

Magic Eden, Travalva and Fizen. The partnership network resulted in rewards redeemable for over 3,000 brands, including Spotify, Netflix, Starbucks, Nike, and PlayStation, providing tangible value to its users. This is a key element to mass adoption that is amongst the main challenges in crypto adoption. By participating in the Lingo network, users can potentially earn real-life rewards as active and passive ecosystem participants. The RWA Narrative with Lingo investors managing over \$3 billion in assets, Lingo aims to be positioned at the forefront of the Real-World Assets (RWA) movement. Building on Base and Solana, Lingo leverages RWA to power tangible rewards through its innovative ecosystem. As potential interest in RWA is on the rise, Lingo is poised to lead this frontier in the crypto industry. How It Works Lingo introduces a new model of generating tangible community rewards supported by Real World Assets. The business model reinvests platform fees into RWAs, creating consistent value and compounding growth in the rewards pool. Exclusive Benefits for Lingo Island Participants Lingo Islands, Lingo's recent SocialFi campaign that went viral on crypto Twitter with over 8 million tweets and half a million participants in less than four weeks, offers exclusive benefits. Holders of First Class, Business Class, Priority Pass, and Economy Pass tickets will unlock special pricing, priority access and increased chances of allocation. Public Presale Details - Sale Platform: Official Lingo website <https://mylingo.io> - Official Announcement: Lingo's official X account <https://x.com/lingocoins> - Launch Date: June 27, 2024, 11 AM EST, 5 PM CET, 11 PM HK Community and Network Growth Lingo has achieved the following traction: - Private Round: \$12 million raised, with \$35 million in oversubscription - User Base: 700,000 active users - Support: Google Cloud Web3 Startup Program grant - Global Brand: \$50 million in branding contracts with mainstream celebrities and creators, including Kingsley Coman, Bryan Habana and P-Square. The Lingo Team Lingo's team comprises industry experts from former Binance, ConsenSys and Google top executives, led by a co-founder who previously founded John-Paul (acquired for \$150 million). Lingo advisors include Duncan Murray (ex-Black Rock), Rachel Howes (ex-Managing Director at Booking), Paul Bunting (SMB Director at Microsoft), and Adrien Delaroche (Principal Web3 at Google). Investors and Partners Lingo is supported by leading investors, including Morningstar Ventures, GBV Capital, Zerostage Capital, Solidity Ventures, Maven Capital, and more. Strategic investors include influential figures like Carl The Moon, Altcoin Daily, Ivan on Tech, Brian Jung, Miles Deutscher, and more. Lingo on a Journey Users can join Lingo in revolutionizing mainstream crypto adoption and potential real-world rewards. Interested users can stay tuned to Lingo's official channels for more details on how to participate in the public presale and contribute to the future of consumer crypto. About Lingo Lingo is a leading gamified, RWA-powered rewards ecosystem, designed to bring real-life rewards for the next billion wave of consumer crypto. Backed by top-tier investors and advisors, Lingo is set to launch in Q3 2024, aiming to lead the RWA and rewards space with its revolutionary model. Bitcoin (BTC) drops to the \$62,000 range, triggering a significant decline in the crypto market. In the last 24 hours, 69,378 traders were liquidated, totaling \$163.08 million in losses. Top cryptocurrencies are facing tough times, while traditional assets like the NASDAQ are growing. What's causing the chaos? Today, the cryptocurrency market is displaying a significant downturn, with major altcoins witnessing sharp declines. The global crypto market capitalization has decreased by 3.38% to \$2.27 trillion. This drop has been largely influenced by Bitcoin's (BTC) decline below the \$62,500 range, currently trading at a low of \$62,299. This marks a 15% decrease from its all-time high of \$73,750 recorded three months ago. Ethereum (ETH), the second-largest cryptocurrency, has also followed a similar downward trajectory. Despite recent positive developments such as the launch of Australia's first Spot Bitcoin ETF and the conclusion of the SEC's investigation into Ether, the market's response has been overwhelmingly negative. This is reflected in Bitcoin and Ethereum's losses of 6.5% and 6.9% last week, respectively. Large-Cap Altcoins in Freefall Amid Market Turbulence In the upcoming days, the crypto market may see continued pressure, with bearish trends possibly halting any recovery. Following the Bitcoin drop, large-cap cryptocurrencies have faced heavy losses today. Among them, Binance Coin (BNB), Solana (SOL), and Ripple (XRP) have experienced declines despite their previous high gains. Solana dropped over 9% in the past 24 hours to a three-month low of \$123.08. The XRP fell 6% to weekly low of \$0.61. BNB, the native cryptocurrency of the largest crypto exchange Binance, declined by 8% amid news that India's anti-money laundering unit fined the exchange \$1 million for non-compliance with local regulations. Moreover, Layer 2 (L2), the Ethereum layer 2 solution launched just last week, has gained a maximum loss of 15% in the last 24 hours, bringing its current trading price to \$2.67. However, despite these losses, investors remain active, as evidenced by the daily trading volume of these cryptocurrencies continuing to trend upward. However, the prevailing bearish trends suggest that the market may face ongoing challenges in the near future.

The wider market is seeing sell-offs, with Dogecoin (DOGE) futures recently experiencing \$60 million in long trades liquidated. Likewise, the Bonk price dropped 19% in one week. Meanwhile, BlockDAG (BDAG) is progressing quickly. The Keynote 1 launch at Tokyo's Shibuya Crossing and the X1 mobile mining app have greatly increased its visibility, pushing presale numbers to over \$53M. Its low-code, no-code platform allows users to create utility tokens, meme coins, and NFTs, setting BlockDAG up to become a significant player in the cryptocurrency market. Bonk Price Drops Amidst Market Volatility Bonk (BONK), one of the first Solana memecoins, saw decreased enthusiasm before its 2023 comeback. Despite a 7.5% increase over the past month, Bonk's price dropped 19% in one week, contributing to a 4% decline as the crypto market lost nearly 1%. BONK has surged significantly over the year, showing resilience and growth potential. The memecoin aims to restore liquidity to Solana, evidenced by its 2022 airdrop to the Solana community. With a trading volume of \$300 million and potential market recovery, BONK might rebound to \$0.000030 in weeks and \$0.00005 by year-end. Dogecoin Futures Suffer Major Losses Amid Bearish Market Over \$400 million in crypto longs were liquidated in the past 24 hours, with Dogecoin futures seeing \$60 million in long trades liquidated as DOGE prices dropped over 10%. This exceeded liquidations for Bitcoin futures, the highest liquidation. The Coinbase 2018 drop of \$100B, expected to be a record, is being compared to the current market. Dogecoin sell-offs due to profit-taking and dollar strength, leading to significant losses in Dogecoin futures. Unlocking Profits with BlockDAG's X1 Mining App and Low-Code Revolution BlockDAG's X1 app transforms mobile mining, turning smartphones into powerful mining devices. Available on Android and Apple platforms, the app features an energy-saving algorithm that preserves battery life and data, ensuring efficient mining. Users can mine up to 20 BDAG per day, worth \$1 at the launch price of \$0.05 per coin. When the coin's value reaches \$1, daily earnings will rise to \$20, and at \$10, users could earn \$200 per day. The app also features a referral system and daily engagement incentives, enhancing accessibility and rewards for users. It stands out as one of the best crypto-mining apps available. BlockDAG's journey to global dominance began with the display of its keynote video at Tokyo's Shibuya Crossing, which detailed its project, including integration with DeFi platforms like Bitget and CoinEx. This strategic marketing move boosted visibility and presale numbers, raising over \$53 million till the 18th batch. BlockDAG's low-code, no-code platform is revolutionizing smart contract creation, making it accessible for developing utility tokens, meme coins, and NFTs. This platform allows users to create, manage, and deploy applications through a drag-and-drop interface, eliminating the need for extensive coding knowledge. This democratizes the development process, potentially giving birth to the next big meme coin by empowering more creators to innovate. Key Insights The broader market sell-offs have significantly impacted Dogecoin (DOGE) futures and Bonk, with substantial liquidations and price drops. In contrast, BlockDAG (BDAG) is making remarkable strides. The successful Keynote 1 launch at Tokyo's Shibuya Crossing and the innovative X1 mobile mining app have boosted its visibility and presale numbers to over \$53M. Furthermore, the low-code, no-code platform empowers users to develop the next big meme coin. While NEAR Protocol and Render are showcasing signs of recovery and gaining traction in the crypto arena, BlockDAG has stolen the spotlight as a leading Layer 1 project, thanks to its extraordinary presale success. Its pioneering ecosystem has quickly become a hub for savvy investors, surpassing its peers with state-of-the-art features. Market experts have praised BlockDAG's no-code platform, which competes with major players like Ethereum and Solana in development capabilities, supporting complex protocols with ease. With glowing endorsements from industry experts that helped boost the presale beyond \$52.7 million, BlockDAG has positioned itself as the prime investment choice in current bull runs, overshadowing optimistic forecasts for RNDR and emerging trends in NEAR Protocol. NEAR Protocol Trends: Overview NEAR Protocol (NEAR) has surged in popularity within the Ethereum token space, topping Google search trends. Despite a slight recent decrease of 0.1% and a more substantial 18% fall over the past week, NEAR has grown by 400% in the last year, ranking it among the top 20 global tokens by market cap according to CoinGecko. Investors view NEAR as a token with significant potential for growth. It excels in transaction volume and total value locked (TVL) in DeFi applications, underpinning popular Dapps like Kai-Ching and Hot Wallet. The 14-day Relative Strength Index (RSI) for NEAR is 42.7, while the weekly RSI is 66.87. For sustained bullish momentum, NEAR must stay above \$4.97, potentially reaching highs of \$16. RNDR Price Trends: Detailed Examination The Render Network (RNDR) tackles issues of scalability and intellectual property in the rendering of motion graphics and visual effects. Operating on Ethereum and leveraging OctaneRender, RNDR supports a peer-to-peer GPU marketplace. Since its launch, RNDR has shown substantial price fluctuations, peaking at \$13.53 in March 2024. As of late April 2024, it's trading at \$8.3, indicating a robust recovery. Current market data places RNDR's market cap at \$3.24 billion, with over 386 million tokens in circulation. Optimistic forecasts predict a rise to \$10.32 by 2025, and possibly \$34.43 by 2030. Conversely, in a downturn, RNDR could drop to around \$5.16, with resistance at \$17.21. BlockDAG's Cutting-Edge Ecosystem BlockDAG has soared to the forefront of the cryptocurrency market, securing a remarkable \$52.7 million in its latest presale, propelled by over 11.7 billion BDAG coins now in circulation. This significant financial growth, showcasing an 1120% increase to \$0.0122 per coin in its 18th batch, was driven by major endorsement and the innovative introduction of the X1 crypto mining app. This app has transformed mobile mining, optimizing energy efficiency and user-friendliness, thus broadening the mining community. BlockDAG has also received accolades from leading financial publications like Forbes and Bloomberg, bolstering its reputation as an avant-garde platform. At its recent second Keynote, BlockDAG revealed over 54 developmental enhancements aimed at improving user interfaces and system functionalities. The integration of DAG technology into its framework emphasizes its dedication to innovation, enabling the concurrent confirmation of multiple transactions and significantly boosting transaction speed and reliability. These strategic advancements not only underscore BlockDAG's dominance in the crypto market but also build a robust base for its ongoing innovation and expansion within the dynamic blockchain landscape. Concluding Insights As NEAR Protocol flourishes with a vibrant DeFi ecosystem and Render revolutionizes 3D content production, BlockDAG emerges as a luminary with unparalleled presale achievements, advanced technology, and novel mining methods. Recognized as the most appealing investment in the crypto sphere, BlockDAG's superior ecosystem and remarkable transaction capabilities establish it as the preferred choice for investors, outstripping the buzz around RNDR and NEAR Protocol. As NEAR Protocol and Render begin to rebound in the crypto sphere, BlockDAG has carved out a niche as a premier Layer 1 project, shining brightly with its phenomenal presale accomplishments. Its state-of-the-art ecosystem quickly attracted shrewd investors, overshadowing competitors with its superior technological prowess. Industry analysts have lauded BlockDAG's no-code platform, which competes with and often surpasses major players like Ethereum and Solana, providing seamless support for intricate protocols. Buoyed by robust support from industry experts, the presale vaulted beyond \$52.7 million, confirming BlockDAG as the top investment choice in the current bull market, eclipsing RNDR's positive forecasts and recent NEAR Protocol developments. NEAR Protocol Trends: Comprehensive Analysis NEAR Protocol (NEAR) has significantly increased in visibility within the Ethereum token ecosystem, recently dominating Google search trends. Despite a minor recent setback of 0.1% and a more significant 18% decline over the previous week, NEAR has surged 400% over the past year, ranking it among the top 20 global tokens by market cap according to CoinGecko. Investors regard NEAR as a token with vast potential, excelling in transaction volume and total value locked (TVL) in DeFi applications, supporting popular Dapps like Kai-Ching and Hot Wallet. The 14-day Relative Strength Index (RSI) for NEAR stands at 42.7, with a weekly RSI at 66.87. To sustain its upward trajectory, NEAR needs to stay above \$4.97, with potential peaks reaching \$16. RNDR Price Dynamics: Extensive Review The Render Network (RNDR) is tackling vital issues such as scalability and intellectual property rights within the realm of motion graphics and visual effects rendering. Operating on Ethereum and utilizing OctaneRender, RNDR underpins a peer-to-peer GPU marketplace. Since its debut, RNDR has experienced substantial price swings, peaking at \$13.53 in March 2024. As of late April 2024, it trades at \$8.3, indicating a notable rebound. Market insights

place RNDR's market cap at \$3.24 billion, with a circulating supply of more than 386 million tokens. Bullish projections envision a rise to \$10.32 by 2025, potentially reaching \$34.43 by 2030. In a bearish scenario, RNDR could decrease to about \$5.16, facing considerable resistance at \$17.21. BlockDAG's Pioneering Ecosystem BlockDAG has soared to the top of the cryptocurrency market, securing a formidable \$52.7 million from its recent presale, bolstered by over 11.7 billion BDAG coins now in circulation. This remarkable financial rise, which saw an 1120% increase to \$0.0122 per coin in its 18th batch, was fueled by extensive endorsements and the groundbreaking launch of the X1 crypto mining app. This app has transformed mobile mining by boosting energy efficiency and user involvement, thus expanding the mining community. BlockDAG has also earned praise from renowned financial outlets like Forbes and Bloomberg, reinforcing its status as a pioneering platform. At its latest second Keynote, BlockDAG presented more than 54 development updates focused on improving user interactions and system performance. The incorporation of DAG technology into its architecture highlights its commitment to innovation, allowing for the simultaneous confirmation of multiple transactions, thus significantly speeding up transaction processing and reliability. These strategic enhancements not only affirm BlockDAG's leadership in the crypto industry but also provide a sturdy platform for its continuous innovation and growth within the ever-evolving blockchain ecosystem. Final Thoughts While NEAR Protocol thrives with a vibrant DeFi ecosystem and Render leads in 3D content creation, BlockDAG emerges as a luminary with unmatched presale success, advanced technology, and innovative mining solutions. Recognized as the premier investment opportunity in the cryptocurrency world, BlockDAG's elite ecosystem and superior transactional efficiency position it as the preferred choice for investors, far surpassing the enthusiasm around RNDR and NEAR Protocol. - The network will become more open and secure as a result of this major change. - The testnet's withdrawal process will undergo major changes with the implementation. A major step towards decentralization will be taken by Base in mid-July when fault proofs are introduced on the Sepolia testnet. The integrity of transactions is guaranteed by this important advancement, which seeks to improve the network's security and dependability. It is critical to comprehend the ramifications of this development as Base keeps evolving. Decentralizing Layer 2 (L2) networks requires fault proofs. They are scheduled to be released on the Sepolia testnet, in the middle of July. By removing the need for centralized authority, this move will make it possible for anybody to make and counter assertions about the status of the L2. The network will become more open and secure as a result of this major change. Withdrawals Affected The testnet's withdrawal process will undergo major changes with the implementation of fault proofs. They used to be quick, but now they take at least a week to finish. Because of the new proving and finishing procedure, this extended timeline is essential. In addition, the system will begin suggesting output root claims using the `acdisputechecker` rather than the `acdisputeoracle`. Users who are presently making withdrawals should take notice of the time instant processing will still be applied to withdrawals started prior to the mid-July upgrade. The new minimum wait period of seven days will apply to withdrawals initiated during or after the upgrade. Resubmission of the request is required in the event that a withdrawal occurs concurrently with the upgrade. Due to the high number of projects listed on the platform in 2024, Coinbase's Base has seen a significant increase in transaction fees and volumes. Base also experienced network congestion a few months ago due to the huge demand for its Layer 2 network. Highlighted Crypto News Today: Solana Price Witnesses Brief Uptick Amid Strong Bear Dominance

London, London, June 20th, 2024, Chainwire Solciety, a prominent player in the PolitiFi meme coin sector, has successfully raised over \$300,000 within the first 48 hours of its presale, which commenced at 14:00 UTC on 18th June. The presale is scheduled to run for 30 days, concluding on 18th July. The presale success aligns with the heightened interest in PolitiFi tokens during this significant US election year. Solciety aims to capitalize on this trend, appealing to a broad audience with its unique 'æpolitical party for degens' branding. Solciety invites all interested parties to participate in discussions on its social channels. A total of 3 billion out of the 10 billion Solciety tokens are available for purchase this month before the coin becomes available for public trading. The presale includes price increases every 72 hours by smart contract, offering early supporters an opportunity to purchase tokens at a lower rate. Stage 1 buyers can acquire tokens at \$0.0015, with the price set to reach \$0.0040 by the end of the presale, resulting in a 169% price increase for the earliest participants. Solciety combines elements of SOL meme coins and PolitiFi, both of which have shown strong performance in the current crypto market. Solciety (SLCTY) tokens are available for purchase on the Solciety website. Overview of Solciety Solciety positions itself as 'æthe political party for degens', æ bringing together meme enthusiasts and investors. The core of its strategy is the meme campaigner, which drives its viral success through politically-themed memes featuring characters such as Donald Pump, Badimir Putin, and Kim Wrong Un. To incentivize content creation, 10% of the SLCTY token supply (one billion tokens) is allocated to reward prolific meme creators. This initiative aims to increase the project's visibility across social media, leveraging the 2024 election cycle for further outreach. Solciety has garnered attention from top crypto influencers, including ALTCOIN-BEAR, the PEPE ARMY, ShibaArmy1000x, and BscGems1000x, who collectively have 835k followers. On top of all this, Solciety has been fully audited by German veterans Solid Proof æ" the smart contract is watertight, meaning both new traders and seasoned degens can invest with complete peace of mind. Solana memes and PolitiFi: Solciety's PR strategy Solana meme coins are a defining trend of 2024, with Solciety poised to benefit from SOL's lower transaction fees compared to Ethereum. This has facilitated the rise of various projects within the meme coin space, namely dogwifhat and Bonk. These two coins have become mainstays in the top 100 most capitalized coins as of the time this release was published. They've seemingly come out of nowhere, benefiting thousands of degens in the process. Dogwifhat rallied by an incredible \$0.0009 between December and March, with BONK also producing returns of 6,700% over a 12-month period. PolitiFi is also home to many of 2024's most notable rallies, with this new sector incorporating another market trend that could elevate Solciety's standing. Coins relating to politicians are showing activity in sync with the election season, with the sector totaling over \$1 billion in market capitalization; this figure has the potential to increase further as the election year progresses. SLCTY tokens are currently available for \$0.0015, with prices set to increase every 72 hours by smart contract. Early participation secures the lowest entry price. Solciety (SLCTY) tokens are available to purchase on the Solciety website. About Solciety Solciety is the answer to the corrupt, dull, and economically inept politics of today. It aims to unite degens under the umbrella of memes and potential for gains. With its advanced meme-generating tech and SLCTY token, Solciety is here to harness election buzz and dominate the 2024 PolitiFi scene by offering degens a fun and potentially lucrative way of taking part in current affairs. For more information about Solciety (SLCTY), users can visit the website. Website | Whitepaper | Socials Contact Solciety marketing@solciety.io

- With an 85% share of users on June 17th, Uniswap ruled the Base blockchain. - Meme coins' recent surge in trading activity on the Base network is a key factor in this. Coinbase-backed Ethereum layer-2 network Base with 270,000 users on June 17th set a new record for most daily active users on decentralized exchanges (DEX). The number increased by almost 9% as compared to the day before. Based on the most recent all-time high in active users, Base-powered decentralized exchanges have overtaken BNB Chain, according to statistics provided by Dune Analytics. Layer 2 is currently trailing Solana in terms of user base. Meme Coins Frenzy Major Factor Meme coins' recent surge in trading activity on the Base network is a key factor propelling this fast adoption. Although meme coins have caused a huge uproar on Solana, Base isn't far behind. Not only that, but Base is rapidly overtaking the former as the go-to platform for meme coin projects and speculation, drawing in market participants eager to cash in on the frenzy. There has been a significant increase in base trading volumes due to the popularity of meme coins such as DEGEN and BRETT. With an 85% share of users on June 17th, Uniswap ruled the Base blockchain. PancakeSwap came in at 3.8%, Aerodrome Finance at 3.2%, and SushiSwap at 2.3%. In March of current year, Base's total DEX volume was \$1.2 billion, according to trading volume metrics. In any case, that number has fallen, and as of June 17th, Base's daily DEX trading volume was little over \$298 million. Uniswap was the dominant force, making about 81.1% of the daily volume, according to statistics from Dune Analytics. 6.6% of that day's Layer 2 network volume was accounted for by PancakeSwap and Aerodrome Finance together. Base has also become a major draw for investors looking to inject fresh funds. Highlighted Crypto News Today: Ethereum Surges Past \$3.5K as SEC Closes Investigation on ETH Sales

In the past month, the crypto market has witnessed wavering upward and downward movements. With crypto assets particularly the altcoin sector, showing price revivals, the regulators introducing announcements and numerous launches, the first half of 2024 has been momentous in activity. As the second half (H2) of the year is approaching, the following altcoins seemingly show signs of potential bullish performances in the upcoming months. Ethereum (ETH) Leading altcoin Ethereum (ETH) has shown a monthly price performance of 21.19% and has broken multiple resistance levels in the past month, according to TradingView data. With a year-to-date price performance increase of 54.68%, ETH shows potential for a bullish takeover. At the time of writing ETH is trading at \$3,518. The recent approval of spot ETH ETF listings by the US SEC caused a price rally which instigated the altcoin to break its \$3K resistance. Moreover, Ethereum's spot ETFs are expected to cause another bullish trend as they begin trading in the coming months. Analysts have predicted that the ETH market price will hit \$4K in 2024. With a neutral market sentiment, the altcoin is one of the most anticipated crypto assets within the market for the second half of 2024. Toncoin (TON) TON, the native token of The Open Network (TON) blockchain, has witnessed multiple instances of market attention over the past month: While its monthly price performance has decreased by 0.77%, the year-to-date performance has increased significantly. In April, the TON blockchain partnered with Tether to integrate stablecoin USDT into the blockchain and Telegram ecosystem. Moreover, its other collaborations and the growth of Telegram are also expected to fuel a price surge. While it's combating a recent price dip in the past week, the altcoin still shows potential for bullish performances in the coming week. At the time of writing, the token was trading at \$7.10, according to CMC data. Notably, TON hit a new ATH at \$7.24 on June 5. Litecoin (LTC) Litecoin has caught market attention this week due to its upsurge in on-chain activity. Litecoin's (LTC) has shown a price decline in the past month (3.08%). At the time of writing, the altcoin is trading at \$77.12 Despite the token's price dip, Litecoin has shown a notable increase in the number of transactions. It hit a new milestone of 426K transactions, as of June 7. The altcoin has set a mark by surpassing Ethereum's active wallet holders count by a notable 100K. Litecoin's wallet addresses have shown a 75% surge since the beginning of 2024. Floki (FLOKI) Floki, one of the famed meme coins, has shown a monthly price increase of 15.1% over the past month. Floki's price has risen from \$0.0003462 to \$0.0003462. At the time of writing, the altcoin is trading at \$0.0002383. Furthermore, FLOKI's native Name Service went live in the past month. With long-term price surges, the altcoin shows a potential for further upward pressure in the coming months. Uniswap (UNI) Uniswap (UNI) witnessed a rough phase in the first half of 2024. The SEC's claims about Uniswap being an unregistered securities exchange caused quite a stir in the market. Moreover, UNI's market price exhibited an increase of 32% over the last 30 days suggesting a bullish trend. Despite the SEC lawsuit, Uniswap hit new milestones this year with a yearly price surge of 129.73%. The altcoin's trading volume hit its highest peak of 3 billion dollars in April. At the time of writing, the altcoin is trading at \$9.28 with a market cap of \$6 billion. Pepe (PEPE) Pepe, the frog-themed meme coin has drawn notable market attention in the past few months. The memecoin has witnessed a significant price surge, particularly in the past month. It has increased by 52.34%. Notably, Pepe also hit a new ATH on May 27 with prices spiking to \$0.0001718. At the time of writing, the altcoin is trading at \$0.0001326. Moreover, the token also showed an increase in market cap and reclaimed its position as the third-largest memecoin in the crypto market. In the coming months, the altcoin is expected to show further bullish trends. Polygon (MATIC) The native token of the Polygon blockchain, MATIC, has shown a modest performance during the first half of 2024. However, bearish trends majorly dominated its momentum in H1 2024. Within the monthly time frame, MATIC recorded a price decline of 6.62%. At the time of writing, the altcoin is trading at \$0.6262. Notably, Polygon Miden Alpha Testnet's newest version went live at the beginning of June. The testnet allows developers to design self-sovereign and high-throughput applications. Additionally, the Polygon Network has also integrated with the Circle platform to list the Polygon USDC token. Recently the Polygon community has announced a community grant program of a whopping 35 million MATIC. Moreover, the Polygon (MATIC) stablecoin hit a new milestone of surpassing \$1.5 million in market cap in the recent past. Solana (SOL) Among the top altcoins, Solana (SOL) has stirred discussions of an ETF entrant presently. The token has also shown a price increase of 6.44% in the past month. SOL in H1 2024, has shown a positive price performance as highlighted by the year-to-date 36.74% increase. Additionally, the Solana blockchain has received immense attention from leading celebrities globally. Solana's memecoin launch platform Pump.fun has seen multiple celebrities including reality-TV star Caitlyn Jenner and singer Iggy Azalea launch their meme tokens. Notably, Iggy Azalea recently expanded her token, Mother's use case by launching cell phones and phone plans

that can be bought for the token. Recently, there has been a dispute between MOTHER and famed boxer, Andrew Tate's token DADDY. The altcoin is trading at \$152.82 at the time of writing. Shiba Inu (SHIB) Shiba Inu, the second largest memecoin in the crypto market, has been a consistent interest among investors. While the altcoin is witnessing a recent price dip, it has shown a notable increase of 117.36% in the past six months. Notably, Shiba Inu's Shibarium blockchain has witnessed a significant surge in new users. According to TradingView reports on June 5, the number of new accounts showed a 24-hour surge of 3436%, skyrocketing from 38 to 1031. Moreover, according to analysts SHIB is expected to hit new highs in the coming months. At the time of writing, the altcoin is trading at \$0.00002182. XRP (XRP) The Ripple ecosystem has witnessed the scrutiny of Regulators and the market collectively in the first half of 2024. Meanwhile, the altcoin is currently facing a price dip with a monthly decline of 3.26%. Notably, the CEO of Ripple Brad Garlinghouse, post the approval of spot ETH ETFs by the SEC raised discussions about a spot XRP ETF. Additionally, Ripple is presently combating a regulatory case against the SEC. Moreover, Ripple in April 2024 launched its stablecoin, the Ripple USD (RLUSD). The CEO of Ripple stated that the stablecoin will initially be available in the US. He also mentioned that there are plans to integrate it into Defi platforms and global markets. At the time of writing XRP is trading at \$0.4829. | Altcoin | Bullish price prediction | Bearish price prediction | | Ethereum (ETH) | \$6800 | \$2500 | | Toncoin (TON) | \$11.191 | \$2.865 | | Litecoin (LTC) | \$82.53 | \$56.22 | | FLOKI (FLOKI) | \$0.00095683 | \$0.00004693 | | Uniswap (UNI) | \$20.113 | \$3.972 | | Pepe (PEPE) | \$0.00004965 | \$0.00000473 | | Polygon (MATIC) | \$0.9803 | \$0.9099 | | Solana (SOL) | \$132.99 | \$88.81 | | Shiba Inu (SHIB) | \$0.00004991 | \$0.0000083 | | XRP | \$0.4829 | \$0.4829. The overall crypto market is expected to see multiple advancements in the second half of 2024. Despite the regulatory challenges, the crypto community members hold a positive outlook toward cryptocurrency moving into the mainstream in the second half. Decentralized applications are designed to look and feel just like regular applications, and ideally, the user should not realize they're interacting with the underlying blockchain. But blockchains are what makes dApps different from regular Apps, enabling them to be decentralized, so users have more control and functionality at their fingertips. dApps provide a new way for users to interact with digital services, games, finance and more, and they have become the foundation of a new kind of internet that's popularly known as the Web3. Just as with the original internet, these days there are dApps for everything, be it payments, investing, borrowing money, sharing information, social media and games. So let's take a look at a few examples that showcase exactly what Web3 is all about. Transak: The World's Gateway To Crypto New users of Web3 need a gateway to crypto, and that's exactly what Transak provides, integrating its crypto on-ramps into any dApp via a simple API, handling all of the complexities of KYC, compliance and regulations, while also providing numerous options for fiat payments and payouts. On-ramps are essential for Web3 dApps because it's believed that the average dApp that doesn't not have one sees something like an 80% bounce rate on new users. That's because many of those new users are unfamiliar with crypto, with zero knowledge of how digital wallets work, gas fees and so on. They're also not familiar with the process of buying crypto through an exchange platform. As such, tell them they need crypto and they simply give up straight away. With Transak that's no longer the case. Although people might not be familiar with crypto, they are familiar enough with the concept of buying in-game currency on mobile games and applications, and Transak makes the experience much like this. All the user has to do is specify the amount and type of crypto they want to buy, link a payment method and they're good to go. It's fast, simple, effective, efficient and therefore a game-changer for every other dApp. dydX: The Best Exchange For Pro Defi Traders In the crypto industry, professional trading tools like margin calls, derivatives and options were previously only available on centralized exchange platforms, but dydX changes that, integrating these pro trading features into a trustless and decentralized environment. On the face of it, dydX looks and feels like most other DEX platforms, such as Uniswap or SushiSwap, but a closer look reveals some stark differences. While the latter platforms are designed for simple spot trading, dydX supports the trading of perpetuals, which are derivatives or financial instruments that derive their value from the underlying asset on which they're based. Like with futures and options, derivatives give traders a way to speculate on the future price of the underlying asset, but the difference is there are no expiration dates on its buy and sell orders. That's why its contracts are termed as perpetuals. dydX gives crypto traders access to more sophisticated trading tools and greater leverage of up to 25x on most synthetic assets, what's more, it's built on a more efficient platform. Instead of using an automated market maker that struggles with high slippage, it's based on a more traditional orderbook and matching model that better suits the requirements of institutional traders. With V4's recent migration to its own chain, dydX will soon be able to host permissionless markets which should be interesting for Defi speculators and pro traders. Flare: The Best Blockchain for Real-World Data An interoperability protocol that's focused on interchain communication, Flare provides dApp developers with an easier way to access off-chain data from other blockchains and the wider web. The idea is that developers can harness real-world data to build richer dApp experiences and create new monetization models. The idea with Flare is that it helps blockchains get over one of their major constraints - namely their inability to talk to the real world. Because blockchains are essentially closed networks, their utility has been limited mainly to financial services, rather than things that happen in the real world, but Flare changes this. Flare has created two powerful data acquisition protocols, including the Flare Time-Series Oracle, which delivers decentralized, time-series data to dApps built on its network. It currently provides data about digital asset prices to other blockchains and is widely used by DeFi's and lending platforms. It does this by incentivising a network of data providers to be honest and ensure accuracy. As for the Flare State Connector, this enables real-world data such as sports results to be transmitted to blockchains through an API. Once again, data providers are incentivized to provide this information, with independent attestation providers doing the job of verifying such information. Nexo: The Best Platform for Lending and Borrowing Crypto One of the great things about crypto is DeFi, which provides users with a world of financial opportunities that don't exist when dealing with fiat. For instance, DeFi enables anyone to lend or borrow crypto, and one of the best platforms for doing that is Nexo, which allows users to access fiat cash without selling their crypto assets. To borrow money from Nexo, simply deposit crypto as collateral and you'll receive a loan in either stablecoins or fiat. The funds for borrowers come from investors, who are users that deposit crypto into its liquidity pools in a return for earning part of the interest derived from its loan repayments. Its interest rates are among the best in the business. What's more, Nexo also acts as a comprehensive trading platform with a range of advanced trading options. It allows users to buy and sell more than 70 digital assets, and they can deposit funds for the first time with no wallet, simply by using a credit card or bank transfer. It supports a number of unique order types for spot trading including advance trailing,OCO (one-cancels-the-other), stop loss and take profit orders. Other options include perpetual futures, similar to dydX, with leverage of up to 2x, and margin trading that provides up to 5x leverage, meaning traders can trade with five-times the amount of their actual deposit. Oh, and did we mention that Nexo also offers a dual-usage crypto card, which makes it simple to spend cryptocurrency in any physical or online store that accepts Mastercard? MixMob - The Best Web3 Game of 2024 Launched earlier this year after years in the making, Mixmob was one of the most widely anticipated metaverse games and it is already enjoying great success. It's based on remix culture, and set in a universe where a mysterious artificial intelligence has deleted the world's culture to enslave humanity. But a small band of Mixbots, who escaped the enslavement, are now fighting back. The game offers a thrilling mix of gameplay mechanics, combined with an open economy, stunning artwork, a complex storyline, mutable NFTs that evolve as the player progresses, and a lively community. Players can engage in various games to compete for cryptocurrency rewards, reinvesting their winnings to make their characters even more powerful. The main focus of the game is Racer 1, a hybrid card/battle/racing strategy game that merges the thrills of Mario Kart with the tactical concepts of Fortnite's Clash Royale battle mode. Racing revolves around MixBot Racers, which are NFTs that players can fine-tune and power up to gain a competitive edge against their peers. Another element of the game involves raiding, where players can engage in raids on the surface of the world, attempting to discover valuable rewards without being detected by the all-conquering AI that dominates. There's also a Remixing element, where players can leverage their creative abilities to merge NFTs and craft unique looks for their avatars and MixBots and develop enhanced abilities. MixMob was under development for years, launching its first NFT collection back in December 2021 when it sold 5,000 unique Gen0 masks on the Solana blockchain. There are currently around 1,600 unique NFT mask holders. Later this year, MixMob's team will add more functionality to the beta of MixMob Racer 1, including player-vs-player and tournament modes, as well as focus groups. It will also expand to include more competitors in ten-player races, with more card complexity, more in-game content and additional decentralized Turbo Arenas. There's a lot to look forward to, and MixMob should be a top blockchain game for some time to come. Nimiq: The most widely accepted, most extensive crypto payments network in the world If you're looking for a secure, easy-to-use, low-cost and fast blockchain protocol that enables seamless value transfer and effortless onboarding for non-crypto natives. Nimiq claims to be the most widely accepted cryptocurrency and it's hard to argue with that, for its tokens are accepted in more than 29,200 locations globally, and that number is growing by the day. Its extensive list of products include the Nimiq Wallet, which is a browser-based dApp that can be accessed from any device, anywhere, so users can transact and manage their funds from any location. SuperSimpleSwap provides a service that makes it possible for users to buy and sell multiple digital assets using their bank account, while Cryptopayment.Link is a merchant-focused product that allows any store to accept crypto as a form of payment. It also offers community projects such as Nimiq Cafe, which provides tools and resources for developers wanting to deploy dApps on the Nimiq blockchain, and a Nimiq Shop, where fans of the dApp can buy branded Nimiq merchandise using crypto. In addition, Nimiq has recently branched out into DeFi, offering staking services with its switch to a proof-of-stake blockchain. It's possible to stake with as few as just 100 NIM coins. In terms of outreach, Nimiq is second-to-none, with successful projects including its Nimiq Cities campaign, which aims to promote local businesses in select cities around the world to adopt crypto. Boxbet: The best crypto betting platform on Telegram Still flying under the radar, Boxbet is pioneering the concept of iGaming, offering a novel way to bet on various sports, lottery and casino games and take on other humans in player-vs-challenges. The platform uniquely leverages Telegram wallets, which is an advantage that means it can focus more on its core offerings rather than the crypto management side. Its platform is designed to serve users aged 18 and over in jurisdictions where online betting is legal, and makes use of both centralized and decentralized elements to deliver a smooth and exciting betting experience. It has emerged as one of the most popular iGaming apps on Telegram, which is one of the most popular social media networks for the crypto industry. Boxbet's mission is to decentralize the iGaming industry and make it fairer for all players. It holds the distinction of being Telegram's fastest iGaming bot, and features seamless integration with sports betting markets offered by Azuro, a major name in online gaming. With this integration, users can place bets on all manner of sporting events from directly within their Telegram wallet. Boxbet's team is currently in the process of obtaining gaming licenses from multiple jurisdictions in the world, and is backed by some of the biggest investors in crypto.

- ZachXT claimed that DJT is not an official Trump token. - Arkham Intelligence offered Bounty money of \$150,000 to resolve the DJT speculation. A speculated report was out last day by Pirate Wires on their X post that former U.S. President Donald Trump has launched his cryptocurrency, DJT. It has sent that token value high while other meme coins have dived down. The post on X, after conversations, the Trump was launching an "official token" with the ticker DJT, and the project spearheaded by the Barron, the Trump's son. The crypto community doubted that Trump was behind the token and later it was clear that it was his son, Barron as per ZachXT, a crypto sleuth, posted on X, 5 hours ago. It claims that Martin Shkreli, a pharmaceutical industry executive, privately messaged him on X, stating that he had recovered 1k pieces of evidence that the token created it with Barron. Shkreli announced that he is the co-creator of DJT, a Solana-based Trump token on X. Shkreli's reputation in both the pharmaceutical and cryptocurrency sectors is disrupted. On Monday, Shkreli reposted the Pirate Wires tweet claiming DJT is the official Trump token. The Trump campaign and the Trump Organization didn't respond to the launch of the token. DJT coin was introduced to the crypto market for two months, and the token value went up considerably. Its price was up by 44.59% yesterday. Notably, it has declined by 8.52% to \$0.002748 within the past 24 hours. Moreover, the trading volume dipped by 1.61% to \$358K. The confirmation regarding the DJT token has driven the price down. DJT Abuzz the Market Meanwhile, 10 hours ago, Arkham Intelligence offered bounty money to the one who can prove the ambiguity of the Donald Trump-themed Solana token, DJT. After it, we ball \$150,000 to the first person to definitively prove the identity of the creator of \$DJT, the Arkham posted on X. According to Lookonchain, an on-chain analytics firm, three TRUMP whales sold a total of 473,433 tokens and made a collective profit of over \$6.2 million yesterday. The sudden whale activity was driven by recent speculations and controversies around the token. The community response is mixed, with concern over the future of the token, while others take it as profit-making. Highlighted News of the Day

London, London, June 18th, 2024, Chainwire Solciety, a new entrant in the crypto's Politifi sector, officially launches today, 18th June at 14:00 UTC, initiating a 30-day presale of its Solciety (SLCTY) tokens. 3 billion Solciety (SLCTY) tokens will go on sale, starting at \$0.0015, with price

increase on the smart contract every 72 hours across ten stages. The final presale price will be \$0.0040, giving day one buyers a potential 16% increase on the value of their bags before the project becomes available for public trading. Described as æthe political party for degens,æ Solciety plans on using the viral potential of memes and political satire to potentially explode alongside the political powder keg that is the 2024 election season. Community numbers have already passed 10,000 across socials before the live presale has even started æ“ an indication that Solcietyæ’s offering of humor and degen politics is resonating with crypto communities around the world. Straddling the Solana meme coin and Displacing Ethereum’s the combi, \$9 billion Solciety is strategically based across two of crypto’s most powerful pairings. And with Solana Solciety (SLCTY) tokens will be available to purchase on the Solciety website from the 18th June at 14:00 UTC. Solciety: Fusing Memes with Political Satire By focusing on gains and satirical meme-induced comedy, instead of invading foreign lands and tanking the dollar, Solciety is aiming to provide degens with a political party of their own. Solcietyæ’s mission is underpinned by two main components: - SLCTY Token: With a total supply of 10 billion tokens, including 3 billion available during the presale, the project allocates 20% for marketing to expand its reach and 10% for rewards, promoting virality through its meme campaign. - Meme Campaigner Tool: This tool facilitates the creation of viral, Solciety-branded memes using satirical characters like Donald Pump and Badamir Putin. Top meme creators will be rewarded with SLCTY tokens, enhancing the projectæ’s visibility and engagement. Strategic Timing for Politifi Growth The Politifi sector, focused on US politics-themed meme coins, has rapidly grown to over \$1.1 billion in under 6 months. Donald Trump-inspired coins rule the roost, with both official and unofficial Trump-themed coins clocking more than \$500 million in market cap, making up over half of the sectoræ’s total capitalization. MAGA token growth in 2023-2024 (Source, CoinGecko) Triple-digit rallies (or more) are commonplace here. In the period leading up to the 3rd June, the MAGA token, a tribute to the potential æcrypto president,æ rallied by more than 80,000% from launch price to recent highs. Super Trump even surged by 10x in one day. Itæ’s not all MAGA, though: Jeo Boden, a parody of the current president, rallied 40x from March to April. With Politifi likely to progress further as election season ramps up, Solciety could be the Politifi coin that comes out on top and unites degens across the political spectrum. Some SOL memes have performed impressively this year. A Dogwifhat (WIF) holder registered a 13,000x gain on a \$310 investment, pocketing \$4 million in profit this year. Meanwhile, Iggy Azaleaæ’s MOTHER token recently turned \$3k into \$9 million for one trader. Plus, with the Politifi sector following US election buzz and the baked-in virality offered by Solcietyæ’s Meme Campaigner tool, the team aims to present a high-potential investment to coincide with the bull run. Solciety (SLCTY) tokens will be available to purchase on the Solciety website from the 18th June at 14:00 UTC. About Solciety Solciety is the answer to the corrupt, dull, and economically inept politics of today. It aims to unite degens under the umbrella of memes and potential for gains with its advanced meme generating tech and SLCTY token. Solciety is here to harness election buzz and dominate the 2024 Politifi scene by offering degens a fun and potentially lucrative way of taking part in current affairs. For more information and to buy Solciety (SLCTY) users can visit the website. Website | Whitepaper | Socials Contact Solciety Solciety marketing@solciety.io

Penguiana (\$PENGU), a Solana based memecoin is turning heads with its unique penguin-themed play to earn concept and is poised for significant growth as they get ready to release the trailer of their upcoming play to earn game and also the GUIANA NFTs which will be instrumental to playing the game and earning some tokens. Hereæ’s everything you need to know about Penguiana and steps on how to get your hands on \$PENGU tokens in preparation for the anticipated NET MINT. GUIANA NFTs are limited Edition NFTs that would allow the holder to play the Penguiana Game & earn tokens. The NFTs are just 1000 and would be minted for 50,000 \$PENGU a piece. According to the Penguiana team, 80% of the \$PENGU used to mint the NFTs would be burnt and the other 20% sent to the reward treasury to incentivise early players of the Penguiana game. Penguiana Token Key Points Before diving in, here are some crucial details about Penguiana and its \$PENGU token: Limited Token Supply: \$PENGU tokens are only 100 million in total and more can never be minted. Also the \$PENGU token contract has been audited by two independent token auditors and also has been listed on Coinmarketcap & Coingecko. Trading On Raydium: The \$PENGU token is currently trading on Raydium and can also be purchased through Birdeye. How to Buy Penguiana (\$PENGU): A Step-by-Step Guide Ready to buy Penguiana tokens? Follow these steps below: Set Up a Solana-Compatible Wallet: First, you need a secure crypto wallet that supports the Solana network. Solflare and Phantom Wallet are excellent choices for beginners. Buy SOL: Next, you need to add some Solana (SOL) to your wallet. Hereæ’s how: Purchase SOL from an exchange like Binance, Coinbase, or Kucoin. Transfer SOL to Your Private Address: With SOL in your wallet, youæ’re ready to go. Visit Raydium: Visit Raydium.io or Birdeye, connect your wallet, and then Click here or copy the \$PENGU contract address below to find Penguiana and then input the amount in SOL you want to buy and sign the transaction. \$PENGU Contract Address: PENGKEYPXYDnBxGKcJxASfMsovhcrtPT8S7127tKcg What Makes Penguiana Different? Real Utility: Unlike many meme coins, \$PENGU has a tangible use case. It will be used to mint in-game NFTs, adding significant value beyond speculation. Strong Community Support: Penguiana boasts over 10,000 followers on Twitter and an active Telegram community, indicating strong market potential. Upcoming Game Trailer: Penguiana is set to release a game trailer next month, showcasing the play-to-earn features of the \$PENGU token. This release is expected to generate significant interest and drive up the tokenæ’s value. Future Partnerships and Listings: Penguiana has several partnership and exchange listing announcements planned for next month, further boosting its potential. Stay updated and connect with other supporters by joining Penguianaæ’s Telegram and Discord channels. About Penguiana Penguiana is a pioneering meme coin project on the Solana blockchain, inspired by the social and playful nature of penguins. It combines humor with substantial investment potential, appealing to both gamers and crypto investors. By leveraging Solanaæ’s high throughput and low transaction costs, Penguiana offers a seamless and rewarding experience for its holders. - Trumpæ’s new speculated token, DJT is up by 44.59% in the past 24 hours. - He has shown interest in the crypto market and would be the crypto president. The crypto market has endorsed the new meme coin, DJT, in the name of former U.S. President Donald Trump. The token on the Solana blockchain has skyrocketed in value amid rumors that the might be Trumpæ’s presidential token. However, there has been no official announcement. A claim was by The Pirate Wires account, an American media company on Twitter, 9 hours ago. It was labeled as a æcommunity note,æ declaring it æfake news.æ This statement is not in the tweet, now. Furthermore, it mentions that Trumpæ’s 18-year-old son Barron will be æspearheadingæ the token project. Per conversations, Trump is launching an official token æ“ \$DJT on Solana. Barron spearheading. æ“ Pirate Wires (@PirateWires) June 17, 2024 DJT coin has been in the crypto market for two months and is performing considerably, as its price is currently up by 44.59% in the past 24 hours to \$0.002868. The trading volume soared by 1521.47% to \$369K. The coin has been driven by speculation and social media buzz. Other Trump-Themed Coins There are several other tokens themed around Donald Trumpæ’s name. MAGA Coin is one of them, built on the Ethereum blockchain. Currently trading at \$7.08, it has declined by 39.01%. Followed by TRUMP coin, one of the first Trump-related cryptocurrencies. The price dropped by 9.41% to \$0.0006536. Interestingly, Trump Inu is an inspired coin by Shiba Inu and Dogecoin, trading at \$0.000096237 down by 12.55%. These tokens have a common element of Trumpæ’s name for market appeal but different origins. Besides, Donald Trump declared that he would be the æcrypto presidentæ at a fundraiser in tech-friendly San Francisco a week ago. The role of cryptocurrency in the upcoming U.S. presidential election is seeking essential attention and scrutiny. Moreover, Biden is reportedly planning to be a part of the Bitcoin roundtable, yet to happen next month. Highlighted News of the Day Tanzania Proposes IT Act Amendment Including Tax For Crypto Traders

- Ethereum price is down 4% in the past 24 hours. - Whale activity suggests confidence; altcoins face significant bearish pressure. The altcoin market is experiencing high bearish pressure, with major cryptocurrencies seeing notable declines. Ethereum (ETH), the leading altcoin has dropped 4% in the past twenty-four hours, hitting a one-month low of \$3,355. Despite this price drop, trading volume has surged by 83%. Other notable coins in the altcoinsæ red sea include Solana-down 8%, Dogecoin-down 10%, Uniswap-down 11%, Polygon-down 10%, Cardano-down 8%, Avalanche-down 8%, and Chainlink-down 7%. Amidst this market slump, a significant whale movement has captured attention. Just before Ethereumæ’s further decline a few hours ago, an Ethereum ICO participant deposited 5,500 ETH (worth \$19.3 million) to Kraken. This participant originally received 150,000 ETH in 2015 at an ICO price of \$0.31, totaling \$46,600. Over the past two days, this whale has deposited 10,000 ETH (\$35.4 million) to Kraken and still holds or stakes 139,000 ETH (\$476 million) across eight wallets. Whalesæ Move Indicate Bullish Recovery? Santimentæ’s data reveals a massive increase in Ethereum addresses holding more than 10,000 ETH over the past four weeks, showing a rise of over 3%. The accumulation by whales can significantly influence market sentiment and drive up demand for ETH, potentially leading to a price increase. Moreover, prominent analyst Ali highlighted in a recent tweet that Ethereum whales have purchased over 700,000 ETH in the past three weeks, amounting to approximately \$2.45 billion. On the technical side, the 9-day EMA for Ethereum is at \$3,553.6, indicating a compelling bearish chart. The daily RSI stands at 43, bearing oversold conditions. The first resistance level is at \$3,600, and if the price surges above this, it could potentially reach \$3,805. Despite the current bearish trend, the actions of these large holders suggest underlying confidence in Ethereumæ’s long-term potential. The coming days will determine whether this accumulation will counteract the prevailing bearish sentiment and support a price recovery.

Recent market movements show a dip in Fetch.aiæ’s price forecasts following a major merger, while GameStopæ’s shares continue their erratic downturn. In contrast, BlockDAG has soared, boasting a \$51.1M presale powered by influential backing, standout presentations, and its innovative X1 mining app which allows phone-based crypto mining drawing significant attention from the cryptocurrency community. Fetch.aiæ’s Market Forecast: Anticipating a turnaround After 24% decline Fetch.aiæ’s price has dropped by 4% in the last 24 hours and 24% over the week, currently at \$1.00, with increased trading activity. This follows the merger of Fetch.ai with Ocean Protocol and SingularityNET on June 13, and the renaming of \$FET token to \$ASI on June 11. Prices have been on a downward trajectory since May, breaking below the lower edge of the wedge pattern. Despite the current bearish outlook and high selling pressure, shown by an RSI below 30, optimists are eyeing a rebound at the \$1.56 support level. If this level holds, Fetch.ai could climb to \$1.9, aligning with the 50-day SMA. GameStopæ’s Stock Takes a Dive, Falling 62% from Recent Highs GameStopæ’s (GME) shares have continued their slide, plummeting 12% on Monday following a 40% drop on Friday, ending at \$24.89æ“a 62% fall from its recent high of \$61. This downturn also hit meme tokens related to GME, with the Solana-based GME token falling 25% to \$0.01624 after a 200% rise the previous week. The market cap stood at \$112.21 million with a trading volume of \$110.14 million over 24 hours. Other meme tokens, like Roaring Kitty (KITTY) and various themed tokens, saw declines between 4% and 10%. This volatility started in late May triggered by retail trader Keith Gillæ’s substantial GME investments and company decisions shaking investor confidence. BlockDAGæ’s Presale Climbs as Prominent Crypto Authorities Advocate for Its Potential BlockDAGæ’s \$51.1 million presale figures are surging, significantly driven by high-profile endorsements from cryptocurrency experts. These nods have caught the attention of a broad audience, leading to a notable presale rally. In a recent video, crypto influencer Dapp Centre called BlockDAG a remarkable investment, even referring to it as the æPolygon killer.æ The influencer pointed out its DAG structure for processing transactions simultaneously and a proof-of-work consensus mechanism ensuring security and decentralization. The first keynote in Tokyo was praised for its comprehensive introduction to the project and products. Additionally, a second keynote, broadcast from the moon, highlighted BlockDAGæ’s major achievements, accolades from Forbes and Bloomberg, endorsements from leading crypto figures, over 50 development updates, and forthcoming attractions including a DOXing video and a development documentary. The keynote also introduced the energy-efficient X1 mining app, a game-changer for mobile mining by turning smartphones into effective BDAG coin miners. With X1, users can mine up to 20 BDAG daily, translating to \$1 at BDAGæ’s projected launch price of \$0.05, and possibly \$20 per day if BDAG climbs to \$1 soon. Closing Commentary In summary, although Fetch.aiæ’s valuation is currently under pressure, the recent strategic merger could ignite a turnaround. Meanwhile, GameStopæ’s shares are undergoing turbulent times, mirroring the unpredictable nature of meme stocks. On the other hand, BlockDAG is causing a stir with its booming presale, reaching \$51.1M, and its revolutionary X1 mining app, allowing for mobile cryptocurrency mining. Supported by major endorsements and recognized by leading publications, BlockDAG is setting itself up as a major force in the cryptocurrency landscape. Join BlockDAG Presale Now: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkofficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The new X discussion is on the risks associated with using only electronic voting methods. - Hoskinson posits a dual system in which digital and analog components audit each other. Charles Hoskinson, founder of Cardano, has suggested that blockchain technology may provide the necessary full proof elections in future elections worldwide and in the U.S. Extending the capabilities of blockchain technology is a typical occurrence among blockchain developers such as Charles Hoskinson. The new X discussion is on the risks associated with using only electronic voting methods. The Perfect Blend First, Robert F. Kennedy Jr. (RFK), a presidential candidate and Bitcoin bull, brought attention to the recent election in Puerto Rico. Also, many election irregularities were brought to light by RFK. If Puerto Rico hadnâ€™t used paper ballots as a backup, this would have ruined the whole thing. In light of this, RFK advocated for the adoption of a comparable paper trail system to safeguard the USâ€™s renowned electronic system. The Cardano Founderâ€™s viewpoint was among the many that changed their minds at this juncture. Hoskinson posits a dual system in which digital and analog components audit each other using blockchain technology in conjunction with paper. Itâ€™s the perfect blend. Moreover, Ethereum, Cardano, and Solana are just a few examples of blockchain systems whose basic architecture makes manipulation difficult. Furthermore, blockchain systems are inherently transparent, allowing anybody to check the authenticity of the data stored on them. Although there have been few examples of blockchain integration with actual voting systems, those that have been implemented have proved successful. Even though Charles Hoskinson didnâ€™t specifically mention Cardano in his piece, several people have offered suggestions on how the protocol may help, especially with the U.S elections around the corner. Highlighted Crypto News Today:

- Whale sells 114 billion PEPE, influencing market sentiment and price dynamics. - PEPE hits 26-day low; RSI nearing oversold condition. As the cryptocurrency market continues to experience turbulence, recent activity surrounding Pepe Coin (PEPE) has captured significant attention. Despite a downturn in its price, a substantial whale transaction suggests potential bullish momentum. On-chain data tracking platform Lookonchain reported that a significant PEPE trader capitulated, selling all 114.7 billion PEPE for 366.5 ETH (approximately \$1.27 million) at a breakeven price. The trader had initially purchased the 114.7 billion PEPE for \$1.27 million at \$0.000011 on May 14 and May 15. This particular sell-off may have contributed to the recent price decline, shaking investor confidence. However, such a substantial transaction can also indicate a potential market bottom, as capitulation by a major holder might precede a price rebound. The price surged to \$0.000017 on May 27, at which point the traderâ€™s profit was \$670,000, a 50% increase. However, the trader did not sell at this profit peak. Subsequently, itsâ€™ price began to decline, eventually falling below the breakeven point. Prompting the trader to sell all his holdings. Yesterday, it hit a 26-day low of \$0.00001057. Currently, it is down 0.57%, trading at \$0.0000109. Over the past week, it has declined by 6.59%. Notably, it reached its all-time high 19 days ago, which is 30% higher than its current price. Whats Ahead For PEPE? Currently, the memecoin is trading at \$0.00001198 with a 0.58% decline and the trading volume is up 21.29%. The three major resistance levels for it stand at \$0.00001530, \$0.00001722, and \$0.00002072, while the support level is at \$0.00001192. The daily Relative Strength Index (RSI) is at 46, indicating that the coin is nearing oversold conditions. As PEPE continues to navigate through this volatile period, market watchers are keenly observing any signs of a potential rebound.

By buying more permanent holders 3,450 ETH, the second highest a recent ever bid, as Ethereum (ETH) had one of its most significant days in September 2023, when accumulation. Demand for Ethereum has skyrocketed. In a post on June 13th, CryptoQuantâ€™s chief of research Julio Moreno said that buying by permanent holders was the second highest it has ever been. According to Moreno, accumulating addresses bought 298,000 Ether tokens in a single day on June 12â€™ worth around \$1.34 billion as of this writing. The previous record was set on September 11, 2023. This happened when long-term holders purchased 317,000 Ether when the price dropped below \$1,600; the quantity acquired was only 6% lower. Highly Anticipated Approval The demand surge is happening despite the fact that the price of Ether has fallen 7.72% in the last seven days. Despite failing to recover from its June 8 plunge below \$3,800, the price has maintained a level over \$3,400 during the duration, as per CoinMarketCap. At the time of writing, ETH is trading at \$3,517, up 0.82% in the last 24 hours. Based on previous market activity, ETH bulls could expect to encounter strong resistance around \$3,500. Some have speculated that this is only the beginning of a precipitous fall. A comparable plunge below \$3,500 on April 11 sparked a 25% slide that eventually hit a low of \$2,814 on May 2. In the meanwhile, the US SEC chair has dropped hints that spot Ethereum ETFs would get final trading approval before September comes to a close. During a Senate Banking Committee hearing on June 13, SEC Chair Gary Gensler told lawmakers that the agency might approve the listing and trading of spot Ether ETFs within three months. - Turkeyâ€™s lawmakers are proposing new taxes to fix budget gaps. - Turkey is considering implementing a 0.03% tax on cryptocurrency trading. The Turkish authorities are considering imposing a 0.03% tax on cryptocurrency transactions. The plan is focusing on generating additional revenue as the country grapples with budget challenges following last yearâ€™s earthquakes. According to the Bloomberg report, Turkish retail investors favor this new tax on crypto trading as a hedge against the declining lira and high inflation, projecting annual revenues of approximately 3.7 billion liras. The proposal forms a key part of a broader set of tax reforms targeting companies. That expected to be the most extensive in a generation. These reforms aim to generate an extra 226 billion liras (\$7 billion), equivalent to about 0.7% of Turkeyâ€™s gross domestic product (GDP). Further, the plan seeks to address the financial strain caused by the earthquakes and substantial pre-election expenditures as drafted by the Ministry of Treasury and Finance. As a result, Turkeyâ€™s budget deficit is predicted to hit 6.4% of GDP this year. Previously, the Turkish government withdrew its proposal for a stock trading transaction tax due to its controversial nature. However, Treasury and Finance Minister Mehmet Simsek announced that new tax regulations would soon be introduced to parliament. Tortola, BVI, June 14th, 2024, Chainwire Stage, with itâ€™s \$STAGE token that is set to launch soon on the BNB Chain, launches a platform where music fans directly influence the rise of new stars and get rewarded for it. This platform combines talent, technology and tokens to create a dynamic music ecosystem. Stage is where artists and fans alike actively participate in shaping the future of music. On Stage, artists upload their video performances and compete in exciting rounds to rise to stardom. Fans play a crucial role by voting for their favorite artists, potentially earning exclusive rewards, and engaging with unique Real World Asset (RWA) Badges. The innovative business model ensures that artists receive 60% of the proceeds from votes cast for them, alongside 10% royalties on RWA Badges. Fans, on the other hand, are rewarded with Stage Badges for their support, making every interaction on the platform mutually beneficial. The mission at Stage is straightforward: to empower music fans and artists, ensuring that everyone gets a piece of the action. The vision is to build a thriving community where every interaction enriches both fansâ€™ and artistsâ€™ journeys. Backed by top-tier crypto entities such as the Solana Foundation and key industry figures including the CEO of Kraken US, Stage has additional support from RR2 Capital, Moonrock Ventures, and Cogitent (among others). The powerhouse team behind Stage includes Andreâ€™ Cruz, CEO and Co-Founder, a musician and e-commerce expert with three successful exits; Geoffrey Doyen, CTO and Co-Founder, who brings extensive AI experience from working with Fortune 500 companies; and Francisco Quartin de Macedo, COO and Co-Founder, who previously led a trading desk at blockchain.com. Stage has also attracted high-profile ambassadors, including celebrities with millions of followers who will help amplify the mission. Among them is Jerry Heil, who ranked Ukraine as Eurovision 3rd Place. Their influence helps Stage reach a global audience and attract top-tier talent to the platform. By integrating Web 3.0 principles, Stage aims that both artists and fans are fairly compensated and deeply engaged. The platformâ€™s unique approach includes: - Play-to-Earn Model: Gamify the userâ€™s music experience and potentially earn as they participate. - Real World Assets (RWAs): Users can collect and trade digital badges linked to exclusive artist rewards. - AI Music First: Users can compete in AI music competitions and tokenize music samples, melodies, beats, and vocals. The Token Generation Event (TGE) for \$STAGE will be conducted through the reputable launchpads ChainPT, Decubate, and Fesse. This will aim to a broad and invested audience, to potentially maximize the impact and reach of the token launch. Users can stay updated with Stageâ€™s journey by following on Twitter and joining the Telegram community. To be the first to know about the latest updates and exclusive rewards. Contact CTO & Co-Founder Geoffrey Doyen Stage Token Inc. info@stage.community

- Data from Farside Investors shows that Fidelityâ€™s FBTC suffered a major blow, \$106.4M. - The biggest spot bitcoin fund by net asset value, BlackRockâ€™s IBIT, defied the trend. A large net outflow of \$226.2 million was seen in yesterdayâ€™s U.S spot Bitcoin ETF market, according to recent monitoring data from Farside Investors. Investor mood has changed, as seen by this substantial swing. Although the majority of funds saw withdrawals, BlackRockâ€™s IBIT ETF was the only one that managed to draw in additional capital, with a net inflow of \$18.2 million. This change exemplifies how investors see various Bitcoin ETFs, revealing that not all funds are seen in the same manner in a market that is so unpredictable. Data from Farside Investors shows that Fidelityâ€™s FBTC suffered a major blow, with its second-largest single-day outflow since its start, with a value of an astounding \$106.4 million. A total of \$61.5 million left Grayscaleâ€™s GBTC fund as well. Not only did Bitwise and VanEck funds lose almost \$10 million apiece, but Ark Invest and 21Sharesâ€™ ARKB also saw \$52.7 million leave their funds. Invesco and Galaxy Digitalâ€™s BTCO both saw smaller outflows of \$2.7 million. The biggest spot bitcoin fund by net asset value, BlackRockâ€™s IBIT, defied the trend. In reality, it attracted additional investments totaling \$18.2 million. Bitcoin Price Struggles After briefly recovering above \$68,000 on Thursday, Bitcoinâ€™s (BTC) price dropped 3% lately, reaching \$66,304. The cryptocurrency has shown considerable volatility this week. The Federal Reserveâ€™s decision to keep interest rates at 5.25% to 5.50% has cast a shadow on Bitcoinâ€™s market performance, leading to this decline. Bitcoin is attempting to maintain a position above the 100-day exponential moving average. If it falls below this, it can trigger more drops: \$65,500 and \$64,800 are official levels. At the time of writing, Bitcoin is trading at \$67,816 as per data from CMC. Highlighted Crypto News Today: Andrew Tateâ€™s DADDY and Iggyâ€™s MOTHER Intensify Solana Memecoin Wars

- \$51M poured into Fidelityâ€™s FBTC, with BlackRockâ€™s IBIT following next with \$16 million. - Bitcoin is now trading at \$67,729, down 0.24% in the last 24 hours. On Wednesday, a total of \$100.9 million was poured into the eleven U.S. spot bitcoin exchange-traded funds, returning them to a net inflow position. On Monday and Tuesday, investors pulled their money out of the exchange-traded funds (ETFs), breaking a record 19-day inflow run. SosoValue data shows that on Wednesday, \$51 million poured into Fidelityâ€™s FBTC, with BlackRockâ€™s IBIT following next with \$16 million. The BITB ETF from Bitwise received \$15 million in net inflows, while the HDOL ETF from VanEck received \$12 million. Additionally, \$9 million inflows were recorded by Ark Investâ€™s ARKB, funds from WisdomTree, Invesco, and others showed no flows, including Grayscaleâ€™s GBTC, which has mostly had net withdrawals since its January conversion. Inflation Slowing Down The expected important economic data from the US economy and Wednesdayâ€™s inflows happened at the same time. According to CNBC, the lack of a rise in Mayâ€™s U.S. consumer price index from the Labor Department might indicate that inflation is slowing down. But instead of cutting interest rates, the Federal Open Market Committee (FOMC) voted to keep them at their current range of 5.25% to 5.50% at a meeting on Wednesday. The Federal Reserve has announced that it expects just one rate decrease in 2024 since it does not think the deflationary trend has ended. The price of Bitcoin surged to \$70,000 on the news of this Fed data. Nonetheless, the price reversed course abruptly, unable to maintain its upward trajectory. According to statistics from CMC, Bitcoin is now trading at \$67,729, down 0.24% in the last 24 hours. Highlighted Crypto News Today: Solana (SOL) Price Struggles to Break \$155 Resistance Amid Volatility

Supra, a completely vertically integrated Layer-1 blockchain with Multi-VM support, in-protocol oracles, VRF, bridges, and automation capabilities, is thrilled to announce the launch of its competition, the â€œSuper dApp Showdown.â€ The competitionâ€™s first season is slated to start in August 2024, and judges from Supra, Google Cloud, Republic Crypto, Hashkey Capital, and the popular crypto-focused reality TV series Killer Whalesâ€™ will be voting on the best projects. The most accomplished blockchain developers in the sector are being invited by the platform to create and implement what Supra refers to as â€œSuper dAppsâ€ on its robust Layer-1 network. Competing for investments from Supraâ€™s recently launched \$100 million Ecosystem Fund will be an opportunity for participants. The Super dApp Showdown offers developers an amazing chance to get started quickly by showcasing their Super dApps to 1.3 million email subscribers and over 500k verified unique token holdersâ€™ both of whom are highly engagedâ€™ on their gamified community platform, Project Blast Off. The Blast Off platform will showcase a winning teamâ€™s Super dApp each week, complete with missions and objectives to educate people about their project. The builders will have the option to choose the kind of incentives that will be given out, including in-game assets, airdrops, prizes, and NFTs. Every week, users who interact with dApps may expect additional perks including partner airdrops, giveaways, and digital collectibles. August marks the start of Season One of the Super dApp Showdown, which will last for three months. Following that, a team of judges from several categories, including DeFi, GameFi, and Web3 Social, will choose 12 winners. In addition to

well-known æwalesæ from the famous reality TV series Killer Whales, created by HELLO Labs and modeled after the well-liked Shark Tank TV series but with an emphasis on Web3 businesses, the judges will include members of Supraæ™s leadership team. Experts from significant ecosystem partners like Google Cloud, Republic Crypto, HashKey Capital, and others will be among the other judges on the Super dApp Showdown panel. Supraæ™s community, who will be asked to cast votes for their preferred Super dApps, will also be consulted throughout the judging process. Builders that are interested in competing may do so by visiting Supraæ™s Super dApp Showdown application website. Joshua Tobkin, CEO and Co-Founder of Supra, said in a quote: æwæ are thrilled to collaborate with Killer Whales as our media partner for the Super dApp Showdown and beyond. At Supra, we understand that attracting the right builders and founders requires a combination of capital and exposure. Along with access to Supraæ™s \$100 million Ecosystem Fund and 500k verified token holders, projects will also have the chance to get featured on Killer Whales, benefiting from their exceptional team, high-quality production, and significant visibility.æ Sander Gortjes, Co-Founder of HELLO Labs and Executive Producer of Killer Whales, went on to say: æwæ are excited to work together with Supra on the growth of their ecosystem and provide a podium for the projects that emerge as winners of the Super dApp Showdown with Killer Whales and our streaming partners, potentially giving them a televised reach of 600 million people globally.æ The Power of Supraæ™s L1 Developers can explore the capabilities of Supraæ™s cutting-edge Layer-1 network, which vertically integrates key blockchain and oracle services, such as its industry-leading price feeds, verifiable randomness generators, automation, and bridges into a single, high-performance stack, during the Super dApp Showdown. In addition, their L1 supports several virtual machines (VMs), allowing developers from MoveVM and EVM chains to launch dApps directly on Supra and compete; support for SolanaVM and CosmWasm is also underway. The innovative Moonshot consensus method, which powers the Supra L1æ™s lightning-fast speed and strong security assurances, was designed to decrease friction surrounding user onboarding and experience in Web3. Supra outperformed most other competing consensus mechanisms during its advanced global testing phase, demonstrating Moonshotæ™s capacity to process 530k transactions per second across 125 nodes distributed globally, with 500 milliseconds for optimistic finality and ~1.5æ™2 seconds for full finality. The Distributed Oracle Agreement (DORA protocol), a state-of-the-art oracle that offers real-time data accessibility to allow the construction of quicker and more functioning dApps spanning DeFi, GameFi, and other blockchain use cases, is vertically integrated with the Supra blockchain. In order to guarantee complete transparency and unpredictable results in games, prize draws, and other contexts, it also integrates Supraæ™s unique decentralized verifiable randomization generator, Supra dVRF. Building on Supra will enable developers to see firsthand the performance advantages of its completely vertically integrated L1, with contributions from the \$100M Ecosystem Fund going to the winning projects. Additional advantages include the opportunity for winning teams to pitch their ideas to some of the top investors in the cryptocurrency space on Killer Whales, as well as free access to Supraæ™s core services, zero-cost access to a token launch platform, cross-promotion and marketing via Supraæ™s social media channels, and networking opportunities with a large network of partners and venture capitalists. Supra intends to continue hosting the Super dApp Showdown, releasing new seasons every three months. This means that companies that arenæ™t quite ready for Season One wonæ™t have to wait very long to interact with one of Web3æ™s fastest-growing communities. Advocates of Web3 may follow the competition and submit an application on Supraæ™s application website to display their Super dApps.

- io.net (IO) hits a new all-time high of \$6.45, up 70% in the past day. - IOæ™s daily trading volume surged 61% in 24 hours, reaching \$1.81 billion. Today, the price of io.net (IO) piqued 70%, hitting a new all-time high of \$6.45. The Solana based, Binanceæ™s 55th project IO initially displayed a 20% drop post-launch on Binance. However, io.net has now shown a strong rally, climbing to a market cap of over \$558 million. At the time of writing, the price of IO stood at \$5.93 and witnessed a 55% increase in intraday trading, as per CoinMarketCap data. The tokenæ™s surge is attributed to high transaction volumes and positive investor sentiment. io.netæ™s daily trading volume surged by 61%, reaching \$1.81 billion in the last 24 hours. io.net Gains Momentum with Binance IO is a Solana-based decentralized physical infrastructure network (DePIN) project that aims to provide AI compute as a currency, powered by the IO token. Further, this ecosystem offers extensive computing resources for users. The current price rally is boosted by IOæ™s listing on the prominent crypto exchanges like KuCoin and Binance. However, io.net promotes itself as the largest decentralized computing network globally, offering affordable, scalable clusters for machine learning engineers. Since its launch on June 11, IO has been in high demand, driven by market excitement and a maximum supply of 800 million IO tokens. Additionally, Solana users are actively purchasing IO. A trader spent 3,120 SOL to acquire 85,326 IO tokens, as per Lookonchain data.

- The positive May US CPI data, showing a decrease in inflation, has triggered a strong recovery in major crypto assets. - Ethereum has witnessed an increase in buying activity, and a surge in on-chain metrics. - ETH price faces immediate resistance at \$3,660 and support at \$3,430, with the potential to surge towards \$3,740 and \$4,000 if buying momentum persists. The release of the May US Consumer Price Index (CPI) data revealed a slight decrease in inflation, dropping from 3.4% in April to 3.3% in May, which has had a positive impact on the cryptocurrency market, leading to a strong recovery in major crypto assets. As Bitcoinæ™s price continues to climb towards the \$70,000 mark, Ethereum (ETH) has also witnessed an increase in buying activity, testing crucial price levels while experiencing a surge in on-chain metrics. Positive CPI Report Bolsters Support Levels The US Consumer Price Index (CPI) remained stable in May, surpassing economistsæ™ expectations of a 0.1% increase and showing an improvement from Aprilæ™s 0.3% rise. On an annual basis, the CPI increased by 3.3%, aligning with predictions but slightly lower than the previous monthæ™s 3.4%. The cryptocurrency market reacted positively to this softer CPI report, with BTC price surging towards the \$70,000 high and ETH price testing buyersæ™ patience at the \$3,700 level. Data from IntoTheBlock indicates a significant surge in large transaction volume over the past 48 hours, with Ethereum whales conducting transactions worth over \$13 billion. This surge in whale activity suggests that large investors are accumulating ETH near each price level, anticipating a significant move and contributing to increased volatility. Despite Ethereumæ™s dominance in the layer 1 sector, Solana is making strides, particularly in terms of on-chain activity. Data from Dapp Radar reveals a 9% decrease in Ethereumæ™s NFT volume over the past week, reaching 105 million, which could potentially accelerate bearish trends for ETH despite its recent price rebound. Ethereum is currently experiencing a strong upward trend, but it is facing resistance around the \$3,660 level, indicating potential profit-taking by short-term traders. Buyers have successfully pushed the price above immediate Fibonacci channels and are currently aiming for a surge above the EMA trend lines. If the price maintains its current buying momentum, it would suggest that bulls have effectively transformed the \$3,430 level into a support zone, increasing the chances of a surge towards the \$3,740 target. A breakthrough at this level could potentially propel the price towards the \$4,000 milestone.

- The daily trading volume of Ethereum NFTs dropped below 4k for the first time since June 2021. - The number peaked at over 80,000 in February 2022 and has since been steadily falling. The NFT sector has lagged behind the rest of the cryptocurrency industry, which has been quite exciting so far this year. The amount of Ethereum NFT marketplace transactions has been falling every month since January, and it was already much lower in January compared to the billions of dollars moved monthly during the 2021/2022 bull market. Sales fell short of \$500 million in May. The most startling statistic is the daily trading volume of Ethereum NFTs, which dropped below 4,000 for the first time since June 2021. The number peaked at over 80,000 in February 2022 and has since been steadily falling. From June 2023 to February 2024, it remained flat, but then started falling again. Struggle Continues Since Ethereumæ™s NFT landscape has been under pressure from other, less expensive competitors, the once-de facto blockchain for most use cases may be in for some rough times ahead. Even while most of the blue-chip NFT collections are still on Ethereum, it is no longer the dominant platform. Recent bad news about the NFT market has been focused on falling valuations and activity. The majority of news coverage regarding NFTs has been negative or nonexistent. However, there have been a few positive announcements, such as an Adidas collaboration with Steph that will start with an NFT collection and the announcement of the Pudgy Penguins game that will be released in 2025 and is based on both the NFT collection and the corresponding toy line, which sold 1 million units in less than a year. Despite occasional high-profile collections, the general tendency is for volumes to stall and floor prices to fall across the board. This is true even for the most talked-about NFT subcategory of the year, Bitcoin Ordinals. Highlighted Crypto News Today: Solana (SOL) Price Struggles to Break Resistance Zone Amidst Market Volatility

- Do Kwon and his firm were found guilty by a jury in April of misleading investors. - This is a second high-profile case in the crypto industry to pay a settlement of more than \$4B. Terraform Labs has reached a \$4.47 billion settlement with the U.S SEC, ending the allegations brought against it. Reuters was the first to report the settlement, which will make it the second high-profile case in the cryptocurrency industry to pay a settlement of more than \$4 billion. As part of its deal with the SEC, Terraform Labs will pay \$420 million in civil penalties and \$3.58 billion in disgorgement. Following this, on June 12, the parties were required to submit their filings with the court presided over by Judge Jed Rakoff of the United States District Court for the Southern District of New York, and they did so. Highly Anticipated Settlement Do Kwon and his firm were found guilty by a jury in April of misleading investors about their crypto products; thus, they decided to settle. The legal disaster that began two years ago may finally end with the filing of the settlement terms today. Binance Exchange reached a settlement with the DOJ a few months ago, ending a protracted investigation into the exchange. In a settlement of \$4.3 billion, the trading platform paid the Department of Justice (DoJ), the Financial Crimes Enforcement Network (FinCEN), and the Commodity Futures Trading Commission (CFTC). Founder Changpeng æwZææ Zhao, who is now doing time in prison, resigned during the settlement as well. In 2022, when Terraform Labsæ™ co-founder Do Kwon was suspected of engaging in fraudulent activities, the company came under significant scrutiny from the government. Two of Terraform Labsæ™ tokens, Terra (LUNA) and TerraUSD (USTC), were liquidated within a few months of one another, which resulted in the loss of more than \$40 billion from the market. Highlighted Crypto News Today: Solana (SOL) Price Struggles to Break Resistance Zone Amidst Market Volatility

George Town, Cayman Islands, June 12th, 2024, Chainwire The VGX Foundation has announced a partnership with popular web3 game Honeyland, offering rewards utilizing the VGX token for their players. VGX is a token that bridges multiple chains and is focused on bridging utility across GameFi and gaming ecosystems. Honeyland is a popular blockchain-based casual strategy game available on iOS and Android, and one of the top games on Solana. With the new partnership, holders of Genesis Eggs, Bees, or Queens based on a snapshot of holders taken at 17:00 UTC on June 6, 2024, will receive VGX rewards. Thanks to the previously announced partnership with Gala Games, players receiving VGX will be able to take their VGX to Gala Games, where they can purchase a Voyager: Ascension season pass unlocking the ability to earn GVGX rewards. In addition to the VGX reward for Genesis holders, from June 12 to June 19, there will be a free VGX cosmetic trait available to all Honeyland players in the Honeyland Cosmetic Shop: a VGX-themed æwMad Hatteræ style hat. The cosmetic trait can be fused to any Bee, and by doing so will boost the Capacity trait for the Bee. æwWeææ™re always looking for new ways to reward Honeyland players,æ said Corey Wright, CEO at Honeyland. æwThanks to this partnership with the VGX Foundation, weæ™re able to offer exciting new rewards to our players whether theyæ™ve been with us since the beginning, or are joining today.æ The VGX Foundationæ™s mission is to increase the number of projects integrating and using the VGX token, growing the number of users able to access and use the token across web3 gaming. For more information, visit www.vgxfoundation.com. For media inquiries, please contact Melrose PR at (310) 260-7901 or [Info\(at\)Melrosepr\(dot\)com](mailto:Info(at)Melrosepr(dot)com) About VGX Foundation The VGX Foundation leads the evolution of decentralized gaming economies through its dynamic blockchain-based gaming token, VGX. Serving as an in-game currency and reward mechanism, VGX empowers diverse gaming communities. The VGX Foundation actively fosters growth by facilitating grants and partnerships for game developers and platforms, enabling the expansion of the tokenæ™s use case and nurturing a thriving VGX ecosystem. London, United Kingdom, June 12th, 2024, Chainwire Base Dawgz (DAWGZ), a new multi-chain meme coin project, has passed the \$1 million milestone during its presale phase. This presale allows users to purchase DAWGZ tokens before they are listed on decentralized exchanges (DEXs) for public trading. Base Dawgz Presale Raises \$1 Million in First Eight Days The Base Dawgz Presale began on June 4. Within hours of the presale going live, it had raised over \$200,000, and three days later, the project had secured \$750,000 in total. As of now, the presale has raised over \$1 million æ“ although the developers have not announced a specific hard cap. Base Dawgzæ™s presale is structured in stages. The DAWGZ token price increases by 5% in every stage to incentivize early investment. Initially, users could purchase DAWGZ tokens for \$0.000479, but that price has since risen to \$0.00502. Investors can swap ETH, USDT, BNB, AVAX, or SOL tokens to make their purchase. Base Dawgzæ™s whitepaper outlines that 20% of the total token supply is allocated for presale investors. A further 20% will be used to provide DEX liquidity once DAWGZ is launched on the open market. The development team hasnæ™t yet announced the specific DEXs where DAWGZ will be listed. However, users can keep up to date on the latest project announcements through Base Dawgzæ™s Telegram channel. DAWGZ Uses Multi-Chain Design for Broad Blockchain Interoperability Base Dawgzæ™s main feature is its multi-chain design. This design allows it to operate across several blockchain networks. While its primary blockchain will be Base,

Coinbase's Layer 2 chain, DAWGZ is also interoperable with Ethereum, Solana, Binance Smart Chain, Avalanche, and Polygon. This interoperability is facilitated by bridging protocols like Wormhole and Portal Bridge. Base DAWGZ's multi-chain properties were highlighted in a video by the YouTube personality Crypto Wire. In this video, Crypto Wire noted multiple potential benefits of cross-chain flexibility, including increased accessibility for retail investors and reduced risk from overreliance on a single network. He also referenced the DAWGZ staking protocol, which will initially be available only on Ethereum but could expand to other supported blockchains in the future. About Base DAWGZ Base DAWGZ (DAWGZ) is a meme coin project launched on the Base network. The coin offers multi-chain capabilities, staking rewards, and a Share-to-Earn system. Prospective investors can visit the Base DAWGZ presale here. Base DAWGZ is the source of this content. This Press Release is for informational purposes only. The information does not constitute investment advice or an offer to invest. Contact Base DAWGZ maverick@basedawgz.com

- The wager is reasonable given Tate's successful kickboxing history. - Surprisingly, Ansem agreed, even though it seemed improbable. Former kickboxer Andrew Tate has placed a \$10 million crypto bet on X, demonstrating his penchant for the spectacular once again. Tate issued a challenge to Ansem, a well-known influencer in the crypto Twitter community. Andrew Tate started the tweet by challenging Ansem to a boxing bout and claiming the current cycle as his own. Additionally, the online celebrity said that he plans to battle with just one hand. "Loser donates 10m to a coin of the winner's choice," he further said. Challenge Accepted The wager is reasonable given Tate's successful kickboxing history. Surprisingly, Ansem agreed, even though it seemed improbable. Ansem was asked by a commenter under Tate's post if he would fight Tate at Dubai's Crypto Fight Week in December. With confidence, Ansem said, "I set it up" and took the challenge. Ansem, who Tate is challenging to a boxing match, has been quite popular recently thanks to his remarkable investment story. He made a mind-boggling 170x profit when the price of Solana (SOL) hit an all-time high of \$260 after investing in the cryptocurrency when it was worth just \$1.5. The crypto influencer has become well-known in the crypto industry as a result of his achievements. His recent remarks on SocialFi's cryptocurrency have also increased his clout. And since he is a crypto millionaire of the modern day, everyone pays attention to his advice. Tate, nevertheless, seems to dethrone Ansem in the eyes of the ecosystem. Following a slew of high-profile events in the Solana ecosystem, including Tate's recent burning of \$11 million worth of TOP G, a new Solana meme coin, comes one of the most recent controversial tweets. As a result of burning development, the market capitalization of TOP G coin increased to over \$65 million, and its price increased by more than 130%. Highlighted Crypto News Today:

As part of its continuous effort in providing a vibrant community of traders and crypto-savvy people, BitDelta is launching yet another trading competition with an overall prize pool of \$50,000. Campaign Period: June 19 ð June 24, 2024. The competition is open to both existing and new users, and the top 15 traders will have the chance to win a share of \$50,000. Hereâs what you need to do to take part of the competition: Sign up and get verified if you are new to BitDelta. - Complete basic KYC. - Deposit a minimum of \$50 into your spot wallet. - Make at least 5 trades on the selected asset pairs. Tokens to Trade BitDelta is kicking off the summer season in style, with the most popular spot pairs to be traded: - Bitcoin (BTC/USDT) - Ethereum (ETH/USDT) - Solana (SOL/USDT) - Ripple (XRP/USDT) - Avalanche (AVAX/USDT) Winners will be selected based on the following criteria: KYC status, trading volume, and compliance to T&Cs. It is important to note that BitDelta is not directly or indirectly associated with the promotion of any of the mentioned tokens ð specifically BTC, ETH, SOL, XRP, and AVAX. BitDelta holds no vested interest in their respective protocols or liquidity pools. The campaign is strictly for spot trading of the mentioned token pairs on BitDelta. It does not involve or promote any underlying associations with these tokensâ liquidity pools or the broader protocols of Solana Blockchain or Ripple. The AVAX token campaign is limited to spot trading and does not engage with or endorse its lending-based DeFi aspects. Always consider the security disclaimers and the volatile nature of these tokens when trading. About BitDelta BitDelta is a versatile trading platform that caters to both retail and institutional traders. It allows users to trade a wide range of assets including cryptocurrencies, stocks, forex, and derivatives. The platform offers a comprehensive trading experience through a range of features including but not limited to: - Spot Trading - Derivatives Trading - Buy Crypto with Card - Token Launchpad Services - SafePass With a focus on security, BitDelta offers robust encryption and institutional-grade protection to safeguard user transactions and data. The platform is designed to provide a seamless trading experience, supporting cross-asset trading and offering features like algo trading and more. BitDelta, as an offshore regulated platform, is dedicated to enhancing user engagement and investment capabilities across multiple financial markets. Tenev has made it clear that this initiative is wholly separate from Robinhood. - Robinhood CEO has spoken out on how LLMs may mimic human languages. Harmonic, a latest artificial intelligence protocol, was unveiled on Monday by Vlad Tenev, Robinhood's CEO and co-founder. The new protocol seems to be an initiative by a commercial artificial intelligence research group working on Mathematical Superintelligence (MSI), as described by Tenev. Artificial intelligence and mathematical reasoning were used to create this model. But it's special in that it can think more complexly than humans. Eliminating Hallucinations Robinhood CEO has spoken out on how LLMs may mimic human languages. On the other hand, it brought attention to the problem that they might provide false findings or display hallucinations. According to Tenev, this same difficulty prompted the earlier invention of mathematics. Tenev stated: "It allows us to rigorously define and align on a common truth and is the foundation for all scientific discovery. This is one of the reasons I pursued a Mathematics PhD before becoming an entrepreneur." Experts in the field have long held the belief that massive language models hold the key to solving the AI hallucinations issue and mathematical reasoning. Harmonic was created because the CEO disagrees with this position, according to Tenev's X post. The development solved these problems head-on by developing an AI model that includes mathematics as a primitive. The end product is a really helpful tool for mankind. It is easily provable that Tenev is absolutely sure that this AI would not produce any hallucinations in its outputs. The CEO of Robinhood is certain that Harmonic will be used to do tasks that benefit mankind. However, he has made it clear that this initiative is wholly separate from Robinhood. Highlighted Crypto News Today: Solana (SOL) Price Consolidates Around Crucial Support as Metrics Signal Breakout

- Uniswap Labs COO is excited about combining CTG’s interactive on-chain experiences. - Season three of CTG will include new crypto-experience engagement. The popular blockchain-based game Crypto: The Game (CTG) has been acquired by Uniswap Labs. Following the news, the price of the UNI token surged, increasing by 6% on the three-hour price chart. Uniswap Labs COO Mary-Catherine Lader is excited about combining CTG’s interactive on-chain experiences with Uniswap’s products and services. It has accomplished this via the smart acquisition of CTG, whose mission is to make blockchain interactions easy and entertaining. We have seen the gaps that CTG has opened up; the task at hand, according to Lader, is to make these on-chain encounters enjoyable and entertaining. Cash, tokens, and stock shares were reportedly part of the payment, but nobody knows the exact facts of the deal. New Crypto-experience Engagement A partnership and commercial transaction, the acquisition will propel the evolution of the crypto games. The three co-founders of CTG—Dylan Abruscato, Tyler Cagle, and Bryan Lee—will be joining the Uniswap team. Season three of CTG will include new crypto-experience engagement and the uninitiated’s continued pursuit of progress. To maintain the integrity of the game, the developers emphasized that they would not be advertising the Uniswap wallet or exchange in the game as a result of playing the game, more and more individuals are interested in crypto and the community as a whole. The fact that it might be a gateway to DeFi is supported by the fact that 10%-15% of users are new to cryptocurrencies. Certain subsets of the community, such as crypto experts and venture capitalists, have taken an interest in the game. Highlighted Crypto News Today: Solana (SOL) Price Consolidates Around Crucial Support as Metrics Signal Breakout

- Iggy Azalea's memecoin MOTHER has shown a price surge of 26.22% in the past 24 hours. - The token was launched in the market towards the end of May 2024. Another use-case of Australian singer, Iggy Azalea's newly-launched token Mother (MOTHER) will be activated from Tuesday. By re-launching her telecom company Unreal Mobile, Azalea links her token in an attempt to expand its use-case and allows the selling of mobile and cell plans in exchange for MOTHER. Moreover, Iggy Azalea also announced the launch of a MOTHER merchandise last week. Additionally, the two announcements have caused a price rally in the token's market price. At the time of writing, MOTHER is trading at \$0.1861 according to CMC data. Notably, Unreal Mobile has partnered with Sphere Labs to facilitate payment infrastructures for the re-launch. Azalea has also mentioned the availability of a selection of phones for purchase during the launch on Tuesday. Furthermore, the past month has seen multiple celebrities launch memecoins on the Pump.fun platform. With the increasing focus on Solana-based meme coins, celebrity shillings are in the surge. Iggy Azalea's memecoin MOTHER was launched towards the end of May 2024. MOTHER 24H price Analysis Over the past 24 hours, the price of Iggy Azalea's MOTHER has increased by 26.22%. The upward movement was propelled by the recent announcement on expanding the token's use cases. With a daily trading volume of \$14.11 million, the token holds a liquidity ranging close to \$5 million. Zooming over the past week the meme token hit an ATH of \$0.2021 on June 6. Despite increased volatility, MOTHER has remained briefly bullish as the current market price stands above the short-term 9-day MA. The token's daily RSI of 62.04 indicates a neutral market sentiment. Moreover, the token, since its launch on May 28, has shown volatile price momentum. After initially skyrocketing, the token plummeted in market value. Amidst other celebrity meme tokens, investors suspected MOTHER to be a rug pull. However, the recent additions to its use cases have influenced an optimistic outlook from the community. Highlighted Crypto News Today:

- BabyDoge partners with Tangem for an exclusive hardware wallet, boosting security for users.

- Baby Doge Coin's price fell by about 1.32%, following Bitcoin's market movement.

Baby Doge Coin, the leading meme coin recently made waves in the crypto market with its price rally and new listing expectation. Additionally today it has announced a new partnership. According to a recent post by BabyDoge, the coin has teamed up with Tangem, a company renowned for its secure hardware wallets. This collaboration aims to offer an exclusive BabyDoge-branded hardware wallet, combining Tangem's cutting-edge technology with Baby Doge Coin's energetic community.

0-8-9-0-0-7-d-0-4-0-8-2 0-E8-0d-0d-0-»-2-0-e-0 1d-0-m 0-5d-0d-»-0-»-0-2-0-o 0-3-d-4d-0-0 0-~0...0-»-1-d 0-6-d-0d-0d-2 0-»-0-0d-0-d-0d 0-»-0d-0-2 0-»-0d-0-1-d-0-2! 0YQYQ'3 æ" Baby Doge (@BabyDogeCoin)

June 10, 2024 We are teaming up with @Tangem to bring you something special! Get ready for the exclusive BabyDoge-branded hardware wallet. Stay tuned for more details comingâ€¦ | pic.twitter.com/CEx9HqUrcg

This new hardware wallet may provide enhanced security for Baby Doge Coin holders, ensuring that their assets are safely stored offline. The partnership is a significant step for BabyDoge, highlighting its commitment to providing its users with top-tier security solutions. With the launch of this exclusive hardware wallet, users may expect a seamless and secure experience, boosting their confidence in managing their BabyDoge assets. This move is anticipated to further strengthen BabyDoge's position in the cryptocurrency market, attracting more users to its ecosystem.

Additionally, Baby Doge Coin's proposal to deploy on Solana was officially passed on June 8, targeting improved transaction speed and reduced fees. Despite the positive news, BabyDogecoin's price declined by about 1.32% in the last 24 hours, following Bitcoin's trend.

Currently, BabyDoge is trading at \$0.000000001721, with a market cap exceeding \$247 million. However, the meme coin's daily trading volume surged by over 174% in the last 24 hours, reaching \$16.46 million.

- Bitcoin price declined by over 4.74%, dropping from \$68,507 to \$71,918. - The crypto market saw \$411M in liquidations, with \$361.29M from long positions and \$50.42M from shorts. Bitcoin (BTC) displayed a significant pullback today, flipping its earlier gains and hardly maintaining a week-over-week increase. On Friday the cryptocurrency briefly teased an all-time high in the \$71,918 range before retreating in U.S. trading, with its price standing at \$68,507, down 4.74% in the past 24 hours. This decline occurred with a large selloff across the cryptocurrency market, worsened by a stronger than expected U.S. employment report for May, which showed an addition of 272,000 jobs. This news dampened hopes for an imminent Federal Reserve interest rate cut, causing interest rates and the dollar to rise. Whatâ€™s Behind the Decline in Bitcoin Price? The sharp decline in Bitcoin price led to liquidations exceeding \$411 million across the cryptocurrency market, with long positions totaling \$361.29 million and short positions worth \$50.42 million. Bitcoin alone saw \$70.81 million in liquidations, with all other cryptocurrencies, including Ethereum (ETH), Solana (SOL), PEPE, and more, witnessing a cumulative liquidation of \$403 million. Additionally, Bitcoinâ€™s exchange reserves decreased by 0.06% to 1.81 million, suggesting that investors might be withdrawing their holdings to personal wallets, indicating a preference for holding rather than selling. However, Bitcoin bulls are hoping for a breakout to reach new highs. Market sentiment, as measured by the Crypto Fear & Greed Index, dropped by 6% to 72. BTC market sentiment remains in the â€œGreedâ€ territory. This phase is often considered the final stage of a bull market. At the time of writing, Bitcoin was trading at \$69,266 with a market cap of \$1.36 trillion. Despite the pullback the daily trading volume surged by 38% over the past 24 hours to reach \$35 billion. Further, spot ETFs have completed an 18-day streak of consecutive inflows, a feat not seen even

during the market rallies of February and March. Over this period, ETFs have accumulated more than 56,000 Bitcoins, nearly seven times the amount mined during the same time frame, according to HDOL Capital. But still, Bitcoin is down around 5.96% from its all-time high of \$73,750.

- Attackers were able to access the contact details of more than 1.9 million CoinGecko users. - Passwords and user accounts on CoinGecko are safe and sound. A data breach occurred at GetResponse, a third-party email management platform, according to cryptocurrency data aggregator CoinGecko. Attackers were able to access the contact details of more than 1.9 million CoinGecko users after a data breach at GetResponse occurred on June 5. This news comes after yesterday's revelations of a fresh wave of crypto airdrop scams. According to CoinGecko's release on June 7, the security incident happened when an employee's account was hacked. CoinGecko stated: "An attacker had compromised a GetResponse employee's account, leading to a breach. We received confirmation from the GetResponse team on 6 June 2024, at 11:58 AM UTC, that a data breach had occurred." Names, email addresses, IP addresses, the locations of email openings, and other information like subscription plans and sign-up dates are among the compromised details. Passwords and user accounts on CoinGecko are safe and sound. Although CoinGecko's primary email domain remained unaffected, the hacker was able to send 23,723 phishing emails, according to the company. Easier targets Hackers use phishing attempts to gain private keys to cryptocurrency wallets and other sensitive information. One kind of phishing assault is called an address poisoning scam, and its goal is to get investors to transfer funds to a fake address that looks much like one they've used before. Consumers may protect themselves against phishing emails by adding two-factor authentication (2FA) to their crypto platforms and checking the email's legitimacy as per experts. When it comes to cryptocurrencies, the most common reasons for hacks are breaches of private keys and personal data since exploiters are focusing on the easiest targets rather than attempting to crack more complicated protocols. Highlighted Crypto News Today: Solana (SOL) Price Struggles to Break Resistance, Faces Potential Bearish Divergence

- There was a 21% drop in the number of distinct active wallets using DeFi. - With a total of \$130 billion, or 68% of the total, Ethereum's TVL topped. In May, the largest amount since February 2022 the total value locked (TVL) in decentralized finance (DeFi) applications reached \$192 billion, according to a report by blockchain analytics company DappRadar. There was a 21% drop in the number of distinct active wallets using DeFi, even though TVL increased. May saw a 17% increase in the USD value of cryptocurrencies locked inside DeFi apps, driven by rising token and Ether (ETH) values. With a total of \$130 billion, or 68% of the total, Ethereum's TVL topped the DeFi market among all networks. In second place, with \$10.9 billion, or 5.7% of the total, was Solana (SOL). There was a 14 percent rise in Solana's DeFi TVL over the prior month. Investors Optimistic The DeFi sector saw a decline in the number of daily unique active wallets (UAW), suggesting that the user-base is contracting even as the remaining users are increasing their deposits or seeing the value of their portfolios rise, despite the robust growth in TVL. A 21% drop to 1.75 million UAW for the month was reported, accounting for 17% of the total UAW for all Web3 applications coupled. According to DappRadar, the short-term speculation around the potential launch of an Ethereum exchange-traded fund was the reason for the TVL spike. The 24-hour trade volumes on decentralized exchanges surged from \$1.7 billion to \$5.1 billion between October 1, 2023, and June 7, 2024, as reported by DeFi Llama. This may have caused liquidity providers and lenders to earn more money, which would explain why they put more cryptocurrency into DeFi applications. Highlighted Crypto News Today: Toncoin (TON) Price Exhibits Massive Upswing Potential as Bulls Gain Strength

FOMO erupts in the markets as one highly profitable crypto trader highlights GameStop (GME), Ondo Finance (ONDO) and ETFSwap (ETFS) as three top cryptos programmed to be the next big thing with the potential of creating millionaires in the coming months of the bull run. ETFSwap (ETFS) is the Next Big Thing With 60,000 Mega Rally Forecasts A whopping 60,000 mega rally forecast is placing ETFSwap (ETFS) on top popular cryptos GameStop (GME) and Ondo Finance (ONDO), projected by one highly profitable trader to be the next big thing in the industry. This one-of-a-kind DeFi trading platform features a rich portfolio of profitable cryptocurrencies and tokenized ETFs that are highly sought after in the crypto industry and ETF economy. A swap feature which enables smart investors to swap the utility token ETFS for desired tokenized ETF investments makes crypto and ETF investments a seamless and appealing venture. ETFSwap (ETFS) has structured its DeFi trading platform to ensure profitability for every trader and investor. By taking advantage of the 50x leverage available on the trading platform, smart investors and traders are guaranteed to scale investment returns up to 42,000%. To fully understand how structured and highly profitable ETFSwap (ETFS) is, its DeFi platform puts in place mechanisms to vet all cryptocurrencies and tokenized ETFs listed on the platform to ensure quality over quantity. The highly profitable tokenized ETFs for trading and investing cover booming sectors including technology, agriculture, healthcare and energy. The list of the highly sought-after tokenized ETFs on the ETFSwap (ETFS) DeFi trading platform includes Market, commodity, leveraged and fixed-income ETFs. In trading these tokenized ETFs, ETFSwap (ETFS) makes rare DeFi trading tools available to increase the profitability potential of every trader and investor. These tools, which include the ETF Screener, ETF Tracker, ETF Filter and ETF Finder tools, ensure high-margin profitability by allowing investors to find the best-tokenized ETFs for investment while tracking and monitoring the performance of investment portfolios. Smart traders and investors can also leverage ETFSwap's highly profitable staking platform feature by staking assets into its liquidity pool. Staking of assets earns investors and users a passive income and rewards up to 87% in staking yield. In benefiting from all of these fantastic platform features, investors and traders are not required to engage in any formal registration and KYC onboarding processes as ETFSwap (ETFS) prioritizes the privacy and security of its investors. GameStop (GME) Among Altcoins Projected To Be The Next Big Thing GameStop (GME), a cryptocurrency nicknamed after the notorious meme stock that experienced a meteoric rise in 2021, has been selected to be among Altcoins such as ETFSwap and Ondo Finance, projected to be the next big thing in the crypto industry. GME, the native token of GameStop, launched in February 2024 and has since experienced massive price rallies and growth in the markets. GameStop (GME), a meme coin built on Solana, has been reported to rally over 250% in one day. Despite GameStop's (GME) bullish projections, top crypto analysts have maintained the stance of GME falling behind ETFSwap (ETFS) in profit returns to investors. At press time, GameStop (GME) trades at \$0.012, according to coinmarketcap trading data. Ondo Finance (ONDO) Receives Honorable Altcoin Mention Ondo Finance (ONDO), a DeFi utility token with a strong presence in the crypto ETF economy, is among Altcoins identified as the next big thing in the crypto industry, only falling behind ETFSwap (ETFS). Through its tokenization model, which allows retail users to tokenize real-world assets for on-chain trading, Ondo Finance aims to bridge the gap between retail access to institutional-grade products and profitable investments. At press time, Ondo Finance trades at \$1.40, according to coingecko data. Conclusion On ETFSwap Vs GameStop And Ondo Finance Becoming The Next Big Thing In The Crypto Industry ETFSwap (ETFS) presents a high potential to scale investors' portfolios by a 60,000% ROI, thereby rising above GameStop (GME) and Ondo Finance (ONDO), which top analysts project to become the next big thing. - A memecoin, HULK, bearing American Wrestler Hulk Hogan's name was launched on Twitter. - Several celebrities have launched solana-based tokens in the past month. Since the beginning of May, the market has witnessed multiple celebrity memecoin shillings. Following this, famed American wrestler Hulk Hogan's twitter account saw the release of a memecoin earlier this week. The memecoin named HULK, was launched on the Solana blockchain. HULK witnessed a price hike within the first few hours of its launch. Shortly afterward the token's price plummeted by a significant 85%. The market crash occurred due to the wrestler's deleting all his posts on the X account. Initially, the wrestler's X account shared controversial posts attempting to pump up the memecoin HULK. The posts targeted singer/rapper Iggy Azalea who also recently launched her memecoin, MOTHER. Following this on Friday, Hulk Hogan deleted the posts which caused HULK's market cap to slide notably from \$17 million to \$2 million. Furthermore, the retired pro wrestler has denied responsibility for the posts on X. His Wednesday announcement on Instagram stated that "they weren't from me" and he asked followers to ignore any other posts on his Twitter. This suggests that Hulk Hogan's X account was hacked contrary to previous assumptions. Meanwhile, on Thursday, before Hogan's post on Twitter, Bubblemaps data showed insider trading of the memecoin. It showed that traders had bought 15% of HULK's supply before the American pro wrestler posted on X. Additionally, the traders managed to exit before the "rug pull" happened and have made profits of millions of dollars according to the data. Are Solana-Based Celebrity Memecoins Reliable? In the past month, the memecoin sector has seen an influx in celebrities' tokens. Notable RealityTV star, Caitlyn Jenner launched her memecoin on the Solana blockchain, in the Pump.fun deployment tool. The token launched under the name JENNER witnessed a price hike initially before prices plummeted. Similarly, Iggy Azalea's MOTHER also launched on Solana and was a prominent focus within the market. Additionally, Nigeria singer Davido launched his token DAVIDO on pump.fun. These two tokens also showed a similar price performance of pump and dump. The increasing celebrity memecoin shillings have raised community's speculations about their intentions for memecoins. Amid Solana memecoins trending, traders analyze if the celebrities solely focus on monetary profits or are showing genuine interest in the sector. Highlighted Crypto News Today: Is Current Market Lull a Prelude to an Upcoming Bullish Rally?

Binance is thrilled to announce IO.NET (IO), a decentralized AI computing & cloud platform, as the 55th project on Binance Launchpool. The webpage is anticipated to be accessible five hours prior to the launchpool commencing. Farming IO tokens will take place over four days, beginning at 2024-06-07 00:00 (UTC), with users able to stake their BNB and FDUSD into different pools. Listing At 12:00 (UTC) on June 11, 2024, Binance will list IO and begin trading IO/BTC, IO/USD, IO/BNB, IO/FDUSD, and IO/TRY trading pairs. IO will have the seed tag appended to it. Specifics of the IO Launchpool - Name of Token: IO.NET (IO) - Total Token Supply at Genesis: 500,000,000 IO - Max Token Supply: 800,000,000 IO - Launchpool Token Rewards: 20,000,000 IO (4% of total token supply at Genesis) - Initial Circulating Supply: 95,000,000 IO (19% of total token supply at Genesis) - Details of the Smart Contract: Solana - Staking Terms: KYC is necessary - Hard Cap for each user hourly: 17,708.33 IO in BNB pool 3,125 IO in FDUSD pool Supported Pools - Stake BNB (webpage will be accessible in approx 5 hours): 17,000,000 IO in rewards (85%) - Stake FDUSD (webpage will be accessible in approx 5 hours): 3,000,000 IO in rewards (15%) - Farming Period: 2024-06-07 00:00 (UTC) to 2024-06-10 23:59 (UTC). - Whales' big strategic moves influence current market trends. - Consolidation primes whales for future influence and strategic accumulation. In the volatile world of cryptocurrencies, market consolidation phases often bring a period of calm and strategic repositioning. The cryptocurrency market is currently experiencing one of these phases, characterized by relatively stable prices and lower trading volumes. This phase is a breeding ground for strategic maneuvers by big whales' large holders of cryptocurrencies who have the potential to influence market trends significantly. The whales have been executing significant moves since last month, with recent 24-hour whale movement being a testament to their strategic activities. Notable transfers include substantial Bitcoin (BTC) and Ethereum (ETH) transactions from long-dormant wallets to exchanges. For instance, a Bitcoin whale recently moved 1,000 BTC (approximately \$70 million) to Binance, sparking speculation about potential selling pressure. Similarly, an Ethereum whale transferred 8,710 ETH (around \$33 million) to Coinbase. Additionally, there was another shocking transfer of 1 billion SOL (\$171 million) from an unknown wallet to a new unknown wallet. These transfers often precede significant market actions, either in the form of large-scale sales or strategic trades. What Does This Indicate? Analysts are divided on what these movements might signify. Some argue that the transfers to exchanges suggest an impending sell-off, which could lead to a short-term price decline. They highlight that whales might be preparing to liquidate their holdings to capitalize on the current price levels before a potential market downturn. Conversely, other analysts interpret these moves as preparatory steps for significant market activities, such as staking, liquidity provision, or decentralized finance (DeFi) investments. The consolidation phase provides a fertile ground for strategic accumulation by whales. Lower volatility allows for large transactions without causing significant market disruptions. Whales might use this opportunity to accumulate more assets at stable prices, anticipating a future bull run. This strategy not only increases their holdings but also strengthens their influence over future market trends. The actions of whales during this consolidation phase will likely have long-lasting implications for the cryptocurrency market. If whales choose to liquidate their holdings, it could trigger a short-term price drop, creating buying opportunities.

SNUKE, the latest memecoin sensation on the Solana blockchain, has officially launched and is already making waves in the crypto community. With its unique concept and strong community backing, SNUKE is poised to become a significant player in the memecoin market. Successful Launch SNUKE's

launch on the Raydium exchange has been a resounding success. The token surged by almost 200% within the first 24 hours, reaching a market cap of \$1 million. This remarkable performance has caught the attention of investors and enthusiasts alike, signaling a bright future for SNUKE. Strong Market Performance The rapid increase in SNUKE's value demonstrates the market's confidence in the project. As the memecoin continues to gain traction, its community of supporters grows stronger, contributing to its upward momentum. SNUKE's impressive start is a testament to the team's dedication and the project's potential. Community Engagement The SNUKE community has shown tremendous support, playing a crucial role in the token's initial success. Active discussions, promotional activities, and a strong social media presence have all contributed to SNUKE's rapid rise. The community's enthusiasm and commitment are key drivers of the project's growth and long-term viability. Strategic Development The SNUKE team is committed to continuous development and improvement of the project. Future plans include expanding the utility of the SNUKE token and forming strategic partnerships. These efforts aim to provide more value to SNUKE holders and ensure the project's sustainable growth. A Promising Future SNUKE's successful launch and strong market performance are just the beginning. With a dedicated team, a growing community, and strategic initiatives, SNUKE is well-positioned for long-term success. As the memecoin market continues to evolve, SNUKE Meme stands out as a promising contender with the potential to deliver significant returns for its investors. Join The SNUKE Community Stay updated with SNUKE's progress and join the community to be part of this exciting journey. Follow us on our official channels for the latest news and updates. Join the SNUKE revolution and be part of the next big memecoin success story! - Sales of \$3.97 billion in NFTs and \$82 million in wash sales were included in the total. - Monthly NFT sales volume as per CryptoSlam fell 54% from April to May. Despite a 54% decline in sales for the entire non-fungible token (NFT) market in May, digital collectibles on Bitcoin hit a new milestone. The overall sales volume of NFTs on the Bitcoin blockchain reached an all-time high of over \$4 billion, according to NFT data tracker CryptoSlam, which was published on June 4th. Sales of \$3.97 billion in NFTs and \$82 million in wash sales were included in the total. Among blockchain-based NFTs, Bitcoin-based NFTs had the highest 30-day sales volume at \$1.1 billion. Next on the list was Ethereum with \$159 million, followed by Solana with \$90 million in the last month. Striving NFT Market Despite taking the lead in 30-day volumes, Bitcoin-based NFTs only rank as the fourth-largest blockchain in terms of sales. It comes behind the Ronin blockchain, which has \$4.2 billion in all-time sales and is currently in third place. With a record-breaking \$5.5 billion in sales, NFTs based in Solana are in second place. At the same time, with a staggering \$43.8 billion in recorded sales, the Ethereum network is still leading the pack for NFT sales. May sales volumes were lower across the board for NFTs. Monthly NFT sales volume as per CryptoSlam fell 54% from April to May. Sales of NFTs topped \$1 billion in April and \$624 million in May. Similarly, collectibles based on Bitcoin saw a drop in sales. May sales of NFTs based on Bitcoin fell 68%, according to the data. Not only did Bitcoin NFTs set a new sales record, but the network also witnessed a record high in transaction value. The estimated value of Bitcoin transactions peaked on May 28 at almost \$25 billion, marking the greatest level in the previous year. Highlighted Crypto News Today:

In the bustling world of cryptocurrency, stories of significant financial gains are not uncommon. However, a remarkable tale of a college student who made an astonishing \$3,400,000 trading cryptocurrencies from his dorm room in 2023 has captured the attention of both crypto enthusiasts and the general public alike. Now, this successful young investor is sharing his insights and revealing the three altcoins he is buying heavily in June: Retik Finance (RETIK), Solana (SOL), and Shiba Inu (SHIB). Here's a deep dive into these altcoins and why they might be worth considering for your crypto portfolio. Retik Finance (RETIK): Revolutionizing DeFi Retik Finance (RETIK) is a newly launched decentralized finance (DeFi) coin that has quickly gained traction in the crypto community. The primary goal of Retik Finance is to address the inefficiencies and limitations of traditional financial systems by offering cutting-edge DeFi solutions. The RETIK token is central to this mission, powering various features and functionalities within the Retik Finance platform. The college student is particularly bullish on Retik Finance due to its robust ecosystem that includes decentralized lending and borrowing, yield farming, staking, and other DeFi services. He believes that Retik Finance is well-positioned to create a decentralized financial system that empowers users by giving them control over their assets and financial activities. Retik Finance had a spectacular launch on May 21, 2024, marking a significant milestone for the coin. Within hours of its debut, the market capitalization of RETIK soared to almost \$3 billion, and the price of RETIK also saw a 2000% increase from its launch price. Currently, the price of RETIK today is \$ 1.01358 with a 24-hour trading volume of \$ 4.76 million, a market cap of \$ 510 million, and a market dominance of 2.61%. The RETIK price increased 14.21% in the last 24 hours. The Retik Finance price prediction sentiment is currently bullish, while the Fear & Greed Index is showing 72 (Greed). The successful launch of RETIK was marked by its simultaneous listing on several prominent centralized exchanges (CEXs), including MEXC, LBank, Diginifex, Bitmart, CoinW, and P2B. This strategic move increased the token's visibility, liquidity, and accessibility to a broad range of investors and traders. The market's positive response to the launch of RETIK and its ongoing development efforts are key reasons why this student sees tremendous potential in Retik Finance. Solana (SOL): A High-Performance Blockchain Solana (SOL) is a high-performance blockchain platform known for its impressive scalability and fast transaction speeds. It has become one of the leading platforms for decentralized applications (dApps) and DeFi projects due to its ability to handle thousands of transactions per second. The student is bullish on Solana for several reasons. Firstly, the technology of Solana is highly advanced, offering low-cost and high-speed transactions, which are critical for the mass adoption of blockchain technology. Secondly, Solana has a vibrant ecosystem with numerous projects being built on its platform, which continually drives demand for SOL tokens. A significant development in the Solana ecosystem is the introduction of Firedancer, a highly optimized Solana client being developed by Jump Crypto. Firedancer aims to optimize networking, consensus rules, and runtime processing to overcome current software bottlenecks. According to benchmarks, Firedancer can already handle over 1 million transactions per second (TPS) per core in testing environments. The full version of Firedancer is expected to be released in 2025, with stripped-down versions likely rolling out sooner. The price of Solana today is \$ 167.23 with a 24-hour trading volume of \$ 2.9 billion, a market cap of \$ 5.45 billion, and a market dominance of 2.93%. The SOL price increased 8.78% in the last 24 hours. The Solana price prediction sentiment is currently bullish, while the Fear & Greed Index is showing 72 (Greed). The price of Solana has increased by 700% in the last year, outperforming 91% of the top 100 crypto assets over the same period. This impressive performance and strong technological foundation make Solana a top pick for this savvy college investor. Shiba Inu (SHIB): The Meme Coin with Serious Potential Shiba Inu (SHIB) started as a meme coin but has evolved into a serious contender in the crypto market. With a passionate community and ongoing development efforts, Shiba Inu has garnered a substantial following and has achieved significant market milestones. Despite its origins, Shiba Inu has shown resilience and growth potential. The student is optimistic about Shiba Inu due to its innovative projects and strategic initiatives. Recently, the Shiba Inu project raised \$12 million in funding by selling TREAT tokens. This funding was provided by a group of international venture capital firms, including Mechanism Capital and Big Brain Holdings. TREAT is designed to be the final token introduced in the Shiba Inu ecosystem, serving as the utility and governance token of a new blockchain aimed at improving the privacy of blockchain transactions. This new blockchain will utilize Fully Homomorphic Encryption (FHE) technology provided by Zama and will function as a layer 3 built on top of the Shibarium platform. Shiba Inu price today is \$ 0.0002483 with a 24-hour trading volume of \$ 1 billion, a market cap of \$ 14.5 billion, and a market dominance of 4.57%. The SHIB price increased 10.01% in the last 24 hours. The Shiba Inu price prediction sentiment is currently bullish, while the Fear & Greed Index is showing 72 (Greed). The student's belief in the potential of Shiba Inu is bolstered by its strong community support and ambitious development plans. Conclusion The college student's remarkable success story and his strategic focus on Retik Finance, Solana, and Shiba Inu highlight the immense potential within the cryptocurrency market. Retik Finance offers innovative DeFi solutions, Solana is renowned for its technological advancements and robust ecosystem, and Shiba Inu continues to capture attention with its active community and future developments. By investing heavily in these altcoins, the student is positioning himself to capitalize on significant growth opportunities, reflecting his deep understanding of market trends and a keen eye for promising assets. These altcoins represent exciting prospects for any investor looking to navigate the dynamic world of cryptocurrencies. Established altcoins like Dogwifhat (WIF) and Polkadot (DOT) are already demonstrating strong momentum, with both tokens targeting new all-time highs. Meanwhile, newer entrants like ETFSwap (ETFS) and Notcoin (NOT) are also making significant gains. ETFSwap (ETFS) Leads Market Gains With \$2 Million Presale Haul ETFSwap (ETFS) is currently leading the altcoin market with substantial gains, driven by its innovative approach to trading exchange-traded funds (ETFs). It has already sold over 155 million tokens and amassed over \$2 million in presale funding. ETFSwap (ETFS) creates tokenized versions of ETFs on the blockchain that allow users to monitor their progress before investing easily. The platform also provides a leverage structure of up to 50x leverage on all listed ETFs, enabling users to potentially multiply their profits by as much as 5,000%. Distinguishing itself from the regular trading and crypto platforms, ETFswap (ETFS) boasts an innovative model that eliminates the need for KYC. Moreover, to reaffirm traders' confidence, it has undergone a comprehensive audit by CyberScope, thus ensuring the highest levels of safety and security. ETFSwap (ETFS) is powered by its native token, ETFS. The token serves as the foundation of the ETFSwap (ETFS) ecosystem, enabling users to engage in governance activities and access various platform utilities. By holding ETFS tokens, users can directly influence the project's future direction and shape its development. The current presale stage of ETFSwap (ETFS) offers a discounted price of \$0.00854 per token, making it an enticing opportunity for early investors to get involved in the project at a favorable rate. As the project advances and the token gains wider adoption, the price is anticipated to rise in the next presale stage. The price of ETFS is scheduled to increase to \$0.11818, providing early participants with the opportunity to maximize their profits. Notcoin (NOT) Surges and Gains Traction Notcoin (NOT) is a meme coin that has gained significant attention from the crypto community due to its recent price surge. Notcoin (NOT) proudly announced on X that its on-chain holders have surpassed those of Shiba Inu (SHIB), Bonk (BONK), and Pepe (PEPE), standing at an impressive 1.6 million compared to their respective on-chain holder counts of 1.4 million, 731,000, and 235,000. Moreover, alongside the surge in on-chain holders, Notcoin's price has experienced a significant uptick in the past 24 hours. Currently trading around \$0.0122, the Notcoin native token NOT has seen a remarkable 31.38% increase in the last 24 hours (at the time of writing). Over a broader timeframe, Notcoin (NOT) tokens have surged by 130% in the past week. Dogwifhat (WIF): Targets \$5 Price Mark Dogwifhat (WIF) has emerged as the latest sensation in the Solana ecosystem, captivating the attention of investors and enthusiasts alike with its rapid growth and popularity. Dogwifhat (WIF) has surged over 23% in the past week, leading the way as bulls target a further 10% increase. Breaking out of a symmetrical triangle pattern, the Dogwifhat (WIF) price soared by more than 130%, nearing the \$4 milestone and approaching its previous all-time high. While the Relative Strength Index (RSI) signals potential bearish divergence, suggesting a minor pullback before a breakout, the overall market sentiment remains positive, with Dogwifhat (WIF) expected to maintain its upward trajectory. Polkadot (DOT): Primed for a New All-Time High? Polkadot (DOT) has garnered significant interest from investors and analysts due to its recent surge in price action. Currently trading at \$7.12, the cryptocurrency has exhibited robust performance metrics that hint at further gains on the horizon. Prominent market analysts, like Crypto Yapper, are forecasting a potential surge in Polkadot's (DOT) price to reach the \$10 mark. This bullish prediction for Polkadot (DOT) is supported by robust technical indicators and a positive market sentiment. Over the past 24 hours, Polkadot (DOT) has seen a trading volume of \$210 million and boasts a market capitalization of \$10.24 billion. Will ETFSwap (ETFS) Rank Above Polkadot (DOT), Dogwifhat (WIF), and Notcoin (NOT)? ETFSwap's distinct value proposition has contributed to its growing popularity in the crypto market. Its assurance of profit on investment has also attracted both large and small investors, who are eager to purchase this rare gem at stage 1. With its upcoming listing on tier 1 exchange platforms it is no wonder experts are optimistic that ETFswap (ETFS) will surpass Polkadot (DOT), Notcoin (NOT) and Dogwifhat (WIF) and potentially rise to be one of the top 10 crypto assets in the market. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. - Leading Cryptocurrencies Bitcoin and Ethereum market prices broke resistance levels in May 2024. - The meme coin shillings of several celebrities has led to an overcrowding of the sector amidst growth. The overall crypto market witnessed key moments in May 2024. While the market witnessed price hikes, the SAB 101â€™s veto caused obstacles. Cryptocurrency has also played a crucial role within the US political landscape which fueled further events. Besides, with multiple crypto crimes and significant arrests the month has been one for mounting tensions within the sector. Moreover, one of the most significant events was the SECâ€™s approval of spot Ethereum ETFs on May 23. ETH price rally was fueled by the commission change in attitude towards the spot ETH ETFs. The US crypto regulator approved eight spot ETH ETFs on the aforementioned date. The SEC also published the Staff Accounting Bulletin (SAB) 101 in May 2024. Notably, the leading cryptocurrency, Bitcoin broke multiple resistance levels this month. In the first week, it showcased struggles to break the \$60K resistance. However, the May month saw Bitcoin inching closer to its ATH at \$73,750 breaking the \$60K and \$68K resistance levels. At the time of writing it is trading at \$68,500 according to CMC data. Moreover, Ethereum, the leading altcoin, also witnessed an impressive price surge. Having traded around the \$2.9K level for most of the month, the last two weeks saw a price surge breaking the \$3K resistance and soaring closer to \$4K. At the time of writing ETH is trading at \$3,816. Additionally, amid the market revival, whale accumulations spiked this month. BTC and ETH whales showed significant movements during the recent price surge. Is Crypto May 2024 Going on Record? According to Dune Analytics data, the memecoin sector has shown a 30-day price growth of 31.63% in May 2024. Memecoins are leading in price growth followed by Blockchain Service Infra. In particular, memecoin Pepe hit its new ATH on May 27th at \$0.00001718. The frog-themed memecoin has shown a price rally of 87.93% over the month regaining its position as the third-largest memecoin, in terms of market cap. Notably, May 2024 witnessed an inflow of celebrity meme coin shillings. Caitlyn Jenner launched meme coins on Solana and Ethereum blockchains bearing her name. Additionally, two music artists Iggy Azalea and David Launched meme tokens. Furthermore, leading celebrity Cristiano Ronaldo released his fourth NFT Collection on May 29. The celebrity meme coin shillings has caused a negative impact on the progress as it has led to overcrowding in the sector. Furthermore, Davidâ€™s scam following his launch of the meme coin has led to increased constrictions within the meme coin sector. Relatively, crypto has become a crucial focal point in the US 2024 election campaigns. Presidential candidate Donald Trumpâ€™s pro-crypto stance has gained him immense support among citizens. On the other hand, current officeholder Joe Bidenâ€™s anti-crypto policies have subjected him to multiple criticisms. His recent veto of the SAB 101 has caused a stir as speculations mount on the US politiciansâ€™ motives for crypto. In conclusion, while the crypto sector witnessed key advancements, incidents of crypto politics and the SECâ€™s heightened screening has caused a few dents in progress. Additionally, it has also inspired uncertainty for the market in the coming months. Highlighted Crypto News Today: Ethereum Supply on Exchanges Plummeted Post-SEC Approval of Spot Ether ETF

- The top three crypto gainers in the market were Notcoin, Toncoin, and GALA. - Notcoin (NOT) leads the market with a surge of 54% to a new all-time high of \$0.02896. Bitcoin (BTC), the leading cryptocurrency, continues to exhibit volatile behavior, trapped below the \$69,000 range early Monday. Despite its unstable momentum, Bitcoin traded between \$68,000 and \$70,000 in the past week. In the past 24 hours, BTC has experienced a slight uptick of approximately 1.51%. Further, the global cryptocurrency market cap currently stands at \$2.55 trillion, reflecting a modest 0.35% rise over the last 24 hours. The market heatmap is slightly green, suggesting price recoveries for many cryptocurrencies. Meanwhile, other well-known altcoins such as Ethereum (ETH), Dogecoin (DOGE), Ripple (XRP), Solana (SOL), and Litecoin (LTC) have experienced minor declines. The overall market Fear & Greed Index stands at 60, indicating a sentiment of greed, according to CoinMarketCap data. Among the altcoins, Notcoin (NOT) has emerged as the top performer for the seventh consecutive day, with a notable 24-hour increase of over 19.53%. Conversely, Synthetix (SNX) has taken the largest hit with an 8.49% decline within the same period. Letâ€™s discuss the top crypto gainers of the day to understand the market conditions. Notcoin (NOT) - Market Cap: \$2.18 Billion - Trading Volume: \$4.53 Billion Notcoin continues to lead the gains, extending a 54% surge from \$0.01875 to a new all-time high of \$0.02896. Currently, NOT is trading at \$0.02125, up 19.53% in the last 24 hours, with a market capitalization of \$2.18 billion. Since its launch in mid-May, Notcoin has been on an upward trajectory, driving increased market transactions. Its 24-hour trading volume has soared by 162%, reaching \$4.53 billion. Toncoin (TON) - Market Cap: \$16.10 Billion - Trading Volume: \$498 Million Toncoin ranks as the second biggest gainer, experiencing a 20% increase in the last 24 hours, rising from \$6.37 to \$7.03. Despite a recent decline, TON is now trading at \$6.70, supported by a market cap of \$16.10 billion. Further, transaction activity for Toncoin has surged, boosting its daily trading volume by 250% to \$498 million. This trend suggests a bullish outlook, as TON trades above the 7-day simple moving average (SMA) and maintains an upward movement on the 4-hour chart. Gala (GALA) - Market Cap: \$1.48 Billion - Trading Volume: \$318 Million Gala, a layer 1 blockchain solution, has gained attention with a 18% increase over the past day, pushing its value from \$0.045 to \$0.047. GALAâ€™s market capitalization stands at \$1.48 billion, and its trading volume has jumped by 140% to \$318 million. Despite the overall positive market performance, several cryptocurrencies have not maintained their gains. Tokens such as Synthetix (SNX), Arweave (AR), and Beam (BEAM) have experienced declines after previously showing bullish trends.

The dynamic landscape of decentralized finance (DeFi) is witnessing a revolutionary advancement with the introduction of OPUR AI. This cutting-edge platform is set to redefine smart contract auditing and analysis, offering a comprehensive suite of tools to cater to the evolving needs of developers and investors in the DeFi space. OPUR AI, an innovative solution in the realm of DeFi security, presents a centralized Bot Hub that houses a range of advanced features tailored to meet the requirements of both novice and experienced users looking to maximize the efficiency and security of their smart contracts. OPUR AIâ€™s suite of tools includes a Smart Contract Auditor, which can swiftly assess smart contracts, identifying vulnerabilities and ensuring compliance in a fraction of the time compared to traditional auditing methods. ETH/SOL Checker: Providing meticulous verification for Ethereum and Solana smart contracts, OPUR AI maintains rigorous standards in code integrity and functionality, ensuring enhanced security and performance for users. Code Analyzer: Leveraging advanced AI algorithms, the Code Analyzer meticulously inspects smart contract code for errors, inefficiencies, and security gaps. It generates detailed reports and actionable insights, empowering developers to enhance the reliability of their code. Chat Bot: The OPUR AI Chat Bot offers real-time responses and automates customer service tasks. By providing personalized assistance and streamlining user interactions, it enhances engagement and user experience. Why OPUR AI In an era where the integrity and security of smart contracts are of paramount importance, OPUR AI emerges as a standout leader in the industry. Its user-friendly interface coupled with powerful auditing and analysis tools make it accessible to all users, irrespective of their technical expertise. By simplifying the auditing process and offering robust analysis, OPUR AI ensures that smart contracts are not only reliable but also secure, instilling confidence in users. About OPUR AI Dedicated to elevating the DeFi ecosystem, OPUR AI showcases a commitment to providing top-tier security and auditing solutions. Its advanced AI-driven tools are strategically crafted to address the escalating demands of the cryptocurrency market, ensuring users have peace of mind and trust in their smart contract transactions. Conclusion As the DeFi environment continues to expand and evolve, the importance of secure and efficient smart contract management becomes increasingly vital. At the forefront of this movement, OPUR AI offers pioneering solutions that safeguard and empower users within the DeFi space. Positioned as an invaluable asset, OPUR AIâ€™s comprehensive suite of tools is poised to revolutionize smart contract auditing and analysis within decentralized finance. - For further information about OPUR AI and its services, please visit <https://www.opur.ai> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish CEL0 price prediction for 2024 is \$1.0493 to \$1.5765. - Cel0 (CEL0) price might reach \$2 soon. - Bearish CEL0 price prediction for 2024 is \$0.4784. In this Cel0 (CEL0) price prediction 2024, 2025-2030, we will analyze the price patterns of CEL0 by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | CEL0 (CEL0) PRICE PREDICTION 2024 | | CEL0 (CEL0) PRICE PREDICTION 2025, 2026-2030 | | CONCLUSION | | FAQ | Cel0 (CEL0) Current Market Status | Current Price | \$0.8158 | 24 â€ Hour Price Change | 3.12% Down | | 24 â€ Hour Trading Volume | \$16.15M | | Market Cap | \$437.86M | | Circulating Supply | 536.68M CEL0 | All â€ Time High | \$10.66 (On Aug 30, 2021) | | All â€ Time Low | \$0.3732 (On Jun 10, 2023) | | What is Cel0 (CEL0) | TICKER | CEL0 BLOCKCHAIN | Cel0 | CATEGORY | Layer 1 blockchain network | | LAUNCHED ON | April, 2020 | | UTILITIES | Governance, tipping system, gas fees & rewards | Cel0 (CEL0) is the native cryptocurrency of the Cel0 blockchain. Cel0 is a blockchain protocol that seeks to use phone numbers to provide a worldwide payment system. The protocol aims to proxy public keys using phone numbers. Its mainnet was launched in April 2020. It is based on the proof-of-stake (PoS) consensus mechanism. The blockchain permits the creation of smart contracts and decentralized applications (DApps). Users can take part in network consensus and pay for on-chain transactions using it as a utility token. CEL0 is used for transaction fees, governance participation, and related activities. Cel0 24H Technicals (Source: TradingView) Cel0 (CEL0) Price Prediction 2024 Cel0 (CEL0) ranks 156th on CoinMarketCap in terms of its market capitalization. The overview of the Cel0 price prediction for 2024 is explained below with a daily time frame. CEL0/USDT Ascending Triangle Pattern (Source: TradingView) In the above chart, Cel0 (CEL0) laid out an ascending triangle pattern. The ascending triangle is a characteristic pattern of an ongoing bullish trend. This triangle is formed by a horizontal upper trendline that connects the highs and a lower trending line that connects the rising lows. If the trend breakout, the resistance level the price will continue to move up in this ascending triangle pattern. At the time of analysis, the price of Cel0 (CEL0) was recorded at \$0.8158. If the pattern trend continues, then the price of CEL0 might reach the resistance levels of \$0.9185, and \$1.7014. If the trend reverses, then the price of CEL0 may fall to the support of \$0.8194 and \$0.7192. Cel0 (CEL0) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Cel0 (CEL0) in 2024. CEL0/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Cel0 (CEL0) for 2024. | Resistance Level 1 | \$1.0493 | | Resistance Level 2 | \$1.5765 | | Support Level 1 | \$0.7171 | | Support Level 2 | \$0.4784 | CEL0 Resistance & Support Levels Cel0 (CEL0) Price Prediction 2024 â€ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Cel0 (CEL0) are shown in the chart below. CEL0/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Cel0 (CEL0) market in 2024. INDICATOR | PURPOSE | READING | INFERENCE | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Cel0 (CEL0) Price Prediction 2024 â€ ADX, RVI In the below chart, we analyze the strength and volatility of Cel0 (CEL0) using the following technical analysis indicators â€ Average Directional Index (ADX) and Relative Volatility Index (RVI). CEL0/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Cel0 (CEL0). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 10.1923 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 29.96 <50 = Low >50 = High | Low volatility | Comparison of CEL0 with BTC, ETH Let us now compare the price movements of Cel0 (CEL0) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs Cel0 Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of CEL0 is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of CEL0 also increases or decreases respectively. Cel0 (CEL0) Price Prediction 2024, 2025 â€ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Cel0 (CEL0) between 2024, 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | Cel0 (CEL0) Price Prediction 2025 | \$2.8 | \$0.4 | | Cel0 (CEL0) Price Prediction 2026 | \$3 | \$0.3 | | Cel0 (CEL0) Price Prediction 2027 | \$3.3 | \$0.2 | | Cel0 (CEL0) Price Prediction 2028 | \$4.5 | \$0.08 | | Cel0 (CEL0) Price Prediction 2029 | \$5.8 | \$0.07 | | Cel0 (CEL0) Price Prediction 2030 | \$6 | \$0.05 | Conclusion If Cel0 (CEL0) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish Cel0 (CEL0) price prediction for 2024 is \$1.5765. Comparatively, if unfavorable sentiment is triggered, the bearish Cel0 (CEL0) price prediction for 2024 is \$0.4784. If the market momentum and investorsâ€™ sentiment positively elevates, then Cel0 (CEL0) might hit \$2. Furthermore, with future upgrades and advancements in the Cel0 ecosystem, CEL0 might surpass its current all-time high (ATH) of \$10.66 and mark its new ATH. FAQ 1. What is Cel0 (CEL0)? Cel0 (CEL0) is the native cryptocurrency of the Cel0 blockchain. It is a blockchain protocol that seeks to use phone numbers to provide a worldwide payment system. It is based on the proof-of-stake (PoS) consensus mechanism where transactions can be verified. Cel0 (CEL0) Traders can trade Cel0 (CEL0) on the following cryptocurrency exchanges such as Binance, Coinbase, and others listed as well. Cel0 (CEL0) can also be purchased via global onramps, such as Moonramp, Ramp Network, and

Simplex/Nuvei. 3. Will Celso (CELO) reach a new ATH soon? With the ongoing developments and upgrades within the Celso platform, Celso (CELO) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Celso (CELO)? Celso (CELO) hit its current all-time high (ATH) of \$10.66 on August 30, 2021. 5. What is the lowest price of Celso (CELO)? According to CoinMarketCap, Celso hit its all-time low (ATL) of \$0.3732 on June 10, 2024. 6. Will Celso (CELO) reach \$2? If Celso (CELO) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$2 soon. 7. What will be Celso (CELO) price by 2025? Celso (CELO) price is expected to reach \$2.8 by 2025. 8. What will be Celso (CELO) price by 2026? Celso (CELO) price is expected to reach \$3 by 2026. 9. What will be Celso (CELO) price by 2027? Celso (CELO) price is expected to reach \$3.3 by 2027. 10. What will be Celso (CELO) price by 2028? Celso (CELO) price is expected to reach \$4.5 by 2028. - A smart trader earned a profit of \$814 SOL using two Trump-based meme coins. - \$FREE, a Trump-based token rallied 450.49% in market price in the last 24 hours. The guilty verdict for former US President Donald Trump's criminal case was passed on Wednesday at Manhattan's Courthouse. New Yorkers flooded the streets outside the courthouse in support of the 2024 presidential candidate. Within the crypto sector, this incident has caused the creation and trending of multiple Trump-themed meme coins. One meme coin, FREE, has skyrocketed in market price by a significant 450.49% in the last 24 hours according to CMC data. Meanwhile, the other Trump meme coin, Never Surrender surged by 264% in market price. However, a prominent Trump-themed meme coin, MAGA hasn't witnessed a significant surge on Friday. Notably, during the Asian morning hours, a particular trader made approximately 972 Solana (SOL) worth \$167K by trading two of the tokens, Free Trump (FREE) and Never Surrender (TRUMP) yielded him the SOL profits. Moreover, the smart trader initially spent 85 SOL (\$14.6K) and bought \$FREE. As the token witnessed the price rally, the trader later sold it for 814 SOL (\$140K) making a profit of 729 SOL (\$125K). The second meme coin, \$TRUMP was bought for 72 SOL and earned him a profit of 243 SOL worth of \$42K as reported by LookOnChain. What Does Trump's Pro-Crypto Stance Intend? The 45th US president, having led a pro-crypto election campaign, has received significant support from the crypto community. He has inspired the creation of over a hundred different crypto assets in the form of meme coins. Moreover, Trump has stated that, if he wins the 2024 elections, his government will focus significantly on cryptocurrency. Recently, X founder Elon Musk and the presidential candidate discussed crypto policies. Trump has expressed that his government will work to make the US a leading nation in the sector. Additionally, in the recent past, Trump's activities within the crypto community have fueled price surges. In light of the recent court statement, a significant rally was exhibited by meme coins based on the presidential candidate. Among the tokens, FREE has shown the highest surge in market price. Apart from cryptocurrency, Donald Trump has also shown interest in Non-Fungible Tokens (NFT). He released his own NFT collection the 'Trump Digital Trading Cards' in 2022 on the Polygon blockchain. Following this he also launched a second series in 2023. Finally, the Presidential candidate awaits sentencing for his criminal charges on July 11. He is expected to receive up to four years of prison time. Highlighted Crypto News Today:

Meme coins like Shiba Inu (SHIB) and Dogecoin (DOGE) chart divergent paths, while NEAR Protocol garners momentum with its bullish prospects. SHIB has recently seen a 4.97% uptick, eclipsing DOGE's 1.48% increase, fueling speculation about SHIB's potential to outperform DOGE. Concurrently, cryptocurrency expert Jamie Coutts foresees a 47% rise for NEAR Protocol, bolstered by robust bullish indicators. In this shifting landscape, BlockDAG distinguishes itself with a forward-thinking strategy and a notable \$37M raised in its latest round, propelled by cutting-edge Directed Acyclic Graph (DAG) technology and integration with the Ethereum Virtual Machine (EVM). As the crypto sector evolves, BlockDAG's innovative approach earmarks it as an attractive investment, merging revolutionary technology with substantial market promise. SHIB vs DOGE: Battle for Dominance In the past day, Shiba Inu (SHIB) has enjoyed a 4.97% increase, surpassing Dogecoin (DOGE), which rose by 1.48%. This event has ignited debates about SHIB's potential to overtake DOGE. IntoTheBlock data shows a 31.25% reduction in SHIB traders, suggesting a strong short-term outlook as fewer traders speculate on its price. In contrast, DOGE's trader count has risen by 16.40%, indicating confidence in its sustained growth. Both coins maintain comparable social influence, suggesting they receive equal market attention. With DOGE's prices on the rise, SHIB could also see potential gains. NEAR Protocol: A Promising Future with Expected Gains Crypto analyst Jamie Coutts points to strong bullish signals for NEAR Protocol, predicting a potential 47% increase from its current levels. Coutts notes a consolidation of price momentum since March, with a bullish pattern signaling a possible breakout above \$7.60. NEAR Protocol's positive trajectory against Bitcoin and Solana, coupled with a rise in daily active users, supports Coutts's optimistic forecast. Despite a recent death cross in its Exponential Moving Average, which could suggest a downturn, NEAR's market sentiment is generally positive, leaning towards further growth. BlockDAG: Pioneering Blockchain Innovation BlockDAG is making significant strides in the blockchain sector, driven by its innovative technology and key updates that promote decentralization and improve transaction efficiency via advanced Directed Acyclic Graph (DAG) algorithms. These enhancements are vital for reliably facilitating rapid, large-scale transactions. An additional noteworthy feature of BlockDAG is its integration with the Ethereum Virtual Machine (EVM), which presents a quicker, more cost-effective option for Ethereum developers. This compatibility and user-focused features like Metamask integration broaden its appeal and promote wider adoption. As BlockDAG gears up for its mainnet launch, it emphasizes extensive testing and active community participation to bolster security and enhance system performance. These initiatives are set to exceed investor expectations, establishing BlockDAG as a leader in the competitive cryptocurrency market. With over \$37 million raised in its latest presale, and a coin price now at \$0.0095, an 850% increase, BlockDAG is positioning itself as a premier investment choice in the crypto world, ready to deliver substantial returns and technological advancements to its backers. Key Takeaways As SHIB and DOGE capture market interest and NEAR Protocol exhibits strong growth potential, BlockDAG stands out as the clear leader in the evolving cryptocurrency landscape. Its commitment to decentralization, rapid transaction processing, and user-friendly features like Metamask integration redefine blockchain standards. With its mainnet launch on the horizon, accompanied by extensive testing and community interaction, BlockDAG is well-positioned to meet and exceed investor expectations. The success of its \$37M fundraising underscores its market appeal, securing BlockDAG's status as a top choice for those seeking significant returns and innovative technology in their crypto investments. The crypto space's flagship asset, Bitcoin, is still the biggest cryptocurrency by market cap, but it has never been really programmable, scalable, or popular among developers. Nevertheless, there has been a shift. There has been a dramatic increase in the volume of discourse around potential solutions to Bitcoin's scalability with the introduction of additional features like Ordinals, Inscriptions, BRC-20 tokens, and Runes. From an average of \$1.5 in 2022 to \$4.2 in 2023 and \$9.5 so far in 2024, the transaction fees for Bitcoin have risen steadily. The overall value of Ethereum is around \$45 billion, with a portion of that amount locked up in its Layer 2 solutions (i.e., roughly 10% of Ethereum's total value). At a valuation of US\$1.4T, Bitcoin's L2 TVL holdings amount to only around \$2B, or approximately 0.13% of Bitcoin's entire worth. The trustless two-way bridge problem, the solution's relationship and alignment with the Bitcoin base layer, the possibility of fork requirements, and the degree of incentive alignment among users, developers, and crypto newbies are all critical factors to examine when evaluating Bitcoin's scalability solutions. We may look at Ethereum, the biggest smart contract L1, and its L2-focused scalability strategy (as opposed to Solana's L1-focused strategy) to get a sense of the possible magnitude of the Bitcoin L2 opportunity. For Bitcoin L2s to expand and capture market share, incentive alignment throughout the stack is crucial. The potential for protocols based on Bitcoin has been increased by the development of core Bitcoin technologies at the infrastructure level, such as Taproot and BitVM. Despite the fact that some of these implementations are in their early stages, teams are continually coming up with creative solutions to Bitcoin's scalability difficulty. While maintaining Bitcoin's integrity, Bitcoin-native initiatives like RGB and Lightning Network seek to enhance Bitcoin's P2P transaction capabilities and add smart contract capabilities to the chain. While RGB is still in its early stages of development, Lightning has had a somewhat successful debut. Sidechains and EVM Layer 1s that protect their chains using bridged BTC are two more types of scaling options. Bridged Bitcoin versions often include centralized components and cannot legitimately claim to inherit much of Bitcoin's security, however they do make use of Bitcoin's economic security to some extent. Emerging in the Bitcoin ecosystem are zero-knowledge rollups, which use BitVM as its foundational technology to more securely validate rollup data, in contrast to scaling solutions that just post a hash of their data into Bitcoin blocks. At this point in time, these rollups may inherit the highest level of Bitcoin security. The relevance of Bitcoin L2 solutions will only increase as Bitcoin expressivity keeps changing and new DeFi primitives like money markets, stablecoins, staking & restaking, and perpetuals come out. Lots of progress is anticipated over the next few months, so it should be an exciting time. The relevance of Bitcoin L2 solutions will only increase as Bitcoin expressivity keeps changing and new DeFi primitives like money markets, stablecoins, staking & restaking, and perpetuals come out. The transaction costs for Bitcoin are much higher than they have been in recent years, and the mempool is becoming busier, as we said before. While the Bitcoin L2 ecosystem is still in its infancy, the only protocols that are even somewhat considered to be true L2s are state channels like Lightning. Having said that, the user pooling and usefulness are severely limited by this. Additionally, a slew of new initiatives are nearing completion but have not yet reached the final stage.

- Digital assets were given a new lease of life when the US SEC gave its surprising permission. - The change was highlighted by Matthew McDermott, Goldman Sachs' global head of crypto. The recent approvals for the Spot Bitcoin ETF have been hailed by world-renowned financial firm Goldman Sachs as a "big psychological turning point." With the approval's effect in mind, the bank hailed January's BTC investment offering as an "astonishing success." The digital asset market has been greatly affected by this news, which has sparked enthusiasm among investors. Digital assets were given a new lease of life when the US SEC gave its surprising permission. It took three months after the approval for Bitcoin to reach a new all-time high of \$73,000. Many are now predicting that the market will continue to increase as a result of this approval. Piqued the attention of institutional investors, Spot Bitcoin ETFs were introduced in the United States in 2023, which caused a tremendous shift in the digital asset sector. The value of digital assets was impacted by this development, which piqued the attention of institutional investors. The market's credibility and attractiveness have been enhanced by the endorsement of such a substantial financial offering. This change was highlighted by Matthew McDermott, Goldman Sachs' global head of crypto. At the Consensus Crypto Conference in Texas, McDermott boasted about the Bitcoin ETF's phenomenal performance. The asset's 60% rally since approval highlights the significance of the product. Additionally, McDermott was hopeful about the future, speculating that Ethereum may soon follow Bitcoin's lead. Regardless, institutional investors continue to show a consistent level of interest and trust in Bitcoin and Ethereum by making these two cryptocurrencies their top requests. New potential has emerged for the digital asset market in the US with the introduction of Bitcoin and Ethereum ETFs. Highlighted Crypto News Today:

- Spot Bitcoin ETFs were previously the subject of a comparable position from the business. - Senior ETF analyst Eric Balchunas took to social media to voice his dissatisfaction. One of the most prominent American financial advisory firms, Vanguard Group, is under a lot of heat for not supporting Spot Ethereum ETFs. This decision is made in light of the current regulatory changes and the increasing interest in digital assets. Spot Bitcoin ETFs were previously the subject of a comparable position from the business. Senior ETF analyst Eric Balchunas of Bloomberg took to social media to voice his dissatisfaction. He harshly lambasted Vanguard's position on Spot Ethereum ETFs in an X post. Also, he thought the company was taking on a "Nanny role" and referred to the action as "silly." Cautious Stance on ETH and BTC ETF As Balchunas put it cynically, Vanguard's "lack of support for some of the biggest crypto players" is a "big problem." Balchunas, who maintains a platform for X, ETH, and BTC, is "not aligned" with building a well-balanced, long-term portfolio. Balchunas seemed to comprehend Vanguard's cautious stance on Ethereum and Bitcoin ETFs, but he still thought it was excessive, notwithstanding his criticism. The analyst also noted that Vanguard is unique among asset managers in how it does business. As he pointed out, the business is structured more like a cooperative and isn't as concerned with making money as it formerly was. Following the SEC's approval of many issuers' 19b-4 filings for Spot Ethereum ETFs, the investment adviser has made their choice. These exchange-traded funds, however, are not yet tradeable. Fund issuers' S-1 registration statements are still pending SEC clearance.

According to the Bloomberg analyst's earlier prediction, the majority of people anticipate these products to be launched by July 4, 2024.
Highlighted Crypto News Today:

As the cryptocurrency market continues to evolve, investors are on the lookout for the next big opportunities reminiscent of Pepe Coin's (PEPE) explosive rise. June presents a promising landscape for three standout altcoins: Shiba Inu (SHIB), Bonk (BONK), and Retik Finance (RETIK). These three coins, with their distinct attributes and growth potential, are well-positioned to capture investor interest and potentially deliver explosive returns akin to PEPE's recent success. The Bullish Momentum of Pepe Coin (PEPE): What Investors Need to Know On May 21, Pepe Coin (PEPE), the meme coin on the Ethereum blockchain, reached an all-time high of \$0.000000009974, marking a significant milestone in its market surge. Technical indicators further bolster the bullish outlook for PEPE. Bollinger Bands reveal high volatility, indicating the potential for another substantial price movement. The short-moving average serves as a robust support level, providing stability within the current price range. Additionally, the Relative Strength Index (RSI) remains above 65, reflecting a bullish trend without venturing into the overbought territory, which could help avoid a bearish reversal or consolidation. The dramatic increase in trading volume, surpassing \$2.3 billion, and open interest, exceeding \$121 million, suggests a considerable influx of capital and heightened trader interest. This surge in liquidity not only sustains Pepe Coin's current price level but also underscores its growing market strength and appeal, pointing towards continued upward momentum. Whale Watching: Shiba Inu (SHIB) Set for Explosive Growth According to IntoTheBlock data, Shiba Inu (SHIB) is showing signs of potential explosive growth similar to Pepe Coin, particularly due to increased interest from whale investors. There has been a 73.72% increase in significant whale transactions, with 327 major transactions occurring in a single day, highlighting Shiba Inu's growing appeal among large-scale investors. Impressively, Shiba Inu whales acquired 5.58 trillion coins in a single day, demonstrating strong accumulation behaviour. Consequently, the value of Shiba Inu coins traded by whales surpassed \$145.48 million, positioning SHIB as one of the most actively traded tokens in recent months. These substantial acquisitions could help Shiba Inu manage supply issues and sustain its positive momentum. Despite a 7.5% price spike in the past week, the long-term continuation of this trend remains uncertain. However, the substantial whale activity and growing trading volume suggest that Shiba Inu could experience a significant rise in June, similar to Pepe Coin's recent surge. The Bonk (BONK) Resurgence: From Bearish Zones to Bullish Relief The first dog-themed cryptocurrency in the Solana ecosystem, Bonk (BONK), debuted in 2023, igniting a meme coin frenzy with its impressive performance in the last quarter. It set a new all-time high earlier this year, securing its status among the top meme coins. Despite this, Bonk has experienced significant volatility, recently entering bearish zones and losing several key price levels during the market decline. While some investors lost confidence, savvy investors remained patient, anticipating the next surge. The recent market rebound has provided a bullish relief, allowing Bonk to recover its lost ground and boosting investor confidence. This resurgence is further supported by an increase in Bonk's market cap, which has risen by over 13% to reach \$2.28 billion. With its strong community and recent positive momentum, Bonk is well-positioned to not only rebound but also make a comeback in June, making it a promising candidate for substantial returns. Retik Finance (RETIK): Innovative Solutions Fuel Retik's Surge Retik Finance (RETIK) is a DeFi token that is poised for a significant rise in June. Potentially mirroring the explosive success of Pepe Coin, RETIK offers innovative solutions designed to redefine global transactions, attracting substantial investor interest, as evidenced by its pre-sale closing ahead of schedule and raising over \$32 million. The impressive 400% spike in the token highlights the market's confidence in Retik Finance's potential and viability. Further boosting its appeal, Retik Finance has engaged actively with the crypto community through events like a \$333,000 RETIK giveaway, demonstrating a strong commitment to fostering community participation and support. The strategic listing of RETIK on seven major exchanges, including Uniswap, Bitmart, MEXC, LBANK, P2PB2B, CoinW, and Digitized, on May 21, 2024, aligns perfectly with the current market resurgence. Analysts predict remarkable gains for RETIK, with investors closely monitoring its development. With its innovative approach and strong market momentum, Retik Finance is viewed as a top altcoin to buy, offering the potential for a massive return in June 2024. Conclusion As the cryptocurrency market continues to evolve, Shiba Inu (SHIB), Bonk (BONK), and Retik Finance (RETIK) emerge as promising contenders poised to follow in the explosive footsteps of Pepe Coin (PEPE) in June. With SHIB attracting significant whale interest, BONK recovering from volatility with renewed investor confidence, and RETIK demonstrating strong market momentum through innovative DeFi solutions and strategic exchange listings, these altcoins are well-positioned to capture investor interest. Their distinct attributes and growth potential make them top picks for those seeking substantial returns, potentially achieving explosive gains akin to PEPE's recent success. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Twitter: [www.twitter.com/retikfinance](https://twitter.com/retikfinance) - Telegram: [www.t.me/retikfinance](https://t.me/retikfinance) Disclaimer: TheNewsCrypto does not endorse any content on this page. - Eight other issuers' comparable bids were approved by the U.S SEC recently. - In September, Hashdex filed its first SEC filing, outlining its plans to establish a fund. Officially, Hashdex is pulling the plug on their planned spot Ethereum ETF. This withdrawal came only one week after eight other issuers' comparable bids were approved by the U.S SEC. On Tuesday, Nasdaq announced a change in strategy by withdrawing the Hashdex Nasdaq Ethereum ETF. Following the SEC's approval of 19b-4 forms for eight Ethereum ETFs by well-established firms, this decision was made. The market could see changes as a result of the authorized ETFs bringing a new transparency and activity level to Ethereum investments. Moreover, in September, Hashdex filed its first SEC filing, outlining its plans to establish a fund that would purchase Ether, Ether futures contracts on the CME, and other liquid assets. Toroso Investments, a licensed commodities pool operator, was to manage the ETF with the goal of providing investors with a regulated opportunity to profit from fluctuations in the price of Ethereum. Few Weeks for Commencement of Trading Prior to the approval of the 19b-4 forms, the proposed ETF was the subject of several public comments, some of which came from lawmakers. Senators from the Democratic Party, Tom Emmer (Minn.), and Josh Gottheimer (N.J.) pleaded for ratification. The SEC's decision to approve eight additional Ethereum ETFs demonstrates a change in stance toward treating Ethereum as a commodity. Before these issuers may trade, however, their S-1 registration statements need to be approved. Although the approval timeline is still up in the air, the SEC has begun communicating with issuers about their S-1 forms. It could take these ETFs a few weeks to start trading, according to some experts. Highlighted Crypto News Today: Hong Kong's SFC to Enforce Licensing Compliance for Crypto Firms

While the XRP's value sees consistent declines, with its RSI revealing a prolonged bearish trend, Dogwifhat news paints a grim picture for WIF, which suffered an alarming loss of 8% in just one week. BlockDAG, on the other hand, has surged by 850%, with its price climbing to \$0.0095 in just a few weeks. From a sensational display at Piccadilly Circus to its innovative Leaderboard Page that gamifies crypto investing, BlockDAG's innovation and strategic marketing innovations have brought earnings worth \$36 million during the platform's ongoing presale. XRP Value Retraced to \$0.5281: Further Declines Ahead Ripple (XRP) is currently battling with multiple challenges with XRP value seeing a retrace to \$0.528. Despite a 1.68% rise in the previous week, the crypto saw a recent 0.95% drop, which may bring further declines in the coming weeks. XRP's RSI and MACD also reveal bearish trends, with its RSI stooping below 50 points and MACD inching dangerously close to the bearish zone. XRP's support levels remain at \$0.5250 and \$0.5185. If this bearish trend continues, the crypto may drop to \$0.5015 or even \$0.49. While Ripple's recent surge came as a beacon of hope, the crypto's RSI and MACD reveal a clear indication toward a long-term bearish trend. Dogwifhat News: WIF Loses Over 8% in 7 Days The Dogwifhat News doesn't exclude optimism either. WIF recently saw an alarming decline and struggles with an 8% loss that faded on the network last week. This loss hits Dogwifhat coin even harder since it is a Solana-based meme coin. Its other SOL-based peers such as BOME, PEPE, and BONK seem to perform particularly well in comparison. WIF has seen a drop below the crucial point of \$3 support level, triggering extensive investor anxieties. If the coin drops below the support level of \$2.50, it may further decline to \$1.60. BlockDAG's Leaderboard Page Highlights Ranks BlockDAG has been crowned as one of the top emerging crypto coins of the year, thanks to its record-breaking presale victory. One key contributor to this victory is the Leaderboard Page of BlockDAG's newly updated dashboard. Designed to gamify crypto-investing experience for users, the Leaderboard has planted seeds of healthy competition within the community. This system has expanded BlockDAG's investor-base exponentially, resulting in \$36 million earnings from its ongoing presale. Let's break down how BlockDAG's Leaderboard Page works. Once a user steps into this world, they witness the top 30 investors participating in the crypto's presale. Every investor is given a specific position based on the number of BDAG coins they purchase. These ranks include Crab, Tortoise, Fish, Shark, and Whale - with Crab being the lowest rank and Whale being the highest. Anyone who invests between \$0.005 and \$0.009999 in the Crab phase and achieves the Whale status deserves an investment of \$55,000 or more. Because investors get to invest in the Crab phase, they have a higher chance of achieving the Whale status. With a limited supply of BDAG coins, BlockDAG's Leaderboard Page continues to drive tsunamis of investors on a daily basis. Investors have been feeling increasingly confident in BlockDAG's scalability and sustainability thanks to its global marketing initiatives. For example, their recent display at the bustling Piccadilly Circus of London skyrocketed BlockDAG's visibility in the crypto world. The event celebrated BlockDAG's CoinMarketCap listing, placing it as a leader in the Block plus DAG landscape. BlockDAG is currently selling out fast at \$0.0095 per coin in its presale batch 16. The platform has successfully sold over 10 billion BDAG coins. Conclusion With XRP and Dogwifhat in the dark throes of looming bearish trends, investors are flocking to cryptos that promise long-term stability and sustainability. This is where BlockDAG comes in. The platform's Leaderboard Page gamifies crypto investing, inducing a healthy competition among investors. This feature, coupled with BlockDAG's global marketing initiatives like the display in Piccadilly Circus, have helped the platform drive an 850% price surge in recent weeks. Currently priced at \$0.0095 in batch 16 of its presale, experts predict BlockDAG to see a whopping 30,000% ROI. Invest in the BlockDAG Presale Now! - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The latest sensation already defined as the new gold standard in the world of meme coins, Godlen Fish Memecoin (\$GODLEN) is making serious waves in the crypto ocean. Following a highly successful presale that raised over \$500,000, the coin has just launched on Jupiter and shot up DATA% within the first hour - now gearing up for major DEXs CEXs, ticking boxes for Binance listing along the way. \$GODLEN Instantly Triples in Value, Quickly Becoming The New Meme Coin Mascot Making its grand debut on May 29, 2024, Godlen Fish Memecoin separates itself from the crowd of dogs, frogs, and pussies by, well, being a fish but also bringing \$GODLEN army of Degenz Luck and utility like no one has ever seen before. With 5000% user growth in just days and \$200,000 raised in presale within hours, this rapid success is no fluke; it's a sign of the real demand for \$GODLEN. But what counts is the moment the fish breaks out of the aquarium into the ocean. The Godlen Fish token pool went live at 2 PM UTC on May 29, 2024. \$GODLEN's Next Big Move: Unprecedented Community Involvement and Major CEX Listings Set to Skyrocket Value Godlenfish Token empowers its holders to vote on upcoming CEX listings, including big names like Binance, OKX, and MEXC. This feature ensures that the coin's future is in the hands of its dedicated community. Teaming up with GOTBIT HEDGE FUND, known for its successes with projects like MYRO, PONKE, and BONK, \$GODLEN is no small fish in a big pond but quite the opposite. With staking protocols, PVP games, utility DApps, and multichain features on both Base and Solana on the way, \$GODLEN is the one to watch out for. JUP holders and traders on the new Jupiter DEX are super excited. With major CEXs on the horizon, crypto enthusiasts still have a chance to catch \$GODLEN early. From Meme Mascot to Ultimate Utility: \$GODLEN's Rise to Crypto Stardom \$GODLEN is more than just another meme coin; it's a revolution in the making. Even before its official launch, \$GODLEN has been showering its followers with a treasure trove of tools and rewards. Unlike many meme coins that rely solely on hype, \$GODLEN understands that luck alone isn't enough. That's why the wise Godlen Fish equips its holders with a caviar of utilities designed to maximize their crypto journey. \$GODLEN Utility In a Fishshell - Staking: Lock in those massive \$GODLEN gains with the staking options available. Whether it's short or long-term, users can choose their APR and watch their \$GODLEN grow. Early birds get the caviar! - Game: Dive into the \$GODLEN-themed degenerate mini-games. Players can battle it out in PVP or Solo mode, stake their tokens, and prove their worth. No free rides here! Gains are powered by staking against each other, making it a thrilling crypto gambling experience with memes. Tokens are burned if contracts are revoked, ensuring no free dumps. The \$GODLEN team has gone above and beyond, preparing seven crypto tools for both memecoin enthusiasts and developers, available NOW. \$GODLEN holders who stake 20 SOL worth

of \$GODLEN can unlock an exclusive utility platform featuring: - Bulk sender - Token sniping bot - Blockchain scanner - TG game development tool - Token SC development tool - Staking SC development tool - Transaction tracker bot Ride The Wave: Buy \$GODLEN on Jupiter DEX Now! From its humble beginnings, raising 1000 SOL in just 24 hours, to a presale haul of over half a million dollars, \$GODLEN is transforming from a mere meme coin into a powerful utility token. Remember how FLOKI skyrocketed with its community-driven approach and utility integration? \$GODLEN is set to explode even more, thanks to its impactful start and dedicated community. The project's early achievements have set the stage for a spectacular journey, turning heads and catching the attention of crypto enthusiasts worldwide. With a robust foundation and a clear vision, \$GODLEN is not just riding the meme coin wave but redefining it. The new crypto world order is here. Get your share of \$GODLEN luck before it hits major exchanges. Head over to Jupiter DEX and secure your \$GODLEN tokens now. Disclaimer: TheNewsCrypto does not endorse any content on this page. The Decentralized Finance (DeFi) ecosystem has come a long way since the yield farming craze that fueled the 2020/2021 bull run. At the time, most of the protocols were launching solely on the Ethereum blockchain; however, with transaction fees skyrocketing, alternative Layer 1 blockchains such as Solana and Layer 2 networks like Optimism also gained popularity as DApp-building ecosystems. While this was a step forward in making DeFi more accessible and cheaper, the advancement came with its own set of challenges. DeFi applications were limited to a single blockchain network, making it hard for users to transfer assets from one chain to another or capitalize on opportunities across the board. To bridge this interoperability gap, developers and innovators in the DeFi market started building cross-chain infrastructures, which essentially leverage smart contracts to enable the transfer of digital assets between various chains. The big question, however, is whether these bridges are reliable in the long term or if there is a stronger need for not just crypto bridges, but strong and seamless multichain compatibility? Cross-chain Bridges: A Weak Link in DeFi's Security According to crypto security firm Chainalysis, cross-chain bridge hacks accounted for close to 70% of the total funds stolen in the DeFi sector in 2022. So why exactly are cross-chain bridges more vulnerable to hacks? Before diving into the details, it would be unfair to only criticize this type of DeFi infrastructure without acknowledging the role bridges have played in supporting the movement of digital assets across different networks. As of writing, the total volume moved through DeFi bridges over the past month stands at \$8.3 billion, according to DeFi Llama. That said, cross-chain bridges have also suffered almost equally in losses. Of course, there are several reasons why hackers have grown fond of targeting bridges; one of them is smart contract vulnerabilities. For instance, Nomad bridge was exploited to a tune of \$200 million in 2022 thanks to a vulnerability in its code which allowed malicious actors to spoof transactions (withdraw funds which did not belong to them). Another reason why bridges are a weak link in DeFi is the underlying infrastructure. By design, most DeFi bridges rely on a "storage" smart contract to hold the digital assets intended for bridging, they then mint a similar amount of tokens to be used on the destination chain. This creates an opportunity for hackers to constantly target the storage smart contract as was the case in the multichain hack where over \$100 million was drained from the Fantom bridge. The above examples of typical bridge exploit approaches are just the tip of the iceberg. Hackers from notorious jurisdictions such as North Korea's infamous Lazarus Group have been exploiting and changing the role of some of the notable bridge hacks the group is suspected to have orchestrated include the Ronin and Harmony bridge hacks. In the former, the hackers made away with close to \$625 million and \$100 million in the latter. Multi-Chain Interoperability: The Solution to DeFi Compossibility Evidently, there is a need for DeFi to move away from bridges given the incidents over the past few years. But what alternatives could improve the state of DeFi compossibility while maintaining a high level of security? There are many ways to skin a cat. In this particular scenario, DeFi innovators and developers have the option of building multi-chain Dapps that can operate across several blockchain ecosystems. In fact, most of the protocols that launched during the first DeFi wave, including the likes of Compound and Uniswap, have all embraced multi-chain support to scale their services beyond the Ethereum blockchain. What's even more transformative are Layer 2 networks such as Polygon's ZK EVM, which is designed to support interoperability across EVM and non-EVM chains. This Dapp-oriented Layer 2 chain introduces a seamless multi-chain compatible environment, alongside privacy-focused and secure transactions powered by the ZK rollup technology. Although still a nascent innovation in the DeFi interoperability space, Polygon achieved over 235,000 transactions within a week of launching its testnet and 100,000 active wallets in just two weeks. With multi-chain solutions slowly being embraced, it is also interesting to note that Ethereum's Co-founder, Vitalik Buterin, had voiced his opinion in 2022, emphasizing that he was optimistic on multi-chain blockchains but pessimistic about the implementation through cross-chain applications. According to Vitalik, the main reason for this take is security vulnerabilities, which as highlighted in the previous section played out in 2022 and 2023. "The fundamental security limits of bridges are actually a key reason why while I am optimistic about a multi-chain blockchain ecosystem (there really are a few separate communities with different values and it's better for them to live separately than all fight over influence on the same thing), I am pessimistic about cross-chain applications." partly read the reddit post. Conclusion Decentralized markets still have a lot of room for expansion; however, for them to become an everyday utility for the average investor, the barriers need to be broken. This will, of course, involve several phases of experimentation, which is why cross-chain bridges were initially popular, and now the tide seems to be shifting towards a multi-chain blockchain ecosystem. It will be interesting to watch the next era of DeFi advancements, especially with interoperability and privacy at the forefront of future innovations in Web3.

- To date, the US spot Bitcoin ETFs market saw a total net inflow of \$13.69 billion. - The dominant BTC ETFs on the leaderboard are Grayscale's GBTC with 293K and BlackRock's IBIT with 284,526 BTC. Bitcoin exchange-traded funds (ETFs) worldwide have exceeded 1 million BTC under management, nearly 5% of the largest cryptocurrency's circulating supply. This signals bullish institutional interest, and mainstream adoption of Bitcoin as an investment asset. Global Bitcoin ETFs and its BTC AUM (Source: The Bold) Signaling a major shift in the crypto landscape, the U.S. Securities and Exchange Commission (SEC) approved 11 spot Bitcoin ETFs. Among them, Grayscale's GBTC leads the row with 289,079 BTC followed by BlackRock's IBIT with 284,518 BTC under management. While the remaining 7 issuers, VanEck, Invesco, Bitwise, Valkyrie, Ark 21Shares, WisdomTree, and Franklin Templeton, manage 1,17,628 BTC in total. Since the beginning of trading, a total of \$1.63 billion has been traded in this market. In the last 24 hours, the US spot BTC ETF market observed a net inflow of \$251.94 million. On the other hand, Hong Kong's Securities and Futures Commission (SFC) approved the three spot bitcoin ETFs by ChinaAMC, Bosera HashKey, and Harvest in late April. According to data, these newly launched ETFs collectively hold 2.46K BTC under management. To date, the total value traded in this market surpassed \$2.48 million. Bitcoin ETFs in Other Nations Besides the US and Hong Kong, countries such as Germany, Sweden, Brazil, Switzerland, Canada, and Australia have embraced Bitcoin ETFs. In Germany, BTC Bitcoin Exchange Traded Crypto (BTCE) is the largest holder with 22,490 BTC under management. As per data, two Sweden-based ETFs such as Bitcoin Tracker Euro (COINXBE) with 17,830 BTC, and Bitcoin Tracker One (COINXBT) with 14,580 BTC stand as the nation's notable ETF issuers. Meanwhile, in Brazil, HASH11, the BTCETF issued by asset manager Hashdex holds 7,900 BTC under management. Moreover, this asset manager hosts service in the US markets by managing 185 BTC. Highlighted News of the Day Solana Boosts Network Security by Granting Validators 100% Priority Fees

- May 2024 saw the lowest NFT trading volumes since October 2023, impacting the Ethereum, Bitcoin, and Solana ecosystems. - Top NFT projects like BAYC and CryptoPunks have felt the market's dip, with BAYC's trading hitting its lowest since August 2021. The global cryptocurrency market is displaying a surge, with Bitcoin (BTC) and Ethereum (ETH) reaching new highs. Bitcoin has soared to new peaks, trading between \$68,000 and \$70,000, while Ethereum is approaching the \$4,000 mark. The excitement around these gains is heightened by the anticipation of Bitcoin and Ethereum ETF approval, which has grabbed significant attention. However, amidst this market rally, it's important to note that May displayed a significant downturn in the trading volumes of BAYC, and Ordinals, hitting their lowest since August 2021. This is despite the fact that Ordinals, a type of nonfungible tokens (NFTs) minted on the Bitcoin network. Don't let the pump in BTC and ETH distract you from the fact that May was the month with the lowest trading volume for NFTs and Ordinals since October 2023. "wale.moca 0y" (@waleswoosh) May 27, 2024 Volume has fallen heavily across the board, with all three major ecosystems (ETH, BTC, SOL) taking a hit. Are floors? pic.twitter.com/GpP3KA5FwD Floor prices have been resistant to this trend. According to NFT analyst @waleswoosh X's post, leading NFT projects across various chains have seen significant value decreases over the past 30 days. Crypto Market Peaks: NFTs Plunge For instance, Bored Ape Yacht Club (BAYC) has showcased a sharp drop of \$1,927.58, while other projects like Pudgy Penguins and Nodemonkes have fallen by \$1,457.31 and \$8,794.06, respectively. Bitcoin Puppets saw a significant reduction of \$11,942.25, and MadLads and SMB also reported declines of \$2,986.08 and \$1,989.64, respectively. Further, monthly Ordinals sales plummeted by 70% to \$193 million, marking a significant decline from December which recorded the highest sales in Ordinals history at \$868 million. Moreover, lower trading volume on the Ethereum blockchain compounded the drop in NFT floor prices: High-profile collections such as BAYC and CryptoPunks have faced a downturn. While the daily sales have varied from 8 to 67 NFTs each day since early May, the collection's floor price has steadily declined. BAYC, in particular, saw its floor price on OpenSea plummet to its lowest since August 2021, down by 90%, hitting 11.747 ETH (\$45290) on May 28. Despite the overall crypto market boom, the NFT sector's downturn highlights the complex dynamics at play, where surging cryptocurrency prices do not necessarily shift to solid NFT performance.

Ethereum's scaling issue is not a new topic of discussion in the crypto realm; this pioneering smart contract blockchain is notorious for high gas fees due to its limited throughput during periods of high activity. One of the main reasons behind the limited scalability is the sequential nature of Ethereum's runtime environment, the Ethereum Virtual Machine (EVM). To provide some more context, the EVM is designed to operate as a Turing-complete virtual machine, enabling the secure execution of smart contracts on the Ethereum blockchain. While this runtime environment has been efficient and reliable, it processes transactions sequentially. This means that smart contract executions on the Ethereum blockchain are processed one after the other, hence taking longer, especially during high-volume activity. In the long run, Ethereum users have to bear with longer waiting times and higher gas costs, as was the case when CryptoKitties first clogged the Ethereum network in 2017, and more recently during the DeFi and NFT market craze of 2021. Parallel EVM: A New Dawn for the DApp Ecosystem Over the past few years, several initiatives have been launched to solve Ethereum's scalability challenge, including alternative Layer 1 chains such as Solana and Layer rollups like Arbitrum and Optimism. While these scalability solutions have played a notable role in enhancing the transaction throughput, a more novel scaling solution is currently the talk of the DeFi community; parallel EVM chains such as Sui, Meter, and Nomad are changing the game by introducing Dapp building ecosystems that can process multiple smart contract transactions simultaneously. Let's put it into perspective: in the standard EVM model, if Alice and Bob submit transactions to send x amount of an Ethereum native token to different addresses, the EVM will process the transactions in a sequential order depending on which transaction was first initiated. This means one of them would have to wait longer for their smart contract order to be executed despite the transactions being independent of each other. However, in a parallel EVM model, the two transactions would be submitted at the same time, reducing the waiting period and gas cost. The analogy is similar to that of a multi-core CPU where each core is able to process or execute independent instructions at the same time, which has significantly increased the processing power of modern-day computers. There are two main approaches to EVM parallelization: optimistic parallelism and the state access method. Optimistic parallelism: As the name suggests, an optimistic parallel EVM model initially assumes that all transactions are naturally independent. Once the transaction is executed, the model then verifies the assumption and rectifies any dependent transactions that might have been executed independently. The caveat with this model is that it could lead to a lot of conflict post transaction execution, especially when processing dependent transactions. State Access Method: Unlike the former, this approach proactively sorts out dependent and independent transactions. This enables smart contracts to execute dependent transactions in a sequential format while independent transactions are processed in tandem. On the upside, there are no retroactive modifications but on the downside it takes more resources and time for developers to sort out the transactions proactively. Parallel EVM Smart Contract Blockchains Although a new solution to Ethereum's scaling bottlenecks, some DApp-compatible blockchains are already leading the way. This section will briefly highlight three main Parallel EVM chains that are using this approach to solve Ethereum's scalability limitations. Sui With a total value locked (TVL) of \$751 million, the Sui blockchain ecosystem is designed as a Parallel EVM chain, leveraging the state access method. Notably, this smart contract network also features an object-centric data model to enhance the clarity in the proactive ordering of independent and dependent transactions. As of writing, there are over 25 Dapps building on the Sui blockchain ecosystem, most of which are Dexes and yield platforms. Meter This is another EVM-compatible chain that has already integrated parallel transaction submission on its mainnet. What further

stands out about Metera€™s approach to Ethereuma€™s scalability is the projecta€™s upcoming crypto optimized database that will enhance I/O performance by 3x and reduce disk footprint to a€œ of the pebbleDB used by Ethereum today. Other distinguishable features include Front Running/MEV Resistance, multi-asset validation, and higher security and liveness, thanks to a combination of POW and PoS consensus. Monad Unlike the Sui blockchain network, Monad leverages the optimistic parallelism method and claims to support over 10,000 transactions per second. The projecta€™s co-founder and CEO, Keone Hon, spoke to Blockworks earlier this year, emphasizing on the importance of using separate threads to enable simultaneous processing of transactions by virtually any number of nodes. Hon, whoa€™s been a vocal proponent of the projecta€™s scalability perspective, a€ said Hon. Conclusion The DApp ecosystem has grown significantly over the past four years, and ita€™s clear that mass adoption cannot occur until scalability issues are resolved. While some Defi enthusiasts might advocate for migrating to cheaper DApp ecosystems, the reality is that Ethereum remains the most prominent smart contract blockchain, holding over 50% of the total value locked (TVL) according to Defi Llama. Therefore, it makes more logical sense to develop scaling solutions that enhance Ethereuma€™s core functionalities or address multiple challenges simultaneously, such as EVM compatibility and parallel transaction processing.

- Ethereum ETF approval led to a surge in the Arbitrum price by 30% in a week, attracting 100,000 new users. - ARB is trading between \$1.23 and \$1.27, with \$1.30 as the next target. Following the approval of an Ethereum exchange-traded fund (ETF), Arbitrum saw a notable surge of 5% in the last 24 hours, attracting 100,000 new users to the platform. This surge propelled the price of ARB to reclaim the \$1.20 mark, climbing over 30% in a weekly time frame from \$0.9757 to \$1.2712. Additionally, the daily trading volume of the Arbitrum soared over 93% to \$829 million. As investors flocked to the Ethereum ecosystem, Ethereum Layer-2 networks, including Arbitrum, emerged as major beneficiaries of this shift in sentiment. The Ethereum ETF approval has impacted not only Arbitrum it also caused a reshuffling in the broader cryptocurrency market. Ethereuma€™s main rivals, Solana (SOL) and Cardano (ADA), experienced a decline in traction as Ethereum-affiliated projects surged. Will Arbitrum (ARB) Reach New High? Despite a correction phase since mid-March, Arbitrum exhibited bullish momentum in May, rising from \$0.94 to \$1.27, driven by increased volume and network activity. With active addresses hitting a record high of 1.1 million and ARB holders increasing to 1.5 million, the outlook for Arbitrum remains optimistic. Future price action is adding with the resistance level of \$1.21 and \$1.25. If the uptrend continues, ARB will need to breach the \$1.29 mark and enter the \$1.30 zone. However, a rejection below \$1.20 could signal a bearish trend, potentially bringing ARB down to \$1.914, with further declines to \$1.1539. Overall, the outlook for Arbitrum remains positive, driven by increased user adoption and favorable market conditions following the Ethereum ETF approval. Highlighted News Of The Day

- CEO Fred Thiel spoke highly of the benefits of working with the Kenyan Ministry. - More than 80% of Kenyaa€™s power comes from renewable sources, according to the ITA. Marathon Digital, a prominent Bitcoin miner, has teamed up with the Kenyan Ministry of Energy and Petroleum (MOEP) to further expand the renewable energy industry in the nation which is currently booming. The main goals of the collaboration are to build essential energy infrastructure, attract foreign investment, and exchange local currencies for cryptocurrencies. Fred Thiel, CEO of Marathon Digital, highlighted the benefits of working with the Kenyan Ministry of Energy and Petroleum after the recently signed partnership. Banking on Renewable Energy More than 80% of Kenyaa€™s power comes from renewable sources, according to the International Trade Administration (ITA). Wind, solar, hydroelectric, and geothermal power all play a role in Kenyaa€™s renewable energy industry, although the countrya€™s electrical infrastructure gets the bulk of its electricity from geothermal sources. In addition to being one of the most cost-effective geothermal energy producers globally, the ITA highlighted Kenya as an ideal location for solar power because of the countrya€™s abundant annual sunshine. Kenyaa€™s government has been looking at ways to control digital assets, but it has been wary, if not downright antagonistic, toward the adoption of new blockchain and cryptocurrency projects. This changes with MOEPa€™s partnership with Marathon Digital. Worldcoin was prohibited from functioning in Kenya for one year in September 2023 after a number of recommendations from government agencies and authorities. The main reasons given by the government for banning Worldcoina€™s collecting of biometric data were privacy concerns, a lack of transparency and security difficulties. After the one-year prohibition is removed, worldcoin may potentially begin operations in Kenya. However, before it can do so, it has to reapply and get regulatory permission from Kenyaa€™s Capital Markets Authority. Highlighted Crypto News Today: Investors Eye Fed Speeches This Week for Clues on Rate Hike Decisions

- BONK has surged 15% in 24 hours, hitting a three-month high. - BONKa€™s market cap hits \$2.5 billion, overtaking FLOKI and claiming the fifth-largest spot among meme coins. The cryptocurrency market has recently surged, driven by the US Securities and Exchange Commissiona€™s (SEC) approval of Ethereum ETFs. Among the top performers, Ether (ETH) has seen a 30% rise over the past month. However, other cryptocurrencies have also posted impressive gains, with some even surpassing Ethereuma€™s performance. BONK, a meme coin that stands out on the Solana blockchain, which has soared by 14% in the last day and 40% over the past week. BONK is now trading at approximately \$0.00003342, marking its highest value in nearly three months. Its market cap is nearing \$2.50 billion, overtaking Floki (FLOKI) as the fifth-largest meme coin. FLOKI currently holds a market cap of \$2.20 billion. Can BONK Sustain Its Recent Highs? After Coinbasea€™s announcement of perpetual futures listings for BONK, FLOKI, and Shiba Inu, the price of BONK surged by over 18%, rising from \$0.00003264 to \$0.00003734. Further, analysts suggest that BONKa€™s rally may continue, with the cryptocurrency breaking out of a two-month consolidation phase. Further, they believe that BONKa€™s bullish momentum could present buying opportunities if a correction occurs. However, if BONK maintains a price above \$0.00003312, crucial for further gains, it will show potential resistance levels at \$0.00003421 and \$0.00003576. If these levels are surpassed, BONK could target prices of \$0.00003890 and possibly \$0.00004021. Conversely, if BONK fails to hold above \$0.000033, it could drop to support levels at \$0.00003106 and \$0.00002983, potentially leading to a bearish trend toward \$0.00002597. Historical data shows that during its previous cycle, BONKa€™s price ranged between \$0.00002431 and \$0.00003738 before reaching its all-time high of \$0.00004704. Additionally, the meme coin Pepe (PEPE) has garnered significant attention, setting a new all-time high on May 23, only to break that record again on May 24. PEPE is now valued at around \$0.00001411, reflecting an 80% increase over the past month. Its market cap has surpassed \$6 billion, positioning it as the third-largest meme coin and the 20th-largest cryptocurrency overall.

The excitement surrounding the \$SNUKE meme coin is reaching its all time high as the presale nears its end, with just 48 hours left, investors are rushing to secure their tokens before the opportunity slips away. The recent completion of a comprehensive contract audit has only added to the frenzy, reassuring both new and seasoned investors of the projecta€™s legitimacy and security. Dona€™t miss out! Buy \$SNUKE Tokens at the Best price Contract Audit Boosts Investor Confidence The \$SNUKE team has been diligent in ensuring the projecta€™s integrity and security, recently completing a thorough contract audit. This audit, conducted by a reputable Web3 auditing firm, confirms that the \$SNUKE tokena€™s smart contract is secure, free from vulnerabilities, and operates as intended. This milestone is significant, as it addresses one of the primary concerns in the crypto community: security. By completing this audit, \$SNUKE has demonstrated its commitment to transparency and investor protection. This move has significantly boosted investor confidence, drawing in a surge of interest as the presale period comes to a close. Secure Your Spot Now! \$SNUKE Presale Ends Soon! Investors Flock to \$SNUKE Presale The \$SNUKE presale has seen remarkable success, raising nearly 900 \$SOL and attracting a diverse group of investors, with the presale ending in just 48 hours, therea€™s a sense of urgency among potential investors. The opportunity to get in early on a promising project like \$SNUKE is dwindling, and many are eager to secure their tokens at the presale price before it lists on exchanges. The projecta€™s innovative approach, combined with its humorous and engaging branding inspired by popular culture, has captured the imagination of the Solana community. This unique blend of entertainment and financial opportunity has proven to be a winning formula, drawing in both whale investors and smaller contributors alike. Why \$SNUKE Stands Out \$SNUKE is not just another meme coin ita€™s a project with real potential and a clear vision for the future. Here are a few reasons why \$SNUKE is attracting so much attention: Completed Contract Audit: The recent audit adds a layer of security and trust, essential for attracting serious investors. Community-Driven: \$SNUKE is built on the principles of community engagement and participation, ensuring that every holder has a stake in the projecta€™s success. Innovative Concept: Inspired by popular culture, \$SNUKE combines humor with serious financial potential, making it an attractive investment for a broad audience. Impressive Presale Performance: The presale has already raised close to 900 \$SOL in days, reflecting strong investor interest and confidence in the projecta€™s future. Post-Presale Plans: With plans to list on major exchanges like Raydium and even on top tier centralized exchanges \$SNUKE is poised for further growth and wider recognition. Dona€™t Miss Out With the presale ending on Saturday, May 25th, time is running out to join the \$SNUKE community at this early stage. The surge in interest following the contract audit indicates that many investors recognize the potential for substantial returns. Whether youa€™re a seasoned crypto investor or new to the scene, \$SNUKE offers a unique opportunity to be part of something exciting and potentially very lucrative. For more information and to participate in the presale, Visit Website | Presale Page | Twitter | Telegram | Disclaimer: TheNewsCrypto does not endorse any content on this page. The liquid restaking platform Kelp DAO has reached a significant milestone in its quest to improve the restaking landscape and decentralized finance (DeFi) by announcing the closing of a \$9 million private sale round. The round was spearheaded by a \$3.9 million investment from SCB Limited, a Bahamas-based proprietary trading business, and Laser Digital, the digital asset branch of Nomura Global. Participating investors included a long list of prominent names including Bankless Ventures, Hypersphere, Draper Dragon, DACM, Cypher Capital, ArkStream, Cluster Capital, GSR, Longhash, Side Door Ventures, NOIA Capital, HTX Ventures, Avid3, ViaBTC Capital, DWF Ventures, Coinseeker, and several more. These investments add to the over \$850 million in TVL and the over 40,000 active restakers already on the platform. The funding will be used to improve the platform, increase innovation in restaking solutions, and extend to new ecosystems such as Solana and Bitcoin. Contributors to the funding round include prominent figures from the cryptocurrency community, such as Scott, Co-founder of Gitcoin; Alex, CEO Nansen; Sam K, Co-founder Frax; Marc Zeller, Aave Chan Initiative; Saurabh Sharma, Jump Crypto; Amrit, COO Altlayer; Anthony, Co-founder of Swissborg; Winslow Strong, Mr. Block. Dheeraj Borra, Co-founder of Kelp DAO, said: a€This fundraise propels our expansion in the market and sharpens our focus on building customer centric solutions. Ita€™s truly thrilling to have our investors share that vision. a€ Amitaj Gajjala and Dheeraj Borra, co-founders of Kelp DAO, have both thanked investors for their help in propelling the company to new heights in the restaking solutions industry. Jez Mondeen, CEO of Laser Digital, added their support for the project, stating: a€We are very excited to support Kelp DAO and the passionate team in its journey towards building innovative restaking infrastructure solutions. a€ This enthusiasm was reiterated by Jack Platts, Co-founder of Hypersphere Ventures, saying: a€Wea€™re excited by the prospect of restaking enabling more developer experimentation and use cases. Kelpa€™s proven team and focus on user experience is playing a key role in this restakinga€™s early success. We look forward to the team executing on its vision of enhancing yields and optionality for ETH stakers. a€

By investing in the BEFE coin, you can earn almost \$200,000 from a meager \$200 investment. Our article reveals how to get through to this possible financial success. Learn to get around in the world of cryptocurrency. Discover what BEFE Coin offers in terms of high-yield financial growth. BEFEa€™s Growing Popularity The release hype of BEFE is something new and alive, never seen before. This is due to its being created friendly and interesting for beginners and being a token that is sought after by other users due to the release hype. Basically, the ecosystem of BEFE is only a commitment to ensuring equity and inclusivity. This is going to be made possible in that there will not be any pre-sale, all the tokens will be added to the liquidity reserve, and there wona€™t be any kind of transaction fee. It will be a multi-chain professional organization, and there will be a presence in the widespread availability of the token. This ensures that the token available is spread widely and extensively. The aspect of a staking system in the BEFE ensures that the assets that get to be returned to the user are in a very active manner and make them feel like they own the project. To ensure there is support from the most and the most loyal fans of the project, BEFE users are rewarded using tokens. The multi-chain technique has been brought into the basic layout of the protocol to work on the Binance Smart Chain, Ethereum, and Solana in order to ensure BEFE has the capability, given that tokens are active within these networksa€™ dynamic networks of individuals and liquidity grades. That is a strategy that expands the range of people who can be users. The three basic cornerstones that the project is based on are humor, subculture, and social engagement. Due to the shared love for memes and the signature logo, there are plenty of interactions on social media through various

platforms that have been created for this. With that meme currency, as the community grows, so does the ecology, preparing the BEFE coin for its actual voyage in the rapidly changing meme realm. Therefore, it is currently uncertain what will happen with all of these tokens in the quickly evolving digital currency sector. However, BEFE remains steadfast in its advocacy of multi-chain interoperability, user participation, and justice. How To Gain Big From BEFE Investments Trading in cryptocurrencies with a meme foundation, like BEFE, may be profitable yet hazardous. Overselling the validity of a humorous idea and its potential for widespread acceptance. Then, if the price of BEFE increases, you may make additional money by staking BRISE tokens. Additionally, participating in the community will help one stay informed about passing possibilities and industry trends. But heed these crucial guidelines. The keys are moderation and diversification. Adopting more aggressive tactics, such as microtrading, pursuing traction, and selling as an intermediary, on autonomous exchanges, may have higher potential but also carry the risk of making the possibility of acquiring high and dumping low or experiencing temporary loss. Conclusion Although the tactics mentioned above can transform a modest investment into a large sum, they should only be used by endured, risk-tolerant individuals. Consider the drawbacks carefully prior to executing in meme-based cryptocurrencies such as BEFE. - To know more about BEFE, Visit <https://befetoken.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- Ethereum hit a two-month high of \$3,841 yesterday. - Technical analysis indicates resistance at \$3,841, and support at \$3,367. Ethereum, the second-largest cryptocurrency by market capitalization, experienced a significant surge of nearly 30% yesterday, surprising investors. This comes as Ethereum's price movement has been relatively stagnant since the start of 2024, even as Bitcoin surged past \$73,750.07. Yesterday, Ethereum hit a two-month high of \$3,841. Currently, ETH is trading at \$3,755.31, with a 3% increase, although its trading volume has decreased by 10%. The recent surge in Ethereum's price is accompanied by the most bullish crowd sentiment since September, according to Santiment. The optimism is largely driven by expectations that the U.S. Securities and Exchange Commission (SEC) will soon approve the first Ethereum Exchange-Traded Funds (ETFs). This potential approval has contributed to Ethereum's price surge, while sentiment around Bitcoin and Solana remains slightly bearish. Adding to the excitement, at least five potential Ethereum ETF issuers have recently submitted their amended 19b-4 forms within the last 25 minutes. The issuers include prominent financial firms such as Fidelity, VanEck, Invesco/Galaxy, Ark/21Shares, and Franklin, all of whom filed through the Chicago Board Options Exchange (CBOE). will Ethereum Surge Past \$4K? Technical analysis indicates that Ethereum faces resistance at \$3,841 and \$4,823, with support levels at \$3,367 and \$2,864. The 9-day Exponential Moving Average (EMA) is at \$3,377, suggesting a bullish trend. However, the daily Relative Strength Index (RSI) is at 71, indicating an overbought situation. The ongoing developments around Ethereum and the broader crypto market are expected to keep investors vigilant and active in the coming days. Highlighted Crypto News Today Uniswap Labs Replies to SEC's Wells Notice, Argues Lack of Regulatory Authority

Introducing BEFE Coin: the all-new meme currency creating waves on the internet. Its engaging nature and increasing appeal as an alternative coin have seeped into cryptocurrency enthusiasts and let it surge the crowd to the top 100 ranks within no time. In any case, about BEFE's the mystery behind this meme currency in town, BEFE, never seems to cease astonishing with its market value increase and ecosystem growth, which keeps the community active. BEFE transparently debuted on the Ethereum, BNB, and Solana chains. As of May 21, 2024, it is now worth \$0.0001153, up 16.5% from the previous day. In December 2023, the currency already reached a record-setting high of \$0.001128. With a market capitalization of \$11 million and a 24-hour working volume per day of \$294,415, BEFE's ecosystem continues to grow in tandem. The majority of the top decentralized and centralized exchanges, including AscendEX, Gate.io, Uniswap, MEXC, and PancakeSwap, already support the virtual currency. One of the most notable trading pairings on PancakeSwap is BEFE/USDT, which is extremely active. At this point, the blazing BEFE project is essential and something you should not miss out on because of its excellent social media visibility on Telegram and Twitter, in addition to its thoughtful token distribution. BEFE's Astounding Growth vs. The Top Contenders BEFE grew very fast, even though it has only been in operation for about 6 months. The price of BEFE has gone 33% in the last 24 hours and 35% in the last week, outpacing against the same period of DOGE, SHIB, and PEPE. This goes to show how much enthusiasm people have for BEFE. Next to the billions of dollars that flow in and out of the exchanges every day in DOGE, SHIB, and PEPE, BEFE's daily trading volume is likely \$290,000, still small, but it appears to be a significant uptake all the same. That volume will rise proportionately directly with the number of people who learn about BEFE and start to invest in it. The guarantee that BEFE's liquidity will be smooth justifies reasonably stable prices and mitigates the risk of erratic, sudden changes in price for the product. Next to the other meme monies, BEFE might have been more effective in seizing that small total supply. It might be able to play to its advantage, given the fact that with fewer tokens available, it would mean every BEFE potential token could be worth that much more when greater sales come to it. Conclusion Investors are now taking an interest in BEFE as it gains traction due to its widespread availability and the fact that it has a robust speculative current, similar to other meme coins. Meme tokens, however, are very unpredictable and should be thoroughly investigated before investing. - To know more about BEFE, Visit <https://befetoken.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. Every new month presents some new hidden gem opportunities for investors and new traders to earn in cryptocurrency. This month is undeniably Bitgert's turn for a significant price eruption that has been long overdue. It's finally time to gain, as there's an impending 600% Price increase that will take many by surprise. Bitgert is one of the few crypto coins that can produce these groundbreaking results because it offers several solutions, like swift transactions and meager transaction fees. Additionally, Bitgert has also secured many recent collaborations that wouldn't just contribute to its much-anticipated growth but also tilt toward becoming the best crypto money can buy this month. Why Bitgert is Expected to Rise the Most This Month The fact that almost all existing traders need Bitgert makes it an indispensable investment vehicle for anyone who cares to make a significant bag in the forthcoming bull run. Bitgert proposes a unique offering that solves problems within the decentralized financial systems. As a result, Bitgert can compete and compare to many of the technical crypto under tangible world assets with quantifiable value and volume that propels Bitgert's growth. Understandably, with solutions like low transaction fees and a highly scalable blockchain ecosystem, it's no surprise why Bitgert has continued to amass and onboard new users. Many aligned new collaborations like the SOLCex will allow Bitgert to pioneer the first centralized exchange on Solana. This collaboration will reportedly advance the accessibility and efficiency of Bitgert within the SOLANA ecosystem. There are also several significant collaborations like this one that would contribute to the immediate growth of the Bitgert coin in the coming weeks. Experts predict that the Bitgert coin will rise significantly this month by more than 600%. Bitgert Coin, Hottest Crypto to Invest in Right Now With the rising number of newly launched tokens and crypto coins across chains, blocks, and even ecosystems, it increasingly gets harder to hand-pick crypto tokens to perform as well as it is likely. Finding these crypto gems factors can be compared to looking for a needle in a haystack. In cases where you see them, it's hard to tell them apart from existing coins because of the ravaging monotone and similarity amongst many existing coins. But Bitgert has displayed some fantastic features and standout quality that make it a choice for many seasoned investors. Conclusion Progressively, the Bitgert Coin is expected to see a price eruption beyond 600% Increase this month. It has offered many unique advantages and investment benefits that make it the best crypto to purchase this month. - To know more about Bitgert, Visit <https://bitgert.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. The cryptocurrency market continues to offer dynamic opportunities for investors, with several promising projects standing out. BlockDAG has captured attention with its impressive \$28.5 million presale and the innovative X1 mobile miner app, poised to democratize crypto mining. Meanwhile, Polygon (MATIC) is on the brink of a potential breakout, with technical indicators suggesting a surge towards \$1.15. Filecoin, the largest decentralized storage network, has demonstrated explosive growth since its mainnet launch, driven by a robust community and partnerships with major organizations. BlockDAG Presale Booms with \$28.5M Raised: X1 Mobile Miner Revolutionizes Crypto Mining BlockDAG has made a remarkable impact with its presale, raising \$28.5 million and drawing significant investor interest. The upcoming launch of the X1 mobile miner app is set to transform crypto mining by turning everyday smartphones into efficient mining devices. This user-friendly app democratizes access to crypto earnings, appealing to a wide range of enthusiasts. BlockDAG's architecture tackles scalability issues faced by traditional blockchain systems. Instead of a single chain of blocks, BlockDAG uses a Directed Acyclic Graph (DAG) structure, allowing multiple blocks to be processed simultaneously. This increases transaction throughput and reduces confirmation times, making the network more robust and efficient. The X1 mobile miner app is designed for ease of use, enabling those with limited technical knowledge to participate in mining. It leverages smartphone processing power, optimizing resource usage to maintain device performance while mining. This innovation allows people to earn cryptocurrency without the need for expensive hardware. BlockDAG's vision goes beyond technical advancements. By lowering the barrier to entry for mining, the project aims to foster greater inclusivity within the crypto community. This approach positions BlockDAG as a compelling investment opportunity with strong growth potential. Polygon Price Forecast: Can MATIC Break Out and Soar to \$1.15? Polygon (MATIC) is currently trading within a symmetrical triangle pattern, indicating potential for significant price movement. Despite a recent 15% drop to \$0.658, the coin is poised for a breakout. Key support at \$0.588 may trigger a bullish rally towards \$1.15 if buying momentum increases. The intraday trading volume of \$262.9 million, up 19.5%, suggests growing interest. MATIC's price has fluctuated between \$0.77 and \$0.588, with resistance around \$0.77 and \$0.953. Positive market sentiment and demand pressure at lower trendlines could lead to a recovery. As the market consolidates, a breakout from the triangle formation is crucial for a sustained bullish trend. Investors should watch for potential gains, making MATIC a promising investment opportunity. Filecoin's Explosive Growth Filecoin, a decentralized storage system, has seen incredible growth since its mainnet launch in October 2020, becoming the largest decentralized storage network globally. The network's success is driven by a diverse community of over 3,000 storage providers and 1,800 data clients, including major organizations like CERN and Solana. Numerous independent teams are enhancing the Filecoin ecosystem, including Fil0z, Curio Storage, and NFT.Storage. These groups focus on protocol improvements, security, and supporting ecosystem partners. The Filecoin Foundation oversees grants and initiatives to foster development. Takeaway As the crypto market evolves, BlockDAG's user-friendly mining app and robust architecture position it as a leader in inclusivity and innovation. Polygon's potential breakout presents a lucrative opportunity for investors seeking gains in a volatile market. Filecoin's rapid growth and strong ecosystem support underscore its status as a top crypto to watch in 2024. Together, these projects offer unique value propositions, making them standout investment opportunities. With continuous advancements and strategic development, BlockDAG, Polygon, and Filecoin are poised to become major players in the ever-expanding crypto landscape. <https://t.me/blockDAGnetwork> Official Discord: <https://discord.gg/Q7BxghMVyu> Contact Details Name : PRDots Advertiser Email : advertiser@prdots.com Phone Number : 9719900886677 Company Name : PRDots City : Dubai Country : UAE

- Meme coin BONK surged 15% on May 19, capitalizing on the market's resurgence. - At the time of writing, BONK traded at \$0.0000261 with a market cap of \$1.66 billion. Last week, the cryptocurrency market experienced a significant resurgence, with the global market cap increasing by 8%, reaching \$2.44 trillion. This rise represents an over \$150 billion gain, bolstered by substantial increases in most leading cryptocurrencies. Bitcoin, in particular, made notable strides, surging the \$67,600 mark overnight. Following this overall market upturn, meme coins faced significant attention. Among them, Bonk (BONK) initially showed bearish trends but capitalized on the market revival on May 19, recording a 15.3% daily gain and ending the day at \$0.00002598. This rally allowed BONK to break through the 50-day EMA, a resistance level challenging since May 10. Yesterday, the token hit a 15-day high of \$0.00002828 before encountering resistance, which led to a 3.9% intraday decline today. Nonetheless, BONK maintained its position above the 50-day EMA, signaling continued bullish momentum. The subsequent days were favorable, with the coin achieving a 10% gain, sustaining the upward trend. Will BONK Hit New Highs? If BONK continues to uptrend and trades between \$0.00002601 and \$0.00002820, bulls aim to breach the \$0.0000307 resistance level. If BONK climbs above these levels, it could drive BONK towards \$0.000035. Conversely, a pullback to

\$0.00002306 could test the tokenâ€™s resilience, potentially leading to a reset of the 50-day EMA if it falls below this support level. Within the Solana ecosystem, BONK has been the largest meme coin, however, now Dogwifhat (WIF) has emerged as a major competitor, boasting a market cap exceeding \$2.68 billion. At the time of writing, BONK is trading at \$0.0000261, with a market cap of \$1.66 billion, highlighting its ongoing strong performance in the dynamic crypto market. Highlighted news of the day

- The report states that 518 deals totaling \$2.3 billion were closed in the first quarter of this year. - Investments increased by 40.3% over the previous quarter, according to this report. Fundraising in the cryptocurrency market reached \$2.4 billion in the first quarter of 2024, thanks to a shift in market mood and fresh inflows. According to a recent PitchBook analysis, the cryptocurrency sector saw a huge increase in investment numbers quarter-on-quarter. The bull market in Q1, during which cryptocurrency values reached levels not seen in months, was the primary driver of the increase in investment. Following the SECâ€™s approval of spot Bitcoin ETFs, a slew of institutional investors poured money into the cryptocurrency market. Investors flocked to the market with the price of Bitcoin reaching a new ATH of around \$73,000. More venture capital funds were active throughout this bull run as well. Substantial Growth The report states that 518 deals totaling \$2.3 billion were closed in the first quarter of this year within the industry. Investments increased by 40.3% over the previous quarter, according to this report. Taking into account the increased on-chain activities seen in Q4 2023, this is a massive jump forward. There was a 44.7% rise in deal volume or transaction number in the previous quarter. Due to the increase in asset values, market valuations went high this year. The experts at PitchBook anticipate an increase in investment activity throughout the year. A crypto firm called Zama, which produces fully homomorphic encryption (FHE), received \$73 million in fundraising, while EigenLayer received \$100 million in Series B funding, according to the report. But with \$106 million, Together AI became the biggest deal of the quarter, boosting its valuation to \$1.1 billion. As more and more institutions began to engage in the cryptocurrency sector, deal after deal brought increasing values for various companies. - After endorsing EIP-4844 in March, zkSync shifted its focus to full decentralization. - By the end of June, zkSync has dropped a hint that the community might expect an airdrop. The decentralization process of the Ethereum layer-2 network zkSync is now complete, and the release of the final protocol upgrade, V24, is imminent. This upgrade not only foreshadows the forthcoming token launch, but it also moves closer to delegating network management to the people. After endorsing EIP-4844 in March, zkSync shifted its focus to full decentralization. In order to hand over network governance to the community, the next version, v24, will be the last consecutive protocol upgrade. The remaining components of decentralization will be available by the end of June, according to zkSync. Because it is not possible to turn back the clock on decentralization, the process demands painstaking precision when it comes to legal and technological frameworks. By prioritizing long-term foundational technologies above short-term benefits, zkSync is resolute in its goal to become a key participant in the sector. With this commitment, zkSync hopes to herald the arrival of a new era of verifiable internet for billions of people. Highly Anticipated Token Airdrop Speculation about a potential token launch has been sparked by the release of the v24 upgrade. By the end of June, zkSync has dropped a hint that the community might expect an airdrop of governance token. Last year, investors sent almost \$8 million worth of tokens to zkSync so they could participate in this anticipated airdrop. So far, the community is waiting impatiently. Total value locked (TVL) in zkSync has risen to \$141 million, according to Defillama. With the help of off-chain computing and data storage, zkSyncâ€™s developer of zero-knowledge (ZK) rollup technologyâ€™ was created to help Ethereum expand by making transactions cheaper. - This might be the much-needed catalyst for Bitcoinâ€™s next climb to new all-time highs. - An additional \$1 billion worth of USDT was minted by Tetherâ€™s Treasury in the last 24 hours. The biggest stablecoin in the world, Tether (USDT), has minted yet another \$1 billion worth of USDT, putting its market cap beyond \$110 billion. This might be the much-needed catalyst for Bitcoinâ€™s next climb to new all-time highs. An additional \$1 billion worth of USDT was minted by Tetherâ€™s Treasury in the last 24 hours, bringing the total amount of USDT minted this year to \$31 billion. Earlier, the price of Bitcoin surged from \$27,000 to \$73,000 in large part because of the newly created USDT, as stated in a post by Lookonchain on May 17. Diversified Portfolio Tether has pledged to diversify its stablecoinâ€™s backing assets by investing 15% of its net earnings into Bitcoin, which might directly help in Bitcoinâ€™s surge. According to Bitfincharts, Tether became the seventh-largest Bitcoin holder in the world on March 31 after acquiring 8,888 Bitcoin worth \$618 million. After declaring its intention to diversify into Bitcoin one year ago, Tetherâ€™s wallet now has more than 78,317 BTC, which is worth more than \$5.18 billion. Investments into spot Bitcoin exchange-traded funds (ETFs) continue to be a major factor influencing the price of Bitcoin. The net positive outflows from U.S. Bitcoin ETFs continued for a second week, according to Dune. A big component of the present Bitcoin run to new all-time highs was the institutional inflows from ETFs. As the price of the biggest cryptocurrency in the world soared beyond \$50,000 on February 15th, exchange-traded funds (ETFs) absorbed about 75% of the fresh capital inflow. Moreover, the \$65,000 level seems to be a significant support for BTC, and the price movement of Bitcoin has corroborated yesterdayâ€™s breakthrough on the daily chart. A strategic alliance has been established by io.net, a leader in decentralized computing solutions, and Synesis One, the first Train2Earn platform on Solana. Through this partnership, Synesis Oneâ€™s enterprise clients will be able to train machine learning (ML) models more effectively and easily thanks to io.netâ€™s cutting-edge decentralized computing network. Isaac Bang, CEO of Synesis One stated: â€œWeâ€™re onboarding a number of large clients, and the scope of some projects require us to build out custom ML models. Itâ€™s extremely exciting to be one of the first to harness the power of distributed computing with io.net for enterprise AI solutions.â€ Synesis One and io.net have partnered to expedite decentralized model training by using io.netâ€™s vast GPU clusters. This relationship represents a huge step in AI development. Both parties are dedicated to decreasing reliance on centralized systems in order to improve data security and privacy in AI applications, and they have a same vision for decentralization. Scalability, security, and operational effectiveness will be given top priority as they jointly explore integrated solutions designed to meet the demands of enterprise customers. The partnership between Synesis One and io.net signifies the start of a focused endeavor to combine and use their respective technologies for the benefit of the larger AI community. This strategic partnership is a reflection of shared goal to improve the state of AI development by using cutting-edge, decentralized technological solutions that can outperform the current centralized solutions and provide even greater benefits to firms who embrace them.

droppGroup, a pioneer in harmonizing blockchain technology and artificial intelligence, has announced the launch of the droppLink, an intelligent service platform that has the potential to revolutionize AI management and development across many blockchains. The droppLink architecture gives consumers ownership and control over data contributions, democratizes micropayments, and abstracts computing needs. Computational Resource Patrons (CRPs) are stakeholders who support infrastructure expenses and get a portion of the revenue from the AI processes they facilitate. droppGroup Co-Founder and CEO Gurps Rai said: â€œdroppLink ensures unmatched data integrity and streamlines AI development by tokenizing every action in an AI modelâ€™s lifecycle on multiple blockchains including Solana, Polygon, Ethereum, Base and Hyperledger Fabric 2.5. This process maintains data ownership rights while providing a transparent, immutable record of usage via our Proof of Gen and Data Genesis protocols.â€ droppGroup Co-Founder and President Christopher J. Kelly added: â€œAt the nexus of physical and digital, droppGroup is pushing the envelope in multi-modal AI systems, bringing sophisticated solutions to market. droppLink exemplifies our commitment to ethical, responsible AI development that benefits all stakeholders.â€ On May 22, Christopher Kelly will give his keynote address at the AWS Summit. The event, which will take place at LAAWS Summit Los Angeles, will include Kelly as a guest on the monitoring and assessment panel. The co-founder and president of droppGroup will talk about data integrity in AI and how it guides the companyâ€™s main goal there. With the AI market expected to grow to \$297 billion by 2027, ethical issues pertaining to data provenance, IP protection, and fair compensation for creators and IP owners have gained prominence. By integrating blockchain technology and artificial intelligence (AI), droppLink creates an ethical management layer that the AI sector now lacks, directly addressing these pressing challenges. At the moment, droppLink is used on the platform and may be accessed via droppPhygital. With its strong tokenization, multi-chain integration, and emphasis on data integrity, droppLink seeks to revolutionize the field of artificial intelligence and bring in a new era of innovation, transparency, and trust.

After a month-long bear market, the cryptocurrency market finally looks back on track for a promising crypto summer. The current excitement in the market was triggered by a high inflow of capital through the Bitcoin ETFs last Wednesday. As a result, Bitcoinâ€™s market value surged above the \$66,000 resistance level. In the wake of a possible bullish trend before June, many investors have been aggressively accumulating tokens with high profit margins like BEFE. BEFE, a relatively new meme coin, could mint many more millionaires in 2024, flipping every \$100 to a whopping \$300,000. BEFE has been identified as a must-have digital asset this season. To learn more about BEFE, continue reading. BEFEâ€™s Impressive Market Performance BEFE made a market debut last December, rallying almost 500% in less than 30 days. The price action of this new meme coin has been nothing short of impressive despite the bearish trend when it debuted. In another couple of weeks, BEFE witnessed another 320% spike. This impressive price performance piqued the interest of savvy investors in Q1, and many of them accumulated the meme-based token. Within a few weeks of BEFEâ€™s accumulation, these investors had already made huge profits from including it in their portfolios after successive pumps throughout the second quarter. BEFEâ€™s Growing Accumulation and Strategic Collaborations Itâ€™s no news that BEFE has attracted a high level of attention from the crypto community with its unique appeal and huge market potential. Although these factors have hugely contributed to the aggressive accumulation of the meme-based token, BEFEâ€™s strategic collaborations also pulled in a fresh wave of investors and market enthusiasts into its ecosystem. For instance, BEFEâ€™s recent collaboration with Planktos, a strong community within Solanaâ€™s ecosystem, attracted many investors from Solanaâ€™s ecosystem. Through this strategic alliance, BEFE would grow into a more robust ecosystem. In another development, BEFE recently partnered with Gari, a Web3-powered social community. With their joining hands, BEFE can reach more meme lovers and enthusiasts within the crypto community, while Gari users can now trade \$BEFE effortlessly using their contract address. These strategic alliances would trigger more adoption and market activity within BEFEâ€™s ecosystem. Conclusion Set to take flight with its core team dynamics, strategic collaborations, and vibrant community; market enthusiasts believe there are exciting times ahead for BEFE. Moreover, having analyzed BEFEâ€™s market metrics and the influx of new market entrants, experts are increasingly optimistic that BEFE will hit \$0.0001 in no time. This lucrative project will fulfill the dream of investors like you. To know more about BEFE, visit <https://befetoken.com>. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Pump.fun, a Solana-based memecoin launchpad identifies the recent exploitâ€™s attacker. - The Pump.fun team to seed LPs for affected coins. Pump.fun, a Solana-based token launching platform, suffered an exploit on May 16. According to a post-mortem report on its X account, it identified the exploit to be executed by a former employee who illegitimately gained access to the withdrawal authority by misusing the privileged position. The exploit which occurred at 15:17 UTC the previous day, caused a \$1.9M loss to the platform and halted trading as bond curves had reached 100% for most coins. Pump.fun stated that it will compensate liquidity protocols for every coin and usersâ€™ losses. How Did the Pump.fun Exploit Happen Pump.fun allows users to mint tokens with minimal fees, within a few dollars. Launched in 2023, Pump.fun protects user funds and prevents rugs by prohibiting pre-sale or team allocation for the created tokens. The exploit occurred when the former employee gained access to admin privileges. The ex-employee, after gaining access, used flash loans to buy as many coins as required to push the bonding curves to hit 100%. Once it hit the cent value they utilised it to gain access to bonding curve liquidity. Furthermore, the liquidated funds were in turn used to pay off the flash loans. The funds lost were 12,300 SOL which amounts to approximately \$2M. The loss comprised 4% of the total 45M liquidity available in bond curve contracts. Moreover, an X account with the username â€œStaacâ€™, who might be the ex-employee, posted a thread claiming the attack. They stated it to be a â€œrobberyâ€ and indicated their former employers as â€œnot the type of ppl you want front n center as the face of blockchainâ€. Lookonchain reported that the attacker has released a meme coin capitalising on the attack. Additionally, Pump.fun has described the measures taken to repurchase the lost funds and to seed LPs for affected coins. The team will seed the LPs for all affected coins that reached 100% and will make them available for trading within the next 24 hours. Highlighted Crypto News Today: Senate Votes 60-38 to Overturn SEC Crypto Policy, Biden Opposed

As it commemorates the third anniversary of its mainnet debut, Internet Computer Protocol (ICP), a decentralized blockchain network that expands the capability of Web3 by overcoming the constraints of conventional blockchains and smart contracts, today announced the [Year 4 Internet Computer Roadmap](#). The updated roadmap includes major areas of development aimed at positioning ICP as the hub for decentralized AI and the blockchain industry's orchestration layer, while also summarizing three years of progress. The Internet Computer blockchain, which was introduced in May 2021, has processed over three billion blocks, had zero outage, and amassed over \$3 billion of value locked in the Network Nervous System (NNS) DAO, which governs the Internet Computer Protocol. The ICP ecosystem has seen similarly remarkable developer growth. Even though the ICP mainnet didn't start until May 2021, according to Electric Capital, the number of developers in the ecosystem increased 12 times between 2020 and 2023. Furthermore, DMail, DSCVR, and OpenChat—some of the most popular crypto applications—are hosted on ICP. A number of significant milestones and important focus areas are outlined in the revised roadmap for the fourth year of ICP. The new roadmap features two of its main features: Chain Fusion and Decentralized AI. The Internet Computer is the first and only public blockchain of the Third Generation, according to Dominic Williams, the founder and chief scientist of the DFINITY Foundations. The goal is to create a "blockchain singularity," in which completely decentralized blockchains eventually overtake other tech stacks worldwide, operate securely, and unstoppable AI. With a new roadmap in hand, the DFINITY Foundation and its distinguished group of engineers, research scientists, and cryptographers are advancing the cause and creating upgrades to the network that will increase its speed, effectiveness, and power. Decentralized AI The Decentralized AI (DeAI) roadmap from ICP outlines a course for on-chain training and operation of AI models. Artificial intelligence (AI) is becoming more and more integrated into our daily lives. However, most AI models now operate as "black boxes," with users having no control over how their data is utilized or how the models generate responses or whether they do it accurately, consistently, and reliably. ICP is well positioned to address this issue because of its powerful computing capacity and smart contract expressiveness. Milestone 1 - 10x increase in speed and faster deterministic floating-point operations - With Wasm SIMD support, a single CPU instruction may perform four floating-point operations. - AI inference engine optimization Milestone 2 - Deterministic API for GPU-based AI computations - Libraries and tools for creating AI smart contracts - Public specification for nodes with GPU capability - AI-focused subnetworks with GPU-capable nodes If the long-term objectives are met, a number of first-of-its-kind use cases will be possible including: - AI smart contracts may use autonomous blockchain KYC to confirm that a person on video is the holder of a driver's license that matches their picture. - Artificial intelligence smart contracts that evaluate the Ethereum smart contract code and mark the code with a checksum if they detect issues such as reentrancy. - You may communicate with LLM AI smart contracts by utilizing natural language. - Web3 communities using DAOs to control AIs - Ready-trained AIs traded as NFTs It is not new for ICP to be working to bring AI on-chain and provide developers and consumers reliable AI models. A \$5 million decentralized artificial intelligence (DeAI) grant program was introduced in July of last year by the DFINITY Foundation, a Swiss non-profit organization that is a significant contributor to the Internet Computer blockchain (ICP). The initiative's goal is to assist Decentralized AI on the Internet Computer blockchain. ICGPT, DecideAI, ELNA AI, Kinic, and Earthstream are just a few of the cutting-edge AI projects that are already building on ICP. Chain Fusion With no intermediaries, ICP's Chain Fusion enables direct interoperability with popular blockchains like as Ethereum, Bitcoin, and soon Solana. ICP smart contracts let developers to create contracts that span many chains since they can read from and write to other chains. Chain Fusion addresses tribalism in the blockchain sector and resolves liquidity fragmentation. Its growth plan has many significant milestones: Milestone 1: Canister smart contracts can hold and trade tokens on EVM chains and interact with their counterparts' smart contracts without the need for bridges or centralized intermediaries thanks to Chain Fusion technology, which fully supports EVM chains. Milestone 2: The complete decentralized support of Bitcoin ordinals and runes is made possible by Chain Fusion's full utilization of Bitcoin-native protocols (BRC20, Runes). The finest features of ICP and Bitcoin may be smoothly combined in dApps created by developers. Milestone 3: In order to enable smart contracts that integrate the capabilities of the two networks, Chain Fusion will shortly add support for Solana, bridging the gap between the Solana network and ICP. One network's smart contracts may call another network's smart contracts. You can check the whole roadmap here.

The Pyth Data Association has launched the Pyth Ecosystem Grants Program, making 50 million PYTH grants accessible to eligible community members. Through instructional and research projects, the program hopes to inspire community members to share their thoughts and understanding of the Pyth Network with the larger Web3 community and contribute to its growth. There will be three categories in the grants program. Every category focuses on a distinct objective for the growth and development of the Pyth Network. PYTH tokens will be distributed to participants under the program's supervision. The Ecosystem Growth tokenomics segment of the supply is where these tokens originate. There will be grants of both locked and unlocked tokens given out in all three categories. The Ecosystem Grants' Objective A new generation of decentralized finance is made possible by Pyth Network. Pyth enables developers worldwide to have access to low-latency, high-frequency, and high-fidelity price data, hence enabling high throughput on-chain applications for the first time. Currently, Pyth Network powers over 350 apps on over 55 different blockchains and has facilitated trading volume of over \$400 billion. The Pyth DAO, which oversees the Pyth Network, uses a decentralized governance mechanism to allow its many contributors and stakeholders to work together to create the network in a way that best serves the DeFi sector. Well-considered incentives may excite new participants, teach new users about the technology, and motivate stakeholders to contribute to protocol development in a decentralized network. The Pyth Ecosystem Grants Program is being introduced by the Pyth Data Association for these reasons. Three types of funding are available via the program: Developer, Research, and Community Grants. With the help of these funding, the Web3 community will be able to develop new tools and use cases for the Pyth protocol, perform research to enhance the Pyth oracle and promote adoption, and provide educational content about Pyth. It is important to note that the Pyth Data Association's Grants program does not rule out the possibility of a different grants program run by the Pyth DAO. Grants of either locked or unlocked PYTH tokens to participants in any category will be managed by the grants program. The Ecosystem Growth category of the PYTH Token supply is the source of all program grants. The bulk of the supply, or the Ecosystem Growth tokenomics category, is designated for three purposes: directing the development of supplementary infrastructure and tools, encouraging research aimed at advancing the Pyth protocol, and sponsoring educational programs about the Pyth Network. Community members who support the network as researchers, developers, educators, data suppliers, and other roles are included in these initiatives. Community Grants There are more than 55 chains in the diverse Pyth Network community. This is so that Pyth can support developers wherever they want to create by scaling quickly to new ecosystems and data feeds. The Pyth community has accepted creators, developers, and users from a variety of platforms, including Solana, Move, Bitcoin, EVM, and Cosmos. The Pyth community's multi-cultural and multi-chain makeup creates a unique social dynamic that may encourage creative thinking, cross-chain cooperation, and a warm welcome for the onboarding of the next million Web3 users. Community Grants will be utilized to support the development of an enthusiastic, welcoming, and enterprising community for all members of the Pyth Network. Community grants may help people work together to co-create unique and fascinating content, participate in positive conversations and social activities, and work on grassroots initiatives that are educational, enjoyable, or useful. Over time, a lively and considerate community dynamic may be very helpful in introducing newcomers to the community, promoting knowledge of the Pyth Network, and creating a warm, inviting atmosphere that allows members to reach their maximum potential within the network. Research Grants These days, Pyth Price Feeds, Benchmarks, and Entropy are used by hundreds of protocols. On the Pythnet appchain, there are more than 500 price feeds that update at speeds of less than a second. Standardized historical prices are provided by benchmarks for accurate settlements and chart representations. Entropy provides a dependable source of unpredictability for financial and creative services. Pyth Network was established using careful methods for blockchain innovation and practical research. The mechanisms of the protocol gain from ongoing review and improvement. Users, developers, and other Pyth Network members often have important insights about upcoming additions, enhancements, and ecosystem improvements. Research Grants are intended to make it easier to explore potential new network features, areas for development, and insightful discoveries that will enhance Pyth's product offerings. Subject matter specialists and researchers will be the emphasis of this category. These grants will have a bounty-based structure. While not all-inclusive, eligible participants will generally possess the following skill sets: - Data-driven and quantitative research. - Development of the blockchain infrastructure. - Proven leadership in the community and in education. - High-quality content creation. - Proven Web3 business and commercial expertise. - Visit the Pyth Ecosystem Grants website to submit an application for a research grant. Developer Grants A new era of decentralized finance has been made possible by Pyth Network. Pyth's low latency and high resolution prices are essential for on-chain perpetual markets, structured products and derivatives platforms, and high-performing AMMs. Pyth is now used by more than 350 protocols to provide their objective-critical services. Web3 is still in its early adoption cycle, and even with continuous improvement in on-chain application capabilities, the total number of active users is still much less than that of the Web2 realm. There are many opportunities to change the way that finance is thought about. Thus, Pyth Network was established to support and empower the next wave of entrepreneurs aiming to upend and reconstruct the financial markets. The main goals of the Developer Grants program are to encourage the development of new tools to support the protocol's operations, creative ways to integrate it with Pyth products, and other significant contributions to the network's development. These grants will have a bounty-based structure. The following skill sets are likely to be possessed by eligible participants, albeit this is not a complete list: - Competence in developing protocols or blockchain infrastructure. - Expertise in developing and refining network architecture. - Familiarity with automation technologies and DevOps processes. Knowledge of data-driven and quantitative methods. Visit the Pyth Ecosystem Grants webpage to submit an application for a Developer Grant. Closing Remarks and Contribution: Gives new developments for the Pyth ecosystem. Secured by Pyth and shapes the network's future. The Pyth Ecosystem Grants Program was established by the Pyth Data Association in order to assist ecosystem participants in developing, researching, and initiating community projects aimed at growing the oracle network. 50 million PYTH tokens will be distributed via grants for developers, researchers, and the community. For more details, please check the Pyth Ecosystem Grants.

Entangle, a interoperable data infrastructure layer, has successfully launched its Mainnet after two years of development and a solid testnet phase. With this significant accomplishment, Entangle is positioned as a major force in the omnichain segment, offering cutting-edge solutions for smooth interoperability. The Entangle Blockchain Entangle Explorer, Photon Messaging Validator, Delegation, and Bridge are some of the vital components of the Mainnet. Launching The Appchain, Entangle Modulus Layer, Photon Message Consensus Layer, and Bridge are some of the vital components of the Mainnet. The efficiency of the Entangle Blockchain is shown by its average block time of less than 2.8 seconds. With the ability to facilitate omnichain development across 16 EVM and non-EVM blockchains, including Solana, the Photon Messaging functionality significantly improves the platform. Since the Mainnet became live, holders of NGL may now stake their tokens to protect the blockchain, get incentives, and take advantage of further promotions that the Entangle Ecosystem will be offering. Staking entails assigning tokens to the Entangle agent network and validators, which are essential to maintaining the security of the Photon Messaging system. There are already 71 validators, with more likely to join, including well-known industry heavyweights as Hashkey Cloud, Rhino, Nodefi, and Daic. Notably, a considerable 25 million NGL tokens have already been staked or assigned to validators, demonstrating the fervor and assurance around Entangle's prospects. To delegate their tokens, users may go to the Entangle Explorer and choose a transmitter agent or validator. One of Entangle's forthcoming initiatives involves onboarding agents who will also accept stakes and delegations from users.

Singapore, Singapore, May 15th, 2024, Chainwire A major event in Cosmos is the recent passing of Governance Proposal No.917: a request by Dora Factory and DoraHacks for a \$1 million grant from the Cosmos Hub community treasury. This grant will support ten rounds of Quadratic Funding within the Cosmos Hub ecosystem over the next two years. As one of the largest treasury funding applications, this proposal sparked extensive discussions within the Cosmos community and received overwhelming support. Over \$1 billion worth of ATOM, including major validators and core Cosmos contributors, voted in favor. The approval rate reached 91.9%, making Gov Proposal 917 the motion with the highest approval rating in the Cosmos Hub's history. Following the approval of this proposal, Dora Factory, in collaboration with DoraHacks, has officially announced the second AFZ (ATOM Economic Zone) quadratic funding program, marking the launch of the first long-term funding initiative. This quadratic funding program will span two years, starting May 15, 2024, and ending May 2026. The passing of Gov Proposal 917 brings native Quadratic Funding to the Cosmos Hub for the first time. What is Public Goods Funding? Public goods funding is a frequently discussed concept within the Web3 industry. Generally, public goods refer to goods or services that are available for everyone to use. In crypto, public goods can include blockchain infrastructure, storage, developer tools, software middleware, and user-facing applications such as block explorers, data dashboards, and wallets. Due to its inherent transparency and verifiability, crypto and blockchain are ideal tools for funding public goods. However, web3 public goods funding also faces numerous challenges. - Lack of coordination among the various parties involved in public goods funding (foundations, institutions, DAOs,

developers, and communities). - A shortage of sustainable and effective funding mechanisms. - Public goods funding is often perceived as not interesting. Enter Dora Factory, which strives to build infrastructure that enables large-scale adoption of public goods funding. Dora Factory: Infrastructure Born for Public Goods Dora Factory is a leading decentralized governance infrastructure and multi-chain public goods funding protocol stack, incubated and supported by DoraHacks, the industry's developer and public goods funding platform. Its products include Public Good Staking Infrastructure and Dora Vota, an appchain for voting and governance designed to empower the global hacker movement, open-source communities, and DAOs. Multi-Chain Quadratic Funding: Aligning Communities and Ecosystem Builders What is Quadratic Funding? Through native-token donations, token-holder communities can support high-quality early-stage projects and public goods within various ecosystems, fostering better collaboration among foundations, communities, and developers. As the first and only team in the industry to develop and advocate for this approach, Dora Factory is a true leader in multi-chain quadratic funding. It has successfully deployed native quadratic funding in numerous mainstream crypto ecosystems, including BNB Chain, Solana, Polygon, Aptos, Cosmos Hub, Injective, and Avalanche. Public Good Staking: Providing Sustainable Funding for Public Goods In late 2022, Dora Factory introduced the concept of Public Good Staking. By operating underlying infrastructure such as validators, they earn native block rewards that are continuously used to fund multi-chain developers and public goods ecosystems. Dora Factory has promoted public good staking in over 30 ecosystems' mainnets and testnets, achieving a TVL (Total Value Locked) of over \$400 million, providing up to \$10 million in sustainable annual funding. In the future, Dora Factory will explore ways to use cryptocurrency to fund cutting-edge technology, such as space technology, quantum computing, artificial intelligence, and biomedical research. Community Incentive Fund: Making Public Goods Funding More Fun Dora Factory launched the Community Incentive Fund to make the public goods funding process more engaging and fun. Top meme and NFT projects like Celestia's Celestine Sloth Collection, Injective Ninja, Aptos Gui Inu, and Aptos Monkeys have become partners of the Community Incentive Fund. Through retroactive airdrops and gamified donations, these projects have brought more fun to public goods funding, receiving contributions and donations from nearly 100,000 unique addresses across different communities. Anonymous Minimum Anti-Collusion Infrastructure (aMACI): Bringing Privacy Technology to On-Chain Public Goods Governance MACI is a cryptographic technology designed to maximize the detection and elimination of collusion in voting. In 2022 and 2023, the Dora Factory team collaborated with ETHDenver, 0x, and OpenSea to introduce privacy voting to crypto hackathons. MACI has significantly improved privacy and reduced collusion in on-chain governance and voting. In 2024, Dora Factory launched aMACI, adding voter anonymity to eliminate collusion between the vote initiator and the operator. This further enhances privacy and lowers the usage threshold of MACI voting. This is a significant step towards future large-scale decentralized voting systems. Dora Vota: Open Infrastructure for Public Goods Funding Dora Vota is a multi-chain governance and voting infrastructure. Vota and interoperability protocols like IBC will provide modular voting and governance infrastructure, such as plug-and-play quadratic funding modules and grant distribution mechanisms. As the first permissionless appchain focused on scaling on-chain voting, Dora Vota will offer developers a valuable playground, unlocking more possibilities for public goods funding and decentralized community governance. Recently, Dora Factory secured strategic financing from dao5, Whampoa Digital, and angel investors like EigenLayer co-founder Calvin Liu. This is the first strategic round of a new funding series since Dora Factory's \$17.5M raise in 2021. As Dora's Public Good Staking grows and Vota's ecosystem matures, the team believes Dora Factory will continue exploring new solutions to traditional funding inefficiencies, accelerating the maturity of governance and public goods funding in the multi-chain ecosystem. - The business has announced plans to increase its footprint across 40 African nations. - Block, which TBD is a subsidiary of, was co-founded by Dorsey, the former CEO of Twitter. In an effort to facilitate more international commerce in Africa, TBD, a digital payment business backed by Jack Dorsey, has established a collaboration with Chipper Cash. The business has announced plans to increase its footprint across 40 African nations. Block, which TBD is a subsidiary of, was co-founded by Jack Dorsey, the former CEO of Twitter. In an effort to get an edge over rivals, the business has teamed up with Chipper Cash, a prominent African payment provider, to gain access to new markets. Strategic Expansion According to Bloomberg, TBD CEO Mike Brock recently spoke in Ghana, where he emphasized the need of expanding the company's international network. The fact that TBD has access to digital assets is a standout advantage compared to its rivals. Users of the platform may convert cryptocurrency to fiat money or send cryptocurrency straight to another user's wallet. The direct value may also be held in dollars, stablecoins, or Bitcoin (BTC) by the receiver. Brock claims that the template combines more conventional and cutting-edge forms of payment. Moreover, users' increased crypto asset quantities have unlocked speedier cross-border payments made possible by blockchain technology, which has been used in numerous places. Companies aiming to increase their market share among young investors have flooded African markets with crypto and digital payment solutions in the last two years. Furthermore, the San Francisco-based chipper cash has over 5 million users who can transfer money across 21 African nations. As inflation soars in several African nations, the idea of TBD that permits payments in digital assets is enticing to the continent's youth. Highlighted Crypto News Today: Solana Outpaces Ethereum in Profitability, Generating Over \$2 Million in Economic Value

The crypto market has been thrown into a state of excitement since US presidential candidate Donald Trump threw in his support for Bitcoin and other altcoins. This has sent projects like ETFSwap (ETFS) into parabolic growth as crypto investor sentiment skyrockets. Several market experts believe Trump's support will have positive implications on the market and are quickly picking the best altcoins to buy ahead of the US election. ETFSwap (ETFS) Poised As The Best Market Pick For Altcoins ETFSwap (ETFS) has been one of the winning picks for best altcoins to buy over the past few weeks, raising over \$500,000 in its Stage 1 presale and offering early investment in a prospective market leader. It is an emerging platform for trading tokenized ETFS, market-making, perpetual trading with up to 10x leverage, and other DeFi solutions. This new blockchain-based solution is marked for the top, considering the attention it has drawn since the presale started. The approval of Spot Bitcoin ETFs and the growing buzz around tokenization and real-world assets have set crypto enthusiasts on the hunt for similar asset types and crypto options. Surprisingly, there are only a few options, and ETFSwap (ETFS) is a massively underpriced prospect as crypto enthusiasts spot the potential of this new project ahead of the US elections. Experts have boldly predicted a 10,000% rally on ETFSwap (ETFS) and considering the positive sentiment toward a bull run, this utility token has the potential to cross \$2, securing massive gains for investors. Solana (SOL) Could Surpass Its All-Time High Solana (SOL) has been the golden ticket among altcoins as momentum gathers for the next bull run. The cryptocurrency has rallied back from its lows in pursuit of its all-time high, leading to high expectations. Several experts believe that Solana (SOL) will complete its recovery to an all-time high and look to break higher price ranges from there. While it's unclear how high Solana (SOL) can go after breaking its ATH, it is being compared to Ethereum (ETH), providing a sense of where it could go for crypto enthusiasts. As of this writing, Solana (SOL) has a market cap of only \$65 billion compared to Ethereum's \$350 billion. This margin leaves room for Solana (SOL) to run if it will ever fulfil its narrative as the Ethereum killer. Fundamentally, Solana (SOL) is winning the war against Ethereum, as several experts are starting to favor the former for its improved scalability and user interface. With a positive trend ahead for the crypto market, Solana (SOL) is one of the best altcoins to hold. Fetch.ai (FET) Is A Pick For AI Altcoins Exposure Fetch.ai (FET) is a decentralized network that helps users automate simple daily tasks with artificial intelligence (AI). The massive boom in AI stocks like NVIDIA has fueled the recent surge in AI altcoins such as Fetch.ai (FET). Crypto retail investors are looking to gain exposure to this sector, and AI cryptocurrencies like Fetch.ai (FET) have allowed crypto investors to speculate on the AI narrative. Fetch.ai (FET) has rallied by over 700% in the past year and remains one of the market's best profit-making picks. Why ETFSwap (ETFS) Is The Crypto Market's Best Pick Again Returning to the exciting prospects on ETFSwap (ETFS), this new cryptocurrency is in the perfect range to rocket to massive heights. ETFSwap (ETFS) is still selling out fast on presale, with Stage 1 already raising over \$500,000. Before that, ETFSwap (ETFS) had raised \$750,000 from institutional and angel investors in private rounds. Seize the opportunity to get in Stage 1 now while the token is selling for \$0.00854 before the price jumps to \$0.01831 in Stage 2. New competitors often surface in the cryptocurrency space, all fighting for a piece of the market share. Alternative currencies, or altcoins, frequently draw investor's interest with their cutting-edge features and promise for exponential development, even if Bitcoin and Ethereum still rule the market. As a rival to the well-known Dogecoin (DOGE), Hump Token (HUMP) is one such cryptocurrency that has recently attracted a lot of attention. HUMP is creating a lot of talk in the cryptocurrency world as investors speculate about its ability to upend the market, supported by a well-known analyst's audacious projection of a 50x gain in value. The Rise of HUMP: More Than Just a Meme Hump Token isn't just another meme coin riding on the coattails of the success of Dogecoin. It represents a new breed of digital assets that leverage community engagement and decentralized finance (DeFi) principles to redefine the cryptocurrency landscape. Inspired by an endearing pet image, HUMP embodies innovation and creativity within the DeFi industry. Running on the Solana blockchain, HUMP boasts unparalleled speed and efficiency, setting it apart from its peers. Analyst Projections: A 50X Jump on the Horizon According to prominent analysts, HUMP is poised for a meteoric rise, with projections suggesting a 50X increase in its value. This bullish sentiment stems from the robust fundamentals, innovative features, and growing community support of HUMP. Despite trading below \$0.01, HUMP has demonstrated resilience and potential, captivating the interest of seasoned investors looking for the next big opportunity in the cryptocurrency market. Market Dynamics: Why HUMP Stands Out What sets Hump Token apart from other meme coins is its commitment to utility and community involvement. While many meme coins fade into obscurity as internet trends come and go, HUMP aims to establish itself as a staple in the DeFi ecosystem. By prioritizing community governance and showcasing real-world use cases, HUMP challenges the notion of meme coins as mere internet novelties, positioning itself as a serious contender in the cryptocurrency market. Navigating the HUMP Ecosystem: How to Get Started For investors looking to explore the potential of HUMP, navigating the ecosystem may seem daunting at first. However, the process is relatively straightforward, thanks to user-friendly platforms and decentralized exchanges. By following a few simple steps, investors can acquire HUMP tokens and become part of its burgeoning community: - Create a Wallet: For secure asset storage, select a cryptocurrency wallet that supports Solana-based tokens, such as Phantom or Sollet. - Connect to a Decentralized Exchange (DEX): Platforms like Raydium and Jupiter facilitate the exchange of Solana-based tokens, including HUMP. Connect your wallet to the DEX you choose and follow the prompts to complete the transaction. - Swap SOL for HUMP: Once connected to the DEX, initiate the swap by entering the desired amount of Solana (SOL) to exchange for HUMP. With zero transaction taxes, investors can confidently trade, knowing that their investments won't be eroded by excessive fees. By embracing HUMP, investors not only gain exposure to a promising digital asset but also join a vibrant community of like-minded individuals committed to driving its success. With its innovative features, strong market potential, and growing recognition, HUMP is proving that meme coins can offer more than just internet memes—they can revolutionize the way we perceive and interact with digital currencies. The Potential of HUMP: A Hump Changer in the Making The recent surge in the value of HUMP underscores its potential for rapid expansion, with a 50x jump on the horizon. HUMP has captured the attention of investors seeking high-growth opportunities in the cryptocurrency market. Despite trading below \$0.01, the innovative features and community-driven approach of HUMP set it apart as a formidable competitor to established meme coins like Dogecoin. Analyst Warnings: The Cost of Overlooking HUMP Despite its burgeoning popularity, some investors may still overlook HUMP, dismissing it as just another meme coin. However, top analysts caution against underestimating its potential impact. With institutional support driving its surge and a growing number of high-value orders flooding the market, HUMP continues to defy expectations. Ignoring HUMP could mean missing out on a lucrative opportunity, as the cryptocurrency captures the attention of seasoned investors. Conclusion: Riding the Wave of HUMP's Potential In conclusion, Hump Token (HUMP) represents a promising addition to the meme coin landscape, poised for exponential growth in the coming months. With its innovative features, growing community, and favorable market conditions, HUMP has captured the attention of analysts and investors alike. As a competitor to Dogecoin and other established players, HUMP offers a fresh perspective and unique advantages that set it apart in the market. With a prominent analyst predicting a 50x jump for HUMP, the opportunity for substantial returns is within reach for those willing to embrace this emerging cryptocurrency. As HUMP continues to gain traction and recognition, its journey towards mainstream adoption promises to be an exciting one for investors and enthusiasts alike. PEPE Coin marked a significant growth and hit a new ATH. - A whale made a profit of \$13.67M and still holds 1.26T Pepe coins. Frog-themed memecoin PEPE had remarkable growth this week and soared over 30%, hitting a new all-time high yesterday at \$0.00001128. It gained immense attention as the price surged almost by 109% in the past month and 901% in the past 6 months. Investors and analysts are looking confidently at the meme coin, which has now set high targets. Meme coins have been in a bearish trend for a long time, and fortunately, yesterday, Pepe made a good move with a price surge in double-digit gains. This unforeseen rise raises expectations for the coin's value in the coming days. Moreover, whales are making good returns out of it; a whale made \$13.67 million profit from PEPE in just three months and out of that, it spent around \$1.56 million to buy 1.40T Pepe. Around 14 hours ago, the whale sold 140.4B PEPE for 1.57M DAI at the new all-time high of PEPE. Despite the massive sale, the whale still holds 1.26T Pepe coins worth \$13.7 million. Since March, Pepe Coin has been struggling to surpass the resistance level of \$0.00000990. However, the coin's price has been on an uptrend since mid-April. At the time of writing, it is valued at \$0.00001103, an increase of 6.75% in a day. Pepe Coin has made a significant surge in trading volume as well, and that has developed investor interest and market engagement with the meme coin. Does the Re-entry Direct the Surge? Pepe's performance aligned with the return of Keith Gill, known as the 'Roaring Kitty,' which was dormant in the meme coin sector since June 2021 and re-entered on May 13, 2024. Furthermore, it ignited the meme coin market with the PEPE becoming one of the beneficiaries. The reappearance of Roaring Kitty likely led to the meme coin rally, with Solana-based GameStop memecoin (GME) surging over 350% and the AMC token witnessing a 900% increase. Other meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB) also experienced gains, according to CoinGecko data. Revenue for the quarter came in at \$259.7 million, up from \$146.7 million a year ago. - The mining operation contributed significantly to the company's first-quarter revenue increase. The record achievement of Galaxy Digital Holdings' mining operation during Q1 contributed to the company's increased revenue and earnings, which were driven by the surge in crypto prices. The financial services company led by Michael Novogratz that specializes in digital assets said on Monday that its net income for the quarter ended in March was \$421.7 million. This represents a growth of over 214% compared to the same time last year. Mining Operation Contributed Significantly Revenue for the quarter came in at \$259.7 million, up from \$146.7 million a year ago, thanks to the company's skyrocketing sales. Galaxy Digital had a \$1 billion net loss in 2022, but these good results are the most recent indication that the company is making a comeback. If we look at Galaxy's financials by division, we see that the mining operation contributed significantly to the company's first-quarter revenue increase, bringing in \$31.5 million. With a record half-year and asset management segment for what could be the industry's largest digital asset manager, the company's development is going global. Also seeing substantial growth was its equity capital, which increased 22% quarter-over-quarter to \$2.2 billion. In Q1, assets under stake increased by 100%, hitting \$1.5 billion, as Galaxy strives to become the second biggest validator on the Solana network. About \$125 million was raised by the business in April. With the funds, Galaxy Digital intends to upgrade the infrastructure at its Helios mining facility in West Texas. Novogratz predicted that Bitcoin's price would stay relatively flat this quarter. - Crypto prices will continue to rise as soon as a new wave of favorable conditions arrives. Michael Novogratz, CEO of Galaxy Digital, has expressed optimism about the short-term future of Solana, Ethereum, and Bitcoin. While adoption from more conventional investors increases, Novogratz predicted that Bitcoin's price would stay relatively flat this quarter on a May 14 conference call. Following last week's corrections that saw Bitcoin's price drop below \$61,000, the cryptocurrency is again trying to recover. Optimism in Bitcoin, altcoins, and memecoins has been stoked by the increasing liquidations caused by the asset's short-term price volatility. Under Consolidation Phase There may not be a dramatic increase beyond the all-time high this quarter, according to the Galaxy Digital Founder, who was quoted by Bloomberg as saying this during the consolidation period after the introduction of spot Bitcoin ETFs. The CEO stated: "We are in the consolidation phase in crypto. Bitcoin, Ethereum, and everything else, Solana will consolidate, what does that mean? It means probably somewhere between \$55,000 and \$75,000 until the next set of circumstances, the next set of market events bring us higher." After the approval of spot Bitcoin ETFs on January 11 and the momentum of the BTC halving, the market saw a positive surge in Q1 2024, according to Novogratz's estimate. The asset's price peaked at about \$73,000 prior to the recent declines. The current state of affairs is a result of both sector circumstances and macroeconomic considerations. The decline in decentralized finance (DeFi) figures is a direct result of the decline in on-chain activity and trading volumes in top assets. Digital asset prices, according to Novogratz and other optimistic traders, will continue to rise as soon as a new wave of favorable market conditions arrives. Highlighted Crypto News Today: Solana (SOL) Price at a Crucial Juncture: Bulls and Bears Prepare for a Decisive Battle

Cryptocurrency investors constantly seek the next big opportunity, the diamond in the rough that promises astronomical gains. However, in pursuing such opportunities, itâ€™s crucial to steer clear of certain pitfalls. Two such pitfalls in 2024 are Polygon (MATIC) and Ripple (XRP). Despite their previous prominence, recent developments indicate that these cryptocurrencies may not be the golden tickets investors hope for. Hereâ€™s why you should approach them cautiously and embrace this crypto priced under \$1 that analysts say will lead the 2024 altcoin season. Polygonâ€™s Struggle to Break Resistance Polygon, once hailed as a potential disruptor in the blockchain scalability arena, now finds itself at a crossroads. Despite its initial promise, the project has encountered significant obstacles on its path to success. The failure to break through the crucial resistance level at \$1.08 highlights underlying weaknesses and raises doubts about its future trajectory. Polygonâ€™s downward spiral intensifies

with each unsuccessful attempt, sending shockwaves through the crypto community. The steep decline of over 75% from its peak is a stark reminder of the challenges ahead. As investors grapple with the implications of Polygon's struggles, uncertainty looms over its ability to find solid ground and regain momentum. In this volatile landscape, navigating the complexities of Polygon's journey requires a cautious approach as the project seeks to overcome obstacles and carve out a sustainable path forward in the ever-evolving world of cryptocurrency. Ripple's Legal Woes and Stagnant Growth Ripple (XRP) mirrors Polygon's plight, grappling with its own set of challenges that have stifled its growth trajectory. Caught in the throes of legal turmoil, Ripple is ensnared in a protracted court battle that threatens to undermine its potential. Trapped within a narrow trading range of \$0.8 to \$0.3, Ripple struggles to break free from the uncertainty that looms over its future. The Securities and Exchange Commission's accusations of unlawful fundraising have cast a pall over Ripple's reputation, instilling doubt among investors and regulators alike. Despite recent developments, including the dismissal of some claims against Ripple's leadership, the regulatory fog refuses to lift, leaving Ripple in a state of limbo. As the cryptocurrency community watches with bated breath, Ripple's ability to navigate the treacherous waters of legal scrutiny will ultimately determine its fate in the turbulent seas of the crypto market. The Rise of Hump (HUMP): A Beacon of Hope Amid the tumultuous landscape surrounding Polygon and Ripple, a fresh contender emerges: Hump (HUMP). Positioned as a beacon of opportunity in the crypto market, Hump has quickly garnered attention for its remarkable performance. Priced below the \$1 mark, this Solana-based meme coin has piqued the interest of both seasoned analysts and eager investors. April 2024 marked a watershed moment for Hump as it embarked on an extraordinary journey of growth. Witnessing an unprecedented surge, Hump defied expectations by skyrocketing an astonishing 9500%. Starting from a modest \$0.002689, it soared to an impressive \$0.02605 within just one month, cementing its status as the highest-gaining meme coin of the period. As the crypto community looks for promising alternatives amidst the struggles of established projects, Hump emerges as a shining example of resilience and potential in the ever-evolving landscape of digital assets. Analysts' Projections for Hump Analysts are bullish on Hump's prospects, predicting that it will lead the altcoin season in 2024. With its impressive performance and strong community backing, Hump embodies the spirit of innovation and resilience that defines successful cryptocurrencies. As investors seek alternatives to faltering giants like Polygon and Ripple, Hump stands out as a beacon of hope in a sea of uncertainty. Conclusion The landscape of cryptocurrency is fraught with risks and opportunities. While Polygon and Ripple grapple with their respective challenges, investors must exercise caution and consider alternative options. Hump, with its meteoric rise and promising outlook, presents a compelling case for those seeking to navigate the volatile waters of the digital asset market. As we venture further into 2024, the choice is clear: avoid Polygon and Ripple like a plague and embrace the potential of Hump to lead the way in the altcoin season. Meme coins have become popular to pass the time and even get money. However, risk-averse investors are frequently discouraged from investigating this market niche due to their unpredictable character. Some meme currencies stand out for their unique features, robust community support, and significant development potential despite the associated hazards. Three meme coins are Hump, Dogwifhat, and Floki Inu, which attracted notice in May 2024 because to their favorable characteristics for investors and relative stability. Let's examine why risk-averse investors seeking exposure to the meme coin market view these currencies as the safest choices. Hump (HUMP): Redefining Meme Coins with Innovation and Community Support Hump Token (HUMP) represents a paradigm shift in the meme coin landscape, transcending its peers through innovative features and unwavering community support. Launched on the Solana blockchain, HUMP boasts unparalleled speed and efficiency, addressing common pain points associated with meme coin transactions. With a total supply of 6.9 billion tokens, HUMP strikes a delicate balance between scarcity and accessibility, instilling confidence among investors. One of the standout features of HUMP is its tax-free transactions, a departure from the norm in the meme coin space. This eliminates concerns about slippage during purchases, enhancing user experience and fostering a vibrant trading environment, especially during periods of market volatility. Moreover, the presence of HUMP on reputable decentralized exchanges (DEXs) like Raydium and Jupiter underscores its commitment to accessibility and market liquidity. Since its launch, HUMP has experienced an unprecedented surge in value, with its market capitalization surpassing \$60 million. This remarkable growth reflects market optimism surrounding the potential of HUMP to redefine the meme coin industry. With listings on prominent platforms like CoinMarketCap and CoinGecko, HUMP has solidified its position as a legitimate player in the cryptocurrency market, further boosting investor confidence. Dogwifhat (WIF): A Rising Star Among Meme Coins Dogwifhat (WIF) has emerged as a significant player in the meme coin market, positioning itself as a top contender among its peers. Operating on the Solana blockchain, WIF has swiftly climbed the ranks to become the third-largest meme coin by market capitalization, surpassing industry stalwarts like Pepe. The success of Dogwifhat can be attributed to its strong community support and strategic listings on major exchanges like Binance. Analysts have noted that WIF's significant surge in price is not merely a result of hype but also due to sustained interest from institutional investors and the robust Solana network. With projections indicating a potential price target of \$5 by the end of 2024, Dogwifhat stands out as a meme coin project with promising growth prospects. Floki Inu (FLOKI): From Meme to Metaverse Floki Inu (FLOKI), named after Elon Musk's Shiba Inu puppy, has transcended its meme coin origins to become a multifaceted Web3 project. Spanning decentralized finance (DeFi), non-fungible tokens (NFTs), and its own metaverse, Floki Inu distinguishes itself through its diversified utility and interoperability across Ethereum and BNB chains. This versatility allows FLOKI token holders to bridge between chains, enhancing accessibility and functionality seamlessly. Despite its humorous branding, FLOKI has experienced exceptional growth, boasting a 369% increase in value year-to-date and a market cap of \$1.8 billion. March witnessed a remarkable 460% surge in FLOKI price, signaling strong market momentum and investor interest. While short-term bearishness may prevail, FLOKI's long-term strength and innovative features position it as a compelling option for risk-averse investors seeking stability amidst market volatility. Why These Coins Are Safe Bets for Risk-Averse Investors Each of these meme coins offers unique features and attributes that appeal to risk-averse investors: - Innovation and Stability: Hump Token stands out for its innovative approach to tax-free trading and efficient transaction speed on the Solana network. Its impressive market performance and strong community support make it a safe bet for investors prioritizing stability. - Community Support and Growth Potential: Dogwifhat (WIF) has garnered significant community support and strategic listings on major exchanges, contributing to its consistent growth and resilience. With promising price projections, WIF presents an attractive investment opportunity for risk-averse investors seeking growth potential. - Versatility and Market Recognition: Floki Inu's evolution from meme coin to comprehensive crypto project underscores its versatility and market recognition. With its metaverse project, Valhalla, gaining traction, FLOKI offers both stability and growth potential for risk-averse investors. Conclusion: The Rise of Safest Meme Coins In May 2024, Hump, Dogwifhat, and Floki Inu stand out as the safest meme coins for risk-averse investors seeking exposure to the meme coin market. With innovative features, strong community support, and promising growth potential, these meme coins offer a compelling investment opportunity in an otherwise volatile landscape. As the cryptocurrency market continues to evolve, Hump, Dogwifhat, and Floki Inu exemplify the transformative power of meme coins, redefining the boundaries of digital finance. Click here to Buy Hump Token (HUMP): - Website: <https://hump.io/> - Twitter: <https://x.com/Humptoken> - Telegram: <https://t.me/humptoken> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Upcoming UK Elections will not have an effect on the crypto sector of the country. - The Labour party is expected to introduce a tokenized regime in the event of winning. The UK elections scheduled to happen later this year, are expected to maintain currents in the crypto sector. Industry stakeholders and Government officials have made statements on the UK's approach to crypto. Amidst the crypto tug-of-war in the US Elections, the UK has steered clear of controversies. The country has progressed in crypto regulations and is also working on the "digital pound". Stakeholders believe that the elections will not alter any crypto plans, while the approach that will be taken is yet to be determined. Conservative vs. Labour The ruling conservative party had stated that it wanted to make the UK a crypto hub in 2022. Since then the country has seen multiple advancements including the passing of a market bill that recognized stablecoins and cryptocurrency as regulated financial activity. Moreover, the government announced plans to update regulations in 2024. Subsequently, this year saw improved authorizations and new rules as the regulatory landscape evolved. The Conservative party has also announced the issuance of legislation for stablecoins and stable. The Labour Party, which is currently in people's favour, has also made significant announcements regarding tokenization. It stated that it would be advancing toward making the country a "securities tokenization hub". This is believed to be one of the announcements and more information on the Labour Party's approach to crypto is expected. The UK Crypto Sector to Evolve Irrespective of the Regime Lawmakers and stakeholders expect steady progress in the crypto sector regardless of the Elections' outcome. The two dominant parties have shown sufficient interest in the potential of cryptocurrency and intend to make the UK a hub for cryptocurrency. However, for the past few weeks, the crypto market has struggled to maintain prices with increased volatility. Analysts are expecting a change to a bullish trend in the coming months. Highlighted Crypto News Today: Bank of Montreal's SEC Filing Reveals Exposure to Several Bitcoin ETFs

As the cryptocurrency market continues to evolve, meme coins have emerged as a significant player, captivating the attention of investors and enthusiasts alike. Among these meme coins, Dogwifhat (WIF) has garnered considerable interest, prompting discussions about its potential as the top performer in the current bull cycle. However, market experts believe that alternative meme coins such as Hump (HUMP), Dogecoin, and Shiba Inu pose strong contenders. In this article, we delve into the analysis provided by market experts, exploring the factors that could determine the best meme coin in this bull cycle. Dogwifhat (WIF): A Brief Overview Dogwifhat, based on the Solana blockchain, has gained attention as a meme coin driven by community engagement and social media hype. Unlike traditional cryptocurrencies, meme coins like Dogwifhat primarily thrive on internet culture and community involvement rather than underlying technology or utility within a blockchain ecosystem. With its humorous branding and grassroots momentum, Dogwifhat has positioned itself as a speculative investment opportunity within the crypto space. Market Expert Opinion While Dogwifhat may have captured the interest of some investors, market experts offer varying opinions on whether it's the best meme coin of this bull cycle. Some argue that the susceptibility to market manipulation and lack of fundamental value beyond speculative trading could hinder its long-term viability. Additionally, the meme coin landscape is highly volatile, with trends shifting rapidly based on social media hype and market sentiment. Case Study: Dogwifhat Falls Short Despite its potential, Dogwifhat faces challenges that could impact its performance compared to other meme coins. For example, during periods of market volatility, the price of Dogwifhat may be subject to significant fluctuations due to its speculative nature and relatively low market capitalization. In contrast, meme coins with stronger community support and established use cases may offer more stability and long-term growth potential. Hump (HUMP): The Rising Star In contrast to Dogwifhat, Hump Token (HUMP) has emerged as a promising contender in the meme coin arena. Operating on the Solana blockchain, Hump Token distinguishes itself by eliminating transaction taxes, offering users a cost-effective and efficient trading experience. This innovative approach has garnered attention from investors seeking alternatives to traditional meme coins. Furthermore, Hump Token prioritizes community involvement and governance, empowering users to participate in decision-making processes. This commitment to decentralization aligns with the core principles of cryptocurrency and sets Hump Token apart from its peers. Dogecoin (DOGE): The Dark Horse No discussion on meme coins is complete without mentioning Dogecoin (DOGE), the original meme coin and a perennial favorite among crypto enthusiasts. Created as a lighthearted parody of Bitcoin, Dogecoin has evolved into a cultural phenomenon, propelled by its vibrant community and celebrity endorsements, notably from Tesla CEO Elon Musk. Despite its origins as a joke, Dogecoin boasts a loyal following and a track record of resilience in the face of market volatility. Its low transaction fees and fast transaction times make it an attractive option for microtransactions and charitable endeavors. While Dogecoin may lack the technical sophistication of other cryptocurrencies, its enduring popularity cements its status as a cornerstone of the meme coin market. Shiba Inu (SHIB): The Established Competitor Shiba Inu is a formidable competitor in the meme coin landscape. Built on the Ethereum blockchain, Shiba Inu features a vibrant community and a wide array of projects within its ecosystem. From decentralized exchanges to gaming platforms, Shiba Inu offers diverse user opportunities to engage with its tokens. Moreover, Shiba Inu's recent popularity surge underscores its potential to rival Dogecoin as the premier meme coin. With a robust infrastructure and strong community support, Shiba Inu remains a top contender in the meme coin space. Conclusion While Dogwifhat presents a compelling investment opportunity, for some investors, the need to explore alternative meme coins and assess their potential within the current market landscape, with Hump, Dogecoin, and Shiba Inu emerging as noteworthy alternatives, investors have a diverse array of options to consider. Ultimately, conducting

thorough research, evaluating risk factors, and staying informed about market trends are crucial steps in navigating the dynamic world of meme coin investments. In conclusion, while Dogwifhat may have its merits, investors must diversify their portfolios and consider alternative meme coins offering unique features and strong community support. As the cryptocurrency market evolves, staying vigilant and adaptable will be key to making informed investment decisions in this bullish cycle. - Eric Balchunas, a senior ETF analyst at Bloomberg, broke the news of the astounding event. - BlackRock's iShares Bitcoin Trust has 250 holdings and a lot of interest. The iShares Bitcoin Trust (IBIT), an exchange-traded fund (ETF) for bitcoin owned by BlackRock, has surpassed all of its rivals in terms of the number of corporations that have invested in it. There are already 250 corporate investors of the BlackRock Bitcoin ETF, which began operations on January 11 after receiving permission from the US SEC for spot ETFs. Eric Balchunas, a senior ETF analyst at Bloomberg, broke the news of the astounding event. It is worth mentioning that the BlackRock ETF stands out due to more than simply its remarkable holdings. The astounding number of holders it has drawn in only three months after inception is the most remarkable aspect. Investors Optimistic Investors are showing a lot of faith in Bitcoin as an asset class, as BlackRock's iShares Bitcoin Trust has 250 holdings and a lot of interest. According to its most recent statement with the SEC, the Boston-based investment company, Grayscale, has the highest stake among the 250 holders of IBIT, with holdings totaling \$10,387,773. When compared to the previously stated number that Grayscale Capital filed with the SEC, this amount is more impressive. More than \$69.7 million is the total value of the company's 1,722,497 units of IBIT shares. Notable holder numbers have also been seen for other Bitcoin ETFs that were introduced around the same time. But compared to BlackRock, their numbers are astronomically smaller. Bitwise Bitcoin (BITB) ETF has 60 investors, whilst Fidelity Wise Origin Bitcoin (FBTC) has 136. With 42 corporate holdings, Ark 21Shares Bitcoin ETF follows closely behind. Highlighted Crypto News Today: Solana: Will SOL Sustain Its Reversal Momentum and Reach \$500 in 2024?

In the ever-evolving world of cryptocurrency, meme coins have emerged as a fascinating and often volatile subset. While some investors steer clear of them, others see potential for astronomical gains. As we step into May, three meme coins have captured the attention of traders and enthusiasts alike: Hump, Dogwifhat, and Shiba Inu. Each stands out for unique reasons, offering growth potential and a strong community. Hump: The Rising Star in the Meme Coin Universe Hump, a meme coin anchored in the Solana ecosystem, has been making waves since its official launch. With its market cap steadily climbing and a surge of over 5000% in April alone, Hump has garnered significant attention from investors seeking the next big opportunity. What sets Hump apart is its innovative approach to community engagement and its commitment to leveraging blockchain technology for financial empowerment. Unlike many meme coins, Hump isn't just a flash in the pan; it's a movement driven by a passionate community of forward-thinkers. Investors eyeing Hump in May have good reason to be optimistic. With its solid foundation in the Solana ecosystem and a dedicated team behind its development, Hump has the potential to soar to new heights in the coming months. As traders brace for potential volatility in the crypto market, Hump remains a beacon of promise, poised to capitalize on its momentum and deliver substantial returns for early adopters. Bonk (BONK): Riding the Meme Coin Momentum Another meme coin generating buzz in May is Bonk. Built on the Solana blockchain, Bonk offers the promise of reduced costs and faster transaction speeds compared to other meme coins operating on the Ethereum network. Going beyond its comedic allure, Bonk delivers on its commitment to lower fees and expedited transactions. Through decentralized autonomous organizations (DAOs), it empowers its community with increased influence, while also exploring opportunities to integrate decentralized finance (DeFi) and non-fungible tokens (NFTs) to expand its utility. Despite its relatively recent inception and brief history, Bonk has achieved remarkable success since its listing on prominent exchanges in December 2023. With year-to-date returns reaching up to 107% and notable gains reflected on market charts in the first quarter, BONK emerges as a coin that investors should not overlook in May. Dogwifhat (WIF): A Dark Horse in the Meme Coin Race Dogwifhat, which has been gaining popularity since its launch late last year, has quickly become a favorite among crypto investors, joining other canine-themed coins such as dogecoin (DOGE) and Shiba Inu (SHIB). Despite its origins as a meme featuring a puppy in a hat, Dogwifhat has ranked 44th in market capitalization, a testament to its growing influence in the crypto community. The rise in the value of Dogwifhat can be attributed to many factors, such as its catchy mascot, its cultural significance, the cultural importance it gained, the overall craze of the crypto market, and this unique combination propelled Dogwifhat to the fore, and drawing attention from both crypto community and traditional investors. As investors diversify their portfolios and seek out new opportunities for growth, Dogwifhat presents an intriguing option for those looking to ride the wave of meme coin mania. Why to Stay Away from Dogecoin (DOGE) for Now While Hump, Bonk, and Dogwifhat show promise for May, one meme coin investors may want to approach with caution is Dogecoin (DOGE). Once hailed as the "people's cryptocurrency," Dogecoin's popularity has waned in recent months, and its value has plummeted since reaching its peak in May 2021. Despite its lighthearted appeal and dedicated community, Dogecoin lacks the intrinsic value and long-term viability of other cryptocurrencies like Ethereum. Investors considering Dogecoin should be aware of its inherent risks. Unlike stablecoins or cryptocurrencies with robust utility, Dogecoin's value is largely driven by sentiment and speculation. While it may offer short-term gains for some traders, Dogecoin's lack of fundamental value makes it a risky investment for those seeking sustainable returns. As the cryptocurrency market continues to evolve, investors would be wise to look beyond the hype surrounding Dogecoin and explore more promising opportunities in the meme coin space. Conclusion As we enter May, Hump, Bonk, and Dogwifhat emerge as meme coins poised for potential growth and momentum. With their innovative concepts, passionate communities, and upward trajectories, these meme coins represent exciting opportunities for investors seeking to capitalize on the volatile nature of the cryptocurrency market. While Dogecoin may have captured headlines in the past, investors should exercise caution and consider the long-term prospects of meme coins like Hump, Bonk, and Dogwifhat as they navigate the evolving landscape of digital assets. The meme coin sector is gaining momentum again as the total market cap surges by 7.4% today. However, not all projects are experiencing equal gains, with some tokens soaring by over 50% in the past 24 hours. In this article, we delve into the top meme tokens a leading crypto analyst on Twitter identified for big gains in May, excluding Shiba Inu (SHIB). Each pick is carefully analyzed based on factors such as price performance, market trends, community engagement, and tokenomics. Hump (HUMP): The Standout Choice Leading the list of top meme coins for May 2024 is Hump, a token that has been making waves in the crypto market with its innovative approach and promising growth potential. Despite trading below \$0.01, Hump has exhibited remarkable performance metrics, including a recent 46.70% price increase over the last 7 days. Analysts predict that Hump is primed for a staggering 5000% rally in 2024, making it an attractive investment opportunity for those seeking exponential growth in the crypto market. Hump stands out for its vibrant community-driven ecosystem and robust infrastructure, leveraging the power of the Solana blockchain to provide users with a seamless and transparent financial experience. Backed by a dedicated team of developers and enthusiasts, Hump embodies the ethos of community-driven innovation, positioning itself as a leader in the Solana meme coin space. Pepe (PEPE): The Face of the Meme Coin Industry Pepe emerges as another top pick for May 2024, solidifying its position as the face of the meme coin industry in this market cycle. Currently the third-largest meme coin, Pepe is garnering tremendous excitement as its price advances toward an all-time high. Trading at \$0.000007812, Pepe has demonstrated resilience in the face of market volatility, recovering from a drastic selloff fueled by an insatiable market appetite. With a market cap of \$3.2 billion and a 24-hour trading volume of \$1.2 billion, Pepe has captured the attention of leading analysts who are rallying in support of the project. Speculating on Pepe's uptrend continuation, analysts like Captain Faibik and MaxbecauseBTC foresee massive potential for the token, further bolstering investor confidence in its long-term prospects. Popcat (POPCAT): The Rising Star Popcat, the leading cat-themed cryptocurrency making waves in the meme coin market, is rounding out the list. Currently trading at \$0.55, Popcat has exhibited impressive price performance, with a 21% increase today, 32% this week, and a staggering 105% this month. With a market cap of \$540 million and a 24-hour trading volume of \$148 million, Popcat's recent strength has outperformed the market average, signalling its potential for further growth. As a Solana-based token, Popcat is positioned to capitalize on the growing popularity of the Solana ecosystem. Its recent success has paved the way for potential listing on tier-one exchanges like Binance. With the market beginning to recover, Popcat stands poised for an even more parabolic run, solidifying its status as a rising star in the meme coin space. In conclusion, Hump, Pepe, and Popcat emerge as the top meme coins to watch for big gains in May 2024, with each token offering unique value propositions and growth potential. While Shiba Inu may not be among them, these three projects are primed to outperform in the upcoming bull run, presenting exciting opportunities for investors to capitalize on the dynamic meme coin market. - Cryptocurrency markets endure -3.6% decline, signaling bearish sentiment. - Bitcoin struggles, down 6% in a week, hovering near \$60,000. The cryptocurrency market has sustained a downward trajectory over the past week. The overall market has seen a decline of 3.6%, coupled with a significant 27% decrease in trading volume compared to the previous week. Despite this gloomy backdrop, hope flickers among traders, largely fueled by the resilience of select cryptocurrencies. TON, KAS, RUNE, and AKT have emerged as beacons of optimism, managing to buoy traders' spirits amidst the prevailing downturn. Meanwhile, Bitcoin has stumbled, registering a 1% dip in the past 24 hours and a notable 6% slump over the past week, driving its price down to the \$60,800 range. Similarly, Ethereum has faltered, witnessing a 2% drop in the past 24 hours and a significant 10% decrease over the week, with its price hovering around \$2,931. Other major cryptocurrencies such as Solana, XRP, DOGE, Cardano, AVAX, DOT, and MATIC have also experienced declines ranging from 3% to 8%. Noteworthy on-chain activity includes a substantial deposit and withdrawal history of Ethereum by an early holder, with transactions totaling millions of dollars. Analysts weigh in on Bitcoin's precarious position, noting a slowdown in on-chain activity, potentially indicating crowd fear and indecision. While the cryptocurrency struggled to maintain a recovery this week, analysts project a bullish trajectory in the post-halving cycle, forecasting Bitcoin's price to soar anywhere between \$175,000 to \$350,000 within the next nine months. However, cautionary tones are sounded, warning of a potential end to the current bull market by January 2025. Despite sporadic glimmers of hope, the overarching sentiment in the cryptocurrency markets remains one of uncertainty and apprehension, with traders closely monitoring developments for signs of a sustained turnaround.

The Solana blockchain is witnessing a surge in projects that are not only going viral but also significantly increasing their market capitalization. Among these, Penguinia stands out as a penguin-themed meme coin that has quickly captured the community's interest. Penguinia has raised over 700 \$SOL in just the first few days of its 31-day token presale, with over 24 days left to the end of the presale. The enthusiasm is high, with the project already achieving nearly one-third of its presale goals. Join the Penguinia Token Presale Now What Sets Penguinia Apart? Inspired by the playful spirit of penguins, Penguinia aims to significantly enrich the Solana meme ecosystem. The presale offers early investors a chance to buy \$PENGU tokens at a discount before they list on major exchanges like Raydium. Exciting Game Preview Coming Soon The Penguinia team is excited to announce that next month, they will release a game preview/demo, showcasing how \$PENGU tokens will be utilized within its play-to-earn game. Players will use \$PENGU to mint playable penguin characters, participating in various challenges to earn more tokens. This integration of \$PENGU tokens adds substantial utility and depth to the project, making the presale an attractive entry point. Presale Details Total Supply: 100 Million \$PENGU Tokens Presale Allocation: 80 Million \$PENGU Tokens (80% of the total supply) Presale Duration: 31 Days, ending on June 20th, 2024. How to Buy \$PENGU Tokens: 1. Connect Your Wallet: Ensure you have a Solana wallet (e.g., Phantom, Solflare) and it is connected to the Raydium interface. 2. Add SOL: Fund your wallet with SOL from a major exchange (e.g., Coinbase, Kraken) or a peer-to-peer transaction. 3. Buy \$PENGU: On the Raydium interface, select the \$PENGU token and the amount you wish to purchase. 4. Confirm Transaction: Review the details and confirm the transaction. 5. Wait for Confirmation: Once the transaction is confirmed on the Solana network, your \$PENGU tokens will be in your wallet. 6. Claim Your Tokens: Follow the instructions provided by the Penguinia team to claim your tokens. 7. Hold or Trade: You can hold your \$PENGU tokens or trade them on supported exchanges. Remember to transfer the purchased SOL to your Solana wallet, not directly from the exchange, to ensure you can participate in the presale. Make Your Contribution: Visit <https://penguinia.com> and follow the steps to send \$SOL to the designated presale address. Track Your \$PENGU Allocation: Use the provided dashboard to see how many \$PENGU tokens you will receive based on your contribution. Await Your Tokens: Once the presale concludes, your \$PENGU tokens will be airdropped to your wallet. Why

Join Now? The presale not only offers \$PENGU tokens at a preferential rate but also early access to the upcoming play-to-earn game, maximizing potential returns from in-game earnings and token appreciation. Join Our Community Donâ€™t miss out on any updates or exclusive community events by joining our Telegram and Discord channels. About Penguinia Penguinia is a pioneering project on the Solana blockchain, leveraging the charm and community spirit of penguins to create a unique blend of entertainment and investment potential. This project is designed to captivate both gamers and crypto investors. - Dorsey gave an optimistic prediction about Bitcoinâ€™s long-term price trajectory. - The Twitter co-founder made the observation that BTCâ€™s price isnâ€™t the most intriguing part. In 2030, according to Twitter co-founder Jack Dorsey, the price of Bitcoin might hit \$1 million, and it could continue to rise in value beyond that. Dorsey gave an optimistic prediction about Bitcoinâ€™s long-term price trajectory and explained his sudden exit from the board of Bluesky, a decentralized Twitter alternative he helped found in 2019, during an interview with journalist Mike Solana on Pirate Wires on May 9. Strong Bitcoin Backing Dorsey informed Solana that, in his opinion, the price of Bitcoin may reach â€œat least a millionâ€ by 2030 and go far higher than that. Moreover, Dorsey, who is now the head of Block Inc, made the observation that Bitcoinâ€™s price isnâ€™t the most intriguing part of the cryptocurrency. Rather, he emphasized the ecosystemâ€™s collaborative character and how it encourages group efforts to improve the network. The most remarkable aspect of Bitcoin, aside from its origin story, is that anyone who contributes to it, receives payment in it, or purchases it for personal use â€œ everyone who makes an effort to improve it â€œ is improving the entire ecosystem, which leads to an increase in price, the former Twitter co-founder stated. An alternative to Twitter, Dorsey helped build Bluesky, a decentralized social network, and his confirmation that he would be leaving the board on May 6 caused eyebrows to rise. In an effort to lessen the likelihood of censorship, Dorsey initially planned for Bluesky to be an open-source protocol upon which Twitter and other social media platforms could be built. On the other hand, he said that the corporation began to act more conventionally and advocate for moderating tools. Highlighted Crypto News Today: Why Are South Asian-Based Cryptos Currently Capturing Tradersâ€™ Attention?

Dogwifhat (WIF) reclaimed a market cap above \$3 billion after a 2-day slump. A significant whale activity has been spotted on the radar during the price surge. The bear is a slight relief in the market as Bitcoin (BTC) rebounds above \$62,800 and Ethereum (ETH) attempts to find a firm foothold above \$3,000. Among the top 5 gainers of the day, Solana-based viral memecoin Dogwifhat (WIF) boasts its double-digit price surge. In the last 24-hour trading window, WIF surged over 12.3% to reach \$3.22. At the time of writing, WIF stood with a market capitalization of \$3.22 billion. Amid this rise, the memecoinâ€™s daily trading volume increased over 24.68% to \$467.6 million. Blockchain data tracker lookonchain detected an anonymous whale activity tied to WIF. In the last 12 hours, the whale purchased nearly 1.4 million WIF tokens â€œ worth \$4.18 million at the time of purchase. Currently, these tokens held are in a profit of 7.7%. A whale spent 4.2M \$USDC to buy 1.4M \$WIF at \$2.99 5 hours ago. â€œ Lookonchain (@lookonchain) May 10, 2024 This whale was an early trader of \$WIF and made a total profit of more than \$8M on \$WIF.<https://t.co/UWit3TBsVQ> pic.twitter.com/KYAsIZJ7AG Will Dogwifhat (WIF) Pump Further or Dump? The daily price chart shows WIFâ€™s relative strength index (RSI) hovering within the neutral territory â€œ neither oversold nor overbought condition. Meanwhile, another indicator, Chaikin Money Flow (CMF), displays a gradual decline below zero, suggesting decreased capital flow into the asset. This is further supported by the decline in trading volume over the past two days. As per TheNewsCryptoâ€™s analysis, WIFâ€™s current price momentum laid down a cup and handle pattern. This formation generally displays a consolidation phase and a breakout is expected to follow. If a bullish breakout occurs, dogwifhat might surpass its resistance, \$3.5757. In case the bearish momentum creeps in, WIF may fall to \$2.8. The top 10 gainersâ€™ list also featured another Solana memecoin BOOK OF MEME (BOME). According to CoinMarketCap data, BOME surged over 10.5% in the last 24 hours to trade at \$0.01184. Highlighted Crypto News Today: Can Bitcoin Investors Maintain Their Bullish Outlook On BTC?

- The business has confirmed that it owns Bitcoin via the well-known GBTC ETF. - This is a remarkable confirmation of Bitcoinâ€™s standing as a worldwide asset for risk mitigation. The \$570 billion insurance behemoth MassMutual has taken a daring step into the world of digital assets, mirroring the increasing public acceptance of cryptocurrencies. It has recently come to light that MassMutualâ€™s 13F filings reveal the companyâ€™s exposure to Bitcoin ETFs. This strategic decision shows that conventional financial institutions are starting to see cryptocurrencies, like Bitcoin, as a real investment opportunity. In the midst of speculation over its entry into the Bitcoin landscape, the business has confirmed that it owns Bitcoin via the well-known Grayscale Bitcoin Trust (GBTC) exchange-traded fund (ETF). Institutional Investors Optimistic A remarkable confirmation of Bitcoinâ€™s standing as a worldwide asset for risk mitigation, MassMutualâ€™s investment of \$100 million in the cryptocurrency is a strong indication. The recognition of Bitcoinâ€™s potential within the conservative area of insurance investment strategies is more important than the relatively tiny investment in relation to MassMutualâ€™s entire portfolio. This is a huge step forward for Bitcoinâ€™s chances of being widely accepted, and it also shows that institutional investors are starting to see the potential in cryptocurrencies. A total of \$15.64 million was recorded as outflows, with a cumulative net inflow of \$1.78 billion and overall net assets of \$52.51 billion, as per latest data. Significantly, the GBTC ETF run by Grayscale had the most withdrawals of \$17 billion, mostly linked due to its high fees. The crypto market has lately been facing high volatility, despite which Bitcoin is able to hold above the \$62k mark. At the time of writing, Bitcoin is trading at \$62,810, down 0.54% in the last 24 hours as per data from CMC. Highlighted Crypto News Today: Massive Solana Whale Movements Stir Speculation as SOL Faces Market Volatility

In the dynamic world of cryptocurrency trading, astute investors always seek new avenues to bolster their financial portfolios. While newcomers often gravitate towards established cryptocurrencies to turn a profit, seasoned traders continuously scour the market for promising up-and-comers that could yield substantial returns in record time. Enter Fukuku Token, the latest buzz in the crypto realm, sparking excitement among investors with its potential for significant gains. In a landscape dominated by meme coins like Doge, SHIB, and PEPE, Fukuku Token emerges as a fresh contender, poised to make waves. Inspired by the Maneki Neko breed of cats, this meme coin is not just another digital asset; it represents a fusion of Japanese culture, feline charm, and the spirit of prosperity. As anticipation builds for its debut, letâ€™s explore what sets Fukuku apart in the crypto universe. Embracing the Cat Craze: The Rise of Fukuku In recent years, cats have captured the hearts of internet users worldwide with their charm and charisma. From viral memes to beloved social media influencers, itâ€™s evident that the feline reign is here to stay. Fukuku taps into this cultural phenomenon, positioning itself as the quintessential representation of the cat craze within the cryptocurrency sphere. Gone are the days of dog-themed coins; the future belongs to cats, and Fukuku leads the charge. Imagine a world where the iconic â€œDogeâ€ takes a backseat to the captivating allure of the Maneki Neko. This is the essence of Fukuku â€œ a symbol of fortune and a â€œlucky catâ€ in Japanese culture, ready to accompany investors, both novice and experienced alike, on their journey to financial success. Unlocking Opportunities: The Fukuku Airdrop As Fukuku prepares to enter the market, excitement is palpable among crypto enthusiasts. To celebrate its impending launch, Fukuku is offering an exclusive airdrop for early investors. If you get your hands on the token before the airdrop, you can benefit from the process. The airdrop is simple, yet rewarding. Within the Fukuku community on the Zealy platform, participants can earn points that unlock access to the airdrop. These tasks are designed to foster engagement and build a vibrant community around Fukuku, ensuring that every member has a chance to reap the rewards. Seize the Moment: Trading Launch and Airdrop Date With the trading launch of \$Fukuku just around the corner, now is the perfect time to get involved. Whether youâ€™re a seasoned investor or a curious newcomer, the allure of Fukuku extends to all who seek prosperity in the crypto market. Mark your calendars for the airdrop date: 13th May 2024. This is your opportunity to claim your token of Fukuku and become part of a thriving community dedicated to success. But donâ€™t wait until the last minute â€œ act now to secure your spot in this groundbreaking venture. How to Buy Fukuku: A Step-by-Step Guide Ready to dive into the world of Fukuku? Hereâ€™s how you can get started: - Download Phantom Wallet: Begin by downloading the Phantom wallet, a secure and user-friendly wallet for Solana-based assets. - Acquire \$SOL: Purchase \$SOL, the native cryptocurrency of the Solana blockchain from a reputable exchange. - Transfer \$SOL to Phantom Wallet: Once you have acquired \$SOL, transfer it to your Phantom wallet to prepare for purchasing FUKUKU. - Buy FUKUKU on Jupiter or Raydium: Navigate to either the Jupiter or Raydium decentralized exchanges within the Solana ecosystem using your Phantom wallet. From there, you can easily swap your \$SOL for Fukuku tokens. Join the Fukuku Revolution: How to Participate Ready to embark on this exciting journey with Fukuku? The first step is to visit Zealy, where you can complete social tasks to earn points and unlock the airdrop. From sharing content to engaging with fellow community members, there are plenty of opportunities to get involved and make your mark in the Fukuku ecosystem. And the rewards? A staggering prize pool of 8,888,888 \$Fukuku tokens awaits the lucky participants. With such a generous offering, thereâ€™s never a better time to join the Fukuku revolution. Follow Fukuku on social media to stay updated, and be part of the conversation: - Website: fukuku.com - Twitter: @FukukuToken - Telegram: t.me/FukukuCommunity - Instagram: @Fukuku.Token Disclaimer: TheNewsCrypto does not endorse any content on this page. Dogwifhat (WIF) and Pepe (PEPE), are far behind in the race as BlockDAG is rapidly becoming the favourite in the cryptocurrency market, driven by strong endorsements from prominent crypto influencers like BlockChainWorld. As it excels in its presale, collecting over \$23.9 million, BlockDAG is distinguished from its competitors, by its potential for a staggering 30,000x return on investment. With such a robust foundation, BDAG is carving out a leading position in the market, presenting a prime investment opportunity. Pepe (PEPE) Faces Challenges Despite Price Surge Pepe (PEPE) recently experienced a substantial 30% spike in its value, driven by large investor activities amidst a general market uptrend. Despite this positive momentum, the PEPE community encountered setbacks as internal team conflicts led to a significant theft of funds, resulting in a drastic price drop. The roadmap for PEPE is ambitious, focusing on broad market engagement and meme-driven marketing strategies. However, its high market capitalisation could restrict the sky-high returns that many investors seek, especially when compared to emerging, low-cap cryptocurrencies. Dogwifhat (WIF) Achieves New Milestones Dogwifhat (WIF), based on the Solana blockchain, has seen impressive growth, reaching new price highs. This surge reflects its popularity and the strong retention of large investors, suggesting a stable investor base with long-term expectations. Dogwifhat continues to attract attention in the meme coin sector, suggesting a promising future for investing in well-supported and dynamic crypto assets. BlockDAG Showcased for Advanced Technology and Massive ROI Potential YouTube influencer BlockChainWorld recently spotlighted BlockDAG, emphasising its innovative technology that integrates proof of work with a directed acyclic graph (DAG), enhancing speed and security. This technical prowess positions BlockDAG as a superior choice in the blockchain field, capable of supporting a wide array of applications, from everyday transactions to complex DeFi systems. The influencerâ€™s review also highlighted the intense market anticipation for BlockDAG, supported by its detailed and ambitious roadmap aiming for \$100 million in liquidity at launch. This approach secures a stable market debut and informs investor confidence in BlockDAGâ€™s long-term viability and growth, as shown in its \$9 million presale. Concluding Thoughts on BlockDAGâ€™s Market Position As BlockDAG navigates through its \$23.9 Million successful presale, nearing its eleventh batch with a price increase, the crypto community shows immense support and enthusiasm. With endorsements from leading influencers and a clear strategic roadmap, BlockDAG is well-positioned to outperform notable competitors like Dogwifhat and Pepe. Investors looking for crypto with high growth potential, industry-leading technology, and a robust community should consider BlockDAG. Its current trajectory and influencer backing suggest itâ€™s not just another crypto project, but a pivotal development in the blockchain space promising significant returns. - Although the TON/USD pair is on the market, it is only accessible to professional traders. - The opening of TON trading is set for May 9th at 16:00 (UTC+8). In April, it was reported that the TON Foundation and the HashKey Group had formed a strategic alliance to strengthen the TON Ecosystemâ€™s capacity to administer its treasury in the Asia-Pacific area. The two organizations have joined forces in an attempt to improve the

Ark will likely keep revising its weightings in the event that Coinbase's stock climbs. - The company ranked Coinbase as the third-biggest position in its ARKK ETF. Across three of its exchange-traded funds, Ark Invest led by Cathie Wood sold 70,616 shares of Coinbase on Tuesday, for a total of \$15.1 million. Recent trade filings show that the investment business headed by Cathie Wood sold 45,915 shares (\$9.8 million) from its Innovation ETF (ARKK), 17,755 shares (\$3.8 million) from its Next Generation Internet ETF (ARKW), and 6,946 shares (\$1.5 million) from its Fintech Innovation ETF (ARKF). After selling \$20.4 million worth of COIN on April 11th, coinciding with a surge in the price of the stock, Ark has not sold a substantial quantity of Coinbase shares for about a month. Having said that, on April 15, it did sell a limited quantity of Coinbase shares, valued at around \$824,000, from its ARKW fund. Diversified Portfolio According to Ark's investing philosophy, no one asset should account for more than 10% of an exchange-traded fund's total holdings. For the sake of diversity, Ark will likely keep revising its weightings in the event that Coinbase's stock climbs in comparison to its other assets in the funds. In its most recent filing, the company ranked Coinbase as the third-biggest position in its ARKK ETF, with a weighting of 8.2%. With an 8.2% weighting, Coinbase ranks as the fourth-largest position in ARKW. With a weight of 10.4 percent, Coinbase is now the most heavily weighted position in its ARKF ETF. The market value of ARKK's Coinbase holdings is \$547 million. As of this writing, the value of ARKW's COIN weightings is \$129 million, while ARKF's is \$105 million. Over the last year, the ARKK, ARKW, and ARKF funds have all seen increases of around 24%, 55%, and 61%, respectively. Highlighted Crypto News Today:

The cryptocurrency market is no stranger to volatility, and Bitcoin's recent price stagnation has prompted some significant movements among large holders, often referred to as "whales." One such whale recently made headlines by selling a portion of their Bitcoin holdings, worth a staggering \$13,000,000, amidst the ongoing price stalls in the market. This move has sparked curiosity among investors and analysts alike, especially given the whale's decision to split their capital into three specific altcoins: Hump, Ripple, and Wen. Understanding the Bitcoin Market Dynamics Before delving into the whale's strategic move, it's essential to grasp the current state of the Bitcoin market. Bitcoin, the pioneering cryptocurrency, has experienced periods of rapid growth followed by sharp corrections throughout its history. Despite its overall upward trajectory, the digital asset is susceptible to short-term fluctuations influenced by various factors, including market sentiment, regulatory developments, and macroeconomic trends. In recent months, the price of Bitcoin has encountered resistance around key psychological levels, leading to a period of consolidation. This price stagnation has prompted some investors, particularly large holders with significant capital at their disposal, to reassess their investment strategies and explore alternative opportunities within the crypto market. The Bitcoin Whale's \$13,000,000 Sale Against this backdrop, the decision of a prominent Bitcoin whale to sell a portion of their holdings worth \$13,000,000 has captured the attention of the crypto community. While selling Bitcoin is not uncommon, especially among large holders looking to realize profits or rebalance their portfolios, the timing and magnitude of this sale have raised eyebrows. The whale's move to offload a small bag of Bitcoin during a period of price stagnation suggests a strategic reallocation of capital into alternative assets with potentially higher returns. This proactive approach reflects the whale's confidence in identifying promising investment opportunities beyond Bitcoin, a sentiment shared by many seasoned investors seeking to diversify their crypto holdings. Rotating Capital into High-ROI Altcoins What sets this particular whale's maneuver apart is their choice to reinvest the proceeds from the Bitcoin sale into three specific altcoins: Hump, Ripple, and Wen. Each of these altcoins represents a unique value proposition and growth potential, making them attractive candidates for strategic investment in the eyes of the whale. Hump Token (\$HUMP): More Than Just a Meme Coin Hump Token (HUMP) has emerged as a standout player in the meme coin landscape, offering more than just a catchy name and playful branding. Positioned as a demonstration of the strength of community and the potential for decentralized finance (DeFi) to disrupt traditional financial barriers, HUMP embodies the spirit of innovation within the crypto space. Built on the Solana blockchain, HUMP boasts impressive speed and efficiency, distinguishing itself from its peers. With a total supply of 6.9 billion tokens, HUMP strikes a balance between scarcity and accessibility, fostering a vibrant trading environment. One of the key features that sets HUMP apart is its tax-free trading mechanism, eliminating the friction associated with transaction taxes and enhancing the overall user experience. As investors flock to join the HUMP community, the token's listing on reputable decentralized exchanges (DEXs) like Raydium and Jupiter further solidifies its position within the DeFi ecosystem. Ripple (XRP): Facilitating Frictionless Transactions Ripple (XRP) has long been recognized for its role in facilitating fast and cost-effective cross-border payments, making it a preferred choice for remittance use cases. Developed by the fintech firm Ripple, XRP operates on its proprietary XRP Ledger Consensus Protocol, offering scalability and efficiency without relying on traditional proof-of-work or proof-of-stake mechanisms. The recent announcement of a new dollar-pegged stablecoin on the XRP Ledger underscores Ripple's commitment to expanding the utility of XRP and driving adoption within the crypto ecosystem. With the stablecoin poised to enhance liquidity on the XRP Ledger's decentralized exchange functionality, XRP investors stand to benefit from new use cases and increased interoperability. Wen Token (WEN): A Novel Approach to Meme Tokens Wen Token (WEN) represents a unique take on the meme token phenomenon, offering a blend of humor, culture, and minor utility. Initially distributed to participants in the Solana ecosystem, WEN gained traction thanks to its playful branding and distribution strategy. While primarily perceived as a meme token, WEN has carved a niche within the broader crypto landscape, drawing inspiration from the culture of anticipation and excitement prevalent among cryptocurrency enthusiasts. Despite its lighthearted approach, WEN's emphasis on ecosystem composability and flexibility underscores its potential to carve out a niche within the broader crypto landscape. Conclusion: Navigating the Evolving Crypto Landscape In conclusion, the strategic reallocation of capital by a prominent Bitcoin whale into high-potential altcoins like Hump, Ripple, and Wen reflects a dynamic shift in the cryptocurrency landscape. As the price of Bitcoin stalls, investors are exploring alternative avenues for growth and diversification. Projects such as Hump, with its innovative approach to meme coins, Ripple's focus on frictionless transactions, and WEN's unique blend of humor and utility, offer compelling opportunities for long-term value creation. By embracing these emerging assets, investors can position themselves at the forefront of innovation and capitalize on the evolving dynamics of the crypto market. Near Protocol is bullish, demonstrating strength by surpassing the \$7 mark as Helium's price climbs to \$5.89, placing it 92nd on CoinMarketCap amid overall crypto market growth. Meanwhile, BlockDAG is capturing attention with its remarkable \$23.6 million presale success and a projected price of \$30 by 2030. BlockDAG is also gaining support from prominent YouTube crypto influencers, including CryptoDexWorld, which elevates this new coin's prominence among the crypto world. It also establishes BlockDAG as a premier crypto investment choice, providing novice investors a distinct advantage in the competitive market landscape. Near Protocol: Bullish Momentum Surges Past \$7 Near Protocol is currently bullish, having surged past \$7 and broken from a falling wedge pattern. Following lower swings, NEAR retraced to \$5 before experiencing a 34% rebound. Presently, it sits at \$7.092, marking a 3.69% increase and indicating optimistic sentiment. Analysts predict NEAR's potential to surpass \$7.60 and retest \$9. Daily charts depict a clean reversal, with buyers successfully surpassing the \$5 support level. A breakout above \$7.60 may further propel bullish momentum. Trading volume surged by 23.89% to \$299.57 million. Most indicators reflect bullish signals, with RSI in the overbought zone and MACD showing bullish tendencies. NEAR's market cap has risen by 1.57% to \$4.32 billion, with a total supply of 1 billion tokens, signifying ongoing bullish momentum. Helium Surges Amid Key Wallet Update & Growth Signals Helium price has surged to \$5.89 with a pivotal wallet update, signaling robust growth. Amidst a bustling crypto market, Helium (HNT) gains attention, elevating its market cap to \$929.4 million. With 160.8 million HNT in circulation and a cap of 223 million, future valuation potential looks promising. Helium's tweet announces the Helium Wallet App update to version 2.7.7, ensuring network stability and boosting user confidence. The Helium Mobile's 2G Group Plan offers unlimited data, talk, and text for up to eight users, simplifying mobile usage with significant cost savings. Helium Mobile enhances its LA and NYC networks with Boosted Locations, strengthening connectivity and rewarding users. Technical analysis suggests bullish trends, with resistance levels at \$5.95 and \$6.41, supported by the Relative Strength Index (RSI) at 56 and the 50-day Exponential Moving Average (EMA) at \$4.92. BlockDAG Gains Influencer's Attention, Impresses with Innovative Technology BlockDAG is rapidly gaining traction in the cryptocurrency market, having impressively raised over \$23.6 million in its presale. Projections suggest the value of the BlockDAG coin could hit \$30 by 2030, signalling strong future growth. BlockDAG is being lauded on YouTube by crypto influencers. The most recent was YouTuber CryptoDexWorld, who, in his new video, compared BlockDAG's potential to established giants like Ethereum, highlighting its transformative capabilities and promising investment prospects. The YouTuber

described BlockDAG as “the most advanced layer-1 blockchain, utilizing Proof of Work technology for enhanced efficiency and speed. It has gained widespread attention not only by investors but also by major technologies and companies and has been featured in top media outlets like Bloomberg and CoinDesk. BlockDAG’s compatibility with the Ethereum Virtual Machine (EVM) allows for fast implementation of Ethereum-based contracts, accelerating development and tapping into extensive Ethereum community resources. Moreover, the coin features a maximum supply of 150 billion, with a substantial portion allocated to the community and a smaller portion locked for team use, ensuring stability and long-term growth. BlockDAG also offers innovative mining solutions like the X1 mobile app for Android and the X2 mining machine, which are designed to be user-friendly, energy efficient, and diverse rewards, including a 10% referral bonus. Final Thoughts with NEAR Protocol’s bullish trends and Helium’s price surge shaping potential lucrative opportunities, BlockDAG’s ongoing development and robust community support position it as a significant force in the blockchain industry. Analysts are predicting a massive 30,000x ROI potential for BlockDAG, making it a top cryptocurrency for huge gains. - The founder of Uniswap raised attention to the Ethereum proposal known as EIP-7702. - New features, such as the ability to sponsor transactions by other parties, are enabled. Vitalik Buterin, co-founder of Ethereum, has put up a new suggestion to make the protocol’s smart contract push more sustainable in the long run. Notably, the new proposal has garnered intriguing remarks. The founder of Uniswap, Hayden Adams, raised attention to the Ethereum proposal known as EIP-7702. Adams offers some clarification to community members who are confused about the proposal’s implications. Quantum Resistance He emphasized that the plan was to supplant EIP-3074, which signifies an improvement for standard EOA wallets by adding smart wallet capabilities. The EIP-4337 proposal, which aims to establish standards for smart contract wallets, has also been presented by a number of Ethereum developers. The founder of Uniswap pointed out that Vitalik Buterin was not at peace with EIP-3074 even though it was planned to be included. Reason being, there are ramifications for the future of compatibility between 3074 and 4337 that come with this. In this era of quantum computers, Vitalik Buterin was worried that 3074 would break earlier than anticipated. With the introduction of the 7702 proposal, the issues with the two earlier options might be addressed. New features, such as the ability to sponsor transactions by other parties, are enabled in the proposal. The plan will go through the standard community review procedures, but its advantages will be adequately emphasized throughout. If this proposal is greenlit and released to the public, it will have no effect on the typical user, much as the Ethereum Dencun Upgrade and similar upgrades in the past. Highlighted Crypto News Today: Solana’s Remarkable Surge: Poised to Break \$200 Amid Bullish Momentum

- Since Bitcoin’s all-time high of \$73,800, daily BTC inflows have declined dramatically. - The figures show that hodler opinion has changed significantly this year. According to the most recent statistics, Bitcoin exchange inflows have hit a level not seen in over ten years. Since Bitcoin’s all-time high of \$73,800, daily BTC inflows have declined dramatically, according to data from on-chain analytics platform CryptoQuant. There is no desire among Bitcoin traders to hold currency on exchanges for a speedy sell. Daily deposits to major exchange accounts in April and May 2024 were among the lowest in the prior decade, according to CryptoQuant. Investors Optimistic Only 8,400 BTC entered exchanges on April 20, when the BTC/USD rate was about the same as it is now. Such a low volume of transactions was last seen when Bitcoin was trading for less than \$1,000. In order to get this information, CryptoQuant monitors a wide range of spot and derivative markets. As institutional investment in Bitcoin enters a new age, the figures show that hodler opinion has changed significantly this year. Despite short-term fluctuations in Bitcoin prices, such as last week’s decline to \$56,500, the appetite for expanding exposure to BTC has continued. Investors are keeping an eye out for good news related to Bitcoin whale groups. According to one of CryptoQuant’s research updates this week, whales ranging from 1,000 to 10,000 bitcoin have not been continuously involved in the current rising cycle, even though they normally cause substantial market volatility. A graph by the analyst displayed age bands of on-chain transactions based on expended output. Whales may not be willing to sell yet as the cycle has not ended, as the post mentioned. At the time of writing, Bitcoin is trading at \$63,122, down 0.14% in the last 24 hours as per data from CMC. Highlighted Crypto News Today: Solana’s Remarkable Surge: Poised to Break \$200 Amid Bullish Momentum

Tenderize is thrilled to announce the launch of TenderSwap, a groundbreaking liquidity solution tailor-made for staked assets, including Liquid Staking Tokens (LSTs) and Liquid Reward Tokens (LRTs). TenderSwap emerges as a pivotal innovation aimed at unifying the fragmented liquidity landscape, facilitating efficient liquidity provision and simplifying staking mechanisms. By introducing a unified liquidity mechanism, TenderSwap exchanges that determine prices based on the ratio of tokens in a liquidity pool, TenderSwap introduces a unique model functioning more like a clearinghouse. This model requires liquidity solely in the form of the unstaked token, simplifying transactions and enhancing capital efficiency. Stakers benefit immensely as they can swap their staked assets for unstaked tokens without enduring the typical unstaking period. This efficient process involves a minor fee, which is contingent on the increase in utilized liquidity. For a detailed understanding of the mechanics, stakeholders are encouraged to consult the accompanying white paper and yellow paper. Strategic Implementation and Vision TenderSwap has already been successfully integrated within Tenderize’s liquid staking layer, creating a cohesive liquidity ecosystem for stakers of platforms like Polygon, The Graph, and Livepeer. However, the ambition extends beyond these initial applications. The flexible model of TenderSwap is designed to be applicable to a diverse range of staked assets across various blockchains, including Ethereum and Solana, thereby enhancing its potential impact and scope. Liquidity Providers’ Advantage For liquidity providers, TenderSwap offers an attractive opportunity to earn trading fees from a broad spectrum of staked assets by providing only the unstaked token. This represents a significant leap in capital efficiency compared to traditional methods of providing liquidity for LSTs in pairs, such as those found on platforms like Uniswap. The Road Ahead As Tenderize continues to innovate and expand its ecosystem, TenderSwap stands as a testament to the company’s commitment to addressing the complex needs of the staking community. With its user-centric platform, TenderSwap is poised to redefine liquidity norms within the Web3 and decentralized finance landscapes, promising a new era of liquidity optimization and financial inclusivity. Singapore, Singapore, May 7th, 2024, Chainwire As the digital dawn of gaming rises, the visionary minds behind DECIMATED are ecstatic to unveil their groundbreaking foray into the desolate yet captivating future of online gaming. DECIMATED, a novel 3rd person PvP and PvE online game experience, invites players to an unprecedented journey through a vast dystopian landscape. Offering freedom for players to explore this post-apocalyptic playground, DECIMATED opens up a realm where players craft their own fate as human citizens struggling for survival or cyborg cops enforcing order in a world where nature and technology collide in chaos. A New World Awaits: Immersive Gameplay and Unparalleled Adventure At the heart of DECIMATED lies a richly designed, immersive world that tests each player’s survival instincts at every turn. Players engage in a relentless battle for existence against the apocalyptic aftermath, populated by mutated creatures, environmental hazards, and rival survivors. This rich narrative is further enhanced by offering players the opportunity to salvage advanced technology, uncover hidden treasures, and navigate the perils of a fractured society on the brink of rebirth. DECIMATED stands as a testament to survival, strategy, and resilience, offering a sandbox of endless possibilities. Whether patching up a battle-scarred vehicle, building impenetrable bases, to navigating the treacherous markets of this new world, players can embrace the lawless land, facing off against deranged robots, monstrous bio-entities, and other mutants, all while forging alliances or rivalries with other players to carve out a semblance of civilization amid chaos. Backed by 46 Investors and a Growing Community Decimated received an Epic Mega Grant and was backed by 46 investors in December 2021 after the studio was self-funded as an indie start-up for 3 years. Developers Fracture Labs were offered \$34M from 180 investors and accepted \$3.5M from VC’s including Mechanism Capital, Spartan Capital, Polygon Ventures, Good Games Guild, Israel Blockchain Association, Dutch Crypto Investors and Metavest Capital to name a few. Since then, the Decimated community has grown to 60k followers on Twitter and 23k members in Discord, many of whom are participating in the closed alpha testing. A Quest for Dominance in the Wasteland: The DIO Token Economic gameplay takes a revolutionary turn in DECIMATED with the DIO token, integrated into the game using the Solana chain, and with interoperability between all of Fracture Labs’ planned games. This creates a real-time digital economy within DECIMATED, incentivizing players for each and every decision made, as well as their efforts within the game itself. Every transaction, trade, and treasure found within this desolate world is valued in DIO, bridging the game to real-world economic principles, making the thrill of loot discovery and trading exponentially more engaging. The ways to earn in DECIMATED are as varied as the wasteland itself. Players can venture into the unknown, salvaging cargo and lost technology, engaging in both legal and illicit commerce to claim their fortune. Whether it’s ambushing convoys for loot, undertaking dangerous missions, or trading valuable finds on the virtual market, success in the desolate landscape of DECIMATED demands wit, bravery, and a keen sense of strategy. Decimated features a leaderboard system that rewards the best performing players, whether they play solo, in guilds or clans. A Game Forged for the Future at Token2049 Dubai In a recent announcement, DECIMATED confirmed its official sponsorship of Token2049 Dubai, underscoring its commitment to innovation, blockchain technology, and the burgeoning digital economy, demonstrating their potential for the future from the lens of immersive gaming. This sponsorship accentuates DECIMATED’s commitment to forging a future where gaming transcends mere entertainment to become a cornerstone of digital economies in virtual worlds, allowing players to earn real rewards through tournaments. The community buzzed with excitement for DECIMATED listing on the Epic Games Store in May 2024. While the official launch date is yet to be announced, the open alpha is pegged for the end of 2024, and the eagerness around this launch grows daily as players and fans are encouraged to keep an eye out for what hopes to be a landmark announcement in online gaming history. About DECIMATED DECIMATED is the future of immersive online gaming, offering a dynamic 3rd person PvP and PvE experience within a richly detailed post-apocalyptic world. With its unique digital economy and endless opportunities for exploration, combat, and alliance, DECIMATED invites players to define their legacy in a world where every decision can mean the difference between survival and extinction. In the fast-paced world of cryptocurrencies, where trends may change in the blink of an eye, predicting future success is extremely important in shaping investors’ decisions. Lately, a prominent analyst who correctly predicted Bitcoin’s historic rise has drawn attention by bringing attention to a relatively obscure competitor: Hump (HUMP). Hump has piqued the interest of investors and enthusiasts alike, with projections hinting at a 2500% rise in its value, outperforming even Polygon’s (MATIC) spectacular surge. We explore the details of Hump, its distinct qualities, and the viability of such an amazing growth projection in the article below. Unveiling Hump (HUMP): The Viral Polygon Competitor Hump is an emerging cryptocurrency that has surfaced as Polygon (MATIC)’s possible rival in the field of decentralized finance (DeFi). Despite Hump’s low price of \$0.01, its novel strategy and rock-solid foundation on the Solana blockchain have garnered considerable interest. Hump isn’t your average meme token—it’s a beacon of progress in the world of decentralized finance. Inspired by the adorable image of a furry friend, HUMP represents more than just a cute face; it embodies the spirit of innovation and community empowerment. The fundamental allure of Hump is its audacious plan to tackle some of the most significant issues confronting the blockchain sector. Because of Solana’s strong infrastructure, Hump stands out from its rivals by providing a scalable, safe, and effective platform for the purchase and sale of tokens. In addition, Hump has a thriving ecosystem with a wide spectrum of developers and partners. Its expanding community and strategic alliances are encouraging for its long-term viability and uptake. Examining the Projection: Is It Possible to Have a 2500% Pump? First and foremost, Hump has a strong platform for growth thanks to its cutting-edge technology and sound principles. Investors are drawn continuously to cryptocurrency ventures with bright futures and creative solutions as the market develops. Because of its ability to solve scaling problems and encourage widespread use, Hump has a good chance of seeing a big increase in value. Also, the projection gains credibility with the support of a reputable analyst. The analyst’s track record of properly predicting market trends, adds weight to the evaluation of Hump’s potential. Furthermore, larger market fundamentals and uptaking investor sentiment play a vital role in determining the market values of Crypto assets. Hump aims to benefit from the increased demand for novel

crypto technologies, which includes DeFi projects and meme coins. With the increasing market confidence it has garnered, Hump is set to defy expectations and rise to the top of the Crypto Gainers Chart. Conclusion The spectacular ascent of Hump (HUMP), fueled by a bold projection of a 2500% gain in value, demonstrates the dynamism of the cryptocurrency market. Hump has attracted the attention of investors looking for the next big chance in the cryptocurrency sector, thanks to its revolutionary technology, vibrant ecology, and endorsement from a leading analyst. While the estimate may appear ambitious, Hump's core fundamentals and larger market trends point to the likelihood of tremendous growth. However, investors should proceed with caution due to the inherent risks and uncertainties connected with cryptocurrency investing. As Hump gains traction and carves out a position in the cryptocurrency ecosystem, enthusiasts, and investors, will keep a careful eye on its progress. However, there is no doubt that HUMP will keep making waves and investors can capitalize on the opportunity to gain a 2500% ROI, as predicted by the Top Analyst. - Bitcoin surges 15% from recent lows of \$56,715 to surpass \$65,350. - The global crypto market has climbed over to \$2.37 trillion. - Altcoins like TON, SOL, and AVAX have shown impressive gains in the last 24 hours. The global crypto markets have witnessed a notable rebound following a jumble period, with Bitcoin spearheading the recovery by surging over 15.2% from its recent lows experienced at the beginning of May (\$56,715). Climbing above \$65,350 for the first time since April 24, Bitcoin's resurgence has infused renewed optimism into the broader cryptocurrency landscape. Notably, altcoins have showcased remarkable rallies, with assets like TON, SOL, and AVAX standing out with imposing gains over the past day. Altcoins Showing Huge Gains Despite enduring an 11.79% correction over the previous week, the global crypto market has bounced back, reclaiming a significant portion of its recent decline. This rebound has not only reaffirmed a crucial long-term support level but has also formed a bullish weekly candlestick, hinting at a potential upward trajectory. The leading altcoins have notably outperformed Bitcoin, with assets like Solana (SOL), Toncoin (TON), and Avalanche (AVAX) posting gains of 6.9%, 8%, and 7%, respectively. Additionally, the largest altcoin, Ethereum (ETH), has surged by 3% to surpass \$3,200, while Binance Coin (BNB) has climbed to \$600 following a similar increase. Other prominent altcoins, including XRP, Cardano (ADA), Dogecoin (DOGE), Shiba Inu (SHIB), and Bitcoin Cash (BCH), have also seen positive movements. Furthermore, lesser-trend altcoins such as Chainlink (LINK), Polygon (MATIC), Near Protocol (NEAR), Hedera (HBAR), and Render (RNDR), among others, have recorded even more impressive gains. While the recent bounce has been promising, the market still has ground to cover to reach its yearly and all-time highs, requiring a further increase of approximately 16.81%. The question remains whether this rebound signals the start of a sustained upward trend aimed at achieving these milestones. However, the overall crypto market cap has surged to \$2.42 trillion, marking an increase of nearly \$100 billion in just one day.

Amid the volatile world of cryptocurrencies, market dips often create opportunities for savvy investors to capitalize on fluctuations and strategically adjust their portfolios. Such was the case during the April market dip, where one particularly sizable player, known colloquially as a microcap token, seized upon the opportunity to enact strategic manoeuvres. Recognizing the allure of potential greener pastures, they made the calculated choice to liquidate their positions in Polygon and Cardano, thereby unlocking capital for deployment in more promising ventures. This decisive action underscored the whale's adeptness at navigating volatile market conditions and their commitment to maximising returns through astute portfolio management. A Microcap Gem: Introducing Hump (HUMP) Hump (HUMP), a microcap token built on the Solana blockchain, positioned as a promising contender in the ever-expanding landscape of digital assets. Priced at less than \$0.01, Hump holds immense appeal for investors seeking high-growth opportunities in the cryptocurrency space. At the time of writing, Hump is trading at \$0.006290, boasting a market capitalization of \$43.40M. What truly sets Hump apart, however, is its staggering growth trajectory, with an astounding surge of 9587% a testament to its potential and the enthusiasm surrounding its future prospects. The Giant Whale's Calculated Move Despite its status as a microcap token, Hump has captured the attention of analysts and investors alike, who are bullish on its trajectory. Many foresee Hump continuing its rally unabated, with speculation rife that it may even breach the \$1 mark in the near future a feat that would mark a monumental milestone for this nascent project. It is within this context that the giant crypto whale, having divested their holdings in Polygon and Cardano during the April dips, chose to strategically pivot towards Hump. Recognizing the potential for exponential growth inherent in this microcap gem, the whale has embarked upon a journey that promises to redefine the success trajectory of its value remains a topic of fervent speculation. While its current price may seem modest, the potential for exponential growth cannot be understated, particularly given the bullish sentiment pervading the market. For investors who have followed in the footsteps of the giant crypto whale, the decision to stake their fortunes on Hump represents a calculated bet on the future of decentralized finance and blockchain technology. While the journey may be fraught with volatility and uncertainty, the potential rewards for those who dare to dream big are equally immense. Conclusion The tale of the giant crypto whale's strategic manoeuvres amidst the April market dip serves as a compelling narrative of adaptability and foresight in the face of uncertainty. By offloading their holdings in Polygon and Cardano and reinvesting in the promising microcap token Hump, this whale has demonstrated a keen understanding of market dynamics and a willingness to seize opportunities where others may see only risk. As the cryptocurrency landscape continues to evolve, one thing remains abundantly clear: for those willing to venture off the beaten path, the potential for riches knows no bounds. As the crypto market expects a strong comeback, investors are looking out for the most promising but slightly lesser-known projects. This revitalised interest extends to the popular altcoins and meme coins as well because of their high potential. BEFE, a meme coin, has impressed one and all in recent times by its incredible performance. So let us study about the BEFE coin in detail and check out what the meme coin has to offer to its investors. Why BEFE is Different? What sets BEFE apart from the crowd is its unique combination of community involvement and practical applications on the blockchain. More than any other method, its decentralized exchange model and community-driven approach appeal to investors who want to be able to influence how much a project grows over time directly. This shows that it could go very far indeed. Key Benefits of BEFE Here are some reasons why people might consider this meme coin as being better than others: Equitable Launch: No presale was held for BEFE so that there wouldn't be any bias towards specific investors. Instead, they wanted everyone who uses or invests in them to have ownership rights over those tokens. No Taxes Involved: Hidden charges or taxes are not part of the whole process with BEFE. Amazing Expansion: Although undergoing a correction throughout all markets at present moment, yet during past occasions has shown upto 550% gains surpassing even bigger cryptocurrencies such as Dogecoin and Shiba Inu. BEFE's objective and reach The aim of BEFE is to compete favorably with established players in the meme currency industry. By being present on Ethereum, Binance Smart Chain, Solana as well as listed on Pancakeswap, Uniswap, Tapbit and Gate.io among others where it is available for trading, the project ensures it is accessible widely. BEFE is Adding Value through NFTs and DeFi Within its strategic roadmap, BEFE plans for NFTs integration alongside DeFi applications which shows that they are interested in creating value that lasts longer than just a momentary buzz in media circles. This commitment places them rightly among serious contenders within the meme coin space owing to their stellar growth rates and scalability achievements. Buying BEFE is easy to go to any supported exchange (DEX), enter token address then swap ETH or BNB across your preferred network. Additionally, holders may stake BRISE tokens so as earn themselves some more freebies i.e., BEFE rewards. Furthermore, both BSC & SOL versions' tokenomics have been fine-tuned having dedicated allocations towards marketing activities; development purposes as well liquidity provision. Conclusion Having large numbers of active traders combined with ambitious expansion strategies makes this digital asset quite interesting from an investment standpoint. However, deep research and a strategic approach are crucial to successfully incorporate BEFE into a portfolio with the potential for substantial returns. To know more about BEFE, Visit <https://befetoken.com>

Within the landscape of cryptocurrency, strategic moves by seasoned traders often signal significant shifts in market sentiment and direction. Recently, a noteworthy occurrence took place as smart money traders opted to divest from two well-known tokens, Shiba Inu (SHIB) and Dogecoin (DOGE), redirecting a portion of their funds to a lesser-known competitor, Hump (HUMP), trading below \$0.01. This decision, driven by the anticipation of a short-term downtrend in SHIB and DOGE, sheds light on the nuanced strategies employed by experienced investors to navigate the volatile crypto market. Identifying the Downtrend: SHIB and DOGE Analysis The decision to sell off Shiba Inu (SHIB) and Dogecoin (DOGE) stems from a meticulous analysis of their recent price actions and market dynamics. SHIB, after respecting a resistance zone on the 5th of March, has seen a staggering decline of 149%, indicating significant selling pressure. Similarly, DOGE has experienced a notable drop of 33.30% in April alone, signalling a potential further downtrend for both assets. Smart money traders, adept at identifying market trends, recognized these signals as indicators of a looming short-term downtrend in SHIB and DOGE. This decision was not made lightly; rather, it was backed by comprehensive research and analysis of various factors influencing the cryptocurrency market. By strategically divesting from SHIB and DOGE, the smart money trader positioned themselves to capitalize on emerging opportunities, such as the promising growth prospects presented by Hump (HUMP). This proactive approach underscores the importance of adaptability and foresight in navigating the ever-changing landscape of crypto investments. Reallocating Funds to Hump (HUMP): A Strategic Move In response to the projected downtrend in Shiba Inu (SHIB) and Dogecoin (DOGE), smart money traders made the strategic decision to reallocate a significant portion of their capital to Hump (HUMP), a small-cap competitor trading below \$0.01. Despite its humble price tag of \$0.006306 and a market cap of \$43.51M, HUMP has emerged as a force to be reckoned with in the cryptocurrency market. Over the past three weeks, it has experienced a remarkable surge in value, offering investors an impressive gain of 96x. This exponential growth trajectory has captured the attention of both seasoned traders and newcomers alike, drawing them towards the promising potential of HUMP. Furthermore, the astute move of reallocating funds to Hump (HUMP) is a testament to the trader's ability to identify and capitalize on emerging opportunities. The Appeal of Hump (HUMP) Hump (HUMP) has quickly risen to prominence, boasting listings on popular platforms such as CoinMarketCap and CoinGecko. Moreover, with impending CEX listings on the horizon, HUMP is poised to attract a wave of investors seeking refuge from the downturn experienced by other altcoins. The Appeal of Hump (HUMP) as a Safe Haven Amidst the uncertainty surrounding SHIB and DOGE, many investors have turned to HUMP as a safe haven for their capital. The promising growth prospects of HUMP, coupled with its recent surge in value, have instilled confidence among investors seeking shelter from market volatility. Furthermore, with a total supply of 6,900,000,000, HUMP offers ample room for growth and scalability within the Solana meme coin ecosystem. Conclusion: HUMP Shines Bright in the Crypto Galaxy The decision by smart money traders to divest from SHIB and DOGE in favour of HUMP underscores the dynamic nature of the cryptocurrency market. As seasoned investors leverage their expertise to anticipate market trends, opportunities arise for emerging assets like HUMP to shine. With its disruptive presence, promising growth prospects, and appeal as a safe haven investment, HUMP stands poised to make waves in the crypto galaxy, ushering in a new dimension of success within the Solana meme coin scene.
