- Robert Kiyosaki warns of a market crash caused by reckless monetary policies and excessive money printing. - He suggests investing in gold, silver, and Bitcoin as secure ways to protect wealth during economic challenges. - Kiyosaki predicts Bitcoin could reach \$175,000 to \$350,000 by 2025 due to its scarcity and rising demand. Kiyosaki's Belief in Gold, Silver, and Bitcoin Financial expert and author of Rich Dad Poor Dad, Robert Kiyosaki, has been warning about a "giant market crash." Recently, he pointed out on X. That the reckless monetary policies of the U.S. Federal Reserve and other financial institutions are major contributors to the impending economic downturn. He believes in gold, silver, and Bitcoin. He also believes them to be an excellent hedge against inflation and the economic problems and does not foresee a bright future in general. Kiyosaki cited the government's excessive printing of "fake money" as the major cause for aggravating inflation, devaluing fiat currencies, and widening the gap between wealth. He called upon investors to save real assets that can act as a hedge against the impending crash. Traditionally, gold and silver have preserved their purchasing power in a downturn. Kiyosaki believes Bitcoin is the modern version-a decentralized asset not pegged to any government. Bold Predictions for Bitcoin Kiyosaki further predicts that Bitcoin will hit between \$175,000 and \$350,000 by 2025. This he attributes to the fact that Bitcoin is scarce and it is being increasingly used by both institutions and individuals. The author also added that Bitcoin has the capacity to protect one against inflation. And how it keeps its buying power during uncertain economic times. Market analysts agree with Kiyosaki's positive view, saying Bitcoin's price might go over \$108,000 if it crosses the important \$100,000 mark. Bitcoin is currently priced at \$98,261, which is a 2% increase for the day, but trading volumes have dropped a little. People are as confident in Bitcoin as they are in the overall market. Many institutions also believe gold and silver will do well. Goldman Sachs thinks gold will reach \$3,000 an ounce by 2025 when interest rates go down. Deutsche Bank expects gold to average \$2,725 per ounce. Silver is worth investing in more because there is not enough being produced. Inflation is still rising, and interest rates are unlikely to go low anytime soon, so tangible assets are a haven. The takeaways from Kiyosaki and the alternative assets that are growing, such as Bitcoin, speak to strategic diversification. Indeed, investors are preparing for uncertain times, building resilient portfolios rather than focusing on preparation for stormy weather. The next market crash may break the traditional financial systems, but for those who believe in Kiyosaki's view, gold, silver, and Bitcoin will be the way to success in tough times. Highlighted Crypto News Today What's Behind Just a Chill Guy's (CHILLGUY) 50% Price Surge?

- Bitcoin price stands at \$97,838, with a 1.12% daily increase and \$34.33B trading volume. - Immediate resistance is at \$99,298, while support holds at \$95,262. Bitcoin's price currently stands at \$97,838.34, reflecting a 1.12% increase over the past 24 hours. Its market cap has surged to \$1.93 trillion, with a 13.17% rise in 24-hour trading volume, which now totals \$34.33 billion. The fully diluted valuation (FDV) is at \$2.05 trillion, highlighting its dominance in the crypto market. With a circulating supply of 19.8 million BTC and a maximum cap of 21 million BTC, Bitcoin remains the most valuable cryptocurrency. The volume-to-market cap ratio of 1.77% further indicates sustained investor interest. Bullish Indicators for ETH On the daily chart, Bitcoin faces immediate resistance at \$99,298, as shown by recent price movements. A breakout above this level could drive the price beyond the psychological barrier of \$100,000. Conversely, the key support lies at \$95,262, represented by the 9-day moving average. Should the price fall below this, the next support zone could be \$93,500. The Relative Strength Index (RSI) is currently at 53.45, indicating a mildly bullish sentiment in the market. However, the RSI average at 47.63 suggests that buying pressure is only slightly outweighing selling pressure. Traders should watch for the RSI moving closer to 70, which signals overbought conditions. The 9-day moving average (MA) at \$97,653 remains above the 21-day MA at \$95,262, forming a bullish crossover. This pattern suggests an upward trend may continue, provided the broader market sustains its current momentum. A bullish crossover typically attracts more buyers and could result in further price gains. If Bitcoin successfully breaches the \$99,298 resistance, it could target \$102,000 as its next major milestone. In such a scenario, investor confidence and trading volume would likely see a significant boost. On the downside, failure to hold the \$95,262 support might result in a drop toward \$90,000, which could trigger a sell-off among short-term traders. Bitcoin's recent price action reflects steady market activity supported by rising trading volume and favorable technical indicators. The RSI and moving averages imply that the cryptocurrency might test higher levels if market conditions remain supportive.

As times have changed, so have people's attitudes towards energy. They rely on renewable energy sources such as solar and wind to power their new energy cloud mining operations, which greatly reduces the cost of mining and integrates power from surplus energy into the grid. It not only saves a lot of energy consumption, but also generates high profits and opens investors' eyes to new energy opportunities. In the fast-paced world of cryptocurrency, simplicity and profitability are key. For beginners looking for an attractive option to generate a steady income with minimal effort, cloud mining offers an attractive option. In this article, we'll explore the concept of cloud mining, featuring AEON MINING as a leading brand in cloud mining, and ways to help you get started earning \$5,850 or more per day. The appeal of new energy cloud mining Cloud mining has long been a favourite among cryptocurrency enthusiasts due to its ease of use and accessibility. Unlike traditional mining, it doesn't require expensive hardware, technical expertise or constant monitoring. Cloud mining

simplifies the process and allows anyone (regardless of experience) to participate in the cryptocurrency revolution. Instead of investing in expensive mining equipment and managing complex setups, users can rent mining arithmetic from remote data centres and receive a share of the profits generated. AEON MINING: where laziness and profit collide AEON MINING takes the simplicity of cloud mining to the highest level, making it perfect for novices. The platform's user-friendly interface ensures easy navigation even for cryptocurrency newbies. For AEON MINING, laziness is not a disadvantage; it is the path to success. As a pioneer in providing cloud mining services, AEON MINING has 20 mining farms around the world with more than 500,000 mining devices, all powered by new and renewable cycles of energy, and has earned the recognition and support of more than 6.3 million users thanks to its stable income and security. Unimaginable earning opportunities What sets AEON MINING apart is its extraordinary daily passive income, which offers the opportunity to earn \$5,850 or more per day, enabling users to realise their dream of becoming rich online. Imagine earning a substantial income without constant effort or complicated setups – that's what AEON MINING offers. Security and Sustainability In the world of mining, trust and security are crucial, AEON MINING understands this and puts the safety of its users first, AEON MINING is committed to transparency and legitimacy, ensuring that your investment is protected and allowing you to focus on making a profit. All mines use clean energy power, making cloud mining join the ranks of the carbon neutral. Renewable energy protects the environment from pollution and delivers superb returns, allowing every investor to enjoy the opportunity and the benefits. Platform Advantage: - Get \$10 instant bonus when you sign up. - High profitability levels and daily payouts. - No other service or management fees. - The platform uses more than 9 cryptocurrencies such as DOGE, BTC, ETH, SOL, USDC, USDT, XRP, LTC, BCH. for settlements - The company's affiliate programme allows you to refer your friends and get up to \$3,000 referral bonus. - McAfee® security. Cloudflare® security. 100% uptime guarantee and excellent 24/7 human technical online support. Step 1: Sign up for an account In this example, we have chosen AEON MINING as our cloud mining provider. Go to the provider of your choice and register to create a new account. AEON MINING offers a simple registration process, all that is required to participate is to enter your email address and create an account. After signing up, users can start mining Bitcoin and other cryptocurrencies immediately. Step 2: Purchase a Mining Contract Currently, AEON MINING also offers a variety of mining contract options, such as \$100, \$500 and \$1,000 contracts. Each contract has a unique ROI and a specific contract term. You can earn more passive income by participating in the following contracts: Earnings are available the next day after purchasing a contract, and when earnings reach \$100, you can choose to withdraw to your crypto wallet or continue purchasing other contracts. Affiliate Programme Now, AEON MINING has also launched an affiliate programme, which is a platform where you can earn money by recommending the site to others. You can start earning money even if you don't invest. After inviting a certain number of active referrals, you will receive a one-time fixed bonus of up to \$3,000. With unlimited referrals, your earning potential is also unlimited! In short If you're looking for ways to increase your passive income, Cloud Mining is a great way to do it. If used properly, these opportunities can help you increase your cryptocurrency wealth on an autopilot mode with minimal time investment. At the very least, they should take less time than any type of active trading. Passive income is the goal of every investor and trader, and with AEON MINING, it's easier than ever to maximise your passive income potential. - If you would like to learn more about AEON MINING, please visit their official website: <https://aeonmining.com/> Disclaimer: TheNewsCrypto does not endorse any content on this page. - MicroStrategy CEO Michael Saylor reveals plans to raise \$2 billion to buy more Bitcoin. - Bitcoin price is trading at \$98,180, moving closer to the \$100K mark. Microstrategy never missed making headlines for the past few years with its constant BTC purchases. To further continue its Bitcoin shopping spree, its CEO Michael Saylor recently announced plans to raise another \$2 billion. The fact that MicroStrategy raised around \$3 billion with 0% convertible note offering is well known in the industry. It seems like this firm is coming up with new ways to raise funds, solely to acquire more Bitcoin. MicroStrategy has acquired 2,138 BTC for ~\$209 million at ~\$97,837 per bitcoin and has achieved BTC Yield of 47.8% QTD and 74.1% YTD. As of 12/29/2024, we hold 446,400 \$BTC acquired for ~\$27.9 billion at ~\$62,428 per bitcoin. \$MSTR <https://t.co/58aXM7g6u2> – Michael Saylor (@saylor) December 30, 2024 The latest news came to light when Michael Saylor posted on X revealing their plans to raise \$2 billion. This time, the firm is planning to raise funds through public offering of perpetual preferred stock. As per the official announcement from its website, the perpetual preferred stock includes, but not limited to, following features. - Convertibility to their class A common stock - Payment of cash dividends - Provisions allowing for redemptions of shares MicroStrategy Plans to Acquire More Bitcoin in Q1 2025 MicroStrategy's latest announcement to raise \$2 billion is to buy more Bitcoin in Q1 2025. The announcement says, "The purpose of the Offering is to allow MicroStrategy to continue to strengthen its balance sheet and acquire more Bitcoin. The Offering is expected to occur, if at all, in the first quarter of 2025." So far, MicroStrategy holds 446,000 Bitcoins acquired for \$27.9 billion at an average price of \$62,428 per BTC. This includes the most recent purchase of 2,138 BTC by MSTR on Dec 30, 2024. Its founder Michael Saylor is one of the biggest proponents of Bitcoin, believing in its strong fundamentals. MicroStrategy emerged to be one of the benchmark firms in the industry with its relentless BTC acquisition. It even entered the Nasdaq-100 index, along with two other firms, Palantir Technologies Inc. and Axon Enterprise. MicroStrategy has come a long way since it first started to Bitcoin in 2020 and will continue to do the same. Its founder Michael Saylor's commitment to Bitcoin set an example to other global organizations, inspiring them to follow its footsteps.

Amber Mining has emerged as a game-changer in the cloud mining industry with its announcement of FCA-

regulated mining contracts. This significant development ensures that cryptocurrency investors can participate in mining with greater transparency and security, backed by the stringent oversight of the UK Financial Conduct Authority (FCA). A Milestone in Cloud Mining Amber Mining's FCA compliance marks a pivotal shift in the cryptocurrency mining landscape. With this move, the platform addresses common industry concerns such as fraud and lack of accountability, creating a reliable space for investors to explore cryptocurrency mining. Amber Mining CEO stated: "The introduction of FCA-regulated contracts underscores our commitment to protecting investors while driving innovation in the cryptocurrency mining space. We aim to set a new standard for security and trust in the industry."

Features of Amber Mining Amber Mining combines cutting-edge technology and strict compliance measures to offer unparalleled services to its users. Key features include:

- **Global Operations:** Over 100 mining centers worldwide ensure extensive service coverage.
- **Advanced Hardware:** Partnerships with manufacturers like Bitmain, Canaan, and Nvidia ensure efficient mining operations.
- **High Hashrate Management:** The platform operates with over 10 EH/s capacity, delivering significant mining efficiency.
- **User-Friendly Design:** The platform eliminates the need for users to manage hardware or software, making it ideal for both novice and experienced miners.
- **Expert Support:** A dedicated team of blockchain engineers ensures smooth technical operations.
- **Consistent Earnings:** Earnings are automatically credited every 24 hours for a stable income stream.

Getting Started with Amber Mining Using the Amber Mining platform is straightforward:

- **Register on the Platform:** Sign up in minutes and receive \$12 immediately as a welcome bonus.
- **Choose a Mining Contract:** Select from various tailored contracts based on your budget and goals. Contracts range in duration and profitability, catering to diverse investment strategies.
- **Start Profiting:** Activate your chosen contract and let the system manage the mining process. Track your earnings through the platform's intuitive dashboard and withdraw your profits as needed.

Amber Mining Contract Options Below is a summary of the available contracts:

Contract Price	Contract Duration	Daily Interest Rate	Total Income (Principal + Profit)
\$12	1 Day	10%	\$12 + \$1.2
\$150	2 Days	4%	\$150 + \$12
\$500	5 Days	1.55%	\$500 + \$38.75
\$1,000	4 Days	1.58%	\$1,000 + \$63.2
\$2,000	10 Days	1.6%	\$2,000 + \$320

Conclusion Amber Mining's FCA-regulated contracts set a new benchmark in the cloud mining industry. By offering transparency, regulatory assurance, and cutting-edge technology, the platform empowers investors to navigate the complexities of cryptocurrency mining confidently. With global reach, user-friendly operations, and consistent earnings, Amber Mining is poised to become a leading force in the cryptocurrency mining sector.

In the ever-evolving landscape of cryptocurrency, security isn't just an add-on—it's the bedrock upon which trust and reliability are built. Lobitcoin has meticulously crafted its reputation by prioritizing the protection of user funds and data through state-of-the-art security measures. Let's delve into how Lobitcoin distinguishes itself as a beacon of safety in the crypto trading arena.

Multi-Layered Protection: Fortifying Every Aspect Lobitcoin employs a robust, multi-faceted approach to security, ensuring that every potential vulnerability is addressed:

- Cold Wallet Storage** The lion's share of user funds are safeguarded in offline wallets, completely detached from the internet. This strategy significantly mitigates the risk of online breaches and cyber threats, ensuring that your assets remain secure even in the face of potential external attacks.
- Advanced Encryption Standards** Lobitcoin utilizes top-tier encryption protocols to secure all sensitive information. From personal data to transaction details, every piece of information is encrypted, making unauthorized access virtually impossible.
- Two-Factor Authentication (2FA)** To add an extra layer of security, Lobitcoin mandates the use of Two-Factor Authentication for all account accesses and transactions. This ensures that even if your password is compromised, unauthorized individuals cannot access your account without the second verification step.
- Real-Time Threat Monitoring: Staying Ahead of Threats** Proactive monitoring is key to maintaining a secure trading environment. Lobitcoin's dedicated security team employs advanced tools to detect and respond to potential threats swiftly.
- 24/7 Monitoring** Leveraging AI-driven technologies, Lobitcoin continuously monitors for unusual activities in real-time. This constant vigilance allows for immediate identification and mitigation of suspicious behaviors, protecting users from potential threats.
- Regular Penetration Testing** Lobitcoin collaborates with third-party cybersecurity experts to conduct regular penetration tests. These assessments help uncover and address vulnerabilities before they can be exploited, ensuring the platform remains resilient against evolving cyber threats.
- Transparent Policies: Building Trust Through Openness** Transparency is a cornerstone of Lobitcoin's approach to security, fostering trust and confidence among its users.
- Insurance Coverage** In the rare event of a security breach, Lobitcoin's comprehensive insurance policies protect user funds. This added assurance provides users with peace of mind, knowing their investments are safeguarded against unforeseen incidents.
- Incident Reporting** Lobitcoin maintains full accountability by promptly disclosing any security events. Transparent incident reporting ensures that users are always informed about the platform's security status and the measures taken to address any issues.
- User Education** Empowering users with knowledge is crucial for maintaining security. Lobitcoin offers extensive guides on best practices, such as securing private keys and identifying phishing attempts, helping users protect themselves against common threats.
- Commitment to Innovation: Evolving with the Threat Landscape** Lobitcoin is not content to rest on its laurels. The platform continuously invests in the latest security technologies to stay ahead of emerging threats.
- Cutting-Edge Security Technologies** By integrating the latest advancements in cybersecurity, Lobitcoin ensures that its defenses remain robust and effective against new and sophisticated attack vectors.
- Continuous Improvement** Lobitcoin's security protocols are regularly reviewed and updated to incorporate new insights and technologies, ensuring that the platform remains at the forefront of cryptocurrency security.

Conclusion In the volatile and often unpredictable world

of cryptocurrency, security is not just a feature—it's the foundation of trust between a platform and its users. Lobitcoin exemplifies this principle through its comprehensive security measures, proactive threat monitoring, and unwavering commitment to transparency and innovation. By prioritizing the safety of its users, Lobitcoin allows traders to focus on their investments with confidence and peace of mind. Choose Lobitcoin today and experience a cryptocurrency trading platform where your security is paramount, ensuring that your journey in the digital asset landscape is both safe and prosperous. Cryptocurrency trading goes beyond a simple interface; it demands a suite of sophisticated tools and features to optimize strategies and maximize profitability. Exbitcoins distinguishes itself as a premier platform catering to seasoned traders by offering a comprehensive array of tools designed to enhance efficiency, precision, and overall trading success. Sophisticated Charting Solutions Technical analysis is pivotal to successful trading, and Exbitcoins delivers some of the most advanced charting tools in the market. Users can:

- Utilize a Broad Range of Indicators: From RSI and MACD to Bollinger Bands, Exbitcoins provides an extensive selection of technical indicators to support detailed market analysis.
- Customize Timeframes and Chart Types: Tailor your charts to match your specific trading strategies, whether you're focused on short-term movements or long-term trends.
- Overlay Multiple Charts: Compare different data sets and perform comparative analysis effortlessly, allowing for more informed decision-making. These features empower traders to make data-driven decisions, whether they're executing quick day trades or maintaining long-term positions.

Seamless API Integration for Automated Trading For those who rely on automated trading systems, Exbitcoins offers a robust API interface that facilitates:

- Custom Trading Bots: Develop and deploy trading bots that execute trades based on your predefined rules and strategies.
- Third-Party Tool Integration: Easily integrate with analytical tools and platforms to enhance real-time data analysis and trading performance.

- Streamlined Trading Processes: Automate repetitive trading tasks, reducing the need for constant manual input and allowing you to focus on strategy refinement. The well-documented API ensures that even developers new to the platform can implement and utilize these features with ease. Unmatched Liquidity and Speed High liquidity and rapid trade execution are essential for advanced trading, and Exbitcoins excels in both areas:

- Deep Liquidity Pools: Access extensive liquidity, minimizing slippage and ensuring that large orders are executed efficiently without significantly impacting market prices.
- Advanced Matching Algorithms: Benefit from cutting-edge algorithms that prioritize speed and accuracy, ensuring that your orders are filled promptly, even in volatile market conditions.

Comprehensive Risk Management Tools Effective risk management is crucial for preserving capital and maintaining sustainable trading practices. Exbitcoins offers a suite of tools designed to help traders stay in control:

- Stop-Loss Orders: Automatically sell an asset when it reaches a specified price to limit potential losses, protecting your investments from unexpected market downturns.
- Take-Profit Orders: Secure your gains by setting predefined price points at which your assets will be sold, ensuring that profits are locked in without the need for constant market monitoring.
- Real-Time Portfolio Tracking: Monitor your portfolio's performance in real-time, allowing you to make timely adjustments to your strategies based on current market conditions.

User-Centric Design and Customization Exbitcoins understands that every trader has unique needs and preferences. The platform's user-friendly interface is highly customizable, enabling you to:

- Tailor Your Dashboard: Customize the layout to display the tools and information that are most relevant to your trading style.
- Accessible Mobile App: Manage your trades on the go with Exbitcoins's mobile application, providing full functionality and real-time access to your account from anywhere in the world.

- Intuitive Navigation: Enjoy a seamless user experience with a clean and organized interface that makes navigating the platform effortless, regardless of your technical expertise. Why Choose Exbitcoins for Advanced Trading? Exbitcoins has established itself as a leading platform for professional cryptocurrency traders by focusing on efficiency, security, and customization. Here's why Exbitcoins should be your preferred choice:

- Enhanced Profitability: Leverage advanced charting tools and real-time data to make informed trading decisions that can significantly boost your profits.
- Time Efficiency: Automated trading and streamlined processes reduce the time spent on manual tasks, allowing you to focus on strategy development and execution.
- Robust Security: Trust in Exbitcoins's top-tier security measures, including two-factor authentication and cold storage solutions, to protect your assets and personal information.
- Comprehensive Support: Benefit from 24/7 customer support and a wealth of educational resources designed to help you navigate the complexities of cryptocurrency trading.

Conclusion In the competitive world of cryptocurrency trading, having access to advanced tools and a reliable platform is essential for success. Exbitcoins offers a powerful combination of sophisticated charting solutions, seamless API integration, unmatched liquidity, and comprehensive risk management tools, all within a user-centric and secure environment. Whether you're a seasoned professional or an ambitious trader looking to elevate your strategies, Exbitcoins provides the resources and support you need to trade with confidence and precision. The cryptocurrency market often mirrors Bitcoin's performance, with altcoins experiencing exponential growth during bull runs. If Bitcoin were to reach \$200,000—a milestone analysts have discussed for years—projects like Lightchain AI (LCAI) and Shiba Inu (SHIB) could see unprecedented price surges. Let's explore what the future might hold for these two high-potential cryptocurrencies in such a scenario. Lightchain AI Rising Star Poised for Massive Gains Lightchain AI, currently priced

at \$0.0045 in its presale, has already raised \$7.2 million, signaling immense early investor interest. If Bitcoin hits \$200,000, the broader bullish sentiment could propel LCAI into new price territories. Analysts suggest that Lightchain AI's focus on real-world utility and developer-friendly tools gives it a competitive edge over speculative tokens. Under these favorable conditions, LCAI could reach or even exceed \$1 by 2025, offering early investors staggering returns of up to 22,000%. This optimistic forecast hinges on Lightchain AI's ability to deliver on its roadmap, including the upcoming mainnet launch and industry-specific collaborations. The demand for blockchain-backed AI solutions is growing, and LCAI's ecosystem is well-positioned to capitalize on this trend. Shiba Inu Meme Coin with Room for Growth? Shiba Inu (SHIB), a liked meme coin, has a past of shocking the market with quick price jumps. Even with its silly start, SHIB has slowly grown, with things like the Shibarium Layer 2 answer and token burn ways meant to cut down supply. If Bitcoin gets to \$200,000, SHIB might use the big market excitement to get back in the limelight. With a price well under \$0.01, Shiba Inu could aim for 500% to 800% growth, hitting new levels in the meme coin world. But, not like Lightchain AI, SHIB's rise mostly relies on team spirit and not on usefulness or tech progress. Though SHIB stays a curious gamble, it might find it hard to match with plans that give strong uses and deals in the field. Bigger Picture Utility Versus Hype If Bitcoin's value skyrockets to \$200,000, both Lightchain AI and Shiba Inu stand to benefit from the resulting market optimism. However, their paths to success differ significantly. Lightchain AI, with its focus on scalable applications and real-world integration, caters to long-term investors seeking sustained growth. Shiba Inu, on the other hand, remains a community-driven asset, thriving on social media hype and retail interest. For investors, the decision lies in weighing the potential returns from a meme coin with a proven track record of viral success against a technologically ambitious project like Lightchain AI, which offers utility-driven growth. Both represent exciting opportunities in a bullish market, but Lightchain AI's focus on innovation and practicality may give it the edge in 2025 and beyond. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Satoshi Action Fund CEO predicts Bitcoin price to breach the \$150,000 mark in 2025. - Bitcoin year end price dip was due to large selloffs for tax purposes. Bitcoin started the new year with a slow recovery as its price witnessed around 2% rise in the last 24 hours. After plunging to around \$91K price range by the end of 2024, it has now entered the \$95K zone, reaffirming predictions behind the larger 2025 bull run. The after effect of the Bitcoin Halving event in 2024, combined with favorable market conditions such as US elections, Bitcoin price witnessed an unprecedented growth, particularly in December 2024. It eventually recorded the much-awaited \$100,000 milestone and eventually reached an ATH of over \$108,268 on Dec 17, 2024. Meanwhile, analysts and industry leaders are making predictions on Bitcoin reaching new all-time highs in the new year. The pro-crypto stance of US President Donald Trump and increasing global crypto adoption, along with rise of AI and crypto integration, RWAs, DePIN technologies are all leading to a positive market sentiment in 2025. Satoshi Action Fund CEO Predicts Bitcoin Price Could go Beyond \$150,000 in 2025 A lot of bitcoin was being sold before the end of the year for tax purposes. The year has ended. It is now 2025. I predict between now and August we go on a run to \$150,000 or higher. " Dennis Porter (@Dennis_Porter_) January 1, 2025 Satoshi Action Fund CEO Dennis Porter recently posted on X, stating his prediction of Bitcoin price to reach \$150,000 and beyond. While most of the long-term BTC holders sold the crypto for gains in December 2024, the year end tax benefits might also be another reason for a large sell-off. Keeping this section of investors in mind, the accumulation of BTC might increase in the new year. Dennis Porter predicts Bitcoin could go on a run to \$150,000 or higher from January to August 2025. Meanwhile, several other industry leaders are also making some price predictions for Bitcoin to reach \$200,000 in 2025. Bitcoin price could reach new all-time highs with large investments pouring in, increase in institutional adoption, and global countries exploring strategic Bitcoin reserves. Highlighted Crypto News Today:

- Bitcoin price has factored in a 2.01% increase in the last 24 hours. - The cryptocurrency's daily trading volume depicts a 28.30% dip as per CMC data. As the community celebrates the coming of the new year, the crypto market has begun to show signs of recovery. The overall market cap shows a 2.27% increase while trading volume has taken a modest plunge. Meanwhile, another new season of X/crypto drama has ensued with Elon Musk's recent endorsement of Keikus Maximus. Notably, the largest cryptocurrency, Bitcoin, has shown a price increase of 2.01% in the last 24 hours. In the morning hours of January 1, BTC was trading at a low of \$93,337 after which it began to climb upwards. The cryptocurrency progressed to the \$94K zone yet another time in the past week. While price consolidation seemed to be the next step, Bitcoin has surprised community members in the past hour. It has sustained the price surge and entered the \$95K zone. According to CMC data, Bitcoin was trading at \$95,573 at the time of writing. Meanwhile, market analyst Ali has marked a support level of \$88,000 for BTC to keep up with in order to combat bearish markets. However, he predicted that if Bitcoin's price falls below the above-mentioned support, it might retreat to the \$71K level. If #Bitcoin \$BTC falls below \$88,000, the next major support level lies at \$71,000, according to the MVRV Pricing Bands. pic.twitter.com/QdphZhrCt2 " Ali (@ali_charts) January 1, 2025 Zooming out, over the past week, the cryptocurrency still clocks in at a 2.79% price drop owing to the free fall from \$97,000 to the \$93,000 support levels. At the week's beginning, Bitcoin was trading at a price of \$98,364. Will Bitcoin Price Begin its Bull Run Soon? As we sought technical indicators to analyze Bitcoin's price action in the coming days, speculative results emerged. Firstly, Bitcoin's bull power indicator value stands at 3.00, while its bear power indicator value is -4.29, as per TradingView data. This reflects how the bears are still consistently overpowering. However, Bitcoin's current price is trading above its Hull Moving Average (HMA) suggesting a positive trend. Additionally, its RSI (48.72)

has shown a sharp spike in the past few hours and is inching closer to a neutral market sentiment. These indicators suggest BTC's potential for a bull run in the coming days. Finally, altcoins such as XRP and Ethereum have also shown price increases in the past day.

- Several community members have predicted bullish prices for Bitcoin in 2025. - The cryptocurrency fell to the \$93K zone in the last 24 hours as per CMC data. In 2024, the crypto market showed leaps and bounds of progress, particularly in Q3. Several key instances shaped up to be the realization of dreams for community members. Spearheading such an instance is Bitcoin's price historically reaching \$100K, propelled by specific external factors. While multitudes of advancements occurred BTC's \$100K stood out among the crowd. Naturally, this has led to higher expectations for Bitcoin's 2025 journey. With the New Year just days away, here is a detailed analysis of what we can expect for Bitcoin in 2025. The Million Dollar Question "Will BTC Cross \$200K? Bitcoin price predictions always flood the market at crucial times of the year. With its recent all-time high of \$108,268, which the digital asset hit 15 days ago, projections have been bouncing off from the \$100K mark. Leading analysts Ali (@ali_charts), having read charts and historical data, predict a bouncing of price to \$168,500, as shown by the Mayor Multiple Indicator. On the other hand, Ali posted a bearish forecast in the past week. He inferred that, based on other analysts, Bitcoin, if it gives in to current bears, could lead to a market crash that would cause it to fall to the \$60K zone. Analysts including Peter Brandt, ToneVays, and Thomas Lee expect a correction level of \$73,000 and \$70,000. '@ToneVays believes that #Bitcoin \$BTC trading below \$95,000 is "very, very bad" because it increases the probability of a correction to \$73,000! pic.twitter.com/SPLWYI6rit" Ali (@ali_charts) December 26, 2024 At the time of writing, Bitcoin had lost its crucial support at \$97,300 and was trading at the \$93K level as per CMC data. But for BTC to hit \$168K, it is required to maintain prices above the aforementioned support and possibly above \$100K. Although, with prices still safely closer to the \$100K such an occurrence still holds potential. If Bitcoin rebounds to \$168,500, then it would bring the \$200K yardstick a lot closer for 2025. What Do Prominent Figures Forecast For Bitcoin's Growth? In the past two months, particularly after the digital asset's significant rally, numerous prominent figures have commented on the asset. Michael Saylor, the founder of MicroStrategy has been extremely bullish on Bitcoin. His firm has been accumulating the token over the past year. In numerous instances, Saylor has predicted Bitcoin's exponential growth in the coming days. With pro-crypto regulations ensuing he also expects BTC to show significant growth in 2025. Additionally, Saylor also pitched to Microsoft to initiate a Bitcoin Strategic reserve that resulted in the latest ATH. Another prominent personality, Eric Trump, President-elect Donald Trump's son in a recent Conference predicted that Bitcoin could hit the \$1 million target. This would mean an advancement to the \$200K in 2025 a possible start for this journey. Similarly, Block's founder Jack Dorsey had predicted during H1 2024 that Bitcoin might hit \$1M by 2030. Other prominent figures who expect Bitcoin to grow significantly in the coming year would include, spearheaded by Donald Trump, Elon Musk, and Jim Cramer. Finally, El Salvador's president Nayib Bukele has also remained extremely optimistic towards Bitcoin. The government's pro-crypto stance has been observed previously, even before the recent rally. How is the Crypto Landscape Shaping Up for 2025 Bitcoin's \$200K Rally? When weighing the reasons for the cryptocurrency's recent rally, a shift in the organization namely the US elections peaks its tower above others. A pro-crypto US government and the resultant regulatory landscape have caused such a rally. This leads to speculations that with pro-crypto regulations already underway further price breakouts can be expected. Donald Trump had made several promises during his campaign, the chief of which was replacing SEC chair Gary Gensler. The election of a new regulatory leader "Paul Atkins has propelled positive notions within the market. Additionally, this transformation in the West has resulted in a huge influx of new investors globally. Singapore recently reported a hike in crypto investors that surpassed 15 million for the first time. Such instances, paving the way for mainstream crypto adoption do reflect on the prices of cryptocurrencies. This means that with such actions set to kickstart the year, Bitcoin price breakouts may not be very far-fetched despite current bearish trends. Furthermore, Bitcoin's growth could also lead to growth in the altcoin sector as well. Several key altcoins including Solana, XRP, and HBAR have hit new all-time highs confirming the AltSeason. Conclusion The recent paradigm shifts in the crypto market caused Bitcoin to rally significantly which in turn set off the next batch of pro-crypto actions. The year ending on such notes leads to optimistic expectations and speculation for 2025 and the growth in Bitcoin that would accompany it. Contending from the aforementioned reasons, Bitcoin's rally to \$200K doesn't seem impossible with market potentials depicting green signals. Although bearish periods might be accompanied, BTC could still show significant growth in 2025. Highlighted Crypto News Today: Ethereum Approaches Triangle Pattern Climax as Institutional Flows Turn Negative

Ever felt like the crypto market's a whirlwind, leaving you unsure where to invest? December 2024 is a pivotal time for crypto enthusiasts. With several projects reaching new milestones and expanding their real-world applications, choosing the best cryptos to buy in December 2024 has never been more crucial. Enter Qubetics (\$TICS), Tron, and Bitcoin Cash—three standout cryptocurrencies that offer unique opportunities for investors. Qubetics (\$TICS) is on fire with its record-breaking presale, Tron continues to dominate the decentralised app (dApp) space, and Bitcoin Cash is redefining digital payments. Let's explore what makes these projects shine and why they should be on your investment radar. Qubetics (\$TICS): Leading the Future of Blockchain with dVPN Qubetics (\$TICS) isn't just a new player—it's setting the standard for blockchain innovation. Currently in its 15th presale stage, Qubetics (\$TICS) has sold over 391 million \$TICS tokens to more than 12,600 holders, raising a staggering \$8.3 million. At just \$0.041 per token, it's an unmissable opportunity before the price jumps 10% this weekend. One of Qubetics (\$TICS)'s standout features is its decentralised VPN (dVPN). This tool addresses one of the biggest gaps in digital security—privacy. With rising concerns over centralised platforms collecting and misusing user data, dVPN offers a decentralised alternative. Imagine a journalist in a restricted country accessing global content without fear, or a business

safeguarding its sensitive transactions from prying eyes. Qubetics (\$TICS) isn't just about security, though. Its ROI potential is jaw-dropping. Analysts predict a \$1,000 investment today could yield \$6,302 if \$TICS reaches \$0.25 by the presale's end. At \$10 post-mainnet, that same investment could grow to \$291,078. And if \$TICS hits \$15, you're looking at \$437,117. By seamlessly combining innovative tech like dVPN with life-changing investment potential, Qubetics (\$TICS) stands out as the best crypto to buy in December 2024. Its focus on real-world applications bridges the gap between blockchain and everyday life, making it a game-changer for individuals and businesses alike.

Tron (\$TRX): The Backbone of Decentralised Applications Tron has firmly established itself as a leader in the blockchain ecosystem, particularly in the world of decentralised applications. Known for its speed, low transaction fees, and robust infrastructure, Tron has been a favourite among developers and investors. What makes \$TRX a standout is its ability to support high-throughput applications without compromising scalability. In 2024, Tron announced new partnerships with global gaming platforms, further solidifying its position as the go-to blockchain for dApps. Developers appreciate Tron's developer-friendly tools, and users love the seamless, near-instant transactions. Tron's commitment to decentralisation is its biggest strength. Unlike other blockchains that rely on centralised validators, Tron's Delegated Proof of Stake (DPoS) system ensures every stakeholder has a voice. This makes it ideal for applications requiring transparency and trust, like supply chain tracking or decentralised finance (DeFi) platforms. For investors, Tron offers steady growth and a proven track record. While it may not promise the same explosive ROI as Qubetics (\$TICS), its established market position and continued innovation make \$TRX one of the best cryptos to buy in December 2024.

Bitcoin Cash (\$BCH): Simplifying Digital Payments Bitcoin Cash has always been about usability. As a fork of Bitcoin, \$BCH was created to address Bitcoin's scalability issues, offering faster and cheaper transactions. In a world where digital payments are becoming the norm, Bitcoin Cash is carving its niche as a practical and efficient solution. 2024 has been a big year for \$BCH. With new merchant adoption programs and integration into global e-commerce platforms, Bitcoin Cash is becoming a favourite among businesses and consumers alike. Its ability to handle a higher number of transactions per second makes it ideal for everyday purchases, from a cup of coffee to an online shopping spree. One of Bitcoin Cash's unique advantages is its focus on accessibility. With \$BCH, users in regions with limited banking infrastructure can participate in the global economy. For instance, small business owners in developing countries can accept payments in Bitcoin Cash, avoiding the high fees and delays of traditional banking systems. For investors, Bitcoin Cash offers stability and real-world utility. While it may lack the high-risk, high-reward appeal of Qubetics (\$TICS), \$BCH remains a solid choice for those looking to diversify their portfolios with a practical and reliable cryptocurrency.

Why These Cryptos Are the Best Cryptos to Buy in December 2024 Each of these cryptocurrencies offers something unique. Qubetics (\$TICS) is redefining blockchain with its dVPN feature and massive ROI potential, making it a must-watch for investors seeking groundbreaking opportunities. Tron excels in the dApp space, catering to developers and users who value speed, scalability, and transparency. Bitcoin Cash continues to simplify digital payments, providing a practical solution for global commerce. These projects cater to different needs but share a common trait: they're shaping the future of blockchain technology. Whether you're a high-risk investor chasing exponential returns or someone looking for steady, long-term growth, these are the best cryptos to buy in December 2024.

Conclusion: Don't Wait, Invest Now The clock is ticking, and the opportunities these projects offer won't last forever. Qubetics (\$TICS)'s presale is in full swing, offering an incredible opportunity for early investors to secure tokens at an unbeatable price, with analysts predicting life-changing ROI. Tron and Bitcoin Cash continue to prove their worth as reliable, innovative players in the crypto market. Whether you're new to crypto or a seasoned investor, now's the time to take action. Secure your stake in these projects and position yourself for success in the rapidly growing blockchain space. - Bitcoin faces profit-taking pressure, dropping below key \$92K support. - Macroeconomic uncertainties and rising bond yields weigh on crypto market. Bitcoin (BTC) has entered a consolidation phase, raising questions about its trajectory as 2025 approaches. After reaching an all-time high of \$108,278 just two weeks ago, Bitcoin has experienced a sharp decline, now trading at \$91,800, down 1.8% in the past 24 hours and over 14% from its peak. The downturn comes amid weak U.S. macroeconomic data and profit-taking by long-term investors, who have cashed out over \$1.2 billion on a seven-day moving average. The Chicago PMI has hit its lowest reading since May, indicating economic slowdown fears, while the Federal Reserve's decision to pause rate cuts until March has further unsettled markets. Additionally, President-elect Donald Trump's upcoming inauguration and rising bond yields have added to the risk-off sentiment. Moreover, Bitcoin's struggles are mirrored across the cryptocurrency market. Ethereum (ETH) has dropped 0.7% to \$3,320, while Solana (SOL) has shown relative strength, with its SOL/BTC ratio rising 0.35%. And Crypto-related stocks have also felt the heat. MicroStrategy (MSTR) and Coinbase (COIN) fell 7% and 5.3%, respectively, while major mining firms like Marathon Digital (MARA) and Riot Platforms (RIOT) saw declines exceeding 7%.

How Will BTC Start Off The Year 2025? Despite the slump, some remain optimistic. Analysts point to historical trends following Bitcoin halving events, often seeing price rallies in subsequent years. However, technical indicators show potential downside risks, with Bitcoin forming a bearish head-and-shoulders pattern and testing key support levels around \$91,430. January is expected to be quiet, with market activity likely picking up in February. While challenges persist, factors such as increased institutional adoption and potential economic stimulus could provide a favorable backdrop for the Bitcoin recovery. For now, traders remain cautious, closely monitoring support and resistance levels, as Bitcoin's performance continues to

influence broader market sentiment.

- With an average price of \$97,837 per bitcoin, MicroStrategy purchased 2,138 BTC for \$209M. - For \$516 million, MicroStrategy bought 5,262 Bitcoins last week. The recent decline in Bitcoin's price has intensified investor anxiety on the future of the flagship cryptocurrency. Plus, the leading altcoins tend to mimic Bitcoin's price movements, so it added gasoline to the fire of conjecture about the future of the whole crypto market. Nonetheless, Matrixport has pointed to BTC's historical tendencies and other variables to suggest a possible breakthrough for the New Year, even if the price has lately dropped. With this latest acquisition, MicroStrategy's total Bitcoin holdings reach 446,400. Eight Bitcoin acquisitions in as many weeks have been made by the same corporation. Banking on Bitcoin With an average price of \$97,837 per bitcoin, MicroStrategy purchased 2,138 BTC for \$209 million, according to a press release. As for the business itself, it has a Bitcoin yield of 47.8% for the quarter and 74.1% for the year thus far. Moreover, with an average price of \$62,428 per bitcoin, the software business purchased 446,400 BTC for \$27.9 billion. For \$516 million, MicroStrategy bought 5,262 Bitcoins last week. The acquisition of billions of BTC at the beginning of November started this Bitcoin buying streak. There are no indications that the software company will soon relinquish its position as the public company with the largest Bitcoin holdings. On the contrary, it is said to be planning to convene a shareholders meeting to decide on purchasing more Bitcoin. In the meantime, this latest Bitcoin acquisition had little effect on MicroStrategy's stock price. According to Nasdaq statistics, the stock price of MSTR is now trading at about \$315, a decrease of more than 4%. Nevertheless, the software company's involvement with Bitcoin has contributed to the stock's continued increase since the beginning of the year. According to MarketWatch, the stock is up more than 400% year-to-date. Highlighted Crypto News Today:

- Christian Lindner urges the ECB and Bundesbank to add Bitcoin to reserves. - Germany joins Hong Kong, Poland, and Japan in exploring Bitcoin reserves. Christian Lindner, Germany's former finance minister, has urged the European Central Bank (ECB) and the Bundesbank to adopt Bitcoin in their reserves. He praised the U.S. administration's crypto policies under Donald Trump, calling them "progressive" and forward-thinking. Lindner emphasized that Europe should avoid lagging in the global shift toward digital assets. In a parliamentary meeting, Lindner highlighted the rising importance of cryptocurrencies like Bitcoin. He argued that crypto assets now contribute significantly to global prosperity. According to him, incorporating Bitcoin into central bank reserves would strengthen Germany's economic resilience. Europe Looks to Catch Up with U.S. Lindner pointed to the United States' strides in crypto adoption. Recent discussions in Washington include adding crypto assets to the Federal Reserve's reserves. Lindner believes Germany and Europe must keep pace with these developments. The former minister also backed a European Parliament proposal for a "Bitcoin Strategic Reserve." Earlier this month, a European MP lauded El Salvador's Bitcoin investments and called for Europe to develop a similar strategy. Meanwhile, Lindner stressed the ECB and Bundesbank's independence in decision-making but urged proactive measures to adopt Bitcoin. Germany's Bitcoin Debate Gains Momentum The debate over Bitcoin adoption in Germany has grown this year. In July, lawmaker Joana Cota urged the government to hold Bitcoin as a "strategic reserve currency." She criticized the ongoing sale of Bitcoin holdings as counterproductive. Cota proposed alternatives like Bitcoin treasury holdings and issuing Bitcoin bonds. Despite the risks of Bitcoin's volatility, Lindner believes the decentralized nature of crypto mitigates political risks. He suggested measured investments to diversify Germany's reserves. The idea of national Bitcoin reserves is spreading globally. Hong Kong, Poland, and Japan are also exploring the concept. In Hong Kong, lawmakers proposed integrating Bitcoin into the Exchange Fund to strengthen financial security. The U.S. and Europe's Bitcoin moves could set the stage for broader adoption worldwide. Highlighted Crypto News Today South Korea Postpones Decision on Corporate Crypto Investment Ban to 2025

The fast ascent of Bitcoin has captivated the community, causing debates about the next major prospect. Among the voices is the investor who famously predicted Bitcoin reaching \$100,000 when trading under \$100. The focus now is on Rexas Finance (RXS) and Algorand (ALGO) as their following up-and-coming candidates. Both coins are positioned for fantastic expansion and bring transforming technologies to decentralized finance (DeFi). Rexas Finance (RXS): Redefining DeFi and Real Estate One unique blockchain platform that aims to transform DeFi and real estate via tokenization is Rexas Finance (RXS). Rexas Finance uses state-of-the-art technologies to enable the flawless tokenization of actual assets, including real estate. Once only available through conventional methods, consumers can obtain rapid, transparent, safe financial services. Rexas Finance presale valued RXS at merely \$0.030 at the first stage. Rising by 485% to \$0.175, the presale has progressed to stage 11; the token's value has skyrocketed; early investors have witnessed a remarkable 6x return on investment (ROI). Selling more than 381.2 million RXS tokens "a fantastic accomplishment for a presale campaign" the project has already raised over \$33.3 million. The community-driven approach of the project and its artistic aspects have attracted institutional and personal investors, creating demand and bolstering projections of RXS's future price. The expected tokenomics of Rexas Finance gives sustainability prioritized reach top importance. The initiative has set aside 42.5% to support the local community. Furthermore, 22.5% set for a staking pool has been promised its dedication and involvement in creating the ecosystem. The 15% set aside for liquidity controls market volatility and helps operations to be smooth. The 10% from smoothly is a safety net for the subsequent growth. The balance divides team operations, marketing plans, alliances, and promotions. Rexas Finance is positioned to gain from the \$486 trillion worldwide financial asset market, which includes real estate, commodities, and financial assets. Its ability as an ETH-based coin adds even more appeal and helps RXS position itself for a possible 10,000% surge following launch. Algorand (ALGO): The Scalable Blockchain for Real-World Applications Algorand is a distributed, self-sustaining blockchain system offering quick, scalable, safe solutions for pragmatic needs. It was designed to solve the slow transaction rates and expensive

fees of past blockchains like Bitcoin. Algorand presents a pure proof-of-stake (PoS) system that guarantees strong security and decentralization while negating the necessity for energy-intensive mining. Algorand's live price as of writing is \$0.39, making it a reasonable investment for those wishing to diversify their portfolios with a beneficial utility-based cryptocurrency. Reliable performance guarantees and low transaction costs help create new trust-based systems, opening the path for creative ideas in supply chains, banking, and other sectors. Algorand distinguishes itself from rivals with its emphasis on sustainability and economy. It is perfect for companies and developers looking for consistent blockchain infrastructure because it offers near-instant transaction finality and scalable support computations. As the need for scalable blockchain solutions increases, Algorand is positioned to become a pillar of the decentralized economy. The investor who precisely predicted the success of Bitcoin's successor utility, scalability, and timing in selecting winning cryptocurrencies. Rexas Finance and Algorand both have the traits required for success in a growingly competitive market. The presale success of Rexas Finance presale success and tokenization present a special chance for investors to have a mix of innovation and development possibilities. Algorand is a dependable solution for anyone wishing to invest in basic blockchain technologies because of its scalability and environmental conscience. Conclusion The investor who precisely predicted the success of Bitcoin's successor utility, scalability, and timing selected Rexas Finance and Algorand because they have the traits required to succeed in a growing market. The success of the Rexas Finance presale presents a unique chance for investors to see a mix of innovation and development possibilities. Algorand is a dependable solution for anyone wishing to invest in essential blockchain technologies because of its scalability and environmental conscience. These two cryptocurrencies stand out as interesting choices for anybody hoping to profit from the next big wave in digital assets as the cryptocurrency market develops. With the support of a seasoned crypto visionary, Rexas Finance and Algorand might turn into the following major success stories in the crypto space. - Bitcoin's market cap stands at \$1.85T, with \$34.56B in 24-hour trading volume. - Breaching \$92K could lead to further declines, while \$98K remains a critical resistance. Bitcoin's price dipped below \$94,000, currently trading at \$93,834.39. The cryptocurrency faced a sharp decline from its all-time high of \$108,364 on December 17 to \$92,118, signalling strong selling pressure in recent days. The market remains volatile as traders react to heightened market uncertainty. The market cap of bitcoin has dropped to \$1.85 trillion, down 1.27% in the last 24 hours. The trading volume surged to \$34.56 billion, reflecting a 49.45% increase. Its fully diluted valuation (FDV) is \$1.96 trillion, with a 1.86% market cap ratio. Bitcoin's total supply remains at 19.8 million BTC, approaching the maximum limit of 21 million BTC. Technical Indicators Signal Weak Momentum Bitcoin's current resistance levels are \$98,630 and \$99,300. If the price breaks above these levels, it could test the \$105,000 mark. However, on the downside, support levels lie at \$93,240 and \$92,000. A sustained break below \$92,000 might push the price downward, possibly toward \$90,000 or lower. The Relative Strength Index (RSI) currently reads 43.85, which indicates neutral-to-weak momentum. The 14-day RSI average is 49.54, reflecting limited buying interest. These levels suggest that Bitcoin is not yet oversold but remains far from a strong bullish trend. Moving averages provide additional bearish signals. The 9-day moving average stands at \$95,693.61, while the 21-day moving average is higher at \$98,629.94. The bearish crossover between these averages suggests ongoing downward pressure. The market cap ratio of 1.86% indicates significant trading activity relative to the overall market cap, hinting at heightened market participation amid the recent price drops. Traders should monitor these indicators closely for any signs of reversal. Breaching critical resistance levels above \$98,000 could reignite bullish momentum. However, failure to hold above \$93,000 may result in further losses. Traders should watch RSI levels, moving average crossovers, and trading volumes to gauge the market's next direction. Highlighted Crypto News Today MakerDAO Records All-Time High Fees and Revenue in December

- El Salvador's Bitcoin reserve surpasses 6,000 BTC, valued at \$569.3 million. - The country ranks sixth globally in Bitcoin holdings, trailing only major nations like the US and China. El Salvador has achieved a significant milestone, surpassing 6,000 Bitcoin (BTC) in its national reserves. On December 29, the country added one more Bitcoin, bringing its total holdings to 6,000.77 BTC, valued at \$569.3 million, according to the National Bitcoin Office portfolio tracker. This marks a 108.02% growth in El Salvador's Bitcoin investment. The government purchased these holdings at an average price of \$45,450 per coin. President Nayib Bukele initiated this journey in September 2021, making Bitcoin legal tender and acquiring the first 200 BTC. Currently, El Salvador holds the sixth-largest Bitcoin reserves among nations. It trails behind the United States, China, the United Kingdom, Ukraine, and Bhutan. The country's consistent Bitcoin purchases highlight its commitment to digital currency adoption. El Salvador Sticks to Bitcoin Strategy Despite international criticism, including from the IMF, El Salvador remains steadfast in its Bitcoin strategy. Stacy Herbert, Director of the National Bitcoin Office, suggested on December 19 that Bitcoin acquisitions could accelerate. The government has also clarified it will not sell its Bitcoin holdings. The Chivo wallet, the country's official Bitcoin wallet, will be phased out or sold. Private-sector wallets will replace it, ensuring seamless Bitcoin transactions for citizens. Meanwhile, the government's \$1.4 billion deal with the IMF is still pending approval, with negotiations complicated by Bitcoin-related policies. Other countries are exploring similar Bitcoin reserve strategies. Ohio, Texas, and Pennsylvania have proposed adding Bitcoin to state reserves, reflecting its potential as an economic hedge. On the corporate front,

companies like MicroStrategy and MARA Holdings continue expanding their Bitcoin portfolios. Highlighted Crypto News Today Can Ethereum (ETH) Maintain Its Bullish Momentum?

- Bitcoin price is \$94,952.42, with a market cap of \$1.88T and 0.38% daily growth. - RSI is at 45.82, signalling mild bearish momentum below its 14-day average of 51.58. The current price of Bitcoin (BTC) stands at \$94,952.42, reflecting a 0.38% increase over the last 24 hours. Bitcoin's market cap has surged to \$1.88 trillion, accounting for 52.17% of the total crypto market dominance. The 24-hour trading volume of Bitcoin is \$23.26 billion, indicating a 1.23% volume-to-market-cap ratio. The fully diluted valuation (FDV) of Bitcoin is \$1.99 trillion, with a circulating supply of 19.8 million BTC out of a total maximum supply of 21 million BTC. The global crypto market cap has reached \$3.33 trillion, with a 0.90% increase in the past day. However, the overall crypto trading volume has dropped by 34.93%, to \$81.23 billion over the last 24 hours. Technical Indicators for BTC Bitcoin's daily chart shows that the cryptocurrency is currently consolidating at nearly \$95,000. The immediate resistance is \$96,000, while the support level is \$94,000. A break above the resistance could push the price toward the \$98,000 mark. Conversely, a breakdown below \$94,000 might lead to a decline toward \$92,000. The Relative Strength Index (RSI) is at 45.82, indicating neutral momentum. The RSI's moving average, at 51.58, suggests mild bearish pressure in the short term. However, the RSI has room to rise if buying interest increases. The Chaikin Money Flow (CMF), at 0.02, signals slightly positive buying pressure. This shows that Bitcoin is attracting moderate inflows despite the recent decline in trading volume. A stronger CMF reading could further confirm a bullish sentiment. The moving averages provide additional insights. The 50-day moving average is slightly above the current price, acting as immediate resistance. The 200-day moving average remains below the price, confirming a long-term bullish trend. No significant moving average crossover has occurred, indicating indecision among traders. Bitcoin's price remains in a consolidation phase, with critical resistance at \$96,000 and support at \$94,000. Technical indicators suggest mixed momentum. A breakout above resistance could spark a rally toward \$98,000, while a breakdown might trigger a drop to \$92,000. Highlighted Crypto News Today Will ETP Launch of FLOKI Propel Its Price to Uncharted Territory?

- Bitcoin nears oversold territory; potential retracement to \$60K predicted. - Mixed indicators suggest an uncertain trajectory; whales signal cautious market optimism. Bitcoin [BTC], the leading cryptocurrency, has grappled with bearish market conditions over the past week. Trading at \$94,805, BTC has declined by 2% in the past 24 hours, trading volumes surged by 6%. Over the last seven days, Bitcoin has shed 4% of its value, following its recent drop below the critical \$92,200 support level eight days ago. Notably, BTC is currently 13% lower than its all-time high of \$108,268, achieved just 11 days prior. The daily Relative Strength Index (RSI) stands at 44, signaling that BTC is nearing an oversold state. Analysts have noted the possibility of further declines, with some projecting a potential retracement toward the \$60,000 mark. A prominent crypto analyst highlighted on-chain data suggesting open air below \$93,806, potentially paving the way for a drop to \$70,085. Moreover, Peter Brandt, a seasoned chart analyst, identified the formation of a broadening triangle pattern that could lead to a breakdown, reinforcing predictions of a correction to \$70,000. Additionally, the Pi Cycle Top indicator places Bitcoin's market bottom at \$78,000, with a potential market top near \$132,000. Can Traders Still Trust Bitcoin Bulls? Despite the prevailing bearish sentiment, there are hints of bullish activity. The Chaikin Money Flow (CMF) metric showed a slight uptick, indicating increased buying pressure. Meanwhile, the TD Sequential indicator on the hourly chart flashed a buy signal, hinting at a potential rebound. Market sentiment remains neutral, as per the Fear and Greed Index, leaving room for BTC to move in either direction. Adding to the mixed outlook, Santiment reported that Bitcoin whales are depositing stablecoins into exchanges, a potential indicator of market confidence. While Bitcoin's near-term trajectory remains uncertain, traders and investors continue to monitor key support levels and market dynamics for signs of a reversal or further decline. Disclaimer: This article does not constitute financial advice. Readers are encouraged to conduct thorough research before making investment decisions. Highlighted News Of The Day Volatility Shares Moves Toward Solana Futures ETF Amid Spot ETF Talk

Cryptocurrencies are making waves as 2024 wraps up, with Bitcoin (BTC) trading close to \$95,000 after a recent pullback of nearly 5%. Despite the dip, analysts predict that BTC remains strong as we head into 2025. On another front, Monero (XMR) is generating buzz for its robust privacy features and price momentum, fueling speculation that it could outpace Ethereum in the race to the moon. These updates highlight why Bitcoin and Monero are capturing investor interest as potential top cryptos for the upcoming year. Amid these developments, Qubetics (\$TICS) is emerging as a must-watch altcoin. Unlike its predecessors, Qubetics is designed to bridge the gap between blockchain technology and everyday life, offering practical solutions for businesses and individuals. Let's dive into how these three coins are shaping up as the best cryptos to buy this week before 2025. Qubetics (\$TICS): Transforming How We Use Crypto Qubetics is more than just a cryptocurrency—it's a game-changer for simplifying crypto transactions. Imagine a world where freelancers receive payments in crypto without worrying about market volatility or where businesses seamlessly integrate digital assets into their daily operations. That's the vision behind Qubetics. Its non-custodial multi-chain wallet is a standout feature, integrating with Apple Pay and Google Pay to make crypto payments as easy as using your debit card. Another revolutionary feature is its smart contract conversion mechanism, which converts digital assets into fiat at the point of sale. This protects users from market swings and ensures a stable, secure transaction every time. The recent partnership with SWIFT Blockchain elevates Qubetics to new heights. This collaboration brings cross-chain functionality and advanced security protocols, enabling users to manage a wide range of assets with speed and peace of mind. Whether you're an investor or a newcomer, Qubetics offers a user-friendly experience designed for the modern era. As for the numbers, the Qubetics presale is in its 14th stage, with over 379 million tokens sold to more than 12,100 holders, raising \$7.9 million. At \$0.0377 per token, this is your chance to get in before a 10% price

increase in the 15th stage this weekend. If you're hunting for the best cryptos to buy this week before 2025, Qubetics deserves your attention. Bitcoin (BTC): Approaching \$95K and Beyond Bitcoin continues to dominate the crypto market, proving it's still the king. Trading near \$95,000 after a slight 5% pullback, BTC remains the go-to cryptocurrency for investors looking for stability and growth. Analysts suggest this correction is just a breather before the next leg up, potentially pushing BTC toward six figures in early 2025. What's driving Bitcoin's resilience? For starters, institutional adoption is at an all-time high, with major players entering the market. Additionally, the upcoming Bitcoin halving event in 2025 is fueling anticipation of reduced supply and increased demand, which historically leads to price surges. If you've been on the fence about Bitcoin, now might be the time to consider adding it to your portfolio. Despite its high price point, BTC's potential to reach new highs makes it one of the best cryptos to buy this week before 2025. Monero (XMR): Privacy and Performance Monero is carving out a niche as the go-to cryptocurrency for privacy. In a world where data breaches and surveillance are growing concerns, Monero's ability to offer fully anonymous transactions is more relevant than ever. Recent price action has shown strength, with XMR trading around \$175-\$180 and analysts predicting a breakout to \$220 if momentum continues. This puts Monero in a strong position compared to competitors like Ethereum, especially among users and developers prioritizing privacy. Monero isn't just a coin—it's a movement against the growing encroachment on financial freedom. Its adoption among privacy-conscious users and its robust blockchain technology make it a strong contender for the best cryptos to buy this week before 2025. Final Thoughts As the crypto market evolves, Qubetics (\$TICS), Bitcoin (BTC), and Monero (XMR) are proving why they're top contenders for your portfolio. Qubetics is revolutionizing crypto usability with its innovative wallet and strategic partnership with SWFT Blockchain. Bitcoin remains a stalwart, pushing toward new all-time highs as institutional adoption grows. Meanwhile, Monero is carving its path as the ultimate privacy coin, offering unparalleled anonymity and potential for price growth. Based on the latest research, we recommend considering Qubetics (\$TICS), Bitcoin (BTC), and Monero (XMR) as the best cryptos to buy this week before 2025. Don't miss out on these promising opportunities as the market gears up for an exciting year ahead! - Bitwise CEO Hunter Horsley predicts 2025 will be a significant year for corporate Bitcoin adoption. - Bitwise is launching an ETF focused on companies holding over 1,000 BTC, with weightings based on Bitcoin reserves. - Although only 22 companies currently hold 1,000 BTC or more, many CFOs are still cautious about Bitcoin. Hunter Horsley, the CEO of Bitwise, revealed a brighter outlook for adopting corporate Bitcoin, and he believes that 2025 will be a turning point. Bitwise Bitcoin ETF Plan While posting on social media lately, Horsley said, "It feels like 2025 will be a big year for new corporates adopting the Bitcoin Standard." His words, especially since the publication of Bitwise's draft for an ETF to track companies with a decent amount of bitcoin reserve. The proposed ETF is called the Bitwise Bitcoin Standard Corporations ETF. It focuses on companies with more than 1,000 BTC in their corporate treasuries. This is different from a traditional ETF. Where the weightings of this fund would be determined by how much market capitalization the company holds. But these ETFs are determined by how much Bitcoin the company owns. "This strategy aims to depict companies embracing Bitcoin as part of its financial policy," Horsley explained. Companies being considered should pass very specific requirements. According to the December 26 filing, the market cap of \$100 million. And a minimum average liquidity of more than \$1 million a day. MicroStrategy Leads the Way Thus, the corporate adoption of Bitcoin is still in infancy. Since only 22 companies around the world own 1,000 or more BTC. MicroStrategy, led by the visionary Michael Saylor. However, still ahead of the pack with more than 444,000 BTC in its treasury. Its aggressive acquisition of Bitcoin using its treasury has seen its MSTR stocks go to unbelievable levels, with it gaining over 2,200% since adopting the asset as a treasury value. Tesla's purchase of a large amount of Bitcoin in 2021 was widely expected to translate into corporate adoption. Well, the anticipated trend materialized. Also companies such as Microsoft are rejected proposals to explore Bitcoin investments. By survey, most CFOs remain reluctant to consider a scenario in which Bitcoin qualifies as a store of value for capital. This stuff works," Horsley insists despite such challenges. "The groundwork is being laid, and 2025 could very well be the year we see broader acceptance of Bitcoin as a treasury asset." This optimism shares the more general market dynamics, such as growing interest in Bitcoin from institutions. Other firms are looking into Bitcoin-related financial products besides Bitwise. For example, Strive Asset Management has just filed to establish a Bitcoin Bond ETF that invests in convertible securities tied to Bitcoin purchases. While the road to corporate adoption remains uncertain. Horsley's prophecy casts light on the possibility of a paradigm shift. Whether through regulatory clarity, market dynamics, or growing confidence in Bitcoin as a store of value, 2025 is the year for Bitcoin in the corporate space. Highlighted Crypto News Today Shiba Inu Analyst Maintains Bullish Outlook for SHIB Despite Weekly Decline

Saudi billionaires are ramping up their investments in the crypto space, pouring millions into DTX Exchange (DTX) during its \$10.5M presale. This surge of investment underscores growing confidence in DTX's innovative approach to decentralized trading. Meanwhile, the crypto market is nearing a critical moment, with Bitcoin hovering just below the \$100K mark—a level that could trigger a massive breakout. Adding to the excitement, speculation about the approval of an XRP-based ETF is driving optimism across the altcoin market. Analysts suggest this regulatory breakthrough could catapult XRP to new highs, solidifying its dominance in the space Bitcoin's Price: \$100K Resistance Under Threat Bitcoin's price hovers just below \$100,000, a psychological barrier that it has

struggled to sustain in recent weeks. With Bitcoin's reserves falling to January levels and institutional buyers resuming accumulation, many experts anticipate a strong rally in the coming months. Historical data reveals that Bitcoin surged 90% within two months after reserves last hit these levels in January. Should this pattern repeat, Bitcoin could hit \$187,500 in early 2025. However, short-term volatility looms as Bitcoin faces a \$14.27B options expiry on Dec. 27. The largest open interest is concentrated around the \$90,000 strike price, potentially sparking market turbulence. Bitcoin's current retracement below \$100K is largely attributed to holiday illiquidity, but the options expiry could amplify price swings," said Ryan Lee, chief analyst at Bitget Research. XRP ETF Approval: A Game-Changer? Adding to the market excitement, speculation around the approval of an XRP-based ETF has intensified following XRP's recent legal wins and Ripple's continued expansion. Market analyst EGRAG Crypto predicts a surge in XRP's market cap dominance to 21.5%, which could push its price to \$27.2 if the total crypto market cap hits \$7.25 trillion. Key reasons for this bullish outlook include XRP's lower market cap, which makes it more responsive during bull cycles, and the Visible Range Volume Profile (VRVP) indicating minimal resistance at higher levels. XRP's dominance could climb rapidly, especially with institutional support driving the broader crypto market toward ETFs," EGRAG noted. DTX Exchange: The Next Big Thing in DeFi? DTX Exchange is making waves in the DeFi space, attracting attention from Saudi billionaires who have contributed significantly to its \$10.5M presale. The platform's unique hybrid Layer-1 blockchain combines speed, scalability, and security, setting a new benchmark in decentralized trading. This massive backing signals a strong vote of confidence in DTX's ability to disrupt traditional trading systems. The platform's distributed liquidity pools, which aggregate liquidity from multiple sources to minimize slippage, have been hailed as a game-changer for traders and investors alike. Analysts project a potential 550% price surge for DTX, with predictions of a 33x rally as the project gains momentum. Its ambitious roadmap and real-world use cases position DTX as a frontrunner in reshaping the DeFi sector. Investors are not just betting on a token but on a technology poised to lead the next phase of blockchain evolution. What Lies Ahead? The crypto market remains on edge as major catalysts, including Bitcoin's price breakout, DTX's growth trajectory, and XRP's ETF approval, converge. While profit-taking may introduce short-term volatility, the overarching sentiment points to a bullish 2025. Investors are watching closely as DTX, Bitcoin, and XRP emerge as key players poised to define the next phase of crypto adoption. To know more about the DTX Exchange ecosystem, visit: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. - Bitwise files to launch the Bitcoin Standard Corporations ETF, targeting companies with significant Bitcoin reserves. - To be included in the ETF, companies must hold at least 1K BTC, with a market cap of \$100M and daily liquidity of \$1M. Bitwise Asset Management is making waves with its latest proposal: an Exchange-Traded Fund (ETF) focused on companies embracing Bitcoin in a big way. The new fund, named the "Bitwise Bitcoin Standard Corporations ETF," aims to offer investors exposure to firms that have adopted the "Bitcoin standard" by holding significant BTC reserves. Bitwise files for Bitcoin Standard Corporations ETF | "Nate Geraci (@NateGeraci) December 26, 2024 Would own stocks of companies that have adopted the "bitcoin standard", which they define as holding at least 1,000 btc in corporate treasury. The btc treasury operations virus is spreading. pic.twitter.com/me0XXX9a6g According to a filing submitted on December 26, the ETF will include publicly traded companies with at least 1,000 Bitcoin in their treasuries. However, the requirements don't stop there"eligible companies must hold a market cap of over \$100 million. Also, they must have daily trading liquidity of at least \$1 million. Additionally, less than 10% of their stock should be privately held. Bitwise's Unique ETF Strategy and Corporate Bitcoin Adoption What sets this ETF apart is its weighting methodology. Instead of relying on company size, the fund focuses on the market value of each firm's Bitcoin holdings, with a maximum weight cap of 25% per stock. This means that smaller companies like MicroStrategy, with their massive 444,262 BTC stash, could outweigh giants like Tesla, which holds 9,720 BTC despite its huge market cap. This announcement comes at a time when corporate Bitcoin adoption is gaining momentum. For instance, KULR Technology Group recently invested \$21 million in Bitcoin, allocating up to 90% of its excess cash into the cryptocurrency. Bitwise's move also coincides with a similar ETF filing by Strive, which plans to offer exposure to convertible bonds tied to major Bitcoin-holding firms like MicroStrategy. As corporate interest in the cryptocurrency continues to grow and more firms bet on its long-term potential, Bitcoin hit an all-time high above \$108K in mid-December. Currently, BTC is priced at \$96K and holds a market cap of \$1.9 trillion. Highlighted Crypto News Today: Bitget Announced Merger of Bitget Wallet Token (BWB) and Bitget Token (BGB)

Analysts have highlighted Bitcoin and Solana as key projects to monitor, with 1Fuel emerging as a potential windfall opportunity that could deliver massive profits to investors. The 1Fuel token is currently on presale and has a higher propensity to yield larger returns than Bitcoin and Solana. The token is currently undervalued but could increase by more than 800% in Q1. 1Fuel gets experts' nod as a good crypto buy Crypto experts are quite positive about 1Fuel's prospects, as the new token keeps impressing on presale. They believe it's a good crypto buy and could greatly reward investors. 1Fuel sold out its first presale stage faster than expected, and the second stage is over 50% complete already. This shows its high adoption from top market players. Observers credit 1Fuel's growing adoption to its tangible utility, predicting significant expansion ahead. Missing out on the early adoption advantages could result in diminished profitability. This makes it smart to be a part of the project now. The crypto project has undergone necessary audits to ensure safety and reliability. Hence, 1Fuel is a safe haven for investors. Beyond that, 1Fuel is bringing never-before-seen features and functions to DeFi, making it a groundbreaking innovation in the crypto landscape. 1Fuel users will

enjoy DeFi delights, as the crypto solution will provide them with a better experience and efficiency. The new project will ease transaction stress, ensuring a simpler and faster process. It will also enable users to enjoy lower trading fees, better security, and utmost privacy. This positions it for mass adoption, making it a great investment. Bitcoin is set for an impressive recovery in the new year as Bitcoin has had a successful year, according to many metrics. The top cryptocurrency finally reached the \$100k price zone, setting a \$108,268.45 all-time high. However, Bitcoin is currently affected by the market's downtrend. The crypto coin fell about 10% below its all-time high after failing to climb up to \$110k. Bitcoin trades at \$98k at press time while currently battling the resistance at \$100k. It's expected to breakout above the nearest resistance point soon and attempt to reach \$120k by Q2. Analysts believe major market factors are still in Bitcoin's favor. Hence, Bitcoin is likely to recover soon. Crypto whales could earn big from Bitcoin next year, making it another top crypto project to watch in 2025. Solana price forecast: Can Solana overcome price woe in 2025? Solana has dropped momentarily below \$200. The altcoin is facing serious downward pressure between \$198 and \$200, but its support levels are still holding firm. However, to keep sentiment bullish, Solana will need more than price consolidation. The altcoin will have to reverse its bearish run after dipping by over 17.26% in the last month. The Solana chart is showing signs of a gradual price uptick, indicating a possible rally soon. Solana ETF approval and general market recovery may contribute to this rally. Analysts predict a positive price action soon, making Solana a top crypto project to watch in 2025. Conclusion Bitcoin and Solana eyes a positive start to 2025 and an impressive run throughout the year. 1Fuel is another good crypto to buy, according to investors, making them great projects to watch in the new year. To Learn More about 1Fuel, visit: - Presale: <https://www.1fuel.io/> - Telegram: https://t.me/Portal_1Fuel - X: https://x.com/1fuel_?s=21 Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. This has been a rollercoaster of a year. Between world events, politics, financial markets, and technology advances, it has honestly been hard to keep up with it all. Amazing feats have been accomplished, and terrible tragedies have occurred. And through it all, the financial markets have responded, reacted, and essentially reflected what has happened. The traditional markets have spiked and dipped accordingly, but no market has had nearly as much attention as Bitcoin. This digital currency is a unicorn in its own right, showing the world that for the first time, money does not need a government to back it to hold value, be stable, and stimulate trade. This period will mark a bright spot in the history books as the moment currency showed that it could stand on its own, with blockchain as the technology to make that possible. If blockchain can guarantee the validity of digital currency, can guarantee ownership, and can safely move it from wallet to wallet, then there is no reason it can't be as strong as any other currency across the globe. More so, its borderless nature allows it the freedom to move unencumbered, creating new and exciting opportunities that we are still working to discover. Its recent spike toward 100k is just the latest show of confidence for Bitcoin, indicating that we are ready to expand beyond the traditional (and often restrictive) currency model. While this is revolutionary in its own right, what is fascinating about Bitcoin is what it can do beyond a traditional currency role. Being a digital currency is nice, but using the power of that currency can yield some very interesting results. Specifically, Bitcoin can use its power and that of the blockchain that holds it to leverage entire ecosystems. Let's dive in and see how Bitcoin is evolving beyond a simple currency, showing how in general the blockchain has massive potential, and with specific cases such as SatLayer, it can create entirely new business models. Bitcoin: The Waking Giant An interesting behavior of the larger blockchain industry has been the creative growth just about everywhere except Bitcoin. Ethereum has created a massive ecosystem of L2 chains, dApps, tokens, and markets. There are many millions of people across the globe using blockchain every day, for activities like staking, token-as-ownership proof, the security and validation of data, and the creation of decentralized communities with shared visions. Many other L1 chains have built up their ecosystems, each with countless uses from the trivial to holding billions in value. The point is, that we as a society continue to develop ways to leverage the unique traits of blockchain, and digital currency as well, to accomplish new tasks and solve previously impossible problems. Just looking at the advances in Multi-Party Computing (MPC) have revolutionized what we can accomplish with people we don't know or trust, generating verifiable results, without having to give up personal information. Why hasn't Bitcoin evolved the same way? After all, its value has been by far the highest of all cryptocurrencies, and the stability of the Bitcoin chain is unparalleled. Part of the issue is Bitcoin's Proof of Work (PoW) consensus, which moves slowly and does not scale. It's meant for security, not speed or capacity. However, we are finally seeing movement in the Bitcoin ecosystem thanks to several platforms establishing L2s on the Bitcoin chain. This unlocks speed, and scalability, and allows full ecosystems to be established. The true benefit of this is that they can essentially access the massive value that is Bitcoin, which works to secure these ecosystems through staking, rewarding, and creating liquidity. One of the strongest examples of this new leveraging of Bitcoin is the Bitcoin Validated Service (BVS), a model that takes key lessons from the larger blockchain ecosystem and applies them to the enormous untapped value of Bitcoin. This architecture is especially interesting because it can solve two major challenges that occur in blockchain platforms. First, as it builds up a collection of individuals who want to stake their Bitcoin to the platform for rewards, this allows new dApps that are building on the SatLayer service (which developed the BVS) to access the staked Bitcoin immediately. dApps can suffer when they launch if they don't have enough collateral to truly protect their platform from bad actors. Tying to a service like this brings enough Bitcoin value that those staking it can flex their economic muscles and ensure the distributed validation (the core of what ensures information is true and above board) acts in good faith. Those who stake Bitcoin to the BVS are rewarded, but they have to ensure those

validators working the platform are trustworthy, or they risk losing their stake. This complex web of incentives, motivations, and risk is what balances blockchain overall, and when the value is secured by none other than Bitcoin, those motivations to act in good faith are as solid as they can be. Using Bitcoin as a foundational layer of security aligns the motivations of all the people involved, even though they are scattered across the world, and interacting with smart contracts. This is the beauty of decentralization, and the BVS model is proving to show a balanced approach backed by the strongest and most underutilized digital currency on the planet. Looking Ahead The world is going to continue with spikes and dips across geopolitics, war, economics, and more. We can't control that, and the only sure thing is that this new year is likely to be as turbulent as the last. What we can control is how we operate in the storm, and the evolving uses of Bitcoin are showing just how stable entire economies can be when secured by something as powerful as the world's top cryptocurrency. We will see this new world continue to evolve, finding more and more use cases as we unlock utility within the Bitcoin chain. Expect to see not only Satlayer evolve, but many other organizations develop their methods to leverage Web3 in ways we've never seen. This new year might have its ups and downs, but it should certainly be exciting and innovative.

- Six Bitcoin mutual funds will launch in Israel on December 31, 2024. - Management fees range from 0.25% to 1.5%, with one actively managed fund. Israel is set to debut six Bitcoin mutual funds on December 31, marking a milestone for local crypto investment. The Israel Securities Authority (ISA) approved the funds last week, following years of requests from asset managers. The mutual funds will be managed by six firms: Migdal Capital Markets, Phoenix Investment, More, Ayalon, IBI, and Meitav. According to Calcalist, all funds will launch simultaneously, a condition set by the ISA. Management fees will range from 0.25% to 1.5%, with one actively managed fund aiming to outperform Bitcoin's price. These funds will initially execute transactions once daily, reflecting Bitcoin's price at that time. Future products may include continuous trading options, enhancing flexibility for investors. The funds will allow purchases in Israel's local currency, the shekel, providing direct exposure to Bitcoin's performance. The approval comes amid the global adoption of Bitcoin-related investment products. The U.S. SEC's approval of spot Bitcoin ETFs earlier this year set a precedent, leading to billions in institutional investments. Bitcoin ETFs in the U.S. now hold over \$110 billion in net assets, equivalent to 5.7% of Bitcoin's market cap. Bridging Digital and Traditional Finance In Israel, the demand for Bitcoin-focused investment products has grown rapidly. Asset managers began filing proposals for these funds in mid-2024. Eyal Haim, vice president at Ayalon Mutual Funds, highlighted the long-standing interest in digital currencies. This development aligns with Israel's broader digital finance initiatives. The country has been advancing its central bank digital currency (CBDC) project, the digital shekel, through a program called the Digital Shekel Challenge. The initiative aims to improve competition in the banking sector using real-time payment systems. Following its December 16 surge to \$108,000, Bitcoin's cooling price underscores the global momentum for crypto investments. Institutional participation continues to drive adoption, as regulatory clarity strengthens investor confidence. The launch of Bitcoin mutual funds in Israel will expand access to cryptocurrency investments. These funds allow local investors to diversify portfolios amid the growing global interest in digital assets. Highlighted Crypto News Today Japanese Government Has No Plans to Consider Bitcoin Reserves

- The Japanese government stated it has no plans to consider Bitcoin reserves. - A Japanese lawmaker, Satoshi Hamada's efforts to create a reserve fund for Bitcoin went in vain. Amidst raising institutional adoption of Bitcoin and global countries considering it for creating a reserve fund, Bitcoin is struggling to regain its previous highs. After falling to the lows of \$92,000 price range, Bitcoin is slowly recovering and is trading in the \$98k range today. Considering the limited supply and potential to act as a hedge against inflation, global countries are exploring ways to include Bitcoin in their strategic reserves. However, the Japanese government recently declared its stance on crypto assets, stating they have no plans to consider Bitcoin reserves. As per the Coinpose media outlet, The government issued an official response to Japanese lawmaker Satoshi Hamada's question regarding the creation of a Bitcoin reserve. Japanese Lawmaker Proposed to Create National Bitcoin Reserve Earlier this month, Satoshi Hamada submitted a request to the Japanese government in a document titled, "Question regarding the status of understanding the movement to introduce a national Bitcoin reserve in the United States and other countries." His major motive was to propose the government consider converting a part of its foreign exchange reserve into Bitcoin. Hamada also gave examples of the global countries such as the US and Brazil planning to create a strategic reserve asset. He further emphasized that Bitcoin is decentralized in nature and it is less susceptible to the influence of countries and institutions. However, the Japanese government released an official written statement under Prime Minister Ishiba Shigeru, stating they do not consider the Bitcoin reserve fund. The response further mentioned that crypto assets do not fall under foreign exchange category. Prime Minister Ishiba Shigeru reiterated that they must prioritize safety and liquidity of foreign exchange reserves and volatility of crypto assets is inconsistent with the current system. The Japanese government has always taken a cautious approach towards digital assets. On the other hand, Metaplanet, aka Japan's Microstrategy, recently announced a \$62M worth of Bitcoin acquisition strategy. Metaplanet also brought Bitcoin magazine to the country to promote Bitcoin adoption. However, the cautious stance of the Japanese government towards digital assets might take the country a few steps backwards compared to the global countries exploring digital assets. Moreover, Japan's overly cautious approach even stalled crypto ETF progress in the country. Despite coming a long way from valued at almost nothing to growing into a trillion dollar industry, cryptocurrencies are yet to go a long way for global countries to regulate and adopt digital currencies. Highlighted Crypto News Today: Will Bitcoin Price Reclaim its \$100K Mark Before 2024 Ends?

- Speculations of Bitcoin hitting \$100K arise as community members hope for external factors to propel

prices. - The cryptocurrency's daily trading volume has dipped by 16.50% as per CMC data. The cryptocurrency market saw some recovery on Christmas day, as Bitcoin revisited its \$99K mark. Meanwhile, several year-end reports depicted a sharp rise in global crypto adoption, thus bringing glad tidings. Additionally, Russia stated that it would include Bitcoin in international payments, further propelling interest within the community. Notably, Bitcoin has hit a snag as its price cycle struggles to break out of the \$90K zone. As aforementioned, on Christmas day, the cryptocurrency tested the \$99K level for the first time this week. However, it failed to hold prices at that level and proceeded to fall back downwards. At the time of writing, BTC was trading at \$98,268, as per CMC data. Meanwhile, when reverting to whale activity, whales have been transferring tokens amid anonymous wallets. This depicts a HODLing situation in the market as we wait for the consolidation to end. Further, analysts have predicted that Bitcoin's crucial support level is at \$97,300 during which time the cryptocurrency saw a 1.51 million buying spree. The most significant support level for #Bitcoin is at \$97,300, where 1.51 million wallets bought around 1.49 million \$BTC. [pic.twitter.com/hDnBnhwMZw](https://twitter.com/hDnBnhwMZw) Ali (@ali_charts) December 25, 2024 Secondly, with 2025 approaching fast, the community expects Bitcoin to show intriguing activity in the coming days. Whether this will turn into reality is a question that time holds the answers to. However, analyzing technical indicators might hint at what to expect. Is Bitcoin \$100K on the Horizon? Analyzing Bitcoin's technical indicators show mixed signals. Its Moving Average Convergence Divergence (MACD) signal line lies below the MACD line indicating a negative environment. However, its bull power indicator value stands at 6.51 as per TradingView data. Meanwhile, its bear power indicator value stands at -2.75 showing the window of opportunity that Bitcoin bulls hold in the present. Utilizing this brief upper hand would aid Bitcoin in reclaiming its \$100K milestone before 2024 officially ends. Its present price cycle depicts resistance at two key points - \$99,369 and \$99,974. On the other hand, altcoins such as Ethereum and XRP have recorded minor dips in the past day.

Lightchain AI is revolutionizing the blockchain space with its innovative integration of artificial intelligence and decentralized technology. Unlike traditional cryptocurrencies that suffer from market volatility, Lightchain AI offers a sustainable, purpose-driven ecosystem built on groundbreaking advancements. Through its ongoing Lightchain AI Presale, participants can secure LCAI tokens at a discounted rate, gaining early access to a platform designed for transparent AI operations, decentralized governance, and scalable, privacy-preserving applications. Join the future of blockchain with Lightchain AI today! The Problem with Bitcoin Volatility As blockchain and cryptocurrency gain mainstream attention, more people are becoming interested in investing in this space. However, for many potential investors, the volatility of cryptocurrencies like Bitcoin is a major deterrent. The value of Bitcoin has been known to fluctuate wildly, making it unpredictable and risky for investors. This instability can be attributed to a variety of factors such as market speculation, regulatory changes, and adoption rates. This volatility not only affects individual investors but also impacts the broader perception of blockchain technology as a whole. Many individuals and businesses are hesitant to fully embrace blockchain due to its association with volatile currencies like Bitcoin. Lightchain AI- A Solution for Blockchain Enthusiasts Lightchain AI is a decentralized platform that integrates artificial intelligence (AI) with blockchain technology to address challenges in both fields. It introduces the Proof of Intelligence (PoI) consensus mechanism, which rewards nodes for performing valuable AI computations, such as model training and optimization, enhancing network security and efficiency. At its core is the Artificial Intelligence Virtual Machine (AIVM), a specialized computational layer optimized for executing AI-specific tasks. The AIVM supports real-time applications while maintaining security and interoperability with popular AI frameworks like TensorFlow and PyTorch. Lightchain AI's mission is to democratize AI development and application, ensuring that AI becomes a tool for equity, inclusivity, and transparency. By leveraging its decentralized approach, Lightchain AI provides an ecosystem where individuals, developers, and organizations can collaborate and innovate without the constraints of centralized control. The platform's roadmap includes phases such as prototype development, testnet rollout, and mainnet launch, aiming for global adoption and the establishment of an open-source innovation hub. Currently, Lightchain AI is conducting a presale of its native LCAI tokens, offering early adopters the opportunity to participate in this innovative ecosystem. Why Lightchain AI Outpaces Traditional Cryptocurrencies Lightchain AI stands apart from traditional cryptocurrencies through its advanced technological framework and strategic roadmap. Unlike volatile assets like Bitcoin, Lightchain AI integrates Proof of Intelligence (PoI) for enhanced security and efficiency. This revolutionary consensus mechanism minimizes energy consumption and streamlines scalability, addressing critical blockchain limitations. Its tokenomics ensure stability and long-term utility. The total token supply is capped to prevent inflation, while allocations are strategically distributed to development, ecosystem growth, and community incentives. This structure guarantees sustainable value growth and adoption. The roadmap underscores Lightchain AI's ambition, with phased milestones including the Artificial Intelligence Virtual Machine (AIVM) launch, ecosystem expansion, and strategic partnerships. These steps position Lightchain AI as a robust, future-ready blockchain platform that combines innovation with utility, making it the smart choice for enthusiasts and investors. The ongoing presale offers a unique opportunity to be an early adopter of this groundbreaking technology, securing LCAI tokens at a discounted rate. Join the future of blockchain and AI with Lightchain AI. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Digital assets are overseen by the Securities and Exchange Commission in Thailand. - The Thai central bank still forbids crypto payments, despite lobbying from businesses and politicians. Thaksin

Shinawatra, Thailand's former prime minister, suggested a Bitcoin pilot project in Phuket as a test field for the cryptocurrency with an eye on the tourist industry. The CEO of Binance Thailand thinks it's a great idea and would help the nation compete and attract tech-savvy tourists, so he's on board with the plan. But the Thai central bank still forbids cryptocurrency payments. Despite lobbying from businesses and politicians who want to transform the country into a digital powerhouse. According to Gulf Binance CEO Nirun Fuwattananukul, who spoke with the Bangkok Post, the plan shows that top-level executives are embracing these revolutionary technologies and reflects the increasing popularity of cryptocurrencies throughout the world. Resolving Critical Issues He went on to say that because Thailand's economy is heavily dependent on tourists and foreign investment. Thus, incorporating cryptocurrency into Phuket's infrastructure might play to the country's strengths. While also appealing to tech-savvy tourists and investors. On the other hand, digital assets are overseen by the Securities and Exchange Commission (SEC) in Thailand. Whilst payment systems are within the purview of the central bank. In contrast to nations like Japan and the US, which have accepted Bitcoin as payment, Thailand likewise has a limited currency system. The Bank of Thailand, which has previously been strongly opposed to cryptocurrency, will have the last say over implementation. And there are a number of critical issues that must be resolved before it can take place. Time may be required for the central bank to complete its risk assessment. Which is especially important in light of the importance of monetary flow and economic stability. And for the BoT and the SEC to work together to update regulatory frameworks. Highlighted Crypto News Today: Total Inflows of US Spot Ethereum ETFs Crosses \$2.5B Despite Price Decline

- Russian enterprises are using digital currencies for foreign commerce, according to the Finance Minister. - Siluanov highlighted Bitcoin's significance in Russia's developing trade policy. Anton Siluanov, Russia's Minister of Finance, acknowledged that the country is now prioritizing Bitcoin and other cryptocurrencies in its foreign commerce. In light of the new regulations, Russian companies are reportedly engaging in international commerce using Bitcoin and other digital currencies, as he recently said. Speculation in the market has been heightened by the country's recent decision to restrict Bitcoin mining in six locations until 2031. Russian officials have begun to accept Bitcoin and other cryptocurrency as a means of international payment in an effort to stave off economic penalties from the West. Russian enterprises are using digital currencies for foreign commerce, according to Finance Minister Anton Siluanov. Key Step to Overcome Sanctions Effect Moreover, this change in approach is a result of new regulations that have made it possible to employ cryptocurrencies in international commerce. A recent Reuters report based on an interview of Russia 24 states that Siluanov highlighted Bitcoin's significance in Russia's developing trade policy. Crypto transactions are already happening, he said, and he's optimistic about their growth in 2024. These measures are in line with the government's trial strategy for incorporating cryptocurrency into the country's monetary system. The change is part of a larger effort to wean economies off of the dollar. Recently, President Putin of Russia voiced his disapproval of the politicization of the dollar by the Trump administration, claiming that this has compelled nations to seek for other assets such as Bitcoin. Putin emphasized Bitcoin's decentralized character, which he believes protects it from outside governmental meddling. As interest in digital assets continues to rise, these new innovations have added gasoline to the fire of market confidence. Highlighted Crypto News Today: Bitget Token (BGB) Surges to 23rd Rank with \$8.18B Market Cap

- U.S. spot Bitcoin ETFs recorded \$1.52 billion in outflows over four days. - Digital asset investment products saw \$308 million in net inflows last week. The U.S. spot Bitcoin exchange-traded funds (ETFs) have recently experienced a sharp reversal in their flow patterns. On December 24, these funds saw \$338.4 million in net outflows, marking the fourth consecutive day of outflows, which have now reached \$1.52 billion over the past four days. This comes after strong inflows, where over \$6.7 billion flowed into spot Bitcoin ETFs leading up to December 18. BlackRock's IBIT ETF, in particular, saw the largest outflow, with \$188.7 million exiting the fund. Fidelity's FBTC followed closely, losing \$83 million, while ARK Invest's ARKB saw \$75 million leave. Bitwise's BITB was the only ETF to record positive movement, adding \$8.5 million. The rest of the funds remained steady, with little change in their net inflows or outflows. This ongoing streak of outflows is the longest since the aftermath of Donald Trump's re-election, which had helped to spark a market rally. Despite the recent negative flows, the total assets held by all spot Bitcoin ETFs still stand at \$107.53 billion. This is thanks to strong price performance on the same day, with some funds even seeing daily gains of up to 6.48%. Shifting Trends in Bitcoin and Ethereum ETFs The outflow trend starkly contrasts the peak seen earlier this month when spot Bitcoin ETFs reached \$121.7 billion in net assets on December 16. However, a record single-day outflow of \$680 million on December 19 has contributed to the recent decline in total assets. On the other hand, spot Ethereum ETFs saw a brighter day on December 23, with net inflows of \$130.76 million. BlackRock's ETHA led the charge with \$89.5 million in daily inflows, while Fidelity's FETH brought in \$46.4 million. Even so, Grayscale's ETH saw a minor outflow of \$6.1 million. In the broader digital asset market, investment products experienced net inflows of \$308 million last week, despite a significant outflow of \$576 million on December 19. Bitcoin stood strong with \$375 million in weekly inflows, while Ethereum continued its positive momentum with \$51 million. - FBI confirms \$308M Bitcoin theft from DMM Bitcoin by North Korean hackers, linked to Lazarus Group. - DMM Bitcoin announced it would shut down operations, transferring customer assets to SBI VC Trade. On December 23, the FBI, Japan's National Police Agency, and the U.S. Department of Defense Cyber Crime Center confirmed that a \$308 million cryptocurrency theft from Japan-based crypto exchange DMM Bitcoin has been linked to "TraderTraitor," a hacking group tied to North Korea's infamous Lazarus Group. FBI and Japanese Police Expose DMM Bitcoin Hack In a joint announcement, the US Federal Bureau of Investigation stated that a hacker posed as a recruiter on LinkedIn and targeted an employee

at GINCO Inc., the company responsible for managing DMM Bitcoin's crypto transactions. Then the attacker tricked the victim into downloading a malicious Python script disguised as a pre-employment test. Once compromised, the attackers gained access to GINCO's systems and, later in May, manipulated a legitimate transaction, transferring 4,502.9 Bitcoin valued at 48.2 billion yen or \$308 million to wallets under their control. Since then the hacker transferred the stolen Bitcoin to 10 different wallets. Following the hack, DMM Bitcoin announced earlier in December that it plans to shut down operations. The exchange will transfer all customer assets to SBI VC Trade, a crypto exchange managed by the SBI Group. However, authorities have labeled this incident as one of the largest crypto hacks in this year. The stolen funds are strongly believed to support North Korea's regime, with the TraderTraitor group tied to the Reconnaissance General Bureau, a military intelligence agency. Nischal Shetty, co-founder of WazirX which was hacked in July 2024 and lost \$230M sparked controversy by sharing the FBI's update on the \$308M DMM Bitcoin hack, drawing parallels to WazirX's own hack. Following his post, users from WazirX and the X platform (formerly Twitter) flooded the comments with questions about the future of WazirX and its creditors. In response, Shetty stated, "Creditors will decide that. If the majority vote yes for the scheme, we can proceed with distributing the liquid assets according to the plan." Highlighted Crypto News Today

After a promising bullish momentum, the market returns with altcoins correcting from their recent price actions. Bitcoin went wild with a massive price surge thanks to increased spot Bitcoin ETF activity and Donald Trump's return to office. This top asset surged by over 80% in this year's final quarter, hitting the \$110,000 mark. Sadly, this crypto giant couldn't sustain its bullish momentum, as it now trades below \$96,000. Yet, experts believe this retracement is temporary, and BTC's price could break the \$100k mark again in the new year. Moreover, investors are considering DTX Exchange, an emerging crypto that could provide remarkable real-world utilities and price value. The question on everyone's minds is if this new project would deliver gains in the new year. Without further ado, let's find out what DTX Exchange could offer crypto traders and BTC price prediction in the new year. DTX Exchange (DTX): A New Unified Trading Platform in 2025 As crypto investors anticipate Bitcoin reclaiming the coveted \$100,000 in the new year, DTX Exchange emerges to redefine the investment scene. It pioneers a unified trading platform that merges cryptos, stocks, Exchange-Traded Funds (ETFs), and forex, which puts it leagues ahead of traditional exchanges. This added convenience eliminates the need for multiple platforms, making it a necessary feature for investors. It also provides trading tools like 1,000x leverage and decentralized asset custody via the state-of-the-art Phoenix Wallet. DTX Exchange features distributed liquidity pools, which aggregate liquidity from various exchange platforms. This ensures traders experience minimal slippage and seamless execution. The buzz surrounding DTX is undeniable. Its presale has already raised an impressive \$10.4 million in its sixth stage, with the token currently priced at \$0.12. As demand surges, the price is set to rise to \$0.14 in the next stage. With analysts predicting that DTX could soar by 100x upon listing on major exchanges, early investors could gain exponential returns. As the platform grows, so does its value proposition. It also empowers its community via governance and profit-sharing models. As it focuses on achieving true decentralization, DTX Exchange could cement its place in the DeFi space. Bitcoin Price Prediction: BTC Price is Expected to Soar in 2025 With Growing Spot Bitcoin ETFs Bitcoin hovers below \$100K, reflecting investor caution amid Fed projections. However, optimism abounds as BTC's price could surge with increasing spot Bitcoin ETF adoption. The US spot BTC ETF market saw net inflows of \$457 million last week, driven by robust demand for BlackRock's IBIT. Despite minor outflows from Fidelity and Grayscale funds, the ETF market remains a critical anchor for BTC's price trajectory. Looking ahead, progress toward a US strategic Bitcoin reserve (SBR) could redefine BTC's price dynamics, signaling government-backed demand. While Congress and the Federal Reserve would need to approve BTC as a reserve asset, this shift could stabilize supply risks and catalyze bullish momentum. Technically, BTC trades above its 50-day and 200-day EMAs, confirming a bullish outlook. With ETF inflows and strategic developments, Bitcoin could aim for \$110,000, potentially soaring to \$120,000 in 2025. Final Thoughts While Bitcoin's dominance might dwindle in 2025, giving way to altcoins, DTX Exchange is poised to capitalize on this shift. Its strong community backing, innovative trading solutions, and growing adoption make it a standout candidate for leading gains in the next bull cycle. To find out more about DTX Exchange, please check the following links: Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency market gears up for the next major Bitcoin rally, savvy investors are eyeing undervalued altcoins with explosive potential. Among the top contenders is Lightchain AI, a groundbreaking project in its Stage 8 presale, offering tokens at \$0.00375 and already raising over \$4.16 million. With real-world utility, innovative AI integration, and a robust roadmap, Lightchain AI is poised for significant growth, making it a standout pick alongside other promising altcoins ready to surge. What is Lightchain AI (LCAI)? Lightchain AI (LCAI) is a new kind of money that mixes smart machine thinking with chain tech. It uses the Proof of Intelligence (PoI) way, which gives rewards to parts for doing helpful machine tasks like teaching models and fixing data; this helps with safety and makes AI better. The site also brings the Smart Brain Virtual Tool (SBVT), made to do AI jobs right on the blockchain. This mix lets live, data-led apps that give growth, safety and speed, putting LCAI as a changing power in spread out tech's. Why is LCAI Undervalued? Lightchain AI (LCAI) is undervalued due to its current presale price of just \$0.00375, despite its groundbreaking innovations and practical utility. With over \$4.16 million raised in Stage 8, the project's potential for scalability and real-world applications is yet to be fully recognized by the broader market. As a pioneer in combining blockchain and AI, LCAI offers features like decentralized governance and privacy-preserving AI services. These unique qualities position it for explosive growth, making its

current valuation a hidden gem for investors. Top 3 Undervalued Altcoins Ready to Explode Here are three other undervalued altcoins that are poised for explosive growth in the near future, making them worthwhile investments to consider Lightchain AI (LCAI) Lightchain AI integrates artificial intelligence with blockchain technology, introducing a unique Proof of Intelligence consensus mechanism. Currently in its presale phase, LCAI offers early investors an opportunity to participate in a project aiming to revolutionize decentralized AI applications. Cardano (ADA) Cardano is a proof-of-stake blockchain platform emphasizing security and sustainability. Its native cryptocurrency, ADA, facilitates peer-to-peer transactions and smart contract functionality. With ongoing developments and a strong focus on scalability, Cardano is positioned for potential growth in the evolving crypto landscape. Chainlink (LINK) Chainlink is a decentralized oracle network that connects smart contracts with real-world data, enabling secure and reliable interactions between blockchain technology and external systems. Its expanding adoption in decentralized finance (DeFi) and partnerships across various industries highlight its growth potential. Roadmap for Exponential Growth Lightchain AI has laid out a well-defined roadmap to achieve exponential growth by focusing on innovation, scalability, and global adoption. The journey begins with foundational developments, such as the Artificial Intelligence Virtual Machine (AIVM) and testnet deployment, ensuring the platform's readiness for real-world applications. Future phases emphasize the mainnet launch, where full functionality is activated, and ecosystem expansion takes center stage. Developer participation and cross-industry partnerships are key priorities, creating a dynamic and thriving community around Lightchain AI. To sustain growth, the roadmap includes plans for scalability solutions, global outreach, and long-term adoption strategies. This comprehensive approach ensures Lightchain AI remains a leader in decentralized blockchain and AI integration. Potential for Massive Gains Lightchain AI offers significant potential for massive gains, driven by its innovative integration of artificial intelligence and blockchain technology. With real-world utility powering decentralized AI services and a focus on scalability, the platform addresses critical industry challenges, positioning itself for substantial growth. Its current presale stage, priced at \$0.00375, has already raised over \$4.16 million, highlighting strong investor confidence. As the cryptocurrency market evolves, Lightchain AI's unique features and robust roadmap make it a standout project. By focusing on long-term utility and inclusivity, it provides an opportunity for investors to capitalize on its transformative potential, setting the stage for exponential value appreciation. Presale and ICO Opportunities Lightchain AI's presale offers an unmatched opportunity for early investors, with tokens priced at just \$0.0037. This entry point allows participants to secure a stake in a groundbreaking project before it gains mainstream traction. The presale also highlights the platform's transparency and commitment to community-driven growth, making it an attractive choice for both seasoned and new investors. The upcoming ICO aims to amplify adoption by funding key developments like the Proof of Intelligence mechanism and Artificial Intelligence Virtual Machine. With a clear roadmap and unique utilities, these fundraising stages position Lightchain AI as a top contender for substantial long-term returns. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin struggles amid declining whale activity and institutional demand slowdown. - A potential rally to \$168K hinges on sentiment and market dynamics. Bitcoin (BTC), the world's largest cryptocurrency, has witnessed a 7% drop in value over the past week, trading at \$94,159 at the time of writing. This marks its fourth consecutive day of decline, driven by macroeconomic concerns and reduced interest from institutional investors. Despite hitting a peak of \$108,245 earlier this month, Bitcoin now hovers below the critical \$100,000 level. Market analysts attribute this drop to a combination of profit-taking and hawkish signals from the U.S. Federal Reserve, which recently announced a slower pace of rate cuts than anticipated. The central bank's decision led to a reassessment of speculative asset investments, impacting Bitcoin and related crypto markets. Moreover, whale activity has notably slowed, adding to the bearish sentiment. According to data, net flows among large holders have dropped by 116% over the past week. High-value Bitcoin transactions "ranging from \$100,000 to \$10 million" have decreased significantly, indicating a lack of buying pressure from key investors. However, regional dynamics offer contrasting perspectives. Korean investors have ramped up their Bitcoin purchases, as reflected in a surge to 5.26 in the Korean Premium Index, signaling heightened demand. Meanwhile, U.S. investors show reduced activity, with the Coinbase Premium Index remaining in negative territory. Will BTC Make Christmas Wish True? Technical indicators present a mixed outlook. The Relative Strength Index (RSI) stands at 54, suggesting a neutral market stance. Analysts point to support levels around \$95,690, warning that a break below this threshold could push Bitcoin toward \$85,721. Conversely, a revival in whale activity or institutional interest could spark a recovery toward previous highs. Despite the pullback, some experts remain optimistic. Analyst Ali Charts predicts Bitcoin could rally to \$168,000, citing the Mayer Multiple, a metric comparing current prices to the 200-day moving average. Institutions also continue to show long-term interest, with their share of Bitcoin holdings rising from 14% to 31% in the past year.

- Matador announced its plans to add Bitcoin and USD-denominated assets to its balance sheet. - The company plans to allocate \$4.5 million to Bitcoin purchase in December 2024. Major organizations across the world are eyeing Bitcoin to maintain their reserves, mitigating the risks associated with fiat currency reserves. While this strategy was originally adopted by Microstrategy years back, global firms and governments are onboarding this year. The latest to join the Bitcoin reserve strategy club is Canadian firm Matador Technologies Inc. As per the latest report from Globe Newswire, the Board of Directors of Matador approved adding Bitcoin to its balance sheet. The Board also identified the risks

associated with its current treasury, comprising Canadian dollars. To address and mitigate the risks of potential devaluation and loss of purchasing power of CAD, Matador plans to add BTC to its treasury. Matador Technologies Allocates \$4.5M to Bitcoin Acquisition This Month The Board of Directors of Matador unanimously approved addition of Bitcoin and USD-denominated assets to its treasury. Their major goal is to focus on the company's long-term capital reservation strategy and to address risks associated with current Canadian dollar reserves. Initially, Matador Technologies plans to allocate around \$4.5 million for Bitcoin purchase before the new year. The firm will continue to explore additional buying opportunities, adopting measured buying programs. In addition to adding Bitcoin to its balance sheet, the company will also move its CAD cash reserves to USD. The company's decision to add BTC to its balance sheet shows its unwavering belief in blockchain and cryptocurrency, particularly Bitcoin. Increasing global trends of BTC adoption combined with institutional adoption as an alternative to bonds and depreciating currencies encouraged Matador to explore Bitcoin. Microstrategy is one of the early adopters of Bitcoin that continues to purchase BTC irrespective of its price trend. Following its footsteps, Mara is also adding Bitcoin to its reserves with 0% convertible note offerings. Keeping major corporations aside, countries such as El Salvador and The City of Lugano have started accepting Bitcoin for purchases. The mayor of Vancouver city also proposed to become a Bitcoin-friendly city earlier this month. Highlighted Crypto News Today:

- Metaplanet acquires 620 BTC for \$60.6 million, boosting its total holdings to 1,762 BTC. - The company issued zero-interest bonds to fund its latest purchase. Japanese investment firm Metaplanet has made headlines with its largest Bitcoin purchase to date. The Tokyo-listed company acquired 619.7 BTC for ¥9.5 billion (\$60.6 million), bringing its total holdings to 1,761.98 BTC. This latest purchase comes amid a dip in Bitcoin prices, with Metaplanet paying an average price of approximately \$97,786 per coin. *Metaplanet purchases additional 619.70 BTC* pic.twitter.com/5npf1MJ3kW "Metaplanet Inc. (@Metaplanet_JP) December 23, 2024 The company announced the acquisition on December 23, following a significant bond issuance. Metaplanet raised ¥9.5 billion through two zero-interest bonds to accelerate its Bitcoin strategy. The bonds, issued earlier in the week, are set to mature in June 2025. The company aims to use the funds to expedite Bitcoin purchases planned for 2025 into the current fiscal year. Dubbed "Asia's MicroStrategy," Metaplanet has adopted BTC as a key treasury reserve asset since May. The firm's holdings are now valued at \$167.1 million, with an average purchase price of \$75,600 per Bitcoin. This recent acquisition marks a significant milestone, nearly quadrupling its previous record purchase of 159.7 BTC in October. Bitcoin Strategy Fuels Growth Metaplanet's aggressive Bitcoin strategy is paying off for shareholders. The company reported a 310% Bitcoin yield between October and December, a sharp increase from the 41.7% yield in the previous quarter. The firm now plans to expand its BTC operations into a dedicated business line, incorporating loans, equity, and other financial instruments. The latest acquisition also aligns with the company's improving financial outlook. Metaplanet anticipates its first operating profit in seven years, projecting revenue of ¥890 million (\$5.8 million) for the fiscal year ending December 31. This marks a significant turnaround from the ¥261 million recorded last year. The company expects an operating profit of ¥270 million, a sharp recovery from last year's ¥468 million loss. A substantial portion of the firm's revenue comes from Bitcoin-related activities. Selling BTC put options generated ¥520 million in income, making it a key driver of its financial success. Put options allow Metaplanet to sell Bitcoin at a pre-agreed strike price, earning premiums for each contract sold. Despite its Bitcoin success, Metaplanet's stock fell 0.98% to ¥3,540 on Monday, after rising 1,982% year-to-date. While U.S. based MicroStrategy remains the largest corporate Bitcoin holder, Metaplanet continues to solidify its position as a significant player in the cryptocurrency market. Highlighted Crypto News Today Aave Price Reaches 3-Year High Following On-chain Metrics Growth

In the world of cryptocurrency, many have dreamed of getting in early on a project with the potential to become the next Bitcoin (BTC) and for some savvy investors, that dream could soon become a reality. A new and under-the-radar altcoin, Lightchain AI (LCAI), has been quietly gaining attention for its groundbreaking technology and massive growth potential. At a presale price of just \$0.003, LCAI is positioning itself as a crypto gem that could far exceed the returns seen by early Bitcoin investors. Let's take a closer look at what makes Lightchain AI so special and why it could become one of the most valuable assets in the crypto market by 2025. Why Lightchain AI Stands Out Unlike many altcoins that thrive on speculative hype, LCAI stands out by combining the power of artificial intelligence with the decentralized nature of blockchain, creating a solid technological foundation. One key feature is the Artificial Intelligence Virtual Machine (AIVM), which allows the deployment of AI-powered decentralized applications (dApps) directly on the blockchain. This unlocks a wide range of potential use cases across industries like finance, healthcare, and logistics. Also, LCAI brings a special agreement way called Proof of Intelligence (PoI). Unlike old methods like Proof of Work (PoW) or Proof of Stake (PoS), PoI gives rewards to nodes for doing useful AI work. This not just helps speed but also makes LCAI more power-saving and green. To make it even more tempting, LCAI uses a system of smart tokens, where some of the fees from deals is burnt, cutting down the number of LCAI tokens over time. This way can push up value in long run as need gets higher. With these new features, LCAI gives helpful answers to real-life issues making a big help to the blockchain and AI area. The Exponential Growth Potential of Lightchain AI Lightchain AI is poised for exponential growth by seamlessly merging blockchain technology with artificial intelligence. The platform's Proof of Intelligence (PoI) consensus mechanism revolutionizes blockchain networks by rewarding nodes for performing critical AI computations. This approach not only increases the network's utility but also ensures improved efficiency, setting it apart in the decentralized technology space. At the core of its ecosystem lies the Artificial Intelligence Virtual Machine (AIVM), designed to execute real-time AI tasks within a decentralized framework. This capability caters to diverse industries, including healthcare, finance, and logistics, enabling intelligent solutions for complex challenges while ensuring scalability and security. Additionally, Lightchain AI's deflationary tokenomics, which

involve burning a portion of transaction fees, create scarcity over time. This model fosters long-term value for both developers and investors, making it an attractive opportunity in the crypto landscape. The project's strategic roadmap includes milestones such as industry partnerships, ecosystem expansion, and global adoption, ensuring its continued development and market relevance. With a focus on innovation and utility, Lightchain AI is positioned to address the growing demand for AI-powered blockchain solutions, paving the way for unprecedented advancements in decentralized technologies.

How LCAI Compares to Bitcoin's Early Days

Bitcoin's (BTC) meteoric rise has made headlines for years, with early investors now sitting on life-changing profits. As LCAI continues to develop and gain traction, there are similarities between Bitcoin's early days and where LCAI stands now.

- **Early Adoption** Just like Bitcoin was once priced at mere pennies before it skyrocketed, LCAI is priced under \$0.003 during its presale phase, offering an affordable entry point for investors looking to capitalize on the next big thing in crypto.
- **Undervalued Asset** Many investors missed the opportunity to get in on Bitcoin early, but LCAI is still at an early stage and priced to grow, making it a perfect opportunity for those who want to get in before the next boom.
- **Disruptive Technology** Bitcoin revolutionized the concept of decentralized money, and LCAI could do the same for AI-powered applications on the blockchain. While there's no certainty that LCAI will follow in Bitcoin's footsteps, the similarities in growth trajectory are hard to ignore. LCAI is entering the market with a strong use case, a growing ecosystem, and the backing of investors who see the potential for massive returns.

LCAI vs. Other Cryptocurrencies

What Makes It Different? Compared to other major cryptocurrencies like Bitcoin, Ethereum, and Solana, LCAI stands out in several key ways.

Feature	Lightchain AI (LCAI)	Bitcoin (BTC)	Ethereum (ETH)
Technology	AI-powered blockchain	Peer-to-peer network	Smart contracts, dApps
Consensus Mechanism	Proof of Intelligence (PoI)	Proof of Work (PoW)	Proof of Stake (PoS)
Tokenomics	Deflationary (burns tokens)	Inflationary	Inflationary
Primary Focus	AI integration, blockchain	Digital currency	DeFi, NFTs, dApps
Growth Potential	High, with AI applications	Moderate (high competition)	Moderate (high gas fees)

LCAI's combination of AI and blockchain makes it unique among traditional cryptocurrencies. Unlike Bitcoin, which primarily serves as a store of value, LCAI is designed to solve real-world problems using AI-powered decentralized applications. This gives LCAI a clear advantage over Bitcoin and Ethereum in terms of long-term growth, as it addresses a growing market for AI solutions.

Is Lightchain AI the Next Big Thing?

Lightchain AI (LCAI) is quickly becoming one of the most exciting projects in the cryptocurrency space. With its innovative combination of AI and blockchain, LCAI offers a real-world utility that most altcoins don't have, positioning it for massive growth. As institutional investors and smart money continue to take notice, LCAI could follow in the footsteps of Bitcoin, rewarding early investors with exponential returns. If you're looking for the next big opportunity in crypto, LCAI could be the token to watch. As its AI-powered blockchain technology disrupts industries and provides real solutions, LCAI has the potential to change the crypto landscape, just like Bitcoin did in its early days. Get in early, and you could see your investment multiply exponentially. Visit Lightchain AI now to learn more and secure your stake in this groundbreaking project before it takes off. And stay tuned for more updates and developments as LCAI continues to make its mark on the blockchain and AI space.

- Bitcoin has factored in an additional price drop of 0.72% in the last 24 hours. - Resulting from recent price drops, BTC has entered a selling market situation as per reports. The crypto market has retreated into a bearish trend with Bitcoin spearheading the freefall. Other altcoins are also continuously losing their recent price surges as trading levels fall lower and lower. However, the ever-optimistic community has entered a "buy the dip" phase as per recent reports. Notably, Bitcoin has factored in a five-day streak of descent with an additional 0.72% drop in the past 24 hours. Bearish streaks drove the cryptocurrency to an intra-day low of \$93,700 causing some concern among members. However, one particular analyst has used the "Mayer Multiple" indicator to predict a price rebound. Particularly, this indicator has proven to be quite reliable in crypto history thus acting as an anchor of reassurance amid FUD. This indicator, as per market analyst Ali's predictions, will result in a Bitcoin price of \$168,500 during its rebounding times. #Bitcoin \$BTC will hit a market top above \$168,500, based on the Mayer Multiple. pic.twitter.com/uvvg4mZHA8 "Ali (@ali_charts) December 22, 2024

Meanwhile, zooming out over the past week, Bitcoin shows an 8.97% price drop due to the past few days' activities. At the beginning of the week, BTC was trading at a high of \$105,329 just a day before hitting its current all-time high. As per CMC data, at the time of writing, the digital asset was trading at \$95,633. How is Bitcoin Price Responding to "Buy the Dip"? Analysing its basic indicators, Bitcoin shows a selling spree in the token. This can be observed from the cryptocurrency's RSI, which stands at 46.02. Additionally, Coinglass data shows BTC experiencing \$62.03 million in liquidations in the last 24 hours. Additionally, its Chaikin Money Flow (CMF) indicator stands at a low of 0.08 further highlighting the low influx of capital into Bitcoin. However, if Ali's predicted price resurgence occurs these market situations might resolve. On the other hand, the sector saw community members trending the "buy the dip" talk over the past day. This occurred immediately after Bitcoin began its descent into the \$90K zone. Finally, this price action also saw Ethereum hit the \$3.3K level.

As 2024 comes to a close, investors are on the lookout for the most promising cryptocurrencies to grow their portfolios. With blockchain advancements accelerating across sectors, Qubetics (\$TICS), Bitcoin (\$BTC), and Cardano (\$ADA) have emerged as the best coins to invest in December 2024. Each project combines innovation with practical real-world utility, offering immense potential for those seeking

both stability and high returns. Qubetics stands out for its real-world asset tokenization feature, Bitcoin continues to lead as the store of value, and Cardano offers unmatched scalability for smart contracts. Let's explore why these three projects are leading the way this December.

Qubetics (\$TICS): Powering Real-World Asset Tokenization Qubetics is redefining how industries interact with blockchain technology through its focus on real-world asset tokenization. Currently in its 13th presale stage, Qubetics has sold over 367 million \$TICS tokens, raising more than \$7.5 million from 11,300+ holders. At a price of \$0.0342 per token, analysts predict \$TICS could reach \$15 post-mainnet launch, offering an ROI of 43,711.73%. Real-world asset tokenization is one of Qubetics's most transformative features. By digitising tangible assets like real estate, art, and commodities, Qubetics allows these traditionally illiquid investments to be fractionalised, bought, and sold on blockchain networks. This creates greater accessibility for retail investors and unlocks new liquidity streams for asset owners. Imagine owning a share of prime commercial real estate in New York City for just a few hundred dollars. With Qubetics, this becomes possible. Small investors can access previously exclusive markets, while asset owners can easily raise funds by tokenising their holdings. For professionals in real estate, tokenization streamlines property management and transfer processes, reducing paperwork and transaction costs. Additionally, businesses can use Qubetics's blockchain to issue digital bonds and other financial instruments securely and transparently, enhancing trust in capital markets. From tokenised gold for commodity investors to digitised art for collectors, Qubetics is bridging traditional assets with blockchain innovation. With its ambitious presale milestones and groundbreaking features, Qubetics is undoubtedly one of the best coins to invest in December 2024 for forward-thinking investors.

Bitcoin (\$BTC): The Ultimate Store of Value Bitcoin needs no introduction. As the first and most recognised cryptocurrency, Bitcoin continues to dominate the market as the leading store of value. Despite market volatility, Bitcoin has remained resilient, proving itself as a digital alternative to gold. In December 2024, Bitcoin is poised to gain further traction as institutional adoption accelerates. Financial giants and corporations have increasingly turned to Bitcoin to hedge against inflation and diversify their portfolios. As central banks around the world experiment with digital currencies, Bitcoin's decentralised and deflationary nature offers a unique advantage. Beyond its role as an investment, Bitcoin is also facilitating real-world payments and financial inclusion. For instance, businesses in developing nations are adopting Bitcoin for cross-border payments, bypassing expensive intermediaries and ensuring faster transactions. Similarly, individuals use Bitcoin to store and transfer value securely in regions facing economic instability. For investors, Bitcoin's established reputation and growing institutional demand make it one of the best coins to invest in December 2024. It remains the bedrock of cryptocurrency portfolios, offering both security and significant long-term potential.

Cardano (\$ADA): The Smart Contract Innovator Cardano has solidified its position as a leading blockchain platform, offering scalability, security, and sustainability for decentralised applications (dApps) and smart contracts. Its unique two-layer architecture separates computation and settlement processes, enabling faster transactions at lower costs compared to other platforms. Cardano's recent focus on real-world applications has further elevated its appeal. Governments, enterprises, and institutions are exploring Cardano for applications in supply chain management, digital identity, and financial inclusion. For instance, agricultural supply chains in Africa are already leveraging Cardano's blockchain to ensure transparency and accountability. One of Cardano's standout features is its commitment to sustainability. Unlike energy-intensive proof-of-work systems, Cardano uses a proof-of-stake mechanism that significantly reduces environmental impact, attracting eco-conscious investors and developers alike. For investors, Cardano represents an opportunity to capitalise on the growing adoption of smart contract platforms. As more dApps and projects deploy on Cardano, demand for \$ADA will continue to rise. Its strong fundamentals, scalability, and focus on real-world solutions make it one of the best coins to invest in December 2024.

Conclusion: The Best Coins to Invest in December 2024 Qubetics, Bitcoin, and Cardano each bring unique strengths to the table, making them standout projects for December 2024. While Bitcoin continues to lead as the digital gold standard and Cardano offers a sustainable platform for smart contracts, Qubetics is at the forefront of real-world asset tokenization, creating new opportunities for investors and industries alike. For those seeking extraordinary returns, Qubetics is particularly compelling. Secure your future today—explore the potential of Qubetics, Bitcoin, and Cardano, and invest in projects shaping the next chapter of blockchain innovation. - Quantum computing is not an immediate threat to Bitcoin, with current technology far from breaking its security. - Bitcoin is preparing for the future by enabling upgrades like Taproot for easy integration of quantum-resistant tech. - There's plenty of time to adapt as quantum computing progresses slowly. In recent days, the potential of quantum computing to disrupt Bitcoin's security has become a hot topic. While the idea of advanced quantum computers breaking Bitcoin's cryptography may sound alarming, many experts in the field believe these concerns are premature and often exaggerated. Key voices in cryptocurrency, such as Ki Young Ju and Adam Back, have shared their views, emphasizing the importance of preparation without succumbing to unnecessary fear. Their insights highlight the significant gap between current quantum capabilities and the speculative risks often associated with them. Breaking Down the Quantum Risk Ki Young Ju recently said that fears about its breaking Bitcoin are exaggerated. He doesn't see it as an immediate threat but rather a problem the Bitcoin community can solve in the future. The concern is that it could solve complex math problems much faster than regular computers, which might let hackers break Bitcoin's security. However, today's quantum computers are far from capable of doing that, so these worries are mostly theoretical for now. Adam Back, the CEO of Blockstream, says we need a more realistic view of it.

While quantum computers have made progress in specific areas, they're nowhere near powerful enough to break Bitcoin's security. Companies like IBM and Google are making advancements, but their technology is still far from being a real threat to Bitcoin. Preparing for the future Even though fears about these are exaggerated, the Bitcoin community is preparing for the future. For example, the Taproot upgrade makes it easier to add anti-quantum protections later, without rushing into it now. Scientists are steadily working on better and more efficient anti-quantum security measures. Bitcoin's ability to adapt means its network will stay safe as quantum technology improves. Switching to post-quantum security is a complex process, including updating security standards, creating new private keys, and moving funds to secure wallets. However, Adam Back assures that there's plenty of time to make these changes, as quantum computers are developing very slowly. The talk about quantum computers shows a common issue with new technologies: the difference between what people think and what's actually happening. While quantum computers are amazing, they're not capable of the dramatic things some people worry about right now. Experts like Ki Young Ju and Adam Back say it's important to prepare for the future but not panic. They see quantum computing as a long-term challenge, not something to fear immediately. Bitcoin is built to adapt to new technology, which helps keep it secure and relevant. As cryptography keeps improving, Bitcoin will be ready to handle any quantum challenges in the future. For now, users can feel confident that Bitcoin's security is strong. Highlighted Crypto News Today Peter Schiff Proposes "USA Coin" as Alternative to Strategic Bitcoin Reserve

- Peter Schiff stated that the US could save a lot of money by creating a "USA Coin". - The coin should run with an upgraded blockchain to make it actually viable for use in payments. Peter Schiff has again made his strong stance against the Strategic Bitcoin Reserve known. This time, the renowned economist has proposed an alternative that the US could adopt instead of implementing a Strategic Bitcoin Reserve. In an X post, Peter Schiff stated that the US could save a lot of money by creating a "USA Coin" instead of a Strategic Bitcoin Reserve. Interestingly, he said just like Bitcoin, the USA coin's supply can be capped at 21 million. Opposing Strategic Bitcoin Reserve He added that the coin should run with an upgraded blockchain to make it actually viable for use in payments. The renowned economist, who happens to be a Bitcoin skeptic, has made it clear on several occasions that he is against the idea of a Strategic Bitcoin Reserve. Recently, Schiff stated that the best thing Biden could do before leaving office was to sell the US Bitcoin holdings. According to him, that would end all the "nonsense" about creating a Bitcoin Reserve. His latest comments look to be his way of once again taunting the Bitcoin faithful. However, despite Peter Schiff's skepticism, the creation of a US BTC Reserve looks to be gaining ground. Moreover, Senator Cynthia Lummis, the sponsor of the Bitcoin Act of 2024 bill, has proposed a plan for the BTC Reserve to reduce the \$36 trillion national debt. VanEck's Matthew Sigel also explained a scenario where the reserve could offset 36% of the national debt by 2050. Like Peter Schiff, Castle Island Ventures' Nic Carter also looks to be against the idea of a Strategic Bitcoin Reserve. Carter explained that a BTC Reserve would undermine and not support the Dollar. Highlighted Crypto News Today:

- Bitcoin's price rapidly climbed to \$99.5K, coming close to the \$100K milestone within hours. - U.S. Bitcoin ETFs faced record outflows, with nearly \$300 million withdrawn, showing mixed market behavior. - Key technical indicators like the 50-day SMA and RSI signaled strong support for the ongoing price rally. Bitcoin saw a price jump, gaining \$7,000 in less than 24 hours. It bounced back from lows near \$92,000 and came close to hitting \$100,000, with a high of \$99,500 on Bitstamp. This rise was mainly driven by strong buying on Coinbase, which helped push prices higher despite the lack of institutional trading. Bitcoin Price Technical Analysis Bitcoin found solid support at its 50-day Simple Moving Average (SMA), an important level showing the price is staying strong. Traders also spotted an "inverse head and shoulders" pattern on the hourly chart, which signals that the price could go higher. Another key indicator, the Relative Strength Index (RSI), stood at 52, above the safe zone 50. This shows that Bitcoin is stable and could keep rising. Some experts even believe the RSI was pushed artificially low before the recent price rally, which often happens before big price gains. ETF Outflows While Bitcoin's price was climbing, U.S. Bitcoin ETFs saw large outflows of money. On December 20, around \$300 million was withdrawn from these funds. With the iShares Bitcoin Trust (IBIT) losing \$72.7 million in a single day. This shows that while regular buyers drive the price, big institutions still pull back. The strong technical signals suggest Bitcoin could break above \$100,000 soon. However, the fact that institutional investors are still cautious could affect how long this rally lasts. Retail traders are driving the momentum for now, but more support from big investors might be needed for Bitcoin to stay above \$100,000.

- Nexo 7RCC ETF combines 80% Bitcoin and 20% carbon credit futures. - SEC approval for the 19b-4 filing has been granted, and launch is imminent. The Nexo 7RCC Spot Bitcoin and Carbon Credit Futures ETF is set to launch soon, following its S-1 amendment submission. Nate Geraci, President of The ETF Store, announced the development on December 21 via social media. This innovative ETF combines 80% Bitcoin and 20% carbon credit futures. It aims to merge cryptocurrency investment with environmental sustainability. S-1 amendment filed for Nexo 7RCC Spot Bitcoin and Carbon Credit Futures ETF | "Nate Geraci (@NateGeraci) December 21, 2024 Holds exactly what name suggests. 80% btc, 20% carbon credit futures. SEC has already approved 19b-4. Expect this to launch soon. Basically an "ESG" version of spot btc ETF. pic.twitter.com/2hcksc1Njs The ETF's portfolio includes carbon trading systems like EU carbon emission allowances, California carbon allowances, and the Regional Greenhouse Gas Initiative. By integrating these assets, the fund positions itself as an "environmental, social, and governance" (ESG) version of a traditional Bitcoin ETF. Merging Crypto with Sustainability The Securities and Exchange Commission (SEC) has already approved the 19b-4 filing for this ETF. With this regulatory approval, the fund's launch is imminent. Price fluctuations in the fund will depend on Bitcoin's spot price, carbon credit allowances, and related futures prices. This combination

provides a diversified approach to cryptocurrency and environmental investments. Market analysts view the Nexo 7RCC ETF as a significant step towards sustainable investing. The inclusion of carbon credit futures aligns with global efforts to reduce carbon emissions. Additionally, this ETF expands the scope of cryptocurrency-linked financial products. Investors seeking ESG-compliant options may find this offering attractive. The ETF Store's announcement underscores the growing intersection of crypto and sustainability. As the market evolves, innovative products like Nexo 7RCC could reshape investment strategies. The blend of Bitcoin and carbon credits caters to modern investors focused on profit and purpose. With its launch expected soon, this ETF could mark a pivotal moment in sustainable finance. Highlighted Crypto News Today Google Sets FCA Registration Rule for UK Crypto Ads in 2025

Are you ready to explore the thrilling updates shaking the cryptocurrency market? The crypto world is always full of surprises, from major price movements to groundbreaking innovations. While Bitcoin and Ethereum dominate headlines with their impressive moves, there's a rising star catching investors' attention—Qubetics (\$TICS). With its ongoing presale offering incredible potential, Qubetics is fast emerging as one of the best altcoins to buy for 2025. This article examines the latest developments surrounding Qubetics, Bitcoin, and Ethereum and shows why these three coins are making waves.

Redefining Crypto Wallets: Qubetics and Its Groundbreaking Ecosystem Wallets are more than mere storage in digital assets—they're a gateway to financial empowerment. With crypto adoption surging, the need for user-friendly and secure wallet solutions has never been greater. Enter the Qubetics Wallet—a revolutionary feature in the Qubetics Network ecosystem designed to simplify crypto management for everyone. The Qubetics Wallet is a versatile tool, offering accessibility across iOS, Android, and desktop platforms. This ensures that users can seamlessly manage their \$TICS tokens alongside other digital assets regardless of their preferred device. It combines intuitive design with robust security, making it a perfect solution for both beginners and seasoned investors. But that's not all—Qubetics recently hosted an AMA session to engage with its community, addressing queries and providing insights into its vision. With its focus on inclusivity and cutting-edge functionality, the Qubetics Wallet positions \$TICS as one of the best altcoins to buy for 2025. Its promise of convenience and innovation ensures it's set to redefine how users interact with blockchain technology.

Bitcoin's Record Highs and Resilient Performance Bitcoin remains the cornerstone of the cryptocurrency world, but recent fluctuations have caught the market's attention. After reaching record highs earlier this week, Bitcoin dipped by 4.9% within 24 hours to \$96,631. This decline, attributed to the Federal Reserve's cautious comments on interest rates, saw Bitcoin testing the significant \$100,000 level. Despite the pullback, analysts view this dip as a demonstration of Bitcoin's underlying strength. Market cycles have historically shown indecision near key psychological levels before accelerating to new highs. With a stellar year behind it and expectations of regulatory easing, Bitcoin continues to set the stage for long-term growth.

Ethereum's Surge and Bullish Predictions Ethereum (ETH), one of the most prominent altcoins, is also enjoying its moment in the spotlight. With a value currently hovering between \$3,000 and \$4,000, ETH has experienced a nearly 30% rise in just a few weeks. Analysts predict it could soon break through to \$4,500, buoyed by robust technical indicators and investor enthusiasm. Trading above both its 10-day and 20-day EMAs, Ethereum's momentum has solidified its status as a must-watch cryptocurrency. Its consistent growth and technical strength ensure it remains a top contender in the market.

Seizing the Opportunity: Qubetics Presale and Unmatched ROI Potential Regarding presales, timing is everything—and Qubetics (\$TICS) is in a phase you don't want to miss. Currently, in Presale Phase 13, \$TICS tokens are priced at \$0.034. Each weekly phase introduces a 10% price increase, with a 20% surge slated for the final stage. Over \$7.3 million has already been raised, showcasing immense interest from the crypto community. The potential return on investment (ROI) makes this presale even more compelling. Analysts project a post-presale price of \$0.25 per token, offering early investors an ROI of 630.27%. And the excitement doesn't stop there. Experts predict \$TICS could climb to \$10–\$15 following the mainnet launch. At \$10, the ROI from the current stage could soar to 29,106.88%. If it reaches \$15, that ROI skyrockets to 43,660.31%. For anyone searching for the best altcoins to buy for 2025, Qubetics's presale offers a golden opportunity to get in early. This could be your chance to become part of a revolutionary project poised for incredible growth.

Conclusion: A Bright Future for Crypto in 2025 As the crypto market evolves, Qubetics (\$TICS), Bitcoin, and Ethereum are setting themselves apart as key players. Bitcoin's resilience and Ethereum's bullish momentum highlight their staying power, but Qubetics stands out with its unparalleled presale potential and innovative ecosystem. For those seeking the best altcoins to buy for 2025, Qubetics offers a unique chance to invest early in a project that combines cutting-edge technology with real-world usability. With its presale entering the final stages, now is the time to act. Secure your \$TICS tokens today and be part of a transformative journey toward financial empowerment. - Social media mentions of "buy the dip" hit an 8-month high as Bitcoin dropped below \$100K. - The social dominance score reached its highest level since April 12, 2024. Social media discussions about "buying the dip" have surged to an eight-month high as Bitcoin's price recently fell below \$100,000. This decline sparked a wave of chatter among investors, with the social dominance score hitting its highest level since April. Despite the drop, search interest in crypto remains strong, signaling continued market activity. ðŸ‘, With Bitcoin falling as low as \$95.5K today, the ratio of crypto discussions that are about buying crypto's dip has reached its highest level in over 8 months. The last time we saw the crowd nearly this enthusiastic about dip buying was the major crash on August 4th. Sinceâ€¦ pic.twitter.com/39NlpgMCs â€” Santiment (@santimentfeed) December 20, 2024

price has been fluctuating around the \$100,000 mark for the past week. Every time it dipped below this psychological level, significant liquidations occurred. On December 19, Bitcoin's price fell to \$95,500, sparking discussions about buying the dip. At publication, Bitcoin was trading at \$92,000, reflecting the market's volatility. Investors are closely monitoring price movements, hoping for a potential recovery. The social dominance score, which tracks the proportion of social media mentions about buying the dip, reached 0.061 on December 19. This was the highest score since April 12, when Bitcoin's price dropped below \$70,000. This surge in "buy the dip" mentions suggests that many believe this dip could be an opportunity to invest. Crypto Market Volatility Rises Search interest for crypto remains high, although it has decreased slightly since the beginning of December. Global searches for "crypto" scored 75 over the past seven days, down from a peak of 100 at the start of the month. Meanwhile, "buy the dip" searches reached a score of 38, the highest level since August 10. Market analysts, including Santiment, suggest that the current conditions could lead to increased volatility. They believe a potential short squeeze could trigger a sharp price recovery. However, some analysts remain cautious, as the market could dip further before seeing a rebound. The Federal Reserve's recent rate cut and its cautious outlook for 2025 have added to market uncertainty. This has fueled concerns about inflation and its impact on the economy, which could influence the crypto market. Highlighted Crypto News Today How Will Shiba Inu's Partnership with Chainlink Impact Its Ecosystem?

- El Salvador bought 11 BTC, increasing its reserves to 5,980 BTC, worth around \$580 million. - The IMF deal requires scaling back government Bitcoin activities, including shutting down the Chivo wallet. - Bitcoin remains legal tender, and El Salvador plans to continue buying Bitcoin for its reserves. El Salvador has been purchasing 11 BTC for \$1 million, a day after reaching a \$1.4 billion loan agreement with the International Monetary Fund (IMF). This purchase adds to the country's growing Bitcoin reserves, totalling nearly 6,000 BTC, valued at around \$580 million. However, this move comes at a critical moment when the country's controversial Bitcoin policies are under scrutiny due to an agreement with the IMF that requires scaling back government involvement in cryptocurrency. In 2021, El Salvador is the first country to adopt Bitcoin as legal tender. President Nayib Bukele championed this bold move to increase the country's economy, especially in remittances and financial inclusion. However, the adoption of Bitcoin has not been without challenges. A significant portion of the Salvadoran population has shown ignorance to embrace cryptocurrency. With surveys indicating that nearly 88% of citizens did not use Bitcoin in 2023. Purchase of Bitcoin Despite IMF warning Despite these challenges, El Salvador's government has continued to invest in Bitcoin and plans to accelerate its purchases. According to Stacy Herbert, Director of the National Bitcoin Office, the government intends to keep buying Bitcoin. For its Strategic Bitcoin Reserve, potentially at a faster pace. This commitment to Bitcoin remains strong, even as the IMF has urged the government to scale back its activities. As part of the loan deal, the IMF has imposed conditions that limit the government's Bitcoin-related economic activities, including transactions and purchases. The country has agreed to the voluntary use of Bitcoin in the private sector, discontinuing the government-operated Chivo wallet and ensuring that taxes remain payable in US dollars. These stipulations aim to address the risks associated with Bitcoin volatility, which the IMF views as threatening El Salvador's economic stability. The Chivo wallet, created by the government to facilitate Bitcoin payments, will be privatized or shut down. This marks a significant shift in the country's approach to Bitcoin, moving away from government involvement in cryptocurrency services. However, the government has reassured the public that Bitcoin will remain legal tender and private-sector Bitcoin wallets will continue to serve Salvadorans. This new phase in El Salvador's Bitcoin journey highlights the country's delicate balancing act: maintaining Bitcoin's legal tender status and strategic reserve while adhering to IMF guidelines to ensure fiscal stability. As Bitcoin continues to be a part of the country's economic strategy, it remains to be seen how these changes will impact the broader adoption of cryptocurrency in El Salvador. Highlighted Crypto News Today How Will Shiba Inu's Partnership with Chainlink Impact Its Ecosystem?

- The SEC approved Hashdex and Franklin Templeton's Bitcoin-Ethereum ETFs. - Hashdex's ETF will trade on Nasdaq, and Franklin's on Cboe BZX. The United States Securities and Exchange Commission (SEC) has approved two groundbreaking crypto exchange-traded funds (ETFs). These include the Hashdex Nasdaq Crypto Index US ETF and the Franklin Crypto Index ETF. The decision marks the first time ETFs combining spot Bitcoin and Ethereum have received regulatory clearance. SEC has *approved* both the Hashdex Nasdaq Crypto Index US ETF & Franklin Crypto Index ETF! " Nate Geraci (@NateGeraci) December 19, 2024 Will initially hold both btc & eth. pic.twitter.com/5GUhhhXL7y Hashdex's ETF will trade on the Nasdaq, while Franklin Templeton's product will launch on the Cboe BZX Exchange. Both ETFs will allocate holdings based on the free-float market capitalizations of Bitcoin and Ethereum. This innovative approach diversifies investment exposure, reducing risk compared to single-asset funds. The SEC's decision reflects growing regulatory comfort with hybrid crypto products. The agency emphasized compliance with commodity-based trust standards and surveillance-sharing agreements. These measures aim to detect and prevent fraud while ensuring investor protection. The ETFs align closely with previously approved single-asset crypto ETPs, meeting criteria under the Exchange Act. ETFs Tackle Volatility with Secure Investment Recent market volatility adds significance to this approval. Bitcoin's price dropped below \$96,000, and Ethereum fell to \$3,440, highlighting the importance of regulated investment options. The funds provide institutional and retail investors with a secure pathway to participate in cryptocurrency. The ETFs must adhere to strict operational guidelines. They will maintain transparency in portfolio holdings and pricing, updating intraday indicative values every 15 seconds. Both exchanges will monitor compliance and can delist the funds if they breach regulations. These safeguards enhance trust and stability in the crypto market. Industry analysts predict high demand for these ETFs. Nate Geraci, president of The ETF Store, noted their potential to attract advisors seeking diversified crypto exposure. Bloomberg analysts expect the funds
