

million for the second week in a row. This indicates that, given the present market situation, investors are less likely to wager against Bitcoin's performance. Ethereum (ETH) investment products had \$4.2 million in inflows. A flurry of activity is going on amongst investors, however this figure covers it. A hefty \$104 million poured into new Ethereum ETF players. On the other hand, \$118 million worth of Grayscale's ETH products saw outflows. Substantial Solana Outflows Last week, the outflow of Solana (SOL) investment products reached a record high of \$39 million. These changes occur as a result of recent macroeconomic data that has impacted the market as a whole. On top of that, it might make regulators even less sure about the spot Solana ETF applications that 21Shares and VanEck have submitted. The whole cryptocurrency world is scratching its heads at the massive Solana outflows. According to CoinShares, the \$39 million negative flow is the largest it has ever been for SOL investment products. - Luigi D'Onofrio DeMeo, COO of Ava Labs, had his X account hacked. - The account also disabled comments to prevent others from posting warnings. The Twitter account of Luigi D'Onofrio DeMeo, Chief Operating Officer of Ava Labs, was allegedly compromised by hackers. The breach became apparent when posts appeared on his official account promoting a newly launched Pokémon-themed memecoin associated with DeMeo. The posts were later removed. The posts, which have since been deleted, included links to airdrops that many users found suspicious. The account also disabled comments to prevent others from posting warnings about the scam, citing concerns that "malicious links" could potentially be shared in the comments section. The memecoin in question, Pika, is based on the popular Pokémon character Pikachu and is built on the Solana blockchain. The posts quickly raised concerns within the crypto community, with many users reporting that DeMeo's account had been compromised. At press time, PIKA is currently trading at \$0.00000001704 a 1.09% increase with a trading volume of \$14,947 according to CMC. After the X post of DeMeo, the market cap hit a high of \$7.20M. Forbes List of America's Best Startup Employees The Forbes List of America's Best Startup Employees highlights the top talent driving innovation in the startup ecosystem. Each year, Forbes recognizes individuals who excel in various roles, from engineers and designers to marketers and product managers, across early-stage companies. Ava Labs is one among the recently released list of Forbes' America's Best Startup Employees. Among the 500 startups on the list, Ava Labs is in the 94th position with Devote Health, Healthcare situated in Massachusetts in the first place. Ava Labs has made it on the list for the second time. - The altcoin market cap dropped to \$874.60B over the last week. - Current market sentiment is neutral as the fear and greed index stays at 43. The largest cryptocurrencies by market cap, Bitcoin (BTC) and Ethereum (ETH), continue to experience bearish fluctuations within the \$58K and \$60K level and ETH within the \$2.6K level, respectively. Altcoins are witnessing a continuous decline, facing selling pressure and a lack of buying interest. Earlier, the altcoin market experienced a promising uptrend, but is now facing down towards bearish sentiments. Despite hitting impressive highs earlier, several assets are now facing significant retracements, evoking fears among investors and traders. The total crypto market cap is found at \$2.035 trillion, where the altcoin market has a worth of \$874.607 billion. Over the last 24 hours, the crypto market volume has increased by 31.59%, reaching \$48.19 billion. However, the recent downturn in the altcoin sentiment has rippled certain tokens; let's check the price performances of notable coins and tokens. Ethereum (ETH) Ethereum (ETH), the second largest cryptocurrency by market cap and the altcoin leader, marked a decline of 23.14% over the last month. The start of August was bullish, with the asset trading in the range of \$3.2K. Later, it dipped to a low of \$2.2K. The asset was slightly up by 2.73% in the past seven days. ETH is currently trading at \$2,628, up by 0.88% over the past 24 hours. Meanwhile, the daily trading volume has increased by 42%, to \$9.96 billion. Dogwifhat (WIF) The popular dog-themed memecoin, WIF, is currently having bearish momentum. Continuing the downtrend, WIF recorded a significant price drop of 17.52% in the past week. Over the last 30 days, the asset was down by 44.45%. The current price stands at \$1.37, noting a decline of 3.06%. Toncoin (TON) TON, the eighth ranked altcoin by market cap, declined by 5.66% in the past month. The asset has climbed up by 13.48% from \$6.08 to a high of \$7.24, over the last seven days. Currently, TON is trading at \$6.80, up by 5.73%. Solana (SOL) Solana, the fifth largest crypto by market cap, shows a remarkable dip of 11.67% over the last month. SOL dropped from a high of \$193 to \$112. In the past week, it was down by 0.82%, the lowest price traded was \$137. Currently, SOL trades at \$143, showing a 0.70% spike. The volatile altcoins, including DOGE and XRP witnessed price fluctuations. Dogecoin (DOGE) has been through a bearish rally for the last 30 days. The asset is currently trading at \$0.1002, noting a decline of 2.09%. Whereas XRP was up by 0.25% per CMC data. Over the past week, XRP was slightly bullish, up by 0.73%. The highest price traded was \$0.5821, and the lowest it hit was \$0.5531. Highlighted Crypto News Australia's ASIC Takes Down 7.3K Scam Sites in Fraud Crackdown

- It has just achieved a new milestone, becoming the sixth-largest dollar-pegged token. - Now PYUSD is officially ahead of USDD, Tron's stablecoin. The cryptocurrency market is mired in neutral sentiment, with only little rebounds sprinkled. The market leader in cryptocurrencies, Bitcoin, has increased its value by about 2% since yesterday, eyeing the \$60,000 mark. Nevertheless, today's main attraction is PayPal USD (PYUSD). A dollar-pegged token that has seen tremendous growth in recent days, occupying the position of the sixth biggest stablecoin. Popular for international transactions and a variety of payment methods, digital payment service provider PayPal has grown in popularity in recent years. In addition, crypto investors prefer this brand since it is crypto-friendly. Especially, because of the release of PYUSD, a widely used stablecoin that is tied to the dollar. Substantial Progress Upon its introduction to the market in August 2023, PYUSD quickly became the center of attention. Not only has it added 500,000 transactions to the network, but it has also been ranked among the top 10 stablecoins. It has just achieved a new milestone, becoming the sixth-largest dollar-pegged token, thanks to an \$140.9M increase in its supply in only 10 days. Now PYUSD is officially ahead of USDD, Tron's stablecoin, as well as USDB, PAXG, TUSD, and many more in the market. According to Coingecko, all of this occurred during the last month, during which time its market cap increased by nearly 97%. According to Solscan data, the market worth of this token increased from around \$651 million on August 6 to more than \$791.6 million on August 17. Most notably, 56.7% of the minting is taking place on Solana, which is much greater than Ethereum. Given that cryptocurrency exchange Bybit has announced the integration of this token on Solana, this may potentially increase even more. Highlighted Crypto News Today:

- More than 25,000 participants gave the proposal an unanimous 91% approval. - At its heart, the proposal is about making the Arbitrum (ARB) token more useful. With the goal of increasing the ARB token's usefulness and fortifying governance security, the Arbitrum DAO has green-lit a temperature check proposal. After more than 25,000 participants gave the proposal their unanimous 91% approval, on Aug. 15 the onchain voting came to a close. At its heart, the proposal is about making the Arbitrum (ARB) token more useful by making it possible to stake ARB. But for the time being, it does not go so far as to pay out fees to token holders. On the contrary, it uses the Tally protocol to introduce liquidity-staking ARB token (stARB). In order to stake and delegate their ARB tokens, users may use the staking mechanism, which allows them to trade their tokens for stARB, which stands for their stake. The stARB token is compatible with a number of decentralized finance (DeFi) apps, has restaking options, and allows automated compounding of future payouts. Boosting Engagement The goal of this strategic undertaking is to get more people involved in the Arbitrum ecosystem. Token holders may increase their eventual eligibility to collect excess sequencer fees by actively delegating and staking ARB tokens. The present low levels of involvement in the DAO are addressed by this technique, which is meant to encourage voting. The proposal brings attention to a critical issue: the ARB token's poor performance in terms of value accumulation. There has been a decrease in voter engagement since the DAO's creation, and fewer than 1% of ARB tokens are now active inside the onchain ecosystem, according to the proposal. The proposal's emphasis on avoiding any assaults on governance is another important feature. The Arbitrum treasury is becoming a more tempting target for those with ill intentions as it continues to expand. Victoria, Seychelles, August 16th, 2024, Chainwire Bitget Wallet the leading Web3 wallet is excited to announce a groundbreaking milestone of reaching 30 million users as it sets a new record for global app downloads in July 2024, surpassing MetaMask's growth for the month. Since crossing 20 million userbase in March this year, Bitget Wallet has surged with a remarkable 50% growth over just four months. This has substantially boosted the wallet's position in the global crypto DeFi market. With total downloads on Apple's App Store and the Android Google Play Store, hitting 1.7 million in a month showcasing a 140% rise from its previous month. As compared to 2023, it represents a 150% increase in users in the past year, as it outpaces others as the top-most downloaded WEB3 wallet in July. Currently, Bitget Wallet boasts users in 168+ countries and regions, strengthened with a strong community base across the globe. Bitget Wallet has made significant breakthroughs in Europe, North America, and Oceania, with user growth in Russia, Italy, Sweden, and Australia exceeding well over 40 times compared to the same period last year. Furthermore, countries such as France, Portugal, the UK, Turkey, and Canada have witnessed growth rates exceeding 1000%. Our international expansion success highlights the crucial role of innovation and ecosystem development in the Web3 space. We aim not just to increase market share but to propel the entire industry forward, creating unparalleled value for Web3 users worldwide. The future of Web3 is bright, and Bitget Wallet is excited to lead the way, as said Alvin Kan, COO at Bitget Wallet. In Asia, Bitget Wallet has experienced extraordinary growth. Downloads in Japan, the Philippines, and Thailand have surged by approximately 20 times compared to the same period last year. Additionally, user growth rates in India, Vietnam, and Singapore have all exceeded 300%. The African market, particularly Nigeria, has emerged as a new engine for Bitget Wallet's growth as it recently topped Nigerian App Store rankings, surpassing popular local apps like TikTok, and WhatsApp. Bitget Wallet is the first wallet to achieve multi-chain aggregation, offer on-chain token charts, support cross-chain transactions, and integrate NFT markets and launchpads on multiple chains. These innovations have set the standard for Web3 wallets. Focused on on-chain asset trading, Bitget Wallet has been integrating innovative features that enable users to discover new assets and opportunities at the earliest possible time. Since its launch, Bitget Wallet has integrated with over 100 major public and EVM-compatible blockchain networks. In 2024, Bitget Wallet has become the top wallet in the meme coin ecosystem, supporting smart money tracking on the Solana and Base chain. It has introduced advanced trading features for meme token trading, such as automatic slippage, zero gas fees, and instant trade mode. The TON ecosystem is becoming the most transacted network on Bitget Wallet, surpassing established public chains like Polygon, Arbitrum, and BNB Chain. As for future plans, Bitget Wallet aims to introduce new features and innovations with a focus on user experience and global expansion. For more information on how to get started with Bitget Wallet, users can visit here. About Bitget Wallet Bitget Wallet stands as one of the world's leading non-custodial Web3 wallets and decentralized ecosystem platform. With the Bitget Onchain Layer, the wallet is well-poised to develop a burgeoning DeFi ecosystem through co-creation and strategic incubation. Aside from a powerful Swap function, Bitget Wallet also offers multi-chain asset management, smart money insights, a native Launchpad, Inscriptions Center, and an Earning Center. Supporting over 100 major blockchains, 250,000+ tokens, and a wide array of DApps, Bitget Wallet is your top wallet for asset discovery and Web3 exploration. For more information, users can visit: Website | Telegram | Discord Contact PR team media.web3@bitget.com

- On-chain analyst ZachXT uncovers a major North Korean network among crypto firm employees. - Cryptocurrency scams have shown a rise in the past few months. Crypto platforms' vulnerability to scams has been the emphasis over the past few months, with the sector reporting several major incidents since H1 2024. The global crypto sector has taken measures to enhance security in the recent past amid rising scams. Notably, in the last 24 hours, on-chain analyst ZachXT reported discovering a DPRK network of developers employed in 25+ crypto projects. Moreover, ZachXT's X post stated that when investigating a particular team's loss of \$1.3 million, he discovered their employing multiple DPRK IT workers. These developers were using fake identities. Further investigations led to the aforementioned findings and believe that developers were connected to several crypto scams. ZachXT stated in his X post: "I then uncovered 25+ crypto projects with related devs that have been active since June 2024. All on delving into the details of the theft, ZachXT was able to outline the scammers' path. The alleged scammers first transferred the \$1.3 million to a theft address '0x00'. Following this, they bridged the funds from Solana to Ethereum via cross-chaining DApp deBridge. They then transferred the funds in the form of ETH to Tornado Cash and other exchanges. Who are these North Korean Devs Targeting Crypto Projects? The on-chain sleuth tracked 21 different developers' addresses and mapped out a cluster of transactions, which unearthed the movement of \$1.3 million in funds. He also posted a list of the North Korean employees suspected to be connected to the network. Additionally, the developers were found to have received payments from an exchange deposit from 2023-2024. This exchange deposit holds connections with Sim Hyon Sop who is known to be sanctioned by the Office of Foreign Assets Control (OFAC). Moreover, the exchange deposit received \$5.5 million in funds prior to the above incidents. Following

this, another firm identified employing one of the North Korean developers from ZachXBT's list. Relatedly, at the beginning of August, Chainalysis uncovered a crypto scam involving 2000 wallets in Australia. Certain success stories stand out following a move to seize the right opportunity, at the perfect time. Consider the journey of a college student who, in the pivotal year of 2016, invested just \$500 in Ethereum when its price was a modest \$10 per coin. Fast forward to 2021, and Ethereum's price had catapulted to a staggering \$4,000 per coin, magnifying his initial investment exponentially. Today, we witness the rise of BlockDAG, pioneering and implementing a groundbreaking investment strategy for developers, positioning it as a pivotal force within the expansive cryptocurrency community. The Transformative Ethereum Investment of a Visionary Student Back in 2016, a forward-thinking college student with a passion for technology and finance made a pivotal decision that would reshape his future. He invested \$500 in Ethereum, placing his faith in its revolutionary potential to alter the digital ecosystem. Over the subsequent years, as Ethereum introduced and refined its smart contract capabilities and was increasingly embraced by the market, its value surged dramatically. By the year 2021, Ethereum had evolved from an emerging digital asset into a cornerstone of the cryptocurrency market, with its value peaking at over \$4,000. This remarkable ascent multiplied the student's investment manyfold, allowing him to graduate without the burden of debt and to further his academic pursuits. Beyond academia, the financial windfall provided the seed money to launch his tech startup. This story of Ethereum's ascent exemplifies the transformative possibilities of early investments in groundbreaking technological projects. BlockDAG: Charting a New Course in Decentralization BlockDAG is carving out a unique niche in the crowded cryptocurrency market, poised to become a leading force with its revolutionary capabilities. It employs a Directed Acyclic Graph (DAG) architecture, which enhances scalability, accelerates transaction speeds, and achieves a higher degree of decentralization. This advanced technology effectively addresses several of the limitations inherent in older blockchain models, positioning BlockDAG as an attractive platform for developers and holders alike. Within the BlockDAG ecosystem, a dynamic range of decentralized applications (dApps) is thriving, encompassing sectors from finance to logistics and digital identity management. The network's adoption of BDAG as its utility coin enhances its long-term viability, enabling users to access a diverse suite of services and fostering a robust, engaged community. This pioneering approach to decentralized digital services distinguishes BlockDAG as a formidable contender in the cryptocurrency landscape. BlockDAG's Presale Achievements and Promising Future The presale phase for BlockDAG has already marked significant milestones, with over \$66 million raised through the sale of more than 12.6 billion BDAG coins and \$4.2 million accrued from the sale of over 10,600 miners. The price of BDAG coins has impressively grown by 1600% from the first to the 21st batch, illustrating strong market confidence in BlockDAG's potential. Experts in the field predict that BlockDAG could reach a presale target of \$600 million, significantly enhancing its attractiveness as a crypto opportunity. This projected growth suggests that early holders are poised to reap substantial returns, akin to the early backers of Ethereum, making this an opportune moment to jump in. Seize Tomorrow with BlockDAG Ethereum's success story illustrates the lucrative outcomes of early investments in transformative technologies. BlockDAG, with its innovative framework and dynamic ecosystem, presents a similar opportunity for those aiming to capitalize on the future of cryptocurrencies. As BlockDAG forges ahead, its early adopters, including holder and developers, stand to gain from its revolutionary impact. Engaging with BlockDAG now could pave the way for financial successes similar to those enjoyed by the initial supporters of Ethereum, highlighting a future rich with possibilities. The 2024 crypto bull run birthed a project so bizarre, it deserves a place in the digital oddity hall of fame. Enter Pepe's FrogBar , a website that wouldn't look out of place in a fever dream. Here, the enigmatic Pepe (presumably the owner) runs a virtual bar with an unconventional private sale for a token to be released in Q4 2024. Intrigued? You should be. Because somehow, this project has taken the crypto world by storm. Welcome to the Strangest Bar on the Blockchain Imagine a neon-drenched watering hole populated by cartoon avatars of Elon Musk, Kim Kardashian, and even Andrew Tate. Now, replace the bathroom with a VIP space. That's Pepe's FrogBar in a nutshell. To join this exclusive club, you connect your crypto wallet to a toilet. Surprisingly, the website itself is a masterpiece. Polished animation, a surprisingly intuitive user experience (with some hilarious Easter eggs), and cleverly disguised evidence of a patented algorithm that lurk beneath the surface. Their genius? Storytelling with a side of crypto. Pepe's FrogBar is now the most talked-about animated series episode that hints at the project's future. It's a stroke of genius, turning users into active participants in this bizarre social experiment that has captivated the crypto world. Token Economics and Distribution Pepe's FrogBar employs a unique token distribution model centered around community engagement. A substantial 46% of the total token supply is dedicated to the private sale, accessible through the Solana-based DApp. Users can directly purchase their allocation by connecting their Phantom wallet. To incentivize user participation and foster a strong community, 5% of the total token supply is allocated to an airdrop program. Users can earn tokens by actively engaging with the Telegram-based game and completing various challenges ( [https://t.me/pepefrogbar\\_bot](https://t.me/pepefrogbar_bot) ). With a current player base exceeding 450,000, the project aims to expand this community to 30 million users to maximize the airdrop's impact. Leveraging this robust community and token distribution strategy, Pepe's FrogBar is poised for a significant token launch in Q4 2024. The Million-User Mystery: Genius or Gimmick? This "world's first private sale through storytelling" boasts a fair token distribution "no whales, just a million minnows. If successful, this could lead to a token launch unlike any other. Imagine a million token holders from day one. The supply so widely distributed, would be nearly immune to manipulation. Fear of missing out (FOMO) would be at an all-time high, with every exchange clamoring to list this bizarre phenomenon. Pepe's FrogBar could become a crypto behemoth, all thanks to the power of community "and poop jokes. The Verdict: Crypto or Crapshoot? Only time will tell if Pepe's FrogBar is a comedic stroke of genius or an elaborate pump-and-dump scheme. But one thing is for sure: in the annals of crypto history, Pepe's FrogBar has already secured its place as a project that dared to be different and dared to make us laugh while doing it. Website: <https://frogbar.io> X: <https://x.com/pepefrogbar> Telegram: [https://t.me/pepefrogbar\\_bot](https://t.me/pepefrogbar_bot) YouTube: <https://www.youtube.com/@frogbar>

hongkong, china, August 15th, 2024, Chainwire In a groundbreaking move to address the challenges of equitable asset distribution and decentralization in the cryptocurrency space, Cellula has unveiled its innovative programmable incentive layer built on the Ethereum Virtual Machine (EVM) ecosystem. At the core of Cellula's innovation is its virtual Proof-of-Work (vPOW) consensus mechanism, which combines principles from Conway's Game of Life, Variable Rate GDAs Algorithm, and Game Theory to revolutionize the way digital assets are distributed and liquidity is allocated. The crypto industry has long grappled with the issue of "whales" a small group of individuals or entities that accumulate a disproportionate share of assets, leading to market manipulation, reduced decentralization, and limited participation opportunities for smaller investors. Additionally, traditional asset distribution methods, such as pre-mining, have further concentrated ownership, undermining the fairness and accessibility of these ecosystems. "We have grown weary of the war between the witches and the hunters," said the Cellula team. "Cellula seeks to address these dual challenges by reintroducing the BTC Proof-of-Work mechanism to EVM-compatible networks, pioneering asset distribution and liquidity allocation guidance through virtual Proof of Work (vPOW)." Cellula's vPOW mechanism empowers "BitLife" entities with unique "hashrates", enabling them to engage in a gamified mining process that generates dynamic incentives. This revolutionary approach is powered by Cellula's trifecta of innovative algorithms: Conway's Game of Life for mining, Variable Rate GDAs (VRGDA) for pricing, and the Analysisor protocol for fair distribution and liquidity guidance. Mining Algorithm "Conway's Game of Life" Genetic Code Of On-Chain Digital Life: Conway's Game of Life underpins Cellula's on-chain entities, "BitLife", which evolve dynamically, reflecting natural life cycles and enabling complex AI development within the blockchain. This gamified mining process encourages participants to develop more optimal strategies to potentially earn additional block rewards, fostering a competitive environment that ensures only committed resources are rewarded. Pricing Algorithm "Variable Rate GDAs" A Dynamic Pricing for NFT Distributions: VRGDA adjusts asset prices based on demand, increasing when sales are high and decreasing when they lag, ensuring balanced distribution even in illiquid markets. This dynamic pricing model helps to prevent the concentration of assets in the hands of a few, promoting wider participation and a more equitable distribution. Consensus Algorithm "Analysisor" Fair Asset Distribution And Liquidity Guidance: Analysisor is a fast-launch protocol designed to use block hashes for a random number generator, allowing for a fair and transparent distribution of assets. It also integrates GDAs and BitLife warping to assign "fixed-sum" "block lottery tickets" for participation. Each ticket's block hash determines winners transparently, preventing bots and ensuring equal opportunities for all users, regardless of financial power. Transaction fees from the lottery are used to inject liquidity into new assets, promoting ecosystem growth. Integrating Analysisor with vPOW also provides fairer asset distribution and better liquidity allocation guidance. "Cellula's vPOW mechanism is truly a game-changer," explained the Cellula team. "By seamlessly integrating these cutting-edge technologies, we have created a programmable incentive layer that is poised to reshape the future of decentralized finance and on-chain participation." One of the key features that sets Cellula apart is its permissionless nature. The vPOW mechanism allows any participant (miner) in the network to potentially earn rewards by minting and charging BitLife, without the need for a central authority to allocate resources. This approach ensures a more open and transparent asset distribution process, fostering greater decentralization and accessibility. Transparency is also a cornerstone of Cellula's design. All algorithms and asset distribution processes are recorded on-chain, enabling anyone the ability to verify and review the process, thereby increasing the system's transparency and credibility. "Cellula is poised to usher in a new era of on-chain participation and value creation," said the Cellula team. "By seamlessly integrating these innovative technologies, we are redefining the way assets are distributed and liquidity is allocated, paving the way for a more equitable and decentralized crypto ecosystem." With its comprehensive approach to addressing the challenges of asset distribution and decentralization, Cellula is set to revolutionize the way the crypto industry approaches these critical issues. As the project continues to evolve and expand its reach, it remains a beacon of hope for a future where fair and transparent asset distribution is the norm, not the exception. About Cellula Cellula is a pioneering programmable incentive layer that revolutionizes asset issuance on the Ethereum Virtual Machine (EVM). Utilizing a novel virtual Proof-of-Work (vPOW) consensus mechanism, Cellula combines the principles of Conway's Game of Life, Variable Rate GDAs Algorithm, and Game Theory to create evolutionary, intelligent, and programmable on-chain digital entities known as BitLifes. For more information on Cellula and its groundbreaking programmable incentive layer, users can visit the project's Gitbook at <https://cellulalifegame.gitbook.io/cellula>. - US Spot Bitcoin ETFs recorded outflows on August 14 ending two-day inflow streak. - Bitcoin showed a price decline of 4.57% in the last 24 hours as per CMC data. The US Spot ETFs over the last few months have begun to witness declining activity. While the spot Ethereum ETFs are attempting to stage a revival, the spot Bitcoin ETFs have failed to do so. Meanwhile, the two cryptocurrencies have struggled to surpass their current price levels. According to SosoValue data, the digital assets recorded \$81.36 million in daily net outflows as of August 14. Among the eleven spot ETFs, Grayscale's GBTC recorded the highest amount of outflows of \$56.87 million. Meanwhile, BlackRock's IBIT exhibited a modest inflow of \$2.68 million. Apart from Grayscale, Fidelity, Ark Invest & 21Shares, and Bitwise also showed outflows. Notably, in the past two days, the spot Bitcoin ETFs exhibited positive flows amounting to a total of \$66.81 million. This occurred after the digital assets recorded two consecutive weeks of outflows. This streak was preceded by nearly four weeks of consecutive positive flows. The spot Bitcoin ETFs which were launched on January 11, saw impressive inflows in the first few months. This was combined with Bitcoin's March price hike, leading to a positive sentiment in the market. However, the past few months as aforementioned have shown negative flows within the sector. Meanwhile, the Bitcoin price has yet again witnessed declines in the last 24 hours and slid back to \$58K levels. In the past few weeks, the token's high liquidations were partly contributed by the Spot Bitcoin ETFs. Bitcoin Price Activity Amid Mixed Spot ETFs' Signals In the last 24 hours, Bitcoin price witnessed a 4.57% decline and slid momentarily to the \$57K level. Meanwhile, the cryptocurrency's daily trading volume showed an increase of 16.39%. At the time of writing, BTC was trading at \$58,391 according to CMC data. Zooming out, over the past month, Bitcoin has shown a price performance of 6.84% decline. This decline occurred following July's market crash and recovery trading cycles. However, analysts expect the token to witness price breakouts in the coming months, despite current bearish trends. On the other hand, the US Spot ETFs witnessed modest inflows on Wednesday maintaining their positive

flows streak this week. Highlighted Crypto News Today: Solayer Labs Unveils Solana Restaking Amid Binance Labs Support

Uniswap, once a prominent cryptocurrency among the top 20 by market capitalization, has recently lost its prominence. This shift opens the door for emerging and established projects to fill the gap. Among the potential contenders are RCO Finance (RCOF) and Polygon (MATIC), both of which have been gaining attention for their unique features and growing communities. This comparison explores the factors behind UNI's decline and examines why RCOF and MATIC might be poised to take their place in the upper echelons of the crypto market. Uniswap's Q2 Financials Spark Community Buzz Amid UNI's Price Volatility and Market Uncertainty Uniswap revolutionized the cryptocurrency landscape by popularizing decentralized finance (DeFi). As a pioneer in the space, Uniswap has grown to become the largest and most active decentralized exchange (DEX), allowing users to seamlessly swap tokens across multiple blockchains, including the BNB Chain. Uniswap's innovative approach to trading without intermediaries has significantly contributed to the broader adoption of DeFi, empowering users with greater control over their assets and fostering a more open financial system. On August 6, 2024, the Uniswap Foundation announced the unaudited summary financials for the second quarter of the year, and this caused a buzz in the Uniswap community. Meanwhile, the price of UNI has dropped significantly recently. Currently, UNI is trading at \$6.188, a 17.84% dip from two weeks ago. Nonetheless, with the recent decline in the Relative Strength Index (RSI) indicator, analysts expect buyers to enter the market. Hence, the price of UNI could hit \$8.300 in a few weeks. Conversely, some analysts have adopted a negative stance with the Bollinger band indicator channeled on the downside. Thus, the value of UNI could drop to \$3.800 soon. Polygon's MATIC Faces Uncertain Future Amid Mixed Market Signals There were high expectations that the launch of the Ethereum ETF would significantly boost activity within the Ethereum ecosystem, subsequently increasing demand for Polygon's Layer 2 scaling solution. Many anticipated this event would bring a surge of interest and investment, potentially leading to substantial gains for Layer 2 blockchain tokens like MATIC. However, with the Ethereum ETF launch attracting less attention than anticipated, the optimistic forecasts for Polygon and similar tokens are now envisioning returns as high as 10,000% are now facing disappointment. This underwhelming response has dampened the hopes for explosive growth in the Layer 2 sector, leaving investors to reassess their expectations in the current market landscape. Recently, the MATIC has been seriously struggling. The token is currently trading at \$0.426, a 16.22% decline from two weeks ago. Despite the recent struggles, some analysts remain bullish about Polygon because of the recent increase in the total value locked (TVL) and network activity. Thus, the price of MATIC may surge to \$0.700 in a few weeks. On the other hand, Coinglass data is showing a notable increase in MATIC liquidations, suggesting a continuation of its bearish trend. This could cause the price of MATIC to drop to \$0.327 soon. RCO Finance Proudly Offers the Market's First Fully AI-Driven Robo Advisor RCO Finance is revolutionizing the financial industry by eliminating the reliance on traditional centralized intermediaries. Historically, institutions have controlled financial transactions and require significant human involvement, leading to slower processes and higher costs. RCO Finance addresses these challenges by utilizing an AI-driven trading platform that maximizes efficiency by removing the human element from trading activities. At the heart of RCO Finance's solutions is its AI-powered robo-advisor, an innovative tool that replaces potentially biased human financial advisors and portfolio managers. This cutting-edge technology offers experienced and novice traders tailored guidance, leveraging market trend analysis and vast data resources to make informed decisions. By eliminating human bias, the robo-advisor helps investors minimize risks and maximize returns. One of its standout features is an advanced alert system that greatly enhances the trading experience by pinpointing the best market entry and exit points. Furthermore, RCO Finance strongly emphasizes user security and autonomy. The platform's smart contracts are thoroughly audited by SolidProof, a leading auditing firm, ensuring the highest standards of integrity and reliability. Users can have confidence in the safety of their assets, as RCO Finance operates without requiring KYC procedures, safeguarding both privacy and security. Can RCO Finance's RCOF Token Outdo UNI and MATIC's Success? RCO Finance's native token, RCOF, is rapidly gaining momentum thanks to the project's practical utility. In Stage 2 of its public presale, RCOF is priced at \$0.0344, with nearly 25 million tokens already sold. The next phase of the presale is on the horizon. The prospects for RCOF are bright, supported by RCO Finance's well-structured tokenomics, which aim to promote steady growth and prevent pump-and-dump schemes. This strategic approach boosts investor confidence in the project's long-term sustainability. For early investors, RCOF offers the potential for significant returns, with projected stage-wise gains that could reach up to 5,000% from the Stage 1 price. Such extraordinary profit potential is rare in the market, making this an opportune moment to consider investing. Decentralized protocol Matrix.One accelerating the development of human-like AI characters is proud to announce that their flagship product, Avatar.One, has over 120,000 active users every month since its launch earlier this year. Many of these users spend more than three hours chatting with their personalized AI companions. Avatar.One, which is based on Solana and has over 100,000 linked Solana wallets, helps users quickly create their perfect 3D AI companion to combat the global loneliness epidemic. By selecting from hundreds of thousands of options and even providing it with a live AI-generated voice, users of Avatar.One are able to customize the AI companion's personality via avatar maker. Users may flirt, have frank conversations with their characters, send and receive selfies and videos, and make memories together. By adding memories, they may even enhance the AI character's personality. The World Health Organization (WHO) deemed loneliness to be a global public health concern last year, stating that it may be just as harmful to people's health as smoking 15 cigarettes a day. Loneliness in older persons is linked to a 30% greater risk of stroke and a 50% increased chance of dementia. A Harvard University survey indicates that 61% of Americans between the ages of 18 and 24 report feeling very lonely. This year, another Harvard research found that conversing with AI companions lessens loneliness to an equivalent extent as conversing with a person. Additional research has shown that AI Companions may help with the development of social and emotional skills. Mark Studholme, Co-Founder of Avatar.One and Matrix One, said: "I envision a future where every living person can own an AI character they define. These AI characters can help them with daily tasks, whether that be reminding you of your mom's birthday, watching Netflix with you on the couch, or even paying your taxes. As the loneliness epidemic is a serious issue. However, given the acceleration of AI technology, it is feasible to envision a time in the future when everyone has a full-time 3D companion to assist with anything from financial management to conversational support to cooking advice, event reminders, tax submission, and more. As AI models advance, the quality of the chat experience is continuously increasing and becoming more accurate at simulating genuine human interactions. Matrix One's custom built decentralized protocol, which includes a character studio, avatar maker, and an extensive library of LLMs, powers Avatar.One. 3D AI characters can be integrated with game engines like Unreal, Unity, and Three.js thanks to this technology. Matrix One makes it possible to deliver fully animated AI-powered characters across a wide range of platforms, such as the web, mobile, VR, AR, and more. Because of this, you can download all of the avatars to use them in more than 200 games and applications. Privacy and user safety are top priorities for Avatar.One. All communications and user information are kept private and secure, never to be disclosed to third parties, and are kept in an encrypted database via SSH. In order to make sure that a user's password cannot be stolen, it also employs passwordless authentication. The user growth milestone coincides with Matrix One getting ready for the weeks leading up to the token's listing on centralized exchanges, which will take place during its token generation event (TGE) on Polkastarter, Seedify, and ChainGPT. In addition to granting holders governance powers, the \$MATRIX token facilitates user access, creation, and interaction with AI characters inside the Matrix One network. Avatar.One is accessible to anybody over the age of 18 who believes AI companions may help them overcome loneliness. The platform intends to soon enable users to completely control their character and history of interactions by making on-chain characters accessible.

- STS Digital is strengthening Market Liquidity with Flotvec's Expertise. - The acquisition aims to strengthen the market position and enhance liquidity for digital assets. STS Digital has announced the acquisition of Swiss market maker Flotvec, a move that underscores its commitment to enhancing liquidity solutions within the cryptocurrency space. Flotvec's trading infrastructure and proprietary algorithms will be integrated into STS Digital's existing platform, further strengthening its offerings. The acquisition is set to bolster STS Digital's portfolio by integrating Flotvec's sophisticated liquidity management tools, which are crucial in minimizing price slippage and improving overall market depth. This strategic move aligns with STS Digital's broader vision of optimizing liquidity across multiple cryptocurrency exchanges, thereby facilitating better market access and more reliable trading conditions for institutional and retail investors alike. As the cryptocurrency market continues to mature, this acquisition represents a significant step towards achieving greater market efficiency and stability. STS Digital reckons that this acquisition will significantly advance its market-making services. Market Makers' Role in Crypto Market making in crypto ensures smooth and transitional trading of cryptocurrencies. Many trading firms are seeking market makers to improve their projects and stand out among the huge crowd. They provide liquidity, ensuring smoother transactions, and reducing price volatility. For trading firms, market makers help minimize slippage. They maintain tight spreads, and enhance the overall trading experience, particularly in less liquid markets. Recent acquisition highlights the growing importance of market makers in the evolving financial landscape. Similarly, Jane Street, a leading trading firm, acquired a market-making unit from Bank of America to strengthen its capabilities in the digital asset space. These moves underscore the strategic value of market makers in improving trading efficiency and competitiveness for firms. In both traditional and digital markets. Highlighted Crypto News today: US Bitcoin ETFs on Track to Surpass Satoshi Nakamoto's BTC Holdings

The U.S. Select Committee will decide which party controls the SEC and influences crypto ETF approvals. The upcoming and influential legislative body will have a significant impact on the regulatory landscape for cryptocurrency, particularly regarding crypto policy and the approval of crypto-related ETFs. With both the presidential and congressional races on the horizon, the balance of power within the Securities and Exchange Commission (SEC) could shift, impacting how the agency approaches these critical issues. Jeremy I. Senderowicz, a leading ETF attorney at law firm Vedder Price, has emphasized the importance of these elections in determining which party will control the SEC. In a recent interview on ETF TV, he explained that the results of the U.S. presidential election are critical, as they will influence who is appointed as SEC commissioner in the next administration. These commissioners play a pivotal role in the approval of financial products, including ETFs that focus on cryptocurrencies. Jeremy I. Senderowicz stated that "The upcoming election will essentially determine which party controls the Securities and Exchange Commission, and that can have a real impact on ETFs." U.S. Government's Crypto Stance Recently, the U.S. government has become more friendly toward the crypto sector with popular support. Presidential candidate Donald Trump also appears to be more involved with cryptocurrencies. Additionally, Senator Cynthia Lummis of Wyoming introduced the Bitcoin Reserve Asset bill at the end of July. However, one of the key developments in view is the pending applications to offer ETF share classes of mutual funds. Senderowicz noted that election outcomes could be crucial for approving these products, including Solana ETFs. Nate Geraci, President of the ETF Store, supports this view, noting that election outcomes could significantly impact the SEC's stance on crypto ETFs and lead to a more favorable approval environment. At the time of writing, the global cryptocurrency market cap has surged by over 2.5% in the past 24 hours, turning bullish. This positive momentum has come as Bitcoin has come back into the \$61K zone following three days of consolidation. This rebound reflects a broader upward trend in the market as major cryptocurrencies recover from recent fluctuations. The resurgence of Bitcoin is a notable highlight, signaling a short-term bullish trend in the coming days. Highlighted Crypto News US Bitcoin ETFs on Track to Surpass Satoshi Nakamoto's BTC Holdings

- Coinbase launches cbBTC on Base blockchain, aiming at DeFi integration. - Justin Sun reassures WBTC's security amid controversy. Coinbase, one of the leading cryptocurrency exchanges, has recently launched its own wrapped Bitcoin token, cbBTC, on the Base blockchain. This move comes amid growing speculation and significant announcements surrounding wrapped Bitcoin (WBTC), which remains a major topic of discussion within the crypto community. Just hours ago, Coinbase tweeted about cbBTC, highlighting its potential to build a robust Bitcoin economic system on the Base network. This announcement follows closely on the heels of BitGo's recent partnership with Justin Sun and Bit Global (formerly Bithumb) to transform its WBTC product. cbBTC, @coinbase's, August 13, 2024 WBTC, currently available on multiple blockchains, holds the most substantial presence on Ethereum, with over 154,000 WBTC tokens worth more than \$9 billion circulating on the network. While WBTC is also available on other chains like Base, Kava, Osmosis, and Tron, these offerings are a fraction of its Ethereum presence. Meanwhile, the introduction of cbBTC by Coinbase has ignited anticipation among the crypto community. As it is expected to provide Bitcoin holders with more efficiency and cost-effective access to decentralized finance (DeFi) applications on the Base blockchain. Sun Reassures Wrapped Tokens cbBTC's emergence positions it as a

potential competitor to WBTC, which has faced community concerns due to Justin Sun's involvement. Sun has been facing backlash in recent days with his take on WBTC. He addressed these concerns via his X profile, clarifying that his role in WBTC is strategic. Also, the product's security remains unchanged. He emphasized that his involvement promotes decentralization and maintains WBTC's critical role in the DeFi ecosystem. Sun reassured that he has no control over WBTC reserves and remains focused on ensuring its safety and integrity. As the market braces for a possible battle between cbBTC and WBTC, this development marks a significant chapter in the ongoing evolution of wrapped tokens. Wrapped Bitcoin tokens allow users to leverage their Bitcoin in DeFi applications, enabling them to lend, borrow, and trade. And earn interest without relying on traditional banks. Highlighted News Of The Day Will Bitcoin (BTC) Stage a Bullish Comeback Amid Whale Movements?

- The lawsuit claims that the price of the HEX token was manipulated. - The plaintiff, Ryan Cox, first filed the complaint in 2021. A class-action lawsuit against Binance US, has been revived by an appeals court in the US. The lawsuit, which had been partly reinstated after being dismissed earlier, claims that the price of the HEX token was manipulated. A class action lawsuit against Binance US was largely reversed by the United States Ninth Circuit Court of Appeals. The court's decision on August 12 breathed fresh life into the action, which focused on alleged price manipulation of the HEX token. The plaintiff, Ryan Cox, first filed the complaint in 2021. And claims that CoinMarketCap and the cryptocurrency exchange illegally manipulated the price of the HEX token. According to Cox, these organizations manipulated CoinMarketCap, a website that tracks cryptocurrency values and is owned by Binance. As a result, HEX was trading at lower rates than Binance's cryptocurrencies. Viable Claim of Price Manipulation Moreover, after the district court rejected Cox's case, a three-judge panel reversed, finding that Cox had not shown enough proof linking certain acts in Arizona to Binance US. Due to their incorporation or major location of business inside the nation, both parties have important relationships with the greater United States, as mentioned. According to the panel's ruling, Cox has a viable claim of price manipulation against Binance US. Since these ties meet the due process criteria for personal jurisdiction. Therefore, further judicial actions will be initiated in the remanded case. This decision is made in the face of mounting criticism of the HEX token and Richard Heart, the man behind it. Separately, on July 31, 2023, the SEC sued Heart, claiming that the company had deceived investors out of at least \$12.1 million and violated federal securities laws. Highlighted Crypto News Today:

- Cardano's user base remains stable despite new market challenges. - ADA's low NVT ratio suggests it might be undervalued. Prominent blockchain Cardano's address count with a balance has remained around 4.45 million for over a year, indicating stability but also highlighting challenges in attracting new users. During the last cycle, Cardano positioned itself as a strong alternative to Ethereum, experiencing significant growth. However, in the current cycle, platforms like Solana and Base have garnered more attention, as noted by the data aggregator, IntoTheBlock. Despite the slowdown in user acquisition, Cardano's transaction count and active user base have remained stable since April. This suggests a committed community that continues to engage with the protocol. Moreover, Cardano settles approximately \$7.2 billion daily in on-chain volume, surpassing many other networks. This result, in a low NVT ratio of just 2.62, potentially indicating that ADA is undervalued. Long-term confidence in Cardano is demonstrated by the fact that nearly 46% of ADA's supply is held by long-term holders, an all-time high. However, ADA's price performance has been underwhelming. ADA Performance Analysis Over the past month, the token has declined by 22%. Crypto analyst Max Maher identified three major reasons for this underperformance. He noted that Cardano lacks a compelling narrative, unlike Solana's memecoin craze or Ethereum's ETF developments. Additionally, Maher pointed to network security, suggesting that Cardano's core values remain misunderstood by many. As of now, ADA is trading at \$0.334, down 2.62%, with a 5% increase in trading volume, facing significant selling pressure. The daily RSI stands at 39, indicating a bearish trend. The 9-day EMA is at \$0.3425. If bullish momentum returns, ADA could potentially rise to \$0.3905 and \$0.4212. Conversely, if bears maintain control, the price could retrace to \$0.3107 initially, with the possibility of further decline to \$0.2778. Analysts stress that Cardano's future remains uncertain as it grapples with both challenges and opportunities. While its committed community and strong on-chain metrics suggest resilience, the lack of market headwinds may continue to weigh on ADA's price performance in the near term.

- Ethereum token witnessed several whale movements in the past 24 hours. - The altcoin's daily trading volume surged 17.44% as per CMC data. Leading altcoin Ethereum has witnessed several whale movements in the past 24 hours. While the token's price has consolidated at the \$2.6K level, particular community members were observed selling ETH tokens. Meanwhile, the overall cryptocurrency market has shown positive momentum with Bitcoin and other altcoins showing modest price increases. Notably, the second largest altcoin, Solana, has returned to its previous price levels similar to Bitcoin. On the other hand, Ethereum showed a mild dip of 1.23% over the last 24 hours. In the late Asian hours of August 12, ETH traded at \$2,682, after which it attempted to surpass \$2.6K. Subsequently, at the day's beginning, Ethereum hit a weekly high of \$2,749, before residing to current levels. At the time of writing, ETH was trading at \$2,644 according to CMC data. Additionally, the token's daily trading volume surged 17.44%. Looking out over the past week, the token shows a price performance of 1% increase after the previous dip. Despite the price recovery, Ethereum has shown repeated action of returning to the \$2.6K level, struggling to break the resistance level. Moreover, the token's RSI stands at 40.11 indicating a consistent selling sentiment among investors according to TradingView reports. Additionally, the token's long-term 21-day MA stands above the short-term 9-day MA highlighting the current bearish trend. Meanwhile, as aforementioned, the altcoin witnessed key whale movements in the past day. Are Ethereum (ETH) Whales Initiating Major Selloffs? Tron Network founder, Justin Sen was observed transferring ETH tokens from his wallet to the Aave Network and Poloniex exchange wallets 4 hours ago. Additionally, crypto investment firm Block Tower Capital sold 9,232 ETH tokens to four different institutions. Additionally, according to WhaleAlert reports, particular whales were observed dumping ETH tokens onto the Coinbase exchange. These whale movements have caused the ETH market sentiment to lean towards selling pressures despite price recovery. Meanwhile, the US spot ETH ETFs recorded positive weekly inflows for the first time last week. The digital assets were initially expected to propel a bull run in Ethereum causing it to hit new PATH. However, contrary to market expectations, the spot ETFs failed to instigate price breakouts in the altcoin.

Prien am Chiemsee, Germany, August 13th, 2024, Chainwire Bit-Chess, a newly launched crypto project, proudly announces the presale launch of the world's first fully decentralized chess platform. This groundbreaking platform aims to bring millions of online chess players into the expanding cryptocurrency industry. The Bit-Chess team shared this exciting news on their X account (formerly known as Twitter), highlighting their commitment to decentralization and how chess is the perfect game for the blockchain era. The platform is designed to be a safe haven for chess players, a fully step in incorporating millions of online chess players into the revolutionizing crypto industry. The presale is designed for chess lovers and investors who want to get in early on this exciting chess-focused project. Bit-Chess aims to bring the world of chess into the decentralized crypto space, offering a unique blend of strategic gaming and blockchain technology. With a total supply of 210 billion tokens, \$BCC is a Solana-based token that will serve as the governance token within the Bit-Chess ecosystem. This means that \$BCC will have a say in important decisions about the platform's future. For the presale phase, Bit-Chess offers 23.625 billion \$BCC tokens, 11.25% of the total supply. Currently, 1 \$BCC is priced at \$0.000373, and interested buyers can purchase tokens at this early stage to secure them at a significant discount. The tokens can be bought on the project's official website using various popular cryptocurrencies, including Solana (SOL), Ethereum (ETH), Binance Coin (BNB), Bitcoin (BTC), and Tether (USDT). This makes participation accessible to a wide range of investors. The presale is an opportunity for those who see the potential of combining this timeless game with the latest blockchain technology. Notable Features of Bit-Chess Bit-Chess is set to significantly impact the chess world by integrating traditional gameplay with modern blockchain technology through the Solana network. Here are some key features that distinguish Bit-Chess: - Guideline with Income Wallets - The platform will offer a detailed guideline for those new to crypto or chess, as its goal is to educate anyone interested and attract millions to crypto. - \$BCC - Bit Chess Coin - The \$BCC smart contract will be developed in the short term on the Solana-Blockchain with a strong partner of Bit-Chess Solidproof to ensure 100% security and transparency made in Germany. - Play-to-Earn (P2E) Mechanics - Bit-Chess introduces a play-to-earn model where players can earn rewards through their gameplay. These rewards will be airdropped automatically and can be converted into real-world value, adding a new layer of benefit to playing chess. - Global Tournaments - The platform will host tournaments that allow players from all over the world to compete against one another. Winners will have the chance to earn cash prizes and exclusive NFTs, creating a competitive and rewarding environment. - Player-Versus-Player Matches - Players can engage in one-on-one matches to test their skills against other chess enthusiasts. This feature offers a direct, competitive experience, allowing players to challenge and improve their strategic abilities. - Exclusive NFTs - Bit-Chess will offer special NFTs to its high-level chess players, which can be bought, bred, traded and borrowed. - Merchandise Store of Bit-Chess - Bit Chess also implements a merchandise store who guarantee to use every single earning for BuyBacks of the \$BCC. - \$BCC Burn - In the Bit Chess environment there will also be a burn mechanism integrated. About Bit-Chess Bit-Chess is introducing a new way to play and enjoy chess using blockchain technology. It is the first chess platform built on the Solana blockchain, which uses digital technology to create a more secure and open gaming environment. Bit-Chess aims to blend the traditional game of chess with modern technology. Its goal is to offer a platform where players can not only play chess but also participate in a system that rewards their efforts. Using blockchain, it wants to make chess more interactive and beneficial for players worldwide. Bit-Chess is focused on connecting traditional chess with the new possibilities of blockchain technology. The platform is designed to be accessible and user-friendly, helping players easily guide and take part in this new gaming experience. For the latest updates on Bit-Chess and its token presale, constantly visit their official website and join their vibrant community by following them on X (Twitter), Telegram, and Instagram. Contact Christian Andreas Heinrich Bit Chess chris@bit-chess.xyz

- Bitget Wallet achieved a record 1.7M downloads, a 140% increase from June. - BNB token integration boosted user engagement and expanded global reach significantly. In July 2024, Bitget Wallet achieved a record-breaking 1.7 million global app downloads, surpassing MetaMask's growth for that month. This represents a significant 140% increase from the previous month, propelled by the platform's advanced on-chain trading features, particularly for meme coins. Bitget Wallet's prominence in the meme coin sector is notable, offering functionalities such as smart money tracking on Solana and Base chains, automatic slippage adjustments, zero gas fees, and instant trade modes. Moreover, the introduction of the BNB token has also contributed to the wallet's expansion, serving roles in community governance, staking, and gas fee payments. The BNB token's integration has enhanced user engagement and extended the platform's reach, especially in markets like Japan and Nigeria. \$Y\$ Big news! #BitgetWallet now has over 30 million users globally, a 50% jump since Q1! - Bitget Wallet (@BitgetWallet) August 13, 2024 87% And in July, we hit 1.65 million app downloads, surpassing #MetaMask! 87% We want to say a big thank you for all of your support and making this milestone possible 87% Dive into our, pic.twitter.com/4SdLZMTp52 Meanwhile, the TON ecosystem has emerged as the most transacted network on Bitget Wallet, outpacing established chains such as Polygon, Arbitrum, and BNB Chain. The wallet's growth is particularly pronounced in Europe, North America, and Oceania, with countries such as Russia, Italy, Sweden, and Australia experiencing over 40-fold increases compared to the previous year. France, the UK, Turkey, and Canada have also seen the user numbers rise by over 1,000%. Dominant Presence Established Across Asia Bitget Wallet's rapid growth, from one million to 30 million users since its March launch, underscores its rising prominence in the DeFi sector. It has made significant inroads in Asia and Africa with user bases in Japan, the Philippines, Thailand, India, Vietnam, and Singapore expanding markedly. Nigeria, in particular, has become a leading market for the wallet. Despite this growth, Bitget Wallet CEO Alvin Kan acknowledges ongoing challenges in Web3, particularly in improving user experience. He emphasizes the need for user interfaces and experiences comparable to those of Web2 applications to attract and retain users, reflecting the broader challenge of simplifying Web3 interactions for mainstream adoption. Highlighted Crypto News Today: TeraWulf Q2 Revenue Surges Despite 21% Drop in Bitcoin Production

- Yilport Holdings, a Turkish firm, would put \$1.6 billion into the Acajutla and La Union ports. - The nation claims this is the biggest private investment it has ever received. The announcement of a \$1.6 billion investment in Bitcoin City in El Salvador has sparked renewed interest in the cryptocurrency. Yilport Holdings, a Turkish firm, would put \$1.6 billion into the Acajutla and La Union ports, the latter of which will house the Bitcoin City. Crypto enthusiasts have dubbed the port construction a Bitcoin city infrastructure investment, and it will attract investment to the city. Yilport Holdings, a Turkish company, plans to spend more than \$1.6 billion improving two ports in El Salvador, one of which is where

Bitcoin City is being considered for development. Also, the nation claims this is the biggest private investment it has ever received in a statement made on X. In a video that he posted on X, President Nayib Bukele informed the public about the development. Bukele stated: "The company Yilport Holding Inc. will allocate more than \$1.615 billion to the Pacific Port Union. Here we will modernize the port of Acajutla and activate, finally, the port of La Unión." Key Logistics Hub Currently, the port of La Unión is in a very bad condition, with very few ships using it because of the inadequate facilities. The Autonomous Executive Port Commission (CEPA) and Yilport Holdings have entered into a deal to administer the facilities for a duration of fifty years. Furthermore, according to the press release, the investment will be phased in and will begin towards the year's conclusion. The measure is in line with goals to enhance El Salvador's seaports, according to CEPA President Federico Anliker. Anliker stated: "El Salvador is becoming a very important logistics hub in Latin America. With the largest private investment in the history of our country, we are going to strengthen our seaports." Highlighted Crypto News Today: Solana Price Faces Potential Drop to \$115: What's Next For SOL?

- Dogwifhat (WIF) showed a double-digit loss, reflecting a sharp price drop of over 10% in a single day. - Dogwifhat futures contracts have decreased by approx 26.35%. As Bitcoin (BTC) faces a notable bid, the Solana-based memecoin Dogwifhat (WIF) has recorded significant volatility with a double-digit loss. In the last 24 hours, WIF displayed a sharp decline of over 13.3%, reflecting the broader impact of Bitcoin's downturn on the memecoin market. The memecoin, which fell to \$1.89 on August 9, initially saw a rebound of over 23%, approaching \$2.50 over the weekend. However, this rally proved unsustainable, with the price dropping back to the \$1.82 zone. At the time of writing, Dogwifhat is trading at \$1.66, with a market cap of \$1.66 billion. Analysts are now speculating whether WIF might dip back to the \$1 mark. Some experts predict that Dogwifhat could retest the critical support level at \$1.50. Additionally, the Open Interest (OI) for Dogwifhat futures has seen a notable decrease, falling 26.35% from \$277 million to \$204 million in just three days, as reported by CoinGlass. This decline in OI suggests a weakening in market confidence. Is Dogwifhat Set for Further Decline? Despite a 38% rise over the past week, the cryptocurrency remains in a bearish phase. The memecoin has fallen 13.3% in the last day, with its price dropping from \$1.87 to \$1.62. The bearish trend is further confirmed by TheNewsCrypto's dogwifhat price prediction, highlighting a strong downward movement with the moving average and average directional index indicating continued bearish pressure. The ADX showed a negative index of 26, surpassing the positive index of 17. Further adding to the bearish sentiment, the liquidation of long positions has increased over the past week. If the recent daily losses continue, WIF might test significant support below \$1.30. Also, there's a risk that the price could drop to \$1.05 zone. However, the recent weekly surge suggests that WIF market sentiment might change hands and rise further. In that case, WIF could face immediate resistance at \$1.92, with a further resistance level at \$2.30. Finally, the coin's price is too far from the \$10 forecast previously made by Arthur Hayes, former CEO of BitMEX. Highlighted Crypto News Today

- Binance faced an operational ban in Venezuela on August 9. - The nation's government also banned X for ten days according to the President's statement. One of the largest cryptocurrency exchanges, Binance was banned in Venezuela due to the presidential disputes. In the past few weeks, the nation has banned several prominent platforms including Elon Musk founded X. The Binance ban occurred on Friday, following which the anti-censorship organization, "Ve sin Filtro" reported it on August 10. Notably, the Venezuelan government has been battling citizen protests and political disarray since its July 28 presidential elections. According to Reuters' report, the nation's election authority stated the running president, Nicolas Maduro had won re-election with 51% votes. However, the opposition leader Edmundo Gonzalez claimed to have won the election with 70% of the votes. Moreover, this resulted in court cases and censorship by the President. Additionally, Ve sin Filtro reported detecting a DNS blocking which affects the normal operation of its website and mobile application. On the other hand, the South American nation's citizens have shown huge interest in the crypto exchange over the past week. Previously, in May, the nation announced detaching cryptocurrency mining firms from its power grid due to increased energy consumption. During the ban, the government confiscated nearly 2000 mining firms in different locations. How Is Binance Dealing With the Venezuela Ban? Presently, Binance's Latin American team addressed its users on X assuring them of funds safety. Moreover, the announcement stated that the Binance firm, similar to other websites in the nation, faced restrictions. Notably, the ten-day X ban occurred after Elon Musk and Nicolas Maduro had an online dispute. Binance stated in its X announcement: "We understand the inconvenience and concern this situation may cause. We are monitoring the situation closely to address it in the best and quickest way possible." Furthermore, the cryptocurrency firm's Indian platform incurred fees for GST in the past week. The Indian government demanded from Binance 722 crore INR worth \$86 million in fees. Highlighted Crypto News Today:

This investing season, everyone is asking the same question: "What's the best crypto to buy now?" Finding the answer requires some research and a bit of math magic. How much yield has the coin offered investors so far? What does the future outlook look like? How has market volatility affected the coin? One is analyzing how easy it is to invest. This article aims to decode these crypto investing conundrums by examining three major market developments: GRT's bullish bid, Solana's ecosystem growth, and BlockDAG's innovative investment gamification with automatic bonuses for investors. Among these options, BlockDAG stands out as an especially attractive opportunity, given its potential to reach \$1 per coin, which could bring current investors nearly 5800% ROI in the coming months. GRT's Bullish Trend Persists The Graph (GRT) is making significant strides in the crypto market, riding the wave of Bitcoin's bullish momentum. As an essential tool for indexing and querying blockchain data, GRT is becoming increasingly vital as the digital landscape grows. Its capabilities are capturing the interest of developers and investors alike, positioning it as a key player in the decentralized ecosystem. Despite its promising trajectory, potential investors should remain cautious. The crypto market is notoriously volatile, and while GRT's upward trend seems enticing, it is essential to consider the long-term utility and the team driving the project. Regulatory shifts can also impact GRT's value, so staying informed is crucial. Solana Ecosystem Flourishes But Price Remains Uncertain The Solana ecosystem has recently experienced a notable upswing in on-chain activities, highlighted by a surge in daily active addresses, reaching over 2 million based on a 7-day moving average. This growth has been fueled by popular DApps like Raydium, Pump.Fun, and Jito, each contributing to the ecosystem's expansion. Raydium, for instance, achieved a trading volume of \$30 billion in July, becoming the second-largest DEX after Uniswap. However, SOL's price remains unimpressed, dropping 4.82% in 24 hours to \$182.88, hinting at an uncertain future. Here's How BlockDAG's Automatic Bonuses Work BlockDAG has smashed record after record, raising \$65.2 million across 20 presale batches. Currently priced at \$0.017 per coin in presale batch 21, BlockDAG's value has soared by a staggering 1600% from its initial price of \$0.001. Investors are captivated by its potential of hitting \$1 per coin soon which could unlock an ROI of nearly 5800% for batch 21 investors. Such impressive numbers have triggered massive demand, with whale purchases reaching as high as \$2.5 million. What sets BlockDAG apart is its innovative approach to investment, making the process not only profitable but also engaging and entertaining. Its cutting-edge dashboard is a game-changer, transforming the investment journey into an interactive experience. The leaderboard page, a highlight of the dashboard, adds a layer of gamification that fosters community engagement. Investors can see the top 30 participants in the presale, ranked according to the number of coins purchased in USD. These rankings are categorized into tiers like crab, tortoise, fish, shark, and whale, each representing different investment levels. This structure not only motivates investors to climb the ranks but also offers enticing bonuses as they progress. For instance, a tortoise rank earns a 1% bonus, while advancing to the fish rank boosts the bonus to 2%, and so on, culminating in an 8% bonus for whale rank investors. The automatic application of these bonuses ensures investors are rewarded promptly and accurately, enhancing the thrill of investment. Furthermore, BlockDAG's Profile page allows users to track their ranks and compare their standings with peers, adding a competitive edge. With over 100k investors already on board and batch 21 nearing sellout, BlockDAG's upcoming batch is poised for a significant price surge, promising even greater excitement and potential profits. Final Verdict: The Best Crypto To Buy Now To conclude, GRT continues to maintain a bullish trend due to its robust indexing capabilities. Solana, meanwhile, is experiencing significant ecosystem growth driven by popular DApps like Raydium and Pump.Fun. However, for those seeking a promising investment with the potential for consistent returns despite market turbulence, BlockDAG stands out as a top choice. With a thriving community of over 100,000 backers and a 1600% price surge, this Layer 1 blockchain is poised for greatness. BlockDAG's gamified investment approach and innovative automatic bonuses add a unique twist to traditional investing. With predictions of reaching \$1 per coin, BlockDAG has attracted significant whale interest, and its presale batch 21 is nearly sold out, highlighting its strong market demand and potential for impressive returns. Initial coin offerings are essential for blockchain projects looking to raise capital and enter new markets. The most appealing investments are shown by closely examining elements like project viability, market demand, fundraising performance, and community involvement. This overview unveils the top five ICOs poised to dominate in 2024. Featuring leading names such as Pawfury and the XRP ETF, BlockDAG's initial offering shines brightly, swiftly securing \$65 million. Armed with innovative DAG technology and strong growth prospects, BlockDAG aims for a market price of \$1 following its introduction. 1. BlockDAG: Unleashing Blockchain's New Era BlockDAG emerges as the elite layer 1 blockchain, fueled by principles from Bitcoin and Kaspa, and stretches the limits of tech ingenuity. Fully EVM-ready, it equips developers to smoothly integrate Ethereum-based smart contracts, reshaping the blockchain universe. With pioneering tools like the Explorer Platform and an intuitive Low Code/No Code Platform, BlockDAG opens up smart contract crafting to all, from experienced tech gurus to beginners. This tech giant not only accelerates deployment but also enhances efficiency and scalability, laying the groundwork for extraordinary expansion and redefining the digital world's mechanics. BlockDAG's presale narrative speaks volumes of its tech allure, with a staggering 12.5 billion coins claimed and \$65 million gathered by the 21st batch. The BDAG price is eyed to reach \$1 following its public debut, hinting at a growth trajectory that could overshadow many well-known projects. This rapid rise marks BlockDAG as a transformative powerhouse in the crypto arena, spotlighting it as a top-tier investment avenue. 2. Pawfury: Charging Ahead into 2024 Pawfury has surged to the forefront, racking up over \$4 million in presale tokens. This DeFi gem dazzles with its high APY and incentives for long-term stakers. With tokenomics crafted for enduring growth and a 10% early bird bonus, Pawfury is on track to dominate in 2024. 3. Solciety: The Meme Culture Phenomenon Solciety stitches meme magic into the Solana blockchain fabric, with token sales hitting \$0.002289 and fundraising topping \$1 million. This platform, steeped in political zest and driven by community, is becoming a hotspot for engagement. Merging wit with technology, Solciety is setting the stage for a thriving community keen on mixing laughter with impactful dialogue, redefining the scope of digital interaction. 4. 5th Scape: Venturing into Virtual Realms 5th Scape is capturing the spotlight, amassing nearly \$7 million with tokens priced at \$0.00376. It aims to redefine digital engagement through a groundbreaking virtual reality experience. Marrying avant-garde technology with a focus on user interaction, 5th Scape is carving out a new era in virtual engagement, offering a gateway to uncharted digital territories. 5. XRP ETF Token: Merging Finance Frontiers XRP ETF token is making waves by linking the robust world of traditional finance with the agile sphere of cryptocurrency, with tokens valued at \$0.08 and a funding pool of over \$340,000. This initiative seeks to fuse Wall Street with crypto innovations, blending trusted financial mechanisms with blockchain's cutting-edge approaches, thereby unlocking novel avenues for investors. Bottom Line 2024 is shaping up to be a year of significant transformations in the crypto world, with ICOs paving the way for both novel investment avenues and growth trajectories. Amidst competitors like Solciety and 5th Scape, BlockDAG claims a leading position due to its superior technology and impressive potential for expansion. This positions BlockDAG as a prime choice for investors, promising robust returns and sustained progress. With its price expected to surge to \$1, BlockDAG represents an enticing option for those scouting for high-stake opportunities. Disclaimer: TheNewsCrypto does not endorse any content on this page. Willemstad, Curacao, August 9th, 2024, Chainwire Online poker site CoinPoker has released a proof of reserves (PoR) report showing that user deposits are covered 1:1 in cold wallets, visible on the blockchain, alongside additional reserves in hot wallets to process instant withdrawals. Praising the move by the crypto-based poker site to increase transparency, former Austrian footballer and poker professional Mario Mosbäck has partnered with the site as a new official ambassador, alongside British pro Patrick Leonard. In an X post, Mario Mosbäck stated the pair's

â€œmission is to guide the new leadership group to build the worldâ€™s best online poker site.â€ Users can read CoinPokerâ€™s proof of reserves report here. Building A Top Online Poker Site With Cryptocurrency Founded in 2017, CoinPoker is a relatively new crypto poker room and casino, but increasingly ranked among the top online poker sites by the likes of Card Player Magazine, PokerScout and Techopedia. Unlike conventional internet poker sites that use fiat currency, on CoinPoker players bet with Tether (USDT) and the site is able to take advantage of the blockchain to show user funds are safe and segregated. Online poker was rocked by the Full Tilt Poker scandal in 2011, in which user funds were co-mingled with operating funds, and the company went insolvent in the industryâ€™s â€œBlack Fridayâ€. Many top poker sites increasingly accept cryptocurrencies as a deposit method, but CoinPoker is among a small and growing contingent to go â€œall inâ€ and embrace it for all actions at the poker table. Players can deposit USDT, Bitcoin, Ethereum, Solana, Polygon, Binance Coin or its own native token CHP which unlocks 33% rakeback for holders. For added security, CoinPoker also makes use of Fireblocks vaults and a decentralized RNG (random number generator) software that players can verify the randomness of after every hand, utilizing Ethereumâ€™s Keccak-256 algorithm. CoinPoker Sign Mario Mosbajck, Patrick â€œPadsâ€ Leonard 28 year old Mario Mosbajck, who played as a forward for Austrian Football club Wiener Neustadt SC, recently made a name for himself on the live and online poker scene. He now has over \$11.7 million in recorded live tournament earnings, including a first place finish at the Triton Super High Roller Series in Jeju for \$1.1 million, and a runner-up finish at the 2023 WPT Big One for One Drop for \$4.6 million. Source â€œtriton-series.com Mario players under the screenname â€œlivinmydreamâ€ on CoinPoker, often seen in high stakes battles in \$25/\$50 PLO cash games and higher. Patrick Leonard is a former PartyPoker ambassador and currently ranked 38th on the England all time money list by the Hendon Mob poker database. His total live earnings exceed \$3.1 million â€œ including a WSOP bracelet win â€œ and his online earnings of over \$19.2 million have seen the 35 year old often rated among the best online MTT players in the world. https://x.com/padspoker/status/1821575144504172892 Also a highly regarded poker coach, Patrick mentors mid stakes players to improve their games, with some of the grinders under his wing going on to win EPT, WCOOP and SCOOP events. He describes his goal at CoinPoker to help â€œcreate the safest and best online poker room in the worldâ€ and worked alongside the site to produce its proof of reserves report. Proof of Reserves on the Blockchain On its PoR report, CoinPoker writes: â€œCoinPoker prioritizes customer security and peace of mind. Our operations are safeguarded by a Cura ao gaming license, ensuring compliance with strict regulatory standards. We demonstrate our financial integrity through Proof of Reserves, holding sufficient funds to cover all user assets. Proof of Reserves refers to the assets we hold in custody for users when they deposit funds into their accounts. Here we provide proof that CoinPoker has funds held in reserve to cover all of our usersâ€™ assets 1:1, as well as some additional reserves. Itâ€™s important to note that this sum of funds refers only to usersâ€™ funds. CoinPokerâ€™s corporate holdings, which are stored in wallets completely separately, are not factored into the proof of reserves calculations.â€ At this time, CoinPoker customer deposits total approximately \$16 million, and the total assets held in reserve to cover those is just under \$16.75 million, equal to 105% of deposits. The exact amount of player deposits is updated dynamically every few minutes on the coinpoker.com website. Links are provided to view those funds on the blockchain via etherscan.io, blockchain.com, bscscan.com, and other crypto tracking sites. Depending on the token, the majority of funds are held in cold storage for security, with some in hot wallets to process instant withdrawals. Users can deposit and withdraw funds at any time via a web browser or a crypto exchange account. CoinPoker also announced an exclusive promotion for players to gain free entry into the upcoming \$40k GTD Sunday Special tournament, on the companyâ€™s Instagram and other socials. About CoinPoker Licensed in Cura ao, CoinPoker is available for free download on Windows and Android devices, hosting No Limit Hold em, Pot Limit Omaha and other game types across real money cash game and tournament formats. New players earn a 150% up to 2000 USDT matching bonus on their first deposit, and holders of the siteâ€™s native cryptocurrency CHP earn 33% rakeback on their play. Users can open a Coinpoker account here. - Donald Trump Jr. confirms memecoin RTR as the pseudo-official token of Trump. - Speculations around the announcement of the crypto platform, hinted at by Trumpâ€™s son, soar. - Trump Jr. endorses the goal of DeFi â€œ banking the unbanked. Dismissing all scam rumors, Donald Trump Jr. clearly asserts the new crypto entrant, Restore the Republic (RTR), is â€œnot a memecoinâ€ linked to Trump or his family. After the revelation, the value of RTR crashed 95% from the first post-launch peak. The ongoing US Presidential race and Donald Trumpâ€™s pro-crypto stance have spurred the virality of PolitiFi (Political Finance) memecoins in the crypto market. Especially, Trump-based memecoins received maximum support from crypto traders and investors. Notably, a new memecoin Restore the Republic (RTR) launched on Solana on Thursday. Following the tokenâ€™s launch two days after Trump Jr.â€™s DeFi announcement hint, rumors spread that it could be the Trump familyâ€™s memecoin, while scam allegations against RTR also emerged. Don Jr. Discusses Today's RTR Debacle on Locals Q&A pic.twitter.com/cd7pVBjAxx â€œ db (@tier10k) August 8, 2024 Furthermore, two of Trumpâ€™s sons â€œ Donald Trump Jr., and Eric Trump â€œ have expressed their love for â€œCrypto/DeFiâ€ lately. According to Trump Jr.â€™s statement, he vouches for introducing a long-term crypto project. He also warned the community saying, â€œbeware of fake tokens claiming to be part of the Trump project.â€ Analyzing the Crash of Trump-Based Memecoin RTR Four hours after the launch, RTR hit its first high at \$0.1562. After the denial of RTR not being the official memecoin of Trump, RTR nosedived 95% to a low of \$0.00672. On-chain analysis platform Lookonchain reported 5 â€œinsider walletsâ€ pulling up profits of over \$4 million within 6 hours of this meme coinâ€™s launch. On the other hand, the platform also pointed out the loss of a meme whale that traded a huge sum of RTR tokens. As per data, when the token was priced high at \$0.1562, the trader purchased 7.2 million RTR, nearly 1.12 million USD, using 5,687 SOL. Post the price plunge, the trader recorded a loss of over \$898,500 worth of SOL. At the time of writing, RTR traded at \$0.005350 on Solana-native DeFi trading platform Meteora. As per data, the token stood with a market cap of \$5.3 million and held a liquidity of \$4.3 million locked on the platform. Gate.io CEO Dr. Han Lin delivered an insightful presentation at the Asia Blockchain Summit 2024, focusing on the evolution of the cryptocurrency industry. Dr. Han explored the current state of the crypto sector, emphasizing that while the industryâ€™s growth has been impressive, there remains substantial potential for further expansion. The Current State of Blockchain and Web3 Dr. Han explained that throughout its existence, the industry has seen remarkable improvements and technological advancements that have made the blockchain more efficient. Furthermore, in recent years governments and regulatory bodies have begun to recognize the importance of blockchain and work to create supportive environments where the industry can continue to thrive. More users are adopting blockchain technology every day, which is making the user base of this technology more diverse and impactful. Now more institutions are showing interest in blockchain technology, proving that the industry is becoming more mature and stable. Dr. Hanâ€™s speech discussed the evolution of crypto across seven distinct areas: The Launch, The Tokens/Coins, The Exchanges/Trading Platforms, Trading Volume, Market Cap, The Chains, and The Users. The History of Crypto The Launch Dr. Han began by stating that initially people mined Bitcoin with computers, and later altcoins borrowed this same idea. Later, blockchain projects began to use ICOs, IEOs, and IDOs to launch. - ICOs pioneered the new wave of crypto fundraising but have declined in popularity due to regulatory scrutiny and market evolution. - IEOs enhanced credibility through established exchanges, providing a safer and more reliable platform for both investors and projects. - IDOs allowed projects to launch directly on decentralized exchanges, democratizing access for participants. This method reflects the shift towards more decentralized and community-driven approaches. Shift Toward Community-Driven Launches There is a noticeable trend towards community-driven launches in the cryptocurrency industry. Memecoins, for instance, have garnered significant attention and participation due to their reliance on strong community support and viral marketing. Additionally, there has been a marked decline in ICO launches as the industry shifts towards more community-focused methods like airdrops. This shift indicates a maturation of the market, where community participation is increasingly prioritized. The Tokens/Coins The tokens/coins of focus were BTC and ETH before, and then in 2017 there was a shift to stablecoins. Later centralized exchange (CEX) tokens became popular. In 2020, DeFi took over and then GameFi in 2022. Now memecoins are popular (although they have a long history before the present day). The number of tokens launched every year has also seen a dramatic increase. The Exchanges/Trading Platforms Trading platforms offer security and liquidity to millions globally. Solana and Base are popular choices for launching new tokens due to their cost-effectiveness. Dr. Han noted that industry veterans still recall the Mt. Gox launch and subsequent hack, as well as the rise and fall of FTX. Before 2018, launching a centralized exchange (CEX) was relatively inexpensive. However, increased competition and higher barriers to entry post-2018 have made this more challenging. Conversely, the decentralized exchange (DEX) landscape remains more accessible, with lower costs for launching a DEX. After the DeFi summer a lot more DEXs were launched. The market share when compared to CEXs is still quite small, but it is growing. CEXâ€™s still dominate, with a higher percentage of the overall trading volume. Trading Volume The trading volume of other coins besides the top 10 is shrinking. This is because the trading volume is concentrated in the top coins. Dr. Han continued with a word of caution to people buying the small coins, stating that they should be careful because there might not be enough liquidity to sell over all the trading volume is going, stating concentrated heavily in BTC, ETH, and stablecoins. The Market Cap Dr. Han described that the market cap of BTC is close to FB and he predicted that in one or two years BTC will surpass Facebookâ€™s market cap. From 2022-2023 BTCâ€™s market cap decreased due to the bear market, but this year it is growing. BTC still dominates among other tokens/coins with more than 50% of the total crypto market cap. The Chains Blockchains act as the infrastructure for the entire industry. Solana is currently dominating and is trying to surpass ETH as the most popular blockchain. ETH still has the highest DEX trading volume and TVL, as well as the most active developers. The Users Over the past 20 years the number of internet users has grown substantially. However, although the overall numbers are less, crypto users are growing even faster. 11 years ago there were only 1 million cryptocurrency users, and now everyone knows about crypto and more than 500 million people are considered crypto users. Conclusion Dr. Han concluded by stating that data suggests that, despite progress, blockchain technology is still relatively new, and we are still at the dawn of a

revolutionary era. He emphasized that as the industry continues to evolve, building connections and fostering collaboration will become increasingly important. Dr. Han urged industry leaders and newcomers to persist in pushing the boundaries and exploring the vast possibilities of blockchain technology. Media Contact: - Elaine Wang at Elaine.Wang@at. \$4WIN, the innovative PolitiFi memecoin on Solana blockchain dedicated to supporting President Donald J Trump and his campaign for the 47th Presidency, has recently grabbed attention with a significant milestone in its market capitalization hitting \$6m market cap days within official launch. This sudden surge has sparked discussions among crypto enthusiasts and investors alike, with many wondering if \$4WIN could be the next big thing in the meme coin space. Supporting Trump's 2024 Campaign In line with \$4WIN's mission to support President Donald Trump, 10% of the total supply of \$4WIN tokens will be donated directly to Trump's 2024 election campaign. This initiative underscores commitment to ensuring that Trump's vision and leadership continue to have a profound impact on our nation. Could \$4WIN be the next 100X Investment? The growing anticipation around President Trump, the MAGA movement, the upcoming election, and other pivotal events places \$4WIN in an exceptional position. This blend of strong momentum, intense excitement, and utility sets \$4WIN apart from other tokens. The buzz surrounding these major political events offers a solid foundation for \$4WIN, potentially boosting its value as more investors and supporters get on board. For investors aiming to diversify their portfolios and tap into the next big thing in crypto, \$4WIN presents thrilling opportunities. Watch closely as these tokens continue to evolve and potentially yield significant returns in the near future. Strategic Collaborations and Major Announcements on the Horizon As this remarkable achievement is celebrated, \$4WIN is gearing up for even bigger surprises. Several strategic collaborations are in the pipeline, promising to further elevate \$4WIN's presence in the crypto space. These upcoming partnerships will play a crucial role in the mission to support President Trump and foster financial independence. Major announcements are on the horizon that will surely take \$4WIN and the entire crypto community by storm. Innovative Initiatives and Future Plans \$4WIN is more than just a memecoin; it represents a movement with a clear vision. 10% of the total supply of \$4WIN tokens are dedicated to supporting President Trump's initiatives, emphasizing their commitment to making a positive impact. Additionally, \$4WIN has ambitious plans for the future, including the development of a unique Play-2-Earn game, an exclusive NFT collection, and ongoing efforts to raise awareness and drive adoption. Community-Driven Success The success of \$4WIN can be attributed to its vibrant and engaged community. Since its launch, \$4WIN has garnered a dedicated following, with supporters actively participating in various campaigns, events, and initiatives across X and Telegram being their strongest channels and blowing up with activity. This collective effort has not only driven the coin's market performance but also strengthened its community and fostered a sense of unity and purpose among its members. Celebrating the Journey Ahead \$4WIN is committed to delivering value to its community and fostering long-term growth and sustainable development. The journey has just beginning, with exciting opportunities and collaborations on the horizon that will further elevate \$4WIN in the crypto space. About \$4WIN, A Coin with a Cause \$4WIN is not the average memecoin. Born out of the desire to stand by Trump during challenging times, this cryptocurrency aims to unite his supporters and create a financial revolution. With the recent attempt on Trump's life, the launch of \$4WIN symbolizes resilience, strength, and enhancing the DeFi (Decentralized Finance) ecosystem. Connect With \$4WIN: - Website: <https://trump4win.com/> - Telegram: [https://t.me/sol4trump\\_4win](https://t.me/sol4trump_4win) - X: [https://x.com/4Trump\\_4WIN](https://x.com/4Trump_4WIN) Media Contact - Mark Hyde - Email: [marketing@trump4win.com](mailto:marketing@trump4win.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. - The FCA discovered over 200 rule violations little over two weeks after rule implementation. - In June of 2023, the FCA made an announcement on the introduction of new rules. The UK's financial watchdog, the Financial Conduct Authority (FCA), has issued fresh guidelines for cryptocurrency companies that promote cryptocurrency services. In October 2023, the FCA implemented laws regarding the marketing of cryptocurrencies and has since been assisting the sector in meeting these requirements. The authority looked at how businesses were putting the rules for advertising crypto services into action. It picked businesses that met the criteria, contacted them for information, and even paid them a visit. Stringent Compliance The Financial Conduct Authority (FCA) was interested in hearing how businesses were handling the following: the 24-hour cooling-off period; customer classification; determining whether an investment was suitable; maintaining records; and doing due diligence on cryptocurrency assets. They classified their results as either excellent or bad practices. Moreover, most of the suggestions made on the subjects were simple. Also, some of the suggestions had greater weight. According to the evaluation, several companies' due diligence was too concerned with determining if the cryptocurrency constituted a security in other countries, rather than being adapted to meet the needs of UK regulators. In June of 2023, the FCA made an announcement on the introduction of new rules in October of the same year. Regulated in August 2022, they were to supersede such regulations. The FCA anticipated that not all businesses will be in compliance by October. And extended the deadline for others until January 8, 2024. The FCA discovered over 200 rule violations little over two weeks after the promotional regulations were implemented, according to the statement. After its banking partner was subject to limitations, even Binance had compliance challenges. Highlighted Crypto News Today:

- The fact that Michael Saylor owns Bitcoin is not shocking, but the magnitude of his holdings is. - The company has managed to purchase a total of 226,500 Bitcoin units as of July 30th. Michael Saylor has come clean about his Bitcoin (BTC) ownership. He is the co-founder and chairman of the American software and business analytics company MicroStrategy. Previous rumors about Saylor's personal Bitcoin bets were confirmed when he made this announcement earlier today. The fact that Michael Saylor owns Bitcoin is not shocking, but the magnitude of his holdings is. Just so you know, Saylor supposedly came clean about his personal ownership of almost \$1 billion worth of Bitcoin. His continuous accumulation of Bitcoin at MicroStrategy is widely believed to be the primary focus of his attention among industry insiders. Banking on Bitcoin It turns out, however, that he cares just as much about his own interests as his business intelligence software company's. All eyes were on MicroStrategy's Bitcoin buying binge for a long time. In 2020, shortly after the worldwide COVID-19 epidemic struck, the company started to acquire BTC under Michael Saylor's leadership. The company has managed to purchase a total of 226,500 Bitcoin units as of July 30th. Four years later, the total value of this hoard is around \$12.7 billion at the current market price. So, about 10% of MicroStrategy's stockpile equates to Saylor's personal Bitcoin ownership. Intense BTC adoption is being recorded throughout the whole digital currency ecosystem, coinciding with this Michael Saylor update. Bitcoin is becoming more prominent in several areas, including the US political scene and spot Bitcoin ETF products. A lot of different areas are competing for cryptocurrency products since Bitcoin has gone a long way since the SEC authorized the selling in the US. Both Australia and Hong Kong have already launched such products in their regions, after the SEC's January approval. Highlighted Crypto News Today:

ETH's staking trend has decoupled from its price performance, with a decline of 0.76%. Not only has it recovered since then, but it has also exceeded its prior records. Significantly, there has been a 1.9% rise in the proportion of ETH staked since the debut of the ETH ETFs. It is worth noting that ETH's staking trend has decoupled from its price performance, which is comparable to the pattern in the Bitcoin network's transaction count. At the time of writing, the price of ETH is \$2,539, down 23.41% in the last 7 days as per data from CMC. But the percentage of ETH staked has gone up by almost 2%, from 26% to about 28%. Steady Rise Considering there are 120.25 million ETH in circulation at the moment, a 2% rise in staked ETH is now worth almost \$7 billion. The effects on restaking and liquid staking protocols are a direct outcome of the steadily rising amount of ETH staked. At the time of writing, the TVL of the liquid staking industry was \$52.27 billion, up 60% from \$32.68 billion at the beginning of the year. Surprisingly, the liquid restaking sector's TVL increased from \$1.34 billion to \$18.65 billion, a growth of more than 1,200% in the same time frame. Among the best achievers, Eigenlayer stands out with a TVL that increased from \$1.4 billion in January 2024 to \$15.97 billion in July, more than tenfold growth. Highlighted Crypto News Today:

- Bitcoin (BTC) fell 17% in a day to \$49,089, while Ethereum (ETH) dropped 24% to below \$2,125. - The global crypto market experienced \$1.04 billion in liquidations over the past 24 hours. In the last 24 hours, the cryptocurrency market faced a sharp downturn, with \$901.67 million in long positions liquidated. The sell-off, which surged on Sunday, has stemmed to significant losses across major digital assets like Bitcoin (BTC) and Ether, with Ether down 21% of the day. The global market cap has fallen below \$1.4 trillion, marking a low of \$1.4 trillion since February. Ethereum's decline has been even more pronounced, plummeting by 24% over the past day and 35% on a weekly basis. The price of ETH has fallen below \$2,125, erasing its gains for the year. The sudden market downturn has resulted in several factors. A key trigger is the large-scale liquidation imposed by Ethereum. A significant drop in ETH prices forced several major holders, or "whales," to sell off their assets to cover their positions. The disappointing economic data and rising geopolitical tensions have worsened this chain reaction of sell-offs. Other cryptocurrencies have not been spared from the market bloodbath. Altcoins like XRP, BNB, and Solana have also seen substantial declines. XRP has fallen over 19%, trading around \$0.4498, while BNB has dropped more than 22%, reaching \$413. Solana, another highly hyped cryptocurrency, has dipped below the \$115 mark, losing over 21% in value. Also, the global market has seen substantial losses, with top 100 tokens such as Lido DAO, UniSwap, and Chainlink dropping 19% to 25%, marking the worst single-day decline since February. Market Pressure from Jump Crypto's Suspected Ethereum Sales The pressure on the market came from rumors of large-scale ETH sales by Jump Crypto, a subsidiary of Jump Trading. Reports suggest that Jump Crypto moved substantial amounts of USDC, USDT, and Ethereum between its cold wallets and various exchanges, including Coinbase, Gate.io, and Binance. The move has raised concerns about potential sell-offs, as the firm holds around \$243 million in digital assets. Jump Crypto's involvement in the market has drawn scrutiny, particularly given its past legal issues related to the collapse of TerraUSD and the Terra ecosystem in May 2022. Jump Crypto is under investigation by the SEC for its alleged role in manipulating TerraUSD's price, leading to \$1.3 billion in profits for the company and its CEO, Kanav Kariya. This investigation is part of a larger SEC case against Terraform Labs and its founder, Do Kwon, for a multi-billion dollar crypto asset securities scam.

- X has reinstated the MakeNowMeme account, which allows users to create Solana-based memecoins through a tweet. - MakeNowMeme led users to create memecoins by tweeting in a specific format and tagging the account. The MakeNowMeme account on X, formerly known as Twitter, has been restored following a brief suspension. The account, which previously allowed users to create Solana-based memecoins with a single tweet, is now active again, with minting and user interactions restored. Earlier today, X temporarily suspended MakeNowMeme, citing violations of its platform rules. The account, which has 15,000 followers, used to create memecoins via a specific tweet format. Users would launch their token by including a dollar sign followed by the ticker symbol. They would also need to provide the token name, description, and optional media. Finally, tagging the account completes the launch process. Memecoin Craze Intensifies The platform's suspension came amidst growing concerns about the memecoin craze, which has increased in 2024. This trend saw significant momentum in late July as Solana-based memecoins outpaced global market gains. The influx of new tokens led to increased activity on decentralized exchanges like Raydium, where liquidity was managed through a burn mechanism similar to other coins platforms. With the growing popularity of memecoins and the increasing use of decentralized platforms, the need for clear guidelines and anti-scam measures becomes more pressing. According to Lookonchain, many people engaged in these trades have already gained huge profits. Adding to the excitement, Nansen's CEO, Alex Svanevik, participated in the memecoin surge by launching his own token named IQ on MakeNowMeme. Svanevik, who described his involvement as a tech test, advised his followers to approach with caution, reflecting the speculative nature of the current memecoin market. Highlighted Crypto News Today How Will Wormhole Price-In Post the Upcoming Token Unlocking?

- An Ethereum Smart money wallet was observed buying ETH tokens in the last 24 hours. - The token showed declines in daily prices and 24 hour trading volume according to CMC data. Leading altcoin Ethereum experienced the spotlight with the launch of its spot ETH ETFs in July. The token was expected to rally with price breakouts, but contrary to market expectations, ETH did not show notable surges. In the last 24 hours, a smart

money wallet, known for its 100% win rate bought ETH tokens instigating market speculations. According to Lookonchain data, the smart money wallet identified with one of its addresses 0x75B8, bought 4000 ETH worth \$12.79 million from the Binance exchange. Notably, the smart money wallet is known for purchasing Ethereum tokens at low prices and then selling them at a higher price level. Previously, a week ago, the wallet with the aforementioned address was seen accumulating another 2.4K ETH worth \$7.89 million. Furthermore, another address connected to the smart money wallet identified as 0x4fa8e bought 2.308K ETH worth \$0.71 million two months ago. According to Lookonchain analysis, the wallet's recipient has shown 100% accuracy in their previous ETH profits. Smart money wallet recipients are top performers within the crypto market having in-depth knowledge about cryptocurrency. Relatedly, the aforementioned smart money recipient's movements have raised market speculations of an ETH price breakout in the coming months. Ethereum Price Weekly Overview In the last 24 hours, the Ethereum price, after a brief upward movement to the \$3,200 level, took a bearish turn. The prices, yet again slid to the \$3,100 levels, while the daily trading volume has dipped by 3.73%. At the time of writing, the token was trading at \$3,148 according to CMC data. Zooming out, over the past seven days, ETH has shown mixed signals in its price activity. At the beginning of the week, the token was trading at \$3,237. Following this, it rallied to the \$3,300 level after which the price dip occurred. In the last few days, the token has shown consistent price declines. Similar to Ethereum, other altcoins such as Solana and XRP have also shown price declines in the past day. Highlighted Crypto News Today:

- XRP price dropped over 14% in the past 24 hours, falling to around \$0.55. - Ripple to allocate \$10 million to tokenized U.S. Treasury bills on the XRP Ledger. XRP displayed a significant swing on Friday, reflecting the global crypto market's downturn. After a strong performance in July, where XRP surged over 30% and outpaced Bitcoin, the token has now fallen nearly 14% in just 24 hours. The price dipped from \$0.65 to \$0.5719, mirroring the recent BTC corrections. Despite this drop, XRP's blockchain ecosystem, the XRP Ledger (XRPL), remains active. According to the market intelligence firm Santiment, the XRPL has continued to perform well with increased on-chain activity and whale transactions. This was the main reason for XRP's 30% rise last month. Further, Ripple, the company behind XRP, recently made headlines with its announcement of a \$10 million investment in tokenized U.S. Treasury bills (T-bills) via the XRP ledger. This new move will tokenize short-term government debt making it easier to manage and distribute these assets. The OpenEden platform will support XRP by backing short-dated U.S. Treasury bonds and reverse repurchase agreements. Following the announcement, analysts remain optimistic about XRP's long-term prospects. Although, regarding its short-term outlook, many believe the token could resume its upward momentum, continuing the positive trend seen over the past month. Will XRP Hit \$0.70 in August? XRP faced a prolonged downtrend after hitting resistance at \$0.72 in March 2024. This bearish trend saw the token lose over 40% of its value in the following three months. However, the market saw a shift when bulls re-entered the \$0.60 zone in July, helping XRP recover. But, again, the cryptocurrency erased its bullish output of \$0.65 since the 1st of August. Currently, XRP is trading at \$0.5733 with a market cap of \$31 billion. The daily trading volume has also decreased by around 16%, standing at \$1.76 billion. According to the XRP price prediction indicators, the token has fallen below the crucial 200-day EMA, indicating a bearish outlook, but recent activity suggests potential support around the \$0.55 mark or near the 21-day EMA. Moreover, the RSI has moved into oversold territory after retreating from overbought levels. This suggests a possible near-term retracement before a bullish reversal. If XRP can reverse its current downtrend, it might face immediate resistance at \$0.65 once it re-enters the \$0.60 zone. Further rallies could push the price to key resistance levels at \$0.68 or \$0.70. However, if the decline continues, XRP could drop to \$0.50, potentially revisiting the June low of around \$0.47 and approaching the year-low range of \$0.41. Highlighted Crypto News Today Can Solana (SOL) Expect a Revival Soon Midst the Uncertainty?

- Total revenue for the quarter came in at \$1.45 billion, down 11% from the first quarter. - Solana accounted for 10% of the exchange's total transaction revenues. Despite a year-over-year increase of more than 100%, Coinbase's second-quarter revenues were down slightly from the previous quarter. Total revenue for the quarter came in at \$1.45 billion, down 11% from the first quarter. Declining consumer transaction revenues contributed to this decline. Q2 customer transaction revenues for Coinbase were \$665 million, down 29% from Q1's \$1.07 billion. While stablecoin revenue for the exchange was \$197.3 million in Q1, it jumped to \$240.4 million in Q2. Below Par Performance Solana accounted for 10% of the exchange's total transaction revenues, which is an interesting point to note. Adjusted EBITDA for the quarter came in at \$596 million, down significantly from \$1.01 billion in the prior quarter. Additionally, net income decreased to \$36 million from approximately \$1.2 billion in Q1. The company stated: "Net income" included \$319 million in pre-tax crypto asset losses on our crypto investment portfolio "the vast majority of which were unrealized" as crypto prices were lower on June 30. Cathie Wood's Ark Invest had dumped a ton of Coinbase (COIN) stock just before the crypto exchange announced its Q2 earnings. The recent sale of almost 12,000 COIN shares, as revealed in today's public statistics, has caused some to worry that the cryptocurrency stock price would fall. Market watchers are still wondering how Wood's company stands to benefit from the COIN stock's recent surge in value. As of July 31st, the company had sold 12,077 shares of Coinbase Global Inc., which was worth \$2.7 million. This was stated in a public post made by Ark Invest, on X. - The court in Podgorica has ruled that this ruling is final and cannot be appealed. - On Thursday, the court ruled against extraditing Kwon to the U.S. Terraform Labs' co-founder, Do Kwon, is about to be extradited to South Korea. A chain reaction of court disputes and opposing extradition demands from the US and South Korea led to this latest turn of events. Now that the Montenegro Appellate Court has given its verdict, Kwon may go back to his own country and face major charges stemming from the catastrophic failure of his cryptocurrency project. The decision to extradite Terraform Labs co-founder Do Kwon to South Korea was affirmed by the Montenegro Appellate Court. The ruling represents the culmination of a protracted court process in Montenegro. Where the US and South Korea have been contending for the extradition. Ruling cannot be appealed On Thursday, however, the court ruled against extraditing Kwon to the US. Stating that he should instead stand trial in South Korea. This judgment is a major development in the continuing story of Kwon. Who has been in the spotlight ever since his cryptocurrency project went belly-up. The court in Podgorica has ruled that this ruling is final and cannot be appealed. The decision also confirmed an earlier fast-track extradition procedure, so it's possible that things may go ahead quickly. Following the court's ruling, Goran Rodic, his attorney, said that Montenegro would coordinate the extradition with the help of Interpol. Following Rodic's desire for a speedy transfer, Kwon's legal team is ready to take the next step in this complex international legal procedure. On the other hand, in all third-party objection cases against the South Korean government's asset seizure operations, the Seoul Southern District Court ruled in favor of Do Kwon's wife. Highlighted Crypto News Today:

- Leading meme coins, including Dogecoin (DOGE), Shiba Inu (SHIB), and PEPE, are displaying declines. - Despite positive news for Ripple and Solana, the meme coin sector remains volatile and struggles to gain. As the global cryptocurrency market continues to evolve, recent developments have sparked optimism in the crypto market. Bitcoin (BTC) has bounced and maintained its position above \$66,000 despite the ripple effects of the Mt. Gox Bitcoin selloff. Meanwhile, broader market sentiment has turned positive with the anticipated resolution of the Ripple-SEC lawsuit and the SEC's recent classification of Solana (SOL) as a non-security. Still, BTC has declined by around 1% in the last 24 hours. Amidst the Bitcoin backdrop, the leading memecoins also struggled to maintain their momentum and follow BTC suits. While Bitcoin remains relatively stable, meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), PEPE, Dogwifhat (WIF), and Bonk have struggled to maintain their recent gains. The overall market sentiment may be upbeat, but the meme coin sector is grappling with notable losses. Meme Coin Market Faces Declines Amidst Stalled Recovery Efforts Memecoins, which had gained huge attention in 2024, are now seeing a decline. Today, Dogecoin (DOGE) and other top meme coins are down by about 3% each. Over the past week, these coins have dropped up to 12%. The market is trying to rebound, but the recovery hasn't fully taken off. Two of the top five meme coins are experiencing double-digit losses. In recent trading sessions, Dogwifhat (WIF) has fallen over 4% in the last 24 hours and 12% over the week. While Bonk has lost over 8% in the past week and 4% in the last 24 hours. Further, Dogecoin, the largest meme coin by market cap, has dropped approximately 3.28% in the past 24 hours, with Shiba Inu following closely with a 1.36% decline. PEPE, another widely followed meme token, has seen a notable decrease of over 4% in the last day and a significant 10.74% drop over the past week. Despite the broader market's attempt at a rebound, the meme coin sector has yet to capture the same positive momentum, reflecting ongoing volatility and shifting investor sentiment. Highlighted News Of The Day

- Two artists filed a lawsuit against the U.S. SEC for unclear NFT regulations. - The SEC intends to acquire fines and legal bills on NFTs without proper regulation is highly scrutinized. The legal battle of the U.S. Securities and Exchange Commission (SEC) with other firms and personalities are resurfacing to the mainstream. Two renowned artists have filed a legal suit against the SEC due to the uncertain classification of non-fungible tokens (NFTs) as securities. On July 29, songwriter Jonathan Mann, popularly known as "Song a Day Mann," and law professor and filmmaker, Brian L. Frye approached a Los Angeles court to clarify whether their NFT art should be classified as a digital asset security. The plaintiffs argue in the complaint: "Should artists have to register their artwork before selling it to the general public? Should artists be forced to make public disclosures about the risks of buying their art? Should artists be required to comply with the federal securities laws, and the thousands of regulations and reams of interpretive guidance thereunder, just to offer their works to the public? Or can artists simply create and sell art?" The SEC's current opinion on NFTs creates uncertainty and interrupts innovation and creativity. Mann and Frye point out that without proper instructions, the SEC acquires substantial fines and legal bills, or is forcing to destroy the artworks. Both of their lawyers assert in the complaint that the SEC's approach threatens the artists and creators who experiment with fast-growing technology or have chosen it as their preferred medium. Frye and Mann's legal suit used Taylor Swift concert tickets to compare their case. It argues that it would be nonsensical for the regulator to class her NFT collectibles as securities. Furthermore, the plaintiffs pointed out the SEC's unfair actions against entertainment company Impact Theory and the Stoner Cats web series, which were alleged to involve unregistered offerings of NFTs, were unfair. These lawsuits in late 2023 became the regulator's initial enforcement against NFTs. Highlighted Crypto News U.S Authorities Transfer Over \$2B in Bitcoin Seized from Silk Road

- Bitcoin surpassed the \$69K range, boosting the altcoins to exhibit bullish rallies as top gainers. - The fear and greed index stays at 63, indicating greed in the market. The crypto market is recovering from its lows, as most of the tokens are priced in green. Notably, the fear and greed index stays at 63, indicating greed in the market. Sooner or later, traders are anticipating a potential bull run. In the past 24 hours, the global crypto market cap has witnessed an increase of 3.15% to \$2.48 trillion. The total crypto market volume stays at \$54.89 billion, which marks a 25.45% decline. Whereas, Bitcoin (BTC) is trading above \$69K, with a 2.90% increase, expecting to hit \$70K shortly. Ethereum (ETH) has noted a spike of 4.55% at \$3.3K. However, traders are observing the market volatility, some cryptocurrencies have captured the top gainers spot with their exceptional performance. Let's check the top crypto gainers over the past 24 hours. AIOZ Network (AIOZ) In the past 24 hours, AIOZ has been in the gainers list, the price has increased by 27.48%, jumping from \$0.4974 to the current trading price of \$0.6338. The daily trading volume has soared by 657.50%. AIOZ is an Ethereum token that powers Aioz Network, which is a DePIN for Web3 AI, Storage and Streaming. AIOZ's price hit a monthly low of \$0.3915 in the first week of June. Over the past week, the token was up by 20.77%. The key resistance might be found at \$0.6879 and the nearby support can be at \$0.6010. BOOK OF MEME (BOME) BOME has increased by 20.95% in the past 24 hours. It increased from a low of \$0.008531 to \$0.01035, the price at press time. The memecoin's daily trading volume has also increased by 176.75%. BOME is an experimental meme project that aims to commemorate and expand meme culture in a decentralized blockchain realm. The monthly low is noted at 0.006715 and over the last week, the token has gained by 13.56%. The initial resistance and support might be found at \$0.01490 and \$0.00719, respectively. Bitcoin SV (BSV) BSV has increased by 17.02% to trade at the price of \$52.60 at the time of writing. BSV has climbed from the low of \$44.71 to hit the day's high at \$52.34 and observed a 89.97% spike in trading volume. The token's network, Bitcoin SV, serves as the new representative of the original Bitcoin Protocol, which emerged following a hard fork of the Bitcoin Cash blockchain. BSV's price observed a 17.81% surge over the month, recovering from February's low of \$37.92. In July, the price saw a slight dip to \$37.92, but it quickly rebounded, reaching a high of \$43.97. Notably, the daily trading volume is up by 43.57%. BCH emerged as an altcoin version of Bitcoin, and it is the result of a hard fork in Bitcoin. The token has increased by 15.94% over the past week. Meanwhile, the asset has climbed to 17.95% in the last month from a low of \$290.29. The initial resistance is found at \$511 and the significant support can be in the \$390 range. stablecoins have shown notable economic money. In H1 2024, the stablecoin sector witnessed 24.3% growth in market cap according to CMC data. It also constituted 18% of all global economic money. In H1 2024, the stablecoin sector witnessed 24.3% growth in market cap according to CMC data. It also dominated the DeFi sector and is stated to be a fast emerging digital asset. Popular stablecoins such as USDT and USDC showed substantial growth in users apart from increases in market cap. Moreover, currently, the fiat-collateralized stablecoins constitute 96.6% of the real-world assets market cap. As stablecoins exhibit increasing prominence, let's understand the asset by delving into their functioning, use cases, and some of the top stablecoins in 2024. What are Stablecoins? Stablecoins are crypto solutions to foster stability within the volatile cryptocurrency sector. In other words, Stablecoins are cryptocurrencies that aim to maintain stability by pegging their value to different external factors. These factors include Fiat currencies, other cryptocurrencies, algorithms, and other commodities such as Gold. The cryptocurrency sector is very volatile, unlike fiat currencies which tend to show price changes very rarely. Thus, stablecoins value is pegged in a 1:1 ratio to fiat currencies. One example of a stablecoin is USDT, which is pegged to the US dollar and is issued by Tether Limited Inc. When a stablecoin's value is pegged to a particular currency, then for every token minted, reserves bearing the pegged fiat currency receive an equivalent. Stablecoins are often stated as bridging the advantages of both traditional finance and blockchain technology. They provide the stability of fiat currencies while functioning on the efficient blockchain technology. How are Stablecoins Used? Stablecoins are issued by particular crypto firms. These issuers hold the reserves that store the fiat equivalents for the cryptocurrency. When a user wants to exchange, they can do so, without incurring any losses. While its primary function, as aforementioned, is to mitigate the crypto market's volatility, users also utilize stablecoins for payments similar to other cryptocurrencies. Moreover, in developing countries, the tokens are used as USD banking methods due to scarce access to the US dollars. The USD-pegged stablecoins enable users to exchange their tokens for USD effectively. Thirdly, the tokens hold utility in centralized crypto exchanges such as Coinbase as quote assets. These assets are common to all trading pairs, for instance, the BTC/USDT, ETH/USDT, and SOL/USDT. Stablecoins also find usage within DeFi applications as payment gateways and also provide traders with advantages. For instance, traders lend stablecoins on DeFi to gain additional interest as DeFi platforms hold higher interest rates than USD. Moreover, apart from these general use cases, each particular token brings in particular utility within its specific ecosystems. Top Stablecoins to Watch in H2 2024 In the current crypto market, two stablecoins dominate as USD and USDC. Tether USD holds the first position with a market cap of \$113 billion approximately according to CMC data. USDC is the second largest stablecoin with a market cap surpassing \$33 billion. MakerDAO-issued stablecoin DAI, Ethena USDe, and TrueUSD are other major stablecoins. According to market analysts, these tokens hold the potential to reach new highs in the second half of 2024. Tether USD (USDT): Tether USD (USDT), the first fiat-backed stablecoin was launched in 2014. Since then the token has shown significant growth in terms of both users and market cap. According to Tokenterminal data, in the past month, Tether recorded 6.9 million active addresses. Moreover, the token witnessed \$70.2 billion in trading volume and has recorded a slight dip in the last 24 hours. The token's current circulating supply stands at 113 billion out of the total 117 billion supply of USDT tokens. Tether USD is expected to continue its dominance of the stablecoin sector with additional expansions into other sectors. The issuer plans to invest in renewable energy sources and has initiated new projects such as Tether Gold. The firm's gold-pegged stablecoin project is called Tether Gold. Moreover, the token has also seen global adoption as more eastern markets have integrated it into their network. Recently, in the past months, Tether also integrated into the Tron Network. Additionally, on Wednesday, Tether was listed on Indonesia's leading exchange Tokocrypto. Circle USD (USDC): The second largest stablecoin in the market Circle USD (USDT) made its market debut in 2018. In H1 2024, the token has shown notable growth in its market cap. From \$24.1 billion in January this year, the token currently holds as aforementioned over \$33 billion. Notably, USDC has also shown a significant increase in token holders over the past six years. According to Tokenterminal data, in January 2024 USDC token holders amounted to 2.8 million, while the current token holders count stands at 5.1 million. Moreover, Circle's transaction volume as of July 17 stands at \$13.567 billion. Additionally, the token is one of the most-watched stablecoins this year according to market analysts. USDC plays a crucial role in global payments and enables trader profits through lending and borrowing systems. Moreover, USDC issuer Circle has also expanded its USDC issuance on a global level. At the beginning of July, the firm announced the launch of its Euro-backed stablecoin EURC. Additionally, in a recent update, the firm has entered into a partnership with CryptoISAC, a crypto analytic center. It aims to fight cyber threats through this partnership stated CryptoISAC's X post. Dai (DAI): DAI USD is issued by the prominent DeFi platform MakerDAO. The token was launched in 2017 with a total supply of 5.3 billion tokens. Presently, the token's total supply is in circulation. Additionally, in the past few months, DAI has shown notable surge in market cap surpassing prominent cryptocurrencies such as Polygon MATIC and PEPE on the CMC leaderboard. Meanwhile, in 2023 MakerDAO introduced a new Maker Constitution for preparing for the future as stated by the firm. The Maker Constitution is a new governance approach that ensures the stability of DAI. Recently, MakerDAO also announced the launch of a new governance token. Stablecoins at the Global Level This year saw several advancements in the stablecoin sector both from existing markets and developing crypto sectors globally. US-based crypto giant Ripple announced the launch of its stablecoin, RLUSD, on April 4. Additionally, at the beginning of July, the Philippines launched its first stablecoin, the Philippines Peso Stablecoin (PHPS) pegged to the Philippine Peso. Moreover, this market also witnessed surges in supply and on-chain activity. Specifically, PayPal's stablecoin, PYUSD after expanding into the Solana network depicted a notable 97% growth in supply. Additionally, the regulatory bodies in several countries, including the U.S SEC, in light of the sector's growth, have scrutinized and imposed new regulations for the issuance and trading. Presently, the Hong Kong government has announced the list of stablecoin issuers who will take part in the sandbox for examining their products. In conclusion, this sector is expected to expand in both utility and dominance in the overall crypto market in the coming years. Notably, Circle CEO, Jeremy Allaire stated in June, that by 2025, stablecoins will make up 10% of global economic money.

Solend, a Solana lending protocol has announced that it has rebranded as Save and relaunched on save.finance. In order to increase the financial possibilities accessible to Solana users, Save is growing with the launch of three additional products: an LST, an app for memecoins shorting, and a stablecoin. The lessons the Solend team has learnt over the last three years are summed up in Save. Having risen to become Solana's top DeFi protocol, with a TVL of more over \$1 billion. More than simply a name change, Save helps the project become more multifunctional and more accurately represents its place in the DeFi landscape. With a completely revamped UI, Save debuts as a major advancement over Solend. The UI/UX has been carefully thought out in order to streamline onboarding and improve platform use. Concurrent with the introduction of save.finance, three novel products have been introduced. Save will accommodate a new generation of onchain users in a variety of ways, as shown by SUSD, saveSOL, and dumpy.fun. Decentralized stablecoin SUSD allows borrowing against SOL with 0% interest. Deep integration with Save will expand the ways in which SUSD may be used on Solana while enabling its rapid and secure growth. A liquid staking token for SOL called saveSOL will also be released by Save. Leveraged staking tactics are included with it, enabling users to get the benefits of owning SOL while earning yield. A multitude of opportunities to experience SOL staking and earn increased APYs will become available with saveSOL. Dumpy.fun, the final product released in tandem with Save, lets users short Solana memecoins. The manner in which traders might benefit from memecoins are expanded by dumpy.fun. With \$6.5 million in funding from blockchain venture capital firms including Dragonfly Ventures, Polychain Capital, Race, Coinbase Ventures, and Solana Ventures, Solend made its debut in 2021. Save's debut will advance everything that Solend has been pursuing over the last three years and more accurately represent the company's expanding position within the Solana ecosystem.

Aggregated rollup infra builder zkLink today announced the recipients for Phase 1 of its Ecosystem Developer Grants program, a 20 million \$ZKL grants program aimed at stimulating the growth of its aggregated DeFi ecosystem. The program, which received over 100 applications, had approved 16 projects for financial and marketing support to build on zkLink Nova, the industry's first aggregated Layer 3 rollup network. Running from March 11 to July 20, 2024, Phase 1 had earmarked 10 million ZKL tokens for its recipients. The grant recipients in Phase 1 include Oku Trade, RedStone, Holdstation, Solv Protocol, Snapshot, Novaswap, POKT Network, Layerbank, Izumi Finance, Aex, Sturdy, Steer Protocol, Allispark, Protofire, Spherex and Chainnodes. Vince Yang, CEO at zkLink, expressed his enthusiasm. "We are thrilled to announce the Phase 1 recipients of our Ecosystem Developer Grants Program. These projects exemplify the outstanding dedication to cultivate a vibrant and seamless aggregated DeFi ecosystem. Each recipient has demonstrated a commitment to advancing aggregated solutions like zkLink Nova, driving innovative change and inspiring others through their work." On zkLink Nova, dApps can access a "unified Ethereum experience" of aggregated assets from eight of Ethereum's broader Layer 2 rollup ecosystems, such as Arbitrum, Optimism, Base, Zksync, Linea, Scroll, Manta, and Mantle. Secured by zero-knowledge proofs and multi-chain state synchronization, zkLink Nova offers developers the opportunity to explore new interoperable DeFi primitives while benefiting from the lower gas costs of its aggregated Layer 3 zkEVM network. "The grants program reflects our vision to seamlessly bridge Web3 and Web2 together through industry collaboration. We are excited to see how the grant recipients will utilize this funding to further their projects and contribute to the community," Yang added. "Congratulations to all the winners, and thank you for your contributions. We look forward to seeing the continued progress to unifying Layer 2s into one interoperable platform." zkLink Ecosystem Developer Grants Program Phase 2 Phase 2 of the Ecosystem Developer Grants Program will commence on 24 July 2024, and conclude on 30 September 2024. The phase will build on the successes and lessons learned from Phase 1, ensuring that grant applicants will receive guidance, flexible funding mechanisms, and reduced decision-making times. The goal of Phase 2 is to support applications that are able to positively impact the on-chain activity and user experience (UX) on zkLink Nova.

Protocols from diverse verticals, including but not limited to DeFi, meme projects, gaming, and AI are encouraged to apply. Special considerations will be given to open-sourced solutions and projects with a proven track record in either zero-knowledge (ZK) or Optimism (OP) rollout networks. Phase 2 will also continue to support innovative protocols and encourage the deployment of native dApps on zkLink Nova. For more information about the zkLink Ecosystem Grants Program or to apply, visit [website](#). About zkLink zkLink develops leading zero-knowledge blockchain solutions for the Ethereum ecosystem. Its flagship zkLink Nova is the industry's first aggregated Layer 3 zkEVM Rollup network built on top of Ethereum and Ethereum Layer 2 rollups (L2s). It is an EVM-compatible, open platform that allows for scattered assets across Ethereum Layer 2s to be aggregated for interoperable trade and transactions. It is secured by zero-knowledge proof technology, charges extremely low gas costs, offers fast finality, and inherits its security from Ethereum. zkLink is funded by notable backers including Coinbase Ventures, Solana Ventures, SIG DTI, Arrington Capital, and others. - Net inflows of \$533.57 million were recorded by ten U.S. spot bitcoin ETFs yesterday. - The HODL fund managed by VanEck had a net withdrawal of \$38.37 million. Monday saw the biggest net inflow of \$526.7 million for BlackRock's IBIT, the biggest spot bitcoin exchange-traded fund by net asset value, since March 13. Net inflows of \$533.57 million were recorded by ten U.S. spot bitcoin ETFs yesterday, with the exception of Bitwise's BITB, as reported by SoSoValue. Following the influx from IBIT, \$23.72 million came from Fidelity's FBTC. The bitcoin fund run by Franklin Templeton received \$7.87 million. While the one run by Invesco and Galaxy Digital, BTCO, received \$13.65 million. The HODL fund managed by VanEck had a net withdrawal of \$38.37 million. The remaining funds, such as GBTC and ARK Invest from Grayscale and ARKB from 21Shares, both had no trading activity for the day. Since their approval in January of this year, spot bitcoin ETFs have amassed net inflows of \$17.59 billion. And their market capitalization exceeds \$62 billion. At the time of writing, Bitcoin is trading at \$66,963, down 0.46% in the last 24 hours as per data from CMC. All Eyes on Spot Ether ETF Issuers' registration applications for spot Ethereum ETFs were authorized by the U.S. Securities and Exchange Commission, marking the latest milestone in the cryptocurrency industry. The funds are slated to go live on Tuesday afternoon. Senior Bloomberg ETF analyst Eric Balchunas in May, said that Ethereum ETFs might draw 10-15% of the assets obtained by spot bitcoin ETFs. Citigroup predicted that in the first half of the year, the funds will gather between \$4.7 billion and \$5.4 billion. More exchange-traded funds (ETFs) based on other cryptocurrencies, like Solana, may also be possible after the approval. Highlighted Crypto News Today:

- Ethereum ETFs soon began trading today in the U.S., through Nasdaq, NYSE, and Cboe. - Grayscale moved \$1.1 billion worth of ETH to Coinbase. Ending the eight month, the Securities and Exchange Commission (SEC) flashed the greenlight to the entry of spot Ethereum Exchange Traded Funds (ETFs) in the U.S. This approval of ETH ETFs began trading in the market today. The investors were highly anticipating the new crypto asset to invest in. ETH ETF applicants received approval for their 19b-4 filings earlier in May, as partial approval. However, there were considerable delays on the SEC's end in drafting the final documents. The greenlight of the S-1 filing was required before the product went live today. The Exchange NYSE Arca confirmed yesterday that it has approval to list and begin trading Grayscale Ethereum Trust and Bitwise Ethereum ETF from July 23. Similarly, the Chicago Board Options Exchange (CBOE) is to list five new ether exchange-traded funds (ETFs) today. These five spot ethereum ETFs are from 21Shares, VanEck, Fidelity, Franklin Templeton, and Invesco Galaxy. Will the ETFs Impact the Ethereum Price? The leading cryptocurrency, Bitcoin debuted its ETF in January 2024. Following that, the BTC price rose to its all-time high of \$73K within three months of approval. The Ethereum ETF is the second crypto-based ETF to start trading in the United States. Moreover, the crypto market is anticipating the expansion of the ETH price after the ETF trading. Meanwhile, Kaleo, a crypto analyst predicted that there is a 60% likelihood we see some type of pullback after the spot ETF launches. He predicted that the asset would drop before the inevitable price discovery. In the long run, the community is expecting that Ethereum could push its price beyond the \$4K zone. Currently, the Ethereum price is struggling to clear the \$3,500 resistance zone. ETH is trading at \$3,450, reflecting a 1.12% decline. The ETF approval of Solana is anticipated next in the market. In late June, VanEck submitted a filing for a product investing in Solana, the fifth-biggest cryptocurrency by market value another attempt by ETF issuers to raise demand for digital assets. Moreover, the approval of a Solana ETF might further integrate Solana into the mainstream financial ecosystem. Highlighted Crypto News

The crypto market is currently in a state of calm, with investors eyeing the possibility of a bull run soon. Altcoins are still at entry points that present attractive opportunities, but their prices are starting to climb. This growth hints at a potential explosion in value at any moment. Amidst this backdrop, there is growing speculation about Donald Trump's crypto plans following Joe Biden's exit. Could his actions trigger the much-anticipated bull run? The intrigue lies in identifying which altcoins are poised for significant growth. This article will uncover the top altcoins to consider now, offering insights into how the market may evolve with potential political shifts. CYBRO Presale Exceeds \$1.3 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$1.3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Ethereum Bulls Recharging for a Potential Rally Ethereum's current price floats between \$3333 and \$3644.33. Although there's a bit of a struggle, the bulls show signs of strength, with a 7.6% increase over the past week. The nearest resistance level is around \$3751.33. If Ethereum breaks past this, it could aim for \$4061.74, potentially rising around 12%. Support sits at \$3130.51, providing a safety net. The six-month price change of over 55% suggests strong long-term growth potential. The RSI of 46.67 and the Stochastic at 25.12 indicate it's not overbought, leaving room for upward movement. If bullish momentum builds, Ethereum could reach new highs in the near future. Solana Eyeing Big Gains: Are Bulls Ready to Charge? Solana (SOL) is moving confidently between \$159.43 and \$197.36, showing bullish potential. With its current price increase in the past week and month, the bullish momentum appears strong. The next resistance level at \$210.22 could be a key target. If surpassed, Solana might aim for \$248.15, indicating a robust growth opportunity. The 10-day moving average of \$179.92 suggests a short-term uptrend, while the 6-month price surge of over 112% hints at significant long-term potential. If SOL overcomes resistance, it could see rises of nearly 25%. Current indicators like the RSI at 53.33 show room for growth, while a higher MACD level supports this bullish outlook. Avalanche (AVAX) Shows Steady Gains with Promising Growth Potential Avalanche (AVAX) is showing strong signs of a bull run. Currently trading between \$28.31 and \$35.01, it has seen price growth of over 22% in the last week alone. With the nearest resistance at \$37.37 and the next at \$44.08, AVAX could rise by more than 25% if it breaks through these levels. The support at \$23.95 and the next at \$17.24 suggest a strong safety cushion. The RSI of 61.58 indicates moderate buying pressure, while a MACD level above zero reaffirms bullish momentum. If this trend continues, AVAX might outperform and attract more investors during this altcoin season. Polkadot (DOT) Holds Promise for a Bullish Surge Amid Mixed Signals Polkadot (DOT) has been holding steady in the \$6.10-\$6.66 range, showing a promising resilience despite recent market hiccups. The bulls are not out of this race yet. With the nearest resistance at \$6.88, a breakthrough could spark a climb to the next resistance at \$7.44. Over the past month, DOT has seen almost a 12% rise. The Relative Strength Index (RSI) at 45.71 and Stochastic at 20.37 may indicate some overselling, hinting at potential for growth. If DOT breaches \$6.88, it could rise by around 10-12%, setting sights on stronger resistance levels. This mirrors patterns from 2021, suggesting that a rebound is not far off. Conclusion ETH, SOL, AVAX, and DOT have seen less potential in the short term. However, CYBRO, a cutting-edge DeFi platform, presents unique opportunities. It utilizes AI-powered yield aggregation on the Blast blockchain. Investors benefit from lucrative staking rewards, exclusive airdrops, and cashback on purchases. CYBRO offers a seamless user experience with easy deposits and withdrawals. Highlighting transparency, compliance, and quality, CYBRO attracts significant interest from crypto whales and influencers. It stands out as a promising project in the evolving crypto space. - The run increases the total net inflows since July 1st to \$3.2 billion. - The trading volumes of exchange-traded products also saw a significant surge, rising 45%. According to the most recent data from CoinShares, global crypto investment products at asset managers saw net inflows of \$1.35 billion last week, marking the third consecutive week of positive activity. As optimistic sentiment persists, the run increases the total net inflows since July 1st to \$3.2 billion, according to CoinShares Head of Research James Butterfill. The trading volumes of exchange-traded products also saw a significant surge, rising 45% from the previous week to \$12.9 billion. This accounts for 22% of the total crypto market volumes. Investors Optimistic As expected, investment products based on Bitcoin attracted \$1.27 billion in net inflows worldwide, while short-Bitcoin ETPs lost \$1.9 million. According to Butterfill, this signifies a enduring positive sentiment since the April halving event. And takes the net outflow of short Bitcoin to \$44 million since March. Almost \$1.2 billion in net inflows were recorded last week by U.S. spot Bitcoin exchange-traded funds; the number for Friday's inflow for Ark Invest's ARKB ETF is still pending. At the time of writing, Bitcoin is trading at \$67,015 as per data from CMC. As an extra bonus, Butterfill said that Ethereum's situation seems to have improved. With an additional \$45 million in net inflows last week, Ethereum funds have now amassed \$103 million, more than Solana's \$71 million, making it the altcoin-based investment product with the highest net inflows year-to-date. On May 23, eight 19b-4 forms for spot Ethereum were authorized by the SEC. Having said that, trading cannot commence until the issuers' S-1 registration statements become effective, which is expected to occur on Tuesday. Highlighted Crypto News Today:

- Trump-based memecoins record notable price surges in the last 24 hours. - The former president's support for crypto has resulted in a positive sentiment in the market. In the last 24 hours, the US election landscape witnessed crucial movements. Present office holder, Joe Biden announced that he would be stepping down from a re-election. Within the crypto sector, Trump-based memecoins showed notable surges after political rival, Biden's announcement. Following Biden's X announcement, the memecoins witnessed bullish price movements where several tokens surged over 10%. This instance depicts the immense support that Donald Trump holds within the crypto community. The former president's support of the sector and personal ventures such as NFT collections has contributed to this support. In the past day, Solana-based Trump memecoins Donald Trump (TRUMP) and Land Trump (TREMPP), and Trump Coin (DJI) prices surged during a short span. TRUMP increased in price by a significant 37.42%, while DJI showed a 4.19% increase according to CMC data. On the other hand, TREMP currently shows a 5.33% increase after surging by 11.21% in the final hours of July 21. Moreover, Trump-based memecoins trading on the Ethereum blockchain exhibited upward price movements. Notably, the tokens, Super Trump (STRUMP) and Maga Hat (MAGA) prices surged 22.8% and 6.7% respectively, as per CoinGecko reports. How are the US Elections Impacting the Crypto Sector? In the past few months, the overall crypto sector witnessed several key milestones. As the market showed surging activity, it drew attention from the mainstream as it evolved into a ground for election campaigns. Moreover, key political events caused fluctuations in particular cryptocurrency prices. Notably, Donald Trump's referring to himself as the "crypto president" and his multiple announcements to make the US a leading nation in cryptocurrency have caused positive impacts on the sector. These developments have majorly benefitted in terms of regulations. Moreover, several traders have incurred profits trading Trump-based memecoins that have surged notably over the past 6 months. One particular trader, GCR made over 8 million profits trading TRUMP. Finally, the recent nomination of JD Vance as Trump's vice president also led to market expectations of optimistic futures. Meanwhile, several Trump tokens have also witnessed price surges over the past months amid increasing volatility. Specifically, the Politifi tokens witnessed price declines when crypto went unmentioned during the presidential debate on June 27. Highlighted Crypto News Today: Hydra Update Boosts Cardano's DeFi TVL, Reflecting Growing Influence

Analysts are still optimistic about Dogecoin, even after a recent 20% decline, and predict that it could reach \$1 by 2025. Meanwhile, KASPA demonstrates promise, leveraging innovative technology through its advanced GHOSTDAG protocol. Nonetheless, BlockDAG emerges as a versatile and

lucrative investment option by providing 10 diverse payment methods, simplifying investor engagement, and leveraging its growth. Furthermore, BlockDAG presents unparalleled growth opportunities, as evidenced by a 1400% surge in early investors' returns across 20 presale rounds. Consequently, investors eyeing cryptocurrency opportunities consider BlockDAG to secure their financial future. Dogecoin Forecast: Will It Reach \$1 by 2025? Dogecoin has encountered volatility recently, losing nearly 20% in value over the past month and trading at \$0.12 currently. Nevertheless, based on the Elliott Wave theory, prominent cryptocurrency analyst Big Mike anticipates a substantial upsurge, potentially projecting Dogecoin to hit \$1 by 2025. According to this theory, Dogecoin may be amid a bullish cycle, particularly in its third wave, which is known for its dynamism and length. If this pattern holds, Dogecoin could peak around \$0.60 before correcting and potentially surpassing the \$1 mark in its final wave. Such forecasts generate optimism among Dogecoin enthusiasts awaiting a potential upswing. KASPA Potential: Analysing GHOSTDAG Protocol & Scalability KASPA has gained traction due to its unique technological advancements. It employs the GHOSTDAG protocol to enhance transaction throughput and scalability while maintaining security. Its proof-of-work consensus mechanism and the k-Heavyhash algorithm ensure robust network security and compatibility with future photonic mining technologies. These forward-looking strategies, coupled with a geometric reduction in emissions, position KASPA as a viable choice. BlockDAG Payment Options: Turning \$1K Investment into \$14K Profit! BlockDAG supports over 10 payment methods, including major cryptocurrencies like Ethereum, BNB, and Bitcoin and newer ones such as KASPA, DOGE, and SHIB. It also accepts USD on the Ethereum and TRON networks, SOLANA, XRP, Fantom, and Cardano. This broad range significantly enhances BlockDAG's accessibility, appealing to a diverse group of investors. By accommodating various cryptocurrencies, BlockDAG simplifies the investment process and establishes itself as a versatile and user-friendly platform in the competitive crypto market. Investing early in BlockDAG's presale, which has raised \$59.9 million, has proven highly profitable. An initial \$1,000 investment at the initial batch price of \$0.001 per coin has grown to \$14,000 as the price surged to \$0.015 in the 20th presale batch. This 1400% increase underscores BlockDAG's robust market performance and potential for growth. Such returns highlight the platform's promise for future gains, making it an attractive option for investors seeking substantial returns. Moreover, BlockDAG's price trajectory suggests even greater potential, with projections indicating the coin could reach \$30 by 2030. If these predictions materialise, a \$1,000 investment could potentially grow to \$30,000,000. This substantial return potential underscores BlockDAG's appeal as a lucrative investment opportunity in the evolving digital currency landscape. Final Thoughts with 10 payment options, BlockDAG is attractive to a diverse group of investors in the ever-changing world of cryptocurrencies. While attention focuses on Dogecoin forecasts and KASPA's technological advancements, BlockDAG's inclusive approach and impressive investment returns make it a compelling choice for those entering the crypto market. Early investors have already seen significant gains, and with projections of even higher returns by 2030, BlockDAG presents an exceptional opportunity for wealth creation. Given its offerings and potential to capitalise on this promising venture, now is an opportune time for serious investors to consider BlockDAG crypto. Web3 has been a buzzword within tech circles over the past three years. This latest iteration of the internet became popular following the debut of decentralized finance (DeFi) and non-fungible tokens (NFTs) in 2021, along with more nascent digital asset niches such as real-world asset (RWA) tokenization. But despite being a "futuristic" topic, it is no secret that Web3 decentralized applications (DApps) have been struggling with adoption. For context, there are over 5 billion internet users today, a majority of whom frequent Web2 social media platforms like Facebook and Twitter. Web3, on the other hand, enjoys only 10 million daily unique DApp users, according to the latest report by DApp Radar. When will the state of Web3 adoption change to a more optimistic outlook? On the surface, it may seem like not much growth is happening, but a closer look at the fundamentals reveals that Web3 may be on track to onboard a billion users in the near future. There have been notable developments in several areas that were previously hurdles to mass adoption, including technical, regulatory, and innovation advancements. Layer 2's Scaling DApp Ecosystems When DeFi made headlines in 2021, one of the biggest challenges was the high gas fees on Ethereum, which at the time was the most active DeFi chain. The average transaction fee went as high as \$69, making it economically unviable for small-time traders to participate in the then burgeoning DeFi market. L2 chains such as Optimism and Arbitrum have, however, changed the DeFi landscape. Built on the Ethereum blockchain, L2s are designed to solve the scalability challenge, automatically reducing the processing time of transactions, and, more importantly, the cost of sending or swapping DeFi native tokens. Most of the L2s that currently exist charge as little as \$0.02 per transaction, making it feasible for more participants to join the DeFi bandwagon. The effect of cheaper DeFi transactions is evident in the growth of the L2 ecosystem, which currently enjoys a total value locked (TVL) of \$43.5 billion, up from a mere \$5 billion at the beginning of 2023. Interoperable DApp Networks Interoperability was another challenge that riddled Web3 innovations in the early days. DApp networks such as Ethereum, Solana, and Avalanche operated in isolation; users could not seamlessly transfer their digital assets from one blockchain to another. Well, that's no longer the case, thanks to cross-chain communication layers such as the Zeus Network. This chain-agnostic network is among the few projects that are leveraging Solana's virtual machine (SVM) to support DApps that enable DeFi interoperability. Zeus Network's pioneer Dapp, APOLLO, is a classic example of the advancement in interoperability within the larger Web3 space. Imagine being able to transfer your idle BTC to an active DeFi ecosystem like Solana? This type of innovation is exactly what was needed to unlock the idle assets in crypto. Of course, there is much to be done before the whole DeFi market can achieve seamless interoperability, but what's worth noting is that DeFi liquidity is no longer confined to a single environment as was the case during the DeFi summer of 2020. U.S. Bitcoin ETF Approval The approval of 11 Bitcoin Spot ETFs earlier this year is perhaps the biggest game-changer in Web3 adoption from a regulatory perspective. Today, BTC is no longer limited to futuristic tech nerds or speculators, players in the traditional investment realm have in fact contributed to a significant share of the inflows this year. According to the most recent stats, U.S. Spot Bitcoin ETFs have attracted north of \$16 billion since they were launched. More importantly, the institutions that are allocating these funds are coming on behalf of a wider pool of investors, none of the today's Bitcoin Spot ETFs, when the digital asset market was perceived for retail! It is also interesting to observe that the U.S. is not the only leading market for the approval of Bitcoin Spot ETFs. Hong Kong has also reserved for retail economies have often been trend setters in their respective regions, which is why it won't be a surprise to see more authorities forging a similar path in the coming years. On-chain Markets Linked to TradFi Assets (RWA) For a long time, cryptocurrencies have had no backing at all or as some critics would argue "made out of thin air". This argument may no longer hold water following the advent of new digital asset niche dubbed real-world assets (RWAs). Simply put, RWAs are blockchain-compatible digital tokens that are designed to represent real-world assets in the on-chain economy. These tokens are useful on several fronts, including the fractionalization of illiquid traditional assets such as real estate, art, and other types of financial investments as well as precious metals like gold. What's particularly intriguing about RWAs is the interest from established financial institutions; Goldman Sachs, for instance, is set to launch 3 tokenization products later this year. Blackrock's tokenized U.S. Treasuries fund has grown to a market cap of over \$519 million. Other established players in consulting, banking, and fund management are also predicting that the RWA market could be worth tens of billions within the next decade. Conclusion Similar to Web2 in the early 90s, most people are still skeptical of Web3's potential. However, looking at the developments, it is a no-brainer that some, if not most, of Web3 innovations are going to set the stage for tomorrow's digital economy. Stablecoins are already leading the way, accounting for quite a share of remittances in emerging countries. More importantly, the narrative is also changing from a speculative market to an ecosystem that could be the foundation of transparency, decentralization, and permissionless participation in global markets and the Web.

- Copper will enable its customers with secure access to the ICRC token standards on the Internet Computer blockchain. - Institutional customers of Copper may now access tokens in the ICP ecosystem enabled by chain-key technology. Industry's one of the leading digital asset custodians, Copper, today announced that it has expanded on a prior initiative with the Swiss non-profit DFINITY Foundation, a major contributor to the Internet Computer (ICP), to allow institutional investors to securely hold and stake their ICP assets directly in the Copper Platform. Copper will enable its customers with secure access to the Internet Computer Request for Comments (ICRC) token standards on the Internet Computer blockchain, a first for institutional custody providers. The Internet Computer working group created the ICRC token standard, and the SNS is a potent form of DAO that enables communities to manage dApps and smart contracts entirely on-chain on the Internet Computer. Through this cooperation, ICP's thriving DeFi and Web3 ecosystem which comprises hundreds of dApps, including some of the most popular cryptocurrency apps like OpenChat, Dragginz, and ELENA AI will now have institutional access and support. Institutional customers of Copper may now access tokens in the ICP ecosystem enabled by cutting-edge chain-key technology, such as ckBTC, and many more will soon be made accessible for custody. ckBTC is a multi-chain Bitcoin twin that is created by chain-key cryptography and Internet computer smart contracts that hold Bitcoin directly. It is backed 1:1 by Bitcoin (BTC). Chain-key tokens are made feasible by the Internet Computer's Chain Fusion technology. Without depending on any trusted intermediary, Chain Fusion allows direct interoperability with all major blockchains, including Ethereum, Bitcoin, and other EVMS (and soon, Solana). Because ICP smart contracts are unique from those on other blockchains in that they can read from and write to several chains, developers are able to create smart contracts that span multiple chains. Many more chain-key twins of ERC20 tokens are anticipated over the course of the next month. ckETH and ckUSDC are now active on the Internet Computer. Marcos Benitez, Head of Sales, Switzerland commented: "We are excited to share the news of our enhanced support for the ICP institutional ecosystem. As a leading institutional custody provider, Copper is pleased to integrate the complete tech stack for ICP, encompassing custody, layer 2, and staking, which reinforces our position as the premier institutional-grade custodian to offer these services. With this development, we anticipate facilitating greater access to vital capital for the ecosystem, including funds, venture capitalists, and exchange listings. Our dedication to bolstering the Swiss and Global Web3 ecosystem remains resolute, and we anticipate continued progress and innovation in this dynamic space." Paul Meesuen, VP of Partnerships at the DFINITY Foundation commented: "Copper supporting Internet Computer's ICRC token standard is a major win for ecosystem participants. It provides an institutional custody and staking solution with access to both native ICP and the growing tokenized apps being built on it. This will increase accessibility and institutional adoption, benefiting all projects building tokenized business models on the Internet Computer Protocol." The partnership makes it possible for cryptocurrency exchanges like Bit2Me, Bybit, BitMEX, Bitget, Deribit, Bitfinex, and others to offer tokens to their customers, such as the second layer Bitcoin ckBTC, the OpenChat governance token (CHAT), or the Internet Computer's first memecoin GHOST. This is made possible by the built-in support for SNS and ICRC tokens. Growing institutional interest in the protocol is the catalyst for this integration. The Valour Internet Computer Physical Staking ETP, which tracks the price of ICP, is the first exchange-traded product (ETP) based on ICP that was recently introduced by Valour Inc. A larger group of investors may now access the ICP ecosystem via a transparent and secure investment vehicle thanks to Copper's role as the custody provider for the Valour ETP as part of the integration. The ability of Internet computers to reduce platform risks that may result in higher server costs or codebase reworking is partly responsible for the ICP's consistent growth and development, particularly in the corporate space. By working together, Copper and ICP want to provide institutions with data-driven, dependable, and secure solutions to help them navigate the quickly changing world of decentralized finance. With its reputation for providing institutional-grade custody, prime services, and collateral management solutions, Copper has made a name for itself as a pioneer in the digital asset custody market. Through this alliance, industry leaders who are dedicated to promoting innovation and expanding the digital asset ecosystem have come together.

- CrowdStrike's stock fell, while memecoins inspired by the outage surged. - Polygon Labs's systems remained unaffected by the CrowdStrike outage. On July 19, Mudit Gupta, CISO of Polygon Labs, confirmed that despite a global IT infrastructure outage caused by a CrowdStrike update, their systems were unaffected. Gupta stated that Polygon Labs employs CrowdStrike's services but ensures rigorous testing of updates, a key security measure that shielded them from disruption. The outage, attributed to a defect in CrowdStrike Falcon EDR's latest version, led to blue screen errors and crashes for millions of Windows users worldwide, affecting airlines, stock exchanges, and emergency services. Despite this, Gupta assured that Polygon networks, being decentralized, remained operational and unaffected by the incident. He also highlighted that even if Polygon Labs were impacted, the decentralized nature of their network ensures its continuity. Meanwhile, crypto exchanges and services, including Bybit, reported no disruptions, maintaining normal operations. This resilience underscores the broader shift towards decentralized solutions in the crypto space. It continues to thrive amid traditional IT system failures. Experts argue that this incident highlights the vulnerabilities of Web2 systems and advocates for Web3 solutions as a robust alternative. Blockchain, The Better Alternative? CrowdStrike CEO George Kurtz clarified that the

downtime was due to a single content update affecting Windows hosts. And that it is not a security breach or cyberattack. He assured customers that the issue had been resolved and urged them to check the support portal for updates. Moreover, the global outage had a mixed impact on the crypto market. While CrowdStrike's stock fell 15% in premarket trading due to the disruption, rival cybersecurity firms gained, reflecting investor concerns over potential shifts in business. Meanwhile, the crypto community leveraged the incident creatively, with new memecoins emerging on Ethereum and Solana, inspired by the outage and the notorious "Blue Screen of Death." Many believe that this episode underscores the growing role of blockchain and digital assets as alternatives to conventional IT systems. Highlighted News Of The Day

Did you know a female rabbit can have more than 30 baby bunnies in a year? Rabbits are famous for their explosive breeding rates. According to the Fibonacci sequence, one rabbit pair can produce nearly 4 million offspring in four years. How is this relevant to crypto? It's a metaphor for the massive ROI you can achieve with the cutest new meme coin: MOONHOP. Inspired by the East Asian myth of the rabbit on the moon, MOONHOP is here to show why rabbits are destined to rule the meme coin world. Let's compare it to new cryptos like Dogwifhat and BlockDAG. Dogwifhat (WIF): A Dog WIF Memes Since Dogecoin's unexpected success, the meme coin market has been flooded with dog-themed cryptos. Dogwifhat is one of the latest, and it has become a surprise hit. Despite claiming to be "literally just a dog wif a hat," this Solana-based meme coin is surging. With a 16% increase in one day, Dogwifhat proves it's more than a Shiba Inu wearing a hat. This raises the question: are meme coins more than just a gimmick? BlockDAG (BDAG): 21st Century Mining Solutions Imagine mining for cash with a dustpan like during the California gold rush instead of working a 9-5 job. BlockDAG lets you do just that! Sort of. BlockDAG is an upcoming PoW coin that's mineable, allowing you to use specialized hardware called ASIC miners to mine BDAG coins. You can still buy and invest in BDAG if you prefer. The coin's hybrid consensus mechanism offers multiple ways to earn passive income with this unique altcoin. MOONHOP (MHOP): Hopping to the Moon, One Purchase at a Time MOONHOP, the meme coin poised for 100x growth, is capturing the crypto community's attention! With a total supply of 8 billion coins and a presale of 4 billion MOONHOP, this coin aims to appeal to a broad audience. The community, affectionately called The Fluffle, invites all enthusiasts to join its lively journey towards financial freedom. The Fluffle is built on inclusivity and mutual support, fostering an environment where every member feels appreciated and involved. Social media is alive with dynamic contests and bunny-themed events, keeping followers engaged and excited. MOONHOP Presale, priced at a modest \$0.01 per coin, aims to raise an impressive \$30 million to drive its ambitious growth. At a launch price of \$0.50 per MOONHOP, early investors are expecting significant returns, showcasing the coin's potential for growth in a competitive market. As MOONHOP hops towards the moon, it represents a path to financial success and a vibrant community rallying behind a promising meme coin. Join the movement, embrace the hop, and see why MOONHOP might be the next big hit in the meme coin world! The Bright Side of the Moon Dogwifhat and BlockDAG both hold great promise, but the new MOONHOP token is stealing the spotlight. If you're a meme coin lover with a soft spot for cute critters, MOONHOP is the perfect pick. Don't get lost in the rabbit hole; invest in MOONHOP today and hop, hop, hop to the moon. - Ripple XRP price, previously considered stagnant, has experienced a massive breakout. - The bulls have become aggressive, with XRP's 24-hour volume surpassing that of Solana. - With the MACD showing a sudden drop in selling pressure and the bulls gaining control over the rally. The XRP price, once speculated to be lifeless due to its relatively stagnant behavior since the beginning of the second quarter, has defied expectations by demonstrating a remarkable resurgence. While other altcoins were receiving sufficient buying pressure at regular intervals, XRP struggled to attract each other's attention, resulting in the price staying flat for a long time. However, as of the 12th of May, XRP has broken out of its long-term price range. The short-term price action and technical formation suggest that the price has just begun to swell, indicating that the upper target may not be restricted within a specific range. Bulls Become Aggressive as XRP Volume Surpasses Solana The bulls have become increasingly aggressive, as evidenced by XRP's 24-hour trading volume surpassing that of Solana, with a rise of over a billion dollars. This historic breakout may signify the beginning of a fresh ascending trend, potentially pushing prices close to the \$1 milestone. The long-term price chart has turned bullish, with the levels reclaiming their position within the bullish pattern. XRP price has entered an ascending parallel channel after rising from the lows by over 45% in just two days. Moreover, the weekly on-balance volume has triggered a bullish divergence, suggesting that the rally has come under bullish influence. Consequently, the XRP price is expected to maintain a healthy upswing for the next few weeks and reach the average levels of the channel.

- The goal of this strategic initiative is to make buying and selling digital assets easier. - At first, the expansion will focus on crypto marketplaces and merchants. Stripe has revealed plans to expand its crypto integration into the EU. Customers will be able to use their credit or debit cards to buy a range of cryptocurrencies, including Bitcoin (BTC), Ethereum (ETH), and Solana (SOL). The goal of this strategic initiative is to make buying and selling digital assets easier. The most recent development is in line with the company's overarching objective of making cryptocurrency more accessible for regular transactions. At first, the expansion will focus on crypto marketplaces and merchants, equipping them with the necessary tools to make crypto transactions easy. Additionally, Stripe now supports stablecoin payments, such as USD Coin (USDC). Instantaneous conversion to fiat currencies like the USD or Euro is possible for all transactions. Online merchants will find this functionality especially useful as it allows them to include a crypto-purchasing widget on their website. Strategic Expansion Know Your Customer (KYC) processes and related activities, including charges, disputes, and regulatory obligations, will also be handled by it. John Egan, head of crypto at Stripe, told the Irish Independent that this extension would enable crypto enterprises to assist European customers with the easy and speedy purchase of cryptocurrency. Consistently ranking high in European reports on per-capita crypto ownership is Ireland, the country where the business has a major presence. Efforts by Stripe to extend its crypto-related services throughout the EU are well-aligned with this regional interest in cryptocurrency. Many different types of businesses and customers stand to gain from Stripe's plan to integrate crypto payments in Europe. The firm is doing its part to unite the conventional financial sector with the new crypto economy by creating a safe and simple method to buy cryptocurrency. Highlighted Crypto News Today:

Today's crypto scene is buzzing with excitement as MOONHOP, the potential crypto gem of 2024, grabs attention with its playful promise of financial freedom. Alongside it, Dogwifhat predictions are stirring curiosity, while BlockDAG investors eagerly watch their trends unfold. As these digital marvels hop, wag, and soar through the speculative cosmos, they promise a thrilling blend of fun and serious potential. Ready to explore the latest crypto crazes? Dive into this whirlwind of innovation and see what makes these meme coins the talk of the crypto town! BlockDAG Investors Gain Momentum with Lucrative Bonus Scheme Blockdag investors are captivated by the platform's innovative referral program, which offers a 10% bonus for every referral. This strategy has led to increased participation, as investors can earn significant rewards by sharing their unique links with friends, family, and networks. Influencers have also jumped on board, promoting Blockdag to their followers and enjoying substantial bonuses. The presale success is evident, with BlockDAG selling over 12.2 billion coins and raising \$58.5 million currently in batch 20 at \$0.015 per coin. With ten different payment methods now available, including BTC, USD, Doge, SHIB, SOLANA, XRP, Polygon, Kaspa, Fantom, and Cardano, Blockdag is making it easier than ever for investors to join in on the action and maximize their earnings. Dogwifhat Predictions: Experts Warn of a Grim Future Dogwifhat predictions have taken a bearish turn as prominent crypto trader DonAlt forecasts a bleak future for the meme coin. Despite its significant mindshare, Dogwifhat has underperformed compared to other meme coins, leading to skepticism about its long-term viability. DonAlt suggests that while short-term gains may be possible, the long-term outlook is grim, with Dogwifhat potentially heading towards zero. This sentiment echoes a growing trend among investors seeking new and unique meme coins with higher profit potential, as skepticism rises towards established tokens like Dogwifhat. MOONHOP Presale: The Crypto Gem of 2024 MOONHOP is setting the stage for an exciting journey with a roadmap designed to delight and engage its community, affectionately known as "The Fluffle." Starting with the presale launch, MOONHOP invites all bunnies to join in and grab tokens at early bird prices. Community engagement is at the heart of MOONHOP, with contests, airdrops, and bunny-themed events keeping everyone involved and excited. The numbers behind MOONHOP are as impressive as its vision. The presale is divided into 50 stages, and the project has already raised a whopping \$921,800 on the first day of stage 1. This phased approach ensures a steady price increase, with a projected 4900% rise from the first to the last stage. With a total presale supply of 4 billion MOONHOP tokens and a starting price of \$0.01 per token, the potential for growth is immense. MOONHOP's charm doesn't stop at numbers. The project's focus on joy, inclusivity, and support makes it a standout in the meme coin market. The Fluffle isn't just a group of investors; it's a community of like-minded individuals hopping towards a shared future. As the presale continues, MOONHOP's unique blend of strategic planning and fun spirit promises a bright future for all its supporters. Get ready to hop along and watch MOONHOP soar to new heights as the crypto gem of 2024! End of the Trail While Dogwifhat predictions paint an interesting picture, MOONHOP leaps ahead as the true crypto gem of 2024. With its unique approach and vibrant community, MOONHOP offers more than just profit potential, it promises a fun and engaging journey for its investors. BlockDAG investors are keenly observing their trends, but for those seeking excitement and innovation, MOONHOP's boundless energy and strategic growth plan make it the standout choice. Pixelverse, a Web3 gaming platform, will bring the Pudgy Penguin character to its Telegram mini-game. In the PixelTap game, the adorable character that serves as the face of the popular Pudgy Penguins NFT collection will take center stage. Pudgy will appear on PixelTap, with other popular crypto favorites like Doge and Mew, the cat that fronts the most popular Solana memecoin. The introduction of Pudgy, the most recognizable character in Web3 to the popular PixelTap game will make it easier for mainstream users to explore the world of digital assets. Pudgy Penguins' success in the cryptocurrency space and the rest of the globe, shattering previous records for web3-native IP. Over 4 million people follow the Pudgy Instagram account, and over 1 million Pudgy toys have been sold at major retailers including Walmart. With the help of the Pixelverse integration, gamers will be able to interact with the endearing Pudgy character, reducing the barrier to entry for web3 gaming. Before the official Pudgy Penguins game, which is slated for release in 2025, arrives, it will give Pudgy fans their first experience of the penguin as a game character. With the addition of real-time PvP combat, Pixelverse's game ecosystem surpasses Telegram's successful tap-to-earn model and has witnessed record demand. In the first month after its introduction, PixelTap registered over 50 million users, and has over 10 million daily players. Pudgy Penguins have already accomplished the exceptional achievement of surpassing their original designation as a PFP collection consisting of 8,888 unique characters. Since then, the brand's IP has expanded to include fluffy toys via a number of licensing agreements, giving fans more opportunities to connect with Pudgy. Once again, Pudgy is breaking new ground and reaching millions of users via the TON ecosystem and within the Pixelverse.

Halfway through 2024, total crypto market capitalization maintained its ascent, reaching over \$2.27T, reflecting a 37.3% gain year-to-date, after a robust 2023. Gains were concentrated in the first three months of the year, when they increased by a substantial 60.2%. The cryptocurrency market lost some of its gains and sank 14.3% in the second quarter, making it comparatively more difficult. Since the fourth Bitcoin Halving, the Runes Protocol went live, and the U.S. spot ETFs were approved, Layer-1s (Ethereum) have been having a good start to the year. Bitcoin has continued to acquire market dominance and the inflows into the cryptocurrency market have exceeded \$14 billion. Solana flourished in the memecoin sector and introduced blockchain links (Blinks). BNB chain persisted in developing opBNB and Greenfield, and Ethereum had a restaking surge and the EIP-4844 upgrade. In the Layer-2 (Arbitrum) community, airdrops have become commonplace in the first half of 2024, particularly for zero knowledge (zk) initiatives. Total value locked in L2s now stands at \$43 billion, thanks to massive inflows of money attracted by incentive promises. Total value locked (TVL) increased by 90% in just the first half of the year. Total value locked (TVL) has increased by 72.8% year-to-date (Ethereum) to US\$94.1B from US\$54.4B at the beginning of 2024 because of the large infusion of funds into Decentralized Finance (DeFi). As a result of this enhancement, protocols are emerging that provide on-chain access to financial primitives that were previously unavailable, benefiting almost every

DeFi industry spanning both large and specialized markets. After a severe slump, the stablecoin market has just turned around, and we are now just 14.5% short of the highs reached in April 2022, immediately before the downfall of TerraUSD (UST). The market capitalization of stablecoins reached a two-year high of \$161 billion on June 30, 2024. Although USDT from Tether is still the most popular, USDC from Circle and USDe from Ethena have both seen gains in market share. The first half of the year was a wild ride for the NFT markets, with falling sales volumes and floor prices for large projects dropping by half or more. As the Blast token airdrop propelled Blur to even greater supremacy, Pudgy Penguins' tangible toys had mixed results. Moreover, Bico's NETS maintained their position. EVMs protocols' announcement of their forthcoming zk chain presale network continued the development of digital assets. The introduction of games, metaverse, and DeFi use cases continued to expand, and Friend.tech introduced their token and v2. One of the notable parts was the Fantasy.top trading card game. Despite a solid first quarter for the Web3 gaming industry, the market capitalization of gaming project tokens and other altcoins fell sharply in the second quarter. Projects like Pixels and Hamster Kombat have been able to draw in a lot of players thanks to the promise of token airdrops, thus user growth figures are looking good compared to declining prices. Among the other noteworthy topics are decentralized physical infrastructure networks (DePIN), memecoins, and artificial intelligence (AI). Throughout the first half of 2024, investors and the wider community have maintained a keen interest in these areas. Looking forward to making great strides in six main areas in the second half of 2024, and are excited about the year ahead. These topics cover a wide range of tales and sectors, including but not limited to: the macro environment, the Bitcoin ecosystem, applications in the ownership economy, real-world assets (RWA), and many more.

As optimism grows for another crypto bull run in 2024, crypto enthusiasts have shown interest in zkSync (ZK), Bonk (BONK), and ETFSwap (ETFS) as three tokens to front-run bullish market momentum. These tokens show fundamental advantages over several other market picks and present unique investment opportunities for crypto investors. zkSync (ZK) presents Unique Scalability Solution For Ethereum zkSync is one of Ethereum's more promising layer-2 scaling solutions (ETH). It's the first zkEVM to launch a mainnet, and investors want to capitalize on its first-mover advantages ahead of the next bull run. zkSync launched in 2020 and has had about four years to upgrade and improve its product. Some of the zkSync developments in those years include EVM compatibility, smart contract support, and support for programming languages like Solidity, Rust, Yul, and Vyper. The upgrade solution on zkSync uses zk-Rollups, a type of zero-knowledge proof that allows multiple transactions to be aggregated into one, processed off-chain, and verified on Ethereum (ETH). zkSync launched its token as an airdrop to early network adopters but has hit a negative price trend as airdrop recipients sell off their allocations. However, zkSync is creating support around \$0.1625, its price as of this writing. Experts expect a price rebound on the coin soon, and it could be a massive gainer towards the next bull run. ETFSwap (ETFS) Emerges As Then Best Market To Buy Ahead Of Bull Run ETFSwap (ETFS) has become the best profit pick in the coming bull run. In only about a month of presale, the new ETF trading platform has raised over \$3 million and looks to push that number much higher before launch. Experts predict up to 50,000% returns on the new platform amid the hype on ETFS. The new DeFi platform is seeing fast growth and is purported to be the future of trading. Combining the best aspects of centralized and decentralized markets, ETFSwap (ETFS) leverages the blockchain to offer decentralized access to ETF assets. This enables the new ETF trading platform to solve some of the challenges associated with trading on a centralized market, such as limited convertibility and trading hours. ETFSwap (ETFS) offers more investment flexibility with tokenized ETFs than the actual ETF asset purchased in traditional markets. The tokenized assets facilitate faster settlements, swaps to cryptocurrencies, staking and lending opportunities, lower trading fees, and permissionless trading. The platform's offerings will feature ETFs from industries such as healthcare, energy, commodities, and others. Investors show confidence in the new presale token before the beta launch, which is set to go live in a few weeks. Also, ETFSwap (ETFS) has completed KYC with SolidProof, a smart contract security auditing firm. With team identity verified with random requirements, presale investors continue accumulating tokens with some security assurance. Bonk (BONK) Is Set For Meme Coin Gains Bonk (BONK) has been one of the breakout tokens of the year, and the meme coin looks to have some runway for another bull run. BONK is a dog-themed meme coin created on Solana (SOL) and airdropped to network holders in December 2022. What was supposed to be a badge for staying through the FTX crash quickly became a promising coin about a year later. As of this writing, Bonk (BONK) is trading at \$0.0002624 and has increased by over 7,000% in the past year. However, Bonk (BONK) remains one of the best tokens to bet on at its current market cap of \$1.8 billion. Bonk (BONK) is considered hugely undervalued compared to other meme coins that don't have the same level of traction. Conclusion zkSync (ZK) and Bonk (BONK) show huge prospects as promising tokens to buy to front-run the bull run. However, experts believe ETFSwap (ETFS) presents a higher potential to be considered in the same category as those tokens. ETFSwap (ETFS) is considered the next biggest thing to come out of crypto, and you can get in early on the presale. The ETFSwap (ETFS) is still selling out fast at \$0.01831; seize the moment and get in before the price increases to \$0.03846 in the next presale stage. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. Crypto market rebounds sharply with \$2.29T cap, 23.24% volume increase. - Record \$17.8B inflows in digital assets, driven by Bitcoin and Ethereum. The global crypto market has rebounded sharply, with the total market cap reaching \$2.29 trillion, marking a 3.69% increase over the past day. Trading volume surged by 23.24% to \$64.1 billion in the last 24 hours, dominated by stablecoins which accounted for \$58.52 billion, constituting 91.29% of the total volume. Notably, Bitcoin and Ethereum led the charge, each gaining 5% in value over the same period. According to CoinShares, digital asset investment products witnessed substantial buying activity amid recent price dips. Last week alone, these products saw inflows of \$1.44 billion, driving year-to-date inflows to a record \$17.8 billion, surpassing 2021's total of \$10.6 billion. Bitcoin recorded its fifth-largest weekly inflow on record with \$1.35 billion, while short positions in Bitcoin saw their largest weekly outflows since April, totaling \$8.6 million. Ethereum also saw significant investor interest with inflows of \$72 million, buoyed by expectations surrounding the imminent approval of a spot-based ETF in the US. More Details Regionally, the US led with inflows of \$1.3 billion, underscoring positive sentiment across global markets. Noteworthy inflows were also observed in Switzerland, setting a record for the year, as well as in Hong Kong and Canada, with \$58 million and \$55 million respectively. Altcoins also attracted investor capital, with Solana, Avalanche, and Chainlink receiving \$4 million, \$2 million, and \$1.3 million in inflows respectively. The market's resilience despite recent challenges, including German government Bitcoin sales and fluctuating US CPI figures, underscores growing confidence among investors who continue to capitalize on perceived buying opportunities in digital assets. - Crypto trader GCR sold 1.08 million tokens of memecoin MAGA (TRUMP) in the last 10 hours. - The memecoin showed 3.28% price decline in the last 24 hours according to CMC data. The crypto market witnesses long-term profits intermittently with traders profiting from yearly price increases. In the last 9 hours, a wallet address suspected to be well-known pseudonymous trader GCR, aka Gigantic Rebirth had inflows of \$8.3 million in profits by selling 1.08 million tokens of memecoin MAGA (TRUMP). According to Arkham Intelligence data, the wallet with the address 0x0404ab dumped the 1.08 million tokens onto the BTSE exchange in three different transactions. As the tokens surged over the weekend, fueled by Trump's assassination attempt, it gave the trader added profits. Secondly, besides the BTSE exchange, GCR also sent TRUMP tokens to another wallet address 0x0576a named MAGA (Trump). He sent 9.9K tokens worth approximately \$87.7 thousand to this account. GCR's current TRUMP holdings are 89.645 tokens. Apart from TRUMP, the trader also holds ETH, USDT, and other memecoins. Moreover, Gigantic Rebirth began purchasing the MAGA tokens from November until December 2023. The wallet spent a total of 540,700 USDT to buy these tokens at an average price of \$0.5. This indicates that the wallet has gained a profit of up to 1538% over the last 8 months. How High Did Memecoin TRUMP's Bullish Rally Hit? Notably, the TRUMP token price surged 17.59% on July 14. In the past year, it has shown a significant price performance of 45517% increase according to CMC data. At the time of writing the token was trading at \$7.69 according to CMC data. Additionally, with the recent US elections buzz, the token's price recorded notable surges in the past two months. However, in the last few hours, all Trump-based memecoins have shown price declines. This is due to rising speculations about the validity of the assassination attempt on the Former US president. Furthermore, the TRUMP token recorded a 3.28% daily decline, due to aforementioned reasons. Meanwhile, the token showed a 1.15% increase in trading volume in the last 24 hours. Moreover, the Former president has shown his extensive support for the crypto community in his election campaigns. This caused several Trump-based memecoins to emerge on ecosystems including Solana and Ethereum. Highlighted Crypto News Today: Fed Expected to Lower Interest Rates as per Bloomberg's Mike McGlone

In the thrilling developments within the crypto sector, BlockDAG captures the spotlight with its latest advertisement video release, showcasing its Proof of Stake (PoS) blockchain. This pioneering venture has already propelled its presale momentum, amassing over \$58 million. Meanwhile, the expanding market cap instilling its position. Together, these developments paint a dynamic picture of the top crypto projects, each with its unique offerings and strategic advancements, shaping the future of digital finance. Polkadot Price Forecast: A Potential Surge Polkadot (DOT) has demonstrated remarkable stability in recent weeks, maintaining a narrow fluctuation range of 2% to 3% on the two-week chart. Over the past seven days, its price has oscillated between established support levels from \$5.81 to \$6.59, indicating a resilient market stance. Analysts suggest that for the Polkadot price forecast to materialise optimally, surpassing the \$7 mark is crucial. This milestone would signify Polkadot's emergence as a dominant player within the cryptocurrency industry. Speculations surrounding Polkadot's price forecast by Q4 2024 suggest potential gains of up to \$8, highlighting optimism for continued growth and investor interest. Toncoin (TON) Performance Overview Toncoin has emerged as one of the standout performers in the cryptocurrency market this year, achieving a remarkable surge to a record high recently. With its price peaking nearly 600% above its 2023 low, Toncoin's market cap has soared to over \$18 billion. This surge is attributed to the tap-to-earn revolution within the Telegram platform, where users accumulate virtual tokens by engaging in simple tasks. Despite bullish indicators such as staying above the 50-day and 100-day EMAs, Toncoin faces challenges like a rising wedge pattern and lower daily trading volume, signalling potential future volatility. BlockDAG's Video Displays Record Speeds BlockDAG has launched a cinematic marvel that's quickly becoming a viral trend in the crypto world, catapulting it into the spotlight as one of the top crypto projects. The video resembles BlockDAG's mission to redefine the boundaries of decentralised finance by showcasing its superior velocity and operational efficiency. Depicting BlockDAG's technology as a strong beam of light, the video perfectly encapsulates the swift, seamless nature of its transaction processing, courtesy of its advanced Directed Acyclic Graph (DAG) architecture. This technology ensures nearly instantaneous confirmations, revolutionising how transactions are handled across the digital landscape. Sporting an impressive capability of handling 10,000 to 15,000 transactions per second while maintaining minimal fees, BlockDAG is changing the game for digital transaction efficiency. This functionality is crucial for users looking for swift, cost-effective solutions in dynamic trading environments and time-sensitive financial applications. BlockDAG's Layer 1 blockchain technology, offers scalable outputs and unmatched confirmation speeds without the risk of orphan blocks. This simplicity and enhanced security set it apart from other Proof of Stake offerings, ensuring a transparent and efficient transaction process akin to high-level platforms like Solana and BNB Ripple. This marketing masterpiece has significantly magnified investor interest, maximising the influx of capital as the presale rockets past \$58 million, distributing over 12.1 billion coins. Early investors still have the chance to secure their BDAG coins at batch 20 priced at \$0.015, which analysts suspect will reach \$20 by 2027. Wrapping-Up While the Polkadot price forecast and Toncoin's performance showcase impressive strides in the cryptocurrency market, BlockDAG appeals to investors as the premier choice. Its innovative video and powerful Layer 1 blockchain technology levitate its position in transaction efficiency, offering unmatched scalability and security. As BlockDAG continues to captivate the market, reaching a presale milestone of \$58 million, it aligns itself as the number one among top crypto projects and as a future powerhouse poised for unprecedented growth, making it the greatest investment in the evolving digital landscape. The meme coin universe is always a thrill ride! MOONHOP shoots for the stars, BOME unfolds its future, and Cardano navigates the cosmic seas of the

crypto universe. This adventure blends predictions with insights into up-and-coming meme coin ventures, offering a peek at their bright futures. MOONHOP grabs the limelight with unstoppable momentum, captivating traders with BOME's market forecasts, while Cardano steers through the currents of the broader crypto market. Brace yourself for an exhilarating journey where digital dreams meet solid predictions, with surprises lurking at every corner. Exploring New Peaks: BOME's Market Predictions and Emerging Opportunities Since its introduction in March 2024 on Solana, Book of Meme (SBOME) quickly rose to fame, securing the 8th spot in meme coin market caps and ranking 3rd on the Solana blockchain. Following a notable 17% rise in value, SBOME has attracted traders' eyes, yet analysts urge caution with price forecasts due to its already significant momentum. As investors shift their focus to newer meme coins offering unique propositions and possibly higher returns, market sentiment seems to be pivoting away from well-established tokens like SBOME. Cardano Price Predictions: Expectations in the Wake of Bitcoin's Potential Rally At a crucial point amidst Bitcoin's potential rally to between \$500,000 and \$1 million, Cardano (ADA) stands at a crossroads that could significantly influence its price. If Bitcoin hits these targets, ADA's price might climb to \$3.28 and possibly \$6.56, echoing past peaks rather than hitting new highs. With an 82% price movement correlation with Bitcoin, ADA's future seems intertwined with Bitcoin's fate. Although some forecasts are optimistic about ADA surpassing \$10 soon, these predictions stand in contrast to the more conservative gains expected with Bitcoin's dramatic rise. Investors are keenly watching Cardano's market predictions, wondering if ADA will outperform its historical patterns and thrive on bullish market vibes. MOONHOP Eyes 100x Growth Potential MOONHOP is more than just another meme coin; it's a stellar phenomenon set to disrupt the crypto world! With a limited supply of only 4 million tokens available at a tempting \$0.01 during its initial presale phase, MOONHOP presents both rarity and the potential for substantial gains. Picture this as a meme coin festival where MOONHOP's scarcity is the main attraction, drawing attention from investors looking for the next giant leap in value. But MOONHOP is not all about the numbers; it's also about building a dynamic community atmosphere. Imagine meme contests that turn rocket science into meme artistry and governance that lets every token holder pioneer the space frontier. This isn't just another cryptocurrency; it's a playful venture into dream-like profits. As MOONHOP prepares for major exchange launches and interstellar journeys, it's not merely hopping; it's moonwalking into the crypto limelight. So, if you're geared up to jump on the next grand meme coin adventure, MOONHOP welcomes you to partake in the excitement, where each jump feels like a leap towards the stars and where rarity meets community spirit in a vibrant crypto playground. In Essence Although the meme coin field is bustling, there's always space for new narratives; MOONHOP soars through space with limitless energy and ambitious growth, captivating those searching for the next major market move. Meanwhile, BOME's financial predictions unfurl, and Cardano charts a steady course across the crypto universe. This exploration of soon-to-be major meme coin projects underscores MOONHOP's exceptional promise, offering an astral journey amidst the expansive crypto landscape. - The Federal Reserve has been sending mixed signals on a possible change in monetary policy. - McGlone compared the present economic climate to prior rate increase cycles. Since US stocks have turned around, Bloomberg analyst Mike McGlone predicts that the Fed will soon reduce interest rates. At a critical juncture in the economic landscape after the pandemic, this prediction arrives as the Federal Reserve has been sending mixed signals on a possible change in monetary policy. It seems like the central bank is about to switch gears from its aggressive rate-hiking strategy to a more accommodating one as inflation starts to fall and the job market starts to loosen. Moreover, after a turn in US markets according to Bloomberg analyst Mike McGlone, the Fed will lower interest rates. McGlone compared the present economic climate to prior rate increase cycles, mentioning, for example, that the Federal Reserve raised interest rates by 425 basis points (bps) between 2004 and 2006 and that the surprise index floor occurred in December 2006. Rates were first reduced in September 2007. Major Change in Monetary Policy Likely In light of the current situation, McGlone brought attention to the fact that the last 525 basis point increase in interest rates, which started in the first quarter of 2022, occurred in July 2023. But he did warn that high inflation might put off the Fed's easing until overvalued stocks revert, which would be good news for gold prices. Also, Federal Reserve officials have recently sent signals suggesting a major change in monetary policy, which is consistent with this forecast. Members of the Federal Reserve Board, notably Chair Jerome Powell, have voiced increasing confidence that they can manage inflation and are prepared to shift the Fed's policy trajectory if needed. Crypto investors are eagerly awaiting for any positive move from the Fed's, hoping to see a change in the ongoing bearish trend. Highlighted Crypto News Today: Solana Co-Founder Criticizes US Government Over Crypto Regulations

Crypto Staking is one of the best investment opportunities available with some cryptocurrencies where you lock a fixed amount of your crypto for a set period to help maintain the operations of a proof-of-stake blockchain. In return, you could earn more rewards. This process allows you to earn passive income in the form of staking rewards ranging from 1% to 13% APY depending on the crypto type staked and platform. In the way of investing in crypto assets, you should be careful in selecting the best-suited cryptocurrency type and platform. Choosing the right platform is key to maximizing your staking rewards and your crypto assets' security. CryptoHeap is one of the top in the crypto staking space offering competitive staking plans and robust security features to protect your investments. Why Choose CryptoHeap for Staking? CryptoHeap offers both seasoned and seasonal investors in the crypto market a friendly interface with crypto like many popular cryptocurrencies including Bitcoin, Ethereum and many more. The platform's security features will keep your crypto safe so you can earn staking rewards worry-free. One of the best parts of staking on CryptoHeap is earning passive income. By staking your crypto you can earn interest over time and turn your idle tokens into a steady income. This is made possible by the platform's staking work process which uses blockchain technology to validate transactions and record transactions securely. Key Features of CryptoHeap CryptoHeap is the best staking platform with many features to get the best user experience and returns. CryptoHeap offers comprehensive staking services and exclusive staking packages to maximize returns, making it a top choice for cryptocurrency staking services. Easy to Use: CryptoHeap has a simple and easy-to-use interface for both newbies and experienced investors. Its available features simplify the staking process, you can create an account with one tap, deposit your investment, choose a validator, and start staking in just a few clicks. Good Validators: CryptoHeap works with top validators known for their performance and reliability. By offering a curated list of good validators, we ensure you can delegate your tokens to trusted entities maximize your staking rewards, and minimize the risks of validator performance. High Crypto Rewards: One of the best points of using CryptoHeap for staking is the high rewards. The platform is designed to help you earn the most possible returns on your staked tokens. Users can get passive income through various staking plans available. Security and Transparency: Security is our top priority at CryptoHeap. We use advanced security measures to protect your assets and personal data. Combining staking strategies with advanced trading features can enhance your earnings while ensuring robust security and regular interest payments. Support: CryptoHeap has great support. They have responsive and knowledgeable support to help you with any questions or issues you may have during staking. Whether you're new to staking or a seasoned investor, we got you covered. How to get Started on CryptoHeap: First Register and create your account: - Go to the CryptoHeap.com website and click 'Join Us'. - Verify your account. - Now you have to deposit your crypto: Send your crypto to the wallet. - Select a Staking Plan: Pick a plan that fits your investment. - Lock Your Assets: Lock your assets in the staking pool for a set time. Earn Staking Rewards: - CryptoHeap calculates your returns based on the amount staked and time. - Get paid regularly and reinvest to compound or withdraw for instant use. Reward Programs Available on CryptoHeap - Free Plan Everyday: \$100 for 1 day and earn \$1 daily. - Topcoin Staking Plan: \$200 for 1 day and earn \$4 daily. - Soli Staking Plan: \$600 for 6 days and earn \$6 daily. - Polygon Staking Plan: \$1500 for 8 days and earn \$16.5 daily. - Cardano Staking Plan: \$5000 for 12 days and earn \$60 daily. - Ethereum Staking Plan: \$8000 for 16 days and earn \$104 daily. - Tron Staking Plan: \$10,000 for 20 days and earn \$130 daily. - Solana Staking Plan: \$15,000 for 25 days and earn \$210 daily. - Bitcoin Staking Plan: \$30,000 for 30 days and earn \$480 daily. - Chainlink Staking Plan: \$50,000 for 40 days and earn \$950 daily. - Cosmos Staking Plan: \$100,000 for 50 days and earn \$2,100 daily. - Uniswap Staking Plan: \$150,000 for 55 days and earn \$3,750 daily. Earn Rewards Through Referral Programs CryptoHeap's affiliate program is a special service for loyal investors. By referring users to CryptoHeap you can earn commissions: 3.5% on First Level Referrals: Earn 3.5% on every investment made by users you refer directly to our platform. 1.5% on Second-Level Referrals: Earn 1.5% on investments made by users referred by your first-level referrals. Why Referral Programs? No Investment Required: Earn commissions without investing yourself. Unlimited Earnings: There is no limit on how much you can earn. The more you refer the more you earn. Support and Resources: CryptoHeap will provide full support and marketing materials to help you grow your earnings. Use our dashboard to see your referrals and earnings. Conclusion: Selecting the right crypto-staking platform is key to getting the most rewards and securing your investments. CryptoHeap has a simple interface, competitive staking plans, and robust security, so it's perfect for beginners and experienced investors. With passive income through efficient staking and support for multiple popular cryptocurrencies, CryptoHeap.com is a top player in the crypto staking space. Plus low trading fees and educational resources help you understand market conditions and regulatory issues. Start staking with CryptoHeap.com today and grow your investments. For more information about how to get started with CryptoHeap and make the most of the crypto summer, visit CryptoHeap.com now

Pepe: The Frog That's Gearing Up for a Price Rally Pepe, the meme coin inspired by the (in)famous Pepe the Frog meme, was an overnight success when it launched in 2023, making many early investors millionaires. Currently, Pepe stands at number 23 on CoinMarketCap's rankings. Unfortunately, the froggy coin fell as hard as it climbed, and its price been fluctuating ever since. Recently though, a Pepe coin whale has injected some optimism into the Pepe fanbase, with a \$1.2 trillion purchase from the Binance crypto exchange amid a price crash. This has increased buying pressure among investors, and a sense of confidence in the Pepe ecosystem. BlockDAG: The Meme Coin Springboard BlockDAG is an upcoming PoW altcoin which has been creating waves with its unique DAG structure and hybrid consensus mechanism. Not only can the BDAG coin be mined, the project is also offering its own range of noise-insulated, energy efficient mining machines. What makes BlockDAG really interesting is its Ethereum-like low-code/no-code platform. This allows developers to create their own dApps, NFTs, and yes, even new meme coins. Because of all these developments, many crypto experts have deemed BlockDAG to be the next Solana, or even the next Ethereum. MOONHOP: One Small Step for Man, One Giant Hop for Bunnykind The meme coin world is populated with mostly puppies with the occasional Kitty, but MOONHOP introduces a third option. What about a meme coin centring around our favourite long-eared, cotton ball-tailed pose twichers? MOONHOP creates a fun, inclusive space where every bunny can live their best life, no matter their background or experience level. Giving its community the adorable name of the Fluffie, this community stick together and helps each other hop towards the moon and a brighter future. To prove just how committed MOONHOP is to building a strong and passionate community, it has introduced a referral program. Simply connect your wallet to your platform, generate your unique referral link, share it with your friends and family, and voila! Watch your HOP tokens start pouring in. Don't Walk, Just Hop: Why MOONHOP is Your Best Choice Frolicking through the crypto field, you might wonder which crypto is the best to sow your seeds into. Pepe may be one of the more popular meme coins right now, and BlockDAG does have an intriguing USP for developers, but MOONHOP might just prove to be the dark horse (rabbit?) of 2024. Why get your hands on some MOONHOP tokens? The sheer cuteness of the coin is hard to resist, and the project has explosive potential, just like the little critter it was inspired by. Join MOONHOP Presale Now: - Website: MOONHOP.io - Presale: <https://moonhop.io/buy> - Twitter: <https://twitter.com/moonhopcoin> - Telegram: <https://t.me/moonhopcoin> Disclaimer: TheNewsCrypto does not endorse any content on this page. Polkadot, a blockchain network focused on interoperability, has released the Join-Accumulate Machine (JAM) Chain. This upgrade is a new solution for scalability and performance. Polkadot is always pushing the limits of what's possible. What is the JAM Chain? The Join-Accumulate Machine (JAM) will replace Polkadot's relay chain with a more robust and efficient one. JAM Chain has two main functions: Join and Accumulate. These are on-chain, two other processes, Collect and Refine, are off-chain. The reason for JAM as a single upgrade is to simplify and optimize the blockchain. Unlike iterative updates that can introduce many small changes over time, a single upgrade allows for a more controlled and efficient transition. Less disruption and complexity. JAM Technical Details JAM is a Rollup Chain, focused on rollups and aggregating computation outputs from multiple sources into a shared state. A domain specific chain on top of Polkadot's existing infrastructure. A key feature of JAM is permissionless code execution. Anyone can deploy and run code on the JAM Chain without needing to ask anyone for permission. The JAM Chain state is divided into encapsulations called services which include code, balance and some state components. This is similar to a smart contract chain so

creating new services is permissionless. Another important point is that JAM has no traditional transactions. Instead it uses a two stage processing model where inputs go through a Refine stage before being added to the chain state through the Accumulate function. Extrinsic information types like Guarantees, Assurances, Judgments, Preimages and Tickets are critical to JAM Chain's security and functionality. JAM Core Functions The JAM Chain has three main functions: Refine, Accumulate and OnTransfer. The Refine, Accumulate and OnTransfer functions of the JAM Chain. Ref: <https://wiki.polkadot.network/docs/learn-jam-chain> The first function is called Refine. It performs stateless computation and transforms input data into work reports. A work package can contain multiple work items that are processed to produce refined outputs. The second function is Accumulate and this function adds the outputs from Refine to the chain state. It is stateful and can read and write to the chain's storage, manage funds and modify state. The third function is OnTransfer, and this function allows services to communicate asynchronously and send and process messages and tokens. JAM Chain's security model is a two stage processing model where work items are refined into work results and then accumulated into the service's state. So the outputs are what the transformations intended. Scalability and Performance One of the main goals of the JAM Chain is to scale and perform. JAM uses multi-core computation and parallel processing to handle multiple chains and programs at once. This increases the network's throughput and efficiency. JAM also has smart contracts and zero-knowledge rollups (ZK-rollups) built in. This adds more functionality and scalability so you can have more complex and secure applications. The pipeline processing of blocks also optimizes performance by using the full block time for calculations. The SAFFROLE algorithm, a SNARK-based block production mechanism, increases anonymity and minimizes forking. This makes block production more secure and efficient. With 852 MB/s of distributed availability, JAM outperforms other blockchain networks. In comparison, Solana with the Firedancer client is 125 MB/s, and Ethereum is 1.3 MB/s with Danksharding. JAM can handle up to 341 cores aggregated and process 500-5,000 EVM gas/Ås and 4,000 reads per second per core. JAM vs Polkadot Relay Chain JAM is more flexible and abstract than the Polkadot relay chain. Its service model allows for many applications and optimisations, so you can use underlying components as needed. JAM's fixed parameters allow for targeted optimisations of the network topology and timing, whereas the relay chain is highly upgradable which can make optimisations hard. This design prioritises simplicity over continuous upgrades. Developer Incentives and Support To support JAM's development, the foundation has launched a \$65 million prize pool. This incentive is to encourage developers to build and implement implementations of the JAM protocol and increase the overall functionality and security of the network. JAM Implementer's Prize participants must meet certain milestones such as importing and producing blocks, performance standards and security audits. This will encourage innovation and a decentralized network that can do many computational tasks. The JAM Toaster is a robust testing environment that plays a big part in this. It simulates a full JAM network with over 1,000 nodes so you can do large scale testing and performance testing. This infrastructure allows you to optimize your implementation and have a smooth running final network. Future and Industry Response The JAM Chain has big implications for existing parachains and new applications. JAM provides a more flexible and scalable infrastructure for blockchain. From EthPrague where industry leaders like Vitalik Buterin and Gavin Wood talked about the future of blockchain, we see that JAM is key to moving the space forward. They mentioned that JAM will drive innovation and scalability of the blockchain. JAM's ability to plug into existing parachains and support new applications puts Polkadot at the forefront of blockchain. Multi-core processing, smart contracts, ZK-rollups and a transactionless environment is a big step forward for blockchain. Conclusion The JAM Chain is a big step forward for blockchain scalability and performance. A more flexible and efficient system solves many of the problems of the relay chain and opens up new possibilities for blockchain development. For devs and stakeholders, it's a chance to get in on the bleeding edge of a technology that will change the face of blockchain networks. Watch this space as JAM rolls out.

Solana-based blockchain developer Meme Sol Labs has successfully completed its Series A funding round with EQT Ventures, raising a,~14 million. Additionally, the company is collaborating with prominent Black rights organizations to advance its NIGGA Coin project. Series A Funding from EQT Ventures Meme Sol Labs, the developer behind NIGGA Coin, has secured essential funding for the growth and development of the NIGGA Coin ecosystem to support EQT Ventures, known for supporting innovative and high-value, high-potential startups. The funding round is a significant milestone for Meme Sol Labs and the NIGGA Coin community. The company is thrilled to accelerate NIGGA Coin's growth and strengthen our global presence with the support of EQT Ventures. This funding will help us bring the benefits of NIGGA Coin to a wider audience, said a spokesperson from Meme Sol Labs. Collaboration with Black Rights Organizations NIGGA Coin aims to empower the Black community economically by collaborating with key Black rights organizations. Current partnerships include: - NAACP Legal Defense and Educational Fund (LDF): Providing legal support programs for the Black community. - United Negro College Fund (UNCF): Offering scholarships and expanding educational opportunities for Black students. - Black Lives Matter Global Network Foundation: Raising awareness about racial discrimination through social campaigns. We want NIGGA Coin to be more than just a cryptocurrency. By partnering with these organizations, we aim to create real, positive change in our community, commented Meme Sol Labs. What's Next for NIGGA Coin? With the new funding and strategic partnerships, NIGGA Coin plans to enhance its global presence and reach more users through several initiatives: - Exchange Listings: Preparing for listings on major exchanges to increase liquidity and accessibility. - Technological Development: Accelerating the advancement of Solana blockchain-based technologies to improve user experience. - Community Growth: Expanding the global community to ensure more users benefit from NIGGA Coin. The NIGGA Coin presale, offering early buyers the opportunity to purchase coins at a lower price and potentially benefit from significant returns as the value increases, is starting in July. NIGGA Coin represents a new era of economic freedom and cultural pride. For more information, visit [\[https://niggacoin.vip\]](https://niggacoin.vip). Issued by: Meme Sol Labs EQT Ventures: A Stockholm-based venture capital firm that provides support and capital to bold and ambitious founders on their journeys to global success, seeking investments ranging between a,~1 million and a,~75 million. Join the journey towards economic freedom and cultural pride with NIGGA Coin.

- Litecoin's price is up 15% in the past 24 hours. - The daily RSI suggests that LTC is facing selling pressure. In a bearish ride recently faced, where altcoins are facing a heavy dump, Litecoin is telling a different story. Despite hitting an 11-month low of \$56.86 six days ago, Litecoin has recovered to \$69.32 today. Litecoin is up 2% in the past 24 hours, with trading volume increasing by 39%. Notably, in the past week, Litecoin has risen by 15%. According to IntoTheBlock, Litecoin processes \$2.85 billion in transactions over \$100k daily on average, which is over 50% of its market cap. This figure surpasses most Layer 1s. For instance, Dogecoin handles \$590 million in large transactions, despite having roughly three times it's market cap. Moreover, Analysts are bullish, noting that Litecoin has attracted more speculative investors. The network offers deep liquidity and faster transactions. They believe it is well-positioned to surpass its all-time high in this cycle, after underperforming in previous ones. LTC To Surge Past \$75? A closer look at Litecoin's recent price movements reveals an underlying bullish trend on the daily chart. The 9-day exponential moving average (EMA) is recorded below the trading price at \$67.25, further emphasizing the bullish sentiment. The daily Relative Strength Index (RSI) has hovered around oversold levels recently. If the price breaks through the \$70 resistance level, it could test the \$76 resistance. Conversely, a drop below the \$64 support level might see it testing the critical \$57 level. Highlighted News of The Day

TOKEN2049, the world's largest crypto event, announced its first batch of headline speakers and prominent title sponsors ahead of its eagerly anticipated return to Singapore. TOKEN2049 will take place from 18-19 September 2024 at Marina Bay Sands, ahead of the Formula 1 Singapore Grand Prix 2024 race weekend. Set to welcome 20,000 attendees from over 150 countries, TOKEN2049 will return to Singapore once more, converging industry leaders and global cultural icons, like in Asia's leading economic hub to share what's ahead for the zeitgeist. Following its record-breaking success in 2023, this year's TOKEN2049 features a densely packed week of over 500 side events taking place from 16-22 September throughout the city-state. With 90 percent of exhibition space already sold out amid unprecedented demand, TOKEN2049 ticket prices will increase today, 28 June at 11:59 PM (GMT+8). This year's TOKEN2049 Singapore will immerse participants in a festival experience unlike any other. A plethora of activities will merge next-generation Web3 technologies with endless entertainment across four floors of the conference venue. The show floors will be densely packed with interactive VR zones and immersive AI art experiences, an indoor rock climbing monolith, competition-grade padel, cage football and mixed martial arts æ just a selection from a range of other activities to be discovered during the event dates. TOKEN2049 will be more than an event, promising an environment where entertainment and learning coexist. The city of Singapore will be marked by the TOKEN2049 community, as thousands of participants are transported around Singapore in TOKEN2049-branded buses and Singapore's iconic pedalled trishaws, ensuring participants can navigate the festival week with ease and style. Making its debut is TOKEN2049's new startup competition, which will unveil the next generation of Web3 projects as they emerge from stealth. Hundreds of aspiring applicants will be rigorously evaluated, with only the top 10 most innovative projects selected to pitch on the global stage, showcasing their innovations for the first time. In gearing up for the event's largest and most immersive iteration to date, Alex Fiskum, Co-Founder of TOKEN2049 said: æTOKEN2049 has always been a global platform that brings together ideas, technology and culture to inspire and to entertain. This year we are reimagining the conference experience from the ground up, creating a spectacle unlike any other. With 20,000 attendees and more than 500 side events throughout the week, we are confident that TOKEN2049 Singapore will surpass all expectations of what one would expect of an event. Ticketing and exhibition demand has already surpassed all previous records, we are only at the beginning of what promises to be the most consequential Web3 event in the world. We look forward to sharing more exciting updates as we get closer to the event.æ The first round of over 200 confirmed speakers includes Richard Teng, CEO of Binance; Anatoly Yakovenko, Founder of Solana; Balaji Srinivasan, Founder, Investor and Author of The Network State; whistleblower Edward Snowden; Arthur Hayes, CIO of Maelstrom; Emad Mostaque, Founder of Schelling AI, with more industry leaders to be unveiled in the months following. TOKEN2049 Singapore's title sponsors include OKX, a leading crypto exchange and Web3 technology company; BingX, a leading crypto exchange and official partner of Chelsea FC; TRON DAO, empowering decentralised commerce and community for every human on the planet; DWF Labs, the new generation Web3 investor and market maker; Bitget, the world's leading cryptocurrency exchange and web3 company, and Bullish, one of the fastest-growing, regulated digital asset exchanges. For more information and continued updates on TOKEN2049 Singapore, please visit: <https://www.asia.token2049.com/> PR Newswire is a community partner of TOKEN2049 Singapore. Alex Fiskum, Co-Founder of TOKEN2049 is available for interview. ABOUT TOKEN2049 TOKEN2049 is a global Web3 event series, organised semi-annually in Singapore and Dubai, where decision-makers in the global crypto ecosystem connect to exchange ideas, network, and shape the industry. TOKEN2049 is the preeminent meeting place for entrepreneurs, institutions, industry insiders, investors, builders, and those with a strong interest in the crypto and blockchain industry. - Media Contact [token2049sg@wachsman.com](mailto:token2049sg@wachsman.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. - Lucie, Shiba Inu's marketing lead, has sparked a discussion on a SHIB ETF, highlighting its pros and cons. - SHIB's price is still struggling to break its yearly high of \$0.0003592. After the approval of the 11-spot Bitcoin (BTC) ETF on January 11, expectations are high for more developments in the market. Also, the discussion around potential exchange-traded funds for various digital assets has intensified. Also, the U.S. Securities and Exchange Commission's (SEC) green light for eight Spot Ethereum ETFs on May 23, 2024, has drawn attention to the Shiba Inu (SHIB) ETF, signaling a significant development due to its status as a meme-based coin. Lucie's Insights on SHIB ETF Lucie, the marketing lead for Shiba Inu, highlighted key reasons why an ETF could be highly beneficial in an X post shared on July 11. Lucie stated that a SHIB ETF will increase accessibility for traditional investors and enhance regulatory security, signaling a shift from memecoin to utility. However, Lucie also outlined concerns that have been raised regarding the implications of ETFs on the decentralized finance (DeFi) ecosystem. Critics argue that ETFs could centralize control over SHIB tokens, potentially reducing community engagement in DeFi activities like staking and governance. Additionally, ETFs might decrease active participation in DeFi protocols and involve management fees and regulatory oversight, which lead to market manipulation. Despite these drawbacks, the prospect of a SHIB ETF has garnered significant interest, with proponents pointing to benefits such as diversification and increased liquidity. Meanwhile, SHIB's market performance today saw a slight decline, trading down 0.68% to \$0.0000165 amidst broader market trends. This fluctuation comes amid ongoing BTC selling pressure in the crypto market, highlighting both the opportunities and challenges. Additionally, asset managers VanEck and 21Shares are bringing a Solana-based ETF to the market, as confirmed by Choe. They submitted 19b-4 filings to the Securities and Exchange Commission (SEC) on July 8 to list spot Solana ETFs. Highlighted Crypto News Today Asia and Africa Show Notable Growth in Crypto Startups in 2024

Popo The Frog (\$FROP) strives to be ranked among the top meme coins in the market, with the goal of competing with rivals such as Pepe The Frog (\$PEPE). Starting with a meticulously planned presale, which allocates a quarter of the total tokens to early supporters, the \$FROP token aspires

to gain prominence. The team is committed to establishing a solid foundation for sustained growth in the highly competitive cryptocurrency landscape. What Makes Popo Attractive? As the Popo team is committed to fostering a robust community with reliable customer support and constant community engagement, Popo has dedicated an additional 25% of \$FROP tokens to staking initiatives. These programs offer community members multiple ways of participating within the ecosystem, while simultaneously enjoying substantial returns on their respective investments. The "War Chest" is a staking platform that allows users to stake their tokens in two pools. One pool provides higher returns with a fixed timetable, while the other lets users withdraw their \$FROP tokens at any time. Popo has also realised the critical importance of visibility and market positioning, which is why the company has allocated another 25% of its token supply toward its marketing efforts. This approach aims to outpace rivals such as SPEPE and firmly establish Popo as a front runner within the evolving meme token sector. At the core of Popo's strategy is its vibrant community, which is incentivized through ongoing rewards and various community-driven initiatives. The roadmap provides key information for investors, including but not limited to the launch of the official website, creation of token contracts, social media establishment, rigorous contract audits, transparent plan disclosures, proactive community building efforts, presale launch, a comprehensive staking platform, extensive marketing campaigns, strategic listings on major exchanges, the launch of the interactive \$FROP farming games, the introduction of the Popo gaming lounge, and much more. Tokenomics & How To Participate \$FROP boasts a fixed total supply capped at 111,111,111,111 tokens which are thoughtfully distributed across multiple segments within the Popo ecosystem in order to ensure both sustainability and liquidity. To summarise, the allocation is as follows: 25% for the presale, 25% for staking initiatives, 25% for marketing efforts, 15% for community rewards, and the remaining 10% for liquidity purposes. Furthermore, as previously mentioned, \$FROP features a transparent smart contract code that aims to ensure constant reliability and security for all stakeholders. By functioning seamlessly across various blockchain networks, both accessibility and overall efficiency can be improved in a timely manner. Participating is also a relatively straightforward process, as users can access the presale widget and safely connect their wallets after which they can choose any of the available blockchain networks offering \$FROP tokens (currently 7 chains are available and Solana will be added soon). Next, users need to select their desired payment method for obtaining \$FROP tokens, and then finally input their desired quantity and confirm the transaction through their connected wallet. About Popo Popo The Frog (\$FROP) is a pioneering meme token which has quickly ascended to become a symbol of community strength and innovation within the cryptocurrency space. By embracing a democratic approach where community feedback is not only appreciated but actively helps form strategic decisions, Popo is able to foster an ecosystem of mutual prosperity and inclusivity. Ultimately, Popo aims to secure its place in meme history which is why members of its community actively engage in steering its future direction, which also helps ensure alignment with collective aspirations. The team hopes to create a truly decentralised environment which helps usher in a new era of digital expression and financial success. For additional information and regular updates, visit the official website, the whitepaper, and the Telegram, Instagram, and X channels. DeFi claims to revolutionize global capital market accessibility and breathe new life into the financial industry. Regardless of the blockchain or decentralized app they use, on-chain users must have access to the world of conventional assets in order to accomplish this aim. Pyth Network and Ondo Finance, the leading provider of tokenized real-world assets, have joined forces to achieve this goal. A major turning point in the DeFi landscape, this strategic alliance manages Pyth's rollout of the USDY/USD price feed to over 65 blockchain ecosystems. With this, smart contract developers worldwide may now access a real-time feed for Ondo's market-leading yieldcoin, USDY. With this launch, Ondo USDY will now be accessible to developers and initiatives creating the financial infrastructure of the future and enhancing access to institutionalized assets on-chain. Price Feeds now supports US Dollar Yield (USDY), and Pyth Network's over 100 first-party data providers enable Pyth to supply feeds for additional real-world assets in response to Web3 developer demand. Katie Wheeler, VP of Partnerships at Ondo Finance: "This is a huge unlock for developers and projects building the future of finance. Many leading DeFi applications and protocols rely on Pyth as an oracle provider, and this USDY/USD price feed marks a significant step towards cutting through the fragmented nature of blockchain ecosystems to make institutional assets widely accessible." What is Ondo's US Dollar Yield Token? The US Dollar Yield (USDY) issued by Ondo is a tokenized note backed by short-term US treasuries. With the reliability of conventional assets combined with the advantages of on-chain finance, USDY offers a yield-producing, reliable substitute for traditional stablecoins. USDY, which is supported by highly safe and liquid assets, provides institutional and individual market participants wishing to engage in on-chain capital markets with a sustainable yield. More information on USDY is available here. Unlocking DeFi's Potential with USDY With the release of the Pyth USDY/USD price feed, USDY is now available in the ecosystems of EVM, Solana, Move, Bitcoin, and Cosmos. Another step toward overcoming the dispersed nature of blockchain ecosystems and creating a single and interoperable DeFi experience is this cooperation with Ondo Finance. Greater Reach: Now that the USDY/USD feed is operational across more than 65 blockchains, a wider variety of on-chain apps may establish markets for USDY. A more cohesive and potent DeFi landscape is made possible by the widespread availability of key assets. Multi-Chain Synergies: Multi-chain growth potential are made possible for DeFi apps that aim to offer the same markets to new user bases by the availability of USDY/USD across different blockchains. This benefit creates integrated markets where assets may now flow freely across chains, dismantling the inherent barriers in the blockchain ecosystem. Connecting Conventional and Decentralized Finance: With this launch, the market will see more liquidity, security, and stability and institutional finance will be able to move more easily into the DeFi space. The integration of conventional assets on smart contract platforms via Ondo creates the foundation for more advanced and dynamic DeFi offerings. Exposure in real time: On-chain users are able to track, monitor, and respond to the conventional capital markets almost instantly thanks to Pyth Price Feeds, which updates at sub-second speeds. For Ondo's tokenized products, this advantage creates a level playing field for DeFi and CeFi solutions, allowing new players to enter these markets. Ecosystem Excitement Oracle feeds for crucial assets are essential for blockchain foundations who want to expand their developer community, enhance user experience, and extend their ecosystem. Solana, Mantle Foundation, and Aptos Foundations are among of the first ecosystem leaders to take advantage of the recently launched Pyth USDY/USD feed. Aptos The launch of Pyth Price Feed for Ondo products was a significant step towards the tokenization of real-world assets, which is a joint venture between Aptos and Ondo Finance. Solana As part of a larger movement to move conventional assets like bonds and credit onto blockchain rails, Ondo Finance has recently added US Treasury-backed assets to the Solana ecosystem. Solana's position as a high-performing Layer 1 is strengthened with the addition of Pyth oracle feeds for these assets. Mantle Mantle and Ondo Finance have teamed up to advance the RWA movement and provide the larger DeFi ecosystem with sustainable yield. A significant advancement in this endeavor is the launch of the Pyth USDY/USD yield. Sui Sui introduced support for native USDY earlier this year, making it the network's first yield-bearing alternative stablecoin. An important step toward expanding user and developer access to USDY in the Sui ecosystem is the introduction of Pyth's USDY feed on Sui, which encourages further innovation. DeFi Protocols Furthermore, other Pyth ecosystem partners are already integrating this price feed, broadening its scope and value. Drift: A dynamic perpetual futures DEX on Solana based on AMM. Chris, core contributor at Drift stated: "Traders on Drift rely heavily on the availability of real-time, accurate price data like USDY. Low-latency price data is crucial to Drift's products, enabling seamless trades on perpetuals and on-chain derivatives. Pyth's pull oracles significantly reduces the risk of stale pricing." FlashTrade: An asset-backed trading that provides on-demand liquidity on Solana. Trepps, Head of Risk and Strategy at FlashTrade stated: "Flash is always on the lookout for innovations in the DeFi that brings more sources of real yield on chain. USDY is a big step in that direction and Pyth's new price feed allows us to easily integrate it into our pools knowing we are quoting accurate prices for this asset." Thala: A DeFi HyperApp and liquidity engine on Aptos. Adam Cader, Co-Founder of Thala stated: "We are excited to launch USDY into Thala pools, allowing users to trade USDY and gain exposure to tokenized treasury yields. Further, USDY will also be whitelisted as a collateral for our stablecoin, MOD. This is part of our bigger vision to make Thala the Liquidity Hub for RWAs on Aptos." DePerp: A perpetual trading mini-app in Telegram and webapp on Base. What Comes Next? Pyth Network and Ondo finance have partnered to help smart contract developers build decentralized finance that is more advanced, accessible, and efficient. Developers may go through the available price feeds to discover which data feeds, including any new Ondo Finance tokenized products, will be released next. Resources - Explore Pyth - Documentation - Best Practices - How Pull Oracles Work - Pythnet Appchain - Pyth Price Feeds IDs - Discord - Telegram Disclaimer for USDY: Important: USDY is not, and may not be, made accessible to US citizens or offered for sale in the US. Additionally, USDY is not registered under the 1933 US Securities Act. The whole disclaimer is available here.

- Alliance DAO reported that Asia and Africa showed a rise in crypto-based startups. - Ethereum is the largest L1 that dominates the crypto ecosystem. Crypto accelerator and DAO community published an X article bringing on chain insights for H1 2024. The reports showed that the eastern continents, Asia and Africa have shown increased numbers of crypto-based startups. Over the past months, these regions have also seen advancements in Regulations and new launches within the crypto sector. According to the report Europe surpassed the superpower US to become the leading region in terms of number of startups. The central continent now accounts for 31.4% of the total crypto-based startups. Meanwhile, the US currently hosts 29%. On the other hand, Asia has witnessed immense growth and is the third-largest region with 26.8% of startup establishments. Africa has shown a rise reaching 5.2% this year. Notably, in 2021, the US was the leading region with nearly half of the startups being US-based. However, over the last few years, other nations have also exhibited emerging markets in cryptocurrency. Moreover, the authors, Qiao Wang and Chloe Xyga stated that the reduction in number is due to regulatory uncertainties in the US. Additionally, the eastern countries attract entrepreneurs due to the emerging markets in their regions. Moreover, Latin America currently hosts 5.8% of the global crypto-startups. Oceania holds a much smaller percentage of the establishments. How Did the Crypto-Based Startups Fair in H1 2024? The Alliance DAO stated that they are able to derive unique insights into where the industry is heading because of the sample size and their agnostic approach to various factors. Relatedly, they presented several factors in terms of on-chain data, products of crypto-startups, and founder backgrounds. In H1 2024, startups that build DeFi, payments, AI x crypto, and infra have shown a rise. Most of these companies use NFT as expenses. Notably, in terms of L1s Ethereum ensures its dominance within the crypto space. Meanwhile, Solana has shown a surge in activity indicating a comeback. Several of the regions that have shown a rise witnessed new advancements in the sector. Hong Kong, for instance, recently made an announcement regarding licensing of particular crypto exchanges to provide services in the capital city. Finally, the overall crypto market has begun to show recovery signs after the recent market crash, according to CMC data. Highlighted Crypto News Today: Malaysia Plans Crackdown on Bitcoin Miners Amidst Illegal Mining Surge

- Rep. Wiley Nickel asked Powell about the Federal Reserve's stance on stablecoin regulation. - Powell said that the Fed is still willing to collaborate with lawmakers for stablecoin regulation. The latest congressional testimony by Federal Reserve Chair Jerome Powell revealed strong desire to have stablecoin legislation passed before the year closes. Recently Fed Chair Jerome Powell voiced his support for stablecoin regulation. Rep. Wiley Nickel asked Powell about the Federal Reserve's stance on stablecoin regulation. And Powell said that the Fed is still willing to collaborate with lawmakers. Active Participation This commitment emphasizes the significance of establishing a regulatory framework for the supply of stablecoin services. In order to strengthen the safety and reliability of financial transactions conducted in the US. Following this, the legislative process will begin, with several legislators and banking regulators actively participating. For a thorough measure to govern payment stablecoins, Senators Cynthia Lummis and Kirsten Gillibrand introduced the Lummis-Gillibrand Payment Stablecoin Act in April. Aiming to safeguard consumers and encourage innovation without jeopardizing the dollar's dominance, this bipartisan law seeks to regulate the market. With an emphasis on payment stablecoin regulation, the new law supersedes the Responsible Financial Innovation Act (RFIA) of 2022. The new law defines a "payment stablecoin" as any cryptocurrency asset that is either pegged to a constant quantity in US dollars or meant to be used as a medium of exchange or payment. Not included in the bill are stablecoins tied to assets other than US dollars. According to market forecasts, everyone in the financial business, including a hedge fund, a social media company, a crypto-friendly market, holding a portfolio of digital assets, and a bank, will be keeping a careful eye on the Federal Reserve's next policy rate plans in light of crucial inflation indicators. Highlighted Crypto News Today: Solana (SOL) Eyes Spot ETF Approval as Price Targets Crucial Resistance Levels

- The project's native cryptocurrency, WLD, shot up in price today, surpassing the \$2 mark. - Reservations made between July 24, 2023, and July 31, 2024, will be valid until July 31, 2025. Notable update has emerged from Sam Altman's co-founding company, Worldcoin, as they have decided to postpone the redemption date for WLD Grant Reservations. The project's native cryptocurrency, WLD, shot up in price today, surpassing the \$2 mark, thanks in large part to this update. The Worldcoin Foundation recently announced a one-year extension of the redemption date for WLD grant

reservations. Reservations made between July 24, 2023, and July 31, 2024, will now be valid until July 31, 2025. Thanks to an extension that was originally offered to enable users without a validated World ID to reserve WLD tokens. More Accessible to Wider Audience At the same time, they are accepting new bookings until July 31, 2024. This decision, they say in the statement, is in line with their goal of making the global economy accessible to everyone. So that many people may take part in its activities and reap their benefits at their own pace. A developer preview of the Worldcoin Foundation's forthcoming Layer 2 (L2) network was also introduced at the same time as the announcement. In preparation for the official mainnet launch this summer, a small group of developers has been granted access to this preview in order to investigate and evaluate the features of the World Chain network. Sam Altman's company is collaborating with Alchemy. In order to make use of their powerful infrastructure and developer tools, in addition to launching the developer preview. World Chain's growth, especially in improving digital identification and blockchain technology solutions, can't go further without this collaboration. - Bullish AGIX price prediction for 2024 is \$1.6937 to \$4.2143. - SingularityNET (AGIX) price might reach \$5 soon. - Bearish AGIX price prediction for 2024 is \$0.2169. In this SingularityNET (AGIX) price prediction 2024, 2025-2030, we will analyze the price patterns of AGIX by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | SINGULARITYNET (AGIX) PRICE PREDICTION 2024 | | | SINGULARITYNET (AGIX) PRICE PREDICTION 2025, 2026-2030 | | CONCLUSION | | FAQ | SingularityNET (AGIX) Current Market Status | Current Price | \$0.623 | 24 ¢ Hour Price Change | 17.00% Up | | 24 ¢ Hour Trading Volume | \$2.43M | | Market Cap | \$757.45M | | Circulating Supply | 1.21B AGIX | All ¢ Time High | \$1.86 (On Jan 20, 2018) | | All ¢ Time Low | \$0.007497 (On Mar 13, 2020) | | What is SingularityNET (AGIX) | TICKER | AGIX | | BLOCKCHAIN | Ethereum Blockchain | | CATEGORY | Decentralized AI | | LAUNCHED ON | January 2018 | | UTILITIES | Governance, tipping system, gas fees & rewards | SingularityNET (AGIX) is a decentralized platform that facilitates the creation, sharing, and monetization of Artificial Intelligence (AI) services. Founded by Dr. Ben Goertzel, it aims to democratize AI by providing a marketplace for developers, researchers, and organizations to exchange AI algorithms. AGIX operates on blockchain technology, ensuring transparency, security, and interoperability. The platform utilizes a native utility token, AGIX, for transactions within the ecosystem. SingularityNET's open and collaborative approach fosters the development of a global AI network, allowing diverse AI agents to interact and combine their capabilities. This vision seeks to advance AI research and application while avoiding centralized control, ultimately promoting a more inclusive and accessible AI landscape. SingularityNET 24H Technicals (Source: TradingView) SingularityNET (AGIX) Price Prediction 2024 SingularityNET (AGIX) ranks 2650th on CoinMarketCap in terms of its market capitalization. The overview of the SingularityNET price prediction for 2024 is explained below with a daily time frame. AGIX/USDT Falling Wedge Pattern (Source: TradingView) In the above chart, SingularityNET (AGIX) laid out a Falling wedge pattern. The falling wedge is a bullish pattern. Together with the rising wedge formation, these two create a powerful pattern that signals a change in the trend direction. The falling wedge pattern occurs when the asset's price is moving in an overall bullish trend before the price action corrects lower. Within this pullback, two converging trendlines are drawn. One of the main features of the falling wedge pattern is the volume, which decreases as the channel converges. At the time of analysis, the price of SingularityNET (AGIX) was recorded at \$0.623. If the pattern trend continues, then the price of AGIX might reach the resistance levels of \$1.0559, \$1.6852 and \$2.7070. If the trend reverses, then the price of AGIX may fall to the support of \$0.4981. SingularityNET (AGIX) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of SingularityNET (AGIX) in 2024. AGIX/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of SingularityNET (AGIX) for 2024. | Resistance Level 1 | \$1.6937 | | Resistance Level 2 | \$4.2143 | | Support Level 1 | \$0.4994 | | Support Level 2 | \$0.2169 | AGIX Resistance & Support Levels SingularityNET (AGIX) Price Prediction 2024 ¢ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of SingularityNET (AGIX) are shown in the chart below. AGIX/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current SingularityNET (AGIX) market in 2024. | 50 MA = \$0.7673 Price = \$0.5938 (50MA > Price) | Bearish/Downward | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 45.0668 <30 = Oversold 50-70 = Neutral >70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | SingularityNET (AGIX) Price Prediction 2024 ¢ ADX, RVI In the below chart, we analyze the strength and volatility of SingularityNET (AGIX) using the following technical analysis indicators ¢ Average Directional Index (ADX) and Relative Volatility Index (RVI). AGIX/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of SingularityNET (AGIX). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 15.9693 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 32.46 <50 = Low >50 = High | Low volatility | Comparison of AGIX with BTC, ETH Let us now compare the price movements of SingularityNET (AGIX) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs AGIX Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of AGIX is similar to that of BTC and ETH. The price of AGIX has been increasing since 2024, and it is expected to reach \$5 by 2028. AGIX also increases and decreases respectively. SingularityNET (AGIX) Price Prediction 2024, 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | SingularityNET (AGIX) Price Prediction 2025 | \$6.8 | \$0.2 | | SingularityNET (AGIX) Price Prediction 2026 | \$8 | \$0.1 | | SingularityNET (AGIX) Price Prediction 2027 | \$9.3 | \$0.09 | | SingularityNET (AGIX) Price Prediction 2028 | \$10.5 | \$0.08 | | SingularityNET (AGIX) Price Prediction 2029 | \$11.8 | \$0.07 | | SingularityNET (AGIX) Price Prediction 2030 | \$13 | \$0.06 | Conclusion If SingularityNET (AGIX) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish SingularityNET (AGIX) price prediction for 2024 is \$4.2143. Comparatively, if unfavorable sentiment is triggered, the bearish SingularityNET (AGIX) price prediction for 2024 is \$0.2169. If the market momentum and investors' sentiment positively elevates, then SingularityNET (AGIX) might hit \$5. Furthermore, with future upgrades and advancements in the SingularityNET ecosystem, AGIX might surpass its current all-time high (ATH) of \$1.86 and mark its new ATH. FAQ 1. What is SingularityNET (AGIX)? SingularityNET (AGIX) is a decentralized platform that facilitates the creation, sharing, and monetization of Artificial Intelligence (AI) services. 2. Where can you purchase SingularityNET (AGIX)? Traders can trade SingularityNET (AGIX) on the following cryptocurrency exchanges such as Binance, Huobi, KuCoin, Uniswap, and Bitfinex. 3. Will SingularityNET (AGIX) reach a new ATH soon? With the ongoing developments and upgrades within the SingularityNET platform, SingularityNET (AGIX) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of SingularityNET (AGIX)? SingularityNET (AGIX) hit its current all-time high (ATH) of \$1.86 on Jan 20, 2018. 5. What is the lowest price of SingularityNET (AGIX)? According to CoinMarketCap, AGIX hit its all-time low (ATL) of \$0.007497 on Mar 13, 2020. 6. Will SingularityNET (AGIX) reach \$5? If SingularityNET (AGIX) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon. 7. What will be SingularityNET (AGIX) price by 2025? SingularityNET (AGIX) price is expected to reach \$6.8 by 2025. 8. What will be SingularityNET (AGIX) price by 2026? SingularityNET (AGIX) price is expected to reach \$8 by 2026. 9. What will be SingularityNET (AGIX) price by 2027? SingularityNET (AGIX) price is expected to reach \$9.3 by 2027. 10. What will be SingularityNET (AGIX) price by 2028? SingularityNET (AGIX) price is expected to reach \$10.5 by 2028. Top Crypto Predictions Bitcoin Cash (BCH) Price Prediction Disclaimer: The opinion expressed in this chart is solely the author's. - The spot Bitcoin ETFs recorded \$216 million in total net inflows according to Sosoalue data. - In the past month, the ETF showed several outflows as attention turned to altcoin Spot ETFs. The US Spot Bitcoin ETFs witnessed another consecutive day of inflows in the last 24 hours. While the past week witnessed an eventful crypto market crash, Investors after a brief FUD stepped up to take advantage of the price dip. Thus, despite the increasing liquidations, investments also soared in the past week. Firstly, the spot Bitcoin ETFs recorded net total inflows of \$216 million as of July 9 according to Sosoalue data. Previously, in the past week on July 1, the 11 ETFs recorded \$129.45 million in net total inflows. However, the following days witnessed the ETF breaking its 5-day streak of inflows amid the market crash. Subsequently, as aforementioned, from July 5 the ETP recovered to see inflows. In the last 24 hours, the Grayscale's spot Bitcoin ETF GBTC, amid net inflows, witnessed \$37.5 million outflows. However, Grayscale is still the largest ETF in the market. Meanwhile, BlackRock's IBIT and Fidelity's FBTC recorded \$121.03 million and \$90.95 million inflows respectively. Ark Invest and 21 Shares ETF witnessed \$43.3 million in inflows. Notably, Bitwise's BITB recorded outflows of \$4.72 million. Grayscale and Bitwise-issued spot Bitcoin ETFs are the only two that witnessed outflows. VanEck's HOVL ETF recorded \$3.27 million in inflows while the other 5 ETFs showed neutral flows. Moreover, the digital asset currently boasts a total net asset value of \$50.79 billion. In the last 24 hours, the 11 ETFs traded for a total value of \$1.98 billion. Are Spot Bitcoin ETFs Back in the Spotlight? In the past month, spot BTC ETFs exhibited several outflows as market attention turned to altcoin spot ETFs. The market is anticipating the trading of spot Ethereum ETFs in July and also saw rising speculations of spot Solana ETFs. Amid the sparking of market debate, spot Bitcoin ETFs took the spotlight. However, the beginning of July showed recovery of spot Bitcoin ETFs. As mentioned, the present market did witness a huge influx of investments into several digital assets including BTC ETFs. Meanwhile, Bitcoin price in the last 24 hours has shown upward movements and surpassed the \$58K level according to CMC data. Highlighted Crypto News Today: Ethereum Price Surges as Market Anticipates ETF Listing, Will ETH Reach \$10,000?

- Particularly noteworthy is the 97% rise in the stablecoin's supply over the previous month. - With a supply of over 112 billion, Tether USD leads the stablecoin sector, launched via a cooperation with custodian company Paxos in August 2023. PayPal's USD-pegged stablecoin PYUSD has had its market supply surpass 500 million tokens. By the end of 2023, PYUSD's supply had grown to 230 million after its launch. According to statistics compiled by DeFillama, the total quantity of stablecoins has more than doubled since then, and this month, it surpassed 500 million, or \$500 million. Substantial Growth Particularly noteworthy is the 97% rise in the stablecoin's supply over the previous month, from 270 million on June 26 to more than 533 million. With a supply of over 112 billion, Tether USDT leads the stablecoin sector, and PayPal is among the top 10 issuers. Following its May expansion to the Solana network, PYUSD's growth has surged. Solana already has 134.5 million PYUSD stablecoins, or 25.2% of the total supply, after a few months. Ethereum now has around 399 million PYUSD stablecoins. PYUSD's inclusion in decentralized finance protocols like Frax and Curve, as well as its acceptance on centralized exchanges like Crypto.com, seem to have had a role in the stablecoin's rise in the last year. With 112 million tokens, or more than 20% of the entire supply, Paxos owns the biggest amount of PYUSD on Ethereum. Users may now use PayPal USD (PYUSD) to finance international Xoom transactions. In April of this year, Xoom, a PayPal service for international money transfers, unveiled this new feature. A statement from Xoom states that US consumers would not be charged any transaction fees by PayPal when funding eligible transactions to over 100 countries using PYUSD. Los Angeles, United States, July 9th, 2024, Chainwire Phoenix Memecoin (\$PHNX) is gaining attention for its unique combination of innovative technology and a strong, community-oriented approach. About Phoenix Memecoin (\$PHNX) Phoenix Memecoin (\$PHNX) is a new cryptocurrency designed to symbolize rebirth and innovation within the crypto world. Supported by a dedicated and rapidly growing community, Phoenix Memecoin aims to offer stability and long-term growth through its thoughtful tokenomics and strategic planning. Key Features of Phoenix Memecoin (\$PHNX) - Thoughtful Tokenomics: Phoenix Memecoin (\$PHNX) employs a carefully designed tokenomics strategy to ensure stability and growth. The total supply of tokens is limited, providing a sustainable foundation. The presale offers tokens at a fixed rate of \$2800 PHNX per 1 Solana (SOL), with a purchase limit of 30 SOL per wallet to promote broad participation and prevent market manipulation. - Strategic Fund Allocation: Funds raised from the presale are allocated to liquidity, team development, exchange listings, partnerships, marketing, and token buyback and burn. This diversified approach aims to support the project's long-term success. - Community and Transparency: The Phoenix Memecoin team prioritizes transparency and community involvement. Active community members and content creators are rewarded for their contributions. Token holders can access exclusive content and events, enhancing engagement and value for the community. - Roadmap and Governance: Phoenix Memecoin has a detailed roadmap outlining its plans, including presale, DEX listings, community events, and rewards. Governance mechanisms allow token holders to participate in project decisions, fostering a collaborative environment. - Experienced Team: The project is led by a team of four developers with extensive experience in

cryptocurrencies and a commitment to transparent communication. The team holds a modest 6% of the total tokens, ensuring that the focus remains on community growth and project sustainability. - Phoenix Academy: The Phoenix Academy on the project's website offers free educational resources on cryptocurrencies, providing valuable knowledge without financial commitment. For More Information - Website: [www.phoenixsol.com](http://www.phoenixsol.com) - Twitter (X): <https://x.com/Phoenixmemecoin> - Telegram: <https://t.me/Phoenixsol> - Reddit: [r/Phoenixsol](https://www.reddit.com/r/Phoenixsol) - Tiktok: [@Phoenixsol](https://www.tiktok.com/@Phoenixsol) - Instagram: [@Phoenixsol](https://www.instagram.com/Phoenixsol) - Facebook: [Phoenixsol](https://www.facebook.com/Phoenixsol) The Phoenix Memecoin team is available on social media to respond to inquiries and engage with the community. - Net inflows for the 11 ETFs totaled \$295 million as of July 8. - It's the largest single day of cash flowing into ETFs since June 5. Amid a faltering cryptocurrency market, spot Bitcoin exchange-traded funds (ETFs) based in the US had their largest day of net inflows in over a month. Net inflows for the 11 ETFs totaled \$295 million as of July 8. The net inflows across all funds have been positive for the first day in the past three trading weeks. The iShares Bitcoin Trust ETF by BlackRock received \$187.2 million in daily inflows, while the ETF by Fidelity received \$61.5 million. On the other hand, the Grayscale Bitcoin Trust (GBTC) saw a unique day of positive inflows as well, receiving \$25.1 million. It's the largest single day of cash flowing into ETFs since June 5, when that figure surpassed \$488 million. Widespread Market Anxiety Issues Surrounding the German Government's Large-Scale Bitcoin Sales and the Repayments Owed by Mt. Gox's Creditors have been causing widespread market anxiety. Exchanges have received more than 26,200 BTC from the German government, which is equivalent to \$1.5 billion at current rates. According to Arkham Intelligence statistics, it still has 27,460 BTC (equivalent to \$1.57 billion) in reserve. Concerns have been raised that creditors who lost money in a 2014 breach at the defunct Japanese cryptocurrency exchange Mt. Gox may get their \$8.5 billion in Bitcoin back in the next few months. But there are those who think the panic over the Bitcoin sales at Mt. Gox was exaggerated. For the first time since February, Bitcoin's price fell below \$54,000 on July 5, a low point in the last two trading weeks. At the time of writing, Bitcoin is trading at \$57,529 as per data from CMC. Highlighted Crypto News Today:

- Cryptocurrency market is slowly recovering from last week's bearish sentiment. - Ethereum trading volume is up 12% in the past 24 hours. The cryptocurrency market has been grappling with bearish sentiment since late June, pushing Bitcoin to a five-month low below \$54,000 and Ethereum to a two-month low under \$2,820 last week. The global market cap dipped below \$2 trillion, and many altcoins hit yearly lows with significant double-digit declines. In the past 24 hours, however, there has been a slight recovery. The global crypto market cap now stands at \$2.12 trillion, marking a modest 0.46% increase from the previous day. Trading volume has risen by 4.41%, totaling \$81.58 billion. Bitcoin dominance has slightly decreased to 53.56%. Bitcoin saw a recovery to \$57,800 in the past day but is currently experiencing a 0.23% decrease, trading at \$57,526, with a 4% increase in trading volume. Ethereum has increased by 1% over the past 24 hours, with a 12% rise in trading volume. Memecoins such as BRETT, BONK, and PEPE have shown notable recovery, leading the gainers today. Despite this modest recovery, lingering panic from recent days still affects traders. The market remains in a state of fear, exacerbated by news such as the commencement of Mt. Gox's massive return of \$2.6 billion in Bitcoin to creditors and the German government's unexpected movements involving 3,673 BTC (\$207 million) accumulation and subsequent transfers. Can Traders Remain Hopeful? Amidst these developments, analysts are cautiously optimistic about the cryptocurrency market's future. On-chain data indicating high miner profitability historically signals the potential end of correction periods within bull markets. Similar movements observed in 2024 suggest that while the exact end of this adjustment period is uncertain, a bullish rally in the third quarter of 2024 seems plausible. Additionally, positive news regarding an ETH ETF could alter the narrative positively. Highlighted News Of The Day

Victoria, Seychelles, July 9th, 2024, Chainwire Bitget Wallet, a leading Web3 wallet solution in the TON ecosystem, has introduced the industry's first MPC wallet supporting the TON mainnet. This launch aligns with the rise of Telegram mini-apps, enhancing user experience. Bitget Wallet's MPC solution has expanded its support to include the TON and Solana mainnets, adding to its existing network coverages that spans Bitcoin and various EVM blockchains. Moving ahead, the Bitget Wallet team plans to further amplify its MPC wallet capabilities by encompassing all heterogeneous chains. This milestone underscores the wallet's dedication to enhancing its overall product features and technology to strike a balance between security and user experience. Most current MPC wallets focus on EVM blockchains. However, EVM heterogeneous chains like Solana and TON need user-friendly wallet solutions to support the mass adoption of cryptocurrencies. With backing from Telegram, which has nearly 1 billion active users, TON has the potential to bring Web2 users into the Web3 space. To support this user surge and address industry challenges, Bitget Wallet has launched an MPC wallet solution compatible with the TON mainnet—the first of its kind in the Web3 market. Using enterprise-grade MPC technology, Bitget Wallet's MPC solution lets users create and import wallets via email, Google, Apple ID, and other methods without needing complex authentication details, like mnemonic phrases or private keys. Adoption of Web3 wallets has been slow, but Bitget Wallet is dedicated to building a robust infrastructure, introducing groundbreaking products, and driving the mass adoption of crypto, said Alvin Kan, COO of Bitget Wallet. As the leading wallet on the TON ecosystem, we aim to provide an unmatched entry point into Web3 for Web2 users. To further this goal, we also launched TONNECT 2024—the biggest online event of the year dedicated to the TON ecosystem. Through this event, we aim to introduce innovative ways for users to easily interact with TON DApps and protocols, and in turn lower the barriers dividing the Web2 and Web3 worlds. About Bitget Wallet Bitget Wallet is Asia's largest and a leading global Web3 wallet with over 20 million users worldwide. It offers a comprehensive range of features, including asset management, intelligent market data, swap trading, launchpad, inscribing, NFT, DApp, and token earning center. Currently, it supports more than 100 major blockchains, hundreds of EVM-compatible chains, and over 250,000 cryptocurrencies. Bitget Wallet enhances liquidity by aggregating it across hundreds of top DEXs and cross-chain bridges, facilitating seamless trading on nearly 50 blockchains. For more information, users can visit: Website | Twitter | Telegram | Discord Contact PR team [media.web3@bitget.com](mailto:media.web3@bitget.com)

- PEPE's trading volume has surged by 48% to hit \$1.13 billion. - The meme coin market cap has noted an increase of 6.17%. The cryptocurrency market has witnessed a prolonged downtrend as the bears put pressure on the potential bull market. The entire market was bleeding lately. However, the global crypto market cap is up 3.21% to \$2.11 trillion over the last day. Similarly, the total crypto market volume increased by 33.78% to \$87.97 billion. Besides, Bitcoin, the leading cryptocurrency, experienced a spike of 3.38%, and Ethereum by 5.62%. Despite this according to the CMC Crypto Fear and Greed Index, the current market sentiment is still fearful at 77. Meanwhile, the meme coins have bounced back from critical levels. With the current price on a bullish momentum, we've also seen a significant increase in trading volume. A significant increase of 7%, and the trading volume is up by 26.41%. Three notable meme coins have soared considerably, which include Pepe, Bonk, and Floki. Pepe (PEPE) Pepe experienced a 13% surge in the last 24 hours, currently trading at \$0.00009354. The trading volume has increased by 48% to \$1.13 billion, and the market cap is noted at \$3.94 billion. Despite this spike, PEPE was down by 18.98% over the past seven days. Similarly, it was down by 23.77% in the last month. The daily RSI is noted at 40.92, indicating a zone close to oversold. If the bullish momentum persists, Pepe could rise to \$0.00009397, while with a bearish rally heads-up, the price might drop to \$0.00009293. Bonk (BONK) Bonk saw over a 24% surge in the past 24 hours, with its current trading price at \$0.00002617. A remarkable increase of over 155% in trading volume is noted. Over the last week, Bonk witnessed a 0.17% increase in price, while the daily Relative Strength Index (RSI) indicates a neutral condition at 56.08. The bounce could reach \$0.00002686 if the bulls lead the price, but if bearish pressure intervenes, it might drop to \$0.00002587. Floki (FLOKI) Floki soared by 8.10% in the last 24 hours, currently trading at \$0.0001472. The trading volume increased by 36.30% to \$269 million. The asset was trading high at 0.0001855 last week, over the past month, the asset is down by 47.49%, and the daily RSI indicates a slightly oversold condition at 40.54. If the short-term bull run persists, Floki could rise to \$0.0001499, and if bears wake up, the price might dip to \$0.0001414. The crypto market is slightly recovering from the bearish pressure, with some of the meme coins climbing from weekly and monthly lows to surging double digits. Highlighted Crypto News

Toncoin has rallied, registering a 5% increase to \$7.59 and a 26% boost in trading volume. Meanwhile, BNB Chain commits \$900,000 to nurture the meme coin sector, fostering innovation and growth. Amid these developments, BlockDAG emerges as a beacon for big investors with its swift presale momentum. Initially priced at \$0.001 in the first batch, the price at batch 19 has escalated to \$0.014, marking a 1300% increase. Analysts envision BlockDAG's coin could ascend to \$30 by 2030, drawing in crypto whales. Toncoin Rebounds to Solidify Its Market Position Toncoin has recently enjoyed a 5% rise, lifting its price to \$7.59 and reflecting a 26% increase in trading volume. This recovery strengthens Toncoin's market cap, restoring it to a prominent position. Driven by an uptick in network use and daily transactions, Toncoin's resurgence is notable this year, especially with its Telegram collaboration which has expanded its user base. With transaction numbers climbing, Toncoin is cementing itself as a stable investment choice. BNB Chain Injects Support into Meme Coin Arena BNB Chain has unveiled a \$900,000 liquidity pool dedicated to supporting the meme coin landscape, extending its Meme Innovation Campaign. This initiative aims to propel the growth of promising meme coin ventures within the BNB ecosystem. Reinvesting profits from these liquidity pools ensures continuous support for meme coins. The Meme Innovation campaign previously awarded \$100,000 to developers and meme coin projects, spurring worldwide participation and creativity. The campaign's impact is clear, with 162 submissions and a total trading volume of 507 million. This liquidity support is poised to maintain a stable trading atmosphere and propel the meme coin market's expansion on the BNB Chain. BlockDAG: A Path to Crypto Wealth with \$500 Turning into \$1M by 2030! BlockDAG is rapidly becoming a hot spot for investors eyeing hefty returns. Market experts are optimistic, projecting that BlockDAG's coin could hit \$30 by 2030. To illustrate, a \$500 investment at the current batch price of \$0.014 could balloon to \$1,071,428.57, making early backers millionaires. This positive forecast has fueled whale activity, as evident on BlockDAG's dashboard platform. The revamped BlockDAG Dashboard's Leaderboard page has sparked considerable investor interest. It displays trending news, current rankings, wallet balances, and transaction previews, giving users a deep dive into their investment landscape. The Leaderboard page features the top 30 users with the most significant purchases, promoting investor transparency and competition. Additionally, the Dashboard offers detailed insights into whale transactions through its live transactions page, showcasing the biggest investors and their activities. This open visibility allows all participants to monitor major investments within the BlockDAG Network, enhancing confidence and drawing more potential investors. BlockDAG's presale has showcased rapid progression and price increases, starting at \$0.001 in batch 1 and climbing to \$0.014 in batch 19, a stunning 1300% growth. This traction has attracted more investors, evident from the whale accumulation on the updated dashboard. So far, BlockDAG has raised \$59 million from the presale, selling over 100 billion return potential. Final Pitch As Toncoin regains strength and BNB Chain bolsters its meme coin framework, BlockDAG is a compelling investment avenue. The notable presale progress and significant whale involvement signal a bullish outlook, with projections of BlockDAG hitting \$30 by 2030. Investing \$500 in the ongoing presale could transform into a millionaire's fortune, positioning early investors for massive returns. BlockDAG's presale presents an enticing opportunity for those seeking to leverage this growth. - Eight asset managers had their spot Ether ETF 19b-4 filings accepted by the SEC on May 23. - The S-1s might be approved over the course of this summer according to the SEC Chair. In order to list and trade shares of a spot Ethereum (ETH) exchange-traded fund (ETF), asset management firms VanEck and 21Shares have updated their S-1 registrations with the US SEC. The firm's attempts to secure final clearance from the SEC for its Ethereum ETF included filings on July 8 in which VanEck modified its Form S-1 registration statement. In a similar move, 21Shares' Core Ethereum ETF also submitted a revised form. As soon as practicable after the effective date of the registration was stated in both filings. But no precise date was given for the debut on U.S. exchanges. All eyes on SEC Moreover, in order for asset management companies to offer shares of spot ETFs, the SEC requires these revised filings as part of the final approval process. Also, Bitwise submitted its own revised registration on July 3. And industry watchers anticipate that more businesses will do the same within the next week. Eight asset managers had their spot Ether ETF 19b-4 filings accepted by the SEC on May 23. Final approvals, according to experts, might occur in July. The S-1s might be approved sometime over the course of this summer according to SEC Chair Gary Gensler. The Chairman did not provide a specific date, at a Senate Banking Committee

hearing in June. Furthermore, in January, after the SEC's approval of the listing and trading of spot Bitcoin ETF shares, VanEck applied for a spot Ether ETF. It has been reported that the SEC is now examining whether or not to classify ETH as a security. This can further delay the clearance process. Highlighted Crypto News Today: Dogecoin (DOGE) Derivatives Market Activity Plunges to Yearly Low

The report from July 8th also mentioned a \$398M inflow into Bitcoin investment products. Solana has been the top-performing altcoin so far, with \$16 million in inflows. In the last week, digital asset investment products saw inflows of \$441 million, according to a new report from CoinShares. The report from July 8th also mentioned a \$398 million inflow into Bitcoin investment products. Investors' purchasing spree were likely caused by the lower Bitcoin prices, activity from Mt. Gox, and selling pressure from the German authorities, according to CoinShares. While \$384 million came into the US, \$32 million went to Hong Kong, \$24 million to Switzerland, and \$12 million to Canada, while \$23 million left Germany. Capitalizing on Bitcoin Price Dip Despite its closure, the Japanese cryptocurrency exchange Mt. Gox had a banner week last week. As it started paying back its debtors on July 5, it sent more than 47,000 BTC, which was valued around \$2.7 billion at the time, to a wallet address that is still unknown. In accordance with the terms of Mt. Gox's rehabilitation plan, payments started being sent to certain creditors on the same day using Bitcoin and Bitcoin Cash (BCH) via designated cryptocurrency exchanges. There was a transfer of 3,000 BTC (equivalent to around \$172 million) from an anonymous wallet in Germany to many cryptocurrency exchanges within the same week. Amid the developments, Bitcoin price declined all the way to the \$54,000 range. Investment in Bitcoin investment products accounted for over 90% of all inflows. According to the CoinShares report, the top three inflows were recorded in a variety of altcoins. Solana has been the top-performing altcoin so far, with \$16 million in inflows in the previous week and \$57 million for the year. Furthermore, Inflows of \$10 million were recorded by Ethereum (ETH). Highlighted Crypto News Today:

- Grayscale announced modifications to GDLC, DEFG, and GSCPxE Fund. - Market developments, indices, and other variables are considered while rebalancing. In light of evaluations conducted in the second quarter of 2024, crypto asset manager Grayscale Investments has revealed revised component weightings of crypto assets within its primary funds. Grayscale Smart Contract Platform Ex-Ethereum Fund (GSCPxE Fund), Grayscale Digital Large Cap Fund (GDLC), and Grayscale DeFi Fund (DEFG) are the primary funds. In an effort to restore equity to the GSCPxE Fund, Polygon (MATIC) has been removed. Cautious Evaluations Grayscale announced modifications to GDLC, DEFG, and GSCPxE Fund after cautious evaluations of crypto asset performance in the second quarter. Market developments, indices, and other variables are considered while rebalancing the components and weightings every three months. Grayscale Digital Large Cap Fund (GDLC) did not add or withdraw any tokens, as stated in the most recent press release. Ethereum (23.51%), Solana (3.86%), XRP (1.54%), and Avalanche (0.63%) make up the components. Bitcoin accounts for 70.46% of the total. It was previously announced that XRP and AVAX were added for Polygon (MATIC) in January. In addition, GDLC delisted Cardano (ADA) in April. In the meantime, there was no change to the Grayscale DeFi Fund (DEFG) components. Aave (10.58%), Synthetix (5.05%), Uniswap (53.75%), MakerDAO (17.94%) and Lido (12.68%), have all had recent weight changes. Grayscale Smart Contract Platform Ex-Ethereum Fund (GSCPxE Fund) also sold and removed Polygon (MATIC). Newly adjusted fund weightings are in accordance with the CoinDesk Smart Contract Platform Select ex ETH Index. Solana (65.80%), Cardano (14.67%), Avalanche (10.00%), and Polkadot (8.83%) make up the asset basket and weightings. Due to its inclusion among cryptocurrency assets that the US Securities and Exchange Commission (SEC) views as securities, Polygon (MATIC) has fallen to the twenty-first rank in terms of market cap as per CMC. Cryptocurrency investment has evolved increasingly famous, offering a new way to diversify portfolios and potentially gain significant returns. There are numerous ways to invest in the cryptocurrency market and to gain economic benefit. Crypto staking is one such way where stakers participate in a network of blockchain consensus mechanisms. They lock fixed assets of cryptocurrency for a certain period in a reliable platform. In return, stakers can get rewards for what they stake. In this article, we will explore crypto staking with focus on CryptoHeap, which is one of the leading platforms that offer various staking plans for individuals who have a dream to invest in the cryptocurrency market. Steps to Invest in Crypto 1. Research and Choose Your preferred Cryptocurrency to stake according to your investment decision Before investing, it's essential to perform detailed research. Get to understand the cryptocurrency market, the possible risks, and the specific cryptocurrencies you're interested in. Many cryptocurrencies like Ethereum, Solana, Bitcoin, and Cardano have earned attention for their scalability and efficiency, making them profitable investments. 2. Choose a Trustworthy Platform Choose a reliable platform like CryptoHeap for your cryptocurrency investments. CryptoHeap proffers various staking plans for different cryptocurrencies, permitting you to earn rewards by participating in the network's validation process. 3. Set Up a Crypto Wallet for financial assets A crypto wallet is crucial for holding your virtual currency. 4. Purchase Cryptocurrency Select the cryptocurrency you expect to buy. Popular choices include Bitcoin (BTC), Ethereum (ETH), and Solana (SOL). 5. Initiate Staking on CryptoHeap - Sign up: Get started on CryptoHeap.com. - Deposit: Transfer the digital currency you want to stake into your CryptoHeap wallet. - Choose a Staking Plan: Go to the Staking section and pick a plan. Each plan has different rewards and lock up periods. - Select: Once you select a plan a guide will appear to help you decide which one is best for you with other advice. - Check Your Rewards: Check the staking dashboard regularly Generating Passive Income with Crypto staking Reward Programs Available on CryptoHeap - Free Plan Everyday: \$100 for 1 day and earn \$1 daily. - Toncoin Staking Plan: \$200 for 1 day and earn \$4 daily. - Sui Staking Plan: \$600 for 6 days and earn \$6 daily. - Polygon Staking Plan: \$1500 for 8 days and earn \$16.5 daily. - Cardano Staking Plan: \$5000 for 12 days and earn \$60 daily. - Ethereum Staking Plan: \$8000 for 16 days and earn \$104 daily. - Tron Staking Plan: \$10,000 for 20 days and earn \$130 daily. - Solana Staking Plan: \$15,000 for 25 days and earn \$210 daily. - Bitcoin Staking Plan: \$30,000 for 30 days and earn \$480 daily. - Chainlink Staking Plan: \$50,000 for 40 days and earn \$950 daily. - Cosmos Staking Plan: \$100,000 for 50 days and earn \$2,100 daily. - Uniswap Staking Plan: \$150,000 for 55 days and earn \$3,750 daily. Why CryptoHeap for making money on crypto? CryptoHeap is the ideal platform for making money with crypto due to several factors that are aimed at offering an easier and safer platform for users to generate crypto passive income. - User-Friendly Interface: Staking on CryptoHeap is simple and for everyone, not just techies. - Comprehensive Support: With robust customer support any problems or questions are sorted without any delay. - Competitive yields: Get paid competitive annual percentage rates (APY) on your stashed coins. - Security: The platform's advanced security measures ensure that everyone's crypto investments are protected at all times. Conclusion: Investing in crypto, particularly through staking plans on platforms like CryptoHeap provides a new avenue for economic growth. By understanding the market, choosing reliable platforms, and handling risks, you can make informed investment decisions. Start staking today on CryptoHeap to earn rewards and secure your financial future. For more information about how to get started with CryptoHeap and make the most of the crypto summer, visit CryptoHeap.com now Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin fell below \$54,000 in early Friday trading as per data from CMC. - The cryptocurrency saw its worst weekly percentage drop since FTX's collapse in 2022. Investors and traders are putting their faith on Friday's U.S. employment data to contain the unstoppable fall in Bitcoin (BTC) prices. Bitcoin fell below \$54,000 in early Friday trading after news spread that the now-defunct Mt. Gox exchange had transferred \$2.6 billion worth of bitcoin, purportedly to pay off creditors. Muted response from bitcoin followed Mt. Gox's later announcement that it had started repaying consumers. The cryptocurrency saw its worst weekly percentage drop since FTX's collapse in November 2022 more than 13%, according to statistics from CMC. All Eyes on Upcoming Data Release On Friday at 12:30 UTC (08:00 UTC), the nonfarm payrolls (NFP) data for June is scheduled to be released by the U.S. Bureau of Labor Statistics. Estimates from experts polled by Factset indicate that the economy created 190,000 jobs in June, down significantly from 272,000 in May, with the unemployment rate remaining unchanged at 4%. The average hourly wages growth rate is expected to moderate to 0.3% in June from 0.4% in May, resulting in a 3.9% year-on-year increase, down from 4.1% in May. This might be good news for the inflation rate. The timing and amount of Fed rate cuts are the main worries of macro traders, who have been dabbling in the BTC market since 2020. According to the CME's FedWatch tool, traders have practically priced in two rate cuts for this year since last Friday's disappointing U.S. PCE inflation data. If Friday's employment report reveals weaker-than-expected job growth, the so-called dovish, pro-risk asset expectations are likely to become even more pronounced. Highlighted Crypto News Today:

- Telecom operator Taiwan Mobile to establish its cryptocurrency exchange. - The firm to become the nation's 26th VASP operator. Taiwan's second-largest telecom operator, Taiwan Mobile, has stepped into the cryptocurrency space. The company has applied to become the nation's 26th Virtual Asset Service Provider (VASP) operator. Acquiring the license, it aims to establish its cryptocurrency exchange. According to the local media report, Taiwan Mobile gained approval after submitting its application long ago. The firm is expected to merge with exchanges to bring different applications for cryptocurrencies and other digital assets. Zhichen Lin, General Manager of Taiwan Mobile, is initiating and positioning it in the VASP Association, as reported by the local media. Notably, the Financial Supervisory Commission (FSC) confirmed Taiwan Mobile's entry into the list of virtual currency platform operators who completed compliance with money laundering prevention laws. A Brief Context of Taiwan's Bond with Crypto Taiwan established an official crypto industry association to regulate the crypto sector in June. This new Taiwan Virtual Asset Service Provider Association with 24 registered crypto firms such as Bitopro and XREX aims to develop and manage VASPs. In May, Taiwan's Ministry of Justice proposed an amendment to the country's Anti-Money Laundering Law (AML), focusing on crypto firms. The law by Taiwan's Executive Yuan is designed to reduce cryptocurrency-related money laundering and prevent money laundering and drug trafficking. On the other hand, it also aims to address fraud and money laundering charges. Taiwan's FSC had a double opinion on cryptocurrencies, stricter regulations, and potential approval for spot Bitcoin exchange-traded funds (ETFs). Moreover, due to regulatory uncertainties, the regulator is skeptical about investing in foreign crypto-based products. Highlighted News of the Day

BUSAI, the innovative memecoin on the Solana blockchain, is launching a series of exciting community activities aimed at engaging crypto enthusiasts worldwide. From the first Presale to the exclusive Airdrop or AMA, BUSAI invites participants to earn rewards and gain insights into the world of AI-infused memes. Recent meme market trends and Q3 2024 forecast recent years have witnessed rapid expansion in the meme market, propelled by the rising popularity of cryptocurrencies like Dogecoin and Shiba Inu. As we approach Q3 2024, this upward trajectory shows no signs of slowing. Capitalizing on the growing interest in AI and its diverse applications, BUSAI is strategically positioned to leverage this trend. As an innovative memecoin on the Solana blockchain, BUSAI is set to launch a series of engaging community activities aimed at connecting with crypto enthusiasts worldwide. The project's robust foundation and unique value proposition firmly establish it as a formidable player in the memecoin market. Exciting July Events for the BUSAI Community Await \*\*1st Pre-Sale Begins with 10 Billion \$BUSAI Tokens on PinkSale BUSAI kicks off its first pre-sale with 10 billion \$BUSAI tokens available at 0.00003 USDT per token. This event, running from July 11th to July 17th, offers a chance to participate in the forefront of the memecoin movement. \*\*Claim Free Rewards in the \$BUSAI Token Airdrop - Timeline: July 5th to July 13th To claim rewards: 175,000,000 \$BUSAI. How to participate: To earn free tokens, you can complete tasks including liking, sharing, and following BUSAI on social media. BUSAI will also be participating in seeding activities and staking rewards and airdrops. If you have any questions, feel free to reach out to BUSAI's official website at busai.me and start earning now. \*\*Explore BUSAI Further in the AMA On July 11th, BUSAI and Tito Labs will host an Ask-Me-Anything (AMA) to allow for direct connection with partners and the community. This free event aims to explain BUSAI, address queries from the host and participants, and offer an in-depth overview of BUSAI. The AMA is intended to foster transparency, inspire dialogue, and disseminate critical information about BUSAI's mission and community-based initiatives. Promising Potential for BUSAI's Engage Growth The BUSAI team intends to organize more Airdrops, Contests, and Community activities in the near future to improve user involvement and reward opportunities for cryptocurrency enthusiasts. These events seek to create engaging experiences that encourage community participation and innovation in the bitcoin field. Visit their official channel to learn about AI-powered memecoins, exhibit your creativity with memes, and earn prizes while contributing to the dynamic BUSAI community. - U.S Spot Bitcoin fundsâ€™ trading volume totaled \$800 million on Wednesday. - Bitcoin is currently experiencing selling pressure and is righting to maintain a support level. U.S Spot Bitcoin ETFs again are seeing withdrawals, with the most recent reaching \$35 million, after a short period of inflows. Lookonchain, a blockchain analytics platform, disclosed today that Grayscale (GBTC) withdrawals were \$30.7M. The investment asset management organization now has 274,734 units of Bitcoin (\$15.76 billion), after this \$30.7 million withdrawal. The outflows did not exclude all spot Bitcoin ETF issuers, either. The Invesco Galaxy Bitcoin ETF had an outflow of 74 BTC as well, reducing its holdings to 6,804 BTC. Combined, the outflows from both issuers amounted to 609 BTC, or \$35 million. No money left any of the five U.S.-based Bitcoin exchange-traded fundsâ€™BlackRockâ€™s IBIT, Fidelityâ€™s FBTC, ARK 21Sharesâ€™ ARKBâ€™and the other two. With 307,206 Bitcoin, BlackRock now has the largest BTC holding among all of them. On the same day, these Bitcoin fundsâ€™ trading volume totaled \$800 million. Compared to Tuesdayâ€™s \$995 million, that was a considerable decline. Possible signs of a change in investor mood or market dynamics include sluggish activity and net outflow. The unpredictable nature of the crypto market justifies such swings. Bears in Total Control On the other hand, Bitcoin is currently experiencing selling pressure and is fighting to maintain a support level. Its value has lately plummeted to \$57,000, marking a significant decline. The decline has caught many investors off guard and sparked discussions among crypto enthusiasts. Speculative investor selloffs in the context of Bitcoin ETFs and the recent halving occurrence are two of the variables that seem to be driving the selloff. The downturn has also been accelerated by the liquidation of overleveraged holdings and by unforeseen sell-offs, such as the sale of confiscated Bitcoin by the German and the U.S governments. Highlighted Crypto News Today: Solana (SOL) Price Faces Decisive Phase as Bears Threaten \$100 Level

- Altcoins like SOL, XRP, and MATIC face significant price dips. - Bitcoin hits a two-month low of \$57,043 with a 4% decline. The cryptocurrency market experienced a significant bearish trend over the past twenty-four hours, with the overall market cap decreasing by 4.40%. Bitcoin, the largest cryptocurrency, fell by 4%, dropping to a two-month low of \$57,043.96, unsettling investors as it led to a broader decline in altcoin prices. Ethereum, the leading altcoin, also hit a two-week low. Ethereum (ETH) saw a 4.33% decline over the past 24 hours, with trading volume increasing by 52% during the same period. Its price decreased from \$3,320.84 to \$3,128.61, currently under selling pressure with a daily RSI of 32. The 9-day EMA at \$3351 confirms a bearish trend. Resistance levels are identified at \$3520 and \$3632, while potential support levels include \$3246 and \$3065. Solana (SOL) Solana, among the top 5 cryptocurrencies by market cap, fell by 8% in the past twenty hours, hitting a ten-day low of \$7.19, with trading volume up by 17%. Over the past month, it has declined notably by 20%. Solana is currently facing selling pressure with a daily RSI at 32 and a 9-day EMA at \$141 indicating a bearish trend. Resistance levels are noted at \$154 and \$162, while support levels might be tested at \$122 and \$116. Toncoin (TON) Toncoin, also in the top 8 by market cap, dropped by 7.18% in the past twenty hours, reaching a ten-day low of \$132.45, with trading volume up by 27%. It is nearing selling pressure with a daily RSI of 47. And a 9-day EMA at \$7.638 confirming a bearish trend. Resistance levels are observed at \$8.09 and \$8.28, with potential support at \$6.7. If bearish sentiment intensifies, memecoins face heavy dip. Top memecoins like DOGE, PEPE, SHIB, and FLOKI also experienced significant declines during this bearish period. Dogecoin dropped to a five-month low of \$0.1103, down by 7%; PEPE hit a seven-day low of \$0.00009329, down by 9%. SHIB fell to a four-month low of \$0.00001522, down by 8%. And Floki reached a nine-week low of \$0.0001509, down by 8%. Highlighted News Of The Day

- Mt. Gox conducted small transfer tests today, preparing for the distribution of 140,000 BTC and 143,000 BCH. - Bitcoin price drops over 8% to the \$51,000 zone, hitting a 5-month low. Today, Mt. Gox initiated small transfer tests at 12:21 UTC+8, involving transactions such as sending 0.0001 BTC to Bitbankâ€™s hot wallet and 0.0001862 BTC to unmarked addresses. These activities highlighted the anticipated distribution of 140,000 BTC and 143,000 Bitcoin Cash (BCH) by Mt. Gox, scheduled between July and October. Concerns are growing over the impact of upcoming Mt. Gox distributions on Bitcoin and Bitcoin Cash. Bitcoin recently saw a significant 5.81% decline, dropping from \$60,558 to \$57,043 amidst sell-offs across Asian and US trading hours. This downturn has also affected Ethereum, Solana, and XRP, each experiencing approximately 6% declines. Additionally, the global cryptocurrency market cap has fallen by over 4.5% to \$2.13 trillionâ€™marking its lowest point since February 2024. Analysts Perspective on the Mt. Gox Sell-Off Analysts like Tom Lee of Fundstrat Global Advisors offer a perspective, suggesting that while the immediate impact is bearish, removing this long-standing overhang could pave the way for a strong rebound in Bitcoinâ€™s price later in the year. On the other hand, Presto Labsâ€™ Head of Research stated that the selling pressure from Mt. Goxâ€™s Bitcoin holdings is expected to affect Bitcoin Cash disproportionately. The analysts predict that BCH could experience up to 24% of its daily trading value affected, compared to 6% for BTC. This disparity reflects differing investor sentiments and strategies between the two cryptocurrencies. In that case, he suggested strategic approaches such as long positions in BTC perpetual paired with short positions in BCH perpetual being considered by market participants to manage risk and capitalize on market-neutral opportunities. Bitcoin Cash is currently trading at \$346, down by 6.86%, according to CoinMarketCap data. Additionally, the daily trading volume of BCH drops over 11% to \$278 million. Highlighted Crypto News Today: Bitwise Advances Ethereum ETF Filings and Expects to Launch Next Week

Victoria, Seychelles, July 4th, 2024, Chainwire As the leading Web3 wallet building on the TON ecosystem, Bitget Wallet has now introduced cross-chain support for TON tokens, allowing users to seamlessly swap TON tokens with mainnet tokens across 14 chains including Ethereum, Solana, Base, as well as USDT, all within the wallet platform. This milestone upgrade further bolsters Bitget Walletâ€™s existing trading capabilities on the TON ecosystem, providing even more comprehensive support for the Web3 community. Driven in part by the Tap2Earn mini-game craze, the monthly active user count on the TON network has surged from 228,000 at the beginning of the year to 4.64 million in recent months. Over the past year, TONâ€™s price has risen more than fivefold, solidifying its position among the top ten cryptocurrencies by market capitalization. TON tokens, in particular, have experienced a notable surge as part of this spike in on-chain activity on the TON network due to gas fee payments, in-game upgrades, and NFT minting. Alvin Kan, Chief Operating Officer of Bitget Wallet, emphasized the firmâ€™s commitment to enhancing its TON ecosystem capabilities: â€œWe plan to introduce even more capabilities on the TON mainnet in the future, including supporting token swaps, which will enable not only easier access to TON tokens for our users, but also facilitate seamless interoperability and trades between different tokens on TON network.â€ As the preferred wallet on the TON ecosystem, Bitget Wallet continues to provide comprehensive support for its users by allowing for the effortless creation of TON wallets, thus allowing them to manage their on-chain assets securely and conveniently. With the recent integration of the TON Connect protocol with Bitget Wallet, users will also be able to enjoy seamless connections to various popular DApps on the TON ecosystem, further emphasizing the walletâ€™s objective of providing meaningful ways for users to easily discover and explore TON ecosystem projects. A dedicated TON Tap2Earn Zone has also been natively launched on Bitget Wallet as well, which features trending Tap2Earn projects for users to try their hands on. Supported by the ever-popular messaging platform Telegram, which boasts 1.3 billion registered users globally and 900 million monthly active users, the TON blockchain and its on-chain ecosystem projects hold immense influence and promise. Moving forward, the Web3 community can expect to see even more robust TON ecosystem functionalities as well as large-scale campaign activities supporting the TON network from Bitget Wallet. About Bitget Wallet Bitget Wallet is Asiaâ€™s largest and a leading global Web3 wallet with over 20 million users worldwide. It offers a comprehensive range of features, including asset management, intelligent market data, swap trading, launchpad, inscribing, NFT, DApp, and token earning center. Currently, it supports more than 100 major blockchains, hundreds of EVM-compatible chains, and over 250,000 cryptocurrencies. Bitget Wallet enhances liquidity by aggregating it across hundreds of top DEXs and cross-chain bridges, facilitating seamless trading on nearly 50 blockchains. For more information, users can visit: Website | Twitter | Telegram | Discord Contact PR team media.web3@bitget.com

- MATIC trading volume is up 136% in the past 24 hours. - Polygon plummets to 21st place, overtaken by Litecoin. The market has been concurrently bearish today, with the largest cryptocurrency, Bitcoin, hitting a two-month low of \$57,800. As is traditionally the case, prominent altcoins also experienced major declines. Ethereum is down 4%, Solana has dropped 9%, and Polkadot has fallen by 7%. However, Polygon (MATIC) has drawn attention by losing its top 20 crypto status to Litecoin, now sitting at the 21st position. Polygon, one of the most prominent altcoins, has been underperforming recently. MATIC hours ago hit a nine-month low of \$0.5058 with price going down 7%. Conversely, its trading volume has surged 136% in the past 24 hours. It is currently 82% below its all-time high, which was reached three years ago. And worth mentioning is that it is down 26% over the past month. Notably, MATIC reached \$0.5148 sixteen days ago, and the bulls significantly recovered yesterday, trading at \$0.5740. However, they struggled to maintain this momentum amid the bearish market sentiment. The daily RSI is at 35, indicating that MATIC is facing selling pressure, with its supply on exchanges increasing. Meanwhile, analysts suggest that investors can expect a bullish reversal as the altcoin is formed falling wedge pattern on the daily chart. If the anticipated bull run breaks out in the upcoming weeks, the price is predicted to be 70%-80% up from the current price. Will MATIC Bulls Change the Tide? The daily chart of MATIC confirms the bearish trend, with the 9-day EMA at \$0.5501. Analyzing MATICâ€™s trajectory, it is trading below the critical support level of \$0.5314, and the bears have pushed it down to \$0.5006. For MATIC bulls, sustaining momentum is crucial. The next significant milestone lies at the \$0.6292 mark, with \$0.6692 also in sight if there is an upward trend. Highlighted News Of The Day Consensus Acquires Wallet Guard to Bolster MetaMask Security

Flare, the layer 1 blockchain for data, has announced a collaboration with LayerZero V2, which would link it to 75 blockchains, including Ethereum, Solana, and Ethereum Layer 2 networks. Over 50,000 decentralized apps that have embraced LayerZeroâ€™s cross-chain messaging protocols may now utilize Flare, which is a significant milestone for the platform. Furthermore, LayerZero enables any chain to incorporate Flareâ€™s safe and decentralized data. LayerZero is a cross-chain messaging protocol that facilitates safe message transmission between decentralized apps and allows information exchange across blockchains. Over 134 million cross-chain messages have been made possible by LayerZero so far. It has also provided the decentralized infrastructure necessary for bridging digital assets valued at over \$50 billion. Stargate Finance, a native asset bridge based on the LayerZero general message passing protocol, has seen almost \$800 million in bridging transaction activity in the last month alone. The ability for dapps to use a modular security stack to confirm and validate messages from other blockchains is one of LayerZero V2â€™s main advantages. Many Decentralized Verifier Networks, or DVNs, comprise this stack. On Flare, individual application developers may strike a compromise between the security and efficiency needs for their application and user base by requiring message approval from one or more of these DVNs. Because LayerZero V2 DVNs are permissionless, networks may establish their own DVNs to increase security even further. Flare has the ability to function as a highly secure DVN on LayerZero V2 thanks to its embedded data protocols, which are secured at the network layer. Flare has instantaneous, secure connection to thousands of dapps and services developed on top blockchains thanks to the LayerZero V2 integration. With interaction available across all Chains linked to LayerZero, such as Solana, Ethereum, and EVM L1s and L2s, the integration gives Flare dapp developers access to a plethora of new consumers and sources of liquidity. Flare is well-positioned to retain the highest levels of decentralization and security while growing its network, user base, and liquidity sources via its integration with LayerZero. Flare Co-Founder Hugo Philion stated: â€œThis is an incredibly valuable integration for all users and builders on Flare. Deployment of LayerZero V2 will help accelerate Flareâ€™s expansion, paving the way for builders to develop a wide variety of innovative interoperable products. Of great interest to me is the ability of LayerZero to help Flare facilitate a cross-chain money market, leveraging in addition, the integration on Flare of non smart contract tokens, such as BTC and XRP. Other interesting angles are the ability of Flare builders to create omnichain fungible tokens or chain-agnostic NFTs. The opportunity for Flare to serve as a highly secure DVN on LayerZero V2 is of particular interest.â€ For instance, tokens that may be utilized on any chain linked to LayerZero can be created thanks to the Omnichain Fungible Token (OFT) standard from LayerZero. Innovative DeFi use cases, such as the ability for users to deposit an item as collateral on one chain and use that to borrow assets from another chain, will arise from the development of new cross-chain money markets. Flareâ€™s embedded oracles will facilitate price discovery in this process. Philion added: â€œFlare is built to achieve extremely high standards for decentralization and security. The permissionless integration of LayerZero V2â€™s Decentralized Verifier Networks and modular security model is a great step forward for the space.â€ Kenny Zhang, Ecosystem Growth Lead of LayerZero stated: â€œPermissionless, cross-chain interoperability is the future of blockchain. The integration of LayerZero V2 with Flare, which we are glad to welcome to our ecosystem, will contribute to the development of omnichain applications deployed on both Flare and LayerZero.â€

London, United Kingdom, July 2nd, 2024, Chainwire Solciety has raised over \$619,000 in the first two weeks of its presale, capitalizing on the rising popularity of PolitiFi and Solana meme coins. The platformâ€™s community, now over 15,000 strong on Twitter and Telegram, has significantly contributed to early presale activity. This growth aligns with notable trends such as PolitiFiâ€™s market cap exceeding \$1 billion and SOL meme

coin Popcat achieving a +18,000% increase between January and May. The Solciety presale offers an opportunity to buy in early at a discounted price. The 15-stage presale currently offers SLCTY tokens at \$0.002222, with 3% price increases at each stage until conclusion. This structured pricing aims to incentivize early participation. Post-presale, SLCTY will be open for public trading. Solciety (SLCTY) tokens are available to purchase on the Solciety website. Solciety: The political party of the degen Solciety has picked up attention with a campaign for ædegen democracyæ as well as strong support from big KOLs in the space, including Crypto Moonlight and Crypto Pablo. It harnesses savagely satirical memes deriding the worldæ’s elites and extends way beyond being a fun branding decision or social content strategy. This makes for a powerful community æ” the foundation of any long-lasting meme coin. The team is rewarding its communities with a number of fun giveaways that will be paid out regularly, starting with a \$1000 giveaway that launched on X last week. Bolstering Solcietyæ’s viral potential is its Meme Campaigner, a meme-generation tool. Using characters like Donald Pump or Kim Wrong Un, degens can generate satirical political memes, with top creators being rewarded for their efforts æ” 10% of SLCTYæ’s total supply is earmarked for these rewards. This mechanism creates a huge incentive for degens to become Solcietyæ’s best marketing channel and place Solciety branded content anywhere a degen could be lurking. Solcietyæ’s tokenomics are also set up to produce a rally when public trading gets underway. 20% of tokens are set aside for marketing to push the message of degen democracy far and wide, and a further 17% of supply is reserved for liquidity to help trading run smoothly when BEX trading begins. Spotlight on Politifi AS Election season heats up With major elections on the horizon in France, the UK, and, of course, the US, Politifi is getting a lot of attention. The latest trend in politics-themed coins saw new token DJT rally 3x in less than a week. The sector now boasts a \$1 billion+ market cap, coming from practically out of nowhere after its inception less than a year ago. As the US election in November approaches, Politifi could benefit from building PR. Meanwhile, leading exchange Kraken recently listed two key Politifi tokens, TREMP and BODEN, solidifying the sectoræ’s status in the crypto space. Solana meme coins also continue to show impressive trade volume, with a 24-hour average of over \$1 billion and a combined market cap of over \$7 billion at press time. With Solciety positioned within these trending sectors, it has the potential to become a leading token. Users can currently buy SLCTY at \$0.002222. Solciety (SLCTY) tokens are available to purchase on the Solciety website. About Solciety Solciety aims to address the corrupt, dull, and economically unproductive politics of today. It aims to unite degens under the umbrella of meme and potential for gains. With its advanced meme generation tech and SLCTY token, Solciety is here to have the election and debate the 2024+ potential for gains. degens a fun and potentially lucrative way of taking part in current affairs. For more information and to buy Solciety (SLCTY), users can visit the website. Website | Whitepaper | Socials Contact Solciety marketing@solciety.io

- Blast (BLAST) price prediction for 2024 is \$4.8170 to \$14.0864. - Blast (BLAST) price might reach \$20 soon. - Blast (BLAST) price prediction for 2024 is \$0.6154. Blast (BLAST) price prediction 2024, 2025-2030, we will analyze the price patterns of BLAST by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | BLAST (BLAST) PRICE PREDICTION 2024 æ” 2025 æ” 2026-2030 | CONCLUSION | FAQ | Blast (BLAST) Current Market Status | Current Price | \$0.02119 | 24 æ” Hour Price Change | -2.92% Down | 24 æ” Hour Trading Volume | \$137,159,788 | Market Cap | \$300,185,398 | Circulating Supply | 17,000,000,000 BLAST | All æ” Time High | \$0.02943 (On Jun 27, 2024) | | All æ” Time Low | \$0.01865 (On Jun 26, 2024) | What is Blast (BLAST) | TICKER | BLAST | | BLOCKCHAIN | Blast | | CATEGORY | DeFi Infrastructure | | LAUNCHED ON | April 2021 | | UTILITIES | Governance, Community Engagement, & Rewards. | Blast (BLAST) is a blockchain-based project designed to provide a high-speed and scalable infrastructure for decentralized applications (dApps) and blockchain solutions. Utilizing advanced consensus mechanisms, Blast aims to offer low-latency transactions and robust security, ensuring a seamless experience for developers and users alike. The project focuses on creating a flexible ecosystem that supports a wide range of applications, from financial services to gaming and supply chain management. Launched with a mission to address the limitations of existing blockchain networks, Blast leverages innovative technologies to enhance transaction throughput and reduce costs. Its native token, BLAST, is integral to the platform, facilitating transactions, governance, and incentivizing network participants. By prioritizing scalability and efficiency, Blast aims to become a leading infrastructure provider in the blockchain space, supporting the next generation of decentralized applications and services. Blast (BLAST) Price Prediction 2024 Blast (BLAST) ranks 153rd on CoinMarketCap in terms of its market capitalization. The overview of the BLAST price prediction for 2024 is explained below with a daily time frame. BLAST/USDT Ascending Channel Pattern (Source: TradingView) In the above chart, Blast (BLAST) laid out an ascending channel pattern. An ascending channel is the price action contained between upward-sloping parallel lines. Higher highs and higher lows characterize this price pattern. An ascending channel is used to show an uptrend in a securityæ’s price. Ascending channels are short-term bullish in that a stock moves higher within an ascending channel, but these patterns often form within longer-term downtrends as continuation patterns. At the time of analysis, the price of Blast (BLAST) was recorded at \$0.02119. If the pattern trend continues, then the price of BLAST might reach the resistance levels of \$0.022648 and \$0.025487. If the trend reverses, then the price of BLAST may fall to the support of \$0.021357, and \$0.020097. Blast (BLAST) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Blast (BLAST) in 2024. BLAST/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Blast (BLAST) for 2024. | Resistance Level 1 | \$4.8170 | | Resistance Level 2 | \$14.0864 | | Support Level 1 | \$1.7173 | | Support Level 2 | \$0.6154 | BLAST Resistance & Support Levels BLAST (BLAST) Price Prediction 2024 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Blast (BLAST) are shown in the chart below. BLAST/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Blast (BLAST) market in 2024. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$4.3112Price = \$1.8650 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 26.1379 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetæ’s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Blast (BLAST) Price Prediction 2024 æ” ADX, RVI In the below chart, we analyze the strength and volatility of Blast (BLAST) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). BLAST/USDT ADX, RVI (Source: TradingView) From the chart above, we can make the following inferences regarding the current Blast (BLAST) market in 2024. | | Relative Volatility Index (RVI) | Volatility over a specific period | 19.57 <50 = Low >50 = High | Low volatility | | Comparison of BLAST with BTC, ETH Let us now compare the price movements of Blast (BLAST) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs BLAST Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of BLAST is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of BLAST also increases or decreases respectively. Blast (BLAST) Price Prediction 2025, 2026 æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Blast (BLAST) between 2025, 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Blast (BLAST) Price Prediction 2025 | \$23 | \$0.4 | | Blast (BLAST) Price Prediction 2026 | \$26 | \$0.35 | | Blast (BLAST) Price Prediction 2027 | \$30 | \$0.3 | | Blast (BLAST) Price Prediction 2028 | \$34 | \$0.25 | | Blast (BLAST) Price Prediction 2029 | \$37 | \$0.2 | | Blast (BLAST) Price Prediction 2030 | \$40 | \$0.15 | Conclusion If Blast (BLAST) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish Blast (BLAST) price prediction for 2024 is \$14.0864. Comparatively, if unfavorable sentiment is triggered, the bearish Blast (BLAST) price prediction for 2024 is \$0.6154. If the market momentum and investorsæ’s sentiment positively elevate, then Blast (BLAST) might hit \$20 Furthermore, with future upgrades and advancements in the BLAST ecosystem, BLAST might surpass its current all-time high (ATH) of \$0.02943 and mark its new ATH. FAQ 1. What is Blast (BLAST)? Blast (BLAST) is a blockchain-based project designed to provide a high-speed and scalable infrastructure for decentralized applications (dApps) and blockchain solutions. 2. Where can you buy Blast (BLAST)? Blast (BLAST) can be traded on several exchanges including BitMart, Uniswap, PancakeSwap, Gate.io 3. Will Blast (BLAST) record a new ATH soon? With the ongoing developments and upgrades within the Blast platform, Blast (BLAST) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Blast (BLAST)? Blast (BLAST) hit its current all-time high (ATH) of \$0.02943 on Jun 27, 2024 5. What is the lowest price of Blast (BLAST) According to CoinMarketCap, BLAST hit its all-time low (ATL) of \$0.01865 on Jun 26, 2024. 6. Will Blast (BLAST) hit \$20? If Blast (BLAST) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$20 soon. 7. What will be the Blast (BLAST) price by 2025? Blast (BLAST) price might reach \$23 by 2025. 8. What will be the Blast (BLAST) price by 2026? Blast (BLAST) price might reach \$26 by 2026. 9. What will be the Blast (BLAST) price by 2027? Blast (BLAST) price might reach \$30 by 2027. 10. What will be the Blast (BLAST) price by 2028? Blast (BLAST) price might reach \$34 by 2028. Today, the global cryptocurrency market has shifted to a positive trend, with memecoins making significant strides. Among these, Mog Coin (MOG), an Ethereum-based memecoin, has seen a substantial increase in value, outpacing its competitor, Book of Meme (BOME) in market cap and hitting an all-time high of \$0.000002095. Over the past week, MOGæ’s market capitalization surged by over 100%, marking waves in its performance. This comes after a bearish start, where the coin dropped by 11.07% on June 23. However, it rebounded with a remarkable 45.32% increase on June 24 and 25, driven by heightened social media activity. Following this, on June 29, the rally was confirmed by Whale Insider, solidifying Mog Coinæ’s position as the largest cat-themed memecoin by market cap. Mog Coin 24-H Stats In the past 24 hours, the Mog Coin price has surged by 18%, reaching a market cap of \$716 million. Currently, the memecoin is trading at \$0.000001722, placing it at rank 97. Further, weekly data shows an 80% increase, and inflows have surged by 120% over the past 14 days. This upward trend has led to bullish predictions for Mog Coin, with some speculating it could surpass other prominent memecoins like BONK. Despite this, daily trading volume has decreased by 11.75% to \$44 million, suggesting potential consolidation even as investor confidence remains high. However, crypto experts predict that this cryptocurrency might be entering overbought territory due to its rapid price rally. Highlighted Crypto News Today:

- Kazakhstan has officially authorized Toncoin, adding it to the list of 107 cryptocurrencies. - Investors are showing great interest in the Open Network and its native asset, TON. An assessment by Kazakhstanæ’s Financial Services and Regulatory Committee (AFSA) confirmed that the digital asset Toncoin (TON) fulfilled the listing requirements of the financial regulator, allowing it to be traded on regulated exchanges. The Kazakh government has officially authorized Toncoin, adding it to the list of 107 cryptocurrencies. Furthermore, a growing number of investors are showing interest in the Open Network and its native asset, TON. Mini Apps and in-app purchases are made possible by the Open Network. This is via the use of Telegramæ’s messaging technology and user base, which boasts over 800 million daily active users. Also, the number of active Telegram users in Kazakhstan is 55 million, according to statistics from TGStat. Moreover, the TON ecosystem isnæ’t complete without blockchain gaming. Players interested in making some extra income canæ’t get enough of games like TonPotato, Notcoin, Hamster Kombat, and Notcoin. Hamster Kombatæ’s Growing Craze Especially noteworthy is Hamster Kombatæ’s ability to garner attention. Officials from many branches of government have voiced their concerns and criticisms about the gameæ’s increasing popularity. People trying to make money off of the gameæ’s token were warned by Uzbekistanæ’s National Agency for Perspective Projects (NAPP), which is in charge of regulating online businesses and digital commerce. Furthermore, the regulator clarified that they do not have jurisdiction over Hamster Kombatæ’s tokens as they are not digital assets stored on the blockchain. So far, the game is still legal to play within the nation. But the NAPP cautioned that people should be prepared for the possibility that withdrawing their tokens may become problematic if they move on-chain and become real digital assets. Highlighted Crypto News Today: Solana (SOL) Price Displays Strength, Hinting at Potential Breakout Towards \$1,000

Altcoins Show Signs of Recovery: MTAUR Leads the Incoming Bull Run The market has recently seen a pullback largely centered around Bitcoin (BTC). Its dominance seems to weaken, which is an interesting sight to see. Whatæ’s even more interesting is that, despite this, several altcoins are showing signs of resilience and potential for recovery. Injection (INJ), Chain link (LINK), Cardano (ADA), Solana (SOL), and one more appealing project have emerged as top performers in this scenario. Analysts suggest that these altcoins, having been oversold, are now positioned to outperform Bitcoin (BTC) in the coming weeks. In particular, the fresh coin seems to be ready to potentially lead the charge. Thatæ’s the coin we are going to discuss first, too. Minotaurus æ” Good Crypto Pick? As promised, now is the time to learn more about Minotaurus, an exciting fresh project thatæ’s currently handing out early bird price cuts. During the current presale, the tokens are offered at a discounted rate of 80%. However, as the sale progresses, the prices are expected to change. Those that get on this bandwagon early on may be able to potentially see great

success. Unwrapping MTAUR By combining blockchain technology with casual gaming, Minotaurus is able to appeal to a larger audience. Avatar customization, in-game enhancements, and unique events are just a few of the in-game perks that may be unlocked using \$MTAUR tokens. More and more games are set to be added to the project, expanding the value and utility of the \$MTAUR token. The project's competitive presale pricing of \$0.00004 per token, which will be adjusted to \$0.00020 upon listing, highlights its economic potential. With its combination of entertainment and solid monetization tactics, Minotaurus might generate significant activity inside the ecosystem. Also, it positions itself rather well within the lucrative \$14.78 billion casual gaming industry. Finally, Minotaurus places an emphasis on security and long-term development, supported by an experienced staff and audited smart contracts. Taking part in Minotaurus's presale is an enticing offer for crypto enthusiasts looking for early-bird options with solid potential. Great Savings, Great Options You may get \$MTAUR tokens for 80% off if you act fast. You may also get a 5% booster for the first 48 hours after this text is published by using WRK273 at checkout! Injective (INJ): Poised for Growth The better-known Injective (INJ) is also garnering significant attention in the crypto space due to its innovative DeFi solutions and cross-chain derivatives capabilities. The token has shown resilience amid market volatility, with recent technical analyses suggesting that it could be primed for a substantial upward movement. Recent analyses indicate that Injective (INJ) is currently retesting a crucial price point around \$22.9, a level that has historically served as strong support. The Hidden Bull Divergence signal suggests that this level could herald a significant price increase. Speculative buying has driven Injective's price up by nearly 10% in the past week, although some on-chain metrics hint at a potential overvaluation. Analysts are optimistic about Injective's (INJ) price, predicting a possible surge as high as \$350 if the bullish divergence plays out. However, this optimism is tempered by the possibility of a correction if speculative buying wanes. The price-daily active address divergence indicates a discrepancy that might lead to a price drop if not backed by sustained network activity. Overall, while the bullish outlook is promising, market participants should remain cautious of potential volatility. Chainlink (LINK): Anticipating a Breakout One more coin has experienced a notable price increase, recently surging by 7.7% 2 days ago – Chainlink (LINK). This surge comes after a period of consolidation within a falling wedge pattern, which many analysts believe could lead to a major breakout. Chainlink's (LINK) current trading environment has been buoyed by increased trading volume and a surge in market cap. Despite this, the overall market sentiment remains cautious, with key indicators such as the Chaikin Money Flow (CMF) and open interest metrics showing mixed signals. Analysts are targeting a price range of \$22 to \$25 for Chainlink (LINK) in the near term, with more bullish scenarios predicting a rise to \$47-\$49. This optimism is based on historical performance patterns and the current technical setup. However, the presence of bearish signals and market volatility poses challenges. Sustained bullish momentum will require overcoming these hurdles and maintaining the upward trajectory. Cardano (ADA): Resilience Amid Challenges One of the crypto market mainstays, Cardano (ADA), has recently faced a Distributed Denial of Service (DDoS) attack, targeting its staked tokens. Despite the sophistication of the attack, Cardano's network demonstrated remarkable resilience, maintaining operational integrity and safeguarding its staked assets. The price of Cardano (ADA) has rebounded by 9% over three days, climbing towards the \$0.4 mark. This recovery follows a broader market trend of easing selling pressure and stabilizing demand. Cardano's (ADA) market cap has increased to \$14.02 billion, highlighting renewed interest from market participants. Technical analysis suggests that Cardano (ADA) is on the verge of a significant breakout from its current wedge pattern. A successful breakout could propel the price towards \$0.52 and potentially \$0.8. However, the bearish MACD slope and the overall market trend pose challenges. Continued buying pressure and successful navigation of technical resistance levels are crucial for sustaining this recovery. Solana (SOL): Innovations Driving Adoption Finally, there's Solana (SOL). It is making significant strides in enhancing blockchain accessibility through the introduction of Solana Actions. These APIs allow seamless blockchain transactions across various internet platforms, removing the need for dedicated crypto apps and lowering the entry barriers for new users. Solana (SOL) has experienced a robust year, with its value increasing by 709%. This bullish trend is supported by the recent updates aimed at simplifying user interactions with blockchain technology. The overall market sentiment towards Solana (SOL) remains positive, driven by its innovative approach and strong technical performance. The introduction of Solana Actions is expected to drive widespread adoption, further boosting the demand for Solana (SOL). Analysts predict that this could help Solana (SOL) reclaim its previous high of \$200. However, the success of these initiatives hinges on user adoption and continued technological advancements. Conclusion Injective (INJ), Chainlink (LINK), Cardano (ADA), Solana (SOL), and Minotaurus (MTAUR) are showing strong recovery potential and are attracting interest. The most promising pick seems to be the newcomer – it is yet to take off like the rest of the coins presented in today's text, but it does seem to have strong potential. Will it or won't it and how soon are all important questions, so you're encouraged to DYOR. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Base secured sixth position in TVL over Blast. - Ethereum tops the list with \$58.594 billion, according to Defillama. Base, the Ethereum layer-2 blockchain developed by a U.S. crypto exchange Coinbase, has marked a remarkable surge in its total value locked (TVL), surpassing Blast. According to Defillama, Base's TVL stands at \$1.549 billion and Blast's TVL at \$1.525 billion, a one-day change of 1.56% and 5.75% respectively. Total value locked (TVL) is an important metric used in the cryptocurrency sector for investors to gauge the popularity and activity of a decentralized financial platform. Base and Blast have experienced a remarkable rise in their TVL, making them a significant part of the crypto ecosystem. Defillama's data shows that Base and Blast have surpassed many other layer-2 solutions, indicating a growing interest in these platforms. The increase in TVL for Base and Blast could be attributed to several factors, including the launch of new applications, improved user experience, and the overall growth of the Ethereum ecosystem. The TVL list, which ranks various blockchain networks based on their total value locked, shows Ethereum at the top with \$58.594 billion, followed by Tron with \$7.659 billion. Binance Smart Chain, Solana, Arbitrum, Base, and Blast follow next. Recent Developments Recent research by Token Terminal mentions that Base reached a new user base. The user inflows have risen since the start of 2024. Further, 25% of the users are retained for more than a month. The on-chain summer campaign influenced the expansion of Base users, more than 500K wallets interacted with the blockchain. Base, with 270,000 users on June 17th, set a new record for the most daily active users on decentralized exchanges (DEX). Meanwhile, Blast, an Ethereum layer 2 blockchain network, recorded all-time highs in daily transactions and active users last week. Highlighted News of the Day

- Doraemon-based token DORAE plummets 99% since launch in the last 24 hours. - In the past few months, the number of rug-pull incidents have shown a notable increase. Multiple rug pull scams occurred over the past few months in the crypto market. Amidst celebrity memecoin shillings and the launch of numerous new tokens, the scams have also shown a surge. Relatively, Doraemon-themed token, DORAE originated in the market on Wednesday with signs of rug-pull within 24-hours of launch. According to Lookonchain reports, the token was deployed by an anonymous individual identified with the wallet address 0xCKEfB2aE. Following its launch, the token surged 300% approximately, within a few hours from its initial price of \$0.000280 to \$0.0023456. The token recorded a trading volume of \$2.77 million, according to CMC data. At the time of writing, the trading price of DORAE was \$0.0001072. Early DORAE Whale Activity or Deployer's Rug-Pull? Meanwhile, an anonymous wallet labeled as 0xCEHgJRaE received 215.7 million DORAE from the deployer's account. Along with the DORAE tokens, the wallet also received 304 SOL worth approximately \$41K from KuCoin. Following this, the wallet bought 2.5 million DORAE tokens using the SOL tokens. However, after the token witnessed its price surge, during midday, the wallet dumped 2.5 million DORAE tokens in exchange for 10,538 SOL worth \$1.45 million. This caused the tokens to plummet in prices. On the other hand, the individual has acquired a 3436% profit consisting of 10,234 SOL which is worth \$1.41 million approximately. Moreover, analysts suspect that the wallet address that dumped the tokens to be connected with the token deployer. The raise in suspensions was primarily caused because of the deployer sending 215.7 million DORAE to 0xCEHgJRaE. This has led to on-chain observers concluding it to be a "rug-pull" scam. Increasing Rug Pull Scams Over the Past Month In the past few months, crypto scams have witnessed an upsurge according to reports. This has led to an increase in regulators' scrutiny as well. Incidentally, in Singapore, following a cryptocurrency scam, banks have announced an increase in security. Over the past 30 days, several celebrities launched their meme tokens amidst which some tokens reported "rug pull" instances. Notably, pro-boxer Hulk Hogan witnessed a fake memecoin released under his name in the beginning of June. Moreover, other Trump-based tokens have also reported similar crimes. Apart from meme coin scams, newly launched tokens have witnessed similar instances as that of DORAE. This has led to an increasing concern among investors. Conversely, according to Chainalysis data, illicit crypto crimes have reduced from 2018 to 2023. The data aggregator has named 2023 as a "year of recovery" from illicit crypto crimes. Highlighted Crypto News Today: Ethereum Supply Faces Inflationary Phase Due to Dencun Upgrade

Within a week of launching its Sonic Testnet Odyssey, Sonic, the first gaming L2 infrastructure to launch on Solana, reported processing over 17 million transactions and amassing over 100,000 unique wallets. As the first atomic SVM Layer-2 designed exclusively for gaming on the Solana blockchain, the astounding milestone highlights the protocol's enormous potential as well as its immense demand. In order to facilitate game development and execution on Solana, the protocol has a number of built-in features, such as extensible data types, a sandbox environment, and customized gaming primitives. It also takes use of Solana's lightning-fast performance to provide the quickest on-chain video game experiences. The protocol announced on X that it has amassed over 45,000 wallets and 3.2 million transactions in only 36 hours of the Sonic Testnet Odyssey. The most recent milestone points to an expedited adoption of its L2 infrastructure. Users engaging with Sonic-based games account for a large percentage of transactions; these games have been connected with the Odyssey campaign, rewarding users who complete a transaction inside them. Jogojogo, Fomoney, Rage Effect, and LowLife Forms are a few of these games. Because of its robust memecoin boom incentives combined with simple onboarding, Solana is now the most retail-friendly blockchain network. But Solana gaming hasn't been as successful as other crypto sector categories like DeFi, NFTs, and SocialFi, which is why the Sonic protocol is so exciting. With Sonic, developers may assist GameFi projects and efforts, as well as other projects looking for a home on Solana, by swiftly deploying their own, lightning-fast SBM chain. Sonic, developed by Mirror World Labs, a two-year-old GameFi infrastructure firm, has already announced expansion plans such as ecosystem grants and accelerator programs to enable developers to swiftly adopt the Sonic SVM and the HyperGrid Framework. By serving as a grid deployment kit and facilitating the rapid creation of new SVM environments to serve new games, HyperGrid makes it easier for developers to deploy virtual machines and game engines on Solana. This new milestone comes after earlier this month's \$12 million Series A investment round for Sonic, which was headed by BITKRAFT and included participation from Galaxy Interactive, Big Brain Holdings, and other investors. Recently, Sonic made the first significant upgrade to the Sonic Testnet Odyssey, increasing its speed and stability to meet the increased demand. Several successful game launches have already occurred, like the tap-to-earn game Snake Lite, which is based on Telegram and launched earlier this week. Sonic's team will be busy this summer as they will be hosting the Solana Kick Off: Shenzhen event in collaboration with RateX and participating in the Kyoto Web3 Gaming Summer event at #IVS2024 next month.

One standout contender has emerged as a potential legend in the crypto market – Cosmic Kittens (CKIT). With a meteoric rise in fame, CKIT is poised to rival the iconic status of Pepe (PEPE) and Bonk (BONK). Its much-anticipated presale is yet to launch. Yet, Cosmic Kittens (CKIT) is attracting a flood of interested investors. By the end of 2024, market analysts expect CKIT to reach an astonishing valuation. The overwhelming backing for Cosmic Kittens (CKIT) shows how many people are about changing the altcoin industry. >>>Click Here To Learn More About Cosmic Kittens<<< Pepe's (PEPE) Bullish Wave: Holders Eye a Rise to \$0.00004001 Pepe (PEPE) is riding the current bullish wave in the crypto market. Recent data reveals an impressive surge in Pepe's (PEPE) price, catapulting from \$0.000008405 to \$0.00001208 within the span of just 30 days – a remarkable 43.72% leap. Not only has its price skyrocketed, but Pepe's (PEPE) market capitalization has also grown exponentially, ballooning to a staggering \$5.19 billion in the second week of June. The technical analysis paints a promising picture for this meme coin, with most indicators flashing green for Pepe (PEPE). Bonk (BONK): Solana (SOL) Based Crypto Surges to \$1.8 Billion Market Cap On the other hand, Bonk (BONK) is making waves, with its value soaring to \$0.00002706 in the second week of June. This surge has propelled Bonk's (BONK) market cap to an impressive \$1.8 billion during the same period. Adding fuel to the fire, Robinhood Crypto EU has announced its intention to list this Solana (SOL) based meme coin in specific regions, paving the way for widespread adoption. From a technical perspective, Bonk (BONK) appears poised to sustain its bullish momentum. Trading above its 21-day Exponential Moving Average (EMA) and with many indicators flashing green, the path ahead looks promising for this meme coin. With such positive developments, market analysts are optimistic about Bonk's (BONK) future, forecasting a surge to \$0.000045 by the third quarter of 2024. However, there are doubts that Bonk's (BONK) performance can match CKIT's. Cosmic Kittens (CKIT): Investors Jubilant as Feline-based NFT Blockchain Game Prepares to Dominate the Market Cosmic Kittens (CKIT) is a crypto meme coin project with an exciting play-to-earn adventure game.

Celebrity crypto scams are climbing recently, as the trend is in a frenzy. - Metallica's X account was hacked late Tuesday and used to promote a Solana meme coin. The rise of meme coins has brought a peculiar trend to the crypto market, with various well-known personalities launching their tokens. Celebrities such as Iggy Azalea and Rich The Kid have joined this movement. However, this trend has also sparked alarms about celebrity-themed crypto scams. Recently, even the Twitter account of the renowned heavy metal band Metallica fell victim to such a scam. Hackers gained control of the account and used it to promote a meme coin named METAL, linked to Solana. The fraudulent tweets promoting the METAL token deleted swiftly within 90 minutes, including posts in Twitter Spaces and replies to users. Despite this, the exploited METAL token managed to accumulate over \$10 million in trading volume through more than 30,000 transactions. At its peak, the token surged to \$0.003 before plummeting, leaving its market cap at a mere \$65K currently. Posts from Metallica's compromised account falsely implicated MoonPay, a fintech firm, which MoonPay's president Keith Grossman promptly denied in a statement, stating, "MoonPay does not support METAL." Subsequently, MoonPay emphasized on its platform, "If someone offers you a METAL token, they're not the master of puppets" they're the master of scams." Celebrity Token Scams Surge Amid Craze The Celebrity Crypto Craze continues to captivate, with actors, musicians, politicians, and athletes diving into various crypto ventures. The celebrity tokens can either be directly endorsed by the celebrities themselves or launched without their involvement. That often leverages meme culture to resonate with the token's community. However, many celebrities have faced legal challenges for promoting crypto projects that turned out to be fraudulent. Notable figures such as Kim Kardashian, Floyd Mayweather, and Paul Pierce were embroiled in lawsuits earlier this year. Recently, tokens associated with Donald Trump's son Barron and the DJ meme coin on Solana made waves in the crypto space. Meanwhile, American celebrity Caitlyn Jenner launched the JENNER meme coin and Singer Jason Derulo has also joined the fray with JASON as the latest celebrity token on Solana. Highlighted News of the Day

audients are buzzing: 2024 is set to ignite the next crypto bull run and the signs are undeniable. Roaring Kittya€'s GME frenzy was just the beginning€"now, the spotlight is on crypto. This year is already delivering jaw-dropping gains from the explosive rise of MOTHER to the playful allure of PlayDoge and the community power behind Milady and PEPE. But which token will truly dominate? Leta€'s dive into these breakout stars and reveal the dark horse ready to redefine the crypto landscape. Buckle up, because this ride is just getting started.

**MOTHER Token: A Case of Meteoric Rise and Sudden Fall** Iggy Azalea€'s MOTHER token made waves when it launched, surging 230x in value within hours. Launched on the Solana blockchain, the token followed a classic a€'pump and dumpa€' trajectory, skyrocketing initially before plummeting just as quickly. Despite the drop, MOTHERa€'s brief success story has been a wake-up call for investors looking for the next big hit in the volatile crypto world.

**PlayDoge: The Next Tamagotchi-Style Sensation** Following the hype around MOTHER, PlayDoge is emerging as a promising new contender. This Tamagotchi-style GameFi project has generated significant interest during its presale phase, promising a unique play-to-earn mechanism. As players nurture their digital pets, they stand to earn rewards, blending nostalgia with the modern appeal of blockchain gaming. With its innovative approach, PlayDoge is poised to capture the hearts of gamers and investors alike.

**Milady Meme Coin (LADYS): The Power of Community** DW Labs recently invested \$5 million in the Milady Meme Coin (LADYS), reflecting its confidence in the tokena€'s potential. LADYS has benefited from the meme coin mania, riding the wave of social media buzz to become one of the most profitable coins in May. Its success underscores the power of community and the allure of meme coins in the current market.

**PEPE: The Meme Coin King** PEPE has dominated the meme coin landscape, delivering a 90% return in May and making 96% of its holders profitable. This tokena€'s remarkable performance highlights the enduring appeal of meme coins and their potential to generate significant returns. PEPEa€'s success story is a testament to the lucrative opportunities within the meme coin sector, which continues to captivate investors.

**The Market Buzz: Trends and Predictions** The crypto market is abuzz with speculation about which tokens will explode next. As investors search for the next big opportunity, several trends are emerging: Integration of Gaming and DeFi: Projects that blend gaming with decentralized finance (DeFi) are gaining traction. These projects offer unique play-to-earn mechanisms, driving user engagement and financial returns. Community-Driven Tokens: Tokens with strong community backing, such as meme coins, continue to perform well. The power of social media and influencer endorsements cannot be underestimated. Innovation and Utility: Tokens that introduce innovative features or solve real-world problems are likely to attract significant investment. Utility and practical applications are key drivers of value in the crypto space.

**The Future of Crypto: W3GG on the Horizon** Amidst the frenzy of new tokens and market speculation, one token is quietly gaining attention from savvy investors: W3GG. While not officially announced, W3GG is generating buzz as the next potential viral token. Herea€'s why W3GG is poised to be a game-changer: Strong Backing: W3GG is backed by industry giants such as Animoca Brands, YGG, Crypto.com, and OKX Ventures. This robust support provides a solid foundation for growth and innovation. Strategic Investments: W3GG has invested in over 70 games, including upcoming giants like Nyan Heroes, Apeiron, and PlayDarktimes. These strategic investments position W3GG at the forefront of the Web3 gaming revolution. Launchpad for Innovation: The upcoming W3GG Launchpad will offer early access to Initial Game Offerings (IGOs), giving investors the chance to support and profit from the next generation of Web3 gaming gems.

**Farming Frenzy: This unique event within the W3GG ecosystem gamifies the player experience, allowing users to earn WXP and unlock W3GG tokens. Farming Frenzy integrates social and DeFi elements, creating a dynamic and engaging platform for gamers. The Verdict: W3GG a€" The Future of Web3 Gaming** As the crypto world keeps an eye on emerging tokens, W3GG stands out as a promising contender set to revolutionize Web3 gaming. With its innovative features, strong backing, and strategic investments, W3GG is well-positioned to capture market share and deliver significant returns. The upcoming token launch is eagerly anticipated, and investors are closely watching for any updates. In conclusion, while MOTHER, PlayDoge, Milady, and PEPE have all made their mark, W3GG is the token to watch in 2024. Its potential to fuel the future of gaming and its impressive support network makes it a strong candidate for explosive growth. Keep an eye on W3GG as it gears up to redefine the gaming and crypto landscape. Stay ahead of the curve and dona€'t miss out on the next big thing in crypto. Follow W3GGa€'s journey and get ready for an exciting year in the world of Web3 gaming.

The TD Sequential indicator has flashed buy signals for Solana (SOL), Cardano (ADA), and Shiba Inu (SHIB). - The buy signal emerges after the recent market shakeout, during which most altcoins established new multi-week lows. - A bullish trend is already taking shape in the altcoin market, with SOL, ADA, and SHIB showing signs of recovery. The current market conditions may have presented a golden opportunity for patient investors to acquire prominent altcoins such as Solana (SOL), Cardano (ADA), and Shiba Inu (SHIB), as indicated by a reliable technical indicator. This development has sparked optimism among market participants, who are eagerly anticipating a potential rebound in these altcoins' prices. Renowned Analyst Reveals Buy Signals for SOL, ADA, and SHIB In a recent post on X (formerly Twitter), esteemed on-chain analyst Ali Martinez revealed that the TD Sequential indicator has flashed buy signals for SOL, ADA, and SHIB on their daily timeframe. Based on this information, Martinez has predicted a significant rebound for these highlighted altcoins, which could potentially lead to substantial gains for investors. Interestingly, the buy signal surfaced following the most recent market shakeout, during which most altcoins established new multi-week lows: Solana, for example, retested the \$123 price point, a level last seen eight weeks ago on May 2, indicating a significant price correction. Shiba Inu, too, experienced a notable decline, bottoming out at \$0.00001642, which represents a 38% dip from its June 5 high of \$0.00002627. This low is comparable to some of its high values during the initial bullish wave in late February, suggesting a potential reversal point. Among the altcoins discussed, Cardano has been one of the most severely affected by the ongoing market retracement. Yesterday, Cardano registered a low of \$0.3667, a price range it had entered seven days earlier. Prior to this, ADA was last seen at the \$0.36 region on November 18, 2023, indicating that the

altcoin has given up all the gains accumulated so far in 2024. As the TD Sequential indicator suggests a potential bull reversal for Shiba Inu, Solana, and Cardano, proponents of these altcoins may now anticipate a short-term relief rally. Interestingly, a bullish trend is already taking shape in the altcoin market at press time, with several coins showing signs of recovery.

- This measure would essentially amend the 1986 Internal Revenue Code if passed. The law proposed has the potential to significantly impact the adoption of Bitcoin in the US. People living in the US may soon be able to use Bitcoin (BTC) and other cryptocurrencies to pay their federal taxes. It has been proposed by US Congressman Matt Gaetz that citizens of the United States be able to pay their federal income taxes using Bitcoin. Among the Bitcoin Marxists, Gaetz stands out for his firm faith in digital assets' potential to shape the financial landscape of the future. To include Bitcoin as an option for taxpayers, this measure would essentially amend the 1986 Internal Revenue Code. Moreover, the provision of the bill introduced by the Florida lawmaker mandates that the Department of the Treasury create and execute a mechanism to permit the payment with Bitcoin of any tax levied on an individual. El Salvador Effect It is worth noting that the law proposed by Gaetz has the potential to significantly impact the adoption of Bitcoin in the US if it were to pass. Also, the Treasury would be able to put more effort into implementing digital assets. Presenting his Bitcoin law to the press, Gaetz emphasized its inherent advantages. He brought up the fact that it has the potential to spur creativity, boost productivity, and provide Americans more leeway. Furthermore, the position of El Salvador toward Bitcoin probably impacted Gaetz's plan. He paid a recent visit at President Nayib Bukele's office. Also, Colorado is one of many states that have begun accepting Bitcoin as payment for state taxes. Numerous Bitcoin bills are awaiting clearance from the relevant authorities. The crypto market has been experiencing severe volatility lately and any positive development will likely boost investor confidence which is lately dwindling. - A liquidation plan put out by FTX's creditors aims to repay clients in cash within a few months. - The stages leading up to this point were outlined by an attorney representing FTX. Bankrupt cryptocurrency exchange FTX has asked a US court to let creditors vote on the best liquidation plan, and the judge has granted their request. Despite earlier objections stating a reduction in asset payments, creditors of the collapsed exchange will vote on a liquidation plan. A liquidation plan put out by FTX's creditors aims to repay clients in cash within a few months. John Dorsey, the bankruptcy judge, overruled the creditors who were opposed to the voting plan documents and gave his approval. The stages leading up to this point were outlined by Andy Dietderich, an attorney representing FTX, who described it as a massive team effort. Among other things, the insolvent company liquidated its holdings in real estate, venture capital, and other IT companies. Disparity in Crypto Prices Moreover, the firm has managed to recoup around \$16 billion to settle its debts after its demise and bankruptcy. Among them are \$12 billion in cash, with intentions to pay clients with interest. Several creditors argued that the claim of a full recovery was unjust because it was far lower than the existing values. Due to its collapse in November 2022, the market suffered massive losses. FTX was the second-largest crypto exchange at the time. There was a domino effect in crypto regulation and market sentiment as a result of the billions of dollars in losses. The idea was challenged by many FTX creditors who pointed to the disparity in cryptocurrency prices between 2022 and the present, due to the price surge this year, as the reason. They claim that creditors will get less than market value since it is not a complete recovery. Highlighted Crypto News Today: Solana Bulls Strive to Maintain Upward Momentum Amidst Platform Upgrades

Chicago, United States, June 25th, 2024, Chainwire GolfN is the first golf app to use the power of tokenization and digital collectibles to empower its members to earn rewards for playing and engaging with a physical sport. GolfN, Inc., today announced the closure of its \$1.3 million Pre-Seed funding round. The round saw participation by prominent blockchain investors, including leading personalities and projects in the Solana ecosystem - CitizenX, Fourth Revolution Capital (DeFi Dad), Nom (TheOnlyNom), and Joe McCann (Asymmetric Financial) - among others. First off the tee in building a gamified Play-to-Earn (P2E) mechanism for a physical sport, GolfN will offer a premium digital caddie app to rival current market incumbents and pair it with Web3 rewards. - Despite its high cost of play, golf has hooked nearly 67 million people globally, commented Jared Phillips, GolfN's CEO and Co-Founder, - Currently, the more golfers play, the more they pay out. The free-to-use GolfN App will not only help users play better, but the more they play and engage, the more they will earn to play more and better golf. - In March 2024, GolfN released its Genesis Collection of NFT Golf Clubs on the Solana network. The Clubs, which come in various rarities, are the keys to earn scaling rewards in the GolfN ecosystem. Hosted on Tensor Launchpad, one of the leading digital collectible marketplaces, the Mint sold out in under an hour. The raise will be allocated to the development and scaling of the GolfN app, community, and ecosystem. The GolfN mobile application, due out in open beta later this year, will bring GolfN's Web3 gamification layer to the real-world game of golf. While using the App as a digital caddie and social platform, players will be able to equip their digital collectible golf clubs to earn rewards during each round, track side games, and organize leagues with friends. For players who did not purchase GolfN's digital collectible golf clubs during the mint, the company will offer monthly membership subscriptions for which rental NFT clubs will be made available by collectors. About GolfN GolfN is redesigning golf engagement for the decentralized digital era. With a focus on innovation, community, and sustainability, GolfN is dedicated to enriching the golfing experience for golf enthusiasts of all levels. In addition to minting the first digital collectibles for a real-world sport like Golf, GolfN is developing a gamified social caddie app for on-course play, which golfers can use to play better and earn blockchain convertible rewards. For more information, users can visit GolfN's: Official Website | Twitter (X) | Discord | YouTube Contact James Carney Operations Lead GolfN, Inc. james@golfn.com +1 708-365-9327

WSF for Solana (SOL) holders, despite the selling pressure, the coin is holding a support level at \$199. The coin is now trading in a falling wedge pattern, indicating a potential further decline. Market dynamics suggest that the price could drop below the critical support level of \$100, possibly testing the next support at \$94.19. This bearish trend has been fueled by a lack of bullish activity, with trading volumes significantly lower than average. In contrast, there is a new coin that might be showing better results. It is currently in its presale phase and now would be an interesting time to compare and contrast it with the currently struggling Solana (SOL). Solana (SOL): Facing Potential Crash and Investigation Rumors Of course, it makes sense to start with the better-known option. Solana (SOL) has been experiencing a turbulent period, shedding \$7 billion in market cap over the past week, which has raised concerns among traders and analysts alike. The cryptocurrency has faced increased selling pressure, failing to hold crucial support levels and dropping approximately 10% to hover around \$130. This decline comes as the broader crypto market experiences a downturn with major coins like Bitcoin and Ethereum also seeing significant losses. The overall market sentiment has shifted towards uncertainty, as reflected by the crypto fear and greed index stabilizing at a neutral level of 51. Adding to Solana (SOL) woes are rumors of a potential investigation, which have exacerbated fears of further price declines. These rumors have led to heightened volatility and have put Solana (SOL) price under intense pressure. The market's reaction to these rumors has been swift, with many investors opting to sell off their holdings, contributing to the downward spiral. Analysts suggest that if the bearish trend continues, Solana (SOL) could fall below the critical \$100 mark, potentially testing support at \$94.19. This significant drop could further erode investor confidence and lead to a deeper market correction. Technical indicators also paint a grim picture for Solana (SOL). The falling wedge pattern in which Solana (SOL) is trading indicates a potential for continued decline. The on-balance volume has been plunging for over 40 days, and the trading volume during weekends has been drained by more than 60% from its average levels. This points to a lack of bullish activity and suggests that buyers are displaying acute weakness. The MACD and RSI indicators are both showing bearish signals, further supporting the possibility of a continued downtrend. Market sentiment towards Solana (SOL) has been negatively impacted by these developments. The broader economic conditions, including the Federal Reserve's monetary policies and the general downturn in the crypto market, have also played a role in this decline. The anticipation of a rate cut in September could provide some relief, but for now, the outlook remains bleak. Minotaurus? Seize the opportunity in the booming casual gaming market Now, now about a coin that seems to have Solana (SOL) outgunned, at least for the time being? Discover Minotaurus, your gateway to the booming casual gaming market, estimated by Statista to be worth \$14.78 billion. During the presale, \$MTAUR tokens are available at a whopping 80% OFF, priced at just \$0.00004 each, with a planned listing price of \$0.00020 per coin. Why Minotaurus? Here are the key reasons to join Minotaurians: - Early Advantage: Benefit from a low entry point with potential savings of up to 5 times off the listing price during the first presale stage - Holder Benefits: Enjoy perks like referral and vesting incentives. - Strong Utility: Swap \$MTAUR for in-game currency and access avatar customization options, mini-games, speed boosts, special zones, and bonuses for inviting friends. - Strong Tokenomics: Designed for stability, with well-thought-out cliff and vesting mechanisms. - Trusted Security: Audited by SolidProof and Coinsult, ensuring top-tier reliability and confidence for participants. Secure Early-Bird Benefits Before They Vanish Don't miss your chance to support a promising blockchain gaming project and benefit from its upside potential. Take advantage of the early bird pricing for \$MTAUR tokens - now can be the best time to join Minotaurus. >> Grab \$MTAUR Tokens at 80% Off Before it's too late! << Join the Minotaurus community today and use code KZW304 for an additional 5% booster bonus. This special code is valid for 48 hours from the publication date, so act quickly. Conclusion The cryptocurrency market has faced significant volatility, impacting major coins like Solana (SOL). It has seen a substantial decline, struggling to maintain crucial support levels amidst increased selling pressure and rumors of a potential investigation. This has led to heightened market volatility and eroded investor confidence. In contrast, Minotaurus (MTAUR) presents a potential opportunity for market participants seeking stability and success potential in the current bear market. - ZachXBT accused Ronaldinho, Amber Rose, and G Herbo of promoting memecoins, labeling them as potential scams. - These celebrities promote new crypto projects to their millions of followers. Amidst the growing influence of celebrities in the cryptocurrency market, concerns over regulatory oversight and financial transparency have intensified. Renowned crypto expert ZachXBT has publicly criticized prominent figures like football legend Ronaldinho, American model Amber Rose, and rapper G Herbo for their involvement in promoting memecoins, which he categorizes as potential - scams. - The scrutiny began on June 24 when ZachXBT commented on a video of Jason Derulo promoting his new coin, JASON, accusing him of promoting various crypto scams over the years. Derulo is the latest celebrity to launch a meme coin on Solana. On Sunday, Derulo posted the address for JASON, a meme coin launched via Pump.fun. Later, he accused promoter Sahil Arora of scamming him. Some hours later, he denounced Arora on X, stating that this situation would motivate him to send his coin to the moon. Arora, as with previous coins, claims that the drama was all part of the plan. Derulo is still actively promoting JASON and has announced a reward for the best JASON memes. ZachXBT continues Celeb Memecoin Promotion Warnings Similarly, ZachXBT pointed out opposition to Brazilian former footballer Ronaldinho's X post related to crypto ventures, which was later deleted. The crypto expert alleges Ronaldinho's involvement in projects accused of engaging in pump-and-dump schemes. The football star, known for endorsing various memecoins, including Baby Doge Coin and Kishu Inu, has recently aligned with GameFi platforms like Lingo Protocol and Base Networks, manipulating his massive social media following to promote these ventures. Further, ZachXBT has raised alarms about Amber Rose and G Herbo, highlighting past promotions of crypto projects that have since faced accusations of fraud or misrepresentation. Amber Rose, in particular, faced criticism for her recent question to 3.15 million followers about memecoins on the Solana blockchain. That prompted ZachXBT to highlight past deleted posts where she allegedly endorsed now-discredited projects like Dragon and Wild Ape Gang NFTs. ZachXBT continued his accusation next to G Herbo. He alleging that he created a memecoin named HERBO, which purportedly turned out to be a scam, and deleted the post. Further, ZachXBT's comment on Herbo's post led to blocking him on social media. The list is not yet over. ZachXBT has been commenting on tweets from at least five celebrities who are promoting upcoming projects that he alleges could turn out to be scams, given these influencers' history of promoting previous projects that ended up being scams. The controversy emphasizes broader concerns within the crypto community regarding celebrity involvement and the potential for market manipulation. With millions of followers at stake, the influence wielded by figures like Ronaldinho, Amber Rose, and G Herbo in the crypto space may draw attention to regulatory loopholes and investor protection.
