

ALT | All æ€ Time High | \$0.6881 (On Mar 27, 2024) | | All æ€ Time Low | \$0.03002 (On Mar 11, 2025) | What is Altlayer (ALT) | TICKER | ALT | | BLOCKCHAIN | Ethereum | | CATEGORY | Scaling / Roll-Ups | | LAUNCHED ON | January 2024 | | UTILITIES | Governance, Staking, Gas Fees, Security, Interoperability | Altlayer (ALT) is a decentralized protocol designed to enhance blockchain scalability through Restaked Rollups. It enables developers to deploy highly efficient, application-specific rollups while leveraging Ethereumæ€™s security via EigenLayer restaking. Altlayer supports multiple execution environments, including EVM, WASM, and Move, allowing flexibility for developers. The protocol integrates with various data availability layers like Celestia, Avail, and Ethereum DA, optimizing speed and cost efficiency. A key innovation of Altlayer is æ€Restaked Rollups-as-a-Service (RaaS),æ€ which allows seamless roll-up deployment with enhanced security, decentralization, and interoperability. This makes it ideal for gaming, DeFi, and high-performance blockchain applications. The ALT token powers governance, staking, and gas fee payments within the ecosystem. With backing from leading investors like Polychain and Binance Labs, Altlayer is positioned to play a crucial role in the modular blockchain landscape, driving scalability and efficiency for Web3 applications. Altlayer 24H Technicals (Source: TradingView) Altlayer (ALT) Price Prediction 2025 Altlayer (ALT) ranks 303rd on CoinMarketCap in terms of its market capitalization. The overview of the Altlayer price prediction for 2025 is explained below with a daily time frame. ALT/USDT Ascending Triangle Pattern (Source: TradingView) In the above chart, Altlayer (ALT) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contract point on one of the horizontal channelæ€™s lines. At the time of analysis, the price of Altlayer (ALT) was recorded at \$0.04103. If the pattern trend continues, then the price of ALT might reach the resistance levels of \$0.04230, and \$0.05863. If the trend reverses, then the price of ALT may fall to the support of \$0.03539, and \$0.02955. Altlayer (ALT) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Altlayer (ALT) in 2025. ALT/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Altlayer (ALT) for 2025. | Resistance Level 1 | \$0.04872 | | Resistance Level 2 | \$0.07988 | | Support Level 1 | \$0.02924 | | Support Level 2 | \$0.01721 | ALT Resistance & Support Levels Altlayer (ALT) Price Prediction 2025 æ€ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (BTC) are shown in the chart below. ALT/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Altlayer (ALT) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.04358Price = \$0.04004 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 51.47779 <30 = Oversold 50-70 = Neutral>70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetæ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Altlayer (ALT) Price Prediction 2025 æ€ ADX, RVI In the below chart, we analyze the strength and volatility of Altlayer (ALT) using the following technical analysis indicators æ€ Average Directional Index (ADX) and Relative Volatility Index (RVI). ALT/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Altlayer (ALT). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 35.21539 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 69.49 <50 = Low >50 = High | High volatility | Comparison of ALT with BTC, ETH Let us now compare the price movements of Altlayer (ALT) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs ALT Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of ALT is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of ALT also increases or decreases respectively. Altlayer (ALT) Price Prediction 2026, 2027 æ€ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Altlayer (ALT) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Altlayer (ALT) Price Prediction 2026 | \$0.7 | \$0.01 | | Altlayer (ALT) Price Prediction 2027 | \$0.9 | \$0.009 | | Altlayer (ALT) Price Prediction 2028 | \$1.1 | \$0.008 | | Altlayer (ALT) Price Prediction 2029 | \$1.3 | \$0.007 | | Altlayer (ALT) Price Prediction 2030 | \$1.5 | \$0.006 | Conclusion If Altlayer (ALT) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Altlayer (ALT) price prediction for 2025 is \$0.07988. Comparatively, if unfavorable sentiment is triggered, the bearish Altlayer (ALT) price prediction for 2025 is \$0.01721. If the market momentum and investorsæ€™ sentiment positively elevate, Altlayer (ALT) might hit \$0.5. Furthermore, with future upgrades and advancements in the Altlayer ecosystem, ALT might surpass its current all-time high (ATH) of \$0.6881 and mark its new ATH. FAQ 1. What is Altlayer (ALT)? Altlayer (ALT) is a decentralized protocol designed to enhance blockchain scalability through Restaked Rollups. 2. Where can you buy Altlayer (ALT)? Traders can trade Altlayer (ALT) on the following cryptocurrency exchanges such as Binance, HTX Global, KuCoin, MEXC Global, WhiteBIT, Gate.io, Bybit, Bitget, DigiFinex, Poloniex. 3. Will Altlayer (ALT) record a new ATH soon? With the ongoing developments and upgrades within the Altlayer platform, Altlayer (ALT) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Altlayer (ALT)? Altlayer (ALT) hit its current all-time high (ATH) of \$0.6881 on March 27, 2024. 5. What is the lowest price of Altlayer (ALT)? According to CoinMarketCap, ALT hit its all-time low (ATL) of \$0.03002 on March 11, 2025. 6. Will Altlayer (ALT) hit \$10? If Altlayer (ALT) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.5 soon. 7. What will be the Altlayer (ALT) price by 2026? Altlayer (ALT) price might reach \$0.7 by 2026. 8. What will be the Altlayer (ALT) price by 2027? Altlayer (ALT) price might reach \$0.9 by 2027. 9. What will be the Altlayer (ALT) price by 2028? Altlayer (ALT) price might reach \$1.1 by 2028. 10. What will be the Altlayer (ALT) price by 2029? Altlayer (ALT) price might reach \$1.3 by 2029. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

The new altcoin Rexas Finance is set to boom, and some analysts believe it will make a significant mark on the crypto market by 2025. This new contender is already generating a lot of hype after analysts predicted it could be the next altcoin to 10x first. The Case for a 10x Breakout in 2025 Rexas Finance has been making waves, and its fundamentals point to a massive rally post-listing. RXS has raised \$47.06 million in its presale, selling 455.3 million tokens at \$0.20 each. With its final presale stage now 90.07% complete, the excitement around RXS is growing. Early investors anticipate rapid price acceleration once it hits significant exchanges on June 19, 2025 at a listing price of \$0.25. The Reason Why RXS is a Forerunner in Booming Besides the speculative approach taken by competitors in the market, RXS has strong tokenomics, utility, and an entire ecosystem of DeFi products, making it capable of enormous growth. Hereæ€™s what differentiates it from others: 1. Rexas AI & Treasury System: RXS implements AI technology for smart trading, risk evaluation, and yield optimization. The Rexas Treasuryæ€™s reinvestment strategies support the tokenæ€™s value, transforming it into a sustainable, long-term project rather than a æ€hypeæ€ token. 2. Rexas Launchpad & Token Builder: New projects have access to an innovative launchpad where novice developers can create and deploy new tokens with little hassle. It makes the platform appealing to RXS developers and entrepreneurs, increasing demand. 3. DeFi Expansion and Staking Incentives: RXS is integrated with staking, allowing users to earn income while contributing to the networkæ€™s liquidity passively. This actively enhances participation and creates a robust ecosystem that pays short-term traders and long-term holders. 4. Huge Community and Presale Activities: With over 47 million dollars already raised, Rexas Finance is gaining traction from stock market investors and high-net-worth individuals. This early interest puts it in a position to boom significantly after being listed. 5. The Tokenomics: The Rexas Finance ecosystem consists of various elements, of which the RXS token is arguably the most crucial. It enables transactions, facilitates participation in governance, and provides staking and liquidity miner rewards. Here is an overview of the tokenomics with supply tokens of \$1 billion: - Tokens Set Aside for Presale: 45% æ€ 450000000 tokens - Tokens Set Aside for Staking & Rewards: 20% æ€ 200000000 tokens - Tokens Set Aside for Listing Liquidity & Exchange: 15% æ€ 150000000 tokens - Tokens Assigned for Development and Ecosystem Growth: 10% æ€ 100000000 tokens - Tokens Allocated for Marketing & Partnerships: 5% æ€ 50000000 tokens - Tokens Allocated for Team and Advisors: 5% æ€ 50000000 tokens (with a vesting period to align to foster a commitment to the project) Market Comparisons: Why RXS Can Surpass Other Altcoins In previous bull altcoin runs, those with actual use and some form of an early driver performed better than meme-driven projects. Solana (SOL), for instance, surged from \$1 to over \$200 during a previous cycle, delivering more than 20,000% returns. Furthermore, BNB and Avalanche (AVAX) were tiny in value before blowing up to large valuations. As RXS enters the market, it could follow this path greatly. Other projects that have received a lot of hype may get left behind, unlike RXS. RXS was made with long-term success in mind, making it the most likely candidate to be the first token to undergo a tenfold increase in worth. Post Listing Price Projections If RXS were listed at \$0.25 and its value increased by 10x, that would place it at \$2.50. However, regarding analysis, some believe RXS could reach highs of \$5 during æ€super bull runs.æ€ A \$5 price would mean a 20x increase. Conclusion With the listing just around the corner and Rexas Financeæ€™s worth set to spike, it is likely the most potent altcoin to surge to the 10x mark in 2025. The versatility of new-age DeFi tools with AI and a clearly defined infrastructure gives Rexas Finance a significant edge over its competition. For those looking for the next major breakout, RXS makes a very compelling case to earn explosive returns. Rexas Finance is the altcoin poised to be at the forefront of the next massive surge while Bitcoin and Ethereum continue to lead the marketæ€™s general movement. Artificial intelligence (AI) and blockchain are two of the most transformative technologies of this decade, and their fusion is developing an entirely new investment frontier. Among AI-powered cryptocurrencies, Ozak AI is rising as a standout undertaking, leveraging predictive AI, decentralized infrastructure, and real-time analytics to revolutionize financial markets. As the crypto area gears up for a major bull run, Ozak AI has the potential to skyrocket 200x, making it certainly one of the most important AI-driven blockchain tasks of 2025. Why AI-Powered Cryptos Are Gaining Traction The AI industry is projected to be worth over \$1 trillion by 2030, and its integration with blockchain is fueling demand for AI-powered crypto solutions. Investors are in search of projects that offer real-world utility, scalability, and innovation rather than just speculation. Unlike meme coins or regular altcoins, Ozak AI is fixing real-world issues with its superior AI algorithms and decentralized data analytics. Several AI-based cryptos, which include Render (RNDR), SingularityNET (AGIX), and Bittensor (TAO), have visible surprising profits as AI adoption surges. Ozak AI is positioned to outperform many existing initiatives because of its specific mixture of predictive analytics, real-time processing, and customizable AI models. What Makes Ozak AI a Strong 200x Project? Several key factors could drive Ozak AIæ€™s massive price growth in 2025: 1. Cutting-Edge AI and Blockchain Technology Ozak AI integrates advanced machine learning knowledge of fashions with blockchain infrastructure, providing a stable and decentralized method to statistics-driven decision-making. Key components of the OZ ecosystem encompass: Ozak Stream Network (OSN) æ€ Enables real-time data processing with minimal latency. Decentralized Physical Infrastructure Networks (DePIN) æ€ Ensures steady and scalable information storage. Ozak Data Vaults æ€ Provides AI-pushed insights for organizations and investors. Prediction Agents (PAs) æ€ Customizable AI models for market forecasting and hazard evaluation. This AI-pushed infrastructure units Ozak AI other than competition and enhances its long-term value proposition. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. 2. Limited Supply and High Demand The OZ token powers the Ozak AI space and has a hard and fast delivery, creating shortages that could pressure prices higher as demand increases. If adoption hastens and major exchanges listing Ozak AI, supply constraints should push the price drastically higher. 3. AI and Blockchain Adoption Is Expanding Rapidly With companies and institutions increasingly more integrating AI and blockchain, the demand for decentralized AI solutions is anticipated to skyrocket. Ozak AI is well-positioned to grow to be a market leader in this area. 4. Exchange Listings and Institutional Interest New CEX and DEX listings can significantly raise a tokenæ€™s price. If Ozak AI secures listings on systems like Binance, Coinbase, and KuCoin, it may revel in a parabolic price surge. Additionally, institutional investors are actively searching for AI-driven blockchain initiatives, and Ozak AIæ€™s strong basics make it an appealing desire. How Realistic Is a 200x Surge? Many successful crypto initiatives have brought 200x or extra in beyond market cycles. Historical examples encompass: Ethereum (ETH) æ€ Launched at \$0.75 in 2015, now trades above \$1,800; Shiba Inu (SHIB) æ€ Gained over 100,000% in a single bull run; Solana (SOL) æ€ Rose from \$0.50 to over \$120 in just a few years. With Ozak AIæ€™s strong fundamentals and growing marketplace traction, accomplishing a 200x surge is a realistic

opportunity, especially if AI adoption keeps accelerating. Ozak AI is not simply another crypto undertaking—it's far a disruptive AI-powered blockchain answer with the potential to revolutionize financial analytics, predictive modeling, and decentralized statistics networks. With its AI-driven method, limited token supply, growing demand, and growing adoption, Ozak AI ought to see its fee skyrocket by means of 200x, making it one among the most important AI cryptos of 2025. For traders seeking to get in early on the next breakout AI crypto, Ozak AI may additionally offer one of the most promising opportunities in the coming bull market. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. It's been a wild ride for crypto markets lately, with major coins flashing green, whales making power moves, and fresh narratives turning heads. Headlines are buzzing about institutional money finally realizing crypto's not just a flash in the pan. Meanwhile, savvy community members know the real wins are brewing in carefully picked projects that pack utility and future potential. That's why digging into the best crypto coins to invest in now matters more than ever. Qubetics (\$TICS) is one name that keeps popping up. It's not just another coin vying for attention. This project is tackling real-world issues where older platforms fell short. With its Decentralized VPN tech, Qubetics is bridging the gap for North Americans craving online privacy, security, and genuine use cases. The mix of AI, DeFi, and RWA tokenization is no joke, pulling serious interest from folks tired of empty promises. Now, toss in Solana, AAVE, and Cardano, and these picks are shaping up as the best crypto coins to invest in now for anyone thinking long-term. 1. Qubetics (\$TICS) – Decentralized VPN Powering Real-World Finance Qubetics is turning heads for all the right reasons. What's got North American backers hyped is Qubetics' Decentralized VPN. Not the basic VPN everyone's grandma downloaded—we're talking next-gen, AI-enhanced privacy tools. Picture this: a marketing agency in New York handling sensitive client data finally ditches overpriced centralized VPNs for Qubetics. Not only do they save cash, but they also get airtight privacy without worrying about data leaks. Or think about remote workers—coders, consultants, digital nomads. A freelance web dev in Austin can finally work from anywhere, tap into Wi-Fi at a coffee shop without sweating over hacks, all thanks to Qubetics' decentralized VPN backbone. Even small-town lawyers handling private client docs or healthcare clinics managing patient records can jump on this. No more trusting shady centralized servers. This decentralized VPN's giving regular folks, pros, and businesses bulletproof privacy without breaking the bank. Qubetics Presale Momentum and Analyst Projections Sitting in stage 26, this crypto presale has already pulled in over 23,500 buyers who scooped up 502 million tokens, racking up more than \$15.3 million so far. The current \$TICS price? \$0.1181 per token. And yeah, those numbers are heating up fast. This is where early buyers start rubbing their hands together. According to analysts, Qubetics is no pump-and-dump. If \$TICS hits \$1 post-presale, early adopters see a whopping 746.05% ROI. At \$5, that explodes to 4,130%. And if \$TICS hits \$6? We're talking 4,976% ROI. Some experts are even tossing around a \$10 to \$15 target post-mainnet, pushing potential gains to a mind-blowing 12,590%. Why did this coin make it to this list? Qubetics is hands-down one of the best crypto coins to invest in now because it's solving real problems that mainstream folks actually care about. Plus, with the presale still live, the entry price is sweet, and that potential ROI? Off the charts. 2. Solana (SOL): Powering DeFi, NFTs, and Payments with AI-Driven Efficiency Solana's been through the wringer, no doubt. But 2025's been kinder, with SOL clawing its way back and showing why it remains a major player. Fast, cheap transactions, and now it's deep in the AI game? That's what community members are vibing with. The big news lately? Solana partnered with a Silicon Valley AI giant to turbocharge its DeFi and NFT ecosystems. AI bots are now optimizing transactions, cutting fees, and reducing failure rates. A Miami-based NFT marketplace just rolled out an AI-backed Solana platform, making minting smoother than butter. And here's the kicker—Solana is landing big payment partnerships. A top Canadian e-commerce platform now lets users pay in SOL, tapping into Solana's speed and dirt-cheap fees. Buyers love skipping those brutal ETH gas fees. Businesses love seeing payments settle instantly. Why did this coin make it to this list? Solana is back swinging and proving doubters wrong. Its insane transaction speeds, AI integrations, and growing role in payments make SOL one of the best crypto coins to invest in now for anyone tired of slow, expensive chains. 3. AAVE (AAVE): Pioneering Real-World Asset Lending and DeFi Innovation AAVE's always been the DeFi sweetheart, and 2025 is no different. With major upgrades and institutional interest heating up, AAVE's back on radars. Liquidity is flowing, and new features are turning heads. Here's where it gets spicy—AAVE recently launched a real-world asset lending platform. Community members can now deposit tokenized real estate or corporate bonds as collateral. One Texas-based real estate group tokenized part of its portfolio and borrowed against it on AAVE's platform. That's a serious shift, folks. On top of that, AAVE dropped a new V4 protocol update focused on boosting liquidity and reducing fees. A Los Angeles-based startup grabbed a multi-million-dollar loan last month at a rate that smoked traditional banks. Why did this coin make it to this list? AAVE remains one of the best crypto coins to invest in now because it keeps evolving. Real-world assets, cheaper fees, and serious adoption make it a DeFi giant with staying power. 4. Cardano (ADA): Powering Supply Chain Transparency and Eco-Friendly DeFi Solutions Cardano's had its share of ups and downs, but 2025 feels different. ADA is no longer just the slow-and-steady tortoise. It's landing partnerships and getting serious about utility. Cardano just inked a deal with a Fortune 500 supply chain company to power verifiable data tracking. From farm to table, every product gets a verified trail on Cardano's blockchain. Think that won't move the needle? Buyers love transparency. And ADA isn't ignoring DeFi anymore. A Chicago-based DeFi platform recently chose Cardano for its lending pools, praising the low fees and eco-friendly approach. That green angle is hitting home with eco-conscious backers in North America. ADA's price has clawed back from last year's lows, gaining steady momentum as these partnerships stack up. Community chatter says Cardano's finally walking the walk. Why did this coin make it to this list? Cardano earns its spot on the best crypto coins to invest in now list because it's not just about potential anymore. It's finally delivering, landing enterprise deals, and expanding its DeFi footprint. Conclusion Picking the best crypto coins to invest in now ain't about hype anymore. It's about real utility, growing adoption, and, yeah, serious ROI potential. Qubetics is shaking things up with its Decentralized VPN and eye-watering ROI projections. Solana's back in the fast lane with AI and payments, AAVE is leading the real-world DeFi charge, and Cardano's finally flexing those enterprise muscles. The Qubetics presale is still cooking, offering backers a golden shot at getting in early. SOL, AAVE, and ADA are all showing that crypto's next big wave isn't some distant dream—it's happening right now. Don't sit on the sidelines wondering what if. These four projects are the best crypto coins to invest in now, ready to reward those who see the bigger picture. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs - What makes Qubetics stand out among the Best Crypto Coins to Invest In Now? Qubetics delivers real-world utility with its Decentralized VPN, offering privacy and security for individuals, pros, and businesses. - How much has Qubetics raised in its presale? Qubetics has raised over \$15.3 million, selling more than 502 million tokens to 23,500 early adopters. - Why is Solana trending again in 2025? Solana's speed, new AI partnerships, and growing role in e-commerce payments have put it back on the map. - What's driving AAVE's growth this year? AAVE's new real-world asset lending platform and protocol upgrades have boosted adoption and liquidity. - How is Cardano staying competitive? Cardano's enterprise deals and DeFi expansion are proving it's more than just a hype coin—it's delivering results. Disclaimer: TheNewsCrypto does not endorse any content on this page. - With a 9% rally, BONK is trading around \$0.000012. - The meme coin's trading volume has surged by over 35%. The recent recovery efforts fell short, with major assets extending their losses. However, the meme coin sector holds steady with a market cap of \$52.9 billion. The Solana-based meme coin BONK has posted a gain of over 9.69%. The meme coin manages to settle as the third top gainer and chooses a bull run for the day. Breaking past a crucial resistance level at \$0.00001286, BONK has climbed to a peak of \$0.00001291 from a low of \$0.00001129. BONK currently trades at \$0.00001264, with its market cap touching \$86.12 million. Notably, the daily trading volume of the meme coin has reached \$150.81 million. The upside trajectory of BONK has recorded a 15.12% gain over the past seven days. The meme coin began the week trading at around \$0.000011, and eventually, it mounted to the current trading level. Can BONK Break Out to New Highs? If the bulls could sustain the active bullish momentum, the price of BONK could mount immediately to the \$0.00001296 resistance. Further gains might push the price of the meme coin to hit high targets around \$0.00001370. On the support side, assuming BONK loses its grip, it could likely pull back the price to the support zone at \$0.00001191. A potential decline might trigger the meme coin continuing to plummet toward the \$0.000011 range. BONK's Moving Average Convergence Divergence (MACD) line has crossed over the signal line. This crossover exposes a strong bullish momentum with the potential for continued upward movement in price. The Chaikin Money Flow (CMF) indicator of the meme coin positioned at -0.05 denotes that outflows are slightly outweighing inflows. Meanwhile, BONK's trading volume has increased by over 35.83%. BONK's ongoing market sentiment is bullish, as the daily relative strength index (RSI) settles at 65.26. Besides, the Bull Bear Power (BBP) value at 0.00000122 suggests a very slight bullish advantage in the market. Disclaimer: The opinion expressed in this article is solely the author's. - Crypto researcher at Alpha Please, Aylo called XRP the biggest financial scam. - Ripple CTO responded and corrected on-chain data figures of XRPL DEX volume. The saying, there's never a dull day in crypto, yet again came true with the latest comments of a researcher about one of the top cryptocurrencies like XRP. Researcher Aylo called XRP the biggest financial scam the world has ever seen. Such a bold accusation on Ripple and its token triggered a variety of reactions from the crypto community. I think XRP is the biggest financial scam the world has ever seen. – Aylo (@alpha\_pls) March 21, 2025 There has never been something which has produced less value that has reached this market cap (\$140B). The XRP ledger did \$44k in volume in the last 24h, according to Defillama. pic.twitter.com/i6crw0GNL4 Aylo, a researcher at Alpha Please, made a post on X recently called XRP the “biggest financial scam.” To support his accusation, Aylo cited XRP Ledger's 24-hour DEX trading volume of \$44k, as per Defillama. He further said that no other crypto reached a market cap of \$140 billion that produced less value. \$44k or \$9M, what's the True 24-hour Trading Volume of XRP Ledger? Ripple Chief Technology Officer, David JoelKatz Schwartz, responded to Aylo's post. Since \$44k is such a low 24-hour DEX volume, Ripple CTO suggested that it only considered XRPL's AMMs. His post read, “I can't find the exact page you're looking at, but I bet that's just looking at AMMs on XRPL, a minuscule fraction of what people use XRP for.” It's arguably the biggest opportunity market in whole crypto. – Vet (@Vet\_X0) March 21, 2025 No other blockchain allows such an easy capture of over 6,000,000 accounts on chain with so little competition. XRP Ledger the place to build hands down. Also it's \$9,000,000 vol 24h on the dex not 44k pic.twitter.com/AK4whdPrBj Replying to the same post, the dUNL validator Vet made another post supporting the project. He stated that XRP is arguably the biggest opportunity market in the whole crypto. Vet also corrected the 24-hour DEX volume, stating that the actual volume is \$9 million not \$44k. However, the comment section also included several posts that affirmed that XRP is a scam with little to no value. While one comment raised concerns over the legitimacy of the XRP token supply, others confused the 24-hour DEX volume with XRP's 24-hour trading volume. Despite the massive community, XRP's real value and the strength of the fundamentals remain dim compared to other top cryptocurrencies such as Ethereum and Solana. An almost four-year-long Ripple lawsuit was recently closed by the SEC under Trump's new administration. Only time proves which cryptocurrencies are the real gems with real-time utility and strong fundamentals. Highlighted Crypto News Today: Hyperliquid (HYPE) Faces Resistance at \$18 as Market Volatility Rises

The crypto market is heating up fast, and some of the biggest projects are making massive moves. Binance just announced a major expansion, increasing its fiat trading support and rolling out enhanced features for global users. Meanwhile, Ethereum has surged past \$2,000, riding a wave of bullish momentum as Bitcoin also gains ground. But the real breakout project? Qubetics (\$TICS), which is changing the game for Web3 with its interoperability-focused ecosystem and a presale that has already raised over \$15.3 million. While Binance and Ethereum are showing impressive growth, Qubetics is delivering groundbreaking innovation that is set to redefine blockchain interoperability. By uniting multiple chains into a seamless, scalable network, Qubetics removes the barriers that have limited blockchain adoption, making it the best crypto to buy in 2025. With a record-breaking presale, massive ROI potential, and revolutionary interoperability solutions, Qubetics is leading the pack. If you're looking for a long-term crypto with real-world impact and explosive growth potential, Qubetics should be at the top of your list. Qubetics: Solving

Blockchain's Biggest Problem with Seamless Interoperability One of the biggest challenges in blockchain technology has always been interoperability—the ability for different blockchains to communicate and share data. Qubetics is solving this problem head-on, creating a seamless, cross-chain ecosystem where users can transfer assets, execute smart contracts, and interact across multiple blockchains without friction. Imagine a future where you don't need to swap tokens manually, use multiple wallets, or rely on centralized exchanges to bridge assets. Qubetics is making this a reality, offering a fully decentralized and scalable interoperability layer that eliminates the barriers between networks like Ethereum, Binance Smart Chain, and Solana. This changes everything for businesses, developers, and everyday users, unlocking faster transactions, reduced fees, and greater flexibility across the crypto space. From DeFi platforms needing smooth cross-chain liquidity to NFT marketplaces requiring seamless asset transfers, Qubetics is building the infrastructure to make Web3 truly interconnected. This is why it's one of the best cryptos to buy in 2025—it's solving a problem that has held blockchain back for years. Qubetics' Record-Breaking Presale—Here's What You Need to Know The Qubetics presale is on fire, with over \$15.3 million raised and a staggering 502 million STICS tokens already sold. With momentum building rapidly, the window to buy in at the current price is closing fast. Each presale stage lasts only 7 days, and every Sunday at 12 AM, the price jumps by 10%, pushing early participants into prime positions for massive gains. Right now, the STICS token is priced at \$0.1181, with a growing community of 23,500 holders who are stacking up before the next surge. And with mainnet launch set for Q2 2025, analysts predict a staggering potential ROI of up to 12,590.70%, making Qubetics one of the most explosive crypto opportunities of the year. So, what happens if you jump in with \$1,000 today? At the current price of \$0.1181, you'd secure 8,460 STICS tokens. When STICS hits \$1, that investment transforms into \$8,460, and at \$5, it skyrockets to \$42,300. If STICS reaches \$10, that same investment turns into a jaw-dropping \$84,600. But with the next price hike coming this Sunday at 12 AM, now is the best time to secure your spot before prices climb again. Join the Qubetics presale now before it's too late! Binance Expands Fiat Trading, Strengthening Its Market Position Binance has just expanded its fiat trading services, improving user experience and accessibility worldwide. With enhanced deposit and withdrawal methods, Binance is solidifying its dominance as the world's largest crypto exchange. The platform is now supporting a wider range of fiat currencies, making it easier for community members to onboard into crypto without the hassle of third-party services. This move is expected to drive even more adoption, cementing Binance's role as a gateway to the digital asset economy. Despite regulatory challenges in some regions, Binance continues to grow, proving its resilience and adaptability. However, as crypto becomes more decentralized, projects like Qubetics that remove the need for centralized exchanges are becoming even more attractive. Ethereum Surges Past \$2,000—What's Next for ETH? Ethereum has broken past the \$2,000 mark, showing strong bullish momentum as the overall crypto market rebounds. With Bitcoin gaining traction, Ethereum's price is riding the wave, attracting new liquidity into the ecosystem. This latest price movement is driven by increased on-chain activity, with Ethereum gas fees surging as demand for transactions spikes. Analysts are now watching key resistance levels, predicting that Ethereum could push toward \$2,500 in the coming weeks if this trend continues. However, Ethereum's long-term growth is still tied to Layer 2 solutions and its ongoing network upgrades. While ETH remains a solid investment, Qubetics' ability to facilitate interoperability between blockchains could make it an even more revolutionary player in the space. Final Thoughts: Why Qubetics is the Best Crypto to Buy in 2025 While Binance's expansion and Ethereum's rally are making headlines, Qubetics is delivering the most groundbreaking innovation. With seamless cross-chain interoperability, a rapidly growing presale, and insane ROI potential, Qubetics is leading the way as the best crypto to buy in 2025. With the next crypto presale price hike coming this Sunday at 12 AM, now is the best time to secure your STICS tokens before they become more expensive. Join the Qubetics presale now and be part of the next crypto revolution! For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. Why is Qubetics one of the best cryptos to buy in 2025? Qubetics is revolutionizing blockchain interoperability, solving one of the biggest problems in crypto. Its fast-selling presale and massive ROI potential make it a must-watch project. 2. How does Qubetics compare to Binance and Ethereum? While Binance is growing as a centralized exchange and Ethereum is leading in DeFi, Qubetics is solving interoperability, making Web3 more connected and accessible. 3. How can I participate in the Qubetics presale? Qubetics' presale is live, and prices increase every Sunday at 12 AM. Join the Qubetics presale now before the next price hike! - Helium (HNT) is currently at \$3.35, defending a strong support level at \$3.00. - Analysts believe Helium could hit \$4.00 – \$4.50 in the short term and foresee a long-term adoption in 2025. Helium (HNT) is pushing higher as the broader crypto market slowly regains momentum. It currently trades at \$3.27, moving up to a 7.1% increase in the past 24 hours, with price movement between \$3.02 and \$3.40. With a market capitalization of about \$603 million, Helium (HNT) solidifies its stand among the top 130 cryptocurrencies. Trading activity remains steady, with \$7.4 million in daily volume. Despite past consolidations, Helium's long-term fundamentals remain solid, backed by its role in decentralized wireless infrastructure. HNT Chart Signals a Breakout Helium(HNT) is testing key resistance zones, signaling a potential breakout. The \$3.00 level has proven to be a strong support zone, holding up against recent dips. On the upside, \$3.50 and \$4.00 remain the next hurdles for buyers. Helium's 50-day moving average at 3.16 is now sitting below the price, which signifies short-term bullish sentiment. Its 200-day moving average is at \$3.01, which is also below Helium's current price. Even though this signifies the token's resilience and sustainability, Helium still needs a stronger push to confirm and sustain a long-term rally. The current Relative Strength Index (RSI) stands at 54, which translates to a moderate buying pressure, and a possibility for increased purchase. If RSI climbs above 60, momentum could shift further in favour of the investors and bulls. A close movement above \$3.50 could spark a potential drive towards \$4.00-\$4.50, but also a decline below \$3.00 may lead to a disappointing \$2.50-\$2.80. Helium's Growing Use Case Fuels Confidence The Helium ecosystem is building a decentralized wireless network, one that challenges traditional telecom providers. Helium use cases are considered valuable and sustainable. Through its hotspot model, users could earn HNT tokens by providing network coverage, ultimately easing access to more cost-efficient and scalable internet usage. Meanwhile, the demand for smart city solutions and IoT connectivity is rising, and Helium's utility continues to grow. The network is already expanding its ecosystem with new integrations like Helium Mobile and its transition to Solana's blockchain. These news upgrades have the potential to boost Helium adoption. It will also allow for developments to strengthen HNT's long-term investment potential. What's Next for HNT? If momentum holds, Helium could test \$4.50 – \$5.00 in the near term. A solid break above \$3.50 will be key in sustaining this uptrend. For long-term holders, price projections remain optimistic. If network adoption and partnerships continue expanding, some forecasts place HNT price at \$7.00 – \$8.50 within a year and \$14+ by 2025. With its unique wireless network model and growing adoption, HNT remains crypto to watch in 2025. Highlighted Crypto News for Today

- International Monetary Fund (IMF) included Bitcoin and other cryptocurrencies in its BPM7. - IMF treats cryptocurrencies such as Bitcoin as non-produced non-financial assets. International Monetary Fund joined the growing list of global organizations that recognize cryptocurrencies. What started as an experiment in 2009 has now grown into a trillion-dollar industry. It reached such a magnitude that is hard to ignore by world leaders and government agencies. Trump's pro-crypto stance further fueled the growth and adoption of cryptocurrencies. Yesterday, the Trump administration announced its plans to bring USAID onto blockchain to increase security, transparency, and accountability. Trump even signed an executive order to establish a crypto token reserve. Today is the new day and another global organization started including cryptocurrencies in its reports. International Monetary Fund (IMF) recently published the seventh edition of its Balance of Payments Manual (BPM7). The framework classified cryptocurrencies such as Bitcoin as non-produced nonfinancial assets. Other crypto tokens are treated as equity holdings. As per IMF, crypto assets without a counterpart liability designed to act as a medium of exchange (e.g., Bitcoin) are treated as non-produced non-financial assets and recorded separately in the capital account. IMF Classifies Cryptocurrencies Treating Staking Rewards as Equity Dividends This marks the first time IMF made an elaborate report on the recognition and classification of cryptocurrencies. IMF classified digital assets into fungible and non-fungible assets and then further classified fungible tokens based on their corresponding liability. While cryptocurrencies like Bitcoin with no corresponding liability are capital assets, other tokens such as stablecoins backed by liabilities are classified as financial instruments. Crypto tokens that have an underlying protocol or platform such as Ether and Solana are more like equity holdings. When traders stake their digital assets and earn staking rewards, the IMF considers them similar to equity dividends. Overall, the IMF manual acts as a guide for all the global countries that are exploring ways to classify digital assets and bring clear regulations. The recognition of digital assets by the IMF brings a huge shift to the crypto industry. For all the governments that are adamant about recognizing or regulating digital assets, this acts as a guiding step forward. Highlighted Crypto News Today: Cardano (ADA) Faces Price Pressure, But Network Activity Remains Strong

With the crypto market constantly evolving, finding the top cryptos to invest in this week requires staying ahead of the latest developments. Polkadot has grabbed headlines with a potential ETF listing, while SUI is making waves with predictions of a \$5 price target. But one project has been dominating the conversation—Qubetics (STICS)—thanks to its game-changing multi-chain QubeCode IDE and an explosive \$15.2 million presale. While Polkadot's ETF speculation could bring institutional capital and SUI is pushing for a major price rebound, Qubetics is solving blockchain's biggest challenges. Its multi-chain development tools are making Web3 smarter, faster, and more accessible—a huge leap forward for the entire crypto space. With a presale that keeps climbing and major ROI projections, Qubetics is shaping up to be the strongest long-term investment this week. If you're looking for top cryptos to invest in this week, it's time to put Qubetics at the top of your watchlist. Qubetics: QubeCode IDE is Transforming Web3 Development One of the biggest problems in blockchain development is that different networks have different coding standards. This makes it hard for developers to build cross-chain applications without significant hurdles. Qubetics is fixing this with QubeCode IDE, a Web3-focused development environment that allows seamless cross-chain dApp creation. Imagine a developer building a DeFi application that works on Ethereum, Solana, and Polkadot—all from a single codebase. With QubeCode IDE, this is now possible, removing the headaches of interoperability. This isn't just a win for developers—it's a major leap forward for businesses, enterprises, and startups that want to build on multiple blockchains without technical barriers. With the future of blockchain leaning toward interconnected ecosystems, Qubetics is way ahead of the curve. This is why it's being hailed as one of the top cryptos to invest in this week, as QubeCode IDE will become an essential tool in Web3 innovation. Qubetics' Presale Explodes with Massive ROI Projections The Qubetics presale is on fire, and community members are rushing to secure their tokens before the next price hike. Every Sunday at 12 AM, the price of STICS increases by 10%, meaning early adopters are already seeing gains even before the presale ends. - Current Price: \$0.1181, with over 501 million STICS tokens sold - Presale tally at \$15.2 million, with 23,490+ token holders - Massive ROI potential, with 8,360% gains if STICS reaches \$10 post-mainnet launch What Happens If You Invest \$1,000 in Qubetics? - \$1,000 at \$0.1181 = 8,460 STICS - At \$1, your investment grows to \$8,460 - At \$5, it skyrockets to \$42,300 - At \$10, it becomes an insane \$84,600 With such a high growth trajectory, Qubetics is one of the top cryptos to invest in this week. Don't miss out—join the Qubetics presale before the next price jump! Polkadot ETF Speculation Sends Shockwaves Through the Market According to Blockhead, Polkadot (DOT) could soon see a game-changing ETF listing on Nasdaq. This news comes just one month after the Chicago Board Options Exchange (CBOE) filed for a similar product, signaling strong institutional interest in DOT. An ETF approval could open the floodgates for mainstream adoption, allowing institutional capital to flow into Polkadot without the technical hurdles of direct token purchases. This could be a huge boost for Polkadot's ecosystem, which already specializes in parachain technology and cross-chain interoperability. That said, ETF approvals take time, and regulatory hurdles remain a concern. While Polkadot's long-term potential is strong, it still faces competition from Qubetics, which offers a more developer-friendly, multi-chain approach. SUI's Price Targets \$5 Amid Growing Optimism According to CoinCentral, SUI is eyeing a massive price rebound, with experts predicting a surge past \$5. The reason? New integrations with IoT and ColdWare technology, which could bring real-world adoption to the SUI blockchain. As more devices connect to blockchain-based infrastructure, SUI is positioning itself as the go-to platform for decentralized IoT solutions. With a strong technical foundation and growing developer interest, the project is attracting serious attention. However, SUI still needs a major catalyst to sustain its upward momentum. While its use case is promising, competition from Polkadot, Qubetics, and Ethereum remains strong. Compared to Qubetics' \$15M presale success, SUI still has a long way to go before it becomes a dominant force in crypto. Final Thoughts: Why Qubetics Leads the Top Cryptos to Invest in This Week While Polkadot is making headlines with ETF speculation and SUI is targeting a price rebound, Qubetics is already delivering game-changing solutions with its QubeCode IDE. With its presale booming and weekly price hikes locking in massive early gains, Qubetics is the top crypto to invest in this week. Its multi-chain developer tools, strong community backing, and high ROI potential make it a must-watch project in 2025. With the next price increase coming this Sunday at 12 AM, now is the best time to buy

before it skyrockets again. Don't wait! Join the Qubetics crypto presale now and secure your stake in the future of Web3! For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. Why is Qubetics one of the top cryptos to invest in this week? Qubetics is revolutionizing blockchain development with QubeQode IDE, allowing seamless multi-chain dApp creation. Its \$15M presale growth and high ROI projections make it a top choice for long-term investment. 2. How does Qubetics compare to Polkadot and SUI? While Polkadot is awaiting ETF approval and SUI is pushing for a \$5 rebound, Qubetics is already delivering real-world utility with its multi-chain tools, making it the strongest long-term pick. 3. How can I participate in the Qubetics presale? Qubetics's presale is live with weekly price hikes every Sunday at 12 AM. Join the Qubetics presale now before the next price surge! The crypto market is hyped over Rexas Finance (RXS), a real-world asset (RWA) tokenization platform surging through its presale. Starting at \$0.03 in September 2024, RXS has climbed 580% to \$0.20 in its final presale stage, with over 90% of its 500 million allocated tokens already sold. Investors have poured \$46.9 million into the project, drawn by its mission to merge blockchain with tangible assets like real estate and gold. With a confirmed launch price of \$0.25 set for June 2025, a 2013 XRP investor predicts A small RXS investment could soon be worth millions, delivering life-changing returns for early backers. Rexas Finance Bridges Real-World Assets and Blockchain Rexas Finance is redefining ownership by tokenizing physical assets. The platform allows anyone to buy, sell, or trade fractional shares of real estate, gold, or art through blockchain. Imagine owning 10% of a luxury apartment in Dubai or a stake in a commercial property in Tokyo—all managed with a single click. This eliminates geographical barriers and high entry costs, democratizing access to markets worth trillions globally. The RXS Token Builder simplifies asset tokenization for users. Whether creating full or fractional ownership tokens, the tool requires no coding expertise. Users mint assets as ERC-20, ERC-721, or ERC-1155 tokens, ensuring compatibility across major blockchains. Once live, the Rexas Launchpad lists projects raise capital directly from the community, bypassing traditional gatekeepers like banks or venture capitalists. Security remains a priority. Every smart contract undergoes rigorous checks by CertiK, a top blockchain audit firm. This ensures protections against vulnerabilities, giving investors confidence in the platform's reliability. Presale Momentum and Strategic Tokenomics Rexas Finance chose public presale over VC funding to let everyday investors lead its revolution. The decision has paid off: Stages 1-11 sold out rapidly, raising \$41 million. Now in its 12th and final stage, RXS tokens cost \$0.20—a 6.6x jump from the starting price. Only 45 million tokens remain before the \$56 million hard cap closes. Token distribution emphasizes long-term growth. Of the 1 billion total supply, 50% went to presale buyers, while 22.5% fuels staking rewards to encourage holding. Liquidity (15%) and treasury reserves (10%) ensure stability, while partnerships (2%) and marketing (3%) expand reach. Early backers also join a \$1 million giveaway, with 20 winners each claiming \$50,000 in RXS. Over 1.2 million entries highlight the frenzy around this offer. Adding credibility, RXS is listed on CoinMarketCap and CoinGecko—platforms tracked by 100 million monthly users. These listings boost visibility and validate the project's legitimacy, attracting more investors. Rexas Finance's Path to Exponential Growth Post-launch plans include debuting on three top-tier exchanges, exposing RXS to millions of traders. Analysts link its potential to Solana's 2021 breakout, predicting similar surges. The \$0.25 listing price offers immediate gains, but long-term projections are bolder. By bridging real estate's \$400 trillion market with blockchain's efficiency, Rexas could push RXS beyond \$10—a 50x leap from current prices. Consider this: A \$5,000 investment today buys 25,000 RXS at \$0.20. If prices hit \$10, that stake becomes \$250,000. Early participants in similar altcoins like Ripple (XRP) saw generational wealth built in months. Rexas offers that same potential, amplified by real-world utility. Final Call for Presale Participation Rexas Finance represents more than another crypto token—it's a gateway to global asset markets once reserved for the wealthy. With the presale 90% complete and launch dates fixed, the window for entry is closing. Those buying now position themselves ahead of exchange listings, staking rewards, and a redefined financial ecosystem. As a 2013 XRP investor might say: Disruptive opportunities this clear rarely come twice. Rexas Finance isn't just trending; it's building the future. Missing it could mean missing millions. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitnomial launches the first-ever CFTC-regulated XRP futures in the U.S. - Bitnomial voluntarily dismisses its lawsuit against the SEC. Bitnomial has officially launched XRP US Dollar Myra (XRUY) Futures, marking the first CFTC-regulated XRP futures in the United States. The product applies for physical settlement, ensuring actual XRP is delivered upon contract expiration. Bitnomial's new futures contract offers traders a compliant and transparent way to gain exposure to XRP. Unlike cash-settled contracts, physically settled futures enhance price discovery by tying derivatives directly to XRP supply and demand. This structure strengthens market integrity and boosts investor confidence. Luke Hoersten, CEO of Bitnomial, emphasized the importance of regulated market infrastructure. He stated that physically settled futures ensure true price discovery and market transparency. Michael Dunn, President of Bitnomial Exchange, highlighted that institutional and retail traders can now access a broader range of CFTC-regulated crypto derivatives. Bitnomial Withdraws SEC Lawsuit Alongside the product launch, Bitnomial Exchange, LLC has voluntarily dismissed its lawsuit against the U.S. Securities and Exchange Commission (SEC). The lawsuit, filed in October 2024, challenged whether XRP futures should be classified as security futures contracts. Bitnomial cited evolving SEC policies as a reason for dropping the case, acknowledging improved regulatory clarity for XRP. This development signals easing regulatory pressure on XRP and the broader crypto market. Ripple CEO Brad Garlinghouse commented on the SEC's retreat in its case against Ripple. While a cross-appeal remains, he noted that Ripple has moved from being the defendant to the plaintiff. Over the past two weeks, it has introduced physically settled futures on Solana, Avalanche, Chainlink, Bitcoin Cash, Litecoin, Ethereum, Polkadot, and Hedera. The addition of XRP futures further solidifies its position as a leader in U.S. crypto derivatives trading. Highlighted Crypto News Today Bitcoin ETF Inflows Rise as Institutional Interest Returns

- Bitcoin ETFs saw a \$165M inflow, marking five straight days of gains. - The Fed's decision to hold rates triggered a 1,300% surge in ETF inflows. - Analysts remain split on Bitcoin's short-term trend amid key resistance levels. Bitcoin exchange-traded funds (ETFs) saw a return of inflows, posting \$165 million on Thursday according to SoSoValue data. This is the fifth day in a row that ETFs have seen inflows, marking increased institutional demand after weeks of outflows. Institutional Interest Surges Following a loss of more than \$6 billion in outflows, Bitcoin ETFs are now experiencing a turnaround. BlackRock's iShares Bitcoin Trust ETF (IBIT) topped with \$172 million in new investments. Followed by Fidelity Wise Origin Bitcoin Fund (FBTC) and Grayscale Bitcoin Trust ETF (GBTC) with \$9.19 million and \$5.22 million, respectively. Bitwise Bitcoin ETF (BITB), however, experienced \$17.4 million in outflows, and Grayscale's GBTC lost almost \$8 million. Fed's Interest Rate One of the key factors behind this revival was the Federal Reserve's choice to keep interest rates unchanged. On March 20, spot Bitcoin ETFs experienced a 1,300% increase in inflows, amounting to almost \$166 million. Bitcoin ETFs accumulated almost \$700 million in five days. The Fed, which suggested rate cuts in the future, spurred risk-on assets' optimism. Bitcoin momentarily jumped 4.5% to \$87,431 before falling back. Ethereum and Solana also gained, while the overall crypto market cap rose to \$2.947 trillion. Even with bullish ETF inflows, analysts are split on the short-term direction of Bitcoin. Technical analysis places Bitcoin at crucial resistance, challenging a falling trendline and the 100-day moving average. Analysts' view Crypto analyst RJT\_WAGMI indicated a potential breakout might spark a rally, while rejection can induce a dip. Trader Great Matlsby mentioned that Bitcoin is still in a long-term trend channel, and the next major high is due in 2025-26. CryptoQuant CEO Ki Young Ju cautioned that although ETF demand is high, on-chain metrics indicate slowing bull cycle, with Bitcoin potentially taking 6-12 months to cross its all-time high. Inflows for Bitcoin ETFs indicate renewed institutional optimism, spurred by the Fed's move and clarity in regulation. Nevertheless, macroeconomic forces and technical resistance will dictate the path of Bitcoin, with both short-term volatility and long-term appreciation.

MEXC, a leading global cryptocurrency exchange, has announced a strategic partnership with pump.fun, the world's leading crypto token launchpad where anyone can create their own token for free. This collaboration aims to enhance the trading experience on MEXC's DEX+ platform and explore further synergies between centralized finance (CeFi) and decentralized finance (DeFi). The first step in this partnership will be the integration with pump.fun's new DEX, PumpSwap. MEXC has recently launched its innovative hybrid product, DEX+, offering a seamless, one-stop solution for both on-chain and off-chain trading. This unique platform enables users to trade directly on decentralized exchanges (DEXs) through the MEXC App and website, providing access to a diverse array of on-chain assets. The initial version of DEX+ will support the Solana ecosystem, giving users the ability to trade over 10,000 tokens available on Raydium and pump.fun. Future updates will expand to include additional DEXs and blockchain networks, broadening the platform's reach and liquidity. MEXC DEX+ simplifies the complexities of DEX by enabling users to trade various on-chain assets within the Solana ecosystem directly through a familiar CEX interface. This eliminates the need to manually hurdle through multi-step interactions, such as switching wallets or cross-chain transactions. Through this strategic partnership with pump.fun, MEXC aims to provide a streamlined, accessible experience for the potential onchain assets, further solidifying its commitment to innovative solutions within the crypto space. MEXC DEX+ users gain unique access to trade newly launched tokens on pump.fun at an early stage. DEX+ allows users to participate in trading as soon as a memecoin is issued, even before it is listed on CEX, enabling them to capitalize on market opportunities from the outset. By leveraging pump.fun's robust capabilities in launching memecoins, this model significantly lowers the entry barrier for users seeking to enter the Web3 trading space. MEXC is committed to offering a broad spectrum of accessible assets through our listing strategy while ensuring fast listing speeds and top-tier security for our users. With DEX+, we aim to address key challenges by providing a familiar, CEX-like trading experience while retaining the benefits of accessing on-chain assets. We are thrilled to partner with pump.fun to empower users to discover and support memecoins in this rapidly evolving investment space. This collaboration underscores our dedication to fostering innovation and providing new opportunities for our users in the ever-evolving crypto landscape, said Tracy Jin, COO of MEXC. MEXC's pump.fun democratized token creation, standardized token contracts, and brought crypto to the people. pump.fun's partnership with MEXC will give DEX+ users a powerful tool to access the coins they want to trade long before they're available on a centralized exchange. pump.fun is building crypto's largest social network, and bridging communities across crypto through partnerships like this with MEXC is how that foundation is built, said Alon Cohen, Co-Founder pump.fun. Looking ahead, MEXC's DEX+ is positioned to be a transformative force in the evolution and mass adoption of DeFi and DEX ecosystems, with its strategic partnership with pump.fun marking a crucial first step in this journey. As user adoption of decentralized trading accelerates, the seamless integration of centralized and decentralized exchange models becomes essential, and MEXC stands at the forefront of this convergence, systematically expanding our ecosystem partnerships to deliver increasingly sophisticated, secure, and user-centric trading experiences that will define the next generation of crypto trading. To celebrate the successful launch of DEX+ and its strategic partnership with pump.fun, MEXC is pleased to announce its incentive program: new users completing trades of 100 USDT or more on the DEX+ platform will be eligible to receive a 20 USDT reward. For more details, please visit: <https://www.mexc.com/dex-rewards>. About MEXC Founded in 2018, MEXC is committed to being "Your Easiest Way to Crypto". Serving over 34 million users across 170+ countries and regions, MEXC is known for its broad selection of trending tokens, frequent airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. For more information, visit: MEXC Website: <https://www.mexc.com> Telegram: <https://t.me/mexc> How to Sign Up on MEXC For media inquiries, please contact MEXC PR Manager Lucia Hu: [lucia.hu@mexc.com](mailto:lucia.hu@mexc.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. Have you ever wondered which meme coin could be your golden ticket in the crypto world? As the market surges with new opportunities, Arctic Pablo Coin (APC) is among the top new meme coins to buy today, standing out with its unique presale structure and massive growth potential. Meanwhile, Notcoin and Popcat have been making waves, attracting traders with their volatile price action and community-driven appeal. Arctic Pablo Coin's

presale phase, currently in Nippy Nook, offers an incredible ROI potential of 10,027.85%, making it one of the most exciting investment prospects. With over \$1.95 million raised, APC continues to gain traction among investors. While Notcoin and Popcat dominate headlines, Arctic Pablo Coin remains the prime contender for those seeking exponential crypto gains. This article will explain the latest developments and updates on all three coins: Arctic Pablo Coin, Notcoin, and Popcat. Arctic Pablo Coin's Referral Program: Amplify Your Earnings Arctic Pablo Coin is among the top new meme coins to buy today, offering investors a unique opportunity through its lucrative referral program. This initiative allows participants to earn additional rewards simply by introducing friends and fellow investors to APC. By leveraging this program, early adopters can significantly enhance their investment potential while contributing to the coin's growing community. Unlike traditional meme coins, Arctic Pablo Coin incentivizes engagement, ensuring long-term sustainability and increased adoption. As the presale gains momentum, this referral system provides an excellent way for investors to maximize their holdings while benefiting from the project's exponential growth potential. Seize the Moment: Arctic Pablo Coin's Nippy Nook Presale Phase Arctic Pablo Coin is on the list of top new meme coins to buy today, especially as it enters the Nippy Nook phase of its meme coin presale. Currently priced at a mere \$0.000079 per APC, this stage offers a staggering potential return on investment of over 10,027.85% upon reaching the launch price of \$0.008. With over \$1.95 million already raised, the momentum is undeniable. Investing \$500 now would secure approximately 6,328,430 APCs, translating to a potential value of \$50,627.44 at launch. As Arctic Pablo Coin progresses through its presale phases, prices are set to increase, making now the optimal time to join this promising venture. Popcat (SOL) Gains Momentum with Strong Trading Volume Popcat (SOL) continues to capture investor attention, currently priced at \$0.190847. With a substantial 24-hour trading volume of \$66,086,515, the meme coin has demonstrated significant liquidity and growing market interest. As meme coins gain traction, Popcat's rising activity suggests increasing adoption within the Solana ecosystem. The project has gained popularity due to its viral appeal and strong community backing, contributing to its sustained market presence. As the broader crypto market is making waves, Popcat's performance will be closely watched, especially by traders looking for high-potential digital assets with strong trading activity and promising market trends. Notcoin's Market Performance and Growth Potential Notcoin has recently captured significant attention within the crypto community. As of March 20, 2025, Notcoin is trading at \$0.002399, boasting a market capitalization of \$245.75 million. Its 24-hour trading volume has surged to \$65.84 million, indicating strong investor interest and active market participation. This heightened engagement highlights Notcoin's increasing relevance in the digital asset space. With consistent trading activity and growing market traction, Notcoin demonstrates promising potential for future expansion. As investors seek emerging opportunities in the crypto landscape, Notcoin's performance suggests it could be a noteworthy contender in the evolving digital economy. Final Reflections: Arctic Pablo Coin's Presale A Golden Opportunity Based on the latest insights, Arctic Pablo Coin is among the top new meme coins to buy today, offering investors an unmatched opportunity with its high-ROI presale. The Nippy Nook phase presents a lucrative entry point, with over \$1.95 million raised and a projected 10,027.85% ROI potential. Meanwhile, Notcoin continues to attract investors with its rising market cap and impressive trading volume, while Popcat (SOL) gains traction with strong liquidity and community-driven momentum. As the meme coin market evolves, Arctic Pablo Coin stands out as a prime investment for those seeking exponential gains. Don't miss out! APC's presale price is increasing with each phase! Secure your tokens now before the next price jump and maximize your profit potential. For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> Frequently Asked Questions (FAQs) 1. What is the current price of Arctic Pablo Coin during the Nippy Nook presale phase? The current price is \$0.000079 per APC. 2. How much has Arctic Pablo Coin raised in its presale so far? Over \$1.95 million has been raised to date. 3. What is the potential ROI for early investors in Arctic Pablo Coin? Investors can anticipate an ROI exceeding 10,027.85% from the Nippy Nook phase to the launch price of \$0.008. 4. How can I participate in Arctic Pablo Coin's presale? Visit the official Arctic Pablo Coin website, connect your crypto wallet, and follow the instructions to purchase APC tokens. 5. What are the benefits of Arctic Pablo Coin's referral program? By referring others, participants can earn additional rewards, enhancing their overall investment.

Is the next big chance for substantial gains in the digital asset market about to unfold? With signals pointing towards Litecoin (LTC) potentially hitting \$200.5 and Cardano (ADA) facing a possible 30% reduction, the market is alive with intense speculation. Within these rapid changes, BlockDAG is drawing attention as a potential high-return digital asset for 2025, with its testnet launch set to reshape how we view distributed ledger technology. BlockDAG has already secured over \$204 million in its ongoing presale, now in Batch 27, priced at \$0.0248 with a 2380% surge and over 18.8 billion coins sold. The core concept driving BlockDAG's appeal is its ability to offer faster, more scalable, and secure transactions, which is a key factor for those looking for assets with high growth potential. Unlocking BlockDAG's Potential Beta Testnet Signals Next-Gen Tech BlockDAG's upcoming testnet launch on March 28, 2025, could completely alter the distributed ledger technology landscape. This event provides developers and digital asset enthusiasts with early access to a network designed to push the limits of distributed ledger technology performance. Using a Directed Acyclic Graph (DAG) architecture, BlockDAG aims to deliver quicker transactions, increased scalability, and a strong base for decentralized applications (dApps). This is a rare chance to engage with a network that many see as a top digital asset to pursue in 2025. The testnet will allow developers to test dApps and smart contracts in a secure, controlled environment. This early involvement is a valuable chance for those looking to build on a solid platform that supports ERC-20, ERC-721, and ERC-1155 standards. The hands-on testing phase is about identifying issues and developing practical applications that could flourish once the main network goes live. BlockDAG's presale has already seen significant interest, raising over \$204 million with more than 18.8 billion BDAG coins sold. With a current coin price of \$0.0248 and a 2,380% return, many consider BlockDAG a top digital asset to watch in 2025. The project also provides a 5% cashback in USD through its new affiliate program, giving more reason to get involved before the main network launch! Litecoin's Leap: \$200.5 Target in Sight The latest Litecoin (LTC) price prediction indicates a possible surge, with analysts targeting the \$200.5 level. Litecoin's price has increased by 7% to \$130, resisting the broader market downturn that saw major altcoins decline by 25-35%. The market's optimism is driven by a 90% chance of a spot Litecoin ETF approval, significantly higher than similar offerings for Solana (65%) and XRP (70%). Technical analysts point to a flag-and-pole breakout setup, with a key resistance level at \$140. If this level is surpassed, Litecoin could move towards \$200.5. The Litecoin (LTC) price prediction is further supported by strong technical indicators. A 15% increase in Litecoin futures' open interest to \$701 million shows that traders are expecting continued upward movement. Additionally, the recent launch of LTC domains through a partnership with Unstoppable Domains adds utility to the network, increasing its appeal to the digital asset community. Cardano's Crossroads: Facing a 30% Correction Can ADA Recover? The latest Cardano (ADA) price forecast suggests a bearish outlook, with ADA struggling to stay above the \$0.65 support level. Despite an initial recovery during the Asian trading session, ADA's price quickly fell back, showing a modest 0.85% decrease in the past 24 hours. With trading volumes also down by 5.5%, market participation remains low. Analysts warn that if ADA fails to reclaim the \$0.68 mark and closes below \$0.63, it could see a sharp 30% decrease to \$0.425. Adding to the bearish Cardano (ADA) price forecast, large holder activity shows over 170 million ADA sold in just 96 hours, increasing the downward pressure. The asset has fallen below the 200 EMA, confirming a downtrend. Futures open interest has also dropped from \$1.48 billion to \$542.4 million, signaling declining trader confidence. Wrapping Up With Litecoin (LTC) possibly moving towards \$200.5 and Cardano (ADA) facing a potential 30% reduction, market dynamics are shifting rapidly. Litecoin's upward movement contrasts sharply with Cardano's downward signals, highlighting how quickly fortunes can change in the digital asset market. Amid this volatility, BlockDAG stands out as a potential high-return digital asset for 2025. Its upcoming testnet launch on March 28, 2025, could redefine distributed ledger technology scalability and performance. Developers and digital asset enthusiasts have a unique opportunity to test dApps on a robust network, gaining early access and potential advantages. With its strong presale performance, raising over \$204 million, and an exciting roadmap ahead, BlockDAG is ready to make a significant impact. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Binance excluded the Pi coin from its recent "Vote to List" campaign. - Binance is facing backlash from the Pi network community as it previously made a vote to list the campaign for the Pi coin and excluded it today. The million-dollar question among the crypto community these days is, "When will Binance list Pi coin?" With its simple smartphone mining application, the Pi network garnered a loyal community of traders over the last 6 years. The much-awaited Pi network mainnet finally launched this year on Feb 20 and Pi coin started trading on open markets. Several top exchanges such as OKX, Bitget, Gate.io, MEXC, and others have already listed the Pi token. Pi network has already gained widespread adoption in the last few years and the enthusiasm around the project has only intensified after the mainnet launch. However, the whole community is awaiting Binance to list this token. Will Binance list Pi Coin Soon? We want to hear from you! "Vote to List" Binance (@binance) February 17, 2025 Should \$PI be launched on #Binance? Vote now on Binance Square and share your thoughts! Cast your vote here, <https://t.co/gXvK6N6nbi> pic.twitter.com/RZkCLdG8Yd Addressing the crypto community, Binance conducted a "Vote to List" campaign earlier this week to see how many of its users support Pi coin listing. Out of the 294,960 votes, 86% of them voted "Yes" for Pi coin listing over 10 days of the campaign. However, till now there has been no update from Binance regarding the token listing. What frustrated the Pi community more was its latest "Vote to List" announcement. Binance released a list of cryptocurrencies asking the community to vote for their preferred crypto to be listed on the platform. The Pi network community was more than disappointed as the list didn't include PI. Binance mentioned that the list only included tokens from the BNB Smart Chain. The fact that it contained memecoins such as Broccoli, Mubarak, and TUT but not PI has frustrated the community. One of the X accounts named "Pi Network News Global" even made an elaborate post regarding the same. It read, "No Shiba, no Doge, no Pepe, no Ethereum, no BNB, no Solana, none of them would have received as strong a vote as the Pi network. We have redefined the word 'crypto community.' The post even suggested the Pi network have its own 'Pinance' exchange to prevent other platforms from exploiting the Pi network community. Why Binance is Ignoring the Pi Coin? Despite a majority of the community voted for Pi coin listing, Binance seems to ignore this token deliberately. While the actual reasons for this may not be known, today's "Vote to List" cryptocurrencies only included tokens from the BSC. Even though the Pi network gathered a strong community, it is facing criticism from its users for not being able to complete migration and losing Pi coins. Some investors are even calling it a scam because of their inability to complete mainnet migration. Adding fuel to the fire, Bybit CEO Ben Zhou made scam allegations to the Pi network. Being the leading crypto exchange, Binance might take its own time to consider Pi coin listing. Once the negative reviews subside and the Pi network builds its reputation, we might see it trading on Binance. Is Pi Network Only About Binance? Amidst all the speculation around Binance listing the Pi coin, one user made a thought-provoking post on the Reddit social platform. A user named "Shoddy\_Magazine\_9231a" made the community realize that the Pi coin is much more than a Binance listing. The post said, "PI's success won't be defined by when it's listed on Binance. It'll be defined by how well we build something that truly empowers people. Let's focus on that" because that's how we make PI everything it's meant to be. We might have to wait for Binance to list Pi coin. In the mean time, let's focus on what the Reddit user said and don't ponder over the token listings. PI is trading at \$1.13 at press time with a 0.26% rise in the last 24 hours. Highlighted Crypto News Today: Bybit CEO Ben Zhou Confirms 88.87% of Funds Stolen by Lazarus Group Still Traceable

The meme coin market is hotter than ever in 2025, with investors hunting for the next big winner before the next rally takes off. With massive hype, growing communities, and real utility making their way into the space, the right picks today like the top new meme coins to invest in for short term could transform modest investments into huge returns. BTFD Coin (BTFD) is riding the wave of meme coin mania, but it's not just another viral trend—it's offering real staking rewards, a fully launched P2E game, and a presale nearing its final stage. With a 2900% ROI potential and only one step left before its explosive launch, the countdown is officially on. Alongside established heavyweights like Dogecoin (DOGE), Dogwifhat (WIF), and Pepe Coin (PEPE), BTFD is positioning itself as the ultimate short-term play with long-term potential. 1. BTFD Coin (BTFD) A The Final Stretch Before a Potential 2900% Surge Is this the last chance to grab BTFD before it blows up? BTFD Coin isn't just another meme token—it's an ecosystem designed for serious gains. Right now, it's in Stage 15 of its presale, priced at \$0.0002, with only one stage left before the official launch at \$0.0006. Investors getting in now are staring at a 3x ROI before the presale even ends. But that's just the beginning. Analysts predict that BTFD could reach its moon price of \$0.006, meaning those who buy at the current price could be looking at a 2900% ROI. That's the kind of return that turns a \$2,500 investment today into \$75,000 if the price hits its peak. BTFD isn't just hype—it has real utility. The P2E game's full version launched on January 1, 2025, giving players the chance to earn rewards while gaming. The staking program,

which went live on December 2, offers a 90% APY, allowing holders to grow their holdings exponentially. These aren't just promises—they're already live, proving BTFD's commitment to its community. BTFD Presale Details (Stage 15) BTFD Coin's presale is now in Stage 15, with a current price of \$0.0002 and over \$6.38 million already raised. The project has attracted more than 11,500 holders, with 71+ billion BTFD coins sold as the excitement builds. With just one stage left before its listing at \$0.0006, this is one of the top new meme coins to invest in for short term, offering massive growth potential. How to Buy BTFD Coin Before It's Too Late Getting into the BTFD Coin presale is quick and easy. Simply visit the BTFD Presale and connect your wallet using MetaMask or Trust Wallet. Enter the amount of BTFD you want to purchase, then confirm the transaction to secure your tokens before the final stage ends. With only one stage left, this could be the last chance to lock in the lowest price before the token hits exchanges. Why BTFD Is the Meme Coin to Watch BTFD made it onto this list because it isn't just about memes—it's about real rewards, high-yield staking, and a thriving P2E ecosystem. It's rare to find a meme coin presale with this much utility, community backing, and short-term profit potential. 2. Dogecoin (DOGE) The Meme Coin That Started It All Dogecoin needs no introduction. It's been the king of meme coins for over a decade, proving that viral internet culture can evolve into serious market value. DOGE remains a top choice for short-term investors, especially when market sentiment turns bullish. Dogecoin has maintained its dominance as the go-to meme coin and is integrated into multiple payment systems, making it more than just a speculative asset. Its connection to social media hype and influential endorsements keeps it relevant, ensuring that it continues to serve as a staple for traders looking to capitalize on meme coin surges. What Makes DOGE a Short-Term Play? Dogecoin made it to this list of the top new meme coins to invest in for short term because it still leads the meme coin market, attracting new waves of traders every cycle. 3. Dogwifhat (WIF) Solana's Meme Coin Sensation Dogwifhat (WIF) has exploded in popularity as one of the top meme coins on Solana, capitalizing on fast transactions and low fees. The coin's rapid rise proves that Solana's meme coin ecosystem is thriving, with WIF leading the charge. WIF has built a dedicated following, with a strong presence across crypto communities. As more investors explore meme coins beyond Ethereum, WIF continues to capture attention as a high-potential short-term investment for traders betting on Solana's growing adoption. Why Is WIF Worth Watching? WIF made it to this list of the top new meme coins to invest in for short term because it represents Solana's answer to the meme coin frenzy, giving investors an alternative to Ethereum-based projects. 4. Pepe Coin (PEPE) The Viral Meme Coin With Unshakable Hype Pepe Coin (PEPE) has proven that meme culture never dies—it just reinvents itself. Since its launch, PEPE has remained one of the most actively traded and talked-about meme coins, with community-driven initiatives fueling its growth. Its massive liquidity and widespread trading volume make it one of the most stable meme coin investments in the space. As traders look for highly volatile, high-reward assets, PEPE continues to be a top pick for quick turnarounds. What Keeps PEPE in the Spotlight? Pepe Coin made it to this list because it remains one of the most traded meme coins, offering strong liquidity and continued hype. The Final Word on These Top New Meme Coins to Invest in for Short Term! Meme coins are unpredictable, but the right ones can generate massive profits in a short time. Dogecoin, Dogwifhat, and Pepe Coin have already made their mark, proving their staying power in the market. But BTFD Coin? It's in a league of its own among the top new meme coins to invest in for short term. With only one presale stage left, its 2900% ROI potential, live staking rewards, and play-to-earn ecosystem make it a rare opportunity in the meme coin space. The final stage is about to begin, and once the presale ends, there's no turning back. Don't wait until it's too late—join the BTFD presale now and lock in the last available low price before the launch. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: [https://x.com/BTFD\\_COIN](https://x.com/BTFD_COIN) - Telegram: [https://t.me/btfd\\_coin](https://t.me/btfd_coin) FAQs 1. What are the best meme coins to invest in right now? BTFD Coin, Dogecoin, Dogwifhat, and Pepe Coin are among the most exciting meme coins, each offering different short-term opportunities. 2. Why is BTFD Coin considered a high-potential investment? BTFD Coin offers 90% APY staking, a fully launched P2E game, and is in its final presale stage with a 2900% ROI potential before its official launch. 3. Is Dogecoin still a good investment? Yes, Dogecoin remains one of the most popular meme coins with strong market liquidity and widespread acceptance. 4. What makes meme coin presales attractive? Presales offer low entry prices, helping investors bypass market volatility and maximize returns before official listings. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Sonic (S) price surged by 7%, breaking above key EMAs with bullish indicators like MACD and RSI. - Resistance at \$0.56063 remains crucial; surpassing it may lead to further upside toward \$0.60. Sonic (S) price is gaining momentum and breaking above the 20, 50, and 100-day EMAs, indicating bullishness in the recent trading sessions. Sonic price is heading in the upward direction by making a higher high structure. In the last 24 hours, it increased by almost 7% showcasing bullishness. S price has faced resistance at the \$0.56063 level if it is clear then investors may witness a fresh upside rally. The bulls have regained their strength and are aiming for the \$0.60 level in the next sessions. According to CMC data, at press time, Sonic crypto was trading at \$0.53632 with an intraday gain of 7% breaking above the 50-day EMA, showing bullishness on the charts. Moreover, the intraday trading volume also showed an incline of 78.25%. The daily trading volume is \$211.7 million and the market cap stands at \$1.53 billion. What's Next In Sonic (S) Crypto? Currently, Sonic's price is trading above the 50-day EMA (Exponential Moving Average), which is supporting the price momentum. Other indicators like MACD and RSI are also in the bullish zone and indicate bullish signs. Furthermore, the technical analysis shows that beyond \$0.60, the zone is bullish, and a rally could be seen. But, if further rejection takes place, then the Sonic price will continue to trade in the congestion zone. Meanwhile, below \$0.50953, bearishness could be extended. If buying volume adds up, then the Sonic price might witness bullish acceleration by making higher highs. Hence, the S price is expected to move upward, showing bullish signs over the daily time frame chart. Highlighted Crypto News Today: Solana Price Analysis: Can SOL Push Beyond \$140 and Break Resistance?

Having purchased Solana (SOL) tokens for \$64 each through an OTC transaction with Galaxy Digital, Arthur Cheong, founder of DeFiance Capital, is quite optimistic about Solana's future. Although the DeFi tokens have appreciated, Cheong expects SOL to be "considerably higher in three months." At the same time, the memecoin scene is gaining traction thanks to DuragDoge (\$DURAG), a token that merges style with aspiration and swagger. DuragDoge aspires to build a community anchored in ambition, driven by crypto, and fueled by cultural identity. The combination of emerging memecoins like DuragDoge and the anticipated growth of Solana present exciting opportunities for investors. Let's explore some more details that could potentially position DuragDoge as the next major player in the memecoin space and the forthcoming Solana surge. Arthur Cheong's Optimistic Stance on Solana (SOL) Arthur Cheong, founder of DeFiance Capital, revealed on the social media platform X that he has unlocked tokens from an OTC SOL transaction via Galaxy Digital. He is now expecting a massive increase in Solana prices. As a crypto investor, Cheong hopes to profit from his SOL DeFi tokens, which means he will have to hold on to them for the next three months. Even though that means waiting after his initial buy-in at \$64, Cheong is confident that the wait will be worth it. Also he has high hopes for the Solana ecosystem especially Jupiter (JUP) a DEX aggregator. The Solana based futures contract options released by CME Group on March 17th may cause a short squeeze and pump SOL. Although Cheong sees a market liquidity drought he thinks the stablecoin supply that has grown since 2024 can sustain a market rally when investor confidence improves. DuragDoge (\$DURAG) Emerges as the Streetwise Memecoin Poised to Take Over the Memecoin Ecosystem As Solana's price goes up the memecoin craze within the ecosystem is heating up. Among the new entrants DuragDoge is gaining traction fast and getting noticed by investors. A token that represents "style, hustle and swagger" DuragDoge aims to create a community of ambitious people united by the "street" culture. The project's narrative is around DuragDoge, a resilient character that represents underdogs who turn challenges into opportunities. This resonates with people who identify with perseverance and ambition and makes \$DURAG more than just a cryptocurrency, it's a movement and a lifestyle. That's why some analysts are saying it could be the next big thing in the memecoin space even though it's still in presale. DuragDoge also prioritized transparency and security. The project went through an audit by Coinsult Audits and got verified. The official DuragDoge account announced this milestone saying "DURAG is officially audited and VERIFIED by CoinsultAudits. No cap, just facts. The hood's meme coin is locked, loaded and certified." That's why it's the best crypto to buy considering the security it gives to its holders. DuragDoge (\$DURAG) Aims to Redefine the Crypto Culture The \$DURAG token can be acquired at discounted rates throughout the ten stages of presale. Investors buy into the presale knowing that its success will predictably boost the token's initial performance when launched on mainstream exchanges. Using both social media and other platforms, the community is able to garner a sense of belonging and shared purpose, illustrating how the members actively engage within the social DuragDoge ecosystem. The branding and narrative is targeted towards individuals who embody the hustle and cultural pride associated with the durag symbol. Unlike its predecessors Dogecoin and Shiba Inu, DuragDoge blends streetwise resilience into their memecoin style, setting themselves apart within the continuously advancing memecoin market. Even in the absence of defined utility, community driven initiatives make the narrative captivating, emphasizing the appeal of the currency. Sentiment and community-oriented projects currently drive the crypto making it clear that DuragDoge is expected to perform exceptionally well. Conclusion The progression of the marketing is further complemented by Cheong's optimistic focus on Solana coupled with the rise of DuragDoge as a possible leader in the memecoin market. Cheong's investment strategy which focuses on purchasing SOL indicates increasing trust from institutions toward Solana's ability to scale and innovate. At the same time, DuragDoge is set up to be the best crypto to buy during the next bull run because of the unique combination of meme culture and hip branding, capturing the attention from various crypto audiences. Follow Durag Doge on X and Telegram for the latest news and updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. What if a single investment today could multiply your portfolio by nearly 30 times in the coming months? With meme coins shaking off their "joke" status and delivering life-changing gains, smart investors are eyeing the hottest new projects before they explode. The market has seen meme coins grow from internet humor into a billion-dollar phenomena. But the next wave of the best meme coins to buy this month isn't just about speculation—they're packed with utility, staking rewards, and Play-to-Earn (P2E) ecosystems that drive real value. One such project shining bright is BTFD Coin (BTFD), a meme coin presale in its final stage, offering a staggering 2900% ROI potential. Its full-fledged P2E game is already live, allowing players to stack tokens while having fun. As FOMO intensifies, let's dive into the five best meme coins to buy this month before they rocket skyward. 1. BTFD Coin (BTFD) 2900% ROI Potential with a Thriving P2E Game What if the next crypto moonshot was staring you in the face? BTFD Coin has already raised over \$6.38 million in its presale, selling more than 71 billion tokens and gaining 11,500+ bullish holders. Investors who jumped in early at \$0.000004 per token are now eyeing massive gains, with the current presale price at \$0.0002 and the listing price locked in at \$0.0006. But that's not the start—analysts predict a moonshot of \$0.006, an eye-watering 2900% surge from today's price. BTFD isn't just about price speculation; its fully functional P2E game is already live, delivering real earning potential. Players can battle through multiple levels, earn token rewards, and cash out or stake their earnings. This isn't some "coming soon" gimmick—the game is here, and early players are already stacking rewards. An investment of \$4,000 at today's price of \$0.0002 gets you 20 million BTFD tokens. If the price hits \$0.0006 by presale's end, that's a cool \$12,000. And if it skyrockets to \$0.006? That same \$4,000 becomes \$120,000. This is the final presale stage before launch—miss the rewarding meme coin presale, and you'll be chasing green candles instead of riding them. BTFD Coin Referral Program Earn even more with BTFD's referral program. If your code gets used and you're in the top 20 referrers by month's end, you'll pocket 10% of the raised amount in BTFD tokens. Every referral who spends \$50+ also gets a 10% bonus. With just one presale stage left, now's the time to stack and spread the word. Why is BTFD leading this list of the best meme coins to buy this month? Because it's delivering real utility, massive presale gains, and an active earning ecosystem before it even hits exchanges. This is your chance to ride the bull from the start. 2. Cat in a Dog's World (MEW) The Underdog Meme Coin Gaining Traction With a name that instantly grabs attention, MEW is making waves as the "anti-Dogecoin." Built on the Solana blockchain, MEW's low fees and fast transactions are attracting investors frustrated with high Ethereum gas costs. The project has seen a surge in community engagement, with thousands of cat lovers rallying behind its mission. Why is MEW on this list of the best meme coins to buy this month? It's a fresh take on meme coins with a growing following and a unique brand identity that sets it apart from the competition. 3. Popcat (POPCAT) Viral Meme Turned Lucrative Investment Born from an internet meme, Popcat has turned virality into a serious investment opportunity. The token has integrated interactive staking features and a gamified ecosystem, keeping investors engaged beyond mere hype. Social media buzz has driven its recent price spikes, proving that Popcat isn't just another flash in the pan. Why is Popcat worth watching among the best meme coins to buy this month? Its rapid adoption and community-driven mechanics show strong potential for sustained growth in the meme coin space. 4. SPX6900 (SPX) The Meme Coin Fueling AI Innovations SPX6900 is an outlier in the meme coin sector, blending artificial intelligence with decentralized finance (DeFi). Its AI-powered trading bot feature is designed to automate trades based on market

sentiment, making it more than just a speculative meme coin. Why does SPX6900 make this list? Because itâ€™s pushing the boundaries of meme coin innovation, combining humor with real-world AI-powered utility. 5. Notcoin (NOT) â€” The Telegram-Powered Meme Coin Taking Over Notcoin exploded in popularity thanks to its integration with Telegramâ€™s massive user base. By gamifying the token-earning experience, it has created an army of users who tap their way to crypto rewards. With millions of players and a steady stream of token burns, NOT has turned micro-engagement into a valuable asset. Why is Notcoin here? Itâ€™s tapping into a platform with billions of users, creating viral traction that most meme coins can only dream of. Final Thoughts: Donâ€™t Sleep on BTDF Coinâ€™s Presale! With meme coins evolving beyond jokes and into full-fledged ecosystems, the opportunity to profit is bigger than ever. While all five coins in this list offer strong potential, BTDF Coin stands out as the best meme coin to buy this month. With only one presale stage left, a P2E game already live, and analysts eyeing a 2900% ROI, the clock is ticking. The question isnâ€™t whether meme coins will deliver massive returnsâ€”itâ€™s whether youâ€™ll be in before the big wave hits. Secure your BTDF tokens now before the presale ends, and youâ€™ll be riding the bull instead of chasing it. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: [https://x.com/BTDF\\_COIN](https://x.com/BTDF_COIN) - Telegram: [https://t.me/btfd\\_coin](https://t.me/btfd_coin) FAQs - What makes BTDF Coin the best meme coin to buy this month? BTDF Coin offers a fully functional P2E game, staking rewards, and a presale with 2900% ROI potential, making it a top pick for investors looking for real utility. - How can I invest in BTDF Coin? You can purchase BTDF tokens directly from the official presale page. Prices increase with each stage, and thereâ€™s only one left before launch. - What is BTDF Coinâ€™s referral program? BTDF offers a 10% bonus for referrals. If your code is used and you rank in the top 20 by monthâ€™s end, youâ€™ll earn 10% of the raised amount in BTDF tokens. - How does the BTDF P2E game work? The game lets players complete levels and earn BTDF tokens, which can be staked or cashed out. Itâ€™s a play-to-earn system built for long-term engagement. - What is the potential price of BTDF Coin after launch? The listing price is set at \$0.0006, but analysts predict a moonshot to \$0.006, offering massive ROI for early investors. Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto never sleeps, and neither does the meme coin mania. If 2023 and 2024 showed us anything, meme coins arenâ€™t just jokes anymoreâ€”theyâ€™re serious money-makers. From the explosive returns of PEPE and Bonk to the rise of quirky projects like Dogwifhat, investors are always looking for the next moonshot. And guess what? The next wave is already here, packed with even bigger potential. Three projects stand out among the hottest new contenders: Arctic Pablo Coin (\$APC), SPX6900, and Pudgy Penguins. Each of these tokens brings something unique, whether innovative tokenomics, an engaging narrative, or a community-driven mission. But only those who act fast will reap the rewards. Letâ€™s dive into why these meme coins are the ones to watch. Arctic Pablo Coin (\$APC) â€” Uncovering Mystical Wealth in the Crypto Tundra Deep in the Arctic wilderness, a legend unfolds. Arctic Pablo Coin isnâ€™t just another meme coinâ€”itâ€™s an expedition, a thrilling journey across icy landscapes searching for hidden fortunes. With each passing location (not stage), Arctic Pablo ventures deeper into uncharted territory, offering early investors the chance to discover untold riches. Arctic Pablo Coin is more than a coin; itâ€™s an adventure. Picture a daring explorer braving the cold, navigating treacherous ice fields, and unearthing shimmering \$APC tokens buried beneath the frost. Investors arenâ€™t just buying into a projectâ€”theyâ€™re joining Pablo on his expedition. The further he travels, the greater the rewards. Arctic Pablo has reached Nippy Nook, the 15th location in its journey. With a current price of \$0.000079 and over \$1.94 million raised, those who get in now are looking at an ROI potential exceeding 10,027.85% when it hits its launch price of \$0.008. Imagine turning a \$1,000 investment into \$101,254.88 upon listingâ€”this isnâ€™t just speculation, itâ€™s history in the making. Arctic Pablo isnâ€™t playing around when it comes to scarcity. Unsold tokens are burned weekly during the presale, ensuring demand outpaces supply. With a total supply of 221.2 billion APC, this deflationary model guarantees long-term value appreciation. And for those who love passive income? The 66% APY staking program lets investors earn serious rewards while holding their tokens. Itâ€™s one of the best new meme coins for exponential returns. SPX6900 â€” The Unapologetic Degensâ€™ Playground SPX6900 has emerged as the ultimate degen coin in a market that thrives on chaos. If Arctic Pablo is an explorer, SPX6900 is a fearless rogue trader, flipping the bird at traditional finance and diving headfirst into the wild world of high-risk, high-reward investments. SPX6900 doesnâ€™t cater to cautious investorsâ€”it thrives on volatility. Itâ€™s a no-holds-barred tribute to traders who live for the thrill of high-leverage, big-bet plays. With its branding rooted in a rebellious, finance-meets-anarchy aesthetic, this coin is quickly gaining traction among crypto gamblers looking for their next adrenaline rush. With a price that fluctuates as wildly as its communityâ€™s memes, SPX6900 embodies the â€”degen spiritâ€”of crypto culture. Itâ€™s backed by a rowdy, die-hard fanbase that believes in sending it straight to Valhalla. Pudgy Penguins â€” The Adorable NFTs Taking Over the Crypto World In a space dominated by edgy, chaotic meme coins, Pudgy Penguins brings something differentâ€”a wholesome, feel-good brand thatâ€™s winning over crypto investors and mainstream audiences alike. Launched initially as an NFT project, Pudgy Penguins has expanded into a full ecosystem, with a dedicated token now entering the scene. What started as a collection of chubby, adorable penguins has transformed into a powerhouse brand with partnerships, real-world licensing deals, and a growing fanbase beyond crypto circles. Unlike many meme coins that rely on short-term hype, Pudgy Penguins has staying power. It has built a dedicated community, secured funding, and positioned itself as a long-term player in the market. The projectâ€™s token is the final puzzle piece, enabling deeper engagement and utility within its ecosystem. Final Thoughts: The Time to Invest is NOW Based on our research and market trends, Arctic Pablo Coin, SPX6900, and Pudgy Penguins are three of the best meme coins for exponential returns. Each project offers something unique like Arctic Pablo Coin (\$APC) is a thrilling adventure with massive ROI potential and a deflationary model. SPX6900 is a traderâ€™s dream with sky-high risk and reward. Pudgy Penguins is a meme brand evolving into a full-fledged crypto empire. With Arctic Pabloâ€™s price about to surge, the window for early entry is closing fast. Join the Pablo meme coin presale now and secure a piece of the next big meme coin explosion. For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs 1. What is the best new meme coin to invest in for 2025? Arctic Pablo Coin (\$APC), SPX6900, and Pudgy Penguins are among the top new meme coins with massive potential for exponential returns. 2. How can I buy Arctic Pablo Coin? You can buy Arctic Pablo Coin during its presale using BNB, ETH, USDT, BTC, SOLANA, XRP, and more. 3. Why is Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin combines a unique storytelling narrative, token burns, high staking rewards, and massive ROI potential.

The rise of coins like Brett, Dogwifhat, and Shiba Inu has shown that community-driven projects can skyrocket in value overnight. But amidst this meme coin madness, a new contender is making waves: Arctic Pablo Coin (APC). Alongside classics like Pepe Coin and emerging stars like Bonk, Arctic Pablo Coin stands out with its adventurous narrative and groundbreaking meme coin presale, capturing the attention of savvy investors seeking the best meme coins to buy now. Arctic Pablo Coin is more than just a meme coin â€” itâ€™s a story-driven expedition into the unknown. Each presale phase unveils a new, mysterious location linked to hidden secrets of the Earth, blending mythology with blockchain technology. This unique theme not only fuels excitement but creates a sense of community-driven exploration, setting APC apart from the pack. 1. Arctic Pablo Coin: The Best Meme Coin Presale for Adventure Seekers Arctic Pablo Coin isnâ€™t just about laughs and memes â€” it dives deep into the unexplored, weaving a thrilling tale of adventure. Each presale phase unveils new mysteries tied to exotic locations, making every step of the journey feel like a treasure hunt. The project aims to blur the line between myth and reality, captivating investors who crave both narrative and profit. This captivating theme has created a buzz, positioning APC as one of the best meme coins to buy now. What makes APC even more exciting is its presale momentum. Currently in Stage 15, known as the â€”Nippy Nook,â€” Arctic Pablo Coin is priced at just \$0.000079, with over \$1.94 million raised so far. The current ROI is a jaw-dropping 10,027.85%, with a projected listing price of \$0.008. If youâ€™re hunting for the best meme coin presale with massive return potential, Arctic Pablo Coin could be your golden ticket. 2. Brett: The King of Meme Community Power Brett has become a beacon for community-driven crypto projects, riding the wave of social media hype and passionate supporters. Launched as a tribute to the internet meme culture, Brett quickly gained traction, showing that the power of community can push a coin to new heights. Its relentless rise is a testament to meme coin mania. Brettâ€™s strong community presence and viral nature are key reasons why Brett made it to this list. 3. Dogwifhat: Barking Up the Right Tree Dogwifhat exploded onto the scene with its quirky, lovable branding, featuring a dog sporting an iconic pink hat. Its lighthearted nature and meme-worthy content have drawn a loyal following, helping it climb the crypto ranks. The coinâ€™s whimsical charm continues to win hearts and wallets alike. Dogwifhatâ€™s rapid ascent and irresistible charm are why Dogwifhat made it to this list. 4. Bonk: The Peopleâ€™s Coin Bonk made waves as the first dog-themed coin to launch on Solana, immediately capturing attention with its community-first ethos. Its mission to reward early adopters and create a decentralized ecosystem has helped it carve out a niche in the meme coin world. Bonkâ€™s commitment to decentralization and its Solana roots are why Bonk made it to this list. 5. Pepe Coin: Meme Royalty No meme coin list is complete without Pepe Coin. As one of the oldest and most iconic meme-inspired tokens, Pepe has stood the test of time. It has continually reinvented itself, riding waves of internet culture and remaining a symbol of meme coin resilience. Pepe Coinâ€™s legendary status and staying power are why Pepe Coin made it to this list. 6. Shiba Inu: The OG Challenger Shiba Inu rose to fame as the â€”Dogecoin killer,â€” capturing the imagination of crypto enthusiasts worldwide. Its decentralized ecosystem and dedicated fanbase helped Shiba Inu climb the ranks, securing a permanent place in the meme coin hall of fame. Shiba Inuâ€™s devoted community and ecosystem expansion are why Shiba Inu made it to this list. Verdict: The Best Meme Coins to Buy Now Based on the latest research, the best meme coins to buy now are Arctic Pablo Coin, Brett, Dogwifhat, Bonk, Pepe Coin, and Shiba Inu. While each coin has its merits, Arctic Pablo Coin stands out with its immersive storytelling and unique meme coin presale. With each presale stage unveiling fresh mysteries and its current ROI soaring past 10,027%, APC is shaping up to be the dark horse of the meme coin race. If youâ€™re hunting for a coin with both adventure and profit, Arctic Pablo Coin is where the treasure lies. For More Information: Arctic Pablo Coin: <https://www.arcticpablo.com/> Telegram: <https://t.me/ArcticPabloOfficial> Twitter: <https://x.com/arcticpabloHQ> FAQs - What makes Arctic Pablo Coin unique? Arctic Pablo Coin blends adventure storytelling with blockchain technology, unveiling new mysteries at each presale phase. - Why is Arctic Pablo Coinâ€™s presale generating so much hype? With an ROI of over 10,027% and a rapidly growing community, Arctic Pablo Coinâ€™s presale offers massive return potential. - How do token burns impact Arctic Pablo Coinâ€™s value? Weekly burns during the presale reduce supply, increasing scarcity and potentially driving up value. - Is Dogwifhat a good investment? Dogwifhat has a strong community and unique branding, making it a solid contender in the meme coin space. - What are the best meme coins to buy now? Top picks include Arctic Pablo Coin, Brett, Dogwifhat, Bonk, Pepe Coin, and Shiba Inu.

- In light of the first cohortâ€™s outstanding performance, 0G and OnePiece Labs are thrilled to present the second cohort. - High-caliber AI projects from various web3 areas and application kinds make up the second 0G x OPL cohort. The goal of the 0G x OnePiece Labs AI Accelerator is to assist innovative AI initiatives that are expanding the possibilities of decentralized intelligence. High-potential AI candidates seeking to expand their influence in the decentralized AI space have flooded in since we launched our Accelerator on a rolling admissions basis last summer. The first cohort of the 0G x OPL Accelerator has raised the standard so far: - CARV: After onboarding with 0G x OnePiece, CARV increased its user base to over 10 million, made \$6 million from its state-of-the-art, AI-driven gaming solutions, and achieved a \$1 billion ATH market valuation. - Cygnus Finance reached \$100M+ TVL and established strategic alliances with OpenOcean, SynFutures, and Binance; they are now preparing for a \$15M funding round that will precede their TGE. - DataHive achieved \$150K in booked revenue, increased its pipeline to 6M customers, and is now undergoing final evaluation at NYU Sternâ€™s Endless Frontier Labs. - Infinity Ground: To create interoperable AI-powered worlds across blockchains like Base, BNB Chain, and Kaiachain, Infinity Ground acquired \$2 million in seed investment. In light of the first cohortâ€™s outstanding performance, 0G and OnePiece Labs are thrilled to present the second cohort, which consists of a carefully chosen group of entrepreneurs developing at the nexus of web3 and AI! Meet The Latest Cohort High-caliber AI projects from various web3 areas and application kinds make up the second 0G x OPL cohort. This cohortâ€™s most intriguing verticals and initiatives include: AI-Enhanced Gaming / Generative AI PlaysOut (Unlocking Mini-Games in Every App) - Pitch: PlaysOut makes it possible for super applications to easily integrate thousands of AI-powered mini-games, increasing user retention and engagement while opening up new income opportunities. - Major Milestones: Currently raising a \$5 million strategic pre-TGE round, the company has partnerships with Tencent Cloud, OKX, Aptos, KAIA, TON, Movement, and Taiko; it works with more than 200 mini-game creators and studios worldwide. PlayArts (AI-Powered Dynamic NFTs) - Pitch: Using a Train-to-Earn methodology, PlayArts allows users to profit from developing AI agents by converting AI-generated data into dynamic, tradable NFTs. PlayArts is revolutionizing digital asset ownership and engagement by integrating AI intelligence into NFTs. - Major Milestones: Key achievements include being chosen for the NVIDIA Inception Program and receiving support from Story Protocol Arbitrum and Alchemy. In January 2025, they hit 200K customers, and at a \$20M valuation, they are now seeking \$2M in a seed round. Escape Velocity (Autonomous Gaming Agent Launchpad) - Pitch: Escape Velocity is a tokenized agent launchpad that gives autonomous agents gaming capabilities and addresses liquidity dispersion by using â€”liquidity pool raidsâ€”and gamified trading. - Milestones: Early in February, the

gamified trading MVP was released. Agent Squad (AI Squad Game), the first gaming agent prototype, was shown at Consensus HK. Also, raising a \$1 million seed round at the moment. WagerVS (Gamified Prediction Market Platform) - Pitch: WagerVS is a gamified, decentralized prediction market where users can make and place unique bets on a variety of topics, including politics, sports, cryptocurrency news, and celebrity feuds. WagerVS addresses the problem of conventional gaming, where the house always wins, by using AI for event forecasting and result determination, guaranteeing more equitable and interesting betting experiences. - Milestones: On February 25, 2025, Open Beta became live. Raised \$55K with a tiny OTC private sale in the community. More than 100 distinct wallets were onboarded. Processed wagers totaling over \$10,000 in the first ten days. In only 14 hours, the quickest wager of \$2K was recorded. Following debugging, a full platform launch is scheduled following beta testing. raising a \$1 million seed round at the moment. Lockness (Decentralized 3D Asset Creation Platform) - Pitch: By combining generative AI with DePIN, Lockness is transforming the creation of 3D assets. With only a smartphone and the platform, users can easily scan real-world items into high-quality 3D models or create intricate 3D assets by responding to simple text prompts. From engineers to artists, Lockness provides innovators with unparalleled adaptability. - Milestones: Within three months, the 3D Scanner MVP will be prepared for alpha testing. Won a Render Network Grant in recognition of its creative methodology. Raising \$500K Pre-Seed at a \$5M Valuation. AI Agent Marketplaces Assisterr AI (A Network of Specialized AI Models & Agents) - Pitch: By 2030, AI is expected to boost the world economy by \$15.7 trillion. By offering the resources and infrastructure needed to create, market, and tokenize specialized AI models and agents, Assisterr AI is spearheading this change and upending the traditional SaaS model. - Major Milestones: Raised \$2.5 million, achieved 2.5 million users, and saw the deployment of over 17,000 AI agents and models by our community in 202. They are now seeking to raise \$5 million in a private round to support their TGE. Exponent.ai (AI-Powered Trading Agents for Retail Users) - Pitch: By providing a whole team of AI trading agents, including Analyst and Trader agents in a chat-based user interface, Exponent.ai enables the typical web3 user to be as productive as institutional organizations. - Major Milestones: Key achievements include the Analyst MVP's debut at Devcon7 SEA and the onboarding of 1,000+ users in under three weeks. Pre-seeded \$2.59 million from leading web3 VCs, including KR1 and GSR. 17K+ Telegram users, 11K+ X followers, and rapid growth currently seeking a \$4.5M seed round. Replicats (No-Code AI-Fi for Autonomous Trading Agents) - Pitch: Replicats is a no-code AI-Fi platform that uses LLMs, specific core models, and DAG processes to create autonomous trading agents. - Major Milestones: Important milestones include the internal launch of Replicat-One, the company's first agent, and the impending public demonstrations. According to Nansen, the RCAT token, which is now raising a \$2 million seed round, was the top asset purchased by smart money on Base on its debut day. Specialized Language Models (SLMs) Credible Finance (Web3 Users' AI-Powered Credit System) - Pitch: In order to provide 560M digital asset holders with on-chain credit ratings that facilitate access to credit cards, cash loans, and pay-later financial products inside a decentralized ecosystem, Credible Finance uses AI-driven credit analysis. - Major Milestones: Supported by OnePiece Labs, Solana, OG, BitSwiss Capital, Outlier Ventures, and Circle. Its fintech ecosystem already has over 200K members, and it is now seeking \$30M for an Oracle node sale and \$5M for a pre-TGE strategic round. Cred Protocol (The First Predictive Web3 Credit Score) - Pitch: Despite being a \$50 billion sector, on-chain lending is still inefficient since credit visibility is low. Cred Protocol makes reputation-based lending and institutional credit access possible by introducing the first predictive web3 credit score, sometimes known as a "FICO for crypto." - Major Milestones: In 2024, we processed over 350K credit scores from nine chains. started under-collateralized lending with 3Jane after joining the Base ecosystem; they are now seeking \$2 million. DAO Automation The AI DAO (The First Agentic Governance Protocol for DAOs) - Pitch: DAOs will oversee more than \$1 trillion in assets by 2030. With the first agentic governance protocol, DAO AI is revolutionizing decentralized governance and enabling DAOs to function independently and effectively at scale via the use of machine learning and on-chain intelligence. - Major Milestones: Supported by Serafund (early investors in Movement, \$1B+, and Plume, \$300M+), the company onboarded 10,000 daily users in its first week after debut in February 2025 and is presently seeking \$3.5M to support its TGE. Despite having different areas of concentration, these projects are all vital contributions to the OG ecosystem because they have advanced product maturity, robust communities, and substantial development potential. Building the Future of AI on OG With some of the most innovative AI projects in web3, we are pleased to introduce the second in batches of their AI Accelerator. By integrating these top-tier projects into the OG decentralized AI OS, the accelerator hopes to increase OG's technical prowess and draw more creatives to its ecosystem. With the goal of creating a genuinely decentralized AI infrastructure that is scalable, effective, and accessible to everyone, OG is quickly becoming the Layer 1 that enables AI. And we're eager to see how far these OG x OnePiece Labs AI Accelerator projects will go given OnePiece's demonstrated success in AI and web3 acceleration! OG has obtained substantial funds to assist this aim, and has just closed a large investment round to support its expansion. The OG ecosystem is poised for exponential growth with its TGE imminent. It provides an unmatched platform for AI researchers, developers, and businesses to create and implement robust, decentralized, and open AI solutions. The projects that make up cohort 2 will get investor exposure, technical assistance, and mentoring over the course of the next weeks. This will culminate in their attendance at Token2049 Dubai's on-site Demo Day, where they will present their advancements to the international web3 and AI community. As these initiatives realize their AI-powered ambitions, stay tuned for updates!

- SEC drops XRP lawsuit against Ripple, clearing XRP's regulatory status. - U.S. names XRP a strategic asset in its Crypto Reserve. - XRP jumps 15% on the news, boosting investor confidence. The United States Securities and Exchange Commission (SEC) has finally withdrawn its lawsuit case against Ripple Labs, a massive win for the cryptocurrency world. The news comes barely a few days after President Donald Trump announced that XRP was listed as a strategic asset in the newly established U.S. Crypto Strategic Reserve, in addition to Bitcoin, Ethereum, Solana, and Cardano. SEC drops XRP lawsuit Ripple CEO Brad Garlinghouse greeted the decision. He is stating, "From day one, we knew the SEC had no case, and today, justice has won. XRP is not a security, and now we can focus our energies on the future of digital payments." The December 2020 lawsuit accused Ripple of selling unregistered securities, concealing XRP's regulatory status for years. Its dismissal now provides long-awaited certainty and legitimacy. The listing of XRP in the U.S. Crypto Strategic Reserve validates the efficacy of its cross-border settlement function. Garlinghouse termed the move as "a defining moment for digital assets in America," meaning the capability it has to reshape the financial system. The fact that XRP is part of the U.S. government's plans is an indication that there is a change towards embracing digital assets in the economy. XRP token surge The ruling saw XRP prices increase by 15% in hours, and the traders greeted it with renewed confidence. Additional gains are anticipated by experts as institutional investment increases and regulatory uncertainty erodes. The SEC ruling can be a precursor to increased regulation of crypto, leading to institutional investment. Simultaneously, U.S. government approval of XRP can invite other nations to follow suit, shaping the future of world finance. With the case settled and state validation in place. Ripple is now poised to expand its economic links and solidify XRP as a leading player in the upcoming digital economy. Highlighted Crypto News Today Flare x Google Cloud Hackathon Advances AI and Blockchain Verifiability

The crypto market is full of apparent picks like XRP, SUI, and Cardano, but the most notable gains do not come from well-known currencies. Institutional investors are racing into a rapidly rising industry, where the next 100x opportunity lies. Rexas Finance (RXS) is that coin. It is a real-world asset (RWA) tokenization project that aims to disrupt a \$30 trillion market by putting real estate, commodities, and financial instruments on the blockchain. With an explosive presale, a final-stage token price of only \$0.20, and an anticipated Tier-1 exchange debut, RXS is poised for a historic breakout. Rexas Finance (RXS) is Capitalizing on the Next \$30 Trillion Crypto Sector Wall Street is already betting big on RWA tokenization, with firms like BlackRock, JPMorgan, and Citigroup adding blockchain-based assets to their portfolios. Traditional finance is migrating on-chain, and projects that help facilitate this shift will experience explosive growth. Rexas Finance (RXS) is a pioneer in this field. Using blockchain, anybody can invest in fractionalized real estate, gold, corporate bonds, and collectibles. Instead of waiting weeks or months to trade traditional assets, RXS allows for near-instant transactions with increased security, transparency, and liquidity. Rexas Finance is poised to dominate a trillion-dollar market by positioning itself as the go-to platform for tokenized assets, much like Ethereum did for smart contracts and Solana for high-speed transactions. RXS Presale Explodes: 90% of Final Stage Sold Out As of this writing, Rexas Finance (RXS) is in its last presale stage (Stage 12), with 90% of tokens sold out. Investors are flocking in, seeing the enormous potential before RXS is listed on major exchanges. The price has risen from \$0.03 in Stage 1 to \$0.20 as of writing, representing a 567% increase before trading began. So far, 454 million tokens have been sold, raising \$46.8 million, "indicating high market demand. With an initial exchange listing price of \$0.25, RXS is projected to provide immediate returns for presale investors. Upcoming Exchange Listings Will Trigger an RXS Price Explosion The Rexas Finance team recently announced its listing schedule. RXS is slated to list on at least three of the top 10 Tier-1 exchanges at \$0.25. Because of their greater liquidity and worldwide exposure, coins that land on big sites like Binance, Coinbase, and Kraken have historically caused substantial price swings. For reference: - Solana (SOL) increased from \$0.50 to \$260 within two years of its major exchange debut. - Shiba Inu (SHIB) grew from a \$5,000 investment to more than \$5 million after listing on Binance. Positioned in the burgeoning RWA tokenization sector, Rexas Finance has the potential to surpass even these renowned runs. Analysts forecast a 100,000% increase for RXS post-listing. Why Rexas Finance is Different from XRP, SUI, and Cardano Unlike XRP, SUI, and Cardano, which are built on existing blockchain ecosystems, Rexas Finance is pioneering a trillion-dollar market with real institutional demand. It is more than just another DeFi or smart contract project; it links traditional finance and blockchain, addressing real-world issues for billion-dollar organizations. While XRP fights legal challenges, SUI struggles with uptake and network congestion, and Cardano irregular updates, Rexas Finance is already forming alliances and garnering institutional funding. The next 100x coin will not be an old name but a disruptive new player like RXS. Conclusion: RXS is the Best Crypto Under \$5 Right Now Rexas Finance is still inexpensive compared to its tremendous potential, selling at only \$0.20 as of this writing. When RXS debuted on top exchanges, it will unleash a wave of liquidity, allowing early investors to reap life-changing profits. With a post-listing price objective of 100,000%, \$5,000 in RXS today might become \$500,000 in only five months, "but only if you buy now before the presale sells out. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - XRP consolidates between \$2.26 support and \$2.70 resistance, with a breakout level at \$3 - Technical signals flash caution, but a move above \$3 could ignite a strong rally. XRP is at a crossroads. The asset has strong community backing and institutional interest, but price action remains weak. Despite several attempts, it hasn't cleared \$2.70. It now trades at \$2.30, facing a major test at this key resistance. The broader market downturn and regulatory uncertainty have kept momentum in check. Yet, historical trends and technical signals suggest a potential breakout "if bulls take charge. Bulls and Bears Fight for Control XRP's price reflects current market volatility, the crypto industry has been battling downtown, even major cryptocurrencies like Bitcoin, Ethereum and Solana have suffered a backlash. XRP surged 16% in early March, holding to a strong buy pressure before losing steam at \$2.70. This level remains a strong supply zone, keeping prices contained. Data from CoinMarketCap shows XRP's 24-hour trading volume fluctuates between \$1.8 billion and \$2.9 billion. Traders are yet undecided and hesitant, waiting until for a clear direction. For XRP to initiate a bullish breakout, it must first breach \$2.70 as this would confirm its strength and attract investors' interest and purchases. But if XRP fails to maintain above \$2.20 as a support zone, a drop to \$2.10-\$1.90 is possible. Technical Indicators And Analysis Despite optimism and interest in the XRP community, the current chart tells a different perspective. XRP Relative Strength Index now sits at 49, showing a neutral ground for possible bear or bull movement. Meanwhile, the Moving Average Convergence Divergence (MACD) flipped a bearish signal, indicating a possible retracement. Also, fibonacci retracement levels reinforce key price zones. The 0.236 Fibonacci level at \$2.70 is a barrier that has its block potential upside. If a true breakout will happen, XRP must secure a daily dose above \$3, which perfectly aligns with the 0.618 Fibonacci level, which has been XRP strong resistance historically. Meanwhile, crypto analyst EGRAG CRYPTO predicted that if XRP maintains a weekly close above \$3.40, it could trigger a rally to \$5. He cites historical examples as evidence. However, if XRP falls below \$2.10, selling pressure could push it to \$1.90 or lower. Long-Term Projections: Can XRP Hit Triple Digits? XRP's long-term potential remains highly debated. Some believe institutional adoption and Ripple's global partnerships could push prices to \$100. Others argue this is unrealistic. XRP enthusiast and analyst recently announced his confidence via a post on X about XRP's \$100 potential. Another analyst, Dark Defender, compares today's market structure to XRP's 2017 bull cycle. If history repeats, he says, prices could skyrocket to \$333 in the most bullish scenario. However, skeptics point to XRP's current \$133 billion market cap. Reaching \$100 per token would require a staggering \$5 trillion valuation "a level never seen in crypto. Additionally, Ripple's legal battle with the SEC remains a major uncertainty that could limit upside potential.

- EOS price surged 26% in the last 24 hours showing a positive trend. - EOS price broke above the 50-day EMA mark showing strength on the charts. EOS price is showing strength and heading towards the \$0.6755 level. This positive trend suggests that an upward move toward the expected target of \$0.8227 is possible. However, its price has to break the \$0.6755 hurdle for this. The EOS token is trading above the 50-day EMA but still has to break the 200-day EMA mark to start a bullish rally. Additionally, chart structures based on recent trading sessions show a bias in favour of bulls. In the last two days, bulls showed their strength and pushed the price by approximately 40%. The increased activity of bulls supports the optimistic outlook in EOS. According to CMC data, at the time of publication, EOS is trading at \$0.6090 with an intraday gain of 23%, indicating bullish sentiment. Additionally, the intraday trading volume is \$466.22 million with a 630% surge and the market capitalization is \$945.98 million. There is one more catalyst behind this upsurge. According to the EOS Authority, total EOS accounts witnessed a good surge over the last month. On 19 Feb, total accounts were 6,308,400 and currently, it is 6,314,634. Moreover, total txs per day also increased. Will EOS Price Break Above The \$0.68 Hurdle? EOS price is bullish hovering in the \$0.599 æ" \$0.675 range with the highest trading volume. However, to start a bullish rally price has to break the 200 EMA (\$0.675) mark. The RSI curve is around 59.01 in the positive zone and heading in an upward direction showcasing a bullish outlook. Its MACD indicator has shown a bullish crossover, with the green histogram, indicating price is turning bullish. EOS price surged 26% in the last 24 hours, trading above the 50 EMA mark and showing bullish signals. Onchain data is also looking positive showing increased accounts and transactions. To start a fresh bullish rally price has to break 200 EMA mark and sustain over it. Highlighted Crypto News Today: Justin Sun Announces TRX Integration with Solana and Pledges Zero Personal Profits from Meme Coins

- Coinbase says, 83% of institutional investors plan to increase crypto holdings, marking a shift toward mainstream adoption. - Stablecoins and DeFi see rising interest, with 84% engaged and DeFi participation set to triple by 2027. - 68% believe regulatory clarity will drive broader adoption despite market challenges. Institutional investors are expressing record, with 83% saying they plan to increase their holdings this year, a Coinbase and EY-Parthenon report indicates. The survey, published on the Coinbase blog, surveyed 352 institutional decision-makers. And highlights mainstream adoption of digital assets is increasing as regulatory clarity rises and use cases expand. The poll found that 59% of respondents plan to have more than 5% of their assets under management (AUM) invested in digital assets in 2025. The shift speaks volumes about how crypto is evolving from an investment in speculation to becoming a core component of institutional portfolios. Stablecoins and DeFi on the Rise Stablecoins are gaining traction, with 84% of investors using or considering using them for purposes beyond payments. Including generating yield, foreign exchange, and cash management. DeFi is also set for enormous growth. While 24% of investors surveyed currently participate in DeFi. Theyæ"re likely to surge to 75% by 2027 as institutions find lending, staking, and derivatives in the DeFi markets. Bitcoin and Ethereum retain the largest market share, but 73% of institutional investors hold alternative cryptocurrencies as well. XRP and Solana are the most widely held altcoins. Investors are also turning to single-asset exchange-traded products (ETPs) to invest in individual digital assets. Despite the bull image, most of the major threats still lie in regulatory uncertainty (52%), market volatility (47%), and security issues (33%). Despite that, 68% of users believe that smoother regulation will bring institutional crypto charging onto another wave. As much as increasing commitments, expanded use cases, and institutional adoption remain, crypto momentum appears to be moving towards sustained existence in 2025 as emphasized by recent data from Coinbase. Highlighted Crypto News Today Bubblemaps (BMT) Record 200% Weekly Surge After Binance Listing

MEXC, a leading global cryptocurrency exchange, announced the launch of DEX+, the marketæ"s first innovative CEX and DEX hybrid product that provides a seamless, one-stop experience for both on-chain and off-chain trading. This development marks a significant milestone in the evolution of hybrid crypto trading platforms. DEX+ allows users to trade directly on decentralized exchanges (DEXs) through the MEXC app and website, offering access to a wide range of on-chain assets. The initial version of DEX+ will support the Solana ecosystem, enabling users to trade over 10,000 tokens available on Raydium and pump.fun, with future expansion to additional DEXs and blockchain networks, with support for the BSC chain launching on March 26, allowing users to trade trending assets on BSC soon. DEX+ stands out by addressing many of the common pain points faced by users on traditional DEX platforms. Conventional DEX interfaces require users to navigate multi-step interactions with complex on-chain processes such as token approvals, transaction signings, and cryptocurrency swaps. MEXCæ"s DEX+ simplifies this process entirely. Users can transfer funds directly into their DEX+ account and execute buy and sell orders without dealing with intricate on-chain operations. This approach makes decentralized trading more accessible, especially for new crypto users. æ" MEXCæ"s DEX+ bridges the gap between centralized efficiency and decentralized freedom. Despite the growing popularity of DEXs, the lack of user-friendly interfaces and high transaction fees remain a significant hindrance to widespread adoption. Through DEX+, MEXC aims to solve these issues by providing a familiar, CEX-like trading experience while retaining the benefits of accessing on-chain assets. Users can seamlessly switch between centralized exchange and DEX+ features,æ" said Tracy Jin, COO of MEXC. MEXC is dedicated to offering a diverse range of accessible assets through its listing strategy and innovative products, all while ensuring top-tier security for its users. MEXC delivers comprehensive custodial wallet management for DEX+ users, ensuring security at an institutional level. Additionally, the platform offers Proof of Reserves, ensuring asset integrity and exceptional transparency. Usersæ" assets are backed 1:1, and customer fund compensation requirements are fully covered. This dual-layer protection ensures unmatched security for user assets. Furthermore, MEXC announced its collaboration with GoPlus, an independent third-party security provider that inspects the safety of all trading pairs listed on the platform. This added measure boosts user confidence and transparency, allowing them to trade with greater assurance and peace of mind. Moving forward, MEXCæ"s DEX+ is expected to play a pivotal role in the continued growth of DeFi and DEX ecosystems. As more users transition toward decentralized trading platforms, integrating CEX and DEX models will become increasingly important. With DEX+, MEXC strives to stand at the forefront of this innovative trend. To celebrate the successful launch of DEX+, MEXC is pleased to announce its incentive program: new users completing trades of 100 USDT or more on the DEX+ platform will be eligible to receive a 20 USDT reward. For more details, please visit: <https://www.mexc.com/dex-rewards>. About MEXC Founded in 2018, MEXC is dedicated to being æ"Your Easiest Way to Crypto.æ" Known for its extensive selection of trending tokens, airdrop opportunities, and low fees, MEXC serves over 34 million users across 170+ countries. With a focus on accessibility and efficiency, our advanced trading platform appeals to both new traders and seasoned investors alike. MEXC provides a seamless, secure, and rewarding gateway to the world of digital assets. For more information, visit: MEXC Website | æ"X | æ"Telegram | æ"How to Sign Up on MEXC For media inquiries, please contact MEXC PR Manager Lucia Hu: [lucia.hu@mexc.com](mailto:lucia.hu@mexc.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish MUBARAK price prediction for 2025 is \$0.1534 to \$0.1910. - Mubarak (MUBARAK) price might reach \$0.5 soon. - Bearish MUBARAK price prediction for 2025 is \$0.0988. In this Mubarak (MUBARAK) price prediction for 2025, 2026-2030, we will analyze the price patterns of MUBARAK by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | MUBARAK PRICE PREDICTION 2025 | | | MUBARAK PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Mubarak (MUBARAK) Current Market Status | Current Price | \$0.1336 | 24 æ" Hour Price Change | 33.99% Down | | 24 æ" Hour Trading Volume | \$298.97M | | Market Cap | \$133.38M | | Circulating Supply | 1B MUBARAK | All æ" Time High | \$0.2158 (On Mar 18, 2025) | | All æ" Time Low | \$0.06019 (On Mar 16, 2025) | What is Mubarak (MUBARAK) | TICKER | MUBARAK | | BLOCKCHAIN | Binance Smart Chain | | CATEGORY | Meme Coin | | LAUNCHED ON | March 2025 | | UTILITIES | GStaking, Rewards, Governance, Community, Trading | Mubarak (MUBARAK) is a meme coin that recently gained attention within the crypto community. Built on the Binance Smart Chain (BSC), it gained popularity due to speculation surrounding notable figures in the industry. The coinæ"s rise has been fueled by community-driven hype, social media engagement, and influencer discussions. Like many meme coins, its value is primarily influenced by market sentiment rather than strong fundamentals. While it has seen rapid growth, it remains a highly speculative asset, making it essential for investors to exercise caution. Mubarak (MUBARAK) reflects the broader trend of meme coins that rely on virality and community support. Its future largely depends on continued interest and engagement from traders and holders. Mubarak (MUBARAK) Price Prediction 2025 Mubarak (MUBARAK) ranks 277th on CoinMarketCap in terms of its market capitalization. The overview of the Mubarak price prediction for 2025 is explained below with a daily time frame. MUBARAK/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Mubarak (MUBARAK) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. The descending channel pattern is often followed by higher prices. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a securityæ"s price with parallel trendlines to show a downward trend. Within a descending channel, a trader could make a selling bet when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Mubarak (MUBARAK) was recorded at \$0.1336. If the pattern trend continues, then the price of MUBARAK might reach the resistance levels of \$0.1535, and \$0.2156. If the trend reverses, then the price of MUBARAK may fall to the support of \$0.1223. MUBARAK (MUBARAK) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Mubarak (MUBARAK) in 2025. MUBARAK/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Mubarak (MUBARAK) for 2025. | Resistance Level 1 | \$0.1534 | | Resistance Level 2 | \$0.1910 | | Support Level 1 | \$0.1240 | | Support Level 2 | \$0.0988 | MUBARAK Resistance & Support Levels Mubarak (MUBARAK) Price Prediction 2025 æ" RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (MUBARAK) are shown in the chart below. MUBARAK/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Mubarak (MUBARAK) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.14168 Price = \$0.13211 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 44.29703 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetæ"s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Mubarak (MUBARAK) Price Prediction 2025 æ" ADX, RVI In the below chart, we analyze the strength and volatility of Mubarak (MUBARAK) using the following technical analysis indicators æ" Average Directional Index (ADX) and Relative Volatility Index (RVI). MUBARAK/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Mubarak (MUBARAK). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 32.2731 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 54.88 < 50 = Low > 50 = High | High volatility | Comparison of MUBARAK with BTC, ETH Let us now compare the price movements of Mubarak (MUBARAK) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs MUBARAK Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of MUBARAK is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of MUBARAK also increases or decreases respectively. Mubarak (MUBARAK) Price Prediction 2026, 2027 æ" 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Mubarak (MUBARAK) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Mubarak (MUBARAK) Price Prediction 2026 | \$1.2 | \$0.09 | | Mubarak (MUBARAK) Price Prediction 2027 | \$1.4 | \$0.08 | | Mubarak (MUBARAK) Price Prediction 2028 | \$1.6 | \$0.07 | | Mubarak (MUBARAK) Price Prediction 2029 | \$1.8 | \$0.06 | | Mubarak (MUBARAK) Price Prediction 2030 | \$2 | \$0.05 | Conclusion If Mubarak (MUBARAK) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Mubarak (MUBARAK) price prediction for 2025 is \$0.1910. Comparatively, if unfavorable sentiment is triggered, the bearish Mubarak (MUBARAK) price prediction for 2025 is \$0.0988. If the market momentum and investorsæ" sentiment positively elevate, Mubarak (MUBARAK) might hit \$0.5. Furthermore, with future upgrades and advancements in the Mubarak ecosystem, MUBARAK might surpass its current all-time high (ATH) of \$0.2158. and mark its new ATH. FAQ 1. What is Mubarak (MUBARAK)? Mubarak (MUBARAK) is a meme coin that recently gained attention within the crypto community. 2. Where can you buy Mubarak (MUBARAK)? Traders can trade Mubarak (MUBARAK) on the following cryptocurrency exchanges such as Gate.io, CoinW, Ourbit, Bitget, PancakeSwap, BakerySwap, 1inch, KuCoin, Coinbase, Binance. 3. Will Mubarak (MUBARAK) record a new ATH soon? With the ongoing developments and upgrades within the Mubarak platform, Mubarak (MUBARAK) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Mubarak (MUBARAK)? Mubarak (MUBARAK) hit its current all-time high (ATH) of \$0.2158 on Mar 18, 2025. 5. What is the lowest price of Mubarak (MUBARAK)? According to CoinMarketCap, MUBARAK hit its all-time low (ATL) of \$0.06019 On Mar 16, 2025. 6. Will Mubarak (MUBARAK) hit \$0.5? If Mubarak (MUBARAK) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$0.5 soon. 7. What will be

the Mubarak (MUBARAK) price by 2026? Mubarak (MUBARAK) price might reach \$1.2 by 2026. 8. What will be the Mubarak (MUBARAK) price by 2027? Mubarak (MUBARAK) price might reach \$1.4 by 2027. 9. What will be the Mubarak (MUBARAK) price by 2028? Mubarak (MUBARAK) price might reach \$1.6 by 2028. 10. What will be the Mubarak (MUBARAK) price by 2029? Mubarak (MUBARAK) price might reach \$1.8 by 2029. - Aptos blockchain has shown a significant 150% increase in total value locked (TVL). - The ecosystem's token has also managed to sustain positive price movements despite the bear market. The cryptocurrency market has not altered its course of price consolidation in the last 24 hours. Bitcoin is trading at the same borderline between \$82,000 and \$83,000, much to the anguish of investors. However, particular altcoins have attempted to break free from bearish holds in the last few days. Meanwhile, the DeFi sector has shown growth in specific ways. One of the leading on-chain ecosystems, Aptos, was reported to have shown significant growth in its on-chain metrics. According to research conducted by the on-chain research community OurNetwork, Aptos has recorded a significant increase of 150% in total value locked (TVL). Secondly, the Aptos blockchain records surging daily user growth and ranks fourth among all blockchains. Following BNB, Solana and Tron, the Aptos chain has recorded a daily users amount of 1.2 million. Thirdly, the blockchain also recorded DEX volumes surging to reach a milestone of over \$13 billion in March 2025. Moreover, the research also outlined several DeFi ecosystems such as Hyperliquid within Aptos that have contributed to the surge. Thirdly, the blockchain has also earned the title of "Stablecoin powerhouse" owing to its deployment of USDC and USDe. These two assets combined have contributed nearly \$200 million to stablecoins volume over the past year. Will Aptos Utilize the On-Chain Surge for Token Bull Run? In the last 24 hours, the Aptos token has recorded a modest price increase of 4.13%. In the morning hours of March 18, the altcoin was trading at the \$5.2 range. However, after bullish candles sparked it rose to current trading levels. At the time of writing, Aptos was trading at \$5.48 as per CMC data. Over the past week, despite the market consolidation, APT has managed to maintain a slightly upward momentum of 7.35%. With this recent report of increasing on-chain activity, the altcoin might witness further upward movements in the coming days. Highlighted Crypto News Today: Raydium Challenges Pump.fun with "LaunchLab" Token Launchpad

Bitcoin, the world's first and largest cryptocurrency, is once again capturing headlines as it holds at \$83,925. With institutional players ramping up their exposure to the asset, Bitcoin's trajectory continues to maintain a steady upward climb. Recent data highlights the enthusiasm of hedge funds, corporations, and even sovereign wealth funds, who are growing their holdings as part of long-term investment strategies. Ethereum: A Stout Force in DeFi, But with Stagnant Growth On the other hand, Ethereum, the second-largest cryptocurrency by market capitalization, is priced at \$1,900. Known for its pioneering role in smart contracts, decentralized applications (dApps), and NFTs, Ethereum remains a juggernaut in the blockchain space. However, it's fair to say Ethereum's price movements have been less inspiring lately. Despite leading innovations and commanding dominance within the DeFi and NFT ecosystems, Ethereum has struggled to break out of its recent price consolidation zone. Still, Ethereum's enduring utility and growing network adoption make it a mainstay in most portfolios. Its role as the backbone of decentralized finance ensures that Ethereum will remain relevant even as the broader market seeks greener pastures. Enter BinoFi (BINO): A Revolutionary DeFi Solution While Bitcoin and Ethereum anchor the crypto narrative, newer projects are emerging that aim to revolutionize how the industry operates. BinoFi (BINO) is quickly becoming one of the most intriguing names in decentralized finance. With a clear focus on solving real-world inefficiencies in trading, security, and cross-chain connectivity, BinoFi is positioning itself as a category leader in DeFi innovation. A Trailblazing Approach to Financial Systems BinoFi's most unique offering lies in its hybrid exchange model, which blends the liquidity and speed of centralized exchanges (CEX) with the transparency and control of decentralized exchanges (DEX). This hybrid approach gives users a smooth trading experience, free from the limitations of traditional platforms. Adding to its appeal, BinoFi introduces true cross-chain trading without bridges. By eliminating the risks of legacy bridging systems, which are prone to exploits, BinoFi enables direct swaps across major ecosystems like Ethereum, Binance Smart Chain, Solana, and Polygon. This innovation drastically reduces friction for traders and developers navigating different blockchain environments. Additionally, the inclusion of AI-driven trading tools elevates the user experience. These tools offer features like predictive analytics, portfolio optimization, and automated trading strategies, catering to both beginner and professional traders looking to gain a competitive edge. Understanding the importance of security in crypto transactions, BinoFi incorporates non-custodial MPC (multi-party computation) wallets. These advanced wallets remove the need for traditional seed phrases and add layers of cryptographic safety. With gas-free transactions and user-friendly recovery options, BinoFi ensures a seamless yet secure experience for all users. \$BINO Presale Sparks Excitement At the heart of BinoFi's ecosystem is its native token, \$BINO, which powers the platform's various functionalities. The ongoing presale has seen tremendous momentum, with 45% of the first phase allocation sold, amounting to approximately 20 million tokens. The success of the presale reflects mounting investor confidence in BinoFi's roadmap and market potential. Priced at \$0.02 per token during this first phase, \$BINO offers significant upside as analysts project a potential listing price of \$0.30 per token. This represents a staggering 1,400% return for early adopters, making the presale a focal point for both retail and institutional investors alike. The funds raised from the presale are earmarked for accelerating platform development, expanding partnerships, and scaling community engagement efforts. From governance voting to trading rewards, \$BINO holders stand to gain a wide array of benefits as BinoFi's ecosystem grows. Why BinoFi Could Be a Game-Changer The rise of BinoFi reflects the growing demand for platforms that deliver both innovation and accessibility. By addressing the critical pain points of traditional DeFi, such as liquidity limitations, high security risks, and lack of interoperability, BinoFi is carving out a distinct niche in the market. Its roadmap, which includes added staking features, yield optimization tools, and integration with major DeFi protocols, further cements its potential as a visionary project. By prioritizing user-centric solutions and offering real-world value, BinoFi is prepared to challenge longstanding incumbents in the space. Final Thoughts Bitcoin may remain the king of cryptocurrencies, and Ethereum the face of DeFi. However, the spotlight is increasingly shifting to next-generation platforms like BinoFi, which aim to redefine what decentralized finance can offer. With its hybrid infrastructure, cross-chain capabilities, advanced security and trading tools, BinoFi is positioning itself as a serious contender in the race to become the next big thing in crypto. For those looking to capitalize on the future of DeFi, BinoFi represents not just an investment, but a vote of confidence in innovation itself. - Website: <https://bino.fi> - Whitepaper: <https://whitepaper.bino.fi> - Giveaway: <https://giveaway.bino.fi> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/bino/i> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Raydium launches the "LaunchLab" token launchpad to compete with Pump.fun's AMM. - Pump.fun contributes over 35% of Raydium's revenue, making it a crucial part of Raydium's business model. - Raydium's RAY token surged by 29% following the announcement of the LaunchLab, signaling strong investor confidence. Raydium, a decentralized exchange (DEX) and automated market maker (AMM) on the Solana network, is launching a new token launchpad named "LaunchLab." This move follows Pump.fun's efforts to develop its own AMM, which could eventually replace Raydium. According to reports from Blockworks, Raydium's "LaunchLab" will initially mirror Pump.fun, with a few distinct differences. The platform will feature a logarithmic bonding curve similar to Pump.fun but will also allow third-party user interfaces (UIs) to set fees and gain direct access to Raydium's liquidity pools. Development on this project has been ongoing for several months. Raydium's Revenue and Pump.fun's Role in Its Success Pump.fun represents the largest revenue source for Raydium with a contribution of more than 35% of its swap fee income since its introduction in early 2024. Users of Pump.fun can generate tokens through their platform that reach a market capitalization of \$60,000. A token will trigger the addition of liquidity to Raydium trading pools when it reaches its predetermined threshold at which point it gets destroyed. This process has become an essential part of Raydium's business model, with Pump.fun memecoins contributing 41% of Raydium's swap fee revenue in the past month, according to Blockworks Research. Despite concerns that Pump.fun may shift tokens to its own AMM, Raydium still holds \$168 million in its balance sheet, giving the platform the flexibility to pivot quickly and even consider a Pump.fun fork. Raydium's Token Surge and the Launchpad's Potential Following the announcement of the upcoming LaunchLab, Raydium's native utility and governance token, RAY, surged by 29%, reaching \$2. Source: Coinmarketcap The new token launchpad aims to challenge Pump.fun by providing a platform for meme token launches. This could shift the current market dynamics, as Raydium has already proven to be a highly profitable platform, generating around \$154 million from swap revenue in 2024. The introduction of the LaunchLab could accelerate this figure, potentially reaching \$1 million in daily swap revenue across all its liquidity pools. The swift reaction from Raydium to the Pump.fun phenomenon demonstrates how well the platform can both adapt and innovate. Raydium's investors first anticipated revenue decline after Pump.fun announced its new AMM but eventually boosted RAY token value from their faith in Raydium's upcoming business strategies. The LaunchLab functions as a critical development which will bring meaningful prospects for both users and investors. Highlighted Crypto News Today: Can Pi Network 2FA Release Improve PI Market Performance?

- The Pi network released a 2FA feature to improve Pi wallet security for pioneers. - The Pi coin is trading at \$1.13 amidst extreme price volatility. Pi network rolled out an additional security feature for Pi migration wallets. It recently released a two-factor authentication (2FA) feature so that pioneers can enable it to complete their migration successfully. Pioneers can enable this feature, secure their Pi wallets, and complete the pending migration of Pi coins. If pioneers already have a trusted email address, they can use it to set up 2FA. Or, they can set up a new trusted email address to complete 2FA and confirm their Pi wallet. Pi users in the 14-day pending period can complete their migration by setting up 2FA. Otherwise, their mined Pi coins will return to their mining app. In the middle of several pioneers complaining about their inability to complete migration, the 2FA feature was rolled out. While it may assist users in getting back their Pi network coins and complete migration to the mainnet, many users complain they lost Pi coins to random addresses. What's Ahead for Pi Coin Market Performance? The Pi coin is trading at \$1.13 at press time amidst extreme price fluctuations. Its market cap dropped to \$7.8 billion from 12 billion, and it is currently in the top 16th position. However, the 24-hour trading volume is up by 30%. The Pi coin is down by 33% and 24% in the last month and last week respectively. From its all-time high record of \$2.99 in February, the Pi coin price has dropped significantly. With Bybit CEO Ben Zhou's allegations and community reporting issues with migration, the token market price decreased. However, the Pi network team continues to build and improve its security features for the users. The recent 2FA release might play a significant role in the account recovery and mainnet migration process. Once pioneers retrieve their mined Pi coins and complete migration successfully, the Pi coin could return to its price rally. Highlighted Crypto News Today: Mercury Reports High Volatility in Tether (USDT) Trading on Solana

- EOS Network has announced its rebrand to Vaulta, signaling a major move into Web3 banking. - A token swap is expected by the end of May 2025, awaiting final confirmation. The blockchain network, EOS Network, has revealed a rebranding to Vaulta, a major shift towards Web3 banking solutions. This is part of a larger strategy to bridge mainstream finance with decentralized technologies, taking advantage of the scalability and speed of the network. The shift to Vaulta is the culmination of several years of creation and market experience, a realization of a dream to create an inclusive and compliant financial system backed by blockchain. Moreover, Vaulta positions itself as a next-generation Web3 banking platform, designed to offer secure, low-cost transactions, seamless interoperability, and decentralized data management. Token Swap and Rebrand Timeline The official switching of EOS Network to Vaulta is due to take place later in May 2025, which is subject to confirmation and change. During the rebranding process, a token swap will be launched by Vaulta. It allows the current EOS holders to exchange their tokens for the new Vaulta token. Launch of the Vaulta Banking Advisory Council Vaulta will be creating the Vaulta Banking Advisory Council. It comprises with a group of leaders from both traditional finance and the blockchain industry. This council will provide strategic guidance to ensure Vaulta's services align with global compliance standards and meet the needs of institutional partners. Among the council members are Lawrence Truong, CEO of Systemic Trust, Didier Lavalle, CEO of Tetra, Alexander Nelson, Senior Director of Digital Finance at ATB Financial, and Jonathan Rizzo, Senior Business Solution Specialist at ATB Financial. Besides, the council's mission is to identify real-world use cases and help pilot Vaulta's Web3 banking solutions across different markets. Strategic Partnerships and the Four Pillars Vaulta has formed partnerships with a number of industry leaders, such as Ceffu, Spirit Blockchain, and Blockchain Insurance Inc. These are important partnerships to build Vaulta's Web3 Banking ecosystem that will concentrate on four areas. It calls as the Four Pillars, these being Wealth Management, Consumer Payments, Portfolio Management, and Insurance. By

focusing on these pillars, Vaulta aims to offer users innovative yield-generation opportunities, facilitate access to real-world asset (RWA) investments. It also establish tailored insurance products for digital assets. Highlighted Crypto News Mercuryo Reports High Volatility in Tether (USDT) Trading on Solana

In a world where financial freedom is the ultimate flex, crypto is rewriting the rulebook on passive income. Gone are the days of grinding away just to make ends meet—now, investors are finding ways to let their money work for them. Whether it's through staking, play-to-earn gaming, or referral programs that dish out serious rewards, meme coins are taking center stage in this revolution. But with so many options, which one holds the key to explosive growth? Meet BTFD Coin (BTFD) — the best meme coin presale to buy now — that's flipping the game with a massive 3650% ROI potential, staking rewards, and a P2E game that's already turning heads. If you're ready to make your money move, here are three crypto projects that are reshaping the digital economy. 1. BTFD Coin (BTFD) — The Presale That's Rewarding Early Believers with a 3650% ROI Potential What if you could lock in the best meme coin presale to buy now and watch your investment skyrocket before the market even realizes what hit it? That's exactly what BTFD Coin is offering — a golden ticket for those who seize the moment. With the 14th presale stage nearing its end and over \$6.37 million already raised, this isn't just another meme coin. It's a movement designed for those who understand that buying early is where the real money is made. The Power of the BTFD Referral Program Passive income seekers are flocking to BTFD, not just for its potential moonshot but for its insanely rewarding referral program. Here's how it works: users who share their referral code with friends get 10% of the purchased amount in BTFD tokens. The more referrals, the bigger the bag. And if you land in the top 20 referrers of the month, the rewards stack even higher. It's a system designed to benefit early adopters who spread the word, creating a win-win cycle of passive earnings. Staking and Play-to-Earn: The Perfect Wealth-Building Combo Beyond the referral program, BTFD's staking mechanism is another powerhouse. Investors can lock in their holdings and earn consistent rewards while waiting for the coin's potential moonshot to \$0.006. With its Play-to-Earn (P2E) game now live, users can earn tokens just by playing — blending entertainment with financial growth like never before. To put things into perspective, an investment of \$2,000 at the current presale price of \$0.00016 buys 12.5 million BTFD tokens. If the price hits \$0.0006 by the presale's end, that's a solid \$7,500. But if it reaches its projected moon price of \$0.006, early investors could be looking at a jaw-dropping \$75,000 from that same initial stake. It's the ultimate blend of patience, strategy, and high reward potential. This best meme coin presale made the list because it's more than just another token — it's a full-fledged passive income machine with multiple earning opportunities. 2. Memecoin (MEME) — The Pure Meme Experience Memecoin (MEME) is a cryptocurrency that fully embraces meme culture without any attached utility, roadmap, or financial return expectations. It's designed purely for meme enthusiasts who appreciate the humor and community aspects of the crypto world. There are no staking programs or passive income mechanisms associated with MEME; it's all about enjoying the lighter side of cryptocurrency. 3. Popcat (POPCAT) — The Meme-Inspired Token Popcat (POPCAT) is a meme token launched on the Solana blockchain, inspired by the viral internet meme featuring a domestic short-haired cat named Otmeal. The meme showcases the cat's mouth popping open and closed, creating a comical effect that resonated with internet users worldwide. While POPCAT leverages this viral meme for its branding, it does not currently offer play-to-earn mechanics or passive income opportunities. Final Thoughts: Seizing the Crypto Passive Income Boom with BTFD! As meme coins develop beyond mere hype, they're becoming powerful tools for generating passive income. Whether through staking, referral programs, or deflationary tokenomics, BTFD Coin stands out as the best meme coin presale to buy now, offering early investors a shot at massive rewards, a game-changing referral program, and a thriving P2E ecosystem. With the 14th presale stage almost closing and BTFD's price still sitting at a steal, now's the moment to take action. The window for securing presale gains at \$0.00016 won't last forever. If the prospect of a potential 3650% ROI excites you, then waiting isn't an option. Secure your position before this opportunity disappears. Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: [https://x.com/BTFD\\_COIN](https://x.com/BTFD_COIN) - Telegram: [https://t.me/btfd\\_coin](https://t.me/btfd_coin) Frequently Asked Questions (FAQs) 1. What makes BTFD Coin the Best Meme Coin Presale to Buy Now? BTFD Coin offers a lucrative 3650% ROI potential, a rewarding referral program, and multiple passive income streams through staking and its play-to-earn game. With its presale nearly closing, early investors have a chance to secure significant gains before its price skyrockets. 2. How does the BTFD Coin referral program work? BTFD's referral program allows users to earn 10% of the raised amount in BTFD tokens when their referral code is used. If a referred user invests at least \$50, they get an additional 10% in BTFD tokens, making it a win-win passive income opportunity. 3. What is the staking APY for BTFD Coin? BTFD Coin offers a competitive staking APY, allowing investors to lock in their holdings and earn consistent rewards while waiting for its value to increase. This ensures a steady passive income stream alongside its growth potential. 4. Can I earn rewards by playing the BTFD Coin game? Yes! The full version of the BTFD Play-to-Earn (P2E) game is now live, enabling users to earn BTFD tokens as they progress through different levels. It merges gaming with financial incentives, creating an exciting way to build wealth. 5. How much can I earn if BTFD Coin reaches its projected moon price of \$0.006? An investment of \$2,000 at the current presale price of \$0.00016 buys 12.5 million BTFD tokens. If BTFD Coin reaches \$0.006, your investment could grow to \$75,000, making it one of the most promising opportunities in the meme coin space. Meme coins have taken over the crypto world again, and this time, they're not just about the laughs — they're about big money moves. Whether it's staking rewards, viral hype, or massive community backing, these projects are proving they have the potential to skyrocket. Investors are diving in, looking for the next meme coin that could 100x or even 1000x. One of the biggest stars right now is BTFD Coin, with its insane 90% APY staking, skyrocketing presale numbers, and an ultra-loyal Bulls Squad. But it's not alone — projects like Apu Apustaja (APU), ANDY, Non-Playable Coin (NPC), Simon's Cat (CAT), and Degen (DEGEN) are also making serious waves. Let's break down why these best meme coins to buy today have investors buzzing. 1. BTFD Coin: The Staking Powerhouse With 90% APY If there's one meme coin presale you don't want to miss, it's BTFD Coin. Investors are stacking up tokens fast, thanks to its game-changing 90% APY staking rewards, an already-live Play-to-Earn (P2E) game, and a dedicated community of over 11,400 Bulls. This meme coin presale has already raised over \$6.37 million, with more than 71 billion tokens sold. But what really has investors piling in is the staking potential. At 90% APY, staking BTFD could turn even a modest investment into a money-printing machine. Let's put it in numbers — if you put \$17,000 into BTFD at its current presale price of \$0.00016, you'd be sitting on 106.25 million BTFD tokens. If the price hits its projected \$0.0006 listing price, that stash would be worth a cool \$63,750 — and that's before staking rewards even kick in. And let's not forget about BTFD's P2E game, which went live on January 1, 2025. Players can earn tokens just by gaming, adding another passive income stream to an already loaded project. With its Bulls Squad community, exclusive referral bonuses, and 3,650% ROI potential, it's easy to see why BTFD is getting all the hype right now. How to Buy BTFD Coin? Buying BTFD Coin is simple: - Set up a wallet like MetaMask or Trust Wallet. - Load it with BNB, ETH, or USDT. - Connect your wallet to the BTFD presale site. - Purchase BTFD and lock in your bonus before the price jumps. - Stake and earn insane 90% APY rewards! Why did this coin make it to this list? BTFD Coin is offering one of the most lucrative staking rewards in the market right now, and its presale numbers prove that investors are taking it seriously. 2. Apu Apustaja (APU): The Viral Meme Sensation Apu Apustaja started as a meme and blew up into a full-fledged crypto project. It's built on Ethereum, making it easy to trade, and its community is one of the most active in the meme space. APU has consistently gained traction on social media, and its developers are actively pushing marketing campaigns to keep the hype alive. Its on-chain activity has been growing, and many investors are betting on it to pump in 2025. Why did this coin make it to this list? APU is riding a massive wave of meme culture popularity, making it one of the hottest tokens on Ethereum right now. 3. ANDY: The Solana Meme Coin With Influencer Hype ANDY has been exploding in popularity, thanks to its connection with social media influencer Andrew Tate. As part of the Solana ecosystem, ANDY benefits from fast transactions and low fees, making it a solid choice for meme coin traders. With meme coins on Solana gaining serious traction, ANDY is positioned as one of the network's most-watched projects. Some analysts predict big things for this token as it continues to trend across social media. Why did this coin make it to this list? ANDY is one of Solana's rising meme coin stars, and with influencer hype behind it, it has plenty of room to grow. 4. Non-Playable Coin (NPC): The Meme + NFT Hybrid NPC is a unique mix of meme culture and NFTs, inspired by the AI support the current thing — meme. It combines ERC20 and ERC1155 standards, allowing it to function as both a fungible token and an NFT — something that's rarely seen in the meme coin world. As more investors look for NFT-backed meme coins, NPC is gaining momentum. Its hybrid structure makes it stand out, and the project's developers are actively working on new features for 2025. Why did this coin make it to this list? NPC merges memes with NFTs, making it one of the most innovative projects in the space. 5. Simon's Cat (CAT): The Officially Licensed Meme Coin Unlike most meme coins, CAT is fully licensed by the creators of Simon's Cat, a wildly popular British animated series with over 1.6 billion views on YouTube. That means it's not just another meme coin — it has IP rights and real-world brand recognition. With a massive fanbase and a growing number of investors jumping in, CAT has the potential to be one of the strongest brand-backed meme coins of 2025. Why did this coin make it to this list? CAT has something most meme coins don't — official licensing and a built-in fanbase that's already massive. 6. Degen (DEGEN): The Gateway to DeFi for Meme Traders DEGEN isn't just a meme coin — it's a DeFi powerhouse. Designed to give traders access to yield farming, staking, and other decentralized finance perks, DEGEN is building a bridge between meme culture and serious financial tools. As DeFi adoption grows, projects like DEGEN are becoming more valuable. With an active community and a focus on real utility, this coin has major potential in the long run. Why did this coin make it to this list? DEGEN blends meme coin energy with DeFi utility, making it one of the more serious meme plays this year. Final Thoughts Based on our research and market trends, BTFD Coin is leading the charge with its 90% APY staking, making it one of the most profitable opportunities right now. But meme culture is thriving, and projects like APU, ANDY, NPC, CAT, and DEGEN are also seeing major momentum. With meme coins driving insane returns, this could be your last chance to grab BTFD Coin at presale prices. Don't wait — BTFD or get left behind. FAQs 1. What are the best meme coins to buy today? BTFD Coin is currently one of the best meme coins to buy today, thanks to its 90% APY staking rewards and fast-growing presale success. 2. How does BTFD Coin's staking work? BTFD Coin offers 90% APY staking, meaning you earn rewards just by holding and staking your tokens. 3. What makes meme coins valuable? Meme coins gain value through community support, viral trends, and unique utilities like staking, NFTs, or DeFi integrations. - MUBARAK meme coin climbs over 300% post-listing on Binance Alpha, hitting \$0.2158 before retracing to \$0.1861. - Binance founder CZ's \$600 MUBARAK purchase on March 16 fuels speculation, contradicting his stance on meme coins. The meme coin Mubarak (MUBARAK) has been making headlines after a significant 250% price surge, fueled by speculation and a key purchase by Binance founder Changpeng Zhao (CZ). After being launched on March 14, 2025, on the BSC Chain's Four.Meme platform, Mubarak has quickly gained traction among traders and investors. Since then the meme coin continues to hit new all-time highs, with the latest peak recorded today at \$0.2158, marking a 40% increase in the past 24 hours before retracing slightly. At the time of writing, MUBARAK priced at \$0.1918 with a market cap of \$186.36 million. Additionally the token daily trading volume soared over 236% to \$481.53 million. CZ's Purchase Sparks Market Excitement On March 16, 2025, blockchain analytics firm Lookonchain reported that CZ had purchased MUBARAK tokens worth 1 BNB (\$600) through PancakeSwap, a major decentralized exchange on the BNB Chain. From this transaction, 20,150 MUBARAK tokens were acquired, triggering speculation about CZ's involvement. His purchases contradicted his earlier statement that he was not actively investing in meme coins, adding to the hype surrounding Mubarak. Additionally, the listing of MUBARAK on Binance Alpha on March 16th has provided significant liquidity, contributing to a 300% price increase. The coin's launch on Four.Meme, a platform dedicated to meme tokens, also fueled interest, especially after CZ acknowledged a post referencing Mubarak. Further, on March 17th a trader made headlines after turning \$232 into over \$1.1 million on Mubarak — an 4,860x return. He initially spent 0.4 BNB (\$232) to purchase 10.5 million MUBARAK and later sold a portion for 576 BNB (\$363.5K). Currently, he holds 5.16 million MUBARAK across three wallets, valued at \$764K. This remarkable profit highlights the speculative nature of meme coins. MUBARAK Price Analysis: Key Levels and Market Trends Key technical indicators suggest that Mubarak is currently in a bullish phase: - Support Level: \$0.1650 - Resistance Level: \$0.2100 - Relative Strength Index (RSI): 72 (indicating overbought conditions) The coin's momentum could continue if trading volumes remain high and broader market sentiment stays positive. However, with RSI in overbought territory, short-term corrections may occur before further upward movement. With listings on major exchanges like Binance Alpha and Bitget, Mubarak is gaining liquidity and accessibility. If the coin maintains its hype and CZ's endorsement sustains investor interest, its

upward trend could persist. However, as with all meme coins, extreme volatility remains a factor. Highlighted Crypto News Today: TRON (TRX) Price Analysis: Will Bulls Maintain Momentum Above \$0.22?

In light of President Donald Trump's recent announcement to establish a U.S. "Crypto Strategic Reserve," which includes major cryptocurrencies such as Bitcoin, Ethereum, XRP, Solana, and Cardano, DefiTax.us is proud to launch its innovative tax reporting platform tailored for decentralized finance (DeFi) users. This strategic move by the government has led to a significant surge in cryptocurrency valuations, underscoring the growing importance of accurate tax reporting for investors and businesses alike. As the cryptocurrency market expands, so does the complexity of tax reporting, especially for those engaged in activities like yield farming, staking, liquidity pools, and token swaps. Traditional tax software often falls short in accurately tracking these intricate transactions, potentially leading to misreporting and penalties. DefiTax.us addresses these challenges by offering:

- Automated Transaction Tracking: Real-time monitoring of DeFi transactions across multiple blockchains and wallets.
- Accurate Tax Calculations: Advanced algorithms that precisely compute gains, losses, and taxable events.
- Seamless Reporting: User-friendly tax reports formatted for IRS compliance and easy integration with tax professionals.
- Privacy & Security: A non-custodial solution ensuring user data remains confidential and protected.

Janna Scott, founder and CEO of DefiTax.us, brings over 20 years of experience in accounting, taxes, business planning, and strategy. As an IRS Enrolled Agent and Master of Business Administration (MBA), Scott has provided CFO, FPA, Tax Accounting, Financial Accounting, Compliance, and SEC services to various clients and firms, including the IRS. Her extensive background in the financial industry and passion for assisting others have been instrumental in the development of DefiTax.us. "Our mission is to bridge the gap between DeFi innovation and regulatory compliance," said Scott. "With the U.S. government's proactive stance on cryptocurrency adoption, it's more crucial than ever for investors to have a reliable, user-friendly solution that ensures accurate tax reporting and peace of mind." DefiTax.us is now available for users in the United States, with plans to expand features and jurisdiction coverage in the coming months. For more information, visit [www.DefiTax.us](http://www.DefiTax.us) or contact [marketing@defitax.us](mailto:marketing@defitax.us). About DefiTax.us: DefiTax.us is a crypto tax platform specializing in decentralized finance transactions. By leveraging blockchain analytics and advanced tax algorithms, DefiTax.us simplifies tax reporting for individuals and businesses engaged in DeFi. As financial restrictions tighten in various regions, Project Yafa is stepping up with a blockchain-based financial solution designed to empower individuals facing systemic economic limitations. Built on Solana, the \$Yafa token provides a decentralized alternative, allowing users to transact, store value, and participate in the global economy without reliance on traditional financial institutions. Economic restrictions often leave entire populations financially excluded, unable to conduct international transactions or access banking services freely. Project Yafa presents a transformative path toward financial self-determination, heritage preservation, and humanitarian aid, ensuring that those facing economic oppression have an alternative. Breaking Financial Barriers with Decentralization Across the world, certain financial systems restrict access to banking, control capital movement, and impose regulatory oversight that limits economic freedom. These constraints make it difficult for people to transfer funds, invest, or even receive aid without interference. Project Yafa is challenging these restrictions through blockchain, offering a borderless, censorship-resistant, and decentralized financial network. By leveraging Solana's high-speed, low-cost infrastructure, \$Yafa enables seamless peer-to-peer transactions, financial independence, and cross-border accessibility, removing reliance on centralized banking institutions that impose external limitations. Unlike traditional financial systems, blockchain transactions are immutable and transparent, ensuring that value can move freely and securely. The \$Yafa token allows individuals to store wealth without fear of political interference, or financial exclusion. "The ability to transact freely is a fundamental right, yet millions face restrictions that limit their economic opportunities," said a Project Yafa spokesperson. "With \$Yafa, we're building a financial network that operates beyond the control of centralized entities, ensuring financial access for all." Additionally, blockchain technology ensures transaction security, reducing the risks of government-imposed freezes, bank shutdowns, or external interventions that typically affect financially marginalized populations. Preserving Heritage & Transforming Humanitarian Aid Beyond financial empowerment, Project Yafa is leveraging blockchain to preserve history, culture, and identity. In partnership with Digital Palestine, the project is tokenizing historical artifacts, ensuring their preservation despite external threats. Cultural erasure is a growing concern for communities under economic and political pressure. By utilizing blockchain, Project Yafa is making sure that historical records, artifacts, and stories remain accessible and tamper-proof, protecting them for future generations. In addition to cultural preservation, Project Yafa is transforming humanitarian aid distribution. Traditional aid often faces delays, inefficiencies, and political conditions before reaching affected populations. Blockchain provides a more efficient and transparent way to ensure that aid reaches those who need it directly, without intermediaries imposing restrictions. Project Yafa has already implemented direct relief initiatives, including the distribution of food and water access points to communities in need. With blockchain technology, donors and organizations can see exactly where their contributions go, ensuring greater accountability and impact. A New Era of Financial Liberation As the world increasingly moves toward decentralized finance (DeFi), digital assets, and blockchain-driven economies, Project Yafa stands at the forefront of this transformation, championing financial autonomy and resistance against restrictive systems. For many, the ability to control their own wealth, transact freely, and remain financially independent is more than just a convenience, it's a necessity for survival and self-determination. \$Yafa is more than a token; it is a movement that represents economic resilience, empowerment, and the right to participate in the global economy without limitations. The project is gaining momentum among crypto enthusiasts, financial activists, and those who believe in the power of decentralized networks to challenge financial exclusion. It serves as a model for how blockchain can be used to address real-world financial oppression, providing tangible solutions beyond speculation and investment. For those who support financial self-sovereignty and digital resistance, \$Yafa offers a way to contribute—not just in words, but in action. About Project Yafa: Project Yafa is a blockchain-powered initiative committed to financial autonomy, cultural preservation, and decentralized humanitarian aid. Built on Solana, it leverages decentralized technology to challenge economic restrictions and empower individuals worldwide. For more information, visit [www.yafa.io](http://www.yafa.io). Contact Details: - Anny K. - [hello@yafa.io](mailto:hello@yafa.io). Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. - Canary Capital moves forward with SUI ETF filing, submitting an S-1 form to the SEC to advance its plans. - Following the ETF filing news, SUI surged 6%, reaching an intraday high of \$2.38 before slightly retracing. Canary Capital has officially submitted paperwork to the U.S. Securities and Exchange Commission (SEC) for a SUI (SUI) exchange-traded fund (ETF). This follows a series of crypto ETF applications from the firm, including ones for Dogecoin (DOGE), Solana (SOL), and XRP. The hedge fund manager's latest move comes after it registered a trust entity in Delaware on March 7, as seen on the state's Division of Corporations website. With the initial S-1 filing now in place, Canary Capital is expected to submit a 19b-4 document next, solidifying its plans for a SUI-focused fund. This development comes just days after Trump-affiliated decentralized finance (DeFi) platform World Liberty Financial (WLFI) announced it would include SUI assets in its token reserve and explore related product opportunities. Following the ETF news, SUI saw a 6% price jump, climbing from \$2.25 to an intraday high of \$2.38 before slightly retreating. The token is currently trading at \$2.32, with a market capitalization of \$7.38 billion. Meanwhile, its daily trading volume surged by over 45%, reaching \$782.88 million. Despite a 349.06% gain over the one year low, the cryptocurrency has dropped about 31% in the last month, mirroring the broader crypto market downturn. Will SUI price climb over \$3 again? SUI Price Analysis: Key Levels and Market Signals From a technical perspective, SUI is showing short-term bullish momentum, trading above its 9-day and 21-day exponential moving averages (EMAs). However, it remains below its 50-day and 100-day EMAs, suggesting resistance ahead at \$2.42 and \$2.47. A breakout above these levels could confirm further upside, while failure to do so might lead to downward pressure. Zooming in, the RSI at 52.42 on the 4-hour SUI/USD chart indicates neutral momentum, suggesting neither strong bullish nor bearish pressure. Analysts are also monitoring a potential bearish shift, as indicated by the SuperTrend turning red on the same time frame. Resistance zones often bring high volatility as buyers and sellers compete for control. If buyers lose momentum, the altcoin could face a pullback toward key support levels. The first major support to watch is \$1.5997, where buyers may try to stop further losses. If this level breaks, SUI could drop to \$1.4222, a crucial support zone that has previously acted as a price floor.

- CryptoQuant CEO Young Ju, stated that Bitcoin might be showing bearish prices for the next 6-12 months. - Bitcoin's recent trading activity suggests the cryptocurrency entering a consolidation phase. The crypto market has been seemingly entering a consolidation phase over the past few days. The lack of significant action has caused FUD among investors, which has, in turn, initiated a selling spree among short-term traders. Meanwhile, the ETF sector and crypto reserves still show increased activity despite the price slack. Notably, to confirm investors' worst fears, CryptoQuant CEO Ki Young Ju posted a Bitcoin prediction a few hours ago. According to the prediction, Ju states that Bitcoin's bull cycle is officially over. He further noted that for the next 6 to 12 months, we can expect bearish or sideways prices. The community has given much attention to this speculation, discussing it fervently. The CryptoQuant CEO has applied a PCA-risk indicator to on-chain metrics such as MVRV and SOPR. Using this he calculated a 365-day moving average and by identifying inflection points confirmed his analysis. Furthermore, Ki Young Ju also said that with fresh liquidity drying up, new whales are selling their Bitcoin for lower prices. This further acts as a catalyst for bearish trends in the cryptocurrency. BTC is currently trading at the consolidated price of \$83,000. Will Bitcoin's \$80K Consolidation Persist For Longer? Over the past week, Bitcoin has been trading in the \$80K - \$85K range. It has attempted several times to break the \$86,000 resistance but failed to do so. In the last 24 hours, the cryptocurrency has factored in an additional price drop of 0.21%. This caused Bitcoin to trade at the border of \$82K-\$83K levels, after struggling to hold the \$83K support. At the time of writing, BTC was trading at 82,991 as per CMC data. Zooming out, into its weekly chart, the digital asset recorded trading at \$80,354 in the week's beginning. These inferences further confirm the cryptocurrency's consolidation. Combining this with the CryptoQuant CEO's prediction, Bitcoin might face extended periods of trading at this current price range. Meanwhile, other altcoins such as Solana and Cardano have also shown struggles in breaking resistance.

Ever wonder what it feels like to get in early on a meme coin before it takes off? Crypto moves fast, and the top new meme coins to invest in for short term are the ones gaining momentum right now. Some of the biggest meme coin success stories started with a small community and a presale that turned early investors into six-figure winners. Right now, BTDF Coin (BTDF) is stealing the show with over \$6.33 million raised, 71 billion tokens sold, and a 90% APY staking feature that's printing rewards for early investors. But it's not alone. Coins like Sneek, Fartcoin, and others are making big moves, and savvy investors are paying attention. Let's break down why these six meme coins are trending and why you should take notice before it's too late. 1. BTDF Coin: The Meme Coin Presale With 90% APY Staking and Huge Potential BTDF Coin is turning heads with its presale numbers—over \$6.33 million raised, 71 billion tokens sold, and 11,400 holders already on board. As one of the top new meme coins to invest in for short term, its entry price of just \$0.00016 won't last long. Early investors are jumping in before it lists at \$0.0006, aiming for a massive 3,650% ROI post-launch. What makes BTDF different? It's not just another meme coin. Its 90% APY staking rewards allow holders to multiply their holdings passively, making it one of the most rewarding top new meme coins to invest in for short term. Plus, its Play-to-Earn (P2E) game, which went live on January 1, 2025, keeps users engaged, driving even more demand for the token. Now, let's talk numbers. If you put \$5,000 into BTDF at the current presale price of \$0.00016, you'd be sitting on 31.25 million BTDF tokens. When it lists at \$0.0006, that's already \$18,750—and if BTDF reaches its moon price of \$0.006, your stack turns into a life-changing \$187,500. This is why many investors consider it one of the top new meme coins to invest in for short term before it takes off. Buying BTDF is simple—just set up a MetaMask or Trust Wallet, load it with BNB or ETH, connect to the meme coin presale page, and grab your tokens before the next price jump. Why did this coin make it to this list? Because BTDF's presale numbers and staking rewards are unlike anything else right now. With its \$0.00016 price vanishing soon, investors are scrambling to get in before it's too late. 2. Sneek: The Cardano Meme Coin That's All About Community Sneek launched in the depths of a bear market but quickly became one of the biggest meme coins on Cardano. Its community-first approach and strong backing from the Cardano ecosystem have helped it secure a dedicated fanbase. Sneek's strength lies in its organic growth and active community, which keeps engagement high even during slow market periods. With liquidity pools and staking options, Sneek is building a lasting presence beyond just meme hype. Why did this coin make it to this

list? Because Snek has one of the strongest meme coin communities on Cardano, and its momentum keeps pushing it higher. 3.Fartcoin: The Meme Coin Thatâ€™s Taking Comedy to the Blockchain Yes, itâ€™s exactly what it sounds likeâ€”Fartcoin (FARTCOIN) is a meme-driven cryptocurrency that rewards users for submitting their best fart jokes and memes. Every transaction on the network triggers a â€œGas Feeâ€ effect, complete with a digital fart sound, adding to the projectâ€™s comedic appeal. While some meme coins ride trends, Fartcoin is creating its own lane in the market by using humor and community engagement to keep people involved. Why did this coin make it to this list? Because Fartcoin taps into humor and internet culture, proving that meme coins can be both fun and profitable. 4.Gigachad: The Meme Token That Honors Internet Legends Inspired by the legend of the original Gigachad, Gigachad (GIGA) is a meme token on Solana that embodies the spirit of â€œChadâ€ energy. With memes and internet culture at its core, the GIGA community has been pushing it forward, embracing its status as a meme powerhouse. GIGA is fully community-run, which means its roadmap and future developments are shaped by holders, making it an interesting addition to the growing meme coin landscape. Why did this coin make it to this list? Because Gigachad celebrates internet meme culture, and its dedicated community is keeping it relevant. 5.Non-Playable Coin (NPC): The Meme Coin That Blends Crypto and NFTs NPC isnâ€™t just a meme coinâ€”itâ€™s a hybrid between a meme token and an NFT, making it one of the most unique meme coins in the space. It operates on Ethereum and Base networks and uses a system called â€œmeme fungible tokensâ€ (MFTs), allowing users to hold tokens that can also function as NFTs. The meme behind itâ€™the Non-Playable Character (NPC) memeâ€was one of the biggest internet trends, and NPC has successfully capitalized on that viral fame. Why did this coin make it to this list? Because NPC is taking meme coin utility to the next level, blending NFTs and ERC20 tokens into a single ecosystem. 6.Moo Deng: The Solana Meme Coin Inspired by a Viral Baby Hippo Moo Deng (MOODENG) is a meme coin built on the Solana blockchain, inspired by a baby pygmy hippo named Moo Deng, whose playful antics made her a viral sensation. Capitalizing on the success formula that made dog-themed meme coins explode, Moo Deng taps into animal lovers and meme enthusiasts alike. As a Solana-based meme coin, Moo Deng benefits from low transaction fees and fast speeds, making it an attractive option for traders and investors looking for quick movements in the meme coin space. The community behind it has been growing steadily, pushing the token up the ranks among top new meme coins to invest in for short term. Why did this coin make it to this list? Because Moo Deng is blending meme culture and viral internet moments into a growing Solana-based ecosystem, making it a fun and exciting short-term investment opportunity. Final Thoughts The top new meme coins to invest in for short term are all about momentum, hype, and strong communities. BTFD Coin is leading the charge, with over \$6.33 million raised, 71 billion tokens sold, and a 90% APY staking reward thatâ€™s fueling massive demand. Meanwhile, coins like Snek, Fartcoin, Gigachad, and NPC are thriving in their own niches, proving the power of meme culture in crypto. But BTFDâ€™s \$0.00016 entry price wonâ€™t last much longer. If youâ€™re looking to stake at 90% APY and ride the potential 3,650% ROI wave, the time to act is now. Join the BTFD Coin presale before the next stage hits and prices go up. FAQs 1. What are the top new meme coins to invest in for short term? Some of the top new meme coins to invest in for short term include BTFD Coin, Snek, Fartcoin, Gigachad, and NPC, all of which have strong momentum and active communities. 2. Why is BTFD Coinâ€™s meme coin presale gaining so much attention? BTFD Coinâ€™s meme coin presale has raised \$6.33 million, sold 71 billion tokens, and offers 90% APY staking rewards, making it one of the hottest meme coins right now. 3. How do I buy BTFD Coin? Set up a MetaMask or Trust Wallet, load it with BNB or ETH, connect to the presale page, and buy before the next price increase. Cardano (ADA), widely regarded for its robust proof-of-stake (PoS) blockchain foundation, is currently trading at \$0.74, reflecting a modest 2.81% gain over the past week. This uptick, while encouraging, highlights Cardanoâ€™s resilience in a turbulent market. ADAâ€™s peer-reviewed academic backing and commitment to scalability and sustainability have solidified it as a key player in the crypto space. However, despite these advancements, ADA holders are encountering a familiar challenge facing many long-term investors in large-cap cryptocurrenciesâ€”limited high-yield opportunities. With yield farming and staking rewards for ADA becoming increasingly competitive, a growing number of Cardano enthusiasts are looking beyond their preferred ecosystem for enhanced returns. BinoFiâ€™s Hybrid Model as a New Alternative Enter BinoFi (BINO), an emerging DeFi platform offering sophisticated solutions that cater to yield-seeking investors. With its hybrid CEX/DEX infrastructure, BinoFi is positioning itself as the bridge between traditional crypto trading and next-generation DeFi ecosystems. Key Advantages of BinoFi BinoFi sets itself apart by addressing specific inefficiencies in the decentralized space, offering features that challenge the status quo and appeal to yield-focused investors: - Hybrid CEX/DEX Infrastructure BinoFi combines the deep liquidity and speed of centralized exchanges with the security and transparency of decentralized networks. This hybrid approach allows users to enjoy the best of both worlds while minimizing risks. - Cross-Chain Trading Without Bridges Unlike Cardano and similar ecosystems that rely on specific interoperability tools, BinoFi enables users to trade assets across leading blockchainsâ€”including Ethereum, Binance Smart Chain, and Solanaâ€”with zero reliance on external bridges. This streamlines asset movement and significantly reduces vulnerabilities. - AI-Driven Tools Advanced AI-powered trading features and analytics give users a competitive edge, automating portfolio management and allowing for informed decision-making in rapidly changing markets. BinoFiâ€™s innovative approach makes it particularly attractive to ADA holders seeking opportunities outside traditional staking mechanisms. \$BINO Presale Excites Investors At the heart of BinoFiâ€™s ecosystem lies its native token, \$BINO, which anchors its platformâ€™s utility and growth. The ongoing presale has captured the attention of investors, offering a unique opportunity to participate early in a high-potential project. Presale Details - Current Price: \$0.02, presenting an entry point well below the expected market price. - Projected Gains: With a listing price of \$0.30, early participants stand to realize an impressive 1,400% potential ROI. Beyond the immediate returns from potential price appreciation, \$BINO holders will benefit from various platform functionalities, including voting rights in governance decisions, staking incentives, and liquidity rewards. The Strategic Shift for ADA Holders For ADA investors, BinoFi offers an intriguing opportunity to diversify portfolios and capitalize on features unavailable within Cardanoâ€™s current ecosystem. By leveraging BinoFiâ€™s scalable and cross-chain solutions, ADA holders gain access to a platform designed for yield generation, low-cost transactions, and future-proof innovation. While Cardano remains a formidable force in the crypto world, platforms like BinoFi are redefining what decentralized finance can achieve. The \$BINO presale represents a gateway for investors ready to venture beyond established assets and into the next phase of DeFi evolution. Final Thoughts Cardano holders face a pivotal moment as they weigh the benefits of stability versus the allure of innovation. With BinoFiâ€™s hybrid infrastructure and competitive features, itâ€™s clear that alternatives like \$BINO represent more than just speculative plays; they signify a shift in how blockchain projects are addressing long-standing inefficiencies in DeFi. For investors seeking high-yield opportunities with disruptive potential, BinoFi might just be the answer. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Giveaway: <https://giveaway.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. Cryptocurrency is all the rage, and with new projects constantly entering the market, itâ€™s tough to keep up with which one will hit the \$1 mark next. As of 2025, several coins are making waves, but among them, Qubetics (\$TICS) stands out in a big way. Already gaining traction with its innovative approach to tokenizing real-world assets, Qubetics is poised for massive growth. Meanwhile, the giants like Binance Coin (BNB) continue to lead the charge, while Sonic (2025) is quickly gaining attention for its unique ecosystem. As more crypto enthusiasts scramble to catch the next big wave, the real question remains: which one will hit \$1 first? Letâ€™s dive into what makes Qubetics, Binance, and Sonic so interesting, with a particular focus on Qubetics and how itâ€™s positioning itself as the next crypto to hit \$1. Qubetics: The Future of Real-World Asset Tokenisation Qubetics has quickly captured the attention of the crypto community, and itâ€™s easy to see why. In its 26th presale stage, Qubetics has already sold over 501 million tokens, raising a whopping \$15.2 million from more than 23,300 holders. But what truly sets Qubetics apart is its focus on tokenizing real-world assetsâ€”a concept that could revolutionize how businesses and individuals interact with blockchain. At its core, Qubetics is developing a Real World Asset Tokenisation Marketplace, making it easier for everyone from small businesses to professional participants to engage with tangible assets like real estate, commodities, and even luxury goods. By bridging the gap between traditional assets and blockchain technology, Qubetics is creating a seamless way to integrate these markets into the crypto space. Qubetics Presale: Key Details - Current Price: The price of \$TICS tokens is set at just \$0.1181. Analyst Predictions & Growth Potential - 111% ROI: If \$TICS reaches \$0.25 by the end of the crypto presale. - 746% ROI: If \$TICS hits \$1 after the presale. What Makes the Qubetics Presale Unique: - Real-World Solutions: Qubetics offers a platform that addresses real-world issues and brings tangible solutions to digital finance. - Growth Potential: The project has strong growth potential if it continues on its current trajectory. Binance Coin (BNB): The Established Giant Binance Coin (BNB) achieved a notable milestone, surpassing the \$630 mark with a 3.63% increase over a 24-hour period, reaching a trading price of \$630.61 USDT. This surge comes amid significant market movements, including Bitcoinâ€™s fluctuation around the \$83,000 mark, highlighting the dynamic nature of the cryptocurrency market. Looking ahead, BNB Chain is set to activate the Pascal hard fork on March 20, 2025, aiming to enhance Ethereum compatibility, introduce native smart contract wallets, and bolster security features. This upgrade is part of a series of improvements designed to position BNB Chain as a leading alternative to Ethereum and Solana, addressing scalability and fee-related challenges. Market observers are also keeping an eye on broader economic factors, such as potential policy shifts and interest rate decisions, which could influence cryptocurrency valuations in the coming weeks. Sonic (\$) Token Swap and Market Update: Binance.US announced its support for the migration of Fantom (FTM) tokens to Sonic (\$), with a 1:1 swap ratio. The token swap process began on March 16, 2025, at 8 p.m. PST, during which FTM trading pairs were suspended. Subsequently, on March 17, 2025, at 8 p.m. PST, FTM deposits and withdrawals were permanently closed across all supported networks, including Fantom, BNB Smart Chain (BEP20), and Ethereum (ERC20). Binance.US is currently working on enabling Sonic (\$) trading pairs and services, with updates to be provided as the migration progresses. Sonic (\$) is trading at approximately \$0.814874, reflecting a 3.77% decrease over the last 24 hours. Recent technical analyses indicate that Sonicâ€™s price has broken through a 20-day resistance level, suggesting a potential bullish trend. However, the long-term trend remains uncertain, with some analyses predicting a possible downturn following the recent surge. Overall, Sonicâ€™s market performance is experiencing fluctuations, and participants are advised to stay informed and exercise caution. What Is the Real-World Asset Tokenisation Marketplace? The Real-World Asset Tokenisation Marketplace (RWAT) is one of the most exciting innovations in the blockchain space. By allowing businesses, professionals, and individuals to tokenize tangible assets, Qubetics is leading the charge in this new area of digital finance. So, how does it work? Tokenization essentially means creating digital tokens that represent real-world assets, such as real estate, commodities, or art. This process makes it easier to trade and transfer ownership of these assets using blockchain technology. For instance, imagine being able to buy a fraction of a high-end piece of art or invest in a property without the hefty price tag. The possibilities are endless, and Qubetics is building the platform to make this a reality. In addition to enabling fractional ownership, tokenization can also enhance liquidity, reduce transaction costs, and provide greater transparency in asset management. This marketplace is not just for crypto enthusiasts; itâ€™s aimed at professionals, businesses, and anyone looking to bring their traditional assets into the future. Conclusion: The Next Crypto to Hit \$1? Looking at the trends, itâ€™s clear that Qubetics has the potential to be the next crypto to hit \$1. With its innovative approach to tokenizing real-world assets, growing user base, and strong presale performance, \$TICS could see massive gains. While Binance Coin and Sonic (2025) are both solid contenders in their own right, Qubeticsâ€™ niche focus on the Real World Asset Tokenisation Marketplace positions it perfectly for long-term success. If you havenâ€™t already, itâ€™s worth checking out the Qubetics presale while itâ€™s still at an early stage. The chance to get in on the ground floor of a groundbreaking project doesnâ€™t come around often. Whether youâ€™re new to crypto or a seasoned pro, Qubetics is certainly one to keep on your radar as the next crypto to hit \$1. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs 1. What is Qubetics and how does it differ from other crypto projects? Qubetics focuses on tokenizing real-world assets, making it easier for businesses and individuals to trade assets on the blockchain. 2. How much have Qubetics raised in its presale? Qubetics has raised over \$15.2 million, selling more than 501 million tokens in its ongoing presale. 3. What is the current price of Qubetics (\$TICS) during the presale? The current price is \$0.1181 per token in the 26th presale stage. 4. Why is Binance Coin still relevant in 2025? Binance Coin remains crucial due to its utility within the Binance exchange ecosystem, including lower transaction fees and supporting decentralized applications. 5. What makes Sonic (2025) unique? Sonic (2025) offers a high-speed blockchain protocol designed for faster transactions and lower fees, positioning itself as a viable alternative to traditional blockchain networks. - Bullish MELANIA price prediction for 2025 is \$0.982 to \$1.622. - Official Melania Meme (MELANIA) price might reach \$5 soon. - Bearish MELANIA price prediction for 2025 is \$0.377. In this Official Melania Meme (MELANIA) price prediction 2025, 2026-2030, we will analyze the price patterns of MELANIA by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | OFFICIAL MELANIA MEME PRICE PREDICTION 2025 | | | OFFICIAL MELANIA MEME PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Official Melania Meme (MELANIA) Current Market Status | Current Price | \$0.6869 | 24 æ Hour Price Change | 3.51% Up | | 24 æ Hour Trading Volume | \$35.89M | | Market Cap | \$369.09M | | Circulating Supply | 537.31M MELANIA | All æ Time High | \$13.73 (On Jan 20, 2025) | | All æ Time Low | \$0.6532 (On Mar 17, 2025) | What is Official Melania Meme (MELANIA) | TICKER | MELANIA | | BLOCKCHAIN | Solana | | CATEGORY | Meme Coin | | LAUNCHED ON | January 2025 | | UTILITIES | Speculation, Collectible, Engagement, Influence, and Fundraising | Melania Trump launched the Official Melania Meme (MELANIA) in January 2025, joining the growing trend of political meme coins. This move followed the success of Donald Trumpæ's TRUMP token, which had gained significant traction in the crypto community. Meme coins are typically driven by online hype and social media trends rather than fundamental utility, making them highly speculative investments. The launch of MELANIA led to fluctuations in the market, impacting the price movements of related tokens. While supporters see it as a strategic entry into the digital asset space, critics raise concerns about potential ethical and financial implications, especially given Trumpæ's political influence. Experts caution that, like most meme coins, MELANIA is subject to extreme volatility. While it has garnered strong interest from traders and speculators, its long-term viability remains uncertain, largely dependent on continued market enthusiasm and online engagement. Official Melania Meme 24H Technicals Official Melania Meme (MELANIA) Price Prediction 2025 Official Melania Meme (MELANIA) ranks 126th on CoinMarketCap in terms of its market capitalization. The overview of the Official Melania Meme price prediction for 2025 is explained below with a daily time frame. In the above chart, Official Melania Meme (MELANIA) laid out the Horizontal Channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the price of the Official Melania Meme (MELANIA) was recorded at \$0.678. If the pattern trend continues, then the price of MELANIA might reach the resistance levels of \$0.702, \$0.778 and \$0.955. If the trend reverses, then the price of MELANIA may fall to the support levels of \$0.635. Official Melania Meme (MELANIA) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Official Melania Meme (MELANIA) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Official Melania Meme (MELANIA) for 2025. | Resistance Level 1 | \$0.982 | | Resistance Level 2 | \$1.622 | | Support Level 1 | \$0.639 | | Support Level 2 | \$0.377 | Official Melania Meme (MELANIA) Price Prediction 2025 æ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Official Melania Meme (MELANIA) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Official Melania Meme (MELANIA) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.708 Price = \$0.678 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 46.820 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetæ's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Official Melania Meme (MELANIA) Price Prediction 2025 æ ADX, RVI In the below chart, we analyze the strength and volatility of Official Melania Meme (MELANIA) using the following technical analysis indicators æ Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Official Melania Meme (MELANIA). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 68.096 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 38.98 < 50 = Low > 50 = High | Low volatility | Comparison of MELANIA with BTC, ETH Let us now compare the price movements of Official Melania Meme (MELANIA) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of MELANIA is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of MELANIA also increases or decreases respectively. Official Melania Meme (MELANIA) Price Prediction 2026, 2027 æ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Official Melania Meme (MELANIA) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Official Melania Meme (MELANIA) Price Prediction 2026 | \$5.5 | \$0.5 | | Official Melania Meme (MELANIA) Price Prediction 2027 | \$6 | \$0.4 | | Official Melania Meme (MELANIA) Price Prediction 2028 | \$6.5 | \$0.3 | | Official Melania Meme (MELANIA) Price Prediction 2029 | \$7 | \$0.2 | | Official Melania Meme (MELANIA) Price Prediction 2030 | \$7.5 | \$0.1 | Conclusion If Official Melania Meme (MELANIA) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Official Melania Meme (MELANIA) price prediction for 2025 is \$1.622. Comparatively, if unfavorable sentiment is triggered, the bearish Official Melania Meme (MELANIA) price prediction for 2025 is \$0.377. If the market momentum and investorsæ sentiment positively elevate, then Official Melania Meme (MELANIA) might hit \$5. Furthermore, with future upgrades and advancements in the Official Melania Meme ecosystem, MELANIA might surpass its current all-time high (ATH) of \$13.73 and mark its new ATH. FAQ 1. What is Official Melania Meme (MELANIA)? Melania Trump launched the Official Melania Meme (MELANIA) in January 2025, joining the growing trend of political meme coins. 2. Where can you purchase Official Melania Meme (MELANIA)? Official Melania Meme (MELANIA) has been listed on many crypto exchanges which include DigiFinex, gate.io, bitget, Kraken, kuCoin, MEXC, XT.com, bitunix, OrangeX, HTX, Meteora, Raydium. 3. Will Official Melania Meme (MELANIA) reach a new ATH soon? With the ongoing developments and upgrades within the Official Melania Meme Platform, MELANIA has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Official Melania Meme (MELANIA)? On Jan 20, 2025, Official Melania Meme (MELANIA) reached its new all-time high (ATH) of \$13.73. 5. What is the lowest price of Official Melania Meme (MELANIA)? According to CoinMarketCap, MELANIA hit its all-time low (ATL) of \$1.35, On Feb 03, 2025. 6. Will Official Melania Meme (MELANIA) reach \$5? If Official Melania Meme (MELANIA) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon. 7. What will be Official Melania Meme (MELANIA) price by 2026? Official Melania Meme (MELANIA) price is expected to reach \$5.5 by 2026. 8. What will be Official Melania Meme (MELANIA) price by 2027? Official Melania Meme (MELANIA) price is expected to reach \$6 by 2027. 9. What will be Official Melania Meme (MELANIA) price by 2028? Official Melania Meme (MELANIA) price is expected to reach \$6.5 by 2028. 10. What will be Official Melania Meme (MELANIA) price by 2029? Official Melania Meme (MELANIA) price is expected to reach \$7 by 2029. Top Crypto Predictions Algorand (ALGO) Price Prediction Disclaimer: The opinion expressed in this article is solely the authoræ's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

- Elections create market volatility based on candidatesæ crypto policies. - Geopolitical tensions drive Bitcoin usage as a hedge against instability. Cryptocurrency markets do not operate in isolation. Political events shape the economy, regulations, and investor sentiment. Government decisions can trigger price surges or steep declines. Elections, regulations, monetary policies, and geopolitical tensions all influence market behavior. Elections and Cryptocurrency Volatility Elections introduce uncertainty. Investors react to policy proposals from candidates. Market trends shift based on how policies could affect digital assets. For example, the 2024 U.S. presidential election had a strong influence on Bitcoinæ's price. Donald Trumpæ's pro-crypto stance reassured investors. His statements about making the U.S. a leader in blockchain technology created optimism. Institutional investors saw this as a positive sign. In contrast, Bidenæ's stricter regulatory approach led to market hesitancy. The uncertainty caused Bitcoin fluctuations before and after the election results. Another example is India. In 2021, rumors spread that the government might ban private cryptocurrencies. Ahead of the elections, this uncertainty led to Bitcoin sell-offs among Indian investors. The market rebounded when the finance minister later clarified that crypto regulation was under consideration rather than a full ban. Regulations and Market Reactions Regulations play a crucial role in shaping cryptocurrency markets. Pro-crypto regulations often lead to price increases. Restrictive policies, however, drive investors away. One key example is the U.S. Securities and Exchange Commission (SEC). The SECæ's lawsuits against major exchanges like Binance and Coinbase shook market confidence. Investors feared tighter regulatory actions would limit growth. Prices of Bitcoin, Ethereum, and altcoins dropped when the lawsuits were announced. On the other hand, Hong Kong positioned itself as a global crypto hub. In 2023, the city introduced licensing frameworks to attract digital asset firms. The announcement led to increased trading activity. Investors saw it as a sign of mainstream acceptance, driving bullish momentum. El Salvador also made headlines in 2021 by adopting Bitcoin as legal tender. The move was controversial. While international institutions criticized it, the announcement caused Bitcoinæ's price to rise. The country also issued Bitcoin-backed bonds, further integrating crypto into its economy. China, however, took the opposite stance. The government has banned cryptocurrency trading and mining multiple times. In 2021, the final crackdown forced miners to relocate. Bitcoinæ's price dropped sharply, showing how regulatory actions impact the market. Central Banks and Monetary Policies Monetary policies influence cryptocurrency demand. When central banks tighten monetary policy, liquidity shrinks. This often leads to market corrections. For example, in 2022, the Federal Reserve increased interest rates to combat inflation. The rate hikes made borrowing more expensive, reducing risk appetite. Investors moved away from volatile assets like Bitcoin. As a result, the crypto market experienced a prolonged bear phase. Conversely, when the Federal Reserve signaled a pause in rate hikes in late 2023, Bitcoin rebounded. Traders anticipated a looser monetary policy, which would increase liquidity. This led to renewed buying interest in digital assets. The European Central Bank (ECB) has also influenced the crypto market. In 2021, ECB President Christine Lagarde called for global regulations on Bitcoin. Her remarks led to market corrections. Institutional investors often react to such statements, adjusting their strategies accordingly. Geopolitical Tensions and Market Movements Geopolitical conflicts create financial uncertainty. During such times, investors seek safe-haven assets. Traditionally, gold played this role. However, Bitcoin has gained attention as a digital alternative. The Russia- Ukraine war is a prime example. Following the invasion in 2022, economic sanctions restricted Russiaæ's access to global financial systems. As a result, Bitcoin trading volumes surged in Russia and Ukraine. People turned to crypto as an alternative to traditional banking. Similarly, during the COVID-19 pandemic, global markets crashed. Investors feared economic instability. Bitcoin initially dropped along with stocks. However, as central banks introduced stimulus measures, Bitcoin recovered. Many saw it as a hedge against inflation, similar to gold. Another example is Venezuela. Due to hyperinflation and political instability, citizens increasingly used Bitcoin. Many turned to crypto to preserve their wealth when the national currency lost value. Institutional Adoption and Political Influence Governments influence institutional participation in cryptocurrency. When regulators approve crypto-related financial products, institutional investors enter the market. For instance, the approval of the U.S spot Bitcoin ETFs in 2024 attracted billions of dollars. BlackRock and Fidelity led the inflows, giving Bitcoin legitimacy among traditional investors. In contrast, when regulatory uncertainty increases, institutions hesitate. The collapse of FTX in 2022 led to increased scrutiny. Many firms reduced crypto exposure due to fears of stricter regulations. Pro-crypto policies also drive adoption. For example, the United Arab Emirates (UAE) established the Dubai Virtual Asset Regulatory Authority (VARA). This move attracted major crypto companies, boosting market confidence. The Future of Cryptocurrency and Politics The relationship between politics and cryptocurrency will continue evolving. Governments worldwide are drafting policies to regulate the industry. Clear guidelines could drive mainstream adoption. However, restrictive policies may limit growth. Investors must monitor political events. Elections, regulations, monetary policies, and geopolitical developments all influence prices. By staying informed, traders can make better decisions and navigate market volatility. The crypto market remains dynamic. Political events will keep shaping its future. Highlighted Crypto News Today Bitcoin Whale Faces Coordinated Liquidation Effort Over \$450M Short on Hyperliquid

- A Bitcoin whale opened a \$450M short position on Hyperliquid with 40x leverage. - The whale deposited \$5M in USDC to strengthen its position and avoid liquidation. A Bitcoin whale on Hyperliquid is facing a coordinated effort to force liquidation after opening a \$450 million short position with 40x leverage. The traderæ's aggressive move has drawn widespread attention from the crypto community, triggering a æamhantua led by traders aiming to counteract the position. The trader first opened the massive short position on March 16, initially valued at over \$300 million. By March 17, the position had grown to 5,167 BTC, worth around \$429 million. The whale closed two positions through Time-Weighted Average Price (TWAP) for a total of 208 BTC, valued at over \$18 million. At 4:30 AM UTC, the whale deposited \$7.5 million in collateral to avoid liquidation. On-chain data shows an unrealized loss of \$1.1 million in profit and loss (PNL). However, the traderæ's short position remains active, with an

unrealized profit of \$4 million. Coordinated Efforts to Liquidate the Whale Crypto trader @Cbb0fe, also known as CBB, identified the whale's short position and called for a coordinated effort to liquidate it. CBB urged traders to message them if they were willing to participate, requiring a minimum 7-figure commitment. As a result, the whale was forced to deposit \$5 million in USD to maintain margin requirements. However, the effort failed as the whale reinforced its position by continuing to short BTC through TWAP orders. Hyperliquid acknowledged the viral short trade, highlighting its platform's role in hosting high-stakes market activity. When a whale shorts \$450M+ BTC and wants a public audience, it's only possible on Hyperliquid, the platform stated. The incident is not the trader's first controversial move. Earlier this month, they opened a 50x leveraged Ethereum position worth \$340 million, leading to a \$4 million loss for Hyperliquid. The platform later adjusted its risk management strategies to mitigate future risks. Highlighted Crypto News Today BSC Surpasses Solana DEX Volume as CZ Buys MUBARAK Memecoin

- North Korean Lazarus group holds more Bitcoins than El Salvador and Bhutan. - Lazarus group converted all the stolen Ethereum in Bybit hack into Bitcoins. The Democratic People's Republic of Korea (DPRK) has become popular for crypto hacks. Chainalysis report also highlighted that most of the hacks have DPRK behind them. The recent Bybit hack is also linked to DPRK's Lazarus group. It is now making headlines, holding more Bitcoins than El Salvador and Bhutan. As per the Arkham Intelligence platform, Lazarus Group's portfolio is worth \$1,159,969,333.48 at present. It holds 13,518 Bitcoins, 13,702 Ether, 5,022 BNB tokens, and other stablecoins. Bitcoins amount to a major share of its portfolio, being worth \$1.13 billion. Lazarus Group surpassed El Salvador and Bhutan in terms of BTC holdings. While El Salvador holds 6,118 BTC, Bhutan holds 10,635 Bitcoins. El Salvador continued to buy Bitcoins ever since it announced Bitcoin as a legal tender in the country. On the other hand, Bhutan accumulated most of its holdings through domestic Bitcoin mining over the past few years. Lazarus Group of North Korea converted Ethereum from Bybit Hack to Bitcoin. Lazarus group stole around \$1.4 billion worth of Ethereum from the Bybit hack and sent shockwaves through the industry. It steadily laundered funds through multiple wallet addresses. The hacker group converted a major portion of the stolen Ethereum to Bitcoin using THORChain. Even though Bybit CEO Ben Zhou has been making efforts to trace the stolen funds, they didn't seem to have any effect. He created the LazarusBounty.com website which shares updates regarding the stolen funds. In one of his X posts, Ben Zhou shared that 77% of the stolen funds are still traceable. On the other hand, the hacker group in North Korea laundered total funds and even converted them into Bitcoins. Meanwhile, the OKX crypto exchange suspended its DEX services temporarily to improve security because the hacker group used its services to move funds. Highlighted Crypto News Today:

- Dogecoin's daily active addresses surged 400%, signaling rising user activity. - DOGE price nears key resistance; breakout could push it toward \$0.90. - RSI and MACD indicators hint at a possible recovery for Dogecoin. The leading memecoin, Dogecoin's (DOGE) current trading value stands at \$0.1726 with a 0.96% rise from its initial 24-hour start price. The trading volume increased by 54% to \$1.04 billion while the price trend shows mixed signals. The price has displayed rapid shifts today but has since recouped some of its daily declines. Dogecoin sets itself among the top cryptocurrencies by maintaining its market capitalization at \$25.63 billion. The recent market volatility drives DOGE prices to show regular fluctuations in their value. On-Chain Data Shows a 400% Surge in Activity On March 15, analyst Ali shared on X that Dogecoin's daily active addresses surged 400% to nearly 395,000, according to Santiment's on-chain data. Active network activity has grown because more addresses are becoming active, indicating increased user participation and more transactions. Dogecoin price continues suffering downward pressure since it maintains itself near \$0.171 following its sudden price decline. Source: X Recent price data shows ongoing descending trends since the previous months but has experienced limited restoration periods. The growing number of users who actively interact with the network might indicate upcoming changes in market behavior. On-chain participation levels have shown a major increase during the beginning of March based on volume metrics which implies traders anticipate a price change. Possible Breakout as Dogecoin Tests Key Resistance Dogecoin maintains a declining price trend while resisting upward movement at a descending trendline which persists through unpredictable market conditions. The technical data shows potential signals for breaking through resistance levels. However, the price maintains its range pattern close to the trendline, which points to the potential for a market transformation. According to Crypto General, Following an optimistic breakout, DOGE will encounter different resistance barriers at \$0.23, \$0.35, and \$0.55 before potentials reach \$0.90. A growing wave of momentum might propel DOGE to reach its highest resistance points. The trendline failure would likely trigger another downward movement before DOGE possibly reverses direction. Technicals Point to a Potential Recovery Dogecoin indicators RSI and MACD indicate that a change in momentum is imminent. The RSI currently measures 38.44, indicating DOGE is within an oversold area that could trigger an upward price movement. Past bearish divergences on the indicator brought down prices, yet the indicator now shows a bullish reversal potential. Source: TradingView The MACD indicator shows bullish trend signals through its movement toward a crossover as the MACD line attempts to surpass the signal line. Market buying strength may show DOGE to challenge \$0.20 resistance and push its price to \$0.25. The price has to sustain its upward push for DOGE to climb above \$0.20 or else support at \$0.16 will become its next stop before another rally attempt. The market will continuously track price fluctuations to validate any potential breakout development. Highlighted Crypto News Today:

As Ethereum (ETH) continues to lead the blockchain space, savvy investors are turning their attention to alternative tokens with significant growth potential. Here are three promising Ethereum alternatives under \$3 that could surge past \$10 before the 2025 bull run reaches its peak. At the forefront is Lightchain AI, an innovative project blending blockchain with artificial intelligence to revolutionize the space. Joining its ranks are Solaxy (SLXY), a rising star in decentralized finance (DeFi), and Retik Finance (RETIK), which focuses on sustainable, eco-friendly blockchain solutions. Currently in its presale phase at just \$0.007125 per token, Lightchain AI has already raised an impressive \$17.8 million—an indicator of strong investor confidence and immense potential for future growth. These projects are worth keeping on your radar as the next wave of blockchain innovation takes shape. 3 Leading Ethereum Alternatives Set for 10x Growth The cryptocurrency market is constantly evolving, with new projects emerging as strong contenders to Ethereum, each showing potential for impressive growth. Lightchain AI stands out by combining artificial intelligence with blockchain technology to revolutionize decentralized applications. This cutting-edge approach has garnered significant attention from investors, with its presale already surpassing \$17 million in funding. Solaxy (SLXY) tackles scalability and congestion challenges on the Solana network with its Layer 2 solution. Designed to boost efficiency, Solaxy provides multi-chain support and significantly increases transaction throughput, empowering decentralized applications to perform seamlessly at scale. Retik Finance (RETIK) is transforming decentralized finance with a range of groundbreaking solutions, including DeFi-powered debit cards, a cutting-edge crypto payment gateway, and AI-driven peer-to-peer lending. Since its launch, RETIK has seen exponential growth, with its token price skyrocketing by 2000% to an all-time high of \$3. These projects showcase the dynamic innovation within the cryptocurrency sector, providing investors with opportunities for significant returns. Why Lightchain AI is the Best Choice Under \$3 Lightchain AI is the top buy below \$3 because of its revolutionary union of blockchain and artificial intelligence, positioning it for explosive growth. The platform's groundbreaking Proof of Intelligence (PoI) consensus and Artificial Intelligence Virtual Machine (AIVM) enable scalable execution of AI tasks on the blockchain with minimal latency. Lightchain AI also leverages cutting-edge privacy-preserving usage mechanisms of data like Homomorphic Encryption, protecting sensitive data and allowing for secure decentralized AI applications. In addition, its cross-chain compatibility and interoperability ensure greater spread across blockchain platforms, hence greater adoption. As the platform grows, its solid tokenomics and ease of use by developers will continue to draw developers and investors to it, positioning Lightchain AI for long-term success and offering it as a great investment at below \$3. Could Lightchain AI Be Next Crypto to Hit \$10? Lightchain AI is making waves in the crypto world, raising an impressive \$17 million during its presale stage. With its powerful combination of AI and blockchain technology, this project is set to disrupt industries and could very well surpass the \$10 mark. As blockchain continues to expand and integrate across sectors, Lightchain AI stands out with its innovative approach. The rising demand for decentralized applications and secure data solutions positions Lightchain AI to become a go-to platform, potentially driving up the value of its native token. Right now, you have the chance to invest in this exciting Ethereum alternative for under \$3. With immense potential for growth, Lightchain AI is one to watch in the evolving blockchain space. Don't miss your chance to get in early! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - BinaryX (BNX) surged to a fresh ATH of \$1.84, recording a 60% gain in 24 hours and 83% gain over the week. - The rally comes ahead of BinaryX's transition to Four (FORM) to align with its new Four.meme ecosystem focused on meme coins. Bitcoin (BTC) struggled to surpass \$83,000 early Monday, while the broader crypto market showed mixed movements. Ethereum (ETH), Solana (SOL), Ripple (XRP), and Cardano (ADA) experienced slight fluctuations, reflecting a market sentiment of "fear," as indicated by a 22/100 score on the Market Fear & Greed Index. Amid this, BinaryX (BNX) stole the spotlight, soaring nearly 60% in 24 hours and recording a new all-time high of \$1.8469. The token also posted an impressive 83% weekly gain, making it the top performer. This surge follows the project's upcoming rebranding to Four (FORM) to support its new meme coin ecosystem, Four.meme. At present, BNX is priced at \$1.84, with a market capitalization of \$701.5 million. Additionally, the token's trading volume skyrocketed by over 185% to reach \$373.05 million, highlighting increased investor interest. BinaryX (BNX) 24-Hour Technical Analysis The BinaryX (BNX) market has recently been bullish, exhibiting a positive sentiment. The day started with a bullish sentiment as the opening price of BNX was at \$1.140. Based on the 24-hour time frame analysis of BNX price, it appears that there is currently a bullish trend. The RSI moving above its signal line indicates increasing bullish momentum and potential price growth. Still an RSI of 85.90 indicates overbought conditions, suggesting a potential price correction or pullback soon. Meanwhile, the Moving Average Convergence Divergence (MACD) indicator signals a bullish sentiment as BNX trends upward, indicating a potential continuation of the rally. This could attract more buyers to the market, pushing prices higher. Additionally, the formation of a positive trajectory histogram further reinforces the likelihood of sustained bullish momentum in the short term. Further, BNX's Supertrend has turned green, signaling bullish momentum as it extends its upward trend. In summary, the BinaryX market has shown strong bullish momentum and positive sentiment, marked by a notable increase in trading activity and price. What if the next meme coin you invest in isn't just about viral hype but actually pays you to play? The meme coin landscape has changed, and now projects are blending gaming, AI, NFTs, and real-world brands to create something way more engaging than just a speculative asset. Right now, BTFD Coin (BTFD) is making headlines with its Play-to-Earn (P2E) game, which just launched in January 2025, giving holders a whole new way to earn rewards. But that's not the only exciting project in the mix—tokens like Act I: The AI Prophecy (ACT), Moo Deng (MOODENG), Non-Playable Coin (NPC), and Simon's Cat (CAT) are all gaining traction in different corners of the meme coin universe. Here's why these five tokens stand out as the best meme coins to join right now. 1. BTFD Coin: The Meme Coin That Pays You to Play Meme coins are evolving, and BTFD Coin (BTFD) is proving that they can be more than just speculative assets. The Play-to-Earn (P2E) game, which launched in January 2025, allows holders to earn \$BTFD tokens by playing, creating a real-use case that fuels both engagement and token demand. And it's not just gaming that's driving the hype—BTFD's presale is on fire. The project has already raised over \$6.32 million, sold 71 billion tokens, and onboarded over 11,400 Bulls. At \$0.00016 per token, investors still have time to lock in before the presale price jumps, with an expected listing price of \$0.0006. But analysts are whispering about something bigger—a possible post-launch surge to \$0.006, which means an insane 3,650% ROI potential. What does that look like in numbers? Let's say you drop \$10,000 into BTFD at \$0.00016—you'd bag 62.5 million tokens. If BTFD hits \$0.0006, that's \$37,500. But if it rockets to \$0.006, that's a life-changing \$375,000. And what could you do with that kind of money? Fund a business, clear out student loans, grab a brand-new Tesla, or take a year-long vacation hopping between luxury destinations. That's the kind of potential BTFD's ecosystem is bringing to the table. Beyond P2E gaming, staking offers a crazy 90% APY, meaning long-term holders can passively stack rewards. Plus, the Bulls Squad community keeps growing, bringing real hype and utility to the project. How to Buy BTFD Coin? Simple: Set up a MetaMask or Trust Wallet, fund it with BNB or ETH, visit the BTFD presale page, connect your wallet, and buy before the next price jump. Why did this coin make it to this list? Because BTFD Coin's Play-to-Earn game, massive presale success, and 3,650% ROI potential make it one of the best meme coins to join right now. 2. Act I: The AI Prophecy (ACT): The Meme Coin Blending AI & Crypto What happens when AI and meme coins collide? You get Act I: The AI Prophecy (ACT)—an open-source, community-driven platform where multiple AI models interact and collaborate. Instead of being just another meme token, ACT is positioning itself at the intersection of artificial intelligence and Web3. With AI adoption skyrocketing, ACT has captured investor interest by

building a decentralized AI ecosystem, where users can contribute, trade, and profit from AI-driven tools. Why did this coin make it to this list? Because ACT is combining AI, blockchain, and meme culture, making it a high-potential project with a unique niche. 3.Moo Deng (MOODENG): The Meme Coin Inspired by a Viral Hippo Youâ€™ve heard of Dogecoin and Shiba Inu, but what about a meme coin based on a baby pygmy hippo? Thatâ€™s exactly what Moo Deng (MOODENG) isâ€”a viral Solana-based token inspired by a real-life internet sensation. With animal-based meme coins still dominating, Moo Dengâ€™s cuteness factor and social media-driven hype have given it a strong community. If DOGE and SHIB have taught us anything, itâ€™s that meme coins with loveable mascots tend to have staying power. Why did this coin make it to this list? Because MOODENG capitalizes on meme culture and real-world viral appeal, making it a standout pick. 4.Non-Playable Coin (NPC): The Meme Coin + NFT Hybrid Ever seen the â€œI support the current thingâ€ meme? Thatâ€™s where Non-Playable Coin (NPC) comes in, blending crypto, NFTs, and meme culture into a single Meme Fungible Token (MFT). By combining ERC20 and ERC1155 standards, NPC lets users own tokens that also function as NFTs, adding a collectible layer to meme coin investing. The unique hybrid structure has helped NPC stand out in a crowded meme coin market. Why did this coin make it to this list? Because NPC merges meme culture with NFT functionality, offering something different from the usual meme coin formula. 5.Simonâ€™s Cat (CAT): The Official Token of a Beloved Web2 Franchise Some meme coins start from internet jokes, but Simonâ€™s Cat (CAT) is backed by an actual global brand. Originating from the famous animated series and books created by Simon Tofield, Simonâ€™s Cat already has a built-in fanbase with over 1.6 billion YouTube views. Unlike random meme coins that fade out, CAT benefits from full IP rights and an established community. If meme coins like PEPE and BONK can thrive on cultural relevance, Simonâ€™s Cat could carve out a similar path using nostalgia and brand trust. Why did this coin make it to this list? Because Simonâ€™s Cat leverages an iconic Web2 brand, giving it instant recognition and long-term potential. Conclusion Based on market momentum and upcoming developments, these five projects are some of the best meme coins to join, offering high engagement, strong communities, and unique themes. While each project has its strengths, BTFD Coin is the only one still in presale, meaning early investors have a limited-time opportunity to lock in before prices rise. With a P2E game that just launched, 90% APY staking, and a projected 3,650% ROI, BTFDâ€™s setup is built for major potential gains. If you want to catch a meme coin on the rise, donâ€™t waitâ€”join the BTFD Coin presale before this price is gone. FAQs 1. What are the best meme coins to join right now? Some of the best meme coins to join include BTFD Coin, Act 1: The AI Prophecy, Moo Deng, Non-Playable Coin, and Simonâ€™s Cat, each offering unique value in the meme coin space. 2. How do I buy BTFD Coin? BTFD Coin is still in presale. Investors can set up a MetaMask or Trust Wallet, load it with BNB or ETH, and secure their tokens before the next price increase. 3. What makes BTFD Coin unique? BTFD Coin has a fully live Play-to-Earn game, 90% APY staking, and an explosive presale performance, setting it up as one of the most exciting meme coins of 2025. As the cryptocurrency market continues to captivate the attention of both seasoned backers and newcomers, the best altcoins to buy in March 2025 are making waves. With exciting developments and real potential for growth, projects like Qubetics, AAVE, and Chainlink are stirring up the conversation. These altcoins have become some of the most sought-after options in the ever-expanding blockchain space. As digital assets and decentralized finance continue to evolve, these projects stand out as go-to choices for anyone looking to diversify their portfolio. Whether youâ€™re already deep into crypto or just dipping your toes, understanding what makes each of these projects tick is crucial. Qubeticsâ€™ the worldâ€™s first Web3 aggregatorâ€”is particularly generating a lot of buzz due to its innovative approach to interoperability. Meanwhile, AAVE and Chainlink continue to secure their place as industry leaders by helping to bridge the gap between traditional finance and blockchain technology. So, letâ€™s dive into what makes Qubetics, AAVE, and Chainlink some of the best altcoins to buy in March 2025. Qubetics: A Web3 Aggregator that Powers the Future When you talk about Qubetics, youâ€™re talking about a project thatâ€™s redefining how businesses and individuals interact with the blockchain. As the worldâ€™s first Web3 aggregator, Qubetics is making significant strides in improving interoperability across various blockchain networks. Their crypto presale figures speak volumes, having raised over \$15 million, 499 million token sold nearly half a billion \$TICS tokens, and boasting over 23,000 token holders at this stage. Currently in its 25th presale round, the \$TICS token is priced at \$0.1074â€”a bargain when analysts predict that it could soar to \$1 or even \$5 post-presale. What makes Qubetics so unique is its ability to simplify complex transactions and enable seamless interaction between different blockchain ecosystems. Imagine being able to send tokens from Ethereum to Solana, or between Polkadot and Binance Smart Chain, without worrying about high fees or long delays. Interoperability like this opens the door to new business models, providing a smoother experience for professionals and everyday users alike. For example, imagine a real estate platform on Ethereum that wants to incorporate payment solutions from the Binance Smart Chain. With Qubetics, businesses like this could streamline their operations without friction. Looking at Qubeticsâ€™ projected return on investment (ROI), the figures are staggering. If \$TICS hits \$1 post-presale, early adopters will see an 831% ROI. Even better, the tokenâ€™s price could reach \$10 or more after the mainnet launch, translating into massive growth potential. With Qubetics facilitating smoother blockchain interactions and addressing scalability concerns, itâ€™s easy to see why this altcoin is rapidly becoming a must-have in March 2025. AAVE: A Decentralized Lending and Borrowing Giant As one of the leading projects in decentralized finance (DeFi), AAVE has carved out its position as a powerhouse. AAVE is well-known for enabling users to lend and borrow digital assets without relying on centralized intermediaries, thus lowering costs and opening up access to financial services for all. The platformâ€™s AAVE token has steadily become one of the most trusted and respected tokens in the DeFi space. Over the years, AAVE has been at the forefront of several breakthroughs, including flash loans and the use of liquidity pools for decentralized lending. The DeFi ecosystem has exploded, with many crypto enthusiasts seeing AAVE as the ultimate solution to democratizing financial services. With AAVE, users can earn passive income by lending their assets and can also borrow assets by putting up collateral in a trustless manner. This unique model has allowed AAVE to secure its place as one of the best altcoins to buy in March 2025, particularly for backers who are looking for a reliable and robust protocol in the crypto market. As AAVE continues to innovate and expand, its token holds immense potential for long-term growth. Chainlink: The Oracle Powerhouse Connecting Blockchains to Real-world Data If youâ€™ve been into crypto for a while, youâ€™ve probably heard of Chainlink. This project has revolutionized how smart contracts interact with real-world data. By offering decentralized oracles, Chainlink allows smart contracts on various blockchains to pull in data from external sources, such as APIs and traditional databases. This has opened the door to countless use cases, from decentralized insurance to real-world asset tokenization. Chainlinkâ€™s reputation as a go-to oracle network is unparalleled. Chainlinkâ€™s market position remains strong as it connects smart contracts to external data sources. The potential for growth in March 2025 is evident, as its services are becoming integral to the functionality of the decentralized economy. Whether youâ€™re a backer interested in long-term growth or someone new to the crypto world, Chainlink stands out as one of the best altcoins to buy in March 2025. Conclusion: Take Action Before Itâ€™s Too Late The crypto world moves fast, and the opportunities to get in on the ground floor of exciting projects like Qubetics, AAVE, and Chainlink donâ€™t last forever. These altcoins are some of the most exciting and promising options for anyone looking to diversify their portfolios in March 2025. Qubetics, with its innovative Web3 aggregation and interoperability, is proving to be a game-changing project. Meanwhile, AAVE and Chainlink continue to be at the forefront of decentralized finance and blockchain technology. If youâ€™re considering jumping in, now is the time. The best altcoins to buy in March 2025 are here, and their growth potential is undeniable. Donâ€™t wait for the next big wave to pass you byâ€”get involved today and take advantage of the exciting opportunities ahead. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs - What makes Qubetics different from other crypto projects? - Qubetics is the first Web3 aggregator, solving interoperability issues and allowing seamless communication across different blockchain networks. - Is AAVE still a good investment in 2025? - Absolutely! AAVE continues to lead the decentralized lending space, offering passive income opportunities and innovative solutions for decentralized finance. - Why should I consider Chainlink for my crypto portfolio? - Chainlinkâ€™s decentralized oracle network powers smart contracts by providing reliable real-world data, making it an essential project for the growing decentralized economy. What if it were possible to go back in time and buy Bitcoin at its ICO price? That opportunity is long gone, but history often repeats itself in new ways. In 2009, Bitcoin quietly emerged as a decentralized alternative to traditional finance, offering early participants a rare chance to enter at a fraction of a cent. Those who recognized its potential saw returns beyond imagination. However, Bitcoinâ€™s early window is closed, and todayâ€™s entry points are significantly higher. That doesnâ€™t mean the chance for substantial growth in blockchain investments is over. Qubetics is shaping up to be the next major contender, offering something that early blockchain projects couldnâ€™tâ€”enhanced security, and real-world usability. Unlike Bitcoin, which functions primarily as a store of value, Qubetics introduces a Non-Custodial Multi-Chain Wallet bringing practical applications to businesses and individuals alike. For those who missed Bitcoinâ€™s early days, Qubetics presents a new avenue to engage with blockchain innovation at an early stage. Qubetics: Your Chance at Redemption Qubetics is redefining digital asset management with its Non-Custodial Multi-Chain Wallet, a feature designed to solve one of cryptoâ€™s biggest challengesâ€”seamless interaction between multiple blockchains. Many users struggle with juggling different wallets for Bitcoin, Ethereum, Solana, and Binance Smart Chain, leading to inefficiencies, security risks, and lost assets. Qubetics simplifies this by allowing users to store, manage, and transact digital assets across multiple networks in a single, user-friendly interface. Security remains a top priority. Unlike centralized wallets that hold usersâ€™ private keys, Qubeticsâ€™ Non-Custodial Multi-Chain Wallet ensures that individuals maintain full control over their funds, eliminating third-party vulnerabilities. This technology is particularly beneficial for businesses and professionals managing cross-chain transactions. This level of innovation positions Qubetics as one of the best cryptos to buy this month with real-world applications and strong technological foundations. Qubetics is in its 25th crypto presale stage, with \$TICS tokens priced at \$0.1074. The presale has gained immense traction, raising over \$15 million, attracting more than 23,000 token holders, with over 499 million \$TICS tokens sold. For those looking at potential returns, analysts predict \$TICS could reach \$0.25 post-presale (133% ROI). Projections suggest further growth to \$1, \$5, or even \$10 after the mainnet launch, with potential ROIs of 831%, 4,553%, and 9,207%, respectively. Bitcoin: The Pioneer of Cryptocurrency Bitcoinâ€™s 2009 ICO was unlike anything the financial world had seen. Initially distributed through mining, Bitcoin offered a new financial paradigmâ€”one that removed intermediaries and gave individuals control over their money. Its early adopters, who mined or purchased BTC at fractions of a cent, saw exponential gains as Bitcoin surged to all-time highs. Despite its historical significance, Bitcoin operates primarily as a store of value rather than an ecosystem for real-world applications. The blockchain, though secure, lacks the flexibility needed for multi-chain interactions and real-world asset integration. While Bitcoin remains the most widely recognized digital asset, newer projects like Qubetics aim to expand blockchainâ€™s capabilities beyond a financial asset and into a functional, scalable ecosystem. This is why those seeking the best cryptos to buy this month should look beyond just Bitcoin. Conclusion Bitcoinâ€™s early investors saw massive returns, but for those who missed out, there is still an opportunity to engage in the next wave of blockchain innovation. Qubetics presents a second chance to get in early on a project with real-world applications, interoperability, and strong growth potential. Its Non-Custodial Multi-Chain Wallet solves one of the most pressing challenges in crypto today, offering a secure, seamless, and user-friendly solution for cross-chain transactions. While Bitcoin has established itself as the foundation of cryptocurrency, Qubetics represents the next evolutionâ€”a blockchain project that integrates usability, security, and scalability. As one of the best cryptos to buy this month, it provides a rare opportunity to participate in an early-stage project with strong fundamentals. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is a battleground of speculation and real-world use cases. Bitcoin is cementing its status as a store of value, Cardano continues to chase scalability, and Trump Coin thrives on political allegiance. But what if there was a token that wasnâ€™t just about hypeâ€”but real, revenue-generating power? Thatâ€™s where BitLemons (\$BLEM) comes in. With a fully functional crypto casino already generating income, \$BLEM proves that real utility beats speculation every time. A Crypto That Generates Revenue BitLemons isnâ€™t just another tokenâ€”itâ€™s a fully operational, revenue-generating casino disrupting the \$450 billion gambling industry. Unlike speculative coins that rely on price swings, BitLemons is already

making money, with 30% of its Gross Gaming Revenue (GGR) feeding back into its ecosystem. The platform boasts over 8,000 games, including exclusive in-house titles like \$BLEM Keno, Crash, and Wheel of Bitlemmons. By eliminating third-party fees on these exclusives, the platform maximizes profits and increases the value of the token. Stage 1 of the presale sold out in just 16 days, and Stage 2 is already 98% sold with nearly \$2M raised. Stage 3 will soon push prices to \$0.03, signaling strong investor demand and the potential for massive returns. The projectâ€™s roadmap is packed with expansion plans, new games, and upcoming strategic partnerships. Major influencers and sports celebrities are already being courted, setting the stage for mainstream adoption. The combination of limited supply, aggressive revenue reinvestment, and an engaged community makes Bitlemmons more than just another crypto projectâ€”itâ€™s a business model built to win. BTC the Store of Value, But Nothing More? Bitcoinâ€™s inclusion in the U.S. strategic crypto reserve is a historic moment, solidifying its role as digital gold. Institutional investors are treating BTC as a hedge against inflation, strengthening its position as a long-term asset. However, while Bitcoin remains dominant, it lacks one critical featureâ€”utility. BTC holders rely solely on price appreciation, as the network does not generate yield or direct returns for investors. Bitcoinâ€™s network continues to face scalability challenges, making transactions slow and costly. Unlike newer platforms, it struggles to evolve beyond its original purpose. As more projects integrate yield-generating mechanisms and real-world applications, Bitcoinâ€™s lack of revenue-sharing makes it a passive investment rather than a wealth-building asset. ADAâ€™s Great Idea Thatâ€™s Still Waiting to Happen Cardano briefly surged when it was mistakenly linked to the U.S. strategic crypto reserve, but the excitement faded once the correction was made. Despite its research-driven approach and strong community, ADA has faced criticism for slow development and a lack of mainstream adoption. While Cardanoâ€™s proof-of-stake mechanism is more energy-efficient than Bitcoinâ€™s proof-of-work, its ecosystem remains underdeveloped compared to competitors like Ethereum and Solana. ADAâ€™s price has historically been prone to extreme volatility, and its delayed rollouts have tested investor patience. While its long-term vision remains ambitious, its slow-moving development has allowed faster, more innovative projects to steal market share. Unlike Bitlemmons, which is already revenue-generating, Cardano remains largely speculative, relying on the potential of future utility rather than present-day results. TRUMP That Made Millions (For Now) Launched in the wake of political frenzy, Trump Coin (\$TRUMP) has become a speculative powerhouse. Its meteoric rise has been fueled by strong media attention and an ultra-loyal base, drawing comparisons to meme coins like Dogecoin and Shiba Inu. While the initial hype has attracted short-term traders, its long-term value remains questionable, as its utility is limited beyond its branding and community enthusiasm. The volatility surrounding \$TRUMP makes it highly unpredictable. Its price swings wildly based on political events and media cycles, making it difficult to assess its true worth. Without a strong use case, \$TRUMP may struggle to maintain momentum once its novelty wears off, while projects like Bitlemmons continue building sustainable revenue streams. Why Smart Investors Are Watching Bitlemmons Closely Unlike Bitcoin, Cardano, and Trump Coin, Bitlemmons is not just another speculative assetâ€”it is a revenue-generating powerhouse with real-world application. With new partnerships, expanded casino offerings, and a roadmap packed with growth opportunities, Bitlemmons is positioned to be one of the most exciting crypto projects of the year. Plus, Bitlemmons is giving away \$1,000,000 USDT to 20 lucky winners. With just a \$50 investment in \$BLEM, you could win 50,000 USDT and be part of the hottest crypto casino project! Discover the Exciting Opportunities of Bitlemmons (\$BLEM) Presale Today - Website: <https://presale.bitlemmons.io/> - Socials: <https://linktr.ee/bitlemmons> Disclaimer: TheNewsCrypto does not endorse any content on this page. The combination of limited supply, aggressive revenue reinvestment, and an engaged community makes Bitlemmons more than just another crypto projectâ€”itâ€™s a business model built to win. BTC the Store of Value, But Nothing More? Bitcoinâ€™s inclusion in the U.S. strategic crypto reserve is a historic moment, solidifying its role as digital gold. Institutional investors are treating BTC as a hedge against inflation, strengthening its position as a long-term asset. However, while Bitcoin remains dominant, it lacks one critical featureâ€”utility. BTC holders rely solely on price appreciation, as the network does not generate yield or direct returns for investors. Bitcoinâ€™s network continues to face scalability challenges, making transactions slow and costly. Unlike newer platforms, it struggles to evolve beyond its original purpose. As more projects integrate yield-generating mechanisms and real-world applications, Bitcoinâ€™s lack of revenue-sharing makes it a passive investment rather than a wealth-building asset. ADAâ€™s Great Idea Thatâ€™s Still Waiting to Happen Cardano briefly surged when it was mistakenly linked to the U.S. strategic crypto reserve, but the excitement faded once the correction was made. Despite its research-driven approach and strong community, ADA has faced criticism for slow development and a lack of mainstream adoption. While Cardanoâ€™s proof-of-stake mechanism is more energy-efficient than Bitcoinâ€™s proof-of-work, its ecosystem remains underdeveloped compared to competitors like Ethereum and Solana. ADAâ€™s price has historically been prone to extreme volatility, and its delayed rollouts have tested investor patience. While its long-term vision remains ambitious, its slow-moving development has allowed faster, more innovative projects to steal market share. Unlike Bitlemmons, which is already revenue-generating, Cardano remains largely speculative, relying on the potential of future utility rather than present-day results. TRUMP That Made Millions (For Now) Launched in the wake of political frenzy, Trump Coin (\$TRUMP) has become a speculative powerhouse. Its meteoric rise has been fueled by strong media attention and an ultra-loyal base, drawing comparisons to meme coins like Dogecoin and Shiba Inu. While the initial hype has attracted short-term traders, its long-term value remains questionable, as its utility is limited beyond its branding and community enthusiasm. The volatility surrounding \$TRUMP makes it highly unpredictable. Its price swings wildly based on political events and media cycles, making it difficult to assess its true worth. Without a strong use case, \$TRUMP may struggle to maintain momentum once its novelty wears off, while projects like Bitlemmons continue building sustainable revenue streams. Why Smart Investors Are Watching Bitlemmons Closely Unlike Bitcoin, Cardano, and Trump Coin, Bitlemmons is not just another speculative assetâ€”it is a revenue-generating powerhouse with real-world application. With new partnerships, expanded casino offerings, and a roadmap packed with growth opportunities, Bitlemmons is positioned to be one of the most exciting crypto projects of the year. Plus, Bitlemmons is giving away \$1,000,000 USDT to 20 lucky winners. With just a \$50 investment in \$BLEM, you could win 50,000 USDT and be part of the hottest crypto casino project! Discover the Exciting Opportunities of Bitlemmons (\$BLEM) Presale Today - Website: <https://presale.bitlemmons.io/> - Socials: <https://linktr.ee/bitlemmons> [Disclaimer: This is a sponsored article and is for informational purposes only. Litecoin (LTC), often hailed as the â€œsilverâ€ to Bitcoinâ€™s â€œgold,â€ is back in the spotlight after its latest price movement. The cryptocurrency climbed to \$93.06, reflecting a 2.79% gain. This upward momentum offers a glimmer of hope to investors, but it has not been without its hurdles. Litecoin faces significant resistance in the \$90â€“\$92 range, which has proved difficult to sustain or surpass in recent trading sessions. Market analysts note that while Litecoin continues to enjoy a reputation as a reliable transactional cryptocurrency, buyer momentum has been inconsistent. Recent technical indicators, including a â€œgolden crossâ€ pattern, suggest bullish potential, but stronger market conditions are needed to break through the resistance zone decisively. A â€œdeath crossâ€ event last week sent the price momentarily tumbling to \$88, exposing the assetâ€™s vulnerability to selling pressure. Still, the modest growth pace leaves some investors exploring new opportunities with higher potential rewards. BinoFiâ€™s Meteoric Rise Sparks Investors Amid Litecoinâ€™s steady but cautious movements, BinoFi (BINO) has emerged as one of the most talked-about tokens in 2025, garnering significant attention from both retail and institutional investors. BinoFiâ€™s revolutionary approach to cryptocurrency trading makes it stand out in an otherwise crowded market, with analysts touting it as a game-changer for decentralized finance. What Makes BinoFi Unique? BinoFi is redefining crypto trading with its hybrid CEX/DEX infrastructure, blending the speed and liquidity of centralized exchanges (CEXs) with the security and transparency of decentralized exchanges (DEXs). This eliminates the trade-offs investors typically face when choosing between these platforms. Its unique features include: - Cross-Chain Trading Without Bridges: BinoFi users can trade assets across ecosystems like Binance Smart Chain, Solana, Ethereum, and Polygon without relying on complex and often risky bridging mechanisms. This provides seamless interoperability while reducing transaction overheads. - AI-Driven Trading Tools: Sophisticated artificial intelligence powers predictive analytics and automated bots that assist traders in making informed decisions and executing strategies with precision. - Non-Custodial MPC Wallets: With Multi-Party Computation (MPC) wallets, BinoFi emphasizes user security while offering gasless transactions and simplified recovery processes. Investors retain full control of their assets with this non-custodial setup. - Proof-of-Reserves Transparency: BinoFi builds trust by providing on-chain proof-of-reserves, allowing investors to verify the platformâ€™s financial integrity and liquidity at any time. Breakout Potential BinoFi has quickly caught the eye of investors due to its ambitious roadmap and disruptive potential in the crypto space. Analysts and industry experts are already predicting substantial growth for the \$BINO token, with some suggesting the tokenâ€™s value could skyrocket by up to 9000% over the next two years, assuming strong adoption metrics. Market word surrounding BinoFi intensified following the platformâ€™s beta launch, which demonstrated the effectiveness of its hybrid exchange model and AI tools in offering a smooth user experience. According to the industry experts, â€œBinoFi is positioned to change the crypto sector in a way we havenâ€™t seen since the DeFi boom. Its hybrid infrastructure addresses long-standing inefficiencies in the market, making it an attractive choice for both professional and beginner traders.â€ What Lies Ahead for Litecoin and BinoFi? Litecoin While Litecoin remains a staple in cryptocurrency portfolios, its slow-moving growth has left some investors underwhelmed. Experts suggest that breaking the \$92 resistance could serve as a pivotal move, signaling the start of a higher upward trend. If not, Litecoin could enter a consolidation phase, with price action hovering between \$85 and \$92 in the near term. BinoFi For BinoFi, the outlook is much more dynamic. With its innovative features solving real-world crypto trading inefficiencies, excitement around the project is only heating up. The \$BINO token presale has generated significant interest, with many investors treating it as a golden opportunity to participate early in something potentially industry-defining. â€œIn 2025, BinoFi isnâ€™t just another crypto project to watch; itâ€™s a movement with the potential to lead the shift toward hybrid trading models,â€ analysts remark. Final Thoughts Litecoinâ€™s recent climb to \$93.06 is a testament to its historical relevance and resilience. However, for higher gains, its future lies in overcoming resistance hurdles and remaining competitive in an evolving market. On the other hand, BinoFi is igniting a wave of investment enthusiasm, not just for its technical innovations but also for its bold vision of the future of crypto trading. - Website: <https://bino.fi> - Whitepaper: <https://whitepaper.bino.fi> - Giveaway: <https://giveaway.bino.fi> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/binoficoin> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market never sleeps. One day, a project is flying under the radar, and the next, itâ€™s rewriting the rules. Right now, thereâ€™s a new player turning heads, proving that blockchainâ€™s future isnâ€™t just about speed or scalabilityâ€”itâ€™s about something bigger. While others are still catching up, this project is moving full throttle, reshaping whatâ€™s possible. But letâ€™s not get ahead of ourselves. Hereâ€™s a deep dive into the best crypto to buy this week that are making serious waves. Qubetics (\$TICS) is at the center of this shift, and those paying attention now might be ahead of the curve. With its groundbreaking QubeCode IDE, itâ€™s not just another blockchainâ€”itâ€™s an entire development ecosystem designed to make building on Web3 easier, faster, and more efficient. Adoption is growing, and the project is steadily gaining momentum as

developers and businesses recognize its potential. While others focus on hype, Qubetics is delivering real-world utility, making it one of the Best crypto to buy this week. 1. Qubetics (\$TICS): The Next-Gen Gamechanger Qubetics isnâ€™t here to play by the old rules. With a focus on seamless interoperability and real-world usability, this project is attracting attention. The ongoing crypto presale is already in its 25th stage, selling over 499 million tokens to more than 23,000+ holders and raking in \$15 millionâ€”and itâ€™s still going strong. At \$0.1074 per \$TICS, this might be the most underrated move in crypto right now. Analysts are crunching the numbers, and the predictions are wild: \$TICS at \$0.25 by the crypto presaleâ€™s end (a 132% ROI), \$1 post-presale (830% ROI), and a mind-blowing \$10-\$15 after the mainnet launch. If historyâ€™s taught anything, itâ€™s that the early birds catch the juiciest rewards. Interoperability isnâ€™t a buzzwordâ€”itâ€™s the missing link. While most blockchains exist in silos, Qubetics is breaking those walls. Businesses across Central Asia, from fintech startups in Kazakhstan to logistics hubs in Uzbekistan, are eyeing Qubeticsâ€™ tech for its ability to connect different chains without a hitch. Smart contracts that actually talk to each other? Thatâ€™s the future. Why did this coin make it to this list? Simple. No other project is making moves like this. While others talk about change, Qubetics is already ahead of the game. 2. Cardano (\$ADA): Slow and Steady Dominance Based on deep research and market analysis, these arenâ€™t just random picksâ€”they are the best crypto to buy this week, carefully selected for their potential to dominate the next wave of blockchain innovation. Some of these coins are steadily building momentum, securing major partnerships, and expanding their ecosystems with real-world utility. Others are on the brink of explosive growth, fueled by game-changing upgrades and increasing adoption. But then thereâ€™s one project that stands apart from the rest. Itâ€™s not just following trendsâ€”itâ€™s rewriting the rules entirely. This hidden gem is already attracting serious attention, locking in millions in presale funding, and setting the stage for a breakout moment that could leave everything else in the dust. While the broader market hesitates, those paying close attention to the best crypto to buy this week will be the ones ahead of the curveâ€”positioned perfectly before the real fireworks begin. 3. Litecoin (LTC): The Sleeping Giant Awakens Litecoinâ€™s halving event came and went, but the aftershocks are still being felt. With a renewed focus on adoption and a growing number of businesses accepting LTC for payments, the veteran crypto isnâ€™t just survivingâ€”itâ€™s thriving. Transaction volumes are climbing, and its low fees and fast processing times continue to make it a preferred choice for real-world transactions. On top of that, Litecoinâ€™s security and decentralization remain rock-solid, giving it an edge in an industry where trust is everything. Institutional interest is picking up, and recent network upgrades have strengthened its position as one of the most efficient digital assets available today. Why did this coin make it to this list? Litecoin is proving that old-school reliability isnâ€™t just relevantâ€”itâ€™s a powerful advantage in a market thatâ€™s always chasing the next big thing. 4. Terra Classic (\$LUNC): Rising from the Ashes Few projects have seen a fall as dramatic as Terra Classic, but whatâ€™s happening now is equally fascinating. The community-driven revival is picking up steam, and recent governance proposals are pointing to a major restructuring. Developers and supporters refuse to let LUNC fade into obscurity, actively working on network upgrades, supply burns, and ecosystem revitalization. The latest proposals focus on improving blockchain efficiency, reducing inflation, and attracting new projects to build on the network. With millions in LUNC tokens being burned regularly, the supply squeeze is starting to show its effects. On-chain activity is gradually increasing, and whispers of a full-scale comeback are gaining traction. Why did this coin make it to this list? When a coin has this kind of community backing, surprises are inevitable. A turnaround could be closer than most expect. 5. Aptos (\$APT): The Dark Horse of Layer-1s Aptos has been on a quiet rampage. Backed by ex-Meta engineers, this layer-1 blockchain is one of the fastest out there, and its ecosystem is expanding faster than expected. The recent Move VM upgrade is making development smoother than ever, attracting more projects and developers to the network. Aptosâ€™ focus on user-friendly blockchain experiences is paying off, with major partnerships and DeFi integrations boosting its adoption. Transaction speeds are rivaling the best in the game, and its low-latency design is making it a serious competitor to Ethereum and Solana. The recent uptick in DeFi activity, along with NFT marketplaces choosing Aptos as their home, signals that this blockchain isnâ€™t just hypeâ€”itâ€™s delivering. Why did this coin make it to this list? Speed, innovation, and backing from some of the smartest minds in techâ€”itâ€™s got the full package. This could be the next big layer-1 success story. 6. Algorand (\$ALGO): The Green Blockchain Pioneer Sustainability isnâ€™t a trend for Algorandâ€”itâ€™s a core principle. While many blockchains struggle with energy efficiency, Algorand has mastered the art of running a carbon-negative network without sacrificing speed or security. Its Pure Proof-of-Stake (PPoS) consensus mechanism is not just an innovationâ€”itâ€™s a game-changer in a world where environmental concerns are becoming a make-or-break factor for mass adoption. Recent partnerships with global organizations and governments have further cemented its place as the go-to blockchain for real-world applications. From powering digital asset platforms to supporting sustainable finance initiatives, Algorand is proving that eco-friendly blockchain tech isnâ€™t just a niche marketâ€”itâ€™s the future. Major institutions are paying attention, and adoption is rising fast. Why did this coin make it to this list? Itâ€™s built for the long haul, and thatâ€™s a rare thing in crypto. While others chase short-term hype, Algorand is laying the groundwork for a truly scalable and sustainable future. 7. Injective (\$INJ): The DeFi Disruptor Injective is shaking up DeFi in ways that even some of the biggest platforms canâ€™t match. While most projects promise decentralization, few actually deliver on it the way Injective does. Built as a fully decentralized layer-1 blockchain for finance, it enables lightning-fast, gas-free transactions and cross-chain trading without bottlenecks. The latest governance upgrades have taken things to the next level, putting more power directly in the hands of the community. Unlike traditional finance, where centralized entities pull the strings, Injective ensures that decisions are made by those who actually use the network. This approach isnâ€™t just refreshingâ€”itâ€™s revolutionary. On top of that, its integration with major chains like Ethereum, Solana, and Cosmos is making Injective a hub for DeFi activity, attracting developers and traders alike. Liquidity is surging, new dApps are launching, and its ecosystem is expanding at a pace thatâ€™s hard to ignore. Why did this coin make it to this list? Real decentralization is rareâ€”Injective is one of the few that actually means it. While others are still figuring out how to balance control and innovation, Injective is already proving that true DeFi is possible. Conclusion Based on research and analysis, these arenâ€™t just lucky picks pulled out of thin airâ€”theyâ€™re the best crypto to buy this week, chosen with precision, backed by strong fundamentals, and fueled by real momentum. Some are steadily climbing the ranks, securing partnerships, and expanding their ecosystems. Others are on the verge of massive breakouts, with key developments that could send their value skyrocketing. And then thereâ€™s one project quietly rewriting the rules of the game, positioning itself as a future giant before most even realize whatâ€™s happening. The signals are there, and those who act now might just be the ones telling the â€œI told you soâ€”story when the dust settles. The market never waits, and neither should those looking for the best crypto to buy this week before the rest of the world wakes up to whatâ€™s coming. - Bullish RARE price prediction for 2025 is \$0.2172 to \$0.4469. - SuperRare (RARE) price might reach \$3 soon. - Bearish RARE price prediction for 2025 is \$0.0465. In this SuperRare (RARE) price prediction 2025, 2026-2030, we will analyze the price patterns of RARE by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | SUPERRARE (RARE) PRICE PREDICTION 2025 | | | SUPERRARE (RARE) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | SuperRare (RARE) Current Market Status | Current Price | \$0.09891 | 24 â€” Hour Price Change | 4.46% Down | 24 â€” Hour Trading Volume | \$119.05M | Market Cap | \$79.66M | | Circulating Supply | 805.34M RARE | All â€” Time High | \$3.79 ( On Oct 11, 2021 ) | All â€” Time Low | \$0.04632 ( On March 04, 2025 ) | What is SuperRare (RARE) | TICKER | RARE | | BLOCKCHAIN | Ethereum | | CATEGORY | NFT Marketplace | | LAUNCHED ON | Aug 2021 | | UTILITIES | Governance, curation, transaction fees, artist rewards | SuperRare (RARE) is a premium NFT marketplace built on the Ethereum blockchain, designed to support and showcase high-quality digital artwork. Launched in April 2021, it empowers artists by enabling direct peer-to-peer sales without intermediaries. The platform operates using the RARE token, which plays a crucial role in governance, curation, and rewarding creators. SuperRare sets itself apart by emphasizing exclusivity and rarity, ensuring that each artwork is a one-of-a-kind collectible. With a growing community of digital artists and collectors, it has established itself as a major player in the NFT space. Additionally, SuperRare Spaces, its decentralized curation system, allows galleries and curators to showcase new talent, further expanding opportunities in the digital art world. SuperRare 24H Technicals What is SuperRare (RARE) | TICKER | RARE | | BLOCKCHAIN | Ethereum | | CATEGORY | NFT Marketplace | | LAUNCHED ON | Aug 2021 | | UTILITIES | Governance, curation, transaction fees, artist rewards | SuperRare (RARE) is a premium NFT marketplace built on the Ethereum blockchain, designed to support and showcase high-quality digital artwork. Launched in April 2021, it empowers artists by enabling direct peer-to-peer sales without intermediaries. The platform operates using the RARE token, which plays a crucial role in governance, curation, and rewarding creators. SuperRare sets itself apart by emphasizing exclusivity and rarity, ensuring that each artwork is a one-of-a-kind collectible. With a growing community of digital artists and collectors, it has established itself as a major player in the NFT space. Additionally, SuperRare Spaces, its decentralized curation system, allows galleries and curators to showcase new talent, further expanding opportunities in the digital art world. SuperRare 24H Technicals SuperRare (RARE) Price Prediction 2025 SuperRare (RARE) ranks 383rd on CoinMarketCap in terms of its market capitalization. The overview of the SuperRare price prediction for 2025 is explained below with a daily time frame. In the above chart, SuperRare (RARE) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contact point on one of the horizontal channelâ€™s lines. At the time of analysis, the price of SuperRare (RARE) was recorded at \$0.1020. If the pattern trend continues, then the price of RARE might reach the resistance levels of \$0.1070, \$0.1348, and \$0.2227. If the trend reverses, then the price of RARE may fall to the support level of \$0.0837. SuperRare (RARE) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of SuperRare (RARE) in 2025. From the readings on the chart above, we can make the following inferences regarding the current SuperRare (RARE) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.0723 Price = \$0.1025 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 64.2783 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | SuperRare (RARE) Price Prediction 2025 â€” ADX, RVI In the below chart, we analyze the strength and volatility of SuperRare (RARE) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of SuperRare (RARE). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 47.0671 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 42.23 < 50 = Low > 50 = High | Low Volatility | Comparison of RARE with BTC, ETH Let us now compare the price movements of SuperRare (RARE) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of RARE is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of RARE also increases or decreases respectively. SuperRare (RARE) Price Prediction 2026, 2027â€”2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of SuperRare (RARE) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | SuperRare (RARE) Price Prediction 2026 | \$5 | \$0.035 | | SuperRare (RARE) Price Prediction 2027 | \$7 | \$0.032 | | SuperRare (RARE) Price Prediction 2028 | \$8 | \$0.023 | | SuperRare (RARE) Price Prediction 2029 | \$9 | \$0.019 | | SuperRare (RARE) Price Prediction 2030 | \$10 | \$0.010 | Conclusion If SuperRare (RARE) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish SuperRare (RARE) price prediction for 2025 is \$0.4469. Comparatively, if unfavorable sentiment is triggered, the bearish SuperRare (RARE) price prediction for 2025 is \$0.0465. If the market momentum and investorsâ€™ sentiment positively elevate, then SuperRare (RARE) might hit \$3. Furthermore, with future upgrades and advancements in the SuperRare ecosystem, RARE might surpass its current all-time high (ATH) of \$3.79 and mark its new ATH. FAQ 1. What is SuperRare (RARE)? SuperRare (RARE) is a high-end NFT marketplace on Ethereum, focusing on exclusive digital art and artist-driven curation. 2. Where can you purchase SuperRare (RARE)? SuperRare (RARE) has been listed on many crypto exchanges which include Binance, Coinbase, Bitget, Kraken, Crypto.com and Gate.io. 3. Will SuperRare (RARE) reach a new ATH soon? With the ongoing developments and upgrades within the SuperRare Platform, RARE has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of SuperRare (RARE)? On January 19, 2025, RARE reached its new all-time high (ATH) of \$294.33. 5. What is the lowest price of SuperRare (RARE)? According to CoinMarketCap, RARE hit its all-time low (ATL) of \$0.5052 on May 12, 2020. 6. Will SuperRare (RARE) reach \$3? If SuperRare (RARE) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$3 soon. 7. What will be the SuperRare (RARE) price by 2026? SuperRare (RARE) price is expected to reach \$5 by 2026. 8. What will be the SuperRare (RARE) price by 2027?

SuperRare (RARE) price is expected to reach \$7 by 2027. 9. What will be the SuperRare (RARE) price by 2028? SuperRare (RARE) price is expected to reach \$8 by 2028. 10. What will be the SuperRare (RARE) price by 2029? SuperRare (RARE) price is expected to reach \$9 by 2029. With a slowdown in trading volumes for Shiba Inu (SHIB) and Solana (SOL), investors seem to be changing their preferences, sensing a shift in market opportunities. Both asset classes have performed well in past cycles, but traders seem to be looking elsewhere now. Among other projects that have recently attracted attention is Rexas Finance (RXS), a newly emerging altcoin currently trading at \$0.20. As Solana battles reliability issues and Shiba Inu whale activity dips, Rexas Finance certainly provides a strong alternative for investors searching for growth. Drop in Solana Trade Volume Is a Consequence of Network Woes After being touted as the closest alternative to Ethereum, Solana now faces an uphill battle with a slowdown in trade volumes on its decentralized exchanges (DEXs). Reports suggest that Solana's DEX volumes have dipped to a modest \$2.61 million, marking the lowest figure since mid-December. Over the past month, the number of DEX users reveals that overall confidence in Solana's network has declined. While the blockchain supports high transaction throughput and charges low fees, recurring network outages have triggered low-confidence zones among users. Frequent network downtimes have frustrated both traders and developers, remaining one of Solana's key concerns. These failures can result in users shifting to other platforms. The drop in trading volume and engagement from DEX users suggests that investors may prefer more stable and scalable options. Both volume and liquidity in the crypto markets are highly sensitive to trust, and unless major improvements are made to resolve Solana's struggles, it risks losing even more ground. Shiba Inu (SHIB) Deals with Whale Pullback Along with Market Volatility Shiba Inu (SHIB) is experiencing a shift in market hype as one of the leading meme coins. Recently, crypto analyst AI Martinez reported a steep drop in whale activity. This indicates that large holders of SHIB have become far less active over the past three months. This observation is based on Sentiments Whale Transaction Count, which tracks transactions exceeding \$1 million in SHIB. The data suggests that key market players have either reduced their activity or are holding liquidity while waiting to re-enter the market. A decline typically follows a drop in large transactions in market activity and speculative interest. Due to long-term holders' hesitation, SHIB's price is struggling to gain upward momentum. If whales remain inactive, SHIB is likely to face further stagnation. With projects like Rexas Finance gaining momentum, SHIB is becoming less appealing. Rexas Finance Gains Market Traction as Investors Seek Alternatives Addressing these two tokens' challenges, Rexas Finance stands out as a strong competitor in the crypto industry. The project focuses on tokenizing real-world assets (RWAs), making blockchain technology more relevant to traditional financial markets. Unlike meme coins that lack substance or networks plagued by outages, Rexas Finance offers real value through asset-backed investments. Having raised over \$46.69 million and sold more than 453.4 million tokens, Rexas Finance is in its final presale stage. RXS is Valued at \$0.20, and the presale is now at 90.7% completion. The token will go live on major exchanges on June 19, 2025, at a listing price of \$0.25. This move boosts the adoption and usage of RXS, potentially driving significant price increases upon release. The Rexas Finance ecosystem includes several standout features that differentiate it from struggling competitors: Tokenized Real-World Assets: RXS allows users to invest in tokenized real estate, commodities, and other assets while earning passive income through staking and yield farming. Utility Beyond Speculation: Unlike speculative coins, RXS offers a practical utility that outlasts meme coins like SHIB and unstable networks like Solana. Why RXS Might Surpass SHIB and SOL in 2025 Investor focus in the crypto economy is shifting toward platforms with solid fundamentals. While Solana and Shiba Inu remain in the market, both face network and confidence issues, making them riskier investments. In contrast, Rexas Finance continues to gain traction due to its innovative approach and consistent presale success. RXS could experience substantial price growth after its initial listing. Some experts believe that as the project expands and trading begins on leading exchanges, RXS could surge well beyond its \$0.25 listing price, potentially delivering 5x-10x returns within a few months. As the market seeks innovative solutions, Rexas Finance provides a promising alternative to struggling traditional platforms. Unlike meme coins or unreliable blockchains, RXS has a strong foundation that supports long-term value appreciation. With its listing date approaching, this opportunity should be considered before it gains even greater traction. Conclusion Not every project will survive the evolving crypto market. SOL and SHIB are losing momentum as trading volumes decline and investor confidence wanes. While these assets have seen success in the past, their recent struggles highlight the importance of market diversification. Meanwhile, Rexas Finance (RXS) is gaining attention for its strengths in asset tokenization. Its strong presale performance, upcoming exchange listing, and real-world applications position RXS as a compelling investment opportunity for 2025. For those looking to invest in the next major breakout, Rexas Finance's high upside potential makes it a strong candidate for portfolio diversification this year. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish VIRTUAL price prediction for 2025 is \$0.860 to \$1.506. - Virtuals Protocol (VIRTUAL) price might reach \$5 soon. - Bearish VIRTUAL price prediction for 2025 is \$0.321. In this Virtuals Protocol (VIRTUAL) price prediction 2025, 2026-2030, we will analyze the price patterns of VIRTUAL by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | Virtuals Protocol (VIRTUAL) PRICE PREDICTION 2025 | | | Virtuals Protocol (VIRTUAL) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Virtuals Protocol (VIRTUAL) Current Market Status | Current Price | \$0.7084 | 24 h Hour Price Change | 6.15% Up | | 24 h Hour Trading Volume | \$182.11M | | Market Cap | \$460.16M | | Circulating Supply | 649.5M VIRTUAL | All Time High | \$5.07 (On Jan 02, 2025) | | All Time Low | \$0.007605 (On Jan 24, 2024) | What is Virtuals Protocol (VIRTUAL) | TICKER | VIRTUAL | | BLOCKCHAIN | Ethereum Blockchain | | CATEGORY | AI-integrated Blockchain solution | | LAUNCHED ON | March 2024 | | UTILITIES | Tokenization, Co-ownership, AI Integration | Virtuals Protocol is a platform that integrates AI and blockchain to provide accessibility to virtual platforms. It utilizes tokenization to provide co-ownership of AI agents in the crypto gaming sector. It is built to support seamless virtual interactions while also enhancing AI gaming. VIRTUALS has caught immense market attention over the past year, since its launch in March 2024. Moreover, cryptocurrency has also taken to the spotlight due to its notable price fluctuations in the past few months. Due to its unique integration of AI and blockchain realms, Virtuals protocol is expected to revolutionize the AI tokens realm in the coming days. The protocol utilizes the Base network and runs as an Layer 2 solution on Ethereum. Virtuals Protocol 24H Technicals (Source: TradingView) Virtuals Protocol (VIRTUAL) Price Prediction 2025 Virtuals Protocol (VIRTUAL) ranks 109th on CoinMarketCap in terms of its market capitalization. The overview of the Virtuals Protocol price prediction for 2025 is explained below with a daily time frame. VIRTUAL/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Virtuals Protocol (VIRTUAL) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Virtuals Protocol (VIRTUAL) was recorded at \$0.7084. If the pattern trend continues, then the price of VIRTUAL might reach the resistance levels of \$0.726, and \$1.232. If the trend reverses, then the price of VIRTUAL may fall to the support of \$0.519. Virtuals Protocol (VIRTUAL) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Virtuals Protocol (VIRTUAL) in 2025. VIRTUAL/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Virtuals Protocol (VIRTUAL) for 2025. | Resistance Level 1 | \$0.860 | | Resistance Level 2 | \$1.506 | | Support Level 1 | \$0.518 | | Support Level 2 | \$0.321 | VIRTUALS Resistance & Support Levels Virtuals Protocol (VIRTUAL) Price Prediction 2025 RSI, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Virtuals Protocol (VIRTUAL) are shown in the chart below. VIRTUAL/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Virtuals Protocol (VIRTUAL) market in 2025. | INDICATOR | | PURPOSE | | READING | | INFERENCE | | 50-day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.648 Price = \$0.715 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 63.654 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Virtuals Protocol (VIRTUAL) Price Prediction 2025 ADX, RVI In the below chart, we analyze the strength and volatility of Virtuals Protocol (VIRTUAL) using the following technical analysis indicators: Average Directional Index (ADX) and Relative Volatility Index (RVI). VIRTUAL/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Virtuals Protocol (VIRTUAL). | INDICATOR | | PURPOSE | | READING | | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 23.571 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 74.87 < 50 = Low > 50 = High | High Volatility | Comparison of VIRTUAL with BTC, ETH Let us now compare the price movements of Virtuals Protocol (VIRTUAL) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs VIRTUAL Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of VIRTUAL is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of VIRTUAL also increases or decreases respectively. Virtuals Protocol (VIRTUAL) Price Prediction 2026, 2027-2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Virtuals Protocol (VIRTUAL) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Virtuals Protocol (VIRTUAL) Price Prediction 2026 | \$7 | \$0.3 | | Virtuals Protocol (VIRTUAL) Price Prediction 2027 | \$9 | \$0.2 | | Virtuals Protocol (VIRTUAL) Price Prediction 2028 | \$11 | \$0.1 | | Virtuals Protocol (VIRTUAL) Price Prediction 2029 | \$13 | \$0.09 | | Virtuals Protocol (VIRTUAL) Price Prediction 2030 | \$15 | \$0.08 | Conclusion If Virtuals Protocol (VIRTUAL) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Virtuals Protocol (VIRTUAL) price prediction for 2025 is \$1.506. Comparatively, if unfavorable sentiment is triggered, the bearish Virtuals Protocol (VIRTUAL) price prediction for 2025 is \$0.321. If the market momentum and investors' sentiment positively elevate, then Virtuals Protocol (VIRTUAL) might hit \$5. Furthermore, with future upgrades and advancements in the Virtuals Protocol ecosystem, VIRTUAL might surpass its current all-time high (ATH) of \$5.07 and mark its new ATH. FAQ 1. What is Virtuals Protocol (VIRTUAL)? Virtuals Protocol (VIRTUAL) is a cryptocurrency that aims to revolutionize virtual interactions through its AI and Metaverse protocol. 2. Where can you purchase Virtuals Protocol (VIRTUAL)? Traders can trade Virtuals Protocol (VIRTUAL) on the following cryptocurrency exchanges such as Bitget, BiKing, Hibit, BitMart, and BingX 3. Will Virtuals Protocol (VIRTUAL) reach a new ATH soon? With the ongoing developments and upgrades within the Virtuals Protocols platform, Virtuals Protocol (VIRTUAL) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Virtuals Protocol (VIRTUAL)? Virtuals Protocol (VIRTUAL) hit its current all-time high (ATH) of \$5.07 on Jan 02, 2025. 5. What is the lowest price of Virtuals Protocol (VIRTUAL)? According to CoinMarketCap, VIRTUAL hit its all-time low (ATL) of \$0.007605 on Jan 24, 2024. 6. Will Virtuals Protocol (VIRTUAL) reach \$5? If Virtuals Protocol (VIRTUAL) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon. 7. What will be Virtuals Protocol (VIRTUAL) price by 2027? Virtuals Protocol (VIRTUAL) price is expected to reach \$7 by 2026. 8. What will be Virtuals Protocol (VIRTUAL) price by 2027? Virtuals Protocol (VIRTUAL) price is expected to reach \$11 by 2027. 9. What will be Virtuals Protocol (VIRTUAL) price by 2028? Virtuals Protocol (VIRTUAL) price is expected to reach \$13 by 2028. 10. What will be Virtuals Protocol (VIRTUAL) price by 2029? Virtuals Protocol (VIRTUAL) price is expected to reach \$15 by 2029. Top Crypto Predictions Chainlink (LINK) Price Prediction Disclaimer: The opinion expressed in this chart is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

The crypto market might be experiencing a slight uptick but is it just a dead cat bounce? Among the tokens hit the hardest, the Solana coin is at the forefront and might plummet further if key support is breached. Also, the Dogecoin price is in the red, with technical indicators signaling another dump. Meanwhile, DTX Exchange (DTX), offering a safe haven against market shocks and promising significant ROIs, is the latest favorite among investors. Amid huge demand, early funding has surpassed \$15.9 million and the number of holders has passed 700,000 a new DeFi project to watch. Scheduled to launch this quarter, it has been hailed as the best new crypto to invest in. DTX Exchange (DTX): How High Can It Go? DTX

Exchange (DTX), dubbed the next big thing, might be this year's best crypto investment. It stands out for several reasons, from outperforming the declining Dogecoin price to boasting higher growth prospects than the Solana coin. As a low-cap, it has plenty of room to run, not to mention its bullish narrative—a blend of DeFi and TradFi. Expected to go live on Tier-1 exchanges this quarter, experts are optimistic about DTX being one of the best ICOs to invest in. A token costs only \$0.18 in the bonus ICO round, presenting a 2x gain at the listing price of \$0.36. That isn't all. New investors can make up to 4x ROI by applying a whitelist at the checkout for a 100% bonus on purchases. Meanwhile, experts predict a 75x rally this year—one of the best altcoins to buy. Beyond the gains, it is fundamentally solid, standing at the intersection between DeFi and TradFi. It will become the first crypto-native platform to offer stocks, ETFs, bonds and over 120,000 currency pairs, setting it up for adoption. Its blend of key elements of CEX and DEX sets it apart even more. Solana (SOL): Down or Up? The Solana coin is down over 10% in the past seven days, changing hands at above \$120. Down over 55% from its January all-time high of \$294, the past few months have been a wild ride, to say the least. A weekly close under \$120 might lead to a cascading sell-off below \$100. Considering technical indicators like the 20-WMA, the Solana coin might experience further downswings. However, the Commodity Channel Index (20) and 9-HMA signal a shift in market trends. Despite current market conditions, top analysts are maintaining a bullish stance. Captain Rice, a crypto analyst, targets \$1,500 in Q2. HeyitsWolf17, another leading expert on X, expects the Solana coin to run past \$1,400. However, at the current price, the Solana coin is not as promising as DTX—a new altcoin primed for a 75x rally. Dogecoin (DOGE): Experts Consider One More Zero to the Current Price The Dogecoin price crashed alongside the broader crypto market, down over 15% on the weekly charts. It retails around \$0.16 but the worst might not be over despite the 10% daily increase. Key technical indicators like the MACD Level (12, 26) hint at a dip in the Dogecoin price. A fall below critical support might add another zero to the current price. However, the Commodity Channel Index (20) and Stochastic RSI Fast suggest now might be a good time to buy in anticipation of a bounce. BravoCycles, holding a bearish outlook, believes the Dogecoin price may drop as low as \$0.05. Meanwhile, Vnzabbar, a leading expert on X, targets \$0.18 next and a potential rally toward \$0.30 in the Dogecoin price. However, investors seeking to make the most of this cycle are betting more on DTX. This is courtesy of its solid narrative—a blend of DeFi and TradFi and massive upside. DTX Exchange (DTX): A New Favorite Over Solana (SOL) and Dogecoin (DOGE) As a new and low-cap gem, DTX Exchange (DTX) might be a better bet than the Solana coin. Moreover, it has become a safe haven as the Dogecoin price nosedived, laying the foundation for an explosive debut. Set to shake up the crypto market, it is a promising wave worth taking advantage of. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - David Sacks and Craft Ventures sold over \$200 million in crypto assets and related stocks before his White House appointment. - Despite divestments, scrutiny persists over potential conflicts of interest and policy influence. David Sacks, the newly appointed White House AI and crypto czar, offloaded over \$200 million in digital assets and crypto-related stocks before assuming his role. A White House memorandum dated March 5 confirmed that Sacks personally accounted for \$85 million of the sales. He divested major crypto assets like Bitcoin (BTC), Ether (ETH), and Solana (SOL). Sack's firm, Craft Ventures, also exited major holdings in Coinbase (COIN), Robinhood (HOOD), and private crypto-focused investment firms. The divestment was aimed at eliminating potential conflicts of interest as Sacks transitioned into his government position, where he is expected to shape crypto regulations. And You and Craft Ventures have divested over \$200 million of positions related to the digital asset industry, of which \$85 million is directly attributable to you, the memorandum stated. Sacks confirmed the sell-off in a March 3 disclosure, noting that the liquidation was completed before President Donald Trump's inauguration on January 20. However, the timing has drawn attention, as Bitcoin surged to an all-time high of \$109,000 just before the inauguration before plummeting below \$80,000 in February amid broader market uncertainty. Sen. Warren Demands Proof Amid Rising Scrutiny Despite the large-scale divestments, skepticism remains. Massachusetts Senator Elizabeth Warren has called for greater transparency, demanding Sacks provide clear evidence of his complete exit from digital assets. In a March 6 letter, Warren raised concerns over the exact timing of the sell-off and whether those close to Sacks could have benefited from the price surge. Despite your public statements via X, it remains unclear exactly when you personally divested from BTC, ETH, and SOL, when Craft Ventures divested from Bitwise, and whether people close to you may have held positions and sold into the recent price surge, Warren wrote. This isn't the first time Sacks has faced scrutiny. Critics argue that despite liquidating his crypto assets, he still holds indirect exposure through Craft Ventures' venture capital funds. The White House, however, has granted him a limited ethics waiver, allowing participation in digital asset policy matters under specific conditions. Sack's Crypto Stance: Regulation Without Overreach Since assuming his White House role, Sacks has positioned himself as an advocate for a balanced regulatory approach. He has supported initiatives like a Strategic Bitcoin Reserve while opposing excessive taxation on crypto transactions. In a recent episode of the All In Podcast, he criticized a proposed 0.01% tax on crypto transactions, comparing it to the gradual expansion of the income tax system. That's always how taxes start. They are described as being very modest, Sacks warned, emphasizing the need to prevent over-regulation that could stifle innovation. Despite controversy, Sacks remains a key figure in shaping U.S. crypto policy. His influence, combined with his previous market involvement, ensures that his decisions will continue to be closely watched by both regulators and the crypto industry. Highlighted Crypto News for Today Bitcoin Persists Against Bears to Reach the \$84K Resistance, Is \$90K In Sight?

- VanEck filed an S-1 registration with the SEC for the first AVAX ETF. - The filing follows VanEck's Delaware registration for the Avalanche ETF. VanEck has submitted an S-1 filing to the U.S. Securities and Exchange Commission (SEC) for the VanEck Avalanche ETF. Bloomberg analyst James Seyffart noted that while the registration had been widely discussed earlier, this filing represents the first official submission to the SEC. The firm has not yet disclosed the ETF's ticker symbol. The proposed fund aims to track AVAX's price performance while holding the asset directly. NEW: @vaneck\_us officially files for an Avalanche ETF. pic.twitter.com/LL1FN770LZ James Seyffart (@Jseyff) March 14, 2025 According to the filing, the ETF will value its shares based on the MarketVector Avalanche Benchmark Rate. This rate aggregates data from the five largest exchanges as determined by CCData's exchange benchmark report. The move aligns with the growing demand for investment products tied to digital assets beyond Bitcoin and Ethereum. Altcoin ETFs Gain Momentum The push for altcoin ETFs follows the SEC's approval of spot Bitcoin ETFs in January and Ethereum ETFs more recently. Several asset managers are now seeking approval for ETFs linked to Solana (SOL), XRP, Dogecoin (DOGE), and Litecoin (LTC). Bloomberg analysts estimate a 90% approval chance for a Litecoin ETF, while SOL and XRP face lower odds. Avalanche's blockchain has gained traction in financial markets. It supports tokenized assets, including Franklin Templeton's blockchain-based fund. This track record may strengthen its case for ETF approval. However, the SEC has historically been cautious with crypto ETFs due to market manipulation and investor protection concerns. The SEC has not yet provided a timeline for its decision. Analysts expect the agency to extend its review period as it has done with previous applications. Bloomberg's Seyffart and Eric Balchunas suggest approval could come later this year. JPMorgan's January report projected billions in inflows if altcoin ETFs gain approval. The report estimated that SOL and XRP ETFs could attract between \$3 billion and \$8 billion in new assets. If approved, the VanEck Avalanche ETF could pave the way for further integrating blockchain assets into traditional finance. Highlighted Crypto News Today The Evolution of Token Launches: Lessons from the \$LIBRA Launch

On February 14, the @Viva la Libertad project launched its meme token, \$LIBRA, on Solana, skyrocketing to a \$1.16 billion market cap in its first hour, with a fully diluted valuation of approximately \$4.5 billion. However, this surge was short-lived as the token collapsed by over 95%, wiping out nearly \$280 million in value and impacting 75,000 traders. Dubbed the "Cryptogate" scandal, the launch raised concerns over insider trading and market manipulation, with alleged ties to Argentinean President Javier Milei and Web3 investment firm Kelsier Ventures. The evolution of token launches and the recent \$LIBRA token episode is covered in the latest report by DWF Labs in an effort to put forward more transparent and equitable token launch mechanisms. Reports revealed that certain wallets, including Kelsier Ventures, profited by over \$110 million through liquidity provision and sniping tactics. This triggered a political crisis for Milei, with fraud accusations and demands for a federal investigation. Further scrutiny pointed to Kelsier CEO Hayden Davis, linking him to previous celebrity-related token launches, including First Lady Melania Trump's \$MELANIA token. These events highlight ongoing concerns over transparency in crypto launches and the need for fairer distribution models. Evolution of Token Launch Mechanisms The crypto industry has experimented with multiple token distribution methods over the years, each with its own benefits and flaws: Mining & Pre-Mining The first token launch mechanism, mining, emerged with Bitcoin (2009), rewarding participants for validating transactions. While effective, mining led to energy concerns and miner centralization. Pre-mining later allowed projects to distribute tokens before public sales, offering early funding but raising concerns over fairness and transparency. ICO Boom & Fixed-Price Sales The Initial Coin Offering (ICO) boom of 2017 introduced fixed-price token sales, providing investors equal buying opportunities. However, mispricing and volatility led to dominance by large investors. The rise of Initial Exchange Offerings (IEOs) and Initial DEX Offerings (IDOs) aimed to restore credibility through third-party oversight. Dutch Auctions & Fair Launches Projects like Algorand and Gnosis introduced Dutch auctions, where prices started high and gradually dropped until demand met supply. Meanwhile, platforms like Yearn Finance and Monero promoted fair launches, ensuring tokens were distributed equitably among participants, including founding teams. Liquidity Bootstrapping & Lockdrop Auctions Innovations like Balancer's Liquidity Bootstrapping Pools (LBPs) allowed dynamic price discovery while discouraging early whale dominance. Additionally, Lockdrop + Liquidity Bootstrapping Auctions (LBAs) locked participants' funds before launch, aligning community incentives and minimizing volatility. The Rise of "Fair Launches 2.0" As retail investors grew wary of low float, high FDV (fully diluted valuation) tokens, a shift toward decentralized token creation emerged. Pump.fun, launched in January 2024, revolutionized fair launches with a one-click token launchpad. Tokens became tradable on Pump.fun's platform and were later listed on Raydium upon reaching a \$100,000 market cap. This automated approach ensured transparency, liquidity, and accessibility, reducing risks for creators. Inspired by Pump.fun, new launchpads like flaunch.gg on Uniswap v4 introduced buybacks and revenue-sharing models, incentivizing traders to support decentralized launches. Persistent Challenges in Token Launches Despite these innovations, exploitation and manipulation continue to plague token launches. The \$LIBRA scandal and \$MELANIA token concerns underscore the need for improved security and regulation. Insider Trading & Information Asymmetry In \$LIBRA's case, insiders acquired significant token supply before a coordinated endorsement by President Milei. This drove retail interest, inflating the token's market cap before early investors dumped their holdings, leading to massive losses for late buyers. Similarly, \$MELANIA's supply was concentrated in a single wallet (80%), raising concerns about ownership centralization. Bot & Whale Domination New token launches are often exploited by bots and large investors, who use automated systems to acquire massive token quantities at launch before retail investors can react. These tactics manipulate prices and create a pump-and-dump effect, leaving retail investors with depreciating assets. The Future of Fair Launches The \$LIBRA fallout and ongoing concerns around celebrity-linked token sales emphasize the need for more robust token distribution methods. Emerging platforms are experimenting with on-chain governance, anti-whale mechanisms, and transparent liquidity management to ensure fairer access and long-term sustainability. With the crypto industry maturing, trust, transparency, and equitable distribution will be essential for ensuring credibility in future token launches.

Veteran traders know that fortunes are made during accumulation phases, not during peak hype. Right now, a perfect storm is brewing: established tokens like SOL, TRX, and PEPE are demonstrating surprising strength, while undiscovered gems like BitLemons (\$BLEM) are quietly building revolutionary infrastructure beneath the radar. With over \$1.9 million already raised and Stage 2 of its presale 95% complete, BLEM is positioning to be the breakout story no one saw coming. The Smart Bet in Crypto Right Now The evolution of crypto investing is clear: speculation is giving way to fundamentals. BitLemons (\$BLEM) exemplifies this shift as a project with actual revenue generation built directly into its ecosystem. Unlike the vast majority of tokens that rely solely on market sentiment, BitLemons' fully operational crypto casino platform is hosting over 8,000 games from premium providers including Evolution and Pragmatic—creates a continuous stream of real-world value that disrupts the \$450 billion traditional casino market with a model that works 24/7. BitLemons has maintained relentless momentum with Stage 1 selling out in just 16 days, and Stage 2 now 95.95% complete with over \$1.93 million raised. The BLEM token features tokenomics designed for long-term appreciation: 30% of all Gross Gaming Revenue flows directly to token economics—15% funds automatic buybacks and burns, while another 15% rewards loyal stakers with passive income. With dual security audits from SpyWolf and SolidProof providing validation that competitors can't match, BitLemons combines security with extraordinary growth potential at the current presale price of just \$0.02. Solana Technical Challenges vs Adoption Rate Solana's technical ambition has defined its journey—promising Ethereum-level security with transaction speeds rival centralized systems. While network

outages and performance issues have periodically tested investor confidence, SOL continues to attract serious developer talent and institutional capital due to its remarkable resilience. Despite facing challenges that would cripple lesser networks, SOL has maintained its position as a top-10 cryptocurrency by processing over 65,000 transactions per second with fees averaging less than \$0.01. With SOL currently trading around \$125 and displaying strong momentum, many analysts believe it has established a solid foundation for sustained growth, with potential targets around \$175-200 as technical improvements continue rolling out. Solana's TVL (Total Value Locked) has shown steady growth, even during broader market downturns, creating an environment where complex DeFi and gaming applications can thrive despite occasional setbacks. TRON Transforming Content Distribution While the crypto spotlight often shines elsewhere, TRON has been quietly revolutionizing digital content distribution. Its focus on disintermediation – removing gatekeepers between content creators and consumers – has created one of blockchain's most practical use cases. TRON's strategy emphasizes steady expansion rather than headline-grabbing moves, yielding impressive results: a consistently growing ecosystem spanning gaming, DeFi, and entertainment, with daily transaction volumes regularly exceeding \$700 million. Trading at \$0.22, TRX has demonstrated remarkable stability during recent market fluctuations. This resilience makes it a compelling option for investors seeking reduced volatility without sacrificing long-term growth potential. Market analysts suggest TRON's practical focus on real-world problems could drive gradual appreciation toward the \$0.35-\$0.40 range as its ecosystem continues expanding across various digital content domains. Meme Coin Accumulation Signals Smart Money The conventional wisdom dismisses meme coins as purely speculative assets, but PEPE's recent on-chain activity tells a more nuanced story. When sophisticated investors controlling large capital begin accumulating in a pattern, attention is warranted. Recent blockchain analysis has revealed major whale accumulation, with three addresses acquiring 689 billion PEPE tokens, suggesting informed positions being built ahead of potential catalysts. With a holder base exceeding 412,000 and growing, PEPE has transcended its memetic origins to become a legitimate market force. Its recent 11% price surge amid broader uncertainty demonstrates its capacity to move independently of traditional crypto correlations. Currently priced at \$0.0000075, PEPE's growing retail interest and whale accumulation create potential for significant price discovery in coming weeks. Why Revenue-Driven Crypto Wins As the crypto industry matures, investment theses are evolving. The projects positioned to thrive in this new environment share a common characteristic: they generate actual revenue rather than merely promising future utility. This fundamental shift favors BitLemons' casino-based model over even established players like Solana, TRON, and PEPE. While other projects continue developing towards eventual utility, BitLemons already delivers measurable value today through its operational platform. Discover the Exciting Opportunities of BitLemons (\$BLEM) Presale Today - Website: <https://presale.bitlemons.io/> - Socials: <https://linktr.ee/bitlemons> [Disclaimer: This is a sponsored article and is for informational purposes only. - Solana (SOL) transaction count grows from 889.7M to 2.6B, but daily active users drop to 3.1M. - The declining developer count and network fees suggest challenges for sustained growth. Solana (SOL) has been trading in the bearish momentum for a while. Currently, it is trading below key moving averages on a daily time frame, indicating bearish signals. However, despite the bearish sentiments, experts and the community are positive about SOL. Renowned Bitcoin analyst, Ali Martinez, said in his latest X post that Sol could reach the \$3,800 mark. He describes that Solana is shaping up into a cup-and-handle pattern. If this pattern is confirmed, the setup could propel the SOL towards the \$3,800 level. However, looking at the weekly time frame, the SOL price is witnessing bearishness. The price already broke below the 50-day EMA mark and is heading towards the 200-day EMA mark. According to CoinMarketCap data, currently, Solana is trading at \$125.85 with an intraday decline of 1.62%, indicating mild bearishness. The daily trading volume has decreased by 30.49%, and the volume-to-market ratio is 4.03%. Moreover, the SOL market cap is \$63.98 billion, and the 24-hour trading volume is \$2.51 billion. What Does Solana (SOL) On-Chain Analysis Indicate? According to Tokenterminal, an on-chain analysis platform, the transaction count on the Solana blockchain is increasing. Over a year, transactions increased from 889.7 million to 2.6 billion, showcasing network growth. However, the daily active users have decreased in recent months. In November 2024, the daily active users count hit a high of 6.4 million; from there, it dropped and is currently at 3.1 million. Besides this, the fees and core developers count are also on the decline. The core developers are reduced from 86 to 24. The decline suggests the waning developer interest in the network. Moreover, the network fees are also declining, indicating reduced network usage. The on-chain analysis indicates the decreased growth of the Solana blockchain. This decreased growth could be the result of increased competition from other blockchains. If this trend resumes, SOL may face challenges in network growth. Highlighted Crypto News Today: U.S. Court Approves Three Arrows Capital's \$1.53B Claim Against FTX

- The U.S. Bankruptcy Court approved 3AC's expanded \$1.53 billion claim against FTX. - FTX debtors objected, but the court dismissed their claims as invalid. A U.S. bankruptcy court has approved liquidators of defunct hedge fund Three Arrows Capital (3AC) to expand their claim against FTX to \$1.53 billion. The ruling, issued by Judge John T. Dorsey of the U.S. Bankruptcy Court for the District of Delaware, dismissed objections from FTX's debtors and allows 3AC to seek a larger recovery. The court determined that 3AC's liquidators had provided adequate notice of their claims. Judge Dorsey noted that delays in filing were primarily due to FTX's failure to provide key financial records in time. FTX's debtors, led by CEO John Ray III, opposed the expansion. They argued that the amendment introduced new legal claims and significantly increased the amount sought. However, the court ruled that 3AC's original filing had already put FTX on notice about potential claims, rendering the objections invalid. 3AC's Collapse and Legal Battles Intensify Three Arrows Capital, once a major crypto hedge fund, collapsed in June 2022 after heavy losses in the crypto market. Founders Kyle Davies and Su Zhu had taken leveraged positions in digital assets, including TerraUSD, which lost almost all its value in May 2022. The firm's failure triggered a chain reaction, leading to the collapse of lenders like Voyager Digital and BlockFi. Court documents reveal that as of June 12, 2022, 3AC held \$1.53 billion in assets on FTX. Over the next two days, FTX liquidated those funds to recover a \$1.3 billion debt. Initially, 3AC's liquidators filed a \$120 million claim in FTX's bankruptcy case in June 2023. They later revised the claim, citing breach of contract, unjust enrichment, and breach of fiduciary duty. This latest ruling adds to ongoing legal battles involving 3AC's founders. In December 2023, a British Virgin Islands court froze \$1.4 billion in assets linked to Davies, Zhu, and Zhu's wife, Kelly Chen. The freeze prevents them from accessing funds while claims against them proceed. Liquidators allege that the founders contributed to 3AC's downfall by mismanaging funds in the weeks before its collapse. Highlighted Crypto News Today Solana SIMD-228 Proposal to Cut Inflation Rate Fails to Pass

Kaanch Network is emerging as a key player in the 2025 crypto presale landscape. With investors actively searching for promising blockchain projects, Kaanch has positioned itself as a formidable contender in the growing market. Recent reports show the blockchain platform is expanding because of its decentralized functioning and innovative framework. Financial analysts report that Kaanch Network attracts more initial buyers because they anticipate value in its blockchain framework. Strong Participant's Confidence in Kaanch Network Participants in the presale phase are excited because it offers them long-term investment possibilities. Industry analysts find that Kaanch delivers competitive decentralized project value through its blockchain implementation of practical applications and efficiency capabilities. Market analysts declare that project scalability and security represent the main elements that drive presale participants to choose the project. The network adopts a decentralization structure because it matches demand from the broader marketplace for blockchain solutions that guarantee transparency and high performance. Growing Market Interest and Community Engagement Multiple sources confirm that the presale attracted numerous participants upon its launch, reflecting increased network interest. Kaanch Network token demand exists because participants support the underlying platform's technical direction and engineering capabilities. The crypto community's rising involvement ensures Kaanch stays at the front of the presale contest. The practical functions of Kaanch attract growing numbers of participants who focus on blockchain projects that make sense in real-world applications, propelling its market position forward. Kaanch Presale and Market Positioning Kanch Network operates in Stage 4 of its presale at its current token price of \$0.08. The forthcoming price increase to \$0.16 demonstrates that buyers view Kaanch positively, and the market demand continues to rise. The Level 1 blockchain system operated by Kaanch receives direct comparisons with the two prominent networks, Solana and Ethereum. The latest technological innovations and enhanced scalability and security capabilities enable Kaanch Network to operate as a strong contender in its market sector. The market follows Kaanch Network development closely throughout its ongoing presale period. The promising participation combined with high-interest levels during the current phase indicates that Kaanch Network will thrive within the evolving blockchain realm. The presale event will keep drawing participants who want to benefit from blockchain technology at its launch stage. Kaanch maintains an interesting position for industry stakeholders in the 2025 presale race because the market prioritizes decentralization and security. Blood in the streets or opportunity of a lifetime? While mainstream investors panic as Ethereum teeters on the \$1,900 cliff, Solana's death cross looms, and Cardano's volume evaporates, smart money is quietly pouring into BitLemons (\$BLEM) – the revenue-generating crypto casino that's already secured \$1.9 million in funding with Stage 2 presale 93% complete. The buzz isn't just about the platform's explosive growth potential, but also its massive \$1,000,000 USDT giveaway with 20 lucky investors set to win \$50,000 each (just a \$50 investment qualifies you to enter). With these market conditions, the question isn't whether to invest – it's which opportunity offers the best risk-reward profile. Is BitLemons the Next 10X Crypto? While most crypto projects sell promises, BitLemons is already delivering results. Their fully operational GambleFi platform features over 8,000 games from premium providers like Evolution and Pragmatic, generating actual revenue 24/7 rather than just whitepaper projections. This commitment to tangible value extends to their exclusive original games – \$BLEM Keno, Crash, and Wheel of BitLemons – which maximize platform profits by eliminating third-party revenue sharing. The project's innovative tokenomics directly connect platform success to investor rewards, allocating 30% of all Gross Gaming Revenue to the ecosystem – 15% for token buyback & burn mechanisms and 15% for staking rewards. With dual security audits from SpyWolf and SolidProof confirming the model's integrity, it's no surprise Stage 1 sold out in just 16 days and Stage 2 is already 93% complete at \$0.02 per token. With Stage 3 pricing at \$0.03 beginning in less than a week and exchange listing rumors suggesting a \$0.17-\$0.18 debut, the project demonstrates precisely what mature crypto investing looks like in 2025. Can Ethereum Hold or Will Liquidations Hit? Ethereum's recent price pressure around the \$1,900 level reflects broader growing pains rather than fundamental weakness. The network's explosive DeFi growth has created approximately \$336 million in leveraged positions now facing potential liquidation – a sign of the ecosystem's increasing financial sophistication. Despite short-term volatility, Ethereum continues expanding its real-world footprint through institutional adoption and layer-2 scaling solutions. While less flashy than price pumps, this infrastructure development approach builds the foundation for sustainable growth that savvy investors recognize as crucial for long-term relevance in the evolving digital economy. Can Solana Balance Speed and Stability? Solana's technical warning signs extend beyond the potential death cross formation, which causes immediate price concerns. The network's prioritization of transaction speed has occasionally come at the expense of reliability, with intermittent performance issues creating ecosystem vulnerabilities during peak demand periods. These challenges haven't deterred developer interest, however, as Solana's fundamental value proposition of high throughput and low fees continues attracting projects with specific performance requirements. The critical \$110-\$125 support zone now represents a technical level and a psychological threshold for confidence in the network's ability to balance its speed advantages with necessary stability improvements. Slow and Steady or Falling Behind? Cardano's Dilemma Cardano's alarming 59% volume collapse reflects the growing tension between its methodical, peer-reviewed development approach and market demands for immediate results. While this scientific foundation may ultimately create a more robust blockchain, investors increasingly question the opportunity costs of such extended timelines. The ecosystem's measured growth continues with several protocol upgrades scheduled, but adoption metrics lag behind those of more aggressive competitors. This creates a complex value proposition where security and correctness come at the expense of immediate functionality. This trade-off has divided the investor community and contributed to recent price volatility. Real Value Matters More Than Hype

Bitlemons represents the evolution of crypto investing from pure speculation to operational businesses generating verifiable revenue. While established networks like Ethereum, Solana, and Cardano continue their essential infrastructure development, projects that directly solve problems and create immediate value flows redefine what blockchain utility means in 2025. With Bitlemonsâ€™ Stage 2 presale nearly sold out and Stage 3 approaching quickly, investors have a rare opportunity to participate in a project that bridges the gap between crypto innovation and traditional business fundamentals. The choice between these four notable projects becomes remarkably clear for those who recognize that sustainable returns come from actual revenue rather than market hype. Discover the Exciting Opportunities of Bitlemons (\$BLEM) Presale Today - Website: <https://presale.bitlemons.io/> - Socials: <https://linktr.ee/bitlemons> [Disclaimer: This is a sponsored article and is for informational purposes only. - Lazarus Group laundered \$750K through Tornado Cash on March 13. - New BeaverTail malware targets Solana and Exodus wallets. - Lazarus-linked crypto thefts hit \$1.3B in 2024, doubling 2023. The Lazarus Group of North Korea maintains active operations in crypto domain activities by transferring stolen funds through newly developed developer-targeting malware. Lazarus Group continues its operation by using sophisticated techniques to steal cryptocurrency funds while also focusing on laundering assets to other platforms. Blockchain security firm Certik detected on March 13 that the Tornado Cash mixing service received a 400 ETH deposit worth around \$750,000. Certik investigators matched the deposit with Bitcoin transactions that the Lazarus Group conducted previously. The group hid its stolen money through transfer routes involving decentralized exchanges like THORChain to execute undetected large transactions. #CertikInsight ðŸš€ â€œ Certik Alert (@CertikAlert) March 13, 2025 We have detected deposit of 400 ETH in <https://t.co/0lWpDz00Wi> on Ethereum from: 0xdB31a812261d599A3fAe74Ac44b1A2d4de5d00901 0xB23D61CeE73b45536EF8F8f8A58adDf8D5af848. The fund traces to the Lazarus group's activity on the Bitcoin network. Stay Vigilant! pic.twitter.com/IHwFwt5uQs Lazarus Group participated in two major crypto heists: stealing \$600 million from the Ronin network in 2022 and breaching Ronin in the same year. The data from Chainalysis shows North Korean hackers conducted 47 crypto thefts which led to over \$1.3 billion in losses during 2024, thus establishing an unprecedented double increase from the previous year. One of the attacks by the malicious group occurred against Bybit Exchange, resulting in the theft of \$1.4 billion worth of digital assets on February 21. Lazarus Deploys Malicious Packages in NPM Ecosystem The cybersecurity experts at Socket found six new malicious packages from the Lazarus Group hidden in the Node Package Manager (NPM) network. The packages implement typo-squatted tricks to mimic authorized JavaScript libraries while seeking to break into developer systems and steal sensitive information. The malware strain named BeaverTail enters systems to install backdoors while stealing credentials and specifically targets Solana and Exodus wallet platforms. Technological analysis has revealed that Lazarus Group uses deceptive package names that mimic distinguished trusted libraries during development attempts. Installation of the malware enables access to browser files from Google Chrome as well as Brave and Firefox and keychain data stored on macOS systems. Developers form the main target of this attack since they buy and install packages containing malware without being aware of it. The researchers could not confirm Lazarus as the direct perpetrator despite observing operational techniques that matched earlier Lazarus Group activities. The initiative serves as the groupâ€™s latest demonstration of continued attacks against crypto sector supply chains. Lazarus Uses Advanced Tactics to Bypass Security Measures The rising cybercrime activities performed by the Lazarus Group demonstrate a lasting danger for cryptocurrency platforms. Lazarus Group develops its tactics by using complex techniques to circle security systems. The research community stresses the need for better security protocols, which developers must implement for cryptocurrency-related projects specifically. Digital asset security has faced an escalating threat according to increasing numbers of digital attacks observed in this space. Security experts warn developers and crypto firms to stay alert against continuous hacking developments. The Lazarus Groupâ€™s operations highlight the highly complex nature of current cyber threats, which continues to hinder the development of the crypto industry. Highlighted Crypto News Today:

- AIOZ price prediction for 2025 is \$0.5270 to \$1.2621. - AIOZ Network (AIOZ) price might reach \$3 soon. - AIOZ price prediction for 2025 is \$0.1159. AIOZ Network (AIOZ) price prediction 2025, 2026-2030, we will analyze the price patterns of AIOZ by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | AIOZ NETWORK PRICE PREDICTION 2025 | | | AIOZ NETWORK PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | AIOZ Network (AIOZ) Current Market Status | Current Price | \$0.2575 | 24 â€œ Hour Price Change | 7.87% Up | | 24 â€œ Hour Trading Volume | \$41.55M | | Market Cap | \$299.32M | | Circulating Supply | 1.16B AIOZ | All â€œ Time High | \$2.67 (On Apr 03, 2021) | | All â€œ Time Low | \$0.01105 (On Sep 12, 2023) | What is AIOZ Network (AIOZ) | TICKER | AIOZ | | BLOCKCHAIN | AIOZ Chain | | CATEGORY | Decentralized CDN & Edge Computing | | LAUNCHED ON | April 2021 | | UTILITIES | Staking, Payments, Governance, Storage, Streaming | AIOZ Network (AIOZ) is a decentralized content delivery and edge computing platform that leverages blockchain technology to revolutionize digital media streaming and cloud services. Built on its own Layer-1 blockchain, AIOZ enables users to share bandwidth and storage, creating a distributed network that reduces costs and enhances scalability compared to traditional content delivery networks (CDNs). The ecosystem supports decentralized applications (dApps) for streaming, file storage, and AI-driven computing. AIOZ operates on a proof-of-stake (PoS) consensus mechanism, ensuring security, efficiency, and sustainability. Its token, AIOZ, is used for transactions, staking, and governance. The network aims to disrupt industries like video streaming, cloud computing, and AI model hosting by offering a decentralized, censorship-resistant alternative to centralized providers. With partnerships and real-world use cases emerging, AIOZ Network is positioning itself as a key player in the decentralized internet economy, fostering a more open and cost-effective digital infrastructure. AIOZ Network (AIOZ) 24H Technicals (Source: TradingView) AIOZ Network (AIOZ) Price Prediction 2025 AIOZ Network (AIOZ) ranks 136th on CoinMarketCap in terms of its market capitalization. The overview of the AIOZ price prediction for 2025 is explained below with a daily time frame. AIOZ/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, AIOZ Network (AIOZ) laid out a Horizontal channel pattern. The Horizontal channel pattern is also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the price of AIOZ Network (AIOZ) was recorded at \$0.2575. If the pattern trend continues, then the price of AIOZ might reach the resistance levels of \$0.47221, \$1.07272, and \$5.37133. If the trend reverses, then the price of AIOZ may fall to the support of \$0.20786. AIOZ Network (AIOZ) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of AIOZ Network (AIOZ) in 2025. AIOZ/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of AIOZ Network (AIOZ) for 2025. | Resistance Level 1 | \$0.5270 | | Resistance Level 2 | \$1.2621 | | Support Level 1 | \$0.2416 | | Support Level 2 | \$0.1159 | AIOZ Resistance & Support Levels AIOZ Network (AIOZ) Price Prediction 2025 â€œ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of AIOZ Network (AIOZ) are shown in the chart below. AIOZ/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current AIOZ Network (AIOZ) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.3009Price = \$0.2540 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 40.8627 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | AIOZ Network (AIOZ) Price Prediction 2025 â€œ ADX, RVI In the below chart, we analyze the strength and volatility of AIOZ Network (AIOZ) using the following technical analysis indicators â€œ Average Directional Index (ADX) and Relative Volatility Index (RVI). AIOZ/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of AIOZ Network (AIOZ). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 16.0666 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 51.41 <50 = Low >50 = High | High volatility | Comparison of AIOZ with BTC, ETH Let us now compare the price movements of AIOZ Network (AIOZ) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs AIOZ Price Comparison (Source: TradingView) From the above chart, the price action of AIOZ is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of AIOZ also increases or decreases respectively. AIOZ Network (AIOZ) Price Prediction 2026, 2027 â€œ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of AIOZ Network (AIOZ) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | AIOZ Network (AIOZ) Price Prediction 2026 | \$5 | \$0.1 | | AIOZ Network (AIOZ) Price Prediction 2027 | \$7 | \$0.09 | | AIOZ Network (AIOZ) Price Prediction 2028 | \$9 | \$0.08 | | AIOZ Network (AIOZ) Price Prediction 2029 | \$11 | \$0.07 | | AIOZ Network (AIOZ) Price Prediction 2030 | \$13 | \$0.06 | Conclusion If AIOZ Network (AIOZ) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish AIOZ Network (AIOZ) price prediction for 2025 is \$1.2621. Comparatively, if unfavorable sentiment is triggered, the bearish AIOZ Network (AIOZ) price prediction for 2025 is \$0.1159. If the market momentum and investorsâ€™ sentiment elevate positively, AIOZ Network (AIOZ) might hit \$3. Furthermore, with future upgrades and advancements in the AIOZ ecosystem, AIOZ might surpass its current all-time high (ATH) of \$2.67 and mark its new ATH. FAQ 1. What is AIOZ Network (AIOZ)? AIOZ Network (AIOZ) is a decentralized content delivery and edge computing platform that leverages blockchain technology to revolutionize digital media streaming and cloud services. 2. Where can you buy AIOZ Network (AIOZ)? Traders can trade AIOZ Network (AIOZ) in the following cryptocurrency exchanges such as Coinbase Exchange, gate.io, KuCoin, Bybit, Bithumb, Crypto.com Exchange, Huobi, Bitfinex, LBank, CoinDCX. 3. Will AIOZ Network (AIOZ) record a new ATH soon? With the ongoing developments and upgrades within the AIOZ Network platform, AIOZ Network (AIOZ) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of AIOZ Network (AIOZ)? AIOZ Network (AIOZ) hit its current all-time high (ATH) of \$2.67 on Apr 03, 2021. 5. What is the lowest price of AIOZ Network (AIOZ)? According to CoinMarketCap, AIOZ hit its all-time low (ATL) of \$0.01105 on Sep 12, 2023. 6. Will AIOZ Network (AIOZ) hit \$3? If AIOZ Network (AIOZ) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$3 soon. 7. What will be the AIOZ Network (AIOZ) price by 2026? AIOZ Network (AIOZ) price might reach \$5 by 2026. 8. What will be the AIOZ Network (AIOZ) price by 2027? AIOZ Network (AIOZ) price might reach \$7 by 2027. 9. What will be the AIOZ Network (AIOZ) price by 2028? AIOZ Network (AIOZ) price might reach \$9 by 2028. 10. What will be the AIOZ Network (AIOZ) price by 2029? AIOZ Network (AIOZ) price might reach \$11 by 2029. - Nebraska has passed a law for crypto ATMs marking its entry into the crypto regulatory landscape. - Several US states in the past months have been shifting their perspectives towards the sector. The US regulatory sector is the prime of activity in 2025. Numerous advancements, bills passed, and laws enforced suggest that the nation is preparing for a boom in the crypto industry. While leading states made the initial steps, others are now paving the way for their citizens to join the digital assets community. Notably, the state of Nebraska announced in the past day that it would initiate the first step in joining the crypto regulatory landscape. According to a statement released roughly 12 hours ago, the state plans to introduce new rules for crypto ATM operators. Furthermore, the bill â€œLB609â€œ was signed by Governor Jim Pillen into law, which as aforementioned elucidates the regulations. In compliance with this law, operators must now hold licenses and disclose fees to the government. Additionally, they are also required to install anti-fraud protective measures. In the statement, Jim Pillen said: â€œCryptocurrency is an important, emerging industry â€œ and weâ€™ve been working hard to build Nebraska into a cryptocurrency leader,â€œ He further discussed how the officials didnâ€™t want criminals to be taking advantage of Nebraskans. Additionally, the state also plans to lay the groundwork for a safe and robust crypto industry. How Has the US Crypto Regulatory Landscape Shifted? The past few months have been in stark contrast to the previous year within the crypto regulatory landscape. While several complications regarding the SEC arose, the growth of the sector was greatly obscured by regulatory scrutiny. Moreover, the lack of clarity in both community members and regulators caused a lot of uncertainty in compliance. On the other hand, after the recent shift in administration, President Donald Trump has incorporated several crypto experts into the regulatory bodies. Subsequently, this has led to increased transparency between the government and crypto-based organizations and has fostered the growth of the crypto regulatory landscape. This past week has seen several state governments making advancements within the sector. Highlighted Crypto News

Today:

The crypto market made a strong comeback in a recovery following lower than expected U.S. inflation readings that eased investors' worries. Bitcoin crossed the \$84,000 barrier, and XRP topped \$2.25, with a 2.6% increase in global market capitalization to \$2.76 trillion. Why Is the Crypto Market Pumping? The U.S. Consumer Price Index (CPI) rose 2.8% year-over-year, just short of the predicted 2.9%, suggesting that inflation is maybe slowing down. Monthly inflation also increased just 0.2%, less than expected. The news eased fears of aggressive Federal Reserve policies, triggering a wave of risk asset euphoria in such assets as stocks and cryptocurrencies. Bitcoin's recent price hike follows after the correction of its March peak price of \$95,000 after Trump's government's proposed establishment of a strategic Bitcoin reserve. The token dipped to \$77,000 but has made a comeback and has tested resistance at \$90,000. Penetrating through this support level would push BTC to the price range of \$95,000-\$100,000, with \$80,000 still being very firm support. XRP's Rally and the SEC Lawsuit Settlement XRP increased by 6% in 24 hours, crossing \$2.25 as legal clarity improved. The SEC will close the case against Ripple, and a finalization of negotiations is underway. Ripple's lawyers are negotiating fewer penalties with conditions like a \$125M fine and the removal of bans on institutional sales. They believe that if other crypto firms are being cleared, Ripple should not be punished. The non-precedential nature of the case is keeping the ruling on hold, but a decision is imminent. The most critical resistance levels of XRP are \$2.8, \$3.5, and \$5, and the support lies at \$2. With cooling inflation, the sentiment remains bullish in the markets but there's plenty of volatility. If BTC is able to break \$90K, then the target might be \$100K. Macro uncertainty created by Fed policy and Trump's tariffs, though, could have some influence on direction. Traders will have to watch Fed announcements and major points of resistance as the next behemoth moves set in. Highlighted Crypto News Today Altcoins Under Pressure: Solana, Dogecoin, and Ethereum Face Critical Levels

Cryptocurrency is no longer a niche investment choice, but an increasingly mainstream opportunity. The journey for many starts with learning about the best cryptos for beginners, and this article will delve into three noteworthy cryptocurrencies: Qubetics, Sonic (formerly Fantom), and Bitcoin Cash. Each of these projects offers unique value propositions for backers, participants, and early adopters looking for exciting, secure, and scalable options in the blockchain space. While Bitcoin Cash has seen steady support among digital finance enthusiasts, Sonic's rebranding from Fantom represents a significant evolution, and Qubetics is making waves with its promising presale figures. This article will take a closer look at why these three cryptos are gaining traction among new and experienced community members alike, offering an insightful view into their current standing in the market. At the forefront of innovation, Qubetics addresses challenges that have plagued blockchain systems, focusing on real-world applications and delivering solutions where previous projects have fallen short. The Qubetics presale has already raised substantial funds and has become a hot topic among early adopters, signaling its potential for long-term success. Qubetics: A New Era in Blockchain and Digital Finance Qubetics (STICS) is a blockchain project that is revolutionizing the way cross-border transactions are handled. It aims to simplify and streamline financial transactions for businesses, professionals, and individuals, providing a much-needed solution to the complexities of international money transfers. As one of the best cryptos for beginners, Qubetics makes it easy for anyone to participate in the global economy without the usual barriers associated with traditional financial systems. Currently, the crypto presale is in its 25th stage, and more than 499 million STICS tokens have been sold, raising over \$14.9 million from more than 22,900 holders. This ongoing presale offers STICS at \$0.1074, with analysts predicting a price surge to \$0.25 by the end of the presale, which translates into a potential ROI of 132%. Furthermore, once the presale concludes, Qubetics could see significant price increases, with forecasts predicting a value of up to \$10 per token after the mainnet launch, delivering a jaw-dropping 9,206% ROI. The Qubetics presale has generated significant buzz due to its impressive performance and the token's projected growth. With its focus on solving real-life problems, such as cross-border payment challenges, Qubetics stands out as a promising addition to any crypto portfolio. In fact, some analysts are predicting that STICS could hit \$1 post-presale, offering a potential ROI of 830%. Even more exciting is the forecast for \$5 per token, which would yield a staggering 4,553% ROI, and some projections even place STICS at \$15 after the mainnet launch. This immense growth potential makes Qubetics one of the most talked-about cryptocurrencies for early adopters and those seeking high returns. The presale's success is a testament to the increasing demand for efficient, scalable solutions in the digital finance sector. Sonic: The Rebranding of Fantom for Scalability and Speed Sonic (formerly Fantom) has recently undergone a significant rebranding, emerging as one of the best cryptos for beginners. With its enhanced scalability and high-performance features, Sonic offers something for those looking to dive into the world of decentralized finance (DeFi) and blockchain technology. Its infrastructure is capable of processing 10,000 transactions per second with sub-second finality, making it an ideal choice for anyone seeking a fast, reliable, and secure crypto platform. By being compatible with both Solana Virtual Machine (SVM) and Ethereum Virtual Machine (EVM), Sonic brings versatility to developers and participants. Whether you're looking to build dApps or explore DeFi opportunities, Sonic provides the tools and technology to support various projects, making it one of the most accessible cryptos for beginners. Bitcoin Cash: Resilience in a Tumultuous Market Bitcoin Cash (BCH) has proven its resilience over the years, particularly when compared to Bitcoin's price movements. BCH recently faced a 5% dip but managed to stabilize above the \$345 mark, showcasing its strength in the face of market downturns. While Bitcoin experienced a sharper loss of 8%, BCH held steady, making it an appealing option for backers seeking a relatively stable alternative to more volatile coins. Despite the short-term pullback, BCH has demonstrated strong support at key price levels, and its ongoing market presence continues to attract participants looking for opportunities in the world of digital assets. Whether you're new to crypto or a seasoned participant, Bitcoin Cash remains one of the best cryptos for beginners due to its established track record and continued network development. Conclusion: Get in Early, Reap the Rewards When it comes to the best cryptos for beginners, Qubetics, Sonic, and Bitcoin Cash each bring something unique to the table. Qubetics is paving the way for a new era of cross-border transactions, Sonic is providing unparalleled scalability and performance, and Bitcoin Cash remains a stronghold of stability in a volatile market. Whether you're looking to take part in a promising presale, explore new blockchain solutions, or simply diversify your digital portfolio, these three projects offer incredible opportunities for backers, participants, and early adopters alike. Don't miss out on the chance to be part of the next big thing in blockchain technology. As the market continues to evolve, these cryptos are well-positioned for long-term success. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs - What makes Qubetics a good choice for beginners? Qubetics offers a user-friendly platform with easy access to cross-border transactions and a clear roadmap for growth, making it ideal for beginners who want to get started with a blockchain solution that provides real-world utility. - How does Sonic differ from other blockchain platforms? Sonic stands out due to its compatibility with both Solana and Ethereum Virtual Machines (SVM and EVM), offering versatility and scalability that other platforms may lack. Its high performance makes it a great option for participants looking for speed and reliability. - Why is Bitcoin Cash considered stable? Bitcoin Cash has demonstrated stability by maintaining support at key price levels even during market downturns, unlike more volatile cryptocurrencies. This resilience makes BCH an appealing choice for backers seeking a steady investment in crypto. - How can I participate in the Qubetics presale? The Qubetics presale is currently in its 25th stage, and participants can buy STICS tokens at \$0.1074. This presale offers an opportunity for early adopters to benefit from potentially high returns once the mainnet launches. - What is the expected ROI for STICS tokens? Analysts predict that STICS could offer substantial returns, with projections suggesting a price of \$0.25 by the end of the presale, and \$1 after the presale, offering an 830% ROI. After the mainnet launch, prices could rise to \$10 or even \$15, leading to returns of up to 13,859%. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Asset manager Franklin Templeton has submitted its S-1 filing for an XRP ETF. - Several altcoins have seen ETF filing by major firms in the last few months. As the crypto market begins another attempt at price revival, community members seem to have turned over a positive leaf. The overall market cap shows a 2.73% increase, and Bitcoin has retraced to its Monday trading level of \$82,000. As whales and investors wade through this consolidation phase, other subsectors show surging activity. For instance, this past two months saw several asset management firms filing for altcoin ETFs. In the past day, VanEck filed for an Avalanche ETF drawing market attention. Notably, another prominent player in the ETF sector, Franklin Templeton has filed for an XRP ETF with the SEC. Moreover, ETF Store President Nate Garcia shared the news in an X post, with a snapshot of the filing. The firm has submitted the S-1 filing, one of the preliminary steps for launching an ETF. Although the SEC has not yet responded, community members speculate delays in the regulator's response. Other firms that have filed for an XRP ETF are Bitwise, Grayscale, and WisdomTree as per leading media reports. Other altcoins including Cardano, Solana, and as aforementioned, Avalanche have been competing for ETF issuers attention. This recent development suggests that XRP might be the next altcoin ETF to make its debut. Will the XRP ETF Win the Race Against Other Altcoins' ETF? In late 2024, and the first two months of 2025, the XRP ETF launch showed fluctuating movements. At certain points, Litecoin seemed to be advancing with SEC approvals. However, in February, the Ripple token's ETF saw shifting landscapes. Notably, Bitwise received approval from the SEC for its filing in the middle of February. Meanwhile, Grayscale reports that its filing is under review with the regulator. Franklin Templeton's filing tips the scales towards XRP over other altcoins. Amid ETF activity, community members have been speculating if this advancement will cause the altcoin to rally significantly. Presently, the spot Bitcoin and Ethereum ETFs have continued to hold stable market attention over the past year. Highlighted Crypto News Today: Solana's Price Faces Bearish Pressure as Meme Coin Frenzy Fades

Cryptocurrency enthusiasts know that timing is everything when it comes to making big moves in the market. Whether you're a seasoned crypto trader or just getting started, the search for the best altcoins to buy and hold for the short term never stops. And let's be honest, finding those hidden gems that promise big rewards without the long wait is like striking gold. In 2025, there are some exciting projects on the radar that are quickly gaining attention for their real-world utility and growth potential. Qubetics, Render, and Arbitrum (ARB) have been making waves, each carving out a unique niche in the crypto ecosystem. But what makes them stand out from the crowd? Why are they among the best altcoins to buy and hold for short term gains? Let's dive into these three projects and explore why they're catching the eyes of crypto enthusiasts across the globe. It's no secret that blockchain technology is transforming industries left and right, but some projects are pushing the boundaries even further. Take Qubetics, for example. This up-and-coming blockchain solution is changing the game with its focus on interoperability. For businesses, professionals, and individuals, Qubetics promises to bridge the gap between different networks, making it easier to access and use decentralized technologies. But what about the other two heavyweights, Render and Arbitrum? Let's break them down one by one. Qubetics: The Future of Blockchain Interoperability When it comes to the best altcoins to buy and hold for the short term, Qubetics (STICS) is definitely making a name for itself. This project is revolutionizing blockchain interoperability, making it easier for businesses and individuals to communicate across various networks. The demand for interoperability is huge, and Qubetics has developed a platform that can truly bridge the gaps. Qubetics Presale Details - Current Stage: 25th presale stage - Tokens Sold: Over 499 million tokens - Number of Holders: More than 22,800 - Funds Raised: Over \$14.9 million - Current Price of STICS: \$0.1074 per token - Potential Price Increase: Analysts predict the price could rise dramatically after the crypto presale ends - Estimated Value at Mainnet Launch: \$1 to \$5 per STICS token ROI Potential - After Presale: Up to a 13,859% return on investment (ROI) - Post-Mainnet Launch: Up to a 15,255% ROI What makes Qubetics stand out is its ability to make blockchain technology more accessible and scalable for everyday use. Whether it's businesses looking for easier ways to manage decentralized networks or professionals seeking seamless cross-chain transactions, Qubetics is solving problems that many previous blockchain solutions couldn't. As more industries embrace decentralized tech, Qubetics is well-positioned to be a key player in the space. Qubetics: Huge Potential for Early Holders - Early Holder Rewards: Potential for huge rewards by getting in early - Blockchain Sector: Qubetics is addressing a much-needed sector in the blockchain world - Short-Term Gains: Positioned as one of the best altcoins for short-term gains - Exciting Projects: Don't overlook other promising projects in the crypto space Render Network Advances Decentralized AI and GPU Rendering Solutions At ETH Denver 2025, Render Network co-hosted a Day: Dawn of the Agents, bringing together leaders in decentralized AI to discuss the convergence of decentralized physical infrastructure networks (DePIN) and AI protocols. Render's Trevor Harries-Jones highlighted the potential of distributed GPUs in efficiently handling AI workloads, thereby enhancing accessibility for decentralized AI development. Render Network announced plans to release product update videos and news related to AI generation on its official Twitter account in the coming days. Render Token is scheduled to participate in the Solana AI Summit in San Jose on March 16, 2025. This event will provide insights into Render's role in AI and blockchain integration. Render Network's decentralized GPU rendering platform offers a solution to high GPU prices by enabling professionals to rent computing power from those with idle GPUs, expanding

accessibility and bridging the gap between demand and supply. Render Network's active participation in industry events and its commitment to integrating AI with decentralized GPU rendering underscore its dedication to advancing the future of media and computing. Arbitrum: Growth Initiatives and Security Updates Arbitrum, a leading Ethereum Layer 2 scaling solution, has been actively enhancing its platform through strategic initiatives and addressing security challenges. Offchain Labs, the team behind Arbitrum, introduced the ARB Strategic Purchase Program to bolster the Arbitrum ecosystem's growth. This initiative involves systematically acquiring ARB tokens to enhance liquidity and stability, reinforcing Offchain Labs' commitment to the platform's long-term success. Blockchain security firm CertiK identified a signature verification vulnerability within Arbitrum, leading to the theft of approximately \$140,000 from various smart contracts. This incident underscores the necessity for robust security measures in DeFi platforms to protect user assets. As a prominent Layer 2 solution, Arbitrum significantly improves Ethereum's scalability by offloading transactions to sidechains. This approach results in faster and more cost-effective transactions while maintaining Ethereum's security. Major decentralized applications (dApps) like GMX, Radiant, Uniswap V3, and Gains Network operate on Arbitrum, contributing to its substantial total value locked (TVL). The Importance of Blockchain Interoperability in 2025 Blockchain interoperability is becoming one of the most critical components in the future of decentralized finance and technology. With so many different blockchains and platforms emerging, the ability to transfer assets, information, and data across networks will be essential for their continued growth and adoption. Qubetics is at the forefront of solving this issue, offering a platform that allows seamless communication between different blockchain networks. As more and more businesses and individuals seek to integrate blockchain into their daily operations, interoperability will become a key factor in determining the success of blockchain-based solutions. This is why projects like Qubetics, which focus on interoperability, are quickly gaining attention. Conclusion: The Best Altcoins to Buy and Hold for Short Term With their unique solutions to pressing problems in the crypto world, Qubetics, Render, and Arbitrum are shaping the future of blockchain technology. Whether it's Qubetics' interoperability, Render's decentralized cloud rendering, or Arbitrum's scalability improvements to Ethereum, these projects are on track to make a significant impact in the short term. So, if you're looking to diversify your crypto portfolio with some of the best altcoins to buy and hold for short-term gains in 2025, keep a close eye on these three. Don't miss out—these projects are on the rise, and the potential for growth is huge. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is showing unprecedented volatility in 2025, with established players like Chainlink (LINK) expanding enterprise partnerships, TRON (TRX) enhancing security measures, and Solana (SOL) attracting major whale investments. Yet amidst this landscape, one newcomer is capturing serious attention: Bitilemons (\$BLEM), whose revolutionary GambleFi protocol is already disrupting the \$450B traditional casino market with a fully operational platform generating actual revenue while still in presale—potentially positioning early investors for gains exceeding 1700% when it hits exchanges. Are You Missing Out on Bitilemons' Unstoppable Momentum? Bitilemons is pioneering the convergence of cryptocurrency and online gambling through its innovative GambleFi protocol. With over 8,000 games from premium providers like Evolution and Pragmatic, Bitilemons generates revenue 24/7 while other projects merely speculate. The platform has secured \$1 million in private seed funding, with Stage 1 of the presale selling out in just 16 days and Stage 2 over 90% complete. It raised \$1,893,188, with only 3,197,155 BLEM tokens remaining before the price increases again. What truly elevates Bitilemons is its ironclad security foundation with dual audits from SpyWolf and SolidProof, and its robust tokenomics: 30% of all Gross Gaming Revenue flows to tokenholders (15% for buybacks/burns and 15% for staking rewards). With the current presale price at just \$0.02 and rumors of a listing price between \$0.17-\$0.18, early investors look at potential returns exceeding 1700% once BLEM hits major exchanges. Will LINK's Oracle Dominance Push It Past \$50? Chainlink continues to cement its position as the leading decentralized oracle network, providing critical infrastructure for the entire DeFi ecosystem. Recent price movements have shown resilience despite market volatility, with LINK currently trading at \$13.98 while expanding its enterprise partnerships at an unprecedented rate. The recent Cross-Chain Interoperability Protocol upgrade has significantly enhanced Chainlink's capability to facilitate secure communication between blockchains. With technical analysts pointing to key resistance levels at \$16 and \$20, LINK could emerge as one of the strongest performers in the next crypto cycle, potentially reaching \$35 within months if broader market momentum continues. How Is TRX Positioning for Its Historic Breakout? TRON's recent security initiatives have captured market attention, particularly the T3 Financial Crime Unit's success in freezing over \$100 million in USDT assets linked to criminal activity. This proactive approach to network security has attracted significant institutional interest to the platform that processes over 2,000 transactions per second. Currently trading at \$0.2328, TRX shows remarkable price stability while building strong technical foundations. With the recent formation of a golden cross on the daily chart and increased staking activity, TRX appears poised for substantial upward movement, with market observers targeting the \$0.35-\$0.40 range in the near term. Can SOL's Surge Continue After Whale's \$12.4M Stake? Solana's ecosystem is buzzing with activity following a major whale's decision to withdraw and stake 96,180 SOL (approximately \$12.45 million)—a decisive vote of confidence in the network's long-term potential. Currently trading at \$127.41, SOL has established strong support around the \$120 level while continuing to advance its technical capabilities. With several major protocol upgrades scheduled for Q2 2025, its vibrant NFT marketplace, and growing DeFi ecosystem positioning SOL as a genuine Ethereum competitor, analysts are projecting SOL could test previous all-time highs above \$250, representing a potential doubling of current investments. Why BLEM Outshines All Other Investment Opportunities While LINK, TRX, and SOL present compelling cases, Bitilemons stands alone with its fully operational revenue-generating casino platform. Unlike projects that are still building their products, BLEM's value is directly linked to actual revenue through systematic buybacks and staking rewards. With Stage 2 of the presale 90.22% complete and only 8 days remaining before the next price increase, the window for maximum returns is rapidly closing. Discover the Exciting Opportunities of Bitilemons (\$BLEM) Presale Today - Website: <https://presale.bitilemons.io/> - Socials: <https://linktr.ee/bitilemons> [Disclaimer: This is a sponsored article and is for informational purposes only. - VanEck filed for the first Avalanche ETF in Delaware amidst increasing altcoin ETF filings. - AVAX price dropped over 10% today despite a surge in its trading volume. Altcoin ETF filings have been increasing ever since the Trump administration began in the US. Ether, Solana, XRP, and ADA cryptocurrencies have already entered the ETF race. Recently, SUI ETF was also filed by Canary Capital in Delaware. Today, VanEck introduced yet another cryptocurrency, AVAX, to the growing ETF filings. One of the top asset management companies, VanEck, has recently registered an Avalanche ETF Fund in Delaware. Official records from Delaware state website also confirm the filing from VanEck. In line with the previous filings, VanEck also registered the Avalanche ETF as a trust corporate service company. This marks the fourth crypto ETF registration by VanEck. Bitcoin, Ether, and Solana are the first three cryptocurrencies filed for ETF products by this organization. VanEck was one of the first global firms to file for Solana ETF way before in June 2024. Avalanche Token AVAX Drops Over 10% Today Avalanche native token AVAX price dropped by more than 10% today amidst broader market slump. At press time, AVAX is trading at \$16.96 with more than 4% drop in the last 24 hours. While its 24-hour high is \$18.6592, it dropped to as low as \$15.42 earlier today. However, its 24-hour trading volume surged by more than 66%. The crypto community is hoping for an AVAX price rise as VanEck's ETF filing might improve investor sentiment. Despite the ongoing price drop, the crypto community is 86% bullish and 14% bearish on AVAX price. Once the broader crypto market gets past the present bear run, AVAX price might witness a considerable surge. - Movement (MOVE) trades at \$0.4932, marking a 1.22% increase in the last 24 hours. - A breakout above \$0.5092 could push MOVE toward \$0.55. Movement (MOVE) is trading at \$0.4932, gaining 1.22% in the past day. The market cap stands at \$1.18 billion, reflecting the same percentage increase. The trading volume surged 55.88%, reaching \$379.63 million in 24 hours. The fully diluted valuation (FDV) is \$4.93 billion, with a 32.26% market cap ratio. MOVE's circulating supply is 2.4 billion out of a 10 billion total supply. Technical Indicators and Price Outlook The 4-hour chart from TradingView shows MOVE facing resistance and support at key levels. Immediate resistance stands near \$0.5092, while support is forming at \$0.4895. If resistance breaks, MOVE could rise toward \$0.55. A drop below support may lead to \$0.45. The Relative Strength Index (RSI) is at 51.95, hovering near the neutral zone. Its moving average is 50.50, suggesting weak momentum. The RSI indicates a balanced market with neither overbought nor oversold conditions. The Chaikin Money Flow (CMF) is negative at -0.12, signaling outflows and declining buying pressure. If CMF remains negative, MOVE may struggle to sustain gains. Moving averages (MA) show mixed trends. Short-term MA is trending near \$0.50, while long-term MA stays above, indicating consolidation. A crossover could confirm a stronger breakout or downturn. MOVE's price action depends on breaking resistance or holding support. A bullish breakout above \$0.5092 could trigger further gains. However, declining CMF suggests caution. Traders should watch for increased volume and a positive RSI shift before confirming upward momentum. Highlighted Crypto News Today Coinbase Eyes Indian Market Again with FIU Registration Complete

- Arkham Intelligence token ARKM price surged over 14% in the last 24 hours. - South Korean Upbit exchange announced ARKM listing earlier today. The crypto market is crashing miserably along with major altcoins and Bitcoin. While Bitcoin reached a bottom of \$76K price range, major altcoins such as Ether, XRP, Solana, DOGE, and ADA are recording price drops. Meanwhile, very few of the cryptocurrencies such as ARKM and RAD stood out with price gains. Arkham Intelligence token ARKM is trading at \$0.5886 with a 14% price surge in the last 24 hours at press time. It is one thing to record gains and another thing to stand out with a price hike amidst a bearish market. The ARKM token stood out from the rest of the cryptocurrencies with its price surge. While ARKM market cap also surged to \$131.64 million, its 24-hour trading volume witnessed a huge spike of 473%. The increased investor interest is clearly reflected in the trading volume surge of ARKM tokens. And, the community sentiment around ARKM tokens is also bullish amidst the present broader market slump. ARKM Token Surges Following Arkham Wallet Tracking Launch and Upbit Token Listing Announcement Arkham Intelligence is a blockchain analytics platform that tracks on-chain data and transactions. It recently rolled out a new feature to track wallets of X users who have more than 100,000 followers. The wallets of these influencers can be tracked on Arkham under the Key Opinion Leader (KOL) label. Arkham usually tracks and reports whenever there is a large crypto transaction from major players of the industry. With the new feature, users can track wallets of KOLs as well. Arkham Intelligence continues to offer more features to expand its services. Another major reason behind ARKM's price surge is its token listing announcement from Upbit. Being one of the largest crypto exchanges, Upbit listing this token pushed the ARKM price to new levels. Right after the announcement, the token price witnessed a sharp price hike and wreaked a peak of \$0.705. However, it is now trading in the \$0.5 range after correction. Highlighted Crypto News Today:

- The global crypto market cap declined by 1.48% to \$2.63T as investor sentiment weakened. - Market liquidations hit \$620M, with long positions facing \$527M in losses. The global crypto market cap fell to \$2.63 trillion, marking a 1.48% decline in the last 24 hours. The downturn follows persistent outflows from crypto investment products and concerns over President Donald Trump's economic policies. The cryptocurrency market remains under pressure as investors react to Trump's trade tariffs and budget cuts. His latest statements indicate that his policies may cause short-term economic pain. He compared his approach to former Federal Reserve Chair Paul Volcker's 1980s policies, which initially hurt the economy but later stabilized it. The U.S.-China trade war continues to add uncertainty. China recently imposed tariffs on U.S. agricultural goods in response to Trump's latest trade restrictions. Federal Reserve Chairman Jerome Powell's cautious stance on interest rates has kept traders on edge. Weak U.S. job numbers further fueled fears of economic instability. Bitcoin and Altcoins Decline Bitcoin (BTC) dropped 4% in the last 24 hours, trading at \$80,968. Ethereum (ETH) fell 3.2% to \$1,903. Solana (SOL) and XRP saw larger losses, declining 7.2% and 4.5%, respectively. Despite a minor 4-5% recovery, the broader market remains in the red. On March 10, the crypto market erased gains from Trump's US Crypto Strategic Reserve announcement, falling 14.7% in seven days. The market's reaction suggests that investors are prioritizing economic concerns over Trump's pro-crypto stance. The market slump led to \$620 million in liquidations in the past 24 hours. Long positions accounted for \$527 million in losses, signaling traders' reduced confidence. Bitcoin recorded \$241 million in liquidations, while Ethereum followed with \$114.76 million. The increased market supply from forced liquidations contributed to the downward trend. Traders remain cautious as Bitcoin approaches its

2025 low of \$78,000. Digital asset investment products faced outflows for the fourth consecutive week, totaling \$876 million. Bitcoin saw the biggest withdrawals, losing \$756 million in investments. Total assets under management dropped by \$39 billion to \$142 billion, the lowest since mid-November 2024. Highlighted Crypto News Today Bearish Indicators Keep Shiba Inu (SHIB) Price Under Pressure

- Bitcoin has factored in a modest price drop of 2.39% in the last 24 hours. - The cryptocurrency tested a support level of \$76,707 in the past day as per CMC data. While community members raise havoc by watching their largest profits disappear, analysts remain positive. Over the past few weeks, several experts had predicted that Bitcoin and the alt sector would retract the bull run before bouncing back up. As this materializes into reality, speculations of a bigger cycle arise. Notably, in the last 24 hours, Bitcoin has factored in a modest price drop of 2.39%. This drop, however, caused it to break the \$80,000 support in the late evening hours of March 10. Presently, the cryptocurrency is dabbling across the \$79K - \$80K border. However, as aforementioned analysts predict further dips. Inferring its daily price chart, Bitcoin depicts combating the \$82K resistance in the morning hours of March 10, after which it gave in to bears. Its intra-day low stands at \$76,707, meanwhile, experts such as Arthur Hayes field mark \$69,000 as the next key support. At the time of writing, BTC was trading at \$80,277 as per CMC data. Moreover, Ali also outlined how the third year of a bull run tends to be unpredictable from historic data. He stated that the year tends to hold uncertainty, volatility, and big shakeouts, on the other hand, traders who navigate it tend to land profits. Is the Bitcoin Drop Part of a Bigger Bull Cycle? Multiple market experts including the aforementioned have viewed the recent dip as essential for an incoming rebound in Bitcoin price. In case of further downward movements, the digital asset might test support levels of \$76,496 and \$74,785 in the coming days. With the current movements mirroring experts' predictions, this recent move might be part of a bigger bull cycle. Additionally, Bitcoin's bear power indicator value stands at -5.07 while the bull power indicator stands at 0.69. This further confirms the bearish market dominance. The resultant sell-offs have caused the RSI value to dip to 35.55 as per TradingView data. Finally, the largest cryptocurrency's price drop can be seen reflected in other altcoins such as Ethereum and Solana.

Bitcoin and Shiba Inu have long dominated headlines as icons of the crypto revolution. Bitcoin, the undisputed pioneer, turned early adopters into millionaires. Shiba Inu, the playful meme token, skyrocketed to fame with its viral growth and meme-fueled momentum. But ask any experienced investor, and they'll tell you these giants have had their time. The spectacular returns they once offered are now a thing of the past. If you're hunting for a life-changing opportunity in cryptocurrency, look beyond yesterday's successes. Let's talk about BinoFi (BINO), the rising-star token that could eclipse the golden days of its predecessors. Cryptocurrency prizes innovators, and BinoFi is proving to be just that, a player set to shake up the way we trade and invest in digital assets. Analysts are beginning to whisper about its potential for exponential returns, with some suggesting it could transform a modest \$5,000 investment today into half a million dollars by the close of 2025. Daring? Sure. But there's a growing case for why this hybrid crypto exchange and ecosystem might just live up to the buildup. A Fresh Start with Proven Innovation What sets BinoFi apart is its raw potential and wide-reaching vision. At a time when the crypto market is full of fragmented trading systems and security concerns, BinoFi steps in to bridge the gaps. Its hybrid exchange model borrows the speed and liquidity of centralized platforms and pairs them with the transparency and user autonomy of decentralization. Yet, this isn't simply another evolutionary step—it's a reimagining of what trading can and should be. Beyond sophisticated trading mechanics, BinoFi introduces meaningful usability upgrades. Its Multi-Party Computation (MPC) wallets, for instance, balance security with simplicity, eliminating barriers that scare off everyday users. BinoFi's cross-chain functionality, allowing direct asset swaps across separate blockchains without bridges, feels less like an upgrade and more like a complete reinvention of interoperability. This is where investors see a spark reminiscent of Bitcoin's early days or Shiba Inu's youthful rise, a project that isn't simply catering to the market but leading it toward its next frontier. And that's enough to ignite imagination and excitement, especially during a time when top tokens feel more like slow, lumbering institutions than explosive opportunities. The Presale That's Turning Heads A central piece of BinoFi's story lies in its presale—a bold entryway into the market designed not just to raise funds, but to prime early adopters for extraordinary gains. Savvy crypto investors know that presales can offer a golden ticket. With lower prices and exclusive perks, they provide a rare opportunity to invest in a token before it hits the major exchanges and gains mainstream attention. For BinoFi, this moment represents more than an early-stage token offering. It's a statement—this project isn't here to blend in. It's here to dominate. The presale is structured to attract long-term investors, offering substantial bonuses and incentives for early contributors. These aren't just empty gestures but designed to ensure compounding benefits for participants who join during its infancy. Importantly, the presale also reflects the project's commitment to long-term growth, with detailed mechanisms to stabilize the token price and foster trust. Industry whispers suggest major institutional players are eyeing the presale, which underscores its significance. And with incentives aimed at rewarding the first movers, smaller retail investors have a distinct advantage if they act quickly. Predictions Heading Toward 2025 Fueled by its hybrid technology, unique trading model, and a rising demand for decentralization and interoperability, analysts predict rapid adoption once the token is fully launched. Early estimations suggest a valuation that could rival mid-cap cryptocurrencies within two years, with a trajectory that mirrors the meteoric initial growth of projects like Solana. By 2025, investor models project BinoFi hitting milestones that would make current prices seem laughably low. Its current entry point, accessible to practically any retail investor, offers the kind of upside rarely seen since Bitcoin's days. But raw profits aside, what really drives these predictions is the ecosystem itself. BinoFi isn't being built as a trendy, hyped-up token, it's being designed as a critical infrastructure layer that could quietly and consistently power an overlooked corner of the crypto market. This is how the biggest winners emerge, not by copying trends but by creating them. Why Timing Matters Anyone who has watched the crypto space long enough knows that timing is everything. Bitcoin in 2011, Ethereum in 2014 and Solana in 2020. Miss those moments, and your portfolio reflects the difference. BinoFi's current stage feels just like one of those pivotal market moments. It's in its infancy—underpinned, under-hyped, but undeniably positioned to capitalize on massive structural changes across the industry. The question isn't whether BinoFi will grow, but how far. For investors still waiting on the sidelines, this moment might well be the last stop before BinoFi's trajectory takes off into uncharted heights. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. In the world of cryptocurrency, it's all about getting in early on projects with massive potential. Every year, new coins and tokens rise to the surface, promising incredible returns for those savvy enough to recognize them. But with so many options out there, it can be tough to know where to look. So, what are the top coins to join today for massive return potential? Well, three projects are gaining serious traction and setting themselves apart in the crypto space: Qubetics, Aptos, and Artificial Super Intelligence Alliance (ASIA). Each one is pushing the envelope in its own way, offering unique solutions to some of blockchain's biggest challenges. Qubetics, for example, is revolutionizing the way people store and manage cryptocurrencies with its Non-Custodial Multi-Chain Wallet. But that's just the tip of the iceberg—the project has already raised millions in its ongoing presale, attracting thousands of holders. On the other hand, Aptos is carving out its place as one of the fastest and most scalable blockchains in the market, while ASIA is merging AI with blockchain to bring intelligent systems to industries across the globe. So, what's the connection between all of them? They're all offering something different, but they share one key thing: massive return potential. If you're looking to get in on some of the top coins to join today, these three are the ones you don't want to miss. Let's dive into each one and see why they're making waves in the crypto world. Qubetics: Revolutionizing Blockchain with Non-Custodial Multi-Chain Wallets It's no secret that the crypto world is buzzing with anticipation about new projects promising massive returns. If you're looking for the top coins to join today for massive return potential, you've likely already heard of Qubetics (STICS). Currently, in its 25th crypto presale stage, Qubetics has already sold over 498 million tokens, raising more than \$14.9 million, with over 22,700+ holders along the way. The future looks promising for this coin, and its Non-Custodial Multi-Chain Wallet might just be the secret sauce behind its long-term success. The Non-Custodial Multi-Chain Wallet that Qubetics offers is a game-changer for both businesses and individual crypto enthusiasts. With this wallet, users maintain control over their private keys, meaning they are never at the mercy of third-party custodians. You have full control, without any intermediary risks, making it ideal for anyone looking to enter the crypto space but with concerns about privacy and security. The multi-chain feature enables users to interact seamlessly across multiple blockchain networks, ensuring maximum flexibility and reducing fragmentation. What really sets Qubetics apart from its competitors is how it combines top-tier security with user-centric functionality. For businesses and professionals, this wallet simplifies the entire process of managing multiple cryptocurrencies, offering a convenient, secure, and efficient way to store assets. The platform's interoperability will allow users to interact with other blockchain projects and DeFi platforms without friction, offering opportunities that other projects simply can't provide. When you're looking for the top coins to join today for massive return potential, Qubetics stands out with its impressive tokenomics, accessibility, and a bright future in digital finance. As the platform continues to grow and evolve, early participants stand to gain significant returns from holding STICS tokens, with projections suggesting ROI percentages as high as 830% after the presale ends. Aptos Makes Strategic Move with Spot ETF Application Bitwise Asset Management filed for a spot Exchange-Traded Fund (ETF) that would track Aptos (APT), the innovative Layer-1 blockchain platform. Aptos, which gained attention for its scalability and potential to challenge competitors like Solana, has experienced significant growth in 2024. The application for a spot ETF marks a new phase in its expansion, highlighting the increasing institutional interest in the platform. The move could signal more widespread adoption of Aptos, opening the door to more mainstream investment options in the blockchain ecosystem. Aptos's technological advancements, including its high throughput and low latency, make it a standout contender in the blockchain space. Artificial Superintelligence Alliance: Revolutionizing DeFi with ASI-1 Mini Fetch.ai Inc., the organization behind the Artificial Superintelligence Alliance (ASI), unveiled the ASI-1 Mini, touted as the first Web3 Large Language Model (LLM) designed for decentralized finance (DeFi). The ASI-1 Mini is a breakthrough in AI-powered blockchain technology, offering a highly efficient, automated solution for various DeFi applications. This launch comes on the heels of increased interest in the integration of artificial intelligence with blockchain, as AI capabilities continue to expand. The ASI-1 Mini promises to deliver faster and more accurate decision-making, enabling smarter, decentralized applications. Despite a slight dip in the market, the token of the Artificial Superintelligence Alliance (FET) remains a promising asset with a significant role to play in the future of decentralized AI-driven solutions. Non-Custodial Multi-Chain Wallet: The Future of Crypto Transactions It's time to get a deeper look into the concept that is driving Qubetics and other blockchain projects forward—the Non-Custodial Multi-Chain Wallet. This type of wallet provides users with full control over their funds, unlike custodial wallets where third-party companies manage the private keys. A non-custodial wallet is ideal for people who value privacy and autonomy in their crypto dealings. For those new to the crypto world, it's the best way to ensure you're not exposing yourself to unnecessary risks or fees. Qubetics' Non-Custodial Multi-Chain Wallet doesn't just allow users to hold multiple cryptocurrencies; it also enables seamless interaction with various decentralized platforms. For businesses, this means you can easily integrate with multiple blockchain ecosystems, while individuals enjoy a simple yet robust tool for managing their assets securely. Whether you're staking tokens or trading on decentralized exchanges, this wallet simplifies everything, making it one of the top options for those looking to maximize returns in the crypto space. As blockchain technology continues to develop, the importance of non-custodial wallets will only increase. With users demanding more privacy and control, projects like Qubetics that offer multi-chain wallets will be at the forefront of this revolution. If you're considering the top coins to join today for massive return potential, don't overlook the power of a secure and versatile wallet solution. Conclusion: Top Coins to Join Today for Massive Return Potential Looking for the top coins to join today for massive return potential? Qubetics, Aptos, and Artificial Super Intelligence Alliance are all vying for a place at the top, each bringing something unique to the table. Whether it's Qubetics' innovative non-custodial wallet, Aptos' lightning-fast scalability, or ASIA's revolutionary AI-powered blockchain solutions, each of these projects is designed to solve real-world problems and provide massive growth potential. However, if you want to get in on the ground floor of a game-changing crypto project, Qubetics stands out as the most exciting opportunity. With its advanced non-custodial multi-chain wallet, security-first approach, and impressive presale numbers, STICS token is a must-have for anyone looking to secure massive returns. The Qubetics presale is still in progress, and the chance to get in at such an early stage could prove to be incredibly lucrative.
