

lost about 8% of its value in the previous week. While the Ethereum merging has gotten off to a good start, ETH prices have been highly pessimistic. In only 24 hours, ETH has lost over 9% of its value. Multiple Factors Incorporated Dogecoin, Solana, Polkadot, MATIC, and Ethereum Classic are just some of the other cryptocurrencies which have dropped by 8-10%. The crypto market decline is only one of several elements supporting Burry's forecast. The SPACs market fall is another thing he brings up. The market for Special Purpose Acquisition Companies reached its apex in 2021, but it has been in steep decline ever since. The present inflation situation is a key aspect of his forecast. Inflation is at historically high levels, as measured by the Consumer Price Index. To slow inflation, the Federal Reserve has been increasing interest rates and implementing quantitative tightening. In a recent address in Jackson Hole, Fed Chair Jerome Powell warned families and companies to brace for "pain" as the central bank battles inflation. Right now, the US economy is through a hard patch. A recession is a real possibility, and people are already coping with historic inflation. - Musk has pledged \$44 billion to purchase Twitter for \$54.20 a share. - Musk alleged that Twitter misrepresented the prevalence of spam accounts. Elon Musk, CEO of Tesla, tweeted out a snapshot of many fictitious accounts purporting to be Binance CEO Changpeng Zhao's replies to Musk yesterday and claimed that "90% of [his] comments are bots." Binance's official Twitter account replied, "Twitter please, I see enough of my boss already." And 90% of my comments are bots - pic.twitter.com/A7RKYNJZoR" Elon Musk (@elonmusk) September 5, 2022 Quickly after, Zhao chimed in to say that although he is the genuine poster below the tweet, 90% of Musk's replies are bots. Musk has pledged \$44 billion to purchase Twitter for \$54.20 a share, beginning a lengthy and difficult journey to acquire the social media site. Musk Demands Statistics When Musk announced his intention to make the purchase, Zhao backed him up by investing \$500 million in the deal. Sequoia Capital and Andreessen Horowitz, two prominent cryptocurrency-focused VC companies, also contributed \$800 million and \$400 million, respectively. The CEO of Tesla had ambitious intentions to transform Twitter before he tried to back out of the transaction. Musk allegedly wanted to open-source Twitter "so that people can critique it, improve it, identify bugs, potentially, or bias." This was according to a transcript of an internal Q&A session obtained by Vox. In addition, a subscription system that accepts Dogecoin was supposed to be developed, along with an edit button to make changes to existing content. Musk, CEO of Tesla, has been suing Twitter since April when their original agreement was signed. Musk alleged that Twitter misrepresented the prevalence of spam accounts on the service. Even more dramatically, Musk said the purchase "cannot move forward" unless Twitter makes this information public. While Musk signed a \$44 billion merger deal with Twitter. He claims in the petition that he was "hoodwinked by Twitter." Recommended For You:

- Bullish DGB price prediction is \$0.01787 to \$0.04118. - The DGB price will also reach \$0.1 soon. - DGB bearish market price prediction for 2022 is \$0.00820. In DigiByte (DGB) price prediction 2022, we use statistics, price patterns, RSI, RVOL, and other DGB information to analyze the cryptocurrency's future movement. DigiByte (DGB) Current Market Status According to CoinGecko, the price of DigiByte (DGB) is \$0.01046723 with a 24-hour trading volume of \$4,065,782 at the time of writing. However, DGB has decreased to 1.6% in the last 24 hours. Moreover, DigiByte (DGB) has a circulating supply of 15,618,745,709 DGB. Currently, DGB trades in cryptocurrency exchanges such as Binance, OKX, Bybit, DigiFinex, and KuCoin. What is DigiByte (DGB)? DigiByte (DGB) is an open-source blockchain and asset creation platform. DGB token is created in January 2014 as a fork of Bitcoin (BTC). DigiByte uses five different algorithms to improve security, and the main aim is to improve the Bitcoin blockchain's security, capacity, and transaction speed. DGB is a proof-of-work (PoW) cryptocurrency, and miners earn tokens for validating blocks through block rewards DigiByte (DGB) Price Prediction 2022 DigiByte (DGB) holds the 192nd position on CoinGecko right now. DGB price prediction 2022 is explained below with a weekly time frame. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contact points. This is because it needs at least two lows to connect, as well as two highs. Buying and selling pressure is equal, and the prevailing direction of price action is sideways. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. When the price hits the top of the channel, sell your existing long position or take a short position. The difference between the other two is that a horizontal channel is characterized as having equal highs and lows. Currently, DigiByte (DGB) is at \$0.01046723. If the pattern continues, the price of DGB might reach the resistance level of \$0.01094, \$0.01371, and \$0.02126. If the trend reverses, then the price of DGB may fall to \$0.00857. DigiByte (DGB) Support and Resistance Levels The chart below shows the support and resistance levels of DigiByte (DGB) . From the above daily time frame, we can clearly interpret the following as the resistance and support levels of DigiByte (DGB) . | Resistance Level 1 | \$0.01787 | | Resistance Level 2 | \$0.02765 | | Resistance Level 3 | \$0.04118 | | Support Level 1 | \$0.01195 | | Support Level 2 | \$0.00820 | The charts show that DGB has performed a bullish trend over the past month. If this trend continues, DGB might run along with the bulls overtaking its resistance level at \$0.04118. Accordingly, if the investors turn against the crypto, the price of the DGB might plummet to almost \$0.00820, a bearish signal. DigiByte (DGB) Price Prediction 2022 " RVOL, MA, and RSI The Relative Volume (RVOL) of the DigiByte (DGB) is shown in the below chart. It is an indicator of how the current trading volume has changed over a period of time from the previous volume for traders. Currently, the RVOL of DGB lies below the cutoff line, indicating weak participants in the current trend. Moreover, the Moving Average (MA) of the DigiByte (DGB) is shown in the above chart. Notably, the DGB price slightly lies below 50 MA (short-term), so it is in a downward trend. Currently, DGB is in a bearish state. There is a possibility of a reversal trend of DGB at any time. Meanwhile, the relative strength index (RSI) of the DGB is at a level of 47. This means that DGB is in a nearly oversold state. However, this gives confidence to the traders to trade without any fear. DigiByte (DGB) Price Prediction 2022 " ADX, RVI Let us now look Average Directional Index (ADX) of DigiByte (DGB) . It helps to measure the overall

strength of the trend. The indicator is the average of the expanding price range values. This system attempts to measure the strength of price movement in the positive and negative directions using DMI indicators with ADX. The above chart represents the ADX of the DigiByte (DGB). Currently, DGB lies in the range of 28.73502, indicating a very strong trend. The above chart shows the Relative Volatility Index (RVI) of DigiByte (DGB). RVI measures the constant deviation of price changes over a period of time rather than price changes. The RVI of DGB lies above 50, indicating higher volatility. In fact, DGB's RSI is at 47, thus confirming a potential buy signal. Comparison of DGB with BTC, ETH The below chart shows the price comparison between Bitcoin, Ethereum, and DigiByte (DGB). From the above chart, we can interpret ETH, BTC, and DGB are moving in a similar trend. This indicates that when the price of BTC increases or decreases, the price of ETH and DGB also increase or decrease respectively.

**DigiByte (DGB) Price Prediction 2023** If the declining price action completely slows down in momentum and the trend reverses, DigiByte (DGB) might probably attain \$0.7 by 2023.

**DigiByte (DGB) Price Prediction 2024** With several upgrades in the network, DigiByte (DGB) might enter a bullish trajectory. If the coin grabs the attention of major investors, DGB might rally to hit \$1 by 2024.

**DigiByte (DGB) Price Prediction 2025** If DigiByte (DGB) sustains major resistance levels and continues to be recognized as a better investment option among investors for the next 3 years, DGB would rally to hit \$1.8.

**DigiByte (DGB) Price Prediction 2026** If DigiByte (DGB) sustains major resistance levels and continues to be recognized as a better investment option among investors for the next 4 years, DGB would rally to hit \$2.4.

**DigiByte (DGB) Price Prediction 2027** If DigiByte (DGB) sustains major resistance levels and continues to be recognized as a better investment option among investors for the next 5 years, DGB would rally to hit \$3.

**DigiByte (DGB) Price Prediction 2028** If DigiByte (DGB) holds up a strong stance as a better investment option for the next 6 years, it might witness significant price rallies. Thus, by 2028, DGB would hit \$3.5.

**DigiByte (DGB) Price Prediction 2029** If investors flock in and continue to place their bets on DigiByte (DGB), it would witness major spikes. DGB might hit \$4.2 by 2029.

**DigiByte (DGB) Price Prediction 2030** With greater advancements in the DigiByte ecosystem, the crypto community might continue to invest in DigiByte (DGB) for the next 8 years and drive significant price rallies for the token. Hence, DigiByte (DGB) might hit \$5 by 2030.

**Conclusion** With continuous improvements in the DigiByte network, we can say that 2022 is a good year for DGB. For this reason, the bullish price prediction of DigiByte (DGB) in 2022 is \$0.04118. On the other hand, the bearish price prediction of DigiByte (DGB) for 2022 is \$0.00820. Furthermore, with the advancements and upgrades in the DigiByte ecosystem, the performance of DigiByte (DGB) might hit \$0.1 gaining investors' attention. It would also rise to reach above its all-time high (ATH) of \$0.178084 in the DGB future.

**FAQ** DigiByte is a highly scalable peer-to-peer digital currency that enables the leading transaction speeds in the industry at very low rates. DGB has listed on many crypto exchanges which include Binance, OKX, Upbit, Bybit, and DigiFinex. With the ongoing developments and upgrades within the DGB platform, it has a high possibility of reaching its ATH soon. On May 01, 2021, DGB reached its new all-time high (ATH) of \$0.178084. DigiByte (DGB) seems to be one of the top-gaining cryptocurrencies this year. According to the recorded achievements of DGB in the past few months, DGB is considered a good investment in 2022. DigiByte (DGB) is one of the active cryptos that continues to maintain its Bullish state. Eventually, if this bullish trend continues then DigiByte (DGB) will hit \$0.1 soon. DigiByte (DGB) price is expected to reach \$0.7 by 2023. DigiByte (DGB) price is expected to reach \$1 by 2024. DigiByte (DGB) price is expected to reach \$1.8 by 2025. DigiByte (DGB) price is expected to reach \$2.4 by 2026.

- Ravi Menon claims that the promise of substantial cost hikes is what draws them in. - Despite warnings and safeguards, consumers are rapidly trading in cryptocurrencies. There is no denying that the use of cryptocurrencies is on the increase and that governments throughout the globe are eager to safeguard their citizens. Especially from the many potential dangers that come with this new trend. Singapore intends to introduce new restrictions that would make it harder for regular investors to trade cryptocurrencies like Bitcoin. Independent Reserve found that 40% of Singaporeans are crypto holders. About three-quarters of them have many varieties. Highlights from the study include: Bitcoin remained the most popular cryptocurrency, with 78% of investors holding it. 50% hold Ethereum and the third most popular cryptocurrency is Dogecoin, held by 25% of investors.

**Targeting Retail Use** Despite warnings and safeguards, consumers are rapidly trading in cryptocurrencies internationally and in Singapore, Ravi Menon, managing director of the Monetary Authority of Singapore (MAS), said at an event on Monday. He claims that the promise of substantial cost hikes is what draws them in. He said that the MAS was considering "adding frictions" to the retail use of cryptocurrencies like Bitcoin. To provide further context, the minister mentioned a seminar titled "Yes to digital asset innovation, No to cryptocurrency speculation," which he believes captures the spirit of the same. Possible measures include regulating the use of leverage and credit facilities for cryptocurrency trading and ensuring that customers are eligible for the investment. The crypto-centric regulatory environment in Singapore is reportedly heating up at the moment. The MAS has been harsher than ever, rejecting crypto license applications outright and restricting the participation of individual investors. Towards the end of last week, the regulator had also ordered crypto platforms to disclose details about their economic activities, further establishing its authority.

- The Smart Contracts have given rise to NFTs and DeFi. Cuban stated. - Mark Cuban has stated that he is a big fan of the Ethereum Merge. American billionaire and entrepreneur Mark Cuban has long been outspoken on topics relating to cryptocurrencies, and he has described himself as a supporter of the Ethereum merger. and anticipating the Ethereum blockchain's dramatic shift. In the Fortune Interview, he said that, "I'm a fan of the merger, I think the energy usage issue is important." He is optimistic about the merger but also stated that it will take time and that it is uncertain as

to when it will rise. According to the decision, the merger will take place on September 15 and Ethereum will switch from proof of work to proof of stake, which is predicted to reduce the network's energy consumption by 99.9%. Cuban About the Ethereum Cuban continued, saying he is still quite bullish on Ethereum, "I think the applications to drive usage will be there." Cuban has frequently referenced the network's applications and use cases as a motivator behind his support when speaking about his fondness for Ethereum. He has primarily discussed his interest in smart contracts, which are sets of computer codes that carry out a set of instructions on a blockchain. In March 2021, he claimed that smart contracts have fundamentally altered everything. When smart contracts appeared, they gave rise to NFTs (or non-fungible tokens) and DeFi (decentralized finance). That's what made them unique. That's what attracted me. Because of this, it matches the internet a lot. Along with other cryptocurrencies like Bitcoin and the meme-inspired Dogecoin, Cuban also owns Ether. A few NFTs and investments in blockchain startups, many of which are focused on improving Ethereum, are also included in his portfolio. Recommended For You

- BTC dropped below \$21k, after reaching \$25,135.59 in the previous week. - Major altcoins are also witnessing a sudden huge crash. Following a continuous positive surge over July, the global crypto market saw a significant crash on previous days, with a crucial fall of major cryptocurrencies. The unexpected drop in the cryptocurrency market has been connected to numerous reasons including, US Federal Reserve's predicted interest rate hike in September. During the past week, the market dominant Bitcoin (BTC), reached \$25,135.59 and dropped below \$21,000. At the time of writing, BTC is trading around \$21,235.17, with a 24-hour trading volume of \$40,292,878,008. Bitcoin has lost over 7.02% in the last 24 hours, as per CMC. Massive Fall of Altcoins In addition to Bitcoin, major altcoins are also going through continuous pressure in the crypto market. During the previous day, Ethereum (ETH) crashed down 9.73%. The coin is currently trading around \$1,641.24, with a 24-hour trading volume of \$26,003,367,546. Also, Binance Coin (BNB) is currently trading around \$286.05 with a 24-hour trading volume of \$1,676,513,661. BNB is 1.80% down during the last 24 hours. Other top altcoins are also witnessing a tremendous loss during the past day including, XRP (4.87%), Cardano (7.28%), Solana (3.71%), Dogecoin (5.52%), Polkadot (5.08%), and Avalanche (1.50%), at the time of writing. So far this year, the global crypto market has already experienced a massive downturn. The market fell below \$1 trillion due to multiple factors including the Terra-Luna crash, market equity, inflation, and transaction freezing from Celsius Network. Following this, the crypto industry gradually emerged from the sudden crash and now again returned to the same condition. Recommended For You

Innovation is the driving force of the cryptocurrency market. New projects are introduced into the market every day. The best way to find out what you stand to gain from a crypto token is by checking through its utilities. If it has a strong use case, then it has the potential to do well. This piece will look at top crypto tokens with properly laid-out use cases " Shiba Inu (SHIB), Chainlink (LINK), and Persystic Token (PSYS). Shiba Inu (SHIB) If you've been in the world of crypto for some time, you'll have heard about meme coins. These cryptocurrencies are different from other tokens in the coin market because they are designed to offer absolutely no utility. Unlike other projects focusing on a particular area of human living, meme coins fail to do so. But this idea changed with Dogecoin. This meme coin ushered in renewed interest in the crypto space. However, it didn't take long before another cryptocurrency project decided to copy most of its features while improving on some of them. Shiba Inu was the next major project to emerge from the meme sector. What's more? It managed to overtake Dogecoin as one of the biggest tokens in the coin market. Shiba Inu is an Ethereum-based meme token that features a dog theme. When this cryptocurrency was launched, it was popularly regarded as the Dogecoin killer. Why? Because it offered better utilities than Dogecoin. To start with, Shiba Inu was developed by an anonymous entity known as Ryoshi in 2020. Shiba Inu adopted a community-driven approach and has an active community of users known as the Shiba army. They are responsible for driving the token forward. Shiba Inu also adopts an ecosystem that's made up of three tokens; SHIB, LEASH, and BONE. SHIB is the native token of this ecosystem. Unlike DOGE, there's a limited number of SHIB tokens " 1 quadrillion. Chainlink (LINK) Before, cryptocurrency tokens and blockchain technology had difficulty interacting with non-blockchain technology. As a result, combining the unique features of several unrelated systems was impossible. If blockchain will provide crypto users with near limitless decentralized features, then it has to be able to interact with external elements. Chainlink is the cryptocurrency project that's set to tackle this problem. Chainlink runs on a decentralized network and uses smart contracts to control its transactions. Users can close the gap between on and off blockchain systems by relying on the Chainlink oracle. This middleware will be an intermediary that will translate data from the real world to smart contracts on the blockchain. There are different types of smart contracts on this platform that can be used to process and collect data. Chainlink will aggregate the collected data to a particular point and trigger its execution with smart contracts to process transactions. Doing this can avoid a centralized point of failure that will threaten the entire system. LINK is the native token of this platform. It's used to facilitate transactions on the Chainlink system. What's more? This ERC-20 token also settles node operators for facilitating smart contracts. Users are expected to stake LINK tokens to become node operators and earn passive rewards from the platform. Persystic Token (PSYS) The Persystic Token is a new addition to the coin market, but it's capable of many things. As a result, many crypto experts and enthusiasts have touted it as the next big cryptocurrency to emerge from the cryptocurrency market and thrill users with what it offers. Persystic plans to be a crypto token that offers a completely decentralized ecosystem where users will get to earn passively. Persystic is designed from a desire to create a cryptocurrency token that'll ensure that users can communicate and interact freely. Today, most social media platforms are controlled and regulated by strict regulations. Persystic aims to break this strict control with blockchain technology. Persystic is designed on the Binance Smart Chain. As a result, it can process transactions quickly and at a cheap

rate. PSYS is the native token of this network and is BEP-20 compatible. Crypto users can add PSYS tokens to their portfolio by participating in the presale. You'll also enjoy lucrative bonus offers on your purchase. Users participating in the presale's first stage will enjoy a 5% bonus, while the second stage will offer a 4% bonus.

- Dogecoin increased by about 8%, from \$0.0771 to \$0.0838. - Users of the Binance card will be able to use SHIB at over 60 million retailers. Neither Shiba Inu (SHIB) nor Dogecoin (DOGE), two of the most popular "meme currencies" in crypto, took the weekend off. After starting the month at \$0.00007911, SHIB skyrocketed to its all-time high of \$0.00008 in October 2021. There has been a resurgence in activity for Meme coin Shiba Inu (SHIB). The current uptick in the price of Shiba Inu may be seen against the background of a large whale buildup. Meanwhile, Dogecoin increased by about 8%, from \$0.0771 to \$0.0838, as recorded by CMC. Early in June was the last time DOGE traded at a price of more than \$0.08. Even though it started the year trading at \$0.18 and peaked at \$0.34 precisely one year ago today, the coin's supporters would want to see it reach \$0.10. Both currencies have been competing for market dominance in recent months, with a combined worth that is now above \$10 billion. Further Bullish Momentum Ahead The price of Shiba Inu (SHIB) has risen lately because of a "cup-and-handle" breakout. A cup and handle is a technical chart pattern, where the cup is shaped like a "u" and the handle has a small downward drift. As a result, Shiba Inu has the potential for a further 50% increase from its present levels. The SHIB price may reach \$0.00002253 by September 2022. Shiba Inu has played a significant role in recent events. Binance's European-issued payment cards now support SHIB as of last week. Users of the Binance card will be able to use SHIB at over 60 million retailers across the globe. Users will not incur any foreign exchange fees, but may also receive a cashback bonus of up to 8%. - The cryptocurrency exchange requested a stay of proceedings until dispute is resolved. - The defendant has requested the court to not reject the intervention plea. Coinbase, the biggest cryptocurrency exchange in the United States, has come under SEC inspection for purportedly offering securities on its website. The exchange now faces even greater challenges after the Supreme Court turned down its appeal. According to Bloomberg, the United States Supreme Court turned down Coinbase's request to skip the arbitration process for a customer dispute. Moreover, the court had rejected its request for intervention by the justices, the statement said. The cryptocurrency exchange has requested a stay of proceedings until the dispute is resolved. Multiple Lawsuits There was a mention of how the two judges hearing the issue in federal court had opted against hearing the appeal and had instead chosen to send the matter to arbitration. Coinbase has filed an appeal, and the judges have been asked to rule on whether the trial may proceed. However, the alternative was to wait for the outcome of the arbitration appeals. The report stated that Coinbase argued before the court that this might do irreparable injury to their business. The courts seem to be divided on this issue. The crypto trading platform said that around six circuits mandate a stay of proceedings upon appeal submission. A customer who alleges he lost \$31,000 when a fraudster accessed his Coinbase account has filed a lawsuit seeking compensation. Another case involves Dogecoins worth around \$1.2 million. The defendant has requested the court to not reject the intervention plea. But they also don't want to put a halt to the proceedings. They just disagree with Coinbase's offered solution and reject it. Recommended For You:

What is MoonXBT? MoonXBT is the world's first social trading platform for cryptocurrencies. The Cayman Islands-based cryptocurrency exchange was established in 2021. The exchange offers its customers a broad range of trading products, allowing them to execute their trading plans effectively with enough liquidity to back them up. Introduction: A wide range of investment choices is available at MoonXBT, including spot trading, futures trading, warrant options, perpetual swap, social trading, and more. When compared to other cryptocurrency exchanges, MoonXBT offers many options, with more reliability and safety. Key Info: More than 60 nations across the globe now have access to MoonXBT services. Indonesia, Malaysia, India, Latin America, Russia, and Japan are just a few nations where the exchange has its functioning base. MoonXBT has gained traction in countries like Vietnam and Turkey after launching contract trading and copy trading in its initial stages. It is now one of Vietnam's top three cryptocurrency exchanges, and it's getting better. It also sparked a public uproar in Turkey, where cryptocurrency users are warier of new developments. Daily trading volume has reached two to three hundred million USDT, with over 200,000 users. MoonXBT Core Features: Social Trading MoonXBT, a global social trading platform, exploits the full potential of community trading to its advantage. Furthermore, it promotes social trading services such as its "Copy Trading" tool that allows traders to "copy" other users' trading moves, meaning that their orders would be automatically executed based on the trader's approach they follow. Copiers benefit from the time savings and the possibility of improved trading performance. Liquidity MoonXBT's powerful liquidation capability underpins all of the platform's items. In contract trading, MoonXBT's liquid contract lets customers invest at most 5000 USDT as a margin and add 150 times the leverage. To prevent market slippage, orders placed by customers are completed in milliseconds, thanks to abundant liquidity. As a result of the abundance of trading volume, the MoonXBT spot has a broad and deep trading range. Security In collaboration with asset custodian Fireblocks and security assessment provider Certik, MoonXBT ensures the safety of its traders' digital assets. For additional protection, MoonXBT employs the usage of two-factor authentication (2FA) for each transaction. MoonXBT Products: 3.1 Core: Liquid Contracts Customers of MoonXBT may trade on an open order book without waiting for other customers' orders to be completed through the "liquid contracts" feature. The filled order will then be offered to the market, where market volatility and movement may have an impact on the price. They may be terminated at any time before the expiry to provide liquidity and stability. 3.2 Spot Trading MoonXBT also offers spot trading in addition to a range of crypto trading

options. Some of the most prominent digital assets, such as Bitcoin, Ethereum, XRP, Dogecoin, Solana, etc., may be purchased here by crypto traders.

### 3.3 Warrant Options: Low Premium

The warrant option from MoonXBT is a crypto derivative with an easy-to-use interface and a straightforward trading process. Bitcoin/USDT, Ethereum/USDT, and Dogecoin/USDT are presently supported through warrant options on MoonXBT.

### 3.4 OTC: Work with Xanpool

MoonXBT has completed integration with XanPool. MoonXBT now covers Asia's fast-growing emerging markets. Over-the-counter trading offered by MoonXBT is peer-to-peer trading that takes place outside the public MoonXBT exchange. It offers a broader range of trading options and greater personal attention to large-scale investors.

### 3.5 MoonXBT Perpetual Swap

MoonXBT Perpetual Swap integrates linear USDT contracts on the trading platform. With one account, a trader can open multiple positions and all the profits and losses are calculated in USDT. Furthermore, MoonXBT's perpetual swap is one-way meaning a trader can either open a long or short position for one contract instead of holding both long and short position for the contract at the same time. This simplifies the risk evaluation and decision making process for traders since they need to only speculate in one way instead of thinking about more complicated hedging strategies. In terms of risk management, MoonXBT's perpetual swap enables traders to use two different margin modes for trading: cross margin and isolated margin mode. Meanwhile, users of MoonXBT can opt for any tier of margin and leverage as per their requirements. Another advantage for users of contracts on MoonBXT is the predictable and minimal trading fees. The contract maker is charged with 0.025% trading fee whereas the taker is charged with 0.071% trading fee.

### MoonXBT Social Trading Features

#### 4.1 Copy Trading

Copy trading is an investment option allowing traders to mimic other traders' trading methods. This has been proven beneficial to beginner traders since it saves time and reduces losses. The copy trading capability is made easy using MoonXBT's platform.

#### 4.2 Benefits of Copy Trading for Both Copiers and Pro-traders

Expert traders may also benefit from the follower's successful orders by sharing 10% of their gains with the follower. Just a few exchanges provide a unique copy trading feature similar to MoonXBT.

#### 4.3 Other Social Trading Features: Trading Battle, In-app Forums

Users of the MoonXBT web app may now participate in trading battles where they are placed against other players. A community-funded cryptocurrency reward pool is awarded to the most active users. Individual conflicts may also be created by traders who have more than 10,000 MoonXBT points or at least ten subscribers. The creator of a Trading Battle receives 5% of the overall prize money, which costs USDT 5 to generate. The more money you make, the higher your position in reward distribution.

#### In-app Forums

The community forum may be accessed using the mobile app. Entering and participating in the forum is free, and you may discuss a wide range of subjects with other members. People can, nevertheless, express their views, ask questions, contribute to the reputation-building efforts of professional traders, and post comments.

#### 4.4 Pro Trader Program

One of the network's products, MoonXBT Pro-trader, allows members to earn up to 50% commissions. It also offers VIP customer care assistance, allowing its consumers to withdraw more tokens every month.

### User Experience on MoonXBT

#### 5.1 Simple Interface

At a very low entry price, investors may start trading MoonXBT. Anyone in the crypto world may benefit from MoonXBT's simple-to-use interface.

#### 5.2 24/7 Service

MoonXBT's customer service team is well-versed and available around the clock. They answer social media queries and give details on the platform's events, services, products, prices, and promotions. They also answer all forms of doubts from users.

#### 5.3 Multilingual Service

Due to the fact that MoonXBT has users from all over the world, the website is available in many languages. Customers from almost every country will appreciate how simple and enjoyable it is to utilize the services in their own language.

### User Engagement on MoonXBT

#### 6.1 New User Bonus

There is a welcome campaign reward of 35 USDT for new traders at MoonXBT. You'll get 100% of your money back on your first purchase. To get started, for example, deposit 100 USDT into your MoonXBT account and make your first transaction. After completing the transaction, you will get a 100 USDT Trading Bonus as a refund. It is possible to deal in USDT and Trading bonuses simultaneously.

#### 6.2 Referral

There is an affiliate program with MoonXBT. You may make up to 50% commissions on MoonXBT's trading fees collected by your referrals' contracts trading via this program. Compared to industry norms, 50% is a competitive level.

#### 6.3 MoonXBT Points (MP)

There are several methods to gain MoonXBT points. You earn 50 MP when you sign up with MoonXBT. Complete KYC verification, and you'll receive 100 MP, as well. In order to safeguard your account, you must connect either your phone number or email address. This provides you with an additional 100 MP. MoonXBT points are linked to every trading activity. MP can be used to remit the transaction fee and be exchanged for Tether (USDT) as 100MP is equal to 1USDT.

- The Dallas Mavericks owner claims he doesn't see much of an influence from Cardano. - In Cuban's opinion, Cardano might be the foundation for the next big hit application. "Shark Tank" star Mark Cuban recently appeared on the Altcoin Daily Podcast for an in-depth, one-hour discussion on cryptocurrencies. He compared decentralized application platforms Cardano and Dogecoin to see which one had the greatest promise and what the differences were. Cuban believes that the number of transactions on a blockchain is a good indicator of how successful a project will be. There are no transactions or fees to be seen, therefore he surmised that Africans aren't utilizing "Cardano" as much as they thought they would. Cardano has had smart contracts for some time, but the Dallas Mavericks owner claims he doesn't see much of an influence from Cardano. In Cuban's opinion, Cardano might be the foundation for the next big hit application. While he acknowledged the possibility of such a thing happening, he insisted that it had not yet occurred. The host asked the billionaire, If Cardano co-founder Charles Hoskinson appeared on "Shark Tank," what advice would Cuban offer him? As I often ask my clients, "Where are your revenues?" The fact that it's crypto doesn't imply profits aren't important, added Cuban. The billionaire stated: "There's this distortion in crypto called market cap. You have a small float, you get the price up enough, and you have a total number available from the treasury at a billion. You make it a \$10 token, and now you have a \$10 billion total market cap." Dogecoin has a market worth of \$9.3 billion, according to CMC, while Shiba Inu has a market cap of \$6.7 billion, according to Cuban. The Cardano price today is \$0.531772 USD with a 24-hour trading volume of \$1,769,342,015 USD. Cardano is down 2.47% in the last

- CryptoDiffer shares the top popular tokens of July on Coinmarketcap. - The cryptocurrencies are LUNC, BTC, SHIB, ETH, and MATIC. - LUNC surpasses BTC while SHIB pushes ETH down in terms of popularity. The inflation of cryptocurrencies is rising while the overall market value has plunged within the last few months. However, Bitcoin has slipped down losing half of its value since the beginning of the year 2022. Following that ETH and some other altcoins of the industry have also been on the same track which resulted in crashdown. The whole crypto market was blown down while the bearish season was initiated at the end of 2021. Since last year, the entire industry is aware of meme tokens which became popular with the lead token Dogecoin (DOGE). Similarly, several cryptocurrencies tend to be trending across the world for their unique specifications and functions. In such a case, CryptoDiffer has come up with the popular coins of July on Coinmarketcap. LUNC Surpasses BTC In Popularity CryptoDiffer is a platform that provides updates and news on the crypto space through its Twitter social account. The platform shares the top popular coins from Coinmarketcap for July which include Terra Classic (LUNC), Bitcoin (BTC), Shiba Inu (SHIB), Ethereum (ETH), and Polygon (MATIC). LUNC has surpassed BTC in terms of popularity for the month of July while SHIB takes over the position above ETH. TOP 15 #COINS BY POPULARITY ON @COINMARKETCAP IN JULY \$LUNC #LUNC \$BTC #BTC \$SHIB #SHIB \$ETH #ETH \$MATIC #MATIC \$FARM \$GST \$SOL #SOL \$GMT \$CAKE \$FTM #FTM \$CULT \$ADA #ADA \$OP \$BNB #BNB pic.twitter.com/CSb8VmpgzV æ” ðŸ†°ðŸ†! CryptoDiffer æ” StandWithUkraine ðŸ†°ðŸ†! (@CryptoDiffer) August 2, 2022 Terra Classic (LUNC) is the top popular coin of July in Coinmarketcap holding 213th position by market cap volume. The current trading volume of LUNC is \$0.000099 which is 5.34% down in the last 24-hours. Bitcoin (BTC), the worldâ€™s largest cryptocurrency, captures the top second position in popularity even though many believe that Bitcoin is the king of cryptocurrencies. Currently, BTC trades above \$23K with a 1.72% loss for the past day. Furthermore, Shiba Inu (SHIB) takes the third position which is trading at \$0.000011 having a 1.97% loss in the last 24-hours. SHIB is one of the most popular meme tokens since its existence following the lead of Dogecoin. Ethereum(ETH) and Polygon (MATIC) are the next top popular coins on CoinMarketCap. However ETH is the second-largest cryptocurrency by market capitalization, and the features and updates from its network pushed the token to surge high. Both ETH and MATIC excel in building their ecosystem and developing blockchain networks. Moreover, these cryptocurrencies have grabbed the attention of huge traders and investors since January.

- Market cap of BTC rose up to \$438 billion after a 7.56% gain. - According to CMC, the top gainers of the day are LDO, SNX, BCH, BTG and UNI. The crypto market has popped into the recovery path after a horrible episode of crashes over the past few months. It has started to regain its path, as the red candles of the first cryptocurrency Bitcoin turned green on the charts fulfilling investorsâ€™ wish. The overall value of the cryptocurrency market rose by 7.09% to \$1.05 trillion. At the time of writing, Bitcoin (BTC) had increased by 7.66 percent to \$22,951 and Ethereum (ETH), the second-largest coin, was trading at \$1,624. The most popular meme coin, Dogecoin (DOGE), went up in value by 6.23 percent over the past day to trade at \$0.066, while Shiba Inu (SHIB), its rival, increased in value by 5.37 percent to trade at \$0.000011. Todayâ€™s gainer from CMC Lido DAO (LDO), Synthetix (SNX), Bitcoin Cash (BCH), Bitcoin Gold (BTG), and Uniswap (UNI) are the cryptos that were listed as the top gainers by the popular crypto-data aggregator, CoinMarketCap. Lido, a liquid staking solution for blockchains using proof of stake (PoS), traded at \$2.03 after exhibiting a 35.85% gain. Synthetix Network (SNX), an ERC-20 token, rose 26.85% to \$3.75, at the time of writing. Bitcoin Cash (BCH) is an altcoin version of bitcoin trading at the price of \$146 and rose to 24.50% Bitcoin Gold (BTG), a cryptocurrency hard forked from Bitcoin, has increased by 25.25% in the last 24 hours to trade at \$27.07. Uniswap (UNI) is a exchange token priced \$ 8.25 after rose to 23.05% According to the DefiLlama, it was surge from \$83.54 to \$87.27 at the time of writing that is it was rose to 4.47% from 24 hours Recommended For You

Bringing new digital entertainment elements like Cryptocurrencies to online gambling platforms turned over the entire gambling industry for the better. Nowadays one of the significant examples of the changes in the industry is online-based casinosâ€™ incorporation of games and financial systems that fully support the most happening digital currencies. Blooming online casinos that have enabled crypto transactions are built with the latest technologies to serve the incoming gamers. This evolution sets the crypto online casinos apart from any other regular casinos for their efficiency and highly innovative architectures. CryptoGames is one of the most efficient and fully functioning crypto-based online casinos that is phenomenal proof of digital evolution in the world of online gambling. The website offers great games to enjoy both classic gambling and modern technologies in wagering futuristic funds. Cryptogames is sincerely consistent with its services to its players. Of the many incredible elements the casino offers, the biggest attraction of the casino is 10 amazing games supported by the flexible options of 10 cryptocurrencies. Although the games keep the gamblers coming back to the casino, its various wagering policies for every single gambler in the casino keep them as lifelong loyal players. Starting with the listed games on the website, follow along to learn more about the casino in detail! Dice The game consists of a cube of luck that has an amazing chance of wins that range from 0.000 to 99.999. The simple Dice also offers modern touches like progressive Jackpots, and auto Betting along with great winning chances. If a player clears the objective of correctly predicting the result then the outcome will be a winning roll otherwise the game will require you to insert another setting of bet size, amount, etc, and make a prediction. Roulette CryptoGames players will find the European Roulette with 37 numbers and only one 0 at the casino that offers the European versionâ€™s House Edge. Players play the game to win rewards from the American versionâ€™s payout table. The roulette wheel is spun once the betting chips have been placed on the betting table according to the playersâ€™ determined bet amount. If the gameâ€™s objective, correctly choosing the neighbor bets is fulfilled then the players will win a direct profit. Slot The visually

classic game effortlessly resembles an actual slot machine with spinning reels and symbols. The machine spins according to the bet settings. Players need to follow the simple rules of the game and form a line of reels with 5 symbols in the middle row. The symbols can form 7 possibly winning combinations. This means, that if after one spin, the players form any one of the 7, they fulfill the fun objective of the game and get compensated immediately. Blackjack Blackjack attracts the players with simple rules in its true modern appearance inspired by the classic version. Players can easily follow the rules of the game and clear the objective by beating the house dealer without crossing 21 points. If the players fulfill the goal and earn 21 points (from the first two cards or by making the house dealer to cross 21 points ) they get immediately compensated when the game ends. Plinko With a structure quite similar to the one from the 80s, the crypto version of Plinko at CryptoGames has 4 different house edges for the 4 different balls offered. On a digital pegged pyramid players aim to fulfill the objective of the game by throwing a ball of their choice down from the pyramid into a winning slot. The winning slots may have different payout values and each color has a specified payout multiplier and house edges. In the end, the total amount of reward will depend entirely on the slot, color picked by the player, and payout table. Video Poker Modern Video Poker games are known to have a similar theme as the original Poker games. The version of Video Poker delivers the ultimate gambling experiences in three other variants with three respective house edges along with payout tables. Bonus Poker, Tens or Better, and Jacks or Better are the three variants players at CryptoGames try to master by following simple rules. The players try to form the best possible hands to clear the objective of the game. The hands are formed manually and by using a special Hold Feature. DiceV2 The modern upgraded version DiceV2 has been added to the list of games to complement the original version, Dice. The game has a lot more modern gaming elements with an objective that is the same as Dice. Players fulfill the objective of the game by predicting the outcome correctly before they begin the game. If a correct prediction about the outcome is made then, the dice rolls on the green zone. The slider can also set the bet size, payout multiplier, and win chances. There is also an open option to place many bets in one take. Keno The most freshly added creation on the website is Keno which has old-school themes mixed with new-age crypto design. Keno's visual is similar to the Minesweeper field. Its chic architecture consists of a field where there is a poll of numbers and useful features. Players aim to clear the objective of the game by successfully drawing the lucky numbers from the field. There are useful features to enhance the gaming experience. Keno is one of the simplest games at the casino for beginners right now. Minesweeper The classic puzzle game's crypto version appears as one of the easiest games with a highly lucrative reward system. Players choose to explore the game as their top choice for beginning crypto gambling for its highly flexible and rewarding option. By clearing as many or all of the mines in the field, players fulfill the objective of the game on a 5\*5 minefield. Players can take out their rewards from the game if they can avoid hitting on any mine. They can also aim for maximum reward by continuing the game until the end. The players can set their difficulty level on the field. Lottery Lottery tickets are the most classic examples of gambling or games of luck. Many classic gamblers find the Lottery as one of the easiest games to engage in. At CryptoGames, players fulfill the objective of the game by simply winning against their luck at the drawing. From each draw, winners are chosen separately based on the 4 different cryptocurrencies offered for the purchase of tickets. The prize money raised for the winners is raised from the sale entirely and is all handed out to the players. Jackpot Rewards Dice, DiceV2, and Roulette encourage the players to experiment and apply more strategies in the games to bag bigger value prizes in each round. The Progressive Jackpots offered in these three games challenge the players to tackle the set of rules and win the Jackpots. Every time a bet's result matches all the rules stated by the casino, players will have guaranteed chances to win the jackpot. The progressive jackpots will hand out rewards even in the smallest amounts. This means, that players will have the chance to win 1% to 100% of the rewards based on the winning conditions of the bet results. Crypto Currencies Making any transaction of funds is always flexible at CryptoGames since it offers 10 different crypto coins along with great exchange systems (regular and ChangeNow) to support a wide number of Crypto Gamblers. The conversion rates are always updated for the players based on the latest rates and refreshed every 10 minutes. Except for the game of Lottery, all 10 cryptocurrencies are supported for the rest of the games. Players can choose their most preferred coins from the following list to start playing any of the games at the casino: Bitcoin, Bitcoin Cash, Ethereum, Ethereum Classic, Litecoin, Dogecoin, Monero, GAS, Solana, and Dash for all their transactions. To Make Transactions With the coins available in the list of CryptoGames, the transaction system remains smooth and hassle-free for every deposit and exchange of funds. Transactions can be done in two ways. One where the players can find the systems from the "Your Account" tab to make regular deposits, withdrawals, and exchanges. On the other hand, CryptoGames offers Onramper and ChangeNow which are third-party fiat currency aggregators for credit card users, and a new age exchange system for over 240 cryptocurrencies respectively. In case, the new system is tricky to navigate then players can always process all transactions through the regular transaction systems by simply creating respective deposit or withdrawal addresses from Your Account Tab. Partake in Monthly Contests Another highly entertaining element of CryptoGames is their thrilling monthly competitions among the players. Through the events, all players get a chance to aim for bigger prizes like VIP memberships. Monthly contests take place throughout the year where every month the players can show off their skills in front of other players. Here are some of the incredible VIP benefits a player gets to enjoy by making it to the leader board of the contests- - Dice can be played for 0.8% house edge. - All winners get to enjoy 0 server delay when they are placing their bets. This advantage can be found regardless of how big or small their bet is. - The coins can be used for better and higher exchange limits - Open VIP chatroom brings together all VIP players and the managers of CryptoGames. - VIP tags beside the account name tag. - Birthday gifts of Tier 3 verified players and Monthly vouchers for other winners where the amount may depend on the position they are at on the leader board. Rewards Upon Registration With no unwanted delay, CryptoGames offers the most effortless Sign-up process for every new account holder who needs to complete the registration to play. While signing up at the casino, players don't get bombarded with popups or redirect links. The

straightforward registration process can be completed with a unique account name. This means providing a unique username will allow any player to move on to the next stage where they have to agree to the terms and conditions of the casino. At CryptoGames, all players are rewarded right from the registration process. The casino keeps the Play Money reward option open for all new gamblers for allowing them to access the games ( minus lottery ), for free. Upon registering players may claim their first share of Play Money from the "Rewards" tab. Then everyday players can claim the reward based on their level at the casino. To claim them, players do not have to worry about providing any personal or financial information. Free Play Money coins can be requested through the Faucet where their levels start at 0. Then for additional rewards, the casino keeps the Referral Programs or Events open for all where the referrers are rewarded with 15% of the house edge of every bet played by their referred players. Join a Community for Lifelong Friendly Gambling Under the supervision of unbreakable security, all the players can enjoy the ever-exciting casino experience while keeping their financial assets safe through Google 2FA applications and SSL encryption. The unbreakable safety measure assures the community of gamblers guaranteed protection of both their user data and funds simultaneously. Every element in the casino caters to the needs of the community in a respectful environment where all incoming gamblers can play without having to face any biased processing. The thrill of the casino comes solely from fair gambling at all times. CryptoGames not only aims to promote responsible gambling through amazing policies but also upgrades itself to meet all the futuristic goals a modern crypto casino should fulfill. The website of CryptoGames is hence, a great space for any gambler seeking the unlimited thrill of modern gambling. - The firm accepts a variety of fiat money deposit methods from throughout the globe. - Baby Doge Coin is down 6.43% in the last 24 hours. Baby Doge Coin has been listed on Deepcoin, one of the prominent cryptocurrency asset exchanges in the world, with a BabyDoge/USDT pair. Currently, Deepcoin users may purchase and sell BabyDoge by paying 0.05 percent spot trading fees for the coin. "¥ #BabyDoge /USDT is NOW available on #Deepcoin Spot trading! @BabyDogeCoin " Deepcoin (@Deepcoin\_global) July 25, 2022 Buy and Sell now with 0.05% spot trading fees! "€Sign Up: <https://t.co/U7T5rqdraj> #BabyDogeCoin #BabyDogeArmy #memecoin #crypto pic.twitter.com/MzjKOU3dwU At the time of this writing, there are more than 1 million registered customers in approximately 30 countries that utilize Deepcoin's extensive financial services. To trade the more than 100 cryptocurrencies offered on the exchange, the firm accepts a variety of fiat money deposit methods from throughout the globe. BabyDoge Metaverse Wearables The price of BabyDoge did not positively and went down with overall bearish market momentum after it was listed on the Deepcoin Exchange. It was announced on July 7 through Twitter by the Memecoin team that its first Metaverse wearable had been released. As stated in the tweet, those who have any Baby Doge NFT tokens may access Decentraland beginning July 18 and play as the famous pooch. As of May 17, BabyDoge Coin (\$BabyDoge) urged the community to vote on whether or not it should be able to use Baby Doge NFT holders' unique skins in Decentraland metaverse. Decentraland Linked Wearables Registry, according to the proposal, would be linked to the Baby Doge NFTs collection of Baby Doge wearables. Baby Doge was added to the Linked Wearables Registry in order to provide NFT holders free access to Baby Doge's new line of unique wearables. According to CMC, the Baby Doge Coin price today is \$1.22e-9 USD with a 24-hour trading volume of \$3,241,950 USD. Baby Doge Coin is down 6.43% in the last 24 hours. - The top 3 coins by social engagement in the last week are BTC, ETH, and DOGE. - Currently, Bitcoin is trading at around \$21,920.03, as per CMC. The global crypto market is currently going through ups and downs, apart from the market-dominant Bitcoin, other major altcoins have already witnessed a huge crash due to the crypto winter. At the time of writing, the current cryptocurrency market capitalization is around \$1 trillion, as per CMC. Even with the current market volatility, prominent cryptocurrencies continue to trend on social media platforms. The coins try to keep up with its social activity including upvotes, favs, retweets, replies, and followers on different social media platforms. Top Coins by Social Engagement The top 10 coins by one week of social engagement are BTC, ETH, DOGE, SOL, AXS, XTZ, APE, CAKE, MATIC, and SHIB, as per LunarCrush. According to the July 25 update from LunarCrush, the first 3 coins which ranked on social activities during the past week are Bitcoin (BTC), Ethereum (ETH), and Dogecoin (DOGE). The social mentions and social engagement for these currencies are 64.14K and 289M, 60.94K and 126.59M, 9.71K, and 63.39M. Following this, the next top 3 coins are Solana (SOL), Axie Infinity (AXS) and Tezos (XTZ). These tokens' social mentions and social engagements are 22.63K and 28.23M, 1.53K and 25.39M, 6.38K and 25.05M. Respectively, the remaining top 4 social engagement gainers are ApeCoin (APE), PancakeSwap (CAKE), Polygon (MATIC), and Shiba Inu (SHIB). The social mentions and social engagement for these currencies are 802 and 20.97M, 3.91K and 11.86M, 1.94K and 10.32M and 8.93K, 9.89M. Recommended For You

- Former chief financial officer of Binance, purchased Coins.ph in early April. - Originally intended to list the meme coin on July 13, but the launch was delayed. Acceptance of the Shiba Inu meme coin is increasing now that it has been listed on Coins.ph, a well-known Philippine cryptocurrency exchange. Currently, Coins.ph has more than 18 million registered users worldwide. This indicates that the dog-themed cryptocurrency can be used by this large number of people. The so-called "Doge-killer"

Shiba Inu will be added to the crypto exchange's current 20 cryptocurrencies. One of the country's first cryptocurrency exchanges, Coins.ph, is still going strong today. The exchange, which was founded in 2014, moved its emphasis from traditional financial services to cryptocurrency. Rising Popularity of SHIB Across the Globe Coins.ph is the first company in Asia to get a license from the BSP as an Electronic Money Issuer and Virtual Currency Exchange (EMIVC). They claim to be "the most established crypto brand in the Philippines and has earned the confidence of over 18 million users." Several cryptocurrencies, as well as a wide range of financial services, may be purchased and sold using the app's user-friendly interface on the local exchange. Wei Zhou, the former chief financial officer of Binance, purchased Coins.ph in early April after he left the crypto exchange giant in May last year for personal reasons. Following a \$95 million acquisition by an Indonesian technology business, the deal was completed three years later. The cryptocurrency exchange based in the Philippines had originally intended to list the meme coin on July 13, but the launch was delayed due to technical difficulties. Bitstamp, Europe's biggest cryptocurrency exchange, recently added Shiba Inu, as did Robinhood, a prominent trading platform. After losing about 85% of its value since hitting a new high in late October, SHIB is still No. 15 in terms of market capitalization on CMC. - \$34 million is apparently owing to Vault's biggest individual retail creditor. - Based on court records and an affidavit, Vault possesses \$287.7 million. Singapore-based Vault, a cryptocurrency lending, and trading company owe its debtors \$402 million, according to The Block. Vault CEO Darshan Bathija submitted a statement to Singapore's High Court on July 8 stating that Vault's clients had deposited \$363 million, or nearly 90 percent of the total, in an email to consumers on July 18. Company Has a \$70 Million Gap \$34 million is apparently owing to Vault's biggest individual retail creditor. An unknown secured creditor also has an outstanding debt of \$35M making the total debt of \$125M for the company's 20 biggest unsecured debtors. The crypto exchange formed by Sam Bankman-Fried, FTX Trading Ltd, is also a secured creditor and is owed \$4.1 million. Based on court records and an affidavit, Vault possesses \$287.7 million in different cryptocurrencies. In reality, the company's assets are valued roughly \$330 million since the affidavit excludes bank balances from the total. According to a different source, the company has a \$70 million gap. Vault, a startup sponsored by the likes of Peter Thiel's Valar Ventures, Pantera Capital, and Coinbase Ventures, ceased operations on July 4 due to financial challenges stemming from the unstable market circumstances. Earlier this week, the company stated that it had filed for bankruptcy protection in a Singapore court to give itself "the breathing space" needed to prepare for the restructure it had planned. Moratorium orders are similar to Chapter 11 bankruptcy under US law because they allow a company to continue operating. At the same time, it attempts "reach an agreement or settlement with its creditors, seek fresh sources of funding or restructure its business," which is described as "generally similar in concept." Meanwhile, Nexo, a crypto financing firm, has stated its interest in purchasing Vault pending a 60-day due diligence period, which Vault is continuing to negotiate. Recommended For You:

- The exchange said on Wednesday that it had halted all withdrawals. - Trade wallet deposits and withdrawals will begin at 17:00 UTC today. Zipmex is preparing to reopen withdrawals and deposits using its Trade wallet function the day after it had frozen user withdrawals owing to the market's volatility. They said they were "exploring all available channels including fundraising, legal action, and restructuring" in a statement. It was announced Thursday that the Asian crypto exchange was re-enabling client withdrawals and deposits using its Trade Wallet function, which had previously been disabled. Due to unpredictable market circumstances, the exchange said on Wednesday that it had halted all withdrawals, preventing users from accessing their assets. Lifeline For Customers Trade wallet deposits and withdrawals will begin at 17:00 UTC today, Zipmex said in a tweet. It also said

that trade would continue to be banned. The exchange highlighted “the black swan events surrounding the crypto space” in a now-deleted message it sent to its social media accounts this morning and stated it was trying to rectify the matter. The statement read: “Zipmex has retrieved the majority of our funds and assets that were historically deposited with our deployment partners and have been actively working to resolve the situation for the remaining outstanding assets. There were no materially adverse impacts to our operations.” Babel Finance and Celsius, two of the most significant casualties in June’s crypto market collapses, had a total exposure of \$48 million and \$5 million, respectively, to Zipmex at the time. Both Babel and Celsius froze customer withdrawals during their own liquidity issues; Celsius has subsequently filed for Chapter 11 bankruptcy, and consumers are still unable to access their holdings. Transfers between ZipUp and Z Wallet have been put on hold for the time being. Recommended For You:

- Top 5 cryptocurrencies of the week, BNB, XRP, DOGE, DOT, and AVAX. - Binance is strongly signaling the buy trends. Since the beginning of this year, the whole cryptocurrency market has faced highs and lows and lost billions. Still, crypto enthusiasts have hopes and are trying to make the market steady, as a result of this after 3 months of a downtrend the crypto market seeing green lights on the chart. Top Coins That Recovering From Market Downtrend Binance (BNB) Binance is the largest exchange globally by daily trading volume and its native token BNB faced a downtrend as a market unstable condition but now the market signaling ups as a result of this BNB moving to buy trend, moving average of BNB is above 50 MA. - Bitcoin of America added Zcash. - Bitcoin of America currently operates more than 2,500 Bitcoin ATMs. Bitcoin of America is a virtual currency exchange and a well-known BTM provider, that has registered with the US Department of Treasury (FinCEN) and (RegNum) as a money services company. Bitcoin of America currently operates more than 2,500 Bitcoin ATMs in 31 states. Users can buy Bitcoin, Litecoin, Ethereum, Dogecoin, Shiba Inu, and Bitcoin Cash in important cities. Since customers seldom have to wait in a customer service line, this has made it simple for them. They even give their clients access to real Bitcoin experts, in comparison to many other operators in the market. Bitcoin of America Added Zcash Bitcoin of America just adjust its strategy after realizing the difficulties that many clients face when they are unfamiliar with the bitcoin market. After they announced greater customer care, it announced an update to its Bitcoin ATMs that at present, Bitcoin of America locations allows Zcash to its customers. The response time and answer rate for Bitcoin of America are relatively fast. According to CMC Zcash traded at \$53.16 with a trading volume of \$51,013,443. Zcash is down 0.61% in the last 24 hours with a market cap of \$786,261,920.

- Polkadot (DOT) is one of the 12 largest cryptocurrencies in the world. - Memecoins have a high market approach, like DOGE and SHIB. As the cryptocurrency crash has been on the rise recently, however, the just presale-launching Mehracki token (MKI) and Polkadot (DOT) have not been significantly impacted by the current state of the cryptocurrency market. The main cryptocurrencies have been on a downward trend over the past few months as the prices of Bitcoin, Ethereum, Cardano, and other cryptocurrencies have fallen. Polkadot (DOT) A para chain is a customized blockchain that is used in the Polkadot multichain vision for the web 3. True interoperability, scalability, ease of blockchain innovation, great energy efficiency, security for all users, user-driven governance, and, most importantly, the blockchains of Bitcoin and Ethereum are all features of this system. And the Polkadot (DOT) has been charging fewer transaction fees. As every currency has been suffering from the market crash, Polkadot impressively rebounded with growth to reach the 12 largest cryptocurrencies in the world. Now the coin is trading at \$6.41 with a 6 billion market cap. The trading volume in the last 24 hrs is \$348 million. Mehracki (MKI) Mehracki (MKI), a Meme coin that has not yet launched but is scheduled to do so on August 22nd, 2022, has been under presale since May 17th. And it utilizes the Solana blockchain, which seeks to make a genuine change in the cryptocurrency industry and give customers a fun and satisfying experience. For a while, Dogecoin (DOGE) and Shiba Inu (SHIB) were successful meme coins and had a high market approach. Mehracki Token (MKI) has a different approach and it creates an ecosystem supporting tourism, travel, ventures, and meme sharing and it tries to spread positivity. Mehracki whitepaper declares: The vision of Mehracki is quite simple, to promote health and a quality lifestyle through memes and touring the world, using blockchain as the tool. An

application consists of cheap, fast, and borderless transitions. One trillion MKI is the fixed supply, making it a deflationary token and deflationary tokens contribute to stability, liquidity, and an increase in the token value, per sources for the crypto crash on Twitter.

- In 2018, a sexual harassment case was filed against Tesla's CEO. - A lawsuit against Musk for promoting Dogecoin is in proceedings. Twitter reportedly wants to take legal action against Tesla and SpaceX CEO Elon Musk over the decision of terminating the 44 billion dollar deal. And appoints the New York law force prepared to sue Musk in Delaware court. " Elon Musk (@elonmusk) July 11, 2022 As this tweet states that Twitter's legal action didn't have much effect on Elon Musk. Lawsuits Against Elon Musk Elon Musk was sued in the past for promoting Dogecoin, and Johnson, a victim, who invested in DOGE under Musk's influence, filed a lawsuit against him seeking \$258 billion, but this did not affect him. The Tesla organization has not been impacted by sexual harassment and discrimination cases by nearly seven women who filed a complaint against the firm in California state court in 2018. And now, after initially stating that he would purchase Twitter, Musk has decided to terminate the contract due to social breaches, fake scams, breaches of sections 6.4 and 6.11 of the agreement, and possible tampering with Twitter's credential information. In response, the chairman of Twitter has said that Musk must pay a penalty and that they are also ready to file a lawsuit against Musk to complete the deal. Recommended For You

- Shytoshi Kusama finally published his long-awaited Medium piece. - TREAT is a new reward token developed by the creators. Shiba Inu (SHIB) has grown to enormous popularity in recent times. As a result of SHIB's broad acceptance, the crypto market benefited from the increase in demand. During this time, the network's primary developer shifted his attention to network development. Shytoshi Kusama finally published his long-awaited Medium piece after teasers lasted for two days. Ryoshi's Strategy implemented the Shiba Inu community has anticipated a slew of changes coming to the network soon. However, the protracted bear market has dramatically affected many individuals. Ryoshi's strategy "strongly" is Shytoshi Kusama's goal, though. On Medium, Shibarium's principal developer talks about the much-anticipated new product. This Shiba Inu layer-2 solution has been in the works for quite some time. Shytoshi has provided updates on this project, which is scheduled to launch in the third quarter of 2022. Shiba Inu developer reaffirmed that everything was OK. There was still no word on when the Public Beta will begin. Terra's algorithmic stablecoin UST went down in flames throughout the globe. The Shiba Inu network, even though some people have opted to avoid all things related to stablecoins, was continuing with its plans. SHI will be launched in 2022, Shytoshi said. A group of SHI developers is now attempting to address the problems noted in previous projects. SHI will also be used to counter and balance payments without market swings. TREAT is a new reward token developed by the creators "quietly." Shytoshi explained why he made this decision in the first place. According to reports, the network apparently sought a well-defined and stated use case for the token. To top it all off, they didn't want to rush another token into the market. Recommended For You:

- The BTCblack cards will be available for 10,000 members around the world. - With Bitcoinblack, members can earn 10% back in \$SPND token. The largest payment network, VISA officially launches Bitcoinblack, a global crypto credit card in The United Arab Emirates. According to a press release issued on Sunday, the Bitcoinblack card provides a limitless spending offer to eligible customers. The crypto card is exclusively available for 10,000 members, across the globe. Unlimited Offers for Bitcoinblack Card Holders The premium card offers several benefits to its holders without any limit. With the BTCblack card, members will be rewarded with up to 10% cashback in exclusive \$SPND tokens. The token can be used to purchase items from Bitcoinblack Haute Living Luxury Marketplace, an upcoming online store that includes luxury goods and accessories. Additionally, BTCblack card allows users to convert Bitcoin and other major Altcoins into normal currency. Prakash Chand, CEO of Bitcoinblack stated: People with incredible wealth in crypto need a way to spend their crypto easily and be rewarded for it. Bitcoinblack is perfectly suited for high net worth individuals who want to use their crypto for business or pleasure wherever they are in the world, including the 140+ countries where Visa is accepted. He also added that members can spend their cryptocurrency with the greatest conversion rates and high limits by simply loading it up through the web app or the upcoming BitcoinBlack wallet app. Currently, Bitcoinblack premium membership can be acquired at \$5,000. The cards are available based on a request for an invitation through the official website of VISA Bitcoinblack. Bitcoinblack is a worldwide accepted crypto credit card, which launched in 2021. Apart from Bitcoin, Bitcoinblack also carries Altcoins such as Ethereum, Dogecoin, Shiba Inu, and some stablecoins like Binance USD, Tether, and USD coins. - The firm has teamed up with multiple fiat and cryptocurrency payment providers. - BitPay has said that SHIB holders may pay for services using one of three other ways. According to a recent statement, crypto fans may now pay for meal delivery services such as UberEats and DoorDash using crypto. BitPay, a renowned cryptocurrency payment service, has introduced efforts that allow crypto holders to pay the two meal delivery providers via SHIB. Although meal delivery services like UberEats and DoorDash don't yet accept crypto payments, BitPay has said that crypto holders may pay for their services using one of three other ways. Multiple Ways For Ordering Food at Doorstep Crypto fans have the option of paying for meal delivery services like UberEats and DoorDash with crypto gift cards purchased via the BitPay app or a cryptocurrency card loaded with their digital currency. The BitPay website states that crypto owners may also use Takeaway.com or Menufy to pay for meal delivery services and that they can do so with currency in their crypto wallets. Bitcoin (BTC), Ethereum (ETH), Dogecoin (DOGE), Shiba Inu (SHIB), and other supported cryptocurrencies may also be used to pay for meal delivery with BitPay. It's interesting to note that BitPay has been a major proponent of cryptocurrency payments.

In order to make it easier for cryptocurrency holders to pay using the new asset class, the firm has teamed up with a number of other fiat and cryptocurrency payment providers. BitPay announced earlier this week that Shiba Inu holders may now buy Apple items like MacBooks and iPhones from shops like Newegg. According to CMC, the Shiba Inu price today is \$0.000010 USD with a 24-hour trading volume of \$242,222,458 USD. Shiba Inu has been up 0.20% in the last 24 hours. - 115 quadrillion was BabyDoge's estimate at the conclusion of voting. - This proposal exclusively pertains to the Ethereum network's coins. The spectacular vote to burn a staggering quantity of BabyDoge coins was a success. Members of the BabyDoge community voted to burn 50 quadrillion Baby Doge Coins, resulting in this choice. The event will take place on Friday, July 1. Our first community proposal ended today: <https://t.co/BtR0Cja3C2> "Baby Doge (@BabyDogeCoin) June 28, 2022 50 quadrillion burn on ETH chain on July 1st #BabyDogeArmy #BabyDoge pic.twitter.com/pa1uchgmYa On June 1, the project's first-year completion, the topic of burning a substantial percentage of the volume in circulation was first brought up. There were 232 quadrillion tokens in circulation at the moment. 115 quadrillion was BabyDoge's estimate at the conclusion of voting. For the avoidance of doubt, this proposal exclusively pertains to the Ethereum network's coins. The BNB Beacon Chain (ex-BSC), which may or may not include BabyDoge tokens, will likewise be vulnerable to such changes. High Volatility Expected on July 1st BabyDoge Prices responded to the news of the decision in a variety of ways. During the voting period that ended on June 28, BabyDoge had a 15.8% gain. However, the next day, it plunged by 18 percent, bringing it to a position below where it had been at the beginning of the previous day's increase. This has caused BabyDoge's price to fall by 10% from yesterday's close and around 13% from its value on June 1. When 50 quadrillion tokens are burnt, it will be fascinating to see how the price and capitalization of BabyDoge evolve. A massive one-time token burning like this may be unprecedented in history. According to CMC, the Baby Doge Coin price today is \$1.66e-9 USD with a 24-hour trading volume of \$9,986,503 USD. Baby Doge Coin has been up 3.72% in the last 24 hours. Recommended For You:

- The platform has allowed sellers to benefit from fee-free, fast payments. - Price volatility was one of the most apparent drawbacks for merchants. Merchants may now take Shiba Inu (SHIB) and six other cryptocurrencies as payment via Coinbase Commerce. Two important changes were made on Tuesday to Coinbase Commerce which is led by the world's most popular crypto exchange platform, Coinbase. The NASDAQ-listed business recently confirmed in a blog post that the platform has allowed sellers to benefit from fee-free, fast payments. Payments to Coinbase businesses will be instantaneous, enhancing the convenience of both online and in-person transactions. Drawbacks and Obstacles Removed The move was made after the exchange got a slew of feedback from customers who said that processing costs were the primary reason they chose not to pay in crypto. Price volatility was one of the most apparent drawbacks for merchants wishing to accept cryptocurrency. Coinbase launched quick payments with no costs in order to minimize price volatility and exorbitant fees for users and merchants. To ensure that Coinbase merchants are getting exactly what they are owed, the Coinbase blog post argues that fast crypto payment and auto-currency conversion would assist. Another seven crypto assets have been introduced to Coinbase Commerce. Shiba Inu, Dogecoin, ApeCoin, Dai, USD Coin, Bitcoin Cash, and Litecoin are among the newest cryptocurrencies. A total of 10 cryptocurrencies, including Bitcoin (BTC), Ethereum (ETH), and Tether, are now supported on the Coinbase Commerce platform. Luxury accessory merchants, airlines, and supermarkets use SHIB as a payment method. Multiple brands and companies are adopting crypto as a payment method, thus boosting the global adoption rate. The global crypto market is going through a tough phase, with major currencies losing consistently over the weeks. The price of Bitcoin is trading around the \$20k level. - Coins like Dogecoin and Ethereum have been on the platform for a long time. - Chainlink's price remains 86.75% below its all-time high of \$52.88. This year saw the widespread acceptance of cryptocurrencies. One of the most well-known and popular trading platforms, Robinhood, included many new cryptocurrencies. FTX crypto exchange has been said to be interested in acquiring Robinhood at this time. As soon as those speculations were put to rest, the platform began a new phase. Chainlink was added to the platform earlier today. LINK joins the Elite List in a tweet. Robinhood announced that Chainlink joined the platform's list of cryptocurrencies. Coins like Dogecoin (DOGE) and Ethereum (ETH) have been on the platform for a long time. The Shiba Inu (SHIB) community lobbied hard this year, and Robinhood finally listed the meme currency. Solana, Compound, and Polygon have also been added to the trading platform. Certain cryptocurrencies have seen their prices rise due to being listed on exchanges. The meme coin's value skyrocketed when Shiba Inu made it to Robinhood. In a single day, SHIB saw a 35% increase. As a result, community members predicted that Chainlink's price would rise. After the announcement, LINK was trading at \$7.08, up 4.26 percent over the last few hours. Chainlink's daily chart shows the huge increase in the asset's value that followed the announcement. According to the community, despite the recent statement, Chainlink's price remains 86.75% below its all-time high of \$52.88. LINK's arrival was also cause for celebration within the Chainlink and Robinhood communities. FTX's CEO, on the other hand, was busy debunking rumors. As FTX CEO Sam Bankman-Fried told Reuters, the company and Robinhood have not yet discussed any acquisition. Recommended For You: Chainlink (LINK) has Jumped over 25% After a New Long-Term Roadmap

- Crypto.com removed a total of 15 altcoins from its crypto earn rewards program. - In addition, the exchange added 3 more cryptocurrencies. On Monday, Crypto.com, the world's leading Singapore-based cryptocurrency exchange platform made significant changes to its Crypto Earn rewards program by removing Shiba Inu (SHIB), Dogecoin (DOGE), and 13 other cryptocurrencies. Shiba Inu (SHIB) and Dogecoin (DOGE), the two most popular dog-themed tokens, are no longer part of the crypto earn rewards

program with the other 13 cryptos as the extreme market volatility. Tezos (XTZ), Maker (MKR), EOS (EOS), Kyber Network Crystal v2 (KNC), OMG Network (OMG), Flow (FLOW), Bancor (BNT), ICON (ICX), Compound (COMP), Ontology Gas (ONG), Gas (GAS), Stratis (STRAX), and Beefy Finance (BIFI) are among the other tokens that will no longer be available on the program. The announcement comes after Crypto.com reported that it would be laying off 5% of its workforce due to a market drop. However, the reason for removing these tokens from the Crypto Earn reward program is unclear, as the exchange has not provided any information. Additional Step by Crypto.com Crypto.com, on the other hand, has expanded its Crypto Earn rewards program to include Fantom (FTM), Zilliqa (ZIL), and NEAR Protocol (NEAR). Users will benefit from rewards rates of up to 5% p.a for FTM and 6% p.a for ZIL and NEAR and the exchange offers up to 14.5 % annual returns on cryptocurrency. The exchange has also changed the reward rates for five stablecoins, TGBP, TAUD, TCAD, TUSD, and USDP (Paxos USD). Recommended For You

- The price of DOGE has increased from \$0.0587 to \$0.0767 in just a week. - The trading volume in the last 24 hrs is accounted to be 108.96%. The meme cryptocurrency, Dogecoin has attained a price surge of around 35% in the last one week. According to CMC, the previous Monday the price of DOGE was \$0.0587 and the current price of the coin is \$0.0767. Also, the full market capitalization is more than \$10 billion. The trading volume in the last 24 hrs is \$1.18 B, which has increased enormously, in numerical the growth is represented to be 108.96%. The buying pattern is multiplying at a larger scale, RSI at present is noted to be at 55.45. Despite the price chart moving up, the buying pattern builds the concern now. Musk Support Reassured The support from the tech millionaire Elon Musk seems to be undisturbed for DOGE, even after facing a legal case by one of the investors. The memecoin mascot made a tweet on June 19, showing his never-ending support. That single tweet has broken the eight consecutive red candle march for the coin. An American DOGE investor has dragged Musk to court and demanded \$258 billion for the loss he had to undergo due to the coin and the influence of Musk. Recommended For You

- It was on June 21st that the Shiba Inu (SHIB) price blasted. - Shiba Inu has been down 1.16% in the last 24 hours. As per CMC, Shiba Inu's returns have increased by 42 percent in the past week. SHIB has been attempting to recover its footing after the market-wide crypto meltdown earlier this month. It has been possible to see a more significant recovery when compared to its rival, Dogecoin. Shiba Inu's current price is \$0.00001157, an increase of 42 percent over the previous week. It was on June 21st that the Shiba Inu (SHIB) price blasted through a five-week-old descending trend line resistance with a long bullish candle. The breakout chance drew in additional buyers as the overall market's mood improved, and the cryptocurrency surged to \$0.000116 in the process. In addition, the currency's price may drop to \$0.00001 due to selling pressure approaching \$0.000012. Traders Might Anticipate a Retest of \$0.00001 Level As of late, the SHIB sellers have used a declining trend line in their downturn, which has lately dropped to a low of \$0.000007197. In addition, the SHIB price recovered from the previously noted support and had a tremendous pump of 32.85% on July 21st. Supported by the current burn activity, buyers could break \$0.00001 and a declining trend line's combined resistance. The three straight green candles in the post-retest rally surge indicated a strong momentum rally. Substantial supply pressure at \$0.000012 is indicated by the daily candle's long-wick rejection on June 21st and June 25th. As a result, traders might anticipate a retest of the \$0.00001 psychological barrier if the SHIB price reverts. According to CMC, the Shiba Inu price today is \$0.00001157 USD with a 24-hour trading volume of \$610,134,994 USD. Shiba Inu has been down 1.16% in the last 24 hours. Recommended For You:

- Mainnet launch and Binance's 'Rune in a Million' campaign were both announced. - RUNE's price is still down 31% from the \$3.21 it was trading at the beginning of June. After THORChain announced the opening of its mainnet on Wednesday, RUNE's value has risen by 16 percent. Mainnet launch and Binance's 'Rune in a Million' campaign were both announced on Wednesday. Binance is offering its customers a total of \$1 million worth of RUNE incentives. It has been seven days after the announcement, and RUNE's price has up 55.2 percent, to \$2.38 at the time of this writing as per CMC. Despite the rise, RUNE's price is still down 31% from the \$3.21 it was trading at the beginning of June. Strong Support of Community Visible Cross-chain exchange and proof-of-bond network THORChain allows users to transfer assets through liquidity pools across several networks, such as Binance Smart Chain, Ethereum, Dogecoin and Bitcoin. Synthetic assets may also be traded on the exchange. According to the organisation, more than \$3.7 billion worth of native on-chain swaps have been completed, and there is around \$299.7 million in total value locked (TVL). A fully working, feature-rich protocol with a vast ecosystem and a strong community has been achieved with Mainnet. According to the development team, the community is ecstatic about this significant milestone, which has been a long time in the making. There have been several notable announcements on the asset's future support. These include those from Binance, Crypto.com, Coinspot, SWYFX, and KuCoin. There was a 'multichain chaosnet' beta version of THORChain that went online in April 2021, and the project began in 2018. In the past, it was the target of multimillion-dollar cyberattacks. There will be no fundamental changes to the protocol with the launch of the mainnet other than fewer bugs and improved network stability/security. Still, it will signal a significant step forward in the governance and adoption of the project and the maturation of Thorchain into a full-fledged network. Crypto gaming websites are seen more often around the internet these days as they are successfully up and running with a pure intention of blending the latest online technologies with the evergreen essence of gambling. Gamblers are forming higher perceptions regarding the online gambling industry now that they have transformed into bigger platforms that serve cryptocurrency users. Online gamblers seek the best services under a user-friendly roof and continue to have high expectations regarding crypto-based gambling as a result of the competent casinos that are being developed currently.

CryptoGames is an extraordinary example of a user-friendly fully crypto-based online casino that recognizes a range of popular cryptocurrencies. The casino has designed an efficiently functioning system that offers 10 exclusive games, and live data validation techniques enabling fair betting. For every game, the casino rewards gamblers fairly based on their payout tables. CryptoGames is an open space where players can freely build their strategies to play any of the games using Play Money. The system also offers extra features accessible to all enthusiastic users. A descriptive outline of CryptoGames has been given below: **Introducing CryptoGames in Short** CryptoGames is a secure, fast cryptocurrency-based casino that is consistently administered by the gaming corporation located in Curacao, MuchGaming B.V. All services provided by the casino are facilitated under the Curacao Government's authorization. The casino's first and foremost aim is to enable a variety of gambling policies that prioritize safety and fairness for every single player on board. The architecture of the casino also provides the gamblers with Play Money an essential feature to enable players to jump right into the games without any hesitation of losing their own money. The architecture of the casino offers an incredibly simple user interface that is compatible with a wide range of smart devices, even including smartphones, and tablets. The casino is accessible to all gamblers from across the globe. Creating Own User Account CryptoGames keeps its registration simple, quick, and free for every new player. There are no unnecessary steps to follow. During their base registration, new users will be able to create a profile at the casino by just creating a unique username. The registration process is completed as the casino's terms and conditions have been agreed to. The registration tab will pop up once the players click on the Play Now tab or any of the games. Although the base registration does not allow the players to use their cryptocurrencies or get complete access to the registration system, it still offers them the option of using Play Money for every game. The Play Money can be used to play all the games except Lottery. **Quick Banking System** Keeping the requirements of a competent crypto casino in mind, the banking system in CryptoGames has been created to support deposits, exchanges, and withdrawals in the quickest time. A comprehensively secured and encrypted system is provided to monitor every transaction operation processed by either one of the two available alternatives. There is an advanced credit card fund transfer system enabled through the third-party aggregator Onramper. This function is made available for the players who are more frequent on the gaming websites and who find the credit card deposit systems more functional than the regular methods. The digitally advanced players can also relish the latest crypto exchange system that is available through the popularly known exchange website ChangeNOW. This thoughtful addition makes the multiple currency users play at ease since they can enjoy seamless transactions without going through the inconvenience of registering at multiple locations for exchanging their funds. Besides, ChangeNOW's innovative system of exchanges allows global crypto gamblers to trade their existing crypto coins to any of the ten cryptocurrencies listed on CryptoGames' website. This means players using multiple different cryptocurrencies can still gamble with their funds at CryptoGames. Moreover, Gamblers at CryptoGames can also look into the casino-recommended e-wallets in the FAQ to know which one they can use to make their transactions with. The steps provided below will guide you in understanding the approach for completing the transaction processes: - At the very first stage, players must complete the full registration process by entering their email address, password, and any other information required for the process. Then they must click on My Account to create Deposit and Withdrawal addresses. Then they will also find the regular Exchange service there which will allow them to convert from the ten cryptocurrencies available on the website. - To start making deposits through the regular method, players must create a deposit address. Otherwise, they can go to Onramper's website for enabling credit card deposits. As Onramper is not officially affiliated with CryptoGames, players must go through the required details on policies and procedures mentioned on Onramper's website with caution. - To withdraw your rewards create a withdrawal address as you have created deposit addresses. Then use the addresses to make any withdrawals. - To Exchange the ten cryptocurrencies directly on the website, click on the Exchange button which leads up to the conversion page of the casino. In case a player uses other cryptocurrencies that are not available in the casinos, they can head over to ChangeNow to exchange their funds. The use of 10 cryptocurrencies is available for all the games except Lottery. Moreover, the availability of modern methods allows the players to easily make their deposits of fiat currencies or use different cryptocurrencies on board. The banking system supports the following cryptocurrencies for completing the transactions: - Solana - Bitcoin - Ethereum - Bitcoin Cash - Litecoin - DogeCoin - Ethereum Classic - Monero - GAS - Dash Safety Measures on Board Playing at CryptoGames is highly enjoyable as the safety measures taken to protect the user data and funds prove the casino's consistency in terms of maintaining the digital platform. Their system enables SSL encryption and google 2FA features for data and fund protection. The security methods allow the transactions to be completed only when the verification has been completed. The security methods don't stop here, in fact, the casino also enables email verification alongside these to protect user funds even at times when 2FA is disabled in the user account. The email verification process does not allow withdrawal of any funds unless the account holder grants permission. **10 Exciting Games to Indulge In** The following list contains all the games (along with their respective house edges) the casino has created for the players. Some of these games come with their own set of hotkeys or keyboard shortcuts. Three of the games listed below have their progressive jackpots. The games are: - Dice- 1.0 % - DiceV2- 1.0% - Roulette- 2.7% - Blackjack- 1.25% - Minesweeper- 1.0% - Keno- 1.0% - Video Poker- 2.09% - Jacks or Better- 2.11% - Tens or Better- 2.08% - Bonus Poker- 2.09% - Plinko- 1.72% - Green ball- 1.63% - Red ball- 1.84% - Blue ball- 1.52% - Yellow ball- 1.56% - Slot- 1.97% - Lottery- 0.0% **Dice:** The game that pops open when players click on the Play Now button is, Dice. Play Money funds may be used to check out the game. The game's winning range (0.000-99.999 ) is ideal for all gamblers who are looking forward to new versions of classic games. Players win the reward amount according to the payout multiplier they choose before the game begins. Making a correct estimate regarding the result can help them win the game. In Dice, players choose between two given numbers. One number asks them to roll over and the other asks them to roll under. Players must guess if their result will be less than or higher than the numbers and predict accordingly. Dice offers

additional entertainment through its Progressive Jackpot. **Blackjack:** Blackjack is one of the two card games provided on the website. Players are compensated in the game for beating the house by either forming a hand total under 21. Or by hitting the lucky total of 21 from the first two cards. The deals are made for the amount of bet placed by the players. They can easily customize the size of the bet according to their fund amount. Blackjack can even be played by using the Play Money funds. Players must learn about how much each card holds as value before hitting the deals. If they can hit 21 points from the first two cards that are dealt, then they will immediately get compensated for their hand. The bet will be lost if the players somehow cross the total of 21 points. **Lottery:** Through the provably fair gambling policies and the processing of Random Picker, Lottery ensures a fair selection of winners in every round. There are four different cryptocurrencies available for the game. Players of the following cryptocurrencies get to buy the tickets in Lottery and participate in the exciting games: Bitcoin, Ethereum, Litecoin, and Dogecoin. There are two days for the winners to be announced. The days are kept different based on the cryptocurrencies. The total amount given to the players as a reward is fully based on the total profit amount raised through the sales of the tickets in each round. The total house edge amount of the game is 0 so that the players can win all of the reward amounts. **Roulette:** Roulette is played on a digitally designed wheel that has 37 numbers and a single 0. The ten cryptocurrencies and the Play Money are available for playing Roulette. If players successfully place the bets on the correct numbers on the betting mat, then they will be compensated according to the payout table dedicated to the game. Players can stack up against any number of betting chips on the betting mat depending on their fund size. There are options to randomly place the betting chips on the mat using the Automatic Neighbour Bets feature. Using the feature, players can place their bets according to four random layouts. The random layouts include Neighbours of Zero, Orphans, Third of the Wheel, and Zero Game. **Plinko:** Plinko offers a completely different architecture to its players by offering 4 different house edges based on the four different colors of balls for the game. The game also includes an automatic feature that allows players to run unlimited rounds for defined bet size and setting. All 10 cryptocurrencies as well as Play Money users can play Plinko for the 4 different house edges. The available four colors are: red, green, blue, and yellow. Players are compensated whenever they land into one of the color-specific reward slot. The reward amounts are completely based on the value of each colored slot and their respective house edges. Plinko is one of the most well-recognized games to the players for its famous appearance on the television show “The Price is Right”. **DiceV2:** DiceV2 is a complete bliss as its original version, Dice. It is currently accessible in the casino with all ten cryptocurrencies and Play Money. The modernized rendition offers a great upgrade for the players. The visual of DiceV2 makes it easier for the players to adjust their bets as the slider bar can be moved from side to side to adjust winning chances against the payout multiplier. The slider bar’s area will be labeled in green and the player must try their best to land their dice inside the green zone to win the prize. Players choose one of the two numbers to make their lucky prediction. In DiceV2, the payout multiplier once again will decide the total win amount. **Minesweeper:** Minesweeper is a true classic game that all computer gamers from the 1990s era remember vividly for its uniqueness. For each field a player skillfully clears without enabling a mine, they earn their reward points immediately. The players can also cash the rewards instantly if they have earned enough points according to their strategy. At CryptoGames Minesweeper, players can choose the number of mines they want to tackle as per their preferences. The cash-out feature in Minesweeper makes it one of the most unique and profitable games for beginners. Since there is a withdrawal option for instant rewards, players must place their entire bet if they lose the round. **Video Poker:** The second card game is offered along with its three different varieties. From the toggle tab, players can choose Jacks or Better, Tens or Better, and Bonus Poker to play. The casino’s version of the three versions offers three different house edges for the bets. The players are free to choose any one of the three options to start playing. They can win the reward amounts by building a profitable hand consisting of the cards they were dealt with. Each hand can be built by discarding or keeping the cards the house deals with to the players after each draw. To keep the cards randomly using an automatic system, players have the chance to use the Smart Hold feature for the game. **Keno** The most recently created game on the website of CryptoGames is Keno. It is the 10th game that the casino has curated for its players. Many consider Keno to be a lottery-style game. Its crypto version is finely crafted with unique visuals and an entertaining objective. Keno is an extremely lightweight game that is played to pick lucky numbers from a poll of 40 numbers. The players are compensated based on the number of correct guesses they have made from the poll. This means, that if they can predict the numbers properly then they will be able to score rewards based on the payout multiplier assigned for the numbers. **Slot:** All ten cryptocurrencies and Play Money users can play Slot following the simplest rules. The game can be played using very few techniques and strategies. Both in physical and online crypto-based casinos slot is one of the classic games played by the players. At CryptoGames Slot, players can aim for any one of its 7 winning combinations. There are no restrictions on the order in which the combinations may be formed. The 7 combinations can be formed in any order as long as they all appear in the middle row of the Slot machine. After each round, players can set up new bets for the game using the Auto Bet feature. **Fair and Unbiased System** At CryptoGames, all players are treated fairly in every game where they put forward the bet amounts according to their fund limits. Each game guarantees complete fairness in every round through provably fair policies. The casino keeps all the gaming records open and accessible to all players. The provably fair gambling technology also ensures that the players are not cheating their way through the games to win any bet. After every round is played, the players can verify all of their bet winnings and even losses by applying the hashes and seeds according to the guidelines provided by the casino. This is applicable for jackpots too. If the gamblers want to recheck if their bets have been processed fairly, they can always do it through the live data validation list which is kept to be publicly disclosed at all times. The games are all purely luck based and the choices made by the players during the games are all the influencing factors that return the end result. **Exciting Monthly Memberships** The casino hosts competitions from month to month to bring together the players for playing at the monthly competitions that boost their gambling

expertise as well as engagement with other players. The participants can enjoy and showcase strategic applications in the competitions and achieve their spots on the monthly leader board. As winners, they will earn the label of VIP, the exclusive privilege to play Dice with a .8 % house edge, uninterrupted processing of bets, exclusively high exchange limits, VIP chatroom access, and many more VIP privileges. Easy Gambling Experience at Your Screen If exploring casinos influenced by technological advancements is something that interests you then CryptoGames is a perfect option for finding all the modern gambling sensations under one roof. The casino ensures that the system has no malpractices in its application or service. As a result, for all interested gamblers who have a keen mind for experiencing futuristic recreation, CryptoGames will definitely be a perfect choice. The customer service never fails to impress the players with its ever-growing list of innovative elements. The casino has built a vastly informative BLOG that helps the gamblers to find it easier to understand the casino, there are detailed posts regarding each of the games. The posts even give out strategies that the players may use to enhance their winning chances. The casino also has its very own FORUM where the players get a fully free space that can act as their mode of interaction with others. Every gambler on the website gets a chance to join the threads of entertaining discussions. There are multiple languages that the gamblers can interact in using various channels. The casino has efficiently become a medium that attracts both professional and rookie gamblers for a lifetime of fair gambling experience. Of all the crypto casinos operating globally at this moment, CryptoGames promises to always remain equipped with a competent transaction system and gambling policies to exemplify how crypto gambling is also one of the biggest revolutionary sources of entertainment. - Nearly \$3.8 billion in native on-chain swaps are available. - The protocol's smart contracts currently have a total value locked (TVL) of about \$302.9 million. After nearly four years of development, on Thursday, THORChain developers announced that the native blockchain went live on seven supported networks. Developers said that Currently, the protocol allows for trades between seven major cryptocurrencies, Bitcoin (BTC), Ether (ETH), Rune (RUNE), Dogecoin (DOGE), litecoin (LTC), and Binance coins (BNB). Support for Cosmos (ATOM) and Avalanche (AVAX) is forthcoming. THORChain currently supports swaps between 7 major ecosystems: BTC, ETH (+ERC-20), BNB (+BEP2), DOGE, LTC, BCH, and RUNE. Support for ATOM, AVAX, and other economically significant chains will be added periodically. Cc: @ninerealms\_cap (5/8) " THORChain (@THORChain) June 22, 2022 Bridges are protocols that allow users to trade currency from several blockchains by using smart contracts. Without the use of bridges or wrapped assets, users of THORChain can exchange bitcoin (BTC) for any other accepted asset. The protocol's focus will be on connecting with more decentralized exchanges (DEX) and exchange aggregators. On THORChain's decentralized autonomous organization (DAO), community members can suggest new features. The previous network ChaosNet saw a trading volume of \$9.2 billion over 3.4 million swaps from 71,000 different traders. The largest trade on that platform, for \$1.33 million, resulted in fees of close to \$80 million for the firm.

- Customers will be able to purchase and sell cryptocurrency at all 59 of their locations. - Cardenas Markets in Las Vegas will be the first location to install a crypto ATM. There will be Shiba Inu and Bitcoin Automated Checkouts shortly at one of the largest Hispanic grocery chains in the United States, "Cardenas Markets." The supermarket has 59 locations in significant states, including California, Nevada, and Arizona, and is the largest in the country. An American supplier of Digital Currency Machines (DCMs) and crypto ATMs has teamed up with the leading Hispanic grocery store chain to form Coin Cloud. Thanks to the cooperation, customers will soon be able to purchase and sell cryptocurrency at all 59 of their locations. Multiple Crypto Options Available Customers at Cardenas Markets will soon be able to use Coin Cloud's crypto ATMs to access 40 different cryptocurrencies. There is a wide range of cryptocurrencies available, including Bitcoin, Ethereum, Dogecoin, and Litecoin, as well as Cardano, Nano, SushiSwap, and Algorand. Cardenas Markets in Las Vegas will be the first location to install a crypto ATM. ATMs will be placed in the remaining 58 establishments stage-by-stage. Coin Cloud's CEO, Chris McArary, said that customers in Las Vegas would be able to purchase and sell cryptos for cash. The CEO further added: "Recognized as one of the largest grocery chains in the country serving the Hispanic community. Cardenas Markets' stores now offer the capabilities to buy and sell digital currencies with cash. It's beginning right here in our home of Las Vegas." The Shiba Inu is gaining broad acceptance as a form of payment in several companies across the globe. A growing number of Hispanics are interested in cryptocurrency and using blockchain technology. According to a new poll of the country's adults, Hispanics in the United States are adopting cryptocurrencies at a higher rate than the overall population. - Twitter board accepts Elon Musk's \$44 Billion deal. - Elon Musk owns the majority of Twitter shares. - Each share of Twitter to possess a profit of \$15.22. Elon Musk's bid to acquire the top most social media, Twitter has finally been fulfilled. Yes, unofficial sources confirm that the board of members from Twitter have declared upon the deal, signing it off. However, the news is not yet out now officially. Many expect that within a few hours, the news will be finally officially out. The deal is to be for the same buying price for the majority of the twitter shares, earlier proposed by Elon Musk. This deal, as most know, amounts to \$44 Billion. Elon and Twitter The CEO of Tesla motors and SpaceX, Elon Musk, has long been behind the tails of Twitter. Indeed both share a deep relationship, especially when it comes to the crypto industry. Elon Musk is truly recognized as one of the most influential persons, especially via his tweets on twitter. Moreover, his tweets even denote the fate of a cryptocurrency too. Not just once or twice, everytime Musk puts out a tweet stating a crypto or

an altcoin, then boom, up goes that particular altcoin. And so, it's because of such reasons, that Elon Musk is still known as the "DOGE Father", in spite of his effortless backing of the Dogecoin (DOGE). Also, just a few days back, his simple tweet stating that he will continue supporting DOGE, made the altcoin to soar up by 8% instantly. In addition, sources claim that Elon Musk has bought a certain number of Bitcoin (BTC) during the current ongoing crypto winter. With all this into account, many in the crypto industry do fear, as if Twitter is under Elon's hands, then even more effective, will be his tweets regarding the altcoins. In such circumstances, almost the majority of the crypto industry will be acting according to his tweet, which indeed is something many fear should not happen. Furthermore, the dispute between the deal, which indeed became a deal breaker, in regards to Elon requesting fake accounts to be less than 5% for Twitter, seems to have subsidized too.

- Musk said that he was urged to support Dogecoin by his own workers. - Tesla and SpaceX accept Dogecoin payments for select items. At this year's Qatar Economic Forum in Doha, Qatar, Tesla and SpaceX CEO Elon Musk reaffirmed his support for Dogecoin, although evasively. In an interview, Musk said that he was urged to support Dogecoin by his own workers. Musk said: "Just people when I walk around the factory at SpaceX or Tesla, they've asked me to support Dogecoin, so I'm doing so." According to Forbes, Tesla CEO Elon Musk is the world's wealthiest person in the world. He has said that he owns Dogecoin, and his tweets on the cryptocurrency have often pushed its value. Tesla and SpaceX accept Dogecoin payments for select items, as he indicated earlier this year. Musk stated: "I have never said that people should invest in crypto. In the case of Tesla, SpaceX, myself, we all did buy some Bitcoin, but it's a small percentage of our total cash assets." All-eyes on Twitter Deal Musk, Tesla and SpaceX are the targets of a \$258-billion lawsuit that claims Musk participated in a racketeering plot to back crypto. This year, cryptocurrency enthusiasts have been closely monitoring Elon Musk's efforts to acquire Twitter. If the transaction is completed, Musk has said that he plans to "integrate payments into Twitter so that it's easy to send money back and forth," adding that this would include "currency as well as crypto." Even though Twitter approved Musk's \$44 billion acquisition deal in April, the CEO seems to have changed his mind, at least temporarily. Next month he said that the transaction was "temporarily on hold" until he could verify that less than 5% of Twitter users were fakes. Recommended For You :

- The token's 24-hour trading volume has grown by more than 1,200 percent. - This fast increase in SNX is backed by the rising daily network traffic due to its new role. The price of SNX, the native token of Synthetix decentralized finance (DeFi) platform, has rebounded more than 100 percent to usher in the week. SNX has proved to be the token with the highest gain on Monday. The token's 24-hour trading volume has grown by more than 1,200 percent to \$322 million, according to statistics from CMC. Gaining Investor's Attention Over Significant Coins This shows that investors are putting money into the token despite its dismal performance last week since it was placed up for bid. Additionally, this fast increase in SNX is backed by the rising daily network traffic due to its new role. Synthetix is a Layer-2 scaling solution that enables on-chain exposure to a broad range of crypto and non-crypto assets. It has joined with liquidity provider Curve Finance to launch Curve pools for sETH/ETH, sUSD/3CRV, and sBTC/BTC, enabling investors to convert synthesizers such as sETH to Ether (ETH) at more competitive costs. The Synthetix token is trading for \$2.96 at the time of writing, a 65 percent rise over the last 24 hours. The new price hike has benefited the token in wiping its deficit from the continuing market catastrophe. SNX's price rise isn't only due to Bitcoin's positive opinions at the beginning of the week but also to investors' desire to hold tokens rather than instruments and the protocol's potential to create more than \$1 million in trading fees, five times larger than BTC's daily performance. The protocol now supports synthetic fiat currencies, cryptocurrencies, and commodities. According to CMC, the Synthetix price today is \$2.94 USD with a 24-hour trading volume of \$476,526,193 USD. Synthetix has been up 65.41 percent in the past 24 hours. Recommended For You:

- Kevin O'Leary is not interested in selling cryptos despite its fall. - Bitcoin has traded below \$19k for the first time since 2021. The Canadian businessman and investor Kevin O'Leary expressed his viewpoints about selling cryptocurrencies. In a recent interview, he declared that he is not going to sell bitcoin or any other cryptocurrencies even in the stage of the crypto market fall. In the interview published on Saturday, the Shark Tank star said that, "I am not selling anything, long term you just have to stomach it. You have to understand you will get volatility, and that some projects are not going to work." According to O'Leary, the current crypto bear market may sustain the entire crypto sector for the long run. The current fall will teach investors and it improves the technology also. He added "The failure of the smaller projects, according to the investor, will help strengthen the crypto market even as the floundering projects will be regulated out of existence." Kelvin's Hold on Crypto Assets Currently one of the crypto industry leaders, Kevin O'Leary holds the 32nd position in the Digital asset market. According to the Insider, he holds crypto assets such as Polygon, Solana, etc. Furtherly, he is doubling down his crypto tokens such as Bitcoin, Ethereum, and also Web3 projects. Even at the time of the crash of the crypto market, the billionaires still kept supporting the cryptocurrency industry. Tesla CEO Elon Musk recently said that he will still keep supporting trading cryptocurrencies, especially Dogecoin. Meanwhile, the current crypto market is continuously facing a huge crash. The major cryptocurrencies are still witnessing huge losses. Bitcoin is trading for \$20,424.27. The top altcoin Ethereum is trading for \$1,156.59. Recommended For You

- The lawsuit claims that Coinbase failed to disclose TerraUSD's true nature. - GYEN surged in value, then plummeted a week after Coinbase added it to its platform. On Thursday, a class-action lawsuit was launched against Coinbase, claiming the trading platform was irresponsible in listing the TerraUSD stablecoin and charging that it neglected to disclose its financial connection with Terraform Labs. The second class-action lawsuit against Coinbase is now pending. In the wake of GYEN's depegging in November, a lawsuit was launched last month. Thursday's lawsuit claims that Coinbase

was negligent in neglecting to undertake due diligence on Terraform Labs before listing TerraUSD and misrepresenting TerraUSD's risk as an algorithmic stablecoin. The lawsuit claims that Coinbase failed to disclose TerraUSD's true nature as an uncollateralized, algorithm-controlled, and extremely dangerous stablecoin when comparing the information supplied by trading platforms Robinhood, Gemini, and Kraken on stablecoins. Struggle Continues Over Stablecoin Crash Effects Coinbase Ventures, the business's investment arm, was one of the main supporters of Terraform Labs, and the complaint argues there was an extra incentive for the company not to disclose TerraUSD's volatility. Milberg Coleman Bryson Phillips Grossman and Erickson Kramer Osborne represent the plaintiffs and classes in action. The plaintiffs launched a lawsuit against Coinbase and GMO-Z.com Trust on May 13 due to the depegging of the Japanese yen-pegged GYEN stablecoin in November. The latter business represents the plaintiffs. GYEN surged in value, then plummeted a week after Coinbase added it to its platform, leading some users to lose access to their wallets. The complaint claims that "untold millions" of dollars were lost by users due to the event. The action says that GMO-Z.com failed in several ways, starting with the design of the stablecoin for the plaintiffs and the class. Coinbase has been accused of negligent misrepresentation and failing to exercise reasonable care in listing the GYEN despite a reasonably foreseeable risk of depegging. Recommended For You:

- Users now have access to an NFT display picture function. - Elon Musk wants to acquire Twitter and implement free expression on the network. Elon Musk, CEO of Tesla and SpaceX, said during a virtual town hall meeting that integrating digital payments on Twitter to move money back and forth makes sense. Musk said: "Money is fundamentally digital at this point and has been for a while. It would make sense to integrate payments into Twitter so it's easy to send money back and forth." Twitter Plays Key Role For Crypto Sector Due to delays in Twitter reporting the volume of spam accounts, the \$44 billion transaction was likely postponed by Musk. Musk attended Thursday's Twitter meeting, implying that the transaction is moving forward. With the introduction of bitcoin tipping and the addition of Ethereum functionality this year, Twitter has become a major player in the cryptocurrency space. Users now have access to an NFT display picture function. Cryptocurrencies aren't a new phenomenon for Elon Musk, who has invested extensively and plans to stay on even in the face of volatile market circumstances. People eagerly anticipated the announcement that Elon Musk would acquire Twitter and implement free expression on the network. Elon Musk is being sued for \$258 billion for allegedly running a Dogecoin pyramid scheme. A "crypto-pyramid scheme using the Dogecoin cryptocurrency" is alleged in the complaint against Elon Musk and his firms. For trading Dogecoin commencing in 2019, Keith Johnson, an American citizen, is suing Dogecoin for an estimated \$86 billion in damages and an additional \$172 billion in losses. Other investors who have suffered losses in Dogecoin are also represented by him. Elon Musk has not yet responded to the lawsuit and the claims. Recommended For You

- An American DOGE investor has demanded \$258 billion from Musk. - Dogecoin trading requested to be added to gambling under NY Law. A Dogecoin investor has filed a case against Elon Musk along with Tesla and SpaceX. The key factor for the charge is considered to be the loss cost to the investor. And he blames Elon for promoting something which is not a stable asset. The case is being filed in the federal court of Manhattan by Keith Johnson. The proceeding will be held in the U.S District Court, Southern District of New York. Johnson strives to triple the loss the DOGE made from April 2019, which is estimated to be \$86 billion & \$172 billion, a total of \$258 billion. In the complaint, it is been stated that: "Musk used his pedestal as World's Richest man to operate and manipulate the Dogecoin Pyramid Scheme for profit, exposure, and amusement." Elon Musk and Dogecoin The Tesla man has always expressed his support for the memecoin that was started to mock the original cryptocurrencies. Till now the support has been extended, as well as always tries to advertise the coin whenever possible. The crowd following increase for the DOGE is majorly boosted by Musk and the tweets he makes. And people do invest in memecoins only by the popularity it has. But the flaws in those coins come to light only after a certain point. Dogecoin's considered drawbacks are lack of restriction in the supply volume and no concrete backup. The claimant now requests to ban Elon and Tesla from further promoting DOGE. As well as, consider DOGE trading to be gambling under NY Law. Recommended For You

- AEX stops BTC and top altcoins withdrawal. - The halt is said to be for a period of 2 to 3 days. - Mounting up liquidity and fera the reason for such halts. The AEX, a global crypto exchange based in Seychelles has socially announced the stopping of withdrawals of the Bitcoin (BTC) and top prominent altcoins too. This is said to be temporary for a period of 2 to 3 days. The major altcoins subject to the halt include Ethereum (ETH), Solana (SOL), Litecoin (LTC), Dogecoin (DOGE), Polkadot (DOT). In addition to this, the stable coins such as the USDT and USDC withdrawals have also been halted by AEX. The major reason behind such chaos for the AEX exchange is with the mounting up liquidity. Behind AEX's Decisions As expected the market crash continues further down, going straight to a week's time soon. Highly disastrous is the market condition right now. The prices of BTC, ETH and other altcoins are dropping at such an alarming rate. Currently, BTC is trading for the price of \$20,709, with the graphs down by 3.5% for the past 24 hours. Similarly the price of ETH is at \$1,092, with the graphs down by 3.15% for the past 24 hours. As a result, the entire overall market cap for the crypto industry is tumbling down below \$1 Trillion, raising extreme fear among the investors and holders. With the increased panic w withdrawals, many exchanges and crypto based platforms are now undergoing an almost bankrupt situation all over the world. However, AEX states that they are going towards almost 100% liquidation, with the growing withdrawal rates. This liquidity pressure has resulted in delays for the withdrawals. Accordingly, AEX puts forth that this halting is primarily due to the high panic withdrawals. Currently, the overall market cap for the AEX exchange is less than \$2.85 billion, for the past 24 hours. In spite of all this, during this period of 2 to 3 days, AEX states that it will be coming up with a mitigation plan. On the other hand, apart from the prominent altcoins, other altcoins are free to be withdrawn though.

Global crypto exchange, LBank, joined Coindesk Consensus as a first-time sponsor and exhibitor, hosting an insightful speaking session and attracting a diverse crowd of attendees to their LBank & Friends Afterparty. Austin has been more than welcome to the top 25 Crypto Exchange, giving LBank the chance to meet many fans and users in person while showing off LBank's ambitions and plans for the United States. It was a busy and fruitful weekend for the LBank team. Consensus 2022 was the first in-person Coindesk Consensus since 2019, with more than 17,000 joining from all over the world. LBank's team got a rare opportunity to show off what they have accomplished in their 7-year run and to do it through a variety of ways, including exhibiting and speaking. Titled "The Future of Centralized Exchanges: DeFi, Metaverse, and Web 3.0", LBank COO Shantnoo Saxsena sat down with CMO Kaia Wang and LBank Labs CEO Jeff Zhou for a talk about the position of Centralized exchanges in the future of crypto. Even with the rise of DeFi, Centralized exchanges are still an indispensable part of the crypto sphere as they provide certain services to the public that is still needed in this stage of crypto development. Saxsena shared LBank's efforts to provide more crypto education to the public, "We currently engaged in an educational effort in a bid to increase users' knowledge about cryptos and to also capture more users into the space." On June 11th, LBank hosted a successful "LBank & Friends" Afterparty for people to have a chance to socialize after the main conference. The event, which was co-hosted by AMB Crypto and NewsBTC, saw a diverse gathering of friends from all corners of the industry, with more than 500 people attending. Sponsored by Frz Solar System, ShibaDoge, FWC Token, GULFCOIN, and My Liquidity Partner, the event was a smash hit. Including the exhibition at Bitcoin Miami earlier this year, Consensus 2022 has been LBank's second major exhibition appearance in the US. "We've achieved a lot during our time here and you will certainly see more and more from LBank soon," CMO Kaia Wang told us. About "LBank & Friends" Sponsors: Frz Solar System, with the help of key partners and investors, intends to purchase, equip and build new solar power plants. In addition, it plans to invest in other physical projects to help countries demand electricity power and protect the environment from air pollution and increase the nation's welfare. ShibaDoge was created on December 24, 2021, by large Dogecoin and Shiba Inu investors. The project's mission is to ultimately merge the communities behind Shiba Inu and Dogecoin into one united cryptocurrency alliance. The coin's short-term goal is to merge 1% of that audience, creating value for over 50,000 holders and over \$400 million in value. As of June 2022, the token has more than 18,000 holders and more than 100,000 people that follow the project across social media. ShibaDoge serves a decentralized ecosystem that includes NFTs and a Launchpad for new Cryptocurrency based projects. FWC token (football world community token) is a project that was created with the aim of bringing football and cryptocurrencies together so that users can enter the world of crypto football. FWC Token is based on the Binance smart chain, which ensures crypto assets' authenticity, traceability, and immutability. FWC was created by people who share a passion for football and cryptocurrency. The token can be used to purchase football tickets, book hotels, use various related services, place bets, and participate in lotteries. Furthermore, FWC will take its place in Metaverse and NFT football games. GULFCOIN, a digital currency developed by GULF software and technology, aims to assist marginalized communities in joining the digital revolution. Gulfcoin has a one-to-one burning strategy during ICO, a feature to limit the supply of GulfCoin and protects it from market manipulation. Currently, in the ICO period, Gulfcoin has already reached a soft cap, and is crowd sales heading for the hard cap. Gulfcoin will be listed on LBank on the 15th of June. It is also the currency to be used by the coming GULF projects. GULF Exchange is an advanced trading platform to be released in June. GULF NFT MARKETPLACE is an online platform for digital arts to be released after that. About LBank Exchange LBank Exchange, founded in 2015, is an innovative global trading platform for various crypto assets. LBank Exchange provides its users with safe crypto trading, specialized financial derivatives, and professional asset management services. It has become one of the most popular and trusted crypto trading platforms with over 7 million users from more than 210 regions around the world. - The DOGE price is \$0.054 which is 92.6% lower than ATH. - OKX and CoinGecko participate in the tweet conversion Elon Musk is once again stepping forward to heat the Dogecoin sales. Early today, Musk made a tweet with just a single word "Cryptonight" and with no further explanation. Parallely, the memecoin is planning to release multiple products in the ecosystem. Cryptonight "Elon Musk (@elonmusk) June 15, 2022 In the previous weeks, Doge has been moving along the downline as every other cryptocurrency in the market. As of writing this, the value of DOGE is \$0.054. The All-Time High of the coin \$0.7376 was on May 8, 2021, which is 92.6% above the current value. The reason is estimated to be the SNL event by Elon Musk. The audience of SNL was around 10 billion, and the impact post this was huge. Now the fan base for both DOGE and Musk has increased, so any initiative by Musk now will skyrocket the growth in the DOGE market and pass that over the moon. Dissecting Musk Tweet The Twitter deal and new SpaceX launches have seemed to have occupied Musk's time and his involvement in the crypto world has been reduced. So, this new tweet has created curiosity among everyone in the zone. Major crypto exchanges like OKX and CoinGecko also participated in the convo, asking whether he is about to buy any bitcoin now. Also, the comparison has been made with Superman's kryptonite. The tweet may be an implication of the current extreme volatile market condition and the loss that is causing the investors. Despite the lower price, the memecoin is hitting the surface frequently as a payment acceptance coin by many firms, exchanges & even the U.S Senate in California. Recommended For You:

An online CFD broker, SimpleFX offers leveraged trading with low fees and no deposit requirements. There are two platforms accessible to customers: the well-liked MT4 and the exclusive SFX WebTrader

system. St. Vincent and Grenadines-based SimpleFX Ltd have been in business since 2014. The broker has attracted more than 200,000 traders from 160 countries, including beginners and experienced traders alike. Available Assets Over 170 tradable instruments are available in many marketplaces with SimpleFX. All of the main indexes are available, as well as 60 currency pairings and dozens of equities. Moreover, it offers several well-known cryptocurrencies, such as BTC and XRP. You may also trade a modest range of commodities such as oil and precious metals. SimpleFX Fees SimpleFX does not charge any fees for trading. Major indexes like the FTSE 100 have spreads of roughly 1.3 pips. You should expect spreads of roughly 0.9 pips for the EUR/USD currency pair and 0.17 pips for gold. Compared to those charged by other brokerages of a comparable calibre, these trading costs are reasonable. Contract specifications provide information on swap costs and rates. Inactive accounts will be charged an extra 3% fee (minimum \$25). Leverage At SimpleFX, products may be leveraged up to a maximum of 1:500, depending on the account balance. The website outlines the margin requirements, and the margin call is 50%. Mobile App Support SimpleFX's mobile trading app is available for both iOS and Android devices. Charting tools, several periods, plus an interactive news feed and community discussion are all included in the app. Also included are pinch-and-zoom movements for a mobile-friendly experience and a swipe. There is a QR code on the website that directs you to the download page. Deposit and Withdrawal Methods Most payments are made using cryptocurrency such as Bitcoin or Dash or via e-wallets such as Neteller or Skrill, both fast and commission-free. A cryptocurrency exchange will be required if you do not currently own any. The processing time for most methods is around an hour, and there is normally no restriction on the amount of money that may be deposited. There is no acceptance of credit cards. The same method used to deposit cash must be utilized to withdraw monies. Payments are typically processed within 24 hours and are normally free of charge. You may see the minimum withdrawal limitations that apply to your account on the website. SimpleFX supports numerous currencies and does not charge any fees for deposit or withdrawal of cryptocurrencies. The currencies supported are listed below; Cardano, Cosmos, Band Protocol, BNB Coin, BUSD, BUSD-ERC20, Bitcoin, Bitcoin-BNB, Bitcoin Cash, Bitcoin Cash BNB, Bitcoin Lightning Network, Chainlink, Dai, Dai BNB, Dash, Dogecoin, Dogecoin BEP20-BSC, Polkadot, EOS, Ethereum, Ethereum Staking, Ethereum Staking BNB, Ethereum Classic, Fasapay, Chainlink BNB, Litecoin, Litecoin BNB, MATIC, Monero, Ontology, PancakeSwap, USDP, PAX Gold, Tether, Tether BEP20 BNB, Tether Omni, Tether TRC-20, TRON, Uniswap, USD Coin, USD Coin BEP20 BNB, USD Coin TRC-20, Wrapped Bitcoin, Ripple, Tezos, Yearn.finance, Yearn.finance BNB, DFI.money, Zcash and Zcash BNB are all supported. Demo Account After signing up for an account, traders at SimpleFX get immediate access to a demo account. There are several advantages to utilizing a demo account before depositing real money into a trading account. Upcoming USDC Bonus Offer The first USDC deposit made before June 17 will get a \$150 bonus. It depends on how much you deposit into your SimpleFX USD Coin account after 08:00 AM UTC on June 6, when the bonus will be applied. You'll receive the following: - \$30 for a deposit higher than \$100 - \$50 for a deposit higher than \$250 - \$150 for a deposit higher than \$500 Staking by SimpleFX One of the services offered by SimpleFX is asset staking. SimpleFX promises investors "guaranteed interest" on their investments. An annual interest rate of approx. 8.5 percent is possible for investors. There is a method to hedge your ETH investments using smart leveraged shorts on SimpleFX, built on ETH 2.0. Knowledge Section With more than a dozen languages accessible, SimpleFX's Blog area provides extensive news articles, currency updates and how-to tutorials. Account Types at SimpleFX Traders may use a single account to trade on both platforms, having access to all tradable financial products. Accounts may be started in multiple currencies with no minimum deposit. For FX, commodities, and cryptos, the minimum contract size is 0.01 lots. The margin call is 50%, and the stop-out level is 30%. Customer Support SimpleFX's customer service is responsive and courteous. There is no need for you to fill out any personal information before starting a live chat. Alternatively, you may email support@simplefx.com to get in touch with the broker. On the Help page, you'll find a FAQ section as well. Pros - VPS and API - No Minimum Deposit - Quick Customer Support - Intuitive platform - Leverage: up to 500x for FOREX and 50x for stocks - 2FA Security - Multi-currency single account Cons - No access to MT5 - Non-crypto financing options are few - U.S users not allowed - No Islamic Account Conclusion SimpleFX delivers on its promise of simple but powerful services, inexpensive trading costs, and a strong demo offering. In addition, since they provide both their own online platform and MetaTrader 4, this broker is suitable for both new and experienced traders. Additionally, a major plus is that SimpleFX allows investors to trade worldwide equities, indices, and commodities in addition to fiat currencies, providing more than 100 tradable assets.

- Bitcoin went below \$24,000 and lost 12% of its value in the last 24 hours. - BTC attained a new low from December 2020. The king of cryptocurrency Bitcoin almost lost 65% of its value from its all-time high of \$68,789 which is recorded in November 2021. 40% of the holders are now swimming underwater with their BTC investment. Top institutional buyers like MicroStrategy, Tesla, El Salvador, and Block are lost nearly a huge amount of profits. Top institutional buyers' losses on Bitcoin MicroStrategy is an American-based business intelligence company holding \$129,218 BTC worth more than 3 billion. Now lost \$713 million or 17.98% of its overall value. MicroStrategy's entire value of bitcoin holdings average price was \$30,700. Last year, El Salvador is the first nation to adopt bitcoin as its legal tender, and the country's investors held \$2031 BTC worth \$103 million and an average price of \$45,171.86. Currently, the holding BTC is worth \$57 million which almost lost 44% of the profit. Tesla is an American-based automotive company holding approximately \$42,000 bitcoin worth \$1 billion. Now it lost more than 20.37% of its value worth \$270 million and the average price was \$31,620.00. Always Tesla CEO Elon Musk's favorite cryptocurrency is the Dogecoin which is under the meme coin. Block formally known as Square is an American financial services and digital payments company based in San Francisco. Block holding \$8027 bitcoin which is worth \$219 million on a cost base and the current value is \$202 million. It lost 8.13% of the profit value which is worth \$17 million. According to the CoinMarketCap today, Bitcoin started trading at below \$25k, still, it has not to get recovered and going down on its bottom. BTC traded at \$23,633 and lost over 12% from its last 24 hours value with a

trading volume of \$61 billion and a market cap of \$460 billion.

- BNB is down 14% this week, whereas ADA is down 7% during the same period. - According to the CFGI, the "extreme fear" score is now a "12." There is currently less value in the \$1.11 trillion crypto-economy compared to what it was worth in July 2021. In the previous week, versus the US dollar, digital currencies, including Bitcoin, Ethereum, Cardano, and XRP, have lost between 50 percent and more than 80 percent of their all-time price highs, according to CoinMarketCap. According to CMC, the ten most popular digital currencies have lost between 4 percent and 15 percent of their value in the previous seven days. Ethereum (ETH) and Bitcoin (BTC) have lost more than 14 percent of their value in the last week. Dramatic Loss of Altcoins Prices BNB is down 14% this week, whereas ADA is down 7% during the same period. In the last seven days, XRP is down 11%, SOL is down 16%, and Dogecoin (DOGE), the tenth-largest market cap, is down 19%. The current worth of the crypto economy is \$1.11 trillion, down 6.5 percent in the last 24 hours. A price this low for the whole crypto economy was last seen in the first week of February 2021. Bitcoin traded for \$39.405 per unit on February 6, 2021, ETH was selling for \$1.665 per unit, and XRP was trading at \$0.43. The value of these coins is now lower than it was in the first week of February. Other prestigious coins had a lesser worth than they do now. On February 6, 2021, avalanche (AVAX) traded at \$16.42 per share. AVAX is now selling at \$18.04 per share. Solana (SOL) was \$6.05 in February 2021 and is now selling for \$33.84. A recent Crypto Fear and Greed Index (CFGI) report indicates that "extreme fear" is pervading the cryptocurrency market today. According to the CFGI, the "extreme fear" score is now a "12," compared to the previous day's "13."

- The losses suffered by SOL came from the blockchain being shut down briefly. - This week's five-hour Solana outage was not the first this year. Solana (SOL) has been the worst-performing major cryptocurrency this week following a shutdown. Over the past seven days, the token has fallen by more than 11% and is now trading at \$39.22, the lowest since August 2021. The losses suffered by SOL came from the blockchain being shut down earlier this week due to a mistake in block generation. Investors Losing Trust Due to Frequent Outages The outage sparked a social media outcry against the blockchain; for a matter of fact, it not being the first in Solana this year. At least a few people were considering quitting the project. Many others made fun of the blockchain's inability to maintain its stability. This week's five-hour Solana outage was not the first this year. Since May, outages have plagued the blockchain occasionally. Earlier last month, NFT minting bots caused a seven-hour outage due to a backlog of transactions on the blockchain. However, this week's downtime resulted in a steeper drop in pricing than previously seen. Trading out of SOL might signify that investors have lost trust in the blockchain. SOL's outsized slide this week may have been exacerbated by a sluggish trading environment, which has done nothing to aid the coin. SOL may confirm a bearish pattern if it falls below \$38 this week. If the bearish trend continues, the token might go as low as \$24, its next support level. There's a good chance SOL will drop by over 40% over the next several weeks if it continues to trade in a falling triangle pattern. Although at the time of writing, SOL price has rebounded and is trying to cross the \$40 mark. A mere \$2 billion separates Solana and Dogecoin as the ninth and tenth most valuable cryptocurrencies. The recent deployment of Chainlink price has not saved SOL price feeds and increased NFT minting on the blockchain.

- The BabyDoge burn took place at 12:20:07 AM +UTC today. - BABYDOGE has been trading up 0.81% in the last 24h. The official team of the BabyDoge project announced on Twitter a successful burn of 3 Quadrillion in the last 12 hours. As per the data from BSCScan, a blockchain tracker, this \$4.8 million worth of BABYDOGE tokens were burnt around 12:20:07 AM UTC today. 3 QUADRILLION #BabyDoge have been burned ! ðŸ”¥ â€” Baby Doge (@BabyDogeCoin) June 3, 2022 Proof of burn: <https://t.co/7sv4bA381Upic.twitter.com/eBr2TiNjJr> The team recently opened a snapshot voting asking its holders to cast their votes regarding the burning of 50 quadrillion BabyDoge. An official tweet from the team revealed that 90% of votes were cast in favor. Competent Memecoin By Popularity BabyDoge is one of the top 10 cryptocurrencies in terms of its vast followers on Twitter. This memecoin gained its popularity gradually from its launch on June 1, 2021. Importantly, Tesla CEO Elon Musk's gibberish tweet, "Baby Doge, doo, doo," boosted the token's recognition among the crypto community. As per the statistics, the number of wallet addresses holding BabyDoge on the BNB Chain rose up to 1,560,369 and that on Ethereum accounts to 3,586. This project launched a collection of 10,000 BabyDoge NFTs on April 20 this year. This "adorable" collection was able to raise a fund of \$400,000 USD on May 4 as a donation to several dog rescue organizations. BabyDoge was launched as a BEP-20 token on the Binance Smart Chain (BSC) and was forked later on to Ethereum. This deflationary token is supported by proof-of-authority (PoA) consensus. According to CoinMarketCap, at the time of writing, BabyDoge traded at \$0.000000001754 USD with a market cap of \$268,172,917 USD.

The greatest downfall of the Terra ecosystem cast a ruinous effect on the crypto world. The crypto market was already crashing down due to soaring macro-inflation and the hyper-volatility of the fiat-based TradeFi. Terra (LUNA) and the network's algo-stablecoin TerraUSD (UST) became the sufferers of a disastrous free-fall to their deathbeds. LUNA Crash is the major disaster ever seen in the history of the crypto world. Terra USD (UST) has become the new entrant to the list of failed stablecoins such as Basis Cash, Iron, and Empty Set Dollar. The tragic fall of the top performers is quite a stressful thriller. Before moving on to the new chapter of Terra, Terra 2.0, let us take a deep dive into the journey of Terra right from its beginning. Started as a Blockchain Payment Firm TerraForm Labs (TFL) emerged from Terra Alliance, a collaborative blockchain payment firm hailing from South Korea. Terra was founded by Do Kwon and Daniel Shin in January 2018. It was the milestone project of TFL. Terra was created with a mission of cutting the ties of crypto assets with the real-world fiat to withstand the price-volatility. It wanted to aid the crypto space with the creation of "a stable digital currency" TerraForm Labs built this proof-of-stake (PoS) blockchain using the Tendermint consensus of

the Cosmos SDK. Cosmos SDK is an open-source software development kit meant for creating custom blockchains. The TFL team "If Bitcoin's contribution to cryptocurrency was immutability, and Ethereum expressivity, our value-add will be usability. We foresee Terra being used as a medium-of-exchange in online payments, allowing people to transact freely at a fraction of the fees charged by other payment methods." Terra turned out to be a prominent dApp platform hosting a family of "price-stable tokens" and it once stood as the second-largest blockchain after Ethereum to incorporate smart contracts. Key Players of Terra Classic Terra (LUNA) a.k.a Luna Classic (LUNC) Terra (LUNA) is the central token for the Terra Classic blockchain, formerly known as Terra. Holders of LUNA gained the mining power in the native PoS network. It was used as staking assets to various DeFi protocols associated with Terra. Most importantly, LUNA stood as the major token to defend the family of Terra's stablecoins against the market's price fluctuations. TerraUSD (UST) Terra initiated the "most-watched experiment" in the DeFi space by introducing its algorithmic stable coin, TerraUSD (UST). Like other stablecoins, the value of algorithmic stablecoins is pegged to a dollar at \$1 USD. But what makes them unique is their peg being backed by a volatile crypto asset. UST also maintained its value to the \$1 peg and was backed by its sister token, LUNA. To mint 1 UST, users had to burn \$1 worth of LUNA, and to redeem 1 LUNA, it was required to burn 1 UST. This on-chain swap mechanism caught the attention of investors. Luna Foundation Guard (LFG) Luna Foundation Guard is a non-profit organization under TerraDAO. This wing of Terra is responsible for maintaining the asset reserves for backing up the ecosystem's native tokens. LFG's reserve pools held BTC, AVAX, BNB, USDC, USDT along with UST and LUNA. The Wild LUNA Crash Terra Crash turned out to be the most horrendous crypto disaster. Investors never imagined these top crypto performers to nosedive into their death spirals. Terra(LUNA) ranked in the top 10 cryptocurrencies by market capitalization and TerraUSD (UST) remained as the third largest stablecoin. UST De-pegging " Ultimate Cause The beginning of May marked the mayhem of the Terra ecosystem. On May 9, the algo-stablecoin UST started to drift off from its peg. Investors were swayed by the market panic, they began dumping nearly \$300 million worth UST out in the on-chain market. This "whale dump" caused the "supply overhang" and accelerated further losses to the Terra assets. LUNA which attained its all-time high (ATH) of \$119.18 USD in early April plunged 100% to bottom out below \$0 USD. While other stablecoins such as Tether rebounded back to its \$1 USD peg, UST remained depegged and witnessed steep declines. The close association of the supply of LUNA and UST toughened the recovery pace. As the free-fall accelerated, the wealth of LUNA investors was wiped out in a very shorter period, intensifying the negative sentiment further. Notably, a well-known crypto billionaire Mike Novagratz, CEO of Galaxy Holdings, who recently announced himself as a LUNatic became one among the investors who had lost millions of dollars in the LUNA crash. Suspicious Evacuation of BTC From LFG Wallet From late April, TFL actively acquired significant amounts of Bitcoin to their LFG reserves to back UST. This acquisition did not seem to cause any improvement in the ecosystem. According to official data from LFG, the reserves held nearly 80,399 BTC and a few other crypto assets before the crash. The unnotified sales of the BTC reserves held up in the LFG, raised extreme controversies and suspicions amid the crypto community. During the crash, the BTC was sold to bring back UST to its peg. In the end, only 313 BTC stayed behind in the pool. But its \$1.2 billion worth of BTC transactions was not transparent. Later on May 16, LFG attempted to justify the reserve's transactions history in a tweet thread. Exchanges Began Delisting LUNA and UST The extreme volatility of LUNA ignited the fear of investors, pushing them to pull back their assets. This led to enormous amounts of transactions and thereby causing network congestion. Eventually, the block production on Terra faced a 9-hour halt on May 11 and again on May 12. Exchanges also faced this inconvenience and decided to suspend the trading of the Terra tokens. Binance suspended the trading for a shorter term and again resumed it on May 13. Initially, Huobi, FTX, L-Bank, Crypto.com, OKX, WazirX, CoinDCX suspended the trading. Coinbase would suspend the trading of UST and WLUNA on its platform from May 27. The total TVL in all the Terra-based DeFi protocols lost several billions. According to Defillama, Terra's TVL stood at \$29.65 billion USD and drastically dropped to \$ \$83.14 million USD, at the time of writing. The dominant Anchor protocol, Terra's lending & borrowing protocol, and Astroport, an automated market maker (AMM) of Terra, dipped by 99% in TVL. Anchor protocol's offer of 20% APY on UST deposits pulled in investors initially towards Terra. Rough Recovery From the Death Spiral TFL and the Terra investors have been through the worst-case scenario. Despite this havoc, Do Kwon and the team have not let their guard down. They worked closely with their LUNatic community via Agora, their community forum, to propose revival plans. The proposal of Initiating the burn of remaining UST in community pools passed but failed in its execution. Kwon proposed a "Kill Switch" which will enable TFL to burn all its assets and detach from Terra within 24 hours. This proposal fueled several controversies around the founder. As this solution would not in any way help investors to overcome their debts. All this mishap triggered the South Korean government to open an investigation into the Collapse of Terra. The authority summoned Do Kwon against his proposal on the hard fork and the Kill Switch. An anonymous investor vented out his anger in an attempt to barge into Kwon's house. But sadly ended up being house arrested. The latest proposal of LUNA2.0 genesis won 65% votes among the validators whereas 21% abstained from voting and 13% opted "no with veto". LUNA 2.0 " Rebirth of Terra Network As UST's de-pegging caused havoc in the ecosystem, Do Kwon proposed the plan to create an entirely independent blockchain, simply called "Terra", without the algo-stablecoin UST. The former blockchain is renamed Terra Classic and the pioneer tokens, Terra (LUNA) is renamed as Luna Classic (LUNC), and the de-pegged stablecoin TerraUSD as USTC. LUNA 2.0 a.k.a LUNA V2 will exist as the revamped form of Luna Classic whilst the latter will continue to exist as Terra Classic. TFL's CEO is still keen on building a community-based decentralized ecosystem. 14/ Our strength will always be in our community, and today is the most resounding sign yet of our resilience. We can't wait to resume our work together building the future of money. " Terra " Powered by LUNA " (@terra\_money) May 25, 2022 Essential validators have begun working on the genesis of Terra 2.0 and the team has confirmed that the new Mainnet will go live sooner on May 28 around 6 AM UTC. The team confirmed that the dApps and other protocols of the Terra Classic will eventually migrate onto Terra 2.0. 1/ Yesterday, we said Terra 2.0 is coming. Tomorrow,

it arrives. â€” Terra ðŸŒ™ Powered by LUNA ðŸŒ™ (@terra\_money) May 27, 2022 The community has been working around the clock to coordinate the new chainâ€™s launch. Subject to potential change, we expect Terra to go live on May 28th, 2022 at around 06:00 AM UTC. Anticipated Airdropping Crypto airdrops are very crucial for any new crypto project unfolding in the DeFi space. Terraâ€™s crash has driven out the trust that investors had in this once-successful project. Exchanges and investors are maintaining a safer distance and wish to approach the new project with caution. The team has laid out a framework for the airdrops to LUNA Classic holders and stakers, residual UST holders, and the essential dApps developers of Terra Classic. Token distribution via airdrops is as follows: - Community pool â€” 30% - Pre-attack LUNA holders â€” 35% - Pre-attack Anchor UST (aUST) holders â€” 10% - Post-attack LUNA holders â€” 10% - Post-attack UST holders â€” 15% Terra 2.0 neither failed nor succeeded to achieve an optimistic market sentiment yet. The project failed to persuade major South Korean exchanges, except Upbit, to adopt LUNA 2.0. Upbit plans only to support the airdrop but abstained itself from enabling LUNA2.0 trading. Exchanges began announcing their support for â€”LUNA 2.0 Airdropsâ€” on their official twitter handles. The announcements have flooded since May 25. Terraâ€™s early supporter, Bittrue, a crypto exchange, became the first to support the airdrop and announce the listing of LUNA 2.0 or LUNA V2 on their platform. Bitfinex, Gate.io, Bitget, Huobi, HitBTC, FTX, KuCoin, MEXC Global, BigOne, Okcoin and Kraken are the exchanges that have hailed their support for the LUNA2.0 so far. Centralized exchanges such as Binance and Bybit agreed to support the new chain by closely working with Terra and they also facilitate the airdropping on their platforms. Coinbase continues to stay silent so far and abstains from involvement with LUNA2.0 till now. Despite all these announcements on airdrops, exchanges have not confirmed their stance on the trading of LUNA 2.0. Thus, crypto usersâ€™ question of â€”where to buy LUNA2.0â€” isnâ€™t supported with a solid answer. Criticisms do prevail and some part of the community still opposes the rise of Terra2.0. Dogecoin co-founder Billy Markus commented: â€œLUNA 2.0 will show the world just how truly dumb crypto gamblers are.â€ He criticized the new launch saying that investors are being misled again into crypto gambling with false hope. Policymakers and off-chain regulators have their eyes on Terra and other crypto projects. They are also keenly looking for loopholes to regulate the unregulated decentralized space. From Terra Crash the other crypto projects realized the significance of deploying less volatile tokens to back stablecoins. Moreover, this would keep the dream of Terra, â€”decentralized economies deserve decentralized moneyâ€, alive. The journey of Terra2.0 and LUNA2.0 begins with questions. What kind of impact will LUNA 2.0 have on the old LUNA? Will the new chain really help Terra to rise up from the ashes? Recommended for you

- The underrated coins listed are VET, LIBERO, SHIB, XEC, and HOT. - Each coin possesses a unique attribute that stands out to bring focus. Let us look at the top 5 DeFi-based cryptocurrency that has huge potential to shine in the upcoming months. VeChain (VET) VET is a Proof-of-Authority (PoA) token, which is said to be highly played down. The token plans to utilize technologies such as the Internet of Things (IoT), peer to peer management to overcome general obstacles in the global market. The platform considers its unique feature to be the dual token (VET) & (VTHO), plus fees-delegation and toolchain attributes in the ecosystem. These allow the crypto cautious industries to make use of the VeChainâ€™s blockchain as ITaaS and make transactions for the service offered in fiat currency. The market cap is estimated to be \$2 billion with a 2.14 % increase in the last 24 hrs. The price falls around \$0.0321, in CMC. Libero Financial (LIBERA) LIBERAâ€™s distinct characteristics can be seen as the worldâ€™s first triple passive income & hyper deflationary token listed on centralized exchanges. Investors get rewarded with three sources passive income: â€”365% BUSD APR (1% daily BUSD) â€”3678% Libero APY (auto-compounded from 1% daily Libero) â€”158K% Libero APY inside every LIBERA (auto-compounded from 2.04% daily Libero) The distinct factor to focus on is the listing made on major CEX and DEX platforms, which brings sustainable passive income from trading volume, and the motto of the worldâ€™s most hyper deflationary token: 25% token burned every sell â€” the highest burning percentage in the whole crypto market. LIBERA has a \$7 million market cap and the price is calculated to be \$1.84973 with a 90% increase in 8 days as of now. Shiba Inu (SHIB) SHIB was launched to be a competitor for the other memecoin DOGE. It has its own DEX Shibaswap and is also going to develop algorithmic stablecoin SHI, whose value will be pegged to one cent rather than one USD. The Shiba Inu expects that to grow as a worldwide exchange medium even for normal people. SHIB value rates are around \$0.0000258 among the CMC, and the current market cap is \$6 billion with a 2.31% percent increase in the last 24hrs. eCash (XEC) Bitcoin ABC has been modified as eCash (XEC), the major concern is only to act as a transaction mode for goods and services. It combines with the Proof-of-Stake (PoS) layer known as Avalanche. The XEC integrates with EVM and is also operable at its DeFi section. The anonymity, immutability, and transaction fee to be free and faster are the fundamental milestones. XEC has a \$872 million market cap and the price is calculated to be \$0.00004636 with a 7.72% increase as of now. Holo (HOT) Holo is a decentralized peer-to-peer platform that supports DApps and doesnâ€™t need any blockchain technology. The fuel charged for the transaction is proportionately applied to the development of the hosts and apps in the environment. The market cap is estimated to be \$464 million with a 0.15 % increase in the last 24 hrs. The price falls around \$0.002693, in CMC. - Bitcoin holds over 44% of the market share. - â€”The Merge,â€ formerly known as Ethereum 2.0 will launch in a few months. Lets look at the Top 10 Cryptocurrencies in the World by Twitter Followers. Top 10 Cyptocurrencies in the World by Twitter Followers (25/MAY/2022) â€” Watcher.Guru (@WatcherGuru) May 24, 2022 1. #BNB Binance 8.89M 2. #Bitcoin 5.28M 3. #Dogecoin 3.38M 4. #SHIB 3.36M 5. #Ethereum 2.55M 6. #XRP 2.51M 7. #CRO 2.16M 8. #Solana 1.82M 9. #Polygon 1.51M 10. #BabyDoge 1.41M Binance (BNB) In 2020, Binance (BNB) turned its native BNB into the smart chain (BSC). BNB is the fifth-largest cryptocurrency with a market cap of \$53,079,083,848 USD. currently, BNB treating at \$325.09 USD and it has 8.89M followers on Twitter. Bitcoin (BTC) Bitcoin is the king of the cryptocurrency and it has

over 44% of the market share but currently, BTC facing the winter season it lost almost half of the volume from its all-time high, the result of this whole market going down. Bitcoin is trading at \$29,389.61 USD with a market cap of \$559,840,841,874 USD. BTC holds 5.28M Twitter followers. Dogecoin (DOGE) Elon Musk's favorite meme coin DOGE was adopted by Tesla as a payment option for users to purchase their products. Currently, DOGE is trading at \$0.082428 USD with a market cap of \$10,935,762,330 USD and it has 3.38M followers on Twitter. Shiba Inu (SHIB) Shiba Inu is a DOGE killer, it has 3.36M Twitter Followers. SHIB currently trading at \$0.000012 USD with a market cap of \$6,349,257,416 USD. Ethereum (ETH) Ethereum is the second-largest cryptocurrency and it lost 50% of its value currently trading at \$1,948.65 USD. "The Merge," formerly known as Ethereum 2.0 with increasing conflict to high-energy efficient PoW mining, the PoS consensus will launch in a few months. It has 2.55M Twitter followers. XRP The XRP Ledger offers a wide range of payment-related applications and use cases, including micropayments, DeFi, and, soon, NFTs. Currently, it trading at \$0.399180 USD with a market cap of \$19,297,591,763 USD. and it has 2.51M followers on Twitter. Cronos (CRO) Cronos (CRO) is the native cryptocurrency of Cronos, the Crypto.com exchange's proof-of-authority (PoA) blockchain. CRO is currently trading at \$0.184262 USD with a market cap of \$4,655,017,010 USD. it has 2.16M Twitter followers. Solana (SOL) The proof-of-history (PoH) consensus is one of the most important improvements from Solana. This idea provides for higher protocol scalability, which improves usability. SOL is currently trading at \$47.90 USD with a market cap of \$16,250,986,228 USD. and it has 1.82M followers on Twitter. Polygon (MATIC) Polygon formerly Matic Network is the first well-structured, user-friendly Ethereum scaling and infrastructure development platform. Polygon SDK is its primary component, a modular, versatile framework for developing a variety of apps. It has 1.51M Twitter followers. Baby Dogecoin (BabyDoge) BabyDoge is a memecoin and deflationary token inspired by Dogecoin. The only benefit to its holders is that they will receive small rewards when adding additional tokens to their wallets. BabyDoge has 1.41M followers on Twitter.

- ROSE HODLers gain 20% APY rewards. - Polygon (MATIC) is trading down 7.54%. Let's take a look at the top 5 coins ranked by LunaCrush based on their social impact and investors' sentiment in the market. TOP 15 coins by @LunarCrush Galaxy Score " CryptoDiffer " StandWithUkraine (CryptoDiffer) May 24, 2022 Galaxy Score is a proprietary score that is constantly measuring crypto against itself with respect to the community metrics across the web \$BZRX \$RARI \$MATIC \$ROSE #POLYDOGE \$XED \$LINK \$ALICE #YOOSHI \$PNT \$AVAX \$GLMR \$NFTB \$APE \$COTI pic.twitter.com/TDdKNwqBUo 1.BZx Protocol (BZRX) BZRX is the governance token on bZx protocol, a DeFi margin trading protocol. It grants holders the voting rights in the native DAO. Its use cases range from leveraged margin trading, staking, borrowing, and lending services on bZx. According to CMC, BZRX traded today at \$0.0662 USD with a market cap of \$29,349,468 USD and a 24-h trading volume of \$192 USD. 2. Rarible (RARI) RARI is the native token on the Rarible, a "creative-centric" NFT Marketplace. It allows users to create NFTs and also to earn rewards. As per data from CMC, RARI traded today at \$3.32 USD with a market cap of \$25,521,900 USD and a trading volume of \$1,722,697 USD in the last 24h. 3. Polygon (MATIC) MATIC is the native coin on the Layer 2 PoS blockchain, Polygon. Polygon is a potential Ethereum scaling solution. According to CMC, MATIC traded at \$0.6392 USD with a market cap of \$540,865,470 USD and a trading volume of \$5,080,186,481 USD in the last 24h. 4. Oasis Network (ROSE) ROSE exists on a layer-1 (L1) blockchain network that is known for its high throughput and low gas fees. ROSE is deployed on the network for staking and governance. According to CMC, ROSE traded at \$0.06574 USD with a market cap of \$330,735,000 USD and a trading volume of \$71,268,805 USD. 5. PolyDoge (POLYDOGE) PolyDoge is popularly known as the "polygonized DOGE." Similar to Dogecoin (DOGE) and Shiba Inu (SHIB), PolyDoge is also a memecoin based on Shiba Inu. This DeFi project also hosts an algorithmic stablecoin, PolyDogeDollar (PDD), pegged to 1 MATIC. According to CMC, POLYDOGE traded at \$0.000000008542 USD with a trading volume of \$2,258,214 USD and a maximum supply of 868 trillion.

Cryptocurrency has been a trend for a while now, and many people either own crypto or are interested to get some. Some even believe that cryptocurrency will be the payment method of the future, and the early buyers have earned a lot by just purchasing and holding. If you are interested in learning how to buy and use cryptocurrency, then keep on reading. What is crypto? First things first, what is a cryptocurrency, and what makes it so special? There must be a reason why so many people purchase it, and why it has become such a big deal. Cryptocurrencies are decentralized currencies, which means that they are not controlled by a national bank or a financial Institute. Furthermore, the coins are only to be found digitally, and the value of them is set only from supply and demand. The prices of crypto can fluctuate a great deal, and if you want to learn how to buy bitcoin in France, you should first look at the price of bitcoin now. Bitcoin is the biggest and most valuable cryptocurrency to this date, and many want to buy this as their first one. How to buy crypto The process of purchasing cryptocurrencies is super easy. The process is quite like buying stocks in the stock market, but you do it in a different place. Since cryptocurrencies are decentralized currencies, you cannot buy them on the regular stock market, but you do need to locate a crypto exchange. There are many different ones out there, and it can be a good idea to choose a large and well-known one. Also, make sure that the exchange you want to use offers the cryptocurrencies you are interested in. It can, for example, be Bitcoin, Ethereum, Dogecoin, Litecoin, etc. Once you have found a crypto exchange you would like to use, you can start by creating your profile. You do this by providing the site with the needed information, to verify you as a user. When the profile is created, you need to choose a payment method and make your first deposit. Now you can have a look around and find your way to the first cryptocurrency you want to purchase. Once you have found it, you simply input the amount of fiat currency you would like to spend on it and proceed with the purchase. Easy as that! Before you buy While it has become very easy to buy crypto, it does not mean you should do so right away. It is important to know just what you are buying, as with any investment. The value of cryptocurrencies can fluctuate greatly, and it is important to be aware of the risks when investing. Also, there are thousands of different cryptos out there, that all differ from each other. By investigating your many

crypto options, it will be easier for you to choose the one you believe will be a success. How to store cryptocurrency Since cryptocurrencies are decentralized, you cannot store them in your regular wallet with fiat currency. However, other wallets are specifically made to store crypto. These crypto-wallets can be either digital or analogue and are often referred to as hot or cold wallets. Hot wallets are software that can be found on your digital devices. Most crypto exchanges have a wallet built into them, where your tokens are placed after purchase. This is a quick and easy way to store crypto, and you can access them to use or monitor with a few taps. However, if you own large amounts of crypto, it might not be a good idea to store them like this, as they can be hacked. Therefore, many store them in cold wallets, which is a kind of hardware, like a USB stick. This requires some time when you want to retrieve your crypto, but you can always rest easy knowing that no one can access your crypto online via hacking.

The crypto market has already entered a gloomy phase. From its all-time high (ATH) of \$3 trillion, it has lost more than half of its volume. At the time of writing, the market capitalization was \$1.25 trillion. Not only crypto world facing the winter season the traditional market also dipping into the bloodbath. Winter On Crypto market Since the end of March, Bitcoin (BTC) has been falling, it was closer to \$50,000 at the time, but it collapsed and quickly lost value. The cryptocurrency quickly sank below \$30,000 and its situation worsened in the following days. In 24 hours BTC fell to below \$29,000. Ethereum is the second-largest cryptocurrency and has lost over 59% of its ATH. Currently it is trading at \$1,972.75 USD with a trading volume of \$12,994,534,724 USD. Ethereum is down 3.24 % in the last 24 hours; its total market cap is \$238,438,047,970 USD. Terra (LUNA) was formerly one of the top ten most valuable cryptocurrencies on the market, with a peak of \$119.5 as its all-time high. However, by May 11, the asset had lost nearly all of its value, dropping from \$75 to \$0.000005 in just five days. It surged by more than 1000% on May 14 after experiencing unexpectedly large volatility and now trades at \$0.0001093. Also, the most popular meme coins have lost more than 85% of their ATH value because of the recent market crash. Dogecoin, the most popular meme currency, has dropped by over 88% from its ATH. Shiba Inu has also lost about 86% of its ATH and shows no signs of improvement. The popular Fear and Greed Index has reverted to an adverse high-risk zone. This is the lowest the index has been since late January. The Fear & Greed Index has fallen to "Extreme Fear." The Index fell from 100 points to 13 points. Bitcoin Fear and Greed Index is 13. Extreme Fear "Bitcoin Fear and Greed Index (@BitcoinFear) May 21, 2022 Current price: \$29,255 pic.twitter.com/cra4eq1RH1 Investors worried about the impact of rising inflation on earnings and the impact of interest rate hikes on economic growth. For the first time since the 2020 Wall Street crash caused by the coronavirus pandemic, a close of 20% or more below that level will certify the S&P 500 is in a bear market. The Nasdaq, which is dominated by technology, is already in a bear market, down 30.7% from its all-time high in November 2021.

- Ethereum currently trading at \$1,980.31 USD with a volume of \$14,788,397,247 USD. - The Beacon Chain won't change anything about the Ethereum we use today. At the age of 28 Vitalik Buterin, a founder of the Ethereum blockchain has become the world's youngest crypto billionaire. FUN FACT: #Ethereum creator Vitalik Buterin is the world's youngest #crypto billionaire. "Watcher.Guru (@WatcherGuru) May 21, 2022 Buterin, a Russian-Canadian who was born in a small town near Moscow, is best recognized as the Ethereum founder. He was a pioneer in the field of cryptocurrency and co-founded Bitcoin Magazine in 2011. He founded Ethereum with Gavin Wood, Charles Hoskinson, Anthony Di Iorio, and Joseph Lubin in 2015. As of now, Vitalik Buterin's total net worth is \$1 billion. The Ether token is connected to the Ethereum blockchain and used for financial services and sales of crypto-collectibles such as non-fungible tokens. Vitalik experienced a wide range of net worth in 2021 and on November 8, 2021, ETH achieved an all-time high of \$4,818.08, giving his ether wallet a value of \$1.71 billion. The gloomy market began in January 2022 and at its beginning, ETH traded at \$3,683.05. But still, he continues his sustained Billionaire title. He also holds large amounts of other popular meme tokens such as \$505 billion SHIB, \$50 billion AKITA, and \$500 billion Dogecoins. In 2021, Vitalik Buterin gave \$100 million in Shiba Inu crypto coins to the Indian COVID-19 relief fund. And following the LUNA disaster, Dogecoin and Shiba Inu are entering horrific red zones He has donated around \$1 million worth of ETH to the Dogecoin Foundation. Buterin was nominated to Forbes 2016 Fortune 40 under 40 and 2018 Forbes 30 under 30 lists after winning the 2014 World Technology Award. Anticipated Ethereum Merge After meeting Bitcoin developers all over the world and understanding the currency's possible constraints, he came up with the idea for Ethereum. With an ambitious aim to dramatically re-architect the web, he intended to create a new and enhanced version of Bitcoin scalability and applications. The most anticipated event in the crypto industry is "The Merge," formerly known as Ethereum 2.0. With growing resistance to high-energy efficient PoW mining, the PoS consensus is becoming more popular among crypto enthusiasts. Since 2020, Ethereum DevOps has been on a long journey to introduce the current ETH 2.0.

- There is a 15-minute guarantee on exchange rates when using BitPay at TAG. - Many stable currencies are accepted, such as USDP, BUSD, and GUSD. TAG Heuer, a premium timepiece maker based in Switzerland, has partnered with BitPay to accept bitcoin and other cryptocurrencies as a mode of payment online, according to a statement. The premium watchmaker lets consumers utilize bitcoin and other cryptocurrencies for up to \$10,000 per transaction with no minimum spending limits. Simple Payment Process TAG will accept crypto payments using BitPay, a cryptocurrency payment gateway provider. Companies who want to join the market with automated services don't have to worry about the complexities of using BitPay. BitPay co-founder and CEO Stephen Pair stated: "We are excited to see global brands such as TAG Heuer investing in the crypto space and seeking the support of BitPay to adapt their digital platforms to the rapid transformation of e-commerce." There is a 15-minute guarantee on exchange rates when using BitPay at TAG, so consumers may pick their chosen currency and wallet when requested during the checkout process. CEO Frederic Arnault of the Swiss unit's said

crypto will ~~at~~ deeply transform our industry and beyond. As soon as the transaction has been validated on-chain, consumers will be sent to TAG's website to get a confirmation from both BitPay and TAG. Many stable currencies will be accepted, such as USDP, BUSD, and GUSD. Bitcoin (BTC), Dogecoin (DOGE), Litecoin (LTC), Shiba Inu (SHIB), and Wrapped Bitcoin (WBTC) are also accepted. A pilot initiative, this effort to accept crypto for online purchases in the US is just one way TAG Heuer aims to exploit blockchain technology and the increasing interest in NFTs as part of a developing Web3 strategy.

- Elon Musk states the issue should be viewed with a political lens. - Tesla accepts Dogecoin as one of the payment options. Tesla stock has lost a third of its value since Elon Musk, the SpaceX founder and CEO of Tesla revealed his interest in Twitter in early April and sold \$8.5 billion in Tesla stock to help fund his \$44 billion Twitter deal. The big issues allegation going on than this matter but he remains silent. SpaceX paid a Air Host \$250,000 to settle a claim she was sexually harassed by SapeceX founder and CEO of Tesla Elon Musk in 2016, according to the report from Insider. SpaceX paid \$250,000 to settle a sexual harassment claim against Elon Musk, Insider reports <https://t.co/3Hmanb15Dl> "Bloomberg (@business) May 20, 2022 Dark side Of Elon Musk The flight attendant refused to perform any sexual acts on Musk and was very upset. And she repeatedly reported to SpaceX's HR department in 2018, stating that her career had suffered as a result of her refusal. The firm took the case to a mediator rather than a court or judge, she had to sign a \$250,000 severance agreement that prohibited her from criticizing Musk or his corporations, including SpaceX and Tesla. The payment was paid in 2018 to an unidentified Air host who worked as a contract employee on a SpaceX corporate plane, according to the reporting interviews and documents including a declaration signed by a friend of the attendant in support of her allegation. According to the report, The flight attendant said that Musk exposed himself and sexually harassed her during a flight in a private area on the plane. Musk offered to buy the attendant a horse in exchange for an erotic massage (physical satisfaction). However the Elon Musk most Favourite Dogecoin is getting stable, currently the price of Dogecoin is \$0.085870 USD, with a 24-hour trading volume of \$568,193,851. In the last 24 hours, Dogecoin has gained 1.22% with a live market cap of \$11,392,375,497 USD. There are 132,670,764,300 DOGE coins in circulation.

- Twitter confirms that the Musk deal is on track for its employees. - Musk claims that he thinks about Twitter only <5% time. Vijaya Gadde, Twitter's top lawyer and head of policy, clarified to the twitter employees at an "all-hands" meeting that the deal with Elon Musk is in process and no halt has been placed on it. After the report published by Parag Agarwal, CEO of Twitter, on May 16th regarding bot/spam accounts and the methods employed to rectify them, Elon replied back with controversial emoji, and raised concerns about advertisers. After this incident, many individuals had differences of opinion on the Twitter deal, and no official statement was made by the company. Some were that the billionaire wanted to decrease the amount agreed for sale, others said it was just made to grab the media attention. Musk is someone who showcases and projects new innovation, this can be seen from his support of the cryptocurrency Dogecoin. The intention expressed by Elon in the twitter purchase for \$44 billion was to encourage freedom of speech and to "clean up" twitter. In a podcast meet on May 16th, he mentions that twitter has more spam accounts than the one that is stated by officials and for him its like buying a house that is promised to have less termites but turns out to have unacceptable number of termites. Tweets by Musk Musk is known for entertaining tweets relating to the current global scenarios, so after the criticism of him being obsessed with twitter and bot issues, he tweeted the following. Musk tweeted: "Elon Musk (@elonmusk) May 19, 2022 This depicts his dissatisfaction on twitter on the number of bots and twitter being irrational to this concern. At the start of the day, Musk clarified that he is not being obsessed with twitter, rather he thinks about it only <5% of the time, which seems to be mocking Parag's statement about <5% bots present in the twitter. To be clear, I'm spending <5% (but actually) of my time on the Twitter acquisition. It ain't rocket science!" Elon Musk (@elonmusk) May 19, 2022 Yesterday was Giga Texas, today is Starbase. Tesla is on my mind 24/7. So may seem like below, but not true. [pic.twitter.com/CXfWiLD2f8](https://pic.twitter.com/CXfWiLD2f8)

- Current crypto trends correlate with stocks and other off-chain investments. - The global crypto market is at a trillion-dollar loss. Bears continue to pull down and oppress the crypto market in the red zone. The Federal Reserve's action of increasing the interest rates has led the on-chain and off-chain markets to steeply decline in sync. Crypto investors are more concerned about the trends of BTC and ETH correlating with the S&P 500, an off-chain asset. The global crypto market exhibited severe drawdowns since early May. The market had lost nearly 500 billion in its market capitalization. According to CMC, it stood at a value of \$1.8 trillion USD on May 5 and dropped to \$1.24 trillion USD, at the time of writing. The trading volume of the market surged up 4% in the last 24 hours from \$79.3 billion USD to \$82.5 billion USD. November 2021 has been the most remarkable period for the crypto market. It is when the value of the market rose up to nearly \$3 trillion USD. On top of that, the largest cryptos reached their all-time highs. Bitcoin hit its ATH at \$68,789 USD and its rival, Ethereum, hit \$4,891 USD. Dropping down by 57%, at the time of writing, BTC trades at \$29,113 USD and ETH trades at \$1,949 USD. Also DeFi declined 45%, nearly \$90 billion USD, in its total-value-locked (TVL) from \$198.6B USD to \$108.39B USD. Cryptos on Continual Losing Streak The prices of major altcoins plummeted with "double-digit losses" during the dips. Terra (LUNA) and algo-stablecoin TerraUSD (UST) had the worst downfall in the market. As per CMC data from May 5 to May 19, Binance (BNB) declined 20% and trades at \$294.95 USD, and Solana (SOL) declined 84.6% and trades at \$50.67 USD. The popular memecoin, Dogecoin (DOGE), dropped by 34% from \$0.1284USD to \$0.0844USD, whilst the dogekiller, Shiba Inu (SHIB), plunged by 43% from \$0.00002029 USD to \$0.00001152 USD. Stablecoins like Tether (USDT), Binance USD (BUSD), and DAI didn't exhibit significant declines. But TerraUSD (UST) lost 91% of its peg and trades at \$0.08944 USD. Investors anticipate the crypto market trends to become uncorrelated from the traditional market.

- Global crypto market declined by 10.69% in trading volume in the last 24h. - Twitter is the greatest influencer of Crypto projects in Defi. The microblogging site, Twitter, serves as the biggest crypto launchpad. A single tweet from any crypto savvy has the potential to intervene in the market trends. Let's take a look at the top 10 cryptos by their Twitter followers. 1. Binance (BNB) â€” 8.83M Binance (BNB) migrated to its native BNB smart chain (BSC) in 2020. It is the fifth crypto by market cap of \$48.9 billion USD. The native crypto exchange invested \$500 million USD in Twitter to initiate the inclusion of crypto on it. 2. Bitcoin (BTC) â€” 5.25M World's largest crypto is trading in the red zone without any significant price rally. Despite the dystopian picture, global countries and entities are coming forth to adopt it as a legal tender. BTC touched the \$30k level exhibiting short-spanned relief amid the bearishness. 3. Dogecoin (DOGE) â€” 3.36M Dogecoin, the pioneer memecoin, won the heart of Elon Musk. It was harshly criticized for being an overrated asset with very minimal use cases. Slashing these out, Tesla adopted it as a potential payment option enabling users to buy their products. 4. Shiba Inu (SHIB) â€” 3.3M Shiba Inu is the DOGE killer and is contending equally with DOGE. The network is working on launching its new Defi project, Shibarium Financial Ecosystem (SHIBFE). SHIBFE is followed by the launch of its native stablecoin project, SHI. SHI is an â€œalgo-stablecoinâ€ pegged to a dollar. 5. Ripple (XRP) â€” 2.51M Ripple is critically up against a lawsuit filed by SEC, a long battle since 2020. The victory of the crypto firm in this would be a turning point for the crypto. It was accused of illegal securities offerings. The coin is trading with a market cap of \$5.01 billion USD. 6. Ethereum (ETH) â€” 2.51M Ethereum, the toughest contender of BTC, had a notable bloodbath, declining 50% from its all-time high and is trading at the \$2k level. The Merge, transition to PoS, is under experimentation. Recently Cloudflare, a web security services provider, is joining the process. It is expected to be launched in Q3 or Q4 2022. 7. Cronos (CRO) â€” 2.13M Cronos (CRO) is the native token of Cronos, the proof-of-Authority (PoA) blockchain of the Crypto.com exchange. It operates on an interoperable chain between Ethereum and Cosmos blockchain. CRO is utilized in staking, rewarding, and transaction fees on the exchange. 8. Solana (SOL) â€” 1.75M SOL is one of the top â€œEthereum killersâ€ that lives on its independent proof-of-stake (PoS) and proof-of-history (PoH) blockchain. The network's NFT marketplace is gaining recent fame in the crypto space through abundant NFT projects. It aims to revolutionize Defi by the launch of Solana Pay, a native P2P payment protocol. 9. Baby Doge(BabyDoge) â€” 1.394M BabyDoge is a Dogecoin-inspired memecoin and deflationary token in the market. The only benefit holders of BabyDoge have are the tiny rewards gained on acquiring new tokens in their wallets. At the time of writing, it trades at \$0.000000001038 USD. 10. Safe Moon (SAFEMOON) â€” 1.391M This is a BNB-based DeFi token existing in the market since March 2021. SAFEMOON functionalities range from reflective finance (RFI), liquidity provider (LP) acquisitions, and burning mechanisms.

- Primer now enables a one-click bitcoin payment method globally. - Have partnered with OpenNode to implement a secure and simple way to checkout. - Primer is accessible across 30 countries while OpenNode is operated in 126 countries. Significantly, several firms have integrated Bitcoin into the payment option, which shows the growth in crypto adoption. The crypto industry has moved a long way forward within a decade and also made a huge difference in the financial sector. Though some around the world are not ready to accept cryptocurrencies, a larger part adopts and accepts cryptocurrencies. We've already heard of many big firms accepting Bitcoin, Ethereum, Dogecoin, and so on. Now another firm has paved the way for Bitcoin adoption. Primer, the world's first no-code automation platform for payments, now enables a one-click bitcoin payment method globally. The platform has integrated this feature by partnering with a leading bitcoin infrastructure payment company, OpenNode. JUST IN: Payment infrastructure provider Primer now allows merchants worldwide to accept #bitcoin ðŸš€ â€” Bitcoin Magazine (@BitcoinMagazine) May 17, 2022 Bitcoin Payment Support Across 30 Countries As a matter of fact, Bitcoin is the world's largest cryptocurrency that is widely adopted around the globe. Thus, Primer has given its users an additional option of Bitcoin payment to the platform. Consequently, Primer and OpenNode have partnered to implement this feature offering the merchants a secure and simple way to checkout. However, Primer users can access the one-click bitcoin payment option in their checkout session. This allows merchants to experience the best checkout option in just a few clicks, while it consists of no-code and bitcoin payment options. Moreover, the Head of Strategy at OpenNode, Josh Held has stated that: â€œFor a long time, OpenNode has believed in the promise of Bitcoin and Lightning-powered payments, and demand is currently growing at an exponential rate. Our relationship with Primer will allow a wide range of enterprises, from huge corporations to small businesses, to accept bitcoin payments for their customers.â€ Furthermore, Primer is the world's first automation payment platform that operates across 30 countries globally. Whereas, OpenNode is operational in 126 countries, simplifies the Lightning Network for users world-wide, and is interoperable with all bitcoin-wallets.

- Anonymous whale buys 376 Billion SHIB. - Total value amounts to \$4.61 Million. - SHIB is among the top ten cryptos again. Ever since the Shiba Inu (SHIB) came into play, it indeed attracted a lot of attention. Initially, it declared openly that it will be the sole opponent for the ever famous meme based coin, the Dogecoin (DOGE). Besides, true to its commitment, the SHIB indeed dethroned DOGE, taking its place among the top ten cryptocurrency based on market cap. Since then, there always existed a tug of war between SHIB and DOGE. Accordingly, an anonymous whale buyout took place for SHIB a few hours back. In spite of this, the SHIB's overall market cap soared up, making its way once again among the top ten cryptocurrencies based on market cap. Will SHIB Spike Like in 2021? In regards with the whale buyout, about approximately 376 Billion SHIB were purchased. This amounts to roughly a whopping \$4.61 million. On the other hand, the overall trading of SHIB increased effortlessly, thereby making a rather less unstable market cap for the SHIB. The recent whale buyout has now made SHIB among the top ten cryptos. Currently, SHIB is trading for the price of \$0.00001206, with the graphs down by 0.10%, taking into account the past 24 hours. Moreover, on 16th May, 2022, SHIB carried out a huge burnout of about 449,981,701 SHIB. In the past 24 hours, there have been a total of 449,981,701 \$SHIB

tokens burned and 29 transactions. Visit <https://t.co/t0eRMnyZel> to view the overall total of #SHIB tokens burned, circulating supply, and more. #shibarmy æ” Shibburn (@shibburn) May 16, 2022 All this 450 million SHIB were burned but through 29 different transactions. Besides, this move by SHIB, is to create a market demand, thereby directly impacting the price. With such burnouts, the prices ought to surge up. Furthermore, such moves shows that we can expect SHIB to hit a new ATH surpassing its previous in the year 2021.

- The coins listed are SHIB, APE, and DOGE. - All the 3 coins have a specific follower community that boosts their growth. As Warren Buffett quotes, a wise trader has æ”to be fearful when others are greedy and to be greedy only when others are fearful.æ” Now, the market situation has made every other trader fearful, also the same situation offers great opportunities to invest in some high potential coins. Shiba Inu (SHIB) According to CMC, the market price is \$0.00001182 at the time of writing. The trading volume in the last 24 hrs is \$963 million, with a 6 billion market cap. The circulating supply is 549,063.28B SHIB as of now. In April 2020, Shib Inu launched their metaverse with 100,595 plots each with an initial rate to be 0.2 ETH. Every plot owner will be able to build their own projects and will also be earning passive rewards. ApeCoin (APE) According to CMC, the market price is \$7.78 at the time of writing. The trading volume in the last 24 hrs is above \$1 billion, with a 2 billion market cap. The circulating supply is 284,843,750.00 APE as of now. ApeCoin advertises itself to be the currency for the web 3 economy, the platform is built with the motto to encourage and enthuse the next-gen digital developers. The recent headline made by the Yuga lab, the company behind APE, is the sale of Otherside Metaverse, which literally stopped Ethereum blockchain and as a result of that Yuga lab is planning to build its blockchain technology. Dogecoin (DOGE) According to CMC, the market price is \$0.0874 at the time of writing. The trading volume in the last 24 hrs is above \$1 billion, with an 11 billion market cap. The circulating supply is 132.67B DOGE as of now. The coin attained greater highs in the latter half of 2021. Elon Musk and this memecoin are inseparable, Musk became the cheerleader for DOGE by the start of 2021. The recent acquisition of Twitter by musk also seemingly adds to a boon to DOGE.

- CryptoDep shares the top 10 meme-currencies by social activity. - It includes DOGE, SHIB, BABYDOGE, and FLOKI. - Social channels and influencers were key to making these meme coins popular. Meme-currencies have already captured the minds of the crypto traders and investors. Itæ”s been the talk of the show a few months back and still holds its position not letting its hype down. Though the meme-tokens were noted following the support from Elon Musk, the popularity it has reached is huge. Among the crypto investors 90% of them would have definitely invested in any meme-currency. Moreover, it has also paved the way for early traders who have initiated to step into the crypto industry. Significantly, the presence of meme-tokens via the social activities have created a strong impact among the industry. Social platforms and influencers played a vital role in making these meme cryptocurrencies the trend. As you may know, Dogecoin is the first meme currency which attracted the attention of investors, followed by Shiba Inu and other meme coins. â”i TOP #MEME Tokens by Social Activity æ” ðŸ†°ðŸ†°! CryptoDep #StandWithUkraine ðŸ†°ðŸ†°! (@Crypto\_Dep) May 10, 2022 10 May 2022\$DOGE \$SHIB #BABYDOGE \$PULI \$MARVIN \$FLOKI \$PIT #SHIBURAI \$KIBA \$BAN pic.twitter.com/Team3EuVyC Top Meme Tokens By Social Activities According to Crypto Dep, there are ten top meme-currencies positioned by social activities. The list is as follows: DOGE, SHIB, BABYDOGE, PULI, MARVIN, FLOKI, PIT, SHIBURAI, KIBA, and BAN. As per the update on May 10, the top meme tokens are Dogecoin (DOGE), Shiba Inu (SHIB), and Baby Doge Coin (BABYDOGE). The social mentions and social engagement for these cryptocurrencies are 53.2K and 11M, 35.1K and 52.8M, 25.2K and 21.3M respectively. Consequently, the next set of tokens are Puli (PULI), Marvin Inu (MARVIN), and Floki Inu (FLOKI). The numeric terms of the tokens mentioned on socials are 23.5K, 9.11K, and 7.6K respectively. Besides, their social engagements are 33.9M, 2.83M, and 7.57M individually. However, the above-mentioned tokens are the top meme-currencies by social activities. Additionally, during the meme-token boom, it is evident that these tokens ruled the social channels in the crypto industry. There wasnæ”t a single day without talks about DOGE and SHIB which generated more gains to its users. Furthermore, crypto users believe that these meme-tokens will resurge in price value in the future term.

- Bonobo wallet buys \$32 million worth APE. - Translates APE as the most widely traded token on ETH blockchain. - APE is down by more than 19% due to the market crash. Ever since the launch, the ApeCoin (APE) has been quite actively making major break-outs and headlines in the crypto industry. In spite of being related and also backed up by the Bored Ape Yacht Club, the APE has been spiking up effortlessly. A couple of hours back, the whale going fondly by the name æ”~Bonoboæ”™, bought APE for about a whopping \$3.2 million. This approximates about 214,996 APE tokens. This purchase has now made the APE the most widely traded and top-ranking token on the Ethereum (ETH) blockchain. JUST IN: #Ethereum whale æ”æ”Bonoboæ” has purchased \$3.2 million #ApeCoin. æ” Watcher.Guru (@WatcherGuru) May 6, 2022 The Bonobo whale wallet is one among the top five ETH wallet addresses. Moreover, the wallet has numerous Wrapped Bitcoin (WBTC), FTX, USD, USDC, and ChainLink (LINK). Also, the FTX is the highest contributor upon the Bonobo wallet, approximating about 67.45%. Despite such significant purchases, the price of APE is still down due to the market crash, for the past two days. APE drifted down from \$16 to \$12 within hours, from the tax increase announcement from the Federal Reserves. Currently, APE is trading for the price of \$12.92, with the graphs down by 1.68%, taking into consideration the past 24 hours only. Will Elon Make APE Soar Again On 4th May, 2022, the CEO of Tesla and SpaceX, Elon Musk, made yet another radical move similar to what he did a year back with the Dogecoin (DOGE). Elon Musk changed his Twitter profile picture into an array of Bored Ape Yacht Club pics compiled together. This move alone catapulted the related ApeCoin (APE) from \$14.51 to \$17.49, within a matter of 25 minutes approximately. Later on the price stabilized on and around \$16, before the market crash. And so, taking Elon Musk and his history with his radical plays upon the crypto industry, there are extremely high possibilities for the APE to soar up again.

- Bitcoin is down 2.30% in the last 24 hours. - ETH has lost about 10% of its value in the last three trading sessions. Let us look at the top 3 crypto projects by social activity as per CryptoDep.

 pic.twitter.com/6dpvdbT1KI Bitcoin (BTC) The S&P 500 and Bitcoin both saw gains on Wednesday. And on Thursday, the world's largest cryptocurrency fell along with the main stock market index. Wall Street and Bitcoin have had a tight relationship for some months now. It's reasonable in light of the current economic turmoil. However, Bitcoin may have a difficult time overcoming this stumbling block. According to CMC, the Bitcoin price today is \$35,941.67 USD with a 24-hour trading volume of \$43,180,445,711 USD. Bitcoin is down 2.30% in the last 24 hours. Ethereum (ETH) On Friday, the price of ETH continued to decline as the market was rife with uncertainty and instability. After falling below critical support recently, it is now in danger of dropping much farther. ETH has lost about 10% of its value in the last three trading sessions, thanks to the bears' cheers. The second-largest cryptocurrency fell precipitously along with Bitcoin's price as investors' apprehension persisted on Friday. According to CMC, the Ethereum price today is \$2,683.19 USD, with a 24-hour trading volume of \$24,027,557,099 USD. Ethereum has been down 1.68% in the last 24 hours. Dogecoin (DOGE) Meme coins made a push at April's peak last week. Reversal and lower lows have persisted since then. This week's price movement aims to set a new monthly low. DOGE has recorded a lower high at \$0.1620 in the 4 hours. While on the other hand, DOGE rival SHIB has finally reached a critical level of support. SHIB is well-positioned for a retest of March's bottom if support at this level is confirmed. According to CMC, the Dogecoin price today is \$0.126434 USD, with a 24-hour trading volume of \$915,522,706 USD. Dogecoin has been down 1.04% in the last 24 hours.

As a world class digital asset exchange, LBank continues to focus on providing its users quality projects to participate in. Here is a weekly report made by LBank Exchange presenting this week's exciting new listings and a summary of the ones listed last week, offering users more information to help better understand these unique opportunities. New Listings on LBank Exchange Scheduled this week starting on 5th May. For a more complete list please follow our twitter @LBank\_Exchange

- Elon Musk obtained a record \$7.14 billion in money to purchase Twitter. - Musk had to acquire \$21 billion in equity to complete the acquisition. Over the last several weeks, Elon Musk's Twitter takeover has been extensively discussed. Musk has been in the news for various reasons, including rumors about what he would do with his own version of Twitter and the inclusion of possible cryptocurrencies. Even though Musk has garnered the backing of the crypto sector on several occasions, the current one is a little pricey. Binance, a major cryptocurrency exchange, has allegedly agreed to invest \$500 million in the microblogging service Twitter. Elon Musk obtained a record \$7.14 billion in money to purchase Twitter. In addition to the financing he secured from banks, Musk had to acquire \$21 billion in equity to complete the acquisition. The \$44 billion purchase of Twitter by Elon Musk was supported by a wide range of businesses and people. However, the Securities and Exchange Commission [SEC] learned about it when the business submitted a Schedule 13D form. Companies like Sequoia, which invested \$800 million, were among the equity investors in addition to Binance. Investor VyCapital, headquartered in Dubai, will provide \$700 million. Lawrence Ellison, Oracle's co-founder, invested \$1 billion in Elon Musk's company. A small contribution to the cause. <https://t.co/xD9XZxOWfL> – CZ – CZ (@cz\_binance) May 5, 2022 This document has to be filed with the regulator since Musk holds more than 5% of Twitter's shareholding. Changpeng Zhao, the CEO of Binance, went to Twitter to express his gratitude for the firm's contribution to the community. However, CZ opined that Binance's contribution to the cause was insignificant. There were also a lot of wild guesses. Several of them started making a case for the introduction of Binance Coin [BNB] and Dogecoin [DOGE] on Twitter.

London, England, 5th May, 2022, Chainwire London, UK, May 4th 2022 – CoinText.com have compiled a study of the popularity of cryptocurrencies across nations, which concludes that Ethereum investors outnumber Bitcoin investors in 26% of countries worldwide, including the USA. This provides fresh impetus to the Flipping debate, and highlights the different beliefs around the globe surrounding certain cryptocurrencies. Alternate Economic Landscapes Digging deeper, the analysis shows that American Bitcoiners are also outnumbered by Dogecoin investors, with the USA containing the highest number of DOGE investors worldwide. This contrasts starkly with Argentina, for example, who possess a higher portion of Bitcoin investors than any other country, perhaps in response to the crippling inflation currently hampering the South American nation. David Merry, CEO of Investoo Group, the parent company of CoinText, said the study "is an intriguing look at the psychology of crypto investors in different countries, and how alternate economic landscapes can shift sentiment to and away from Bitcoin and other coins – Solana vs Ethereum Other conclusions the study arrives at include the fact that more Japanese investors hold Solana than Ethereum, displaying a stout belief that Solana ultimately offers a better platform within the realm of DeFi. Singapore, meanwhile, appear to be the most bullish nation on Ethereum. The data in the CoinText study dates from January 2022, and is derived from a survey of 27 countries. Results are weighted using Google's interactive Ranking process, reflecting the national population distribution in each country. The coins examined – Bitcoin, Ethereum, Solana, Dogecoin and XRP – are among the biggest coins in the space, and encompass some of the main sub-sectors of the crypto market: Bitcoin, DeFi, NFTs & memes. "Investors worldwide are a diverse bunch, all coming from different macro landscapes", Merry added. "They seek contrasting avenues in deploying their capital, and each country has contrasting risk/reward, cultural and economic parameters which they are working within – the variant data among nations here only
