

Through Its New Platform

- Ethereum's scaling phase aims for over 100,000 transactions per second. - Layer 2 rollups and proto-danksharding enhance transaction efficiency. Vitalik Buterin, co-founder of Ethereum, has outlined the blockchain's ambitious future in a two-part blog series. His latest post, "Possible Futures for the Ethereum Protocol, Part 2: The Surge," sheds light on the next major phase following Ethereum's transition to Proof of Stake (PoS) in 2022. Known as "The Merge," this previous milestone drastically reduced Ethereum's energy consumption and was the first step in a broader plan to make the network more scalable and secure. Possible futures for the Ethereum protocol, part 2: The Surge <https://t.co/DdEUpV4zQN> - vitalik.eth (@VitalikButerin) October 17, 2024 In "The Surge," Buterin highlights Ethereum's focus on scaling solutions, specifically targeting transaction throughput. The post emphasizes the critical role of Layer 2 rollups and "off-chain" protocols that handle transactions before settling them on the Ethereum mainnet. Moreover, integrating shard chains and introducing proto-danksharding (EIP-4844) are key strategies for achieving Ethereum's target of processing over 100,000 transactions per second (TPS), a significant leap from the current 30 TPS. This scaling effort is expected to make Ethereum far more efficient for decentralized applications (DApps), opening new avenues for adoption in finance, gaming, and more. Merge To Surge Buterin also addresses the future of cross-rollup interoperability and the importance of ensuring long-term security. These enhancements aim to keep Ethereum competitive in a blockchain ecosystem that increasingly demands lower fees and faster transactions. While "The Merge" laid the foundation by transitioning Ethereum to a PoS network, "The Surge" promises to build on that success by dramatically expanding the network's capacity. Together, these phases are part of Ethereum's broader goal to remain the leading platform for decentralized applications, while improving both performance and user experience. This road map reaffirms Ethereum's commitment to evolving in line with the needs of its users and the broader blockchain industry. Meanwhile, ETH is trading at \$2633 with a modest 0.38% surge and the trading volume is down 23%. In a week, it is up 9.45%. Highlighted News Of The Day Quantity Funds Launches Innovative US-based Bitcoin and Gold ETF

- Ethereum surged to \$2,684, but now faces potential selling pressure. - Increased exchange deposits signal profit-taking and potential price correction. Ethereum surged to a 16-day high of \$2,684, bolstered by a wave of bullish momentum over the past week, gaining 8%. The rally mirrors Bitcoin's recent rise above \$68,000, pushing Ethereum to peak levels. However, as of today, Ethereum has pulled back slightly, trading at \$2,623, with new signs indicating possible downside risks. On Monday, Ethereum broke through the significant resistance level at \$2,579, causing older, long-dormant coins to re-enter the market. Data shows a surge in activity from long-term holders, who have started moving their holdings, with the age consumed metric skyrocketing by over 400%. This renewed activity suggests that many investors are now seeking opportunities to take profits. However, a notable increase in Ethereum's netflow to exchanges suggests that a significant portion of these moved coins is being sent to trading platforms. This shift in activity often precedes heightened selling pressure. It is as investors typically transfer assets to exchanges when they are preparing to sell. Over 51,000 ETH, worth more than \$135 million, was transferred to exchanges on Monday, highlighting this trend. If this selling pressure continues to build, Ethereum's price could face a correction, potentially falling toward the \$2,579 support level. Should this level fail to hold, Ethereum could experience a further decline to around \$2,320, representing a 10% drop from current prices. Investors To Remain Cautioned? Additionally, a rise in Ethereum's exchange supply and reserve levels points toward increasing investor caution, as more ETH is being deposited into exchanges, likely in preparation for sales. This could result in a further price dip if the trend intensifies. Long-term holders, currently facing losses, may contribute to the pressure as they seek to minimize risks. In conclusion, while Ethereum's recent rally has been strong, rising exchange activity and profit-taking suggest that the cryptocurrency could face short-term corrections. Investors should monitor key support levels as the market adjusts.

A bold prediction from a SHIB team member suggests that the Shiba Inu price could skyrocket 1,000% in just three days, but the spotlight is shifting to ETFSwap (ETFS), an Ethereum token poised for an even more staggering 5,000% surge. Analysts Bold Forecast: Shiba Inu Price Poised For A 1,000% Spike A member of the SHIB team has recently made a hint that the Shiba Inu price could rise by 1,000% in just three days, demonstrating the SHIB's potential for rapid expansion. The team member encouraged the community to keep calm by assuring Shiba Inu owners that the current Shiba Inu price decrease is only temporary. The SHIB team member has underlined that the Shiba Inu ecosystem is strong and ready to recover quickly, noting that in past bull runs, the Shiba Inu price has also experienced sharp price increases. At \$0.000016, Shiba Inu's price would reach \$0.000203 if the anticipated 1,000% gain comes to true, breaking the record high of \$0.00008845 recorded in October 2021. Despite being highly optimistic, a number of market experts have expressed their belief that the Shiba Inu price has the potential to reach such a spike, particularly during altcoin season. These Analysts attribute their confidence for the Shiba Inu price prediction to a number of variables, including a higher token burn rate, the implementation of staking mechanisms, and increased on-chain activity. ETFSwap (ETFS): The Ethereum Token Positioned For A Staggering 5,000% Rise The SHIB team member sees a revolutionary transformation in the way institutional and retail investors see exchange-traded funds (ETFs). The team member feels that by tokenizing ETFs, creating previously unheard-of demand, and increasing its value by an incredible 5,000%, ETFSwap (ETFS) is poised to take the lead in this revolution. ETFSwap (ETFS) makes trading ETFs easier for beginners in the cryptocurrency space with its easy-to-use interface. According to the SHIB team member, the platform improves trading experiences by offering substantial profit chances through 24/7 trading, which is a critical component leading to the projected 5,000% price surge. The easy integration of cryptocurrencies and ETFs makes ETFSwap (ETFS) a powerful competitor to digital assets like Shiba Inu (SHIB). Its minimal fees and safe structure allow

traders of any level of skill to easily transfer assets across exchanges. Through its innovative ecosystem, ETFSwap (ETFS) exceeds expectations in liquidity and flexibility. The platform creates a positive trading environment that may help achieve the expected 5,000% price gain by facilitating smooth, non-expiry trading, something prior systems have struggled with. ETFSwap (ETFS) further improves its legitimacy and stability by using tokenized assets backed by securities from respectable financial markets through agreements with MiCA-compliant investment businesses. The ETFSwap (ETFS) has also impressed the SHIB team member as it has obtained certifications from SolidProof and Cyberscope after KYC verification and smart contract audits respectively, attesting to the ecosystem's safety and transparency for cryptocurrency investments. At \$0.03846, investors are in a great position to acquire ETFSwap (ETFS) tokens ahead of the projected spike. The development team has been fine-tuning a beta trading platform that facilitates informed trading for users by providing high-reward liquidity pools, a real-time ETF price tracker, and staking possibilities. The AI-powered ETF screeners that ETFSwap (ETFS) will introduce in its next phase will include sentiment analysis, models for prediction, real-time data, and advanced analytics. These tools have the potential to increase investor trust and boost the token closer to its anticipated 5,000% breakout. Conclusion The SHIB team member's bold prediction is based on ETFSwap's (ETFS) unique utilities that simplify ETF investing and its expected 5,000% breakthrough. Investors are rushing to ETFSwap's (ETFS) final to join this historic rally that is set to outpace the expected 1000% surge of Shiba Inu price. The current presale round has raised over \$1 million and sold over 21 million tokens in a month, exhibiting strong market demand. The SHIB team member sees this as a fantastic opportunity to maximize investment returns and secure your financial future with a 50% bonus on each transaction and a discounted price of \$0.03846 on offer during the current presale round. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. - ETH breaches \$2,579 resistance, triggering movement of dormant coins. - Age consumed metric spikes 400%, reaching 66.42 million. - Potential price targets: \$2,320 if bearish, \$3,102 if bullish momentum continues. Ethereum has reached a critical juncture as its price surpassed the \$2,579 resistance level on Monday, catalyzing a significant shift in market dynamics. This breakthrough has prompted a wave of activity among long-term holders, with older, less active coins suddenly changing hands. The movement of these dormant assets, particularly their apparent flow towards cryptocurrency exchanges, raises questions about Ethereum's short-term price trajectory. The broader cryptocurrency market has witnessed a sentiment shift from neutral to greed, accompanied by increased trading activity. Ethereum's price has responded with a surge recently. However, this price rally has had an unexpected consequence: the reactivation of long-held coins. Ethereum's age consumed metric shows surge Santiment's data reveals a remarkable 400% spike in Ethereum's age consumed metric, reaching 66.42 million – its highest level since October 4. This surge indicates a substantial movement of previously inactive coins, suggesting that long-term holders are seizing the opportunity presented by the recent price appreciation. However, the concurrent increase in Ethereum's exchange netflow volume paints a potentially concerning picture. On Monday alone, 51,881 ETH coins, valued at over \$135 million, were transferred to cryptocurrency exchanges. This influx of coins to trading platforms often signals an increase in selling pressure, as more investors appear to be liquidating their holdings than acquiring new positions. Looking ahead, Ethereum's price action may hinge on the balance between this emerging selling pressure and potential new demand. If selling activity intensifies, ETH could retest the \$2,579 level as support. A failure to hold this threshold could lead to a further decline towards \$2,320, representing a 10% drop from its current value of \$2,616. Conversely, if selling pressure subsides and fresh demand enters the market, Ethereum could invalidate the bearish scenario and continue its upward trajectory. In this optimistic scenario, ETH's next major resistance lies at \$3,102, presenting a significant upside potential for the asset.

- Ethereum enters the \$2.6K range, over the past 24 hours. - The Monochrome Ethereum ETF (IETH) began trading on the Cboe Australia exchange. The largest altcoin, Ethereum (ETH), has briefly recovered from the significant downside pressure. The asset's price remains caught between crucial resistance levels; it recently surged to the \$2.6K range. Notably, over the past 24 hours, ETH witnessed a moderate spike of 3.13%. At the press time, ETH traded at \$2,617 with a market cap of \$314 billion. Over the day, ETH recorded the lowest price at \$2,529 and the highest at \$2,652, as per CMC data. The market observed a liquidation of \$30.22 million worth of ETH during this timeframe, as per CoinGlass data. Besides, the daily trading volume of Ethereum has increased by 29.56% to \$19 billion. On the other side, Monochrome Asset Management has launched the Monochrome Ethereum ETF (IETH). This is Australia's first exchange-traded fund (ETF) that provides direct access to Ethereum. The ETF will be available on Australian brokerage platforms, with zero transfer fees and no capital gains tax implications, assuming no change of beneficial ownership. Will the Current Momentum Persist? ETH observed a notable decline of over 7.20%, trading at a low of \$2,333 in the last seven days. The asset's price opened the week by trading at \$2,431, and stood in the range-bound between \$2.3K and \$2.5K range. The four-hour technical chart of ETH displayed the daily relative strength index (RSI) at 59.50, staying in the neutral zone in the market. Besides, the daily frame of the asset highlights the brief bullish state as the short-term 9-day and 21-day moving averages are noted below the current price at \$2,472 and \$2,501, respectively. Looking ahead, Ethereum's price might climb if the upside correction continues. The asset might rally to a high of \$2,726, and possibly could target even higher. Conversely, if the asset falls below \$2.5K, it may enter into a period of consolidation.

The year is ending on a high note for cryptocurrencies. Ethereum ETFs are holding strong, drawing millions despite the shaky market. BlackRock's ETHA is driving this trend, showing heavy interest

from big financial players. Meanwhile, Aptos (APT) has jumped 6% in just 24 hours, with experts forecasting a significant rise soon. Yet, BlockDAG steals the show, pulling in \$10 million in just 3 days, totaling nearly \$95 million. With major players keen on the presale, BlockDAG's tech-savvy and community-focused approach makes it a top contender, expected to reach \$600 million within two months. Ethereum ETF Shows Strength Ethereum ETFs have been surprisingly sturdy amidst recent market ups and downs. Ethereum's spot ETF saw an influx of \$14.45 million. BlackRock's ETHA alone added \$18.04 million to this, showing a strong pull with large financial groups. Even with these gains, Ethereum's price is sticking around \$2400, indicating the market is still settling. This stability underscores Ethereum's increasing draw in the ETF world. Aptos Price Expected to Surge: Over 30% Increase Soon The latest forecasts for Aptos (APT) suggest a major price boost is on the horizon. Currently at \$8.34, APT has risen over 6% in one day. Analysts see it climbing 31.19%, aiming for \$10.74 by October 8, 2024. Despite ongoing market shifts, Aptos is maintaining a strong stance, with positive market vibes and crucial indicators pointing upwards. About 85% of technical indicators are showing a likely rise. After a \$10M in 3 Days " BlockDAG is Set to Hit \$600M in 2 Months BlockDAG has become a major draw in the crypto world, collecting \$10 million in just 3 days and pushing its total to nearly \$95 million since the presale started. Currently, the price of BlockDAG's coin is \$0.0206, with 14 billion coins sold already. Big players are gathering at the presale, drawn by the impressive technological improvements and the smooth performance of its recently launched testnet. Boosting the excitement, after the testnet went live successfully, BlockDAG introduced a limited-time 50% bonus, an enticing chance that has these big players eager to expand their holdings before it ends on Oct 14th. Confidence in BlockDAG's solid base has led to predictions that the presale might reach a stunning \$600 million in just two months. The arrival of these big players indicates more than just fleeting interest. Early participants are poised to gain from this wave, as their confidence in BlockDAG's potential for long-term growth could lead to significant rewards. With robust performance metrics and increasing popularity, BlockDAG is quickly making a name for itself as one of the leading crypto coins currently in the altcoin scene. The future looks incredibly promising for early supporters as BlockDAG continues to excel in the crypto market. BlockDAG: One of the Top Crypto Coins Right Now The crypto market is buzzing, seeing high activity across numerous coins with Ethereum ETFs holding strong, attracting serious attention from large entities, and resulting in inflows of \$14.45 million. Similarly, Aptos (APT) is poised to jump over 30% shortly, reinforcing its upward momentum. Yet, it's BlockDAG that's turning heads, having raised \$10 million in just 72 hours. With nearly \$95 million gathered so far and big players continuing to come in, BlockDAG's presale is expected to climb to \$600 million in two months. As these big players keep joining, early participants stand to gain, making BlockDAG one of the crypto coins to keep an eye on. Its growing prominence and strong foundations indicate great potential for future gains. - Vitalik Buterin advocates reducing Ethereum's staking threshold. - Faster Ethereum transactions through "single-slot finality" proposed by Buterin. Ethereum co-founder Vitalik Buterin has recently taken to social media to share insights into the blockchain's development and future. In a detailed blog post on October 14, Buterin reflected on Ethereum's evolution since the Merge, the major 2022 upgrade that transitioned the network from proof-of-work (PoW) to proof-of-stake (PoS). While the Merge was a milestone event, Buterin stressed that there are still areas in need of improvement. One of the primary goals, according to Buterin, is reducing transaction times, which currently take up to 15 minutes. He proposed "single-slot finality," a solution that could drastically cut transaction times and reduce network congestion. Moreover, Buterin also addressed the high barrier to staking, which currently requires 32 ETH—an amount too large for many users. He suggested lowering the requirement to 1 ETH, making staking more accessible and further decentralizing the network. Meanwhile, on the security front, Buterin emphasized the importance of safeguarding Ethereum from potential future threats, including those posed by quantum computing. He also proposed enhancements to protect against 51% attacks and improve overall network resilience. Vitalik, A Philanthropist !? While driving technological advancement, Buterin has also been active in philanthropy. Over the past nine days, he has converted \$2.78 million worth of memecoins into Ethereum, donating \$884,000 to various charities. Memecoins, which are often sent to him, include Moo Deng (MOODENG), Monsterra (MSTR), and ETHEREUM IS GOOD (EBULL). Buterin praised memecoin issuers for their donations but encouraged direct contributions to charitable causes. Buterin's recent visibility has led some economists to suggest he may be a future Nobel Prize contender, citing his contributions to blockchain technology and Ethereum's transition to PoS. With Ethereum's next upgrade, Prague-Electra (Pectra), scheduled for 2025, Buterin's vision continues to shape the protocol's future trajectory. Meanwhile, Ethereum native token, ETH is trading at \$2533 with 2.74% surge in the past 24 hours and in the same timeline, the trading volume is up 56%. Highlighted News Of The Day SUI Begins the Week with New All-Time High Amid Market Optimism

- Monochrome launches the world's first Ethereum ETF on Cboe Australia. - IETH offers in-kind redemption for Ethereum, enhancing flexibility for investors. Monochrome Asset Management is poised to make history with the launch of the world's first Ethereum exchange-traded fund (ETF) on Cboe Australia. Furthermore, the company's Ethereum ETF, known as the Monochrome Ethereum ETF (IETH), is likely to attract significant attention. Investors seeking exposure to Ethereum can benefit from this option, as it effectively eliminates the complexities of directly holding the cryptocurrency. Monochrome's IETH will be the first spot Ethereum ETF in Australia. This event follows

Monochrome's successful application with the Australian Securities and Investments Commission (ASIC) on September 4, 2024. The approval represents a major milestone in the Australian crypto landscape. However, as global demand for digital asset investments rises, Monochrome leads the charge to provide a regulated and secure avenue for investing in Ethereum. Trading for Monochrome's Ethereum ETF (IETH) is set to commence on Monday at 11 AM UST. This launch comes after the successful introduction of its Bitcoin ETF (IBTC) in August 2023, which has attracted \$15 million (approximately US\$10.1 million) in investments. Monochrome's Approach to Ethereum Investment One of the features of Monochrome's Ethereum ETF is its in-kind redemption model. This feature allows investors to redeem their shares for actual Ethereum. Moreover, it provides flexibility and liquidity for both institutional and retail investors alike. Additionally, the ETF is designed to track the price of Ethereum closely. This structure gives investors an easy way to gain exposure to Ethereum's price movements. Monochrome has emphasized the regulatory compliance of its ETF, ensuring that it meets all the necessary standards set by ASIC. Furthermore, the introduction of the Ethereum ETF comes at a time when the Australian crypto market is seeing increased demand for digital asset products. The launch of Monochrome's Ethereum ETF on Cboe Australia is a significant development for the global crypto market. Highlighted Crypto News Today Will Bitcoin Bulls Take Charge as BTC Targets New Resistance?

- Ethereum, in the last 24 hours surpassed \$2.5K for the first time since October 1. - The altcoin's daily trading volume surged 35.69% as per CMC data. Another week begins with investors still holding strong to their optimism. The community awaits the anticipated bull runs, while the price charts depict modest gains. In the last 24 hours, the overall crypto market has shown increases in both its market cap and trading volume. Notably, leading altcoin Ethereum has transcended its resistance at the \$2.5K level in a remarkable move. Meanwhile, the largest cryptocurrency, Bitcoin, has shown gains, attempting to hit \$64,000. This can be seen reflected evidently in Ethereum and other altcoins. Inferring the Ethereum daily price chart, ETH shows a price increase of 2.46%. In the Asian morning hours of October 13, the altcoin traded at \$2,462. Following this, it fell to further support levels at \$2,450. However, on October 14, bulls began to overpower the bears as the token rallied to surpass \$2,500 for the first time since the beginning of October. At the time of writing, Ethereum was trading at \$2,526 as per CMC data. Furthermore, the crypto community has been quite disappointed with Ethereum's price actions in the past month. The cryptocurrency has failed to show any significant recovery after the last market crash, unlike Bitcoin. Ethereum has been trading within a consolidated phase at the \$2,000 level since September. Additionally, when reverting to Ethereum's weekly price action, it shows a 1.64% increase. This has caused traders to speculate on an incoming price rally in the coming days. Will Ethereum Witness a Bullish Rally in the Coming Months? On inferring Ethereum's technical indicators, certain aspects come to light. The token's Moving Average Convergence Divergence (MACD) signal line recently crossed over the MACD line. This indicated a positive momentum in the altcoin and can be expected to highlight an incoming bull run. Moreover, the market sentiment shows buying signals as the RSI stands at 54.37. Additionally, the bull-bear power trend shows that the bulls dominate with a value of 4.53 while the bears hold a value of 2.73. This further highlights a bullish trend in Ethereum. Finally, the US SEC recently has further delayed its decision on Ethereum Options trading. Meanwhile, the overall crypto market has shown increased liquidations in the past 24 hours as per coinglass data. Highlighted Crypto News Today: BNB Price Remains Stable Despite Dramatic Decline in Network Fees

The cryptocurrency sector is bustling, with rapid shifts that can alter market dynamics overnight. Despite a strategic boost in holdings by Ethereum's co-founder Vitalik Buterin, Ethereum has seen a decline of over 9% in the past week, demonstrating the volatility and challenges in the broader market. Conversely, Kaspa shows promise of stability, potentially marking a growth phase. BlockDAG, however, has captured widespread attention by achieving \$10 million in presale funds within a mere 72 hours. This notable influx has propelled BlockDAG's presale earnings to an impressive \$94 million, positioning it as a standout cryptocurrency entity in 2024. With the presale fast approaching the \$100 million mark, market analysts suggest that BlockDAG is well placed to meet its ambitious \$600 million target soon. Ethereum's Market Challenges Continue Below \$2,500 Over the past week, Ethereum has struggled, with its value decreasing by more than 9%. Despite these hurdles, Vitalik Buterin has been actively increasing his Ethereum stake, notably converting various smaller-cap cryptocurrencies into 140.67 ETH, currently valued at \$340,500. However, Ethereum's value continues to face difficulties, presently hovering around \$2,487. The resistance near \$2,500 is proving tough to overcome, and technical indicators indicate that the downward trend may continue, potentially affecting wider market sentiment. Uncertain Outlook for Kaspa Kaspa has recently drawn attention due to its rapid growth, earning the nickname "Bitcoin on steroids" because of its quick block times and efficient network. Although recent trends have shown increased stability, Kaspa faces ongoing market resistance, and some analysts caution that its rapid ascent might not be sustainable. This volatility could lead to unexpected price drops, posing risks for short-term holders. Despite this, Kaspa's technological advancements continue to attract interest, although the prospect of sudden market corrections has shifted some focus towards other emerging projects like BlockDAG. Kaspa Whales Transition to BlockDAG: \$10M Gained in Three Days BlockDAG has recently seen an influx of \$10 million within a remarkably short 72 hours, predominantly driven by significant assets from Kaspa whales. This rapid capital accumulation underscores BlockDAG's unique allure, built on its groundbreaking technology and user-focused design, setting it apart from traditional cryptocurrency platforms. The swift escalation in attention from major traders underscores BlockDAG's transformation into a highly sought-after destination for those pursuing state-of-the-art technology combined with substantial growth opportunities. This wave of demand has significantly boosted its presale revenue to over \$94 million. As BlockDAG nears the significant milestone of \$100 million, it is steadily closing in on its ambitious \$600 million presale target. Currently, with over 140,000 unique holders, BlockDAG is strategically positioned to broaden its international reach and escalate its influence in the

cryptocurrency market. Early backers of BlockDAG have already experienced a remarkable 1960% increase in the value of their holdings. The price of BDAG has escalated from \$0.001 in the first batch to \$0.0206 in the latest, 24th batch, with a total of 14 billion coins sold. This trajectory not only highlights the strong market confidence in BlockDAG's potential but also marks it as a top contender in the rapidly evolving crypto landscape, promising continued growth and profitability. Top-Performing Cryptocurrencies: A Focus on BlockDAG While Ethereum grapples with its market challenges and Kaspa displays a potentially steadier growth curve, BlockDAG has emerged as a key focus for substantial traders. With its presale swiftly garnering \$10 million, largely driven by significant interest from Kaspa whales, BlockDAG is recognized as a top-performing cryptocurrency of 2024. With presale revenues surpassing \$94 million and nearing \$100 million, experts predict BlockDAG will soon achieve its \$600 million goal, promising substantial returns for long-term participants. Join BlockDAG "Act Now Before Prices Increase: - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto space can't seem to calm down after a well-known whale, who previously showed a lot of activity in both Ethereum (ETH) and Binance Coin (BNB), returned. On his return, he backed a new ICO "IntelMarkets (INTL). This rising star is now in its third presale phase, which has been amazing. It has raised over \$1M and may hit \$2M before this month ends. While ETH and BNB are rising on the price charts, all attention is on INTL. Some experts even hint that it has the potential to surge by 3,000% as it combines AI with blockchain technology. Ethereum (ETH) To Kick-Off a New Rally Ethereum (ETH) is one of the top crypto coins in the market. CoinMarketCap data shows that the Ethereum price surged over 5% on the monthly chart. Crypto analyst Mikybull also made a bold prediction about this altcoin. According to his X post, Ethereum is now in its next wave of a rally to \$5,000 in the short term. In other news, Ethereum (ETH) proposed EIP-7781, which will improve the speed of transactions on this network. The slot times will be reduced from 12 to 8 seconds to accomplish this. The Ethereum coin is also trading above its 10-day EMA of \$2,433. Due to all these factors, other experts are also bullish in their Ethereum price prediction. They foresee a value of \$2,600 before this quarter ends. Binance Coin (BNB) May See Price Discovery Soon Binance Coin (BNB) is another top 5 cryptocurrency with good growth. Over the past 30 days, the price of Binance Coin increased by around 15%, according to CoinMarketCap. Currently, the Binance Coin crypto trades between \$507 and \$577. However, crypto analyst Sjuul says this altcoin is having trouble breaking through its resistance level of \$600. If it does happen soon, there will be little resistance to \$700 and potential price discovery. The Binance Coin (BNB) technicals are also showing positive signs. Binance Coin is trading above its 20-day EMA (\$568) and its 100-day EMA (\$555). Market analysts note all these factors when making their Binance Coin price prediction. Thus, they predict a potential pump of \$600 before November starts. IntelMarkets (INTL) Seen As the Best ICO Right Now IntelMarkets (INTL) is making headlines now thanks to its presale performance. It has given early buyers a 200% return in a few short months. Not only that, demand is sky-high, with over 11M INTL tokens already sold. This level of attention is rare in the crypto space. In essence, IntelMarkets aims to tap into the growing AI market, which Statista projects may be worth \$826B by 2030. To accomplish this, it will launch an AI-powered smart trading platform. This combination will make IntelMarkets stand out from the rest. For instance, traders on IntelMarkets will be able to use AI-based cost averaging, auto-investment strategies, and self-learning trading robots. Additionally, a 1000x leverage will help maximize traders' profit while minimizing their risk. All these features have made countless traders rush to the IntelMarkets ICO event. In it, people can buy the INTL for just \$0.027. But this altcoin price will jump to \$0.036 after phase four begins "a 33% return for those who buy it now. Experts predict another 3,000% surge after a Tier-1 CEX lists INTL soon. They think that this project may be the best crypto ICO event. What Will the Future Bring for Ethereum (ETH), Binance Coin (BNB) and IntelMarkets (INTL)? The crypto market is on a good trajectory with tokens like Ethereum (ETH), Binance Coin (BNB) and IntelMarkets (INTL). Thanks to exciting developments, all three of them may surge. However, IntelMarkets gets the upper hand as it has a smaller market cap than the rest. Therefore, this altcoin price will rise faster since it needs less new money to do so. Discover More About IntelMarkets: - Presale: <https://intelmarketspresale.com/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency world is in turmoil due to Bitcoin's drop to a two-week low of \$61,800, causing \$350 million in sell-offs and affecting thousands of traders. Meanwhile, Ethereum might be heading for a downturn similar to its end-of-2016 slump, potentially lowering its price in the upcoming months. Amidst these downward trends, BlockDAG continues to attract attention with its unaffected performance. BlockDAG's presale is nearing \$94 million, propelled by a 50% bonus that is drawing enthusiasts as it approaches the \$100 million milestone. With the bonus period ending soon, anticipation is high for what could be a leading crypto project in 2024. Bitcoin's Price Drop Triggers Millions in Sell-Offs Bitcoin's value suddenly fell, reaching a two-week low of \$61,800, which led to \$350 million in sell-offs. This affected approximately 120,000 traders in the last day as the market experienced significant fluctuations. After a brief recovery to \$64,000, negative forces drove the price down again. This downturn followed an announcement by Fed Chair Jerome Powell about two upcoming rate cuts by the US central bank before year's end. Other cryptocurrencies also suffered, with ETH losing over 3%, SOL by 3.6%, and DOGE by more than 5%. Although Bitcoin has seen some recovery, the market's

instability continues to cause substantial losses for many traders who took on too much risk. Ethereum's Price Outlook Reminiscent of 2016 Ethereum seems poised to replicate its late 2016 behavior, indicating possible price reductions in the fourth quarter of 2024. Despite a strong September, significant sales by major holders are pressuring Ethereum's value. Recent ETF withdrawals totaling \$48.6 million and global tensions further darken the outlook. With these elements in play, the market is closely monitoring Ethereum for signs of repeating its previous downturn. While the future remains uncertain, the growth potential still exists depending on market developments.

Last Chance to Maximize BDAG Holdings with a 50% Bonus! Time is ticking for crypto fans to grab BlockDAG's amazing 50% bonus, which offers a rare chance to significantly boost BDAG holdings. The presale is on the brink of hitting \$94 million, with the \$100 million milestone within close reach for BlockDAG. The success of its Testnet showcases BlockDAG's tech-savvy, making it the current star of the blockchain universe. The window for the 50% bonus is swiftly closing, with just two days left for traders to cement their spot in this promising project. Early participants are already reaping big rewards, with each new release pushing the presale even higher, and momentum continues to build. As the final dash for this 50% bonus starts, BDAG's value is expected to skyrocket. Market experts suggest that BDAG could hit an impressive \$20 by 2027, potentially multiplying early buyers' holdings by up to 20,000 times. Priced at \$0.0206 in batch 24, those who joined early have already enjoyed a 1960% increase in returns since the first batch. Those seizing the 50% bonus to snag more BDAG are setting themselves up for huge potential profits, especially as time to take advantage of this offer dwindles. BlockDAG is gearing up to be a major player in the 2024 crypto scene, and missing out now could mean passing on one of the most promising ventures in blockchain history. Best Crypto to Buy Before Year Ends As Bitcoin's latest sell-off wave calms, traders are closely monitoring market trends and bracing for potential changes. Ethereum's pricing outlook calls for caution, influenced by significant holder sales and ETF withdrawals. Still, the standout opportunity is BlockDAG's 50% bonus, currently a hot ticket in the market! With just two days to go, crypto enthusiasts are hurrying to secure their BDAG before the bonus period shuts. As the presale approaches \$94 million, BlockDAG is poised to be one of the top crypto projects for 2024, with experts forecasting an astonishing \$20 price by 2027. Discover More About BlockDAG: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum currently trades at \$2,463.82 with a 2.13% daily increase. - A \$Neiro trader missed a 16,690x potential return after selling early. Ethereum is currently trading at \$2,463.82, marking a 2.13% increase over the past day. Despite this upward momentum, trading volumes decreased by 16.84%, reflecting a drop to \$12.53 billion. Ethereum's market cap now sits at \$296.6 billion, contributing to the broader crypto market's recent recovery. A trader bought 8.41 billion \$Neiro tokens for just 0.32 ETH (\$1,000). He sold all the tokens for 9.98 ETH, making \$32.4K, a 30x return on investment. However, had he held onto those tokens, they would now be worth \$17.5 million, delivering an astonishing 16,690x return. In contrast to the bullish sentiment around Ethereum's price, the Ethereum spot ETF recorded a net outflow of \$97,100. Although small, this reflects cautious investor sentiment. ETFs offer more secure exposure to Ethereum, yet the market remains mixed as traders balance short-term market movements with long-term gains. Continuous outflows may weigh on Ethereum's price, but overall market conditions remain largely positive. Ethereum (ETH) in the Current Market From a technical perspective, Ethereum shows potential for more upside. The price is currently near resistance at \$2,500, as seen from the recent candlestick patterns. If this resistance is breached, the next significant level is around \$2,550. However, failure to break higher could push prices back to support at \$2,420. Key moving averages, such as the 9-day simple moving average (SMA), stand at \$2,421.34, indicating short-term strength. The recent crossover of the 9-day and 21-day moving averages suggests a slight bullish momentum. The RSI is at 49.31, indicating that Ethereum is in a neutral zone, neither overbought nor oversold. However, the RSI's 14-day average of 45.63 implies some bearishness lingering in the market. A move above 50 in the RSI could signal further price gains. Ethereum's price action shows both potential for upside and cautionary signals, depending on key resistance and support levels, ETF sentiment, and overall market conditions. Highlighted Crypto News Today Popcat (SOL) Hits New All-Time High as Bulls Gain Strength

The talk in the cryptocurrency world is that Rexas Finance (RXS) might be the next boost in the blockchain revolution and it just may follow suit with Ethereum (ETH). As Ethereum came up and became the go-to platform for dApps and intelligent contracts, Rexas Finance intends to take the number one position in the field of Real World Asset (RWA)-backed tokens. Since the tokenization of the real estate market is projected to come into the limelight in the years to come, most believe the growth of Rexas Finance will exceed an exponential curve by 2025. Here are four key catalysts driving its potential to skyrocket. Transforming the Tokenization of Real-World Assets So far the single most convincing reason for Rexas Finance's prospects is that it is leading the way in the little-known area of tokenization of the Real World Assets (RWA). Whereas Ethereum is known for smart contracts and various Dapps, Rexas Finance aims at revolutionizing asset maximalism to include property, art, raw materials, and their trades in the blockchain ecosystem. By digitizing possession of real-world valuables and making them a token, Rexas Finance can create a new form of investment. Tokenization of assets provides such a luxury as fractional ownership when investors can purchase not the whole property but its smaller shares, such as expensive real estate or an art piece. This does increase the liquidity of an investment but also widens the range of assets available for potential investors who would otherwise be hounded by high installment requirements, which for instance, were only restricted to the rich and institutions. This democratization also resonates with the imaginations of the initial

supporters of Ethereum who wanted to build applications on it. The specialization that Rexas Finance is demonstrating in this frontier of blockchain technology bodes well for the asset management industry concerning the next generation. It's self-evident that more and more people become aware of tokenization of real-world assets and understand its benefits the same as those who understood the change that Ethereum brought to the DeFi space. Notable Rise In The Demand In The Initial Stages Of The Presale The second catalyst that enhances the prospect of Rexas Finance exploding is the remarkable demand that was observed in its early presale stages. In Stage 3 alone, the project has pulled in \$2,750,000, which closed earlier than anticipated owing to the unhealthy surge in interest. Given that the tokens are currently selling at \$0.06 and that the next presale stage price will be increased, there is a rush of entrants into the project anticipating high profits. The reason why this stage of the presale has been closed in advance like the previous ones is the excessive demand for RXS tokens. Enthusiastic early-stage investors have already internalized that Rexas Finance is a breakthrough platform in the sense that it has a bright future. This in particular is coupled with a fair chance of most "early presale stages" inflationary trends and price increase actions, which will see Rexas finance operate in similar patterns as that of Ethereum at its early stages of operation. The Rexas Ecosystem: Intuitive and Easy-to-Use The possible appreciable growth of Rexas Finance can also be explained with the help of its ecosystem. Where the success of Ethereum was based on a large ecosystem of dApps, DeFi protocols, and dex, it is about Rexas Finance that now presents and continues to build a great, easy-to-use platform to enable proper asset tokenization. The Rexas platform makes the procedure for the development, management, and trading of asset-backed tokens very easy, even for users without much technical know-how. It possesses features that enhance asset tokenization by individuals and corporations, which are the reasons why the adoption of this technology is not as common as it should be. Insufficient barriers are in place. Moreover, the platform also emphasizes the issues of security and compliance and restricts its activities to permissible legal frameworks while taking appropriate measures to enhance the security of users and the transactions' integrity. Providing trust and transparency is also helpful and increases investor awareness as more people are looking towards this platform as one of the safe and secure avenues for blockchain-based investment. The Process of Non-Stop Innovations The fourth supporting factor that can enable Rexas Finance to soar higher within the year 2025 is its zeal for ceaseless innovation. The digital finance field does not remain stagnant and neither does the team at Rexas Finance. The developers of the platform offer new enhancements and features in the platform regularly so that it does not become outdated in the growing economy. With this innovation-first approach taken, investor confidence can be sustained and the platform updated in a sector with rapid change. In the case of ongoing development, Rexas Finance shall certainly be striving for an extended ambition, as is the way that continued improvements and upgrades like the shift to Ethereum 2.0 have kept Ethereum at the peak of the crypto world. Conclusion For the time being, Rexas Finance may not be the next Ethereum, but there are a lot of vital components around Real World Asset tokenization, high presale level, easy-to-navigate ecosystem, and innovation that make this possible. As more investors and users have to seek the help of blockchain technology for managerial purposes, Rexas Finance might just as well agitate for supremacy in the field, much like Ethereum in decentralized finance. Rexas Finance is a project to keep in view due to the expected growth through 2025 and beyond. Should it stay on its course, this token may capitalize on the historic momentum of success as the next big token after Ethereum. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum trades at \$2.4K, with a modest gain over the past 24 hours. - The market observed a liquidation of \$28.86 million worth of ETH. The altcoin market has shown mixed signals from the start of the week. Ethereum (ETH), the largest altcoin, is grappling to sustain itself in the \$2.5K mark. The asset's price has been caught between the key support and resistance levels. Notably, ETH witnessed several price dips in the past few days. The daily price chart shows the token's struggle to drive the price above \$2.5K. ETH managed to trade at \$2,416 while recording a modest gain of 0.92% at press time, according to CMC data. Over the day, ETH registered the lowest price at \$2,329 and the highest at \$2,417. The market observed a liquidation of \$28.86 million worth of Ethereum during this timeframe, as per CoinGlass. Meanwhile, the daily trading volume of ETH stayed at \$15.12 billion. Despite that, an analyst observes that \$2.3K is the crucial support level for Ethereum, where 2.4 million addresses have purchased 52.6 million ETH at this price. If the price falls below this demand zone, it could trigger a sell-off as investors may sell their holdings to minimize the losses. Will ETH Overcome the Bearish Pressure? The largest altcoin's weekly price chart reveals a brief gain of 1.65%, which noted ETH's high at \$2,510. ETH continued to trade within the moderate range. The asset opened the week at the \$2.3K mark and continued to trade within \$2.4K. If the anticipated bullish signals showed up, ETH might push its price towards \$2,598. If this momentum continues, the asset could be targeted for the next major breakout. However, if Ethereum fails to hold the bullish momentum and struggles to surpass the \$2.5K mark, the price may slip to the consolidation zone, which has the potential to direct the asset's price to the \$2.3K range. On inferring TradingView, Ethereum is moving towards the neutral zone, as the daily relative strength index (RSI) is positioned at 49.11. Moreover, the asset's daily frame displays the short-term 50-day MA below the long-term 200-day MA. Besides, ETH's Moving Average Convergence Divergence (MACD) signal line stands below the MACD line, suggesting a negative market sentiment.

What can be expected as the boom of crypto continues: whales "those valued businessmen with volumes

of cryptocurrencyâ€”tend to stir things up quite a bit. Not so long ago, one more Ethereum whale with a jaw-dropping \$130 million bag of ETH has turned some of the most optimistic investors in the market by reallocating some of his investments in meme coins and the up-and-coming project in the blockchain ecosystem. According to reports, the whale has exchanged part of his massive ETH holdings for relatively new digital assets such as Shiba Inu and PEPE Coin, which are the current favorites, and Rexas Finance (RXS), which is also a low-market cap coin. This action has led to even more assumptions concerning the future of these altcoins as well as what this bold step taken by the whale entails for the skeletal investors Shiba Inu (SHIB) Shiba Inu coin is at the very forefront of the meme coins that are found in the cryptocurrency space sometimes making it be referred to as the “DogeCoin Killer. Perhaps, with their highest brand and loyal followers, they have come up with a DeFi project called ShibaSwap, which is a DEX where the holders can stake, supply liquidity, and participate in governance. This development has broadened the attractiveness of Shiba Inu since it has widened the demographic of the offerings of the project to include more DeFi investors. At least one time it dropped to \$0.0000182 on 30 September 2024. The price of SHIB has sustained its uptrend even as technicals showroom for correction. At present, SHIB has recuperated and at this time, it is at a high of \$0.0000200. Still, it has a resistance level of \$0.0000202. If SHIB goes on to surpass this level on the downside, there are higher chances the next level of \$0.0000229 will be reached before new all-time highs are experienced by the close of the year. Experts say the price of SHIB in October can grow by about 34%. Price calculations indicate that it can approach the \$0.0000221 mark within 10 days. Those who are looking at SHIB feel this Ethereum Whale’s interest is a good sign for potential wins down the line, as many feel SHIB is one of those coins that can produce millionaires again as it did in the 2021 huge round of price surges. PEPE Coin (PEPE) Another meme coin that has drawn the interest of an Ethereum whale is the PEPE Coin. With a devoted fanbase and a widening variety of partnerships, PEPE has been climbing higher and higher over the past month, even registering more than a 100% increase in gains. As of October 2024, the PEPE price is around \$0.000013, which has increased from \$0.0000029 and the daily trade volume has increased by more than 30% over the last 24 hours. Such a notable increase in both price and volume does point out that the token value still has some more upside, as an analyst envisages PEPE may even reach \$0.0005 in an astonishing 28,000% surge. Currently, the token carries the rank of No. 22 in the cryptocurrency ecosystem and has a circulating supply of over 5.6 trillion PEPE tokens. Many investors have now shifted to PEPE aimed at the possibility of life-changing returns based on the fact that most people expect the coin will smash its previous highest mark at the end of the year. If you’re looking for a low-cost crypto investment that’s likely to perform extraordinarily well, circle PEPE on your calendar for the year 2024. Rexas Finance (RXS) As much of the spotlight was focused on meme coins, especially SHIB and PEPE, the Ethereum whale also placed an interesting bet on Rexas Finance (RXS), an upcoming rapidly rising star in blockchain. Rexas Finance buttresses that it is shifting the narrative of Real World Assets (RWA) from being a fashionable term into a practical business flatter. With the current trend of enclosure in an asset tokenization society, RXS is well-placed to take up a significant market position, attracting institutional as well as retail investors. RXS’s presale is already on fire, with Stage 4 of the presale being offered at \$0.060 per token. The presale has been very promising, with a total amount of \$2.75 million being raised and 65 million tokens sold. Cryptocurrency communities are aware that it is expected that this sale will be completed and the next stage will entail a price of \$0.070 for each token. Some conservatives believe that early investors can expect very good returns, adding that there are expectations for the token to gain up to 45 times by early 2025. Taking into account the whale’s position regarding RXS, the majority are sure that the token’s price will rise above 0.20 after the token launch. And if the asset tokenization model is already remarkable for its originality, attracting, then Rexas Finance will attract even more due to such promotions as Rexas Millionaire Giveaway, where one lucky investor gets to win US \$50,000 in USDT investing. Such a marketing trend, along with the technologically advanced and continuously novel platform, makes Rexas Finance one of the promising investment opportunities for the year 2024. Conclusion The fact that the big holder of Ethereum has opted to invest in Shiba Inu, PEPE Coin, and Rexas Finance clearly shows that confidence in the potential of these altcoins is growing. Shiba Inu is eons away from its all-time highs, PEPE is gaining ground rapidly and Rexas Finance presents a promising investment opportunity in asset tokenization. Hence, any crypto investor searching for a chance to cash in on the next breakout could consider mimicking the whale’s move. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is buzzing with activity, with select projects stealing the spotlight. Ethereum is caught in a challenging bearish grip, while Tron is riding a wave of bullish energy. The talk of the town is undoubtedly BlockDAG! Its presale is making waves, raking in a colossal \$10 million from heavy hitters in just 72 hours, bringing the total to a staggering \$92 million. The launch of the BlockDAG Explorer has set the developer community abuzz, providing an innovative tool for tracking transactions in real time. With these developments, BlockDAG is rapidly claiming its place as a key player in the cryptocurrency arena. Ethereum Battles Resistance Ethereum is striving to rebound after a drop below \$2,350, facing a significant challenge at the \$2,400 mark. With its price lingering below \$2,400 and the 100-hourly Simple Moving Average, Ethereum is entrenched in a bearish phase. Ethereum needs to breach the \$2,400 and \$2,420 resistance levels to turn the tide. Success here could propel it towards \$2,480 or possibly \$2,550. However, if Ethereum fails to overcome this resistance, it risks falling further, with support possibly forming around \$2,300 and \$2,220. The

trading community is on high alert for any signs of a turnaround or further decline in the upcoming trading sessions. Tron Gains Bullish Momentum Tron is demonstrating robust bullish momentum, distinguishing itself even as other major cryptocurrencies like Bitcoin and Ethereum face challenges. Its open interest has soared by over 15%, showcasing significant market enthusiasm. On October 4, 2024, Tron marked a bullish milestone after successfully retesting a crucial level, backed by a solid bullish daily candle. Currently trading at around \$0.1572, Tron has experienced a 2% increase in price over the last 24 hours and a 13% boost in trading volume, indicating a surge in buyer interest. Positive on-chain data, including a Long/Short ratio of 1.034, hints at a bullish outlook. If Tron maintains this trajectory, it could be on the brink of setting new all-time highs soon. BlockDAG's Explosive \$10M Raise & New Explorer Launch BlockDAG's presale has ignited the market with an explosive \$10 million influx from whales in just 72 hours, pushing the hype to new heights and accelerating demand. The presale, now totaling \$92 million, is moving at a breakneck pace. The excitement around BlockDAG is palpable, with buyers quickly snapping up spots as each new batch is released, pushing prices upward and making BlockDAG a central topic in crypto discussions. Currently in batch 24 and priced at \$0.0206, early adopters have achieved a remarkable 1960% return since batch 1. The enthusiasm is further fueled by the rollout of the highly anticipated BlockDAG Explorer. This new tool is captivating the blockchain developer community, enabling real-time interaction and analysis of the network. With its sleek design and instant transaction visibility, the Explorer is revolutionizing how developers engage with the blockchain. Traders are electrified, developers are thrilled, and the entire crypto universe is on the edge of its seat, eager to see what comes next. With its explosive presale and state-of-the-art BlockDAG Explorer, BlockDAG has rocketed to the forefront as one of the most buzzworthy initiatives in the world of cryptocurrency. Market Dynamics: Highs and Lows As the cryptocurrency landscape fluctuates, Ethereum grapples with significant resistance levels, while Tron shows signs of a strong bullish uptrend that could lead to new highs. Amid these dynamics, BlockDAG is capturing widespread attention with its significant fundraising success and the strategic launch of its Explorer, attracting both traders and developers. With its rapid presale progress and innovative tools, BlockDAG is positioning itself as a formidable force in the cryptocurrency market, drawing eyes from across the sector. For those involved in trading or development, BlockDAG represents a pivotal project in 2024 that simply cannot be overlooked. Discover More About BlockDAG: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. As Nasdaq investors take notice of the crypto market, past charts' long-term analysis have shown that a few names always seem to rise to the top: Bitcoin (BTC), Ethereum (ETH), and Solana (SOL). However, occasionally, a relatively unknown company appears in the market, draws the attention of experienced professionals, and creates a stir. A man who predicted the Nasdaq crash recently compared Ethereum's meteoric rise in 2021 to an obscure altcoin that is still under \$1. RCOF is the next altcoin being touted as the next big thing, and the numbers suggest that it has the potential to deliver a mind-boggling 10,000x in the next three years. Ethereum's 2021 Rally: A Blueprint for Explosive Growth The year 2021 marked a turning point in Ethereum, which rose from under \$1,000 to over \$4,800 in a few months. It was not only the spectacular price increase that caused people to pay attention to Ethereum; it was also the way Ethereum paved the way for DeFi and NFT. Smart contracts brought a new era in the blockchain world, and those who invested in Ethereum initially got very rich. Now, the crypto world is discussing another altcoin called RCO Finance, which many people expect to repeat Bitcoin's fate: begin with a minimum price and end up at the top. RCO Finance: The Altcoin Poised for Ethereum-Level Gains Like Ethereum in its early stages, the Nasdaq expert stated that RCO Finance is ready to revolutionize decentralized finance. Due to its features and integration of AI, RCOF will revolutionize the trading space, greatly improving how digital assets are traded and dealt with in the altcoin market. RCO Finance stands out from the rest due to the inclusion of an AI robo-advisor that provides customized trading solutions based on investors' preferences. This feature is unique because, with its help, even inexperienced traders can interact with highly volatile financial markets. These strategies consider factors such as risk profile and investment objectives. They are dynamic and change in response to market conditions in real time. This continuous monitoring ensures that investors are always ready to exploit new opportunities without the emotions that are likely to affect human beings. Another strong selling point of RCO Finance is its versatility in trading in a variety of securities, such as real estate, stocks, bonds, and commodities like Nasdaq. Converting RWAs to cryptos erases barriers that were previously erected between traditional finance and digital currencies. Users can use their cryptos to trade these assets directly on the platform without cashing out their assets. This eases the trading process, improves liquidity, and expands investment opportunities for users. The features of automated market-making improve RCO Finance. Some of the features include: Users can supply liquidity into different trading pairs on the platform and earn some fees. This liquidity provision helps the ecosystem and enables participants to profit from yield farming. RCO Finance provides a high level of leverage of up to 1000:1 on crypto trading, allowing investors to make high profits with small amounts of money. Together with low transaction fees, it is a perfect choice for both old-timers and newcomers who look for powerful investment tools. Security is a significant factor in cryptocurrency, and RCO Finance excels in ensuring security with constant audits from leading security firm SolidProof. This commitment increases investors' confidence, and users can use it without any concern. The non-availability of KYC verifications reduces privacy concerns. Invest in RCO Finance (RCOF) For High ROI The presale phase of RCOF has already attracted massive attention, with investors investing more than \$2 million to purchase RCOF altcoin at a relatively lower price than its future value. Currently trading at \$0.0344, early investors will make

handsome profits because estimations indicate that RCOF could be valued between \$0.4 and \$0.6 during its launch. In addition to financial returns, RCOF altcoin holders will be able to enjoy other privileges within the ecosystem, including quarterly dividends depending on the amount of holding and the right to vote on significant decisions that will determine the further development of the platform and create a community around the RCOF ecosystem. RCO Finance is set up as another altcoin and a revolution within the altcoin industry. The combination of its AI technology, the integration of a wide range of assets, high-leverage options, and security make it possible to argue that it could replicate Ethereum's performance by 2025. For more information about the RCO Finance (RCOF) Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum underperforms, its price has declined 2% in the past 24h. - Whale selling intensifies ETH faces market pressure. Ethereum (ETH), the largest altcoin by market cap, continues to underperform in the crypto market. The cryptocurrency has been in a steady downtrend since falling below \$3,400 on June 23. The much-anticipated "October" has also disappointed ETH holders, with the altcoin hitting a monthly low and facing growing selling pressure. Currently, Ethereum is trading at \$2,405.50, marking a 2% decline in the past 24 hours. Despite a slight 1.2% increase in trading volume, the coin's performance lags behind Bitcoin (BTC). Over the past year, Bitcoin has surged more than 120%, while Ethereum has gained only about 50%. Meanwhile, ETH's market dominance has also been dwindling, currently standing at 13.85%, a steep drop from its yearly high of nearly 20%. Several factors are contributing to this decline, including Bitcoin's rising dominance, which has been bolstered by increased institutional interest in spot Bitcoin ETFs. Adding to Ethereum's woes is a significant increase in whale-selling activity. SpotOnChain data shows a whale that participated in Ethereum's 2014 Initial Coin Offering (ICO) deposited 50,000 ETH, worth around \$125 million, to exchanges in recent weeks. Simultaneously, the Ethereum Foundation has offloaded over \$10 million in ETH this year. Moreover, with declining demand for ETH ETFs and a rising circulating supply, Ethereum is facing mounting sell-side pressure. If demand doesn't pick up, Ethereum may continue its downward trajectory, struggling to reach the \$3,000 mark that investors hoped for this month. What Can Traders Expect From ETH? Despite the ETF outflows, Ethereum technical indicators suggest that it is in bearish momentum. Its 9-day EMA is at \$2429. The daily RSI stands at 47, showing that it is nearing an oversold condition. If demand holds, ETH could break resistance at \$2651 and push toward \$2819. However, slowing accumulation could lead to a drop in price to the support level of \$2296. Highlighted News Of The Day

The cryptocurrency market is vibrant with continuous advancements and intriguing developments. Ethereum's creator, Vitalik Buterin, is championing the use of Polymarket's prediction platforms, promoting them as effective tools for reducing misinformation. Simultaneously, Bitcoin exhibits signs of unpredictability, remaining below its 200-day moving average, yet market observers anticipate possible upward movements. With historical patterns suggesting that October could usher in substantial increases, there's a hopeful outlook that Bitcoin might achieve new highs, providing it can surpass key resistance levels observed earlier in the year. Amidst these developments, BlockDAG is capturing significant attention with its limited-time 50% bonus offer on coin purchases. This initiative has significantly increased demand for BDAG coins, propelling the presale total to an impressive \$92 million. Market analysts are expressing optimism, projecting substantial growth with potential valuations reaching as high as \$30 by 2030. Monitoring the progression of these coins is crucial for those participating in the dynamic crypto environment. Vitalik Buterin Advocates for Responsible Predictive Platforms Vitalik Buterin's support for Polymarket, a decentralized prediction platform operating on Ethereum's Layer-2 chain, reflects his commitment to leveraging blockchain technology for societal benefit. Buterin advocates for the responsible use of such platforms, cautioning against their application in harmful or illicit predictions. His stance is indicative of a broader vision where decentralized technologies play a pivotal role in shaping public discourse and access to information. Bitcoin's Potential Breakthrough Looms As Bitcoin navigates through a challenging phase, the anticipation of a breakthrough builds. The cryptocurrency has experienced a downward trend since March, but the seasonal strength typically seen in October offers a glimmer of hope. If Bitcoin can rise above the notable July peak, there is a strong possibility it could climb past previous thresholds and set new records. BlockDAG's 50% Bonus Countdown: Just 5 Days Left to Enhance Your Holdings As the countdown to BlockDAG's generous 50% bonus offer nears its conclusion, the excitement within the crypto community is palpable. With only five days remaining, this offer has already made significant waves, amassing an impressive \$10 million within 72 hours of its announcement and elevating the presale total to \$92 million by batch 24. The burgeoning demand for BDAG coin has remarkably increased its value, delivering a staggering 1960% gain for early holders. Market analysts maintain a positive outlook on BlockDAG's trajectory, envisioning a potential value of \$30 by 2030, which could represent a transformative return for those engaging now. The BDAG coin is currently priced attractively at \$0.0206, but this window of opportunity is expected to narrow swiftly as prices are poised to escalate with each successive batch. For enthusiasts keen on capitalizing on this opportunity, the final day to participate is October 14. This initiative offers a significant opportunity to enhance holdings with minimal additional action required. As the deadline approaches, BlockDAG is also preparing to broaden its reach with the launch of a new website and platform, set to increase its appeal on a global scale. With over 13.9 billion coins already purchased, the potential for considerable growth is evident. Overview of the Crypto Market The broader crypto market is also seeing notable developments. Ethereum, under the guidance of its creator Vitalik Buterin, is experiencing positive momentum, particularly with Buterin's endorsement of Polymarket as a tool to combat misinformation effectively. Meanwhile, Bitcoin is navigating through some instability,

remaining below its usual trading parameters. Yet, it's BlockDAG that is currently capturing widespread attention with its soon-ending 50% bonus offer. The surge in demand and optimistic price forecasts indicate a robust future. BlockDAG's strategic initiatives and forthcoming enhancements to its platform are creating buzz and promise rewarding possibilities, positioning it as an enticing option for those looking to expand their digital asset portfolios in a dynamic market landscape. - SUI ecosystem market cap reaches \$8.54 billion, with SUI at \$5.38 billion. - SUI ranks third in altcoin netflow, behind Ethereum and Solana. - The coin's dominance surges 270% to 0.27%, amid potential correction warnings. The SUI ecosystem has emerged as a focal point for investor attention this October, setting multiple records and outperforming many of its altcoin peers. While numerous cryptocurrencies struggle to maintain recovery momentum, SUI had achieved new all-time high of \$2.16, showcasing its robust market performance. CoinMarketCap data reveals that the SUI ecosystem's total market capitalization has surged to an impressive \$8.54 billion. SUI token itself accounts for \$5.3 billion of this valuation, while First Digital USD (FDUSD) contributes nearly \$3 billion. Daily trading volume across the ecosystem has exceeded \$6 billion, primarily driven by SUI and FDUSD activities. SUI ecosystem meme coins surge The ecosystem's growth extends beyond its primary assets, with meme coins on SUI experiencing a remarkable 170% increase in market cap since the beginning of October, now totaling over \$296 million. This trend mirrors the pattern seen in the Solana ecosystem's rise to popularity last year, as SUI holders reinvest in various protocols within the ecosystem. Artemis data further underscores SUI's growing appeal, ranking it third in altcoin netflow over the past month, trailing only Ethereum and Solana. Cross-ecosystem bridge transactions reveal that SUI accounts for over 9% of capital flow from Ethereum, highlighting the network's increasing activity and user adoption. SUI's market dominance (SUI.D) has seen a meteoric rise, surging 270% in the past two months to reach a new high of 0.27%. This increase in market share comes at a time when most other altcoins are experiencing declines, and Bitcoin dominance remains above 56%.

- Ethereum (ETH) is trading at \$2,429, with a 24-hour increase of 0.09% and a weekly rise of 0.49%. - ETH's market cap has dropped below \$300 billion, currently sitting at approximately \$293 billion. The second largest crypto, Ethereum (ETH), is currently facing a challenging phase as its price hovers around \$2,400, reflecting a slight 0.09% increase in the last 24 hours and a 0.49% rise over the week. However, this recent uptick comes amid broader concerns about its ability to maintain key support levels, particularly after hitting resistance at \$2,560 earlier this week. This decline has caused Ethereum's market cap to fall below \$300 billion, now standing at \$293 billion, with trading volumes dropping by over 8% to \$13 billion in the past day. Bearish Signals Emerge Amid Resistance Challenges for Ethereum The Ethereum price was rejected by the daily resistance level at \$2,470 on Wednesday. According to the ETH/USD 4-hour chart, the 50-day MA has fallen below the 200-day MA, indicating a bearish crossover. Both MA are positioned above the current price of ETH, suggesting that downward pressure may persist in the short term. Additionally, the Relative Strength Index (RSI) sits at 49, just below the neutral mark, suggesting ongoing weakness. Further, Ethereum might be in a strong bearish trend, with the signal line positioned above the MACD line, indicating a potential sell signal. However, the zero line is above both the signal and MACD lines, suggesting that the overall momentum might still be bullish despite short-term weakness. In that case, if the daily resistance level at \$2,400 remains stable, Ethereum could rise from its current trading level to challenge its October 1 high of \$2,655. However, the RSI on the daily chart is currently at 49, below the neutral level, suggesting weakness and a continuation of the downward trend. Conversely, if selling pressure persists, a decline of around 5% could push Ethereum down to \$2,256.

- Ethereum price drops to \$2,420, losing 4% in a week and falling below \$300B market cap. - Technical analysis shows bearish signals on 4-hour chart, with potential drop to \$2,150. - On-chain data indicates crucial support at \$2,300, where 2.77M addresses hold 52.65M ETH. Ethereum (ETH) finds itself navigating turbulent waters as its price experiences a notable decline, raising concerns about the sustainability of key support levels. Currently trading at the \$2,400 level, ETH has recorded a 2% drop in the past 24 hours and a more substantial 4% decrease over the past week. This downward movement has pushed Ethereum's market capitalization below the \$300 billion threshold, settling at \$291 billion with a 24-hour trading volume of \$16.11 trillion. Technical analysis of Ethereum's daily chart reveals a larger falling channel pattern, indicative of an ongoing downtrend. The bullish momentum within this bearish channel struggles to gain traction, facing significant resistance at the 50-day Exponential Moving Average (EMA). Since reaching a 14-day high of \$2,729, ETH has retraced 11.52%, though bulls maintain hope as long as the price holds above the crucial \$2,350 support level. Zooming in to the 4-hour timeframe, the likelihood of a breakdown rally increases. The Moving Average Convergence Divergence (MACD) indicator shows a bearish crossover, while the 50, 100, and 200 EMAs have aligned in a bearish formation. 77.54% of Ethereum holders in profit These technical signals collectively point towards a potential sell opportunity, with key support levels at \$2,150, \$2,000, and \$1,900 should a bearish breakdown materialize. On-chain metrics provide additional context to Ethereum's market dynamics. The Global In and Out of Money Indicator from IntoTheBlock reveals that 77.54% of Ethereum's current supply, approximately 105.62 million ETH tokens valued at \$255.43 billion, is "in the money." The "At the Money" range spans from \$2,412 to \$2,511, encompassing 4.85% of the current supply. Analyst Ali Martinez highlights the significance of the \$2,300 level, where nearly 2.77 million addresses hold 52.65 million ETH tokens. This concentration of holdings

creates a crucial on-chain support level, potentially influencing Ethereum's price action in the near term.

- Ethereum slips into the \$2.4K mark, losing over 2.50% over the past 24 hours. - The market witnessed an ETH liquidation of \$50.51 million. Ethereum's price oscillation over the past few days has left traders anxious due to eminent volatility. Several crypto analysts anticipate that the ETH price might recover with the influx of October. The ETH price is at a critical juncture as it hovers near strong resistance and support levels. The largest altcoin witnessed a price drop of over 2.50% in the past 24 hours. This decline is reflected in the price, which is currently trading at \$2,426, as per CMC data. The daily price chart shows the asset's struggle to maintain the price at the \$2.5K mark. Moreover, Ethereum recorded the lowest price at \$2,405 and the highest at \$2,520. Amid this, the market witnessed an ETH liquidation of \$50.51 million as per CoinGlass. Meanwhile, the daily trading volume of ETH has increased by over 43.90% to \$15.89 billion. On the other hand, the on-chain data observed that an Ethereum whale who received 150K ETH during the ICO has deposited another 5K ETH, worth \$12.2 million, to Kraken. Over the past 15 days, Furthermore, the whale has sent a total of 45K ETH, worth \$113.3 million. The whale holds a total of 94,450 ETH, valued at around \$230 million in the wallet. Is a Rebound Possible for ETH? On the monthly chart, ETH's price has spiked over 6.40%; a high has formed at \$2,685. However, in the past seven days, a series of lows were formed, and the price has plunged 7.70%. The asset has tumbled from \$2.6K to \$2.3K. An upside price correction was expected amid the volatility, but the bear hold has strengthened till date. The current bearish pace could trigger Ethereum to collapse to the \$2.2K level. If the downside momentum persists, further pullback can be expected below the \$2K mark. On the other hand, a rebound above the current price could bring a retest, and ETH might jump toward \$2,628. While zooming in at the technical chart, the daily Relative Strength Index (RSI) is positioned at 48.16, in the neutral zone. Besides, both the short-term 50 and long-term 200 moving averages of ETH are noted at \$2,459, suggesting that the current price momentum for ETH is bearish.

- Solana price recovers, outperforming Ethereum in the past 30 days. - SOL forms symmetric triangle pattern, trading between \$127 and \$155. - Technical indicators show mixed signals, with potential for both bullish and bearish scenarios. Solana (SOL) has demonstrated remarkable resilience in the face of recent market turbulence, staging a significant recovery following a sharp bearish pullback. The fifth-largest cryptocurrency by market capitalization has outpaced Ethereum's performance by approximately 8.5% over the past month, adding an impressive 16% to its valuation. This surge in value highlights the growing adoption and interest in Solana within the cryptocurrency ecosystem. Despite this positive momentum, SOL faces a formidable barrier in the form of resistance around the \$155 mark. This price point has repeatedly thwarted attempts at further upward movement, leaving market participants to speculate whether upcoming bullish catalysts or increased network activity could propel Solana beyond this crucial threshold. Solana surges modestly in 24 hours The past 24 hours have seen SOL record a modest 4% gain, accompanied by a trading volume of \$1.925 billion. However, zooming out to a weekly timeframe reveals a 5.17% decline, underscoring the token's recent volatility. Since September, Solana has been confined within a symmetric triangle pattern, a formation that often precedes significant price movements in either direction. Technical indicators present a mixed picture for SOL's near-term prospects. The Moving Average Convergence Divergence (MACD) histogram shows a consistent decline in its red component, with its averages hinting at a potential bullish convergence on the daily timeframe. Conversely, the Simple Moving Average (SMA) suggests an impending bearish crossover, adding an element of uncertainty to Solana's price outlook. Looking ahead, Solana's price trajectory hinges on its ability to overcome key resistance levels. A bullish scenario could see SOL retesting the \$155 resistance, with sustained momentum potentially driving the price towards the \$180 mark in the coming weeks.

An early Bitcoin investor who made a fortune stockpiling Bitcoin in 2017 before its bull run in 2021 has announced the next Bitcoin-like investment. He believes ETFSwap (ETFS) will perform like Bitcoin (BTC) in 2021 and even deliver "better gains than Ethereum (ETH)," given the several 400,000x predictions the token has gotten from top crypto analysts. Bitcoin Investors Race To Join ETFSwap (ETFS) Presale Before It Concludes ETFSwap (ETFS) has seen more Bitcoin (BTC) investors buy its presale this past month than during its earlier months. As the Ethereum project gets more popular and more notable crypto figures like the Bitcoin investor talk about it, the crypto community is seeing its potential, and the FOMO wave is catching on. In just a few weeks, ETFSwap (ETFS) sold almost 12.4 million tokens and raised \$1.72 million in revenue despite being priced at \$0.03846 per unit. ETFSwap's thunder is in the way its decentralized ETF trading platform blends traditional and decentralized finance to create a very liquid pool of assets for investors and traders to choose from. The platform collaborates with highly regulated investment banks that comply with the Markets in Crypto-Assets regulatory framework to offer its assortment of hybrid institutional ETFs. Additionally, ETFSwap (ETFS) offers many incentives to traders who use the platform. For instance, ETFSwap (ETFS) allows them to strengthen their futures and options orders by up to 50x, multiplying their profits exponentially. Meanwhile, users can multiply their gains on all other trades by up to 10x using ETFSwap (ETFS). These options help even small-scale traders to access larger positions with relatively smaller upfront capital. Furthermore, ETFSwap (ETFS) equips investors with advanced trading tools to rev up their trading strategies and boost their earnings. The platform's market-making algorithm tightens spreads and minimizes slippage to execute all buy and sell orders at the best possible prices. AI-powered tools like the ETF Screener and ETF Tracker help investors and traders make better investment decisions by providing analytical insights on ETF trends and patterns obtained from an analysis of their market history. The ETFSwap (ETFS) token also offers several incentives for token holders to support its community in several ways. They will enjoy huge discounts on trading fees so they can trade cost-effectively. Also, token holders are entitled to monthly airdrops from ETFSwap's

(ETFS) dedicated rewards pool for rewarding its community. Staking ETFSwap (ETFS) tokens is another way users earn on the platform. Contributing to the project's liquidity pool in this way exposes users to an opportunity to earn passive income with an 87% APR yield potential. Bitcoin Investor Picks ETFSwap (ETFS) For Huge Gains Like Bitcoin's (BTC) And Ethereum's (ETH) 2021 Bull Runs The Bitcoin investor has said he is going all in on the ongoing ETFSwap (ETFS) presale. To show his seriousness, he bought several \$10,000 tranches of the token as he expects to see huge gains after the token's predicted 40,000% surge. The Bitcoin investor often compares the token to the bull run of 2021 during which early investors in Bitcoin (BTC) and Ethereum (ETH) reaped massive profits. In 2021, Bitcoin (BTC) went from under \$20,000 to over \$50,000, delivering over 250% profits for early investors in Bitcoin (BTC). Similarly, Ethereum (ETH) surged over 740% as early investors reaped huge profits from the token. Conclusion The Bitcoin investor has said ETFSwap (ETFS) will deliver greater profits than Bitcoin (BTC) and will even surpass Ethereum's (ETH) surge. However, as the presale quickly draws to its conclusion, interested investors cannot afford to waste any more time. Now is the time to buy the Ethereum token, at its discounted price of \$0.03846 and with the ongoing 50% bonus promo which is allowing them to accumulate more tokens and maximize their profits. - Ethereum reaches a four-day high, trading at \$2,484.46. - A whale transaction of 29,732 ETH adds to market activity. Ethereum is gaining momentum as it edges closer to the \$2,500 mark, supported by the Shanghai upgrade. Currently trading at \$2,484.46, Ethereum has experienced a 2.57% increase in the past 24 hours. The market capitalization has surged to \$299.07 billion, while the 24-hour trading volume jumped by 52.73%, reaching \$11.56 billion. The volume-to-market cap ratio stands at 3.86%, indicating sustained liquidity and market interest. Ethereum's recent proposal aims to enhance network efficiency by increasing throughput by 50%. This improvement addresses its scalability issues. Specifically, it refines how the network processes transactions. By boosting transaction speeds, Ethereum can cater to higher demand. Additionally, this enhancement helps reduce congestion and fees. Analysts believe this development will play a significant role in supporting Ethereum's long-term growth. Furthermore, more decentralized applications (dApps) and users will enter the ecosystem as a result. Whale Moves and Bullish Signals for ETH A whale transaction further highlights the market activity. Recently, 29,732 ETH (worth approximately \$73 million) was transferred from an unknown wallet to Coinbase, as noted by Whale Alert. Such movements can trigger price shifts and raise speculation about future market direction. From a technical standpoint, Ethereum's indicators signal a bullish trend. The key \$2,500 resistance level was tested, and current support is holding strong at \$2,456, setting the stage for further upward movement. The 50-day moving average (MA) is currently at \$2,522, which is the next resistance to watch. A close above this could confirm a more prolonged rally for Ethereum. The Relative Strength Index (RSI) is currently at 50.67, reflecting neutral market conditions. This suggests that Ethereum is neither overbought nor oversold, leaving room for additional upward momentum. The average RSI stands at 46.97, confirming steady market sentiment. Furthermore, a recent moving average crossover between the 9-day and 21-day averages points to a bullish shift, indicating growing buying pressure. Highlighted Crypto News Ethereum's Proposal Aims to Skyrocket Throughput by 50 Percent

In 2024, Bitcoin (BTC) and Ethereum (ETH) have grabbed investors' interests, especially with the launch of spot ETFs. Trading at \$63,800 (BTC) and \$2600 (ETH), their exorbitant pricing sometimes deters prospective investors from searching for low-cost, highly profitable prospects. Fortunately, there are some fascinating cryptocurrencies presently for less than \$0.50 that could soon provide more gains. Let's look at three inexpensive coins under \$0.05 that have significant growth potential and more approachable entry points: Notcoin (NOT), PEPE Coin (PEPE), and Rexas Finance (RXS). The Rexas Finance (RXS) Rexas Finance (RXS), an up-and-coming project, tokenizes actual assets, including real estate and gold, using blockchain technology. Thanks to this innovative technology, users may buy and sell complete or partial ownership of genuine assets from anywhere in the world with just a few clicks. Furthermore, the platform removes middlemen, improving access, openness, and liquidity of actual asset investments. For \$0.050, RXS tokens are in the third presale phase; the price will go to \$0.060 in the next stage. Sales of 51.5 million RXS tokens during the continuous presale have brought over \$2 million. Early investors have the chance to purchase tokens at a discount to the anticipated \$0.20 listing price, potentially yielding a 6x return. Rexas Finance offers investors the opportunity to engage in a platform that has the potential to completely transform global asset management by bridging the gap between traditional asset markets and blockchain networks. Apart from its tokenization functionalities, Rexas Finance distinguishes itself from other initiatives with a number of creative tools. Users may easily tokenize their assets with the Rexas Token Builder, and fundraising across different blockchain networks can take place in a decentralized setting on the Rexas Launchpad. These characteristics, along with the platform's gaining traction and advantageous tokenomics, position RXS as a serious competitor to outperform Ethereum or Bitcoin in terms of returns. PEPE Coin (PEPE) With a 42% price increase in the last week, PEPE Coin has demonstrated remarkable growth and captured the attention of the meme coin market. PEPE, which is now trading at just \$0.00001097, has demonstrated that meme coins can have significant positions in the larger cryptocurrency market. With a current market cap of a healthy \$4.6 billion, the token is ranked #21 in terms of market capitalization. In the past 24 hours, PEPE's trading volume has increased to \$2.26 billion, ranking it as the tenth most traded coin in terms of volume. PEPE's success is largely due to the tremendous support it has from the community. PEPE has amassed a sizable network of investors with over 455,000 holders that actively trade and promote the coin. Technical indicators point to additional higher movement, and the current price increase is consistent with bullish momentum. PEPE is an excellent

chance for investors hoping to profit from the market's resurrection of meme coins due to its low pricing and increasing popularity. Notcoin (NOT) In the play-to-earn space, a fast-expanding part of the cryptocurrency market, Notcoin (NOT) is causing a stir. Whale activity has returned to NOT, which is currently ranked 79th by market capitalization, as major holders are repurchasing the coin. Whales now hold 66.91% of the supply, indicating a bullish outlook following a period of sell pressure. The price of NOT has increased by 40% over the last five days, and it is currently selling at \$0.009, which is 76% less than its peak. Whale accumulation and greater liquidity make it NOT a cheap alternative to Bitcoin and Ethereum, which have huge potential. Conclusion Bitcoin and Ethereum's growing prices are locking out low-budget investors. Notcoin, PEPE Coin, and Rexas Finance are all reasonably priced options with significant development potential. Because each of these coins is positioned to benefit from current market trends, investors can achieve substantial returns for a fraction of the price of Bitcoin or Ethereum. Investors should always carefully examine their level of risk tolerance, but in the coming months, it will be interesting to keep an eye on these three coins under \$0.50. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- EIP-7781 aims to decrease block times on Ethereum from 12 seconds to 8 seconds. - Increased blob capacity will help lower layer-2 network fees. Ethereum's latest proposal, EIP-7781, was introduced by Illyriad Games co-founder Ben Adams on Oct. 5. The proposal aims to cut block times from 12 seconds to eight seconds. This reduction would increase Ethereum's network throughput by 50%, benefiting decentralized finance (DeFi) platforms and decentralized exchanges (DEXs). Prominent figures like Vitalik Buterin and Justin Drake support this initiative. They believe that shorter block times could improve network efficiency while lowering user costs, particularly in DeFi. EIP-7781 also aims to enhance layer-2 scaling solutions by increasing blob capacity. Blobs, temporary data structures, help reduce network fees on layer-2 rollups like Arbitrum and Optimism. The proposed changes could improve transaction efficiency on DEXs by 22%. This efficiency boost could potentially save up to \$100 million annually by reducing arbitrage opportunities between centralized exchanges (CEXs) and DEXs. With Ethereum aiming to balance performance and cost efficiency, this proposal is a significant step forward. Concerns and Optimism Surrounding Ethereum's EIP-7781 Proposal However, concerns have emerged regarding its impact on solo stakers. Shorter block times could lead to faster state growth, requiring more powerful hardware to handle data propagation. Critics worry this could push solo stakers out of the network, threatening decentralization. Adam Cochran of Cinnehaum Ventures raised concerns about the impact on stakers with limited hardware. Yet, he believes the gas limit remaining unchanged could mitigate these issues for most participants. This proposal follows discussions about lowering the validator minimum from 32 ETH to as low as 16 ETH. Lowering this threshold would make it easier for more users to participate in staking, improving network security and decentralization. While EIP-7781 presents challenges, Ethereum developers remain optimistic about its potential. By enhancing throughput and reducing costs, the proposal aligns with Ethereum's long-term scalability goals. If EIP-7781 is adopted, it could significantly improve the Ethereum network's performance. The combination of shorter block times and increased blob capacity promises to enhance DeFi operations and boost transaction efficiency across the network. Highlighted Crypto News Today Tether Celebrates 10th Anniversary with Documentary on USDT Stablecoin

In cryptocurrency market, Ethereum ETFs experienced a significant drop on Monday, with a staggering \$79 million moving out. This shift highlights a growing trend where enthusiasm is cooling off due to Ethereum's recent slow pace in rolling out new developments. On the flip side, Fantom (FTM) is buzzing with a nearly 90% surge in value since the debut of its Sonic testnet. Now, it's at a crucial juncture, grappling with a key resistance level that could either catapult its price to \$1 or see it struggle to maintain the momentum. Meanwhile, BlockDAG is making waves with its whopping \$84.2 million presale, fueled further by a tantalizing \$1M giveaway. With analysts whispering about a potential 20,000x return, the big question is: will this surge in presale activity lead to an explosive increase in price sooner than many might expect? Ethereum ETFs Face Major Outflows It was a rough start to the week for Ethereum ETFs, seeing over \$79 million pulled out, marking the most significant exit since July. The lion's share of this exodus came from Grayscale's Ethereum Trust (ETHE), though Bitwise's ETHW managed to snag some modest inflows. Despite Ethereum's price enjoying an 11% uptick recently, the mood remains wary among those holding Ether. The lack of fresh and exciting developments has many reallocating their assets, looking towards what's next on the horizon. With the Pectra update slated for 2025 aiming to inject new life into Ethereum's capabilities, the hope is to rekindle interest. Yet, for now, the focus for many is shifting towards fresher opportunities. Fantom's Price on the Cusp: Could \$1 Be in Sight? Fantom is on a tear, with its value nearly doubling since the Sonic testnet went live on September 6. After overcoming a long-standing resistance level, FTM now faces another challenge at the \$0.75 to \$0.86 range. If it can break through, the pathway to \$1 looks promising. However, failure to sustain this breakthrough could mean that the recent uptick is just a temporary peak rather than a sign of a long-term trend.. BlockDAG Launches Its Second \$1M Giveaway More Opportunities to Win Big! BlockDAG is stirring up the crypto community once again with its second \$1 million giveaway, marking another pivotal moment in its remarkable growth journey. For those looking to participate, the steps are straightforward: maintain at least \$100 worth of BDAG coins, engage with BlockDAG on social media, and share the giveaway post. These simple actions could catapult participants into the ranks of the 50 lucky winners who will each snag \$20,000. Plus, referring friends can significantly boost one's odds by earning additional entries. Since making a splash with its testnet debut, BlockDAG's presale has reached a monumental

\$84.2 million, cementing its place as one of the major presales in cryptocurrency history. With such impressive figures, industry insiders are suggesting BlockDAG could rise to become a leading figure in the crypto sphere by 2027, with potential value reaching up to \$20 per coin. The ongoing giveaway is expected to further skyrocket BlockDAG's visibility and appeal. But the giveaway does more than just reward a few lucky winners—it benefits the entire BlockDAG community. As more people join the giveaway, the demand for BDAG coins is likely to soar, potentially boosting the value of the holdings significantly. In fact, early participants have already witnessed their holdings skyrocket by 1820% across 22 presale batches. As buzz about the giveaway spreads across social platforms, more and more traders are rushing to be part of the action, with the 23rd batch of the presale on the verge of selling out. Those eager to maximize their potential benefits are finding that early participation is crucial as each new batch sees rising prices due to growing demand. Which Crypto Will Dominate 2024? While Ethereum ETFs are seeing significant outflows, indicating a cooling interest due to recent stagnations, all eyes are now on whether the upcoming Pectra update in 2025 can reverse these fortunes. Meanwhile, Fantom is on an upswing, targeting the \$1 mark if it can successfully navigate through key resistance levels between \$0.75 and \$0.86, potentially setting it up for a long-term upward trajectory. Yet, amidst these developments, it's BlockDAG's \$1 million giveaway that's capturing the limelight. With the presale's success and the increasing demand for BDAG coins, BlockDAG is quickly becoming the go-to narrative for those wondering which crypto will make the biggest splash in 2024. With the 23rd presale batch nearly sold out, getting in early appears to be a strategy many are eager to adopt for potentially substantial rewards. - Ethereum trades at \$2.4K, moderately spiked over the past 24 hours. - ETH price influences the altcoin market sentiment and activity. Altcoins in the market have shown mixed signals, with Ethereum, the largest altcoin, suffering to hold its ground. ETH price is at a critical juncture as it hovers near key resistance and support levels. Notably, over the past 24 hours, ETH witnessed a moderate spike of 1.54%. At the press time, Ethereum traded at \$2,423 with a market cap of \$291 billion. Besides, the asset recorded the lowest price at \$2,353, and the highest at \$2,440, according to CoinMarketCap data. The market observed a liquidation of \$20.86 million worth of ETH during this timeframe, as per CoinGlass. Meanwhile, the daily trading volume of the altcoin stays at \$12.85 billion. Furthermore, as per the analyst, the crypto market shows a strong desire to rise with an upward move of Ethereum. For an altcoin rally to occur, ETH needs to take the lead, as it's still considered the primary indicator of risk appetite in the altcoin market. Can ETH Break the Key Resistance? The notable plunge of ETH by 9.45% over the past week triggered the asset to trade below the \$2.4K mark. The week began trading at \$2,674, eventually, the asset slid to the \$2.3K range. The asset's four-hour price chart reveals the daily relative strength index (RSI) at 44.93, in the neutral zone. Besides, the daily frame of Ethereum highlights the short-term 9-day and long-term 21-day moving averages noted below the current price at \$2,404 and \$2,401 respectively. In addition, the Chaikin Money Flow (CMF) indicator is positioned at 0.12, an increased money flow with selling pressure is suggested. However, the trading volume has plummeted by 22.44%. If Ethereum could break out at the \$2,500 zone, it would likely push the price further and test the \$2,648 resistance. However, on the downside, if ETH fails to hold the \$2.5K mark, it may enter into and prolong a period of consolidation. This has the potential to fall back to the \$2,290 range. A major cryptocurrency investor offloaded 19,000 ETH just as Ethereum's price took a nosedive. The sudden sell-off has sent shockwaves through the market, raising questions about the investor's next move. This article will explore potential coins poised for growth and where this market whale might be shifting his focus next. CYBRO Presale Achieves \$2.9 Million Milestone: A One-in-a-Million Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$2.9 million. This cutting-edge platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In an exciting development, CYBRO has also launched a referral program, offering 12% from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are sent weekly in USDT, and referees earn double CYBRO Points on their first deposit using the referral code. In addition to tokens, CYBRO introduces exclusive Points, providing even greater benefits for investors. These Points grant automatic entry into the CYBRO Airdrop, where the number of tokens you receive is proportional to the Points you hold. Up to 1 million Points are distributed weekly, earned by investing in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Ethereum's Role in the Next Altcoin Bull Run Ethereum stands as a key player in the crypto world, known for its Proof-of-Stake system. Vitalik Buterin's creation offers a robust platform for smart contracts and decentralized apps. It's home to financial solutions and projects trying to improve transaction speeds. Ethereum's legacy includes introducing ERC-20 tokens, which

are important for various applications. The platform's shift to Proof-of-Stake aims to enhance efficiency and scale. Ether (ETH), the lifeblood of the network, is crucial for transactions and staking rewards. As the crypto space evolves, Ethereum's technology and ecosystem make it an interesting asset for many investors and developers. Conclusion ETH and other coins have less potential in the short term. CYBRO, a technologically advanced DeFi platform, offers investors great opportunities. It uses AI-powered yield aggregation on the Blast blockchain. CYBRO's features include lucrative staking rewards, exclusive airdrops, and cashback on purchases. It ensures a superior user experience with seamless deposits and withdrawals. The platform emphasizes transparency, compliance, and quality. CYBRO stands out as a promising project with strong interest from crypto whales and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum (ETH) price has dropped about 12.73% in October, from \$2,648 to \$2,311. - Ethereum reserves increased by 186,000 ETH in 24 hours, signaling rising selling pressure and mixed sentiment. Despite positive news surrounding Franklin Templeton's proposed Bitcoin and Ethereum index ETFs, Ethereum (ETH) and Bitcoin (BTC) display price declines. As October begins, often referred to as "Uptober" for its historical bullish trends, market sentiment remains cautious, with both leading cryptocurrencies struggling to maintain momentum. Currently, ETH is trading around \$2,383 after dipping to a low of \$2,311. Since October 1, it has lost approx. 12.73%, falling from a high of \$2,648. While it remains above the crucial \$2,300 support level, a drop below this point could send it toward the \$2,100 range or even below \$2,000. Investor sentiment has shifted to a more cautious stance, evident from a rise in Ethereum exchange reserves. Data from CryptoQuant shows an increase of over 186,000 ETH in exchange reserves in just 24 hours, indicating growing selling pressure. At present, the Ethereum price is down nearly 0.33% for the day. Over the past 24 hours, ETH has experienced liquidations exceeding \$44.89 million, with long positions of \$34.93 million and short positions accounting for \$9.96 million. Further, Ethereum ETFs recorded a net outflow of \$3.20 million on Thursday. Although BlackRock's ETHA saw an inflow of \$12.08 million, it wasn't enough to counter the \$14.69 million outflow from Grayscale's ETHE. Historically, Ethereum ETFs have struggled to match the performance of their Bitcoin counterparts. Is Ethereum's Price Decline Pointing to Bearish Trends? Despite the initial optimism for October, Ethereum began the month on a low note, breaking below the support level of \$2,350. It has also crossed below its 50-day and 200-day moving averages, signaling potential bearish trends. The next support level to watch is \$2,280, and a breach here could lead to a further decline toward \$2,200. The Stochastic RSI for Ethereum shows an overbought condition, with selling pressure increasing as the Relative Strength Index (RSI) sits at 33. This suggests a potential reversal as it approaches oversold levels. However, recovering above the \$2,550 level could help invalidate the current bearish outlook.

Crypto enthusiasts are often on the lookout for opportunities that promise substantial growth in a brief period. Currently, the cryptocurrency community is abuzz with several significant developments. LayerZero (ZRO) is currently seeing a 16.8% price surge, driven by increased activity following an airdrop announcement. Meanwhile, Ethereum investors maintain a positive outlook with consistent inflows, though the rising exchange reserves may present potential challenges ahead. BlockDAG has ignited widespread enthusiasm with its 50% bonus offer, set to conclude on October 14. This promotion has successfully attracted a surge of new participants and re-engaged existing ones, propelling presale revenue beyond \$79.5 million. This offer stands as a prime opportunity for cryptocurrency enthusiasts to maximize their potential returns as the closing date rapidly approaches. LayerZero (ZRO) Experiences Notable Price Increase LayerZero has recently seen a remarkable 16.8% rise in its value, following an announcement of an upcoming airdrop. This news spurred a 433% increase in daily activity, pushing the number of daily messages to 98,000. The price of ZRO has climbed to \$5.19, with 80.39% of LayerZero addresses currently showing profits. Market observers suggest that breaking past the \$4.99 mark might set the stage for reaching new heights around \$5.60. However, the sharp increase in price also introduces the possibility of a correction if the current momentum doesn't hold, potentially driving prices down to around \$3.83. Ethereum Enthusiasts Remain Hopeful Amid Positive Market Indicators The Ethereum community is witnessing an optimistic phase, with the token currently trading around \$2,640, marking a 2% increase amid significant inflows into Ethereum ETFs. More than \$105 million has entered these funds recently, sparked by the U.S. Federal Reserve's decision to cut interest rates. These positive funding rates are supporting a generally bullish outlook for Ethereum's market performance. Despite this, there is a cautious eye on the rising exchange reserves, which might introduce selling pressure. As Ethereum approaches the resistance level of \$2,707, the community views it as a significant marker that could influence future price movements. BlockDAG's 50% Bonus Sparks Significant Participation as Deadline Approaches BlockDAG is currently at the center of attention in the crypto world with its exclusive 50% bonus offer, set to expire on October 14. This limited-time promotion is rewarding users with additional BDAG coins when they use the code BDAG50 at checkout, amplifying their potential returns. This offer aligns with BlockDAG reaching significant milestones, including a successful Testnet launch and robust presale activities. The anticipation intensifies as BlockDAG gears up to unveil its new website and platform, marking a significant leap forward in its development. This coincides with the bonus offer deadline, making this period particularly pivotal for the project. Those participating in this phase are well-placed to experience what could be substantial future growth, given the project's momentum. The crypto community has responded enthusiastically to BlockDAG's bonus, propelling its presale revenue to over \$79.5 million. Currently, in its 23rd batch, BDAG's price has impressively risen from \$0.001 to

\$0.0192, reflecting a growth of 1820%. The swift sell-out of each presale batch underscores the growing demand for BDAG, with the community eagerly anticipating the upcoming platform enhancements. BlockDAG Amidst a Vibrant Crypto Landscape While other cryptocurrencies like LayerZero (ZRO) experience price fluctuations and Ethereum maintains a steady influx of optimistic support, BlockDAG distinguishes itself with this timely bonus offer. The initiative has significantly expanded its community, now boasting over 140,000 holders who are keenly observing the project's progression. As the October 14 deadline looms, both new and existing participants are seizing the opportunity to enhance their holdings with the 50% bonus, poised to capitalize on the imminent launch of BlockDAG's innovative platform. This strategic timing suggests that BlockDAG is not just another crypto project but a forward-thinking endeavor poised for significant developments that could reshape its market position. - Franklin Templeton has filed a proposal with the US SEC to launch a Bitcoin and Ethereum index ETF. - If approved, this ETF would be the first to hold both BTC and ETH in a single fund. Franklin Templeton, a trillion-dollar asset management firm, submitted a proposal to the U.S. Securities and Exchange Commission (SEC) for a Bitcoin and Ethereum index exchange-traded fund (ETF). This fund, known as the Franklin Templeton Bitcoin & Ethereum Crypto Index ETF, aims to provide investors with a combined exposure to both cryptocurrencies, which are currently the largest in the market. According to the Oct. 2 filing, the ETF shares will be issued in blocks of 50,000, with their value linked to the net asset value of the cryptocurrencies held within the fund. Notably, the fund won't participate in staking or any activities that generate income from these digital assets. If the SEC approves this application, it will be a significant milestone, as this ETF would be the first to hold both Bitcoin (BTC) and Ethereum (ETH) together. Overview of the Franklin Templeton ETF Structure and Strategy This index was created to offer investors indirect exposure to Bitcoin and Ethereum. Further, it aims to reduce the typical price fluctuations associated with these cryptocurrencies. The fund will comprise Bitcoin, Ethereum, cash, and short-term financial instruments, with assets structured to mature in less than three months. It will track the CF Institutional Digital Asset Index, which reflects the performance of the largest digital assets. BNY Mellon, a global financial services company, will serve as the custodian and transfer agent for the ETF. The Coinbase Custody will be responsible for managing the digital assets. The SEC's decision on this proposal will hinge on the effectiveness of anti-fraud measures concerning regulated futures markets. With this new offering, Franklin Templeton is positioning itself to tap into the growing interest in cryptocurrency investments, making it an exciting development for investors looking to diversify their portfolios. Highlighted News Of The Day Vitalik Supports Lower ETH Staking Minimum for Accessibility

- 7 Siblings invested \$66M in Ethereum during recent market dip. - Previous purchases include \$129.3M for 56,093 ETH at \$2,305 average price. In a remarkable show of confidence amid market volatility, the enigmatic group known as the 7 Siblings has re-entered the spotlight, amassing significant Ethereum (ETH) holdings worth over \$66 million. This latest acquisition of 28,120 ETH comes as part of a strategic buying spree during a recent dip in the cryptocurrency market, reinforcing the group's reputation as a shrewd investor. The 7 Siblings, whose identity remains undisclosed, made headlines previously when they capitalized on the sharp market downturn on August 5. During this crash, the entity deployed an impressive \$129.3 million in USD Coin (USDC) to acquire 56,093 ETH at an average price of \$2,305 per coin. This strategic maneuver not only showcased their ability to navigate market turbulence but also positioned them as key players in the Ethereum ecosystem. The mysterious "7 Siblings" with \$2.2B assets is back, quietly buying 28,120 \$ETH (\$66M) during the recent dip! – Spot On Chain (@spotonchain) October 3, 2024 Notably, in the August 5 crash, this entity spent 129.3M \$USDC to purchase 56,093 \$ETH at an average price of \$2,305. Recently, as the #Ethereum price crashed again, pic.twitter.com/pxS4899Ast Meanwhile, fast forward to the present, as Ethereum experienced another price drop, the group seized the opportunity once more. In the past 15 hours, they spent an additional \$66 million in USDC to purchase 28,120 ETH at an average price of \$2,350. This calculated investment reflects their steadfast belief in Ethereum's long-term potential, even as broader market sentiments fluctuate. Speculation Around Analysts Club The most recent transaction occurred just 45 minutes ago, further emphasizing the group's active engagement in the market. Their consistent buying pattern has led many analysts to speculate on their motives and the potential implications for the Ethereum price trajectory. As the cryptocurrency landscape evolves, the actions of the 7 Siblings will be closely monitored by investors and analysts alike. Their significant holdings and strategic purchases could signal a bullish outlook for Ethereum, making their next moves a focal point for the crypto community. Highlighted News Of The Day Vitalik Supports Lower ETH Staking Minimum for Accessibility

- Ethereum price in the past 24 hours has incurred an additional price dip of 3.61%. - The altcoin's daily trading volume has dipped by 18.77% as per CMC data. Uptober's failure to initiate the bull run yet, has caused a feeling of unrest in the crypto community. Significant cryptocurrencies have incurred major dips in the last 2 days, this has put investors in a tough spot. The decision to sell or buy the dip has been looming within the sector. Meanwhile, as aforementioned, Ethereum has shown significant price dips. Notably, and contrary to expectations, Bitcoin has fallen to \$61,000 after its recent rally to \$66K. Mirroring this price action, the largest altcoin, Ethereum exhibited an additional 3.61% price drop over the last 24 hours. Looking back, the altcoin failed to show

significant increases despite Bitcoin's recent rally. At the beginning of October 2, ETH traded at \$2,491 before it began falling to its previous support level at the \$2,300 level. Moreover, the altcoin dipped to an intra-day low of \$2,352 before attempting to recover. At the time of writing, Ethereum was trading at \$2,388 as per CMC data. Contrastingly, the US spot ETH ETFs have shown significant inflows in the last 24 hours. According to Sosoalue data, the ETP products recorded \$14.45 million in daily net inflows on October 2. Additionally, BlackRock's spot ETH ETFs recorded the highest inflows amounting to 18.04 million. Is Ethereum (ETH) Price Anticipating Further Dips? Over the past week, Ethereum has incurred an 8.18% price decrease as per TradingView data. In the beginning of the week, the altcoin traded at the \$2,600 level which resulted from a modest price dip during the time. Additionally, the token's monthly performance stands at an approximate 5% dip while its YTD price increase is struggling to remain positive and is currently at 4.77%. Meanwhile, several Ethereum whales have shown selling activity in the past few weeks. The token's RSI standing at 41.32 indicates the persistent selling pressures in the market. Furthermore, the token's bull power indicator stands at 2.13 while the bear power indicator stands at 3.86 highlighting the bearish dominance. Moreover, the token in case of continuing with the bearish trend might fall to a support of \$2,215. However, for Ethereum to turn the price action towards the positive, it might require significant propellants.

- An Ethereum ICO whale transferred 21,490 ETH worth \$55.2 million to Kraken. - Ethereum spot ETFs faced net outflows of \$48.519 million on October 1, the largest since September 3. As of October 1, Ethereum's current price stands at \$2,474, reflecting a 6.20% decrease over the past day. The market cap has similarly declined by 5.18%, currently sitting at \$299.87 billion. Despite this price drop, the 24-hour trading volume has increased by 46.66%, reaching \$25.27 billion. Ethereum's market has undergone significant changes recently, primarily driven by whale activity. An Ethereum ICO whale, known as 0xb8c, transferred 21,490 ETH, worth approximately \$55.2 million, to Kraken over the past seven days. This whale initially received 150,000 ETH from the 2015 ICO and has been gradually offloading their holdings over the years. Recent major sales include 5,000 ETH sold to Bitfinex in July 2019 at \$218.6 per ETH and 10,000 ETH sold to Kraken in June 2024 at \$3,542 per ETH, just before a price drop. Additionally, the whale sold 30,000 ETH to Kraken in late September and early October 2024 at \$2,580 per ETH. Currently, this whale controls approximately 110,000 ETH, valued at around \$271 million, distributed across eight wallets. The last deposit occurred just two hours ago, suggesting further potential sell-off pressure, which could negatively impact the price. Ethereum (ETH) Technical Indicators and ETF Outflows This significant rise in volume indicates heightened market activity, possibly as traders react to recent developments. Technically, Ethereum is currently facing a support level of \$2,480 and a resistance level of \$2,800. The Relative Strength Index (RSI) is at 46.24, showing a lack of strong buying pressure, while the RSI average is at 55.82, suggesting that Ethereum is in a neutral position. The Ethereum spot ETF market also saw notable activity on October 1, experiencing the largest net outflows of \$48.519 million from September 3. Grayscale's ETHE reported outflows of \$26.64 million, while Fidelity FETH faced outflows of \$24.97 million. However, Bitwise's ETHW ETF recorded a smaller outflow of \$0.9 million. On a positive note, VanEck's ETHV saw inflows of \$2.7 million, and 21Shares' CETH experienced \$1.2 million in inflows, providing some relief amidst the overall outflow trend. These mixed signals reflect ongoing market caution, with investor sentiment leaning towards risk aversion. The current price of Ethereum, combined with whale activity and ETF outflows, underscores the prevailing bearish trend. Continued monitoring of whale movements and ETF performance remains crucial as the market navigates these pressures.

Helium's crypto token has been making serious waves lately, capturing attention with its unique approach to blockchain-powered broadband. Helium's ambition? Lower-cost internet access, driven by decentralized tech. Meanwhile, Ethereum's been having a bumpy ride. It opened at \$2,419 on September 15 but pulled back by 3% over the weekend, a stumble after what had been a promising 15% rise over the past week. And then there's BlockDAG, stealing some spotlight of its own with a \$77.7 million presale that has the market buzzing. During its latest AMA, BlockDAG's CEO dropped some major news: pair their X10 and X1 miners together, and you can supercharge your mining by 10x. For miners, this means bigger rewards and fast. Plus, the company's focus on simplifying mining solutions could be the edge they need in the crowded crypto landscape. Helium: Momentary Dip Holds Back from Surge Predictions Helium's price may have corrected by 12% over the past week, but on the 1-day chart, it's forming an expanding channel, signaling potential for a rebound. Over the last 72 days, Helium has surged 143%, reclaiming the \$8 mark by mid-September. Currently sitting at 57th in the crypto rankings, it's outperforming bigger names, reflecting its growing adoption. If a bullish reversal kicks in, HNT could retest its \$8 resistance level. And if demand continues to rise, especially with the growing IoT market, we could see it push toward \$9.5 before the month's end. On the flip side, if bears maintain control, Helium could drop to test the \$6.525 support level. Failure to hold momentum there might send the price further down toward its lower support at \$5.155. Ethereum Facing A Momentary Dip? Ethereum opened trading at \$2,419 recently, slipping 3% after an initial 15% gain earlier in the week. Yet, on-chain indicators tied to ETH 2.0 staking trends point to investors gearing up for another push higher in the coming days. While Bitcoin and XRP have surged past key resistance levels of \$60,000 and \$0.60, respectively, Ethereum stumbled over the \$2,500 mark this past weekend, unable to break through. Despite that, savvy investors are seeing opportunity in the dip, snapping up ETH at lower prices and positioning themselves in the Ethereum 2.0 staking network. Buoyed by favorable macroeconomic signs, Ethereum enjoyed a strong double-digit rally last week, even as the broader market shook off a slow start to September. BlockDAG's Dream Run: New Mining Avenues Foster New Value Heights During BlockDAG's second AMA, CEO Antony Turner reignited excitement with a game-changing announcement for the platform's mining ecosystem. The news? Pairing the X10 and X1 miners can deliver a staggering 10x boost in mining output, making it a game-changer for those chasing

efficiency. Turner highlighted how this approach could massively increase mining rewards, sparking predictions of a 20,000x return on investment for BDAG in the long run. What sets BlockDAG apart in the crowded crypto space is its commitment to user-friendly mining solutions. The X1 Miner mobile app simplifies the process, allowing users to mine up to 20 BDAG coins with minimal effort. Meanwhile, home miners using the X10, X30, and X100 machines can mine up to 2,000 BDAG coins daily, depending on the device. Each machine strikes a different balance between efficiency and reward, making BlockDAG's offerings appealing to both beginners and seasoned miners alike. As a leading Layer 1 crypto, BlockDAG is making waves in the presale market. The project has already moved more than 5 million ASIC miners, an impressive achievement that reflects the high demand for PoW mining. With more than \$77.7 million raised during the presale, experts are predicting substantial returns and project the coin could be worth between \$1 and \$20. Currently, at batch 23, the project is offering coins for \$0.0192 each, presenting an attractive price point for an advanced coin anticipated to succeed Kaspas & Bitcoin. Final Thoughts Helium (HNT) stands at the intersection of two rapidly growing sectors: connectivity and gambling. As for Ethereum, bullish on-chain signals suggest that the recent 2.6% dip could be short-lived, with forecasts pointing to a potential climb above \$2,500, possibly reaching \$2,600—a move that might ignite a fresh bull run. Meanwhile, BlockDAG is steadily gaining traction, thanks to its innovative mining solutions and successful presale. The recent announcement from its CEO, revealing that pairing the X10 and X1 miners could deliver a 10x output boost, has sparked renewed interest from miners eager to maximize their gains. With BlockDAG's price projected to hit \$1 soon, early adopters are eyeing substantial returns. Join BlockDAG Presale Now: - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. As the saying goes, "Money makes money," and with BlockDAG, Helium, and Ethereum, that couldn't be more true. BlockDAG's TG Tap Miner gives users a chance to turn leisure into potential profits, offering a game where every tap can accumulate points, eventually converting into BDAG coins. With power-ups and friend referrals boosting earnings, and a successful presale raising over \$77.7 million, now is a prime time to explore BlockDAG's potential. Meanwhile, Helium (HNT) is gaining momentum, driven by rising token burns and data revenue. Ethereum (ETH) also presents an opportunity, nearing key support levels that may spark a significant price rally. Unlock Profits with BlockDAG's TG Tap Miner: Turn Leisure into BDAG Rewards BlockDAG's TG Tap Miner is a fresh take on combining fun and profits, offering users a chance to turn leisure into gains. In this innovative game, every tap counts—like throwing pennies into a wishing well, you never know which one will bring in the reward. Players engage in fast-paced, one-minute sessions, tapping on balls worth varying points, from high-value Diamond Balls to standard Emerald Balls. Power-ups like Thunderstorm and Rocket can boost scores and potential earnings. Beyond the game, TG Tap Miner builds a strong community, rewarding teamwork and competition. Players can rack up between 2600 to 7000 Tap Points daily, with future options to convert them into BDAGs. Inviting friends also brings additional Tap Points, pushing your potential gains higher. With over \$77.7 million raised in BlockDAG's presale, there's no better time to jump in. The project's recent launch of the testnet has also sparked a significant surge in purchases, leading to rapid advancement through batches. Currently in batch 23, offering coins at a price of \$0.0192, BDAG presents an attractive opportunity to acquire a technically strong coin at a lower cost, with speculation suggesting it could follow in the footsteps of Kaspas as its successor. Helium (HNT) Defies Market Odds: Token Burns and Data Revenue Drive Bullish Momentum Helium (HNT) continues to show impressive resilience, with its bullish momentum driven by strong data revenue and increasing token burns. As more mobile and IoT services rely on the Helium network, the demand for HNT coins has surged, contributing to its recent price rise. Helium recorded a significant daily data revenue of \$4,070.14 from mobile services and \$97.05 from IoT, which led to the burning of 9.6 million Data Credits (DC) in the past 24 hours alone. This token burn mechanism reduces HNT's circulating supply, making it more scarce and valuable over time. Technical indicators like the Relative Strength Index (RSI) and MACD also show positive trends, further hinting at continued growth potential. Crucial Ethereum Price Level Could Spark Significant Rally Ethereum (ETH) is nearing a critical price point that could have a big impact on its short-term movement. Currently trading at \$2,247, analysts are emphasizing the importance of two key technical indicators: the 200-week moving average (MA) and the annual open price. The 200W MA has been a reliable support level in past market downturns, and a bounce from this level could drive a strong rally. It's seen as a last defense against further drops. The annual open price also holds significance as it can act as both support and resistance. If Ethereum manages to hold above these levels, a price rebound may follow. With upcoming inflation reports, positive economic data could propel Ethereum past \$2,500 and \$2,750, creating a strong opportunity for investors. Concluding Insights For those looking to make their money work harder, BlockDAG, Helium, and Ethereum offer promising opportunities. BlockDAG stands out with its TG Tap Miner, a fun and engaging way to earn BDAG coins through gameplay. With over \$77.7 million raised in its presale, the potential for future gains is clear. Helium (HNT), on the other hand, is gaining traction through increasing token burns and data revenue, making it a strong long-term hold. Meanwhile, Ethereum (ETH) is approaching key support levels that could trigger a price rally. Each offers unique growth potential, making them worthy of consideration for investors. - Ethereum staking yields to surpass the US interest rates by the coming year. - ETH stake yields are currently positioned at 3.2%. Ethereum staking yields to surpass the U.S. interest rates in 2025. As the Federal Reserve continues to cut interest rates, the gap between Ethereum staking returns and traditional risk-free rates is anticipated to minimize. ETH stake yields are currently positioned at 3.2%. With the U.S. rates expected to fall below 3.75% by March 2025 and further to slip 3.5% by June, it will likely boost Ethereum's price as the network becomes appealing for staking. The increase in transaction fees and network activity boosts the stake rewards. Recently, the Ethereum transaction fees spiked nearly to a two-month high, reaching an average of \$0.80 per transaction. Besides, the gap between the Federal Funds Rate (FFR) and Ethereum's Consolidated Staking Ratio (CESR) has remained negative since mid-2023. Ethereum ETFs The September 2022 shift of Ethereum to the proof-of-stake system provides Ethereum holders the ability to deposit funds with the network to earn rewards. On the other hand, institutional investors might prefer to access staking yields through regulated products, such as exchange-traded funds (ETFs). In May 2024, the Securities and Exchange Commission (SEC) approved eight applications for spot Ethereum ETFs. Several issuers removed the references to staking customer Ethereum from their applications to clear the regulatory hurdles. According to SoSoValue, the US-based spot ether ETFs recorded \$58.7 million worth of inflows on Friday, leading the funds to their first week of positive inflows, totaling about \$84.5 million, after a six-week streak of net weekly outflows. Meanwhile, BlackRock's fund has surpassed one billion in total asset value. Ethereum Price The second largest asset by market cap, Ethereum is currently trading at \$2,605. The asset has lost 1.55% over the past 24 hours, as per CMC data. The ETH market has entered into the greed zone as the fear and greed index stays at 60. Notably, the asset's daily trading volume has increased over 39.80% to \$14.25 billion. Highlighted Crypto News

- Ethereum's price has dropped to \$2,598, a 1.90% decline in 24 hours. - The Ethereum Foundation sold 100 ETH for approximately 262,474 DAI. Ethereum's price has dropped to \$2,598, marking a 1.90% decline over the past 24 hours. Meanwhile, trading volumes surged, reaching \$13.31 billion, which represents a significant 30.23% increase. Additionally, the drop in Ethereum's market capitalization by 1.49%, now sitting at \$316 billion, combined with a steady circulating supply of 120.37 million ETH, raises concerns among investors. These factors point to potential further corrections. Several large-scale whale transactions currently influence market sentiment. The most notable transfer involved a staggering 43,331 ETH, valued at over \$113 million, which moved to Coinbase Institutional. This significant shift raises questions about potential large-scale liquidations or repositioning by institutional players. Consequently, this movement may contribute to Ethereum's current downtrend. In addition to this major transfer, two other prominent transactions were observed. A combined total of 25,194 ETH, with an estimated value of \$66.13 million, was transferred to Coinbase in two separate transactions. Thus, this activity adds downward pressure to Ethereum's price in the short term. Another major movement involves 8,487 ETH, worth \$22.38 million, which was transferred to Binance. This influx of ETH to the exchange could increase selling pressure further. If liquidation occurs, it may drive down Ethereum's value even more. Moreover, a noteworthy transfer of 9,534 ETH from Wintermute, a prominent market-making firm, to an unknown wallet has drawn attention. Valued at \$25.05 million, this move hints at behind-the-scenes market maneuvers. Meanwhile, a dormant address holding 70 ETH was activated after more than 9.2 years, but the impact of this specific transfer is likely minimal compared to larger whale movements. Ethereum ETH Approaches Critical Support Levels Ethereum faces strong resistance at \$2,634 and support at \$2,593. A bearish crossover appeared between the 9-day and 21-day moving averages (MA). Currently, the price sits below both \$2,600 and \$2,605, which signals potential further declines. Technical indicators suggest that Ethereum could encounter further challenges as it approaches critical support levels. The Relative Strength Index (RSI) currently stands at 28, while the average RSI is 31. This low RSI level indicates that Ethereum is oversold, which could suggest a potential reversal may occur soon. However, the average RSI signals continued bearish momentum in the short term. Therefore, market sentiment remains negative. Investors should exercise caution as oversold conditions can persist longer than expected. Additionally, the Ethereum Foundation sold 100 ETH for approximately 262,474 DAI just 10 minutes ago. This sale marks a total of 3,766 ETH sold for 10.46 million DAI in 2024. Notably, 1,250 ETH, valued at \$3.06 million, sold in September alone. Such sales could indicate ongoing efforts by the foundation to manage its holdings. Ultimately, this activity may impact market supply and price stability. Highlighted Crypto News Today

- Buterin listed attaining "Ethereum alignment" as a top social challenge facing the community. - The co-founder emphasized Ethereum maintaining its authentically neutral stance. Vitalik Buterin, a co-founder of Ethereum, has suggested developing a set of criteria to evaluate projects' degree of "alignment" with the Ethereum principles. Buterin listed attaining "Ethereum alignment" as a top social challenge facing the Ethereum community in his most recent blog post on September 28. Still, he conceded that it's not an easy endeavor, especially considering the wide variety of client teams, application developers, researchers, and local communities all attempting to make their own distinct contributions to Ethereum. Tough Task According to Buterin, there are already a number of "starting points," such as a project's level of open source commitment. According to him, "open source" not only makes code auditable for security reasons, but it also makes it easier to avoid proprietary lock-in and welcomes improvements from outside parties. Another factor is the project's interoperability; Buterin has proposed a system wherein apps and wallets may be graded according to the number of ERCs they support. Other security and decentralization metrics include the "walkaway" and "insider attack" tests. For example, he said that new public funding methods and improved financial inclusion are two examples of how a project might benefit the Ethereum community and humankind as a whole. Buterin emphasized the significance of Ethereum maintaining its authentically
