- The floor price of a single BAYC NFT has likewise risen to \$119.6 from \$106.9. - The Billionaire changed his Twitter profile photo to the Bored Ape Yacht Club. Various internal and external variables influence the price of cryptocurrencies. Elon Musk is an outlier who can cause asset values to skyrocket with a tweet. Prices of ApeCoin increased by 15% when the Billionaire changed his Twitter profile photo to the Bored Ape Yacht Club during the spectacular metaverse debut. Highly Anticipated Metaverse Launch When Elon Musk updated his BAYC profile photo on Wednesday, it re-ignited the debate about cryptocurrency. ApeCoin, the native token of Bored Ape Yacht Club, which had been rather quiet in the early stages of trade, surged by 15% and reached a four-day high of \$17.6 on Tuesday. The floor price of a single BAYC NFT has likewise risen to \$119.6 from \$106.9, which is a coincidence. In January, the eccentric Billionaire, who now owns Twitter, expressed his displeasure with NFT profile images. However, his purchase of 569 Ether worth of BAYC NFT via Moonpay was alleged to have occurred a few weeks later. Regularly, Elon Musk can be seen tweeting about hot-button problems in the cryptocurrency world. When BAYC's metaverse NFTs went on sale, demand for them pushed Ethereum costs to exorbitant heights, causing a big disaster within the community. Both Ethereum's limitations and Yuga Labs' congestion were cited as causes of the network's congestion. Dogecoin's price surged in July 2021 when Elon Musk used the dog-themed cryptocurrency as his Twitter profile image. According to him, DOGE is the "people's crypto" and even better than Bitcoin for transactions. According to CMC, the ApeCoin price today is \$15.96 USD with a 24-hour trading volume of \$2,620,504,139 USD. ApeCoin has been up 10.54% in the last 24 hours.

- ApeCoin has been down 5.03% in the last 24 hours. - Almost \$500,000 in Shiba Inu (SHIB) has been burned. Let us look at the top 3 meme coins set to explode in 2022. Shiba Inu (SHIB) Since ShibaSwap's decentralized exchange ShibaSwap opened a burn portal, rewarding holders for removing SHIB from circulation, almost \$500,000 in Shiba Inu (SHIB) has been burned by the cryptocurrency's meme-inspired community. As a result, SHIB's creators revealed that a burn gateway would be introduced in an updated version of decentralized exchange Shiba Inu's Swap, making it more straightforward for platform users to burn SHIB and lower the amount in circulation. According to CMC, the Shiba Inu price today is \$0.000021 USD with a 24-hour trading volume of \$518,979,508 USD. Shiba Inu has been down 0.37% in the last 24 hours. ApeCoin (APE) In the APE Ecosystem, ApeCoin is an ERC-20 token designed to empower and motivate a decentralized community working at the cutting edge of web3. Voting on how the ApeCoin DAO Ecosystem Fund should be spent is done by ApeCoin holders through the ApeCoin DAO decentralized governance structure. Holders of ApeCoin elect the APE Foundation to carry out their collective will. According to CMC, the ApeCoin price today is \$14.64 USD with a 24-hour trading volume of \$1,238,615,828 USD. ApeCoin has been down 5.03% in the last 24 hours. Dogelon Mars (ELON) On Ethereum and Polygon, Dogelon Mars is a dog-themed meme coin. Dogecoin, Shiba Inu, and Floki Inu are all examples of successful dog theme-based currencies. Dogelon Mars is a mashup of numerous meme-coin-popular topics. A clever twist on the moon, click references Mars, hinting that Dogelon's fortunes could soar dramatically. According to CMC, the Dogelon Mars price today is \$8.96e-7 USD with a 24-hour trading volume of \$17,711,472 USD. Dogelon Mars has been up 0.03% in the last 24 hours.

- The recently-delayed merge to Proof-of-Stake will permit sharding. - Otherdeeds non-fungible token buyers paid over 60,000 ETH (\$165 million) fees. To be "truly acceptable," Ethereum (ETH) co-founder Vitalik Buterin thinks transaction costs for Layer-2 transactions should be lower than \$0.05. Buterin's new remarks were in reaction to a tweet from Bankless podcast host Ryan Sean Adams, who tweeted a snapshot showing the average transaction costs for eight Ethereum Layer-2 platforms. Ethereum's Layer-1 network is compared to the cost of Layer-2 networks constructed on top of it by L2fees.info, a website dedicated to comparing the two options. Highly Anticipated Merger A token swap on the Metis Network costs \$0.14, which falls short of Buterin's planned transaction fee of \$0.05. After that, there was a dramatic rise in fees, with Loopring charging \$0.12 for every transaction and the Aztec Network charging \$1.98 per transaction. At \$3.26 each transaction and a shocking \$16.31 every token swap, Ethereum's Layer-1 is now reasonably priced. However, this is only true until Yuga Labs publishes another collection of NFTs, at which point costs might soar over \$14,000 per mint. The recently-delayed merge to Proof-of-Stake will permit sharding. Ethereum's chain may be divided up into concurrent threads, which will let Ethereum scaling solutions quickly grow to new capacities. This is unlikely to happen for some time; hence Ethereum will continue to rely on scaling solutions (such as rollups) for the time being. That's why Buterin came out with EIP-4488 in November. Ethereum scaling solutions are expected to benefit from EIP-4844 in the same way. Last weekend's \$310 million Otherside metaverse NFT drop by Yuga Labs was a significant NFT drop and witnessed Ethereum's fee issue. Otherdeeds non-fungible token buyers paid over 60,000 ETH (\$165 million) fees. Recommended For You Ethereum Price Prediction "Will ETH Hit \$5K Soon? Cardano(ADA) Price Prediction 2022 "Will ADA Hit \$4 Soon? Dogecoin (DOGE) Price Prediction 2022 "Will DOGE Hit \$1 Soon?

- The firm made its grand debut in the cryptocurrency world using bitcoin. - Tesla had claimed it acquired \$1.5 billion in bitcoin. Tesla has said that it believes in the long-term potential of crypto assets in one of its SEC filings. Even though Dogecoin had been widely regarded as Elon Musk's preferred cryptocurrency, the firm made its grand debut in the cryptocurrency world using bitcoin. No Purchase in Last 4 Quarters Even though the mining of Bitcoin had a detrimental influence on the environment, Musk kept it beneath the curtains and continued to hoard it. But according to reports,

Tesla hasn't purchased or sold any bitcoin in the last four quarters. In February of last year, Tesla had claimed it acquired \$1.5 billion in bitcoin. However, there was no movement until the firm had to record a \$51 million loss to show the reduction in bitcoin's price in the third quarter. Tesla seems to have a solid foundation in crypto. As indicated in one of its most recent SEC filings, in January 2021, the business considered diversifying its portfolio and investing in digital assets and gold bullion. According to the filing: "We believe in the long-term potential of digital assets both as an investment and also as a liquid alternative to cash. We may increase or decrease our holdings of digital assets at any time based on the needs of the business and on our view of market and environmental conditions." Digital assets have been volatile in the past and the present, according to the company's report. Moreover, because they rely on technology for their production, validation, and continued existence, digital assets are likewise vulnerable to vicious assaults and technical obsolescence. The corporation also said that if the fair values fall, they would have to record impairment costs.

Though some countries take the initiative to adopt cryptocurrencies, some firms and stores are also showing interest in digital-assets. Some huge firms revealed their support for cryptocurrencies like Bitcoin, Ethereum, Dogecoin, and Shiba Inu. Significantly, VeChain (VET) has joined the list where the network announces its official partnership with Alchemy Pay. The collaboration of VeChain and Alchemy Pay allows people to use the native token VET, for payment methods in 2 million stores. Alchemy Pay is a crypto-payment service that now allows VET to be used in over 2 million stores across 70 countries as payment. The VeChain token (VET) is a type of "smart money" that is used to carry value from smart contracts. Moreover, VET will be used in decentralized application transactions that take place on VeChain's blockchain. It is open to the entire public to invest in VET As Payment In 2M Stores. However, the partnership of VeChain and the crypto payment service platform is a sweet spot for the holders. As this collaboration allows users to make payments using the VET token in over 2 million stores across 70 countries. JUST IN: VeChain \$VET can now be used as a payment method in over 2 million stores throughout 70 different countries. " Watcher.Guru (@WatcherGuru) April 29, 2022. Additionally, the platform uses its advanced low carbon blockchain for transactions that allow any VeChain wallet cost fractions of a cent to be executed in seconds. However, VeChain has a series of updates and advancements from their network which will also support price action. Currently, VET is trading at \$0.049 with a trading volume of \$366 million in the last 24-hours. Besides, it is 5.41% down for the day and holds 37th rank by market capitalization. - BTC's negative performance generated further downside during the previous five days. - Bitcoin has been down 3.12% in the last 24 hours. Despite this year's high volatility and price adjustment, worldwide usage of Bitcoin (BTC) is expected to rise in 2022. Bitcoin and other cryptocurrencies are being seen as a way out of financial debt in countries under increasing pressure. As a result, bitcoin adoption seems to be on the verge of a snowball effect. BTC's negative performance generated further downside during the previous five days that stretched below the support line. As more gloom filled the market, it fell below the \$40,000 mark. According to CMC, the Bitcoin price today is \$38,540.11 USD with a 24-hour trading volume of \$25,725,571,102 USD. Bitcoin has been down 3.12% in the last 24 hours. Altcoins Follow Similar Course Ethereum made attempts to break over the \$3,000 barrier level. Although the price failed to break above the \$3,000 level, ETH formed a short-term top near \$2,980. After reaching a peak of \$2,967, the price began a steep decline. The support level of \$2,950 and the 100-hourly simple moving average were breached. Despite the bulls' efforts, the price managed to go below \$2,900. Not just ETH but significant altcoins are trading in red, including Shiba Inu, Cardano, XRP, polygon, and Dogecoin. According to MicroStrategy's CEO Michael Saylor, Solana and Binance will face Ethereum. His remarks come at a difficult moment for the Ethereum community, whose prized platform is further postponing the Merge. Solana's NFT market is smaller than Ethereum's. Moreover, Solana's NFT trading volumes continue to fall well short of Ethereum's, despite recent advancements in the technology. According to CMC, the Ethereum price today is \$2,827.21 USD with a 24-hour trading volume of \$14,968,837,464 USD. Ethereum is down 4.12% in the last 24 hours.

- The APE price would rise to \$18 if the post-retest rally were successful. - Dogelon Mars has been up 31.57% in the last 24 hours. Let us look at the top 3 trending searches on CoinGecko today as per CryptoDep. "i, Trending Searches by @CoinGecko" "ðŸ†°ðŸ†‡! CryptoDep #StandWithUkraine ðŸ†°ðŸ†‡! (@CryptoDep) April 20, 2022 20 April 2022\$APE \$GMT \$ELON \$LOOKS \$NEAR \$SEWT \$REF \$MATIC \$GLMR \$FTM pic.twitter.com/1g69ktbulo ApeCoin (APE) NFT-ApeCoin, the native token of Bored Ape, has surged in recent days, up 56% from its low of \$10.93 on April 18th. Whale buildup and a fresh launch announcement by creator Yuga Labs for its future metaverse-"Otherside" were behind this exponential surge. Because of this, the price of APE jumped by 22% throughout the day and hit a new record high of \$17.35. The APE price would rise to \$18 if the post-retest rally were successful. According to CMC, the ApeCoin price today is \$16.14 USD with a 24-hour trading volume of \$2,730,907,795 USD. ApeCoin has been up 23.88% in the last 24 hours. STEPN (GMT) As of March, the STEPN (GMT) token, which uses the Solana (SOL) blockchain, has a market capitalization of over \$1 billion. It took only 41 days for GMT's price to soar from a low of \$0.01 to a record high of \$3.45 a 34,000 percent increase in value (data from Binance). In particular, the buzz surrounding decentralized finance (DeFi) initiatives, which reward users with tokens for being active, seems to have contributed significantly to the market's meteoric rise. According to CMC, the STEPN price today is \$3.52 USD, with a 24-hour trading volume of \$4,617,398,965 USD. STEPN is up 0.90% in the last 24 hours. Dogelon Mars (ELON) Intraday gains of 45 percent to \$0.000001103 for Dogelon Mars cryptocurrency, a blend of Dogecoin and Tesla CEO Elon Musk. It's not obvious what's behind the token's recent surge, but Tesla CEO Elon Musk's latest cryptic Twitter tender offer suggestion puts him back in the limelight. Dogelon Mars is an Ethereum and Polygon meme currency with dogs as the theme. Dogecoin, Shiba Inu, and Floki Inu have all been popular dog-themed cryptocurrencies in the

past, and this one is no exception. According to CMC, the Dogelon Mars price today is \$0.000001 USD with a 24-hour trading volume of \$173,835,011 USD. Dogelon Mars has been up 31.57% in the last 24 hours.

- Participants over 35 were less inclined to invest in digital assets. - Australians between 18 and 24 are more willing to invest in cryptocurrencies. Cryptocurrency adoption and investment across the globe are on the rise, with many countries legalizing crypto in recent times. Over one million Australians currently possess cryptocurrencies, including Bitcoin, Ethereum, Ripple, Cardano, Dogecoin, and Shiba Inu, according to a report by Australian research company Roy Morgan. 5 percent of Australians over the age of 18 currently possess at least one cryptocurrency, according to a February poll. When it comes to investing in cryptocurrencies, more than two-thirds (742,000) of Australian crypto investors are males, compared to just over a third (332,000) of women. This group was the most likely to own cryptocurrencies, with one in ten of those under 35. Highest Investment by Participants Over 50 Participants over 35 were less inclined to invest in digital assets, but they still accounted for 40% of the entire investor market, with 296,000 aged 35-49 (28%) and 138,000 aged 50 and older (13 percent). Even though they are less inclined to participate in cryptocurrencies, Australians over 35 account for a sizable portion of the country's crypto industry in terms of average investment size. Participants over 50 had the highest average crypto investments, at roughly AUD 56,000 on average. An estimated AUD 7.6 billion is now held by those 50 and over, making them the largest cohort in terms of total crypto investment value and 35% of the whole market. Australians between 18 and 24 are more willing to invest in cryptocurrencies, but they only possess an average of AUD 2,600, which amounts to barely 3% of the overall market value. Both 25-34 and 35-49-year-olds in Australia had market shares of roughly AUD 18,200, while those in the latter category had a market share of AUD 21,600. Investments made by people between the ages of 25 and 34 accounted for 32 percent of the total, while those between 35 and 49 accounted for 30 percent.

- Musk offered to pay \$41 billion to take Twitter private. - The company's board is also reportedly not willing to accept it. Cardano founder Charles Hoskinson has proposed creating a new decentralized social media platform from scratch together with Tesla Elon Musk if the billionaire's audacious attempt to take over Twitter fails. Douglas Horn, the chief architect of the Telos blockchain, facetiously predicted that the project would be delivered by 2035. Another Twitter user joked that the platform would only be able to send ten messages per minute, alluding to various tech issues plaguing Cardano-based applications. Dogecoin Co-founder Criticizes Musk I made an offer <https://t.co/VvreuPMelU> "Elon Musk (@elonmusk) April 14, 2022 Musk offered to pay \$41 billion to take Twitter private, claiming that the unsolicited bid was meant to protect freedom of speech. Before that, he acquired a 9.2% stake in the company. Dogecoin co-founder Jackson Palmer criticized Musk for attempting a hostile takeover of Twitter. Critics argue that the mogul is far from being a free speech messiah, and his real motive is to get back at the U.S. Securities and Exchange Commission (SEC). Musk's tweets have to be preapproved before publishing as part of his settlement with the formidable regulator. So the billionaire is now trying to get rid of his "Twitter sitter." Musk is "not sure" whether or not he will succeed in taking over Twitter but claims that he has "a Plan B." Saudi Prince Alwaleed bin Talal Al Saud, a key Twitter shareholder, has shot down Musk's offer. The company's board is also reportedly not willing to accept it.

- SHIB gets listed upon the Robinhood trading platform. - Surges a massive 35% within 24 hours. - High trend for SHIB reflects the near future. It's been quite a time since Shiba Inu (SHIB) has witnessed such surges. The last time SHIB had a good upwards graph was on 6th, February 2022, almost two months back. This is only upon taking into consideration the daily 24 hours surges. In such terms, on 12th April, 2022, SHIB hit a massive 35% increase just within 24 hours, reaching a high price of \$0.00003. Upon analysis, it is highly evident that the major reason for such surge up for the SHIB goes to its listing in the global trading platform, Robinhood. The Surge and Further On The dog-meme based coin and the direct rival to the first meme coin, the Dogecoin (DOGE), got listed by Robinhood, one of the most prominent global trading platforms, based in America. As a result of this listing, the SHIB moved up rapidly reaching a high of 35%, within just 24 hours. SHIB being one of the most remarkable crypto for the year 2021, has not seen to the elats half of what it underwent in 2021. This is not exceptional only for SHIB, but for the majority of cryptos. As this is the direct result of its listing in Robinhood, the high tide is expected to remain for a period. Moreover, the Robinhood platform has about 10 million users and accounts active spread all over the world. With many ups and downs throughout the year 2021, Robinhood is indeed all geared up for the year 2022, with the launch of its own wallet. And so, in a notion to expand itself, it has also accepted numerous altcoins throughout 2022. There's no doubt why SHIB surged up immediately after the listing. Indeed, this has been the same way for the prominent cryptos like the Bitcoin (BTC) and the Ethereum (ETH), while they got listed on Robinhood.

- PoW mining will be phased out in favor of PoS this summer. - Cuban had urged newcomers to the crypto world to invest in ETH. Ethereum's change from a proof-of-work approach to a proof-of-stake has two major benefits for American billionaire Mark Cuban. He thinks the so-called Merge will dramatically reduce Ether's energy usage, perhaps turning it into a deflationary asset. PoW mining will be phased out in favor of PoS this summer, making the Ethereum blockchain system more environmentally friendly and reducing gas costs substantially. Cryptocurrency investors and players believe Ethereum's upcoming update is a good thing for the platform and will help it gain ground. Mark Cuban, the Dallas Mavericks owner, is an example of this. According to him, Ethereum will be a lot more environmentally friendly following the changeover, leading to more widespread use. Highly Anticipated ETH 2.0 According to Cuban, the change would "possibly make" Ether a deflationary asset. According to the millionaire, the quantity of ETH will be considerably reduced, and the process of minting new ETH will

take longer. On the other hand, Cuban stated that he had put part of his money into Ethereum and other Ethereum-based ventures. Despite formerly being opposed to the asset class, the entrepreneur is now an enthusiastic supporter. He often lauds bitcoin's virtues, claiming that it is a superior financial instrument to gold. The Dallas Mavericks, his NBA club, accepts digital assets as payment for tickets and goods, including the meme currency Dogecoin, which is one of those accepted digital assets. It seems that the billionaire has a unique perspective on Ethereum. In October of last year, he urged newcomers to the crypto world to invest in ETH since it had the most upside potential.

- HEX is up 5.22% in the last 24 hours. - Dogecoin (DOGE) has shown a positive price dynamic in the last 24 hours. Let us look at the top 3 price gainer crypto in the last hour as per The Coin Detective. Top price gainers of the past hour (Top 100 market cap) \$CELO \$DOGE \$HEX \$EGLD \$NEAR <https://t.co/GKMwbT2VW2> " The Coin Detective (@acoindetective) April 8, 2022 Celo (CELO) "Mobile first" DeFi layer 1 blockchain Celo is on a roll. Last week, the CELO token gained 22.7% and temporarily reached a 12-week high of \$5.22. At the time of this writing, it was trading at \$3.87. The Celo Foundation's announcement of "Connect the World," a \$20 million initiative aimed at improving crypto users' onramps and offramps, may be one cause for the recent spike in Celo's price. According to CoinMarketCap, the Celo price today is \$3.87 USD, with a 24-hour trading volume of \$220,443,889 USD. Celo is up 5.30% in the last 24 hours. Dogecoin (DOGE) Dogecoin (DOGE) has shown a positive price dynamic in the last 24 hours despite many crypto investors' negative opinions of meme currencies. Dogecoin's price may be affected by the following factors: - The demand and perception of meme coins by the crypto community - The overall dynamics of the crypto market - Elon Musk's support for DOGE - New improvements made by Dogecoin's creators According to CoinMarketCap, the Dogecoin price today is \$0.150293 USD with a 24-hour trading volume of \$1,558,474,498 USD. Dogecoin has been up 2.90% in the last 24 hours. HEX (HEX) HEX is an Ethereum-based ERC20 token. HEX is the blockchain equivalent of the Certificate of Deposit, which is currently utilized in conventional financial markets to store assets. HEX is also meant to use the Ethereum network's DeFi (Decentralized Finance) ecosystem. According to CoinMarketCap, the HEX price today is \$0.138536 USD with a 24-hour trading volume of \$12,811,228 USD. HEX is up 5.22% in the last 24 hours.

- \$2,500 to a random follower if Bitcoin does not reach \$50,000 by April 20. - Bitcoin is down 4.07% in the last 24 hours. Following Wednesday's decline, Bitcoin showed indications of recovery as aggressive statements from the U.S. Federal Reserve failed to alleviate market concerns about inflation in the coming months. Price charts reveal that Bitcoin (BTC) fell below a recent upswing and failed to break beyond the \$48,000 mark this week. However, at \$42,000, substantial support seems to be in place for the asset. To battle inflation, the Federal Reserve Board decided to reduce its balance sheet by as much as \$95 billion each month, or more than \$1 trillion over the current financial year. Bitcoin fell below support at \$45,000 as a result of the report. Crypto Analyst Optimistic In contrast to most crypto analysts, others have gone even farther and believe that Bitcoin will hit \$50K by April despite the recent slump movement. For example, famous Bitcoin analyst MartiniGuyYT has declared that he would give away \$2,500 to a random follower if Bitcoin does not reach \$50,000 by April 20. If #Bitcoin doesn't reach \$50,000 by April 20th, I will give \$2,500 to one lucky follower! "ö'öÿ\$e " That MartiniGuy " (@MartiniGuyYT) April 7, 2022 LIKE & FOLLOW @MartiniGuyYT TO ENTER!!! Moreover, global stock markets and indexes showed a little rebound on Thursday. Investors in Europe's Stoxx 600 and Germany's DAX gained 0.46 percent and 0.43 percent, respectively, while futures of the S&P 500 jumped 0.15 percent. In addition, Bitcoin and ether rebounded from Wednesday's lows, indicating a stabilization of the crypto markets. Most cryptocurrencies, however, stayed in the red for 24 hours. Dogecoin's DOGE declined the most, by an average of 11%, followed by Cardano's ADA, which fell by 8%. According to data, the crypto market's capitalization fell to \$1.9 trillion from \$2.4 trillion on Tuesday and is now trading at 2.01 trillion.

- The Ethereum network's average gas price is presently \$5.81. - DOGE prices rallied but could not hold on to the momentum. Let us look at the top three cryptocurrencies in terms of social media activity over the previous 24 hours as per LunarCrush. Bitcoin (BTC) A giant rich whale is back when it comes to the non-exchange Bitcoin (BTC) whale. Even as the leading cryptocurrency trades around 5% below its previous-day high, the address containing over 120,000 Bitcoin worth about \$5.5 billion has added 3,241 BTC. A total of 289 BTC, followed by 2,952 BTC, was added to the whale's account on April 5th, making it the third-richest wallet in the world behind the Binance and Bitfinex accounts. The freshly acquired BTC has a little more than \$145 million. According to CoinMarketCap, the Bitcoin price today is \$43,535.36 USD with a 24-hour trading volume of \$36,769,720,188 USD. Ethereum (ETH) As data from On-chain data provider, Santiment, has shown, Ethereum competitors can no longer use the network's high transaction costs against it. The network's average gas price is presently \$5.81. This is much less than the average charge of \$69.57 on May 11th, 2021, or the average rate of \$62.85 on November 8th, 2021. Ethereum's price has dropped dramatically from its all-time high, but it has recently risen and is again trading over the \$3,000 barrier. According to CoinMarketCap, the Ethereum price today is \$3,229.26 USD with a 24-hour trading volume of \$22,874,129,456 USD. Dogecoin (DOGE) Amidst skepticism about meme currencies, Dogecoin (DOGE) proved to be the only cryptocurrency to show positive price dynamics when Bitcoin prices sank. In the wake of Elon Musk disclosing that he owns the single most significant stake in Twitter, prices of DOGE rallied but could not hold on to the momentum. According to CoinMarketCap, the Dogecoin price today is \$0.146109 USD with a 24-hour trading volume of \$2,758,425,893 USD.

- The Dogecoin community has been a huge supporter of Musk. - MicroStrategy currently owns 129,218 bitcoins, worth over \$6 billion. Let us look at the top 3 most searched cryptocurrencies in the United States as per Watcher.Guru. Top 5 most searched #cryptocurrency in the U.S: " Watcher.Guru

(@WatcherGuru) April 5, 2022 #Dogecoin #Bitcoin #Ethereum #ShibaInu #Cardano
 Dogecoin (DOGE) DOGE's price has increased by over 20 percent to \$0.169 per token. On April 4, Elon Musk revealed that he has a \$3 billion investment in Twitter, reaffirming his impact on the market for the currency. The Dogecoin community has been a huge supporter of Musk, including his decision to accept DOGE payments at Tesla's online goods shop. As a result, Twitter's crypto projects might benefit from Musk's funding, which could lead to the introduction of DOGE on the social media site. According to CoinMarketCap, the Dogecoin price today is \$0.169760 USD, with a 24-hour trading volume of \$4,145,007,019 USD. Dogecoin has been up 18.32% in the last 24 hours. Bitcoin (BTC) MicroStrategy, run by Michael Saylor, is unrelenting in its pursuit of BTC. However, the CEO has said on several occasions that the corporation has no intention of selling its bitcoins in the near future. MicroStrategy currently owns 129,218 bitcoins, worth over \$6 billion at the current price. According to CoinMarketCap, the Bitcoin price today is \$45,939.40 USD with a 24-hour trading volume of \$31,049,977,979 USD. Bitcoin has been up 1.56% in the last 24 hours. Ethereum (ETH) The Ethereum blockchain has increased in popularity and usage, as new statistics show. A cryptocurrency data aggregator, Token Terminal (TT), estimates that Ethereum blockchain transaction fees amounted to \$10.7 billion over the previous 365 days. On the world's biggest smart contracts blockchain, demand for block space has risen astronomically. According to CoinMarketCap, the Ethereum price today is \$3,453.91 USD with a 24-hour trading volume of \$17,242,523,724 USD. Ethereum is up 0.86% in the last 24 hours.

- In November, Jack Dorsey, Twitter's co-founder and CEO stepped down. - Musk has openly discussed the prospect of creating a competing social media network. Elon Musk, CEO of Tesla Inc., asked Twitter followers whether they wanted an edit button in a poll he shared on the social media platform. Earlier this week, Elon Musk announced that he owns 9.2 percent of Tesla, which is worth roughly \$3 billion, and that he is the microblogging site's single biggest shareholder. Dogecoin, quickly soared by 10% as a result of the announcement. Tweets may now be edited after they've been posted, according to the early findings of a survey conducted amongst those who have taken part. According to Twitter CEO Parag Agrawal's comment after Elon Musk's poll, its outcome will be significant. "Please vote carefully," he said. Long Anticipated Edit Function On April 1, Twitter posted an official message announcing that the long-anticipated "edit" function would soon be available. "We cannot confirm or deny, but we may edit our statement later," the corporation said when questioned whether the tweet was a prank. In November, Jack Dorsey, Twitter's co-founder and CEO stepped down. As of this writing, Musk's stake in Twitter is over four times that of Dorsey, the company's previous greatest shareholder. According to an SEC filing made public on Monday, the incident that prompted the filing occurred on March 14. As a long-term "passive" investor, he fits all of the requirements for this kind of investment. Dogecoin and other cryptocurrencies have received several endorsements from Tesla CEO Elon Musk. Many of his tweets have had a significant influence on cryptocurrency values. Famous analyst Pomp recently tweeted about Musk now being the Chief Meme officer citing Musk's support for meme coins over time and now Musk owning a significant stake. Elon Musk, Chief Meme Officer at Twitter "Pomp OYC (@APompliano) April 4, 2022 However, Musk has also openly discussed the prospect of creating a competing social media network in front of his enormous and devoted Twitter following.

Shiba Inu (SHIB) is one of the most popular meme-coins which is marking to stand out in the market. It is actively making a massive gain in the last 24 hours. Observing very closely, Shiba Inu is performing a stable hike in the price values, exciting its holders. Further continuing the rise, the meme-coin skyrocketed by 21.19% in the last day. Besides marking a new milestone, SHIB is now making new prominent partnerships with great and interesting projects in the market. Thus, altcoin is now scoring a bullish trend over 2 weeks. And that happens to be the main reason for the price hike. Followingly, Shiba Inu is now listed in Netcoins, a Canadian crypto exchange. SHIB to be traded in Netcoins Netcoins is an online crypto trading platform which supports its Canadian citizens to explore the trading activities of digital assets. The exchange also educates its population to understand the process of how to buy, sell and store the cryptocurrencies in the platform. In addition, Netcoins also helps the consumers and investors to make the purchase and sale of cryptocurrency easily. Thereby providing the users with a promising focus on compliance and security. Interestingly, on March 24th the Netcoins received an approval for an update to its regulated dealer license which was requested earlier in 2021. Moreover, through this license, Netcoins planned to list and offer a variety of digital coins in its exchange. Now, Netcoins is actively listing five major cryptocurrencies with numerous benefits yet to roll out for the users. It includes Shiba Inu (SHIB), Dogecoin (DOGE), Polygon (MATIC), Fantom (FTM) and Decentraland (MANA). According to CoinMarketCap, the current market status of SHIB is \$0.000028 with a 24 hour trading over \$2 billion. This depicts that Shiba holders are very active and engage in trading the meme coin at frequent rates. Therefore, Shiba Inu marked a trending green graph through its significant rise in the activity from the investors community and the altcoin users. Unfortunately, at present, due to some market fluctuations, SHIB is at a downfall rate of 2.48% in the last 24 hours. But, as a twist in the performance, Shiba Inu will be back as many popular crypto exchanges are listing the meme coin. One of the examples is SHIB listed in Netcoins in Canada!

- Over 230 million SHIB tokens have been burnt in the last few days. - So far, around 41% of SHIB's original supply has been burned. Since yesterday, the price of Dogecoin has been rising. While rallies like these are typical for meme coins, they have a clear rationale. After announcing that it will allow Dogecoin on its machines, finch business Bitcoin of America gave the meme currency it's a blessing. Investors may now buy digital assets anytime they want because of this. Cryptocurrency ATMs owned by Bitcoin of America, a financial technology business, are located throughout America. These 1,800-plus ATMs enable customers to buy bitcoin and other cryptocurrencies whenever they wish to use a

credit card or simply cash. There were no other cryptocurrencies available to clients until last October when support for Ethereum was added to Bitcoin and Litecoin. Adding Dogecoin to the list brings the humor currency closer to millions of American investors. SHIB Token Burn SHIB (SHIB) holders are committed to stabilising the meme coins supply so that it becomes lucrative. Over 230 million SHIB tokens have been burnt in the last few days, according to statistics from Shibburn. Over 168 million SHIB tokens were burned in a single transaction by a program that monitors transfers of SHIB tokens to "dead wallets." The SHIB token burn rate decreased by 86.23 percent, burning about 32 million tokens on the last trading day. Famous analyst Lark Davis tweeted whether meme coins will make a comeback in 2022. Are meme coins going to make a comeback in 2022? \$shib \$doge \$floki " Lark Davis (@TheCryptoLark) March 26, 2022 The community is doing token burning to lower the initial supply of SHIB, which was set at one quadrillion. So far, around 41% of this original supply has been burned to enhance the token's value.

- As per the listing by LunarCrush, ETH ranks second by social engagement. - ApeCoin seemed to be on the verge of a breakout. Let us take a look at the top 3 achievers this week based on social media engagement by LunarCrush. " This week's top performers by social engagement: \$btc #bitcoin \$eth #ethereum \$ape #apecoin \$doge #dogecoin \$xtz #tezos \$ada #cardano \$shib #shibainu \$cake #pancakeswap \$maga #decentraland \$rare #superfart <https://t.co/8nsqxP6n1q> pic.twitter.com/ZKWPxZjcyJ " LunarCrush by Social Intelligence for Crypto (@LunarCrush) March 25, 2022 Bitcoin (BTC) Bitcoin's price surged and retested essential resistance levels in the recent week, resulting in a tremendous increase in positive momentum. Stablecoin investors are encouraged by Terra Labs' recent purchases of BTC as collateral. The price of Bitcoin has risen by 18 percent since March 14 and hit \$44,439 for the third time. After BTC's fourth higher bottom since January 22, this upswing has begun. Ascending triangles are formed when trend lines are connected across these swing points. According to CoinMarketCap, the Bitcoin price today is \$44,502.25 USD with a 24-hour trading volume of \$26,837,946,881 USD. Bitcoin is up 1.00% in the last 24 hours. As per the listing by LunarCrush, BTC ranks at the top by social engagement. Ethereum (ETH) Ethereum (ETH), the second-largest cryptocurrency globally, surged beyond \$3,000 this week, again outpacing Bitcoin. Analysts expect the price of ETH, which is presently trading about \$3,100, will rise even more in 2022. According to Bloomberg analyst Jamie Coutts, the discounted cash flow model predicts that the price of ETH might reach \$6,100 shortly. Ether has a "unique blend of equity, commodity and monetary characteristics," according to the expert. In addition, as per the listing by LunarCrush, ETH ranks second by social engagement. According to CoinMarketCap, the Ethereum price today is \$3,126.77 USD with a 24-hour trading volume of \$14,771,822,844 USD. Ethereum has been down 0.06% in the last 24 hours. ApeCoin (APE) In the APE Ecosystem, ApeCoin is an ERC-20 governance and utility token meant to empower and incentivize a decentralized community growing at the forefront of web3. While approaching \$14.5 resistance, ApeCoin seemed to be on the verge of a breakout. The bulls would have been encouraged by a breakthrough over this level. However, the price looked to have broken through the \$13 support level and turned it into a level of resistance. As per the listing by LunarCrush, APE ranks third by social engagement. The current ApeCoin price is \$12.88 USD, with a 24-hour trading volume of \$984,774,002 USD, as reported by CoinMarketCap. In the past 24 hours, ApeCoin has lost 3.12 percent of its value.

- Crypto enthusiasts are freaking around with their favorite crypto tattoos. - More than 900 people etched the logos of BTC, DOGE and ETH tattoos. - Google searches for crypto tattoos have spiked over 222% last year. Cryptocurrencies are one of the hottest topics around the world today. People are just going crazy in trading and investing in digital currencies as in turn earning good profits as well. Thus, the freak in cryptocurrencies led many users to ink tattoos of their favorite tokens logo on their skin permanently. Interestingly, the search in social networks like Google and Instagram just spiked by 222% in the last one year. Notably, the craze in the cryptocurrencies is really boosting high, where over 900 people have etched the symbol of Bitcoin "B" around the world. Besides, there are some crypto devotees who are very eager for these digital assets. Some of them have inked the logos of their favorite digital currencies on their body for a lifetime. If the same case continues, then crypto tattoos will hit the moon soon! Freak of Crypto Tattoos As Bitcoin is the king of all the cryptocurrencies, the followers and users are really high where BTC holders will love the coin even if it crashes. Like Bitcoin, there are users fond of their own crypto currencies as well. In that list, we have the father of the Bitcoin family, Didi Taihuttu, the early adopter of BTC ink in 2017. Following the Bitcoin showman, a Bitcoin author and podcaster- Anita Posch etched a tattoo on her forearm. In addition, she wrote a brief note in a Bitcoin documentary titled, "Human B" which says tattoos "represent energy." Surprisingly, the crypto devoted followers are also a huge fan of Dogecoin (DOGE). Even though the popular meme-coin is out of the top ten cryptocurrencies, it is highlighted gaining with 700 average monthly searches for crypto tattoos. Furthermore, some of the Dogecoin fans are printing the full logo of the original Shiba Inu dog. Additionally, to these most popular cryptocurrencies tattoos, we also have Ethereum's diamond-shaped geometric figure logo on the followers skin as a permanent ink. Along with these digital currencies, NFT tattoos are also gaining popularity in the crypto tattoo community.

Meme coins have been trending for a while now in the crypto space and most of them are animal related. Dogs, in particular, are the most popular meme element used in global meme coin community. From Dogecoin to Shiba Inu (SHIB), the success of numerous meme coins has been witnessed by the vast majority of crypto investors and enthusiasts. And now, this everlasting trend of using animal as the major meme coin element might just come to an end, with the inception of a new meme created by a prodigy. Recently, Random (RND), a 12-year-old primary school student's new project, once again set off a "meme boom" and caused a sensation in the crypto community. After receiving widespread attention, it's now listed on LBank Exchange to provide opportunities for more people who are interested in investing RND. Meme and the Prodigy On February 6, an extensive discussion occurred in

the crypto space, all because a 12-year-old child released a video tutorial of smart contract on bilibili, a popular Chinese video website. According to the video he sent, his name is Huang Zheng and he is still a primary school student. Huang Zheng said that he deployed a smart contract on the Ethereum network at the end of January. The tutorial is based on the whole process of him deploying the smart contract, which introduced the creation, deployment, testing, release and subsequent contents of the smart contract in detail. He hopes the video will help people learn how to create a smart contract by themselves from scratch. This video has already been deleted. Although Huang Zheng has repeatedly stressed that he is only a primary school student and hopes to learn and progress with everyone, his potential cannot be underestimated. Huang Zheng began to learn programming six years ago and came into contact with the Solidity language in the second half of 2021. Out of interest in Solidity, Huang Zheng created RND token on the Ethereum network through self-study and deployed a smart contract. RND has no private sale and is directly airdropped to 101010 users. Such a huge airdrop event quickly attracted people to join one after another and RND suddenly became a popular project in the crypto community. Some people even began to expect Huang Zheng to become the next Vitalik, the founder of Ethereum. The full name of RND project is TheRandomDao. Its official website page is very concise, with only a few words of project introduction. According to the information on the official website, a total of 37.8 trillion RND tokens were issued, of which 12% were left to Huang Zheng's parents to thank them for their dedication and love over the past 12 years. In addition, 38% will be provided for liquidity mining, and the remaining 50% will be airdropped to 101010 people. At present, the airdrop has already been completed, which shall be claimed within one year, and the unclaimed tokens after one year will be destroyed directly. It is worth mentioning that the RND token is only used as a demonstration in the tutorial video of Solidity programming and has no other value. Based on this, many people believe that RND also belongs to the meme coin family. Meme culture no longer needs to use animals as their main element but has a new identity that is created regardless of profits and is more "random", as its name indicates. Will RND be the Next SHIB? There is no doubt that the RND token issued by Huang Zheng has a meme element in it. Although meme coins are popular at present, they have also been widely criticized. Their prices are usually pushed up by giant whales or countless retail investors. Since the prices have no practical support, when there is no profit, they will naturally collapse. When it comes to meme coins, investors always feel kind of suspicious about their hype. SHIB has successfully transformed itself to a beloved project after being hyped by the community. Will RND token, as a hot meme project, become the next SHIB? Huang Zheng himself tweeted that RND has no practical value and is only used for demonstration in the tutorial video of Solidity programming and called on not to overhype the RND token value. As soon as this tweet was sent, two voices immediately appeared in the community. Some people said that RND itself is a DAO. There is no private sale, no public offering, no various ICOs or IEOs. Instead, it allows everyone to get a free airdrop. Overall, this is the real DAO, something that a group of people think is valuable. There were also some other voices claiming that Huang Zheng has no control over what the community would do in the future, and the community is going to make RND the next SHIB. According to the current situation, RND is still popular in the community and has attracted the participation of many crypto influencers. Due to the open-source contract of TheRandomDao, RND may also derive various project branches under the condition of community autonomy. The development of TheRandomDao may even end up running counter to what Huang Zheng hopes. However, it is not an easy task to recreate SHIB's success. In the end, RND may not be the next SHIB, but another special existence in meme culture. Listed on March 11, 2022, RND is now available for trading on LBank Exchange. Any investor who has interest in RND investment can easily buy and sell RND on LBank Exchange right now. Learn More about RND Token: Official Website: <http://therandomdao.com> Twitter: <https://twitter.com/therandomdao> About LBank Exchange LBank Exchange, founded in 2015, is an innovative global trading platform for various crypto assets. LBank Exchange provides its users with safe crypto trading, specialized financial derivatives, and professional asset management services. - Bullish OGN price prediction is \$0.43 to \$2.41. - The OGN price will also reach \$2.5 soon. - OGN bearish market price prediction for 2022 is \$0.11. In Origin Protocol's (OGN) price prediction 2022, we use statistics, price patterns, RSI, RVOL, and much other information about OGN to analyze the future movement of the cryptocurrency. Origin Protocol Current Market Status According to CoinGecko, the price of OGN is \$0.40 with a 24-hour trading volume of \$368,854,761 at the time of writing. However, OGN has increased 4.1% in the last 24 hours. Moreover, OGN has a circulating supply of 428,393,522 OGN. Currently, OGN trades in cryptocurrency exchanges such as Binance, Hotcoin Global, Mandala Exchange, Bitget, and Huobi Global. What is Origin Protocol (OGN)? The Origin protocol is a network that enables market participants to exchange goods and services through a peer-to-peer (P2P) network. The platform aims to create a huge online market by using the Ethereum (ETH) blockchain. OGN deals with the basic problems of the existing online market, such as unfair transaction fees, lack of transparency, lack of innovation, and centralization issues. Origin Protocol (OGN) Price Prediction 2022 Origin Protocol holds the 275th position on CoinGecko right now. OGN price prediction 2022 is explained below with a weekly time frame. A descending channel is the chart pattern formed from two downward trendlines drawn above and below a price representing resistance and support levels. The descending channel pattern is also known as a falling channel or channel down. The upper line is identified first, as running along with the highs and is called the trendline. The lower line is identified as parallel to the trendline, running across the bottom. A breakout above the upper trendline generates a strong buy signal, while a break down below the lower trendline generates a strong sell signal. Currently, OGN is in the range of \$0.38. If the pattern continues, the price of

OGN might fall to the support level of \$0.28. If the trend reverses, then the price of OGN may reach the resistance levels at \$0.46 & \$1.29. Origin Protocol (OGN) Support and Resistance Level The below chart shows the support and resistance level of OGN. From the above daily time frame, it is clear the following are the resistance and support levels of OGN. - Resistance Level 1 â€” \$0.43 - Resistance Level 2 â€” \$0.76 - Resistance Level 3 â€” \$1.3 - Resistance Level 4 â€” \$2.41 - Support Level 1 â€” \$0.26 - Support Level 2 â€” \$0.177 - Support Level 3 â€” \$0.11 The charts show that OGN has performed a bullish trend over the past month. If this trend continues, OGN might run along with the bulls overtaking its resistance level at \$2.41. Accordingly, if the investors turn against the crypto, the price of the OGN might plummet to almost \$0.11, a bearish signal. Origin Protocol Price Prediction 2022 â€” RVOL, MA, and RSI The Relative Volume (RVOL) of OGN is shown in the below chart. It is an indicator of how the current trading volume has changed over a period of time from the previous volume for traders. Currently, the RVOL of OGN lies above the cutoff line, indicating stronger participants in the current trend. More so, the OGNâ€™s Moving Average (MA) is shown in the chart above. Currently, OGN is in a bullish state. Notably, the OGN price lies above 50 MA (short-term), so it is completely in an upward trend. Therefore, there is a possibility of a reversal trend of OGN at any time. Meanwhile, the relative strength index (RSI) of the OGN is at level 62.10. This means that OGN is in a nearly overbought state. However, this means a major price reversal of OGN may occur in the upcoming days. So, traders need to trade carefully. Origin Protocol Price Prediction 2022 â€” ADX, RVI Let us now look at Origin Protocolâ€™s Average Directional Index (ADX). It helps to measure the overall strength of the trend. The indicator is the average of the expanding price range values. This system attempts to measure the strength of price movement in the positive and negative directions using DMI indicators with ADX. The above chart represents the ADX of Origin Protocol. Currently, OGN lies in the range of 20.09, so it indicates a weak trend. From the above chart, the Relative Volatility Index (RVI) of OGN. RVI measures the constant deviation of price changes over a period of time rather than price changes. The RVI of OGN lies above the 50 levels, indicating that the direction of volatility is high. In fact, OGNâ€™s RVI is at a 62.10 level thus confirming a potential high signal. Comparison of OGN with BTC, ETH The below chart shows the price comparison between Bitcoin, Ethereum, and Origin Protocol. From the above chart, we can identify the trend of the ETH, BTC and OGN is moving at the same level as the trend. This indicates that when the price of BTC increases or decreases, the price of ETH and OGN also increases or decreases respectively. Conclusion With continuous improvements in the Origin Protocol network, we can say that 2022 is a good year for OGN. For this reason, the bullish price prediction of Origin Protocol in 2022 is \$2.41. On the other hand, the bearish OGN price prediction for 2022 is \$0.11. Furthermore, with the advancements and upgrades on the OGN ecosystem, the performance of OGN would help to reach above its current all-time high (ATH) \$0.7 very soon. But, it might also reach \$2.5 if the investors believe that OGN is a good investment in 2022. FAQ The Origin Protocol (OGN) is an Ethereum token that drives the Origin platform, which aims to empower decentralized and peer-to-peer markets. OGN has listed on many crypto exchanges which include Binance, Hotcoin Global, Mandala Exchange, Bitget, and Huobi Global. With the ongoing developments and upgrades within the OGN platform, it has a high possibility of reaching its ATH soon. On April 8, 2021, OGN reached its new all-time high (ATH) of \$3.35. Origin Protocol (OGN) seems to be one of the top-gaining cryptocurrencies this year. According to the recorded achievements of OGN in the past few months, OGN is considered a good investment in 2022. Origin Protocol (OGN) is one of the active cryptos that continues to maintain its Bullish state. Eventually, if this bullish trend continues then Origin Protocol (OGN) will hit \$2.5 soon. Origin Protocol (OGN) price is expected to reach \$3.2 by 2023. Origin Protocol (OGN) price is expected to reach \$5 by 2024. Origin Protocol (OGN) price is expected to reach \$6.5 by 2025. Origin Protocol (OGN) price is expected to reach \$8 by 2026. Disclaimer: The opinion expressed in this chart solely authorâ€™s. It is not interpreted as investment advice. - Inflation in the United States reached a 40-year high of 7.9 percent last month. - Russiaâ€™s conflict with Ukraine is anticipated to have long-term economic repercussions. After a Twitter conversation with MicroStrategyâ€™s Michael Saylor, Elon Musk said that he would hold three main crypto coins in his portfolio. The billionaires were debating the current state of the US economy and the potential for inflation shortly. According to Saylor: â€œUSD consumer inflation will continue near all-time highs, and asset inflation will run at double the rate of consumer inflation.â€ Collapse of Weaker Currencies Over the last year, the steep rise in the price of cryptocurrencies has been a crucial factor in the marketâ€™s direction. Inflation in the United States reached a 40-year high of 7.9 percent last month. Foreseeing a BTC Bull Run in late 2021, JPMorgan Chase analysts predicted inflation and the COVID-19 pandemic. For the simple reason that BTC is considered a â€œbetter inflation hedge than gold.â€ According to MicroStrategyâ€™s CEO, inflation will eventually lead to the collapse of weaker currencies. In addition, Russiaâ€™s conflict with Ukraine is anticipated to have long-term economic repercussions. Elon Musk explained his investing decisions during the conversation. Musk stated: â€œAs a general principle, for those looking for advice from this thread, it is generally better to own physical things like a home or stock in companies you think make good products than dollars when inflation is high.â€ Musk added that he still â€œowns and wonâ€™t sellâ€ Bitcoin, Ethereum, or Dogecoin. Cryptocurrency is being seen as a possible answer for countries like Venezuela, plagued by high inflation rates. In Saylorâ€™s view, â€œscarce property like Bitcoinâ€ will become a new source of money.

- Ukraine receives massive crypto and BTC donations. - Estimates to roughly above \$100 Million. - Most donations have been spent towards weapon supplies and protective gears. The war of the decade, yep, tensions between Russia and Ukraine are still high. Seems, this war would not end any sooner as expected all around the world. Moreover, the Russian President, Vladimir Putin still maintains the same rage towards Ukraine, as he turned down the talks proposed by the Ukraine President, Volodymyr Zelenskyy. With all this into account, as soon as Russiaâ€™s invasion war on Ukraine started, soon

crypto donations started to flow in massively, growing up higher and higher with the passing of each day. From all over the world, crypto and Bitcoin (BTC) donations were sent to support Ukraine by all means possible. In spite of this, taking into account a rough estimation, so far crypto and BTC donations, worth more than \$100 million have been donated to Ukraine. Apart from crypto and BTC, this massive donation also includes Non-Fungible Token (NFT) too. Possibly, the epic CryptoPunk NFT #5364 has also been donated anonymously. Spendings of Crypto Donations In the beginning, most of the donations through crypto and other digital assets towards Ukraine were indeed unofficial. However, soon upon the initial days of the war, Ukraine officially started to accept crypto, BTC, NFTs, and all other sorts of digital assets as donations eventually, upon further insistence by people from all over the world. As soon as the donations became official in Ukraine, the donations started to surge effortlessly. So far, it's estimated that all the donations through crypto, BTC, NFTs, and other digital assets altogether sum up to more than \$100 million. In spite of all this, the Ukrainian Digital Transformation minister, Alex Bornyakov terms that most of these donations are being spent towards procuring weaponaries, protective gears like helmets, and much more. In addition, Bornyakov shows out officially the list of items procured with the crypto donation since March 1, 2022. Items brought include 5,500 bulletproof jackets and vests, 410,000 launchers, and 500 helmets. Furthermore, the Ukrainian minister terms that such crypto donations and especially crypto have indeed played a major role in the contribution of its support towards Ukraine from all over the world.

Bitcoin and cryptocurrency prices have been under great pressure through most of 2022, with the bitcoin price losing almost 20% so far this year. However, from March 13 to 14, the Bitcoin price suddenly surged by 4.2% in 10 hours, and Dogecoin spiked more than 9%. Elon Musk's influence on it cannot be underestimated. Tesla's CEO, Elon Musk, sent shockwaves through the crypto world when he added \$1.5 billion of bitcoin to Tesla's balance sheet last year. On March 14 this year, Musk posted an article from the Financial Times, discussing the fact that global commodity prices are on track to see the biggest weekly rally in over 50 years as a result of the war between Russia and Ukraine. Therefore, he advised that it's better to own "physical things" like homes and stocks, advising people not to hold dollars when inflation is high. Under these circumstances, he also outlined that he still owns and has no plans of selling his Bitcoin, Ethereum, or Dogecoin. How to Maximize Profits in BTC Market Not just Musk, crypto is considered to be the best safe haven during times of turmoil to the most traders. Bitcoin bull run is imminent. So, how can we earn more BTC before the bull really comes? Bexplus, a popular cryptocurrency futures exchange, launches an interest-bearing wallet program, allowing users to earn passive income by holding Bitcoin without any risks. Regardless of whether BTC's price is going up or down, you can enjoy up to 21% annualized interest. For example, suppose you store 10 BTC with an annualized interest rate of 21%, then your monthly revenue will be $(10 \times 21\% / 365 \times 30) = 0.173 \text{ BTC}$. This is a good option for traders who prefer risk-free investment. For bold and advanced investors, Bexplus offers 100x leveraged crypto perpetual contracts trading which enables you to profit from the market volatility. Crypto perpetual contracts trading enables traders to buy/up or sell/down BTC according to the analysis and prediction on the market trend. As long as there is market volatility, there is opportunity to make profits. In addition, leverage helps traders increase buying power and profits without investing a large amount of money. For instance, you predict the BTC price will bounce back above \$42,000, and open a 100 long position at \$39,000. You will get the profit of $(\$42,000 - \$39,000) \times 100 \text{ BTC} / \$39,000 = 6.89 \text{ BTC}$. With only 1 BTC used as margin, you can enjoy the ROI of up to 689%. Join Bexplus now, you can enjoy 100% BTC bonus and Earn money with Top Crypto Traders Bexplus is a leading crypto derivatives platform offering 100x leverage in BTC, ETH, ADA, DOGE, and XRP futures contracts. Headquartered in Hong Kong, Bexplus is trusted by over one million traders around the world, including the USA, Japan, Korea, and Iran. - Interest-bearing Bitcoin wallet with an annualized interest rate of up to 21%. - Demo account with 10 BTC to practice trading without risks. - No KYC requirement, registration with Email within a few minutes. - Android and iOS App to trade anywhere anytime. - 7/24 hours 1V1 customer support available. - Fast withdrawal without any time limit, and no deposit fee. To deposit BTC in the Bexplus account, you can earn a 100% BTC bonus, which can also be used to trade futures contracts. The more deposits, the more bonus you will get. You can get up to 10 BTC as a bonus! (Bonuses are not withdrawable, the profit obtained with the bonus can be withdrawn.) Get Higher Profitability with Copy Trading Bexplus provides copy trading which means you can automatically copy other excellent traders' trading. When using copy trading, you still retain full control over managing your portfolio. You can stop the copy, pause it, and add or remove funds at any time. What's more, Copy trading in Bexplus is at no extra charge. Click here to register to get your 100% deposit bonus. Disclaimer: The opinion expressed in this chart solely author's. - AMC Theaters accept SHIB & DOGE payments. - AMC will be powered by BitPay for such crypto payments.
- The official acceptance starts further before than actually planned. True to the fact even local restaurants nearby have started to accept crypto payments quite a long back. Now, wherever we go or even whatever we shop, as there are facilities and modes of payments like cash, card, the next "Cash" in line is now the "Crypto"! Accepting crypto and Bitcoin (BTC) as modes of payments are no longer a big deal in the current era. But however, crypto payments acceptance by giant firms and industry leading top tier players, is so obviously a big deal. In such terms, the world's largest chain of movie theaters, the American Multi Cinema (AMC) entertainment has officially declared it's acceptance of crypto payments. AMC's Crypto Payment Acceptance Starting from March 10, 2022, AMC theaters have officially declared it's worldwide acceptance of crypto as a means of payment for their movie tickets. In spite of this, currently they have declared to accept only two cryptos at the moment. These are the Shiba Inu (SHIB) and the Dogecoin (DOGE). The news circulated previously by the end of February 2022, regarding AMC's crypto payment acceptance. At that time, it's revealed that the official acceptance will start from the second half of March 2022 online. As for the AMC app, a

bit later though. However, AMC took a leap well in advance and officially now started to accept SHIB and DOGE as payments on March 10, 2022. Besides, the main tech partner to facilitate all these crypto transactions is BitPay. Also, soon additional BitPay support is expected to be out on the AMC app. Though AMC did not reveal any plans to accept BTC, starting off with majorly available cryptos like the DOGE and SHIB is an excellent move by AMC.

Meme-based cryptocurrencies or meme coins started as parodies, and now, they are quickly going mainstream. As more influential people like Elon Musk publicly discuss these projects, their popularity will continue to rise. Dogecoin was the first meme coin project, but its success has spurred a slew of mimics like Shiba Inu, Doge Dash, Floki Inu, etc. Since the advent of Dogecoin, meme coins have sparked a new wave of interest in cryptocurrencies and gained a massive following from willing investors across the board. The meme coin surge only grows bigger despite mainly being seen as a joke rather than serious projects with value. However, meme coins are gradually evolving from "joke" cryptocurrencies to projects that deliver a ton of utility and value for their communities. This meme coin evolution isn't happening fast enough compared to other blockchain areas. RYT Coin looks to change this by accelerating the meme coin transformation and emerging as a leader in this "new age" meme coin movement. RYT Coin is the new-age meme coin project that aims to drive the evolution of this class of cryptocurrencies and usher in an era of utility-focused meme coins. RYT Coin intends to develop an innovative meme coin ecosystem that provides metaverse and web3 solutions. The RYT Coin project is built on the BSC network, delivering a decentralized and transparent platform with zero transaction fees for its users. The idea is to create an adaptable community-owned environment that will radically transform the traditional concept of meme coins. RYT Coin is currently listed on Nomics and has received a grade A listing "one of the highest ratings on the crypto market data provider that measures transparent volume, the percentage of crypto-asset trading volume occurring on trustworthy exchanges. RYT Coin's native token, \$RYT, powers its ecosystem and is currently available on Pancakeswap. To boost project awareness and increase visibility, RYT Coin's team has partnered with many social media influencers, including cryptotv, fomotion on youtube, and cryptonormzy and crypto review on TikTok. The team is currently working on developing the RYT Coin game, a play-to-earn/metaverse game with a futuristic setting. They are also looking into getting listed on many more exchanges in the future, securing more partnerships, and creating new offerings for their community. RYT Coin is working to grow a community of passionate investors that believe in the platform's goals because RYT Coin will eventually expand to become a community-powered platform. The meme coin market disruption is the core focus of RYT Coin. The meme coin space, while evolving, isn't catching up quick enough to other crypto sub-niches like Web3, DeFi, or the metaverse. RYT Coin will build new utility outlets for meme coins to push them to a whole new level of popularity. About RYT Coin RYT Coin is a meme coin project seeking to pilot the evolution of meme coins, taking them from the realm of joke cryptocurrencies to utility-based tokens that provide actual value across the board. RYT Coin will do this by building metaverse and web3.0 solutions around its meme coin initiative. - Etherscan identified a bogus airdrop that had already begun. - Ukraine's contribution wallet is said to have received \$40 million in crypto donations. On Wednesday, Fedorov notified the Ukrainian public that the nation has chosen to postpone an airdrop for crypto donors announced on Tuesday and intended to raise additional money by selling non-fungible tokens (NFTs). As the situation in Ukraine worsens as a consequence of Russia's invasion, the nation has resorted to cryptocurrency. Ukraine's official Twitter account provided a Bitcoin (BTC) and Ethereum (ETH) wallet address on Saturday as part of an appeal to the crypto community for assistance. NFT Airdrop Announced When a bogus account produced 7 billion "Peace World Tokens," it seemed to be the official airdrop token for crypto contributors in Ukraine's crypto airdrop program on Wednesday. An hour before the declared start time, Etherscan identified a bogus airdrop that had already begun. It wasn't until a few hours after this announcement that Fedorov said Ukraine would be using NFTs instead of any fungible tokens. On Crypto Twitter, there was a discussion on how much money the official Ukrainian crypto wallet got as donations following the airdrop announcement. The minister didn't say why the airdrop was canceled, but some in the crypto world were angry at the reversal, while others, like Twitter star Cobie, found comedy in the incident. On Wednesday, Ukraine revealed the airdrop, which had been supported by the crypto community and millions of dollars in digital asset contributions. The official contribution wallet has since included Polkadot and Dogecoin addresses in response to a request from the crypto community. According to reports, Ukraine's official contribution wallet is said to have received \$40 million in crypto donations.

- THORChain eliminates the need for intermediaries like bridges. - The Terra integration has been completed and is ready to be released to the public. THORChain, a cross-chain decentralized exchange, was up 26% yesterday, putting the network's native RUNE token up 51% in the last seven days according to CoinMarketCap. One of the network's most eagerly awaited integrations, THORChain, has made a strong comeback. After a week of consistent growth, the RUNE token on the cross-chain decentralized exchange has gained an extra 26% on Wednesday. Over the last week, RUNE has surged 51%, reaching a 24 hour high of \$5.77. THORChain's native token has seen an increase in demand due to a number of future catalysts. Customers of THORChain-integrated chains may exchange LUNA tokens and stablecoins for assets on the Terra network, which is currently under development. According to a tweet sent on Tuesday by Nine Realms, the Terra integration has been completed and is ready to be released to the public. SCV, the Terra smart contract auditor, is currently working with the Terra

developers to ensure the integration is operating properly before the mainnet launch. DeFiSpot, a decentralized multi-chain exchange built on top of THORChain, is also getting ready to debut, alongside Terra. In addition to the present strong returns on THORChain-integrated chains, the project offers "boosted APYs." In terms of APY, users may now earn 60 percent on Binance USD, 19 percent on native Ethereum, and 17 percent on Bitcoin. THORChain eliminates the need for intermediaries like bridges or controlled exchanges by allowing users to transfer their assets directly across blockchains. Litecoin, Dogecoin, Ethereum, and BNB Chain are the newest additions to the network's cross-chain trading, which now includes six other blockchains. THORChain's sixth integration will be Terra.

- The United States and Europe have agreed to suspend Russian banks from SWIFT. - BTC and Ethereum (ETH) have soared by more than 10% in the previous 24 hours. The previous 12 hours have been blissful for cryptocurrency investors, as digital currencies rallied dramatically on Monday evening. According to CoinMarketCap, the price of Bitcoin (BTC) and Ethereum (ETH) has soared by more than 10% in the previous 24 hours, making cryptocurrency investors happy once again. This morning, Bitcoin was trading at \$43,500, up 14 percent from \$38,500 at this time yesterday, according to the statistics. Altcoins Follow Surge Ethereum (ETH), which fell to around \$2,700 over the weekend slaughter, has gained 11.3 percent in the past 24 hours and is now trading at roughly \$2,926 at the time of this writing. Some other cryptocurrencies, except the two leading ones in terms of market capitalization, have had significant gains over this span, including Terra (LUNA), Ripple (XRP), Dogecoin (DOGE), Avalanche (AVAX), and Cardano (ADA) LUNA has risen 23 percent in the previous 24 hours, while ADA, SOL, and AVAX have gained 10.2 percent, 10.1 percent, and 15 percent, respectively, in the same time frame. In the previous 24 hours, Ripple and Dogecoin have experienced minor increases of 6.2% and 6.4%, respectively. While the cryptocurrency market has had a good reaction in the previous 24 hours, the stock and commodities markets have not been able to copy the success. According to several reports, Russia is contemplating using Bitcoin and other cryptocurrencies to get around the severe sanctions it faces due to its continuing invasion of Ukraine. According to market perception, bitcoin adoption may grow as a result of sanctions. Rumors are circulating that Russians are buying Bitcoin. The United States and Europe have agreed to suspend Russian banks from SWIFT, a messaging network that facilitates global financial transactions, following a long period of debate.

- The whales' acceptance of meme-coins is encouraging for the meme-crypto community. - KISHU also released a teaser for their KISHUVERSE NFT earlier this year. According to WhaleStats, Kishu Inu (KISHU) has re-entered the top ten list of tokens acquired by the 1000 most significant Ethereum (ETH) whales in the previous 24 hours. The coin's price has risen 7.8%, while its trading volume has increased by a whopping 200% in the last 24 hours. Whales in Action According to WhaleStats, Kishu Inu has been purchased by the biggest ETH wallets in the previous 24 hours, taking the fourth position in the top 10 currencies. However, Ethereum and USDC coins occupy the top two spots. Surprisingly, the top ETH whales are now trading NuCypher (NU) more than any cryptocurrency. NU is now the fourth most popular smart contract on the market. Another Dogecoin-inspired cryptocurrency is Kishu Inu, which is modelled on a Japanese dog breed. As its mascot, it has chosen the "Kishu" dog type. On the other hand, Shiba Inu is the most popular meme currency owned by the largest ETH whales. According to the Wallets, SHIB accounts for more than 15% of their overall ownership. A WhaleStats report shows that the largest ETH wallets possess \$1.27 billion worth of SHIB coins. The whales' acceptance of meme-coins is encouraging for the meme-crypto community. Kishu Inu recently revealed that the currency has risen to the fourth position among Binance's top trending currencies. KISHU also released a teaser for their KISHUVERSE NFT earlier this year, which sparked enthusiasm among its fans. According to CoinMarketCap, the Kishu Inu price today is \$1.49e-9 USD with a 24-hour trading volume of \$6,610,607 USD.

- LEASH holders will be given precedence in the sale of metaverse land. - The land in the metaverse would have to be acquired using ETH at some point. SHIB currency holders have been speculating about a moon-like spike for some time now, from the current events and actions around the Dogecoin killer. Shiba Inu has been the subject of much recent discussion. Furthermore, SHIB developers are discussing token and currency usage outside the Shiba Inu ecosystem. Shiba Inu welcomes new postings and acceptances. Shiba Inu's ecosystem developer has sparked interest in the community by releasing an upgrade that incorporates digital assets from outside the Shiba Inu ecosystem. Discord server creator Eric M echoes this sentiment. According to the report, LEASH holders will be given precedence in the sale of metaverse land. Shiba Inu Entry In Metaverse The land in the metaverse would have to be acquired using ETH at some point. Moreover, the facts of the land deal may be disclosed at the Shibguru AMA session, according to information, on the 22nd of February, 2022, at 5 p.m. PST / 8 p.m. EST. The Shiba Inu ecosystem's creators have no corners left unturned in boosting token pricing. Although transactions in Shibarium will use SHIB, Shibarium will continue to use BONE. LEASH will also benefit from these changes. The metaverse from Shiba Inu is included in the most recent release. Furthermore, a total of 410,303,144,811,591 SHIB have been used since the original supply was released. More than 19,520,542 SHIB had been burnt in the previous 24 hours, representing an increase in burn rate of 185.33%. According to CoinMarketCap, the Shiba Inu price today is \$0.000025 USD with a 24-hour trading volume of \$1,294,322,370 USD. Shiba Inu has been up 4.69% in the last 24 hours.

- Bullish VTHO price prediction is \$0.005002 to \$0.024790 - The VTHO price will also reach \$0.03 soon. - VTHO's bearish market price prediction for 2022 is \$0.001885. In VeThor Token's (VTHO) price prediction 2022, we use statistics, price patterns, RSI, RVOL, and much other information about VTHO to analyze the future movement of the cryptocurrency. VeThor Token Current Market Status According to CoinGecko, the price of VTHO is \$0.00325025 with a 24-hour trading volume of \$6,607,290 at the time of writing. However, VTHO has decreased nearly 4.5% in the last 24 hours. Moreover, VTHO has a

circulating supply of 45,630,774,011 VTHO. Currently, VTHO trades in cryptocurrency exchanges such as Binance, Mandala Exchange, Gate.io, MEXC, and HitBTC. What is VeThor Token (VTHO)? VeThor Token is one of the two tokens employed by the VechainThor public blockchain. The Vethor Token is a VIP-180 Standard token, that represents the cost of using the VeChainThor blockchain. VTHO is unique due to the fact that it is a VIP-180 standard token, while VeChain Token (VET) performs as the primary value-transfer token, VTHO is an inseparable part of the operation of VeChainThor. The network relies on a proof-of-authority (PoA) consensus mechanism, which allows it to validate transactions more swiftly.

VeThor Token (VTHO) Price Prediction 2022 VeThor Token holds the 315th position on CoinGecko right now. VTHO price prediction 2022 is explained below with a daily time frame. Descending channel pattern consists of two parallel lines with a downward slope. It forms when the chart demonstrates consistently lower highs and lower lows. the upper line is identified first, as running along the highs and is called the trendline. the lower line is identified as parallel to the trendline, running across the bottom. It is the bearish chart pattern defined by a trendline supporting the series of lower lows and a diagonal resistance level connecting the lower highs. descending channels are useful due to their ability to predict overall changes in trends. Currently, VTHO is in the range of \$0.00325025 & \$0.005330. If the pattern continues, the price of VTHO might reach the resistance level of \$0.004495. If the trend reverses, then the price of VTHO may fall to \$0.003235. VeThor Token (VTHO) Support and Resistance Level The below chart shows the support and resistance level of VTHO. From the above daily time frame, it is clear the following are the resistance and support levels of VTHO.

Resistance Level	Support Level
Resistance Level 1 \$0.005002	Support Level 1 \$0.003149
Resistance Level 2 \$0.007815	Support Level 2 \$0.001885
Resistance Level 3 \$0.012695	
Resistance Level 4 \$0.017446	
Resistance Level 5 \$0.024790	

The charts show that VTHO has performed a bullish trend over the past month. If this trend continues, VTHO might run along with the bulls overtaking its resistance level at \$0.024790. Accordingly, if the investors turn against the crypto, the price of the VTHO might plummet to almost \$0.001885 a bearish signal. VeThor Token Price Prediction 2022 â€” RVOL, MA, and RSI The Relative Volume (RVOL) of VTHO is shown in the below chart. It is an indicator of how the current trading volume has changed over a period of time from the previous volume for traders. Currently, the RVOL of VTHO lies below the cutoff line, indicating weaker participants in the current trend. More so, the VTHOâ€™s Moving Average (MA) is shown in the chart above. Currently, VTHO is in a bearish state. Notably, the VTHO price lies below 50 MA (short-term), so it is VTHOletely in a downward trend. Therefore, there is a possibility of a reversal trend of VTHO at any time. Meanwhile, the relative strength index (RSI) of the VTHO is at level 35.99. This means that VTHO is in a nearly oversold state. However, this means a major price reversal of VTHO may occur in the upcoming days. So, traders need to trade carefully. VeThor Token Price Prediction 2022 â€” ADX, RVI Let us now look at VeThor Tokenâ€™s Average Directional Index (ADX). It helps to measure the overall strength of the trend. The indicator is the average of the expanding price range values. This system attempts to measure the strength of price movement in the positive and negative directions using DMI indicators with ADX. The above chart represents the ADX of VeThor Token. Currently, VTHO lies in the range of 11.127487, so it indicates a weak trend. From the above chart, the Relative Volatility Index (RVI) of VTHO. RVI measures the constant deviation of price changes over a period of time rather than price changes. The RVI of VTHO lies below the 50 levels, indicating that the direction of volatility is low. In fact, VTHOâ€™s RSI is at 35.99 level thus confirming a potential sell signal. Comparison of VTHO with BTC, ETH The below chart shows the price comparison between Bitcoin, Ethereum, and VeThor Token. From the above chart, we can identify the trend of the ETH, BTC, and VTHO is moving at the same level as the trend. This indicates that when the price of BTC increases or decreases, the price of ETH and VTHO also increases or decreases respectively. Conclusion With continuous improvements in the VeThor Token network, we can say that 2022 is a good year for VTHO. For this reason, the bullish price prediction of VeThor Token in 2022 is \$0.024790. On the other hand, the bearish VTHO price prediction for 2022 is \$0.001885. Furthermore, with the advancements and upgrades on the VTHO ecosystem, the performance of VTHO would help to reach above its current all-time high (ATH) \$0.04671227 very soon. But, it might also reach \$0.03 if the investors believe that VTHO is a good investment in 2022.

FAQ 1. What is VeThor Token? VeThor Token is one of the two tokens employed by the VechainThor public blockchain. 2. Where can you purchase VTHO? VTHO has listed on many crypto exchanges which include Binance, Mandala Exchange, Gate.io, MEXC, and HitBTC. 3. Will VTHO reach a new ATH soon? With the ongoing developments and upgrades within the VTHO platform, it has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of VeThor Token? On August 29, 2018, VTHO reached its new all-time high (ATH) of \$0.04671227. 5. Is VTHO a good investment in 2022? VeThor Token (VTHO) seems to be one of the top-gaining cryptocurrencies this year. According to the recorded achievements of VTHO in the past few months, VTHO is considered a good investment in 2022. 6. Can VeThor Token (VTHO) reach \$0.03? VeThor Token (VTHO) is one of the active cryptos that continues to maintain its Bullish state. Eventually, if this bullish trend continues then VeThor Token (VTHO) will hit \$0.2 soon. 7. What will be the VTHO price by 2023? VeThor Token (VTHO) price is expected to reach \$0.045 by 2023. 8. What will be the VTHO price by 2024? VeThor Token (VTHO) price is expected to reach \$0.057 by 2024. 9. What will be the VTHO price by 2025? VeThor Token (VTHO) price is expected to reach \$0.064 by 2025. 10. What will be the VTHO price by 2026? VeThor Token (VTHO) price is expected to reach \$0.08 by 2026.

Welups is an identity blockchain platform that enables all digital citizens to connect through a suite of applications supporting on-chain transactions and applications. It traced its origins to Dubai and a platform that differs from other blockchain platforms as it is built on the Welups ecosystem. Now let us see a quick recap of the great achievement of Welups Blockchain. 2021 â€” Welupsâ€™ Milestones Achieved So Far Welups coin was launched in March 2021 with its own network and ecosystem. The price of the coin was only \$0.0005 per token last Mar â€” June 15, 2021 at its internal sale. Currently, the

Welups price is trading at \$0.001121 with a 24-hour trading volume of \$964,682, at the time of writing. On May 23, 2021, Welups invited crypto enthusiasts from different social media platforms like Facebook, YouTube, Zoom meeting to know more about Welups and offer 1,000 WELUPS for each participant.

June 2021 – A Quick Recap on Welups Welups is currently a center of discussion in the investment world because of its potential – which has been proven as Welups's value went doubled after its first IEO on June 15th. In June 2021, Welups team organized many training sessions on Dr. NEE, Welups social media, etc. these sessions are to educate people more about Welups. On June 5, 2021, the Welups team organized an AMA live stream in which Mr. Hero Vu – CEO of OMANEE was the speaker. This livestream AMA is mainly for more understanding about our project and plan in the future. [AMA – Ask me anything] OMANEE & WELUPS – Welups (@WelupsOfficial) June 3, 2021 OMANEE corporation will hold a Livestream AMA for further understanding about our projects and plan. Speaker : Mr. Hero Vu – CEO of OMANEE – June 5th 2021 8PM GMT+7 For free !!! For more detail: <https://t.co/vA4burHvQC> pic.twitter.com/KLqEmG2D0M After IEO the price of Welups reached \$0.001. On June 15, Welups conducted an event on – Guess Well – Get Welups's rewarding 20,000 Welups to the first 10 people with correct results. The Welups team also conducted the – Dubai – Yacht – Welups \$1 Club – campaign, at Flamingo beach, sponsored by Omanee Corporation. Thereby, inviting people to join us to spread the faith of – WELUPS to the moon – a reality. Best moments of WEL \$1 club during our yacht trip in Dubai – Welups (@WelupsOfficial) June 22, 2021 Everyone is excited and full of confidence in WEL – Let's build a stronger and larger WEL community together The stronger our WEL community becomes, the faster WEL price will break out! #Welups #Wel #Wel_to_the_moon

The team also organized many live AMAs on general topics: – Digital Currency Digital payment – Contactless payment – on June 24, and – A quick understanding about crypto blockchain – on June 26. July 2021 – A Quick Recap on Welups Welups testnet officially went live on July 1, 2022, indicating this as the stepping stone to mainnet launch in 2022 and bring WELUPS to the moon. On the same day, Welups team organized a live stream with Host Ms. Sam and Speakers Mr. Ravi Arora, and Mr. Rodney Munene on topic – The potential of Cryptocurrency –. In July 2021, the Welups team conducted many AMA live streams every Thursday with different speakers and a zoom meeting training session every Saturday. July 8 – Let's talk about E-Wallet; July 14 – About Crypto Tourism (Speakers – Mr. Ravi Arora, Mr. Kumbi Portia) July 22 – Coffee With Crypto; July 29 – NFT & Digital Art (Speakers – Mr. Ravi Arora, Ms. Irina) Zoom meeting on every Saturday: July 10 – Learn About E-Wallet July 17 – Crypto Tourism July 24 – Coffee With Crypto July 31 – NFT & Digital Art The Host for all the July 2021 AMA live streams was Ms. Sam. She is also the Host for all the AMA Live Streams occurred in 2021. August 2021 – A Quick Recap on Welups In August 2021, the Welups team conducted many AMA live streams every Wednesday with different speakers. In addition, the team conducted a zoom meeting training session every week on the same topic. Welups team also offered 500 WELUPS as a reward for lucky users. August 4 – Blockchain Ecosystem (Speakers – Ms. Irina, Ms. Kumbi, and Mr. Ravi) August 11 – Bitcoin Vs Dogecoin Vs Welups (Speakers – Mr. Ravi, Ms. Kumbi, and Mr. Rodney) Stand a chance to WIN 500 #WEL! – Welups (@WelupsOfficial) August 11, 2021 This #Wednesday Livestream's Topic: #Bitcoin Vs #Dogecoin Vs #WELcoin – The Live-Stream will be held at #Welups Fanpage <https://t.co/zcv1UqxFOJ> Host: Sam Guests: Mr. Rodney, Ms. Kumbi and Mr. Ravi Follow Welups to stream – , pic.twitter.com/ORI0ahzM2W August 18 – Crypto-Banking (Speakers – Mr. Rodney, Mr. MJ Nieves, and Mr. Ravi) August 25 – Crypto Wallet (Speakers – Ms. Miracle, Mr. MJ Nieves, and Mr. Ravi) September 2021 – A Quick Recap on Welups In September, the Welups team organized an AMA Live Stream event on its Facebook fan page every Wednesday with different Speakers each week. Through this Live Stream, users are aware of crypto-related topics. September 1 – Crypto Volatility (Speakers – Mr. Rodney, Ms. Kumbi and Mr. Ravi) September 8 – Earn Free Crypto (Speakers – Mr. MJ Nieves, Ms. Miracle and Mr. Ravi) September 15 – Introducing IEO (Speakers – Mr. MJ Nieves, Mr. Rodney, and Mr. Ravi) To meet investor expectations and make the community better understand the Welups ecosystem's projects, the team hosted a Livestream on September 17. In order to introduce the technology, the exchange listing plan for WELUPS, Airdrop programs, as well as the development plan of the ecosystem in the near future.

<https://www.facebook.com/welups/photos/a.107964174773989/190007519902987/> In the form of livestream on Dr. NEE fanpage and ecosystem's projects, it is not only a simple sharing session but also an impressive transmission of useful knowledge about technology from 2 senior leaders of Omanee. - Mr. Brian Tran – Omanee CMO - Mr. Jake Nguyen – Omanee CTO The team also offered an airdrop of 50,000 WELUPS to the audience. September 22 – Blockchain Security (Speakers – Ms. Kumbi, Ms. Miracle, and Mr. Ravi) September 29 – IDENTITY VERIFICATION (Speakers – Ms. Miracle, Mr. Rodney and Mr. Ravi) October 2021 – A Quick Recap on Welups Oct 1 – Learning About IDSHARE Ecosystem (Speakers – Mr. Phong Nguyen – Omanee Growth Manager, NEETEK Team) October 10 – Introduction To IDBank Ecosystem Meet with senior leaders from Omanee Corp. (Speakers – Mr. Wind Nguyen – Omanee Growth Manager, Ms. Moon – Omanee Project Manager) On October 15, the WELUPS price reached \$0.0018. Moreover, the WELUPS has continuously increased in price since Presale with a price of only \$0.0005 and through 5 times IEO WEL price is now at \$0.0018 which is 3.6 times increase in just 4 months – A desirable number for all new cryptocurrency October 17-20 – Future Blockchain Summit 2021 This summit is considered as one of the largest Blockchain summits on the planet. Mr. Jake Nguyen was one of the panelists on a talk about The Potentials (and Perils) of Decentralized finance. Notably, OMANEE is a co-sponsor of the event and had a 45-minute presentation to the entire conference. OMANEE's CTO, Mr. Jake Nguyen introduced the vision, potential and direction of Welups Blockchain and demonstrated applications built on the Welups Block platform such as the Dr. NEE identity social network application, the NFT Moongle ecosystem. The entire presentation went Live on Wells Fanpage and all OMANEE media channels. November 2021 – A Quick Recap on Welups November 14 – Welcoin sale Guests – Ms. Kumbi, Ms. Sam Users joined and availed the exclusive bonus of Welups during live sale. November 16 – The most secure and secure Identity Blockchain Platform today. WELUPS has continuously increased in price since pre-sale with a price of only \$0.0005 and through 5 times IEO WELUPS price reached \$0.0022 which is 4.4 times increase in just 5 months. November 21 – AMA: WELUPS

- Everyone from Coinbase to FTX tried to get the attention of NFL fans. - El Salvadorâ€™s adoption of Bitcoin as legal money is also on the table. Despite reports that Ukraine is considering legalizing cryptocurrency and the possibility of conflict breaking out between Russia and Ukraine, the global crypto market has continued to trade downward. The global cryptocurrency market capitalization had fallen 2.66 percent to \$1.82 trillion. Moreover, with a total value of \$61.88 billion, the crypto trading volume was down 29.31%. UAE Plans to Offer Licenses According to a report by Bloomberg, the United Arab Emirates (UAE) plans to offer licenses to virtual asset service providers in the first quarter of 2022. In related news, Bit2Me has become the first Spanish crypto service provider to be granted a license by the Central Bank of Spain. According to CoinMarketCap statistics, the price of BTC, the worldâ€™s oldest cryptocurrency, fell by 1.3 percent to \$40,140.08. The second-largest cryptocurrency by market value, ETH, fell by 3.02 percent to \$2,814.13. Dogecoin (DOGE) was trading at \$0.1415, up 0.35 percent. Everyone from Coinbase to FTX tried to get the attention of NFL fans with their advertising during the Super Bowl last weekend. However, the question remains as to which advertisement was the more effective. Well, there seems to be a lack of preparedness among certain companies, as the Coinbase website crashed amid huge visitors. El Salvadorâ€™s adoption of Bitcoin as legal money is also on the table. When three senators in Washington sent a bill to President Nayib Bukele, he strongly objected. Many argue about whether or not the United States should be involved in the Central American nationâ€™s extreme policies and whether or not they should be intervening at all. - Three million Dogecoin fans follow Dogecoinâ€™s official Twitter handle. - 2.8 million Shiba Inu fans follow the official Shiba Inu Twitter handle. The popularity of Baby DogeCoin continues to rise, and it appears to be trending on Twitter almost every day. Compared with other meme currencies, this

is claimed to be the main reason for the coin's popularity and success. When it comes to meme currencies, Dogecoin is head and shoulders above the others. But in terms of both Twitter followers and market cap, Shiba Inu is perilously close to toppling Dogecoin. Three million Dogecoin fans follow Dogecoin's official Twitter handle, whereas 2.8 million Shiba Inu fans follow the official Shiba Inu Twitter handle. Popularity to Play a Vital Role BabyDoge's official Twitter account presently has more than 1 million followers, making it the third meme currency to do so. BabyDoge has finally entered the million followers club. Congratulations #BabyDogeArmy we just passed 1 MILLION followers on Twitter! " BabyDoge (@BabyDogeCoin) February 17, 2022 Best community in crypto! pic.twitter.com/KpNIfBQljU According to BscScan statistics, the BabyDoge meme currency is the most popular among meme currencies in terms of the total number of wallet addresses that hold the coin, which is 1.4M. The Shiba Inu token has a current holder count of 1.1M at the time of this writing. On the other hand, only 563,482 people hold Dogecoin. To compete with these meme currencies, BabyDoge's popularity will play a vital role. A steady stream of new followers and new owners are joining the ranks of the BabyDoge Army every day. BabyDoge has just ascended to the top 10 most purchased tokens by BSC wallets with the largest 1000 BSC wallets in the last 24 hours, according to data from WhaleStats. According to CoinMarketCap, the Baby Doge Coin price today is \$3.14e-9 USD with a 24-hour trading volume of \$10,221,445 USD.

As a world class digital asset exchange, LBank continues to focus on providing its users quality projects to participate in. - The Shiba Inu token's 24-hour trading volume increased by 4.81 percent. - The average whale has spent \$6,880 in the past 24 hours. The statistics from WhaleStats just verified that Shiba Inu has just flipped Polygon (MATIC) and is now the most traded token among 1000 most significant Ethereum (ETH) wallets. Shiba Inu's (SHIB) price has increased by 4.87 percent to \$0.00003077 for the day. According to the statistics, a total of 54.640 Trillion SHIB tokens worth \$1,722,780,849 has been accumulated by the top 1000 Ethereum whales. The Shiba Inu token's 24-hour trading volume increased by 4.81 percent from the previous trading day and is now \$2,070,395,094.98 in value (2.07B). More Achievements in the Last 24 Hours Shiba Inu (SHIB) has overtaken Ethereum (ETH) wallets to become the second-largest holding. Moreover, Shiba Inu has been the most popular token among Ethereum whales in the last 24 hours. The average whale has spent \$6,880 in the past 24 hours to acquire 216,080,402 SHIB tokens. IZEA, a NASDAQ-listed influencer marketing business, has announced its support for Shiba Inu (SHIB) and Dogecoin (DOGE), as well as Bitcoin, Ethereum, Litecoin, and Crypto.com Coin. After breaking over its trendline resistance, Shiba Inu enjoyed significant gains but could not break through its long-term 23.6 percent Fibonacci barrier. Following its three-month low on January 22 at the price of \$0.000018, buyers entered the market. As a result, bulls on the SHIB have begun a rebound and have broken over a critical trendline resistance level. Furthermore, the bulls tried to break over the 23.6% Fibonacci barrier after recording a stunning ROI of 75.5%. (from February 4 low). There was a hurdle at the \$0.000029 threshold for the purchasers now.

- Bitcoin investment losses of \$101 million were also recorded by Tesla. - Dogecoin was accepted as a form of payment by the EV firm earlier this year. Tesla's crypto portfolio still includes Bitcoin, according to recent sources. Tesla, the electric car and sustainable energy firm founded by Elon Musk, is a significant player in the stock market. At the end of the year in 2021, Tesla's cryptocurrency assets were valued \$1.9 billion, up from the company's initial investment of \$1.5 billion in the first three months of 2021. Bitcoin investment losses of \$101 million were also recorded by Tesla in its financial reports. The filing read: "In the first quarter of 2021, we invested an aggregate \$1.50 billion in Bitcoin. The fair market value of our bitcoin holdings as of December 31, 2021, was \$1.99 billion." Long-term Plans in Consideration A Tesla financial report for the fourth quarter of 2021 has just been made public by the SEC. The electric car manufacturer's financial report revealed that it is still open to the idea of acquiring and keeping digital assets. According to the most recent financial reports, the company has held its stake in the venture. According to the company, it has made about \$2 billion in green investments thus far. After first refusing to accept Bitcoin as payment for its automobiles, Tesla has seemed to hold on to the asset. If the network can prove that it is fueled by at least 50% renewable energy, Elon Musk says Tesla would restart taking the top cryptocurrency as payment. In contrast, Dogecoin was accepted as a form of payment by the EV firm earlier this year. Alongside MicroStrategy and Block, many institutions are long-term crypto investors. As of late, MicroStrategy has added \$25 million worth of Bitcoins, bringing its total holding to 125,051 Bitcoins.

- Welly will be able to accept SHIB tokens from their consumers. - Bigger Entertainment stated on Feb. 5 that it would burn 162 million SHIB tokens. Token burning events and rising merchant uptake have helped Shiba Inu exceed Dogecoin so far this month in terms of market capitalization. Currently ranked 13th in terms of market capitalization, Shiba Inu (SHIB) is just behind Dogecoin (DOGE), a competitor meme-cryptocurrency with almost \$20 billion market capitalization. Despite this, the price of SHIB has outpaced DOGE in 2022, despite its lag in the rankings. The SHIB/DOGE combination, for example, has experienced a 38 percent increase month-to-date (MTD). So, in comparison to Dogecoin, Shiba Inu has risen more than 50% against the US dollar over the last week. Read More: Shiba Inu Price Prediction Back-to-back Development Updates The SHIB market saw most of its gains in February 2022 on two days: February 6 and 7. In contrast to DOGE's 12.5% rise, SHIB's price climbed by a net 41 percent, driven by back-to-back upbeat updates in the Shiba Inu market. According to reports, Welly's, a fast-food restaurant serving burgers and fries, established a partnership with Shiba Inu on Feb. 3. A new Shiba Inu-themed product line and Shiba Inu-themed non-fungible tokens were added to the company's outlets as a result. With Shiba Inu's "Doggy DAO," Welly will be able to accept SHIB tokens from their consumers and expand their food chain at the same time. SHIB's price increased by 7% to \$0.00002219 the day after the news. To commemorate Valentine's Day, crypto firm Bigger Entertainment stated on Feb. 5 that it would burn 162 million SHIB tokens one day before the significant Shiba Inu rally. It was reported on the same day that Unification, a Singapore-based blockchain solutions provider, was working with Shiba Inu's founders to build a layer-2 solution dubbed Shibarium, which is tailored for gaming.

To help traders earn more cryptocurrency, leading crypto derivatives exchange Bexplus has launched a 100% deposit bonus promotion to all traders. If you deposit 1 BTC, 2 BTC will be credited to your account. Every user can get up to 10 BTC for each deposit. Traders now can deposit BTC, USDT, ETH, XRP, ADA, and DOGE and enjoy trading with 100x leverage. Bexplus also cooperates with third-party purchasing cryptocurrency platforms, so if you don't have cryptocurrency, it doesn't matter, bexplus will guide you to quickly buy the cryptocurrency you need. BTC wallet: up to 21% annualized interest without any risks If you want to take a short break from trading, the Bexplus BTC wallet can help you generate juicy profit without taking any risks. With up to 21% annualized interests, it is no doubt one of the most profitable rates in the industry. While most lending platforms require traders to deposit at least 1 BTC, traders can make a deposit starting from 0.05 BTC on Bexplus. Why choose Bexplus? Bexplus is a leading crypto derivatives trading platform offering 100x leverage futures trading on a variety of trading pairs at BTC, ETH, LTC, Dogecoin, XRP, etc. Demo account, 100% bonus and mobile apps are available on Bexplus. Bexplus doesn't require KYC and is trusted by over 800k traders from over 200 countries/regions. Bexplus is accredited by MSB (Money Services Business). 100X Leverage & How Does 100X Leveraged Trading Work? Assume we use 1 BTC to open a long contract when

Bitcoin is trading at \$10,000. Please note that with 100x leverage, 1 BTC can open a contract worth 100 BTC. One day later, the price of Bitcoin increase to \$10,500. The profit will be $(\$10,500 - \$10,000) \times 100 \text{ BTC} / \$10,500 \times 100\% = 4.76 \text{ BTC}$, making the ROI 476%. Now, with Bexplus™ 100% bonus, our initial investment would be 2 BTC, and our realized profit made with these 2 BTC will be 9.52 BTC, and the ROI will also be doubled to 952%. With leverage, it's important to be vigilant, as returns can be outstanding, but liquidations are easier if the price moves down. No KYC No KYC protocol is strictly carried out throughout every process. Registration only requires email confirmation and only takes a minute. Demo account with 10 BTC To help traders better familiarize themselves with leveraged trading, Bexplus has launched a trading simulator. There are 10 replenishable BTC in the demo account for traders to practice as much as they like, without taking any risks. You can also learn to analyze the market and use the tool-kit with the demo account. What can I do with the bonus? The bonus is not withdrawable, but traders can use it as margin to open bigger positions and take more profit. Profit made with the bonus is withdrawable. Besides, with a bigger margin, traders' positions are less likely to get liquidated when there are huge price swings. You might miss the opportunity to buy cheap Bitcoin, but you can still make handsome profits with the revival of Bitcoin. If you are prepared to accumulate more BTC. Join Bexplus and claim your bonus now! Any other questions, you can join bexplus official discord or telegram, contact admin or 24-hour customer service for help. Discord: discord.gg/Bexplusofficial i^â'â'â'where you can communicate with experienced traders or other traders and refer to the trading signals of traders who have long-term profitability in futures tradingi%. - XRP, a cryptocurrency linked to Ripple, has gained 10% in the last day. - Today's high for Bitcoin was \$43,000, a 30.5 percent increase from the previous low. CoinMarketCap statistics show that the Shiba Inu cryptocurrency has jumped over 25% in the last 24 hours. The trade volume of the canine currency has also increased by 244 percent, reaching \$2.7 billion. It is the sixth most popular cryptocurrency globally (behind only Tether, Bitcoin, Ethereum, Bitcoin Cash, and Binance USD). Coinbase, the most popular cryptocurrency exchange in the United States, ranks Shiba Inu third. Bullish Momentum Sweeps Market Shiba Inu has risen to the 14th position in the market capitalization rankings thanks to a recent price hike, overtaking Polygon (MATIC). Despite the recent surge in the meme coin's price, it is still down 67.47 percent from its all-time high of \$0.0001. Even so, the Dogecoin competitor has gained 72 percent since its multi-month low of \$0.0001704. Today's high for Bitcoin was \$43,000, a 30.5 percent increase from the previous low of \$32,950. It has dropped by 37.95 percent amid the recent market fall from its record high. Recent price increases in Bitcoin have lifted the whole cryptocurrency market. XRP, a cryptocurrency linked to Ripple, has gained 10% in the last day. After topping \$3 trillion in November, the market capitalization of the whole cryptocurrency industry is presently nearing \$2 trillion, a 2.99% increase over the last day. According to CoinMarketCap, the Shiba Inu price today is \$0.000028 USD with a 24-hour trading volume of \$2,853,983,819 USD. Shiba Inu has been up 23.43% in the last 24 hours. The current CoinMarketCap ranking is #14, with a live market cap of \$15,324,313,462 USD.

- Several noted that the Bitcoin chart resembled the company's golden arch emblem. - On February 5, Bitcoin hit a two-week high of \$41,983. After the recent crypto market decline, most major currencies have now turned green. After reclaiming the \$40k level, Bitcoin shows strong price momentum. Traders and industry players were taken aback by the sudden drop in the price of the leading cryptocurrency last week. Thanks to a widely shared tweet from fast-food behemoth McDonald's, the latest Bitcoin drop may have reached its lowest point. As investors fled hazardous assets, the world's biggest cryptocurrency, Bitcoin, fell below \$33,000 on January 24, the Chicago-based Corporation derided crypto speculators. This came about due to a meme promoted by notable members of the community, notably MicroStrategy CEO Michael Saylor. After the collapse, several noted that the Bitcoin chart resembled the company's golden arch emblem. Crypto Adoption on a Rise by Fast Food Sector After McDonald's tweet went viral, cryptocurrency startups connected with the fast-food chain. The fast-food chain tweeted "wagmi buddy" in response to Binance's photo of the Wojak meme. how are you doing people who run crypto twitter accounts " McDonald's (@McDonalds) January 24, 2022 Since McDonald's tweeted the famous slogan, "we're all gonna to make it," the company joked that the continued market recovery is due to this. On February 5, Bitcoin hit a two-week high of \$41,983. It is constantly changing hands over the \$41,600 mark at this writing. Tesla CEO Elon Musk was recently teased by McDonald's, which asked him to take Grimacecoin in return for allowing Dogecoin payments. In addition to McDonald's, several fast-food restaurants are courting the cryptocurrency community. According to a press release issued in 2021, Burger King and Robinhood will work together to provide rewards in several cryptocurrencies. Welly's, a Naples-based burger eatery, has partnered with Shiba Inu to open its fast-food restaurant.

- Floki Inu has been up 25.01% in the last 24 hours. - Stocktwits utilize a cashtag, a dollar symbol that exists before a stock ticker. Sometime back, cryptocurrencies like Dogecoin, Floki Inu, and others were simply a fantasy. Now, they're becoming an actuality in the real world. On the other hand, Cryptocurrency has spread throughout the globe and is threatening Amazon's e-commerce dominance. The Floki Inu, a meme token that aspired to remove the tag of a meme currency, accomplished this remarkable achievement. FLOKI token briefly overtook AMZN as the top trending stock on Stocktwits, the first social trading platform for all asset classes. The FLOKI team and community showed the excitement of this significant accomplishment, as the token was able to overtake Amazon as the number one cryptocurrency after the company's quarterly report hailed profits after a significant rise in its price. Although Short-lived Yet Fans Excited At this writing, FLOKI had fallen to the number two slot on the recently launched crypto trading platform on Thursday. However, fans were quite excited about this development. Last year, an army of retail traders leveraged Stocktwits and other internet discussion boards to drive gains in meme stocks like GameStop [GME.N] and AMC [AMC.N], causing enormous losses for hedge funds. Stocktwits utilizes a cashtag, a dollar symbol that exists before a stock ticker, to communicate their thoughts and ideas about a firm. To compile user

opinion and display the most popular stocks on its portal, the social media platform examined the postings and message volumes around the ticker. According to CoinMarketCap, the Floki Inu price today is \$0.000043 USD with a 24-hour trading volume of \$7,874,079 USD. Floki Inu has been up 25.01% in the last 24 hours.

- A Metaverse or other Web3 project may be part of the alliance. - Dogecoin will be the jersey sleeve sponsor of Watford FC. Tezos, a Proof-of-Stake blockchain platform, is expected to announce a multi-year training gear partnership with Manchester United, one of the world's most famous soccer clubs. The Athletic was the first to publish the deal, allowing Tezos to display its emblem on the team's training uniform for an annual fee of \$27 million. According to reports, official advertising material will apparently be shot soon by Manchester United. Moreover, a Metaverse or other Web3 project may be part of the alliance, according to the source. A significant portion of Tezos's business is dedicated to sports sponsorships. Tezos was revealed as Red Bull racing's official blockchain partner in May 2021. In November of that year, Tezos released its first NFT fan experience. A month later, McLaren Racing announced that Tezos was their official technical partner in a multi-year contract covering their Formula 1, INDYCAR, and esports teams and that the Tezos network will be utilized in the debut of McLaren's NFT collection in October of 2021. Baby Doge Coin Bags Hoffenheim For the following 2021-22 season, Dogecoin will be the jersey sleeve sponsor of Watford FC, with players donning the meme emblem of the currency on their arms. The partnership was announced in August of that year. Fan tokens have been introduced by Manchester City, Arsenal, and Wolverhampton Wanderers FC on various platforms, including Socios and Bitci. As of this writing, the Doge and Shiba Inu-inspired meme currency, Baby Doge Coin, has announced a partnership with the Bundesliga side TSG Hoffenheim. Hoffenheim revealed in an announcement that BabyDoge would collaborate to create NFTs customized to the club.

- To prevent further declines, ETH must remain above the \$2,600 support level. - SHIB is trading similarly to DOGE from a technical standpoint. Bulls couldn't hang on for long, and most coins have returned to their original red zone. Only Polkadot (DOT) had an increase of 1.35 percent. When compared to the US Dollar, Bitcoin could not break beyond the \$40,000 barrier. BTC is presently in a downward trend and might go as low as \$36,000, a significant support level. After failing to break over the \$39,250 resistance level, Bitcoin has begun a new slump. In other words, the price is now trading below \$38,000 and the 100-hour SMA. On the hourly chart of the BTC/USD pair, a strong bullish trend line with support at \$37,500 was broken. Similar Case For Altcoins After failing to break \$2,800, Ethereum reversed its gains against the US Dollar. To prevent further declines, the price of ETH must remain above the \$2,600 support level. Ethereum is down 2.95%. There has been a 1.13 percent decrease in the value of DOGE following the fall of Bitcoin (BTC). The rate of DOGE hasn't changed much because of the current price decline. This indicates that neither bulls nor bears are now controlling the market. While sellers' pressure is expected to continue, a breakthrough of support at the current price may be imminent if the price returns to \$0.1310. The meme currency has fallen by 3.14 percent, making SHIB one of the biggest loser today. SHIB is trading similarly to DOGE from a technical standpoint, as there is little likelihood of witnessing any significant swings shortly since buyers and sellers are weak. To sum it up, the \$0.00001704 support and \$0.00002537 resistance levels need to be closely monitored.

- In Henderson, Nevada, the property is situated at 7 Talus Court. - Gene tweeted that he had purchased \$300,000 in Cardano (ADA). Alternative payment methods like cryptocurrencies are becoming more popular in various sectors, including the arts and real estate. Gene Simmons, bassist and co-lead singer of Kiss, has said that he would take cryptocurrency as payment for his 11,000 square foot estate, including Bitcoin, Ethereum, Litecoin, Uniswap, Polkadot, Aave or Try, or a combination of those. Rock legend @GeneSimmons is selling his home in Henderson's Ascaya community for \$13,500,000 and says he will accept cryptocurrency as payment. "Las Vegas Locally 88" (@LasVegasLocally) February 2, 2022 Bitcoin, Ethereum, Litecoin, Uniswap, Polkadot, Litecoin, Aave, Try or a combination of those. pic.twitter.com/HLTHZkrJfX In Henderson, Nevada, the property is situated at 7 Talus Court. The asking price is \$13.5 million. The home has 11,000 square feet on three separate floors with six bedrooms, eight bathrooms, and eleven parking spaces. All three floors are accessible through a commercial elevator and a dining area with vanishing walls. Theatre seating for 11 and private space with bar and lounge are located on the lower level. No Stranger to Crypto Market The member of the musical band is no stranger to the cryptocurrency market. His interest in cryptocurrency, particularly Bitcoin, has grown since 2017. According to his tweets from the beginning of February 2021, he acquired and owned Bitcoin, Ether (ETH), and LTC (Litecoin). A few minutes later, his tweets added that he purchased Dogecoin, XRP, and other digital currencies. Not recommending any of these to anyone. But yes, I also bought Dogecoin, XRP and others. Make of it what you will. "Gene Simmons (@genesimmons) February 1, 2021 Three weeks after his initial crypto transaction, he tweeted that he had purchased \$300,000 in Cardano (ADA). Celebrities like Eminem, Neymar Jr., and DJ Khaled are becoming more and more active in the crypto environment, particularly in NFTs. More and more well-known people will get interested in the cryptocurrency market as it grows in popularity.

International online crypto sportsbook, 1xBit, is here with one of its biggest events "the BIG 5 tournament. Known for its amazing online betting services and juicy promotions, 1xBit is about to reward punters massively again. Designed specially for football fans around the world, the BIG 5 tournament is rewarding players with a total of 5 BTC in this promotion. To participate in this tournament, users must bet from 0.2 mBTC at odds of 1.5 and higher on events from any of the 5 top football leagues. These of course are EPL, Bundesliga, Serie A, La Liga, and Ligue 1. Each qualifying bet you make gets you a promotional ticket. How do you win? Every month, 15 winners will be randomly selected from all the promotional tickets gotten. These 15 winners will bag prizes up to 15 mBTC.

Bigger prizes up to 50 mBTC await more punters at the end of each championship – EPL, Bundesliga, Serie A, La Liga, and Ligue 1. Another group of winners will be selected from the promotional tickets acquired from making qualifying bets. And then comes the grand prize draw! At the end of the BIG 5 promo, more winners will be selected randomly from the promo tickets to win up to 500 mBTC and other marvelous rewards. Remember, the bigger your bet amount, the more tickets you get. Each additional ticket you acquire increases your chances of winning. Ready to participate? Visit the 1xBit website and log in to your account or sign up. Then confirm participation by clicking on “Participate” on the promo page. In addition to the amazing prizes you can win from the BIG 5, 1xBit provides you with much more, which are: - Huge Welcome Bonus: Once you sign up on the platform, you can claim up to 7 BTC on your first four deposits! - Anonymous betting: You won’t have to provide any private information to play on 1xBit. Sign up within seconds and begin to bet immediately! - Multicurrency crypto account: You can select from any of the 35+ cryptocurrencies available on the platform. All the popular currencies such as Bitcoin, Ethereum, Dogecoin, and Litecoin are available! What more? The site allows you to switch your preferred currency whenever you like. - Fast payouts: Receive your winnings instantly! No processing or waiting period required. - Thousands of Betting Markets: Over 35 sports with numerous betting markets are available to wager on. Enjoy betting on top sports like Football, Basketball, Tennis, and many others. Join now and participate in prize draws! Disclaimer: The opinion expressed in this chart solely author’s. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing.

- BabyDoge is the 115th-largest cryptocurrency by market capitalization. - There are now 1,325,042 BabyDoge wallets in existence. Even though dog coins have been performing well, BabyDoge is leagues ahead of the others. The BabyDoge team has done several things that have made this product very appealing to investors. The BabyDoge team has done a great job of addressing the problem of token usefulness. Token holders will be able to use their tokens at chosen online retailers thanks to the development of the BabyDoge card and a mobile app. At the time of this writing, BabyDoge was accepted by Shopify, Magento, and WooCommerce. When the official @bitgetglobal Twitter account revealed that the BABYDOGE crypto would be listed on the Bitget exchange a few days ago, Baby Doge Coin lovers worldwide rejoiced. Listing on Bitget Exchange Although the response to the Bitget listing has been subdued, new listings are usually excellent news for supporters of any currency. Is it easy to be listed on Bitget? Not at all. Bitget is a cryptocurrency trading platform launched in 2018 and has seen rapid expansion since then. The price of an asset should rise significantly if it is listed on a primary stock market. Though BABYDOGE’s relative stagnation isn’t surprising, considering the recent crypto meltdown and increased uncertainty about future market circumstances. According to CoinMarketCap, the Baby Doge Coin price today is \$4.30e-9 USD with a 24-hour trading volume of \$15,412,077 USD. Read More: Baby Doge Coin Price Prediction #BabyDogeCoin is up +143% in the last 31 days and is now ranked the 115th biggest cryptocurrency in the world by market value. ðŸ“– â€” Watcher.Guru (@WatcherGuru) January 30, 2022 Another milestone has been set for the BabyDoge community: There are now 1,325,042 BabyDoge wallets in existence, marking a new ATH, according to WhaleStats, an analytics data provider. Moreover, the value of BabyDogeCoin has increased by 143% in the previous 31 days, making it the 115th-largest cryptocurrency by market capitalization.

- The MIT Cryptoeconomics Lab was founded by Catalini. - Celsius has announced that it would integrate Chainlink Proof of Reserve (PoR). Yesterday it was announced that Diem co-creator and chief economist Christian Catalini and renowned Stanford cryptographer Dan Boneh had joined the firm as strategic consultants to the Chainlink Labs, the firm behind developing Chainlink. The Cross-Chain Interoperability Protocol (CCIP), a new worldwide standard for decentralized inter-blockchain communications, data, and token transfers, will focus on Catalini and Boneh’s work. Because of the Chainlink Network, users will be able to create cross-chain apps by moving tokens and smart contracts across multiple blockchains. The MIT Cryptoeconomics Lab was founded by Catalini, who is also a research scientist at the MIT Sloan School of Management and a co-creator of the Diem project. All students at MIT were given access to cryptocurrencies via the MIT Digital Currency Research Study, developed by Catalini in 2013. Integration by Celsius In order to create auditable and highly secure cross-chain tokens, Celsius has announced that it would integrate Chainlink Proof of Reserve (PoR). With the integration, the leading lending platform, which lets users earn interest on their crypto deposits, will successfully bridge wrapped versions of Cardano, Dogecoin, and Ethereum to the polygon mainnet. There are around 700 oracle networks supported by the Chainlink protocol, which is independent of any particular blockchain. Token usefulness and access to DeFi ecosystems on non-native blockchains will shortly benefit Cardano, Dogecoin, and Ethereum users. According to Celsius, the platform will soon extend its cross-chain token sales and supported blockchains. In order to ensure Celsius’s accountability, Chainlink PoR will allow anybody to validate Celsius’s wrapped cross-chain tokens’ collateralization in real-time.

The Crypto market is definitely unpredictable as we all know that a coin that was launched as a joke is now flying high. Dogecoin was just a joke coin when it started but it just took the rocket and went to the moon within hours while holding the 11th position by market cap. On the other hand, Cardano (ADA) was launched with the vision of the future doing things differently. Cardano is open-source and decentralized, with consensus achieved using proof of stake. It is the first blockchain to be found in peer-reviewed research. Cardano follows a slow and steady method where the growth which the platform has achieved since its inception is huge. Moreover, the launch of the smart contract was a hit which literally drove ADA’s price action to reach highs in September. Despite the market crash, ADA managed to outperform the mainstream cryptocurrencies while BTC lost 11% in the past 30 days but ADA gained 7.6%. Cardano Is Optimistic There are several reasons to invest in Cardano during the dip while the first and foremost factor is that the Cardano network has a plan. They are indulged with a mission and vision for their ecosystem which triggers users to anticipate. Cardano has clearly described their

roadmap on their website which depicts the goals for the future. The platform intends to create economic identities on the blockchain. Additionally, the network plans to establish a transparent system credit score that allows the poorest people to use financial services. Consequently, Cardano has a list of applications to launch on its platform in the first quarter of 2022. One application that is currently attracting more people is SundaeSwap, a DEX where users can swap and earn cryptos. Similarly, solutions for real-world issues are the game changer in any sector. Most of the cryptocurrencies solve issues within the crypto community but Cardano plays different, being out of the box. It has partnered with governments and organizations portraying the thoughts of blockchain to the world. The eyes which lay behind the project are the most significant factor that people should look into. In such a case, Cardano's founder, Charles Hoskinson, is a popular figure among the crypto world who partially helped Ethereum. He has created this platform with a strong foundation consisting of a great team of talent. Moreover, IOHK behind the platform has over 400 people working across 50 countries. As mentioned previously, Cardano uses a proof-of-stake model, which allows people only who own coins can help to validate transactions. Thus, users can hold Cardano, can stake and earn income which illustrates to be less risky. Furthermore, investing and trading cryptocurrencies are at high risk as we can't measure the development of a particular token. As listed, there are many more reasonable options to buy Cardano but not sure when the price will turn down. Therefore, doing your own research and investing in projects is appreciable while ADA is also one of the potential projects to consider.

- The 262nd-largest Ethereum wallet acquired \$34 million worth of SHIB. - The top 1000 Ethereum wallets possess more than \$1.155 billion in SHIB. The wealthiest 1000 Ethereum wallets are absorbing meme currency Shiba Inu (SHIB) at an alarming pace. According to the whale-monitoring bot WhaleStats, the top Ethereum wallets bought SHIB worth \$88 million in a single day. It's clear from their recent purchases that these investors don't think the reign of dog-themed coins is gone just yet. Their aggregate accumulation of Shiba Inu has firmly established the currency as one of their favorites. Optimistic Sentiments For SHIB The 262nd-largest Ethereum wallet acquired more than \$34 million worth of Shiba Inu 24 hours from that address. The 29th largest Ethereum wallet purchased almost \$40 million worth of SHIB. Other Ethereum whales, on the other hand, have piled in, acquiring SHIB valued at \$1 to \$12 million. These whales have some of the highest Shiba Inu holdings, and their purchasing patterns indicate a positive feeling among the heavyweights in the market. The market capitalization of the 14th-largest crypto asset has decreased by roughly 45 percent in the previous month. Dogecoin's Ethereum-based rival, SHIB, is a meme token. The cryptocurrency may be used to pay for goods at various stores or on ShibaSwap, a decentralized exchange, for the purchase and staking of non-fungible tokens (NFTs). Read More: Shiba Inu Price Prediction According to WhaleStats, the top 1000 Ethereum wallets possess more than \$1.155 billion in SHIB, representing 13.78 percent of their non-Ethereum (ETH) holdings. Only FTX Token (FTT) has a higher percentage of non-ETH assets, at 15.56 percent. According to CoinMarketCap, the Shiba Inu price today is \$0.000021 USD with a 24-hour trading volume of \$768,319,519 USD. Shiba Inu has been up 0.41% in the last 24 hours.

- Tesla has BTC worth 41.26 Billion. - Tesla has not purchased or sold any BTC since Q1. - Yet, accepting BTC payments is still on hold. Tesla, the ruler of the electric vehicle market once again buzzes upon the crypto industry with some hot news unrevealed. Tesla on January 26, 2022 officially put out its financial statements for the complete year of 2021. Though the statements are yet to be audited, rather astonishing data were interpreted from it. Accordingly, Tesla's financial statements of 2021, shows that it has digital assets valued at \$1.26 Billion. Owing to the fact that Tesla has only Bitcoin (BTC) under it, this indicates that Tesla has about \$1.26 Billion worth of BTC. Tesla and BTC Bonds The financial statement of Tesla for the year 2021, clearly shows that Tesla has purchased digital assets, rather BTC upon the first quarter (Q1) of 2021 for a whopping \$1.5 Billion. Subsequently, during the same Q1, Tesla sold off a few BTC, then amounting to \$1.33 Billion, post sale. However, it's well known that Tesla never revealed how much BTC it owns. But, CEO of Tesla, Elon Musk once spilled the beans in an interview, telling that Tesla has about around 42K BTC under the firm's accounts. Since Q1, Tesla never sold off any of its BTCs and still till date holds them. This rather contradicts the fact that even though BTC has failed miserably, slumping down to 50%, Elon Musk has quite strong confidence in the digital asset. Despite the controversy upon accepting BTC as means of payment for Tesla is still on the same hold though. Previously, Tesla announced that it would accept BTC as a means of payment for Tesla in March 2021. Unfortunately, just within less than two months time, Tesla again announced officially that they would not accept BTC, stating it has concerns for the environment. On the other hand, Elon Musk recently stated that Tesla is now accepting Dogecoin (DOGE) as a means of payment for certain merchandise from Tesla. Currently, BTC is trading for the price of \$36,639 which is indeed low obviously. Moreover, the graphs are down with 3.54%, taking into account the past 24 hours.

- Shibnobi (SHINJA) surges extremely everyday. - Currently, for almost a week, SHINJA stands at more than 50% surges. - Many predict SHINJA to hit 1000X. As we all do very well know that the recent days have not been so inviting for the crypto industry. With the first month nearly getting onto completion, it seems the start of 2022 is quite on the skeptical side. Moreover the crash of the king, Bitcoin(BTC) for more than 50% down has completely shook the whole industry with losses estimated to be about \$500 Billion. Despite such petty full days, one particular altcoin has been surprising the entire industry. This is the Shibnobi (SHINJA), like most meme based coins inspired from the stars like the Dogecoin (DOGE) and the Shiba Inu (SHIB). What Exactly is Shibnobi (SHINJA)? The Shibnobi is actually a platform meant for the future perfectly with all sorts of adaptations of the blockchain ecosystem. The platform focuses primarily on Decentralized Finance (DeFi) services, most importantly multi-chain swapping. The entire platform is said to revolve around the concept of multi-chain token swapping. Moreover, the entire Shibnobi platform uses its own blockchain, the Kusari blockchain. The

swapping feature is actually possible through the three major blockchain networks. These are the Ethereum (ETH) blockchain, the Binance Smart Chain (BSC) and the Polygon (MATIC) blockchain. Apart from this, Shibnobi terms that they aim at making passive income for the users by profuse staking features too. In spite of this Shibnobi is indeed capitalizing itâ€™s native token to the extent possible. The SHINJA is the native token for the platform, launched only on November 15, 2021, barely anywhere above two months! Besides, SHINJA is now available on leading exchange platforms like Coinbase, Binance and much more. SHINJA to the Moon SHINJA acknowledges itself as â€œthe worldâ€™s deadliest SHIBâ€™. And so, it obviously lives up to the words. Accordingly, SHINJA has surged up drastically at an unimaginable pace. Though BTC failed miserably, SHINJA kept surging more and more with each day. Currently SHINJA is trading at the price of \$0.00000000000000001865. The graph is completely upwards with a surge of astonishing 52.30%, taking into account the past 24 hours. With such a surge in many terms, SHINJA will be hitting the 1000X very soon, owing to its minimalistic price.

Despite the market crash since the start of this year, meme currencies are certainly not losing a bit of their popularity. Following the trading pattern of Bitcoin, most of the altcoins are also trapped in the same chart pattern. Even meme tokens had a bearish trading chart, dropping to their lowest point and then beginning to rise. Following the current rally in BTC, cryptocurrencies have begun to steadily rise from their lowest points. When it comes to meme tokens, DOGE and SHIB are the most popular, attracting the majority of investors. As a result, DOGE and SHIB have been experiencing bearish trading patterns since the beginning of the year, following in the footsteps of BTC. According to CoinMarketCap, the top three meme-tokens by market capitalization are Dogecoin (DOGE), Shiba Inu (SHIB), and Dogelon Mars (ELON). ELON As New Rival Significantly, Dogecoin is considered to be the head of all meme currencies as it was the first meme-token to grab the attention of the entire market. After that, SHIB took the place of DOGE on the show, and it also outperformed the mainstream cryptocurrencies. Dogelon Mars has entered the market as a new rival, with a market capitalization of \$452,132,842. As per the list from CoinMarketCap, Dogecoin is the first token to have a high market cap value among meme-currencies. Then follows Shiba Inu, while Dogelon Mars holds the third position by market cap value. Moreover, the market cap values of DOGE, SHIB, and ELON are \$19,722,723,985, \$11,944,919,533, and \$452,132,842 respectively. At the time of writing, DOGE was trading for \$0.1502, which is 7.05% up for the day. With the 7-day statistics, DOGE has dipped 9.06% and dropped nearly to \$0.12 in the past week. On the other hand, SHIB is currently trading at \$0.0000221, which is 4.88% up for the day and 20.59% down for the past week. SHIB almost went down to \$0.000018 on December 22, 2022, which is the lowest since the start of this year. Consequently, ELON is currently trading at \$0.0000008569, with the token having gained 11.71% in the last 24 hours. Surprisingly, among the meme-currencies, ELON is a new trending token that is presently ranked third in terms of market value. Furthermore, it is expected that these meme tokens will reach a new all-time high value in the next term, along with the beginnings of a bullish run.

- Elon Musk tweets again promoting DOGE. - Elon Musk asks McDonalds to accept DOGE. - DOGE price spikes up vertically after the tweet. Seems our favorite and rather at times annoying crypto man of all times, Elon Musk is back again vividly into the crypto industry. Many depict that Elon Musk has started to play the same cycle of games as he did in the year 2021, with his primary concern of altcoin, the Dogecoin (DOGE). Repeating the same cycle as promoting the DOGE, Elon Musk takes to Twitter. Accordingly, this ought to be the second tweet from Elon Musk in the past 10 days regarding and concerning DOGE. The first was on 14 January 2022, by which he promoted DOGE and Tesla both together via a tweet. Upon the tweet, Elon stated that all Tesla merchandise will be available for sale with DOGE as a payment method. This also, spiked up the price of DOGE by almost 15% gains immediately after the tweet. With all those being 10 days back, Elon Musk takes on Twitter again, asking McDonaldâ€™s to accept DOGE as a payment method. Will McDonaldâ€™s Accept DOGE? Around the evening of 25, January 2022, the CEO of Tesla and SpaceX, Elon Musk, once again tweeted in spite of promoting and backing up DOGE. I will eat a happy meal on tv if @McDonalds accepts Dogecoin â€” Elon Musk (@elonmusk) January 25, 2022 As per the tweet, Elon Musk states that he is all set and ready to eat a complete happy meal on television live, provided that the worldâ€™s beloved burger fast-food giant, McDonaldâ€™s accepts DOGE. Accordingly, Elon Musk targets McDonaldâ€™s to accept DOGE for payments, as this will tremendously increase the value and usage of DOGE, over many folds. Owing to the fact that McDonaldâ€™s is one of the largest and most established fast-food chains known for its burgers especially all over the world. On the other hand, as usual, the price of DOGE soared up instantly with the tweet from Elon Musk. Accordingly, before the tweet, DOGE was trading for the price of \$0.1358. However, after the tweet within a few minutes, the price of DOGE soared exponentially all the way up to \$0.1445! Currently, DOGE is trading at \$0.1404, with the graph in greens with gains of 9.61%, taking into account the past 24 hours.

Jersey, United Kingdom, 24th January, 2022, Chainwire OKO Miners is one of the largest cryptocurrency mining equipment resellers on the market. OKOâ€™s mission is to guide users in choosing the best blockchain mining technologies and providing access to reliable cryptocurrency miners. The company focuses on supplying reliable miners to a large customer base, which is still increasing over time. OKO Miners strive to always deliver quickly and at the best online prices and to keep everything in stock at all times. As mining becomes increasingly popular, OKO Miners offers various types of miners with varying hashrate capabilities. Our Miners are now on sale:

previous experience, as the Oko miner team provides 24/7 technical support and assistance to all of its customers. Users just need to have a steady internet connection, electricity and the necessary space. For more information visit www.okominers.com Contacts - Diego Mark - okomining@bigmirkavanya@gmail.com

- Only seven coins may presently be traded on the platform. - More than 500,000 people have signed a Change.org petition. At the end of 2021, Shiba Inu Coin surpassed 1 million holders, and it surged swiftly after that, just to fumble to the recent crypto market crash. SHIB holders are looking to Robinhood to complete their listing collection after getting a Coinbase listing in September 2021 and subsequent listings on Kraken and CoinDCX. By the end of January 2022, Robinhood will not support the Shiba Inu coin and has not confirmed any intentions to list SHIB. Only seven coins may presently be traded on the platform. Prospective SHIB holders will instead need to seek SHIB on exchanges such as Binance, Coinbase, Gemini, and others. In the SHIB community, rumors of Robinhood's support for SHIB are commonplace. Rumors, on the other hand, are often just that. Demand is clearly high. Robinhood's intentions for a SHIB listing are unknown, but the demand is clearly high. More than 500,000 people have signed a Change.org petition requesting Robinhood to include SHIB in its product line. According to the petition, the success of Robinhood's Dogecoin listing shows that SHIB has the potential to be just as successful. On Shiba Inu, Robinhood CFO Jason Warnick is the most recent formal remark. During the Wall Street Journal CFO Network Summit, Warnick was questioned about new listings and Shiba Inu. Warnick said: "It's not lost on us that our customers and others would like to see us add more coins. We're a highly regulated company in a highly regulated industry, and we think it's important that we get a bit more clarity from regulators." It's hard to accurately predict when SHIB will be listed on Robinhood, but the SHIB army can hope it's this year.

- Cooper urged people to get tickets for the next burn party on February 14th. - Shiba Inu has been down 22.88% in the last 24 hours. According to the owner of one of the firms that burn Shiba Inu tokens, the meme crypto's developers are now working on new ways to burn the tokens. Nearly 110 million SHIB were destroyed over the course of the weekend, further reducing the quantity in circulation. In a recent Twitter discussion, Bigger Entertainment owner Steven Cooper mentioned that SHIB developers are working on new mechanisms to create more ways to destroy SHIB "the second most popular canine crypto, also encouraged as a Dogecoin killer. Cooper owns the Bigger Entertainment crypto record label, regularly holding SHIB burn parties. There will be burn mechanisms introduced. They are working on this." Steven Cooper (@iamstevencooper) January 20, 2022 Earlier in the conversation, Cooper was urging people to get tickets for the next burn party on February 14th. Shiba Inu tokens will be purchased with the funds and burnt on Valentine's Day. According to Twitter's @shibburn account, close to 110 million Shiba Inu coins were transferred to a dead wallet over the weekend and can never be used or withdrawn. We burned close to 110M over the weekend. If you would like for us to burn more, simply visit the burn transactions on <https://t.co/t0eRMnyZel> as they get tweeted. More projects are on the way." Shibburn (@shibburn) January 19, 2022 2.5 Billion SHIB Burnt Moreover, according to a newly built website that records SHIB burn transactions on etherscan, 18,340,447 SHIB have been burned in the last 24 hours. As of January 19th, the community has destroyed 2.5 billion SHIB tokens since December 1st, according to a report. The price of Shiba Inu (SHIB) has fallen due to the unfavorable market conditions in the US stock market. Due to investors' hesitation fearing risks, the cryptocurrency market is in danger of a terrible free fall. According to CoinMarketCap, the Shiba Inu price today is \$0.000019 USD with a 24-hour trading volume of \$2,028,488,032 USD. Shiba Inu has been down 22.88% in the last 24 hours. Read More: [Shiba Inu Price Prediction](#)

- Tronix (TRX) ranks first in highest number of active accounts. - Surpasses that of BTC, ETH, DOGE, ADA, XRP, BNB and much more. - TRX ought to spike up in a few days along with BTC. The Tron platform is one of the most versatile decentralized blockchain platforms available in the market. Besides, the first thing which comes to the minds of a crypto geek with the Tron, is its exquisite smart contract enablings. True to the fact the Tron platform and blockchain, is evidently best known for their DApps and smart contract featurings. However, the native token of the Tron platform, the Tronix (TRX) has not been so bright for a certain period. Indeed the TRX was one of the most expected altcoin to outperform in 2021. Yet, the 2021 was just a complete disappointment from the TRX. Despite all such negative aura surrounding the platform's native coin, the platform now stands as the top with the highest number of active users! Tron's First Rankings Without failing to keep up the legacy, the Tron platform becomes the hot news for the day. Accordingly, the Tron Community officially took to Twitter, with a tweet. The Tron platform now accounts for the highest number of active users, surpassing that of all major cryptos. These include Bitcoin (BTC), Ethereum (ETH), Cardano (ADA), Ripple (XRP), Dogecoin (DOGE), Binance (BNB), and much more. According to @coinmetrics, #TRON ranks first in the number of active accounts compared to #BTC, #ETH, #XRP, #ADA, #BNB, #DOGE, #MANA, #LINK and #XLM by pic.twitter.com/ZxASLPTy24 "TRON Community by...E (@tronixtrx) January 18, 2022 Though it's determined to be obviously proud of the platform, it failed to impress many upon the community and in general. Many TRX holders took on fire, slamming various comments for the tweet. Major views were like, what's the use if the coin doesn't perform well." TRX to Surge Soon Since the Q4 of 2021, TRX has been dropping down profusely. Before, the recent market crash TRX maintained itself at a price between \$0.082 and \$0.078. However, as the tragedy struck for the entire industry, TRX dropped down to extreme lows of \$0.062. Ever since then till date TRX did not reach \$0.70 mark. Moreover, analysts predict that once TRX crosses the mark of \$0.070, it will spike up all the way to \$0.0715, being the first break point. Furthermore, TRX is expected to travel up all the way back to \$0.076. This is ought to happen if BTC surges up too. Currently TRX trades at the price of \$0.069 at the graph surging upwards at the rate of 1.42%, taking into account the past 24 hours.

- The number of wallets containing BabyDoge far outstrips Shiba Inu. - Baby Doge Coin has been up 16.03% in the last 24 hours. CoinEx is a well-known exchange in the cryptocurrency industry. Most crypto traders use it as a one-stop shop for all their trading needs because of its cheap costs and high security. Moreover, CoinEx has at least 2 million customers in over 100 countries and regions because of its exceptionally fast speed, steady operation, and seamless withdrawals and deposits services. An announcement of BabyDoge's listing on CoinEx came through on January 18, 2022. New Listing " CoinEx Global (@coinexcom) January 18, 2022 CoinEx Lists #BABYDOGE on 18th Jan@BabyDogeCoin seeks to improve transaction speed & adorableness æ... Trading Pair: BABYDOGE/USDT æ... Deposit & Withdrawal: 7AM UTC 18th Jan æ... Trading: 11AM UTC 18th Jan Learn more ðŸ%
<https://t.co/q37fIJrD2c#CoinEx> #BabyDogeCoin [pic.twitter.com/dEw1LZPQxb](https://t.co/dEw1LZPQxb) According to the analytics platform, WhaleStats, the number of BabyDoge owners has increased significantly in only two days. A new listing by BabyDoge has also pushed its price up by approximately 13%. ðŸ† New Record: #BabyDoge reaches an astonishing 1,275,000+ holders. æ" WhaleStats æ" the top 1000 BSC richlist (@WhaleStatsBSC) January 18, 2022 Current Holder Count: 1,275,995 ðŸ¹ The top 1000 BNB wallets are holding 989,582,594,495,517 #BabyDoge (\$5,027,713 USD) Source: <https://t.co/Uc1nehV7Jr#BabyDoge> #BabyDogeCoin #BabyDogeArmy Furthermore, according to statistics, on January 17 of this year, there were 1,260,401 BabyDoge owners. It has risen by 15,594 in the last two days (today), bringing the total to 1,275,000. As of now, there are 1,275,995 people using BabyDoge worldwide. BabyDoge Continues the Bullish Momentum Despite countless listings and increasing acceptance of Shiba Inu, the number of wallets containing BabyDoge far outstrips Shiba Inu. CoinEx, a Hong Kong-based cryptocurrency exchange, began trading BabyDoge against the USDT stablecoin on January 18, enabling deposits and withdrawals for the meme cryptocurrency. Meme coins based on dogs breeds, such as BabyDoge and SHIB, are also popular. On January 17, CoinEx added ELON, a cryptocurrency based on Elon Musk's love of memes, to the platform. According to CoinMarketCap, the Baby Doge Coin price today is \$6.05e-9 USD with a 24-hour trading volume of \$50,683,064 USD. Baby Doge Coin has been up 16.03% in the last 24 hours.

- Crypto.com activates back the addresses. - New security protocol added over the previous 2FA. - Introduces a time wait of 24 hours for new whitelisting and it's first withdrawal. Ever since the continuous hacks took place upon the Crypto.com platform, the team immediately set towards the rectification of the issues. Usually, in such cases, detailed investigations followed by an analysis of the hack points and identification followed by rectification of the vital entry node points and then finally increasing the security barriers. This tends to be the usual protocol when it comes to cyber crimes and crypto hacks. However, without any of these or to the least without any official revelations regarding all the above, Crypto.com directly jumped to the last. The co-founder of Crypto.com tweets officially regarding their new 3rd layer security strategy. 3rd Layer of Security Tweet Though not a huge deal of money or Ethereum (ETH) has been hacked, the January 17, 2022 hack upon the Crypto.com platform spread like hot fire. In spite of this, the team from Crypto.com immediately announced the stopping of all transactions and new address listings temporarily. And so just a few hours before the time of writing, the co-founder of Crypto.com, Kris Marszalek, took to Twitter, to officially confirm the re-activation of the new addresses whitelisting. Whitelisting of new addresses is now re-enabled. We introduced an additional layer of security: there is now a 24 hour delay between registration of a new whitelisted address and first withdrawal. æ" Kris | Crypto.com (@Kris_HK) January 18, 2022 Accordingly, the co-founder officially says that the Crypto.com new address enabling has been reactivated. In addition to this, Kris added one more surprise, that an extra security layer [protocol] has been added. Therefore, now, Crypto.com consists of 3 security layers. Moreover, this new security feature is nothing but a delay time period of 24 hours between adding a new address and the first withdrawal or transaction to it. This waiting of 24 hours, has indeed created wide speculation among the people. Seemingly, the majority of the users do agree that this could indeed be the best way to mitigate against such anonymous hacks. Even many took to Twitter to appreciate Crypto.com's new security protocols. Though, still, some are quite left with disappointment in the case with the wait for 24 hours. However, it's indeed better to wait for 24 hours, rather than to lose money, right?

- Meme-currencies are being accepted as payments by major entities. - Despite high fees from Ethereum, it accounts for 13% of all BitPay transactions in 2021. - According to BitPay, altcoins adoption is surging more than Bitcoin. As per the recent hike of cryptocurrencies around the world, their adoption among people has seen growth. Most businesses have started to accept cryptocurrencies as payments while altcoins are becoming popular. According to the leading crypto payment processor BitPay, altcoins like Ethereum, Dogecoin, Shiba Inu are becoming more popular rather than Bitcoin. It records that 65% of all payments were made with BTC in 2021 which is currently 27% low from a year back. Significantly, everybody knows that Ethereum charges high fees, despite that it accounted for 13% of all BitPay transactions last year. Moreover, ETH seems to be the reason for Bitcoin's declining crypto market share. Apart from these cryptocurrencies, some meme-tokens and altcoins are being the highlight of the crypto payment section. DOGE And SHIB Into The Show Dogecoin and Shiba Inu are two meme-tokens that account to be out of the box among the popular meme-currencies. Along with these, even cryptocurrencies such as Litecoin, Solana, Cardano are also popular and potential currencies. As a matter of fact, last year was quite a bullish period for meme-currencies along with their beneficial growth. Last March, the Dallas Mavericks, the basketball franchise owned by billionaire and æShark Tankæ host Mark Cuban, partnered with BitPay to accept Dogecoin. Additionally, Newegg which is an online store also began to accept Dogecoin and SHIB in payment methods last year. Since the wider adoption of cryptocurrencies around the globe from last year, several major platforms began to accept crypto. As 2021 was a great year for the crypto industry, it is predicted that 2022 will be continuing its uptrend at the same rate. A recent survey shows that one-fourth of businesses are planning to accept cryptocurrencies in 2022. Following this bullish crypto trend, huge investors were rushing to

invest in cryptocurrencies in massive amounts all through 2021. Thus, 2022 will also be accounting for more crypto transaction volume.

- It is estimated that 32.9 percent of UK crypto owners possess Ethereum. - 2,013 internet users in the United Kingdom were polled. Late in 2021, the cryptocurrency market was very volatile and experienced a drastic shift from extremes in the bigger market. Crypto users in the United Kingdom seemed to be taking it slowly throughout the recent sell-offs and feverish market periods. With 2,013 internet users in the United Kingdom being polled, Finder.com came up with various findings. The UK's crypto community appears to have rekindled its enthusiasm for Ethereum, despite a lack of interest and acceptance in other cryptocurrencies. It is estimated that 32.9 percent of UK crypto owners possess Ethereum, putting it in the second position in terms of crypto ownership after only Bitcoin. Read More: [Bitcoin Price Prediction](#) Read More: [Ethereum Price Prediction](#) Crypto Adoption Rate At a Mere 1% There was an increase in the percentage of people owning cryptocurrencies from 11.2% to 15.5% last year, although, in certain countries, this rise was stifled. When comparing the two polls, the United Kingdom had one of the fewest increases in crypto holdings, moving from 5.2% to 6.1%, with a modest 1% increase in that time frame. UK crypto ownership is much lower than the worldwide average of 15.5%, according to an ongoing poll of Internet users in 27 nations. With only 17 percent of respondents saying they believe crypto is an excellent investment, Britain was rated 23rd out of 23 nations in November 2021 for favorable opinions towards cryptocurrencies. Despite the glimmering figures on ETH, Bitcoin remains the most popular cryptocurrency, owned by 42.8% of those who own digital assets. Third place went to Ripple, with 17.4 percent, followed by Solana with 15%, while Dogecoin only had a 1% gain.

Since the last quarter of 2021, the growth in adoption and popularity of meme currencies have set a new high level. Moreover, one of the best performing meme tokens last year was SHIB which has gained massive holders. To defeat that achievement, another meme token has taken a parade in the market towards gaining more holders. As per recent data shared by WhaleStats blockchain analytics platform, BabyDoge is prevailing in terms of the number of holders than SHIB holders. Despite the fact that SHIB has larger market capitalization, better trading volume, and wider acceptance, BabyDoge dominates holders of SHIB. ðŹ† New Record: #BabyDoge reaches an astonishing 1,225,000+ holders. â€œ WhaleStats â€œ the top 1000 BSC richlist (@WhaleStatsBSC) January 14, 2022 Current Holder Count: 1,226,253 ðŹ‘¹ The top 1000 BNB wallets are holding 1,011,635,236,121,550 #BabyDoge (\$4,668,265 USD) Source: [#BabyDoge](https://t.co/Uc1nehV7Jr#BabyDoge) #BabyDogeCoin #BabyDogeArmy Currently, BabyDoge holders are surging over 1,225,000 which has set a new record while BabyDoge's price also soars. On the other hand, the total number of SHIB holders is 1,140,151 which is quite less compared to BabyDoge holders. At the time of writing, BabyDoge was trading at \$0.000000005434 and surged up to 20.04% within the last 24-hours. Significantly, whales on the BSC are now holding BabyDoge for the worth of \$4,668,265 at the current price. DOGE Rises Parallely Following the tweet that Tesla accepts Dogecoin, the holders of DOGE at the moment are rising. The total holders are 460,007 while Tesla started selling some of its products on the online Tesla Shop exclusively for Dogecoin earlier this week. This tweet helped in DOGE's price action of soaring 20% within a few hours after the post. Currently, DOGE is trading at the price of \$0.188 being the most popular meme currency in the crypto industry. The top 1,000 BSC now control 326,785,975 DOGE which value to \$62,501,117. Yet, the coin has now lost the gains which were made via the Tesla announcement.

- Many started marketing their own initiatives in reaction to Buterin. - On Twitter, Buterin seemed to be having a low-key day. What is Ethereum co-founder Vitalik Buterin's goal for today? To find out which cryptocurrency the Ethereum community thinks is the most viable alternative to the Bitcoin currency. According to him, the most popular currency other than ETH will be the most widely accepted payment method and a store of wealth in 13 years. Poll for Ethereum community. You wake up in 2035, and 80% of all transactions + savings in the world are in one currency that is not ETH. Which would you prefer it to be? â€œ vitalik.eth (@VitalikButerin) January 13, 2022 Bitcoin Dominates Yet Again Bitcoin holds a commanding lead in Buterin's first poll, with over 401,000 votes. With 29.4 percent of the vote, Cardano fell to second place after briefly taking the top spot. Solana is currently the leading altcoin, moving up from third position (14 percent). Fewer than 7% of respondents believed that the US dollar would still be the world's dominant currency in 2035. With more than 147,000 votes, Binance Coin has a 39 percent vote share in a separate survey. Neo comes in third, with Tron a distant fourth. Many started marketing their own initiatives in reaction to Buterin. The co-founder of Dogecoin also promoted his humorous currency in the comment section. Furthermore, Tesla started taking DOGE for select goods yesterday, and the price went up by 17 percent. Some experts, like JPMorgan's Nikolaos Panigirtzoglou, fear Ethereum will continue to lose market share this year owing to scalability issues despite its stellar year. Ethereum had a phenomenal year in 2021. On Twitter, Buterin seemed to be having a low-key day. As a result, Vitalik Buterin, Ethereum co-founder, recently requested that his Twitter followers provide him with instances of the wackiest criticism he has received. Finally, the billionaire recalls being referred to as an â€œalien crackheadâ€ at one time in his career.

- Scott Melker insists the Government should indulge into the crypto sector. - Predicts the next three targets for BTC. - Melker terms that soon all governments will compromise and accept crypto. Most crypto geeks know very well who the â€œWolf of All Streetsâ€ is. For those who don't, let me short cap him. Scott Melker, is a trader, an investor, a financial advisor and most importantly an avid crypto analyst. And so being into all sorts of trades, stocks, crypto and much more with all attributes related to finance, Scott Melker is known as â€œWolf of All Streetsâ€. Surprisingly, it seems he has come up with the name himself. Moreover, he's into all sorts of social media, and is a prominent YouTuber too. In YouTube alone he has about 115K subscribers and on Twitter, more than

764.9K followers. Mostly about every day he puts out his views, analysis and predictions regarding various cryptos and most specifically the Bitcoin (BTC). Apart from that it's evident that he's a complete BTC bull and has invested quite a lot into digital gold. Wolf of All Streets Predictions On January 13, 2022, Wolf of All Streets took to Twitter as usual, putting out a tweet sarcastically stating that the government should get along with the crypto industry. Accordingly, he mentions that the government should start using the term "airdrops" in place of other monetary giveaways. Through this, Scott Melker sarcastically terms that this will somehow bond the crypto industry together with the money printing. Here he indirectly refers to banks as he uses the words "money printing". Apart from this, recently he even put out his predictions on BTC further. According to his tweet on January 12, 2022, for the start of the year, his target for BTC starts from the first cut-off point at \$42K. Surprisingly, 24 hours back, BTC reached this target. Secondly, Wolf of All Streets determines the cut-off target at \$45.5K and the third at \$46.6K. Moreover, Scott Melker states that the next target if all this is achieved will be \$52K for BTC. Furthermore, he terms that at this range he will withdraw 75% of his BTC and leave the rest.

- Dogecoin has been Shiba Inu's main opponent since its debut. - Fortunately, Elon Musk has been kind to Shiba Inu in his tweets. There aren't many cryptocurrencies that can compete with Bitcoin on any level. On the other hand, Shiba Inu was able to do the impossible. In 2021, Shiba Inu had 43 million more views than Bitcoin, making it the most popular currency. Read More: Bitcoin Price Prediction Shiba Inu Not a Coin Unlike coins, which have their own blockchains, tokens are built on preexisting blockchain infrastructure. Shiba Inu does not have a blockchain of its own. On the other hand, it is a token developed on the Ethereum network. DOGE and BTC, two well-known cryptocurrencies, each have their own blockchains, so they are referred to as coins. Read More: Ethereum Price Prediction Dogecoin Killer Dogecoin has been Shiba Inu's main opponent since its debut. On-chain technologies like smart contracts are still lacking in Dogecoin. As a Dogecoin competitor/killer, SHIB is an Ethereum-based currency with smart contract capabilities. Read More: Dogecoin Price Prediction The Creator Remains Unknown The developer of Bitcoin, Satoshi Nakamoto, remains a mystery to the rest of the world. Similar to Bitcoin, the Shiba Inu cryptocurrency is secretly created by Ryoshi. The anonymous founder might be a person or a group; nobody knows. Multi-token Ecosystem Leash (LEASH), Shiba Inu (SHIB) and Bone (BONE) comprise the Shiba Inu ecosystem's three primary tokens. The SHIB token dominates the Shiba Inu ecosystem. Elon Musk Backed When it comes to cryptocurrency, Elon Musk's tweets have the power to either make or ruin it. Fortunately, Elon Musk has been kind to Shiba Inu in his tweets. A Shiba Inu puppy tweet from him boosted the SHIB token's value by close to 300 percent.

- Terra has a community-based governance model. - Terra coins may now be purchased on the platform by potential buyers. The leading blockchain protocol for algorithmic stablecoins, Terra is now live on OpenOcean. Terra coins, both LUNA and UST may now be purchased on the platform by potential buyers. Terra is one of the fastest-growing cryptocurrencies on the market. When Shiba Inu, Dogecoin, Litecoin, and others got it into the top ten cryptocurrencies, Terra outperformed them all. ðŸ™¸ Thrilled to announce @terra_money, the leading blockchain protocol for algorithmic stablecoins, now live on #OpenOcean! â€” OpenOcean | We're hiring ðŸ™¸ (@OpenOceanGlobal) January 10, 2022 â™¸ Get best rates & maximum returns across leading DEXes @loop_finance & @terraswap.io Dive into Terra on OpenOcean today! More info <https://t.co/kK9db21QVM> Terra's current market capitalization, according to CoinMarketCap, is \$32.707 billion, making it the 9th biggest cryptocurrency. In the year 2021, the cryptocurrency's price had risen by over 15,000 percent. Decentralized financial infrastructure and blockchain protocol Terra (LUNA) present various novel market notions. An oracle system and smart contracts introduce people to digital currency on the network. Strong Emphasis on Interoperability LUNA has several advantages for investors, thus so many are drawn to it. Payments, logistics, infrastructure, and decentralized app development are available via this platform. Stablecoin development is also supported. Additionally, Terra places a strong emphasis on interoperability. The network supports multiple chains. There are plans to spread the LUNA protocol to additional major blockchain networks in the future. Currently, LUNA is only available on Ethereum and Solana. One of the team's main objectives is to replace the cumbersome payment value chain with a transparent one. Read More: Ethereum Price Prediction Read More: Solana Price Prediction Aside from this, Terra has a community-based governance model. Voting privileges are granted to validate users in the event of critical network changes. Technical adjustments, enhancements, and a slew of other things may be included in these revisions. As a general rule, any validator may propose new features for consideration by the community. Recommended for you

- Robinhood may eventually accept the asset as the market had expected. - The meme-coin presently ranked 13th on the market may have a similar year. Despite being dubbed a Dogecoin Killer, Shiba Inu seems to have established itself quickly. There has been a lot of talk about the meme coin in the cryptocurrency market last year, and it appears like the debate will continue to be dominated by it in 2022 as well. The coin promises to bounce back amid the recent crypto blood bath. For a brief while last year, Shiba Inu could flip some of the most popular cryptocurrencies. Before SHIB's introduction, most of these cryptocurrencies had already been on the market for some time. UNI, AVAX, LTC, LINK, Crypto.com Coin, and even Elon Musk's favorite cryptocurrency Dogecoin were the unlucky casualties hit by the SHIB storm. The meme-coin presently ranked 13th on the market may have a similar year. Read More: Dogecoin Price Prediction Even though support for SHIB has diminished, its proponents are hopeful that it will regain steam. If the asset performs as expected by the market, its value will skyrocket, eclipsing its competitors. Robinhood Listing As projected by the market last year, several assets are likely to reach price levels that they did not last year. It is projected that Shiba Inu will reach a new price high of \$1 in the near future. SHIB, on the other hand, maybe preferred by investors as the need for it grows. If Shiba Inu maintains its record-breaking streak, Robinhood may

eventually accept the asset as the market had expected. However, the network's role does not end there. Brand new stable coins are being planned for in the long run by the network to its blockchain. According to CoinMarketCap, the Shiba Inu price today is \$0.000027 USD with a 24-hour trading volume of \$1,032,045,414 USD. Shiba Inu has been down 4.20% in the last 24 hours. Read More: Shiba Inu Price Prediction

Launched in 2016, 1xBit is a crypto gambling platform. It has about 5000 slots and over 1000 sporting events every day. It also has provably fair games, including its own games. The variety of game genres is wide, with multiple games within each category. 1xBit supports over 30 coins, allowing participants maximum freedom and anonymity. However, users from the UK and the USA are geo-blocked and cannot participate. Security Features It has a firewall, SSL encryption and two-factor authentication. Moreover, it has a 2FA, a rare sight in the crypto casino sector. Users can enable it to establish an extra degree of profile security. The 2FA uses Google Authenticator, so users don't need to supply their phone or email. Moreover, Using a provably fair mechanism, 1xBit's proprietary casino games allow users to verify the result and fairness of every bet and game. Payouts The payout details on 1xBit.com vary per asset. All supported assets have one thing in common: no fees. That stated users can't cash out in fiat. However, they can withdraw their crypto to their wallet and sell them if necessary. Supported Currencies A total of 30 cryptocurrencies are supported. You can check out the whole list, including the 1xBit minimum deposit criteria, below: Bitcoin, Litecoin, Dogecoin, Dash, Monero, Ethereum, ZCash, Paxos Standard Token, Tether on Ethereum, Tether on Tron, NEM, DigiByte, Bitcoin gold, Bitcoin Cash, Ethereum Classic, BitShares, Verge, QTUM, Polkadot, Eos, USD Coin, TrueUSD, Wrapped Bitcoin on Tron, Wrapped Bitcoin on Ethereum, Cardano, Dai, Chainlink, OMG Network, Basic Attention Token, TRON, Stellar, Ripple, Binance Coin BSC, Juventus, Paris Saint-Germain, AS Roma, SHIBA INU, Binance USD, Tether on BSC. Players get a multicurrency account to put bets or spins in all supported currencies. Because cryptos are not tethered to banks or payment processors, payments are fast and free of transaction costs. The minimum deposit is 0.01 mBTC, and the minimum withdrawal is 1 mBTC. Unique Features - Offers 60 languages - Accepts 30+ cryptocurrencies - Supports a multicurrency account - Simple registration - Option to play 4 slots at once - Mobile apps for Android and iOS users, which can be downloaded here - Generous Welcome Package up to 7 Bitcoins for the first 4 deposits Welcome Bonus The 1xBit platform offers new users a 7 BTC welcome bonus. To get the bonus, you need to deposit it multiple times. Use the coupon code NEWCRYPTO125 while registration to increment your first deposit bonus to 125%. The following is the maximum deposit bonus that may be claimed: - 1st deposit â€" 100% bonus up to 1 BTC - 2nd deposit â€" 50% bonus up to 1 BTC - 3rd deposit â€" 100% bonus up to 2 BTC - 4th deposit â€" 50% bonus up to 3 BTC Languages Supported To cater the global audience, the platform supports massive 60 languages, which are mentioned below: MS, NB, NE, NL, PL, PT, RO, RU, SK, RS, SD, SE, SW, TH, TJ, ET, IR, FI, FR, HE, HI, HK, HR, HU, HY, ID, IQ, IT, JP, GE, KM, KR, KU, KZ, LT, LV, MK, MN, TR, TW, UA, US, UZ, VI, ZU, AL, AM, AE, AU, AZ, BG, BD, BR, BS, CN, CZ, DE, GR, EN, and ES. Pros of 1xBit - Unique bets - Bet on weather forecasts, television shows - Anonymous - Two clicks, get a username and password generated and start playing anonymously. - Regularly updated blog - Get news, guides, and betting ideas regularly - Plenty of games - Lots of sportsbook odds - Just for football matches, there are over 1,400 betting options - Unlike its rivals, it offers multiple OS/platform support. Cons of 1xBit - Few provably fair games - Live bet confirmation is hit and miss. - The app must be installed from the 1xBit website Primary Sections On 1xBit, there are four primary sections: sports, esports, casino, and bonuses. Slots: There are almost 5000 slots. Slot players will never be bored as the platform features progressive, 3 reel, 5 reel, jackpots, classic, and more. Thanks to the casino's unique multitasking software, slot gamers may play up to four games at once without delays. Sports section: The sports section has two subcategories: â€" Line â€" Live In the sportsbook section, users can place bets on football, tennis, basketball, boxing, ice hockey, baseball, cricket, Formula 1, golf, darts, greyhound racing, handball, horse racing, hurling, UFC, martial arts, motorsport, rugby, surfing, squash, TV games, Gaelic football, chess, badminton, table tennis, cockfights, politics, weather prognosis and more. The site also features the option of watching matches and games live, as well as the widest lines for events. 1xBit includes all odds formats: Decimal (2.2), Hong Kong (1.2), Indonesian (1.2), Malay (-0.834), UK (6/5), and US (+120). Casino: Under the genre, the platform offers live casinos where users will be able to access Baccarat, Blackjack, Jackpot, Poker, Roulette, and many others. 1xBit has over 100 games from some of the industry's most prominent game companies. Their game collection includes Spinomenal, GameArt, Betsoft, Playson, Pragmatic Play, Vivo Gaming, Evolution Gaming, and Ezugi, to name a few. Esports: Players can also bet on Esports such as CS:GO, League of Legends, DOTA 2, StarCraft, Rainbow 6 and many other popular games. Promotions & Bonuses The platform offers constant promotions & bonuses frequently, a few of which are mentioned below: - PLACED BETS ATTRACT BONUS POINTS - ACCUMULATOR OF THE DAY - 100% BET INSURANCE - VIP CASHBACK - GAME OF THE DAY - EVERY WEEK BRINGS VALUABLE PRIZES Customer Support 1xBit, like many other casinos, lacks a phone line. However, it offers live chat and email assistance, which is conventional in this market. Email assistance is also excellent, and users should get a response within a few hours. Reasons Why 1xBit is the Industry Leader - Easy registration process - Users need only an email to create an account on 1xBit. - No fees for Deposit and withdrawal - A massive welcome bonus up to 7 bitcoins - Numerous ongoing and seasonal promotions - Weekly tournament, â€"Blackjack on Thursdaysâ€" - Worldwide 24\7 support - Betting and casino on the go Summary: 1xBit is a promising cryptocurrency-based online casino. 1xBit is a great option for anyone searching for a site that offers a wide range of casino games in addition to sports betting and virtual sports. A significant social media presence further substantiates the validity of the 1xBit website. Furthermore, 1xBit takes your privacy very seriously and enables you to bet online anonymously.

- It's been a rough start to the year for the crypto market. - There is a feeling of optimism among lovers of meme coins despite the volatility. Coins like Dogecoin, Shiba Inu, Floki Inu, and other

tokens associated more with internet jokes than mainstream cryptocurrencies have taken the brunt of the recent price decline from the record highs set late last year. It's been a rough start to the year for the crypto market, with the overall market value dipping below \$2 trillion, according to CoinMarketCap. Dogecoin is down about 80 percent from its all-time high of 74 cents in May, while Shiba Inu is down more than 65 percent from its record of fractions of a cent in October. Whale Reports \$3billion Worth of Transactions SHIB's present volatility was sparked by whales who initiated selling. Three billion dollars worth of cryptocurrency was shifted by a single whale into many accounts, causing panic in the markets. According to CoinMarketCap, today's Shiba Inu price is USD 0.000028 with a 24-hour trading volume of USD 1,119,826,180. Shiba Inu has been down 3.79% in the last 24 hours. According to CoinMarketCap, today's Dogecoin price is USD 0.152262 with a 24-hour trading volume of USD 620,944,597. Dogecoin's price has dropped by 2.95 percent during the past day. According to CoinMarketCap, today's Floki Inu price is USD 0.000070 with a 24-hour trading volume of USD 15,345,461. Floki Inu has been down 10.02% in the last 24 hours. There is a feeling of optimism among lovers of meme coins despite the volatility. Dog coin season might return in 2022 if these meme coins advancements, marketing, and popularity continue to be strong.

- Amidst the market crash the talks around altcoins are on the rise. - Many take to twitter depicting their views vividly. It's been the third consecutive day as the market is still down. However, the talks regarding the Bitcoin (BTC) or the other altcoins are never down though. In spite of this CoinTrendz, an all in all platform with profuse market follow ups for 24/7 has listed out the top ten cryptos on trend with respect to their mentioning in Twitter. They are as follows, Top 10 Mentions on Twitter in the last hour \$BTC \$SHIB \$ETH \$SOL \$ONE \$LINK \$DOGE \$FTM \$ADA \$VLX - CoinTrendz.com (@CoinTrendz) January 8, 2022 More on our Free Bot: <https://t.co/zBdS1Kw72I> - pic.twitter.com/YNRWE1IWIl

1. Bitcoin (BTC) Bitcoin (BTC) has been mentioned 502 times on Twitter for the past hour. As the king of cryptos, BTC even tops the charts in this too, and it's obvious. Currently BTC trades at extreme lows of \$41,294.71 with the graphs still low at 1.74% down, for the past 24 hours.
2. Shiba Inu (SHIB) Shiba Inu (SHIB) is rather a controversy, with massive surges at the 04 of 2021, defeating its primary rival the Dogecoin (DOGE), SHIB emerged out with complete success at end of 2021. Subsequently, according to the stats, SHIB is all geared up for 2022, with 453 mentions in twitter. Currently SHIB trades at lows of \$0.00002856 with the graphs still low at 2.50% down, for the past 24 hours.
3. Ethereum (ETH) Ethereum (ETH) and BTC remain the top affected cryptos in the current market crash. In spite of this, ETH has been mentioned 205 times on Twitter. Currently ETH trades at lows of \$3,131.87 with the graphs still low at 1.97% down, for the past 24 hours.
4. Solana (SOL) Solana (SOL) looking for the opportunity to kill ETH, has been so far mentioned 187 times on Twitter. Currently SHIB trades at \$139.71 with the graphs up at 0.81, for the past 24 hours.
5. Harmony (ONE) The Harmony (ONE) is the first altcoin which doesn't come upon the top ten to get high mentions of 118 on Twitter. Currently ONE trades at lows of \$0.3007 with the graphs still low at 1.92% down, for the past 24 hours.
6. Chainlink (LINK) The Chainlink (LINK) has been mentioned so far 75 times on Twitter in the past hour. Currently LINK trades at lows of \$24.53 with the graphs extremely low at 8.42% down, for the past 24 hours.
7. Dogecoin (DOGE) The Dogecoin (DOGE) is quite disappointing though, with being mentioned only 63 times, despite being one of the prominent altcoins among the top ten. Currently DOGE trades at lows of \$0.1517 with the graphs still low at 1.96% down, for the past 24 hours.
8. Fantom (FTM) The Fantom (FTM) has been crashing as low as \$2.26, with the graphs plunging low at 17.53% down, for the past 24 hours. However, FTM has been mentioned about 61 times on Twitter in the past hour, surpassing Cardano (ADA).
9. Cardano (ADA) Despite huge expectations for ADA in 2022, taking the past hour into consideration, ADA has been mentioned only 58 times. Currently ADA trades at lows of \$1.18 with the graphs still low at 3.78% down, for the past 24 hours.
10. Velas (VLX) The Velas (VLX) is one of the most highly anticipated altcoins for the year 2022. Accordingly, it's been mentioned on Twitter 52 times in the past hour. Currently VLX trades at lows of \$12.72% with the graphs still low at 12.72% down, for the past 24 hours.

When it comes to cryptocurrencies, there are of course all kinds of options to choose from. However, many would still prefer to invest in meme tokens, mainly due to the hype surrounding them as well as the seemingly astronomical gains that these coins have managed to experience in the past. One thus needn't look far for examples of this either, as top meme cryptocurrencies such as Shiba Inu (SHIB), SafeMoon (SAFEMOON), Dogecoin (DOGE), Shiba Floki (FLOKI) and many more continue to dominate in a market that is often volatile and unpredictable. Shar Pei (SHARPEI) is hence another meme token that aims to become leaps and bounds above its competition. In an ocean of meme tokens though, this is easier said than done so it is imperative to understand what SHARPEI offers and how it tries to be different from the rest. Defining SHARPEI 100,000,000,000 is the total supply when it comes to SHARPEI, and half of this quantity has been set aside for subsequent years. This might be confusing for some, but 50,000,000,000 of the overall supply being entirely locked in for 5 years looks to be a reasonable notion from which investors can potentially earn sizable profits. The coins had also been introduced not too long ago, and the project is now trending on key platforms like CoinMarketCap and CoinGecko. Furthermore, many tokens, coins and cryptocurrencies typically include liquidity, and so 50,000,000,000 are allotted for the following 12 months and all tokens shall additionally remain in circulation. Moreover, by holding SHARPEI through their wallets, users can store massive amounts which can even go up to trillions of dollars. Finally, SHARPEI also recorded a 20,000% increase ever since it had been launched not too long ago and it has over 5,000 holders in addition to a market valuation of \$8,000,000. Is investing in meme tokens viable for the future? There are many experts in this sector who have conflicting ideas about the future of meme tokens and cryptocurrencies. Some say that meme coins are only as relevant as their supporters make them, but this could also be said of any cryptocurrency in general. Having said that though, major proponents of the crypto industry like Mark Cuban and Elon Musk have previously expressed their support for meme tokens, so the interest is still very much there. In the end, investing in cryptocurrencies will always carry a certain degree of risk

and so doing your own research is always advisable. As far as SHARPEI goes however, this could be a profitable addition to one's portfolio indeed. The project's official website, Telegram and Twitter can be accessed for more information and regular updates.

- Shibburn reported that over 410 trillion SHIB tokens have been burned. - Recently, SHIBA INU has been more widely accepted. Shibburn, an account that keeps track of all Shiba Inu token burns, recently reported that over 410 trillion SHIB tokens have been burned. To increase prices, tokens are frequently destroyed or burnt to reduce the number of tokens in circulation. Moreover, to begin with, 500 trillion tokens were delivered to Ethereum co-founder Vitalik Buterin, with the remaining 500 trillion tokens closed in UniSwap. This equates to 41% of the 1 quadrillion SHIB tokens available at launch. Moreover, community-led campaigns to burn tokens have had little or no impact on the market, with 549 trillion SHIB in circulation. SHIB Is Trying Hard To Match Dogecoin Dogecoin, which has over 132 billion tokens in circulation, is a considerable way ahead of SHIB. Furthermore, the ShibaSwap developers revealed a burning plan to lower the \$SHIB and \$LEASH supply on August 7, 2021. And SHIB investors reacted enthusiastically on social media to this news. A total of \$25,000 has been burned in \$SHIB and \$LEASH. And this coincided with the creation of two new ShibaSwap trading pools, PERL-ETH and RYO-ETH. Moreover, founder Ryoshi of SHIB suggested that the token burn is part of tokens' attempts to move into the metaverse. Recently, SHIBA INU has been more widely accepted. SHIB has just been integrated into Flexa's Payment network. Thus, allowing it to be used in retail transactions. Furthermore, it was recently listed on Kraken and Gemini, among other exchanges. However, although SHIB has dropped 15.3% in the previous week, the stock has gained a phenomenal 34,988,291% over the course of the last year.

- Elon Musk is skeptical on Cardano (ADA) - Many tweets questioning Elon Musk and ADA relation. - Tesla might soon accept ADA payments. Elon Musk, not only the CEO of Tesla and SpaceX, but also one of the most influential people in the crypto industry. Rather a typical controversial person, as stated by many upon the crypto industry. The truth is, Elon Musk has such powers, that a single tweet from him could push up a coin at the same time bring it down. Foundly, known as the "DogeFather", for his epic backing up for the Dogecoin (DOGE). In regards to all this, now the hot topic is the connection between Elon Musk and Cardano (ADA). Many term that Elon Musk will be backing up ADA effortlessly as he did for the Dogecoin (DOGE). Elon & ADA Controversy The very first instance in the tuggle between Cardano (ADA) and Elon Musk dates back to November, 2021. This is when the Cardano Foundation put out a tweet tagging Elon Musk, asking him to ask his team to come and talk to Cardano's team. True to the fact, even though Elon Musk remained silent regarding the tweet, it indeed created a huge stir. The price of ADA catapulted during the period. Besides, at various instances, Elon Musk did mention ADA and often talked about its potential. Furthermore, Cardano Foundation, states itself, that it has all that Elon Musk looks for in a crypto. Indeed, the foundation does seem to be quite confident in getting together with Elon Musk. Nevertheless, many put up with the question whether Elon Musk has ADA stocked in his wallets. Accordingly, the founder of Crypto Capital Venture, a firm based on outsourcing qualified cryptogeeks for new crypto firms and startups, Dan Gambardello posted a tweet, asking Elon, if he does have stock of ADA! However, in a personal opinion, for sure, Elon Musk does possess ADA, but the true question is how much? Anyways, that's something only his wallets knows.

- About 1.1 million people are now BabyDoge holders. - The price instantly increased as a consequence of the burning. Baby Doge holders got a 5 Quadrillion Coin Burn as a New Year's present. This Binance Chain project's rapid development has been a joy to observe. Shiba Inu coin gets most of the limelight when it comes to meme coins, but Baby Doge is deserving of much more due to its rapidly growing user base. Approximately \$11.50 million worth of Baby Doge Coins were sent to a burn wallet on January 2nd, according to a confirmation from the team behind Baby Doge Coin. Additionally, the group provided a "Proof of burn" in the form of a link. About 1.1 million people are now BabyDoge holders. It's a massive undertaking, particularly considering that its market value is close to \$1 billion. The team chose to execute a 5 Quadrillion coin burn to commemorate the company's seven-month anniversary and the company's phenomenal growth. The price instantly increased as a consequence of the burning. Announcement Channel In addition to this major development, the team has announced that they have achieved a cap of 200K for its verified Telegram channel. It was observed that the only option to get above 200K was to make it into an announcement channel, according to the team. It's mind-boggling when a new cryptocurrency grows so quickly and has so much community support. We've maxed out our verified telegram channel to 200,000 members! " BabyDoge (@BabyDogeCoin) January 1, 2022 The only way to exceed 200,000 is to turn it into an announcement channel ! 200k+ verified <https://t.co/lCa8RWHwTM> New public: <https://t.co/IBWbnMTrZv> Although the large supply might make it difficult for BabyDoge to attract the attention of institutional investors or so-called "whales." According to CoinMarketCap, the Baby Doge Coin price today is \$2.85e-9 USD with a 24-hour trading volume of \$13,684,832 USD. BabyDoge has been up 2.43% in the last 24 hours.

- Dogecoin totaling more than 15 million was transferred. - Although Floki Inu has a striking resemblance to Elon Musk's dog. According to Dogecoin Whale Alerts' Twitter statistics, whales have sent over \$15.5 million in Dogecoin to an anonymous wallet in the previous 24 hours. Dogecoin totaling more than 15 million were transferred in 14 separate transactions, with the biggest sum being more than 15 million Dogecoin at once. It has been reported that the Mozilla Foundation, a non-profit organization that manages the Mozilla Corporation, which is behind several internet-related apps, including the popular Firefox web browser, would accept cryptocurrency contributions, including Dogecoin (\$DOGE). Through cooperation with BitPay, the top cryptocurrency payment processor, Mozilla announced its acceptance of cryptocurrency contributions on social media. Due to the volatile nature of cryptocurrency, donations are converted into US dollars. Explosive 2022 Others feel that the days

of dog-themed meme coins are numbered. At one point, Shiba Inu's little investments grew into millions of dollars, but they point out that big gains tend to be greeted by corresponding reversals. As soon as Dogelon Mars is brought into the picture, the mood immediately changes. Although Floki Inu has a striking resemblance to Elon Musk's dog, the initiative is unaffiliated with the Tesla CEO. In addition, as a payment token, it has had little influence. As one of the three cryptocurrencies he confesses to owning along with Bitcoin and Ether, Dogecoin is more closely associated with Musk than Floki Inu. On the other hand, Dogecoin's payment token use case is seen as a failure. According to many, transaction costs for \$DOGE are more expensive than those for XRP, the network isn't very scalable, and retailers aren't accepting it very broadly. Whatever people think, it seems that 2022 will be an explosive year for all cryptocurrencies, including dog-based meme coins, and they are here to stay.

- By staking BONE tokens, ShibaSwap users may vote on the projects featured. - Only Dogecoin (DOGE) has a greater market cap. A "Doggy DAO" has been unveiled by Shiba Inu (SHIB), the second-largest crypto meme token by market valuation. There has always been an emphasis on decentralization for the SHIB development team. With a rise of 43,685,107 percent versus the US dollar in the last year, listings on several crypto platforms, and merchant acceptance, the meme coin shot to prominence in 2021. SHIB has gained 8.1% in the previous two weeks but has lost 7.6% in the last seven days. Just 0.79 percent of the \$2.3 trillion crypto-economy was SHIB's market value on Saturday. Only Dogecoin (DOGE) has a market cap greater than SHIB's \$22.7 billion, making it the largest crypto meme currency. On Friday, the SHIB team released a statement stating: "The Doggy DAO will be released in a stage-by-stage metric and phased approach. This allows the community to understand the needs and requirements of the project while also attending to the possibilities that this ecosystem brings to our community." Staking Governance Token ShibaSwap users may vote on the listed projects by staking BONE tokens once the DAO 1 beta begins. For their efforts, they get the staked version of the governance token, tBONE. A project's allocation points (AP) are based on the number of votes it gets, and the more votes it receives, the more BONE rewards it will earn. Decentralized autonomous organizations (DAOs) like the Doggy DAO have been popping up all over the cryptosphere in the past week or so. Digital currency supporters have recently mentioned the Opendao airdrop and the Gas DAO airdrop. The SHIB team, called the "Shibarmy," has been around for a long time, but both of those DAOs are newer. According to CoinMarketCap, the Shiba Inu price today is \$0.000034 USD with a 24-hour trading volume of \$588,100,572 USD. Shiba Inu has been up 0.36% in the last 24 hours.

- Vitalik Buterin points out his mistakes of his previous predictions on BTC and ETH - Re-corrects his views on BTC regulations. - Points out that he missed the NFTs in ETH white paper. With the start of a fresh year, many terms to look forward to in future perspectives. However, the co-founder of Ethereum (ETH), Vitalik Buterin plays vice versa. Accordingly, the ETH co-founder took to Twitter within the first few hours of January 2, 2022, revisiting all his previous predictions upon the Bitcoin (BTC) and ETH. All those previous predictions date back to the year 2013, almost a decade back old. Buterin's Corrections for BTC Vitalik Buterin takes on a tweet and prediction of BTC made by him in the year 2013. According to the decade old tweet prediction, Vitalik mentioned the effects of decentralization and regulations which are to be imposed on BTC and its growth. As stated by Buterin, he predicted that regulations and rules imposed on BTC would be rather catastrophic for BTC's growth. In addition, he previously mentioned that such restraints put towards BTC will not enable it to establish wider borders. On the contrary, at present Buterin tweets that his views today on BTC are that BTC still is surviving and will survive, despite all decentralization. Besides, the heavily imposed rules and regulations on BTC will not stop BTC completely. Rather instead, these BTC will not be able to flourish possibly as ever before, insists Buterin. Buterin's Corrections for ETH Likewise Buterin takes on to his previous decade old tweets on ETH, including the flaws left out in the white paper publication of the ETH. In spite of this, Buterin points out that according to his previous tweet, the internet cost for a transaction shouldn't cost more than 5 cents for a single transaction. On the other hand, it's obvious that at present and since new and more scalable and efficient blockchains are on the rise, the major problem for ETH blockchain is in regards with its scalability issues. Accordingly, Buterin insists that they are working profusely on ETH blockchain to make it more scalable and efficient in terms of cost per transaction. Besides, in regards with the white paper of ETH, Buterin acknowledges that he has mentioned almost all the possible attributes of the blockchain ecosystem. Starting from Decentralized Finance (DeFi) to DAOs and much more were included in the white paper. However, one major mistake is that they have left out the major idea of the Non-Fungible Token (NFT) completely. Buterin himself acknowledges these mistakes as per his current tweet reply threads.

- Dogecoin is stumbling after its infamous fall, while XRP remains in limbo. - Like our society, a shift in the crypto world is approaching. For Bitcoin and other crypto assets, 2021 was one of the most exciting years in recent times. NFTs and the metaverse entered a new phase as values of various crypto tokens on various blockchains skyrocketed. With 2022 rapidly approaching, crypto traders have begun scheming towards a new year. Crypto supporters expect a change in the crypto directory's market cap ranks. Recently, a slew of useful digital currencies has emerged. There has been a massive rise in NFTs, metaverse projects, along with Terra (LUNA), Polygon (MATIC), Avalanche (AVAX), Solana (SOL) protocols. The flawless surge has left projects like Cardano and XRP in the dust. Rearrangement of Market Cap Rankings The aforementioned cryptocurrency growth measures, together with fundamentals, usefulness, and advancements, have been propellants. Industry supporters expect a rearrangement in the market cap rankings. Many projects have a much faster growth rate than lesser performing alts. Cardano, XRP, and Dogecoin are among the digital currencies recently hampered. Since the Alonzo hard fork, Cardano price has been drifting in a confined range. Dogecoin is stumbling after its infamous fall, while XRP remains in limbo. Cardano's year-to-date gains are 593.8 percent, while XRP's are 276.4 percent. Terra, Polygon, and Avalanche are up 13069.7%, 13,434.7%, and 3,431.3% respectively.
