

Polkadot, crypto.com currency, decentraland, and the Sandbox are probable top-10 cryptocurrencies. Like our society, a shift in the crypto world is approaching. With so many higher-performing coins, the lower-performing coins will gradually fade away. However, the slower performers may soon pick up speed as well.

- Crypto industry has so far performed the best for the year 2021. - Overall crypto industry market cap amounts to \$3 Trillion. - Certain hurdles pose for the year 2022 to overcome. Looking back for the past decade, the year 2021 has so far been the best year for the crypto industry. Though there were certain worse downfalls and market crashes, many altcoins including the Bitcoin (BTC) sprung up to their till date ATHs. Apart from that in terms of technological developments, market cap expansion and much more the year 2021 out paced. Moreover, 2021 proved to be such a market cap expander, as now the overall industry's market cap amounts to over \$3 Trillion. Many highlights, such as the surges of Ethereum (ETH), Dogecoin (DOGE) and the last quarter buster, the Shiba Inu (SHIB) all played a significant role. With all this intact, the CEO of the global crypto exchange, the FTX, Sam Bankman Fried puts forth his views on the ride of the crypto industry so far and for the future year 2022, yet to come. The Crypto Industry So Far Accordingly, the CEO Sam Bankman Fried (SBF) points out statistically that at present there are over 200 million people holding cryptos. In addition, SBF terms that numerous developments were done over time. From the emerging of the blockchain technology to giving birth to many of its attributes such as the smart contracts, Decentralized Finance (DeFi), Non-Fungible Token (NFT), and much more, has transformed the entire crypto industry completely. Furthermore, the major game players for the year 2021 account to the evolution of blockchain gaming, NFT blockchain gaming and the latest trending and depicted to be the future, the Metaverse. The Road Ahead for 2022 The CEO, SBF shoots out that the year 2022 ahead would not be an easy ride for the crypto industry. Indeed, he terms that there are a few major obstacles that the industry has to overcome in order to succeed for the upcoming year. Firstly, SBF addresses the issues with the scalability of the blockchains. He terms that no blockchain technology yet now could process over a thousand transactions per second. Secondly, the obstacles in terms of security. SBF points out that the vulnerability for the industry to hacks, cyber crimes and thefts are on the rise, and yet couldn't be controlled. Proper security and proper enforcement has to be made accordingly, states SBF. Third, is in regards with the regulations. SBF states that all the regulations have to be unified and clearly explained to the people indulging into the industry. Lack of knowledge and awareness owes to be major hurdles for the crypto industry.

- Valereum blockchain firm bids to buy Gibraltar Stock Exchange. - Firm's goal to merge crypto and fiat together. - If the plan succeeds, Gibraltar will become the world's first crypto hub. The country of Gibraltar which comes under the British Overseas Territory is located in the southernmost tip of Spain. Most of the landscape of Gibraltar is actually dominated by the huge Gibraltar Rock. Being a small country with a population of approximately 32,000 people, the country is at present vastly expanding into global attributes. The hot news circulating is that Valereum, a global blockchain firm based on Gibraltar, plans on acquiring the Gibraltar Stock Exchange (GSX). Amidst the new year, it seems Valereum will be buying more than 80% of GSX. In case of such an event, then the Gibraltar Rock will become the Blockchain Rock, transforming into the world's first crypto hub. World's First Crypto Hub The Valereum is actually a completely blockchain based firm solely concentrating in merging between the cryptocurrency and the live fiat currencies together. Besides, the Valereum blockchain prompts to establish a bridge between the crypto and the fiat currencies for Non-Fungible Token (NFT) too. In such terms, Valereum has signed a proposal to buy 80% of the GSX. And so if the proposal passes through, then Valereum will establish a seamless network in merging both the fiat along with the cryptocurrencies such as the Bitcoin (BTC), Dogecoin (DOGE), Ethereum (ETH) and much more. Moreover, this act will catapult Gibraltar into becoming the world's first country to establish direct fiat and crypto integration. This indeed will make Gibraltar world's first cryptocurrency hub ever. With such plans, Gibraltar reinvents its crypto regulations, more vividly and practically. These are in terms for the new merging to take place without any flaws. The Minister's Views Accordingly, the Minister of Digital and Financial services, Albert Isola terms that all the crypto regulations are perfectly sculpted such that no one can even think of indulging in any sorts of crypto crimes in the country. Besides, Isola states that the country previously underwent the same scenario as now, in regards with the taxes. About 20 years before, Gibraltar was actually tax free and certain measures were then put to implement taxes with perfect regulations. Similarly, the current condition of leaglisng crypto with proper regulations and policies as mainstream will enable the same for the betterment of the nation, states Isola. In addition, Isola puts out that with the current trend with the digital era, adopting crypto and other digital assets is vital for the development of the nation throughout the future.

- Bitcoin emerged as the most talked-about cryptocurrency. - Twitter is considering incorporating cryptocurrencies into the site. The phrase "social media" has become associated with Facebook, Instagram, Twitter, and YouTube, but this is likely to alter in the near future. SocialFi's integration with the rise of new social networks could be a key factor in the spread of blockchain technology. According to a study, the number of people talking about cryptocurrency on social media increased by more than 400% in 2021. Mentions from technical specialists, blockchain experts, CEOs, and fintech professionals have been proven to have a greater influence on driving cryptocurrency conversations. Elon Musk has had a major influence on the crypto industry and is a catalyst for top cryptos like Bitcoin and Dogecoin. By accepting Dogecoin as a form of payment, Tesla CEO Elon Musk has fueled an increase in interest in Dogecoin. When it came to social media conversations, Bitcoin emerged as the most talked-about cryptocurrency. Polkadot, Binance Coin, Tether, Solana, and Shiba Inu were the next top five cryptos. Meta Takes Over Facebook Facebook is expected to have over 2.89 billion users. Facebook, meanwhile, has recently made significant progress in its transition to the

next generation of the Internet. Now known as Meta, the company plans to build the largest social media metaverse in the world. The introduction of cryptocurrencies and blockchain to nearly 3 billion people around the world could be facilitated by this and Facebook's cryptocurrency Diem. Furthermore, Twitter is considering incorporating cryptocurrencies into the site, including features such as Bitcoin tipping for creators. Reddit is also rumored to be working on an NFT marketplace.

- The market swings were unfavourable for Ether. - Bitcoin's market is now in a tight battle between bulls and bears. A record \$142 million outflow from digital asset funds between December 11-17 has led to a shift in market sentiment. Since the cryptocurrency market's momentum has been flat lately, investors' faith in the sector has dwindled. The withdrawal of cryptocurrencies for the first time in 17 weeks is notable. A total of \$97 million was withheld from the account earlier in June 2021. Furthermore, several major cryptocurrencies, including Cardano, Ripple, Dogecoin, Shiba Inu, and Polygon, had big rises before the festival. On the other hand, the market's swings were unfavorable for Ether. The second-most valuable cryptocurrency is now trading at \$4,230. The price of Ether fell by 0.47 percent to \$4,000. Most other coins were on the upswing, except for Tether (USDC) and USD Coin (BSCV). Transaction Volume of BTC Lowest in 3 Months It's worth remembering that the last time Bitcoin's transaction value was this low was only a week before it hit its all-time high of \$61,000. Bitcoin's market is now in a battle between bulls and bears as it tries to break over the \$50,000 mark. This is notable since transaction volume has fallen to its lowest level in three months. According to the most recent market statistics, long-term holders seem to be holding and accumulating Bitcoin, while miners appear to be accumulating. In the wake of escalating Omicron instances and growing inflation, bitcoin slid from a peak of \$69,000 last month to a low of \$46,000, according to the study. A total of \$89 million was taken out of crypto accounts during the week ending December 17.

- The primary cause for the holding's depreciation is the asset itself. - Since the previous ATH, Shiba Inu has lost around 70% of its value. As of December 20, Shiba Inu (SHIB) is the third most utilized coin on the Ethereum Network. SHIB has surpassed numerous other currencies and is only third in users after Tether (USDT) and U.S. Dollar Coin (USDC). The coin has 78,089 unique users, 485,935 for USDT and 232,311 for USDC. And this is despite SHIB's poor market performance since October. SHIB dubbed the "Dogecoin killer" may have a shot with its latest advancements. Interestingly, DOGE is not left behind in researching new use cases. Unfortunately for investors, Shiba Inu cryptocurrency has taken another tumble, with assets plummeting below \$0.00003 and entering a correction phase. According to WhaleStats, most whales that presently own Shiba Inu bought it at a much higher price than today, resulting in significant losses for these whales. Both Whales and Retail Traders Affected According to IntoTheBlock, retail traders generally lose money or break even on the market. Previously, over 75% of Shiba Inu wallets were lucrative, while the asset lost value. The considerable reduction in SHIB token profitability occurred when the meme-based cryptocurrency broke through the \$0.000045 support, indicating that most traders placed positions near to or at that price. The primary cause for the holding's depreciation is the asset itself. Since the previous ATH, Shiba Inu has lost around 70% of its value. Shiba Inu previously traded at \$0.000088 before plummeting to October levels. According to CoinMarketCap, the SHIBA INU price today is \$0.000030 USD with a 24-hour trading volume of \$1,026,936,033 USD. SHIBA INU has been down 6.09% in the last 24 hours.

- Myanmar's National Unity Government said that it would use Tether. - DREP promises to combat fake news and digital identity on the internet. Let us take a look at the top 3 Coins by @LunarCRUSH Galaxy Score. TOP 15 coins by @LunarCRUSH Galaxy Score are "CryptoDiffer (@CryptoDiffer) December 19, 2021 Galaxy Score are" a proprietary score that's constantly measuring crypto against itself with respect to the community metrics pulled in from across web\$USDT \$DOGE \$DREP \$KDA \$BEL \$HIGH \$KAI \$SAND \$ICON \$GLCH \$VRA \$ONE #SAFEMOON \$ADD \$ALPHA pic.twitter.com/iTQZGAYjb Tether (USDT) Tether, a Hong Kong-based company, has created USDT, a stablecoin that matches the dollar's value. Recently, in order to simplify and speed up present commerce, service, and payment processes, Myanmar's National Unity Government said that it would use Tether. The objective is to utilize USDT like US money, but without the censorship and control of the new government. According to CoinMarketCap, the Tether has a price of USD 1.00 and a 24-hour trading volume of USD 52,209,181,607. In the preceding 24 hours, it increased by 0.07 percent. The market capitalization is at \$76,315,101,749 USD. Dogecoin (DOGE) Following the revelation that Tesla will accept Dogecoin as a form of payment for some of its merchandise, there has been a substantial increase in whale activity. There was a 148 percent spike in large transactions, which are transfers surpassing \$100,000, on December 16. When Dogecoin's worth on worldwide exchanges rose by 40% on Tuesday, December 14, there was a jump in whale activity. According to CoinMarketCap, the Dogecoin price is USD 0.171778, with USD 549,350,445 in 24-hour trading volume. In the past 24 hours, Dogecoin has lost 0.63 percent of its value. Drep (DREP) DREP promises to combat fake news and digital identity on the internet. Demand will climb as the DREP token gains prominence in the credit-data network. Furthermore, Gamefi players and NFT holders would benefit from DREP's ability to leverage its outstanding technology and thriving ecosystem to integrate into the inevitable trend of Web3.0 and Metaverse, DREP revealed on its Twitter account on December 9. According to CoinMarketCap, the DREP is now trading at USD 0.842293, with a 24-hour volume of USD 4,947,298. In the previous 24 hours, DREP has lost 3.51 percent of its value. Recommended for You - Investors Lost About \$140M in Businessman Accused in Crypto Scam - Grammy Award Nominee Swae Lee Named Chief Entertainment Officer of SYN CITY - The Sandbox Announces Strategic Partnership with NBA Legend Stephen Curry - Whale Alert-15,000,000 XRP Transferred from an Unknown Wallet - 3 Best Ethereum Killers to Consider by Investors in December 2021

- The SHIBA INU price today is \$0.000032 USD. - Investors are looking for a recurrence of Shiba Inu's ROI. Despite recent losses, a market value of approximately \$19 billion still places Shiba Inu 13th in the cryptocurrency rankings. As great as this accomplishment is, the tale takes on a legendary

aspect when explored further. Shiba Inu's token price has surged 60,000,000 percent since November 2020, making a \$17 investment worth \$10 million today. For such a short period, few assets have earned as much money as this one. Investors are looking for a recurrence of Shiba Inu's ROI after the 60 percent drop from its peak. By 2025, Shiba backers expect the token price to be \$1. Using the current price of \$0.00003372 equates to an annualized return of 1,212 percent over the next four years, which is very light compared to the company's previous record of success. Market Worth Would be \$550 Investing in a company based only on its popularity is not a sound long-term strategy. Nonetheless, Shiba Inu serves as a good illustration of how strong popularity can be in the short term. Since Dogecoin failed to pass the \$1 mark, some investors are still expecting it. That's not doable, unfortunately. Shiba Inu's market worth would soar to \$550 trillion with a \$1 price tag. For comparison, global GDP is predicted to reach \$94 trillion in 2021 and \$116 trillion by 2025. A single Shiba Inu's value would dwarf every economy on Earth's production if it were to reach \$1. According to CoinMarketCap, the SHIBA INU price today is \$0.000032 USD with a 24-hour trading volume of \$605,099,250 USD. SHIBA INU is down 0.55% in the last 24 hours.

Along with the phrase of downward movement for the crypto market, Dogecoin has also followed the same suit. As a matter of fact, Bitcoin takes the lead for bullish and bearish markets, where most altcoins are followers. When the market depicts a bullish run, every trader and investors will enjoy the greenish trading charts. But the fact is, if people are expecting bullish charts then the market will also display bearish charts. Significantly, red and green charts are the life cycle of the crypto market since its birth. Experienced traders know that anticipating both upward and sideways movements will help them in trading and locking their cryptocurrencies. Additionally, price dips of the crypto-tokens can be identified with the help of AI-driven tools analyzing the past data. DOGE's Score The score of DOGE displays a very high and very low score in the mid-week of April. When the price curve was flat at \$0.073 on April 13, the assets score went above 80. The algorithm has evidently detected a pattern of celebrity tweets and a growing trade volume. The price action followed suit, surging all the way to \$0.141 in less than 12 hours. DOGE jumped in price value reaching its peak while the algorithm signaled the traders by rebounding in its rally. Following the hit to its peak value, DOGE pumped to \$0.110 within several hours resulting in its score area below 30. Thus it doesn't mean that the algorithm gives trading advice to the traders but it provides an indication. With the historical data of bullish and bearish conditions it offers a useful indication for a particular asset. This trading strategy can be used to analyze and have an idea of trading charts. These algorithms might assist skilled traders in choosing the digital assets and locking in gains.

- However, Bitstamp stated that they were experiencing technical issues - Bitstamp is the biggest exchange in Europe with 4.4 billion users worldwide. It was revealed on December 9th that Bitstamp will be listing Shiba Inu cryptocurrency on its platform. Adding to the number of companies that are warming up to the meme-based dog currency that was established as a Dogecoin imitation, the move was remarkable. Users will be able to deposit and withdraw money in Shiba Inu using Bitstamp. The Glitch Pushes the Launch to 2022 However, Bitstamp stated that they were experiencing technical issues in the process of doing so. As a consequence of this revelation, Shiba Inu was placed under considerable pressure, and the coin's value continued to decrease. \$SHIB update "i, " Bitstamp (@Bitstamp) December 15, 2021 No worries, we haven't changed our minds! As you know, we needed to postpone our #SHIBAINU listing. We've been having some technical difficulties with the integration. Rest assured it's happening, but in 2022! Thanks for understanding " Bitstamp is the most trusted and user-friendly trading platform utilised by European investors. It is the biggest exchange in Europe with 4.4 billion users worldwide. The listing on Bitstamp has finally placed the meme currency on Europe's biggest crypto exchange. The listing, which had been eagerly awaited by the community, dubbed the SHIB army, had been put on hold indefinitely due to the challenges that the exchange has been attempting to resolve. Bitstamp has addressed the community once again, reassuring them that they will proceed with the listing of Shiba Inu and that this is merely a temporary situation. SHIB was added to Kraken and Gemini in November, two of the most popular cryptocurrency exchanges. Additionally, Bitstamp has added DYDX, GALA, and the Perpetual Protocol (PERP) to its trading platform. According to CoinMarketCap, the SHIBA INU price today is \$0.000032 USD with a 24-hour trading volume of \$1,154,942,173 USD. SHIBA INU is down 2.84% in the last 24 hours.

- Dogecoin rose over 20% after Tesla CEO Elon Musk's tweet. - Binance Coin will fall when leading cryptocurrencies do. Let us look at the top 3 coins trend search on Binance. TOP-15 COINS BY TRENDING SEARCH ON @BINANCE! #BNB \$BNB \$DOGE \$SHIB \$VOXEL #BTC \$BTC #ETH \$ETH \$MATIC \$GALA \$SOL \$ADA \$AVAX \$MANA \$DOT \$SAND \$NEAR pic.twitter.com/ekrgRnVvOY " CryptoDiffer (@CryptoDiffer) December 15, 2021 Binance Coin (BNB) Binance is a decentralized blockchain network ecosystem. They are the dominant crypto exchange in many countries, and their side projects are gaining popularity. Because Binance is a cryptocurrency exchange, its coin will always be volatile. Binance Coin will fall when leading cryptocurrencies do. But it seems Binance Coin has found support and is starting to recover. BNB found support around \$515 and is now fighting to reclaim \$530. The RSI is modest, and there is an opportunity for upward momentum if the appropriate triggers occur. CryptoDiffer says BNB is the top trending search on Binance. Dogecoin (DOGE) Musk compared Dogecoin to Ether, the Ethereum blockchain's native token, earlier this month. He labeled Dogecoin "the people's crypto" and has been actively tweeting about it all year. Dogecoin rose over 20% after Tesla CEO Elon Musk indicated the electric car manufacturer would accept the meme-based cryptocurrency as payment for items. Musk did not clarify what merchandise might be purchased using Dogecoin, ranging from \$50 to \$1,900. On Binance, Dogecoin is the second most-searched-for currency. Shiba Inu (SHIB) According to a fresh source, the Shiba Inu digital token may join Robinhood in January 2022. A Shiba Inu news Twitter account stated it had talked with an unnamed source at Robinhood regarding Shiba Inu's future. Shiba Inu coin is already available on Coinbase and Public, a retail trading software similar to Robinhood. Moreover, Robinhood

is commonly regarded as the crypto tokenæ s 1cing on the cake. According to Cryptodigger, SHIB is the third popular search on Binance.

- Elonæ™s Marvin is a Binance Smart Chain cryptocurrency. - Like Floki Inu, Marvin has the potential to offer extraordinary returns. Memes have been a major trend in recent years. Meme-inspired currencies have grown as popular as the jokes they represent. Dogecoin was an early resounding success that helped many early investors boost their crypto portfolio gains. Elonæ™s Marvin is a Binance Smart Chain cryptocurrency based on Elon Muskæ™s real-life Havanese dog, Marvin. Elon Musk is an admirer of his dogs and often tweets about their life. MARVIN quickly established a large following on Twitter, with thousands of followers within hours of its inception. Meme Coin Trend on the Rise Like his brother Floki Inu, MARVIN has the potential to offer extraordinary returns to those who invest in the dog-inspired cryptocurrency. Furthermore, MARVIN became the highest gainer by increasing its position by more than 3,000 percent on December 13th. Customers will profit from the use of SWFT since it is one of the fastest and most secure methods of transferring cryptocurrency assets and a boatload of other advantages. In addition, each Elonæ™s Marvin sale will contribute 2 percent to a wallet that will offer MAARVIN rewards to holders, and 4 percent of every transaction will be used to increase the liquidity of the wallet. According to the projectæ™s website, this will most likely keep the tokenæ™s floor price as high as possible while also discouraging large-scale selling. According to CoinMarketCap, Elonæ™s Marvin price today is \$0.110848 USD with a 24-hour trading volume of \$284,178 USD. Elonæ™s Marvin is up 16.33% in the last 24 hours.

- DOGE and SHIB had lost more value than they had gained. - Both meme-coins were showing signs of recovery. On December 3, the crypto market suffered a big correction and massacre. However, the market is steadily rising recently. However, Terraform Labsæ™ native cryptocurrency, LUNA, and a few new entrants into the top 10 cryptocurrencies have been quick to rebound. For the amusement of all cryptocurrency enthusiasts, there is not a single meme token among the top 10 most valuable cryptocurrencies by market capitalization. Look at a couple of the meme tokens that have just dropped out of the top ten. LUNA is now trading at \$72.71 with a market capitalization of \$27.8 billion. Dogecoin (DOGE) has been knocked out of the top ten cryptocurrencies by market cap due to LUNAæ™s rise. Can They Rebound? Over the last several hours, the marketæ™s meme-currencies have been in a similar predicament to large-cap coins. Over the previous seven days, DOGE and SHIB had lost more value than they had gained. No memes in the top 10. Sometimes the market has to be cleansed. pic.twitter.com/aKFQVOHbWd æ” Benjamin Cowen (@intocryptoverse) December 4, 2021 Both meme-coins were showing signs of recovery. The chart shows that the previous three hours have been quite positive for both currencies. As a result, DOGE recorded two green candles throughout the period above. As for SHIBA, its rebound seemed more solid as it registered three consecutive green candles on its hourly chart. Over the last several hours, their volume has been rather strong. As a result, it seems that a significant number of investors have begun to æ”buy the drop.æ” But the big question is whether the meme tokens make a comeback and enter the top 10 list? Only time will tell.

- Bullish WAN price prediction is \$0.99 to \$1.64. - The WAN price will also reach \$2 soon. - WAN bearish market price prediction for 2021 is \$0.40. In Wanchain (WAN) price prediction 2021, we use statistics, price patterns, RSI, RVOL, and much other information about WAN to analyze the future movement of the cryptocurrency. Wanchain Current Market Status According to coingecko, the price of WAN is \$0.89 with a 24-hour trading volume of \$37,936,239 at the time of writing. However, WAN has increased to 4.9% in the last 24 hours. Moreover, WAN has a circulating supply of 192,680,162 WAN. Currently, WAN trades in cryptocurrency exchanges such as Binance, Mandala Exchange, Huobi Global, KuCoin, and ZT. What is Wanchain (WAN)? Wanchain is a public blockchain with support for creating smart deals using solidity. It also supports ring signature based private transactions and decentralized cross chain operation. Wanchain has been developing its cross-chain infrastructure since 2017. In early 2021, it launched the worldæ™s first decentralized direct BTC-ETH bridge. It also offers decentralized bridges connecting BTC, ETH, Ripple and EOS, as well as other chains such as Polkadot on the horizon. Wanchainæ™s various cross-chain bridges are all supported by integrated decentralized pools. Wanchain (WAN) Price Prediction 2021 Wanchain holds the 379th position on CoinGecko right now. WAN price prediction 2021 explained below with a weekly time frame. A descending channel is a pattern formed from two downward trend lines drawn above and below the price indicating the resistance and support levels. This pattern is also called channel down or falling channel. It is a bearish pattern defined by a trend line that supports a series of lower lows and a diagonal resistance level that connects low highs. While on the channel, prices are expected to rise from the upper and lower ranges. The method is very reliable because of such reverse changes. Currently, WAN is at \$0.89. If the pattern continues, the price of WAN might reach the resistance level to \$1.2 and \$2.5. If the trend reverses, then the price of WAN may fall to \$0.4095. Wanchain (WAN) Support and Resistance Level The below chart shows the support and resistance level of WAN. From the above daily time frame, it is clear the following are the resistance and support levels of WAN. | Resistance Level 1 | \$0.99 | | Resistance Level 2 | \$1.30 | | Resistance Level 3 | \$1.64 | | Resistance Level 4 | \$2.07 | | Support Level 1 | \$0.68 | | Support Level 2 | \$0.41 | The charts show that WAN has performed a bullish trend over the past month. If this trend continues, WAN might run along with the bulls overtaking its resistance level at \$2.07. Accordingly, if the investors turn against the crypto, the price of the WAN might plummet to almost \$0.41, a bearish signal. Wanchain Price Prediction 2021 æ” RVOL, MA, and RSI The Relative Volume (RVOL) of WAN is shown in the below chart. It is an indicator of how the current trading volume has changed over a period of time from the previous volume for traders. Currently, RVOL of WAN lies below the cutoff line, indicating weaker participants in the current trend. More so, the WANæ™s Moving Average (MA) is shown in the chart above. Currently, WAN is in a bearish state. Notably, the WAN price lies below 50 MA (short-term), so it is completely in a downward trend. Therefore, there is a possibility of a reversal trend of WAN at any time. Meanwhile, the

relative strength index (RSI) of the WAN is at level 46.28. This means that WAN is in a nearly oversold state. However, this gives confidence for the traders to trade without any fear. Wanchain Price Prediction 2021 – ADX, RVI Let us now look at Wanchain's Average Directional Index (ADX). It helps to measure the overall strength of the trend. The indicator is the average of the expanding price range values. This system attempts to measure the strength of price movement in the positive and negative directions using DMI indicators with ADX. The above chart represents the ADX of Wanchain. Currently, WAN lies in the range at 24.78, so it indicates a weak trend. From the above chart, the Relative Volatility Index (RVI) of WAN. RVI measures the constant deviation of price changes over a period of time rather than price changes. The RVI of WAN lies above the 50 level, indicating that the direction of volatility is high. In fact, WAN's RSI is at the 46.28 level thus confirming a potential either buy or sell signal. Comparison of WAN with BTC, ETH The below chart shows the price comparison between Bitcoin, Ethereum, and Wanchain. From the above chart, we can identify the trend of the ETH, BTC and WAN is moving at the same level as the trend. This indicates that when the price of BTC increases or decreases, the price of ETH and WAN also increases or decreases respectively. Conclusion With continuous improvements in the Wanchain network, we can say that 2021 is a good year for WAN. For this reason, the bullish price prediction of Wanchain in 2021 is \$1.6. On the other hand, the bearish WAN price prediction for 2021 is \$0.4. Furthermore, with the advancements and upgrades on the WAN ecosystem, the performance of WAN would rise reaching \$1.2 very soon. But, it might also reach \$2 if the investors believe that WAN is a good investment in 2021. Wanchain is a distributed ledger that enables cross-chain transactions and interoperability of multiple chains. WAN has listed on many crypto exchanges which include Binance, Mandala Exchange, Huobi Global, KuCoin, and ZT. With the ongoing developments and upgrades within the WAN platform, it has a high possibility of reaching its ATH soon. On May 04, 2018, WAN reached its new all-time high (ATH) of \$9.84. Wanchain (WAN) seems to be one of the top-gaining cryptocurrencies this year. According to the recorded achievements of WAN in the past few months, WAN is considered a good investment in 2021. Wanchain (WAN) is one of the active crypto that continues to maintain its Bullish state. Eventually, if this bullish trend continues then Wanchain (WAN) will hit \$2 soon. Wanchain (WAN) price is expected to reach \$1.5 by 2022. Wanchain (WAN) price is expected to reach \$3 by 2023. Wanchain (WAN) price is expected to reach \$6 by 2024. Wanchain (WAN) price is expected to reach \$10 by 2025. Recommended for You

The adoption of cryptocurrencies has become huge among people around the world. The popularity and the growth of the crypto space can be clearly witnessed since the beginning of this year. At the start of the past decade, only a few were aware of the crypto industry but currently, it's been the hype globally. Becoming a millionaire is everyone's dream but making it real is a difficult task. As a matter of fact, the crypto market would help investors to become millionaires with little investment. According to the data, investment in three cryptocurrencies would have generated a giant ship of money within the short term. These cryptocurrencies that might result in massive gains are Shiba Inu, Ethereum, and Dogecoin. Investment Turns From \$1,500 To \$1 Million The entire crypto market knows that SHIB experienced an extraordinary performance surpassing the performance of leading cryptocurrencies. There isn't a clear idea of how a small amount invested in SHIB in the past would have generated huge profit. Following the success of Dogecoin, the trading performance of Shiba Inu went high and was a hit trend in the market. Significantly, Ethereum, the second-largest cryptocurrency surged to a total market cap value of \$537 billion. The fact behind the growth of Ethereum's price is the real-world utility. The real-world use case is that Ethereum Blockchain can host other cryptocurrencies as well. Indeed, Ethereum's ERC-20 standard is used by roughly half of the top 100 tokens by market capitalization. The next huge gain cryptocurrency provider is Dogecoin which was the talk of the town a few months back. During the bullish trend in May, the price value of DOGE went high and created a buzz among the crypto market. Early investors had a sweet spot investing in Dogecoin while DOGE had great support from Elon Musk. The entire crypto market knows that Musk's support for DOGE is the main reason for the price surge in a short span. Even institutional investors began to invest in DOGE following the Twitter post Musk. Moreover, Musk titled himself as "Dogefather" and created a phrase in the industry as "to the moon" which was a hit. Furthermore, these cryptocurrencies have played a vital role in a short time, while cryptocurrencies adoption became huge within this decade. Currently, this market range may or may not continue which depends on traders and its market cap value. Consequently, traders and investors should be more careful when investing in cryptocurrencies in the future.

- The LUNA cryptocurrency outperformed Bitcoin in market capitalization, - Terra is the third-largest blockchain in terms of total value locked. Late on Friday, December 3, the crypto market saw a major downturn and massacre. It has, however, been Terraform Labs' native coin LUNA that has recovered the quickest. According to CoinMarketCap, LUNA has a market valuation of \$28.3 billion and is now trading 32% higher at \$74.21 per share. As a result, LUNA has surpassed the meme cryptocurrency Dogecoin (DOGE) and entered the top ten of the most valuable cryptocurrencies. Last few weeks, the LUNA cryptocurrency outperformed Bitcoin in market capitalization. It has gained more than 64% versus Bitcoin on the weekly charts. The price of LUNA has risen as a result of the increasing usage of LUNA coins in DeFi apps. In addition, Terra's development activities have seen a significant uptick. Fiat-pegged Stablecoin Deployment Technique As a result, the Terra blockchain is gradually becoming a sought-after platform in the DeFi industry. The Terra protocol uses a fiat-pegged stablecoin deployment technique that benefits a DeFi economy. Pylon, Mirror, and Anchor are part of Terraform's DeFi ecosystem. In addition, Terra is the third-largest blockchain in terms of total value locked, according to DeFi Llama (TVL). As a result of the price of Terra (LUNA) on the platform, the overall value of the platform has surpassed \$13.86 billion. Terra is now in third place in TVL, behind Ethereum and Solana. Signs point to Terra being a dominant player in the DeFi market. Terra's market capitalization, expected to surpass Solana's in the near future.

- Elon Musk tweets degrading crypto overall. - Complete crypto market slumps down after Elon's tweet. - Tweet symbolizes Elon criticizing his brother Kimbal Musk. It's been quite a long time since our favourite critic, Elon Musk makes a controversial tweet, especially upon the crypto industry. Besides being a prominent influential person in the crypto industry, Elon Musk takes against crypto in a rather different approach. The true intentions are still skeptical as whether he straightly and abruptly puts against the crypto or it's just a small clash between the siblings! The Controversial Tweet In the early hours of Saturday, Elon Musk took upon twitter to express his views. Note, whatsoever he tweets if it is regarding crypto, then bang! There you have the hot fire crypto news for the day and so does the market sways accordingly. In spite of all this, Elon Musk tweeted in form a meme this time. Upon the meme content is first a picture of a guy who Elon terms is him at the restroom taking a leak. Upon the same meme, next comes a guy who Elon Musk mentions as "Web3 people". The "Web3 people" guy comes and stands next to him. He too started to take a leak. And so, upon this, the "Web3 people" guy starts a conversation stating that he should really get into crypto. Furthermore, he terms that Web3 is the future and that Elon should join the Decentralized Autonomous Organization (DAO). What Does Elon Musk Really Means Upon His Tweet? Within a short span, the complete crypto market slumped down, denoting a complete crypto market crash. Even Bitcoin (BTC) is still down by 11%. However, whether it is because of Elon Musk's tweet or not is a controversy. Moreover, Elon's younger sibling, Kimbal Musk is actually making up his own DAO termed as "Big Green DAO" focused towards gardening developments for kids. Maybe as his younger brother is completely into DAO, Elon Musk seems to bring about a sibling rivalry here. And so, if that's the case then it's purely evident that the big brother is not so happy with the younger ones activities!

- The meme-currencies have begun to rule the crypto market. - The top five meme-currency gainers of the week are listed. - Significantly, these tokens are MOLA, LOWB, DOGEGF, XDOGE, and WOOF. Following the huge rise of the meme-currency trend, the market began to witness many meme-coins given birth in the industry. The surge of Dogecoin was an initial take while SHIB took the perfect move with great success hitting a continuous new ATH. Consequently, the performance of SHIB surpassed Bitcoin and other leading cryptocurrencies in the industry. This new hit of meme-currencies was the pillar for many meme-coins to enter the market. Considering the potential of these tokens, traders and investors showed interest in meme-currencies which was the first successful step for meme-tokens. However, the traders are aware of many cryptocurrencies with much potential to reach great heights in the next term. Besides, the market offers many options for investors to choose from the variety of meme-currencies to explode. Let's dig into the top five meme-currency gainers of the week which are MOLA, LOWB, DOGEGF, XDOGE, and WOOF. Top Meme-Currency Gainers The first token in the list is Moonlana which bills itself as a next-generation memes platform by Solana. Moonlana has its own DEX, the LanaDex, which includes charts, logos, and NFTs. All of LanaDex's trading fees will be used to purchase back and burn MOLA, the platform's native cryptocurrency. Lanabots, an NFT collection containing 3,333 unique random animated bots, is also available on Moonlana. Currently, MOLA is trading at \$0.0019 which is 13% up in the past 24-hours and soars nearly 30% in a week. The second meme-token in the list is Loser Coin (LOWB) where the founders were ready to lose everything to launch this coin. They prepared and spent their whole savings for the liquidity pool and guaranteed that the price of \$LOWB will not be changed due to lack of capital. At the time of writing, the trading price of LOWB is \$0.000070 which is nearly 9% up within a week. The next top meme-currency gainer of the week is DodgeGF (DODGEGF) which focuses on growing the team, community events, burn events, rebranding, and more. It is an ERC-20 token that describes itself as "a token for kind gestures based on reciprocity". Moreover, the current trading price of DOGEGF is \$0.000000002929 with a rise of over 39% in a week. Furthermore, the top fourth meme-gainer is Classic Doge (XDOGE) which focuses on pet lovers. It is a BEP-20 token that is perfect for dog lovers and connects the pet lovers' community. The platform bills itself as the "first decentralized pet community" and features a social app for pet lovers. The current trading price of XDOGE is \$0.000762 which has surged to nearly 50% within a week. The final meme-token in the list is WOOF (WOOF) which is similar to Moonlana, built on top of Solana. WoofSwap is the company's own DEX and NFT marketplace. After debuting in late October, WOOF is one of the fastest-growing communities, with more than 26K users. At the time of writing, the trading price of WOOF is \$0.001560 that has soared to over 20% within a week. However, the aforementioned meme-tokens are the top meme-currency gainers of the week. These tokens have the potential to reach great heights in the next term.

- Bullish AION price prediction ranges from \$0.25 to \$0.56. - The AION price might also reach \$0.80. - AION bearish market price prediction for 2021 is \$0.15. In AION price prediction 2021, we use statistics, price patterns, ADX, and much other information about AION to analyze the future movement of the cryptocurrency. Aion is a multi-tier blockchain platform designed for blockchain interconnection. AION tokens are used to launch new blockchains, monetize inter-chain bridges, and secure the network as a whole. Nuco, which was founded in the spring of 2016, created AION. Aion has a fortune system that offers members of the community for providing technical support, documentation, and other assistance. Currently, AION is mined using a modified Equihash Proof-of-Work mining algorithm. Current Market Status of Aion (AION) According to CoinGecko, the price of Aion is \$0.198 with a 24-hour trading volume of \$14,426,731 at the time of writing. However, AION surged to 4.06% in the last 24 hours. Moreover, AION has a circulating supply of 494,841,926 AION coins. Currently, AION trades in cryptocurrency exchanges such as Binance, BiONE, KuCoin, Bitrue, and Pionex. Aion (AION) Price Prediction 2021 Aion (AION) holds the 398th position on CoinGecko right now. AION price prediction 2021 explained below with a daily time frame. The falling wedge pattern is a continuation pattern formed when price bounces between two downward sloping, converging trendlines. It is a bullish chart formation, but it can also indicate reversal or continuation patterns depending on where it appears in the trend. Currently, AION is waving at \$0.198. After this, AION would continue to follow the pattern where the price chart would show uptrend. Moreover, the price of AION will breakout at

\$0.20 and might reach the resistance level to \$0.64. If the trend reverses, then the price of AION may fall to \$0.15. Aion (AION) Support and Resistance Level The below chart shows the support and resistance level of Aion (AION). From the above chart, it is observed that the following are the resistance and support levels of AION. - Resistance Level 1 â€" \$0.25 - Resistance Level 2 â€" \$0.38 - Resistance Level 3 â€" \$0.56 - Support Level 1 â€" \$0.15 - Support Level 2 â€" \$0.09 - Support Level 3 â€" \$0.06 The chart depicts the bearish performance of AION over the previous month. However, AION will follow a bullish pattern and will rise. On the contrary, if the trend reversed then AION might fall to \$0.15 presenting a bearish signal. Aion (AION) Average Directional Index (ADX) Let us now look at AION's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of AION lies in the range at 45.07, so it indicates a strong trend. Conclusion The AION is one of the cryptos which is great for long-term investment. In addition, AION price prediction is bullish for a short-term. It has a good chance of reaching \$0.64 within the end of this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the AION ecosystem, the performance of AION would rise reaching \$0.64 very soon. But, it might also reach \$0.80 if the investors believe that AION is a good investment in 2021. Disclaimer: The opinion expressed in this chart solely author's. It is not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Recommended for You

- Bullish Akropolis price prediction ranges from \$0.042 to \$0.088. - Akropolis prices might also reach \$0.09 soon. - AKRO bearish market price prediction for 2021 is \$0.008. In Akropolis (AKRO) price prediction 2021, we use statistics, price patterns, ADX, and much other information about AKRO to analyze the future movement of the cryptocurrency. Akropolis is a firm that works as an Ethereum blockchain-based decentralized finance protocol which seeks to offer an autonomous financial environment in order to save and grow wealth, which includes borrowing and lending. Moreover, AKRO provides a series of products that includes AkropolisOS, which is a framework for enabling for-profit decentralized autonomous organizations, Sparta, which is a platform for uncollateralized lending, and Delphi, a yield farming aggregator and tool for dollar-cost averaging. Let us see about the Akropolis price prediction 2021. Current Market Status of Akropolis (AKRO) According to CoinGecko, the Akropolis price is trading at \$0.023 with a 24-hour trading volume of \$13,795,780, at the time of writing. However, Akropolis has decreased by 5.2% in the last 24 hours. Currently, Akropolis trades in cryptocurrency exchanges such as Binance, Hotcoin Global, CoinTiger, FTX, and Huobi Global. Akropolis (AKRO) Price Prediction 2021 Akropolis (AKRO) holds the 501th position on CoinGecko right now. Akropolis price prediction 2021 explained below with a weekly time frame. A symmetrical triangle is made of a downward diagonal upward trend line and an upward diagonal downward trend line. When there is a price increase, it will inevitably break through the upper trend line to break, and in an uptrend, the price will increase or break. A lower trend line develops a breakthrough and a downward trend in which prices drop. Currently, AKRO is trading at \$0.02. After this, AKRO may continue to rise according to the trend. With this pattern, AKRO might reach the resistance level at \$0.088 soon. If the trend reverses, then the price of AKRO may fall to \$0.008. Akropolis (AKRO) Support and Resistance Level The below chart shows the support and resistance level of Akropolis (AKRO). From the above chart, it is observed that the following are the resistance and support levels of Akropolis. - Resistance Level 1 â€" \$0.042 - Resistance Level 2 â€" \$0.088 - Support Level 1 â€" \$0.02 - Support Level 2 â€" \$0.013 - Support Level 3 â€" \$0.008 The chart depicts the bullish performance of Akropolis over the previous month. However, this trend will continue to reach a resistance level at \$0.088 soon. Even more, if the trend reversed then Akropolis might fall to \$0.008 presenting a bearish signal. Akropolis (AKRO) Average Directional Index (ADX) Let us now look at Reserve Rights's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of Akropolis. Currently, Akropolis lies in the range at 34.18, so it indicates a strong trend. This shows that the price of AKRO can go bullish in the future. Conclusion Akropolis is one of the cryptos which is great for long-term investment. In addition, Akropolis price prediction is bullish for a short-term. It has a good chance of reaching \$0.08 within the end of this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the Akropolis ecosystem, the performance of Akropolis would rise, reaching \$0.042 very soon. But, it might also reach \$0.09 if the investors believe that Akropolis is a good investment in 2021. Disclaimer: The opinion expressed in this chart solely author's. - Bullish PHA price prediction ranges from \$0.87 to \$0.97. - PHA price might also reach \$1 soon. - PHA bearish market price prediction for 2021 is \$0.61. In Phala Network price prediction 2021, we use statistics, price patterns, RSI, and much other information about PHA to analyze the future movement of the cryptocurrency. Phala Network is a trustless computation platform that provides massive cloud processing without sacrificing data confidentiality. PHA is the utility token for Phala Network. Using PHA tokens users can purchase trusted computing resources in the network and the data exchanges. Phala Network will be able to provide computing power to other blockchain applications while protecting the data layer. According to CoinGecko, the PHA price is trading at \$0.8341 with a 24-hour trading volume

of \$41,784,395 at the time of writing. Moreover, PHA has decreased by 0.91% in the last 24 hours. However, PHA has a circulating supply of 272,000,000.00 PHA. Currently, PHA trades in cryptocurrency exchanges such as Binance, OKEx, CoinTiger, Huobi Global, and BIONE Phala Network (PHA) Price Prediction 2021 Phala Network (PHA) holds the 92nd position on CoinGecko right now. PHA price prediction 2021 is explained below with a daily time frame. The above chart shows the Triangle pattern. It occurs by mid-trend and usually signals a continuation of the existing trend. The triangle chart pattern is designed by drawing two converging trendlines as price temporarily moves in a sideways direction. This pattern is also used to assist a trader in spotting a market reversal. One of the most important patterns is the triangle pattern because they help to indicate the continuation of a bullish or bearish market. In the daily time frame chart, if the price of the PHA breaks the resistance level of \$0.87, it will reach the target of \$0.98. Else, if the price of the PHA breakout the support level it will fall to \$0.61. So, the trend of the PHA is based on the breakout. Phala Network (PHA) Support and Resistance Level The below chart shows the support and resistance level of PHA. From the above daily time frames, it is clear the following are the resistance and support levels of PHA. - Resistance Level 1 â€” \$0.87 - Resistance Level 2- \$0.97 - Support Level 1 â€” \$0.76 - Support Level 2 â€” \$0.66 - Support Level 3 â€” \$0.61 The charts show that PHA has performed a bullish trend over the past month. If this trend continues, PHA might run along with the bulls overtaking its resistance level at \$0.97. Accordingly, if the investors turn against the crypto, the price of the PHA might plummet to almost \$0.61, a bearish signal. Phala Network (PHA) Average Directional Index (ADX) Now letâ€™s see the average directional index (ADX) of PHA. Generally, the Average Direction Index (ADX) helps traders determine the strength of a trend, rather than its actual direction. It can be used to determine whether the market is changing or a new trend is starting. It is associated with the Directional Movement Index (DMI) and includes the ADX line. The range of the oscillator is from 0 to 100. A high value indicates a strong trend, and a low value indicates a weak trend. It is often combined with directional indicators. The above chart shows the ADX of PHA stays above the range of 20, so it indicates a weak trend. Conclusion The PHA is one of the cryptos that keeps its ground against the bearish market. Hence more, our long-term PHA price prediction for 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$1.39 this year. More so, this will only happen if it breaks many past psychological resistances. Henceforth, with the ongoing developments and upgrades within the PHA ecosystem, it could experience a great future ahead in 2021. It may reach \$0.97 soon and it might even reach high heights, however reaching \$1, if investors have planned that PHA is a good investment in 2021. - Bullish Contentos price prediction ranges from \$0.029 to \$0.085. - Contentos prices might also reach \$0.1 soon. - COS bearish market price prediction for 2021 is \$0.018. In Contentos (COS) price prediction 2021, we use statistics, price patterns, RSI, and much other information about COS to analyze the future movement of the cryptocurrency. Contentos (COS) is a cryptocurrency and operates on the Binance Chain platform. Moreover, the vision of Contentos is to create a decentralized digital content community which enables content to be produced freely, distributed, rewarded, and traded. However, protecting author rights. Contentos strives to incentivize content creation and global diversity and return the rights and value of content to users. Let us see about the Contentos price prediction 2021. Current Market Status of Contentos (COS) According to CoinGecko, the Contentos price is trading at \$0.025 with a 24-hour trading volume of \$8,652,232, at the time of writing. However, Contentos has decreased by 4.34% in the last 24 hours. Currently, Contentos trades in cryptocurrency exchanges such as Binance, Hotcoin Global, Pionex, Gate.io, and Bitrue. Contentos (COS) Price Prediction 2021 Contentos (COS) holds the 407th position on CoinGecko right now. Contentos price prediction 2021 explained below with a daily time frame. The chart above indicates the symmetrical triangle pattern of COS. A symmetrical triangle pattern is formed by falling an upper trendline and a rising lower trendline. More so, as the price approaches the apex, it will violate the upper trendline which results in a breakout. The symmetrical triangle varies from the other triangle patterns in that it is a neutral pattern that does not lean in any direction. While the triangle itself is neutral, it might favor the existing trendâ€™s direction, and traders look for breakouts in that direction. Currently, COS is trading at \$0.025. After this, COS may continue to fall or rise according to the direction of breakout. With this pattern, COS might reach the resistance level at \$0.085 soon, if the trend breaks out at \$0.031. If the trend reverses, then the price of COS may fall to \$0.01. Contentos (COS) Support and Resistance Level The COSow chart shows the support and resistance level of Contentos (COS). From the above chart, it is considered that the following are the resistance and support levels of Contentos (COS). - Resistance Level 1 â€” \$0.029 - Resistance Level 2 â€” \$0.046 - Next resistance level â€” \$0.085 - Support Level 1 â€” \$0.018 - Support Level 2 â€” \$0.01 - Next support level â€” \$0.005 The chart depicts the bullish performance of Contentos over the previous month. However, this trend will continue to reach a resistance level at \$0.085 soon. Even more, if the trend reversed then Contentos might fall to \$0.01 presenting a bearish signal. Contentos (COS) Average Directional Index (ADX) Let us now look at Contentosâ€™s Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of Contentos. Currently, Contentos lies in the range at 50.88, so it indicates a strong trend. This shows that the price of ADX can go bullish in the future. Conclusion Contentos is one of the cryptos which is great for long-term investment. In addition, Contentos price prediction is bullish for a short-term. It has a good chance of reaching \$0.029 within the end of this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the

Contentos ecosystem, the performance of Contentos would rise reaching \$0.046 very soon. But, it might also reach \$0.085 if the investors believe that Contentos is a good investment in 2021. - Bullish DATA price prediction ranges from \$0.173 to \$0.321. - DATA price might also reach \$0.35 soon. - DATA bearish market price prediction for 2021 is \$0.03. In Streamr price prediction 2021, we use statistics, price patterns, ADX, and much other information about DATA to analyze the future movement of the cryptocurrency. Streamr is a distributed open-source platform, which was crowdfunded in 2017. Moreover, the projectâ€™s goal is to create a decentralized infrastructure for real-time information, replacing centralized message brokers with a global peer-to-peer network. More so, through relying on cryptography rather than trust, the open-source network focuses to enable data sharing and monetization in IoT and smart cities, business consortia, individual crowd selling through the decentralized web and Data Unions. According to CoinGecko, the DATA price is trading at \$0.152 with a 24-hour trading volume of \$1,828,747, at the time of writing. However, DATA has increased by 11.1% in the last 24 hours. Moreover, DATA has a circulating supply of 891,072,680.46 DATA. Currently, DATA trades in cryptocurrency exchanges such as Binance, HitBTC, BiONE, Gate.io, and Pionex. Streamr DATA Price Prediction 2021 Streamr DATA price prediction 2021 explained below with a weekly time frame. A triangle pattern is made up of a downward diagonal upward trend line and an upward diagonal downward trend line. When the price rises, it will inevitably break through the upper trend line to break, and in an uptrend, the price will rise or break. A lower trend line forms a breakthrough and a downward trend in which prices fall. In the weekly time frame chart, if the price of the DATA breaks the resistance level it will reach the target of \$0.321. Or else, if the price of the DATA breaks the support level of \$0.1 means it will drop to the next support level at \$0.069 and \$0.049. So, the trend of the DATA is based on the breakout: DATA Support and Resistance Level The below chart shows the support and resistance level of DATA. From the above weekly time frame, it is clear the following are the resistance and support level of DATA. | Resistance Level 1 | \$0.182 | | Resistance Level 2 | \$0.319 | | Support Level 1 | \$0.087 | | Support Level 2 | \$0.047 | | Support Level 3 | \$0.03 | The charts show that DATA has performed a bullish trend over the past month. If this trend continues, DATA might run along with the bulls overtaking its resistance level at \$0.319. Conversely, if the investors turn against the crypto, the price of DATA might plummet to almost \$0.03, a bearish signal. Streamr DATA Average Directional Index (ADX) Now letâ€™s look at the average directional index (ADX) of DATA. Generally, the Average Direction Index (ADX) helps traders determine the strength of a trend, rather than its actual direction. It can be used to determine whether the market is changing or a new trend is starting. It is associated with the Directional Movement Index (DMI) and basically includes the ADX line. The range of the oscillator is from 0 to 100. A high value indicates a strong trend, and a low value indicates a weak trend. It is often combined with directional indicators. The above chart shows the ADX of DATA stays above the range of 27.46, so it indicates a strong trend. Conclusion The DATA is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term DATA price prediction 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$0.201 this year. However, this will only happen if it breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the DATA ecosystem, it could experience a great future ahead in 2021. It may reach \$0.173 soon and it might even reach high heights, however reaching \$0.35, if investors have planned that DATA is a good investment in 2021. In BEAM price prediction 2021, we use statistics, price patterns, ADX, and much other information about BEAM to analyze the future movement of the cryptocurrency. Beam is a scalable, private cryptocurrency built on the MimbleWimble and LelantusMW protocols, with the goal of exploring the world of confidential Decentralized Finance (DeFi). To achieve network consensus, the Beam blockchain employs Proof-of-work (POW). Beam uses the MimbleWimble protocol to improve privacy and fungibility while reducing blockchain fatigue. Current Market Status of Beam (BEAM) According to CoinGecko, the price of Beam is \$0.561 with a 24-hour trading volume of \$9,895,253 at the time of writing. However, BEAM dropped to 8.26% in the last 24 hours. Moreover, BEAM has a circulating supply of 90,579,280 BEAM. Currently, BEAM trades in cryptocurrency exchanges such as Binance, BitForex, BitZ, Gate.io and XT.COM. Beam (BEAM) Price Prediction 2021 Beam (BEAM) holds the 406th position on CoinGecko right now. BEAM price prediction 2021 explained below with a daily time frame. A head and shoulders pattern is a performance measure with three peaks on a chart, the outside two being close in height and the middle being the highest. More so, the theory explains that the chart formation forecasts a bullish-to-bearish trend reversal. One of the most reliable trend reversal patterns is the head and shoulders pattern. Following long bullish trends, the price rises to a peak and then falls to form a trough. The price rises again to form a second high that is significantly higher than the initial peak, then falls again. The price rises a third time, but only to the level of the previous peak before falling again. Currently, BEAM is waving at its third fall at \$0.56. After this, BEAM would continue to fall. With this pattern, BEAM will soon reach \$0.46. If the trend reverses, then the price of BEAM may rise to \$2.06. Beam (BEAM) Support and Resistance Level The below chart shows the support and resistance level of Beam (BEAM). From the above chart, it is observed that the following are the resistance and support level of BEAM.

- Resistance Level 1 â€" \$0.78 - Resistance Level 2 â€" \$1.02 - Resistance Level 3 â€" \$1.48 - Resistance Level 4 â€" \$ 2.06 - Support Level 1 â€" \$0.49 - Support Level 2 â€" \$0.34 - Support Level 3 â€" \$0.24 The chart depicts the bearish performance of BEAM over the previous month. However, this trend will continue to fall then BEAM would reach support level at \$0.46. On the contrary, if the trend reversed then BEAM might rise to \$0.90 presenting a bullish signal. Beam (BEAM) Average Directional Index (ADX) Let us now look at BEAM's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of BEAM which made a downtrend crossover in mid-May. Currently, the range of ADX is at 16.86, so it indicates a weak trend. Conclusion The BEAM is one of the cryptos which is great for long-term investment. In addition, short-term BEAM price prediction is bearish. But, it has a good chance of reaching \$2.06 this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the BEAM ecosystem, the performance of BEAM would rise reaching \$2.06 very soon. But, it might also reach \$3 if the investors believe that BEAM is a good investment in 2021. - Bullish Julswap JULD price prediction ranges from \$0.085 to \$0.2. - JULD price might also reach \$0.5 soon. - JULD bearish market price prediction for 2021 is \$0.029 In JulSwap JULD price prediction 2021, we use statistics, price patterns, RSI, and much other information about JULD to analyze the future movement of the cryptocurrency. JulSwap is the equivalent of Uniswap (UNI) developed on the Binance Smart Chain (BSC). JulSwap provides the same trade engine and analytics as UniSwap and few additional features from SushiSwap (SUSHI). JulSwap provides automated, decentralized exchange of BSC-20 tokens. Moreover, the main goal of this project is to lower the barrier to enter into decentralized finance (DeFi). The platform allows any user to create their own liquidity pool. According to CoinGecko, the JULD price is trading at \$0.03 with a 24-hour trading volume of \$190,897, at the time of writing. However, JULD has decreased by 2.4% in the last 24 hours. Moreover, JULD has a circulating supply of 461,744,651 JULD. Currently, JULD trades in cryptocurrency exchanges such as HitBTC, Bitcoin.com Exchange, Gate.io, Hoo, and BKEX. JulSwap JULD Price Prediction 2021 JulSwap (JULD) holds the 695th

position on indicators right now. JulSwap JULD price prediction 2021 explained below with a daily time frame. The above chart displays a falling wedge pattern. This pattern is created when the market makes lower lows and lower highs with the contracting range. Moreover, this trend is considered a bullish chart formation but can show both reversal and continuation patterns. In the daily time frame chart, if the price of the JULD breaks the resistance level of \$0.16, it will reach the target of \$0.26. Or else, if the price of the JULD breaks the support level of \$0.029 means it will fall to the next support level at \$0.0295. So, the trend of the JULD is based on the breakout. JulSwap (JULD) Support and Resistance Level The below chart shows the support and resistance level of JULD. From the above daily time frames, it is clear the following are the resistance and support level of JULD. -

Resistance Level 1 â€" \$0.085 - Resistance Level 2 â€" \$0.112 - Resistance Level 3 â€" \$0.223 - Support Level 1 â€" \$0.03 - Support Level 2 â€" \$0.029 The charts show that JULD has performed a bullish trend over the past month. If this trend continues, JULD might run along with the bulls overtaking its resistance level at \$0.096. Conversely, if the investors turn against the crypto, the price of JULD might plummet to almost \$0.029, a bearish signal. JulSwap (JULD) Average Directional Index (ADX) Now let's look at the average directional index (ADX) of JULD. Generally, the Average Directional Index (ADX) helps crypto traders identify the strength of a trend, instead of its actual direction. It can be used to check whether the market is changing or a new trend is initiating. More so, it is connected with the Directional Movement Index (DMI) and basically includes the ADX line. The range of the oscillator is from 0 to 100. Moreover, a high value indicates a strong trend, and a low price shows a weak trend. It is often joined with directional indicators. The above chart shows the ADX of JULD stays above the range of 21, so it indicates a weak trend. Conclusion The JULD is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term JulSwap JULD price prediction 2021 is bullish. It has a huge possibility to reach great highs this year. However, this will only happen if it breaks many previous few psychological resistances. Furthermore, with the ongoing developments and upgrades within the JULD ecosystem, it could experience a great future ahead in 2021. It may reach \$0.2 soon and it might even reach high heights, however reaching \$0.5, if investors have planned that JULD is a good investment in 2021. - Bullish STARX price prediction ranges from \$2.4 to \$4. - STARX price may also reach \$10 if it exceeds \$4 soon. - Bearish STARX price prediction for 2021 is \$0.243. Stratis is a blockchain-as-a-service firm that provides several products and services for enterprises, including launching private sidechains, running full nodes, developing and deploying smart contracts, an ICO platform, and a proof-of-identity application. The firm also provides cryptocurrency wallets and blockchain consulting services. Recently, STARX partners with the world's largest .NET development community. However, this may lead to price surge of the cryptocurrency. For interested crypto traders, the crypto trades at exchanges such as Binance, Upbit, Bithumb, Gate.io, and Bittrex. Moreover, with these recent developments, is STARX a good investment in 2021? Let's find out in this STARX price analysis 2021 article. StarCash Network (STARX) Price Analysis Currently, STARX holds the 253rd place on CoinGecko. But will the recent changes in the blockchain and its governance help catapult the price to reach higher? Let's proceed to the charts in this STARX price prediction article. In the monthly time frame chart above, we can see the Ascending Scallop pattern. Usually this is succeeded by an uptrend. However, the pattern can also move into a downtrend. More so, this pattern took a month for the formation to occur. Meanwhile, the relative strength index (RSI) of the STARX is already at its overbought state. For this reason, traders must be careful because STARX might trigger a price reversal any time, as shown in this Power Ledger price prediction. According to CoinGecko, the STARX price is \$0.55, at the time of writing. In terms of market position, the market capitalization of STARX amounts to almost \$245,602,133. Furthermore, STARX has an average daily trading volume of over \$38,839,662. - Resistance Level 1 â€" \$2.43 - Resistance Level 2 â€" \$3.21 - Next Resistance Level â€" \$4.06 - Support Level 1 â€" \$1.608 - Support Level 2 â€" \$0.759 The above chart shows the impressive performance of STARX in the last few days. STARX is showing a bullish trend. However, if the trend continues, STARX will run along with the bulls, overtaking its \$3.21 resistance level and climb higher to \$4.06. In contrast, if the crypto investors turn against the cryptocurrency, the bears might take over. More so, the STARX price might plummet to almost \$0.759, a bearish signal. Even more, it may even reach \$10 if investors have decided that STARX is a good investment in 2021. Furthermore, the project seems promising. Moreover, it has high goals, a clear focus, and a use case that target a broad market. Along with increasing adoption, positive price predictions, and a community consists of thousands of retailers, STARX is likely a promising investment for 2021. - Binance CEO Changpeng Zhao will give away a personalized Tesla. - Tweets have poured in on how crypto transformed their lives. Binance CEO Changpeng Zhao has been too active on Twitter lately. And it's been a dramatic week. The tweet currently pinned on CZ's Twitter page has been retweeted over 60,000 times, and it has almost as many likes. Just days ago, Musk slammed CZ on Twitter for blocking DOGE owners from withdrawing their coins. This created a Twitter feud when CZ grilled Musk over a recent Tesla recall. Elon, we are pretty certain it is an issue with the latest #doge wallet. We are in communications with the devs. Apologies for any inconvenience that may have caused you. â€" CZ ðŸ™‚ Binance (@cz_binance) November 23, 2021 What happened here? ðŸ™‚€https://t.co/g2J50zqbEu Musk's fondness for DOGE is nothing new, and his past claims that Dogecoin is â€œthe people's cryptoâ€ have led to accusations of market manipulation. To show his canine affinity, he even acquired a Shiba Inu puppy. Surprisingly, both organizations are up after the tweet. Tesla is up 4% today, but DOGE is up over 12%. In a contest launched on Twitter Monday, Binance CEO Changpeng Zhao will give away a personalized Tesla and \$50,000 worth of Dogecoin. I'm giving away a DOGE Tesla & \$50,000 in \$DOGE.

Which do you want? â€” CZ ðŸ”Œ Binance (@cz_binance) November 29, 2021 To enter: ðŸ”Œ, Retweet ðŸ”Œ, Follow @elonmusk, @binance, @cz_binance ðŸ”Œ, Have a KYC'd Binance account ðŸ”Œ, Tweet the prize you want & why with hashtags #DOGEorTesla & #Binance Our favorite answer from each 'team' will win. pic.twitter.com/A2VLB6fh4a Binance will choose one winner. The prize is a Tesla Model 3, which costs roughly \$45,000 new. Alternatively, the winner may choose to receive \$50,000 in Binance Coin (BNB) instead of the electric automobile. Tweets have poured in on how crypto transformed their lives and how the award would help pay for college. Another stated theyâ€™d donate the money to charity. The challenge comes days after Zhao, or CZ, publicly snubbed Tesla CEO Elon Musk. CZ has also tweeted on the need for liquidity. And mentioned valuation is nothing without liquidity. If I sell 0.01% of the company equity to someone for \$1 dollar, then the company is worth \$10,000. â€” CZ ðŸ”Œ Binance (@cz_binance) November 30, 2021 If I issue a coin with a 1T supply, and sell 1 of them to someone for \$1 dollar, then I have a \$1 trillion dollar coin. Valuations without liquidity doesnâ€™t mean much.

Changpeng Zhao, CEO of Binance, worldâ€™s leading digital asset exchange has revealed important key metrics. Mainly for how to list the cryptocurrencies on the Binance trading platform. The CEO disclosed this information in an interview with Forbes on Monday. Significantly, during the interview, CZ directly shared that a strong user base is the most important factor for listing a token in Binance. In addition, there are some major points like active users wallet address on blockchain, social media popularity and code commits. Besides all these, the number of active users will be the prominent indicator for a token to get listed on Binance. According to Binance exchange, the CEO works on a formula stating, if there is a large number of users, then the product will have a value. Binance Listing Tips CZ is more cautious about the volume of the users as the productivity is solely dependent on that calculation. For instance, if a digital currency has a huge volume of users, the profit of the currency will be valuable. And that is the easiest way to measure including the users statistics in the application form, he adds. Also, the CEO follows some listing measures on Binance network. He says, â€œOnly if the digital token has a large count of users, Binance will list it. That will be the overwhelming attribute to the exchange. Besides, even my opinion doesnâ€™t matter if the coin has a strong user base in the market.â€ Morever, with smart ideology, the CEO targets the profits concentrating more on trading volumes rather than listings. CZ very openly comments, even though I donâ€™t prefer meme tokens but if there is a popular community for the token, then it will be listed in Binance. Thus, following the same listing techniques, Binance encourages trading in more than 500 cryptocurrencies. It includes popular coins like Bitcoin (BTC), Ethereum (ETH) and its own native BNB tokens. Also trending meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB). However, as a leading cryptocurrency exchange in the U.S marketplace, Binance daily trading volume is almost around \$28 billion. Besides so many challenges in the industry, Binance still remains in the top list among other crypto exchanges in the marketplace.

- Shiba Inu has flipped Avalanche (AVAX). - On multiple occasions, SHIB has surpassed DOGE. Let us take a look at the top crypto gainers of the day. Shiba Inu (SHIB) On Tuesday morning, Shiba Inu (SHIB), a meme currency and Dogecoin competitor, achieved an intraday high of \$0.00005097, up 31.4 percent. According to CoinGecko, Shiba Inu hadnâ€™t traded over \$0.00005100 since November 19, when it went above \$0.00003660. The meme currency has gotten a lot of attention recently, thanks to the indirect help of Vitalik Buterin, co-founder of Ethereum. Shiba Inu has flipped Avalanche (AVAX) to become the 11th biggest cryptocurrency by market value. On multiple occasions, SHIB has surpassed DOGE in terms of the total market cap on CoinGecko. According to CoinMarketCap, the SHIBA INU price today is \$0.000052 USD with a 24-hour trading volume of \$9,108,222,166 USD. SHIBA INU is up 34.77% in the last 24 hours. Tezos (XTZ) Tezos is a smart contract-based blockchain network similar to Ethereum. But thereâ€™s a key difference: Tezos intends to provide the more sophisticated infrastructure to develop and improve without risking a hard fork. This has been a problem for both Bitcoin and Ethereum since its creation. Tezos holders have the ability to vote on protocol modifications suggested by the Tezos team. According to CoinMarketCap, the Tezos price today is \$5.47 USD with a 24-hour trading volume of \$809,631,184 USD. Tezos is up 16.22% in the last 24 hours. Stacks (STX) Stacks is a layer-1 blockchain system aimed to introduce smart contracts and Dapps to Bitcoin (BTC). These smart contracts are added to Bitcoin without compromising its great qualities, such as security and stability. Unlike typical applications, Dapps are open and modular, allowing developers to build on top of each otherâ€™s apps. Because Stacks is built on Bitcoin, everything is settled on the most extensively used and secure blockchain. According to CoinMarketCap, the Stacks price today is \$2.47 USD with a 24-hour trading volume of \$384,010,631 USD. Stacks have been up 13.13% in the last 24 hours.

- Shiba Inu enters into blockchain gaming. - Known as the â€”Shiba Inu gamesâ€™ the expectations are high as ever. - With the launch of the game, the price of SHIB is expected to rise up. The meme based crypto- the Shiba Inu (SHIB) has stolen the hearts of the entire crypto industry this year. Owing to its amazing spike up and steady surges throughout the second half of the year, I would personally vote SHIB as the altcoin of the year! Besides, to be frank no one ever expected that the SHIB will ever tackle and dethrone the mighty Dogecoin (DOGE). However, the year 2021 has witnessed it all. In spite of all this, the SHIB still remains in the bullish zone for the past few months, ever since it started spiking up, till to date. Moreover, many speculated after its first ATH in this year that itâ€™s too late for anyone to invest in SHIB. Yet, to everyoneâ€™s surprise, SHIB still continues to surge up constantly throughout. Furthermore, the main hot news for the current date is that Shiba Inu has planned strategically into entering the blockchain gaming platform. Accordingly, itâ€™s blockchain game the â€”Shiba Inu Gamesâ€™ is almost completed and is expected to be launched soon. The Shiba Inu Games The Shiba Inu Games is currently the biggest project Shiba Inu are currently working on. Also, the Shiba Inu Games will be a video game available primarily for mobile gaming with both Android as well as IOS. In addition to all this, the game is said to be entirely work upon the Shiba Inuâ€™s very own blockchain, the Shibarium. Moreover, the income generated through the game app purchase will be

directly used to burn both SHIB and LEASH. In such a situation, this will directly impact the price of SHIB, by increasing it by many folds. Development Head's Views Accordingly, the lead developer of SHIB, Shytoshi Kusama terms that this new project will be the complete future of blockchain gaming. In addition, the developer terms that they would be uniting with an AAA game studio and build the game together. Also, after extensive searches, finally a AAA game studio has accepted and agreed upon the project and the talks are on to the papers, explains Kusama. Besides, Kusama reveals that they will be working with William David Volk, an extinguished game designer.

- Shiba Inu tops the second most popular meme coin on Twitter. - SHIB's popularity reached 4.02 million mentions this November. - Meme coin's twitter performance remains strong despite its price slump. Shiba Inu is becoming the craziest meme coin among the investors community in recent days. It is grabbing the interest of users around the world. SHIB is continuing to gain huge popularity on social media with support from its community. Also many celebrities and stars are in favor of this special dog featuring meme coin. Despite its price slump in the market, SHIB brings in pride for its community. Yes, Shiba Inu is the second most popular meme cryptocurrency on Twitter this month. SHIB is playing its Twitter game stronger, achieving a total of 4.02 million mentions. SHIB- The Rock Star of Twitter Shiba Inu's trending rate is scoring high with its massive developments and achievements in just one month. SHIB is competing with the first large cryptocurrency, Bitcoin (BTC) popular among the entire crypto market. In addition, BTC ranks first with over 10 million mentions this November. Last week, Shiba Inu cheered for crossing over 1M wallet holders marking a magical milestone to remember. Also, SHIB records a surging level over 1200% during the second part of the year 2021. Besides, all these attributes were in flow after Shiba Inu marked its new ATH hitting up-to \$0.00008685 in October. Even though the popular meme coin is failing to maintain a bullish trend, the growth of SHIB adoption is increasing in the market. In recent days, Shiba Inu is being accepted as payment services in the merchants community. Additionally, many popular exchanges are stepping forward in listing the SHIB meme currency in spite of its price breakdown. Interestingly, Shiba Inu is making some magic to remain as the hot talk of the town. According to CoinMarketCap, SHIB stands at a price value of \$0.000038 which still remains on the red line dropping up to 4.00% in the last 24 hours. However, the red line indicator is least bothering the performance of Shiba Inu on social media. Thus, SHIB is triggering the curiosity among the entire crypto market as it will skyrocket to an unexpected level soon. The popular meme coin of 2021 is almost competing with the top digital currencies like BTC and ETH. Therefore, anything can happen as the crypto market is unpredictable!

- On October 27, Shiba Inu reached an all-time high of US\$0.00008841. - The memecoin is making small strides and reaching new milestones. The value of meme currencies like Shiba Inu and Dogecoin is surging as significant cryptos like Bitcoin and Ethereum remain flat. It is expected that SHIB will acquire value before 2022. The rising popularity of Dogecoin prompted copycats. One is Shiba Inu. It is no longer considered a duplicate of Dogecoin since the memecoin momentarily overtook DOGE and moved to eighth place in the top 10. On October 27, Shiba Inu reached an all-time high of US\$0.00008841, a 17,335,194% increase since creation. But a SHIB value without one zero looks a long way off. Elon Musk, the Godfather of Dogecoin, shared a photo of his Shiba Inu puppy on Twitter on October 1, 2021. This move directly impacted SHIB, indicating an impending price surge. Later, a Change.org petition urging Robinhood to include Shiba Inu in their trading portfolio garnered over 300,000 signatures. It triggered a tremendous price spike that propelled SHIB to new highs. Popular analyst Watcher.Guru says SHIB could reach \$0.0001 by the end of 2021. On Nov 23 he tweeted the same. #SHIB Could Reach \$0.0001 By the End of 2021. Claims Financial Analyst <https://t.co/ORpM53ZVir> Watcher.Guru (@WatcherGuru) November 22, 2021 Reaching New Milestones while the argument rages over whether Shiba Inu is off the radar, the memecoin is making small strides and reaching new milestones. SHIB's official Twitter account just exceeded 1.8 million followers, surpassing Ethereum's social media. This suggests that the so-called SHIB Army is alive and well to spread the digital token's popularity. It's improbable that SHIB will lose another zero this year. Shiba Inu, on the other hand, may be an excellent long-term investment, according to Wallet Investor. Price prediction so far is that it will conclude 2021 at US\$0.000048, and however, it is expected to grow to US\$0.000098 by the end of 2022. SHIB, expected to drop a zero in late 2022 or early 2023.

- Supposedly, SHIB will lose a zero in late 2022 or early 2023. - Ethereum's objective is to create a global platform for decentralized apps. Let us take a look at the top 3 Projects by social activity today as per CryptoDep. Bitcoin (BTC) The announcement of the newest COVID variation has sparked a new wave of investor fear, sending Bitcoin to \$54k and markets worldwide into the red. The fact that Bitcoin was the first cryptocurrency on the market gives it a distinct edge. It has built a global community of millions of supporters who create, invest, trade, and use Bitcoin and other cryptocurrencies on a regular basis. The birth of the first cryptocurrency paved the way for hundreds of more imitators. Bitcoin ranks at the top of the list for the top crypto based on social activity. <https://twitter.com/DYIammJul8> TOP #Crypto Projects by Social Activity CryptoDep (@Crypto_Dep) November 26, 2021 26 November 2021#BTC \$SHIB \$ETH \$CAKE \$DOGE #XTZ \$ADA #SAFEMOON \$CTK \$TCT pic.twitter.com/DYIammJul8 Shiba Inu (SHIB) An anonymous "Ryoshi" constructed Shiba Inu in August 2020. SHIB, based on Ethereum, calls itself the "Dogecoin killer". Shiba Inu, now switching from PoW to PoS. The memecoin was born after the DOGE triumph in 2020. It's unlikely that SHIB will lose a zero this year. But, according to Wallet Investor, Shiba Inu might be an "awesome" long-term investment. To conclude 2021 at US\$0.000048, it is expected to grow to US\$0.000098 by the end of 2022. Supposedly, SHIB will lose a zero in late 2022 or early 2023. Second, to Bitcoin ranks, SHIB, dominated heavily by the SHIB army, for top 3 crypto based on social activity. Ethereum (ETH) Ethereum's stated objective is to create a global platform for decentralized apps, enabling people worldwide to build and operate software resistant to censorship, outage, and fraud. Experts fear a downward channel aiming for \$3,600 by mid-December, representing an 18% loss from the current price of \$4,400. Ethereum bags the number three

spot for the top crypto based on social activity.

In VeChain (VET) Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about VET to analyze the future movement of the cryptocurrency. VeChain (VET) is a blockchain-related supply chain platform. Started in 2015 and launched in June 2016, VeChain focuses on using distributed governance and Internet of Things (IoT) technology to create an ecosystem which solves some of the major problems with supply chain management. VeChain (VET) Current Market Status According to CoinGecko, the VET price is trading at \$0.129 with a 24-hour trading volume of \$1,374,535,788, at the time of writing. However, VET has increased by 13.3% in the last 24 hours. In addition, VET has a circulating supply of 66,760,741,299 VET. Currently, VET trades in Binance, Tokocrypto, Huobi Global, Upbit, and FTX. VeChain (VET) Technical Analysis 2021 VeChain (VET) holds the 21st position on CoinGecko right now. The recent development and upgrades might push VET to reach new heights. Now, let's deep dive into the VET technical analysis 2021. The daily time frame chart of VeChain (VET) is shown below. Ascending Channel Trend pattern is the price action contained between upward sloping parallel lines. Moreover, if the pattern continues to the top side, then it will reach the \$0.7 level soon. VeChain (VET) RSI The below chart shows the relative strength index (RSI) of VET. As shown in the above chart, RSI remains at 79.56. This shows that VET's price is in a nearly overbought state. However, this shows that major price reversal can take place anytime. VeChain (VET) RVOL The below chart shows the Relative Volume of VET. It is an indicator that indicates to traders how the current trading volume has changed over a period of time compared to the previous trading volume. Currently, the RVOL of VET lies below the cutoff line which represents the weaker participants in the current trend. VeChain (VET) Moving Average VET's Moving Average (MA) is shown in the chart below. MA supports traders to find trends. Currently, VET is in a bullish state. Notably, the VET price is moving above 50-MA and 200-MA; this indicates that the crypto will go completely bullish in the future. However, major price reversal can take place anytime. VeChain (VET) Price Comparison With Bitcoin The below chart shows the price comparison between VET and BTC. From the chart, we can identify the trend of the BTC and VET is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of VET also increases or decreases respectively. Conclusion With the ongoing developments and upgrades that are taking place within the VET platform. VeChain has a great future ahead in this crypto market. However, VET can reach new heights. Bullish VET price prediction 2021 is \$0.8. As mentioned above, it may reach great heights, however reaching \$1, if investors have decided that VET is a good investment in 2021. FAQ VeChain is a blockchain-related supply chain platform. VET is the native token of VeChain network. VET is listed on many cryptocurrency exchanges that include Binance, Huobi Global, FTX, Upbit, and VCC Exchange. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the VET platform, it has the high possibility of reaching its new ATH soon. Disclaimer: The opinion expressed in this chart solely author's. In Beam (BEAM) Technical Analysis 2021, we use past statistics, price analysis, RVOL, MA, and much other information about BEAM to analyze the future trend of the cryptocurrency. Beam is a privacy coin whose goal is to explore confidential Def1. It employs the Mimblewimble protocol, which covers up transaction values and metadata while limiting blockchain bloating and enhancing scalability. Beam's confidential transaction mechanism allows for the creation and exchange of a variety of asset types. Mimblewimble (or MW), a blockchain design introduced in 2016 by pseudonymous Tom Elvis Jedusor, is a blockchain design that leverages the Proof-of-Work consensus mechanism to provide more privacy and improve network scalability. Beam (BEAM) Current Market Status According to CoinGecko, the BEAM price is trading at \$0.555 with a 24-hour trading volume of \$7,093,172, at the time of writing. However, BEAM has dropped by 3.60% in the last 24 hours. In addition, BEAM has a circulating supply of 93,463,760 BEAM coins. Currently, BEAM trades in Binance, Gate.io, BKEX, and Pionex. Beam (BEAM) Technical Analysis 2021 Beam (BEAM) holds the 453th position on CoinGecko right now. The recent development and upgrades might push BEAM to reach new heights. Now, let's deep dive into the BEAM technical analysis 2021. The daily time frame chart of Beam (BEAM) is shown below. A head and shoulders pattern is a chart formation that appears as a baseline with three peaks, the outer two of which are close in height and the middle of which is the highest. A head and shoulders pattern in technical analysis is a specific chart formation that predicts a bullish-to-bearish trend reversal. Currently, BEAM trades in a range of \$0.555. If the price breaks the trend line support level of \$0.46 then it will lead to a further drop up to the \$0.24 Level. If the pattern continues to the top side, then it will reach the \$1.97 level soon. Beam (BEAM) RSI The below chart shows the relative strength index (RSI) of BEAM. As shown in the above chart, RSI remains at 62.74. This shows that BEAM's price is in a nearly overbought state. This shows that traders have to trade carefully, however, major price reversal could take place. Beam (BEAM) RVOL The below chart shows the Relative Volume of BEAM. It is an indicator that indicates to traders how the current trading volume has changed over a period of time compared to the previous trading volume. Currently, the RVOL of BEAM lies below the cutoff line which represents the weaker participants in the current trend. Beam (BEAM) Moving Average Beam's Moving Average (MA) is shown in the chart below. MA supports traders to find trends. Currently, BEAM is in bearish state. However, BEAM price touches 50 MA (short-term), and it has a high chance of moving above 50-MA level. Possibly, BEAM can also move above 200 MA (long-term) soon. Once it moves above 50 MA and 200 MA level, it completely goes to a bullish state. Moreover, there is a high possibility of Trend reversal at any time. Beam (BEAM) Price Comparison With Bitcoin The below chart shows the price comparison between BEAM and BTC. From the chart, we can identify the trend of the BTC and BEAM is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of BEAM also increases or decreases respectively. Conclusion With the ongoing developments and upgrades that are taking place within the BEAM platform. Beam has a great future

ahead in this crypto market. However, BEAM can reach new heights. Bullish BEAM price prediction 2021 is \$1.97. As mentioned above, it may reach great heights, however reaching \$2.5 is also possible, if investors have decided that BEAM is a good investment in 2021. FAQ Beam is a privacy coin whose goal is to explore confidential DeFi. It employs the Mimblewimble protocol, which provides more privacy and enhances scalability. BEAM is listed on many cryptocurrency exchanges that include Binance, Gate.io, BKEK, and Pionex. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the BEAM platform, it has the high possibility of reaching its new ATH soon Disclaimer: The opinion expressed in this chart solely authorâ€™s. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Recommended for you

- SHIB community Cherishes for surpassing 1M holders. - Shiba Inu surged over 1200% during the second half of 2021. - Sky rocking meme coin marks a magical milestone to remember. Shiba Inu (SHIB) is creating huge hype in recent days with its price fluctuations and became the talk of the town. With many ups and downs, Shiba Inu is stepping forward achieving a remarkable milestone in crypto history. Yes, the entire SHIB community is cheering for successfully crossing the 1,00,000 wallet holders mark today. Notably, it will be a cherishing moment for achieving a memorable success in the year 2021. More so, as Shiba Inu is making its popular name â€œDogecoin Killerâ€ become true in the crypto market. SHIB Marks Magical Milestone In recent months, SHIB was heading up and became the dominant force among other altcoins in the marketplace. The special featured SHIB coin marked its ATH in October hitting up to \$0.000085 within a day. It is a peak point for Shiba Inu where all investors were trapped into its net. Moreover, the sky rocking meme coin excites its holders by growing exponentially during the Q3 of the year 2021 surpassing other coins in the market. Also, the unexpected hike of more than 900% in October caused the investors to become SHIB bandwagon. In addition, Shiba Inu became the star of the town and also a hot topic among the investorâ€™s association. As an additional advantage, SHIB is the first meme currency to be accepted as payment services in a short period. For instance, some popular cafes are encouraging Shiba Inu as their payment options. Also a real estate firm in Brazil and Argentina shared in public accepting SHIB as payment for customers to purchase their properties. Latesty, an American movie theater (AMC) reveals to accept SHIB coins as payment services in four months. However, all these great developments and achievements made Shiba Inu (SHIB) to become the popular meme coin of 2021. Besides, SHIB ranks as the most talked meme coin and expected to beat the crypto whales like Bitcoin and Ethereum in the near future.

- DOGE and SHIBA have lost 7.11 and 10% respectively in the last 24 hours. - This year Floki Inu emblem will be placed on the back of Napoliâ€™s shirts Dog meme crypto project Floki Inu (\$FLOKI) has won another remarkable strategic collaboration. The creators of FLOKI have teamed up with SSC Napoli of Italy. This year Floki Inu emblem will be placed on the back of Napoliâ€™s shirts and LED signs surrounding the teamâ€™s home stadium, S.S.C. Napoli announced on November 23. Floki has previously teamed with CÃ¡diz of the Spanish LaLiga and Kerala Blasters of the Indian Super League. FLOKI is an Ethereum-based coin with a market valuation of \$1.18 billion, according to CoinMarketCap. The four-hour chart of FLOKI/USD shows an asymmetrical triangle formed since November 15. The price of Floki Inu might climb beyond the triangleâ€™s resistance line if it rises over the immediate barrier at \$0.00018513. So FLOKI might hit the November 19 range high at \$0.0002359, up 38% from the current price of \$0.0001605. The rising MACD indicator adds to the optimism. Also, the MACD provided a buy signal yesterday when the blue MACD line crossed above the orange signal line, indicating a favorable market attitude. The rise in Floki Inu will gather momentum after the MACD crosses the zero line. FLOKI Vs SHIB and DOGE Conversely, negative RSI divergence indicates that the bears are still determined to drive the FLOKI price down. With the price of Dogecoin and Shiba Inu decreasing, FLOKI may surpass DOGE. DOGE and SHIBA have lost 7.11 and 10% respectively in the past day. However, FLOKI is still trading in a broad channel, bears have started to take the initiative. However, if sellers manage to break below \$0.00013258 on the daily chart, additional price declines may be in store. According to CoinMarketCap, the Floki Inu price today is \$0.0001605 USD with a 24-hour trading volume of \$31,658,540 USD. Floki Inu is down 6.31% in the last 24 hours.

Shiba Inu (SHIB) is a special featured dog breed from the popular DOGE community. It inspires millions of people around the world to eagerly invest in its tokens. Also SHIB is alternatively known as Dogecoin Killer in the crypto market. Besides, Shiba Inu marks the record as a popular meme coin of the year 2021. All of sudden, the sky rocking meme coin gained speed and value with a huge support from its community. Along with popular social media posts from famous personalities like Elon Musk and Vitalik Buterin in recent times. Shiba Inu Edged Down With a trending activity SHIB was the popular meme coin with sudden prices in past months. Unfortunately, Shiba Inu (SHIB) sloped down nearly 60% and remained on the same red line depressing itâ€™s holders. Moreover, SHIB set itâ€™s all time high reaching upto \$0.000086 on October 28, 2021. All investors were crazy about Shiba Inu adoption which resulted in a price surge. With these achievements, a twist occurred changing the value of SHIB upside down. Further, as per the record, Shiba Inuâ€™s market capitalization drops down to \$21.30B from around \$28.31B in just five days. This made a huge change in the crypto market resulting in a bearish trend at present. More specifically, the work Shiba Inu is dropping down in Google trends which indicates the bear cycle for the meme coin. According to CoinMarketCap, the current price of SHIB is \$0.000036 which is down up to 13.71% in the last 24 hours. With this, Shiba Inu is still around the red margin slipping in the marketplace. Besides surging to massive heights in recent months, Shiba Inu grabbed the attention of millions of users. Thus, traders are expecting for SHIB to rise again and showcase its uptrends with higher volumes. Also, SHIB is a potential meme coin which can aim high and achieve making a new all time reaching \$0.00010000. Thus, it will mark Shiba Inuâ€™s flagpoleâ€™s height in its history in the crypto market.

In 2016, Vitalik Buterin received a large amount of Dogecoin (\$ DOGE) and Shiba (\$ SHIB) meme tokens. The creators of the tokens transferred meme tokens to the wallet of the co-founder of Ethereum. Subsequently, other token issuers began donating certain amounts of their tokens to Vitalik Buterin. So it comes as no surprise that his recent acquisition of \$AAA has created a tidal wave of excitement and speculation as to what heights Moon Rabbit is capable of reaching. However, this is not the first time a celebrity or thought leader has made a move with \$AAA. And unlike all other meme coins, Moon Rabbit has a live Main-Net running Web3 infrastructure with Delegated Proof of Stake on Substrate, a radically more scalable framework than Ethereum. Those looking for the future of crypto beyond memes that have no real use case are starting to look at fundamentals, where Moon Rabbit shines. More Celebrities Taking Notice of \$AAA Several Hollywood stars and key influencers took to Twitter to let their followers know that they too were adding to their bags with what they believe is the next big thing in crypto. Legends like Skid Row frontman and Dogecoin Army leader Sebastian Bach, pro wrestling champion Finn Balor, Hollywood star Brian Cox (X-Men, Succession), Crypto Bitlord and many others have shown their support for Moon Rabbit, not to mention a quite obvious rabbit-like tweet from none other than Elon Musk himself – leading many to believe \$AAA could easily overtake crypto giants Shiba and Doge. A recent study by Etherscan showed that AAA tokens appeared on Vitalik Buterin’s wallet. What Is Moon Rabbit? At first sight, Moon Rabbit may seem like another meme. And with Founder Angel Versetti, creator of Dogecoin Foundation (doge.org) that led the revival of Dogecoin in 2020-2021, it may seem like the next big meme. In reality, Angel wanted memes to become meaningful. What if you take a memorable symbol that people can relate to and add a ground-breaking technology framework to it? This is Moon Rabbit, the world’s first Metachain – a Web3 infrastructure connecting all blockchains and cryptocurrencies under one meta-protocol. Running on Substrate and sharing the same core as Polkadot, it permits development of specialised blockchains with no limits to scalability. Among the earliest applications of Moon Rabbit include a commission-free NFT Marketplace and cross-chain composability. Several independent DEXes, the most prominent being Rabbitex and RabbitSwap, have sprung up on the infrastructure. Moon Rabbit is now also building out its own Metaverse, with Rad Rabbits, more on which below. With full integration of EVM, Ethereum Virtual Machine into Moon Rabbit, any smart contract powered applications can now be easily ported here, without the prohibitive gas costs on Ethereum. Versetti, a member Forbes 30 under 30 list in Finance, brings to the table a decade of experience in crypto, deeptech and entrepreneurship. As entrepreneur Angel has launched and exited several groundbreaking startups with up to \$1.2b valuation. Via his Global Family Office Conglomerate Versetti & Co he is engaged in deep-tech, life extension and astrophysics. Within the crypto space, his fund has made outsized bets on \$SYS, \$NMR, \$BAT, \$UMA and \$MLN. His dream is to merge molecular, hardware and digital constructs to enable humanity to live forever and build new worlds on other planets. The Future is Bright for the Bunnyverse With Metaverse becoming the next big narrative, Moon Rabbit is shaping up to be a serious contender with the introduction of its very own prolific Bunnyverse. Rad Rabbits combines NFT with GameFi to create a massively interactive play-to-earn world, with the initial collection of Rad Rabbits NFT to be offered exclusively to \$AAA holders. Higher network throughput unlocks the huge potential of Bunnyverse to evolve into a meta-gaming cluster. Instead of focusing on just one game, Moon Rabbit network will host multi-player games running in parallel, with infinite amount of in-game artefacts to be minted as NFTs and Metachain’s cross-chain interoperability becoming the key to permit NFTs and in-game items and achievements to cross from one world to another. Longevity industry connections or the recent surge of metaverse coins? – It remains to be seen what exactly piqued Vitalik’s interest in \$AAA. We are excited to see where the story takes us next! An exciting combo of CoinGate and Shib army working together integrating Shiba Inu (SHIB) as payment services. This creates a huge hype for the Shiba Inu community as users can trade and spend SHIB on anything they need. With great joy CoinGate announces that all its users including merchants, traders, Gift card shoppers can use SHIB. For multiple services like to buy, accept, trade or spend the meme coin on their favorite things. Sky-rocking meme coin Shiba Inu (SHIB) is a Ethereum based popular altcoin of the year 2021. Besides, SHIB is considered as an alternative to Dogecoin. And in fact it is famously known as Dogecoin Killer in the crypto community, with this cheer, CoinGate chose Shiba Inu as payment services due to recent trending activities in the crypto market. Also, CoinGate announces, SHIB holders can access wide options to purchase their things. However, even users who like to own the meme coin can buy SHIB with 1% rate on the trading system. Prior to this initiative, CoinGate introduced Shiba Inu (SHIB) to its gift store as the network is one of the best crypto gift card providers in the market. Besides, it helps the users to spend the SHIB cryptocurrency to purchase day-to-day expenses with this altcoin. In addition, expanding the Shiba Inu services all through CoinGate network, there is a massive score rising for SHIB. At present, more than 500 CoinGate merchants are accepting Shiba Inu (SHIB) as payments from their customers. In regards to this integration, the CEO of CoinGate, Dmitrijus Borisenka shares. “All digital currencies are worth becoming a paying currency. So we are happy to integrate Shiba Inu for our community. In addition, Shiba Inu and Dogecoin are the trending meme coins of 2021. Also, both the cryptocurrencies have a huge trend in the marketplace with great support from its community and through social media posts. As a note, they are the same breed of dog, he adds. - Musk had previously released a photo of his new pet dog called “Floki”. - Famous crypto analyst

watcher.guru posted a critical fact. Dogecoin inspired the authors of this currency. The makers of Shiba Inu want SHIB to be more than a joke. The SHIB Token is an Ethereum ERC-20 compliant token, and this community calls it the "Dogecoin Killer." Many coin holders support and promote the token on social media sites like Reddit and Twitter. Cryptocurrencies that have no cause to be at the top frequently get puffed up in a turbulent and unpredictable market. However, a tweet from Tesla CEO and Dogecoin investor Elon Musk has inflated the currency. Musk had previously released a photo of his new pet dog called "Floki", causing the price of Shiba Inu (SHIB) to rise. After Musk tweeted another photo of the dog with the caption "Floki Frunkpuppy," the token's price skyrocketed. Since Dogecoin's excitement has waned, many new crypto fans have been actively promoting Shiba Inu Coin. Musk, a longtime supporter of Dogecoin, is now the face of SHIB price fluctuations since his pet has become an online sensation. Experts say that such a sudden rise in the token's price is not good for investing. Investors expect the coin's value to climb to roughly \$0.000018 in a year. No major crypto market analyst or business predicts a \$1 coin in the next three to four years. Astonishing Year-to-Date Gains Famous crypto analyst Watcher.Guru posted a critical fact about Shiba Inu recently, mentioning the price of the token a year back and the gain it provided to its holders. On this day one year ago, 1 \$SHIB was worth 0.000000000001. â€" Watcher.Guru (@watcherguru) November 23, 2021 Today, one #SHIB is worth 0.000044, that's a 55,200,000% increase in 365 days. pic.twitter.com/D8HYkYIx01 SHIB, which began as a joke, gained traction when its founders revealed their plans to build an NFT network modelled on the Shiba Inu Network. Earlier last year, when Vitalik burnt approximately half of Shiba Inu supply, the coin's price soared. Recommended for You - Ripple Vs. - Bitcoins soared to an all-time high of \$64,000 in April. - Elon Musk's tweet increased the currency tenfold. Elon Musk showed no interest in Bitcoin for 11 years after it was launched in 2009. Then, in early February 2021, he stated that Tesla had acquired \$1.5 billion in coins, which boosted the cryptocurrency to new highs. That phenomenon is now known as the "Elon Musk" effect. A tweet from Elon Musk boosted the value of the Dogecoin offshoot Floki Inu coin by 30% in early October. Musk owns a Shiba Inu, a Japanese dog breed called Floki. Elon Musk Effect Elon Musk's tweets have previously enraged crypto investors. Musk said in March 2021, "I am getting a Shiba Inu." He tweeted he named Shiba Inu, Floki, on June 25. An image of his dog lying on the rug was shared on September 12. Floki Inu increased 1,000% by September 15 due to these tweets. So, in three days, Elon Musk's tweet increased the currency tenfold. When Musk stated Tesla acquired \$1.5 billion worth of bitcoins in February, the cryptocurrency soared 20% in one day. On February 4, he said, "Dogecoin is the people's crypto," prompting a 50% increase in one day. Overall, Dogecoin has risen 15,000% in a year due to Elon Musk's backing through Twitter. Bitcoins soared to an all-time high of \$64,000 in April after Musk revealed Tesla would accept bitcoin payments. But shortly after he warmed up to bitcoins, he declared his newfound love for Floki. Musk declared in May that Tesla would not take bitcoins due to environmental concerns. He is worried about the increased usage of fossil fuels for bitcoin mining and transactions, particularly coal, which generates the maximum pollution. He said bitcoin was a good concept, but not at the expense of the environment. Bitcoin dropped 10% following the tweet. At least 50% of my tweets were made on a porcelain throne â€" Elon Musk (@elonmusk) November 22, 2021 Following the news, the number one cryptocurrency fell 27%. In the same month, Dogecoin fell by roughly 20%. Now, Elon Musk has posted a new tweet, "At least 50% of my tweets were made on a porcelain throne." Leaving netizens wondering what's coming up next. - Shiba Inu's official Twitter account has recently uploaded a short video. - Scammers are already circling the Shiba Inu community. Shiba Inu (SHIB), a decentralized cryptocurrency inspired by Dogecoin, is gaining popularity and recognition. Moreover, scammers are already circling the Shiba Inu community, endangering the project's long-term survival. Thus, Shiba Inu's official Twitter account has recently uploaded a short video explaining a recent widespread scam: Stay Alert & Safe #ShibArmy! â€" Shib (@shibtoken) November 21, 2021 We've been made aware of a recent scam, traveling social media, and other communication platforms. Here's a quick video to provide more information on the matter. pic.twitter.com/U0h50wsJSQ Furthermore, this fraud involves Shiba Inu owners being duped into giving over their wallet keys, email addresses, or passwords. Freebies and other advantages are used to entice SHIB community members to join these organizations. Moreover, keep in mind that the Shiba Inu project is new. Scams like these might shake the community's confidence and stop the token's general adoption. According to Vegas Auto Gallery, Shiba Inu token users may now buy a vehicle with their SHIB tokens: Now that we accept #SHIBA let's us know what cars you'd buy! pic.twitter.com/pfPaw22Hos â€" Vegas Auto Gallery (@vautogallery) November 20, 2021 On November 9th, we revealed that AMC Entertainment would accept Dogecoin and other cryptocurrencies, including the SHIB token. That deal, made last week. According to CEO Adam Aron, AMC will incorporate Shiba Inu's SHIB token into their payment system within four months: Attention #SHIBArmy: Our friends @Bitpay decided to support Shiba Inu specifically because I asked, so AMC can take Shiba Inu for online payments of movie tickets and concessions. @AMCtheatres to be the first @bitpay client to accept Shiba Inu. Timing 60-120 days. This is a WOW! pic.twitter.com/F54i22hHDv â€" Adam Aron (@CEOAdam) November 15, 2021 Listing on Major Exchanges The number of exchanges that take Shiba Inu is also growing, with Gemini Exchange being the newest to join. Moreover, of course, SHIB supporters are still waiting for confirmation from Kraken and Robinhood. The Shiba Inu project, well known for its native peer-to-peer

crypto exchange, Shibaswap. Moreover, SHIB is an Ethereum ERC-20 coin. Only 549.095 trillion SHIB coins remain in circulation, with the remainder primarily burned by Ethereum co-founder Vitalik Buterin. According to CoinMarketCap, the SHIBA INU (SHIB) price today is \$0.000045 USD with a 24-hour trading volume of \$1,659,982,115 USD. SHIBA INU has been down 3.00% in the last 24 hours. - Bullish Gifto price prediction ranges from \$0.05 to \$0.14 - Gifto price might also reach \$1 soon. - Gifto bearish market price prediction for 2021 is \$0.024 In Gifto (GTO) price prediction 2021, we use statistics, price patterns, RSI, and much other information about GTO to analyze the future movement of the cryptocurrency. Gifto is the application tokens unveiled in 2017. Moreover, the token is launched on Binance launchpad. The platform has released many innovations, including the largest crypto wallet for wide market use. More so, the highest active user blockchain game, and other mass consumer apps. However, Gifto Chain and wallet is created by global contributors over technology, operations, partnerships, and community. According to CoinGecko, the GTO price is trading at \$0.03349 with a 24-hour trading volume of \$7,434,180, at the time of writing. However, GTO has increased by 5.39% in the last 24 hours. Moreover, GTO has a circulating supply of 770,236,879.20 GTO. Currently, GTO trades in cryptocurrency exchanges such as Binance, OKEx, Upbit, B1ONE, and VCC Exchange. Gifto (GTO) Price Prediction 2021 Gifto (GTO) holds the 543rd position on CoinGecko right now. GTO price prediction 2021 explained below with a daily time frame. The above chart shows the Symmetrical Triangle patterns. Generally, a symmetrical triangle is made up of a downward diagonal upward trend line and an upward diagonal downward trend line. When the price rises, it will inevitably break through the upper trend line to break, and in an uptrend, the price will rise or break. A lower trend line forms a breakthrough and a downward trend in which prices fall. In the daily time frame chart, if the price of the GTO breaks the resistance level of \$0.093, it will reach the target of \$0.162. Or else, if the price of the GTO breakout the support level of \$0.024 means it will fall to the next support level at \$0.015. So, the trend of the GTO is based on the breakout. Gifto (GTO) Support and Resistance Level The below chart shows the support and resistance level of GTO. From the above daily time frames, it is clear the following are the resistance and support level of GTO. - Resistance Level 1 â€" \$0.055 - Resistance Level 2 â€" \$0.091 - Resistance Level 3 â€" \$0.14 - Support Level 1 â€" \$0.027 - Support Level 2 â€" \$0.017 - Support Level 3 â€" \$0.011 The charts show that GTO has performed a bullish trend over the past month. If this trend continues, GTO might run along with the bulls overtaking its resistance level at \$0.055. Conversely, if the investors turn against the crypto, the price of GTO might plummet to almost \$0.027, a bearish signal. Gifto (GTO) Average Directional Index (ADX) Now let's look at the average directional index (ADX) of GTO. Generally, the Average Directional Index (ADX) helps traders determine the strength of a trend, rather than its actual direction. It can be used to determine whether the market is changing or a new trend is starting. It is associated with the Directional Movement Index (DMI) and basically includes the ADX line. The range of the oscillator is from 0 to 100. A high value indicates a strong trend, and a low value indicates a weak trend. It is often combined with directional indicators. The above chart shows the ADX of GTO stays above the range of 10.58, so it indicates a sideways trend. Conclusion The GTO is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term GTO price prediction 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$1.05 this year. However, this will only happen if it breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the GTO ecosystem, it could experience a great future ahead in 2021. It may reach \$0.5 soon and it might even reach high heights, however reaching \$1 if investors have planned that GTO is a good investment in 2021. In Stellar (XLM) Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about XLM to analyze the future movement of the cryptocurrency. Stellar was launched in July 2014. It is an open network that enables cash to transfer and store. At the launch, its main goal was energizing financial inclusion by achieving the world's unbanked. Later, its priorities changed to help financial firms connect with one another through blockchain technology. Stellar (XML) Current Market Status According to CoinGecko, the Stellar price is trading at \$0.411 with a 24-hour trading volume of \$2,080,251,465, at the time of writing. However, XLM has decreased by 15.4% in the last 24 hours. Moreover, XLM has a circulating supply of 23,107,442,314 XLM and a maximum supply of 50,000,000,000. Currently, XLM trades in Binance, Huobi Global, OKEx, FTX, and CoinTiger. Stellar (XLM) Technical Analysis 2021 The recent development and upgrades might push Stellar (XLM) to reach new heights. Now, let's deep dive into the Stellar (XLM) technical analysis 2021. XLM holds 16th position on CoinGecko right now. The weekly time frame chart of Stellar (XLM) is shown below. The above chart shows in the range of \$0.19 and \$0.29, XLM forms a consolidation zone in 2019. However, the consolidation zone refers to the coin oscillating between a well-defined pattern of trading levels. Moreover, this month XLM price has dropped to \$0.29 level. XLM price shows uptrend from that level, since it touched the previous consolidation level. This indicates the price reversal of XLM. The daily time frame chart of Stellar (XLM) is shown above. The chart shows XLM has made a strong buyer's volume two times before the recent crash. In addition, due to the recent crash in the crypto market, the XLM holders panicked and sold the coin, resulting in high volume. However, this volume level is still less than the buyer's volume. This indicates only the panic selling of XLM, and still

many hold the coin. Added to this, the XLM has moved to show a bull trend, as a result forming a big tail at the demand area. This indicates there are more buyers at this level. Stellar (XLM) RSI, MACD, and MA The below chart shows the Moving Average Convergence/Divergence (MACD) of XLM. Notably, the MACD (blue) continues to stay just below the signal indicator (orange line). This means that cryptocurrency traders can still expect more bearish days ahead. In contrast, if the MACD begins to move above the signal indicator and performs a bearish crossover. Then the crypto has a high possibility of reaching new highs. Now let's look at the relative strength index (RSI) of XLM. As shown in the chart above, the RSI remains at level 37. This shows that XLM's price is in a nearly oversold state. However, this gives confidence for the traders to trade without any fear. XLM's 200-day Moving Average (MA) is shown in the chart below. Notably, 200-day MA is one of the important support levels used to determine the overall long-term run of the market trend. Since the indicator shows a bullish move and stays above the 200-day MA, this indicates an overall uptrend. In contrast, if the signal indicator drops below the 200-day MA, the market shows an overall downtrend. From the beginning of 2021, it is clear that the XLM price has shown many bullish patterns. Furthermore, taking all these into account, XLM could have a competitive market in 2021. Conclusion With the ongoing developments and upgrades that are taking place within the XLM platform. The cryptocurrency XLM has a fantastic future ahead in this crypto market. However, it is possible to see XLM reaching new heights. Bullish XLM price prediction 2021 is \$1.5. As said above, it may reach great heights, however reaching \$5 if investors have decided that XLM is a good investment in 2021. FAQ Where can you purchase XLM? XLM is listed on many cryptocurrency exchanges that include Binance, Huobi Global, OKE, FTX, and CoinTiger. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. Will XLM reach a new ATH soon? With the ongoing developments and upgrades within the XLM platform, it has the high possibility of reaching its ATH soon. Is the Stellar Network Secured? This network is secured utilizing the Stellar Consensus Protocol, which is explained with four main properties such as decentralized control, low latency, flexible trust, and asymptotic security. - Bullish Bella Protocol price prediction ranges from \$2.21 to \$4.48. - Bella Protocol prices might also reach \$5 soon. - BEL bearish market price prediction for 2021 is \$0.95. In Bella Protocol (BEL) price prediction 2021, we use statistics, price patterns, ADX, and much other information about BEL to analyze the future movement of the cryptocurrency. Bella Protocol is a platform that offers a suite of DeFi products developed to make crypto banking simpler and more accessible. Moreover, the protocol focuses on creating a better user experience by eliminating the high fee and slow transaction problems that can affect some blockchain platforms. However, simultaneously improving the user experience via its simplified DeFi smart portal. Let us see about the Bella Protocol price prediction 2021. Current Market Status of Bella Protocol (BEL) According to CoinGecko, the Bella Protocol price is trading at \$1.92 with a 24-hour trading volume of \$16,383,557, at the time of writing. However, Bella Protocol has decreased by 4.2% in the last 24 hours. Currently, Bella Protocol trades in cryptocurrency exchanges such as Binance, Bilaxy, and many more. Bella Protocol (BEL) Price Prediction 2021 Bella Protocol (BEL) holds the 436th position on CoinGecko right now. Bella Protocol price prediction 2021 explained below with a daily time frame. Descending channel trend, designed between downward sloping parallel lines. Lower highs and lower lows characterize this price pattern. Channel trends are used commonly to confirm trends and identify breakouts and reversals. Descending channel trend shows an absolute downtrend. Traders can swing trade between the pattern's support and resistance levels or trade in the directions of a breakout. Currently, BEL is trading at \$1.981. After this, BEL may continue to fall or rise according to the direction of breakout. With this pattern, BEL might reach the resistance level at \$2.84 soon, if the trend breaks out at \$2.22. If the trend reverses, then the price of BEL may fall to \$1.41. Bella Protocol (BEL) Support and Resistance Level The below chart shows the support and resistance level of Bella Protocol (BEL). From the above chart, it is considered that the following are the resistance and support levels of Bella Protocol (BEL). - Resistance Level 1 - \$2.21 - Resistance Level 2 - \$2.83 - Resistance Level 3 - \$4.48 - Support Level 1 - \$1.41 - Support Level 2 - \$0.95 The chart depicts the bullish performance of Bella Protocol over the previous month. However, this trend will continue to reach a resistance level at \$4.48 soon. Even more, if the trend reversed then Bella Protocol might fall to \$0.95 presenting a bearish signal. Bella Protocol (BEL) Average Directional Index (ADX) Let us now look at BEL's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of Bella Protocol. Currently, Bella Protocol lies in the range at 13.853, so it indicates a weak trend. Conclusion Bella Protocol is one of the cryptos which is great for long-term investment. In addition, Bella Protocol price prediction is bullish for a short-term. It has a good chance of reaching \$9.99 within the end of this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the Bella Protocol ecosystem, the performance of Bella Protocol would rise reaching \$2.83 very soon. But, it might also reach \$5 if the investors believe that Bella Protocol is a good investment in 2021. Disclaimer: The opinion expressed in this chart solely author's. - Bullish DOCK price prediction ranges from \$0.11 to \$0.18. - DOCK price might also reach \$0.27 soon. - DOCK bearish market price prediction for 2021 is \$0.03 In DOCK price prediction 2021, we use

statistics, price patterns, ADX, and much other information about DOCK to analyze the future movement of the cryptocurrency. The Dock is a platform designed to provide businesses and developers with an easy solution to create, manage and present digital credentials that can be instantly verified using blockchain technology. With a separate blockchain and integrated payment and reward token, a robust network of validators, and seamless interoperability and adaptability, the Dock is part of a movement to solve problems, common problems with existing data and how it is collected, shared and controlled. As per CoinGecko, the DOCK price is trading at \$0.111 with a 24-hour trading volume of \$10,722,296, at the time of writing. DOCK has increased by 1% in the last 24 hours. Moreover, DOCK has a circulating supply of 690,645,623 DOCK. Currently, DOCK trades in cryptocurrency exchanges such as Binance, CoinTiger, Huobi Global, BiONE, and ZT. DOCK Price Prediction 2021 DOCK holds the 495th position on CoinGecko right now. DOCK price prediction 2021 explained below with a daily time frame. An ascending triangle is considered a continuation pattern, which means that it is significant whether it occurs during an uptrend or a downtrend. When the price breaks out of the triangle, traders tend to buy or sell the asset aggressively, depending on which direction the price broke out. Currently, DOCK is wavering at \$0.11. After this, DOCK may continue to fall or rise according to the breakout. With this pattern, DOCK will violate the upper trendline reaching \$0.114 soon. If the trend reverses, then the price of DOCK may fall to \$0.036. DOCK Support and Resistance Level The below chart shows the support and resistance level of DOCK. From the above daily time frame, it is clear the following are the resistance and support level of DOCK. - Resistance Level 1 â€" \$0.11 - Resistance Level 2 â€" \$0.18 - Resistance Level 3 â€" \$0.27 - Support Level 1 â€" \$0.05 - Support Level 2 â€" \$0.03 - Support Level 3 â€" \$0.01 The charts show that DOCK has performed a bullish trend over the past month. If this trend continues, DOCK might run along with the bulls overtaking its resistance level at \$0.27. Conversely, if the investors turn against the crypto, the price of DOCK might plummet to almost \$0.01, a bearish signal. DOCK Average Directional Index (ADX) Now let's look at the average directional index (ADX) of DOCK. Generally, the Average Directional Index (ADX) helps crypto traders identify the strength of a trend, instead of its actual direction. It can be used to check whether the market is changing or a new trend is initiating. It is associated with the Directional Movement Index (DMI) and basically includes the ADX line. The range of the oscillator is from 0 to 100. A high value represents a strong trend, and a low value shows a weak trend. It is often combined with directional indicators. The above chart shows the ADX of DOCK stays above the range of 51.17, so it indicates a very strong trend. Conclusion The DOCK is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term DOCK price prediction 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$0.24 this year. This will only happen if it breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the DOCK ecosystem, it could experience a great future ahead in 2021. It may reach \$0.18 soon and it might even reach high heights, however reaching \$0.27, if investors have planned that DOCK is a good investment in 2021. - Bullish RAMP price prediction ranges from \$0.38 to \$0.57. - The RAMP price might also reach \$1. - RAMP bearish market price prediction for 2021 is \$0.12. In RAMP price prediction 2021, we use statistics, price patterns, ADX, and much other information about RAMP to analyze the future movement of the cryptocurrency. RAMP DeFi is a decentralized protocol that aims to drive the adoption of DeFi by allowing non-Ethereum (ETH) users to deposit tokens on the ETH platform. At the same time, Ethereum users can interact with the RAMP protocol and increase their profitability. RAMP DeFi enables leveraged capital from non-ERC20 gambling blockchains with a stable currency called rUSD issued on the Ethereum blockchain. The main result of this is to maximize capital efficiency in multi-layered digital assets, where users are rewarded for participation by unlocking liquidity in shared assets and accumulating multiple streams of profit at the same time. Users already using the Ethereum blockchain can earn eUSD by depositing their ERC20 stablecoins into the eUSD RAMP liquidity pool. Current Market Status of RAMP According to CoinGecko, the price of RAMP is \$0.38 with a 24-hour trading volume of \$41,176,587 at the time of writing. However, RAMP has increased by 5.1% in the last 24 hours. Moreover, RAMP has a circulating supply of 338,972,185 RAMP coins. Currently, RAMP trades in cryptocurrency exchanges such as Binance, FTX, ZT, Hotcoin Global, and HitBTC. RAMP Price Prediction 2021 RAMP holds the 370th position on CoinGecko right now. RAMP price prediction 2021 explained below with a daily time frame. A descending triangle is a bearish chart pattern that is created by drawing one trend line that connects a series of lower highs and a second horizontal trend line that connects a series of lows. It is a sign for traders in a short position to accelerate a breakdown. Among the traders descending triangle is a very popular chart pattern because it clearly shows the demand for an asset. Currently, RAMP is trading at \$0.38. After this, RAMP may continue to fall or rise according to the direction of breakout. With this pattern, RAMP might reach the resistance level at \$0.5 soon, if the trend breaks out at the first resistance level \$1. If the trend reverses, then the price of RAMP may fall to \$0.16. RAMP Support and Resistance Level The below chart shows the support and resistance level of RAMP. From the above chart, it is observed that the following are the resistance and support level of RAMP. - Resistance Level 1 â€" \$0.38 - Resistance Level 2 â€" \$0.57 - Resistance Level 3 â€" \$1 - Support Level 1 â€" \$0.28 - Support Level 2 â€" \$0.19 - Support Level 3 â€" \$0.12 The chart depicts the bearish performance of RAMP over the previous month. However, this trend will continue to reach resistance level at \$1 soon. On the contrary, if the trend reversed then RAMP might fall to \$0.12 presenting a bearish signal. RAMP Average Directional Index (ADX) Let us now look at RAMP's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators.

The above chart represents the ADX of RAMP with the range at 60.88, so it indicates a very strong trend. Conclusion The RAMP is one of the cryptos which is great for long-term investment. In addition, RAMP price prediction will be bearish or bullish, until the breakout direction is confirmed. But, it has a good chance of reaching \$1.01 this year. However, this will only happen if many previous psychological barriers are broken. Furthermore, with the advancements and upgrades on the RAMP ecosystem, the performance of RAMP would rise reaching \$0.5 very soon. But, it might also reach \$1 if the investors believe that RAMP is a good investment in 2021. Disclaimer: The opinion expressed in this chart solely author's. - Bullish SHR price prediction ranges from \$0.05 to \$0.09. - SHR price might also reach \$0.2 soon. - SHR bearish market price prediction for 2021 is \$0.02 In ShareToken (SHR) price prediction 2021, we use statistics, price patterns, RSI, and much other information about SHR to analyze the future movement of the cryptocurrency. ShareToken is a digital utility token which is utilized to make payments for sharing services over industries and geographies on the ShareRing platform, that includes the ShareRing application, ShareRing shop and each user's ShareRing ID. ShareRing is a blockchain-based open-source platform which makes use of distributed ledger technology and a dual token mechanism. As per the developers and founders of the ShareRing platform, the current service sharing economy is incredibly fragmented and multi-faceted, which could be overwhelming for users. The use of ShareToken on the ShareRing platform overcomes this problem by providing a single decentralized marketplace and crypto asset that helps users securely access services over the world and pay for them. In 2019, the founders of the platform and its respective crypto turned their focus to the travel industry and created TravelRing which is the first B2B consumer-first example of which is possible using the ShareRing platform. Besides being used to pay for transaction fees on the ShareRing network, SHR tokens could also be staked to earn rewards called flowbacks. As per CoinGecko, the SHR price is trading at \$0.0371 with a 24-hour trading volume of \$951,677, at the time of writing. ShareRing has decreased by 2.2% in the last 24 hours. Moreover, ShareRing has a circulating supply of 2,418,778,639 SHR. Currently, SHR trades in cryptocurrency exchanges such as KuCoin, BitMart, Bithumb Global, lynch Exchange, and ProBit Global. ShareRing (SHR) Price Prediction 2021 ShareRing (SHR) holds the 441th position on CoinGecko right now. ShareRing price prediction 2021 explained below with a daily time frame. Descending channel trend, designed between downward sloping parallel lines. Lower highs and lower lows characterize this price pattern. Channel trends are used commonly to confirm trends and identify breakouts and reversals. Descending channel trend shows an absolute downtrend. Traders can

swing trade between the pattern's support and resistance levels or trade in the directions of a breakout. In the daily time frame chart, if the price of the SHR breaks the resistance level of \$0.05, it will reach the target of \$0.09. Else, if the price of the SHR breakout the support level of \$0.02 means it will fall to the next support level at \$0.01. So, the trend of the SHR is based on the breakout. **SHR Support and Resistance Level** The below chart shows the support and resistance level of SHR. From the above daily time frames, it is clear the following are the resistance and support level of SHR. - Resistance Level 1 â€" \$0.05 - Resistance Level 2 â€" \$0.09 - Support Level 1 â€" \$0.02 - Support Level 2 â€" \$0.01 The charts show that SHR has performed a bullish trend over the past month. If this trend continues, SHR might run along with the bulls overtaking its resistance level at \$0.09. Conversely, if the investors turn against the crypto, the price of SHR might plummet to almost \$0.01, a bearish signal. ShareRing (SHR) Average Directional Index (ADX) Now let's look at the average directional index (ADX) of SHR. Generally, the Average Direction Index (ADX) helps crypto traders identify the strength of a trend, instead of its actual direction. It can be used to check whether the market is changing or a new trend is initiating. It is associated with the Directional Movement Index (DMI) and basically includes the ADX line. The range of the oscillator is from 0 to 100. A high value represents a strong trend, and a low value shows a weak trend. It is often combined with directional indicators. The above chart shows the ADX of SHR stays above the range of 21, so it indicates a weak trend. Conclusion The SHR is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term SHR price prediction 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$0.09856 this year. This will only happen if it breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the SHR ecosystem, it could experience a great future ahead in 2021. It may reach \$0.05 soon and it might even reach high heights, however reaching \$0.09, if investors have planned that SHR is a good investment in 2021. - SHIB is a dog-themed coin that has created its own DEX. - Altcoins often rise during the boom period but come with larger risks. During the 2021 Bull Run, cryptos soared. Altcoins, DeFi blue chips, and even meme coins doubled in value in days to months. This price increase occurs throughout every boom cycle. Like equities, crypto goes through boom and bust cycles. Altcoins often rise during the boom period but come with larger risks. However, choosing altcoins, let alone penny cryptocurrencies, is not straightforward. So, this article looks at a list of penny cryptocurrencies that may explode in the Bull Run's second leg. There are three types of penny coins: meme coins, remittance tokens, and real-world blockchain tokens. Which penny cryptos should you purchase in 2021? Dogecoin (DOGE) The original meme currency, DOGE. According to CoinMarketCap, the Dogecoin (DOGE) price today is \$0.238153 USD with a 24-hour trading volume of \$1,641,612,075 USD. It has been down 0.95% in the last 24 hours. Shiba Inu (SHIB) SHIB is a dog-themed coin that has created its own DEX. According to CoinMarketCap, the Shiba Inu (SHIB) price today is \$0.000048 USD with a 24-hour trading volume of \$2,600,495,505 USD. It has been down 2.55% in the last 24 hours. Ripple (XRP) XRP is the remittance coin that might explode if they win the current litigation. According to CoinMarketCap, the Ripple (XRP) price today is \$1.10 USD with a 24-hour trading volume of \$3,903,857,565 USD. It is up 0.42% in the last 24 hours. Stellar (XLM) Like XRP, XLM might gain a lot if the SEC v. Ripple lawsuit goes against it. According to CoinMarketCap, the Stellar (XLM) price today is \$0.347121 USD with a 24-hour trading volume of \$765,703,528 USD. Stellar is down 0.08% in the last 24 hours. VeChain (VET) It has lately joined China's \$1 billion pet food sector. According to CoinMarketCap, the VeChain (VET) price today is \$0.144825 USD with a 24-hour trading volume of \$934,492,469 USD. VeChain has been down 2.61% in the last 24 hours. Recommended for You

- Musk held a tiny Bitcoin stake for a long time. - Musk is now the public face of Dogecoin. Investors pay heed to Elon Musk's tweets. Tesla and SpaceX CEO Elon Musk has long endorsed cryptocurrency. But cryptocurrency investors might sometimes idolize Musk. For example, when Musk tweets photographs of his Shiba Inu puppy, the value of Shiba Inu rises. Is it true that a billionaire's puppy picture increases the value of cryptocurrency? Musk only owns a few cryptocurrencies. Shiba Inu isn't one of them. 1. Bitcoin (BTC) In 2017, speculations surfaced that Musk was Satoshi Nakamoto, the enigmatic inventor of Bitcoin. Musk refuted them. But he's been a long-time supporter of Bitcoin. Tesla acquired \$1.5 billion worth of Bitcoin earlier this year. It began Bitcoin as payment for its electric automobiles. But, owing to worries over energy use, it only lasted a few months. Tesla would likely begin taking Bitcoin, Musk stated later. Musk held a tiny Bitcoin stake for a long time. In early 2019, he claimed to hold just 0.25 Bitcoins, given to him by a friend. His biggest cryptocurrency ownership is Bitcoin, which he acknowledged during the summer. 2. Dogecoin (DOGE) Musk is now the public face of Dogecoin. His links to Bitcoin go back at least three years. To remove fraudulent bots from his Twitter account, Musk asked Dogecoin founder Jackson Palmer for aid. By 2020, Musk was sometimes tweeting about Dogecoin. Each tweet increased the digital coin's value. The largest exposure occurred in May when Musk presented Saturday Night Live. On the broadcast, Musk dubbed himself "the Dogefather." However, Dogecoin fell after he called the cryptocurrency "a hustle" on Saturday Night Live. 3. Ethereum (ETH) Musk's first public interaction with Ethereum (ETH) was a flop. The scam he asked Dogecoin's inventor for assistance involved twitter users posing as famous persons giving away massive quantities of Ether tokens. His April 2019 one-word tweet "Ethereum" sparked interest in cryptocurrency. In response, Musk and Ethereum co-founder Vitalik Buterin exchanged emails. - Shiba Inu is bullish after breaking above a diagonal barrier. - The bulls tried to push SHIB over the weekly mid-price. In the final week of October 2021, the Shiba Inu hit a peak of \$0.00008845. Shiba coin has also grown by nearly 69% in recent months. SHIB has traded in the region of \$0.0000512 to \$0.00005537 in the past 24 hours, with \$0.000056 being the next barrier. In a downtrend, support is at \$0.000044. The RSI is balanced at 51.86, and the moving averages are also neutral. In addition, a well-known crypto strategist and trader believes Shiba Inu (SHIB) is about to hit an all-time high. Bullish Momentum Shiba Inu is bullish after breaking above a diagonal barrier that has held Shiba negative in previous weeks, according to analyst Scott Melker. He says he purchased SHIB when it was breaking out and believes it will re-test its all-time high. Scott stated: "This thing has a ton of volume. We're seeing this four-hour candle is the biggest in a few days, breaking out. I love that. My target's up here (\$0.000089). A 219 percent increase from October 23 to 28 saw SHIB hit an all-time high of \$0.0000885. Analysts call this climb a "Flagpole". The price of Self-claimed DOGEKILLER steadied after a wild surge with lower highs and higher lows. Bulls tried to push SHIB over the weekly mid-price of \$0.00005433. Sadly, it ran out of steam after the US inflation report. According to CoinMarketCap, the SHIBA INU (SHIB) price today is \$0.000055 USD with a 24-hour trading volume of \$2,299,906,081 USD. SHIBA INU has been up 3.70% in the last 24 hours. Recommended for You

In Telcoin Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about TEL to analyze the future movement of the cryptocurrency. Telcoin (TEL) is an Ethereum-based decentralized crypto platform started in July 2017 in Singapore to be the connection between cryptos, blockchain, and the telecommunication industry. The project aims to partner with leading names in the telecoms industry like Verizon and AT&T to delete the hassle that stays between billing platforms and mobile money. The main focus of Telcoin is the remittance market, where Western Union is presently the clear leader. Telcoin is collaborating with global telecoms and mobile money platforms to provide users with high-speed, low-cost digital remittances to mobile money platforms and e-wallets. Telcoin (TEL) Current Market Status According to CoinGecko, the Telcoin price is trading at \$0.0433 with a 24-hour trading volume of \$89,278,249, at the time of writing. However, TEL has increased by 13.9% in the last 24 hours. TEL holds the 63rd position on CoinGecko right now. Moreover, TEL has a circulating supply of 54,869,406,904 TEL and maximum supply of 100,000,000,000. Currently, TEL trades in KuCoin, HitBTC, Bilaxy, Simex, and lynch Exchange. Telcoin Technical Analysis 2021 The recent development and upgrades might push Telcoin (TEL) to reach new heights. Now, let's deep dive into the Telcoin (TEL) technical analysis 2021. Telcoin (TEL) Showing Ascending Scallop Pattern in Hourly Time Frame The hourly time frame chart below shows the Ascending Scallop pattern of Telcoin (TEL). Based on the graph above, the hourly time frame chart has shown the Ascending Scallop pattern. Normally, this pattern is followed by an uptrend signal but in some cases the pattern can change and move into a downtrend signal. More so, in this chart above the pattern took more than a day for the formation to take place. In addition, at the beginning of this pattern, TEL moved from its bearish to a bullish trend. This results as many traders stop selling and start to buy. As a result, the TEL trading supply increased drastically. Telcoin (TEL) RSI, MACD, MA, and EMA The below chart shows the Moving Average Convergence/Divergence (MACD) of TEL. Notably, the MACD (blue) begins to stay just above the signal indicator (orange line). This indicates that cryptocurrency traders can still expect more bullish days ahead. In contrast, if the MACD starts to move above the signal indicator and performs a bearish crossover. Then the crypto has a high possibility of reaching new highs. Now let's look at the relative strength index (RSI) of TEL. As shown in the chart above, the RSI remains at level 58. This shows that SRM price is in neither overbought nor oversold state. However, this gives confidence for the traders to trade without any fear. TEL's Moving Average (MA) and Exponential Moving Average (EMA) is shown in the chart below. Moreover, MA is a part of technical analysis that helps traders to recognize trends. While EMA is a type of moving average. From the beginning of 2021, it is clear that the TEL price has shown many bullish patterns. Furthermore, taking all these into account, TEL could have a competitive market in 2021. Telcoin (TEL) Showing Ascending Channel Pattern in Monthly Time Frame The monthly time frame chart below shows the symmetrical triangle pattern. In the chart above, which is set in a daily time frame, we can see the Symmetrical Triangle pattern. This pattern shows a period of consolidation that may force a price breakout or breakdown. A breakdown from the lower trendline represents the starting of a new bearish trend. In contrast, a breakout from the upper trendline indicates the start of a new bullish trend. Conclusion With the ongoing developments and upgrades that are taking place within the TEL platform. The cryptocurrency TEL has a fantastic future ahead in this crypto market. However, it is possible to see TEL reaching new heights. Bullish TEL price prediction 2021 is \$0.5. As said above, it may reach great heights, however reaching \$1 if investors have decided that TEL is a good investment in 2021. FAQ Telcoin (TEL) is an Ethereum-based decentralized crypto platform. TEL is the native token of Telcoin. TEL is listed on many cryptocurrency exchanges that include KuCoin, HitBTC, Bilaxy, Simex, and lynch Exchange. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the TEL platform, it has the high possibility of reaching its new ATH soon. Disclaimer: The opinion expressed in this chart solely author's. - WAX (WAXP) is found to be the top gainer of the day. - In a day WAXP price increased from \$0.6 to \$0.8. - WAX features a WAXP-to-Ethereum (ETH) bridge. A layer -1 network that aims to build an ecosystem for dApps is WAX (WAXP). And today, WAX (WAXP) is found to be the top gainer of the day. WAXP is WAX's native utility token. Furthermore, WAX is a decentralized blockchain solution that powers the WAX marketplace and focuses on the transfer and exchange of virtual goods and services. WAX features a WAXP-to-Ethereum (ETH) bridge that enables WAXP token holders to convert their token into WAXE. WAXE is an Ethereum-based ERC20 utility token. Accordingly, WAX has many unique features, if users want to take part in tokenomics, they have to burn their WAXP tokens to get WAXE through the

Ethereum bridge. Afterward, users need to stake the WAXE tokens on the Ethereum distribution contract. Currently, the WAX mainnet supports two competing NFT standards – Simple Assets and Atomic Assets. The non-fungible token (NFT) standards on the WAX blockchain enable NFT operations such as minting, burning, or transfer with no gas fees. CoinMarketStaus of WAXP More so, as per CoinMarketCap, WAXP’s price was trading at \$0.815 with a 24-hour trading volume of \$1,607,650,181. The circulating supply of WAXP is 1.84B WAXP. In the last 24-hour WAXP price surged over 30.65%. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, Huobi Global, Uppbit, and KuCoin. The above chart depicts the strong bullish trend of WAXP in the last 24-hour. In a day WAXP price increased from \$0.6 to \$0.8, with a surge of 30.65%. In the last 7 days, WAXP price gained over 65%. And it was founded as the top gainer of the day. For sure, if this gain continues we can expect WAXP to hit its new all-time high (ATH). - Acala currently offers a daily crowd loan displayed on the website. - Moonriver is a smart-contract parachain for Ethereum on Kusama. Polkadot recently began auctioning off its “parachains.” These auctions allow users to acquire new cryptocurrencies before they are publicly available. Users may lend DOT crypto tokens to new Polkadot crypto companies and mini-cryptos called parachains. It will then be used to lease space on the main Polkadot platform. The loans are parachain crowdfunded loans. But they might also be specialized parachain consumer loans. The parachains “stake” the borrowed DOT tokens with Polkadot for up to 2 years. Users must maintain DOT tokens with parachains. Similar auctions for Polkadot’s sibling blockchain Kusama have been a tremendous hit. Acala Network Vs Moonbeam One of the two most popular projects in the Polkadot ecosystem, Acala Network and Moonbeam, is likely to secure slots in the upcoming auctions. Acala is one of the parachains soliciting crowd financings. It’s perhaps the most famous parachain. Moreover, Acala currently offers a daily crowd loan displayed on the website. Another competitor is the Moonbeam project which is even very popular. The Moonbeam Foundation sponsors it. The crypto sign is GLMR. However, the initiative is still not public. It’s a sibling project of the \$811 million market value, Moonriver token. Moonriver is a smart-contract parachain for Ethereum on Kusama. This prelaunch network will operate like Ethereum but with Polkadot features like staking and on-chain governance. Participants may earn GLMR tokens before the initiative is public, but they must wait two years to acquire them. The new parachain auctions at Polkadot might have a big impact. Furthermore, don’t be shocked if the cumulative impact boosts the DOT prices. According to DotMarketCap, Acala and Moonbeam are the top parachain contender, fighting neck to neck for the top spot. So far, Acala has raised 29.0597 million DOT tokens. Moonbeam, meanwhile, has secured about 29.02361 million DOT. Recommended for You

- The Cere Network price today is \$0.182765 USD - The DDC enables stakeholders to fully own and govern their data. Let us take a look at the top 3 Trending Searches on CryptoRank.io in the last 7 Days. Cere Network (CERE) CERE is a part of a worldwide, decentralized ecosystem for companies and consumers. Furthermore, Cere Network is part of the Polkadot and Cosmos consortia. Cere Network is a Decentralized Data Cloud (DDC) built on the Polkadot architecture, which is scalable and diverse. This DDC enables stakeholders to fully own and govern their data, making it the first platform to do so. On CryptoRank.io, the coin has been trending over the previous seven days at the number one spot. According to CoinMarketCap, the Cere Network price today is \$0.182765 USD with a 24-hour trading volume of \$29,517,237 USD. Cere Network has been up 13.19% in the last 24 hours. Immutable X (IMX) Impervious to user custody, Immutable X is the first layer-2 scaling solution for NFTs on Ethereum. Users may continue to access Ethereum’s ecosystem and network effects thanks to StarkWare’s proving technology. IMX aids artists, gamers, and developers in redefining value in the digital world. According to CoinMarketCap, the Immutable X price today is \$5.41 USD with a 24-hour trading volume of \$76,877,388 USD. In the last 24 hours, IMX has gone down 4.06%. IMX is the second most searched crypto on CryptoRank.io in the last seven days. SHIBA INU (SHIB) Shiba Inu planned to be Ethereum’s mining algorithm. Baby Dogecoin, Dogecoin, JINDO INU, Alaska Inu, and Alaskan Malamute Token are some of the other dog-themed currencies. They attracted investors who missed Dogecoin’s meteoric rise from 0.0002 to 0.75 USD. According to CoinMarketCap, the SHIBA INU (SHIB) price today is \$0.000053 USD with a 24-hour trading volume of \$2,425,566,474 USD. SHIB has been the third most popular search on CryptoRank.io in the past seven days. Recommended for You

- Elon Musk brings forth more stocks of Tesla for sale. - Elon Musk terms he’s in need of cash for paying taxes. - 934,000 Tesla shares sold for \$1.1 Billion. Whomsoever it be, or however rich one may be, there will always be a time when the rich need hot cash and fiat at their disposal. Yes, being rich with assets in digital forms, cryptocurrencies, stocks, real estate, or whatsoever, people need money as cash for sure. In such terms the billionaire, entrepreneur, the Dogecoin (DOGE) father, and CEO of Tesla, Elon Musk officially sold off some of his shares and stocks of Tesla. The \$1.1 Billion Stock Sales According to the Securities and Exchange Commission (SEC), Elon Musk has sold the stocks of his electric car manufacturing company, Tesla for a whopping \$1.1 Billion. A bit more precise, Elon Musk has sold off 934,000 stocks of Tesla for \$1.1 Billion. In spite of this, Musk has sold each of the stocks for a price of \$1,170. This selling price is almost more than 180% gain compared to the previous year. Also, this is the third time Elon Musk has sold off his shares of Tesla officially. The very first sale was once Tesla got registered on Nasdaq in 2010. Moreover, Elon Musk utters that he has to get some money in order to pay his taxes. In addition, he reveals that he doesn’t get a separate salary from the company monthly, or a profit share. Therefore he’s left with only the stocks to sell. Michael Saylor’s Advice Besides, all this Elon Musk took to Twitter to poll upon what he can decide regarding the stocks sale. However, he finally decided to sell them off and the sale done now is actually around 0.5% to 1% out of the total 10% shares he owns in Tesla. The CEO of MicroStrategy, Michael Saylor replies to Elon’s tweet, terming that it is advisable for him to convert the money from the sale to buy Bitcoin (BTC) and then use this BTC to trade and then pay off the taxes. Unizen has announced its partnership with Geometric (GEC) to launch DOGE-1, the first crypto-funded mission to the moon. Along with Unizen, a leading smart exchange platform, ZenX, CeDeFi incubator also joins the partnership with GEC. Consequently, the CEO of Unizen and ZenX, Sean Noga shares that GEC's team is truly innovative and works on an impressive vision for the future. The team also aims to expand the use cases in their ecosystem. The team's implementation of the XI protocol is a game-changing advancement in space structure that integrates distributed ledger technologies. This agreement will be set as a number of achievements not only for the crypto community but also in the space community. Moreover, Dogecoin was used to fund a launch agreement for a spot on a SpaceX Falcon 9 in Q1 2022, making it the first spacecraft launch paid entirely with cryptocurrency. According to Tom Orchinero, Vice President of SpaceX, this initiative will show the use of cryptocurrencies beyond Earth orbit and lay the groundwork for interplanetary commerce. Besides, he is very excited to launch DOGE-1 to the moon. The collaboration of GEC and ZenX is the first example of merging scientific and tech teams together to advance in the space community through a unique crypto use case. Significantly, GEC is a manufacturing, intellectual property, and logistics leader dedicated to developing cutting-edge renewable energy technology. The company is continuing to diversify its offerings by developing products for the space, software, energy, and medical industries. Pushing Ledger Technology To Space This partnership helps to push the borders of distributed ledger technology to space. Even before it launched, the mission was a huge success because it revealed that cryptocurrency can be used to fund large-scale initiatives like satellite launches in a stable, flexible, and frictionless manner. Unizen and GEC are both convinced that this world-record-breaking use case will serve as a model for subsequent crypto-funded projects. Additionally, DOGE-1 may set a new record if it is launched in the first quarter of 2022. So far, more than 1,600 cubesats have been launched into Low Earth Orbit (LEO), which orbits between 100 and 1,200 miles above Earth's surface. While on the other hand, a launch with a distance of 250,000 miles is complex. CAPSTONE, a NASA cubesat, was supposed to be the first to reach the moon, but it has been postponed several times and now has a launch window of late March 2022. DOGE-1 could be the first cubesat to reach the moon, which would be a huge breakthrough for global spaceflight. If this mission is successful then it might create a history, so it is time to wait for more updates officially. - Tokens.com acquired SHIB tokens for between \$0.000071 and \$0.0000632. - The corporation paid between \$50,000 and \$60,000 for the tokens. Tokens.com Corp, a publicly listed company, purchased 833 million SHIB tokens earlier this month. The corporation paid between \$50,000 and \$60,000 for the tokens on the day they were purchased. A week after its ATH on Nov. 3, Tokens.com acquired SHIB tokens for between \$0.000071 and \$0.0000632. The fact that a publicly listed corporation has invested in the meme currency is positive for SHIB. CEO Andrew Kiguel commented: "We believe we are the first publicly-traded company to provide its investors with exposure to SHIB tokens." SHIB is now trading at \$0.00005606, down 35.5 percent from its all-time high of \$0.00008616, when it overtook Dogecoin in market value. Since then, DOGE has risen to 9th position, surpassing Shiba Inu, which had a market valuation of \$30.7 billion. Dogecoin (DOGE), an ecologically friendly Proof-of-Stake (PoS) token, has been replaced by Shiba Inu, according to the company's official release. For example, the SHIB ecosystem allows NFT, GameFi, and decentralized trade through ShibaSwap (unlike Dogecoin). Tesla Adoption Pending Musk had asked on Twitter in May whether Tesla should accept DOGE as a payment method, and 78.2 percent of respondents replied yes. But, thus far, no significant progress has been made. The SHIB community recently received a boost when the source code of Elon Musk's electric vehicle producer Tesla revealed SHIB beneath the payment type section. ShibaSwap developer also acknowledged via a tweet but said Musk might be teasing the SHIB community. It may be a code term for another dog currency like Dogecoin, which Musk prefers. Tesla hasn't said anything about this. - PlanB states that his algorithms predict a 700 percent surge in Bitcoin by early next year. - The analyst expects the cryptocurrency to surpass all other assets. While central banks in Europe and the US look unwilling to hike interest rates, equities and cryptocurrencies are surging. However, market investors see low-interest rates as a positive for riskier assets, despite intentions to soften monetary policy. As investors rushed to cryptocurrencies amid inflation fears, bitcoin reached fresh highs on Monday. The primary cryptocurrency suddenly soared, with the Bitstamp site reporting a BTC price of above \$67.8K. Recently, the overall cryptocurrency market worth reached \$3 trillion, with Bitcoin accounting for 43.6 percent. Revised BTC Price Forecast Analyst PlanB has revised his Bitcoin (BTC) price forecast for the first quarter of 2022, outlining when he expects the cryptocurrency to surpass all other assets. In an interview with Bitcoin bull Anthony Pompliano, PlanB states that his algorithms predict a 700 percent surge in Bitcoin by early next year. "I guess we will be above \$100,000, above \$135,000 at the end of the year, and then we'll continue to grow maybe towards to stock-to-flow X (S2FX) model target [at] \$288,000 or even above. I would not be surprised even to see in Q1 in Q2 next year prices of \$300,000, \$400,000 [or] \$500,000." He thinks the pinnacle is at least six months away. So that concludes Q1. PlanB's stock-to-flow cross-asset model (S2FX) studies Bitcoin's shift from proof of concept to a financial asset to value it. PlanB predicts a parabolic rise in Bitcoin between 2024 and 2032. According to CoinMarketCap, the Bitcoin price today is \$67,870.82 USD with a 24-hour trading volume of \$41,891,156,143 USD. Bitcoin has been up 3.59% in the last 24 hours. Recommended for You

The non-fungible token (NFT) market has witnessed explosive growth over the past year or so. According to DAppRadar, the NFT ecosystem saw a rapid rise in Q3 2021 as sales volume surged past \$10 billion, representing over 1000% increase in the past year alone. Additionally, the largest NFT marketplace OpenSea has witnessed a surge in monthly sales, recording a total of \$2.81 billion in October. However, with explosive growth in any nascent market, you expect fraud and theft to grow as well. The NFT market has not been spared with scammers and frauds entering the market just as explosively as the growth of sales. The increasing rise in scams and fraud calls for NFT projects to deploy extra security measures to protect genuine collectors and creators. All the same, verification modules of NFTs remain stretched thin creating a gap on determining which NFT is real. SelfKey, a blockchain-based identity project, aims to ease verification of NFTs for the purposes of protecting the digital identity rights of individuals with a self-sovereign approach. Launched in 2017, the platform leverages a proof-of-identity (POI) consensus to ensure NFT owners and collectors can prove the legitimacy of their digital asset. Nonetheless, SelfKey is not the only verification platform for NFTs and digital assets. Recently, Twitter announced the launch of its NFT authenticator that lets users verify and authenticate the ownership of NFTs they put on their profile pictures with a special badge. Introducing the SelfKey POI Paper. <https://t.co/fXrQnwhze8> pic.twitter.com/yuEdhNU7RW SelfKey (@SelfKey) November 8, 2021 Twitter Introduces NFT Verification and Authentication Over the past year, NFT assets have gone mainstream with scientists, billionaires, celebrities and athletes from all corners of the globe starting to showcase their digital possessions. From Mark Zuckerberg and Snoop Dogg owning a CryptoPunk to Stephen Curry's Bored Ape Yacht Club NFT, the NFT metaverse is welcoming new participants and shows it is here to stay. Notwithstanding, a multitude of Twitter users are also changing their profile pictures in favor of NFT art. As time passes, profile pictures based on NFTs are quickly becoming the "new blue checkmark" of Twitter but there's still a huge issue with verification of NFTs. As such, Twitter announced its plans to start verifying and authenticating NFTs by letting users connect their crypto wallets and then mark the legitimate NFTs with a special badge. So Why Do We Need Verification of NFTs? NFTs are rapidly changing the way we view art and entertainment but in equal measure, fraud and scams are also finding their way into the market. Other issues affecting NFTs include copyright rules, document storage, forgery issues, high carbon footprint, high taxes and ownership defaults. For example, it is easy to identify Steph Curry's or Mark Zuckerberg's NFT as their own because it would be hard for them to duplicate or use someone else's NFT on their profile picture. Additionally, these "celebrities" are already verified on various social media platforms which makes it easy for them to identify with their NFTs. However, not everyone has the luxury of owning and verifying their own NFT without someone else squatting on the highly paid JPEG. While Twitter's solution is set to reduce the overall counterfeiting of NFTs on its platform, there remains pertinent issues. Current governance systems are vulnerable and offer unfair advantage to some individuals. This defeats the purpose of decentralization, any voting mechanisms and makes the process centralized. Decentralized verification systems could also offer an unfair advantage through the voting structures currently implemented. DApps often assign voting power equal to the number of tokens a voter holds. This grants more power to users with wealth and is a direct contradiction of the principles of decentralization. Such governance systems offer an unfair advantage to the whales (large holders) on the network. Here's where fair and fully decentralized verification is needed. SelfKey leverages blockchain technology to allow anybody to verify their NFT in a decentralized fashion showing everyone that the NFT actually belongs to you. New "Proof-Of-Individuality" Concept To avoid the challenges current verification models use, SelfKey introduces "Proof of Humanity/Proof of Individuality" (POI) to ensure that voting on DApps and verification of NFTs is fully decentralized. Simply put, the proof of individuality is a method by which a user can join the dApp only one time by proving their individuality, and those who attempt to join multiple times could be detected and stopped. Applying this to NFTs means that each NFT will be assigned to one person at all times. If you own an NFT, the SelfKey system will mark the NFT with your proof of individuality, authenticating and verifying that the NFT belongs to you. This prevents Sybil attacks and enables better governance of the platform. The POI system starts from a simple design that requires the NFT holder to take a selfie to provide proof to the system. The selfie will be checked automatically via machine learning algorithms and once accepted, the user is issued a temporary credential. Users will need to stake KEY tokens as collateral to finalize their credentials. Unlike other verification systems, SelfKey allows users with a valid credential to earn directly from the platform's "games". Any interested user with a valid POI credential and stake can play the game, the gamer will check the uniqueness of selfies uploaded on the POI system. To do this, the gamer would essentially view selfies of random users on the system to check whether the selfies match. All the users who work to correctly identify a selfie as non-unique, which leads to the eventual invalidation of a user's POI credential from the system, will earn a proportion of the stake that was held against the invalidated credential. This incentivizes the users to check for the validity of a selfie which improves the authentication process on the system. Once the validity of the selfie and staking is complete, users can verify their digital assets including NFTs using their credentials and authenticate their documents, files, art, music. Blockchain as the Future of Digital Verification As the world moves towards digitization, blockchain technology will have a big role to play in securing digital verification and identity. In the future, all of the information about our real estate, financial, and healthcare information, in one unified place such that we can easily verify true identity to a past transaction. Solutions such as SelfKey aim to decentralized the verification process by incentivizing the network participants. This will help maintain validated proof-of-identity ensuring that the records of ownership are legitimate and true. This will minimize the cases of fraudulent documents and transactions and secures identity information as the world inevitably advances towards a digital future. Recommended for You

- BTC hits again a new ATH clocking at \$67,651.27. - PlanB predicts BTC to surpass \$100K before Christmas. - PlanB gives the first breakthrough to hit \$98K. Yet, once again Bitcoin (BTC) creates a

record for itself, surpassing its previous ATH. Upon the early hours of November 9 and late hours of November 8, the market for BTC turned up completely bullish. In spite of this, now the new ATH of BTC is at \$67,651.12. Apart from this, the overall market cap for BTC spiked above \$1 million. This adds even more to the date, making it into the history of BTC. Moreover, with all the hype surrounding BTC always, one of the most profuse and renowned analyst and crypto geek, going by the anonymous name PlanB, puts out his views and predictions of BTC. Accordingly, PlanB terms that BTC would hit the six digit figure for the first time, by the end of year 2021. In such terms, BTC is ought to touch \$100K before Christmas most probably. Rather, before that a break point of \$98K is to be achieved. In addition, if BTC hits \$98K, by the second week of December, then for sure \$100K will be the next ATH before the end of the year. PlanB's BTC Predictions The anonymous analyst, PlanB has recently gained a huge fan following and is often noted in the crypto industry, due to his accurate and precise BTC predictions. In regards to the method by which PlanB predicts all the closing ends for BTC, PlanB uses the old method of Stock-to-Flow (S2F). Using this, the S2F method, PlanB's predictions for the month of August and September closings were so accurate. Besides, the same right now is expected for the month of November too. Also, PlanB terms that there are high chances for BTC to touch \$98K within November, and so if that happens then the year end price of BTC would be above \$100K. Recommended for You

- Kadena (KDA) goes all the way from \$0.23 to \$25.94 in just a few months. - Three major reasons behind such mind blowing surges for KDA. - KDA to remain above \$15 furthermore. One of the most astonishing surges in recent times in the crypto market is that of the Kadena (KDA). With this altcoin in hand, it ought to make you a millionaire or a billionaire in such a short period totally unexpected by anyone. In spite of this, taking the last three months into consideration, the price of KDA rose from a rock bottom of \$0.23 to its ATH of \$25.94. Such a humongous transition with the last 30 days alone accounting to gains of more than 1200% is something completely out of the box. Moreover, such a sudden spike up of KDA, that too in such a short span is mainly due to three major reasons. These are the entry into DeFi space, NFT enablings and exchange listings and stakings. Entry into the DeFi Space The KDA makes its first entry into the Decentralized Finance (DeFi) zone by enabling it on the Kadena.io. In spite of this, KDA has launched the wrapped version of KDA, the WKDA, which will be the utility token for all EVM based DeFi protocols. Moreover, the epic point is that the WKDA is built completely upon the Ethereum (ETH) platform. NFT Enablings In recent times the KDA has adapted itself to enable Non-Fungible Token (NFT) upon its network. This is rather done indirectly, by partnering with the UFO Gaming (UFO). Accordingly, the UFO tokens will be completely programmed upon the KDA network. Furthermore, these UFO tokens are used for profuse NFT gamings. Staking Options and Exchange Listings Throughout time, the KDA has managed to get itself listed upon various and renowned exchanges. This has directly catapulted the value of KDA. Recent ones to enlist KDA are Crypto.com, CoinMetro and many more. Also, all these features profuse staking and polling options along with enabling smart contracts. As the utility and importance of the platform rises so does the price too directly. Recommended for You

- SHIB now has more Twitter followers than Ethereum. - The adoption surge has also energized the cryptocurrency community. The buzz around Shiba Inu (SHIB) is still alive despite recent on-chain stats. Consequently, traders are keeping a watch on the meme currency, which has already reached 1.8 million followers on Twitter. To put things in perspective, SHIB now has more Twitter followers than Ethereum. The Ethereum (ETH) currency project's Twitter account now has about 1.7 million followers. Nonetheless, the SHIB Army's success is hardly unexpected considering its wide popularity since October. The token's price soared over 800 percent in a couple of days, hitting new all-time highs at \$0.000088. However, it is presently sitting around \$0.000057. The adoption surge has also energized the cryptocurrency community. However, given the current pricing of Dogecoin (DOGE), SHIB's main rival, and it generated debate on the long-term viability of meme currencies. Some merchants are exploring or possibly adopting the Shiba Inu currency as a payment method, while others remain wary. Bedrock Capital CEO Geoff Lewis recently likened the SHIB craze to Pets.com, one of the dot-com bubble's worst business flops. Shiba Inu is to 2021 what <https://t.co/YaR4fWb2wt> was to 2000. "Geoff Lewis (@GeoffLewisOrg) November 6, 2021 SHIB Extinction Prediction Regardless, many keep questioning whether the Shiba Inu coin price can keep devouring zeros and reach a cent. On one side, Creative Planning CEO Peter Mallouk predicted a SHIB extinction. Shiba Inu is going to zero. "Peter Mallouk (@PeterMallouk) November 3, 2021 It may go to the moon first, but it's going to be a round trip with a crash landing. With the latest biggest SHIB holding efforts to liquidate some of its tokens ultimately, traders are concerned about a significant sell-off because of the extensive take-profit activity. In addition, crypto traders lament the present SHIB supply concentration. Technical analysis suggests that SHIB is collecting momentum to capture bids and confirm a "buy the dips" approach that would enable it to devour more zeros in the medium and long run. Recommended for You

- Optimists expect the cryptocurrency to reach \$10,000. - The ETH price has been rapidly rising to new highs. November has started well for numerous cryptocurrencies. The whole crypto market cap is nearing \$3 trillion. Meanwhile, the second-largest crypto is catching the attention of crypto fans. Ethereum investors are ecstatic, while detractors are left out in the cold. The digital currency reached its ATH just before press time. The Ethereum (ETH) price has been rapidly rising to new highs. Leaving fanatics amused by its gains. Sections expect the cryptocurrency to double in value shortly. The leading altcoin is on a spectacular rise, reaching new milestones daily. Despite the network's expensive gas rates at 91 gwei average and 93 gwei high, the current spike occurred. As a result, netizens anxiously await ETH 2.0's resolution. However, reliable sources claim that every day On-chain net exchange flow of Ethereum is up 23.1 M. A 6-month high has been reached in the quantity of ETH supply last active 1y-2y (1dMA). ETH futures short liquidations recently hit a 6-month high of \$7,814,434.01 on Binance. The previous 6-month high occurred on September 1, 2021. Moreover, the

Ethereum hash rate reached at \$1,014,230,266,415,220. Ethereum mining difficulty just increased to 11,028,173,704,939,400. Which is up from a week ago. At press time, the NFT space had burned about 799,386 ETH. Initial Decline Likely According to CoinMarketCap, the coin was trading at \$4,730.28, up 4.9 percent. As of now, the market cap is \$560. The latest 24-hour trading volume is roughly \$18,720,006,100. Charts show a rising wedge shape. Based on the present trend, we may anticipate the digital asset to reach \$6,500 soon. An initial decline is likely before the milestone. Then it may hit \$8,500. Optimists expect the cryptocurrency to reach \$10,000. But it would require multiple triggers to expand. Like ETH 2.0 or an ETF. With a market valuation about half that of the market leader. We may anticipate ETH to outperform Bitcoin in terms of market cap, hitting \$10,000. Recommended for You

- Squid Game, hosted on a decentralized financial exchange. - Changpeng Zhao also addressed the latest stock market probe reports. In terms of daily trading volume, Binance is the largest cryptocurrency exchange in the world. Binance began as a cryptocurrency exchange in 2017. It has now surpassed all other participants in the \$2.6 trillion cryptocurrency industry. In addition to several cryptocurrency exchanges and numerous currencies, the Binance ecosystem includes the Trust Wallet and its TWT token, a Token Launchpad, and more. Changpeng Zhao, the CEO of Binance, the world's largest cryptocurrency exchange by trading volume, was invited to speak on the Bloomberg live broadcast. Zhao didn't only mention Bitcoin; he also spoke about altcoins, GameFi, NFTs, and even the Squid Game token, among other things. Zhao believes that the crypto sector will continue to grow endlessly as long as new products are produced. The Squid Game inspired Zhao, and he referenced the SQUID coin, whose value surged and then plummeted in a matter of minutes, placing investors in a difficult position. The individual behind this token is said to have taken the money and fled. Squid Game hosted on a decentralized financial exchange that CZ had no control over, but it could relocate. He said that they were on the lookout for the perpetrator of the scam. Stock Market Probe Reports Binance CEO Changpeng Zhao also addressed the latest stock market probe reports. The stock market is not under investigation, as depicted by the news of United States media. Zhao further added, executives from the stock exchanges have spoken with regulators in each country. Finally, about GameFi regarding investments in the NFTs and fan tokens sectors. Recommended for You

Crypto market was so busy and on trend with the rise of digital assets and their monetary values. All cryptocurrencies were surging at different hikes in prices resulting in a huge increase in the market capitalization of the crypto market. Which Crypto is Better Buy? Importantly, popular cryptocurrencies like Shiba Inu (SHIB) and Ethereum (ETH) achieved ATH recording high market values. Both the digital assets were highly competing resulting in a massive rise in overall trading volumes. Besides, SHIB and ETH were into the top 10 cryptocurrencies list, exciting the holders. Shiba Inu (SHIB) and Ethereum (ETH) were the recent talk of the town for their breaking records in the market. However, both the crypto assets can be a right investment, they both possess unique services. Shiba Inu (SHIB) The interesting meme coin became more popular in recent days with a rapid rise in its performance. SHIB just attracted many investors to pour in their savings and made new millionaires in the industry. On October 31, 2021 Shiba Inu (SHIB) achieved its all time high reaching up to \$0.00008685. Thus, the massive hype of Shiba Inu (SHIB) is predicted to reach \$0.0001 soon. Significantly, over the past month Shiba Inu surged over 231% in the same time period. Through this, SHIB can be a tempting investment but it can satisfy users only for a short-term nature. In addition, SHIB's trading volume records over \$12 billion which is a remarkable hike for a meme coin. However, the current market status of SHIB is \$0.000059 with a spike up to 2.57% in the last 24 hours. Thus, the Dogecoin killer SHIB ranked into the world's top cryptocurrencies. Ethereum (ETH) ETH is the second largest cryptocurrency which is a fundamentally stronger investment than Shiba Inu (SHIB). Besides, Ethereum is one of the popular digital assets with competitive benefits in the crypto industry. Moreover, Ethereum blockchain is a powerful tool which is a support system for many applications and crypto platforms. Most popular features like non fungible tokens (NFTs) and decentralized finance (DeFi) are also using ETH blockchain for its safe and secure services. Recently, Ethereum recorded a new ATH soaring around around \$4,500 per token with a 33% rise over the last month. Through a continuous rise, ETH is expected to reach the target of \$6.4K soon. If the cryptocurrency is following the same bullish trend, Ethereum will reach \$14K in 3 months. More so, the current market trend of Ethereum (ETH) Price is \$4,403.40 performing a green graph in the crypto chart throughout last week. But, there are some challenges and risks as well aligning with crypto assets in the marketplace. Thus, for any digital investments a proper research about the cryptocurrency is required before investing. Besides, not all investments are equally the same and some cryptocurrencies are stronger than others. So it is advisable for the investors to cross check the risks and challenges before choosing a cryptocurrency as a right investment. Recommended for You

- Solana and Arweave's respective tokens gained on blockchain gaming news. - OMG Network token owners will receive new tickets to use Boba Network. - The news hit on Friday that Solana was launching a \$100 million fund in conjunction. Many cryptocurrencies have experienced another day of solid trading. As of 7:15 p.m. EDT on Friday, Solana (SOL), Arweave (AR), and OMG Network (OMG) were among the cryptocurrency companies benefiting from the bullish market momentum, with their tokens up approximately 17 %, 45 %, and 26%, respectively. Additionally, a new funding action plan for blockchain-playing games appears to have aided the rise of Solana and Arweave. In addition to the general bullish trend in the cryptocurrency space as a whole. Meanwhile, token holders of the OMG Network are expected to receive a new supplementary token. Certainly, which is causing a surge in the price of the ticket. On Friday, it was revealed that Solana was launching a \$100 million fund in partnership with Lightspeed Venture Partners and FTX. To engage in blockchain-focused playing games studios, according to reports. Like Ethereum, Solana's blockchain serves as a platform to build other cryptocurrencies. And decentralized financial applications comparable to how Ethereum does. Now, switching gears, it appears that increases in the price of OMG Network's tokens over the last week

have been fueled. By the expectation for the new cryptocurrency that tickets will soon receive. Shareholders of the OMG Network are expected to obtain a cryptocurrency token that can be staked for rewards on the Boba Network shortly. This is scheduled to take place on November 12th, 2018. The various tokens of Solana, Arweave, and OMG Network differ from other cryptocurrencies. Such as they are being used to support or transact for offerings that are particular to their network systems rather than simply serving as digital currencies. They may have a more compelling fundamental valuation case than tokens that conduct business solely on supposition or adoption. However, investors should please remember that they are still extremely high investments. And the market is likely to remain volatile shortly. Recommended for You

- CoinBene stopped the function of its service on November 05, 2021. - The website and apps will be closed on November 15, 2021. - The platform will close completely on November 31, 2021. According to Coinbene announcement, CoinBene stopped the function of its service on November 05, 2021. Moreover, CoinBene is a trusted and secure cryptocurrency exchange platform where users can buy and sell the most famous crypto assets, including Bitcoin, Ripple, Ethereum, and more. For operational and regulatory reasons, CoinBene will permanently close its service to meet the requirements for cryptocurrency laws and regulations in various regions. Coinbene's Closing And Return Process As part of the closing and return process, the exchange announced a few dates to be noted. Notably, the spot transaction function will be stopped on November 5, 2021, at 18:00 (GMT + 8). Moreover, the system will uniformly cancel any orders that have not been cancelled. More so, the website and apps will be closed at 18:00 (GMT + 8) on November 15, 2021, and no one will be able to log in. By November 31, BR site users will be able to withdraw coins from the website. Customers will not be able to withdraw after November 31 due to a lack of customer service personnel. In addition, the user must bear the consequences of not withdrawing cash on time if they suffer asset losses. In case the platform closes, users who haven't completed the asset withdrawal process can contact the platform's customer service team before November 31, 2021, so that they can apply to withdraw assets after completing identity verification. Upon completion of the cancellation and liquidation, the platform will close on November 31, 2021. The user's withdrawal request will not be accepted by customer service at that time. Moreover, the exchange request the user needs to bear the asset loss which happens through not withdrawing in time. Recommended for You

- The first week of November has newer coins dominating the market. - The cryptos of the week are Loopring (LRC), Decentraland (MANA), Sandbox (SAND). - Loopring has risen to a phenomenal 248.9% in the last 14-trading days. Newer coins are dominating the market in the first week of November, according to CoinMarketCap. Loopring (LRC), Decentraland (MANA), and Sandbox (SAND) are this week's featured cryptocurrencies. Loopring, which trades under the ticker LRC in the indexes, has gained 57.5% in the last 24 hours of day trading. In the previous 14 trading days, the coin's value has increased by an incredible 248.9 %. Investors that took an early position saw their profits on investment more than double in as little as two weeks after taking the class. The coin was previously available for purchase for 70 cents but is now available for \$1.52. A \$1,000 investment in LRC was low-hanging fruit, so investors could acquire a large bag of it with just a \$1,000 investment, which doubled in price. Meanwhile, the coin is still accessible for a lower and more enticing price, making it an excellent time to get in on the action while the market is down. LRC was selling at \$1.52 at the publishing date, representing a gain of +59.9% in the day's trading. MANA reigned supreme inside the ring for the last week of October, and the team's winning streak extended into early November. Even though the coin has dropped in value today, its momentum has stayed consistent. Investors take advantage of the current downturn by purchasing additional tokens to cash out when the market climbs again. As a result, MANA allows investors to make relatively quick money and then exit the market after realising their profits. The coin has gained 277.9% in the last 30 trading days and has only lost a small amount today. Those who made an initial investment in the new position last month were rewarded with a doubling return on their money. Decentraland was trading at \$2.85 at the publishing date, representing a loss of -12.2% in the previous day's transaction. With a gain of +241.2% in just seven trading days, SAND turned out to be an unexpected star in the market. The value of the coin has increased by +221.6% during the previous 30 days. Even though the price is experiencing a drop today, investors believe it is a market correction and are putting more coins into their bags. On October 27, the coin was available to buy for 70 cents, and today, the cash is selling at \$2.83 a coin. Investors who entered the market a week ago have received the benefits of the company's expansion. Sandbox was trading at \$2.83 at the time of publication, representing a -0.9% decline from the previous day's close. Recommended for You

- 5 PM EST, BTC is trading slightly lower, down half a percent at \$61,050. - European Central Bank to keep interest rates where they are, move Bitcoin back \$60,000. - Much of the attention was drawn away from Bitcoin by specific alt. On Thursday, the overall market capitalization of all cryptocurrencies together reached a record high of \$2.7 billion, although this did not affect the price of bitcoin. In the early afternoon Eastern Standard Time, Bitcoin is trading marginally lower, down half a percent at \$61,050. The Federal Reserve and the Bank of England decided this week to keep interest rates near zero percent, which is a significant development in the fight against inflation. These developments, however, did not affect Bitcoin, which has been viewed as a hedge against inflation even though inflation is continuing to climb or at the very least remains at elevated levels. Even though gold, which some feel is a superior tool to hedge versus inflation, did not react immediately, it did so after several days and traded lower on the day of the announcement. When the European Central Bank announced last week that interest rates would remain at their current levels, Bitcoin surged back above \$60,000 for the first time. They feel that this announcement, which came after Bitcoin had fallen below \$60k in the previous trading period, may have made the retracement from \$67,000 shallower

than they had anticipated. As a result, even though we haven't reached a new all-time high, Bitcoin building a base over \$60k is still highly favorable. Although they might yet see a return to \$54,000 next week, this represents far less of a risk than a new all-time high, possibly later this month. Analysts still believe that the next all-time high will be in the range of \$70-\$75k. Specific alternative cryptocurrencies and Ethereum have drawn a lot of attention away from Bitcoin this week, with the latter reaching new highs. However, it is crucial to recall that these currencies only rose in value in the weeks following Bitcoin's all-time high and that any further rise in value from them will almost certainly coincide with Bitcoin's acceptance. - An unwary person searching for "phantom", sent to a phishing website. - They noticed the frauds after hearing from crypto users on Reddit and other sites. The crypto world is dangerous, with crooks waiting for newcomers. Furthermore, a recent report from Check Point Research outlines a powerful attack method: utilizing Google Ads to lure people to fraudulent crypto wallets. Moreover, in its study, CPR claims it has witnessed half a million dollars taken out in recent days. Here's how it works. The attacker buys Google Ads for prominent crypto wallets. Furthermore, CPR has observed frauds targeting the popular Phantom and MetaMask wallets for the Solana and Ethereum ecosystems. An unwary person searching for "phantom", sent to a phishing website that seems legitimate. Moreover, the user submits their credentials, which the attacker maintains. Or, even worse, they're advised to enter a recovery password to establish a new wallet, which logs them into the attacker's wallet. Furthermore, any funds sent will be promptly received by the attacker, adds CPR. Incorrect URL's Like other phishing schemes, the attackers try to make their bogus log-in sites appear as legitimate as possible. The CPR has seen attackers employ incorrect URLs to fool users, such as phantom.app or phantonn.app instead of phantom.app. Similar phishing attempts were used to send consumers to fraudulent cryptocurrency exchanges like PancakeSwap and UniSwap. The CPR researchers said they noticed the frauds after hearing from crypto users on Reddit and other sites. "At least half a million dollars", stolen in recent days, CPR said. Eleven hacked wallet accounts with cryptocurrency valued at \$1,000 to \$10,000, identified by the company. When asked for comment on these reports, a spokesperson for Google said: "This behavior directly violates our policies and we immediately suspended these accounts and removed the ads. This appears to be a malicious actor looking for ways to evade our detection. We are always adjusting our enforcement mechanisms to prevent these abuses." To prevent these hazards, CPR advises people to avoid clicking on Google Ads results and instead look at search results and carefully verify the URL of the site they're visiting. Recommended for You

- The number of new Ethereum addresses has increased dramatically. - Larger-cap cryptocurrencies seem to have struggled to keep up with star altcoin. As the crypto market continues to overcome obstacles, it has now reached the big altseason. After Bitcoin reached its higher high in the early parts of Q4, cash poured into the top altcoin. The newest luxurious green charts have emphasized the cash flow to most cryptocurrencies. While the market leader Bitcoin has hovered near \$61,000. The star altcoin Ethereum, however, has outpaced the most valuable asset by 13.55 percent. Interestingly, cryptocurrencies like The Sandbox (SAND), Arweave (AR), and The Jasmy Coin (JASMY) have followed the altcoin leader. In Q4, Bitcoin and Ethereum have become fierce rivals. While the flagship asset has slowed after reaching a new ATH of \$66,930, the star cryptocurrency has continued to shine. In terms of address activity, both are in a close race. According to a recent Santiment analysis, the number of new Ethereum addresses has increased dramatically. The analytics revealed 995k network growth, its biggest week since mid-May. One million addresses are used in Bitcoin. Bullish Altseason Motion Interestingly, larger-cap cryptocurrencies seem to have struggled to keep up with star altcoin. Notably absent from the current Altseason are Cardano, Ripple, Dogecoin, and others. However, cryptocurrencies with a significant market cap like SAND, Arweave, and Jasmy have recently generated a lot of hype. Another Santiment study shows the best performing cryptocurrencies recently. The SAND token has increased by over 313 percent in the last week. The research also breaks down Arweave and Jasmy. Some of the top 10 cryptocurrencies, including ADA, XRP, and DOGE, have stayed flat with no major growth. Moreover, Arweave just touched ATH in search of fresh highs. Due to the May Chinese market meltdown, Jasmy currency has gone from \$2.5 to \$0.08. However, the coin's recent surge of over 300 percent demonstrates its great capacity to retrace prior highs. Overall, the trend in crypto has shown several twists in the current bull cycles. Recommended for You

- The total market value of Shiba Inu soared to more than \$51 billion last week. - Ownership in Shiba Inu is primarily concentrated. - Some 872,382 full wallets hold it, and the top 10 own almost 72% of the coin. Shiba Inu isn't the first currency to raise concerns about significant concentrations of ownership. Whales, whose trades might alter market-rate returns, were initially a substantial effect on Bitcoin and Ethereum. Shiba Inu's total market capitalization surpassed \$51 billion last week, leapfrogging Dogecoin and placing it among the top ten cryptocurrencies in existence. Shiba Inu has very focused ownership. Its top ten wallets possess over 72% of the currency, which is held by 872,382 genuine wallets. Shiba Inu, named after the same breed of dog that motivated the market's previous odd meme-coin favorite Dogecoin, is the unlikely star of the cryptocurrency world today. Even though its origins as a joke leave it without an essential economic motivation to grow. The token's total market capitalization skyrocket to more than \$51 billion last week. Leapfrogging Dogecoin and placing it among the top 10 cryptocurrencies in existence. The crypto world's attention has focused on the few giant "whale" wallets that own most of the Shiba tokens in circulation as the hysteria has died down in recent days. Bringing the coin's market price down by 31% to around \$35 billion. And there's bad news for all the minnows who purchased Shiba Inu and are sitting on lifetime profits on paper: one of the whales has started shifting. The coins are around in multiple wallets, sparking concerns that the holder is likely to sell. The dog-coin controversy is the latest example of how despite a high level of accountability in a market in which every transaction enters. On a blockchain for all to see, the confidentiality of the players involved including, in this particular instance.
