

soared over 100%. Whatâ€™s more, it handed out half of its total supply to participants in Solanaâ€™s NFTs and DeFi projects. By mid-December 2023, it had become the third-largest memecoin by market cap and saw an astonishing year-to-date growth of over 10,000%. Despite the challenges of a huge supply and the wild nature of memecoins, BONK shows promise. Itâ€™s becoming a key part of Solanaâ€™s ecosystem, even launching its own decentralized exchange called BonkSwap. This integration with a booming network of decentralized apps sets it apart. In the current market cycle, where community-driven projects are gaining traction, BONK stands out as an attractive option. Compared to other memecoins, its strong community focus and real use cases could make it a noteworthy contender in the crypto space.

SPX6900 (SPX) In a digital world where numbers hold immense power, SPX6900 has emerged from the depths of internet culture as the newest meme token capturing everyoneâ€™s attention. Born with the audacious goal to surpass the S&P 500, SPX6900 sets its sights on a staggering \$69 trillion market cap. The logic is simple yet bold: if 6900 is greater than 500, then SPX6900 must be superior to traditional financial instruments. In a market buzzing with innovation, SPX6900â€™s playful approach resonates with a generation that values creativity and disruption. Powered by the belief that bigger numbers mean better investments, it taps into the same spirit that propelled other meme coins like Dogecoin to fame. As cryptocurrencies continue to gain mainstream attention, SPX6900 stands out with its ambitious vision and community-driven momentum. Whether it will achieve its sky-high goals remains an open question, but it undoubtedly adds a new flavor to the ever-evolving crypto landscape.

Conclusion SHIB, PEPE, BONK, and SPX are promising, but XYZVerse unites sports fans and targets 20,000% growth, potentially leading the 2024 bull run. You can find more information about XYZVersus (XYZ) here: [Disclaimer: TheNewsCrypto does not endorse any content on this page. - Flare gains over 18%, trading at \$0.02839. - FLRâ€™s daily trading volume has surged by over 467%. As November is closing, the altcoin market rallied with major tokens like ETH, SOL, XRP, ADA, and DOGE surging with notable returns. However, the anticipation of the altcoin season escalates with Ethereum hitting \$3.7K. However, Flare (FLR) rallied by an 18.20% surge and currently trades at \$0.02839. The tokenâ€™s market cap has reached \$1.50 billion, with its daily trading volume reaching \$89.41 million. Flare chose to trade on the upside. With its bullish trajectory, FLR visited its daily high of \$0.03141 from a low of \$0.02349. Zooming in on the monthly price chart, Flare has gained over 108%. The month began trading at \$0.01345. Eventually, it ascended to a mid-week high of \$0.02398 and continued to date. Can FLR Climb Higher? The four-hour price chart of the Flare exhibits the assetâ€™s current bullish momentum. If the altcoin continues to trade in the bullish territory, it could push the price toward the \$0.03216 mark. Besides, FLR has the potential to climb higher if the major resistance is broken. Looking at the downside, if Flareâ€™s upward trajectory vanishes, a potential downside correction might unfold to test the support at the \$0.024 level. The crucial moves of FLR will decide the assetâ€™s further recovery or decline. Flareâ€™s daily frame exposes the short-term 9-day moving average above the long-term 21-day moving average. Moreover, the ongoing market sentiment of the asset is in the overbought zone, inferring the buying momentum is strong, as the daily relative strength index (RSI) is settled at 70.53. The technical indicators of FLR exposed the positive sentiment with the Moving Average Convergence Divergence (MACD) line crossing the signal line. It indicates the building of upward momentum in the market. In addition, the Chaikin Money Flow (CMF) indicator is settled at 0.02, suggesting a brief positive money flow within the market. Meanwhile, the assetâ€™s daily trading volume has increased by over 467%. Highlighted Crypto News

Crypto speculators made a killing from altcoins like Shiba Inu (SHIB) and Sui (SUI) in early November 2024. Currently, it seems like the bull run is over, and investors are looking for the next high-leverage token for long-term profits in 2025. FXGuys (\$FXG) presented the perfect opportunity, and investors have already accumulated millions of tokens. Keep reading to see why crypto traders are betting on \$FXG for long-term success!

Sui Name Service Launches Community Constitution Sui Name Service (the web3 identity for Sui Network users) launched its DAO constitution on November 21, 2024. Moving forward, Sui holders will be able to participate in governance votes. The DAO constitution contains the fee structure, allocation of revenue, integration with existing systems, protection of name ownership, and amendment requirements. Despite innovative ecosystem developments, SUI lost its bullish momentum towards the end of November. On November 18, SUI traded for \$3.6704. One week later, SUI lost 8.87% and fell to a value of \$3.3464. A few investors were betting on SUI to become the next 100x altcoin. However, it would appear the token got its bullish juice from the waning post-election bull run.

Shiba Inu Rises as Meme Coins Continue to Charm Traders According to MetaMask, the worldâ€™s leading web3 wallet, PEPE, Dogecoin, and Shiba Inu were the most swapped tokens on the platform between November 14 and 21, 2024. Shiba Inu recorded more on-chain activity during this period, and SHIBâ€™s price continued to rise in late November. For context, Shiba Inuâ€™s SHIB traded at \$0.00002481 on November 18. Within seven days, SHIB already gained 2.38% and traded for \$0.00002536.

OG Crypto investors know that Shiba Inu and other popular meme coins gave investors juicy ROIs in 2021. However, the time to look forward to new projects is now and FXGuys is the best pick for new investors. FXGuys Launches Trade2Earn Program, Set to Attract Over Thousands of Traders in 2025 FXGuys is coming to disrupt the trading industry in 2025. As a retail trader, FXGuys is a new blockchain prop trading firm that offers you the reliability of traditional finance and the flexibility of decentralized finance. For context, the FXGuys platform runs a funding program that lets traders apply for capital and get up to \$500,000 when they pass difficult trading challenges. Also, FXGuys has listed multiple asset classes on its platform. You can get funded as a forex, crypto, or commodities trader. Interestingly, the best part of the FX Guys platform is its Trade2Earn program. Renowned market professionals have admitted that trading is one of the most difficult jobs in the industry and retail traders bear the brunt of this reality the most. For this reason, FXGuys makes sure to reward

traders with \$FXG tokens anytime they execute a trade on the platform. It doesn't matter if your trade won or lost. As long as you are actively trading on FXGuys, you get rewarded. However, FX Guys has increased your chances of success by providing advanced analytic AI tools to increase your chances of success. Will \$FXG Become the Next 100x Altcoin? With FXGuys attracting traders from all over the globe, \$FXG is set to become the next 100x altcoin in 2025. Currently, \$FXG is in Stage 2 of its public presale and the token is selling for \$0.04. At the end of the presale process, \$FXG will hit the mainstream crypto market and sell for \$0.10. At this point, early crypto investors will enjoy a massive 150% ROI. As \$FXG becomes more popular in the finance/trading community, experts predict that the price will follow suit. This means \$FXG may likely become the next 100x altcoin and hit \$10 before the end of 2025. To find out more about FXGuys follow the links below: [Presale](#) | [Website](#) | [Whitepaper](#) | [Socials](#) | [Audit Disclaimer](#): TheNewsCrypto does not endorse any content on this page. Ethereum (ETH) has been a main participant in the crypto market since its launch and has shown until unheard-of success. Thanks to its smart contract characteristics and distributed application (dApp) ecosystem, which transformed blockchain technology, Ethereum became the basis of distributed finance (DeFi) and non-fungible tokens (NFTs). Ethereum rose astonishingly 9,404% in just 100 days during the 2017 bull run, turning early investors into billionaires. Now, as Ethereum develops and is more well-known, experts wonder whether it will hit a \$15,000 cycle. While Ethereum's future is still bright, some investors are turning their focus to other coins with great expansion possibilities. Among these coins is Rexas Finance (RXS), a forerunner of real-world asset (RWA) tokenization. This creative platform could reflect Ethereum's 2017 triumph as smart investors can generate exponential gains. Here's a closer view of Ethereum's future, the fascinating path taken by RXS, and how early you may participate in this upcoming star. Could Ethereum Reach \$15,000 in This Cycle? Regarding market value, Ethereum has confirmed its second-largest ranking among cryptocurrencies. Its most recent developments—the switch to Ethereum 2.0 and the acceptance of layer-2 scaling techniques—have greatly lowered transaction fees and raised network efficiency. These changes are relevant because other blockchains such as Solana, Cardano, and Binance Smart Chain pose a greater challenge to Ethereum's dominance. Due to expanding technologies such as Optimism and Arbitrum which enhance its scalability, ethereum has found its usage in a broad range of DeFi protocols and NFT platforms. It has practically become the most preferred blockchain for commercial applications and tokenized properties thus pulling in institutional shareholders. The rising on-chain activity brought on by the expansion of distributed apps and NFT projects keeps Ethereum demand high. Ethereum's foundations are still sound, but its present price of more than \$2,000 points to the unusual benefits experienced by early adopters is unlikely to last. Projects such as Rexas Finance offer a great chance for those looking for ETH-like expansion prospects. Rexas Finance (RXS): The Next Big Idea in Blockchain Leading in real asset tokenization—a novel concept combining blockchain technology with conventional finance—Rexas Finance is The platform that lets customers tokenize actual and intangible assets including real estate, goods, and collectibles, therefore enabling fractional ownership and distributed access to valuable investments. - Why Pre-Sale Momentum Might Change Things With tokens worth \$0.10, Rexas Finance is in the eighth stage of its presale right now. The price will rise to \$0.125 in the next stage; the token's listing price is \$0.20, thereby perhaps providing early investors with a 100% return upon launch. Selling around 251 million tokens out of a target of 290 million, the presale brought in more than \$16.9 million. As more than 86% of the tokens have already gone, time is running out to join the presale at this amazing pricing. - Veracity for Trust: CertiK Audit Investing in cryptocurrencies mostly depends on security, hence Rexas Finance has taken great care to guarantee the security of its system. Top blockchain security company CertiK evaluated the smart contracts of the project using their thorough testing methods. This audit lends credibility, which helps RXS to be a consistent investment for both individual and institutional players. - Mainstream Attention Two of the most respectable websites for monitoring cryptocurrency performance have registered Rexas Finance: CoinGecko and CoinMarketCap (CMC). These deals have raised RXS's profile and accessibility greatly and drawn more investors. - \$1 Million Giveaway Initiative. Rexas Finance is starting a \$1 million contest to involve its viewership more actively. Each of the twenty fortunate winners will get \$50,000 in RXS tokens, therefore fostering more general involvement and project excitement. By finishing projects and suggesting others, participants can raise their chances of winning and so create a network effect driving the growth of the coin. - Real-World Applications Tokenization of real assets enables fractional ownership and enhanced liquidity. The platform's launchpad facilitates fundraising and effective marketing for new tokens, while blockchain's transparency and efficiency ensure secure asset management. How One May Make Investments in the Pre-sale Rexas Finance? Rexas Finance is basic and offers a chance to gain from its great development potential. Use these instructions to join in the presale: - Use a wallet connected with MetaMask or Trust Wallet to guarantee interoperability with Ethereum-based coins. - RXS coins have to be bought in USDT or ETH in order to pay for gas fees. Verify the proper amount in your wallet. - Visit rexas.com and link the Ethereum network to your wallet. - Select Your Method of Payment. Pay ETH or USDT. - Now add the buying value. Enter the RXS token count you wish to purchase. Check the transaction straight in your wallet. - Get your tokens right here. Following a transaction, the RXS tokens will show up in your wallet. For new investors, Rexas Finance also provides fiat onboarding via sites including MoonPay, Ramp Network, and Transak so they may simply buy ETH with a credit or debit card to take advantage of the presale. Conclusion: One Rare Chance For Exponential Returns. Thanks to its usefulness-driven ecosystem, verified security, and steady presale momentum, Rexas Finance is among the most fascinating cryptocurrencies of 2024. Its resemblance to early Ethereum days—innovation, acceptance, and industry upheaval—makes it a compelling target for explosive expansion. As Ethereum hits new highs, those looking for exponential gains similar to ETH's 2017 boom have a special chance with Rexas

Finance. The time to act is now; stage 8 presale tokens at \$0.10 offer notable upside potential from little supply remaining. Will you be part of the next 9,404% movement? Don't miss your opportunity to ride the blockchain technology innovation wave and team with Rexas Finance. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. In a recent post on X, a prominent crypto billionaire shared that four tokens, Rexas Finance, Bitcoin, Solana, and Dogecoin, make up 67.4% of his crypto portfolio. This deliberate deliberation highlights his faith in these initiatives, each with special qualities and great development possibilities. Rexas Finance (RXS) With a large share of their investing strategy, Rexas Finance rules this billionaire's portfolio. Focused on real-world asset (RWA) tokenization, Rexas Finance is a fresh blockchain-based ecosystem that unlocks liquidity in frequently illiquid assets, including real estate, art, and financial instruments, and fractional ownership is made possible While enhancing The project aims to democratize asset ownership while improving accessibility, efficiency, and openness. The ecosystem has creative tools such as the no-code platform Rexas Token Builder, which lets users easily build tokens. Among the several token standards this tool supports are ERC-20 and ERC-721. Rexas Finance also offers the QuickMint Bot, which guarantees mobile-first access by allowing token production through well-known messaging apps like Telegram and Discord. Openness and security are at the foundation of Rexas Finance. Its artificial intelligence-powered tools like the Rexas AI Shield offer real-time monitoring and smart contract auditing, hence building user confidence. The most recent Certik audit of the ecosystem has strengthened its standing even more by highlighting its strong security policies. This assessment gives investors another degree of assurance, protecting their money. The project's popularity is seen in its presale success. Rexas Finance, which debuted on September 8, less than three months ago, has gone through eight presale phases, and the token price has surged by almost 200% from \$0.03 to \$0.10. Selling 247 million RXS tokens, the presale has gathered \$16.5 million. This expansion was accomplished without the use of venture capital, demonstrating the value of community-driven investment. To further increase its attractiveness, Rexas Finance has obtained listings on CoinGecko and CoinMarketCap, improving its profile and allowing investors to monitor RXS token performance. With 20 winners expected to get \$50,000 worth of RXS tokens apiece, the ongoing \$1 million giveaway encourages even more encouragement. These activities not only attract investors but also help to boost the project's market position. The creative approach and strategic efforts of Rexas Finance have become pillars of the billionaire's portfolio since they highlight its ability to transform asset tokenization and distributed finance. Bitcoin Pioneer of the cryptocurrency scene, Bitcoin remains a pillar in billionaire portfolios. Because of its limited number of 21 million coins and dispersed character, Bitcoin is sometimes seen as digital gold. Its resilience and market supremacy are shown by its present trading price of \$97,450 as of writing, almost reaching the \$100,000 threshold. A main factor in Bitcoin's rise has been institutional acceptance. Bitcoin ETFs, launched by financial behemoths such as BlackRock, have drawn billions in investment and confirmed their potential as a store of wealth. This degree of institutional support guarantees Bitcoin's security and dependability, ensuring its significance in every diversified crypto portfolio. Solana Celebrated for its unparalleled scalability and speed, Solana is another crucial asset for the millionaire's portfolio. With transaction rates of fractions of a cent and a network able to process over 65,000 transactions per second, Solana has been a preferred platform for both customers and developers. With Solana's total value locked (TVL) just surpassing \$8 billion, the blockchain's growing popularity in distributed finance (DeFi) is attested by projects in DeFi, NFTs, and gaming, which enable the blockchain ecosystem to grow. Solana's constant developments and user interaction make it a high-potential asset for this portfolio. Dogecoin Once laughed at as a joke, Dogecoin has found a spot on the portfolio of a crypto billionaire. Being the biggest meme coin with market capitalization, Dogecoin has shown constant community support and usefulness. Its daily transaction volume and growing whale activity point to great market demand. Though it is a meme coin, Dogecoin's practical applications including micropayments and tipping have helped it to be long-lived. Given its continuous development and market activity, Dogecoin remains a speculative but worthwhile addition to any portfolio. Final Thought The large investment this billionaire makes in Rexas Finance, Bitcoin, Solana, and Dogecoin shows the significant strategic value of integrating innovation, dependability, and market appeal in a diversified crypto portfolio. Each of these tokens has special worth and lays a strong basis for future development. Among these, Rexas Finance shows great transformative power. Rexas Finance is transforming decentralized finance, emphasizing RWA tokenization, sophisticated tools, and community-driven expansion. Investors trying to profit from the next wave of blockchain innovation must give it top priority because of its possible exponential expansion. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. For those looking for some of the most profitable prospects the cryptocurrency market offers, Solana (SOL), which surged following the FTX meltdown in late 2022 and turned early investor losses into large returns, is a perfect illustration of this. Should you have invested \$1,000 in Solana at the

time of the FTX fall, that investment would be worth \$30,240 now, a startling 3,024% gain. Though many people are drawn to Solana's amazing comeback, another cryptocurrency is under development that could either copy or perhaps surpass Solana's price increase: Rexas Finance (RXS). Rexas Finance, the next big participant in the cryptocurrency market, is ready to provide comparable large profits in just 60 days—and maybe even more. The Crash of FTX and Solana's Peak In November 2022 FTX, a cryptocurrency platform abruptly halted its operations causing turmoil in the sphere. This event triggered a chain reaction, in the market resulting in a drop in the value of cryptocurrency assets. Affected resources included Solana, the platform most severely impacted due to its strong relationship with Sam Bankman-Fried and FTX. After the crash, the market price for Solana declined sharply, with the value dropping to approximately \$8. Still, what transpired was rather extraordinary. As the market recovered, Solana started to heal; by mid-2023, SOL had jumped to over \$200, a reflection of an amazing price rise of more than 2,400% from its bottom during the crisis. Investors who bought Solana during its fall were immensely wealthy thanks to this comeback, and the token became among the most sought-after assets on the market. Solana's quick recovery following FTX has shown that, in the cryptocurrency market, particularly when you can purchase at times of market uncertainty and panic, huge profits are not only feasible but also reasonable. Many investors have been motivated by Solana's success story to search for like prospects in the market; Rexas Finance is now a contender for the next major cryptocurrency that might follow Solana's lead. Rexas Finance (RXS): The "Next SOL" Possessing 3,000%+ Potential Among the most exciting new cryptocurrencies available in the cryptocurrency market, Rexas Finance is fast acquiring popularity. Real-world asset (RWA) tokenizing—which lets digital representations of real-world assets including real estate, commodities, and intellectual property—is the main emphasis of the project. By providing more liquidity, openness, and worldwide investor accessibility, this invention could completely transform conventional finance. Rexas Finance's impressive presale—which has raised over \$16.3 million in just under 3 months—has already attracted interest. The platform offers solutions for simple access to tokenized real-world assets, therefore catering to both institutional and retail investors. Along with a rising need for distributed finance (DeFi) solutions, the presale success positions Rexas Finance for notable expansion in the not-too-distant future. Rexas Finance is still in its early years, but it is a prime contender for rapid expansion because of its creative approach to asset tokenization and ability to democratize access to several financial markets. At its Stage 8 presale, the altcoin is now valued at \$0.10; analysts estimate that in just 60 days or less, it will surge rapidly. Particularly for early investors, a 3,000%+ return is most definitely within reach if the project performs like Solana in its early years. Rexas Finance's possibility for quick expansion adds even more appeal. Solana's comeback took around a year, while Rexas Finance is well suited to achieve a comparable leap in only 60 days. The strong community support and a high degree of innovation of the project, together with the growing demand for tokenized assets, could cause a rise in both price and acceptance. Thanks to its appealing value proposition, presale momentum, and growing public interest in blockchain-based finance solutions, analysts estimate Rexas Finance may see a notable rise in the next sixty days. With possible returns of up to 3000%. Once the market catches up to the vision of the project, investors who enter now during the presale could enjoy gains comparable to those who bought Solana during the FTX crisis. A Rare Opportunity to Multiply Your Investment Should you have paid \$1,000 in Solana during the FTX crisis, you would be sitting on \$30,240 today—a phenomenal return that emphasizes the amazing prospects the cryptocurrency market has. Rexas Finance is now ready to rise as the next Solana-style success narrative in the cryptocurrency field. Rexas Finance has the power to either copy or even surpass Solana's expansion in the next few months with its innovative method of tokenizing real-world assets and great momentum. Rexas Finance offers a rare chance for investors seeking the next great cryptocurrency to rapidly multiply their money. Those who invest early in RXS could experience amazing gains that either equal or exceed Solana's historical run, given just 60 days till the next phase of development. Take advantage of the opportunity to participate on the ground floor of what might be the next big cryptocurrency to enter the scene. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. We have all witnessed how crypto casinos are leading the charge in the online gambling industry, providing a modern gaming approach to everyone. Bitcoin and other cryptocurrencies are taking off, so players use these cutting-edge platforms for the ultimate gaming experience. Why? Because crypto casinos offer unbeatable benefits, such as a high level of security, total privacy, and super-speedy transactions. If you are a fan of fast-paced action and smooth payments, crypto gambling platforms are where you need to be. Ready to discover the best crypto casinos for huge winnings and prizes? Let's dive in and explore the top picks shaking up the industry. Key Features to Look for in the Best Crypto Casinos When searching for the best crypto casinos, there are several key features you should consider to ensure a top-tier gaming experience. For example: - Variety of Supported Cryptocurrencies: The best crypto casinos accept multiple digital currencies like Bitcoin, Ethereum, Dogecoin, Litecoin, etc. offering more flexibility for players. - License and Regulation Status: A properly licensed and regulated casino ensures a safe, fair, and legal gambling environment, even in the crypto space. Look for crypto casinos with licenses issued by Curacao, MGA, UKGC, Kahnawake Gaming Commission, etc. - Game Selection and Software Providers: Literally all crypto casinos that partner with top-tier software developers offer a wide variety of games. Have fun with slot games, table games, live dealer games, megaways, game shows, jackpots, and similar experiences. - Bonuses and Promotions for Crypto Players: Crypto casinos often provide special bonuses for deposits made with cryptocurrencies, giving you more value for your bets. They come in the form of crypto welcome bonuses, crypto reload bonuses, crypto cashbacks, crypto deposits for free spins, etc. - Security Features: Encryption and two-factor

authentication are essential for protecting your crypto assets and ensuring secure transactions. All crypto casinos offer high-security standards and full anonymity which is important for many players. - Transaction Speed and Limits: Fast deposits and withdrawals are crucial, and the best crypto casinos offer quick processing times without high transaction limits or fees. When using crypto, forget about delays and long waiting times, as all transactions, especially deposits, are instant. Top Picks: Best Crypto Casinos You Must Check If you are a fan of cryptocurrencies and looking for the perfect place to have fun, you are in luck! The best crypto casinos not only accept your favorite cryptocurrencies but also deliver thrilling games, exclusive bonuses, and a high level of security. For those seeking the ultimate crypto gaming experience, we have rounded up the top picks that are leading the way for enthusiasts like you. Let's explore the best crypto casinos where your next big win could be just a click away! 1. Crashino Casino We are opening the list with Crashino Casino, a safe and legit crypto online casino operating since 2021 under the roof of MIBS N.V. with a Curacao license. This is an all-in-one online gambling platform where casino and sports-betting players can dive into huge winning opportunities, playing 2000+ casino games and hundreds of sports matches in all sports under the sun. The most popular crypto payment methods you can use to place your bets here are Bitcoin, Ethereum, Solana, USD Tether, Dogecoin, Litecoin, Shiba Inu, TRON, Bitcoin Cash, etc. For all new players, there is a great welcome bonus of 100% for your first deposit up to 1000 USDT + 50 free spins for the Big Bass Bonanza slot game. Also, there is a VIP club where you can unlock special prizes after becoming a VIP player, for example, VIP manager, up to 20% cashback bonuses, faster withdrawals, surprises, gifts, etc. If you don't have any crypto assets in your wallet but still want to play here, there is a "Buy Crypto" option where you can use your credit card and buy cryptocurrencies to start playing. 2. Betibet Casino BetiBet Casino is a legitimate online gambling platform licensed under Curacao eGaming as a brand owned by the famous Dama N.V. This crypto casino has been operating since 2022, offering multiple crypto payment methods that you can use for all deposits and withdrawals on the site. This is the sports-betting first platform, so don't hesitate to make a bet slip with the most popular sports events at the moment in different sports. Choose the matches with the highest winning odds and bet on football, basketball, tennis, table tennis, MMA, golf, cricket, e-sports, horse racing, and so on. The welcome offer for the casino games includes a cashback offer. This is not limited to new players. Existing players can claim the cashback as well. This is up to 20% of their deposit amount. However, the percentage varies as per the amount players deposit. Existing players can take up different combo boost offers in the sportsbook section, such as: - Combo boosts up to 100% offer for US players. - BetiSoccer Boost offers up to 70%. - BetiTennis Boost offers up to 70%. - BetiBoost offers up to 50%. 3. Seven Casino Seven Casino is another huge online casino and sportsbook owned and operated by New Gambling Solutions SRL. This casino is undoubtedly among the best online casinos globally, with an impressive portfolio of games. The live dealer games stand out among the various options, boasting over a hundred live tables and TV games. There is a great sportsbook section too where you can create a bet slip with the most popular sports matches, including live betting. Don't skip the lotto tournaments because you grab huge rewards depending on your country of residence. You can play the lotto in Australia, Belgium, Croatia, Switzerland, Finland, Germany, Greece, Italy, the USA, Latvia, Poland, Spain, and other countries. But, keep in mind that as a new player, there is an offer of a 100% match-up bonus for up to \$250, one of the biggest welcome bonuses at crypto online casinos like this. Sign up today and have fun like nowhere else. 4. Gangsta Casino Gangsta Casino is a new online casino that launched in 2023. It operates under a Curacao license, which means it follows strict industry standards and regulations. It also uses the latest SSL encryption to protect sensitive data from unauthorized access, which means that all crypto payments will be safe, fast, and anonymous. The casino offers over 3,100 games from over 40 providers, including all the best video slots and live dealer games. As a new player, you can claim a generous welcome package of up to \$2500 plus 250 free spins when you make your first three deposits. You can also benefit from other regular promotions, such as weekly cashback, birthday bonus, and free spins on Wednesdays and Fridays. The Future of Crypto Casinos The future of crypto casinos is full of exciting possibilities. As more players turn to digital currencies, we will see big changes like the use of NFTs for unique rewards and decentralized platforms that offer a more open and player-driven experience. As regulations get stronger, they will help the best crypto casinos to be safer and more secure for everyone. With faster transactions and better privacy, crypto casinos are set to become even more popular, offering new and exciting ways to play for cryptocurrency fans around the world. The crypto market is heating up, and altcoin enthusiasts are watching closely as Solana, Cardano, and XRP continue to dominate. However, seasoned investors know the importance of identifying the next big movers early. Two projects making waves are Rexas Finance (RXS) and Dogecoin, each offering unique value propositions and market opportunities. While Solana and Cardano focus on blockchain efficiency, and XRP tackles cross-border payments, Rexas Finance revolutionizes real-world asset tokenization, and Dogecoin leverages massive community support and speculative momentum. Dogecoin Solidifies Its Position in the Market Dogecoin recently hit a three-year high of \$0.48, driven by speculation around Elon Musk's plans for X Payments on his platform. Over the past month, Dogecoin's value surged by 219%, with daily trading volumes peaking at \$15.4 billion. These numbers solidify its place as the third-most traded cryptocurrency, reflecting strong investor interest. The price jump follows technical indicators showing continued strength, with analysts predicting Dogecoin could reach \$0.65 to \$1.25 soon. Even with a temporary pullback to \$0.41 due to market cooling, Dogecoin maintains its position as a key player in the meme coin category. Investors see potential long-term targets of up to \$3.60, especially if integration with Musk's payment system materializes. As Dogecoin gains traction, its influence across the crypto market remains undeniable. Rexas Finance Leading Asset

Tokenization Rexas Finance (RXS) emerges as a transformative force in the crypto market, offering solutions for tokenizing real-world assets like real estate, gold, and art. Investors can purchase fractional ownership of high-value assets, enabling unprecedented access to lucrative markets. For instance, a professional in Asia can invest in a commercial property in Europe, earning passive income without leaving home. This model unlocks global opportunities for ordinary investors previously limited to institutional players. The RXS ecosystem includes tools like the Rexas Token Builder, allowing users to tokenize assets seamlessly, and the QuickMint Bot, which simplifies the process further via platforms like Telegram. Additionally, the Rexas Launchpad supports projects raising funds through token sales, making the platform a one-stop solution for real-world asset tokenization. Whether dealing with real estate, commodities, or collectibles, Rexas Finance bridges traditional markets with blockchain technology. RXS is an ERC-20 token with a total supply of 1 billion tokens. Its allocation strategy prioritizes accessibility, with 42.5% reserved for a public presale. This approach stands out, as the team opted against raising capital through venture capitalists, ensuring public involvement in this financial revolution. The presale has already raised \$15,296,894, selling out stages 1-6 swiftly and pushing the price up threefold to \$0.09 per token in stage 7. Early buyers can anticipate significant returns, with prices projected to increase further by launch. CertiK-audited for security and listed on CoinMarketCap and CoinGecko, Rexas Finance is gaining credibility and visibility. The project also features a \$1 million giveaway, allowing participants to win up to \$50,000 USDT each by completing tasks and referring friends. As RXS prepares for listings on three top-tier exchanges, its market potential continues to grow, with predictions of reaching double-digit valuations by early 2025. Conclusion The current altcoin season presents a unique opportunity for investors seeking to diversify beyond established projects like Solana, Cardano, and XRP. Dogecoin's renewed momentum and Rexas Finance's innovative asset tokenization model demonstrate the potential for significant returns. With RXS bridging traditional assets to blockchain networks and Dogecoin capturing speculative interest, both coins are poised to redefine market expectations. As altcoins continue to soar, seizing the opportunity to invest in these projects could unlock unparalleled growth for savvy investors. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. With Cardano (ADA) nearing a new all-time high (ATH) within the next 45-60 days, the cryptocurrency market is humming. ADA, trading at \$1.00 with a market capitalization of more than \$35 billion as of writing, has demonstrated amazing durability and growth potential; it has climbed 4.36% in only the past 24 hours. Though Cardano is attracting interest, astute investors are looking to an even more exciting prospect—Rexas Finance (RXS), an ADA counterpart ready for explosive expansion. Pioneering real-world asset (RWA) tokenization platform Rexas Finance has its sights on transforming the blockchain scene. Rexas Finance has taken a community-centric strategy, enabling private investors to participate in its mission-driven ecosystem unlike many crypto companies dependent on venture money. Approved on CoinMarketCap and CoinGecko, the cryptocurrency is creating waves with its presale performance and shockingly expected 19,040% increase by 2025. Cardano's ATH Prospects and Why Investors Should Look at Alternatives Cardano's strong infrastructure and innovative application of the proof-of-stake consensus mechanism have helped it to develop a good name. The platform is becoming rather popular in smart contract development and distributed finance (DeFi). ADA presents a great possibility for returns as the next ATH looms. Still, compared to new choices like Rexas Finance (RXS), chances for exponential expansion in existing tokens like ADA are few. While ADA seeks slow development, RXS is positioned for radical changes and allows early adopters to engage in a project with great practical value. Why Rexas Finance (RXS) Is the Investment Opportunity of 2024 By closing the distance between actual assets and digital tokens, Rexas Finance offers a fresh perspective on blockchain. Imagine just a few clicks owning a piece of multi-million dollar real estate, gold, or rare artwork. Through its easy-to-use token builder and Launchpad, Rexas Finance streamlines this process and allows flawless asset tokenization free from the technical knowledge required. Here's the reason RXS is drawing investors at a never-seen pace: Currently priced at \$0.090, Rexas Finance is at its presale stage; it has increased a startling 200% from its starting price of \$0.030 at stage 1. The presale has already raised \$15,263,923 from over 234,041,322 RXS sold at the time of writing. Early investors are grabbing this chance since the token will debut at \$0.20 in early 2025. ADA Alternative, Rexas Finance Targets a 19,040% Rise in 60 Days Estimates show RXS would rise to \$17.13 by 2025. From its present presale price, this shows an astonishing 19,040% growth. RXS offers a second opportunity for everyone who lost out on the early profits of tokens like Bitcoin or Ethereum at hitherto unheard-of rates. With its Certik audit, a gold standard in blockchain security, Rexas Finance's dedication to security and openness is clear. Moreover, the token will first show on three out of the top 10 tier-1 exchanges, therefore guaranteeing liquidity and visibility. Rexas Finance is holding a \$1 million RXS giveaway in which 20 winners will each get \$50,000 worth of tokens, therefore encouraging participation. Completing chores on the Rexas Finance website and posting on social media would help investors increase their chances given 298,249 entries already entered as of writing. Real estate (\$379.7 trillion), commodities like gold (\$121.2 trillion), and art and collectibles (\$65 billion in yearly volume) among other sectors valued at trillions of dollars are among those Rexas Finance targets. The platform is releasing great value for individual and institutional investors by democratizing access to these markets. Conclusion Although Cardano is still a good investment choice, its development path is nowhere compared to the possibilities of Rexas Finance (RXS). RXS is more than simply a token with its innovative approach to asset tokenizing, Certik-certified security, and road map for rapid expansion; it's a portal to the future of blockchain. The chance to act is now as the presale picks speed and momentum increases. Don't let yourself miss what might be among the most

profitable investments of the decade as RXS could rise 19,040%. Go to the Rexas Finance website right now, take part in the presale, and guarantee your place in the next major cryptocurrency innovation. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - PEPE has shown a daily price increase of 7.28% fueled by the altseason momentum. - The memecoin's trading volume has surged by 17.54% in the last 24 hours. The most recent price cycle brought astonishing news to the crypto community. This Altseason was led by Ethereum, the altcoin that had docked at a price consolidation for several months. Following its surge, other cryptocurrencies also showed their upward movements. Additionally, Bitcoin also showed a 2% price increase hitting \$95K. Moreover, within the memecoin sector, leading tokens such as DOGE and Shiba Inu have reversed gears to become bullish again. Meanwhile, frog-based memecoin PEPE, after its significant dip, has begun to show signs of recovery. In the last 24 hours, the token recorded a 7.28% price increase, bouncing off from its support levels. In the afternoon hours of November 27, the memecoin was trading at \$0.00001821. Following this it surpassed the previous resistance at \$0.000019 and is currently closing towards its next crucial resistance at \$0.00002. At the time of writing, PEPE was trading at \$0.00001968 as per CMC data. Zooming out, inferring its weekly chart, PEPE reflects a brief descent in the middle of the week. The memecoin, as aforementioned, is attempting to recover its bullish trend in the past day, after the downward trend put a dent in its monthly and weekly price progression. Will PEPE Price Recover Into a Bull Run? Inferring to PEPE's price chart, it depicts a horizontal channel pattern. This suggests PEPE entering a consolidation phase, days after hitting its new ATH on November 14. The horizontal channel pattern suggests that the cryptocurrency could either witness a price breakout or allow for a bearish takeover. The cryptocurrency's Moving Average Convergence Divergence (MACD) signal line stands below the MACD line. This further suggests the memecoin's downward trend. However, PEPE's bull power indicator's value resides at 5.31. The bear power indicator value is at -2.80 as per TradingView data. It can be inferred from this that PEPE holds the potential and is attempting to turn bullish. In such a case, the cryptocurrency's bullish price prediction by TheNewsCrypto analysts for this year is \$0.00003600. Highlighted Crypto News Today: Is Bitcoin's Drop in MDIA a Sign of Continued Bullish Momentum?

- Solana-based meme coin ChillGuy token's price surged by around 30% today. - Crypto exchanges KuCoin and Bitget listed the CHILLGUY token causing the price rise. - ChillGuy token gave 38,399x return to a trader, as per the Lookonchain analytics platform. The latest Solana-based meme coin "Just a Chill Guy" is making waves in the industry with its cool nature. Adding to its "whatever" attitude, Chill Guy token listing on major crypto exchanges such as Bybit, KuCoin, and others is causing the price surge. ChillGuy token mentions from influential figures such as Elon Musk are further grabbing attention from people on social media. While social platforms are buzzing with this trending meme coin and analyzing who is "chill", the token is recording new all-time highs, soaring on an upward trajectory. ChillGuy token's price rose by around 30% in the last 24 hours and is currently trading above the \$0.58 price level. If you are wondering what this ChillGuy token is and why its price is skyrocketing, read on! Just a Chill Guy on Solana Blockchain As its name suggests, CHILLGUY token is a just a chill guy token introduced on the Solana blockchain. It is inspired by a popular internet meme, featuring a super relaxed anthropomorphic dog with hands in his pockets. The meme token is radiating a cool vibe that doesn't make a big deal out of anything. ChillGuy token was first introduced on Nov 15, 2024, with a starting price of around \$0.3. After rising to \$0.5 price level a week after its launch, it witnessed a continuous downtrend until the present price surge. Today, the token is trading at more than \$0.58, recording an overall price increase of 50%. Why Did the Chill Guy Token Price Soar 30% Today? Source: CoinMarketCap There are multiple reasons for the ongoing price rise of Just a Chill Guy token. One of the noteworthy reasons is the availability of these tokens on major crypto exchange platforms such as ByBit, Bitget, KuCoin, Crypto.com and others. Both KuCoin and Bitget announced their CHILLGUY token listing today. you can hate a chill guy, but they'll keep building. pic.twitter.com/XalGlofMLV " just a chill guy (@chillguycto) November 27, 2024 Adding to the social media buzz around the ChillGuy token, Elon Musk replied to a tweet mentioning the chill guy meme and calling it "the new figurehead of racists" with ROFL emojis. Elon Musk is popular in the crypto industry, being known for his Dogecoin support with Doge memes on X. By joining the chill guy meme, he played a fair share in further increasing the attention around this Solana meme coin. As a result new token listings and social media buzz around the meme token, Chill Guy token soared around 30% today. While the 24-hour trading volume crossed the \$270 million mark, market capitalization is standing above \$580 million, with a 30% increase in the last 24 hours. Final Thoughts Turned \$160 into \$6.14M, a 38,399x return! " Lookonchain (@lookonchain) November 27, 2024 12 days ago, this trader spent only 0.75 \$SOL(\$160) to buy 12.5M \$CHILLGUY on <https://t.co/DrKlYnPPqY>, and then sold 2.8M \$CHILLGUY for 149 \$SOL(\$35.4K). #CHILLGUY The trader still holds 9.62M \$CHILLGUY(\$6.1M), with a total profit of \$6.04M! pic.twitter.com/a5tPaB3KpT As per Lookonchain on-chain analytics platform, a trader reportedly made 38,399x returns with ChillGuy token. He bought 12.5M \$CHILLGUY tokens, spending 0.75 \$SOL around 12 days ago. Then, he sold 2.8M \$CHILLGUY today for 140 \$SOL, making a whopping 38,399x. Apparently, he still holds 9.62M CHILLGUY. On another note, Chill Guy token is currently facing controversy and risks due to legal action from Phillip Banks, the original creator behind the Chill Guy meme. Earlier this week, Banks posted on X, saying chill guy has been legally copyrighted. No matter the price surge and the hype behind the token, ChillGuy is a meme coin. And, meme coins are known for their extreme price fluctuations and short-term hype. It is only a matter of time Just a Chill Guy falls behind in a heap of meme coins. In case, you invested in this meme token, trade wisely and exit before it hits the road! Highlighted Crypto News Today:

The crypto market is introduced in new projects with high growth rate and new aims. Among them is FXGuys (\$FXG), a new trading platform drawing the interest of investors. Although Ripple, Shiba Inu, and Dogecoins are considered leading crypto projects, FXGuys' features may exceed them to the \$1 mark. Owing to its notable presale growth, FXGuys is gaining popularity among the masses. In Stage 1 of the public presale, members of the public were able to purchase \$FXG tokens at just \$0.03. All these considerations make it a great investment prospect as the token price is expected to go up to \$0.10 upon launch and most likely resulting in a higher profit. This article explores the factors that might make \$FXG reach \$1 before these popular projects.

Dogecoin (DOGE): Top Meme Coin With Active Community and Widespread Recognition Meme-based Dogecoin is a form of digital cash available to all people. It is one of the most popular projects in the market. Dogecoin was mostly developed to educate people on what blockchain is capable of. Main changes which were done by Dogecoin are increased access speed and lower transaction fees. Special codes are used to secure all the transactions on this blockchain network. Among many great features, this is what makes Dogecoin such a good selection for crypto-investing with potential for growth.

Shiba Inu (SHIB): Promising Crypto Project with Strong Community Backing Shiba Inu is one of the most inventions that the whole cryptocurrency market holds. This is often recognised to be among the most promising investment opportunities due to the great ability it has to generate good returns. It has a relatively small cover with enormous potential for profits that catches the attention of those willing to invest. SHIB experts also believe that this coin is going to rise due to the next token burn planned as the supply limit measure. This could increase the prices for the next bull run to skyrocket. The altcoin market is on the rise, and SHIB is in tune with the community.

Ripple (XRP): Poised for Explosive Growth and Market Surge Ripple is an open source digital payment system through which users can transfer amounts of money across the globe and also for exchanging currencies. Ripple enacts transactions using its consensus mechanism in 3-5 seconds. This makes it a good crypto investment. Recent favorable developments with regard to court cases involving Ripple make it a more competitive participant in the market. With clearer rules, Ripple can grow and attract more investors. The momentum shows it is ready to rise upwards fast and beat other cryptocurrencies.

FXGuys (\$FXG): Redefining Forex with Trade2Earn and Secure Trading FXGuys a new crypto trading platform of FX Guys is set to outperform XRP, SHIB, and DOGE in scaling to \$1. Unlike their regular options, it provides a safe and transparent trading space which will change the Forex dynamics. This is a bold move that places FX Guys as the best crypto to buy now for any trader desiring high chances. A very key feature of the FXGuys is its Trader Funding, which solves the problem of limited capital for traders. Through an assessment process, traders can have up to \$500k in trading capital and scale with absolutely no risk to their cash. Thus, it's the best crypto to buy now for any investor in search. For people who are seeking to make some passive income, the only practical way would be staking of \$FXG tokens. The tokens enable one to be able to take 20% of the trading volume of the broker and earn profits as gains. Thus \$FXG as the best DeFi coin in the market has many contributions to the growth of the investment with little effort and input demanded.

Conclusion With features such as Trade2Earn, staking rewards, and an amazing community, FXGuys can compete with popular coins like XRP, SHIB, and DOGE. Through its new model, it has become the best DeFi coin for both active and passive crypto enthusiasts. As the value rises, this crypto trading project might become the first to hit the \$1 milestone. To find out more about FXGuys follow the links below: [Presale](#) | [Website](#) | [Whitepaper](#) | [Socials](#) | [Audit Disclaimer](#): TheNewsCrypto does not endorse any content on this page. - SAND's price dropped 20%, trading at \$0.6061, with a 19.54% fall in the market cap. - The Exchange flow balance rose by 162%, indicating heightened selling activity. The Sandbox (SAND) recently reached a yearly high of \$0.86. However, the price has dropped 20% in the past 24 hours, now trading at \$0.6061. Its market cap has fallen 19.54% to \$1.47 billion, while trading volume plunged 59.37% to \$2.06 billion. The volume-to-market cap ratio stands at 141.22%, signaling intensified activity despite the decline. Dormant tokens are entering the market, with the age-consumed metric spiking to a two-month high of 33.19 billion, according to Santiment. Additionally, the exchange flow balance surged by 162% in 24 hours, indicating a higher movement of SAND tokens to exchanges, potentially for selling. These metrics confirm increased bearish sentiment in the market.

SAND's Battle at Key Support SAND currently trades below key support at \$0.61, as per the technical chart. The 9-day moving average stands at \$0.476, and the 21-day moving average at \$0.3727. A bullish crossover between these moving averages occurred recently, but the current price movement hints at weakening momentum. The RSI (Relative Strength Index) is at 67.14, hovering near overbought levels. If the selling pressure persists, SAND may further test the support at \$0.61 or drop toward \$0.50. On the upside, reclaiming \$0.86 as resistance is crucial to reversing the current trend. A successful breakout could set the stage for a rally toward \$1. If selling pressure continues, SAND could further test the \$0.61 support level or drop toward \$0.50. On the other hand, reclaiming \$0.86 as resistance remains critical for a bullish recovery. A successful breakout above this level might pave the way toward the psychological \$1 mark. However, sustained upward movement would depend heavily on a reduction in selling pressure and increased buying volume. For SAND to stabilize and recover, easing the ongoing sell-offs is crucial. Holding above \$0.61 could restore trader confidence, allowing the price to revisit its recent high of \$0.86. Until such conditions are met, caution is advised as the market leans bearish in the short term.

Highlighted Crypto News Today Why Did CZ Call the Memecoin Market "Weird"?

- The total crypto market cap fell by \$82B, nearing \$3T support. - SAND led altcoin losses, plunging 18% in 24 hours. The cryptocurrency market continues its slide, shedding \$82 billion in the past 24 hours. The total crypto market capitalization now stands at \$3.19 trillion, nearing critical support at \$3 trillion. Bitcoin's (BTC) price fell by 5.68%, trading at \$92,981.58, while Ethereum and

Dogecoin also suffered significant liquidations. Liquidation events spiked, with over \$518.3 million wiped out across 159,554 traders. Long positions bore the brunt, accounting for \$389.13 million. Bitcoin saw \$56 million in liquidations, marking the highest single-day-long liquidations in a week. Ethereum and DOGE followed, losing \$32 million and \$21 million, respectively. The market's bearish momentum aligns with readings from the Moving Average Convergence Divergence (MACD) indicator. The MACD line poised to cross below the signal line confirms increasing selling pressure. If selling persists, TOTAL risks breaching the \$3 trillion support level and could slide further to \$2.72 trillion. Weekend trading patterns also contributed to volatility. Low trading volumes amplify price fluctuations, with over 74,000 BTC moved to spot exchanges in three days. Around 19,238 BTC were deposited over the weekend, suggesting profit-taking activity that pressured prices downward. Crypto Market Struggles Metaverse token SAND emerged as the biggest loser, plummeting 18% in the past 24 hours. It currently trades at \$0.66, down 23% from its recent high of \$0.86. Institutional moves have added to market uncertainty. Bitcoin ETFs recorded a daily net outflow of \$438 million. While BlackRock's IBIT saw a \$267 million inflow, Bitwise BTC experienced a \$280 million outflow. These opposing trends highlight diverging investor sentiments. Options expiries further drove volatility. Bitcoin and Ethereum options worth \$9.4 billion and \$1.3 billion, respectively, are set to expire on November 29. Traders adjusted their positions, leading to widespread market impacts. Despite the downturn, some tokens gained ground. Lido DAO surged 7.67%, followed by Uniswap and Arbitrum, which rose 6.07% and 5.34%, respectively. These gains highlight investor interest in decentralized finance (DeFi) amid broader market turmoil. While market sentiment remains in "extreme greed," with a Fear and Greed Index value of 82, traders continue navigating volatility. The cryptocurrency market's recent fluctuations underscore the challenges of reaching major price milestones like \$100K for Bitcoin. Highlighted Crypto News Today Can Solana (SOL) Recover and Surpass the \$260 Mark?

- Liquidations soared to \$511M, with \$383M in long positions wrecked. - Resistance stands at \$100K, with support at \$95,354; RSI shows overbought levels. Bitcoin retraced from its record-breaking rally, trading at \$97,954, down 0.03% in 24 hours. BTC's market cap fell below \$1.9 trillion, losing over \$60 billion since Friday. Meanwhile, the global crypto market cap dropped 0.74% to \$3.34 trillion, with a trading volume of \$199.2 billion, down 3.24% over the last day. Crypto liquidations soared to \$511 million in the past 24 hours. Long positions faced \$383 million in losses, while shorts lost \$136 million. Binance recorded the largest single liquidation order of \$13.4 million. Bitcoin accounted for \$78.94 million of the liquidations, followed by Ether (\$42.25M) and DOGE (\$34.96M). Geopolitical unrest has pressured Bitcoin's price. The recent escalation of tensions in the Middle East led many investors to choose gold over cryptocurrencies. Following Iran's missile attack in October, Bitcoin initially dropped, underscoring its vulnerability to global instability. In the U.S., macroeconomic factors also shaped Bitcoin's price movement. A stronger-than-expected labor market and solid payroll reports hinted at further Federal Reserve rate cuts. Historically, such cuts have boosted Bitcoin as investors shift to riskier assets for higher returns. Technical Indicators Remain Positive Bitcoin faces resistance at \$100,000, with support at \$95,354. If the price breaks above resistance, it could target \$105,000. A drop below \$95,000 may result in further declines to \$90,000. Technical indicators remain positive for Bitcoin. The RSI stands at 78.55, showing overbought conditions and signalling potential consolidation. The 9-day moving average at \$95,354 remains above the 21-day moving average at \$88,044, indicating bullish momentum. Their recent crossover reinforces a positive medium-term outlook. Despite the correction, Bitcoin's prospects remain strong. Institutional and retail demand shows no signs of slowing, especially with the incoming pro-crypto Trump administration. Analysts expect easing monetary policies and increasing adoption to support Bitcoin as 2024 progresses. With solid fundamentals and supportive policies, Bitcoin could regain its upward momentum toward year-end, potentially setting new milestones.

With Traders predicting a 250% increase, ripple (XRP) has been at the front of investor attention as a profitable prospect for anyone wishing to profit on the upward trend of the market. Beyond XRP, though, three cryptocurrencies under \$0.50 "Rexas Finance (RXS), Shiba Inu (SHIB), and Floki Inu (FLOKI)" are generating waves for their possible even more profit potential. Among them, Rexas Finance is unique in transforming power since blockchain-based tokenization of actual assets drives a financial revolution. Rexas Finance (RXS): Tokenizing Real-World Asset Future By tokenizing tangible assets including real estate and commodities as well as intangible assets like intellectual property, Rexas Finance is changing asset ownership and investment via blockchain technology. Tokenizing these assets means turning them into divisible, liquid, transferable digital tokens available on blockchain systems. Rexas Finance reduces investor entrance obstacles by allowing fractional ownership, hence opening high-value asset classes. Particularly in sectors like real estate, which historically have been controlled by high-net-worth individuals, this democratization is transforming. Using RXS tokens, an investor might buy a fraction of a luxury house or a gold reserve, therefore providing unmatched access and flexibility. From institutions to individual players, this inclusive strategy is drawing a wide range of investors that fuels demand for the RXS token. The extreme presale performance of RXS reflects great investor confidence. Beginning at \$0.03 in Stage 1, the token's value has increased consistently until it stands at \$0.07 at the end of Stage 5. Token fast sell-out highlighted its increasing appeal. Currently, at Stage 6, RXS costs \$0.08 and should be listed at \$0.20. While those starting now still have the chance for a possible 150% return, early investors have already enjoyed notable gains. Rexas Finance is positioned as a top choice for investors looking for strong portfolio expansion based on this growth path. Furthermore, expected to improve liquidity and visibility are future listings on top-tier centralized exchanges (CEXs) and distributed exchanges (DEXs), hence opening the path for continuous price increases following the debut. Rexas Finance has given developing trust priority in a market sometimes rife with security issues using strict security policies. Leading blockchain security company CertiK has verified its smart contracts to guarantee investor money is safe and underline the platform's dedication to building a safe ecosystem.

Moreover, listings on reliable cryptocurrency tracking sites like CoinGecko and CoinMarketCap (CMC) improve openness, thereby enabling investors to track performance confidently. Rexas Finance is a preferred alternative for both individual and institutional investors because of its exacting attitude to security and compliance. Rexas Finance valued its community and started a \$1 million gift campaign to honor and grow its customer base. Twenty victors will get RXS tokens valued at \$50,000 apiece, therefore generating a lot of interest in the idea. By doing little tasks like keeping current on project progress and suggesting friends, participants can raise their chances of winning. The platform guarantees flawless communication and user involvement employing social media channels like Telegram and Discord, therefore ensuring accessibility. The long-term viability of the project depends on a robust, active community that these projects have helped create. Shiba Inu (SHIB): a Community- Driven Powerhouse Often referred to as the “Dogecoin killer,” Shiba Inu has become somewhat well-known among the most identifiable cryptocurrencies available worldwide. Originally becoming popular because of its low entrance cost and active viral network, SHIB has effectively grown its ecosystem to present itself as more than simply a meme coin. The ShibaSwap ecosystem, a distributed exchange (DEX) platform enabling users to stake tokens, offer liquidity, and earn rewards, is one of Shiba Inu’s most important creations. With a variety of financial services provided to its users, this platform has enhanced SHIB’s value inside the distributed finance (DeFi) market. Shiba Inu has generated a strong use case for its token by including such capability, therefore bridging the gap between conventional DeFi apps and meme coins. Shiba Inu has also advanced the NFT and gaming industries significantly. Appealing to both gamers and digital art enthusiasts, the Shiboshis NFT series has given their ecology fresh angles. Entering blockchain gaming, SHIB has expanded its application to fit the fast-expanding NFT game sector.. Floki Inu, or bridging meme culture and real-world utility, Floki Inu (FLOKI) has stepped into the meme coin arena in a unique fashion naming the project after Elon Musk’s Shiba Inu puppy. Unlike many of its rivals, FLOKI creates a well-rounded ecosystem appealing to both casual investors and crypto aficionados by combining its cultural attraction with useful applications. Valhalla, a blockchain-based play-to-earn (P2E) game giving players FLOKI tokens, is one of Floki Inu’s flagship projects. This metaverse initiative not only capitalizes on the explosive gaming market but also incorporates distributed finance ideas, allowing users to create and apply their currencies inside a virtual economy. Combining blockchain technology with gaming sets Floki Inu in front of the P2E revolution and emphasizes its creative strategy to increase the usage of cryptocurrencies. Beyond games, Floki Inu is dedicated to philanthropy and learning. The initiative has started instructional courses meant to democratize knowledge of cryptocurrencies, therefore promoting more general blockchain technology acceptance and understanding. FLOKI has also teamed with several nonprofit groups to highlight its commitment to social impact and community growth. Conclusion With its expected 250% increase, ripple (XRP) is still an interesting investment; but, cryptocurrencies like Rexas Finance, Shiba Inu, and Floki Inu have actual promise. Among these, Rexas Finance is unique in its creative approach to actual asset tokenization and strong ecosystem. Rexas Finance bills itself as a blockchain game-changer by tackling conventional finance inefficiencies and providing useful applications. Rexas Finance is more than just an investment for those looking for dramatic increase and practical value; it’s a financial revolution. Unlike many of its rivals, FLOKI creates a well-rounded ecosystem appealing to both casual investors and crypto aficionados by combining its cultural attraction with useful applications. Valhalla, a blockchain-based play-to-earn (P2E) game giving players FLOKI tokens, is one of Floki Inu’s flagship projects. This metaverse initiative not only capitalizes on the explosive gaming market but also incorporates distributed finance ideas, allowing users to create and apply their currencies inside a virtual economy. Combining blockchain technology with gaming sets Floki Inu in front of the P2E revolution and emphasizes its creative strategy to increase the usage of cryptocurrencies. Beyond games, Floki Inu is dedicated to philanthropy and learning. The initiative has started instructional courses meant to democratize knowledge of cryptocurrencies, therefore promoting more general blockchain technology acceptance and understanding. FLOKI has also teamed with several nonprofit groups to highlight its commitment to social impact and community growth. The market for cryptocurrencies has long been a subject of exciting forecasts and explosive returns. Among the most audacious voices is a trader known for precisely foretelling Ethereum’s historical top at \$4,800. Currently, this same professional anticipates Ethereum rising to \$10,000 not too far off. Though Ethereum’s path shows amazing results, the true buzz is surrounding a less-known Ethereum rival called Rexas Finance (RXS), which might yield a shockingly 10,000% return on investment (ROI). The emergence of utility-oriented tokens such as Rexas Finance marks a paradigm change as the crypto scene develops since they provide investors with not just speculative returns but also practical uses. Here is a detailed analysis of Rexas Finance’s reasons for being heralded as the next great thing in cryptocurrency as well as how you may get a piece of its presale action. The Evolution of Rexas Finance (RXS): Changing Available Resources Leading a financial revolution with blockchain technology tokenizing real-world assets (RWA), Rexas Finance’s Physical and intangible assets are turned by this innovative technique into digital tokens divided, liquid, and transferable across blockchain systems. These tokenized assets comprise intangible things like intellectual property as well as physical objects like goods and real estate. Rexas Finance opens high-value asset markets to regular investors by allowing fractional ownership, therefore greatly reducing the entrance obstacles. In historically restricted industries like luxury real estate and gold reserves, once only accessible to the rich, this democratization of access is especially transforming. With RXS tokens, for example, an investor might own a fraction of a luxury house or a gold vault, therefore providing

unheard-of freedom and access. Both institutional players and individual investors are attracted by this invention, which is increasing demand for RXS tokens and therefore enhancing their possible return on investment. Although Ethereum's expected ascent to \$10,000 guarantees a good return for present owners, Rexas Finance presents an unparalleled chance for exponential development. During the presale stages, the token has already shown tremendous performance: Stage 1: Tokens had a low starting point at \$0.03 for early adopters. Stage 5: Prices came in at \$0.07; the great demand caused the stage to sell out faster than expected. Stage 6: With an anticipated listing price of \$0.20, tokens now cost \$0.08, so offering a possible 150% gain for present presale investors. The road map and market posture of Rexas Finance contain the actual magic. Being a utility-driven token, RXS is likely to flourish in the tokenization of actual assets—a market expected to reach a multi-trillion-dollar size. This strong use combined with smart listings on top-notch centralized exchanges (CEXs) and distributed exchanges (DEXs) lays a strong basis for long-term development. This Trader estimates that RXS might yield 10,000% ROI given its revolutionary use case and rising acceptance, therefore transforming a meager \$1,000 investment into \$100,000. Rexas Finance offers a second opportunity to transform wealth for individuals who missed Ethereum's early years. Beyond Hypothesis: Practical Value of RXS

Rexas Finance presents a whole ecosystem tackling actual asset management inefficiencies, unlike speculative meme coins. Designed for both companies and people, QuickMint Bot lets users easily create tokens on Ethereum-compatible blockchains using Telegram or Discord. These capabilities solve liquidity problems and simplify asset ownership for a worldwide audience, therefore positioning Rexas Finance as a leader in the tokenizing sector. Rexas Finance has given security and openness top priority, therefore tackling issues sometimes afflicting the crypto industry. Leading blockchain security company CertiK has fully examined the smart contracts on the platform to provide a safe environment for transactions. Furthermore improving visibility and reliability is Rexas Finance's listing on reliable sites like CoinMarketCap (CMC) and CoinGecko. These initiatives make RXS appealing to both institutional and individual investors since they offer a basis of confidence necessary for long-term development. How to Enter the Presale? The continuous presale presents a great chance to make Rexas Finance investments before its price soars. You can engage in this by: - Get ready for your wallet by Using a wallet supported by Wallet Connect, either MetaMask or Trust Wallet. - Fund Your Wallet: Either USDT to buy RXS coins or ETH for gas expenses. - Link to the Platform: Visit rexas.com and the Ethereum network wallet connection tool will help you. - Select a payment method: Your payment choice should be ETH or USDT. - Add Purchase Amount: Indicate the desired investment amount and validate the transaction from your wallet. - Validation of Transactions: Your RXS tokens will be credited to your wallet after the transaction is finished. Rexas Finance now enables credit and debit card purchases made by new investors via suppliers such as Ramp Network, Transak, and MoonPay. This streamlines the procedure so users may get ETH and apply it to purchase RXS tokens. Conclusion: Rexas Finance owns the future. Though for those looking for the next great thing Rexas Finance offers unmatched promise, Ethereum's ascent to \$10,000 is an exciting possibility. RXS is not only a cryptocurrency but also a portal to a new era of easily available, efficient asset management by transforming the tokenization of actual assets. Rexas Finance is ready to surpass Ethereum and competing traditional markets with its rapid presale performance, strong ecosystem, and expected 10,000% ROI. Investors wishing to maximize their gains have time to act right now. Join the Rexas Finance presale today to help shape the future of money rather than only see it. - Ryoshi, the creator of SHIB, had the idea for Treat to replace BONE as the reward token for ShibSwap. - TREAT seeks to improve the Shiba Inu ecosystem's governance and trust. The introduction of the TREAT token, a significant component of the SHIB ecosystem, was announced by Shiba Inu head Shytoshi Kusama. Ryoshi, the creator of SHIB, had the idea for Treat to replace BONE as the reward token for ShibSwap. Furthermore, beyond these capabilities, TREAT seeks to improve the Shiba Inu ecosystem's governance and trust. Also, this update shows how seriously the community takes the goal of improving SHIB's standing in the cryptocurrency market and expanding the possibilities of decentralized finance (DeFi). Community Excited Over Launch Lead developer Shytoshi Kusama, who is leading the Shiba Inu ecosystem, has teased the debut of the TREAT token, which has the SHIB community very excited. Treat was announced on November 23 as a game-changing innovation to the ecosystem. Kusama highlighted its importance in furthering Shiba Inu's objective to enhance decentralized finance (DeFi) in terms of trust, governance, and usefulness. Kusama emphasized the need for responsibility in light of the current situation with live streamer Jack Doherty and his deceitful meme coin. He spilled the beans on the Shiba Inu ecosystem, saying that it will have "Karma and Reputation" systems powered by TREAT. Moreover, potentially resolving trust difficulties in the cryptocurrency realm, these solutions seek to promote a trustworthy environment by rewarding positive contributions and deterring frauds. Although the token's debut has not yet occurred, the community is excitedly anticipating its arrival. Treat will presumably take the place of BONE as the reward token for ShibSwap whenever it becomes live. If Shiba Inu (SHIB) follows a similar development path as Dogecoin, its price might double, according to analysts. As the market for meme coins continues to grow, SHIB is catching on and has the potential to become as successful as Dogecoin. Highlighted Crypto News Today: Coin Center Analyzes Crypto Policy Under Trump as Surveillance Tops Concerns

- Kraken adds 19 new tokens, including BNB, to attract more users and stay competitive in the U.S. market. - CZ tweets his support for Kraken's BNB listing, - U.S. crypto regulations may ease under President-elect Trump, creating opportunities for exchanges like Kraken to list more tokens. Kraken Token List Kraken, the second-largest cryptocurrency exchange in the U.S., has announced that it will

list 19 new tokens, including popular ones like BNB, DYDX, AR, and LQTY. The timing of this expansion is important. As many people believe that the new U.S. government under President-elect Donald Trump might ease some rules on cryptocurrencies. If this happens, it could help exchanges like Kraken grow even more, with fewer restrictions on token listings. CZ Supports Kraken's BNB Listing Changpeng "CZ" Zhao, the CEO of Binance, tweeted about Kraken for listing BNB, CZ is a major figure in the crypto world, and his support makes this listing even more significant. BNB is a well known cryptocurrency, and its addition to it will help attract more people who use or hold the token. Its decision to list these new tokens, especially BNB, has been highly anticipated, as it is one of the biggest and most trusted exchanges in the U.S. In the past, U.S. crypto exchanges faced strict rules when listing new tokens. However, there is hope that the Trump administration may reduce these rules, allowing exchanges like this to list more tokens with fewer obstacles. If this happens, it could make it easier for people to access a wider range of cryptocurrencies. By adding 19 new tokens now, Kraken is preparing for the possibility of more relaxed rules. This would allow Kraken to keep growing and make it easier for people to use cryptocurrencies in the U.S.

There is a lot of excitement building around Ripple right now, and its big moment is coming up quickly. Still, the world of crypto is always changing, and new people are always ready to take the lead. Rexas Finance (RXS) is one of these cryptocurrencies that is getting a lot of attention and could deliver a huge 17,080% breakout. With amazing accomplishments, a great pre-sale performance, and a bright future, Rexas Finance is ready to shake up the market and give investors the chance to make huge returns. Ripple: A Major Breakthrough is on the Horizon With its price as of writing sitting at \$1.10, ripple is on the verge of a breakthrough as it reaches a turning point in its path. With the possibility for notable expansion, XRP is attracting fresh interest following the overcoming of legal obstacles and market challenges. XRP's value might experience a significant rise as Ripple's technology is adopted more and more for cross-border payments and as excitement about forthcoming advancements grows. Investors are keenly monitoring this cryptocurrency as, for those who enter at the correct moment, it can upset the global payments system and yield amazing rewards. Rexas Finance (RXS): Rising to Prominence While Ripple (XRP) is on the verge of a major breakout of its own, many analysts believe Rexas Finance's explosive potential could outperform XRP soon. The presale success, the strategic use of blockchain technology for real estate tokenization, the Certik audit, and its growing community of supporters place Rexas Finance in a prime position for a massive rally. With a 17,080% potential return on investment, investors have an opportunity to get in on the ground floor before the token sees a substantial price surge. More than merely a token, Rexas Finance marks a technological advance in blockchain integration"especially in the real estate industry. Rexas Finance stands out among other things for emphasizing real estate tokenization. Real-world assets, including property, may be bought, sold, and traded safely on the blockchain thanks to this groundbreaking method. opening for investors all over fresh markets and possibilities. Rexas Finance can revolutionize the real estate investment scene and enable enormous development for token holders with this creative use case Rexas Finance has already shown itself as a force to be reckoned with, recently entering Stage 6 of its presale for \$0.08 per token. With more than \$9.9 million raised thus far and over 172 million RXS tokens traded, the presale has attracted amazing attention. Strong investor trust in the long-term viability and expansion prospects of the project is reflected in this fast momentum. Rexas Finance is becoming more than simply a trend as the project picks momentum; it's one of the most fascinating prospects in the cryptocurrency field. Rexas Finance's solid market positioning is one of the main factors causing such great interest. Rexas Finance is already listed on several big crypto platforms, including CoinMarketCap and CoinGecko, as of right now. Early listing of two of the most significant bitcoin data aggregators gives the project legitimacy and improves its visibility on the worldwide market. Furthermore, Certik"one of the most reputable names in blockchain security"has audited the initiative. This audit gives investors peace of mind knowing Rexas Finance satisfies industry criteria for dependability and safety. Their money is in excellent hands. The presence of Certik is a vital mark of approval that boosts investor confidence and thereby increases the appeal of Rexas Finance. Conclusion Rexas Finance is a remarkable cryptocurrency deserving of attention with its presale success, major funding, real estate tokenizing innovation, and strategic alliances. Rexas Finance offers investors the possibility for profits significantly higher than those of Ripple, therefore reflecting the future of blockchain and real estate. The project offers a special chance to acquire a portion of this innovative concept at a reasonably modest price while it gathers pace, thereby providing an ideal investment before it maybe bursts. Now is the chance to enter Rexas Finance before it flies. Rexas Finance is fast turning into a token to monitor, given so much enthusiasm behind it. Don't let this chance pass by; as the initiative reaches new heights, investors who participate now may be quite profitable. - Polymarket has widened its access restrictions to include users in France. - ANJ is looking into Polymarket to make sure it complies with French gambling regulations. In light of a rumoured inquiry into the platform's compliance with local gambling regulations, prediction marketplace Polymarket has widened its access restrictions to include users in France. Although the company has not yet made an official announcement regarding the ban on French users. A message stating that Polymarket is in "view-only mode" for persons located in the US, France, or restricted jurisdictions is displayed. When trying to access the prediction market platform from France. A Polymarket spokesperson told: "Users in France can continue to access Polymarket for critical information about the events that matter most to them, but for the time being we've hit pause on new trades. We took this step

proactively while we continue to engage with stakeholders in the country about our platform and prediction markets more generally. Compliance with French Regulations The new limitations are a result of an alleged investigation into the site's compliance with French legislation by the National Gaming Authority (ANJ), which is responsible for overseeing online gambling in France. Following the roughly \$80 million profit that French citizen "Fred", alias "Fred1999", made from betting on Donald Trump's victory in the U.S. presidential election earlier this month, it is possible that government authorities became interested in the site. According to a recent interview with The Block, an official from the ANJ said that the organization is looking into Polymarket. To make sure it complies with French gambling regulations. This follows increased scrutiny of the platform's betting activities and a spike in demand during the US election. French users may have been restricted from the site. Due to a policy change that has not been formally notified by the French agency. Highlighted Crypto News Today:

- Alameda Research transferred 4.5M POL tokens worth \$1.98M to Binance over four days. - RSI at 72.39 indicates overbought conditions, while MA crossovers suggest an uptrend. Alameda Research has raised concerns among investors by transferring large amounts of Polygon (POL) tokens to Binance during a price surge. In the past four days, the firm moved 4.5 million POL tokens worth \$1.98 million. The latest transfer involved 2 million POL tokens, valued at \$927,000. Polygon's market activity has intensified, with its price trading at \$0.5453, reflecting an 18.25% gain in the last 24 hours. The market cap surged by 17.44% to reach \$4.35 billion. Meanwhile, trading volume rose 71.74%, totaling \$819.45 million in the same period. The volume-to-market-cap ratio stands at 18.90%, signaling heightened trading interest. Alameda's history of token dumps has led to steep market corrections in the past. Traders are now closely monitoring Binance's order books for any signs of liquidation. With Polygon's circulating supply at 7.97 billion POL, investors remain cautious about the impact of large sell-offs on the token's upward momentum. Polygon in Today's Market The technical indicators reveal a bullish flag pattern for POL. This pattern suggests further upward momentum if resistance levels break. The immediate resistance is at \$0.5552, while support rests at \$0.3968. A breakout above \$0.5552 could push the price toward \$0.60. Conversely, a drop below \$0.3968 may trigger a bearish sentiment. The Relative Strength Index (RSI) currently stands at 72.39, indicating overbought conditions. Its average at 61.36 reflects growing bullish momentum. Moving averages add to the bullish case, with the 9-day MA at \$0.4454 above the 21-day MA at \$0.3968. This crossover signifies a strong uptrend and potential for sustained gains. While the price rally and bullish patterns support continued growth, sell-off risks from whales remain significant. POL's price surge, coupled with Alameda's token transfers, creates a volatile scenario. Highlighted Crypto News Today Dogecoin (DOGE) Surges 19% as Hash Rate Hits Record High

Long mainstays of the cryptocurrency scene, Ripple (XRP) and Cardano (ADA) attract respect and interest from experienced players. Still, even the most devoted consumers of these giants are increasingly focussing on Rexas Finance (RXS), a fresh participant in the industry. Although this token is barely priced at \$0.08 as of writing, it offers returns of more than 10,000%, thus it is a tempting chance for anyone looking for big earnings. The Next Frontier in Real-World Asset Tokenization Rexas Finance (RXS) is a transforming initiative ready to change the field of real-world asset tokenization (RWA), not only another cryptocurrency. Rexas Finance lets users tokenize and exchange actual assets including real estate, gold, and artwork by using blockchain technology. The market potential is astounding: the real estate industry alone is assessed at \$379.7 trillion; gold at \$121.2 trillion; and art and collectibles add another \$65 billion yearly. By use of its creative Rexas Token Builder, customers may tokenize their assets "for full or fractional ownership" without writing a single line of code. This democratizes asset ownership and investment, therefore enabling anybody to engage in hitherto unreachable markets. Rexas Finance's approach presents an interesting chance for XRP and ADA holders used to high potential returns to diversify into a project with practical use and almost unlimited possibilities. Rexas Finance's Explosive Growth Potential as ADA and XRP Biggest Holders Quietly Accumulate RXS At \$0.08 as of writing, RXS has already shown amazing expansion, jumping 165% from its \$0.03 presale stage 1 price. Projections indicate that RXS might soar to \$8 or more, giving investors a 10,000% return on their initial investment. The presale is developing quickly and the token launch is slated for early 2025 at \$0.20. The strong foundations of the project and its attraction to prominent investors help to justify this explosive climb. With more than 183 million tokens sold and almost \$10.89 million raised as of writing, the presale indicates great demand and faith in the concept of the enterprise. Rexas Finance distinguishes itself with a community-centric strategy. Unlike many blockchain initiatives dependent on venture capital financing, Rexas Finance has decided to gather a committed community of private investors fit with its goals. This strategy guarantees that the project stays in line with its long-term objectives and builds confidence as well. Rexas Finance has started a \$1 million giveaway with 20 winners expected to get \$50,000 worth of RXS each, therefore involving its expanding community. Already with over 251,784 entries, this project has increased its profile and attractiveness. Participants can perform tasks on the Rexas Finance website to take part in the giveaway. The Certik audit of Rexas Finance clearly shows its dedication to security and openness since it confirms the dependability of the project and follows the highest standards. Moreover, two of the most reliable sites in the cryptocurrency market, CoinMarketCap and CoinGecko, mention RXS. These listings let investors monitor the success of the token and obtain premium data in real time, therefore increasing their confidence. Furthermore, Rexas Finance's forthcoming release on three out of the top 10 Tier-1 exchanges will offer unheard-of liquidity and visibility, therefore orienting the token for great acceptance after launch. The Time to Act Is Now The RXS presale is moving fast, hence the present price of \$0.08 won't hold for very long. The price will climb as the token moves through its presale phases and becomes ready for its formal release, therefore reducing chances for early investors to get significant returns. RXS fills a real demand in the market by closing the distance between blockchain technology and real-world assets,

therefore establishing itself as a leader in an industry expected to rise from \$14 billion to \$24 billion by 2025. Rexas Finance gives a second opportunity for individuals who missed the early days of Ripple or Cardano. RXS is more than simply an investment with its innovative approach to asset tokenization, great community support, and the possibility to rank among the top 10 cryptocurrencies with a \$55 billion market capitalization—its stake in the future of finance. Wait not for the price to reach \$0.20 or fly to \$8 and beyond. Enter early today to set yourself up for returns that will change your life. The investment you have been waiting for is Rexas Finance! For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- DOGE trades at \$0.39 after a modest gain of 2.23% in the last 24 hours. - The meme coin has observed a 24-hour liquidation of \$11.32 million. With Bitcoin (BTC) mounted above \$99.5K, leading traders to label November as “Moonvember.” Extreme greed dominates the cryptocurrency market, as the Fear and Greed Index is settled at a high of 88. Notably, the meme coin market cap has reached \$125 billion with a 4.7% spike in the last 24 hours. The leading meme coin, Dogecoin (DOGE), has been trending sideways over the past 24 hours. A potential breakout above the crucial resistance could initiate an uptrend. DOGE recorded a modest gain of 2.23% over the past 24 hours. At the time of writing, the meme coin trades at \$0.39, with its daily trading volume resting at \$8.68 billion. In the morning hours, DOGE has plunged to a low of \$0.3783. Eventually, it climbed to the current trading level. Furthermore, the market observed a liquidation of \$11.32 million worth of DOGE during this timeframe, noting the daily trading volume of the asset at \$8.68 billion. An on-chain analyst recently noted that the Dogecoin whales accumulated 550 million DOGE, amounting to \$214.5 million, over the past seven days. This surge in whale activity has sparked concerns regarding the price movements of DOGE. Where Is DOGE’s Price Headed? The four-hour price chart of DOGE shows a brief upward momentum. If the bullish momentum builds, the asset could drive its price toward new highs. The asset could breach and hold above the \$0.43 barrier. Reinforcing the momentum would likely push the meme coin toward the \$0.50 mark. On the flip side, the meme coin’s failure to hold the \$0.35 support level could lead to a steeper correction. A potential break below that mark could push the price of DOGE to the \$0.30 mark. DOGE’s ongoing market sentiment is in the neutral zone, with the daily relative strength index (RSI) found at 57.31. Besides, the daily frame of the meme coin displays the short-term 9-day moving average above the long-term 21-day moving average. In addition, the technical indicators of the meme coin exhibit the current brief bullish momentum. The Moving Average Convergence Divergence (MACD) line is likely positioned above the signal line. This indicates an upcoming uptrend in the market. Moreover, the Chaikin Money Flow (CMF) indicator is settled at -0.09, suggesting a negative money flow. In the meantime, DOGE’s daily trading volume has moderately spiked by 3.35%. Highlighted Crypto News

- Polygon shows potential for major rally despite recent underperformance - Technical indicators reveal bullish crossover signals - Analyst projects ambitious \$36 price target Polygon (POL) appears poised for a price surge despite its recent underwhelming performance, according to leading blockchain analyst Ali Martinez. While the broader cryptocurrency market has experienced substantial gains, Polygon’s modest 2.73% daily and 17.41% weekly increases have left investors questioning its competitive edge against peers like Dogecoin and XRP, which have delivered returns exceeding 120%. However, Martinez suggests a “hated rally” could be imminent, based on emerging technical patterns. The analyst’s detailed examination reveals that Polygon’s price has recently bounced off the x-axis of a descending triangle, establishing a critical technical foundation. This pattern typically precedes significant upward movement, particularly if the asset can breach the triangle’s descending trendline resistance. Polygon Stochastic oscillator presents bullish signals Supporting this bullish outlook, the Stochastic oscillator presents encouraging signals, with the %K line (blue) crossing above the %D line (orange), traditionally indicating growing buying pressure and potential trend reversal. The MACD indicator further reinforces this positive sentiment, approaching a bullish crossover as the MACD line nears the signal line, while histogram bars show diminishing negative momentum. Perhaps most notably, Martinez’s chart analysis points to an ambitious price target of \$36. This projection would represent an extraordinary 8,216% appreciation from the current price of \$0.4329, highlighting the significant potential upside if technical patterns play out as anticipated. On-chain metrics add weight to the bullish thesis, with Martinez noting a marked increase in daily active addresses, transaction volume, and whale activity over the past two days. These fundamental indicators often precede positive price action, suggesting growing market interest in Polygon. Looking at specific price targets, Martinez identifies a longstanding resistance trendline dating back to Polygon’s December 2021 peak. Breaking this barrier could trigger a cascade of upward movement, with initial targets at \$0.89 (167% gain) and \$8.00 (2,387% increase) before potentially reaching the ultimate \$36 target.

While Toncoin (TON) eyes steady growth, a promising rival nearing the \$0.10 mark is gaining momentum and could outpace TON’s race to \$20 with a sharp rally in the next 10 weeks. Backed by strong fundamentals, growing investor interest, and innovative use cases, this emerging altcoin is quickly positioning itself as a market leader. As the crypto landscape evolves, this project’s potential to deliver exponential gains makes it one to watch for investors seeking high-growth opportunities. Toncoin Price Prediction TON price has become extremely volatile in the past few months as the traders have become more vigilant over the rally, and the recent crypto market corrections. The price is consolidating horizontally, due to which the Bollinger Bands are squeezing, suggesting a major price action could be on the horizon. Besides, the RSI, which indicates the strength of the rally, is

rising, and hence the price may undergo a breakout toward the higher target. Therefore, the TON price is expected to continue to consolidate for some more time, following which a bullish breakout could elevate the levels close to \$10. Rival Rexas Finance (RXS) Nearing \$0.10 Could Outpace TON

Rexas Finance is the userâ€™s gateway to the future of asset management, has the capacity to our space Toncoin (TON). Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities. Rexas Token Builder: It is normally used to tokenize their real-world assets and commodities. To make it easy for individuals to get digital ownership and offer access to the global market. Rexas Launchpad: This feature helps the asset owners raise funds for their tokenized assets, offering liquidity and new investment options for the crypto users. Rexas Estate: The projectâ€™s one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins. Furthermore, Rexas Finance began the presale of the native token RXS on September 8, 2024. The total supply of RXS tokens is 1 billion. Rexas project has raised over \$9.8M until now, with 88% of the sixth presale stage over. This event is important for the platform as it allows early investors to engage in what might turn into a revolutionary solution for RWA tokenization. Rexas Financeâ€™s \$1M Giveaway is live, offering a huge chance for early adopters to join the projectâ€™s growth. With a current token price of \$0.08 and a projected listing price of \$0.20 indicate a good opportunity for investors. Moreover, Rexas Finance has been listed on CoinMarketCap and CoinGecko. Furthermore, Rexas Finance (RXS) has the potential to be listed on Top 3 Tier 1 exchanges. Rexas Financeâ€™s security is validated by a rigorous audit conducted by Certik. About Rexas Finance (RXS) Rexas Finance is the userâ€™s gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. - Bitcoinâ€™s Resistance at \$97,024 is broken, targeting \$100,000 next. - RSI at 70.66 and CMF at 0.312 confirm bullish momentum. Bitcoin (BTC) surged to a new all-time high of \$97,628 and is currently trading at \$97,360 marking a 5.60% gain in the past 24 hours. The global crypto market cap climbed 2.77% to \$3.15 trillion, driven by a pro-crypto U.S. government and institutional demand. Trading volume for Bitcoin rose 6.74% to \$80.61 billion, while its dominance increased 1.20% to 60.64%. Bitcoinâ€™s market cap now stands at \$1.91 trillion, with a 4.69% gain. Spot Bitcoin ETFs launched by BlackRock on Nasdaq fueled market enthusiasm. BlackRockâ€™s Bitcoin options ETF contributed to a record \$1.9 billion trading volume, showcasing surging institutional interest. Whale activities also indicated strong accumulation, with one whale amassing 3,289 BTC worth \$302 million over the past two days. Notable transfers included 552 BTC from Coinbase to an unknown wallet and 800 BTC to Antpool. Bitcoin added 30% in 14 days, benefiting from Federal Reserve rate cuts and a â€œTrump tradeâ€ optimism. Analysts attributed the rally to Donald Trumpâ€™s pro-crypto policies and a supportive cabinet. BlackRockâ€™s IBIT ETF inflows further reinforced BTCâ€™s upward momentum. Alongside Bitcoinâ€™s rise, the cryptocurrency market saw \$393 million in liquidations. Of this, \$267 million were long positions, and \$126 million were short positions. Bitcoin led the liquidations with \$77.4 million, followed by Ethereum and Dogecoin. A total of 149,210 traders were liquidated, with the largest liquidation occurring in the ETH/BTC trading pair on Binance. Bullish Indicators for BTC The support level for Bitcoin is at \$95,863, while the resistance is at \$97,024. If Bitcoin breaks above the \$97,024 resistance, analysts predict it could quickly target \$100,000. Conversely, a fall below the \$95,863 support may lead to a retraction toward the \$94,000 range. Bitcoinâ€™s technical indicators point to sustained bullish momentum. The Relative Strength Index (RSI) is at 70.66, signaling overbought conditions but reflecting strong buying pressure. The RSI average of 61.29 supports this upward trend, highlighting consistent market confidence. The Chaikin Money Flow (CMF) is at 0.312, indicating significant capital inflow into Bitcoin. This metric underscores the increasing demand, suggesting that buyers are driving the price higher. Combined with RSI, the CMF suggests that Bitcoin is poised to maintain its bullish trajectory in the short term. BRN analyst Valentin Fournier predicts BTC will surpass \$100,000 by year-end, driven by institutional inflows and technical strength. The crypto market remains optimistic, buoyed by strong fundamentals and growing adoption.

Missed Ethereum when it was just \$1 back in 2015? Rexas Finance (RXS) is here to present an even more compelling opportunity. With its focus on real-world asset tokenization and growing traction in the crypto market, RXS is quickly establishing itself as a standout altcoin. Having raised over \$9 million in its presale and set to be listed on top-tier exchanges, RXS is poised for significant growth. Backed by a Certik-audited security and featured on CoinMarketCap and CoinGecko, it aims to rival established players like Shiba Inu (SHIB) by 2025. RXS could be your next chance to catch an altcoin before it takes off. Ethereum (ETH) Price Forecast Ethereum price (ETHUSD) finds difficulty to break \$3042.50 level, while the negative effect of the head and shouldersâ€™ pattern still active, waiting to break the mentioned level to confirm opening the way to achieve additional negativetargets that reach \$2825. Therefore, the bearish trend will remain valid for the upcoming period, noting that breaching \$3120 will stop the negative scenario and lead the price to rise again. The expected trading range for today is between \$2980 support and \$3200 resistance. Rexas Finance (RXS) â€“ Best Altcoin to Buy Right Now For users who have missed Ethereum (ETH) at \$1 in 2015? Rexas Finance is the userâ€™s gateway to the future of asset management. Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities. Rexas Token Builder: It is normally

used to tokenize their real-world assets and commodities. To make it easy for individuals to get digital ownership and offer access to the global market. **Rexas Launchpad:** This feature helps the asset owners raise funds for their tokenized assets, offering liquidity and new investment options for the crypto users. **Rexas Estate:** The project's one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins. Furthermore, the presale of RXS tokens began on September 8, 2024, with a total supply of 1 billion tokens. As of now, Rexas Finance has already raised over \$9M with 80% of sixth presale stage has been sold out. Rexas Finance (RXS) has been listed on CoinMarketCap and CoinGecko. Moreover, Rexas Finance will soon be listed on top 3 tier 1 exchanges. Rexas Finance's security is validated by a rigorous audit conducted by Certik. About Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. - Dogecoin has shown significant bullish momentum, rising from \$0.3778 to an intraday high of \$0.4183. - The Ichimoku Cloud indicator suggests that DOGE could maintain an upward trend and rise above \$0.45. Dogecoin (DOGE) shows signs of a potential breakout as the Ichimoku Cloud suggests continued bullish momentum. While tech mogul Elon Musk's tweets on DOGE have historically created price pumps, the current rally seems different. The memecoin clearly follows Bitcoin's trend; as of Nov 20, BTC hit a new all-time high at \$94,002. Following this, DOGE climbed from a low of \$0.3778 to an intraday high of \$0.4183. At the time of writing, DOGE trading at \$0.3933 has seen a 3.2% increase in the last 24 hours, with its daily trading volume climbing to \$11.47 billion—an impressive 22.20% jump. This surge in volume reflects growing interest among traders as Dogecoin breaks free from its previous bearish trend. The recent rally began on November 6, on the day of the US election, when DOGE broke above the prolonged bearish trend above \$0.21922. Since then, the memecoin has soared by over 90%, continuing its upward trajectory. Adding to the fuel, Musk's recent tweet sparked another level of excitement as he posted a photo of himself with the caption “The Dogefather.” 24-H Technicals Shows Bullish Outlook for Dogecoin The Ichimoku Cloud, a widely used indicator for identifying trends and momentum, offers promising signs for Dogecoin. The conversion line at \$0.38279 and the base line at \$0.28465 indicate extended upward momentum. Further, the upper boundary at \$0.39124 signals a potential breakout if the price stays above \$0.38, while the lower boundary at \$0.26983 provides a solid support zone. Beyond the Ichimoku Cloud, other indicators also support a bullish outlook. According to the DOGE/USDT 4-hour chart, the RSI, currently at 55, shows room for upward movement, staying comfortably below overbought levels. Additionally, the MACD has also turned positive, with the MACD line crossing above the signal line, highlighting increasing momentum in the short term. As all the indicators create a favorable setup for further gains, key resistance levels to watch out for include \$0.41, \$0.42, and \$0.45. If Dogecoin falls below the conversion line at \$0.38279, the bullish outlook could be invalidated, with the support at \$0.28465. That would mark a short-term bearish turn for Dogecoin. However, if the momentum continues, Dogecoin could be on its way to even higher highs soon. Highlighted Crypto News Today

- Pepe's price witnessed a modest increase of 0.52% in the last 24 hours. - The memecoin's daily trading volume showed a 9.57% increase as per CMC data. This week, the crypto market has prolonged its weekend slump not showing much action in prices. Meanwhile, a shift in focus from cryptocurrency in the regulatory sector has further contributed to this slump. On the other hand, in the past day, Trump's considering Teresa Goody Guillón has received market interest. Despite the market slump, particular altcoins and especially the memecoin sector have seen several top performers this week. Frog-based memecoin PEPE has shown notable performance over the past week. In the last 24 hours, the cryptocurrency has shown a modest price increase of 0.52%. In the Asian afternoon hours of November 19, PEPE was trading at \$0.00002008, after which it progressed to an intra-day high of \$0.00002118. Following this, it dipped to current levels once again docking at the \$0.000020 level. At the time of writing, PEPE was trading at \$0.00002028 as per CMC data. Zooming out, over the past week, PEPE has shown a significant price increase of 57.85%. This price rally saw the memecoin break notable resistance levels at \$0.000017 and \$0.00002. In this week the cryptocurrency also hit a new ATH at \$0.00002524. Will PEPE Surpass Price Correction onto Another Rally? On inferring its price movements PEPE, as aforementioned, seems to have entered a price correction, reflecting Bitcoin. The memecoin shows struggles to break resistance beyond \$0.000026 after a recent price rally. However, when analyzing technical indicators, they show potential for upward movements. Pepe's bull power indicator value stands at 0.15, while its bear power indicator value stands at a low of -1.82. Additionally, according to TradingView data, its RSI stands at 70.55 indicating a slightly overbought situation in the market. These inferences suggest that the PEPE price could witness another rally in the coming days. Meanwhile, other memecoins such as DOGE and SHIB have also shown upward movements. Recently, in the past day, BONK hit a new ATH and flipped dogwifhat in market cap, becoming the fourth largest altcoin. Highlighted Crypto News Today:

San Fransisco, USA, November 19th, 2024, Chainwire The Keanu (KNU) token, a new Solana-based meme coin inspired by cultural icon Keanu Reeves, has officially hit the market via a fair launch on Pump.fun. The release comes amid a surge in meme coin market activity, with the Keanu team positioning the project as a community-driven initiative leveraging viral potential. The broader meme coin market has seen massive growth in recent months, with notable projects contributing to an industry market cap of

\$125 billion. The team aims to capitalize on this momentum with a token launch designed to appeal to a broad demographic, from crypto enthusiasts to pop culture fans. This launch perfectly aligns with what investor and commentator Murad Mahmudov has described as an unprecedented “meme coin supercycle,” creating fertile ground for viral, community-focused crypto projects. Keanu (KNU): A Cultural and Community-Driven Token Keanu leverages the widespread popularity and meme culture heritage of actor Keanu Reeves, a figure celebrated across generational and cultural divides. The token seeks to distinguish itself through its ethos, emphasizing positivity and inclusivity—triggering speculation that this could be the making of a new crypto cult. Keanu’s branding incorporates community-oriented principles such as “Be Excellent to Each Other,” signaling a departure from the often intense and competitive nature of the crypto landscape. The team behind Keanu plans to cultivate an engaged community by focusing on a balance between entertainment and functionality. This strategy positions the token as an accessible entry point for new users exploring the world of cryptocurrencies while fostering a strong connection with existing crypto participants. Bridging Pop Culture and Cryptocurrency Meme coins have historically gained traction for their simplicity and relatability, making them an accessible entry point for newcomers. While Dogecoin has been the most prominent example of a meme coin achieving mainstream recognition, the Keanu project seeks to expand on this foundation, offering a culturally resonant alternative designed to engage a diverse audience. Unlike many projects that rely solely on novelty or fleeting trends, Keanu’s developers emphasize its potential for sustained community growth. By targeting both experienced cryptocurrency participants and mainstream audiences, the token aspires to build a broader cultural and economic bridge between these spaces. Exploring Keanu’s Adoption Potential Keanu launches with a total supply of 1 billion KNU tokens, structured to encourage widespread participation. The project’s debut on Pump.fun represents the first phase of its roadmap, with plans for additional listings to follow. By tapping into Keanu Reeves’ universal popularity and the current momentum of the meme coin market, the token seeks to carve out its place in the evolving crypto landscape. For updates on the project’s progress, Keanu encourages the community to follow its official channels on X (formerly Twitter) and Telegram. About Keanu Keanu (KNU) is a meme token built on the Solana blockchain. It prioritizes community engagement and inclusivity, aiming to foster a positive cultural movement within the cryptocurrency space. The token launched via a fair listing on Pump.fun, with plans for expanded availability on decentralized exchanges and additional trading platforms. Contact Keanu pr@keanu.xyz

After tokens like OM, SUI, and DOGE have doubled in value, the crypto market is buzzing with anticipation for the next big opportunity. A new memecoin is emerging, promising even greater returns. Could it surpass the successes seen so far? Introducing XYZVerse (XYZ), the first memecoin uniting fans of football, basketball, MMA, and more within a vibrant ecosystem. Targeting exponential growth, it blends meme culture with sports passion to create a unique, community-driven platform. The All-Sports Meme Token You Can’t Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets. Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election — now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding — and your rewards will slam dunk through the roof! XYZ presale is your first-quarter chance to get in before the mind-blowing explosion! In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME’s 5,000% rise or WIF’s 1,000% rally — XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here — get in before the crowd storms the field, and you’ll be sitting on way bigger returns! MANTRA (OM) Over the past week, MANTRA (OM) has soared by nearly 195%. This surge extends a trend seen over the past month and six months, with price increases of about 178% and 478% respectively. Currently trading between \$2.24 and \$5.29, the coin shows significant volatility and potential. Technical indicators point to potential growth. The 10-day Simple Moving Average is \$4.22, above the 100-day SMA of \$2.71, suggesting bullish momentum. The Relative Strength Index is at 61.61, indicating the asset isn’t yet overbought. The Stochastic oscillator at 57.53 also supports possible upward movement. MANTRA faces a resistance level at \$6.35. Breaking through this could lead to the next resistance at \$9.41, a potential 75% gain. On the downside, the nearest support level is at \$0.25, which would signify a significant drop. Monitoring these key levels may be crucial for anticipating MANTRA’s future price action. Sui (SUI) Sui (SUI) has seen significant price movements recently. Over the past week, its price increased by 23.50%. In the last month, it surged by 76.23%, and over six months, it skyrocketed by 227.98%. Currently, SUI trades between \$3.09 and \$4.21. The coin is nearing resistance at \$4.63. If it breaks above this level, the next resistance is at \$5.75. On the downside, the nearest support is \$2.40, followed by \$1.28. These levels indicate where SUI might face buying or selling pressure. Breaking resistance could signal further growth, while falling below support might lead to declines. Technical indicators show mixed signals. The 10-day Simple Moving Average is \$3.72, slightly above the 100-day SMA of \$3.62. The Relative Strength Index is 49.59, suggesting SUI is neither overbought nor oversold. The Stochastic oscillator is 46.89, reinforcing a neutral stance. The MACD level is -0.0137, indicating slight bearish momentum. Based on these indicators, SUI’s price might consolidate or move moderately in either direction. Dogecoin (DOGE) Dogecoin has seen significant price movement recently. In the past 1 week, its price increased by 33.98%. Over the last month, it surged by 170.98%. In the past 6 months, it has risen by 118.53%. These figures show that Dogecoin is gaining momentum in the crypto market. Based on this data, there is potential for the price to continue rising. The current price range is between \$0.28 and \$0.45. The Simple Moving Averages over 10 and 100 days are both at \$0.37, indicating stability. The Relative Strength Index is at 53.92, suggesting the coin is neither overbought nor oversold. The MACD level at

0.0012 shows a positive trend. Looking ahead, the nearest resistance level is at \$0.53. If Dogecoin breaks through this, it could move toward the second resistance level at \$0.69, which would be an increase of about 53% from the current price. On the downside, the nearest support level is at \$0.19. If the price falls below this, it might drop to the second support level at \$0.0264, a significant decrease. Traders should watch these levels closely as they could indicate future price movements. Conclusion OM, SUI, and DOGE have delivered impressive gains, but XYZVerse (XYZ) aims higherâ€”uniting sports fans and targeting 20,000% growth with its unique sports-meme ecosystem. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. As the crypto market experiences a surge of enthusiasm, leading meme-based cryptocurrencies are making bold moves. One renowned token aims for unprecedented price levels, another unveils ambitious plans, and an emerging contender sets the stage for a remarkable ascent. Amid this momentum, XYZVerse seeks to transform its minuscule starting value into substantial growth, uniting sports fans in a unique meme-sports ecosystem poised to outperform others with massive gains. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€” bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphants like BOME and WIF trailing in its wake. ðŸ’° Own the field, earn while the crowd plays ðŸ’° XYZ is more than just a benchwarmer in the meme coin game; itâ€™s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€™s massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. ðŸ’¥ Missed meme coin supercycle? ðŸ’¥ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOMEâ€™s 5,000% takeoff and WIFâ€™s 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot â€” currently undervalued, XYZ is going the distance to break new records! ðŸ’£ Rallying the community, securing the win ðŸ’£ XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystemâ€™s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. The XYZ presale is live â€” donâ€™t miss out on this knockout 99,900% opportunity! Shiba Inu (SHIB) Shiba Inu (SHIB) has experienced significant price movement recently. Over the past month, the coinâ€™s value surged by 33.42%, indicating a strong upward momentum. However, in the last week, SHIB saw a slight decline of 3.95%. Comparing this to six months ago, the price has marginally decreased by 3.91%, showing relative stability over a longer period. Currently, SHIB is trading between \$0.00002143 and \$0.00002928. The 10-day simple moving average is \$0.00002498, slightly above the 100-day SMA of \$0.00002463. This suggests a short-term bullish trend. The Relative Strength Index (RSI) stands at 52.38, which is close to the neutral mark of 50, indicating that the coin is neither overbought nor oversold. The stochastic oscillator is at 50.77, supporting the RSIâ€™s neutral stance. Looking ahead, the nearest resistance level is at \$0.53. If Dogecoin breaks through this, it could move toward the second resistance level at \$0.69, which would be an increase of about 53% from the current price. On the downside, the nearest support level is at \$0.19. If the price falls below this, it might drop to the second support level at \$0.0264, a significant decrease. Traders should watch these levels closely as they could indicate future price movements. Dogecoin (DOGE) Dogecoin has seen significant price movement recently. In the past 1 week, its price increased by 33.98%. Over the last month, it surged by 170.98%. In the past 6 months, it has risen by 118.53%. These figures show that Dogecoin is gaining momentum in the crypto market. Based on this data, there is potential for the price to continue rising. The current price range is between \$0.28 and \$0.45. The Simple Moving Averages over 10 and 100 days are both at \$0.37, indicating stability. The Relative Strength Index is at 53.92, suggesting the coin is neither overbought nor oversold. The MACD level at 0.0012 shows a positive trend. Looking ahead, the nearest resistance level is at \$0.53. If Dogecoin breaks through this, it could move toward the second resistance level at \$0.69, which would be an increase of about 53% from the current price. On the downside, the nearest support level is at \$0.19. If the price falls below this, it might drop to the second support level at \$0.0264, a significant decrease. Traders should watch these levels closely as they could indicate future price movements. Conclusion SHIB and DOGE show promise in the bull run, but XYZVerse, the first all-sport memecoin, aims for a 20,000% surge by uniting sports fans in its community-driven ecosystem. The XYZ presale is live – don't miss out on this knockout 99,900% opportunity! Ethereum (ETH) Ethereum is more than just a cryptocurrency; it's a groundbreaking platform that has transformed the blockchain world. Launched in 2015 by Vitalik Buterin, Ethereum introduced smart contracts, allowing developers to build decentralized applications (dApps) that run without downtime or interference. This innovation has led to a rich ecosystem of services, including decentralized finance (DeFi) platforms and Layer 2 solutions like Arbitrum and Polygon, which make transactions faster and cheaper. With the switch to Proof-of-Stake through The Merge in 2022, Ethereum has shown its commitment to energy efficiency and scalability. In today's market, Ethereum stands out for its robust technology and active community. The introduction of ERC-20 tokens has expanded its use in areas like governance and value storage, even though ETH is still needed for transaction fees. Upcoming improvements aim to boost scalability and reduce costs, making the network more accessible. Compared to other coins, Ethereum's blend of innovation and practical use makes it a compelling option for those interested in the evolving world of blockchain. As the industry progresses, Ethereum's role in powering transactions, rewarding participants, and serving as a valuable asset keeps it at the forefront of decentralized finance. Solana (SOL) Solana is a blockchain platform built for speed and scalability. Like Ethereum and Cardano, it provides a foundation for decentralized applications (dapps). What makes Solana stand out is its ability to process transactions quickly without sacrificing security. SOL is the native cryptocurrency of Solana. It's used to pay for transactions, run programs, and reward those who support the network. Many are excited about Solana because it doesn't rely on methods like sharding or extra layers to scale up. This simplicity makes it attractive to developers aiming to create high-performance applications with less hassle. Compared to Ethereum, which can have high fees and slower speeds, Solana offers faster transactions and lower costs. In today's market, where speed and capacity are crucial, SOL is catching attention. Its potential to handle busy products and services could make it a strong player in the crypto world. However, as with all cryptocurrencies, there are risks involved, and staying informed about market trends is important. Cardano (ADA) Cardano is making waves in the cryptocurrency world with its native coin, ADA. Designed as a flexible and scalable blockchain platform, Cardano supports smart contracts, enabling the creation of decentralized finance apps, crypto tokens, and games. Unlike many other cryptocurrencies, ADA offers an environmentally friendly approach. By using the Ouroboros proof-of-stake mechanism, it consumes far less energy than traditional proof-of-work models. This makes it a strong rival to Ethereum's ETH, providing users with a way to store value, make payments, and participate in network staking. What sets Cardano apart is its innovative two-layer architecture. The Cardano Settlement Layer handles transactions, while the Cardano Computing Layer manages smart contracts. This design boosts its potential to process up to a million transactions per second. Since the introduction of Cardano native tokens in March 2021, users enjoy secure and low-fee interactions with smart contracts. As the crypto market seeks more sustainable and scalable solutions, ADA stands out as an attractive option in the current market cycle. Its commitment to efficiency and environmental sustainability positions it well against competitors like Ethereum, marking it as a coin to watch. Dogecoin (DOGE) Dogecoin started in 2013 as a joke. Created by Billy Marcus and Jackson Palmer, it used a funny image of a Shiba Inu dog as its logo. Unlike Bitcoin, which has a limited supply, Dogecoin was designed to be abundant. Every minute, 10,000 new coins are mined, and there is no maximum supply. People first saw it as a –memecoin,– but in 2021, its value skyrocketed. It became one of the top ten cryptocurrencies, with a market cap of over \$50 billion. This surge was driven by social media buzz, especially from Elon Musk, and a booming crypto market. Dogecoin showed how powerful online communities and social media can be in the financial world. Today, Dogecoin continues to capture attention. Its technology is similar to Litecoin, with fast transaction times and low fees. Some see potential in its widespread supply and active community. Others are cautious because of its origins as a joke and its inflationary supply. In the current market cycle, with cryptocurrencies facing volatility, Dogecoin's future is uncertain but intriguing. Compared to coins like Bitcoin and Ethereum, which have strong use cases and developer support, Dogecoin relies heavily on community sentiment. If social media interest remains high, Dogecoin could continue to perform well. Conclusion ETH, SOL, ADA, and DOGE are promising, yet XYZVerse (XYZ) stands out. It unites

sports fans in a memecoin, aiming for 20,000% growth and becoming a leading cultural icon. Investors are eagerly searching for digital assets that could deliver substantial returns in a matter of weeks. The cryptocurrency market is known for its rapid shifts, and certain altcoins are showing signs of significant upside potential. Spotting these promising tokens early is key for those aiming to enhance their portfolios and capitalize on emerging opportunities in this dynamic space. Among these contenders is XYZVerse (XYZ), a pioneering memecoin that unites sports fans across various disciplines, striving to surpass the remarkable gains achieved by previous standout tokens. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets. Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election – now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding – and your rewards will slam dunk through the roof! XYZ presale is your first-quarter chance to get in before the mind-blowing explosion! In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME's 5,000% rise or WIF's 1,000% rally – XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here – get in before the crowd storms the field, and you'll be sitting on way bigger returns! Sui (SUI) Sui is a revolutionary layer-1 blockchain platform poised to redefine how we interact with decentralized applications. By harnessing a novel object-centric data model and the secure Move programming language, Sui tackles the inefficiencies that burden current blockchain architectures. This innovative foundation not only enhances security and scalability but also empowers developers with a powerful platform to build cutting-edge applications suited for global adoption. What truly sets Sui apart is its unwavering commitment to user experience. With innovations like zkLogin, sponsored transactions, and programmable transaction blocks, Sui removes common barriers that have long hindered blockchain interactions. These features make applications more accessible and user-friendly, setting a new standard within the Web3 sphere. In a market ripe for solutions that blend robust technology with seamless usability, Sui stands out as an attractive contender. Its unique approach aligns with emerging trends that prioritize both scalability and accessibility, suggesting that Sui could play a significant role in the future of blockchain technology. Pepe (PEPE) PEPE is a deflationary memecoin launched on Ethereum. It's a tribute to Pepe the Frog, a popular internet meme created by Matt Furie in the early 2000s. Aiming to join the ranks of Shiba Inu and Dogecoin, PEPE keeps it simple with no taxes and no pretense of utility – embracing its memecoin nature. In late April to May 2023, PEPE's market cap soared to \$1.6 billion. Early holders became millionaires, and a strong community formed around the coin. This surge sparked a –memecoin season,– with many new meme-based cryptocurrencies experiencing wild price swings. PEPE's potential lies in its community and meme appeal. Its roadmap focuses on gaining listings on major exchanges and creating a –meme takeover.– Compared to other coins, PEPE stands out with its no-tax policy and straightforward approach. Polkadot (DOT) Imagine a world where different blockchains can talk to each other without barriers. That's the vision behind Polkadot and its cryptocurrency, DOT. Polkadot is a decentralized protocol that allows secure communication between blockchains like Ethereum and Bitcoin. It uses a unique technology called parachains to boost speed and scalability, processing transactions much faster than Bitcoin and Ethereum. Launched in 2020 by Gavin Wood, a co-founder of Ethereum, Polkadot aims to create a more interconnected and efficient blockchain ecosystem. DOT isn't just a token; it's a ticket to participate in Polkadot's governance and staking. Holders can help shape the network's future and validate transactions. In a market where scalability and interoperability are crucial, Polkadot stands out by addressing these challenges head-on. Compared to other cryptocurrencies, DOT offers a promising solution to the limitations of older blockchains. As the crypto market evolves, Polkadot's technology positions it as a strong contender. For those watching current trends, DOT's focus on connecting blockchains could make it an attractive option in the ongoing market cycle. Shiba Inu (SHIB) Shiba Inu (SHIB) began as a fun meme coin inspired by Dogecoin, but it's becoming more than a joke. Launched in August 2020 by the mysterious Ryoshi, SHIB runs on the Ethereum blockchain. This means it can connect with many apps and services on Ethereum. SHIB started with a huge supply of one quadrillion tokens. To build trust, half of these tokens were sent to Vitalik Buterin, a co-founder of Ethereum. Buterin donated a large amount to the India Covid Crypto Relief Fund and burned 40% of the total supply. These actions put SHIB in the spotlight and added to its credibility. Being on Ethereum sets SHIB apart from other meme coins. It allows for advanced features like ShibaSwap, where users can trade and earn with their tokens. Plans are in place for a platform for NFTs and a system where holders help make decisions. These developments give SHIB more uses in the crypto world. In today's market, SHIB looks promising, especially as interest in Ethereum-based projects grows. While the crypto market can be unpredictable, SHIB's active community and new features could make it an appealing choice for those seeking something different. Conclusion Though SUI, PEPE, DOT, and SHIB are promising, XYZVerse (XYZ) stands out with its unique sports-meme blend and aims for massive growth through community engagement. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. According to expert predictions, most of the new crypto billionaires are likely to emerge in the next sixteen months; the trade in cryptocurrencies is about to explode. The secret to exponential wealth increase may just be choosing the correct tokens to hang on to, even if the market is at its euphoric top. Six cryptocurrencies—including Rexas Finance (RXS)—that are expected to be fairly helpful in creating large-sized portfolios are listed below. Rexas Finance (RXS): Tokenization of assets Rexas Finance (RXS) keeps rising ceaselessly and arrives at the current stage 6 of the presale, where tokens are sold for \$0.08. Confirming its status as a game-changer at an amazing fifth stage, previous presale stages over \$8,600,000. Rexas Finance is focused on RWA tokenizing, which lets asset sections of valuable items—such as gold or real estate—be owned by several persons so increasing the number of investors in these high-value assets. The platform became somewhat well-known because of its CertiK-verified smart contracts. Coinmarketcap and CoinGecko have made the platform more visible, which attracts institutional as well as retail investors. Apart from that, the platform's million-dollar RXS giveaway offer is also facilitating fast community development since each of the twenty users qualified to get RXS tokens worth 50,000 dollars is benefiting. Given the successful presale plus the forthcoming listings on Tier 1 exchanges, RXS offers a great chance for expansion. Early investors could obtain up to 150 percent return on investment by the time the RXS launches from an expected listing price of \$0.20. Anyone looking to profit from the forthcoming tsunami of multi-million crypto investors will find Rexas Finance as a custodian of the RWA tokenizing revolution to be the ideal choice. Solana (SOL) Solana (SOL), sometimes known as the future Ethereum, is another fascinating rival with quick transaction rates and reasonable costs. Solana, which presently stands at \$213.09, is the greatest solution for d Apps and DeFi projects since it offers a great edge on scale thanks to its special consensus mechanism that makes use of proof of history. After FTX fell, Solana cautiously marked a strong return and today has almost \$100 billion market capitalization. Clearly, SOL will be a long-term holding and a sensible investment for those looking for consistent appreciation given the estimated price of about \$300 by 2025. Ripple (XRP) — Global Payments Revolution Leading the transformation in cross-border payments is XRP, whose goal is to outsell the SWIFT payment system using a blockchain equivalent. With a market cap value of \$47 billion, Ripple presently retails at \$0.8261 despite constant SEC battles. Analysts expect an enormous comeback as witnessed in past patterns when such regulatory clarity is discovered; predictions for 2024 will be about \$3.10. It will be a necessary tool in the next bull run since it has become crucial in enabling international payments. Cardano (ADA) — Customized smart contracts for several applications. Cardano (ADA) can improve security while also improving grading performance mostly thanks to its two-layer design. Cardano's environmental issues drew a lot of investors, which explains the ADA trading around \$0.5826 proof-of-stake. Although ADA's price swings soon may stay boring, experts expect an enormous \$3.50 objective by 2025, which investors shouldn't be astonished by especially considering the new potential Alonzo upgrading driving the Cardano ecosystem. Cardano's practical and scientific outlook will guarantee its competitiveness in this very competitive market of ours. Shiba Inu (SHIB), Meme King Shiba Inu replaced Dogecoin as the current meme coin only to penetrate various markets including building its own blockchain, Shibarium, and funding other DeFi projects. Some of Shiba Inu's primary selling propositions are its cheap offers and more loyal fan aggregate valued at \$0.000010. With Shiba Inu defining its long-term goal for enhanced usefulness and acceptability reaching prices of \$0.0001 in the next bull run, expectations for Shiba Inu projection are strong. Targeting Shiba Inus is therefore a wise possibility on some level since it would be a high-risk high-reward venture. Ethereum (ETH) It is still a fundamental component of any investment portfolio since most of the advancements and innovations are being carried out in the blockchain resource Ethereum in which ETH is a vital component. ETH's value rose to over 2000 and demand grew mostly owing to its lowered power usage with the release of its new version and its change from proof of work to proof of stake. Analysts estimate that Ethereum will be valued at at least \$5000 by 2025; so, it is a valuable asset in any investment portfolio because of its dominance on NFTs, DeFi projects, and Smart contracts. Conclusion Though at a level of maximum fervor in the Bitcoin market, the next generation of billionaires will also be strategic with an eye toward highly promising sprouting tokens. From Rexas Finance, Scalability of Solana, and Transformational Riple, new RWA ideas from all provide special chances for development. By carefully diversifying across several assets, investors can themselves get ready for amazing profits as the market approaches its future height. Many investors are on the hunt for cryptocurrencies that could deliver substantial returns rapidly. The dynamic world of altcoins presents opportunities for significant portfolio growth for those who can identify tokens with explosive potential. Uncovering these hidden gems could be the key to multiplying investments in a short span. One such promising token is XYZVerse (XYZ), a pioneering memecoin that merges meme culture with sports enthusiasm, uniting fans across various disciplines within its unique ecosystem. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election — now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding — and your rewards will slam dunk through the roof! XYZ presale is your first-quarter chance to get in before the mind-blowing

explosion! In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME's 5,000% rise or WIF's 1,000% rally – XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here – get in before the crowd storms the field, and you'll be sitting on way bigger returns! Sui (SUI) Sui is a revolutionary layer-1 blockchain platform poised to redefine how we interact with decentralized applications. By harnessing a novel object-centric data model and the secure Move programming language, Sui tackles the inefficiencies that burden current blockchain architectures. This innovative foundation not only enhances security and scalability but also empowers developers with a powerful platform to build cutting-edge applications suited for global adoption. What truly sets Sui apart is its unwavering commitment to user experience. With innovations like zkLogin, sponsored transactions, and programmable transaction blocks, Sui removes common barriers that have long hindered blockchain interactions. These features make applications more accessible and user-friendly, setting a new standard within the Web3 sphere. In a market ripe for solutions that blend robust technology with seamless usability, Sui stands out as an attractive contender. Its unique approach aligns with emerging trends that prioritize both scalability and accessibility, suggesting that Sui could play a significant role in the future of blockchain technology. Pepe (PEPE) PEPE is a deflationary memecoin launched on Ethereum. It's a tribute to Pepe the Frog, a popular internet meme created by Matt Furie in the early 2000s. Aiming to join the ranks of Shiba Inu and Dogecoin, PEPE keeps it simple with no taxes and no pretense of utility – embracing its memecoin nature. In late April to May 2023, PEPE's market cap soared to \$1.6 billion. Early holders became millionaires, and a strong community formed around the coin. This surge sparked a "memecoin season," with many new meme-based cryptocurrencies experiencing wild price swings. PEPE's potential lies in its community and meme appeal. Its roadmap focuses on gaining listings on major exchanges and creating a "meme takeover." Compared to other coins, PEPE stands out with its no-tax policy and straightforward approach. Polkadot (DOT) Imagine a world where different blockchains can talk to each other without barriers. That's the vision behind Polkadot and its cryptocurrency, DOT. Polkadot is a decentralized protocol that allows secure communication between blockchains like Ethereum and Bitcoin. It uses a unique technology called parachains to boost speed and scalability, processing transactions much faster than Bitcoin and Ethereum. Launched in 2020 by Gavin Wood, a co-founder of Ethereum, Polkadot aims to create a more interconnected and efficient blockchain ecosystem. DOT isn't just a token; it's a ticket to participate in Polkadot's governance and staking. Holders can help shape the network's future and validate transactions. In a market where scalability and interoperability are crucial, Polkadot stands out by addressing these challenges head-on. Compared to other cryptocurrencies, DOT offers a promising solution to the limitations of older blockchains. As the crypto market evolves, Polkadot's technology positions it as a strong contender. For those watching current trends, DOT's focus on connecting blockchains could make it an attractive option in the ongoing market cycle. Shiba Inu (SHIB) Shiba Inu (SHIB) began as a fun meme coin inspired by Dogecoin, but it's becoming more than a joke. Launched in August 2020 by the mysterious Ryoshi, SHIB runs on the Ethereum blockchain. This means it can connect with many apps and services on Ethereum. SHIB started with a huge supply of one quadrillion tokens. To build trust, half of these tokens were sent to Vitalik Buterin, a co-founder of Ethereum. Buterin donated a large amount to the India Covid Crypto Relief Fund and burned 40% of the total supply. These actions put SHIB in the spotlight and added to its credibility. Being on Ethereum sets SHIB apart from other meme coins. It allows for advanced features like ShibaSwap, where users can trade and earn with their tokens. Plans are in place for a platform for NFTs and a system where holders help make decisions. These developments give SHIB more uses in the crypto world. In today's market, SHIB looks promising, especially as interest in Ethereum-based projects grows. While the crypto market can be unpredictable, SHIB's active community and new features could make it an appealing choice for those seeking something different. Conclusion SUI, PEPE, DOT, and SHIB offer promising growth, but XYZVerse (XYZ) unites sports fans and meme culture, aiming for 20,000% gains – a standout for early adopters. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency market heats up, analysts are forecasting significant surges for leading digital assets. Ethereum is predicted to reach new heights, potentially crossing the \$6,000 threshold. Dogecoin, the popular meme-inspired coin, might climb to \$2. Amid these projections, a new contender in the crypto space is drawing attention, promising impressive growth and capturing the interest of investors eager for substantial returns. XYZVerse (XYZ), the first all-sport memecoin, unites fans from football to esports in a unique ecosystem, aiming to outperform previous successes with community-driven momentum. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition – "bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. Own the field, earn while the crowd plays – XYZ is more than just a benchwarmer in the meme coin game; it's creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarket's massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting

its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. **Missed meme coin supercycle?** By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOME's 5,000% takeoff and WIF's 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot – currently undervalued, XYZ is going the distance to break new records! **Rallying the community**, securing the win **XYZVerse** will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem's direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. The XYZ presale is live – don't miss out on this knockout 99,900% opportunity! Ethereum (ETH) Ethereum (ETH) has had a mixed performance recently. In the past week, its price slipped by almost 1%. However, over the past month, it climbed by over 19%. Looking back six months, the price is down by about 15%. Currently, Ethereum's price ranges between \$2,612.72 and \$3,504.77. The closest resistance level is at \$3,824. If it breaks through this level, the next target could be \$4,716. On the downside, the nearest support is at \$2,040. If the price drops below this, the next support is at \$1,147.51. If Dogecoin breaks through the resistance level of \$0.39, it could aim for the second resistance level at \$0.5425. This would be an increase of about 64% from the current price. However, if it falls below the support level of \$0.0904, the price could drop significantly. The Simple Moving Averages for 10 and 100 days are \$0.36 and \$0.37, respectively, suggesting that the price is slightly below these averages. The MACD level is -0.0015, indicating a potential for upward momentum. Dogecoin (DOGE) Over the past week, Dogecoin's price surged by 65.22%. In the last month, it jumped by 178.84%. Looking back six months, the increase is 119.56%. These figures show significant growth in a short time. Based on this data, the trend suggests that Dogecoin might continue to rise. The current price range is between \$0.18 and \$0.33. The nearest resistance level is at \$0.39, and the nearest support level is at \$0.0904. The Relative Strength Index is at 49.29, which is close to neutral, indicating the market is not overbought or oversold. If Dogecoin breaks through the resistance level of \$0.39, it could aim for the second resistance level at \$0.5425. This would be an increase of about 64% from the current price. However, if it falls below the support level of \$0.0904, the price could drop significantly. The Simple Moving Averages for 10 and 100 days are \$0.36 and \$0.37, respectively, suggesting that the price is slightly below these averages. The MACD level is -0.0015, indicating a potential for upward momentum. **Conclusion** While ETH and DOGE are set for growth, XYZVerse (XYZ) emerges as a pioneering sports memecoin aiming for a 20,000% surge by uniting fans in a dynamic ecosystem. You can find more information about XYZVersus (XYZ) here: **Disclaimer:** TheNewsCrypto does not endorse any content on this page. The crypto space has been going through a massive pullback, but it is clear that the currency market is preparing for an important bull run. Among the promising coins, **Rexas Finance ((RXS)**, Solana (SOL), Aptos (APT), Litecoin (LTC), and Chainlink (LINK) are likely to do exceptionally well in the next 4 months. **Rexas Finance (RXS): Changing the Tokenization of Assets** Rexas Finance is one of the companies spearheading the tokenization of real-world assets, allowing investors to buy fractions of shares from expensive assets such as property, fine art, and various copyrights. RXS, contrary to many speculative tokens, rides on strong utility and innovative aspects. During presale, RXS surpassed its target of \$8.6 million, with sales of 155 million tokens being completed. From \$0.03 in Stage 1 of the token sale, the price rose to \$0.08, while initial exchange rates for the coin are expected to reach \$0.20. In addition, the token of Rexas has already been listed on CoinMarketCap and CoinGecko, which has increased interest in the project. The tools served by the RXS ecosystem, such as the Rexas Token Builder, AI integration, and DeFi, provide a comprehensive package for investors. Also, the pause due to the \$1 million giveaway campaign allows the community to have strong ties, making RXS a force to be reckoned with in the market. Predicted at \$15 within a few years, RXS is something that every investor should buy if they want to enjoy the bull run. **Solana (SOL): Blockchain With the Biggest Potential** Solana has also emerged as a rival in the blockchain world with its impressive updates of low fees and high transaction rates. Today, its price is \$212.49, with a market capitalization of more than one hundred billion. The ecosystem supports thousands of dApps and has become the hub for numerous NFT projects. Solana can now reach a new price peak of \$260 in the next bull cycle due to its increasing use on the DeFi and NFT platforms. In portfolios, the Transactions Per Second of Solana stands at 65,000, which has made it a darling among developers and investors. **Aptos (APT): The Layer-1 Blockchain Revolution** Aptos is gaining quite the attention for its consensus mechanism and scalability coined as the "Solana killer." Currently, with a price tag of \$12.04 and a market capitalization of \$6.4 billion, Aptos has great prospects for exponential growth. The emphasis is on building the Aptos blockchain for the end-user experience with integrated developer tools for quick market penetration. With over a dozen partnerships and even more dApps in the making, there is a simple bullish narrative forming for Aptos to take advantage of the coming bull run. It would not be surprising if the APT token goes past \$20 in the next few months. **Litecoin (LTC): Litecoin More Stable Cryptocurrencies** Litecoin has always been seen as a more stable cryptocurrency and the recent activities only seem to complete the picture. Litecoin's current price is sitting at a whopping \$83.80, and it lets users enjoy low transaction fees and quick transaction times, which makes it more practical for people in everyday situations. The estimated Litecoin halving event in 2025 could result in plenty of price movement when the supply decreases. And given its past history and current rate of adoption, Litecoin will make a good addition to any portfolio in this bull run. **Chainlink (LINK): Enabling Smart Contracts to Start** Chainlink emphasizes economic stability in a decentralized manner by

solving the questions of data integration into a smart contract. As of now, LINK is being sold at a \$13.47 price point with a market cap of about \$8.4 billion. In the future, LINK will be a vital link in the expansion process of decentralized financial services. The Chainlink staking feature is expected to become life soon, and continued partnership with leading players in the blockchain ecosystem should create a lot of interest in LINK. Some analysts believe this increase in popularity in the DeFi sector means a price jump for LINK is due, putting it between \$25-\$30. Conclusion: REX is the Most Promising One Even though each of these coins has its respective advantages, REX Finance (REX) shines the brightest due to its revolutionary concept of tokenizing real-life assets! Given the clear development strategy, community relations, and successful performance during the presale stages, REX Token has every chance to become the market leader in the next bull run. Investors wanting to ride the bull wave will find these five coinsâ€”REX, Solana, Aptos, Litecoin, and Chainlinkâ€”provide a well-balanced mix of speculation and utility across the investor base. This trend will only get stronger as the bull cycle deepens. For more information about REX Finance (REX) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. With the crypto market being hyped up post US-election resulting in gains such as those of Dogecoin (DOGE) and Near Protocol (NEAR), market makers are strategically moving their profits to a new opportunity: DTX Exchange (DTX). Although DOGE is still one of the top meme coins and NEAR is gaining momentum as a Layer-1 blockchain, both have seen an increase in market activity. Thus investors are turning their eyes to DTX Exchange which promises a mind boggling 9,700% return after launch. Dogecoin (DOGE): Profit-Taking After an Explosive Rally The memecoin powerhouse Dogecoin has been riding high in the past few weeks, and while the monthly price is showing an over 190% increase, itâ€™s still down from 2021 highs. Currently trading at \$0.37, its tempo may be slowing down. With level capped gains, market participants are cashing out and focusing on projects with even higher upside potential and real world utility. The skyrocketing price tag of DOGE demonstrates the continued need for low cost, engagement heavy cryptocurrencies. Yet today, its value implies that much of the high upside potential that was seen in earlier phases may be hard to repeat in the coming times. Near Protocol (NEAR): A Layer-1 Leader Fuels Market Rotation Meanwhile Near Protocol, a Layer 1 blockchain which is well known for its scalability and ease of development, also saw a strong rally with prices trading around \$5.45. NEAR is a DeFi and Web3 hub which captivates investors because it provides a user-friendly blockchain experience, quick transactions and an active developer community. But as always, profit rotation is beginning to crop up and Near Protocol is losing its investorâ€™s interest. NEAR doesnâ€™t have a lot of room for upside in the short term, but does have solid fundamentals, both retail and market makers have moved their focus to other assets with massive growth potential in the coming period. DTX Exchange (DTX): The Future of Trading Poised for a 9,700% Surge DTX Exchange offers a hybrid platform that combines the elements of a centralized (CEX) and decentralized (DEX) exchanges. Built on a proprietary Layer-1 blockchain, DTX allows access to over 120,000 asset classes ranging from stocks, bonds, commodities as well as cryptocurrencies for the users. Its VulcanX blockchain also provides non custodial storage solutions and is attractive to a user who wants to have robust security while also having access to a broad range of assets. DTX exchangeâ€™s projected 9,700% increase is backed by its incredible presale. Since its launch, the platform has had a significant amount of funding raised, surpassing \$7.8 million in funds already raised. With its token priced at a very attractive \$0.10 in the 5th round, its value is excellent given the imminent Tier-1 exchange listing plus. Conclusion DTX Exchange is poised for a bright future ahead. With an accessible entry price, strong fundamentals, and a growing demand for innovative trading solutions, DTX is incentivizing investors to rotate funds from popular coins like DOGE and NEAR. If the projections hold true, DTX could emerge as one of this yearâ€™s top crypto investments by transforming trading and connecting the DeFi and TradFi ecosystems. If you use the promo code SELLSTAGE, you will get an extra 100% on your deposit! Disclaimer: TheNewsCrypto does not endorse any content on this page. Investors are keen to identify digital assets that could deliver substantial returns in the coming years. Amidst market fluctuations, several cryptocurrencies have emerged with the potential to reshape the industry. One of these could mirror the extraordinary rise of previous standout tokens, capturing the attention of the crypto world. One promising candidate is XYZVerse (XYZ), a pioneering memecoin uniting sports enthusiasts, aiming for a massive surge that could outshine previous high-performing tokens. The All-Sports Meme Token You Canâ€™t Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election â€” now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding â€” and your rewards will slam dunk through the roof! XYZ presale is your first-quarter chance to get in before the mind-blowing explosion! In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOMEâ€™s 5,000% rise or WIFâ€™s 1,000% rally â€” XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here â€” get in before the crowd storms the field, and youâ€™ll be sitting on

way bigger returns! Degen (DEGEN) DEGEN started as a playful token for fans of Farcaster, a decentralized social network. It's an unofficial coin that operates on the Base blockchain. What began as a simple reward in the Farcaster Degen channel has grown into something much bigger. DEGEN has attracted developers, cryptocurrency creators, and a loyal group of supporters. Its popularity has soared, especially since other meme coins have joined the Base blockchain too. What's exciting about DEGEN is how it's being shared. They plan to distribute 70% of all DEGEN tokens through future giveaways called airdrops. This keeps the community engaged and spreads the word. DEGEN's growth shows how a meme coin can rally a community and gain value. In the current market, where community-driven coins are making waves, DEGEN stands out. Its connection to Farcaster and the Base blockchain gives it solid footing. For those looking at new opportunities in crypto, DEGEN might be an attractive option.

Moo Deng (MOODENG) MOODENG is a fresh Binance meme coin quickly gaining attention in the crypto community. With its price surging toward a new all-time high, the opportunity to accumulate MOODENG is fleeting, making it a prime target for investors seeking rapid gains. Like MOG, this token is capitalizing on the current meme coin frenzy, but its unique charm sets it apart. Inspired by a beloved Thai baby hippo, Moo Deng embodies the playful spirit of internet culture. Its quirky origin story resonates with both crypto natives and mainstream audiences, blending humor and relatability to attract a diverse community. MOODENG is more than a token; it's a cultural phenomenon poised to make waves in the meme coin landscape.

Pepe (PEPE) Meet PEPE, the deflationary memecoin taking the crypto world by storm. Launched on Ethereum, PEPE pays homage to Matt Furie's iconic Pepe the Frog meme that captivated the internet in the early 2000s. Embracing the playful spirit of meme culture, PEPE joins the ranks of Dogecoin and Shiba Inu, aiming to become a top meme-based cryptocurrency. With a no-tax policy and a candid admission of its lack of utility, PEPE keeps things straightforward, appealing to those who appreciate a pure and simple memecoin experience. In late April to May 2023, PEPE's market cap skyrocketed to an astonishing \$1.6 billion, transforming early holders into millionaires and drawing a vibrant community of enthusiasts. This explosive growth ignited what many dub the "memecoin season," with new meme-inspired tokens experiencing dramatic rises and falls overnight. As the crypto community looks forward to the upcoming Bitcoin halving and speculates about a potential bull run, PEPE's ambitious roadmap featuring major exchange listings and a planned "meme takeover" has placed it in the spotlight. While the future is uncertain, PEPE's journey captures the unpredictable and exhilarating nature of the cryptocurrency market, making it a fascinating phenomenon to watch in the current cycle.

First Neuro On Ethereum (NEIRO) There's a new Shiba Inu capturing hearts around the world, and her name is Neuro. Adopted by the same woman who owned Kabosu—the famous dog behind the Doge meme—Neiro is the latest furry sensation. To honor this adorable pup, a community has come together to launch the Neuro token on the Ethereum blockchain. This isn't just another coin; it's a project owned and managed with love by its supporters. The Neuro token embodies the spirit of joy and togetherness that Kabosu inspired, bringing people together in a shared adventure. In today's crypto market, meme coins continue to draw interest, and the Neuro token shines among them. Being the first of its kind on Ethereum, it blends the charm of Neuro with the power of blockchain technology. Unlike projects with centralized control, Neuro is 100% community-owned, which can lead to strong engagement and organic growth. As people look for fresh and exciting opportunities beyond well-known coins like Dogecoin and Shiba Inu, Neuro offers something new. With the crypto world always on the lookout for the next big thing, Neuro might just be the rising star everyone is waiting to discover.

Conclusion DEGEN, MOODENG, PEPE, and NEIRO are promising, but XYZVerse (XYZ) uniquely fuses memes and sports, aiming for 20,000% growth to become the "G.O.A.T of memecoins". You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin's price has factored in an increase of 4.25% over the last 24 hours. - The cryptocurrency's daily trading volume has dipped by 14.11% as per CMC data. As the crypto market enters the weekend slumber, Bitcoin has decided to stay upbeat. The cryptocurrency changed gears to alter its course in the bull run after the modest drop. In reflection, the overall market shows a 3.71% increase in market cap. Meanwhile, the crypto regulatory space has shown some activity in the past 24 hours. Other altcoins, such as Ethereum and Solana, have also surged following Bitcoin's bull run. The largest cryptocurrency has factored in a price increase of 4.25% over the past day. This has resulted in it once again testing the \$91K level after several attempts to break it in previous cycles. In the Asian morning hours of November 15, Bitcoin traded at a low of \$87,350 as prices dipped on Friday. However, following this, the cryptocurrency made a quick recovery to current levels. Additionally, the digital asset hit an intra-day high of \$91,709. At the time of writing, BTC was trading at \$91,356 as per CMC data. Meanwhile, several dormant BTC wallets have begun to show activity as the bull run accelerates. Recently, one particular Bitcoin miner who had remained inactive for nearly 14 years sold 2000 BTC in the past day as per Lookonchain reports. Additionally, several governmental institutions such as Pennsylvania have also expressed interest in Bitcoin reserves. Will Bitcoin Stay Above the \$90K Mark This Time? Inferring Bitcoin's price chart, reveals optimistic indications. For instance, the Chaikin Money Flow (CMF)'s value recedes at 0.28. This highlights the increased incoming money flow into the asset that can be observed in the market. Additionally, BTC's bull power indicator value stands at 1.54 while its bear power indicator value stands at 0.46 below zero. These indicators suggest an existing positive environment in the market and thus indicate that Bitcoin could potentially maintain price stability above the \$90,000 level. In such a case, the digital asset can face resistance at \$92,026 as current prices suggest breaking resistance at \$90,916. Finally, adding to the positive note, the memecoin sector has also shown significant price surges. Top memes such as DOGE and PEPE have reached new trading levels.

As the cryptocurrency market braces for its next surge, eyes are on familiar names like XRP, Dogecoin, Shiba Inu, and Cardano. Enthusiasts are questioning whether these established tokens will deliver significant returns or if a new contender will steal the limelight. The dynamics of the crypto sphere are shifting, and surprises may be on the horizon. XYZVerse, an all-sport memecoin blending sports passion with meme culture, is aiming for extraordinary growth. Positioned to become a cultural icon, it could redefine success in both the crypto and sports communities. Dominate the Field with XYZ: The Next Meme Coin Champion! The game is on, and XYZ is leading the charge in the meme coin arena! This sensational all-sports meme token has hit the market with unstoppable momentum, knocking out weak competitors and scammy cryptos. As it charges ahead, XYZ is set to deliver jaw-dropping gains, leaving the likes of BOME and WIF far behind. With eyes on a staggering 99,900% growth, XYZ is ready to claim the meme coin crown in the next crypto bull marathon! ðŸ’ Rule the game, cash in as the bets roll in ðŸ’ XYZ is the star player in XYZVerse â€” the ultimate fusion of sports thrill and meme culture. This community-centered ecosystem is the perfect playground for crypto degens and sports fans alike, offering everything from entertainment apps to prediction markets. Think back to Polymarket’s \$1 billion trading volume during the US elections betting frenzy, and now, picture that on steroids with XYZVerse. With millions of sport bettors getting ready to jump in the action, opportunities for early investors in XYZ are really huge! XYZ is currently undervalued, and with major listings on the way, presale participants stand to secure life-changing gains. >>>Donâ€™t miss your shot at being part of the XYZ winning team!<<< XRP (XRP) XRP has shown significant growth recently. In the past week, its price jumped by over 43%. Over the last month, it increased by nearly 42%. In the past six months, the coin’s value climbed by about 48%. This surge has caught the attention of investors and analysts alike. Currently, XRP is trading between \$0.52 and \$0.64. The nearest resistance level is at \$0.69. If the price breaks above this point, it could aim for the next resistance at \$0.81. On the downside, the nearest support level is at \$0.44, with a secondary support at \$0.3221. These levels are crucial for traders watching for potential entry and exit points. Technical indicators suggest strong momentum. The Relative Strength Index (RSI) is at 72.85, indicating the coin is overbought. The Stochastic indicator, at 84.55, supports this view. The 10-day simple moving average is \$0.73, higher than the current price range. This could mean XRP has room to rise, possibly gaining another 10% to reach the next resistance level. However, if it fails to break through, the price might fall back toward the support levels. Dogecoin (DOGE) Dogecoin (DOGE) has experienced remarkable price movements recently. In the past week, its price surged by 99.13%. Over the last month, it climbed an impressive 234.78%. Looking back six months, DOGE’s price increased by 152.05%. These significant gains highlight a strong upward trend for the cryptocurrency. Based on this data, there is potential for the price to continue rising. The current price range is between \$0.18 and \$0.33. The Relative Strength Index (RSI) stands at 50.10, indicating a neutral market sentiment. The 10-day Simple Moving Average is \$0.39, which is above the current price range, suggesting upward momentum. Dogecoin’s nearest resistance level is at \$0.39. If the price breaks through this point, it could reach the second resistance level of \$0.5425, representing a potential increase of over 60%. The nearest support level is at \$0.0904. Should the price decline to this level, it would be a decrease of around 45%. The MACD level of 0.0012 and Stochastic at 45.90 indicate moderate bullish momentum. Considering these factors, DOGE shows potential for further growth in the near term. Shiba Inu (SHIB) Shiba Inu (SHIB) has experienced notable price movements recently. In the past week, its price increased by 31.10%. Over the last month, it went up by 33.83%. However, over the past six months, the change was minimal at 0.08%. This shows that SHIB has had significant short-term growth while remaining relatively stable in the longer term. Currently, SHIB’s price ranges between \$0.00001894 and \$0.00003064. The nearest resistance level is at \$0.00003521, and the nearest support level is at \$0.00001181. Its 10-day simple moving average is \$0.00002530, and the 100-day average is \$0.00002609. The Relative Strength Index (RSI) is 45.81, indicating neutral momentum. The stochastic oscillator is at 31.69, and the MACD level stands at -0.00000017391. These indicators suggest that SHIB’s price could move towards the resistance level if the upward trend continues. Reaching the nearest resistance would mean an increase of around 15% from the current high. On the other hand, if the price dips, it might approach the support level, which would be a drop of about 37% from the current low. Monitoring these levels can provide insight into SHIB’s potential price movements. Cardano (ADA) Cardano (ADA) has experienced significant price gains recently. In the past week, its price surged by 53.02%, and over the past month, it increased by 52.60%. Over six months, the price grew by 15.56%. The current price ranges between \$0.39 and \$0.73, indicating strong short-term momentum. Technical indicators give a mixed signal. The Relative Strength Index is at 43.71, suggesting a neutral position. The stochastic value is 29.70, nearing oversold territory. The MACD level is negative at -0.00418, hinting at possible bearish momentum. The 10-day and 100-day Simple Moving Averages are \$0.56 and \$0.58 respectively, with the price hovering around these levels. ADA faces a nearest resistance at \$0.86. Breaking this could lead to testing the second resistance at \$1, representing a potential rise of about 37% from the current price. The nearest support is at \$0.18, which is approximately 54% below the lower end of the current range. The coin’s recent performance shows potential for growth, but surpassing resistance levels will be crucial for continued upward movement. Conclusion XRP, DOGE, SHIB, and ADA are solid picks, but XYZVerse (XYZ) stands out by merging sports and memes, aiming for 20,000% growth and community-driven success. In the fast-paced world of cryptocurrency, where rapid growth and innovation continually redefine the landscape, Rexas Finance is emerging as a promising alternative to XRP, poised for a remarkable rally. Analysts and investors alike are eyeing this new digital asset with optimism, predicting a potential surge of up to 16,700% in just three months. Rexas Finance, designed with enhanced speed, low transaction fees, and robust security features, appeals to a diverse audience, from institutional investors to individual traders. As blockchain adoption accelerates globally, Rexas Finance's unique advantages could position it as a leader in next-gen financial technology. XRP: Steady Growth Amid Legal Challenges and Market Shifts Ripple's XRP is a digital asset designed for use in cross-border payment systems, aiming to provide faster and more cost-effective transactions than traditional methods. Operating on the open-source, decentralized XRP Ledger, it facilitates liquidity between currencies without needing a pre-funded nostro account. This positions XRP as an appealing solution for financial institutions looking to streamline international transfers and reduce operational costs. The asset has faced legal scrutiny, particularly with the U.S. Securities and Exchange Commission (SEC), leading to debates over its classification as a security or commodity. Despite legal hurdles, XRP remains a significant player in the crypto market, known for its real-time settlement capabilities and a strong global user base advocating for seamless financial transactions across borders. XRP is trading at \$0.5516, marking a 0.34% daily increase. Its market cap is \$31.37 billion, with a 24-hour trading volume of \$1.36 billion, down 29.47%. Over the past seven days, XRP's price has risen by 6.37%, showing resilience and positive momentum. The last month saw a 4.87% increase, indicating steady growth. Despite reduced trading volume, XRP's consistent weekly and monthly gains highlight solid investor interest and market stability. Rexas Finance: The Next Big Asset Tokenization Opportunity Rexas Finance (RXS) is positioning itself as a key player in the integration of traditional asset markets with blockchain technology through tokenization. This model allows physical assets like real estate and precious metals to be digitized, making them more accessible to a wider audience. By offering investment opportunities in profitable assets typically reserved for wealthy individuals, RXS stands out as a token with real-world utility beyond mere speculation. With features like the Rexas Token Builder for asset tokenization, the Rexas Launchpad for blockchain crowdfunding, and a property investment module, Rexas has built an ecosystem supporting its growth. This unique

utility positions RXS as a promising long-term investment with the potential for substantial returns. The projected growth of RXS is substantial, with analysts predicting a staggering 16,700% return by 2025, potentially turning a \$100 investment into \$1,670,000. The platform's momentum is driven by its innovative approach and real-world applications, attracting investor interest through multiple successful presale rounds that raised \$6 million. The extended presale period and increased token price have enhanced its value, setting up RXS for a robust public launch. Coupled with a \$1 million community giveaway, Rexas Finance has cemented a strong foundation, ensuring that its asset tokenization services remain a lucrative avenue in the evolving blockchain landscape. Conclusion: In conclusion, Rexas Finance and XRP each present unique opportunities in the dynamic crypto market. XRP continues to showcase resilience and growth despite regulatory challenges, appealing to institutions seeking efficient cross-border payments. Meanwhile, Rexas Finance is emerging as a high-potential alternative with a focus on asset tokenization and broad investment accessibility. The predicted 16,700% growth positions it as a noteworthy contender, backed by innovative features, presale success, and tangible utility. As blockchain adoption widens, investors are poised to benefit from both established and emerging technologies. Ultimately, whether through XRP's proven financial network or Rexas Finance's pioneering asset model, opportunities for significant returns remain strong. - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The Fed has announced a slower rate cut cycle due to recent economic growth. - This has raised speculations on the possible impacts that could be expected in the crypto market. The Asian side of the world woke up to the crypto market's slight dip in prices. However, on a positive note, prices have steadied their position in the bull run after recent rallies. This clears the path for more progressive growth in the coming days. Meanwhile, turning eyes to major propellants of the bull market, the USA gave a new update a few hours ago. The country's leading economic regulator, Federal Reserve chair Jerome Powell, discussed the economy and inflation recently. During his speech, Powell stated that the US economy has shown growth along with a solid job market, and thus, interest rate cuts can be slowed down. On Thursday, in Dallas, the Fed Chair stated that the USA's inflation rate had remained below 2%. These positive improvements suggest that we could proceed more carefully with interest rate cuts given the strong economy, said Jerome Powell. The Fed recently in the beginning of November, made its third interest rate cut. Furthermore, on reverting to the crypto market, the previous rate cuts resulted in upward price movements. Additionally, the November rate cut was one of the contributing factors to the Moonvember bull rally. Thus the recent announcement has raised speculations on how its impact would be in the crypto market. How Will the Crypto Market Receive Fed's Rate Cut Pause? Assuming from historical data, Fed interest rate cuts have resulted in positive impacts on cryptocurrency prices. However, there have also been cases when it didn't have any effects on the crypto market. Despite that, a continuous rate-cut cycle could be expected to propel prices further when combined with current bullish trends. Subsequently, a slower Fed rate cut cycle would mean the absence or a delay in a positive contributing factor. Leading cryptocurrencies would require to prolong the bullish trend without one additional propellant. Relatedly, a recent announcement revealed that several US states have filed complaints against the SEC headed by Chair Gary Gensler. On the other hand, the current crypto market, despite the aforementioned price dip, still remains within the limits of the bull run. Altcoins such as Ethereum and DOGE have continued to hold market attention with their price activity.

Meme-inspired cryptocurrencies are making waves as they reach for new price heights. Established tokens with playful origins are eyeing significant milestones, capturing the attention of investors and enthusiasts alike. The crypto market is abuzz with anticipation over which digital assets will lead the next surge. Amid this excitement, XYZVerse emerges as the first all-sport memecoin, uniting fans across various sports and aiming for remarkable growth. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election " now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding " and your rewards will slam dunk through the roof! >>>XYZ presale is your first-quarter chance to get in before the mind-blowing explosion!<<< In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME's 5,000% rise or WIF's 1,000% rally " XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here " get in before the crowd storms the field, and you'll be sitting on way bigger returns! Dogecoin (DOGE) Dogecoin has surged dramatically in recent times. Over the past week, its price jumped by 142.33%. In the last month, it climbed 270.35%, and over six months, it rose 175.71%. This significant growth has caught the eye of many investors. Currently priced between \$0.18 and \$0.33, Dogecoin is nearing its nearest resistance level at \$0.39, aligning with its 10-day simple moving average. If it breaks through this point, the next resistance is at \$0.54. The nearest support level lies at \$0.0904, providing a cushion if prices fall. Technical indicators show mixed signals. The 10-day and 100-day simple moving averages are close, at \$0.000025241 and \$0.0000250482 respectively, suggesting stability. The Relative Strength Index (RSI) is at 56.23, indicating a neutral market. The Stochastic value of 77.66 suggests that SHIB is nearing overbought territory. Meanwhile, the MACD level is slightly negative at -0.00000001078. These factors could influence SHIB's price movement in

the coming days. Shiba Inu (SHIB) Shiba Inu (SHIB) has experienced a notable surge in its price recently. Over the past week, its value increased by 48.57%. In the last month, SHIB climbed by 50.42%. Even over six months, it saw an 8.10% rise. These numbers highlight a strong upward trend for this cryptocurrency. The current price range of SHIB is between \$0.0000189467 and \$0.0000306467. It is approaching its nearest resistance level at \$0.0000352133. If it surpasses this point, the next target could be around \$0.0000469133. On the downside, the nearest support level is at \$0.0000118133, providing a safety net for potential price drops. Technical indicators show mixed signals. The 10-day and 100-day simple moving averages are close, at \$0.000025241 and \$0.0000250482 respectively, suggesting stability. The Relative Strength Index (RSI) is at 56.23, indicating a neutral market. The Stochastic value of 77.66 suggests that SHIB is nearing overbought territory. Meanwhile, the MACD level is slightly negative at -0.00000001078. These factors could influence SHIB's price movement in the coming days. Conclusion While DOGE and SHIB strive for new milestones in the 2024 bull run, XYZVerse (XYZ) leads with its sports memecoin, targeting immense growth and community-driven success. - Peanut the Squirrel (PNUT) saw a 40% increase and hit an all-time high at \$2.47. - Since its launch in early November, PNUT has skyrocketed by over 3480%, reflecting its rapid rise in value and popularity. The global crypto market is buzzing with the rapid rise of a new memecoin, Peanut the Squirrel (PNUT), which has surged by more than 490.70% in a single day. Today, the Solana-based memecoin PNUT reached a new all-time high of \$2.47 from a low of \$0.4181, which was recorded on Nov 13. This dramatic rise has pushed its market cap to \$1.88 billion, overtaking Popcat (SOL) and Brett (Based) to secure the 56th spot in the crypto rankings. Further, the 24-hour trading volume for PNUT skyrocketed to \$5.16 billion, an increase of over 85%. While the broader crypto market is experiencing a bull run fueled by the Donald Trump victory and Bitcoin's \$93K entry, PNUT's story is one to watch. But what's behind this sudden rise? The story begins with a viral tweet from Elon Musk, who posted that, "America was saved by a squirrel and a meme coin." His endorsement quickly caught fire, sparking massive interest in the token. Musk's involvement with memecoins is no secret, as his tweets have previously fueled the growth of tokens like Dogecoin (DOGE). PNUT also owes its rapid rise to a unique backstory. The coin was created in response to an incident where New York officials euthanized a pet squirrel named Peanut. The heartbreaking story sparked outrage, and figures like Musk voiced their dismay, generating a wave of support for the token. PNUT Memecoin Holds Strong Above \$1.8 After 40% Surge Things took a further turn for the better when Binance listed PNUT, boosting its legitimacy. With this milestone, it now ranks as the third-largest Solana-based memecoin, trailing dogwifhat (WIF) and Bonk (BONK). Since its launch in early November, PNUT has climbed by over 3480%, highlighting its rapid growth in value and popularity. By the time of writing, the PNUT price was adjusted to \$1.94 but still holding its foot strong above \$1.80. Additionally, memecoin's 24-hour surge of 40% makes it the largest daily gainer in the market. On the technical side, PNUT's RSI has hit 80.30, signaling that the asset is in an overbought zone and suggesting that a correction may be coming soon. Still, with strong buying pressure reflected in the Chaikin Money Flow, the momentum doesn't seem to be slowing down anytime soon. Moreover, PNUT's rapid rise has made it one of the fastest-growing memecoins, joining the ranks of PEPE and WIF. - The UK government will announce its plan to regulate the crypto industry. - The UK treasury plans to focus on stablecoins and staking services. The UK government is to unveil its plans for cryptocurrency regulation in response to the fast-evolving industry. Following the victory of Donald Trump in the US presidential election, hailed by the crypto space, the UK faces increased pressure to provide clarity and supportive regulations for digital assets. The UK Treasury is planning to address two areas of legislation in the cryptocurrency sector, stablecoins and staking services. The government's focus on stablecoins will enable the Financial Conduct Authority (FCA) to review the industry rules for these tokens. Meanwhile, staking allows investors to lock tokens for rewards to support blockchain networks. The legislation aims to reclassify staking to avoid rigid regulations meant for collective investment schemes. On the other side, the UK's digital securities sandbox, a joint initiative run by the Bank of England and FCA, is another area of focus. This live environment allows blockchain and crypto projects to test their ideas under regulatory supervision. This sandbox, with the upcoming regulations, will provide clarity to crypto companies in the UK and strengthen the country's position in digital finance. Besides, the FCA is scheduled to release a roadmap, that details its phased approach towards regulating stablecoins and other crypto assets. Also, the FCA will likely publish a consultation paper on stablecoins in early 2025. Laura Navaratnam, UK policy lead at the Crypto Council for Innovation, underlined the importance of quick action, that the UK has a second-mover advantage, but must mobilize to capitalize on this opportunity. The Impact of Trump's Victory Donald Trump's win has had an impact on the crypto market, with the largest asset, Bitcoin surging past \$93K. Other major assets have also climbed to new highs. Trump has pledged to establish a government-backed Bitcoin reserve, replace the SEC Chairman, and ensure all future Bitcoin mining happens on US soil. Moreover, many crypto investors were optimistic about Trump's alliance with Elon Musk. On election night, the dog-themed, Musk-preferred meme coin, Dogecoin surged by around 25%.
