

RETIK remains in its early stages, with a current presale price of just \$0.05, its presale performance and ambitious roadmap indicate significant potential. The token's total supply is capped at 1 billion, with a portion allocated for ecosystem development and incentives, potentially mitigating concerns about inflationary pressures. >>>> Click Here To Buy RETIK Tokens <<<< Shiba Inu (SHIB): The Doge-Inspired Meme Coin Phenomenon In 2021, the Shiba Inu, affectionately referred to as SHIB, made a notable entrance, capitalizing on the meme coin frenzy sparked by Dogecoin (DOGE). Its playful branding, featuring the endearing Shiba Inu dog breed, struck a chord with a community attracted to its lighthearted appeal and the possibility of significant gains. Propelled by social media buzz and endorsements from celebrities, SHIB's value surged, reaching a record high of \$0.0000888 in October 2021, marking an astounding 12 million percent increase from its initial price. However, SHIB's rapid ascent was followed by a substantial decline, with its value plummeting by over 90% from its peak. This volatility underscores the inherent risks associated with meme coins, often driven by speculation and community sentiment rather than practical utility. Despite the price decrease, SHIB's dedicated community remains active. The Shiba Inu team has been addressing concerns about the token's lack of utility by introducing initiatives such as the Shibarium blockchain platform and the ShibaSwap decentralized exchange (DEX). These developments are aimed at creating a more robust ecosystem for SHIB and potentially unlocking its long-term potential. >>>> Click Here To Buy RETIK Tokens <<<< Why Crypto Users Are Buzzing About Retik Finance Retik Finance has emerged as a beacon of real-world utility in the often-nebulous landscape of cryptocurrencies. One of Retik's most attractive features is its focus on bridging the gap between the burgeoning world of crypto and the established realm of fiat currency transactions. This resonates deeply with users who see the immense potential of cryptocurrencies but are frustrated by the friction points that hinder mass adoption. Retik's solutions, like DeFi Debit Cards for everyday spending and a seamless payment gateway for merchants, address this head-on by making cryptocurrencies a practical part of daily life. In contrast to many meme-driven tokens riding the hype wave, Retik stands out for its emphasis on tangible value propositions. Users aren't just drawn to the promise of quick gains; they're attracted to the platform's ability to solve real-world problems. The AI-powered P2P lending feature, for example, offers a decentralized alternative to traditional financial institutions, potentially unlocking greater access to credit and fairer interest rates for borrowers. As the project continues to evolve and deliver on its promises, its online search footprint is likely to expand even further, solidifying its place as a pioneer in the ever-evolving world of cryptocurrency. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): Website: <https://retik.com/> Whitepaper: <https://retik.com/retik-whitepaper.pdf> Linktree: <https://linktr.ee/retikfinance>

The irresistible allure of crypto wealth permeates the narrative, with tales of overnight millionaires and transformative gains fueling the aspirations of countless investors. Yet, amid the fervor, a pivotal question arises: do Shiba Inu (SHIB) and Retik Finance (RETIK) genuinely stand as the exclusive gateways to crypto riches, as some assert? This article intricately explores the facts and figures surrounding these two tokens, providing a nuanced perspective on their potential for creating lasting wealth in the few months to come. Retik Finance (RETIK): Utility Token to Turn You into a Millionaire Launched in late 2023, Retik Finance (RETIK) distinguishes itself as a bridge between traditional finance (TradFi) and decentralized finance (DeFi), aiming to democratize DeFi access through a range of user-friendly financial tools and services. Among its core offerings are DeFi debit cards, allowing users to seamlessly spend cryptocurrencies in the real world, thereby blurring the lines between TradFi and DeFi. Additionally, the Retik Finance (RETIK) ecosystem features an AI-powered P2P lending platform, connecting borrowers' and lenders directly to eliminate intermediaries and potentially offer more competitive rates. The project further facilitates passive income through yield farming by enabling users to earn rewards by depositing RETIK tokens into liquidity pools. Complementing these offerings are secure wallets provided by RETIK, ensuring the secure storage of both cryptocurrencies and fiat currencies. What sets RETIK apart is its emphasis on real-world utility and user experience, contrasting with the trend of meme-driven tokens. The project's roadmap outlines ambitious plans for future expansion, including the integration of fiat currencies and the development of a decentralized insurance platform. With a commitment to bridging the gap between traditional and decentralized finance, RETIK Finance aims to redefine accessibility and user engagement in the evolving landscape of financial technology. >>>> Click Here To Buy RETIK Tokens <<<< Shiba Inu (SHIB): Dogecoin's Meme-Powered Token Shiba Inu (SHIB), when it surged in the 2021 bull run, witnessed an astronomical price surge of over 40 million percent and transformed early adopters into instant millionaires. However, attributing this meteoric rise solely to the token's fundamentals is akin to mistaking a firework for a sustainable energy source. The inherent value of SHIB remains a topic of debate, given its staggering total supply of one quadrillion tokens, leading to extreme price volatility. Despite offering a decentralized exchange, a payment gateway, and an NFT marketplace, their adoption and usage are somewhat limited. The community-driven burning of SHIB tokens, aimed at reducing supply and boosting prices, has yielded only modest results. Nevertheless, SHIB cannot be entirely dismissed. Its passionate community and association with the popular Dogecoin (DOGE) meme culture provide it with a certain intangible value. Additionally, its affordable price point widens accessibility to a broader investor base, potentially fueling future price surges. Purchasing the token at the current rate of \$0.00001055 could provide investors with a pleasant chance to turn their cryptocurrency investments into millionaires. Why Joining the Retik Finance (RETIK) Presale Could Be Your Key to Becoming a Crypto Millionaire The world of DeFi holds immense potential, but navigating its complexities can be daunting for newcomers. Retik Finance (RETIK) aims to break down these barriers, revolutionizing how we interact with and leverage decentralized finance. By participating in the RETIK presale, you not only stand to gain early access to this innovative platform but also secure a valuable foothold in the future of DeFi. >>>> Click Here To Buy RETIK Tokens <<<< Democratizing DeFi: RETIK breaks down the walls separating traditional finance (TradFi)

and DeFi. Imagine seamlessly spending your crypto using a DeFi debit card, eliminating the need for centralized exchanges and their hefty fees. This user-friendly approach opens the doors of DeFi to a wider audience, fostering greater adoption and propelling RETIK's growth. Real-World Utility, Not Just Hype: Unlike many meme-driven tokens, RETIK boasts tangible applications. Its AI-powered P2P lending platform connects borrowers and lenders directly, offering potentially superior rates and cutting out middlemen. The yield farming opportunities through liquidity pools incentivize participation and contribute to a robust ecosystem. Early-Bird Advantage: The presale presents a unique opportunity to acquire RETIK tokens at a significantly discounted price compared to future listings. This not only unlocks potential capital gains as the project matures but also grants early access to its features and services, allowing you to get ahead of the curve. A Team with Vision: The minds behind RETIK are seasoned entrepreneurs and blockchain experts with a proven track record of success. Their comprehensive roadmap outlines ambitious plans for expansion, including fiat currency integration and decentralized insurance, indicating their commitment to long-term growth and innovation. Conclusion Both Shiba Inu (SHIB) and Retik Finance (RETIK) tokens present intriguing possibilities to make you a crypto millionaire. SHIB, with its established community and ongoing development, could experience further growth if its ecosystem matures and attracts institutional investors. However, the ambitious mission of Retik Finance (RETIK) to bridge the gap between traditional finance (TradFi) and decentralized finance (DeFi) resonates with a growing demand for user-friendly, accessible financial tools. The ongoing RETIK presale is not just an investment opportunity; it's a chance to be part of a revolution. Join the presale now and unlock your gateway to becoming a millionaire in cryptocurrency. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): Website: <https://retik.com/> Whitepaper: <https://retik.com/retik-whitepaper.pdf> Linktree: <https://linktr.ee/retikfinance>

Cryptocurrency enthusiasts are perpetually in search of the next potential gem in the digital asset landscape, especially those priced under \$0.1 with the promise of maximum profits. In this exploration of promising contenders, one standout player, Retik Finance, takes center stage. Let's delve into the unique features of Retik Finance and explore its potential alongside other affordable tokens like Bonk and Dogecoin. Retik Finance (RETIK) Retik Finance emerges as a groundbreaking project aiming to bridge the gap between decentralized finance (DeFi) and real-world applications. The native token, RETIK, currently trades at an enticing \$0.05 in the project's presale stage 3, providing an attractive entry point for early adopters. The potential for maximum profits is evident, considering that at its current price, holders could experience up to 300% profits upon listing on major exchanges. Impressively, Retik Finance has demonstrated robust presale performance, raising over \$2 million in just two weeks. This not only indicates strong community support but also boosts investor confidence. The upcoming listing on two top-tier centralized exchanges is expected to further enhance visibility and liquidity, potentially driving the value of RETIK even higher. Retik Finance's unique approach distinguishes it from other projects. Instead of aiming to eliminate fiat currency, Retik Finance seeks to build an interface that bridges the gap between the fiat and crypto worlds. By drawing on extensive experience in fiat currency payment processing and leveraging early entry into blockchain technology, Retik Finance addresses challenges while providing innovative solutions. The three key categories of Retik Finance's bridging agenda include payment functions for commercial applications, support functions for ongoing adjustments, and addressing prevailing issues in the cryptocurrency realm. Through these comprehensive strategies, Retik Finance aims to overcome challenges and create a seamless interface between the fiat and crypto worlds. Nevertheless, the potential for growth in Retik Finance, with the promise of up to a 300% increase upon listing, positions it as a token priced below \$0.1 for maximizing profits in 2024. Bonk (BONK) Known as a meme token built on the Solana blockchain, Bonk (BONK) has captured the attention of the crypto community. Priced at a mere \$0.00001558, Bonk offers affordability that appeals to a wide range of investors. With a total token supply of 100 trillion and a market capitalization exceeding \$1.1 billion, Bonk has already established itself as a significant player in the crypto space. Several factors contribute to the potential for BONK to experience a tenfold increase in value in 2024. The rapid expansion of the Solana ecosystem is a key factor that could benefit all Solana-based tokens, including BONK. Moreover, the active development of new initiatives such as a decentralized exchange (DEX) and a launchpad enhances the utility of BONK, potentially driving its price upwards. Being a relatively new token, BONK also possesses ample growth opportunities. Bonk's dedicated community of supporters and its listing on prominent cryptocurrency exchanges further bolster its liquidity and exposure. As the crypto market continues to evolve, Bonk stands out as a token with the potential for maximum profits in 2024. Dogecoin (DOGE) Dogecoin's distinctive standing in the cryptocurrency realm, marked by its meme status and lively community, positions it as a compelling candidate for potential profits in 2024. With its current valuation at \$0.0921, Dogecoin remains within an accessible range for numerous investors, classifying it as a token below \$0.1 for maximizing profits in 2024. On the bullish front, Dogecoin's underlying market data provides an optimistic outlook. The significant increase in new DOGE addresses and a high level of active addresses signal growing engagement and interest in the Dogecoin community. This influx of new and active addresses has the potential to drive demand and push Dogecoin towards higher resistance levels. If the current momentum continues and market sentiment strengthens, DOGE could break past \$0.098, aiming for the second barrier at \$0.104 and possibly testing the highest target at \$0.1159. The strong backing from the large and dedicated Dogecoin community, along with robust whale support, historically plays a pivotal role in DOGE's price movements. In conclusion, within the cryptocurrency market's landscape of promising opportunities, Retik Finance stands out as the optimal choice for investors seeking maximum profits in 2024 among tokens priced below \$0.1. While Bonk and Dogecoin also offer unique value propositions, Retik Finance distinguishes itself with a set of factors that uniquely contribute to its exceptional growth potential. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

- The protocol lost 10% of its liquidity due to this occurrence, which was a major loss. - A bug in the Osmosis fee market code made this scenario much worse. An attack was found in the Levana perpetual swap protocol on the Osmosis blockchain. Someone without authorization took over \$1.1 million from Levana's liquidity pools over the course of 13 days. The protocol lost 10% of its liquidity due to this occurrence, which was a major loss. Many factors contributed to the disaster, according to investigations. The Osmosis blockchain was subject to a congestion assault, which drastically limited user interactions with the market. A bug in the Osmosis fee market code made this scenario much worse. Gas prices for bot maintenance or transactions required to be raised during times of heavy traffic. Operations Temporarily Suspended The exploit also took advantage of the fact that Levana's integration with the Pyth oracle was 'price staleness'. Because of these interrelated issues, the perpetrators were able to deplete liquidity pools and influence market prices. In spite of all this, Levana's crew stressed that the Pyth oracle worked as planned, saying that the weak spot was in their system integration and not the oracle. The breach has been promptly addressed by Levana. The protocol has temporarily paused the opening of new positions and revisions to existing ones. They reassure customers that the vulnerability has had no effect on their trading positions or earnings. The group's top priorities are the protection of user assets and the rapid restoration of full operation. The liquidity providers' financial losses have prompted Levana to devise a two-fold compensation strategy. Along with the distribution of protocol fees collected during the assault, affected parties will also receive an airdrop. Highlighted Crypto News Today:

The heated conversation that seems to never get settled in the crypto community is the age-long debate of whether Shiba Inu will ever reach \$1. Analysts have thrown their weight into this discussion and their viewpoints are cogent and, hence should be adhered to. Shiba Inu (The hype of a lifetime) Shiba Inu made a big splash in 2021 thanks to its meme status which was inspired by Dogecoin and a surge of enthusiasm and virality. Its basic value proposition is still highly dependent on speculative activity and community attitude, even with a robust community and ongoing development. SHIB's price trajectory remains vulnerable to market sentiment and any regulatory actions, as achieving a \$1 market cap would necessitate an enormous market capitalization which looks mathematically unlikely. Although SHIB has a low price that makes it easily accessible to new investors, analysts believe that the lack of valid utility makes it unsustainable, especially in the long run. In times past, SHIB's brief rally has been fueled by FOMO, rumours, and overall market sentiments, which is not a good option for investors. While they have cast doubt on the possibility of SHIB reaching \$1, especially anytime soon, these analysts have suggested better options for investors seeking to capitalize on the market. Analysts Suggestions Emerge, Retik Finance & Bitcoin are better options In a convincing tone, Analysts have weighed in to give potential options in place of Shiba Inu: Retik Finance: Retik Finance has garnered interest because of its extensive DeFi ecosystem, which is intended to provide new users and investors with a myriad of useful features. Retik seeks to close the gap between traditional finance and cryptocurrency with products including the Retik Wallet, DeFi Debit Card, Retik Pay, etc. It is positioned as a viable platform for users looking for a strong DeFi experience because of its emphasis on scalability, security, and user-centric services. Bitcoin: As the first cryptocurrency and a store of value, Bitcoin continues to be a respected alternative to other conventional systems. Although being a decentralized digital asset and an inflation hedge are its main uses, its scarcity, acceptance as a digital store of value, and widespread adoption also enhance its utility. In the cryptocurrency world, Bitcoin is well recognized for its worth as a long-term investment and a way to transfer money across borders. Retik Finance; The Driving Vision Retik harbours a visionary perspective that extends beyond the current financial landscape, envisioning a future characterized by heightened financial empowerment, unwavering dependability, and unparalleled transparency. This vision extends its reach to encompass individuals, enterprises, institutions, and even governments, transcending geographical boundaries and socioeconomic disparities. At the core of this transformative vision are cutting-edge technologies meticulously designed to serve as bridges, fostering seamless connections between the intricate realms of cryptocurrency and traditional fiat payment systems. Utility tokens are better than Penny tokens Cryptocurrency utility goes beyond just being worth money; it includes useful applications, use cases, and ecosystem functionality. Shiba Inu, which relies mostly on community hype and its memetic origin, is less diverse and established than Retik Finance, which offers a variety of DeFi options, and Bitcoin, which serves as a store of value and a medium of exchange. Retik Finance and Bitcoin are more in line with the utility-driven goals of users and investors looking for long-term profit, a strong DeFi ecosystem, a reliable store of value, and international transaction capabilities than Shiba Inu. Conclusion While the crypto world is within touching distance with a new crypto year, utility tokens like Bitcoin and Retik Finance emerge as the strongest potential for massive profits. The Bitcoin community, anticipating the approval of bitcoin ETFs, which will drive up its value and also the bitcoin halving, which reduces supply, and ultimately leads to increased value. On the other hand, Retik Finance is set to launch on major exchanges in 2024, a move that will inadvertently cause its value to rise like a rocket. Investors who purchase Retik Finance now stand to benefit the most from this highly anticipated event. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

- The most recent PSA from Ardoino is quite similar to one that occurred in September 2023. - Whale Alert, informed on December 25 that Tether Treasury has minted \$1 billion USDT. Another 1 billion USDT has been 'authorized but not issued,' as stated by CEO Paolo Ardoino of Tether, the firm behind the stablecoin. Whale Alert, informed on December 25 via twitter that Tether Treasury has minted one billion USDT (\$1 billion). The CEO of Tether, Ardoino, then issued a public service announcement (PSA) in the twitter thread of Whale Alert, explaining that the transaction in question constituted an 'inventory replenish' on the Ethereum blockchain. Ardoino stated: 'Note this is an authorized but not issued transaction, meaning that this amount will be used as inventory for next period issuance

requests and chain swaps. Not Part of Total Market Cap Replenishing inventory involves, according to Tether, making fresh USDT and storing them in the treasury as "authorized but not issued" USDT. As they have not been issued or put into circulation yet, "these tokens are not part of the total market capitalization of USDT," according to Tether's FAQ. There are \$925 million worth of USDT that have been "authorized but not issued" on Ethereum as of December 26, 2023, according to statistics from the Tether Transparency page. The most recent PSA from Ardoino is quite similar to one that occurred in September 2023, when Whale Alert brought attention to a transaction involving one billion USDT. While speaking about the USDT transaction, Ardoino clarified that it was an authorization rather than an actual issuance. The allotted amount would be used for future issuance requests and chain swaps on the Tron network. Skepticism over Ardoino's most recent PSA and the lack of transparency around Tether's authorized but not issued transactions has been voiced by certain internet industry analysts. As the crypto market approaches the end of the year, there's growing speculation about a potential "Santa Claus rally." This term, drawing from historical surges in Bitcoin's value during the festive seasons of 2013 and 2017, suggests a possible uptick in the market. Factors like the Bitcoin Spot ETF approval and the upcoming Bitcoin halving event are bolstering market confidence. Amidst this backdrop, cryptocurrencies like Solana (SOL), Dogecoin (DOGE), Polygon (MATIC), Sei (SEI), Chainlink (LINK), and ScapesMania are being eyed for potentially good returns on investment in early 2024. Finding a cryptocurrency with a solid ROI is not that easy, but our article attempts to sort the wheat from the chaff. Our assessment of the market through the prism of the industry's past performance provides us with some invaluable insights. Not all coins will give astronomical ROIs, but at least some of them are likely to do well over the next few weeks, months, and years.

ScapesMania: A Rising Star in the Crypto World ScapesMania is a one-of-a-kind gaming ecosystem, where crypto-savvy audiences join forces with the vibrant community of casual players, paving the way for substantial growth. The ScapesMania community is buzzing with enthusiasm, which is reflected in more than \$2,110,000 raised from crowd/retail contributions to date. >>> Join Presale at a Discount on the Official Site <<< Empowering Holders ScapesMania ensures participants get precisely what they desire: gamers enjoy their favorite pastime, while crypto enthusiasts can leverage the ecosystem's performance and shape its future through DAO, all without engaging in gameplay. Furthermore, acquiring ScapesMania tokens unlocks extra perks. By joining the presale, you can access bonuses totaling up to 127%. You can also earn referral rewards by introducing ScapesMania to your friends. Plus, holders can participate in token buyback & burn events as well as staking. Verified Excellence ScapesMania's smart contract has successfully undergone scrutiny from leading security-ranking companies, providing peace of mind for holders. Behind ScapesMania is an award-winning team that secured a prestigious grant from a prominent player in the blockchain industry. The team upholds transparent and publicly accessible social media accounts, engaging with a flourishing community of over 60K followers. ScapesMania's Prospects ScapesMania tokens are currently a steal, priced at just \$0.004568 per coin during the presale. As the last sales stage price is set at \$0.01, early adopters could potentially be looking at a 2.2x return after the ScapesMania presale concludes. If you're already on board with everything that ScapesMania has to offer, there's a unique opportunity for you: a special offered code, YBL372. The limited-time offer is only valid for a limited time since the article's publication. It's your best chance to get a bonus of 10% after entering YBL372 in a special field at checkout, so act fast, the clock is ticking.

Solana (SOL): A Surge in User Activity and Market Presence Solana (SOL) has witnessed a remarkable surge in user activity, with a nearly 400% increase as the last quarter of the year approaches its end. This growth has significantly outpaced Ethereum's modest 3% rise. The driving force behind this upswing is attributed to a series of token airdrops by protocols on the Solana network, notably the Solana-based oracle network Pyth (PYTH), which completed an airdrop of 250 million PYTH tokens. Additionally, Solana's decentralized exchange (DEX) volumes have soared, with Jupiter DEX playing a pivotal role. Looking ahead, Solana (SOL) robust network activity and DEX volume growth bode well for its future price prospects. However, the cryptocurrency market's inherent volatility and competitive landscape pose challenges.

Dogecoin (DOGE): Navigating Market Sentiments and Trends Dogecoin (DOGE) has been experiencing a positive trend, with 63% of the last 30 days showing price increases. Currently trading above its 200-day simple moving average, Dogecoin (DOGE) displays potential for an uptrend. Despite the optimistic market sentiment, Dogecoin (DOGE) price has seen a decline of nearly 50% from \$0.15 in November 2022 to approximately \$0.0917. This trend aligns with the broader decline in interest in meme coins and the cryptocurrency market's overall downturn.

Polygon (MATIC): Steady Growth Amid Market Fluctuations Polygon (MATIC), known for its decentralized scaling solution, has recently surpassed the \$0.80 mark. However, it has experienced a decline of more than 4.4% recently, aligning with the broader negative trend in the cryptocurrency market. Polygon's price has shown resilience by surpassing the \$0.8 resistance level. Experts project Polygon (MATIC) price to be around \$0.9004, with a potential range between \$0.8232 and \$0.9261 by the end of December. Polygon (MATIC) price trajectory during the upcoming Christmas period will be influenced by market dynamics, advancements, and utility cases.

Sei (SEI): A Remarkable Surge in the Altcoin Market Sei (SEI) has recently made a significant impact in the altcoin market with a remarkable 50% surge. This surge has allowed Sei (SEI) to outperform many of the top cryptocurrencies in the market, marking a notable achievement in its market presence. The 50% surge in Sei (SEI) value is a clear indicator of its strong market performance. This rapid increase in value highlights the growing interest and confidence in Sei (SEI) among investors and traders. While the recent surge in Sei (SEI) price is promising, it's important to approach its future with a balanced perspective.

Chainlink (LINK): Integrating Real-World Assets and Traditional Finance Chainlink (LINK) is set to undergo significant upgrades, as indicated in a recent announcement. These upgrades aim to enhance Chainlink (LINK) functionality and interoperability across different blockchain networks. Currently, Chainlink (LINK) is down 73% from its May 2021 all-time high of \$52.70. Despite this, it remains one of the better-performing altcoins, with potential for a significant move in the bull market. Chainlink (LINK) future

price prospects seem promising, especially with the upcoming upgrades and expansion into traditional finance (TradFi). Conclusion As we approach 2024, the crypto market is buzzing with anticipation of a potential “Santa Claus rally,” reminiscent of Bitcoin’s historical surges. This optimism is fueled by factors like the Bitcoin Spot ETF approval and the upcoming Bitcoin halving event, creating a fertile ground for cryptocurrencies like ScapesMania. In the captivating world of cryptocurrencies, Shiba Inu (SHIB) has long been a topic of fascination and speculation. However, amidst a market that’s showing signs of revival, SHIB seems to be caught in a phase of stagnation, leaving investors and enthusiasts pondering its future. Meanwhile, experts are turning their attention to an alternative that’s brimming with potential – Retik Finance (RETIK), believed to offer magical returns in the foreseeable future. Shiba Inu’s (SHIB) Critical Juncture Shiba Inu, often celebrated for its meteoric rise as a meme coin, currently stands at a pivotal point. The coin’s journey is marked by its vibrant community, the Shiba Army, and its potential to mimic Dogecoin’s bullish rampage. However, recent trends suggest a period of uncertainty: - Current Market Position: SHIB’s price, as of writing, was \$0.000010973, marking a 0% change over the past 24 hours, and a year-to-date change of 34.68%. - Market Capitalization: SHIB’s market cap stands at \$6,466,385,027.98, reflecting its significant position in the crypto market. - Price Prediction: Experts predict that SHIB might oscillate between \$0.00000498 and \$0.00000904 in 2024, with an average trading price of around \$0.0000131. Investors are eyeing a decisive weekly close above the current level, which could propel SHIB towards \$0.000014. However, if rejected, a pullback to \$0.000008 might occur before any bullish breakout. Click Here To Buy RETIK Tokens Retik Finance (RETIK): The Rising Star While SHIB navigates through its phase of uncertainty, Retik Finance emerges as a promising alternative, captivating experts and investors alike with its comprehensive approach to DeFi and substantial growth potential. Retik Finance’s Unique Proposition - DeFi Integration: RETIK stands out with its innovative integration of DeFi solutions into everyday finance, notably through its DeFi debit cards. - Market Potential: With a global crypto market capitalization of \$1.4 trillion and a DeFi market volume estimated at \$25 billion daily, RETIK taps into a vast and expanding Total Accessible Market. - DeFi Debit Cards: The emergence and adoption of DeFi debit cards represent a significant opportunity. The global card purchase volume reached \$42.7 trillion in 2022, with projections of it hitting \$63.5 trillion by 2028. RETIK’s DeFi debit cards are positioned to capitalize on this surge, bridging crypto and fiat transactions seamlessly. Presale Success and Future Prospects Retik Finance’s presale stages have been a resounding success, indicating strong investor confidence and market demand for its DeFi solutions. This success lays the foundation for an anticipated price surge, with experts predicting up to a 400% increase, positioning RETIK as a lucrative investment for those seeking substantial returns or magical returns. Why Retik Finance Over Shiba Inu? In the current market scenario, where investors are increasingly looking for tokens with real-world applications and substantial growth potential, Retik Finance stands out. Real-World Utility: Unlike SHIB, which largely remains a speculative asset, RETIK offers tangible utility in the DeFi space, making it more than just an investment; it’s a platform that users can leverage for various financial activities. Growth Potential: RETIK’s comprehensive suite of DeFi services, combined with its innovative approach, presents a solid case for long-term growth, unlike the more volatile nature of meme coins like SHIB. Market Expansion: The increasing global adoption of cryptocurrencies and the growth in DeFi and digital payment systems create a ripe environment for RETIK’s products and services. Click Here To Buy RETIK Tokens Conclusion: A Strategic Shift for Investors The current trends in the crypto market indicate a strategic shift among investors. While meme coins like Shiba Inu have provided dramatic short-term gains and an enthusiastic community, platforms like Retik Finance are drawing attention for their comprehensive approach to DeFi, promising utility, and substantial market potential. For investors looking to maximize gains and tap into the burgeoning world of DeFi, Retik Finance offers a compelling alternative. Its success in the presale stages, coupled with the anticipated growth trajectory, positions RETIK as a must-watch for those seeking transformative returns. As the crypto landscape continues to evolve, the contrast between SHIB and RETIK highlights the diverse investment opportunities available, each catering to different investor preferences and risk appetites. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

- Musk stated his intention to completely deploy payment services by the mid 2024. - Bureaucratic procedures were the main reason the feature could not go live sooner. Midway through 2024, Elon Musk’s X platform is anticipated to include in-app payment capabilities, however the incorporation of cryptocurrency currently seems distant. In an interview with Cathie Wood of ARK Invest on December 21st, Musk stated his intention to completely deploy payment services by the “middle of next year,” subject to the acceptance of several money transmitter license applications. According to Musk, bureaucratic procedures were the main reason he was unable to activate the social networking platform’s payment feature sooner. Although X was a bit late in delivering all the required paperwork, Musk said he was unaware of any possible “showstoppers” that would have their money transmitter license applications denied. No Updates on Crypto Inclusion There was a lot of anticipation among crypto fans that Musk will include his favorite cryptocurrency, Dogecoin or Bitcoin, in the X payments network. It seems Musk has further dampened crypto-related euphoria by admitting he devotes “hardly any” time pondering digital assets; however, he has never verified this. Even while Musk now seems unconcerned in cryptocurrency, electric car maker Tesla still has over \$148 million in Bitcoin on hand, and Dogecoin is accepted at the Tesla Shop. Dogecoin was reportedly

accepted as payment for trips on the Las Vegas metro system by Musk's tunnel construction company, The Boring Company, in 2022. But Musk said that digital assets and money are only a "database for resource allocation" in his mind, and that fiat currency is "actually fine" as long as authorities don't attempt to manipulate its supply and base it. Highlighted Crypto News Today: Solana Soars 876%. Overtakes BNB to Become Fourth Largest Crypto

Three tokens have emerged as potential game-changers – Shiba Inu (SHIB), Pepe (PEPE), and Retik Finance (RETIK). This triad, known for their unique propositions and strong community support, is positioned to deliver an impressive 20X return on investment. Here's why Shiba Inu, Pepe, and Retik Finance are generating buzz and are forecasted to be the stars of 2024. Shiba Inu (SHIB) Shiba Inu (SHIB) has captured the attention of the crypto community as a meme coin with high volatility and the potential for explosive gains. Following in the footsteps of its meme coin predecessor, Dogecoin, SHIB has become a speculative darling among traders seeking high-risk, high-reward opportunities. The token's Shiba Inu dog logo and its decentralized community-driven ecosystem contribute to its popularity. With its low price per token, SHIB offers an accessible entry point for investors looking to participate in the excitement of the meme coin wave. Click Here To Take Part In Retik Finance Presale Pepe (PEPE) Pepe (PEPE) injects a fresh and innovative perspective into the meme coin space. Beyond its playful and meme-centric branding, Pepe distinguishes itself by incorporating unique utility and features. As meme coins continue to gain traction, Pepe's combination of meme magic and innovation positions it as a compelling investment opportunity. Retik Finance (RETIK) Retik Finance (RETIK) stands out not just for its potential returns but for its revolutionary approach to decentralized finance (DeFi). The Retik Finance team, despite having the option to secure funds from venture capitalists, made a bold decision to prioritize individual participation. This reflects their commitment to giving each investor the opportunity not only to make profits but also to actively contribute to changing and revolutionizing DeFi forever. A significant milestone in Retik Finance's journey has been the success of Stage 1 of its presale, raising an impressive \$450,000. The ongoing Stage 2 has seen even greater support, with a total of \$930,000 raised so far. This financial backing reflects the community's trust in Retik Finance's potential to redefine the DeFi landscape. To celebrate this success and engage the community further, Retik Finance has launched the mega \$333K Giveaway. This initiative offers users the thrilling opportunity to become one of the fortunate 10 winners, each seizing \$33,300 worth of RETIK. The giveaway not only adds excitement to the project but also aligns with Retik Finance's vision of fostering inclusivity and community involvement. The Power Trio: 20X Returns in 2024 As the crypto market evolves, strategic diversification becomes crucial. The combination of Shiba Inu, Pepe, and Retik Finance offers investors a diversified portfolio with the potential for 20X returns in 2024. Shiba Inu brings the speculative fervor of meme coins, Pepe introduces meme magic with a twist of innovation, and Retik Finance adds a transformative approach to DeFi. The ongoing mega \$333K Giveaway from Retik Finance further sweetens the deal, allowing participants to not only potentially profit but also actively contribute to the project's success. Investors looking for a potent mix of meme-driven excitement, innovation, and transformative DeFi potential should keep a close eye on the triumphant trio of SHIB, PEPE, and RETIK. About Retik Finance Retik Finance is revolutionizing the DeFi space through its features offerings such as futuristic DeFi debit cards, a smart crypto payment gateway, AI-powered peer-to-peer (P2P) lending, and a multi-chain non-custodial DeFi wallet with heightened security. - Cardano (ADA), the eighth-largest cryptocurrency, is making notable on-chain whale transactions. - Cardano's whale volume ranks second only to Bitcoin, which recorded \$33.45 billion in transactions during the same period. - It stands out as the second-cheapest token among the top 10 cryptocurrencies by market cap, enhancing its attractiveness as an investment option. Cardano (ADA), currently positioned as the eighth largest cryptocurrency by market capitalization, is making waves not just in its ranking but also through substantial on-chain whale transactions. Recent data from crypto analytics platform IntoTheBlock reveals that Cardano's aggregated whale volume in the past 24 hours has exceeded \$23.07 billion, marking an 8.37% increase. This places Cardano's whale volume second only to Bitcoin (BTC), which recorded a large transaction volume of \$33.45 billion during the same period. Cardano's Allure to Whales Cardano's appeal to market whales is evident, given the significant developmental strides made by the protocol. Notably, Cardano stands out as the second-cheapest token among the top 10 largest coins by market cap, trailing only Dogecoin (DOGE). This affordability adds to its attractiveness as a compelling investment option. IntoTheBlock data further highlights a notable uptick in Cardano whale transactions throughout the week. Large transactions, valued at \$100,000 or more, increased from 10,070 on December 11 to 13,140 on December 14. Maintaining a consistent and high number of whale transactions is a rarity in the cryptocurrency space. Previous data from November 15 showed a total of 4,320 whale transactions on Cardano, with a peak of 16,160 on November 9. The surge in ADA whale activity underscores the cryptocurrency's significant influence within the broader Web3 ecosystem. This positive trend aligns with ADA's recent resurgence, as the digital currency experienced a 2.5% price drop in the past 24 hours, reaching \$0.6204. The continuous presence of whale transactions is expected to bolster market sentiment and contribute to ADA's resilience across various aspects of the cryptocurrency landscape.

The world of cryptocurrencies is an ever-evolving landscape filled with innovation, competition, and potential riches. As the crypto market continues to mature, new tokens are vying for a spot among the top-ranking cryptocurrencies. Three such contenders are Shiba Inu (SHIB), Retik Finance (RETIK), and Avalanche (AVAX) – have emerged as strong candidates in the race to become a top crypto token. In this article, we will take a closer look at these projects, their unique features, and the factors that could propel Retik Finance to the forefront. Shiba Inu (SHIB): The Underdog with a Strong

Community Shiba Inu, often referred to as the “DogeCoin killer,” burst onto the crypto scene with a mission to take down the meme-inspired Dogecoin. SHIB gained immense popularity due to its meme-based branding and the appeal of being a “community-driven” project. It introduced an ecosystem of tokens, including LEASH and BONE, to diversify its offerings. SHIB’s popularity skyrocketed, with its price reaching all-time highs in 2021. However, it’s important to note that SHIB’s journey has been marked by extreme volatility, and its utility remains somewhat limited. While it has made significant strides in terms of market capitalization, it faces stiff competition from other meme coins and tokens with more robust use cases. [Click Here To Take Part In Retik Finance Presale](#)

Avalanche (AVAX): The Smart Contract and DeFi Pioneer Avalanche, often referred to as AVAX, is a platform that has gained recognition for its focus on scalability, decentralization, and interoperability. AVAX is known for its Avalanche consensus mechanism, which enables high-speed and low-cost transactions, making it a promising choice for decentralized applications (dApps) and DeFi projects. AVAX’s ecosystem includes a range of DeFi protocols, assets, and tools that leverage its capabilities. Its native token, AVAX, plays a pivotal role in securing the network, participating in governance decisions, and providing liquidity. AVAX has enjoyed steady growth in market capitalization and user adoption, positioning itself as a top contender in the crypto space.

Retik Finance (RETIK): The Rising Star With a Multifaceted Utility Retik Finance (RETIK) has emerged as a dynamic project with a multifaceted utility that sets it apart in the race to become a top crypto token. Unlike many meme coins, Retik Finance is driven by a clear vision and a commitment to bringing tangible benefits to its users. One of the standout features of Retik Finance is its DeFi debit card, which bridges the gap between the digital and real-world financial ecosystems. The Retik DeFi Debit Card allows users to earn cashback rewards in RETIK tokens for their everyday spending. This integration of cryptocurrency into real-world spending is a significant step forward in making crypto more accessible and practical. Beyond the debit card, Retik Finance offers opportunities for users to stake their tokens, participate in liquidity provision, and engage in lending and borrowing through its DeFi protocols. This multifaceted utility not only enhances the value proposition of RETIK tokens but also fosters a thriving and interconnected community. [Click Here To Take Part In Retik Finance Presale](#)

What Makes a Top Crypto Token? To assess which of these projects has the potential to reach the top 7 crypto tokens first, it’s essential to understand what makes a cryptocurrency stand out in the crowded market:

- Utility:** A top crypto token should offer real-world utility and solve genuine problems. Tokens with practical use cases, like Retik Finance’s DeFi debit card, have a competitive edge.
- Community Support:** A dedicated and engaged community can drive adoption and growth. Shiba Inu’s early success was partly due to its strong community support.
- Innovation:** Projects that innovate and introduce novel solutions tend to capture attention and investment. Avalanche’s consensus mechanism and DeFi ecosystem showcase innovation.
- Market Capitalization:** A higher market cap often signifies greater trust and acceptance. Avalanche has steadily climbed the ranks in terms of market capitalization.
- Sustainability:** Projects with long-term viability and a clear roadmap are more likely to succeed. Retik Finance’s commitment to ongoing development and improvement is a positive sign.

The Potential of Retik Finance While each of these projects has its strengths, Retik Finance stands out for its multifaceted utility and innovative approach to bridging the gap between crypto and traditional finance. Its DeFi debit card, real-world integration, and commitment to community engagement are key factors that could propel RETIK tokens to the top 7 crypto tokens. Moreover, the success of Retik Finance’s first presale stage and the enthusiastic response from big whales in the crypto space underscore its potential for rapid growth. As the project continues to expand its offerings and gain traction, it is well-positioned to outperform its competitors and secure a prominent spot among the top crypto tokens. In the ever-evolving crypto landscape, only time will reveal which of these projects will ultimately reach the top 7. However, Retik Finance’s utility and strong community support make it a compelling contender to watch closely as it strives to achieve this milestone. - **Bonk surges 107% in the past twenty four hours.** - It reached the 69th position in market cap by reaching \$1 billion. In a whirlwind turn of events, the Solana based memecoin Bonk Coin has swiftly captivated the crypto town, experiencing an electrifying surge of 107% within a mere 24 hours, soaring to an all time high of \$0.00003033. This meteoric ascent has sent shockwaves through the community, igniting discussions about its potential to become the next memecoin sensation. The fervor surrounding the bonk intensified following the landmark announcement from the eminent exchange Coinbase, declaring its forthcoming listing of the token. The exchange’s proclamation on Wednesday paved the way for the future trading of BONK-USD pairs, albeit with potential restrictions in select supported jurisdictions, awaiting the establishment of a substantial asset supply. Notably, Bonk coin solidified its meme deity status by scaling the ranks to claim the 69th spot on CoinGecko’s esteemed list of the most valuable cryptocurrencies. The coin’s market cap breached the monumental \$1 billion milestone for the very first time, heralding an era of newfound recognition and potential.

What’s Next For Bonk? The surge in the bonk coin’s price trajectory finds roots in the introduction of single-sided staking within the project’s framework, coupled with the Coinbase listing as mentioned, setting the stage for a pivotal moment in its journey. Analysts keenly eye a potential buying opportunity, targeting the ambitious 61.8% Fibonacci extension level at \$0.0000219 for BONK, following a breakout past the \$0.0000149 mark and a subsequent retest. In a domain dominated by Dogecoin and Shiba Inu, the emergence of BONK as the latest torchbearer of the memecoin realm has caught the attention of enthusiasts worldwide. Further elevating its potential, the token’s parent chain, Solana (SOL), stands tall among the most high-performing cryptocurrencies in 2023. However, amidst the optimism, skeptics ponder the fate of this bullish surge, questioning whether it signifies the inception of a monumental breakout for the next colossal crypto, or if it’s merely a fleeting moment in the midst of past 24-hour gains.

With the cryptocurrency market experiencing a surge in popularity, many investors are searching for the next big opportunity. Shiba Inu (SHIB), a meme coin inspired by Dogecoin, has gained significant traction in recent years. However, before you invest your hard-earned \$1,000 into SHIB, it's crucial to weigh its potential against other exciting projects like Retik Finance (RETIK). Shiba Inu: A Meme Coin with Limited Utility SHIB emerged as a playful alternative to Bitcoin and Ethereum, capitalizing on the popular meme culture. Its initial success was fueled by social media hype, community-driven marketing, and celebrity endorsements. However, SHIB's future remains uncertain due to its limited functionality. Here are some key concerns about SHIB:

- Limited use cases: Unlike many other cryptocurrencies with practical applications within their ecosystems, SHIB lacks real-world utility. Its primary value currently relies on speculation and market sentiment.
- High volatility: Meme coins are notorious for their unpredictable price swings, making them risky investments. While SHIB has experienced significant growth periods, its price can be susceptible to sudden drops based on market sentiment and external factors.
- Large circulating supply: SHIB has a massive circulating supply of 549.1 trillion tokens, making it challenging to achieve significant price appreciation.

Introducing Retik Finance: A DeFi Ecosystem with Real-World Applications Retik Finance offers a compelling alternative to SHIB, presenting a robust DeFi ecosystem with a range of practical applications. This platform aims to bridge the gap between traditional finance and the decentralized world by providing users with innovative tools and services. Here are some of the key features of Retik Finance:

- DeFi debit cards: Retik's debit cards allow users to seamlessly spend their crypto holdings at point-of-sale terminals worldwide, eliminating the need for conversion and promoting mainstream adoption of cryptocurrencies.
- Next-generation payment gateway: Retik Pay empowers businesses to accept crypto payments efficiently and securely, expanding their customer reach and attracting a new generation of tech-savvy consumers.
- AI-powered P2P lending platform: Retik's lending platform utilizes AI algorithms to facilitate peer-to-peer lending based on a data-driven risk assessment system, creating a more inclusive and accessible financial system.
- World's most secure DeFi wallet: Retik Wallet offers multi-layered security features and a user-friendly interface for managing digital assets and accessing other Retik services.

Why Retik Finance offers better opportunities than SHIB:

- Stronger fundamentals: Retik's focus on building a comprehensive DeFi ecosystem with real-world utility offers a more sustainable value proposition compared to SHIB's meme-based approach.
- Diversified revenue streams: Retik's platform generates income through various services like transaction fees, lending interest, and cashback rewards, providing a stable foundation for future growth.
- Active development and roadmap: Retik's team is continuously working on new features and functionalities, demonstrating a commitment to long-term development and innovation.

Investing in Retik Finance provides investors with the potential for:

- Higher returns: Retik's strong fundamentals and diversified revenue streams indicate a higher probability of significant price appreciation compared to SHIB's speculative nature.
- Long-term value creation: Retik's focus on building a sustainable and user-centric ecosystem creates a more reliable and long-term investment opportunity.
- Participation in a growing DeFi space: By investing in Retik, you become a part of a rapidly evolving and promising sector of the cryptocurrency market.

While both SHIB and Retik offer investment opportunities, Retik emerges as a more promising option for long-term investors seeking a stable and utility-driven project with the potential for significant growth. Before making any investment decisions, it's crucial to conduct thorough research and consider your risk tolerance and investment goals. Here are some additional factors to consider when comparing SHIB and Retik:

- Team and advisors: Both projects have experienced and passionate teams with established track records.
- Community engagement: Retik boasts a vibrant and engaged community, indicating strong support for the project.
- Market capitalization: SHIB currently has a larger market cap, while Retik is poised for significant growth.

Ultimately, the decision of whether to invest in SHIB or Retik depends on your individual risk tolerance and investment goals. However, by considering the key differences and potential future opportunities, Retik Finance presents a compelling alternative with a higher likelihood of providing investors with significant returns and long-term value. Visit the links below for more information about Retik Finance (RETIK):

Shiba Inu (SHIB) and Retik Finance (RETIK) are the two prominent coins, have captured the significant attention of crypto enthusiasts. Retik Finance is a new crypto project, will it outdone major meme coin Shiba Inu (SHIB)? Shiba Inu (SHIB) Shiba Inu, introduced in August 2020, quickly became a meme coin sensation, drawing along with Dogecoin and featuring the Shiba Inu dog meme. The initial hype and speculation fueled its rapid ascent, but SHIB has evolved into a robust ecosystem with a dedicated community and practical use cases. The strength of SHIB lies in its robust and dedicated community. Active engagement and unwavering support have been pivotal in propelling the project's growth. Moreover, operating on the Ethereum blockchain, SHIB utilizes smart contracts and distributed ledger technology, ensuring transparency, security, and immutability—core tenets highly valued in the crypto space. Shibarium Development: Shibarium, the core layer-2 network, recently completed its first hard fork, enhancing token burns and introducing a new system capable of burning multiple tokens simultaneously. This development has sparked optimism within the SHIB community regarding the token's price potentially reaching \$0.01. Retik Finance (RETIK) In contrast, Retik Finance takes a grounded approach, emphasizing innovation and real-world applications. With advanced bridging systems, DeFi debit cards, and a comprehensive wallet, Retik aims to bridge the gap between traditional finance and cryptocurrency, offering compelling solutions for individuals and businesses alike. Retik Finance employs open-source protocols and rapid product development to construct advanced crypto-fiat bridging systems. These systems provide swift, secure, and scalable global payment solutions, integrating cryptocurrency seamlessly into the global payment landscape. Retik Finance's DeFi debit cards serve as a direct link to users' digital wallets, offering unprecedented versatility in both physical and virtual formats. Integration with payment systems like Visa and Mastercard enhances the possibilities for digital asset usage. Retik Pay revolutionizes online payment processing within the Retik Finance

ecosystem, introducing blockchain technology benefits to e-commerce. The Retik Wallet consolidates decentralized exchanges into a unified application, providing access to diverse liquidity sources and enabling various traditional DeFi activities. Retik Finance's recent presale raised an impressive \$600K within 5 days. In addition, the RETIK has recently announced its \$333K Mega Giveaway event. This early success, combined with innovative solutions, positions the RETIK token for potential long-term growth. Retik Finance stands out with its innovative bridging systems, DeFi debit cards, and a comprehensive wallet, offering real-world applications. Ultimately, the choice between SHIB and RETIK depends on individual preferences, risk tolerance, and belief in the projects' future trajectories.

About Retik Finance Retik Finance (RETIK) is a cutting-edge decentralized finance (DeFi) project revolutionizing global transactions with its innovative suite of financial solutions. Introducing futuristic DeFi Debit Cards, a Smart Crypto Payment Gateway, AI-powered Peer-to-Peer (P2P) lending, and a Multi-Chain Non-Custodial Highly Secured DeFi Wallet. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Linktree: <https://linktr.ee/retikfinance>

Earlier this week, Bitcoin (BTC) surged past \$42,000 to a 19-month high, sparking new price bets. Prominent financial figure Bloomberg predicts that Bitcoin is on a long-term rally towards \$500,000. According to their report, "Bitcoin topping \$42,000 is just the start of a fresh crypto supercycle that will push the world's biggest token above \$500,000 in what adherents say is the new monetary order taking Wall Street by storm." Last year, the CEO of Galaxy Digital, Mike Novogratz, made a similar call when he predicted that Bitcoin would hit \$500,000 within five years. But what does a Bitcoin rally to \$500,000 mean for the rest of the crypto market? Specifically, what does it mean for Shiba Inu (SHIB) and Retik Finance (RETIK), two investor favorites? Shiba Inu (SHIB): Does the meme coin stand a chance? Shiba Inu (SHIB) is an Ethereum-based meme coin and Dogecoin (DOGE) competitor. Like DOGE, SHIB features the image of a smirking shiba inu dog as its mascot. Shiba Inu surged over 67 million percent from when it was launched in August 2020, reaching its all-time high in October 2021. SHIB is currently trading roughly 90% below its all-time high. Apart from the market-wide downtrend that set in after the 2021 bull cycle, another reason for this dramatic fall in the price of Shiba Inu (SHIB) is a lack of utility. Shiba Inu (SHIB) was primarily created as a meme coin with no real-life use cases. As a result, its price was very volatile, with large, unpredictable price swings. Since 2021, the development team behind Shiba Inu, Ryoshi, has built an ecosystem of DeFi products around the SHIB token to give it more utility. The ecosystem includes a decentralized exchange, an NFT marketplace, an Ethereum layer-2 scaling solution, and a metaverse platform. But this has not done a lot to restore SHIB's value. The token's price is still far from its peak. Shiba Inu (SHIB) is also facing competition from other meme coins. Dogecoin is still the most valuable meme coin, with a market cap nearly double that of Shiba Inu. Newer meme coins, such as PEPE and Grog, also pose a challenge to the current position of SHIB. Typically, when Bitcoin rises, other cryptocurrencies rise with it. However, SHIB's dominance is diminishing, making its future questionable.

Retik Finance (RETIK): A Safer Bet Retik Finance is causing a stir in the decentralized finance (DeFi) market. The project launched its presale campaign earlier this week and sold out the first stage within 72 hours, raising over \$450,000. This is among the best presale performances of 2023. Retik Finance is an Ethereum-based platform that seeks to reshape the financial landscape. Retik's ecosystem includes a multi-chain Web 3 wallet, futuristic DeFi debit cards, and a payment gateway, among other features. Let's see how each of these contributes to the allure of the project: Retik DeFi Debit Cards: Perhaps one of the most innovative features of this project. Retik DeFi debit cards allow users to spend crypto directly from their wallets on everyday expenses such as grocery shopping or car fuel. A partnership with payment systems such as Visa and MasterCard facilitates instant crypto-to-fiat conversion, allowing users to make payments even to merchants who may not directly accept crypto payments. Users can also use the cards at an ATM anywhere in the world to make cash withdrawals. Retik DeFi debit card users are eligible for up to 5% in cashback rewards. Retik Pay: This payment gateway provides a user-centric pick for business owners looking to integrate crypto payments into their businesses. It is cost-effective, globally available, and compatible with any e-commerce platform. Retik Wallet: The wallet is linked to the Retik DeFi debit cards to facilitate the conversion of cryptocurrencies to fiat currency, eliminating the need for decentralized exchanges such as Binance. The wallet prioritizes top-tier security, ensuring the safety of all user transactions and funds. It has been hailed as one of the most secure Web 3.0 wallets. Retik Wallet also enables users to engage in all typical DeFi activities, including swapping, farming, mining, staking, lending, borrowing, and shorting. These products put Retik Finance ahead of the competition and in an excellent position to benefit from the new investors and volume attracted to the cryptosphere by Bitcoin. In just one week, Retik Finance has established itself as a major contender in the upcoming bull run. The current price of RETIK is \$0.040. Market analysts predict a sustained rally that could see RETIK hit \$10 in 2024. To celebrate its early success, Retik Finance is holding a giveaway contest where ten lucky participants will share a \$333,000 prize. To learn more about this wonderful opportunity, Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Linktree: <https://linktr.ee/retikfinance>

- At the time of writing, AVAX is trading at \$40.81, up 13.54% in the last 24 hours. - If the price goes below \$38.5 level then it will likely test \$34.4 support level. Avalanche (AVAX) has surged by 13% in the last 24 hours to join the top 10 cryptocurrencies list by market value, defying the severe market reversal. The value of AVAX has doubled since the beginning of 2023, and it has gained 84.28% in the last week, as it regained the \$40 level for the first time since May of last year. In terms of market capitalization, Avalanche (AVAX) is now in the top ten, surpassing Dogecoin (DOGE). Moreover, Avalanche is now following a route that may replicate Solana's recent meteoric rise. According to the data supplied by DeFiLlama, Avalanche has also seen substantial growth in the DeFi industry. It draws attention to important updates at Trader Joe, the top DEX based on the Avalanche network. The platform's income reached a notable milestone of \$145,000 on December 11th, and its fee revenues

climbed to \$1.23 million, achieving the second-highest level of the year. Investors Optimistic According to the statistics provided by the on-chain analytics platform IntoTheBlock, there has been a notable surge in the frequency of huge AVAX transactions. Last week, there were over 1000 transactions that were above \$100,000, pointing towards increased optimism among large traders. At the time of writing, AVAX is trading at \$40.81, up 13.54% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 20.74%. The price recently broke above the key resistance level of \$38.5. If the bullish momentum continues and price manages to go above \$55.8 then it will likely test \$76.7 resistance level. Conversely, if the price goes below \$38.5 level then it will likely test \$34.4 support level.

The surge in the popularity of online gambling based on cryptocurrencies in recent years can be attributed, in part, to the swift withdrawal times offered by Bitcoin (BTC) casinos and the overall convenience and user-friendly nature of these platforms. In the past, gamblers would gather in specialized hotels dedicated to gambling, but the increasing digitization of the industry prompted a significant market shift. With the emergence of these casinos, the once seemingly unattainable dream of receiving winnings immediately upon winning has become a reality. Therefore, let's discuss the best options when it comes to crypto casinos, provided by CasinoFinder. Stake.com: The Global Player Stake.com is a Curaçaoan-Australian online casino. Not only is it one of the most recognizable crypto casinos in the world, but it is also run by Medium Rare NV, a company based in Curaçao that has an online casino license. In addition, it is a multinational corporation with offices in Serbia, Australia, and Cyprus, as well as employees all over the world. - Pros: - Operated by Medium Rare NV, a company with a global presence, Stake.com caters to players worldwide. - Holds an online casino license in Curaçao, ensuring a regulated, private, and secure gaming environment. - With offices in Serbia, Australia, and Cyprus, Stake.com boasts a diverse and experienced team. - Fast transactions, convenient limits for withdrawals and deposits which are available 24/7. - Cons: - The appearance of the website and its user interface could've been better designed. - Limited options for customer support. - Visit Stake.com today to learn more about the platform, its features, and bonuses. BC.Game: Community-Driven Experience BC.Game is a community-based crypto casino and was one of the first gaming platforms to support the Bitcoin Lightning Network. Soon after creating an account, the game will prompt users to enable two-factor authentication. C.I.L. Curacao Interactive Licensing N.V. grants the game its official gaming license. BC.Game has obtained a gaming license and is now an officially regulated online cryptocurrency casino. - Pros: - BC.Game supports Bitcoin Lightning Network, enhancing transaction speed and efficiency. There is also 2FA (Two-Factor Authentication) for added security. - BC.Game prioritizes a community-based approach, fostering a sense of engagement and shared experience among players. - The platform offers over 10,000 slot games as well as other fun activities. - Cons: - Lucky spin is not provably fair. - Lack of a freeplay mode. - Visit BC.Game today to learn more about the platform, its features, and bonuses. Roobet: Cryptocurrency-Only Platform Roobet is a leading online gambling platform which also has a gambling license issued by the Curacao government. This is a cryptocurrency-only casino that features 2,400+ games, but only transacts in Bitcoin, Litecoin, and Ethereum. - Pros: - Holds a gambling license under the Government of Curacao, ensuring a regulated and secure gaming environment with plenty of features like a Live Casino and various sports betting options. - Roobet accepts leading crypto options like Bitcoin, Litecoin, and Ethereum. - Over 2,400 games are available. - Cons: - Being a cryptocurrency-only platform might limit accessibility for players preferring traditional payment methods. Roobet only accepts BTC, ETH, LTC, and USDT for deposits and withdrawals. - Visit Roobet today to learn more about the platform, its features, and bonuses. Fairspin: Crypto Diversity at Its Finest Fairspin is a cryptocurrency-powered online casino that accepts deposits in digital currencies such as Bitcoin, Ethereum, Cardano, Dash, Bitcoin Cash, Tether, Neo, and Dogecoin. The platform has over 5,000 casino games, as well as live and virtual sports betting options alongside exciting tournaments. With generous promotions and a native utility token, it's potentially one of the best altcoin gambling platforms available. - Pros: - Fairspin allows deposits in a variety of digital currencies, including BTC, ETH, USDT, and more. - The platform offers a diverse range of over 5,000 casino games like Baccarat, Roulette, and Blackjack, ensuring there's something for every player. - Cons: - The variety of supported cryptocurrencies may be overwhelming for newcomers to the crypto casino scene. The extensive game library may also pose a challenge for players looking for specific titles or types of games. - Inconvenient bonus requirements. - Fairspin is restricted in many countries. - Visit Fairspin today to learn more about the platform, its features, and bonuses. TrustDice: Gaming Variety and Beyond Founded in 2018, TrustDice has a fantastic selection of casino games. Over 2,000 casino games from leading developers such as Pragmatic, Evolution, Evoplay, Gameart, and others are available on the platform. TrustDice is also regulated and licensed by the Curacao eGaming Authority and provides a variety of games such as live dealer games, dice and crash games, and video slots. - Pros: - With over 2,000 games from leading developers, TrustDice offers an unparalleled selection for players. - Features games from top developers like Pragmatic, Evolution, and Evoplay, ensuring high-quality entertainment. - Easy to use interface. - Cons: - The extensive game library might pose a challenge for players looking for specific titles or types of games. - Only a few games are provably fair. - The wagering requirements for some of the bonuses can be unfavorable. - Visit TrustDice today to learn more about the platform, its features, and bonuses. About CasinoFinder CasinoFinder is committed to shaking up the traditional online casino scene by focusing on those that offer more than just a few games. The team scours the web to bring users the top gambling platforms with lucrative bonuses and rewards. By conducting thorough research and analysis to handpick only the finest crypto casinos, users are ensured of nothing but the best in terms of security, technology, and overall gaming experience. The featured crypto casinos also boast sophisticated technologies that provide a secure and seamless environment. Users' privacy and funds are of the utmost importance, and the casinos selected by CasinoFinder go the extra mile to provide top-notch security as well as user-friendly interfaces, making it easy for both newbies and seasoned players to explore the exciting

world or crypto gaming effortlessly. Finally, CasinoFinder brings users a diverse gaming portfolio, including popular options like Plinko, Crash, Dice, Blackjack, Poker, Baccarat, Roulette, and Slots. Whether someone is a strategic card player or a fan of the thrill in chance-based games, these casinos have something for everyone. In conclusion, each aforementioned crypto casino has its unique strengths and weaknesses. It is important to consider personal preferences and budget in order to find the perfect match for an online crypto gaming adventure. Be sure to check out CasinoFinder's official website for additional information.

- Bonk, a dog-themed meme coin on the Solana blockchain, is now the third-largest meme coin by market capitalization. - Over the last month, the meme coin has surged by an impressive 363%, reaching a market cap of \$707 million. - BONK currently holds the third position among meme coins, trailing behind Dogecoin and Shiba Inu. The Solana blockchain is witnessing the meteoric rise of Bonk, a dog-themed meme coin, which has swiftly climbed the ranks to become the third-largest meme coin by market capitalization. According to recent CoinGecko data, Bonk has surged past the market cap of its counterpart, Pepe, marking an impressive milestone in the world of meme coins. Over the last month, Bonk has experienced an astonishing 363% increase in its price, propelling its market cap to an impressive \$707 million. BONK now ranks behind Dogecoin and Shiba Inu. Bonk's current market cap places it just behind the behemoths of the meme coin realm—DOGE and SHIB—with market caps of \$5.66 billion and \$13.64.4 billion, respectively. The meme coin, which made its debut on Dec. 29, 2022, faced an impressive 3,766% surge in its first week of trading despite the challenging conditions of the bear market. Subsequently, from Jan. 5 onwards, Bonk experienced a decline, hovering around its all-time lows for the better part of a year. However, a turning point emerged on Oct. 21, 2023, when Bonk initiated a remarkable upward trajectory. Since then, it has achieved an outstanding 6215% gain, solidifying its position as the most high-performing mid-cap meme coin over the last three months. As Bonk continues to ride this wave of success, the cryptocurrency community remains captivated by its unprecedented ascent and the evolving dynamics within the meme coin landscape.

Cryptocurrencies have witnessed a meteoric rise in recent years, with various tokens gaining fame for their unique attributes. Shiba Inu (SHIB) emerged as one of the prominent meme coins, capturing the fascination of investors worldwide. However, the crypto landscape is dynamic, and newer tokens like Retik Finance (RETIK) are making waves. In this article, we'll explore whether Retik Finance has the potential to surpass Shiba Inu in 2024 and why experts believe it could be bigger and better. The Shiba Inu Phenomenon Shiba Inu (SHIB) became a global sensation due to its meme coin status, inspired by the infamous Dogecoin (DOGE). The rise of SHIB can be attributed to its community-driven approach, with a vast and passionate following of supporters who affectionately call themselves "aShibArmy." However, meme coins like SHIB primarily rely on hype and community sentiment, which can lead to extreme volatility. Retik Finance (RETIK) — Breaking Presale Records While Shiba Inu has been capturing headlines, Retik Finance has quietly emerged as a promising contender. RETIK's unique approach sets it apart from meme coins like SHIB. The Retik Finance presale, in particular, has garnered substantial attention in the crypto community, breaking records and piquing the interest of investors and experts alike. Here's why experts believe that Retik Finance could outshine Shiba Inu in 2024: Utility Beyond Memes Retik Finance isn't just another meme coin. While SHIB primarily relies on meme culture and viral marketing, RETIK is focusing on providing real utility within the decentralized finance (DeFi) space. This utility includes features like DeFi Debit Cards, Retik Pay (a next-gen payment gateway), an AI-powered P2P lending platform, and the world's most secure DeFi wallet. These features offer tangible benefits and a clear use case for RETIK beyond memes. Presale Success Retik Finance's presale success has been remarkable, raising over \$450,000 to sell out its first presale stage in less than 72 hours. Early buyers and big whales have seen gains of up to 100% in less than 74 hours, making it one of the top presale sales in recent times. This achievement demonstrates the market's confidence in RETIK's potential and distinguishes it from many meme coins that struggle to deliver on their promises. Diverse Ecosystem Unlike Shiba Inu, which primarily focuses on meme tokens, Retik Finance is building a diverse ecosystem of DeFi solutions. This ecosystem caters to various aspects of decentralized finance, making it more resilient and adaptable to market trends. This diversification enhances RETIK's potential for sustained growth. Transparency and Security Retik Finance prioritizes transparency and security. It has undergone extensive security audits, assuring investors that their assets are safeguarded. In contrast, meme coins like SHIB often lack the same level of transparency and security measures. Analyzing Utility Shiba Inu (SHIB) is undoubtedly a cultural phenomenon with a dedicated community. However, it's essential to analyze the utility aspect to understand why Retik Finance (RETIK) could potentially surpass SHIB in 2024. Shiba Inu (SHIB) SHIB primarily serves as a meme coin. It relies on meme culture, community engagement, and viral marketing to maintain its value. While it has made headlines, its long-term sustainability is questionable, as it lacks real utility beyond being a meme token. Retik Finance (RETIK) RETIK, on the other hand, is rooted in the decentralized finance (DeFi) sector, which offers practical applications. RETIK's utility-driven features, including DeFi Debit Cards, Retik Pay, AI-powered P2P lending, and a secure DeFi wallet, provide tangible benefits to users. These features address real-world financial needs, setting RETIK apart from meme coins. Conclusion While Shiba Inu (SHIB) may have captured the crypto world's attention as a meme coin, Retik Finance (RETIK) is positioning itself as a utility-rich DeFi token. Experts believe that RETIK's focus on utility, its presale success, a diverse ecosystem, and a commitment to transparency and security make it a strong contender to surpass SHIB in 2024. The crypto landscape is ever-evolving, and while memes have their place, tokens with real-world utility like RETIK are likely to have a more lasting impact and potentially become even bigger and better investments. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Linktree: <https://linktr.ee/retikfinance>

As we enter the final month of 2023, the year's cryptocurrency market has been a whirlwind,

experiencing significant highs and lows. Whether you're a seasoned investor seeking immediate returns or a newcomer aiming for long-term growth, making informed decisions within this dynamic landscape is crucial. This article delves into the top 3 cryptos worth considering in December 2023, highlighting their potential for both short-term gains and long-term growth. These carefully selected assets exhibit strong market performance, innovative technology, and robust fundamentals, making them compelling investment options. While all these tokens carry substantial potential for significant rewards, the Retik Finance token stands out by not only promising investment returns but also providing innovative solutions to bridge the gap in the cryptocurrency-fiat payment system. Stay tuned and maintain a vigilant focus on the Retik Finance token for promising developments. Retik Finance (RETIK) Retik Finance is pioneering a new era of crypto-fiat bridging through its innovative approach, which leverages open-source protocols and agile development methodologies. Powered by secure and decentralized smart contracts, they offer swift, secure, and scalable global payment solutions. But Retik Finance goes beyond simple bridging. Their DeFi debit cards act as a direct link to users' digital wallets, offering unparalleled versatility in both physical and virtual formats. These cards allow for seamless conversion of crypto funds into fiat currency at the point of transaction, removing barriers to spending your digital assets. Furthermore, integration with major payment systems like Visa and Mastercard expands the possibilities for utilizing crypto in your everyday life. Retik Pay further revolutionizes online payment processing within the Retik Finance ecosystem. By integrating blockchain technology into e-commerce, Retik Pay enables seamless, secure, and cost-effective online transactions, unlocking a new level of convenience for both merchants and consumers. In summary, Retik Finance presents a comprehensive solution for managing your digital wealth, encompassing advanced bridging systems, innovative payment gateways, and a revolutionary payment processing platform. This comprehensive approach positions them as a leader in reshaping the future of decentralized finance. The recent initiation of Retik Finance's presale has sparked heightened enthusiasm within the crypto community. Priced at \$0.030, the RETIK token has swiftly accumulated an impressive \$242,694 within a mere 48 hours, highlighting the substantial potential of this groundbreaking project. Its early success has captivated industry experts, positioning the token as a noteworthy investment before the close of December.

Shiba Inu (SHIB) Shiba Inu (SHIB) is an Ethereum-based altcoin that has exploded in popularity since its launch in August 2020. Its mascot, the adorable Japanese hunting dog of the same name, has become synonymous with the cryptocurrency, while its positioning as an alternative to Dogecoin has earned it the nickname "Dogecoin Killer." However, one of the strongest indicators provided by the analytics platform IntoTheBlock shows a recent jump in the number of transactions conducted by new SHIB investors. The "New Adoption Rate" metric, which measures the number of active addresses buying SHIB for the first time, has increased by 40%. Lastly, these developments show that SHIB is a token to buy before December ends to get huge gains in the long run. The token currently trades for \$0.000009931. Pepe (PEPE) Pepe Coin (\$PEPE) burst onto the scene in April 2023, taking the Ethereum network and meme coin enthusiasts by storm. Within just three weeks, it had already surpassed a staggering \$1 billion market cap, a feat that took Dogecoin four long years to achieve. This explosive growth cemented \$PEPE as one of the most actively traded cryptocurrencies, leaving many wondering what fueled its meteoric rise. Meanwhile, despite its official disclaimer stating no intrinsic value or expectation of financial returns, \$PEPE has amassed a significant and dedicated holder base. This passionate community actively engages in unofficial transactions, with estimates exceeding 100,000 trades on major exchanges like Binance, showcasing the strong engagement and interest surrounding this meme coin. However, with the rally of the past few days, many top analysts believe the altcoin season has likely been ushered in and the likes of PEPE are taking this call further. At the time of writing, PEPE has jumped by 4.02% in the past 24 hours to \$0.000001536, extending its overall growth in the trailing seven-day period to 38.69%. This rally suggests that PEPE is a token you should consider buying in December 2023. In summary, before investing in a token, it's crucial and advantageous to assess the solutions it provides and how they address current challenges in the cryptocurrency space, something Retik Finance excels at. Explore Retik Finance and consider becoming a token holder before December concludes for potential benefits. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Linktree: <https://linktr.ee/retikfinance>

- Dimon responded by saying that he would "close down" Bitcoin if he were in charge. - Notably, Dimon's organization has substantial investments in blockchain technology. The chief executive officer of JPMorgan Chase, Jamie Dimon, took aim at cryptocurrency—specifically Bitcoin (BTC)—during his appearance at a Senate Banking, Housing, and Urban Affairs committee oversight hearing in Washington, DC, today. Senator Elizabeth Warren probed the head of JPMorgan for his thoughts on anti-money laundering throughout the session. When asked about this, Dimon responded by saying that he would "close down" Bitcoin if he were in charge. Severe Criticism Dimon's position on BTC is based on the fact that criminals, including cybercriminals and drug traffickers, have begun to use digital assets to fund their illicit operations. Moreover, the criminals, in his opinion, launder money and avoid paying taxes by using cryptocurrencies. In addition to stating that stablecoins need comprehensive regulation, he has repeatedly warned investors to avoid Bitcoin. Notably, these discussions with Senator Warren are occurring just before the US senator is set to unveil the crypto Bill on which she has been laboring for some time. Furthermore, Senator Warren has been attempting to persuade her fellow senators and members of the Senate Banking Committee to advocate for crypto regulation by using her position on the committee. To be more specific, she urged senators and committee members to join a letter demanding that banks discontinue crypto services by sending it to the OCC. Notably, Dimon's organization has substantial investments in blockchain technology, despite his steadfast and publicly stated disapproval of Bitcoin. The financial services business has lately been a part of conversations about a spot Bitcoin exchange-traded fund.

- Do Kwon's contestation of the verdict was affirmed by the Montenegrin Court of Appeal. The Montenegrin Court of Appeals will again rule on the extradition. The founder of Terraform Labs, Do Kwon, has recently appealed the extradition order made by the High Court of Podgorica in Montenegro. On December 6, Do Kwon's contestation of the verdict was affirmed by the Montenegrin Court of Appeal. Kwon stated: "I do not accept the court's decision to extradite me, so I do not submit to the court's decision." New Ruling Awaited Moreover, the purpose of this appeal is to force the Montenegrin Court of Appeals to reconsider its judgment on extradition. Because of this, the Montenegrin Ministry of Justice is having a hard time deciding whether or not to return Do Kwon before the December 15 deadline. This change in the law followed the original June 15 order by the Montenegrin court to extradite Do Kwon, which established a six-month detention term until December 15. Furthermore, the press secretary of the Podgorica High Court, Marija Rakovic, said on December 1 that Do Kwon and others engaged in extradition proceedings have the ability to dispute court rulings, according to information received from the local news outlet Digital Asset. The Montenegrin Court of Appeals will again rule on the extradition after the appeal is lodged, Rakovic said. The locals think there's little hope of changing the repatriation decision, but the legal procedure is still ongoing. The extradition judgment was made around two weeks ago, and Do Kwon has appealed. In a news statement dated November 24, the High Court of Montenegro declared that Do Kwon's extradition, which had been sought by both South Korea and the US, had been approved. - A total of 10,218 Coinbase (COIN) shares, valued at \$1.4 million, were dumped. - In a week, the price of Coinbase stocks increased by 16%, and in a month, by 63%. As the price of Coinbase (COIN) shares kept climbing amid a phenomenal rebound in the crypto market, Ark Invest, led by Cathie Wood, sold further shares. On the other hand, at the same time, Robinhood (HOOD) shares are still being purchased by Ark Invest's several funds in anticipation of massive swings. A total of 10,218 Coinbase (COIN) shares, valued at \$1.4 million, were dumped by Cathie Wood's Ark Invest funds. The decision is in response to the recent surge of COIN stocks rising to a 19-week high. 7,248 Coinbase shares were sold by the ARK Innovation ETF (ARKK), while 2,970 COIN stocks were sold by the ARK Fintech Innovation ETF (ARKF). After reaching a new high of \$146.30, Coinbase (COIN) stock price is trading at \$145.98, a gain of 3.42%. In a week, the price increased by 16%, and in a month, by 63%. Banking on Robinhood The performance of Ark Invest funds has been enhanced by the recent crypto market rise. The cryptocurrency market will keep going up as long as investor confidence is strong. Amidst dumping Coinbase shares, the firm nevertheless continued to purchase shares of Robinhood (HOOD). ARK Fintech Innovation ETF (ARKF) bought 14,702 Robinhood shares. As a part of their aim to capture market share, Robinhood announced expansion to the UK last week. In November, the platform's crypto trading volume jumped 75%, riding on the recent market rally. At the time of writing, Bitcoin is trading at \$42,827, up 2.95% in the last 24 hours as per data from CoinMarketCap. The bulls continue to dominate as most cryptocurrencies are trading in green. A test version of FAssets has been successfully deployed on Flare's Coston testnet by renowned blockchain research and development firm Flare Labs. Enabling DeFi and smart contracts for older tokens has reached a major milestone with this. Non-smart contract tokens like BTC, XRP, and DOGE may be utilized securely with smart contracts on Flare thanks to the FAssets system. These non-smart contract tokens may be minted into FAssets and used in decentralized Flare network apps to generate rewards or yield. The assets may also be bridged to other networks once they are on Flare. Hugo Philion, CEO of Flare Labs, stated: "More than 70% of the total value of all blockchain assets do not have smart contracts and therefore can't be efficiently deployed in DeFi. FAssets are formally a Delta neutral synthetic with multi collateral backing. They enable these legacy assets to be represented on a smart contract chain without requiring a centralized third party. For developers, it will be a new and trustless means to access new potential users and a large amount of currently untapped value." Before launching on the Flare mainnet, FAssets will undergo an initial private Beta on Flare's Coston testnet, followed by an implementation on the Songbird canary network. All of the system's primary components will be covered in the beta, with Flare Labs and its early partners taking on all essential tasks and offering the infrastructure. Test assets will make it possible to simulate market volatility and evaluate how resilient the system is under pressure. External participants will be allowed to join as the beta test moves forward. Users and dapps who provide sustainable value to Flare will be rewarded with FLR tokens from the cross-chain incentive pool once FAssets become live on the Flare mainnet, in addition to receiving DeFi yields. FAssets explanation video: <https://youtu.be/90qC-aIWdRI>

- Ronaldo is accused of encouraging and taking part in the sale of unregistered securities. - In mid-2022, Binance and Ronaldo began a multi-year collaboration. The world-renowned footballer Cristiano Ronaldo is embroiled in a class action lawsuit that claims he caused investor losses via promotion of the crypto exchange Binance. Ronaldo is accused of encouraging and taking part in the sale of unregistered securities on the Binance exchange in a complaint that was filed in a Florida District Court on November 27th. In mid-2022, Binance and Ronaldo began a multi-year collaboration to market a number of Ronaldo's NFTs, with three of the star's collections associated with Binance. Signups for Ronaldo's NFTs allegedly increased the likelihood that users would use Binance for other reasons, including as investing in what the lawsuit describes as unregistered securities. Seeking Damages and Attorney Expenses Moreover, according to the lawsuit, Ronaldo's 850 million social media followers were instrumental in Binance's meteoric rise to fame. Also, they claim that the NFT sales he did were "incredibly successful" in drawing attention to the exchange; in the week after the sale, searches for Binance increased by 500%. As per the complaint, Ronaldo knew or should have known that Binance was offering unregistered crypto assets because of his extensive knowledge of investing and his ability to hire outside consultants. Furthermore, Ronaldo was accused of failing to disclose

money received for endorsing cryptocurrencies, as stated in the lawsuit, which relies on United States SEC regulations. Gordon Lewis, Mikey Vongdara, and Michael Sizemore are the class action plaintiffs suing for damages and attorney expenses. The SEC has also filed a lawsuit against Binance. Moreover, Binance is allegedly under investigation by the SEC into allegations of client money misappropriation and unregistered securities sales, among other accusations. - Crypto hacks in 2023 resulted in a \$735 million loss across 69 incidents. - Atomic Wallet's \$100 million hit is linked to North Korea's Lazarus Group. As the crypto world navigates another tumultuous year, the specter of cybercriminals looms large. A string of heists has plagued the industry, amounting to over \$735 million siphoned across 69 hacks so far in 2023, marking a staggering surge in digital theft. Among these, six stand as emblematic examples of the audacious exploits that have rocked DeFi protocols and crypto exchanges. 1. Euler Finance The year began with a seismic blow as lending protocol Euler Finance endured a colossal breach, hemorrhaging close to \$197 million. The attacker leveraged vulnerabilities in Euler's donate function contract, sparking a high-stakes chase. Despite the hacker's claim and partial restitution, questions linger about the intricacies of the exploit and the motives behind the elusive figure. 2. Multichain The summer heat brought more than sweltering temperatures as the Multichain cross-chain bridge protocol was ransacked, lost over \$125 million. Suspicion of insider involvement clouded the incident, amplifying concerns about decentralized protocols. The hack reverberated across Fantom, Dogecoin, and Moon River bridges, shaking confidence in centralized asset repositories. 3. Atomic Wallet June saw the Atomic Wallet, a bastion of non-custodial security, breached for a staggering \$100 million. Dark shadows emerged as the hack was allegedly linked to the North Korea-associated Lazarus Group. Beyond financial repercussions, the attack's geopolitical implications underscored the intersection of cybercrime and global security concerns. 4. Curve Finance Multiple exploits rocked Curve Finance in July, resulting in a hefty loss of \$61 million across various trading pools. The initial breach was a catalyst for a wave of subsequent attacks, highlighting vulnerabilities within DeFi platforms and sparking urgent calls for enhanced security measures. 5. Stake.com September brought the infiltration of Stake.com, a titan in the crypto betting arena, suffering a \$41 million hit. Downplaying the impact on operations highlighted vulnerabilities in high-profile platforms, emphasizing the need to fortify digital fortresses against evolving threats. It signals the importance of fortifying digital fortresses against evolving threats. 6. CoinsPaid A sophisticated social engineering attack targeted CoinsPaid, resulting in a months-long campaign culminating in a \$37.3 million heist. The assailants' link to the Lazarus Group echoed earlier connections, emphasizing the persistent threat posed by sophisticated cybercriminal syndicates. Furthermore, the drumbeat of heists reverberates through the crypto landscape, painting a harrowing picture of vulnerabilities and escalating risks. Each breach unveils new dimensions of cyber threats, prompting a collective call to action for bolstered security measures and industry-wide resilience. As the year hurtles toward its conclusion, the battle against digital plunder remains a pressing priority for the crypto ecosystem's fortitude and longevity.

- Markets for ADA/PERP, LINK/PERP, DOGE/PERP, and XLM/PERP have been announced. - The pick of these assets was an obvious one given their distinct value propositions. Cardano (ADA), Chainlink (LINK), Dogecoin (DOGE), and Stellar (XLM) have all been added to the list of upcoming assets that Coinbase International Exchange, a subsidiary of Coinbase Global Inc. aimed at non-US customers, will be offering as Perpetual Future Contracts. The exchange has announced that it would offer trading pairs for all four assets on December 30 at 10 am UTC, clearing the way for its customers to adopt the new digital currencies as long as the necessary liquidity criteria are satisfied. Markets for ADA/PERP, LINK/PERP, DOGE/PERP, and XLM/PERP have been announced for launch on Coinbase International Exchange and Coinbase Advanced. Strategic Inclusion The four new cryptocurrencies join Bitcoin, Ethereum, and XRP, as well as others that have been available on the platform since it began accepting non-US consumers. Coinbase has to take a different approach to serving its non-US consumers properly due to the lack of clarity in the legislation that binds its US users. Also, with the inclusion of ADA, LINK, DOGE, and XLM, Coinbase has taken a deliberate step towards expanding its international presence and thereby increasing its exposure to traders in the larger digital currency ecosystem. The pick of these assets was an obvious one given their distinct value propositions and loyal group of enthusiasts. Chainlink has expanded its scope as the industry's de-facto Oracle service provider while Cardano has made news this year for its innovative features and devotion to development efforts. Amid the regulatory woes in the U.S Coinbase has been eager to expand internationally eyeing a larger market share. In the ever-evolving landscape of cryptocurrency, memecoins have become a captivating and volatile corner of the market. As of 2023, notable names like Dogecoin, Shiba Inu, Pepe, Floki, and Bone ShibaSwap have captured the spotlight, drawing enthusiasts from dedicated communities worldwide. Further, the global market is currently displaying positive momentum and signaling the potential onset of the next bull run. This article highlights the top 10 memecoins for consideration in 2023, taking into account insights from crypto insiders, market trends, reputable media sources, and specialized analysts. Dogecoin (DOGE) - Market Cap: \$11.1 Billion - Trading Volume 24-H: \$394 Million Dogecoin emerged as the first meme token in the cryptocurrency market and has garnered significant attention since 2021, propelled by support from celebrities like Elon Musk. Subsequently, DOGE's market cap soared, securing its position among the top 10 cryptocurrencies. Over the past year and a half, Dogecoin's price movement has been restricted within a symmetrical triangle pattern. Despite its seemingly uneventful price behavior, this consolidation phase signals an opportune period for investor accumulation, leading to a gradual increase in price. At the time of writing, DOGE is trading at \$0.07886, reflecting a 2.5% increase in the last 24 hours and a noteworthy 22% climb over the past month. If the existing trend persists, Dogecoin may breach the \$0.09 to \$0.15 range, potentially

paving the way for further surges and offering DOGE the opportunity to reach the \$0.3 to \$0.5 range in 2024. However, if DOGE fails to sustain its upward trajectory, it may find support levels at \$0.072 and \$0.065, marking potential points of stability in the face of a downturn. Shiba Inu (SHIB) - Market Cap: \$4.9 Billion - Trading Volume 24-H: \$126 Million Shiba Inu, recognized as SHIB, witnessed a surge in popularity, capitalizing on its association with the strong SHIB Army. Launched in 2020, this meme token aims to establish a decentralized platform driven by its community of token holders. Shiba Inu's layer 2 blockchain, 'Shibarium,' positions it as a utility token, garnering significant attention. Moreover, SHIB has gained acceptance from various vendors and established partnerships, including with Binance Pay. As of the latest update, SHIB is trading at \$0.000008379, has climbed about 2.6% in the last 24 hours, and has seen a 13% rise over the past month. There is potential for SHIB to reach \$0.000015 in 2024. However, if SHIB fails to overcome \$0.0000096 resistance, it may find support levels at \$0.0000076 and \$0.0000062, offering stability in the face of a potential downturn. Pepe (PEPE) - Market Cap: \$473 Million - Trading Volume 24-H: \$65 Million Pepe Coin, introduced just this April 2024, has swiftly captured the spotlight, reaching a significant market cap of \$1.6 billion by May. Also, investors in PEPE experienced substantial returns, exceeding 90%. However, the memecoin encountered a decline in its value, mirroring the trajectory of many leading cryptocurrencies. PEPE witnessed a loss of over \$1 billion in market cap. Currently trading at \$0.000001127, soaring over 10% in a month, there is potential for PEPE to reach \$0.0000027 in 2024 if the existing trend persists. On the flip side, if PEPE fails to sustain its positive trend, it could find support at \$0.00000092, providing a potential floor amid market uncertainties. Floki (FLOKI) - Market Cap: \$331 Million - Trading Volume 24-H: \$26 Million Ranked fourth in the top 10 meme cryptocurrency lists. FLOKI is a revolutionary memecoin inspired by Elon Musk's dog and launched in July 2021. FLOKI uniquely combines elements of decentralized finance, non-fungible tokens (NFTs), and the metaverse. Recent momentum has been noted, particularly with Musk's dog securing the title of Twitter CEO. Currently trading at \$0.00003352, FLOKI has experienced a 2.2% increase in the last 24 hours and an impressive 34.5% surge over the past month. If the current trend persists, FLOKI may have the potential to surpass \$0.00008 and even \$0.00015. However, if FLOKI faces a downturn, it could find support at \$0.000026, offering a potential stabilization point. Bone ShibaSwap (BONE) - Market Cap: \$140 Million - Trading Volume 24-H: \$6.6 Million Bone ShibaSwap holds a crucial position as the decentralized exchange (DEX) governance token within the ShibaSwap ecosystem. This token, allowing the Shib Army to participate in voting on proposals, submitting ideas, and accessing future NFTs, operates on the Ethereum blockchain alongside the Shiba Inu (SHIB) and Doge Killer (LEASH) tokens. As of the latest update, BONE is trading at \$0.614. With the prolonged bear trend subsiding, BONE has the potential to breach \$1 and \$3 in 2024. Conversely, if BONE fails to overcome the challenges, it could experience a decline to \$0.56 and \$0.38, signifying possible support levels in the face of market uncertainties. Bonk (BONK) - Market Cap: \$241 Million - Trading Volume 24-H: \$50.2 Million BONK, the first dog-themed coin on Solana, follows a 'for the people, by the people' approach, with 50% of its total supply airdropped to the Solana community. Launched on December 25, 2022, BONK draws parallels with meme coins like Shiba Inu (SHIB) and Dogecoin (DOGE). Notably, BONK recorded an all-time high of \$0.000005327 on November 20, 2023. Sustained growth may propel it to new highs in 2024, surpassing even BabyDoge in terms of market cap. Conversely, failure could lead to a decline to \$0.0000032. Baby Doge Coin (BabyDoge) - Market Cap: \$178 Million - Trading Volume 24-H: \$1.6 Million Introduced in 2021, Baby Doge Coin has sought to ride the Dogecoin wave, maintaining a market capitalization of approximately \$178 million. Distinguishing itself from other memecoins, Baby Doge Coin emphasizes added utility, exemplified by the introduction of the decentralized exchange (DEX) Baby Doge Swap and an NFT collection on the Ethereum blockchain. Currently trading at \$0.000000001233, BabyDoge could reach \$0.0000000034 in 2024 with sustained positive momentum. Conversely, failure may result in a decline to \$0.0000000011. Dogelon Mars (ELON) - Market Cap: \$94 Million - Trading Volume 24-H: \$39 Million Dogelon Mars stands as yet another meme coin's creation to leverage Elon Musk's support of Dogecoin in 2021. While not categorized as a major project, Dogelon Mars still commands a notable market capitalization of \$73 million. Separate from the strategies employed by Baby Doge Coin and Floki Inu, the Dogelon Musk project appears to place less emphasis on providing utility to the ELON token. Interestingly, the project's website prominently features a comic series as its sole highlighted 'product.' As of the latest update, Dogelon Mars is trading at \$0.0000001723. If the prevailing market trend continues to generate positive momentum for Dogelon Mars, the memecoin may potentially reach values of \$0.000000058 or even \$0.00000098 in 2024. Doge Killer (LEASH) - Market Cap: \$31 Million - Trading Volume 24-H: \$1.2 Million Doge Killer (LEASH) functions as a token within the Shiba Inu (SHIB) ecosystem, which is often hailed as the 'Dogecoin (DOGE) killer' due to its substantial popularity. SHIB has risen to become the second-largest canine-inspired coin in the cryptocurrency space and aims to serve as the Ethereum (ETH)-based counterpart to Dogecoin's Script-based mining algorithm. If Shiba Inu continues to capture the community's attention and experience further surges, LEASH may potentially follow suit, offering a chance to overcome an extended bear trend. Presently, Doge Killer is trading at \$297, and a bullish trend could propel LEASH to prices ranging between \$720 and \$1,350 in 2024. However, failure to exceed the \$500 resistance level may result in LEASH remaining within the range of \$250 to \$330. Arbdoge AI (AIDOGE) - Market Cap: \$26 Million - Trading Volume 24-H: \$9.7 Million The final entry in the lineup is Arbdoge AI, an unconventional project serving as an experiment within the Arbitrum ecosystem. The newly launched AIDOGE has garnered a positive response from the Arbitrum community. As of the latest update, AIDOGE is trading at \$0.0000000001495, reflecting a 22% increase in the last 24 hours and a notable 27% surge over the past week. If this trend persists, AIDOGE may climb to \$0.0000000002 in 2024. Conversely, a failure to sustain this trend could lead to a decline in the price of AIDOGE, potentially reaching \$0.0000000001211. FAQ - What are the top-performing memecoins in 2023? Dogecoin (DOGE), Shiba Inu (SHIB), and Pepe (PEPE). - Are memecoins a good investment or a bad one? Memecoins can be highly volatile and speculative, posing significant risks; therefore, they are considered high-risk investments and may not be suitable for all investors. - Can memecoins move beyond speculation to

real-world utility, and how does utility development affect their long-term viability? Yes, memecoins, like Shiba Inu with its Shibarium blockchain, can shift from speculation to real-world utility, enhancing their long-term viability through practical applications. - Can memecoins, such as Dogecoin and Shiba Inu, sustain long-term growth, or is their value mostly driven by hype? The sustainability of long-term growth for memecoins like Dogecoin and Shiba Inu remains uncertain, as their value is often influenced by hype and social media trends rather than inherent utility.

- Often the market begins moving in the opposite direction of his predictions. - Bitcoin and Jim Cramer's protracted spat looks to have been in mediation for some time. Jim Cramer, a well-known TV personality and financial expert, is known for making bold market predictions. Whenever Jim Cramer makes a forecast on the future of cryptocurrencies or stocks, a phenomenon known as "Cramer's curse" typically occurs, as per the community. Often the market begins moving in the opposite direction of his predictions, prompting some investors to take the other tack. Recently, Jim Cramer, host of the stock market analysis show Mad Money, has recommended cryptocurrency investments, namely Bitcoin, on the show. Bitcoin's price saw slight increases today, suggesting that Cramer's comments caused a stir in the larger cryptocurrency markets. So Far Bitcoin Stable Bitcoin and Jim Cramer's protracted spat looks to have been in mediation for some time. Cramer apparently advised his audience to liquidate their Bitcoin holdings in October of this year, given the state of the market at the time. Cramer said in the statement that the current market circumstances show that it is a good time to get out of the crypto industry. Recent comments, however, seem to run counter to his established worldview. Moreover, in Cramer's most recent edition of CNBC Lightning Round, he indicated that one should acquire Bitcoin if they genuinely like it. Jim said that this was his way of thinking from the beginning, and that he liked it for a time. This mental framework was crucial to his financial success as per Jim. At the time of writing, Bitcoin is trading at \$37,260, up 0.59% in the last 24 hours as per data from CoinMarketCap. The crypto market has been quite stable despite the recent Binance and U.S. authorities settlement. Highlighted Crypto News Today: Sudden Dogecoin Whale Activity Sparks Speculation of Price Breakout

- Austria's Financial Market Authority (FMA) and Germany's BaFin both oversee Bitpanda. - Bitpanda, a crypto exchange, signed a memorandum of intent with the bank earlier this year. By January 2024 end, Austria-based Raiffeisen Bank plans to provide retail clients trading services in cryptocurrencies. Bitpanda, a crypto exchange, signed a memorandum of intent with the bank earlier this year, and the duo will work together to deliver the service to consumers in Vienna. Curt Chadha, the bank's head of innovation stated: "We are starting in Vienna where about a quarter of Austria's population lives." Targeting Retail Clients Bitpanda's services, including the trading of more than 250 different cryptocurrencies like Bitcoin and Ethereum, would be made available to the bank's clients as a result of the agreement. With \$215 billion in assets and 17.8 million clients in the EU and Eastern Europe, the bank's decision is another indication that crypto adoption is picking up steam, especially in regions where regulatory clarity is developing. Chadha further added: "The customer can use their mobile device to enter Bitpanda through the Raiffeisen app. The experience will be familiar, so confirming a trade will work exactly like an account-to-account bank transfer with the same security customers are used to." According to Chadha, unlike the products of other banks, which are geared at affluent people with millions to invest, this service is designed for clients who are digitally adept but may only wish to make a little contribution. Austria's Financial Market Authority (FMA) and Germany's BaFin both oversee Bitpanda, a company created in Vienna in 2014 that allows businesses to provide regulated trading, investing, and custody services for various assets including cryptocurrencies. In 2020, the global Raiffeisen bank began building a blockchain-based platform for the tokenization of national currency. The bank's trade finance experiments using R3's Marco Polo blockchain network are additional evidence of its dedication to innovation. - HECO, created by Justin Sun, is a gateway that enables the exchange of tokens and coins. - The funds were sent to decentralized exchanges where they were traded for other tokens. There has been a questionable transfer of \$86 million from one of the HECO accounts to an unknown address. Cyvers Alerts, an on-chain security tool driven by AI, has announced that it has uncovered the mysterious transaction. HECO, created by Justin Sun, is a gateway that enables the exchange of tokens and coins between the Ethereum blockchain and the Heco Chain. On December 21, 2020, HTX Eco Chain (HECO) became live with the intention of providing a cross-chain experience with cheaper gas rates. In 2022, Sun combined the Tron network with the BitTorrent bridge ecosystem into HECO. Peckshield Alert also tracked a transaction of 10,145 ETH. According to Peckshield, an operator executed the transaction, which raises the possibility that the operator's address was hacked. Multiple Attacks According to Igor Igamberdiev, head of research at Wintermute, and PeckShield, the initial assessment is that \$86.6 million was stolen from the Heco bridge. Instantaneously, the money was sent to decentralized exchanges where they were traded for other tokens. Igamberdiev concludes that there was a second hack into the cryptocurrency exchange HTX based on suspicious \$23.4 million in transfers. He said these deals happened soon after the Heco bridge hack and followed the same patterns. To likely further secure its cryptocurrency, HTX has begun transferring cash from a separate hot wallet to a recovery wallet. HTX and Heco Cross-Chain Bridge Undergo Hacker Attack. HTX Will Fully Compensate for HTX's hot wallet Losses. Deposits and Withdrawals Temporarily Suspended. All Funds in HTX Are Secure, and the Community Can Rest Assured. We are investigating the specific reasons for the hacker's! " H.E. Justin Sun (@justinsuntron) November 22, 2023 HECO Chain is the second Sun-related project to be hacked in recent times. Sun's 2018 exchange acquisition Poloniex was hacked to the tune of \$100 million on November 10th. Private keys may have been hacked, according to security experts. Moreover, HECO's creator, Justin Sun, also acknowledged the recent hack on Twitter. Highlighted Crypto News Today:

- Unstoppable Domains was issued its first patent (US11558344) in January. - ENS Labs claims the patent is totally a derivative of its own innovations. In an open letter published on Twitter, Nick Johnson, the founder and principal developer of Ethereum Name Service (ENS), urges blockchain domains firm Unstoppable Domains to relinquish a newly obtained patent or face legal action. Unstoppable Domains was issued its first patent (US11558344) in January, for a technology that leverages blockchain technology to determine domains and is said to have been invented by Braden River Pezeshki, Matthew Everett Gould, and Bogdan Gusiev. Ongoing Clash Over Patent Furthermore, the request for a patent was submitted to the U.S. Patent and Trademark Office (USPTO) in 2021. Also, Johnson claims that the patent relies only on advancements made by ENS and includes no original ideas of its own. Moreover, Johnson states in his open letter that all ENS work is released under open-source licenses and that all applicable standards may be found online. He claims that he has been trying to get in touch with Unstoppable Domains about the matter for months, but has been unable. Johnson stated: “We have subsequently issued a press release ‘pledging’ its first patent to the Web3 Domain Alliance, an industry group founded and run by Unstoppable Domains. We appreciate the sentiment behind this, but regrettably, press releases are not legally binding.” Also, the ENS Labs is ready to oppose this patent, which it feels is totally derivative of its own innovations; a stance it is able and prepared to show, Johnson cautioned. Moreover, one of the alleged creators from Unstoppable Domains, Matthew Gould, commented in the discussion, giving a broad invitation for participation in the Web3 Domain Alliance, the blockchain domain registry company purportedly pledged with the patent. - The Monetary Authority of Singapore has awarded preliminary permission to XREX. - After initially approving Coinbase in December, the agency finally issued a full MPI license. XREX, a cryptocurrency exchange located in Asia that focuses on global transactions, was granted in-principle approval for a Major Payment Institution (MPI) license in Singapore. The Monetary Authority of Singapore (MAS) has awarded preliminary permission to XREX Singapore for a license that would enable the firm to provide digital payment token products and services in Singapore, according to a statement shared by the company. Once the firm has received the license in its entirety, it will be able to extend BitCheck, a payment tool that accepts fiat currency, stablecoins, and several cryptocurrencies. Christopher Chye, CEO of XREX Singapore stated: “Our engagements with the MAS have shown us time and again why they are internationally revered as a leading central bank and financial regulator.” Crypto-friendly Approach According to Wayne Huang, XREX’s co-founder and Group CEO, XREX Singapore will take over as the company’s major supplier of goods in the APAC region, while XREX Taiwan will continue to play an important role in the company’s product design, engineering, research, and threat analysis. Many international firms operating in the cryptocurrency and web 3.0 sectors have established operations in Singapore due to the country’s reputation as a crypto-friendly region. However, the nation’s capital has had to deal with various crypto-related problems over the last year. It seems like MAS is still interested in working with the crypto industry. After initially approving Coinbase in December, the agency finally issued a full MPI license to the exchange last month. In June, Circle also got an MPI license. - A Shiba Inu official recently addressed the delay in launching Shibaswap 2.0. - Shibaswap 2.0 aspires to be more than a basic decentralized exchange, evolving into a sophisticated decentralized application (DApp). - Over the past 24 hours, SHIB experienced a 0.44% drop in value to \$0.000008561. A recent tweet from a Shiba Inu official account provided insight into the delayed launch of the highly anticipated Shibaswap 2.0 platform. Shibaswap 2 aims to evolve into a sophisticated decentralized application (DApp) that goes beyond a basic decentralized exchange. According to the tweet from SHIB’s spokesperson, the intricate design of Shibaswap 2 necessitates careful planning and strategic execution across interconnected frameworks. This expanded scope exceeds that of a traditional DEX, positioning it as a more comprehensive platform. The clarification comes amid community anticipation for the new Shibaswap version. The original swap launched in July 2021 as a decentralized exchange supporting SHIB and other ecosystem tokens. V2 promises features like multi-chain capabilities. Shiba Inu drops in value The update aligns with recent SHIB price performance. Over the past 24 hours, the self-labeled “dogecoin killer” dropped by 0.44% to \$0.000008561, partially recovering from a plunge last week, per CoinMarketCap data. Trading data also indicates a spike in large-holder activity. According to IntoTheBlock analytics, SHIB saw a 1,275% surge in large holder netflows over two days this week. The flows represent changes in whale ownership. While eagerly awaited, the team emphasized a thoughtful approach to launching Shibaswap 2, transcending a basic exchange model. The clarification highlighted dedication to methodical development and avoiding rushed releases. The commitment to crafting an advanced DApp mirrors broader SHIB ecosystem ambitions. With metaverse integrations and layered functionality, Shibaswap 2 represents a milestone in that vision. The team stresses diligent progress over hasty launches as work continues.

The relaunched platform, built for flexibility and secure innovation, will also offer expanded coin custody capabilities with six additional coins to go live in December. ALPHARETTA, Ga. (BUSINESS WIRE) – Bakkt Holdings, Inc. (NYSE: BKT) announced today that it has relaunched its Bakkt Custody platform with enhanced capabilities, a revitalized interface, and a foundation built to enable the rapid addition of future functionality. The redesigned Bakkt Custody offers segregated on-chain wallet addresses, gives clients the ability to configure security processes in the application and provides access to more advanced reporting features. Operated under Bakkt Trust Company LLC, an NYDFS Qualified Custodian, Bakkt’s institutional-grade platform is built on reliable infrastructure, insured to help protect client’s digital assets, tested by independent third-parties, and managed using comprehensive security and operational controls defined in robust security and compliance policies. “The events of the past year have revealed why qualified crypto custody is so necessary,”

said Gavin Michael, President and CEO of Bakkt. “Bakkt takes pride in being a provider that never co-mingles funds and always puts our clients’ security first. With custody as a core anchor product, our team has been working diligently to enhance our platform with infrastructure built to withstand the shifting regulatory environment. We anticipate several future developments as we continue to invest and rollout more advanced features.” In addition to enhanced capabilities, Bakkt will add 6 additional tokens to the Bakkt Custody platform for a total of 8 coins including Bitcoin, Ethereum, Bitcoin Cash, Ethereum Classic, Litecoin, Dogecoin, USD Coin and Shiba Inu. These additions to Bakkt’s Custody bring it to parity with what are offered through Bakkt’s Trading. The new token capabilities will be added to the platform in December 2023. “These additional assets allow us to cater to clients seeking more fluidity between platforms,” Michael said. “We’re pleased to increase our offering in a secure and regulatory-first way.” Bakkt recently announced significant progress with respect to its custody product in the company’s Q3 2023 earnings, including signed agreements with LeboBTC Ledger Group (LLG) and Unchained. Bakkt also has preliminarily agreed to join EDX Markets’ clearing house and custodial network as a qualified custodian. “Security and regulation are heavy considerations when selecting a crypto counterparty. Bakkt has remained unscathed amid the insolvencies of crypto companies in the past several years, and they’ve proven that they dot every ‘i’ and cross every ‘t’ with regards to licenses and regulation,” shared Jason Leibowitz, CEO & Co-Founder of LeboBTC Ledger Group (LLG). “As an NYDFS-chartered qualified custodian, we can trust that their security is top notch and that our clients will have reliable crypto capabilities.” Bakkt’s revamped offering has been awarded the 2023 Digital Asset Awards’ Best Digital Assets Custodian by The Digital Banker, which is awarded to the custodian who meets their standards for innovation, transaction capability, risk management, and interoperability. Further details on Bakkt’s Custody features can be found here. About Bakkt Founded in 2018, Bakkt builds solutions that enable our clients to grow with the crypto economy. Through institutional-grade custody, trading, and onramp capabilities, our clients leverage technology that’s built for sustainable, long-term involvement in crypto. Gross crypto services revenues of \$191.8 million and associated crypto costs and execution, clearing and brokerage fees of \$190.1 million Total revenues of \$204.8 million include gross crypto revenues and net loyalty revenues Total operating expenses of \$257.6 million includes crypto costs and execution, clearing and brokerage fees and goodwill and intangible assets impairments. Excluding crypto costs and execution, clearing and brokerage fees and goodwill and intangible assets impairments, expenses were \$44.2 million down 26% year-over-year Expansion of crypto capabilities in nine new international markets expected to be active by year-end, including the United Kingdom, Hong Kong, Latin America, Singapore, Australia and Spain Strong client execution with nearly all recently signed clients onboarded and/or activated, and significant broadening of our client network Updated full year 2023 outlook and provided preliminary 2024 outlook ALPHARETTA, Ga. (BUSINESS WIRE) – Bakkt Holdings, Inc. (‘Bakkt’) (NYSE: BKKT) announced its financial and operational results for the quarter ended September 30, 2023. “This quarter we clearly demonstrated our ability to execute and strengthen our company despite highly challenging crypto market conditions,” said Gavin Michael, President and CEO of Bakkt. “Given headwinds facing the U.S. crypto industry, we made international expansion a key priority, successfully launching our crypto capabilities in Latin America and Spain, and we plan to go live in the United Kingdom, Hong Kong, Singapore and Australia by the end of this year. International markets will remain a key focus area for us with additional markets already in our pipeline. Our relentless focus on delivering for our clients enabled us to onboard and activate most of the new clients that we signed last quarter. We made strong traction broadening our crypto trading and custody network. We also further enhanced our secure custody platform, with the imminent relaunch of our custody solution followed by the expansion of the number of coins that we custody. Our leading platform and focused execution will continue to drive us to success.” Recent Strategic Highlights International expansion “Expanding with our clients 3.0verse and Hapi into new international markets with planned further expansion with IBEX. Our platform is currently live with certain clients in Latin America and Spain. We plan to further expand our crypto capabilities in the United Kingdom, Hong Kong, Singapore and Australia by year-end. Crypto trading “Significant progress activating and broadening our client network including: - Seamless execution for existing clients “Provided a swift and seamless onboarding and activation experience for recently signed crypto clients. We onboarded nearly all of the new clients that were signed in the prior quarter. Our time to activate is consistent with historical trends of ~45 days. - Expansion of client base “Our advanced crypto trading capabilities continue to attract strong interest from new clients, which includes many crypto native institutions such as 3.0verse. OpenNode and Legend Trading also intend to utilize our advanced crypto trading capabilities. Crypto custody “Our highly-regarded custody solution has been enhanced with the imminent relaunch of its core platform followed by additional coin support. We made strong progress expanding our platform and client network including: - Relaunch of Bakkt’s Custody “Ground up redevelopment of the Bakkt Trust custody solution is complete and launching this month. The foundational redevelopment adds key features such as segregated wallets, a flexible policy engine, and enables the rapid addition of future functionality. - Expanding support for additional coins “An example of Bakkt’s Custody’s enhanced functionality that the relaunch provides is the expansion of asset support, which will follow shortly after the release of the new platform. This release will expand custodial support from Bitcoin (BTC) and Ethereum (ETH) to create parity with our trading platform, adding Bitcoin Cash (BCH), Dogecoin (DOGE), Ethereum Classic (ETC), Litecoin (LTC), Shiba Inu (SHIB) and USD Coin (USDC), with more coins to come early next year. - Expansion of client base “Our secure, reliable and trusted custody platform continues to benefit from a flight to quality and we made strong progress expanding our client network. Recently signed new clients include Unchained and LeboBTC. As we announced last week, we intend to join EDX’s clearing house and

custodial network initially serving as a back-up qualified custodian. We have also received significant inbound client interest regarding our enhanced custody capabilities, which will be launched soon. Lightning Network – As we drive crypto’s evolution towards increased utility, we are investing in the Lightning Network. We recently announced that we will be launching Lightning Services to select clients. Clients will be able to leverage these capabilities for cross-border remittances, B2B settlement, instantaneous deposits and withdrawals for trading, or global, interoperable P2P1. We will be partnering with two leading Lightning Service Providers, Lightspark and IBEX, to build out a global network of compliant on and off-ramps. Additionally, we announced that we are a founding infrastructure provider for UMA, a new Universal Money Address standard aimed at simplifying sending money. | _____ | | 1 Use cases are subject to applicable regulatory approvals. | Bakkt Third Quarter Financial Highlights (unaudited) Third quarter 2023 results include Apex Crypto, which we acquired on April 1, 2023. In accordance with GAAP, we are presenting crypto services revenue and crypto costs and execution, clearing and brokerage fees on a gross basis since we are a principal in those transactions. | \$ in millions | 3Q23 | 3Q22 | Increase/ | | Revenues | \$204.8 | \$13.2 | N.M. | | Goodwill and intangible assets impairments | 23.3 | 1,547.7 | N.M. | | Operating expenses, excluding impairments | 234.3 | 60.4 | N.M. | | Total operating expenses | 257.6 | 1,608.1 | N.M. | | Operating loss | (52.9) | (1,594.9) | N.M. | | Net loss | (51.7) | (1,592.5) | N.M. | | Adjusted EBITDA loss (non-GAAP) | \$(21.6) | \$(30.7) | (30)% | | Note: –N.M. denotes Not Meaningful | – Key performance indicators (including historical Apex Crypto data for comparison purposes): – Crypto enabled accounts of 6.1 million have continued to increase steadily. – Transacting accounts of 1.0 million decreased 13% year-over-year, due to industrywide slowdown in crypto activity. – Notional traded volume of \$366.1 million decreased 45% year-over-year, due to industrywide decline in crypto trading volumes and lower hotel and rental car loyalty redemption activity. – Assets under custody of \$505.7 million decreased 28% year-over-year, primarily due to lower coin quantities. – Revenues of \$204.8 million reflect a significant increase in gross crypto services revenues driven by our acquisition of Apex Crypto. Net loyalty revenues of \$13.0 million increased 2% year-over-year driven by higher customer activity. – Total operating expenses of \$257.6 million reflect a significant increase in crypto costs and execution, clearing and brokerage fees driven by our acquisition of Apex Crypto. Third quarter expenses included a non-cash intangible assets impairment charge of \$23.3 million. This charge was in accordance with generally accepted accounting principles and a result of lower revenue growth expectations for the loyalty business. – Operating loss of \$52.9 million decreased year-over-year due to larger goodwill and intangible assets impairments recorded in the prior year. – Net loss of \$51.7 million decreased year-over-year. – Adjusted EBITDA loss (non-GAAP) of \$21.6 million decreased 30% year-over-year primarily due to a reduction in compensation and benefits costs. Updated Full Year 2023 Outlook We are updating our full year 2023 guidance to reflect the current market environment: – Full year 2023 revenues expected to be ~\$750 million – ~\$1,268 million; includes gross crypto revenues of ~\$697 million – ~\$1,215 million and net loyalty revenues of ~\$53 million. – Full year 2023 crypto costs expected to be ~\$693 million – ~\$1,208 million, in line with gross crypto revenues. – Full year 2023 net cash used in operating activities expected to be ~(\$86 million) – ~(\$89 million). Prior full year 2023 guidance of (\$78 million) – (\$84 million). – Full year 2023 free cash flow (non-GAAP) expected to be ~(\$99 million) – ~(\$102 million). Prior full year 2023 guidance of (\$90 million) – (\$96 million). Change in guidance reflects lower revenue partially offset by reductions in operating expenses. Preliminary Full Year 2024 Outlook – Full year 2024 revenues expected to be ~\$3,461 million – ~\$9,071 million; includes gross crypto revenues of ~\$3,406 million – ~\$9,015 million and net loyalty revenues of ~\$55 million. – Full year 2024 crypto costs expected to be ~\$3,386 million – ~\$8,976 million, in line with gross crypto revenues. – Full year 2024 net cash used in operating activities expected to be ~(\$35 million) – ~(\$55 million). Full year 2024 free cash flow (non-GAAP) expected to be ~(\$43 million) – ~(\$63 million). – Expect to be approximately breakeven on an adjusted EBITDA basis by end of 2024. Webcast and Conference Call Information Bakkt will host a conference call at 9:00 AM ET, November 14, 2023. The live webcast of Bakkt’s earnings conference call can be accessed at <https://investors.bakkt.com>, along with the earnings press release and accompanying slide presentation. Investors and analysts interested in participating in the call are invited to dial (833) 470-1428 or (404) 975-4839, and reference participant access code 178790 approximately ten minutes prior to the start of the call. A replay will be available promptly after the call and can be accessed by dialing (866) 813-9403 and entering the access code 984736. The replay will be available through December 11, 2023. Note on Forward-Looking Statements This press release contains –forward-looking statements– within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Such statements include, but are not limited to, statements regarding the impacts from the Apex Crypto acquisition, Bakkt’s guidance regarding Apex Crypto’s full year 2023 results, and Bakkt’s guidance, plans, objectives, expectations and intentions with respect to future operations, products, services, among others. Forward-looking statements can be identified by words such as –will, –likely, –expect, –continue, –anticipate, –estimate, –believe, –intend, –plan, –projection, –outlook, –grow, –progress, –potential– or words of similar meaning. Such forward-looking statements are based upon the current beliefs and expectations of Bakkt’s management and are inherently subject to significant business, economic and competitive uncertainties and contingencies, many of which are difficult to predict and beyond Bakkt’s control. Actual results and the timing of events may differ materially from the results anticipated in such forward-looking statements as a result of the following factors, among others: Bakkt’s ability to grow and manage growth profitably; changes in Bakkt’s business strategy;

changes in the market in which Bakkt competes, including with respect to its competitive landscape, technology evolution or changes in applicable laws or regulations; changes in the markets that Bakkt targets; disruptions in the crypto market that subject Bakkt to additional risks, including the risk that banks may not provide banking services to Bakkt; the possibility that Bakkt may be adversely affected by other economic, business, and/or competitive factors; the inability to launch new services and products or to profitably expand into new markets and services; the inability to execute Bakkt's growth strategies, including identifying and executing acquisitions and Bakkt's initiatives to add new clients; Bakkt's failure to comply with extensive government regulation, oversight, licensure and appraisals; uncertain regulatory regime governing blockchain technologies and crypto; the inability to develop and maintain effective internal controls and procedures; the exposure to any liability, protracted and costly litigation or reputational damage relating to Bakkt's data security; the impact of any goodwill or other intangible assets impairments on Bakkt's operating results; the impact of any pandemics or other public health emergencies; Bakkt's inability to maintain the listing of its securities on the New York Stock Exchange; and other risks and uncertainties indicated in Bakkt's filings with the Securities and Exchange Commission. You are cautioned not to place undue reliance on such forward-looking statements. Such forward-looking statements relate only to events as of the date on which such statements are made and are based on information available to us as of the date of this press release. Unless otherwise required by law, we undertake no obligation to update any forward-looking statements made in this press release to reflect events or circumstances after the date of this press release or to reflect new information or the occurrence of unanticipated events.

Definitions

Crypto-enabled accounts: total crypto accounts open.

Transacting accounts: unique accounts that perform at least one transaction across crypto buy/sell and loyalty redemption each month. Monthly figures are de-duped for the month. Quarterly figure represents sum of all months in the quarter.

Notional traded volume: total notional volume of transactions across crypto buy/sell and loyalty redemption. Figures represent gross values recorded as of order date.

Assets under custody: the sum of coin quantities held by customers multiplied by the final quote for each coin on the last day of the quarter.

Non-GAAP Financial Measures

Adjusted EBITDA is a non-GAAP financial measure, which we define as earnings before interest, income taxes, depreciation, amortization, acquisition-related expenses, share-based and unit-based compensation expense, goodwill and intangible assets impairments, restructuring charges, changes in the fair value of our warrant liability and certain other non-cash and/or non-recurring items that do not contribute directly to our evaluation of operating results and are not components of our core business operations. Adjusted EBITDA provides management with an understanding of earnings before the impact of investing and financing transactions and income taxes, and the effects of aforementioned items that do not reflect the ordinary earnings of our operations. This measure may be useful to an investor in evaluating our performance. Adjusted EBITDA is not a measure of our financial performance under GAAP and should not be considered as an alternative to net income (loss) or other performance measures derived in accordance with GAAP. Our definition of Adjusted EBITDA may not be comparable to similarly tied measures used by other companies. Non-GAAP financial measures like Adjusted EBITDA have limitations, should be considered as supplemental in nature and are not meant as a substitute for the related financial information prepared in accordance with GAAP. The non-GAAP financial measures should be considered alongside other financial performance measures, including net loss and our other financial results presented in accordance with GAAP.

Reconciliation of GAAP Net Loss to Non-GAAP Adjusted EBITDA

	3Q23	3Q22	Net loss	\$(51.7)	\$(1,592.5)
Depreciation and amortization	4.0	6.4	Interest income, net	(1.2)	(0.6)
Income tax expense (benefit)	0.2	(0.6)	EBITDA	\$(48.7)	\$(1,587.4)
Acquisition-related expenses	(0.7)	0.5	Share-based and unit-based compensation expense	3.3	8.8
Cancellation of common units	(0.0)	(0.1)	Loss (gain) from change in fair value of warrant liability	0.2	(0.4)
Goodwill and intangible assets impairments	23.3	1,547.7	Impairment of long-lived assets	0.1	0.0
Transition services expense	1.0	0.3	Adjusted EBITDA loss	\$(21.6)	\$(30.7)

Free Cash Flow is a non-GAAP financial measure. Free Cash Flow is cash flow from operations adjusted for non-capitalized internal use software development costs and other capital expenditures and interest income. We adjust for capitalized expenses associated with internally developed software for our technology platforms given they are a large component of our ongoing expense base given our position as a technology platform company. Information reconciling forward-looking Free Cash Flow to the comparable GAAP financial measure is unavailable to us without unreasonable effort. We are not able to provide a reconciliation of forward-looking Free Cash Flow to the comparable GAAP financial measure because certain items required for such reconciliations are outside of our control and/or cannot be reasonably predicted, such as timing of customer payments for account receivables and payment terms for operating expenses. Preparation of such reconciliations would require a forward-looking statement of income and statement of cash flow, prepared in accordance with GAAP, and such forward-looking financial statements are unavailable to us without unreasonable effort (as specified in the exception provided by Item 10(e)(1)(i)(B) of Regulation S-K). We provide a range for our Free Cash Flow forecast that we believe will be achieved, however we cannot accurately predict all the components of the Free Cash Flow calculation. We provide a Free Cash Flow because we believe that Free Cash Flow, when viewed with our results under GAAP, provides useful information for the reasons noted above. However, Free Cash Flow is not a measure of liquidity under GAAP and, accordingly, should not be considered as an alternative to net cash used in operating activities as an indicator of liquidity.

Reconciliation of Operating Cash Flow to Non-GAAP Free Cash Flow (\$ in millions) (unaudited)

	FY 2023E	FY 2024E	Low	High	Low	High
Net cash used in operating activities	(\$86)	(\$89)	(\$35)	(\$55)	(8)	(8)
Capex	(4)	(4)	(4)	(4)	(4)	(4)

- The cryptocurrency market has displayed bullish momentum, with a 2% increase in the past 24 hours. - Bitcoin (BTC) has reclaimed the spotlight, surging to \$37,904, marking a 16-month high. In the past 24 hours, the broader cryptocurrency market has displayed a significant comeback, surging by an additional 2%. The total market capitalization has now surpassed the \$1.4 trillion mark, indicating that the crypto sector continues to exhibit substantial strength. This bullish trend persists despite recent statements from Federal Reserve Chairman Jerome Powell, who emphasized the central bank's readiness to raise interest rates further if inflation fails to subside and remains above their desired target of 2%. Since November 07, Bitcoin (BTC) has been a standout performer, with its value climbing to \$35,500. This rally also fueled the surge in altcoins. This impressive performance marks the highest point for the total cryptocurrency market cap in 16 months. Crypto Market on the Rise Bitcoin has seen its value soar even higher, reaching \$37,904 on November 9th. This uptrend coincided with the confirmation of BlackRock, the world's largest asset manager, filing for a Spot Ethereum ETF with the Delaware Department of State. Ethereum (ETH), the second-largest cryptocurrency by market capitalization, also experienced significant gains, breaching the \$2,100 range. This surge was directly linked to BlackRock's Ethereum ETF plans, which were officially confirmed in a Nasdaq filing. Other altcoins have followed suit, enjoying substantial gains. Solana (SOL) and Toncoin (TON) saw increases of 6% and 4%, respectively, during the same period. This can be attributed to the

capital into various altcoins. However, not all altcoins fared as well, as some experienced minor pullbacks. Binance's BNB, Ripple's XRP, Cardano's ADA, and Dogecoin (DOGE) retreated by 1% to 1.5%, although they had substantial gains in a week of over 8% to 11%. Additionally, lesser-known and lower-market-cap cryptocurrencies such as GMX (\$GMX), GROK (\$GROK), ORDI (\$ORDI), and CateCoin (\$CATE) also saw gains ranging from 10% to 5% in the last 24 hours, reflecting the overall positive sentiment in the crypto market.

- Binance lists MEME on Launchpool, farming since October 28. - 69B total supply, 1.38B rewards, 8.8B circulating MEME tokens. The year 2023 has been a thrilling ride for the cryptocurrency market, and one of the standout moments has been the meteoric rise of memecoins. Leading players like Dogecoin, Shiba Inu, and Floki captured the limelight, and new entrants like Pepe made waves. As we examine the memecoin space, it resembles a buzzing beehive with numerous new coins emerging. However, one memecoin is currently stealing the spotlight – MEME. MEME, an Ethereum-based memecoin, operates on the ERC-20 network and boasts a total supply of 69 billion MEME tokens. This token was crafted by Memeland, a web3 startup, and launched by the same team behind the globally renowned meme platform, 9GAG. The latest buzz in the crypto world revolves around Binance's announcement of MEME's listing. MEME has become the 39th project on Binance Launchpool, allowing users to stake their BNB, TUSD, and FDUSD in separate pools for farming MEME tokens over a 30-day period, with farming commenced on October 28. Introducing Memecoin \$MEME on #Binance Launchpool! Farm \$MEME by staking #BNB, \$TUSD and \$FDUSD. <https://t.co/iclawFUArp> [pic.twitter.com/I3LebJp2zN](https://t.co/I3LebJp2zN) Binance (@binance) October 27, 2023 With a total and maximum token supply of 69,000,000,000 MEME and Launchpool Token Rewards amounting to 1,380,000,000 MEME (2.00% of the total token supply), the initial circulating supply stands at 8,797,500,000 MEME (12.75% of the total token supply). Popularity vs. Functionality While one group of enthusiasts eagerly anticipates the coin's future developments, another segment of the community is intrigued by an unusual aspect of MEME. In line with MEME's whitepaper, the team emphasizes that the token has "no functions, no utility, and no intrinsic value, no promise or expectation of any financial return, profit, interest, or dividend." Furthermore, the team asserts that, concerning the Memeland ecosystem, MEME does not confer "any entitlement to any voting rights." Despite the absence of a roadmap, utility, or the promise of future returns, crypto investors have not hesitated to invest in this memecoin. The crypto community's support for this startup underscores their faith in this new memecoin, with MEME even amassing more than a million followers on its X account.

- Floki (FLOKI) has surged 24% in the past 24 hours. - Bullish momentum with 9D EMA at \$0.00002927 and RSI at 84. Floki, the popular memecoin, is the talk of the crypto token with its impressive performance and recent updates. It has recently reached a five-month high, trading at \$0.00004074, marking a 24% increase over the past 24 hours. In a week's time, it has witnessed an extraordinary surge of 105%. Meanwhile, the trading volume of FLOKI has also seen a notable increase of 93% within the same time frame, now totaling \$324 million. This bullish momentum is attributed to a strategic partnership and a key update related to tokenization. In a blog post on October 24, it announced its partnership with World Table Tennis, a highly influential organization in the table tennis world. The goal of this partnership coincides with the October 27 launch of Floki's new sister token, TOKEN. Floki Inu has introduced TokenFi, its tokenization platform, and its native asset TOKEN. TokenFi will enable Floki Inu to compete in the rapidly growing tokenization industry. It is projected to reach a valuation of \$16 trillion by 2030. It has plans to unveil the TokenFi website on October 27. Furthermore, these developments have propelled Floki into the top 100 cryptocurrencies by market capitalization. Notably, it is now the fourth most searched token on Binance, surpassing other popular tokens like PEPE, SOL, XRP, and DOGE. The surge in interest results from the anticipation of Floki's impending launch of its crypto and asset tokenization token. A Strong Bull Run Ahead? Analyzing the current price movements of FLOKI, it's evident that bullish forces are at play. The 9-day exponential moving average (EMA) has risen above the current trading price, settling at \$0.00002927. At the same time, the daily relative strength index (RSI) stands at 84. The asset is indicating an extremely overbought condition. Moreover, if FLOKI manages to break through the \$0.00004511 resistance level, a rally toward \$0.00005510 appears highly likely. However, if the price drops below the critical support level of \$0.00002465, a downward move towards \$0.00001961 is a probable scenario. Further decline could lead to testing the \$0.00001643 support level.

- The platform will support 15 cryptocurrencies, according to the statement. - Residents of Nevada can now purchase and sell cryptocurrencies using Robinhood. Since announcing that it will begin serving customers in Nevada, U.S., Robinhood, the California-based cryptocurrency trading platform, has garnered the attention of crypto market aficionados. The platform will support 15 cryptocurrencies, according to the statement. Robinhood shared the exciting news with cryptocurrency investors on Twitter on October 25. Robinhood Crypto is now available in Nevada! "Robinhood Help (@AskRobinhood) October 25, 2023 Buy, sell and transfer 15 cryptocurrencies! See list ðŸ™– <https://t.co/er9TOpJm9Q> More info: <https://t.co/uFJGPLZKQ8> Most notably, Robinhood offers a marketplace for trading cryptocurrencies, complete with simple access to accurate, real-time market data. Robinhood supports a wide variety of cryptocurrencies, including Aave, Bitcoin, Chainlink, Dogecoin, Ethereum, and more. Strategic Growth Rising market expectations for Bitcoin Spot ETF approval coincided with Robinhood's introduction of cryptocurrency trading in Nevada, United States. Several cryptocurrencies are now readily available for residents of Nevada to purchase, sell, and trade with no fees and minimum investments as little as \$1. With its low entry price of just \$1, Robinhood has quickly become one of the most popular trading platforms, and its strategic growth plans only stand to increase its popularity. For the Q2 of 2023, Robinhood reported healthy profits despite a fall in revenue. This is the first time the company has made money since becoming public. According to the trading platform's August 2 financial report, its quarterly income from cryptocurrency transactions fell by 18% to \$31 million. Its sales decreased by 4% from \$202 million in June of last year to \$193 million this year.

Highlighted Crypto News Today:

- Solana's SOL has gained over 214% year-to-date in 2023. - Bitcoin and Ethereum are up 106% and 50%, respectively, in 2023. - Other top 10 tokens like XRP, TRON, and Chainlink have posted gains between 64 and 105%. According to data from CoinGecko, Solana's SOL has been a rare standout in 2023's cryptocurrency rout, gaining over 214% year-to-date. The price performance makes it one of the only major crypto assets firmly in positive territory for the year. In comparison, Bitcoin and Ethereum are only up 106% and 50%, respectively, in 2023, based on the CoinGecko rankings. Other top 10 tokens like XRP, TRON, and Chainlink have posted more modest gains, between 64 and 105%. Cardano, BNB and Dogecoin records losses. Meanwhile, Cardano, Binance Coin, Dogecoin, and TON have joined the losers, recording double-digit losses since January. This showcases just how brutal broad conditions have been in 2023, with crypto markets down over 60% from all-time highs. Solana's ability to swim against the tide demonstrates the network's technical momentum despite recent challenges. The blockchain has faced congestion issues, outages, and critics questioning its decentralization. In fact, Solana has hit major milestones that validate its value proposition to developers and enterprises. For example, Visa introduced USDC settlement on Solana in September, while Shopify integrated Solana Pay in August. The network has also maintained strong uptime, with 100% year-to-date availability. This showcases maturing stability and reliability for a blockchain once plagued by frequent outages. With Solana firing on all cylinders technically while tokens like Ethereum struggle with congestion, its outperformance makes sense. Questions linger around the unknown extent of potential FTX sales impacting SOL markets.

- Bitpanda joins an exclusive group of pioneering foreign firms in gaining this license. - Norway has stated its willingness to pursue its own crypto regulatory framework. Crypto exchange Bitpanda, recently received its virtual asset service provider (VASP) license from the Norwegian authorities. Bitpanda joins an exclusive group of pioneering foreign firms in gaining this license. On October 19th, Bitpanda made public their successful application for a crypto license on Twitter. Bitpanda also has licenses in other European countries, including Austria, Germany, France, the Czech Republic, and Sweden. Eyeing Europe Expansion Bitpanda's deputy CEO, Lukas Enzersdorfer-Konrad, said that the firm's registration in Norway is a major step forward in its plans to expand across Europe. Norway has stated its willingness to pursue its own crypto regulatory framework apart from the European Union. The country's central bank expressed worry in its annual report published in May 2023 that the upcoming EU Markets in Crypto-Assets (MiCA) law would not adequately address all crypto regulatory demands. Through a number of current initiatives, Norway has actively backed crypto innovation and development. For instance, Norway's biggest bank, DNB ASA, is working with the IOTA Foundation to investigate the advantages of blockchain technology. Bitpanda has secured licenses in many European countries. On the flip side, several large crypto exchanges have run into regulatory hurdles. Most crypto exchanges are facing challenges with regulatory scrutiny across the globe. As it expands its presence and services throughout Europe, Bitpanda distinguishes out as a firm devoted to complying with local laws and regulations, with over 300 tradable cryptocurrencies and 2600 digital assets available to its consumers. - The goal of this project is to promote Ras Al Khaimah as a center for innovative technology. - The United Arab Emirates is aggressively courting crypto and blockchain startups. One of the Emirates of UAE, Ras Al Khaimah, is taking deliberate effort to broaden its financial landscape. The RAK Digital Assets Oasis (RAK DAO) is a new free zone in the emirate that aims to support and promote the digital and virtual asset industry. The goal of this project is to promote Ras Al Khaimah as a center for innovative technology and attract crypto businesses from across the world. Ras Al Khaimah, eager to keep up with the rapidly developing digital boom has announced RAK DAO, which aims to boost future technologies. This innovative project will likely create a tailored environment, inviting business owners from all around the globe to take part in the expanding digital and blockchain industry. Favorable Regulatory Climate For its part, RAK DAO is dedicated to backing startups working with cutting-edge technologies like Web3 and its associated segments including NFTs and DeFi. In this free zone, company owners may keep all of the profits they make, and they'll also benefit from reduced taxes and fewer rules. While non-financial activities will be the first emphasis of RAK DAO, the emirate plans to include financial activities in the future to demonstrate its commitment to innovation and regulatory compliance. The United Arab Emirates is aggressively courting crypto and blockchain startups, promising them a favorable regulatory climate in which to thrive. Other major Emirates, including Dubai and Abu Dhabi, have already adopted virtual asset-friendly legislation and regulations, making it possible for crypto firms to establish themselves there. - Users cannot withdraw USD without first converting it to stablecoins or another digital asset. - Binance US notified users of the update via email and provided detailed instructions. Binance US has implemented fundamental changes to its financial activities in the USA. The exchange is no longer allowing users to make direct withdrawals in US dollars as of this week. As stated in their revised terms of service, they will no longer let users withdraw USD without first converting it to stablecoins or another digital asset. Importantly, unlike conventional financial guarantees, US currency deposits are no longer covered by the Federal Deposit Insurance Corporation (FDIC). Regulatory Concerns The decision comes after months of increased scrutiny from US authorities, which has presented the corporation with significant operating obstacles. Binance US has been the target of several lawsuits over its financial dealings, prompting a review of its offerings. As a result, dollar deposits were frozen this summer, a prelude to the present withdrawal restriction. Customers will have to adjust how they get at their funds because of the alterations. There will be no option for cashing out in US currency. To withdraw dollars, users must first convert their funds to another digital asset or stablecoin. Binance US notified users of the update via email and provided detailed instructions for the new procedure. The company's problems, however, extend beyond only regulatory ones. After the SEC took strong action, banking partners were hesitant to maintain ties. This fallout, initiated by a June SEC complaint, highlights the difficult climate in which crypto exchanges like Binance US operate. Binance's problems aren't exclusive to the United States. The firm is no longer accepting new UK customers. This decision came quickly after its UK promotional partner, Rebuilding Society, was hit with new regulations from the Financial Conduct Authority (FCA). Highlighted Crypto News Today:

- Bullish ANKR price prediction for 2023 is \$0.02924 to \$0.05754. - Ankr (ANKR) price might reach \$0.5 soon. - Bearish (ANKR) price prediction for 2023 is \$0.01081. In this Ankr (ANKR) price prediction 2023, 2024-2030, we will analyze the price patterns of ANKR by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ANKR (ANKR) PRICE PREDICTION 2023 | | | ANKR (ANKR) PRICE PREDICTION 2024, 2025, 2026-2030 | | CONCLUSION | | FAQ | Ankr (ANKR) Current Market Status | Current Price | \$0.01994 | 24 " Hour Price Change | 1.35% Up | | 24 " Hour Trading Volume | \$14,980,554 | | Market Cap | \$199,384,997 | | Circulating Supply | 10,000,000,000 ANKR | All " Time High | \$0.2252 (On March 28, 2021) | | All " Time Low | \$0.0007111 (On Mar 13, 2020) | What is Ankr (ANKR) | TICKER | ANKR | | BLOCKCHAIN | Ethereum | | CATEGORY | WEB3 | | LAUNCHED ON | 2017 | | UTILITIES | Governance, security, gas fees & rewards | The Ankr (ANKR) token is the native cryptocurrency of the Ankr network, a Web3 infrastructure platform that enables users to build and control their own nodes that they can utilize for various Proof-of-Stake blockchain. ANKR was developed in 2017. And the mainnet launched in 2019. Polygon (MATIC), Ethereum (ETH), BNB SmartChain (BNB), Avalanche (AVAX). Polkadot (DOT), and Kusama are the six cryptocurrencies that Ankr presently supports for Staking. ANKR is an ERC-20 and BEP-20 token that can be used in both the Ethereum and BNB Smart Chain ecosystems. Within the Ankr network, ANKR can be utilized as a governance token as well as a utility token. Ankr 24H Technicals (Source: TradingView) Ankr (ANKR) Price Prediction 2023 Ankr (ANKR) ranks 130th on CoinMarketCap in terms of its market capitalization. The overview of the Ankr price prediction for 2023 is explained below with a daily time frame. ANKR/USDT Descending Triangle Pattern (Source: TradingView) In the above chart, Ankr (ANKR) laid out a descending triangle pattern. The descending triangle is most commonly seen during downtrends and is often interpreted as a bearish signal. The ascending triangle pattern is reversed in the descending triangle pattern. As the price continues to make lower highs, descending triangles indicate to investors and traders that sellers are more aggressive than buyers. When the price breaks out of the triangle in the direction of the overall trend, the pattern is complete. Contrary to popular belief, a descending triangle can be bullish or bearish. A regular descending triangle pattern is traditionally regarded as a bearish chart pattern. A descending triangle pattern, on the other hand, can be bullish. At the time of analysis, the price of Ankr (ANKR) was recorded at \$0.01994. If the pattern trend continues, then the price of ANKR might reach the resistance levels of 0.02048, and 0.02787. If the trend reverses, then the price of ANKR may fall to the support of 0.01669. Ankr (ANKR) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Ankr (ANKR) in 2023. ANKR/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Ankr (ANKR) for 2023. | Resistance Level 1 | 0.02924 | | Resistance Level 2 | 0.05754 | | Support Level 1 | 0.01716 | | Support Level 2 | 0.01081 | ANKR Resistance & Support Levels Ankr (ANKR) Price Prediction 2023 " RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Ankr (ANKR) are shown in the chart below. ANKR/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Ankr (ANKR) market in 2023. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = 0.01911 Price = 0.01985 (50MA < Price) | Bullish(Uptrend) | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions |

54.56711 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Ankr (ANKR) Price Prediction 2023 " ADX, RVI In the below chart, we analyze the strength and volatility of Ankr (ANKR) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). ANKR/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Ankr (ANKR). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 10.13434 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 69.97 <50 = Low >50 = High | High Volatility | Comparison of ANKR with BTC, ETH Let us now compare the price movements of Ankr (ANKR) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs ANKR Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of ANKR is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of ANKR also increases or decreases respectively. Ankr (ANKR) Price Prediction 2024, 2025 " 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Ankr (ANKR) between 2024, 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | Ankr (ANKR) Price Prediction 2024 | \$1 | \$0.4 | | Ankr (ANKR) Price Prediction 2025 | \$2 | \$0.3 | | Ankr (ANKR) Price Prediction 2026 | \$3 | \$0.2 | | Ankr (ANKR) Price Prediction 2027 | \$4 | \$0.1 | | Ankr (ANKR) Price Prediction 2028 | \$5 | \$0.08 | | Ankr (ANKR) Price Prediction 2029 | \$6 | \$0.06 | | Ankr (ANKR) Price Prediction 2030 | \$7 | \$0.04 | Conclusion If Ankr (ANKR) establishes itself as a good investment in 2023, this year would be favorable to the cryptocurrency. In conclusion, the bullish Ankr (ANKR) price prediction for 2023 is \$0.05754. Comparatively, if unfavorable sentiment is triggered, the bearish Ankr (ANKR) price prediction for 2023 is 0.01081. If the market momentum and investors' sentiment positively elevate, then Ankr (ANKR) might hit \$0.5. Furthermore, with future upgrades and advancements in the Ankr ecosystem, ANKR might surpass its current all-time high (ATH) of \$0.2252 and mark its new ATH. FAQ 1. What is Ankr (ANKR) ? The Ankr (ANKR) token is the native cryptocurrency of the Ankr network, a Web3 infrastructure platform that enables users to build and control their own nodes that they can utilize for various Proof-of-Stake blockchain. 2. - Stephen Ehrlich, in reaction to these accusations, has categorically refuted them. - The former CEO claims that he is being made the scapegoat for the acts of others. The U.S CFTC has launched a lawsuit against former Voyager Digital Ltd. CEO Stephen Ehrlich, bringing the cryptocurrency business back into the limelight. Stephen Ehrlich allegedly broke derivatives laws and misled clients about the security of their digital assets. This has been detailed in a recent report by the Commodity Futures Trading Commission (CFTC). The agency has taken a major step towards enforcing crypto rules by filing a case in a U.S. federal court in New York. Violation of Agency Regulations During Ehrlich's time as CEO, the CFTC claims he broke laws meant to promote openness and honesty in the derivatives market. The lawsuit also alleges that Ehrlich and Voyager Digital misrepresented the platform as a "safe haven" for users' digital assets. Thereby enticing unwary investors into a risky scenario. Bloomberg News said that CFTC investigators had already found that Ehrlich had violated agency regulations prior to the filing of the complaint. A decision on whether to pursue enforcement measures against the former CEO was thereafter being discussed by the regulatory body's commissioners. Moreover, Stephen Ehrlich, in reaction to these accusations, has categorically refuted them. He has made a point of highlighting the fact that he has never had any problems throughout his lengthy and spotless career in regulated markets at public firms. Ehrlich claims that he is being made the scapegoat for the acts of others inside several corporations. The claims against Ehrlich follow the collapse of Voyager Digital in July of last year. The firm failed as a result of the severe market collapse that hit the cryptocurrency industry. Highlighted Crypto News Today: Dogecoin Co-Creator Has \$500 Stolen in Japan, Expresses Shame

- As a defense mechanism, the protocol froze all of its pools over the assault. - This latest flash loan assault marks the third such incident involving Platypus in 2023. After another flash loan exploit on its platform, the decentralized finance (DeFi) protocol Platypus lost almost \$2 million in assets. As a defense mechanism, the protocol froze all of its pools over the assault. Certik, a blockchain security platform, reports that \$2.23 million were stolen in three separate assaults on the DeFi platform. On October 12th, the platform saw its first assault, which resulted in the theft of \$1.2 million. Hours later, another assault took place, this time resulting in \$575,000 in stolen assets. A minute later, a third assault happened, and another \$450,000 in assets were stolen. Third Similar Incident Hackers engage in a flash loan assault when they discover a loophole that might enable them to borrow cryptocurrency immediately without first putting up any collateral. According to

CertiK, this latest flash loan assault marks the third such incident involving Platypus in 2023. A similar hack on February 16 resulted in a loss of \$8.5 million for the protocol and caused the Platypus USD (USP) stablecoin to depeg, sending its value from \$1 to \$0.48. CertiK claims that in July, the protocol suffered a loss of roughly \$157,000 due to a flash loan exploit. The DeFi protocol established a compensation page in March for anyone who had lost funds in the February hack. Users were able to see how much compensation they were eligible for via the site and voice any issues they had before the funds were disbursed through the portal. - Sachin Ranglani joined the company in the roles of VP and India Head in September. - The exchange is on the lookout for qualified candidates to fill jobs in various domains. After investing \$24 million to extend operations to India, cryptocurrency exchange Gemini has named a head of operations for its Indian arm. According to his LinkedIn page, Sachin Ranglani, who had substantial expertise in the IT industry, joined the company in the roles of Vice President and India Head in September. He has worked for companies including Uber, Amazon, and Infosys, and most recently spent three years as senior VP of product management at Indian fintech Paytm. In September, Praviit Tiwana, CEO of Gemini's Asia Pacific Region, said that the company's engineering center in Gurgaon, India, would play a crucial role in the future expansion of the business. Hiring Underway In an interview published on Tuesday by Financial News, Tiwana said that the Gurgaon office, which presently employs more than 70 people, plans to increase its employees to more than 100 by the end of 2023. He also said that by 2024's end, this number should have hit 200. The Gurgaon office handles matters of regulation, information flow, storage, security, and payment. The exchange is on the lookout for qualified candidates to fill jobs in software development, technical product management, human resources, talent acquisition, accounting, customer service, and regulatory compliance. The business said that its crypto trading products (both spot and futures) are now available to retail and institutional clients in India. Gemini's foray into the Indian market coincides with the company's plan to increase its headcount in Singapore to more than 100 by the end of the year. Highlighted Crypto News Today: Dogecoin Whale Transactions Surge 49% Despite Lagging Prices

- Solana is now the seventh most valuable cryptocurrency as per CMC. - If the price breaks decisively over the \$25 resistance, it may go towards \$27.50. Lately, the price of Solana (SOL) skyrocketed, coming alarmingly close to \$25. Due to its recent price increase, Solana is now the seventh most valuable cryptocurrency, surpassing both Dogecoin (DOGE) and Cardano (ADA). This year, the TVL for Solana reached a new high of \$338.21 million. This provides some good news for Solana fans after a year full of setbacks. Bulls in Total Control Solana's TVL rose 4.15 percent from \$324.64 million yesterday, for a yearly growth of nearly 38 percent from its \$210.47 million starting point on January 1. These numbers, however, cannot make up for the shocking 60% drop in TVL starting in 2022. In comparison to Solana's high of over \$10 billion in 2021, the TVL's present recovery is notable but not very impressive. Its TVL has increased by almost \$116 million year to date, which might indicate a positive sentiment. At the time of writing, SOL is trading at \$24.18, up 6.18% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 39.83%. In terms of technical analysis, the first key barrier is at \$24.60, followed by \$25. If the price breaks decisively over the \$25 resistance, it may go towards the \$27.50, with the next major barrier seen around the \$28.80 area. If the current trend keeps on, the price may soon hit \$30. However, if SOL cannot find buyers between \$24.50 and \$25, it may change course. The \$23.20 price point, together with the adjacent trend line, provides initial downward support.

- Baby Doge's AI Image Generator launch sparks community excitement. - The platform adds AI utility, enabling meme and NFT creation Baby Doge, one of the memecoins with the largest market capitalization, is currently the talk of the town as the eagerly awaited launch of the BabyDoge AI Image Generator is set to occur in less than an hour. The announcement on September 4th has ignited anticipation with its tagline, "Take a leap into the future of creativity." Just 1 hour away from the big moment! The BabyDoge AI Image Generator will be live soon. Get ready to mint NFTs, create memes, and fuel creativity like never before. Stay with us! #BabyDogeAI pic.twitter.com/BfVovviZPr "Baby Doge (@BabyDogeCoin) September 19, 2023 According to the Baby Doge team, The BabyDoge AI Image Generator promises to bring a new dimension to the ecosystem. Also, this platform introduces AI utility to Baby Doge, allowing users to create BabyDoge characters and memes on demand, without the need for graphic design skills. Furthermore, the platform offers integration with the world of NFTs, allowing users to pay with Baby Doge to mint their creations as NFT masterpieces. Additionally, its holders are rewarded with free image generation credits, incentivizing the community to participate actively. Despite the recent bearish trends, with a 6% decline over the past month, Baby Doge has seen a slight 1.15% surge in the last 24 hours, with a trading volume of \$1 million. While the daily chart still reflects bearish control, there's a prevailing belief within the community that the impending launch of the BabyDoge AI Image Generator will act as a catalyst for a positive turnaround.

- New York's DFS drops XRP and DOGE from its approved crypto list. - XRP is trading in the \$0.50 range with potential price movement. The New York Department of Financial Services (DFS) has made significant waves in the cryptocurrency world with its latest move to revamp its "greenlist" of approved cryptocurrencies. According to crypto lawyer Bill Morgan, DFS removed assets like Ripple (XRP) and Dogecoin (DOGE), while Bitcoin (BTC), Ethereum (ETH), and the PayPal Dollar retained their approval status. DFS has taken a proactive stance in regulating digital assets, positioning itself as a pioneering force nationally, despite Congress's hesitance to enact comprehensive crypto regulations. This fame is largely attributed to the DFS's BitLicense program and its specialized virtual currency unit. Further, this decision to delist 25 assets has ignited debates within the crypto community and raised questions about the track of cryptocurrency regulation. XRP Shows Positive

Sign in 24H Despite recent regulatory actions, the cryptocurrency market has shown signs of a slight recovery from its two-week lows. At the time of writing, XRP is trading at \$0.5082, resembling the early July 2023 range, with stable trading volumes. Notably, XRP has witnessed a 3% increase in the last 24 hours, accompanied by a significant 84% surge in daily trading volume to reach \$1.6 billion. Also, the latest data from Kaiko, a blockchain analytics firm, reveals that while XRP prices have fallen by 46% from their July 2023 highs, liquidity for the cryptocurrency has significantly improved over the past two months. Expanding by 50% from \$8 million to \$12 million as of early September. Moreover, price action highlights that XRP experienced a rapid surge on July 13, surging nearly 100% from \$0.47 to \$0.933. Optimism prevailed, anticipating further gains that could propel XRP prices above the \$1 mark. However, prices have been gradually cooling off since then.

- Floki trading volume is up 555% in the past 24H. - Floki targets global recognition with Asia-Pacific partnerships Floki, one of the popular memecoins has experienced a momentary significant surge in the past 24 hours. Its price has risen from 0.0000172 to 0.0000197, and while it has seen a slight decline, it currently stands at \$0.00001756. What sets this surge apart is that while Floki is on the rise, other top meme coins like Shiba Inu, Dogecoin and Pepe are seeing declines in their charts. The reason behind this surge can be attributed to a recent tweet from the Floki team. Just hours ago, they addressed the FUD circulating within the community. In their tweet, the Floki ecosystem clarified that the network does not have a founder or co-founder. This statement was made in response to claims that "PetabyteCapital" was the network's executive. The network emphasized that it is a "community project" at its core, with no history of any top executives whatsoever. The report further highlighted that individuals sometimes falsely associate themselves with the network to generate hype to promote their own scams. It also underscored the importance of community members conducting thorough research and making informed investment decisions. Meanwhile, @100viking, a co-contributor at Floki, also distanced themselves from being the project's founder or co-founder. Even though they played a significant role in reviving the project single-handedly. Notably, @100viking used their own resources to breathe new life into the project after a developer pulled a rug, and then they handed it over to the community. What Does Floki Have in Store? Floki has ambitious plans for global recognition and has made substantial progress in the vast Asia-Pacific (APAC) region through strategic partnerships. The cryptocurrency's ecosystem includes the NFT metaverse game Valhalla, set to launch on the mainnet later this year. This innovative game is poised to make a significant impact in China, given its gaming population of over 700 million. Moreover, Floki is its marketing campaign in collaboration with Badminton Asia, aiming to reach an audience of over 600 million people, including 250 million households in China and Hong Kong. Additionally, Floki has strengthened its presence by partnering with ITTF World Table Tennis. It connects with more than 500 million enthusiasts of the sport. An analysis of FLOKI's recent price movements reveals a prevailing intense battle between bears and the bulls. The short-term 9-day exponential moving average (EMA) currently stands at \$0.00001764, indicating a slippery bullish sentiment. The Relative Strength Index (RSI) sits at 43, suggesting that oversold conditions may be on the horizon. And the trading volume of Floki has surged by an impressive 546.07% in the last 24 hours, reaching \$51 million.

- Cambridge Bitcoin Electricity Consumption Index (CBECI) estimated Bitcoin mining's annual power demand to be 120.29 TWh. - Cloud mining enables users to participate in crypto mining without the need for hardware. The cryptocurrency landscape is constantly evolving, with users adapting to changing trends and market patterns. As participants in the digital asset ecosystem, users continually seek new opportunities to generate income through cryptocurrencies. Among those, crypto mining has been subject to controversial speculations and debates. Not every crypto enthusiast can access mining hardware or computational power, and for those seeking an alternative, cloud mining offers a solution. Cloud mining refers to the process of remotely mining cryptocurrencies like Bitcoin (BTC), Litecoin (LTC), Ethereum Classic (ETC), Dogecoin (DOGE), or others without the need for real mining hardware. Instead of purchasing and handling heavy mining equipment, individuals or entities can rent or outsource computing power from a cloud mining service provider. These providers have mining farms with powerful machines, and users can earn a share of the mined cryptocurrency based on the computational power they rent. Transformative Shift in Crypto Cloud Mining GlobaleCrypto distinguishes itself by offering a wide range of cloud mining plans suitable for both institutional users and cryptocurrency enthusiasts. Their commitment to transparency, a proven track record, and diverse investment options make them a reliable choice for passive income seekers in the cryptocurrency sphere. They prioritize user understanding, with comprehensive information available on their official website. The firm provides a \$7 registration bonus that can be used to purchase plans and is eligible for withdrawal once the order is completed. However, it's important to note that the platform has a minimum withdrawal threshold of 50 USD. Upon registration, participants can opt for a complimentary investment plan. They may then utilize the bonus, which provides a daily income of \$7.21 and access to various investment plans. If the daily income exceeds 0.005 BTC, it is directly deposited into the customer's collection account; otherwise, it goes into the platform account balance. GlobaleCrypto offers users the flexibility to choose mining plans and customize the daily mining potential ranging from \$7 to \$315. The platform is known for its mining plans featuring top-tier hardware, including the Bitcoin Antminer S19 PRO, Bitcoin Antminer S19J, and Bitcoin Avalon-1366. Notably, GlobaleCrypto has established partnerships with leading mining pools such as BTC.com, Poolin, ViaBTC, Antpool, and F2pool. Cardano (ADA) recently managed to inch up by 1% on the weekly charts, demonstrating resilience amidst the ongoing volatility. On the other hand, a more audacious contender, Pomerdoge (POMD), is generating

significant buzz. In fact, some experts whisper of an impending price pump that could bring Pomerdoge to the next level. - Cardano shows green weekly price charts - AnetaBTC announces the start of Cardano's mainnet operations - Pomerdoge to experience a 17x surge before its presale finishes Click Here To Find Out More About The Pomerdoge (POMD) Presale Cardano (ADA) and Its Steady Climb Cardano (ADA) has long been a favorite among crypto enthusiasts for its commitment to scalability and sustainability. As the Cardano price experienced a 1% uptick on the weekly charts, it reaffirmed its ability to weather market turbulence. In recent Cardano news, AnetaBTC has proudly announced the start of Cardano's long-awaited mainnet operations, marking a considerable advancement. After the ADA blockchain's successful public test net release earlier in April, anetaBTC seeks to ignite Cardano's DeFi potential by injecting it with on-chain wrapped BTC. The launch of the mainnet is important for Cardano as it sets out on a mission to include Bitcoin liquidity via the BTC asset. Now, the Cardano price sits at \$0.2984 with a market cap of \$10.4B. With its moving averages also showing buy signals, many experts remain bullish about its long-term growth potential. Thus, they forecast a \$0.37 price point by December 2023. Pomerdoge (POMD): Beyond the Hype In a market characterized by rapid shifts, new contenders are constantly vying for attention, and Pomerdoge (POMD) is the latest star on the horizon, promising more than just a cryptocurrency. Pomerdoge represents a P2E game that taps into the gaming world's immense potential as over 3B individuals spend time on online games. With Pomerdoge, players can build and shape their characters into elite figures within the game's dynamic world. The allure of customization beckons, as players can craft unique items and outfits, allowing them to express their individuality and style. However, the journey doesn't end there. As players progress and attain the coveted gold status Pomer, a new realm of possibilities opens up. This elite status grants access to the Pomerplace, a marketplace within the game where players can trade an array of skins. This innovative feature also introduces a dynamic economic ecosystem where the virtual treasures collected can translate into tangible rewards. At the core of this game lies the POMD native token, now worth just \$0.008. In addition, it is in Phase One of its presale. In other words, this price will increase as the presale picks up steam. With access to an exclusive 7,777 NFT collection for POMD holders, buyers are flooding the presale. As a matter of fact, demand is so high that experts forecast a 17x jump before it ends. - SBF declared a 7.6 percent investment in Robinhood half a year before the insolvency filing. - Robinhood stock rose by 2% in pre-market trade, trading at \$11.10. Robinhood has reportedly reached a deal with the US Marshals Service to buy back shares. As a result, the firm plans to repurchase \$605.7 million worth of shares from Sam Bankman-Fried's (SBF) Emergent Fidelity Technologies. Following the bankruptcy filings of SBF's FTX and Emergent last year, the equities in issue fell under the scrutiny of the US government. The market seems to have responded well to this news, as Robinhood stock rose by 2% in pre-market trade, trading at \$11.10. Coordinating Closely With Authorities SBF declared a 7.6 percent investment in Robinhood half a year before the insolvency filing in November. But he stressed that he had no plans to take over the trading platform. In addition to the insolvency, SBF faces legal disputes after being accused of fraud in connection with the collapse of the FTX exchange last year. Given the ambiguity surrounding the confiscated shares, Robinhood's CFO Jason Warnick stressed the need of obtaining them "free and clear of any claims." The corporation also expects to coordinate closely with the U.S. DOJ as it works through this complex matter. It was also announced in February that Robinhood will be repurchasing shares from Emergent Fidelity Technologies. Robinhood's stock price has risen since the company said it will repurchase shares. But the business is having trouble as retail investors who were formerly quite active on Robinhood's platform now seem wary due to the uncertain market. - The platform may now legally provide crypto wallet services in Rhode Island. - It's interesting to speculate how DOGE will fit in with the Twitter crypto wallet ambitions. X (twitter), the social media network owned by Elon Musk has been granted permission to provide crypto wallet services in one US state. A recent filing indicated that the firm has been issued a Currency Transmission License by the state of Rhode Island. The platform may now legally provide crypto wallet services after receiving a license in Rhode Island. The ability to store, transfer, and receive other cryptocurrencies is a potentially game-changing addition to X's payments infrastructure. Financial Markets Ecosystem Expanding the crypto market to include more consumers, this action would also help promote cryptocurrency to a wider audience. Musk's regular tweet related to Dogecoin is well known to all, so it's interesting to speculate how the memecoin will fit in with the Twitter crypto wallet ambitions. Musk may be able to use the success of the crypto wallet launch to provide further cryptocurrency-related financial services to the platform. This is in addition to Musk's plan to include a financial market ecosystem within the platform. During Twitter's X rebranding announcement in 2023, he had previously announced ambitions to include the financial markets ecosystem. The payment processing corporation PayPal had recently introduced its own stablecoin called PYUSD. Also, there was talk at the time that the dollar-backed stablecoin may integrate with the X platform. Highlighted Crypto News Today:

- Binance US collaborates with MoonPay to restore USD transactions. - Binance US encounters access issues to USD ramps due to severed banking ties. - Binance US faces heightened regulation, prompting the need for new solutions. Binance US, the American arm of the world-renowned crypto exchange Binance, has announced a strategic partnership with payment startup MoonPay in an attempt to reestablish a seamless flow of USD transactions into the crypto market. The move comes as Binance US grapples with a series of legal and financial obstacles in the wake of heightened regulatory scrutiny surrounding the crypto industry. According to the August 22 announcement, Binance US has been working on integrating new US dollar on-ramp solutions by partnering with third-party payment provider MoonPay. The recent Binance US transition to a crypto-only platform, discontinuing its fiat on- and off-ramp services, appears to be in flux just one month after its implementation. Today, we're excited to introduce a new \$USD on-ramp! â€” Binance.US ðŸ†’ðŸ†’ (@BinanceUS) August 22, 2023 â€”i, Buy \$USDT on <https://t.co/AZwoB0gsqS> through payment partners like @moonpay, which supports debit & credit card, Apple Pay, and Google Pay. â€”i, Sell USDT for USD to withdraw via bank transfer. Learn more & get started â€”i, Binance US has replaced USD with the new â€œbase asset USDTâ€”, a stablecoin pegged to the U.S. dollar. Still, the specific details about the range of cryptocurrencies that will be supported for trading against the US dollar via the MoonPay partnership remain unclear. However, through this collaboration, Binance US users can now conveniently fund their accounts by exchanging dollars for USDT. Subsequently enabling the purchase of various other cryptocurrencies offered on the platform. Although direct bank deposits remain inaccessible at present, the partnership with MoonPay extends users an alternative on-ramp solution. This solution facilitates transactions through debit and credit cards. As well as popular digital payment platforms like Apple Pay and Google Pay. As tokens rise and fall in popularity, a new contender has emerged that is attracting the attention of both Shiba Inu (SHIB) and Pepe (PEPE) holders alike: Pomerdoge (POMD). With a recent 14% surge in its price, Pomerdoge is captivating the hearts and wallets of traders, prompting a migration of holders from other tokens. Click Here To Find Out More About The Pomerdoge (POMD) Presale Shiba Inu (SHIB): Plummets After Shibarium Launch Unfortunately, the much-anticipated Shibarium launch, which marks a significant milestone for the Shiba Inu (SHIB) community, faced technical issues. As a result, the Shiba Inu price experienced a drop in the aftermath of the launch. In fact, the Shiba Inu coin lost 7% of its value in the last 24 hours. Such instances highlight technical stability's role in the success of blockchain projects. While Shibarium could usher in a new era for Shiba Inu by transforming it from a meme coin to an ecosystem, the setbacks remind of the market's unpredictability. Moreover, this bearish trend is predicted to continue as all moving averages and technical indicators display strong sell signals. Thus, experts forecast that the current price of Shiba Inu, which is \$0.000008879, will drop to \$0.000008800 soon. Pepe (PEPE): Trading in the Red Pepe (PEPE) has recently landed in the red on the charts. Despite lacking intrinsic value or a financial profit motive, Pepe Coin has managed to captivate a devoted following. Nevertheless, this following did not result in significant price surges as the Pepe price has decreased by 21.8%. Furthermore, Pepe now has a value of \$0.000001204 with a market cap of \$470M, down 1.62% overnight. From a technical perspective, the Pepe coin could trade in the red for now, as all technical indicators are in the red. Therefore, market analysts remain bearish for Pepe, predicting a drop below \$0.000001200 soon. Pomerdoge (POMD): Gains Mass Appeal After 14% Surge The recent 14% price surge of Pomerdoge (POMD) has acted as a catalyst, causing a migration of holders from Shiba Inu and Pepe. This newcomer is making waves for reasons beyond its meme status. Its innovative Play-to-Earn (P2E) gaming concept has struck a chord with investors seeking more than just a speculative asset. P2E Gaming Takes Center Stage Pomerdoge's P2E Pomergame is a significant draw for many holders seeking more than just speculative trading. This crypto game allows users to enjoy gaming while simultaneously earning rewards in the form of POMD tokens. As you progress in the game, you can customize your Pomer characters and access the Pomerplace marketplace. The Pomerplace marketplace is a dynamic hub within the Pomerdoge ecosystem, offering a space where traders can trade expensive in-game items. Not only that, the Pomerplace also incorporates

an arena where Pomers can battle in a winner-takes-all scenario. POMD – The Best Crypto Choice in 2023 With a current market cap of \$14M, POMD has the advantage of being relatively undiscovered, positioning it for rapid growth. While Shiba Inu and Pepe have garnered attention, POMD’s distinct ecosystem, including the Pomerplace marketplace and engaging Pomer game, provides a multifaceted appeal that could attract diverse users. The POMD token is currently worth only \$0.008 and is in Phase One of its presale. Buyers will get access to a limited 7,777 NFT collection as well as weekly prizes worth \$150,000. Moreover, they will capitalize on a projected 17x price increase before its presale ends. Therefore, do not miss out – register for the POMD presale below. Find out more about the Pomerdoge (POMD) Presale Today: - Website: <https://pomerdoge.com/> - Telegram Community: <https://t.me/pomerdoge> - Twitter: <https://twitter.com/pomerdoge>

- Ordinals accounted for 84.9% of Bitcoin’s activity on August 20. - At present, BRC-20 tokens are the most often issued inscriptions. Although Bitcoin’s price has dropped recently and there have been rumors that the euphoria around Bitcoin NFTs has faded down, ordinary inscriptions remain in control of network activity as per recent statistics. Ordinals developer – Leonidas – said on August 21 that out of Bitcoin’s 530,788 transactions in the previous day, 450,785 were directly tied to Ordinals. While everyone is proclaiming “Ordinals are dead,” they have actually accounted for 84.9% of Bitcoin’s activity, he claimed. Dune Analytics’ data supports this trend by showing that on August 20th, there were over 400,000 ordinal inscriptions, while Bitinfocharts records a daily of 556,000 Bitcoin transactions. Contradicting Claims On August 20th, this indicates that Ordinals-related activity accounted for almost 75% of all traffic on the network. According to Dune, the Bitcoin network has received \$53.4 million in fees from 25.5 million Ordinal inscriptions. At present, BRC-20 tokens are the most often issued inscriptions, with 1.9 million issued only last week. DappRadar reported on August 17 that Ordinals NFT use and sales volume had dropped since peaking in May, leading some crypto analysts to proclaim the euphoria as having “died down.” However, the current data present a different picture. A prominent on-chain analyst recently reported that funding rates for Bitcoin had fallen into the negative zone, indicating that most traders were anticipating price drops as an opportunity to make a profit. According to CMC, the price of Bitcoin at the time of writing is \$26,015 and is down 0.62% in the last 24 hours. - This decision is timely given the widespread fear of generative AI. - Judge Howell stressed the importance of human authorship under copyright law. U.S. District Judge Beryl Howell has ruled that works fully created by artificial intelligence are not eligible for copyright protection. Thus, upholding the view of the U.S. Copyright Office. This decision is timely given the widespread fear that generative AI may one day replace human creators in fields like art and other similar fields. Concerns about AI eventually taking over scriptwriting have intensified as the writers’ strike has stretched on for more than a hundred days. But intellectual property law has always held that copyrights are exclusively given for human-made works. Human Authorship Stephen Thaler challenged the governing body’s reluctance to register AI-generated works in court. Imagination Engines’ CEO and neural network expert, Thaler, believes that AI should be given authorship credit when it achieves the necessary standards. Therefore, the person who owns the machine should be considered the owner of the product. However, Judge Howell ruled otherwise, stressing the importance of human authorship under copyright law. She referred to earlier precedents that ruled that only human authors’ unique ideas deserved legal protection. Judge Howell explained the rationale for copyright legislation, noting that it is meant to inspire people to create. She pointed out that the governing body was originally founded to safeguard copyrights and patents because it was believed that granting people exclusive rights in these areas would encourage innovation in various fields. As courts debate whether or not it is permissible for AI corporations to train their algorithms on copyrighted works, this decision is timely. Highlighted Crypto News Today: Key Dogecoin Developer Hints at Exit Amid Concerns Over Proof-of-Stake

This week, we look at Huobi (HT)’s efforts to counter bankruptcy speculation, Cathie Wood’s firm predicting a BTC ETF in 2021, and the rise of Pomerdoge (POMD)’s presale. Most notable is the Pomerdoge project, which stands to disrupt the meme market with its P2E platform. Let’s break down each story. Click Here to Find Out More About The Pomerdoge (POMD) Presale Pomerdoge (POMD): From Pomeranian-Inspired NFTs to a Global Gaming Platform Clear the pond, Frogs!
