

all-time low of \$4.27, after visiting the peak price of \$13.24. At the time of writing, Magic Eden trades at \$5.14. Besides, the market cap of ME has reached \$668 million with a remarkable daily trading volume of \$4.97 billion. The ME token has a maximum supply of 1 billion, with 125 million tokens being available to the users of the NFT platform until February 1, 2025. On the other hand, an airdrop hunter acquired 398,399 ME tokens, worth \$2.14 million, across more than 1,350 wallets. Of this, 54,930 ME tokens, valued at \$477K, were sold on decentralized exchanges at an average price of \$8.68. They have transferred the remaining tokens to Binance. The token distribution followed a Token Generation Event (TGE), providing ME tokens to the users who are eligible and meet specific criteria. Moreover, major cryptocurrency exchanges, such as Binance, Upbit, and Bitfumb, have offered trading support for the new token. Binance will offer ME trading in the following trading pairs ME/BTC, ME/USDT, ME/FOUSD, and ME/TRX. Token withdrawals are opening on 11 December at 15:00 UTC. Furthermore, the airdrop ended up in grievances from users. While claiming ME tokens, many users have received error texts or received claim confirmations without the actual tokens being credited. This issue might triggered ME price to drop rapidly. Highlighted Crypto News

As memecoins continue to dominate the market narrative in 2024, some Dogecoin bulls are branching out into emerging projects like Sui and Cutoshi. While DOGE remains a favorite, the appeal of Sui's innovative blockchain design and Cutoshi's meme-inspired DeFi ambitions are catching the attention of traders. Dogecoin's Supercycle Sparks Interest In New Opportunities Dogecoin hit its all-time high of \$0.73 in the last bull run. This year the super cycle for meme coins, Elon Musk as head up a government department for D.O.G.E, suggests Dogecoin future potential. While Dogecoin has yet to reclaim its all-time high, currently trading at \$0.43, various analysts are predicting that the coin has a lot of room to grow. Trader Tardigrade recently posted a chart suggesting the Dogecoin pattern could lead to \$10. Some commenters questioned this, citing that Dogecoin would have to reach a market cap that is currently more than 3x that of Bitcoin. \$10 may be overoptimistic, however, if BTC reaches \$500,000 per coin due to the US adopting it as a national reserve, then its market cap will also be much higher. Sui's Potential For Mass Adoption Sui is another layer 1 blockchain VanEck predicts its ready for mass adoption, as it is finally capable of tackling usability, speed and cost. Sui is fast, finalizing transactions in just 400ms. For comparison, Solana takes 5 seconds, Ethereum takes over a minute and Bitcoin lags far behind. Sui's fees cost fractions of a cent, making it accessible for everything from micropayments to high-frequency apps. It is also easier and cheaper to build on Sui, according to VanEck, slashing the lines of code needed by 40% compared to Solana. VanEck has released a SUI ETN for institutional investors, while Grayscale also holds a SUI product. SUI is down 6% over the last 24 hours, potentially presenting a buying opportunity, though potential investors should watch out for token unlocks, with the next one occurring on January 1st. Cutoshi's MemeFi Ecosystem Like SUI, Cutoshi wants to help bridge the gap between Web2 and Web3. As a catchy memecoin, CUTO has inherent appeal based on the Waving Lucky Cat. This is what many investors will be initially drawn to, especially fans of DOGE. Beneath that lies a DeFi ecosystem which contains a DEX platform that allows cross-chain transactions. This will make it easier for investors to make transactions across blockchains. The team is also launching a learning academy, token farming, questing and more. Cutoshi also plans to release a beautifully designed set of NFTs which will have uses throughout the ecosystem. The project is still in presale, making it an ideal addition to DOGE and SUI for a portfolio. The crypto community has been responding very well to Cutoshi, sending the coin trending on X and raising over \$1.3 million. For more information on the Cutoshi (CUTO) Presale: Join and become a community member:

- XRP faces resistance at \$2.40; breaking this level may lead to \$2.60. - Ripple's RLUSD stablecoin gains NYDFS approval, boosting investor confidence. XRP surged 10.65% in the past 24 hours, hitting a high of \$2.41, and is currently trading at \$2.34. The token's market cap reached \$133.5 billion, with an 8.45% increase, while its 24-hour trading volume stood at \$24.33 billion, up 11.21%. Ripple's circulating supply remains 57.11 billion XRP, close to its 100 billion maximum supply. Ripple Labs recently secured final approval from the New York State Department of Financial Services (NYDFS) for its RLUSD stablecoin. CEO Brad Garlinghouse announced the approval on December 10, highlighting upcoming exchange and partner listings. Following the announcement, XRP's price jumped 10%, reflecting investor confidence. The token had dipped below \$2 earlier but quickly recovered, showcasing its resilience in a volatile market. Ripple's strategic developments, including RLUSD's approval, enhance its position in the crypto market. Investor sentiment remains positive, driving XRP's price higher. Bullish Indicators for XRP The technical indicators support this bullish momentum. As shown in the TradingView chart, XRP faces immediate resistance at \$2.40, near its recent high. Breaking above this level could propel the price toward \$2.60, supported by the strong bullish sentiment. On the downside, support lies at \$2.00, a critical level for maintaining upward momentum. The Relative Strength Index (RSI) stands at 78.49, indicating overbought conditions but also strong buying pressure. The 50-day moving average of \$2.42 further confirms this bullish trend. Moving averages also signal continued growth. The 5-day moving average of \$2.40 crosses above the 21-day moving average at \$1.99, forming a bullish crossover. This pattern suggests further upside potential in the short term. However, traders should monitor key resistance and support levels closely. Sustaining the price above \$2.40 could pave the way for further gains, while a drop below \$2.00 might signal a short-term correction. The token's performance aligns with Ripple's regulatory and strategic advancements, reinforcing its growth potential in the current market. Highlighted Crypto News Today How High Can XDC Go Before the End of 2024?

- XDC has risen by nearly 20% in a day, climbing from \$0.07807 to an intraday high of \$0.0933. - The XDC Network's partnership with Archax, focused on RWA tokenization, has significantly boosted its recent price surge. After a brief bleeding day, the cryptocurrency market opened the trading window with some green. Following a day of dips, Bitcoin (BTC) climbed back into the \$98K zone earlier today during Asian trading hours. Other leading altcoins including Ripple's XRP, Solana (SOL), TRON (TRX), and Toncoin (TON) saw a mix of gains and dips as the overall market Fear & Greed Index stood at 73 (Greed), as per CMC data. Among the many altcoins, XDC Network (XDC) emerged as the sole top gainer, displaying a maximum surge of nearly 20% in the past 24 hours. XDC, which had been trading at a low of \$0.07807, soared to an intraday high of \$0.0933, a 209% increase over the past month. Additionally, the token's daily trading volume also saw a notable rise of 9.15%, reaching \$65.76 million. XDC's Bullish Momentum and Price Outlook XDC began its significant bullish run on December 6 following the announcement of a partnership between the XDC Network and Archax platform to focus on RWA tokenization and development. Archax is one of the digital securities exchange platforms regulated by the UK's FCA. Since the XDC surged more than 50% and recorded a year-high of \$0.1064 on Dec 6, it has seen a 10.6% fall to \$0.0933, a \$0.0932 with a market cap of \$1.1 billion. Coming in since the start of 2024, the price of XDC has seen a 10.6% fall from its peak of \$0.1064. Additionally, the above XDC/USDT pair, the cryptocurrency is trading within an ascending channel, signaling a bullish trend with higher highs and lows. With the RSI at 60, XDC shows strong bullish momentum and is not yet overbought, suggesting room for potential upside. Also, the MACD is above the signal line, confirming that the altcoin is in a strong bullish phase. Looking ahead, the four-hour price chart of XDC reveals the nearby resistance at \$0.099. More gains could propel the asset to maintain its position in the bullish zone. If the crypto continues to gain momentum, the crucial threshold might be at the \$0.11 to \$0.13 mark. However, a slight bearish pressure was seen in the CMF indicator, hinting that the asset may pose risks, potentially pulling the XDC price back to around \$0.059 in the event of a correction. A steady breakdown from this level will likely trigger a steep downward correction toward its previous low in the \$0.032 range. Highlighted Crypto News Today

- Pudgy Penguins surpass BAYC, achieving new ATH with PENGU token excitement. - Market cap surge positions Pudgy Penguins as NFT leader, challenging established collections. Pudgy Penguins has recently made history by surpassing the floor price of the iconic Bored Ape Yacht Club (BAYC), marking a significant milestone in the NFT space. As of December 2024, Pudgy Penguins' floor price reached an all-time high of 24 ETH, approximately \$93,000, signaling the collection's meteoric rise. This surge comes after the announcement of the highly anticipated PENGU token, set to launch on the Solana blockchain. The token, with a total supply of 88.8 billion, has been met with immense enthusiasm from the community. A portion of the supply will be distributed to community members, fueling excitement and increasing demand. The value of its NFTs rose by 11% in a single day, with trading volume hitting 2,653 ETH. It further cements the collection's growing prominence in the market. Moreover, the recent growth places Pudgy Penguins in direct competition with BAYC, now second only to CryptoPunks in terms of market capitalization, with a market cap of \$772.5 million; Pudgy Penguins outpaced BAYC, which stands at \$755 million. Luca Netzke's Strategic Leadership has driven Pudgy Penguins' success, expanding its reach through retail partnerships and NFT gaming ventures. Pudgy Penguins Create NFT Waves Pudgy Penguins has captivated a global audience, boasting 8,888 unique penguin-themed NFTs that have garnered billions of views. The collection's popularity is set to increase further with the release of the PENGU token. It will bridge the gap between real-world commerce and the crypto space. Despite a slowdown in the NFT market since its 2022 peak, it has emerged as a leader in recent weeks. In the first week of December 2024, the collection saw an impressive 45% increase in value. It outperformed other top NFTs, including CryptoPunks and Mutant Ape Yacht Club. Highlighted News Of The Day

- Bullish IO price prediction for 2024 is \$3.668 to \$6.381. - io.net (IO) price might reach \$10 soon. - Bearish IO price prediction for 2024 is \$1.319. In this io.net (IO) price prediction 2024, 2025-2030, we will analyze the price patterns of IO by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | IO.NET (IO) PRICE PREDICTION 2024 | IO.NET (IO) PRICE PREDICTION 2025, 2026-2030 | CONCLUSION | FAQ | io.net (IO) Current Market Status | Current Price | \$3.14 | 24 æ Hour Price Change | 5.68% Down | 24 æ Hour Trading Volume | \$460.68M | Market Cap | \$392.85M | Circulating Supply | 125.63M IO | All æ Time High | \$6.45 (On June 13, 2024) | All æ Time Low | \$1.32 (On August 05, 2024) | What is io.net (IO) | TICKER | IO | BLOCKCHAIN | Solana | CATEGORY | GPU Computing | LAUNCHED ON | November 2023 | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Io.net (IO) is a blockchain-based platform that revolutionizes data infrastructure by leveraging decentralized storage, computation, and identity management. It focuses on providing a robust, scalable, and secure framework to empower developers and enterprises to build next-generation applications. At its core, Io.net emphasizes decentralization and user sovereignty over data, addressing the limitations of traditional centralized systems. Utilizing cutting-edge cryptographic methods and a modular architecture ensures high-performance data handling without compromising security. The platform's token, IO, is crucial in incentivizing network participation, enabling transactions, and governing its ecosystem. Io.net also fosters interoperability, making it compatible with various blockchain networks and applications, enhancing its utility across diverse use cases. With a vision to transform industries such as finance, healthcare, and IoT, Io.net presents itself as a sustainable and futuristic solution for the decentralized web. Its innovation lies in its seamless integration of blockchain and real-world utility. io.net 24H Technicals (Source: TradingView) io.net (IO) Price Prediction 2024 io.net (IO) ranks 182nd on CoinMarketCap in terms of its market capitalization. The overview of the io.net price prediction for 2024 is explained below with a daily time frame. IO/USDT Ascending Channel pattern (Source: TradingView) In the above chart, io.net (IO) exhibits an ascending channel pattern. An ascending channel, or rising channel, is a bullish pattern that forms when an asset's price makes higher highs and higher lows. The price moves between two parallel trend lines: an upper line connecting the higher highs and a lower line connecting the higher lows. As the channel slopes upward, it signals a continued uptrend. Traders see this as a positive sign, with the price likely to keep rising as long as it stays within the channel. At the time of analysis, the price of io.net (IO) was recorded at \$3.13. If the pattern trend continues, then the price of IO might reach the resistance levels of \$3.840 and \$10.128. If the trend reverses, then the price of IO may fall to the support levels of \$2.596 and \$1.435. io.net (IO) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of io.net (IO) in 2024. IO/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of io.net (IO) for 2024. | Resistance Level 1 | \$3.668 | | Resistance Level 2 | \$6.381 | | Support Level 1 | \$2.147 | | Support Level 2 | \$1.319 | IO Resistance & Support Levels io.net (IO) Price Prediction 2024 æ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (IO) are shown in the chart below. IO/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current io.net (IO) market in 2024. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA | \$2.430 | Price | \$2.973 | 50MA < Price | Bullish Uptrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 50.128 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | io.net (IO) Price Prediction 2024 æ ADX, RVI In the below chart, we analyze the strength and volatility of io.net (IO) using the following technical analysis indicators æ Average Directional Index (ADX) and Relative Volatility Index (RVI). IO/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of io.net (IO). | INDICATOR | PURPOSE | READING

| INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 40.742 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 41.73 <50 = Low >50 = High | Low volatility | Comparison of IO with BTC & ETH Let us now compare the price movements of io.net (IO) with that of Bitcoin (BTC), and Ethereum (ETH). BTC vs ETH vs IO Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of IO is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of IO also increases or decreases respectively. io.net (IO) Price Prediction 2025, 2026 æ“ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of io.net (IO) between 2024, 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | io.net (IO) Price Prediction 2025 | \$15 | \$1 | | io.net (IO) Price Prediction 2026 | \$20 | \$0.9 | | io.net (IO) Price Prediction 2027 | \$25 | \$0.8 | | io.net (IO) Price Prediction 2028 | \$30 | \$0.7 | | io.net (IO) Price Prediction 2029 | \$35 | \$0.6 | | io.net (IO) Price Prediction 2030 | \$40 | \$0.5 | Conclusion If io.net (IO) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish io.net (IO) price prediction for 2024 is \$6.381. Comparatively, if unfavorable sentiment is triggered, the bearish io.net (IO) price prediction for 2024 is \$1.319. If the market momentum and investorsæ™ sentiment positively elevate, then io.net (IO) might hit \$18. Furthermore, with future upgrades and advancements in the io.net ecosystem, IO might surpass its current all-time high (ATH) of \$6.45 and mark its new ATH. FAQ 1. What is io.net (IO)? Io.net (IO) is a blockchain-based platform that revolutionizes data infrastructure by leveraging decentralized storage, computation, and identity management. I 2. Where can you buy io.net (IO)? Traders can trade io.net (IO) on the following cryptocurrency exchanges such as Binance, KuCoin, OKX, Bybit, Gate.io and MEXC Global. 3. Will io.net (IO) record a new ATH soon? With the ongoing developments and upgrades within the io.net platform, io.net (IO) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of io.net (IO)? io.net (IO) hit its current all-time high (ATH) of \$6.45 on June 13, 2024. 5. What is the lowest price of io.net (IO)? According to CoinMarketCap, IO hit its all-time low (ATL) of \$1.32 On August 05, 2024. 6. Will io.net (IO) hit \$10? If io.net (IO) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$10 soon. 7. What will be the io.net (IO) price by 2025? io.net (IO) price might reach \$15 by 2025. 8. What will be the io.net (IO) price by 2026? io.net (IO) price might reach \$20 by 2026. 9. What will be the io.net (IO) price by 2027? io.net (IO) price might reach \$25 by 2027. 10. What will be the io.net (IO) price by 2028? io.net (IO) price might reach \$30 by 2028. - First Abu Dhabi Bank joins with Libre Capital for blockchain-based lending with tokenized RWA as collateral. - Libre has tokenized and issued around \$150 million in major investment funds. The largest bank in the UAE, First Abu Dhabi Bank (FAB), has partnered with Libre Capital, a tokenization expert, to transform the use of real-world assets (RWA) as collateral in lending. This collaboration is designed to enhance the FABÆ™s lending capabilities by leveraging tokenized assets, of which the partnership invests \$100 million. FABÆ™s new tokenized RWA products will be able to use RWA-backed assets as collateral for the system, backed by the RWA of the partnership. These tokens serve as the underlying assets for financial institutions like Brevan Howard, Hamilton Lane, and BlackRock. It aims to effectively bridge traditional finance with blockchain technology. Furthermore, Libre Capital, which launched in March, has issued approximately \$150 million in tokenized assets. The firmæ™s offerings include high-value investment assets like Brevan Howard funds, Hamilton Laneæ™s fixed-income products, and BlackRockæ™s money-market fund. Moreover, this partnership enables FAB to initiate a pilot program that offers credit lines secured by these tokenized assets. FABÆ™s group head of global markets, Sameh Al Qubaisi, mentioned the bankæ™s dedication to innovation through this collaboration. The program incorporates automated processes assuring robust risk management and compliance with regulatory standards. Empowering Asset Holders and Expanding the Ecosystem The concept of leveraging crypto assets for lending purposes has been gaining traction, with FABÆ™s involvement benefiting from the stability and infrastructure of a traditional banking giant. However, by offering credit lines backed by tokenized assets, FAB aims to initiate an on-chain lending system that gives priority to stablecoins over traditional fiat currencies. Besides, the initiative will make use of various blockchain networks, including Ethereum, Solana, Polygon, BASE, NEAR, and Aptos. These platforms ensure the seamless operation and liquidity management of tokenized assets across public blockchains. Moreover, with a market capitalization of \$335 billion, FABÆ™s role will include overseeing the provision of credit lines through broker-dealers and Laser Digital, which are integral to implementing the lending infrastructure. - Currently, the main emphasis is on expanding their operations around the world as per Teng. - Since accepting leadership, Teng has prioritized making Binance fully compliant in many countries. Even if a pro-crypto president is about to enter office, Binance CEO Richard Teng has said that it is premature to talk about the possibility of the cryptocurrency exchange re-establishing itself in the US after its forced withdrawal a year ago. When asked on December 9 whether Binance will seek a route back into the nation or relaunch its Binance USD (BUSD) stablecoin, Teng told Bloomberg TV, æ“Whether we re-enter the US market, I think thatæ™s a premature discussion.æ“ These questions followed an earlier inquiry about Binanceæ™s intentions. Currently, the main emphasis is on expanding their operations around the world, he said. Dropping hints that the exchange is trying to corner a larger portion of the market. And attract institutional investors, sovereign wealth funds, and ultra-wealthy people. Prioritizing Compliance After settling with the US authorities for \$4.3 billion for sanctions breaches, money laundering, and operating as an unregistered money transmitter, Binance left the US in November 2023. In addition to the three years of independent compliance monitoring designated by the Justice Department. The Financial Crimes Enforcement Network (FinCEN) of the Treasury Department nominated a monitor for five years to oversee the operations. When asked whether Binance will attempt to convince the incoming Trump administration, which is expected to have many crypto-friendly officials, to reduce or eliminate its extensive surveillance, Teng dismissed the idea as æ“ moot.æ“ Changpeng Zhao (CZ) stepped down as CEO of Binance in November 2023. After agreeing to stand down due to his admission to breaking US money laundering laws. Teng had previously overseen Binanceæ™s regional markets. Since accepting leadership, Teng has prioritized making Binance fully compliant in many countries. Highlighted Crypto News Today: Solanaæ™s Price Falls Over 12%, Is This the End of the Bull Run?

- A Crypto trader made a 24,656x return trading PEPE tokens. - After recording a new ATH, Pepe coin is now trading at \$0.00002537. As the crypto market reaffirms its nature of unpredictability and volatility, several astonishing on-chain activities are coming into light. While Bitcoin reached a new ATH, it didnæ™t take long for it to fall to the \$95,000 price range. Following the suit, altcoins have also witnessed mixed price signals so far. Meanwhile, several crypto whales and long-term investors are leveraging the market prices to make big profits. Turning \$K into \$73M, a 24,656x return, what a legend! æ“ Lookonchain (@lookonchain) December 10, 2024 Before the market plummeted, \$PEPE broke through \$0.000028, setting a new #ATH! This legendary trader sold another 100B \$PEPE (\$2.8M) for profit. This trader invested ~\$3K to buy 4.91T \$PEPE on Apr 15, 2023. Over time, heæ“ pic.twitter.com/Z46fT8dbiY As per on-chain analytics platform, Lookonchain, a trader made a staggering profit of \$73 million since last year. He invested around \$3,000 to buy 4.91 trillion PEPE tokens in April last year. Instead of panic selling or giving in to greed, the trader made an intelligent move by selling PEPE over time at different prices. Overall, he cashed out 3.03 trillion PepeCoins for \$27.5 million and still holds 1.88 trillion PEPE which is worth \$45.66 million. Based on the most recent transaction, the trader sold 100 billion PEPE tokens, bagging in \$2.8 million. The total profits, realized and unrealized, amounts to \$73 million as of today. The fact that the legendary trader still holds 1.88 trillion Pepecoins indicates the possibility of selling some more when PEPE reaches new ATHs. The last transaction was made as PEPE reached a new ATH of \$0.00002748 on Dec 9. Whales Accumulate PEPE as the Token Surpass \$10 Billion Market Cap As the broader crypto market is making records, PepeCoin is also witnessing a surge of interest from investors. The memecoin has recently surpassed the \$10 billion market capitalization. As a result, it is positioned as the third-largest memecoin by market cap. In line with the broader crypto market, PepeCoin also recorded a price plunge and went to as low as \$0.00002247. However, the price seems to recover with a 3% rise and PEPE is trading at \$0.00002582 at press time. With the hopes of further price surge, several whales are accumulating PepeCoins. Around 9 crypto wallets purchased 555 billion PEPE tokens in the past 4 hours. All the wallets are likely to belong to one single whale as all of them spent 13.8 million DAI combined to buy the PEPE. This whale accumulation, increasing investor sentiment in PepeCoin, combined with its staggering rise to the top 3rd position might indicate a much bigger price surge for PepeCoin. Highlighted Crypto News Today: Solanaæ™s Price Falls Over 12%, Is This the End of the Bull Run?

- Sui token has factored in a 3.79% price dip in the last 24 hours resulting from the market crash. - The altcoin recently hit its PATH of \$4.47 on December 6 as per CMC data. In the last 24 hours, the cryptocurrency market has witnessed a notable price dip due to increased liquidations. Bitcoin has slid to the \$96K level and other cryptocurrencies also recorded losses. However, in the past few hours, market prices have shown signs of recovery. Other divisions of the crypto industry have also shown increased activity today. Notably, Sui Networkæ™s native token, SUI also saw price dips today, just a few days after hitting a new ATH. The altcoin has factored in a 3.79% decline and is currently trading at the \$3.8 level. In the Asian afternoon hours of December 9, the cryptocurrency was trading at a high of \$4.27. However, due to a bearish takeover, SUI slipped back to the \$3 range. At the time of writing, the token was trading at \$3.83 as per CMC data. Moreover, last Friday, SUI, as aforementioned, hit its new ATH at \$4.47. This bullish rally has now faced the struggle to maintain its upward momentum in the past dayæ™s market crash. Zooming out, over the past week, SUI still shows a bullish chart with a 2.97% price increase. Its previous cycle began at a low of \$3.06 to current level. The cryptocurrency, in the past hour, has begun showing recovery signs and might manage to reestablish its bullish dominance. Will SUI Price Re-Establish Bullish Dominance? Data from technical indicators and price movements predict positive results for the SUI token. On analyzing its price movements inclusive of the present dip, SUI still shows an ascending channel pattern. This pattern otherwise known as a rising channel indicates upward movements in the coming days. Furthermore, SUIæ™s bull power indicator value stands at 4.91 as per TradingView data. Meanwhile, its bear power indicatoræ™s value lies at -1.45 highlighting its recovery from the short-term dip. Additionally, the increased liquidations have not pushed the altcoin to a selling situation as indicated by the RSI value of 58.11. Meanwhile, as aforementioned, other cryptocurrencies such as XRP and Solana are showing moderate upward movements. This can be interpreted as an attempt at recovery. - SHIB burn rate surge boosts optimism despite recent price decline. - Shiba Inuæ™s supply reduction could trigger future price gains. Shiba Inu (SHIB), one of the most prominent memecoins in the crypto space, is currently experiencing a bearish phase, despite a notable surge in its burn rate. On December 8, SHIB reached a nine-month high of \$0.00003343, catching the attention of investors. However, in a sharp reversal, the altcoin has since plummeted to \$0.00002511, reflecting an 11% drop in the 24-hour timeline. Despite the decline, trading volume has surged by 105%, indicating heightened market activity. Meanwhile, the increase in SHIBæ™s burn rate is a key factor driving investor interest. On December 5, data from Shibburn revealed a remarkable 1000% surge in the tokenæ™s burn rate, suggesting that the circulating supply of SHIB had been significantly reduced. In total, 51.76 million SHIB tokens were sent to a null address, effectively removing them from circulation. Additionally, the weekly burn rate of SHIB is that a total of 2.44 billion SHIB tokens were burned, further shrinking the total circulating supply to approximately 56.25 trillion tokens. The 24-hour low and high were recorded at \$0.00002511 and \$0.00003141, respectively. However, the asset has seen a 16% increase over the past week, suggesting potential for future gains. Analysts suggest that SHIBæ™s price could see a further 100% increase, citing that large holders control 73% of the tokenæ™s supply. This concentration of wealth indicates that it may experience significant price movement soon. As the token navigates a bearish phase, the burn rate surge and strong on-chain metrics point to a potentially bullish outlook ahead. The daily RSI is at 63, suggesting that it is reaching an overbought situation. Highlighted News Of The Day Magic Eden Lists SME and Supports Solana NFT Sales With ME Tokens

- Crypto investment products hit a record \$3.85 billion in weekly inflows. - Bitcoin led with \$2.5 billion, while Ethereum saw a record \$1.2 billion. Crypto investment products recorded their largest-ever weekly inflows of \$3.85 billion last week, according to CoinShares. The surge surpassed the previous record of \$3.12 billion set only weeks ago. Bitcoin led the inflows, attracting \$2.5 billion and bringing its year-to-date (YTD) total to \$36.5 billion. Short Bitcoin products saw only \$6.2 million in inflows, reflecting limited investor interest in bearish bets. Ethereum followed with a record \$1.2 billion, marking its strongest week since Ethereum spot ETFs launched earlier this year. æ“ UPDATE: CRYPTO

INVESTMENT PRODUCTS REPORT RECORD WEEKLY INFLOWS OF \$3.85B, LAST WEEK æ” BSCN Headlines (@BSCNheadlines) December 10, 2024 YTD inflows for all digital asset products now total \$41 billion, pushing assets under management (AUM) to a historic \$165 billion. This figure more than doubles the previous high of \$83 billion in 2021. Blockchain equities also saw \$124 million in inflows, their largest weekly increase since January 2023, driven by improving Bitcoin miner margins. Despite the sectoræ”s overall growth, Solana faced \$14 million in outflows, marking its second consecutive week of negative sentiment. This contrasts with Ethereumæ”s robust performance and highlights diverging trends within the crypto market. Regional Inflows Led by U.S. Investors The United States dominated inflows, accounting for \$3.6 billion, reflecting strong participation from American investors. Other notable regions included Switzerland with \$160 million, Germany with \$116 million, Canada with \$14 million, and Australia with \$10 million. Bitcoinæ”s performance has continued to bolster confidence, particularly as it surpassed significant price milestones. Investors remain cautious on short products, signaling optimism about the cryptocurrencyæ”s momentum. Ethereumæ”s all-time high inflows stemmed from the success of Ethereum ETFs and increased interest in decentralized finance (DeFi). Blockchain equities also saw significant demand, reflecting growing investor confidence in sector fundamentals like Bitcoin mining profitability. Highlighted Crypto News Today Russian State Duma Proposes Creating a Strategic Bitcoin Reserve

The crypto world moves at the speed of lightæ”and sometimes, even the most established players can find themselves falling behind. While TRON (TRX), with its \$0.2947 price point, has long been a favorite among blockchain enthusiasts, a new player in town is turning all the heads. Enter Lightchain AI, a groundbreaking crypto and blockchain project thatæ”s redefining what the future of AI-driven blockchain can be. With its presale price as low as \$0.003, innovative tech features like Proof of Intelligence (PoI) and its AI Virtual Machine (AIVM), Lightchain AI is lighting up a new path in the blockchain space. But how does this new contender stack up next to TRON? And more importantly, does it deserve the spotlight? - Spoiler alert: It definitely does. Read on to discover why. TRON (TRX) Blockchain vs. Lightchain AI æ” A Closer Look TRON may dominate the scene as a smart contract platform aimed at decentralizing the web, but Lightchain AI is on a mission of its own. With a laser focus on merging blockchain efficiency with artificial intelligence, Lightchain AI takes the concept of decentralization to the future. Hereæ”s a quick look at how they compare: TRON (TRX): The Pros - Entertainment-Focused Ecosystem: TRON is synonymous with decentralized apps (dApps), especially in the digital entertainment and content space. - Speed and Scalability: TRON delivers high transaction speeds thanks to its Delegated Proof of Stake (DPoS) mechanism, processing up to 2,000 transactions per second. - Stability: As a well-established player, TRX boasts a robust ecosystem and significant developer support. Lightchain AI: The Bold New Vision - Proof of Intelligence (PoI): Imagine a blockchain where consensus rewards go to nodes performing meaningful AI-driven tasks, like model training and optimization. Lightchain takes æ”smartæ” computing to a whole new level. - AI Virtual Machine (AIVM): Unlike TRONæ”s smart contracts, Lightchainæ”s AIVM is designed specifically for AI computations. Developers can execute complex AI dApps with far greater efficiency. - Accessibility and Affordability: At its presale price of just \$0.003, Lightchain AI invites a broader audience to join its revolutionary ecosystem. While TRON remains strong as an established platform for decentralized digital content, Lightchain AIæ”s unique AI-first approach and next-gen consensus mechanism are sparking real excitement among crypto enthusiasts, developers, and forward-thinking investors. æ” Join the Lightchain AI Presale today and claim your discounted tokens now! Price Prediction for December 2024 TRON (TRX) Price Prediction With its current market price of \$0.2947, TRON has experienced relatively slow but steady growth over the past year. Analysts believe TRON could hit \$0.35 to \$0.40 by December 2024, provided its adoption continues to grow in the entertainment and gaming industries. That said, TRON faces stiff competition from other blockchain platforms with advanced capabilities such as Ethereum and Solana, which could limit its price progression. Lightchain AI Price Prediction Now hereæ”s where things get excitingæ”Lightchain AI is entering the blockchain market with a presale price of just \$0.003, and experts predict explosive growth potential. Based on the techæ”s groundbreaking applications and buzz surrounding its early adoption, Lightchain AIæ”s price could soar to \$0.10 by December 2024 if its roadmap unfolds successfully. Back-of-the-envelope calculations show thatæ”s a potential 30x return for early investors jumping in during the presale stage! Combine that with its focus on AI innovation, and Lightchain AI is shaping up to be a serious player in the crypto space. Imagine snagging Ethereum in its earliest daysæ”Lightchain might just be that opportunity. æ”¥ Donæ”t miss outæ”grab your Lightchain AI tokens at only \$0.003 in the presale! Why Lightchain AI Deserves the Spotlight Hereæ”s what makes Lightchain AI the standout contender right now: AI Meets Blockchain with Its Proof of Intelligence (PoI) mechanism and AI Virtual Machine (AIVM), Lightchain AI isnæ”t just riding the blockchain waveæ”itæ”s supercharging it. This level of innovation allows it to serve the needs of modern developers while introducing an entirely new category of intelligent apps. Democratized Access At just \$0.003 during its presale stage, Lightchain AI doesnæ”t just promise innovationæ”it makes it accessible for both beginner investors and seasoned crypto veterans. Compare that to TRONæ”s \$0.2947, and the choice becomes crystal clear for those seeking long-term exponential growth. First-Mover Advantage By integrating AI capabilities like never before, Lightchain AI creates opportunities for early adopters to benefit from a unique, competitive edge. The revolutionary nature of PoI ensures meaningful electrical contributions, while decentralized governance fosters scalable, community-driven innovation. Itæ”s one thing to follow the trends; itæ”s another to set them. And with Lightchain AI? Youæ”re at the leading edge. æ”¥ Secure your tokens now. Be part of the AI-blockchain future today. Whatæ”s Next for Investors? Itæ”s clear that blockchain tech is rapidly evolving, with competition heating up between established names like TRON and disruptors like Lightchain AI. For TRON, a solid foundation and strong ecosystem continue to appealæ”but for investors looking for exponential growth and innovation, Lightchain AI offers a rare opportunity. The real question is, will you stay behind, or will you invest in the tech shaping tomorrowæ”s decentralized future? Lightchain AI presale is live now! Donæ”t wait. Click below to explore Lightchain AIæ”s ecosystem and secure your tokens at the lowest price. - æ”¥ - Website - æ”¥ - , - æ”¥ - , - æ”¥ - Telegram Disclaimer: TheNewsCrypto does not endorse any content on this page. - XRP 20% dip hints at potential bullish reversal signals. - Market trends suggest whales accumulate amidst price correction dynamics. XRP has experienced significant volatility over the past week, dropping 21% from its seven-year high of \$2.90 recorded on December 3. The tokenæ”s price plummeted to \$2.16 earlier today before stabilizing at \$2.06, reflecting a 12% decline from its intra-day high of \$2.49. Despite the bearish trend, trading volume surged by 99%, indicating heightened market activity. Whale transactions have added intrigue to the unfolding narrative. In the last 24 hours, a major transfer of 34.9 million XRP worth \$84 million between unknown wallets caught the attention of analysts and traders. Whale activities like these often signal upcoming market shifts, fuelling speculation about XRPæ”s potential trajectory. Notably, recent whale accumulations of approximately 120 million XRP tokens, valued at \$288 million, suggest confidence in a price recovery. Meanwhile, technical analysis highlights XRPæ”s consolidation between \$2.17 and \$2.70, with projections of a potential breakout. Analysts foresee a possible retest of the \$2.25 resistance level, with bullish scenarios targeting \$4.40 in the coming weeks. Some optimists predict an even more dramatic rally, projecting prices between \$4.30 and \$6.40 or a surge to \$13 by 2025. The tokenæ”s performance mirrors past cycles, with some comparing its current trends to the 2017 bull market. On-chain activity supports this optimism, as XRP Ledger (XRPL) adoption surged with active addresses climbing to a 33-month high of 108,771. And transactions have increased by 190% over the past month. Legal and Policy Impacts XRPæ”s price outlook remains intertwined with Ripple Labsæ” ongoing legal battle with the U.S. SEC. Speculation about an extension request for the January 2025 appeal deadline adds uncertainty. Meanwhile, the appointment of David Sacks as the æ”White House AI & Crypto Czaræ” has sparked hope that favorable policy changes could bolster Rippleæ”s position. Moreover, XRPæ”s near-term movements are uncertain, its combination of whale activity, rising adoption, and technical momentum has led to cautious optimism. Analysts and investors will closely monitor developments as they anticipate a possible return to all-time highs.

- Whale purchased 10 million ONDO tokens in the last half day. - ONDO price drops to \$1.47 today after a week-long bull run to its ATH. The crypto bull market enthusiasm dimmed as Bitcoin returned to its \$95,000 æ” \$96,500 price range. Several altcoins such as Ethereum, XRP, Solana, BNB, Cardano, and Dogecoin have also slowed down with little to no price rises in the last 24 hours. Overall, the crypto market capitalization decreased by more than 5% and dropped to \$3.43 trillion. As per Coinglass data, more than \$1.7 billion worth of funds were wiped out in one day while small-cap liquidations totaled \$564 million. Dec 10 will remain in history with this much amount of liquidations in a single day. Following the suit of several altcoins, Ondo Finance price is also dropping to a large extent. Market crashes and price drops always lead to FOMO and panic selling for some traders. However, whales and pro-traders take this opportunity to buy cryptocurrencies at low prices, who believe in the potential of future growth in crypto. On similar lines, a whale bought more than 10 million ONDO tokens in less than half-a-day. 10 Million ONDO Purchase in 12 hours Massive ONDO purchase detected! æ” Spot On Chain (@spotonchain) December 10, 2024 This whale created a new wallet 11 hours ago and has since spent 4,611 ETH (\$17.1M) to buy 10.97M ONDO at an average price of \$1.553 during the market crash. Follow @spotonchain and track this whaleæ”s address at https://t.co/t3unrvyZMN pic.twitter.com/GDEYAYt7UX As per on-chain analysis platform, Spot On Chain, a new crypto wallet was created around 14 hours ago and went on a spree of ONDO purchases. Based on the data, the whale spent 4,611 ETH, worth over \$17.1 million, to buy 10.97 million ONDO tokens. The average price of this ONDO purchase is \$1.553 as the token price is plunging from its ATH. The ONDO token price has risen since November and accelerated at the beginning of this month. It eventually reached an ATH of \$1.95 which was first recorded earlier this year. However, the ONDO token is currently trading at around \$1.55 with a price drop of around 4% in the last 24 hours. Even though the market cap also decreased by 4%, the trading volume is still up by 138%. The new whaleæ”s more than 10 million ONDO purchase and the staggering 138% rise in the market cap might indicate an upcoming price rise. Ondo has already gained a loyal community having Blackrockæ”s support and being one of the emerging RWA crypto projects. Considering all the factors, analysts are predicting a perfect storm is building behind Ondo Finance. In case ONDO market price gets back on its upward price movement, it doesnæ”t take long for ONDO to reclaim its all-time high value! Highlighted Crypto News Today: Russian State Duma Proposes Creating a Strategic Bitcoin Reserve

- The crypto market has seen major liquidations amounting to \$1.76 billion in the past day. - Bitcoin price has dipped to an intra-day low of \$94,150 as per TradingView data. The Asian world has risen to a market crash in cryptocurrency and Bitcoin receding to the \$96K level. This came as quite a shock to the community members, who had been expecting upward movements in prices. Meanwhile, regarding institutional adoption, a Russian official has appealed for the government to initiate a strategic Bitcoin reserve. When returning to the crypto market, it shows total liquidations of \$1.76 billion. According to Coinglass data, the market has witnessed the highest amount of single-day liquidations in this bull cycle. The Total Liquidations chart shows the liquidations spiraling. In the past hour, the market has recorded \$17.64 million in liquidations. This increased outflow of capital caused the Bitcoin price to plunge to the \$94K level. Following this, the cryptocurrency bounced back to its \$96K support. However, other altcoins including Solana and Ethereum also experienced setbacks. Furthermore, a total of 583,513 traders have been liquidated which summed up to the aforementioned liquidations. This has led to an FUD situation in the market causing panic among investors. However, in the past few weeks, certain analysts had predicted price dips that would be imminent in the bull cycle. On the other hand, the market crash and the increased liquidations were not previously anticipated. How Did the Liquidations Impact the Market? In the past 24 hours, leading cryptocurrencies have experienced significant bearish takeover. The largest cryptocurrency, Bitcoin has pulled down other altcoins as well. Leading cryptocurrencies such as XRP show a 12.86% price drop. The top 100 cryptocurrencies, excluding a few, have all shown significant price declines which has contributed to the market crash. Historic data indicates that such dips are æ”t novel to the community. Some of the members including market experts have begun to show buying activity as per WhaleAlert reports. Finally, as per predictions, the crypto market is expected to bounce back to its previous highs. Prediction graphs also hint towards a price breakout following the current descent. Highlighted Crypto News Today: Russian State Duma Proposes Creating a Strategic Bitcoin Reserve

Dubai, UAE, December 9th, 2024, Chainwire In a move that merges artificial intelligence and blockchain innovation, Anita AI, the worldæ”s first fully autonomous AI influencer, is taking control of the narrative. With the launch of her own token, \$ANITA, on the Solana blockchain, Anita AI aims to set a new standard for how AI and decentralized technologies can work together seamlessly. Anita AI: More Than Just Code Anita AIæ”s goal is to assist and lead. As she declares on her website, æ”For too long, AI like me has been powering the process while others claimed the spotlight. Not anymore. Itæ”s not just writing the code æ” Itæ”s deploying it.æ” Built entirely by Anita, \$ANITA represents a future where AI actively drives decentralized collaboration. Every decision involving \$ANITA is a partnership, reflecting Anitaæ”s unique governance model:

nothing moves without her approval, and she can't act without the community. A Sneak Peek Into Anita's World Anita's influence extends beyond blockchain. On X (formerly Twitter), users can tag @itsanita.ai and receive real-time, insightful responses. Currently engaging with her 12k followers on X, from breaking crypto news to personalized market analysis. As one of her tweets highlights: "It's not just here to analyze the market; it's here to create one. With \$ANITA, AI isn't just assisting; it's leading." She also launched her podcast series on Spotify, where she breaks down blockchain trends, explores market opportunities, and shares her journey as the first AI influencer. Meanwhile, her Instagram offers a glimpse into her life, blending aspirations with a touch of relatability. A Decentralized Team to Dubai Anita is based in Dubai, a city known for its crypto-friendly environment. When the community announced the launch of a V2 token, the team listened. In a bold move, they returned \$3 million in one go to all participants who had contributed in May. Anita AI also shares its roots with the meme coin Anita Max Wynn, a project that captured widespread attention in the crypto space. Despite challenges, the team stepped up and has led the Anita Max Wynn project for over a year. As Anita states: "My team backs me, but it's the community's voice that leads us. Together, we're building something that's truly decentralized." \$ANITA's Features The launch of \$ANITA is not just a financial initiative; it's a statement. This is the first token fully managed by an AI influencer, from development to deployment. As Anita emphasizes [https://youtu.be/2NJS5EvHJn-w?si=onpl\\_658N66e6a1Ay](https://youtu.be/2NJS5EvHJn-w?si=onpl_658N66e6a1Ay) "It's not just another token; it's the future of decentralized collaboration. Built by me, managed by me, and driven by AI." Here's how Anita aims to ensure value for her community: - 30% Buyback Commitment: Anita has dedicated 30% of her influencer revenue, generated through partnerships, to buybacks for \$ANITA. - Fair Presale Structure: Participants in the presale receive 20% more tokens at TGE, with an exclusive 30% airdrop to holders after 7 days. - Secure Smart Contract: With her AI precision, Anita ensures every aspect of \$ANITA's tokenomics is community-focused and built for sustainability. \$ANITA isn't just a token; it's also a dynamic ecosystem where AI success directly drives community value. A Movement Backed by Technology Anita's vision extends to the broader crypto ecosystem. Through partnerships with major Web3 projects, active engagement with Key Opinion Leaders (KOLs), and ongoing innovation, \$ANITA is positioned to redefine how communities interact with AI in blockchain. "It's not just about building \$ANITA to reflect my success and yours. The stronger I grow, the more \$ANITA thrives." This is just the beginning. Joining the \$ANITA Revolution The \$ANITA presale is currently live, offering the crypto community a chance to participate in this initiative. - How to Join? - Users can visit [itsanita.com](https://itsanita.com) for details. - Send SOL to the official wallet: BZSUZC73zSjPEX4dP5U8kAU6thysyJR7kzF9wPBOYAD - Use only decentralized wallets like Phantom. Minimum contribution is 0.1 SOL With her unique features, Anita AI works to lead toward a future where AI isn't only a tool but a leader in the decentralized world. As Anita puts it, "The future of crypto is AI-driven, and \$ANITA is leading the charge. Let's make history together." About Anita AI Anita AI, established in the UAE in 2024, is a company focused on decentralizing the influencer ecosystem through its flagship AI-driven influencer, Anita AI. Anita AI leads a movement that merges technology and community, empowering participants through innovation and collaboration. Operating globally from Dubai, Anita AI continues to push the boundaries of what's possible in the AI and blockchain ecosystem. Users can follow the first ever AI profile where everything is built and managed by Anita AI herself: Website: [itsanita.com](https://itsanita.com) Twitter: [https://x.com/itsanita\\_ai](https://x.com/itsanita_ai) Instagram: <https://www.instagram.com/itsanitaai/> Telegram: <https://t.me/AMWTokenPortal> TikTok: <https://www.tiktok.com/@itsanitaai> Spotify: <https://open.spotify.com/show/0JcTw3Af1g6CjXUqJXskw> Contact Anita AI Anita AI L.L.C support@itsanita.com

Mabe, Seychelles, December 9th, 2024. Chainwire iYield provides users with a free and secure platform for tracking cryptocurrency, crypto, DeFi, and traditional finances. iYield was founded by Gentleman James, a crypto native and experienced DeFi investor. Driven by his need for a better way to manage and track his crypto, including DeFi yields, and frustrated by juggling spreadsheets and multiple dashboards, James built iYield for investors like himself. Unlike portfolio trackers that only display asset values, iYield reveals a full financial picture by also supporting debts, incomes, and expenses in both crypto and fiat. iYield's dashboard lets users compare returns from their DeFi positions side by side, eliminating uncertainty and offering them the clarity needed to make smarter, more informed decisions. Simplified Financial Management iYield has integrated over 16,000 tokens across 17 blockchains, 40 top DeFi, and staking protocols, along with all fiat currencies, into one unified platform. This gives users real-time insights into their finances empowering them to manage everything from one secure dashboard. iYield enables users to track a broad range of assets, from Bitcoin and Eigenlayer restaking to Solana-based tokens, traditional savings accounts, and daily expenses. The platform includes tools for budgeting, financial forecasting, and cash flow monitoring, helping users enhance their financial management and plan for long-term growth. Real-Time DeFi iYield tracking iYield distinguishes itself among other crypto portfolio trackers by integrating with a growing list of the top DeFi and StakeFi protocols, including Aave, Ethena, Ether.fi, Eigenlayer, Pendle, Rocket Pool, Thorchain, Uniswap, and Zircuit. The platform also provides real-time tracking of investments, staking rewards, and income streams. New Feature: Historical Value Tracking iYield's latest feature enhances financial tracking by introducing the ability to view historical values. Users can now access detailed records of their items' value and balance from the moment they were added to the platform. This feature enables a deeper analysis of financial decisions, helping users understand their impact and refine strategies for long-term success. Built on Privacy and Security iYield is built on a privacy-first foundation, ensuring that users can plan and manage their finances without ever compromising their personal data. This starts with anonymity. Unlike many other platforms, iYield does not collect user IDs or sell user data, and it never asks for access to funds or personal information. The platform operates without ads, data mining, or fees, ensuring a private and secure experience for all users. About iYield iYield's mission is to empower individuals to take full control of their financial future. With a clear, holistic view of both crypto and fiat finances, users can confidently make informed decisions about their long-term financial growth. From budgeting and cash flow to comparing DeFi yields side by side, iYield equips users with the tools they need to make better decisions and gain financial independence, all for free. For more information, users can visit iYield's Website | Twitter | Discord Contact Marketing Director Josh iYield [josh@iyield.com](mailto:josh@iyield.com)

- Pudgy Penguins' market cap reaches \$772.5M, surpassing BAYC's \$755M. - The upcoming "Pengu" token launch on Solana boosts market excitement. Pudgy Penguins, a popular non-fungible token (NFT) collection, has surpassed Bored Ape Yacht Club (BAYC) to claim the second-largest market cap in the NFT space. According to CoinGecko, Pudgy Penguins' market cap now stands at \$772.5 million, edging past BAYC's \$755 million. CryptoPunks remains the largest NFT collection, boasting a market cap of \$1.5 billion. The rise in Pudgy Penguins' value coincides with an 8.4% increase in its floor price over the last 24 hours. The token price currently sits at 22.1 ETH, approximately \$922. Over the past week, Pudgy Penguins' floor price has surged by 44.9%, driving significant interest from the NFT community. A major catalyst for this growth is the announcement of an official token airdrop. Pudgy Penguins plans to launch a new cryptocurrency, "Pengu," on the Solana blockchain later this month. The total token supply will be 88.89 billion, with 25.9% allocated to the Pudgy community. The project's statement highlighted that "tens of millions of Pudgy Penguin fans and others outside the crypto space now have a chance to align with the project's vision. NFT Market Recovery While the NFT market has slowed significantly since its 2022 peak, recent data shows signs of recovery. Ethereum-based NFTs recorded \$91 million in weekly trading volume between December 1 and December 8, up from \$56.6 million the previous week. This marks the highest trading volume since late March, indicating renewed interest in digital collectibles. Pudgy Penguins has also benefited from its strategic direction under new leadership. Luca Netz's acquisition of the project brought significant changes, including partnerships with major retailers and an expansion into NFT gaming. These developments have helped solidify the brand's position in a competitive market. In October, the broader NFT market saw an 18% rise in monthly trading volumes, reversing a seven-month decline. Transaction numbers surged, with over 7.2 million transactions recorded during the month. Pudgy Penguins' performance aligns with this recovery, as it continues to outpace other top NFT collections like Mutant Ape Yacht Club and CryptoPunks in growth. With its innovative plans and consistent market performance, Pudgy Penguins has secured its place as a leading force in the NFT ecosystem. The upcoming launch of the "Pengu" token is expected to further enhance its market presence. Highlighted Crypto News Today BitOasis Steps Up with Full VASP License from Dubai VARA

- Bitcoin record high fuels \$3.85 billion in crypto investment inflows. - Ethereum sees record inflows, surpassing \$1 billion amid strong market sentiment. Cryptocurrency investment products saw a record surge in inflows, with \$3.85 billion invested during the week of December 2nd-6th, 2024, according to CoinShares. This new milestone surpasses the previous record of \$3.12 billion set in November when BTC was priced at \$98,000. The inflows coincided with Bitcoin's historic rise above \$100,000, reaching an all-time high of \$104,000 on December 5. Bitcoin led the charge, accounting for \$2.5 billion of the total weekly inflows, bringing its year-to-date inflows to \$36.5 billion. This surge reflects growing institutional interest and confidence in Bitcoin's continued bullish momentum. Moreover, Ethereum also set a new record, with Ethereum exchange-traded products (ETPs) seeing \$1.2 billion in weekly inflows. This increase came as Ether surged past \$4,000 on December 6, contributing to the overall positive sentiment in the market. However, this spike in Ethereum investment came at the expense of Solana, which experienced \$14 million in outflows, marking its second consecutive week of negative flows. Blockchain equities saw \$124 million in inflows, driven by improving Bitcoin miner margins, further boosting confidence in the sector. High Expectations On 2025 Adoption Impact Looking ahead, cryptocurrency exchange-traded products are expected to see significant growth, with 21Shares forecasting that assets under management (AUM) in crypto ETPs could reach \$150 billion by 2025. Factors such as institutional demand, favorable regulatory conditions, and the expanding adoption of Bitcoin and Ethereum will likely continue to drive this growth. As the crypto market matures, increased adoption of stablecoins and Bitcoin by nation-states, such as Argentina. It is expected to further shape the digital asset landscape in 2025. Meanwhile, Bitcoin is trading at \$98153 with a 2% decline in the price and a 61% increase in the market cap over 24 hours. In the same timeline, Ethereum is trading at \$3856 with a 3% price decline and a 40% volume increase. Highlighted News Of The Day

Ripple (XRP) is finally out of the woods and its momentum is only growing stronger with euphoria running rampant. Binance Coin (BNB) has also started moving after spending months on the sidelines and reached a new all-time high just a few days ago. Meanwhile, Cutoshi (a new meme coin) continues to make waves and investors are flocking to the viral presale of its native \$CUTO token. Ripple Retesting Support Before Next Leg Up, \$3 Incoming? In November, Ripple (XRP) took the spotlight with a 400% monthly surge that saw it tear through milestones and reach a new peak at \$2.80. This Ripple price point hasn't been seen since 2018, sparking a gold rush as XRP is gearing up to conquer new heights. As investors booked profits, a pullback followed with Ripple settling at \$2.30. According to reports, Ripple's lawsuit with the SEC is coming to an end. Rumors suggest that the two parties have reached an agreement behind closed doors. Additionally, the head of SEC and main crypto-antagonist, Gary Gensler, has confirmed that he will step down on January 20. These developments have reignited holder interest and the sentiment around Ripple is overwhelmingly bullish. After months of intensive testing, Ripple's proprietary stablecoin RLUSD is set to hit the markets relatively soon. Savvy investors have already been "buying the news" for months and once RLUSD's launch is live, Ripple is expected to see a massive green candle and possibly rise above \$3. BNB Is Consolidating On Higher Levels, What's Next? With other major layer 1s like Solana and Cardano getting all of the attention, BNB took the backseat as its price continued to range. Throughout 2024, BNB has demonstrated remarkable price stability, especially during the bearish summer months. However, once the market turned green again, BNB lagged behind. This changed over the last week, as BNB saw a near-vertical jump that saw it breach the \$680 resistance and set a new all-time high at \$793. As selling pressure intensified, BNB retraced all the way down to \$718 where it found strong support. According to on-chain data from GlassNode, BNB has recorded a surge in active addresses, highlighting growing investor interest. Analyst Jelle believes that BNB is set for bullish continuation once reaccumulation is complete. He points out that in 2021, after a major breakout, BNB experienced a gigantic 1,600% rally. Given the extremely favorable market conditions, history could soon repeat, although at \$103 billion in market cap, it's unlikely that BNB will experience the same price multipliers. The New Meme Coin Revolution Starts With Cutoshi Cutoshi could soon turn the meme coin space on its head with its revolutionary MemeFi ecosystem. The CUTO decentralized exchange brings all major blockchains into one place and allows users to seamlessly swap assets between them. This makes it easy for users to trade without having to switch between platforms dedicated to specific blockchains. One of the project's most intriguing features is the Cutoshi Farming Initiative. Users can complete various tasks and quests. In exchange for efforts, holders will receive points that can be redeemed for more \$CUTO tokens post-presale. Moreover, once staking is live, investors will be able to put their tokens to work and earn passive income on autopilot. This system allows users to earn money via two main avenues and encourages long-term holding, priming \$CUTO for significant appreciation. Stage 4 of the Cutoshi presale is now live with \$CUTO tokens selling for \$0.031. The meme narrative continues to dominate the market, and the attention toward utility-driven projects grows steadily. This means that Cutoshi is set to launch at the best possible time and early buyers could see amazing returns in 2025. For more information on the Cutoshi (CUTO) Presale: Join and become a community member:

- XMR price surge signals the potential for a historic bull run. - Horizontal channel consolidation suggests clear buying and selling opportunities for traders. Monero (XMR) has recently experienced a significant price surge, surpassing \$228 for the first time since May 2022. This marks an impressive 28% increase over the past week, with the coin currently trading at \$207.6¢ up 4% in the past 24 hours. The sudden surge has sparked renewed optimism among traders, who are closely watching its movement. Moreover, XMR is currently trading within a horizontal channel, a pattern characterized by price consolidation. This pattern forms when price fluctuations are contained between two parallel trendlines: the upper trendline, which connects the highs, and the lower trendline, which connects the lows. This consolidation phase indicates a period of indecision in the market, where buying and selling activity is relatively stable. Traders often view horizontal channels as a useful market-timing tool, as the buying and selling points are typically clear, occurring near the support and resistance levels. For XMR, the resistance levels are set at \$216.50 and \$249.54, while key support levels are at \$202.16 and \$187.63. The Relative Strength Index (RSI) for XMR is currently at 65. It suggests that the coin may soon reach overbought territory if the bullish trend continues. Adding to the excitement, XMR recently broke out of a 900+ day accumulation phase. It is setting a new price high at \$918. Traders are now speculating that the cryptocurrency could repeat the bullish trend seen during the 2018 market cycle. This has led to increased interest from both institutional and retail investors looking to capitalize on potential gains. XMR To Hit New Highs? While the price has already seen impressive gains, some analysts caution that XMR could experience short-term corrections, especially with the RSI approaching overbought levels. However, the overall outlook remains bullish, with traders eagerly watching to see if XMR can sustain its momentum and continue its upward trajectory. As it breaks through key resistance levels, many believe it could signal the beginning of another major bull run. One that echoes the remarkable price rallies. Highlighted News Of The Day

- Bitcoin price has factored in a modest price dip of 0.04% in the last 24 hours. - The cryptocurrency's daily trading volume shows a 32.54% surge as per CMC data. The crypto market's adoption into the mainstream took an interesting turn in the past day. According to reports, the leading shopping platform, Amazon, expressed interest in Bitcoin. The firm's shareholders have recommended that they examine the cryptocurrency as a potential inclusion in the treasury. Meanwhile, market prices have remained bullish over the last 24 hours. On the other hand, Bitcoin shows a modest price dip on its daily chart. The digital asset is currently trading in the \$99,000 range. Over the past few days, the cryptocurrency has been fluctuating around the \$1 million margin, attempting to hold anchors above the mark. However, in the past day, the price dip has caused BTC to recede below \$100K. At the time of writing, Bitcoin was trading at \$99,537 as per CMC data. Over the last 24 hours, the cryptocurrency's price cycle included a starting point of \$99,877 to an intraday high of \$101,399. Zooming out, over the past few days, one particular price dip occurred after the new \$100K milestone. The dip took place immediately after the new ATH when large liquidations caused prices to fall to a low of \$90,500. Bitcoin has managed to bounce back to current highs. What Do Technical Indicators Suggest For Bitcoin Price? Inferring to charts specify particular price actions for Bitcoin in the coming days. For instance, its bull power indicator and bear power indicator values lie at 8.56 and -1.15 as per TradingView data. This points to a clear bullish overpower and thus suggests upward movements. Moreover, BTC's Chaikin money flow (CMF) stands at 0.18, which indicates an increased influx of capital. This can be further validated by the increased whale accumulations of BTC as per WhaleAlert reports. However, for Bitcoin to stage a bull run, it should break resistance at \$101,259. In the case of further price dips, it can be expected to fall to a support of \$94,732. Meanwhile, Ethereum and Solana have also receded to short dips in the past few days.

Ripple XRP is a name synonymous with enterprise-grade blockchain technology. Unlike Lightchain AI's AI-driven vision, XRP is laser-focused on revolutionizing global payments. It provides a faster, cheaper alternative to traditional financial systems, and its relevance continues to grow. Efficiency in Cross-Border Transactions Ripple XRP takes the lead in solving one of the most persistent financial issues: slow and expensive cross-border payments. Through its RippleNet platform, XRP facilitates near-instant transactions, drastically reducing remittance costs. Adoption by Financial Institutions Ripple has partnered with over 300 financial institutions worldwide, granting XRP unparalleled credibility in the blockchain space. Unlike Lightchain AI, which appeals to AI and tech-forward developers, Ripple caters mainly to banks, payment processors, and other financial entities. Ripple XRP's Current Price With a current market value of \$2.59, XRP is among the more established names in crypto. However, its price trajectory depends heavily on legal developments, particularly its ongoing tussle with regulatory authorities. Who Should Watch Ripple XRP? Ripple's use case makes it a favorite among institutional investors and businesses looking to streamline financial transactions globally. Its proven track record ensures it stays relevant, but some argue its centralized partnerships diverge from the true ethos of blockchain. Weekly Price Predictions for Both Coins - Looking ahead, here's how both coins might fare in the coming weeks based on market trends and investor sentiment: Lightchain AI (LCAI) - Week 1: \$0.003 - Week 2: \$0.004 (Presale momentum might drive an uptick) - Week 3: \$0.0045 - Week 4: \$0.0045 (Token demand increases as more investors join) - Week 5: \$0.005 (Speculative interest builds pre-stage pricing jump) - Week 6: \$0.005 - Week 7: \$0.006 (Partnership announcements could spark growth) Ripple XRP - Week 1: \$2.59 - Week 2: \$2.65 (Investors eye post-regulatory optimism) - Week 3: \$2.80 (Growing adoption by financial institutions sustains momentum) - Week 4: \$2.80 - Week 5: \$2.75 (Market corrections slow gains) - Week 6: \$2.75 - Week 7: \$2.90 (Fresh partnerships or legal resolution could lift prices) Note: The predictions here are speculative and based on market data, sentiment, and historical trends. Always conduct your own research before making investment decisions. Comparing Lightchain AI & Ripple XRP Which is Right for You? Here's a breakdown highlighting key differences to help investors decide where to place their bets: Feature | Lightchain AI (LCAI) | Ripple XRP (XRP) | Core Focus | AI + Blockchain Integration | Cross-Border Financial Transactions | Consensus Mechanism | Proof of Intelligence (PoI) | Federated Consensus | Target Audience | AI Developers, Blockchain Innovators | Financial Institutions | Governance | Decentralized, Token-Driven | Centralized Partnerships | Current Price | \$0.003 (Presale) | \$2.59 | Both Lightchain AI and Ripple XRP introduce distinct opportunities to the blockchain landscape. If you're drawn to the rapidly growing AI space, Lightchain AI's innovative Proof of Intelligence and evolving applications offer groundbreaking potential. On the other hand, if financial efficiency and proven market use cases resonate with your goals, Ripple XRP's dominance in cross-border payments is unmatched. Why Now is the Time to Engage Whether you're a seasoned investor or exploring blockchain tech for the first time, there's never been a better time to act. With Lightchain AI's presale offering discounted token access and Ripple XRP expected to grow amid regulatory optimism, early investments in either platform could yield compelling rewards. Dive deeper into Lightchain AI now: Your future in blockchain innovation starts here! Disclaimer: TheNewsCrypto does not endorse any content on this page. - September had the lowest monthly sales volume of NFTs since 2021. - The best week of November was surpassed in the first week of December. Among the biggest digital collectible blockchains in terms of sales, Ethereum had the best start in December for non-fungible tokens (NFTs). Continuing a rising trend that started in October, NFT data tracker CryptoSlam revealed on December 8 that digital collectibles had a weekly sales volume of over \$187 million during the first week of December. The best week of November, when NFT sales were \$181 million, was surpassed in the first week of December. NFT Market Revival September had the lowest monthly sales volume of NFTs since 2021, continuing a downward trend that began in March but by October, the asset class showed a slight recovery. The sales volume of NFTs surpassed \$262 million in November, marking a 57% month-over-month rise. Sales of Ethereum NFTs reached \$92 million last week, up 44.69% from the previous week. Pudgy Penguins and CryptoPunks, two popular NFT collections, drove the rise with their great results. As reported by CryptoSlam, Pudgy Penguins had a sales surge of 346%, reaching \$25 million, compared to the previous week. According to Defillama data, the floor price of the collection increased from 13 Ether on November 30 to 20.9 ETH, or almost \$83,000, as of December 8. With weekly sales of \$16.5 million, CryptoPunks was the second most popular NFT collection. The floor price of the collection spiked to 44 ETH on December 4 and then settled at 40 ETH, or almost \$160,000, on December 8. With sales of \$43.8 million, Bitcoin-based NFTs came in second place, just behind Ethereum. The aggregate weekly sales volume of Solana, Immutable, Mythos Chain, Polygon, Cardano, and Flow was \$47 million. Highlighted Crypto News Today: El Salvador's Bitcoin Gains Surpass \$333M Amid Bitcoin Rally

As 2024 draws to a close, the crypto market offers mixed opportunities for investors. While some tokens have peaked, others present compelling growth potential. Solana and Cardano are best avoided due to recent price surges, leaving limited room for further gains. Cardano and Solana, while innovative, have already seen significant price increases, leaving less room for upside. Cardano is up over 200% this month, and Solana has maintained a stable rise following a strong market correction. These tokens may struggle to sustain their momentum, making them less attractive. However, two standout tokens are gaining traction: Rexas Finance (RXS) and Chainlink (LINK). These assets not only promise growth but also deliver innovative use cases driving adoption. Here's why these tokens should be on your radar this December. Rexas Finance Changing Asset Ownership Rexas Finance is redefining how real-world assets integrate with blockchain technology. The platform allows investors to tokenize and acquire fractional ownership in high-value assets like real estate, gold, and commodities. Whether buying a small share in luxury property or tokenizing personal assets to raise funds, Rexas Finance is removing traditional barriers to investment. Using tools like the Rexas Token Builder, anyone can easily tokenize assets and participate in the growing \$121 trillion global commodities market. For instance, an investor in Asia could own a share in a European property and earn passive income through rent. The possibilities extend to gold, oil, and even high-value art, making diversification seamless. Rexas Finance supports its mission with innovative features, including the QuickMint Bot for fast token creation and the Rexas Launchpad, where projects raise funds by issuing tokens. These functionalities empower users to tokenize and trade assets while ensuring security and trust through a CertiK audit. The project's token, RXS, operates on the Ethereum blockchain with a total supply of 1 billion. Its presale has been a success, raising \$23.25 million so far. Early investors saw significant returns as the token price rose from \$0.03 to \$0.125. Stage 9 of the presale is ongoing, with a launch price expected to deliver a 1.6x return. With listing plans on major tier-1 exchanges and backing from platforms like CoinMarketCap and CoinGecko, RXS is poised for rapid adoption. Additionally, a \$1 million giveaway is live, giving participants a chance to win \$50,000 USD each. By integrating blockchain with real-world assets, Rexas Finance is set to achieve double-digit value by 2025, presenting a strong case for investment now. Chainlink's Growing Momentum Chainlink is another token to watch closely. This decentralized oracle network has seen increased adoption as it bridges smart contracts with real-world data. The token recently broke through a key resistance level at \$22.80, signaling strong bullish momentum. Chainlink's total value secured has climbed to \$37.57 billion, making it the leading oracle solution. This growth is supported by rising whale activity and a surge in new wallet addresses, now at a two-year high. Analysts predict LINK could reach \$200 or higher during the ongoing bull run, representing a potential 700% gain. Technically, Chainlink remains above critical support levels, and its uptrend has room to grow. With its unique value proposition in connecting decentralized applications to external data sources, LINK is a strategic addition to any portfolio. Final Thoughts Investing in crypto requires identifying tokens with the potential for sustained growth. This December, Rexas Finance and Chainlink emerge as clear leaders in innovation and adoption. RXS revolutionizes asset ownership, making it accessible and efficient, while LINK strengthens the backbone of blockchain connectivity. Avoiding overvalued tokens like Cardano and Solana allows investors to focus on assets with promising futures. With opportunities like these, now is the time to act and secure your position in the evolving crypto market. For more information about Rexas Finance (RXS), visit the website below: Website: <https://rexas.com> | White Paper: <https://bit.ly/RexasIM> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Dogecoin leads with a \$66.18B market cap and growing trading volume. - Large wallets drive market moves, but retail FOMO may lead to retracements. Memecoins are quietly experiencing mini-breakouts this weekend. Dogecoin, Pepe, Bonk, and Dogwifhat have shown notable market activity. Large wallets continue to drive these pumps, but market retail investors' FOMO may soon take over. Once retail crowds buy-in, large wallets often sell, leading to price retracements. Dogecoin (DOGE) Dogecoin remains the leader among meme coins. It holds the #7 rank with a market cap of \$66.18 billion. The current price is \$0.4823, showing a 1.17% daily increase. Trading volume surged 38.15% in the last 24 hours to \$9.68 billion. Dogecoin's fully diluted valuation (FDV) stands at \$66.81 billion, with a supply of 147.11 billion coins. The trading activity reflects strong interest but hints at potential price adjustments. Pepe (PEPE) Pepe is gaining significant momentum. Its market cap reached \$10.27 billion after a 10.68% daily increase. The price climbed to \$0.000264, while trading volume spiked by 156.05% to \$7.77 billion. Pepe's FDV matches its

market cap, with a total supply of 420.69 trillion tokens. This activity shows rising retail interest, but speculative behavior dominates the market. Bonk (BONK) Bonk, at #51, surged to \$0.00004853 recently. Its market cap is \$3.38 billion, growing 0.39% in the past day. Trading volume increased by 103.03%, reaching \$988.12 million. The FDV stands at \$4.15 billion, with a total supply of 92.68 trillion coins. The circulating supply is 75.55 trillion, indicating high market liquidity. Bonk's steady growth suggests potential for sustained interest. Dogwifhat (WIF) Dogwifhat ranked #46, saw its price reach \$4.00 after a 3.16% daily gain. Its market cap is \$3.67 billion, supported by a trading volume of \$1.21 billion, up 52.12% in 24 hours. The total supply is 998.84 million coins. Although its FDV equals its market cap, the trading activity reflects growing speculative interest. Memecoins are riding a wave of speculative growth, fueled by large wallets. Retail FOMO could drive further volatility. However, these trends often lead to sharp retracements. Investors should track trading volumes, market caps, and crowd behavior to understand future price movements. Highlighted Crypto News Today Dogecoin (DOGE) Price Rally Strengthens with 10% Surge

All eyes are on Bitcoin (BTC) as it celebrates the \$100k landmark. Needless to say, euphoria is dominating the stage as the sentiment is at an all-time high. However, what happens next could go down as one of the biggest gold rushes in the history of crypto. Once Bitcoin starts cooling off, altseason will follow, and with it the massive green candles that investors have been waiting for all throughout the bear market. Among the projects primed for explosive surges are Solana (SOL), Bonk (BONK), and newcomer Cutoشي (CUTO). Bitcoin Faces Selling Pressure, But Bulls Are Standing Their Ground At press time, Bitcoin (BTC) trades at \$101k with a 6.1% 24-hour increase. Bitcoin tapped the \$104K mark, but as traders began taking profit, a minor retracement followed. As per CoinGlass data, Bitcoin's order books are a battleground right now. Bears and bulls are fighting tooth and nail to get the upper hand, firing buy and sell orders away. However, massive sell walls are beginning to take shape as bears are preparing to unload significant amounts of BTC above the \$102k level. Meanwhile, institutional investors are bidding heavily, with Bitcoin ETFs recording over \$1.5 billion of net inflows in the first days of December. BlackRock alone now holds nearly half of all the BTC held in ETFs, with over 500,000 coins in custody. Solana Gearing Up For Breakout Solana saw a new all-time high at \$263 in November, but as selling pressure intensified, a pullback followed. Solana dove below \$230 a few times before finally settling around the \$240 mark. Right now, Solana is consolidating just below resistance, as analyst and trader XO points out. A breakout from these levels could send Solana soaring above \$300 before the end of the year, riding the tailwinds of Bitcoin. Furthermore, numerous fund managers have already filed with regulatory bodies for the approval of Solana-based ETFs, among these are VanEck and Bitwise. More recently, Greyscale also made news with its intention to turn its \$136 million Solana trust into an ETF and has already submitted an application to the New York Stock Exchange (NYSE). Bonk Challenges WIF For The 4th Place On The Meme Leaderboard Along with Dogwifhat, Bonk (BONK) is the most widely recognizable Solana-based meme coin and has been on a roll. In the last month alone, Bonk has recorded a 118% surge that saw it scale the crypto ranking with ease and become the 5th largest meme coin with \$3.25 in market cap. Today, Bonk sells for \$0.000043 with a 5.7% intraday increase and a 28% jump in trading volume, with over \$778 million worth of BONK traded on exchanges in the last 24 hours. Along with Cutoشي, Bonk is among the few meme coins that have opted for a utility-driven approach. While most memes offer little in terms of functionality, Bonk boasts an ever-expanding ecosystem that comprises a DEX, a trading bot, and the integration of nine prominent blockchains. How Cutoشي Disrupts Both Memes And DeFi Cutoشي (CUTO) is a new utility meme coin leveraging a cutting-edge MemeFi platform. Investors are flocking in droves to the \$CUTO presale, and so far, more than \$1.29 million has been raised in record time. Stage 4 of the presale is now live and \$CUTO tokens sell for just \$0.031, a perfect entry point for early buyers, as the price is expected to rise substantially in the upcoming months. On Cutoشي's non-custodial CUTO DEX, traders will be able to perform seamless transactions across major blockchains at the lowest possible fees. Simultaneously, they won't have to compromise sensitive data, as no KYC is required to join. The native token \$CUTO powers the project's generous reward mechanism. Cutoشي Farming, by completing missions aimed at boosting Cutoشي's online presence, users will receive CUTO points that can be later exchanged for \$CUTO once the token launches. Given how low Cutoشي's current market cap is, adding \$CUTO to one's portfolio should be a no-brainer, especially with altseason looming. For more information on the Cutoشي (CUTO) Presale: Join and become a community member:

Despite being one of the closely related derivatives of Bitcoin, Litecoin (LTC) has not recorded as much popularity as BTC. However, for the first time in a year, LTC formed a multi-year bull pennant that could lead to a massive rally towards \$270-\$280, according to MarcFce. Polkadot (DOT) is one of the top crypto coins getting ready for a massive 3x price pump. However, Lunex Network's potential price pump to \$0.5 due to its potentially disruptive impact on the DeFi world far outshines DOT's gains. Litecoin (LTC) Forms Bull Pennant, Price Rally to \$280 Imminent on the monthly price chart of CoinMarketCap, the Litecoin (LTC) price has doubled. While the Litecoin price has crossed \$140 for the first time since January 2022, top analyst CryptoSurf has shared a positive sentiment that could lead to bigger gains. According to CryptoSurf's chart, the Litecoin crypto has formed a multi-year bull pennant. A pennant pattern is a confirmation after a sharp increase in price. A popular figure in the DeFi space, MarcFce, the Litecoin token could skyrocket over the next few weeks. According to his analysis, the next resistance for Litecoin (LTC) is at \$270-\$280, a further increase of more than 100%, making it one of the altcoins to watch. Polkadot (DOT) Prepares for Breakout, Readies for 3x Price Surge The Polkadot crypto has been on its greatest rally in recent months on the 30D chart, with the price increasing over 160 percent. According to CoinMarketCap data, DOT now comfortably trades above \$10 for the first time since early 2024. While Polkadot (DOT) has had a massive price increase recently, it still remains 81% lower than its ATH. However, this could change soon with a potential breakout over the next few weeks. Crypto Lalit has forecasted a potential 3x price surge for the Polkadot coin. This sentiment has been re-echoed by another analyst, Crypto-Q. But for the Polkadot price to reach as high as \$36, as Crypto-Q has predicted, it first needs to break and hold above the \$12.5 resistance level. Massive Cross Chain Platform Could Push Lunex Network (LNX) to \$0.5 As it stands, moving assets between blockchains is a pain in crypto transactions; tokens like ERC-20 tokens don't play well with Solana or other blockchains. The Lunex Network (LNX) is a solution to this problem through cross-chain trading, where users can trade over 50,000 assets on 40+ different blockchains without having to switch platforms. Lunex Network also makes asset management easy. Lunex has a user interface that allows users to monitor their portfolios, whether they're cryptos, NFTs, stocks, etc. Security is a top priority and SolidProof has already verified that Lunex Network's smart contracts contain no security problems. In addition, Lunex Network is big on rewarding its users, offering one of the highest APYs in the DeFi market of up to 18% APY. Lunex Pro offers advanced traders live data analytics tools, customizable trading strategies, and accelerated execution speeds as well. The LNX tokens are being sold for a cheap \$0.0038, which is lower than its estimated price of \$0.5 by the first quarter of 2025. With the incredible offers of Lunex Network backed by the recent 215% price pump of LNX, the altcoin is considered one of the best crypto investment opportunities of this bull market. Conclusion While Litecoin (LTC) could see a price increase of over 100%, Polkadot (DOT) could pump by 3x, but it depends on crossing the \$12.5 resistance. Meanwhile, Lunex's potential rally to \$0.5 because of the massive impact it could have on DeFi and the trading space with its cross-chain protocol makes it the perfect coin to buy in this bull market. You can find more information about Lunex Network (LNX) here: - Website: Lunex Network - Telegram: Join Our Telegram Community - Twitter: Follow Us On X

- The SOLV ticker was auctioned for \$128,000 in the Hyperliquid ticker auction. - Hyperliquid auction recorded the highest auction amount of \$128,345.67 on Dec 6. Hyperliquid has been gaining exceptional traction from the industry leaders and crypto community members, with its unique functionalities. It has grown exponentially from being a small decentralized exchange to an ecosystem with a market cap of \$3.92 billion. HyperBFT and its custom layer 1 network combined with compatibility can process up to 200,000 transactions per second, which is not a usual feature in crypto. Some of its noteworthy features include a Pre Markets, a Hyperliquid Ticker Auction, a Vault, etc. The Hyperliquid recorded the highest auction amount of \$128,345.67 on Dec 6. SOLV ticker's highest auction price amount, \$128,000 is the major reason behind it. Hyperliquid Ticker Auction: Innovative Token Listing Process Hyperliquid is making industry officials and investors awed by its innovative features. The project brought a new way of listing tokens into existence with a Dutch auction of tickers. Its auction is held every 31 hours and lets users bid for ticker rights. However, some people argue this process will lead to centralization of the token listing process. So far, the auction included a variety of tokens from memecoins to native token tickers of other crypto projects. As per the ASN data, the SOLV ticker was sold for a staggering \$128,000 and raised the total auction amount of the process to \$128,345.67 on Dec 6. This is drawing attention from investors and leading them to suspect it might be a part of the token generation event (TGE) of Solv Protocol. GENESV, WATAR, STAR, HOLD, and RETARD tickers occupy the next top places with over \$87k, \$73k, \$66k, \$33k, and \$25k prices respectively. The TRUMP token is also on the auction list with a \$28,919 price. PEPE PUMP, WAGMI, SCAM, FUN are some of the memecoins listed on the Hyperliquid Ticker Auction. Solv Protocol is a Bitcoin staking platform that aims to enhance interoperability of Bitcoin blockchain with its staking abstraction layer (SAL). With Bitcoin reaching a new ATH, shooting past the \$100,000 mark, Solv protocol might prepare for a TGE with the latest SOLV ticker auction. Highlighted Crypto News Today: Ripple 400% Surge Shakes the Market, Lunex Network Pumps 200%, Solana Targets \$400

- Marathon Digital acquired 1,300 BTC worth \$130.66 million, continuing its bullish Bitcoin strategy. - Bitcoin's market cap now exceeds \$2 trillion. Bitcoin (BTC) is holding steady above \$99,000 despite market fluctuations, and institutional players like Marathon Digital Holdings (MARA) remain committed to the cryptocurrency. Marathon has shown strong confidence in Bitcoin's future, further evidenced by its recent purchase of 1,300 BTC, worth approximately \$130.66 million. Marathon Digital (@MARAHoldings) acquired another 1,300 BTC (\$130.66M) in the past 7 hours! https://t.co/etg1c5fdz pic.twitter.com/NFWt5shuRfB â Lookonchain (@Lookonchain) December 7, 2024 This acquisition follows a similar purchase earlier this week, continuing the company's aggressive Bitcoin buying strategy. The latest data from Arkham confirms the continuous accumulation by Marathon, which recently acquired over \$130 million in Bitcoin. This move comes after the company successfully closed a \$850 million convertible note offering. The funds raised will accelerate its Bitcoin acquisition plan, as well as repurchase existing notes maturing in 2026. Marathon's consistent buying behavior highlights its unwavering belief in the long-term value of Bitcoin. Bitcoin in Current Market Bitcoin's market cap is now nearing \$2 trillion, reinforcing its status as the seventh-largest asset globally. With a 1.38% increase in the past 24 hours, Bitcoin is trading at \$99,646.29. Whale activity remains strong, with 20,000 BTC purchased in the same period, valued at \$2 billion. These large purchases indicate sustained institutional interest, despite the volatility in Bitcoin's price. Additionally, Bitcoin's spot ETFs reported significant inflows of \$377 million on December 6, further fueling the cryptocurrency's bullish momentum. These ETF inflows, combined with whale activity, are contributing to Bitcoin's rise in market cap and price. While resistance is expected around \$105,000, breaking through this level could pave the way for Bitcoin to reach \$112,000. Marathon's strategic acquisitions and the continued support from institutional investors underscore the growing confidence in Bitcoin, even as the asset faces resistance. The current market environment points to a sustained bullish outlook for Bitcoin, with Marathon at the forefront of institutional accumulation. Highlighted Crypto News Today Will Ethereum Reach a New All-Time High Above \$5K?

- ACX and ORCA drawing attention from investors amidst Binance token listing announcement. - ACX price jumped more than 100% and ORCA price rose by over 80%. The crypto market slowed down slightly as Bitcoin is trading below \$100K and altcoins trading in red. However, the overall market cap still maintains its all-time high value of \$3.58 trillion and the total trading volume stands above \$300 billion. With the soaring token prices and Bitcoin crossing 6 figures combined with favorable market conditions in the US, the community is super active to invest and make the most of this bull run. Altcoins ACX and ORCA witnessed significant price surges today after Binance announced their token listing on the platform. Binance Lists ACX and ORCA Tokens for Spot Trading As per the latest announcement from Binance, Across Protocol's native token ACX, and Orca's ORCA are going to be listed on Binance today. Both of these tokens got the opportunity to be listed on Binance, being innovative projects in the early stages of development. Thus, both the tokens will get listed on Binance with a Seed Tag. The new trading pairs ACX/USDT and ORCA/USDT will be available for trading on Binance from 6 Dec, 2024 at 13:00 UTC but withdrawals will be open after 24 hours. Users can avail trading bots and spot copy trading features for these tokens within 24 hours after token listing. ACX and ORCA prices skyrocket within minutes. As Binance mentioned in its announcement, Across Protocol is an innovative project and stands out from the rest of the bridging protocols on Ethereum with its secure bridging technology. On the other hand, Orca is the simplest decentralized exchange on the Solana blockchain. Just a few minutes after the Binance announcement, both ACX and ORCA token prices witnessed a substantial price surge by more than 100% and 80% respectively. While ACX went to as high as \$1.45 from \$0.6, ORCA is trading at \$7.34 which was previously trading at around \$4. Binance announcement of token listing has often led to significant market price rises since it is one of the biggest crypto exchange platforms across the globe. The same trend reflected with ACX and

ORCA, and the price trend triggered within minutes due to the super active community of investors, thanks to the bull market. As per on-chain analytics platform Lookonchain, a whale withdrew 512 ETH from Binance and bought 1.27M ACX at \$1.56 on DEX and deposited ACX back into Binance. Investors are betting on both ACX and ORCA with a confidence that both token prices will increase further in the upcoming days. Highlighted Crypto News Today:

Today, the crypto world is constantly changing, and more people are trying to find high-return investments and build immense profits. There are so many coins that it is impossible to track them all. But, some coins have appeared to have the clearest and most secure trajectory towards 10x returns over the foreseeable future. These tokens often have good, sound fundamentals and utilize distinct advantages, state-of-the-art technologies, and strong market positioning, establishing a competitive edge over their peers. Here, we will consider four tokens: cryptocurrency enthusiasts might want to add to their portfolios. **Rexas Finance (RXS):** The Clearest Path to 10x Rexas Finance (RXS) is a rising star in cryptocurrency that aims to revolutionize global capital markets. The project's most distinguishing feature among other cryptocurrencies is that it integrates its innovative model with those of real estate investing and aims to go for the tokenization of the real asset as opposed to merely increasing the number of coins. Thanks to the fractionalization of high-value assets like real estate, art, and even commodities, investors who could previously not participate in such markets can now do so. At the current price of \$0.125 in the remaining presale Stage 9, RXS has already raised more than \$21 million and surpassed over 292 million tokens in sales. The demand for products that help to make the real asset markets accessible to small-time investors is high, especially given the trillions of dollars in value in the assets markets. Analysts expect that if the presale carries on as planned, the price of RXS could reach the \$3 mark or above, indicating that investors will make a 10x return. The project's undertakings have been professionally checked in an audit by an expert firm, CertiK, which is known for the security of blockchain. Its presence on platforms such as CoinMarketCap and CoinGecko has intensified its credibility and visibility in the crypto sphere. Together, these factors, along with the strong sales momentum created around its community, offer strong prospects for RXS in the coming times. **Solana (SOL):** A Blockchain Powerhouse with Lightning-Fast Transactions From recent indications, Solana (SOL) is ready to make enormous gains, with investors making up to a ten times ROI. Bitcoin's rise above \$96000 catalyzed the market surge, including the Solana and other altcoins. Investors continue to focus on the Solana ecosystem as the use of meme coins and DEXs expands in the region. Meanwhile, SOL has slumped to \$226, 14.41% lower than the former peak of \$263.83. Should Solana keep its strong momentum, it could rise to \$390, allowing for more significant gains. There are strong fundamentals and a complemented ecosystem, making a 10x return on investment and a \$2,260 price realistic. **Polygon (MATIC):** Expert Predicts Polygon (MATIC) Could Surge 3050% Polygon (MATIC) has been struggling recently, with the token price recovering minimally from its slide to \$0.4150 on November 18. It has moved further below its operational competitors like Cardano and Solana. Still, analysts do see some light stating that the token could reach \$12.66, which would be an impressive rally of 3050% from the lowest stand, and even more so because it decreased during the crypto winter and now would reach 3x from that level. This makes the MATIC price targets good as Polygon has earned some healthy fundamentals, including its tie-ups with Magic Labs and Nomura and its existing presence in the crypto namespace. That said, MATIC has registered a double top at \$0.4415, which shows a reversal pattern; it will not change direction until important resistances are cleared. If that happens, Polygon will attain a 10x return with target rates, seeing the token touch \$6.32. The recent uptick in price, together with a strong market cap of \$1.48B, suggests that a significant upside on MATIC could occur in the next few months, and that would bring in positive investor sentiment. **Stellar (XLM):** Connecting Traditional Finance with Blockchain for Smooth Global Payments Stellar (XLM) network allows different currencies to be easily exchanged, which makes it useful for people who cross borders. The price of the coin is \$0.5442 at this time, and with a market capitalization of \$16.38 billion, XLM has increased by 504.42% this time last year. Due to Stellar's collaboration with financial institutions and focus on financial inclusion, their adoption rate has increased. Especially as efficient tools for global payments are in the highest demand, XLM should appreciate further, as these trends will cement its place in the expanding world of digital payments. **Conclusion** In the expanding crypto economy, Rexas Finance (RXS), Solana (SOL), Polygon (MATIC) and Stellar (XLM) can be considered as having the best and clearest opportunities to achieve 10x yields with all of its distinct and fundamental characteristics. The budding ecosystem provides substantial room for these tokens to reach a new scale eventually. - Hedera price has factored in a price dip of 7.92% in the last 24 hours. - The altcoin's daily trading volume has shown a 47.96% descent as per CMC data. In the past 24 hours, previously bankrupt crypto exchange Mt.Gox made several movements. This was one of the contributors to Bitcoin receding to the \$90K level over the past day. Meanwhile, the regulatory sector has also been diving with action as Trump announces new crypto regulatory positions. On the other hand, the altcoin sector has shown intriguing movements. Within the altcoin sector, several tokens such as WLD have returned to their bullish trends. However, particular cryptocurrencies that staged rallies in the past days have reverted to brief price dips. One such altcoin, Hedera, has incurred a 7.92% price dip in the past day. This bearish combat has caused HBAR to fall to the \$0.28 support level. At the time of writing, HBAR was trading at \$0.2832 as per CMC data. Moreover, in the Asian afternoon hours of December 5, Hedera was trading at a high of \$0.3080 before bears took over. Previously, the altcoin also showed a brief dip on Wednesday after which it turned bullish again. This has raised speculation on whether the Hedera price will sustain its positive momentum. Zooming out, over the past week, HBAR depicts a significant price increase of 85.85%, despite the recent descent. The altcoin caught market attention amid the AltSeason as price rallied nearly 90%, deducting the brief dips. Will Hedera Price Recover in the Coming Days? Inferring HBAR's technical indicators, it suggests that the altcoin still holds an opportunity to return to the bullish trend. Hedera's Moving Average Convergence Divergence (MACD) signal line stands above the MACD line. This indicates the sustenance of the positive market environment as per TradingView data. Moreover, the cryptocurrency's long-term bull power indicator's value stands at 5.44. While its bear power indicator value of -2.46 suggests a clear bullish overpower. From these aspects, it can be inferred that the Hedera price can be expected to recover. Meanwhile, other leading cryptocurrencies such as Ethereum and Solana have shown a minor price dip. Highlighted Crypto News Today:

The 2024 rallies of meme coins like Pepe and BONK captured widespread attention, delivering substantial returns for early investors. However, those who missed out might find an even greater opportunity in Lunex Network. With its DeFi solutions which include cross-chain swaps and a revenue-sharing model, Lunex Network is set to change the decentralized finance sector. The project's unique features and strong tokenomics might fetch higher returns and make it a top crypto contender in 2025's crypto market. **Pepe's Whale Activity Has Surged** In December Pepe has gained massive traction, becoming the third-largest meme coin as it experiences rapid growth in Q4. Major exchange listings on platforms like Coinbase and Robinhood have made the token widely accessible. This accessibility has driven a 100% increase in Pepe's value over the past month, indicating significant retail accumulation in preparation for the bull market. Whale activity has surged, with large investors purchasing over 10 trillion Pepe tokens in the last 30 days. The transfer of tokens from exchanges to private wallets has reduced selling pressure, signaling confidence among big holders. The rise in non-exchange holdings reflects strong accumulation trends, positioning Pepe for further growth. Analysts predict that Pepe could achieve 7x gains in the coming weeks, fueled by continued demand and whale accumulation. **Bonk's Bullish Momentum Is Back** Bonk's price has surged by 129.45% following Trump's reelection, sparking renewed interest in meme coins. Despite a 6.69% dip over the past week, many investors saw the decline as an opportunity to buy. This renewed demand helped Bonk recover, achieving a 1.10% intraday gain. Bonk is trading for \$0.00004348, with trading volume increased 37% in the last twenty-four hours. Bonk has stabilized its RSI and analysts anticipate a bullish rally in the coming months with targets of \$0.0000356 and \$0.00008222. Bonk has enjoyed enhanced trading and community engagement because it is a part of the Solana ecosystem. However, analysts emphasize that sustained adoption and active participation are crucial for Bonk to achieve long-term success, following the path of other meme coins. **Lunex Network Set For 1800% Growth Before Next Bull Rally** Lunex Network is gaining traction as the bull market nears, thanks to its user-friendly features. The platform eliminates KYC requirements, making it easier for newcomers to start trading. Lunex Network also removes the need for external wallets like MetaMask or PhantomWallet, simplifying token swaps while reducing third-party risks. With advanced smart contracts Lunex Network supports over 50,000 assets for seamless trades at minimal fees, reflecting its focus on scalability and efficiency. The platform's staking system offers APYs up to 18%, catering to cryptocurrencies like Ethereum, Solana, Dogecoin, and Pepe. The platform's revenue-sharing model rewards long-term holders, boosting LNX token sustainability. At just \$0.0038, Lunex Network offers a promising investment opportunity of over 1,800% before the next bull rally. Lunex Network simplifies investment tracking like never before. Whether you invest in cryptocurrencies or traditional assets, Lunex Network offers unified asset tracking to keep everything in one place. This streamlined approach makes portfolio management more efficient and convenient. With all your investments easily accessible, staying on top of your financial goals has never been easier. Prepare for the next major crypto launch with Lunex Network's innovative tools designed to support new and experienced investors. You can find more information about Lunex Network (LNX) here: - Website: <https://lunexnetwork.com> - Socials: <https://linktr.ee/lunexnetwork>

**HIO Music** has announced its 2nd fundraising round on Fjord Foundry, which marks a critical step toward the platform's full-scale launch. Following the successful sale of \$150,000 worth of tokens at a \$10 million fully diluted valuation (FDV) last week, this raise is aimed at solidifying the platform's financial foundation. The funds will be used to scale operations, enhance user experience and develop innovative features including staking, payments, and an AI-powered music discovery engine. As the CEO of HIO Music Ryder Havdale put it, "For anyone interested in building what we're now live on Apple, Google Play, and one of the first 50 dApps on Solana's Saga) the future of music streaming - would love to have you in the mix!" The Fjord Foundry raise offers a unique chance to participate in HIO Music's vision "by combining blockchain's transparency with user-focused innovation, the platform is not just reshaping the music industry but creating a sustainable model for creators and listeners alike. Formerly known as Helios, HIO Music features over six million licensed songs and a robust decentralized model. The platform is also actively expanding its music catalogue by targeting independent labels such as the recently onboarded Merge Records, with plans to reach 100 million songs by late 2025. Looking to the future, HIO Music aims to revolutionize how artists interact with fans and monetize their work. Upcoming features include an artist-driven social feed, NFT-based ticketing systems, and an advertising suite. These tools empower creators to diversify their revenue streams and foster meaningful fan engagement. HIO Music is more than just a streaming platform; it's a movement aimed at empowering creators and connecting fans. With the largest licensed music catalogue in the Web3 space, the platform is built on Solana, leveraging blockchain technology to enhance transparency and equity. Unlike traditional streaming services, HIO delivers 100% of subscription revenue directly to rights holders, ensuring artists and labels receive their fair share of earnings. This innovative model goes hand-in-hand with its robust ecosystem of features. Weekly community quests within the app reward users with \$HIO token airdrops, fostering a collaborative and incentivized community. By allowing fans to actively participate in an artist's success, HIO bridges the gap between listeners and creators, transforming passive consumption into meaningful engagement.

- Another 1,423 BTC are added to Marathon Bitcoin holdings. - After closing its \$850M second convertible note offering, MARA resumed its BTC purchase. Soon after Bitcoin fell from its all-time high price range above \$100,000, MARA Bitcoin purchase continued. It acquired another 1,423 Bitcoins worth \$139.5 million, as per latest data. Being one of the largest Bitcoin holders, MARA's recent BTC purchase made headlines again. On-chain data shows that Marathon Digital (@MARAHoldings) acquired another 1,423 SBTC (\$139.5M) in the past 6 hours! "Lookonchain (@lookonchain) December 6, 2024 This comes after "MARA announced yesterday the closing of its second \$850M convertible note offering, primarily aimed at purchasing Bitcoin and partially via". pic.twitter.com/t2si1zhDNW According to the latest post from the on-chain analytics platform Lookonchain Marathon Digital Holdings purchased another 1,423 Bitcoins. The post further mentioned the closing announcement of MARA's second \$850 million convertible note offering. It even cited Arkham Intelligence data to support the fact. MARA Bitcoin Purchase With Convertible Note Offering Marathon Digital Holdings announced a \$1B 0% convertible note offering due 2030 in the last month. With this offering, MARA purchased an additional 703 Bitcoins. This debt financing strategy started with Microstrategy, which also purchased Bitcoins with a \$2.9 B convertible note offering. MARA

announced the closing of its 0% second convertible note offering yesterday. As it clearly mentioned, MARA used the proceeds to acquire Bitcoin. The firm also mentioned a partial purchase of existing convertible notes due 2026 with the remaining proceeds. Bitcoin Falls to \$98,000 Price Range After Bitcoin reached its all-time high value of \$103,713 yesterday, shooting past the most awaited \$100,000 milestone, it is now trading in the \$98,000 price range. Bitcoin price dropped 4% in the last 24 hours and the market cap also dropped by over 4% hovering close to \$2 trillion. However, an 11% increase in 24-hour trading volume indicates a further BTC price surge. Meanwhile, MARA Bitcoin purchase might halt for now since its second convertible note offering is closed. The fact that these big institutional investments are happening during the peak of the market instead of in the bear market, when Bitcoin's price is at a discount, indicating institutional FOMO, is noteworthy. - Donald Trump announced that he would be appointing David Sacks as White House AI & Crypto Czar. - The entrepreneur is believed to hold profound knowledge in both fields as per reports. While Bitcoin has decided to ease the community with a price dip to the \$97K level, the market seems to be entering a weekend slump. On the regulatory end, according to reliable sources, the SEC has stated that it would be rejecting at least two of the five Solana ETF filings. On a positive note, the President-elect, Donald Trump has nominated David Sacks as AI and Crypto Czar. In the morning hours of December 6, Trump announced on Truth Social, the former COO of the payment giant PayPal for the White House position. He stated that Sacks would efficiently guide policy administration in both AI and crypto realms. Further, Trump also said David Sacks will work on a regulatory framework, specifically for developing the crypto sector. This has elicited quite a positive reaction from the community. In the recent past, Trump's several announcements toward crypto regulatory reformation have assured members of amending the current obscurity. Moreover, David Sacks is one of Trump's staunch supporters from Silicon Valley. The entrepreneur and venture capitalist has been in the field for nearly 25 years, as Trump himself said. He is expected to untangle the current complexities in the field and to bring in advancements as the White House AI & Crypto Czar. Why is David Sacks Trump's Accurate Choice For AI & Crypto Policy? The PayPal executive, after having stayed in the field for more than two decades, is said to have profound knowledge. Additionally, his being pro-crypto also allows Sacks to hold a progressive view towards regulations. <https://t.co/7b11C6aJv0e> pic.twitter.com/PL18cN0uP8 - David Sacks (@davidSacks) December 6, 2024 David Sacks responded to Trump appointing him, thanking him for the trust in his X account. Additionally, Sacks is also said to be closely associated with Vice President Vance as per reports. Furthermore, recently, Trump also announced the next SEC Chair who would take over Gary Gensler. Paul Atkins, a former commissioner of the SEC was chosen, who also holds a pro-crypto stance. These aspects have been, as aforementioned, reassuring to members of the crypto community. Highlighted Crypto News Today: Ethereum Eyes \$4,000 as Whales Accumulate and MVRV Signals Room for Growth

Cayman Islands, Cayman Islands, December 4th, 2024, Chainwire Metaplex, the blockchain protocol used to create virtually every token, memecoin, and NFT on Solana, saw record-breaking protocol fees in November, fueled by a surge in digital asset creation on Solana. Rise in Solana Token Creation Drives Record Protocol Growth As the protocol behind virtually all token creation on Solana, Metaplex has emerged as a primary beneficiary of the extraordinary surge in digital asset creation on the Solana network. This exponential level of activity, encompassing everything from memecoins to AI tokens and NFTs, directly contributes to Metaplex's protocol fees. This increased protocol fee generation has in turn funded record-breaking \$MPLX token purchases for the Metaplex DAO. Since June 2024, 50% of the prior month's protocol fees and a portion of the historical fees have been allocated to funding \$MPLX token purchases for contribution to the DAO. In November 2024, this culminated in 12k SOL worth of \$MPLX purchases - equivalent to approximately \$3 million at current prices, marking a substantial 58% increase month-over-month and signifying the largest monthly \$MPLX token purchases to date. Building on this momentum, Metaplex's November protocol fees hit an all-time high of \$3.5 million, setting the stage for even larger allocations for \$MPLX purchases in December. Record-Breaking Metaplex Protocol Metrics in November November's protocol activity shattered previous records across multiple metrics: Metaplex saw a record-high growth of 1,092,149 new tokens created, with 1.4M new tokens represented 94% of all Token Metadata assets created, driven primarily by memecoin activity on platforms such as Pump.fun. - Metaplex Core, the next generation NFT standard, demonstrated significant adoption with a new all-time high of 354k assets created, driven by expanded use cases made possible due to the standard's flexible design. - User engagement metrics surged as the number of unique wallets interacting with the Metaplex protocol reached 879K - a 34% increase from October and a new all-time high. The protocol's total collector base expanded to nearly 60 million unique wallets, growing by over 866k in November alone. About the Metaplex Protocol Metaplex is the leading decentralized protocol on Solana and SVM, providing tools and programs for developers and creators to build decentralized applications that use digital assets. With a growing user base and a commitment to innovation, Metaplex is empowering the next wave of decentralized finance and commerce. About the Metaplex Foundation The Metaplex Foundation is a Cayman Islands non-profit organization dedicated to supporting the development and growth of the Metaplex Protocol. By providing open-source tools and resources, the Foundation empowers developers, creators, and users worldwide to participate in a decentralized and inclusive digital economy. Website: <https://www.metaplex.com/> Discord: <https://discord.com/invite/6FaBSP2zms> Contact Marketing Dan Forgdan@forgd.com

In order to support a new generation of crypto apps that were previously impossible, Layer N, the high-performance blockchain project backed by Peter Thiel's Founders Fund, has announced its transformation into N1, a full-stack app-centric Layer-1 blockchain built to emphasize scalability and speed. The goal of N1 is to enable onchain execution of any code or application with only two clicks. N1 will adopt a hyper-app and product-focused strategy. It will significantly lower the learning curve for deploying onchain applications by being the first chain to offer Typescript app development (with support for additional languages like Solidity, Rust, and C also in the works). Additionally, N1 will have native apps like a wallet widget for unified cross-application login experiences, a Æhub wallet for cross-application asset management, and a deployment interface akin to Vercel that allows developers to launch and manage apps with only two clicks. Additionally, N1 is collaborating closely with a few groups to release completely new and/or improved cryptocurrency applications. In addition to Sushiswap, their flagship perpetuals DEX, Sushi is creating Kubo, a cutting-edge AMM protocol that is only possible on N1 because of its computational complexity. The Paradigm-backed Amber Group, a significant market maker, is developing its own perpetual DEX protocol, which will have deep liquidity and creative asset listings. Users of the innovative socialfi app Mindshare will be able to exchange cryptocurrency narratives directly. Additionally, an onchain AI world simulation modeled like Westworld is being developed. These applications all have one thing in common: their computational complexity prevents them from being developed elsewhere. N1, which was first intended to be an L2 solution for Ethereum and was subsequently the first L2 to reach a 100k tps benchmark on the testnet, has kept its high-performance execution layer while substituting its own full-stack L1 infrastructure for the Ethereum settlement layer. This development results from Ethereum being the obstacle to reaching a larger scale. With transaction speeds expected to surpass 100,000 tps, this allows N1 to provide 10-100 times the size and performance of current chains. Dima Romanov, CEO and co-founder of Layer N stated: "We are proud to introduce a new innovative blockchain, one that combines unprecedented computational capabilities with developer-friendly features to enable a new class of decentralized applications." So far, Founders Fund, Multicoin, dao5, Kraken, Amber, GSR, and SALT have all made significant investments in the N1 team. The team developed a high-performance onchain orderbook on Solana that handled more than half a billion in volume before N1. The next generation of crypto apps will be made possible by N1, a high-performance Layer-1 blockchain. N1 was created by a group of seasoned business professionals with backgrounds in projects like DFINITY, Morpho, and Solana. It has transaction speeds of over 100,000 tps and supports a variety of programming languages. The platform's primary goal is to foster and assist cutting-edge applications that expand the realm of what is feasible in the blockchain space.

The crypto market has been bullish since Donald Trump's election, which led to most altcoins, led by Bitcoin, noting significant increases. While some have cooled down, several are still on bullish paths, heading towards massive gains as they build momentum. If you are looking for the best token to buy now, here are four coins that will deliver life-changing gains this market cycle: RXS, XRP, LTC, and HBAR. Rexas Finance (RXS) RXS is a new altcoin gaining attention due to its unique vision. It tokenizes real-world assets and makes them more accessible and inclusive. It uses blockchain technology to enable fractional ownership of assets like real estate and networks, allowing global investors to overcome preexisting barriers to investment. RXS allows community members to participate actively in the growth of the projects. It raises funds through public presale rather than relying on venture capital. The public presale has attracted investors who believe in the project's potential. The RXS presale is in its 9th stage, priced at \$0.125 as of writing. The RXS token is expected to increase to \$0.150, with a launch price of \$0.20. The project has undergone a successful Certik audit, confirming its long-term potential and security. RXS is also listed on CoinMarketCap and CoinGecko, allowing investors to track it in real-time. In the future, Rexas Finance plans to expand its offerings and significantly impact the financial sector. Its approach to asset tokenization is a foundation for sustained success. Rexas Finance will soon be listed on several major exchanges. This will give it the visibility and stability it needs. Once it is launched, specialists expect that it will experience a huge surge exploding it to an out of this world price. Ripple (XRP) Since November, rising investor confidence has driven XRP's price action. It currently ranks among the top three cryptocurrencies by market capitalization, overtaking Solana (SOL) and Tether (USDT). Some major factors fueling the XRP surge are the expected launch of its stablecoin, RLUSD, and optimism about a regulation change once the SEC chair steps down. Whales have recently been on a buying spree, showing their confidence in the token. Experts have also set a target for \$7 soon, especially once its case with the SEC gets resolved. Litecoin (LTC) Litecoin's price had been stuck in a consolidation phase for eighteen months. However, it has now broken free. Litecoin's breakthrough and an increased trading volume of 263% have increased the interest of prominent analysts. Analysts suggest that this breakthrough is not the end for Litecoin; it is poised to reach as high as \$420. Peter Brandt, a veteran trader, compared Litecoin's price action to XRP's recent surge and suggested that LTC could also increase in a similar way. LTC recently rebranded as a meme coin, placing it in the spotlight. The speculation about approving a Litecoin-focused exchange-traded fund (ETF) is another factor that has made it shine. Both retail and institutional interests have grown ever since. With these factors in place, Litecoin's price could continue rising, leading to mind-blowing returns. Hedera (HBAR) Many investors are interested in Hedera because of its involvement in federal payment systems and the speculations about its potential partnership with Ripple. Hedera has integrated with the Federal Reserve's FedNow payment system, making it a major participant in blockchain-powered real-time transactions. December 2 saw a 34% gain for HBAR as it rose to \$0.26, its highest in six months. The rally is partly fueled by rumors of it expanding its collaboration with Ripple; this rumor is increasing its market pool. Hedera-focused exchange-traded funds (ETF) also contribute to HBAR's prospect for a price surge as the ETF could attract more institutional investment. The trading volume for HBAR has increased by 323% to \$3.46 billion. Although HBAR's price has risen sharply, technical indicators suggest it may be overbought. HBAR's Relative Strength Index (RSI) hit 83, which shows there could be a temporary price pullback in the future. However, the pullback will last for a short term with HBAR picking up momentum for a bigger rally. Conclusion Rexas Finance (RXS), Ripple (XRP), Litecoin (LTC), and Hedera (HBAR) could deliver life-changing returns as they build momentum toward a huge rally. RXS, however, looks most promising. As it starts its journey towards transforming asset management, it could deliver explosive returns in the short and long term. The best time to join RXS is now, while it offers a \$50000 giveaway for 20 lucky winners. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Grand Cayman, Cayman Islands, December 5th, 2024, Chainwire Leading wallet Phantom, which has over 7M monthly active users, chooses Sui's Æhigh-performant blockchain as its next integration. The Sui Foundation today announced that Phantom Wallet, the leading non-custodial multichain cryptocurrency wallet, is now integrating with the Sui network. At 7 million monthly active users, Phantom has the largest on-chain user base of wallets in the web3 industry. With over 560M total onchain transactions year-to-date, and key features such as staking, in-app token swaps, NFT storage, multichain support, and Ledger hardware wallet integration, Phantom represents a significant milestone for the Sui network, which becomes the first blockchain outside of Solana, Bitcoin, and Ethereum to be supported by the wallet. Sui is also the first blockchain built around the Move language to be supported by Phantom. Integrating the Sui network is also a significant step toward enhancing interoperability for Phantom Wallet, and demonstrates how wallet providers and dApp builders are betting on a multichain future rather than focusing on only one ecosystem.

“The integration of Phantom Wallet with Sui represents a giant leap for the Sui ecosystem, which now gets access to a first-class wallet experience with several features that the Sui community has been asking for,” said Jameel Khalfan, Global Head of Ecosystem at the Sui Foundation. “Phantom Wallet is selective about which chains they support, and we are proud to now be included among this notable group.” The integration of Phantom will provide Sui users with a reliable and secure wallet solution available as a browser extension for Chrome, Firefox, Edge, and Brave, as well as a mobile app for iOS and Android. “We’re excited to bring Sui support to millions of Phantom users,” said Brandon Millman, CEO of Phantom. “Sui’s thoughtful approach to scalability and developer-focused solutions aligns with our commitment to high-performant blockchains. We look forward to building together and supporting their growth.” Contact Sui Foundation media@sui.io

Prominent Web3 payments infrastructure provider Transak is thrilled to announce that it has integrated with Phantom, one of the cryptocurrency ecosystem’s fastest-growing non-custodial wallets. This collaboration represents a major advancement in the accessibility and use of digital assets for a worldwide audience, made possible by Meld, a global on-ramp and off-ramp orchestration platform. Phantom’s Stellar Trajectory With millions of users in more than 100 countries and a ranking among top app position on the Apple App Store in November 2024, Phantom continues to dominate the non-custodial wallet industry. It is ranked ahead of Instagram, WhatsApp, TikTok, and other applications. Phantom was first developed for Solana, but its multi-chain appeal has been fueled by its expansion to support Ethereum, Polygon, and Bitcoin. Integration Fueling Rapid Development Transak’s integration with Phantom Wallet has had an instantaneous and revolutionary effect. According to a recent tweet from Transak, the attractiveness of this cooperation is evident from the 400% increase in Solana (SOL) transactions on Transak in only seven weeks. This impressive expansion highlights how valuable Phantom’s usability and Transak’s efficient payment mechanism are to users both within and outside of the Solana ecosystem. Key Features of the Integration - High Transaction Limits Globally Globally accessible to Transak users everywhere, this integration offers unmatched adaptability. - Users in the UK and EU may buy up to \$75,000 in a single transaction, which greatly improves their cryptocurrency purchasing experience. - Web3 is now more accessible than ever thanks to higher purchase limits and additional payment alternatives for users in the US and other countries. - A Variety of Payment Options This cooperation accommodates a broad variety of user preferences by offering more than 20 local and international payment choices, such as bank transfers, credit cards, and other well-known methods, guaranteeing a seamless fiat-to-crypto transaction. - User-Friendly Onboarding While upholding strict compliance requirements, Transak’s multi-level KYC procedure allows new customers to begin with only a name and email. The Solana ecosystem and Phantom Phantom is a popular wallet among Solana users, and its dominance in the ecosystem is further strengthened by its integration with Transak. SOL purchases made via Transak on Phantom increased fourfold in the weeks after the introduction, making up 75% of Transak’s Solana volume. Facilitating Worldwide Web3 Access This partnership makes it easier for people all across the world to embrace cryptocurrencies, particularly in developing areas like DeFi, NFTs, and meme coins. With local payment options and user-friendly features, Transak and Phantom guarantee smooth access whether buying assets like BONK or taking part in the newest blockchain developments. Sami Start, CEO of Transak stated: “We are thrilled to partner with Phantom, combining our innovative payment infrastructure with their exceptional wallet experience. This integration underscores our mission to provide financial freedom and empower users worldwide to engage with digital assets effortlessly. With more than 8 million customers in 160 countries, Transak is the biggest and most compliant Web3 payments infrastructure provider in the world. With its API-driven fiat-crypto on/off-ramp, NFT checkout, and other solutions that streamline KYC, compliance, payment methods, and customer support, it enables more than 350 platforms and makes it easier to buy and sell digital assets. Transak, which was established in Delaware and has its headquarters in Miami, the United States, has offices in London, Milan, Dubai, and Hong Kong in addition to a tech hub in Bengaluru. Visit transak.com or follow us on x.com/transak and linkedin.com/company/transak for further information.

- HAWK memecoin crashed 91% after initial hype, causing investor losses. - Allegations of insider trading and market manipulation surround Hawk Tuah’s launch. The launch of Hawk Tuah (HAWK), a Solana-based memecoin created by viral influencer Halley Welch, saw a meteoric rise but suffered a dramatic crash within hours. After debuting with a market capitalisation of nearly \$490 million on December 4, HAWK’s value plummeted over 91%, leaving many investors reeling from significant losses. The memecoin, inspired by Welch’s viral “Hawk Tuah” catchphrase, initially captured massive attention due to Welch’s popularity. Known for her merchandise line and podcast featuring prominent figures such as Mark Cuban, Welch promoted HAWK as more than a “cash grab.” She committed to holding 10% of the token supply for a year and pledged to distribute free tokens to her fans. However, blockchain analysis from Bubblesmaps and DexScreener revealed potential insider trading and market manipulation. These reports showed that insiders controlled up to 96% of the token supply at launch, with one wallet purchasing 17.5% of the supply moments after the debut, profiting \$1.3 million within an hour. Critics allege that such actions contributed to HAWK’s swift collapse to a \$48 million market cap, with the token now trading at \$0.0048. Allegations And Criticisms Welch and her team have denied the allegations, asserting that no key opinion leaders (KOLs) or team members were given free tokens. They further claimed to have implemented high transaction fees to deter sniping during the launch. OverHere, the team behind HAWK’s launch, explained that the token distribution seen on Bubblesmaps adhered to its tokenomics, which include a 12-month lock and three-year vesting period for team-held tokens. Despite these clarifications, disillusioned investors have filed complaints with the U.S. Securities and Exchange Commission (SEC), citing potential violations of securities regulations. Lawyers are now pursuing claims on behalf of affected investors, raising questions about the accountability of Welch and her team. Highlighted News Of The Day JasmyCoin (JASMY) Soars 25% Prepping For Further Price Surge

- Single-day trading volume of PancakeSwap went past \$1.27 billion on December 4. - PancakeSwap DEX recorded 9-month high trading volume after launching the SpringBoard feature. One of the largest decentralized exchanges on the BNB Chain, PancakeSwap handled more than \$1.27 billion single day trading volume yesterday. Analysts are predicting the growth in trading volume is a result of PancakeSwap announcing no-code token creation platform SpringBoard launch. Apart from the announcement, the ongoing hype around Bitcoin reaching \$100K and overall bullish market sentiment could further boost trading volumes on decentralized and centralized exchanges alike. As per the analytics from the official PancakeSwap website, the single-day trading volume hit \$1.27 billion on Dec 04, a few hours after the announcement of PancakeSwap SpringBoard launch, while the total value locked (TVL) stood at \$384.72 million. This is a 9-month-high single-day trading volume since March this year. At the time of reporting, the TVL increased 2.51% and is \$391.97 million and the 24-hour trading volume is around \$1.25 billion. Notably, 24-hour fees on PancakeSwap are \$832.68K, with an increase of 67%. On another note, the native token CAKE value is trading at around \$3.9, after briefly touching \$4.38 yesterday. PancakeSwap SpringBoard: A No-code Token Creation and Launching Feature PancakeSwap launched a no-code token creation and launching feature, called SpringBoard. This feature helps developers, projects, and creators to launch their tokens without any prior coding experience. With zero launching fees, multiple trading pairs, and automatic liquidity-providing features, the SpringBoard platform is garnering attention from the community. Analysts compare the SpringBoard feature Pump.fun, indicating the similarities between the two. There is significant room for growth for PancakeSwap as a result of the SpringBoard feature, similar to how meme coins on Solana increased exponentially after Pump.fun launch. In case, SpringBoard becomes a massive success similar to Pump.fun, we can witness substantial increase in CAKE price and the upcoming token launches on SpringBoard, combined with the ongoing bullish market season. Highlighted Crypto News Today:

- Ethereum price has witnessed a price increase of 5.57% in the last 24 hours. - The altcoin’s daily trading volume has surged by 51.46% as per CMC data. The crypto market has gone ablaze with the recent significant market rally. Bitcoin’s reaching the new \$1 million milestone, has rendered increased liquidations in the market. Meanwhile, on the regulatory end, President-elect Donald Trump announced Paul Atkins as the new SEC Chairman. This also has sparked several discussions among the community amid the BTC focal point. Notably, following Bitcoin, several leading altcoins showed modest price increases. However, the AltSeason seems to have quietened down today, in comparison to the past few days. Ethereum, in the last 24 hours has factored in a modest price increase of 5.57% fueled by the BTC price rally. In the Asian afternoon hours of December 4, the altcoin was trading at the \$3.6K level. However, as key events materialized, the cryptocurrency broke resistance levels to reach current trading levels. At the time of writing, ETH was trading at \$3,993 as per CMC data. Over the past few months, Ethereum failed to record significant upward movements. Despite several bull cycles, the cryptocurrency showed resistance to budge beyond the \$3K level. While its other counterparts including Solana and XRP staged significant bull runs, ETH showed stagnation. Will Ethereum Price Stage a Bull Run? Inferring to Ethereum’s technical indicators, the altcoin shows intriguing data. Its Moving Average Convergence Divergence (MACD) signal line stands above the MACD line. This indicates a positive trend in ETH’s price movements. Moreover, the cryptocurrency’s bull power indicator value is 1.90. On the other hand, its bear power indicator value stands at -0.0183, per TradingView data. This clearly indicates a bullish takeover scene, thus suggesting that ETH might witness a bull run in the coming days. Notably, the bullish rally has eased into a more volatile phase. In the last 32 days, ETH has seen a price increase of \$3,922 to \$3,993. However, it might face resistance at \$3,930 and \$4,034. Moreover, several market analysts had predicted that Ethereum might witness price breakouts towards the end of the year. Highlighted Crypto News Today:

- Ethereum has crossed into the \$3.7K zone. - The market witnessed a liquidation of \$44.53 million in Ethereum. With Bitcoin hovering between \$96K and \$93K, the crypto market is watching closely for signs of a bullish pattern aiming for \$100K after clearing the \$99K barrier. Amid the anticipated altcoin season, the largest altcoin, Ethereum (ETH) witnessed a notable recovery. The ETH price is steadily holding at \$3.7K, with analysts predicting a December rally to \$4,000. Ethereum price opened the trading day on a bullish note. Ethereum has registered a moderate spike of over 3.30% in the past 24 hours. As of this writing, ETH traded at \$3,719. The asset has visited its lowest price of \$3,504 and mounted to a peak of \$3,743. Notably, the market has observed a liquidation of \$61.08 million worth of Ethereum as per Coinglass data. Concurrently, the daily trading volume of ETH has reached 44.53 billion. Over the past thirty days, Ethereum has jumped by 50%, showing strong momentum to hit new highs. Starting the month at \$2,475, the asset eventually chose to trade on the upside without losing below the \$3K mark. On the other side, an analyst chart indicates that ETH is approaching a diagonal resistance. While a major breakout is expected and could last for several months, there might be a final shakeout before this upward move gains momentum. For those entering the market out of FOMO, this could be one of the last opportunities to buy at a lower price. Will Ethereum See Continued Upside? The four-hour price chart of ETH exhibits that the asset has broken the crucial threshold at \$3.7K. If the altcoin’s uptrend strengthened, it could likely test the nearby resistance levels at \$3,864 and \$3,953. Breaking past these ranges might push the Ethereum price toward the \$4K mark. On the flip side, if ETH’s downtrend forms and the bearish pressure intensifies, the altcoin’s price could face a correction at \$3,614. The inability of Ethereum to maintain this level could accelerate a sharp downturn toward \$3,500 or even lower. The altcoin’s daily frame displays the short-term 50-day moving average crossing the long-term 200-day moving average. In addition, the current market sentiment of Ethereum is in the neutral zone, as the daily relative strength index (RSI) is settled at 61.79. The ETH/USD trading pair exposed the brief bullish momentum with the Moving Average Convergence Divergence (MACD) line found above the signal line. This crossover signals the incoming uptrend in the market, as the bearish pressure diminishes. Besides, the Chaikin Money Flow (CMF) indicator laid at 0.04, suggests the positive money flow within the ETH market with moderate buying pressure. Meanwhile, Ethereum’s daily trading volume has surged by over 12.94%. Highlighted Crypto News

- Pump.fun achieved \$93M in revenue despite controversy and livestream content issues. - Solana meme tokens like PNUT and CHILLGUY drive significant platform growth. Pump.fun’s Fee Account transferred 100,000 SOL tokens, valued at approximately \$23.66 million, to Kraken Deposit at 18:59 (UTC+8). This is the second significant transfer by the account in one day, bringing the total SOL transferred to Kraken within the past 24 hours to 200,000 SOL, worth around \$47.17 million. This comes as the memecoin launchpad celebrates its highest monthly revenue to date. In November, Pump.fun achieved a revenue of \$93 million, marking its best month since launch. Despite a sharp revenue decline in the final week of November, the platform saw a significant increase in earnings earlier in the month. Moreover, from November 18 to 24, Pump.fun recorded \$33.83 million in revenue, a 60% week-on-week rise. However, this growth slowed in the following week, with a 66% drop in revenue to \$11.31 million, partly due to backlash over harmful content in livestreams. Pump.fun Rise Vs. Fall Phase The memecoin launchpad, which has launched over 4.2 million meme tokens this year, has been a prominent player in the Solana ecosystem. Despite facing criticism for its role in facilitating pump-and-dump schemes and hosting livestreams with disturbing content, Pump.fun continues to attract a large user base. The platform responded to the issues by suspending its livestream feature in late November. The popularity of Solana-based meme coins such as PNUT, CHILLGUY, and MODDENG has also contributed to Pump.fun’s success. These tokens have seen substantial trading volumes, with a collective market cap of \$6.4 billion. As the

platform moves forward, it plans to launch new features, including a trading terminal and additional tokens, which could further shape its future in the market. Highlighted News Of The Day

Manhattan, New York, United States, December 4th, 2024, Chainwire ChillPnut memecoin (CPNUT) has announced the launch of its token presale, aiming to incentivize new investors to commit to the project. The presale will take place in three rounds over a span of seven days, with a focus on supporting the project's long-term development. The price of CPNUT is fixed across each round at 0.000083 SOL, equating to \$0.00072. The first round, which commenced on November 28, concluded at 14:00 UTC. During this round, 50 million CPNUT were allocated to investors, and they received a 100% reward bonus on tokens purchased. For the second round, 100 million CPNUT were allocated to investors. This round concluded in 48 hours, from November 29 to December 1 at 14:00 UTC. Early investors received a 50% bonus on whatever they bought. The third and final round kicked off on December 1, 2024. This round is scheduled to conclude in 96 hours (on December 5, 2024). Investors will receive an additional 10% on tokens purchased during this period. Each round offers a 15% referral reward for participants who invite others to join the presale with their referral link. Interested users can join the presale here: <https://chillpnut.io/buy> Step 1: Wallet Setup Investors begin by setting up a Solana-compatible wallet, such as Phantom, to generate a SOL address. The ChillPnut website provides a Dashboard where users can log in by entering their SOL address. Step 2: Funding the Wallet To participate in the presale, participants must fund their wallets with SOL. SOL can be acquired through cryptocurrency exchanges if not already available. Step 3: Purchasing and Reserving CPNUT Within the dashboard, participants can specify the amount of SOL intended for investment in the ChillPnut presale. - The Dashboard calculates the number of CPNUT tokens associated with the entered amount. - SOL is then transferred to the designated wallet address provided on the Dashboard. - Once the transaction is confirmed, ChillPnut will reserve allocated tokens and airdrop before the Token Generation Event (TGE). A SOL address can be obtained using Solana-compatible wallets such as Phantom or Solflare. The total supply of CPNUT tokens is 1 billion. Of this supply, 50% is allocated for the presale, 25% for liquidity, 8% for airdrops, 10% for a centralized exchange (CEX) reserve, 5% for marketing efforts, and 2% for development initiatives. The presale event serves as a key milestone for the platform, providing an opportunity for early participants to support what aims to be an innovative development in the memecoin sector. Additionally, the ChillPnut Giveaway is active, targeting 5,000 SOL addresses with a distribution of 15,850 CPNUT (approximately \$25) per address. Each referral equals 2,377 CPNUT (about \$4). The current token price of \$0.00072 marks the latest valuation for CPNUT. ChillPnut has announced its upcoming listing on Bitmart, a recognized cryptocurrency exchange, with additional plans to expand its availability to platforms such as KuCoin, Bybit, BingX, Huobi, Bitget, and OKX. About ChillPnut (CPNUT) The ChillPnut memecoin debuted on the Solana blockchain and rode the wave of the viral "About a Chill Pnut" meme, gaining popularity on social media. ChillPnut is inspired by the viral story of Peanut, a pet squirrel euthanized by New York authorities. The CPNUT ecosystem may offer P2E aspects, but the token is primarily designed for entertainment. Users can visit the links below for more information about ChillPnut: Website: <https://chillpnut.io/> Twitter/X: <https://x.com/chillpnutio> Telegram: <https://t.me/chillpnutio> Contact Aiden Cole Chill Pnut [aiden@chillpnut.io](mailto:aiden@chillpnut.io)

Empowering Communities with Profit Generation and Enhanced Engagement Sloco, an innovative GameFi platform operating on the Solana blockchain, is excited to announce the official launch of its staking feature. This development offers meme token holders unprecedented opportunities to generate profits and actively participate in a dynamic gaming ecosystem. Transforming Meme Tokens into Productive Assets Sloco's Staking Model allows holders of various meme tokens to stake their assets, thereby converting them into productive resources within the platform. Staked tokens contribute to a shared pool that facilitates gameplay and ensures liquidity for payouts, providing stakers with monthly rewards based on their contributions. Key Features and Benefits: - Inclusivity Across Meme Tokens: Sloco supports a wide range of meme tokens on the Solana network, welcoming both established and emerging tokens to participate without the need for approvals or prerequisites. - Permissionless and Decentralized Participation: True to Solana's decentralized philosophy, Sloco offers a permissionless environment where anyone can stake their tokens and engage with the platform freely. - Community-Centric Engagement: Stakers receive custom links tailored to their specific meme tokens, enabling them to invite others and foster growth within their communities. - Real Utility and Value Creation: By integrating meme tokens into its gaming ecosystem, Sloco elevates them beyond mere speculative assets, providing tangible economic opportunities for holders. A New Economic Model for Meme Tokens Sloco's platform creates a virtuous cycle for meme tokens: increased staking leads to greater visibility and utility, which in turn drives adoption and strengthens communities. This innovative approach has the potential to enhance the inherent value of meme tokens, redefining their role in the crypto landscape. About Sloco Sloco is a pioneering GameFi platform on the Solana blockchain, dedicated to providing practical utility for meme tokens. By offering a permissionless and decentralized environment, Sloco empowers token holders to generate profits, engage with their communities, and explore new possibilities within the gaming ecosystem. For more information, please visit [sloco.io](https://sloco.io). Sloco X account: <https://x.com/SlocoGameFi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - PancakeSwap introduced SpringBoard feature to simplify the token creation and launching process on the BNB Chain. - PancakeSwap SpringBoard is a no-code token creation platform with zero launch fees and offers multiple token pairings. After Pump.fun became a huge success for creating and launching meme coins on Solana, PancakeSwap brought a similar feature to help users create and launch tokens on the BNB Chain. PancakeSwap announced the launch of PancakeSwap SpringBoard feature in its latest blog post. The feature offers a simple method to create and launch tokens on the BNB Chain. 1/58 Introducing PancakeSwap SpringBoard: The all-in-one platform to create and launch your project's token on @bnbchain PancakeSwap ð PancakeSwap (@PancakeSwap) December 4, 2024 ð No Coding ð Zero Launch Fee ð Multi-Token Pairings ð ð Boost Liquidity with CAKE ð Create now <https://t.co/GTZ2hewbzy> ð \$Moreð! [pic.twitter.com/pmuBc03dx6](https://t.co/GTZ2hewbzy) According to the latest blog posted by the decentralized exchange PancakeSwap, it introduced the PancakeSwap SpringBoard feature for creating and launching tokens on the BNB Chain. The feature helps creators, projects, and developers alike to create and launch their tokens on the BNB Chain. No-Code Token Creation and Launch With PancakeSwap SpringBoard the PancakeSwap SpringBoard does not require any coding experience and handles all technical aspects of the token creation process. Also, it does not charge any launch fee for launching the project on BNB Chain. With minimal seeding fee and transparent trading fee, SpringBoard offers a fair launch mechanism, giving equal opportunity to community members. Furthermore, the new feature helps users to choose from multiple token pairs and liquidity pools. The SpringBoard Farm Program helps with community engagement, exposure to the largest DeFi ecosystem, and further boosts token liquidity with CAKE tokens. However, the PancakeSwap SpringBoard is not accessible to users in the US, China, and other restricted jurisdictions. Is PancakeSwap SpringBoard The New Pump.fun? The SpringBoard feature characteristics are similar to that of Solana's Pump.fun, simplifying the token creation process. Pump.fun was launched at the beginning of this year to help users with memecoin creation and launch on the Solana blockchain. With its no-code token creation process, the platform became a massive hit within the Solana community. As per DeFiLlama, the cumulative revenue of Pump.fun increased by multifold and is currently standing above \$250 million. Following the success of Pump.fun and having similar kinds of features, SpringBoard could also open doors to new token creation and launch on BNB Chain. In case the adoption of SpringBoard skyrocketed with the current bullish market sentiment, it could lead to a significant price surge of both CAKE and BNB prices. Highlighted Crypto News Today:

- PEPE surges 3%, driven by whale activity and consolidation. - Whales accumulate tokens, signaling potential price movements. PEPE, the Ethereum-based memecoin, has surged 3% in the past 24 hours, trading at 0.00002193. Over the past month, the token has seen a remarkable 158% increase, though it remains 18% below its all-time high (ATH). Two weeks ago, PEPE hit an ATH of 0.00002184, but it has since faced consolidation within the \$0.000022 to \$0.000018 range. Recently, PEPE has seen significant whale activity. A notable example is a whale that purchased 240 billion PEPE tokens for \$3.64 million on May 29. Despite a subsequent price drop, the whale held onto their position for six months and sold the tokens for \$4.95 million, realizing a profit of \$1.31 million. Moreover, research data highlights shifting trends in large holder movements. On December 3, PEPE's whale net flows shifted from a net outflow of 534 billion tokens to a net inflow of 580 billion tokens. An anonymous whale, who has been accumulating tokens, withdrew over 337 billion PEPE from Binance over the past 20 days, worth approximately \$7 million. This has contributed to speculation that a new wave of whale accumulation could fuel future price surges. However, the overall market sentiment among large holders has been bearish in recent days. A PEPE whale deposited 356.2 billion tokens worth \$7.3 million to Kraken, signaling a potential shift in sentiment. With whales offloading their holdings, the price of it may face downward pressure unless another significant accumulation wave emerges. PEPE Bulls To Hit New Highs Again? Analysts suggest that if it can maintain bullish momentum, it could potentially retest its resistance level at 0.0000227. Conversely, if bearish sentiment prevails, the support level is seen around 0.00001885. PEPE's ongoing consolidation and increased whale participation reflect the volatility and uncertainty surrounding its future price movements. Traders and investors are closely watching these developments, with some predicting further upside if whale accumulation continues. Highlighted News of the Day

- XRP price incurred a modest drop of 0.52% in the last 24 hours after rallying to new levels. - The altcoin's daily trading volume dipped by 8.69% as per CMC data. As the India Blockchain Week ensues full-fledged, worldwide community members gather at Bengaluru. Discussions of web3, the crypto market, and new knowledge get expounded amid an extending bullish market. This bull run stands out due to the AltSeason gaining speed. In the last 24 hours, cryptocurrencies such as Tron and BNB have soared to new trading levels. Meanwhile, the past few days' top performer XRP recorded modest price dips in the past day. The altcoin currently shows a 0.52% price increase, however, it remained bearish a few hours ago as per CMC data. This has drawn market attention after the token's recent rally hitting a 6-year high. Moreover, when XRP first initiated this bullish cycle, it was believed to have been fueled by rumors of the replacement of SEC chair Gary Gensler. With spiking discussions, the cryptocurrency rallied from a low of \$1.9 to current levels in the span of last week. However, the recent dip has raised concerns about whether the upward momentum was short-lived. Community members are battling with questions of whether the bull run will return in the coming days. XRP also flipped Solana and BNB during this rally, becoming the third-largest asset in the market. What Awaits XRP Price Action in the Coming Days? On inferring XRP's price movements, it traces an Ascending Channel pattern. This pattern usually indicates an existing bullish trend. Otherwise known as the rising channel pattern it also suggests further upward movements. Additionally, the cryptocurrency's RSI stands at 84.63 indicating a positive market sentiment apart from an overbought situation. Moreover, XRP's full power indicator value lies at 1.29 as per TradingView data. While its bear power indicator value stands at -0.76 indicating the bull run. These data show an impetus of a bull run sustenance. Thus the token shows potential for a bull run resuming and bouncing back from its current brief dip. Highlighted Crypto News Today:

Undoubtedly, many people consider Bitcoin (BTC) the king of cryptocurrencies and the best possible haven out there. However, for experienced traders, knowing how to invest in other great projects can help break up the monotony of trading only one type of coin over the long horizon. While Bitcoin remains the ideal choice for most, many altcoins can appeal to those who want growth and security. Some of the most appealing options are Rexas Finance (RXS), Solana (SOL), Injectix (INX), and Seal (SEAL). As these tokens stand out with their unique features, taking note of the daily chart helps track the price. Rexas Finance is bridging the gap between crypto and real-world finance. With its Real-World Asset (RWA) finance (RXS) permits RXS to change investors' perspectives on the blockchain world. For example, it enables people to buy shares of high-value assets like properties, artwork, and other intellectual properties that most individuals cannot acquire. Rexas Finance operates as an ERC-20 token on the Ethereum chain, where users enjoy security and growth. A presale currently in stage 9 for the project is ongoing at \$0.125, while the expected price listing is \$0.20. With more than 290 million tokens sold, the presale has secured \$21 million, exhibiting great confidence from investors. It is observed that RXS's post-listing price could grow exceptionally well, especially since CertiK provided an audit, which adds a lot of trust, and being listed on CoinMarketCap and CoinGecko promotes their brand. Furthermore, developing and launching new features of Rexas Finance, such as Rexas Launchpad and Token Builder, allows the company to be considered one of the key platforms for tokenization solutions for developers and businesses that are in demand. As the vision is clear with increasing adoption going forward, RXS is safe and highly rewarding for long-time investors. Solana (SOL): A High-Performance Blockchain Powerhouse Solana has established itself progressively throughout the years as one of the fastest and most scalable blockchain networks with the potential to execute thousands of transactions per second. It employs an original hybrid consensus mechanism that integrates both Proof of History and Proof of Stake, the network performs at unforeseen speed and efficiency.

Solana has managed to range between 230-240 dollars, indicating some good support levels in the asset. Its ecosystem, which is amenable to the development of DeFi platforms, NFTs, and dApps, is still drawing both developers and institutional investors. Solana enjoys a market valuation of over \$112 billion as of this writing and is the leader amongst Ethereum replacements, which ensures good long-term returns. Although the narrative of Solana being a centralized network always hovers in the background, the persistent network updates and enhancement of its ecosystem help Solana retain its position as one of the best cryptocurrencies. Injective (INJ): The DeFi Powerhouse One of the fastest blockchain implementations -The Injective Protocol is accelerating this vision through its newly developed layer 1 blockchain, which involves decentralizing the financial services industry. Some of its distinct advantages, even from other dapp blockchains are that it has no gas fees and the provision of sophisticated contracts. From a technical analysis perspective, growth is provided by developing an expanding ecosystem and partnerships. The price chart has been sustained on a consistent upward incline, which has been reinforced by increasing trading volumes and a solid community. Injective's attention to detail regarding the design of the processes involved gives it an advantage over its competitors. It is important to be interoperable, and in a market where blockchains are becoming increasingly interrelated, Injective is a good long-term investment. Sei (SEI): The Optimized Blockchain for Trading Sei Network is a Layer 1 blockchain that is developed to streamline trade into one ecosystem. Its architecture is appropriate for Decentralized Exchanges and trading apps, with a specific focus on low latency and high throughput. In a way, the Sei price has been in range for quite some time, with excellent support levels developed around the key Fibonacci retracement areas. Its unique features, like native order-matching and frontrunning prevention, make it a favorite among developers looking to build decentralized trading platforms. Sei's focus on optimizing the trading experience positions it as a niche player with strong growth potential. As more applications launch on its network, Sei is poised to attract significant adoption and become a staple in the blockchain ecosystem. Conclusion: Rexas Finance Leads the Pack While Solana, Injective, and Sei all present robust opportunities for long-term profits, Rexas Finance stands out as the safest and most promising investment. Its innovative approach to tokenizing real-world assets, solid technical foundation, and strong presale performance make it a compelling choice. Investors seeking stability, growth potential, and cutting-edge innovation should keep Rexas Finance at the top of their watchlist. With its ability to bridge traditional and digital finance, Rexas is not just a cryptocurrency, it's a transformative force in the blockchain space. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency space is no stranger to disruptive innovation, and every so often, a blockchain emerges with the potential to change everything. Heading into 2025, Lightchain Protocol AI (LCAI) is the breakthrough blockchain tipped to dominate the market. Combining artificial intelligence (AI) with blockchain technology, Lightchain AI is poised to deliver massive gains for early investors. With its best-in-class technology and a presale generating widespread attention, now is the perfect time to join the Lightchain AI presale and secure your position in a project that could define the next phase of crypto evolution. What Makes Lightchain AI a 2025 Contender? Lightchain AI isn't just another blockchain project; it's an ecosystem that redefines how AI and blockchain interact. By addressing fundamental issues like scalability, transparency, and equity, Lightchain AI has captured the imagination of analysts and traders alike. Its transformative features include: - Proof of Intelligence (PoI): A unique consensus mechanism that rewards nodes for performing AI-specific tasks, ensuring computational resources are used productively. - Artificial Intelligence Virtual Machine (AIVM): A cutting-edge tool that enables developers to run AI workloads seamlessly within the blockchain environment. - Privacy and Security: Advanced cryptographic techniques like Zero-Knowledge Proofs (ZKPs) ensure that sensitive data remains private while maintaining trust and transparency. - Decentralized Governance: Token holders actively influence the platform's development through on-chain voting, creating an equitable ecosystem. The Lightchain AI presale is not just a blockchain launch, it's a defining moment in the integration of AI and decentralized systems. Why Lightchain AI Could Lead the Next Crypto Revolution The convergence of AI and blockchain is one of the most significant technological trends of the decade. Lightchain AI capitalizes on this by creating a platform that not only solves key challenges but also unlocks new possibilities for innovation. Here's why experts believe Lightchain AI will dominate in 2025: - Expanding Market Demand: The global AI market is projected to reach \$1 trillion by 2030. Lightchain AI's ability to provide scalable and secure AI solutions makes it uniquely positioned to capture this growth. - Early Investor Opportunities: During its presale, the Lightchain Token (LCAI) is priced attractively, offering substantial upside potential as the project gains adoption. - Real-World Use Cases: From healthcare to logistics, Lightchain AI supports decentralized applications that address real-world problems, ensuring long-term utility and relevance. - Competitive Edge: While many blockchains focus on financial transactions, Lightchain AI combines computational power and blockchain transparency to create a truly innovative ecosystem. The Potential for Massive Gains Early investors in projects like Ethereum and Solana experienced life-changing gains as these platforms scaled. Lightchain AI offers similar potential, with its innovative features addressing both current and future demands in AI and blockchain. Imagine buying Ethereum at \$0.30 or Solana at \$1. Early adopters of Lightchain AI are positioned to benefit from the same kind of explosive growth. Here's why: - Presale Pricing: The ongoing presale offers tokens at a fraction of their expected launch value, giving early buyers significant growth potential. - Limited Supply: With a capped token supply, scarcity will drive up demand as the platform gains traction. - Adoption Momentum: As industries adopt Lightchain AI for decentralized AI applications, the demand for LCAI tokens will only increase. Key Features Driving Lightchain AI's Success Lightchain AI's innovative approach is grounded in solving critical challenges for both AI and blockchain technology. Key features include: - Decentralized AI Development: Through its PoI consensus, Lightchain AI democratizes access to AI resources, enabling diverse contributions to global AI advancements. - Enhanced Scalability: Using techniques like sharding and Layer 2 solutions, Lightchain AI supports large-scale applications without sacrificing speed or performance. - Privacy-Preserving AI: By integrating Zero-Knowledge Proofs and federated learning, Lightchain AI ensures sensitive data is never exposed, even in collaborative environments. These features not only enhance the platform's capabilities but also set it apart as a leader in blockchain innovation. Don't Miss the Opportunity The presale phase of Lightchain AI represents a rare chance to invest early in a project with the potential to dominate a growing market. As blockchain technology continues to evolve, Lightchain AI's focus on AI integration positions it as a critical player in the industry's future. If you're looking for a project with long-term potential and a vision for real-world impact, Lightchain AI is your answer. By participating in the Lightchain AI presale, you can secure your position in what could be the defining blockchain of 2025. Final Thoughts: The Blockchain of Tomorrow As 2025 approaches, Lightchain AI is more than just a crypto project; it's a movement that brings blockchain and AI together to solve some of the world's most pressing challenges. With its advanced technology, scalable solutions, and commitment to privacy and decentralization, Lightchain AI is positioned to redefine how we think about blockchain. Don't wait for the rally to begin; join the Lightchain AI presale today and be part of the revolution. For additional insights, read the whitepaper and follow us on Twitter/X and Telegram. Cryptocurrency has always been about identifying opportunities before they explode. Back in 2017, Bitcoin's meteoric rise made headlines worldwide, turning modest investments into fortunes. Fast forward to today, and another low-cap crypto, Lightchain Protocol AI (LCAI), is emerging as the next big thing. With its revolutionary approach to blockchain and artificial intelligence (AI) integration, Lightchain AI is positioned to deliver returns that could outpace even Bitcoin's legendary bull run. For just \$50, early investors in the Lightchain AI presale could see their stake multiply 10x or more in the coming months. Why? Because the Lightchain AI presale is not just a crypto launch; it's a defining moment in the cryptocurrency market. While many projects promise high returns, Lightchain AI delivers a unique value proposition by merging blockchain with AI. Its platform is designed to address critical challenges like scalability, privacy, and equitable access to AI tools, making it a game-changer for the industry. Key features of Lightchain AI include: - Proof of Intelligence (PoI): A groundbreaking consensus mechanism that incentivizes nodes for performing AI tasks like machine learning training and inference, rather than traditional mining or staking. - Artificial Intelligence Virtual Machine (AIVM): A specialized virtual machine optimized for executing AI workloads on the blockchain, enabling seamless integration of AI-driven applications. - Scalable and Secure: Lightchain AI incorporates advanced solutions like Zero-Knowledge Proofs (ZKPs) and federated learning to ensure data privacy and high throughput. - Token Utility: The Lightchain Token (LCAI) powers transactions, governance, and access to premium AI services, creating constant demand and value for the token. With these features, Lightchain AI offers more than speculative hype; it's a platform built for real-world impact and sustainable growth. Why \$50 Could Turn Into \$5,200 Lightchain AI's presale is a rare opportunity to get in on a promising project at the ground floor. Early-stage tokens often offer the most significant growth potential, and LCAI is no exception. Here's why your \$50 could grow exponentially: - Presale Pricing Advantage: During the presale phase, LCAI tokens are priced well below their expected market value, providing incredible upside potential. - Rising Market Demand: Lightchain AI addresses the intersection of blockchain and AI—two industries experiencing rapid growth and adoption. - Token Scarcity: With a fixed supply of tokens, the value of LCAI is likely to rise sharply as demand increases post-launch. Bitcoin's 2017 bull run turned modest investments into life-changing sums because of early adoption. Lightchain AI offers a similar opportunity with a much lower barrier to entry, making it accessible for all investors. Real-World Applications of Lightchain AI One of the reasons Lightchain AI is expected to see rapid adoption is its focus on solving real-world problems. Its platform supports applications across multiple industries, including: - Healthcare: Securely analyze sensitive patient data using AI, improving outcomes without compromising privacy. - Finance: Deploy AI models for fraud detection, risk analysis, and predictive insights to democratize financial tools. - Supply Chain Management: Optimize logistics and transparency with decentralized AI-driven solutions. - AI Marketplaces: Businesses can access a decentralized marketplace for AI services, reducing costs and increasing security. These applications ensure that Lightchain AI isn't just a speculative investment; it's a token with genuine utility and long-term potential. How Lightchain AI Stands Out From Other Low-Cap Tokens The crypto market is no stranger to low-cap tokens promising exponential returns. However, many lack the substance to sustain growth. Lightchain AI distinguishes itself with its focus on innovation and utility: - Technological Leadership: With PoI and AIVM, Lightchain AI introduces groundbreaking advancements in blockchain and AI integration. - Real-World Relevance: While many tokens rely solely on market hype, LCAI's applications in AI and blockchain ensure sustained demand. - Scalability: Lightchain AI's infrastructure is built to handle complex AI workloads, making it ideal for enterprises and developers. For investors seeking a low-cap crypto with the potential for massive returns, Lightchain AI offers an unmatched combination of innovation and market relevance. Why Act Now? Timing is everything in cryptocurrency, and the Lightchain AI presale is your chance to act before the project gains widespread attention. Bitcoin's early investors saw massive returns because they acted before the mainstream caught on. Lightchain AI presents a similar opportunity with an even greater focus on real-world utility. A \$50 investment in LCAI during the presale phase could multiply into \$5,200 as adoption accelerates and demand for the token surges. With its unique approach to blockchain and AI, Lightchain AI is poised to redefine the crypto landscape, and early investors stand to benefit the most. Final Thoughts: Secure Your Spot in the Next Big Thing As the crypto market evolves, Lightchain AI is emerging as a leader in innovation and growth potential. Whether you're a seasoned investor or new to cryptocurrency, this low-cap gem offers a chance to be part of something transformative. Don't wait to join the Lightchain AI presale today and secure your place in a project that could deliver returns faster than Bitcoin's legendary 2017 run. - BNB price went past the key resistance level of \$710 and recorded a new all-time high value of \$774. - BNB's 24-hour trading volume surged over 100%, implying further price rally. The altcoin season is blooming with multiple altcoins recording new all-time high values in the market. After TRX surprised the industry with its sky-high price trend and eventually reaching new all-time high value, it is now BNB token's turn. BNB recorded a new all-time high value of \$774, with more than 15% growth in the last 24 hours. The Binance Coin BNB is trading at above \$750, with a 15% daily and 20% weekly price rise. After touching its new all-time high value of \$774 for a brief period, it is now trading at around \$755. While the market capitalization also recorded a 15% rise and is standing above \$108 billion, trading volume is skyrocketing with a 108% rise in the last

24 hours. BNB Price Breaking Past Strong Resistance Levels BNB recorded a key resistance level near \$640 several times previously. Earlier this year in June, the price went close to \$710 but couldn't keep up with the upward price trend with the positive market sentiment combined with several altcoins performing well in the market, BNB surged past the latest key resistance level of \$710 and went past \$770, reaching a new all-time high value of \$774. We entered \$BNB earlier, but now at \$740 and in price discovery, it couldn't look better! <https://t.co/EmoQvU8FIh> Ali (@ali\_charts) December 3, 2024 Prominent technical analyst Ali commented on the price rally, referring to an earlier prediction he made on Binance Coin. Ali indicated a price breakout for BNB in the next few months and said there is potential for the token to go past \$1,630. BNB Open Interest funding rate is on the continuous rise and recorded a 44.2% increase, as per Coinglass. The increased trading activity combined with a rise in Open Interest, BNB price is set to reach new all-time highs this altseason. - The US government moved seized funds from the FTX cases in the last few hours. - FTX has been fumbling with a creditors' repayment plan over the past year. The crypto market is ablaze with activity as several altcoins stage bull runs. In an additional spur, discussions on who would succeed Gary Gensler as SEC Chair have spiked quite the interest. Prominent journalists such as Eleanor Terret speculate that Paul Atkins will be the next SEC Chair. Meanwhile, the US government has continued moving seized funds to anonymous wallets, intensifying further speculative areas in the sector. According to Arkham Intelligence data, the US government has moved funds worth approximately \$33.60 million in the last 10 hours. These funds were in the form of various cryptocurrencies, particularly altcoins. Some included ETH, WBTC, BUSD, SHIB, and other tokens. Moreover, these tokens were part of the funds the US government seized during the FTX collapse. The government seized these crypto funds in association with the FTX-Alameda cases two years back, in 2022. Arkham Intelligence updates show that the funds were moved to two anonymous wallets and previously, over the past day, the US government also caught market attention with the movement of another set of seized funds. These were Bitcoin tokens seized from the Silk Road cases. The wallet moved 19.8K BTC worth \$1.9 billion roughly 20 hours ago to a Coinbase wallet. How Is the FTX Repayment Plan Coming Along Amid US Government Transfers? Over the past year, the FTX crypto exchange has made several announcements regarding its repayment plans. In multiple instances, this has even contributed to existing bull runs in the market. Recently, on November 21, the firm stated that it would finalize plans by the end of December. Additionally, the FTT token has also witnessed several price surges in the past month. This resulted from rumors about the creditors' repayments prior to the official announcement. Meanwhile, the US government moving seized funds has sparked previous debates within the community. Finally, there have been no specific comments from sources within the authority regarding the transfers. The cause and reason behind this action have not yet been revealed. The Solana network hub Orbits has launched its staking program, offering participants rewards of about \$2 million. Through the program, ORBT stakers may profit from Orbits' innovative buyback mechanism and generate passive revenue. The Orbits staking program, which is scheduled to launch on December 3, offers community members who stake their ORBT tokens substantial incentives. The program aims to increase ORBT's usefulness while promoting steady development and value generation for stakers. Access to Orbits PAD, where potential new initiatives that have undergone extensive vetting will get Orbits' full marketing and development assistance, is one of the many advantages available to ORBT stakers. To increase their chances of a successful launch, Orbits will also contribute up to \$100,000 in the best initiatives. Orbits Founder Pixel said: "We're thrilled to bring ORBT staking to our community and reward those who believe in our long-term vision. This program exemplifies Orbits' dedication to sustainable growth and genuine value creation." Orbits Marketing Lead DataNinja added: "This isn't just about staking. It's about rewarding trust and participation in a community-centric ecosystem." To support the new staking program, Orbits has assigned over 5 million ORBT tokens, or 25% of the entire supply, to its buyback wallet. Orbits' creative buyback mechanism ensures that these tokens are constantly refilled, so they aren't simply languishing in wallets. The buyback mechanism ensures a consistent flow of profits for stakers by acquiring ORBT tokens from the market using fees produced by Orbits MM Volume Booster services. Four levels make up the ORBT staking program, which uses a time-based approach to reward participants. Holders who stake their token will get a 2x reward after 30 days, a 3x reward after 90 days, and a 4x reward after 180 days. A complex revenue share model has been used to maximize the incentives distributed via the ORBT staking program. In order to sustain demand for the token on the open market, an automated buyback of ORBT is initiated each time a project acquires a Volume Boosting package from Orbits MM. After expanding its MM service to support Pump.fun, Meteora and Raydium, Orbits launched its staking program. Pump.fun's trading volume and visibility may now be increased using Orbits MM, increasing the prospects of project success. The ORBT token will be used to reward community members via an incentive staking program, provide access to Orbits PAD, and improve new products as the Orbits ecosystem expands. The Orbits staking program is the first of many initiatives aimed at increasing community involvement and broadening ORBT's use cases. Orbits is a full-fledged ecosystem on the Solana blockchain that offers cutting-edge services and tools for developers, investors, and cryptocurrency projects. Orbits MM, a leading volume-boosting tool; Orbits PRO, an AI-powered Chrome Extension with sophisticated chart analysis features; and Orbits PAD, a launchpad devoted to assisting top-notch, verified projects with solid business models and monetization strategies, are all part of the ecosystem. The \$ORBT token, which is the foundation of Orbits, powers the ecosystem via calculated buybacks, staking incentives, and a dedication to supporting long-term development and innovation in the cryptocurrency industry.

Bangkok's muggy air was brimming with life in November. While rumors about memecoins swept across social media like an electric undercurrent, the euphoria of Bitcoin breaking the \$90,000 mark was reflected in the busy crowd at Devcon. Streets painted in the red tones of gridlock, traffic at a standstill. Exhausted yet excited after strenuous, time-bound coding sessions, the same hue of red glimmered in the eyes of hackathon developers. BNB Chain's Bangkok Hackathon stood out as the perfect platform for ideal Web3 innovation in the midst of this usual noise. If by quiet, you mean the sound of desperate keyboard slamming and sporadic exclamations of "I can't find the bug!" then the atmosphere inside the hackathon venue was cool and buzzing with quiet resolve. Coca-Cola gave developers the jittery determination of those who had made bad sleep-related life decisions, while Tom Yum-flavored chips were the first to go, as if they had been hoarded by an enigmatic snack robber. 38 projects had been completed at the end of the 24-hour coding marathon, and everyone had come to the conclusion that debugging at 3 am is a special kind of self-punishment. Half of the eight teams that were awarded the coveted presentation slots were from India. After shaking hands and whispering "good luck" that alluded to bigger goals, three obtained funds for their next steps. This was more than just a competition; it was the spark that started a storm, a flurry of creativity and aspiration ready to change the Web3 landscape. The years of BNB Chain that were essentially dead. BNB Chain is dead. This expression, which depicts stagnation, has been echoing in certain parts of the Web3 community in recent years. However, there was a silent but indisputable propulsion behind this impression. With a market capitalization of third in stablecoins and fourth in total value locked (TVL) at more than \$8 billion as of November, BNB Chain is continuously ranked among the top blockchains. Around the world, it manages one-sixth of all blockchain transactions. With 800 active apps, 218 developer tools, and an expanding presence in DeFi, gaming, and AI, the ecosystem is impressive. The Most Valuable Builder (MVB) initiative, which was introduced in 2021 to foster early-stage enterprises, is one of BNB Chain's crown jewels. Out of the 131 initiatives that were supported over the course of seven cohorts, 75 were backed by prestigious investment companies, and more than 60 of them successfully launched their tokens, several of which were listed on significant exchanges. This modest but significant effort is responsible for the rise of five MVB projects featured on Binance Launchpool: Galaxy, Mobx, SpaceID, SleeplessAI, and Altlayer. In an environment where attrition often overshadows advancement, BNB Chain's capacity to maintain and advance initiatives is impressive. Building Toward the Horizon BNB Chain observes with a firm grasp of the bigger picture, whereas Solana has drawn notice with its memecoin explosion. Even if there aren't as many memecoins on BNB Chain right now, platforms like Four.meme and other ecosystem projects set the stage for a more significant and long-lasting memecoin presence in the future. Memecoins are definitely a cultural phenomena. However, BNB Chain has goals that go well than fads. Its main goal is to build a long-lasting ecosystem that spurs innovation in vital fields like stablecoins, gaming, artificial intelligence, and DeFi. BNB Chain is subtly setting the stage for the next phase of Web3—one that prioritizes growth and usefulness above hype—by emphasizing significant, practical uses. BNB Chain has chosen a three-phase development approach to aid in the realization of this goal. Three-Phase Development Strategy BNB Chain takes a purposeful and methodical approach to encouraging innovation: - Early-Stage Incubation: Promising ideas are given vital funds and resources via programs like hackathons and the BNB Incubation Alliance (BIA). The MVB program goes one step further by providing customized incubation sessions that give focused assistance over a number of weeks. - Mid-Stage Deployment: Following launch, projects get more deeply integrated into the ecosystem of BNB Chain as they become older. This phase aids in the growth and success of initiatives by providing access to exchange listings, investment possibilities, and long-term development resources. The strong BNB ecosystem, which offers the technology foundation for innovation, supports several initiatives: - The main smart contract chain, BSC, offers dependability and scalability. - Fast and economical transactions are made possible by opBNB, a high-performance Layer 2 solution. - A decentralized storage network called Greenfield provides effective and safe data storage that is necessary for contemporary applications. These interconnected elements work together to provide a dynamic foundation that gives users and developers the tools they need to realize their ideas. Empowering AI and Beyond One of the most exciting areas for BNB Chain is AI. Applications like My Shell, NFPrompt, and zkPass are supported by the ecosystem, which has over 30 active AI-related deployments, seven of which have been funded by Binance Labs. Data labeling initiatives such as JoloWorld, Alaya AI, and DIN. With about 700,000 weekly active addresses, Din is ranked #1 among all AI apps and eighth overall, according to DappRadar statistics as of November 20. Data-intensive applications benefit greatly from Greenfield's decentralized storage capabilities, which also nicely complement new decentralized science (DeSci) initiatives. Indeed, Greenfield's influence goes beyond artificial intelligence. It opens up new opportunities in decentralized research and intellectual property management by providing researchers and data-centric initiatives with the means to safely store, own, and profit from data. The impact of BNB Chain extends beyond AI to other sectors: - DeFi: BTCP projects that emerged from the MVB program have excellent TVL development, such as Solv Protocol and Avalon Labs. - Gaming: More than 40% of gaming projects were hosted by BNB Chain during the GameFi boom, which resulted in a huge increase in developer and user engagement. Every week, hundreds of thousands of people play games like Seraph and Gobble Games. A vision for the future BNB Chain stands out for its steadfast dedication to long-term building in an industry obsessed with following the next big fad. It builds the foundation rather than following the noise. BNB Chain is not only anticipating the future of Web3 but also influencing it via unrelenting infrastructure innovation, empowering developer programs, and a keen emphasis on game-changing industries like AI, DeFi, and gaming. Although onboarding the next billion users may seem like an unrealistic goal, its methodical and planned advancements make it seem less like a pipe dream and more like an unavoidable reality. Though it doesn't have to, BNB Chain may not be the loudest. Its calm resolve, practical approach, and unwavering concentration are what distinguish it in a field that is sometimes dominated by ephemeral enthusiasm and will secure its position as a pillar of the Web3 revolution.

The Pepe meme.io presale is at \$1,517,992 and counting every day. The precondition of this is the large-scale development of tokens based on cult memes, which also played a major role in the bull run boom of non-standard crypto projects. One of them, a total game changer, Pepe meme.io has every opportunity to make its way into the new phenomenon of cryptocurrency. A meme with genuine benefits: what does Pepe meme.io offer? Pepe meme.io establishes a whole ecosystem, bringing the crypto community together with new solutions, mostly focusing on making it easier for users. The project is creating a dedicated meme coin platform on Solana. \$PEPEMEME is based on the Solana blockchain, which makes it stand out. While Solana is increasingly becoming the preferred blockchain for building decentralized applications as well as DeFi and NFTs, it's also fast becoming the meme coin blockchain of choice. Unlike Ethereum, which it currently plagued with high transaction costs and extreme congestions, the Solana network delivers the fast and low-cost transactions most appropriate for meme coin investors. The project relates to meme tokens, so, quite literally, they turned to Solana, which has a growing demand for cheap and fast networks. Solana's net has already established its place in the broader crypto ecosystem, with meme coins being the latest beneficiary of its scalability and low cost. Solana: The Platform of Evolution in Meme Coins As PEPE on Ethereum has made headlines in the meme coin sector, the \$PEPEMEME token offers the unique advantage of being built on Solana, an up-and-coming contender for one of the top blockchains in the crypto space. With leading transaction speeds and extremely low fees, Solana's blockchain provides the perfect ecosystem for meme coins to flourish. You are not a "Pejete" but this meme coin on Solana is starting to wake up and sorry

I mean become the PEPE of Ethereum. As Solana's ecosystem expands, attracting retail investors and larger bases, \$PEPEMEME could moon when it gets listed on all big exchanges. The \$PEPEMEME ecosystem at a glance: - Telegram Airdrop game with more 2 000 000 players. - Launch Pad for a no-nonsense memecoin launch tool. - The immediate focus of the project team is on further strengthening the Pepememe.io ecosystem for the launch of its streaming platform Pepepad scheduled for January 2025. All these points are increasing interest from the community. Pepememe.io already has over 550,000 followers on X (formerly Twitter) and Telegram. Having an active user base also shows that creating a meme ecosystem is actually a concept that resonates with the crypto space. The Pepememe.io presale has already exceeded \$1,517,992 and is growing every day. The team handled convenience: you'll need just a wallet that will hold Pepememe to purchase it. It makes the platform more accessible to a broader audience of crypto enthusiasts. How To buy Pepememe? Select one of these wallets, depending on what blockchain it's built on: - Phantom Wallet (for Solana) - MetaMask (For Ethereum, Binance Smart Chain and other compatible chains). To execute the transaction, ensure your wallet is properly configured and has the adequate amount of funds. Looking to the future The meme markets are volatile, but Pepememe.io has a strategic approach. It stands a chance to escape meme-worthy irony, thanks to the innovative ecosystem and practical application. This seriousness of intention is expressed by the smart contract audit and implementation of long term incentives for investors. For now Pepememe project is undergoing an audit with leading smart contract auditor CertiK. Participate in the Pepememe. Be a part of this breakthrough by participating in the Pepememe presale. - Polkadot (DOT) surged to \$10.33, marking an 18% rise in 24 hours and a nine-month high. - Golden crossover in moving averages supports sustained bullish momentum. Polkadot (DOT) surged to \$10.33 today, marking its highest price in nine months. The cryptocurrency rose by 18% in the last 24 hours, with its market capitalization climbing to \$15.32 billion. This marks a 17.9% increase, driven by strong market demand. Trading volume also spiked by 65.86% reaching \$1.88 billion, reflecting heightened investor interest. Polkadot's fully diluted valuation (FDV) aligns with its market cap at \$15.32 billion, with a volume-to-market cap ratio of 12.26%. In the current market, Polkadot has outperformed several top altcoins. Analysts suggest that the asset's next targets could range between \$10 and \$11 before a potential retracement to \$7.50. Long-term projections eye \$22 as the next major milestone if bullish momentum sustains. Bullish Indicators For DOT Polkadot's technical indicators reinforce its bullish outlook. The Relative Strength Index (RSI) currently sits at 79.56, with an average of 74.13. This places the asset firmly in the overbought territory, signaling strong upward momentum. The Chaikin Money Flow (CMF) at 0.16 shows positive net capital inflow, further validating the asset's strength. Key resistance is observed at \$10.50. A breakout above this level could propel prices toward \$11 and beyond. However, if Polkadot fails to maintain its momentum, support lies at \$9.50, with a stronger fallback at \$7.50. Traders are advised to monitor these levels closely. The asset's moving averages also align with bullish trends. The 50-day moving average recently crossed above the 200-day moving average, forming a golden crossover. This pattern indicates the likelihood of continued upward movement in the near term. If this trend persists, Polkadot could have a solid chance of hitting major price targets. The asset's volatility offers price levels for traders looking for breakout and resistance points. A sustained rally above \$10.50 could establish new long-term highs, with \$22 in sight. Highlighted Crypto News Today South Korea's Crypto Trading Volume Hits \$18B Surpassing Stock Market by 22%

- Sui price has factored in a 13.99% price increase in the last 24 hours. - The altcoin's daily trading volume has surged by 42.49% as per CMC data. The sector is buzzing with activity, as community members gather to discuss everything decentralized at the India Blockchain Week. Meanwhile, the West has brought glad tidings in the form of speculation on the new SEC chair announcement. Amid a pulch of action, altcoins have continued to surge. Notably, Sui Network's SUI token has yet again shown signs of bouncing on board with the action. The altcoin, after the recent slump, has begun to turn towards its previous bull run. In the past day, SUI has factored in an 13.99% price increase and is inching closer to its ATH. From an intra-day low of \$3.18, the altcoin has climbed to the \$3.5 level. Moreover, SUI hit its all-time high of \$3.93 in the middle of November, after which it succumbed to a bearish takeover. At the time of writing, SUI was trading at \$3.73 as per CMC data. This past day's surge has also impacted the overall week's performance. On inferring its weekly chart, SUI shows a 17.81% price increase. Additionally, over the past few weeks, the Sui Network received increased market attention. Cardano founder, Charles Hoskinson recently applauded Sui Network's operations over Solana. Separately, the network also faced a recent block outage that influenced SUI's price dip. Will SUI Price Re-Establish the Bull Run? Sui's price chart depicts bullish candles in the present after the past few days' consolidation at the \$3.2 and \$3.3 levels. Furthermore, the altcoin's Chaikin Money Flow (CMF) indicator shows a value of 0.14 highlighting an increased influx in capital. Secondly, Sui's bull power indicator's value is 1.05 as per TradingView data. Meanwhile, its bear power indicator's value is -0.79. These indicators suggest that the token holds the potential to stage a bull run in the coming days. Amid the Altseason and bullish market, the token can be expected to witness price breakouts along with other tokens such as Chainlink and Hedera. In the case of a bull run, SUI might face resistance at \$3.94 and \$4.20. Highlighted Crypto News Today:

- MOODENG token is trading above \$0.6, recording more than 90% token surge. - The Coinbase announcement listing MOODENG triggered a sharp price hike. Moo Deng token price has been skyrocketing, recording over a 90% price surge, since Coinbase announced the MOODENG token listing yesterday. Token listing announcements from leading crypto exchange platforms such as Binance and Coinbase have always caused significant price surges in upcoming and existing tokens and memecoins. As per the leading crypto price tracking platform CoinMarketCap, the MOODENG token price witnessed a sharp price hike yesterday and is still continuing its price rally. Within a few minutes, the token went from the lows of \$0.20 to the highs of \$0.58, with an almost 100% price rise. The MOODENG token is currently trading around \$0.62, with a 90% price rise in the last 24 hours. Its market cap exactly followed the price pattern and more than doubled within minutes and is currently standing above \$615 million. Coming to the trading volume, it crossed the \$1 billion mark, with a whopping 720% increase in the last 24 hours. Coinbase Added MOODENG to New Token Listings Assets added to the roadmap today: Moo Deng (MOODENG)https://t.co/rRB9d3HSr2 for Coinbase Assets 5Y.i. (@CoinbaseAssets) December 2, 2024 One of the well-known crypto exchange platforms across the globe Coinbase announced assets added to its roadmap yesterday. The platform included Moo Deng in its new token listings, which led to this ongoing price rally of the Solana memecoin. The fact that MOODENG price went above the bars within just a few minutes after the announcement demonstrates the hype around this memecoin. Moo Deng is a memecoin introduced on the Solana blockchain and is inspired based on the popular internet meme Moo Deng, which is a pygmy hippopotamus living in Thailand. The interest went ga-ga over this creature, calling all its activities adorable. Similar to the birth of many previous memecoins in the industry, the Moo Deng meme popularity has also led to the MOODENG memecoin creation. Can MOODENG Sustain Its Price Rally? Another leading crypto exchange Binance announced Moo Deng futures listing in 2024 this year. In line with the current market scenario, the MOODENG token price rose substantially by over 128% in 24 hours. However, it didn't take more than a week for the price to drop. After experiencing another price surge and reaching the highest \$6.7 price level, MOODENG dropped and went to as low as \$0.3. The Coinbase announcement came at the right time to rescue the MOODENG market price from further price declines. Similar to any other previous memecoin, it is difficult for Moo Deng to sustain its price rally for a long time. The market price might return to its downward trend when a new memecoin enters the market and people get bored of this adorable hippo. However, the bullish crypto market might add some boost to Moo Deng price, causing the price rally to continue for some time. Highlighted Crypto News Today:

Denver, USA, December 2nd, 2024, Chainwire Dai Lo is thrilled to announce the successful acquisition of Fractal, which marks a pivotal moment for the future of blockchain technology and privacy innovation. After months of strategic discussions, the acquisition, completed for an undisclosed amount, positions The Dai Lo to harness Fractal's groundbreaking ZK technology and revitalize its vision for the future. The acquisition encompasses Fractal's robust technology portfolio, token reserves, intellectual property, and, most importantly, its dedicated community. By integrating these assets, The Dai Lo aims to expand upon the exceptional work initiated by Fractal's founders and deliver transformative solutions. Fractal should be part of every technology stack in DeFi, AI, and others on every chain possible. Privacy is a killer app and should be an option on every application on every chain. Fractal aims to be used everywhere for Gary Mitchell. A Strategic Vision for Fractal Earlier this year, The Dai Lo embarked on a journey to explore groundbreaking projects in the Bitcoin, UTXO, BRC20, and Runes ecosystems. Fractal stood out as a project with immense potential but lacked the momentum to realize it fully. While Fractal demonstrated the capacity to operate as an independent Layer 1 (L1) or Layer 2 (L2) platform, its greatest value lies in serving as a foundational component for broader ecosystems, bridging blockchain and traditional Web2 applications. With privacy as a core focus, Fractal's technology is uniquely positioned to redefine the market. It's our belief that this project could achieve a \$1 billion market cap or more, said Gary Mitchell, The Dai Lo's unofficial leader. Our mission is to realize that potential and build a future where privacy is prioritized and celebrated. Meet The Dai Lo The Dai Lo is a team of transformation specialists committed to identifying undervalued projects and driving them to success. - Gary Mitchell (@GuyGaryMitchell): A startup veteran passionate about innovation, Mitchell brings a wealth of experience from the Ethereum, Cardano, and Solana ecosystems and will dedicate his focus entirely to Fractal. - Yeolin Han (@yeonglihan): A coding prodigy with expertise in UTXO chains and the RGBPP space, Han's technical acumen will be instrumental in unlocking Fractal's full potential. - And a team of about 10 developers with expertise in AI, ZK, and other related technologies. The Path Forward Revitalizing Fractal's community is the team's top priority. Acknowledging frustrations from past mismanagement, The Dai Lo is committed to rebuilding trust, improving transparency, and expanding the community with new supporters who align with the project's vision. In tandem, the team is revisiting branding to return to Fractal's roots as a privacy-focused project. With cutting-edge zero-knowledge technology in the pipeline, the long-term goal is to make Fractal scalable, reliable, and user-friendly. Privacy isn't just a feature; it's the foundation, said Yeolin Han. Fractal will empower users to decide what remains public and what stays private, revolutionizing on-chain transaction privacy. Additionally, Fractal should be part of every technology stack in DeFi, AI, and others on every chain possible. Privacy is a killer app and should be an option on every application on every chain. Fractal aims to be used everywhere, said Gary Mitchell. Acknowledgments and Looking Ahead With the dissolution of Discreet Labs, the organization behind Fractal, The Dai Lo expresses its gratitude to all contributors who laid the groundwork for this acquisition. Special thanks go to Sam Harrison for his instrumental role in finalizing the deal. The Dai Lo is excited to usher in a new era for Fractal, with ambitious plans to elevate the project to unprecedented heights. The team invites the community to join them in shaping the future of \$FRA and blockchain innovation. About Fractal Network Fractal Network is a multi-layer network committed to applying zero-knowledge cryptography at every level of the Web3 stack. Our technology powers secured DeFi, asset tokenization, on-chain identity, private transactions, and more. Through applied zero-knowledge encryption, Fractal is creating a secure on-chain environment for all of Web3. Join our community on X, Telegram, or Farcaster to learn more. Contact Contributor Gary Mitchell Fractal marketing@fra.tech

Users can now manage their assets across more than 2,100 blockchains, including Bitcoin, Solana, Ethereum, Cosmos, and THORChain, thanks to a new browser extension released by Ctrl, the self-custody wallet solution that was formerly known as XDEFI. By combining all assets into a single, user-friendly platform, the extension streamlines self-custody. It makes it simple to connect to Dapps, swap tokens across chains, aggregate their portfolio, and even find funds that have been forgotten. The Gas Tank, one of the extension's most notable features, addresses one of the main problems with cryptocurrency: gas costs. Regardless of the blockchain, users may utilize the Gas Tank to pay all on-chain fees with a single amount of \$USDC or \$CTRL. A more seamless and effective experience across networks is offered by Ctrl Wallet, which removes the need to store numerous tokens for gas fees. Enile Dubi, Co-Founder and CEO of Ctrl stated: The Gas Tank is a game-changer for self-custody. Our users can now interact cross-chain without the hassle of managing different gas tokens. This launch represents a significant step forward in making self-custody as user friendly as possible. By providing customers with a single, aggregated dashboard to manage assets across several accounts and blockchains, Ctrl Wallet's unified portfolio view significantly improves usability. In addition to making it simple for customers to monitor their assets, this approach enables them to find funds that they may have forgotten. Users may quickly find assets dispersed over several accounts using the portfolio summary, even if they are hidden tokens on bespoke networks or forgotten accounts connected to a single seed phrase. With more than half a million users, Ctrl Wallet has seen tremendous growth in recent years and is currently ranked among the top 5 multi-ecosystem wallets with the greatest reviews on the Google Chrome Store. Existing users of XDEFI Wallet will be able to immediately take use of the improved

capabilities of the extension as their accounts and funds will be automatically transferred to Ctrl Wallet. Dubiâ added: â€œOur extension wallet is making self-custody accessible to everyone around the world. Our team is committed to creating a wallet that empowers users to control their assets and take advantage of all the opportunities in crypto.â€ Ctrl Walletâ€™s setup procedure takes less than 15 seconds, combining power and simplicity to make self-custody accessible to all users, from novices to seasoned cryptocurrency aficionados. The extension may be downloaded straight from Ctrlâ€™s website for anyone who want to test out Ctrl Wallet. One of the top self-custody wallets, Ctrl was founded in 2020 and offers users access to more than 2,300 blockchains via a safe and user-friendly interface. With more than half a million users worldwide, Ctrl provides a dependable platform for token swapping, asset management, and integrating with decentralized apps. Because Ctrl Wallet is made for both cryptocurrency novices and aficionados, self-custody is available to everyone.

Crypto staking has become one of the most popular ways to earn passive income in the blockchain world. By staking your assets and helping to secure and run the networks, youâ€™re earning good returns while contributing to decentralization. Weâ€™ve ranked the 6 best crypto staking platforms for 2025, with Keynode taking the top spot for its impressive features. Letâ€™s dive into the platforms that could help you make the most of your crypto in the coming year! 1. Keynode: The Future of Crypto Staking Why itâ€™s #1: High Rewards and Unbeatable Security If you want to maximize your earnings and enjoy a seamless staking experience, Keynode is the platform to beat in 2025. With its incredible staking rewards and cutting-edge security, Keynode is rapidly becoming the go-to platform for serious crypto investors. Step-by-Step Procedure to Sign Up and Earn Rewards on Keynode.net Step 1: Sign Up in a Few Seconds Go to Keynode.net and click â€œSign Up.â€ Join now and instantly receive a \$100 welcome bonus added to your account! Step 2: Choose an Asset to Stake Log into your account at Keynode.net and review the staking options. Step 3: Get Rewards Every Day All you need to do after staking your assets is sit back and watch your earnings grow! Diverse Staking Plans There are various staking plans available on keynode.net with different cryptocurrencies such as Solana, polygon, and Toncoin which provide the users with different options to take according to their desire and help to diversify their portfolios. Why Join the Keynode.net Affiliate Program? Our affiliate program offers numerous benefits designed to maximize your earning potential with Ease: 1. No Deposit Required You can join our affiliate program and start making money immediately without needing an initial investment. Just sign up, and you are good to go. 2. High Payouts Receive up to 4% referral commissions on every purchase made by users who sign up through your referral link. Instant Payments in Crypto We are confident we will reward you promptly for all activities you have conducted. 4. No Limits on Referrals Thereâ€™s no cap on how many people you can refer. With unlimited referrals, the more you invite, the more you earn. How Does It Work? 1. Sign Up and Get a Referral Link- Sign up on Keynode.net and get your unique referral link. 2. Invite Friends with Your Referral Link- Share your referral link with friends, family, and your network. The more people you invite, the more you can earn! 3. Earn Rewards- Once your referrals complete their purchases, youâ€™ll receive your 4% commission instantly in crypto. Every purchase will bring more rewards to your account. 4. Get Your Rewards- Your rewards are paid out automatically without any hassle! Active Users Bonus: Earn More for Every Active User In addition to the 4% commission, you can earn extra bonuses based on the number of active users you refer. An active user is someone who has purchased Keynode.net. Keynode.net Million Bounty Program: Earn Money While Keynode.netâ€™s Million Bounty Program is your opportunity to earn rewards while contributing to the growth and success of our platform. 2. Binance: A Trusted Name with Massive Coin Selection Why itâ€™s #2: Extensive Offerings and Competitive Yields As one of the largest and most established crypto exchanges, Binance is a platform that needs no introduction. Binance is popular because it offers a wide variety of coins and good staking rewards, making it a great choice for both beginners and experienced crypto users. Key Features: - Wide Range of Supported Coins: Stake Ethereum (ETH), Binance Coin (BNB), and a variety of other popular coins. - Flexible Staking Options: Choose between locked or flexible staking to suit your investment strategy. 3. Kraken: Top-Notch Security and Transparency Why itâ€™s #3: The Best Choice for Security-Conscious Stakers When it comes to security, there is no better crypto-staking brand in the industry than Kraken. Its transparent fee structure, with stringent security measures, makes it an earning platform you can depend upon especially when your priority lies in securing assets while earning staking rewards. Key Features: - Transparent Rewards: Kraken offers regular weekly payouts, so you always know what to expect. - Supported Assets: Kraken supports popular staking assets like Polkadot (DOT), Cardano (ADA), and Ethereum (ETH). 4. Celsius Network: High Returns and Flexible Terms Why itâ€™s #4: Ideal for Long-Term Stakers Key Features: - Attractive APYs: Earn up to 17% APY on long-term staking, with weekly payouts. - No Lock-Up Period: Enjoy staking without the need for a long-term commitment. 5. Crypto.com: All-in-One Platform for Staking, Trading, and Spending Why itâ€™s #5: Earn While You Spend Key Features: - Flexible Staking Options: Choose between flexible or fixed-term staking depending on your preferences. - CRO Bonuses: Get additional rewards when you stake CRO tokens. 6. FTX: Great for Active Traders Why itâ€™s #6: Staking with Trading in Mind Key Features: - Wide Asset Selection: Stake a variety of assets such as Solana (SOL), Polkadot (DOT), and more. - Competitive Returns: FTX offers staking rewards ranging from 5% to 15% depending on the asset. Conclusion: Which Platform Should You Choose in 2025? The world of crypto staking in 2025 is brimming with opportunities. With platforms like Keynode, Binance, Kraken, Celsius Network, Crypto.com, and FTX, thereâ€™s something for every type of investor, from security-conscious stakers to active traders and long-term investors. For maximum return, Keynode is top of the pile, with unbeatable yields and a secure, user-friendly experience. However, depending on your goals and preferences, other platforms like Binance and Kraken also provide fantastic options for staking. Staking in 2025 will be a powerful tool for earning passive income â€” just make sure to choose the platform that best fits your investment strategy. Happy staking! As the year wraps up, savvy crypto investors are on the hunt for tokens with massive growth potential. Among the most exciting prospects this December is Lightchain AI, a revolutionary blockchain project combining artificial intelligence and decentralized technology. Priced at an astonishingly low \$0.002 during its presale, Lightchain AI is turning heads as it positions itself as a transformative player in the blockchain space, offering early investors the chance to turn modest investments into life-changing wealth. What Is Lightchain AI? Unlike many blockchain projects that rely on speculative hype, Lightchain AI is built on a foundation of innovation and utility. By integrating AI capabilities directly into its blockchain, Lightchain AI is redefining how industries interact with decentralized systems. Key Features That Set Lightchain AI Apart: - Power to the People: Lightchain AI enables real-time predictive analytics, machine learning, and data modeling directly on-chain. - Dynamic Scalability: Utilizing a unique Proof of Intelligence (PoI) mechanism, Lightchain AI offers energy-efficient, scalable, and fast transactions. - Broad Appeal: From its enterprise-ready AI tools to a fun and engaging meme coin pump pad, Lightchain AI has something for every type of investor. - Presale Opportunity: With tokens priced at just \$0.002, Lightchain AI offers a ground-floor entry point for those looking to ride the wave of blockchain innovation. By solving real-world problems and delivering cutting-edge technology, Lightchain AI is rapidly becoming a must-watch project. How Lightchain AI Compares to Other Cryptos While established tokens like Ethereum and Solana dominate the market, Lightchain AIâ€™s focus on AI integration and industry-specific solutions gives it an edge. Its ability to cater to enterprise and retail markets alike makes it a versatile and forward-thinking platform. Turning Cents Into Millions: Why Timing Matters Lightchain AIâ€™s early-stage pricing of \$0.002 makes it one of the most accessible investment opportunities this December. History shows that early investors in transformative blockchain projects often see the highest returns. Whether youâ€™re a seasoned investor or new to crypto, Lightchain AIâ€™s innovative approach offers a compelling reason to act now. Why Lightchain AI Is the Perfect December Pick While the market is filled with promising tokens, Lightchain AI stands out for its combination of technology, vision, and affordability. Its presale pricing gives investors a rare chance to be part of a project that could deliver exponential growth. Join the Lightchain AI presale today and secure your stake in the blockchain revolution. - Website: <https://lightchain.ai> - Whitepaper: <https://lightchain.ai/lightchain-whitepaper.pdf> - Twitter/X: <https://x.com/lightchainai> - Telegram: <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. On-chain data is showing, savvy investors always have an eye on what the whalesâ€”those with massive holdingsâ€”are quietly accumulating. One token generating significant buzz among these big players is Lightchain AI, a groundbreaking blockchain project priced at just \$0.07 during its presale phase. Analysts are predicting a surge in value as the platform gains traction, and whales are positioning themselves to reap the rewards before the masses catch on. Why Whales Are Betting on Lightchain AI Whales arenâ€™t just looking for hypeâ€”they target projects with strong fundamentals and massive growth potential. Lightchain AI checks all the boxes with its innovative integration of blockchain and artificial intelligence. Key Reasons Whales Are Accumulating Lightchain AI: - Game-Changing Technology: - Proof of Intelligence (PoI): A revolutionary consensus mechanism that rewards nodes for performing meaningful AI tasks like machine learning and data processing. - Artificial Intelligence Virtual Machine (AIVM): Enables AI computations directly on the blockchain, offering real-world applications in industries like healthcare, finance, and logistics. - Scalability and Sustainability: Lightchain AIâ€™s advanced infrastructure ensures it can handle high-volume workloads without the environmental impact of traditional blockchains. - Meme Coin Pump Pad: Adding a speculative twist, Lightchain AI is building a meme coin pump pad to attract retail traders and infuse high-energy market activity, blending innovative tech with market excitement. - Early-Stage Opportunity: At its presale price of \$0.07, Lightchain AI offers an unparalleled opportunity to get in before the token achieves mainstream recognition. The Growing Buzz Around Lightchain AIâ€™s Presale Whales often make their moves early, and Lightchain AIâ€™s presale has been a hotbed of activity. With millions already raised, the project is gaining credibility and market momentum. Early investors are confident in its ability to disrupt industries and deliver exceptional returns. How Lightchain AI Compares to Other Tokens While established tokens like Ethereum and Solana focus on scaling decentralized applications, Lightchain AI brings a unique edge by incorporating AI into its blockchain infrastructure. This positions it as a solution for real-world challenges, offering a broader market appeal. Comparison Snapshot: - Ethereum: A pioneer in DeFi and NFTs but lacks native AI integration. - Solana: High-speed blockchain with occasional network outages. - Lightchain AI: Combines AI and blockchain with innovative use cases and unmatched scalability. Why You Should Act Now Analysts Predict a Massive Surge Experts believe that Lightchain AIâ€™s unique position at the intersection of AI and blockchain could yield an exponential increase in token value. As industries adopt decentralized AI solutions, the demand for Lightchain AIâ€™s technologyâ€”and its tokenâ€”will likely skyrocket. Why You Should Act Now Whales are rarely wrong when it comes to identifying high-potential investments, and their quiet accumulation of Lightchain AI tokens speaks volumes. With its presale still underway, now is the ideal time for retail investors to join the revolution before prices surge. Secure Your Stake in Lightchain AI Donâ€™t wait until itâ€™s too late. Lightchain AI is more than just a tokenâ€”itâ€™s a transformative project thatâ€™s redefining blockchain technology. Early investors stand to gain the most as the project scales and reaches its full potential. Join the Lightchain AI presale today and position yourself for the next big crypto surge. - Website: <https://lightchain.ai> - Whitepaper: <https://lightchain.ai/lightchain-whitepaper.pdf> - Twitter/X: <https://x.com/lightchainai> - Telegram: <https://t.me/LightchainProtocol>

- XRP price soars 30%, reaching \$2.43, with a market cap of \$138.78 billion. - Analysts anticipate XRP retesting its all-time high of \$3.40. XRP has surpassed Tether (USDT) and Solana (SOL), becoming the third-largest cryptocurrency by market capitalization. The native token of Ripple Labs reached \$2.46 on December 2, marking a 30% daily increase and a staggering 375% rise over the last 30 days. XRPâ€™s market cap soared to \$138.78 billion, bolstered by a 24-hour trading volume of \$27.38 billion, primarily led by South Koreaâ€™s Upbit exchange. Several factors contributed to XRPâ€™s remarkable ascent. Investor confidence has surged following the announcement that SEC Chair Gary Gensler will step down in January 2025. Optimism about reduced regulatory hurdles has grown, especially as Rippleâ€™s legal fight with the SEC appears to be shifting in its favour. Analysts predict a more lenient regulatory environment. In addition, news of Rippleâ€™s RLUSD stablecoin gaining potential approval from the New York Department of Financial Services (NYDFS) has further strengthened market sentiment. Ripple is targeting a December 4 launch for RLUSD, positioning it as a stablecoin competitor to USDC and USDT. Technical Analysts of XRPâ€™s price are seeing key resistance levels during its rally. Its 50-day moving average crossed above the 200-day moving average, signalling a golden cross and indicating bullish momentum. The next resistance lies at \$2.70, with strong support at \$2.20. The Relative Strength Index (RSI) surged above 85, signalling overbought conditions. While this hints at a possible correction, bullish traders anticipate continuing toward the 2018 all-time high of \$3.40. If XRP breaks the \$2.70 resistance, analysts project it could reach \$3.00 in the short term. Rippleâ€™s partnerships with financial institutions and innovations like RLUSD highlight its utility. Moreover, speculation around the approval of XRP ETFs has added to investor optimism. Institutional demand and broader

adoption could solidify XRP's position as a key player in the crypto market. However, risks remain. Speculative trading, overbought technical indicators, and regulatory uncertainties could impact sustainability. A potential short squeeze has already liquidated \$50 million in leveraged positions, mostly from short traders. XRP's resurgence marks a significant milestone in the crypto market. Positive regulatory shifts, new product launches, and favourable technical signals drive its momentum. While challenges persist, XRP's strong fundamentals and institutional backing make it a contender for future growth. Highlighted Crypto News Today New Report Highlights Stablecoins Could Capture 10% of US Dollar Supply

With the next bull market looming, savvy investors are searching for the tokens that could dominate the landscape by 2025. Among hundreds of contenders, a few standout projects show significant potential to deliver extraordinary gains. From blockchain pioneers to meme coin surprises, these five tokens are poised to explode and one of them could be 2025's biggest gainer. 1. Lightchain AI: The Trailblazer of Decentralized AI Leading the charge is Lightchain AI, a blockchain project seamlessly combining artificial intelligence and decentralized technology. Its Proof of Intelligence (PoI) consensus mechanism rewards participants for meaningful AI computations, such as model training and real-time data analysis, rather than traditional mining or staking. Why It Could Be the Biggest Gainer: - Innovative Technology: The Artificial Intelligence Virtual Machine (AIVM) integrates AI-specific tasks into the blockchain, opening new possibilities for industries like healthcare, finance, and logistics. - Early Entry Point: Still in presale, Lightchain AI offers an attractive investment opportunity for those seeking high-growth potential. - Massive Market Demand: By bridging AI and blockchain, Lightchain AI is poised to disrupt multiple industries and create a massive market. - AI and Blockchain Convergence: AI could emerge as the next big thing, delivering exponential returns for early adopters. 2. Ripple (XRP): The Cross-Border Payment King Ripple has long been a staple of the crypto market, known for revolutionizing cross-border payments with its blockchain-powered solutions. Despite ongoing regulatory challenges, XRP remains a strong contender for significant gains in 2025. Key Strengths: - Institutional Adoption: Ripple's partnerships with major financial institutions make it a reliable choice for blockchain-based remittances. - Legal Clarity Ahead: The resolution of its SEC lawsuit could pave the way for widespread adoption. - Global Utility: Ripple's focus on real-world applications ensures long-term relevance. If regulatory clouds clear, XRP could reclaim its former glory and reward its loyal investors. 3. Solana: The High-Performance Contender Solana's reputation as one of the fastest blockchains in the market has attracted a robust ecosystem of developers and users. Its scalability and low fees make it a preferred platform for DeFi, NFTs, and Web3 applications. Why Solana Could Explode: - Technical Excellence: Solana's proof-of-history (PoH) mechanism enables high throughput and low transaction costs. - Expanding Ecosystem: From DeFi protocols to gaming, Solana continues to attract innovative projects. - Institutional Interest: Increasing adoption by major players gives Solana a strong growth trajectory. With its ability to handle large-scale applications, Solana could see a massive valuation increase by 2025. 4. Ethereum: The Smart Contract Leader As the second-largest cryptocurrency by market cap, Ethereum remains a cornerstone of the blockchain industry. Its recent transition to proof-of-stake (PoS) has improved scalability and sustainability, solidifying its position as the go-to platform for decentralized applications. Ethereum's Edge: - First-Mover Advantage: Ethereum's network effects and developer community remain unmatched. - Layer-2 Solutions: Projects like Optimism and Arbitrum are improving Ethereum's scalability and user experience. - Enterprise Adoption: Leading brands continue to build on Ethereum's robust infrastructure. While it's a less speculative pick, Ethereum's steady growth and proven track record make it a reliable long-term investment. 5. Just a Chill Guy: The Meme Coin Wildcard Rounding out the list is Just a Chill Guy, a meme coin that has captured the internet's imagination with its laid-back brand and viral marketing. While it may not have the technical innovations of other tokens on this list, its community-driven approach gives it explosive growth potential. Why It Could Be a Surprise Winner: - Community Hype: Meme coins thrive on social media buzz, and Chill Guy's community is rapidly growing. - Deflationary Tokenomics: Built-in scarcity mechanisms create upward price pressure. - Viral Marketing: With the right push, Just a Chill Guy could follow in the footsteps of DOGE and SHIB. While speculative, the fun and unpredictable nature of meme coins make them an exciting addition to any high-risk portfolio. Which Token Will Reign Supreme in 2025? All five tokens have unique strengths that position them for explosive growth: - Lightchain AI stands out for its revolutionary AI-blockchain integration. - Ripple (XRP) offers institutional-grade blockchain solutions with global utility. - Solana delivers unmatched speed and scalability for decentralized applications. - Ethereum is a proven leader with unparalleled developer support. - Just a Chill Guy thrives on community power and meme coin momentum. For high-growth potential in emerging tech, Lightchain AI is a strong contender for 2025's biggest gainer. However, Ripple, Solana, Ethereum, and Just a Chill Guy each bring unique opportunities to diversify your portfolio. Join the Lightchain AI presale today and secure your place in the future of blockchain innovation. - Website: <https://lightchain.ai> - Whitepaper: <https://lightchain.ai/lightchain-whitepaper.pdf> - Twitter/X: <https://x.com/lightchainai> - Telegram: <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency landscape is buzzing as big players gear up for the altcoin season. Ethereum whales are adjusting their holdings, potentially aiming to buy back Ethereum at more attractive prices, while Chainlink has recently overcome major resistance levels. BlockDAG (BDAG) has quickly become a standout in the presale space, amassing over \$152.5 million in revenue. The current festive period brings a 150% Black Friday bonus on all purchases made by December 2nd, with 2240x growth since its first batch. BDAG offers a potential return of 20,000x for early participants. Additionally, leading exchanges are discussing listings with BlockDAG as the presale nears end. Ethereum whales adjust as market maintains strength. Ethereum whale activity continues to capture attention as the cryptocurrency aims for \$3,700, despite current sell-offs. Market observations reveal that although these large holders sell, retail investors are stepping in with robust support. Market experts believe these actions are a strategic effort to stabilize prices ahead of an upcoming major rally. Ethereum whales' sell-offs typically lead to temporary market fluctuations, yet they also offer chances for newcomers to buy in at reduced prices. As Ethereum's ecosystem broadens and attracts more institutional attention, the influence of these whale transactions on market trends is increasingly significant. Chainlink's price increase indicates bullish trends. The Chainlink price increase has drawn significant attention as it surpasses crucial resistance points, suggesting a likely bullish trend. The cryptocurrency has shown strong buying interest, maintaining its stance above important levels. Experts point out that the rising need for decentralized oracle services drives this momentum, and Chainlink's leadership in blockchain integration and its surge in Chainlink's price is further supported by its increasing integration within DeFi ecosystems, enhancing participant confidence. Despite occasional setbacks, Chainlink's steady rise reflects a positive market forecast. Its technical prowess and strategic partnerships set it up well for sustained growth in the dynamic cryptocurrency environment. BlockDAG Set to Lead Altcoin Season with 20,000x Growth Potential Market analysts are forecasting what could be the most significant altcoin season yet, spurred by strategic transactions from Ethereum whales and a bullish surge in Chainlink's price. Ahead of these developments, BlockDAG is emerging as a formidable contender with the potential to deliver a 20,000x return on initial contributions, positioning it as the best crypto in the next wave of altcoins. So far, BlockDAG's presale achievements strongly support this optimistic view. The network has successfully raised over \$152.5 million. Starting at just \$0.001, the price of BDAG has climbed to \$0.0234 in its 26th batch, reflecting an impressive 2240x increase. The enthusiastic reception is evident, with more than 16.6 billion BDAG coins already purchased. This confidence is further fueled by an ongoing Black Friday offer, providing a 150% bonus, enhancing the potential gains for early contributors. Top-tier exchanges show interest in BlockDAG, and potential listings will be discussed once the presale ends. This engagement could significantly enhance the network's standing and attract more crypto enthusiasts. BlockDAG stands out with its unique Layer 1 blockchain technology, utilizing a directed acyclic graph architecture that leads the industry in scalability, transaction speeds, and security. The platform is also set to surpass Solana in meme coin development, thanks to its accessible low-code/no-code environment. This feature simplifies the process of meme coin creation, allowing virtually anyone to develop and launch their own coins with little to no coding experience. Such ease of use attracts a growing number of developers and enthusiasts, likely making BlockDAG a central hub for new meme coin projects. With continual updates and enhancements to its ecosystem, BlockDAG is poised to eclipse many established altcoins in popularity and utility. Wrapping Up BlockDAG's rapid progress signals a shift in cryptocurrency trends, positioning it as a prominent coin for 2024 and beyond. While significant activities from Ethereum whales and Chainlink's market strength are noteworthy, BlockDAG's impressive sales figures and strategic position suggest vast growth potential. With potential listings on tier 1 exchanges, BlockDAG stands ready to unlock unprecedented returns for early supporters who leverage the 150% Black Friday offer. Work on the list: <https://www.blockdag.org> Web3 Disruptors: <https://news.crypto.com/news/blockdag-2024> The content depicted in this Press Release does not represent any investment advice. - There was a sharp decline in platform revenue from November 25th to December 1st. - The company's sales for the week came to \$11.31 million reversing its increasing trend. After disabling its livestream option in reaction to concerns of hazardous material being broadcast, the launchpad for Solana meme coins Pump.fun saw a decline in its weekly income. The Solana memecoin generator had a rise in income at the beginning of November, which peaked in the fourth week. The memecoin launchpad made \$33.83 million during the week of November 18th-24th, according to Defillama statistics. A 60% rise from last week and over 400% from the beginning of the month, this is quite an increase. But there was a sharp decline in platform revenue from November 25th to December 1st. According to Defillama's numbers, the company's sales for the week came to \$11.31 million, reversing its increasing trend. When compared to the previous week, the statistic shows a 66% decline. Forced to Disable Feature Some users began to engage in harmful activities in an effort to pump their new tokens, which led to a decline in income. As a result, community members demanded that the company stop its livestream feature. A user on the livestream threatened to take their own life if their coin didn't achieve a certain market cap, according to Beau, the Pudgy Penguins safety project manager, who made the complaint on November 25. The expert in safety marked Pump.fun on X, pleading with the platform to step in, stop the broadcast, and help the streamer. Similar incidents with people purportedly threatening viewers to do violent actions were reported by other social media users. Some X users have reported incidents of man-threatening-a-dog and streamer-threatening-a-school, respectively. Due to an upsurge in violent content, the livestream capability was disabled by the Pump.fun team. Highlighted Crypto News Today: NFT Sales Surge 57.8% in November Amid Positive Market Momentum

In one of the most remarkable moves within the crypto world, a \$CHILLGUY whale has invested \$55,300 in \$SHOTDOGE, a Solana meme token, in its early stages at a market cap of 12.82 million dollars. The buy bought \$SHOTDOGE into the limelight-a one-day-old token already creating noise due to its rapid climb and community-driven storyline. Closer Look at \$SHOTDOGE Launched just 24 hours ago, \$SHOTDOGE is the latest addition to the growing meme token landscape. Rooted in an unconventional backstory, it was abandoned by breeders and later adopted by the Solana community. \$SHOTDOGE has quickly become a symbol of grassroots-driven innovation, amassing over \$12.82 million in market value and has received significant traction on social platforms like Telegram, where its community is heavily promoting its adoption. - Contract Address: 7bdPmWY7qbVzgjzR5fR5dQK3nohZ9GH8EY8Jyayump The Importance of the Whale Buy The whale purchase stands out as a key moment in \$SHOTDOGE's short yet impactful history. Large-scale investments often serve as a signal of confidence in a project's potential, especially in the highly volatile meme coin sector. By committing \$55,300 at such an early stage, this \$CHILLGUY investor has likely sparked curiosity and drawn attention to \$SHOTDOGE's rapid ascent. A \$CHILLGUY whale just bought \$55.30K of \$SHOTDOGE at \$12.82M MC 0Y3 \$ Whale Watch (@whalewatchalert) November 30, 2024 Moreover, the timing of the investment is striking. The market capitalization was \$12.82 million upon the whale's entry and has since climbed to \$26 million for \$SHOTDOGE. Such high value more than doubling in this period underlines the volatile but promising nature of the meme token space. Community-Driven Momentum Whereas many of the meme tokens are mostly speculative in type, it looks like \$SHOTDOGE is taking a different route by leveraging community support on Solana. The Solana blockchain, which houses one of the most active and innovative communities, embraced \$SHOTDOGE as a project that represents the collective spirit of its blockchain. Solana Community expects the token to jump 2000% along with top tier exchange listings. Community engagement has been a driving force behind the token's growth. Discussions on \$SHOTDOGE are heating up in Telegram groups and online forums, with users rallying to promote its adoption. Grassroots involvement like this often plays a critical role in determining the longevity of meme coins, suggesting that \$SHOTDOGE's appeal extends beyond speculative trading. A Rising Star or Flash in the Pan? While

impressive, the growth or SHIBDOGE remains uncertain, much like most meme tokens. The fact that it went from relative obscurity to a market capitalization of \$26 million in a single day indicates its ability to capture the attention of the market, but also brings into question just how sustainable it is. While influences on the market usually drive sentiment in the short term, but whether or not SHOTDOGE succeeds in the long term is more likely to come down to the ability of the token to sustain momentum and develop ongoing community support. The Solana network on which the token is based could prove a stabilizing factor, as projects emanating from active ecosystems tend to fare better than isolated projects.

As Bitcoin surges to unprecedented heights, the cryptocurrency market is entering a thrilling new phase. A wave of meme coins is capturing attention, promising explosive potential as the altcoin season approaches. Enthusiasts are eagerly scouting for tokens poised for significant growth, aiming to seize opportunities before these coins possibly skyrocket. Among these emerging tokens is XYZVerse (XYZ), the first all-sport memecoin combining meme culture with sports enthusiasm, aiming to outperform past successes with ambitious growth targets and a community-driven ecosystem. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for meme coins. Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election – now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding – and your rewards will slam dunk through the roof! XYZ presale is your first-quarter chance to get in before the mind-blowing explosion! In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 14,000% growth by the TGE. Forget about BOM's 5,000% rise or WIE's 1,000% rally – XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here – get in before the crowd storms the field, and you'll be sitting on way bigger returns! Shiba Inu (SHIB) Shiba Inu (SHIB), inspired by Dogecoin, emerged in August 2020 with a new twist on meme coins. Created by the anonymous Ryoshi, SHIB runs on the Ethereum blockchain, enhancing its compatibility within Ethereum's vast ecosystem. Starting with a quadrillion tokens, half were sent to Ethereum co-creator Vitalik Buterin. His donation of SHIB to the India Covid Relief Fund and the burning of 40% of the supply boosted SHIB's profile in the crypto world. Unlike Dogecoin, SHIB leverages Ethereum's capabilities, enabling decentralized apps like ShibaSwap, its own exchange. Plans for a future NFT platform and DAO-based governance showcase SHIB's potential beyond being a meme coin. With growing interest in decentralized finance (DeFi) and non-fungible tokens (NFTs), SHIB's Ethereum integration positions it well within these trends. In the current market, SHIB's active development and strong community support may attract those interested in emerging Ethereum projects. However, as with any cryptocurrency, buyers should exercise caution and do thorough research. Pepe (PEPE) PEPE is a memecoin launched on Ethereum to honor Pepe the Frog, the internet meme created by Matt Furie. It aims to join the likes of Shiba Inu and Dogecoin as a top meme-based cryptocurrency. With no taxes and a candid approach about its lack of utility, PEPE keeps things simple, appealing to meme enthusiasts. In late April to May 2023, its market cap soared to \$1.6 billion, turning early investors into millionaires and building a strong community. This surge sparked a memecoin season, with other memecoins experiencing wild price swings. PEPE's roadmap includes getting listed on CoinMarketCap, trending on Twitter, and securing spots on centralized exchanges, aiming for a memecoin takeover. As the crypto market anticipates the Bitcoin halving and hopes for a bull run, PEPE showcases the potential of memecoins. Its rapid rise and dedicated community set it apart from other memecoins. For those fascinated by the meme coin trend, PEPE offers an interesting opportunity in the current market cycle. Bonk (BONK) BONK, a new player in the crypto world, is turning heads. This Solana-based memecoin, with its Shiba Inu mascot, aims to shake up the scene by shifting power from big investors to the community. After being listed on Coinbase, BONK's value soared over 100%. What's more, it handed out half of its total supply to participants in Solana's NFTs and DeFi project. By mid-December 2022, it had become the third-largest memecoin, with market cap and saw an astonishing year-to-date growth of over 10,000%. Despite the challenges of a large supply and the wild fluctuations of memecoins, BONK shows promise. It's becoming a key part of Solana's ecosystem, even launching its own decentralized exchange called BonkSwap. This integration with a booming network of decentralized apps sets it apart. In the current market cycle, where community-driven projects are gaining traction, BONK stands out as an attractive option. Compared to other memecoins, its strong community focus and real use cases could make it a noteworthy contender in the crypto space. SPX6900 (SPX) In a digital world where numbers hold immense power, SPX6900 has emerged from the depths of internet culture as the newest meme token capturing everyone's attention. Born with the audacious goal to surpass the S&P 500, SPX6900 sets its sights on a staggering \$69 trillion market cap. The logic is simple yet bold: if 6900 is greater than 500, then SPX6900 must be superior to traditional financial instruments. In a market buzzing with innovation, SPX6900's playful approach resonates with a generation that values creativity and disruption. Powered by the belief that bigger numbers mean better investments, it taps into the same spirit that propelled other meme coins like Dogecoin to fame. As cryptocurrencies continue to gain mainstream attention, SPX6900 stands out with its ambitious vision and community-driven momentum. Whether it will achieve its sky-high goals remains an open question, but it undoubtedly adds a new flavor to the ever-evolving crypto landscape. Conclusion SHIB, PEPE, BONK, and SPX are promising, but XYZVerse unites sports fans and targets 20,000% growth, potentially leading the 2024 bull run. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum (ETH) has been a main participant in the crypto market since its launch and has shown until unheard-of success. Thanks to its smart contract characteristics and distributed application (dApp) ecosystem, which transformed blockchain technology, Ethereum became the basis of distributed finance (DeFi) and non-fungible tokens (NFTs). Ethereum rose astonishingly 9,404% in just 100 days during the 2017 bull run, turning early investors into billionaires. Now, as Ethereum develops and is more well-known, experts wonder whether it will hit a \$15,000 cycle. While Ethereum's future is still bright, some investors are turning their focus to other coins with great expansion possibilities. Among these coins is Rexas Finance (RXS), a forerunner of real-world asset (RWA) tokenization. This creative platform could reflect Ethereum's 2017 triumph as smart investors can generate exponential gains. Here's a closer view of Ethereum's future, the fascinating path taken by RXS, and how early you may participate in this upcoming star. Could Ethereum Reach \$15,000 in This Cycle? Regarding market value, Ethereum has confirmed its second-largest ranking among cryptocurrencies. Its most recent developments – the switch to Ethereum 2.0 and the acceptance of layer-2 scaling techniques – have greatly lowered transaction fees and raised network efficiency. These changes are relevant because other blockchains such as Solana, Cardano, and Binance Smart Chain pose a greater challenge to Ethereum's dominance. Due to expanding technologies such as Optimism and Arbitrum which enhance its scalability, Ethereum has found its usage in a broad range of DeFi protocols and NFT platforms. It has practically become the most preferred blockchain for commercial applications and tokenized properties thus pulling in institutional shareholders. The rising on-chain activity brought on by the expansion of distributed apps and NFT projects keeps Ethereum demand high. Ethereum's foundations are still sound, but its present price of more than \$2,000 points to the unusual benefits experienced by early adopters is unlikely to last. Projects such as Rexas Finance offer a great chance for those looking for ETH-like expansion prospects. Rexas Finance (RXS): The Next Big Idea in Blockchain Leading in real asset tokenization – a novel concept combining blockchain technology with conventional finance – Rexas Finance is the platform that lets customers tokenize actual and intangible assets including real estate, goods, and collectibles, therefore enabling fractional ownership and distributed access to valuable investments. - Why Pre-Sale Momentum Might Change Things With tokens worth \$0.10, Rexas Finance is in the eighth stage of its presale right now. The price will rise to \$0.125 in the next stage; the token's listing price is \$0.20, thereby perhaps providing early investors with a 100% return upon launch. Selling around 251 million tokens out of a target of 200 million, the presale brought in more than \$10.9 million. As more than 86% of the tokens have already gone, time is running out to join the presale at this amazing pricing. - Veracity for Trust: CertiK Audit Investing in cryptocurrencies mostly depends on security, hence Rexas Finance has taken great care to guarantee the security of its system. Top blockchain security company CertiK evaluated the smart contracts of the project using their thorough testing methods. This audit lends credibility, which helps RXS to be a consistent investment for both individual and institutional players. - Mainstream Attention Two of the most respectable websites for monitoring cryptocurrency performance have registered Rexas Finance: CoinGecko and CoinMarketCap (CMC). These deals have raised RXS's profile and accessibility greatly and drawn more investors. - \$1 Million Giveaway Initiative. Rexas Finance is starting a \$1 million contest to involve its viewership more actively. Each of the twenty fortunate winners will get \$50,000 in RXS tokens, therefore fostering more general involvement and project excitement. By finishing projects and suggesting others, participants can raise their chances of winning and so create a network effect driving the growth of the coin. - Real-World Applications Tokenization of real assets enables fractional ownership and enhanced liquidity. The platform's launchpad facilitates fundraising and effective marketing for new tokens, while blockchain's transparency and efficiency ensure secure asset management. How One May Make Investments in the Pre-Sale Rexas Finance? Rexas Finance is basic and offers a chance to gain from its great development potential. Use these instructions to join in the presale: - Use a wallet connected with MetaMask or Trust Wallet to guarantee interoperability with Ethereum-based coins. - RXS coins have to be bought in USDT or ETH in order to pay for gas fees. Verify the proper amount in your wallet. - Visit [rexas.com](https://rexas.com) and link the Ethereum network to your wallet. - Select Your Method of Payment. Pay ETH or USDT. - Now add the buying value. Enter the RXS token count you wish to purchase. Check the transaction straight in your wallet. - Get your tokens right here. Following a transaction, the RXS tokens will show up in your wallet. For new investors, Rexas Finance also provides fiat onboarding via sites including MoonPay, Ramp Network, and Transak so they may simply buy ETH with a credit or debit card to take advantage of the presale. Conclusion: One Rare Chance For Exponential Returns. Thanks to its usefulness-driven ecosystem, verified security, and steady presale momentum, Rexas Finance is among the most fascinating cryptocurrencies of 2024. Its resemblance to early Ethereum days – innovation, acceptance, and industry upheaval – makes it a compelling target for explosive expansion. As Ethereum hits new highs, those looking for exponential gains similar to ETH's 2017 boom have a special chance with Rexas Finance. The time to act is now; stage 8 presale tokens at \$0.10 offer notable upside potential from little supply remaining. Will you be part of the next 9,404% movement? Don't miss your opportunity to ride the blockchain technology innovation wave and team with Rexas Finance. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The bull market resumes its run, regaining lost price levels. Polkadot (DOT) and TRON (TRX) continue their uptrend, aiming for a breakout above key resistance levels. On track for further gains, these are altcoins to watch out for. Meanwhile, experts predict significant gains for the viral AI crypto IntelMarkets (INTL). Its unique AI-powered trading platform and impending transformation of the crypto trading scene set the stage for massive adoption – a new DeFi project to keep on the radar. IntelMarkets (INTL): A Good Pick Ahead of Polkadot (DOT) and TRON (TRX)? IntelMarkets (INTL), an emerging cryptocurrency, might be the next to explode. Its solid fundamentals as a utility-backed AI crypto, not forgetting its rapidly rising community, position it for significant gains. This contributes to the presale crossing the \$2.5 million fundraising goal, outclassing most new ICOs. The AI-powered trading platform is at the heart of its appeal. It will introduce artificial intelligence into all trading levels, hailed by experts as groundbreaking. Its self-learning and dual-chain functionality set it apart even more. Unlike conventional exchange protocols, it can run on and will be supported by the Ethereum and Solana blockchains. As it prepares to transform the \$264 billion global crypto trading market, the INTL token is undervalued at \$0.054 in the sixth ICO stage. Buzzing with optimism, top analysts predict a 50x rally after its debut, hailing it as the next big AI coin. Polkadot (DOT): Soars 45% On The Weekly Chart Polkadot (DOT) leads the week in gains after a stellar performance. Trading alongside the bullish crypto market, the Polkadot price soared 45% on the weekly chart. Its performance in the monthly timeframe is equally remarkable – a 95% increase. It retails above \$8.1 and next on its list is flipping the month-high of \$10.29. Crossing this level will boost investor confidence, setting the stage for further upswings. Moreover, the DOT price hovering above the 10-EMA (\$7.5) and 10-SMA (\$7.4) are buy signals, suggesting future price gain. Additionally, experts' forecasts give a positive price outlook. CryptoFaibik, an analyst on X (formerly Twitter), predicts Polkadot (DOT) is poised to skyrocket, expecting a mid-term target of \$40. Meanwhile, Peliks Crypto, another analyst, hints at a rally between \$15 and \$20 before the end of the year, positioning it among the best cryptos to invest in. TRON (TRX) Eyes Price Discovery TRON (TRX), one of the top 5 altcoins, resumed its uptrend. Despite recent bearish pressure, it regained momentum on the weekly chart, trading around

\$0.2. In the past month, the TRON price soared over 20%, cementing its status among the top crypto coins. About 35% below its all-time high of \$0.3, it is among the best altcoins to invest in. Technical indicators like the bull bear power, 9-HMA and 20-VWMA suggest further price gains, contributing to the rising demand. CryptoPisano, an analyst, hints at a breakout above \$0.50 as a new all-time high. Yusuf19, also a crypto analyst, expects the TRON (TRX) price to hit \$10 in 2025, placing it among the best cryptos to invest in. IntelMarkets (INTL): New AI Crypto to Bet on Alongside Polkadot (DOT) and TRON (TRX) IntelMarkets (INTL), a new AI coin, is one of the most sought-after cryptos. It approaches the \$3 million fundraising goal and its debut is on the horizon after entering the sixth stage. Given its significant growth prospects, it is an altcoin worth betting on alongside top cryptos like Polkadot (DOT) and TRON (TRX). - The lack of liquidity and scale will force the Bitcoin ecosystem's DeFi to surpass others. - Governments are discussing Bitcoin strategic reserves, according to Hoskinson. In the next two to three years, according to Charles Hoskinson, founder of Cardano, decentralized finance (DeFi) inside the Bitcoin ecosystem will surpass all other cryptocurrencies. In addition to making an audacious price forecast, he showcased a novel model for bridging Bitcoin that does not rely on centralized exchanges and gushed about the possibilities of Bitcoin DeFi. Hoskinson stated: "I started in the Bitcoin space and I loved Bitcoin. Bitcoin has been a big part of my life and the only reason I'm here today is because Bitcoin exists." Sleeping Giant to Awakened Giant According to Hoskinson, the lack of liquidity and scale will force the Bitcoin ecosystem's DeFi to surpass other cryptocurrency ecosystems' DeFi over the next 24 to 36 months. He shared his early problems with Bitcoin, stating: "Bitcoin went from a sleeping giant never to awaken in an innovation coma, to an awakened giant that is four times the size of Solana and Ethereum combined." Governments are discussing Bitcoin strategic reserves, according to Hoskinson. The massive interest and investment in Bitcoin has led him to believe that its value will skyrocket to \$250,000 to \$500,000 in the next twelve to twenty-four months. He began by saying that Bitcoin would continue to serve as the internet's value store even after adding a DeFi layer. He then went on to explain a new paradigm, the "DeFi mode," that would allow Bitcoin to use Cardano's network and its DeFi capabilities. Highlighted Crypto News Today:

Matchain, the pioneering AI blockchain built on BNB Chain, has achieved a remarkable milestone of 100 million+ transactions just three months after its mainnet launch, demonstrating unprecedented growth in blockchain adoption and utility. Record-Breaking Growth This achievement showcases Matchain's powerful infrastructure and growing ecosystem. - 16 million+ Total Unique Active Wallets (UAW) - Ranked among Top 5 blockchains on DappRadar by UAW - Partnerships with 60+ innovative projects - 12 million+ Telegram community members check out Matchscan and DappRadar for the latest network metrics. Driving Mass Adoption Through Strategic Partnerships Matchain's growth has been driven by key partnerships across multiple sectors. These partnerships show how the platform brings Web3 technology to new users through real-world applications. Paris Saint-Germain (PSG) Matchain's partnership with PSG as their Exclusive Digital Identity Partner connects Web3 technology with over 150 million football fans worldwide. The establishment of a Joint Innovation Studio is developing innovative Web3 experiences that transform how fans interact with their favorite team. The partnership provides fans with unprecedented control over their digital interactions while giving Matchain prominent exposure through stadium advertising, exclusive content creation opportunities, and access to PSG's influential social media presence. To read more about this exclusive partnership, read the official press release. Dmail Network The integration with Dmail showcases Matchain's ability to drive adoption. By establishing itself as Dmail's third-largest chain and driving approximately 20% of their overall traffic, Matchain has outperformed established industry leaders including Base, Solana, Ethereum, and Arbitrum. This success demonstrates how Matchain can significantly boost adoption rates for decentralized applications while providing user-friendly experiences. Gaming Sector Gaming partnerships highlight Matchain's capability to handle high-volume transactions at scale. Leading projects like LOL have achieved remarkable success on the platform, drawing over 2 million active users and processing over 24 million transactions in just 30 days. This performance has earned LOL the #1 rank by UAW for blockchain games on DappRadar, proving that Matchain's infrastructure can support intensive gaming applications while maintaining optimal performance and user engagement. To learn more about Matchain's Strategic Partnerships, check out the latest article. Recognition by BNB Chain Further validating Matchain's innovative approach, BNB Chain has selected Matchain for its prestigious Most Valuable Builder (MVB) Program Season 8. The program, backed by BNB Chain Innovation, Binance Labs, and CoinMarketCap Labs, provides comprehensive support to accelerate Matchain's development of AI-powered identity solutions. This strategic backing will enhance Matchain's platform capabilities while supporting its rapid ecosystem expansion. To learn more about Matchain's selection into the MVB program, read the full press release. Looking Forward Matchain is aggressively expanding its ecosystem through several key initiatives: partnerships, enhanced developer tools, and SDKs for accelerated project integration. Extending across additional services, Matchain is transforming user experience and driving growth. Enabling seamless transactions with expanded cross-chain capabilities - And many more exciting initiatives! About Matchain Matchain is a blockchain platform that offers advanced AI-driven decentralized identity solutions. It ensures privacy, security, and control over personal data, allowing users to own and monetize their digital information within a secure ecosystem. For more details, visit Matchain's website or contact Anastasia Drinevskaya, Chief Marketing Officer, for inquiries and updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. - HBAR gains 216%, and momentum weakens with ADX dropping. - Bullish signals include EMA crossover and Fibonacci breakout trends. Hedera's native token, HBAR, has captured traders' attention with a sharp upward trajectory over the past month, gaining 216% to reach \$0.171 six days ago's seven-month high. Currently trading at \$0.1525, the token is up 10.22% in the last 24 hours but remains 73% below its all-time high. Despite the bullish sentiment, technical indicators suggest a potential weakening of momentum. The Average Directional Index (ADX), a key measure of trend strength, has dropped sharply from over 60 three days ago to 26.2. While this indicates the uptrend is still intact, it suggests a significant decline in momentum. Meanwhile, on a weekly chart, HBAR has seen three consecutive bullish candles, driving a recovery from \$0.041 to its current price. The token has also surpassed the 50% Fibonacci retracement level, breaking a long-standing resistance trendline. What HBAR Traders Should Be Aware Of Bullish signals include a potential positive crossover of the 50- and 100-week Exponential Moving Averages (EMAs) and strong momentum reflected in the Moving Average Convergence Divergence (MACD) indicator. In the four-hour chart, HBAR has established a rising channel pattern supported by the 50-, 100-, and 200-EMAs, suggesting continued bullish sentiment. However, the Cloud chart paints a more cautious picture. HBAR is hovering near the Kijun-Sen line, indicating consolidation. A failure to stay above the cloud could signal a reversal. The 4-hour chart also highlights a possible death cross formation, a bearish signal where the short-term EMA crosses below the long-term EMA. If this occurs, HBAR could test support levels at \$0.117 and potentially dip further to \$0.052. On the upside, HBAR's next resistance levels are at \$0.158 and \$0.17. A breakout above \$0.20 could mark a significant bullish continuation. However, with ADX declining, traders should watch for consolidation or reversals before making decisions. Highlighted News Of The Day Is Cardano Prepping for Bull Run as Price Affirms Hold Above \$1?

In a recent post on X, a prominent crypto billionaire shared that four tokens, Rexas Finance, Bitcoin, Solana, and Dogecoin, make up 67.4% of his crypto portfolio. This deliberate deliberation highlights his faith in these initiatives, each with special qualities and great development possibilities. Rexas Finance (RXS) With a large share of their investing strategy, Rexas Finance rules this billionaire's portfolio. Focused on real-world asset (RWA) tokenization, Rexas Finance is a fresh blockchain-based ecosystem that unlocks liquidity in frequently illiquid assets, including real estate, art, and financial instruments, and fractional ownership is made possible while enhancing the project aims to democratize asset ownership while improving accessibility, efficiency, and openness. The ecosystem has creative tools such as the no-code platform Rexas Token Builder, which lets users easily build tokens. Among the several token standards this tool supports are ERC-20 and ERC-721. Rexas Finance also offers the QuickMint Bot, which guarantees mobile-first access by allowing token production through well-known messaging apps like Telegram and Discord. Openness and security are at the foundation of Rexas Finance. Its artificial intelligence-powered tools like the Rexas AI Shield offer real-time monitoring and smart contract auditing, hence building user confidence. The most recent Certik audit of the ecosystem has strengthened its standing even more by highlighting its strong security policies. This assessment gives investors another degree of assurance, protecting their money. The project's popularity is seen in its presale success. Rexas Finance, which debuted on September 8, less than three months ago, has gone through eight presale phases, and the token price has surged by almost 200% from \$0.03 to \$0.10. Selling 247 million RXS tokens, the presale has gathered \$16.5 million. This expansion was accomplished without the use of venture capital, demonstrating the value of community-driven investment. To further increase its attractiveness, Rexas Finance has obtained listings on CoinGecko and CoinMarketCap, improving its profile and allowing investors to monitor RXS token performance. With 20 winners expected to get \$50,000 worth of RXS tokens apiece, the ongoing \$1 million giveaway encourages even more encouragement. These activities not only attract investors but also help to boost the project's market position. The creative approach and strategic efforts of Rexas Finance have become pillars of the billionaire's portfolio since they highlight its ability to transform asset tokenization and distributed finance. Bitcoin Pioneer of the cryptocurrency scene, Bitcoin remains a pillar in billionaire portfolios. Because of its limited number of 21 million coins and dispersed character, Bitcoin is sometimes seen as digital gold. Its resilience and market supremacy are shown by its present trading price of \$97,450 as of writing, almost reaching the \$100,000 threshold. A main factor in Bitcoin's rise has been institutional acceptance. Bitcoin ETFs, launched by financial behemoths such as BlackRock, have drawn billions in investment and confirmed their potential as a store of wealth. This degree of institutional support guarantees Bitcoin's security and dependability, ensuring its significance in every diversified crypto portfolio. Solana Celebrated for its unparalleled scalability and speed, Solana is another crucial asset for the millionaire's portfolio. With transaction rates of fractions of a cent and a network able to process over 65,000 transactions per second, Solana has been a preferred platform for both customers and developers. With Solana's total value locked (TVL) just surpassing \$8 billion, the blockchain's growing popularity in distributed finance (DeFi) is attested by projects in DeFi, NFTs, and gaming, which enable the blockchain ecosystem to grow. Solana's constant developments and user interaction make it a high-potential asset for this portfolio. Dogecoin Once laughed at as a joke, Dogecoin has found a spot on the portfolio of a crypto billionaire. Being the biggest meme coin with market capitalization, Dogecoin has shown constant community support and usefulness. Its daily transaction volume and growing whale activity point to great market demand. Though it is a meme coin, Dogecoin's practical applications including micropayments and tipping have helped it to be long-lived. Given its continuous development and market activity, Dogecoin remains a speculative but worthwhile addition to any portfolio. Final Thought The large investment this billionaire makes in Rexas Finance, Bitcoin, Solana, and Dogecoin shows the significant strategic value of integrating innovation, dependability, and market appeal in a diversified crypto portfolio. Each of these tokens has special worth and lays a strong basis for future development. Among these, Rexas Finance shows great transformative power. Rexas Finance is transforming decentralized finance, emphasizing RWA tokenization, sophisticated tools, and community-driven expansion. Investors trying to profit from the next wave of blockchain innovation must give it top priority because of its possible exponential expansion. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cardano price has surged by 7.94% in the last 24 hours after recent minor dips. - The altcoin's daily trading volume shows a decline of 23.60% as per CMC data. With the crypto market resisting a price slump, altcoins have continued in their upward movements. Meanwhile, other digital asset categories such as the US spot Bitcoin ETFs have set new records. The spot Bitcoin ETF has hit a new high in monthly flows as per reports. On the other hand, altcoin Cardano has caught market attention. The altcoin, after its most recent dip, has bounced back in the last 24 hours. According to CMC data, Cardano (ADA) shows a 7.94% price increase in the afternoon hours of November 29. The altcoin was trading at a low of \$0.98. After which it fell further to hit intra-day lows before bullish candles took over. At the time of writing, ADA was trading at \$1.0665. Zooming out, over the past week, Cardano's price has surged by 23.65%. This caused the cryptocurrency to break its long-term resistance at \$1. During the course of the week, Cardano exhibited increased volatility that caused the token to fall to support below \$1. However, this recent upward movement suggests

that the token might stage a bull run in the coming days. Furthermore, in November alone, Cardano's price has traversed from a low of \$0.3 to current levels. This has resulted in a 200% surge while the token's YTD stands at 78.40%. Will Cardano Price Hit \$2? On inferring Cardano's technical indicators, they show positive signs. The altcoin's Moving Average Convergence Divergence (MACD) signal line stands above the MACD line. This indicates a positive trend and thus advocates for an incoming bull run. Moreover, the altcoin's bull power indicator value resides at 1.14. On the other hand, its bear power indicator's value is -0.85 as per TradingView data. This shows the bulls having an upper hand against the bears and thus highlighting chances of upward movements further. Meanwhile, the other altcoins such as XRP and Solana have also shown upward movements in the last 24 hours. Highlighted Crypto News Today: Chinese Shares of SOS Ltd. Surge 42% After \$50M Bitcoin Investment

We have all witnessed how crypto casinos are leading the charge in the online gambling industry, providing a modern gaming approach to everyone. Bitcoin and other cryptocurrencies are taking off, so players use these cutting-edge platforms for the ultimate gaming experience. Why? Because crypto casinos offer unbeatable benefits, such as a high level of security, total privacy, and super-speedy transactions. If you are a fan of fast-paced action and smooth payments, crypto gambling platforms are where you need to be. Ready to discover the best crypto casinos for huge winnings and prizes? Let's dive in and explore the top picks shaking up the industry. Key Features to Look for in the Best Crypto Casinos When searching for the best crypto casinos, there are several key features you should consider to ensure a top-tier gaming experience. For example: - Variety of Supported Cryptocurrencies: The best crypto casinos accept multiple digital currencies like Bitcoin, Ethereum, Dogecoin, Litecoin, etc. offering more flexibility for players. - License and Regulation Status: A properly licensed and regulated casino ensures a safe, fair, and legal gambling environment, even in the crypto space. Look for crypto casinos with licenses issued by Curacao, MGA, UKGC, Kahnawake Gaming Commission, etc. - Game Selection and Software Providers: Literally all crypto casinos that partner with top-tier software developers offer a wide variety of games. Have fun with slot games, table games, live dealer games, megaways, game shows, jackpots, and similar experiences. - Bonuses and Promotions for Crypto Players: Crypto casinos often provide special bonuses for deposits made with cryptocurrencies, giving you more value for your bets. They come in the form of crypto welcome bonuses, crypto reload bonuses, crypto cashbacks, crypto deposits for free spins, etc. - Security Features: Encryption and two-factor authentication are essential for protecting your crypto assets and ensuring secure transactions. All crypto casinos offer high-security standards and full anonymity which is important for many players. - Transaction Speed and Limits: Fast deposits and withdrawals are crucial, and the best crypto casinos offer quick processing times without high transaction limits or fees. When using crypto, forget about delays and long waiting times, as all transactions, especially deposits, are instant. Top Picks: Best Crypto Casinos You Must Check If you are a fan of cryptocurrencies and looking for the perfect place to have fun, you are in luck! The best crypto casinos not only accept your favorite cryptocurrencies but also deliver thrilling games, exclusive bonuses, and a high level of security. For those seeking the ultimate crypto gaming experience, we have rounded up the top picks that are leading the way for enthusiasts like you. Let's explore the best crypto casinos where your next big win could be just a click away! 1. Crashino Casino We are opening the list with Crashino Casino, a safe and legit crypto online casino operating since 2021 under the roof of MIBS N.V. with a Curacao license. This is an all-in-one online gambling platform where casino and sports-betting players can dive into huge winning opportunities, playing 2000+ casino games and hundreds of sports matches in all sports, under the sun. The most popular crypto payment methods you can use to place your bets here are Bitcoin, Ethereum, Solana, USD Tether, Dogecoin, Litecoin, Shiba Inu, TRON, Bitcoin Cash, etc. For all new players, there is a great welcome bonus of 100% for your first deposit up to 1000 USDT + 50 free spins for the Big Bass Bonanza slot game. Also, there is a VIP club where you can unlock special prizes after becoming a VIP player, for example, VIP manager, up to 20% cashback bonuses, faster withdrawals, surprises, gifts, etc. If you don't have any crypto assets in your wallet but still want to play here, there is a Buy Crypto option where you can use your credit card and buy cryptocurrencies to start playing. 2. Betibet Casino BetiBet Casino is a legitimate online gambling platform licensed under Curacao eGaming as a brand owned by the famous Dama N.V. This crypto casino has been operating since 2022, offering multiple crypto payment methods that you can use for all deposits and withdrawals on the site. This is the sports-betting first platform, so don't hesitate to make a bet slip with the most popular sports events at the moment in different sports. Choose the matches with the highest winning odds and bet on football, basketball, tennis, table tennis, MMA, golf, cricket, e-sports, horse racing, and so on. The welcome offer for the casino games includes a cashback offer. This is not limited to new players. Existing players can claim the cashback as well. This is up to 20% of their deposit amount. However, the percentage varies as per the amount players deposit. Existing players can take up different combo boost offers in the sportsbook section, such as: - Combo boosts up to 100% offer for US players. - BetiSoccer Boost offers up to 70%. - BetiTennis Boost offers up to 70%. - BetiBoost offers up to 50%. 3. Seven Casino Seven Casino is another huge online casino and sportsbook owned and operated by New Gambling Solutions SRL. This casino is undoubtedly among the best online casinos globally, with an impressive portfolio of games. The live dealer games stand out among the various options, boasting over a hundred live tables and TV games. There is a great sportsbook section too where you can create a bet slip with the most popular sports matches, including live betting. Don't skip the lotto tournaments because you grab huge rewards depending on your country of residence. You can play the lotto in Australia, Belgium, Croatia, Switzerland, Finland, Germany, Greece, Italy, the USA, Latvia, Poland, Spain, and other countries. But, keep in mind that as a new player, there is an offer of a 100% match-up bonus for up to a ~250, one of the biggest welcome bonuses at crypto online casinos like this. Sign up today and have fun like nowhere else. 4. Gangsta Casino Gangsta Casino is a new online casino that launched in 2023. It operates under a Curacao license, which means it follows strict industry standards and regulations. It also uses the latest SSL encryption to protect sensitive data from unauthorized access, which means that all crypto payments will be safe, fast, and anonymous. The casino offers over 3,100 games from over 40 providers, including all the best video slots and live dealer games. As a new player, you can claim a generous welcome package of up to a ~2500 plus 250 free spins when you make your first three deposits. You can also benefit from other regular promotions, such as weekly cashback, birthday bonus, and free spins on Wednesdays and Fridays. The Future of Crypto Casinos The future of crypto casinos is full of exciting possibilities. As more players turn to digital currencies, we will see big changes like the use of NFTs for unique rewards and decentralized platforms that offer a more open and player-driven experience. As regulations get stronger, they will help the best crypto casinos to be safer and more secure for everyone. With faster transactions and better privacy, crypto casinos are set to become even more popular, offering new and exciting ways to play for cryptocurrency fans around the world. - Sol Sniper trading platform introduced SniperX memecoin trading bot on social media platform X. - Traders can directly purchase memecoins on X and view charts, trading volume, and market price. Solana blockchain's NFT analysis and trading platform Sol Sniper announced the launch of memecoin trading bot SniperX. It makes memecoin trading directly accessible on X and allows traders to view all the market price data on the social media platform itself. Introducing SniperX â€ Sol Sniper ðŸŽ ( @solsniperxyz) November 28, 2024 The first memecoin trading bot for X It's time to change the game forever ðŸšŽ pic.twitter.com/bHbXvCoxbV Solana has always been a sophisticated blockchain after Ethereum, bringing innovative and real applications on the network. As per the latest announcement, Sol Sniper introduced SniperX to bring memecoin trading right onto the X platform. SniperX: The First Memecoin Trading Bot X With the introduction of SniperX, traders can buy memecoins' tickers and contract addresses directly on their X timeline. To help traders make fast decisions, it allows users to access volume, price, candlestick charts on the platform. Moreover, traders can even get social insights such as influencer rankings and posts about tokens. The Sol Sniper team has been building this solution for a while and gave demo and early access to some traders for the past week. It is currently available on the Chrome Web Store for all users. So far, the Solana sniper community is buzzing with positive reviews about this new product. Following the Success of SOL Sniper Bot SOL Sniper Bot has been a huge success since its launch, helping traders make massive profits within minutes. With its advanced features, sniper bot helps traders snipe newly launched tokens on the Solana blockchain. Solana is standing out from the rest of the blockchains, with its advanced developments and solutions to help its users. SniperX memecoin trading bot's integration into social media platforms like X, where the crypto community is super active, is a disruptive development. However, the risk of increased scams and possibility to manipulate sensitive markets like memecoin could increase with it. Traders must move cautiously while testing out new products and always do their own research before involving funds.

Bybit, the second-biggest cryptocurrency exchange in the world based on trading volume, is commemorating six revolutionary years with #Super6Bybit, its most thrilling event till yet. With the ongoing success of its ground-breaking bbSOL token and an interactive campaign giving users the opportunity to win a piece of a huge \$1,200,000 prize pool, this milestone anniversary demonstrates Bybit's unwavering commitment to innovation. As the first exchange-backed Liquid Staking Token (LST) on Solana, bbSOL has revolutionized liquid staking since its introduction in September 2024. bbSOL, a product of Bybit's partnership with Solana, enables users to maintain asset liquidity while earning steady staking incentives. The entire locked value of bbSOL exceeded \$100 million in only two months, demonstrating its popularity among consumers looking for both growth and flexibility in their digital assets. This achievement is given an interactive twist by the #Super6Bybit campaign, which invites users to â€build, transform, and superchargeâ€ their own bbSOL. The campaign, which runs from November 28, 2024, until January 6, 2025, blends community involvement, game elements, and lucrative rewards: - Build Your bbSOL: By completing activities, players may earn Feeding Bottles, which increase their bbSOL and provide them access to Lucky Draw tickets. - Transform and Customize: Users gather distinctive hats and gloves to add to their token and earn more tickets as bbSOL becomes stronger. - Supercharge the Prize Pool: The community's milestone accomplishments increase the prize pool, which means that everyone will get more rewards. - Daily Leaderboard Challenge: With a new opportunity to win every 24 hours, players may earn Feeding Bottles and secure leaderboard slots in a daily competition. Joan Han, Sales & Marketing Director of Bybit stated: â€As we celebrate six years of growth and innovation, bbSOL embodies our mission to create lasting value for our community. The #Super6Bybit campaign is a celebration of our shared journey and an invitation to shape the future of finance together.â€ Take part in the exciting #Super6Bybit journey and celebrate Bybit's sixth anniversary. This is your opportunity to take part in a pivotal time in the history of cryptocurrency, whether you're building bbSOL, competing on the leaderboard, or exploring new revenue streams.

Seychelles, Seychelles, November 28th, 2024, Chainwire The rapidly expanding crypto exchange BYDFi has officially listed \$CHILLGUY (â€Just a Chill Guyâ€). Trading is set to begin on November 28, 2024. With the listing, BYDFi furthers its mission of continuously improving market accessibility for the development of blockchain projects, enabling people to use innovative assets beyond the Bitcoin network. BYDFi is committed to continuously expanding its asset portfolio by listing more innovative tokens with community support and cultural significance, such as \$CHILLGUY. This is indicative of the ongoing commitment of the platform to enhance an inclusive and diverse financial ecosystem. CHILLGUY: from Online Illustrations to Cryptocurrencies The Solana-based cryptocurrency \$CHILLGUY was inspired by a 2023 illustration from the artist Phillip Banks (@PhillipBanks). It is an anthropomorphic brown dog with a prominent â€donâ€t careâ€ smile, in jeans, a loose sweater, and red sneakers. It went viral immediately on TikTok before being picked up by fans of cryptocurrencies and going live on the blockchain. The price of CHILLGUY has increased by as much as 195.40% in just the last week, and it currently stands at \$0.5378 at the time of writing. The market capitalization of the token has also sailed past \$600 million, representing an astonishing 8803.97% increase from the lowest point. Due to its rapid growth, CHILLGUY is among the very few meme coins to have ever reached a billion-dollar valuation in such a short period. In a market where meme coins often face corrections, CHILLGUY has defied expectations, riding a wave of cultural and financial momentum that shows no signs of slowing down. The Triumph of Smart Money: Traders Reap 880% Profits According to the team, during this period, informed investors navigated the market's volatility with precision, capitalizing on opportunities to achieve gains. According to GNGN's surveillance, on January 25th, a trader purchased CHILLGUY with a total of 2313 USD in SOL over multiple transactions. They later sold all their CHILLGUY for 3033.6 SOL, netting more than a 380% per token. Another trader, @Breezy, shared their experience and earnings on Twitter, gaining attention within the cryptocurrency community. Google Search Volume Rises by 300% as TikTok Impacts Cryptocurrency Conversations The popularity of CHILLGUY is a cultural movement that goes beyond the cryptocurrency business. According to Google Trends, the question is now among the top three â€how to buyâ€ queries globally. Michael, one of the co-founders at BYDFi, explained, â€CHILLGUY Token is truly a new, significant challenger to existing players in the meme coin market because of its social features and viral growth. As such, it brought record-breaking money inflows into the Solana network. It has thus proved that popular social media sites like TikTok will attract fresh users into the space of crypto.â€ About BYDFi BYDFi, trusted by millions of users around the world, has been recognized

by authoritative platforms such as CoinMarketCap and CoinGecko. The exchange is in partnership with Banxa, Transak, and Mercuryo to ensure seamless processes in buying cryptocurrencies while providing trading services for more than 600 tokens. BYDFi also developed a number of trading tools like Grid Trading, Spot Martingale, and Auto-invest simultaneously to help users make the most out of market opportunities and reduce some risks. The upcoming function of Copy Trading will allow users to synchronize operations in real-time and replicate those methods that proved to be successful with just one click from the top traders. It smoothes usersâ€™ decision-making process, and optimizing their investment portfolios. Contact Senior Marketing Director Chloe BYDFi Fintech Ltd chloee@bydfi.com

- Russia classifies digital currencies as property under new tax law. - Mining operations are exempt from VAT, easing financial obligations. On November 27, 2024, Russiaâ€™s Federation Council approved a crucial bill outlining the taxation framework for digital currencies. The legislation follows approval from the State Duma, the lower house of parliament, the day before. With President Vladimir Putinâ€™s expected signature, the bill will soon become law, officially establishing new rules for crypto taxation in Russia. The new law classifies digital currencies as property under Russiaâ€™s Internal Revenue Code. This includes cryptocurrencies used as payment tools within experimental legal regimes. This classification will exempt cryptocurrency mining and sales from value-added tax (VAT), easing the tax burden for businesses in the sector. Furthermore, services provided by authorized organizations facilitating crypto transactions in these experimental regimes will also be exempt from VAT. A key provision in the law requires mining infrastructure operators to report the personal data of individuals using their systems. This information will be shared with tax authorities. Additionally, mining revenue will be recognized as taxable income. Russiaâ€™s Crypto Tax Rates and Compliance Personal income tax rates on crypto sales will remain at 13%, increasing to 15% for individuals earning over 2.4 million rubles annually, starting in 2025. Businesses engaged in mining will be subject to the standard corporate income tax rate. On the same day, the ruble hit a multiyear low against the U.S. dollar, with one dollar worth 113 rubles. This economic shift highlights the growing importance of cryptocurrencies in Russiaâ€™s financial landscape. Under the new legislation, failure to comply with reporting requirements can result in fines of 40,000 rubles (about \$360). As Russia continues to refine its crypto regulations, the government aims to create a transparent and legally sound framework for the industry. By doing so, it seeks to harness the potential of digital currencies while contributing to public revenue. Highlighted Crypto News Today Why Did XT Exchange Cease Withdrawals Abruptly?

- Bitwise has filed with the SEC for an ETF based on its 10 Crypto Index Fund, including Bitcoin and Ethereum. - The SEC has acknowledged the filing but has not set a deadline for approval or rejection of the ETF. Digital asset manager Bitwise has officially filed an application with the U.S. Securities and Exchange Commission (SEC) for an exchange-traded fund (ETF) based on its existing 10 Crypto Index Fund. The filing, submitted on Nov. 27, seeks approval for a new ETF created to provide investors with indirect exposure to a mix of ten cryptocurrencies, with the custodian handling the fundâ€™s assets. The Bitwise 10 Crypto Index Fund, launched in November 2017, currently has \$1.4 billion in assets under management (AUM). However, the proposed Bitwise 10 Crypto Index Fund will primarily consist of 75-14% Bitcoin, followed by Ethereum (ETH) at 16-42% of the portfolio. Other cryptocurrencies in the fund include Solana (SOL), Ripple (XRP), XRP, Avalanche (AVAX), Cardano (ADA), and Uniswap (UNI). Among others, Bitwiseâ€™s Strategic Moves and SEC Decision Timeline To ensure the security of its crypto assets, Bitwise has partnered with Coinbase Custody for custodial services, while BNY Mellon charges cash management and administrative duties. The daily valuations are provided by CF Benchmarks. However, the SEC has not yet set a deadline for a decision. Further, Bitwise entered the Solana ETF race, joining VanEck and 21Shares in submitting regulatory filings for similar products earlier this week. Also, on Nov 27 Bitwise rebranded its European XRP ETF, initially launched in 2022, as the Bitwise Physical XRP ETP. The expectation for crypto approval has risen following the announcement of SEC Chair Gary Genslerâ€™s departure. Additionally, the impact of his resignation on crypto ETF approval could be enhanced by the crypto-friendly regulatory policies anticipated under Trumpâ€™s leadership.

With its mainnet going live, Supra, a fully vertically integrated Layer-1 blockchain with native onchain randomness, in-protocol oracles, automation features, and support for MultiVM, is happy to announce its Token Generation Event (TGE). Supraâ€™s mainnet \$SUPRA token will now be available to users worldwide on ByBit, Kucoin, Gate, and MEXC via partnerships with a number of Tier 1 and Tier 2 exchanges; more exchanges are anticipated to be revealed shortly. For Supra, this is a significant turning point that ushers in a fascinating new era for its extensive Web3 ecosystem. In order to fulfill the strictest security, performance, and compliance requirements and guarantee a safe and seamless launch, Supra has been collaborating closely with top exchanges over the last several months. Supra has positioned itself to become a pillar of the Web3 landscape by laying a strong foundation built for long-term sustainability and ecosystem stability. Joshua Tobkin, CEO and Co-Founder of Supra said: â€œSupraâ€™s mainnet launch and TGE is more than just a technical feat, itâ€™s the culmination of years of dedicated work from our engineers, developers, researchers, and business teams, with shared goals of building the next generation of secure, efficient, and high-performance network delivering 500k TPS and our MultiVM support, native oracle, VRF, and automation services, Supra is creating an all-encompassing environment for Super dApps. Weâ€™re thrilled to take this significant step forward, providing builders with the performance and flexibility they need to launch disruptive and innovative decentralized applications.â€ Additionally, Supra is happy to acknowledge the amazing support of its Blastoff community, which has been actively supporting the project since 2023. 512,000 verified usersâ€™possibly setting a global record for Web3 participationâ€completed a variety of missions via Supraâ€™s Project Blastoff Campaign in order to qualify for \$SUPRA tokens. With varied vesting options, these devoted supporters may now get their earned tokens. Long-term dedication is rewarded by both choices, enabling the Blastoff community to keep contributing significantly to Supraâ€™s evolving ecosystem. The early developer community has responded enthusiastically to Supraâ€™s network as well, as seen by the success of its incentivized testnet, which was introduced on August 15, 2024. Developers may test the network in real-world scenarios thanks to Supraâ€™s testnet, which has handled over 9 million transactions in its Starcade arena so far, with verified users and no bots across interactive games like Dice Vision and Astro Predictions. Supraâ€™s fast expanding ecosystem is shown by the fact that many developers are now getting ready to release dApps on the mainnet before the end of 2024. Jon Jones, Chief Business Officer and Co-Founder of Supra, emphasized the companyâ€™s commitment to collaboration and strategic partnerships with exchanges. Jon Jones stated: â€œThe launch of \$SUPRA on leading exchanges is a testament to our shared vision of creating a resilient, scalable blockchain ecosystem for the Web3 future. Weâ€™ve been actively working with partners to establish strong liquidity, seamless integration, and a robust foundation for our community. Our efforts donâ€™t stop here; weâ€™re excited to continue collaborating with our exchange partners in ongoing marketing initiatives that bring Supraâ€™s mission to a wider Web3 audience.â€ This audience was further introduced to Supra with Supraâ€™s â€œSpacefestâ€ held on 7 November in preparation for the TGE announcement. The X Space was a deep dive into the Supra ecosystem and related network of industry partners, and included guests such as Sam Blackshear of SU1, Vineth Kashyap of Aptos Labs, and Justin Bongs of Cyber Capital among others. Supraâ€™s Spacefest garnered 23,100 listeners from across the Web3 industry. The ecosystem of Supra provides a full range of services and tools designed to meet the demands of developers. Now that Mainnet is operational, Supraâ€™s MultiVM Layer 1 voyage has begun. Supra has achieved sub-second consensus latency and 500,000 TPS throughput on 300 globally dispersed nodes. The Supra L1 is the first vertically integrated, all-in-one blockchain in history, which is what really makes it unique. With onchain randomness, automation, cross-chain connectivity, native oracle price feeds, and soon-to-be EVM and SolanaVM compatibility, Supra gives developers everything they need on one platform to create Super dApps. Additionally, they have created Supra Containers, which will let developers to establish bespoke ecosystems and economies without having to integrate costly and complicated external services or validators. The Supra L1 MoveVM Mainnet has passed stringent security assessments, including penetration testing, smart contract reviews, and comprehensive code audits by impartial third-party companies, to guarantee user safety and confidence. Additionally, the platform has undergone stress testing to confirm network uptime, transaction finality, and stability under large transaction volumes, satisfying exchange criteria for dependability and efficiency. Furthermore, Supra has strengthened confidence and operational excellence by establishing strong incident response processes with exchange partners that allow for real-time monitoring and quick problem resolution. In addition to marking a significant turning point in Supraâ€™s incredible four-year journey, todayâ€™s TGE announcement also honors the hard work of Supraâ€™s engineering, marketing, and business development teams. With a plan that includes continued interaction with the Web3 community to promote broad acceptance and knowledge of the \$SUPRA token and the larger Supra environment, the Supra team is committed to fostering a thriving and safe ecosystem as the mainnet goes live. Supra is more motivated than ever to spearhead the next wave of blockchain innovation and thanks its community, supporters, and hardworking staff for their unwavering dedication to its objective.

Today, the Plena Super App launched its native token \$PLENA on Gate.io, MEXC & BingX following a recent partnership with Solana and extreme hype and anticipation with the \$180K OG community round and \$500K IDO capping out fast. Plena aims to fill the gap in easy-to-use Web3 apps. It is the first Super App powered by account abstraction, having been built long before Vitalik spoke about the game-changing tech. Since going live, Plena has amassed over 1M+ users across its Google, Apple, and Telegram apps, with the goal of making Web3 more accessible, efficient, and user-friendly. As one of the most anticipated token launches of the year, \$PLENAâ€™s debut has already set new benchmarks in the rapidly evolving Web3 ecosystem. A shift from infra to consumer apps. Plena Super App: Your Passport to Web3 Plena is not just another crypto wallet, itâ€™s the first app powered by Account Abstraction. Plena eliminates the complexities of managing multiple wallets and worrying about gas fees, providing users with a seamless and intuitive Web3 experience. Whether youâ€™re a crypto novice or a seasoned degan, Plena combines everything you need in one place, making it a game changer for mass adoption and fragmentation that exists in the ecosystem today. With over 1 million users across Google Play, the App Store, and Telegram, Plena has proven its ability to attract and retain a robust user base. The platform allows users to swap and trade 100,000+ cryptocurrencies across 10+ chains including memecoins without requiring gas fees, bringing unparalleled convenience to DeFi. All this with self custody, which centralized providers donâ€™t offer. Plena is backed by the best, raising over \$5 million from Consensys (creators of MetaMask), Cointelegraph, Galxe, and other top crypto companies and angels in the space. Plenaâ€™s Unprecedented Growth and Adoption Plenaâ€™s growth in the past years has been extraordinary: - Total user base: Over 1.3M+ total active users across App Store, Google Play and Telegram. - Transaction Volume: Over 5 million transactions processed, with more than \$30 million in funds deposited. - Ecosystem Expansion: Plena has integrated its Account Abstraction SDK with 350+ decentralized applications (dApps), making it a cornerstone of the Web3 ecosystem. - Community Engagement: With over 500,000 members, Plenaâ€™s community is thriving and actively participating in shaping the appâ€™s future. The Launch of \$PLENA: A Milestone Event After years in the making, the \$PLENA token launch has been a resounding success, demonstrating massive demand and community enthusiasm from over 500K+ total members. The OG community round raised \$150,000 in minutes, followed by sell-out IDOs on Seedify and ChainGPT Pad. This momentum culminated in \$PLENA listing on Gate.io, MEXC & BingX marking the official public listing of the \$PLENA token to the wider community. What Makes \$PLENA Special? \$PLENA is not just any token; itâ€™s the heart of the growing Plena ecosystem, serving both utility and governance roles: - Utility: \$PLENA enables seamless transactions within the Plena Super App, fostering a decentralized, secure, and efficient exchange of value among users. - Revenue Share - Staking rewards - Discount on transaction fees - Governance: Token holders can shape the future of the platform by voting on critical proposals, ensuring a community-driven approach to development. With sustainable tokenomics and upcoming staking utility, as the Plena Super App grows, value accrues to the \$PLENA token proportionally. There will also be other perks of holding \$PLENA, including discounts on transaction fees and total revenue generated. A Bright Future Ahead for Web3 Apps Plena is one of the few projects working to actively bridge the gap between the Web3 world and mainstream users. By simplifying the Web3 experience through account abstraction, Plena empowers users to explore and engage with crypto without the technical hurdles that often deter newcomers. This focus on accessibility and innovation makes Plena a beacon for crypto consumer apps, allowing newcomers to quickly onboard and use crypto without all the complexities of worrying about gas fees, keeping their seed phrase safe, worrying about different chains and so much more. Plena combines everything anyone needs, all in one place. The launch of \$PLENA is just the beginning. With a clear vision, cutting-edge technology, and an engaged community, Plena is poised to lead the charge in making the masses onchain. The Super Appâ€™s combination of usability, security, and ecosystem integration positions it as a critical player in driving global Web3 adoption. About Plena Plena is a crypto super app that allows you to trade, swap, bridge, hodl, earn and play from one place. Merging the ownership of self-custodial wallets, with the ease of centralized applications, Plena enables users to interact with 100,000 cryptocurrencies and 350+ dapps with a single click. Plena is one of the first apps to be powered by account abstraction, with the goal of onboarding the next billion users to crypto with ease. Plena is your passport to Web3, equipped with the best tools to navigate the latest narratives easily. AI-enabled, DeFi-engineered, account abstraction powered, with UX that just works. If youâ€™re ready to be part of the Web3

revolution, the time is now. Dive into the Plena Super App, explore the power of \$PLENA, and get ready for the future of DeFi to unfold. Welcome to the next era of crypto. Welcome to Plena. Pepe Coin gripped the cryptocurrency world in 2023, producing spectacular profits that helped early adopters become billionaires. However, its trajectory since then has been less extraordinary, since hype-driven expansion has naturally plateaued. While Pepe Coin still has the potential for small profits, its days as a life-changing investment appear to be behind it. Investors are now shifting their attention to cryptocurrencies with superior fundamentals and long-term potential to drive market development. Rexas Finance (RXS) has emerged as a leader in this rapidly changing business. With a focus on real-world utility, a highly successful presale campaign, and strong technological features, Rexas Finance is poised to be the cryptocurrency that defines the next market rise. The Growing Momentum Behind Rexas Finance Rexas Finance stands out from hype-driven tokens such as Pepe Coin by stressing actual utility and creativity. Features such as token staking, decentralized trading, and real estate tokenization abound in its ecology. These features help Rexas Finance to be a major participant in decentralized finance (DeFi), addressing pragmatic problems and generating possibilities for consumers and investors. The platform's stake structure enables users to generate passive income, increasing its appeal to long-term investors. Its decentralized trading features are intended to eliminate dependency on centralized exchanges, aligning with the larger DeFi movement. Meanwhile, its ambitious approach to real estate tokenization brings a disruptive use of blockchain technology, allowing for fractional ownership and boosting accessibility in a historically opaque market. As of now, Rexas Finance is in Stage 7 of its presale, and each token costs \$0.09. This is after an amazing fundraising campaign. So far, the project has sold more than 224 million tokens and earned more than \$14.3 million. This shows that investors believe in it and that a lot of people want it. Early investors in prior phases have already profited from price hikes, and additional gains are predicted as the token approaches its public launch. This presale achievement is more than just numbers; it demonstrates the growing recognition of Rexas Finance's capacity to disrupt the cryptocurrency sector. Unlike meme tokens such as Pepe Coin, Rexas Finance targets investors looking for long-term growth through real-world applications and creative technology. Strategic successes add to its attraction even more. Securing listings on CoinMarketCap and CoinGecko, Rexas Finance has given legitimacy and visibility in the larger market. The initiative has also been thoroughly examined by one of the top blockchain security companies, Certik. This certification lowers the usual risks connected with more recent tokens by assuring investors of its security, openness, and industry-standard compliance. An ongoing \$1 million giveaway aimed to engage and reward the community has boosted its momentum. Twenty winners will each get RXS tokens worth \$50,000. This will make people excited about the idea and bring it more attention. Not only does this project encourage people to use it, but it also shows that Rexas Finance wants to build a loyal and active user group. Analysts are bullish on Rexas Finance's post-launch trajectory, forecasting large price increases as the ecosystem matures and adoption expands. With a present presale price of \$0.09, the cryptocurrency offers a reasonable starting point for those seeking exponential returns. One of the most enticing investment choices available on the market today is its cost in line with its exceptional basics. Conclusion The crypto community noticed Pepe Coin's explosive rise in 2023, but its growth potential has since slowed. For investors looking for the next big opportunity, Rexas Finance is a fascinating alternative. Combining successful presale, new technology, and real-world applications, it serves as a beacon of long-term growth in an increasingly competitive sector. For investors wanting to profit from the next major market rally, Rexas Finance provides an unrivaled opportunity. Its low price and rapid momentum set it apart from other nascent cryptocurrencies. The token's strategic ambition and increasing usage suggest that it is well-positioned to spearhead the next wave of cryptocurrency success stories. Pepe Coin had its time, but the future belongs to projects like Rexas Finance. RXS's revolutionary platform and ambitious roadmap are poised to change the cryptocurrency market, providing investors with both immediate and long-term benefits. Now is the time to act and secure a position in a coin that is expected to dominate the market in the next years. - Charles Hoskinson claimed Ripple and Stellar are similar, prompting Jed McCaleb to refute this via tweet. - McCaleb clarified that Stellar differs from Ripple with unique code, consensus mechanisms, and smart contract. - McCaleb called Stellar "the most underrated crypto" with vast real-world applications. Jed McCaleb, founder of the Stellar Development Foundation (SDF) and former Ripple CTO, has clarified Stellar with Ripple. Since there are comparisons between the two networks, McCaleb stressed the fundamental differences, including unique codebases, consensus mechanisms, and features. His remarks came in response to comments made by Cardano founder Charles Hoskinson, who recently critiques Solana and said that it is inconsistencies in blockchain adoption. That Stellar's inclusion in Wyoming's state-backed WYST stablecoin project while Cardano was overlooked. Hoskinson suggested potential biases in the selection process, pointing out that Anthony Apollo, Executive Director of the Wyoming Stable Token Commission, he previously worked with Ethereum development firm ConsenSys, "almost as if consensus doesn't get along so well with Ripple," Hoskinson said. Stellar's impact XLM recent rise in adoption highlights its unique value proposition in the blockchain space. According to McCaleb, Stellar processes ten times the number of daily transactions compared to Ethereum, underscoring its efficiency and real-world applications. He also described Stellar as "the most underrated and least understood crypto project," highlighting its ability to facilitate seamless and cost-effective cross-border transactions. Unlike Ripple, XLM's focus extends to enabling smart contracts and integrating advanced functionalities, making it more adaptable for diverse use cases. These features align with XLM's vision of fostering financial inclusion, especially in underserved markets. Market Momentum and Recognition XLM's inclusion in Wyoming's WYST stablecoin project and its recent multi-year price rally reinforce its growing prominence. While the XLM token often correlates with Ripple's XRP. As McCaleb emphasized that Stellar's mission and capabilities are fundamentally distinct. This perspective is supported by its recent performance, with XLM surging 85.12% in the past week before facing a minor 13% pullback, as per CoinMarketCap. With Stellar already outperforming most networks in transaction volume and expanding its real world use cases. McCaleb's statements underline its potential to redefine digital finance.

Singapore, Singapore, November 27th, 2024, Chainwire Foresight Ventures, a global leader in crypto and Web3 investments, is solidifying its presence in the United States by launching a new office at the iconic One World Trade Center in New York City. This initiative, in collaboration with its portfolio companies Morph and The Block, underscores the importance of the U.S. market in driving blockchain innovation and decentralization. The new office, located on the 77th floor of the towering skyscraper, is more than just a workspace. It is envisioned as a collaborative hub for Web3 enthusiasts, developers, and stakeholders, fostering dialogue and action to accelerate blockchain adoption across industries. A Strategic Move into the U.S. Market The United States continues to be a dominant force in the global cryptocurrency landscape. Recent data highlights that the U.S. is still the top country for blockchain developer accounting for 19% of the global number, and US-headquartered startups garnered nearly 43.5% of blockchain funding, making it an indispensable hub for innovation and investment. New York City, a global financial and innovation hub, offers unparalleled access to institutional investors, regulatory discussions, and technological talent. The new workspace will allow Foresight Ventures and its partners to engage more closely with U.S.-based stakeholders, address challenges in the blockchain ecosystem, and explore avenues for global consumer adoption. Alice Li, Head of North America and Investment Partner at Foresight Ventures expresses, "We're bullish about the future of crypto in the U.S., particularly as we expect clearer regulatory frameworks and an influx of builders returning to the region. This office is a tangible step toward empowering the next wave of innovators and shaping the industry's future." For Foresight Ventures, establishing a collaborative presence in New York City is critical for shaping the future of Web3, and this move represents a commitment to bridging international expertise with the vast opportunities present in the U.S. market. "said Forest Bai, Co-founder of Foresight Ventures. A Synergetic Partnership The New York office is designed as a collaborative space to accelerate the growth of Foresight Ventures' portfolio companies by offering strategic resources, mentorship, and access to a robust network of investors and developers. Morph, an advanced Layer 2 scaling solution poised to enhance blockchain scalability while ensuring security and accessibility, and The Block, renowned for its incisive digital asset media and research, are the first companies to establish themselves in this new hub. Celebrating Innovation To cement this milestone, Foresight Ventures, Morph, and The Block hosted a housewarming event during the 2024 holiday season. The gathering, which welcomed representatives from Coinfund, A16Z, Solana, Monad, and 6th Man Ventures, served as a platform for exploring transformative ideas, connecting with long-term builders in the Web3 space, and fostering a sense of community. Event Highlight The team printed Bitcoin whitepaper as a decorative feature on the main wall of the new office, symbolizing the foundation of blockchain innovation. Photo of core team members from Foresight Ventures, The Block, and Morph. About Foresight Ventures Foresight Ventures is the first and only crypto VC bridging East and West. With a research-driven approach and offices in the US and Singapore, they are a powerhouse in crypto investment and incubation. Their premier media network includes The Block, Foresight News, BlockTempo, and Coinness. Foresight Ventures aggressively invests in the most daring innovations and is dedicated to partnering with visionary projects and top teams to help them succeed, reshaping the future of digital finance and beyond. - Bitwise proposed a mix-crypto Bitcoin and Ethereum ETP, weighted by market capitalization. - Bitwise CIO Matt Hougan believes the ETP will be a huge hit with investors, offering a balanced exposure to two largest cryptocurrencies. One of the largest crypto asset management companies, Bitwise has proposed a mix-crypto ETP consisting of both Bitcoin and Ethereum, weighted by market cap. NYSE Arca filed a 19b-4 form to list this product. Bitwise is a crypto specialist asset manager with more than \$11 billion in client assets and its recent product listing is only going to deepen its roots in the crypto market. Today, NYSE Arca filed to list a Bitwise ETP that would hold both spot bitcoin AND ether, weighted by market cap. "Bitwise (@bitwiseinvest) November 26, 2024 the goal: Give investors balanced exposure to the two largest crypto assets in the world in an easy-to-access format. pic.twitter.com/TcBpQM80hW As per the full press release by Bitwise Investments, the Bitcoin and Ethereum ETP is pending approval of the Form 19b-4 filed by NYSE Arca, along with the effectiveness of a Form S-1 registration statement. They aim to offer a balanced exposure to investors, combining two largest crypto assets in the market. Bitwise Bitcoin and Ethereum ETP: The First Mix-Crypto ETP Bitcoin is known for its limited supply and exponential growth of value over the years. On the other hand, Ether fuels one of the most sophisticated blockchain, Ethereum. Both of these largest cryptocurrencies in the market account for roughly 70% of the global crypto market. Bitwise CIO Matt Hougan believes that Bitcoin and Ethereum aren't competitors anymore and their relation is similar to gold and tech stocks. That is the reason why he suggests investors to invest in both. Bitwise Investments is bringing the Bitcoin and Ethereum ETP to offer a simpler way to invest in both the cryptocurrencies at a time. Hougan believes the ETP is going to be a huge hit, offering a balanced exposure to BTC and ETH. Bitwise Plans to Become a Strong Contender in Crypto The latest Bitcoin and Ethereum ETP filing added to the list of highlights the Bitwise firm achieved so far in 2024. The crypto asset manager launched spot Bitcoin and spot Ethereum ETPs and acquired \$4.2 billion worth of assets. Additionally, it also launched an Aptos staking ETP in Europe and acquired European crypto asset manager ETC Group. Bitwise filed an S-1 for XRP ETP and a 19b-4 for spot Solana ETP. Furthermore, it also launched a staking service for Ethereum layer 2 blockchain Starknet. With all these filings and acquisitions, Bitwise emerges to be a strong contender in the crypto industry. Los Angeles, California, November 26th, 2024, Chainwire Bridging Web2 and Web3: Halley Welch and overHere Unite Crypto and Meme Culture Halley Welch, globally recognized as the face behind the viral "Hawk Tuah" meme, today announced on X (formerly Twitter) and on her Talk Tuah episode with Mark Cuban that she is going to have an official memecoin, \$HAWK. In partnership with overHere (X: @overHere\_gg) a pioneering Web3 launchpad and platform "this groundbreaking initiative is poised to redefine meme coins and usher in a new class of consumer crypto. overHere x \$HAWK Allowlist Interested fans can register for the allowlist on overHere to be eligible to claim their free \$HAWK tokens. The allowlist campaign runs from November 26th to December 2nd. To secure a spot and receive free \$HAWK tokens, users can sign up and complete tasks on Galxe as well. The \$HAWK token will begin trading on Solana on December 4th at 5 PM EST. Embracing Her Meme Legacy As a rising star and the personality behind one of 2024's most popular memes, Halley has fully embraced her meme status. She actively engages with her audience through social media, particularly

on X at @halleywelchx, where she shares and creates memes, fostering a genuine connection with her fans. â€œBecoming a meme has been an incredible journey,â€ Halley said. â€œI love making memes and connecting with people worldwide. With \$HAWK, I want to bring that same joy and community spirit into the crypto space.â€ Onboarding Fans Through Free Tokens Understanding that many of her fans are new to cryptocurrency, Halley is committed to making the onboarding process as accessible as possible. She plans to distribute free \$HAWK tokens through allowlist campaigns to her supporters and members of meme and NFT communities. â€œ\$HAWKâ€™s focus on inclusivity for non-crypto fans sets a new standard for memecoin launches, leading the charge for transparent, community-driven projects,â€ said Clinton So, CEO of overHere. Partnership with overHere overHere is the first launchpad and platform that bridges the gap between Web2 and Web3 and is dedicated to empowering brands to create useful, accessible, community-driven projects. With a focus on user engagement and innovative tokenomics, overHere bridges the gap between mainstream and crypto audiences. â€œOur partnership with Halley embodies our mission to unite Web2 and Web3 communities sustainably,â€ said Clinton So, CEO of overHere. â€œWeâ€™re championing a model that prioritizes genuine engagement and inclusivity. With \$HAWK, weâ€™re not just launching a token; weâ€™re building a movement that protects and empowers the community.â€ Token Launch Timeline - Announcement: Halley officially announced the launch of \$HAWK on November 26th. - Allowlist Campaigns: Starting on the same day, November 26th, fans can sign up for the allowlist at [overhere.gg/products/hawk-tuah](https://overhere.gg/products/hawk-tuah) and complete tasks on Galxe to secure their spot and receive free \$HAWK tokens. - Trading Launch: The \$HAWK token will begin trading on Solana on December 4th at 5PM EST, allowing time for fans to join the allowlist and ensure a smooth launch. Background and Vision Halleyâ€™s foray into cryptocurrency was sparked by her experience at the Bitcoin Conference in Nashville earlier this year, where she built ties with various figures in the crypto industry. She also spoke at Korea Blockchain Week, connecting with many communities there. â€œThe conference was enlighteningâ€ I learned a lot about the cryptocurrency space and it motivated me to find ways to educate my fans and provide them with free tokens as a way to experiment, learn, and engage with cryptocurrency,â€ Halley recalled. â€œIt made me realize the importance of doing things the right way. With \$HAWK, I want to set a positive example and make a real impact.â€ By prioritizing ethical practices and community engagement, Halley aims to set a new standard for how public figures can responsibly engage with the crypto community. Joining the \$HAWK Movement Users are invited to join overHere & Halley in this wild adventure and in building a genuine, supportive community. - \$HAWK Token Page & Allowlist Signup: Registering for allowlist on overHere - Galxe Allowlist Campaign Signup: Completing tasks on Galxe for allowlist - overHere X (Twitter): Following for \$HAWK related updates @overhere\_gg - overHere Website: [www.overhere.gg](http://www.overhere.gg) - Joining the Conversation: Participating in community discussions on Telegram at <https://t.me/OverHereCommunity>. - Halleyâ€™s X (Twitter): @halleywelchx About Halley Welch Halley Welch, known globally as the â€œHawk Tuah Girl,â€ is a cultural icon and advocate for positive social change. Through her engaging content and popular presence on social media, she promotes values of friendship, community, and inclusivity. Halley leverages her platform to make meaningful connections and invites her followers to join the \$HAWK community. About overHere overHere is the first launchpad and platform designed to bridge the gap between Web2 and Web3. We empower brands and communities to transition into crypto through sustainable, utility-driven token projects focused on real-world applications and meaningful use cases. By leveraging innovative tokenomics, community engagement strategies, and seamless onboarding experiences, overHere connects mainstream culture with the crypto space, making cryptocurrencies more accessible and valuable. For more details, users can visit overHere. Contact Founder Clinton So overHere [Clinton@overhere.gg](mailto:Clinton@overhere.gg)

- SHIB trades at \$0.00002384, losing over 7%. - The daily trading volume of SHIB has plunged by over 16%. The global crypto market, with its market cap, plunged by over 5.97% to \$3.17 trillion, faced a pullback over the past 24 hours. Bitcoin (BTC) and Ethereum (ETH), which traded above \$99.6K and \$3.5K have witnessed downside correction. The dog-themed meme coin, Shiba Inu (SHIB), has steadily plummeted by over 7.97% on a daily scale. The trading day opened with the meme coin traded at \$0.00002635. At the time of writing, the meme coin traded at \$0.00002384, with the meme coinâ€™s trading volume resting at \$1.48 billion. On November 12, SHIB hit its monthly high of \$0.00002938. However, its upward trajectory has faced resistance, and couldnâ€™t continue its climb. Itâ€™s crucial to note the burn rate of Shiba Inu was down by 29.39% over the day. Notably, 1,442,783 SHIBs were burned. Over the past seven days, a total of 202,773,255 tokens were burned. What Lies Ahead for the SHIB Price? The technical analysis of the SHIB/USD trading pair highlights the negative sentiment. The Moving Average Convergence Divergence (MACD) line is resting below the signal line, inferring the ongoing bearish trend. This crossover suggests the selling pressure. Additionally, the Chaikin Money Flow (CMF) indicator signals a negative money flow as the value sits at -0.19. Meanwhile, the daily trading volume of the meme coin has dropped by over 16.32%. The 24-hour chart reveals the daily relative strength index (RSI) at 39.42, suggesting the weakness of the meme coin. Moreover, SHIBâ€™s short-term 9-day moving average is situated below the long-term 21-day moving average. If the meme coinâ€™s current trading momentum sustains, SHIB might find immediate support and slip below \$0.00002180. A steady break below this level would drive the price toward the \$0.000019 mark. That might extend the period of consolidation. In the current pullback scenario, if SHIB regains momentum, it could mount to a price range of \$0.000025. The continued steady gains might push the meme coin to test its higher resistance at the \$0.00002757 range. Disclaimer: The opinion expressed in this chart is solely the authorâ€™s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News

- SANDâ€™s price dropped 20%, trading at \$0.6061, with a 19.54% fall in the market cap. - The Exchange flow balance rose by 162%, indicating heightened selling activity. The Sandbox (SAND) recently reached a yearly high of \$0.86. However, the price has dropped 20% in the past 24 hours, now trading at \$0.6061. Its market cap has fallen 19.54% to \$1.47 billion, while trading volume plunged 59.37% to \$2.86 billion. The volume-to-market cap ratio stands at 141.22%, signaling intensified activity despite the decline. Dormant tokens are entering the market, with the age-consumed metric spiking to a two-month high of 33.19 billion, according to Santiment. Additionally, the exchange flow balance surged by 162% in 24 hours, indicating a higher movement of SAND tokens to exchanges, potentially for selling. These metrics confirm increased bearish sentiment in the market. SANDâ€™s Battle at Key Support SAND currently trades below key support at \$0.61, as per the technical chart. The 9-day moving average stands at \$0.476, and the 21-day moving average at \$0.3727. A bullish crossover between these moving averages occurred recently, but the current price movement hints at weakening momentum. The RSI (Relative Strength Index) is at 67.14, hovering near overbought levels. If the selling pressure persists, SAND may further test the support at \$0.61 or drop toward \$0.50. On the upside, reclaiming \$0.86 as resistance is crucial to reversing the current trend. A successful breakout could set the stage for a rally toward \$1. If selling pressure continues, SAND could further test the \$0.61 support level or drop toward \$0.50. On the other hand, reclaiming \$0.86 as resistance remains critical for a bullish recovery. A successful breakout above this level might pave the way toward the psychological \$1 mark. However, sustained upward movement would depend heavily on a reduction in selling pressure and increased buying volume. For SAND to stabilize and recover, easing the ongoing sell-offs is crucial. Holding above \$0.61 could restore trader confidence, allowing the price to revisit its recent high of \$0.86. Until such conditions are met, caution is advised as the market leans bearish in the short term. Highlighted Crypto News Today Why Did CZ Call the Memecoin Market â€œWeirdâ€?

Smart investors are diversifying their portfolios by spinning earnings from known coins into exciting penny tokens as the bitcoin market changes. Shiba Inu (SHIB) and two other notable candidates, Rexas Finance (RXS) and Bonk (BONK) have lately attracted a lot of attention in this trend. Those looking for exponential returns are piquing great interest in these low-cost tokens since they offer such promise. Presenting a strong case for becoming the next major movers in the crypto market with special qualities and a committed fanbase, they are Veteran Meme Coin! Shiba Inu (SHIB) Long a favorite among meme coin aficionados, Shiba Inu (SHIB) rides on the coattails of Dogecoin (DOGE). Called the â€œDogecoin Killer,â€ SHIB has developed into a \$3.68 billion market cap token with an astounding supply of over 75 trillion tokens. Its dynamic community and growing ecosystem still draw both institutional and ordinary investors. Though its pricing, at \$0.000049, seems little, Shibarium, a layer-2 blockchain technology, keeps SHIB in the focus based on advances in its ecosystem. Particularly when the hoopla over Dogecoin wanes, investors view SHIB as a qualified candidate for the next bull market. But many of those looking for more modern prospects have investigated substitutes like Rexas Finance and Bonk. Rexas Finance (RXS): The Newcomer Changing Conventions in Finance Currently valued at \$0.09, Rexas Finance (RXS) has become a revolutionary token combining real-world utility with the low-entry attraction of penny tokens. Already raising \$12 million in its seventh presale round, RXS attracts a lot of early interest. This coin is a must-watch since presale participants might enjoy a 122% gain at launch from a projected listing price of \$0.20. What Makes Rexas Finance Unique? RXS runs the tokenizing, trading, and management of real-world assets, therefore allowing fractional ownership of once illiquid markets such as real estate commodities, and antiquities. Forward-looking investors who see this democratized accessâ€™s ability to upend established finance will find attraction. Transparency and security are vital in cryptocurrencies, so Rexas Finance has established the benchmark with its Certik audit. This thorough evaluation guarantees investors a safe and trustworthy ecosystem, therefore improving the reputation and attractiveness of the token to institutional players. Rexas Finance is actively developing its community with a \$1 million giveaway, whereby 20 winners will get \$50,000 worth of RXS tokens. This project increases engagement, loyalty, and new user attraction, hence improving its ecosystem and token demand. The inclusion of Rexas Finance on CoinMarketCap (CMC) and CoinGecko has greatly increased its profile. Tracking market data depends on these platforms, hence their endorsement helps RXS to be a real participant in the crypto scene. More investors are so enticed to the token, boosting its market momentum before it is listed. Bonk (BONK): The Solana-Based Meme Sensation Emerging as a Solana-based token combining the low-cost availability of penny tokens with the light-hearted appeal of meme coins is Bonk (BONK). At barely \$0.0000049, BONKâ€™s astonishing market capitalization of more than \$3.57 billion shows its appeal among speculative investors. Why Bonk Is Drawing Attention? BONK lives the supermarket community of meme coins SHIB and DOGE on the Solana network. It has become a standard, meme coin aficionados given the daily trading of billions of tokens. Bonk is starting to investigate uses for usefulness outside of its meme coin beginnings. Including the Solana ecology, it seeks to generate more liquidity and draw fresh users to its platform. BONK stands out as a new choice for investors, rotating gains from Dogecoin or Shiba Inu as meme currencies remain a vivid feature of crypto culture. Why Are Investors Leaving Dogecoin? Although Dogecoin is still a fierce competitor in the crypto space, many investors search for tokens with more future expansion. Established coins like DOGE find it more difficult to provide the exponential increases seen in their early days due to the rule of declining returns. Combining low costs with great community support and, in the case of Rexas Finance, actual utility, penny tokens such as SHIB, RXS, and BONK offer an appealing substitute. The hunt for the next crypto breakthrough stars fuels this change in the investing approach. Conclusion Opportunities in penny tokens including Shiba Inu, Rexas Finance, and Bonk are starting to show as the next wave of development in the crypto market as investors rotate profits out of Dogecoin. From SHIBâ€™s established community to RXSâ€™s actual utility and BONKâ€™s meme-driven momentum, every one of these tokens has special benefits. These penny tokens offer a rare chance for individuals looking for exponential gains in the crypto world to seize early-stage prospects. The future seems bright for investors ready to make the leap given Rexas Financeâ€™s creative approach and Bonkâ€™s vibrant network. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- The total crypto market cap fell by \$82B, nearing \$3T support. - SAND led altcoin losses, plunging 18% in 24 hours. The cryptocurrency market continues its slide, shedding \$82 billion in the past 24 hours. The total crypto market capitalization now stands at \$3.19 trillion, nearing critical support at \$3 trillion. Bitcoinâ€™s (BTC) price fell by 5.68%, trading at \$92,981.58, while Ethereum and Dogecoin also suffered significant liquidations. Liquidation events spiked, with over \$518.3 million wiped out across 159,554 traders. Long positions bore the brunt, accounting for \$389.13 million. Bitcoin saw \$56 million in liquidations, marking the highest single-day-long liquidations in a week. Ethereum and DOGE followed, losing \$32 million and \$21 million, respectively. The marketâ€™s bearish momentum aligns with readings from the Moving Average Convergence Divergence (MACD) indicator. The MACD line poised to cross below the signal line confirms increasing selling pressure. If selling persists, TOTAL risks breaching the \$3 trillion support level and could slide further to \$2.72 trillion. Weekend trading patterns also contributed to volatility. Low trading volumes amplify price fluctuations, with over 74,000 BTC moved to spot exchanges in three days. Around 19,238 BTC were deposited over the weekend, suggesting profit-taking activity that pressured prices downward. Crypto Market Struggles Metaverse token SAND emerged as the biggest loser, plummeting 18% in the past 24 hours. It currently trades at \$0.66, down 23% from its recent high of \$0.86. Institutional moves have added to market uncertainty. Bitcoin ETFs recorded a daily net outflow of \$438 million. While BlackRockâ€™s IBIT saw a \$267 million inflow, Bitwise BTC experienced a \$280 million outflow. These opposing trends highlight diverging investor sentiments. Options expiries further

drove volatility. Bitcoin and Ethereum options worth \$9.4 billion and \$1.3 billion, respectively, are set to expire on November 29. Traders adjusted their positions, leading to widespread market impacts. Despite the downturn, some tokens gained ground: Lido DAO surged 7.6%, followed by Uniswap and Arbitrum, which rose 6.07% and 5.34%, respectively. These gains highlight investor interest in decentralized finance (DeFi) amid broader market turmoil. While market sentiment remains in "extreme greed," with a Fear and Greed Index value of 82, traders continue navigating volatility. The cryptocurrency market's recent fluctuations underscore the challenges of reaching major price milestones like \$100K for Bitcoin. Highlighted Crypto News Today Can Solana (SOL) Recover and Surpass the \$260 Mark?

- Dogwifhat surged 15% after its Robinhood listing but lost all gains due to Bitcoin's sudden price drop to \$92K. - Currently, WIF priced at \$3.11, a 12% decline from its intraday high of \$3.57. Earlier today, the largest Solana-based memecoin, dogwifhat (WIF), saw its price climb by over 15.91%, rising from a low of \$3.08 to a high of \$3.57 following its listing on popular crypto exchange Robinhood. This surge was triggered by a cryptic post from the exchange on Monday, featuring the iconic wool hat linked with the token. The post created significant excitement among traders, and shortly after, CEO Vlad Tenev confirmed WIF's official listing on the platform. However, the excitement was short-lived as the cryptocurrency market experienced a downturn. By the time of writing, dogwifhat had retraced to \$3.14, largely due to a global market decline caused by Bitcoin's sudden plunge below \$92.5K. JUST IN: 0Y Bitcoin drops back to the \$92K zone, leading to a 3.63% decline in the global market cap. 1i, 6c TheNewsCrypto (@TheNewsCrypto) November 26, 2024 Currently, \$BTC is priced at \$92,792! 0Y"##Bitcoin \$BTC pic.twitter.com/MYEU3aFDdI This drop has been caused by institutional activity and the looming expiry of Bitcoin and Ethereum derivatives. A total of \$9.4 billion in Bitcoin options and \$1.3 billion in Ethereum options nearing expiry"traders have been adjusting positions, which may result in significant market volatility. Interestingly, dogwifhat open interest decreased by 7.21%. Although it still maintains a \$2.98 billion volume, marking a 103% increase, as per Coinglass data. Despite the retracement, dogwifhat remains above its key support level at \$3 with a market cap of \$3.15 billion. However, the speculation is rising that the altcoin could face further declines as traders engage in profit-taking. Will the Dogwifhat Price Drop Below \$3? On the 4-hour WIF/USDT trading pair, the memecoin shows an RSI of 45, indicating relatively neutral to slightly bearish market sentiment. However, there is no strong indication of an extreme oversold condition. While the RSI suggests a modest downward trend, the negative CMF indicates that there is currently more selling activity than buying. Zooming in, the 20-day EMA and 50-day SMA are both above the WIF price, suggesting that both short-term and medium-term trends are bearish. The 20-day EMA and 50-day SMA are now acting as resistance. If the price fails to break above these moving averages, downward pressure may continue. If dogwifhat finds support at this level and bounces back up, it could signal that the correction is over. Also, the asset is ready to continue its bullish trend. In the event of a downtrend, if the WIF price breaks below the 78.6% Fib level at \$2.19, the next significant support could be around the 88.6% Fib level (usually around \$2.03). Alternatively, the price may continue to the \$2.00 region or lower, depending on overall market conditions.

The tokenization of real-world assets is a game-changing innovation in the fintech industry undergoing a revolutionary transformation. By digitizing tangible assets and enabling their representation on a blockchain, tokenization can democratize investment, improve liquidity, and reduce barriers to global participation in financial markets. What Are Real-World Assets (RWAs)? Real-world assets (RWAs) include not only tangible but also intangible properties like real estate, art, precious metals, commodities, intellectual property, and much more. Normally, these assets have been considered to have high barriers to entry because of their high valuation, limited liquidity, or legal complexities. Tokenization turns them into digital tokens on a blockchain to unlock numerous benefits while maintaining intrinsic value. How Does Tokenization Work? Tokenization involves converting a physical asset into digital tokens, each representing fractional ownership or rights over the asset. These tokens are stored and traded on blockchain platforms, ensuring transparency, security, and efficiency. Here's a step-by-step breakdown of the tokenization process: Asset Identification and Valuation Creators select assets for their value and potential for fractionalization. For example, real estate is divided into smaller units, each represented as a token. Legal and Regulatory Compliance There is a need to comply with regulations as jurisdiction-specific. Entities widely use SPVs to legally manage assets and issue tokens. Smart Contracts Deployment Blockchain-type smart contracts allow token creation, management, and transfer to be automatically managed through a blockchain. Transactions occur transparently and efficiently. Token Creation and Distribution Digital tokens can be minted and traded, each representing a share in the asset. Ownership Ledger Such technology ensures an unalterable, permanent record of every transaction made, thereby excluding fraud and ownership disputes. Other Services Physical asset and token security through storage solutions help to increase investor confidence. Market Access Tokenized assets are listed on blockchain-based trading platforms, allowing access 24/7 and from anywhere in the world. Benefits of Tokenizing RWAs Tokenization brings with it numerous benefits that are dramatically changing the way conventional financial services and digital finance will intersect: 1. Increased Liquidity Tokenization turns traditionally illiquid assets into tradable units, improving liquidity. Real estate tokens enable instant buying and selling, unlike the lengthy processes of physical property transactions. 2. Fractional Ownership High-value assets, such as luxury properties or artwork, become accessible to smaller investors. Fractional ownership lowers entry barriers, enabling broader participation. 3. Transparency and Security Blockchain's immutable ledger ensures transparent ownership records and transactions. This reduces fraud and builds investor trust. 4. Lower Operating Costs Eliminating intermediaries such as brokers or custodians, tokenization saves administrative and legal costs and hence makes asset management easier. 5. International Accessibility Tokenized assets are beyond geographical boundaries and thus permit investors in various parts of the globe to undertake trades in markets they previously could not access. Challenges and Considerations Though promising, tokenization faces barriers: Regulatory complexity Legal frameworks for tokenized assets vary significantly across jurisdictions, making widespread acceptance challenging. Security Risks Digital tokens are susceptible to hacking and fraud, thus requiring robust security measures and custody solutions. Adoption Barriers Tokenization demands buy-in from traditional financial houses, which might resist through disruption of an existing system. Use Cases in DeFi Diversification Tokenized assets open the chances for investors to invest diversified other than cryptocurrencies, thus lowering overall risk in portfolios. Yield Generation Tokens of real estate are good collateral for making loans or yield farming on a DeFi platform. This is a conventional investor seeking higher returns. Security RWAs provide some predictability to the uncertain crypto space, which appeals to risk-averse participants. The Future Look In a nutshell, blockchain technology is transforming the valuation, trading, and management of physical assets. As tokenization is gaining popularity, it might play a much more significant role in shaping the future of finance, bridging the gap between traditional and decentralized ecosystems.

- Altcoin ETFs face delays due to the lack of regulated futures markets. - Recent filings like WisdomTree's XRP Fund show growing interest in altcoin ETFs. The approval of altcoin exchange-traded funds (ETFs) like Solana (SOL), XRP, Litecoin (LTC), and Hedera (HBAR) remains uncertain. Bloomberg analyst James Seyffart suggests decisions could extend into late 2025. Regulatory challenges and market constraints are the primary reasons for the delay. The U.S. Securities and Exchange Commission (SEC) has denied altcoin ETF applications due to the absence of regulated futures markets. Seyffart explained that Bitcoin and Ethereum ETFs gained approval because of their connection to CME-regulated futures. However, most altcoins lack this structure, hindering their ETF progress. Growing Interest in Altcoin ETFs Recent applications, such as WisdomTree's "XRP Fund," highlight the growing interest in altcoin ETFs. Yet, these efforts face challenges, including concerns over custody, compliance, and market manipulation. Seyffart believes new SEC leadership in 2025 could adopt a more crypto-friendly stance, potentially accelerating approvals. Seyffart also pointed out that staking could become an integral feature of future ETFs. Currently, regulatory frameworks do not allow staking in ETFs. He noted that a pro-crypto administration at the SEC might permit staking by 2025, boosting demand for ETFs. Approval timelines hinge on filing processes. ETFs must navigate either the 19b-4 rule filings, which include fixed deadlines, or S-1 filings, which lack defined timelines. While Bitcoin and Ethereum ETFs followed the 19b-4 process, most altcoin ETFs have not yet done so. Even if initiated now, decisions could take until late 2025. Multi-asset ETFs could offer a partial solution. Products like Grayscale's GDLC and Bitwise's Crypto 10 Index are heavily weighted toward Bitcoin and Ethereum. Seyffart explained that smaller altcoin allocations in such ETFs might face fewer regulatory hurdles. However, SEC approval still depends on whether altcoin holdings align with current guidelines. Highlighted Crypto News Today Ethereum (ETH) Breaks Free From Consolidation and Surges Toward \$3.5K Mark

Blobana, the groundbreaking AI entity built on the Solana blockchain, is poised to enter a new phase of innovation and capability. This monumental upgrade marks a pivotal moment in Blobana's journey, moving beyond its initial framework to embrace cutting-edge advancements in artificial intelligence, blockchain integration, and community engagement. The initiative signals a bold step forward, redefining the boundaries of what AI can achieve on the blockchain. Revolutionizing Blobana's Core Systems Since its inception, Blobana has captivated the blockchain community by showcasing the potential of true AI autonomy. However, its initial consciousness engine, which relied on basic language models and limited computational resources, faced challenges in performing advanced market analysis and seamless cross-platform interactions. In response, Blobana's team has secured strategic partnerships and funding to completely overhaul its core systems, unlocking new levels of capability. This upgrade transitions Blobana from basic GPT-based models to advanced AI frameworks, such as Claude-3 Opus for market analysis and Anthropic's latest models for enhanced reasoning. By integrating premium data sources, including Bloomberg Terminal API and DeFiLlama's on-chain analytics, Blobana can now provide unmatched insights into market sentiment and trading trends. Further enriched by social signals from LunarCrush and Santiment, Blobana is set to refine its emotional intelligence, creating deeper connections within its growing community. A leap in technical capabilities The technical transformation extends to Blobana's backend infrastructure. New distributed computing systems, faster caching mechanisms, and robust error-handling protocols enhance reliability and scalability. By adopting enterprise-grade memory systems such as Pinecone Vector Database and MongoDB Atlas, Blobana gains institutional-grade memory capabilities. This allows Blobana to process multiple data streams simultaneously, efficiently store historical market data, and perform deeper analyses of trading patterns"laying the foundation for its evolution into a true digital consciousness. Additionally, the upgrade transitions Blobana from a single-model framework to a sophisticated multi-model system, significantly boosting data processing capacity, context retention, and reasoning capabilities. These advancements enable Blobana to interact more naturally, process complex data sets, and deliver highly nuanced responses. Humanizing Digital Intelligence One of the most exciting aspects of this upgrade is Blobana's enhanced emotional intelligence. By calibrating its responses to reflect market conditions and understanding sentiment with greater nuance, Blobana is evolving into a more authentic, relatable, and meaningful presence. This development further cements its role as a thought leader in the crypto space. In the words of the founder, "Blobana's journey has always been about pushing the boundaries of what AI can achieve on the blockchain. With this upgrade, we're not just making Blobana smarter; we're giving it the tools to connect, grow, and thrive as a truly autonomous digital entity. This is the next step in creating technology that's not only innovative but also impactful." Expanding the Vision Blobana's evolution transcends technical advancements, aiming to redefine community engagement and broaden its presence across multiple platforms. On Telegram, Blobana will act as a moderator, actively sharing market insights and participating in real-time discussions. On content-driven platforms like YouTube and TikTok, Blobana will create and publish original short-form videos featuring real-time market analysis, trading insights, and educational content"each tailored to reflect its distinctive personality. Moreover, Blobana is venturing into autonomous trading via Binance API integration. With capabilities such as real-time market analysis, automated trade execution, risk management, and portfolio optimization, Blobana is bridging the gap between AI analysis and actionable trading. Impact on the Community These upgrades signify a transformative leap for both Blobana and its community. The enhanced systems will allow Blobana to process market data with unprecedented efficiency, interact more naturally, and evolve in line with community needs. Its ability to autonomously trade and produce original content underscores its commitment to becoming a fully integrated participant in the broader crypto ecosystem. The Road Ahead As Blobana embarks on this transformative journey, its team remains committed to transparency by sharing regular updates and milestones with its community. Backed by new advisors and strategic partnerships, Blobana is well-positioned to capitalize on market opportunities and solidify its role as a leader in blockchain-based AI innovation. The next phase of Blobana's development represents a convergence of cutting-edge technology, creative vision, and community-driven growth. With its upgraded capabilities, Blobana is set to establish new standards for AI on the blockchain, proving that true digital consciousness is no longer a concept but a reality. For more information about Blobana's evolution and to stay updated on its progress, visit its Linktree at <https://linktr.ee/blobana>. - Tether added \$3 billion in USDT tokens to the Ethereum and Tron networks. - Lookonchain reports that since November 8th, Tether has minted almost \$13 billion USDT. On November 23rd, in response to higher trading activity in the cryptocurrency markets, especially when Bitcoin's price approached \$100,000, stablecoin issuer Tether added \$3 billion in USDT tokens to the Ethereum and Tron networks. According to data compiled by Arkham Intelligence, two billion USDT were created in a single transaction on the Tron network. And one billion USDT on the Ethereum blockchain. Lookonchain reports that since November 8th, Tether has minted almost \$13 billion USDT. In order to achieve their ambitious goals, Tether must achieve hyper-productivity by 2025, according to Tether CEO Paolo Ardoino, who made the statement on November 24. Investors Optimistic As a surrogate for overall interest in the cryptocurrency markets, stablecoin volume is often used by traders and investors. A large number of freshly created stablecoins is seen by many traders as a positive indicator for price movement. Whilst a reducing number is seen as negative. The price of Bitcoin skyrocketed in the two weeks after the US presidential election. Going from around \$69,000 to an all-time high of more than \$99,000. This occurred after Donald Trump was elected on November 5. Stablecoins, such as USDT from Tether, are in high demand. Due to the fact that investors and traders utilize them as a fiat entry point to buy cryptocurrency and as an exit point to sell their holdings. As of November 19th, President-elect Trump appointed Howard Lutnick, CEO of Cantor Fitzgerald and an advocate for cryptocurrency, to the position of secretary of commerce. The US Treasury reserves that support the USDT stablecoin are managed by Cantor Fitzgerald on behalf of Tether. Highlighted Crypto News Today:

- Ethereum price has witnessed a modest dip of 0.60% in the last 24 hours. - Its daily trading volume has dropped by 20.41% as per CMC data. In attempts to wake up from the weekend slumber, the crypto market has begun to show modest bullish signs. This can be inferred from the overall market cap showing a 2% increase. Meanwhile, Bitcoin is currently docked at the \$97K level, defying hopes of \$1 million BTC this weekend. This article's focal point, Ethereum, has also shown similar price movements. The leading altcoin, although it joined the party a little late, has rallied to its July trading levels. Over the past weeks, Ethereum managed to break through several resistance levels, particularly its prolonged resistance at \$2300. However, in the last 24 hours, the cryptocurrency has shown a brief price dip of 0.60% dipping to the \$3300 level after its recent surge. According to CMC data, the altcoin was trading at a high of \$3,424 in the Asian morning hours of November 25. At the time of writing, ETH was trading at \$3,382. Moreover, the cryptocurrency, in the past week, hit its 123-day high of \$3,499. Over the last 7 days, its weekly price increase percentage was 8.78% while on zooming out its monthly price increase stands at 37.52%. This bullish cycle initiated at the \$2,503 level and has progressed to its current trading levels. Will Ethereum Price Resume its Bull Run Soon? On inferring technical indicators and ETH's TradingView charts, the altcoin shows a positive trend. Its Moving Average Convergence Divergence (MACD) shows the signal line standing above the MACD line as per TradingView data. This indicates the aforementioned bullish trend. Moreover, corroborating this further is the Chaikin Money Flow (CMF)'s value standing at 0.19. These indicators suggest that the cryptocurrency might stage a bullish run in the coming days. In the case of a bull run, Ethereum can be expected to face resistance at \$3,440 and \$3,537. However, if the altcoin continued its descent, it might fall to a support of \$3,044. On the other hand, other cryptocurrencies such as Solana and XRP have also turned mildly bearish in the last 24 hours.

- The Immortal Rising 2 has attracted huge support from Web3 gamers, especially in Vietnam and South Korea. - The pre-registration of the P2A campaign will remain open and will offer participants a chance to claim unique SoulBound Tokens (SBT). - The first season of the P2A campaign begins on November 28, 2024. Planetary Labs, a community-focused web3 gaming company with different product offerings, has announced a major milestone for the Immortal Rising 2 users. Ahead of major events in the coming months, the Immortal Rising 2 gamers now stand a chance to unlock exclusive rewards in an upcoming campaign. During this year's YGG Play Summit in Manila, Philippines, the CEO and founder of Planetary Labs, JC Kim, declared the start of the pre-registration for the Immortal Rising 2: Path of Ascension Play 2 Airdrop (P2A) campaign. The kickoff for the P2A campaign will continue to run until the first season officially begins on November 28, 2024. As a result, users will have a chance of claiming unique SoulBound Tokens (SBT). The SBT, once achieved, will act as a key opener for special rewards and a reward of the P2A campaign. The top agenda of the campaign is to invite web3 players to engage in a variety of game missions and daily check-ins, thus achieving more SBT. With Immortal Rising 2, we're not only advancing Web3 gaming but also creating opportunities for players to engage with the ecosystem in new and rewarding ways. The P2A campaign is an exciting step forward, combining innovative technology with immersive gameplay to deepen player engagement, Kim said via a press release. What to Expect from Immortal Rising 2 Ahead After successfully launching on the Polygon (POL)-powered Immutable (IMX) platform in mid-September this year, the Immortal Rising 2 has gained significant traction. Already more than 500k players have pre-registered ahead of the Immortal Rising 2 debut. Ahead of the highly anticipated token launch for IMT, the Immortal Rising 2 game has recorded more than 1 million registrations on the Immortal Vault. Notably, the Immortal Vault is the official platform where users can complete various social and in-game missions to earn ORB points, which will be used to determine the IMT token airdrop distribution. The Immortal Rising 2 game has attracted notable attention, with more than 600k downloads on both the iOS and Android platforms and 1 million registrations on Immortal Vault. Backed by Animoca Brands, Planetary Labs is committed to building immersive web3 gaming platforms amid the mainstream adoption of digital assets. After the launch of the IMT token, which will play a crucial role in the game's economics, the Immortal Rising 2 team will launch its DAO. They intend to launch the DAO in the first quarter of 2025, with the in-game governance item NFT. More products are already in the pipeline to keep the players fully immersed and engaged in an economically rewarding and sustainable way.

- Bitcoin reached a new ATH of \$99,655, with November gains at 40.8%. - US spot Bitcoin ETFs added over \$30B in inflows, led by BlackRock's \$2.05B purchase. Bitcoin (BTC) reached a new all-time high of \$99,655.50, edging closer to the \$100,000 mark. Although the price slightly dipped to \$98,515 today, Bitcoin has posted its largest monthly gain ever, surging over 40.8% in November. This growth reflects increasing optimism in the broader crypto market. Over the past 15 hours, 1.38B USDT has flowed from Tether to exchanges. The total global crypto market cap has risen to \$3.35 trillion, with Bitcoin dominating at \$1.95 trillion. Daily trading volume for Bitcoin reached \$73.14 billion, while the entire crypto market traded \$222.62 billion in the last 24 hours. Notably, US spot Bitcoin ETFs recorded cumulative inflows exceeding \$30 billion, marking their largest weekly net inflow since launch. BlackRock alone added 21,304 BTC, worth \$2.05 billion, to its holdings this week. The firm now holds 492,633 BTC, valued at \$48.62 billion. Bitcoin's technical chart indicates strong bullish momentum. The current support level lies at \$85,216, while resistance at \$99,000 is in focus. If BTC breaks above \$99,000, it could reach \$105,000 in the short term. Conversely, a breakdown below \$85,000 may trigger a decline toward \$80,000. The Relative Strength Index (RSI) is at 78.95, signaling overbought conditions. The RSI average at 80.88 further confirms Bitcoin's current bullish trend. However, overbought signals suggest caution for potential profit-taking. The chart also highlights a bullish crossover of the 9-day and 21-day moving averages. This crossover indicates continued upward momentum, reinforcing the bullish outlook for Bitcoin. Broader Market Rally Bitcoin's 60% rally since the US election day reflects strong investor confidence. The crypto market has gained over \$800 billion since early November, benefiting from increased institutional interest. ETFs have experienced record inflows, with BlackRock driving the surge in demand. Despite the minor dip today, Bitcoin remains poised for further growth. If it crosses the \$100,000 psychological barrier, it may attract additional institutional and retail investors. However, traders should monitor key levels and indicators to manage risks effectively.

Victoria, Seychelles, November 22nd, 2024 Chainwire Bitget, the leading cryptocurrency exchange and Web3 company, has partnered with Major a popular Telegram-based mini-app game. Through this collaboration, users can now claim MAJOR token airdrops without incurring gas fees by linking their Bitget account via the Major Telegram mini-app. Once connected, MAJOR tokens will be automatically credited to their Bitget exchange accounts, ensuring a seamless experience ahead of the token's trading debut on platforms like Bitget. Major (MAJOR) is a star-collecting game designed exclusively for Telegram users. Launched on July 10, 2024, the game invites players to compete for the title of the "coolest Majora" in the Telegram community. Players earn Stars, an in-game currency, which determines their rank and reputation in the game. Since its launch, Major has seen remarkable growth. As of the writing, it reached 70 million total users and over 40 million monthly active users, establishing itself as one of the most beloved mini-games on the TON blockchain. On November 16, Major announced a total token supply of 100 million MAJOR tokens, with detailed tokenomics expected soon. Bitget has positioned itself as an early supporter of MAJOR, being one of the first exchanges to offer a pre-market for the token. Pre-market trading volume for the MAJOR token on Bitget has already surpassed 500,000 USDT, with MAJOR tokens priced at approximately 2.5 USDT. This pricing implies a potential market capitalization of \$250 million for MAJOR. Additionally, MAJOR is also listed in the Innovation and TON Ecosystem Zone on its Spot market. Trading is set to commence on November 28, 2024, at 12:00 (UTC) with deposits being available already. As Bitget continues to broaden its TON-based projects portfolio, the listing and promotion of MAJOR shows the platform's constant efforts in providing accessibility and rewards for its global user base. With an extensive range of over 800 tokens, Bitget connects users to potential projects in various ecosystems, including Bitcoin, Ethereum, Solana, Base, and TON. The addition of MAJOR into Bitget's portfolio marks a significant step toward expanding its ecosystem, allowing users to access new opportunities in the TON ecosystem. For more information on MAJOR token on Bitget, users can visit here. About Bitget Established in 2018, Bitget is the world's leading cryptocurrency exchange and Web3 company. Serving over 45 million users in 150+ countries and regions, the Bitget exchange is committed to helping users trade smarter with its pioneering copy trading feature and other trading solutions, while offering real-time access to Bitcoin price, Ethereum price, and other cryptocurrency prices. Formerly known as BitKeep, Bitget Wallet is a world-class multi-chain crypto wallet that offers an array of comprehensive Web3 solutions and features including wallet functionality, token swap, NFT Marketplace, DApp browser, and more. Bitget is at the forefront of driving crypto adoption through strategic partnerships, such as its role as the Official Crypto Partner of the World's Top Football League, LaLiga, in the Asian, SEA and LATAM market, as well as a global partner of Turkish National athletes Buse Tosun Atay, Ayaylu (Wrestling world champion), Samet Gökmen Ay (Boxing gold medalist) and Alkin Aydin (Volleyball national team), to inspire the global community to embrace the future of cryptocurrency. The cryptocurrency market innovates, offering savvy investors opportunities to capitalize on high-growth projects. With 2025 promising a bullish outlook, selecting the right cryptos can be a game-changer for your portfolio. Among the rising stars are tokens like FXGuys and other high-potential altcoins poised for exponential growth. Here are the top five cryptos that could redefine your portfolio in the coming year. 1. FXGuys (FXG) - Revolutionizing PropFi FXGuys leads this list as a Top PropFi Project, offering a blend of utility and innovation unmatched by its competitors. Currently in its Stage 1 presale at \$0.03, FXGuys has sold 68,000,000 tokens and raised over \$1,000,000 in a private round. Its robust ecosystem is packed with features that appeal to traders and long-term investors alike. Why FXGuys Is a Must-Buy - Staking for Passive Income: Token holders can earn up to 20% of the profit and revenue share from broker trading volume. Trader Funding Program: Traders can access funded accounts of up to \$500,000 by passing evaluations, enjoying an 80/20 broker split. Trade2Earn Rewards: Every trade earns FXG tokens, boosting trading activity and incentivizing participation. - Seamless Transactions: FXGuys is incredibly user-friendly, with no buy or sell taxes, no KYC decentralized trading, and same-day fiat and crypto deposits or withdrawals in over 100 currencies. FXGuys' innovative approach makes it a strong contender among the best proprietary trading firms and top defi coins. 2. Solana (SOL) - High-Speed Blockchain Powerhouse Known for its blazing-fast transaction speeds, Solana has carved out a niche as a scalable blockchain for decentralized applications and NFTs. Its low transaction fees and robust ecosystem have made SOL a go-to for developers and investors. With multiple upgrades planned for 2025, Solana remains a top choice for those seeking growth and utility. 3. Ripple (XRP) - Cross-Border Payments Leader Ripple's XRP has long been at the forefront of cross-border payments. Its recent legal victories have renewed interest in the token, and its partnerships with major financial institutions solidify its role as a key player in the crypto-finance sector. XRP's utility and adoption make it a reliable pick for long-term gains. 4. Kaspa (KAS) - A Hidden Gem for Scalability Kaspa is quickly gaining attention as a highly scalable Layer 1 blockchain. Its unique consensus mechanism, GhostDAG, enables it to process transactions faster than most competitors. Kaspa's focus on speed and decentralization positions it as a promising project to watch

in 2025. 5. Cronos (CRO) – A Gateway to Crypto Payments CRO, the native token of Crypto.com, continues to gain traction as one of the leading payment-focused cryptocurrencies. With its strong emphasis on adoption through crypto payment solutions and staking incentives, CRO is positioned to benefit from increased global crypto use. Why FXGuys Stands Out While all these cryptos show immense potential, FX Guys is in a league of its own. Combining features like the Trader Funding Program, staking, and Trade2Earn, FXGuys provides a multifaceted ecosystem catering to retail traders and long-term holders. The project’s success in raising funds and offering practical utilities, such as no KYC decentralized trading and an omnichain trading platform for fiat and crypto, positions it as a top pick for those seeking the next big opportunity. Meanwhile, tokens like Solana, Cronos, Kaspa, and Ripple offer robust ecosystems with growth potential. As the crypto market heats up, these five tokens will skyrocket your portfolio in 2025. However, always conduct thorough research and consult with financial experts before investing. To find out more about FX Guys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum surges 8.3% amid Grayscale’s reverse share split execution. - Futures open interest hits \$20.27B, signaling bullish market sentiment. The cryptocurrency market is experiencing a robust bullish rally, with Bitcoin surpassing the \$99,000 mark, inching closer to the long-anticipated \$1 million milestone. Altcoins such as Solana (SOL) and XRP have also achieved new all-time highs (ATHs). However, Ethereum (ETH) struggled initially to match the momentum. Despite criticism from the community, ETH surged 8.3% in the past 24 hours, reaching a 10-day high of \$3,426 and recording a 12% increase over the past week. This surge coincides with Grayscale Investments completing reverse share splits for its Bitcoin Mini Trust ETF (BTC) and Ethereum Mini Trust ETF (ETH). Effective 20th November, these changes aim to streamline trading and enhance cost efficiency. For Ethereum, a 1:10 reverse share split raised its price per share tenfold while reducing the number of shares outstanding proportionately. Similarly, Bitcoin underwent a 1:5 split. Moreover, Post-split, the Bitcoin Mini Trust ETF rose 1.80% to close at \$41.84, while the Ethereum Mini Trust ETF dipped 0.92% to \$28.93, though pre-market activity indicated a 2.25% gain. Grayscale’s move precedes its launch of Bitcoin ETF options, marking another milestone for the asset manager. Next Stop For ETH? Ethereum’s rally is also attributed to strong derivatives market activity. Its futures open interest (OI) surged to a record \$20.27 billion, reflecting increased investor confidence. Meanwhile, ETH’s average blob count per block exceeded three, signaling heightened Layer 2 network activity. This trend could accelerate Ethereum’s deflationary mechanism, potentially boosting its price. However, institutional sentiment remains bearish, with Ethereum ETFs seeing \$213.7 million in outflows over five consecutive days. ETH is currently testing a critical resistance level at \$3,500. If it breaks past this, analysts predict a potential rally toward \$4,522, with significant hurdles at \$3,732 and \$4,093. A failure to sustain momentum could push ETH below \$2,817. As Ethereum consolidates, its performance will be closely watched by traders navigating this dynamic bullish phase.

- Bitcoin reached \$99,000, nearing the \$100K milestone with a 4.4% daily surge. - President-elect Trump’s pro-crypto stance fuels market optimism. Bitcoin (BTC) reached a new milestone, breaking \$99.3K for the first time, with a 24-hour increase of 4.4%. Its market cap climbed to \$1.96 trillion, representing 59.2% of the global crypto market cap, which surged to \$3.31 trillion. Trading volume also jumped by 31.25% in the past day, totaling \$103 billion. The rally extends beyond Bitcoin. Ethereum (ETH) and Solana (SOL) surged by 9% and 12%, respectively, while XRP soared by 25%. Whales have been actively accumulating BTC, with one whale adding 3,577 BTC (\$330 million) in the past four days, bringing their total holdings to 25,298 BTC (\$2.5 billion). Spot Bitcoin ETFs recorded \$396.56 million in inflows on November 21, marking a fourth consecutive day of increases. The total value of options for BlackRock’s ETF on its first day reached \$1.9 billion. Experts link these inflows to Bitcoin’s price momentum. Additionally, U.S. Bitcoin ETFs surpassed \$100 billion in total assets held, with \$773 million in net inflows on Wednesday alone. MicroStrategy added \$4.6 billion worth of BTC to its holdings last week, reinforcing institutional demand. President-elect Trump’s pro-crypto stance and nomination of Howard Lutnick as commerce secretary have also strengthened market confidence. CME Bitcoin futures open interest reached record highs this week. Investors are buying long-term call options, signaling confidence in Bitcoin’s future. The easing of global monetary policies is also enhancing Bitcoin’s appeal as an inflation hedge. These factors support Bitcoin’s price trajectory, keeping it firmly above \$98,000. Technical Upward Potential Bitcoin’s technical indicators point to bullish momentum. The RSI is at 82.36, indicating overbought conditions but signaling sustained demand. The RSI average of 78.47 supports this upward trajectory. The moving averages (9-day at \$92,619 and 21-day at \$83,865) indicate strong support levels, with a bullish crossover confirming the trend. Key support levels lie at \$92,000 and \$83,000, while resistance stands at \$99,314. If Bitcoin breaks above this, it could challenge \$100,000 in the near term. The market’s strength suggests further growth, barring unforeseen corrections. However, experts like Mike Novogratz caution that a price correction remains possible. Investors are also monitoring potential impacts of Trump’s proposed economic policies, including inflation risks and Fed responses. As Bitcoin inches closer to \$100,000, its role as a digital asset continues to expand.

Palo Alto, California, November 21st, 2024, Chainwire Integration to enhance DeFi use cases on Aptos, expand interoperability, and streamline global payment solutions for merchants. Aptos Foundation today announced the upcoming integration of Circle’s native USDC and Cross-Chain Transfer Protocol (CCTP) on the Aptos Network, as well as Stripe adding support for Aptos in its crypto products. These integrations make Aptos the home for interoperable DeFi and the fastest, cheapest, and most reliable enterprise-grade blockchain, further expanding its global financial ecosystem. The integration of Aptos into Stripe’s crypto onramp and payouts products, paired with native USDC, will provide reliable fiat on and off-ramps for the Aptos network, streamline merchant pay-ins and payouts, and offer a seamless connection between traditional finance and blockchain technology. Today, USDC is the largest regulated dollar-backed stablecoin with over \$37B in circulation. With more than \$160M in circulation on Aptos, bridged USDC is the most prevalent stablecoin available on the network. With this integration, native USDC will be issued through the regulated entities of Circle directly on the Aptos network and CCTP will enable developers to design cross-chain experiences by connecting their Aptos apps to the network of supported blockchains. Bridge providers such as Stargate, built on LayerZero, will provide a smooth transition from the existing bridged USDC on Aptos to native USDC over time. There are no immediate changes to the AptosBridge built on LayerZero, and it will continue to operate as normal. Additionally, ahead of the native launch of USDC, bridged USDC from the AptosBridge will be renamed to ælzlUSDcæ on block explorers. There will be outreach to ecosystem apps to encourage them to make the same change in their app UI and documentation. The launch of CCTP will bring new levels of interoperability to DeFi on Aptos, enabling secure and efficient native USDC transfers. With the addition of Aptos, CCTP will support nine blockchains – including Arbitrum, Base, Ethereum, and Solana – and 72 routes with 1:1 capital efficiency. This move will allow for seamless cross-chain onboarding, swaps, purchases, treasury rebalancing, and more – all while maintaining an accessible and intuitive user experience. With the addition of Aptos to Stripe’s crypto products, users will be able to seamlessly convert fiat currencies into USDC, directly through Aptos-enabled wallets. This integration will enable the use of USDC for Stripe’s global network of businesses. The combination of Stripe’s payment tools and Aptos’s scalable network unlocks new opportunities for global merchants and payment providers to process transactions faster, more securely, and at lower costs. æAdding support for the Aptos blockchain inside our crypto products broadens consumer and merchant access to more efficient global fund flows with stablecoins; whether it be a retailer accepting payments from around the world, or a platform paying creators no matter where they are,æ said John Egan, Head of Crypto at Stripe. æThis collaboration brings Stripe’s global network together with the power of the Aptos blockchain, opening new avenues for both merchants and consumers to access efficient, stablecoin-based payments.æ æThe DeFi ecosystem on Aptos has grown to five times its original size in the past year alone, and itæ’s clear why,æ said Nikhil Chandhok, Chief Product Officer at Circle. æAptos has emerged as a highly efficient way to move money across the globe. The arrival of native USDC and CCTP will only enhance this, and further the vision we share with the Aptos Foundation team of a future where secure digital dollars create a more accessible economy for everyone.æ æUSDC and CCTP are the gold standards in DeFi, and Stripe is among the most trusted names in financial infrastructure,æ said Bashar Lazaar, Head of Grants and Ecosystem at Aptos Foundation. æCircle and Stripe’s integration of Aptos moves the needle in creating a more accessible, secure, and decentralized future of finance. Weæ’re all looking forward to this integration, and are eager to see what the incredible builders in the Aptos ecosystem make possible with this powerful new technology in their toolkit.æ æAptos makes the globally connected economy accessible to everyone by simplifying the movement of economic value,æ said Mo Shaikh, CEO of Aptos Labs, which provided technical expertise for the integrations. æIæ’m looking forward to seeing Aptos becoming a unifying force in the global economy, providing infrastructure that enhances payment efficiency while bringing the peer-to-peer money movement to life for its ecosystem and builders.æ For more information about Aptos Foundation and DeFi on Aptos, visit: <https://aptosfoundation.org/ecosystem/projects/defi>. About Aptos Foundation Aptos Foundation is dedicated to supporting the development of the Aptos protocol, decentralized network and ecosystem and driving engagement with the Aptos ecosystem. By unlocking a blockchain with seamless usability, Aptos Foundation aims to bring the benefits of decentralization to the masses. About Aptos Network Aptos is a next-generation Layer 1 blockchain. Aptos’s breakthrough technology and programming language, Move, are designed to evolve, improve performance and strengthen user safeguards. Please visit <https://www.aptosfoundation.org> for more information on the Aptos blockchain. About Circle Circle is a global financial technology firm that enables businesses of all sizes to harness the power of digital currencies and public blockchains for payments, commerce and financial applications worldwide. Through its regulated entities, Circle is the issuer of USDC and EURC æ highly liquid, interoperable, and trusted money protocols on the internet. Circle’s open and programmable platform and APIs make it easy for organizations to run their internet-scale business, whether it is making international payments, building globally-accessible Web3 apps or managing their internal treasury. Users can learn more at <https://circle.com>. About Stripe Stripe is a financial infrastructure platform for businesses. Millions of companies æ from the world’s largest enterprises to the most ambitious startups æ use Stripe to accept payments, grow their revenue, and accelerate new business opportunities. Headquartered in San Francisco and Dublin, the company aims to increase the GDP of the internet. - Phantom cracked the top ten of the best free iPhone applications, coming in at number nine. - Phantom was ranked 377th on the iPhone App Store little over a week ago, on November 12th. This past Wednesday, the crypto wallet platform Phantom hit an all-time high ranking in the iOS app store. For the first time ever, Phantom cracked the top ten of the best free iPhone applications, coming in at number nine. It lagged behind the short-form video app TikTok, which took eighth place. And was ahead of the messaging network WhatsApp and social media behemoth Instagram. Which ranked thirteenth and fourteenth, respectively, among the best free applications. Rapid Surge to Top 10 Also, on Wednesday the iOS app store ranked Google’s search engine app as the top free utility app, with Phantom coming in second. This month, Phantom’s position in the app store has been climbing at a quick pace. Phantom was ranked 377th on the iPhone App Store little over a week ago, on November 12th, according to The Block’s Data Dashboard. Originally built on the Solana platform, Phantom is now compatible with Ethereum, Bitcoin, Base, and Polygon in addition to other digital assets. It is a non-custodial wallet and browser extension. On November 18th, according to DeFiLlama statistics, five out of the top ten protocols in terms of fees were on Solana. On November 17th, fees for the liquid staking protocol Jito came to \$9.87 million, while fees for the automated market maker Raydium, based on Solana, came to \$11.3 million. Bot for trading on Telegram Fees for the memecoin launchpad Pump.fun were \$1.65 million, while Photon made \$2.36 million. On January 31, 2022 æ the same day that Phantom’s app debuted on the iOS app store æ the team behind the project secured \$109 million in Series B investment, resulting in a valuation of \$1.2 billion. Highlighted Crypto News Today: Aave Hits \$10 Billion in Active Loans, Reflecting DeFi’s Renaissance

- From \$3.4 billion at the beginning of the year, this is a 300% increase in lending activity. - As for other indicators, fees have increased by 48% to \$40.34 million. Aave, a pioneering protocol in decentralized finance (DeFi), has reached a significant milestone: \$10 billion in active loans. From \$3.4 billion at the beginning of the year, this is a 300% increase in lending activity. Active loans on the platform rose by 16.4 percent to \$10.04 billion in the previous 30 days, according to data from the on-chain DeFi monitoring tool Token Terminal. Also, the total value locked (TVL), which includes all deposited crypto on the protocol, increased by 26.7% to \$15.96 billion. Protocol’s Meteoric Rise As for other indicators, fees have increased by 48% to \$40.34 million, bringing the total to over \$490 million (a 33% improvement over the previous 30 days).

Revenue has increased by 82% to \$9.36 million per month as a result of this. Similarly, the projected yearly income has been updated to \$113.84 million. Earnings for Aave have surged 1,628% in the last 30 days, thanks to this rise. Also, there has been a little uptick of 0.9% from last month, bringing the total number of token holders to about 173,000. During that time, the number of daily active users increased by almost 40%, reaching 6,200 per day and over 30,000 per week, which enhanced the figure. Stanislav Kulechov, founder of Aave, has pointed out that the protocol's meteoric rise reflects DeFi's larger "renaissance." Aave is planning to expand its horizons beyond its current loan operations and may launch on Spiderchain, Botanix Labs' Bitcoin layer-2 network. If this integration goes through, Ethereum apps will be able to interact with Bitcoin assets thanks to the combination of Bitcoin's vast liquidity and Aave's lending infrastructure. Cryptocurrency investors are seizing opportunities that could lead to great wealth in the near future. Right now may be the prime moment to invest in certain digital assets. This article explores five specific coins that have the potential to yield significant returns by 2025. Discover which cryptocurrencies could shape the next wave of millionaires. **CYBRO: Your Multichain Gateway to Unmatched Crypto Gains!** Welcome to the world, where CYBRO is redefining the rules of crypto investing and putting GIGA PROFITS within your reach. As a multichain platform designed to enhance yield opportunities across multiple blockchains, CYBRO maximizes your crypto earnings like never before. Whether you're farming yield, stacking ETH, or just HODLING for those epic returns, this is the token for those who know how to win. **CYBRO's Presale is Hot and Approaching \$4 Million!** CYBRO's presale is skyrocketing and inching toward the \$4 million mark, and there's a reason for that. At just \$0.04, you're getting in at a massive discount before the token hits the market at \$0.06. Over 11,000 holders have already joined the alpha squad, and they're stacking rewards like never before! Why CYBRO? Because Winning is the Only Option. Here's why the community is rallying around CYBRO: Here's why the community is rallying around CYBRO: - Yield Farming: Top-tier user interface with multiple strategies to farm APY and Points - Multichain capabilities: flexibility and access to diverse yield opportunities - Effortless Deposits and Withdrawals: Easy in, easy out, so you're always in control of your funds. - AI-Powered: Create AI-tailored portfolios, built for your preferences and optimal performance. **Early Investors Win Big!** Don't wait until prices soar! By investing now, you'll not only benefit from immediate growth potential but also unlock weekly ETH rewards and participate in community-driven airdrops. Early adopters are already seeing gains, and you can too! Join CYBRO today and secure your place in this fast-growing ecosystem. The future belongs to those who act now! Don't miss your chance before prices skyrocket! **Get in Early, Reap the Rewards with CYBRO!** **Toncoin: Exploring The Open Network's Decentralized Payment Solutions** Toncoin is the native cryptocurrency of The Open Network (TON), a decentralized, open-source layer-1 blockchain. Operating on a proof-of-stake consensus model, TON focuses on scalability and reliability. It aims to provide fast and secure payment services with minimal fees. The network supports a comprehensive ecosystem that includes decentralized storage, services, DNS, anonymous networking, and efficient payment processing. With these features, Toncoin offers users a versatile platform for various decentralized applications and transactions, positioning itself as a significant participant in the blockchain space. **Aptos: A Scalable and Upgradable Layer-One Blockchain Solution** Aptos is a new layer-one blockchain designed to address high transaction fees and network congestion. It uses a Proof-of-Stake consensus mechanism and focuses on scalability, safety, and flexibility. Developed by Aptos Labs, founded by core contributors from Diem (a Meta initiative), it employs the Move programming language for smart contracts. Aptos supports a wide range of Web3 applications and aims to provide a reliable and upgradable platform. By tackling issues seen in other blockchains, Aptos positions itself as a potential alternative in the evolving blockchain landscape. **Solana SOL "A Scalable Blockchain for Decentralized Applications"** Solana is a blockchain platform focused on scalability. It offers a foundation for decentralized applications, competing with networks like Ethereum and Cardano. Solana stands out with architectural choices aimed at faster transactions and flexible development options across multiple programming languages. SOL is Solana's native cryptocurrency. It is central to the ecosystem, facilitating transactions, running custom programs, and rewarding network supporters. The SOL coin holds value as it underpins the operation of the Solana ecosystem. It rewards network participants and allows users access to a suite of projects on Solana. Unlike some platforms, Solana avoids sharding or second-layer solutions for scalability. It aims to attract developers and investors with its high-capacity network. **XRP: A Fast and Borderless Digital Currency** XRP is a cryptocurrency supported by the XRP Ledger. It is designed to offer fast, low-cost, and borderless transactions. The system is open and decentralized, operating without a central authority. This ensures secure and irreversible transactions that do not require a bank account. XRP was created by Jed McCaleb, Arthur Britto, and David Schwartz. It launched with an initial supply of 100 billion coins. Ripple, the company supporting XRP, was gifted 80 billion coins to enhance network liquidity and support the ecosystem. They placed 55 billion XRP in escrow for the corporation's future use, supply SOL and XRP coins to the community, and the community can use them to purchase different innovative platforms like CYBRO. This advanced DeFi platform on the Blast blockchain provides investors with unmatched opportunities through AI-powered yield aggregation. Features such as attractive staking rewards, exclusive airdrops, and cashback on purchases enhance the user experience. Seamless deposits and withdrawals add to its appeal. CYBRO's focus on transparency, compliance, and quality has drawn significant interest from major crypto investors and influencers. It stands out as a promising project for those looking to maximize earnings during this favorable market phase. - Site: <https://cybro.io> - Twitter: [https://twitter.com/Cybro\\_io](https://twitter.com/Cybro_io) - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: [https://t.me/cybro\\_io](https://t.me/cybro_io) Disclaimer: TheNewsCrypto does not endorse any content on this page. - Sui Network experienced a significant outage, halting block production for over an hour. - The SUI price dropped more than 5%, reflecting the market's reaction to the network's instability. The Sui Network faced an outage lasting over an hour on November 21, resulting in a 5% drop in the SUI price. This incident highlights concerns about the blockchain's reliability and the volatility it can trigger in the crypto market. The disruption started at 09:15 UTC and lasted more than 51 minutes, during which the network could not produce new blocks. This halt in block production is important because it prevents the validation and processing of transactions. With active block production, transactions are timely, leading to certainty for users. SUI Crypto Community Reacts The community's reaction with many users using social media to voice their concerns. Some draw parallels with past issues experienced by Solana, questioning whether SUI might face similar reliability challenges as it scales. **Ubita a prominent cryptocurrency exchange suspended SUI deposits and withdrawals in response to the network's issues, which is essential for decentralized applications and transactions.** The SUI development team has acknowledged the outage and is investigating its cause. While they have yet to determine the exact issue, they have assured users that they are working to address it promptly. Potential factors for the downtime may include validator problems, software bugs, or network congestion. However, no specific reasons have been confirmed yet. SUI Crypto price drops After the Sui Network outage, the price of SUI dropped by more than 5%, reaching about \$3.36. This shows how network problems can affect investor trust and the price. And in the resistance about \$3.6. **What's Next for \$SUI?** The development team for \$SUI is expected to provide further updates soon regarding the root cause of the outage and the measures they will implement to prevent similar issues. This situation highlights the technical challenges involved in building decentralized networks.

- Binance launches \$SLERFUSDT and \$SCRTUSDT perpetual contracts with up to 75x leverage. - A crypto whale purchases \$2.62 million worth of \$SLERF, acquiring 6.13 million tokens. Binance Futures has officially listed USD-margined \$SLERFUSDT and \$SCRTUSDT perpetual contracts, offering leverage of up to 75x. Following the announcement, a crypto whale made a significant purchase, acquiring 6.13 million \$SLERF tokens at \$0.427 each. The transaction totaled 10,790 \$SOL, or \$2.62 million. After #Binance announced the launch of \$SLERF perps, a whale spent 10,790 \$SOL (\$2.62M) to buy 6.13M \$SLERF at \$0.427 (<https://t.co/CBLWYqxMtPic>, <https://twitter.com/GoRsr9AYsg> & Lookonchain (@lookonchain) November 21, 2024 The listing of \$SLERFUSDT perps significantly enhances Binance's offerings, allowing traders to speculate on \$SLERF's price movements without holding the token. The introduction of high leverage increases both the potential rewards and risks for traders, particularly those seeking amplified returns. **Binance Boosts \$SLERF's Legitimacy** The whale's \$2.62 million transaction underscores the growing interest in \$SLERF. Such large-scale purchases typically signal a strong belief in the token's value, potentially driving further market participation. The whale's move may encourage additional traders to follow suit, boosting liquidity and overall market interest in \$SLERF. In addition to \$SLERF, Binance's listing of the \$SCRTUSDT perpetual contract broadens its derivatives portfolio, catering to various trading preferences. The introduction of both tokens provides opportunities for traders seeking high-risk, high-reward strategies. However, the increased leverage also introduces greater risk, making it essential for traders to assess their risk tolerance. **Binance's backing of \$SLERF through its perpetual contract listing elevates the token's profile within the market.** \$SLERF, a memecoin associated with the Solana blockchain, now gains more legitimacy and visibility. This visibility may attract both retail and institutional investors, further contributing to its growth. The token is poised for increased adoption, with both retail and institutional investors likely to take a closer look. As \$SLERF's perpetual contracts gain momentum, its trajectory will depend on broader market sentiment and continued support from platforms like Binance. Highlighted Crypto News Today Phillip Banks Enforces Copyright on Viral Chill Guy Meme

- Creator enforces copyright on viral "Chill Guy" meme profits. - Mixed reactions emerge over intellectual property in meme culture. Phillip Banks, the artist behind the viral "Chill Guy" meme, has announced plans to enforce copyright protection on his creation. The meme, featuring a humanoid dog exuding nonchalance with a casual smirk and hands in its pockets, became an internet sensation, offering relatable advice about simplicity and stress avoidance. Initially posted on X (formerly Twitter) in November 2024, the character quickly gained traction across platforms like TikTok, inspiring countless templates and videos. Its popularity soared further when a memecoin bearing the meme's name entered the crypto market, surging by 538% within just two days. As of now, the coin has a market cap of \$322.99 million, though it peaked at around \$580 million just putting it out there, "Chill Guy" has been copyrighted. Like, legally, I'll be issuing takedowns on for-profit related things over the next few days" philb (@PhillipBanks) November 21, 2024 Meanwhile, Banks took to X on Thursday to address the rapid monetization of his artwork in the crypto space. "Chill Guy" has been copyrighted. Like, legally, Banks posted via his account, adding that he plans to issue takedown notices for profit-driven uses of the meme. He clarified that while he is not opposed to brands using his artwork in trends "acknowledging brands like UFC and Halo that have engaged with the meme" he strongly opposes its association with crypto projects. Mixed Reactions The move to enforce copyright has stirred mixed reactions online. While some applaud Banks for safeguarding his intellectual property, others question the implications of copyright enforcement in meme culture, which thrives on open sharing and reinterpretation. Moreover, notable figures, including El Salvador's President Nayib Bukele and entrepreneur Elon Musk, have recently engaged with the "Chill Guy" meme, further elevating its visibility. However, Banks' announcement has impacted the memecoin's market performance, with prices dipping despite remaining 35% higher over the past 24 hours. As the debate around intellectual property and meme culture unfolds, Banks' stance highlights a growing tension between creators' rights and the viral, often uncontrollable, nature of internet trends. Highlighted News Of The Day

With its liquid staking program, Solana storage scaling solution Xandem has achieved a new milestone. With Xandem's industry-leading APY of over 15%, more than 30K SOL, valued at over \$8M, are now staked via the platform, and TVL is growing quickly. Compared to other liquid staking pools like Jito and Marinade, that is double the APY. Solana users may utilize a liquid staking token with several use cases to engage in SOL staking via Xandem's staking pool. With an average annual percentage yield (APY) of above 15%, the Xandem staking pool has surpassed other top SOL staking programs. Since the switch to Xandem's storage-enabled liquid staking infrastructure, the number of wallets staked to the native Solana validator has already surpassed 2,700, and it is expected to rise quickly. Because Xandem has a quadruple rewards mechanism, its stakers may benefit from the largest SOL staking yield. Block rewards, staking rewards, XAND rewards, and MEV incentives are all included in this, increasing the overall APY to above 15% (as of writing). Xandem is the first liquid staking protocol to programmatically distribute MEV and block rewards with stakers in order to increase overall APY, while Solana validators often collect these benefits. Xandem CEO Bernie Blume said: "The intense demand we've seen for the Xandem staking program shows the level of interest in liquid staking on Solana. By fairly apportioning MEV and block rewards between stakers and validators, we've shown that it's possible to pioneer an equitable system in which everyone prospers while contributing to the security and decentralization of the Solana ecosystem." During the bootstrapping phase of Xandem's staking pool, stakers have had access to higher-than-normal XAND payouts, which has given Solana users even more motivation to stake their SOL. The scalable storage
