

significant expansion. Furthermore, due to its unique focus on accessibility and affordability, the project appeals to investors hoping to profit from the growing wave of cryptocurrency success. Retik Finance is an attractive option for anyone hoping to ride the cryptocurrency wave of new millionaires, even though the other tokens have potential. This is because of its distinctive characteristics and forward-thinking outlook. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

The heated conversation that seems to never get settled in the crypto community is the age-long debate of whether Shiba Inu will ever reach \$1. Analysts have thrown their weight into this discussion and their viewpoints are cogent and, hence should be adhered to. Shiba Inu (the hype of a lifetime) Shiba Inu made a big splash in 2021 thanks to its meme status which was inspired by Dogecoin and a surge of enthusiasm and virality. Its basic value proposition is still highly dependent on speculative activity and community attitude, even with a robust community and ongoing development. SHIB's price trajectory remains vulnerable to market sentiment and any regulatory actions, as achieving a \$1 market cap would necessitate an enormous market capitalization which looks mathematically unlikely. Although SHIB has a low price that makes it easily accessible to new investors, analysts believe that the lack of valid utility makes it unsustainable, especially in the long run. In times past, SHIB's brief rally has been fueled by FOMO, rumours, and overall market sentiments, which is not a good option for investors. While they have cast doubt on the possibility of SHIB reaching \$1, especially anytime soon, these analysts have suggested better options for investors seeking to capitalize on the market. Analysts suggest that Retik Finance, a DeFi ecosystem, and Bitcoin are better options. The crypto world has been weighed down by a lack of utility, which provides new users and investors with a myriad of useful features. Retik seeks to close the gap between traditional finance and cryptocurrency with products including the Retik Wallet, DeFi Debit Card, Retik Pay, etc. It is positioned as a viable platform for users looking for a strong DeFi experience because of its emphasis on scalability, security, and user-centric services. Bitcoin: As the first cryptocurrency and a store of value, Bitcoin continues to be a respected alternative to other conventional systems. Although being a decentralized digital asset and an inflation hedge are its main uses, its scarcity, acceptance as a digital store of value, and widespread adoption also enhance its utility. In the cryptocurrency world, Bitcoin is well recognized for its worth as a long-term investment and a way to transfer money across borders. Retik Finance; The Driving Vision Retik harbours a visionary perspective that extends beyond the current financial landscape, envisioning a future characterized by heightened financial empowerment, unwavering dependability, and unparalleled transparency. This vision extends its reach to encompass individuals, enterprises, institutions, and even governments, transcending geographical boundaries and socioeconomic disparities. At the core of this transformative vision are cutting-edge technologies meticulously designed to serve as bridges, fostering seamless connections between the intricate realms of cryptocurrency and traditional fiat payment systems. Utility tokens are better than Penny tokens Cryptocurrency utility goes beyond just being worth money; it includes useful applications, use cases, and ecosystem functionality. Shiba Inu, which relies mostly on community hype and its memetic origin, is less diverse and established than Retik Finance, which offers a variety of DeFi options, and Bitcoin, which serves as a store of value and a medium of exchange. Retik Finance and Bitcoin are more in line with the utility-driven goals of users and investors looking for long-term profit, a strong DeFi ecosystem, a reliable store of value, and international transaction capabilities than Shiba Inu. Conclusion While the crypto world is within touching distance with a new crypto year, utility tokens like Bitcoin and Retik Finance emerge as the strongest potential for massive profits. The Bitcoin community, anticipating the approval of Bitcoin ETFs, which will drive up its value and also the Bitcoin halving, which reduces supply, and ultimately leads to increased value. On the other hand, Retik Finance is set to launch on major exchanges in 2024, a move that will inadvertently cause its value to rise like a rocket. Investors who purchase Retik Finance now stand to benefit the most from this highly anticipated event. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

Ethereum (ETH) has long been a cornerstone in the ever-changing world of cryptocurrencies, having been a pioneer in the development of smart contracts and decentralized apps (dApps). But a fresh competitor, Retik Finance (RETIK), is gaining popularity quickly and luring investors in with its Presale. This dramatic change in interest points to a possible threat to Ethereum's hegemony and reveals Retik Finance's growing allure in the cryptocurrency space. While experts predict that Ethereum will struggle to reach its previous all-time high of \$4800, Retik Finance's token, RETIK, is said to return 15x profits in 2024. The rise of Retik Finance and Ethereum's domination there is no denying Ethereum's reputation as a major pioneer in the blockchain industry. But because of problems like high gas fees and network congestion, investors are looking for other options. Here comes Retik Finance, a cutting-edge DeFi ecosystem with a range of services ready to unseat Ethereum as the dominant player in the market. Retik Finance represents an innovative platform aiming to establish a fully decentralized finance ecosystem, effectively closing the divide between the realm of cryptocurrencies and conventional fiat applications like Visa and Mastercard Debit Cards. Through the substitution of third-party intermediaries in financial transactions such as banks and middlemen with secure and efficient Smart Contracts, Retik Finance strives to deliver a financial environment that's not only more transparent but also built on trustworthiness for its users. Retik Finance's Vision Retik harbours a visionary perspective that extends beyond the current financial landscape, envisioning a future characterized by heightened financial empowerment, unwavering dependability, and unparalleled transparency. This vision extends its reach to encompass individuals, enterprises, institutions, and even governments, transcending geographical boundaries and socioeconomic disparities. At the core of this transformative vision are cutting-edge technologies meticulously designed to serve as bridges, fostering seamless connections between the intricate realms of cryptocurrency and traditional fiat payment systems. Revealing the Investors' Interest; The Allure of Retik Finance Investors looking for a novel Ethereum alternative are drawn to the Retik Presale. Investor attention has been captured by Retik Finance's extensive ecosystem, which includes the Retik Wallet, DeFi Debit Card, Retik Pay, etc. The platform's focus on security, scalability, and feature-rich services is evidence of its potential to establish a distinctive position for itself in the DeFi market. Retik Finance's appeal is derived from its capacity to alleviate certain issues encountered by Ethereum users. Retik Finance is an alluring option for investors frustrated with Ethereum's drawbacks because of its quicker transaction rates, lower fees, and intuitive user interface. Investors looking for innovation and growth potential are drawn to the Retik ecosystem because it offers a wide range of DeFi features together with improved security. Retik Finance goes toe-to-toe with Ethereum It's not just a chance that Retik Finance is starting to become a serious contender to Ethereum; rather, it's the outcome of careful planning and a clear goal to offer a strong DeFi ecosystem. Because of its emphasis on scalability, useful applications, and user experience. The increase in investors during the Retik Presale is indicative of the rising trust that Retik Finance can upend the status quo and provide a competitive alternative in the cryptocurrency market. The shift in opinion among the crypto community is reflected in investors' support for Retik's long-term impact. It goes beyond just looking at new investment opportunities; it's also a vote of confidence in a platform that improves upon Ethereum's drawbacks and promotes innovation and usefulness. Retik Finance has the ability to completely change the DeFi market and open the door to a more open and effective ecosystem, while also yielding at least a 15x yield. Conclusion Retik Finance's Presale is attracting interest and investments, signalling the start of a new phase in the development of DeFi. Although tough, Retik's network offers reduced fees, scalability, and a user-centric strategy that could pose a threat to Ethereum's dominance. The change in the attention of investors highlights the increasing need for alternatives that provide useful answers and innovation in the DeFi space. In addition to drawing attention, Retik Finance's successful presale reflects a wider shift in investor opinion in favour of platforms that offer innovation, scalability, and user-friendly experiences. With Ethereum set to implement the Cancun upgrade in 2024, it will experience a brief rally, but a \$5000 mark seems illusory. With Retik Finance still at presale, and set to launch on major exchanges in 2024, its prices could yield 15x better profits. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

- At the time of writing, ETH is trading at \$2284, up 2.02% in the last 24 hours. - If the price manages to go above \$2301 then the price will likely test \$2342 level. The co-founder of Solana, Anatoly Yakovenko, brings attention to a new age of engagement between Solana and Ethereum. Solana is Ethereum, in his opinion. The path for crypto interoperability is laid forth by this remarkable notion. Crypto experts have long seen Solana as a potential rival to Ethereum. However, the story is shifting due to recent remarks made by Yakovenko. The co-founder recently posted on Twitter suggesting that Solana may be more than just Ethereum's rival, broadening the scope of the cryptocurrency blockchain. In particular, Yakovenko evaluates the possibility of Solana serving as Ethereum's layer 2. Highly Anticipated Upgrade According to analysts, Ethereum's ecosystem development will be boosted by the next major update in January. Features that improve the efficiency of bridges and staking protocols, decrease the number of times smart contracts self-destruct, and lower Ethereum mainnet transaction costs are anticipated to be included in the Dencun Upgrade. This development is anticipated to have a significant positive impact on Ethereum layer 2 projects such as Optimism and Arbitrum. In terms of transaction costs, Bitcoin has surpassed Ethereum, and its price has returned to levels seen during the cryptocurrency bubble of 2017. Bitcoin's average weekly fees of \$19 million is far above Ethereum's \$14 million. At the time of writing, ETH is trading at \$2291, up 2.02% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 2.51%. If the price manages to go above \$2301 then the price will likely surge further to test \$2342 resistance level. However, if the bears pull the price below \$2193 level then it will likely test the \$2154 support area.

- At the time of writing, XRP is trading at \$0.6218, down 3.85% in the last 24 hours. - If price manages to go below \$0.61 then it will likely fall further to test \$0.60 support level. XRP is now witnessing a surge in market activity due to large-scale whale transactions. 20 million XRP tokens, worth \$12.6 million, were sent to Bybit by an unidentified sender. But that wasn't the end of this whale's play. Two further substantial transactions took place within a 12-hour timeframe. In the first, a large amount of 24.9 million XRP tokens, valued at \$15.3 million, were transferred from an anonymous wallet to Bitstamp. This was followed by another significant transaction involving the transfer of 25.2 million XRP from an anonymous wallet to Bitso, worth around \$15.54 million. The price of XRP has been witnessing a severe sell off recently. Despite this tendency, number of crypto experts continue to predict that Ripple's native cryptocurrency would rise in the near future. Bears in control At the time of writing, XRP is trading at \$0.6218, down 3.85% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is down 2.11%. The price spiked all the way to \$0.65 level recently, but failed to clear above and faced severe selling pressure. If the price manages to go past \$0.63 level, then it will likely surge to test \$0.65 resistance level. Breaking above this level, will likely see price starting a fresh rally all the way till \$0.67 level. On the other hand, if price manages to go below \$0.61 then it will likely fall further to test \$0.60 support level. Further decline will likely result in price testing \$0.59 level.

As the crypto market approaches the end of the year, there's growing speculation about a potential "Santa Claus rally." This term, drawing from historical surges in Bitcoin's value during the festive seasons of 2013 and 2017, suggests a possible uptick in the market. Factors like the Bitcoin Spot ETF approval and the upcoming Bitcoin halving event are bolstering market confidence. Amidst this backdrop, cryptocurrencies like Solana (SOL), Dogecoin (DOGE), Polygon (MATIC), Sei (SEI), Chainlink (LINK), and ScapesMania are being eyed for potentially good returns on investment in early 2024. Finding a cryptocurrency with a solid ROI is not that easy, but our article attempts to sort the wheat from the chaff. Our assessment of the market through the prism of the industry's past performance provides us with some invaluable insights. Not all coins will give astronomical ROIs, but at least some of them are likely to do well over the next few weeks, months, and years. ScapesMania: A Rising Star in the Crypto World ScapesMania is a one-of-a-kind gaming ecosystem, where crypto-savvy audiences join forces with the vibrant community of casual players, paving the way to substantial growth. The ScapesMania community is buzzing with enthusiasm, which is reflected in more than \$2,110,000 raised from crowd-retail contributions to date. Join Presale at a Discount on the Official Site Empowering Holder In ScapesMania ensures participants get precisely what they desire: gamers enjoy their favorite pastime, while crypto enthusiasts can witness the ecosystem's performance and shape its future through DAO, all without engaging in gameplay. Furthermore, acquiring ScapesMania tokens unlocks extra perks. By joining the presale, you can access bonuses totaling up to 127%. You can also earn referral rewards by introducing ScapesMania to your friends. Plus, holders can participate in token buyback & burn events as well as staking. Verified Excellence ScapesMania's smart contract has successfully undergone scrutiny from leading security-ranking companies, providing peace of mind for holders. Behind ScapesMania is an award-

winning team that secured a prestigious grant from a prominent player in the blockchain industry. The team upholds transparent and publicly accessible social media accounts, engaging with a flourishing community of over 60K followers. ScapesMania's Prospects ScapesMania tokens are currently a steal, priced at just \$0.004568 per coin during the presale. As the last sales stage price is set at \$0.01, early adopters could potentially be looking at a 2.2x return after the ScapesMania presale concludes. If you're already on board with everything that ScapesMania has to offer, there's a unique opportunity for you: a special offered code, YBL372. The limited-time offer is only valid for a limited time since the article's publication. It's your best chance to get a bonus of 10% after entering YBL372 in a special field at checkout, so act fast, the clock is ticking. Solana (SOL): A Surge in User Activity and Market Presence Solana (SOL) has witnessed a remarkable surge in user activity, with a nearly 400% increase as the last quarter of the year approaches its end. This growth has significantly outpaced Ethereum's modest 3% rise. The driving force behind this upswing is attributed to a series of token airdrops by protocols on the Solana network, notably the Solana-based oracle network Pyth (PYTH), which completed an airdrop of 250 million PYTH tokens. Additionally, Solana's decentralized exchange (DEX) volumes have soared, with Jupiter DEX playing a pivotal role. Looking ahead, Solana (SOL) robust network activity and DEX volume growth bode well for its future price prospects. However, the cryptocurrency market's inherent volatility and competitive landscape pose challenges. Dogecoin (DOGE): Navigating Market Sentiments and Trends Dogecoin (DOGE) has been experiencing a positive trend, with 63% of the last 30 days showing price increases. Currently trading above its 200-day simple moving average, Dogecoin (DOGE) displays potential for an uptrend. Despite the optimistic market sentiment, Dogecoin (DOGE) price has seen a decline of nearly 50% from \$0.15 in November 2022 to approximately \$0.0917. This trend aligns with the broader decline in interest in meme coins and the cryptocurrency market's overall downturn. Polygon (MATIC): Steady Growth Amid Market Fluctuations Polygon (MATIC), known for its decentralized scaling solution, has recently surpassed the \$0.80 mark. However, it has experienced a decline of more than 4.4% recently, aligning with the broader negative trend in the cryptocurrency market. Polygon's price has shown resilience by surpassing the \$0.8 resistance level. Experts project Polygon (MATIC) price to be around \$0.9004, with a potential range between \$0.8232 and \$0.9261 by the end of December. Polygon (MATIC) price trajectory during the upcoming Christmas period will be influenced by market dynamics, advancements, and utility cases. Sei (SEI): A Remarkable Surge in the Altcoin Market Sei (SEI) has recently made a significant impact in the altcoin market with a remarkable 50% surge. This surge has allowed Sei (SEI) to outperform many of the top cryptocurrencies in the market, marking a notable achievement in its market presence. The 50% surge in Sei (SEI) value is a clear indicator of its strong market performance. This rapid increase in value highlights the growing interest and confidence in Sei (SEI) among investors and traders. While the recent surge in Sei (SEI) price is promising, it's important to approach its future with a balanced perspective. Chainlink (LINK): Integrating Real-World Assets and Traditional Finance Chainlink (LINK) is set to undergo significant upgrades, as indicated in a recent announcement. These upgrades aim to enhance Chainlink (LINK) functionality and interoperability across different blockchain networks. Currently, Chainlink (LINK) is down 73% from its May 2021 all-time high of \$52.70. Despite this, it remains one of the better-performing altcoins, with potential for a significant move in the bull market. Chainlink (LINK) future price prospects seem promising, especially with the upcoming upgrades and expansion into traditional finance (TradFi). Conclusion As we approach 2024, the crypto market is buzzing with anticipation of a potential "Santa Claus rally," reminiscent of Bitcoin's historical surges. This optimism is fueled by factors like the Bitcoin Spot ETF approval and the upcoming Bitcoin halving event, creating a fertile ground for cryptocurrencies like ScapesMania. - Since February 2014, these creditors' funds have been stuck on the exchange. - Repayments were scheduled for October 31, 2023, however they were extended. Creditors of the now-defunct cryptocurrency exchange Mt. Gox have reportedly begun receiving reimbursements after the business's 10-year closure. Since February 2014, these creditors' monies have been stuck on the exchange. There have been rumblings on social media, namely on the r/montgoxinsolvency subreddit, that Mt. Gox is allegedly using PayPal to pay customers reimbursements. One Reddit member was first suspicious of the email, fearing it was a phishing attempt. But when the funds showed up in their PayPal account, they knew it was real. On December 21, a user from Japan on Twitter revealed that they had received their Mt. Gox claims in Japanese Yen via bank transfer. This was the first mention of the repayments. Creditors whose funds were trapped after Mt. Gox's 2014 closure have been the focus of efforts by the now-defunct cryptocurrency exchange. Further Repayments Expected Until 2024 Repayments were started only one month after Nobuaki Kobayashi, the trustee of the Mt. Gox Bitcoin exchange's estate began communicating with its creditors by email on November 21. Kobayashi said in the email that the first cash repayments to creditors would begin in 2023, with further repayments expected until 2024. The exact dates of repayments to certain rehabilitation creditors were not disclosed by Kobayashi, however. Repayments were originally scheduled for October 31, 2023, however the Mt. Gox Trustee extended the deadline to the same date in 2024. On the other hand, they did mention that rehabilitative creditors who had already submitted the required paperwork may get some of their money back as early as the year's end. Highlighted Crypto News Today:

The cryptocurrency market is on the cusp of a significant transformation, with altcoins like Solana (SOL), 1inch Network (1INCH), Maverick Protocol (MAV), dydX (DYDX), Aptos (APT), and ScapesMania positioned at the forefront of this change. Analysts predict a potential 200% surge in altcoin market capitalization in the first quarter of 2024, marking the end of a 500-day stagnation period. This anticipated growth could herald a new era of prosperity for altcoin investors. The market has reclaimed the 200-week moving average, indicating a strengthening market and a buildup of buying pressure. With the market cap nearing the \$1 trillion mark, investor confidence is expected to bolster, potentially leading to increased investment and higher prices. We handpicked some top altcoins poised to thrive in the coming year. These cryptocurrencies all have promising futures thanks to strong technical indicators, upcoming developments, and solid fundamentals. Of course, the market is impossible to predict, so it's worth thinking about whether these altcoins have the staying power and longevity required to turn their initial potential surges into sustained market impacts. Top Cryptocurrency to Buy Before It Soars - ScapesMania: A rising star in crypto, known for its unique approach and successful presale. - Solana (SOL): A potential Ethereum challenger, experiencing a significant market surge. - 1inch Network (1INCH): A DEX aggregator, showing substantial growth in the DeFi space. - Maverick Protocol (MAV): Gaining recognition with Binance integration, enhancing market presence. - dydX (DYDX): Balancing growth amidst mixed market sentiment and resilience. - Aptos (APT): Innovating in blockchain technology with strong partnerships and market fluctuations. ScapesMania: The Rising Star in the Crypto World ScapesMania is a one-of-a-kind gaming ecosystem, where crypto-savvy audiences join forces with the vibrant community of casual players, paving the way to substantial growth. The ScapesMania community is buzzing with enthusiasm, which is reflected in more than \$2,603,000 raised from crowd/retail contributions to date. Empowering Holders ScapesMania ensures participants get precisely what they desire: gamers enjoy their favorite pastime, while crypto enthusiasts can leverage the ecosystem's performance and shape its future through DAO, all without engaging in gameplay. Furthermore, acquiring ScapesMania tokens unlocks extra perks. By joining the presale, you can access bonuses totaling up to 127%. You can also earn referral rewards by introducing ScapesMania to your friends. Plus, holders can participate in token buyback & burn events as well as staking. Verified Excellence ScapesMania's smart contract has successfully undergone scrutiny from leading security-ranking companies, providing peace of mind for holders. Behind ScapesMania is an award-winning team that secured a prestigious grant from a prominent player in the blockchain industry. The team is constantly engaging with a flourishing community of over 60K followers. Potential for Expansion ScapesMania is part of the massive \$376 billion gaming industry, and its growth potential is fueled by this booming market. Already featured on major tracking platforms, ScapesMania is expected to hit major exchanges soon, with negotiations currently underway. After its debut on exchange platforms, holders can expect greater liquidity and easier access to trade. ScapesMania's Prospects ScapesMania tokens are currently a steal, priced at just \$0.004568 per coin during the presale. As the last sales stage price is set at \$0.01, early adopters could potentially be looking at a 2.2x return after the ScapesMania presale concludes. The innovative core concept robust tokenomics, stage bonuses and benefits for holders have the potential to further increase the project's value. Now could be the best moment to become part of the community of ScapesMania holders. >>> Join Presale at a Discount on the Official Site <<< Secure higher gains by grabbing a sizable bonus of 10% on ScapesMania! Use code KUQ757 at checkout in a special textbox for an even better deal on a cryptocurrency that could make you the envy of the entire crypto community. Act fast as the offer is valid for a limited time only. Solana (SOL): A Surge in Market Dominance Solana (SOL) has recently been making headlines for its impressive performance against Ethereum (ETH), recording a staggering 300% growth. This surge has sparked discussions about a potential shift in the cryptocurrency hierarchy, with some analysts speculating whether Solana might eventually dethrone Ethereum as the leading platform. The market is abuzz with the narrative of Solana (SOL) not just as an alternative but as a potential leader in the space. It's clear that Solana (SOL) price has seen a significant rally, bringing it within 20% of its all-time high relative to Ethereum's price. This indicates a robust and bullish sentiment surrounding Solana (SOL), as it continues to gain ground and assert its position in the market. The future for Solana (SOL) looks promising with its recent performance, but the road ahead is not without challenges. The potential for Solana (SOL) to reshape the crypto narrative and continue its growth trajectory is significant. However, it must maintain its momentum and continue to innovate to overcome the inherent volatility of the crypto market and potential regulatory challenges. If it can do so, Solana (SOL) may well redefine the future of blockchain technology and decentralized applications. 1inch Network (1INCH): Decentralized Exchange Innovator 1inch Network (1INCH) is recognized as a decentralized exchange (DEX) aggregator, aiming to provide users with the best trading prices by pooling liquidity from various exchanges. It has established itself as a significant player in the decentralized finance (DeFi) space with solid fundamentals and a growing user base. The 1inch Network (1INCH) has seen substantial growth since its launch in 2020. The platform's innovative approach to aggregating liquidity and offering efficient trading solutions has garnered attention and investment, reflecting positively on its price and market position. Looking ahead, 1inch Network (1INCH) has the potential to continue its growth trajectory as it capitalizes on the expanding DeFi sector. However, it faces challenges such as increasing competition and the need for continuous technological advancements to stay ahead. The platform's ability to adapt to market changes and user needs will be crucial in determining its future success. Maverick Protocol (MAV): Gaining Ground with BNB Integration Maverick Protocol (MAV) has recently gained significant attention with Binance integrating its Maverick Protocol (MAV) token on the BNB Smart Chain. This move signifies growing recognition and adoption of Maverick Protocol (MAV) within the broader crypto ecosystem. The integration by a major exchange like BNB is likely to have a positive impact on Maverick Protocol (MAV) price and market perception. It enhances the token's liquidity and accessibility, potentially leading to increased demand and price appreciation. The future of Maverick Protocol (MAV) looks optimistic with its recent integration into a major platform. However, it must continue to build partnerships, maintain technological robustness, and navigate the complex regulatory landscape to realize its full potential. Success will depend on its ability to remain competitive and innovative in the fast-paced crypto market. dydX (DYDX): Balancing Growth Amidst Market Skepticism dydX (DYDX) has been experiencing a mix of positive on-chain metrics and market sentiment. While some indicators suggest growth and healthy activity, there's also a rise in negative sentiment, or FUD, surrounding the token, which could impact its short-term performance. Despite the negative sentiment, dydX (DYDX) has shown resilience with its price up by more than 4% in the last week alone at the time of the article. This suggests that while there are concerns, the overall market perception might still be cautiously optimistic. The future of dydX (DYDX) appears to be a balance between its strong fundamentals and the external market sentiment. If it can navigate the FUD and continue to build on its platform's strengths, it has the potential for growth. However, market volatility and sentiment shifts pose significant challenges that it must adeptly manage. Aptos (APT): Pioneering a New Era of Blockchain Technology Aptos (APT) has been making waves with its innovative approach and strong backing. The blockchain, developed by former Meta engineers, aims to offer a scalable and user-friendly platform for decentralized applications. Its partnership with Microsoft and a Proof-of-Stake (PoS) consensus mechanism are notable highlights. Aptos (APT) has experienced fluctuations, with its price reaching an all-time high of \$19.90 in January of the same year. The market's response to its technological advancements and strategic partnerships will be critical in shaping its price trajectory. The future for Aptos (APT) is promising, given its technological foundation and strategic partnerships. However, it faces challenges such as high market expectations and the need to distinguish itself in a crowded market. Its success will depend on its ability to deliver on its promises and adapt to an ever-evolving market landscape. Conclusion The cryptocurrency market is on the brink of a significant transformation, with altcoins such as Solana (SOL), 1inch Network (1INCH), Maverick Protocol (MAV), dydX (DYDX), Aptos (APT), and ScapesMania at the forefront of this shift. Analysts predict a potential 200% surge in altcoin market capitalization by the first quarter of 2024, signaling the end of a 500-day stagnation and heralding a new era of prosperity for altcoin investors. Out of all the options presented here, it seems like ScapesMania can unlock the biggest returns over the longer period. With a strong presale and other solid growth factors, this coin could potentially become your portfolio's biggest super-gainer. Disclaimer: TheNewsCrypto does not endorse any content on this

As the year 2023 winds down, the crypto market has been a spectacle of resilience and optimism, with significant cryptocurrencies like Bitcoin (BTC) and Ethereum (ETH) leading a spirited rally. Despite a mild correction earlier, Bitcoin has surged more than 63% since mid-October, while Ethereum has followed suit with a substantial 45% gain in the same period. This resurgence has fueled a wave of optimism among traders and analysts who are now keenly eyeing the potential for new highs in 2024, driven by positive developments such as the anticipated approval of a Bitcoin spot exchange-traded fund. The broader market sentiment has been buoyant, with the S&P 500 and Nasdaq Composite indexes also poised to end the year on a high note. This general optimism across financial markets has bolstered the belief that cryptocurrencies like Ethereum (ETH), Sui (SUI), Aptos (APT), Cardano (ADA), Osmosis (OSMO) and the emerging ScapesMania could see significant gains in the coming year. We made sure to include an in-depth analysis of these six cryptocurrencies to give you a sense of their long-term potential and provide a preview of what holders could be looking forward to in 2024. Top List For Gains in 2024 - ScapesMania: A promising new cryptocurrency with innovative revenue and strong security. - Ethereum (ETH): Is poised for a rally amid decreasing exchange supply and growing holder confidence. - Sui (SUI): Expands its reach as major protocols like Solend move to its blockchain. - Aptos (APT): Experiences a price surge following a significant coin unlocking, indicating bullish sentiment. - Cardano (ADA): Nears a potential surge with strong ecosystem interest and robust TVL. - Osmosis (OSMO): Sees a dramatic rally, signaling a shift in market sentiment and interest. ScapesMania: A New Contender in the Crypto Arena ScapesMania is a one-of-a-kind gaming ecosystem, where crypto-savvy audiences join forces with the vibrant community of casual players, paving the way to substantial growth. The ScapesMania community is buzzing with enthusiasm, which is reflected in more than \$2,254,000 raised from crowd/retail contributions to date.

Empowering Holders ScapesMania ensures participants get precisely what they desire: gamers enjoy their favorite pastime, while crypto enthusiasts can leverage the ecosystem's performance and shape its future through DAO, all without engaging in gameplay. Furthermore, acquiring ScapesMania tokens unlocks extra perks. By joining the presale, you can access bonuses totaling up to 127%. You can also earn referral rewards by introducing ScapesMania to your friends. Plus, holders can participate in token buyback & burn events as well as staking. Verified Excellence ScapesMania's smart contract has successfully undergone scrutiny from leading security-ranking companies, providing peace of mind for holders. Behind ScapesMania is an award-winning team that secured a prestigious grant from a prominent player in the blockchain industry. The team upholds transparent and publicly accessible social media accounts, engaging with a flourishing community of over 60K followers. Potential for Expansion ScapesMania is part of the massive \$376 billion gaming industry, and its growth potential is fueled by this booming market. Already featured on major tracking platforms, ScapesMania is expected to hit major exchanges soon, with negotiations currently underway. After its debut on exchange platforms, holders can expect greater liquidity and easier access to trade. ScapesMania's Prospects ScapesMania tokens are currently a steal, priced at just \$0.004568 per coin during the presale. As the last sales stage price is set at \$0.01, early adopters could potentially be looking at a 2.2x return after the ScapesMania presale concludes. The innovative core concept, robust tokenomics, stage bonuses and benefits for holders have the potential to further increase the project's value. Now could be the best moment to become part of the community of ScapesMania holders. Join Presale at a Discount on the Official Site 0% Exclusive #ScapesMania Promo Codes Launched! A ScapesMania (@ScapesMania) December 6, 2023 EXTRA 10% bonus on \$MANIA token purchases! 8% 8% Simply find our admins in the chat, grab their unique promo code, and use it to buy \$MANIA! 8% Act quickly, this offer won't last forever! GET A PROMO CODE - pic.twitter.com/rQ5nt76mxx If you're already on board with everything that ScapesMania has to offer, there's a unique opportunity for you: a special offered code, IOC160. The limited-time offer is only valid for a limited time since the article's publication. It's your best chance to get a bonus of 10% after entering IOC160 in a special field at checkout, so act fast, the clock is ticking. Ethereum (ETH): Gearing Up for a Potential 20% Rally Ethereum (ETH) is currently experiencing a notable trend in the market, characterized by a significant decrease in its supply on exchanges. This trend suggests that long-term holders are increasingly withdrawing their Ethereum (ETH) holdings from exchanges, a move that could be indicative of their confidence in Ethereum (ETH) future value. The current market dynamics for Ethereum (ETH) are leading analysts to predict a potential rally, with price targets hovering around the \$2,500 to \$2,700 range. This optimism is fueled by the observed exchange outflows and the broader market's interest in Ethereum (ETH). Looking ahead, Ethereum (ETH) shows promise for a potential rally, especially if the current trend of exchange outflows continues. However, the market's reaction to changes in interest rates and other macroeconomic factors could pose challenges. A breakdown below key support levels could lead to negative implications for Ethereum (ETH) price. Sui (SUI): Expanding Horizons on Solana Sui (SUI) is gaining attention as Solend, a prominent lending and borrowing protocol on Solana, announced its expansion to the Sui (SUI) blockchain. This move marks Solend's first deployment on a blockchain other than Solana and signifies confidence in Sui (SUI) technology and potential as a long-term partner. The expansion of Solend to Sui (SUI) could potentially influence Sui's market position positively. As one of the largest lending and borrowing products on Solana, Solend's move to Sui might attract more users and liquidity to the Sui ecosystem, potentially impacting its price positively. The future of Sui (SUI) looks promising with the expansion of major protocols like Solend. However, the success of this expansion and its impact on Sui (SUI) price will depend on the adoption rate and the seamless integration of these protocols into the Sui ecosystem. Aptos (APT): Soaring Amidst Doubts Aptos (APT) recently has led a 120% price surge, following the unlocking of 25 million coins. This event triggered a significant increase in interest and trading activity in the Aptos (APT) market. The unlocking event for Aptos (APT) has resulted in a bullish sentiment among traders, with a notable increase in open interest and trading positions. This surge contrasts with the general decline in the broader crypto market, indicating a strong interest in Aptos (APT). The future price movement for Aptos (APT) will likely be influenced by the market's response to the recent unlocking event. While the current bullish sentiment is strong, it's crucial to monitor how the market absorbs this influx of coins and whether the interest can be sustained in the long term. Cardano (ADA): Nearing New Heights Cardano (ADA) is showing signs of a potential surge, with its Total Value Locked (TVL) remaining over \$425 million. This indicates a strong interest in the Cardano ecosystem and its capabilities. The current market dynamics suggest that Cardano (ADA) could experience a 14% surge, potentially pushing its price beyond the \$0.70 level. This anticipated surge is backed by the robust TVL and the growing interest in Cardano (ADA) offerings. Looking forward, Cardano (ADA) appears poised for growth, but its future price movement will depend on maintaining its TVL and attracting further investments into its ecosystem. Market volatility and competition from other blockchains could pose challenges to Cardano (ADA) growth trajectory. Osmosis (OSMO): Intensifying Momentum Osmosis (OSMO) has recently seen a significant rally, with a 143% increase in its price. This rally comes after a period of bearish trends for most of the year, indicating a potential shift in market sentiment towards Osmosis (OSMO). The recent rally in Osmosis (OSMO) suggests a growing interest and confidence in the project. This surge is particularly notable given the largely bearish trend it experienced earlier in the year. The future of Osmosis (OSMO) looks optimistic given the recent rally, but it's important to consider the volatility and unpredictability of the crypto market. The ability of Osmosis (OSMO) to maintain this momentum and attract sustained interest will be key to its future price performance. Conclusion As 2023 concludes, the crypto market is marked by resilience and optimism, with leading cryptocurrencies like Bitcoin and Ethereum spearheading a rally that has ignited a wave of positive market sentiment. This buoyancy is further bolstered by the broader financial market's performance, setting a promising stage for cryptocurrencies in 2024. Indeed, there are reasons to be optimistic about the crypto market in the long run, and the most promising pick in the text, ScapesMania, should fare very well going forward. - China's Ministry of Science and Technology has publicly recognized and emphasized the strategic importance of the Web3 industry. - Bitcoin's price has doubled to \$44,000, reflecting a significant 163% rally over the past year. China appears to be embracing the digital asset revolution, signaling a major shift in its stance on cryptocurrencies. Despite a strict crypto trading ban in 2021 that led to a market shock, the country is now expressing a newfound commitment to the development of the crypto industry. The Ministry of Science and Technology in China, represented by Yin Hejun, has issued a written response to the proposal of the National Committee of the Chinese People's Political Consultative Conference (CPPCC), highlighting the government's recognition of the importance of the Web3 industry. The statement outlines China's strong industrial foundation and emphasizes its extensive development potential in the realm of Web3, encompassing policy support, technical research, and real-world applications. This unexpected change is underscored by official guidelines on blockchain technology and ongoing blockchain innovation pilots exploring diverse use cases, ranging from trade finance to intellectual property. The government's acknowledgment of the substantial growth opportunities within the Web3 sector reflects a strategic move towards embracing the digital revolution. Crypto Market on the Rise China, known for its 2021 ban on Bitcoin and crypto trading that sent shockwaves through the market, is now expressing a renewed interest in the financial landscape. Currently, the global cryptocurrency market, dominated by major players such as Bitcoin (BTC), Ethereum (ETH), XRP, and Solana (SOL), has experienced a remarkable surge in value, surpassing the market cap of \$1.6 trillion. The Bitcoin price has more than doubled to \$44,000. Over the past 12 months, BTC has been overshadowed by a significant performance with a 163% surge. It has seen its market cap increase to \$553 billion. Also, altcoin Solana rose extraordinarily and emerged as a standout performer. SOL leaves early investors with substantial gains. In a global context, the People's Bank of China (PBC) has emphasized the need for international cooperation in regulating crypto assets. Citing similar concerns, France also recognizes the risks associated with crypto assets and calls for strengthened international supervision to establish a unified approach to crypto regulation.

Are you searching for budget-friendly tokens under \$0.1 that could skyrocket in 2024? Want to diversify your crypto portfolio with some promising yet overlooked gems? If so, look no further than Pepe (PEPE), Bonk (BONK), and Retik Finance (RETIK). These tokens with Retik Finance in particular have shown impressive growth and resilience in the crypto market, hinting at the potential for significant gains in 2024. In this article, we'll explore each token, explaining why they're worth considering for your investment. Join us as we break down the reasons that make these tokens stand out as smart choices. Let's get started on this crypto journey! Bonk (BONK): The Rising Star on Solana A meme coin known as BONK, which draws inspiration from comedy and online culture, has gathered popularity because of its special features and Solana blockchain integration. In the cutthroat meme currency market, BONK stands out thanks to its link to the fast, scalable, and reasonably priced Solana blockchain. It was introduced on December 25, 2022, as a Christmas present to the Solana community. With over 400 decentralized applications (dApps) thriving on Solana, BONK seeks to establish itself as the community coin of Solana. In this gesture, 50% of the total supply of 100 trillion coins was distributed randomly and anonymously to Solana users who had contributed to the network's development as of mid-December 2023. BONK has firmly established itself as the third-largest meme coin by market capitalization, trailing behind DOGE and SHIBA INU and holding the 43rd position in the overall cryptocurrency market. This dual recognition underscores its substantial presence in both the meme coin sector and the broader crypto landscape. Click Here To Take Part In Retik Finance Presale Bonk's current price and prediction for 2024 According to the most recent information available, Bonk (BONK) is now trading at \$0.00001998, which is under \$0.1 with a 24-hour trading volume of \$400,133,005.03. This indicates a significant gain of 34.20% over the previous 7 days and a noteworthy 10.60% increase in the last 24 hours. With 61 trillion BONK in circulation, the coin has a \$1,217,994,440 market capitalization. Looking ahead to 2024, the Bonk price forecast anticipates an average price of \$0.00003214, with a potential peak of \$0.00007524. CoinPedia experts express a more optimistic outlook, foreseeing a potential high price of \$0.000085 and an average price of \$0.0000475 throughout the year. Retik Finance: Empowering Finance, Enabling Freedom Retik Finance is a pioneering force that is positioned to completely transform the financial landscape by bridging the gap between standard financial apps and decentralized finance (DeFi). Retik Finance aims to enhance international trade by enabling universal cryptocurrency spending, as part of its goal to empower finance and facilitate freedom. One of its best features is the Retik Wallet, a user-friendly platform that smoothly combines traditional and digital money. Users may now easily transact, earn, and spend cryptocurrency thanks to the addition of Retik Pay and DeFi Debit Cards to its already extensive portfolio. Retik Finance is a dynamic and forward-thinking participant in the constantly changing cryptocurrency industry. It bridges the gap between traditional and decentralized finance and envisions a day when everyone may achieve financial independence. Retik Finance's current price and prediction for 2024 With the ongoing presale successfully raising 98.85% of its target at \$1,431,581 and also successfully selling 39,539,510 out of 40,000,000 tokens for presale stage 2, Retik Finance demonstrates substantial community support. This growth indicates the platform's faith in both the market's

At the time of writing, ETH is trading at \$2309, up 4.82% in the last 24 hours. - If the price manages to go past \$2317, then it will likely test \$2385 resistance level. The widespread speculation that a Bitcoin Spot ETF is soon to be approved seems to be pumping investors' optimism.

Indochangce Fund's Ethereum-based investment strategy is also being tested by the wider crypto market. The fund's portfolio manager said that while the price of Ether has been volatile, the network itself is speeding up testing for it. It will implement "proto-danksharding," a method for scaling the blockchain, and provide data storage features. By allowing the storing of enormous "blobs" of data, the new capability aims to increase the blockchain's data capacity and decrease fees for layer 2 rollups, which are solutions built on top of Ethereum to enhance transaction speeds and costs. Bold Move In favor of Ethereum, Arthur Hayes, the founder of the cryptocurrency exchange BitMEX, sold off his assets in Solana. Hayes claims that he reevaluated his portfolio and came to prefer Ethereum over Solana after a revealing meditation session, which led to this strategic decision. Because of his respect for Vitalik Buterin, Ethereum's co-founder, Hayes has a good view on the project. He predicts that the price of Ethereum might hit \$5,000. At the time of writing, ETH is trading at \$2309, up 4.82% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 29.34%. The price is nearing a key resistance level of \$2317. If the price manages to go past \$2317, then it will likely surge further to test \$2385 resistance level. Conversely, if the price manages to go below \$2217, then it will likely test \$2129 support level.

The BC8.AI platform has been successfully launched by io.net, a prominent pioneer in artificial intelligence. The platform has completed over 10,000 inferences and enabled over 50,000 on-chain transactions since its inception a few weeks ago, demonstrating both its strong functionality and high user engagement. The vast capabilities of io.net's state-of-the-art AI computing platform are demonstrated by BC8.AI. Moreover, BC8.AI's model was driven entirely by io.net, from data collection to model deployment and inference. Users may easily create photorealistic images using BC8.AI. In addition to uploading their own photographs and specifying which bad prompts to avoid, users may create images based on prompts and see a thorough demo on YouTube. Free image generating is available to BC8.AI's expanding user base. There are plans to host hundreds of models on BC8.AI and extend the platform into other optimized models, gaming assets, and 3-D models. The goal of this expansion is to provide model owners more ways to make money on the platform, so engineers will have the opportunity to display their AI models on the model marketplace on io.net. The platform also provides a marketplace where users can buy and sell AI models and the services they offer. The marketplace on io.net provided by BC8.AI makes cluster deployment easy for ML developers. Utilizing the Solana blockchain, the "Proof of Compute" button in BC8.AI offers comprehensive details about every inference, such as the particular model used, the royalty fee given to the model owner, network fees, and the app inference pricing.

WalletConnect prepares to launch its closed network as part of a four-phase decentralization effort NEW YORK&#x2013;(BUSINESS WIRE)&#x2013;Today, Pedro Gomes, CEO and founder of WalletConnect &#x201c;a leading web3 communications protocol &#x201d; announces an ambitious new roadmap to build an open, permissionless, and decentralized network that will both improve performance of the WalletConnect Protocol and achieve functionality that better aligns with the tenets of web3. Milestones on the roadmap will be tested, audited and executed over the next year, concluding with a proposed formal launch of an open, permissionless WalletConnect Network in 2025. The announcement arrives at a time when centralized control of web3 protocols is increasingly creating a choke-point for web3, posing a significant threat to the security and resiliency of the web3 ecosystem. The current environment &#x201c;rife with regulatory uncertainty, potential for censorship, and security threats &#x201d; underlines the importance of decentralization and demonstrates the need for the industry to take tangible steps towards achieving this. Over the last five years, the WalletConnect Protocol successfully established paths of interoperability linking millions of users across more than 3,000 decentralized applications and over 500 wallets. The protocol was designed to be open, federated and decentralized; however, the initial framework necessitated a closed system that could safely scale while ensuring reliability. Now, the WalletConnect Protocol will be able to safely transition to the purely decentralized, permissionless, and verifiable WalletConnect Network and still maintain the same reliability and low-latency that users experience today. &#x201c;Decentralization is crucial for ensuring that connectivity is truly owned by everyone. After establishing WalletConnect and building the proper infrastructure and architecture of the protocol, we&#x2019;re excited for this long-awaited update,&#x201d; said Gomes. &#x201c;WalletConnect is moving progressively and intentionally towards a decentralized network by distributing control and data across multiple nodes, enhancing strength, protection, and privacy for users. We hope this not only motivates but also encourages more to follow suit and understand the role we all play in a decentralized ecosystem.&#x201d; Through a four-phase approach, the Protocol is progressing towards a fully-decentralized protocol:

- Phase One (current): Close beta test and prepare for the launch of the closed, permissioned WalletConnect Network. Expand infrastructure to multiple relayers and apply a consistent-hashing approach from low-latency/high-throughput database principles in order to progressively decentralize while maintaining the same level of user experience.
- Phase Two (Q1 2024): Launch and test the closed, permissioned WalletConnect Network. Implement a permissioned registry approach, in which multiple parties can read and write to the database.
- Phase Three (Q2 2024): Launch and test the open, permissioned WalletConnect Network. Federate the WalletConnect Network by expanding its core infrastructure into a permissioned network, utilizing selected third-party relayers to establish a genuine peer-to-peer framework, enabling gradual network access while testing incentives for participant rewards. During this time, external partners &#x201c;including some of the largest web2 tech companies &#x201d; have committed to running a node to test the infrastructure.
- Phase Four (late 2025): Launch the open, permissionless WalletConnect Network. The WalletConnect Network will transition to a fully decentralized state, operated collectively by a community of infrastructure providers, ensuring independent operation devoid of centralized control, while incentivizing node operators equally to uphold network speed, security, and performance. &#x201c;This transition is not without its challenges, but the potential benefits far outweigh the complexities involved. The future success of web3 is contingent on our ability to adapt and build a truly decentralized ecosystem. WalletConnect is eager to seize this opportunity to create a dependable web3 stack for our customers and partners,&#x201d; concluded Gomes. WalletConnect is both proud of reaching this milestone, and looks forward to demonstrating to the entire web3 community that this is both a necessary and achievable step for similar infrastructure providers across the industry. In a highly integrated and interdependent industry where wallets, dapps, and protocols alike rely on each other for full success, so too must each play its part in helping web3 to fulfill its ultimate promise. To learn more about WalletConnect, please visit <https://walletconnect.com/> and follow us on Twitter @walletconnect.

About WalletConnect: Founded in 2018 by Pedro Gomes, CEO of WalletConnect, the largest open-source web3 communication protocol, connecting billions of end user connections each month. Today, it is also empowering developers to build engaging web3 experiences with a suite of SDKs: Web3Modal, Web3Wallet, and Web3Inbox. It has raised \$25 million from some of the world&#x2019;s leading tech and crypto investors, including Union Square Ventures, 1kx, Shopify, Coinbase Ventures, Circle Ventures, and Uniswap Labs Ventures. WalletConnect integrations currently span the Ethereum, Solana, NEAR, Cosmos, and other blockchains. For more information, please visit <https://walletconnect.com>. Contacts: Gianna Perera [WalletConnect@wachsman.com](mailto:WalletConnect@wachsman.com)

watch in 2024, letâ€™s take a moment to acknowledge their recent achievements that have caught the attention of the crypto community. Fusionist (ACE) Ignites a 20% Rally on Binance and OKX Debut Fusionist (ACE) recently made a grand entrance onto two major cryptocurrency exchanges, Binance and OKX. This listing did not go unnoticed by investors, as the token saw an impressive 20% rally in its price. This debut on renowned exchanges is a testament to the projectâ€™s potential and the growing demand for its token. Retik Financeâ€™s Rapid Transition and Price Surge Retik Finance (RETIK) has been making waves with its swift transition from one presale stage to another. The projectâ€™s agility and adaptability are apparent, as it recently experienced a remarkable 25% increase in its price. This resilience and growth have placed Retik Finance in the spotlight as a project to watch closely in 2024. Bonk (BONK): A Solana-Based Memecoin on the Rise Currently, Bonk boasts a market capitalization of \$251 million, with a price of \$0.000004636. It has seen impressive gains, with a 17% increase in the last 24 hours, 7% over the week, and a staggering 555% increase over the month. These remarkable figures indicate Bonkâ€™s potential for further growth, particularly as it rides the wave of Solanaâ€™s explosive growth. Click Here To Take Part In Retik Finance Presale Why Fusionist (ACE), Retik Finance (RETIK), and Bonk (BONK) are primed to be the best cryptos to hold in 2024? Fusionist (ACE): Gaming Meets Blockchain Fusionist is a project that seamlessly combines elements of a blockchain game with a gaming/social infrastructure layer known as Endurance. Developed by a team of experienced gaming veterans, Fusionist is a Web3 AAA game that leverages Unity and HDRP technologies to provide users with a high-quality and engaging gaming experience. Endurance, on the other hand, is the decentralized game/social blockchain that serves as the foundation for Fusionist. Since its launch on the mainnet in January 2023, Endurance has gained significant traction, boasting over 1.86 million token-holding wallets and processing more than 100 million transactions. This remarkable growth underscores the appeal of Enduranceâ€™s gaming and social options, including features like Expeditions, Auction House, ACEDomain, and Beta testing. At the heart of the Fusionist ecosystem lies the ACE token, the native cryptocurrency of the Endurance blockchain. ACE serves various purposes within the ecosystem: 1. In-Game Spending/Earning: ACE can be used to purchase in-game items, tournament tickets, and claim rewards, not only in Fusionist but also in upcoming games developed by the Fusionist team and its partners. 2. Ecosystem Engagement: Users can use ACE to access goods and services within the broader Endurance ecosystem, extending beyond gaming to social products and domains. 3. Staking and Governance: ACE token holders have the opportunity to stake their tokens to secure the network and participate in governance decisions. 4. Endurance Blockchain Gas: ACE serves as the gas for all transactions on the Endurance blockchain, ensuring the smooth operation of the network. As of December 11th, 2023, ACE has a total supply of 147,000,000 tokens, with a circulating supply of approximately 21,969,520 (approximately 14.95% of the total token supply) upon listing. Click Here To Take Part In Retik Finance Presale Retik Finance (RETIK): Redefining DeFi with Real-World Utility In a world where decentralized finance (DeFi) continues to gain momentum, Retik Finance stands out as a project that is poised to redefine the DeFi landscape in 2024. The cryptocurrency market represents a vast Total Accessible Market (TAM), with a global crypto market capitalization exceeding \$1.4 trillion, according to CoinMarketCap. This figure reflects the substantial value and investor interest in digital assets. Within the crypto market, DeFi is a rapidly growing segment, with a market capitalization of approximately \$25 billion. The total value of DeFi transactions reached an impressive \$42.7 trillion in 2022, and this figure is projected to reach \$63.5 trillion by 2028. DeFi debit cards represent a transformative bridge between traditional financial systems and decentralized technologies. Retik Financeâ€™s DeFi Debit Cards: Bridging the Gap Retik Finance introduces DeFi debit cards that seamlessly merge the advantages of traditional debit cards with the power of decentralized finance. These cards empower users to spend their cryptocurrency holdings in real-world transactions, bridging the digital and physical realms of finance. Key features of Retikâ€™s DeFi Debit Cards include: â€” Spend Anywhere, Anytime: Users can use their cryptocurrency for everyday purchases, whether shopping online, paying bills, or making purchases at physical stores, just like with traditional debit cards. â€” Cash Withdrawals: Access crypto funds in cash from ATMs worldwide without the need to convert assets or navigate complex processes. â€” Anonymity and Privacy: Retik Finance values user privacy and does not require KYC, ensuring transaction confidentiality and security. â€” Cashback Rewards in \$RETIK: Every transaction made with Retikâ€™s DeFi Debit Cards earns cashback rewards based on the userâ€™s tier (Silver, Gold, or Diamond), enhancing financial benefits with every purchase. â€” Seamlessly Integrated Wallet: The cards are linked to the Retik wallet, simplifying financial management by allowing users to monitor transactions, track spending, and manage crypto holdings in one place. â€” Empowering Financial Freedom: Retikâ€™s DeFi Debit Cards empower users to take control of their financial choices, offering a gateway to financial autonomy. â€” Universal Acceptance: Partnered with Visa and Mastercard, Retikâ€™s DeFi Debit Cards are accepted at millions of locations globally, providing unmatched accessibility and usability. Click Here To Take Part In Retik Finance Presale Bonk (BONK): The Solana-Based Memecoin While the world of memecoins is crowded with Ethereum-based tokens, Bonk (BONK) has set itself apart as the first dog-themed memecoin on the Solana blockchain. With its slogan â€œfor the people by the people,â€” Bonk demonstrates a strong commitment to its community, including token holders and the broader Solana ecosystem. This commitment has propelled Bonk into the top 100 cryptocurrencies, signalling its potential for further growth. In conclusion, as we enter 2024, Fusionist (ACE), Retik Finance (RETIK), and Bonk (BONK) have positioned themselves as top cryptocurrencies to watch and hold in your portfolio. Fusionist combines the worlds of gaming and blockchain, while Retik Finance redefines DeFi with its innovative DeFi Debit Cards, and Bonk stands out as a Solana-based memecoin with significant upside potential. These projects each offer unique value propositions, making them compelling choices for investors seeking opportunities in the cryptocurrency space. HyperPlayâ€™s integration of MetaMask Snaps offers players and developers a secure cross-chain, cross-game wallet solution NEWARK, Del.â€”(BUSINESS WIRE)â€”HyperPlay, the innovative Web3-native game store that overlays MetaMask into every Web3 game, today announced that it has launched a new integration of MetaMask Snaps for native games. Snaps are new features and functionality, created by third-party developers, that MetaMask users worldwide can install directly into their wallets. Snaps provide utility around security, communication and interoperability with non-EVM blockchains like Bitcoin or Sui. HyperPlay and MetaMask have teamed up with Bushi, the wildly popular third-person competitive brawler game on the Sui blockchain, to launch the first usage of MetaMask Snaps inside a native game. Historically, Bushi hasnâ€™t been able to integrate with MetaMaskâ€™s millions of monthly active users because the game is built on a non-EVM blockchain. Through HyperPlay and MetaMask Snaps, MetaMask users can now carry their wallets and assets directly into the beloved game. â€œEvery game developer dreams of being able to tap into the largest audiences and onboard them into their game with as little friction as possible. Thatâ€™s why it was a â€œno-brainerâ€” for us to work with HyperPlay, Game7, and MetaMask to make it possible for us to transcend our current boundaries and compete with the best titles in gaming,â€” said founder and CEO of Bushi, Leon Berroya. â€œWith Snaps, we can now collaborate, connect, and communicate with communities that we never thought would be possible. The best part is that we can do this all while focusing on what game developers do best, make games.â€” MetaMask Snaps and HyperPlay arenâ€™t just supporting Sui. HyperPlay aims to support games on every major blockchain protocol, including Bitcoin, Starkware, Solana, Aptos, Tezos, and Cosmos, among others. This new feature further enhances HyperPlayâ€™s custom MetaMask wallet overlay. In November of 2022, HyperPlay was launched as a collaboration between MetaMask and Game7, a DAO dedicated to constructing Web3 gaming infrastructure. The primary goal of HyperPlay is to establish interoperability as the standard for all Web3 games, enabling developers to unlock new audiences and revenue streams. HyperPlay is unique because it also aggregates other game stores like the Epic Games Store. HyperPlayâ€™s MetaMask wallet overlay allows players to open their MetaMask from within any game and use it to make purchases and collect in-game tokens. Through this new feature, games inside of HyperPlay can request that users add Snaps that extend the functionality of the wallet to support previously unsupported blockchains and interact with games in new ways. â€œHyperPlayâ€™s mission is to realize the true potential of permissionless, extensible, and interoperable game worlds that empower gamers and developers through great user experience,â€” said HyperPlay founder and CEO Jacob C. eth. â€œIntegrating MetaMask Snaps positions HyperPlay as a central piece of the entire Web3 gaming ecosystem, regardless of what blockchain or protocol game players build on.â€” Game developers can benefit from this integration by launching via HyperPlay. Snapsâ€™ open-source nature means that any developer can take advantage of the technology to support a new blockchain or invent a novel feature. In September 2023, MetaMask unveiled its new Snaps feature, which bolstered the platformâ€™s interoperability with other blockchains â€” turning the popularly known Ethereum-based wallet into an all-encompassing, multiprotocol aggregator wallet. â€œOur deepened integration with HyperPlay highlights one of the ways we bring our ethos of permissionless creativity to life,â€” said Christian Montoya, Product Lead for MetaMask Snaps at Consensys. â€œWe have a shared commitment to empower both gamers and developers with the benefits of interoperability to elevate and diversify capabilities of the gaming community.â€” Developers interested in listing their games on HyperPlay can register here. To download the HyperPlay launcher, visit the official website www.hyperplay.xyz. About HyperPlay HyperPlay is the premier web3 game store crafted to empower gamers and developers alike by removing obstacles and enhancing creative autonomy. HyperPlayâ€™s game store also functions as an aggregator of other stores, like the Epic Games Store, bringing together titles from various storefronts into a unified hub and allowing players to play the latest games free from walled gardens. Its 0% fee model guarantees that every dollar spent on HyperPlay games goes directly to game developers, so they can reinvest the funds in further game development. HyperPlay is committed to innovation, and provides advanced features and tools, such as interoperable items and wallets, cross-platform support for Windows, MacOS, SteamDeck, and Linux, creating an ecosystem without limits that prioritizes gamersâ€™ experience. About Consensys Consensys is the leading blockchain and web3 software company. Since 2014, Consensys has been at the forefront of innovation, pioneering technological developments within the web3 ecosystem. Through our product suite, including the MetaMask platform, Infura, Linea, Diligence, and our NFT platform, we have become the trusted collaborator for users, creators, and developers on their path to build and belong in the world they want to see. Whether building a dapp, an NFT collection, a portfolio, or a better future, the instinct to build is universal. Consensys inspires and champions the builder instinct in everyone by making web3 universally easy to use and develop on. To explore our products and solutions, visit https://consensys.io/. About Bushi Bushi is a cutting-edge free-to-play brawler game engineered in Unreal Engine 5. Bushi coin the term, â€œthird-person competitive brawlerâ€”, to bring an entirely new gaming experience. As a fast-paced and competitive video game, it is designed to maximize player adrenaline with parkour-like movement and precision gameplay. With the successful launch and adoption of Bushi, the Bushi team has their eyes set on their longer-term beta testing period. During this period, players can enjoy the game for free. If players are on the horizon for Bushi and gamers can expect an action packed testing period. Bushi can be played via the HyperPlay store and interested players can keep up with all the updates on their official Twitter. Contacts HyperPlay Media hyperplay@wachsman.com Consensys Media pr@consensys.io Bushi Media contact@launchonenet.com

The aggregate 24-hour trading volume of Blur, Magic Eden, and OpenSea is around \$24M. According to DappRadar, the OKX NFT Marketplace had the daily trading volume of over \$90M. The 24-hour trading volume of known NFT markets, including OpenSea, Blur, and Magic Eden, was eclipsed by the NFT arm of crypto exchange OKX. According to DappRadar, the OKX NFT Marketplace had a daily trading volume of over \$50 million at roughly 10:00 am UTC on December 18. The platformâ€™s trade volume has decreased to \$35 million lately. The aggregate 24-hour trading volume of Blur, Magic Eden, and OpenSea is around \$24 million, putting OKX NFT Marketplace ahead of the pack. Bitcoin Ordinals Craze The introduction of Bitcoin Ordinals trading caused a dramatic increase in the NFT marketplaceâ€™s trading volume. According to NFT tracker CryptoSlam, Bitcoin had a tremendous week, with sales volume of \$367 million. This was more than Ethereum and Solana combined, which witnessed \$91 million together in weekly trading volume. The Bitcoin network shifted to having a daily NFT sales volume of \$24 million on December 12th, followed by Ethereum with roughly \$16 million and Solana with \$6 million. The whole NFT market, not just Bitcoin Ordinals, has also seen a renaissance; in November, the sectorâ€™s total volume was close to \$1 billion. Users seemed to be more eager to make higher-value trades than in prior months, as the average value of NFT transactions increased by 114%, from \$126 to \$270, during that month. Strategic backing for BRC-20 tokens and Bitcoin Ordinals by OKX is largely responsible for this astounding rise. Since early this year, Bitcoin Ordinals has been the topic of industry buzz, with several organizations trying to cash in on the craze. Highlighted Crypto News Today: Charles Hoskinson Maintains Critical Stance Towards XRP Community

Solana-based Bonk Inu (BONK) has been trending lately after the announcement of a Coinbase listing. Bonk surged over 500% after the news emerged. While this causes a lot of excitement within the Solana ecosystem, market analysts are warning of a selloff on the horizon. Their optimism lies in Retik Finance (RETIK), a newly launched DeFi token with better utility value than Bonk. Bonk Inu Price Prediction 2024 Bonk Inu is a meme coin cryptocurrency that was airdropped late last year to Solana ecosystem users. Bonk helped save Solana, which was tumbling at the time due to its ties with Sam Bankman-Fried and the FTX exchange. Bonkâ€™s whitepaper presents the token as a â€œcommunity coin of Solana,â€” The project seeks to develop the script on a proprietary VC (venture capital) tokens that preyed on the wider Solana communityâ€”by giving power back to the people.

BONK airdropped 50% of its supply to N-1 collectors and De-1 traders in the Solana ecosystem last Christmas. The current price of BONK is 0.00002461, with a 14.44% decline in the last 24 hours. It is the third-largest meme coin, with a market cap of \$1.5 billion. Bonk's chart is starting to flatten after a more than 500% rally that started after news of a Coinbase listing hit the market. Despite the surge, market analysts predict a bleak future for Bonk. They specifically point to Bonk's large token supply of 100 trillion tokens. Additionally, Bonk is a meme coin with limited utility, which leaves its price very volatile in the market. Bonk is at risk of experiencing fading hype as new meme coins emerge. Coincodex predicts a 4.77% price drop that will see BONK trade around \$0.00002416 at Christmas. The website also sees Bonk trade between \$0.00002699 and \$0.00003917 in 2024. Click Here To Take Part In Retik Finance Presale Retik Finance (RETIK) Price Prediction 2024. Retik Finance is an Ethereum-based DeFi ecosystem that market analysts predict will surpass most other cryptocurrencies in 2024, including Bonk. RETIK is currently building momentum in presale. The presale has raised over \$1 million in a little over a week after opening to the public. This early success indicates strong interest and support from the crypto community. It suggests that investors find value in Retik Finance and are willing to commit their funds early on. So, what does Retik offer that is drawing this much attention? Retik Finance is reshaping the financial landscape with its comprehensive suite of DeFi products. The project aims to bridge the gap between digital and traditional realms of finance. Retik's futuristic DeFi debit cards allow users to effortlessly spend their digital holdings on daily expenses such as grocery shopping. Retik has partnered with global payment systems like Mastercard and Visa to power on-site crypto-to-cash conversions. This way, cardholders can use their cards even at locations that do not directly accept crypto payments. Cardholders can also withdraw at any ATM worldwide and are eligible for up to 5% in cashback rewards. The cards are connected to Retik's Web 3.0 wallet for easier conversions. The wallet has multiple layers of security to ensure the safety of every transaction and holding. Retik Wallet is a holistic solution for the decentralized finance community, enabling users to access various DeFi activities such as swap, mine, stake, short, lend, and borrow from a single access point. Retik Finance also features a blockchain-based payment system that enables merchants and business owners to integrate crypto payments. Retik Pay is competitively cheaper, compatible with current e-commerce platforms, and global, allowing users to tap into a \$1 trillion industry. Retik's products and features resonate with investors evidenced by the project's presale success. The presale is currently in the second stage and selling out fast. This is a chance for investors to get in on the ground floor of a future industry titan. The current price of RETIK is \$0.04. The token's price will continue to rise during the presale and eventually enter the market at \$0.15. According to the project's website, RETIK will be launched on several exchanges, including at least three top-tier central exchanges. If Bonk, a meme coin with limited utility, can jump 500% on news of a top-tier listing, how much will RETIK, a token with unique utility, jump? Market analysts predict over 1000%. - Helium Mobile offers new members the chance to win mapping rewards during onboarding. - Customers may help pinpoint hotspots for Helium use by choosing to utilize the NFT. An estimated 8,000 customers have signed up for Helium Mobile's \$20 per month unlimited mobile services since the mobile virtual network operator (MVNO) recently launched the plan in the U.S. Helium Mobile offers new members the chance to win a mapping rewards during onboarding if they share their phone's session connection data with the company. During the last day, the price of Helium Mobile (MOBILE) has jumped 65%. Moreover, the trading volume is up 245%. Innovative Approach In the event that users provide their consent, a non-fungible token (NFT) is created and added to their Helium wallet on Solana. Those who own this NFT will be entitled to a piece of the MOBILE mapping incentives, which amount to 20% of the total. Helium Mobile users have the opportunity to earn MOBILE incentives, just by installing a location-monitoring NFT on their phones. These smartphones include a built-in Helium wallet that is compatible with the Solana blockchain. Helium Mobile distinguishes out because of its innovative take on mobile phone service. Customers may help pinpoint hotspots for Helium use by choosing to utilize the NFT. Helium Mobile may exploit this information to its advantage by suggesting hotspot deployments in certain regions, which will lower T-Mobile's MVNO network-usage charges. The price managed to reach \$0.0077 today but faced minor correction. At the time of writing, MOBILE is trading at \$0.00636, up 65% in the last 24 hours and 785% in the last 7 days as per data from CoinMarketCap. Highlighted Crypto News Today:

- At the time of writing, ETH is trading at \$2251, up 0.71% in the last 24 hours. - If the price manages to go above \$2331 then it will likely test \$2380 resistance level. An unprecedented milestone has been reached by SOL, surpassing Ethereum in 24-hour decentralized exchange (DEX) volume the very first time since its inception in 2020. The Solana chain exceeded the Ethereum chain in DEX volume, according to statistics released by DeFiLlama on December 16. The Ethereum rollup chain Arbitrum was down for a short while on Friday, but is now back up and working well. There was a network outage on December 15 that lasted little over an hour and affected the layer 2 scaling solution for Ethereum. According to an update released on the official Arbitrum Foundation account on Twitter, the outage occurred because the Arbitrum One Sequencer stalled due to an influx of inscriptions. Since the blockchain's move from a proof-of-work (PoW) consensus mechanism to a proof-of-stake (PoS) network, the supply of Ether has dropped to its lowest point. The network has burned up a lot of ETH this week, reducing the total supply of the token. Statistics compiled by Ultrasound.money show that 31,829.06 ETH, valued at about \$71.58 million, were burned in the last seven days. New coins totaling 16,535 ETH have been issued over the same time period. Minor Correction Underway At the time of writing, ETH is trading at \$2251, up 0.71% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is down 28.73%. The price found support at \$2153 on December 13, after making a failed attempt to clear above \$2378 level. However, ETH price rebounded from this support level. If the price manages to go above \$2331 then it will likely test \$2380 resistance level. Conversely, if the price manages to go below \$2158, then it will likely witness more selling pressure in order to test \$2079 support level.

Liquidity Hub by Orbs has been integrated by THENA, a renowned DEX on BNB Chain. Because of this, traders at THENA will now have access to more liquidity on the BNB Chain network, which was not previously available via the conventional AMM. With the help of Orbs' L3 technology, Liquidity Hub offers reduced costs, MEV protection, gasless transactions, improved capital efficiency, an easier-to-use user interface, and more. As one of the few integrations in all of DeFi that aggregates liquidity from both on-chain and off-chain sources to a DEX, this one is the second of its type for Liquidity Hub by Orbs. The Orbs project created Liquidity Hub, a completely decentralized, permissionless, and composable DeFi system driven by the Orbs Network. All of the liquidity that BNB Chain provides is now available to THENA's traders at no extra cost. Staked with tens of millions of dollars in TVL, Orbs is a decentralized protocol run by a public network of permissionless validators via proof of stake. Opening up a whole new range of possibilities for Web 3.0, DeFi, NFTs, and GameFi, Orbs pioneers the notion of L3 infrastructure by employing the Orbs decentralized network to expand the capabilities of current EVM smart contracts. Liquidity Hub's Operation Above the AMM, Liquidity Hub is an optimization layer provided by layer 3 (L3) infrastructure software. For more accurate price quotations and less price influence, this technique uses external liquidity. Unlike the standard swap, which looks for the optimal path inside the DEX's constrained liquidity pools, Liquidity Hub improves this procedure by using extra sources of liquidity: - On-chain solver auction: Third-party solvers competing to fill swaps with on-chain liquidity, such as AMM pools or their own private inventory. - Decentralized orders via API: Professional and institutional traders, including market makers, may place bids and compete to fill swaps via the use of decentralized orders, which are available via API. DEXs may try to make transactions via Liquidity Hub without going through the AMM and affecting prices. The transaction will revert to the AMM contract and proceed normally if the layer is unable to complete the transaction at a lower cost than the AMM. Hence, a trader's experience can only be enhanced by Liquidity Hub. The swap will proceed as normal via the AMM contract if Liquidity Hub isn't viable, which means it would only process at a worse price for the user or can't execute at all. Liquidity Hub & Architecture Product Specification An on-chain contract that is deployed next to the AMM contract and backend functionality that is still operating on-chain via Orbs' decentralized L3 nodes jointly managed Liquidity Hub. Regardless, the Liquidity Hub on-chain contract guarantees end users' safety and protection of their funds while prohibiting major pricing manipulations. It's not necessary for ordinary users trying to swap to be aware of Liquidity Hub's existence. The execution price of the swap will be superior than the execution price on the AMM contract, according to the Liquidity Hub contract's guarantee. Stated otherwise, if Liquidity Hub lacks competitiveness, it will be avoided. Since this guarantee is applied at the contract level, there is no need for trust. A portion of the Liquidity Hub functionality is implemented off-chain on the DEX (off-chain risks may be reduced by utilizing Orbs L3, which is covered in more detail below). It will only take a few moments to add and remove orders from the Liquidity Hub (without having to wait for a fresh block to be closed) and won't cost gas since the data structure is kept off-chain. Because these qualities are comparable to CEXs, market makers find them appealing. All funds are kept in a non-custodial manner on-chain. When a user places an order via Liquidity Hub, their funds stay in their wallet. The transaction transferring the funds from the account on match will be started by the approval of the Liquidity Hub contract. Order verification will always occur on-chain via the Liquidity Hub contract. The contract will confirm that the execution meets the needs of both parties and that the execution cost is less than the AMM. The money will be directly sent on-chain between the parties upon match. Here are Liquidity Hub's primary product specifications: - User Interface of DEX Has Not Changed: The DEX's recognizable user interface is preserved with the integration of Liquidity Hub, guaranteeing a smooth and simple trading experience. - Decentralized Order Interface for Market Makers (MMs) + API for Solvers: The hub streamlines trading and liquidity supply by providing a decentralized interface for Market Makers and an effective API for solvers. - Nominal to Zero Latency Execution for MMs: Users may profit from real-time market fluctuations as trades are performed with minimal to zero latency. - Users on MetaMask Approve Token Expenditure: By using MetaMask, users may approve token expenditure while still keeping control and security over their transactions. Funds remain in the user wallet until trades are executed. By keeping users' funds in their wallets until trades are executed, the trading process is made more secure and trustworthy. - Gasless Trades: By providing customers with gasless trades, the Liquidity Hub dramatically lowers transaction costs. Maintaining the Standard Powered by Orbs L3 technology, the Liquidity Hub protocol has emerged as the industry standard for finding the best price without having to leave the DEX. Over \$12 million worth of trade activity has been made possible by the protocol, which has been deployed so far by QuickSwap on Polygon and now Thena on BNB Chain. To ask any queries about Liquidity Hub, please sign up for our Telegram channel. Additional readings:

- Bonk surges 107% in the past twenty four hours. - It reached the 69th position in market cap by reaching \$1 billion. In a whirlwind turn of events, the solana based memecoin Bonk Coin has swiftly captivated the crypto town, experiencing an electrifying surge of 107% within a mere 24 hours, soaring to an all time high of \$0.00003033. This meteoric ascent has sent shockwaves through the community, igniting discussions about its potential to become the next memecoin sensation. The fervor surrounding the bonk intensified following the landmark announcement from the eminent exchange Coinbase, declaring its forthcoming listing of the token. The exchange's proclamation on Wednesday paved the way for the future trading of BONK-USD pairs, albeit with potential restrictions in select supported jurisdictions, awaiting the establishment of a substantial asset supply. Notably, Bonk coin solidified its meme deity status by scaling the ranks to claim the 69th spot on CoinGecko's esteemed list of the most valuable cryptocurrencies. The coin's market cap breached the monumental \$1 billion milestone for the very first time, heralding an era of newfound recognition and potential. What's Next For Bonk? The surge in the bonk coin's price trajectory finds roots in the introduction of single-sided staking within the project's framework, coupled with the Coinbase listing as mentioned, setting the stage for a pivotal moment in its journey. Analysts keenly eye a potential buying opportunity, targeting the ambitious 61.8% Fibonacci extension level at \$0.0000219 for BONK, following a breakout past the \$0.0000149 mark and a subsequent retest. In a domain dominated by Dogecoin and Shiba Inu, the emergence of BONK as the latest torchbearer of the memecoin realm has caught the attention of enthusiasts worldwide. Further elevating its potential, the token's parent chain, Solana (SOL), stands tall among the most high-performing cryptocurrencies in 2023. However, amidst the optimism, skeptics ponder the fate of this bullish surge, questioning whether it signifies the inception of a monumental breakout for the next colossal crypto, or if it's merely a fleeting moment in the midst of past 24-hour gains.

Many DeFi protocols were affected by the supply chain assault on Ledger, which resulted in a rug-pull security compromise. Malicious code injection into different Decentralized Applications (dApps) is possible due to the vulnerability, which has been dubbed a supply chain attack. This puts users and their assets at considerable danger. Web3 security company Blockaid has identified LedgerHQ's ConnectKit, notably versions larger than 1.1.4, as the compromised package in the assault. As per Ledger, a former employee of Ledger was hacked this morning and their NPMJS account was compromised as a result of a phishing

effort. A hacker's wallet was redirected to by the malicious code using a rogue WalletConnect project. In an effort to identify the perpetrator, the company has said that they would be collaborating with the police, and submitting a formal complaint. Multiple Protocols Affected Many DeFi protocols were affected by the supply chain assault on Ledger ConnectKit. Some of the decentralized exchanges that Blockaid identified as being susceptible were Kyber, SushiSwap, RevokeCash, and Zapper. Moreover, Kyber and RevokeCash swiftly deactivated their front ends in response to the threat. Notably, this vulnerability was discovered shortly after KyberSwap was hacked, leading to the loss of around \$46 million worth of cryptocurrency. The rapid and extensive effect of the assault is shown by Blockaid's estimate of almost \$150,000 lost within only a few hours. The security company has already assured Blockaid-enabled wallet users that they are safe from this particular assault, but the hack's ramifications might be disastrous for the Web3 ecosystem as a whole. The Ledger ConnectKit software library was hosted by a particular Content Delivery Network (CDN), which is where the vulnerability originated. A statement from Ledger confirmed the breach and assured customers that a legitimate version of Ledger ConnectKit is being sent to replace the malicious file. This was in reaction to the attack. Additionally, a software patch has been created to fix the issue. Highlighted Crypto News Today: Cronos Labs Unveils Public zkEVM Chain Testnet, What Makes It Unique?

Victoria, Seychelles, December 14th, 2023, Chainwire Bitget Wallet (formerly BitKeep), a leading global Web3 trading wallet, has announced a collaboration with the Ethereum Layer 2 network, Linea, to jointly advance the development and growth of the Linea ecosystem. Bitget Wallet has integrated with the Linea mainnet, providing wallet connectivity and support for the Linea mainnet and ecosystem projects. Wallet users can now easily connect to the Linea mainnet via their mobile app and browser extension, manage their assets on the Linea ecosystem, engage in multi-chain swaps for Linea mainnet tokens and view real-time candlestick data, and interact with projects on the Linea ecosystem. "The partnership with Bitget Wallet is a great step for Linea, enhancing user interaction with our zkEVM Layer 2 solution. This collaboration simplifies asset management and ecosystem engagement for the network, aligning with our goal to make Web3 more accessible and efficient. We're excited about this collaboration and the positive impact it will have in the Linea ecosystem," said Declan Fox, Product Lead at Linea. Developed by Consensys, Linea is a developer-friendly Ethereum Layer 2 network built on zero-knowledge proof technology that aims to provide efficient scaling solutions to enhance Ethereum's performance and usability. As part of this collaboration, Bitget Wallet has launched an extension of Linea's DeFi Voyage Wave 9 through its own event on its Task2Get platform, signaling the commencement of the second phase of Bitget Wallet's Task2Get initiative. By exploring the Linea ecosystem within the wallet and completing tasks like token swaps and DApp interactions, users can earn Task2Get NFT rewards distributed by Bitget Wallet and share in a total prize pool of \$10,000. The event runs from December 14th to December 28th. Task2Get NFT holders will qualify for additional airdrops from this campaign as well, including tokens from partnered projects and more. Task2Get, a Web3 exploration incentive platform introduced by Bitget Wallet, rewards users for participating in various on-chain interaction tasks, offering an effective way for users to both learn and earn from various ecosystems, while also providing growth opportunities for these projects. "As active participants in the Web3 ecosystem, we not only curate and showcase promising mainnet and on-chain projects for users to better interact and claim future airdrops, but also launch various incentivized task events in collaboration with these parties," said Alvin Kan, Chief Operating Officer of Bitget Wallet. Besides offering an easy-to-use user interface and comprehensive interaction guides, Task2Get also provides convenient access to interaction records and interaction reminders. Users can also stand to earn exclusive NFTs for completing various tasks, which will qualify them for rewards such as vouchers and even airdrops in the future. As one of the top global-leading Web3 trading wallets, Bitget Wallet provides reliable and powerful services for over 12 million users worldwide. Bitget Wallet's mobile app is also ranked fourth in global downloads in recent months. Leveraging its vast user base and strong market influence, it has built up a robust growth and exposure platform for Web3 mainnets and projects through its Task2Get incentive. With the continuous deepening of collaboration between Bitget Wallet and Linea, it is predicted that Task2Get will be a key driver in fostering further innovations and market growth, cultivating sustained user engagement and active interaction in the ecosystem. About Bitget Wallet (Web3 Trading Wallet) Formerly known as BitKeep, Bitget Wallet stands as Asia's largest and global frontrunner among all-in-one Web3 trading wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, MPC Wallet and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 12 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. In March 2023, Bitget, a leading crypto derivatives trading platform made a substantial \$30 million investment in BitKeep, acquiring a controlling stake. Following this strategic move, BitKeep underwent a transformative and strategic brand evolution in August, officially rebranding itself as Bitget Wallet. - Convenience-oriented apps could only demand the user's "Device Auth" World ID. - Worldcoin said that the updated functionality would lessen bot losses. The "World ID 2.0" update is the latest addition to Worldcoin's World ID functionality. As stated in a statement made on December 12th, individuals may now demonstrate their humanity on Shopify, Mercado Libre, Reddit, and Telegram thanks to the new version's integration with these platforms. According to the statement, the new app integrations expand upon previous ones, such as Discord, Talent Protocol, and Okta's Auth0. Various authentication levels, from "lite" to "max," are now available to app developers in the updated version. Tuning Application Demands In order to make sure consumers aren't giving up more personal information than is necessary or desired for a specific application, the statement states that these additional tiers will provide more options for how to utilize World ID depending on the application's security requirements. An app with stringent security measures, for instance, demand that all users provide an orb-verified ID. On the other hand, convenience-oriented apps could only need the user's "device Auth" world ID associated with their phone. A worldcoin official elaborated that Shopify merchants may now choose the necessary degree of integration on an individual basis. The representative stated: "[f]or the new Shopify integration, stores will be able to create coupons and then specify the level of humanness required to redeem them (options include the "device-verified" level, which is done on the individual's smartphone or orb-verified level)." Worldcoin said that the updated functionality would lessen bot losses without necessitating customers to divulge sensitive information to the applications they use. It cited a CNBC study that said businesses lose \$100 billion annually due to "return fraud, bots, and coupon stacking."

At the time of writing, AVAX is trading at \$40.81, up 13.54% in the last 24 hours. - If the price goes below \$38.5 level then it will likely test \$34.4 support level. Avalanche (AVAX) has surged by 13% in the last 24 hours to join the top 10 cryptocurrencies list by market value, defying the severe market reversal. The value of AVAX has doubled since the beginning of 2023, and it has gained 84.28% in the last week, as it regained the \$40 level for the first time since May of last year. In terms of market capitalization, Avalanche (AVAX) is now in the top ten, surpassing Dogecoin (DOGE). Moreover, Avalanche is now following a route that may replicate Solana's recent meteoric rise. According to the data supplied by Defillama, Avalanche has also seen substantial growth in the DeFi industry. It draws attention to important updates at Trader Joe, the top DEX based on the Avalanche network. The platform's income reached a notable milestone of \$145,000 on December 11th, and its fee revenues climbed to \$1.23 million, achieving the second-highest level of the year. Investors Optimistic According to the statistics provided by the on-chain analytics platform IntoTheBlock, there has been a notable surge in the frequency of huge AVAX transactions. Last week, there were over 1000 transactions that were above \$100,000, pointing towards increased optimism among large traders. At the time of writing, AVAX is trading at \$40.81, up 13.54% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 20.74%. The price recently broke above the key resistance level of \$38.5. If the bullish momentum continues and price manages to go above \$55.8 then it will likely test \$76.7 resistance level. Conversely, if the price goes below \$38.5 level then it will likely test \$34.4 support level.

- Both the Immutable Checkout and the Immutable Passport will include Transak's services. - The payment rail would enable in-game transactions for digital assets. For its zero-knowledge Ethereum Virtual Machine (zkEVM), Web3 gaming company Immutable is integrating Transak as its only payment service provider. Gaming ecosystems will soon be able to accept fiat and Web3-based payments directly via the service. Both the Immutable Checkout and the Immutable Passport will include Transak's services. The former serves as a customizable interface for game producers to incorporate numerous payment alternatives and is Immutable's all-in-one transaction infrastructure for games. Major Boost for Web3 Gaming Users may use fiat payments like credit and debit cards, Apple Pay, and Google Pay with Transak's on-ramp, off-ramp, and NFT payment service. The payment rail would enable in-game transactions for digital assets, according to Harshit Gangwar, director of marketing at Transak. Harshit stated: "These products will be used by hundreds of high-quality games over the next couple of years. The majority of those games are scheduled to go live in 2024." Guild of Guardians, Gods Unchained, and Cross The Ages "three of Immutable's most popular Web3 games" will be the first to use Transak's integration, according to Michael Powell, director of product marketing at Immutable. More than 350 apps rely on Transak, which has a history of success as a payments infrastructure provider. As for its payment service, it has been around for a while and is utilized by a lot of games that are backed by Animoca Brands, a Web3 gaming venture capital company. The fact that over 20 different payment options are available to Transak consumers in 160 different countries is something that Gangwar points out. Moreover, pricing varies by country and manner of payment. Highlighted Crypto News Today: XRP and Solana Lead Altcoin Surge: Report Reveals 11 Consecutive Weeks of Inflows

- Bonk, a dog-themed meme coin on the Solana blockchain, is now the third-largest meme coin by market capitalization. - Over the last month, the meme coin has surged by an impressive 363%, reaching a market cap of \$707 million. - BONK currently holds the third position among meme coins, trailing behind Dogecoin and Shiba Inu. The Solana blockchain is witnessing the meteoric rise of Bonk, a dog-themed meme coin, which has swiftly climbed the ranks to become the third-largest meme coin by market capitalization. According to recent CoinGecko data, Bonk has surged past the market cap of its counterpart, Pepe, marking an impressive milestone in the world of meme coins. Over the last month, Bonk has experienced an astonishing 363% increase in its price, propelling its market cap to an impressive \$707 million. BONK now ranks behind Dogecoin and Shiba Inu. Bonk's current market cap places it just behind the benefactors of the meme coin realm: DOGE and SHIB, with market caps of \$5.66 billion and \$13.64 billion, respectively. The meme coin, which made its debut on Dec. 29, 2022, faced an impressive 3,766% surge in its first week of trading despite the challenging conditions of the bear market. Subsequently, from Jan. 5 onwards, Bonk experienced a decline, hovering around its all-time lows for the better part of a year. However, a turning point emerged on Oct. 21, 2023, when Bonk initiated a remarkable upward trajectory. Since then, it has achieved an outstanding 6215% gain, solidifying its position as the most high-performing mid-cap meme coin over the last three months. As Bonk continues to ride this wave of success, the cryptocurrency community remains captivated by its unprecedented ascent and the evolving dynamics within the meme coin landscape.

- Blast's TVL now stands at \$837.02 million, up 27% from where it was seven days ago. - The L2 solution had a TVL of around \$350 million on November 24. In the short time since its introduction, the Ethereum Layer-2 network Blast has achieved a new Total Value Locked (TVL) milestone, according to statistics from Defillama. According to the numbers, Blast's TVL now stands at \$837.02 million, up 27% from where it was seven days ago. The L2 solution had a TVL of around \$350 million on November 24, according to Defillama's statistics. A significant portion of its expansion may be traced back to the distinctive business strategy it implemented. Tieshun Roquerre, better known by his stage name "Pacman," is the brains behind the NFT marketplace Blur. His new platform uses an innovative yield generating strategy to reward users who stake their Ethereum or stablecoins. Addressing Security Concern Users are guaranteed a maximum payout of 4% on Ethereum staking, with stablecoin stakers standing to get a yield of 5%. Since it is a novel idea in the DeFi sphere, the distinctiveness of this feature has helped it get substantial interest from investors. The increase in Blast TVL is proof of this affinity. This expansion does not ignore the difficulties encountered by the protocol so far. A security issue surfaced at the tail end of November when consumers who staked on Blast saw that \$100,000 vanished after their money was converted to Dai (DIA). It was determined that the problem originated from an incorrectly set slippage parameter in the UI. The process persisted, and assets worth about \$350 million were also changed to USDT and ETH. But Blast wasted no time in responding to this criticism, highlighting the need for upgradeable contracts. Highlighted Crypto News Today: Tether Implements Voluntary Wallet-Freezing for OFAC Sanctioned List

At the time of writing, ETH is trading at \$2357, up 5.41% in the last 24 hours. - If the price manages to go above \$2386 level, then it will likely test \$2724. The altcoins have capitalised on the recent bullish momentum while bitcoin price witnessed a brief correction. The etherium

price has reached its highest point in over 18 months. It wasn't until early May 2022 that ETH traded above this level. Cryptocurrencies are a new danger to the US, according to Senator Elizabeth Warren, who has often spoken out strongly against them. Her remarks, which she delivered on December 7 during an interview on CNBC's Squawk Box, align with the opinions of Jamie Dimon, the CEO of JPMorgan, who has been a strong proponent of closing down the cryptocurrency industry. The purported use of cryptocurrency to fund terrorism, drug trade, and by rogue nations was the main topic of Warren's speech. After five years of inactivity, a long-dormant Ethereum whale recently transferred almost \$90 million worth of ETH to the cryptocurrency exchange Kraken, sparking debate among experts. Kraken received a deposit of 39,260 ETH from the whale. At one point in 2017, this address had received 47,260 ETH, which was worth little over \$11 million at that time. ETH Rallies as Bulls in Control At the time of writing, ETH is trading at \$2357, up 5.41% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 32.54%. If the price manages to go above \$2386 level, then it will likely test the \$2724 resistance level. However, if the ETH price dives below \$2331, then it will decline further to test \$2269 support level.

- As an introductory offer, it accepts a non-refundable \$999 deposit toward the amount. - If every available slot is filled, El Salvador would get \$1 billion. A new citizenship-by-investment scheme in El Salvador has been created. It offers a residence permit and a road to citizenship to 1,000 individuals who are ready to shell out \$1 million worth of investment in the nation in Bitcoin or USDT. The cost of citizenship in the Bitcoin-friendly nation starts at \$100,000, which is much more than in neighboring Caribbean nations. El Salvador's government and Tether, a stablecoin issuer, unveiled the "Adopting El Salvador Freedom Visa Program" on December 7. As an introductory offer, it accepts a non-refundable \$999 deposit toward the amount of \$1 million in Bitcoin or USDT. If every available slot is filled, El Salvador would get \$1 billion, while nations like Vanuatu, which offers citizenship by investment, reap substantial financial benefits. Much Cheaper Options Crypto hedge company Altana Digital Currency's founder, Alistair Milne, said on Twitter that El Salvador's proposal is "uncompetitive in the global market" and that EU citizenship could be bought for lesser. According to research from investment migration consultant Henley & Partners, Maltese citizenship by investment is available for \$10,000 (750,000 euros), which grants entry to the visa-free Schengen Area, which consists of 23 member states of the European Union. El Salvador's president, Nayib Bukele decided to seek reelection and resigned from office on December 1st. He was instrumental in passing the legislation that legalized Bitcoin as currency in El Salvador. El Salvador's parliamentary assembly gave Bukele the go-ahead to stand down as president on December 1st. He may now focus on preparing for the 2024 re-election campaign. - Jayant Sinha was speaking at the India Blockchain Week in Bengaluru. - As per Sinha, it is very unlikely that parliament will soon approve a crypto-specific bill. A senior Indian politician in charge of the country's financial development has said that the country is not expected to introduce a crypto or Web3-specific legislative measure until at least the middle of 2025. Chair of the Standing Committee on Finance Jayant Sinha was speaking at the India Blockchain Week in Bengaluru when asked when the country can expect a Web3-specific law. Sinha is a member of the governing Bharatiya Janata Party (BJP) and a minister of Parliament. Sinha stated: "Regulators and policymakers are responsible, not just on the innovation side, which of course we want to encourage, but also on the safety side. We have to really find that balance and that balance is going to evolve over the next 12 to 18 months." Absence of Domestic Regulation As per Sinha, given the following three factors, it is very unlikely that parliament will soon approve a crypto-specific bill: the evolving nature of the space's use cases, the development of global standards, and the current state of the industry overall. The year 2024 brings with it the upcoming elections in India, the United States, and maybe the United Kingdom, as well as the realization that the sector will evolve in the wake of the FTX collapse and recent regulatory proceedings against Binance. India's stance on cryptocurrency was under further scrutiny after September 2023, when, as G20 president, it advocated for the adoption of global crypto standards in the absence of domestic regulation. Since 2021, India has had a cryptocurrency law in cold storage, but the country has hinted that it would decide in the next few months. But according to Sinha's comments, such a stance is not going to materialize into a law anytime soon. Highlighted Crypto News Today: Solana Eyes Breaking Above \$65.9 Level as Bulls Striving Hard

- An effort to attract investors for the long haul in the digital asset market is driving this shift. - Reducing taxes for Japanese businesses is just one goal of the planned tax reform. A new tax system for businesses with cryptocurrency holdings as long-term assets is being prepared to be implemented in Japan. Positioning Japan as an influential participant in the fast-growing digital economy is a larger goal, and this step is only one component of that plan. Japanese lawmakers from the Liberal Democratic Party and Komeito, the ruling coalition, will soon propose a tax exemption for companies' cryptocurrency holdings with unrealized profits. Eyeing Larger Interest Moreover, an effort to attract investors for the long haul in the digital asset market is driving this shift. Companies in Japan are now required to pay corporation taxes according to the value of their cryptocurrency holdings as of the end of the year. Also, a major shift from the current tax system is anticipated with the proposed change, which is anticipated to be included in the fiscal 2024 tax plan. It demonstrates the rising awareness of the distinctive qualities and possible influence of digital assets on the Japanese economy. Reducing taxes for Japanese businesses is just one goal of the planned tax reform. In addition, it shows that Japan is trying to get more money out of the international cryptocurrency industry. This decision is made at a time when other Asian regions are stepping up their game to become major centers for cryptocurrency. Furthermore, the details of a plan to alter the taxation of cryptocurrency purchases made by foreign nationals in Japan are still up in the air. Japan is making strides in the digital currency space, which goes hand in hand with its tax changes. Highlighted Crypto News Today:

The leading self-custody Ethereum wallet Earth Wallet and Bitcoin wallet Taproot have announced that an independent security audit has been successfully completed. The audit, carried out by well-known blockchain security company Halborn Security, which is popular for its extensive full-stack solutions, will contribute to making sure that security comes first in the next phase of innovation on the leading blockchains in the world. Earth Wallet founder and CEO Sukhveer Sanghera stated: "We are thankful to Halborn Security for helping independently verify our commitment to the fundamentals of Bitcoin and Ethereum decentralization, self-custody. We are dedicated to empowering everyone on Earth with full control of their own digital assets, without sacrificing security or user-friendliness." Earth Wallet has become the first independently audited self-custody Bitcoin Ordinals and Ethereum Proof-of-Stake wallet available on iOS and Android thanks to the forensic investigation conducted by Halborn's security experts. This sets a fresh benchmark for self-study solutions at the forefront of Bitcoin Taproot. To guarantee the greatest degree of user protection, Halborn Security thoroughly evaluated the wallet's security mechanisms throughout the audit. Openness and transparency are at the very core of Earth Wallet's guiding principles. Both novice and seasoned cryptocurrency users are urged to take advantage of financial sovereignty by maintaining complete control over their private keys and, by extension, their digital assets. Earth Wallet, which is compatible with all popular digital tokens, NFTs, and Ordinals on Bitcoin, has been downloaded over 20,000 times and is accessible on iOS and Android. Its open SDKs allow for easy integration with decentralized apps (dApps), and its domain support capability improves accessibility and user experience. Apart from its plethora of features tailored to the needs of the user, Earth Wallet is committed to environmental sustainability. Earth Wallet, so named given its emphasis on the earth, has made a substantial contribution to ecological concerns by clearing hundreds of pounds of plastic debris from the ocean and planting thousands of trees to stop deforestation. The enthusiastic community and partners behind it make these efforts feasible. Visit earthwallet.io to learn more about Earth Wallet's features and to download the app.

- At the time of writing, ETH is trading at \$2253, up 4.53% in the last 24 hours. - If the price manages to go past \$2307 then it will rally further to test \$2736. Bybit released a research report that highlighted the strategic movements made by institutional investors and provided insight into their asset allocation interests. The research emphasizes a notable change in asset allocation, particularly within the Bitcoin and Ethereum domains, with an emphasis on the evolving market attitudes of institutional investors. Institutional investors are showing renewed interest in Ethereum. After a brief dip shortly following the Shapella update, institutional investors are starting to see Ethereum's potential. An optimistic outlook in Ethereum's technical breakthroughs and potential development trajectory is reflected in this increased investment, which is detailed in the analysis. The creation of Solana's Anatoly Yakovenko has recently made a rather moderate remark on the Ethereum blockchain. Yakovenko attempted to defuse the tension during a speech, despite the fact that the two projects are often seen as deadly rivals. Against widespread speculation that Solana is "Ethereum killer," Anatoly Yakovenko has spoken up openly. However, such generalizations hurt the crypto ecosystem as a whole, as they encourage needless competition across the different protocols, claims Yakovenko. Therefore, Yakovenko requested greater collaboration, stating that the success of one project is not dependent on the failure of another. Bulls Dominating At the time of writing, ETH is trading at \$2253, up 4.53% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 46.39%. If the price manages to go past \$2307 then it will rally further to test \$2736 resistance level. However, if the momentum shifts and the price goes below \$2190 level, then it will decline further to test \$2153 support level.

Zeply crypto platform, a Europe-based digital currency exchange and crypto wallet platform, has announced the integration of Apple Pay and Google Pay into its ecosystem. The exchange has added payment options to offer users in most EU countries, the EEA, and the UK a more convenient way to buy crypto. Through Apple and Google Pay, users can now acquire digital currencies like Bitcoin (BTC), Ethereum (ETH), Solana (SOL), Cardano (ADA), USDT, and USDC, among many others, on the Zeply app. The platform also grants instant and fee-free purchases to investors using the payment feature. Moreover, Zeply facilitates the buying, selling, and storing of cryptocurrencies on desktops, allowing users to exchange digital assets seamlessly. It also exclusively supports the storage of cryptocurrencies in the platform's proprietary custodial wallet. Their robust platform facilitates secure and efficient transactions for both crypto-to-fiat and fiat-to-crypto exchanges. Zeply has strategic partnerships with industry leaders such as Fireblocks. Andrei Bulgakov, Zeply Crypto CEO, gave his remarks on the integration of the payment options at the Cyprus Sigma Event, stating: "Zeply is an amazing product, an amazing team of people. We are a regulated crypto exchange based in Estonia, EU-regulated. We service corporate and private individuals and handle the whole crypto infrastructure for our customers, including Fiat on and off-rampings. Unlike many other crypto companies, I will say we're more focused on the regulation; technically we can provide any crypto solution. We are currently focusing here on finding companies struggling with crypto, specifically for regulation reasons." Download the Zeply app via Google Play for Android or Apple Store for iOS to access these payment options. After installing the app, you can link your Apple Pay or Google Pay accounts to buy cryptocurrencies at no extra cost. The crypto exchange recognises users have preferences when it comes to payment methods. Alongside the seamless options of Apple Pay and Google Pay, it provides additional alternatives such as wire transfers, Trustly, and Cards. By offering a range of convenient choices, Zeply facilitates a tailored payment experience for each individual. Earlier this year, Zeply announced its partnership with Swedish-based Fintech banking company Trustly. Incorporating the Trustly payment option into the crypto platform ensures bank-level security, eliminating the requirement for sharing card details when purchasing crypto. Zeply believes Trustly's transparent and secure transactions provide peace of mind, making it an ideal choice for hassle-free cryptocurrency transactions. About Zeply Crypto Zeply is an EU-regulated crypto platform offering a secure wallet and exchange, along with a payment gateway for individual and business use. Zeply operates under the brand name Zeply OÜ, launched in 2020, is registered at Lastekodu tn 25-37, 10113, Tallinn, Estonia, an EU member state. The company holds a valid license (FVT000128) from the Estonian Financial Intelligence Unit, ensuring customer rights protection. Zeply prioritises transparency and aims to instil confidence in its users by providing a secure and compliant environment for cryptocurrency transactions. The crypto exchange takes great pride in delivering exceptional customer support, with a highly responsive, easily accessible, and available round-the-clock team to provide assistance and guidance in multiple languages. To learn more about Zeply's vast features and gain the ultimate crypto user experience, visit the social channels below:

- February 2024 is the scheduled date of the next general election. - In September 2021, Bukele lobbied for the adoption of Bitcoin as legal cash in El Salvador. Nayib Bukele, the president of El Salvador, has resigned from office to run for office again. He was the driving force behind the bill that made Bitcoin legal money in El Salvador. After receiving the green light from El Salvador's legislative assembly, Bukele stepped down as president on December 1st. He will now be able to devote his time and energy to running for re-election in 2024. Claudia Rodríguez de Guevara, who is anticipated to hold the position until June 2024, took over as president after him. February 2024 is the scheduled date of the next general election. Banking on Bitcoin El Salvador had one of the world's highest rates of homicide before Bukele assumed office in June 2019, and he gained notoriety for his pro-crypto policies and his efforts to lower the number. In September 2021, he lobbied for the adoption of Bitcoin as

legal cash by the Salvadoran government and the development of a “Bitcoin City” powered by a volcano in the nation. Despite a marked decline in homicides under Bukele’s watch, many have accused El Salvador of breaking human rights rules in its fight against gangs. The government has instituted mass detentions since 2022, according to a March report by the UN human rights office, and several individuals have been abused or killed while in jail. El Salvador’s president is elected to a five-year term. The constitutionally mandated waiting period for presidents to seek re-election was 10 years prior to September 2021. But at that time, the Supreme Court of El Salvador decided that a president might serve two consecutive terms in office. The firms will work with Sui to conduct security assessments of projects building on the network, providing independent builders with powerful tools to strengthen their products. GRAND CAYMAN, Cayman Islands“(BUSINESS WIRE)“Sui, the Layer 1 blockchain created by the technology team that emerged from Meta’s Diem Blockchain project, today announced a long-term partnership with two leading Web3 auditing firms in which Sui will support Sui builders and ecosystem projects. The auditors, Zelic and OtterSec, will conduct security assessments of ecosystem projects building on Sui to help ensure the safety, security, stability, and strength of these individual projects and the Sui Network as a whole. Following on the Sui Network’s recent performance achievements, including setting a new Web3 record for most transactions executed in a single day, and vaulting into the top 20 blockchains in TVL, the auditors expressed their excitement about working with this fast-rising network. “As experienced security auditors working with many in the Web3 industry, we were impressed by the tremendous performance and growth displayed by Sui in the period of time since the launch of its mainnet,” said Christian Cuffari, OtterSec’s Head of Accounts. “We’re thrilled to have the opportunity to help ensure Sui’s security and reliability as it enters its upcoming growth phase. We are excited to be part of Sui’s growth as it continues to gain adoption at a rapid pace,” said Kaushik Swaminathan, Zelic’s Head of Growth. “We are pleased to bring our deep experience in Move security to support a rapidly ascendant blockchain that does not compromise on the security of its ecosystem projects. Zelic and OtterSec are leaders in multiple ecosystems, and each has a proven track record of providing high-quality audit services, and brings a level of experience that is uncommon in the Web3 industry. Their expertise in Move offers Sui builders a level of comfort that will serve the network well. We are extremely pleased to have our audit team, the caliber of Zelic and OtterSec working to ensure the security of the apps who will form the basis of the Sui ecosystem and our Sui Founders, Managing Director and the Sui Foundation to ensure the one more example of the Sui Foundation investing to transform the ecosystem in a safe and responsible manner, while at the same time supporting some of our best partners. About Sui Sui is a first-of-its-kind Layer 1 blockchain and smart contract platform designed from the bottom up to make digital asset ownership fast, private, secure, and accessible to everyone. Its object-centric model, based on the Move programming language, enables parallel execution, sub-second finality, and rich on-chain assets. With horizontally scalable processing and storage, Sui supports a wide range of applications with unrivaled speed at low cost. Sui is a step-function advancement in blockchain and a platform on which creators and developers can build amazing, user-friendly experiences. Learn more: <https://sui.io> About OtterSec OtterSec is a blockchain cybersecurity firm focused on identifying and remediating critical vulnerabilities. Teams like Cetus, Aftermath, LayerZero and over 100 others have trusted OtterSec with protecting more than \$5B in TVL. The OtterSec team is composed of seasoned professionals with extensive experience in blockchain technology and cybersecurity. They employ a variety of techniques to advise teams in Sui, Aptos, and other ecosystems on tailored security solutions. About Zelic Zelic is a blockchain security firm solving the most critical software assurance problems. The Zelic team has identified and eliminated critical vulnerabilities that endangered billions of dollars at Sui and Aptos Core, Solana SPL, and LayerZero. The team is made up of leading experts in cryptography, web security, and reverse engineering and advises clients in the EVM, Move, Cosmos, and Solana ecosystems, as well as wallets, secure enclaves, major cross-chain bridges, and L1s. - The firm reportedly reduced its holdings in BAYC by 69% and OpenSea by 94%. - Earlier, Coate Management wrote down 90% of its stake in OpenSea on November 8th. Tiger Global, an investment business, allegedly liquidated stakes in well-known NFT initiatives such as the Bored Ape Yacht Club (BAYC) collection and the prominent NFT marketplace OpenSea. The investment firm reportedly reduced its holdings in BAYC by 69% and OpenSea by 94%, according to anonymous sources cited by Bloomberg. The report also states that the business reduced the value of many other portfolio companies. Several sectors of the cryptocurrency industry have seen heavy investment from Tiger Global. The company isn’t only into NFTs; it’s also into blockchain security and privacy initiatives. As CertiK sought to increase its security capabilities for the decentralized finance (DeFi) industry, Tiger Global co-led a \$24 million investment round in 2021. Struggle Continues Tiger Global has joined a group of investors that have written down their NFT stakes. The U.S.-based technology investment firm Coate Management wrote down 90% of its stake in the OpenSea NFT marketplace on November 8th. Coate reportedly reduced its investment in OpenSea from \$120 million to \$13 million, bringing the company’s on-paper valuation down to \$1.4 billion, according to documents reviewed by The Information on November 7. Along with its rebranding as OpenSea 2.0, OpenSea announced on November 3 that it would be halving its personnel. And this followed a year of falling NFT trading volume and a protracted bear market. The decision to remove the operator screening by OpenSea was met with criticism in August. A feature that allowed artists to block access to marketplaces that did not collect royalties. In 2021, the industry’s sales hit a record high of about \$14 billion. However, the volume of NFT trades has dropped by a staggering 80% since the slump started in March 2022. SINGAPORE“(BUSINESS WIRE)“Cega Finance (a Cega) announces the launch of its Dual Currency strategy to unlock new yield opportunities for the Liquid Staking ecosystem, providing returns of 22%+ APY for stETH or ETH holders. This collaboration with Lido taps into the rapidly expanding liquid staking market and continued growth of Ethereum, where Cega’s structured investment expertise meets Lido’s staking leadership, to fuel a real yield revolution. The Liquid Staking ecosystem has grown 100% in size in the last year, and shows no signs of slowing down. More than a quarter of all ETH in circulation is staked, and a third of that is directly in Lido. Lido’s stETH market alone, currently valued at over \$16 billion, represents the significant emergence of a new capital market structure. A major problem in the billion-dollar Liquid Staking market today is lack of yield opportunities for stETH holders, limited to around ~3% APY without delving into leveraged or higher-risk strategies. Cega’s new Dual Currency product solves this by offering DeFi investors an innovative yet simple way to earn at the highest stETH and ETH yield in the market of 22%+ real yield through options trading. Since launching in 2022, Cega has become the leader in on-chain structured investments by building innovative products that earn investors safer, higher real yields through exotic options. Over \$300M in volume has been transacted to date. The launch of the Dual Currency strategy is exciting for a number of reasons. “We’re pioneering a new era in DeFi by introducing Dual Currency, integrating one of the most sought-after structured products with yield-bearing DeFi tokens,” said Arisa Toyosaki, CEO & Co-Founder at Cega. “Our innovation not only delivers attractive returns in the current market environment, but also continues our journey of expanding the untapped potential of DeFi through exotic options innovation. The Lido team echoes this enthusiasm for the potential of Cega’s Dual Currency products. We are excited to see innovative strategies such as Cega’s Dual Currency products that enhance the utility of stETH by giving holders more options and opportunities to utilize their stETH,” said Kenneth Tan, DeFi Generalist Contributor at Lido. Cega has prioritized security and safety with their release of the Dual Currency products to provide peace of mind for investors. A comprehensive security audit with Ottersec was conducted, and Cega also received security consulting from Code4rena’s top auditor during live code development. Cega’s launch of the Dual Currency strategy marks a major win for the Liquid Staking ecosystem, and illustrates what’s achievable when innovation converges with market needs. With more innovation on the horizon for early 2024, Cega is redefining the landscape of structured investments and expanding the frontiers of safer, real yield in DeFi. To explore Cega’s new products and begin your investment journey, visit <https://app.cego.fi>. About Cega: Cega is a decentralized structured investments protocol that helps investors earn high fixed yield on their USDC stablecoin. Cega strategies deliver yield enhancement, principal protection, and more, to an investor’s diversified DeFi portfolio. Now accessible on Ethereum, Solana, and Arbitrum. Use of Cega’s Portal and Services is subject to the Cega Terms of Service. Access and use of the Cega Portal and Services is subject to a range of risks, including financial risk including potential loss of funds. The Cega Portal and Services are not offered to persons or entities who are U.S. Persons, Restricted Persons, or Sanctioned Persons (as defined in the Cega Terms of Service). Access and use by such persons is expressly prohibited. - Ronaldo is accused of encouraging and taking part in the sale of unregistered securities. - In mid-2022, Binance and Ronaldo began a multi-year collaboration. The world-renowned footballer Cristiano Ronaldo is embroiled in a class action lawsuit that claims he caused investor losses via promotion of the crypto exchange Binance. Ronaldo is accused of encouraging and taking part in the sale of unregistered securities on the Binance exchange in a complaint that was filed in a Florida District Court on November 27th. In mid-2022, Binance and Ronaldo began a multi-year collaboration to market a number of Ronaldo’s NFTs, with three of the star’s collections associated with Binance. Signups for Ronaldo’s NFTs allegedly increased the likelihood that users would use Binance for other reasons, including as investing in what the lawsuit describes as unregistered securities. Seeking Damages and Attorney Expenses Moreover, according to the lawsuit, Ronaldo’s 850 million social media followers were instrumental in Binance’s meteoric rise to fame. Also, they claim that the NFT sales he did were “incredibly successful” in drawing attention to the exchange; in the week after the sale, searches for Binance increased by 500%. As per the complaint, Ronaldo knew or should have known that Binance was offering unregistered crypto assets because of his extensive knowledge of investing and his ability to hire outside consultants. Furthermore, Ronaldo was accused of failing to disclose money received for endorsing cryptocurrencies, as stated in the lawsuit, which relies on United States SEC regulations. Gordon Lewis, Mikey Vongdara, and Michael Sizemore are the class action plaintiffs suing for damages and attorney expenses. The SEC has also filed a lawsuit against Binance. Moreover, Binance is allegedly under investigation by the SEC into allegations of client money misappropriation and unregistered securities sales, among other accusations. Buterin said that super intelligent AI would wipe out the human race. Integrating brain-computer interfaces (BCI) was Buterin’s proposed solution. According to Vitalik Buterin, co-founder of Ethereum, highly sophisticated AI might potentially overtake humans and become the next “apex species” if current trends continue. He did, however, say that the outcome would depend on the degree to which humans meddle in AI research and development. Buterin, who is considered by some as a cryptocurrency industry pioneer, wrote a blog post on November 27 in which he claimed artificial intelligence (AI) is “fundamentally different” from other modern innovations because it has the potential to develop a new kind of “mind” that could rebel against human interests. Buterin said that super intelligent AI, in contrast to climate change, a man-made epidemic, or nuclear war, would wipe out the human race and its remnants if it perceives humans as an existential danger. Humans are the Brightest Stars Buterin referenced a poll conducted in August 2022 among more than 4,270 machine learning experts, who projected a 5-10% probability that AI would wipe humans off the face of the earth. Integrating brain-computer interfaces (BCI) was Buterin’s proposed solution for giving humans more command over advanced AI-based computing and cognition. An implanted device that allows the brain’s electrical activity to be sent to an outside device “like a computer or a robotic limb” is called a BCI. However, Buterin came to the conclusion that “we, humans, are the brightest stars in the cosmos because, for centuries, and maybe forevermore, we have created technology to increase human potential. A new partnership between Mastercard and artificial intelligence firm Feedzai was announced earlier this month. According to Mastercard, the group plans to improve its ability to detect and prevent fraud that is funneled via crypto exchanges. According to the report, Feedzai is set to integrate directly with Mastercard’s CipherTrace Armada platform, which is a financial tool designed to keep an eye out for fraudulent activities and other unusual activities across thousands of crypto exchanges. - Altcoin market reels as bears resurface amid declining November profits. - Token unlocks amplify concerns over altcoin oversupply and market dynamics. The altcoin market, which experienced a promising uptrend in the last quarter of 2023, is now grappling with a resurgence of bearish sentiments. Despite hitting impressive highs earlier in November, several top altcoins are now facing significant retracements, sparking fears among investors and traders. Ethereum, the leading altcoin, soared to a seven-month high of \$2130 on November 10. However, it has struggled to

break the resistance, fluctuating between the range of \$1999 and \$2099 in recent days, hinting at a slowdown in its bullish momentum. However, this downturn in sentiment is not exclusive to Ethereum; it has rippled across the altcoin landscape. Avalanche (AVAX) Avalanche, ranking 13th in market capitalization, experienced a historical rally, hitting a fifteen-month high of \$25 in November start. However, currently, in the span of just 24 hours, it faced a 7% decline, trading at \$20. Moreover, its trading volume has decreased by 5%, intensifying the struggle between bullish and bearish forces. Solana (SOL) Solana, the 7th largest coin in market capitalization, made headlines by reaching an eighteen-month high of \$69 in the second week of November. Presently, it trades at \$54, indicating a 5% decrease in the past 24 hours. However, its performance over the month still shows a remarkable surge of 70%. Polygon (MATIC) Polygon, positioned 14th in market capitalization, followed a similar trajectory. After reaching a six-month high of 0.9837 on November 14, MATIC has slipped to \$0.7416. It witnessed a 9% decline in the past week. Furthermore Adding to the volatility, several major alternative cryptocurrencies, including DYDX, OP, SUI, AXL, IMX, INCH, and HBAR, witnessed declines as large token unlocks affected their prices negatively. Altcoins are anticipated to witness a staggering increase of approximately \$650 million in their circulating supply throughout this week, amplifying concerns about oversupply and market dynamics. Moreover, research reveals that DYDX alone is set to double its current circulating supply with an additional \$480 million worth of tokens entering the market. It adds pressure to its price trajectory. As the broader crypto market navigates these shifts, the resurgence of bearish trends and the looming influx of tokens raise caution flags among market participants. The coming days are poised to test the resilience of altcoins and their ability to weather market fluctuations.

- The hedge fund also announced that it will be relocating its worldwide headquarters to Dubai. - Nine Blocks employs a market neutral trading technique. The crypto hedge fund Nine Blocks Capital Management claims to be the first to get a license from Dubai's Virtual Assets Regulatory Authority (VARA). On Monday, the hedge fund also announced that it will be relocating its worldwide headquarters to Dubai. Nine Blocks co-founder Henri Arslanian stated: "I think what's interesting is that VARA has really created an ecosystem for crypto in Dubai. Many of our hedge fund's counterparties are one minute walk away from my office. Everybody is in this one square kilometer, which makes it easy to meet up, have conversations and generally enables a good exchange of information." Banking on Arbitrage Trading To capitalize on arbitrage possibilities and market inefficiencies in the cryptocurrency ecosystem, Nine Blocks employs a market neutral trading technique. Arslanian further added: "Being market neutral, we don't take any directional risk, so whether bitcoin is going up or going to go down doesn't matter much to us. We generate alpha from the inefficiencies in crypto markets. So, we will arbitrage between perpetual swaps and the spot price of bitcoin and ETH, for example." On Wednesday, the UAE's minister of artificial intelligence encouraged nations to reach an agreement on AI governance more quickly than they did with the Paris Agreement, which took years. The UAE Minister declared at the Dubai Assembly for Generative AI that governments need a novel strategy to control AI. The United Arab Emirates (UAE) actively pursues cutting-edge technologies and helps them thrive so that they may push developmental activities and become an international hub. - Hayes explained about the correlation between dollar liquidity and the price of BTC. - As the dollar's liquidity surges, Hayes said, so too will BTC's value grow. Arthur Hayes, co-founder of BitMEX, has a positive outlook on Bitcoin. Hayes discussed his views on twitter recently. The co-founder used the monkey with a chart showing shifts in the net reverse repurchase agreement (RRP) and the Treasury general account balance (TGA). Getting my feet did and observing how bad GURP Veien is busy pumping financial assets. Don't get distracted, liquidity is increasing and BTC will go up as well. This is the chart of net RRP and TGA balance changes. pic.twitter.com/12US0FzLAX " Arthur Hayes (@CryptoHayes) November 25, 2023 While emphasizing a huge increase in U.S. dollar liquidity, Hayes urged Bitcoin backers to maintain their focus on the post. As the dollar's liquidity surges, he said, so too will BTC's value grow. Large Net Liquidity Spike Net changes in RRP and TGA balances were shown by the co-founder, which may suggest a correlation between increased dollar liquidity and the price of Bitcoin. At the same time, dharmafi, a crypto analyst, provided additional detailed information. The post emphasized an RRP of \$65B and a TGA balance of \$35B, with a large net liquidity spike of \$106 billion since Nov. 21. The shifting dynamics of financial markets are reflected in the increase in liquidity, as Hayes has pointed out. Investors and Bitcoin backers noticing liquidity injections might predict future consequences on the crypto market. The analyst's numbers back up what Hayes said about the correlation between dollar liquidity and the price of BTC. Concerns regarding the impact on several asset classes, including cryptocurrencies, have been expressed in light of the \$106 billion increase in net liquidity since November 21. The current rise of Bitcoin to \$38,544 is a high not seen since May 5, 2022, a span of an incredible 18 months. Bitcoin dropped to below \$35,780 over the course of two days before beginning its spectacular rise. The current value is \$37,829, representing a 0.42% increase over the last 24 hours as per data from CoinMarketCap. Highlighted Crypto News Today:

- Plans call for Agile Coretime or Bulk Coretime to replace Parachain Auctions. - The specifics of the Agile Coretime and Bulk Coretime are currently being worked out. Polkadot (DOT) has announced its intention to eventually phase out parachain auctions, which have been vital to the protocol's success since its creation. Pierre Aubert, the new VP of Engineering at Parity Technologies (the firm behind the Polkadot protocol), has revealed that the company has plans to replace Parachain Auctions with a new mechanism. Aubert claims to agree with the protocol's eventual goal, which may be bundled as Polkadot V2. Improving Protocol's User Experience Moreover, plans call for Agile Coretime or Bulk Coretime to replace Parachain Auctions, paving the way for Polkadot's eventual ability to provide a robust bridge to Ethereum. As an added bonus, the protocol will establish a direct link to its canary chain Kusama. According to Aubert, the next six months of Polkadot's roadmap will focus on implementing changes that will improve the protocol's user experience, as outlined in Agile Coretime. He further stated the emphasis for Polkadot today is predicated on boosting developer experience and one of the means by which it hopes to do this is via the recommended Polkadot API. Also, developers working on dashboards will find this tool helpful, he added. Moonbeam Network and Astar Network's successful deployments on the network demonstrate the revolutionary potential of the Parachain auction concept for powering sidechains. Community members band together in support of the protocols contending for inclusion in Parachain, and are rewarded for their efforts with the parachain's native token following the network's debut. The specifics of the Agile Coretime and Bulk Coretime are currently being worked out, but when they are released, they will undoubtedly reflect Polkadot's approach of "easy evolution." In the ever-evolving landscape of cryptocurrency, memecoins have become a captivating and volatile corner of the market. As of 2023, notable names like Dogecoin, Shiba Inu, Pepe, Floki, and Bone ShibaSwap have captured the spotlight, drawing enthusiasts from dedicated communities worldwide. Further, the global market is currently displaying positive momentum and signaling the potential onset of the next bull run. This article highlights the top 10 memecoins for consideration in 2023, taking into account insights from crypto insiders, market trends, reputable media sources, and specialized analysts. Dogecoin (DOGE) - Market Cap: \$11.1 Billion - Trading Volume 24-H: \$394 Million Dogecoin emerged as the first meme token in the cryptocurrency market and has garnered significant attention since 2021, propelled by support from celebrities like Elon Musk. Subsequently, DOGE's market cap soared, securing its position among the top 10 cryptocurrencies. Over the past year and a half, Dogecoin's price movement has been restricted within a symmetrical triangle pattern. Despite its seemingly uneventful price behavior, this consolidation phase signals an opportune period for investor accumulation, leading to a gradual increase in price. At the time of writing, DOGE is trading at \$0.07886, reflecting a 2.5% increase in the last 24 hours and a noteworthy 22% climb over the past month. If the existing trend persists, Dogecoin may breach the \$0.09 to \$0.1.5 range, potentially paving the way for further surges and offering DOGE the opportunity to reach the \$0.3 to \$0.5 range in 2024. However, if DOGE fails to sustain its upward trajectory, it may find support levels at \$0.072 and \$0.065, marking potential points of stability in the face of a downturn. Shiba Inu (SHIB) - Market Cap: \$4.9 Billion - Trading Volume 24-H: \$126 Million Shiba Inu, recognized as SHIB, witnessed a surge in popularity, capitalizing on its association with the strong SHIB Army. Launched in 2020, this meme token aims to establish a decentralized platform driven by its community of token holders. Shiba Inu's layer 2 blockchain, aeschibarium, at positions it as a utility token, garnering significant attention. Moreover, SHIB has gained acceptance from various vendors and established partnerships, including with Binance Pay. As of the latest update, SHIB is trading at \$0.000008379, has climbed about 2.6% in the last 24 hours, and has seen a 13% rise over the past month. There is potential for SHIB to reach \$0.0000015 in 2024. However, if SHIB fails to overcome \$0.0000096 resistance, it may find support levels at \$0.0000076 and \$0.0000062, offering stability in the face of a potential downturn. Pepe (PEPE) - Market Cap: \$473 Million - Trading Volume 24-H: \$65 Million Pepe Coin, introduced just this April 2024, has swiftly captured the spotlight, reaching a significant market cap of \$1.6 billion by May. Also, investors in PEPE experienced substantial returns, exceeding 90%. However, the memecoin encountered a decline in its value, mirroring the trajectory of many leading cryptocurrencies. PEPE witnessed a loss of over \$1 billion in market cap. Currently trading at \$0.000001127, soaring over 10% in a month, there is potential for PEPE to reach \$0.0000027 in 2024 if the existing trend persists. On the flip side, if PEPE fails to sustain its positive trend, it could find support at \$0.00000092, providing a potential floor amid market uncertainties. Floki (FLOKI) - Market Cap: \$331 Million - Trading Volume 24-H: \$26 Million Banked fourth in the top 10 meme cryptocurrency lists, FLOKI is a revolutionary memecoin inspired by Elon Musk's dog and launched in July 2021. FLOKI uniquely combines elements of decentralized finance, non-fungible tokens (NFTs), and the metaverse. Recent momentum has been noted, particularly with Musk's dog securing the title of Twitter CEO. Currently trading at \$0.00003352, FLOKI has experienced a 2.2% increase in the last 24 hours and an impressive 34.5% surge over the past month. If the current trend persists, FLOKI may have the potential to surpass \$0.00008 and even \$0.00015. However, if FLOKI faces a downturn, it could find support at \$0.000026, offering a potential stabilization point. Bone ShibaSwap (BONE) - Market Cap: \$140 Million - Trading Volume 24-H: \$6.6 Million Bone ShibaSwap holds a crucial position as the decentralized exchange (DEX) governance token within the ShibaSwap ecosystem. This token, allowing the Shib Army to participate in voting on proposals, submitting ideas, and accessing future NFTs, operates on the Ethereum blockchain alongside the Shiba Inu (SHIB) and Doge Killer (LEASH) tokens. As of the latest update, BONE is trading at \$0.614. With the prolonged bear trend subsiding, BONE has the potential to breach \$1 and \$3 in 2024. Conversely, if BONE fails to overcome the challenges, it could experience a decline to \$0.56 and \$0.38, signifying possible support levels in the face of market uncertainties. Bonk (BONK) - Market Cap: \$241 Million - Trading Volume 24-H: \$50.2 Million BONK, the first dog-themed coin on Solana, follows a "for the people, by the people" approach, with 50% of its total supply airdropped to the Solana community. Launched on December 25, 2022, BONK draws parallels with meme coins like Shiba Inu (SHIB) and Dogecoin (DOGE). Notably, BONK recorded an all-time high of \$0.000005327 on November 20, 2023. Sustained growth may propel it to new highs in 2024, surpassing even BabyDoge in terms of market cap. Conversely, failure could lead to a decline to \$0.0000032. Baby Doge Coin (BabyDoge) - Market Cap: \$178 Million - Trading Volume 24-H: \$1.6 Million Introduced in 2021, Baby Doge Coin has sought to ride the Dogecoin wave, maintaining a market capitalization of approximately \$178 million. Distinguishing itself from other memecoins, Baby Doge Coin emphasizes added utility, exemplified by the introduction of the decentralized exchange (DEX) Baby Doge Swap and an NFT collection on the Ethereum blockchain. Currently trading at \$0.000000001233, BabyDoge could reach \$0.0000000034 in 2024 with sustained positive momentum. Conversely, failure may result in a decline to \$0.0000000011. Dogelon Mars (ELON) - Market Cap: \$94 Million - Trading Volume 24-H: \$39 Million Dogelon Mars stands as yet another meme coin's creation to leverage Elon Musk's support of Dogecoin. It is a dog-themed memecoin inspired by Elon Musk's tweets and the Elon Musk company's support of Dogecoin. Launched in 2021, ELON token is a dog-themed memecoin inspired by Elon Musk's tweets and the Elon Musk company's support of Dogecoin. Interestingly, the project's website prominently features a comic series as its sole highlighted "product." As of the latest update, Dogelon Mars is trading at \$0.000001723. If the prevailing market trend continues to generate positive momentum for Dogelon Mars, the memecoin may potentially reach values of \$0.00000058 or even \$0.0000098 in 2024. Doge Killer (LEASH) - Market Cap: \$31 Million - Trading Volume 24-H: \$1.2 Million Doge Killer (LEASH) functions as a token within the Shiba Inu (SHIB) ecosystem, which is often hailed as the "Dogecoin (DOGE) killer" due to its substantial popularity. SHIB has risen to become the second-largest canine-inspired coin in the cryptocurrency space and aims to serve as the Ethereum (ETH)-based counterpart to Dogecoin's Script-based mining algorithm. If Shiba Inu continues to capture the community's attention and experience further surges, LEASH may potentially follow suit, offering a chance to overcome an extended bear trend. Presently, Doge Killer is trading at \$297, and a bullish trend could propel LEASH to prices ranging between \$720 and \$1,350 in 2024. However, failure to exceed the \$500 resistance level may result in LEASH remaining within the range of \$250 to \$330. Arbdoge AI (AIDOGE) - Market Cap: \$26 Million - Trading Volume 24-H: \$9.7 Million The final entry in the lineup is Arbdoge AI, an unconventional project serving as an experiment within the Arbitrum ecosystem. The newly launched AIDOGE has garnered a positive response from the Arbitrum community. As of the latest update, AIDOGE is trading at \$0.000000001495, reflecting a 22% increase in the last 24 hours and a notable 27% surge over the past week. If this trend persists, AIDOGE may climb to \$0.000000002 in 2024. Conversely, a failure to sustain this trend could lead to a decline in the price of AIDOGE, potentially reaching

\$0.0000000001211. FAQ - What are the top-performing memecoins in 2023? Dogecoin (DOGE), Shiba Inu (SHIB), and Pepe (PEPE). - Are memecoins a good investment or a bad one? Memecoins can be highly volatile and speculative, posing significant risks; therefore, they are considered high-risk investments and may not be suitable for all investors. - Can memecoins move beyond speculation to real-world utility, and how does utility development affect their long-term viability? Yes, memecoins, like Shiba Inu with its Shibarium blockchain, can shift from speculation to real-world utility, enhancing their long-term viability through practical applications. - Can memecoins, such as Dogecoin and Shiba Inu, sustain long-term growth, or is their value mostly driven by hype? The sustainability of long-term growth for memecoins like Dogecoin and Shiba Inu remains uncertain, as their value is often influenced by hype and social media trends rather than inherent utility.

- The liquidation move has dragged the MATIC down by 1.80% and AVAX down by 9.18%. - This action highlights the exchange's efforts to free up cash that may be used to settle debts. There has been a fresh wave of token transfers by defunct crypto exchange FTX. Lookonchain reports that the defunct exchange transacted almost \$36 million worth of Polygon (MATIC) and Avalanche (AVAX) in the last 24 hours. In the past 24 hours, #FTX transferred a total of ~\$36M assets to exchanges. @Lookonchain (@lookonchain) November 22, 2023 Deposited 12.6M \$MATIC(\$9.4M) to #Coinbase; Deposited 10M \$MATIC (\$7.45M) to #Binance via #FalconX; Deposited 975,859 \$AVAX (\$19.25M) to #Binance via #FalconX. pic.twitter.com/pkcYg9kfcv Moreover, this move coincides with the exchange's current settlement negotiations, which are worth a significant \$4.3 billion, with the United States Department of Justice (DOJ). MATIC and AVAX Price Falls According to the information provided, the MATIC transfer was split into two parts. One was placed to Binance via FalconX, and the other was sent to Coinbase. The Binance deposit has a total of 10M MATIC tokens valued at about \$19.25 million worth of Avalanche tokens (AVAX) were sent to Binance via FalconX. Large-scale token transfers are nothing new for FTX. Several altcoins have been highlighted in these fund shifts over the last several months, as was previously reported, particularly after it received authority from the bankruptcy court to sell its assets. Even though the amount at stake is relatively tiny, the liquidation move has dragged the MATIC down by 1.80% to \$0.7573 and AVAX down by 9.18% to \$19.98 at the time of writing. Also, this action highlights the exchange's efforts to free up cash that may be used to settle debts and perhaps relaunch the FTX 2.0 trading platform. The exchange is set to play a pivotal role with the relaunch and a fresh start. Highlighted Crypto News Today: Upcoming Closed-Door SEC Meeting Stokes Speculation on Ripple Settlement

- Bret Taylor will serve as chair of the newly formed inaugural board. - Microsoft is now talking to the OpenAI board about certain governance improvements. Reversing its earlier decision to fire Sam Altman, OpenAI rehired him two days after Microsoft appointed him to head a new squad focused on advanced artificial intelligence research. The news that Altman will be returning to OpenAI as CEO was revealed on November 22. In a formal tweet, the corporation announced its decision. OpenAI has announced that Sam Altman's return as CEO is in principle agreed upon. Bret Taylor will serve as chair of the newly formed inaugural board, which also includes Larry Summers and Adam D'Angelico, as reported in the preceding post. The business and Altman are working together to determine the specifics, according to OpenAI. Replying to the onboarding announcement with a "heart" emoji was Sam Altman's way of showing his enthusiasm to rejoin OpenAI. Microsoft Calls for Governance Improvements Furthermore, upon deciding to step down from his new position at Microsoft, Altman publicly expressed his "love" for OpenAI. In order to ensure that OpenAI thrives and builds on its purpose, Nadella backed Altman, and President Greg Brockman's choice to come back inside the organization. Altman's involvement in bringing the OpenAI team together was highlighted by his brief absence from the company. Reportedly, 505 out of 700 OpenAI workers signed a letter on November 20 claiming that the board's decision to fire Altman harmed the company's objective. Microsoft is now talking to the OpenAI board about certain governance improvements it wants to pursue after investing an astounding \$13 billion in the company. Raising the bar for board members' expertise and expanding the board's size are two possible outcomes of the proposed reforms. Recent events necessitated a reevaluation of current safeguards, including the fact that OpenAI's merger discussions with Anthropic did not seek Microsoft's consent. Highlighted Crypto News Today: Solana vs. AltSignals - Which is The Best Crypto to Buy Now for Gains in 2024?

- The outcome of this intense battle will be keenly watched by investors and traders. - A statement on the settlement might be made as soon as the month ends as per Bloomberg. According to a report from Bloomberg citing persons involved with the talks on November 20th, the US Department of Justice (DOJ) seeks payment for more than \$4 billion from Binance Holdings as part of a possible settlement of a years-long probe. Any decision to the inquiry into the corporation, and the possible heavy penalty that comes with it, is likely to play a major part in shaping investor attitude towards crypto. Moreover, Binance's previous competitor FTX went bankrupt last year, and the sector as a whole was thrown into disarray, but the industry is seeking to recover thanks to the support of more conventional financial institutions. All Eyes on Upcoming Outcome According to Bloomberg, a statement on the settlement might be made as soon as the month ends. Also, the investigation by the Department of Justice (DOJ) is just one of several legal and regulatory issues plaguing the largest cryptocurrency exchange in the United States. For "willful evasion" of US commodities law, the CFTC filed suit against Binance and CZ in March, claiming that they ran an "illegal" exchange and a "sham" compliance program. In June this year, the U.S SEC filed a lawsuit against Binance and CEO Changpeng Zhao, accusing them of engaging in a complex fraud to circumvent US federal securities laws. In reply, the exchange said it will "aggressively defend" itself against the SEC's accusations. The outcome of this intense battle will be keenly watched by investors and traders and will definitely have a significant impact on the crypto market as a whole. Hong Kong, Hong Kong, November 15th, 2023, Chainwire Sleek, a Web3 social network, today announces they have successfully raised US\$5 million in a seed round, enabling them to power the ownership economy and bring blockchain-powered social media to the masses. Officially launched in April 2023, the company aims to revolutionize human connection by making networking simple, fun, and productive. Sleek offers a comprehensive platform that enables users to seamlessly exchange information, onboard new people into their network, as well as incentivize community building via Web3 Social Finance (SocialFi) business models. For the very first time, users can directly monetize their content and social capital to become a new class of creators. Sleek's first product, Sleek Card, was designed to empower Web3 professionals to network in person. Each card creates a blockchain wallet and a decentralized identity for each user, seamlessly onboarding individuals into the Web3 space. Sleek Card leverages NFC technology and its proprietary messaging bot to help users efficiently capture data and manage contacts, creating powerful on-chain social graphs. To date, the Sleek Card has powered over 300,000 connections, solidifying its position as a leading player in the Web3 space. Sleek Card has also partnered with Solana Hacker Houses, Coinfest, Digital Art Fair, and NFTNow to bring innovative event experiences to life. We are launching monetization models in our platform that are only possible through the blockchain, so talented creators from various verticals who don't have a full team supporting them can earn sustainably, said co-founder, Tania Tse. Leveraging our own experiences and lessons learnt, we are building applications alongside our users to power the future of Web3 social, said co-founder, Chase Guo. In the first half of 2024, Sleek will launch an open marketplace that empowers domain experts to become creators by tokenizing their knowledge into liquid and accessible assets. The future holds the promise of a more equitable, user-centric, and transparent digital social landscape. Sleek's investors include Binance Labs, Shima Capital, Spartan Group, Symbolic Capital, Genblock Capital, Big Brain Holdings, Market Across, Emirates Consortium, Arkstream, Perridon, GBV, and several angel investors. Binance Labs, the VC arm of Binance, invested in Sleek through the Binance Labs Incubation Program. With blockchain-based social assets and a suite of pioneering products, Sleek is poised to reshape the social networking landscape and open new doors for creators to prosper in the Web3 era. About Sleek Sleek is a Hong Kong-based Web3 social network that revolutionizes authentic human connection in the digital age. Their mission is to power the ownership economy and bring blockchain-powered social media to the masses. Sleek's platform consists of Sleek Card and a knowledge marketplace launching in the first half of 2024. Sleek Card is an identity platform for seamless networking in person. Sleek's NFC cards and proprietary messaging bot bring together the user's collective identities with a single tap, facilitating 300,000+ connections and powering 60+ global events. Sleek's knowledge marketplace facilitates the discovery of domain experts who can monetize directly with consumers. For more information visit Sleek's Official website | Twitter | Telegram Contact Marketing and PR Sleek media@sleek.io

- Bitcoin trading volume surges 23% in the past 24H. - Breaking \$37,800 may test \$42,600 resistance; support at \$35,670. Bitcoin enthusiasts witnessed a stirring moment in the market as the leading cryptocurrency, by market capitalization, surged to new 18-month high of \$37,904, tantalizingly close to breaching the \$38,000 mark in recent hours. After a prolonged lull, the Bitcoin bulls made a notable comeback, propelling a remarkable 33% surge in the past 30 days. Just a month ago, BTC struggled around \$29,448, seemingly distant from the current price range and grappling with breaking the \$30,000 resistance. Despite the bullish momentum, the past couple of days introduced some volatility, nearly pushing Bitcoin to \$35,580, before settling at \$37,800. The last several days were overshadowed by a "day of reckoning" marked by a broader surge in the global market cap, accompanied by a 10% rise in overall trading volume over the last 24 hours. Notably, altcoins mirrored this positivity, with altcoin head, Ethereum registering a 4% surge in the same period. Other prominent altcoins like Solana (SOL), Avalanche (AVAX), and Kaspa also soared to new highs. It maintained a robust presence across various social media platforms. Moreover, recent research unveiled intriguing insights, indicating that a staggering 69% of the Bitcoin supply has remained inactive for over a year, reaching an all-time high. Additionally, data from Santiment, a prominent crypto data aggregator, highlighted a significant improvement in Bitcoin's NVT ratio. This metric serves as a key indicator for traders. It signals the health of the circulating BTC supply concerning current market cap levels. Delving into whale behavior, cryptocurrency analyst Alá Martinez disclosed on-chain data illustrating profit-taking activities by Bitcoin whales. During the surge from \$35,000 to nearly \$38,000, over 15 wallets holding more than 1,000 BTC either sold or redistributed their assets. Notably, this surge was largely influenced by BlackRock, the world's largest asset manager. It had applied for a Bitcoin spot ETF approval from the SEC in June, where to Next for the Bitcoin Bulls? A closer analysis of Bitcoin's recent price movements reveals an underlying bullish trend on the daily chart. Notably, the 9-day exponential moving average (EMA) positioned below the trading price at \$36,665, further underscoring the prevailing bullish sentiment. Meanwhile, the daily relative strength index (RSI) stands at 69, indicating a potential approach towards an overbought position. As the price approaches critical levels, breaking above \$37,800 could pave the way for testing the \$42,600 resistance level. Conversely, a dip below \$36,210 might lead to a test of the \$35,670 support level.

The token count at the exchange will rise to 47 after this modification. This growth is part of the exchange's larger mission to provide 100 tokens in Japan. Binance Japan recently revealed the inclusion of 13 new tokens to its platform for Japanese users. The token count at the exchange will rise to 47 after this modification, which is scheduled for November 27. Many well-known protocols, such as Near Protocol (NEAR), Optimism (OP), and Arbitrum (ARB), have been included. Binance Japan's status as a major crypto exchange is bolstered by the addition of these assets to an already robust selection. The list of included tokens are \$HBAR, \$NEAR, \$ARB, \$OP, \$GRT, \$IMX, \$RNDR, \$MANA, \$EOS, \$GALA, \$APE, \$KLAY and \$LSK. Binance Japan highlights the fact that these tokens are already a part of other recognized exchanges in Japan, so they are not just new additions. This means that the Japan Virtual and Crypto Assets Exchange Association may quickly and easily approve them for use in Binance Japan. Eyeing to Offer 100 Tokens After recent market departures by Coinbase and Kraken from Japan, this statement is important. As a result, Binance Japan is able to expand its market share and fill the void created by its rivals. The general manager of Binance Japan, Takeshi Chino, emphasizes this growth as part of their larger mission to provide 100 tokens in Japan. He emphasizes the firm's dedication to expanding its service options in Japan by drawing on international experience and blockchain technology. The growth of Binance Japan is remarkable, particularly considering the difficulties of reentering the Japanese market. The debut in August followed the purchase of Sakura Exchange Bitcoin in November 2022, renamed thereafter. After confronting regulatory hurdles in Japan in 2021, Binance has made a return with this approach. The addition of these 13 tokens demonstrates Binance Japan's continued dedication to offering its consumers a comprehensive and diversified crypto trading platform. Highlighted Crypto News Today:

- The bank has said that its immediate priority is to build a platform that is secure and reliable. - Commerzbank claims to be the first "full-service" German bank to get such a license. Commerzbank, a German bank, said on November 15 that it has received a cryptocurrency custody license from German authorities. The firm is led by CEO Christian Schick, chief operating officer of Commerzbank, stated during the announcement. An important milestone. Moreover, Commerzbank claims to be the first "full-service" German bank to get such a license under the German Banking Act. The organization may now provide cryptocurrency custody services and further digital asset services as a result. Custody Service-Initial

offering The bank has said that its immediate priority is to build a platform that is æsecure and reliableæ and fully conforms with local rules in order to provide crypto custody services via blockchain to its institutional customers. Commerzbank told Reuters in an email that its initial offering would be a custody service for Bitcoin and Ethereum, targeted at institutional and corporate customers. Commerzbankæ’s announcement comes after DZ Bank, Germanyæ’s third-largest bank, made public its cryptocurrency custody services for institutional investors on November 6. DZ Bank has released an innovative platform for managing digital assets and other financial products. The company said that it has submitted an application for a crypto custody license in June 2023 so that institutional investors and individual clients may purchase cryptocurrency. Germanyæ’s crypto scene has been heating up over the last 12 months. After three years of running its dedicated local subsidiary, U.S crypto custody service BitGo got a license from the German Federal Financial Supervisory Authority recently to increase its compliance with local legislation. Highlighted Crypto News Today:

- Solana hit a six-month high with an 18% surge in 24 hours. - The global market cap is down 1.01%, and Bitcoinæ’s dominance is at 51%. In a tale of contrasting halves, the crypto market underwent a rollercoaster ride for the first three quarters of 2023, with a downturn that seemed unrelenting. However, the last quarter heralded a wave of optimism, as the market saw a resurgence in bullish sentiment. Notably, top coins like Bitcoin and Ethereum finally breached long-awaited resistance levels, surpassing \$35K and \$2K, respectively. Following suit, altcoins also stepped up, challenging the prolonged bearish trend. The current market signals a slight bearish trend, recent dynamics showed a 1.01% decrease in the global market cap over the last day. Bitcoinæ’s dominance, at 50.77%, saw a 0.34% decrease in the same period. Despite this, the total crypto market volume in the last 24 hours surged to \$66.14B, marking a notable 7.26% increase. DeFi contributed significantly, accounting for \$7.44B, which constitutes 11.25% of the total crypto market volume. Stablecoins, on the other hand, held a significant portion at \$58.75B, comprising 88.83% of the total crypto market volume in the last 24 hours. Amidst this volatile landscape, certain altcoins have soared to new heights, making waves within the crypto sphere. Solana (SOL) Solana, one of the prominent altcoins in the top ten cryptocurrencies by market capitalization, recently hit a six-month high of \$63. While experiencing volatility within the \$52 to \$59 range the past two days, the coin saw an astonishing 18% surge in the last 24 hours, once again touching the six-month high. During this surge, market capitalization soared by 19%, accompanied by a 15% increase in trading volume. Interestingly, this bullish turn coincided with the transfer of 250,000 SOL tokens (worth approximately \$14 million) by FTX to the Kraken crypto exchange on Nov. 13. Technical analysis of recent movements signals a bullish trajectory on the daily chart, with the 9-day exponential moving average (EMA) positioned below the current trading price at \$53. However, caution is warranted as the daily relative strength index (RSI) stands at 81, indicating an overbought condition. Avalanche (AVAX) Another standout altcoin, Avalanche, surged to a seven-month high of \$20, marking an impressive 113% increase in value over the past 30 days. In the last 24 hours alone, the trading volume surged by 54%. The surge in TVL (Total Value Locked) and DEX (Decentralized Exchange) volumes on Avalanche has been a notable factor in this surge. As TVL grows, it contributes more income and fees to the network, thereby enhancing its success. This surge in TVL indicates a growing user base, a positive indicator for investors analyzing recent movements. The daily RSI stands at 89, signaling an overbought condition. KASPA (KAS) KASPA, ranking among the top 35 cryptocurrencies by market capitalization, recently reached an all-time high of \$0.107, surging by 26% in the past 24 hours. During this time frame, trading volume surged by 85%, paralleled by a 26% increase in market capitalization. This surge, which was initiated a week ago, marked a remarkable 48% increase over the past seven days, capturing investorsæ’s attention. Notably, KASPA made a successful entry into the South Korean market, further underscoring its growing popularity among cryptocurrency traders and investors. Analyzing recent movements, the daily chart indicates a bullish trajectory, with the 9-day exponential moving average (EMA) positioned below the current trading price at \$0.86210. However, itæ’s crucial to note that the daily RSI stands at 80, signaling an overbought condition.

- Celestia native token TIA has surged 14% in the past 24 hours. - æAirdrop to 190,000 recipients from a pool of 610,000 eligible accounts. In the midst of a tumultuous market, the emergence of Celestia, a modular blockchain network, has stunned the crypto sphere. Despite a 2.08% dip in global market capitalization over the past day, Celestiaæ’s native token, TIA, has surged to an all-time high of \$6.45, marking a remarkable 14% spike in the same timeline. Unveiled on October 31st, 2023, Celestiaæ’s mainnet launch was eagerly anticipated and garnered significant support from major exchanges such as Coinbase and Binance, both of which announced backing for the TIA token ahead of the networkæ’s debut. At present, TIA is trading slightly below its peak at \$6.05. Yet still boasting an impressive 161% surge in the last week. The tokenæ’s trading volume has risen by 39%, hitting \$66 million. Notably, Celestia has swiftly climbed into the top 50 cryptocurrencies by market capitalization according to CoinMarketCap. Celestia: Strong Competitor? The ATH surge was accompanied by an airdrop to over 190,000 individuals, despite a larger eligible pool of 610,000 recipients. The journey of Celestiaæ’s TIA navigated through volatility earlier in the week, culminating in a rebound over the past two days. The token has gained substantial traction across various social media platforms, maintaining its position as a trending coin in the crypto community. Analysts are increasingly viewing Celestia as a formidable contender against established players like Ethereum (ETH) and Solana (SOL). Its listing on Binance has notably bolstered its momentum, showcasing promising scalability solutions. From a traderæ’s perspective, a cautious estimate hints at TIA potentially reaching around \$11 by the close of the year. This projection anticipates the current upward momentum tapering off, potentially triggering a corrective phase. A hypothetical scenario considers a pullback towards the \$3.40 zone, setting the stage for a significant upward surge.

- The cryptocurrency market has displayed bullish momentum, with a 2% increase in the past 24 hours. - Bitcoin (BTC) has reclaimed the spotlight, surging to \$37,904, marking a 16-month high. In the past 24 hours, the broader cryptocurrency market has displayed a significant comeback, surging by an additional 2%. The total market capitalization has now surpassed the \$1.4 trillion mark, indicating that the crypto sector continues to exhibit substantial strength. This bullish trend persists despite recent statements from Federal Reserve Chairman Jerome Powell, who emphasized the central bankæ’s readiness to raise interest rates further if inflation fails to subside and remains above their desired target of 2%. Since November 07, Bitcoin (BTC) has been a standout performer, with its value climbing to \$35,500. This rally also fueled the surge in altcoins. This impressive performance marks the highest point for the total cryptocurrency market cap in 16 months. Crypto Market on the Rise Bitcoin has seen its value soar even higher, reaching \$37,904 on November 9th. This uptrend coincided with the confirmation of BlackRock, the worldæ’s largest asset manager, filing for a spot Ethereum ETF with the Delaware Department of State. Ethereum (ETH), the second-largest cryptocurrency by market capitalization, also experienced significant gains, breaching the \$2,100 range. This surge was directly linked to BlackRockæ’s Ethereum ETF plans, which were officially confirmed in a Nasdaq filing. Other altcoins have followed suit, enjoying substantial gains. Solana (SOL) and Toncoin (TON) saw increases of 6% and 4%, respectively, during the same period. This can be attributed to the capital into various altcoins. However, not all altcoins fared as well, as some experienced minor pullbacks. Binanceæ’s BNB, Rippleæ’s XRP, Cardanoæ’s ADA, and Dogecoin (DOGE) retreated by 1% to 1.5%, although they had substantial gains in a week of over 8% to 11%. Additionally, lesser-known and lower-market-cap cryptocurrencies such as GMX (\$GMX), GROK (\$GROK), ORDİ (\$ORDİ), and CateCoin (\$CATE) also saw gains ranging from 10% to 5% in the last 24 hours, reflecting the overall positive sentiment in the crypto market.

TORONTOæ“(BUSINESS WIRE)æ“Tokens.com Corp. (NEO Exchange Canada: COIN)(Frankfurt Stock Exchange: 76M) (OTCQB US: SMURF) (ææTokens.comææ or the ææCompanyææ), a technology company that builds immersive experiences and games in 3D internet environments and owns an inventory of cryptocurrencies, is pleased to provide a corporate update. To better withstand current market conditions, the Company has streamlined its operations, including a reduction in staff of approximately 40% and the cancellation of certain outsourced services. Management estimates it has eliminated approximately CAD\$1.6 million thus far from its operating overhead. In addition, the Company and the board of directors (the ææBoardææ) have agreed to commence a strategic review of the business with a view to enhance shareholder and stakeholder value in the long term. Consideration is being given to a full or a partial sale of business segments or IP within those segments, a sale of the domain name portfolio, including Tokens.com, and/or a sale of the crypto inventory or other digital assets. An independent committee of the Board has been formed to review potential transactions. Neither the Board nor the Committee have set a timetable to complete the strategic review process nor have any decisions been made relating to strategic alternatives at this time. There can be no assurance that the review process will result in a transaction. The Company does not intend to provide any updates or make any announcements unless or until it determines that further disclosure is appropriate or necessary. Corporate Update and Strategic Direction Going Forward Tokens.com has focused on building web3 projects and holding an inventory of crypto assets for staking. In 2021, our assets and share price appreciated significantly. However, since then, our asset values and share price have declined significantly as a result of several factors largely related to macroeconomic conditions and crypto prices. Management has attempted to offset these conditions through building new web3 businesses intended to bring in new revenue streams and new sources of growth. While these initiatives have shown success, they will require additional capital commitment for further R&D and marketing. Given weak market conditions, there are no assurances that the Company will be able to access new capital in the future to scale these businesses. At this time, the Company will scale back on further investments into its business segments in favour of preserving cash, while evaluating its next steps. The Company will maintain operation of its key businesses and crypto inventory, which largely remains staked and earning revenue. ææThe last two years have been difficult for micro-cap stocks in the crypto sector. We have been successful in building innovative products and services for web3 for ourselves and third parties. However, these projects require continued capital for R&D and marketing to scale them successfully and cover their associated overhead,ææ said Andrew Kiguel, CEO. ææAs a result, we have made the decision to reduce our operating overhead to preserve shareholder capital as the Company contemplates its next steps.ææ Part of managementæ’s evaluation is exploring the sale of its domain name portfolio, including Tokens.com. Management believes that the Tokens.com domain name has tremendous value. CitiGIPS predicts the tokenization of all physical and digital assets by the end of the decade is inevitable. As such, management believes that the opportunity to sell the domain name could provide substantial financial compensation to the Company. As a point of reference for its value, it is widely reported online that the domain name crypto.com was sold in 2018 for \$22 million, and in 2022, it was sold for \$10 million. Our company, which subsequently rebranded as CryptoSquad NFTs.com, is widely reported online to have sold for \$15 million in 2022. Based on our reported quarter 1 earnings, Tokens.com has approximately \$2.1 million in cash and crypto tokens, some expected to release its audited year-end result in mid-December 2023. Further information on our year-end audited results will be forthcoming in November 2023. The Company does not anticipate any issues completing its audit on time. Tokens.com currently focuses on several operating segments, which are described fulsomely below. Through sharing resources and infrastructure across these business segments, Tokens.com is able to incubate these businesses from inception to revenue. While the review process is ongoing, the Companyæ’s management remains committed to executing on the Companyæ’s strategy and business plan, including in the manner set out below. Crypto Staking The Companyæ’s crypto staking segment involves the validation of blockchain transactions via a process called staking. In order to perform this task, a staker needs to own tokens of the asset it wishes to stake. In return, the staker is compensated with additional tokens of the underlying digital asset. We note, this is not a lending process and there is no counterparty risk. It is a process of validation using existing inventory similar to an electronic voting mechanism. Since the end of 2021, this segment has been negatively impacted by declining crypto prices. To address this, the Company has narrowed the scope of its ownership of tokens to focus on larger names, primarily Ethereum. Below is a table showing our current crypto ownership and corresponding value. ææAs of November 06, 2023.ææ

Crypto	Holdings	Value (\$USD)
Ethereum	3,313	\$6,299,835.15
Polkadot	217,192	1,064,240.80
Solana	18,055	730,144.20
Total		\$8,094,220.15

ææ340 Ethereum are held by Genesis Global Trading. ææ ææ\*\*18,001 Solana are held by Genesis Global Trading. ææ Strategically, such assets underpin our valuation. We may strategically sell or buy more tokens in the future depending on our capital needs and market conditions. We note that a portion of our assets (denoted in the table above) are held with Genesis Global Trading that is undergoing a restructuring. As a result, some or all of those holdings may not be recovered. Metaverse Group Metaverse Group started as a business that purchased and rented out digital land in various metaverses. This business has evolved. As the hype cycle around the metaverse disappeared in 2022 and in 2023, the focus has shifted away from buying digital land and to providing third party clients with an ability to connect to consumers through 3D experiences. This includes the creation of customized games for clients. Today, Metaverse Group does not focus on web3, but instead on creating immersive experiences within web2 games like Roblox and Fortnite. This segment has been successful in attracting several high profile clients. Since the June 2023 acquisition by the Company of the remaining interest in Metaverse Group which the Company did not own, management has

been disappointed in its ability to generate revenue and scale. Revenues in this segment have also been affected by cuts in marketing budgets of potential clients. As a result, we have determined to downsize this business to a level that corresponds with its revenues. Metaverse Group also owns US\$1.56M in digital real estate in various metaverse platforms, including Sandbox and Decentraland. While this digital land may have appreciation opportunities in the future, management is exploring the disposition of these digital assets. Helix Worlds Helix World is a proprietary ecommerce tool within Metaverse Group that will allow for product placement and advertising within virtual gaming worlds. The product has been in development for over a year and has recently launched. The consumer ecommerce experience has not changed substantially in the last 20 years. However, with the advent and popularity of new 3D platforms such as Roblox and Fortnite, brands are seeking innovative ways to evolve their ecommerce solutions. Through Helix World, brands have the unprecedented opportunity to place their products into games and 3D environments without breaking the immersive experience. Helix World has innovated for brands to market their products to a new audience and for consumers to enjoy an improved shopping experience. Helix World is platform agnostic and will be available across multiple platforms and popular games such as Roblox and Fortnite. Hulk Labs Tokens.com's video gaming initiatives reside within Hulk Labs. During the last 5 months, Hulk has pivoted from operating a player network in Africa, to developing a data platform called Yeti, that provides data services to the web3 gaming industry and the development of a web3 game called Astraus Defense. While this may seem like a significant pivot, in reality, Hulk Labs utilized the IP it had already developed and repositioned to areas management feels have more upside. In a recent report from Deloitte, 96% of Millennials, Gen Alpha and Gen Z located in the United States, play video games, regularly averaging 13 hours per week. Web3 gaming is growing rapidly in both the quality and number of games following \$4.5 billion dollars invested in web3 games in 2022. Citi GPS estimates web3 gaming will surge up to 100 million players by 2025. The average age of gamers is around 31 to 35 years old, with the most common age group being between 18 and 34, accounting for 38% of the gaming demographic. This points to the maturity and purchasing power of the average player. Going forward, Hulk will focus on the continued development and scaling of Yeti, a web3 gaming dashboard. About Tokens.com Tokens.com is a technology company that builds products and services that connects brands to consumers in 3D internet environments, including popular gaming and metaverse platforms. The Company also earns revenues through staking an inventory of owned cryptocurrencies. Our solutions give our clients a more engaging way to connect with their existing clients, and access to a new generation of consumers who spend time on platforms such as Roblox and Fortnite. Our key areas of focus are: i) branded virtual stores, sales centres, and 3D branded content ii) web2 and web3 game development and game analytics, and iii) innovative e-commerce solutions that integrate shopping into existing popular gaming platforms. Tokens.com also manages an inventory of valuable cryptocurrency, digital real estate, and a collection of top ranked crypto related domain names. Visit Tokens.com to learn more. Keep up-to-date on Tokens.com developments and join our online communities on X, LinkedIn, and YouTube. Forward-Looking Statements This news release includes certain forward-looking statements as well as management's objectives, strategies, beliefs and intentions. Forward looking statements are frequently identified by such words as "may", "will", "expect", "anticipate", "estimate", "intend" and similar words referring to future events and results. Forward-looking statements in this news release include statements relating to the strategic review process and the work of the Committee; whether a strategic change, transaction or any outcome will result from or be consummated or implemented as a result of the strategic review process; and whether any transaction resulting from the strategic review process, if any, will ultimately enhance shareholder or stakeholder value in the long term. - At the time of writing, ETH is trading at \$1881, down 0.07% in the last 24 hours. - The price has been trading in a confined range, struggling to break above \$1914 level. Bluntz, a well-known crypto analyst and trader who accurately predicted Bitcoin's price bottom in 2018, has predicted that Ethereum would have a significant climb in the coming months. The expert has made an optimistic prediction and observation on ETH. The analyst published a graphic on Twitter predicting a surge in price of ETH to around \$2,400 during the next few months. Moreover, numerous experts feel that the chance of a fall in Ethereum would lessen if Bitcoin continues to increase. Moreover, the data from CoinShares shows that Ethereum and Solana are attracting the most altcoin fund inflows. The report states that over the previous week, ETH experienced inflows totaling \$17.5 million. Trading in a Confined Range The price of Ethereum, which is presently trading at \$1881, is showing symptoms of losing its bullish momentum as it struggles to break over the recent high at \$1914. In particular, a formation breakthrough over the \$1914 level that has been active in recent days may lead to more price gains. At the time of writing, ETH is trading at \$1881, down 0.07% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is down 4.19%. The price has been facing strong resistance and has been trading in a confined range, struggling to break above \$1914 level. If the price manages to go past this level, then it will likely test the \$2000 level. Further uptick will likely see price moving towards \$2123 resistance level. However, if the price goes below \$1857 then it will likely move towards the \$1783 support area.

Dutch Blockchain Week 2023 promises to be an exciting journey into the world of blockchain and Web3, and our partners have been more than important in shaping this exciting future. From global giants like VanEck, Coinbase, and ASML to web3 companies pushing innovation such as DeSocialWorld and Bybit, our partners represent a diverse and dynamic group all dedicated to exploring the potential of web3. Dutch Blockchain Week 2023 is made possible through the support and collaboration of numerous partners, each playing a crucial role in bringing you this week full of web3! As we come closer to the much-anticipated event, we are honored to introduce our valued partners, each contributing their expertise to make Dutch Blockchain Week 2023 an unforgettable experience. So, who are the main partners for this year's Dutch Blockchain Week? Meet Our Main Partners BCNL: The Netherlands' Blockchain Community As Dutch Blockchain Week 2023's main host, BCNL serves as the core of the Dutch blockchain landscape, driving growth with over 60 entrepreneurial companies all involved with Web3. Their collaboration reaches international tech hubs and organizations, highlighting the Dutch Web3 community's value on a global scale. VanEck: Institutional Investment Giants in the Web3 World Dutch Blockchain Week 2023 is proud to have VanEck as one of its Main Partners. VanEck is a leading investment management firm, particularly notable for its involvement in the Web3 and blockchain space, where it has been actively working on providing investment products related to digital assets. They offer Exchange Traded Notes (ETNs) that give their customers exposure to major blue-chip Web3 projects like Ethereum, Solana, TRON, Avalanche, and more. VanEck's involvement in the cryptocurrency space doesn't stop there! They are currently one of the many firms in the process of applying for a Bitcoin ETF and are all set to break down the barriers for investing into bitcoin and other cryptocurrencies. Learn more about the rising institutional demand for digital assets and cryptocurrencies with VanEck as one of the main partners of Dutch Blockchain Week 2023. Bybit: The 4th Largest Cryptocurrency Exchange In The World Bybit, a key partner of Dutch Blockchain Week, is the 4th largest cryptocurrency exchange in the world, boasting over 15 million users. The platform is the second most popular exchange in The Netherlands, and partners with some of the most influential organizations in the Web3 space. With a user-centric approach, Bybit is committed to creating a more approachable trading environment, directly aligning with Dutch Blockchain Week's mission to share the world of blockchain with attendees. Bitget: Top Singaporean Derivatives Exchange Bitget is another leading global crypto exchange that is a major partner of Dutch Blockchain Week 2023. The Singapore-based exchange boasts over 8 million users across 100 countries. Founded in Singapore in 2018, Bitget has rapidly climbed the ranks to become one of the top five global derivatives exchanges in terms of trading volume. Specializing in cryptocurrency derivatives trading, Bitget offers futures and options alongside a wide range of services, including spot trading and staking. If you're a trader yourself, you can anticipate a wealth of trading discussions and insights at this year's Dutch Blockchain Week 2023 event. Concordium: The Layer-1 Champion Another main partner of the Dutch Blockchain Week 2023 is the layer-1 protocol, Concordium. Concordium is not your ordinary layer-1 project - it's an innovative blockchain equipped with a built-in ID framework, designed to bring a new era of trust to the Web3 space. With features like instant finalized transactions, cost-efficient pegged fees, and a team with leadership experience from renowned companies, including Volvo, IKEA, Credit Suisse, Uber, and Saxo Bank, Concordium is a blockchain with a focus on real-world utility and business applications. With Concordium as a main partner, you can anticipate an exciting discussion of blockchain's real-world utility and the digitization of assets at Dutch Blockchain Week 2023. DeSocialWorld: Pioneering Decentralized Social Media Our final partner, DeSocialWorld, is a valued main partner of Dutch Blockchain Week and is at the forefront of decentralized social media on the DeSo blockchain. Their commitment to making blockchain technology accessible and inclusive perfectly aligns with Dutch Blockchain Week's core value of welcoming diverse perspectives. DeSocialWorld's platform embodies the essence of Dutch Blockchain Week, making web3 technology accessible to a broader audience and expanding its global impact. Discover Our Partnership Ecosystem At Dutch Blockchain Week 2023, collaboration and community are at the heart of everything we do. This thriving ecosystem of partnerships has been the driving force behind our event's ongoing success. As we prepare to embark on yet another exciting web3 journey, we want to showcase our esteemed partners, event partners, and media partners! Partners: Our partner organizations are some of the industries' biggest names dedicated to unleashing blockchain technology across various sectors. Our esteemed partners include Coinbase, PostNL, COMPUTABLE, SNC XYZ, AIX21, BLOOM, THRILLD, and C3 Marketing & consultancy, with each contributing their unique strengths to our shared mission. Event Partners: Event partners are central in ensuring Dutch Blockchain Week 2023's success, enriching our program with valuable ecosystem events and unforgettable experiences alike. Our event partners include INHolland Hogeschool, International Blockchain Olympiad, Talk Like TED, TDE - Digital Creatives in Sports, ASML, AIX21, and HAYSTACK PEOPLE, each playing a vital role in hosting and delivering compelling ecosystem events. Media Partners: Our media partners play an essential role in keeping our community well-informed and engaged throughout the event. With industry leaders such as Cointelegraph, Coinspeaker, Cryptotoken, Cryptotakies, Dutchcryptotalk.com, Icolder, Newsbit, Coincheckup, Coincodex, Blockchain Reporter, Cryptoiniders, BLOX, and CryptobeneLux, we ensure that the latest blockchain insights and developments are at your fingertips. Don't Miss This Opportunity To Connect With Web3 Leaders & Pioneers: Learn More About Dutch Blockchain Week 2023 We extend our gratitude to each partner for their unwavering support and dedication to Dutch Blockchain Week 2023. Together, we aim to showcase the full potential of web3 technology, empowering a brighter web3 future. Join us from November 15th to 17th, a part of this showcase, the week 11 of everything web3, a membership, and a chance to be part of the web3 ecosystem. We have the opportunity to engage and network with members of our partner ecosystem. Gain valuable connections, explore different perspectives, and participate in some of the most pressing discussions at the forefront of the web3 space. For more information about Dutch Blockchain Week 2023, our partner events, and the event schedule, please visit our official website. Join us in this exciting journey by visiting our official website now! Disclaimer: TheNewsCrypto does not endorse any content on this page. - It was a "multi-million dollar" transaction, as Florian Wimmer, CEO of Blockpit, revealed. - Glassnode has announced it is discontinuing its cryptocurrency taxation initiatives. Blockpit, a cryptocurrency tax software provider, has purchased competitor Accounting from blockchain analytics company Glassnode, extending its presence in the United Kingdom. The value of the transaction was not revealed by either firm. It was, however, a "multi-million dollar" transaction, as Florian Wimmer, CEO of Blockpit, revealed. Blockpit said on Tuesday that it will be able to serve customers in the United Kingdom by using a tight public-private collaboration with U.K. authorities and a broad variety of top CPAs. The transaction occurs more than three years after Blockpit and Crypto Tax, a German company, merged. Exiting Crypto Tax Space Glassnode has announced it is discontinuing its cryptocurrency taxation initiatives in favor of developing new solutions for institutional investors and decentralized finance (DeFi). According to a company representative, Glassnode is selling Accounting to Blockpit in order to "exit the crypto tax space" and strengthen its commitment on supplying new Digital Asset Intelligence Solutions to its institutional customers. In October 2022, Glassnode completed the acquisition of Accounting to include tax-reporting compliance tools onto its platform. The purchase of Accounting signals another step by Blockpit into combining with rivals, since the platform previously merged with the German rival platform Crypto Tax in 2020. Blockpit's new purchase reaffirms the company's commitment to building an integrated crypto tax platform throughout Europe. Florian Wimmer, co-founder and CEO of Blockpit stated: "Due to the very similar nature of the Blockpit and Accounting platform, the acquisition really is a perfect opportunity." Wimmer said that it would just take a few minutes for an Accounting user to transfer their profile and data to a new Blockpit account. According to Blockpit's CEO, the company will be able to put all of its efforts on building a single platform, releasing new features,

and improving the user experience after the accounts are migrated. Highlighted Crypto News Today:

- As of November 7th, the average BTC transaction cost was close to \$6. Bitcoin miners are enjoying the rewards as their revenue from fees soars. Due to increased competition for available block space, Bitcoin transaction fees are at their peak level in almost six months. BitInfoCharts reports that as of November 7th, the average BTC transaction cost was close to \$6. This week, on-chain transactions have seen significantly increased costs due to the resurgence of Bitcoin Ordinals. Ordinal inscriptions are taking up a lot of blockspace, much like in the second quarter of this year. Ordinals are a kind of NFT that may be used to permanently record information on the blockchain. Bitcoin miners may face increased competition for confirmations as a consequence of the large number of BRC-20 Ordinal transactions that must be processed on-chain. Because of this, greater fees are necessary, and without them, transaction confirmation times will be substantially longer than usual. GeniiData reports that during the previous week, there have been almost 1 million  $\text{\textcircled{a}}$  transactions. Since then, there has been a shift in which projects are the most active, with BEES, gpts, and HALV now producing the most minters. Miners Enjoying Rewards According to data from Mempool.space, there are presently more than 120,000 transactions waiting to be validated in Bitcoin's mempool. In comparison, there were less than 30,000 queues at the beginning of October. Social media users speculated about the future of the fee trend, expressing concern that new minting initiatives might emerge to replace those that had already concluded. Meanwhile, Bitcoin miners are enjoying the rewards as their revenue from fees soars. According to on-chain analytics company Glassnode, on Nov. 6, 8.5% of miners' earnings came from the raised fee rates  $\text{\textcircled{a}}$  the greatest daily share since early June. Moreover, the crypto market as a whole has been witnessing bullish momentum with the price of Bitcoin hovering around the \$35,000 mark. Highlighted Crypto News Today:

- Five Grayscale trusts are holding assets worth \$691 million. - The trusts operate as an onboarding vehicle enabling investors to obtain crypto exposure. The insolvent cryptocurrency exchange FTX petitioned in court last Friday, November 3, to sell off crucial Trust funds worth a total of \$744 million. Some of the funds are held by custodial service provider Bitwise and cryptocurrency asset management Grayscale, as shown by the filing. One Bitwise trust is holding assets worth \$53 million, while five Grayscale trusts are holding assets worth \$691 million. The trusts operate as an onboarding vehicle enabling investors to obtain crypto exposure without owning the assets. Getting Ready to Pay Back Creditors The major reason for selling these  $\text{\textcircled{a}}$  trust assets  $\text{\textcircled{a}}$  is to help the estates get ready to pay back creditors, and to provide FTX the freedom to sell them whenever it's most profitable to do so. The court document explains how eliminating the need to submit individual papers for each proposed sale would save expenses and speed up the selling process. Moreover, debtors of FTX have approached an investment advisor requesting permission to sell trust assets. They've also proposed forming a pricing committee made up of interested parties to discuss prices before the transaction is finalized. After the court had already approved the liquidation of around \$3.4 billion in crypto assets, FTX debtors made this motion. To avoid any catastrophic market sell-offs, the court had ordered the sale of these assets in \$50 million and \$100 million chunks. On the other hand, FTX founder Sam Bankman-Fried (SBF) was found guilty of fraud last week in a US court. Highlighted Crypto News Today:

- The price recently found support at \$34,650 level after failing to clear above \$35,820. - If the price goes below \$34,650 level, then it will likely decline further to test \$34,190. Defunct crypto exchange FTX has submitted a petition to the Delaware bankruptcy court for the liquidation of trust assets held by Grayscale and Bitwise estimated to be worth \$744 million. Statements from FTX and its debtors indicate that they expect this approach to facilitate preparation for payments to creditors in USD and speed up the sale of trust assets by the debtors. The filing also notes that the time and money saved by not having to submit a separate solicitation for each intended sale under the sales processes applies to sales of trust assets to one or more purchasers in one or more sales. This new development will likely have a significant effect on the cryptocurrency industry as a whole. Bullish Momentum Continues Bitcoin is once again in the spotlight, surprising many with its resiliently bullish trading range despite widespread anticipation of a market correction. Bitcoin has stayed steady, refusing to tumble below the recent support level of \$34,650. Bitcoin's current gain has been attributed to the recent fall in non-farm job and unemployment statistics and stock market volatility indexes reported on Friday. At the time of writing, Bitcoin is trading at \$35,151, up 0.16% in the last 24 hours as per data from CoinMarketCap. Moreover, the trading volume is up 28.26%. The price recently found support at \$34,650 level after failing to clear above the \$35,820 mark. If the price manages to go past the \$35,470 resistance level, then it will likely retest the \$35,820 mark. However, if the price goes below \$34,650 level, then it will likely decline further to test \$34,190 support level.

- Trading volume climbed 32% from \$306 million in September to \$405 million in October. - The first half of this year has been challenging for many NFT projects. NFT trade volume increased by \$99 million in October compared to the previous month, according to a research issued by crypto analytics company DappRadar, suggesting that the NFT market is bouncing back. However, there has been significant reductions in staff at renowned NFT marketplace OpenSea as announced on Friday. According to DappRadar,  $\text{\textcircled{a}}$  the yearlong downward trend in NFT trading has been broken,  $\text{\textcircled{a}}$  as NFT trading volume climbed 32% from \$306 million in September to \$405 million in October. According to the company, this is a level of sales that hasn't been witnessed since August. Optimism Post Challenging Times While the NFT market was hyper active in 2021 and early 2022, the first half of this year has been challenging for many projects due to the protracted crypto winter and the consequent waning of excitement behind collections such as Bored Ape Yacht Club (BAYC). But there may be a cause for optimism in the digital assets sector as a whole. Analysts believe that the increase in NFT trading volume is due to the fact that the price of Bitcoin recently rose over \$35,000, marking the biggest increase in 16 months on the hopes that a spot Bitcoin ETF would soon be approved in the United States. According to DappRadar, Solana is one of the fastest-growing networks. NFT trading volume on the layer-1 climbed 15% from \$24 million to \$27.6 million. DappRadar's report captures the total volume of NFT trades on a variety of blockchains that provide trading in this token class. DappRadar also noted that Ethereum's NFT trading volume increased by 50% year over year, making it the leader of the group  $\text{\textcircled{a}}$  among other networks. Highlighted Crypto News Today:

- FTX and Alameda Research still own \$736 million in EVM (Ethereum Virtual Machine) assets. - The data shows that since October 25th, both parties have been making regular transactions. On October 31st, defunct FTX and Alameda Research reportedly moved assets valued at \$27.2 million, as shown by data presented by Lookonchain, a data analytics platform. The majority \$17.93M was held in RNDR, followed by \$4.7M in SOL, \$2M in ETH, and \$1.18M in MKR. More than \$1.12 million worth of REN and \$0.27 million worth of GRM were also sent to Coinbase. Together, FTX and Alameda Research have moved approximately \$106 million worth of cryptocurrency as of this writing. Spot On Chain reports that after routinely transferring large sums into multiple exchanges in recent days, FTX and Alameda Research still own \$736 million in EVM (Ethereum Virtual Machine) assets. Regular Transactions Multiple addresses connected to FTX and Alameda were used in a string of recent transactions. Funds were reportedly transferred from addresses like 0x0de9, FTX 0x97f, and Alameda 0xf02 on October 25 in order to be sold on exchanges like Binance and Coinbase. The data shows that since October 25th, both parties have been making regular transactions. Earlier this month, FTX and Alameda used Wintermute to send 21,967 COMP, worth \$1.01 million, and 974,270 RNDR, worth \$2.04 million, to Binance. Afterwards, the firms transferred an additional \$6.5 million in assets to two intermediate addresses, including UNI, DYDX, SUSHI, and LDO, in order to rapidly transmit them to exchanges. Earlier around mid-October Solana block explorer SolanaFM reported that 5.5 million SOL tokens, worth an estimated \$122 million, were staked from a wallet owned by the FTX trustee. Highlighted Crypto News Today:

- Among altcoins, Solana (SOL) investment vehicles had the greatest net inflows of \$24 million. - The cryptocurrency-focused investment funds had net inflows of \$326M last week. Digital asset investment company CoinShares stated on Monday that cryptocurrency-focused investment funds had net inflows of \$326M last week, the highest weekly inflow since July 2022. According to CoinShares, the primary motivation for the adjustment is the price increase brought on by rising expectations that the United States SEC would approve the first spot bitcoin ETF. James Butterfill, CoinShares head of research stated:  $\text{\textcircled{a}}$  We do believe a spot-based ETF is now highly likely in the coming months, and will represent a step-change for the industry from a regulatory perspective  $\text{\textcircled{a}}$  Bitcoin leads the way while last week's inflows were substantial, they were still the 21st greatest weekly increase in the three years that CoinShares has been tracking this information, suggesting that investors may still be wary about committing huge sums of money. Some investors may be hedging their gains or wagering that prices would soon reverse, since 90% of all inflows went to Bitcoin funds, \$15 million of which went to short-bitcoin funds. Among altcoins, Solana (SOL) investment vehicles had the greatest net inflows of \$24 million. Net outflows from ether (ETH)-holding funds reached \$6 million last week, bringing the YTD total to \$125 million. The biggest cryptocurrency by market cap, Bitcoin (BTC), has been the catalyst for a market-wide positive trend since October 24. As BTC has maintained its bullish momentum, enthusiasm among Bitcoin supporters and investors has been palpable. Nonetheless, Bitcoin's value increase is being driven not only by retail investors but also by institutional investment vehicles. At the time of writing, BTC is trading at \$34,240. Unfold 2023, India's largest Web3 event organised by CoinDCX from October 19 -21, 2023, was wrapped up on a high note. The sheer scale of the event and the overwhelming success reflects the promising future of Web3 in India. This objective is no less than propelling the nation to the forefront of Web3 leadership, thereby charting the course for the next phase of the Internet revolution. Unfold 2023 witnessed a remarkable turnout of over 2,500 participants during its three-day duration. Eminent leaders from the Ministry such as Sh. Priyank Mallikarjun Kharge, Minister IT/BT Karnataka, Sh. Jayant Sinha, Chairman PSC-FINANCE and MP and Sh. Rajeev Gowda, Vice Chairman, of Karnataka Policy and Planning Commission, and former- MP, of Rajya Sabha, spoke at the event, sharing a firm belief in the potential of Web3 to generate employment opportunities and revolutionize the internet landscape. The Event featured participation both in person and virtually, with over 60 distinguished global Web3 leaders and entrepreneurs, including notable figures such as Founder, Jeetu Bhai, Founder, of  $\text{\textcircled{a}}$  Sankin,  $\text{\textcircled{a}}$  Aptos,  $\text{\textcircled{a}}$  Unfold 2023  $\text{\textcircled{a}}$  Ashab Singh,  $\text{\textcircled{a}}$  Soka,  $\text{\textcircled{a}}$  Ge,  $\text{\textcircled{a}}$  Founder,  $\text{\textcircled{a}}$  India  $\text{\textcircled{a}}$   $\text{\textcircled{a}}$  multiprotocol hackathon, drawing over 700 web developers who competed for a total prize pool of USD 85,000. The Demo Day, which was also part of the event, saw some exceptional ideas from the entrepreneurs. The perks of winning the Demo Day included a \$1 million pool of funding from CoinDCX Ventures and some of the top-tier Web3 investors, including Pi Ventures, Mumbai Angels, Global Coin Research, Dorahacks Ventures, Hashed EM, Draper Dragon, and IOSG Venture. By every metric, the event stood as the grandest and most significant in the realm of Web3. CoinDCX also unveiled its upgraded app, offering Indian crypto investors and traders a seamless experience with integrated advanced features from CoinDCX Pro. The user-friendly app launched during Unfold 2023 ensures secure and compliant trading in Virtual Digital Assets (VDAs). Delivering a keynote at Unfold 2023, Shri Priyank Kharge extended his support for Web3 innovation within the state. He proposed the exploration of a regulatory sandbox for development and innovation until a comprehensive framework is established.  $\text{\textcircled{a}}$  The Government of Karnataka is willing to listen, learn and adapt new technology and we are here to support the industry. In the burgeoning realm of Web3, our government is committed to not only observe and absorb but also to evolve with this digital frontier. We eagerly anticipate the establishment of a regulatory sandbox,  $\text{\textcircled{a}}$  he said. Shri. Jayant Sinha praised CoinDCX for its outstanding initiatives in fostering synergy among developers, startup founders, and other participants within the Web3 ecosystem during Unfold 2023.  $\text{\textcircled{a}}$  India and Indian digital infrastructure has been recognized globally. With the world's largest open digital ecosystem and a passionate developer community, India is poised to lead the global Web3 revolution. The presence of so many developers at the Unfold 2023 hackathon is a testament to this vision,  $\text{\textcircled{a}}$  he added. Speaking at Unfold, Mr. Sumit Gupta, Co-founder, CoinDCX said,  $\text{\textcircled{a}}$  In this transformative decade, the VDA market cap is poised to surge by 15-20%, paving the way for a future that holds incredible promise. By 2030, we anticipate a landscape where over 1 million developers will be actively crafting the web3, ushering in web3 applications that will engage over 1 billion users. Our commitment at CoinDCX extends beyond building a large company. We are dedicated to crafting an open, inclusive, and efficient internet, right here in India, and sharing it with the world. Together, we will build for the long-term and build the right way.  $\text{\textcircled{a}}$  We extend our heartfelt gratitude to the distinguished speakers, valued partners, sponsors, developers who participated in the hackathon, and innovative startups who united with us in this remarkable journey at Unfold 2023. Together, we have taken substantial strides in constructing a unified and collaborative Web3 ecosystem,  $\text{\textcircled{a}}$  Sumit added. Unfold 2023 stands as a monumental achievement, propelling India to the forefront of the global Web3 arena. With hundreds of startups, five unicorns, and a projected contribution of \$1.1 trillion to India's GDP by 2032, this event underscored the imperative of fostering a unified Web3 ecosystem. India's pivotal role in grassroots crypto adoption, housing 11% of the global Web3 developer pool, solidifies its position as a Web3 powerhouse. Anticipating a 120% growth in blockchain talent, the nation is poised for remarkable progress. The retail and financial sectors, contributing 37% and 15% respectively, will drive Web3 and metaverse adoption, illuminating India's dynamic

potential. Unfold 2023 has firmly established India as a trailblazer in the ever-evolving Web3 landscape, marking a significant leap toward a collaborative and thriving future. About CoinDCX Established in 2018, CoinDCX is the preferred crypto exchange in India, trusted by over 1.4+ crore registered users. Our mission is simple: to provide easy access to Web3 experiences and democratize investments in virtual digital assets. We prioritize user safety and security, strictly adhering to KYC and AML guidelines. In our commitment to quality, we employ a stringent 7M Framework for the listing of crypto projects, ensuring users access only the safest digital assets. CoinDCX has partnered with Okto for India to launch a secure multi-chain DeFi app that offers a keyless, self-custody wallet. It aims to simplify the world of decentralized finance (DeFi) by providing a secure, user-friendly, and innovative solution for managing digital assets. Through CoinDCX Ventures, we have invested in over 15 innovative Web3 projects, reinforcing our dedication to the Web3 ecosystem. Our flagship educational initiative, #NamasteWeb3 empowers Indians with crypto knowledge, preparing them for the future of virtual digital assets. CoinDCX's vision and potential have gained the confidence of global investors, including Pantera, Steadview Capital, Kingsway, Polychain Capital, B Capital Group, Bain Capital Ventures, Cadenza, Draper Dragon, Republic, Kindred and Coinbase Ventures. - For more information, visit <https://coindcx.com/> For media queries CoinDCX Sharjil Shaikh 9920231055 sharjil.shaikh@coindcx.com Veritas Reputation PR Disha Guha 8388820313 disha.guha@veritasreputation.com Disclaimer: TheNewsCrypto does not endorse any content on this page. - The 30-page measure seems to provide reasonable requirements for the sector. - The proposed legislation sets a penalty for unlicensed VASPs. The Virtual Asset Management Bill was proposed to the Legislative Yuan, Taiwan's unicameral parliament, on October 25. The purpose of the legislation is to "properly supervise" the sector and give "better protection" for consumers. The 30-page measure seems to provide reasonable requirements for the sector. Also, it recommends that VASPs do things like build up an internal control and audit system, become members of the local trade organization, and keep client funds separate from the company's reserve assets. However, it does not yet specify algorithmic stablecoins or compel stablecoin issuers to maintain a 1:1 ratio of reserve funds. Rules for advertising in marketing efforts are left to be established by a "competent authority." The bill simply mandates the segregation of client assets from corporate finances, in contrast to Japan's strict mandate for the employment of custodians for domestically licensed exchanges. The employment of external custodians is not required under this provision. Stringent Compliance Moreover, the proposed legislation sets a penalty for unlicensed VASPs between approx. \$60,000 and \$600,000. Also, after the measure goes into effect, businesses already present in Taiwan's market would have six months to register. The Financial Supervisory Commission (FSC) of Taiwan issued regulations for VASPs in September 2023. Without proper authorization from the FSC, overseas VASPs are not allowed to provide their services in Taiwan. Rules were established because a group of prominent crypto exchanges in Taiwan have banded together to act as a self-regulatory body. The Taiwan Virtual Asset Platform and Transaction Business Association was established on September 26 by local exchanges. Their goal is to aid the crypto sector as well as collaborate with government bodies. Highlighted Crypto News Today: Solana's Price Fails To Slow Down as Bulls Continue Domination

- Ethereum (ETH) bounced back to \$1,850 resistance on October 26. - Alameda Research and FTX swiftly moved over \$59M in cryptocurrencies, including ETH, for undisclosed reasons. - Ethereum is currently trading at \$1,793, marking a 0.89% decline over the past 24 hours. Ethereum (ETH) continues to tread a delicate path, facing resistance as it attempts to break free from a descending trendline that's been in place since April, when it reached its yearly high of \$2,141. After dipping to a low of \$1,536 on October 13, ETH made a rebound, surging to \$1,851 by October 26, mirroring the movements of the leading cryptocurrency, Bitcoin. In contrast to Ethereum's struggle, Bitcoin (BTC) marked a significant rally on Wednesday, reaching a new 18-month high with a market share of \$35,116. However, one disturbing news emerged in the crypto market. According to data from crypto data tracker Lookonchain, bankrupt crypto firms Alameda Research and FTX swiftly shifted over \$59 million worth of assets, including Ethereum, leaving the reasons behind this transfer unclear. FTX itself faced allegations of criminal mismanagement, leading to its bankruptcy in November, with nearly \$9 billion in client funds unaccounted for. In response, FTX is now exploring a plan to repay its creditors by liquidating its assets which include Ethereum, Solana, MATIC, and more. Ethereum (ETH) Next Target As for Ethereum's price analysis in the last 24 hours, ETH embarked on a renewed attempt to breach the \$1,820 level. It successfully cleared the \$1,850 resistance but faced limitations in its upward trajectory. The price reached as high as \$1,851 before undergoing a correction, the pattern observed in Bitcoin. During this correction, ETH slipped below the \$1,810 and \$1,800 levels. Notably, a key bullish trendline was broken, with support near \$1,810. Nevertheless, Ethereum found support at the \$1,780 level, prompting a resurgence in buying interest. At the time of this report, ETH is trading at \$1,793, backed by a daily trading volume of \$10.7 billion, a 15% surge within the last 24 hours. For Ethereum, the path ahead is two-fold. If ETH clears the \$1,850 resistance, it may set its sights on \$1,870 and even test \$1,900. Beyond that lies the pivotal resistance at \$1,950, it could potentially accelerate towards \$2,000. However, if Ethereum fails to overcome the \$1,815 resistance, it could face another descent. The initial support on the downside rests near the \$1,775 level.

Dubai is paving the way for a Web3 future by implementing a robust regulatory framework for digital assets and offering commercial licenses for Web3 projects. The countdown has begun as the World Blockchain Summit returns, scheduled for November 1st-2nd, 2023, at the Address Dubai Marina, hosted by Trescon. This highly anticipated summit is set to become a major focal point for global web3 and blockchain innovators to take note of the region's efforts towards a web3-driven future. With strategic partners, like Dubai AI & Web3 Campus by DIFC, the largest cluster of Artificial Intelligence and Web3 companies in MENA, the summit offers a platform for top-tier web3 investors, enterprises, industry leaders, and entrepreneurs to explore collaboration and investment opportunities while discussing the emerging trends and innovations shaping the industry. Dubai's established digital landscape, flourishing investment ecosystem, and innovative workforce create the perfect foundation for innovators and founders as we move beyond the challenges of the 2022 crypto winter. The UAE is playing a pivotal role by implementing initiatives such as the Central Bank Digital Currency Strategy, known as the Digital Dirham, establishing the Virtual Assets Regulatory Authority (VARA) in Dubai, advancing the Dubai Blockchain Strategy, and launching the Dubai AI & Web3 Campus by DIFC. Notably, the campus announced specialized commercial licenses for AI and Web3 projects, further accelerating the adoption of blockchain solutions and the proliferation of digital assets within the economy. The summit will unite over 2,000 web3 decision-makers and will also include the regional finale of the Startup World Cup, organized by the globally acclaimed US-based venture capital firm Pegasus Ventures. The winner of this competition will have the opportunity to present at the global finals held in San Francisco, with the chance to secure a funding prize of US\$ 1 million. Don't miss out on the opportunity to be a part of #WBSDubai, where forward-thinking ideas and transformative solutions will be shaping the future of the global web3 ecosystem. Engage with leading experts, visionary entrepreneurs, and industry pioneers who are shaping blockchain innovation. This summit will unveil the latest trends and advancements in the field, offering a platform for accessing funding opportunities, expert guidance, and invaluable networking. Amongst the notable names attending the event: - Charles Hoskinson, CEO & Founder, Input Output Global - Cardano, Frederik Gregaard, CEO, Cardano Foundation - Shogo Ishida, Co-CEO, Middle East & Africa, ENKOD - Julian Banks, CEO, UNIVOX - The Summit features engaging keynote speeches, panel discussions, and presentations from some of the leading voices from the blockchain and web3 space. The agenda will cover key topics, including: - Value creation in the metaverse - NFT market overview: Trends & opportunities - Bridging DeFi and CeFi - DAOs: A business-building opportunity - Regulation of crypto assets and more Speaking about metaverse and web3 gaming being more than technological shifts but major societal evolutions, Zara Zamani, Chief Solutions Officer, Choramaway, Co-Founder of MultiMetaverse and Neoki, said, "As we chart this new territory, let's ensure our compass is set on innovation, inclusivity, and responsible governance." Sharing their excitement about the Summit, Naveen Bharadwaj, CEO, of Trescon said, "Dubai's emergence as a global tech hub is a testament to its forward-thinking approach. At Trescon, we're at the forefront of this transformation. The World Blockchain Summit is the perfect platform where thought leaders converge, investments flourish, and groundbreaking blockchain projects take flight, defining the global digital economy." Registration for the World Blockchain Summit Dubai is still open. Seize the chance to book your slots today and prepare to be a part of another thrilling blockchain and crypto event of the year. Don't let this opportunity slip away!! The Dubai edition of the World Blockchain Summit is presented by: - Lead Sponsor: "Unicoin - After Party Sponsor: "Legacy Network - Platinum Sponsor: "Zeebu - Silver Sponsors: "Qlindo, Core, Sui Galileo Protocol - Bronze Sponsors: Innes Global, Sastanaqqam, Yardhub, Mimo - Pitch Partners: Cryptounity, Umma Life - Association Partner: Arabs in Blockchain About World Blockchain Summit (WBS) World Blockchain Summit (WBS) is an event by Trescon that supports the growth of the blockchain, crypto, and Web3 ecosystem globally. WBS is the world's longest-running blockchain, crypto, and web 3-focused summit series. Since our inception in 2017, we have hosted more than 20 editions in 11 countries as we strive to create the ultimate networking and deal flow platform for the Web3 ecosystem. Each edition brings together global leaders and emerging startups in the space, including investors, developers, IT leaders, entrepreneurs, government authorities, and others. About Trescon Trescon is a pioneering force in the global business events and services sector, driving the adoption of emerging technologies while promoting sustainability and inclusive leadership. With a deep understanding of the realities and requirements of the growth markets we operate in, we strive to deliver innovative and high-quality business platforms for our clients. - To book your tickets, visit: <https://bit.ly/get-passes-wbs-dxb-pr3> - For inquiries, Contact: [wbscomms@tresconglobal.com](mailto:wbscomms@tresconglobal.com) For media inquiries and further information, please contact: - Shadi Dawi - Director, Public Relations & Partnerships " MENA - [shadi@tresconglobal.com](mailto:shadi@tresconglobal.com) - +971 55 498 4989 Disclaimer: TheNewsCrypto does not endorse any content on this page. SKALE was found to be the most efficient due to its 397.7 TPS and 1.46 second TTF. The SKALE community has saved over \$2 billion USD in gas fees. Dartmouth Blockchain has tested many of the most well-known blockchains in realistic settings and published their findings on their performance metrics. Eight prominent blockchains were tested and compared. Did you know that SKALE is the world's fastest blockchain? " SKALE (@SkaleNetwork) October 24, 2023 A study conducted by @Voxchain evaluated the performance of 8 popular blockchains: Ethereum, Polygon, Solana, Fantom, Avalanche, NEAR, Flow, and SKALE. SKALE emerged as the top-performing blockchain, with a TPS of " pic.twitter.com/nEM8tVb9Jf Among them, SKALE was found to be the most efficient due to its 397.7 TPS and 1.46 second TTF. Transactions per second (TPS) and time to finality (TTF) ratings for most alternative blockchain networks were much lower. Solana (375.31 TPS), Flow (60.1 TPS), Avalanche (49.68 TPS), Polygon (20.92 TPS), Ethereum (12.23 TPS), and NEAR (6.22 TPS) are among the tested chains. Also, as of this writing, the SKALE network is made up of 20 independent, Ethereum Virtual Machine (EVM) blockchains. Each of which can process transactions at a rate of 397.7 TPS. An astounding 7,954 TPS is achieved over the whole SKALE network. Infinite Scalability Moreover, the modular nature of SKALE means that there is no limit to the number of new SKALE Chains that may be built, allowing for potentially infinite scalability. SKALE is an Ethereum-specific blockchain scaling solution that aims to build a network of interoperable, sharded blockchains. Also, SKALE users may create a limitless number of rapid, on-demand, pooled-security Blockchains at no cost to them in terms of gas. The SKALE community has saved over \$2 billion USD in gas fees. Furthermore, developers may use SKALE to quickly and easily construct a secure, decentralized, and interoperable EVM blockchain. SKALE is an entirely decentralized, open source, and community-run initiative. The network has reached over 1.6 million unique wallets and over 675,000 active users in the last month, making this a huge milestone. Highlighted Crypto News Today:

- Sonic is expected to reach throughputs of 2,000 TPS or more as per the Foundation. - The size of a validator node may be decreased from over 2,000 GB to 300 GB. Fantom Foundation has introduced a new revolutionary upgrade called Fantom Sonic, which will allow the network to reach unprecedented levels. Compared to its predecessor, Opera, Sonic is expected to reach throughputs of 2,000 TPS or more. This is because of a combination of a new virtual machine, enhanced database storage, and optimized consensus. Today, #Fantom is thrilled to announce the launch of the #FantomSonic testnet environment! " Fantom Foundation (@FantomFDN) October 24, 2023 Sonic's three main upgrades include: " Fantom Virtual Machine, which offers drastically faster smart contract execution compared to the old EVM. " Carmen database storage, which uses " pic.twitter.com/showQtzMKd Before the upgrade's expected mainnet deployment in the spring of 2024. The team is now granting access to the Fantom Sonic testnet environment. So that consumers and developers may experience the breakthrough speed for themselves. Major Improvements Moreover, the

enhancement is the most recent move in Fantom's effort to enhance the core platform without opting for sharding or other layers. Fantom Sonic's testnet is now live and can be observed at the project's main website. The size of a validator node may be decreased from over 2,000 GB to 300 GB. While the size of an unpruned archiving node can be reduced from over 11 TB to under 1 TB, drastically reducing storage needs. With the cost of storage reduced, anybody may deploy validator nodes with much faster synchronization times and support for live pruning. The new Fantom Sonic Client, which validators and other nodes will utilize to power the network, incorporates the updated technological stack. Which consists primarily of the Fantom Virtual Machine (FVM), Carmen database storage, and a refined Lachesis consensus mechanism. What this means is that there will be no need for a hard fork in order to upgrade. Since Sonic is just the next version of the Fantom network. The Fantom Virtual Machine (FVM) is entirely compatible with the Ethereum Virtual Machine (EVM). And, also its programming languages (Solidity, Vyper, etc.). Therefore any smart contracts, services, or tools that were built on Fantom Opera should work just fine with the Fantom Sonic mainnet. Highlighted Crypto News Today: Grayscale Forays Into Crypto Indices Market With FTSE Russell

- The unique indices will categorize digital assets into numerous groupings. - There will be many indices in this series, each one dedicated to a distinct kind of digital assets. To enter the cryptocurrency indices market, Grayscale Investments has teamed up with FTSE Russell, a division of the London Stock Exchange. A new offering called the Crypto Sector Index Series is in the works. There will be many indices in this series, each one dedicated to a distinct kind of digital assets with a particular set of applications. The unique indices will categorize digital assets into numerous groupings. Cryptocurrencies like bitcoin and litecoin are one example, as are smart contract initiatives like ether and Solana, and tokens associated with financial services like Uniswap and Compound. In addition to currencies having practical uses like Chainlink and Filecoin, the indexes will also include coins with ties to the arts, games, and media. Wider Range of Options Grayscale's director of ETFs, Inkoo Kang, recently discussed the rationale behind the indices' asset allocation. The technique uses the square root of the market capitalization of each cryptocurrency, mitigating the disproportionate impact of large-cap tokens like Bitcoin. As a result, investors will have a wider range of options to choose from. The progress Grayscale has made recently is not without legal obstacles, however. New York's attorney general, Letitia James, filed a lawsuit against Grayscale's parent company, DCG, and its other subsidiary, Genesis, last week. The cryptocurrency exchange Gemini and other high-ranking executives were also mentioned in the filing. Earn is a product developed by Genesis and Gemini in partnership, and its controversial nature is at the heart of the matter. The NYAG claimed that substantial user money misappropriations occurred because the companies misled the public about the nature of this product. WOW Summit Dubai 2023, the World of Web3 Summit, recently concluded with resounding success at the opulent Atlantis the Royal in Dubai. This remarkable event showcased an extraordinary lineup of speakers and esteemed sponsors, leaving an indelible mark on the world of blockchain and Web3 technology. Ivan Ivanov, Global CEO of WOW Summit, expressed his enthusiasm, stating, "WOW Summit Dubai 2023 has exceeded our wildest expectations. It was a landmark gathering that brought together Web3 enthusiasts, industry leaders, and government officials to shape the future of blockchain technology." The event featured some amazing panel discussions and keynotes that illuminated the path forward for blockchain and Web3 technology. The Summit featured an array of captivating panel discussions and keynote presentations. Among the standout topics were, Exploring the Fusion of AI, Metaverse, Gaming, Fashion, and NFTs, Global Strategies for Amplifying Revenue: Unlocking the Potential of Corporate Blockchain Providers, Early-Stage Funding Opportunities in Web3 Projects and Acceleration, Current State of Decentralized Media, Advancements in Web3 Protocols: Pioneering the Path to Innovation and Progress and several others. The event's sponsors, Farcana, Unicorn, and Fastex, demonstrated their unwavering commitment to fostering innovation in the blockchain industry. Their visionary leadership and strategic expertise set the stage for transformative discussions on the potential of blockchain. Our sponsors were represented at the event as speakers and boosters in the exhibition hall. This exemplified their commitment to advancing the blockchain industry. Among the sponsors of the event, we note such companies as Darwinbit, ChainUp, Sastana, Beezfi (BizTrip), P2PBet, Hacken, ICP, and EXOLO. Unicorn, a next-generation cryptocurrency, stands out from its predecessors by embracing transparency, and SEC compliance, and being backed by a diversified asset portfolio, including real estate and equity in high-growth companies. In contrast, Farcana, a Dubai-based AAA game development studio, is in the process of creating a game bearing the same name. Farcana's unique 4v4, ability-based arena shooter redefines the gaming experience with its innovative 4-role system, strategic gameplay, and full integration of Web3 technology, all while maintaining the high-quality standards associated with AAA gaming. Fastex is a complete Web3-driven ecosystem that introduces diverse centralized and decentralized products and solutions, including Fasttoken (FTN), Fastex Exchange, Fastreverse, Fastex Pay, and fNFT Marketplace. Driven by constant changes in the world of technologies, the Fastex ecosystem always thinks one step ahead and aims to bring businesses and communities closer to Web3 technologies, making them more accessible than ever. Joining as speakers were also a group of outstanding individuals contributing significantly to the payments industry on Blockchain instead, including Jeff Zhao (Darwinbit), Eowyn Chen (Trust Wallet), Igor Bershadskiy (Hacken), Marat Salimov (P2P Labs), and Tigran Bolshoi (Kinotex Network). Their support underscored the collaborative spirit of WOW Summit Dubai 2023. The event featured distinguished speakers, including Yat Siu (Animoca Brands), Dr. Marwan Alzarouni (Dubai Blockchain Centre), Dr. Hoda Alkhazaimi (Director at EMARATSEC, Co-chair at the WEF global future council, Director for Center at Cyber Security New York University AD), Nameer Khan (MENA Fintech Association), Miriam Kiwan (Circle), Mohamed Issa (Chainalysis), Sam Katiela (Crypto Valley Partners), Julian Sperring-Toy (UNICOIN), Islam Shazhaev (Farcana), Joy John (Oracle), and other luminaries who shared profound insights and valuable discussions. Prominent figures such as Michael Terpin, Gurvinder Ahluwalia, Christian Gleich, Nick Spanos, and Mansoor Madhavi, also graced the event, adding to its prestige. The Summit was honored by the presence of distinguished guests and esteemed media personalities, including Sheikh Ali Rashed Ali Saeed Al Maktoum, the esteemed Carl Runefelt from MoonGames, as well as the notable presence of Davinci Jeremie and Guy Yampolskiy (GuyWay events). The results of the WOW Summit Dubai Startup competition serve as a glittering showcase, highlighting the brilliant innovations and rising stars within the dynamic realms of blockchain and Web3 technology. From a pool of over a hundred spirited startup contenders, the selection of the top 10 was an inclusive and decentralized process, driven by the vibrant community using Cyrator (available at cyrator.com). This online platform became the epicenter of independent decentralized reviews, inquiries, and profound insights, all thoughtfully validated, and endorsed by esteemed experts. These well-considered deliberations are closely scrutinized by a committee of discerning investors. They're thrilled to introduce the distinguished winner of their Startup competition, hailing all the way from France, the brilliant minds behind the tokenized investment fund named Petale. This remarkable achievement has garnered the attention of MPro Trust and its esteemed investors, who are now contemplating an investment of up to \$1 million in the Petale project. Additionally, the project is set to embark on a series of meetings with tier-1 investment funds in Dubai. In an added boost of support, the Petale project has secured three months of invaluable market-making assistance, comprehensive listing maintenance, and expert trade strategy management courtesy of Market Making Pro, all as a well-deserved reward for emerging triumphant in the WOW Summit Startup Competition. This accomplishment underlines WOW Summit's steadfast dedication not only to recognizing exceptional talent but also to providing a vital launchpad for entrepreneurial aspirations. Furthermore, their victorious startups have not only earned the prestigious accolade but have also been generously rewarded with a slew of prizes from industry leaders such as AWS and various other esteemed partners. The WOW GROWTH program has also extended its nurturing hand to the top 10 finalists, offering a three-month acceleration program complete with comprehensive business development support and guidance on investor relations. This support will span across regions of interest, including Asia (HK Hub), the MENA region (UAE Hub), and Europe (Swiss Hub). In a groundbreaking collaboration with the Internet Computer Protocol (ICP), WOW Summit and GROWTH have launched an exciting Ideathon program, designed to cater to companies in their early stages enabling them to test their innovative concepts and find the perfect tech team to bring these ideas to life. The Ideathon is now open for participation throughout the months of October and November 2023, while the forthcoming hackathon is scheduled to take place during the WOW Summit in Hong Kong in 2024. The exclusive media zone, featuring moderators from Ana Solana (JETA agency) and Adel Bhurtun from Web3TV, provided a platform for in-depth coverage and analysis of the event's key moments. WOW Summit Dubai 2023's art zone showcased an impressive array of digital and NFT artists. Amrita Sethi, the event's headliner, crafted five unique works and is recognized as the UAE's first NFT artist, as well as a top-tier Physical and Digital Artist. For the WOW Summit, Amrita Sethi unveiled her latest masterpiece series titled "Art and Tech aBYTES", representing a captivating evolution of her distinctive style. In a remarkable fusion of art and technology, she collaborated with ChatGPT to craft a poetic narrative that envisions how the transition from Web2 to Web3 will inspire our world. Subsequently, she harnessed the creative power of Midjourney to transform this narrative into stunning visual imagery. Vesa, a renowned digital art pioneer for over 15 years, is considered one of the initial artists to delve into crypto art and NFTs. His notable awards include NFT Artist of the Year (AIBC Summit, 2023) and top Web3 Artists accolades from "Official Arabia Naama Pozniak, the CEO of Paz Holding, Inc. and LetzGetPhysical, stood out as a Web3 Educator, NFT Artist, and multifaceted professional known for her contributions to the art world. WOW Summit Dubai 2023 lived up to its promise as an unmissable Web3 event that will undoubtedly shape the future of blockchain technology. Attendees were treated to a unique experience filled with knowledge sharing, networking opportunities, and exploration of cutting-edge developments in the Web3 ecosystem. WOW Summit is now gearing up for their Hong Kong edition in 2024, scheduled for March 26-27. Secure your super early bird tickets now. About WOW Summit: WOW Summit is a leading global Web3 event that unites distinguished industry titans, esteemed government officials, visionary funds, venture capitalists, NFT and digital artists, entrepreneurs, and multinational corporations. The Summit drives the innovative trajectory of Web3, covering cutting-edge trends and innovations in technology. It explores themes including the Web2 to Web3 transition, CBDCs, regulatory landscapes, asset tokenization, and the societal impact of blockchain and DLT technologies. Hosted by GuyWay, powered by MarketMakingPro, and co-organized by Uvecon.vc and Quantum Leap Strategy, WOW Summit has a history of hosting distinguished speakers. - The debut of a new digital wallet has been postponed from February 2024. - Using the wallet, the Thai government plans to provide 10,000 baht to qualified residents. Critics have called for an investigation by the country's election commission into the postponement of Thailand's proposed digital wallet initiative, which aims to pay out 10,000 baht (\$274) to residents over the age of 16. According to the Bangkok Post, the deputy finance minister of Thailand, Julaporn Amornvivat, revealed that the debut of a new digital wallet has been postponed from February 2024 to allow for more development. Multiple obstacles Moreover, using the wallet, the Thai government plans to provide 10,000 baht to qualified residents in an effort to boost the country's economy. Amornvivat said in a statement that the introduction of the digital grant wallet is still scheduled for the first quarter of 2024, but that additional time is needed to assure the security of the underlying system. The subcommittee in charge of the initiative is reportedly still debating where to get the money for the notion. The digital wallet plan of the Pheu Thai Party is expected to cost over \$15 billion. Also, the government has predicted that the effort would boost economic growth by 5% the next year. And Amornvivat has proposed that tax money from increased economic activity will help cover a portion of the scheme's costs. Ex-Thai senator and outspoken critic Rosana Tositrakul has asked the electoral commission to look into the legitimacy of the plan. Furthermore, as the Thai government is contemplating utilizing the national budget to finance the digital giveaway. Tositrakul has raised concerns about the program's constitutionality. Due to concerns about a shortage of cash and the possibility of generating debt to pay for the effort. Highlighted Crypto News Today:

- Ethereum sees record accumulation by whale addresses. - ETH's 9-day EMA at \$1,625, RSI near neutrality at 50. Ethereum, the second-largest cryptocurrency by market capitalization, is currently facing bearish pressure in the midst of a positive market turnaround. The previous week was a pivotal one in the crypto world, leading to the global market surging by four percent and Bitcoin touching the \$30,000 mark. Notably, Ripple's CEO, Brad Garlinghouse, and Executive Chairman, Chris Larsen, were acquitted of all allegations in a historic move by the U.S. SEC. This marks a significant victory for Ripple after nearly three years of intense regulatory scrutiny. In another development, Reddit is discontinuing its blockchain-based Community Points program in favour of more easily scalable rewards programs. In addition to this, Federal Reserve Chair Jerome Powell expressed satisfaction with the decline in inflation over the summer and indicated that the central bank is unlikely to raise interest rates again. However, the focus of the crypto community is currently on the struggle of the altcoin head, ETH against bearish trends. Meanwhile, XRP, Solana, Stacks, and Mantle have emerged as notable performers by surging double digits in the past 24 hours. In the same timeline, Ethereum did experience a brief surge from \$1,582 to \$1,627, but it has since returned to trading at \$1,599 with a modest 0.98% increase over 24 hours.

Contrastly, Ethereum is witnessing record accumulation by whale addresses holding over one million ETH, now controlling 32.3% of the total ETH supply â€” a milestone not seen since July 16. On October 16, Ethereum saw its second-highest frequency of transactions exceeding \$1 million within a month. Moreover, prominent crypto data aggregator, CryptoQuantâ€™s recent data also indicates that while ETHâ€™s exchange netflow increased, the Coinbase premium turned green, suggesting strong buying pressure from U.S. investors. Will The ETH Bulls Win? A closer analysis of Ethereumâ€™s current price movements reveals the presence of bearish forces. The 9-day exponential moving average (EMA) has risen above the current trading price, settling at \$1,625. Simultaneously, the daily relative strength index (RSI) is at 50, indicating that the asset is nearing neutral territory. Breaking the \$1,655 level is likely to propel the price towards testing the \$1,735 mark. Conversely, if bears intervene and push prices below the \$1,571 support level, a decline to test the \$1,529 support level may become probable.

- The global crypto market cap hits \$1.13T with a 4.28% daily increase. - Positive October price action provides a short-term crypto price boost. The crypto market has faced a challenging year so far, with bearish trends dominating the charts. Enthusiasts and traders awaited an overall green chart in the market, and today marked an eventful shift as the bulls took control, pushing Bitcoin to the \$30,000 mark and ushering in double-digit surges for various altcoins. Notably, the global crypto market capitalization now stands at \$1.13 trillion, marking a 4.28% increase over the past 24 hours. Moreover, the total crypto market volume in the last 24 hours has surged to \$47.36 billion, a substantial 26.04% increase. In the DeFi sector, the trading volume is currently at \$2.38 billion, constituting 5.02% of the total crypto marketâ€™s 24-hour volume. Stablecoins are dominating the scene, with a total volume of \$43.95 billion. It comprises 92.81% of the total crypto marketâ€™s 24-hour volume. Meanwhile, the resounding news of Bitcoin crossing the \$30,000 threshold has captured the communityâ€™s attention, as strong bearish forces had kept it at bay for two months. In the past 24 hours, BTC has surged by 5%, and its trading volume has seen an impressive 104% increase. The world of altcoins has also displayed robust performance. Notably, XRP and Solana have seen significant increases of 8% and 10%, respectively, in the past 24 hours. Meanwhile, Bitcoin SV, Shiba Inu, and Mantle have stood out as extraordinary performers. They had remarkable double-digit surges of 24%, 16%, and 12% during the same time frame. This resurgence coincides with the popular belief within the crypto community that October is historically a favorable month for cryptocurrencies, particularly Bitcoin. Some have even affectionately dubbed it â€œOctober.â€ Whatâ€™s Next in October? The crypto market rally kicked off on October 16, leading to a wave of short positions being liquidated across the market, totaling over \$64 million in a 24-hour period. The largest single liquidation, amounting to \$2.53 million, occurred on the Binance exchange in a Bitcoin short position. Research indicates that crypto market is likely to continue experiencing price volatility. While the positive price action in October provides a short-term boost to crypto prices, the marketâ€™s reaction to new regulatory actions or an economic downturn will ultimately determine its direction. Looking ahead to the end of Q4, there is optimism for a crypto market bull run. It is driven by the anticipated approval of Bitcoin ETFs and an upcoming Bitcoin halving event.

- Two suggestions were submitted to the FDIC by the Office of the Inspector General. - Companies dealing in crypto are criticized for â€œmisrepresentationsâ€ in the report. The FDICâ€™s Office of the Inspector General published an evaluation on the FDICâ€™s crypto risk strategy. Two suggestions were submitted to the FDIC by the Office of the Inspector General, one of which was a method for monitoring crypto activity at regulated institutions. A news release states that the OIG issued the suggestions â€œbased on evidence obtained during [their] evaluation.â€ One section of the report said that the FDICâ€™s murky processes leave monitored institutions unsure of what to do. Addressing Crypto Related Risks Without â€œeffective guidance,â€ the FDIC or its member institutions may not take enough steps to address the most serious risks presented by crypto assets, hence the OIG recommends that the FDIC conduct an evaluation of these risks. A section of the report read: â€œSpecifically, the FDIC has not yet completed a risk assessment to determine whether the Agency can sufficiently address crypto asset-related risks through actions such as issuing guidance to supervised institutions.â€ The OIG also expressed concern that the absence of a review mechanism might give the impression that the regulatory body is not â€œsupportiveâ€ of institutions who are or intend to interact with cryptocurrency. Also, the FDIC has said that it would take the necessary steps to address these suggestions by the end of January. Thus, suggesting that it agrees with the reportâ€™s conclusions. Moreover, companies dealing in cryptocurrency are criticized for â€œmisrepresentationsâ€ in the report. An anonymous cryptocurrency firm was used as an example. A cryptocurrency company filed into bankruptcy in 2022. The company â€œhad misledâ€ its customers for almost a year. By making them believe that their funds were protected by the FDIC, according to the findings of the report. Highlighted Crypto News Today: Analysts Eye Further Upside for Solana After Falling Wedge Breakout

- Bullish ANKR price prediction for 2023 is \$0.02924 to \$0.05754. - Ankr (ANKR) price might reach \$0.5 soon. - Bearish (ANKR) price prediction for 2023 is \$0.01081. In this Ankr (ANKR) price prediction 2023, 2024-2030, we will analyze the price patterns of ANKR by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ANKR (ANKR) PRICE PREDICTION 2023 | | | ANKR (ANKR) PRICE PREDICTION 2024, 2025, 2026-2030 | | CONCLUSION | | FAQ | Ankr (ANKR) Current Market Status | Current Price | \$0.01994 | 24 â€œ Hour Price Change | 1.35% Up | | 24 â€œ Hour Trading Volume | \$14,980,554 | | Market Cap | \$199,384,997 | | Circulating Supply | 10,000,000,000 ANKR | All â€œ Time High | \$0.2520 (On March 28, 2021) | | All â€œ Time Low | \$0.0007111 (On Mar 13, 2020) | What is Ankr (ANKR) | TICKER | ANKR | | BLOCKCHAIN | Ethereum | | CATEGORY | WEB3 | | LAUNCHED ON | 2017 | | UTILITIES | Governance, security, gas fees & rewards | The Ankr (ANKR) token is the native cryptocurrency of the Ankr network, a Web3 infrastructure platform that enables users to build and control their own nodes that they can utilize for various Proof-of-Stake blockchain. When infrastructure platform and the mainnet were launched in 2019. Polygon (MATIC), Ethereum (ETH), BNB SmartChain (BNB), Avalanche (AVAX), Polkadot (DOT), and Kusama are the six cryptocurrencies that Ankr presently supports for Staking. ANKR is an ERC-20 and BEP-20 token that can be used in both the Ethereum and BNB Smart Chain ecosystems. Within the Ankr network, ANKR can be utilized as a governance token as well as a utility token. Ankr 24H Technicals (Source: TradingView) Ankr (ANKR) Price Prediction 2023 Ankr (ANKR) ranks 130th on CoinMarketCap in terms of its market capitalization. The overview of the Ankr price prediction for 2023 is explained below with a daily time frame. ANKR/USDT Descending Triangle Pattern (Source: TradingView) In the above chart, Ankr (ANKR) laid out a descending triangle pattern. The descending triangle is most commonly seen during downtrends and is often interpreted as a bearish signal. The ascending triangle pattern is reversed in the descending triangle pattern. As the price continues to make lower highs, descending triangles indicate to investors and traders that sellers are more aggressive than buyers. When the price breaks out of the triangle in the direction of the overall trend, the pattern is complete. Contrary to popular belief, a descending triangle can be bullish or bearish. A regular descending triangle pattern is traditionally regarded as a bearish chart pattern. A descending triangle pattern, on the other hand, can be bullish. At the time of analysis, the price of Ankr (ANKR) was recorded at \$0.01994. If the pattern trend continues, then the price of ANKR might reach the resistance levels of 0.02048, and 0.02787. If the trend reverses, then the price of ANKR may fall to the support of 0.01669. Ankr (ANKR) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Ankr (ANKR) in 2023. ANKR/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Ankr (ANKR) for 2023. | Resistance Level 1 | 0.02924 | | Resistance Level 2 | 0.05754 | | Support Level 1 | 0.01716 | | Support Level 2 | 0.01081 | ANKR Resistance & Support Levels Ankr (ANKR) Price Prediction 2023 â€œ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Ankr (ANKR) are shown in the chart below. ANKR/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Ankr (ANKR) market in 2023. | INDICATOR | PURPOSE | READING | INFERENCE | 50 Day Moving Average (SOMA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = 0.01911 Price = 0.01955 (SOMA < Price) | Bullish (Uptrend) | | Relative Strength Index (RSI) | Magnitude of price change, Analyzing oversold & overbought conditions | 54.56711 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Ankr (ANKR) Price Prediction 2023 â€œ ADX, RVI In the below chart, we analyze the strength and volatility of Ankr (ANKR) using the following technical analysis indicators â€œ Average Directional Index (ADX) and Relative Volatility Index (RVI). ANKR/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Ankr (ANKR). | INDICATOR | PURPOSE | READING | INFERENCE | Average Directional Index (ADX) | Strength of the trend momentum | 10.13434 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 69.97 <50 = Low >50 = High | High Volatility | Comparison of ANKR with BTC, ETH Let us now compare the price movements of Ankr (ANKR) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs ANKR Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of ANKR is similar to that of BTC and ETH, that is, when the price of BTC and ETH increases or decreases, the price of ANKR also increases or decreases respectively. Ankr (ANKR) Price Prediction 2024, 2025 â€œ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Ankr (ANKR) between 2024, 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | Ankr (ANKR) Price Prediction 2024 | \$1 | \$0.4 | | Ankr (ANKR) Price Prediction 2025 | \$2 | \$0.3 | | Ankr (ANKR) Price Prediction 2026 | \$3 | \$0.2 | | Ankr (ANKR) Price Prediction 2027 | \$4 | \$0.1 | | Ankr (ANKR) Price Prediction 2028 | \$5 | \$0.08 | | Ankr (ANKR) Price Prediction 2029 | \$6 | \$0.06 | | Ankr (ANKR) Price Prediction 2030 | \$7 | \$0.04 | Conclusion If Ankr (ANKR) establishes itself as a good investment in 2023, this year would be favorable to the cryptocurrency. In conclusion, the bullish Ankr (ANKR) price prediction for 2023 is \$0.05754. Comparatively, if unfavorable sentiment is triggered, the bearish Ankr (ANKR) price prediction for 2023 is 0.01081. If the market momentum and investorsâ€™ sentiment positively elevate, then Ankr (ANKR) might hit \$0.5. Furthermore, with future upgrades and advancements in the Ankr ecosystem, ANKR might surpass its current all-time high (ATH) of \$0.2252 and mark its new ATH. FAQ 1. What is Ankr (ANKR) ? The Ankr (ANKR) token is the native cryptocurrency of the Ankr network, a Web3 infrastructure platform that enables users to build and control their own nodes that they can utilize for various Proof-of-Stake blockchain. 2. Where can you buy a Ankr (ANKR)? Traders can trade Ankr (ANKR) on the following cryptocurrency exchanges such as Binance, LBank, Bybit, Coinr Pro, and Bitrue. 3. Will Ankr (ANKR) record a new ATH soon? With the ongoing developments and upgrades within the Ankr platform, Ankr (ANKR) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Ankr (ANKR)? Ankr (ANKR) hit its current all-time high (ATH) of \$0.2252 On March 28, 2021. 5. What is the lowest price of Ankr (ANKR)? According to CoinMarketCap, ANKR hit its all-time low (ATL) of \$0.0007111 on March 13, 2020. 6. Will Ankr (ANKR) hit \$0.5? If Ankr (ANKR) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.5 soon. 7. What will be the Ankr (ANKR) price by 2024? Ankr (ANKR) price might reach \$1 by 2024. 8. What will be the Ankr (ANKR) price by 2025? Ankr (ANKR) price might reach \$2 by 2025. 9. What will be the Ankr (ANKR) price by 2026? Ankr (ANKR) price might reach \$3 by 2026. 10. What will be the Ankr (ANKR) price by 2027? Ankr (ANKR) price might reach \$4 by 2027. - This remarkable staking number was fueled by the increasing number of validators. - There have been more than 3.4M transactions on the network, and more than 1.25M users. Bone ShibaSwap (BONE), has hit an ATH on the Shibarium layer-2 scaling solution, signaling the cryptocurrencyâ€™s promising future. Shibariumâ€™s validator tracker shows that the number of staked BONE tokens has reached 26,020,173.6431. This remarkable staking number was fueled by the increasing number of validators that have signed up for the protocol. According to the numbers, Shibariumâ€™s smart contract network has reached a block height of 1,013,490 and there are now 12 validators. Moving in Right Direction Moreover, Shibarium continues to serve as an example of how far a Web3 ecosystem project might hope to shift its focus. To bring in decentralized apps that can bring the next 1 billion people into the digital currency ecosystem, Shibarium was developed. Shibariumâ€™s early logs revealed a congested network, highlighting the need to revamp the platform for greater scalability. While initial difficulties reduced enthusiasm, recent increases in validator commitment to the protocol indicate that the protocolâ€™s vision for the future is feasible. Shibarium has been steadily progressing towards its important objectives over the previous few weeks, in addition to staking BONE. There have been more than 3.4 million transactions on the network. And more than 1.25 million users, according to statistics from Shibarium scan. However, the Shiba Inu ecosystem is poised for a turnaround thanks to continued partnerships and well defined use cases that could assist boost the development in the long run, despite the previous struggles. Highlighted Crypto News Today:

- The most frequent explanation was that regulators are putting pressure on ETH than BTC. - A key concern raised by an analyst was whether or not

staking was properly accounted for. This week, the crypto community learned of a striking discrepancy in the attitudes of the “whales” holding the two largest cryptocurrencies on the market: Bitcoin and Ethereum. On-chain research business Glassnode data shows a dramatic decline in the number of Ethereum “whales” (individuals holding 1,000 or more ETH, or around \$1.5 million) since 2020, with the sale of \$20 million worth of ETH. However, Bitcoin whales have been steadily building their reserves in stealth. With a handful of abrupt declines, either owing to the FTX crash or profit-taking after a strong 2021 bull run, the number of people who possess 1,000 BTC or more (about \$26.9 million) has stayed quite stable over the same period. Missing Out Key Aspects Social media was ablaze with speculation as to the cause of the apparent difference in whale behavior, with prominent members of the Bitcoin camp using the opportunity to take aim at their Ethereum community rivals. The most frequent explanation was that regulators are putting more pressure on Ethereum than Bitcoin. However, both the Glassnode data and the conclusions generated from them seem to be lacking. A key concern raised by an analyst was whether or not the chart properly accounted for staking. He elaborated on the misconception that transfers to a staking contract constitute a sale on chain. To participate in the Ethereum network’s staking protocol and assist verify transactions on the blockchain, users must now commit 32 ETH to a smart contract. This seems to be what’s behind the supposed decline in institutional ownership. Highlighted Crypto News Today:

Building the world’s largest Decentralized Physical Infrastructure Network (DePIN) for AI is what Decentralized cloud service io.net has declared as its ultimate objective. Io.net seeks to address the lack of GPUs for AI processing by obtaining one million GPUs from independent suppliers of computing resources. In the process, it will create the first machine learning cloud ecosystem that is fully decentralized. GPU power is becoming one of the most valuable and rare resources in the world due to the emergence of AI. When compared to the expense of training large-scale AI models, demand for GPUs is growing by 10 times every 18 months. As a result, cloud service access has become more expensive and time-consuming, inhibiting innovation and making AI companies wait in queue. This is what io.net intends to fix by releasing idle GPU capacity on computers all around the globe. This includes independent data centers, whose usual utilization rate is barely 12%18%, as well as mining operations for cryptocurrencies like Solana, Render, and Filecoin, which have witnessed a sharp fall in revenue after Ethereum transitioned to Proof-of-Stake (PoS). Io.net will compete with established companies like AWS, GCP, and Azure by making GPU processing available, adaptable, and easily accessible. With this approach, huge GPU clusters can be deployed with a single click and can handle demanding machine learning workloads while being operational in less than 90 seconds. In comparison to existing alternatives, io.net claims it can provide GPU computation for up to 90% less money. Io.net plans to deploy a worldwide network of user-supplied GPUs utilizing an incentive-based rewards system to accomplish these goals. The variety of providers is anticipated to include crypto projects with access to GPU computation, independent data centers with underutilized computer capacity, and miners. GPU suppliers will get payment for the computation they give, fostering a robust market that will foster the expansion of the AI sector. Ahmad Shadid, Founder & CEO of io.net said: “AI is one step away from starting the Fourth Industrial Revolution but current GPU providers can’t support the scale and speed of innovation. io.net will be able to connect one million GPUs distributed across the globe in under 90 seconds, giving AI startups access to essential processing power on demand.” The onboarding of cryptocurrency mining farms, which have enormous GPU capacity and have seen their profit margins shrink in the present market circumstances, is essential to attaining these goals. Io.net estimates that by repurposing their farms for GPU supply, they may increase their profits by up to 1,500% while using less energy. As it approaches its goal of one million GPUs, io.net already has 36,000 GPUs available.

- At the time of writing, the BNT price witnessed retraction and is trading at \$0.57. - Bancor has been a frontrunner in the DeFi industry as a decentralized liquidity protocol. In reaction to the surge in trading activity, Bancor’s native token BNT has begun a compelling rally inside a parabolic trend. The price of BNT rose by more than 50% during this trend, from its 24-hour low of \$0.4603 to a high of \$0.6906. CMC data shows that Bancor’s sustained volume increased by almost 200% during this rally. Some analysts are speculating that the price is overvalued, and the price retraced and is trading at \$0.57, up 17.57% in the last 24 hours as per data from CMC. Proactive Approach An attempted phishing assault, which might have created turmoil in the ecosystem of the dominating protocol Carbon DeFi, was revealed on the official social media account of the protocol. The protocol’s core development proposal and this proactive approach have enhanced confidence in the ecosystem, setting it apart from other protocols that have recently been hacked. This was complemented by another remarkable number: 797 unique BNT addresses were active on a single day. Speculation regarding the future of Bancor has been sparked by its recent price gain and the substantial rise of active addresses among crypto fans and experts. For many years, Bancor has been a frontrunner in the DeFi industry as a decentralized liquidity protocol based on the Ethereum blockchain. Traders and investors that value efficiency and decentralization have found it to be a go-to due to its novel liquidity supply strategy and automated market maker (AMM) system. Highlighted Crypto News Today: Solana Price Faces Severe Selling Pressure; Further Decline Likely

- The Pudgy Penguins Toy Collection was recently released at over 2,000 Walmart shops. - As of May 2023, the project secured a massive \$9 million in funding. Lately, there has been a massive increase in the trade volume of the Pudgy Penguins NFT collection. The 8,888 NFTs included in the Pudgy Penguins NFT collection on Ethereum are all unique in some way. Yesterday, the trading volume of Pudgy Penguins NFT rose by a whopping 530%. The value of a Pudgy Penguins NFT collection surged during the bull run of 2021, only to face significant price variations until April 2022, when a serial entrepreneur named Luca Netz paid a stunning \$2.5 million to acquire the project IP. As of May 2023, the project has advanced further and secured a massive \$9 million in funding. Good News for Collectors The Pudgy Penguins Toy Collection, which was recently released at over 2,000 Walmart shops, is quickly becoming one of the most popular NFT collections in the crypto sphere. More than \$400 million in transactions have been made since Pudgy Penguins began earlier this week. With the NFT market still in a freefall, the recent spike in Pudgy Penguin pricing might be good news for collectors of Pudgy World collections. The Pudgy Penguins NFT collection’s extension, Lil Pudgy Penguins NFT, had its floor price rise significantly, hitting a new all-time high of \$788 (0.48 ETH) earlier in the week. The NFTs in Lil Pudgy Penguins total 22,222. Lil Pudgy provides its owners the same privileges and access as their bigger versions. Highlighted Crypto News Today: Hacker Restores Entire \$8.2 Million Worth Stolen ETH to HTX Global

- Bitcoin (BTC) led a bullish rally at the beginning of the week, nearly hitting a seven-week high of \$28.3K. - The global crypto market declined by 2.56% in the last 24 hours. In a rollercoaster week for the global cryptocurrency market, Bitcoin (BTC) led a bullish rally, nearly reaching a seven-week high of \$28.3K on Monday, positively influencing various digital currencies. However, the market faced a sudden downturn today, plummeting by 2.56%. Bitcoin (BTC) Price Chart (Source: CoinMarketCap) Bitcoin experienced a surge on Monday, approaching the \$28.3K range, only to lose 2.78% in the past 24 hours, trading at \$27,502. Nevertheless, it managed to maintain a 4.68% increase from the previous week. Ethereum (ETH), the second-largest cryptocurrency, mirrored the market’s volatility, dropping 4.19% in the past day to trade at \$1,655. Despite this setback, it recorded a 4.08% weekly gain. Marketwide Decline: The market decline wasn’t limited to Bitcoin and Ethereum, as other cryptocurrencies like Binance’s BNB, Ripple’s XRP, Solana (SOL), and more also saw declines in their values. According to data from CoinMarketCap, Binance Coin (BNB) has experienced a decrease of over 2.08% in the past 24 hours, with its current trading price standing at \$213. Meanwhile, XRP has managed to maintain a trading price in the \$0.5 range, following Ripple’s partial victory in its legal battle against the SEC. However, it’s worth noting that XRP is still far from its previous high of approximately \$0.9. At the time of this writing, XRP is trading at \$0.509, representing a 2.72% decrease over the course of a day. In contrast, Solana (SOL) has seen a modest increase of approximately 0.71% in the past 24 hours, with its current trading price at \$24.09. Over the past week, Solana has made significant gains, climbing by an impressive 24.70%. Amidst the market’s ups and downs, two major players in the cryptocurrency space are facing legal troubles. The former CEO of a bankrupt cryptocurrency exchange, Sam Bankman-Fried (SBF), saw the commencement of his trial on Tuesday, which included the selection of a jury. Binance, the largest crypto exchange, is facing a lawsuit filed by California resident Nir Lahav. This class-action lawsuit alleges multiple violations of federal and California laws, citing unfair competition and an attempt to monopolize the cryptocurrency market.

- Michael Sonnenshein, CEO of Grayscale, made the announcement on Twitter. - The Ethereum Trust holds around 2.5% of all ETH in circulation. With the recent green light given to the first Ether futures ETF, Grayscale Investments is trying to transform its Grayscale Ethereum Trust into a spot Ether ETF. On October 2, the New York Stock Exchange Arca submitted a conversion application to the U.S. SEC. Previously, Grayscale’s trust had invested in Ether futures contracts to get exposure to ETH indirectly; however, a spot ETF would invest directly in ETH. Exposure to Crypto Assets Michael Sonnenshein, CEO of Grayscale, made the announcement on Twitter and emphasized the company’s intention to provide traditional financial products with exposure to cryptocurrency assets. The CEO stated: “As we file to convert ETHE to an ETF, the natural next step in the product’s evolution, we recognize this as an important moment to bring Ethereum even further into the U.S. regulatory perimeter.” Moreover, Grayscale Ethereum Trust began trading in March 2019, and the business filed with the SEC by October 2020, allowing investors to see how their cryptocurrency investment vehicle is doing firsthand. Also, the Ethereum Trust holds around 2.5% of all ETH in circulation and has a market cap of \$4.9 billion. According to Grayscale, the trust is exposed to 250,000 investor accounts. Grayscale also stated its continued dedication to the “intended four phase lifecycle” for its cryptocurrency products, which would culminate in an exchange-traded fund (ETF) conversion. There are presently seventeen distinct crypto investing options available on the platform. Highlighted Crypto News Today: Solana (SOL) Price Skyrockets; Inches Closer to \$25 Key Level

- Ripple will continue to be a stakeholder in Fortress Trust’s parent firm. - Cancellation of the deal, according to Purcell, is not related to the security issue. Ripple is backing out of its planned acquisition of Fortress Trust only 20 days after announcing the purchase in order to ostensibly increase its number of licenses in the U.S. Yesterday, Ripple CEO Brad Garlinghouse said on Twitter about the decision to abandon the acquisition. However Ripple will continue to be a stakeholder in Fortress Trust’s parent firm Fortress Blockchain Technologies. Ripple has already announced their intent to invest in other Fortress group firms, such as FortressPay. Not a Big Deal A few days after the acquisition announcement, Fortress Trust admitted that a security problem involving a third-party analytics company had prompted them to move quickly on the deal. Fortress CEO Scott Purcell told Fortune that the hack cost the corporation between \$12 and \$15 million. Bitcoin predominated, with some USDC and USDT also present. Moreover, Ripple has been an investor in the firm since its 2022 seed round. Cancellation of the deal, according to Purcell, “is not a big deal.” He claims the security issue had nothing to do with the shift in plan. Other firms with links to Fortress may be affected from the deal’s collapse while Ripple continues its high-profile legal fight with the U.S SEC. For instance, Swan Bitcoin is forming a partnership with BitGo to establish a Bitcoin-only trust firm in the United States. This endeavor is subject to the necessary approvals from relevant authorities. Swan relies on Fortress Trust as a custody provider. Swan will have no further involvement with Ripple’s operations in the nation after the agreement fell through. Highlighted Crypto News Today:

- Polygon PoS is adopting native USDC from Circle for ecosystem growth. - Future plans include a Cross-Chain Transfer Protocol for faster transfers. Polygon PoS, a prominent layer 2 scaling solution for Ethereum, is set to witness a significant shift as it prepares to launch native USDC by Circle, the issuer of USDC on October 10th. This marks a step towards reducing reliance on bridged USDC. The transition to native USDC comes with several advantages as mentioned by Circle. It ensures that USDC issued by Circle will be fully reserved and always redeemable on a 1:1 basis for US dollars. This move will also facilitate institutional on/off-ramps and streamline support via Circle Account and its APIs. 1/ We might need a new hashtag because October is fast approaching and #StableSeptember isn’t slowing down. “ Circle (@circle) September 28, 2023 Native USDC will launch on @0xPolygon on October 10th, so let’s learn all the details for how the ecosystem will transition away from bridged USDC.https://t.co/7vVK0IIPXY Significantly, in order to facilitate this transition, Ethereum’s bridged USDC will undergo a renaming process to become USDC.e before the launch. This modification will not only appear on block explorers but will also extend to ecosystem applications and their user interfaces. Circle Account will continue to support deposits and withdrawals for both native USDC and bridged USDC.e for a 30-day period following the launch. On November 10th, Circle will cease support for bridged USDC.e, including Express withdrawals. Users are advised to refrain from sending bridged USDC.e to their Circle Account after this date. It is to avoid potential loss of funds. Additionally, Circle’s APIs will undergo adjustments to accommodate native USDC on Polygon PoS, with distinct API Chain Codes differentiating between native and bridged USDC. In

the future, Polygon PoS intends to further enhance its cross-chain capabilities with the Cross-Chain Transfer Protocol (CCTP). It enables near-instant transfers of USDC between Polygon PoS and Ethereum, among other supported chains. Meanwhile, the community believes that this transition signals a transformative phase for the Polygon PoS ecosystem. As it emphasizes improved stability and accessibility for its users.

Recent developments mean Bitcoin NFTs, known as Ordinals, can store data and digital assets directly on the Bitcoin chain, making the launch of the Osura marketplace an important event in Web3 history. Osura hosts high-quality and highly-curated digital asset collections on Bitcoin. REDMOND, Wash.â€“(BUSINESS WIRE)â€“Metagood launches Osura.com, the premier marketplace curated for high-end Bitcoin Ordinal collections. Since early 2023, Ordinals saw a meteoric rise, with over 33 million inscriptions as of earlier this month. Ordinals are quite different and offer many benefits compared to NFTs stored on Ethereum. NFTs on Ethereum are designed around digital certificates, or pointers to data and images stored off-chain on services like AWS (Amazon Web Services) or IPFS (InterPlanetary File System). In contrast, Bitcoin NFTs are designed as digital artifacts that are immutable, uncensorable, self-sovereign, permissionless, and stored fully on-chain (all data lives on Bitcoin). These properties have led to a community of early adopters who believe Bitcoin is now the natural home for high-end NFTs. With the NFT market showing impressive adoption for both Ethereum and Solana during the last crypto bull run, the Osura team believes Ordinals on Bitcoin will see rapid adoption over the next year. When obtaining digital assets, users need to trust that they get the highest quality product when transacting. Osura is a destination for true digital art connoisseurs. It offers collectors a curated marketplace and enables them to collect, buy and sell digital artifacts. With a strategy to curate only the highest-quality digital assets, Osura debuts with two exceptional Bitcoin Ordinals NFT collections: OnChainMonkey (OCM) Dimensions 300 and the Asprey Bugatti Egg Collection by Asprey Studio, Bugatti, and Metagood. Both collections are 3D, interactive, and use recursion. Metagood co-founder Danny Yang developed new technology to create 3D animated and interactive art for the OCM Dimensions collection on Bitcoin. OCM Dimensions 300 is arguably the most innovative art collection on Bitcoin. Inscribed in February 2023, OCM Dimensions stands out among Bitcoin collections. It is a high-resolution, 3D art collection that pioneered recursion, one of the most significant aspects of Bitcoin Ordinals. The animated art scales with display size, presenting pixel-perfect clarity even on 8K screens. Remarkably, this quality is achieved with a file size of less than 1 kilobyte, a 500-fold improvement over the average 500KB of other 3D art collections. Asprey Studio, co-founder of the Asprey Bugatti Egg Collection, achieved what was thought impossible by Bitcoin: a 3D digital artwork with OCM Asprey Studio, Metagood crafted the generative code to encapsulate the essence of natureâ€“s perfection. Only 111 in the whole collection, all eggs have a different motion of lighting that is unique to each of them. This exclusive collection is inscribed on uncommon satoshis (sats), with one of these sats being the oldest inscribed uncommon sat to date. â€“Iâ€“ve spent the last decade building on Bitcoin and the last few years focusing on creating high-end digital artifacts on Ethereum and now on Bitcoin. Now is a truly exciting time in NFTs â€“ the Bitcoin Ordinals protocol just launched a few months ago. With our background creating digital artifacts, we understood the significance immediately and focused on Bitcoin Ordinals early on,”â€“ Danny Yang, co-founder and CEO of Metagood, said. â€“Bitcoin is the largest, most decentralized, and secure blockchain, and now Ordinals will see the most significant and high-end NFTs being stored on Bitcoin, too. At Osura, our focus is to foster and shepherd this new market and curate the best works in a trusted manner,”â€“ Amanda Terry, co-founder and COO of Metagood, said. â€“Metagood played an instrumental role in delivering the technical backing for our Asprey Bugatti Egg Collection,”â€“ Ali Walker, Chief Creative Officer at Asprey Studio, said. â€“Their deep expertise and knowledge of Bitcoin technology set them at the forefront of putting digital assets on chain. The Osura marketplace will set a new standard for luxury Bitcoin NFT collections.â€“ What sets the Osura marketplace apart is the curated art, the cutting-edge technology, the experienced and reputable team, and the seamless and secure product. As a trusted pioneering authority in shaping the future of digital assets, Metagood built Osura to continue to launch collections for renowned brands and esteemed creators. The Osura team also plans to put together an Osura Curation Board for Digital Artifacts (with names to be announced shortly) as a new asset class that includes creators, collectors, historians, and technologists. OCM Dimensions and the Asprey Bugatti Egg Collection NFTs will be displayed in Asprey Studioâ€“s Mayfair Gallery during their London Frieze event â€“Digital Musesâ€“ on October 10. Metagood COO Amanda Terry will speak at â€“The Art of Ordinalsâ€“ Asprey Studio event in Paris on October 11, where the NFTs will also be displayed. About Osura Osura Bitcoin NFT Marketplace will host only the highest quality high-end digital assets. The team behind Osura, Metagood, has been building on the Bitcoin blockchain for over a decade. Their expertise allowed them to develop pioneering technology such as recursion, parent-child collection provenance, and launch the first on-chain randomization and reveal for an NFT collection on Bitcoin. Metagood proved its deep expertise by inscribing the first 10,000-image art collection of NFTs in one transaction on Ethereum in 2021 and on Bitcoin in 2023. It also launched the first 3D art collection fully on-chain on Bitcoin in June 2023. Osura enables renowned brands and creators to inscribe their high-end digital art on the Bitcoin blockchain. The platform caters to both seasoned and budding collectors, ensuring they discover unique and valuable Bitcoin NFT art of the highest quality. About OnChainMonkey OnChainMonkey, by Metagood, is a pioneering digital art collection. It is the first 10,000-image art collection created on-chain in a single transaction on Ethereum in 2021. In 2023, OnChainMonkey made history again, becoming the first 10,000-image collection inscribed on Bitcoin, and all done in a single inscription (#20219). The collection is led by an experienced team: Danny Yang, who founded Taiwanâ€“s largest cryptocurrency exchange, Maicoi; Amanda Terry, who served as a digital media business development executive at Twitter and NBC; and Bill Tai, a legendary VC and the first investor in Zoom and early investor in Canva, Dapper Labs and over 20 companies that have become publicly listed. The OnChainMonkey community is building businesses in Web3 and making real-world impact. About Metagood Metagood is a leader in blockchain technology and digital assets, setting a new standard for innovation in the crypto industry that blends technology, art, and community. Metagood was recognized in Fast Companyâ€“s 2022 Best World Changing Ideas Awards for impact investing. Metagood strives to build a better future for Web3. Through its innovative NFT collection OnChainMonkey (OCM), Metagood has created value and contributed to important causes, such as funding the successful evacuation of Sharbat Gula (known as â€“Afghan Girlâ€“ from the iconic 1984 National Geographic cover) and her family from Afghanistan, donating to humanitarian aid in Ukraine, Coral Reef conservation, and more. Metagood was founded by veterans with decades of business experience. Its chairman, Bill Tai, a legendary venture capitalist, has been at the forefront of the crypto space since 2010. Danny Yang, the CEO, founded both Maicoi, Taiwanâ€“s largest cryptocurrency exchange, and Blockseer, a blockchain technology company providing services to customers like the FBI, US Secret Service, and the DHS. He also founded the Stanford Bitcoin Meetup in 2013. Amanda Terry, the COO, is a former business development executive at Twitter, NBC, and the co-founder and managing partner of ACTAI Ventures. About Asprey Studio (aspreystudio.com) Asprey Studio was founded in 2022, part of the 242-year-old luxury house, Asprey. Asprey Studio creates unique artworks that make use of innovative and groundbreaking production techniques. The Asprey Studio Gallery is a multi-purpose gallery space that will host exhibitions and showcase Asprey Studio creations. Located on the second floor of the Asprey London flagship store in Mayfair, the galleryâ€“s primary focus will be on creating a new way to exhibit, release, and purchase artworks. In a recent pioneering collaboration with Bugatti, the Studio designed one hundred and eleven precious metal eggs linked to generative art in Bitcoin. The release showcases not only the art of coding but also creates a new form of art expression that bridges physical and digital creations. - The release of the new e-CNY app version coincides with the beginning of the Asian Games. - China has actively tested accepting the digital yuan from overseas tourists. As China updates the smartphone app powering its CBDC trial, visitors to the Peopleâ€“s Republic of China may now preload their digital yuan wallets using Visa and Mastercard payment methods. The e-CNY app, currently under beta testing, may be downloaded from the Apple App Store or the Google Play Store in China. The app caters to individuals by facilitating the creation of digital yuan wallets for the usage of e-CNY. Boosting e-CNY Adoption Version 1.1.1 of the iOS app, released on September 22nd, adds the ability to use foreign credit cards for its in-app purchases. The release of the newest e-CNY app version coincides with the beginning of the Asian Games. China has actively tested accepting the digital yuan from overseas tourists. Yicai claims that the 2022 Beijing Winter Olympics was the first time the CBDC pilot allowed foreign visitors to use e-CNY to make purchases from local businesses. It has been claimed that foreign visitors may utilize their domestic phone numbers to sign up for and use e-CNY wallets. Moreover, they utilize the recharge wallet function, which now accepts Visa and Mastercard payments. Recent updates have detailed Chinaâ€“s efforts to mainstream the use of digital yuan in all retail settings. This would make the digital yuan the de facto mode of payment for consumers and businesses alike throughout China. - The total worth of the fraudulent APT tokens was a stunning \$3.4 billion. - At the time of writing, APT is trading at \$5.33, up 3.93% in the last 24 hours. Upbit, the biggest crypto exchange in South Korea, has suffered a significant security breach, sending shockwaves. This comes after the trading platform found earlier on Sunday that a fraudulent deposit had been made using a crypto that was mistaken for the real Aptos (APT) token. Korea-based media site â€“Web 3 Buildersâ€“ said that the stunning breach was discovered after Upbitâ€“s system incorrectly classified the phoney currency as APT, enabling a bot to deposit a large amount of the bogus tokens into a variety of user accounts. Investors Remain Unaffected An astonishing 100,000 accounts were compromised, all of which included APT deposits. One of the worst crypto security breaches in recent times, the total worth of the fraudulent APT tokens was a stunning \$3.4 billion. Many Korean users have come forward claiming to have gotten APT tokens without having initiated the transactions themselves, according to reports. Also, after discovering the hack, Upbit swiftly suspended APT deposits and withdrawals, citing maintenance on the wallet system as the reason. A South Korean crypto expert and co-founder of TUNABOT, helped to reveal key information about the hack. According to the expertâ€“s research, the phoney APT tokens were not the original Aptos Network token but rather a bogus token with the name â€“claimAPTGift.”â€“ However, despite the event, investors have remained unaffected. At the time of writing, APT is trading at \$5.33, up 3.93% in the last 24 hours as per data from CMC. Highlighted Crypto News Today:

- This choice demonstrates the communityâ€“s dedication to restoring ecological balance. - The community hopes to forestall more crises and preserve the worth of its assets. The algorithmic stablecoin, earlier known as UST Terra Classic USD (USTC), has recently had its minting and reminting halted by the Terra LUNA Classic (LUNC) community. The de-pegging of the UST posed a difficult choice for the community of Terra Classic. A proposal to end the USTC-LUNA swapping mechanism was made to protect the interests of the investors. Users were able to easily swap UST and LUNA using this technique, but it has proven to be quite fatal at times of crisis. In a majority-approval vote, the Terra Classic community has decided to end the swapping system. Avoiding Future Catastrophe Moreover, this choice demonstrates the communityâ€“s dedication to restoring ecological trust and balance. The community hopes to forestall more crises and preserve the worth of its assets by halting further minting and reminting of USTC. The problems started in May of 2022 when UST, the stablecoin that underpinned Terraâ€“s financial ecosystem, de-pegged to the USD. This sudden turn of events caused a domino effect that rocked the community to its foundations. A crucial mechanism meant to ensure stability failed spectacularly when the UST price dropped. As a response to the de-pegging, a record amount of LUNA tokens were minted. The market was inundated with trillions of LUNA to maintain the value of UST. Unfortunately, this action resulted in a surplus of LUNA. The issue was exacerbated when additional LUNA tokens were minted, reducing their value and driving the price of UST further below its intended peg. Highlighted Crypto News Today:

KoinBX, The most trusted and fastest-growing crypto exchange, proudly marks its 4th anniversary as a trailblazing platform that continues to reshape the financial landscape through innovation, trust, and empowerment. Since its inception four years ago, KoinBX has been on a remarkable journey, evolving from a promising startup to a trusted and globally recognized crypto exchange. Throughout this journey, the companyâ€“s unwavering commitment to security, transparency, and user-centricity has set it apart in the ever-evolving crypto space. During these four years, KoinBX has achieved significant milestones that reflect its commitment to excellence: â€“ Diverse Crypto Portfolio: Diversified crypto portfolio boasting over 120+ carefully selected crypto assets including renowned Bitcoin (BTC) and Ethereum (ETH), stablecoins to promising altcoins. â€“ Robust Security Measures: KoinBX has continuously invested in state-of-the-art security protocols to safeguard usersâ€“ assets and information, earning trust through transparency and reliability. â€“ 24/7 Customer Support: A dedicated team is around the clock to assist users with any questions, concerns, or assistance they may need. They ensure that help is just a message or call away, fulfilling usersâ€“ needs. â€“ Active Community: KoinBXâ€“s 1.5 million+ user community has grown into a vibrant ecosystem where members collaborate, share insights, and collectively shape the future of finance. Empowering Financial Future KoinBX has always believed in the transformative power of digital assets and blockchain technology. Its mission, from day one, has been to empower individuals from all walks of life to explore and benefit from the world of cryptos.

Over the past four years, KoinBX has succeeded in fostering a diverse and vibrant community of users, including seasoned traders, newcomers, and tech enthusiasts. As KoinBX celebrates its 4th anniversary, the company remains firmly committed to its vision of democratizing access to financial opportunities. The road ahead is filled with exciting developments, including new features, partnerships, and enhanced security measures designed to elevate the user experience and broaden the horizons of financial possibilities. On the occasion, expressing his gratitude, Saravanan Pandian, Founder and CEO of KoinBX says, “Four years of KoinBX signifies not just our journey but the collective journey of our users, who have trusted us to be their gateway to the world of digital finance.” Utkarsh Tiwari, Chief Strategy Officer at KoinBX, radiated excitement for the path ahead, stating, “We are excited about the future and look forward to continuing our mission of empowerment and innovation.” Brian Kuttikat, COO of KoinBX, reinforced their unwavering commitment, affirming, “We are committed to maintaining the highest standards of security and user experience as we embark on this exciting fifth year.” KoinBX’s 4th Anniversary Mega Giveaway: Get Ready! On the celebration of its 4th anniversary, KoinBX presents an exciting celebratory giveaway of 125,000 SHIB from September 22 to September 27, 2023. Moreover, as a token of gratitude, users will be able to enjoy zero-fee trading on the top five cryptocurrencies and its 17 fiat trading pairs on the KoinBX platform. The trading pairs include Bitcoin (BTC/INR, BTC/USD), Ethereum (ETH/INR, ETH/USD, ETH/BTC), Solana (SOL/INR, SOL/USD, SOL/ETH, SOL/BTC), Ripple (XRP/INR, XRP/USD, XRP/ETH, XRP/BTC), and Polygon (MATIC/ETH, MATIC/BTC, MATIC/INR, MATIC/USD). About KoinBX KoinBX is a trusted crypto exchange that empowers individuals to explore, invest, and thrive in the world of digital assets. With a relentless commitment to transparency, user-centricity, and a passion for blockchain technology, KoinBX has become a reliable platform for crypto trading and investment. KoinBX invites its users and the crypto community to celebrate this momentous occasion and looks forward to many more years of innovation and success in the dynamic world of cryptos. - For more information, please visit: <https://koinbx.com/> Social Media Links: - Instagram: <https://www.instagram.com/koinbx/> - Facebook: <https://www.facebook.com/KoinBX/> - x/Twitter: <https://twitter.com/KoinBX> - LinkedIn: <https://www.linkedin.com/company/koinbx> - Telegram: [https://t.me/koinbx\\_discussion](https://t.me/koinbx_discussion) Disclaimer: TheNewsCrypto does not endorse any content on this page. MarketAcross, the top blockchain PR and marketing agency in the world, is excited to announce that it has partnered with Turingum, a renowned Japanese Web3 corporation that specializes in business consultancy, tokenomics design, DeFi, and smart contract development. Through this alliance, MarketAcross and Turingum will be better positioned to support the international Web3 projects’ growth in Japan and vice versa, as well as to take advantage of possibilities in the quickly changing cryptocurrency sector. By offering one another’s services and growing their clientele, Turingum and MarketAcross will be able to strengthen their brand value and seize new business prospects. Turingum will be able to collaborate with multinational corporations via MarketAcross, which will also serve to increase prospects for cryptocurrency initiatives looking to access the Japanese market. For the Japanese initiatives, MarketAcross will have more access to PR and marketing possibilities and create a long-term presence in Asia. Together, they will provide companies the necessary knowledge and resources to decide on their Web3 approach when entering a new market. While its primary business is helping token-related initiatives, Turingum has been offering Web3 business consulting services to Japanese businesses. Through the partnership, customers of Turingum will have access to the PR and marketing know-how of the MarketAcross team, which has assisted in scaling several of the biggest exchanges and blockchain initiatives in the world, including Binance, Polkadot, Solana, Polygon, Crypto.com, Huobi, and eToro. MarketAcross’s experience in PR, content marketing, the brand’s image, social promotions, influencer outreach (Kol), SEO, community development, and other areas may be used by Japanese projects that want to go worldwide. Due to its tight collaboration with Astar Network, Japan’s top public blockchain, MarketAcross is firmly rooted in the Web3 ecosystem of the nation. Additionally, earlier this year, it served as the official media partner for WebX and IVS Crypto, two of the major Web3 events in Japan. MarketAcross attracted eminent speakers and assisted in raising the visibility of these important events throughout the globe by managing the pre- and post-event marketing and PR activities for WebX and IVS Crypto. A substantial market for international Web3 projects has formed in Japan. Moreover, Japan has included Web3 into its national policy that promotes blockchain usage while placing a priority on investor safety at a time when the US and other Western countries are finding it difficult to offer regulatory certainty. The Japanese Prime Minister Fumio Kishida restated his commitment to enhancing the environment for using Web3 tokens at the WebX conference in July, acknowledging the importance of Web3 in determining the nation’s digital future.

- The Stoner Cats’ floor value was about 0.0189 ether until the SEC stepped in. - There are 10,420 Stoner Cat NFTs in total, which were originally sold for 0.35 ETH apiece. The Stoner Cats NFT collection is based on an animated series in which a group of cats and an old lady spend their time chilling out while high on cannabis. Seth MacFarlane from “Family Guy,” Chris Rock, and Jane Fonda all featured in the series, which was created by prominent celebrities. Mila Kunis and Ashton Kutcher. Based on data collected by cryptoslam.io, secondary sales of Stoner Cats have brought in \$28.16 million since its inception in July 2021. There are 10,420 Stoner Cat NFTs in total, which were originally sold for 0.35 ETH apiece. There have been 9,091 purchasers of Stoner Cat NFTs since July 2021, and their average holding time is 10.72 days. One address (0xfc9) of the 3,000-5,000 holders has 451 NFTs, or 4.33 percent of the Stoner Cats total. Moreover, the address 0xcoco.eth has 350 Stoner Cats, or 3.36 percent of the total supply. SEC Intervention After the SEC took action against the Stoner Cats NFT initiative, the digital collection’s floor value and trading volume skyrocketed. opensea.io and nftpricefloor.com report that at one point the floor price was equal to 0.084 ETH, or around \$136. The Stoner Cats’ floor value was about 0.0189 ether (equal to approx. \$30.73) until the SEC stepped in. The SEC levied \$1 million penalties against the cartoon series Stoner Cats, starring Mila Kunis and Ashton Kutcher, for its unregistered marketing of crypto asset securities. - The layer-2 network processed more transactions than Optimism and Arbitrum combined. - Despite the success, the layer-2 network remains behind prominent layer-2 networks. Statistics from blockchain analytics provider BaseScan shows that Layer-2 Network Base broke its previous record for daily transactions set on launch in August. Base reached 1.88M transactions on September 14, exceeding the earlier record of 1.41M transactions reached on August 21. The layer-2 network processed more transactions than Optimism and Arbitrum combined (878,000) in a single day. Despite the success, the layer-2 network remains behind other, more well-known blockchains like as Polygon and BNB Smart Chain (BSC). On the same day, BSC processed 3.1 million transactions, whereas Polygon processed 2.1 million. Strong Backing by Crypto Community Base did not have as many users as it did on August 21, when it set a new record for the most transactions in a day and also exceeded 136,000 daily active users. Data collected by Dune Analytics on September 14 revealed that Base had just around 86,000 DAUs. On August 9, Base was released to the public, enabling its users to conduct a wide variety of tasks that were previously only possible on layer-2 networks, such as bridging tokens, swapping tokens to create liquidity, minting NFTs, and more. The crypto community as a whole has embraced the network from its debut. More than 268,000 individual wallets on the layer-2 network created over 700,000 NFTs on September 6. More than \$242 million in cryptos were transferred using the blockchain in its first two weeks, with 130,000 different wallets making use of it on a daily basis. Highlighted Crypto News Today:

- Kroll has guaranteed that neither FTX passwords nor KYC information were exposed. - FTX has verified that new security mechanisms have been implemented. After a serious cyberattack, FTX has finally fixed its claims site. Kroll, FTX’s third-party agency managing creditor claims, was the planned victim. However, FTX responded quickly, freezing impacted user accounts as a preventative action to guarantee the safety of its customers. Interestingly, a technique known as “SIM swapping” was the root of the security flaw. Information on BlockFi, FTX, and Genesis claimants was compromised in this assault. In spite of this disturbing fact, Kroll has guaranteed that neither FTX passwords nor KYC information were exposed. In addition, FTX has made it known that it plans to improve safety. FTX has verified that new security mechanisms have been implemented now that the portal is live. Users might feel more at ease when using the system. Liquidation Likely in addition to the safety measures, Delaware District Judge John Dorsey’s permission has been drawing a lot of attention. By doing so, FTX may liquidate a significant percentage of its crypto holdings “likely in the billions” to pay back its debtors. A financial adviser is designated in the authorized plan to manage token sales. The result is a weekly limit of \$100 million for the vast majority of coins. Token per token basis, the limit might be raised to \$200 million. In addition, the U.S. Trustee’s office must be notified 10 days in advance of any Bitcoin or Ether transactions. Additionally, FTX intends to hedge Bitcoin and Ether to protect against the volatile crypto market. This tactical shift has been made to mitigate the effects of price volatility on sales revenues. Highlighted Crypto News Today: Billionaire Investor Mark Cuban’s Crypto Wallet Drained of \$870k

- Cuban verified that he had indeed logged into MetaMask for the first time in months. - On September 15, a blockchain investigator Wazz initially noticed the exploit. Mark Cuban, billionaire businessman, allegedly had one of his hot wallets emptied of about \$870k worth of cryptocurrency. On September 15 at about 8 pm UTC, a blockchain investigator Wazz initially noticed the exploit after drawing attention to unusual activity in one of Cuban’s wallets that he hadn’t used in over five months. Etherscan’s transaction log shows that a large number of tokens were unexpectedly removed from the wallet within a short period of 10 minutes. These tokens included USDC, USD, and Lido Staked Ether (stETH). Wazz suspected Cuban was merely shuffling funds when he saw that another \$2 million in USDC had been withdrawn and transferred to a separate wallet. Waiting to Strike A few hours later, though, Cuban verified that he had indeed logged into MetaMask for the first time in months, and he made some oblique references to the possibility that a hacker had been waiting to strike. Cuban also confirmed that he was the one who transferred \$2 million USDC by saying that he had moved any leftover funds to Coinbase Custody. Community users were eager to point out that the hack was probably Cuban’s fault, rather than the result of hackers monitoring his online behavior. Since the funds were sent out of the wallet without going via any intermediaries, some have speculated that Cuban may have signed a malicious transaction by accident, while others have claimed that his private key was hacked. Highlighted Crypto News Today:

- If the price manages to go past the \$28k resistance level, then it will likely test \$31,480. - Crypto Michael, an analyst, recently predicted an upcoming price surge for Bitcoin. Bitcoin and other cryptocurrencies were lately facing severe downtrend due to fears that FTX may unload its cryptocurrency holdings. This selling pressure resulted in Bitcoin drop terribly and a general decline throughout the cryptocurrency market. Fear of selling pressure from FTX subsided, however, and BTC prices climbed back over \$26,500, breaking the key resistance level of \$25,690. Even if there were signs that inflation was more tenacious than predicted, Bitcoin and other conventional markets had ignored these news the day before and continued to rise. Crypto Michael, an analyst, recently made a video in which he predicted an upcoming price surge for Bitcoin. Fresh Rally Likely? Moreover, the expert in the video seems to think Bitcoin is starting to show some strength and is getting ready to start an upward trend. Referencing past price movement, in particular, the analyst predicted that Bitcoin’s price may increase to \$45,000 by the time of the halving the following year. The current Bitcoin price is \$26,651 at the time of this writing as per data from CMC. Midway through June, the support level at \$25,000 served as a springboard for BTC’s subsequent ascent to an annual high of \$31,700. If the price manages to go past the \$28,000 resistance level, then it will likely test the July high resistance level at \$31,480. Post the breakout, the price will likely start a fresh rally all the way till \$46,700 mark. Contrarily, if the price breaks below the \$25,450 support level then it will likely test the \$25,000 key support level.

- U.S. Bankruptcy Judge Dorsey approves FTX’s crypto asset liquidation, which holds \$3.4 billion. - FTX has received permission to sell up to \$100 million in cryptocurrency per week. Bankrupt cryptocurrency exchange FTX has received approval from a U.S. court to liquidate its cryptocurrency holdings. This move aims to facilitate the repayment of customers in U.S. dollars and reduce exposure to price volatility in the crypto markets. The U.S. Bankruptcy Judge John Dorsey’s decision allows FTX to sell up to \$100 million worth of cryptocurrency per week. Further, FTX, which disclosed holdings exceeding \$3.4 billion, has been granted the ability to sell, stake, and hedge its crypto assets and generate passive income from assets like bitcoin and ether. During the hearing, Judge Dorsey overruled concerns about potential market disruptions, as per the CoinDesk report. Also, FTX had emphasized its awareness of the risks associated with its liquidation efforts and had even enlisted U.S. crypto firm Cayan as an investment advisor to address these concerns. Moreover, FTX’s holdings include \$1.18 billion in Solana (SOL), worth about 10% of the token’s total supply. As well as around \$560 million in bitcoin (BTC). The remaining holdings consist of less-known, illiquid tokens. This court approval signifies a crucial step for FTX in its efforts to navigate bankruptcy proceedings and return funds to its users. Will the liquidation affect the crypto market? Tweet to us at @TheNewsCrypto and let us know your thoughts.

- CoinEx suffered a hack on September 12, with losses estimated at nearly \$54 million. - Approximately \$5.98M in BTC and \$18M in ETH were drained from CoinEx's hot wallet. - The exchange detected these anomalous withdrawals through its Risk Control System. CoinEx, a prominent cryptocurrency exchange, found itself in the spotlight on September 12 amidst suspicions of a security breach that potentially cost them close to a staggering \$53.9 million. The incident sent shockwaves through the crypto community, as large withdrawals to an unfamiliar address raised red flags. On Tuesday, at 1:21 PM UTC, around 4,947 ETH, worth \$7.9 million, were swiftly transferred from a well-known CoinEx hot wallet to an Ethereum (ETH) account. What raised eyebrows even further was the recipient account's complete absence of any prior transaction history. Following this mysterious transfer, a massive volume of tokens embarked on a one-way journey from CoinEx's hot wallet to the same enigmatic address. This flurry of activity was sufficient to catch the attention of numerous blockchain security companies that promptly labeled the withdrawals as suspicious. Blockchain security platform Slow Mist estimated a loss of nearly \$53.96 million worth of cryptocurrencies. The exploit included Bitcoin (BTC), Ethereum (ETH), XRP, Polygon (MATIC), Solana (SOL), TRON (TRX), Binance Coin (BNB), Bitcoin Cash (BCH) and others on the stolen list. Notably, CryptoQuant's director of research, Julio Moreno, expressed his concerns about the unusual behavior of CoinEx's wallet. He highlighted that the wallet's Ether reserves had dwindled to nearly zero ETH, a startling revelation. CoinEx Confirms Its Stance In response to the brewing crisis, CoinEx took to Twitter at 5:25 PM UTC on Tuesday to address the issue. They revealed that their Risk Control System had detected "anomalous withdrawals" from multiple hot wallet addresses that are responsible for safeguarding the exchange's assets. To tackle this critical situation head-on, CoinEx assembled a "special investigative team" to investigate the matter and ascertain the extent of the breach. Urgent Notice: Security Incident on CoinEx "Immediate Actions Underway" CoinEx Global (@coinexcom) September 12, 2023 On September 12, 2023, our Risk Control System detected anomalous withdrawals from several hot wallet addresses used to store CoinEx's exchange assets. Promptly recognizing the gravity of the situation, we re-assured concerned users, CoinEx emphasized that the withdrawn cryptocurrency represents only a fraction of their overall reserves. They pledged to compensate users for any losses incurred due to this breach, promising a full 100% reimbursement.

- NFTScan partners with TON to unveil the NFT explorer, TON NFTScan. - Over 1.1 million NFTs and 9,682 collections were issued in the TON ecosystem. NFTScan, a multi-chain NFT data infrastructure service provider, launched TON NFTScan, an all-inclusive NFT explorer within the TON (The Open Network) ecosystem on September 12. Welcome to the #TON Ecosystem @nftscan.com! ðŸŽŒ https://t.co/aMRWug7odi " TON ðŸŽŒ (@ton\_blockchain) September 12, 2023 This announcement marks a milestone for NFTScan as they expand their support to the 18th blockchain, the TON network. Notable chains such as Bitcoin, Ethereum, Solana, Avalanche, Arbitrum, Optimism, Aptos, and Base are part of the NFTScan ecosystem. Through this integration with TON, NFTScan bolsters its mission of enabling users to access concise and efficient NFT data searches. And query services across various blockchain networks. Analyzing Statistics Using TON NFTScan The data from the TON NFTScan revealed impressive statistics regarding the TON ecosystem. According to the explorer, a total of 1,140,128 NFT assets have been minted and 9,682 collections have been created on the TON blockchain, as of September 12. Remarkably, the advanced L1 network recorded a staggering 2,710,156 on-chain transactions, involving 717,613 wallet addresses actively trading NFTs. Meanwhile, through various features, the TON NFTScan Explorer aims to give users detailed on-chain data, including trading, minting, and ranking. And gas fees for any NFT asset issued on the TON network. Additionally, users can easily access transaction histories for specific wallet addresses. Moreover, The community considers the launch of network-exclusive explorers as a significant step forward in boosting transparency within the NFT space. As the NFT market continues to evolve and expand, these analytical platforms play a crucial role in providing users with the tools they need to navigate this cutting-edge digital frontier.

MetaMask Snaps will capture the full extent of the innovation happening in web3 by enabling third-party developers to bring their specialist expertise to building for the MetaMask platform. This permissionless innovation program is poised to transform the manner in which users engage with MetaMask worldwide, presenting them with unparalleled control and customization possibilities. In the initial phases, the priority is to involve adept MetaMask users in trying out MetaMask Snaps and gathering their input while the MetaMask team continues its development journey towards realizing MetaMask Snaps' ultimate vision. FORT WORTH, Texas "BUSINESS WIRE" "Today, Consensys, a leading blockchain and web3 software company, announces the launch of the first iteration of MetaMask Snaps to the public. MetaMask Snaps is set to revolutionize the way users interact with MetaMask, the world's leading self-custody web3 platform, offering them unprecedented control and customization. Snaps are new features and functionality, created by third-party developers, that MetaMask users worldwide can install directly into their wallet. Previously, MetaMask features were exclusively developed by MetaMask developers employed by Consensys. The initial rollout will include 34 Snaps that provide utility around transaction insights, interoperability with non-EVM blockchains like Bitcoin, and notifications. The public launch of MetaMask Snaps marks a pivotal moment in the evolution of MetaMask as a wallet. By providing users with a new set of tools developed by third-party developers across the globe, MetaMask Snaps will empower individuals to shape their web3 experience according to their unique needs and preferences. Adept MetaMask users can access information about how to install the first available Snaps from the official website. The initial iterations will focus on getting experienced MetaMask users to try out MetaMask Snaps and collecting their feedback, while the MetaMask team continues its development journey towards realizing its ultimate vision. Initial Snaps rollout: transaction insights, interoperability, and notifications As the initial phase of realizing this vision, MetaMask Snaps will launch with a set of 34 Snaps. These Snaps went through security audits and were manually included in the allowlist by the MetaMask team. MetaMask will persist in auditing and incorporating Snaps into the allowlist until the transition to a permissionless system is achieved, eliminating the need for this intermediate step. These first Snaps unlock unique use cases that include: - Transaction Insights: Enhancing users' web3 journey with clearer transaction insights, empowering them to identify potential security concerns and malicious smart contracts before finalizing a transaction. - Interoperability: MetaMask Snaps broadens web3 usage to encompass non-EVM blockchains such as Bitcoin, Solana, Cosmos, and EVM Layer 2 solutions like StarkNet. - Notifications: Keeping users informed and engaged with web3-specific notifications directly in MetaMask, ensuring you never miss an essential update or event. A full list of Snaps is available on the MetaMask Snaps Directory. MetaMask's Vision of Permissionless Innovation In 2022, MetaMask surpassed 100 million users. The web3 ecosystem has witnessed rapid growth, leading to new diverse use cases. Innovations that provide a personalized user experience continue to be crucial to eliminating barriers to entry and facilitating the growth of the web3 ecosystem, with the ultimate goal of onboarding 1 billion users. While its origins are rooted in Ethereum, MetaMask holds the conviction that innovation occurs in many domains across the web3 ecosystem. With Snaps, the leading web3 wallet hopes to capture a fuller extent of the innovation happening in web3 by enabling third-party developers to bring their specialist expertise to building for the platform. MetaMask envisions an open, permissionless system of innovation where any web3 developer can build a Snap and make it available to users. A platform for the community, built by the community. "The most important part of the Snaps story to me is that we now have a system at the heart of our wallet that allows us to step back and humbly invite the community to provide their own solutions to the hardest problems. I have some big ideas and opinions about what the future of transaction safety could look like, but that's no reason for it to be the only idea being validated. We're helping usher in a new paradigm of distributed computing, and there are a lot of questions that need creative solutions, and so I still believe that lowering the barrier and cost to trying new things can be an important accelerator to finding good answers to those hard problems. This isn't about accelerating technology for its own sake, it's about accelerating the process of finding improvements in the ways we do things," said Dan Finlay, Co-founder of MetaMask and Chief Ethics Officer at Consensys. Third-party developers building Snaps can independently ship and maintain their creations, separate from MetaMask. They maintain ownership of their code and establish a direct connection with their Snap's users. In the long-term, MetaMask users will benefit from the convenience and versatility of countless Snaps tailored for various use cases across multiple protocols. These all these features that haven't been imagined yet, developed at a pace MetaMask could never have achieved. It's our desire to build MetaMask Snaps as an open platform for innovation and we do not charge developers for publishing Snaps to this platform. We believe that permissionless innovation is a cornerstone of a decentralized system "no gatekeepers. Innovation thrives at the pace of the network, not just within an individual development team at Consensys," emphasized Christian Montoya, Product Lead for MetaMask Snaps. Anticipating the future and what lies ahead, MetaMask has engaged in discussions with over 150 developers in the past few months to broaden the array of Snaps. These developers come from various regions around the world, including Africa, Asia, Europe, LATAM and the US. About Consensys Consensys is the leading blockchain and web3 software company. Since 2014, Consensys has been at the forefront of innovation, pioneering technological developments within the web3 ecosystem. Through our product suite, including the MetaMask platform, Infura, Linea, Diligence, and our NFT platform, we have become the trusted collaborator for users, creators, and developers on their path to build and belong in the world they want to see. Whether building a dapp, an NFT collection, a portfolio, or a better future, the instinct to build is universal! Consensys inspires and champions the builder instinct in everyone by making web3 universally easy to use and develop on. To explore our products and solutions, visit https://consensys.io/. Contacts

- FTX's plans to sell \$3.4 billion worth of its crypto holdings, including SOL, ETH, and BTC. - FTX aims to sell \$200 million worth of crypto assets weekly. - ApeCoin would face a potential impact on Sep 17, with 11% of outstanding tokens set to unlock. The cryptocurrency market has once again experienced a significant surge in volatility following the news of FTX's impending sale of its crypto holdings, totaling \$3.4 billion. The move has placed immense pressure on FTX's major holdings, including Solana (SOL), Ethereum (ETH), and Bitcoin (BTC). According to recent filings, a court hearing scheduled for Wednesday will evaluate a proposal to initiate token sales as part of the creditor repayment plan. Altcoints at Risk FTX intends to liquidate at least \$3.4 billion worth of cryptocurrencies to facilitate the return of fiat currency to its users instead of tokens. This action is expected to have a prolonged impact on the crypto market. Throughout the remainder of the year, as noted by Matrixport, a crypto services provider. Matrixport has pointed out that FTX has intention to sell \$200 million worth of crypto assets each week. Notably, FTX holds a substantial amount of Solana with close to \$1.2 billion in SOL. FTX's crypto asset inventory also includes \$560 million in Bitcoin, the largest cryptocurrency, and \$192 million in Ether, the second-largest cryptocurrency. FTX isn't the sole major seller in the crypto market at the moment. VC Investors are also facing significant pressure to return funds to their investors, leading them to become substantial sellers of altcoins. Markus Thielen, head of research, emphasized the importance of these VC funds in shaping market dynamics. The upcoming unlock of ApeCoin (APE), another crypto held by VC investors, scheduled for September 17. This event will account for 11% of outstanding APE tokens, potentially further impacting prices following a 4.2% unlock on August 17, which resulted in a 24% price drop. On the technical front, Bitcoin has formed a death cross, indicating increased volatility. This occurs when the 50-day short-term moving average breaches the 200-day short-term moving average, potentially leading to further turbulence in BTC's price in the coming days. Ethereum has also faced challenges, hitting a five-month low on early September 12 and experiencing a 15% drop to \$1,533. Despite these challenges, at the time of writing, the crypto market is showing signs of a slight recovery. Bitcoin's price has risen by about 2% to \$26,154, Ethereum (ETH) has surged by 1.4% to \$1,609. And Solana (SOL) has climbed over 4% to \$18.34.

- On September 7th, LBRY filed an appeal with the U.S. District Court. - Jeremy Kauffman, owner of LBRY, was likewise unhappy with the earlier verdict. Following its notice of appeal to the United States SEC, blockchain-based file-sharing and payment network LBRY received support from the XRP community. The abrupt announcement from LBRY that it will appeal the final ruling in favor of the U.S. SEC sparked widespread interest in the cryptocurrency space. On September 7th, LBRY filed an appeal with the U.S. District Court for the District of New Hampshire, challenging the final decision made on July 11th. The court agreed with the SEC that the company had illegally offered securities without first registering them. Community Backing LBRY decided to take legal route in the US SEC lawsuit after the verdict had been out for two months. LBRY has already announced that it would cease all activities, leaving the future of its LBC token up to the community. Jeremy Kauffman, owner of LBRY, was likewise unhappy with the verdict, but favorable decisions in Ripple and Grayscale have swung the pendulum back. The price of LBC spiked on the appeal news and is up 40% in the last 7 days as per data from CMC. Even after two months, Jeremy Kauffman didn't say why he decided to appeal, however he did share postings of encouragement from the XRP community. Many in the XRP community were hoping for a victory against the U.S. SEC after hearing about LBRY. Several prominent members of the community, including pro-XRP attorney John E. Deaton, have voiced their opinions on the LBRY filing. The crypto community is at a tipping point, and they need some remedy to stop the SEC from acting irrationally against the sector. - Base has said that it would keep an eye out for any additional problems in the chain. - Nonetheless, there were still mainnet RPC bugs that needed fixing. Since its public release on August 9, Ethereum layer-2 network Base by Coinbase has experienced its first significant outage. No new blocks were created on the Base chain for around 45 minutes on September 5. The stalled block production was initially noticed by its developers at 9:36 pm UTC. However, production of blocks has started back up again. It found the problem within around 20 minutes and began implementing a repair. At 22:09 UTC, the team announced that the problem had been resolved. Not Battle Tested Base has said that it would keep an eye out for any additional problems in the chain. Collective Shift's director of research Matt Willemsen raised some valid worries about utilizing Ethereum layer 2 networks and cautioned that they haven't been as battle tested as Ethereum's mainnet. Nonetheless, there were still mainnet RPC bugs that needed fixing. Approximately one and a half hours after the outage began, at 23:06 UTC, the team said, "We have verified recovery of network health and RPC APIs." The crew finally reported the situation some hours later, placing blame on internal infrastructure. It went on to say that the problem had been found and fixed, so that no funds were in jeopardy. Since the launch of Base Mainnet in mid-July, this is the first significant disruption to occur. Base, like Solana, was marketed as an alternative to Ethereum. Despite this slight setback, Base's expansion since its introduction has been remarkable. Highlighted Crypto News Today:

Following a Crypto.com issuer pilot, Visa expands stablecoin settlement capabilities with Circle's USDC, adding pilot programs with merchant acquirers Worldpay and Nuvei, and utilizing the Solana blockchain. SAN FRANCISCO (BUSINESS WIRE) – Visa (NYSE: V), a global leader in payments, announced its next step in modernizing cross-border money movement. Visa is expanding its stablecoin settlement capabilities to the high-performing Solana blockchain and is working with merchant acquirers Worldpay and Nuvei. Through live pilots with issuers and acquirers, Visa has already moved millions of USDC between its partners over the Solana and Ethereum blockchain networks to settle fiat-denominated payments authorized over VisaNet. When consumers use Visa cards to make a purchase at any of the millions of Visa-accepting merchant locations around the world, they can experience the convenience of nearly instant payment authorizations. But what they don't see is that the funds used for their purchase need to move between their bank (the issuer) and the merchant's bank (the acquirer). This is where Visa's treasury and settlement systems enable the clearing, settlement and movement of billions in transactions a day, making sure the correct amount in the preferred currency is received from the issuer and sent to the acquirer. This process happens seamlessly between nearly 15K financial institutions and across more than 25 currencies globally. By leveraging stablecoins like USDC and global blockchain networks like Solana and Ethereum, we're helping to improve the speed of cross-border settlement and providing a modern option for our clients to easily send or receive funds from Visa's treasury," said Cuy Sheffield, Head of Crypto, Visa. "Visa is committed to being on the forefront of digital currency and blockchain innovation and leveraging these new technologies to help improve the way we move money." Building on the Crypto.com Pilot In 2021, Visa began testing how USDC could be used inside its treasury operations which led to a pilot with Crypto.com, making Visa one of the first major payments networks to test stablecoin settlement on the issuance side. This work led to a successful pilot leveraging USDC and the Ethereum blockchain to receive payments from Crypto.com for cross-border volume on their live card program in Australia. Crypto.com now uses USDC to fulfill its settlement obligations on the Visa card in Australia and intends to roll out this capability in other markets. Before that pilot, settlement for cross-border purchases made on Crypto.com Visa cards required a days-long currency conversion process and costly international wire transfers. Now, Crypto.com can send USDC cross-border over the Ethereum blockchain directly to a Visa treasury managed Circle account which helps reduce the time and complexity of international wire transfers. "We are excited about the USDC use cases Visa and its partners are driving to create fundamental blockchain innovation," said Jeremy Allaire, Co-founder and CEO, Circle. "Circle built USDC to provide a functional digital dollar that could move at the speed of the internet to facilitate secure, reliable payments. Expanding the pilot exemplifies how pairing USDC with Visa's innovation opens up the future of payments, commerce and financial applications." Moving from Issuers to Acquirers While Visa's treasury operation continues to test receiving funds onchain from multiple issuer partners, with these new settlement options Visa can send funds onchain to acquirers like Worldpay and Nuvei to help speed up settlement times for their merchants. Worldpay and Nuvei are global acquirers serving merchants worldwide from a diverse range of sectors. This includes a growing number of merchants interacting with the blockchain and crypto economy including on-ramp providers, games, and NFT marketplaces who may prefer to receive stablecoins over traditional fiat currencies for the card payments they accept. Using Visa's own Circle account, Visa can now manage settlement payouts in USDC to Worldpay and Nuvei who can then route these payments in USDC to their end merchants. Adding Support for the Solana Blockchain Network As Visa looked to expand this capability to additional clients, there has been significant demand to leverage newer, high performance blockchains that can send and receive stablecoins with higher speed and lower costs. For these reasons, Visa chose to add support for Solana as a high performance blockchain that its partners can choose to send or receive USDC settlement payments. This makes Visa one of the first major payments companies at scale to directly utilize Solana for live settlement payments between its clients. The Solana blockchain sees 400 millisecond block times, averages 400 transactions per second (TPS) and typically surges to more than 2K TPS1 across a variety of use cases during periods of peak demand. Forging New Partnerships With an eye towards the future in an increasingly digital financial landscape, Visa is forging ahead with new partnerships and embracing the innovative potential of digital currencies. Visa's work with Worldpay and Nuvei represents a significant stride in this direction. "Visa's USDC settlement capability enables Worldpay to bring more of our treasury operations in-house and allows us to offer merchants more choices for receiving funds," said Jim Johnson, President of Worldpay Merchant Solutions, FIS. "Diversifying funding options and increasing flexibility is critical to serving the changing needs of global merchants in today's rapidly evolving commerce landscape." "Stablecoins like USDC are cutting edge payments technology that can enable online businesses around the world to accelerate their growth," said Philip Fayer, Chair and CEO, Nuvei. "Optimizing cross-border transactions is only one use case where stablecoins can benefit businesses. As a leading global payments company, we are constantly focused on innovation, and we're excited to work with Visa to bring these capabilities to our partners." About Visa Visa (NYSE: V) is a world leader in digital payments, facilitating transactions between consumers, merchants, financial institutions and government entities across more than 200 countries and territories. Our mission is to connect the world through the most innovative, convenient, reliable and secure payments network, enabling individuals, businesses and economies to thrive. We believe that economies that include everyone everywhere uplift everyone everywhere and see access as foundational to the future of money movement. - Assets held in liquid staking services increased by a remarkable 292% to \$20 billion. - Ethereum adopted liquid staking as part of network updates during the past year. Bloomberg says that one subset of the crypto industry, "liquid staking," has seen a stunning revival, almost reaching its all-time high. Assets held in liquid staking services increased by a remarkable 292% to \$20 billion, recovering from a crisis in June 2022 when the larger digital-asset market was in an extensive decline. Due to this meteoric rise, liquid staking has surpassed lending as the most important use case in DeFi. When the TerraUSD stablecoin failed and the crypto market dropped by \$2 trillion in value, liquid staking providers like Lido and Rocket Pool saw their asset values drop from a high of over \$21 billion in April of the previous year. Liquid Staking Protocols Although the liquid staking industry has been on the rise, the prices of key tokens and interest in the majority of DeFi services are still much lower than their respective records established in 2021 and 2022, according to Bloomberg. Since Ethereum adopted liquid staking as part of network updates during the past year, its popularity has skyrocketed. Token holders that validate transactions on the Ethereum network now get a bonus of 4% in equivalent each year. Competing blockchains such as Solana and Cardano now also provide a stake for rewards. Direct participation in staking often requires high-level computing expertise, expensive gear, and large financial outlays. However, the procedure has been made easier by the introduction of liquid staking protocols, which accept lesser commitments and provide users with a version of the pledged coins that may be used in other transactions. Highlighted Crypto News Today: Ethereum Fails to Gain Momentum as Whales Move 300K ETH to Coinbase

- LSE Group has shared that it is planning to introduce a blockchain-based platform. - It became the first exchange to host traditional finance on the digital asset platform. The London Stock Exchange (LSE) Group has shared that it is planning to introduce a blockchain-based platform to offer traditional financial assets as a part of its digital business plans. This will make it the first exchange to host traditional finance on the digital asset platform. On September 4, the Financial Times released a report announcing that the London Stock Exchange plans to create a blockchain-based platform for traditional financial assets. According to the report, using blockchain technology would make the process easier, smoother, cheaper, and more transparent. Murray Roos, LSE Group's head of capital markets, has stated that the company's plans for a blockchain-based platform have been a long time in the making and will take time to implement. The report also mentioned that the exchange did not build anything around the cryptocurrencies. However, the company will use blockchain technology to increase the efficiency of holding, buying, and selling traditional assets. And also noted the need for regulation around the new blockchain-based trading options. Roos also added that LSE Group will wait until investors are ready and the public blockchain is good enough before proceeding with the project. Moreover, with the new project, LSE Group became the first major stock exchange to offer traditional assets on a blockchain-based platform. The plans will involve a separate legal entity to capture the digital marketer's interest in the LSEG. This also comes at the time of the UK's drive to promote global asset trading and innovative ideas. At the same time, other traditional financial infrastructure plans include integrating blockchain technology.

- The Block reports a 5.7% monthly decline in Ethereum trading volume. - The ETH price has rebounded after testing the \$1,600 threshold. There has been a notable uptick in the number of transactions made to distinct addresses on the Ethereum network, with the daily peak hitting 467,000. This notable uptick is a potent sign of growing prominence. Investors have been keeping a close eye on Ethereum network activity since the first Ethereum-based ETF applications were announced on June 16th. All eyes are now on the U.S SEC over the approval of ETF proposals. Moreover, according to data provided by Dune Analytics, the total value of ETH staked increased by a whopping 95% over the course of a year, from \$22 billion to \$41.6 billion. Lido currently controls 32.37 percent of all Ethereum that has been staked, more than four times as much as the next largest player, Coinbase, which controls 8.7 percent. Furthermore, after MakerDAO said they would switch to rival blockchain Solana, Ethereum co-founder Vitalik Buterin liquidated the last 500 MKR tokens he owned. Breakout Likely According to CMC, the price of ETH is \$1638 and is down 0.18% in the last 24 hours, with the trading volume up 21%. Moreover, The Block reports a 5.7% monthly decline in Ethereum trading volume. The ETH price has rebounded after testing the \$1,600 threshold. At the time of writing the price is consolidating in a tight range. If it manages to break the key \$1600 support level then it might decline all the way till \$1430 range. In order to start an upward rally, the price needs to clearly break above the \$1650 level. Post which it will likely test the \$1700 mark.

- The swapped 350 ETH was then transferred to the address 0x3f6. - The sale could also be related to the recent statement by MakerDAO founder. Prominent independent reporter with the Twitter handle @wublockchain revealed an unexpected sale by Ethereum co-founder Vitalik Buterin: he swapped 500 MKR tokens for 350 ETH, a deal worth around \$581,000. The swapped 350 ETH was then transferred to the address 0x3f6. Buterin's sale of MKR tokens, the first in two years, has raised suspicions in the cryptocurrency industry. This news follows a short spike in the trading price of MKR tokens, which some speculate may have been caused by whale activity. There has been a notable uptick in MakerDAO's core functionality. Nonetheless, the MakerDAO community's statement on August 28 announcing the establishment of SubDAOs in South Korea looks to be a major driver behind the increasing price of MKR tokens. This method has generated a lot of buzz in the blockchain space as it seeks to unleash DAOs' full potential. Migration from Ethereum As investors and enthusiasts wonder what prompted Vitalik to sell his MKR tokens for the first time in two years, the market as a whole may have corrected, which might explain the decline in value. Moreover, the sale could also be related to the recent statement by MakerDAO founder. The fifth and last phase of the Endgame was described by MakerDAO creator Rune Christensen in a blog post for the MakerDAO community recently. This step entails rebuilding the MakerDAO protocol on a new, separate blockchain. Despite the fact that MakerDAO has been built on Ethereum from day one. Instead of utilizing the Ethereum Virtual Machine (EVM), the next native chain will be built on a fork of the Solana codebase. Highlighted Crypto News Today: Token Transfers by Insolvent FTX Raises Questions Amid Uncertainty

Douro Labs Joins Network to Work on Perseus Upgrade as well as Permissionless Mainnet with Token-Led Governance PORTO, Portugal (BUSINESS WIRE) – Douro Labs, a software development company dedicated to advancing the Pyth Network, officially launches today and is excited to be joining

the network as the latest core contributor. The Pyth Data Association and the Pyth Network's community includes a vast network of data contributors including top trading firms, leading exchanges, and premier crypto companies globally including Cboe Global Markets, Optiver, IMC, Flow Traders, OKX, Bybit, Wintermute, OCP Capital, Auros, Susquehanna International Group, and LMAX. The Douro Labs entity will initially work to implement the Perseus Upgrade and bring the network into a permissionless mainnet with token-led governance for the fall of 2023. Pyth Network is the largest first-party oracle for financial data. Oracles are programmatic data feeds that bring off-chain data on-chain for smart contracts to use. They are an essential component of decentralized finance (DeFi). The Pyth Network provides low-latency, high-fidelity, and tamper-resistant price data feeds directly to blockchains through a vast network of first-party data providers. We are thrilled to welcome Douro Labs as the newest contributor to the Pyth Network, said Marc Tillement, Director at Pyth Data Association. The Pyth Data Association was formed with a mission to create the largest, most robust financial data marketplace for decentralized finance to build on. Thanks to a diversity of contributors and a growing ecosystem of users, the Pyth Network has quickly become the largest first-party oracle network. Douro Labs was formed by long-time Pyth Network contributors Mike Cahill, Jayant Krishnamurthy, and Ciaran Cronin in July 2023. The company employs close to 20 individuals who previously worked at firms such as Goldman Sachs, Jump Crypto, BNP Paribas, Amazon Web Services and Chorus One. The company is focused on contributing alongside other data providers and building developer-focused oracle tooling and core protocol infrastructure. The Pyth Network is the fastest growing decentralized oracle and is already becoming the go-to solution for modern DeFi applications that need cheap, lightning-fast, ultra-accurate price information, and is accelerating the growth of all decentralized applications. The network's continued growth and lifting up the next generation of DeFi apps that are building new tools and experiences that simply aren't possible on legacy oracle infrastructure. As one of the founding institutional data providers on the Pyth Network, we are pleased to see the formation of Douro Labs as a dedicated blockchain infrastructure company, said David Mercer, CEO of LMAX Group. We look forward to supporting Douro Labs as it accelerates the development of this transformative and fundamental building block of the new financial infrastructure for both DeFi and TradFi. This expansion of capability underscores the value of democratizing the distribution of readily available, real-time and verifiable market data. First-generation oracles rely on networks of third-party operators to source and aggregate pricing data, which is typically achieved through unauthorized scraping. Pyth Network's model eliminates slow, unreliable third-party data aggregators and replaces them with fast, first-party data providers, such as trading firms, exchanges and brokerages. Auros is thrilled to see the formation of Douro Labs, which furthers the mission of Pyth Network to democratize high-fidelity market data for all blockchain participants. The Auros team is a proud supporter of Pyth's vision, added Ben Roth, co-founder and CIO of Auros. Together with the talented individuals at Douro Labs, we are committed to contributing to the advancement of Pyth's decentralized oracle solutions and the growth of the blockchain and Web3 ecosystem. The Pyth Network supports more than 300 sub-second price feeds across major asset classes including digital assets, equities, ETFs, FX and commodities. Additionally, over 180 DeFi and CeFi applications use the Pyth Network, including projects like Synthetix, Venus, Ribbon Finance, Vela Exchange, and Solend, as do more than 30 blockchains, including but not limited to Ethereum, BNB Chain, Arbitrum, Optimism, Base, Solana, Injective, zkSync Era, Fantom, Osmosis, Aptos, Sei, Aurora, and Sui. Making market data accessible to investors has always been a core focus for us at IEX, said Ronan Ryan, President of IEX Group. We look forward to seeing how the talented team behind Douro Labs will add the tooling and infrastructure needed to make the Pyth Network a go-to market data solution. To join the Pyth Network and become a data provider, please get in touch at [pyth.network](mailto:pyth.network). If you're interested in building applications on top of the world's fastest growing, most innovative oracle, get started in docs at [docs.pyth.network](https://docs.pyth.network). About Pyth Network The Pyth Network is the largest first-party oracle for the world's financial data. It supports more than 300 real-time price feeds across major asset classes including digital assets, equities, ETFs, FX, and commodities. The network comprises some of the world's largest exchanges, market makers, and financial services providers contributing their proprietary price data on-chain for aggregation and distribution to smart contract applications. Thanks to the Pyth Network's innovative pull oracle design, applications can effortlessly pull the latest price onto their native blockchain on demand. In less than a year since the launch of its cross-chain pull model, the network has secured over \$1B in total value. The Pyth Network has been used by DeFi protocols in over \$65B in trading volume and in over 180 applications. You can learn more about the Pyth Network here and its documentation. About Douro Labs Douro Labs is a blockchain infrastructure company that contributes to the development and acceleration of the Pyth Network, the largest first-party financial oracle network for delivering real-time financial market data to smart contracts applications. Established in 2023, Douro Labs is building oracle tooling, products, and Web3 infrastructure that will expand the Pyth Network's suite of decentralized data services and enhance access to real-time, once-exclusive market data for all blockchain participants. To learn more about Douro Labs, please visit <http://dourolabs.xyz/>. About Pyth Data Association The Pyth Data Association is a Swiss association founded by Pyth Network participants to advance the development of the network. The Pyth Data Association is a contributor to the Pyth Network and helps facilitate protocol maintenance, ecosystem grants, and ecosystem development. To learn more about the association, please visit <https://pythdataassociation.com/>. Contacts Carissa Felger Gasthalter & Co. (212) 257-4170 [pyth@gasthalter.com](mailto:pyth@gasthalter.com)

- On August 22nd, the Bitcoin network difficulty surged by 6.17 percent. - The next scheduled automatic adjustment will push the level of difficulty over 56 trillion. The underlying Bitcoin network is not looking to follow the negative BTC price behavior. New records have been set for both difficulty and hash rate as verified by the most recent on-chain statistics. Bitcoin miners seem to be unfazed by the recent price decrease of 10%. On August 22nd, the difficulty was raised by 6.17 percent at the time of its most recent biweekly automatic readjustment. This was the sixth-highest difficulty increase for Bitcoin in 2023, according to data compiled by tracking portal BTC.com. Moreover, it was sufficient to push difficulty to all-time highs. As the difficulty of Bitcoin transactions increases, it reflects both more competition among miners and increased measures taken to secure the Bitcoin network. In order to maintain this pattern, the next scheduled automatic adjustment will push the level of difficulty over 56 trillion. Strong Backing by Miners Hash rate, or the projected hashing deployment of miners on the Bitcoin network, follows a similar pattern. Moreover, Hash rate is already around 400 exahashes per second (EH/s), which is difficult to determine properly but is already threatening existing all-time highs. On the other hand, Glassnode, an on-chain analytics startup, found that the sum of Bitcoin owned by mining organizations had not changed much. As of the 22nd of August, this has increased by a consistent 0.08% from the beginning of the month, reaching a little over 1.83 million BTC. According to CMC, the price of Bitcoin at the time of writing is \$26,514 and is up by 2.85% in the last 24 hours. Highlighted Crypto News Today:

- XRP hit a 4-month low of \$0.4226 with a decline of over 17.30%. - Litecoin experienced a decline of more than 15% in the last 24 hours. The trillion-dollar crypto market witnesses yet another notable 24-hour drop of over 6%. Prices of the largest crypto members declining to further lows Bitcoin (BTC) dropped below \$26,500 and Ethereum (ETH) below \$1,700 drew major attention. Amid this downtrend, Ripple's XRP and Litecoin (LTC) recorded maximum double-digit losses in the last 24 hours. Since July, these two cryptocurrencies sustained their trending spot on the headlines with their prominent events Litecoin halving and XRP's legal victory against the SEC. With a sudden decline, XRP and LTC have led the crypto losers in the last 24 hours. On August 17, the cryptocurrency XRP hit a 4-month low of \$0.4226 and became the second top loser of the day with a decline of over 17.30%. On the other hand, Litecoin reached a 9-month low of \$61.76, with a decline of more than 15% in the last 24 hours. Moreover, the downtrend is expected to continue in the upcoming days as the cryptocurrencies clearly show bearish momentum. XRP Marks its New 4-Month-Low At the time of writing, the trading price of XRP is \$0.4918, with a decline of over 17% in the last 24 hours. However, the trading volume of XRP has experienced a massive surge of 71.18%. Litecoin (LTC) Touches Down 8-Month-Low At press time, Litecoin is trading at \$64.14, with a decline of over 15% in the last 24 hours. The daily trading volume of LTC has experienced an increase of 25.97%, according to CoinMarketCap. Adding to that, the top cryptocurrencies in the crypto market have experienced the same pattern in the last 24 hours. The sudden downtrend in the crypto market comes after the Chinese property giant Evergrande Group filed for bankruptcy protection in the U.S. as it seeks to restructure its \$300 billion debt. The world's largest cryptocurrency, Bitcoin (BTC), has fallen below the \$27K mark with a decline of around 7%. Polygon (MATIC) hit a new low this year reaching \$0.5464. Moreover, popular cryptocurrencies, including Ethereum (ETH), Shiba Inu (SHIB), Dogecoin (DOGE), Solana (SOL), and Cardano (ADA), are experiencing bearish momentum. Will the crypto market break the bearish momentum? Share your thoughts by tweeting us at @TheNewsCrypto

- The BitPay Wallet and merchant settings will be instantly updated, simplifying the connection. - The effectiveness of XRP in international transfers is constantly improving. BitPay, a global leader in cryptocurrency payments, has announced its support for XRP. As of right now, BitPay customers can buy XRP, keep it safely in self-custody inside the BitPay Wallet, buy gift cards with it, trade it for other cryptocurrencies, and shop at BitPay merchants for consumers and businesses alike. This is exciting news. A network of more than a hundred wallets means that businesses of various types may now accept XRP payments with ease. Moreover, BitPay's wallet and merchant settings will be instantly updated, simplifying the connection procedure. There is no additional work required on the part of customers or businesses to begin accepting XRP. Significant Progress Moreover, this news comes on the heels of Ripple's recent court victory, which is fascinating. In its continuing legal struggle with the U.S. SEC, the corporation has achieved partial success. Also, on grounds of the recent ruling, XRP is making progress with new partnerships and multiple relisting. The adoption of XRP by BitPay demonstrates the revolutionary potential of cryptocurrencies to alter the global financial system. Also, the convergence of digital assets and payments technology is poised to revolutionize the global transmission of value, with cross-border payments emerging as a significant use case. Furthermore, the effectiveness of XRP in international transfers is constantly improving. 44% of respondents in Ripple's 2023 New Value Report believe that use in payments will be the key driver of cryptocurrency adoption. In addition, international transactions are seen by almost half of respondents as one of cryptocurrency's most promising applications. - Binance CEO CZ raised his support for the self-custody wallets. - Binance increased the maximum order limit for OTC trading across 16 cryptocurrencies. Changpeng Zhao, the CEO of the world's largest crypto exchange, Binance, stated that he is supportive of self-custody wallets. Moreover, self-custody wallets are not without risks. Through this tweet reply, CZ raised his support for the self-custody wallets. Self custody wallets are not without risks. CZ said "Binance (@cz\_binance) August 11, 2023 I am supportive of self custody, IF you know what you are doing. Stay #SAFE! <https://t.co/KnCxFNAxkd> On August 11, Changpeng Zhao replied to the tweet, mentioning that he is supportive of Self custody. A crypto writer tweeted that generating wallets using Libbitcoin's Bitcoin Explorer, as described in the appendix to Mastering Bitcoin. Moreover, he added that if you do, your funds are at risk or have already been stolen. CZ tweeted that self-custody wallets are not without risks. He also explains that this vulnerability is due to random number generators using a 32-bit seed. That is not sufficiently random against modern cracking such as GPUs. Moreover, Trust Wallet and Binance wallets didn't use this for seed phrase generation. Binance increased the Trading Limits for SHIB Recently, Binance increased the maximum order limit for over-the-counter (OTC) trading across 16 cryptocurrencies and 37 trading pairs. The OTC trading portal allows investors to place large amounts of buy and sell directly without disrupting the market. The crypto exchange includes the dog-themed memecoins Shiba Inu and Dogecoin. And also added some popular cryptocurrencies Bitcoin, Ethereum, XRP, Polygon, BNB, Solana, and Litecoin to the list. According to the report, the exchange is continuously working to evaluate and increase high-quality assets and trading pairs on the OTC trading platform. The trading price of Shiba Inu (SHIB) has experienced a surge after Binance's announcement. At the time of writing, the Shiba Inu trading price is \$0.0001004, with an increase of over 3.08% in the last 24 hours. The trading volume of SHIB has experienced a surge of 3%, according to CoinMarketCap.

- The BTC price faced a brief pullback and is now currently trading at \$29,784. - Altcoins like SOL, TON, and HBAR surged once BTC hit \$30K. The crypto community is excited as once again Bitcoin (BTC) touched \$30K. Although the price has faced a brief pullback and is now currently trading at \$29,784.76 as per CoinMarketCap, at the time of writing. As soon as BTC touched the surface of \$30K, the bulls and the bears in the market stood for a fierce battle. Whereas, the analytics platform, Santiment reports that other cryptocurrencies like Solana (SOL), Toncoin (TON), and Hedera (HBAR) have shown a similar price rally. Altcoins like these are leading the way with price surges, depicting bullish momentum. With Bitcoin's push back above \$30K instilling confidence in crypto markets, many altcoins are showing signs of life. Keep an eye on #FOMO levels if prices continue pushing forward for the day, with SOL, TON, & HBAR among the surging assets creating bullish narratives. [pic.twitter.com/n0YpmxVQP4](https://pic.twitter.com/n0YpmxVQP4) Santiment (@santimentfeed) August 8, 2023 Moreover, Ethereum (ETH) price also gained momentum and reached the \$1872

mark. However, similar to BTC, it faced a brief pullback and is now trading at \$1852. The trading volume of ETH witnessed a 19.71% surge in the last 24Hr. Will Altcoin Season Sustain For a Long Time? According to CoinMarketCap, SOL is trading at \$24.88 over a 6.62% surge in the last 24Hrs. Thereby, the market cap crossed more than \$10B with its trading volume of around \$570M at an increase of 59.03% over a day. Next, TON has witnessed a 5.32% surge and is trading at \$1.29. And, the trading volume has also witnessed gains compared to the previous day, standing at an increase of 22.61% worth \$29M over a market cap of around \$4.5B. This shows that the traders are involved in purchasing and selling these altcoins following a bullish sentiment amid FOMO. Lastly, HBAR is fluctuating over the day and is currently trading at \$0.06165, a 4.95% surge in the last 24 hours. Also, it witnessed an increased trading volume of about 48%. HBAR is showing bullish traits amid positive market momentum. Related Crypto News:

The integration marks a significant milestone in the adoption of Web3 social media, with Chingari's user base expanding at unprecedented rates on the Aptos Network BENGALURU, India's (BUSINESS WIRE) "Chingari, a leading social media platform in India, has commenced its integration into the Aptos Network blockchain, which has resulted in a substantial increase in user activity. Over the first ten days following the integration, Chingari registered over 1,000,000 total onchain users and experienced a surge in daily onboarding from a previous range of 10,000-15,000 users to approximately 60,000 to 80,000 new users per day. The impressive growth has positioned Chingari as the largest project on the Aptos blockchain, surpassing any other decentralized app (dApp) on any other chain, including Chingari's past performance on Solana. In fact, Chingari is anticipated to surpass the total number of lifetime users of Stepn, the second-largest Dapp on Solana, within the next week. All Aptos Network metrics saw a significant rise after the launch of Chingari, with official analytics showing including a 150% increase in transactions, a 500% increase in onchain daily active users, a 500% increase in gas consumption, and a 900% increase in new users. Notably, over 50% of all Aptos Network transactions and gas consumption, and 80% of daily active users, are credited to Chingari. Given this growth trajectory, Chingari projects that it will reach over 1.25 million users by the end of July and over 20 million onchain users by the end of the first year. This is expected to result in a cumulative total of more than 200,000 APT paid as gas fees by the end of Year 1. Currently, all new Chingari users are automatically added to the Aptos blockchain, and existing users will have the option to switch from Solana to Aptos in the future. This integration brings numerous benefits to Chingari users. Users can earn GARI tokens through engagement and content creation on the platform, which can be used in various ways such as tipping favorite creators, boosting content for increased visibility, and purchasing virtual gifts. Users also have the option to stake tokens within the Chingari app to earn a 10% APR and partake in governance. Sumit Ghosh, CEO and Co-Founder at Chingari, said, "Our integration with Aptos is a significant milestone in our journey. We are committed to providing our users with a platform that is not only entertaining but also technologically advanced, secure, and user-friendly. This partnership with Aptos allows us to do just that, and we are excited about the opportunities it presents." The collaboration with Aptos Network has led to significant improvements in the user experience, with many web3 functionalities now instant, thanks to increased reliability and availability. The Aptos network has comfortably coped with surges as steep as 1,200 transactions per second (TPS) following Chingari's integration, showcasing Aptos' ability to accommodate scalable social media projects like Chingari. Chingari's partnership with Aptos is a significant step in its growth strategy. The partnership will also see the launch of GARI Academy, an initiative to educate developers and students in India on building Dapps (decentralized applications) on the Aptos Move Ecosystem. Furthermore, to promote Aptos in India, Chingari and Aptos will be hosting events in Q4 2023. For more information about Chingari or to download the app, visit Chingari.io. To learn more about Aptos Network, visit Aptosfoundation.org. About Chingari Chingari, powered by GARI is the world's fastest-growing on-chain social app. Chingari's platform entertains 175M+ users across 15+ languages. Chingari has more than 5 million daily active users and 40 million monthly active users. The app has been downloaded more than 175 million times and is amongst the top 20 most downloaded apps worldwide on Google Play. Over 200 million videos are viewed on the app on a daily basis. - CoinGecko unveiled a list of 48 tokens that are alleged as securities by the SEC. - Ripple's XRP excluded from CoinGecko's list of alleged securities. Prominent crypto price-tracking platform CoinGecko unveiled a curated list of 48 tokens on August 8, 2023, and categorized them as the "top alleged SEC securities." Leading tokens such as Binance Coin (BNB), Cardano (ADA), Solana (SOL), and Polygon (MATIC) are among the featured. These cryptocurrencies hold a combined market capitalization of over \$92.7 billion, which is almost 6% of the entire global crypto market cap. However, Ripple Labs' native cryptocurrency, XRP, is missing from the list. The omission is attributed to a recent partial legal victory that Ripple secured against the United States Securities and Exchange Commission (SEC). This victory was underscored by Judge Torres' recent ruling, stating that XRP is not to be considered a security, effectively contradicting the stance taken by the SEC. The decision to exclude XRP from CoinGecko's list underlines the newfound recognition of its legitimacy within the market. Ripple Labs' success in challenging the SEC's position has bolstered XRP's status, signifying a pivotal moment in the token's journey. Further, David Schwartz, the Chief Technology Officer (CTO) of Ripple, enters the scene. He jokes about the list's omissions in a playful manner. It's been almost four weeks since Ripple's partial win against the SEC. That sent XRP to a new high in the \$0.9 range. But the price of XRP declined by around 50% from its short-term rally. Although, at the time of writing, XRP price had soared over 4% in the last 24 hours and traded at \$0.6454. Also, the crypto holds a 24-hour trading volume of \$1.3 billion and market cap of \$34 billion.

- As of now, 68 digital currencies are accused by the SEC of being securities. - The exchange is now in talks to acquire additional funding, eyeing further expansion. U.S. consumers will soon no longer be allowed to engage in trading in seven cryptocurrencies, according to the notice made on August 8. This is possibly due to recent regulatory updates by the U.S SEC. Beginning on August 29th, Bitstamp will no longer allow users in the United States to trade Axie Infinity (AXS), Chiliz (CHZ), Decentraland (MANA), Polygon (MATIC), Near (NEAR), Sandbox (SAND), or Solana (SOL). SEC Crackdown Effects Although the company gave no explanation for the suspension, it is possibly related to the SEC filing charges against Binance and Coinbase alleging that seven tokens traded on both platforms are unregistered securities. As Bitstamp put it: "We kindly request our users to promptly execute any desired buy or sell orders involving the affected assets before August 29, 2023. After this deadline, trading activities related to AXS, CHZ, MANA, MATIC, NEAR, SAND, and SOL will be permanently disabled on the Bitstamp platform." Moreover, other fintech companies like Revolut have voluntarily delisted them for U.S. citizens in light of the SEC's lawsuit against Binance and Coinbase. As of now, 68 digital currencies are accused by the SEC of being securities. As the sector as a whole comes under more regulatory scrutiny throughout the world, the exchange is now in talks to acquire additional funding. According to the global CEO of the exchange, Jean-Baptiste Graftieux, the firm has been actively seeking investors since late June, with guidance from Galaxy Digital Holdings and Mike Novogratz. The funds will be utilized to expand the reach of the exchange in the European and Asian regions. Highlighted Crypto News Today: Federal Reserve Requires Approval for Banks Engaging in Stablecoin

CALGARY, Alberta's (BUSINESS WIRE) "Tetra Trust Company (Tetra), Canada's only licensed custody solution for digital assets, is rolling out increased staking functionality through its strategic partnership with Kiln, a leading enterprise-grade staking platform. Starting today, Tetra clients can stake their assets with Kiln on the main Proof-of-Stake (PoS) blockchains such as Ethereum, Solana, Polygon, Cardano and Tezos. This partnership will offer access to staking services by providing secure and efficient methods for institutional clients to actively participate in blockchain networks and earn rewards on their digital asset holdings. The Tetra-Kiln Partnership Kiln, known for its high standards of operational excellence, manages over \$2 billion worth of staked assets, and has established itself as a leading enterprise-grade staking platform. Like Tetra, Kiln is SOC 2 Type II certified, making the two companies ideal partners to elevate the custodial landscape for digital assets in Canada. "We are excited to offer our clients staking opportunities thanks to our collaboration with Kiln," says Didier Lavallée, CEO at Tetra. "The solution Kiln brings to the table is quite impressive, not only does Kiln meet our security and technical requirements, their all-encompassing capabilities make it a robust solution to offer our clients." Laszlo Szabo, CEO at Kiln, stated, "We strive to enable institutions to access staking. Being our first enterprise-grade custodian partner in Canada, we're thrilled to collaborate with Tetra, with whom we share common values." Understanding the Staking Opportunity In PoS blockchains, staking consists of locking native tokens to earn the right to help secure the chain via a validator. Validators review and approve blocks proposed by other validators, and bundle transactions together to propose new blocks when they are selected to do so. Through these activities, validators earn rewards for stakers who commit part of their assets. Staking is considered to be the most natural way to earn rewards in the crypto space as the rewards stem from helping secure the chain. Rewards are paid out from the protocol's inflation and a share of transaction fees. By staking, token holders can earn rewards and grow their digital asset holdings. Staking plays a crucial role in network security, governance, and contributes to the growth of the Web3 ecosystem. This collaboration marks a significant milestone in both companies' commitment to delivering the highest standards of security and service for institutional and corporate clients. About Tetra Founded in 2019, Tetra Trust Company is the leading trust company licensed to custody digital assets in Canada. Backed by industry giants such as WonderFi, Coinbase Ventures, Canadian Securities Exchange, Urbana, and others, Tetra delivers the most advanced digital asset storage technology, setting the standard for digital asset custody in the country. About Kiln Kiln is the leading enterprise-grade staking platform, enabling institutional customers to stake assets, and to whitelabel staking functionality into their offering. Kiln runs validators on all major PoS blockchains, with over \$2.2 billion of stake under management and over 3% of the Ethereum network, running on a multi-cloud, multi-region infrastructure. Kiln also provides a validator-agnostic suite of products for fully automated deployment of validators, reporting and commission management, enabling custodians, wallets and exchanges to streamline staking operations across providers. Kiln is SOC 2 Type II certified. Contacts Tetra Trust Company: press@tetratrust.com www.tetratrust.com

- The group has also reached out to the hacker to discuss the possible recovery. - Hours after the issue was discovered, the purported wallet sent \$30,000 USDC. A \$1 million estimated attack caused Solana-based Cypher Protocol, a decentralized futures exchange, to suspend its smart contract. On August 7th, Cypher tweeted its users to let them know that the platform had encountered a security breach and had temporarily disabled its smart contract. The group has also reached out to the hacker to discuss the possible restitution of stolen monies and is determining the root cause of the vulnerability. Data from the Solana blockchain explorer Solscan suggests that the wallet associated with the vulnerability took about 38,530 SOL tokens and \$123,184 USDC, for a grand total of \$1,035,203. Hours after the issue was discovered, the purported wallet sent \$30,000 USDC to the Solana USDC address @kling.sol on the cryptocurrency exchange Binance, suggesting an effort to withdraw the stolen assets. Not Successful in Making Contact Yet Since the vulnerability was discovered, many NETs have been sent to the wallet, pleading for their recovery. Also, the suspected hacker has not yet transferred any assets based on Solana to the Ethereum network as of the time of publishing. Moreover, the assault occurred amid Cypher Protocol and Solana Protocol Marginfi hosted the mtND40 hacker house event. In a message sent out over Telegram, Marginfi said that it is operating independently of Cypher and is unaffected by the cyberattack. Unfortunately, the Cypher team has not been successful in making contact with the hacker. The Team has provided a list of possible ways to get in touch with the perpetrator in their most recent update. CMC reports that the current price of SOL is \$23.17, reflecting a gain of 0.14% over the last 24 hours. In an era where blockchain technology and cryptocurrencies are revolutionizing the world of digital finance, interoperability has emerged as a vital catalyst for seamless transactions across diverse blockchain ecosystems. At DPEX, our unwavering commitment to innovation, transparency, and user-centric solutions drives us forward. With great excitement, we announce the integration of deBridge, an exceptional cross-chain interoperability solution, into our platform. This represents a significant milestone in our pursuit of excellence. Introducing deBridge: The Definitive Solution for High Performance Interoperability deBridge is a groundbreaking interoperability solution that facilitates effortless asset transfers across a wide range of both Ethereum Virtual Machine (EVM) compatible chains and diverse non-EVM blockchain ecosystems. With deBridge, the previously intricate hurdles posed by heterogeneous blockchains become a mere stroll in the serene park, empowering users to fully embrace the vast horizons of decentralized finance (DeFi). Reasons for Selecting deBridge and DLN API Our decision to integrate deBridge was driven by three core tenets: Unbeatable Speed, Competitive Rates, and Endless Liquidity. Unbeatable Speed: DLN API stands out with its impressive transaction speeds. Through this integration, users can effortlessly move assets across chains, swiftly, in record time, greatly enhancing the overall user experience on DPEX. Competitive Rates: deBridge's DLN API offers the most competitive rates in the market, ensuring that users receive the utmost value from their transactions. Furthermore, by avoiding liquidity pools, DLN's sophisticated algorithms protect users from potential price slippage and Miner Extractable Value (MEV), maximizing transaction value. Endless Liquidity: With DLN API, the limitations of liquidity are a thing

of the past. deBridge unlocks access to boundless liquidity, enabling users to execute transactions of any size without concerns about market depth or liquidity constraints. Ensuring Security and Trust Trust is a crucial component in the DeFi landscape. deBridge understands this importance and therefore subjects its infrastructure to thorough audits by respected cybersecurity firms such as Zokyo, Halborn, Ackee Blockchain, and Neodyme. These audits are particularly significant since DPEX, the platform itself, undergoes scrutiny from Zokyo and CertiK. Through this meticulous audit process, deBridge ensures the security and reliability of its interoperability solution. In addition, deBridge has embraced the Immunefi bug bounty program, enabling security researchers worldwide to identify potential vulnerabilities in the system. This program enhances the platform's security and reliability, reinforcing its robustness. Overall, deBridge prioritizes trust and takes significant measures to ensure the safety and dependability of its services. Take advantage of decentralized cross-chain leveraged trading by using Binance Smart Chain to trade on DPEX through deBridge. By leveraging deBridge's integration with DPEX in combination with Binance Smart Chain, users can now reap the benefits of decentralized cross-chain leveraged trading. This enables users to trade assets across multiple blockchains without compromising their security. Furthermore, this integration provides users with access to an expansive range of markets and trading pairs, diversifying their portfolios and unlocking potentially lucrative opportunities. Stay tuned for more exciting updates! Up next, we'll be integrating Solana using deBridge for DPEX. Expect even more chains to come your way! Unlock seamless connectivity with deBridge, effortlessly bridging assets from other chains to Polygon. Experience flawless interoperability like never before. Introducing the deBridge integration, now allowing users to effortlessly acquire MATIC on the Polygon chain without leaving DPEX. This seamless integration enhances transaction efficiency, bridging the gap between blockchain ecosystems, and elevating the overall user experience on DPEX. It not only benefits traders but also liquidity providers who require assets on the Polygon network. Our collaboration with deBridge goes beyond a mere partnership; it represents the fusion of shared visions and values, driving user empowerment and pushing the boundaries of the DeFi space. With this integration, we are one step closer to realizing our goal of delivering innovative, secure, and user-friendly solutions to our valued customers. Embark on a journey of endless possibilities with deBridge on DPEX today. Experience seamless interoperability, unparalleled convenience, and embrace the future of DeFi with DPEX and deBridge. About DPEX DPEX.io is a groundbreaking decentralized leverage trading platform that aims to reshape the way traders interact with the financial markets. By offering up to 50x leverage within a decentralized setting, DPEX stands at the forefront of the movement to democratize access to financial opportunities. The platform allows users to tap into leveraged trading without sacrificing the transparency, security, and autonomy that come with decentralized finance (DeFi). About deBridge deBridge is the infrastructure for high performance interoperability. By removing the bottlenecks and risks of liquidity pools, deBridge enables DeFi applications to scale faster with ultra capital-efficient and deep liquidity providers across chains. - Elon affirmed that X won't launch any crypto token. - Crypto investors on FUD; DOGE falls by 1.15% in 24H. The second week of August started with a boom in the crypto market where the unfortunate announcement spread around. The Boss of Twitter (known as 'X'), Elon Musk has denied the launch of a crypto token for X. Following this denial of scam and rumors by Elon, Dogecoin (DOGE) went on an abrupt surge of over 2% which led to bullish momentum. As per the previous view on DOGE, it felt evident that Elon's promotion had an impact. As of a recent update, Elon Musk said, "I will never launch a crypto token." Elon Musk Blowing Cryptocurrencies According to Forbes, Elon's declaration creates wild speculation which might blow up the prices of cryptocurrencies like Bitcoin (BTC), Ethereum (ETH), Ripple (XRP), and Dogecoin (DOGE). Certain crypto analysts have predicted that the bearish sentiment might affect crypto trading. As it was believed that Elon promoted DOGE, now it doesn't reflect the same whereas the recent surge on Friday has fallen by 1.15% according to CoinMarketCap. The global crypto market cap has decreased by 0.08% compared to the previous day. With the chance of the crypto market breaking down the wall, Elon's stance of bringing up the price is higher. However, Elon considers the unlikely rumors being spread with no proper affirmation from X. On August 6, 2023, Elon tweeted, "We just keep making X better and better, every day." Meanwhile, Mark Zuckerberg, the CEO of Facebook (termed 'Meta') commented, "Threads will copy and become better and better too." Irrespective of the crypto community, the newer version of Twitter, X has bought changes into trading. The use of eToro if X doesn't work as a crypto trading platform, might be useless. By the way, the curiosity of eToro was awakening at the moment of its arrival and Elon had an optimistic view over cryptocurrencies. Confusingly, the crypto investors are yet trading and the digital form of currencies might rule the nation in the future days as UPIs do up to date. The crypto market faces criticalities during the end of Q3. Challengingly, Q4 might turn effective towards the crypto market and its growth. Related Crypto News:

- As per CoinGecko, the index went live in the first week of August. - BNB ranks first on the 'Top Alleged Securities Coins' page. With the advent of a new index, CoinGecko is now keeping tabs on the most prominent digital tokens that are likely viewed as securities by the United States SEC. According to market cap, BNB ranks first on the 'Top Alleged Securities Coins' page, followed by Cardano (ADA), Solana (SOL), and TRON (TRX). Moreover, according to a representative from CoinGecko, the index went live in the first week of August and was built by aggregating a number of the most prominent tokens that had been designated securities by the SEC in previous litigation. Regulatory Scrutiny The financial watchdog has filed lawsuits against Coinbase and Binance, bringing the total number of tokens it has designated as securities to 69, but CoinGecko is limited to 24. Also, approximately 8% of the whole crypto market valuation is represented by the top coins included in the SEC's litigated remit of the crypto sector, according to CoinGecko's website. After earlier stating that "everything other than Bitcoin is a security and so comes within the agency's mandate," SEC Chair Gary Gensler has gone to considerable efforts to stress that the vast majority of cryptocurrencies should be considered securities. If so, then the SEC would have jurisdiction over almost all of the coins now listed on cryptocurrency exchanges. Coinbase has asked the judge overseeing the SEC's lawsuit against them to dismiss the allegations in a brief filed on Friday. Also, in its brief, the exchange argued that decades of Supreme Court precedent holding that it does issue investment contracts are wrong. This occurs as pressure grows on U.S. authorities and officials to define the rules for the crypto space. Highlighted Crypto News Today: Justin Sun Addresses Huobi Exchange's Bankruptcy Rumors

- Bullish BAT price prediction for 2023 is \$0.2909 to \$0.3820. - Basic Attention Token (BAT) price might reach \$0.5 soon. - Bearish BAT price prediction for 2023 is \$0.1606. In this Basic Attention Token (BAT) price prediction for 2023, 2024-2030, we will analyze the price patterns of BAT by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | BASIC ATTENTION TOKEN (BAT) PRICE PREDICTION 2023 | | | BASIC ATTENTION TOKEN (BAT) PRICE PREDICTION 2024, 2025, 2026-2030 | | CONCLUSION | | FAQ | Basic Attention Token (BAT) Current Market Status | Current Price | \$0.204 | 24 hr Price Change | 1.90% Down | 24 hr Hour Trading Volume | \$31,647,076 | | Market Cap | \$303,860,452 | | Circulating Supply | 1,489,852,087 BAT | All Time High | \$1.92 (On Nov 28, 2021) | All Time Low | \$0.06621 (On Jul 16, 2017) | What is Basic Attention Token (BAT)? TICKER | BAT | BLOCKCHAIN | Ethereum | CATEGORY | Utility Token | | LAUNCHED ON | May 2017 | | UTILITIES | Governance, Fast Transactions, Gas Fees & Rewards | Basic Attention Token (BAT) is the utility token of a blockchain-based digital advertising platform of Brave. The Brave web browser is a secure, privacy-focused browser. BAT can be regarded as the Ethereum Ad Token that was launched as an ERC-20 token in 2017. A basic Attention Token (BAT) is used as the payment token rewarded to users for viewing ads via Brave. Users, content creators, and advertisers deploy BAT as a mode of exchange. With BAT, Brave browsers confer even more privacy and anonymity to internet users. Basic Attention Token 24H Technicals (Source: TradingView) Basic Attention Token (BAT) Price Prediction 2023 Basic Attention Token (BAT) ranks 103rd on CoinMarketCap in terms of its market capitalization. The overview of the Basic Attention Token price prediction for 2023 is explained below with a daily time frame. BAT/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, Basic Attention Token (BAT) laid out a Horizontal Channel Pattern, Horizontal channel also known as the sideways trend.
