gate.io's spot exchange has also listed more than 1,100 coins and tokens, and the company has invested a lot of money to expand its NFT Magic Box market and its Startup IEO platform. About Gate.io Gate.io is a leading digital currency exchange with over 8 million users in 190 countries across the globe. The exchange offers spot, margin, futures and contract trading in addition to DeFi products through HipoDeFi, custodial services through Wallet.io, investments through Gate Labs and its dedicated GateChain platform. The company also offers a wholly integrated suite of products such as its Startup IEO platform, NFT Magic Box marketplace, crypto loans and more. Contacts Head of PR & Communication - Diksha Sharma - Gate.io - diksha@mail.gate.io

- ProfitsBoogie tweets the end of year prices for several cryptos. - Bitcoin (BTC) and Ethereum (ETH) to reach \$75k and \$6.5k respectively. - vEmpire DDAO (VEMP) to surge 5X. The thing with the crypto industry is that near the end of the year, huge expectations and eyes fall upon the industry. This is due to the fact that certain cryptos usually are expected to outperform by the year end. In such terms, the prominent and trustable crypto analyst and daily highlights updater, the ProfitsBoogie, lists out top 12 cryptos which are expected to outperform by the end of the year. Top 6 Prominent Cryptos Whatever be the enlistsings related to the crypto industry, the list never ever fails to start off with the Bitcoin (BTC) and the Ethereum (ETH). Accordingly, the ProfitsBoogie upon their tweet terms that the price of BTC is to hit an all time high by the year end, of \$75K. Moreover, the next in line, the king of the altcoins Ethereum (ETH) will be at a price of \$6.5K. In spite of this, this will be the all time high for ETH as well. The Polygon (MATIC) which is currently trading at \$2 is expected to hit \$4 by year end. This is quite a remarkable surge if MATIC succeeds in hitting \$4. In addition, the Solana (SOL) which is in line within the top ten cryptos is currently trading at \$186.76. However, SOL is said to hit a whopping \$400. Furthermore, the altcoin predicted with the highest surge is the Galaxy Heroes Coin (GHC). Also, it's expected to increase to over 10X by the end of the year. The last but not the least is the vEmpire DDAO (VEMP), which is said to increase by 5 folds. At present VEMP is trading at \$0.316.

- The LUNA cryptocurrency outperformed Bitcoin in market capitalization. - Terra is the third-largest blockchain in terms of total value locked. Late on Friday, December 3, the crypto market saw a major downturn and massacre. It has, however, been Terraform Labs' native coin LUNA that has recovered the quickest. According to CoinMarketCap, LUNA has a market valuation of \$28.3 billion and is now trading 32% higher at \$74.21 per share. As a result, LUNA has surpassed the meme cryptocurrency Dogecoin (DOGE) and entered the top ten of the most valuable cryptocurrencies. Last few weeks, the LUNA cryptocurrency outperformed Bitcoin in market capitalization. It has gained more than 64% versus Bitcoin on the weekly charts. The price of LUNA has risen as a result of the increasing usage of LUNA coins in DeFi apps. In addition, Terra's development activities have seen a significant uptick. Fiat-pegged Stablecoin Deployment Technique As a result, the Terra blockchain is gradually becoming a sought-after platform in the DeFi industry. The Terra protocol uses a fiat-pegged stablecoin deployment technique that benefits a DeFi economy. Pylon, Mirror, and Anchor are part of Terraform's DeFi ecosystem. In addition, Terra is the third-largest blockchain in terms of total value locked, according to DeFi Llama. TVL places it right behind Ethereum and Solana. Along the platform, the overall value of the platform has surpassed \$13.86 billion. Terra is now capitalization, expected to surpass Solana's in the near future.

- Total value locked (TVL) is one indicator of DeFi demand. - Ethereum now has \$180 billion in DeFi TVL. When it comes to functionality, Bitcoin and Ethereum are never compared. The only distinction is Ethereum's smart contracts functionality. But every other smart contract technology has

been considered an Ethereum killer at some point. But not in 2021. The DeFi ecosystem reclassified protocols, and the usefulness of smart contracts was further appreciated. The name “Ethereum killer” gained momentum, but will it be obsolete in the future? Ever since EOS and Tezos ICOs, a constant stream of rival smart contract platforms has been called “Ethereum killers,” putting them against one another. The success of Solana, Avalanche and other alternative layers 1 protocols in 2021 did not necessarily come at the price of Ethereum. Deploying apps on all chains is prospering the ecosystems. Ethereum Still Leads Total value locked (TVL) is one indicator of DeFi demand, and the most popular chains have all grown rather than competed. Ethereum has \$180 billion in DeFi at the start of 2021. Accounting for 97% of the multi-chain ecosystem. By June 1, 2021, Ethereum DeFi had grown to \$88.6 billion but only represented 52.2% of the whole ecosystem, thanks to Polygon and Binance Smart Chain. Ethereum now has \$180 billion in DeFi TVL, but its control has dwindled to 66%. In the medium term, it is believed supremacy is less relevant. As Ethereum tries to grow massively with Arbitrum, Optimism, Polygon, and others. These other chains are not “Ethereum killers,” since Ethereum TVL rose approximately 9x, while its native token gained just 5.9x.

The meme-currencies have begun to enter the crypto market - The top five meme-currency gainers of the week are listed - Significantly these tokens are MOLA, LOWB, DOGEGF, XDoge, and WOOF. Following the huge rise of the meme-currency trend, the market began to witness many meme-coins given birth in the industry. The surge of Dogecoin was an initial take while SHIB took the perfect move with great success hitting a continuous new ATH. Consequently, the performance of SHIB surpassed Bitcoin and other leading cryptocurrencies in the industry. This new hit of meme-currencies was the pillar for many meme-coins to enter the market. Considering the potential of these tokens, traders and investors showed interest in meme-currencies which was the first successful step for meme-tokens. However, the traders are aware of many cryptocurrencies with much potential to reach great heights in the next term. Besides, the market offers many options for investors to choose from the variety of meme-currencies to explode. Let's dig into the top five meme-currency gainers of the week which are MOLA, LOWB, DOGEGF, XDoge, and WOOF. Top Meme-Currency Gainers

The first token in the list is Moonlana which bills itself as a next-generation memes platform by Solana. Moonlana has its own DEX, the LanaDex, which includes charts, logos, and NFTs. All of LanaDex's trading fees will be used to purchase back and burn MOLA, the platform's native Meme-Currency. LanaDex, an NFT collection containing 9,333 unique and random animated bots is also available on Moonlana. Currently, MOLA's trading price is 19% up in the past 24 hours and has nearly 38% in a week. The second meme-token in the list is DogeSwap (XDoge) whose trading price is 19% up in the past 24 hours and has nearly 38% in a week. The third meme-token is Classic Doge (XDoge) which focuses on pet lovers. It is a BEP-20 token that is perfect for dog lovers and connects the pet lovers' community. The platform bills itself as the first decentralized pet community and features a social app for pet lovers. The current trading price of XDoge is \$0.00762 which has surged to nearly 50% within a week. The final meme-token in the list is WOOF (WOOF) which is similar to Moonlana, built on top of Solana. WoofSwap is the company's own DEX and NFT marketplace. After debuting in late October, WOOF is one of the fastest-growing communities, with more than 26K users. At the time of writing, the trading price of WOOF is \$0.001560 that has soared to over 20% within a week. However, the aforementioned meme-tokens are the top meme-currency gainers of the week. These tokens have the potential to reach great heights in the next term.

Avalanche's market valuation is expected to remain below Solana's. Polygon has hosted an NFT marketplace that offers low costs for traders. In November, the crypto market saw a significant decline due to the rising inflation in the US market and the uncertainties surrounding Covid. On the other hand, Alcoins with large market caps work tirelessly to boost the global market cap. We can't help but notice the rapid rise of the tokens that make up the top 10: AVAX (VGX), MATIC (DOT), DOT (AXS), and MATIC (AVAX). Avalanche (AVAX) Smart contract-capable blockchain network Avalanche (AVAX) attempts to burn transaction fees to reduce the number of tokens available for use. According to prominent figures in the cryptocurrency community, Avalanche's market valuation is expected to remain below Solana's for the foreseeable future. According to CoinMarketCap, the Avalanche price today is \$126.66 USD with a 24-hour trading volume of \$1,479,581,414 USD. Avalanche has been up 2.65% in the last 24 hours. Polygon (MATIC) One of the most popular platforms for NFT trading, Polygon has hosted an NFT marketplace that offers low costs for traders. In a matter of seconds, the platform would begin shifting gears and accelerate at a rapid pace. According to CoinMarketCap, the Polygon price today is \$2.92 USD with a 24-hour trading volume of \$2,260,212,034 USD. Polygon is up 12.30% in the last 24 hours. Voyager (VGX) Cryptocurrency tokens like Voyager are meant to be traded in a safe and secure environment for users. Recent announcements about cooperation and updates have kept the platform in the public eye. The price of VGX surged to \$5.02, an increase of more than 22% during the day. However, if the surge continues, the price will face immediate resistance at \$6.2. The price would fall to \$3.9 if there were an increase in sell orders. According to CoinMarketCap, the Voyager Token price today is \$4.99 USD with a 24-hour trading volume of \$153,066,575 USD. Voyager Token has been up 26.46% in the last 24 hours. The cryptocurrencies above have a strong chance of breaking new highs when taken as a group. In addition, Polkadot and Axie Infinity would continue to raise their bars to reach new goals. Reclaiming a prior all-time high of \$33.5, the DOT price has lately broken out its one-month low. But for the AXS price to restart its bull run, a clean break out at \$125 was required.

Crypto Analyst Lark Davis shares top three crypto investments. - The potential crypto space are DeFi, Metaverse, and Gaming space. - Grayscale mentions that Metaverse will present \$1 Trillion annual revenue. Crypto space is often associated with cryptocurrencies. DeFi, NFT, metaverse, and many more unique features being implemented. The whole crypto market moved a long step ahead with more advancement offered to the users. Traders and investors are aiming to choose potential cryptocurrencies in the crypto market for making investments. Similarly, taking advice from a crypto expert is always a habit for crypto traders and investors. According to the crypto analyst, Lark Davis, the crypto space has potential areas for investments that will be life-changing. He has shared his views on the crypto industry and the potential cryptocurrencies that traders can invest in. Potential Crypto Space The first potential area in the crypto industry that will continue to rise and make investors freaking rich is DeFi space. According to Lark Davis, DeFi will be an \$800 Billion industry in 2022 which might be achieved in the short term. Decentralized finance protocols, exchanges, and farming platforms have much potential with about turning into a multi-trillion dollar sector of the crypto industry. Moreover, he mentions that DeFi coins have the potential and it will be a big opportunity for early investors. The market cap DeFi has been \$1 million in the mid-last year and has now gone up to \$270 billion. Besides, some of the promising projects that he mentioned are Avalanche™s Trader Joe and in Solana space its Orca which is a decentralized exchange that enables users to do farming. There are also some other projects coming up like Cardano™s Ardana, Polkadot which are happening right now in DeFi space. The next hot top area in crypto is metaverse which is actually on-fire right now. According to Grayscale, metaverse presents over \$1 trillion annual revenue market opportunity every year. Projects like Sandbox (SAND) and Decentraland (MANA) will produce massive results which will continue to grow. Aping into SAND and MANA will probably generate better outcomes in the market. Significantly, within the metaverse space, the higher potential coins are Wilder world, RMRK, and Higher Street. Additionally, the next area is gaming space that reports about the industry is twice as recorded at \$336B annual revenue. As of now, gaming is gaining a large percent of attention from users and revenue as well. The Play-to-earn mechanism is absolutely driving massive as players™ rewards are NFTs or tokens which can be changed to real-time currency. As a result, Davis cited other intriguing games with good gameplay, such as Illuvium, Star Atlas, and Aurore. Furthermore, the top three areas of the crypto world are DeFi, Metaverse, and Gaming, all of which provide excellent opportunities for early investors.

Road Town, BVI, 1st December, 2021, OpenOcean æ“ the worldæ™s first DeFi and CeFi full aggregator, was born in 2019 with the mission to help its users trade with maximum returns that cannot be found anywhere else. Now we are primed to enter the next stage of expansion. OpenOceanæ™s recent Atlantic version upgrade provides users with an even more efficient trading experience that helps maximize returns while outperforming other DEX aggregators. While testing swaps on BSC, it has shown that OpenOcean Atlantic is better in 60% of the cases according to the testing results. Overall, OpenOcean Atlantic delivers better returns in most cases compared to other leading DEX aggregators on BSC. Plus, OpenOceanæ™s large user base, paired with the high potential of the BSC ecosystem, persuaded us to launch a BSC-focused growth incentive. The OpenOcean Foundation is proud to announce the launch of the OpenOcean Atlanticwave, an incentive program committing 1,000,000 to the growth of the BSC ecosystem consisting of various campaigns, including liquidity mining and partnership events. Call out to current and new BSC partners. Apply for your project to join Atlanticwave here: <https://forms.gle/zWRFPXmZSrTQvUwV9> - Duration: Six months - Start date: December 1, 2021 - End date: May 31, 2022 - Pledge: 1,000,000 The program will run over six months starting from December and consist of several BSC trading-related campaigns across different categories, including DeFi, gaming, DAOs, NFTs, and metaverses. So there is no need to worry if you miss a campaign or are not lucky in one you participate in æ“ there will be plenty more opportunities over the campaign duration. Campaigns will be announced around one week before their start date. Follow OpenOcean on social media to keep up to date with the latest. About OpenOcean OpenOcean is the worldæ™s first DeFi & CeFi full aggregator. OpenOceanæ™s intelligent routing algorithm finds the best price and low slippage for traders across centralized and decentralized exchanges with no additional fees. As a one-stop trading entrance, we have aggregated major DEXes across public chains including Ethereum & Layer 2, Binance Smart Chain, Avalanche, Polygon, Solana, HECO, TRON, Ontology, and CEX (Binance). OpenOcean will continue to support cross-chain swaps via bridges and cross-chain protocols, and aggregate more DeFi & CeFi products and launch intelligent management services. Bullish GAS price prediction ranges from \$24.58 to \$31.78. - GAS price may also reach \$100. - Bearish GAS price prediction for 2021 is \$4.22. This Gas Price Prediction 2021 article is based on technical analysis alone. In this article, you can see the key measures that were taken into consideration upon coming up with our GAS price analysis and prediction. Gas is one of the two coins created by Neo Foundation. Gas is used as a processing fee for Neo coins. Neo hashing algorithm is Proof of Stake (PoS), where blocks processing power depends on the amount of tokens held by miners instead of the Proof of Work method which depends on the mining power that a miner has to create a new block. For interested crypto traders, the crypto trades at exchanges such as Binance, Huobi Global, OKEX, Upbit, and VCC Exchange. Moreover, with these recent developments, is GAS a good investment in 2021? Let's find out in this GAS price analysis 2021 article. GAS (GAS) Price Analysis Currently, GAS holds 279th place on CoinGecko. But will the recent changes in the blockchain and its governance help catapult the price to reach higher? Let's proceed to the charts in this GAS price prediction article. In the daily time frame chart shows the Ascending Channel pattern. An Ascending Channel is the price action

that occurs between upper inclining equal trendlines. Whatâ€™s more, higher highs and higher lows structure this price pattern. Meanwhile, the relative strength index (RSI) of the GAS is already at its overbought state. For this reason, traders must be careful because GAS might trigger a price reversal any time, as shown in this price prediction. According to CoinGecko, the GAS price is \$19.61, at the time of writing. In terms of market position, the market capitalization of GAS amounts to almost \$198,582,361. Furthermore, GAS has an average daily trading volume of over \$139,756,057. - Resistance Level 1 â€” \$24.58 - Resistance Level 2 â€” \$31.78 - Support Level 1 â€” \$11.19 - Support Level 2 â€” \$4.22 The above chart shows the impressive performance of GAS in the last few days. GAS is showing a bullish trend. However, if the trend continues, GAS will run along with the bulls, overtaking the resistance level at 24.58 and climb higher to \$31.78. In contrast, if the crypto investors turn against the cryptocurrency, the bears might take over. More so, the GAS price might plummet to almost \$4.22, a bearish signal. Even more, it may even reach \$1.19 if investors have faith that GAS is a good investment in the long run. Furthermore, our project sees GAS as a promising long-term coin, clear ideas, and a use case that target a broad market. Along with increasing adoption, positive price predictions, and a community consists of thousands of retailers, GAS is likely a promising investment for 2021. Disclaimer: The opinion expressed in this chart solely the authors. It is not interpreted as investment advice. Recommended for You

AscendEX is thrilled to announce the listing of the VERA Token (VERA) under the trading pair VERA/USDT on AscendEX starting on December 1 at 2 p.m. UTC. VERA is a decentralized protocol built on top of major blockchains that provides essential financial services for NFTs such as renting, lending, and mortgages. It is making it one of the most powerful open financial platforms for non-fungible assets. By providing unprecedented access to NFTs and financing for NFTs across various blockchains, VERA allows any metaverse or marketplace to generate new revenue streams, reimagine user experiences, and empower communities. The lending and renting capabilities on VERA allow users to list their NFTs on the marketplace with their desired rental terms. Currently, the VERA testnet supports collateralized NFT rentals, requiring the borrower to deposit collateral to rent an NFT. Non-collateralized NFT rentals will be available on the platform in late Q4 2021. \$VERA is the original utility token for the VERA network and is set up as both an ERC-20 and BEP-20 token. \$VERA will be used to govern VERA's system of NFT rental, lending, and financing pools upon the launch of the mainnet. Users can post \$VERA tokens as collateral to raise their borrowing limits for NFT mortgage loans. Users who borrow \$VERA or rent \$VERA-verified NFTs can also bypass the borrowing and rental fees to reduce the cost if they post the tokens or NFTs as collateral. Fees collected by the VERA platform are used to burn \$VERA tokens and pay lenders. The constant burning of \$VERA reduces its total supply, thus supporting the token price level while demand remains steady. AscendEX is excited to list \$VERA and help further drive VERA's mission to build open, secure, and powerful NFT financial products that are equally available to everyone, everywhere. About AscendEX AscendEX is a global cryptocurrency financial platform servicing more than one million institutional and retail traders with the resources needed to obtain more value from their crypto investments. Operating at the nexus of centralized finance and decentralized finance, AscendEX's platform features access to futures, margin and spot trading, a robust wallet infrastructure, and staking support for over 200 industry-leading blockchain projects, all producing industry-leading yields and returns, further driving the growth of the crypto ecosystem. In efforts to cultivate scalable and secure forms of decentralized financing, AscendEX has emerged as a leading platform by ROI on its Aeneian exchange offerings through supporting some of the industry's most innovative projects from the DeFi ecosystem. To learn more about how AscendEX leverages best practices from both Wall Street and the cryptocurrency ecosystem to extract the highest value per dollar to its users, please visit: Website: <https://ascendex.com> Twitter: https://twitter.com/AscendEX_Global Telegram: <https://t.me/AscendEXEnglish> Medium: <https://medium.com/ascendex> About VERA VERA is the best-decentralized way to rent, lend, and mortgage non-fungible tokens (NFT). Founded in 2021 and backed by notable investors in the decentralized fintech space such as Animoca Brands and the Web3 Foundation, VERA's mission is simple: To build open, secure, and powerful NFT financial products that are equally available to everyone everywhere. VERA supports NFTs from major blockchains such as Ethereum, Polygon, BSC, Polkadot, and Solana. Using VERA, applications such as metaverses, games, and marketplaces can generate new revenue streams, reimagine user experiences, and empower their communities. Zurich, Switzerland, 19th November, 2021, Chainwire - Long-awaited upgrade has allowed smart contract code to transfer ICP tokens, after it was adopted by the Internet Computer community's DAO, the Network Nervous System (NNS). - Community voted 309,936,205 (approve) to 20,561 (reject) on Proposal 31471. - Stage set for the development of a new generation of web speed and censorship resistant DeFi applications on the Internet Computer blockchain, which run without the need for cloud computing services - The Internet Computer is the only blockchain that runs under the complete control of a community DAO, called the Network Nervous System, which is able to continuously upgrade and evolve its protocols. The DFINITY Foundation is today announcing that a proposed upgrade to expand support for all canister smart contracts to be able to hold and transfer ICP tokens has been adopted and is already live on the network. The community voted 309,936,205 (approve) to 20,561 (reject) on proposal 31471. This long-awaited feature sets the stage for an explosion of advanced DeFi applications on the Internet Computer blockchain, by expanding support for all canister smart contracts to be able to hold and transfer ICP tokens. Dominic Williams, Chief Scientist and Founder at DFINITY, said, "The Internet Computer blockchain is the only blockchain that truly scales, runs efficiently at web speed, and where smart contracts can serve web experiences directly to end users without the need for other services, such as cloud computing, which provides much stronger censorship resistance. Now the community has adopted this proposal, and the Network Nervous System DAO has upgraded the network, canister smart contracts on the Internet Computer have become able to hold and transfer ICP tokens for the first time, providing for the development of a new generation of DeFi, and the blending of DeFi with social media and games functionality in the form of SocialFi and GameFi, forging the path towards billions of end users. Legacy blockchains perform disruptive, divisive and hard forks or require centralized coordination by its validators to upgrade their protocols. Due to Chain Key cryptography and breakthroughs in computer science, the Internet Computer is the only public blockchain that allows its community of token holders to vote on governance proposals, and the ICP protocol automatically upgrades itself via the Network Nervous System (NNS), a super-advanced DAO. The ICP transferability upgrade has been eagerly awaited by Internet Computer developers. At a basic level, a dapp such as OpenChat, a decentralized version of Whatsapp, will soon be able to allow users to send ICP tokens to one another via instant messages. Because smart contracts on the Internet Computer run at web speed and can serve web experiences directly to users, this functionality also heralds the advent of decentralized exchanges that run entirely on a blockchain, without the need for cloud nodes to process trades or create the front-end for users. Imagine Uniswap running completely on-chain. A community developer recently unveiled a Uniswap front end on the Internet Computer, showing how conventional DeFi solutions can fully run on blockchain technology. Mike Schwartz, Co-Founder at ORIGYN Foundation, a digital certification and authentication platform, recently valued at \$300m with backers Paris Hilton and Bill Ackman, said, "The Internet Computer is the world's fastest public blockchain at 250,000 queries per second and 11,500 transactions per second, which is over 11 times faster than Solana. The ICP transferability upgrade has been a high priority feature needed by entrepreneurs and developers to activate DeFi, and after the community adopted the code, the Internet Computer automatically upgraded itself - no hard forks or disruptions to operations. The possibilities are endless when you combine the fastest blockchain with advanced DeFi capabilities. For ORIGYN, the Internet Computer's advanced technology matches our massive ambitions, and AI-based technology to authenticate every luxury good, art, and NFTs on a sovereign blockchain" and in doing so, eliminating counterfeit as well as fraud. The execution of this upgrade is also an important step towards the implementation of application localization on the Internet Computer. An upgrade proposal for the critical Service Nervous System (SNS) feature is already under discussion within the community. DFINITY is also currently working on directly integrating the Internet Computer with the Bitcoin network, which will leverage the combined strength of Bitcoin as the world's digital gold reserve and the Internet Computer as a platform for securely and efficiently executing smart contracts. The Internet Computer has attracted thousands of developers, and hundreds of thousands of users of its dapps, within just a few months of its launch in May 2021. Hundreds of projects are already up and running with users on the Internet Computer, including DeFi, DAOs, SocialFi, GameFi, and NFT projects. "This upgrade to allow canisters to transfer ICP is significant for the Internet Computer ecosystem because decentralized exchanges on the Internet Computer can now spin up liquidity pools to convert ICP to other Internet Computer-based tokens, and NFT projects can securely launch on their own websites" - opposed to NFT marketplaces. The impact of this upgrade is enormous, and with these newfound advanced capabilities for DEXs and NFTs alone, I expect hundreds of new ways to invest ICP over the next few weeks," said Bob Bodilly, Chief Product Officer at Tonik Labs. "For Tonik Labs, the ICP transferability upgrade allows us to (1) perform secure NFT auctions on our Entrepot marketplace, (2) enable bidding on NFTs that aren't even listed on our marketplace, and (3) release our NFT minting and marketplace APIs to enable developers to use our services in their own decentralized applications." This week, the Internet Computer blockchain surpassed 345M blocks, which have been added since mainnet launch less than 7 months ago. It also recently reached a record high of 28.13 blocks per second, by far the highest throughput in blockchain. While this number reflects how the Internet Computer has already scaled to provide vast capacity, throughput is expected to scale beyond 100 blocks per second early in 2022. About the Internet Computer The Internet Computer is the world's most powerful general-purpose blockchain and Web3 platform. Its protocols apply advanced cryptography and computer science to scale smart contract data storage and computation without limit, host web-speed smart contracts that can directly serve web experiences to end users without the cloud, and run smart contracts with breakthrough levels of efficiency. For the first time, developers can create truly decentralized dapps and services that run entirely from the blockchain, and push into emerging areas such as SocialFi and GameFi, which blend social media and game functionality with DeFi, and build out the fully decentralized metaverse. The Internet Computer blockchain acts as a complete alternative technology stack, which has been designed to replace the centralized IT stack that is mostly controlled by Big Tech, and it can even be used to build secure and unstoppable websites and enterprise systems. It was incubated and launched by the DFINITY Foundation. DFINITY: Twitter Reddit YouTube GitHub Developer Center Contacts - Seamus Conwell - 150Bond - seamus.conwell@150Bond.com

The latest project that is about to be listed on the prominent AAX platform is the Moonlana. The symbol is MOLA. Itâ€™s a meme token based on Solana. The project makes use of Solanaâ€™s capabilities to create tools and contribute to the ecosystem. After the first tool, the robust Solana listing on the AAX platform are mentioned below. - AAX will list Moonlana (MOLA) at the following time: - Deposit available on 10:00 on Dec. 02, 2021 (UTC) - Withdrawal available on 10:00 on Dec. 02, 2021 (UTC) - Trading available on 10:00 on Dec. 03, 2021 (UTC) - Trading pairs: MOLA/USDT AAX has further announced exciting events to reward its users while celebrating the listing of the MOLA token. The detail of the events and rewards are mentioned below: Event period: 10:00 on Dec. 02, 2021-10:00 on Dec. 08, 2021 (UTC) Event One: Deposit MOLA and Share 2 Million MOLA Customers who deposit MOLA in AAX from external addresses may get 3,000 MOLA instantly during the activity, whether it is deposit or withdrawal does not matter in these internal transactions. The prize pool is 2 million MOLA. Users will be rewarded in time sequence. A fair play, 1st comes 1st serve concept has been declared. Furthermore, KYC1 completed participants will get twice airdrop gifts. Event Two: Trade MOLA and Share 3 Million MOLA Trading MOLA with a net acquired amount, which can include purchased amount or sold, greater or equal to 350,000 MOLA and ranking in the top 100, have the chance to win and share the 3 million MOLA prize pool. Event Three: Participant Needs to Subscribe to Savings and Share 8 Million MOLA During the contest, users who subscribe to MOLA fixed savings for 400000 MOLA or more get 5 AAB instantly. This is limited to once per person. Furthermore, users whose daily AAB holding amount is higher than or equal to 500 AAB throughout the activity are eligible to share the 8 million MOLA reward if the aggregate of set savings subscription amounts in any BTC, ETH, USDT, or USDC token satisfies the following requirements. The rewards will be distributed according to the amount of time necessary to fulfill the savings goals. The fair-play, first-come, first-served principle will be observed once again. Furthermore, the rewards are not stackable. Activity Rules: - If any cheating activities such as click farming or bulk registration of vice accounts are discovered during the event, AAX may revoke the qualifying and freeze the account. - AAX will alter the token type, interest rate, and minimum and maximum subscription amount according to market conditions and risk. - After the activity, the winning usersâ€™ spot accounts will be credited within seven working days. Log in to check out.

- The top 10 metaverse coins by market cap are Decentraland, Axie Infinity. - The Sandbox, Gala, Enjin Coin, UFO Gaming, Illuvium. - Yield Guild Game, MyNeighborAlice, Star Atlas. The top 10 metaverse coins by market cap are Decentraland (MANA), Axie Infinity (AXS), The Sandbox (SAND), Gala

(GALA), Enjin Coin (ENJ), UFO Gaming (UFO), Illuvium (ILV), Yield Guild Game (YGG), MyNeighborAlice (ALICE), Star Atlas (ATLAS). 1. Decentraland (MANA) The top metaverse coin by crypto market cap is Decentraland (MANA). It is a self-defined virtual reality platform powered by the Ethereum blockchain that enables users to create, experience, and monetize content and applications. MANA is an ERC-20 token that needs to be burned to acquire non-fungible ERC-721 LAND tokens. MANA can also be utilized to pay for a range of avatars, wearables, names, and more on the Decentraland marketplace. Furthermore, at press time, MANA's price was trading at \$4.68 with a 24-hour trading volume of \$2,397,182,475. According to CoinMarketCap, the circulating supply of MANA is 1.82B MANA. In the last 24-hour MANA price surged over 4%. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, CoinTiger, and Huobi Global. 2. Axie Infinity (AXS) Axie Infinity (AXS) is a blockchain-based trading and battling game that is partially owned and operated by its players. It will allow players to collect, breed, raise, battle, and trade token-based creatures known as Axies. Each Axie is a non-fungible token (NFT) with different attributes and strengths and can be entered into 3v3 battles. This is not the same as other blockchain-based battling and breeding games, each Axie can only breed a total of seven times to help control the population of Axies. Accordingly, as per CoinMarketCap, AXS's price was trading at \$128.47 with a 24-hour trading volume of \$296,755,014. In the last 24-hour it has gained nearly 0.58%. Axie Infinity (AXS) can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, Huobi Global, and ZBG. It has been found to be the 25th largest cryptocurrency, as per CoinMarketCap. 3. The Sandbox (SAND) The Sandbox (SAND) is a unique platform, it introduces blockchain technology to the world of gaming. The main aim of The Sandbox is to introduce blockchain technology in mainstream gaming successfully. The platform focuses on facilitating a creative play-to-earn model, that enables users to be both creators and gamers simultaneously. Henceforth, at the time of writing SAND price was waving at \$6.32 with a 24-hour trading volume of \$3,216,440,897. The circulating supply of SAND is 892,246,119.22 SAND. The Sandbox (SAND) can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, CoinTiger, and Huobi Global. 4. Gala (GALA) Gala secured the 43rd position in CoinMarketCap. Ans it has been found to be the 4th top metaverse coin by market cap. Gala games aim to take the gaming industry in a different direction by giving players back control over their games. Furthermore, GALA plans to reintroduce creative thinking into games by giving players control of the games and in-game assets with the help of blockchain technology. And, GALA's price was trading at \$0.685 with a 24-hour trading volume of \$1,788,983,334. GALA can be traded in top crypto exchanges such as Binance, Mandala Exchange, Huobi Global, and FTX. 5. Enjin Coin (ENJ) Enjin is a company that provides an ecosystem of interconnected, blockchain-based gaming products. ENJ is a project of Enjin. ENJ is a digital store of value used to back the value of blockchain assets like non-fungible tokens (NFTs). Enjin Coin is unique, every token minted with Enjin platform. More so, Enjin Coin uses a series of smart contracts to which game developers send ENJ to mint new, unique fungible, or non-fungible ERC-1155 tokens. At the time of writing ENJ's price was waving at \$3.40 with a 24-hour trading volume of \$523,452,632. The circulating supply of ENJ is 838,603,684.07 ENJ. 6. UFO Gaming (UFO) UFO Gaming is a fully decentralized inter-galactic social gaming token. P2E (Play to Earn) Metaverse, Virtual land, NFT, Gaming, and IDO Launchpad. Eventually, users can stake UFO tokens or own land on the game's dedicated planet to get tiered access to some of the most highly anticipated gaming projects added to the dark Metaverse. According to CoinMarketCap, UFO's price was trading at \$0.0004453 with a 24-hour trading volume of 18,648,828. The circulating supply of UFOs is 25,757,588 UFO. It can be traded in top crypto exchanges such as Bitget, ZT, Gate.io, Bittrue, and BitMart. 7. Illuvium (ILV) An open-world fantasy battle game built on the Ethereum blockchain is Illuvium (ILV). The world of Illuvium is occupied by creatures known as Illuvials, which can be captured by players that best them in battle and nurse them back to health. Illuvium is unique in comparison to other blockchain-powered games. even more, it features a fully 3D environment, with over 100 unique illuvial found scattered throughout its various regions. Furthermore, ILV price was trading at \$1,529.02 with a 24-hour trading volume of \$86,63,936. As per CoinMarketCap, ILV circulating supply is 642,799.06 ILV. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, KuCoin, and Hotcoin Global. 8. Yield Guild Games (YGG) The 8th top metaverse by market cap is Yield Guild Games (YGG). It is a decentralized autonomous organization (DAO) that invests in virtual world-non-fungible tokens (NFTs). In decentralized games, yield games have built a community of players and investors who make money by investing in NFTs, used in virtual worlds and blockchain-based games. Henceforth, NFT ownership will gain from an increase in the economic worth of the in-game asset reflected in the value of its NFT on the open market. According to CoinMarketCap, YGG [price was waving at \$7.37 with a 24-hour trading volume of \$79,637,390. At the time of writing the circulating supply of YGG is 68,309,471.13 YGG. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, Huobi Global, and KuCoin. 9. MyNeighborAlice (ALICE) A multi-builder game, where anyone can buy and own virtual islands, collect and build exciting items and meet new friends. ALICE is My Neighbor Alice's native utility token and is used in the following functions as In-game Currency, Governance, Player Incentives. It has secured the 145th position according to CoinMarketCap. ALICE can be traded in top crypto exchanges such as \$20.52, with a 24-hour trading volume of \$338,326,171. ALICE can be traded in top crypto exchanges such as Binance, Mandala Exchange, Huobi Global, FTX, and KuCoin. 10. Star Atlas (ATLAS) Star Atlas is a massively multiplayer online game that takes place in a virtual gaming metaverse. Even more, it combines different genres. It aims to deliver an immersive metaverse gaming experience that encompasses several genres and combines a cinema-quality gaming experience with an ability to earn virtual assets that can be exchanged for real-life currency. Star Atlas will be set up on the Solana blockchain. ATLAS is the 10th top metaverse by market cap. Henceforth, ATLAS's price was trading at \$0.1792 with a 24-hour trading volume of \$50,233,965. The circulating supply of ATLAS is 2.16B ATLAS. It can be traded in top crypto exchanges such as FTX, Bitget, ZT, Gate.io, and Bittrue

- Solana can perform over 50,000 transactions per second (TPS). - Cardano has spent a lot of effort developing real-world partnerships. Ethereum (ETH) is the second most valuable cryptocurrency, with a price gain of almost 150,000% since its introduction in 2015. However, its 500 percent increase since January 1 pales in contrast to currencies that have gained nearly 5,000 percent. First-mover Ethereum still hosts most apps. In other ways, its success has hurt it. There is network congestion and expensive transaction costs. As a consequence, newer, quicker, and cheaper systems are dubbed Ethereum killers are circling. And their prices have risen dramatically this year. Solana (SOL) Solana's year maybe 2021. Over 11,000% since January 1 for the ultrafast smart contract platform. It is also a programmable blockchain, and it now contains over 500 projects ranging from NFTs to DeFi applications. Investors, interested in Solana because it can perform over 50,000 transactions per second (TPS) for pennies apiece. To put it in perspective, Ethereum currently processes 15-45 TPS until it can upgrade to Eth2. Costs vary based on network traffic but may exceed \$100. Cardano (ADA) Cardano is a programmable blockchain that differs from many others. Its development is peer-reviewed before deployment, and development has been slower than comparable projects. It just released smart contract functionality in September. In principle, Cardano, meant to stay, which is why it is one of the top cryptocurrencies by market cap and has gained about 1,000% this year. Cardano has also spent a lot of effort developing real-world partnerships and use cases. For example, it works with Ethiopia's Ministry of Education to keep student data on the blockchain. Polygon (MATIC) Both Solana and Cardano are layer one solutions, means embedded into the original blockchain. To overcome Ethereum's difficulties, another set of cryptocurrencies termed layer two solutions, was created. Polygon is a leader in this industry, resulting in a 9,000% increase this year! To boost Ethereum's speed, it claims to be a layer two solution aggregator. Since there is no universal solution, developers may select the path that best suits their project.

Basic Attention Token (BAT) is an empowering token which marked a new record in the global marketplace. As people are more engaged on social media, BAT empowers the users by rewarding them fairly for their attention. BAT performance hits a new price top beating the other cryptocurrencies in the market. More specifically, BAT massively raised over 30% reaching a price level of \$1.88 for the first time in history. Remarkably, its market capitalization also surged to \$2.74 billion within a day. Bullish Trend of BAT As the entire crypto market is facing a downtrend in recent days with a price fall of top cryptocurrencies. As a contrasting act, BAT is one token which climbed high marking new ATH in the same period. BAT's market value rally to its record high influenced the traders to gain their short term profits immediately. Thus, the BAT rises even more 20% after reaching upto \$1.88 maintaining a strong resistance in an area around \$1.50. According to CoinMarketCap, the current market value of BAT is \$1.45 with a 24 hour trading volume of more than \$3 billion. In addition, the BAT is still maintaining a green line with a rise upto 9.10% in the last 24 hours. Thus, if the BAT continues to mark its margin in green graph with a price surging activity, then it is potential to record a new ATH soon. Most importantly, this particular all time high is marked in just one day in the market. Interestingly, popular digital currencies like Bitcoin (BTC), Ethereum (ETH), Solana (SOL), Cardano (ADA), XRP, Binance coin (BNB) plunged in the market. This resulted in a crypto crash with a bearish trend for the entire crypto market. However, BAT surpasses the crypto crash and ever in history placed a new all time high when all other top currencies are facing a tremendous fall in the marketplace. This surge of BAT is almost equal to crypto market capitalization loss of nearly \$283 billion in the same period.

A crypto market is a place for investments as many potential business models rise up in the industry. The crypto space has always been a place for innovation and learning of newer altcoins. As a matter of fact, low cap value coins are displaying a greener chart than the cryptocurrencies with high cap value. Significantly, the challenges that investors of cryptocurrencies are facing are in the part of choosing the potential crypto-asset. The market holds several potential cryptocurrencies which are yet to boom and contract the attention of investors. Such altcoins might bounce exponentially if the developments from their own ecosystem are valuable. Investors are interested in identifying the digital-assets that fly to the moon. As simple as it seems, traders are very keen on having an eye for low cap value potential coins. On the contrary, the market has some potential coins which will rise 10x within the end of 2021. These low-cap altcoins which will reach the moon are DANA, AUDIO, CEL, MINA, and TRAC. Low Cap Value Altcoins The network which implements new features and bridges infrastructure will provide significant solutions for users. The first coin in the list is Ardana (DANA) which has now joined with Near Protocol. The partnership allows assets to be transferred between two protocols, with Ardana providing the bridging technology. At the time of writing, DANA was trading at \$8.25 with a trading volume of \$3,732,707 in the past 24-hours. The next coin on the list is Audius (AUDIO) which is a music platform that allows listeners to stream and share music using blockchain technology. The platform introduces Discord, a new NFT embed tool for Twitter. Users of the platform will be able to display their Ethereum and Solana NFTs on Twitter, Discord, and other websites as a result of the shift. At the time of writing, the trading price of AUDIO was \$2.25 with a trading volume of \$72,883,288 in the last 24-hours. The third potential coin is Celsius Network (CEL) which has low cap value but might reach heights by the end of 2021. Moreover, the industry has witnessed investments in mining, especially the industry is well-versed in the resettlement of Bitcoin mining. The current trading price of CEL is \$3.95 with a trading volume of \$6,674,080 within a day. Following these coins, Mina Protocol (MINA) is another efficient coin that has the network's newest SNARK. Kimchi. Besides, kimchi is faster than traditional PLONK SNARK in terms of verification. Currently, MINA is trading at \$4.57 with a trading volume of \$112,368,509 in the last 24-hours. Finally, Origin Trail (TRAC) is a platform that addresses food traceability, fashion, and clothing traceability, and trusted manufacturing standards. The service that the platform offers to the real-world might assist in price surges. At the time of writing, the trading price of TRAC is \$1.55 and the trading volume is \$9,544,642 in the last 24-hours. Consequently, the mentioned coins are worth it and have the potential to reach heights in near future. These coins might present a bullish rally while its protocols will be improvised to address the existing challenges. The networks are gaining traction based on protocol, attracting funding, and catering to real-world use cases. Thus the altcoins will continue to climb in the upcoming days.

Bitcoin seems to be the most valued crypto. Binance is the world's largest cryptocurrency exchange by volume. Let us take a look at the top 3 best cryptocurrencies to invest & explore in 2021. Bitcoin (BTC) A person using the alias Satoshi Nakamoto invented Bitcoin in 2009. The vision behind creating bitcoin was no middlemen are no banks. Bitcoin can be used to purchase Xbox games, book Expedia hotels, buy furniture, etc. But a lot of the buzz is about trading it. Bitcoin's value soared into the thousands in 2017. At the moment, bitcoin seems to be the most valued crypto. Because of its high value, many businesses and retailers that accept cryptocurrencies choose to utilize bitcoin over other currencies. One bitcoin may cost up to \$60,000. Investing in it is costly but may be worth it. Ethereum (ETH) Ethereum is an open-source platform that supports smart contracts. A distributed computing infrastructure supports decentralized Digital Applications (Dapps) employing blockchain technology. Developers can create and publish new distributed apps on Ethereum. It made our list for its technological value. How much you can get for it is not as important as what you can accomplish with it. Even reputable financial firms are developing Ethereum-based applications. On the Ethereum platform, more are on the way. Binance (BNB) Binance is the world's largest cryptocurrency exchange by volume, with users in over 180 countries. It is simple to use and has many features suitable for novices. Users may also use its superb Binance Academy to learn more about crypto. Initially, the currency was based on Ethereum. Binance coin is the exchange's new blockchain. The currency is trustworthy given the exchange's worldwide reputation. Its widespread use warrants investment, and it may be improved. In the beginning, one Binance coin traded for \$0.10. But now,

itâ€™s worth about \$640 for each coin. A few honorable mentions are Cardano (ADA) and Solana (SOL). Both are promising and a great investment asset for investors in 2021.

- The token itself is the reward unit in this advertising ecosystem. - It scored 68 out of 100 in galaxy score as per CryptoDep. The Basic Attention Token (BAT) is the engine behind a new blockchain-based digital advertising ecosystem that rewards consumers for their attention while also rewarding advertisers for their expenditure. Done via the Brave Browser, where users may view privacy-preserving ads and earn BAT. Advertisers may send personalized advertising to increase engagement and reduce ad fraud and abuse losses. In this advertising ecosystem, the reward unit is the Basic Attention Token (BAT). The BAT/USD chart shows the coin is steadily rising. According to CoinMarketCap, the Basic Attention Token price today is \$1.35 USD with a 24-hour trading volume of \$1,186,947,893 USD. Basic Attention Token is up 27.83% in the last 24 hours.

- Artists must connect their Audius accounts to Phantom wallet. - Audiusâ€™s embed function makes NFT metadata available for artists. Audius (AUDIO) is up 36.6 percent to \$2.92 this morning on rumours of a Coinbase listing and a new feature that would allow artists and followers to incorporate NFT information into blogs and social networking sites, according to a report from Bloomberg. A new feature from Audius allows artists and fans to embed non-fungible tokens (NFT) on blogs and social networking sites such as Twitter and Discord, according to the company. Through NFT and Web 3.0 connections, the â€œembeddedâ€ capacity is expected to improve musician-fan engagement. Artists must connect their Audius accounts to Phantom wallet, a cryptocurrency wallet based on Solana, to use the functionality. Solana NFTs have been highlighted. The company stated: â€œNFT holders can embed their collectibles from the two biggest blockchains on Twitter timelines, personal blogs, and websites. Thanks to this new feature, will further push collectibles into the mainstream.â€ Sevenfold Increase in Subscribers In 2021, the blockchain-based music streaming service had a sevenfold increase in subscribers, with artists like Katy Perry, Nas, and the Chainsmokers among those that signed on. While social networking sites allow for sharing JPEG photographs, Audiusâ€™s embed function makes NFT metadata available for artists to market and monetize their talents. As third-party organizations continue to experiment with new features, tagging decentralized applications, cryptocurrencies, and blockchain has become a top goal for the social media platform, especially Twitter. According to CoinMarketCap, the Audius price today is \$2.64 USD with a 24-hour trading volume of \$380,283,370 USD.

- Ethereum and Solana have outpaced Cardano year-to-date. - Cardano (ADA) is now in the 1-2 corrective phase of a 4-5 wave cycle. The price of Cardano (ADA) is showing a downward trend, according to the assessment. For two weeks, the currency has been trending lower, despite attempts by the bulls to rally the market back. On the other hand, Bears are driving the price function right now since prices are decreasing rapidly. Cardanoâ€™s price dropped considerably for the first four hours of todayâ€™s session but slowed over the next four hours, indicating that the cryptocurrency is suffering minor damage. Cardano (ADA) is now in the 1-2 corrective phase of a 4-5 wave cycle, according to cryptocurrency expert GertvanLagen. If the ADA is unable to maintain public support, it will very definitely fall much further. \$ADA [1W]: Currently price is in the 1-2 correction of the 4-5 wave of this cycle. â€ Gert van Lagen (@GertvanLagen) November 20, 2021 Currently there is a wrestle between key support determined by corrective ABC (purple) and key resistance determined by the 0-1 wave(blue). If failing at support price might wick to lower fibs. pic.twitter.com/vnKBwA9tY4 Hydra Update Awaited Cardano advocates expect that the price of the cryptocurrency will grow as the Hydra update approaches. However, Cardanoâ€™s on-chain activity has slowed to a level below that of layer-2 scaling solutions, and Ethereum-killer is underperforming compared to the top 30 cryptocurrency exchanges. Despite a jump in the number of Cardano tokens staked, enthusiasm from retail and institutional investors is waning. According to CoinShares data, Cardanoâ€™s total amount of institutional money so far this year is \$108 million. Ethereum and Solana have outpaced Cardano year-to-date, according to CoinMarketCap. According to CoinShares, Cardano was the cryptocurrency with the most institutional inflows last week. Since the first part of 2021, there has been a significant slowdown in immigration. According to CoinMarketCap, the ADA price today is \$1.80 USD with a 24-hour trading volume of \$1,481,480,658 USD. Cardano has been down 4.13% in the last 24 hours. - Today Bitcoin and Ethereum dropped nearly 2% and 4%. - SOL and AVAX, found to be the top gainers in the top 10 cryptos. - Some of the top private banks are warning the customers invested in Crypto. The entire crypto market follows a bullish trend for the past few months. All cryptocurrency Bitcoin and the altcoins also surged high. But in the past few days, the top cryptocurrency in the crypto market is facing a price drop. And today, the largest cryptocurrency of the Crypto market Bitcoin and Ethereum dropped nearly 2% and 4%. Furthermore, Solana (SOL), Avalanche (AVAX) found to be the top gainers in the top 10 cryptocurrencies. After this drop, the entire crypto market cap declined by over 2% to the \$2.36 trillion mark compared to the previous day. However, the global crypto market volume zoomed over 5% to \$108.88 billion. More so, the founder of itsblockchain.com, Hitesh Malviya, mentioned, â€œMetaverse and NFT gaming base cryptocurrencies had outperformed the crypto market last week, and they can continue to do so due to the massive rise of demand from the retail investors.â€ Accordingly, some of the top private banks are warning the customers who invest in cryptocurrencies about the risks associated with the asset class. However, the government is working on legislation to regulate cryptocurrencies. Even more, El Salvador said it intends to provide the worldâ€™s first sovereign Bitcoin bonds and build Bitcoin City. Which will be completely free of income, property, and capital gains taxes, President Nayib Bukele announced in the beach town of Mizata to a crowd of cheering Bitcoin fans. Current Market Status Henceforth, at the time of writing, according to CoinMarketCap, Bitcoinâ€™s (BTC) price was trading at \$57,442.59 with a drop of nearly 2.28%. And the second-largest crypto Ethereum (ETH) price is trading at \$4,197.68 with a drop of roughly 3.27%. Meanwhile, Solanaâ€™s (SOL) price was trading at \$218.06, its price has gained over 1.70% in the last 24 hours, and Avalanche (AVAX) price waving at \$134.07 with the gain of over 37% in the last 7 days. - Retail and institutional investors are losing interest in cryptocurrency. - If the ADA price falls through the support level, it may fall much more. Despite being labelled the Ethereum killer, Cardano has lately experienced a decrease in its volatility. Recently, Ethereum scaling solutions and layer-2 protocols like MATIC and Avalanche outperformed Cardano. Cardano supporters foresee a resurgence in the cryptocurrency as the Hydra upgrade approaches. Cardanoâ€™s on-chain activity has decreased, and the cryptocurrency is falling farther behind layer-2 solutions. The Ethereum-killer is underperforming when compared to the top 30 cryptocurrencies. Despite a rise in the number of Cardano tokens staked, retail and institutional investors are losing interest in cryptocurrency. CoinShares reports that institutional investors have put \$108 million into Cardano so far this year. According to CoinShares, Cardano was the most popular cryptocurrency among institutional investors last week, despite the lack of a clear catalyst. Since the first half of 2021, the number of people arriving has decreased considerably. Low Volatility On November 19, 2021, proponents predict a decrease in the volatility of the ADA price. Bitcoin and Cardano, among the top five cryptocurrencies, have the lowest volatility of any of the coins. Low volatility, traditionally associated with the downtrend in the crypto market. According to cryptocurrency expert GertvanLagen, the ADA cryptocurrency is now in the 1-2 corrective phase of the 4-5 wave cycle. If the ADA price falls through the support level, it may fall much more. According to CoinMarketCap, the Cardano (ADA) price today is \$1.87 USD with a 24-hour trading volume of \$1,262,115,297 USD. Cardano is down 0.40% in the last 24 hours with a market cap of \$62,363,366,302 USD. Recommended for You

- Verasity (VRA) price has soared in the second part of the quarter. - Enjin coin is one of the top coins of the Metaverse season. On Saturday, the crypto market began its November rally. The overall market worth of cryptocurrencies has risen to \$2.6 trillion, a 3.16 percent increase in 24 hours. Most notably, Bitcoin, Ethereum, and Solana are back on track with 2.26 percent, 3.18 percent, and 4.18% daily gains. Altcoins like Verasity (VRA), Chromia (CHR), and Enjin (ENJ) are poised for another parabolic run. Verasity (VRA) Verasity (VRA) price has soared in the second part of the quarter. Since June, the cryptocurrency has seen greater lows. The VRA has made higher lows at \$0.009322, \$0.0314, and \$0.05451. Prices have risen and fallen rapidly in recent weeks. However, the positive increases in each cycle suggest a long-term price trend. Post-ATH of \$0.8683 on November 1st, the cryptocurrency strengthened between \$0.055 and \$0.65. With the RSI element still positive, a 15 to 20% surge in VRA price might lead to a new ATH. In contrast, a large number of sellers would result in a price of \$0.0452. According to CoinMarketCap, the Verasity price today is \$0.061181 USD with a 24-hour trading volume of \$73,704,077 USD. Verasity is up 0.84% in the last 24 hours. Chromia (CHR) Chromia, an open-source, public blockchain, has grown rapidly since early 2021. The price of CHR has confirmed its second parabolic jump of the year, rising from \$0.5 to \$1.46 at press time. However, the RSI factor is lingering around 75.85, suggesting an oversold situation. When Chromia fails to gain strength at \$0.7593, it will correct around \$0.6 if an unforeseen sell-off happens. The cryptocurrency would rise by 10 to 13%, generating a surge in the community interest. According to CoinMarketCap, the Chromia price today is \$1.38 USD with a 24-hour trading volume of \$597,402,409 USD. Chromia is up 15.96% in the last 24 hours. Enjin (ENJ) Enjin coin is one of the top coins of the Metaverse season. The ENJ price overcame the bearish rule when Facebook rebranded to Meta. The asset went from \$1.1 to \$2.8 with the trend reversal to Meta. With a brief retest of around \$3.02, the asset is eyeing another parabolic surge. The RSI component crosses the oversold zone, indicating a price decline between \$2.8 and \$2.5 in the near future. A breakthrough of the converging rising channel might push the asset up to \$. According to CoinMarketCap, the Enjin Coin (ENJ) price today is \$3.64 USD with a 24-hour trading volume of \$1,342,476,892 USD. We update our ENJ to USD price in real-time. Enjin Coin is down 1.03% in the last 24 hours. Midtown, Gibraltar, 19th November, 2021, Panther Protocol, the end-to-end privacy solution building the privacy layer for Web3 and Decentralized Finance, and Velas, an EVM/EBPF hybrid chain offering up to 75,000 TPS for dApps that require lightning speed and scale, are joining forces in a strategic partnership today. Based on Solana, but offering EVM compatibility and Solidity support, Velas is building an open-source blockchain world of services and products including Account, Vault and Wallet, allowing users to enjoy a seamless experience and instant, low cost transactions. Velas aims to combine the best qualities of centralized solutions such as UX and speed, with the trustless new paradigms of decentralized solutions. Velasâ€™s mission is to create and integrate world-changing technology products and services to improve peopleâ€™s lives all over the globe, and Panther is bringing privacy preserving infrastructure to that nascent, high potential ecosystem The team at Velas strongly resonates with Pantherâ€™s interest in advancing privacy and data protection tools. Therefore, the teams decided to work together on technical integrations. Velas and Panther will share their research for technology development and deployment related to privacy schemes using zero-knowledge proof systems. Panther Protocol will also enable the cross-chain exchange of private Velas assets thanks to its unique privacy preserving interoperability features. This will accompany the integration of Panther zAssets into the Velas wallet to produce access to on-chain privacy for Velasâ€™ users. Velasâ€™ enterprise clients and customers will greatly benefit from this additional layer of privacy. â€The integration between Velas and Panther Protocol enables the advancement of privacy and data protection tools. We have a big vision for the future of DeFi and Panther fits into that vision as a partner providing decentralized, trustless privacy and interoperability to this burgeoning ecosystemâ€. â€ Oliver Gale, CEO at Panther Protocol â€We are excited to see how this new partnership between Velas and Panther Protocol can move privacy and data protection to a whole new level. Panther Protocol can be perfectly integrated into the Velas wallet and cross-chain to make Velas assets privateâ€. â€ Added Shirley Valge, COO at VELAS Panther is uniquely positioned to bring private transactions over to the Velas Ecosystem. Velasâ€™ native assets, in turn, will be incredibly beneficial to Pantherâ€™s user base and liquidity, strengthening Pantherâ€™s Multi-Asset Shielded Pools. Velasâ€™ users

Singapore, Singapore, 19th November, 2021 DoraHacks, a decentralized global developer community and open-source incentive platform, has secured \$1 million in strategic investment from Binance Labs, the venture capital arm and innovation incubator of Binance. DoraHacks is a global hackathon organizer and one of the world's most active Web3 developer communities. It provides Web3 native on-chain toolkits to help developers around the world raise funding for their startups. In 2021 so far, more than 1,000 projects in the DoraHacks community have received over \$12 million in grants and donations from worldwide supporters. Bill Chin, Head of Binance Labs Fund, commented on the investment: "Backing early-stage startups and developers have always been a strategy for Binance Labs. DoraHacks is one of the largest multi-chain developer communities with great Web3 projects emerging. Binance Labs will further build crypto communities with DoraHacks as part of the investment and establish a more open-source and diversified blockchain world. As one of the initiatives, Binance Labs and DoraHacks are co-organizing Season 3 of Binance Labs Incubation Program. To support their long-term vision for the growth of the Web3 developer community, DoraHacks and Binance Labs plan to work together on the following areas closely: Grants, funding and incubation resources to back more early-stage Web3 startups; Joint R&D on innovative, decentralized governance technologies and DAO infrastructures; Strategic partnership between BSC (Binance Smart Chain) and DoraHacks on BSC Grants, Hackathons and integration of Dora DAO infrastructures; DoraHacks' mission is to create a permanent global hacker movement. The Dora ecosystem includes the decentralized open-source developer community DoraHacks, the open-source developer incentive platform HackerLink.io, the decentralized Hackathon community Hackathon DAO, the DAO-as-a-Service infrastructure DoraFactory, as well as dGov middlewares such as Grant Factory, DoraID, privacy voting infrastructure, the Moloch and multisig pallets. Developers can build and fund decentralized governance DApps for open source communities and future decentralized autonomous organizations (DAOs) upon the infrastructure provided by DoraHacks and Dora Factory. At present, over 20 mainstream Web3 ecosystems like including BSC, Polygon, Filecoin, Solana, etc. are already using DoraHacks' infrastructure for quadratic governance of their developer communities. DoraHacks has approximately 100,000 monthly active users from 152 countries around the world. Eric Zhang, Founder of DoraHacks, said: "Since 2018, DoraHacks has partnered with Binance on 15 global hackathons and grant rounds. Through DoraHacks' developer events and grant toolkits, Binance has distributed over \$2 million in funding to more than 100 teams. This new round of strategic investment will help us accelerate the innovation of developer incentive mechanisms, deliver more effective products to support hackathon organizers and Web3 open source applications, and promote Dora Factory's infrastructure and ecosystem development. We're happy to see Binance sharing our vision to support Web3 developers worldwide and help developers innovate freely to change the world." Nicole Zhang, Investment Director of Binance Labs Fund, said: "Binance Labs has always been a strong advocate for open-source culture. DoraHacks has developed sophisticated infrastructures to support decentralized voting, funding, and participation for early-stage open-source blockchain projects. We believe DoraHacks' large blockchain developer community will provide endless support to Binance Labs investment portfolio as well as our greater ecosystem." About DoraHacks DoraHacks is a global hackathon organizer and one of the world's most active Web3 developer communities. DoraHacks provides Web3 native on-chain toolkits to help developers around the world raise funding for their startups. DoraHacks core features range from Quadratic Funding Grant, Bounty, Hackathon, BUIDL NFT, and Continuous Funding. In 2021, over 1,000 projects in the DoraHacks community received over \$12 million in grants and donations from worldwide supporters. For more information, please visit our website: <https://dorahacks.com>, or follow us on Twitter: <https://twitter.com/dorahacks>, Medium: <https://hidorahacks.medium.com/>. About Binance Labs Binance Labs identifies, invests, and empowers viable blockchain entrepreneurs, startups, and communities, financing industry projects that help grow the larger blockchain ecosystem. Binance Labs is committed to supporting fast-executing teams who positively impact the crypto space. Contacts - Steve Ngok - steve@dorahacks.com

- The early surge has pushed the MATIC price up by 16 percent. - Buyers may be able to re-enter the upswing at this point. Since October 29, the price of Polygon (Matic) has been declining, and it is now near the middle of the trading range. Polygon is likely to bounce back from its recent slump, which is spread across the entire crypto market. The price of MATIC has dropped by about 21% since October 29 and is now \$1.50. As of today's closure, the downward trend has returned at \$1.05. During the decline that began on October 29, Polygon could not retest the midway at \$1.42. Fresh Uptrend Expected The early surge has pushed the MATIC price up by 16 percent, and the market seems to be poised for a brief pullback before a fresh uptrend begins. The relative strength index (RSI) is the primary reason for this optimistic tendency. A trend line linking the six lower highs of this indicator establishes an upward-sloping resistance barrier. This technical hint indicates that the market is poised for an upward breakthrough. If this occurs, the MATIC price will soar through the range high at \$1.80 and the resistance level at \$2.06 before settling at \$1.80. This would represent a 25% boost in price. While the price of MATIC continues to rise, a breach of the midpoint at \$1.42 implies that Polygon is entering a period of bargain hunting. Failure to immediately recover above \$1.42 implies that the downswing may extend to the immediate demand zone of \$1.15 to \$1.24, as previously stated. Buyers may be able to re-enter the upswing at this point. The bullish assumption was proven false with this move, and the market fell to the bottom range at \$1.05. According to CoinMarketCap, the Polygon price today is \$1.50 USD with a 24-hour trading volume of \$1,093,461,065 USD. Polygon is down 8.53% in the last 24 hours. - India essentially banned crypto transactions. - India's government is ready to hold off on issuing another ban. In an assertive stance, Indian Prime Minister Narendra Modi cautioned that bitcoin poses a danger to younger people, as his government prepared to regulate cryptocurrencies. Modi portrayed virtual money, which is popular in India and is not controlled by the state or central bank, as a realm that has to be strictly regulated. Critics say cryptocurrencies' anonymity and uncontrolled transfers make them ideal for drug trafficking, human smuggling, and money laundering. Several governments have started regulating cryptocurrencies, and exchanges are now subject to the same rules as banks. Advertising Blitz In 2018, India essentially banned crypto transactions, eventually overturned by the country's highest court. The business boomed as the country's enormous youthful population flocked to see Bollywood and cricket stars through an advertising blitz. According to recent BrokerChooser research, over 100 million Indians now utilize virtual currencies, placing them behind the United States, Russia, and Nigeria. India's government is ready to hold off on issuing another ban, choosing instead stringent legislation that may be implemented by the end of the year. Last week, Reserve Bank of India Governor Shaktikanta Das warned that unregulated cryptocurrencies pose a severe danger to the financial system. Simultaneously, the central bank is considering launching its own digital currency. Modi used his speech to promote India as a worldwide technological powerhouse. His digital India plan intends to modernize and use technology throughout the 1.3 billion-person subcontinent. Ahead-of-the-curve technologies like quantum computing offer excellent growth, Modi said. - Metaverse coins peeled off tier-1 cryptos with ease. - The market capitalization is \$148.5 billion. While the crypto-verse is undergoing a revolution, the market looks to be swimming with the current. DeFi tokens, NFT games, and Meme tokens, on the other hand, witnessed significant rises. The most recent gaming invention may make its way into the Metaverse. The whole crypto market value fell by almost 5% to \$2.60 trillion early Tuesday. Bitcoin, Ethereum, and Solana dropped 9.05 percent, 10.47 percent, and 7.33 percent, respectively. Intriguingly, Metaverse coins peeled off tier-1 cryptos with ease. Notably, The Sandbox (SAND) price has reached a new ATH of \$3.61, up 26.30 percent in 24 hours. However, after a brief retest of roughly \$2.85, Decentraland (MANA) jumped to \$3.52, netting almost 8% daily gains. However, the Avalanche ecosystem intends to investigate further Metaverse initiatives. The protocol then rose to \$94.84 with a 51.41 percent increase in trading volume. Others like CEEK VR, Bloktopia, POLC and CUBE have had 2544, 1642, 1285 and 753% gains in the last 30 days. Virtualization Journey The current influx of gaming tokens into the Metaverse has begun the virtualization journey. ElliotTrades, a crypto expert, believes Metaverse will change crypto. The current spike of related techniques is only the beginning, he warned. We are literally about to be living inside our computers æ" ElliotTrades (@elliotttrades) November 16, 2021 Short term price action is just noise The destination is clear Although the Metaverse is making headway in reversing Tuesday's devastating market catastrophe, it looks like Future technology is knocking on the door. At the moment, the market capitalization is \$148.5 billion. Conventional information technology organizations, on the other hand, begin operations before Meta reaches exponential growth. - Bulls have good odds in the current price forecast. - The ADA price moved slowly last year. Cardano's pricing looks to be stuck between \$1.95 and \$2.15. Last week, the price rose to \$2.368 before falling to \$2.05. The asset's slow movement has traders panicking as altcoins like SOL, LUNA, and AVAX rise to dethrone ADA. Solana's (SOL) price beats Cardano, reaching 5th place. Avalanche and Luna also work hard to get out of the top 10. Meanwhile, the ADA community seems to be migrating in massive numbers. Bulls have good odds in the current price forecast. Once that barrier is broken, the ADA price will quickly reach new ATH. The bulk of the community and netizens who believe in the altcoin's goal support the price surge. Proponents say those upset by the altcoin's standstill are ignorant and bought into the hype. Analyst Views The ADA price moved slowly last year. The price has risen from \$0.03 to \$2.15. But the rally has had its ups and downs. Cardano supporter Darren N. advises his followers to hold the cryptocurrency and have realistic expectations. It also expects pricing to reach new highs despite unavoidable hurdles. The platform's co-founder Charles Hoskinson is enthusiastic about the project's plan for 2022. He set ambitious goals and hopes to bring future technologies to people soon. However, Cardano has displayed similar price movements in the past, including spectacular rallies. Crypto influencer Ash WSB expects ADA will surpass \$6 by year's end. Despite the recent price action authorities and supporters anticipate the price to skyrocket shortly. According to CoinMarketCap, the Cardano price today is \$1.98 USD with a 24-hour trading volume of \$2,137,216,410 USD. Cardano is down 4.55% in the last 24 hours. - The entire market crashed after the long bullish run. - The might be a healthy pullback to again push towards uptrend in future. Bitcoin has setup a new ATH at \$69K level. After the long bullish run, the crypto market has taken a step down presenting bearish signals. All the top cryptocurrencies are sloping down standing on the nerves of the investors. The entire crypto market displays the red trading charts after reaching new ATHs. Significantly, the holders are experiencing a saddened part as the cryptocurrencies are falling in price value. Users are amazed to witness that all the crypto-assets are dropping in price value at the same time. In this case, investors and users may arise with different queries like is this an opportunity to purchase mainstream cryptocurrencies? Or will it continue to decline more? As a victim in the crypto industry, we could end up connecting many things for the crackdown of the market. Consequently, there are a number of factors that contribute to the market crash. As a result, the market crash has wiped over \$2.5 trillion overnight. A major reason might be the rejection of Spot ETF by the Securities and Exchange Commission. Additionally, the other major cause would be the announcement from NDRC. During a press conference on Tuesday, China's state planner, the National Development and Reform Commission (NDRC), stated that the country's cryptocurrency mining will be cleaned up. Is It A Pullback? As a treat for crypto users, the recent bullish rally has formed well providing a sweet spot for holders. The mainstream cryptocurrencies hit a new all-time high while Bitcoin almost reached nearly \$30,000 and then dropped. Crypto analysts and investors stated that it would be a pullback for bitcoin to result in an uptrend. Similarly, this market crash might also be a pullback for the crypto market to gradually reach heights in near future. If the market initiates to rise steadily then it may set up a new resistance and support level for all mainstream cryptocurrencies. This market dump has the possibility to be a healthy pullback to again take an uplift rally which is usual. Since the beginning of this year, most of the cryptocurrencies have gained in massive amounts and the features from each ecosystem is impressive. Moreover, altcoins have surged in triple-digit percents from the start of 2021, while bitcoin made its new ATH to \$69K level. On the other hand, Ethereum's price value has bounced over 400% since 2021. Cryptocurrencies are always volatile, so this market down won't continue for long, it will again begin to soar. - Bybit has joined with AFA's commercial projects. - This sponsorship will strengthen both brands AFA and Bybit. - Bybit will encourage Argentina in the coming years. A company dedicated to cryptocurrency exchange with operations globally, Bybit has joined with AFA's commercial projects, as the Global Main Sponsor for all Selections. The brand will have maximum visibility in all AFA belongings and it will be present in the training clothing of all National Teams. Accordingly, Claudio Tapia, the President of AFA, mentioned, æ" We are very happy with the announcement of this important commercial agreement. We added a brand to the National Teams clothing and that is something significant, both for the company and AFA.æ" De Paul ðŸŒŸðŸ" Messi æ" SportsCenter (@SC_ESPN) November 15, 2021 ðŸ" @argentina pic.twitter.com/PuuqVhWsvD Furthermore, the Commercial and marketing manager of AFA, Leandro Petersen mentioned the commercial importance of the agreement. He pointed out, a brand name in the jersey of the team is very important. He also added, these years they have carried out a strategy of commercial and brand growth around the world, opening strategic markets where AFA is not generating many business units to strengthen AFA's revenues and launching new digital products for fans all over the world. More so, AFA has collaborated with many businesses along this path, leading brands that today form part of the AFA sponsorship platform. Bybit is a global brand that was become part of the AFA platform. Bybit is a popular brand that is committed to technology and seeks to continue growing all over the world, AFA is also doing the same. Therefore, this sponsorship will strengthen both brands and it will expand tremendously around the globe. Even more, Ben Zhou, CEO of the Bybit, noted, that the community was very happy to support the Argentine soccer team through this long-term partnership with the Argentine Football Association. Also, he added, joining with AFA is one of the easiest decisions that they have made ever. Bybit will encourage Argentina in the coming years. Recommended for You

- \$66,000 price level represents a significant immediate roadblock. - The extent of the downside risk is nearing \$65,200. Bitcoin's price has recovered some of its losses and now exceeds \$65,000 USD as the crypto market turns green. BTC must surge beyond \$66,350 to spark a new rally. The price of bitcoin has remained around \$63,500. Consequently, bitcoin (BTC) has re-entered the \$64,000 resistance zone. The \$65,000 resistance level and the 100-day simple moving average (SMA) were both breached on Friday. Also broken was a critical negative trend line with resistance at \$65,000 on the hourly chart of the Bitcoin/US Dollar pair. The big decline from the swing high of \$68,762 to the low of \$62,300 has been retraced by less than half of the Fibonacci retracement. Fresh Uptrend Insight On the plus hand, \$66,000 represents a significant immediate roadblock. It is around \$66,400. A 61.8 percent Fibonacci retracement of the significant decline from the swing high of \$68,762 to the low of \$62,300 is in sight. A significant break over the \$66,350 resistance level may herald the beginning of a fresh uptrend. The bears may decide to take around \$68,000, the next important psychological hurdle. Bulls may encounter intermediate resistance at the price of \$67,250. If bitcoin cannot break over the \$66,350 resistance zone it is likely to continue its downward trend. The extent of the downside risk is nearing \$65,200. The first substantial support came in about \$65,000, and the trend line was broken. If the price continues to plummet, it may go below \$64,500. Furthermore, \$64,000 is the next key support level, and the price might go as low as \$63,500. According to CoinMarketCap, the Bitcoin price today is \$64,035.20 USD with a 24-hour trading volume of \$29,221,190,110 USD. Bitcoin price is up 0.12 percent in the last 24 hours. - Shiba Inu is bullish after breaking above a diagonal barrier. - The bulls tried to push SHIB over the weekly mid-price. In the final week of October, 2021, the Shiba Inu hit a peak of \$0.00008845. Shiba coin has also grown by nearly 69% in recent months. SHIB has traded in the region of \$0.0000512 æ" \$0.00005537 in the past 24 hours, with \$0.000056 being the next barrier. In a downturn, support is at \$0.000044. The RSI is balanced at 51.86, and the moving averages are also neutral. In addition, a well-known crypto strategist and trader believes Shiba Inu (SHIB) is about to hit an all-time high. Bullish Momentum Shiba Inu is bullish after breaking above a diagonal barrier that has held Shiba negative in previous weeks, according to analyst Scott Melker. He says he purchased SHIB when it was breaking out and believes it will re-test its all-time high. Scott stated: æ" This thing has a ton of volume. We're seeing this four-hour candle is the biggest in a few days, breaking out. I love that. My target's up here (\$0.000089).æ" A 219 percent increase from October 23 to 28 saw SHIB hit an all-time high of \$0.0000885. Analysts call this climb a æ" Flagpoleæ". The price of Self-claimed DOGEKILLER steadied after a wild surge with lower highs and higher lows. Bulls tried to push SHIB over the weekly mid-price of \$0.00005433. Sadly, it ran out of steam after the US inflation report. According to CoinMarketCap, the SHIBA INU (SHIB) price today is \$0.000055 USD with a 24-hour trading volume of \$2,299,906,081 USD. SHIBA INU has been up 3.70% in the last 24 hours. Recommended for You

- One of the greatest improvements is Bitcoin privacy. - Core developer Greg Maxwell suggested Taproot. The Bitcoin network's largest update in four years has finally arrived. The Taproot update will improve Bitcoin privacy by changing the network's signature method and reducing transaction fees. Ether, the king of altcoins and the ultimate Dapp and DeFi network, may also be jeopardy. Core developer Greg Maxwell suggested Taproot in January 2018. In June, BTC miners overwhelmingly supported it. The developers have since tested and reviewed the update. It became live on the BTC blockchain yesterday, November 14. The goal is to make Bitcoin more private, safe, and scalable for its users. All of this adds to Bitcoin's usefulness. Taproot's activation has developers and users ecstatic, and rightly so. It might rekindle Bitcoin's flame and make it

the ideal cryptocurrency. Signature Algorithm One of the greatest improvements is Bitcoin privacy. The taproot will eventually modify Bitcoin's signature algorithm. Signatures on Bitcoin are like a fingerprint that the user leaves on every transaction done through the wallet. For years, it depended on the Elliptic Curve Digital Signature Algorithm to produce signatures from the wallet's private key. It will now use Schnorr Signatures to protect Bitcoin transactions. Multi-signature transactions will be essentially unintelligible. The change is due to the activation of BIP 340. However, Schnorr Signatures will not make Bitcoin a privacy currency like Monero or make transactions untraceable. The taproot will also help spread smart contracts on Bitcoin. Smart contracts are now accessible on Bitcoin's core layer and the Lightning Network. But few see Bitcoin as a smart contract platform. Ethereum dominates this market. Indeed, smart contracts are the main reason Ethereum has risen. So they're behind Dapps, and DeFi, which have made Ethereum the dominating force it is today. They enabled NFTs. The taproot will make Bitcoin smart contracts simpler to execute, cheaper, and take up less space on the BTC blockchain. Recommended for You

- This initiative allows Nexo to buy back its native NEXO Tokens. - Nexo has already completed its second token buyback campaign. Nexo is a renowned global regulated digital asset institution. With top-tier custodial insurance and military-grade security, the Nexo Wallet's purpose is to increase the value and usefulness of cryptocurrencies. This initiative allows Nexo to buy back its native NEXO Tokens on the open market for up to \$100 million. It is scheduled to be completed within six months, following which the Nexo Board of Directors may decide on a further buyback. The repurchased tokens will be used to invest in strategic targets through token mergers with suitable vesting schemes. Nexo will also utilize some of the repurchased tokens to pay daily interest to customers who want to receive their yields in NEXO Tokens. As previously stated, all NEXO Tokens utilized for interest distributions are derived from the open market and do not affect the circulating supply. Lesser-valued NEXO Tokens will be deposited in an Investor Protection Reserve (IPR) using the ERC-20 address 0x1C433CBF4777aaa8DC76B497. Each buyback tranche will be vested for 12 months. Token mergers, daily interest distributions, and other advancements will not be possible until this time has ended. The specifics of the following transactions will be regularly made public on Nexo's website and communication channels. Antoni Trenchev, Co-Founder and Managing Partner at Nexo commented: "The buy-back program announced today reflects our strong financial position and underscores our ability to simultaneously upgrade our products, maintain a strong balance sheet, and invest in alternative growth strategies, all while providing significant utility and growth to NEXO Token holders. As Nexo's market share increases and the industry matures, we'll continue to seek acquisitions and token mergers to cement our leadership position in the crypto lending ecosystem." Nexo has already completed its second token buyback campaign, after a \$12 million programme earlier this year. Future buyback expenditures may be allocated based on business growth and market circumstances. Profits from exchanging NEXO Token pairings on the Nexo Exchange or loans collateralized by Nexo's native token will be reinvested directly into the repurchase programme. NEXO Token's Liquidity and Value This new buyback is in line with Nexo's aim to raise the NEXO Token's liquidity and value. The initiative also aligns with Nexo's recent investments in FINRA-member and SEC-registered broker-dealer Texture Capital, decentralized technology supplier Qredo, and DeFi enterprise Yield. The buyback program is the cornerstone of Nexonomics 3.0, Nexo's continuous tokenomics project to improve the NEXO Token's usefulness and value. Tokenomics has helped Nexo's ecosystem get a large number of new members. In May 2021, the NEXO Token reached an all-time high of \$4, as a result of the inaugural Nexonomics project. With the release of Nexonomics 2.0, the first NEXO Governance Vote was held, in which token holders voted for daily rewards of up to 13% APY on NEXO Tokens. Since then, the firm has paid out over \$87 million in daily NEXO and earned interest to token holders. Nexo obtained the industry's first real-time audit through Armanino and built a sophisticated prime brokerage offering. It has benefited from increasing digital asset values and robust demand for its tax-efficient cryptocurrency-backed credit lines and exchange services since its last buyback in late 2020. In Serum (SRM) Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about SRM to analyze the future movement of the cryptocurrency. Serum is a decentralized exchange (DEX) and an ecosystem that brings a high speed and low transaction costs to decentralized finance (DeFi). It is permissionless and is built on the Solana blockchain. Serum (SRM) Current Market Status According to CoinGecko, the Serum price is trading at \$9.84 with a 24-hour trading volume of \$250,973,442, at the time of writing. However, SRM has decreased by -8.2% in the last 24 hours. SRM holds the 146th position on CoinGecko right now. Moreover, SRM has a circulating supply of 50,000,000 SRM and maximum supply of 10,000,000,000. Currently, SRM trades in Binance, OKEX, FRX, Cointiger, and Upbit. Serum (SRM) Technical Analysis 2021 The recent development and upgrades might push Serum (SRM) to reach new heights. Now, let's deep dive into the Serum (SRM) technical analysis 2021. SRM Showing Cup With Handle Pattern in Hourly Time Frame The hourly time frame chart below shows the Cup with Handle pattern of Serum (SRM). Based on the graph above, the chart displays a cup with a handle pattern. This graph shows a consolidation period that could result immediately in a price breakout or breakdown. A breakdown from the lower line indicates the beginning of a new bearish signal, while a breakout that takes place from the upper trendline shows the start of a new bullish trend. In addition, at the beginning of this pattern, SRM moved from its bullish to a bearish trend. This results as many traders stop buying and start to sell. As a result, the SRM trading supply increased drastically. Serum (SRM) RSI, MACD, MA, and EMA The below chart shows the Moving Average Convergence/Divergence (MACD) of SRM. Notably, the MACD (blue) begins to stay just below the signal indicator (orange line). This indicates that cryptocurrency traders can still expect more bearish days ahead. In contrast, if the MACD starts to move above the signal indicator and performs a bullish crossover, then the crypto has a high possibility of reaching new highs. Now let's look at the relative strength index (RSI) of SRM. As shown in the chart above, the RSI remains at level 53. This shows that SRM price is in nearly overbought state. However, this gives confidence for the traders to trade without any fear. SRM's Moving Average (MA) and Exponential Moving Average (EMA) is shown in the chart below. Moreover, MA is a part of technical analysis that helps traders to recognize trends. While EMA is a type of moving average. From the beginning of 2021, it is clear that the SRM price has shown many bullish patterns. Furthermore, taking all these into account, SRM could have a competitive market in 2021. Serum (SRM) Showing Ascending Channel Pattern in Monthly Time Frame The monthly time frame chart below shows the ascending channel pattern. In the chart above, which is set in a monthly time frame, we can see the Ascending Channel pattern. An ascending channel is the price movement that occurs in an upward direction through a sloping parallel line. Also, the chart indicates the higher highs and lows from this price pattern. More so, this pattern represents a short-term bullish. Conclusion With the ongoing developments and upgrades that are taking place within the SRM platform. The cryptocurrency SRM has a fantastic future ahead in this crypto market. However, it is possible to see SRM reaching new heights. Bullish SRM price prediction 2021 is \$26. As said above, it may reach great heights, however, reaching \$50 if investors have decided that SRM is a good investment in 2021. FAQ SRM is a DEX and an ecosystem that brings high speed and low transaction costs to DeFi. It is permissionless and is built on the Solana blockchain. SRM is listed on many cryptocurrency exchanges that include Binance, OKEX, FTX, Cointiger, and Upbit exchange. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the SRM platform, it has the high possibility of reaching its new ATH soon. Disclaimer: The opinion expressed in this chart solely the authors. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Recommended for You

The UST earned from the burn will go into the community pool. The coin's scarcity may drive up the price of LUNA. Terra's smart contract enabled algorithmic stablecoin venture, approved two requests to burn \$4.5 billion of its native token, LUNA, in community pool. Furthermore, the burn will occur every 800 blocks generated. In order to adjust the monetary system to the new Columbus 5 update. The UST earned from the burn will go into the community pool, where governance will decide how to spend it. The first trade took place earlier this week. After the whole stockpile is destroyed, the community may determine how much of it will be used to bootstrap Ozone, a decentralized insurance system built on Terra. According to a Terra official account tweet, one of the biggest, if not the largest, layer-one asset burning in crypto history. Moreover, long term, the coin's scarcity may drive up the price of LUNA. Terraform Labs CEO Do Kwon stated: "The burn will simplify the narrative of Luna economics, boost staking rewards, and leave the community pool well funded with 10 million Luna." Terra Vs SEC Regulators have targeted Terra. On his way to appear at Messari's Mainnet conference, Kwon, summoned by the SEC. The subpoena concerned one of Terra's native protocols, Mirror. Which enables users to exchange tokens that are derivatives tied to certain stock prices. Last month, Kwon sued the SEC for its actions and subpoena service. Tokens having a limited quantity have appreciated greatly in value. For example, Binance Coin (BNB) increased from \$50 to over \$600. Another, Ethereum's newly incorporated EIP-1559. The network's pricing model was altered to burn ETH with each transaction. LUNA may continue a similar path, with \$80 as a possible short-term objective. Furthermore, price might rise over \$100 and join Solana (SOL) as one of the best performers in 2021. According to CoinMarketCap, the Terra (LUNA) price today is \$50.81 USD with a 24-hour trading volume of \$571,533,440 USD. Recommended for You

- The newest purchase by the whale has the potential to change the market. - It is seen as a favourable indicator by investors. Over the last several weeks, the cryptocurrency market has been sailing through choppy waters. There have been several notable digital assets that the winds have impacted, including Solana and Polkadot. Bitcoin, the king of cryptocurrencies, is now trading at a minus. Bitcoin, on the other hand, has a market share of 41.1 percent. A well-known Bitcoin Whale purchases roughly \$72 million worth of bitcoin. It is seen as a favourable indicator by investors. According to reports, the dive was acquired by the third-largest Bitcoin whale. Purchasing 1,123 BTC, which is worth around \$72 million. Each bitcoin was purchased for \$64,190.68 USD. There are 709444 blocks in this block. On the 9th of this month, the address sold 1,500 bitcoins for a total of \$67,510.46 per bitcoin. Positive Indication for Investors The latest transaction has traders thrilled since it might be a favourable sign for Bitcoin's future performance. When the wallet address was first listed on the market earlier this year, it was constantly trading. Moreover, the first transaction to occur at this location occurred on February 6th, 2019. According to assessments, the address has been used over 532 times and is now worth more than \$6,928,672,215. A significant percentage of the whale's investments have recently been distributed. While simultaneously boosting its BTC holdings. The newest purchase by the whale has the potential to change the market. It is expected that many traders would take advantage of the low Bitcoin price to increase their Bitcoin ownership. The price of bitcoin might potentially reach \$100,000. According to CoinMarketCap, the Bitcoin price today is \$64,770.35 USD with a 24-hour trading volume of \$29,863,937,280 USD. Bitcoin is up 1.36% in the last 24 hours. In recent days, the currency has fallen short of its previous all-time high of \$69,044.77. Recommended for You

- The top 3 gainers by volume are USDT, BTC, ETH. - USDT is a stablecoin that mirrors the price of the U.S. Dollar. - Ethereum's blockchain can host other cryptocurrencies called tokens. The top 3 gainers by volume are Tether (USDT), Bitcoin (BTC), and Ethereum (ETH). 1. Tether (USDT) The first top gainer by volume is Tether (USDT). It is the 4th largest coin in the crypto market as per CoinMarketCap. USDT is a stablecoin that mirrors the price of the U.S. Dollar, issued by a Hong Kong-based company Tether. Moreover, the unique feature of USDT is, its value is guaranteed by Tether to remain pegged to the U.S. Dollar. USDT doesn't have its blockchain, instead, it operates as a second-layer token on top of other cryptocurrency blockchains such as Bitcoin, Ethereum, EOS, Tron, Whitcoin Cash, Algorand, and OMG, and also it is secured by their respective hashing algorithms. Furthermore, according to CoinMarketCap, Tether's (USDT) price was trading at \$1.00 with a 24-hour trading volume of \$1.00, with a 24-hour trading volume of \$63,963,743,108. In the last 24-hour USDT price surged over 0.08%. USDT can be traded in top crypto exchanges such as DODO BSC, Binance, Mandala Exchange, OKEX, and ZBG. 2. Bitcoin (BTC) Crypto giant Bitcoin is found to be the top 2nd gainer by volume. Many of us were well-known about Bitcoin (BTC). It is a decentralized cryptocurrency, a peer-to-peer cryptocurrency, all the transactions happen directly between equal, independent network participants. Henceforth, Bitcoin is the first cryptocurrency that appears on the crypto market. More so, at press time, according to CoinMarketCap, Bitcoin's (BTC) price was trading at \$64,770.35 with a 24-hour trading volume of \$29,863,529,520. In the last 24-hour BTC price gained over 1.35%. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEX, ZBG, and Cointiger. 3. Ethereum (ETH) The second-largest cryptocurrency in the crypto market is Ethereum (ETH). Ethereum is a decentralized open-source blockchain system that features its cryptocurrency, Ether. Even more, Ethereum has introduced the concept of a blockchain smart contract platform. Ethereum's blockchain can host other cryptocurrencies called tokens, via the use of its ERC-20 compatibility standard. According, as per CoinMarketCap, Ethereum (ETH) price was trading at \$4,6334.46 with 24-hour trading volume of \$13,468,681,992. The circulating supply of ETH is 118,334,518.87 ETH. It can be traded in top crypto exchanges such as DODO BSC, Binance, Mandala Exchange, OKEX, and ZBG. Recommended for You - Solana (SOL) Price Striving Hard Despite Bearish Divergence! - Mark Zuckerberg's Launch of Meta Receives Flak by Netizens - Top Gainer of the Day: IOTEX (IOTX) With 48.74 Percent Gain! - Decentraland (MANA) Price Level Eyes for \$5 Before a Pull-Back - Bitcoin (BTC) Price Level to Reach \$100,000 Predicts Kraken Exchange

- Institutional fund flows to Bitcoin increased last month. - Both predict that bitcoin will hit \$100,000 by the end of Q4. Kraken is the largest global digital asset exchange by euro volume and liquidity. Kraken's global customer base trades over 60 digital assets and seven fiat currencies. More than 7 million traders, institutions, and authorities trust Kraken for competent, 24/7 online support. According to certain technical indicators, bitcoin might reach \$100,000 before the end of the year, as per the exchange giant, Kraken. This quarter's uptrend could see Bitcoin reach roughly \$ 96,000, according to the prominent exchange's October 2021 Market Recap & Outlook. Kraken also detailed recent developments in the crypto industry, particularly those concerning bitcoin. The rebound of prices to levels not seen since April, the desire of investors to possess BTC, which they call digital gold, and the approval of the first BTC Futures ETF in the US are some of the industry's most important achievements, according to the exchange. Institutional fund flows to Bitcoin increased last month. If the pattern continues, the asset will be a top performer in the future as per the exchange. In contrast, Ethereum, the second-largest cryptocurrency project, lags far behind. Kraken predicted the price of bitcoin using two prominent technical indicators: RSI and Bollinger Bands. Both predict that bitcoin will hit \$100,000 by the end of Q4. At 71.7, the RSI has an opportunity to expand following the spot market's price activity. The statistic underlies some of the strongest price forecasts for this cycle. Popular Analyst's Views Like Kraken, many cryptocurrency analysts and experts estimate bitcoin to exceed \$100,000 before the end of 2021. According to expert Willy Woo, the \$50,000-\$60,000 range is a rigid place to find support. Contour map of every bitcoin at the price they last changed hands between investors. Huge price validation between \$50k-\$60k. #Bitcoin as a \$1T asset class IMO is now cemented; hard to see it dropping below this zone. " Willy Woo (@woonomic) November 8, 2021 This data is @glassnode's URPD visualised. pic.twitter.com/pHbIXrKlNs Adam Back, CEO of Blockstream, is also one of them. In August, when BTC was worth roughly \$50,000, he predicted a \$100k price tag by the end of the year. He also linked bitcoin to gold, claiming the former is superior. Anthony Scaramucci, CEO of Skybridge Capital, also agrees. Earlier this year, he said: "I do think we see \$100,000 in this coin before year-end." Notably, the stock-to-flow model developed by the pseudonymous "PlanB" was even more bullish. The research predicts BTC will hit \$135,000 by December, as per the analyst. Recommended for You

- Mark said they were working on an experience termed "Project Nazareth." - Meta is expected to invest at least \$10 billion this year. Announcing his lofty aspirations to establish the "metaverse," Mark Zuckerberg stated that users would be able to accomplish practically anything they can imagine. Facebook recently relaunched as "Meta," changing its logo to an eternal loop, focusing on the Metaverse rather than social networking. A virtual experience similar to real-world experiences is Meta's goal, according to CEO Mark Zuckerberg. Zuckerberg said: "In this future, you will be able to teleport instantly as a hologram to be at the office without a commute, at a concert with friends, or in your parents' living room to catch up." While Mark's choice may have excited many of his brand's fans, his strategy to create this 3D experience has already caused a reaction from certain netizens. Users will require augmented reality glasses to enjoy 3D experiences in the Metaverse, according to Mark. Project Nazareth Mark said they were working on an experience termed "Project Nazareth," which is Meta's title for its first complete augmented reality glasses through Oculus, a 3D VR headset manufacturing company now owned by Facebook. But Insider CEO Henry Blodget disagrees with Mark's plan to introduce VR to the Metaverse. He thinks VR headsets are too burdensome for today's netizens. After 24 hours in a VR headset, the Wall Street Journal's Joanna Stern is puzzled by people talking about Mark's "Metaverse." Her experience "does not recommend" VR headsets since they are too bulky and unpleasant. Meta is expected to invest at least \$10 billion this year on its metaverse section, while large IT giants like Microsoft increase their rivalry. According to Microsoft CEO Satya Nadella, the firm that delivers a seamless experience for consumers may be the only one positioned to lead this new experience. Recommended for You

- The value of little-known crypto has more than quadrupled. - IOTX is used to manage the network's fundamentals. Open economics for machines is the objective of the IOTX project, which was founded as an open-source initiative in 2017 with the purpose of creating an open environment where people and machines may communicate in a safe and trustworthy environment with free will and economically organized incentives. As the native token of the blockchain system, IOTX is used to manage the network's fundamentals and to utilize as its transaction fees. As the number of devices controlled by IOTX increases, the value of IOTX decreases. This week, the value of little-known crypto has more than quadrupled, while the value of other crypto assets has remained flat. IOTX is a blockchain platform for decentralized apps and Internet of Things (IoT) devices available as open-source projects. Due to the platform's compatibility with EVM, developers will have an easier time transferring their apps to the IOTX network. On November 8th, the coin's value increased from \$0.10 to \$0.25, representing a rise of 150 percent and a market capitalization of \$2,000,000,000. Bold Entry Into NFT Sector Last week, chainlink (LINK) stated that it had awarded Prototipe a grant to facilitate the IOTX integration. As part of its expansion into the crypto economy, IOTX has announced a strategic relationship with the NFT game PlaceWar, allowing players to generate revenue. According to CoinMarketCap, the IOTX (IOTX) price today is \$0.235097 USD with a 24-hour trading volume of \$1,205,495,890 USD. IOTX is up 48.74% in the last 24 hours. Recommended for You

- Decentraland is a decentralized virtual reality (VR) ecosystem. - MANA has benefited from Facebook's recent rebranding as Meta. Decentraland is growing in popularity among metaverse-friendly digitally aware users as the technology and native currency allows users access the digital space. Moreover, Decentraland is a decentralized virtual reality (VR) ecosystem based on the Ethereum blockchain. One of the first crypto metaverse initiatives enables people to buy land, develop on it, monetize it, and do other great things. It is an initiative that encourages user ownership and openness. MANA has benefited from Facebook's recent rebranding as Meta. Its price rose to a new all-time high over \$4.10 two weeks ago but then fell again. Massive Return on Investment (ROI) Decentraland's native token MANA has produced a monthly ROI of 370 percent following a descending wedge breakout. A significant buying volume might drive MANA to its 78.6% Fibonacci barrier before an overbought RSI prompts a reversal. MANA pushed higher from its 61.8 percent Fibonacci breakthrough mark, aiming for \$4 in the next few days. A bullish crossing of the 20-SMA and 50-SMA also aided. MANA was the fourth most traded crypto in the previous 24 hours, with approximately \$8 Billion volume. If MANA keeps adding above the 78.6% Fibonacci line, it will reach the October 30th high of \$5. However, the 4-hour RSI was overbought, indicating a near-term pullback. The 50 percent Fibonacci level corresponded with the short mid-term moving average lines. MANA's breakthrough was validated by most of its indications. A "squeeze release" triggered the SMA's rising green bars while the DMI saw a bullish crossing. An ADX of 24 even suggested a strong market for the token. Conversely, an overbought RSI might lead to a profit-taking pressure as investors' profit gain. MANA might reach the 50-SMA and perhaps \$5 if buy volumes sustain. After a pullback, MANA should find support around the 50% Fibonacci level, underpinned by the 20-SMA and 50-SMA. According to CoinMarketCap, the Decentraland price today is \$3.44 USD with a 24-hour trading volume of \$5,950,988,501 USD. Decentraland is up 7.63% in the last 24 hours. Recommended for You

- Fantom is better at least in its technology than Ethereum. - Cronje was one of the initial team members of the Fantom Foundation. It's been the year of Ethereum killers, with Cardano, Solana, Polkadot, Avalanche, and others achieving new highs and garnering worldwide headlines. But according to one analyst, one initiative that's been missed and that might rocket by the end of the year is Fantom (FTM). Looking at the optimistic elements that make FTM a smart investment, including a pending Coinbase listing, Yearn Finance's Andre Cronje's return as a key developer, and a \$1 billion ecosystem expansion fund. Fantom has gone under the radar while its more flamboyant competitors tore the charts, but its performance has also been extremely outstanding. It has gained a staggering 18,000+ percent to trade at \$2.65 at press time in the last year. It began the year at a measly \$0.016. Guy, an analyst with 1.55 million subscribers on his Coin Bureau YouTube channel, believes FTM has further potential. In a recent video, he pointed out the bullish elements for Fantom, projecting that it would attain at least 3x in gains in the current Bull Run. For one, Fantom is better, at least in its technology, than Ethereum. With its decentralized acrylic graph ledger, it can perform 20,000 transactions per second, a long cry from Ethereum's transaction processing power. It utilizes the Ethereum Virtual Machine for its smart contracts, enabling Ethereum developers to deploy their Dapps on Fantom. Consequently, Fantom supports a number of major Ethereum DeFi protocols, including Curve Finance, Cream Finance, and Yearn Finance, which have around \$5.5 billion in total value locked. The DeFi giant Fantom has many additional variables going its way other than technological supremacy. Andre Cronje, the DeFi giant behind the well-known Yearn Finance, is one of them. Cronje was one of the initial team members of the Fantom Foundation but departed to work on Yearn. He's back now. Besides Andre, Fantom has caught the attention of other important cryptocurrency leaders and corporations. Sam Bankman-Alameda Fried's Research has invested in the Fantom Foundation. The VCs that invested in Fantom want to create an ecosystem Y-Combinator. Guy indicated this would foster Fantom-based initiatives. Then there's the Coinbase listing. It also enabled native FTM functionality in September, which Guy feels could anticipate FTM listing on the Coinbase exchange. Recommended for You

- Following US inflation statistics, BTC started to lose value and approached \$60,000. - BTC may reach record highs of about \$66,999 if it allows further rising. It was a mixed bag on Nov. 6 as the cryptocurrency market cap is \$2.71 trillion. Bitcoin has been consolidating for a while. Due to the current price activity, it is still on a bull run. Bitcoin's price has been stabilizing, although the daily and weekly closes have been over \$60k. Bitcoin just hit an all-time high of \$67,500. Since then, the dominating cryptocurrency has traded over \$60k. Several cryptocurrencies, including Ethereum, Shiba Inu, Solana, and Polkadot, have recently hit fresh highs. On Oct. 20, Bitcoin hit a new high of \$66,974. Last month's price rise coincided with the much-anticipated release of the first Bitcoin ETF on the NYSE. Facing Resistance Between \$62k and \$65k The Flagship currency is seeing substantial market resistance between \$62k and \$65k. The price is nearing but not above this level, halting the BTC spike. Following US inflation statistics, BTC started to lose value and approached \$60,000 in a few days. Despite a quick return to \$63,000, the overall situation has deteriorated. Bitcoin is poised to break past the \$64,000 barrier mark. BTC may reach record highs of about \$66,999 if it allows further rising. Bitcoin was trading at \$60,589 USD, according to CoinMarketCap. Bitcoin must first break the pivot at \$61,727 to reach the first substantial barrier at \$62,755. But for Bitcoin to burst beyond the morning high of \$62,600, the market must back it. Breaking the pivot at \$61,717 reintroduces the first major support level at \$60,388. Unless the sell-off continues throughout the afternoon, Bitcoin should stay over \$59,000. Recommended for You

- If the price of DOGE supports the bears, it may decrease by 28%. - A reduction in price volatility may result in a rise in the price of DOGE. There is chaos and negativity in the crypto market, as Bitcoin drops below \$60488, and most major altcoins are trading in the red. The price of Ethereum, ADA, XRP, and DOT have all fallen by 2-4 percent but BNB and SOL have remained stable in the green. The price of Dogecoin in the original meme currency, is now trading at \$0.2549, with a little downward bias. A reduction in price volatility may result in a rise in the price of DOGE. The symmetrical triangle forecasts that Dogecoin will rise by 29 percent, reaching \$0.34 per coin. Bulls and Bears Cancelling Each Other It's an asymmetrical triangle on the four-hour chart, meaning the bulls and bears are cancelling each other out. With market volatility decreasing, a breakout in either direction is possible in the next sessions. The flattening of the moving averages and the RSI indicator's position at 45.2, near the middle line, confirm this view. There is a potential that DOGE may continue to rise to \$0.34, a 28 percent gain. If the price of DOGE supports the bears, it may decrease by 28% to \$0.18. Before reaching this bearish target, Dogecoin may find support at the 200-day SMA at \$0.2524. Between October 5 and 25, the Dogecoin price consolidated between \$0.24 and \$0.28. On October 26, DOGE dipped to below \$0.21 before rising to stabilize over \$0.235. According to CoinMarketCap, the Dogecoin price today is \$0.256961 USD with a 24-hour trading volume of \$1,359,776,912 USD. Recommended for You

Despite the insane market leaps, NFT seems to have already determined the direction of development. And this direction is up! NFT sales rose to a record \$ 10.6 billion in the third quarter of 2021, according to Reuters. No wonder, that new projects are launching daily to take their share in the expanding market. The CryptoDragons Metaverse is currently building the NFT dragon lovers community and presented several innovative ideas to become a new NFT hit of the growing industry. The young and talented CEO and Co-Founder Nari, took the initiative herself and explained about the reservation stages, how to get started, and what CryptoDragons is all about. #CryptoDragons CEO and Co-Founder Naria's Intro to the project [#NFT](https://t.co/Gi0QZzYSYB#NFTCommunity) at CryptoDragons.com. (@CryptoDragons) November 5, 2021 She also sheds light through the video shared on the official Twitter handle about the countdown which is ticking on the website for the upcoming sale coming up on Sunday, November 7th at 12 PM EST. The team plans to turn the project into a whole dragon Metaverse. In addition to breeding and collecting NFT dragons, they implemented the first blockchain DNA concept and fully-fledged battling Arena. Moreover, certain types of dragons are generating an earning. -What

were the criteria for starting the project? Tell us about the platform implementation techniques. George CryptoDragons Head of Development Technically, it was necessary to provide maximum transparency for the community and pass a security audit for a company from the list recommended by Etherscan. The entire development team was guided by these inputs and implemented the task in such a way that all the logical parts of the functions are executed on the blockchain, and this is public, as we know! All metadata and illustration of the picture host on IPFS, which has become the market standard for the complete decentralization of all NFT objects created by our smart contract. All tests and code optimizations were carried out. We involved cryptography specialists to identify an algorithm for creating a gene pool of 25 and 16 state genes in such a way as to put the data of one dragon on a 128-bit stack and after several tests we got it. It will be difficult for many people to understand what it means to complete the data of the dragon gene pool in 128 bits, but for comparison, I note that we looked at the implementations of quite popular competitors, which have 3 times fewer data for one memory block. That is why we can provide data many times more and details in NFT than our competitors. As I understand, the first dragons will hatch from NFT Eggs. How did you do it technically? One of my favorite parts of the development was the creation of 10K limited dragon NFT Eggs, which, according to the logic of our Metaverse, should give birth to the first dragons. Technically, it was clear that Eggs should also be different in their uniqueness. So the team and I decided to use Artificial Intelligence to generate them. The work was carried out in this way as the design team generated the attributes of dragon Eggs in large quantities, and the AI team trained the program code. The purpose of the algorithm was to take all the attributes as input and generate 10K unique Eggs. After launching and receiving the result, we were struck by the idea of creating an Eggshell, since after the hatching of the dragon, the NFT Eggs that spawned it will remain in history and be used in the future. We have developed a pattern by which we set the polygon for cutting and rotating the broken part of the Egg. The designer gave the coordinates and we began the process of breaking the Egg into a different state so that it was immediately ready by the time the dragon hatched. Over time, the number of contracts increased and there were 9 of them. We have implemented a role model for managing functionality in the contract, which has been proven by experience and assigned them a set of responsibilities. The main wallet is completely made using the Multisig wallet method, and without several confirmations, no actions can be performed. Even though management wallets are stored in cold storage, we decided to be safe and raise unnecessary questions from experts to identify the risks of manipulation. Let's talk about the idea of a meme coin, how it works, and the platform that generates memes. Would you like to mention? About the meme coin, I can only say a subjective opinion "I like it))) However, I'd like to speak more about the technical side, the specifics of the implementation, in general. Speed and accessibility are a seemingly solved problem in the programming world, but not here! A large number of pictures complicated it all. The team decided to use another layer between the decentralized IPFS and the site for a proper opening speed. We took a CDN and configured it to display png on those pages where there are many images and SVGs on specific routes of one NFT. This will allow the community to choose the dragon they like from the list, go to it, and view it zooming "since SVG will not lose quality at any size! It is also worth noting that cryptodragons.com at the start allows connecting to 6 different wallets, the first of which is, of course, Metamask. Also, I'd like to note, that we are not interested in the personal data of users, it's confidential. To enter the world of CryptoDragons, one needs an Ethereum wallet, no emails and phone numbers are required. -Great! What about the blockchain battling Arena you've made? A little about the crossbreeding and Arena contracts "they are my favorite, especially the Arena. It was cool to create a platform using the limited capabilities of the blockchain. The architecture is synchronous, the Arena involves two participants ready to fight. To implement the battle in the dragon's gene pool, there are special parameters that determine the strength of the dragon. It turns out that dragons also have strength! It is determined by mathematical calculations and each dragon has its strength. The outcome of the full-fledged blockchain battling is determined by the strength of the dragon, and the winner takes either the defeated NFT dragonling or an agreed ETH. All transactions of battles and the outcome can be viewed on the website or Etherscan. Full transparency of the blockchain allows excluding fraud of all kinds. Recommended for You

Crypto market was so busy and on trend with the rise of digital assets and their monetary values. All cryptocurrencies were surging at different rates in prices resulting in a huge increase in the market capitalization of the Crypto market. Which crypto is better buy? Importantly, popular cryptocurrencies like Shiba Inu (SHIB) and Ethereum (ETH) achieved ATH recording high market values. Both the digital assets were highly competing resulting in a massive rise in overall trading volumes. Besides, SHIB and ETH were into the top 10 cryptocurrencies list, exciting the holders. Shiba Inu (SHIB) and Ethereum (ETH) were the recent talk of the town for their breaking records in the market. However, both the crypto assets can be a right investment, they both possess unique services. Shiba Inu (SHIB) The interesting meme coin became more popular in recent days with a rapid rise in its performance. SHIB just attracted many investors to pour in their savings and made new millionaires in the industry. On October 31, 2021 Shiba Inu (SHIB) achieved its all time high reaching up to \$0.00008685. Thus, the massive hype of Shiba Inu (SHIB) is predicted to reach \$0.0001 soon. Significantly, over the past month Shiba Inu surged over 231% in the same time period. Through this, SHIB can be a tempting investment but it can satisfy users only for a short-term nature. In addition, SHIB's trading volume records over \$12 billion which is a remarkable hike for a meme coin. However, the current market status of SHIB is \$0.000059 with a spike up to 2.57% in the last 24 hours. Thus, the Dogecoin killer SHIB ranked into the world's top cryptocurrencies. Ethereum (ETH) ETH is the second largest cryptocurrency which is a fundamentally stronger investment than Shiba Inu (SHIB). Besides, Ethereum is one of the popular digital assets with competitive benefits in the crypto industry. Moreover, Ethereum blockchain is a powerful tool which is a support system for many applications and crypto platforms. Most popular features like non fungible tokens (NFTs) and decentralized finance (DeFi) are also using ETH blockchain for its safe and secure services. Recently, Ethereum recorded a new ATH soaring around \$4,500 per token with a 33% rise over the last month. Through a continuous rise, ETH is expected to reach the target of \$6.4K soon. If the cryptocurrency is following the same bullish trend, Ethereum will reach \$14K in 3 months. More so, the current market trend of Ethereum (ETH) Price is \$4,403.40 performing a green graph in the crypto chart throughout last week. But, there are some challenges and risks as well aligning with crypto assets in the marketplace. Thus, for any digital investments a proper research about the cryptocurrency is required before investing. Besides, not all investments are equally the same and some cryptocurrencies are stronger than others. So it is advisable for the investors to cross check the risks and challenges before choosing a cryptocurrency as a right investment. Recommended for You

- The newly added tokens in the market are XEUS, SHARPEI, and NFTSTYLE. - These tokens have surged over 50% since the launch. - If the upward trend continues, investors could make a substantial profit. The count of new cryptocurrencies is increasing in the market as the entire crypto industry is evolving to be an asset to the digital world. The significant fact is that the crypto space is witnessing new crypto-tokens each day with new features from their ecosystem. As a matter of fact, the enhancement of crypto-space is huge within a decade and the popularity it has reached worldwide is massive. Moreover, as the growth of cryptocurrencies is ascending, the adoption is also equally growing. Apart from digital assets, DeFi and NFTs have also become popular with NFTs and DeFi attracting more investors. Despite the fact that investing in cryptocurrencies is partially risky and partially profitable, investors are showing interest in crypto assets. As a result, many new cryptocurrencies are arriving in the market offering more options to the interest. Currently, the new crypto-tokens added to the market are XEUS (XEUS), Shar Pei (SHARPEI), and NFTStyle (NFTSTYLE), according to Coinmarketcap. Current Market Status XEUS is a Binance Smart Chain based decentralized reserve protocol forked from OHM Dao. At the time of writing, the trading price of XEUS is \$1,044.85 with a trading volume of \$4,796,611 in the last 24-hours. According to Coinmarketcap, the price of XEUS has surged over 25% since the launch of the token. Shar Pei (SHARPEI) is also a BSC-based decentralized meme token. It is being inspired by the success of meme-currencies in the crypto market. Currently, SHARPEI is trading at \$0.00009547 with a trading volume of \$3,192,518 in the last 24-hours. Moreover, the price of SHARPEI has soared to 66.82% in the past 24-hours. NFTStyle (NFTSTYLE) is a new metaverse of fashion while the official Twitter account gave an announcement about the launch of unique NFTs. The current trading price of NFTSTYLE is \$0.00000002723 with a trading volume of \$1,745,894 in the past 24-hours. According to Coinmarketcap, the price value of NFTSTYLE has surged to 117.62% since the launch of the token. However, the market is seeing a slew of new crypto-tokens with unique qualities. The number of cryptocurrencies is rising, and investor interest is growing as well. If the present upward trend in these new coins continues, investors could make a substantial profit. - b2x DeFi lending protocol sufferers hack again. - Losses \$55 million to the hack. - This corresponds to the 3rd hack upon the b2x platform this year alone. Just when I thought things are finally getting smooth upon the crypto industry and the market, another news of hacking came up. In recent days and the past month of October, the overall prime rates in regards to the crypto industry have sufficiently declined by a margin. However, the news came up upon another hack on the b2x DeFi platform. Accordingly, the leading decentralized finance (DeFi) protocol b2x got hacked on November 5. Moreover, this hack has resulted in a loss of \$55 million for the platform. On the other hand, this news was brought out officially by the blockchain security firm, the SlowMist. SlowMist put out the news through a tweet. The Hack According to SlowMist's tweet, a private key has been at stake upon the b2x platform, resulting in such hack and losses. Moreover, it's evident from the tweet that the hack took place on about 7 anonymous transactions. However, the transactions are all different from one another. In addition, all the transaction addresses have also been recorded. Also, SlowMist terms that they will be further updating new updates once they receive more information. b2x Team's Views In spite of the hack, the team from b2x protocol terms that they have not yet completely verified regarding the losses internally. Moreover, the b2x is profusely based upon the Ethereum (ETH) and Binance Smart Chain (BSC), blockchains respectively. Also, the private keys which were compromised resulted in a major hack upon the Binance Smart chain, than on the ETH blockchain. In addition, this is the third hack for the b2x platform for the year. Previously, last year it suffered vividly on the month of February hack of \$8 million. This accounted for nearly 30% of the overall value of b2x at that time. Recommended for You

- Over the past 48 Hours, both Bitcoin (BTC) and Ethereum (ETH) are down. - Several altcoins spike up evidently, despite BTC and ETH's downfall. - Top 3 altcoins to spike for the past 24 hours are XYO Network (XYO), Crypto.com Coin (CRO), Wrapped NXM (WNXM). The current market scenario is something that is quite rare. You cannot often see altcoins surging up profusely with the major crypto players, the Bitcoin (BTC) and Ethereum (ETH) falling down. However, at present several altcoins have rocketed up despite BTC plunging down to \$60K and ETH at \$4.3K. Also, both are down by a major of 2% to 3% overall. On the other hand, the top three altcoins which have rocketed up for the past 24 hours are XYO Network (XYO), Crypto.com Coin (CRO), Wrapped NXM (WNXM). XYO Network (XYO) The XYO Network platform is one particular decentralized blockchain platform that correlates data regards to geospatial. It determines the weather, temperature, humidity, and much more connected to a particular location. Apart from this it also features profuse smart contracts upon its platform. XYO being the native token for the XYO Network platform actually works based upon the ETH blockchain. Besides, taking the past 24 hours into consideration, XYO has risen to \$0.0818 from a low of \$0.0584. Moreover, this accounts for a whopping rise of 33.34% in overall gains just in a few hours. Crypto.com Coin (CRO) The Crypto.com (CRO) platform is also a decentralized ecosystem towards various online payments including finance and trading too. The CRO is the native token of the Crypto.com platform. Over the past 24 hours and over a little more, the price of CRO has spiked up drastically the same as the XYO just in a span of a few hours. The highest for the past 24 hours for CRO stands at \$0.401. In spite of this, the overall gains account for 32.90% for the past 24 hours and a whopping 64% for the past 48 hours into consideration. Wrapped NXM (WNXM) The NXM is the native token for the Nexus Mutual platform. However, this NXM could be used only within the Nexus Mutual platform and it couldn't be traded elsewhere. In such terms, the WNXM functions as the tradable version of the NXM, enabling itself upon various crypto exchanges and platforms. The WNXM touched a whopping \$77.57 price from a bottom of \$56.81, consolidating to a rise of 20.02% over the past 24 to 48 hours. Recommended for You

- CoinBene stopped the function of its service on November 05, 2021. - The website and apps will be closed on November 15, 2021. - The platform will close completely on November 31, 2021. According to CoinBene announcement, CoinBene stopped the function of its service on November 05, 2021. Moreover, CoinBene is a trusted and secure cryptocurrency exchange platform where users can buy and sell the most famous crypto assets, including Bitcoin, Ripple, Ethereum, and more. For operational and regulatory reasons, CoinBene will permanently close its service to meet the requirements for cryptocurrency laws and regulations in various regions. CoinBene's Closing And Return Process As part of the closing and return process, the exchange announced a few dates to be noted. Notably, the spot transaction function will be stopped on November 5, 2021, at 18:00 (GMT +8). Moreover, the system will uniformly cancel any orders that have not been cancelled. More so, the website and apps will be closed at 18:00 (GMT + 8) on November 15, 2021, and no one will be able to log in. By November 31, BR site users will be able to withdraw coins from the website. Customers

will not be able to withdraw after November 31 due to a lack of customer service personnel. In addition, the user must bear the consequences of not withdrawing cash on time if they suffer asset losses. Even more, the asset withdrawals must be completed by November 15, 2021 for CoinBene users. In case the platform closes, users who haven't completed the asset withdrawal process can contact the platform's customer service team before November 31, 2021 so that they can apply to withdraw assets after completing identity verification. Upon completion of the cancellation and liquidation, the platform will close on November 31, 2021. The user's withdrawal request will not be accepted by customer service at that time. Moreover, the exchange request the user needs to bear the asset loss which happens through not withdrawing in time. Recommended for You

- Markus urged Bray to take responsibility for his actions. - Markus added, Doge is a Shiba Inu. - Two Indian exchanges made a majority of their trading volume from the meme coins. A recent statement from Doge inventor Billy Markus noted that Doge hype does not stay but that ventures must have lasting worth to be successful. Recently SHIB suffered a fast deterioration due to his admission that he possessed zero Shiba Inu tokens (as previously reported). Before Markus's presentation on Saturday Night Live, Dogecoin's price was gathering pace. Even so, the value of the memes currency plummeted by 30 percent shortly after he debuted. Take responsibility for his conduct, Markus admonished Bray in this context. Other cryptocurrency investors have already received advice from the Dogecoin inventor, who has counseled caution when entering the crypto space. In addition, he advised people to accept responsibility for the dangers that they choose to take on their initiative. Take everything that everyone says about it with a grain of salt because no one knows anything, states the second point. Finally, if they are unable to implement the preceding recommendations, they should avoid this market entirely. Senate candidate Bray has previously voiced his support for SHIB should be mentioned at this stage in the discussion. Once, he claims to have distributed his doge holdings in exchange for SHIB tokens. The Dogecoin cryptocurrency has been referred to as "people's money" by both Musk and Markus, with Markus recently stating that Dogecoin is a fundamental cryptocurrency. The following remark was in response to his "hype" comments: "It is not a currency of promise and bombastic overstatements." The SHIB and DOGE meme currencies are still being confused by some, even though the two are entirely different. The network of dogecoin self-identified as shibes according to Markus, which explains why this has happened. Accordingly, Doge is a Shiba Inu, as he said. Even yet, both currencies appear to have a rapidly growing investor base with the latter appearing to be particularly strong in India. Recent research revealed that two Indian marketplaces generated a vast bulk of their trading volume through meme currencies. Recommended for You

- The first week of November has newer coins dominating the market. - The cryptos of the week are Loopring (LRC), Decentraland (MANA), Sandbox (SAND). - Loopring has risen to a phenomenal 248.9% in the last 14-trading days. Newer coins are dominating the market in the first week of November, according to CoinMarketCap. Loopring (LRC), Decentraland (MANA), and Sandbox (SAND) are this week's featured cryptocurrencies. Loopring, which trades under the ticker LRC in the indexes, has gained 57.5% in the last 24 hours of day trading. In the previous 14 trading days, the coin's value has increased by an incredible 248.9 %. Investors that took an early position saw their profits on investment more than double in as little as two weeks after taking the class. The coin was previously available for purchase for 70 cents but is now available for \$1.52. A \$1,000 investment in LRC was low-hanging fruit, so investors could acquire a large bag of it with just a \$1,000 investment, which doubled in price. Meanwhile, the coin is still accessible for a lower and more enticing price, making it an excellent time to get in on the action while the market is down. LRC was selling at \$1.52 at the publishing date, representing a gain of +59.9% in the day's trading. MANA reigned supreme inside the ring for the last week of October, and the team's winning streak extended into early November. Even though the coin has dropped in value today, its momentum has stayed consistent. Investors take advantage of the current downturn by purchasing additional tokens to cash out when the market climbs again. As a result, MANA allows investors to make relatively quick money and then exit the market after realising their profits. The coin has gained 277.9% in the last 30 trading days and has only lost a small amount today. Those who made an initial investment in the new position last month were rewarded with a doubling return on their money. Decentraland was trading at \$2.50 at the publishing date, representing a loss of 12.2% in the previous day's transaction. With a gain of +241.2% in just seven trading days, SAND turned out to be an unexpected star in the market. The value of the coin has increased by +221.6% during the previous 30 days. Even though the price is experiencing a drop today, investors believe it is a market correction and are putting more coins into their bags. On October 27, the coin was available to buy for 70 cents, and today, the cash is selling at \$2.83 a coin. Investors who entered the market a week ago have received the benefits of the company's expansion. Sandbox was trading at \$2.83 at the time of publication, representing a -0.9% decline from the previous day's close. Recommended for You

- 5 PM EST, BTC is trading slightly lower, down half a percent at \$61,050. - European Central Bank to keep interest rates where they are, move Bitcoin back \$60,000. - Much of the attention was drawn away from Bitcoin by specific alt. On Thursday, the overall market capitalization of all cryptocurrencies together reached a record high of \$2.7 billion, although this did not affect the price of bitcoin. In the early afternoon Eastern Standard Time, Bitcoin is trading marginally lower, down half a percent at \$61,050. The Federal Reserve and the Bank of England decided this week to keep interest rates near zero percent, which is a significant development in the fight against inflation. These developments, however, did not affect Bitcoin, which has been viewed as a hedge against inflation even though inflation is continuing to climb or at the very least remains at elevated levels. Even though gold, which some feel is a superior tool to hedge versus inflation, did not react immediately, it did so after several days and traded lower on the day of the announcement. When the European Central Bank announced last week that interest rates would remain at their current levels, Bitcoin surged back above \$60,000 for the first time. They feared that this announcement, which came after Bitcoin had fallen below \$60,000 in the previous trading period, may have made the market fall from \$61,000. When they had anticipated this as a result, even though we haven't reached a new all-time high, Bitcoin building a base over \$60k is still highly favorable. Although they might yet see a return to \$54,000 next week, this represents far less of a risk than a new all-time high, possibly later this month. Analysts still believe that the next all-time high will be in the range of \$70-\$75k. Specific alternative cryptocurrencies and Ethereum have drawn a lot of attention away from Bitcoin this week, with the latter reaching new highs. However, it is crucial to recall that these currencies only rose in value in the weeks following Bitcoin's all-time high and that any further rise in value from them will almost certainly coincide with Bitcoin's acceptance. - An unwary person searching for a phantom, sent to a phishing website. - They noticed the frauds after hearing from crypto users on Reddit and other sites. The crypto world is dangerous, with crooks waiting for newcomers. Furthermore, a recent report from Check Point Research outlines a powerful attack method: utilizing Google Ads to lure people to fraudulent crypto wallets. Moreover, in its study, CPR claims it has witnessed half a million dollars taken out in recent days. Here's how it works. The attacker buys Google Ads for prominent crypto wallets. Furthermore, CPR has observed frauds targeting the popular Phantom and MetaMask wallets for the Solana and Ethereum ecosystems. An unwary person searching for a phantom, sent to a phishing website that seems legitimate. Moreover, the user submits their credentials, which the attacker maintains. Or, even worse, they're advised to enter a recovery password to establish a new wallet, which logs them into the attacker's wallet. Furthermore, any funds sent will be promptly received by the attacker, adds CPR. Incorrect URLs are like other phishing schemes, the attackers try to make their bogus log-in sites appear as legitimate as possible. The CPR has seen attackers employ incorrect URLs to fool users such as phantom.app or phantom:app instead of phantom.app. Similar phishing attempts were used to send consumers to fraudulent cryptocurrency exchanges like PancakeSwap and UniSwap. The CPR researchers said they noticed the frauds after hearing from crypto users on Reddit and other sites. At least half a million dollars, stolen in recent days, CPR said. Eleven hacked wallet accounts with cryptocurrency valued at \$1,000 to \$10,000, identified by the company. When asked for comment on these reports, a spokesperson for Google said: "This behavior directly violates our policies and we immediately suspended these accounts and removed the ads. This appears to be a malicious actor looking for ways to evade our detection. We are always adjusting our enforcement mechanisms to prevent these abuses." To prevent these hazards, CPR advises people to avoid clicking on Google Ads results and instead look at search results and carefully verify the URL of the site they're visiting. Recommended for You

The entire crypto market experienced a bullish run for the past few days which is slowly draining out of energy. The bullish era for this term has come to an end with new heights from Bitcoin, Ethereum, and Shiba Inu. While other potential coins like Solana, Polkadot, and Ripple have also slowed down in their price rally. Meanwhile, meme-currencies have been trading sideways since the historic rise. Additionally, Shiba Inu has dropped to 21.41% within the past week which raises questions for investors. Will it be a good time to buy SHIB while it's dropping? Or is it a sign of a further fall of SHIB's price? Story Behind SHIB Price Fall According to a popular crypto analyst, Jacob Oracle, the reason behind the price fall of SHIB is Whales' manipulation. After the price surge of over 950% since the beginning of the quarter, SHIB has been trapped in Whale games. The tweet which he posted highlights the movement of the wallet which has turned the investment of \$8K on SHIB to \$5.7 billion. Remember the guy who turned his \$8K SHIB investment into \$5.7 Billion? Well, he recently moved 40+ trillion of his SHIB holdings to new four new wallets. If he decided to sell these bags, SHIB would plummet -99.99% to zero. Oof. pic.twitter.com/HqrWw57nr2 " Jacob Oracle (@JacobOracle) November 3, 2021 The same wallet sent almost 40 trillion dollars to the other four wallets. If he sells all of his shares, the expert predicts that the meme coin will lose 99.99 percent of its value. Internet users are seeing this as a sign of impending mass liquidation! Furthermore, according to Bybt data, a total of \$1.39 million was liquidated in just 24 hours. At the time of writing, the trading price of Shiba Inu (SHIB) is \$0.00005744 with a trading volume of \$11,770,499,879. Consequently, SHIB has been experiencing bearish signals for the past week with the rejection at the support level of \$0.00006458. The next immediate support level lies between \$0.00004198 and \$0.00003626, so if SHIB fails to remain above this level then it may experience a huge downfall. Significantly, as per the announcement from Kraken exchange, if Shiba Inu is listed on their platform, it will act as a major trigger for the impending price action. There might be a price hike after the listing while SHIB is still 60 million percent high YTD. Besides, this fall of SHIB's price may be a pullback to bounce again to heights. Recommended for You

- After hitting fresh highs, the ETH price looks to have paused. - About 100K ETH was burnt last week, potentially increasing the supply. Ethereum is now exhibiting tremendous positive momentum, in the same way as Polkadot and Solana have. The price of Ethereum (ETH) has been slowly growing, avoiding any significant decreases. The price, on the other hand, was unable to break through the barrier levels. As a result, the volume remained strong, even among the bears who made profits. Because the cost of ETH Gas is still prohibitively expensive, a number of traders are exploring alternatives. The Ethereum Mainnet continues to be favored by traders, as seen by a 5-month high of about \$56K transactions. However, they are slipping back towards their previous highs of \$65K. Current Rally is More Calculated After hitting fresh highs, the ETH price looks to have paused. The traders still believe in the approaching Bull Run since the bears were barred from the deal. It seems that, unlike prior crashes, the current rally is more calculated. Since the start of Q4, the trajectory has been under full control. The second most popular crypto seems weary at press time and may consolidate for a while. In the next few days, the price may potentially drop below \$4500. However, a big comeback at current levels might quickly push the price beyond \$5000. Ethereum (ETH) price is poised to skyrocket as ETH 2.0 advancements, and recent upgrades hint at a positive trend. Interestingly, about 100K ETH was burnt last week, potentially increasing the supply. According to CoinMarketCap, the Ethereum price today is \$4,537.27 USD with a 24-hour trading volume of \$19,835,444,270 USD with a market cap of \$536,274,651,005 USD. Recommended for You

- Once the neckline is challenged, the AVAX price may rebound over \$80. - The price is already testing the pattern's neckline and may break shortly. The crypto industry is heating up as more crypto assets go out of their comfort zones. Bitcoin price hovers around \$63,000, with break domination in a downward trend. Such cryptocurrencies like Ethereum, Polkadot, and Solana might demolish their highs. However, Avalanche (AVAX) and MakerDAO (MKR) are poised to make huge movements. The asset fell from a high of \$63 in the first half of 2021 to as low as \$22. Multiple efforts to reverse the negative divergence failed, and the asset ultimately launched a massive parabolic surge over \$60. Moreover, towards the start of the fourth quarter, AVAX pricing continued to rise. However, despite the drop in trading volume, the price remained optimistic. As a result, the price has created an inverted head and shoulders pattern. Also, the price is already testing the pattern's neckline and may break shortly. Once the neckline is challenged, the AVAX price may rebound over \$80 and then consolidate. The price is now trading along 0.78 FIB levels, with an immediate objective of \$80. Also, the price might soon breach the next FIB levels of 1.272, which are created quite near to \$100. Considerable Chance of Retest The MKR price has plummeted since the market turned negative in May. The price dropped from over \$6000 to just \$2000. The retest failed to push the price beyond \$4000. Rather, it slid back to retest \$2300 support. While many believed the MKR price had peaked, it bucked the downtrend to

prove its survival. The MakerDAO pricing has broken its downward trend since the May crisis. The asset breached the falling triangle and challenged immediate resistance at \$3211. It was helped by two huge candles and the trading volume. The asset may challenge key resistance levels around \$4000. As a result, there is a considerable chance of a retest before breaking resistance. However, the asset might immediately recover positive momentum and rally above \$4650. Recommended for You

The crypto industry has already started with the greenish price chart beginning from BTC to other altcoins. A significant fact is that Polkadot, Solana, Ripple are also surging in price value but Cardano remains at its position. Is there a possibility for ADA to come out of the top 10 if this pattern continues? What will be the condition of ADA if DOT, SOL, and XRP outperform and rank above ADA? ADA is one potential cryptocurrency where investors believe that ADA would hit highs but it has been at the same level of price for the past two months. In the recent hike of the crypto market, Bitcoin's price has moved above \$63,000 following the correction at \$60,000. Whereas, Ethereum has set up its new all-time high on Wednesday at \$4,638 with a round of 2% gain in the past 24-hours. Consequently, the prominent altcoins SOL, XRP, and DOT have soared around 10% each. Currently, both the potential altcoin Solana and Cardano are fighting hard to capture the 5th position while ADA is still in the \$2 level. If ADA is not making its move towards an uptrend within a week then it may lose its position from the top 10 cryptocurrencies. ADA might be kicked by DOT and XRP despite the fact that Cardano has no signs of an uptrend. Polkadot and Ripple are trying hard to kick out ADA below. The DOT ecosystem has been waiting for the parachain auction, which will take place between November and January. As stated in the whitepaper, the event commemorates the realization of the company's fundamental objectives. Furthermore, Ripple is hopeful of winning its lawsuit against the US Securities and Exchange Commission, and its request for relisting XRP on Coinbase has been praised, implying that its price may soon reach new highs. Significantly, Ripple (XRP) has expressed its confidence towards the chance of winning a lawsuit against the US Securities and Exchange Commission. As a matter of fact, the crypto-asset XRP is still presenting a bullish run which is around 5% up in the last 24-hours. Furthermore, with a bullish signal forming, a breakout at the next critical level of \$1.30 might improve price momentum by another 12 to 15%. At the time of publishing, ADA has already lost its position to SOL moving to 6th position by market cap value. If the preceding facts prove to be true, the price of DOT and XRP will be the event. The Cardano ecosystem, on the other hand, is not far behind. On the other hand, if the enhancements are further delayed, the mentioned coins will easily unseat ADA from the top ten! - Solana looks to have halted after breaking out of a symmetrical triangle. - SOL's prospective positive impulse might boost its market worth by over \$10 billion. Solana just became the best performing Crypto, but it looks like a victim of its success. On Tuesday, a five-hour network disruption halted Solana's climb. It flipped Cardano's ADA, which couldn't keep up with the Ethereum killer. ADA is up 2% today but down 8% in the previous week. Solana's market valuation currently exceeds \$64 billion, while Cardano's is \$63.5 billion. Just eight days ago, SOL hit an all-time high of \$219.95 and the current price of roughly \$217 is a far behind. On the daily chart, Solana looks to have halted after breaking out of a symmetrical triangle. However, SOL may continue above its previous all-time high of \$219.95. The token might rise another 17% to \$257, the triangle's target if this happens. SOL's prospective positive impulse might boost its market worth by over \$10 billion. However, the Reddit Community is pessimistic about Solana's pricing. They expect SOL to be approximately \$65 by the end of 2021. Furthermore, according to analyst Long Forest, the coin will be worth roughly \$106 by the end of 2021. Commencement of a New Uptrend A daily candlestick close above \$220.21 will mark the commencement of a new uptrend. In this case, SOL may target the 161.8% trend-based Fibonacci extension mark at \$384.08. This rise would be a 100% uptrend. If the price of Solana (SOL) closes below \$188.69, it indicates that buyers are fading and bears are taking power. It will then fall by at least 9% to retest the 5 percent Fibonacci retracement line at 170.01. If the selling pressure persists, Solana may test the \$155.78 support level. This decline would be around 17% from \$188.69, when buyers may opt to resume the upswing. According to CoinMarketCap, the SOL price is \$217.88 with a 24-hour trading volume of \$2,630,098,838. Recommended for You

- A bullish pennant pattern indicates that sellers might build support at the bottom. - XRP price has risen when the Stochastic was far over 20. Since the start of the great Q4, the crypto industry has been demonstrating ebb and flows. Following the major currency run, gains seem to be rising across multiple cryptocurrencies. Notably, Solana, Polkadot, and Cardano have been preparing for third place. However, Ripple (XRP) pricing is calmly waiting to displace other cryptocurrencies. Since the start of Q4, Ripple's (XRP) price has maintained a steady upward trend. This is despite the platform taking advantage of the chance to lay the framework for a future masterpiece. The platform's current fostering growth has backed the price momentum in recent weeks. So it's time for XRP to quit listing to generalizations and focus on price patterns. Crypto expert analysts have been setting forecasts for the near-term XRP pricing. A bullish pennant pattern indicates that sellers might build support at the bottom and subsequently price reversal to higher highs. The graphic has remembered earlier historical occurrences. After Stoch RSI crosses over 20, price momentum increased 74x to \$0.287 from \$0.00568 in 2017. Stock RSI over 40 increased the price 14x from \$0.20 to \$2.19. Bullish Pennant Formation Ripple (XRP) price has risen when the Stochastic was far over 20 and accompanied by a bullish pennant formation. However, the cryptocurrency is on the brink of breaking out of a bullish pennant formation. As for probable entry and exit points, the analyst predicts the greatest chance to hold for the long term is between \$0.50 and \$0.83. Sell targets are \$8.92 (2.6187 Fib) and \$14.28 (4.618 Fib). The XRP price may rise if the case against Ripple is resolved in its favour. However, despite widespread fear, institutional inflows have reached \$54 million. According to CoinMarketCap, the XRP price today is \$1.14 USD with a 24-hour trading volume of \$3,514,775,060 USD. OpenOcean Atlantic, the long-awaited upgrade of OpenOcean, will go live on the Ethereum network today, November 1, 2021. Users will benefit from maximum returns on swap rates that blow other DEX aggregators out of the water. In addition, OpenOcean prides itself on transparency regarding trading fees and providing an optimal user experience. OpenOcean has always aimed to let users achieve the best trading experience and rates for digital assets across multiple networks without extra fees. Today, the project has become the optimal cross-chain swaps and derivatives aggregation provider in the cryptocurrency space. With its focus on transparency, unlocking greater capital efficiency, and intelligent wealth management, OpenOcean prepares to take the next step in this ongoing journey. That next step involves the launch of OpenOcean Atlantic. The flagship product will bring more institutions to the vast ocean of crypto liquidity across different blockchains. Atlantic has a significant competitive edge over other DEX aggregators in more cases through an improved algorithm and better liquidity sources. In addition, its returns are far better than competing solutions on Ethereum due to incorporating various crucial parameters. For example, OpenOcean Atlantic provides better pricing, lower gas fees, less slippage, and optimized routing across networks and currencies to maximize the final returns. OpenOcean has noted tremendous success on other blockchains, including Binance Smart Chain, Avalanche, Fantom, Solana, etc. The first-mover advantage gained by exploring these new blockchains helped the team establish its position in the broader DeFi industry. Bringing the solution to Ethereum strengthens OpenOcean's position as the one-stop destination for the best trading experience and pricing. The Ethereum launch of OpenOcean Atlantic coincides with enabling users to add tokens by themselves on the trading interface. All that is required is the token address to be pasted into the search bar and click the 'Add' button. Keep in mind some tokens may have poor trading liquidity, and transactions may have a significant price impact. Through gas price presets, users will have a smooth and efficient trading experience. Presets are taken on-chain to allow for real-time adjustments without intervention. However, issuers can opt for a custom fee if they prefer that option. These upgrades provided in OpenOcean Atlantic mark an important milestone for the team. However, the work is not over, as more optimizations loom on the horizon. OpenOcean will keep achieving innovation and breakthroughs by researching new techniques and algorithm optimizations to provide the best rates when trading. One of the future solutions to look forward to is on-chain derivatives aggregation. OpenOcean aims to tackle the derivatives market by providing access to the best-priced trades and liquidity across AMMs and order books. All of these aspects help traders capture trading opportunities and carry out trading strategies for both spot and derivatives trading. In addition, SaaS product subscribers will benefit from arbitrage trading opportunities and execute advanced strategies. About OpenOcean OpenOcean is a one-stop full chain aggregation protocol that acts as a bridge between DeFi and CeFi. It eliminates the fragmentation that exists within the DeFi ecosystem by giving users access to the entire crypto market via a single, user-friendly interface. Users enjoy full access to aggregated liquidity and best pricing from a wide range of centralized and decentralized exchanges. XDEFI Wallet, the browser wallet built for speed, announced today its integration with Terra, the 4th largest blockchain ecosystem by total value locked (TVL). While the integration was live for a number of weeks and undergoing testing, it is now live to all XDEFI Wallet users. Asmile Dubia, CEO and co-founder, said, "We believe that UST serves a unique purpose as a decentralized stablecoin and will become a key component of the Terra ecosystem. Terra's killer app is its accessible and UX-focused environment that caters for wider web3 adoption. It is truly exciting to see how Terra has developed as a Layer 1 and to see projects flourishing around UST. Terra is a programmable Layer 1 blockchain protocol that offers a suite of algorithmic fiat-pegged stablecoins. Terra's native LUNA token absorbs the short-term volatility of Terra's stablecoins. According to DeFiLlama, Terra has over US\$8.6 billion in TVL and LUNA, the native asset of the Terra blockchain, hit US\$18 billion earlier this year. Over 60 projects are ready to launch on Terra in the next 6-8 weeks and over 100 have recently stated plans to launch by early 2022. Do Kwon, CEO and Co-Founder of Terra, said, "We're thrilled to welcome XDEFI as a non-custodial wallet supporting the Terra ecosystem. XDEFI integrating Terra provides LUNATICS with one of the fastest and most user-friendly multi-chain wallets in the industry, including a customizable NFT display which is soon to feature Terra's booming NFT market. In addition to Terra, XDEFI Wallet supports 8 other chains, including Bitcoin, Ethereum, Polygon, Solana, Binance Smart Chain, Binance Chain, THORChain, Litecoin, and Bitcoin Cash. XDEFI Wallet is planning to add support for Avalanche, Arbitrum, Solana and others. XDEFI Wallet also announced they will be working with Pylon to set up a liquidity program on Terra. Pylon is a suite of DeFi savings and payments products powered by user deposits that build on stable yield-bearing protocols such as Terra's Anchor Protocol. Pylon enables sustainable exchanges between long-term value providers and their consumers through customizable deposit contracts and yield redirection. Woojin Lim, Co-Founder of Pylon Protocol, said, "Our protocol is excited to partner with XDEFI Wallet to open up Pylon Pools on Pylon Gateway, Terra's premier launchpad, and introduce yield-based deposit contract pools. We're looking forward to working together in growing Terra's ecosystem. Half of the funds that will be raised via Pylon will be used to fund early-stage projects of the Terra ecosystem. The community will be able to vote on how the funds should be allocated. XDEFI Wallet is backed by a number of DeFi-centric funds and venture investors, having recently raised US\$6M from Mechanism Capital, DeFiance Capital, Alameda Research, Sino Global Capital, Animoca Brands, Morningstar Ventures and CoinGecko, as well as DeFi builders like Darren Lau, Mark Zeller, Scoopy Trooples, and Mariano Conti. XDEFI Wallet unveiled the public release of its next-generation browser wallet on the Chrome Store earlier this month, with over 35,000 users to date. [Add info about IDO] About XDEFI Wallet XDEFI is the world's fastest DeFi & NFT wallet. XDEFI Wallet users can use an Ape Mode, a revolutionary approach that ensures transactions are processed in the next block, across Terra, THORChain, Ethereum and EVM blockchains. The wallet also displays NFTs from all chains in a single drag-and-drop grid. XDEFI Wallet's team of around 20 is based around the world and backed by the leading names in DeFi and NFTs. - Lark Davis tweets optimism upon Shiba Inu (SHIB) . - He states SHIB has excelled over other altcoins with respect to trading volumes. - Accordingly, SHIB reaches ATH of \$0.00009915. The profuse analyst, advisor and investor, Lark Davis owes lots for the crypto industry. Moreover, rather than just being a profuse investor, his analyses, predictions and investment advice surely plays a major role upon both the stocks as well as the crypto industry. In addition, more than just being an investor only upon Bitcoin (BTC), he also has invested in many altcoins. Being an

Ethereum invented the blockchain smart contract idea. Dogecoin's proof-of-work mechanism varies from Bitcoin's in various areas. Huobi is one of the major cryptocurrency exchanges situated in Asia, operating since 2013. It has rebranded itself as Huobi Global, a global crypto exchange that supports a broad range of altcoins and stablecoins. Let us take a look at the top 6 trending coins on the exchange. Bitcoin (BTC) It has established a worldwide community of millions of fans that develop, invest, trade, and utilize Bitcoin and other cryptocurrencies daily. The birth of the first cryptocurrency paved the way for hundreds of more competitors. According to CoinMarketCap, the price of BTC at the time of writing is \$62,151.76, with a 24-hour trading volume of \$32,119,630,724. BTC ranks in the first position on top trending tokens on Huobi Global. Ethereum (ETH) Ethereum invented the blockchain smart contract idea. Smart contracts are computer programs that automatically perform steps required to fulfill an online agreement. A trusted intermediary between contractors is eliminated, lowering transaction costs while enhancing transaction dependability. According to CoinMarketCap, the price of ETH at the time of writing is \$4,159.80, with a 24-hour trading volume of \$15,234,256,867. ETH ranks in the second position on top trending tokens on Huobi Global. Dogecoin (DOGE) Dogecoin's proof-of-work mechanism varies from Bitcoin's in various areas, including employing Scrypt. The cryptocurrency has a block period of 1 minute and an unbounded supply, meaning it may be mined indefinitely. You may mine Dogecoin alone or in a mining pool. According to CoinMarketCap, the price of DOGE at the time of writing is \$0.2647 with a 24-hour trading volume of \$2,716,982,041. DOGE ranks in the third position on top trending tokens on Huobi Global. Shiba Inu (SHIB) The SHIBA INU encourages dog-related artists from across the globe to join their SHIBA INU community in the NET market. SHIBA INU has also set up an Amazon Smile campaign for its supporters. Shiba Inu Reserves Association funds According to CoinMarketCap, the price of SHIB at the time of writing is \$0.00004691 with a 24-hour trading volume of \$9,994,981,302. SHIB ranks in the fourth position on top trending tokens on Huobi Global. Solana (SOL) Solana, known for its blockchains lightning-fast processing rates in the crypto world. Solana's hybrid protocol reduces transaction and smart contract validation times. Solana's lightning-fast processing speeds have also piqued institutional attention. According to CoinMarketCap, the price of SOL at the time of writing is \$204.67, with a 24-hour trading volume of \$3,602,956,540. SOL ranks in the fifth position on top trending tokens on Huobi Global. Tron (TRX) TRON wants to be a place where content producers may directly engage with their consumers. By removing centralized platforms like streaming services, app stores, and music sites, producers hope to save money on intermediaries. As a result, customers may pay less for content. Given its rising digitization, TRON may have a good start in using blockchain technology in the entertainment business. According to CoinMarketCap, the price of TRX at the time of writing is \$0.1026 with a 24-hour trading volume of \$2,841,493,807. TRX ranks in the sixth position on top trending tokens on Huobi Global.

The crypto market has been presenting a green chart for the past week. The price value of Bitcoin has hit a new ATH at \$67,000 and took a pullback. Currently, the price of Bitcoin was 2.04% up, Ethereum was 11.86% up and Solana is 38.11% up. Significantly, a Twitter account named Credible Crypto which has wide followers has posted a tweet mentioning bullish altcoins. According to analysts, the following altcoins are the top five cryptocurrencies that might get huge gains by month-end. These altcoins are Convex Finance, Ripple, Ethereum, Hedera Hashgraph, and Solana. Convex Finance (CVX) According to the post from Credible Crypto Whales have purchased Convex Finance, where CVX token powers the Curve Finance decentralized exchange. The post mentions that another million-dollar purchase of CVX from pros at the price of \$21.53 per CVX. At the time of writing, CVX was trading at \$24.75 which was 25.53% up in the last 24-hours. Moreover, CVX was trading in the range between \$17 to \$25, thus \$25 might be the important resistance level. Whereas, if CVX falls below \$17 then it may continue to decline. Ripple (XRP) Despite US Securities Regulators, XRP still looks split and might present an upswing chart. According to Credible, he predicts that XRP will turn support level from a historic resistance level which will pave the way for a huge gain. At the time of writing, Ripple (XRP) is trading at \$1.10 which is 1.9% up in the last 24-hours. Currently, the price value of Ripple (XRP) has recovered from its fall at \$1.057 and has surged up to \$1.10. Thus the trend may continue its bullish run. Ethereum (ETH) According to the analysts, Ethereum follows the track of BTC which has set its new all-time high cracking heavy resistance levels. Significantly, ETH followed BTC and has surged to \$4,295 currently. Moreover, ETH has gained 12.76% in the last 24-hours setting up its support level at \$3,960. This support level will be the immediate support line whereas the next support level will be at \$3,797. Hedera Hashgraph (HBAR) According to Credible Crypto, HBAR has the potential to set up a new all-time high if it cracks the hurdle at \$0.47. The price value of HBAR has soared from \$0.360 to \$0.389 in a few hours. At the time of writing, the trading price of Hedera Hashgraph (HBAR) is \$0.385 which is 5.70% up in the last 24-hours. If the trend continues the bullish run and cracks the heavy resistance at \$0.47 then it might crack the previous ATH at \$0.56. Solana (SOL) As per the analysts, Solana (SOL) is also predicted to set a new all-time high. With the 7-day statistics, the report depicts that SOL has risen 38.22% which is from \$62.60 to \$213.62. It is worth noting that SOL is preparing to set a new all-time high as the price chart depicts a bullish pattern. At the time of writing, the trading price of Solana (SOL) is \$213.62 with 38.91% up which is expected to surge more. Analysts predict that SOL aims to cross \$215 securing a strong support level.
