

- Solana (SOL) shows bullish momentum with a 15.93% gain over the past week, spurred by institutional support and AI developments. - RSI at 64.19 signals potential for further gains, with \$160 resistance and \$150 support levels key to Solana's price action. Solana (SOL) has experienced a slight price drop, trading at \$152. This represents a 2.06% decrease in the last 24 hours, equivalent to a decline of approximately \$3.20. Despite this downturn, the cryptocurrency maintains a solid market capitalization of \$78.48 billion. The 24-hour trading volume is \$3.92 billion, reflecting a slight dip of 1.99%. Earlier in the day, SOL reached a high of \$154.8 before retreating. Solana's Price Surge Fueled by Institutional and AI Developments Over the past week, Solana has gained 15.93%, which has spurred strong bullish sentiment in the market. Analyst DonAlt predicted that SOL could surge to \$200, driven by increasing investor interest and favorable U.S. trade tariff dynamics. Additionally, Solana's ecosystem shows signs of recovery, with market participants focusing on approving key institutional products. Solana is among the leading candidates for SEC ETF filings, and optimism is growing with the appointment of a new SEC chair. This has led to hopes that these filings may soon progress, opening doors for institutional adoption. Moreover, Solana's price trends appear to be closely tied to advancements in AI. The network's high-speed, low-cost transaction capabilities make it an attractive platform for AI developers, particularly those building decentralized applications. Integrating AI-powered projects on Solana drives price increases, making it a top choice for decentralized AI applications. Institutional support is boosting Solana's growth, with Kraken receiving \$18.26 million in SOL and Sol Strategies securing \$500 million for staking. Pumpfun (@pumpdotfun) deposited 117,913 \$SOL (\$18.26M) to #Kraken again in the past 2 hours. Lookonchain (@lookonchain) April 25, 2025 So far, #Pumpfun has deposited 3,097,265 \$SOL (\$575M) to #Kraken at \$186 and sold 264,373 \$SOL for 41.64M \$USDC at \$158. https://t.co/LwQXbrs7oc pic.twitter.com/gVUGw9E5T3 Solana Eyes \$160 Resistance with RSI at 64.19 The Solana price chart currently shows signs of positive momentum. The Relative Strength Index (RSI) stands at 64.19, suggesting that the asset is nearing overbought territory, though it's not in the extreme range. Meanwhile, the MACD indicator shows a positive divergence, with the MACD line above the signal line, indicating bullish market sentiment. The increasing trading volume also supports the ongoing uptrend. Looking ahead, Solana's next key resistance level is \$160. If SOL surpasses this level, it could target the \$170 range. However, the key support level to watch is \$150. A drop below this support could trigger a potential retracement to around \$140. Thus, the next few days could be crucial for determining Solana's near-term price direction, with key levels at \$160 and \$150 to monitor closely. Highlighted Crypto News Today: Market Sentiment Hints at Big Shift, Altcoin Rally Ahead?

Crypto investors are carefully analyzing top performers like Solana (SOL) and Ethereum (ETH) to position themselves for potential gains in 2025. Both have proven track records, strong ecosystems, and high institutional interest. But while blue-chip assets show steady growth potential, emerging projects like Ozak AI (OZ) are creating significant buzz, especially with its presale entry point of \$0.003 and a projected price target of \$1. Backed by over \$1 million raised, Ozak AI's blend of artificial intelligence and decentralized infrastructure is giving it an edge many believe could lead to massive outperformance. Solana (SOL) Price Prediction Solana has bounced back impressively from previous network outages, with strong developer activity and thriving DeFi and NFT ecosystems. As of now, SOL trades around \$134, with bulls aiming to retest the major resistance near \$190. A successful breakout could push prices toward \$240, especially if broader market sentiment remains bullish. However, support sits near \$125, and any weakness in Bitcoin or macro indicators could pressure Solana's gains. While still considered a top altcoin with massive potential, its upside may be more modest compared to earlier phases of its growth cycle. Ethereum (ETH) Price Prediction Ethereum remains the backbone of the decentralized world. With the transition to Ethereum 2.0 and widespread adoption of Layer-2 solutions like Arbitrum and Optimism, ETH is more scalable and sustainable than ever. Analysts predict Ethereum could climb to \$3,500 by the end of 2025, with key resistance near \$3,200 and support around \$2,800. That said, Ethereum's large market cap limits explosive growth. While institutions continue to embrace it, newer investors may be drawn to smaller-cap projects that offer significantly higher ROI in a shorter time frame. Ozak AI (OZ): Undervalued with 300x Potential Ozak AI is quietly turning into one of the most talked-about early-stage crypto projects. It merges artificial intelligence with blockchain through tools like the Ozak Stream Network (OSN), DePIN (Decentralized Physical Infrastructure Networks), secure Data Vaults, and advanced Prediction Agents. These tools are not just conceptual—they're designed for real-time data-driven decisions across industries. With a current Ozak AI presale price of \$0.003, and a forecasted long-term target of \$1, Ozak AI could deliver up to 300x returns if adoption meets expectations. Strong early fundraising crossing the \$1M milestone reflects growing market confidence in the project's potential. Support is forming at \$0.005, while resistance is likely at \$0.01, and a breakthrough at that level could lead to exponential growth. Unlike meme coins that rely solely on hype, Ozak AI combines real-world utility, innovation, and decentralized infrastructure factors that appeal to investors seeking both value and vision. Solana and Ethereum remain strong players in the crypto space with solid foundations and steady growth outlooks. However, Ozak AI offers a different kind of opportunity—a chance to get in early on a utility-rich, AI-driven platform at a fraction of the cost. With smart technology, a rising user base, and a massive upside forecast, this \$0.003 gem might just outperform even the biggest names in the next market cycle. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. Crypto watchers are zeroing in on select names that have shown big moves or have news that could trigger major upside. With the market buzzing over Ethereum ETF flows, Solana's steady price climb, and XRP's bullish setup, there's no shortage of potential gainers. But the real excitement this year isn't only in the known names, it's also in networks like BlockDAG that are drawing massive traction through smart presale strategies. If you're scanning for high growth cryptos for 2025, this list walks through the most updated picks based on recent price action, presale data, user traction, and real announcements as of April 25, 2025. Each of these coins is backed by a narrative that's fueling strong interest right now, and one of them just unlocked its best deal of the year. 1. BlockDAG: \$0.0025 Reset Ignites Presale Rush BlockDAG is making headlines after slashing its presale price back to \$0.0025, giving top buyers a shot at early-stage pricing right before launch. This rollback mirrors the EOS-style buyer battle format, but analysts say BlockDAG could outdo EOS's \$4.1 billion raise. With over \$217.5 million already secured and more than 19.3 billion BDAG coins sold, the timing has triggered major FOMO across Telegram and Reddit. The project's estimated listing price remains at \$0.05, setting up a potential 2,380% return. What makes BlockDAG a standout among high growth cryptos for 2025 is not just the price angle but the pace of ecosystem rollouts. Its X1 app has crossed 1 million users, and over 17,000 ASIC miners have shipped to support the network. The beta testnet is already live, running over 800 TPS. With CEX listings coming and a mainnet launch locked in for August 2025, BDAG is tracking toward one of the strongest presale-to-launch runs in the market. 2. Ethereum: ETF Momentum Brings New Inflows Ethereum is trading around \$1,768 as of April 25, 2025, with recent ETF inflows grabbing attention. A total of \$63.5 million poured into ETH ETFs this week, with ETHA alone bringing in \$40 million. This strong institutional interest is helping Ethereum hold above the \$1,750 level despite market volatility. Analysts are watching the \$1,800 breakout point closely, with expectations of a push toward \$2,000 if buying volume continues to grow. Ethereum's position as one of the high growth cryptos for 2025 comes from both infrastructure dominance and recent traction in staking and L2 scaling. With ETH remaining the backbone of DeFi and AI-driven protocols flocking to its network, long-term holders are stacking again even as short-term traders tread cautiously. This week's ETF flows hint at a shift in sentiment that could accelerate quickly if momentum holds. 3. Solana: Price Holds Above \$150 with Strong Weekly Gains Solana is currently priced at \$151.12 and is up over 20% in the last 7 days. This week's action has caught the attention of traders and analysts alike, especially as Solana holds steady above the \$150 support. Forecasts predict a move to \$160.14 within the next 48 hours if current volumes are sustained. This would confirm a strong short-term trend, with some momentum models pointing to a breakout month ahead. With multiple DeFi and NFT projects still anchored to the network, Solana's growth outlook is firm. For those looking at high growth cryptos for 2025, the network's improved uptime and bullish technicals are key reasons for inclusion. The ongoing ETF-driven market optimism has spilled over into altcoins, and SOL is one of the few names holding gains across weekly timeframes. If the \$160 level breaks soon, it could open up room for an extended move higher. 4. XRP: Price Surge and Bold Long-Term Targets XRP is priced at \$2.18 after touching \$2.25 earlier this week. It's down slightly in the past 24 hours, but overall sentiment remains strong. Analysts on major crypto channels have described XRP's chart as one of the most interesting setups currently in play, calling for it to outperform peers. This optimism is backed by increased whale activity and higher on-chain movement, both of which suggest accumulation is underway. Some analysts have floated bold predictions of XRP hitting \$100 or even \$1,000 in the long term, though most consider those levels highly speculative. That said, even a move back toward its previous all-time highs would represent a major gain from current levels. With court-related uncertainty largely out of the picture now, XRP is back on the radar for those chasing high growth cryptos for 2025. If price closes above \$2.20 consistently, momentum could build up fast. Key Insights Each of these networks has a catalyst that makes it worth watching right now, whether it's Ethereum's ETF flows, Solana's price strength, or XRP's setup. But one name is clearly driving the most buzz today. BlockDAG's price rollback to \$0.0025 has created one of the biggest limited-time windows in the presale market. With 1M+ users, real tech milestones, and exchange listings around the corner, it's the kind of setup crypto buyers look for when scanning high growth cryptos for 2025. If you're building your shortlist for the year, make sure you're watching price action, but also which coins are actually delivering on roadmap promises. BlockDAG is doing both. Combined with the 2,380% upside from its rollback price to launch, it's currently the most aggressive setup among all high growth plays this cycle. San Francisco, California, April 25th, 2025, Chainwire Huma Finance, the first PayFi network, has surpassed \$4 billion in Total Transaction Volume (TTV), just two years after its launch and within two weeks of unveiling Huma 2.0 – signalling a major shift in how real yield is accessed and distributed in DeFi. As of April, the platform is growing at a rate of over \$500 million, and is on track to exceed \$10 billion TTV within the year. – PayFi is no longer simply a concept or emerging category; it's live and scaling faster than we ever anticipated, said Erbil Karaman, Co-Founder of Huma Finance. – For years, traditional finance has locked real yield behind closed doors. With Huma 2.0 we're tearing those doors down and putting institutional-grade returns in the hands of every user. We are deeply grateful to our launch partners Jupiter and Kamino for making it even more accessible. – Huma 2.0 is innovative for its ability to democratize real yields normally only accessible to institutions. Traditionally, when you deposit funds into a bank account, the bank leverages that liquidity for slow, costly transfers, like SWIFT, while returning almost nothing to the depositor. With Huma's PayFi network, that model is flipped: payment companies access stablecoin liquidity directly to accelerate their payment flows in a capital efficient way, depositors receive double-digit, real-world yields in return. Unlike traditional DeFi, PayFi's yield is tied to fees collected during payment flows, not speculative market conditions. This makes it a more sustainable and reliable alternative for users seeking consistent returns in a volatile environment. Since launching Huma 2.0 on Solana, the number of active wallet addresses on Huma has surged over 490% from 5,600 to 33,000 in just two weeks. This rapid growth demonstrates the appetite for real and sustainable yield. Huma is now preparing to expand the PayFi network even further, with upcoming partnerships involving some of the world's largest payment institutions. For more information about Huma 2.0, and upcoming announcements, visit huma.finance. About Huma Finance Huma is the first PayFi (Payment Finance) network. It features an open-stack liquidity protocol with applications for key areas like cross-border payments, stablecoin-backed cards, and trade finance. The network addresses a total market estimated at over \$30 trillion. Its mission is to accelerate the movement of money for a world that's always on. In 2025, the crypto conversation is no longer what it used to be. While Ethereum and Solana are still dominating the headlines, there's a new player on the block. But investors are beginning to wonder: Is it time to rotate into newer tokens such as Rexas Finance (RXS)? Ethereum (ETH): The OG Still Holding Strong Ethereum has earned its stripes. It is still the basis for DeFi, NFTs, and smart contracts. With ETH fully stabilized as the proof-of-stake chain and Layer 2 scaling solutions booming, ETH remains a long term favorite for institutions and developers alike. However, slower growth comes with maturity. The explosive 100x potential? ETH might still climb. That era may be behind us. Solana (SOL): Fast, Scalable, and Still Rising Solana's speed and efficiency have made it the chain of choice for high-frequency apps, especially in gaming and DeFi. Its ecosystem has grown up quickly, and SOL is no longer just a speculative bet; it's a real layer-one contender with real usage. Again, how much higher can it go from here? Speculative has become more stable. Welcome to Rexas Finance (RXS): The Fresh Frontier Unlike other altcoins, Rexas Finance is a completely new concept of asset ownership. Rexas is building a bridge between traditional finance and the blockchain future by making real-world assets (RWAs) such as real estate, art and commodities tokenizable and tradable. RXS, the native token, is at the core of a sleek ecosystem of tools such as the Rexas Token Builder and QuickMint Bot. These assets can be tokenized with these tools so that anyone from creators to real-world asset holders can easily launch and manage asset-backed tokens. No coding. No middlemen. Just full ownership, fast minting, and on-chain liquidity. Unlike legacy chains, Rexas isn't trying to patch an old system. It's starting something new from scratch built for 2025 and beyond. So, ETH & SOL Stick Or Rotate Into RXS? ETH and SOL have set the tone. However, newer tokens like RXS are building the skyscrapers on top. Ethereum is trusted. Solana is fast. Rexas is future-forward. If you're looking for the next wave of exponential growth, fresh utility, and mass market adoption, Rexas Finance has an appealing thesis and one that lines up with where Web3 is going: real world integration, ease of use, and permissionless creation. Bottom line? It's not a question of abandoning ETH or SOL. It's about evolving your portfolio. And in 2025, that evolution points to Rexas. RXS isn't just the next token; it's the next narrative. - Website: https://rexas.com - Whitepaper: https://rexas.com/rexas-whitepaper.pdf - Twitter/X: https://x.com/rexasfinance - Telegram: https://t.me/rexasfinance Disclaimer: TheNewsCrypto does not endorse any

- SOL Strategies will stake hundreds of millions in Solana, not just hold it. - This deal hits just as Solana leads the market’s latest crypto charge. A Canadian Firm, SOL Strategies (CSE: HODL), made one of the boldest plays in recent crypto finance history and the market loved it. After announcing a massive \$500 million convertible note deal with New York’s ATW Partners, the Canadian investment firm saw its stock leap 25.27% on Wednesday, closing at CAD 2.28 (\$1.64). But this isn’t just a market headline—it’s a signal that institutional money is finding new confidence in Solana (SOL), even as the broader crypto landscape recovers from recent volatility. The move positions SOL Strategies as a pioneer in blockchain-native yield generation and hints at a fresh wave of Wall Street-meets-Web3 synergy. Staking Is the New Mining This isn’t an average crypto acquisition. SOL Strategies will use every dollar of that \$500 million facility to buy and stake Solana, not simply hold it. The firm will run its validator nodes, putting its crypto to work and generating returns that, unlike traditional interest, will be paid back in SOL, based on up to 85% of staking rewards. This structure links real blockchain rewards to institutional debt in a way the market hasn’t seen before, CEO Leah Wald explained via the company’s press release. It’s a new lane between capital markets and Web3 infrastructure. The firm will begin with a \$20 million tranche by May 1. If all conditions are met, up to \$480 million more could follow. ATW, in return, can convert the notes into SOL Strategies shares at market price—essentially a long call on the firm’s future performance. SOL Strategies—formerly Cypherpunk Holdings—rebranded last year to double down on the Solana ecosystem. It already holds 267,151 SOL, worth over \$40 million, and this deal could grow that number many times over. It’s not unlike what Strategy (formerly MicroStrategy) has done with Bitcoin, accumulating 538,000 BTC using borrowed funds. That move, once mocked, now gives the Virginia-based firm a \$50 billion Bitcoin war chest. Solana’s Comeback Attracts the Big Fish SOL’s recent run has been impressive. Trading above \$152, it’s up over 20% in just two weeks—outpacing Bitcoin and eyeing its previous all-time highs. The reasons are clear: ultra-low fees, blazing transaction speeds, and growing developer activity. Memecoins, DeFi apps, and institutional players are flooding the chain, making it Ethereum’s most serious challenger yet. According to Arkham Intelligence data, even Galaxy Digital has reportedly swapped over \$100 million from Ethereum into Solana. And with Solana’s total value locked (TVL) rising sharply, it’s clear the market is waking up to its staying power. This backdrop offers tailwinds for SOL Strategies. Not only does the company gain yield from staking, but rising SOL prices could magnify returns significantly, both for shareholders and its debt partner, ATW. Broader Market Tailwinds Add Fuel The SOL deal also lands amid a wave of market optimism. On April 23, U.S. stocks popped after former President Trump clarified he had no intention of firing Fed Chair Jerome Powell—a signal of stability that Wall Street welcomed. The Dow jumped 900 points. The S&P 500 surged 2.7%. Tech led the charge, with Nasdaq gaining over 3.6%. Crypto rode that momentum, too. Bitcoin climbed above \$94,000, and altcoins followed. This broader rally strengthens the context around SOL Strategies’ announcement—it’s not just riding the Solana wave but the tide lifting all risk assets. The entire structure is regulatory-light, bypassing SEC and Canadian registrations thanks to exemptions. Cohen & Company, the placement agent, will earn a 4% fee on the first \$20 million, underscoring just how seriously the financial world is taking this project. Highlighted Crypto News For Today Cardano Founder Hoskinson Predicts Ethereum Collapse Within 15 Years

Investor attention paired with bullish market sentiment positions Rexas Finance (RXS) to emerge as the dominant cryptocurrency by 2025. Solana (SOL) and Cardano (ADA) are expected to yield hefty returns for investors willing to engage with the market in April. Both tokens appear to provide lucrative returns soon. Still, Rexas Finance is positioned as the break-out token of the year with its unmatched tokenomics, RWA tokenization model, security audits, and dApps. While Solana and Cardano relish in the short-term market focus, Rexas Finance is silently adopting the role of a long-term champion. Solana’s (SOL) Market Momentum and Growth Prospects Even after minor setbacks, SOL is priced at \$127.07, which puts it in a good position for an upswing in late April. Defi projects and NFT marketplaces love using the network because of the low transaction fees and high speed, which are the network’s major strengths. Hedge funds and other investment firms are showing increasing interest in Solana, which is slowly expanding its ecosystem. The growing number of applications built on Solana bodes well for its credibility as a smart contract platform. However, competition like Rexas Finance might take control of the market as SOL is dependent on ongoing network upgrades, prioritizing developer attention, and sustained market changes. Cardano (ADA): A Slow but Steady Climb Cardano is an incredibly dynamic project with a strikingly powerful underlying system. It highlights decentralization, sustainability, and security. ADA currently trades at \$0.68. Although it has gone through some tricky patches recently, analysts say that its long-term outlook is still good. Network upgrades, such as improvements in scalability and interoperability, are strong signs of growth. However, in comparison to Solana and Ethereum, Cardano seems to have a problem with slower uptake speeds. Its grounded academic frameworks and protocols make it reliable, yet they slow development and uptake. Because of this, while traders have short-term expectations, the long-term control of ADA is somewhat uncertain. This allows Rexas Finance to step in. Rexas Finance is a new token based on real-world applications, making it a favorable investment for 2025 and beyond. Rexas Finance (RXS): The Breakout Token of 2025 While Solana and Cardano tackle decentralized applications and blockchain scalability, Rexas Finance approaches things differently by merging traditional finance with blockchain technologies. The platform facilitates tokenizing real-world assets (RWA), permitting investors to own fractionalized portions of real estate, commodities, and even intellectual property. This transformative investing model makes previously illiquid assets liquidable and puts RXS ahead of the competition. Rexas Finance gained popularity because of its highly successful presale, which has raised over \$47.7 million. The last phase of the presale is almost complete, which means investors are confident. The presale price is set to \$0.25 per RXS token, which means investors will benefit immensely once the token goes live on crypto exchange platforms. Apart from the investment model, Rexas Finance is developing an expansive ecosystem of dApps that will provide long-term value for the token. These dApps allow for staking, asset trading, and yield optimization, making RXS highly sought after. In addition, the tokens underwent an audit with CertiK, making RXS a reliable and secure investment. Why RXS Is Poised for Explosive Growth Rexas Finance is innovative, leveraging cryptocurrency and traditional investing using a single token, RXS. Meme coins provide liquidity with little to no value; however, Rexas solves real-world financial issues. The cryptosphere has seen many coin offerings in the past, but Rexas has built an ecosystem to foster sustainable growth and work toward long-term adoption and growth. Tokens sold before the token release were targeted on increasing numbers. There’s now interest in RXS surging and token launching set for June 19, 2025. Experts say that projects like Rexas Finance will be major winners as crypto assets get more regulation. RXS almost combines the overwhelming features of multiple contenders of 2025. While Solana and Cardano focus primarily on network performance, RXS excels in blockchain speed paired with ownership of tangible assets, making it one of the most anticipated investments in 2025. Conclusion Solana and Cardano may offer promising returns in the short term, but Rexas Finance is emerging as the long-term winner. Its real-world asset tokenization model, successful presale, security audits, and expanding ecosystem make it a superior investment choice. As traditional finance merges with blockchain technology, RXS is set to take charge of bridging digital and real-world investments. With its strategic launch on the horizon, investors should note that 2025 could indeed belong to Rexas Finance. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Investors are aggressively looking for the best altcoins ready for explosive expansion as the crypto market prepares for its next bull phase. Although Solana (SOL) has been a leading player in the altcoin market, experts believe other cryptocurrencies may outperform it in the next surge. Rexas Finance (RXS) stands out among them as the most promising; Sui (SUI), Cardano (ADA), Tron (TRX), and so on follow. Rexas Finance (RXS): The Best Altcoin to Rip Higher in the Next Bull Phase Setting itself apart as the best-performing altcoin ready for a big boom is Rexas Finance (RXS). From real estate and art to intellectual property and commodities, RXS enables users to tokenize practically any item as a cutting-edge Real-World item (RWA) tokenization initiative, therefore enabling seamless global ownership and trading. Investors seeking high-growth possibilities have paid great interest in this innovative method to distributed finance. Rexas Finance (RXS) is currently in its last presale stage (Stage 12) at \$0.20; its launch price is already \$0.25. With 91.76% of the presale filled, the \$47.76 million shows the excellent demand for RXS tokens. Its \$1 million campaign has attracted over 1.81 million submissions, allowing early adopters to win significant prizes. The Certik audit, which guarantees the security and dependability of RXS’s smart contract, is the main element that boosts faith in it. Rexas Finance is setting itself for an explosive spike with a presale surge of over 500% from its initial stage, maybe yielding gains that would exceed those of past cryptocurrency cycles. RXS is projected to outperform many major altcoins as the market moves into a positive phase, guiding investors seeking exponential gains. Sui (SUI): A Rising Contender in the Next Bull Run Currently valued at \$2.49 following a 6.49% rise over the previous 24 hours, Sui (SUI) has shown remarkable strength in recent trading sessions. With a daily trading volume of \$1.05 billion and a market capitalization of \$7.91 billion, Sui is among the most potential available. Sui’s momentum is robust despite conflicting technical indications; its oscillators indicate buy and sell signals. Although its moving averages show a neutral attitude, suggesting the possibility of notable price swings, analysts remain hopeful about its long-term path. Given its strong ecosystem and rising acceptance, Sui (SUI) is positioned to witness a significant rise in the next bull phase. Cardano (ADA): A Strong Player Gearing Up for a Rebound With current pricing at \$0.6974, Cardano (ADA) is still among the most often used cryptocurrencies. Although its past 24-hour drop was 5.64%, its general market foundations are still strong. ADA has a 24-hour trading volume of \$782.38 million and a market capitalization of \$24.58 billion. ADA’s technical indicators reflect a neutral view, while oscillators provide conflicting buy and sell signals. Targeting levels between \$0.96 and \$1.32, some analysts believe Cardano may lead the forthcoming bullish surge; others suggest it may drop to \$0.50-\$0.58 before rebounding. Cardano is a good choice for those wishing to profit from the next bull phase since, despite temporary swings, its long-term prospects remain bright. Tron (TRX): Stability and Growth Potential Reflecting a 1.3% increase in the past 24 hours, Tron (TRX) has progressively risen and trades at \$0.2341. Remarkably resilient among the cryptocurrencies on the market, TRX boasts a market capitalization of \$22.22 billion and a trading volume of \$541.42 million. Technically, Tron’s indicators show a neutral trend since oscillators produce strong buy and sell signals. Though short-term volatility exists, analysts believe Tron (TRX) will keep doing well and riding the next bull wave higher. Its increasing acceptance in the blockchain and decentralized application (dApp) domain further supports its optimistic projection. Final Thoughts Investors focus on the most interesting altcoins as the crypto market prepares for its subsequent significant rise. Although Solana (SOL) has been a consistent performer in the past, other cryptocurrencies will most certainly lead in the next bull phase. With its creative real-world asset tokenizing approach, high presale momentum, and potential for exponential gains, Rexas Finance (RXS) is the ideal choice. Sui (SUI), Cardano (ADA), and Tron (TRX) all offer interesting prospects that are ready to profit from the market’s increasing momentum. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. NEW YORK, NEW YORK, April 21st, 2025, ChainWire GSR, a leading crypto trading and investment firm, today announced it has anchored a \$100 million private investment in public equity (PIPE) into Upexi, Inc. (NASDAQ:UPXI), a brand owner specializing in the development, manufacturing, and distribution of consumer products. The investment follows Upexi’s announcement of a strategic shift toward a cryptocurrency-based treasury strategy aimed at generating long-term appreciation and yield for shareholders. Upexi has committed to the establishment of a Solana treasury strategy that includes the accumulation and staking of Solana. The investment underscores GSR’s confidence in Solana as a leading high-performance blockchain and GSR’s mission to bridge the gap between traditional capital markets and the digital asset ecosystem. This investment highlights the growing demand for efficient, secure access to high-quality crypto assets in public markets, said Brian Rudick, Head of Research at GSR. “Solana’s speed, scalability, and vibrant developer ecosystem make it an ideal foundation for long-term growth and we are honored to help accelerate the integration of digital assets into institutional portfolios.” “We’re proud to lead this investment and support a bold strategy centered around Solana, reflecting our deep belief in the future of DeFi and our commitment to growing the crypto ecosystem at every level,” said Jakob Palmstierna, President, GSR. “At GSR, we back founders, protocols, and builders not just with capital, but with expertise, liquidity, and real long-term support. This is a meaningful step forward” and just one part of our broader mission to help unlock the full potential of digital assets. “It’s encouraging to see institutions exploring blockchain infrastructure in meaningful ways,” said Lily Liu, President, Solana Foundation. “GSR and Upexi’s announcement highlights growing interest in using Solana for real-world financial applications, and it’s another signal of how traditional finance and DeFi are starting to intersect.” GSR continues to invest in the broader digital asset ecosystem, offering capital solutions, liquidity, and strategic advisory services to partners at all stages of growth. About GSR The GSR Group brings over a decade of experience as a leading digital asset liquidity provider and multi-stage investor. Our full-spectrum offering includes OTC trading, market making, and treasury management. Deeply embedded in the digital asset ecosystem, we work with token issuers, institutional investors, and top-tier trading venues. Beyond capital, we deliver strategic insight, deep liquidity, and long-term partnerships to the founders, protocols, and platforms shaping the future of crypto markets. Follow GSR on X. Visit www.gsr.io for more information. Contact VP Public Relations Haley Malanga GSR haley.malanga@gsr.io

- Solana is trading within the \$140 range. - SOL’s daily trading volume has surged by over 48%. The crypto assets are attempting a recovery, with the market cap reaching \$2.75 trillion, with fear hanging over the market. Major assets have failed to exhibit steady momentum amid the uncertainty. Meanwhile, Solana (SOL) has

posted a modest gain of 1.28%. Solana could recover from the bearish grip only after a series of resistance tests. In the early hours, the asset traded at around \$135.77, and the modest bullish pressure has triggered SOL to jump toward \$142.66. At press time, Solana traded within the \$140.80 range, with the daily trading volume increasing by over 48.96%, reaching \$3.36 billion. Furthermore, the Solana market has witnessed a 24-hour liquidation of \$9.66 million, as per Coinglass. Notably, Aliaï’s chart shows that Solana may face a short-term pullback. A sell signal has appeared on the 12-hour chart by the TD Sequential indicator. This could mean that a pullback is likely after the recent upward momentum. Will Solana Flip the Script and Turn Bullish? The four-hour price graph of Solana hints that a continued downtrend forms a death cross. It could make the price slip toward the support zone at \$134.20. Falling past this mark might pave the way for a deeper slide to the crucial \$128 range. Contrarily, if SOL mounts to \$146.14, the price could potentially eye its subsequent resistance at around the \$151.25 level. Upon breaking this resistance, the altcoin might trigger the golden cross to emerge for more upside correction. SOL’s Moving Average Convergence Divergence (MACD) line has fallen below the signal line. This indicates a crossover of bears, with the chance of a continued downtrend. Besides, the Chaikin Money Flow (CMF) indicator at -0.11 suggests outflows and moderate selling pressure. The asset’s daily relative strength index (RSI) is positioned at 63.34, inferring a bullish wave approaching the overbought territory. Solana’s Bull Bear Power (BBP) value of 5.03 signals the positive momentum in the market, pushing the price high.

- Top cryptos to watch this week: Ethereum, XRP, and Solana, which are showing early signs of recovery after recent dips. - ETH trades near \$1,640; Vitalik Buterin proposes replacing EVM with RISC-V to improve speed and reduce costs. After three rough weeks of downward pressure, the crypto market is finally showing signs of recovery. Bitcoin, which had dropped below \$74.5K earlier this month, is now trading above \$87K – bringing a wave of positivity across major altcoins as well. The overall sentiment has shifted from panic to cautious optimism as investor confidence returns. Still the fear and greed index stands at 34, indicating –Fear. This week, all eyes are on Ethereum (ETH), XRP, and Solana (SOL) – three of the top performing coins from the past, as they are expected to recover in this market rebound. Ethereum (ETH) Ethereum has bounced back strongly, currently hovering near the \$1,640 zone. Last week, ETH dipped close to \$1,415 due to profit-booking and macroeconomic uncertainty. But now with broader market strength and optimism around the upcoming changes could have a profound impact on ETH’s price. Ethereum’s co-founder Vitalik Buterin recently proposed a significant update to Ethereum’s infrastructure, replacing the current Ethereum Virtual Machine (EVM) with RISC-V, an open-source instruction set architecture. This change is expected to boost Ethereum’s speed and reduce transaction costs, making it more scalable and user-friendly for developers. This move is in line with Ethereum’s broader strategy to enhance its network’s efficiency and lay the groundwork for future upgrades. Ethereum is trading at \$1,639.54 with immediate resistance near \$1,650. A breakthrough above this could push the price towards the next resistance at \$1,700. On the downside, the immediate support lies at \$1,570, followed by a stronger support around \$1,500 if the price faces further pressure. Ripple’s XRP XRP has also made a solid comeback, gaining around 7% in the past few days. Over the past few weeks, it struggled under \$2. Currently priced at \$2.12, XRP has seen a 1.44% uptick, buoyed by Ripple Labs securing a payments license in the UAE and nearing the conclusion of its long-standing legal battle with the U.S. SEC. The weekly chart reveals a bull flag pattern with a breakout target of \$5 if the price can breach the upper boundary of the flag at \$2.50 Solana (SOL) Solana is back in the spotlight, climbing from its recent low of \$96 to above \$140. Over the past week, the price of SOL surged by over 6.35% and 8.50% over the month. The drop in Solana’s price was significantly impacted by the loss of meme coins like TRUMP Coin and FARTCOIN. However, the current SOL price stands at \$141.14 with the daily trading volume soaring by over 55.75% to \$3.42 billion. If the positive momentum continues to build, the next resistance level is at \$150 followed by a significant resistance at \$170, which has been identified as a crucial level for any bullish scenario. The immediate support level is at \$135 with a stronger support zone around \$125-\$127. The forecast was driven by the launch of spot Solana ETFs on the Toronto Stock Exchange (TSX). These ETFs are backed by direct SOL holdings and feature staking, a first for any publicly listed Solana product. However, while Canada moves forward, the U.S. Securities and Exchange Commission (SEC) has yet to approve any Solana-based ETFs. Despite this, seven major U.S. asset managers, including Fidelity, VanEck, Franklin Templeton, and Grayscale, have filed to launch their own Solana ETFs, sparking market speculation. Why the Market is Volatile The recent volatility can be traced to several global triggers that include inflation worries, shifting interest rate expectations and the U.S. Fed’s mixed signals. On-chain activity is rising again, but traders are still reacting cautiously to news cycles and macro events. For now, Ethereum, XRP and Solana are looking strong and trying to lead the way as the market attempts a full recovery. Highlighted Crypto News for Today

- Astra Fintech launches a major \$100 million fund to accelerate innovation within the Solana ecosystem, building on its successful track record of supporting projects like Mulex, DEPE, and MoNE through initiatives like the Seoulana event. - Astra is advancing its Payment Finance (PayFi) strategy by integrating Banana Pay, positioning itself at the intersection of decentralized and traditional finance to enable seamless blockchain-based transactions. - With Korea as its regional hub, Astra is strategically deploying capital and partnerships to drive Solana adoption across Asia, leveraging Korea’s tech-savvy market as a springboard for broader expansion. Astra Fintech, a leading force in blockchain infrastructure and fintech solutions, announced the launch of a \$100 million dedicated fund to fuel the growth of the Solana ecosystem. The fund will focus on identifying and supporting high-potential builders, startups, and innovative projects within Solana’s rapidly expanding network. This initiative builds on Astra’s proven track record of fostering cutting-edge projects – including Mulex, DEPE, and MoNE – through its sponsorship of Seoulana, a premier Solana ecosystem event hosted by Superteam Korea. Astra’s Role in Solana’s Growth: From Sponsorship to Strategic Investment Astra Fintech has been an active contributor to the Solana ecosystem, leveraging its expertise and resources to empower breakthrough innovations. As a key sponsor of Seoulana, Astra played a pivotal role in connecting with and nurturing high-impact projects such as: - Mulex: A next-gen cross-chain infrastructure solution enhancing Solana’s subchain scalability. - DEPE: A composite liquidity steward routing abstract pools on Solana chains. - MoNE: No-code AI Agent Builder for Solana: Create, deploy, and verify on-chain agents effortlessly with the new \$100M fund, Astra Fintech is doubling down on its commitment to Solana, providing not just capital but also strategic support to help projects scale globally. PayFi Expansion: Banana Pay Integration Beyond ecosystem funding, Astra Fintech has taken concrete steps to advance its PayFi (Payment Finance) strategy by integrating Banana Pay, a seamless blockchain-based payment solution. This move positions Astra at the forefront of bridging traditional finance with decentralized payment infrastructures, further solidifying its role as a fintech innovator. Asia-First Strategy: Korea as the Launchpad Astra Fintech’s expansion plans are strategically centered on Asia, with Korea serving as the regional hub. The company will: - Deploy capital from the \$100M fund to accelerate Solana-based projects in Asia. Forge partnerships with local developers, enterprises, and regulators to drive blockchain adoption. - Expand PayFi solutions, starting with Korea’s tech-savvy market before scaling across the region. – Our \$100M fund is a testament to Astra’s belief in Solana’s potential to redefine global fintech, – said Jamie, Head of Partnership. – Korea’s vibrant blockchain ecosystem is the perfect launchpad for our Asia expansion, and we’re excited to back the next wave of innovators building on Solana. – Looking Ahead: A Multi-Chain Future, Anchored in Solana Astra Fintech’s vision extends beyond funding – it aims to build an inter-connected financial ecosystem where Solana’s speed, scalability, and low-cost infrastructure serve as the foundation for next-gen applications. By combining capital deployment, PayFi integration, and regional expertise, Astra is poised to become a key enabler of Web3’s mass adoption. About Astra Fintech Astra Fintech is a leading blockchain-powered finance solutions provider at the forefront of revolutionizing global payments. With a mission to break down the barriers of traditional payment systems and empower users with seamless, secure, and efficient global digital asset transactions, Astra Fintech delivers innovative PayFi services to individual users worldwide. As a strategic partner within the Solana ecosystem and backed by shareholders who are Limited Partners (LPs) of Multicoin, Astra Fintech is driving the future of blockchain finance through strategic investments and collaborative innovation. Astra Fintech is committed to unlocking new possibilities in international finance, positioning itself as a trusted leader in the industry. With April 2025 approaching, there is massive buzz regarding Solana’s (SOL) price movement in cryptocurrency. Analysts are still split, with some expecting more declines and some anticipating a possible bounce back. But amid Solana’s cloudy predictions, one rival is stepping forward in the limelight –Rexas Finance (RXS). SOL could dip to \$103.793, while RXS rises to \$39.53, as SOL is losing capital to Rexas Finance as it approaches its official launch at \$0.25. Solana (SOL) Price Prediction for April 2025 CryptoPredictions.com predicted that SOL’s average price in April 2025 would be \$122.109, lower than the present price by 5.34%. Their forecasted minimum and maximum prices are \$103.793 and \$152.636, respectively. On the other hand, AMBCrypto is more bullish because he estimates that SOL will be trading between \$231.26 and \$266.08, averaging \$248.67. Meanwhile, CoinCodex seems more pessimistic but still believes SOL will reach \$145.41 by April 22, 2025. He bases his prediction on the current bear sentiment and the Fear & Greed Index of 39, which indicates extreme fear. The predictions differ from each other and show the instability of Solana’s market performance. The network’s congestion, new competing blockchain projects, and market sentiment in general make price action highly volatile. The Rise of Rexas Finance (RXS) and Its Impact on SOL Rexas Finance (RXS) is gaining traction within the crypto community, while Solana struggles with uncertainty. RXS skyrocketed from an astonishing \$0.030 to \$0.20 in three months, marking a 566% increase. With bullish momentum building, analysts project an outrageous rise of 19,765%, putting RXS at a jaw-dropping \$39.53. This level of rapid growth is expected to pull liquidity away from Solana, raising concerns that SOL’s price will drop to \$103.793 as investors turn their attention to RXS. Interest in asset tokenization offered through Rexas Finance could further boost demand for RXS, solidifying RXS as one of the crypto market’s strongest contenders. Rexas Finance Presale Gains Momentum At stage twelve of the presale, RXS is priced at \$0.20. This is because RXS is expected to trade for \$0.25 after launch. To date, \$47,659,152 has already been raised from the presale, and over 458 million RXS tokens have been transformed into cash. The final presale stage is 91.66% filled, possibly explaining why investors scramble to get RXS before its value skyrockets. Rexas Finance hopes to raise \$56 million from the 500 million RXS tokens allocated to the presale. Investor anticipation has surged to record levels, with only a couple of million dollars remaining to reach this target. Investors who purchase the tokens at this advanced stage before RXS is launched at \$0.25 stand to profit from a 25% increase. Why Rexas Finance is Dominating the Crypto Market 1. Certik-Audited and Secure The Certik audit has completely secured Rexas Finance’s ecosystem. This verification enhanced investor trust, setting RXS apart from other projects. 2. Listed on CoinMarketCap & CoinGecko Rexas Finance has secured listings on CoinMarketCap and CoinGecko, enhancing its credibility and providing investors with real-time tracking and essential details about the token. 3. Tokenizing Real-World Assets Rexas Finance is a leader in tokenizing real-world assets, allowing people to buy fractions of real estate, commodities, art, and more. Combining blockchain technology with tangible assets is set to transform investment concepts for RXS. 4. A Community-Driven Project While many blockchain arrays depend on venture capitalism, Rexas Finance is built from the ground up, relying solely on individual investors. This approach, which focuses on the community, is in tandem with the essence of the blockchain, which promises a more equitable allocation of token and governance power. 5. Multi-Chain Compatibility & Advanced Trading Tools Because of its multi-chain technology, Rexas can trade on multiple blockchains simultaneously, increasing efficiency and optimizing yield for investors. It also supports the ERC-20, ERC-721, and ERC-1155 token standards. Final Thoughts: Is RXS the Next Big Investment Opportunity? As Solana struggles with bearish trends and market uncertainties, Rexas Finance continues to gain momentum. With a presale already delivering over 6.66x returns and projections placing RXS at \$39.53, the potential for exponential growth is undeniable. The ongoing presale is nearing completion, making now the ideal time for investors to join before RXS launches at \$0.25. Those seeking a high-growth alternative to Solana should seriously consider the long-term potential of Rexas Finance. Join the revolution –tokenize anything, anywhere with Rexas Finance! - Bullish SOL price prediction for 2025 is \$146.63 to \$185.48. - Solana (SOL) price might reach \$300 soon. - Bearish SOL price prediction for 2025 is \$79.08. In this Solana (SOL) price prediction 2025, 2026-2030, we will analyze the price patterns of SOL by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | SOLANA (SOL) PRICE PREDICTION 2025 | | | SOLANA (SOL) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Solana (SOL) Current Market Status | Current Price | \$134.55 | 24 – Hour Price Change | 6.61% Up | | 24 – Hour Trading Volume | \$4.61B | | Market Cap | \$69.48B | | Circulating Supply | 516.4M SOL | All – Time High | \$294.33 (On Jan 19, 2025) | | All – Time Low | \$0.5052 (On May 12, 2020) | What is Solana (SOL) | TICKER | SOL | | BLOCKCHAIN | Solana | | CATEGORY | Ethereum Scaling Solution | | LAUNCHED ON | March 2020 | | UTILITIES | Governance, security, gas fees & rewards | Solana (SOL), a cryptocurrency coin, operates on its own scalable blockchain, enabling faster transaction speeds, and was introduced in March 2020. By combining proof-of-history (POH) and proof-of-stake (PoS) consensus mechanisms, Solana enhances scalability and facilitates the creation of decentralized applications (DApps). In addition, With its hybrid model, Solana can validate blocks efficiently and provide accurate timestamps. Further, Solana has also made significant strides in revolutionizing the NFT marketplace. Solana-based NFTs are gaining traction and are increasingly becoming a preferred choice over Ethereum-based NFTs. Solana 24H Technicals (Source: TradingView) Solana (SOL) Price Prediction 2025 Solana (SOL) ranks 6th on CoinMarketCap in terms of its market capitalization. The overview of the Solana price prediction for 2025 is explained below with a daily time frame. SOL/USD Rounding Bottom Pattern (Source: TradingView) In the above chart, Solana (SOL) laid out a Rounding bottom pattern. The price movements form a pattern that resembles a bow and hence is also known as the saucer bottom pattern. In general, the rounding bottom pattern indicates a long-term price reversal. This pattern also emphasizes the changes in the market sentiment as the trend seems to shift from bearish to bullish. Investors generally have to stay cautious and time the market well. If the price breaks and

moves past the resistance level, it will enter a confirmed bullish trajectory. At the time of analysis, the price of Solana (SOL) was recorded at \$134.55. If the pattern trend continues, then the price of SOL might reach the resistance levels of \$142.91 and \$203.64. If the trend reverses, then the price of SOL may fall to the support level of \$118.94 and \$94.99. Solana (SOL) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Solana (SOL) in 2025. SOL/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Solana (SOL) for 2025. | Resistance Level 1 | \$146.63 | | Resistance Level 2 | \$185.48 | | Support Level 1 | \$105.18 | | Support Level 2 | \$79.08 | SOL Resistance & Support Levels Solana (SOL) Price Prediction 2025 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Solana (SOL) are shown in the chart below. SOL/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Solana (SOL) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$129.47Price = \$131.54 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 53.20 <30 = Oversold 50-70 = Neutral>70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetæ”s trading volume in relation to its recent average volumes | Below cutoff line | Below volume | Solana (SOL) Price Prediction 2025 æ” ADX, RVI In the below chart, we analyze the strength and volatility of Solana (SOL) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). SOL/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Solana (SOL). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 18.37 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 61.16 <50 = Low >50 = High | High Volatility | Comparison of SOL with BTC, ETH Let us now compare the price movements of Solana (SOL) with those of Bitcoin (BTC) and Ethereum (ETH). BTC Vs ETH Vs SOL Price Comparison (Source: TradingView) From the above chart, the price action of SOL is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of SOL also increases or decreases, respectively. Solana (SOL) Price Prediction 2026, 2027æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Solana (SOL) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Solana (SOL) Price Prediction 2026 | \$320 | \$79 | | Solana (SOL) Price Prediction 2027 | \$340 | \$75 | | Solana (SOL) Price Prediction 2028 | \$360 | \$70 | | Solana (SOL) Price Prediction 2029 | \$380 | \$65 | | Solana (SOL) Price Prediction 2030 | \$400 | \$60 | Conclusion If Solana (SOL) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish Solana (SOL) price prediction for 2025 is \$185.48. Comparatively, if an unfavorable sentiment is triggered, the bearish Solana (SOL) price prediction for 2025 is \$79.08. If the market momentum and investorsæ” sentiments positively elevate, then Solana (SOL) might hit \$300. Furthermore, with future upgrades and advancements in the Solana ecosystem, SOL might surpass its current all-time high (ATH) of \$294.33 and mark its new ATH. FAQ 1. What is Solana (SOL)? Solana (SOL) is the native crypto coin of Solana. Solana runs on a scalable blockchain that runs with a hybrid consensus model that integrates proof-of-stake (PoS) and proof-of-history (PoH). SOL was launched in March 2020. 2. Where can you purchase Solana (SOL)? Solana (SOL) has been listed on many crypto exchanges which include Binance, OKX, Bybit, Bitunix, and CoinTR Pro. 3. Will Solana (SOL) reach a new ATH soon? With the ongoing developments and upgrades within the Solana Platform, SOL has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Solana (SOL)? On January 19, 2025, SOL reached its new all-time high (ATH) of \$294.33. 5. What is the lowest price of Solana (SOL)? According to CoinMarketCap, SOL hit its all-time low (ATL) of \$0.5952 on May 12, 2020. 6. Will Solana (SOL) reach \$300? If Solana (SOL) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$300 soon. 7. What will be the Solana (SOL) price by 2026? Solana (SOL) price is expected to reach \$320 by 2026. 8. What will be the Solana (SOL) price by 2027? Solana (SOL) price is expected to reach \$340 by 2027. 9. What will be the Solana (SOL) price by 2028? Solana (SOL) price is expected to reach \$360 by 2028. 10. What will be the Solana (SOL) price by 2029? Solana (SOL) price is expected to reach \$380 by 2029. 20 Crypto Predictions Algorand (ALGO) Price Prediction Disclaimer: The opinion expressed in this article is solely the authoræ”s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

- Solana has bounced back above the \$130 level, showing signs of recovery after recent dips. - SOL needs to break through key resistance zones around \$136æ”\$140 for a stronger uptrend. Solana (SOL) is showing signs of life again, bouncing back to the \$130 zone æ” a level it hadnæ”t seen since early April. After slipping below \$100 during the ongoing crypto market downturn, SOL has surged by over 7.9% in the past 24 hours, climbing from a low of \$123.72 to hit \$133.59 before settling around \$133. Its daily trading volume also jumped more than 34%, now sitting at \$4.38 billion, with a solid 14% weekly price gain. The current reclaim in the Solana price coincides with a broader rally in Solana-based memecoins. Tokens like POPCAT, FARTCOIN, BONK, and WIF have seen significant gains of 51%, 23%, 12%, and 10% respectively over the past week, injecting fresh enthusiasm into the Solana ecosystem. Still, Solana hasnæ”t fully escaped bearish pressure. The crypto is down over 56% from its all-time high of \$294.33 recorded in January 2025, and fee generation has dropped sharply too æ” from over \$400 million in January to just \$22 million so far this April. Meanwhile, investor behavior reveals some caution æ” around \$485 million has recently moved from Solana to chains like Ethereum and BNB. Short-Term Pullback Still on the Table for Solana (SOL) The SOL/USDT chart is showing bullish signs on both the daily and 4-hour timeframes. On the daily chart, SOL is forming a rounded bottom pattern, which suggests a possible trend reversal. The price has been slowly recovering after a drop, and if it breaks above the \$136æ”\$140 resistance zone (the neckline), it could move higher. Zooming in, the MACD shows a bullish crossover with values at 2.72 and RSI sits at 54.75, which means thereæ”s room for more upside. On the 4-hour chart, a bullish flag pattern is visible. SOL recently had a strong move up and is now consolidating. The lower time frames shows thereæ”s a bearish divergence between the price and RSI æ” a pattern that has led to price drops for SOL earlier this year. Similar setups happened after the price briefly moved above the 50-day and 100-day EMAs, followed by a correction. So, a short-term pullback is still possible. If that happens, the next support zone is between \$115 and \$110. In the end, technically, SOL remains under its 50-day EMA resistance at \$135.78. A daily close above this could trigger a stronger bullish move toward the 100-day EMA at \$153.73.

- After falling over 5%, Solana is trading in the \$125 range. - The market has recorded \$12.7 million in SOL liquidations. The lingering bearish wave in the crypto market continues to hinder assets from reclaiming their lost bullish momentum. Bears have dragged Bitcoin near \$84K, while Ethereum trades around \$1.5K. Meanwhile, Solana (SOL) has posted a loss of over 5.26%. Solanaæ”s recovery can loom after testing key support and resistance levels amid the fluctuating market. The asset opened the day trading at around a peak of \$134.19, and the mighty bears pulled SOL back to \$123.72. At press time, Solana traded within the \$125.91 level, with its daily trading volume reaching \$3.34 billion. Furthermore, the SOL market has witnessed a 24-hour liquidation of \$12.70 million, as per Coinglass data. The Ali chart exhibits that Solana is retesting a key support-turned-resistance level from a right-angled ascending broadening pattern. If it fails to break above this zone, it could confirm the breakdown and head lower toward the \$65 mark. Can SOL Avoid Further Losses? The Moving Average Convergence Divergence (MACD) line of Solana has crossed below the signal line. This crossover signals the bearish momentum, and the asset may face more downside. SOLæ”s Chaikin Money Flow (CMF) indicator settled at -0.22, inferring a negative capital flow within the market. In the meantime, the daily trading volume of the asset has dropped by over 9%. Assuming the sharp pullback of SOLæ”s price, that might test the support at the range of \$121.31. Formation of a death cross could trigger a drop past this level, which accelerates further downside to its previous lows near \$116. Contrarily, if Solana mounts toward the \$129 range, it could target its crucial resistance. Breaking this mark might trigger a golden cross to aid the recovery, sending the price to \$134.36 for a strong upside correction. The daily relative strength index (RSI) at 48.66 infers the asset is neither overbought nor oversold. Moreover, SOLæ”s Bull Bear Power (BBP) value of -5.70 reflects the power of bears in the market.

- Solana has factored in significant price increases over the last 7 days, after the recent crash. - The altcoinæ”s daily trading volume has increased by 1.41% as per CMC data. In the last 24 hours, the crypto market is beginning to show signs of recovery. While Bitcoin is steady above the \$80K levels, Ethereum which has not experienced bullish signs is making progress. The altcoin showed a modest upward movement and is trading above the \$1500 level. Meanwhile, one of the other leading altcoins, Solana, has experienced a full recovery in prices. SOL is heading back to its previous trading levels, resulting from consistent upward movements in the past week. In the last 24 hours, the altcoin has factored in an additional price increase of 2.11%. This caused Solana to rise to the \$133 range on its way to the \$140 mark. In the evening Asian hours of April 13, SOL was trading at a low of \$126. However, with the additional increase it surpassed the \$130 mark after several weeks. At the time of writing, Solana was trading at \$133.18 as per CMC data. Moreover, when inferring its weekly price chart, the altcoin shows an incredible 31.55% price increase. As mentioned earlier, SOLæ”s recovery is quite evident from this upward movement. Will Solana Bulls Continue to Dominate? On analyzing its technical indicators, Solanaæ”s bull power indicator value stands at 3.39. Meanwhile, its bear power indicator value stands at a low of -4.17. This indicates the overall bearish trend caused by previous market crashes. However, if the bulls continue to persist, then it might soon overpower the bearish trend. On the other hand, its RSI value stands at 54.70 as per TradingView data. This suggests a neutral market sentiment and positive investor interests. Hence it can be stated that if the positive momentum sustains for the coming days, Solana holds the potential to exhibit a bullish trend. Meanwhile, other altcoins such as Flare, and Helium have shown positive movements in the past 24 hours.

- Solana DEX Orca token price surged by 57% today. - The 910% increase in its trading volume indicates a strong price rally. The broader crypto market is facing uncertainty with no significant ups or downs in the last 24 hours. Bitcoin is trading in the \$81K price range, while Ether continues to drop below the \$1,600 price level. The crypto fear and greed index reads 21, indicating a fear market sentiment. Several altcoins are showing significant gains, even though the top 10 cryptocurrencies are showing little to no gains. XCN, CRV, ORCA, FARTCOIN, and other altcoins are recording double-digit gains today. This present article explores the reasons behind Solana DEX Orcaæ”s price surge in the last 24 hours. ORCA is trading at \$3.06 at press time with a 57.44% surge in the last 24 hours. The token price went as high as \$3.2318 from the 24-hour lows of \$1.8363. Its trading volume increased by more than 900%, which indicates a further price rally of ORCA. The breakout of the \$2.15 resistance level triggered a sharp price hike of the ORCA token. This breakout of the resistance level further turned into a bullish run, supported by token accumulation. ORCA is experiencing an intended price surge backed by investor confidence and strong trading volume. Solanaæ”s Orca Gains Investor Confidence Following Project Developments Orca has been focusing on enhancing its offerings for the past few weeks. Orca Governance Council announced a live on-chain tokenholder proposal. The voting is about to end tomorrow, deciding whether the new proposal should be implemented. The proposal also includes major changes to its tokenomics and includes a 25% token supply burning. This is one of the largest governance proposal voting processes in the crypto community, as Orca is one of the top Solana DEXs. Orca also offers KAST Solana debit card benefits to its community starting on Wednesday. The project also achieved several milestones to improve its features last month. Liquidity Terminal, Liquidity Locking, tx sender library, and card view on portfolio are some of its highlighted features. The present price surge of Orca is a combined effect of its investor confidence and its strengthening project fundamentals. Its relentless efforts to improve the project features by eth month is what is driving investors to accumulate ORCA tokens. The current price rally might witness a correction, but the overall growth of Orca is undeniable. Highlighted Crypto News Today: SEC Drops Lawsuit Against Helium Developer Nova Labs Over Token Sale

Willemstad, Curaçao, April 10th, 2025, Chainwire Whale.io has officially launched its highly anticipated NFT bridge, seamlessly transporting the iconic Whale NFT collection from the TON blockchain to the Solana blockchain. The migration is now live on bridgedmaddy.com a dedicated domain facilitating the cross-chain transfer. Now listed on Magic Eden, one of the largest NFT marketplaces on Solana, Whale.io introduces its collection to a new blockchain environment, maintaining features such as zero gas fees and a range of rarity traits. A New Home on Solana with Magic Eden The Whale NFT collection, a standout success on TON, is now swimming into Solanaæ”s vibrant waters, and thereæ”s no better place to showcase it than Magic Eden. Known for its sleek interface, massive user base, and fast transactions, Magic Eden is the perfect stage for Whale NFTs to shine. With Solanaæ”s high-speed, low-cost blockchain powering the action, collectors and traders can expect a seamless experience as they dive into this next chapter of the Whale journey. Solanaæ”s ecosystem is recognized for its active NFT development, and Whale.ioæ”s integration adds another established collection to the network. Magic Edenæ”s reputation as the go-to marketplace for Solana NFTs, provides a platform for the Whale NFT collection to reach a broader audience. Whether one is a longtime Whale holder or a Solana native looking to get in on the action, this bridge unlocks a world of possibilitiesæ”starting at bridgedmaddy.com. How the Whale NFT Bridge Works Users seeking to transfer Whale NFTs from the TON blockchain to Solana can do so via bridgedmaddy.com, which offers a streamlined bridging process. According to details shared on whale.ioæ”s blog, the process is user-friendly and secure, leveraging cutting-edge bridging technology to ensure the useræ”s NFTs make the journey to Solana. The process includes the following steps:æ - Accessing the Bridge æ” The migration interface is hosted at bridgedmaddy.com. - Wallet Connection: Users connect a TON-compatible wallet, such as Tonkeeper, that holds their Whale NFTs. - NFT Selection æ” Holders select the NFTs they intend to bridge from TON to Solana. - Solana Address Input æ” A Solana wallet address is required as the destination. An associated Magic Eden account may also be needed to list NFTs post-migration. - Transaction Execution æ” Upon confirmation, the selected TON NFTs are burned, and new versions are minted on Solana via smart contract. The collection will be revealed again. During the process, the useræ”s TON NFTs will be burned and a new NFT will be minted on the Solana blockchain. The freshly minted new beast has new traits, new rarity, and new value after the artwork is revealed. One of the notable aspects of the Whale NFT collection is the artwork reveal. While the artwork remains the same as on TON, the specific NFT received after bridging is not predetermined. The process introduces a randomized assignment, meaning holders may receive an NFT with different traits or rarity once on Solana. Why Solana and Magic Eden Are the Perfect Fit Solanaæ”s blockchain is a powerhouseæ”blazing fast, cost-efficient, and home to a thriving NFT community. Itæ”s no wonder Whale.io chose it as the next stop for its 20,000-strong NFT collection. These characteristics support Whale.ioæ”s decision to expand its 20,000-item collection to the network, with trading now available on Magic Eden. Magic Eden takes it up a notch with its top-tier marketplace features. From curated

listings to real-time analytics, ita€™s built to showcase whale NFTs in all their glory. The platforma€™s large user base increases the potential visibility of whale NFTs across a range of rarity tiers. As whale.ioa€™s blog highlights, Solanaa€™s a€œhigh-throughput, low-latency networka€œ paired with Magic Edena€™s a€œbattle-tested toolsa€œ is a match made in NFT heaven, promising faster feature rollouts and a bigger splash in the market. From TON Triumph to Solana Stardom The whale NFT collection made history on TON, minting out 20,000 NFTs in 11 hours and soaring to a 7x floor price increase within a year. Now, ita€™s ready to conquer Solana with the same energy. The teama€™s signature movesa€™buybacks, burns, and zero gas feesa€™are coming along for the ride, ensuring the collection stays hot on Magic Eden. As detailed on whale.io/thedailyfinn/wtf/nft-bridge, these strategies have kept whale NFTs trending on TONa€™s Getgems, and theya€™re set to do the same on Solana. Bridge Launch and Ongoing Developments The whale NFT bridge is more than a migrationa€™ita€™s a celebration of whata€™s possible in the NFT space. Whether a user is a collector, trader, or gamer, the bridge provides an opportunity to interact with the whale NFT collection on Solana. The team promises more updates, from marketplace drops to soon-to-be-released token enhancements. Users can follow whale.ioa€™s official channels to stay in the loop. With the launch of the whale NFT bridge at bridgedaddy.com and integration into the Solana ecosystem via Magic Eden, the collection expands its reach across blockchain networks. This development marks a continued evolution of the whale.io platform within the broader NFT landscape About whale.io whale.io is a trailblazer in NFTs and blockchain gaming, fusing art, utility, and community into unforgettable projects. The whale NFT collection and the wheel of whales miniapp are designed to explore the intersection of utility and entertainment within decentralized environments. Further information about the whale NFT collection and the \$WHALE token is available through the following resources: Website: <https://bridgedaddy.com/> Socials: https://linktr.ee/whalesocials_tg Contact Whale Spokesperson whale.support@whale.io

San Francisco, United States/California, April 10th, 2025, Chainwire Huma Finance, the first PayFi Network, announced the launch of Huma 2.0, a permissionless, compliant, and composable real-yield platform built on Solana today. This launch opens global access to Humaa€™s stable real yield from global payment financing related to everyday commerce and trade activities. This development broadens individual access to stable, real-world yielda€™historically more common in institutional financea€™by leveraging payment-financing mechanisms. Simultaneously, the existing permissioned service has been rebranded as Huma Institutional to continue serving institutions and accredited investors. Users can begin depositing on the new Huma 2.0 platform immediately. Huma 2.0 offers users alternative ways to participate as liquidity providers. It introduces two primary modes to cater to different user preferences: Classic Mode, designed for those seeking stable, double-digit USDC yield (updated monthly) combined with rewards called Huma Feathers; and Maxi Mode, tailored for users aiming to maximize their accumulation of Huma Feathers, earning rewards at 5x the base rate, without receiving USDC yield. Users can switch the mode of their existing positions at any time. DeFi composability is also a core feature of Huma 2.0, enabled by the \$PST, short for PayFi Strategy Token. This liquid, yield-bearing LP token allows holders to integrate their Huma positions with leading protocols on Solana. At launch, users can swap \$PST for USDC via Jupiter, the first of several planned integrations with top Solana DeFi platforms. Support for using \$PST as collateral on Kamino and trading future rewards via RateX are expected shortly after launch. While participation does not require capital lock-up, users can opt for 3-month or 6-month terms to significantly boost their Huma Feather rewards via multipliers. Notably, during the initial launch period, these multipliers are significantly elevated as part of a limited-time promotion, offering particularly high boosts in Maxi Mode. These features offer users enhanced flexibility and choice in managing their positions. In just two years, Huma Financea€™s PayFi Network has rapidly achieved significant scale, processing over \$3.8 billion in transactions and generating \$8 million in annualized revenue. Huma supports its partners to generate yield from their PayFi operations. Unlike DeFi yields often reliant on token incentives, market speculation, or typically low rates in traditional finance, PayFi yield originates directly from fees paid by businesses using the network for payment financing and settlement liquidity. Capital is recycled rapidlya€™often within daysa€™compounding fees generated from tangible economic activity. This mechanism has enabled Huma to consistently deliver stable, double-digit USDC yields, showcasing a sustainable model further validated by backing from leading investors and recognition from industry analysts like Messari regarding PayFia€™s potential to address a \$30 trillion market. a€œHuma 2.0 isna€™t just another yield product a€™ ita€™s a structural shift,a€œ said Erbil Karaman, Co-founder of Huma Finance. a€œBy giving payments institutions a new source of liquidity that operates 24/7 with incredible capital efficiency, we are creating a new type of yield that is composable, transparent, and grounded in real economic activity. It finally gives DeFi access to a source of returns that institutions have kept to themselves for decades a€™ and it does so without compromising on what makes DeFi powerful.a€œ The launch of Huma 2.0 comes during significant shifts in global finance and within the DeFi landscape itself. While legacy payment infrastructures like SWIFT face challenges with speed and transparency and trillions in capital remain inefficiently allocated, the demand for modern, blockchain-based solutions is clear, evidenced by stablecoin transaction volumes recently reaching a reported \$35 trillion. Huma 2.0 leverages this shift, providing efficient settlement liquidity and broadening access for individuals worldwide to earn from foundational financial activities a€™ an opportunity previously confined mainly to institutions. Crucially, the yield generated through PayFi is designed to be less dependent on crypto market cycles. Whether markets are booming or in a downturn, economic activities like payments and trade may continue, potentially offering a more stable foundation for Humaa€™s yield generation. This structure may make double-digit returns more relevant during bear markets, where speculative yields often decline. As DeFi matures, there is a readiness for this type of yield a€™ one grounded in tangible commerce rather than token speculation. PayFi serves as a foundational layer, enabling new DeFi strategies like the recent Solmate product from Splyce, which combines Humaa€™s \$PST yield with SOL liquid staking, bridging decentralized finance with productive economic use. Huma 2.0 marks a key step in building a new financial future, fundamentally expanding participation by inviting everyone into a financial revolution where access is open and fair. Early participants can benefit from various reward multipliers, including boosts for prior Huma depositors and partner communities. As the platform expands with more DeFi integrations and plans to be the first major project on Jupitera€™s LFG 2.0 launchpad a€™ Huma continues to build finance that is truly accessible. To learn more about Huma 2.0 or participate, users can visit <https://huma.finance> or follow @humafinance on X. For media inquiries, users can contact: Ejiro Ovir, ejiro@huma.finance. About Huma Finance Huma is the first PayFi (Payment Finance) network. It features an open-stack liquidity protocol with applications for key areas like cross-border payments, stablecoin-backed cards and trade finance. The network addresses a total market estimated at over \$30 trillion. Its mission is to accelerate the movement of money for a world thata€™s always on. Huma is the source of this content. This Press Release is for informational purposes only. The information does not constitute investment advice or an offer to invest. - Solana has surged over 11%, trading near the \$114 level. - The asset has witnessed \$24.47 million in liquidations. The 7.42% rebound in the crypto market has helped assets reclaim lost momentum. Bitcoin is trading above \$82K, and Ethereum has climbed to \$1.6K. Meanwhile, Solana (SOL) has posted a double-digit gain of over 11.41%. After testing a series of key support and resistance levels, Solana might steadily recover from the fluctuating market momentum. In the early hours, the asset was trading at around \$103, and the arrival of bulls pushed SOL to mount toward \$120.47. At press time, Solana traded at around \$114.97, with its daily trading volume reaching \$6.69 billion. Furthermore, the SOL market has witnessed a 24-hour liquidation of \$24.47 million, as per Coinglass data. Is SOL Poised for a Breakout or Breakdown? In the event of Solana climbing above \$117, the altcoin could aim for its crucial resistance zone near \$122.17. Pushing through this mark likely triggers the price for a potent upside correction, speeding up the recovery. On the downside, SOLa€™s price might sharply fall back, testing the nearby support at the \$109 range. Assuming a drop past this level could accelerate further declines to its previous lows, sending the price to \$104.56. SOLa€™s Moving Average Convergence Divergence (MACD) line is positioned above the zero line, indicating the start of a bullish trend in the market. But the signal line below it hints that the momentum is lagging. In addition, the Chaikin Money Flow (CMF) indicator staying at -0.07 suggests a negative capital flow within the market. In the meantime, the daily trading volume of Solana has surged by over 21.97%. The Bull Bear Power (BBP) value near 7.75 signals bull power, which could support a continued upward price movement. Besides, the daily relative strength index (RSI) at 54.95 infers a neutral to mildly bullish momentum. Disclaimer: The opinion expressed in this article is solely the authora€™s. - Solana has presented Confidential Balances to enhance privacy and secure transaction details. - The new system comes with several benefits such as users can convert public token balances into a confidential state and transfer them privately. Solana has expanded its privacy capabilities with the launch of a€œConfidential Balances,a€œ a suite of zero-knowledge-powered token extensions. It is designed to shield transaction details while maintaining regulatory compliance. New Privacy Features Expand Token Functionality Confidential Balances represents the latest addition to Solanaa€™s privacy-protecting a€œConfidential Transfersa€œ features which Token2022 introduced to the network in June 2024. The expanded suite consists of three integrated extensions that were added to the framework. The first one is Confidential Transfers which allows users to obscure transfer amounts. The second one is the Confidential Transfer Fee which enables hidden fee processing while maintaining the same cryptographic security. The third one is Confidential Mint and Burn which allows token issuers to conceal the number of tokens being minted or burned. According to the developer, the system allows users to convert public token balances into a confidential state, transfer them privately, and revert them to public balances when needed. All these operations use homomorphic encryption and zero-knowledge proofs to verify transaction correctness while keeping privacy maintained. Confidential Balances are prepared for Rust-based backend deployment because servers handle proof generation and encryption key management. These features can be supported by a€œWallets-as-a-Servicea€œ providers from third parties to boost user adoption. The upcoming release of JavaScript-based zero-knowledge proof libraries during 2025 will create better integration possibilities for wallets. These developments will allow for client-side proof generation, native wallet support, and streamlined compliance mechanisms through optional a€œAuditor Keya€œ functionality. Helius Solanaa€™s leading RPC and API platform defined the new feature set as a€œthe first zk-powered encrypted token. It is built for institutional compliance without compromising on sub-second finality.a€œ The technology enables encrypted payroll services together with business-to-business transactions through its financial use cases. The technology addresses privacy needs of applications that need to follow regulatory standards. Highlighted Crypto News Today: Choe Files to List First-Ever SUI ETF Backed by Canary Capital

- Solana price jumped 7.72%, hitting an intraday high of \$112.30 and pushing its market cap to \$56 billion. - The analyst predicts Solanaa€™s price could drop to \$58 if it fails to reclaim the \$121 support level. Solana (SOL) recorded a 7.72% price increase which brought its value to \$112.30 in the last 24 hours before slightly pulling back to its current trading level of \$109.99. The market capitalization of Solana has reached \$56 billion due to this recent price increase. Despite this, Solanaa€™s 24-hour trading volume dropped 4.37% to reach \$6.9 billion, demonstrating rising pressure and intensive market sentiment. During the past day, Solana experienced price swings reaching a minimum of \$99 while reaching a maximum of \$111 despite continuous market instability. On April 7th, analyst Ali projected a breakdown in Solanaa€™s price after its recent dip below key support levels. The chart shows a strong descending trend, indicating that the price of SOL could continue to fall toward the \$58 mark, a significant support zone. The breakdown comes after the coina€™s price fell below the critical level of \$121, Analysts predict that if Solana fails to reclaim \$121, its price could drop further to \$58, signaling a bearish shift. Technicals Indicate Solanaa€™s Potential to Break \$112 and Reach \$120 Solanaa€™s recent price action has led to mixed signals from its technical indicators. The Relative Strength Index (RSI) measures 40.51 which places the coin in a neutral state. Solanaa€™s position in the neutral zone indicates it is not overbought or oversold therefore setting the conditions for a possible upward movement in case buying momentum strengthens. The MACD indicator currently tracks downward as its lines remain at -6.82 below the signal line, holding at -8.07. A bearish trend exists per market indicator data though the situation might change if market conditions improve. Solanaa€™s immediate resistance is at \$112.58, and breaking this level could push the price toward \$120. After recently testing the \$112 resistance and facing rejection, a successful reclaim of this level could lead to a rally towards \$120. Traders should watch this key level closely, as a break above \$112 could signal a reversal. However, if the price fails to hold above \$106.65, further downside could push Solana towards the \$100 range. Highlighted Crypto News Today: SBI Holdings Inc. Weighs Reducing Its Stake in B2C2 Crypto Unit

Ozak AI is rapidly emerging as one of the most talked-about AI-powered cryptocurrencies in the present day market cycle. With its groundbreaking combo of artificial intelligence and blockchain infrastructure, the project is drawing comparisons to early-stage Solana, which turned modest investments into life-changing gains. As crypto investors search for the next big breakout, Ozak AIa€™s ultra-low entry price and strong technological foundation are positioning it as a serious project. The question now is: can Ozak AI reflect Solanaa€™s meteoric upward rise and deliver similar 500x or even 1000x returns by 2025? Solanaa€™s Meteoric Rise Sets the Stage Solanaa€™s extraordinary ascent in the last few years has become a benchmark for rising cryptocurrencies. With its ultra-fast transaction speeds, low fees, and strong developer adoption, Solana positioned itself as an impressive Ethereum competitor. It commenced as an incredibly unknown token and unexpectedly captured institutional and retail interest, climbing to the top ranks of the crypto market. The adventure of Solana indicates how the right mixture of era, timing, and market sentiment can cause exponential increasesa€™even for projects that first of all fly under the radar. This success story has stimulated comparisons to new initiatives like Ozak AI, which is now gaining traction throughout the crypto community. Ozak AIa€™s Technological Edge and Growth Potential Ozak AI isna€™t simply driving the AI hype; ita€™s building something basically robust. The assignment merges advanced artificial intelligence, decentralized analytics, and predictive modeling to create a unique offering inside the blockchain space. Unlike many AI-associated cryptos which are long on vision but quick on execution, Ozak AI has already launched a presale thata€™s unexpectedly gaining momentum. At just \$0.003 per token, early traders see an opportunity similar to what Solana offered for the duration of its early days. The platforma€™s integration of real-time data streams, customizable AI dealers, and decentralized physical infrastructure places it in a position to disrupt how information is utilized in DeFi, trading, and business enterprise intelligence. With strong tokenomics and real-world utility, many

consider Ozak AI may want to see the type of breakout increase that became Solana into a family name. 2025 Price Prediction: Can OZ Mirror SOL’s Explosion? With its present day presale price at only a fraction of a dollar, Ozak AI has big upside ability. Some projections, primarily based on current adoption developments and boom models, advocate that OZ could hit \$1 via the end of 2025. That might represent more than a 300x increase from its initial presale valuation “an eye-watering return by any measure. What makes this prediction even greater compelling is the momentum behind the AI crypto area, that’s rising as one of the most up to date developments within the digital asset area. If Ozak AI continues to build out its surroundings, entice key partnerships, and deliver on its roadmap, a breakout moment might be inevitable” just as it was with Solana in its early section. While no two initiatives are the equal, the contrast among Ozak AI and Solana highlights what investors search for in the next big crypto winner: current tech, sensible use cases, and strong network backing. Solana proved that explosive growth is possible, even in a crowded market. Ozak AI is now getting into that spotlight, with its blend of AI innovation and blockchain infrastructure making it a critical project. If present day trends hold, Ozak AI ought to certainly observe Solana’s path and deliver extensive returns by the year 2025. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. Congratulations if you were smart enough to purchase the Solana (SOL) dip; you already have a powerhouse cryptocurrency in your portfolio. Solana is a favorite among individual and institutional investors because of its low costs, swift transactions, and strong ecosystem. But in the often erratic crypto market, increasing earnings and reducing risks depend on diversity. Strategic alcoins with strong foundations and growth prospects will help you balance your holdings and open even more opportunities. Tron (TRX), Kaspa (KAS), and Rexas Finance (RXS) are three alcoins that complement Solana. These tokens offer unique qualities such as real-world asset (RWA) tokenization, next-generation blockchain scalability, and fast stablecoin transactions. These alcoins deserve to be in your portfolio. Rexas Finance (RXS): A Game-Changer in Real-World Asset Tokenization With its creative approach to tokenizing real-world assets, Rexas Finance (RXS) is causing waves in the crypto industry. The concept lets investors fractionalize tangible holdings, including real estate, commodities, and fine art, opening usually exclusive markets to retail buyers. Rexas Finance has rapidly become a preferred choice for forward-looking investors, with its presale pricing at \$0.20 and above \$47.5 million raised. The ecosystem of Rexas Finance is one of its main benefits since it provides several means to promote usefulness and acceptance. The Rexas Token Builder lets users quickly construct tokenized assets, enabling a wider audience to access real-world asset tokenization. Its launchpad for fresh ideas encourages firms wishing to use blockchain technology to promote ecosystem innovation. An effortless staking platform lets investors generate passive income, boosting involvement and long-term value. These characteristics make Rexas Finance a viable competitor for future crypto market expansion since they help bridge conventional finance with blockchain. Analysts estimate Rexas Finance could soar by over 5000% post-launch, reaching \$10 or more by year-end, given the growing acceptance of tokenized assets and DeFi connections. Rising investor interest and real-world use cases make Rexas Finance not only another speculative asset but also a breakthrough blockchain initiative with concrete uses. Kaspa (KAS): The Future of Scalable Proof-of-Work The next-generation proof-of-work blockchain Kaspa provides scalability on par with top-notch networks like Solana. Kaspa employs a different blockDAG (Directed Acyclic Graph) architecture than conventional blockchains that validate blocks sequentially, enabling simultaneous processing of many blocks. This results in unmatched network efficiency and almost instantaneous transactions. As of this writing, Kaspa is trading at \$0.07; she has been gathering speed, with a 19.22% rise just last week. With price forecasts of \$0.20 or higher in early 2025, analysts project an even greater increase. Kaspa is a creative and scalable substitute for investors who value Solana’s quickness yet still see the long-term promise of PoW systems. Given its strong technology and growing acceptance, KAS is positioned for significant gains in the upcoming bull run. Tron (TRX): The Powerhouse for Stablecoins and dApps Tron has become the leading blockchain for stablecoin transactions and decentralized apps (dApps). Given some of the lowest transaction costs in crypto, it is a first pick for high-volume transactions. Reflecting great market confidence, TRX is trading at \$0.22, with a 4.41% increase in the last 24 hours. One of Tron’s strongest points is its dominance in the USDT market. Processing billions of USDT daily, the Tron network shows dependability and efficiency. Whale activity on the network has lately increased by 929%, indicating more institutional interest. Analysts have projected a 2025 price estimate for TRX of \$0.53, possibly climbing to \$1.10 in an optimistic market. TRX’s real-world utility, robust developer environment, and growing acceptance make it an excellent complement to any well-rounded crypto portfolio. Conclusion Adding Rexas Finance (RXS), Kaspa (KAS), and Tron (TRX) to the Solana (SOL) dip would diversify your portfolio with high-growth potential. Leading in real-world asset tokenization, RXS makes commodities and real estate available via blockchain. KAS transforms proof-of-work with its blockDAG structure, which permits high-speed, scalable transactions. Offering a consistent, low-cost network, TRX shines in stablecoin transfers and dApp development. Holding a diversified portfolio that balances speed, security, and real-world acceptance is crucial, as 2025 looks like a massive year for crypto. These three cryptocurrencies improve your holdings and help you profit from some of the most significant technological trends in blockchain. Consider three essential cryptocurrencies today to increase your gains outside Solana: RXS, KAS, and TRX. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana price has shown significant drops in the last few hours, as the crypto market crashed. - Its daily trading volume shows a surge of 205.21% as per CMC data. Community members in the Asian crypto sector have woken up to the inevitable. With the latest market crash, analysts’ predictions have been realized, as Bitcoin plummets to the \$77K level. With a significant 7% drop in the overall market cap, the reflection in the alt sector is quite definitive. Notably, one of the leading alcoins, Solana has factored in a significant price drop of 14.95% in the last 24 hours. This has caused the alcoin to trade at the border of the \$100 level after weeks of struggling to hold above \$120. This has instigated panic selling among investors. In the morning hours of April 6, SOL was trading at \$120, however, as the day progressed bears began to overpower the consolidation. This caused it to reach the current \$101 level. At the time of writing, Solana was trading at \$101.35 as per CMC data. Subsequently, the past day saw whales dumping the SOL tokens. According to Lookonchain reports, one particular whale, unstaked 282,604 tokens and deposited them to Binance. He made this movement to cut further losses and his current loss stands at \$678K. Will Solana Price Drop Further Below \$100? Although analysts have not recently predicted Solana’s price action, technical indicators suggest impending downward trends. Its price movements have traced a descending channel pattern which indicates the aforementioned negative trends. Additionally, its short-term 9-day MA stands several yards below its long-term 21-day MA. Secondly, its RSI value stands at 30.94 as per TradingView data. This suggests that the alcoin has entered into an oversold market situation. If Solana falls below \$100 it might find support at 97.90 and 80.49 in the coming days. On the other hand, alcoins such as Cardano and XRP have also shown similar bearish movements in the last 24 hours.

Growing excitement in the digital asset space shows that a prime market rally could be on the horizon. With the blockchain era advancing swiftly and institutional investors increasing their exposure, some crypto projects are emerging as frontrunners. Ozak AI (OZ), Solana (SOL), and Ethereum (ETH) are three standout cryptocurrencies that would pressure the next wave of boom. Ethereum continues to dominate the smart contract and DeFi sectors, Solana is revolutionizing high-speed transactions, and Ozak AI is pushing innovation via merging artificial intelligence with blockchain. As adoption hastens and new use cases emerge, those initiatives have the ability to lead the market’s next explosive surge. Ethereum: The Undisputed Leader in Smart Contracts Ethereum remains a foundational pillar of the crypto space, powering decentralized finance (DeFi), NFTs, and thousands of smart contract applications. Despite dealing with scalability troubles and high gas costs, Ethereum keeps evolving, with ongoing improvements geared toward making the community extra efficient. The transition to Proof-of-Stake (PoS) via Ethereum 2.0 has already improved power performance, and the rise of layer-2 solutions like Arbitrum and Optimism is assisting to lessen transaction charges. Institutional interest is likewise developing, specifically with Ethereum ETFs gaining traction, making ETH a strong project for leading the next market rally. However, competition is heating up, and Ethereum ought to continue to innovate to preserve its dominance. Solana: The High-Speed Blockchain Challenging Ethereum Solana has emerged as one of the biggest challengers to Ethereum, presenting quicker transaction speeds and extensively decreasing prices. Its blockchain structure enables builders to create scalable and efficient decentralized applications, making it a desired choice for gaming, DeFi, and NFT projects. Despite past network outages and concerns about centralization, Solana has managed to construct a strong ecosystem with strong developer support. As the crypto market recovers, Solana’s capability to deal with high transaction volumes with minimum prices may want to attract greater users and developers, pushing its price higher. If Solana continues to make its ecosystem bigger and cope with its technical demanding situations, it is able to see enormous profits in the next bull run. Ozak AI: The AI-Driven Crypto Set for Explosive Growth Ozak AI is rapidly gaining attention as one of the most promising new initiatives inside the crypto space. Unlike Ethereum and Solana, which focus on blockchain scalability and smart settlement functionality, Ozak AI integrates artificial intelligence into decentralized networks, establishing up new possibilities for automation, predictive analytics, and AI-based DeFi solutions. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. As AI adoption accelerates throughout diverse industries, Ozak AI is positioned at the intersection of two of the fastest-growing sectors “AI and blockchain. With a surprisingly low market cap, Ozak AI offers a possibility for early buyers to benefit from doubtlessly big gains. Its particular use cases, combined with growing institutional interest in AI-powered blockchain solutions, make it a strong project for riding the next crypto rally. While Bitcoin regularly dictates market movements, the next important rally might be led by innovative alcoins like Ethereum, Solana, and Ozak AI. Ethereum’s DeFi ecosystem, Solana’s high-pace network, and Ozak AI’s groundbreaking AI integration make them high candidates for explosive growth. As investors search for the following big opportunity, those three initiatives are nicely-located to capitalize on market momentum, placing the stage for a new generation of crypto expansion. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana dropped over 1.9% in the past 24 hours and recorded a new low of \$120 amid market volatility. - After hitting an all-time high of \$294.33 in January, Solana has faced challenges like network congestion and market corrections, with its price declining by 19% in the last ten days. Solana’s (SOL) pricing movement barely seems to break a tight range toward breaching an essential resistance zone lying at \$135. Over the past twenty-four hours, SOL reflected market uncertainties with low trading volumes in a wide price margin between \$120 and \$124. Solana’s capital value exceeds \$61 billion, while its daily trading volume surpasses \$3.9 billion, showing its position as a reputable crypto asset. Solana Faces Continued Struggles After January’s Peak Solana achieved its highest price yet at \$294 during January before network congestion and market deterioration reduced its value. The platform has experienced significant challenges which include network issues and market adjustment problems since reaching its highest value at \$294. During the most recent weeks Solana has experienced another price drop which completely cancelled out the gains it achieved in the middle of March. At its current \$120 worth Solana has lost around 19% of value over the past ten days. Investors have been patiently waiting for the price to cease its struggles, and that increased impatience has made them more willing to sell their holdings and leave the market. Market analysts pointed out that Solana’s unwillingness to cross-resistance levels is also caused by other outside factors that dampened investor appetite and curbed any upward price movement, like FTX repayment matters and macroeconomic uncertainty. According to crypto analyst Ali Martinez, the key resistance levels for Solana include \$135.70, \$144.40, and \$165.20. He emphasized that clearing each could signal a strong continuation of the uptrend, but the alcoin has been unable to do so. Bearish Indicators Signal Continued Pressure Technical analysis shows that SOL is under bearish pressure. The RSI on the daily chart is at 41.03, indicating limited potential for further price drops in SOL. The primary support level for SOL is projected at \$97.69 which bears the risk of price declines to \$110 if bearish forces gain dominance. Breaking through the current resistance at \$165 would potentially send SOL toward \$200 and possibly further toward \$220. Highlighted Crypto News Today: DeFi Market Experiences Revenue Drops as On-chain Activity Reduces

- PayPal adds LINK and SOL to its crypto offerings via PayPal and Venmo. - Solana and Chainlink chosen for their speed, utility, and growing adoption. - Move signals PayPal’s deeper push into Web3 and institutional-grade crypto assets. International payments giant PayPal has announced the addition of Chainlink (LINK) and Solana (SOL) to its roster of supported cryptocurrencies. In an official release, the company confirmed that users in the United States can now buy, sell, hold, and send both LINK and SOL on PayPal and its subsidiary platform, Venmo. The addition brings the total number of cryptocurrencies supported by PayPal to seven,

representing the companyâ€™s continued bet on digital currencies and Web3 technology. From its initial crypto adoption in 2020â€™ Bitcoin and Ethereum at the timeâ€™ PayPal has been adding Litecoin and Bitcoin Cash, as well as launching its own stablecoin, PayPal USD (PYUSD). It was driven by considerable consumer feedback, says May Zabaneh, PayPal Vice President of Product for Blockchain, Crypto, and Digital Currencies. â€™Making more tokens available on PayPal and Venmo allows consumers to have more flexibility, option, and access to digital currencies,â€™ said Zabaneh. â€™It means more options to buy, send, or spend in our secure PayPal and Venmo wallets.â€™ Chainlink, in common perception the leading data, compute, and cross-chain interoperability platform, is now an essential component of the crafting of complex blockchain applications. Its recent partnership with ADGM to construct tokenization frameworks in the UAE reiterates its increasing enterprise appeal. Why Solana and Chainlink? At the same time, Solana remains at the forefront as a fast performance blockchain supporting a wide range of decentralized applications. Gaming and DeFi, payments and infrastructure initiatives are only a few of the domains where SOLâ€™s universe is growing at a record rate. Institutional adoption has also gained momentum, with BlackRockâ€™s BUIDL going live on the Solana network and Polymarket enabling SOL deposits. As we could see a slight surge in the \$SOL as it may be because of the announcement. Because both LINK and SOL were among the top 11 market cap cryptocurrencies with a combined value of more than \$80 billion, PayPalâ€™s move is in line with its strategic growth into leading blockchain ecosystems. The move is in line with its overall mission to revolutionize payments and remain at the bleeding edge of the digital economy. They can expect LINK and SOL to go live on PayPal and Venmo in the coming weeks, further cementing the platforms as gateway portals to the evolving world of cryptocurrency

The market sentiment of Crypto FOMO (Fear of Missing Out) is increasing as traders expect a major price surge soon. Institutional players continue their discreet buying activities, while retail investors maintain their position outside the market until they receive confirmation signals. The entry of sidelined capital into markets during bull phases leads to new price peaks because of increased market activity. A potential FOMO-driven purchase wave may emerge soon as Bitcoin maintains its consolidation while altcoins demonstrate increased momentum. Meanwhile, the blockchain-based Rexas Finance (RXS) platform stands out as it introduces mainstream adoption of real-world asset (RWA) tokenization technologies. Analysts predict that Rexas Finance (RXS) may experience similar value growth to Solana (SOL) after the FTX crash, when it surged from \$8 to over \$200 within two years. Rexas Finance: The Future of Asset Tokenization Rexas Finance transforms real-world assets, including real estate, art and commodities, into blockchain-based tokens to provide new investment possibilities for people. Traditional illiquid assets become accessible to retail investors through this development, which previously only institutional players could access. What differentiates Rexas Finance? - Users can tokenize their assets through the No-Code Token Builder interface, which requires no programming experience. - The Decentralized Launchpad serves as a safe system for conducting multi-chain fundraising activities. - Fractional ownership allows investors to purchase fractional units of high-value assets. - AI-Powered Security provides continuous monitoring of smart contract vulnerabilities. - The platform offers DeFi integration through yield farming and staking and other financial services for maximizing returns. Price Prediction: Could RXS Be the Next Big Gainer? The early stages of RXS performance have been impressive as its presale price increased from \$0.03 to \$0.20. The market projection indicates that RXS tokens will experience substantial growth according to current analyst forecasts, which show: - \$5 by mid-2025 (a 10x increase from early presale prices). - RWA tokenization will achieve mainstream adoption by 2027 which will drive the price to \$15. - The adoption and successful integration of this technology will lead to a projected price of \$30 by 2030. The projected growth rates for RXS put it in a high-potential sector, which mirrors Solanaâ€™s substantial recovery after FTX. The growing awareness among investors about real-world asset tokenization potential creates substantial demand for RXS tokens. Conclusion Historically, investors who enter altcoin cycles early have achieved the greatest financial benefits from the next bull market. Rexas Finance takes the lead in RWA tokenization innovation while emerging as a top crypto investment opportunity in the market today. History suggests that RXS token could experience similar success as Solana by rewarding its initial supporters with substantial returns. Are you going to join their ranks? - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Fidelity Investments received SEC acknowledgement for its spot Solana ETF filing. - The launch of an ETP product could possibly propel a rally in SOL. In the last 24 hours, intriguing actions have occurred in the mainstream economic sector. The US has once again received the spotlight with Trump announcing further tariffs on all international trades. Moreover the tariff impositions are further kindling the mounting tensions between the nations. Meanwhile, within the crypto sector several announcements took place. Apart from the STABLE ACTâ€™s advancement yesterday spot ETFs have also seen new regulatory developments. Notably, the prominent ETF issuer Fidelity Investmentsâ€™s spot Solana ETF filing was acknowledged by the SEC. In a recent document the US regulator acknowledged the ETP product and subsequently pushed it closer to approval. While the market has seen numerous ETF filings in the last few months, Fidelity is the first to see a response from the SEC. However, during a previous hype, spot Solana ETFs saw several filings but were rejected by the SEC under Chair Gary Gensler. Will a Spot Solana ETF Propel Price Rally? The launch of the spot Bitcoin ETF saw significant upward momentum in the cryptocurrency. However, the same cannot be said for Ether, which showed minimum gains. On the other hand, in the case of a spot ETF launch, SOL could show significant upward movements. Moreover, the altcoin, despite several market crashes, has managed to hold above the \$100 support. Additionally, it held on strongly to the \$120 support until recently. In the last 24 hours, Solana has factored in a modest price drop of 3.29%. This caused SOL to fall from a high of \$119 to current trading levels. At the time of writing, the altcoin was trading at \$115.90 as per CMC data. If it has to witness a significant upward momentum, the launch of a spot Solana ETF could propel it further. Highlighted Crypto News Today: Paul Atkinsâ€™ SEC Chair Nomination Passes, What It Means for Crypto Regulation

- Solana slips to \$119 following a 3% loss. - SOL has seen \$31.26 million in liquidations. Bearish pressure continues to rule the crypto space, with the Fear and Greed Index remaining at 24, reflecting fear within the market. Solana (SOL) is one of the assets suffering, slipping over 3.39% during the prevailing negative sentiment. The recovery of Solana might approach after a series of key support and resistance tests. SOL opened the day trading at around \$124, and the wake of bulls pushed the asset to climb toward the \$135.70 level. Later, the bears took charge of Solana and pulled back the price to \$116.98. At press time, SOL trades within the \$119.83 range, with a \$61.41 billion market cap. Furthermore, the Solana market has witnessed a 24-hour liquidation of \$31.26 million, as per Coinglass data. Consequently, the daily trading volume of SOL has reached \$6.19 billion. Can Solana Shake Off the Bearish Grip? If Solanaâ€™s downside correction forms a death cross, the price could steadily fall back and test the support at \$113.27. Dropping past this level could amplify further declines, sending the price to \$107. Assuming SOL jumps to the \$125 level, the altcoin could likely target its crucial resistance at around \$131.18. Breaking this resistance might trigger the altcoin for a strong upside correction. The assetâ€™s Moving Average Convergence Divergence (MACD) line and the signal line are positioned below the zero line. This crossover infers a strong bearish momentum, hinting that the trend to persist. Besides, the Chaikin Money Flow (CMF) indicator found at -0.08 signals a negative money flow in the market. In the meantime, the daily trading volume of Solana has increased by over 105%. SOLâ€™s Bull Bear Power (BBP) value of -8.55 indicates that the bearish pressure is strong. Moreover, the daily relative strength index (RSI) at 39.67 suggests a weak momentum, leaning toward oversold territory.

Although many outrageous and unmet expectations predict Solana (SOL) will reach \$5,000 in a few years, investors with experience understand that such forecasts are unfeasible. While searching for reliable investments across the cryptocurrency spectrum, many are turning towards Cardano (ADA), Rexas Finance (RXS), and Ripple (XRP). These three cryptocurrencies offer considerably more promise for serious investments due to their backed real-world utility, unique value propositions, and powerful technology than Solanaâ€™s networkâ€™s persistent issues with outages and scaling. These attributes position the three crypto alternatives as contenders for investors seeking long-term growth in the blockchain ecosystem. Rexas Finance (RXS): The Tokenization of Real-World Assets Rexas Finance (RXS) is built on the tokenization of illiquid assets, such as real estate, art, and commodities, which are brought to the blockchain. Rexas Finance is a frontrunner in asset tokenization, creating a niche, while Solana fundamentally struggles with sustaining reliable network infrastructure. Rexas Finance is looking to emerge as a significant player in the upcoming blockchain revolution. As you know, RXS is in its last presale phase, priced at \$0.20 per token, with more than \$47.2 million raised. It has gained significant traction. In the most recent update, Rexas Finance has completed the sale of 455.5 million tokens. The presale will culminate in an open market listing on June 19, 2025, at \$0.25. Analysts believe Rexas Finance could return \$17,500 on the investment, while the price per token is predicted to exceed \$35 during the widespread adoption of tokenization technology. RXS aims to tokenize real-life assets, which allows for converting traditionally hard-to-sell assets into liquid assets. By being a leader in the crypto-tokenization industry, RXS aims to help the industry, especially given the recent upsurge in using blockchain in finance. Cardano (ADA): Building for the Long Term with Sustainable Growth For years, Cardano (ADA) has been one of the most promising projects in the crypto space due to its fundamental offerings and focus on sustainability in the long run. Its price volatility in recent months hasnâ€™t helped things either, currently sitting at \$0.72 with a market cap of \$24.6 billion. Despite these facts, the proof-of-stake and consensus scalability features that set Cardano apart from other blockchain networks make it a contender for growth. Its robust approach toward developing blockchain technology makes it a strong contender to Ethereum 2. Cardano has the potential for massive growth in the year primarily because of its proven commitment to establishing an ecosystem capable of real-world-scale applications. Continuous network upgrades, government collaborations, increasing developer adoption, and growing public adoption strengthen that claim. Analysts predict a price increase of 3 or even \$6.45 in the coming months. Likewise, the scalable nature of Solana makes it less reliable than Cardano, which places focus on sustainable growth and execution of smart contracts. Cardano seems to have a bright future with the demand surge in decentralized finance and novel contract platforms. Unlike Solana, which has had its share of network downtimes, Cardano is working towards reliable and steady development in the crypto economy. Ripple (XRP): The Cross-border Payments Behemoth Rippleâ€™s XRP has earned its place as one of the most crucial cryptocurrencies in terms of the future of cross-border payments. XRP, Rippleâ€™s prime asset, has a \$140 billion market cap and a price that outshines most digital assets globally at \$2.40. This places Ripple among the most valued currencies. In addition to XRPâ€™s position in the market, as more payment systems across the globe accept the integration of XRP, its market value is bound to skyrocket. When it comes to cross-border payments, XRP has an unquestionable role to play. As the value of global remittances increases, the XRP token, in correlation with Rippleâ€™s network, is poised to take advantage of the opportunities presented in the current infrastructure. This is how one can explain the beliefs of many investors that XRP is bound to cross \$5 by 2025, and some very optimistic minds project this number will reach \$80.35 by 2025 due to institutional support in Ripple and the expansion of its network. Rippleâ€™s collaboration with other banks and financial institutions puts aiding remittance companies in the forefront, making it the center of the future of finance across the economy. This underlines its mark as an asset in the crypto reserve, attributed by the treasury. It sets currency confidence into Rippleâ€™s endeavors and collaborations with the U.S. Bank, boosting interest in XRP. Why These Alternatives Are Better Than Solana Solana has created a lot of hype, but its continuous problems with network outages and technical stability have made it less reliable than its competitors. Thereâ€™s so much that Solana has to work on, mainly because its market cap is currently sitting around \$98.2 billion. Because it has an unpredictable value, it makes people lose faith as long-term investors. With a lack of differentiation in the market compared to Rexas Finance, Cardano, and Rippleâ€™who have significant issues but are far more stable and scalable in their solutionsâ€™Solana is in a greater pitfall. Investors have more reasons to follow Rexas Finance, Cardano, and Rippleâ€™s tokenization and sustainable blockchain advancements paired with cross-border payment dominance, as each project comes with value. All three are better equipped to deal with the evolving problems of the crypto industry and guarantee significant returns, outperforming Solana in the long run. Conclusion Even though Solana still has room to grow as a top crypto, it pales compared to the Rexas Finance token, Cardano, and Ripple, representing decentralized chainsâ€™ actual future. These altcoins possess strong fundamentals, established use cases, widening adoption, and presence in the industry, which will help them outdo Solana in the upcoming years. If youâ€™re an investor seeking scalable or reliable solutions for your portfolio, Rexas Finance, Cardano, and Ripple possess immense possibilities for growth. As crypto evolves, these altcoins will rely on their advanced technology and real-world applications to capture market attention. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana meme coin BONK jumps 10.65% in 24 hours, ranking among the top gainers. - A double bottom pattern on the 4-hour chart suggests a trend reversal if BONK breaks above \$0.00001240. The global crypto market is attempting to recover as Bitcoin (BTC) climbs back to the \$85K zone. Yet, the recent recovery efforts have fallen short, with major cryptocurrencies continuing to extend their losses. The meme coin sector has taken a big hit with many tokens slipping deeper into losses. Despite this, the Solana-based meme coin BONK has posted a gain of over 10.65% in the past 24 hours, topping the gainersâ€™ list. Now, BONK holds the third spot among the top gainers which setting itself up for a bullish move for the day. The memecoin broke past a key resistance level at \$0.00001206, reaching an intraday high of \$0.00001273 from a low of \$0.00001151. It has since retraced slightly and is now trading at around \$0.00001213. Additionally BONKâ€™s daily trading volume has surged by over 128%, hitting \$159.13 million. BONK Tests Key Resistance with Bullish Reversal Signals In the one day chart, BONK tested a key resistance level at \$0.00001273. Looking at the 4-hour BONK/USDT chart, the meme coin appears to be forming a Double Bottom (W Pattern), a possible bullish reversal signal. The price has tested a support level twice around \$0.00001100, creating a â€™Wâ€™ shape, with a neckline resistance near \$0.00001240. A breakout above this level could confirm an upward trend that signaling increased buying interest. On the other hand if BONK forms a higher low it may develop into an Inverse Head and Shoulders

pattern that hinting at a possible bullish reversal. As of now, the Double Bottom pattern is the more well known formation that indicating a possible trend reversal if resistance is breached. Some technical indicators also support a breakout view. The MACD line is crossing above the signal line that hinting at positive momentum. Meanwhile, the RSI at 52.97, moving away from oversold levels that suggesting growing buying interest. Zooming in, the Chaikin Money Flow (CMF) at -0.05 shows mild selling pressure indicating that buyers need more strength to sustain the rally. A breakout above \$0.00001240 should be accompanied by increasing volume for confirmation. Weak volume may indicate a false breakout. If BONK breaks and holds above the \$0.00001240 and \$0.00001273 zones with strong volume, it could confirm a bullish reversal, possibly pushing the price toward the next resistance stop at \$0.00001350. But failure to hold this level could result in a pullback to the \$0.00001100 support zone. Highlighted Crypto News Today: USDC Issuer Circle Files for IPO After Recording Revenue Growth

- Ethereum DEXes led with \$64.62B in March, surpassing Solana's \$52.62B. - Uniswap led Ethereum's DEX surge with \$30B in volume. Ethereum has regained its position as the top decentralized exchange (DEX) chain, overtaking Solana for the first time since September. The shift happened in March as bearish market sentiment, especially in the memecoin sector, led to a decline in activity on Solana-based platforms like Raydium and Pump.fun. Ethereum-based DEXes recorded \$64.62 billion in trading volume, beating Solana's \$52.62 billion by 22%, according to DeFiLlama. This marks Ethereum's return to the top, pushing Solana to second place. Raydium, Solana's leading DEX, struggled throughout March. It failed to surpass \$1 billion in daily trading volume, a sharp decline from its \$13 billion peak on January 18. Additionally, its daily volume averaged less than \$100 million, down from \$390 million in mid-January. The surge in Solana's DEX activity earlier in the year coincided with the launch of Donald Trump's TRUMP token. Ethereum's dominance was driven by Uniswap, which recorded over \$30 billion in trading volume. Fluid followed with \$9 billion, securing a distant second place. Ethereum (ETH) in Today's Market Ethereum is currently trading at \$1,869.11, with a market cap of \$225.52 billion and a 24-hour trading volume of \$15 billion, reflecting an 8.12% increase. The market cap ratio stands at 6.67%, indicating solid trading activity. ETH's price movement shows key support at \$1,820, while resistance is forming around \$1,900. A breakout above this level could push prices toward \$1,950, while a drop below support might see ETH testing \$1,780. The Relative Strength Index (RSI) stands at 51.78, suggesting a neutral market with neither overbought nor oversold conditions. The RSI average remains at 33.56, which previously indicated bearish pressure but has started recovering. The Chaikin Money Flow (CMF) is positive at 0.06, signaling mild buying pressure and potential accumulation. Moving averages indicate potential shifts. The 14-day RSI moving average is recovering, hinting at a possible trend reversal if momentum strengthens. If moving averages form a bullish crossover, it could support upward movement. However, ETH remains susceptible to macroeconomic factors and market sentiment. Ethereum's return to the top DEX position strengthens its long-term outlook, but short-term price action depends on breaking resistance and sustaining higher trading volumes.

- PumpSwap hit \$2.43 billion in trading volume within 10 days. - MEXC integration helps expand access, increasing liquidity potential. PumpSwap, the new exchange (DEX) built by Pump.fun, has taken off fast. In just 10 days, it has processed \$2.43 billion in trading volume. The platform has also generated over \$5.4 million in protocol fees, welcomed 700,000 active wallets, and recorded more than 30.5 million swaps, according to data by Dune Analytics. Despite Raydium still holding a dominant 74% share of the Solana DEX market as of March 30, PumpSwap is making waves. It now accounts for 8% of Solana's total DEX trading volume. The platform's sensational growth could mean a shift in the memecoin market, as attention is being drawn to its unique features. How PumpSwap is Changing Memecoin Trading Before creating PumpSwap, Solana memecoins launched on Pump.fun were traded on Raydium which made trading activities more complicated for users. PumpSwap is expected to cut out that extra step, which allows users to trade, provide liquidity, and create tokens all on a single platform. It operates on a constant product automated market maker model, similar to Uniswap V2 and Raydium V4. The platform originally charged a six-SOL migration fee to Raydium but has now replaced it with a 0.25% trading fee. Of that, 0.20% goes to liquidity providers, while 0.05% stays with the protocol. This setup is expected to evolve with the introduction of Creator Revenue Sharing. One big reason PumpSwap took off so fast is its partnership with MEXC. On March 25, MEXC announced it was adding PumpSwap to its DEX+ aggregator. This partnership results in a massive adoption for PumpSwap as MEXC 34 millions users in over 170 countries will be able to trade PumpSwap-listed tokens directly through the exchange's platforms. The integration will potentially drive more accessibility and liquidity for traders in the platform. Now that memecoin trading has cooled off but gradually waking up, PumpSwap's latest partnership and expansion might be another boost to revive memecoin trading and its momentum. Will PumpSwap Keep Up the Pace? While PumpSwap's has witnessed early growth and adoption rate, the broader Solana DEX market faces a downturn. Data by DeFiLlama reveals that Solana's total DEX volume has dropped from \$258 billion in January to \$50 billion in March. Pump.fun and Raydium have already positioned themselves for a market rebound. In a fast reply to PumpSwap's launch, Raydium also launched its memecoin incubator, called LaunchLab. Pump.fun further hints at a possible launching of its own native token, which could add to its use cases and boost trading activities. The pumpfun team via an X space teased about PumpSwap's native token during an AMA session. The team further expressed its mission to create something like Binance and bigger. Whether PumpSwap can maintain its strong performance will depend on how it adapts to market changes and keeps attracting traders. Highlighted Crypto News for Today California Assembles Bitcoin Rights Bill to Secure Self-Custody for Digital Asset Holders

As 2025 approaches, the crypto market is not slowing down, and neither are discerning traders. The hunt for the best crypto coins to buy now centers on coins that offer more than impressive statistics. These coins showcase solid technology, viable applications, and enduring momentum. The hot topics currently? BlockDAG, XRP, Solana, and Cardano. Each offers unique features, and their potential for significant returns could catch many by surprise. 1. BlockDAG: Crypto with \$1 Price Surge Potential BlockDAG (BDAG) is a frontrunner in the race for the best crypto coin to buy now. Its advanced directed acyclic graph (DAG) architecture allows transactions to proceed in parallel, eliminating delays and bottlenecks. This efficiency is particularly valued by developers for creating fast, effective decentralized applications. In its presale phase, BlockDAG has garnered over \$208.5 million, with 18.9 billion BDAG coins already distributed. Currently, in its 27th batch, BDAG is priced at \$0.0248. Early supporters have seen a 2,380% return, and some analysts forecast a rise to \$1 by 2025, representing a potential 3,932% increase from today's figures. Anticipation is also building around BlockDAG's mainnet launch set for later this year, with 10 central exchange (CEX) listings expected in 2025. For those focusing on the long term and eager to engage early in a promising project, BlockDAG remains a standout choice. 2. Ripple (XRP): Engineered for Global Finance XRP is in the spotlight as a prime candidate for worldwide payment systems. It has been mentioned by the United Nations as a potential key player in future international digital payment strategies. There are rumors that the U.S. might consider XRP for inclusion in a strategic reserve. Market expert Maximilian Staudinger has suggested that the SEC could utilize XRP to facilitate the release of \$1.5 trillion currently locked in international Nostro accounts. XRP stands out as the best crypto coin to buy now due to its swift transaction capabilities and operational efficiency. With increasing discussions about its role in future reserve assets and growing global interest, XRP is a contender for significant appreciation. Currently, XRP's price has not yet exceeded \$3, but market pressure is decreasing, as indicated by a Relative Strength Index (RSI) of 34. Over the past day, XRP has increased by 12.4%, reaching \$2.53, showing signs of stability with potential to break the \$3 threshold. 3. Solana (SOL): Awaiting ETF Decisions Known for its high performance as an alternative to Ethereum, Solana has seen its market valuation soar to \$65.6 billion since its inception in 2020. Speculation is rife about potential SEC approval of Solana-based ETFs in 2025, which could bridge traditional investors to this crypto asset. Given that Bitcoin and Ethereum have already secured ETF approvals, Solana might be next in line. Currently, Solana is experiencing a price correction after peaking at \$260 in January, with a nearly 50% drop influenced by broader market conditions. Its RSI at 57 suggests a stabilizing market with moderated buying activity, likely leading to steady prices in the near term. 4. Cardano (ADA): Consistent Growth and Technical Rigor Cardano, with a market value of \$25.2 billion, is rapidly gaining ground on Solana as a robust Ethereum competitor. Rumors persist about potential inclusion of Cardano in U.S. reserve assets. Founded by Ethereum co-creator Charles Hoskinson in 2014, Cardano was designed to be a scalable and reliable blockchain solution. Cardano's development team maintains a high level of transparency, with its price currently stable at \$0.70, and resistance seen at the \$1 to \$1.10 range. This stability, coupled with a commitment to clarity and potential for growth, positions Cardano as one of the best crypto coins to buy now. Crypto Coins to Watch for Long-Term Success in 2025 As we approach 2025, the crypto landscape could transform significantly. XRP is making strides in global payment applications with substantial political and economic implications. Solana looks towards potential ETF approvals, and Cardano continues to build its platform with steady technical advancements. And then there's BlockDAG. Early supporters have witnessed a return of 2,380%. With its price currently at \$0.0248 in its 27th batch and projections reaching \$1, an astounding 3,932% ROI is within reach for early participants, making BlockDAG an intriguing prospect as the best crypto coin to buy now for outstanding gains in 2025. The crypto industry shifts constantly, and every now and then, some digital coins start to gain serious attention due to strong growth signs. Among this movement, a few projects are pulling ahead because of their technical power and steady rise, earning them a place among the top trending cryptos for 2025. Polkadot (DOT) stands out with its cross-chain system, BlockDAG (BDAG) is getting noticed for solving speed and scaling issues, Solana (SOL) keeps building with fast performance, and Cosmos (ATOM) is pushing the future of connected blockchains. Here's a closer look at what makes these coins the top trending cryptos this year. - BlockDAG: Record-Breaking Presale & Growing Ecosystem Among the top trending cryptos in 2025, BlockDAG (BDAG) is gaining attention due to its solid foundation and clear progress path. Every part of its strategy appears to add directly to BDAG's future price surge. BlockDAG has raised more than \$209.5 million in its presale so far, and the growing demand has led to a 2,380% price increase. The current rate is \$0.0248, but experts expect the price to climb to \$1, offering a possible 3,932% rise. This increase isn't based on hype—it reflects actual growth and user interest. Its structure brings together Proof-of-Work and DAG technology to handle more transactions at lower fees. This setup brings in creators, developers, and users who want real utility. More than 700,000 people are mining BDAG through its X1 mobile miner and TG tap game. Also, over 200 decentralized apps are now being created under the project. As BlockDAG prepares for its mainnet launch and 10 exchange listings, demand is expected to spike even more. The rise in value closely follows its growing user base, making BlockDAG a strong choice in the list of top trending cryptos for this year. - Polkadot (DOT): Building Bridges Across Chains A key name in the list of top trending cryptos, Polkadot (DOT) is known for solving one major challenge—getting blockchains to talk to each other. Its parachain feature helps different blockchains work as one, which is a major step in scaling the technology. Polkadot's new Bridge 1.4 and MetaMask updates have helped it become more user-friendly. Staking dashboard changes are also making it easier for people to join and earn. As more services want to connect across different blockchains, Polkadot becomes even more valuable. This push toward better connection and ease of use keeps Polkadot near the top of the crypto growth list. - Solana (SOL): Speed and Real Use Cases With its super-fast transactions and cheap fees, Solana (SOL) keeps showing it's one of the top trending cryptos of 2025. Its reach is now stretching into DeFi, Web3, and AI, showing signs of major expansion. In 2024, about 8,000 new developers joined the network, showing its strong developer support. Events like the SendAI hackathon and key partnerships are helping Solana grow its use cases. With more apps and tools connecting to the network, Solana is shaping up as a major force with long-term potential. People looking for a network ready to expand fast are watching SOL closely. - Cosmos (ATOM): Advancing Multi-Chain Connectivity Cosmos (ATOM) is pushing forward with tools that let blockchains work together. It isn't just adding features—it's laying the base for future tech in blockchain. Its communication tools allow smooth interaction between different chains, bringing new options for dApp creators. Zero-fee limit orders on its Osmosis exchange and IBC transfers with Starknet are some recent wins that show how capable the project is. Added privacy functions are also in development. These updates, along with Cosmos's strong structure, make it one of the top trending cryptos, with a path to lasting relevance in the space. Top Trending Cryptos in 2025: Final Remarks! Solana with its quick transactions, Polkadot's chain linking tools, and Cosmos's multi-chain progress each bring different strengths, helping them rise among top trending cryptos. Their growing adoption and usefulness hint at strong performance ahead. But BlockDAG brings something extra. Its unique tech setup, large presale progress, and 10 planned exchange listings point toward a strong breakout. With 200+ apps in the works and fast adoption through its miner tools, BDAG is gearing up for a major rise. Ignoring this project could mean missing one of the top trending cryptos making waves in 2025. Disclaimer: TheNewsCrypto does not endorse any content on this page. Investors in cryptocurrencies search for the next great prospect nonstop. Solana (SOL)'s spectacular expansion in the last cycle confirmed that early investments in worthy initiatives might pay off remarkably. XRP and Rexas Finance (RXS) are becoming two strong rivals for exponential expansion as the market prepares for a possible bull run. What if, however, these two assets adopted Solana's past trajectory? By Q4 2025, let's examine the possible profits from a \$799 investment in XRP and RXS. The Solana Phenomenon: A 51,000% Surge Examining Solana's past success will help us appreciate XRP and RXS's possibilities. Starting in March 2020 at about \$0.50, Solana (SOL) grew exponentially and peaked in November 2021 at about \$259.96. This shows a fantastic rise of around 51,000% in less than two years. XRP's Growth Potential in 2025 Ripple's XRP has been a major player in the cryptocurrency market, particularly for its ability to transform cross-border payments. XRP is priced at \$2.22 as of March 13, 2025; market analysts project a possible rise motivated by post-electoral enthusiasm and Ripple's ongoing developments. In the first half of 2025, some analysts estimate XRP falling between \$5 and \$7. But what if XRP followed Solana's historical path and surged 51,000%? This would put XRP's price at approximately \$1,132 per token. A \$799 investment at the current price of \$2.22 would yield approximately 360 XRP tokens. If XRP hit \$1,132 per token, this investment would skyrocket to \$407,520 by Q4 2025. Rexas Finance (RXS): The Next Big Crypto Asset? With its original method of real-world asset tokenization, Rexas Finance (RXS) is creating waves in the cryptocurrency scene. The platform changes everything in the trillion-dollar

tokenization market by allowing assets like real estate, commodities, and collectibles to be seamlessly digital. Investors have taken notice, and RXSâ€™s presale performance has been nothing short of spectacular. Currently priced at \$0.20 in stage 12 of its presale, RXS has already surged by 566% from its stage 1 price of \$0.030. The presale has raised \$47,356,007, selling 456,777,747 RXS tokens, with only 8.64% of the final stage remaining. On June 19, 2025, RXS will officially launch at \$0.25, marking a 25% increase for final-stage presale investors. The Potential Gains of a \$799 Investment in RXS If RXS were to mirror Solanaâ€™s remarkable 51,000% growth, its price would surge from \$0.20 to approximately \$102 per token. A \$799 investment at the current presale price of \$0.20 would grant an investor 3,995 RXS tokens. At \$102 per token, this investment would be valued at an astounding \$407,490 by Q4 2025. Why Rexas Finance is Poised for Success Rexas Finance is not just another token but an innovative ecosystem bridging blockchain technology with real-world assets. Several factors contribute to its strong growth potential: - CoinMarketCap and CoinGecko Listings: RXSâ€™s reputation and investor appeal have been enhanced by previously landing listings on these significant sites. - Certik Audit: Certik has conducted a thorough security audit of Rexas Finance to guarantee investors a transparent and open environment. - Community-Driven Approach: Unlike many initiatives seeking venture capital backing, Rexas Finance has concentrated on grassroots investor support, enabling people to help it expand. Final Thoughts: A Life-Changing Opportunity? Should XRP and RXS grow like Solanaâ€™s last cycle, a small \$799 investment in either asset may result in life-changing gains by Q4 2025. Although the market for cryptocurrencies is still erratic, the past performance of initiatives like Solana shows that transformative results are achievable. Rexas Finance, with its real-world asset tokenization model, growing community, and impressive presale performance, stands out as a high-potential investment. As the RXS presale nears its conclusion, investors have a limited window to get in before the price jumps upon launch. Itâ€™s unlikely for XRP to rise to \$1,132 from its current price of \$2.22, but RXS aims to reach \$102 from its current price of \$0.20 as it shows a strong bullish momentum after surging 566% in its presale. With XRP positioned for a significant breakout and RXS offering groundbreaking opportunities, those who take action today may soon be celebrating massive gains. The question is, are you ready to move before itâ€™s too late? - Solana has factored in a modest price dip of 5.08% in the last 24 hours. - The altcoinâ€™s daily trading volume also shows a drop of 20.03% as per CMC data. In the last 24 hours, the overall crypto market pendulum decided to swing towards the bearish end yet again. However, this time it tested previous support rather than consolidating. Bitcoin is currently docked at the \$83K level causing distress to investors. This has also affected the altcoin sector. Particularly, one of the leading altcoins, Solana dipped back to the \$120 range following Bitcoinâ€™s descent. It factored in a price drop of 5.08%, which though modest, has caused it to fall back to support levels. In the Asian afternoon hours of March 28, SOL was trading at a high of \$131.96. However, as bearish candles sparked, it fell to \$125 and is inching closer to the \$120 mark. At the time of writing, Solana was trading at \$125.05 as per CMC data. Zooming out onto its weekly chart, Solana shows a similar 4.36% descent. The altcoin had recently tested the \$140 level over the past week. Its weekly high stands at \$147.05, inching closer to the \$150 range after it successfully broke the prolonged \$130 resistance. Will Solana Price Drop Further? On analyzing its technical indicators, Solanaâ€™s Moving Average Convergence Divergence (MACD) MACD line stands below the signal line. Although itâ€™s inching towards a crossover, if SOL drops further, the bearish trend will prolong. On the other hand its RSI value is standing at 41.18 as per TradingView data. This further suggests that the investors are selling and a negative market sentiment prevails. If Solana continues its downward trend it might test the support levels of \$122.98 and \$120.04. Meanwhile, other altcoins such as Cronos and SUI have shown downward movements in the last 24 hours, when referring to CMC data.

Strengthening Solana: SOSANA Brings Community, Rewards, and Smart Voting to the Ecosystem Amidst Solanaâ€™s dynamic developments, including its inclusion in the U.S. Crypto Strategic Reserve and upcoming futures offerings, SOSANA (\$SOSANA) is stepping up to help stabilize the ecosystem and strengthen the network for everyone. Short for â€œShiny Object Syndrome And Nothing Accomplished,â€ SOSANA turns meme-fueled chaos into community-driven success. Itâ€™s more than just another tokenâ€”itâ€™s a movement. With a structured voting system that rewards smart degens and filters out the noise, SOSANA brings accountability, trust, and real rewards back to the Solana ecosystem. The project embraces cryptoâ€™s chaotic nature with a satirical twist, but its systems, rewards, and voting mechanism are built to last. Solanaâ€™s Rapid Growth Faces New Challenges Solanaâ€™s market has been a rollercoaster: - Crashing 50% as FTX dumped 11.2 million SOL back into circulation. - Soaring 25% overnight after Trumpâ€™s crypto reserve announcement. - Facing network instability as degens chase the next â€œone hundred timesâ€ meme pump. With such rapid growth, Solanaâ€™s ecosystem has become overwhelmed with new token launches, making it harder for quality projects to stand out and for the network to function at full strength. Adding to the chaos, Solana is experiencing an unprecedented token oversupply. Platforms like Pump.fun have enabled tens of thousands of new token launches in just days, flooding the network with low-effort launches, rug pulls, and fleeting hype cycles. Legitimate projects struggle to break through, and degenerate gambling has become the norm. The Solution: SOSANA â€” Strengthening Solana Through Smarter Community Decisions SOSANA helps bring structure to Solanaâ€™s rapid expansion, making participation both smarter and more rewarding. By organizing how new tokens are discovered and supported, SOSANA ensures that the best projects thriveâ€”strengthening confidence in Solana as a whole. - Nominate & vote on upcoming tokens (no more blind gambling). - The best projects rise based on votesâ€”not just hype. - Earn rewards for making the right calls. - Stronger voting = stronger confidence = a more stable Solana. - Degen Voter Bonus (1% reflections) is used to buy the winning token and distribute it to voters who backed the winner. As a result, quality triumphs over quantity. A system where real degens make smart decisions and get rewarded for it. SOSANA Community Hub The SOSANA Community Hub is where Solana enthusiasts connect, learn, and growâ€”featuring forum discussions, local meetups, giveaways, and crypto education covering everything from beginner basics to launching a project. Launch Details & Key Features - SOSANA goes live March 17, 2025. - Voting rounds happen every two weeks. - The person who nominates a winning token earns \$500 in SOSANA. - Referral program rewards smart degens who bring in others. - Tokenomics designed for long-term engagement, not just pump & dump. Strengthening Solana Strengthens the Entire Market SOSANA isnâ€™t just a nameâ€”itâ€™s a mission. â€œShiny Object Syndrome And Nothing Accomplishedâ€ perfectly describes the problem SOSANA is solving. Meme coins will always existâ€”but they donâ€™t have to be random, risky, or rug-prone. By solving the junk token problem, SOSANA helps stabilize Solana, which in turn strengthens the entire crypto market. When Solana thrives, the industry thrivesâ€”and SOSANA is here to make sure that happens. This isnâ€™t just about voting. Itâ€™s about coordinated actionâ€”when a winning token is crowned, the SOSANA community apes in together. SOSANA isnâ€™t just a token. Itâ€™s a movement Join the real community (not just another group chat): - sosana.community (Meetups, discussions, and smarter governance.) - t.me/SosanaToken (Degens yelling â€œWAGMIâ€ at each other in real-time.) - For more details, visit: <https://sosana.io> Legal Disclaimer: This website contains content in the form of parody and satire and is subject to fair use. Crypto market continues to adapt, with major projects making good sized strides closer to new price milestones. Solana is targeting a surge to \$500, pushed via extended adoption, institutional interest, and network improvements. Meanwhile, Ozak AI is gaining traction within the AI-driven crypto space, aiming for a \$1 valuation because it integrates artificial intelligence with blockchain generation. With both projects showing strong capability, traders are closely watching whether or not these cryptos can deliver significant gains in 2025. Solanaâ€™s \$500 Surge â€” Whatâ€™s Driving the Growth? Solana has established itself as a primary force in the blockchain enterprise, known for its excessive transaction speed and low costs. Its growing presence in decentralized finance, NFTs, and gaming has placed it as one of the top altcoins in the market. Key elements fueling Solanaâ€™s potential upward thrust to \$500 encompass: Institutional Investment: Large-scale traders hold to build up Solana, betting on its long-term growth. Network Improvements: Solana has been addressing beyond stability troubles, making it an extra attractive alternative for developers and users. Expanding Ecosystem: More DeFi platforms, NFT systems, and gaming applications are launching on Solana, increasing demand for SOL tokens. Market Sentiment: If Bitcoin and other primary cryptocurrencies experience a bull run, Solana should gain notably. At its top, Solana reached over \$250, and analysts believe that with enduring adoption and bullish market situations, the \$500 goal is practical in the coming year. Ozak AIâ€™s \$1 Target â€” The Future of AI in Crypto? Ozak AI is a rising AI-powered cryptocurrency designed to revolutionize the blockchain era with artificial intelligence integration. Its predictive analytics and information-driven approach have made it a strong project in the AI crypto zone. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.093 each, with the next stage price set at \$0.095. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. Key reasons Ozak AI could reach \$1 in 2025 include: - AI-Powered Market Analysis: Ozak AI leverages artificial intelligence to predict developments and enhance trading techniques. - Growing AI Sector in Crypto: The demand for AI-based blockchain solutions is increasing, positioning Ozak AI for widespread boom. - Presale Momentum: Early investors have already visible over 90 percentage returns, indicating robust market interest. - Adoption Potential: As more buyers search for AI-primarily based solutions, Ozak AIâ€™s call for growth, pushing its price toward the \$1 mark. With AI playing a developing function in financial markets, Ozak AI is well-located to capitalize on the fashion, making its \$1 price goal a robust opportunity. Solana and Ozak AI both have robust growth potential in 2025. Solana, as a well-mounted blockchain, offers a confirmed track report and a more stable funding choice, with its \$500 target depending on persevered adoption and market situations. Ozak AI, on the other hand, represents a high-risk, high-reward opportunity with the potential for full-size returns if AI-pushed cryptos benefit mainstream adoption. Investors looking for long-term reliability may also choose Solana, while the ones seeking explosive growth may additionally see Ozak AI as the higher bet. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Bitcoin holders may now utilize Solanaâ€™s DeFi ecosystem, enabling cross-chain Bitcoin liquidity. - Zeus Networkâ€™s flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana. The first on-chain Bitcoin exchange developed on Solana, APOLLO, Zeus Networkâ€™s flagship decentralized application, was formally launched. Zeus Network has unveiled zBTC, the first fully permissionless Bitcoin asset on Solana, in addition to APOLLO. Bitcoin holders may now utilize Solanaâ€™s DeFi ecosystem, enabling cross-chain Bitcoin liquidity, without depending on centralized wrapped solutions. APOLLO adds Bitcoin liquidity in a completely decentralized, non-custodial setting by enabling users to lock native BTC and mint zBTC directly on Solana at a 1:1 ratio. While traditional wrapped Bitcoin models depend on opaque systems and centralized custodians, APOLLO and zBTC provide a transparent, trustless experience free from custodial concerns and KYC requirements. During the private mainnet phase, the platform has shown a great deal of interest, minting 50 zBTC before launch and registering over \$40 million in on-chain volume. With a range of decentralized financial services that take use of Bitcoinâ€™s unparalleled liquidity and security to interface with contemporary DeFi infrastructure, APOLLOâ€™s debut marks the arrival of Bitcoin Finance, also known as BTCFi, on Solana. Bitcoin holders may now engage in a variety of DeFi strategies across Solana by using zBTC, such as trading zBTC on Jupiter and offering liquidity on Meteora, HawkFi, and Raydium. In the near future, vault tactics for yield optimization will also be introduced, including depositing zBTC on Drift and Neutral Trade. Through ZeusScan, a specially designed Proof of Reserves system that guarantees every Bitcoin transaction is completely auditable, Zeus Network further offers on-chain insight into Bitcoin reserves. This utility preserves the integrity of APOLLOâ€™s trustless architecture while bolstering user confidence. Zeus Network intends to roll out additional services that further modularize Bitcoin liquidity in the next months. It will be simpler than ever to manage Bitcoin holdings across protocols and formats when APOLLO allows users to switch between zBTC, cbBTC, and wBTC and withdraw any version back to native Bitcoin. Users will have more freedom and control thanks to this modular structure, which will also improve market efficiency. Along with many other things, users will be able to borrow and lend funds on Drift and Save Finance. Onboarding institutional liquidity partners, including other UTXO-based assets like DOGE, LTC, and KAS, and evolving ZPL-assets to improve liquidity coverage are among Zeus Networkâ€™s top goals for the future. As Zeus continues to build BTCFi on Solana, other Bitcoin-native apps will be released on Solana. The Solana Virtual Machine (SVM) serves as the foundation for the multi-chain layer Zeus Network, which enables permissionless communication between Bitcoin and other significant blockchain ecosystems. It creates safe, scalable cross-chain connections by smoothly integrating liquidity from UTXO-based blockchains like Litecoin, Dogecoin, and KAS as well as Bitcoin into the Solana ecosystem. Zeus Networkâ€™s flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana by showcasing the decentralized, trustless integration of native Bitcoin using a lock-mint mechanism.

- Solana price struggles below \$148 despite 11% gain over four days. - NVT Ratio hits 5-month high, suggesting network hype outpaces actual usage. - Impending Death Cross between 50-day and 200-day EMAs threatens 16-month uptrend. Solana (SOL) continues to face resistance at the \$148 level despite recent price gains, raising concerns about its short-term prospects. The altcoin has posted an 11% increase over the past four days but remains unable to secure this key support level, keeping

it from breaking through the important \$150 psychological barrier. Technical indicators now point to a potential reversal in SOL's price trajectory, casting doubt on its ability to maintain upward momentum. On-chain data reveals a concerning disconnect between network sentiment and actual transaction activity. The Network Value to Transactions (NVT) Ratio for Solana has reached a 5-month high, indicating that market valuation may be outpacing genuine network utility. This metric, which compares market capitalization to transaction volume, suggests that despite positive market sentiment, Solana is not experiencing corresponding growth in network adoption or engagement. Solana ETF developments provide hope. Recent developments, including Fidelity's filing for a spot SOL ETF with CBOE, have provided some optimistic news for investors. However, this announcement has yet to translate into substantial on-chain activity. While institutional interest through ETF filings represents a positive signal for Solana's mainstream acceptance, the lack of corresponding blockchain activity raises questions about the sustainability of current price levels. Perhaps most concerning for Solana bulls is the looming technical pattern on the price chart. The 50-day and 200-day exponential moving averages (EMAs) are approaching a Death Cross formation, where the shorter-term average crosses below the longer-term one. This would mark the end of a 16-month Golden Cross period that has generally supported Solana's upward price action since early 2024. If confirmed in the coming days, this Death Cross could trigger additional selling pressure, potentially accelerating Solana's price decline. The technical pattern historically signals a shift in momentum from bullish to bearish and often precedes extended downtrends in various markets, including cryptocurrencies. Currently trading at approximately \$142, Solana needs to overcome the stubborn \$148 resistance to avoid further downside. This price level has repeatedly rejected SOL's attempts to move higher, creating a ceiling that limits the cryptocurrency's ability to reclaim the \$150 mark. Until this resistance is broken, Solana remains vulnerable to continued bearish pressure.

- Cboe BZX filed a 19b-4 form on March 25 to list Fidelity's spot Solana ETF. - The SEC's stance on altcoin ETFs may shift under Trump's administration. Cboe BZX Exchange has officially submitted a 19b-4 filing to the U.S. Securities and Exchange Commission (SEC) to list a spot Solana (SOL) exchange-traded fund (ETF) from Fidelity. The filing, made on March 25, follows Fidelity's registration of a Solana trust in Delaware. Fidelity joins asset managers such as VanEck, Grayscale, 21Shares, Bitwise, and Canary Capital in seeking approval for a spot SOL ETF. Analysts estimate potential inflows of \$3 billion to \$6 billion based on market cap comparisons with Bitcoin (BTC) and Ethereum (ETH) ETFs. Solana futures contracts debuted on the Chicago Mercantile Exchange (CME) on March 17. Trading volumes reached \$12.3 million on launch day, lower than BTC's \$102.7 million and ETH's \$31 million. However, market cap-adjusted volumes show that demand aligns with Bitcoin and Ethereum. On March 20, Volatility Shares launched the first Solana futures ETFs in the U.S. These include the Volatility Shares Solana ETF (SOLZ) and the leveraged Volatility Shares 2X Solana ETF (SOLT). Analysts view their performance as a gauge for future spot ETF demand. Competitive ETF Landscape Fidelity's latest filing follows Cboe's March 12 application to list Franklin Templeton's spot Solana ETF. Multiple firms have submitted applications for altcoin-related ETFs. These include funds for Litecoin (LTC), XRP, Cardano (ADA), Polkadot (DOT), and even memecoins like Dogecoin (DOGE). Canary Capital recently applied for an ETF tracking a non-fungible token (NFT) collection, exposing investors to the PENGU token and Pudgy Penguins NFTs. The ETF market is expanding as asset managers test regulatory boundaries. Highlighted Crypto News Today Fidelity Enters Stablecoin Race Amid Growing Tokenization Trend

- Solana jumps to \$144 with a 3% gain. - SOL has recorded \$11.74 million in liquidations in the last 24 hours. A modest uptick in the global crypto market cap has resulted in a mix of green and red charts across assets. All major assets are attempting to reclaim lost ground, while Solana (SOL) has spiked over 3.23%. The asset has faced a series of declines and key support retests. With this price bouncing between support and resistance levels, market analysts are watching out Solana's price movement's potential breakout or another dip ahead. Solana opened the day trading at a low of \$139.39, and the wake of bulls triggered it to climb toward a peak of \$147.06. At press time, Solana traded at \$144.47 with a \$73.88 billion market cap. Furthermore, Solana has witnessed a 24-hour liquidation of \$11.74 million, as per Coinglass data. Consequently, SOL's daily trading volume has reached \$3.5 billion. An on-chain data reveals that Pumpfun has recently deposited 104,120 SOL worth \$15 million to Kraken. Over time, the platform has deposited a total of 2,733,776 SOL valued at approximately \$526 million at an average price of \$192. Additionally, it has sold 264,373 SOL for \$41.64M USDC at \$158. Will Solana Hold Its Gains? Assuming Solana jumped over the \$145 level, the altcoin could target its crucial resistance near \$147.37. Clearing this resistance level might open the door for a potential move toward the crucial \$150. On the downside, a potent death cross of Solana could trigger the price to steadily fall and test the \$138.12 support. A move below this range might amplify losses, edging the price toward the \$130 mark. SOL's Moving Average Convergence Divergence (MACD) line stationed above the signal line indicates bullish momentum within the market. The asset may continue to climb if the uptrend holds. Besides, the Chaikin Money Flow (CMF) indicator found at 0.24 suggests a positive money flow into the asset. In the meantime, the daily trading volume of Solana has slipped by over 1.36%. The Bull Bear Power (BBP) value of 3.82 signals that the bulls are in control of the market. Moreover, SOL's daily relative strength index (RSI) at 64.39 infers a positive momentum, and might approach the overbought territory.

Amid the Dogecoin price fluctuations in the market, analysts have forecasted an uptrend. Queen predicts the value of the memecoin could rise to \$0.20 if it breaks out of a falling wedge. Meanwhile, a new entrant is gaining the attention of new and old investors. Although Solana has been gaining traction in the DeFi market for quite some time now, a new contender called DTX Exchange (DTX) could take over this year. With over 700k users and \$16.1 million raised within a short time, DTX Exchange shows potential for 10x growth in the coming months. Dogecoin (DOGE) Trades in Falling Wedge According to Coinvo, there is a falling wedge pattern on the Dogecoin price chart. The analyst confirmed that bulls are already staging a breakout, which could occur anytime soon and push the Dogecoin price up the charts. Meanwhile, a crypto enthusiast called Queen also mentioned the falling wedge pattern. They forecast the Dogecoin price could surge to \$0.18 first in the case of an upward breakout. Afterward, the next Dogecoin price target is \$0.20. On the other hand, Queen argued the Dogecoin price could continue its downward movement if bulls fail to force a breakout. At the moment, the Dogecoin price has lost all of its recent gains this week. CoinMarketCap data reveals the Dogecoin price has plunged by 0.3% on the weekly timeframe and 33.5% on the monthly chart. The memecoin price has been consolidating between \$0.16 and \$0.17 in the past week. Solana (SOL) Forecasted To Soar If Key Support Holds The Solana price has been trading sideways in the past few days. Its value has been consolidating between \$110 and \$140 since March 10, per CoinMarketCap. This bearish Solana price movement has left investors disappointed as many diversify to new DeFi projects. Amid the downtrend, a popular Bitcoin investor on X has told his followers to exercise patience. Coinvo says the support zone around \$120-\$130 could be the one that pushes the Solana price to new highs. Another analyst, Man of Bitcoin, says the Solana price is forming a diagonal pattern to the upside. He predicts the Solana price might surge to \$153 in the coming days. However, Man of Bitcoin told his audience to watch out for the Solana price support around the \$122 zone. Meanwhile, Mister Crypto also reiterated the support zone cited by Coinvo. The expert says the Solana price might pump to \$245 once it breaks out of this downtrend. Why Investors Are Optimistic About DTX Exchange (DTX) With the Dogecoin price trading in the red zone, investors are looking for promising altcoins to buy. Among them is the new altcoin called DTX Exchange (DTX). DTX is in the presale stage and is currently priced at \$0.18. Its value has risen by 800% and it is expected to 10x in the near future. DTX has also secured over \$16 million and has a constantly expanding user base of more than 700,000 people. Such high interest in the market shows that investors are bullish on the future of DTX Exchange and its strategic plan. The DeFi project seeks to revolutionize trading through its hybrid approach. It offers the best of centralized and decentralized exchanges. The concept of DTX Exchange is based on its VulcanX blockchain, which is fast and secure. This makes it easier for traders to take advantage of opportunities in the market. Furthermore, DTX Exchange provides tokenized Exchange-Traded Funds (ETFs) for trading. Currently, DTX has over 1000 tokenized ETFs, which makes it a link between the traditional financial and the crypto market. New Altcoin Catches Investors' Interest While the Dogecoin price is under bearish control. The value of the DTX Exchange coin has risen by 800%, outperforming other top altcoins. As more users enter the DTX Exchange community, its price is expected to skyrocket by 10x making it a top crypto to buy. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is on fire again with the price of Ripple and the Solana price in the green again. Even prominent market experts like Amynox and Mister Crypto have made some bold price predictions for these top altcoins. Meanwhile, a presale star currently in its bonus phase is also capturing the spotlight - DTX Exchange (DTX). Early buyers of this crypto coin are already 800% richer, but this percentage will see a guaranteed 100% growth soon after a Tier-1 CEX lists it. Since DTX Exchange also redefines online trading forever, many traders consider this crypto coin the one with the highest potential for growth in 2025 - even better than XRP and SOL. DTX Exchange (DTX) To Experience 100% Growth Very Soon DTX Exchange (DTX) has also made headlines as the price of Ripple and the Solana price managed to regain bullish momentum. DTX has already rewarded early investors with an 800% return, with another 100% growth on the way. As a result, countless traders are rushing to capitalize on this movement. Interest in DTX Exchange was already high as it launched a hybrid trading platform that stands out from its peers. On it, traders can access over 120K asset classes like stocks, gold and crypto coins with up to 1000x leverage. This means just a \$100 investment opens the doors for liquidity of up to \$100K. As a result, there have been over 700K registered users so far. Currently, DTX is in the bonus stage of its crypto ICO event and costs just \$0.18. This is an 800% rise from its starting price of \$0.02. However, this altcoin price will soar to \$0.36 soon after a top-tier CEX lists DTX. This means a 100% return for anyone who buys DTX now. As a result, traders are looking at DTX as one of the top altcoins to buy for fast returns this year. Amynox: The Price of Ripple (XRP) May Soar to \$20 Ripple (XRP) is one of the best cryptos, as it has regained some bullish momentum. Notably, the price of Ripple increased over 10% on the one-week chart. During that time, its value grew from around \$2.20 to over \$2.50. Market analyst Amynox thinks this bullish trend will continue for Ripple (XRP). According to his X post, this altcoin looks poised to soar to \$20 soon. This means nearly a 810% increase for the price of Ripple. Although this Ripple price prediction has excited some traders, many are still skeptical. Since the price of Ripple has soared by 320% on the YTD chart, its highest upswings may have passed. Therefore, traders are looking at crypto coins like DTX for faster gains. Analyst Claims the Solana Price Will See a Rally Any Day Now Solana (SOL) is another one of the top 10 altcoins. On the one-week chart, its value has jumped from around \$120 to over \$130. This means the Solana price grew nearly 5% in a few short days. The community is excited for Solana (SOL) thanks to some bullish statements from analysts like Mister Crypto. In a recent X post, he said this crypto coin will explode once it breaks a downtrend. He foresees the Solana price soaring to \$260 soon. This Solana price prediction has turned some heads, but many traders are still gravitating towards DTX more. Since its VulcanX blockchain showcased a 200K TPS while SOL's sits at 65K, its adoption may be better. Thus, the Solana price may rise slower than that of DTX. What Makes DTX Exchange (DTX) Stand Out From Altcoins Like Ripple (XRP) and Solana (SOL)? While the price of Ripple and the Solana price look to continue their uptrends, DTX Exchange (DTX) gains all the attention. This project may dominate the online trading space which Statista predicts will be worth \$13B by 2026. Therefore, its long-term growth potential and stability may be better than other crypto coins. Not only that, but DTX boasts a smaller market cap than both XRP and SOL. This will bring faster price gains with less money. Due to all these factors, investors consider DTX the best crypto investment and they are rushing to buy it before its value skyrockets by 100% soon. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. Willemstad, Curacao, March 25th, 2025, Chainwire Whale.io has announced plans to migrate its Whale NFT collection from the TON blockchain to the Solana blockchain. The cross-chain transition aims to expand the project's interoperability and accessibility by leveraging Solana's infrastructure. This move represents a strategic shift in blockchain alignment for one of the more prominent NFT collections launched in recent years. Initial Launch on TON Blockchain The Whale NFT collection was initially launched on the TON blockchain, where all 20,000 NFTs were minted at no cost within hours of release. The rapid minting reflected strong early engagement from the community. Over the following year, the collection became one of the most visible projects on Getgems, TON's leading NFT marketplace. According to platform data, the floor price increased approximately sevenfold during this period. Hosted on Getgems.io (collection available here), Whale NFTs quickly became a cultural phenomenon within the TON ecosystem. With eye-catching designs and varying rarities, Whale.io's collectibles became popular display pictures across Telegram, where the team has continued to deliver value, innovation, and utility to keep the project thriving. Buybacks, Supply Reductions, and Fee-Free Trading The Whale team has implemented several mechanisms to manage supply and maintain engagement with the collection, including token buybacks and supply reductions via burns. These practices have been part of the project's ongoing strategy on the TON blockchain, and the team has indicated that similar measures will be introduced following the migration to Solana. In addition, Whale NFTs have been available for trading with zero gas fees on supported platforms, a feature that has contributed to repeated appearances on trending lists within Getgems, TON's leading NFT marketplace. With the upcoming transition to Solana's known for its high throughput and low transaction costs, the collection is expected to remain active across major NFT marketplaces within the Solana ecosystem. Utility That Packs a Punch Whale NFTs aren't just pretty pictures; they're powerhouses of utility, deeply integrated into the Whale ecosystem. At the heart of this is the Wheel of Whales miniapp on Telegram, a play-to-earn sensation that's taking the crypto gaming world by storm. This innovative game offers players the exclusive chance to participate in the distribution of Whale tokens, making it a golden opportunity for anyone looking to dive into the project's rewards system. Owning a Whale NFT isn't just a flex; it's a ticket to amplified benefits within Wheel of Whales. Holders enjoy boosted earnings and a suite of in-game perks, giving them a significant edge in this addictive play-to-earn game. With rarities ranging from common to ultra-rare, each NFT brings its own unique flair and value to the game, making every Whale a prized possession. Highest rarity Golden NFT prices go up to 2000 TON that equals over 7000 USDT. Bridging to Solana: A New Frontier Whale.io has announced its intention to bridge its NFT collection to the Solana blockchain, recognized for its scalability and active NFT ecosystem. The transition

is designed to expand the project's reach by integrating with Solana's infrastructure and user base. According to the team, this cross-chain move reflects a broader strategy to enhance accessibility and engagement across multiple blockchain environments. The bridge from TON to Solana represents an effort to connect two blockchain ecosystems, enabling broader accessibility for the Whale NFT collection. Whale.io will bring its established framework which has included gas-free trading, supply reduction mechanisms, and various utility features into the Solana environment. With Solana's low transaction costs and high-speed processing, the transition is intended to streamline the user experience and support increased activity across NFT marketplaces. Bridge Signals Strategic Expansion Across NFT and Gaming Ecosystems The Whale NFT bridge is a landmark moment for the broader NFT and blockchain gaming industries. It showcases how projects can evolve, adapt, and thrive across ecosystems while delivering consistent value to their communities. For Whale holders, this is a chance to ride the tide of a project that's already proven its worth and is now gearing up for an even bigger splash. For newcomers, it's an invitation to dive into a collection that's equal parts art, investment, and entertainment. Preparing for the Solana Bridge With the upcoming bridge to Solana, Whale.io is transitioning its NFT collection into a new blockchain environment. The project has encouraged community members, NFT collectors, and Telegram gaming participants to follow official channels for updates regarding the bridging timeline, marketplace listings, and upcoming developments within the Wheel of Whales ecosystem. Additional information about the bridging process is available at whale.io/thedailyfinn/nftbridging. Following its presence on the TON blockchain, the collection will now be accessible within Solana's NFT ecosystem. About Whale.io Whale.io is a pioneering force in the NFT and blockchain gaming space, delivering innovative projects that blend art, utility, and community value. With the Whale NFT collection and Wheel of Whales miniapp, Whale.io is redefining what it means to own, trade, and play in the decentralized world. Users can discover the future of Whale.io and \$WHALE token by checking them out here: Website: <https://whale.io/> Socials: https://linktr.ee/whalesocials_tg Contact Whale Spokesperson whale.io.support@whale.io

Solana (SOL) is bracing for heightened volatility as the network experiences a surge in stablecoin activity. Recent data shows that stablecoin inflows to Solana-based protocols have spiked to multi-month highs, initiating a trend that signals increased liquidity and trading interest. This influx of capital, combined with SOL's recent price fluctuations, has left traders on edge, with many anticipating a potential breakout. Adding to the uncertainty, analysts point to Solana's historically volatile price movements during periods of heightened network activity. While some see the influx of stablecoins as a bullish signal, others caution that rapid capital movement can lead to unexpected price swings. Meanwhile, seasoned investors have identified a new crypto project with massive potential to reward early adopters. Stablecoin Surge: Fueling Solana's Market Uncertainty Solana (SOL) has been the centre of heightened market turbulence as stablecoin trading activity on its network experiences extreme fluctuations. Data from Mercuryo reveals that USDT trading on Solana surged by over 137% in the last week of February, following a sharp 61% decline the previous week. This erratic movement signals an uncertain yet crucial period for SOL's price trajectory as traders reposition themselves in response to shifting market dynamics. The sudden spikes in stablecoin transactions suggest that investors are actively reallocating capital, which could lead to sharp price swings for Solana in the near term. Analysts warn that the coming weeks could be decisive for SOL, as technical indicators hint at the possibility of sharp breakouts or corrections depending on broader market conditions. BinoFi's Hybrid Trading Model: The Best of CEXs and DEXs BinoFi is redefining the crypto trading experience by integrating a Trade-to-Earn model that rewards users for engaging with the platform. Traditional exchanges primarily profit from transaction fees. BinoFi is changing this narrative by incentivizing users to trade through gamified rewards. This creates a dynamic and engaging trading environment. BinoFi allows traders to earn rewards based on trading activity, participation in challenges, and strategy sharing. Investors can observe and replicate successful trading strategies through copy trading instead of trading in isolation. This feature enables beginners to follow experienced traders and benefit from their expertise. This system fosters a learning environment while ensuring that users remain active participants in the exchange. The Trade-to-Earn model enhances liquidity on the platform and ensures that even novice traders have an opportunity to maximize their earnings. Privacy-Preserving Compliance: Zero-Knowledge KYC BinoFi takes a privacy-first approach to compliance by implementing Zero-Knowledge (ZK) KYC solutions. Traditional KYC methods require users to disclose sensitive personal information to centralized entities. However, BinoFi's ZK-KYC enables identity verification without exposing personal data. This approach cuts across regulatory compliance and user privacy and ensures that traders can meet jurisdictional requirements while maintaining full control over their information. BinoFi ensures that users from different regions can access the platform while adhering to local regulations by integrating jurisdiction-based compliance adaptation. This adaptability not only makes BinoFi a globally accessible exchange but also protects users from the risks associated with overreaching regulatory enforcement. The hybrid exchange platform is pioneering a new era of compliance in crypto trading with ZK-KYC. BinoFi is actively welcoming investors through its highly anticipated ICO event. The presale offers early adopters a chance to acquire BINO tokens at a discounted price before it is listed on major exchanges. The presale has been carefully structured into multiple phases to ensure a fair distribution while allowing investors to participate at various price points. Currently, the presale is in Phase 1, with more than 20 million BINO tokens already sold. The success demonstrates strong demand from both retail and institutional investors. Some crypto projects come and go without making a dent. Others shake up the industry, introduce groundbreaking tech, and dominate headlines. Currently, three names are catching serious attention: Qubetics (STICS), Sonic, and Solana. Each of these projects is revolutionizing different aspects of blockchain, from asset tokenization to decentralized networking and high-speed smart contracts. Qubetics is already making history with its crypto presale, crossing the \$15.4 million mark with over 503 million tokens sold. Sonic is offering innovative DeFi solutions that simplify complex financial transactions. Meanwhile, Solana continues to refine its lightning-fast blockchain, drawing users and developers with its unmatched efficiency. The real question is why are people rallying behind these projects? Let's break it down. Qubetics: The Future of Real-World Asset Tokenization Traditional finance has one big problem liquidity. High-value assets like real estate, artwork, and rare collectibles are challenging to buy, sell, or fractionalize. Enter Qubetics. This project builds a seamless marketplace where businesses and individuals can tokenize physical and digital assets. It's a game-changer, allowing people to trade fractionalized ownership of assets once locked away in elite financial circles. Qubetics doesn't stop at asset tokenization. Its decentralized VPN service is another powerhouse innovation. Offering privacy-focused, blockchain-secured internet access gives users control over their data and online interactions. Businesses can protect sensitive data, professionals can work securely, and everyday users can browse without surveillance. It's a much-needed upgrade to traditional VPN services. Qubetics Presale Stats: - Stage: 27th - Tokens Sold: Over 503 million STICS - Holders: 23,700+ - Funds Raised: Exceeding \$15.4 million - Current STICS Price: \$0.1300 per token The numbers don't lie Qubetics is a project on the rise. With analyst predictions hinting at potential gains post-mainnet launch, it's gaining traction as among the Top Cryptos to Invest in for Short Term in 2025. Sonic: Revolutionizing Blockchain Speed with Game-Changing Upgrades Sonic's latest upgrade has significantly enhanced transaction speeds, improving finality by 30%. This means transactions are processed and confirmed much faster, reducing wait times and increasing reliability. With this improvement, Sonic addresses one of the biggest challenges in blockchain technology while maintaining network security and efficiency. Sonic has recently partnered with leading DeFi projects to enhance liquidity and scalability within its ecosystem. These collaborations aim to provide users better access to decentralized financial services, creating a more robust and interconnected blockchain space. As DeFi adoption continues to grow, Sonic's expanding network positions it as a key player in the future of decentralized finance. Sonic's cutting-edge features have attracted a growing number of developers looking to build innovative applications on its platform. With its high-speed infrastructure and developer-friendly environment, Sonic is becoming an attractive option for blockchain projects across various industries. This rise in developer interest further solidifies Sonic's position as one of the most promising blockchain networks in the market. Solana Price Prediction: Bullish Momentum on the Horizon Regarding transaction speed and efficiency, Solana remains the gold standard. It boasts 65,000 transactions per second (TPS) with near-zero fees. That's why developers are flocking to the network, choosing it over Ethereum and other slower chains. Solana price prediction has been trending, with many analysts highlighting its growth potential. Despite past challenges, Solana has bounced back, securing major partnerships and expanding its ecosystem. Introducing new Layer-2 solutions and innovative contract enhancements has made it even more attractive to users and developers. Why Solana Price Prediction Remains Bullish - Unmatched transaction speed: 65,000 TPS - Low fees: Less than \$0.01 per transaction - Growing adoption: More projects are migrating to Solana - Institutional interest: More enterprise applications are being built on Solana Why Decentralized VPNs Are the Future Privacy isn't just a buzzword it's a necessity. Security breaches, government surveillance, and data leaks have plagued centralized VPN services. That's where decentralized VPNs come in, offering: - True anonymity - No central authority storing user logs - Improved security - Blockchain encryption ensures data remains private - Global access - Users can bypass geo-restrictions without worrying about censorship - No single point of failure - Unlike traditional VPNs, decentralized networks are resistant to shutdowns Qubetics is at the forefront of this shift, integrating a decentralized VPN into its ecosystem to provide secure, censorship-free internet access. Final Thoughts: Top Cryptos to Invest in for Short Term? Blockchain technology is on the brink of massive adoption, and Qubetics, Sonic, and Solana are at the forefront of this revolution. Whether it's Qubetics' real-world asset tokenization, Sonic's high-speed transactions, or Solana's scalability, each of these projects is solving unique problems and pushing blockchain technology forward. For those looking for top cryptos to invest in for short term potential, these three stand out. Qubetics' presale success, Sonic's rapid advancements, and Solana's institutional adoption signal a strong future ahead. As blockchain evolves, these projects aren't just keeping up they're setting new standards. The next wave of crypto adoption is happening now, and those paying attention could be part of something big. Keep an eye on these developments and stay informed because the future of digital finance is unfolding before us. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs: - What makes Qubetics unique? Qubetics offers a real-world asset tokenization marketplace and a decentralized VPN, solving liquidity and privacy issues. - Is Sonic a good DeFi project? Sonic simplifies DeFi interactions, making it accessible to users without technical expertise. - Why is Solana price prediction so bullish? Solana's high-speed transactions and low fees continue to attract developers and users. - How does Qubetics' presale compare to other crypto launches? Qubetics has already raised \$15.4M, with over 503 million tokens sold, making it one of the most successful presales in 2025. - Why are decentralized VPNs necessary? They ensure privacy, security, and censorship-free internet access without centralized control. Disclaimer: TheNewsCrypto does not endorse any content on this page. Solana (SOL) is on track for a major breakout, with analysts predicting its market cap could surpass \$150 billion in the coming weeks. As investor confidence grows, SOL's high-speed blockchain and DeFi ecosystem continue to attract attention. However, while Solana is set for strong gains, a new AI-powered altcoin is positioning itself for even bigger growth. Lightchain AI. Having already raised over \$18.1 million at a presale price of \$0.007, Lightchain AI is gaining momentum as a high-potential investment, with projections of an explosive 27x surge in 2025. Could this rising AI-driven altcoin outperform Solana and deliver life-changing returns for early investors? The market is watching closely! Solana's Market Cap Surge - Can It Cross \$150 Billion Soon? As of March 21, 2025, the market capitalization of Solana (SOL) is pegged at about \$65.15 billion, with a single token being sold at \$127.71. In order for SOL to have a market cap of \$150 billion, its price has to be increased to \$294 per coin. The main driving force behind such growth could be a number of factors. The most important element is the adoption of Solana in the institutional environment. The introduction of futures ETFs of Solana by companies such as Volatility Shares is expected to bring about a hike in institutional interest and liquidity in SOL. This stands to be a major source of its steady market growth. Also, government campaigns could be another driver of this rise. Trump's announcement of a U.S. strategic cryptocurrency reserve for example including Solana may have a positive impact on the cryptocurrency's valuation. Therefore, initiatives like these might continue nurturing investor confidence in SOL. Besides that, technology is indispensable for the success story of Solana. The Solon technology which is both scalable and efficient blockchain has been the core of the company's allure to dApps and other projects which has served to increase the structural value of its ecosystem. The above-mentioned occurrences are indeed exciting, but in order to reach a \$150 billion market cap, the price of SOL should at least double from the current one. Investors are advised to be aware of the market volatility and actually do their research before they initiate the investment. Lightchain AI Gains Momentum with 27x Growth Potential Lightchain AI is gaining momentum with a 27x growth potential, driven by its robust privacy, decentralized governance, and efficient transaction processing. It ensures privacy and security in decentralized AI by integrating Zero-Knowledge Proofs (ZKPs) and homomorphic encryption, allowing AI computations to be verified without exposing sensitive data. On-chain voting empowers token holders to influence key decisions, ensuring transparent governance where proposals and votes are immutably recorded on the blockchain. Additionally, gas optimization dynamically adjusts fees based on AI task complexity, reducing transaction costs and ensuring efficient resource utilization. With strong privacy protections, community-driven governance, and cost-effective AI execution, Lightchain AI is positioned as a high-growth contender in the AI-powered crypto revolution. Grab Lightchain AI (LCAI) Tokens Before It's Too Late As the market continues to see positive trends in both Solana and Lightchain AI, investors should consider diversifying their portfolios and exploring promising opportunities like LCAI. With its innovative technology and potential for explosive growth, LCAI could be a game-changer in the crypto space. The presale for LCAI has already sold out, with over \$18.1 million raised at a price of \$0.007 per token. Its ICO is expected to launch soon with a target price of \$0.10 per token, representing an initial growth potential of 14x. However, based on current projections, analysts predict that by 2025 LCAI could

reach a value of \$0.189 per token, resulting in a massive 27x growth potential for early investors. Donâ€™t miss out on the opportunity to be part of the AI-powered crypto revolution and potentially secure life-changing returns. Keep an eye on Solana and Lightchain AI as they continue to make waves in the market. The future looks bright for both, and itâ€™s never too late to join the party. As always, do your own research and consult with a financial advisor before making any investment decisions. Happy investing! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is heating up, and finding the next 100x opportunity before the bull run kicks into full swing is every early buyerâ€™s goal. But with so many projects making big promises, which ones are actually building for the long term? Three cryptos are standing out right nowâ€”Qubetics, Solana, and Immutable Xâ€”each making serious moves that could define the blockchain landscape in 2025. Solana is celebrating a major institutional breakthrough as Solana futures debuted on the CME Group with \$5 million in trading volume, a sign that Wall Street is finally paying attention. Meanwhile, Immutable X is crushing it in the gaming sector, reporting a 50% surge in profits as blockchain gaming adoption skyrockets. But the real disruptor? Qubetics (STICS), a blockchain aggregator thatâ€™s solving interoperability with AI-powered tools, and itâ€™s still in presale mode. With over \$15.3 million raised, Qubetics is rapidly cementing itself as a 100x crypto for 2025. Qubetics (STICS) â€™ The Future of Interoperability is Here One of the biggest problems in blockchain today? Interoperability. Right now, blockchains are like walled-off cities, each requiring its own infrastructure, smart contract standards, and ecosystems. This fragmentation slows adoption and makes Web3 development a nightmare. Thatâ€™s where Qubeticsâ€™ QubeCode IDE comes in. This AI-powered development environment allows blockchain developers to write and deploy smart contracts that automatically adapt to multiple networksâ€”without rewriting code for Ethereum, Solana, or Avalanche separately. For example, imagine a global e-commerce company wanting to integrate payments across multiple chains. With Qubeticsâ€™ QubeCode IDE, they can launch a unified smart contract that works across different blockchains, unlocking seamless cross-chain commerce. Thatâ€™s why Qubetics is being labeled a 100x crypto for 2025â€”because itâ€™s solving a massive pain point in the industry. Qubetics Presale â€™ The Clock is Ticking on a 10,000% ROI Opportunity Qubetics isnâ€™t just a groundbreaking Web3 solution, itâ€™s also in one of the hottest presales of 2025. Now in Stage 26, STICS is trading at \$0.1181. The project uses a timed release structure where each stage lasts 7 days, followed by an automatic 10% price increase every Sunday at midnight. Itâ€™s a strategy designed to reward early entryâ€”and so far, itâ€™s working. The presale has already brought in \$15.3 million, attracted 23,500+ holders, and sold over 502 million tokens. The numbers alone are impressiveâ€”but the ROI potential is what truly stands out. At \$1, returns hit 746.04%. At \$10, that soars to 8,360.26%. If STICS reaches \$15, the return maxes out at 12,590.69%. Letâ€™s say you contribute \$7,500 right now. That would give you approximately 63,450 STICS. If those tokens reach just \$10, the value jumps to \$634,500. Itâ€™s rare to see this kind of upside with such transparent structureâ€”and itâ€™s disappearing fast. Solana (SOL) â€™ Institutional Interest Grows with CME Futures Launch Solana just hit a major milestone as CME Group launched Solana futures contracts, bringing institutional-grade financial products to the Solana ecosystem. With \$5 million in trading volume on launch day, this signals growing demand from institutional players. CME futures are often seen as a legitimization step for cryptocurrencies, as Wall Street and hedge funds typically use these financial instruments to gain exposure without directly holding assets. With Solana now joining Bitcoin and Ethereum on CME Groupâ€™s futures platform, it could see a wave of new liquidity entering the market. Despite the excitement, Solana is currently facing resistance at its 50-day moving average. Analysts suggest that a breakout above this level could send SOL surging higher, but failure to do so could mean further consolidation. However, with institutional adoption growing, Solana remains a strong player in the 100x crypto for 2025 conversation. Immutable X (IMX) â€™ Dominating Blockchain Gaming with a 50% Profit Surge Immutable X is quietly becoming the backbone of blockchain gaming, and its latest financial report proves it. The company announced a massive 50% increase in profits in 2024, driven by growing adoption of Web3 gaming and NFT marketplaces. Unlike Ethereum, which struggles with high gas fees and slow transactions, Immutable X offers gas-free NFT minting and ultra-fast transactions, making it the go-to platform for blockchain game developers. As more game developers migrate from traditional platforms to Web3, Immutable X is well-positioned for long-term dominance. With partnerships with gaming giants and NFT marketplaces, IMX could be one of the biggest winners in the blockchain gaming sector, making it a solid candidate for massive growth in 2025. Conclusion â€™ Qubetics is the Ultimate 100x Crypto for 2025 Solanaâ€™s institutional adoption is a major win, and Immutable X is dominating blockchain gaming, but Qubetics stands out as the best 100x crypto for 2025. Its AI-powered interoperability tools are solving one of the biggest challenges in Web3, making it the go-to platform for developers, enterprises, and DeFi protocols. And with \$15.3 million already raised, the market is clearly bullish on its potential. With each crypto presale stage only lasting 7 days and prices increasing every Sunday, the best time to buy is now. At \$0.1181 per STICS, the upside potential is staggering. Donâ€™t miss outâ€”join the Qubetics presale now! For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana DEX ORCA price witnessed an exceptional price surge today. - Top Korean exchange Upbit announced ORCA token listing with BTC, USDT, and KRW trading pairs. The crypto market continues its mundane performance with Bitcoin trading in the \$83K price range and Ether falling back to \$1,900. Meanwhile, a few of the cryptocurrencies are recording considerable price gains such as ORCA, ACH, FARM, and CAKE, among others. Orca is one of the top decentralized exchanges on the Solana blockchain. As per Defillama, Orca is the top 3rd DEX of Solana with a \$276.64 million 24-hour trading volume. It holds \$245.79 million in total value locked (TVL), at press time. The ORCA price is trading at \$3.86 with a 140% rise in the last 24 hours, at the time of reporting. While its market cap is standing at \$205.83 million, 24-hour trading volume surged by a whopping 6,748%. Itâ€™s been a few weeks since ORCAâ€™s price stood at the \$3 price level. Despite the incredible price surge, ORCAâ€™s price is trading much below its all-time high of around \$20. ORCA Price Surge Led by Upbit Token Listing Announcement The primary reason behind the ORCA token price surge is its token listing announcement from Upbit. It is the top crypto exchange in Korea and acquired the top 5th exchange by trading volume in the world. Thus, the token listing announcement from Upbit hyped ORCA and resulted in its price surge. Upbit announced the ORCA token listing earlier today with BTC, USDT, and KRW trading pairs on its X account. The token started trading on the platform at 17:00 KST today. The increased user base of Upbit and recognition from the exchange have caused the ORCA price to rise above the \$3 level. However, the price surge might not last long. Token listing announcements from top exchanges often led to price surges of similar kinds. This will eventually result in an overbought condition and a price correction follows. Only time will tell if ORCA will sustain this price surge or fall within a few days. Highlighted Crypto News Today: Real World Assets Record All-time High \$10B TVL Amidst Dull Crypto Market

Ozak AI is getting into the aggressive global blockchain generation, in which giants like Chainlink and Solana dominate the crypto space. As the crypto marketplace matures, the question arises: can new crypto projects like Ozak AI carve out its own area of interest and rival those installed names? The solution lies in its capacity to innovate and provide something beyond what already exists. Chainlinkâ€™s Smart Contract Connectivity vs. Ozak AIâ€™s AI-Driven Insights Chainlink has positioned itself as the backbone of smart contract connectivity, offering a decentralized oracle network that feeds dependable facts into blockchain structures. Ozak AI, in comparison, is mixing artificial intelligence with decentralized finance, creating a completely unique proposition that might set it aside from these enterprise leaders. Unlike Chainlink, which serves as a bridge among external records and blockchain networks, Ozak AI targets to generate predictive insights the usage of machine learning. If achieved correctly, this will provide buyers and investors with an unparalleled facet inside the risky crypto markets. Solanaâ€™s High-Speed Transactions vs. Ozak AIâ€™s Scalable Infrastructure Solana has constructed its recognition as an excessive-performance blockchain capable of processing thousands of transactions per second with minimum prices. While Solana boasts high-speed transactions, it has faced challenges with community stability. Ozak AIâ€™s infrastructure, leveraging decentralized physical infrastructure networks (DePIN), should offer a more resilient alternative, balancing velocity and protection without the pitfalls of congestion-related outages. If Ozak AI manages to hold a continuing user experience whilst scaling its operations, it can appeal to the sort of adoption that has propelled Solana into the limelight. The Importance of Adoption and Community Beyond the era, the role of community and adoption canâ€™t be ignored. Chainlink has solidified itself as a vital element inside the DeFi ecosystem because of its full-size adoption across a couple of blockchain initiatives. Solana has gained traction with developers for its ease of use and efficiency. Ozak AI will need to set up sturdy partnerships and integrations to gain credibility within the area. Building an environment in which developers, traders, and institutions depend on its era will be crucial for long-term fulfillment. Moreover, the 3rd stage of the Ozak AI presale is currently occurring, and the task is already making waves within the crypto community. With an outstanding over \$900K raised so far, Ozak AI tokens are currently priced at simply \$0.003 each, with the next level price set at \$0.005. This early-level opportunity is poised for sizable growth, with projections suggesting that the token ought to reach \$1 by 2025. Can Ozak AI Redefine Blockchain Analytics? Ultimately, the conflict for dominance within the crypto space isnâ€™t just about who has the most superior eraâ€”itâ€™s about real-world application and adoption. Ozak AI has the capability to disrupt present fashions via merging AI-powered insights with decentralized networks. If it may prove its reliability, scalability, and practical value, it may not just compete with Chainlink and Solanaâ€”it could redefine the destiny of blockchain analytics. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Solana (SOL) drops 4.21%, trading at \$127.74, down from its intraday high of \$134.88. - The Solana futures ETF launch on March 20 fueled a 12% surge, but momentum has slowed. Solana (SOL) has taken a step back after a recovery phase, dropping over 4.21% in the past 24 hours. As of March 21, 2025, the altcoin is trading at approximately \$127.74, marking a slight 0.045% decrease from the previous close. Throughout the day, SOL fluctuated between a high of \$134.88 and a low of \$126.86. Despite this short-term decline, Solana has gained around 2.23% over the past week. This recent price movement follows a notable surge earlier on Thursday, where SOLâ€™s price increased by 12% to surpass the \$136 mark. This uptick was largely driven by the announcement from Volatility Shares regarding the launch of Solana futures ETFs, which began trading on March 20, 2025. The introduction of these ETFs has heightened institutional interest in Solana, contributing to increased trading volumes and open interest in SOL futures. Looking ahead, analysts maintain an optimistic outlook for Solana. Some forecasts suggest that if momentum picks up, SOL could reach \$170 within the next seven days, representing a 17.53% increase. However, the broader crypto market remains volatile, with leading assets like Bitcoin (BTC) and Ethereum (ETH) also facing downward pressure. Mixed Signals in Solanaâ€™s Technical Analysis Technical analysis presents a mixed picture in the 4 hours SOL/USDT chart. SOL has formed an ascending triangle pattern, often associated with potential breakouts. Additionally, here are observations of an inverted head-and-shoulders pattern, typically considered a bullish indicator, suggesting a potential trend reversal to the upside. Despite this, the altcoinâ€™s Moving Average Convergence Divergence (MACD) line stands below the signal line, further confirming a bearish takeover. On the other hand, its Chaikin Money Flow (CMF) indicator value stands at 0.09, according to TradingView data. This indicates increased capital flow into the Solana. If investors show increased interest in the altcoin, it could lead to a change in price direction. However, this is not confirmed by other indicators. For now, strong support lies between \$125 and \$120, a level buyers have defended multiple times. If this support holds, it could fuel a bounce back. Otherwise, a further dip below \$125 could lead to \$118 might be on the cards before any potential recovery.

What if one blockchain could provide the speed of Solana, the storage power of Filecoin, and an integrated development environment unlike anything seen before? Qubetics (STICS) has entered the stage, offering not just another blockchain but an entirely new way to develop, transact, and build on decentralized technology. Meanwhile, Solana is integrating TRX for seamless interoperability, and Filecoin is strengthening data security with Proof of Data Possession (PDP). With these advancements, blockchain is entering a new era of efficiency and accessibility. Qubetics is reshaping blockchain with its multi-chain, non-custodial architecture and the revolutionary QubeCode IDE. Unlike traditional development environments that require extensive coding knowledge and fragmented tools, QubeCode streamlines smart contract creation with an intuitive, all-in-one system. It enables businesses, developers, and institutions to launch decentralized applications (dApps) with unprecedented ease. While previous platforms struggled with inefficiencies and integration limitations, Qubetics positions itself as the top crypto projects to invest in today. Qubetics (STICS): The Future of Blockchain Development Qubetics goes beyond being just another blockchainâ€”it actively addresses real-world inefficiencies hindering Web3 adoption. Built for both developers and enterprises, its non-custodial multi-chain wallet and integrated development environment eliminate the friction that often deters adoption. QubeCode IDE stands as Qubeticsâ€™ most defining feature. Unlike conventional programming environments that demand intricate coding knowledge and extensive debugging, QubeCode simplifies blockchain development. This all-in-one platform allows seamless smart contract creation, eliminating the need for multiple third-party integrations. Enterprises can now deploy dApps without navigating through complex frameworks. For instance, a decentralized finance (DeFi) platform looking to launch a lending protocol can use QubeCode to write, test, and deploy contracts within hours instead of weeks. The numbers speak for themselves. Qubetics has raised over \$15.2 million, surpassing 501 million tokens sold, with over 23,400 token holders. With the STICS crypto

presale in its 26th stage and priced at \$0.1181, the potential for returns remains substantial. Those who acquire STICS now and hold until \$0.25 will see a 111% ROI, while a rise to \$10 would yield an 8,360% return one of the top crypto projects to invest in today. Solana (SOL): High-Speed Expansion with TRX Integration Solana continues its ascent as a high-performance blockchain, now strengthening its ecosystem by integrating TRX. With TRON's native token migrating to Solana, interoperability within DeFi and NFT markets gains a significant boost. This move is expected to attract developers seeking high-speed, low-cost transactions without the bottlenecks seen in Ethereum. Solana's network efficiency has long been its selling point, boasting transaction speeds of up to 65,000 transactions per second (TPS). By adding TRX to its ecosystem, Solana expands its utility, allowing for seamless asset transfers between networks. For instance, DeFi platforms built on Solana can now tap into TRON's liquidity pool, opening doors for cross-chain lending and yield farming. Another critical development on the horizon is the pending approval of Solana ETFs by the U.S. Securities and Exchange Commission (SEC). If approved, this move would cement Solana as an institutional-grade asset, making it accessible to traditional finance markets. Given the shifting political landscape and ongoing debates around cryptocurrency regulations, the decision remains highly anticipated one of the top crypto projects to invest in today. Filecoin (FIL): Reinventing Data Security with PDP and Fast Finality Filecoin's decentralized storage network is evolving with groundbreaking upgrades that prioritize security and efficiency. The upcoming Proof of Data Possession (PDP) mechanism ensures that stored data remains verifiable, eliminating concerns over data loss. PDP will be live on the mainnet by the end of March 2025, following rigorous audits and the launch of an explorer tool designed for real-time verification. Filecoin is also rolling out Fast Finality (F3), a mechanism that significantly reduces transaction settlement times. By leveraging a delegated authority system for on-chain governance, F3 allows for faster, more secure transactions. These improvements are particularly beneficial for enterprises relying on large-scale data storage, such as AI model training, supply chain tracking, and archival systems. With these enhancements, Filecoin cements its position as the top crypto projects to invest in today. Its focus on efficiency and reliability ensures continued adoption among institutions requiring verifiable, tamper-proof data solutions. Conclusion The blockchain industry continues to evolve, but only projects with tangible use cases and technical superiority will stand the test of time. Qubetics leads with an unparalleled development environment that simplifies blockchain adoption. Solana accelerates financial applications with its high-speed network and TRX integration, while Filecoin reinforces decentralized storage with cutting-edge security protocols. With these advancements, Qubetics, Solana, and Filecoin remain the top crypto projects to invest in today. Their ongoing innovations and real-world applications continue to drive strong adoption and market confidence. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. What makes Qubetics different from other blockchain projects? Qubetics introduces the QubeNode IDE, a streamlined environment for developing smart contracts and dApps without the technical barriers of traditional platforms. Its non-custodial, multi-chain architecture makes blockchain adoption more accessible. 2. How does TRX integration benefit Solana? By incorporating TRX into its ecosystem, Solana enhances cross-chain interoperability, expanding DeFi and NFT use cases. This integration provides greater liquidity and transaction efficiency. 3. What is Filecoin's Proof of Data Possession (PDP)? PDP is a security mechanism that ensures data stored on Filecoin remains verifiable and accessible. It eliminates risks associated with data loss by requiring proof that data remains intact over time. Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Solana is trading at \$134 at the moment, and faces key resistance between \$140-\$145 while securing strong support at \$125-\$130. - Institutional interest and ETF speculation could fuel SOL's next breakout, aiming at \$160 as the next target. Solana (SOL) remains in a strong position today after reclaiming its crucial support at \$128-\$130. Solana is currently priced at \$134 and seems to be on a run to regain its Q1 losses. Over the past week, buying interest in SOL has increased and has helped SOL keep its bullish with resistance near \$140. The global crypto market's recent upswing also caused SOL recovery, but the question remains whether it will push higher or be affected if massive sellouts break in. Meanwhile, Bitcoin's steady performance has provided stability, and also the demand for layer-1 blockchains like Solana, which continues to grow. Institutional investors are showing renewed interest, and speculation surrounding potential SOL ETF approvals and this could ignite a bullish scenario for the token. Still, technical barriers remain, and breaking through them won't be so easy. Technical Indicators Show Strength but Resistance Remains Solana's technical indicators show strength, but cannot ignore the challenges ahead. The Relative Strength Index (RSI) sits near 50.1, which means a neutral level, healthy but not confident enough to scale SOL to an uptrend. Buying pressure and whale accumulation could be the most important activities for Solana to reach resistance at \$140. However, the Moving Average Convergence Divergence (MACD) remains bullish, as the MACD line currently trends above the signal lines. The rising histogram could only mean an increase in buying pressure but SOL still faces a crucial test at the 200-day Exponential Moving Average (EMA), which currently sits near \$180-\$183. On the flip side, strong support sits between \$125 and \$130. Buyers have repeatedly defended this range, making it a critical zone for maintaining bullish momentum. If this support fails, SOL could dip to \$120 before finding stability again at \$120. Institutional Demand and ETF Speculation Boost Confidence Beyond the charts, fundamentals are playing a major role in SOL's market strength. Institutional investors are showing greater interest, and speculation around a possible Solana Futures ETF has been growing. If such an ETF gains approval, it could unlock fresh capital inflows and further cement SOL's position among top crypto assets. Solana's network activity is another bullish factor. The Solana ecosystem continues to dominate in the NFT and DeFi sectors, it recently surpassed Ethereum with 40B daily transactions and 1 Trillion transaction volumes, resulting in more institutional recognition. The Chicago Mercantile Exchange recently launched future trading on Solana and is an enhancement of Solana legitimacy in the crypto market. However, broader market conditions and macroeconomic trends will be key in determining SOL's next move. Bitcoin's influence remains strong, and altcoins like Solana will need independent momentum to sustain long-term gains. Watching ETF developments, on-chain activity, and macroeconomic trends will provide clues about SOL's next major move. While the bullish outlook remains strong, caution is necessary as market volatility continues to shape price action.

- Each participant has a different reason for wanting to join the Xandium Network, and pNodes are made to meet their needs. - pNodes may be of interest to bloggers, crypto KOLs, early-stage investment pickers, node operators, and others looking for passive income. Incentivized Provider Nodes, or pNodes, have been launched by Xandium in its devnet to provide Solana smart contracts a scalable, random-access storage layer. The existing deficiency of a scalable, effective storage layer for Solana applications is addressed by pNodes. They constitute the foundation of Xandium's decentralized storage network, which smoothly integrates with smart contracts. This gives users a unique opportunity to contribute to the development of the future of data-heavy Web3 applications and enjoy the advantages that come with it. Each participant has a different reason for wanting to join the Xandium Network, and pNodes are made to meet their needs. The scalable storage layer caters to blockchain and cryptocurrency aficionados who want to remain at the vanguard of the Web3 revolution, as well as dApp developers. pNodes may be of interest to bloggers, crypto KOLs, early-stage investment pickers, node operators, and others looking for passive income. pNodes are used by the Xandium storage layer to store data in a decentralized fashion. Erasure coding and adjustable redundancy levels are used to guarantee availability and security. Data management and distribution across several pNodes are cryptographically supervised by validator nodes (vNodes) running Xandium-enabled software. This hybrid solution guarantees blockchain-grade integrity while relieving Solana validators of the effort of storing all data. Extended Solana primitives like *Account* and *PoA* that Xandium is providing allow for smooth data flow between Solana accounts and Xandium's decentralized file system abstraction. In essence, pNodes are the *hard drive*-like infrastructure that supports Solana's CPU and RAM. Because of its high throughput, low latency, minimal transaction costs, and unified global state that supports composable smart contracts, Solana is regarded as a world computer. Because pNodes provide scalable storage that is intrinsic to smart contracts, they open up new use cases for data-intensive dApps on Solana. The *Constance* release will be launched, marking the beginning of Xandium's Deep South Era, the first of six Innovation Eras that will take place in 2025 and the foundation for the creation of a decentralized storage layer. This period will see the debut of the user-friendly pNode management application, XandMiner. Users will be able to build and destroy file systems, register pNodes, and generate key pairs. Everything a user may need to start a pNode and get a first-mover advantage is provided by these core functions. A limited quantity of 300 incentive-based devnet pNodes up to three pNodes per wallet will be offered by Deep South. Every node on the mainnet will be fully permissionless. Bernie Blume, CEO, Xandium Labs stated: *"A low-cost, decentralized scaling solution will drastically expand the global dApp landscape. It can unlock a new revenue stream for pNode operators as well as Solana validators and stakers. The Xandium solution will have an enormous impact on the growth of the Solana ecosystem."* The goal of blockchain-focused software development firm Xandium Labs is to create the first scalable Solana storage layer that gives smart contracts access to a decentralized file system. Among other things, the Xandium DAO and Xandium Foundation are creating the Xandium Network to improve Solana via the storage layer and liquid staking platform. You may find out more at <https://xandium.com>.

- TRON's founder, Justin Sun, plans to integrate TRX with the Solana blockchain for enhanced interoperability. - Sun declares he will not personally profit from meme coin ventures, pledging to cover any losses himself. Justin Sun, the founder of TRON has announced plans to integrate TRX, the native token of the TRON network with the Solana blockchain. This move plans to improve cross-chain functionality that allow users to access TRX on Solana's fast and cost-effective network. The integration could drive higher adoption for TRX, which has primarily been used within the TRON ecosystem. TRX will be soon on solana. Ready to buy and collaborate? H.E. Justin Sun *ðŸŒŽ* (@justinsuntron) March 18, 2025 Sun's collaboration with Solana follows recent efforts to expand TRON's presence in the broader blockchain space. By leveraging Solana's speed and low fees, TRX transactions could become even more efficient, benefiting traders and developers alike. Sun's Stance on Meme Coins: No Personal Profit In a separate tweet on March 19th, Justin Sun addressed the rising meme coin trend clarifying that he will not personally profit from any meme-related ventures. Sun stated that any losses incurred from meme coin projects would be covered entirely by himself, while all proceeds would be donated. The first rule of making memes on Tron: I will not personally profit a single cent from memes. Any losses will be fully covered by myself, and all proceeds will be donated. H.E. Justin Sun *ðŸŒŽ* (@justinsuntron) March 19, 2025 This statement might aim to distance himself from concerns over potential market manipulation. Also that reinforce his commitment to ethical practices in the cryptocurrency space. It also aligns with growing calls for transparency among high-profile crypto figures, especially after controversies involving influencers launching and profiting from meme coins. TRX Market Reaction After the tweet, TRX saw an immediate market reaction, increasing 9.26%, climbing from \$0.2224 to \$0.243. Correctly, TRX priced at \$23.27 with a market cap of \$22.11 billion. This rally was accompanied by a 65% surge in trading volume that reached 1.14 billion TRX. The announcement also impacted other meme tokens in the TRON ecosystem, highlighting the market's strong sensitivity to Sun's statements. However, Sun's dual announcements highlight his strategic approach "expanding TRON's ecosystem while maintaining a transparent stance on speculative assets like meme coins. The integration of TRX with Solana could drive further utility for both networks, while his commitment to ethical meme coin practices may set a precedent for other industry leaders. Highlighted Crypto News Today U.S. Authorities Drop Fraud Charges Against BitCloud Founder Nader Al-Naji

- Solana, which is now commemorating its fifth year after the creation of its genesis block on March 16, 2020. - The data from Mercuryo demonstrates that there are considerable increases in volatility in USDt trading on the Solana transport layer. It was announced today that Mercuryo, a global payments infrastructure platform, has disclosed data that demonstrates exceptional levels of volatility in the trading of Tether tokens (USDt) on the Solana transport layer this year. This suggests that the leading layer-1 blockchain is capturing the eye of cryptocurrency traders. Solana, which is now commemorating its fifth year after the creation of its genesis block on March 16, 2020, has developed into one of the most busy blockchain networks in terms of the magnitude of the transactions it processes. The data from Mercuryo demonstrates that there are considerable increases in volatility in USDt trading on the Solana transport layer. This occurs when players reposition themselves in pursuit of trading opportunities: - 100% surge (week of Jan 13) - 63% drop (Jan 20) - 129% recovery (Jan 27) - 61% plunge (Feb 10) - 137% spike (Feb 24) Greg Waisman, Co-founder and COO at Mercuryo stated: *"Solana captivates the interest of crypto traders across the globe. As Solana celebrates its fifth birthday, our transaction data on Tether tokens on the Solana transport layer suggests an unparalleled level of trading activity amid an explosion of interest in trading opportunities on Solana that we've seen over the past 12 months."* Due to the fact that holders of Solana (SOL) are able to utilize the digital token to acquire meme coins like dogwifhat (WIF) and Bonk (BONK), there has been a significant increase in the amount of interest in meme coins when it comes to Solana. Pump.fun, a platform that allows users to generate meme coins, has generated more than \$540 million in revenue over the course of the previous year. At some instances, it has even eclipsed Ethereum in terms of revenue over 24-hour intervals. Since the creation of the first Solana block on March 16, 2020, the network has successfully handled over 408 billion transactions and approximately one trillion dollars' worth of value on decentralized exchanges. As a result, it has established itself as one of the most prominent layer-1 blockchains in the business. Mercuryo is a pioneer and innovator in the rapidly developing Web3 domain. They provide a wide range of payment options in addition to a smooth interaction with the blockchain. Mercuryo's user-friendly solutions are making the experience of entering the digital token arena easier for those who are just starting out. Mercuryo specializes in the effective movement of funds within the DeFi ecosystem. Additionally, it integrates a variety of payment methods into a single interface.

- Solana has factored in a modest price drop of 4.44% in the last 24 hours. - The altcoin's daily trading volume has surged by 21.73% as per CMC data. The cryptocurrency market has entered a prolonged consolidation phase over the past week. With experts and analysts confirming a bear market entry, hopes are diminishing for investors. The largest cryptocurrency, Bitcoin has receded to trading at the border of \$82,000-\$83,000. This price drop can be seen reflected in the altsector as well. Notably, one of the leading altcoins, Solana has factored in an additional price drop of 4.44% in the last 24 hours. In the evening hours of March 17, the altcoin was trading at a high of \$129.45. However, as the day progressed more bearish candles began to spark. Solana had recently shown a price

recovery that caused it to retrace to a high of \$136 .48. However, the past few weeksâ€™ actions has once again brought it closer to the \$120 support level. At the time of writing, SOL was trading at \$123.55 as per CMC data. Zooming out, onto its weekly chart, Solana records a modest price drop of 0.96%. This results from its recent recovery towards the middle of last week before bears took over. The altcoin was trading at a low of \$118.86 seven days ago. Will Solana Bulls Resurface? On analyzing its recent price movements, Solana has traced a descending channel pattern. The pattern is a stark indication of bearish trends in the altcoin and suggests further price dips in the coming days. From this inference, it can be elicited that the bulls may not resurface anytime soon. Additionally, the altcoinâ€™s Moving Average Convergence Divergence (MACD) MACD line stands below the signal line further confirming bearish takeover. However, its Chaikin Money Flow (CMF) indicator value stands at 0.07 as per TradingView data. This indicates increased capital flow into the digital asset. If investors show increased interest in the altcoin, it can be expected to show a change in price direction. This is, however, not confirmed by other indicators of the altcoin. Meanwhile, other cryptocurrencies such as Tron and Pancake Swap have shown bullish momentum in the past day.

- The Solana team was forced to delete its â€œAccelerateâ€ ad after facing criticism. - The team has yet to respond to the community backlash on social media. The Solana team had to delete its â€œAmerica is Back â€ Time to Accelerateâ€ ad after receiving serious criticism from the crypto community. The team posted the advertisement in the late evening Asian hours on its X account. Even though the ad focused on political messaging, it felt offensive in terms of gender identity. What is the Solana Controversial Ad? The Solana team is organizing an â€œAccelerateâ€ event to celebrate founders, technology, and American innovation. The event consists of two programs â€œ â€šship of Dieâ€, and â€œScale or Die.â€ It is going to take place from March 19 to 23 this year. The Solana Foundation event is basically about how America has been a leader in terms of technological innovation over the last few decades. And, it is also highlighting the present US administrationâ€™s initiative to make America Great again by supporting advanced technologies like crypto and blockchain. Solana is decentralized pic.twitter.com/U0nHdwsUNB â€ eMon (@0xemon) March 18, 2025 In an effort to promote this event, the team created and posted an ad on X. The ad showed a man, representing America, in a therapy session, who explained that he was having thoughts about innovation. In response, the therapist says that he should do something more productive like coming up with a new gender. The man fires the therapist and says he wants to build on-chain and reclaim his place as the beacon of innovation. Furthermore, he says, â€œI built the future once and I wonâ€™t be left behind now. I will lead the world in permissionless tech, build on-chain, and reclaim my place as the beacon of innovation. I want to invent technologies, no genders.â€ Solana Ad Receives Community Backlash The ad received over 1.4 million views a few hours after going live. Trumpâ€™s administration issued an order recognizing only male and female genders, changing the current gender ideology. He forbade Americans to choose other genders on their passports. While the ad is praising the new US administrationâ€™s plans for the future, it offended a portion of the people based on their gender identity. It received over 1,300 comments and 1,400 reposts before deletion. Even though the Solana Foundation team deleted the ad, several people saved it and reposted it on X. The ad not only alienated a certain portion of people but also against crypto ethos. Referring to the same, the product lead at Base posted saying, â€œOffensive, cringe, and pandering. Base is for everyone. Solana co-opted the â€œis for everyoneâ€ phrase last week too. This ad shows thereâ€™s still a long way to go in truly embracing that ethos.â€ While some of the people replied with pure criticism, others stated that they deliberately posted this ad to get attention. The team has not yet responded to anything on the Solana controversial ad ever since its deletion. Highlighted Crypto News Today: Bitcoin Hovers Near \$83K as Whales and Miners Cash Out â€ Will BTC Drop to \$75K?

Solana caught crypto fansâ€™ attention once more after a whale moved many funds. A Solana whale took out 134,902 SOL, about \$19.3 million. This step, which involved putting sell orders at different prices, raised worry over the pressure of selling with possible price swings ahead. While this whale move touches Solana, another project grows fast and gains notice. FXGuys appears as the Top PropFi Project that changes decentralized trading. Its \$FXG token sold out during Stage 3 presale, raised over \$4.5 million and shows promise as an altcoin. Solana Whale Moves Spark Market Reactions Solanaâ€™s price often shows the actions of major holders. This large move by a whale follows that trend. This clever trader sells their holdings by unstaking SOL exceeding \$19 million in value. Analysts say that the whale set limit orders between \$171 and \$294, which shows a careful method to keep prices stable. For common traders, moves like this may bring brief uncertainty. They also lead experienced traders to check other assets with high profit chances. FXGuys appears here as a leading defi token and a top altcoin in todayâ€™s market. FXGuys Raises Over \$4.5M â€ What Makes It Stand Out? As Solana faces uncertainty, FXGuys offers a service that exceeds simple DeFi use. The project joins staking, a support program for prop traders, with a Trade2Earn program into one offer. Investors who hold \$FXG tokens earn 20% of the profits as well as revenue from broker trades. This plan links reward income with work on the platform. FXGuys emphasizes token holding while backing skilled prop traders with a complete funding program. Prospective traders pass a test to prove their skills before receiving funding up to \$500,000. The profits split 80/20 in favor of the trader, which builds FXGuysâ€™ reputation as one leading proprietary trading firm. A further concept is the Trade2Earn feature. Every trade on the platform earns users \$FXG tokens; it also boosts trading volume while compensating work. This design creates a self-sustaining system where active work benefits token holders directly. Instant Funding and Seamless Deposits One main benefit of FXGuys is its aim for ease and comfort. With its fast funding model, traders get money quickly without long checks. Money deposits work easily; the service handles over 100 local currencies and crypto options letting traders join the market without extra troubles. The platform also offers a choice of trading tools. Based on location, users gain access to FXGuys Trader as well as known platforms like MT5, cTrader, Match-Trader, and DXTtrade. Beta Access and Strong Presale Performance Currently in Stage 3 of its presale, FXGuys costs \$0.05 per \$FXG token, with over \$4.5 million raised so far. Investors get access to the projectâ€™s BETA platform, which gives a free trial of the trading system. This early access lets users see the platformâ€™s features, from its simple layout to the advanced tools that drive the system. As FXGuys moves toward the next phase, it attracts interest as a leading PropFi Project and a practical option for traders who need funding or decentralized choices. With no tax on buys or sells, no KYC, plus a focus on quick fiat or crypto transactions, FXGuys provides useful options for todayâ€™s traders. Conclusion When Solana deals with large asset holders offloading coins and an unpredictable market, FXGuys holds firm by providing real benefits to traders through staking, quick funding, and its new Trade2Earn plan. As one of the leading DeFi coins today, FXGuys mixes DeFi with actual trading opportunities, offering retail investors as well as experienced traders a reason to keep an eye on this promising altcoin. With FXGuysâ€™ presale reaching over \$4.5 million and the BETA platform now available, FXGuys is set to become a notable name in crypto. To find out more about FXGuys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. - FalconX and StoneX executed the first-ever block trade of CME Groupâ€™s Solana futures, showcasing institutional demand. - CMEâ€™s crypto futures market saw a 73% surge in daily trading volume and a 55% rise in open interest in early 2025. - The launch of SOL futures could pave the way for Solana ETFs, similar to Bitcoin and Ethereum. FalconX and StoneX Interest in Solana Future FalconX and StoneX have completed the first-ever block trade of CME Groupâ€™s Solana (SOL) futures, an institutional crypto adoption milestone. The worldâ€™s largest derivatives exchange, CME Group, launched SOL futures on February 28 with cash-settled contracts in two sizes: 500 SOL (standard) and 25 SOL (micro). The contracts are settled against the CME CF Solana-Dollar Reference Rate, calculated daily at 4:00 p.m. London time. Block trades like this allow institutions to execute large trades anonymously, excluding material market impact. FalconX U.S. sales head Josh Barkhordar called it an institutional tipping point for crypto trading. StoneX digital asset execution head Eric Rose reaffirmed the companyâ€™s commitment to bringing more institutional exposure to cryptocurrencies through regulated derivatives. â€œStoneX and StoneX Digital are proud to support CMEâ€™s innovative initiatives to enhance institutional access to cryptocurrencies through a regulated and compliant suite of listed derivatives,â€ said Eric Rose, Head of Digital Asset Execution at StoneX Digital. FalconX and StoneX Expand Crypto Derivatives CMEâ€™s crypto futures operation has taken off, with daily volume reaching 202,000 contracts in early 2025â€™a 73% year-over-year increase. Open interest also increased 55% to 243,600 contracts, reflecting growing institutional demand. This development comes in conjunction with increasing demand for a Solana ETF. Asset managers including Franklin Templeton, Grayscale, and VanEck have filed applications, and analysts view CMEâ€™s SOL futures. As likely paving the way for regulatory approval, akin to Bitcoin and Ethereum ETFs. With increasing institutional demand for Solana, regulated futures and settled block trades strengthen its presence in the emerging digital asset market. Highlighted Crypto News Today D-ETF Listings Grows: New Stocks â€ Led by ARM and NFLX â€ Meet USDT Trading

As the race for blockchain utility heats up in 2025, Solana (SOL) and Cardano (ADA) continue to compete for dominance with their advanced ecosystems. Solana is known for its high-speed transactions and scalability, while Cardano focuses on a research-driven approach to decentralized applications. However, a rising contender is gaining attentionâ€Lightchain AI, currently in its presale phase at \$0.007, having already raised \$17.9 million. Unlike traditional blockchains, Lightchain AI integrates artificial intelligence to enhance efficiency and decentralization, making it a strong competitor in the evolving crypto landscape. With each of these projects offering unique strengths, investors are closely watching to see which altcoin will emerge as the leader in utility and real-world adoption in 2025. In this article, we will discuss the potential of each project and their chances of success. Why These Altcoins Are in the Race Solana, Cardano, and Lightchain AI are competing for dominance in 2025 due to their strong technological foundations and real-world applications. Solana has built a reputation for high-speed transactions and low fees, making it a preferred choice for DeFi and NFT platforms. Cardano, on the other hand, is known for its research-backed development and focus on security, attracting institutional interest and large-scale projects. Meanwhile, Lightchain AI is gaining momentum with its AI-driven blockchain innovations, positioning itself as a next-generation solution for decentralized applications. Each of these altcoins brings unique advantages to the market, making them key contenders in the ongoing utility race. With blockchain adoption accelerating across industries, the competition among these three projects will shape the future of decentralized technology and define the next wave of crypto advancements. Which Altcoin Will Win? Determining the winner of the 2025 utility race as an altcoin is based on adoption, innovation, and scalability. Solanaâ€™s fast transaction speeds and low costs place it in the running, especially for DeFi and NFT use cases. Cardanoâ€™s focus on security and peer-reviewed blockchain development offer long-term stability, attracting businesses and institutional investors. But Lightchain AI offers a disruption strategy with artificial intelligence natively embedded in blockchain infrastructure, optimizing efficiency and governance, something that the legacy networks cannot offer. ts Proof of Intelligence (PoI) model incentivizes AI-based calculations, and thus it is extremely competitive in the upcoming tech-based markets. Cardano and Solana have already built ecosystems, but Lightchain AIâ€™s new architecture makes it a top contender in long-term dominance, especially with blockchain and AI convergence becoming more and more relevant. Why Lightchain AI Could be the Winner Lightchain AI stands out as a potential winner in the 2025 utility race due to its innovative integration of artificial intelligence with blockchain technology. Unlike Solana and Cardano, which focus primarily on scalability and security, Lightchain AI introduces a unique Artificial Intelligence Virtual Machine (AIVM) that enables efficient execution of AI-driven tasks on-chain. This feature enhances automation, decision-making, and computational efficiency, making it highly attractive for next-generation decentralized applications. Additionally, its Proof of Intelligence (PoI) consensus mechanism rewards AI computations, fostering real-world utility beyond traditional blockchain functions. With its transparent governance model and growing investor confidence, Lightchain AI is positioning itself as a next-generation blockchain solution, capable of outperforming established networks as AI-driven applications become a major focus in the crypto industry. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Despite the ridiculous amount of hype that surrounded Solana (SOL) after Trumpâ€™s crypto reserve announcement, it is surprising that on-chain activities on Solana have not recovered. A few metrics, including its trading volume and active addresses, have revealed that Solanaâ€™s on-chain activities have been tanking for a while. There have also been speculations that its performance over the past month has been pushing investors to the high-potential altcoins in search of bullish alternatives. While Solanaâ€™s performance can come as a shock, the rising hype surrounding DuragDoge (\$DURAG) isnâ€™t surprising. Everything about the project teases its appeal as one of the best crypto coins to buy if you plan on making explosive profĀ-ts this year. Its ongoing presale also has the potential to turn early investors into millionaires, giving them something to be excited about. Solana (SOL) Suffers Decline In On-chain Performance To break down what has been happening with Solanaâ€™s on-chain lately, weâ€™ll have to look at the performance of a few things that make it so relevant in todayâ€™s crypto system. Firstly, the crash of Solanaâ€™s active addresses from 76 million in January to around 45 million, which is over 40% decline. Then, the daily active addresses are at just 3.4 million, which is the lowest it has gotten in over three months. The volume of on-chain transactions is still tanking even after last monthâ€™s massive decline of over 28%, which amounts to a loss of over \$31 billion. This means that users are not as active on the platform now compared to last year. Even things like liquid staking, DEXs, and NFTs have been slowing down lately, and this is why network fees have dropped. Thereâ€™s also a possibility that the recent crash of the meme coin market affected Solana. Last month, monthly trading volume for meme coins fell by almost \$106 billion. Then, thereâ€™s the noticeable lack of interest from traders who are leveraged. On the futures market, the rate of funding for SOL perpetuals is still negative, meaning traders who are shorting SOL are ready to pay to keep their positions open. DuragDoge (\$DURAG) Hype Skyrockets Thanks To Massive Potential Of Presale There are a few things that come to mind when DuragDoge is mentioned. The platform is evolving from just another new meme coin to a highly anticipated platform with the potential to outperform high-potential altcoins. The reason for the recent hype surrounding it is because of how well the platform has performed, even though itâ€™s still in the early stages of its presale. In just the fĀ-rst stage of the event, DuragDoge has been able to pull in high-end investors, and they canâ€™t seem to stop talking about it. Aside from being the talk of

the token, the \$DURAG token is also set to deliver impressive profit-as the presale tokens move from one stage to the next. Now, the token is selling for just \$0.00009, but itâ€™s on track to deliver over 1,000% returns by the time it launches on exchanges for \$0.010. While the presale is a huge part of why DuragDoge has so much hype, the structure of the platform also contributes a lot to it. DuragDoge has included plans to carry out buybacks and burns, which will help to keep the supply of the token in check while driving the value of the token. With all these in place, expectations for \$DURAG to 10x after listing isnâ€™t impossible, making it one of the best crypto coins to buy this year. Conclusion If thereâ€™s anything the market has taught us, itâ€™s that hype fades fast if thereâ€™s no real momentum to back it up. The way Solanaâ€™s on-chain activity is performing is proof that price action alone canâ€™t keep investors interested forever. Now that investors are pumping funds into \$DURAG before its price jumps, itâ€™s clear that DuragDoge is one of the best investment plays this year. Follow Durag Doge on X and Telegram for the latest news and updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. Solana (SOL) price surge; Will it hit \$900 amid growing institutional interest, or will Lightchain AI reach \$1 first? As Solana continues to gain attention from institutional investors, many are wondering if it can sustain its momentum and reach the \$900 mark. However, Lightchain AI, priced at just \$0.007 with over \$17.8 million raised in its presale, is gaining significant traction as a promising alternative. Combining artificial intelligence with blockchain technology, Lightchain AI offers real-world utility and scalability, making it a strong contender for rapid growth in 2025. Could Lightchain AI outpace Solana and reach \$1 first? Time will tell. Solanaâ€™s Price Surge- Can SOL Reach \$900 with Growing Institutional Interest? Solanaâ€™s (SOL) recent price surge has been fueled by significant institutional interest. Notably, Franklin Templeton filed for a Solana ETF, aiming to broaden cryptocurrency investment options beyond Bitcoin. Additionally, President Trumpâ€™s establishment of a U.S. crypto reserve, which includes Solana, has further heightened institutional engagement. These developments have contributed to SOLâ€™s current trading price of \$125.84, reflecting a 0.27% decrease from the previous close. While reaching \$900 is a long-term prospect, the growing institutional support positions Solana for potential substantial growth in the coming years. Why Lightchain AI Could Reach \$1 Before Solana in 2025 Lightchain AI has the potential to reach \$1 before Solana in 2025 due to its novelty and unique features. The platformâ€™s dynamic pricing mechanism guarantees cost savings through varying fees based on network demand, making it more adaptable in various market conditions. Security and privacy are the very basis of Lightchain AI, which is rooted in cutting-edge privacy-preserving techniques like Zero-Knowledge Proofs to facilitate safe, decentralized AI tasks without sacrificing data confidentiality. Additionally, Lightchain AIâ€™s scalability allows it to handle increasing demand as the platform expands, with the ability to handle high-performance AI computations without overloading the network. With such important features, in addition to its solid tokenomics and use cases, Lightchain AI is poised for rapid adoption and exponential growth, and it is possible it might overtake Solanaâ€™s development in a year. Grab Lightchain AI Now and Ride Wave of Growth The current cryptocurrency market is highly competitive, with numerous projects vying for attention. However, Lightchain AI stands out as a unique and promising contender that could potentially reach \$1 before Solana in 2025. With its low entry price and strong fundamentals, now may be the perfect time to invest in Lightchain AI and ride the wave of growth towards potential significant returns. Do not miss out on this exciting opportunity to be a part of the future of blockchain and artificial intelligence. So, keep an eye on Solanaâ€™s progress but also consider Lightchain AI as a potential alternative for high growth potential in the coming years. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - BNB Chain DEX trading volume surpassed Solana with Mubarak memecoin hype. - Binance founder CZ started investing in memecoins with MUBARAK and TST purchases. Binance Smart Chain (BSC) DEX trading volume surpasses Solana today. This remarkable record is led by the new memecoin MUBARAK hype. Mubarak memecoin has been making waves in the industry with its incredible price surge of over 300% in the last 24 hours. As per Defilama, BSC climbed up to the top position in terms of DEX trading volume. It recorded a 13.27% surge in its weekly trading volume, standing at \$1.637 billion. On the other hand, Solanaâ€™s trading volume is \$1.077 billion, which has dropped by 28.88% in the last week. This significant surge in BSC DEX volume is garnering attention across the industry. CZ Enters Memecoin Investment With MUBARAK Purchase Binance co-founder and former CEO CZ expressed his disinterest in memecoin investment several times. However, CZ has come a long way from commenting on memecoins as â€œweirdâ€ to making a memecoin investment himself. As per several recent reports, CZ reportedly purchased two memecoins â€œ MUBARAK and TST. CZ (@cz_binance) spent 1 \$BNB(\$600) to buy \$mubarak and 1 \$BNB (\$600) to buy \$TST 30 mins ago.<https://t.co/0QdzQYfn7A> pic.twitter.com/yv6YPuAnXY â€œ Lookonchain (@lookonchain) March 16, 2025 On-chain tracker Loon on chain found out about CZâ€™s investment yesterday. It posted that CZ spent 1 BNB to buy 20,150 MUBARAK tokens and another 1 BNB to buy 9,161 TST tokens. The crypto leader who said he has never invested in any memecoin is now a memecoin holder. MUBARAK is a new memecoin launched on BNB Chain a few days ago. The token is spreading waves across DEX space, and it is behind the surge of BNB Chain and PancakeSwap. It is trading at \$0.1342, at press time, and surged 329.95% in the last 24 hours. TST is another memecoin that skyrocketed in February following its controversy with Binance. Another major reason behind the MUBARAK tokenâ€™s hype is it is backed by Abu Dhabiâ€™s \$2 billion investment in Binance by MGX. As per CZâ€™s earlier post, this is one of the first institutional investments in the Binance exchange. After this announcement, the MUBARAK token was created and CZ mentioned the memecoins multiple times on his X posts. CZ has finally entered the memecoin market. And, BSC Chain became the top DEX platform by trading volume due to Mubarak memecoin. However, once the hype around the memecoin subsides, it might crash similar to many other memecoins. Highlighted Crypto News Today: OKX Suspends DEX Aggregator Services to Implement Security Upgrades

- At present the price of Solana (SOL) has taken a hit and is now down 7.02% in the last 24 hours. - If the price falls below \$121 level, then it will likely retest the \$114 support level. As the US Federal Open Market Committee (FOMC) prepares for its crucial meeting on March 19, 2025, investors are keeping a close watch on Bitcoin and the digital asset market in general. It is widely believed that the US Federal Reserve will maintain the current interest rate structure. A lot of ups and downs in the price of cryptocurrencies are anticipated to happen before the FOMC meeting. As it will provide investors more information regarding the Fedâ€™s monetary policies for 2025. However, at present the price of Solana (SOL) has taken a hit and is down 7.02% in the last 24 hours, trading at \$126.78. No Respite Despite Positive Development Despite a dramatic increase in the number of assets bridged to the Solana ecosystem, this remains the case. Solana received tokens valued at \$314 million over the last 30 days by the Ethereum network, according to the most recent statistics. With a volume that outstrips the entire assets transferred to Ethereumâ€™s layer 2 projects. This figure establishes a new record for Solana. The assets will likely boost user engagement, which in turn increases SOLâ€™s total value locked (TVL) and liquidity. At the time of writing, SOL is trading at \$126.78, down 7.02% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 33.60%. The price of SOL is down by a whopping 37% in the last 30 days as bears continue to dominate. If the price manages to go past the \$131 mark, then it will likely retest \$136 resistance level. Breaking above this level will likely see price testing \$153 level. However, if the bears continue the rampage, and the price falls below \$121 level, then it will likely retest the \$114 support level. All eyes will be on the upcoming FOMC meeting, as high volatility in the crypto market is anticipated.

Crypto markets are heating up, and this underdog coin might just Solana-slam 2021â€™s growth. Lightchain AI, already raising over \$17.3 million at a presale price of \$0.006, is quickly becoming a standout in the space. With its innovative combination of AI and blockchain technology, Lightchain AI is positioned for explosive growth, similar to Solanaâ€™s meteoric rise in 2021. As investors look for the next big thing, Lightchain AIâ€™s unique value proposition and growing momentum make it an exciting contender. With strong potential for high returns, this underdog coin could very well replicate Solanaâ€™s success and become a major player in the crypto space. Crypto Markets on Rise- Is Another Bull Run Coming? The cryptocurrency market is experiencing a notable surge, prompting speculation about an impending bull run. Bitcoin recently surpassed the \$100,000 mark, driven by President Donald Trumpâ€™s pro-crypto policies, including the establishment of a strategic Bitcoin reserve. Analysts predict Bitcoin could reach \$180,000 by Q1 2025, followed by a potential 30% correction and a subsequent rally to new highs later in the year. Alcoins like Ethereum, Solana, and XRP are also gaining momentum, with projections indicating significant growth. Factors such as increased institutional adoption, regulatory clarity, and technological advancements are contributing to this optimistic outlook. However, investors should remain cautious, as the crypto marketâ€™s inherent volatility necessitates careful consideration and risk management. Could This Underdog Coin Replicate Solanaâ€™s 2021 Surge? Lightchain AI, a rising underdog, has the potential to replicate Solanaâ€™s 2021 surge due to its efficient workflow, scalable node performance, and strong tokenomics. Its workflow and data flow optimize AI task execution by distributing computations across decentralized nodes while ensuring security through cryptographic verification. Nodes vs. Performance showcases near-linear scaling, meaning as more nodes join, the network becomes faster without congestionâ€an advantage over legacy blockchains. The tokenomics model supports sustainable growth, with 40% of 10 billion LCAI allocated to presale, 28.5% to staking rewards, and the rest to liquidity, marketing, treasury, and team incentives. With real-world AI utility and scalable blockchain infrastructure, Lightchain AI could be the next breakout success in the crypto space. Lightchain AI- Next Big Thing in Crypto! Lightchain AI is breaking boundaries by blending the power of AI with blockchain technology, setting itself apart in the crowded crypto world. With lightning-fast workflows, scalable node performance, solid tokenomics, and real-world applications, this project has all the ingredients for massive growth and adoption. Institutional investors are flocking to crypto projects with real utility and strong fundamentalsâ€and Lightchain AI is checking all the right boxes. The presale has already hit a staggering \$17.3 million, signaling a bright future ahead. Could Lightchain AI replicate Solanaâ€™s meteoric rise? Itâ€™s shaping up to be the underdog everyone roots for. Donâ€™t sleep on this game-changerâ€it might just be the next big winner in the crypto market. Keep your eyes on this one! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Bitcoinâ€™s path to \$150K; How Lightchain AI and Solana are shaping the future of blockchain. As Bitcoin climbs higher, Lightchain AI and Solana are emerging as game-changers in the crypto space. Lightchain AI, which raised \$17.7 million at a presale price of \$0.00712, combines AI and blockchain to power scalable, efficient decentralized applications. Meanwhile, Solanaâ€™s high-speed transaction capabilities continue to attract attention. Together, these platforms are redefining possibilities in the crypto world and paving the way for significant growth in 2025 and beyond. Bitcoinâ€™s Path to \$150K- Whatâ€™s Fueling Surge? Bitcoinâ€™s path toward the \$150,000 mark is being driven by several key factors. First, government initiatives have played a significant role. President Donald Trumpâ€™s executive order to establish a government Bitcoin reserve has boosted confidence in the cryptocurrencyâ€™s future, signaling strong institutional support. Regulatory developments are another critical factor. The U.S. Securities and Exchange Commission (SEC) has approved spot Bitcoin ETFs, allowing for greater institutional investment. This approval has enhanced Bitcoinâ€™s credibility and made it more accessible to a wider range of investors. Market cycles also contribute to Bitcoinâ€™s price movements. Historically, Bitcoinâ€™s price surges have coincided with its halving events, which reduce the rate of new Bitcoin creation. These supply constraints often lead to increased demand and higher prices. Lastly, macroeconomic factors play a role. The Federal Reserveâ€™s anticipated interest rate cuts may increase liquidity in financial markets, encouraging more investment in Bitcoin as investors seek higher returns. Together, these factors create a supportive environment for Bitcoin, strengthening projections that it could reach or even surpass \$150,000 in the near future. How Lightchain AI and Solana Are Shaping Future of Crypto Lightchain AI and Solana are pioneering advancements in the cryptocurrency landscape, each contributing uniquely to its evolution. Lightchain AI seamlessly integrates artificial intelligence with blockchain technology, offering scalable and efficient solutions for decentralized applications. Its innovative approach has attracted significant investor interest, raising over \$17.7 million at a presale price of \$0.00712 per token. This substantial funding underscores the marketâ€™s confidence in Lightchain AIâ€™s potential to deliver real-world applications beyond speculative trading. Solana, on the other hand, has emerged as a formidable competitor to established blockchains like Ethereum. Renowned for its high transaction throughput and low fees, Solana is now generating more fees than Ethereum, offering users a faster and more cost-effective service. This efficiency has positioned Solana as a preferred platform for decentralized finance (DeFi) projects and non-fungible token (NFT) marketplaces, thereby expanding the crypto ecosystemâ€™s accessibility and functionality. Collectively, Lightchain AI and Solana are shaping the future of crypto by addressing scalability, efficiency, and practical application challenges, paving the way for broader adoption and integration of blockchain technologies. Lightchain AI- Set to Lead Next Crypto Boom! Lightchain AI is gaining momentum as a leading altcoin in the 2025 crypto market. Unlike speculative tokens, it integrates AI with blockchain to drive real-world applications, offering a strong use case beyond trading. With a focus on scalability and decentralized AI solutions, Lightchain AI is positioned to capitalize on the growing demand for AI-driven blockchain utilities. As investor confidence surges, its upcoming mainnet launch could further solidify its role as a key player in the next crypto boom. Do not miss out on the opportunity to be part of Lightchain AIâ€™s groundbreaking journey and its potential to shape the future of crypto. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The crypto world has seen its fair share of heavyweight contenders, with Solana (SOL) and Avalanche (AVAX) celebrated as market disruptors. But a new player on the horizon, BinoFi (BINO), is gearing up to shake things up in ways weâ€™ve never seen before. Experts are discussing, claiming that BinoFiâ€™s innovative approach could propel it past both Solana and Avalanche in terms of potential and adoption. And at the heart of this buildup? BinoFiâ€™s ongoing presale and its groundbreaking first-ever hybrid crypto exchange. The BinoFi Hybrid Exchange: What Sets It Apart? Traditional crypto exchanges are divided into two categories. Centralized exchanges (CEX) offer users fast transactions and liquidity, but they require you to give up control of your assets. On the other hand, decentralized exchanges (DEX) empower users with full ownership over their funds but often lack the speed and liquidity needed for seamless trading. Enter BinoFiâ€™s hybrid crypto exchange, an innovative platform that combines the best of both worlds. This revolutionary approach offers the efficiency and liquidity of a CEX while preserving the security and autonomy of a DEX. For investors and traders, itâ€™s the perfect blend, offering convenience without compromising control. This hybrid model is further amplified with smart tools and features designed to make crypto trading more intuitive. From AI-powered analytics to cross-chain swaps, BinoFi is setting a new standard for those looking to maximize their crypto investments. Itâ€™s not just an exchange; itâ€™s a complete ecosystem for crypto enthusiasts. Why Experts Are Betting Big on BinoFi Solana and Avalanche have long been hailed for their contributions to blockchain scalability and speed. However, BinoFi is on a mission to tackle the limitations of existing platforms head-on. Its hybrid exchange alone positions it as a strong competitor, but what truly sets it apart is its visionary approach to simplifying the way users interact with digital assets. - A User-Centric Ecosystem: The hybrid exchange prioritizes both speed and security, an often-overlooked combination in large-scale crypto trading. - Mass Accessibility: By lowering barriers for newcomers and offering tools seasoned investors need, BinoFi targets a broad user base. - Scalable Growth Potential: BinoFiâ€™s native token (BINO) is designed to integrate deeply into the platform, encouraging utility and long-term value. - Ongoing Innovation: Unlike existing systems, BinoFi is avoiding the pitfalls of one-size-fits-all blockchain frameworks, ensuring it delivers exactly what traders want. Itâ€™s this alignment of innovation, performance, and user-focused design that has analysts and insiders predicting a stellar rise for BinoFi in 2025 and beyond. The Presale Thatâ€™s Turning Heads The buzz surrounding BinoFi isnâ€™t just theoretical. Its ongoing presale has already attracted the interest of smart investors searching for the next big thing. With a limited supply of BINO tokens up for grabs at presale rates, this window of opportunity is shrinking fast. Token sales are a big deal in the cryptosphere, often serving as a crucial indicator of a projectâ€™s market reception. The momentum of BinoFiâ€™s presale is a clear sign that investors see enormous potential in this hybrid exchange-powered ecosystem. For those who missed out on the early days of Solana and Avalanche, this is another chance to be part of a game-changing project right from the start. Why Join the BinoFi Revolution? The crypto landscape is constantly evolving, and staying ahead requires spotting opportunities before they hit mainstream recognition. BinoFi is more than just another token; itâ€™s a complete platform that could redefine how we trade and interact with digital assets. By participating in the ongoing presale, youâ€™re not just buying a token; youâ€™re stepping into a future where crypto trading is faster, safer, and more accessible to everyone. Donâ€™t Miss Out The world of crypto doesnâ€™t slow down for anyone. While Solana and Avalanche have had their moment in the spotlight, the BinoFi hybrid exchange is making waves that could define the next era of crypto innovation. The presale is your chance to get in on the ground floor and secure your place in what may be one of the most exciting crypto opportunities of 2025. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Giveaway: <https://giveaway.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. - At the time of writing, SOL is trading at \$134.41, up 8.91% in the last 24 hours. - After severe downtrend, the SOL price found support at \$114 level and has since witnessed a brief uptick. The price of Solana has declined by nearly 50% since its January high, when Donald Trumpâ€™s meme coin was introduced, due to the networkâ€™s transaction volumes and fees being affected by the meme coin winter. Since reaching its high in December of last year, the market cap of meme coins has decreased by 65.2%, and the price of most assets in this category has dropped to levels seen before the election or even lower. Because of the large number of transactions they facilitate, meme coins play a crucial role in the Solana ecosystem. Having said that, the majority of these assets have seen substantial declines since the beginning of the year. Bulls Striving Hard At the time of writing, SOL is trading at \$134.41, up 8.91% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 9.75%. The price surge follows general uptick in the overall crypto market with Bitcoin regaining the \$84k mark. Despite the recent uptick, the SOL price is still down 4.15% in the last 7 days. After severe downtrend, the SOL price found support at \$114 level and has since witnessed a brief uptick. The pace of SOL is increasing on the hourly chart after a breach of the \$130 local barrier. It is still too soon to tell whether the recent price respite for Solana represents a sustained bounce or just a pump. The uptrend should likely extend to the \$140 region, if the bulls can maintain their newly-won advantage. Breaking above \$140 level should likely propel the SOL price towards \$153 resistance level. However, if the price falls below the \$124 mark, then it will likely retest \$114 support level.

Cryptoâ€™s bullish momentum is back, and if you arenâ€™t paying attention, you might just miss the next big wave. Solana is making headlines as CME futures hint at an impending ETF approval, which could bring massive institutional adoption. Meanwhile, Arbitrum is gearing up for a major token unlock, which could shake up its market dynamics and redefine its price action. But the real star? Qubetics (QTICS), a next-gen Web3 aggregator, is revolutionizing blockchain interoperability, helping users seamlessly transact across different networks. With over \$15 million raised, 499 million tokens sold, and 23,000+ holders, Qubetics is quickly becoming the best crypto to buy in 2025â€”before its presale stages run out and the price soars. Qubetics: The Ultimate Solution for Blockchain Interoperability One of the biggest pain points in crypto is the lack of seamless cross-chain compatibility. Imagine trying to move assets from Ethereum to Solana, or from Binance Smart Chain to Avalancheâ€”itâ€™s a hassle, filled with bridges, swaps, and high fees. Qubetics fixes this problem with its advanced interoperability framework, allowing users to move assets across multiple chains effortlessly. It acts as a universal Web3 aggregator, bringing together the best of Ethereum, Solana, Binance Smart Chain, and moreâ€”all in one place. For example, a trader can swap assets across chains without using centralized exchanges, and DeFi platforms can integrate Qubetics to provide seamless multi-chain lending solutions. Even NFT marketplaces can benefit by allowing users to buy and sell NFTs across different blockchains without compatibility issues. With interoperability becoming a key narrative for 2025, Qubetics is positioning itself as the go-to blockchain solution for seamless cross-chain transactions. Qubetics Presale: Your Last Chance Before the Price Surges Qubeticsâ€™ presale is gaining serious momentum, and the numbers speak for themselves: - \$15 million raised in total funding - 499 million tokens sold - Over 23,000 holders Currently, Qubetics is in Stage 25, with QTICS priced at \$0.1074. But hereâ€™s the kickerâ€”every Sunday at 12 AM, the price jumps by 10%. That means waiting could cost you, as QTICS is set to hit \$0.25 by the end of the presale. Letâ€™s talk about potential gains. If you invest \$1,000 at todayâ€™s price, hereâ€™s what it could be worth: - At \$0.25 after presale â†’ \$2,325 (+132.66%) - At \$1 after launch â†’ \$8,306 (+830.65%) - At \$5 in the bull run â†’ \$45,532 (+4,553.26%) - At \$10 â†’ \$92,065 (+9,206.51%) - At \$15 â†’ \$138,597 (+13,859.77%) With these projections, Qubetics is easily one of the best cryptos to buy in 2025, offering insane ROI potential. Solana (SOL): ETF Approval on the Horizon? Solana is on the verge of a game-changing moment, as the latest CME futures listing hints at a possible U.S. ETF approval. If this happens, it could open the floodgates for institutional investors, pushing SOLâ€™s price to new all-time highs. The demand for crypto ETFs has been exploding, especially after the approval of Bitcoin ETFs earlier this year. If Solana gets the green light, it could become the Ethereum of the ETF world, bringing in billions of dollars in new liquidity. With its fast transactions and low fees, Solana has already captured the NFT and DeFi markets. Now, an ETF could be the final catalyst to propel SOL beyond its previous all-time high of \$260. Market analysts are already predicting a major breakout, with price targets reaching \$500+ in the next bull cycle. For those looking for the best crypto to buy in 2025, keeping an eye on Solanaâ€™s ETF approval status could be a game-changer. Arbitrum (ARB): Major Token Unlock Incoming Arbitrum (SARB) is gearing up for a high-stakes eventâ€”a massive token unlock that will introduce \$1.1 billion worth of ARB tokens into circulation. Scheduled for March 2025, this event could cause serious market volatility, depending on how the community reacts. Historically, token unlocks have led to short-term price dips, as early buyers and whales take profits. However, Arbitrumâ€™s long-term fundamentals remain strong, with its Ethereum Layer 2 scaling solutions gaining adoption. If the market absorbs the new supply well, ARB could stabilize and position itself for long-term growth. Given that Layer 2 networks are crucial for Ethereumâ€™s scalability, Arbitrum still remains one of the best long-term bets in crypto. Conclusion: The Best Crypto to Buy in 2025 The best crypto to buy in 2025 isnâ€™t just about chasing hypeâ€”itâ€™s about finding projects with real utility, strong adoption, and massive upside potential. Qubetics is revolutionizing blockchain interoperability, solving one of cryptoâ€™s biggest challenges. With \$15M raised and 23,000 holders, itâ€™s one of the hottest presales right now. Solanaâ€™s ETF rumors could push it into institutional investor territory, setting the stage for a massive price surge. Qubetics is revolutionizing blockchain interoperability, solving one of cryptoâ€™s biggest challenges. With \$15M raised and 23,000 holders, itâ€™s one of the hottest crypto presales right now. Want to be part of the next crypto success story? Join the Qubetics presale before prices jump! For More Information: Qubetics: <https://qubetics.com> Presale: <https://buy.qubetics.com/> Telegram: <https://t.me/qubetics> Twitter: <https://x.com/qubetics> FAQs 1. Why is Qubetics considered the best crypto to buy in 2025? Qubetics is solving blockchain interoperability, allowing seamless asset movement across multiple chains. With \$15M raised, 499M tokens sold, and insane ROI potential, itâ€™s a top pick for long-term gains. 2. How could Solanaâ€™s ETF approval impact its price? If Solana gets ETF approval, it could bring billions of dollars in institutional money, pushing SOL to new highs. Experts predict a potential run to \$500+ if approval goes through. 3. What should community members expect from Arbitrumâ€™s token unlock? Arbitrumâ€™s \$1.1B token unlock in March could cause short-term volatility, but its Ethereum Layer 2 dominance makes it a strong long-term project. Those watching for dips might see a good buying opportunity.

- Dogecoin (DOGE) has confirmed a death cross, struggling above 0.14, with risks of dropping to 0.12 or 0.10. - Solana (SOL) faces further declines as the death cross signals continued weakness after losing 150 support. - XRP attempts recovery but must break 2.57 for bullish momentum; failure may lead to a retest of 2.20 or 1.86. Dogecoin and Solana face strong bearish pressure with confirmed death crosses, while XRP attempts a recovery but struggles with key resistance. Dogecoin (DOGE) is at risk from a bearish â€œdeath crossâ€ technical signal, which will exacerbate its poor price momentum. It is when the 50-day moving average crosses below the 200-day average, which shows that downward pressure is continuous. With current trends and DOGEâ€™s downward trajectory, declines are also in jeopardy. Dogecoin has been declining in the recent past, below key support levels, as there is no buying pressure. It declined to the \$0.14 support after a failure at \$0.20, reiterating bearish indications. Since the death cross has been initiated, a fast recovery is not anticipated. Dogecoin volume is low, with no spikes to reflect increasing buying pressure. The reversal of a trend normally requires the volume of buying to rise, but DOGE has not witnessed this in recent times. If it cannot break above \$0.14, the support lies at \$0.12, a price not seen in months. Going below this could see it fall sharply, with the psychological \$0.10 being a possible target. To regain its former highs, DOGE must regain crucial resistance at \$0.18 and \$0.20. But the bearishness of the death cross makes it hard for the cryptocurrency to regain its former highs without a radical shift in market sentiment. Solana also faces the same market pressure similar to Dogecoin, Solana (SOL) is also experiencing market volatility. SOL confirmed a death cross, which indicates potential further declines. This happens when the 200-day moving average crosses the 50-day average, which usually signals long-term bearish trends. Solanaâ€™s recent price movement is an indication of the general weakness of the market. It was unable to gain strong support in recent weeks, and its momentum slowed down after falling below \$150. The confirmed death cross has strengthened the bearishness, and it is becoming difficult for the comeback. SOL, similar to DOGE, is making lower highs and lows, which indicates bear control. As anything can occur with future price, investors need to be careful and watch the market for a change in momentum. XRP Shows Resistance While Solana and Dogecoin experience bearish movements, XRP demonstrates resilience in recovering. It has increased from the significant \$2.10 support level, but its strength is in doubt. XRPâ€™s break-out is impeded by a declining channel pattern. Trading currently above \$2.30, the next resistance comes in at \$2.57. Breaking through here would have it reach \$3.00, confirming its recovery trend. XRPâ€™s bearish volume is declining, therefore weaker selling pressure and space for buyers. RSI has reverted from oversold levels, and hence short-term strengthening. The assetâ€™s future is uncertain. If XRP fails to breach \$2.57, it can slide back into the \$2.20-\$2.10 range. A fall below this support can retest \$1.86, wiping out recent gains. XRPâ€™s next direction will depend on sustained buying pressure. Greater demand will see a turnabout, moving towards \$3.00. Solana and Dogecoin have imposed bear pressure, with death crosses predicting declines. Dogecoin is experiencing low volumes and no signs of buying pressure supporting this presumption, while Solana is having issues with the same in the presence of market volatility. XRP, however, is recovering gradually but still has key resistance looming over it which will determine its destiny. Highlighted Crypto News Today World Liberty Financial \$WLFI Raises \$550 Million in Token Sale

- The SIMD-228 proposal to reform the inflation rate failed to pass in the voting system. - The proposal aimed to change the inflation system from pre-set to a dynamic based on staking participation. The Solana community agreed to introduce the SIMD-228 proposal to change its current inflation rate system. After the final vote today, the proposal failed to pass with only 61.4% votes. Despite the rejection of the proposal, the Solana voting system is garnering attention across the industry. Around 910 validators, amounting to 74% of staked supply, voted on the new proposal. While 43.6% of them voted in favor of the proposal, 27.4% voted against it. Dune Analytics also revealed that 3.3% of validators abstained. Thus, the proposal only received 61.4% whereas it required 66.67% to pass. What is the SIMD-228 proposal? The current proposal aims to introduce a dynamic inflation system based on staking participation. At present, the Solana inflation rate works based on a fixed schedule. It begins at 8% annually and decreases 15% each year until it achieves 1.5% inflation. However, the proposed model would have reduced inflation by 80%. Helius offered a detailed insight into the SIMD-228 model and its benefits. In addition to reducing inflation, the new model could also reduce unnecessary token issuance and improve network security. However, small validators would experience less profits, and the new model would increase complexity. SIMD-

228: A Historical Milestone for Crypto The Solana voting system is garnering attention across the industry. Several community members appreciated the diligent voting process on the SIMD-228 proposal. Multicoin Capital co-founder Tushar Jain referred to it as a historical milestone for crypto. Tushar even said that it is a major victory for the Solana ecosystem and its governance despite the proposal facing rejection. He further said, “If this vote tells us one thing, it’s that the state of the Solana network is strong. This was a meaningful scaling stress test – a social, rather than technical, stress test” and the network passed despite a wide stratification of diverging opinions and interests.

Highlighted Crypto News Today: World Liberty Financial \$WLFI Raises \$550 Million in Token Sale

Trading and investing in digital assets has proven to be a profitable venture for tech-savvy investors. Professional crypto trading and investment yield massive returns for involved market participants. Digital assets like Solana (SOL) could make sustainable profits in the long run since experts predict a possible rally by the end of 2025. However, a new project promises to turn small investments into huge gains in the short term. The potential of BinoFi is limitless when judging from its cross-chain trading features and presale prices. The hybrid platform backs CEX and DEX transactions, making it a gem for newbies and expert crypto traders. The project would potentially make a 5X upsurge for early adopters and investors in the next few months. A \$1,000 investment would easily flip to \$50,000 under the same investment conditions in the next six months. BinoFi’s potential growth casts a shadow on Solana Smart crypto enthusiasts have turned as little as \$1,000 into millions of dollars investing in presales, ICOs and low market cap projects. Although past performance does not guarantee future outcomes, utility projects like BinoFi will always attract more investors than speculative assets driven by hype and emerging trends. BinoFi’s growth potential is greater than that of already-established crypto assets like Solana (SOL). BinoFi includes Atomic Swaps and HTLCs with trading features that allow fast and seamless crypto asset swaps. Atomic swaps allow traders to access peer-to-peer crypto trading across various blockchain networks. There is no centralized interference while using these features. The hybrid platform also combines DEX and CEX features, offering a wider variety of trading opportunities. BinoFi also offers automated trades with AI assistance for its users. AI-driven trade automation has the potential to revolutionize crypto trading and analysis. Crypto traders using BinoFi can access these features, including sentiment-based market alerts and social media outlook to help traders make trading decisions. BinoFi users get informed of the latest happenings in the market and access real-time analysis. Use the data generated by AI tools to scan the market to make informed trading decisions. The AI-driven tools serve as a major advantage in turning small investments into significant profit channels. BINO investing returns vs Solana’s Solana investors have turned to a more lucrative prospect, seeking better returns on investments as Solana’s price declines. Recent data analysis shows that Solana’s trading volume dipped by 61% as its support level was tested. The smart contracting platform may have taken a hit due to ongoing macro uncertainty but experts are still positive about Solana’s future. DeFi participants believe investing in BinoFi’s ongoing ICO has the potential for better returns than buying Solana. Experts believe the new project’s ongoing presale is a one-in-a-lifetime opportunity for value crypto investors seeking value-providing projects. BINO token’s current price is \$0.02 and is set to launch in a few months at \$0.3. The early birds who buy BINO will now see a 1200% return on invested capital when the project launches in a few months. The investment will accrue more returns when the token’s value rises over time. BinoFi developers are building a self-sustaining ecosystem with income-generating mechanisms. BinoFi will offer investors and traders premium AI tools for trading and market analysis at a fee settled in BinoFi’s native cryptocurrency. These tools will be available for both retail and institutional investors looking for AI-driven market-making and automated portfolio rebalancing mechanisms. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Giveaway: <https://giveaway.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Jake Gagain is buying XRP, Solana, Tron, SUI, and Ethereum amid the recent market dip. - Gagain believes XRP will surge once Ripple’s SEC lawsuit ends, while Solana and SUI are trading at deep discounts. - Ethereum, despite being Bitcoin’s closest rival, is down 62% from its all-time high, making it an attractive buy. Jake Gagain, a widely followed crypto analyst, has identified XRP as one of the best altcoins to buy during the current market downturn. Many crypto assets are trading at major discounts after Bitcoin dropped to \$76K this week, its lowest price in four months. With the bull market expected to continue for a few more months, analysts believe today’s low prices could present a prime buying opportunity. Gagain shared his top altcoin picks, explaining why he is adding these assets to his portfolio. Why Gagain is Buying XRP Now Gagain listed XRP as his top pick, citing the potential for a price surge once Ripple’s four-year-long legal battle with the SEC concludes. Recent reports suggest Ripple is negotiating favorable settlement terms, which could be a major catalyst for XRP. Currently trading at \$2.23, XRP has already rebounded 16% from this week’s low of \$1.92. Solana is another coin on Gagain’s list, following a 62% drop from its January high of \$295 to \$112. He sees this sharp decline as a prime buying opportunity, given Solana’s strong presence in the crypto space. Beyond XRP and Solana, Gagain is bullish on Tron (TRX), citing its resilience during the market crash and its founder Justin Sun’s close ties with Donald Trump. TRX has only declined 12% in the last 90 days, compared to Solana’s 62% drop. Gagain is also accumulating SUI, which once surged past \$5 in January but now sits at \$2.20 – a 58% drop. He highlights its rapid growth as a Layer 1 blockchain and notes that Eric Trump is reportedly a holder. Finally, Ethereum rounds out his list. Despite being Bitcoin’s closest competitor, Ethereum has underperformed, dropping 62% from its all-time high. At \$1,862, Gagain considers ETH a steal compared to Bitcoin, which is only 24% below its peak.

Blockchain networks battle to provide the most efficient solutions regarding scalability along with fast transactions and affordable fees. Ethereum and Solana remain the leading blockchain networks but they present different strengths and weaknesses to each other. The rising market demand for speed and efficiency has led Kaanch Network to emerge as an alternative network that offers superior innovations to both Ethereum and Solana across multiple performance domains. Ethereum: The Pioneer with Scalability Challenges The blockchain world shifted toward a new direction because Ethereum introduced smart contracts which led to the creation of DeFi and NFTs. Although Ethereum maintains a position as the cryptocurrency with the second-largest market capitalization it faces substantial scalability problems. Ethereum 2.0 introduced Proof of Stake (PoS) alongside improved efficiency yet the network performs transactions at a slow rate with 12-30 transactions per second (TPS). When network usage increases Ethereum fees increase dramatically which produces an expensive solution for developers and users. Solana: Speed and Efficiency, but at a Cost Solana introduced itself as a blockchain platform that provided high-speed operation with a transaction capacity of 65,000 TPS alongside instantly confirmed transactions. Solana achieves its high processing efficiency through Proof of History (PoH) which delivers enhanced speed at reduced expenses in comparison to Ethereum. The network faces reliability problems because it experienced several outages throughout the previous years which makes users doubt its centralized structure and future stability. The superior speed of Solana transactions over Ethereum creates obstacles for mass adoption because the platform faces both technical security risks and limited evolution of its ecosystem. Kaanch emerges as the next-generation blockchain which transforms modern blockchain operations. The ongoing Ethereum vs. Solana competition brought Kaanch to the market as a solution that offers unmatched speed and scalability for blockchain operations. Real-time global transactions happen instantaneously through the network because it achieves 1.4 million TPS together with a 0.8-second block time. Kaanch stands out because it offers free transaction fees to users while Solana struggles with reliability and Ethereum has expensive gas fee requirements. Unparalleled Security and Decentralization The Kaanch Network system achieves more than fast processing since its architectural design emphasizes both advanced security measures and high resilience capabilities. Through its 3,600 decentralized nodes Kaanch provides both strong attack resistance and increases developer and business trust. The AI-optimized governance framework enhances decision processes as well as smart contract execution and transaction handling to make Kaanch the smartest blockchain solution now in the market. Real-World Asset Tokenization and Mass Adoption Real-world asset tokenization receives enhanced capabilities through Kaanch which surpasses both Ethereum and Solana in DeFi and NFTs. Real-time secure tokenization of assets through Kaanch Network enables businesses and individuals to adopt blockchain technology at a mass scale. Through its community-oriented approach Kaanch provides complete transparent governance and simple staking tools alongside complete development documents for blockchain integration. The Development Community Moves Toward Kaanch Because of Its Winning Approach Ethereum faces three key disadvantages through its expensive operations and sluggish processing and intricate network upgrade procedures but Solana faces two major issues because of its network stability and concentration problems. The solution offered by Kaanch stands unmatched as it starts attracting developers from the highest level. Growing numbers of developers are selecting Kaanch Network because it provides minimal transaction costs alongside rapid processing times and flexible network expansion. The upcoming year will witness a 125,890% growth according to top analysts because developers continue to build new projects within the space. Kaanch at \$0.08 won’t last – price doubling soon. Outpacing Ethereum and Solana, this is your chance to get in early. The ongoing Stage 4 presale phase of Kaanch presents investors with an ideal moment to buy at present prices that will eventually increase. The current price of Kaanch tokens sits at \$0.08 before moving to the following price level at \$0.16. Each Kaanch Token (Kaanch) holds a market value of \$0.080000 at present. The security audits performed by Spywolf and VerifyLab are establishing Kaanch as the future of blockchain technology which provides superior advantages than Ethereum and Solana. Conclusion: The Future is Kaanch The foundational work of Ethereum and Solana in blockchain development opens doors for better blockchain solutions because they possess technical constraints. Kaanch stands as the superior blockchain solution through its combination of fastest speed along with unmatched scalability and virtually no fees. Kaanch positions itself to dominate the blockchain industry due to its rapid industry evolution. For more information about Kaanch Network visit the links below: BE A PART NOW at’ <https://presale.kaanch.com> - Official Website: <https://kaanch.com> - Whitepaper: <https://docs.kaanch.network> - Twitter / X: <https://x.com/KaanchNetwork> - Telegram: <https://t.me/kaanchnetwork> Disclaimer: Remember that investing in cryptocurrencies carries inherent risks. Three blockchain giants – Ethereum (ETH), Solana (SOL), and Kaanch – are vying for dominance in the rapidly evolving crypto space. While Ethereum and Solana have cemented their places as leading smart contract platforms, Kaanch Network is emerging as a revolutionary Layer 1 blockchain that reigns supreme. With its superior scalability, unmatched transaction speeds, and AI-enhanced efficiency, Kaanch is set to disrupt the industry. As all three networks continue their expansion, 2025 is shaping up to be a pivotal year for blockchain innovation. Ethereum: The Smart Contract Leader The dominant status of Ethereum as a smart contract platform continues due to its well-developed ecosystem managed by a wide range of developers. Ethereum 2.0 implementation method enables security improvements, advanced scalability, and system-wide operational efficiency. Ethereum utilizes proof-of-stake (PoS) to operate more energy efficiently, thus improving sustainability and increasing functional abilities. Solana: High-Speed, Low-Cost Transactions Solana has become famous because it enables speedy transactions at affordable rates. Solana distinguishes itself through its blended proof-of-history (PoH) and proof-of-stake (PoS) consensus system, while Ethereum exclusively uses proof-of-stake. Both developers and users have chosen the network to establish its dominant position in the DeFi and NFT sectors. The network stability problems experienced by Solana occasionally resulted in platform reliability issues. Ethereum’s Market Position vs. Solana’s Scalability Advantage Developers select Ethereum as their platform mainly because of its robust framework while appreciating its decisive significance to Web3 development. Developers aim to fix network congestion through Ethereum Improvement Proposals (EIPs) and layer-2 scaling solutions, including Optimistic Rollups and ZK-Rollups. Solana stands out to users who need swift transactions since it handles thousands at budget-friendly prices per second. The crypto community continues to discuss ongoing network outage problems with Solana. Solana develops its market clout by establishing flagship business partnerships among financial institutions. Kaanch: The Ultimate Blockchain Revolution Kaanch Network is redefining blockchain technology with its high-performance Layer 1 network. Boasting an unparalleled 1.4 million transactions per second (TPS) and 0.8-second block finality, Kaanch is miles ahead of both Ethereum and Solana in terms of efficiency. Its Delegated Proof-of-Stake (DPoS) consensus mechanism, supported by 3,600 active validators, ensures security, decentralization, and smooth scalability. What sets Kaanch apart is its seamless AI integration, optimizing transactions with near-zero gas fees and enhancing smart contract efficiency. AI-powered governance ensures a transparent and accountable framework, allowing the community to drive innovation and decision-making. Businesses, developers, and users alike benefit from cost-effective blockchain interactions, making Kaanch an all-in-one solution for DeFi, asset transfers, and decentralized applications. Kaanch: Closing in on the Competition Kaanch is almost at the neck of Ethereum and Solana, and its rapid presale progress signals investor confidence in its potential. Currently in Stage 4 of its presale at \$0.08 per token, Kaanch is set to rise to \$0.16 in the next phase. Having already raised over \$636,942, the momentum behind Kaanch is undeniable. As it continues to gain traction, the blockchain world is witnessing the rise of a formidable contender poised to challenge Ethereum and Solana’s market supremacy. The Competitive Outlook for 2025 While Ethereum is expected to maintain its dominance due to its established ecosystem and continuous development, Solana’s efficiency and affordability position it as a strong market player. However, Kaanch offers the best of both worlds – scalability, speed, security, and cost-effectiveness – making it the superior blockchain network. As Kaanch continues its fast-moving presale and attracts investors globally, it presents a groundbreaking alternative to Ethereum and Solana. With AI-driven innovation, decentralized governance, and record-breaking transaction speeds, Kaanch is not just a competitor – it’s the future of blockchain. - Solana has factored in a modest price increase of 1.87% in the last 24 hours. - The altcoin’s daily trading volume has dropped by 18.62% as per CMC data. The overall crypto market has been traversing towards the recovery lane in the past two days. Bitcoin has finally surpassed its \$82K resistance and instilled hope among investors. This can also be seen in the altcoin sector, as leading tokens struggle to overpower the bears. Meanwhile, other subsectors have remained active in the past day. However, one of the leading altcoins, Solana, seems to be an exception. After struggling for hours, Solana briefly showed bullish signs but once again retraced to the negative side of the spectrum. In the last 24 hours, the altcoin has recorded a modest price increase of 1.87%, as depicted in its daily price chart. In the afternoon hours of March 12, SOL was trading at the \$123 level. After bullish candles sparked, prices plummeted to an intra-day high of \$130.65, but Solana failed to test the resistance. At the time of writing, the altcoin was trading at \$126.24 as per CMC data. Zooming out and looking at its weekly chart, SOL depicts significant bearish trends that resulted from the past week’s market crash. Its weekly price performance stands at a 16.08% price drop. However, this recent positive momentum might aid the altcoin in distancing itself from the \$100 support. Will Solana Rally Away from the \$100 Support? On analyzing its recent trading patterns Solana shows signs of beginning an ascending channel, after tracing a horizontal channel in the past few days. This suggests that the altcoin might sustain its positive momentum. Moreover, its Moving Average Convergence Divergence MACD line is close to being crossed over the signal line. If Solana manages to pull the stops on the bears for the next few days, it might manage to regain its recovery and eventually the bull run. However, the RSI value stands at 36.95 suggesting an oversold market sentiment as per TradingView data. If Solana manages to sustain the aforementioned momentum, the RSI might enter the neutral zone. Meanwhile, other altcoins such as Celestia and Avalanche have shown significant positive trends.

- Solana has rebounded above \$120 but remains 60% below its all-time high. - Solana’s real economic value (REV) has dropped 90% due to reduced meme coin trading. - A double-top formation and rising network inefficiencies indicate a bearish divergence. Solana is showing signs of recovery above \$120 amid a volatile crypto market. Despite a 14% decline over the past week, SOL has surged 5.98% on March 11, temporarily halting a bearish streak. However, analysts caution that the recovery may be short-lived, as declining revenues and technical sell signals point to further downside risks. Solana Sell Signal On the daily chart, Solana is showing a slight 1.14% intraday pullback. The recent price movement appears to be a retest of the broken \$130 demand-turned-supply zone. The asset remains nearly 60% below its all-time high of \$295, with a death cross event forming between the 50 and 200 EMA lines. Additionally, the 100 and 200 EMA lines are nearing a bearish crossover, further signaling a potential downturn. Brandon Farmer, an analyst at ZeroKnowledge Polygon, suggests that Solana’s previous economic strength was largely driven by the surge in meme coin trading on decentralized exchanges. The increased demand for block space fueled high transaction volumes, creating a SOL wealth effect that pushed prices higher. However, with meme coin activity sharply declining, Solana’s weekly real economic value (REV) has dropped 90% from its peak. Farmer warns that meme coin-driven growth is unsustainable and mercenary, leaving Solana vulnerable to further losses. Technical analyst Gert van Lagen highlights a double-top formation on Solana’s weekly chart, suggesting a strong bearish divergence. Additionally, Solana failed non-vote transaction rate has climbed to 75%, indicating inefficiencies in network transactions. Van Lagen warns that if bearish momentum continues, Solana could face a significant downswing, potentially dropping below \$1 in an extreme scenario. While Solana’s short-term outlook remains uncertain, its ability to reclaim key resistance levels will determine whether it can sustain its recovery or succumb to further losses.

- Solana nears a death cross, struggling below \$150 with potential drops to \$110 or \$100. - Dogecoin risks falling below \$0.14, possibly declining to \$0.10-\$0.12. - Ethereum breaks \$2,000 support, signaling bearish momentum and further losses. Solana approaches the death cross Solana is experiencing strong bearish pressure since it is moving towards a death cross formation. This is when the 50-day moving average crosses below the 200-day MA, which in the past has been used as a sign of a long-term downtrend and increased selling pressure. The breakdown of a key support level has impacted Solana’s market negatively. The \$150 support level was strong but has weakened, and SOL has declined to about \$124. If the death cross is true, it could trigger more liquidations and lower prices. The price of Solana indicates a downtrend with short-term moving averages in favor of bearishness. The flattening 200-day MA suggests diminishing bullish momentum. If SOL is unable to sustain support, then it can fall to \$110, potentially testing \$100. Or, if the price is propped up by buyers above \$150, then a short-term bounce can be seen. Dogecoin Reaches Last Support Point Dogecoin is descending towards a critical support of \$0.14. This is the last major support. If DOGE dips below this, it can go to the \$0.10-\$0.12 level. DOGE is bearish with support levels failing to hold buyers. From a jump from \$0.22, the price dropped to \$0.18 and below. Currently, a death cross threat can extend losses if it occurs. As compared to earlier hype cycles, DOGE is exposed now since meme coins have very low demand. Without favorable catalysts, Dogecoin cannot gain momentum. Ethereum is below \$2,000 Ethereum has dropped below the \$2,000 support level, indicating bearish conditions. This decline was also indicated by rising trading volume, which indicates strong selling pressure. In the recent past, ETH has lost its bullish hold and weakened. The fall below \$2,000 has weakened its technical stance since it cannot trade above key moving averages. Ethereum is in a bear trend with the short-term moving averages falling. Without improved market conditions, ETH can continue to experience further corrections in the near future. Solana, Dogecoin, and Ethereum are under bear pressure after the collapse of important support levels. Death cross in SOL and DOGE is a cause for concern, and ETH dipping below \$2,000 is a weakness signal. Without stability, further corrections are in the pipeline. Alternatively, growing buying momentum might provide relief, and the next two days are crucial for their prices. Highlighted Crypto news Today Pierre Gasly’s Fan-Designed Helmet Unveiled in Binance Mural in Melbourne

- The SEC has delayed its decision on VanEck’s spot Solana (SOL) ETF, citing market assessment. - Similar delays were issued for other altcoin ETFs, including Dogecoin, XRP, Litecoin, and Cardano. The U.S. Securities and Exchange Commission (SEC) has postponed its decision on VanEck’s proposed spot Solana (SOL) exchange-traded fund (ETF). This delay aligns with the regulator’s cautious approach to cryptocurrency ETFs, emphasizing investor protection and market stability. The SEC’s decision to delay the Solana ETF was widely anticipated, as the agency continues to assess various crypto-related investment products. Historically, the SEC has cited concerns about market volatility, regulatory scrutiny, and custody security when evaluating crypto ETFs. The postponement does not mean rejection. Instead, it extends the review period, allowing the SEC more time to evaluate VanEck’s proposal and its potential impact. The approval of a spot Solana ETF could set a precedent for other altcoins, prompting the SEC to proceed cautiously. SEC’s Broader Crypto ETF Delays The SEC’s decision on VanEck’s Solana ETF comes amid broader delays in other altcoin ETF applications. On March 11, the agency postponed decisions on various altcoin-based ETFs, including those for Dogecoin (DOGE), XRP, Litecoin (LTC), and Cardano (ADA). Additionally, it delayed filings from Grayscale, Bitwise, and 21Shares, as well as staking proposals for Ethereum ETFs. Despite the delays, the SEC acknowledged new filings, such as Grayscale’s Hedera (HBAR) ETF and Bitwise’s DOGE-related proposal. Franklin Templeton also entered the altcoin ETF race by filing an S-1 Form for an XRP ETF. Bloomberg ETF analyst James Seyffart stated that these delays were expected, describing them as a standard procedure. He noted that the final deadlines for SEC decisions on all pending ETF applications fall in October 2024, and the likelihood of approval remains high. Seyffart and Bloomberg’s senior ETF analyst Eric Balchunas estimated approval odds for various altcoin ETFs earlier this year. Litecoin leads with a 90% probability of approval in 2024, followed by Dogecoin at 75%, Solana at 70%, and XRP at 65%. These odds have risen significantly compared to the pre-election period in November 2023. Highlighted Crypto News Today U.S. House Votes to Overturn IRS Rule on DeFi Platforms

Have you ever looked back at a missed crypto opportunity and thought, What was I even thinking? If Solana was one of those regrets, you’re not alone. When SOL launched, it was available for just \$0.22. Those who got in early saw life-changing returns when it skyrocketed to an all-time high of \$294.33. That’s a jaw-dropping 133,376% increase, and many people had the chance to secure massive profits but hesitated. Maybe you were skeptical. Maybe you thought it was just another passing trend. But hindsight is 20/20, and now, as SOL continues to dominate the crypto space, the regret is real. But what if you didn’t have to make the same mistake twice? This time, Qubetics (\$TICS) is offering a rare second chance. Since launching on September 29, 2024, Qubetics has been gaining serious traction, with its presale raising over \$14.9 million. Its vision is ambitious—aiming to become the most popular cryptocurrency by revolutionizing cross-border payments, offering unmatched scalability, and ensuring lightning-fast transactions. Right now, Qubetics presale is still ongoing, meaning you have a limited window to secure \$TICS at a price that’s still within reach. But don’t wait too long—each stage only lasts seven days, and prices rise by 10% with every new stage. The longer you wait, the more you’ll pay, and before you know it, you could be sitting on another airtight opportunity. Qubetics: The Most Popular Cryptocurrency Opportunity You Can’t Afford to Miss If you were paying attention when Qubetics first launched, you would have seen early adopters securing \$TICS for just \$0.01—with zero upfront investment. The earliest stages of the Qubetics presale were a dream come true for those who understood the power of getting in early. Fast forward to today, and while you may have missed those initial stages, there’s still time to get in at an incredible price. Right now, in its 25th stage, Qubetics is priced at just \$0.1074. Over 22,700 token holders have already secured their share, and more than 498 million \$TICS tokens have been sold. The momentum is undeniable, and this could be your final opportunity before the price climbs even higher. If Qubetics continues on this trajectory, it has the potential to become the most popular cryptocurrency, making early entry even more valuable. Let’s talk numbers. If you buy in at the current stage, the potential returns are staggering. By the end of the Qubetics presale, \$TICS is projected to hit \$0.25, translating into a 132.66% ROI. If it reaches \$1 after the presale, that jumps to an 830.65% ROI. And if \$TICS climbs to \$10 post-mainnet launch, you’d be looking at a mind-blowing 9,206.51% ROI. To put this into perspective, if you invested just \$1,000 today, and \$TICS reached \$10, your initial investment could turn into a massive \$92,065. With these kinds of gains on the horizon, it’s no surprise that Qubetics is rapidly emerging as the most popular cryptocurrency for those looking to capitalize on the next big thing. Beyond its massive profit potential, Qubetics is solving real-world problems with its Non-Custodial Multi-Chain Wallet. Picture this: a freelance web developer working with international clients no longer has to wait days for payments to process or lose a chunk of their earnings to fees. With Qubetics, they can receive payments instantly in any supported cryptocurrency, convert it seamlessly, and access their funds without intermediaries. Similarly, a small business owner importing goods globally can send cross-border payments without dealing with the nightmare of currency conversion delays. Whether you’re an individual or a business, Qubetics’ wallet provides the kind of efficiency and security the traditional banking system simply can’t match. It’s yet another reason why Qubetics is on track to becoming the most popular cryptocurrency in the near future. Solana: The One That Got Away Everyone loves a good success story until they realize they could have been a part of it. Solana’s rise to the top is one of those stories. When it launched in March 2020, its ICO price was a mere \$0.22. It seemed like just another project in the crowded crypto space. But those who had the foresight to invest at the time saw something different. Fast forward to its all-time high in January 2025, and SOL hit \$294.33. That kind of growth is what crypto dreams are made of. Solana’s early investors made generational wealth while many others stood on the sidelines, watching its meteoric rise. The project’s success wasn’t a fluke. With blazing-fast transaction speeds, a robust ecosystem, and widespread adoption, Solana quickly became one of the biggest names in crypto. Those who dismissed it as just another blockchain project ended up regretting it when it established itself among the most popular cryptocurrencies of all time. But here’s the thing—these massive opportunities don’t come often. Solana was one of them, and many people missed out. The question is, are you going to let history repeat itself, or will you make sure you’re on the right side of the next big thing? Seize the Moment: Join This Crypto Presale Before It’s Too Late There are few things worse in crypto than realizing you were this close to a life-changing investment but let doubt get in the way. Solana was a massive opportunity, but Qubetics is here now, and it’s offering a similar chance. The current presale is still open, but every seven days, the price increases by 10%. That means if you hesitate, you’ll be paying more than you would today. And if you wait too long, you might be forced to buy \$TICS at a much higher price once it’s listed. With its mainnet launch set for Q2 2025, Qubetics is gearing up for something big. The growing community, the strategic presale structure, and the real-world utility of its wallet are all indicators of a project with serious long-term potential. Timing is everything in crypto, and right now, the timing is perfect to join this crypto presale before the window of opportunity closes. There are two types of people in crypto: those who act early and those who watch from the sidelines. Which one are you going to be? The choice is yours, but one thing is clear—Qubetics is on track to becoming the most popular cryptocurrency, and this could be your chance to get in before the rest of the world catches on. For More Information: - Qubetics: <https://qubetics.com/> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://twitter.com/qubetics> TheNewsCrypto does not endorse any content on this page. - Solana’s price has dropped by 3.50% in the past 24 hours and is trading at \$124. - Solana’s revenue fell by 93%, reaching its lowest level since September. - Technical indicators suggest further price decline if bearish momentum persists. The crypto market is experiencing uncertainty as the fear and greed index drops to 15, the level last seen during the FTX collapse. The global market cap has declined to \$2.65 trillion while the 24-hour trading volume surged to \$150 billion. The momentum has continued to be bearish, resulting in major declines across the altcoins sector. Solana (SOL), one of the leading altcoins, has been trading in a descending channel since losing its all-time high of \$295. At press time, SOL is exchanging hands at \$124, down by 3.50% in the past 24 hours, according to CMC data. SOL has declined by 8% and 38% on the weekly and monthly charts, respectively. Furthermore, its market cap and trading volume have dropped to \$63 billion and \$6.13 billion, respectively. Solana’s Revenue Drops Sharply as Meme Coin Frenzy Fades Meme coin activity drove Solana’s weekly revenue to a peak of \$55.3 million in mid-January. However, this boom is fizzling out, and the decline has been sharp. Solana’s network revenue plunged 93% last week to \$4 million, the lowest level since September. Moreover, Solana’s decentralized application (dApp) revenue dropped 86%. It fell from \$238 million in January to only \$32 million last week. This downward trend is due to the fading of the meme coin hype itself, which was once a significant revenue source for Solana. Over the same period, Solana’s total value locked (TVL) has dropped by nearly 50%. Capital tied to the ecosystem plummeted from \$12 billion to \$6.4 billion. A recent downturn in meme

coin trading has coincided with its. Rapid growth platforms such as Pump.fun are now struggling. In January, its daily revenue peaked at \$15 million but dropped 95% to \$800,000 by March 7. Solana's price has fallen 58% since its mid-peak in January due to its fading meme coin trend. Technical Analysis: Will Solana's Price Dip Further? Solana's market shows a bearish sentiment on the daily chart based on the technical indicators. The Relative Strength Index (RSI) and Moving Average Convergence Divergence (MACD) indicators are in the negative territory. Currently, the RSI has a value of 36, which means that the market is oversold. This indicates a lack of buying pressure as the sellers dominate the market. Should the current trend hold, SOL could correct toward the \$100 level. The bearish sentiment remains strong as the MACD line stays below the signal line. Furthermore, the histogram is printing red bars and the SOL price could fall further if the buyers don't overcome sellers. Highlighted Crypto News for Today

With the crypto market heating up, now is the perfect time to position yourself in high-potential altcoins before the next major bull run. If you have \$1,000 to invest, these five altcoins could deliver massive returns, led by an under-\$1 token that could surpass Solana in the AI-powered blockchain space. That token? Lightchain AI (LCAI). With over \$17.1 million raised in its presale at just \$0.006 per token, Lightchain AI is emerging as one of the most innovative blockchain projects of 2025. 5 Altcoins to Watch Right Now Here are some altcoins catching the eye of investors right now: - Lightchain AI (LCAI) - This up-and-coming blockchain platform is combining AI with decentralized applications for something truly unique. Its Proof of Intelligence system actually rewards nodes for AI computations, making the network super efficient. It's still in presale but has already raised over \$16 million. Clearly, people are paying attention! - Ethereum (ETH) - Ethereum is still the king of smart contracts, dominating DeFi and NFTs. Currently trading at around \$2,218.70, it's gearing up for some major network upgrades aimed at improving scalability and lowering transaction fees, which could give its value a nice boost. - Polygon (MATIC) - As a Layer 2 solution for Ethereum, Polygon makes transactions faster and cheaper. At just \$0.271147, it's a cost-effective option that plays a big role in improving Ethereum's overall performance. - Chainlink (LINK) - This one's all about connecting smart contracts with real-world data, which is crucial for DeFi and other blockchain applications. At \$14.73, Chainlink's reliable data feeds make it a key player in the crypto space. - Injective Protocol (INJ) - If you're into decentralized exchanges, Injective might catch your interest. It's designed for advanced trading and cross-chain compatibility, making it a standout in the DeFi world. Right now, it's priced at \$13.20 and focuses heavily on derivatives trading. These altcoins show just how diverse and exciting the crypto market continues to be! Which Altcoin Has the Biggest Upside? While Ethereum, Polygon, Chainlink, and Injective Protocol all have strong growth potential, Lightchain AI (LCAI) stands out as the best under-\$1 opportunity. With its AI-driven smart contracts and decentralized AI computing solutions, Lightchain AI could revolutionize the blockchain industry, making it a strong contender to surpass Solana in market adoption. If you're looking for the next big 100x investment, Lightchain AI is the top pick in this lineup. Its cutting-edge technology, experienced team, and strategic partnerships make it a clear choice for investors looking to get in on the ground floor of an innovative blockchain project. The Potential for Massive Returns With Lightchain AI's presale selling out quickly at just \$0.006 per token, there is immense potential for early investors to see massive returns as the project gains traction. In addition to its low entry point, Lightchain AI also has a limited supply of tokens. Only 10 billion LCAI will ever be minted, which could drive up demand and value for the token over time. As Lightchain AI continues to develop and launch its AI-driven smart contracts and decentralized AI computing solutions, it has the potential to become a major player in the blockchain industry and deliver significant returns for its investors. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market will allure investors in 2025 with new exciting projects. Rexas Finance (RXS) is competing with Solana's (SOL) high-capable blockchain and is focused on Real World Asset (RWA) tokenization. With a successful presale round approaching its final phase, Certik audit for security confirmation, alongside an ever-expanding ecosystem of decentralized applications (dApps), Rexas Finance seeks to diversify the investment options for its clients. This article analyzes Rexas Finance's prospects compared to Solana's regarding investment, tokenomics, ecosystem development, and emerging market security for fresh investors. Real-World Asset Tokenization: A Game-Changer for Crypto Rexas Finance streamlines the gap between traditional finance and blockchain through the tokenization of Real World Assets (RWA). This makes it possible for investors to purchase a fraction of real estate, fine art, commodities, intellectual property, or any other asset in Rexas Finance's ecosystem. Whereas Solana mainly emphasizes DeFi, NFTs, and Web3 apps, Rexas permits fractional investment in tokenized assets. This kind of capital deployment facilitates better trading of highly illiquid assets, thus augmenting overall liquidity. However, the most benefit remains with the developers of DeFi protocols, NFT markets, and even blockchain-based games in the usage of Solana's fast and cheap transaction rates. Still, its lack of focus on RWAs greatly reduces its appeal to investors searching for steady and reliable backing to support their assets. The presence of investment assets and their corresponding valuation reduces the need for vague trading. Investors driven by the demand for digital investments backed by tangible assets are turning to Rexas Finance, which is trying to establish itself as a leader in the world of non-speculative tokens and provides investment opportunities unlike any other. Tokenomics and Investment Potential Rexas Finance's tokenomics is designed to foster growth and sustainability over time. There is a total supply of one billion RXS tokens; with the partitioning of the RXS tokens into presale (42.5%), staking rewards (22.5%), and treasury management (10%), strong investor engagement is ensured. This structure rewards early adopters while motivating them to retain their tokens for longer due to staking rewards. Early investors will be able to purchase the token during the launch at \$0.25 and gain from the increase in the token's value. Conversely, Solana employs an unlimited supply system, using staking and network activity to counterbalance token inflation. Although SOL continues to be one of the most prominent assets on the blockchain, its value has depreciated recently, which makes one question its stability in the long run. Operating at a market cap of over \$83 billion, SOL is already highly valued, which proves to be a costly entry point for novice investors. In contrast, Rexas Finance represents a low-cost investment with notable upside potential, especially as it nears its exchange listing date of June 19, 2025. Presale Success and Exclusive Investor Incentives With regard to the presale of Rexas Finance, it has already raised \$46.49 million and sold 90.49% of the available tokens. This puts Rexas in a strong position because investors appear fully confident in the project from an early stage. Investors in this final stage of presale RXS tokens can buy the RXS token for \$0.20 before the price increases to \$0.25 at the launch. The growth in RXS tokens shows that more and more investors want to invest in cryptocurrencies backed by assets, and it also confirms the worth of RXS as a next-generation investment tool. To increase participation, Rexas Finance is doing a one-million-dollar giveaway to randomly selected 20 investors, each of which will receive 50,000 dollars worth of RXS tokens. To qualify for the giveaway, participants must only pay a minimum of a hundred dollars to the presale, significantly widening the scope of eligible investors. Despite its extensive user base, Solana does not offer such presale discounts or giveaways to investors. While SOL continues to be in the attention of institutional and retail traders, the lack of promotional offers for early backers, unlike what comes with RXS, makes Rexas Finance a more appealing choice for new users eager to gain immediate rewards. Ecosystem Development and Security Measures Rexas Finance is developing an integrated ecosystem with various decentralized applications (dApps) to promote usability and sustained integration. Rexas estate seamlessly covers multi-chain decentralized exchange (DEX) trading. Rexas Estate allows real estate investment through tokenization, while Rexas Treasury works as a yield aggregator for passive income generation. These applications serve practical purposes, thus strengthening RXS's position beyond being merely a speculative currency. Security poses a risk to investments in blockchains, and Certik audited Rexas Finance to mitigate that risk. This blockchain security company gives Rexas investors confidence in the platform's safety. Certik guarantees that Rexas's smart contracts containing its business logic have no exploitable bugs. Like most known blockchains, Solana has also had its fair share of network outages and security weaknesses, most notoriously the \$325 million wormhole bridge attack. Even though Solana is still a household name in the crypto world, the historical lack of security is certainly a cause of concern for overly cautious investors. RXS's Certik audit gives credibility and makes the token a preferred investment for the next blockchain technology innovation stage. Conclusion: Is RXS the Better Investment for 2025? Despite possessing a powerful ecosystem, Solana lacks the focus and precision offered by Rexas Finance to investors interested in real-world asset tokenization. RXS has positioned itself as a frontrunner for new investors by demonstrating strong tokenomics, achieving a successful presale, offering exclusive investor bonuses, and operating within a Certik audited security framework. The low price combined with high growth potential offers a striking alternative for prospective crypto investors when compared to Solana. Early investors are uniquely positioned to benefit from a project tailored towards the future of digital asset ownership as the June 19th listing date approaches and presale caps out. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana has failed to reverse its downward trajectory despite the minting of USDC stablecoins totaling over \$9.5B. - At the time of writing, Solana is trading at \$127.48, down 7.81% in the last 24 hours. Traders are re-evaluating the effects of trade tensions on world economic activity and US President Trump's Bitcoin Reserve order, which has caused the cryptocurrency market to continue bleeding. The overall market capitalization of all cryptocurrencies fell, with bitcoin price diving to \$81k range. And that's despite Trump's Thursday Executive Order, which authorized the formation of a digital asset stockpile and officially established the Strategic Bitcoin Reserve. Although Solana is one of three cryptocurrencies listed in the Digital Asset Stockpile of US President Donald Trump, the decline has occurred anyway. According to CMC statistics, Solana price has declined by nearly 28% in the last 7 days. Even though it received \$10 billion in fresh liquidity and was included in the US Digital Asset Stockpile. Bears in Total Control Solana has failed to reverse its downward trajectory despite the minting of USDC stablecoins totaling over \$9.5 billion since January 1, 2025. The newly created liquidity has allegedly gone into memecoins instead of increasing the price of SOL, according to some analysts. Further, as per analysts, after the latest wave of memecoin scams, investors may be looking for safer assets, which might explain some of Solana's fall. At the time of writing, Solana is trading at \$127.48, down 7.81% in the last 24 hours. Moreover, the trading volume is up 64.49%. The SOL price is down 33.95% in the last 30 days. The price recently broke below the \$131 support level. If the bears drive the price below \$124 mark, then the price will likely decline further to test \$103 support level. However, if the price manages to break above \$140 level, then it will likely witness a short-term rally towards \$153 resistance level.

- Solana (SOL) trades at \$134.49, down 2.20% in 24 hours. - The market cap is at \$68.44B, and the trading volume is down 55.18% to \$2.12B. Solana (SOL) experienced a sharp drop after reaching \$139.73. The token is currently trading at \$134.49, down 2.20% in the last 24 hours. Its market cap stands at \$68.44 billion, reflecting the same percentage decline. The trading volume has dropped significantly to \$2.12 billion, marking a 55.18% decrease. Solana's market cap ratio is at 3.08%. Solana validators are set to vote on a new dynamic inflation model. The proposal aims to optimize staking rewards while ensuring network stability. Meanwhile, Solana continues to dominate decentralized exchange (DEX) trading. Its total DEX volume reached \$105.86 billion, demonstrating its scalability and low transaction costs. Will Solana (SOL) Rebound? Solana faces immediate resistance at \$140. If it breaks above this level, the next target is \$150. However, if the price drops further, support is seen at \$130. A breakdown below this level could push SOL toward \$125. The RSI stands at 38.71, indicating weak buying momentum. The RSI average is at 43.36, suggesting a bearish trend. The Chaikin Money Flow (CMF) is at -0.09, signaling weak capital inflows. The 50-day moving average is currently above the 14-day moving average. This bearish crossover suggests that the downward pressure may persist. If SOL fails to regain momentum, further declines could be expected. Solana's price action depends on whether it can hold above key support levels. If buying pressure increases, SOL could retest resistance at \$140 and \$150. However, weak RSI and negative CMF indicate limited strength for an immediate rebound. The upcoming validator vote on staking rewards may influence investor sentiment. Additionally, Solana's strong presence in the DeFi space could support long-term growth. Highlighted Crypto News Today Is Pi Network (PI) Headed Lower After a 14% Price Drop?

The price of Ethereum and the SOL price are both expected to see a big jump soon. Prominent experts like Marco Polo and Mister Crypto have made some bold price predictions for these altcoins. However, many whales are pulling their capital into a presale opportunity that has already surged by 911% - IntelMarkets (INTL). This innovative project is gaining attention as it will bring AI technology to crypto trading and usher in the next generation of trading platforms. With a Tier-1 CEX listing this altcoin soon, its value will soar by 361%. As a result, many whales think INTL could have higher upside potential than ETH and SOL. IntelMarkets (INTL) To Skyrocket by 361% Soon While the price of Ethereum and the SOL price could go up soon, IntelMarkets (INTL) is also making headlines. Recently, CoinMarketCap listed this altcoin. This event allows millions of new eyes to gravitate towards it. Also, a top-tier crypto exchange like Uniswap will list INTL soon, bringing a guaranteed 361% price increase overnight. The hype was already intense for IntelMarkets as it aims to redefine crypto trading by launching the first AI-driven trading platform. Therefore, traders will get features like AI-driven trade signals that locate the best trades across different markets and self-learning trading robots that improve their performance over time. These AI features are designed to maximize trader profit potential while minimizing the risks. By holding the INTL token, traders will get governance voting rights and first dibs on new IntelMarkets features. Thus, 9M INTL tokens have been sold in phase ten of its presale alone. Currently, one INTL costs just \$0.091, which is a 911% rise from its starting price of \$0.009. However, this altcoin price will hit \$0.10 after phase eleven begins, while the CEX listing will trigger a rally to \$0.42. This 361% growth makes INTL one of the top altcoins for fast returns. Marco Polo: The Price of Ethereum (ETH) Will Flip the \$3,000 Range Ethereum (ETH) is one of the top 5 cryptocurrencies but it has faced some turbulence recently. CoinMarketCap

shows that the price of Ethereum fell nearly 20% on the monthly chart as its value dropped from around \$2,700 to nearly \$2,200. However, market expert Marco Polo remains bullish on Ethereum (ETH). According to his X post, this altcoin is showing signs of life at the moment. He also mentioned that the price of Ethereum could skyrocket past \$3,000 soon. This Ethereum price prediction has turned some heads but some traders are still skeptical. Since it has a high market cap of around \$270B, it will need a lot of new money for the price of Ethereum to skyrocket. But, crypto coins like INTL will not face this issue. Analyst Claims the SOL Price May Skyrocket to \$325 One of the top crypto coins, Solana (SOL), is also seeing some volatility. For instance, the SOL price increased from around \$140 to over \$150 on the weekly chart. However, this is still nearly a 30% fall on the one-month chart when the SOL price sat above \$210. But, the community is still watching Solana (SOL) thanks to some bullish analysts like Mister Crypto. In a recent X post, Mister Crypto said that Solana is now seeing an ascending wedge, which is very bullish. He predicts that the SOL price will soar to \$325 soon. Although the Solana price prediction is positive, many investors are sidestepping it for INTL. This is because the SOL price has surged nearly 15% on the YTD chart, suggesting that its highest upswings may have passed. What Attracts Ethereum (ETH) and Solana (SOL) Whales to IntelMarkets (INTL)? While the price of Ethereum and the SOL price could see big price gains soon, a lot of eyes are turning to IntelMarkets (INTL). This is because this innovative project will tap into the growing AI market which Statista predicts could be worth \$826B by 2030. As a result, the long-term growth potential and stability of IntelMarkets could stand out among other projects. Not only that, while ETH and SOL may see gains, INTL is guaranteed to provide a 361% return once a Tier-1 CEX lists this altcoin. Plus, its smaller market cap means faster price growth with less money. Due to all these factors, whales consider INTL the best crypto investment for fast returns in 2025. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmkt.com/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- The resistance point for Solana exists around \$150 but the support stands near \$135. - Weak leverage demand and on-chain activity limit SOL's upside. - An upcoming approval of Solana ETFs might produce a brief market rise. Solana (SOL) is trading at \$138.80, reflecting a 4.23% decline in the last 24 hours. The current market capitalization reaches \$70.63 billion and the daily trading volume recorded \$5.13 billion after an 11% increase which demonstrates robust market activity. The declining market prices did not deter investors as demonstrated by the rising trading volumes which signal potential market volatility during this short-term period. Low Leverage Demand Limits SOL's Upside Potential Analysts link SOL's rapid price drop to the memecoin market's collapse that affected overall network usage throughout various sectors. Liquid staking together with tokenized assets forms a group that includes yield aggregators as well as synthetic perpetuals and NFT marketplaces and AI infrastructure. SOL faces limited growth potential because leveraged traders show no interest in the market. Perpetual SOL future contracts have maintained a negative funding fee structure that short sellers pay for three consecutive days. The funding rate of -0.01% per 8 hours during this period equals a monthly fee of 0.9% which indicates buy-side traders maintain lower sentiment since SOL prices declined by 52% from its peak. The rumors about a US-approved Solana spot ETF have created market conditions which might lead to a short-term upward movement in SOL value. A few Solana critics claim that network activity is overblown because 95% of payment fees originate from only 1.3% of active participants consisting of Wintermute and MEV bots. Another reason SOL struggled to reclaim the \$180 level is linked to World Liberty Financial, a semi-centralized finance application associated with Donald Trump's personal investments. This connection has contributed to speculation over the project's long-term outlook. Key Indicators Signal Weak Momentum for SOL According to analyst Ali Solana remains confined within the right-angled ascending broadening pattern which tends to indicate impending price shifts. The support level for SOL exists between \$135-\$145 yet the resistance begins at \$290. The trading pattern indicates expanding volatility because resistance breaks may start an upward price surge and support breaks may initiate additional price declines. The MACD (Moving Average Convergence Divergence) indicator remains bearish, with the MACD line below the signal line, indicating weak momentum. Meanwhile, the RSI (Relative Strength Index) at 38.45 suggests SOL is nearing oversold conditions, which could lead to a potential bounce if buying pressure increases. If support holds, SOL could target \$150-\$160, while continued selling pressure may push the price toward \$120-\$125, where buyers could step in for a rebound. Highlighted Crypto News Today:

The crypto market is heating up, with some projects proving they have what it takes to stay ahead of the pack. Solana (SOL) has faced a battle between bullish and bearish forces, stagnating below \$150 as traders weigh the impact of FTX's recent 3 million SOL unlocks against the potential upside of Trump's crypto strategic reserve plan. Despite this, derivatives market trends suggest that Solana's next move could be critical for its short-term trajectory. Meanwhile, Immutable X (IMX) continues to lead the NFT and gaming sector, solving Ethereum's high gas fee problem and enabling fast, feeless transactions. With gaming giants embracing blockchain technology, Immutable X is positioned as the go-to Layer-2 scaling solution for Ethereum-based NFTs. But the biggest name to watch right now? Qubetics (\$TICS). Unlike other blockchain projects, Qubetics is setting new standards for security and interoperability with its Non-Custodial Multi-Chain Wallet, allowing seamless transactions across multiple blockchains. This positions Qubetics as one of the top cryptos to buy this month. Qubetics (\$TICS): The Future of Multi-Chain Wallets Crypto wallets should be easy to use, highly secure, and functional across multiple blockchains—but most wallets fall short. That's where Qubetics comes in. Its Non-Custodial Multi-Chain Wallet gives users complete control over their assets without relying on centralized services. Qubetics' wallet makes transactions faster, safer, and more accessible for businesses, professionals, and individuals. Unlike traditional wallets, which are often limited to one blockchain, Qubetics' multi-chain integration allows seamless transfers between Ethereum, Solana, Binance Smart Chain, and other major networks. This eliminates the hassle of multiple wallets, reducing fees and increasing transaction efficiency. Beyond its groundbreaking wallet solution, the crypto presale is making waves. Currently in its 24th presale stage, \$TICS is still available at \$0.0976 per token. With analysts projecting massive growth, early buyers are securing their positions before the price increases. At \$0.25 per token, Qubetics participants could see a 155% return. After the presale, if \$TICS climbs to \$1, that's a 923% ROI. Looking further ahead, \$TICS hitting \$5 means a 5018% return, while projections indicate \$10=\$15 post-mainnet launch, positioning Qubetics as one of the most promising crypto projects in 2025. Qubetics isn't just a project—it's an ecosystem designed to reshape digital finance. With rising adoption and demand for cross-chain compatibility, it's clear why Qubetics is among the top cryptos to buy this month. Immutable X (IMX): The NFT and Gaming Powerhouse NFTs and blockchain gaming are no longer just hype—they're becoming a key part of the digital economy. At the forefront of this revolution is Immutable X (IMX), a Layer-2 scaling solution that solves Ethereum's gas fee problem while enabling instant, feeless NFT transactions. Immutable X is built for mass adoption, allowing gaming companies and NFT creators to scale without sacrificing speed or security. Major gaming titles have already integrated Immutable X as their preferred blockchain solution, proving that it's more than just another NFT platform—it's a key player in the future of blockchain gaming. As the NFT market evolves, projects that offer scalability and efficiency will dominate. Immutable X has positioned itself as a long-term winner, making it a must-watch crypto this month. Solana (SOL): Testing Key Resistance Levels Solana's high-performance blockchain remains one of the most promising projects in the industry. However, SOL has been struggling to break out, hovering around \$145=\$150 as traders weigh bullish macro catalysts against short-term supply concerns. Solana's price has been under pressure due to the 3 million SOL tokens unlocked by FTX and Alameda Research, which added over \$450 million in short-term supply to the market. This has made traders hesitant, keeping SOL's open interest around \$4 billion as they wait for clearer momentum. Solana needs to break past \$161.88 (Keltner Channel midline) for a sustained rally. A break above this level could trigger a move toward \$198.29, a key resistance zone. If Solana fails to break out, it could revisit support at \$139.66 or even \$125.47. Solana is at a critical decision point. With speculation around Trump's tariff rollback plan lifting market sentiment, SOL could rally—but cautious traders are still weighing supply risks. Whether bullish momentum wins or supply pressure pulls SOL down, the next few weeks will be key. Conclusion For those looking for the top cryptos to buy this month, Qubetics, Immutable X, and Solana stand out for different reasons. Qubetics (\$TICS) is dominating the presale scene with its multi-chain wallet technology, securing its position as a top-tier blockchain innovation. Immutable X (IMX) is redefining NFTs and blockchain gaming, making it one of the most exciting projects in the space. Solana (SOL) is at a technical crossroads, with major price action expected in the coming weeks. With Qubetics' presale still open, early adopters have a limited window to buy at \$0.0976 before prices surge. With mass adoption, high demand, and innovative technology, these three cryptos should be on every watchlist. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. Why is Qubetics considered as one of the top cryptos to buy this month? Qubetics is revolutionizing multi-chain transactions, making crypto wallets more secure, efficient, and user-friendly. Its presale momentum proves strong demand. 2. How does Qubetics' multi-chain wallet benefit users? It enables seamless cross-chain transactions, allowing users to store and transfer assets across multiple blockchains without limitations. 3. Why is Immutable X a strong crypto to buy this month? Immutable X is leading the NFT and gaming revolution, offering gas-free transactions and Ethereum scalability. 4. Is Solana (SOL) a good buy right now? Solana is at a critical resistance level—if it breaks above \$161, a strong rally could follow. 5. How can I participate in the Qubetics presale? Qubetics (\$TICS) can be purchased at \$0.0976 in the current presale stage, available on the official website. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana falls to \$142 with a 4% loss. - SOL has faced \$20.12 million in liquidations in the past 24 hours. Though US President Donald Trump signed an executive order to create a Strategic Bitcoin Reserve, BTC retraced back to its low. The action was supposed to improve the market sentiment but failed as the government would not acquire new Bitcoin. Anatoly Yakovenko, the Solana co-founder has expressed skepticism over the idea of a US crypto strategic reserve, saying that his first preference would be to have no crypto reserve. The Solana price has shown a mix of upticks, declines, and key support retests. With the SOL price bouncing between support and resistance levels, traders are watching for a potential breakout or another dip. Notably, Solana has plunged by over 4.29%, with a 72.42 billion market cap. At press time, SOL trades at \$142.55. The intraday trading price of the altcoin is noted at \$135.72, slipped from a high of \$149.53. Furthermore, Solana has witnessed a 24-hour liquidation of \$20.12 million, as per Coinglass data. Consequently, the daily trading volume of SOL has reached \$4.66 billion. Can Solana Reverse Its Losing Streak? Assuming the active downtrend forms a death cross, the price of Solana could steeply fall and test the \$133.16 support. A drop below this range might accelerate losses, pushing the price closer to the \$120 mark. On the upside, if Solana jumps to the \$148 level, the altcoin could target its crucial resistance at \$156.77. Overcoming this resistance level could set the stage for the altcoin to potentially climb toward \$170. Additionally, the Moving Average Convergence Divergence (MACD) line and the signal line are settled below the zero line. This infers the bearish crossover with the possibility of continued downside pressure. The Chaikin Money Flow (CMF) indicator is found at 0.06 signals more inflows than outflows but doesn't confirm a bullish trend. In the meantime, the altcoin's daily trading volume has increased by over 7.45%. Solana's Bull Bear Power (BBP) value of -2.24 suggests strong bearish momentum in the market. The asset's market sentiment rests in a neutral to slight bearish zone, as the daily relative strength index (RSI) stays at 47.40. Highlighted Crypto News Will Dogecoin (DOGE) Struggle to Recover After a Steep 8% Drop?

The Solana price is currently on a recovery path after its fall to \$120, with a crypto analyst predicting that a potential pump to \$300 could happen soon. With the recent rally after a strategic crypto reserve was announced by the US government, whales have renewed their interest in Ethereum. According to Santiment data, whales have bought over 190k ETH in anticipation of an Ethereum price pump. Whales are also moving their investments to a promising AI coin called IntelMarkets (INTL). Currently, in the tenth phase of its blockchain ICO, the value of IntelMarkets has skyrocketed by over 900% with the potential to climb by 10x in the next few months. Analysts Expect Solana (SOL) To Rise To \$300 After suffering long-term decline, the Solana price appears to be on a recovery path. CoinMarketCap's data shows that the Solana price has rebounded from a low of \$120 to briefly cross the \$170 level. However, \$SOL has retracted back to the \$150 range. According to Ali Martinez, the Solana price is on track to break out of a descending channel. The analyst forecasts the Solana price might pump to \$213 if the breakout is successful. However, other analysts have set a higher target. Another analyst called Lucky predicted that the Solana price could rally to a new all-time high above \$300 in the coming months. As one of the top crypto coins picked to be included in the US strategic crypto reserve, the Solana price could record this sort of increase. Ethereum (ETH) Whales Buy Over 190K ETH The Ethereum price decline has seen some relief since the announcement of the strategic crypto reserve. Data from Santiment shows that whales have been adding ETH tokens to their portfolios as a result. According to CoinMarketCap, the Ethereum price has rebounded from \$2,100 to \$2,500. However, as the hype around the reserve fund waned, the Ethereum price dropped back to the \$2,100 range. Since it is not clear if the Ethereum price has bottomed out, it might need to break through the \$2.3k level in the coming weeks. On the other hand, positive inflows from the Ethereum ETF together with positive sentiment in the market could cause a trend reversal. CryptoGoos argues that the Ethereum price chart still looks great. They told their followers not to worry, as they believe the Ethereum price could skyrocket to \$10k in the coming months. IntelMarkets (INTL) Crosses \$11.2M In Funding As Momentum Grows IntelMarkets (INTL) is one of the best ICO projects in the cryptocurrency market at the moment. It is currently holding a very successful presale campaign which has already attracted more than \$11.2 million. With the current price of \$0.091, those who joined at the early stage have seen their investments rise by 900%. One of the most important aspects of IntelMarkets' upcoming trading platform is that it is user-friendly. It does not have the KYC procedures that are common in most trading platforms, which means that traders can trade freely without going through a process of identification. This approach makes it more convenient and friendly to the users, especially those who prefer to remain anonymous in their financial dealings. Meanwhile, this DeFi project has a flagship tool known as the Intelli-Ma, a AI trading bots. These bots can process more than 100,000 variables in real time, and this makes them very fast and accurate in their trading activities. As the bots are

programmed to learn from each mistake, the system provides the users with an automated solution that is dynamic in nature. What is the Best Altcoin To Buy As Solana Price Drops? While the hype around the reserve fund has waned and the Solana price, along with Ethereum, are dropping, IntelMarkets is gaining more momentum in the market. Its presale success is enough proof that investors are bullish about its potential. While others are sitting on the sidelines, savvy investors are already getting the INTL coin at \$0.091 before the price surges. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmkt.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market has witnessed explosive growth, with tokens like Sui (SUI) and Solana (SOL) hitting record highs since late 2023. While these projects grab headlines, a new player is capturing attention for its potential to redefine real-world asset (RWA) tokenization. Rexas Finance (RXS), priced at \$0.20 in its ongoing presale, is positioning itself as a gateway to trillion-dollar markets like real estate, commodities, and art. With over \$46 million raised and a confirmed listing price of \$0.25, RXS is emerging as a contender for the next major breakout. Breaking Down Real-World Asset Tokenization Rexas Finance is transforming how global investors interact with physical assets. Traditional markets like real estate and gold, valued at \$613 trillion and \$13.5 trillion respectively, have long been restricted by high entry costs and limited access. The platform eliminates these barriers by enabling fractional ownership through blockchain. Imagine purchasing a 5% stake in a luxury apartment in Dubai or a share of a gold mine in Australia—all from a smartphone. This shift democratizes wealth-building, allowing anyone to diversify portfolios without needing massive capital. The impact extends beyond ownership. Tokenizing assets like art or rare collectibles unlocks liquidity in markets historically plagued by slow transactions. A painting worth millions can now be divided into thousands of tokens, traded instantly on decentralized exchanges. Rexas Finance isn't just opening doors—it's rewriting the rules of global investing. Rexas Finance's Tools for Mass Adoption Rexas Finance has rolled out user-friendly tools to simplify RWA tokenization. The Rexas Token Builder lets anyone convert real estate, commodities, or art into digital tokens within minutes. No coding expertise is required. For quick token creation, the Rexas QuickMint Bot operates seamlessly on Telegram and Discord, supporting multiple blockchain networks. The Rexas Launchpad is another game-changer, offering projects a space to raise funds through token sales. Startups can pitch ideas directly to a global investor base, bypassing traditional financing hurdles. Combined with AI-driven features like the Rexas GenAI (which generates asset descriptions) and the Rexas AI Shield (which audits smart contracts), the platform ensures security and efficiency at every step. The Presale Opportunity You Can't Ignore Rexas Finance's presale has been performing exemplary, with 90.2% of its 500 million RXS allocation already sold. Priced at \$0.20 in its final stage—a 6x jump from the initial \$0.03—the token is nearing its \$56 million target. Unlike projects reliant on venture capital, Rexas prioritizes community involvement, reserving 50% of its 1 billion total supply for public buyers. Recently, a mega RXS transaction was recorded on Etherscan. This 1,000,000 RXS (\$200,000) buy by a whale highlights growing institutional interest in Rexas Finance. Such significant acquisitions often precede bullish market movements, making this a key moment for investors to evaluate their positions. Early backers gain more than just tokens. A \$1 million giveaway offers 20 winners \$50,000 each, incentivizing participation. Listing on CoinMarketCap and CoinGecko has boosted visibility, drawing millions of monthly users to the project. With plans to debut on three top-tier exchanges in 2025, RXS is poised for rapid growth post-launch. Analysts predict a surge past \$10, delivering 50x returns for presale investors. Final Thoughts As Sui and Solana dominate conversations, Rexas Finance (RXS) is quietly building infrastructure to bridge blockchain with real-world wealth. Its presale success, coupled with tools democratizing asset ownership, positions it as a dark horse in the crypto market. For investors seeking the next high-growth token, RXS offers a rare blend of innovation, accessibility, and untapped potential. The window to join at \$0.20 is closing fast—miss it, and you might miss the biggest opportunity of 2025. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Traders are looking for big profit opportunities this year—could one of these coins be their ticket to success? Solana price analysis shows SOL has dropped a lot since its all-time high of \$295.83, but it could rebound to \$182.81 if it holds support at \$136.62. Similarly, the Dogecoin (DOGE) price is bearish, but a recent buy signal could mean a potential price recovery. On the other hand, upcoming crypto coin BlockDAG (BDAG) is on a whole different level, recently hitting \$200.5 million in its presale. This comes as five new experts join the team, all focused on accelerating global growth and pushing the presale to \$600 million target. With their expertise across key areas like marketing, product development, and mining efficiency, the network is set for rapid growth. Batch 27 is nearly sold out as traders rush to secure the coin at its current price! Solana Price Analysis: Key Levels to Watch for SOL Solana (SOL) price analysis shows the coin has been struggling since its all-time high of \$295.83, hitting multi-month lows. Its RSI has dropped below 30, indicating it may be oversold and could be due for a rebound. Market sentiment is currently negative, with many investors selling in frustration, which could be nearing an end. If SOL finds support at \$136.62, it might stabilize and see a potential recovery, targeting \$182.31 or even \$222.14. However, if it drops below that support, it could fall further to \$120.72 before finding new support. Dogecoin (DOGE) Price to Rebound or Further Decline? The Dogecoin (DOGE) price may face further declines, with analysts predicting a drop to \$0.125 if it fails to break through the key resistance at \$0.24. The market remains bearish, and more drops are expected. However, there is hope for a rebound. A recent buy signal from the TD Sequential indicator suggests a potential trend reversal. If this trend holds, Dogecoin's (DOGE) price could rise from its current value of \$0.21. Traders should stay alert to market movements, as a shift could lead to significant price changes in the future. BlockDAG's Team Expansion Sets the Stage to Hit \$600M! BlockDAG is having an exciting moment right now, with its presale hitting the \$200.5 million milestone! Along with this, five industry experts have joined the team, and their skills are expected to help push the network toward its \$600 million presale goal. Nicolaas David van den Bergh, the Chief Marketing Officer, is an expert in creating impactful marketing strategies, which will be essential in further driving visibility and user adoption for BlockDAG globally. Marcus Xavier, who heads the Learning Academy, brings expertise in education and will likely play a key role in making BlockDAG more accessible to new users. Robert Radek, the Product Manager, has an extensive background in innovative development and scaling fintech startups, which he will leverage to support BlockDAG's growth toward its \$600M presale target. Joshua Sack, with his knowledge of mining, will ensure that BlockDAG's infrastructure remains secure and efficient. Lastly, Liza van Der Berg, responsible for HR and Operations, will help build a strong team and streamline operations. Given BlockDAG's impressive presale performance, analysts predict that BDAG could hit \$20 by 2027. The price is currently just \$0.0248 in batch 27, which could mean over 800x returns for those who get in now! Batch 27 is almost sold out, as smart traders are jumping in to grab BDAG at its lowest price. With these experts driving global growth, BlockDAG is the top opportunity for anyone looking for the best upcoming crypto coins, as BDAG presents excellent profit potential. Which Crypto to Buy for Maximum Profits? Solana's price analysis shows that SOL may rebound if it holds support at \$136.62, but a drop below this level could see it reach the \$120 mark. Meanwhile, Dogecoin (DOGE) could see a rise if the recent buy signal holds, but a drop to \$0.125 is possible if resistance isn't broken. However, for those looking for the highest profit potential, the upcoming crypto coin BlockDAG is the clear choice! With its current price of just \$0.0248 in batch 27, it's expected to reach \$20 within the next two years, making it one of the most profitable coins on the market. The presale has already crossed \$200.5 million, and with new industry experts driving growth, the \$600 million target could be reached sooner than expected. As the presale nears its goal, this is the lowest price BDAG will ever be, so now is the perfect time to buy BDAG for potential historic returns. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cardano founder Charles Hoskinson classified XRP and ADA as safe blue chip cryptocurrencies due to their longevity and resilience. - Hoskinson noted that the U.S. crypto reserve currently includes BTC, XRP, SOL, ETH, and ADA, praising XRP and ADA for their strong ratings. - He mentioned Solana as a "kinda mid" for being neither new nor old. Cardano founder Charles Hoskinson recently shared his views on the current state of the U.S. crypto reserve during an interview with David Gokhshtein. Speaking about the initial support for five cryptocurrencies—Bitcoin, XRP, Solana, Ethereum, and Cardano—Hoskinson expressed strong confidence in XRP and ADA, calling them safe blue chip cryptos. He attributed their high ratings to their longevity and resilience, noting that both assets have weathered market downturns and team changes while consistently ranking in the top 10. Hoskinson shared his Solana view Hoskinson contrasted this with his view on Solana, describing it as a "kinda mid" due to its status of being neither new nor old. He acknowledged Solana's ability to survive the FTX incident in 2022, which sent its price plummeting to around \$8, before rebounding to an all-time high of \$294 in January 2025. Despite its recovery, he implied that Solana does not possess the same robust qualities as XRP and ADA. He also highlighted that Solana and Ethereum remain the standard for smart contracts, underscoring their importance in the crypto market. Looking toward the future, Hoskinson raised the question of which additional assets might be added to the reserve, citing examples like Avalanche and Hedera Hashgraph. He recommended establishing a working group—potentially overseen by the Presidential Working Committee formed in January—to define the selection criteria for future assets and to determine the procurement and management process, suggesting that the U.S. Treasury Department might play a key role. With the industry eagerly awaiting further details about the U.S. crypto reserve, more insights are expected at the Crypto Summit scheduled for March 7, as noted by the White House AI & Crypto Czar.

With shifting investor focus, Ethereum's potential breakout, Solana's downward spiral, and BlockDAG's \$30M developer grants are capturing investor attention. ETH is holding strong above \$2300, sparking speculation about a price surge past \$3,000. Meanwhile, Solana's price continues to drop, dragged down by the decline of its meme coin sector. But BlockDAG is making the biggest impact, launching a \$30M grant program to support developers and startups aiming to build real-world blockchain solutions. With a Beta Test Net arriving in March 2025 and BDAG's presale surging past \$200M, could this be the smartest move for anyone searching for the top crypto to buy and build on in 2025. Let's find out. BlockDAG's \$30M Grant Initiative: Building the Next Big Blockchain Solutions BlockDAG is setting new benchmarks with its \$30 million grant program, providing developers, startups, and blockchain innovators with the resources to build on a network designed for performance and scalability. Grants range from \$10,000 to \$100,000, distributed based on milestones to ensure sustained project growth. Unlike Ethereum's high gas fees and Solana's network inconsistencies, BlockDAG offers a Directed Acyclic Graph (DAG) architecture designed to deliver higher speeds and lower fees. This approach makes BDAG an attractive alternative for developers seeking a more scalable and cost-efficient blockchain. Beyond funding, BlockDAG's initiative includes access to the BlockDAG Academy, offering educational resources, mentorship, and real-world development opportunities. A strategic collaboration with HackerEarth also ensures hands-on hackathons, fostering innovation within its ecosystem. Developers who capitalize on this program early can gain a first-mover advantage ahead of BlockDAG's upcoming beta testnet launch. Meanwhile, BlockDAG's presale is in its 27th batch, with BDAG coins priced at \$0.0248. With over \$200 million raised and more than 18 billion BDAG coins sold, the project is seeing exponential interest. Another reason for this exponential growth is the ongoing BDAG800 code which offers a 400% purchase bonus, further enhancing its appeal as a strategic investment. As exchange listings approach, the window to enter BlockDAG at presale prices is closing fast. Ethereum's Potential Breakout: Is \$3,000 the Next Target? Ethereum is maintaining its position above \$2,300, reinforcing speculation that a push beyond \$3,000 is on the horizon. Increased whale accumulation and technical indicators suggest a potential price rally, with ETH currently trading above its 100-hour Simple Moving Average. Market analyst Ted Pillows compares Ethereum's current price movement to Bitcoin's 2015-2017 growth cycle, raising expectations for an extended uptrend. Ethereum has remained resilient thanks to its DeFi ecosystem and institutional backing, with strong support levels. For Ethereum to confirm a breakout, it must surpass \$2,920 and hold above \$3,000. With sustained investor demand and network stability, ETH remains a dominant force despite competition from newer blockchain projects like BlockDAG. Solana's Struggles Continue: Bearish Sentiment Grows Solana (SOL) continues its downward trend, having fallen from \$280 to \$160, marking six consecutive weeks of losses. The meme coin sector, once a significant driver of Solana's success, has seen its market cap collapse from \$25 billion to \$10 billion, leaving traders uncertain about SOL's future. Additionally, Solana's DeFi activity is weakening, with DEX volumes dropping 36% to \$16.6 billion and network fees plummeting to \$1.1 million. Key technical indicators, including a death cross pattern, bearish MACD, and a declining RSI, suggest further downside risk. Analysts pinpoint \$109 as the next major support level, warning that without a catalyst like ETF approval, SOL's recovery could be difficult. While Solana's declining momentum raises concerns, BlockDAG's rapid growth presents a strong alternative for those looking beyond traditional Layer 1 blockchains. Its combination of scalability, low fees, and developer incentives positions it as an attractive option for builders and investors alike. Which Crypto Holds the Strongest Potential? Ethereum is showing strong market resilience, with whale activity supporting a potential breakout beyond \$3,000. In contrast, Solana's ecosystem decline raises doubts about its short-term recovery. However, BlockDAG stands out as the most promising crypto of 2025, thanks to its \$30M grant program, upcoming Beta Test Net, and rapidly expanding presale. With over \$200M raised and BDAG's value surging, now is a critical time to secure BDAG before its exchange debut. For developers and investors seeking a high-growth blockchain with real-world potential, BlockDAG is proving to be an opportunity too significant to overlook. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. - FTX and Alameda unstaked 3.03M SOL worth \$431M, distributing them to 37 wallets. - This is their largest unstaking since November 2023, part of an 11.2M SOL unlock plan. FTX and Alameda Research unstaked 3.03 million Solana (SOL) tokens worth \$431 million. This marks their largest SOL unlock since November 2023. The tokens were distributed to 37 wallets, with deposits likely made to Coinbase and Binance. Since November 2023, FTX and Alameda have unstaked and offloaded 7.83 million SOL, worth \$986 million. The average price for these sales was \$125.80 per token. The latest unstaking is part of a larger plan to unlock 11.2 million SOL, valued at \$1.5 billion, in early March. Largest Unstaking Since November 2023 Blockchain analytics firm Lookonchain flagged the transaction on March 4. FTX and Alameda’s wallets moved 3.03 million SOL at the time, worth \$431 million. Following the unstaking, they deposited about 25,000 SOL, valued at \$3.3 million, to Binance. In November 2023, the companies unstaked 2.1 million SOL worth \$141 million. Since then, they have regularly unstaked and transferred assets to exchanges. The latest transaction aligns with their ongoing liquidation strategy. FTX and Alameda may not sell all unstaked tokens at once. In September 2023, the Delaware Bankruptcy Court set strict limits on asset sales. Initially, FTX could sell \$50 million in digital assets per week. This limit increased to \$100 million in later weeks. Any sale above \$200 million requires court approval. Despite these restrictions, blockchain data shows FTX and Alameda have steadily offloaded SOL to major exchanges. Spot On Chain reported a total sale of 7.83 million SOL to Coinbase and Binance since November. The unstaking comes as FTX repays some of its former users. On February 18, the exchange started distributing \$1.2 billion in digital assets. However, some customers cannot access these funds due to jurisdiction restrictions. On February 21, FTX creditor Sunil Kavuri revealed that 163 jurisdictions are ineligible for repayments. Highlighted Crypto News Today Can Toncoin (TON) Recover or Is a Bigger Decline Coming After a 9% Slip?

Toronto, CA, March 4th, 2025, Chainwire The Company has successfully strengthened their ability to focus entirely on opportunities within the Solana ecosystem SOL Global Investments Corp. (CSE: SOL) (FSE: 9SB) (the “SOL Global” or the “Company”), one of the first publicly traded companies focused on institutional Solana investments, is pleased to announce the completion of its previously announced reorganization of assets and liabilities, whereby, among other things, the Company has transferred all of its assets other than its native Solana token assets (the “Solana”), together with certain of its liabilities, into a newly formed entity (the “Reorganization”). The Company’s strategic reorganization is designed to enhance business focus on blockchain innovation, including its significant position in Solana, and decouple its new strategic approach from its historical liability. Completion of the Reorganization Pursuant to the terms of the Reorganization, SOL Global has transferred all of its assets other than Solana assets (collectively the “Transferred Assets”) together with certain of its liabilities (collectively, the “Transferred Liabilities”, and together with the Transferred Assets, the “Vehicle Portfolio”), into a newly created special purpose vehicle (the “Asset Vehicle”) in exchange for non-voting common shares in the capital of the Asset Vehicle (the “Non-Voting Common Shares”). In connection with the Reorganization, all secured liabilities, secured obligations and other security interests granted in favour of Braebacon Holdings Inc. (the “Secured Party”) by SOL Global and a former partially-owned subsidiary, House of Lithium Ltd. (the “HOL”), were assumed by the Asset Vehicle together with the Vehicle Portfolio in accordance with the terms and conditions of an assumption and amending agreement dated February 28, 2025 between, among others, the Company, the Secured Party, the Asset Vehicle and HOL (the “Assumption Agreement”) with respect to a loan that had been granted by the Secured Party to SOL and HOL in accordance with the terms of a loan agreement dated August 6, 2021, as amended from time to time (the “Loan Agreement”). After giving effect to the Reorganization, SOL is the sole holder of all Non-Voting Common Shares, and the second lien lender under the Loan Agreement (the “Second Lien Lender”), is the sole holder of all voting common shares in the capital of the Asset Vehicle (the “Voting Shares”). As a result of SOL Global holding all of the Non-Voting Common Shares of the Asset Vehicle, any possible gain in the Transferred Assets will be largely held by SOL Global, however, SOL Global will not hold any voting rights in the Asset Vehicle. All of the Voting Shares issued and outstanding after giving effect to the Reorganization are held by the Second Lien Lender. In accordance with the terms of the Assumption Agreement, the Asset Vehicle will operate as an independent entity, SOL Global will no longer be liable for the Transferred Liabilities, and such Transferred Liabilities will no longer appear on SOL Global’s balance sheet. The Company intends to invest the remaining cash following the disposition of the Vehicle Portfolio for additional Solana tokens. Following the completion of the Reorganization, the only assets held in SOL Global’s portfolio will be its Solana assets and its equity position in the Asset Vehicle. SOL Global is an investment issuer listed on the Canadian Securities Exchange (the “CSE”) that has applied to list on the Nasdaq exchange in order to expand its investor base and access to new capital and financing opportunities. SOL Global holds certain portfolio assets which, after giving effect to the Reorganization, consist predominately of blockchain tokens, initially consisting only of Solana tokens. The Transferred Assets consist of securities of mainly electric vehicle companies together with certain real estate assets. While the change in focus of portfolio assets does represent a new strategic direction of the Company to increase the value of its portfolio, SOL Global will continue to be an investment issuer and may change the strategic focus of its portfolio at any time, including investing in portfolio assets other than blockchain tokens. Strategic Investment in Blockchain Innovation SOL Global’s investment strategy is centered on strategic positioning for long-term success, including leveraging blockchain’s growth trajectory in this rapidly evolving sector. Solana’s competitive advantage lies in its scalability and efficiency, offering high-speed transactions with low fees. Its integration with major platforms, wallets, and blockchain networks enhances interoperability, driving broader adoption. For Further Information Users Can Contact: SOL Global Investments Corp. Paul Kania, Interim CEO, CFO Tel: (212) 729-9208 Email: info@solglobal.com Website: https://solglobal.com/ About SOL Global Investments Corp. SOL Global is pioneering institutional investment in the Solana ecosystem. As one of the first publicly traded companies globally focused on Solana investment, SOL Global aims to provide unprecedented public exposure to the Solana blockchain through token acquisition, staking for yield generation, and investments in early-stage ventures being built on Solana. Caution Regarding Forward-Looking Information This press release includes certain “forward-looking information” within the meaning of applicable Canadian securities legislation. All statements herein, other than statements of historical fact, constitute forward-looking information. Forward-looking information is frequently, but not always, identified by words such as “expects”, “anticipates”, “believes”, “intends”, “estimates”, “potential”, “possible”, and similar expressions, or statements that events, conditions, or results “will”, “may”, “could”, “should” occur or be achieved. Forward-looking information in this press release includes, but is not limited to, the Company’s expectations related to its Solana assets, liabilities and equity position following the completion of the Reorganization; the Company’s expectations regarding blockchain technology, including Solana blockchain and technologies, and the expected yield associated therewith; the Company’s investment strategies; statements related to investor interest and confidence in digital assets, in particular in Solana; and statements related to the expected growth and adoption of the Solana ecosystem and decentralized finance. Forward-looking information reflects the beliefs, opinions and projections on the date the statements are made and are based upon a number of assumptions and estimates that, while considered reasonable by the Company, are inherently subject to significant business, technical, economic, and competitive uncertainties and contingencies, including the speculative nature of cryptocurrencies. Many factors, both known and unknown, could cause actual results, performance or achievements to be materially different from the results, performance or achievements that are or may be expressed or implied by such forward-looking information. Such risks, uncertainties and other factors include, without limitation, the Company’s ability to execute on its business and investment plans; the Company’s ability to raise debt or equity through future financing activities; the Company’s ability to increase its investments in the Solana blockchain and Solana-based technologies; any adverse changes and developments in the Solana blockchain and ecosystem; the growth and development of decentralized finance and the digital asset sector; any new rules and regulations with respect to decentralized finance and digital assets; the inherent volatility in the prices of certain cryptocurrencies including Solana tokens; increasing competition in the crypto and blockchain industries; general economic, political and social uncertainties in Canada and the United States; currency exchange rates and interest rates; the limited resources of the Company; the Company’s reliance on the expertise and judgment of senior management and the Company’s ability to attract and retain key personnel; the speculative nature of cryptocurrencies in general; and the Company’s ability to continue as a going concern. There can be no assurance that such forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on the forward-looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws. Ozak AI is gaining fame as a new and promising project in the crypto world, with innovative technology and high investor demand. It is considered by many to be a prime candidate for massive returns and a powerful figure in the digital economy, which could replicate Solana’s success. Could Ozak AI be the next Solana? Ozak AI has made waves in the crypto market with its unique concept and innovative technology. Comparing Ozak AI to Solana, Ozak AI seeks to offer fast transactions, scalability, and robust security—the same forces drove Solana to success in 2021. Ozak AI goes further by incorporating artificial intelligence and blockchain to revolutionize decentralized applications (dApps) through AI-driven smart contract automation. The system has significantly lower transaction fees and faster processing speeds than some of the large-scale blockchains, and as such, it may be a complete game-changer for developers and users. Like Solana, Ozak AI solves the scalability problems that have created headaches on networks like Ethereum, offering an alternative with both speed and efficiency at an enormous level. With a growing developer base and increasing institutional focus, Ozak AI could very well follow in the footsteps of Solana by offering a high-performance blockchain that attracts decentralized finance (DeFi) applications, NFT developers, and Web3 devs. Ozak AI can replicate the success of Solana if it focuses on scalability, security, and adoption. Its initial signs are positive, however, and therefore, it is worth monitoring closely in 2025. Why are investors eyeing this AI coin for massive returns? Investors are watching Ozak AI as a very attractive opportunity for substantial returns, considering the groundbreaking combination of cutting-edge technology and practical use in the world of the blockchain. Blockchain and artificial intelligence (AI) integration in Ozak AI are some of the leading reasons behind increased investor attention. Other blockchains rely on coding by humans as well as centralization, while Ozak AI employs AI in auto-coding smart contracts to enable faster transactions with ease and accuracy. This technology is capable of greatly reducing operational complexity and cost, which appeals to developers and business entities seeking simplicity in decentralized applications (dApps). Ozak AI’s high scalability and fast transaction speeds are another major draw for investors. In an economy where slow processing rates and high fees have been a barrier to entry, Ozak AI is an economical yet effective solution. Low-fee transactions and a high transaction processing capacity make the platform a viable alternative to existing networks like Ethereum and Solana, which get bogged down in times of high demand. The 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. In addition, the emphasis by Ozak AI on decentralization and security also makes it more appealing. Investors in blockchain are aware of the necessity of having solid security to ensure user trust, and Ozak AI is positioning itself as one that can achieve this without loss of performance. This blend of scalability, speed, and security is an ideal choice for DeFi applications, NFT platforms, and Web3 projects, which further boosts investor confidence. As the network continues to grow and expand its ecosystem, Ozak AI will be ideally placed to capture a rightful share of the market and is a solid long-term investment bet. Ozak AI is a growth investment opportunity with great potential for returns driven by innovative technology and growing market demand, presenting an attractive investment opportunity for growth-oriented investors. About Ozak AI Ozak AI is a blockchain-based crypto project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Through machine learning algorithms and decentralized network technologies, Ozak AI enables real-time, accurate, and actionable insights to help crypto enthusiasts and businesses make the correct decisions. - Solana (SOL) surged overnight on news of inclusion in the U.S. Crypto Reserve, peaking near \$180 before a pullback brought it to \$138. - Technical indicators show that SOL is gaining bullish momentum, with a bullish engulfing candle reaching the 50% Fibonacci level at \$180 and a subsequent bullish crossover in MACD and rising RSI. - Analyst Ali Martinez predicts a breakout from a descending parallel channel, potentially pushing SOL toward \$213, while whales are actively unstaking and cashing in. Solana’s price experienced a dramatic overnight surge following news that the U.S. Crypto Reserve will include Solana alongside XRP, Cardano, Bitcoin, and Ethereum. This announcement helped propel Solana’s price to a peak of \$180, reaching a key resistance level defined by the 50% Fibonacci retracement. However, as bullish exhaustion set in, the price pulled back to around \$138, prompting investors to question whether the current situation can push SOL past the crucial \$200 psychological mark. Can Solana hit \$200 soon? On the daily chart, SOL has maintained bullish support above \$125, having reversed from a lower price rejection fueled by news-driven sentiment. The overnight rally saw SOL jump by 24.47% from \$143 to \$178, with a massive bullish engulfing candle marking the rise to \$180. However, a sharp pullback followed—breaching the 38.20% Fibonacci level at \$165, while the daily RSI has moved toward neutral from oversold levels. These technical signals point to increased buying pressure. Crypto analyst Ali Martinez recently highlighted that SOL is breaking out of a descending parallel channel on the 4-hour chart. According to his analysis, if SOL can overcome resistance in the \$2.90-\$3.10 range on the XRP pair, it may climb further toward the 38.20% Fibonacci level at \$213. Adding another layer to the market dynamics, whale activity has picked up significantly. Data from OnChain Lens indicates that 3 million SOL tokens, worth approximately \$510 million, have been deposited to Binance from a cold wallet after nearly two months of inactivity. Additionally, another whale has recently transferred 48,647 SOL tokens (valued at nearly \$7 million) to Binance, securing a profit of \$1.61 million through unstaking activity. This inflow of liquidity signals that, despite short-term pullbacks, there is considerable institutional interest and profit-taking among large holders. In conclusion, while SOL is

currently facing a pullback to around \$138 after reaching \$180, the technical outlook remains bearish.

- Solana (SOL) surged 30% after Trump’s announcement but dropped 20% in the last 24 hours. - Bearish indicators dominate as SOL tests key support at \$131.89, with next support at \$121.74. Solana (SOL) increased 30% on Sunday after President Donald Trump announced that it would be part of the US crypto reserve. The announcement sparked a bullish rally in the crypto price surging it to the level of \$180. However, the gains appear to be fading, as the SOL price has dropped by almost 20% in the last 24 hours. Bears ate all the gains and the SOL price is now testing a key support level of \$131.89. In the 4-hour time frame, the price surged to the level of the 200-day EMA but failed to break it and fell below the 50-day EMA level. While on the daily time frame, a death cross is visible between the 50-day and 200-day EMAs showcasing bearishness. According to CMC data, currently, the SOL price is trading at \$137.82 with an intraday decline of 20%. The 24-hour trading volume is \$9.5 billion and the market cap is at \$2.35 billion. The community sentiment is 84% bullish and 16% bearish. What Next In Solana (SOL) Price? Indicators are showing bearish signs. Key EMAs constructed a bearish cross. The RSI curve took a reversal from the median line heading in the bearish zone currently at 38.14. MACD is also hovering in the bearish territory indicating bearish signals. Moreover, the trading view technical summary also supports the bearish outlook. As per the technical summary for Solana, out of 25 indicators, 15 are on the sell side, 10 are on the neutral side and none are on the buying side, suggesting strong bearishness. Solana price analysis indicates bearish signals. Major indicators are in the bearish territory suggesting bears dominance over price. If the price breaks below the current support then the next support will be \$121.74. Highlighted Crypto News Today: Ripple CTO Explains How XRPL Meme Coins Mirror XRP Price Movements

As XRP’s price takes a downturn, is this an opportunity to buy, or will Solana’s price fall further as forecasts predict? XRP is battling to maintain the \$2 level and sentiment around Solana is at its lowest in a year, putting the cryptocurrency market under strain. In these uncertain times, crypto enthusiasts are searching for the best crypto to buy, and BlockDAG (BDAG) is presenting an attractive option. BlockDAG’s newly launched Ambassador Program introduces an engaging way to earn tangible rewards by promoting a pioneering blockchain initiative. Participants have the opportunity to earn BDAG units and receive 10% cashback in USD via a new referral program, effectively turning their enthusiasm into financial gain. They can begin modestly and expand to become worldwide ambassadors, having a tangible impact through organizing meetings, creating educational materials, and leading community initiatives. Maximize Earnings with BlockDAG’s Ambassador Program BlockDAG’s Ambassador Program is forging new paths for crypto enthusiasts to obtain tangible rewards and expand their influence in the blockchain sphere. Emphasizing financial benefits, the program enables participants to acquire BDAG units and secure a 5% cashback in USD through a novel referral strategy. Whether as a side project or a full-time pursuit, this program enables you to transform your enthusiasm into earnings and capitalize on BlockDAG’s reputation as a prime crypto acquisition. The Ambassador Program includes a three-level system—Explorer, Advocate, and Champion—each providing distinctive opportunities to advance within the BlockDAG community. Ambassadors begin as Explorers by participating in online discussions and distributing content, then advance to Advocates by hosting events and crafting educational materials. Champions go further by spearheading regional projects and representing BlockDAG at global conferences. This tiered system not only fosters a robust community but also solidifies BlockDAG’s position as a leading crypto purchase for those eager to engage with a rewarding initiative. With more than \$200 million gathered and over 18.6 billion BDAG units sold in its ongoing crypto presale, BlockDAG is maintaining strong momentum. Currently in its 27th batch, BDAG is priced at \$0.0248, showing a 2,380% increase from its starting price of \$0.001. As the project prepares for listings on 10 major CEXs, the Ambassador Program presents a distinct opportunity to earn, influence, and evolve with one of the most exciting projects in the crypto market today. Solana’s Uncertain Path: Price Risks and Potential Growth Solana has recently seen a significant price decline, falling to a five-month low of \$131 amid the weakest market sentiment in more than a year. The latest forecasts indicate potential risks for Solana, especially with an upcoming event on March 1st that might increase price fluctuations. Experts suggest that if Solana does not maintain the \$130-\$140 support zone, its price could plummet to \$70, a stark contrast to its previous highs. However, not all forecasts are pessimistic. Some analysts identify the \$90-\$125 range as a potential opportunity for buyers, suggesting a recovery might be on the horizon. If Solana can maintain its support levels and overcome negative impacts from recent meme coin scams, it could use these lows as a stepping stone for sustained growth. XRP’s Recent Decline: A Turnaround Ahead? XRP’s price has recently dropped to \$2.15, a significant 13.2% fall within just 24 hours, bringing it dangerously close to breaking the \$2.0 support level. The market is on edge, watching to see if XRP can stabilize or if it will continue to fall. Crypto analyst Javon Marks has spotted a hidden bullish divergence on the daily charts, which may indicate that the downward pressure is starting to diminish. Despite the recent concerns, this bullish sign hints at a possible upward movement, with Marks predicting a potential rally to \$3.80 if the support remains firm. Such a rise could help XRP surpass its highest price of \$3.40. The coming days are crucial, as maintaining the \$2.0 support could reverse the current downward trend and lead to a robust recovery. Final Say Currently, the cryptocurrency market is undergoing a period of caution, with XRP testing its crucial \$2.0 support and Solana’s forecast suggesting possible declines to \$70. Both currencies are at a crossroads, facing potential volatility that keeps the market participants alert. XRP’s optimistic technical indicators provide some hope for recovery, whereas Solana needs to defend its key support levels to prevent further losses. In this period of uncertainty, BlockDAG introduces a new chance for those searching for promising crypto opportunities. Its Ambassador Program offers a way for participants to earn BDAG units and receive a 10% cashback in USD, all while enhancing their presence in the blockchain space. This initiative, “Earn While You Influence,” positions BlockDAG as a prudent choice in today’s volatile market. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. Choosing the Right Crypto Can Make All the Difference. Previously seen as a top performer, Solana experienced a severe 50% decline in February 2025, impacted by decreased on-chain activity, a downturn in the memecoin sector, and general market downturns. As people reconsider their choices, many are turning to alternatives with solid fundamentals. BlockDAG (BDAG) is emerging as a favorable option, propelled by a growing ecosystem, a \$30 million grant program, and an expanding educational initiative. With its presale achieving new heights, BlockDAG offers a promising alternative to Solana’s unstable future. Solana’s February Freefall: The Causes Behind the 50% Decline In February 2025, Solana’s price sharply dropped, decreasing by nearly 50% in just weeks. The decline followed a January high of \$295, with SOL dipping to about \$140 by mid-February. A significant reduction in on-chain activity was a key reason for this drop. Solana’s Total Value Locked (TVL) plummeted from \$12 billion in January to just over \$7 billion. Additionally, major decentralized applications like Raydium and Jupiter DEX saw decreases in user activity by 60% and 25%, respectively. This led to a substantial reduction in Solana’s on-chain transaction volume, dropping from \$97 billion weekly to just \$7 billion. Wider market trends also played a role in Solana’s downturn. Bitcoin’s price fell below \$90,000 amid economic uncertainties, such as inflation worries and potential tariffs, pulling the entire crypto market downward, with altcoins like Solana facing significant drops. Another factor was the downturn in Solana’s memecoin sector. In December 2024, memecoins on the network had a combined market cap of \$25 billion. By February, this had decreased to \$8.3 billion, with some assets shedding over 80% of their peak value. This loss of speculative interest further impacted SOL’s price as people moved away from riskier assets. Despite these uncertainties, Solana’s decline underscores the importance of consistent ecosystem growth and market stability in preserving long-term value. Solana’s Challenges Create Opportunities for BlockDAG As Solana faces difficulties, people are looking toward more appealing options, and BlockDAG (BDAG) has become an attractive alternative. A recent AMA on February 20, 2025, unveiled significant updates, positioning BDAG’s presale as a highly desirable opportunity. One major announcement was BlockDAG’s \$30 million grant program aimed at fostering ecosystem development. This program grants funds from \$10,000 to \$100,000 per project, encouraging developers to innovate within the BlockDAG network. This initiative not only boosts growth but also promotes long-term viability and wider use of BDAG. BlockDAG is also broadening its educational efforts with the launch of BlockDAG Academy. This program serves all skill levels, from novices to advanced developers, ensuring participants are well-prepared to engage with the ecosystem. This educational push helps cultivate a well-informed community, boosting user involvement and acceptance. BlockDAG’s crypto presale has reached impressive milestones, collecting over \$200 million and selling more than 18.6 billion BDAG coins, signaling strong buyer interest. BDAG’s value has increased by 2,380% since its initial offering, with anticipated growth following upcoming exchange listings. Furthermore, BlockDAG plans to roll out its Beta Testnet in March 2025, allowing developers to trial and launch decentralized applications, thus enhancing the network’s practical use and appeal. In comparison, Solana’s future appears less certain, making BlockDAG an increasingly appealing option with robust financial support, a clear development pathway, and an expanding ecosystem. The ongoing presale provides a fleeting chance to obtain BDAG at a reduced price before it potentially surges following its introduction to exchanges. Quick action could be beneficial for those aiming to maximize returns while the window is open. Final Insights Timing plays a critical role in the crypto market, and knowing when to shift focus can determine success. Solana’s recent downturn underlines the dangers of depending solely on previous achievements, with reduced on-chain activity and market dynamics causing continued challenges. On the other hand, BlockDAG is building momentum with substantial financial support, a methodical development strategy, and a presale that has captivated numerous buyers. With fresh endeavors like the \$30 million grant program and the forthcoming Beta Testnet, BlockDAG is carving out a niche as a promising alternative. For those looking to the future, staying informed and selecting projects with robust foundations may be essential for achieving lasting gains. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. - After plunging as low as \$125.74 last week, Solana is now seeing a tremendous comeback. - At the time of writing, SOL is trading at \$178.14, up 24.51% in the last 24 hours as per data from CMC. In the first few days of the new month, cryptocurrencies such as Solana (SOL) are gaining attention in the cryptocurrency market. After plunging as low as \$125.74 last week, Solana is now seeing a tremendous comeback. Price action in the cryptocurrency market has cooled down compared to the massive liquidations that occurred earlier this week. Market watchers are beginning to think the worst may be behind, now that Bitcoin is back over \$90,000. US President Donald Trump’s announcement of the Crypto Strategic Reserve made a market-wide upsurge. In his announcement on the formation of a US Crypto Strategic Reserve, Trump chose to include XRP, Solana (SOL), and Cardano (ADA) as initial assets. Bitcoin (BTC) and Ethereum (ETH) were eventually included. Bulls Back in Action The release of the FTX estate’s hoard was a key factor in the February Solana sell-off. The market’s enormous liquidity caused a sell-off fear, which in turn accelerated the price decline. Despite a \$2 billion token unlock—the largest token unlock for Solana—on March 1st—releasing more than 11.2 million SOL tokens into circulation—the price of Solana nevertheless managed to rebound over \$175 amid Trump’s recent move. Now that this obstacle has been removed, investors are shifting their attention to the possible implications of the Solana ETF clearance. Meme coins have been a boon to SOL because of their significant popular appeal, but the ETF will increase institutional investment. At the time of writing, SOL is trading at \$178.14, up 24.51% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 251.91%. If the price manages to go past \$180 resistance level, then it will likely climb all the way to test \$205 level. However, if bears drive the price below \$138 level, then it will likely retest \$125 support level.

A Solana (SOL) trader who made millions riding SOL’s 11,192% rally is now hunting for the next big opportunity and this time, it’s not Solana. While Solana is currently trading at \$190, the days of 100x returns are likely over. Even if it reclaims its all-time high of \$258, that’s only 1.36x gain. Good, but nowhere near life-changing. Investors looking for massive gains are now shifting their focus to a fast-rising crypto project that’s still in its early stages. Rexas Finance (RXS) is quickly becoming the top choice for high-growth investors. The project is in its final 12th presale stage with 89.9% of tokens already sold. Rexas Finance is currently priced at \$0.20 and with its asset tokenization model set to disrupt industries like real estate, art, and commodities, analysts predict it could soar past \$50 in 2025, a 250x return for presale buyers. Rexas Finance is the next crypto to create multi-millionaires in the upcoming bull run. Solana’s Explosive Past and Strong Comeback, But Can It Still 100x? In 2021, Solana (SOL) was one of crypto’s biggest success stories, delivering an insane 11,192% return as it became a top Ethereum competitor. However, the 2022 bear market saw SOL crash over 95% to \$8, wiping out most of those gains. Fast forward to 2025, and Solana has made a strong comeback, now trading at \$190. SOL remains a major player with fewer outages, rising developer activity and a booming DeFi ecosystem, but its days of 100x gains are behind it. As its market cap rises to 93.21B, SOL’s upside is limited, which is why investors looking for massive returns are turning to newer, high-growth projects; Rexas Finance (RXS) instead. Rexas Finance: Revolutionizing Asset Tokenization Rexas Finance is reshaping the Real-World Asset (RWA) market by making high-value investments accessible to all. By enabling fractional ownership, it allows everyday investors to participate in markets once reserved for the wealthy, fostering greater financial inclusivity. What sets Rexas Finance apart is its cutting-edge blockchain technology that simplifies asset tokenization. Tools like the Rexas QuickMint Bot and Token Builder make digital asset creation seamless, while the Rexas Launchpad supports multi-chain fundraising. Additionally, the ecosystem is enriched with AI-powered NFTs and fractional real estate opportunities through Rexas Estate. With an active community on Telegram and Discord, Rexas Finance is quickly establishing itself as a leader in blockchain-powered investing. Rexas Finance Presale Nears Completion with \$46M Raised The presale is nearing its conclusion having successfully sold over 450 million tokens and raised \$46 million. The token price has risen to \$0.20, marking a nearly 7x increase from its initial price of \$0.03, showcasing strong investor confidence and demand. Rexas Finance has completed a CertiK audit with a commitment to security and transparency and secured listings on top data tracking platforms CoinMarketCap and CoinGecko. To celebrate this milestone, the project is hosting a \$1 million giveaway, set to

reward 20 winners with \$50,000 each. As tier-1 exchange listings approach, Rexas Finance is positioning itself for long-term success in the crypto market. As Solanaâ€™s days of explosive growth seem to have passed, investors seeking the next big opportunity are increasingly turning their attention to Rexas Finance. With its innovative approach to asset tokenization and a rapidly growing ecosystem, Rexas Finance offers a unique chance to capitalize on the future of blockchain technology. The presale success, investor demand and solid security measures all signal that Rexas Finance will deliver life-changing returns in the coming years. For those looking beyond the established giants like Solana, Rexas Finance presents an exciting new frontier, potentially making early investors multi-millionaires in the next bull run. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The market is in a bearish cycle, and investors who want to secure maximum returns this year with top DeFi coins are on the lookout for new opportunities. Even though Chainlink (LINK) and Solana (SOL) faced declines this quarter, thereâ€™s a new PropFi coin that has taken investors by surprise with its 100x growth potential. This PropFi coin is backed by a blockchain and trading platform that sets itself apart from other crypto projects with its advanced trading tools. With features like Trade2Earn, a Trader Funding Program, and instant withdrawals, this trading platform has gained attention from SOL and LINK whales who want to give their portfolios a big boost. Continue reading to find out why the PropFi coin has the eyes of Chainlink and Solana holders! The FXGuys Blockchain and Trading Platform Gains Whaleâ€™s Approval The FXGuys (\$FXG) blockchain and trading company offers a unique approach to crypto trading. This project combines the best of traditional and decentralized finance to give traders exclusive opportunities in the forex market. With top-notch features like Trade2Earn, a Trader Funding Program, instant withdrawals, and much more, FXGuys has emerged as the best choice for skilled traders. The blockchain and trading platform offers smooth access to real capital through its Trader Funding program. Those who complete the Challenge Phase on the platform can access up to \$500,000 in funding. Additionally, you will receive an 80/20 profit split, with 80% of the profit going to your pockets and 20% to the FX Guys platform. With FXGuys, you can trade multiple assets like crypto, equities, commodities, and more, making its \$FXG PropFi coin one of the best DeFi coins to buy. The Trade2Earn program is another feature that helps traders to maximize their profits. This feature rewards you with \$FXG tokens for every trade you carry out on the platform. Regardless of whether you make a profit or loss, you will receive \$FXG tokens as a reward for being an active trader. Furthermore, thereâ€™s an instant withdrawal feature that eliminates the delays that come with accessing your funds on conventional trading platforms. The FXGuys project gives you access to over 100 fiat currencies or cryptocurrencies as a \$FXG holder. With so much it has to offer, experts believe its PropFi coin can be the next crypto to 100x. All these features set FXGuys apart from other trading platforms. Hence, its ongoing public presale is a hot topic among savvy investors. Analyst Says That Solanaâ€™s SOL Could Breakout Soon Solana is on its way to a potential rebound following Coinbaseâ€™s launch of SOL futures. Coinbase launched CFTC-regulated SOL futures to expand the projectâ€™s institutional access to Solanaâ€™s derivatives market. The Solana coin has been under pressure for a set time following its price decline below the \$200 mark. SOL now trades at about \$175 after declining by over 10% within the last seven days. However, an analyst predicts a potential rebound for SOL. Ali Martinez shared in a post on X that SOL is breaking out of a head and shoulders pattern, preparing for a 6% surge to \$180. Yet, \$FXG, a PropFi coin, emerges as one of the top DeFi coins to buy for life-changing gains this year. Hence, Solana holders are storming its ongoing presale. A LINK Rebound is On the Horizon: How High Can Chainlink Go? Chainlink is on the verge of a massive rally after its persistent decline over the past week. Crypto analyst Ali Martinez shared in a recent post that Chainlinkâ€™s LINK could face a rebound soon if it breaks past the \$19 mark. Ali shared that LINK could reach \$23 if it continues its bullish outlook, and this has investors quite excited. For now, Chainlinkâ€™s LINK trades at about \$18, which has declined by over 2% within the last seven days due to the marketâ€™s bearish sentiment. Yet, Chainlink investors fix their gaze on the \$FXG PropFi coin, which is poised to be the next crypto to 100x with the rich trading features of FXGuys. Experts Say the \$FXG PropFi Coin Could be the Next Crypto to 100x The FXGuys public presale is in Stage 3, with each token priced at \$0.05, and already over \$4.3 million has been raised. \$FXG is one of the top DeFi coins to leverage for your portfolio, and thatâ€™s why SOL and LINK holders canâ€™t get enough of it. Once this PropFi coin launches on multiple exchanges at \$0.10, Stage 3 investors will receive a 100% ROI. According to analysts who have been following the FX Guys presale, the \$FXG price will probably pump 100x a few weeks after the launch. And thatâ€™s why investors targeting immense success flock to it. Join the \$FXG presale today! To find out more about FXGuys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market demonstrates signs of recovery while XRP Solana (SOL) and Dogecoin (DOGE) attract investorâ€™s interest. Rising market sentiment prompts investors to follow key support and resistance levels because they need those indicators to predict upcoming price changes. All three assets have different price behaviors at present as XRP pushes against its breakout zone yet Solana strengthens its position, and Dogecoin shows market volatility. Studying crypto market price movements enables traders to uncover upcoming market chances in the developing cryptocurrency industry. XRP Surges 7.07% to \$2.16 The value of XRP advanced 7.07% to rest at \$2.16 as its market capitalization climbed to \$125.5 billion. Although the prices climbed higher, the 24-hour trading volume decreased by 31.53% which suggests a weaker demand for transactions. XRP remains above \$2.10 as it sustains the elevation it achieved in recent times. The SECâ€™s legal pursuit of Ripple lost strength after Judge Torres declared XRP not a security, which improved market faith. Traders study important resistance points because they need to determine if a price surge will keep going or whether a price correction will happen soon. XRP demonstrates that it is set for a market rally above \$3 during the upcoming weeks because both market conditions and regulatory clarity keep improving. Solana Rises 6%Faces Key Resistance at \$150 Solana (SOL) has risen 6.00%, reaching \$140. The market capitalization has increased to \$71.04 billion, reflecting a 7.84% gain. Solanaâ€™s 24-hour trading volume grew to 6.53% while it reached peak levels beyond \$150 until it experienced some price reduction. The next prospective price move of Solana is tracked by traders through observation of support levels at \$136.40 and resistance zones at \$150. The price performance of Solana increased concurrently with a 15% growth in its futures Options Index reaching \$4.65 billion, according to Coinglass data. Dogecoin Surges 8.1% In the last 24 hours, Dogecoin (DOGE) has surged 8.63%, reaching \$0.2031. The market capitalization has grown by 8%, hitting \$30.11 billion, indicating strong buying momentum. However, 24-hour trading volume has dropped by 25.91%, suggesting a slowdown in transaction activity. , with DOGE rising from \$0.187 before consolidating around the \$0.203 level. Traders monitor key resistance at \$0.205 and support at \$0.195 to assess further movement. Satoshi Flipperâ€™s analysis suggests Dogecoin (DOGE) is nearing a key breakout point. A breakout could push DOGE above resistance, with targets around \$0.25 and beyond. DOGE appears primed for an upward rally as momentum shifts in favor of buyers. The cryptocurrency market demonstrates rapid growth through the positive price increases of XRP, Solana, and Dogecoin. The XRP price seeks to break through \$3 after reaching important resistance levels, while Solana maintains upward momentum because of increasing interest in futures contracts. Multiple analysts expect Dogecoin to break out from its current level to reach \$0.25 and continue beyond that level. An improving market sentiment reveals traders who actively track critical price benchmarks to identify any forthcoming positive price moves across these assets. Highlighted Crypto News Today

Could the cryptocurrency market be on the cusp of a significant breakout? Recently Solana Price dropped by 10.98% within a week, yet with its continued strong adoption, thereâ€™s anticipation for a bounce back. On the other hand, BNB price prediction suggests a possible rise toward \$800, propelled by regular token burns and overall market dynamics. Amid these mixed signals from leading projects, fresh opportunities are beginning to draw attention. BlockDAG (BDAG) is on the rise with its presale close to hitting \$200 million, captivating interest not only with its innovative technology but also through its lucrative affiliate program. Envision earning USDt passively. Communities within the crypto sphere, along with friends and social circles, are actively engaging, with referrers benefiting financially each time their links are used. There are no capsâ€™the more your network engages, the greater your earnings. This model is ideal for anyone from casual sharers to crypto influencers seeking a passive income stream. BlockDAGâ€™s Affiliate Program Converts Passive Earnings into Reality Picture this: earning USDt while you sleep. This is the reality for BlockDAG affiliates who distribute their links effectively. Each referral purchase brings instant cashback to both the referrer and the buyer. The advantage? There are no boundaries. As your networkâ€™s purchases increase, so do your profits. BlockDAGâ€™s progressive reward system can boost your commissions by up to 10%, offering a chance to accumulate a consistent USDt income without the need for active trading. This program is a straightforward method to profit from one of the top crypto assets without extensive market expertise. The momentum behind BlockDAGâ€™s presale is building quickly, with funds raised topping \$199.5 million as of February 2025. The price for the current Batch 27 stands at \$0.0248, a staggering 2,380% increase from its initial price of \$0.001. This swift ascent has positioned BlockDAG prominently among the top presale crypto assets. With each subsequent batch, the price escalates, rewarding those who buy early. The anticipation of upcoming listings on 10 major exchanges could further boost demand, potentially leading to additional gains. With the presale nearing \$200 million, those who engage now in the affiliate program can maximize returns from both the rising prices and referral earnings. Whether accumulating BDAG or garnering USDt rewards, the opportunity is ripe for the takingâ€™before it becomes common knowledge. Could BNBâ€™s Price Prediction Reach \$800 Soon? BNB price prediction is becoming increasingly optimistic, with its current trading price at \$680.43, showing a 2.2% increase in the last 24 hours. Analysts believe that if the momentum persists, BNB might approach \$800, driven by ongoing token burns and enhanced staking rewards from Binance. Nonetheless, a decline in DEX volume on the BNB Chain could temper its ascent. Market watchers remain attentive to whether BNB can maintain its upward trajectory, particularly as Solanaâ€™s price exhibits fluctuations. Estimates for BNB price prediction vary, with some ranging from \$580 to \$1,250 for 2025. Other projections suggest a potential high of \$1,238 by March, contingent on broader market movements. If a broader altcoin rally takes off, BNB stands to gain significantly, making its forthcoming price trends crucial. Will Its Price Rally After Its Recent Drop? Solanaâ€™s price dropped by 10.98% over the past week, currently valued at around \$186.19. This downturn is largely due to traders securing profits and awaiting new market catalysts, particularly around U.S. Presidentsâ€™ Day. Some market analysts view this as a brief setback, given Solanaâ€™s robust adoption and long-term positive outlook. However, a looming release of 11.2 million SOL tokens, valued at \$2.06 billion on March 1, could introduce additional selling pressure, potentially impacting Solanaâ€™s price further. Despite these challenges, Solana continues to be one of the most active Layer 1 blockchains, renowned for its rapid transactions and low fees. If market participants rally after Solana price drop, a recovery could be on the horizon. Monitoring market volume and sentiment in the upcoming weeks will be pivotal in forecasting Solanaâ€™s future movements. Final Thoughts Pressure mounts on Solanaâ€™s price after a 10.98% weekly drop, with a significant token unlock looming. Meanwhile, BNBâ€™s price prediction leans toward an \$800 target, though diminishing DEX volume may curb its momentum. Both assets are pivotal in the market, with traders keenly observing potential signs of recovery. BlockDAGâ€™s affiliate program is redefining passive income generation. Every referral results in instant USDt cashback, with rewards scaling up to 10%. As the presale approaches \$200 million, early participants are reaping benefits while BDAGâ€™s price surges. Unlike top crypto assets dependent on market cycles, BlockDAG ensures continuous earnings with each transaction made through your referral link. Whether buying BDAG or accruing USDt, the opportunity is currently availableâ€™before it gains broader recognition. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghVMYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. Choosing high-potential altcoins is vital if you have \$1,000 to invest in cryptocurrencies. Among the top candidates, Rexas Finance (RXS) stands out as the under-\$1 token projected to overthrow Solana (SOL). Alongside XRP, Tron (TRX), OKB, and GateToken (GT), these five altcoins provide tremendous growth potential for savvy investors. Rexas Finance (RXS): The Under-\$1 Token Set to Topple Solana (SOL) For investors with a \$1,000 budget seeking a high-potential altcoin, Rexas Finance (RXS) appears as the best alternative. Priced at just \$0.20 in its 12th and last presale round, RXS has already exhibited amazing growth, soaring over 6x from its initial presale price. The token has raised over \$45.89 million reflecting strong investor confidence. With a targeted launch price of \$0.25 on June 19, 2025 and a Certik audit strengthening its trustworthiness RXS is primed for an explosive surge. Rexas Finance is redefining asset management using blockchain-powered tokenization, unlike conventional cryptocurrencies, with unrivaled liquidity allowing investors to buy, sell quickly, and trade actual assets, including real estate, commodities, and intellectual property. As the tokenization industry gains traction, RXS could challenge Solana (SOL) in market supremacy by rising as a leader. Given its current price and anticipated post-launch growth investing in RXS could yield substantial returns. Ripple (XRP): The Established Contender with Upside Potential For those looking for a consistent altcoin with future expansion XRP is still a great buy. XRP trading at about \$2.40 has shown durability during market swings. Technical study points to an approaching breakout with important resistance levels at \$2.50 and \$3.40. This makes an appealing investment choice since it suggests a prospective price increase. With a market capitalization of over \$138.75 billion, XRP guarantees enough liquidity with its 24-hour trading volume that exceeds \$4.92 billion. Tron (TRX): A Cost-Effective Option with Strong Fundamentals For those with a \$1,000 budget Tron (TRX) offers still another intriguing possibility. At \$0.2379 right now TRX provides a reasonably priced entrâ€™ into the crypto scene. The networkâ€™s remarkable adoption rate and robust tokenomics have led to its recent price stability. With a market value of about \$20.48 billion and a 24-hour trading volume of \$550.71 million, Tron shows liquidity and future development potential. Investors looking for a consistent but growth-oriented asset can consider TRX for their portfolio. OKB: A Utility Token with Breakout Potential Another clear purchase for readers trying to maximize their \$1,000 investment is OKB, the native token of the OKX exchange. Driven by the

acceptance of the OKX platform, OKB has steadily increased, trading at about \$50.19. The exchange’s strong user base of constant innovation helps explain the coin’s value increase. Technical study shows that OKB is about to break through the \$50 resistance level, generating notable upward momentum. With a market value of about \$2.99 billion, OKB provides stability and expansion. Its value in the OKX ecosystem including staking incentives and trading fee discounts helps to appeal even more for investments. Among those wishing to be exposed to exchange-based tokens, OKB is a strong candidate. GateToken (GT): A Low-Risk, High-Reward Altcoin Another interesting addition to the list of clearly worthwhile purchases is GateToken (GT). Currently trading between \$21.45 and \$21.61, GT presents a pleasing starting point for anyone looking for a dependable and cheap asset. Its strong tokenomics and growing acceptance inside the Gate.io ecosystem make it a wise investment. GT has shown endurance in the erratic crypto market with a market capitalization between \$1.92 billion and \$2.74 billion and consistent trading activity. Demand for GT is projected to grow as more traders and investors use Gate.io for trading, fostering a possible price increase. Investor spending some of their \$1,000 budget, GT will benefit from its long-term expansion possibilities. Conclusion: Seizing the Opportunity in the Altcoin Market With a \$1,000 budget, investors have a unique opportunity to diversify their portfolios with high-potential altcoins. Rexas Finance (RXS) leads the pack as the under-\$1 token ready to surpass Solana (SOL) in market effect. Its presale performance, forthcoming release, and real-world asset tokenizing features point it toward great expansion. XRP TRX OKB and GT provide good investment prospects supported by robust foundations liquidity and development potential. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana has factored in an additional price drop of 4.36% in the last 24 hours. - The altcoin’s daily trading volume has increased by 3.72% as per CMC data. The cryptocurrency market has continued to dip downwards in the last 24 hours increasing fear among investors. Multiple reasons have cropped up for the market crash, the leading among them being the recent Bybit hack. Although the exchange has revived funds quite rapidly, the aftereffects seem to be arising. Donald Trump’s recent tariff laws also have been a causative factor. With the recent market crash, Bitcoin has hit the \$79,000 level for the first time in 2025. Leading altcoins have also sunk in the past day. Particularly, Solana has factored in an additional 4.36% drop in the duration of the past day. The cryptocurrency has reached its previous trading levels of \$130 due to this dip. In the evening hours of February 27, the altcoin was holding to its \$141 support. However, as bearish trends intensified, prices began to free-fall to current ranges. At the time of writing, Solana was trading at \$134.33 as per CMC data. Zooming out, into its weekly chart, the market crash seems to have put a huge dent in Solana’s price actions. The altcoin has been subjugated to a 25.88% drop in the span of the last 7 days. This has caused a price setback in the altcoin making it lose the hikes from the previous bull cycles. Will Solana Price Fall to \$100? On analyzing Solana’s technical indicators, the altcoin’s Moving Average Convergence Divergence (MACD) MACD line stands way below the signal line. This indicates a clear bearish control of the trend meaning prices could go further down. Additionally, its movements trace a descending channel which also highlights a continuation of price drops. These inferences suggest that the altcoin, in the case of any bullish recovery, might drop to the \$100 support. Thirdly, its RSI value stands at 25.64 as per TradingView data. This indicates that the digital asset is in the oversold category. Investors dumping tokens could result in further bearish price movements as it often occurs in bear market cycles. Finally, other altcoins such as Ethereum and Cardano have also lost their recent price hikes similar to Solana.

- Bitcoin & Solana Integration: Native support for BTC in Q3 2025 and SOL in May. - Users can pay fees with any token, reducing ETH dependency. MetaMask has unveiled a major expansion, adding support for Bitcoin and Solana. The announcement at ETHDenver marks a shift from its Ethereum-exclusive model. These updates aim to unify digital asset management across multiple blockchains. MetaMask will introduce Bitcoin support in Q3 2025. Users can store, send, and swap BTC natively without needing separate wallets. Solana integration will roll out in May, making it the first non-EVM chain on MetaMask. This update will enable users to access Solana’s ecosystem, interact with dApps, and swap tokens seamlessly. Programmable Accounts and Smart Transactions MetaMask is launching programmable accounts with Ethereum’s Pectra upgrade. This feature introduces built-in multi-sig, two-factor authentication (2FA), and AI-powered delegated access. The platform will also support ERC-5792 batched transactions, allowing users to execute multiple actions in one click. This will reduce gas fees and simplify transactions. In March, MetaMask will introduce gas fee payments using any token. This eliminates disruptions caused by low ETH balances. The update also enhances security against front-running bots and MEV sandwich attacks. Reports suggest MetaMask swaps have already reduced these risks significantly. MetaMask Metal Card and Multichain API The MetaMask Metal Card is receiving an upgrade. Users will enjoy enhanced rewards and exclusive features. The wallet provider is also launching a multichain API in June. This will allow dApps to connect to multiple networks, improving interoperability. Users managing multi-chain portfolios will benefit from this streamlined approach. MetaMask is adding support for multiple Secret Recovery Phrases (SRPs). Users will also experience profile sync across devices. Additionally, a redesigned home screen will display all assets across different chains in one place. The company plans to eventually eliminate gas fees for users. Smart transaction features will prevent failed transactions and protect against MEV attacks. MetaMask is also transitioning from Externally Owned Accounts to smart contract-based accounts. This will improve asset management and security. Highlighted Crypto News Today Deutsche Telekom Unit Joins Injective Blockchain As a Validator

- DTCC has listed the first Solana futures ETFs from Volatility Shares. - The listing isn’t SEC-approved but is expected to draw more institutional interest. - Analysts predict a high likelihood of a spot Solana ETF being approved by October 2025. The Depository Trust & Clearing Corporation (DTCC) has listed the first Solana futures exchange-traded funds (ETFs) from Volatility Shares, marking a significant step for Solana’s expansion into traditional finance. The newly listed ETFs are Volatility Shares Solana ETF (SOLZ) and Volatility Shares 2X Solana ETF (SOLT) provide leveraged exposure to Solana futures contracts. While the listing does not indicate approval from the U.S. Securities and Exchange Commission (SEC), it could attract greater institutional interest in Solana-based investment products. BYS JUST IN: The first Solana (SOL) ETF is now listed on the DTCC!ðŸŒ© pic.twitter.com/lHorHfNRaL â€” TheNewsCrypto (@TheNewsCrypto) February 27, 2025 Institutional Infrastructure Expands for Solana ETFs The DTCC’s listing of Solana futures ETFs provides essential infrastructure for clearing and settlement, facilitating smoother trading. Previously, Solana futures were absent from regulated markets; however, Coinbase’s recent launch of CFTC-approved Solana futures contracts has altered this landscape. Reason: Enhanced readability and sentence structure. Bloomberg ETF analyst Eric Balchunas described this move as a strong indication that Solana futures are becoming more accessible. The development has drawn comparisons to Bitcoin and Ethereum ETF approvals, which relied on regulated futures markets before the SEC greenlit spot ETFs. Rising ETF Approval Odds Amid Regulatory Shifts The SEC has begun reviewing multiple applications for spot Solana ETFs from asset managers such as Grayscale, Bitwise, 21Shares, VanEck, and Canary Capital. With an October 2025 deadline for approval or rejection, analysts predict a high likelihood of approval. Bloomberg analysts estimate a 70% chance of SEC approval, while Polymarket’s data suggests an 85% probability. The regulatory environment has shifted under the Trump administration, with the SEC appearing more open to crypto ETFs. If Solana follows the precedent set by Bitcoin and Ethereum, a spot Solana ETF could gain approval sooner than expected. Despite these positive developments, Solana’s price has faced significant downward pressure. SOL recently dropped below \$138, hitting its lowest price since October 2024. The decline was influenced by multiple factors, including Binance’s reported plans to unlock and sell \$2 billion worth of SOL, scam activities about Solana memecoins, especially the fallout from the Libra token scandal. Although the crypto market itself is at a redressing moment, Bitcoin and Ethereum have also recently struggled below recovery price. Technical indicators also show a bearish outlook for SOL. Solana broke a crucial support level at \$138, with the Chaikin Money Flow (CMF) indicator turning negative. However, the potential approval of Solana ETFs could reverse sentiment. Institutional demand for spot Solana ETFs could introduce fresh liquidity into the market, helping stabilize the asset. Highlighted Crypto for Today

DTX Exchange (DTX) is causing notable investor excitement as Solana (SOL) and Ripple (XRP) holders bravely flock into this less-known but fast-rising altcoin. DTX is drawing people seeking explosive returns having produced an incredible 800% ROI in a few months for early investors. But just what drives this massive migration? Maybe DTX will be the next crypto supernova just poised for a 100x spike. In this article reviewing the most recent SOL price fluctuations and XRP price patterns, we investigate if these top altcoins still provide exceptional value for 2025. Read on to also learn why more and more people are betting big on DTX. DTX Exchange (DTX) Is Revolutionizing Crypto Investment DTX Exchange, fast developing as one of the best crypto investment opportunities for 2025, provides a unique financial ecosystem integrating crypto with traditional assets for better results. Built on the robust VulcanX blockchain, DTX is the recommended platform for investors who appreciate dependability and efficiency since it ensures lightning-fast transaction rates, security, and perfect execution. By means of automated micro-investments and integrated risk balancing, DTX also simplifies long-term wealth creation, hence reducing upfront capital needs. Within a few months, DTX which attracts over 700,000 investors and already boasts more than \$15 million in presale revenue is swiftly rising among the best cryptos to buy now. DTX sets itself apart with its innovative approach toward economic growth. Apart from easy access to fast trading, DTX token holders gain from governance rights, income-sharing possibilities, and trading fee reductions. Those who act now will see instantaneous 100% gains on the bonus presale price of \$0.18 as DTX is scheduled to launch at \$0.36 on tier-1 exchanges like Binance, Uniswap, and Bybit this Q1. Early investors, meantime, have already made about 800% ROIs in just a few months. With staking rates of up to 15% APY giving passive income together with the creative Automated Investment Manager, DTX is positioned to become a pillar in the crypto market. Solana’s (SOL) Potential Breakout? But Is There a Bigger Opportunity? Technical indicators like the MACD, Momentum Oscillator, and Moving Averages point to a possible rally on the SOL price chart. However, the SOL price has been varying between \$155 and \$180. The SOL price chart still shows a trend of lower highs and lower lows, nevertheless, which suggests ongoing bearish momentum for Solana. Analysts think that should the SOL price surpass its ATH of \$294 in Q1, Solana could climb above \$400 in the first half of the year. The SOL price has increased more than 55% over the past year, therefore confirming its ranking among the top altcoins to hold for long-term investors. Furthermore, a recent SOL price prediction for 2025 forecasts an average trading range between \$165 and \$410. Solana is still showing resiliency, but traders searching for quicker and more exponential profits are shifting more and more to DTX. DTX has drawn interest from both institutional and retail investors with an incredible 800% ROI within a few months during its presale. Ripple (XRP) Shows Promise For Long-Term Gains Ripple has undergone noteworthy volatility recently, with the XRP price bouncing from the \$2 support level back to the \$2.4 mark. Meanwhile, this took place after the XRP price briefly tested the \$2.8 zone. Technical indicators like the MACD and Moving Averages point to a possible future upward momentum for the XRP price despite current swings. The RSI, CCI, and Momentum Oscillator do, however, show some short-term negative pressure on the XRP price chart. Still, the XRP price trend seems positive for long-term Ripple investors. A recent XRP price prediction for 2025 forecasts an average trading range between \$2.5 and \$4.5. Though Ripple is still one of the promising altcoins to watch, many traders are now focusing on quicker-growing substitutes. DTX is a new altcoin with just a few months of presale showing an amazing 800% ROI. DTX, one of the best altcoins to buy in 2025, presents faster returns thanks to its creative automated investing ideas. DTX Exchange vs. Solana & Ripple? The Ultimate Crypto Play for 2025? DTX Exchange is taking the front stage with unheard-of gains and a game-changing financial ecosystem as Solana and Ripple struggle with market instability. Although XRP price forecasts and SOL price swings point to long-term potential, DTX has already given early investors shockingly high 800% ROIs before even launching on tier-1 exchanges. DTX is positioned for a massive rally with its forthcoming launch on Binance, Uniswap, and Bybit. Now is the time to act since DTX has a limited total token supply and the investor demand is increasing rapidly. Find out more information about DTX Exchange (DTX) by visiting the links below. - Solana (SOL) price has seen a significant sell-off amid broader market downturns with its price dropping below \$140 and targeting a pitstop near \$122. - The S&P 500 has declined close to 3% recently, adding to the bearish sentiment across crypto markets. - Recent technical indicators show that SOL is facing extreme selling pressure with the RSI and MACD at levels not seen since mid-2023 and 2022, respectively. The crypto markets are painted in red today, with the S&P 500 dropping close to 3% over the past few days. Solana, which was already struggling in a sinking market, has seen a surge in selling pressure that caused its price to drop below \$140. Currently, SOL is under downward pressure, and many analysts believe that the next pitstop could be around \$122. This has led to growing questions among investors about whether it is the right time to buy Solana and if the token has a bullish future. Rising Solana Sell-Offs and Market Uncertainty Solana has been caught in a storm of bearish sentiment amid a broader market correction. The sell-off has been exacerbated by recent events, including the escalation of rug pull cases involving memecoins on the Solana chain. This has dampened trader confidence, and the situation worsened when Binance liquidated massive amounts of SOL through its market maker Wintermute. Some speculate that Binance may be deliberately dumping the token to buy back at lower prices, while others believe that the exchange is simply reacting to underlying market updates that have turned sentiment negative. Recent technical analysis shows that SOL is facing extreme selling pressure. The token’s RSI has dropped to levels not observed since June 2023, and its MACD has been declining since 2022 that indicating that bearish momentum is intensifying. Furthermore, the on-balance volume (OBV) has been falling steadily since the start of the month which suggesting that overall market sentiment has turned decidedly bearish. With these indicators SOL is currently trading within a pivotal support range between \$136.5 and \$133.6 a level that has provided a strong base throughout 2024. However, the prevailing trend suggests that SOL may soon fail to defend these support levels, potentially leading to a further decline toward the \$100 mark. Given the ongoing bearish pressure and the significant liquidations already seen the outlook for Solana appears challenging. The current trade setup indicates that unless buying pressure can be revived, SOL’s price may continue its descent. A sustained close below the crucial support of around \$119 could signal a transition into a bear market, with the possibility of further dips to \$100.

I’ve been in the crypto game long enough to know that smart investors don’t just chase hype—they chase real opportunity. And while Solana price predictions are
