

The coin's creators lead to a house-of-mirrors impact in which no one knows who is doing what. The token, which has the symbol SHIB, has already been flying out of the wallet of the No.2 owner at a rapid pace. Recommended for You

- DOGE: The real party begins when \$0.35 is shattered in half. - DOT, the native asset for the interoperable blockchain Polkadot, is now trading at \$1.00 per share, representing a 35.7% increase in the last 30 days. Bitcoin was trading 0.54% lower in the early hours of Tuesday morning. Bitcoin was selling at \$61,725 per coin, according to Coindesk, while Ethereum and Dogecoin were trading at roughly \$4,364 (+0.89 %) and 27.2 cents (-0.38 %) per coin, according to Coindesk. As per a well-known cryptocurrency trader, Dogecoin (DOGE) must first break over a critical price level until it can continue to climb in value. Assuring his 141,200 Twitter followers that the meme cryptocurrency will likely consolidate until it breaks past its current resistance, Altcoin Sherpa claims to be an anonymous specialist. "DOGE: The real party begins when \$0.35 is shattered in half. Until then, it's just a range of possibilities. DOGE concluded the day at \$0.271800, with a high of \$0.285800 and a low of \$0.263600. It began the day at \$0.271800 and ended the day at \$0.271800. The cryptocurrency Dogecoin plunged once more on Monday, despite these positive developments in the ecosystem and a fall of the US dollar. The cryptocurrency has now reversed its previous upward trend. According to Altcoin Sherpa, the price of Polkadot (DOT), the original currency for the interoperability blockchain Polkadot, is projected to rise as well shortly. He anticipates that the Department of Transportation will continue to combine for the foreseeable future. The unidentified researcher, the Graph (GRT), a platform that analyses and organizes blockchain data, is actively observed. According to Altcoin Sherpa, the cryptocurrency GRT is sending out positive indications for long-term investors. From observing the expert, there appears to be a significant amount of accumulation on this coin. There's a substantial amount of information pouring in. He goes on to say that he would be willing to step in for a passive trade. GRT is now trading at \$1.00 per share, representing a 35.7% increase in the last 30 days. Recommended for You

- Shiba Inu is currently the 9th biggest cryptocurrency, valued at almost \$37 billion. - Dogecoin, with a market worth of \$36 billion, is the tenth largest. While most of the spotlight has been on Bitcoin and Ethereum, many meme currencies have risen in recent months. Some investors think meme coins are real and should be treated seriously. Dogecoin and other cryptocurrencies have exploded in popularity. Three Meme Tokens reached the top 100 crypto by market cap list. Let us explore these meme currencies. Shiba Inu (SHIB) Shiba Inu (SHIB), a meme-inspired cryptocurrency and Dogecoin derivative, has set an all-time high recently, surpassing \$0.00008456 as per CoinMarketCap. The SHIB's record-breaking market capitalization has now overtaken other prominent altcoins. Shiba Inu is currently the 9th biggest cryptocurrency, valued at almost \$37 billion. Dogecoin, with a market worth of \$36 billion, is the tenth largest. In terms of market cap, Shiba Inu has surpassed Uniswap, Luna, USD Coin, Polkadot, and XRP. On October 18, tech magnate Elon Musk posted a snapshot of the SHIB currency travelling to the Moon, fueling speculation. The token was once worth \$0.000026. However, according to CoinMarketCap, his tweet boosted the currency by almost 50% to \$0.000044. Moreover, the market cap of SHIB is at \$37,202,961,387 at the time of writing. Dogecoin (DOGE) Musk has been quite vocal about his support for Dogecoin on Twitter, initially posting about it in 2019 as it rose to become a top 10 cryptocurrency at the end of the year. The millionaire explained why he owns Dogecoin and promotes it on social media. DOGE has a market cap of \$36,655,021,282, according to CoinMarketCap. Yooshi (YOOSHI) Yooshi has developed on its promising start in the GameFi crypto market, earning a price and attention boom. As a result, Yooshi's token YOOSHI has reached an all-time high in the last week. It seems like Yooshi has become the number one trending search currency, according to CoinGecko statistics. According to CoinMarketCap, the price hit an all-time high of \$0.000000710508. YOOSHI has a market cap of \$1,161,751,409. - SCRT has been rising exponentially for a week. - After hitting a new high, CRV tested prior resistance around \$4.20. October was a great month for cryptos. On October 20, Bitcoin (BTC) climbed by 32% to a new all-time high, while six altcoins soared by 100%, led by Shiba Inu (SHIB). Let us take a look at the top five cryptocurrencies that grew the most in October. Shiba Inu (SHIB) SHIB has been rising since early October. It's increased since October 23. SHIB surged by 217 percent in only four days. But a major Fib resistance level at \$0.000088 denied it. As of now, it is 4.618 External Fib Retracement Level. It acts as a local top during an upward movement. For October, the price surged 1005%. It also corresponds with the 1.61 external Fib retracement level of the last dip from the May high. Finally, the volume has decreased since the start of the pump, indicating a slowing upward trend. Secret (SCRT) SCRT has been rising exponentially for a week. On October 28, it surpassed the \$10 mark for the first time. Between \$13.90 and \$14.25 is the next resistance zone. Because both levels have a similar target, the region should be resistant. For October, the price surged 350%. Frax Share Price (FXS) Since October 20, FXS has risen rapidly. However, the current price is at the last resistance level before an all-time high of \$14.80. On October 26, this resistance region rejected FXS, forming a lengthy upper wick. However, it is presently attempting a second breakout. If successful, the next resistance is at \$24.90. The last dip was measured at a 1.61 external Fib retracement barrier. For October, the price surged 224%. Fantom (FTM) Like SHIB and FXS, the FTM surge intensified on October 22. On October 26, FTM was rejected at \$3.45 by the 2.61 external Fib retracement. It regained its balance and tried again but failed. If a breakthrough happens, \$4.41 would be the following resistance. While 3.61 external Fib retracement resistance level for the latest dip. For October, the price surged 195%. Curve DAO Token (CRV) CRV has been rising rapidly since October 22, when it broke out of a declining resistance line. This signalled the conclusion of the

previous all-time high correction. After hitting a new high, CRV tested prior resistance around \$4.20 and found support. On October 28, it hit another all-time high before reverting to support. At \$6.85, resistance is encountered. Moreover, 1.61 external Fib retracement level is for the last decline. For October, the price surged 120%. - YooShi GamePad offers pre-launch services to game creators. - Lossless is a token creator's anti-hack tool. The Crypto sector had a bullish month, with many coins renewing their ATH. Moreover, some unexpected entries and rallies took everyone by surprise. Both Bitcoin and Ethereum created new highs, and we also saw SHIB climb to the third position. Now let us take a look at the top five most gained coins of this bullish month. Dogelon Mars (ELON) ELON was named after Elon Musk, CEO of Tesla Inc. ELON. It is a project that will continuously be developing, according to its developer. Dogelon is an Ethereum-based ERC20 token. Oct 29-30, the token gained over 200 percent after being posted on OKEx and Crypto.com. Dogelon Mars' market value increased from \$26 million on October 1 to \$1.4 billion on October 30. According to CoinMarketCap, the Dogelon Mars price today is \$0.000002 USD with a 24-hour trading volume of \$561,437,139 USD. The token has surged 3840 percent this month, ranking at first as per CryptoRank. YooShi (YOOCHI) YooShi's game metaverse is dedicated to constructing a connection between the P2E game and players, making the game not only for enjoyment but also for profit! YooShi GamePad offers pre-launch services to game creators such as selling NFT, Farms, NFT auction and trading marketplace, etc. According to CoinMarketCap, the YooShi price today is \$0.000002 USD with a 24-hour trading volume of \$52,875,951 USD. The token has surged 981 percent this month, ranking at second as per CryptoRank. Shiba Inu (SHIB) SHIB is termed "DOGECOIN KILLER" and is listed on ShibaSwap, its decentralized exchange. The adorable attractiveness of the currency combined with articles and Tweets from individuals like Elon Musk and Vitalik Buterin drew a community of investors. According to CoinMarketCap, the SHIBA INU (SHIB) price today is \$0.000067 USD with a 24-hour trading volume of \$8,647,696,828 USD. The token has surged 801 percent this month, ranking at third as per CryptoRank. Lossless (LSS) Lossless is a token creator's anti-hack tool. Its technology stops fraudulent transactions and restores stolen monies to the owner's account. Blockchain, cyber-security, fin-tech, DeFi, and cryptocurrency professionals launched Lossless in Q1 2021. Furthermore, the LSS token allows participation in the lossless network. As a result, holders of LSS tokens have the power to stake and thereby freeze fraudulent transactions, which will be reviewed and assessed. According to CoinMarketCap, the Lossless price today is \$1.50 USD with a 24-hour trading volume of \$10,177,153 USD. The token has surged 763 percent this month, ranking at fourth as per CryptoRank. Spell Token (SPELL) Abracadabra.money is a lending platform that accepts Interest Bearing Tokens (IBT) as collateral. Furthermore, SPELL is its token, utilized for rewards and voting rights when staked! According to CoinMarketCap, the Spell Token price today is \$0.027031 USD with a 24-hour trading volume of \$83,210,846 USD. The token has surged 667 percent this month, ranking at fifth as per CryptoRank. Recommended for You

- The top 5 crypto of the week, MANA, ELON, SNAD, SHIB, BAT. - Decentraland is a self-possessed virtual reality platform. - Dogelon Mars, Ethereum-based crypto using the ERC-20 token. The top 5 crypto token of the week are Decentraland (MANA), Dogelon Mars (ELON), The Sandbox (SAND), Shiba Inu (SHIB), and Basic Attention Token (BAT). 1. Decentraland (MANA) The top crypto token of the week is Decentraland (MANA). It is a self-possessed virtual reality platform powered by Ethereum blockchain that enables users to create, experience, and monetize content and applications. Users will purchase plots of land in the virtual world that they can alter navigate, build upon and monetize. Decentraland uses two tokens, MANA and LAND. MANA is an ERC-20 token that must be burned to acquire non-fungible ERC-721 LAND tokens. Furthermore, as per CoinMarketCap, MANA's price is trading at \$3.35, with a 24-hour trading volume of \$31,400,811,860. In the last 24-hour MANA price increased over 140%. MANA can be traded in crypto exchanges such as Binance, Mandala Exchange, CoinTiger, OKEx, and Upbit. 2. Dogelon Mars (ELON) Dogelon Mars, Ethereum-based crypto using the ERC-20 token standard. It is the meme coin, it was born out of a joke and makes references to Elon Musk, Dogecoin, and the planet Mars. Dogelon Mars (ELON) promises to become an interplanetary currency among other extreme presumptions, clearly living up to its billing of a meme coin. More, according to CoinMarketCap, Dogelon Mars (ELON) price was trading at \$0.000002016, with a 24-hour trading volume of \$650,540,230. At the time of writing ELON's price increased by over 3.80% in the last 24-hour. ELON can be traded in top crypto exchanges such as OKEx, KuCoin, ZT, gate.io, and BKEX. 3. The Sandbox (SAND) The 3rd top crypto token of the week is The Sandbox (SAND). The sandbox is one of the blockchain-based virtual worlds enabling users to create, build, buy and sell digital assets in the form of a game. Henceforth, by merging the powers of decentralized autonomous organizations (DAO) and non-fungible tokens (NFTs), The Sandbox creates a decentralized platform for the flourishing gaming industry. At the time of writing ELON price trading at \$1.75 with a 24-hour trading volume of \$7,055,753,009. As per the CoinMarketCap, the circulating supply of ELON is 892,246,119.22 SAND. ELON price surged over 48.06% in the last 24-hour. 4. Shiba Inu (SHIB) SHIB is the DOGECOIN KILLER and will be listed on their own ShibaSwap, a decentralized exchange (DEX). The Shiba Inu aim to be the Ethereum-based counterpart to Dogecoin's Srypt-based mining algorithm. Moreover, SHIB is te part of the swarm of dog-themed cryptocurrencies, which include Baby Dogecoin (BabyDoge), Dogecoin (DOGE), JINDO INU (JIND), Alaska Inu (LAS), and Alaskan Malamute (LASM). According to CoinMarketCap, SHIB's price was trading at \$0.00006379, with a 24-hour trading volume of \$7,755,009,721. More so, the circulating supply of SHIB is 549,095.51B SHIB. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, FTX, and Huobi Global. 5. Basic Attention Token (BAT) The 5th top crypto token of the ween is a BAT. Basic Attention Token is the token that powers a new blockchain-based digital advertising platform designed to fairly reward users for their attention while enabling advertisers with a better return on their ad spend. The primary

Basic Attention Token is a payment token for running advertising campaigns through Brave Ads. BAT is an ERC-20 token, it is built on the Ethereum blockchain. So BAT is secured by a carefully tested, proof-of-work (POW) consensus algorithm supported by an extensive Ethereum miner network. Accordingly, BAT's price was trading at \$1.08 with a 24-hour trading volume of \$3,834,223,155. As per CoinMarketCap BAT's price surged over 29% in the last 24-hour. BAT can be traded in top crypto exchanges such as Binance, Mandala Exchange, OKEx, Upbit, and FTX.

- DOGE price dropped over 8% in the 24-hour. - If DOGE can't able to reach above \$0.28 today, it will fall to \$0.245. - Dogecoin's (DOGE) daily circulation has declined drastically. In recent few months, crypto markets continue to rise gradually. With several cryptocurrencies in the crypto market in a bullish direction. Accordingly, Dogecoin (DOGE) one of the leading cryptocurrencies in the crypto market, unfortunately, dropped over 8% in the 24-hour. Still now DOGE is trading in a wide channel with no strong bullish or bearish signals. If DOGE can't able to reach above \$0.28 today. Then it may continue to fall to the level with the biggest liquidity, around \$0.245, to gain additional energy for growth. Furthermore, as per Blockchain on-chain analytics service, Dogecoin's (DOGE) daily circulation has declined drastically since reaching a three-month high on October 29, 2021. The major reason for the drop in circulation might be the price of meme coins. More so, huge amounts on the market following high network activity, including a 43 percent price rise. DOGE again reached 12% after reaching a nearly three-month high, and then only dived below 5%. The Crypto market is undergoing more volatility. With more traders and investors, and is transferring their digital assets from exchange wallets to the personal wallet and vice versa. With prices stabilizing and volatility decreasing, market players are more likely to leave their assets on exchange or wallets without moving them, resulting in a reduction in daily circulation. At the time of writing, as per CoinMarketCap, DOGE's price was trading at \$0.2648 with a 24-hour trading volume of \$3,652,820,725. The circulating supply of DOGE is 131.92B. DOGE price was decreased by nearly 8%. And this fall continues we can expect a strong bearish movement in the upcoming days.

- Shib's IPO on Robinhood is slated to take place next week. - The Shiba Inu whale purchased 16,528,196,899.9738 SHIB tokens. Shiba is now the most popular meme currency among traders. The coin has grown at a quick pace, eclipsing competitors and important players in the process. Shiba Inu has once again outperformed Dogecoin in terms of market capitalization. Digital money is gaining acceptance among financial institutions at an alarming rate. The weekend, on the other hand, is critical for the future of SHIB. Owners of SHIBs now have even more reasons to be happy. Adam Aron, the CEO of AMC Entertainment, conducted yet another study. So, should the firm consider Shiba Inu as a cryptocurrency in addition to Bitcoin, Ethereum, Litecoin, and Dogecoin? SHIB received 79.8 percent of the votes cast in the election. Robinhood Listing In addition, Shiba Inu is now accepted as payment at a Parisian eatery. Shib's IPO on Robinhood is slated to take place next week. SHIB is now the third most searched cryptocurrency on Google in 2021, behind only BTC and ETH. According to CoinMarketCap, the meme currency was trading at \$0.00007247 at the time of writing, representing a 7.2 percent increase in value with a market capitalization of \$39.861.549.365. The total volume of trade for the day was \$9,859,081,557. Shib is still on the short side. Currently, volumes are low. Weekends is critical for the meme coin's growth. It must maintain a level of support over \$0.00006. Depending on the market, a dip from there might bring it down to \$0.00004-\$0.000037. Recovery seems to be difficult in the short term. Furthermore, it might take 6-8 months to reach its peak. The Doge-killer is taking part in the short-lived marathon this year. However, the coin has repeatedly shown them to be incorrect. According to reports, the Shiba Inu whale purchased 16,528,196,899.9738 SHIB tokens. A gloomy indication of a greater leap to come is expected.

- Shiba Inu (SHIB) stops at ATH of \$0.00008685. - SHIB creates tremendous markets for the entire crypto industry. - After dethroning DOGE, SHIB is now expected to hit new targets of \$0.0001. Shiba Inu (SHIB) can now be officially declared the crypto of the year. Yes, it's obvious and with just a little more for the year 2021 to end, hopes for any other altcoin or even Bitcoin (BTC) to spike as much as SHIB are low. Moreover, the hype of SHIB was so massive that, throughout the month of October witnessed many new and new first time comers into the crypto industry. In spite of this, it's obvious that SHIB has made many new billionaires and millionaires recently. Apart from all so far, expectations are on rise with more and more investors pouring into SHIB vividly. Future for SHIB Almost everyone in the industry is now either trying or willing to put their hands into SHIB, looking for themselves to get a taste of it! Accordingly, SHIB came to a stop by reaching more and more ATHs throughout the past 24 hours. Finally, it came to a stop after touching \$0.00008685 as its ATH till this moment. With this, SHIB keeps everyone intrigued by maintaining a \$0.00007 price range. In spite of this the overall market cap value of SHIB is drastically rising every second. At present, the market cap for SHIB stands strongly at \$38,621,037,173.70. With the market cap on rise, denotes that SHIB will be profusely continuing it's journey even more steady than ever before. Furthermore, analysts and predictors all upon studying SHIB earnestly term that SHIB will never stop and its momentum is so high. Also, they predict that SHIB will for sure reach and break the next target barrier of \$0.0001! What's After Killing DOGE? Apart from dethroning the Dogecoin (DOGE), as it has always wanted, the DogeKiller- SHIB is not ready to settle any further in peace. However, DOGE spiked up and this helped it gain back its throne though. Yet, SHIB is fighting profusely and its market cap is on the rise too. Moreover, in a short time again it's expected SHIB to over-run DOGE again and again. In addition, many analysts term that there are high possibilities for SHIB's price to surpass DOGE!

- SHIB is outperforming the mainstream cryptocurrencies. - The price value of SHIB has surged over 167% in a week. - Top three crypto tokens of the week are SHIB, MANA, and SCRT. The popularity of crypto tokens is surging and their adoption is massive since the spike of Bitcoin price value.

cryptocurrencies have become a major part of the financial sector and it is also said to be the future of finance. The crypto market witnesses many coins each day while the count of cryptocurrencies is surging up. Rather than mainstream crypto-assets, many altcoins are outperforming leading cryptocurrencies. Currently, the cryptocurrency which is trending in the market is Shiba Inu (SHIB), which has crossed over 92212581% in a year. If an investor had invested around \$1000 in SHIB seven months ago, then the investor would be a millionaire now. The price value of Shiba Inu has exceeded the performance of Bitcoin and other leading cryptocurrencies as well. Within a few months, the growth of SHIB is very impeccable and it has overtaken the rank of Dogecoin. According to Coinmarketcap, the top three cryptocurrencies of the week are Shiba Inu (SHIB), Decentraland (MANA), and Secret (SCRT). Significantly, these coins have performed well for the past week resulting in huge gains to their users. SHIB has especially grabbed the attention of the whole crypto market with its bullish run. Its uptrend in the price chart continues to surge up without any flaws. Three Outperforming Altcoins The first cryptocurrency in the list of top crypto tokens of the week is Shiba Inu (SHIB) which is presenting an ultra-bullish run. It has been presenting its green chart for the past few days and it's been the talk of the town recently. At the time of writing, the trading price of SHIB is \$0.00007406 which has surged over 167% within a week. According to the volume, SHIB holds the 9th rank on the list pushing Dogecoin to 10th rank. With its splendid performance, SHIB has become one of the top 10 cryptocurrencies in the market. The second top performer of the week is Decentraland (MANA) which has gained over 45% in the last 24 hours. At the time of writing, the trading price of MANA is \$1.26 with the price surge up to 59% in the past week. The third top token of the week is Secret (SCRT) which is currently trading at \$9.21. Consequently, SCRT has set a new all-time high one day ago at \$10.38 where the current price is 11% lower than ATH. According to Coinmarketcap, SCRT holds the 82nd rank by volume and it has soared over 75% within a week. However, these tokens have the potential to continue the uptrend and set new ATH in the next term. The holders of these tokens are experiencing a sweet spot as the performance is astounding and results in massive gains. These tokens have proved that altcoins are better performers than leading cryptocurrencies.

- The emotional worth of meme coins is tied to unrealistic earnings. - To achieve 10 cents price, the market cap must hit \$40 trillion. Shiba Inu has led a stunning rally that many in the business find implausible. The coin's rise has inspired other meme currencies. While DOGE trails the rally. Despite the famous ones being under the shadow, meme currencies rise. Smashing the market value of Dogecoin, Shiba Inu has finally shown itself as a Doge-killer. But, analysts expect a drop in prices. SHIB is now trading at \$0.00007019, up roughly 28.8%. Earlier today, the canine coin touched \$0.00008616, closer to losing another digit from its market worth. It is presently valued at \$38,383,621,475 and is ranked 9th. SHIB is up 124266381.6% from its 11-month low. Consider the return on investment if hodled. Suppose a trader had invested \$1,000 at the start of the year. The rewards would be in the billions. Sources say a wallet that purchased SHIB for \$8,000 in August is now worth over \$5 billion. The profits are attracting additional purchasers. Sources indicate that the availability of SHIB coins on exchanges is dwindling as traders move money to cold wallets. As a result, the exchange supply is back to early May levels. May Hit Rock Bottom A crypto enthusiast acknowledges SHIB's dominance. But he advises investors to take measured risks. While recommending against it. True, the coin has risen, defying the odds. Moreover, every day it levels up more than it should. That alludes to FOMO. Meanwhile, netizens believe 25 persons own 95% of SHIB, which worries the people. And may hit rock bottom. The emotional worth of meme coins is tied to unrealistic earnings in most cases, which may be pocket heavy. Earlier today, the dog-based currency rose from \$0.00000734 on October 1st to \$0.00008616. Aiming towards the \$1 milestone. Analysts say SHIB won't touch a dollar, ten cents, or even one penny soon. To achieve 10 cents, the market cap must hit \$40 trillion. That's far from reality. Major factors have propelled the SHIB price increase. There will also be a rise in listings under exchanges and NFT. As a result, prices will likely correct in the near future. But SHIB may not consolidate as quickly as DOGE. Considering its expanding usefulness, protocol, and use cases.

Crypto market is on the recovering process after a millions loss in the market capitalization. More so, the global performance of the crypto industry is maintaining a green line with 54.28% profits in trading volume within a day. At present, the market is showcasing a bull run despite the price dip of both the top cryptocurrencies in the marketplace. As per the record, Bitcoin (BTC) and Ethereum (ETH) have fallen on the red line in 24 hours. But, Shiba Inu, meme-coin, empowered the entire crypto market turning out to be the trending coin for the day. SHIB- The Crypto Star Surprisingly, Shiba Inu took over the attention of all the crypto users in just 24 hours, ranking among the top 10. As per today's cryptocurrency prices by market cap, SHIB is ranking first as the most trending coin. Remarkably, Shiba Inu's trading volume spiked over 57.14% in just 24 hours, exciting the users. In addition, SHIB recorded a profit of 1000% since the start of Q4, 2021 thus becoming the star player of the crypto space. Also, SHIB marked a new all time high standing on a value of \$0.00008845 on October 28th, 2021. Through this, entire crypto users attention turned towards the meme coin gaining more popularity within a day. Moreover, in the last 24 hours Bitcoin (BTC) prices showed huge fluctuations to the least reaching upto \$58,287. Meanwhile as the market was already in dip with the BTC price fall, Shiba Inu took over in the race making a new ATH. On the other hand, the meme coins are generally showing a rise in their performances which drives a lot of users. Many crypto analysts speculate these coins are working on the green margin profiting the users for short term needs. Thus, these profits from small coins enable the users to take interest to invest on long term crypto assets. Notably, the current market status of SHIB is \$0.000072 with a hike up to 7.77% in the last 24 hours. Thus, the Dogecoin Killer is on fire with a huge spike in the price along with a new ATH mark in the market.

- Robinhood's crypto exchange transactions are down for Q3. - In turn, the HOOD stock prices tumbles

down by 10%. - Robinhood exchange pulls out surveys upon its users of the crypto traded upon the firm. In spite of the month of October, being highly prolific for the entire crypto industry, sadly for this whole month into study as a writer, this is the my first negative news for the month. Not all of the crypto industry has been happy throughout. Accordingly, the crypto exchange Robinhood firm has lost its highly significant revenue in recent times. In similar aspects, the impacts have been statistical for the entire Robinhood firm. The Exchange Revenue Drop Ever since the financial services firm based in America, Robinhood launched its very own crypto exchange, the revenue from this exchange alone proved to be of a significant value. Moreover, with the passage of time, this revenue has become a vital part for Robinhood. For the first time for the year, the revenue for the firm from the crypto transactions upon its exchange has gone down. This is due to drop in the transactions upon the exchange. In addition, the total revenue from the transactions upon the third quarter, Q3 is about 78% less than that of the previous quarter of the year, Q2. Accordingly, the second quarter, Q2 of 2021 saw about a total revenue of \$233 million solely upon the crypto transactions upon its exchange. On the other hand, for Q3 of 2021, the total revenue amounted to only \$51 million. Despite all this, the report from Robinhood states that about 62% of the revenue from Q3 is from the transactions of Dogecoin (DOGE) alone! Sink of Stocks In spite of the low revenue of Q3, many other aspects of the firm got affected profusely. As a result, the stock of Robinhood, the "HOOD" dropped down by 10%. Accordingly, the price of the stock HOOD fell from \$42.28 to \$35.04. This fall in the stocks took place at the exact time Robinhood declared officially through its reports denoting the fall in revenue of Q3. Moreover, statistical data shows that the same trend of Q3 is said to prevail for Q4 of 2021 too. Besides all the fall downs, in order to find a mitigation plan for its crypto exchange transactions, Robinhood pulled out a survey upon its users. And so, upon the survey which consisted of a list of prominent cryptos, users were asked to select the crypto they traded upon recently.

- Lark Davis tweets optimistic upon Shiba Inu (SHIB) . - He states SHIB has excelled over other altcoins with respect to trading volumes. - Accordingly, SHIB reaches ATH of \$0.00006915. The profuse analyst, advisor and investor, Lark Davis owes lots for the crypto industry. Moreover, rather than just being a profuse investor, his analyses, predictions and investment advice surely plays a major role upon both the stocks as well as the crypto industry. In addition, more than just being an investor only upon Bitcoin (BTC), he also has invested in many altcoins. Being an avid game player in the industry, words from him are to be surely taken on a serious note. Accordingly, Lark Davis put out a tweet a few hours back from the time of writing depicting the eternity of Shiba Inu (SHIB). The Tweet In spite of all the hype throughout the month of October, SHIB soars above making a level range for its own, setting its bar higher and higher. Accordingly, in the early hours of October 27, Lark Davis took to Twitter, sharing his views on SHIB. In addition, he tweets, SHIB has excelled over upon taking into account the trading volumes. Also, he adds, SHIB has covered more trading volumes compared to Solana (SOL), Ripple's XRP, Cardano (ADA), and Dogecoin (DOGE) all combined together. Though being skeptical on what basis he has put out this, many term that his tweet is based upon the trading volumes of the month of October alone into account. Performance of SHIB Accordingly, as Lark Davis is being optimistic upon SHIB, many also commented upon his tweet in the same manner. However, a few analysts also fear a huge dumping of SHIB any moment. Also, they term this dump to be massive. Yet, many are still skeptical when SHIB will go down. On the other hand, SHIB has reached yet another ATH a few hours back. And so, the price of SHIB marks \$0.00006915, now as its ATH. Moreover, the overall market cap of SHIB now stands a whopping \$27 billion, making SHIB the 11th largest upon the crypto rankings.

- SHIB has reached its new all-time-high (ATH) at \$0.0000594. - A petition on Change.org requesting Robinhood to list Shiba Inu (SHIB). - Meme tokens contributed significantly to Robinhood's crypto revenue A decentralized cryptocurrency Shiba Inu (SHIB) price skyrockets to a record high due to a high possibility of Robinhood adding support for the mem token. In the last 24-hour SHIB has surged over 28% to \$0.00005732, as per CoinMarketCap. And today SHIB has reached its new all-time-high (ATH) at \$0.0000594. Eventually, the crypto market cap is now \$28.3 billion. Accordingly, a petition on Change.org requesting Robinhood to list Shiba Inu (SHIB) to trade. The petition now reached 334,620 signatures. On Tuesday, during Robinhood's third-quarter update, Robinhood CEO, Vlad Tenev was mentioned to be optimistic about adding new cryptocurrencies, saying that they will be carefully considered and monitored. More so, Vlad Tenev noted, "We feel very very good about the coins that we're currently listing on our platform and any new coins that we add we want to feel equal, if not better". Furthermore, traditional brokerage and apps, which includes Robinhood, have been seriously considering adding the crypto trading facility to their platform as it becomes critical to their growth. Past month, a commission-free Stock Trading & Investing app, Robinhood also announced that it is considering adding crypto wallets making it easier for its users to send and receive crypto assets. Also, meme cryptocurrencies in the crypto market have contributed significantly to Robinhood's crypto revenue. Dogecoin has contributed 64% of the app's crypto revenue. Moreover, Co-founder and CEO of electric car maker Tesla, Elon Musk responded to the tweet posted earlier this week, saying that he doesn't own any SHIB crypto in his portfolio. Musk's comments introduced some volatility in the SHIB price on Monday.

- Ethereum invented the blockchain smart contract idea. - Dogecoin's proof-of-work mechanism varies from Bitcoin's in various areas. Huobi is one of the major cryptocurrency exchanges situated in Asia, operating since 2013. It has rebranded itself as Huobi Global, a global crypto exchange that supports a broad range of altcoins and stablecoins. Let us take a look at the top 6 trending coins on the exchange. Bitcoin (BTC) It has established a worldwide community of millions of fans that develop, invest, trade, and utilize Bitcoin and other cryptocurrencies daily. The birth of the first cryptocurrency paved the way for hundreds of more competitors. According to CoinMarketCap, the price of BTC at the time of writing is \$62,151.76, with a 24-hour trading volume of \$32,119,630,724. BTC

ranks in the first position on top trending tokens on Huobi Global. Ethereum (ETH) Ethereum invented the blockchain smart contract idea. Smart contracts are computer programs that automatically perform steps required to fulfill an online agreement. A trusted intermediary between contractors is eliminated, lowering transaction costs while enhancing transaction dependability. According to CoinMarketCap, the price of ETH at the time of writing is \$4,159.80, with a 24-hour trading volume of \$15,234,256,867. ETH ranks in the second position on top trending tokens on Huobi Global. Dogecoin (DOGE) Dogecoin's proof-of-work mechanism varies from Bitcoin's in various areas, including employing Scrypt. The cryptocurrency has a block period of 1 minute and an unbounded supply, meaning it may be mined indefinitely. You may mine Dogecoin alone or in a mining pool. According to CoinMarketCap, the price of DOGE at the time of writing is \$0.2647 with a 24-hour trading volume of \$2,716,982,041. DOGE ranks in the third position on top trending tokens on Huobi Global. Shiba Inu (SHIB) The SHIBA INU encourages dog-inspired artists from across the globe to join their SHIBA INU community in the NFT market. SHIBA INU has also set up an Amazon Smile campaign to raise the Shiba Inu Rescue Association funds. According to CoinMarketCap, the price of SHIB at the time of writing is \$0.00004601 with a 24-hour trading volume of \$9,994,981,302. SHIB ranks in the fourth position on top trending tokens on Huobi Global. Solana (SOL) Solana, known for its blockchains lightning-fast processing rates in the crypto world. Solana's hybrid protocol reduces transaction and smart contract validation times. Solana's lightning-fast processing speeds have also piqued institutional attention. According to CoinMarketCap, the price of SOL at the time of writing is \$204.67, with a 24-hour trading volume of \$3,602,956,540. SOL ranks in the fifth position on top trending tokens on Huobi Global. TRON (TRX) TRON wants to be a place where content producers may directly engage with their consumers. By removing centralized platforms like streaming services, app stores, and music sites, producers hope to save money on intermediaries. As a result, customers may pay less for content. Given its rising digitization, TRON may have a good start in using blockchain technology in the entertainment business. According to CoinMarketCap, the price of TRX at the time of writing is \$0.1026 with a 24-hour trading volume of \$2,841,493,807. TRX ranks in the sixth position on top trending tokens on Huobi Global.

- SafeMoon Inu (SMI) has spiked over 255% in the last 7 days. - Today SMI has hit its new all-time high (ATH) at \$0.00003774. - In the last 30 days, SMI price surges over 2605%. A community-driven meme & gaming token, SafeMoon Inu (SMI) has spiked over 255% in the last 7 days. And today SMI has hit its new all-time high (ATH) at \$0.00003774. SafeMoon Inu (SMI) is one of the meme tokens such as Dogecoin (DOGE), Shiba Inu (SHIB), and some more. SafeMoon Inu is the result of combined Doge and SafeMoon. SafeMoon Inu is a smart ERC20 token with beyond moon potential which helps to survey in the industry. Accordingly, SafeMoon Inu (SMI) is not a usual meme token, it has many unique features compared to other meme tokens. SMI community is creating a crypto gaming platform named SMI Play. Henceforth, the forthcoming play-to-earn gaming platform SMI play with in-game NFTs provides additional rewards for SMI token holders. Furthermore, with the various updates and upgrades, SMI price was gradually increasing following this as aforementioned SMI price has hit its new all-time high (ATH). And the reason for the price surge might be the trader's interest. Therefore, we can expect SMI will expand tremendously. SMI Current Market Status According to CoinMarketCap, at the time of writing, SafeMoon Inu's (SMI) price was trading at \$0.00002899 with a 24-hour trading volume of \$2,407,112. In the last 24 hours, SMI price has surged over 32%. The circulating supply of SMI is 1,000.00B SMI. The above chart depicts the continuous bullish trend of SMI for the last 7 days. In 7 days SMI was gained from \$0.0000082 to \$0.0000289 which was tremendous growth. In a week SMI price spikes over 255% and in the last 30 days SMI price surges over 2605%. So it was clear that in the past month SMI price was in a bullish state, and if this continues we can expect SMI to reach more heights. Recommended for you

- Shiba Inu exploded during the weekend to trade above \$0.00004 at writing. - Ethereum returned above \$4,000 and nearly touched \$4,200. - The trading volume stands at \$15 billion, with a market value of \$20 billion. While the Bitcoin market has maintained its bullish perspective, there has been some volatility. In the wake of Bitcoin's meteoric rise to new all-time highs over \$67,000, alternative cryptocurrencies have gained popularity. Last week, Ethereum rose above \$4,000 for the first time in almost a year and came close to reaching \$4,200. Solana has increased past \$200, whereas Shiba Inu erupted over the weekend, trading at \$0.00004 at writing. Elon Musk, the founder and CEO of Tesla, has admitted that he does not own any Shiba Inu dogs, but this hasn't seemed to concern the Shiba Inu community. On the other hand, Musk has stated that he now holds Bitcoin, Ethereum, and Dogecoin. Despite the dismal news from the billionaire Tesla, the Shiba Inu rose past \$0.00004 and was on the verge of reaching \$0.000045 in value. According to the company, it has a \$15 billion trading activity and a market capitalization of \$20 billion. Shiba Inu has reclaimed the 11th market position, replacing the USDC coin. At the time of this writing, the Dogecoin offshoot is trading at \$0.000041 per coin. Support at \$0.000035 has already been maintained, encouraging bulls to resume control of the market. Another push past \$0.000045 might set off the next round of the rally toward \$0.0001. In the recent week, Ethereum came close to closing the gap on Bitcoin, which reached an all high of \$4,400, but was forced to drop below \$4,000. The zone around \$3,900 was essential in ensuring that kept losses were in check and that recovery could get underway. As depicted on the four-hour charts, the 50 Simple Moving Average (SMA) and the rising trend line helped confirm this specific buyer congested zone. During this period, Ethereum is trading at approximately \$4,143 at writing, as bulls continue their efforts to turn the record high into resistance. In the same timeframe, the MACD is expected to offer a buy signal, which would further solidify the bulls' position in the marketplace. Please recognize that the relative strength index (RSI) has shifted back in favor of the bulls as it recoils from the middle and approaches the overbought level. This demonstrates that purchasers are becoming more active in anticipation of another rise that will push Ethereum to \$5,000. Recommended for You

- Shiba Inu presently has the most circulating coins (395 trillion). - Shiba Inu's market worth has

risen by almost 50% in the previous week. On October 24, cryptocurrency prices remained mixed. While BTC is struggling to stay over \$60K, ETH is up 2.2 percent. ADA, SOL, XRP, and DOT are all in red. Shiba Inu, the meme crypto, has just touched an all-time high. Shiba Inu (SHIB), a Dogecoin (DOGE) spin-off token, has risen 46% in only two days. A positive trend that started on October 15 has helped SHIB token's value soar by almost 26%. It has been trading at \$0.00002796 since October 17 until breaking out to its all-time high. Shiba Inu's market worth has risen by almost 50% in the previous week, making it the 13th biggest cryptocurrency, only three positions below Dogecoin. Shiba Inu presently has the most circulating coins (395 trillion). Birth of a Baby Shiba Inu In September, when Tesla CEO Elon Musk announced the birth of a baby Shiba Inu called Floki, the token soared 40%. Over the previous week, Shiba Inu prices have been consolidating. After a substantial increase in early October, SHIB/USD started to consolidate, regressing to \$0.00002. SHIB/USD has recently reached lower highs and higher lows, ultimately resting below \$0.00003. A probable push higher later this week is indicated by Shiba Inu trading sideways below support. Shiba Inu finally broke higher yesterday, reaching \$0.000035. The previous all-time high was smashed overnight, pushing SHIB/USD to \$0.00004442. According to CoinMarketCap, the SHIBA INU price today is \$0.000039 USD with a 24-hour trading volume of \$13,487,405,149 USD. Moreover, it has a live market cap of \$15,273,310,310 USD. Also, it has a circulating supply of 394,796,000,000,000 SHIB coins. Recommended for You

- Players may buy NFT surprise boxes in the MemeKiller marketplace. - Chinese Brunt and Chinese Guard are now accessible. MemeKiller is an NFT game platform on Binance Smart Chain (BSC). The platform's gameplay relies on killing memes to obtain prizes. Players will lead their NFT-represented meme squad into war in 3D, collecting money along the way. MemeKiller's tokenomics and gameplay set it apart from other meme-based initiatives. The MemeKiller team has shared a gameplay sample video on Twitter showing off the game's features. The video shows players exploring their home base, a PvP war arena, and a forthcoming "Military Trip" feature. The demo also shows the player's inventory. Users may also get NFTs that symbolize guns and other stuff in the game. These NFTs will have varying rarities and effects. These goods, character skins, and more may be found in MemeKiller NFT loot boxes. Players may buy NFT surprise boxes in the MemeKiller marketplace. Each box will have a distinct theme and include unique goodies. Each box has a rarity rating, and the number of available goods varies. Only 500 of Each Box Accessible Chinese Brunt and Chinese Guard are now accessible. The Brunt box offers several weapons, whereas the Guard box has various armour coverings. There are only 500 of each box accessible, so players must move quickly to get the contents. MemeKiller wants to be a part of the fast expansion of the NFT-gaming business. Their mix of pop-culture memes, 3D gaming, and DeFi ecosystem principles helps them on BSC. MemeKiller might become a famous blockchain gaming destination in the near future if they keep improving their platform and concept. According to CoinMarketCap, The live MemeKiller price today is \$0.151614 USD with a 24-hour trading volume of \$818,828 USD. MemeKiller has been up 66.83% in the last 24 hours. Recommended for You

Colombia is a restrictive country with a legal environment for digital currencies as it is a big deal to operate crypto businesses within the country. Besides, all the banking institutions are prohibited to provide funds for cryptocurrency firms. Colombia is not a crypto friendly country in comparison to other African countries. But now, it is the second most country with more cryptocurrency ATMs in its regional areas. As a result, there is a sudden ongoing surge of crypto ATMs in Colombia. Thus, it is becoming an important factor for easy crypto adoption within the country. Colombia and Cryptocurrency Till date, Colombia is a country which has a high usage of currencies in its country. Thus, it can be the reason for a sudden boom of crypto ATMs in the region. Besides, Colombia was ranking first place until El Salvador declaration of Bitcoin (BTC) as a crypto legal tender. Thus, El Salvador's plan in accepting bitcoins provided promising potential benefits against many challenges. Surprisingly, at present Colombia is hosting 50 cryptocurrency ATMs and ranks second among the latam region. However, Colombia's unfavorable legal regulations had shut down many cryptocurrency businesses. And cryptocurrencies are not classified as legal tender in Colombia as well. Despite strict authorities, many cryptocurrency ATM companies were eager in offering digital services in the country. As it is an unexpected change in Colombia, CEO of Buda, a Latam-based exchange Alejandro Beltr  n shares that Colombia is rising to be a vital crypto hub in currencies and transactions. Also like Venezuela it is ranking in top 3 in the global adoption index. Moreover, the smart strategy to launch crypto ATMs is active in the capital of the country. So the existence of crypto ATMs in the latam regions depicts it mostly targets the city areas far from the borders. Thus, it increases the transaction functionality between the countries driving the use of ATMs. However, this initiative to raise the existence of crypto ATMs within the country will help people to manage and transact funds easily. It reduces the limitations present in the financial sectors and creates effective transactions for the customers. Thus, Colombia is already a leading country for huge cash usages among the other African countries. In addition, these crypto ATM contributions will support the country to grow both economically and digitally to larger extents. Recommended for You

- The XinFin Decentralized Oracle Platform Plugin provides low-cost smart contract solutions. - The Plugin also improves scalability and security for blockchain applications. Blockchain technology may alter enterprises using smart contract-related blockchain frameworks like XinFin. Many oracles exist to bridge the gap between blockchain applications and external data, but not all of them succeed. The XinFin Decentralized Oracle Platform Plugin provides low-cost smart contract solutions. GoPlugin.co collects data from other sources, consolidates it, and makes it available to its customers at all times. This is the most challenging component for any decentralized oracle service with strong user confidence. It is based on PLI. Also, the PLI token uses XinFin's XRC 20 standard to reduce GAS expenses. It also enables transaction time and allows multiple Dapps to contact Data Oracle globally. The precise value is obtained by combining data from several oracle nodes. This does not mean the system is decentralized. A decentralized oracle relies on the community to pick data sources and

validators and reward and penalize. 500 Million Total Token Supply 500 Million is the total token supply. Since PLUGIN is the industry-standard oracle service provider, many PLUGIN are required to satisfy all those contract demands. Because the Proof of Burn mechanism depletes the quantity of tokens, a steady flow of new PLUGIN is needed. The Plugin (PLI) token is now approved on Globiance. La Rosa said the exchange now has a PLI token for the "XDC Rapid Listing Initiative." The Bittrue listing raised the PLI token's value by over 67%. Until then, the crypto community anticipates a price rise for the PLI token, similar to the previous Bittrue launch. #Xinfin We're listing \$PLI @GoPlugin today after they successfully passed the #BTRVote Thanks to your support ! Deposits are open NOW, and pairs with \$USDT open at 11:00 UTC today. <https://t.co/W9oRxDa5xi> [pic.twitter.com/4t3v98Pjmc](https://t.co/4t3v98Pjmc) " Bittrue (@BittrueOfficial) October 15, 2021 Users who want to use the PLUGIN Ecosystem's data stream must swap XDC for PLUGIN tokens or use FIAT money on exchanges. The user must pay the contract using the XinPay wallet before requesting data or value from the data feed. The Plugin also improves scalability and security for blockchain applications that utilize its data streams. The key advantage of using Plugin is the inexpensive cost of the data feeds compared to other Oracle suppliers. The data streams are also tailored to the demands of the XinFin community. So Plugin may be used as a decentralized, scalable, and reliable oracle. Moreover, Dapps have endless potential, and oracles are required to standardize their institutions. To prevent security issues with a blockchain-based peer-to-peer system, the community must choose data sources, validators, and reward/punishment systems. The Plugin rewards the best performers and penalizes the poorest. XDC Network nodes can operate decentralized web3 APIs 24/7 without centralized failure. Increasing the use-cases of blockchains. It is an Agnostic Blockchain Platform. The APIs will be independent of the blockchain platform. Any blockchain, DLT, or non-DLT platform should work. Users may also sell their data feeds and existing APIs straight to smart contracts. To establish data oracles for decentralized apps, blockchain developers may leverage the XDC Network. - Avalanche's first desktop wallet launched version 2.0. - AVAX price will also hit its strong resistance level of \$71 soon. - we can also expect AVAX price may regain its lost position. A layer one blockchain that functions as a platform for decentralized applications (dApps) and custom blockchain networks is Avalanche. Recently, Avalanche's first desktop wallet launched version 2.0. The new features in version 2.0 are quite compatible with all the DApp on Avalanche blockchain. With this new update, Avalanche (AVAX) could climb up to its peak in the forthcoming days. Avalanche's (AVAX) price will also hit its strong resistance level of \$71 soon. Lots of great new features and tools in version 2.0, check out their browser plugin compatible with every DApp on #Avalanche <https://t.co/ocnsgKDeu9> " Avalanche " (@avalancheavax) October 22, 2021 Accordingly, in the time of mid-May, the AVAX price experienced a huge crash after this now the asset went parabolic. After witnessing the ups and downs, AVAX has shown a bullish sign and surge over \$60. Eventually, with the latest drop and corrections, the AVAX price chart has formed the w-shaped pattern and broke the resistance level, and moved upwards. Furthermore, since the mid of August, the AVAX platform has undergone an immense surge of volume, which has given huge confidence and a boost to the price. After the recent up and downs from \$60 to nearly \$50 and also reached the resistance level. Therefore, as forementioned, AVAX formed a w-shape. Henceforth, with a recent gain in AVAX price, the asset broke the next resistance level and moved towards a strong resistance level at \$71. If it breaks the resistance level then we can expect a new all-time high (ATH) soon. AVAX Current Market Status As per CoinMarketCap, AVAX's price has been trading at \$66.73 with a 24-hour trading volume of \$539,966,583. At press time, in the last 24 hours, AVAX price has increased by over 1.90%. The circulating supply of AVAX is 220,286,577.21 AVAX. It can be traded in top crypto exchanges such as Binance, Coinbase, Huobi Global, Bitfinex, Gate.io, Kucoin, and more. More so, currently, the chart displays an ascending channel pattern, if this trend continues then the levels at 1.4 FIB levels at \$126 could be an achievable target. And we can also expect Avalanche's (AVAX) price may regain its lost position and reach more heights will the new ATH. Recommended for You

- The initial hype with BITO could fade after a week. - Gold used to be an effective tool to hedge against inflation. - The second bitcoin futures ETF in the U.S. launched Friday. As opposed to investment opportunities in newly created futures trading exchange-traded funds. According to the global investment firm JPMorgan, inflation fears are driving bitcoin prices to record highs (ETFs). "the flow shift continues intact, supporting a bullish prognosis for bitcoins through year-end." The business said, noting that investors are shifting their money away from gold ETFs and towards bitcoin funds. A research note issued this week by JPMorgan Chase analysts led by Nikolaos Panigirtzoglou explained that inflation. Instead, the excitement surrounding the first U.S. futures trading exchange-traded fund has already been driving up. The price of bitcoin to all-time highs (ATH). After just one day of trading, the Proshares Bitcoin Strategy ETF (ticker: BITO) has garnered almost \$1 billion in assets under management. On Friday, the second bitcoin derivatives exchange-traded fund (ETF) in the United States opened. They go on to say that "by itself. The introduction of BITO is unlikely to ignite a new phase of considerably. Additional fresh money into bitcoin," and they provide the following explanation: Our research indicates that bitcoin is perceived as an improved inflation hedge than gold. This perception, in turn, has prompted a transition away from gold ETFs and into bitcoin funds, which has occurred since September. As the experts pointed out, "the initial excitement surrounding BITO may dissipate within a week or two." Earlier today, according to information from Bitcoin.com Markets. The price of bitcoin reached an all-time high of \$66,899, a new all-time high. It is currently valued at around \$61,249 at the time of writing. This index has climbed by roughly 40 percent. It is since the start of the month and by more than 90 percent since January 1, 2015. When the market expected the authorization of a bitcoin futures exchange-traded fund (ETF) by the Securities & Exchange Board of the United States. The bitcoin price significantly increased in value (SEC). Not only have JPMorgan analysts clarified that the real driver behind bitcoin's price increase has been starting to grow inflationary concerns. But they've also mentioned that this has

prompted investors to look at investments that, can act as a hedge against this risk, such as gold as well as bitcoin. The gold standard was formerly seen as an effective inflationary buffer. However, it has been unable to respond effectively over the last week to growing concerns about rising cost pressures on the company. Recommended for You

- Ripple's XRP fell 0.03 percent - XRP is looking solid - XRP is now trading in the red at \$1.09 just at the time of writing. Because sellers are attempting to catch over-leveraged bulls in the short term, both Bitcoin and Ethereum have reversed course in search of underlying support. It appears that XRP will hold up well despite Ripple's ongoing legal struggle with US regulatory agencies. An unprecedented level of resistance in XRP is expected to be converted into support, laying the groundwork for a significant price increase. A 0.03 % decline in the value of Ripple's XRP occurred on Friday. Following a 5.04 percent decline on Thursday, Ripple's XRP closed the day at \$1.08883. Before making an upward rise, Ripple's XRP fell to an intraday low of \$1.08 in the middle of the afternoon, following a difficult start to the day. Ripple's XRP rocketed to an intraday high of \$1.12 in the middle of the afternoon, breaking above the 38.2 percent Fibonacci retracement level of \$1.0659 and the first significant support level of \$1.0609. After failing to break past the first critical resistance level at \$1.1400, Ripple's XRP fell as low as \$1.07 per dollar. After briefly rising to the \$1.09 level later in a day, Ripple's XRP fell back into the negative territory again. Right now, XRP is trading inside the red, at \$1.09, as of writing. After receiving the SEC's letter, Ripple reacted by explaining its privilege assertions, along with a partial transcript of the three specific documentation sought by the defendants for in-camera inspection in the XRP dispute. He has requested the court to make these materials public to the defence, and he has maintained to contend that the plaintiff's "privileged" stance is unwarranted. In addition to being the creator of the Pac Protocols network, David Gokhshtein is a crypto influencer who frequently tweets about the cryptocurrency industry. Most recently, he spoke about the Ripple vs SEC lawsuit and how the outcome of the legal battle between Ripple and the SEC will be beneficial to the XRP cryptocurrency. David mentioned an initial interview with Ripple CEO Brad Garlinghouse as evidence that the company will work with the Securities and Exchange Commission (SEC) to resolve the issue if the investment strategy of the Ripple token is defined clearly. According to David, if the SEC determines that Ripple's asset class is a security or not, it will also determine whether or not cryptocurrencies are securities under federal securities laws. In addition, the SEC's clarification will catalyze for the XRP & cryptocurrency markets to take off. Recommended for You

- The price of ETH has dropped by nearly 2% to \$4,112. - Bitcoin has lost over \$5,000 in a single day. - Cardano prices have dropped roughly 3 per cent to \$2.16. Two days after the launch of the first bitcoin futures marketplace fund in the United States. Bitcoin fell from its all-time high, causing cryptocurrency values to collapse, which has continued into today. Bitcoin has lost nearly \$5,000 in one day, whilst Solana has gained approximately 10% since the previous trading day. It is now trading for \$4,112 per token, a decrease of approximately 2 percent. Compared to the previous day, Cardano prices have dropped roughly 3 percent to \$2.16, while dogecoin values have dropped 3 percent to \$0.24. Although Bitcoin (BTC) has just reached new highs and has experienced other swings. Crypto analyst and trader Michal van de Poppe is optimistic about the future of various alternative currencies (altcoins). He explains his most recent analysis on Chainlink's native assets in a new strategy session, which marks the beginning of the new planning session for the prominent trader (LINK). At this point, I believe that Chain Link will still be in the field of concern if interested in taking a strategy on this one. "The way I see it, everything is perfectly OK; it's just waiting for the right moment to explode." Traders' attention now turns to the Curve DAO Token (CRV), the asset that drives the automatic market maker protocols of the same name. The currency, he predicts, will move sideways in the short future before making a significant breakout. In his opinion, the Curve has been witnessing a nice retest, a lovely structure in which we will most likely see continuing toward opposition here, before some minor comprehensive and multidimensional phases into the area here. Then we will break out at some point later on. Next, Van de Poppe examines the Skale (SKL) decentralized internet protocol suite (DApp), a decentralized application (DApp) protocol that intends to aid developers in avoiding Ethereum congestion issues. The SKL, according to him, will begin to rise by the end of the month next. In the following section, Van de Poppe examines the charts for The Graph, a decentralized Blockchain Indexing Service (DBIS). THORchain (RUNE), a decentralized cross-chain liquidity protocol expected to post a higher bottom. Signaling that yet another upwards surge is in the works, according to the cryptocurrency researcher. Especially in the case of supply network VeChain (VET), van de Poppe says he's sticking to his prognosis from early October, anticipating that the coin will go below at least 0.00000149 BTC before a long-term rally can begin. - McLaren Racing has launches McLaren Racing Collective. - McLaren Racing will release the collectibles in five stages. - The first four components will be released on October 24th. Today, the famous racing team McLaren Racing has launched an innovative platform, McLaren Racing collective. McLaren Racing is a British motor racing team. The one main mission of the team is to win Grands Prix and World Championships. McLaren Racing team has entered their first Formula 1 race in 1966, then McLaren has won 20 Formula 1 world championships, and more than 180 Formula 1 Grands Prix. The fans and collectors of McLaren Racing can purchase its digital collectibles or non-fungible tokens (NFTs). The new launch McLaren Racing Collective will act as McLaren Racing's official location for many opportunities to own a piece of McLaren Racing for the long term. More so, the first drop will enable the fans and blockchain admirers alike to purchase various components of the MCL35M 2021 Formula 1 race car built from the official McLaren Racing CAD. The first 5,000 fans joined in the collective platform will be gifted a first digital component. And the fans can purchase one or more components as they launched to collect all 22 to assemble the complete digital MCL35M race car. Lindsey Eckhouse,

Director, Licensing, e-commerce and esports, McLaren Racing mentioned, "We are excited to launch McLaren Racing Collective, which allows us to engage our fans in an innovative new space". Accordingly, McLaren Racing will release the collectibles in five stages, and the first four components will be released on October 24th. The new McLaren Racing Collective is developed on Tezos, the energy-efficient blockchain, and official Technical Partner. Along with McLaren Racing, Tezos also facilitates the creation of limited digital assets so that fans can purchase their very own piece of them. Even more, the first person who completes a full MCL35M will win a VIP trip to a 2022 Formula 1 Grand Prix. Recommended for You

- Facebook is almost complete with its cryptocurrency and digital wallet. - U.S lawmakers term Facebook is incapable of maintaining cryptocurrency of its own. - U.S lawmakers issue notice against Facebook's crypto plans and digital wallet. With the entire world plunging into crypto driven ecosystems, the social media giant Facebook Inc has been into the game too. Besides, numerous efforts and developments spent for the past 2 years by Facebook, it finally is all set to launch a cryptocurrency of its own including a digital wallet known as the Novi. In spite of all this, the U.S lawmakers certainly seem to oppose Facebook's plans ever since the start. And so, now they officially issue a notice letter to Facebook in order to stop all the work in relation to upbringing its own digital currency and to stop its digital wallet. The Lawmakers Contradictions In spite of all the buzz created by Facebook upon its crypto plans for the past 2 years, the U.S lawmakers abruptly raise their oppositions. Accordingly, the team of senators, Elizabeth Warren, Sherrod Brown, Brian Schatz, Tina Smith, and Richard Blumenthal raised their opposition against Facebook. Accordingly, they officially sent out a notice letter to the CEO of Facebook, Mark Zuckerberg. Moreover, the senators terms that Facebook is again working profusely upon its cryptocurrency plans in a bad period of time. Also, they exclaim Facebook has come forward and launched their crypto platform and digital wallets despite being a network incapable completely in aspects of finance. In addition, they also point out that Facebook cannot maintain a payments network solution platform, as they couldn't even manage to maintain and secure the data of the platform's users though. Facebook's Reply On the other hand, Facebook's digital wallet, Novi, says that they will be for sure replying to the Senators letter officially. Furthermore, Facebook has been working on the Novi platform which ought to be a payment solution and e-commerce too. However, it has been under strict opposition from the lawmakers and policy makers from the afar that Facebook would take over the money control and also putting the users data privacy at stake. - Chainlink has been recovering steadily over the past month. - Dreams Quest announced several Chainlink service partnerships. The current quarter of 2021 seems historically positive for crypto. With a flurry of green candles, the crypto market recaptured the \$2.5 trillion milestones. Meanwhile, Chainlink has been recovering steadily over the past month as whales acquired LINK tokens. Its revolutionary partnerships are positioning it for huge price action! Santiment recently reported that big wallet addresses (1 million-10) purchased 167.7 million tokens worth \$431 million. Whales currently have 25% of the entire circulating supply. \$Y-3 #Chainlink sits at a modest \$25.70, but whale traders are staying busy & adding to their bags. Addresses with 1M to 10M \$LINK now own 167.7M tokens worth \$431M. In the last 4 months, through this volatility, these whales have added 15.2% more \$LINK. <https://t.co/MJcXwUTvz0> pic.twitter.com/N8xqjE240s " Santiment (@santimentfeed) October 19, 2021 Despite the recent price decrease, whale traders have amassed 16.8% of the overall link supply. Increasing asset scarcity will boost price momentum in the coming days. New Partnerships and Improvements However, the cryptocurrency is working on new partnerships and improvements to increase the price. In the past 24-hours, the platform teamed up with three renowned IT companies. To assist traders in buying characters, goods, and equipment, Chainlink collaborated with POCOLAND. Dreams Quest announced several Chainlink service partnerships to incorporate its dynamic NFT gaming experience. Both chains linked up on the same day. The latter was with BaconDAO. This integration will provide a tamper-proof randomness source on-chain. Chainlink is now trading at \$25.90, up 0.96 percent in the past day. On the 4-hour chart, the cryptocurrency has created an M-shaped pattern and is about the line of breaking down. In September 2021, the altcoin created a W pattern twice. But the asset failed to break out. Hence, with RSI and MACD showing positive signs, the asset may consolidate before resuming an advance. With further positive optimism, the price may break through \$33 and reach the next ATH. With more whale piling and less sell-off pressure, the cryptocurrency may soon reach new milestones. According to CoinMarketCap, the Chainlink (LINK) price today is \$26.01 USD with a 24-hour trading volume of \$685,264,458 USD. Recommended for You

- Investors have recently started eyeing Solana. - SHIB Price has been making headlines since early October. Investors and traders have flocked to the crypto sector in record numbers. While Hodlers choose popular currencies like Bitcoin and Ethereum. Fans praise the fundamentals and price fluctuations of other currencies. Polkadot (DOT) Polkadot is a top choice for investors. DOT has the 8th largest market cap. As per CoinMarketCap, the Polkadot (DOT) Price was \$41.83, with a market value of \$43,868,164,477. The 24-hour trading volume is \$1,883,772,401. It peaked at \$43.19 in the last 24 hours. The currency is approaching its short-term ATH of \$49.35. With the parachain auctions, it is anticipated to hit 3-digits this Bull Run. On the route to ATH, the coin must overcome a \$44 barrier. Conversely, DOT's support level is around \$39.5. Solana (SOL) Investors have recently started eyeing Solana. According to CoinMarketCap, the market cap of the 7th biggest digital currency is \$47,441,638,332. The 24-hour trading volume is \$1,775,716,209. Its 24-hour high is \$165.55. To begin its upward trend, the digital currency must hold above its support level of \$151. The coin's significant resistance is around \$163.12, where it has been denied five times since October 15th. To climb the rankings, the coin must overcome this obstacle. But SOL is still below its ATH of \$213.47. Dogecoin (DOGE) Doge is again on the move. Popular in public platforms lately. According to CoinMarketCap, the meme coin has a market cap of \$33,838,750,457 and a value of \$0.257. The 24-hour

Trading volume is \$3,142,709,549. The coin is now ranked 9th on the market rankings. DOGE Price has broken its triangle. The currency is nearing its \$0.28 resistance, and then around \$0.3. Suppose it can overcome the approaching obstacle. However, the coin's crucial support level is \$0.2163. Doge is also breaking the downtrend line for the fourth time. SHIBA INU (SHIB) SHIB Price has been making headlines since early October. The coin has outlasted its misperceptions. Elon Musk's tweet has resurrected the Doge equivalent. According to CoinMarketCap, the Doge killer is worth \$0.00002782, with a market value of \$13,431,045,943. The 24-hour trading volume is at \$3,216,772,645, regaining its 12th position recently. While the resistance stays at \$0.000029, the currency must hold above its support at \$0.000026. The high of \$0.00003791 is still far away. Altcoins continue to attract the attention of investors and dealers. Alternatives for the next alt season are much anticipated. This may happen as early as the first quarter of 2022. Altcoins' growth has netizens optimistic. Recommended for You

- Whales are buying the meme-based coin. - The prices remained stable and did not decrease. On-chain data from Santiment suggests that the fuel tank for another big move may have been depleted. Still, the social volume and overall attitude about Shiba Inu remain very favorable and robust. In contrast to social media indications, the market data from SHIB does not seem to be increasing in lockstep with them. In the last week, the token's trading volume on Binance exceeded 11 trillion tokens. Compared to a prior week when it was close to 200 trillion tokens. Investors Still Interested Positive social volume may imply that traders and investors are still interested in the token's future. But not prepared to support it financially. SHIB, a cryptocurrency that has lately surpassed Bitcoin, Ethereum, and Dogecoin in terms of social media popularity. Has received much attention from investors who still believe in the coin. According to earlier reports, whales are buying the meme-based coin and placing their bets on its growth. Prices very likely rose on October 11 as a result of the tremendous amount of purchasing power displayed. This is a 19 percent decrease from the previous high of \$0.00003563. Following a period of extremely high open interest in SHIB futures, the open interest in SHIB futures has also decreased significantly. In spite of the fact that most traders pulled their money out of meme derivatives, their prices remained stable and did not decrease. According to CoinMarketCap, the SHIBA INU price today is \$0.000027 USD with a 24-hour trading volume of \$2,524,119,478 USD. Recommended for You

- Shiba Inu (SHIB) is experiencing its bullish run. - According to Coinmarketcap, SHIB moved from 20th position to 14th position. - In terms of market capitalization value SHIB is nearing Dogecoin. Currently, crypto enthusiasts would have noticed that one meme-currency has been in its bull run for the past week. Shiba Inu (SHIB) has been moving in an uptrend for the past week. It also records as the highest gainer of the week in the crypto-market. Surprisingly, now SHIB has moved from 20th position to 14th position in the table of cryptocurrencies listed by market value. Notably, other famous meme-currency Dogecoin holds the 10th position whereas Shiba Inu is just three positions away from it. Significantly, Shiba Inu is moving forward in terms of price value and market value as well. Thus many will have questions like whether SHIB has a chance to outperform the king of meme-currencies - Dogecoin. Consequently, SHIB is chasing Dogecoin in the rally of bullish run and the factor is that SHIB has the potential to overtake Dogecoin. As a matter of fact, Dogecoin is the primary factor for users to know about meme-currencies. In fact, Dogecoin began as a joke coin which has now evolved to be the top 10th cryptocurrency all over the world. Moreover, the pillar for Dogecoin's fame is Elon Musk, CEO of Tesla. The support for Dogecoin which Musk showed to his followers through social media accounts created a buzz and led to the trend of DOGE. Shiba Inu's Bullish Rally However, following the trend of Dogecoin, many got inspired and the market began to witness a higher number of meme-currencies. One such coin is Shiba Inu which was inspired by the dog - Shiba Inu as the image for Dogecoin. Shiba Inu (SHIB) token was established in August 2020, a decentralized cryptocurrency created by a person called - Ryoshi. Within a year, the popularity and adoption which SHIB has gained are impeccable. Now, it competes with the mainstream cryptocurrencies as the performance of SHIB is flawless. Investors believe that Shiba Inu has the potential to outperform Dogecoin and other mainstream crypto-assets. Furthermore, if the bullish trend for Shiba Inu continues then it has a high chance to overtake the position of Dogecoin soon. SHIB was also started as a joke coin but it has now come all the way forward within a year. Moreover, SHIB is currently trading at \$0.000031 while it is 13.2% up in the last 24-hours. It might also set up its new all-time high in the near future, so SHIB token holders can now enjoy this sweet spot. - Gene Simmons bought Cradano (ADA) at low in the beginning of the year. - Now the value of Gene Simmons ADA is about \$700K. - He also possesses a number of other cryptos evidently. The American rock star who ruled the 1970s can never be forgotten. Despite the age of 72, he still maintains to be active too. In such aspects the rockstar who also goes by the name - The Demon - is abruptly an avid crypto investor and enthusiast. Accordingly, he has made a number of investments over the years and now most of all his crypto investments are ripe with profits. Besides, he bought Cardano (ADA) at the beginning of the year 2021 around February and now its value has more than doubled up. Gene Simmons ADA Investment In spite of being old news of Gene Simmons buying ADA for \$300K in the month of February, now its hot as the value of his ADA has reached \$700K. Moreover, the investment he has put in has more than doubled till date. According to a recent interview by him a couple of days ago, the rockstar terms that ADA is just one of the 14 crypto assets he owns. Moreover, at the time he bought ADA, he took to twitter, tweeting ADA is the one crypto he truly believes in. Also, upon the interview he abrupt utters that the name - Cardano - actually is idiotic and he just prefers it being called as - ADA. Gene Simmons Other Crypto Assets Furthermore, Gene Simmon reveals that he

has a total of 14 crypto asset investments, upon which ADA is one. Accordingly, he says he has invested both in Bitcoin (BTC) and on Ethereum (ETH). Besides, buying BTC at around the price of just \$10K, now it values to \$57K, which he trades profusely, he acknowledges. Also, he comments that all his crypto assets have done well throughout time. On the other hand, he revealed that BTC and ETH compromise major proportions of his total crypto assets investments. In addition, he proclaims that he has sold Dogecoin (DOGE) upon Elons radical tweets earlier this year. Moreover, he advises that before investing in cryptos, one should do the research completely themselves. Otherwise itâ€™s worthless, he terms. - The typical investor holds Shiba Inu for six days. - SHIB is almost \$11 billion market worth. Cryptocurrencies have outperformed the stock market over the last decade. Shiba Inu is the newest digital currency to offer jaw-dropping gains in a short period. Shiba Inu surged almost 260 percent in a week, reaching the top 20 cryptocurrencies by market size on Oct. 8. A mystery whale purchased huge quantities of Shiba Inu lately. It became the worldâ€™s 12th-largest cryptocurrency, overtaking Litecoin and Avalancheâ€™s AVAX. However, the bulk of cryptocurrencies have no competitive advantages and serve no real-world function. Even though itâ€™s almost \$11 billion market worth, Cryptwerk reports that just 43 companies globally accept Shiba Inu as payment. Long-term conviction is also lacking. According to Coinbase, the typical investor holds Shiba Inu for six days. SHIB investors should grasp the reasons behind the fundamentals of Shiba Inu and invest in other major currencies with greater real-world uses and more consistent profits, according to renowned crypto analyst Simon Dedic. Canâ€™t wait for SHIB investors to come to their mind and invest in solid high caps like \$ETH, \$ADA, \$SOL or \$DOT. â€” Simon Dedic (@scoinaldo) October 11, 2021 Defraud Investorâ€™s Out of Their Cryptos Moreover, ShibaSwap does not contribute anything new to the Ethereum decentralized finance (DeFi) ecosystem. Because it runs on the Ethereum network, it has more use cases than Dogecoin, but it wonâ€™t perform better. Itâ€™s a good thing Buterin contributed to two organizations that need to sell their ShibaSwap tokens quickly to keep the price low. The contributions gave prominence and legitimacy, but they will make ShibaSwap fight to regain its former glory. Depositing cryptocurrencies into anonymous projects like ShibaSwap is particularly risky since the coding may enable developers to defraud investors out of their cryptos. Scams costing millions of dollars are becoming increasingly frequent in DeFi. But ShibaSwap hasnâ€™t been audited yet. According to CoinMarketCap, the SHIBA INU price is \$0.000029 USD with a 24-hour trading volume of \$5,804,335,569 USD. The QuarkChain is a decentralized blockchain services provider platform, with QKC as its native token. The QKC has surged about 69.3% throughout the past 7 days. In spite of this, the price of QKC now stands at \$0.034. Recommended for You

- DefiLlama said the TVL is now under \$300 million. - Fans expect a debut on RobinHood soon. An unidentified investor bought 6.3 trillion SHIB coins in two days. On October 1, the whale purchased a massive 6 trillion SHIB coins valued at approximately \$43,838,900. The whale then bought another 116 billion coins the next day, followed by two more 159 billion coin transactions and a 1 billion coin buy all in the span of a few hours. The whale bought 276 billion SHIB coins on Saturday, October 2. Due to the large volume, the SHIB coin price rose 5% before settling at 3%. But this isn't the first time a whale has helped a meme currency. Shiba Inu was launched in August 2020 to capitalize on the success of Dogecoin, which drew thousands of investors. Unlike Dogecoin, Shiba Inu levelled instantly. The total value locked (TVL) for Shiba Inu in June and July rose close to \$2 billion. DefiLlama said the TVL is now under \$300 million. No matter, unknown SHIB whales have bought huge parts of the asset. The SHIB was re-transferred. The money was transferred many times before landing in an unknown wallet. The crypto community is wondering who anticipated and profited from this surge. A whale that travelled 6 trillion SHIB at dusk. Who would be so taken by the asset? While it could be anybody in the community, imagine a well-known industry figure and a big lover of meme tokens "Elon Musk. Debut on RobinHood Soon? Whales' curiosity has bolstered Shiba Inu's market standing in recent months. SHIB was first listed on eToro, an Israeli-based worldwide social trading platform, in late June, and subsequently on Coinbase Pro and WeBull in early August, fueled by whales purchasing billions of coins. In September, SHIB joined Binance's portfolio. The "Doge-killer" meme coin also has a large social media following, having over a million Twitter followers. Fans expect a debut on RobinHood soon that would further help the price reach new levels. SHIBA INU's current price is \$0.000026 USD, and its 24-hour trading volume is \$4,122,223,187 USD, according to CoinMarketCap. Recommended for You

The world has emerged into the trend of cryptocurrencies as the technology grabs the attention of investors on a large scale. Moreover, in recent times, meme-currencies were the talk of the town which

created a buzz in the market. Dogecoin was the first meme-currency that was trending with the support from Elon Musk. Initially, it all started as a joke coin, but as the support from Musk was trending, the coin also began to trend in popularity and price value. Following that many memes, cryptocurrencies began to rise and from those, some had the potential to reach heights. One such coin is Shiba Inu (SHIB) which has risen in popularity as well as in price value. Shiba Inu (SHIB) is an Ethereum-based token that aspires to be an Ethereum-based solution to the popular meme coin Dogecoin (DOGE). It was established by an anonymous individual named Ryoshi, and the coin's website describes it as "a decentralized meme token that developed into a vibrant ecosystem." Current Market Status: The current trading price of Shiba Inu (SHIB) is \$0.000026 with a trading volume of \$9,117,315,771 in the last 24-hours. Moreover, SHIB has surged to 273% within a week and it is the 20th biggest cryptocurrency in market value. The current circulating supply of SHIB coins is 394,796,000,000,000. The price chart of SHIB depicts the bullish pattern for the past week. The price value of SHIB has surged from \$0.0000077 to \$0.00003366 within seven days. Consequently, SHIB is 26% up in the last 24-hours, whereas 273% up in the past week. SHIB is available in top exchanges such as Binance, Mandala Exchange, OKEx, Huobi Global, and FTX. SHIB Partners With NOWPayments Shiba Inu has announced its partnership with NowPayments which will be onboard soon. SHIB users can use NowPayments for burning \$SHIB, \$LEASH, and \$BONE. NowPayments is a non-custodial payment process platform that provides an easy way to accept online payments with various cryptocurrencies. Considering the recent update, the firm's announcement on partnering with NowPayments might be the reason for the price surge. However, SHIB is a popular token that has already created an impact among investors. Users are experiencing a sweet spot over the past week and they expect more price hikes in the upcoming days. With the ongoing developments and updates, SHIB has the potential to reach heights. Recommended for You

- Moneygram has collaborated with Stellar for Blockchain payments. - Banco Hipotecario has partnered with four new blockchain startups. Large IT companies are demonstrating a strong interest in crypto-based payments, garnering huge public attention. It will not be surprising if the crypto sector replaces conventional financial systems. On October 7th, 2021, the SEC approved the "Volt Bitcoin Revolution ETF" fund to promote blockchain technology. According to Volt creator Tad Park, Tesla, Coinbase, Paypal, and Square are among the companies included in the fund. However, El Salvador's commercial national bank, Banco Hipotecario, has partnered with four new blockchain startups. API3 is one of the revealed firms. This partnership will create blockchain solutions to provide consumers with Bitcoin-native DeFi products like trading and lending. Peer-to-Peer fund transfer service provider Moneygram has collaborated with Stellar for Blockchain payments. Circle's USDC stable currency would be used to enable quick money transactions, the firm said. Thus, many advancements are occurring in the crypto space. Most crypto assets are trending. Altcoins on the Rise Solana's spectacular Q3 performance pushed its price to an all-time high of \$214.96, a 400% increase. Because its ecosystem is focused on security, data tools, and analytics, Q4 should be a lucrative quarter for DeFi. Terra Luna, following its Columbus 5 upgrade on September 30th, saw excellent growth in Q4. Token trading at \$46.73 surpasses prior ATH. In Q3, Dogecoin volatility spiked. The trend appears to be continuing in Q4, as the meme coin's trade volume increased almost 400% last week. Moreover, it is also testing a key resistance level between \$0.24 and \$0.25, a breach of which may result in a new ATH. Shiba Inu, a recent market phenomenon, surged almost 500% in four days, hitting a high of \$0.00003502. Late Thursday, the dog-themed meme currency began to plummet. Furthermore, the asset has lost 30% in the past 24 hours. One of the whales just purchased over 1 trillion SHIB, prompting the price to soar. Because of this, the community believes now is not the time to purchase SHIB. The crypto industry is growing like no before. Still, major events like Bitcoin Taproot upgrade, Ethereum merger, and Cardano Hydra layer 2 scaling solution update are on the way. As improvements are planned for late Q4, now looks like a good opportunity to purchase crypto assets and take calculated risks. - JP Morgan points out the behind the scenes of BTC's recent surges . - Liquidations upon BTC have increased over the past few weeks. - BTC legal tender adoption by El Salvador owes to be one major reason. The Bitcoin (BTC) shook the whole crypto industry on October 6, after peeking its head above the \$55K benchmark. The whole crypto industry danced in joy as many prominent altcoins too followed the surge, due to the rise of BTC. In spite of all this, JP Morgan, America's leading financial analyst and investment firm, shares their views and points out various aspects behind the surge of BTC. Aspects Behind Rise of BTC We all know that BTC reached \$55K on October 6 from about \$40K. This is the highest for the past few months for BTC to raise its head above \$55K. In spite of all this, the JP Morgan analyst team predicted various reasons behind this recent surge. Accordingly, they term that about three major factors are responsible for such drastic rise in BTC price. Firstly, JP Morgan points out that the U.S has officially made certain reforms upon the cryptocurrency and BTC. All these tend to be in favour of BTC profusely. Despite China's strict ban on BTC, the U.S seems to be not so. This is one major reason, kind of like an encouragement for people to invest in BTC. Secondly, El-Salvador's BTC legal tender into complete action is also another vital reason. This is due to the fact that the partner for El-Salvador's BTC legal tender, the Lightning Network along with various other 2nd layer payment solutions altogether surged up. Thirdly, the inflation fever has again caught up among the investors in recent times. In spite of this, the possibility of inflation of BTC has kindled the interest among investors to invest more upon BTC. Also, more investors now seek BTC as an inflation hedge evidently. Recommended for You - Shiba Inu (SHIB) to Soon Destroy Dogecoin (DOGE)! - Solana Is Now Available To Buy And Sell Via Skrill & NETELLER - 100 Million XRP of \$107M Transferred in 6 Whale Transactions! - NZ Cryptopia Exchange Moves to Stage 2 of Its Claiming Process - Cryptocurrency Market Hits a Monthly High of \$2.3 Trillion in Capitalization

Solana is one of the leading cryptocurrencies in the market and a high-performing smart contracts blockchain. Now, Solana is available in Skrill and NETELLER, where users can now buy and sell Solana through Paysafe services. Both Skrill and NETELLER are cryptocurrency services from the specialized payment platform Paysafe. Solana is a blockchain platform that prioritizes smart contracts and has an active ecosystem of DeFi and NFT projects. It is a Proof-of-Stake (PoS) blockchain which makes it more friendly than Proof-of-Work (PoW). In addition, Skrill and NETELLER users can use their Solana accounts directly via the app. Users can also set up alerts to notify them of major movements in price value. Even more, this service allows users to set up automated options to repeat purchases for the cryptocurrencies available on the two digital wallets. The major cryptocurrencies in the wallets are Bitcoin, Ethereum, Chainlink, and Uniswap. On the other hand, this service is available in countries where Skrill and NETELLER crypto services currently operate. As of now, it is not yet released in the United States. Skrill is a global payment platform that has been offering simple and secured solutions since 2001. This platform has worked as the best solution for people's businesses for buying online or sending money to family and friends. Whereas, NETELLER is a digital wallet that works in a simple way for sending and spending money online. It enables users to upload funds using credit or debit cards, bank accounts and other alternative payment options are also available. Jordan Stoev Views On Solana The head of crypto services, Skrill and NETELLER from Paysafe, Jordan Stoev says that the addition of Solana to their services is exciting and it would help in the growth of these services. He adds that Solana is growing rapidly in terms of price as well as in terms of projects that it is working on. Moreover, the performance and developments from the ecosystem of Solana will make users use the opportunity to buy and sell cryptocurrency. Stoev also stated that: "With the continuous surge in interest in cryptocurrencies over the last few years, and especially since the outbreak of the pandemic, we are excited to launch new features for our service, such as the addition of Solana." However, adding Solana to their services seems to help the platform in terms of growth. The payment solutions have initiated a step for their users to provide better, new, and secured ways to use their money conveniently. As Solana is an improved blockchain solution, the features from the platform will grab the attention of users. Moreover, the cryptocurrency services offer their users a better opportunity to experience the taste of Solana features. Recommended for You

- 100 million XRP transferred between various exchange accounts. - Value of \$107 million has been so far transferred. - All these have been transacted in just 6 transactions. Recently, getting a notification regarding a whale alert is nothing new or a surprise though. It has become almost an everyday event these days. In spite of this, on October 7, 100 million XRP was transferred in just 6 transactions. XRP Whale Alert According to the blockchain service, the Whale Alert, on October 7, about nearly 100 million XRP has been transferred. All these transfers are as usual anonymous. In addition, the information received is that, all these are not from the same account or crypto wallet. Also, the transfers were between accounts of different crypto exchanges. Moreover, the total value of the XRP transferred amounts to about \$107 million approximately. On the other hand, the whale alert shows that all these XRP transfers were done through only 6 crypto transactions. Furthermore, recently Ripple has also transferred about 20 million XRP from its own crypto wallets to the Bitstamp crypto exchange. However, just the starting of this year, this exchange banned XRP from its stables. Besides, being banned by the exchange, again transferring XRP to it, is now a mystery. Also, it is evident that XRP was banned upon the exchange due to the U.S Securities and Exchange Commission (SEC) filing a case on Ripple for XRP. The Bitter News for Ripple Amidst all this, Ripple also undergoes a new trauma now. Just a few hours back it was officially announced that Moneygram and Stellar (XLM) have closed a deal with each other. In addition, the complete project from this partnership is expected to hit roads soon by the mid of 2022. Moreover, it's known very well that Stellar (XLM) has been Ripple's competitor since the beginning. Owing to the fact that Stellar was actually developed by Ripple's former developer. Crypto hacking is one of the recent topics evolving in the town affecting the life savings of many users around the world. A lot of cryptocurrency exchanges have been caught up in this hacking losing millions of dollars in the market. However, digital currencies are gaining more popularity in the industry and are also being affected through scammers and hackers. Thus, Cryptopia, a well-known cryptocurrency exchange based in New Zealand was hacked in May 2019. In this case, the exchange lost multi- millions dollars and a large number of users were affected in this massive hack. Further, the Cryptopia team raised a claim in the court which is now heading to Stage 2 which is the identity verification process. Cryptopia's Massive Hack Honestly, the Cryptopia exchange did not expect such a huge loss affecting the lives of its valuable users. Surprisingly, the total users strength of Cryptopia trading platform is almost 900,000 connected around the globe. As the users were not ready to accept their assets' loss, they directly fought in court for their properties. So on behalf of the users' concern, the court announced a 4 stage process for this case to move forward. 1/3: Today, 7 October 2021, the Liquidators announce the launch of stage 2, "identity verification" of the claims process. Account holders should expect to receive an invitation email to login into the claims portal when their country is ready for verification. " Cryptopia Exchange (@Cryptopia_NZ) October 7, 2021 In regards to supporting the team, there were official updates given about the current status of the case plans. Notably the last notice was released in June 2021 stating the claim process is at stage 1. Thus, a solid number of users are following up the registration process successfully. And nearly, 55,000 users have been guided to the 4 stage process through our customer service team. Claims Four-Stage Plans Initially, the clients have to claim their registration disclosing the account holder details and to raise a claim for their balance. The second step is the identity verification process where the submitted documents will be verified for quality work. Thirdly, it reflects the claim acceptance notice which agrees that Cryptopia will represent the due amount. Finally, after all these verifications, the assets will be transferred to the appropriate accounts. Hence the entire Cryptopia team was strongly supporting its users and guiding them through the efficient process.

further to enhance more crypto projects, Cryptopia community is planning to secure the Cryptopia wallets to assist the transfer process of the assets. Cryptopia faced a worst time in the marketplace by going through many challenges. Besides, million dollar hack, the former employee of Cryptopia cheated nearly \$250K of digital assets. The employee smartly made duplicate keys of the customer's wallets and stole this huge amount. Now this is also an additional case filed in the court which will be commencing by the end of this month. Recommended for You

- The total value locked (TVL) in the Bitcoin Lightning Network grows. - The global economic situation remains unpredictable. The cryptocurrency market hit a monthly high of \$2.3 trillion thus stayed in green on Thursday morning. The crypto market is now worth \$2.28 trillion, up 4.57 percent from yesterday. Furthermore, the total crypto market volume rose by 13.67 percent to \$144.33 billion in the last 24 hours. Moreover, DeFi volume for the last 24 hours was 12.72% of the entire crypto market volume. Whereas all stablecoins combined volume totals \$113.40 billion or 78.5% Compared to this, the price of Bitcoin (BTC) has steadied below \$55,000. Thus, extending advances from Tuesday and Wednesday to a new high. The main digital asset is now selling at \$54,119. Its up 5.35 percent in the past day and 25.98 percent in the last week. If BTC continues to rise at the same rate as it did this week. It may soon be trading around its all-time high of \$64,863 set on April 14, 2021. The total value locked (TVL) in the Bitcoin Lightning Network rises as BTC grows. The network has expanded over 1,000% in a year, reaching \$165 million in locked BTC, with 2,998 TVL as of October 7, 2021. The second-largest crypto by market value, Ethereum (ETH), is also up 5.56 percent in the last 24 hours and 21.02 percent in the last week. Global Level Adoption and Rejections On October 7, 2021, it was revealed that Auto1 FT, a German financial partner in the automotive industry, is utilizing Ethereum smart contracts to facilitate vehicle purchase financing. While the global economic situation remains unpredictable, with rising interest rates and more fragmented financial systems, Bitcoin continues to show its resilience. Millennials and younger generations understand the importance of Bitcoin and other cryptocurrencies, but recent failures on Instagram and Facebook demonstrate the world's reliance on centralized systems. If you have been in the cryptocurrency arena for some time, you've probably heard the terms "mainnet", "testnet", and "devnet" thrown around on every project. Simply put, these are the technical terms used in crypto to denote the major development stages of any blockchain product. Each stage offers vital upgrades and features that help in enhancing the DApps, smart contracts, DeFi projects, NFTs, or anything else you build on the blockchain. The mainnet, short for the main network, is always the "active, live, and publicly available" version of the blockchain project "the final product. Blockchain testnets (test network) and devnets (development network) provide proxy environments that developers could practice with/ experiment with their projects before releasing the "real thing". This allows them to build their DApps without the costs, risks, and pressure accumulated if they were building on the mainnet. By removing these risks, developers get the freedom to innovate and build their decentralized applications (DApps), act as validators, issue new tokens, or test new smart contracts. Additionally, testnets allow them to test the robustness and bug-free nature of the mainnet without actually interfering with the mainnet. It has almost become an unsaid rule that developers must launch a testnet and/or devnet during a test period before launching their mainnet platform. For example, quantum-resistant blockchain, QAN Platform, plans to launch a testnet version later this quarter to test the first-of-its-kind DApps. The worlds apart: Testnets vs Mainnet AS alluded to, blockchain mainnets are the live, public, and primary protocols that allow real transactions to occur by utilizing the platform's real native cryptocurrency. These transactions are then verified and recorded on the distributed ledger. Testnets and devnets offer the experimentation environment of mainnets, to users and developers, respectively. So, as an inspiring crypto head, how can you tell the difference between them? The easiest way to tell them apart is most testnets and devnets will be labeled accordingly. For example, Ethereum's testnets "Ropsten, Rinkeby, and Kovan" are clearly labeled "Test Networks" on Metamask with the mainnet labeled "Ethereum Mainnet". The network identifier (ID) for mainnet and testnets also differ. Whenever a developer, or node, wants to join the chain, they need to choose a network ID to join. For instance, Ethereum's Mainnet network has an ID of 1 while the Ropsten, Rinkeby, and Kovan testnet have a chain ID of 3,4, and 42 respectively. On the transactions front, mainnets offer real and valuable transactions stored on the actual blockchain while testnet/devnet only allow pseudo transactions with no real value. Moreover, cryptocurrencies or tokens on the devnet/testnet have no monetary value while mainnet coins possess real value and can be exchanged. Testnets and devnet also do not charge any transaction fees while on the mainnet, every transaction is paid for using the native coins of the blockchain. Finally, miners on the mainnet have an economic incentive to earn real coins once they validate transactions while testnets and devnets offer no real economic benefit. Moving from testnet to mainnet in action To get a feel of how mainnet and testnets work in action, let's have a look at the QAN blockchain platform. It is important to note that a mainnet and a testnet are two separate networks that operate independently from each other. QAN leads the development of quantum-resistant blockchains offering high throughput, easy integration, and low latency to the users. The blockchain is quantum-resistant via its use of lattice-based algorithms to offer post-quantum cryptography. Later this quarter, the QAN blockchain platform will launch its inaugural testnet version to allow developers and builders to create and test their DApps on the QAN blockchain. This allows developers to build any type of quantum-resistant DApp on QAN including smart contracts, DeFi solutions, tokens/cryptocurrencies, and non-fungible tokens, popular as NFTs. Via their testnet version, developers can experiment with the functionalities of their DApps to check how they will perform once launched on the mainnet. QAN testnet allows developers to save on using valuable QAN tokens when testing their projects before they go live to the public. Once tested and satisfied that the DApps work, they are then deployed to the mainnet where they will go live and be available for anyone to use. QAN platform achieves record 5-minute+ rapid cloud deployment "80% faster than industry leaders. Works with @awscloud @Azure

@googlecloud @digitalocean @linodehttps://t.co/xZjr5NcrKt#QANplatform \$QANXâ€” QANplatform (@QANplatform) September 28, 2021 Unlike other testnet versions, QAN offers developers an easy-to-setup environment. Via Docker (a deployment app), developers get all the packages and libraries needed for setting up their QAN private blockchain in minutes. Developers can then â€œdefine later which of the data will be published on the QAN public blockchainâ€”, once the mainnet is launched. Users can deploy their tenets in minutes on Google Cloud, Amazon Web Services, Microsoft Azure, Digital Ocean, or Linode. Testnets will importance to the blockchain ecosystem while the mainnet is the final and only valuable chain across the blockchain versions, testnets and devnets also have their own advantages, majorly, offering an experimentation environment to enhance the platform. The experimentation environment ensures constant development on the platform. In order to improve and innovate in the blockchain industry, constant rigorous tests on smart contract functionalities, transactions, and minting/mining processes have to be carried out. Having testnets enhance the developmental spirit across the industry by providing a simulation on how the actual mainnet will work, once launched. As the saying goes, humans are prone to errors hence the need to have preventive measures when developing blockchains. Testnets are useful in preventing bugs on the main network since they can be easily detected and solved without losing usersâ€™ money or crashing the system. This ensures the transparency, security, and integrity of the system are maintained. In short, blockchain testnets are a key component of the blockchain ecosystem that offers simple and risk-free avenues for testing and debugging developersâ€™ code. Testnet and devnet networks provide significant value to the blockchain mainnets they serve whether it is in writing smart contracts, building DApps in NFTs, or creating DeFi protocols. Crypto exchanges are expanding their presence in the market as the trading platforms are in huge demand due to the rise in more crypto adoption. Crypto users are connecting through these platforms to trade their assets. Thus, BitOasis, one of the largest and most secure crypto exchanges in UAE is planning to extend their network. To achieve the mission, BitOasis initiated a Series B funding round with remarkable investors from MENA regions. The funding rounds resulted in a closure of \$30 Million which will support BitOasis for a notable growth in the marketplace. BitOasis â€” Fundraising Season BitOasis is a popular crypto asset exchange serving all UAE crypto users including the MENA regions. Importantly, BitOasis fame lies in their vision of presenting a digitalized financial experience to its valuable users. Besides, maintaining an open, transparent and a super secure trading platform in the Middle East. Moreover, the notable investors of the Series B funding are solely based in the MENA region supporting the event. The round was led by Chicago-based VC firm Jump Capital and MENA regionâ€™s VC company Wamda Capital. Along with them, BitOasis both new and existing investors took part in the funding rounds. Significantly, Global Founders Capital and Alameda Research were the recognizable new investors for BitOasis. And, Pantera Capital, Digital Currency Group, and NXMH-Belgium based investment firm are the existing partners of BitOasis. However with all these investorâ€™s participation, BitOasis secures \$30M in fundraising rounds. Additionally, the crypto adoption is showing massive results in MENA regions with large interested crypto users. Thus the positive crypto regulations and digital asset awareness will increase the user base and digital currencies in the region. Besides, BitOasis is working on a smart plan to create an awareness about crypto security by incorporating with public departments. As an initiative, BitOasis recently joined the Dubai Police community to spread the crypto related fraudulent awareness. Through this, the BitOasis team will educate the public and the existing users to be safe while investing on crypto assets within the region. However, this smart activity of BitOasis will bring transparency and trust on the exchange and into the crypto industry. So, BitOasis conducted the funding rounds to support the public, existing crypto users and investors to be more vigilant in dealing with digital assets. Thus, the CEO of BitOasis shares, â€œThe fundraising rounds will support us to work closely with resources to rank as the most safe and trustable crypto exchange in the region. Along with extending our presence beyond the MENA region will happen in the due course.â€” Recommended for You - Has Bitcoin Caught The Upward Track Crossing \$50K Again ? - Under 30 Seconds Inflation Hedging Coin (IHC) Raised \$10 Million - Nimbus and Nethermind Run Merge Event To Prepare for PoS Transition - Dogecoin (DOGE) on a Slow-Growth as Rival Shiba Inu (SHIB) Dominates - Understanding the Mainnet and Testnet Releases in Blockchain Technology

Bitcoin was struggling to crack the heavy resistance level at \$48k for the past month. Now, BTC is back on track in high-speed moving towards \$55k while crossing the \$52k level already. This seems to be the sweet spot for the BTC users, where \$55k is not too far for BTC to reach soon. Although Bitcoin cracked the \$50,000 level since September 7, capturing the green signal in the price chart with a bullish month start over. Significantly, Bitcoinâ€™s price has surged nearly 6% in the last 24-hours where it was dragging below \$50k for the past whole month. With the bearish pattern of September, the crypto market has lost more than 20% of its value since the start of the month. The current trading price of Bitcoin is \$52,549 which has bounced 25% up within a week presenting a green signal for all its users. According to Rekt Capital, a market Analyst mentions that BTC is comfortable staying above the 21-week EMA presenting bullish momentum. As per the prediction for October, BTC started with a bullish-signal and may continue for the rest of the year. Bitcoinâ€™s price surge has also been predicted as BTC supply on centralized exchange fell to a new low which gave a significant chance to another sell-off. Besides, market watchers predict that BTCâ€™s price might reach \$100,000 by the end of 2021 if no major sell-offs being occurred. Bitcoinâ€™s Bull Run Towards \$55K Bitcoin has already cracked the \$50,000 level and is now establishing a strong support level before the next price barrier at \$55,000. The final quarter of the year might be essential for BTC as investors are in a state for a bull or bearish run. When the price of BTC cracks the \$55k level then it might have a chance to hit

above its previous all-time high at \$64k. Besides, BTC's current track above \$52k has resulted in a surge of market cap to \$900 billion. Moreover, as a result of the recent shutdown of Facebook, the market cap value of Bitcoin surpasses the value of Facebook. - Every IHC transaction has a 5% fee collected. - The IHC team is working on an on-chain wallet application. Inflation is becoming more linked to current global circumstances. Moreover, as the industry enters a recession, many believe the worst since the Second World War. Inflation devalues our assets, reducing the buying power. The central bank extended the cash supply by purchasing long-term securities from the market. Thus, the goal was to reduce inflation by prioritizing lending and financing above saving and prudential measures. The Federal Reserve bought about \$80 billion in Treasuries and \$40 billion in mortgage-backed securities per month in the summer of 2020. Furthermore, the stability sheet revealed passing throughout \$8 trillion. Cross-Chain Cryptocurrency The answer is unique forex that encourages practical actions like saving and ensures others' purchasing power doesn't dwindle over time. One is Inflation Hedging Coin (IHC). It is one of the most touted projects, as shown by the IHC, raising \$10 Million USD in just 30 seconds. Operating on ETH and BNB networks, IHC is a cross-chain cryptocurrency. The price of the IHC remains stable since the US inflation rate determines the standard burning times. Burning events will continue until the total market capitalization equals the total number of tokens owned by holders. Every IHC transaction has a 5% fee collected and redistributed to token holders over time to encourage them to save more as an alternative to speculating with the tokens. Any additional factor that makes IHC less volatile than other cryptocurrencies in the region is desirable in trading or other speculative activities. Currently, the IHC team is working on an on-chain wallet application to simplify access to financial services and goods for token holders. The pockets utility will include loan and yield farming services and solutions to make saving easier for customers. - The Beacon chain and the mainnet are distinct. - The Beacon Chain will bring proof-of-stake to Ethereum. A recent picture of a Twitter user's computer screen during a complex procedure sparked both delight and bewilderment. Jacek Sieka then stated that Ethereum clients Nimbus and Nethermind were "emerging." A proof-of-stake consensus method would be perfect for Ethereum. The Beacon chain and the mainnet are distinct. The Beacon Chain will bring proof-of-stake to Ethereum, while the mainnet deals with smart contracts and proof-of-work. The merging would allow developers to mix the two before switching Ethereum to proof-of-stake. Merge event, day 1: @ethnimbus and @nethermindeth does #themerge transition! pic.twitter.com/eyRlygTMbv " Jacek Sieka (@jcksie) October 3, 2021 It would then drive a proof-of-stake consensus mechanism. The Beacon chain would also allow staking and shard chains into the Ethereum ecosystem. By 2021-2022, Ethereum 2.0 should be ready. However, the merger of Nimbus and Nethermind is a positive sign. Also, interested individuals may test the merging themselves. Bug Bounty Program The upcoming Altair upgrade will include support for light clients in the core consensus, among other changes. Notably, Nethermind and Nimbus were two of five winners of \$1.5 million in contributions towards the Ethereum ecosystem. Until the update, Ethereum has launched a bug bounty program with increased incentives. This shows how important Altair is to Ethereum's development plan. Ethereum's gas consumption has been decreasing over the past several days. It fell to a one-month low. Ethereum's mining earnings have also dropped to a new 18-month low of \$65,264.58. On the other hand, the number of addresses that possess more than 0.1 coins has reached an all-time high of 5,741,367. That is very encouraging news for the Ethereum ecosystem as well as for the cryptocurrency ecosystem, especially after last months chaos. According to CoinMarketCap, Ethereum price today is \$3,566.35 USD with a 24-hour trading volume of \$21,413,993,123 USD. - In the last 24-hour, SHIB price and volume gained over 67% and 376%. - SHIB has surprised the entire crypto market with its huge price gain. - The price was started to increase after the tweet from Elon Musk. SHIBA INU (SHIB) which is known as DOGECOIN KILLER has been founded as a top gainer. In the last 24-hour, SHIB price has gained over 67%. And the last 24-hour volume also gained over 376%. Accordingly, SHIB has surprised the entire cryptocurrency market with its huge price gain. Because the major cryptocurrency in the crypto market continued to be in red on Monday with only a small increase in the altcoin prices. More so, the developer of SHIBA INU has created SHIB from inspiration from Dogecoin. The SHIBA INU developers aim to develop SHIB more than just a joke. It is an ERC-20 token adaptable to the Ethereum blockchain network. SHIB coin holders also support and promote the coin on social media like Reddit and Twitter. Furthermore, SHIB price was started to increase after the tweet from Elon Musk, Tesla CEO and Dogecoin (DOGE) investor. Earlier the price of SHIBA INU (SHIB) was climbed up in a short span after Elon Musk shared a snap of his new pet dog named Floki. And on Monday, Elon Musk tweeted a snap of another dog with the caption Floki Frunkpuppy, this seems to be a reason for the sudden price of SHIB. Floki Frunkpuppy pic.twitter.com/xAr8T0Jfdf " Elon Musk (@elonmusk) October 4, 2021 Current Market Status of SHIB As per CoinMarketCap, SHIBA INU's (SHIB) price was trading at \$0.00001856 with a 24-hour trading volume of \$11,321,161,366. The price of SHIB has increased 67.63% within a day, and the volume increased 376.94% in a day. The circulating supply of

SHIB is 394,796.00B SHIB. It can be traded in top crypto exchanges such as Binance, Mandala Exchange, Huobi Global, OKEx, and FTX. - The top 5 cheapest coins to buy right now are SHIB, XEC, BTT, HOT, REV. - eCash was built by a team of Bitcoin developers. - Holo (HOT) was developed for hosting decentralized applications. The top 5 cheapest coin to buy right now are SHIBA INU (SHIB), eCash (XEC), BitTorrent (BTT), Holo (HOT), Revain (REV). 1. SHIBA INU (SHIB) Shiba Inu (SHIB) seems to be an Ethereum based alternative to the world's biggest and most popular meme coin Dogecoin (DOGE). It has a nickname, DOGECOIN KILLER. Moreover, the website of Shiba Inu welcomes dog-inspired artists from all over the world to encourage the artistic Shiba movement. More so, as per CoinMarketCap, SHIB price was trading at \$0.000007511 with a 24-hour trading volume of \$318,690,422. In the last 24-hour SHIB price has gained over 3%. The circulating supply of SHIB is 394,796.00B SHIB. 2. eCash (XEC) The second cheapest coin is eCash (XEC). It built by a team of Bitcoin developers who created Bitcoin Cash. The eCash network combines the core technology behind the success of Bitcoin. Currently, eCash can be traded in crypto exchanges such as Binance, Huobi Global, Mandala Exchange, OKEx, and Upbit. According to CoinMarketCap, XEC's price was trading at \$0.0002513 with a 24-hour trading volume of \$564,144,692. At the time of writing the circulating supply of eCash (XEC) is 18,858.81B XEC. 3. BitTorrent (BTT) The third cheapest coin is BitTorrent (BTT) it has secured the 56th rank as per CoinMarketCap. BitTorrent is one of the popular peer-to-peer (P2P) file sharing and torrent platforms. Hence more, BitTorrent builds the highest level of security measures to safeguard the user funds. More so, at press time, the BTT price was trading at \$0.003395 with a 24-hour trading volume of \$243,988,675. As per CoinMarketCap, BTT's price surged over 6%. The circulating supply of BTT is 656.95B BTT. 4. Holo (HOT) Holo (HOT), developed for hosting decentralized applications which were built using Holochain. Between centralized internet and Holochain, Holo network builds a bridge, that does not depend on traditional blockchain technology. HOT can be traded in top cryptocurrency exchanges such as Binance, Mandala Exchange, ZT, Gat.io, and Hotcoin Global. At the time of writing, according to CoinMarketCap, the HOT price was trading at \$0.008574 with the 24-hour trading volume of \$143,058,889. In the last 24-hour HOT price gained over 8%. Even more, the circulating supply of HOT is 172.90B HOT. 5. Revain (REV) The fifth top cheapest crypto token is Revain (REV). The first platform to merge the features of traditional review websites and blockchain technology is Revain. Eventually, its main gain is to build an authorized and genuine feedback structure for all products and services globally that using technologies like machine learning and blockchain. At press time, Revain's (REV) price was waving at \$0.0189 with the 24-hour trading volume of \$3,890,622. According to CoinMarketCap, REV price was gained over 26% in the last 24 hours. The circulating supply of REV is 85.068B REV. Recommended for You

- TRON claims 2,000 TPS. - Justin Sun is the Founder and CEO of TRON. According to a recent Tron community tweet, the blockchain-based ecosystem made to the top of the list for total transactions on significant blockchains. Furthermore, Tron came in second with 2.46 billion transactions. TRON is a blockchain-based operating system designed for everyday usage. TRON claims to be able to process 2,000 transactions per second, compared to Bitcoin's 6 TPS and Ethereum's 25 TPS. Total transaction on popular blockchain platforms & #x2191; #TRON ranks second & #x2191; a pic.twitter.com/etIOz3Y42i & #x2191; TRON Community & #x2191; (@TronixTrx) September 28, 2021 Moreover, Justin Sun is the Founder and CEO of TRON, one of the biggest blockchain operating systems available today. Furthermore, Sun is a University of Pennsylvania alumnus and Ripple's Ex-Chief Advisor. Moreover, this is why he offers significant experience and understanding to his first crypto asset venture. This project is a decentralized network centered on content sharing and entertainment, and in 2018 it acquired the file-sharing service BitTorrent. TRON Power Moreover, owners of TRX may freeze their coins to gain TRON Power, which allows them to vote for & #x201c;super representatives& #x201c; who act as block makers. These block producers get TRX incentives for validating transactions, which are subsequently divided among the voters. TRON's expansion map includes Strategic Alliances: - oBike, Singapore: A bike rental business using Tron network to run its own Ocoin. - An innovator in ASIC chips for Bitcoin mining, Bitmain joined TRON. - ZAG-S&W, a prominent corporate law firm, joins TRON to safeguard its clients' digital assets. - BitTorrent, a \$140 million American corporation, invests in TRON. - Poloniex, an American cryptocurrency exchange, and many others. Thus, with so many vital collaborations in the TRON blockchain ecosystem, the price of TRX may soon reach \$1. TRON (TRX) price is trading at \$0.08727, with a 24-hour trading volume of \$1,220,410,964 as per CoinMarketCap. - Solana maintained its pricing over \$100. - LUNA remains the most undervalued currency. The crypto industry appears to be purging weak hands as Chinese market manipulation continues to wreak havoc. The overall market value is \$1.857 trillion, down from \$2.2 trillion on September 26th, 2021, as per CoinMarketCap. Despite the market collapse, Solana maintained its pricing over \$100. Furthermore, it is now trying to exceed the psychological threshold of \$150. Several improvements are planned for the platform. Terra Luna's price has soared recently, setting a new high. It just reached a new ATH of \$44.34, making it one of the top 15 crypto assets. Terra is preparing for the much-anticipated Columbus 5 upgrade launch on September 30th, 2021. Bridge Between Terra and Solana Cross-chain integration with popular crypto blockchains as Solana, Polkadot, and Cosmos. In addition, the update may increase the prices of SOL, DOT, and ATOM. Furthermore, Terra's upgrade will also include a wormhole that will serve as a bridge between Terra and Solana. Current projects and platforms can

transfer tokenized assets across blockchains easily. Sized \$LUNA into the biggest position in my portfolio again. " Daniel Cheung (@HighCoinviction) September 14, 2021 Terra is now the most undervalued L1 despite one of the best TVL growth prospects vs peers given Columbus 5 upgrade in few weeks. TVL can easily double and multiple reates to 6x which implies a \$140 price target EOY. pic.twitter.com/nvved8LDH2 According to renowned crypto expert Daniel Cheung's chart, the Solana ecosystem grew rapidly. Solana's total value locked (TVL) increased by 1,657,043 percent in six months to 11.6 billion. Despite the improvements and massive TVL, LUNA remains the most undervalued currency. According to CoinMarketCap, the SOL price is \$137.99. Bulls may hit new highs if the price bounces off it. Moreover, if the market falls, the SOL has significant support at around \$75. SOL price may still hold between \$110 and \$115. Terra Luna has created few big bull flags in September, previous to the upgrade. How it affects the SOL pricing can be known after it's implemented. - The regulator claims Kraken accepted client trades and funds. - Kraken was the sole margin provider and held all client assets physically. The CFTC fined crypto exchange Kraken \$1.25 million for illegally offering some products. Between June 2020 and July 2021, Kraken, fined for facilitating margined retail commodity transactions in digital assets. Including bitcoin, to non-eligible customers. The company also failed to register as a futures commission merchant (FCM). Kraken is a global cryptocurrency exchange. Furthermore, exchanges have been penalized in the past for selling products that did not meet regulatory requirements. The CFTC regulates the U.S. derivatives market and commodities, forex, fixed income, and some crypto assets. Moreover, according to the regulator, a client purchased a digital asset using borrowed money from the exchange, which then sold it to the seller. Held All Clients Assets Physically From June 2020 to July 2021, Payward Ventures Inc, doing business as Kraken, offered non-eligible U.S. customers, the CFTC said in a statement. Moreover, the firm also traded futures without registering with the agency. The regulator claims Kraken accepted client trades and funds. Thus acted as an ECP without registering with the CFTC. Moreover, worse Kraken was the sole margin provider and held all client assets physically. As a result, the platform traded cryptocurrency without taking an authorisation. Furthermore, the CFTC said Kraken required customers to exit positions and return margin funds within 28 days or risk having their funds frozen. In the absence of repayment, Kraken would request or force the liquidation of the position if the collateral value fell below a certain threshold. Commissioner Dawn Stump concurred with the settlement, stating that existing agency guidance does not establish clear rules for cryptocurrency firms seeking to offer retail commodity transactions involving digital assets. - Ukraine has passed legislation regulating cryptocurrency. - The government is optimistic about the crypto economy's growth. Ukraine is the sixth nation in recent weeks to set regulations for the cryptocurrency industry. Thus, indicating that governments worldwide recognize bitcoin's permanence. The Ukrainian Parliament voted almost unanimously in September to legalize and regulate cryptocurrencies. The measure was introduced in 2020 and now goes to President Volodymyr Zelenskyy. After El Salvador and Cuba, Ukraine has passed legislation regulating cryptocurrency. Trading in cryptocurrency was not prohibited before the legislation. Although there were no regulations. Earlier this year, Eesti Pank, Estonia's central bank, collaborated with the ECB, Spain, Germany, Italy, Greece, and the Netherlands to test a blockchain-based digital euro. Using the same blockchain technology as Estonia's now-famous e-state, a digital euro can handle up to 300,000 payments per

second, with money reaching recipients' accounts in under two seconds. Luukas Ilves, former Estonian EU digital affairs counsellor and current strategy director at Guardtime, a business and government blockchain firm, believes Estonia could significantly gain from participation. Poland and Ukraine are two nations that have already started to establish a national CBDC. Legalization of Crypto According to Marek Dietl, CEO of the Warsaw Stock Exchange, Poland can choose between joining the eurozone (and creating a digital euro) or creating its digital zloty. Ukraine is another developing European nation seeking to profit from a digital currency. When Estonia's Eesti Pank was researching digitalizing the euro, Ukraine's Ministry of Digital Transformation released a roadmap detailing how to transform the country into a leader in cryptocurrency integration, aiming to make digital currency functional by 50% of Ukrainians by 2024. Ukraine's daily digital asset turnover reported being about \$37,000. The government is optimistic about the crypto economy's growth. The legalization of crypto in Ukraine reflects the global growth of the digital currency. - Bitcoin owners and investors have a diverse portfolio. - 20% of urban Indians in the top four metros hold bitcoin. According to Survey by Kantar, 83 percent of urban Indians are aware of bitcoin, and 16% possess it. The study shows that bitcoin sentiment is volatile, with tweets or news on cryptocurrency immediately impacting mood. The majority of Indians are learning about cryptocurrencies and whether or not it's worth their time and money to invest in them. Kantar's insights division executive director, Anand Parameswaran, said: "This is the first of its kind research study on cryptocurrency in India. We met close to 2,000 consumers and saw that awareness levels are clearly quite high. Consumers are willing to invest in the product and are looking at diversification of their portfolio among high-risk products. Engagement with various crypto exchanges also indicates that ownership numbers seem likely to increase in future." Net Sentiment is Higher for Ethereum According to a recent survey, 20% of urban Indians in the top four metros hold Bitcoin, while private banking clients own 19%, and those aged between 21 and 35 years own 17%. The owners are more risk-averse while investing in shares (31%), mutual funds (21%), and life insurance (16%). Also, bitcoin owners and investors have a diverse portfolio. Non-crypto owners possess an average of 4.6 financial goods, whereas non-intenders hold an average of 3.6. Surprisingly, one in every two customers planning to invest are repeat investors. Also, 19% of Indians polled want to invest in cryptocurrencies in the next six months. However, this compared to plans to invest in mutual funds (49%) and stocks (33%) in the following six months are way lower. The top five favoured currencies in terms of ownership are Bitcoin (75%), Dogecoin (47%), Ethereum (40%), Binance Coin (23%), and XRP (18%). The net sentiment is higher for Ethereum than Bitcoin (41). It is also more significant than that of Bitcoin for other cryptos such as Dogecoin and XRP. - A popular cryptocurrency exchange just added Cosmos. - Cosmos is termed as "Blockchain 3.0". Some in the crypto sector are worried about the amount of fragmentation in blockchain networks. Moreover, there are hundreds, yet few can converse. Furthermore, This is something that Cosmos hopes to alter by making it accessible. Cosmos is termed "Blockchain 3.0". Thus, as previously said, ease of usage is a major objective. In order to this aim, the Cosmos SDK focuses on modularity. As a result, a network may be rapidly constructed by using preexisting code. Now, in the long term, it is anticipated that sophisticated applications will be simple to build. Cosmos (ATOM) would have been worth \$4,690 now if you purchased \$1,000 worth on Jan. 1. According to CoinMarketCap, \$1,000 would buy 154.08 ATOM. Moreover, As of Sept. 21, each ATOM is worth \$30.44 and almost 370 percent gain. Also, Cosmos peaked at \$44.70 last week (Sept. 20) but has since dropped. To put that in perspective, here's what \$1,000 worth of other cryptocurrencies, including its rivals, would be valued in similar conditions. - Bitcoin (BTC) purchased for \$1,000 would be worth \$1,404 - Ethereum (ETH) purchased for \$1,000 would be worth \$3,747 - Dogecoin (DOGE) purchased for \$1,000 would be worth \$42,940 - Solana (SOL) purchased for \$1,000 would be worth \$82,086 - Polkadot (DOT) purchased for \$1,000 would be worth \$2,833 - Avalanche (AVAX) purchased for \$1,000 would be worth \$18,737 The Market is Always Volatile and Unpredictable The author estimates are based on CoinMarketCap data, prices from Jan. 1 to Sept. 21. As a result, these pricing comparisons may be deceptive. Furthermore, unpredictable occurrences like Elon Musk's comments on Dogecoin may significantly affect pricing in the highly speculative cryptocurrency market. A popular cryptocurrency exchange just added Cosmos to their list of supported coins. Moreover, its network hosts over 250 apps, including Binance Smart Chain and Crypto.com. According to CoinMarketCap, Cosmos price is \$38.63 with a 24-hour trading volume of \$1,373,110,982. Recommended for You

- Despite a long wait, finally WallStreetBets enters into the cryptocurrency industry. - Discussions to be mainly focused on Bitcoin (BTC), Ethereum (ETH) and other prominent coins. - Discussions regarding scams, predictions and crypto fanning are not allowed. Even a random novice into the stock market industry will be knowing the WallStreetBets! The WallStreetBets is a subreddit platform which is vividly into all discussions regarding the stock market. In addition, the WallStreetBets are a vital reason for the stocks of GamStop to spike up profusely recently. However, almost everyone who is into the WallStreetBets so badly wanted them to start discussions upon the cryptocurrencies too. Yet, the WallStreetBets has been avoiding it and once even strictly announced that crypto discussions wouldn't take place. On the contrary, a few days back on September 22, the WallStreetBets (WSB) finally gave out officially regarding their crypto discussion entity. WallStreetBets Views In spite of

their much awaited and epic entry into the crypto industry, many are eagerly on what crypto the discussions would start. Moreover, the expectations on WSB into cryptocurrencies is extreme though. Furthermore, WSB terms that their new crypto entity will be by the same team, by the same people and by the same system and protocol as that of their stocks. Amidst all this, WSB does put up certain limits and restrictions regarding what to be discussed and what not too. They tend that these rules and regulations are necessary for them to maintain their standards. On the other hand, people are expecting so much on WSB when it comes to cryptos. This is because the GameStop was in fact absolutely nothing at start, but with the WSB, it is now at its all time high. This in fact, no one ever even dreamt of! Crypto Rules of WSB Besides the expectations, the WSB is so strong in maintaining their standards. Accordingly, they have devices with certain rules and regulations upon the cryptocurrency discussions. In addition, one of their rules depict not to discuss any sorts of market bear or bull, scams and smart contract schemes etc. Moreover, they tend to stick to their discussions with renowned coins such as the Bitcoin (BTC), Ethereum (ETH), the Dogecoin (DOGE) and so on. Furthermore, they tend to concentrate more upon recent hot trends like the China crypto ban, developments of Solana (SOL), and further on. Recommended for You

- GoldFinX (GIX) has skyrocketed to 1674% within a day. - The platform uses the concept of Contract mining. - The new partner of GoldFinX is Sanctum Global Ventures. Expanding the network with new partnerships is playing a vital role in the crypto market. Users are attracted to the updates when it regards to new partnerships with reputed or well-known entities. This has become a routine in the market that when a company expands its network, then the value of its native token would boom. Even when the mainstream cryptocurrencies are struggling to crack their heavy resistance level some altcoins outperform. Investors are showing interest in the crypto updates when each ecosystem releases an announcement. Crypto investors jump towards the token when a new update is announced from its network. GoldFinX (GIX) is a FinTech 2.0 company that provides financing to Artisanal Small Gold Mines (ASGM) around the world in exchange for a percentage of their output. It utilizes the concept of Contract mining, which identifies the financial resources needed for optimal and viable mining operations. Current Market Status At the time of writing, the trading price of GoldFinX (GIX) is \$21.30 with a trading volume of \$867,609 in the last 24-hours. According to Coinmarketcap, the price value of GIX has surged to 1674% within the past 24-hours and it holds 2987th rank. The chart depicts the bullish pattern for the past 24 hours. Significantly, the 7-day statistics display that the price of GIX has soared to 2044%. If this trend continues, then the price value of GIX might crack its all-time high. New Partnerships The latest partner for GoldFinX is Sanctum Global Ventures. Sanctum Pte Ltd primarily advises Ultra-High-Net-Worth families in Asia and the Middle East on innovative technology investments and cryptocurrency transformation. The CEO of this firm invests in GoldFinX as it brings a wave of institutional investments along with them. However, the users of GIX had their sweet spot for the past week. Investors expect this bullish trend to continue, if it continues GIX may reach a new ATH. With the on-going developments and new partnership discussions in the network will lead to more highs in near future. Recommended for You - Altcoin the New Favorite Over Bitcoin? - IoTeX has been up 36.59% in the last 24 hours. - It enabled EVM-based Dapps to grow without worrying about gas costs. IoTeX, headquartered in Singapore, hopes to dig into the enormous market for "smart" gadgets with its secure blockchain network. The IoTeX concept relies on the gadgets' massive quantities of data as businesses and governments profit from them. If consumers want to provide data with these organizations, its blockchain technology will allow them to monetize such data. IoTeX (IOTX) had a market value of about \$42m till January. However, many favourable events have caused the value to skyrocket in recent weeks, resulting in large profits for investors. In 2017, IoTeX launched as an open-source project to enable open economics for machines at "an open environment where humans and machines may interact with assured trust, free will, and correctly structured economic incentives. With the ioPay wallet and ioTube bridge, the team has developed the necessary infrastructure to link with Ethereum, BSC, and Heco blockchains, serving thousands of users. It enabled EVM-based Dapps to grow without worrying about gas costs. Price Surge Due to Rise in Demand On top of the IoTeX blockchain, middleware like Decentralized Identity, Confidential Computing, and Secure Hardware allow self-sovereign devices like Ucam and real-world oracles like Pebble. As demand surged, the IOTX token's price burst through critical resistance levels with ease. Buying volume has increased dramatically since the bullish surge started. According to CoinMarketCap, IoTeX price today is \$0.069999 USD with a staggering over 900% rise in 24-hour trading volume, which currently stood at \$383,534,357 USD. IoTeX has been up 36.59% in the last 24 hours. It indicates prices are increasing rapidly. Recommended for You - Altcoin the New Favorite Over Bitcoin? - This brings together global telephony and blockchain technologies. - Cardano's parent firm, Input Output, announced it collaborated with Chainlink. Cardano is rising in the world cryptocurrency. The blockchain community believes it has potential. According to CoinMarketCap, ADA is the third-largest cryptocurrency by market capitalization. Following such positive days, Cardano founder and CEO Charles Hoskinson announced a collaboration with DISH. Furthermore, the agreement should allow Dish Network to offer DID to its 8 million customers. This brings together global telephony and blockchain technologies. Hoskinson announced the partnership during the Cardano Summit 2021. Moreover, it is one of the earliest collaborations in the crypto sector. Extra Support for Developers According to Hoskinson, the collaboration would enable the global telecommunications provider to unleash value for

its customers. Thus, Cardano blockchain is now being introduced to Dish. Cardano's parent firm, Input Output, announced it collaborated with Chainlink to assist developers in creating secure decentralized financial (DeFi) apps. Definitely, it will allow extra support for developers who work on the Cardano blockchain to develop smart contracts. Head of blockchain partnerships, Niki Ariyasinghe at Chainlink Labs, said: "We have tremendous amount of respect for the Cardano ecosystem. For us it's about right timing to engage with the Cardano ecosystem [and] bring it together with Chainlink which is really built to enable smart contracts." Following the fantastic collaboration, Hoskinson highlighted that identification, the flow of data capacity sharing, and other possibilities exist. In order to create a network where customers may move smoothly from one location to another, Hoskinson says the business architecture has remained inflexible. According to CoinMarketCap, Cardano price today is \$2.19 USD with a 24-hour trading volume of \$5,958,476,157 USD. Recommended for You - Altcoin the New Favorite Over Bitcoin? - Despite the odds, the Altcoin space has done well. - Bitcoin has recently gained widespread recognition and popular usage. This year, the crypto market had a wild ride from the Bull Run to the Evergrande disaster and FUD. The charts have swung. Professional traders, however, are experts. And await the fourth-quarter Bull Run. Despite the odds, the Altcoin space has done well. Several investors have made fortunes from their assets. Netizens have been comparing the year's data to 2017. Possibly announcing a bull run. According to CoinMarketCap, BTC is now worth \$42,709.97, up from \$29,022.42 on January 1, 2021. The star coin has returned 300 percent this year. ETH is now worth \$2937.52, up from \$738.62 on January 1st, 2021. The year's returns are 740 percent. ADA is now \$2.37, up from \$0.182 on January 1st. The returns are 2750 percent. Other coins have also risen rapidly. Here are some reasons why ALT coins potentially outperform Bitcoin: - Higher volatility equals faster gains. - Scalability, transaction time, costs, interoperability, smart contracts, and more. - The layer-1 protocol is preferred over the layer-2 protocol. Dapps, DeFi and NFTs launch. - Communities and conferences development. Others like Cardano, Polkadot, and Solana influenced the sector. Furthermore, Cardano, for example, is presently rising despite famous ones fading. But the movement is linked to the upcoming Cardano Summit. Moreover, other platforms may have similar events, boosting the ecosystem. Bitcoin Still the Choice for Novice Traders Bitcoin has recently gained widespread recognition and popular usage. This has made the ecosystem less volatile as an inflation buffer. Consequently, BTC is acquiring enormous popularity among novice crypto traders. So, BTC is still the preferred currency for holders. Moreover, netizens expect it to skyrocket in the future, like compounding on long-term investments. We are excited about Altcoins' meteoric rise and ability to provide real-time solutions. BTC still has the upper hand. Because it dominates the market cap, even little adjustments have a big impact. Recommended for You - Cardano (ADA) Collaborates With Dish Network and Chainlink - GoldFinX (GIX) Skyrockets 1674% In A Day After New Partnerships - CEO of Digital Finance Group, James Wo on FTX Purchase of LedgerX - IoTeX (IOTX) Price Surges, Trading Volume Rose Over 900% in Last 24-Hours - Major Dogecoin Twitter User Posts "Dogecoin Community Will Support Musk"

- Protocols like staking and DeFi would be tough to regulate. - James said the company is focusing on establishing itself in the Asian industry. FTX purchased LedgerX, a cryptocurrency derivatives platform licensed by the CFTC, Swap Execution Facility, and Derivatives Clearing Organization (DCO). LedgerX has been around for nearly four years and has cleared over 10 million options and swaps contracts. When asked why FTX bought it, James Wo said it was a win-win scenario for both parties. In a Zoom interview with Nairametrics, James Wo, a LedgerX board member and CEO of Digital Finance Group (DFG), addressed FTX's purchase of LedgerX. List More Coins and Offer Leveraged Trading LedgerX announced its purchase by FTX and said that the transaction would have no significant effect on its operations. As the platform will continue to serve its existing client base. When asked James whether there had been any substantial changes to LedgerX's board. James mentioned that the management team had not changed. James said: "FTX will be a major shareholder on the board because previously, LedgerX had 2 board seats for Terry and me. Both of us are still on the board and we also got other people on the board, like the CEO of LedgerX, Zach, and the Chair of LedgerX, Larry, who was a former commissioner of CFTC." James was also questioned about Coin base's entry into the cryptocurrency futures market and what innovations they have in place to stay competitive. He answered that the company now looks to list more coins and would also like to offer leveraged trading in the upcoming future. When asked whether LedgerX has ambitions to grow into the African market, James said that the business is presently focusing on establishing itself in the Asian industry. James discussed the present regulatory environment for cryptocurrencies. Stating that protocols like staking and DeFi would be tough to regulate. - Investing in crypto may be profitable if done correctly. - Crypto's appeal is hard to resist. Cryptocurrency prices have soared in recent weeks, and many investors are attempting to cash in. Investing in crypto may be profitable if done correctly. If you had invested \$1,000 in Bitcoin a decade ago, you'd have almost \$15 million now if you held on to your assets and didn't sell. While it is conceivable to become a crypto millionaire, not all investors will. Bitcoin has risen 372% in a year. Ethereum has grown over 1,500 percent in the same period, while Dogecoin has increased by over 19,000 percent. The statistics alone suggest that bitcoin may be lucrative. However, previous performance does not guarantee future results, and crypto remains a high-risk investment. Before Investing, Consider Your Risk Tolerance Cryptocurrency prices may continue to increase or fall. Bitcoin's price has declined recently, demonstrating how unpredictable the cryptocurrency market is. Nobody knows whether it will be a smash hit or a flop. Furthermore, if it works, you may earn a lot of money today. But if it fails, you may lose everything. Crypto's appeal is hard to resist. Moreover, if costs keep rising, you might earn a lot of money on this brand-new technology that promises to transform the world. Before investing, consider your risk tolerance. Buying bitcoin during volatile times may cause many sleepless nights for risk-averse investors. The way crypto has risen over the years and the potential it has promised for the future, famous crypto analyst Nebraskan Gooner on Twitter in a recent tweet says, becoming a millionaire is easy and shows in a sarcastic way of saving funds for years. It would take 42 years to become a millionaire finally. Becoming a millionaire is easy. " NebraskanGooner (nebraskangooner) September 24, 2021 All you have to do is save \$5 a week with 8% interest for 462 years and you're set. Now go out there and get to saving, future millionaires. " Also, before investing in crypto, make sure your finances are in order. Invest only money you can afford to lose, and make sure you have three to six months' worth of savings set up for emergencies. So you don't have to sell your crypto assets to cover an unforeseen bill. Recommended for You

- The Ethereum network has recently been upgraded to quicker scaling. - Bitcoin is the talk of the town, and its volatile character is apparent. A year after the leading cryptocurrencies hit all-time highs in April, most are up 200 percent to 300 percent or more. Bitcoin is the talk of the town, and its volatile character is apparent. Then there's Ethereum, created in 2013. It is an open-source platform for creating new decentralized apps based on blockchain technology. Major market participants like Goldman Sachs have highlighted to its clients that Ethereum has a strong possibility of exceeding the \$660 billion market value of Bitcoin. ETH Vs BTC In terms of real-world applications and value storage, Ethereum has greater potential. Unlike Bitcoin, Ethereum symbolizes the future of programmable currency and smart contracts. Because Ethereum enables the development of new applications on its infrastructure, it may prove to be a more valuable resource in the long run. Many transactions are paid using Ether (ETH), as witnessed lately with the success of NFTs this spring. As a consequence, ether has seen much more transactions than Bitcoin in the past year. They both feed the ETH blockchain. The Ethereum network has recently been upgraded to quicker scaling and lower transaction costs, driving the token's price value. According to renowned crypto analyst and trader Inmortal on Twitter, Ethereum will exceed market leader Bitcoin in the fourth quarter. \$ETH will outperform \$BTC in Q4. " Inmortal (@inmortalcrypto) September 23, 2021 In the past 24 hours, Ethereum has traded in a range of \$2,930.01 to \$3,156. Trading volume fell 19.59 percent to \$22.3 billion, with a \$368.7 billion market value. It is ahead of the 100 hourly simple moving average and above \$3,000. Also, immediate upward resistance is around \$3,135. The first significant resistance is \$3,200. If the price closes over \$3,200, it may climb further. 3400 may be the next major barrier level. Moreover, it is the 1.618 Fib extension level of the significant decline from \$3,105 to \$2,651. \$3,320 may be an intermediate resistance level. If Ethereum fails to break through the \$3,135 and \$3,200 barrier, a downtrend may commence. On the downside, \$3,050 acts as first support. Recommended for You

- REN Might also hit new ATH if the bullish trend continues. - REN price spikes 23.97% in the last 24 hours. - RenVM Greyscale was launched in the Ren network's testnet. Ren is software that is utilized to transfer new and existing crypto assets over different blockchains. REN is the native cryptocurrency of Ren Network. Currently, Ren's (REN) price moving in an upward direction it showing a bullish sign and there might be the possibility of hitting its current ATH of \$1.83 and also hits a new all-time high (ATH). Current Market Status According to CoinMarketCap, REN's price was trading at \$1.02 with a 24-hour trading volume of \$485,788,221. REN price spikes 23.97% in the last 24 hours.

The circulating supply of REN is 997,764,051.02 REN. The above chart depicts the price flow of REN in the last 24 hours, it was displaying a bullish trend. Within a day REN price was increased from \$0.85 to \$1.02. More so in the last 30 days, REN's price skyrocketed over 68%. If this bullish trend continues further REN will break its current ATH and it is possible of reaching a new ATH. Reason for the Price Surge Ren (REN) is an open-source platform that is utilized to facilitate interoperability and liquidity across various blockchain networks. The major reason for the price surge of REN is the continued growth activity and also the total value locked (TVL) on RenVM. Furthermore, the next reason for the price surge is the release of the Arbitrum bridge, an Ethereum (ETH) layer-two scaling solution Arbitrum. This was developed to organize popular decentralized applications (dApps) in a fast, low-fee environment. On September 13 RenVM Greycore was launched in the Ren network's testnet. This was found to be the third reason for the price surge of Ren. Finally, with the upcoming updates and upgrades, we can expect more bullish in the future. As aforementioned, there is the chance for REN to hit its new all-time high (ATH) if this bullish trend continues without any breakouts. - Crypto Market Cap Skyrockets 5.3% to Hit \$2.05 Trillion - Earlier this month, the crypto market has undergone a major drop. - The market cap of Bitcoin has reached over \$828 billion. In the past 3 days, the crypto market depicts a bearish trend, but on Thursday, the crypto market turned bullish trend. The crypto market was hitting above \$2 trillion after the dropdown. The whole crypto market has skyrocketed nearly 5.3% to hit \$2.05 trillion. Previously, on August 15 the total market value of cryptocurrencies surged above \$2 trillion. Accordingly, earlier this month, the crypto market has undergone a major drop. The leading cryptocurrencies such as Bitcoin, Ethereum, and other cryptocurrencies experienced a major price downfall in the latest market crash to hit traders and investors. At that time, the biggest question raised is will the crypto market recover and when it will happen. But the crypto market was recovered from the major fall down. Furthermore, crypto giant Bitcoin (BTC) has surged 4.21% to hit \$44 K. With this surge in price, the market cap of Bitcoin has reached over \$828 billion. Similarly, Ether (ETH) price spikes over 5% to reach \$3,109. With this price surge, the market cap of ETH has touched \$364.7 billion. More so, many cryptocurrencies also surged in their price which has increased their market capitalization. A major reason behind the price surge seems to be the trending popularity of crypto all over the world. In this trending world, the majority started to invest in crypto, and many countries are accepting cryptocurrency as one of the payment methods. Many activities in the crypto market tend to affect each other. Eventually, when Bitcoin price pumps up, altcoins will also blow up. Likewise, when Non-fungible Tokens (NFT) perform well, Decentralized Finance (DeFi) also shows a good performance. Finally, these things will seem to be a reason for the crypto market surge. - Many cryptocurrencies hit record highs in April. - Few analysts believe this crash will eventually be overlooked. With a new all-time high for Bitcoin, legislative discussions that may affect the sector, and more institutional buy-in from large businesses, the cryptocurrency market has gone through so much this year. Despite this, interest in Crypto has soared this year. But the sector is young and growing. Long-term trends are difficult to forecast, but experts will focus on topics like regulation. Also, institutional crypto payment usage in the next months to better understand the industry. This month's crypto market collapse saw several major digital currencies decrease in value. Bitcoin, Ethereum, and other popular cryptocurrencies lost value in the recent market collapse. Many cryptocurrencies hit record highs in April, with Bitcoin hitting over \$50,000 before major falls during the summer. According to Coinbase, Bitcoin's value has increased 335.91 percent in the past year, despite the crypto collapses of May 19 and June 8. The total price is now far below the mid-April highs, but well over the same time last year. In 2021, mainstream businesses across sectors showed interest in cryptocurrencies and blockchain. And some even invested. According to AMC, Bitcoin payments will be accepted before the end of this year. PayPal and Square, for example, are betting on Crypto by enabling consumers to purchase on their platforms. The market wants to climb to the moon, according to Twitter Crypto Analyst and co-Founder of @PACcoinOfficial David Gokhshtein. David's Tweet: The entire market wants to moon ðŸŒªðŸŒª â€” David Gokhshtein (@davidgokhshtein) September 23, 2021 Future of Crypto Many analysts believe this crash will eventually be overlooked, and new highs will be made following the wide-adoption rate of crypto in all sectors. NFT sales soared in August, according to the biggest platform for the burgeoning digital asset class, as investors' wagered increasing interest in the arts, sports, and media. Many people, puzzled as to why so much money, spent on things that do not exist physically. The demand and craze for the Crypto and increasing upgrades to DeFi. Along with nations starting to approve Crypto as a legal tender, shows the future of Crypto has a long way to go, and one can predict moon is not too far for the crypto market. Recommended for You

- The price of XRP has risen over 10% in the past 24 hours. - Ripple's CBDC Private Ledger allows central banks to access a network of CBDC Ledgers. To pilot a central bank digital currency (CBDC) utilizing Ripple's CBDC Private Ledger, Ripple announced a partnership with Bhutan's Royal Monetary Authority (RMA). The RMA will test retail, cross-border, and wholesale payment scenarios for a digital Ngultrum built on Ripple's long-term blockchain technology. This will help it achieve its goal of 85% financial inclusion in Bhutan by 2023. The RMA's dedication to creating a safe and reliable payment system has made it a financial innovator. The central bank introduced the Global Interchange for Financial Transactions (GIFT) system in 2019. To make transactions easier, it integrates with the government's Electronic Public Expenditure Management System (e-PEMS). Ripple said: "Beyond privacy, the CBDC solution is also custom designed to handle payments at the volume of

transactions required by a successful retail CBDC.â€” Bhutan, the worldâ€™s only carbon-negative nation, shares Rippleâ€™s dedication to sustainability. The CBDC Private Ledger is carbon neutral and more efficient than proof-of-work blockchains by a factor of 120,000. XRP Rises Over 10% in last 24 Hours Deploying a CBDC strategy without jeopardizing financial stability or monetary policy goals is made possible by the CBDC Private Ledger. To ensure monetary and technical independence, Rippleâ€™s CBDC Private Ledger allows central banks to access a network of CBDC Ledgers. The RMA became an independent Central Bank with increased powers under the RMA Act (2010). Due to Rippleâ€™s latest statement, the price of XRP has risen over 10% in the past 24 hours. XRP is currently trading over \$1 with a \$47 billion market value. XRP is the 6th largest cryptocurrency. Last week, XRPâ€™s market cap surpassed Solanaâ€™s as per CoinMarketCap. - Turkey President Erdogan terms the nation is against cryptocurrency. - Former Prime minister states crypto leads to grievances. - Turkey plans to restrict crypto and initiate new regulations upon it. Turkey being a country full of promises, however is not so fair when it comes to its crypto industry. Besides being a well developed nation of the Ottomans, Turkey seems to avoid cryptocurrencies since long back. Furthermore, the interview took place in Mersin port city of Southern Turkey, which was actually a program for the youth, â€”Meeting with Youthâ€™. This program saw students from various universities across the country in a meeting with the President and other higher officials of the nation. Besides the president being bombarded with numerous questions, one student asked the President regarding the future of cryptocurrency in Turkey. This question is in contradiction as true to the fact that the Central Bank of Turkey launched the Lira platform, for cryptocurrency of its own. In spite of this, the President and the officials gave their views evidently to surprise. The Presidentâ€™s Statements Accordingly, the President of Turkey, Reccep Tayyip Erdogan expresses that the whole nation is against crypto and in a profuse war with it for a long time. Also, he adds the nation is in a complete struggle with the crypto industry. Moreover, such an abrupt answer gave all the students a thrill as they expected quite a different answer from the President. Furthermore, the President took upon the former prime minister and deputy chairman of the Justice and Development party, Binali Yildirim to comment his opinions on cryptocurrency. Former Prime Ministerâ€™s Comments In spite of this, Binali Yildirim states that the crypto industry is nothing but full of grievances and bad remarks. Also, he adds that the crypto industry of the nation has to be controlled adversely. In addition, he points out various instances when various fraud and scams upon the crypto exchanges took place. This contradicts the scams of crypto exchanges of Turkey such as the Thodex and Vebitcoin, and both these exchanges are shut down now. Also, he pointed out the Dogecoin (DOGE) investment scam, which led to the loss of assets of nearly 1500 investors. Moreover, he states the government has to take certain actions and decisions upon the crypto industry. Accordingly, itâ€™s already known that the Turkish government is in preparation and development of its rules and regulations for the crypto industry. Recommended for You

Solana (SOL) is now the recent hype which creates a huge curiosity among the millions of investors with its exciting developments. At present, all crypto users are planning to invest their assets into Solana for its massive performance in the marketplace. Besides, all investors believe that SOL will overtake Ethereum (ETH) in the near future. Moreover, Solana is progressing forward offering great deals to the investors and to the entire crypto space. All investors must know when to invest their savings into the crypto assets as the market is always unpredictable. But now, Solana is fast approaching and SOL adoption is remarkable with a market cap of \$50 billion. Why invest in Solana (SOL) ? Solana is the decentralized Finance (DeFi) token which recently gained the users attention with its innovation in the market. The creative ideas of the developers working behind the Solana network provides the users with unique features and infrastructure. Moreover, SOLâ€™s decentralized applications (Dapps) offer the users fast, safe and secure transactions. Notably, Solana protocol strengthens the network to provide nearly 50,000 TPS, much faster than ETH networkâ€™s 30 per second. Also the Solana network is capable of working with a variety of Dapps on its infrastructure. Thus, these features create a hype among the investors for Solana to become the worldâ€™s most popular DeFi network. Earlier in September, Solana grabbed the title of best Ethereum killer in competition with Cardano. Also proving that SOL is 3,800 times faster than the ETH network. Hence with its significant utility and conduct it will increase its value and reach greater heights in the digital space. Following, Solana is massively rocking the crypto industry by thrashing the value of other digital assets. Recently, SOLâ€™s continuous rise pushed itself into the top 10 cryptocurrencies with remarkable market cap. Surprisingly, Soalan surpassed XRP, Polkadot, Dogecoin and became the seventh-largest cryptocurrency by market value. SOL Market Status According to CoinMarketCap, the Solana (SOL) holds the value of \$163.61 with a rise of 15.98% in the last 24-hours. Besides, with a 16.81% increase its current market capitalization is \$48 billion with huge trading volume. Also, Solanaâ€™s innovative proof-of-history (PoH) will boost its value and usability in the industry very soon. Thus, with an unique integrated blockchain technology, Solana (SOL) will incredibly fly high in a very short period. With its developments and smart contracts it has attracted millions of investors in a lightning processing time. Hence, it is a good time for all the investors, crypto traders to cash out their assets into the digital currencies. Recommended for You

- The top 5 trending altcoin searches, Terra (LUNA), Shiba Inu (SHIB). - PlantVsUndead (PVU), Gala (GALA), and JOE (JOE). The top 5 trending altcoin searches are Terra (LUNA), Shiba Inu (SHIB), PlantVsUndead (PVU), Gala (GALA) and the 5th altcoin is JOE (JOE). 1. Terra (LUNA) Terra launched in the year 2018. It is a network of creating cryptocurrencies with stable prices. LUNA is the native token of Terra protocol. LUNA offers the holders to vote on governance proposals. Terra is a secured blockchain using proof-of-stake consensus. As per CoinMarketCap, Terra (LUNA) price is trading at \$35.14 with the 24-hour trading volume of \$1,231,580,645. The circulating supply of LUNA is 401,714,159.44 LUNA, at the time of writing. 2. Shiba Inu (SHIB) DOGE killer Shiba Inu (SHIB), was

launched in the year 2020. SHIB intends to be an Ethereum-based alternative to the popular meme coin, Dogecoin (DOGE). It supports several projects such as a non-fungible token (NFT) art incubator and the expansion of decentralized exchange (DEX) that known as Shibswap. According to CoinMarketCap, SHIB price surges 16.17% in the last 24 hours. 3.PlantVsUndead (PVU) PlantVsUndead (PVU) is a free non-fungible token (NFT) play-to-earn game. It is one of the newest NFT games, it will not enable the user to own and fight using digital pets. The main aim of the PlantVsUndead is to facilitate the players with a free game, however other online games like Axie Infinity (AXS) players need to invest a minimum of 3 Axies. According to CoinMarketCap, PlantVsUndead (PVU) price is trading at \$8.31 with a 24-hour trading volume of \$19,195,271. At the time of writing PVU circulating supply is 1,946,826.30 PVU. 4. Gala (GALA) A GALA token is utilized in Gala Games Ecosystem. Currently, GALA based on the Ethereum blockchain, it is a non-refundable utility token that can be utilized as the medium of exchange. The ultimate aim of the Gala games is to take the gaming industry in various directions by enabling players back control over their games. As per CoinMarketCap, GALA's price is trading at \$0.08915 with a 24-hour trading volume of \$511,470,890. At press time, the circulating supply of GALA is 6.98B GALA. 5. JOE (JOE) The 5th top trending altcoin search is JOE (JOE). JOE is the governance token of the decentralized trading platform Trader Joe. It was built on the Avalanche blockchain network. Trader Joe enables users to take part in trading, offering liquidity to liquidity pools, yield farming, staking, lending, and governance voting. At the press time, the JOE price was trading at \$2.88 with a 24-hour trading volume of \$17,550,617. According to CoinMarketCap, the circulating supply of JOE is 64,335,594.00 JOE. Recommended for You

- Shiba Inu and Dogecoin are down up to 75% from their all-time highs. - SHIB price has just hit critical resistance. Shiba INU (SHIB), the second most popular meme coin, soared 35% on Friday after Coinbase announced that users may trade, transmit, receive, and store SHIB on its platform. A meme coin is a cryptocurrency that is linked with a concept, usually as a joke. Shiba Inu aims to be an Ethereum-based meme coin like Dogecoin (DOGE), which has a market value of over \$33 billion. Japan's Shiba Inu hunting dog breed inspired the coin dubbed "DOGECOIN KILLER." Unlike Bitcoin, which is intended to be rare, SHIB is intended to be plentiful. This joke coin has approximately 500 trillion in circulation already. The Shiba Inu coin, created in August 2020 by an unknown individual known as Ryoshi. Memecoins are notoriously volatile cryptocurrencies that fluctuate rapidly in response to news events. Both tokens Shiba Inu and Dogecoin are down up to 75% from their all-time highs. However, the blue-chip crypto, bitcoin, is up about 340 percent yearly basis. Released Delayed Due to Technical Glitch When the asset was launched on Binance and Coinbase Pro, the surge was comparable but less intense. Despite a small retreat, the price continues to rise, indicating a more dramatic surge. Moreover, the price is continuously trying to stop the bears from taking all the gains and lowering the value. Coinbase, a popular cryptocurrency exchange, now accepts Shiba Inu. Customers may now trade Shiba Inu on Coinbase.com and the company's iOS and Android applications. After a technical issue delayed the June release, the recent addition of Shiba to Coinbase Pro took place, its professional trading platform. Currently, the SHIB price has just hit critical resistance and dropped below it. A break of these levels would allow the price to test the next resistance zone. As per CoinMarketCap, SHIBA INU price is \$0.000008 USD with a 24-hour trading volume of \$2,658,636,133 USD. Also, SHIBA INU is up 15.79% in the last 24 hours. Recommended for You

- Dogecoin Market Capitalization Dropped to 9th position. - The meme coin price falls 67% from its All-time high. - DOGE holders lose 4.8% of their assets in one day. Dogecoin (DOGE) is a famous internet meme-coin which is an attraction for many investors and crypto enthusiasts. This dogecoin initially rose from being a joke coin to the most popular meme-based digital currency. Notably, DOGE's fans are popular stars and business giants who believe dogecoin is a legitimate investment prospect. Recently, the Dogecoin community's partnership with most popular brands and business leads were on a trend attracting the interests of large users. In addition, Twitter tweets from the Doge father, "Elon Musk", the CEO of Tesla will be the main reasons for Dogecoin (DOGE) price surge. With its market performance more than 1500 merchants accepted Dogecoin as payments. So, performing as a great crypto deal, dogecoin was holding the 4th position in the market capitalization. At present, the DOGE slips down 67% from its all-time high and today the meme-coin ranks 9th place in the market. DOGE's Market Value Dips In August, the entire crypto market was resulting in a bullish trend seeking interest of more investors into digital space. One interesting concept the crypto market follows is the performance of Bitcoin (BTC). If the price of BTC and Ethereum (ETH) falls, the value of altcoins also dips. Then if the value of these top currencies rise, the price of altcoins also surge. So, at that time, the value of dogecoin (DOGE) reached a value of \$0.34 with massive trading volume in the market. All the dogecoin lovers were excited to notice such a price soar believing it is growing mature. According to CoinMarketCap, dogecoin holds the value of \$0.244046 USD, ranking #9 in the market capitalization. More so, this price dip affected the holders assets by 4.8% in the last 24 hours and 22.7% during last week. And so it is the toughest period for all the DOGE lovers all over the world. Besides, several crypto assets slowly started to drop in their value and price recently. Moreover, crypto analysts suggest, the price fall can be due to strict regulations on digital currencies. Thus, many investors are selling their assets in recent days due to Authoritative pressures. So, the investors are pulling out their earnings from the crypto space. However, with a price fall, Dogecoin is still receiving support from its users and lovers. And many crypto investors expect DOGE will reach \$1 in the near future. Besides all struggles and challenges, the Doge community is upgrading its network. Thus, the upgrade will offer its users super security and low transaction fees. As always being a Doge supporter, Elon Musk comments, Dogecoin relies on the social media hype to rise in value. And also claims that Dogecoin is the strongest cryptocurrency as a medium of exchange. The Attorney General of New York Democrat Letitia James has permanently shut down the Coinseed crypto exchange. The exchange has converted all its users' funds into dogecoins without their knowledge. Due to the numerous complaints on the crypto exchange, the NYAG officer, James wins the judgement against the crypto exchange to stop all of its operations. Moreover, the CEO of the Coinseed exchange was warned to halt their illicit and fraudulent operations. Along with a penalty of \$3 Million for freezing the customers accounts and converting their funds into Dogecoins (DOGE). This results in a huge impact affecting the savings of many investors. Coinseed To Shut Down for Lifetime Earlier in February, the NYAG officer, James filed a case on the Coinseed crypto exchange for defrauding the monetary funds of millions of investors. Despite the lawsuit the CEO of Coinseed, Delgerdalai Davaasambu continued his fraudulent process. Besides, the most interesting part is that the entire exchange team was cheating the users in a very smart way. Coinseed and its CEO were trading in the users accounts without their knowledge. And finally these fraudsters were blocking the investors from accessing their accounts. However, by monitoring these deceit acts from the Coinseed community, James filed a case according to Law360. And as a result the New York County State Supreme Court passes a judgement on Monday. Thus, James won the case and permanently shuttered the Coinseed crypto platform. The Attorney General were very concerned about the investors and states, "For years, Coinseed and its CEO have been involved in egregious and fraudulent activities deceiving millions of investors. Thus, we will continue to pursue all who attempt to mishandle the system and ensure investors are safe and secure." Notably, after James filed the lawsuit to the court, the NYAG office received more than 175 complaints from investors. All the request letters were regarding to save their accounts from the fraudsters group. Thus, through winning the case against the Coinseed, General Attorney James today shut down the entire operations of the crypto exchange. Recommended for You

- The most popular crypto mentions on Twitter are Bitcoin, Ethereum, Velas. - Cardano, Hedera Hashgraph, Solana, Tezos, Dogecoin, Polkadot, Polygon. The most popular crypto mentions on Twitter are Bitcoin, Ethereum, Velas, Cardano, Hedera Hashgraph, Solana, Tezos, Dogecoin, Polkadot, and Polygon.

1. Bitcoin (BTC) Bitcoin is a decentralized system that tracks and records transactions in a distributed ledger which is blockchain. Moreover, Bitcoin has the highest mention on Twitter. Accordingly, as per CoinMarketCap, the BTC price is trading at \$46,503.97, with a 24-hour trading volume of \$43,350,741,652, at the time of writing.

network. According to CoinMarketCap, the Polkadot (DOT) price is trading at \$37.92 and gained 12.49% in the last 24 hours. 10. Polygon (MATIC) Polygon takes tenth place in the crypto mentions. Eventually, it is self-possessed as a layer 2 scaling solution. The native token of the Polygon network is MATIC. More so, as per CoinMarketCap, the Polygon (MATIC) price is trading at \$1.31 with a 24-hour trading volume of \$914,556,786 at the time of writing. Recommended for You

Actually nothing could be said abruptly regarding the complete movement of the cryptocurrency market for the year 2021. There were numerous ups and downs so far till date. Despite facing immense market crashes, and one being evidently there for nearly a month, just recently the market surfaces back. In terms, the present crypto market resurfacing could be said as the most legit and standard one after a crash so far for this year. In spite of all this, many speculate how and at what points all the major cryptocurrencies, the Bitcoin (BTC), the ruler of altcoins Ethereum (ETH), and much more will be for the next few months for the year to end. Accordingly, majority of the crypto enthusiasts are sightings upon Ethereum (ETH), many speculating how its market trend and price will be. Current Trend of Ethereum (ETH) The number 2 cryptocurrency needs no further introduction, as completely everyone knows what it is. Apart from being the number 2 crypto, Ethereum (ETH) is the most valued blockchain ecosystem in terms of transactions and traffic in the blockchain industry. In spite of this, it's the most renowned and prolific open decentralized blockchain platform. And so, at present it is the most used global platform for developing and establishing Decentralized Applications (DApps). According to the time of writing, ETH is priced at \$3406.80 with the 24 hours price range spiking up about 3.28%. Taking the past 24 hours into consideration, ETH has soared up from \$3237.79 to \$3455.96 as the highest for the day. ETH History Short Cap Moreover, taking the last month into consideration, ETH has suffered miserably upon the month of August. However, with the start of September, along with the market boom, ETH spiked to \$3972.66 in the first week of September. Despite all efforts of surging up, it stumbled down profusely in the second week of September. And so, ever since then, its gearing up gradually to the benchmark \$3500 range. In spite of all this, the last 1 year track graph evidently shows that the year of 2021 is the year for ETH. Accordingly, from beginning at just \$365.57 a year back, it soared to its ATH of \$4168.7, astonishing the whole crypto industry. As a result, many speculate extreme bulls on ETH. Furthermore, many analysts state that ETH will be touching a massive \$10K mark by the year's end. Reasonings Valid For ETH \$10K Moreover, most of the graphs and indicators denote strong lines of surge, owing to either the RSI or the MACD. Also, the much elaborate backing up by ETH blockchain makes the price value of Ethereum (ETH) extremely stable and strong. Furthermore, as long as ETH stays above the \$3K mark, the RSI and MSD points will be above the line, making ETH not to fall below or turn bullish at any time in future. NFTs have been around since 2014 and are currently gaining prominence in the digital art trade. Since November 2017, NFTs have been valued at \$174 million. NFTs are also usually one-of-a-kind, limited run, and feature unique identification codes. With the Alonzo update, Cardano (ADA) will be able to use blockchain smart contracts. On 1 September, Alonzo Purple received its smart contract live, enabling new Dapps and NFT minting on the testnet before the mainnet launch. While many doubters remain, the Cardano network has managed to complete critical updates on schedule. In terms of the transfer volume, Cardano NFTs (CNFT) are already coming up to Ethereum NFTs. With the scalability problem and high gas price for Ethereum, several alternative "Ethereum killers" have emerged, such as Solana, whose NFT marketplace generates headlines with multi-million NFT purchases. Cardano Derangement Syndrome Cardano wants a piece of the market after the smart contract is implemented tomorrow by integrating the mainnet. It has overcome all odds to become the third-largest cryptocurrency. The skeptics are still opposing and inventor Charles Hoskinson labels this the Cardano Derangement Syndrome (CDS). A Coindesk writer stated it was difficult to mint NFTs on Cardano, to which Hoskinson called out. Cardano user mined an NFT for the tweet claiming NFT minting was "impossible". When it comes to trolling disguised as criticism, Hoskinson has not held back, even warned of an impending "FUD Storm". Charles Hoskinson mentioned in a tweet: In contrast, the Cardano (ADA) price has risen 2.5X since August, claiming third place. Just like Solana, the altcoin was poised to enter the price discovery phase before the Tuesday market flash collapse. \$ADA is now trading at \$2.67, down 0.53% in the last 24 hours as per CoinMarketCap. Like Ethereum, the price of altcoin may rise after the Alonzo upgrade on Sunday. Recommended for You

When it comes to the play of "Entertainment" specifically to the Superheroes, the whole world is into two separate groups. Yes, for sure everyone knows regarding this, the two groups are, the Marvel Universe and the DC comics. Every single individual in the world could be distinguished as either a fan of DC comics or a fan of Marvel Universe. In spite of all this, along with the emerging non-fungible token (NFT) market, the expectations and hype are to the core among the fans and crypto enthusiasts. However, both the competitors come together stating the same when it comes to NFTs being sold by freelance artists regarding their firm's characters. And so, both Marvel and DC comics have strictly said "No" to all the freelance artists from making and selling NFTs based upon their characters. DC Comics Strict Orders The DC comics are the oldest American comics still playing the game till date and hopefully forever. With the evolution of the NFT market, most expected ones to come into it for a long time were the DC comics and the Marvel Universe. However, DC comics has so far hasn't revealed any possibilities or news regarding its NFTs so far till now. Accordingly, last year DC comics officially told all freelance writers not to make or sell any types of digital assets namely NFTs based on its intellectual properties (IP) and its characters. And so any such activities done upon the NFT market, will be against the law, illegal, and considered as an offense punishable by law.

Despite such announcements being made, many continued to make NFTs and sell them profusely. In addition, a comic artist, Jose Delgo sold an NFT collection of Wonder Woman on Makersplace. Also, another freelance artist sold an NFT on Marvel on OpenSea for \$2000 value Ethereum (ETH). Therefore, now the DC comics NFTs will not be available for sale until or unless DC comics launches them themselves officially. Marvel's NFTs on the other hand, Marvel Universe also recently announced the same statement as DC comics. In addition, Marvel states all the freelance artists not to make and sell any sort of NFTs or other digital assets based upon their IP and characters. Moreover, previously last month, Marvel Cinematic Universe openly announced their entry into the NFT market. Accordingly, Marvel has partnered with VeVe application to bring forth its NFTs and series of digital collectibles. In spite of this, Marvel termed the month of August to be the "Marvel Month", citing the launch of its first series of digital collectibles and NFTs based on "Spider-Man". Furthermore, Marvel put out the Captain-America NFTs by the end of August for their 81st Anniversary. And also, Marvel states that they will be profusely giving opportunities to the Marvel creators upon the VeVe platform. Elrond Network, the development creators of the eponymous blockchain internet-scale protocol. Stated that the technology it produces had been incorporated into the Elrond blockchain digital asset infrastructure and business solutions provider Copper.co. Thus providing custody services for EGLD digital currency. EGLD is the Elrond Network's native, capped supply and settlement token. Furthermore, this currency is utilized for transaction fees. Also, Elrond consensus layer staking, decentralized financial products (DeFi), tokenized assets, and non-fungible tokens (NFTs). Benjamin Mincu, Elrond Network CEO stated: "Best in class digital asset custody services are essential for making the rapidly expanding Elrond ecosystem accessible to more institutional actors, markets, and geographies. With Copper as a robust custodian for assets on the Elrond Network, a new growth chapter is ready to begin for the internet-scale blockchain." Thus, the collaboration of two partners will benefit institutional players, managers, exchanges, trading channels, and other market participants. Enabling them to get safe, secure, and compliant access to high-performance, low-cost, carbon-negative, blockchain-based Elrond Network capabilities and the EGLD, the underlying digital currency. Reinforcement For Copper.co After the New Connection Copper.co, the provider of digital asset custody and trade solutions, revealed to offer stake services on the Oasis ROSE token. Copper's custody solution is one of the tiny cohorts of MPC technology users. Furthermore, it integrated a total of 250 digital assets. After Copper.co, added EGLD. The Elrond (EGLD) price today reached an all-time high of \$291.52 USD. With a 24-hour trading volume of \$567,746,435 USD as per CoinMarketCap. Copper also has 40 large centralized exchanges. Moreover, more than 300 institutional asset managers trust them. EGLD is the backbone of the tokenomics of the Elrond Network. The new connection with Elrond Networks would further reinforce the Walled Garden of Copper.co. Which infact already accounts for 96% of the crypto market. Teething difficulties plagued El Salvador's historical acceptance of bitcoin as legal money on Tuesday. A furious protest of suspects, technological difficulties, and a dip in the crisis masked the deployment. The daring attempt began when Salvadoran President Nayib Bukele protested soon after midnight. That the government-funded bitcoin software was not on several internet platforms, including Apple and Huawei. When El Salvador tendered Bitcoin, a poll was carried out to see whether American people in the United States favored or opposed such actions. Of the 4,912 participating adults, 61% did not fight it. On Thursday, Yougov America Inc. ran a poll to discover whether people favor or object to the usage of Bitcoin as a legal currency in the United States. A total of 4,912 people participated in the poll throughout the nation. Yougov is a London-based multinational research and analysis organization. Survey respondents were asked: "Would you support or oppose the U.S. making bitcoin a legal form of currency? This would mean that businesses would accept bitcoin in exchange for goods and services, in addition to continuing to accept the U.S. dollar." Highest Age Group Backed Bitcoin The findings revealed that 11% of respondents said they support firmly, and 16% said they support a little. At the same time, 11% said they little disagree, 28% said they strongly disagreed, 34% stated they don't know. Among the male participants, the number of individuals who strongly favor Bitcoin as legal money has increased to 15%, while 17% have expressed a degree of support. Of the female respondents, just 7% strongly favor it, and 14% support it. The highest age group backed Bitcoin strongly In the United States. It is 25-34 (20%) and 35-44 (19 percent). At the same time, 26% of the 18-24 age group and 24% of the 25-34 age group support somewhat. Recommended for You

There are countless cryptocurrencies that are coming out every now and then. We all have heard about the DogeCoin going to the moon. It has not been trending since then. Other than Dogecoin, here are the top 3 crypto tokens that are now trending in the world of cryptocurrencies. Fantom (FTM) It is a decentralized, open-source, and permissionless smart contract platform for Dapps or Decentralized Applications and digital assets. It is amongst the many blockchain networks that are built to serve as an alternative to Ethereum. The Fantom Blockchain went live in December 2019. The network architecture is designed to provide a viable solution to the blockchain trilemma by offering a steady security, scalability, and decentralization balance. With its in-house token FTM, it aims to solve issues associated with smart-contract platforms, specifically transaction speed. The developers claim that they have reduced the speed by 2 seconds. Currently, the price of FTM is \$1.52, with a 24-hour trading volume of \$981,629,051 USD according to CoinMarketCap. Kalata (KALA) A DeFi platform supported by the
