

extents. Dogecoin's Present Value Dogecoin's blockchain observed only just under \$5 Billion in transaction amounts on Wednesday. This marks its biggest breakdown ever to about 93% from its highest of \$82 Billion. All this fall down occurred in just a matter of a little more to two weeks. The extreme plunge observed was just 3 days prior to Wednesday. On Sunday the average transaction value was about \$1.16 million, whereas on Wednesday it went down to \$240,000 " marking a drop of 80%. Having a major transaction volume, it maintained somehow throughout despite the crisis and its fall in price. This hints that Doge is also used by many hefty account holders and stakers. Doge so far has come across a ramp walk of numerous sawteeth throughout a year's time. By the mid of last month, the coin was pushed to its highest extent by various artificial means. With the overall drop in its blockchain and its networks, now Dogecoin at present stands at \$0.315. This is down of about 63% from its all time highest of \$0.73. Recommended for you

- Novogratz gives two reasons for Dogecoin's growth. - He adds that no coins can be as successful as Bitcoin. - Many banks are building an asset channel for crypto. Michael Novogratz, CEO of Galaxy Digital Holdings Ltd., recently discussed the capability of cryptocurrencies, such as Dogecoin, and their process of converting the financial system and beyond with Goldman Sachs. His remarks were released in a Goldman Sachs report titled "Crypto: A New Asset Class?Crypto: A New Asset Class?" on May 21st. Novogratz was asked about his thoughts on Dogecoin and meme coins. He replied saying that dogecoin has no long-term viability and thus he doubts the future of Dogecoin. Moreover, he adds that there have been two reasons for Dogecoin's growth. He answers that the first reason is tribalism among investors. More so, he recalls Gamestop's rise, which was fueled by some young investors empowered through trading apps and social media platforms. Additionally, he compares Dogecoin with Gamestop that one day these will be vanished. He continued saying some crypto assets like Gamestop will have short-term potential but gradually lose their viability. Besides, he strongly believes in Bitcoin (BTC). Novogratz claims that no coin can be as successful as Bitcoin in a short period of time, and now highly credible individuals accept and recognize its potential. As a result, the entire world voted for Bitcoin to be a store of value. Novogratz concluded with a note saying: "People are still making strong arguments against it, but every single bank we know is developing a crypto asset channel, 14 companies have Bitcoin ETFs registered with the SEC, and most tech companies incorporate bitcoin into their wallets and interfaces." Then, Michael Sonnenshein, CEO of Grayscale Investments answers the question whether meme-currencies are "a blessing or a curse to cryptos". He gave an epic reply saying that Dogecoin exemplifies how simple it is to create a digital asset. He says that investors examine before investing. In addition, he explains how it demonstrates the importance of determining whether the asset is profitable and has potential in the real world. Furthermore, TheNewsCrypto's Senior Analyst advises against investing in Dogecoin and instead recommends digital assets such as ADA, TRX, and VET. Recommended for you

- Elon Musk says that his ability to take action is limited when it's about Dogecoin. - Many Australians believe that Musk is the founder of Bitcoin. - DOGE, started as a joke, boomed in its value because of Elon Musk's continuous tweets. Elon Musk's followers believe that he is the CEO of Dogecoin and one tweeted from a dog-themed profile. Replying to that comment, Elon has stated that he has no formal authority over the property and his ability "to take action is limited" when it's about Dogecoin. Please note Dogecoin has no formal organization & no one reports to me, so my ability to take action is limited " Elon Musk (@elonmusk) May 25, 2021 Although his followers believe that he is the head of DOGE, Musk denies and clearly claims that he isn't the boss of Dogecoin. Moreover, with reports of the survey taken in Australia, states that more than 50% of the responders believe Musk as the founder of Bitcoin (BTC). This implies that his last few Dogecoin reminders were well timed. Elon Musk: Reason for unwanted commotion Additionally, Dogecoin was just started as a joke in 2013, and framed as a meme-currency in the crypto world. The coin was not known to the users until Elon started tweeting about DOGE. Musk's consequent tweets were the reason for a boost in the value of Dogecoin throughout 2021. Besides, many followed him and started to invest in Dogecoin. In addition, Musk's continuous tweets resulted in unwanted disturbance within the crypto-markets, and so he is blamed for this activity. Others claim that they see irresponsible swings in the cryptocurrency markets because of Elon Musk. Furthermore, during the mid-May market crash, a Change.org petition was launched urging Elon Musk to sell his Bitcoins and withdraw from cryptocurrency. Recommended for You

- The mystic whale now holds 36.7 billion Dogecoins. - They purchased 420.6899 more coins on Thursday. - Even crypto experts are not sure about the whale's exact identity. A mystical whale is the largest Dogecoin holder in the world, it holds around 36.7 Billion of Dogecoins worth \$14.7 Billion. According to blockchain data, they purchased 420.6899 more Dogecoins worth \$192 on Thursday. Whereas this number "420" is relatable to meme joke: refers to "cannabis" culture. Moreover, this whale now holds about 28% of the total Dogecoins in circulation. There is a lot of controversy about who is behind this Doge wallet. Even crypto experts are not sure about the whale's exact identity whether an individual, group of persons or a trading firm. However, they have two characteristics: on one hand, it is publicly seen that they are extremely rich to invest millions of dollars and on the other hand, they are too much interested in today's memes. Why Not Elon Musk? Some users of reddit suggest Elon Musk's name as he has both characteristics, money and love memes. Besides with other reports, it is noted that there are 3 transactions in the whale's wallet that add 28.061971 Dogecoins each. It probably refers to the birthdate of Elon Musk, June 28, 1971. In addition, Musk has previously stated that DOGE would go to the moon, moreover, he has purchased some dogecoins for his younger child. Also he accepts Dogecoin for the SpaceX mission as payment. Additionally, this concept of hiding their identity with this enormous wealth sounds intriguing, but it isn't good for the crypto-market. If a large portion of a cryptocurrency is in the hands of a single person, it is not good for the coin's financial health. If Thursday's response to a tweet is any indication, he's not selling the

dogecoin either. To be clear, I don't believe Elon will ever sell any of his Doge holdings. He's the ultimate hodler," said Dave Lee, a well-known Tesla investor on Twitter, in a tweet on Thursday. Yeah, I haven't & won't sell any Doge " Elon Musk (@elonmusk) May 20, 2021 Eventhough, the largest dogecoin holder is still in disguise, every dogecoin holders are getting richer. Following Elon's tweet on Thursday, the coin pumped 10% shortly. Recommended for you

Elon Musk tweets once again on Dogecoin earlier this morning. This time rather hopefully. He mentioned that he and Dogecoin are working together to come up with a new improved transaction system. He further mentioned "Potentially promising". These two words alone are enough to light up the fire on the Dogecoin's price to rocket up again. Working with Doge devs to improve system transaction efficiency. Potentially promising. " Elon Musk (@elonmusk) May 13, 2021 Dogecoin History so Far: Calling himself the "Dogefather", Elon once again proves it to his name. Whatever be his tweet will set the market on play. Elon is now like the puppet master of the whole crypto industry. His tweets are the strings upon which the whole crypto industry is being played. Looking back since the end of last month, his SNL announcement tweet skyrocketed Dogecoin's price from \$0.265 to a staggering high of \$0.737 just within a week's time. Then it remained in the same zone jumping between \$0.72 to \$0.69 constantly until his very next tweet just hours before the SNL. After his mentioning to the world to invest cautiously into crypto, the market flung downhill from the epic height of \$0.753 to a low of \$0.35 till yesterday. Everything so far regarding the price of Dogecoin is based on Elon's tweets. Future of Dogecoin: As always, today's tweet proved the same. History keeps repeating again and again. Usually just a normal tweet from Elon depicting any coin, either it be Dogecoin or Bitcoin or whatsoever, affects their prices drastically rising up. So I think you all could imagine what will happen if he tweets optimistically. True to your imagination, the price of Dogecoin is up racing like anything since Elon's early morning tweet. Till yesterday the whole crypto industry witnessed a great bear market overall since Elon & Tesla together officially announced their cease of Bitcoin payment for Tesla's products. Upon the whole market sump, Dogecoin alone rose up like a one man army from the dead. From \$0.35, it now stands \$0.576, touching \$0.590 on the way. This mounts to 53.09% increase in its price for the past few hours since Elon's tweet. No wonder , the price may even hit the \$1.00 stance once we wake up tomorrow. Now from Elon's such tweet, stating openly his working with Dogecoin and his mentioning "Potentially promising", sets the future as bright as possible. It may even be an overnight metamorphosis, let's wake up to witness it! Recommended for you

Elon Musk and Tesla officially announced today, May 13th to cease Bitcoin as a source of payment for Tesla's products. This announcement completely shattered the whole crypto industry, turning down the price of Bitcoin abundantly. Upon this announcement, Bitcoin suffered a huge drop of 15%, from \$55,000 to \$46,600. All this took place within a span of 3 hours. The whole entire market suffered a serious beardown. Not only Bitcoin, all other Altcoins and also those based on Bitcoin suffered the same fate today. The overall crypto market plummeted down drastically. Elon and Tesla's views Elon Musk and Tesla together came up with this announcement today that set the whole crypto industry to chaos and including his twitter tweet too. Tesla & Bitcoin pic.twitter.com/YSSwJmVZhP " Elon Musk (@elonmusk) May 12, 2021 Elon's reason for such a radical decision foresees immense amounts of electrical energy being spent on the mining of cryptocurrencies and Bitcoins. The mining of cryptocurrency involves extensive use of fossil fuels, which produce electricity. Such massive units of electricity are in need to run special computers which process various mathematical algorithms for crypto mining. He foresees that extensive mining of Bitcoins and other cryptocurrencies has increased the usage of fossil fuels. He further claims, Tesla is an environmentally friendly corporation that produces only electric cars, electric storages, solar equipment, etc. Being such a green revolutionized corporation, it will not accept any direct or indirect means of revenues that deplete fossil fuels. The aftermath Market Scenario: Once after the announcement, the complete crypto market turned into complete pandemonium, havoc, and chaos. A direct domino effect prevailed. Starting from the pull-down price of Bitcoin from \$55,000 to \$46,600, witnessing a fall of 15% in just 3 hours of the announcement. Furthermore, all the altcoins based on Bitcoin and other cryptocurrencies faced the same bear dropdown. The whole market flunked out. Bitcoin's "Greed & Fear" indeed value antagonistically differed from a Greed of 68% yesterday to a Fear of 31% today. Critics' Views Critics were on the rise ever since the SNL announcement took place. After the announcement of the SNL , witnessed nothing but just a complete surge of Dogecoin shooting up to its highest of \$0.737. His tweet just hours before the SNL slumped Dogecoin to \$0.619. This raised speculations on a pessimistic view on Dogecoin among the crypto geeks all over. And as per the predictions after the SNL, prices raced downwards from the high point of \$0.75 to \$0.35 in monotonous manner every day till today. This was the same for Bitcoin too. Bitcoin's price trumped up to ever high of \$65,00 during mid-April ever since Tesla announced that it would accept payments in Bitcoins. And what happened today with Tesla ceasing Bitcoin as a payment method resulted in the exact opposite, dumping and crashing the whole crypto market. Critics and traders are infuriated with such radical acts of Elon. Barstool Sports founder, Dave Portnoy, clashed out Musk is like the Wizard of Oz in the crypto world. Once he pulls a lever, he shoots up the price of Dogecoin up and that of Bitcoin down. He further instigated Elon should have a responsibility while uttering something. This is because when he says to buy something and the next second says not to, it's simply like playing with people's hopes and riches. Many traders sued Elon Musk and now demand the US Securities and Exchange Commission- SEC to look into this issue. Skeptics proclaim all this is a game of scam played by Elon Musk. Adrian Przelozny, CEO of Independent Reserve also commented Elon's acts to be "disappointing". A Trader's Perspective On the contrary many crypto analysts are now commenting on this opportunity to buy cryptocurrency at its dip. Traders are all set and are now buying cryptos and Bitcoins at their dips. William Clemente III, the Bitcoin Magazine contributor tweeted this is the best opportunity for one to buy Bitcoin in its whole history so far. Adam Back, the British cryptographer, cypherpunk, and CEO of Blockstream along with

Anthony Pomplino, CEO of Morgan Creek Digital, both thanked Elon for bringing the price of Bitcoin down. They also depicted, whatever they all along with Elon too didn't sell their Bitcoin reserve. All this speculates a strategical scam move by Elon Musk, or was it all just a spontaneous act. Only profound investigations could solve this mystery. Recommended for You

- Dogecoin (DOGE) is expected to hit \$1 by the end of May. - Usually the price surge of DOGE is due to social media campaigns. Elon Musk's meme cryptocurrency Dogecoin (DOGE) is expected to hit \$1 by the end of May. However, DOGE never fails to come up with big surprises that always get investors' attention globally. Notably, the meme crypto DOGE was bullish despite the recent crypto market crash that occurred last week. Usually, the price surge of DOGE is due to the social media campaigns that happen around. The recent hype around DOGE seems to be fueled by the #DogeDay420 hashtag. The campaign's ultimate goal is for the crypto to hit \$4.20 by June 09, 2021. Also, in February, the price of DOGE spiked drastically over 55%. However, the price surge came after the tweet consecutive tweet from Elon Musk and Snoop Dogg. Dogecoin (DOGE) Price Analysis According to CoinGecko, DOGE holds 7th position, and its price is trading at \$0.27, at the time of writing. The daily time frame chart above shows the Ascending Channel pattern. An Ascending Channel is the pattern that occurs between upper inclining equal trendlines. More so, higher highs and higher lows frame this price pattern. DOGE technical analysis shows that cryptocurrency has a fabulous future ahead in 2021. Additionally, the platform looks encouraging as it has clear objectives, and a use case that surfs a wide market. Furthermore, DOGE has a high possibility of hitting \$1 before June, if investors decide DOGE is a wise investment in 2021. Added to this, bullish DOGE price prediction 2021 is \$10.

| -Dogecoin price is expected to surge over \$0.125. -DOGE run along with the bulls in breaking the resistance level of \$0.78, -Moreover, for opening a position in Dogecoin, investors need to be prepared for the high volatility | Dogecoin price is expected to surge over \$0.125. Moreover, DOGE has seen many pumps this month through the manipulation of traders, celebrities, and so on. Doge Price Could Face Another Bull Rally DOGE is regarded as a meme token, is poised for higher highs. In particular, Tesla's Elon Musk continues talking about DOGE. While rapper Snoop Dogg recently tweeted "Snoop Doge," fueling the rising speculation around. More so, DOGE is consolidating in a bull pennant after surging 1,150% between January 28 and January 29. This type of technical formation is considered a continuation pattern that may lead to a significant price increase. According to CoinGecko, the DOGE price is at \$0.067, with a 24-hour trading volume of over \$9.99 billion, at the time of writing. DOGE/USDT Price Chart (Source: TradingView) DOGE/USDT has shown great performance in the last few days. If this continues, the crypto can be seen to run along with the bulls in breaking the resistance level of \$0.78, which can lead towards a high price of \$0.125. On the contrary, if the DOGE price fails to maintain its position with the bulls, the crypto might break out of its bullish position and fall down along with the bears at the support level of \$0.03. In this case, the crypto must find a way to recover quickly. Furthermore, crypto markets are prone to rapid, sharp price changes. For opening a position in Dogecoin, investors need to be prepared for the high volatility in the price along the way. Even if the long-term outlook is bullish. Recommended for You

| Dogecoin (DOGE) spiked over 900% in less than two days from \$0.0078 to an all-time high of \$0.078. Also, DOGE is ranked among the list of top ten crypto assets in the market cap. Dogecoin surges ranking among top cryptocurrencies DOGE is created "as a joke", now seen a surge after Redditors encouragement to buy. According to CoinGecko, DOGE's price is at \$0.0367 with a 24-hour volume of over \$28.15 million, at the time of writing. Reddit users in a/ SatoshiStreetBets thread encouraged traders to get the cryptocurrency up to \$1. However, this led to the cryptocurrency DOGE price surge. Users wrote messages like "Let's make DOGECOIN a thing", "NEED \$1, Doge". Also, shared how much users bought in the thread. #DogeCoin, a cryptocurrency originally started as a joke is up 72%. Reddit is at it again. Here are some screenshots from a Reddit board called "SatoshiStreetBets" (Satoshi = mysterious founder of bitcoin). Posts encouraging ppl to send Dogecoin to \$1. Currently just over \$0.01 pic.twitter.com/9Nj5bPjOwc " Arjun Kharpal (@ArjunKharpal) January 28, 2021 Moreover, the spike was also bolstered by a tweet from Elon Musk, Dogecoin's former CEO, and Tesla chief executive. DOGE also experienced a price surge over 120% previously on January 2. More so, when an adult film star made a tweet in support of holding the crypto. In Spite of a widely exciting rally, crypto data site TheTIE reported that DOGE became the subject of over 90,000 tweets. Nevertheless, this is the first altcoin to get a huge Twitter-volume than Bitcoin. Recommended for You

On July 8, Crypto asset Dogecoin (DOGE) surged 50% due to a fresh viral TikTok campaign that encouraged users to pump the coin, leading to an appeal to speculators from its twitter account. DOGE is warning traders against speculation after its price gain. In a tweet, the controller of the @Dogecoin Twitter account appealed to traders to "be mindful of the intentions people have when they direct you to buy things". Bloomberg Former Analyst and Delphi Digital Co-founder Anil Lulla said, "The recent rise of DOGE, a meme coin, should serve as a reminder to everyone in the space that the most popular use case for crypto is still pure speculation." The price gain came after TikTok user James Galante posted a video called "Let's all get rich", and persuaded viewers to invest \$25 in DOGE, and wait until its price rises to \$1, which would give each person a profit of around \$10K if the unlikely scenario happened. The so-called #DogeCoinTikTokChallenge has gained almost half a million views and 100,000 likes to date. It has pushed Dogecoin rankings to reach the number 28 cryptocurrency by market cap and its volume has increased more than 2,000, while Global search interest on "How to buy a dogecoin" has also skyrocketed. TikTok has delivered gains for DOGE holders in a way that beats even the likes of Elon Musk, who earlier this year began giving huge support for the altcoin. During an altcoin boom in Jan 2018, wherein many assets hit all-time highs, DOGE founder Jackson Palmer released an article in tech news magazine Vice titled, "My Joke Cryptocurrency Hit \$2 Billion and Something Is Very Wrong." Recommended for You

Cryptocurrency markets are evolving hastily, and meme coins that after dominating the headlines now seem like losing steam. Dogecoin (DOGE) and Shiba Inu (SHIB), two of the most well-known meme-based tokens, are showing symptoms of slowing momentum in both rate overall performance and community exhilaration. Meanwhile, more recent, utility-driven projects like Ozak AI (OZ) are growing to prominence—backed by real-world use instances and strong investor confidence. With over \$1 million raised in its presale and a sensible \$1 price goal, Ozak AI is taking pictures of interest as one among 2025's top altcoins to observe. From Hype to Utility: Why Meme Coins Are Struggling Meme coins exploded onto the scene with massive social media campaigns, movie star endorsements, and viral memes. DOGE reached dizzying heights throughout the bull market thanks in part to Elon Musk's tweets, even as SHIB rallied a faithful network by branding itself as the "Dogecoin killer." However, the panorama is converting. Traders and investors have become extra selective, prioritizing long-term sustainability, technological innovation, and real application over speculative hype. Price action reflects this shift. DOGE has struggled to reclaim the \$0.50 mark and SHIB remains well below its all-time highs, with limited bullish catalysts on the horizon. Without ongoing innovation or new use cases, meme coins risk fading into irrelevance during the next major bull run. Ozak AI: Built for the Future of Decentralized Intelligence In contrast, Ozak AI is gaining serious traction with its unique blend of artificial intelligence, blockchain technology, and predictive analytics. It's not just another speculative token—it's a full-fledged ecosystem designed to deliver intelligent, data-driven solutions for both individuals and businesses. By integrating tools like Ozak Stream Network (OSN), DePIN (Decentralized Physical Infrastructure Networks), Data Vaults, and customizable Prediction Agents, the platform enables users to interact with decentralized AI in ways that were once unimaginable. The OZ token, currently priced at just \$0.003 during presale, powers this ecosystem. It grants access to premium features, supports governance decisions, and acts as a reward mechanism for network participants. With this real-world utility and a fully decentralized structure, Ozak AI is well-positioned to thrive in a market that's increasingly focused on meaningful innovation. A \$1 Target? Why Analysts Are Bullish Market analysts and crypto influencers are taking notice of Ozak AI's rapid fundraising success and technological edge. The presale recently surpassed \$1 million, and many forecasts suggest that the token could reach \$1 by late 2025, translating to an eye-watering 300x return from its current price point. Technical expectations suggest initial resistance at \$0.01 once exchange listings begin, with support holding steady around \$0.0028. If development milestones continue to be met and adoption increases, breaking through to \$1 would not be out of reach—especially in a bullish macro environment. Meme coins may have had their time in the sun, but the crypto market is maturing. Utility, innovation, and real-world application are the new drivers of investor interest—and Ozak AI delivers on all three fronts. With a promising product, a clear roadmap, and explosive upside potential, Ozak AI isn't just riding a wave—it's building one. For those eyeing the next big thing in crypto, this \$0.003 gem could be a breakout star in 2025. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Bitcoin's consolidation is pushing traders toward altcoins. - Low volatility and interest rate pauses boost altcoin appeal. - Increased buying in DeFi, gaming, and AI tokens signals a rally. The crypto market is buzzing once more, and this time, it's not Bitcoin that is dominating the headlines. Indications are pointing towards a potential altcoin rally, and all signs suggest that the long-awaited "altcoin season" is indeed close at hand. As Bitcoin holds steady, market participants are set to diversify, and altcoins are increasingly in focus. Bitcoin Consolidation Fuels Altcoin Potential Bitcoin's momentum has cooled off, entering a consolidation phase that typically signals capital rotation into smaller-cap digital assets. This shift historically marks the beginning of strong upward movements in altcoin prices. The current market sentiment, supported by increased trading activity and price breakouts on altcoin charts like Ethereum, Solana, and Avalanche, suggests this could be the case once again. Traders Seek Higher Gains in Altcoins One of the key reasons the market is primed for altcoins is the reduced volatility in Bitcoin. Traders often shift funds to altcoins seeking higher short-term gains, especially when BTC hits strong resistance zones. This creates opportunities for other crypto assets to shine and even outperform. Macroeconomic Factors Favour Risk Assets Macroeconomic factors are also adding fuel to the fire. Central banks are signalling a pause or reversal in interest rate hikes. Lower interest rates often increase risk appetite among investors, leading to a surge in capital entering the crypto market, particularly altcoins, which are seen as higher-risk, higher-reward assets. Retail Investors Return to the Market Retail interest is making a comeback, too. Social media discussions and on-chain data show rising transaction activity and renewed enthusiasm for altcoins like Dogecoin, Chainlink, and XRP, which have already posted double-digit gains in recent days. Meanwhile, smart money is moving in. Institutional investors are quietly accumulating tokens in trending sectors like DeFi, gaming, and AI. Blockchain data confirms large wallet movements, a typical precursor to major rallies, as these investments often spark wider retail adoption and FOMO. Although nothing is guaranteed in the crypto world, current signals, both technical and fundamental, indicate that altcoins could be gearing up for a significant run. With market conditions shifting and investor appetite growing, now might be the time to keep a close watch on the altcoin space. A new wave of crypto headlines may be just ahead. Highlighted Crypto News Today: Skip Solana (SOL), These 4 Altcoins Are Expected to Rip Higher in the Next Bull Phase

- Ether price briefly touched the \$1,800 mark after recording over a 10% price surge. - Ethereum market dominance recovered from its all-time low as the token outperformed Bitcoin and the broader crypto market. - Ether whale accumulation is further boosting the Ether market price, as of April 23. Ethereum price surprised the entire crypto market after it briefly touched the \$1,800 mark earlier today. The broader crypto market reclaimed the \$3 trillion overall market cap, while Bitcoin recorded a 5.62% surge and climbed to the \$93k price level. However, the entire crypto community is having its eyes on Ether as it outperformed BTC after a long time. As the trade tension between the US and other countries eased and Trump announced that he has no intention to fire the Fed chair, the crypto market witnessed positive market sentiment. Meanwhile, the crypto fear and greed index recorded 52, which turned fear market sentiment into neutral today. Ethereum Price Records Over 10% Surge Before Hitting \$1,800 Ethereum price surged by more than 10% today after the market sentiment improved in the crypto market. Ether is trading at \$1,795.87 at the time of reporting. It reached a 24-hour peak of \$1,816.52. Bitcoin also recorded a price surge of 5.9% and climbed to the \$93,600 price level. Major altcoins, such as XRP, Solana, BNB, Dogecoin, and Chainlink, have also recorded price gains today. This has resulted in a 6% increase in the overall market cap, close to \$3 trillion. There have been several times the crypto market showed recovery gains in the past few months after a short bull run in December 2024. However, Ether recorded average market performance every time, disappointing ETH long-term holders. With a price surge of more than 10%, Ether has outperformed most of the major altcoins and Bitcoin today. Ethereum market dominance started showing signs of recovery from its all-time low value. It hit an ATL of 7.07% a couple of days ago and increased by 1.67% today to 7.50%. Can Ethereum Whale Accumulation Further Push Its Market Price? ETH just hit \$1,800! æ” Lookonchain (@lookonchain) April 23, 2025 Whales continue to buy \$ETH. 0xD20E withdrew 5,531 \$ETH(\$9.8M) from #Binance in the past hour. 0x2088 spent 4.61M \$USDC to buy 2,568 \$ETH at \$1,794 in the past 40 minutes.<https://t.co/jzoEhDh2Fs><https://t.co/Gz3tdRjNwp> pic.twitter.com/Fow5pZZ0lM On-chain analytics platform Lookonchain reported Ethereum whale accumulation today. As the second-largest cryptocurrency by market cap recorded gains, ETH whales took this opportunity to increase their ETH holdings. Whale æ”0xD20Eæ” withdrew 5,531 Ethereum from Binance. Another whale æ”0x2088æ” purchased 2,568 ETH at an average price of \$1,794. The increasing investor confidence in Ethereum might bring further gains for the token in the next few days. Its 73% surge in 24-hour trading volume also suggests the same. However, the broader crypto market must sustain its upward momentum for that to happen. And it is too early to say whether the crypto market is completely on track for the next bull run or will face pullbacks.

- DOGE is holding around the \$0.18 range after an 11% gain. - The meme coinâ”™s daily trading volume has surged by over 96%. The sturdy bear hold has ended up with a 6.72% surge in market cap, reaching \$2.95 trillion. Notably, the meme coin market cap has reached \$58 billion, after a 16.3% jump. Among the meme coins, Dogecoin (DOGE) has posted a gain of over 11.69%. DOGE kickstarted the day trading at a low of \$0.1633, and with the bulls in command, it eventually pushed the price up to a high of \$0.1849. At the time of writing, DOGE traded within the \$0.1829, with the market cap reaching \$27.25 billion. Consequently, the daily trading volume of the meme coin has touched \$1.95 billion. According to CoinGlass data, the market has witnessed a liquidation of \$12.86 million worth of DOGE. Dogecoin has gained over 18.97% in the last seven days. The asset opened the week trading at \$0.1517. The bulls initiated the upside correction and reached the current trading level. Trend Shift Coming for DOGE? DOGEâ”™s Moving Average Convergence Divergence (MACD) line is trying to cross over the zero line while the signal line stays below the zero line. This indicates that the early stage of stepping into the bullish zone. If it stays below, it may lead to more downside. Besides, the meme coinâ”™s Chaikin Money Flow (CMF) indicator, positioned at 0.14 suggests moderate buying pressure in the market, with the capital flowing into the asset. In the meantime, the daily trading volume of Dogecoin has increased by over 96.65%. Assuming DOGE, failing to hold above the \$0.1823 range, the price could steeply slide toward the \$0.17 support zone. An extended loss might invite the death cross. It may likely send the meme coin into a deeper correction, eyeing more losses. On the recovery side, the meme coin could jump and reclaim the nearby resistance at around \$0.1833. If the bulls are mighty enough, the golden cross might emerge and propel DOGE to bring in a retest at \$0.1850 resistance. Moreover, the assetâ”™s Bull Bear Power (BBP) value of 0.03546 signals that the bulls are dominant in the market, with mild upward momentum. DOGEâ”™s daily relative strength index (RSI), found at 60.41, implies a neutral-to-bullish territory.

Crypto investors are closely watching two trending tokensâ”€”PEPE and Ozak AI (OZ)â”€”as both compete for the spotlight in the race toward a \$1 valuation. PEPE rides high on meme-fueled popularity, while Ozak AI is carving out a niche through AI-powered utility and decentralized innovation. With momentum building behind both projects, fresh price forecasts now point to one clear frontrunner in this battle for massive returns. Pepe Coin (PEPE) PEPE has exploded in popularity as yet another meme coin riding the viral wave started by Dogecoin and Shiba Inu. Its brand is built on humor, internet culture, and community hype, but that also comes with high volatility and unpredictable price swings. At the time of writing, PEPE is trading at \$0.0000072. To reach \$1, PEPE would need an astronomical market cap increase that most experts consider highly unlikely. Even at \$0.01, the total market cap would exceed that of Bitcoin and Ethereum combined, something many analysts agree is not feasible without a complete paradigm shift in the crypto market. - Current Price: \$0.0000072 - Support Level: \$0.0000060 - Resistance Level: \$0.0000090 2025 Forecast: \$0.00002 æ” \$0.00005 (3xâ”€”6x from current levels) While PEPE may deliver solid short-term returns during meme coin rallies, its long-term outlook is limited by its lack of utility and real-world application. For that reason, it remains a high-risk, speculative play. Ozak AI (OZ): A Utility-Driven Project With Explosive Potential Ozak AI, on the other hand, is gaining recognition as one of the most promising AI-integrated crypto projects in 2025. Built on a decentralized infrastructure, Ozak AI combines predictive analytics, DePIN (Decentralized Physical Infrastructure Networks), and data vaults to provide real-world value for businesses and

individuals. Currently in presale at \$0.003, the OZ token has already raised over \$1 million, signaling strong early investor interest. Analysts are forecasting a potential rise to \$0.05â€”\$0.10 shortly after listing, with a realistic target of \$1 by late 2025 or early 2026. Current Presale Price: \$0.003 Target price: \$1 2025 Forecast: \$0.50 â€” \$1.00 (150xâ€”300x potential) Ozak AIâ€™s platform is already attracting attention in fintech and health sectors for its AI-powered prediction agents, real-time analytics, and decentralized data solutions. Unlike PEPE, Ozak AI brings innovation and utility to the marketâ€”two elements that make its \$1 target not just a dream, but a strategic objective. While both tokens have strong communities, the difference lies in utility and long-term viability. PEPE may continue to generate short-term hype, but its path to \$1 is blocked by massive market cap limitations. Ozak AI, backed by technology, real-world use cases, and investor demand, stands out as the clear winner in this race. If youâ€™re looking for the next 100x token with actual substance behind the price action, Ozak AI looks far more likely to hit the \$1 markâ€”and possibly beyond. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Tesla maintains 11,509 Bitcoin worth \$951 million in Q1 2025, with holdings now exceeding \$1 billion due to recent price increases. - The firm missed earnings expectations with \$0.27 per share. Tesla continues to invest substantially in Bitcoin even though Q1 2025 financial performance proved unsatisfactory. The April 22 earnings report from Tesla shows the company maintains 11,509 Bitcoins worth \$951 million as of March 31. However, the value decreased from \$1.076 billion at year-end because Bitcoin prices in the market changed. Tesla maintains its Strategy Without Changes Despite Its Business Difficulties The electric vehicle manufacturer has maintained an unaltered Bitcoin position in the first quarter despite facing difficult times for its main automotive operations. Teslaâ€™s Bitcoin investment strategy reached over \$1 billion again after the cryptocurrency surged to \$93,000. This demonstrates both the market risks and potential benefits of this investment method. Tesla maintains a consistent cryptocurrency approach that creates a striking difference from its overall business performance. Its adjusted earnings per share reached \$0.27 below the range of \$0.41-\$0.42, which analysts had forecast. Tesla reported a 9% drop in annual revenue, which reached \$19 billion. Automotive revenue underwent a 20% decline due to a fall in deliveries, mixed with continuous price adjustments. The company registered a 13% drop in vehicle deliveries since last year, while production levels decreased by 16%. Its production decline occurred because Tesla needed to update four Model Y production lines. The energy division of Tesla proved to be a positive point in their report, with revenue growth reaching 67% compared to the previous year. Additionally, regulatory credit revenue rose to \$595 million from \$432 million a year earlier. Elon Musk announced plans to reduce his involvement in D.O.G.E to focus more on Tesla. This directed to a 5% increase in Tesla stock prices in after-hours trading, even though the companyâ€™s stock had declined by 41% throughout the year. - Bullish XLM price prediction for 2025 is \$0.2667 to \$0.4381. - Stellar (XLM) price might reach \$2 soon. - Bearish XLM price prediction for 2025 is \$0.0703. In this Stellar (XLM) price prediction for 2025, 2026-2030, we will analyze the price patterns of XLM by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | STELLAR (XLM) PRICE PREDICTION 2025 | | | STELLAR (XLM) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Stellar (XLM) Current Market Status | Current Price | \$0.2503 | 24 â€” Hour Price Change | 2.24% Down | | 24 â€” Hour Trading Volume | \$205.78M | | Market Cap | \$7.72B | | Circulating Supply | 30.77B XLM | All â€” Time High | \$0.9381 (On Jan 04, 2018) | | All â€” Time Low | \$0.001227 (On Nov 19, 2014) | What is Stellar (XLM) | TICKER | XLM | | BLOCKCHAIN | Stellar | | CATEGORY | Stellar Consensus Protocol | | LAUNCHED ON | 2014 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Stellar (XLM) is the native cryptocurrency of the Stellar network. The token is well-known as Stellar Lumens (XLM). Stellar is a peer-to-peer (P2P) decentralized payment network that was launched in 2014. Stellar Lumens (XLM) is used as the transaction fees on the network. It also serves as the intermediate payment currency across cross-bridge transactions. The supply of XLM and the networkâ€™s development is supported by Stellar Development Foundation (SDF), Stellarâ€™s native non-profit organization. Stellar network secures its blockchain with Stellar Consensus Protocol (SCP). SCP is a modified consensus mechanism that is based on the Federated Byzantine Agreement (FBA). Hence, nodes are selected based on voting and later verify and validate transactions onto the distributed ledger. The Stellar network also holds its own decentralized exchange. Stellar network bridges the off-chain financial institutions to the on-chain payment ecosystem. Thus, its prime motto is to accelerate the mission of banking the unbanked. Stellar 24H Technicals Stellar (XLM) Price Prediction 2025 Stellar (XLM) ranks 14th on CoinMarketCap in terms of its market capitalization. The overview of the Stellar price prediction for 2025 is explained below with a daily time frame. In the above chart, Stellar (XLM) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline

and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Stellar (XLM) was recorded at \$0.2094. If the pattern trend continues, then the price of XLM might reach the resistance levels of \$0.2667, \$0.3756 and \$0.4381. If the trend reverses, then the price of XLM may fall to the support level of \$0.2005.

### Stellar (XLM) Resistance and Support Levels

The chart given below elucidates the possible resistance and support levels of Stellar (XLM) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Stellar (XLM) for 2025.

Indicator	Purpose	Reading	Inference
Resistance Level 1		\$0.2667	
Resistance Level 2		\$0.6423	
Support Level 1		\$0.1415	
Support Level 2		\$0.0703	

### Stellar (XLM) Price Prediction 2025

RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (XLM) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Stellar (XLM) market in 2025.

Indicator	Purpose	Reading	Inference
50-Day Moving Average (50MA)	Nature of the current trend by comparing the average price over 50 days	50 MA = \$0.2605 Price = \$0.2474 (50MA > Price)	Bearish/Downtrend
Relative Strength Index (RSI)	Magnitude of price change; Analyzing oversold & overbought conditions	48.8728 < 30 = Oversold 50-70 = Neutral > 70 = Overbought	Oversold
Relative Volume (RVOL)	Asset's trading volume in relation to its recent average volumes	Below cutoff line	Weak volume

### Stellar (XLM) Price Prediction 2025

ADX, RVI In the below chart, we analyze the strength and volatility of Stellar (XLM) using the following technical analysis indicators

Indicator	Purpose	Reading	Inference
Average Directional Index (ADX)	Strength of the trend momentum	28.8490	Weak Trend
Relative Volatility Index (RVI)	Volatility over a specific period	56.18 < 50 = Low > 50 = High	High volatility

Comparison of XLM with BTC, ETH Let us now compare the price movements of Stellar (XLM) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of XLM is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of XLM also increases or decreases respectively.

### Stellar (XLM) Price Prediction 2026, 2027

2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Stellar (XLM) between 2026, 2027, 2028, 2029, and 2030.

Year	Bullish Price	Bearish Price
Stellar (XLM) Price Prediction 2026	\$2.8	\$0.08
Stellar (XLM) Price Prediction 2027	\$3.1	\$0.07
Stellar (XLM) Price Prediction 2028	\$3.6	\$0.06
Stellar (XLM) Price Prediction 2029	\$4.2	\$0.05
Stellar (XLM) Price Prediction 2030	\$5	\$0.04

### Conclusion

If Stellar (XLM) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Stellar (XLM) price prediction for 2025 is \$0.6423. Comparatively, if unfavorable sentiment is triggered, the bearish Stellar (XLM) price prediction for 2025 is \$0.0703. If the market momentum and investors' sentiment positively elevate, then Stellar (XLM) might hit \$2. Furthermore, with future upgrades and advancements in the Stellar ecosystem, XLM might surpass its current all-time high (ATH) of \$0.9381 and mark its new ATH.

### FAQ

- What is Stellar (XLM)? Stellar (XLM) is the native cryptocurrency of Stellar, a peer-to-peer (P2P) decentralized payment network that was launched in 2014.
- Where can you purchase Stellar (XLM)? Stellar (XLM) has been listed on many crypto exchanges which include Binance, WEEX, OKX, Deepcoin, and LBank.
- Will Stellar (XLM) reach a new ATH soon? With the ongoing developments and upgrades within the Stellar platform, Stellar (XLM) has a high possibility of reaching its ATH soon.
- What is the current all-time high (ATH) of Stellar (XLM)? On January 04, 2018, Stellar (XLM) reached its new all-time high (ATH) of \$0.9381.
- What is the lowest price of Chainlink (LINK)? According to CoinMarketCap, LINK hit its all-time low (ATL) of \$0.1263 on September 23, 2017.
- Will Stellar (XLM) reach \$2? Stellar (XLM) is one of the active cryptos that continues to maintain its bullish state. Eventually, if this bullish trend continues then Stellar (XLM) will hit \$2 soon.
- What will be the Stellar (XLM) price by 2026? Stellar (XLM) price is expected to reach \$2.8 by 2026.
- What will be the Stellar (XLM) price by 2027? Stellar (XLM) price is expected to reach \$3.1 by 2027.
- What will be the Stellar (XLM) price by 2028? Stellar (XLM) price is expected to reach \$3.6 by 2028.
- What will be the Stellar (XLM) price by 2029? Stellar (XLM) price is expected to reach \$4.2 by 2029.

**Top Crypto Predictions Dogecoin (DOGE) Price Prediction Disclaimer:** The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

Dogecoin (DOGE) remains one of the most recognized names in the cryptocurrency market, but popularity alone might not be sufficient to propel its price over the \$0.20 resistance level. While DOGE's meme status and celebrity endorsements have helped preserve its recognition, the coin has struggled to keep steady momentum. On the other hand, Ozak AI (OZ), an AI-powered blockchain project, is emerging as a powerful project within the space

specifically after surpassing the \$1 million mark in its presale. The contrast among these two projects offers a revealing glimpse into the evolving crypto panorama in 2025.

### Dogecoin: Fame Without Fundamentals?

Dogecoin's origins as a meme coin gave it an instantaneous appeal and viral attraction, with supporters ranging from regular traders to billionaires like Elon Musk. Despite multiple surges in popularity, DOGE has remained fairly flat since its ultimate major rally, hovering just beneath the \$0.20 mark. While it sometimes spikes on social media activity or speculative hype, many investors query whether or not DOGE can preserve long-term boom without real-world utility. One of the challenges dealing with Dogecoin is its loss of a defined use case beyond being a digital tipping currency or speculative asset. In a market where application, adoption, and innovation are increasingly vital to long-term viability, DOGE's basics remain to lag. Analysts are expecting the coin would possibly attain an average price of \$0.34 by the end of 2025, with a bullish goal of \$0.73. But those predictions rely heavily on external elements in place of inner development or technological enhancements.

### Ozak AI: A Rising Star in AI-Driven Crypto

In stark contrast to Dogecoin's meme-fueled narrative, Ozak AI is built on cutting-edge technology.

The project merges artificial intelligence with blockchain infrastructure to provide real-time predictive analytics, decentralized data management, and AI-enhanced decision-making tools for crypto investors and businesses. It is this strong technological foundation that has led to growing investor confidence in Ozak AI. Ozak AI recently hit a key milestone by raising over \$1 million in its Ozak AI presale, positioning it as one of the most promising new entries in the crypto space. The OZ token, currently priced at \$0.003, is set to increase to \$0.005 in the next stage of the presale. Market experts and early adopters suggest the token has the potential to surge to \$1 by the end of 2025—a projected 300x return that far outpaces the forecasted growth of Dogecoin. What Makes Ozak AI Stand Out? The core appeal of Ozak AI lies in its innovative ecosystem. It incorporates:

- Ozak Stream Network (OSN): A decentralized infrastructure designed to handle massive data processing in real-time.
- Ozak Data Vaults: Secure and private storage solutions for sensitive data.
- Prediction Agents: Customizable AI agents that help users make better trading and investment decisions.
- DePIN (Decentralized Physical Infrastructure Networks): This feature integrates physical systems with blockchain for real-world applications. This unique combination enables Ozak AI to provide accurate, actionable insights to traders, analysts, and institutions. It bridges the gap between traditional AI services and decentralized platforms, making it especially attractive as AI adoption increases globally.

Presale Success Reflects Strong Market Sentiment Presales regularly serve as a barometer of investor enthusiasm, and Ozak AI's performance thus far has been superb. Crossing the \$1 million threshold now not only validates the venture's roadmap but additionally signifies growing acceptance as true within its long-term potential. This level of presale engagement mirrors early success stories like Polygon, Solana, or even Chainlink's initiatives that saw big profits following strong early backing. Moreover, the challenge's low entry rate and high increase ceiling create a compelling possibility for retail investors who neglected earlier crypto booms. With each stage of the presale increasing the token's value, Ozak AI's momentum indicates that it is able to turn out to be one of the breakout stars of this market cycle. Can Ozak AI Outperform Dogecoin? While Dogecoin's name popularity and large network cannot be brushed off, it faces challenges in scaling without a stable technical backbone. Ozak AI, by contrast, has carved out a niche that aligns with foremost developments in AI and blockchain—two of the most transformative technologies of our time. Given its real-world utility, innovative features, and growing market traction, many believe that Ozak AI could outperform Dogecoin in terms of ROI over the following 12–18 months. DOGE might retain a place in portfolios due to its meme power and potential for short-term spikes, but for those seeking long-term value rooted in innovation, OZ presents a more compelling case. Dogecoin continues to hover below \$0.20, held back by its limited use cases and over-reliance on social media buzz. In contrast, Ozak AI is leveraging advanced AI technologies to create a decentralized platform with real utility. With \$1 million already raised in its presale and significant technological backing, Ozak AI is well-positioned to reach \$1 by 2025, delivering exponential gains to early investors. As the crypto market matures, projects like Ozak AI are proving that innovation and utility—not memes—will shape the next generation of digital assets. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - PlanB made a post in which it mentioned that Ethereum (ETH) is eligible on all outlooks to be a "real shitcoin." - This comes after Vitalik Buterin's June 2022 post on X, where he criticized the stock-to-flow model, saying it was "really not looking good now." Nearly after three years, PlanB, a Dutch institutional investor and Bitcoin analyst renowned for the Stock-to-Flow model, has recently slammed Ethereum (ETH), calling it a "centralized, premined shitcoin." On April 20, PlanB posted on X (formerly Twitter), mentioning that "Ethereum is really not looking good now." The post further called Ethereum a "shitcoin" and asserted that it is "centralized and premined." He further added that Ethereum is harmful and deserving of all the mockery they get. Ethereum is really not looking good now " PlanB (@100trillionUSD) April 20, 2025 I know it's impolite to gloat and all that, but I think shitcoins like ETH, that are centralized & premined, have PoS instead of PoW, switch supply schedule at will, are harmful and deserve all the mockery they get <https://t.co/4EAh8LvsvD> [pic.twitter.com/nLTLqJz4wp](https://pic.twitter.com/nLTLqJz4wp) Three years ago, Vitalik Buterin, the co-founder of Ethereum, slammed the anonymous analyst behind Bitcoin's Stock-to-Flow model of PlanB, which tries to speculate the price of BTC based on the ratio between its current supply and the rate of fresh issuance through mining. Since then, PlanB remained silent on the matter and chose to speak yesterday after three years. The Conflict of Wills In June 2022, Buterin posted on X (then Twitter) that Stock-to-flow is really not looking good now. And, this time, the analyst replied in the same manner. Further, the co-founder mentioned in his post that he knows that it is rude to relish and all that, but in his view, the financial models that give people a false sense of positivity and fate that number-will-go-up are harmful and are worthy of all the mockery they get. This statement was a jab that came after the price of BTC was parting sharply from the predictions made by the S2F model. Now, it looks like PlanB is doing the same when Ethereum is facing low price actions. PlanB made another post in which it mentioned that ETH is eligible on all outlooks to be a "real shitcoin." Also, "ETH does not have a fixed supply schedule as well as a monetary policy." Adding more to this, PlanB mentions that ETH has never surpassed BTC. He also highlighted that the token distribution model of Ethereum is an issue, mentioning that the dumping from the Ethereum Foundation is "attached to the premine," which is a big red flag. Highlighted crypto news today: Dogecoin Breaks Out of Descending Triangle Pattern as Bulls Hint Take Over

Have you ever wish you could rewind the clock and catch DOGE or SHIB right before they popped off? While some of those chances are long gone, the market’s heating up again, and three meme coins are commanding attention: Dogwifhat (WIF), Official Trump (TRUMP), and the upstart BTFD Coin (BTFD). Unlike the others, BTFD Coin isn’t trading yet—it’s in Stage 15 of its presale with an ultra-low entry of \$0.0002. The big hype? Its Play-to-Earn (P2E) game is already live, staking is clocking 90% APY, and if analysts are right, a moon price of \$0.006 could bring early backers a staggering 2900% ROI. This isn’t just another meme coin—it’s an opportunity to invest before the rocket launches. For those chasing the top new meme coins to buy and hold for short term, the clock’s ticking on this one. BTFD Coin: Final Stretch Starts with 2900% ROI Potential So what makes BTFD Coin different from the usual meme suspects? For starters, it’s not just about hype—it’s about utility. The full version of BTFD’s P2E game launched on January 1, 2025, and lets players earn real rewards while smashing through immersive levels with the Bulls Squad. This isn’t some vaporware promise. It’s live. It’s working. And it’s paying. Add to that the chance to earn up to 90% APY through staking, which has been live since December 2. That means while you wait for the coin to moon, your bag’s already growing. Now toss in the referral program: share your unique code, and if you make the top 20 leaderboard, you pocket 10% of the total raise your referrals generate—plus your referrals get 10% more BTFD on purchases of \$50 or more. Easy money. Here’s what’s wild: an investment of \$2,000 at today’s presale price of \$0.0002 gets you 10 million BTFD coins. At the \$0.0006 launch price, that turns into \$6,000. But if BTFD hits its projected moon price of \$0.006, you’re looking at \$60,000—a clean 2900% ROI. The presale ends on May 26 at 23:59 UTC, with the launch locked in for May 27. Stage 15 is already picking up serious traction, and once Stage 16 rolls out, that \$0.0002 price is history. With over 72 billion BTFD coins already sold, 11,800+ holders strong, and \$6.54 million raised, this isn’t a maybe. It’s happening. Meme coin whales are already stacking. Miss it now, and you’re watching the moonshot from Earth. BTFD’s P2E Game: Where the Bulls Play and Pay The BTFD Bull Run game isn’t just a bonus feature—it’s the backbone of BTFD’s ecosystem. Players control Bulls Squad members across multi-level maps, collect in-game coins, and convert them into BTFD tokens. Think of it like playing Mario Kart, but instead of bananas, you’re collecting coins that earn you crypto. Invite your friends, stack rewards, and climb the leaderboard—because here, the more you play, the more you earn. And since withdrawals are tied to vesting schedules, it creates a sustainable economy instead of a pump-and-dump joke. This is the meme coin presale redefining the space with real-world gaming mechanics and rewards. Dogwifhat (WIF): The Meme That Wears the Crown WIF is the Solana-based dog token that turned heads with its quirky name and massive community. It became a breakout star in the meme space, not by reinventing the wheel but by showing how vibe, memes, and timing can still rule the market. WIF has carved out its lane as the new-gen Dogecoin and is seen as one of the top new meme coins to buy and hold for short term by risk-savvy traders. Its appeal is raw and nostalgic—a Shiba Inu in a pink beanie riding the Solana wave. But while it’s shown explosive past runs, there’s no presale or APY here. WIF is an active token trading in the open market, making it more vulnerable to swings. Still, it holds strong as a recognizable face in the meme wars. Official Trump (TRUMP): Patriot-Backed Memecoin Mania The TRUMP token surged with political memes and MAGA-powered meme culture. It gained traction as an alternative investment play aligned with supporters of the former President. While it doesn’t have the deep tech or utility of BTFD, TRUMP is a cultural bet—a coin riding waves of sentiment, virality, and public headlines. TRUMP has drawn a community of holders who view it as a digital flag bearer, making it more than just a speculative asset for some. It’s one of the top new meme coins to buy and hold for short term if you’re banking on socio-political momentum. But keep in mind, like WIF, there’s no staking, no game, no presale advantage—you’re entering with the market. Final Countdown for the Top New Meme Coins to Buy and Hold for Short Term! Crypto’s meme coin season is back, but not all projects are built the same. WIF is already crowned by the community. TRUMP rides the wave of real-world headlines. But BTFD? It’s still early, it’s loaded with features, and it’s about to close its door to early entries. Based on the current market buzz and real-time traction, BTFD Coin checks all the boxes: a working P2E game, 90% APY staking, referral rewards, and an entry price of \$0.0002. If you’re looking for the top new meme coins to buy and hold for short term, this isn’t just a suggestion—it’s your last boarding call. Secure your stack before the presale ends on May 26 and ride the moonshot to launch on May 27. - Bullish PI price prediction for 2025 is \$0.7704 to \$1.2548. - Pi (PI) price might reach \$5 soon. - Bearish PI price prediction for 2025 is \$0.2867. In this Pi (PI) price prediction 2025, 2026-2030, we will analyze the price patterns of PI by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | PI PRICE PREDICTION 2025 | | | PI PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Pi (PI) Current Market Status | Current Price | \$0.6468 | 24 “ Hour Price Change | 4.01% Up | | 24 “ Hour Trading Volume | \$151.69M | | Market Cap | \$4.47B | | Circulating Supply | 6.91B PI | All “ Time High | \$2.98 (On Feb 26, 2025) | | All “ Time Low | \$0.4012 (On Apr 05, 2025) | What is Pi (PI) | TICKER | PI | | BLOCKCHAIN | Pi Network | | CATEGORY | Layer 1 Blockchain | | LAUNCHED ON | March 2019 | | UTILITIES | Payments, transactions, dApps, Payments, and DeFi | Pi Network (PI) is a blockchain-based project that aims to create a decentralized digital currency accessible to everyday users via mobile mining. Launched in 2019 by Stanford graduates, it allows users to earn PI coins through a mobile app without requiring high energy consumption like traditional cryptocurrencies. The project has gained significant attention, with millions of users worldwide, but it remains in its enclosed mainnet phase, meaning PI cannot be freely traded on exchanges yet. The team is focused on developing its ecosystem,

including decentralized applications (dApps) and real-world utility for PI. Despite its popularity, Pi Network has faced skepticism due to its prolonged development and lack of clear liquidity. The success of PI depends on its transition to an open mainnet and adoption for real transactions. Until then, it remains a promising but uncertain digital asset in the crypto space. FTX introduced the PI token a year after its founding, and it operates as an ERC-20 standard token with various use cases within the FTX ecosystem. Originally designed as a reward for exchange transactions, PI's functionalities have expanded over time, including the creation of leveraged tokens, VIP discounts, and rewards for providing liquidity through futures positions. Pi 24H Technicals (Source: TradingView) Pi (PI) Price Prediction 2025 Pi (PI) ranks 26th on CoinMarketCap in terms of its market capitalization. The overview of the Pi price prediction for 2025 is explained below with a daily time frame. PI/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Pi (PI) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Pi (PI) was recorded at \$0.6468. If the pattern trend continues, then the price of PI might reach the resistance level of \$0.8134, \$1.4468 and \$3.0050. If the trend reverses, then the price of PI may fall to the support level of \$0.4057. Pi (PI) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Pi (PI) in 2025. PI/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Pi (PI) for 2025. | Resistance Level 1 | \$0.7704 | | Resistance Level 2 | \$1.2548 | | Support Level 1 | \$0.4601 | | Support Level 2 | \$0.2867 | PI Resistance & Support Levels Pi (PI) Price Prediction 2025 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Pi (PI) are shown in the chart below. PI/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Pi (PI) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.6752 Price = \$0.6649 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 53.2691 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Pi (PI) Price Prediction 2025 â€” ADX, RVI In the below chart, we analyze the strength and volatility of Pi (PI) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). PI/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Pi (PI). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 25.1173 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 43.66 <50 = Low >50 = High | Low volatility | Comparison of PI with BTC, ETH Let us now compare the price movements of Pi (PI) with those of Bitcoin (BTC) and Ethereum (ETH). BTC Vs ETH Vs PI Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of PI is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of PI also increases or decreases, respectively. Pi (PI) Price Prediction 2026, 2027 â€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Pi (PI) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Pi (PI) Price Prediction 2026 | \$6 | \$0.2 | | Pi (PI) Price Prediction 2027 | \$7 | \$0.1 | | Pi (PI) Price Prediction 2028 | \$8 | \$0.09 | | Pi (PI) Price Prediction 2029 | \$9 | \$0.08 | | Pi (PI) Price Prediction 2030 | \$10 | \$0.07 | Conclusion If Pi (PI) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Pi (PI) price prediction for 2025 is \$1.2548. Comparatively, if an unfavorable sentiment is triggered, the bearish Pi (PI) price prediction for 2025 is \$0.2867. If the market momentum and investors' sentiment positively elevate, then Pi (PI) might hit \$5. Furthermore, with future upgrades and advancements in the Pi ecosystem, PI might surpass its current all-time high (ATH) of \$2.98 and mark a new ATH. FAQ 1. What is Pi (PI)? Pi Network (PI) is a blockchain-based project that aims to create a decentralized digital currency accessible to everyday users via mobile mining. 2. Where can you purchase Pi (PI)? Pi (PI) is not officially available for trading as it is in its enclosed mainnet phase. 3. Will Pi (PI) reach a new ATH soon? With the ongoing developments and upgrades within the Pi Platform, PI has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Pi (PI)? On February 26, 2025, PI reached its new all-time high (ATH) of \$2.98. 5. What is the lowest price of Pi (PI)? According to CoinMarketCap, PI hit its all-time low (ATL) of \$0.4012 on February 20, 2025. 6. Will Pi (PI) reach \$5? If Pi (PI) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$5 soon. 7. What will be Pi (PI) price by 2026? Pi (PI) price is expected to reach \$6 by 2026. 8. What will be Pi (PI) price by 2027? Pi (PI) price is expected to reach \$7 by 2027. 9. What will be Pi (PI) price by 2028? Pi (PI) price is expected to reach \$8 by 2028. 10. What will be Pi (PI) price by 2029? Pi (PI) price is expected to reach \$9 by 2029. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

XRP has struggled to deliver significant gains, even after winning its legal battle with the SEC. Despite hopes for a rally, the token remains below \$2.50, with bearish patterns hinting at a further downside. While some analysts predict long-term growth, XRP's short-term potential appears limited.

Meanwhile, two alternative cryptocurrencies—Rexas Finance (RXS) and Sui (SUI)—are gaining traction, showing the potential to surge 50x much sooner than XRP. With strong fundamentals and growing investor interest, these tokens could turn a \$200 investment into \$10,000 faster than XRP.

**Ripple (XRP): Struggling to Break Out Amid Bearish Signals** XRP failed to rally significantly even after its legal victory against the SEC. The token has remained stuck below \$2.5. Now, bearish patterns suggest it could dip further. Analyst Peter Brandt warns that if XRP slips below \$1.9, it could crash 43% to \$1.07 due to a textbook head-and-shoulders pattern. On-chain data supports this, with active XRP Ledger addresses down 62% since December and indicators showing that it remains overvalued. Despite this, some analysts predict a rally. EGRAG CRYPTO has set a conservative target of \$15, with extended projections at \$22 and \$44. Another analyst, Dark Defender, says XRP must break \$2.75 to push higher. Fibonacci analysis also suggests key breakout dates, including March 30 and April 8. Bitwise, a crypto fund manager, has a more long-term outlook. Their bullish scenario sees XRP reaching \$12.70 by 2030. If XRP dominates payments and tokenization markets, an extreme case suggests \$29.32. However, even if XRP rallies, these forecasts indicate it won't surge 50x this year. Any massive gains would likely come much later, making short-term expectations of a price explosion unrealistic. Meanwhile, two coins could rally by 50x faster than XRP. Their momentum suggests they could turn \$200 into \$10,000, possibly before the year ends.

**Rexas Finance (RXS): The Future of Real-World Asset Tokenization with 50x Potential** Rexas Finance is backed by real-world utility, giving it a strong foundation for long-term success. The project focuses on real-world asset (RWA) tokenization, a sector expected to see massive growth in the coming years. Through tokenization, Rexas Finance aims to create new opportunities in the market. This process turns assets into digital tokens, making them more accessible. With tokenization gaining popularity, Rexas Finance is positioned for rapid adoption. Investors have already recognized the potential of RXS, leading to a record-breaking presale. The project has raised over \$47.7 million as investors have already bought over 91% of its allocated tokens. Since the presale launched, RXS has also shown strong momentum. Early investors have seen a 566% increase in their holdings, which may be only the beginning. With RXS set to launch on major tier-one exchanges on June 19, demand is expected to skyrocket. Considering its current momentum, the token could rally 50x from its launch price of \$0.25 within months. Rexas Finance's ecosystem supports its vision with tools. The Rexas Token Builder allows businesses and individuals to create and launch their own tokens with ease, even without technical knowledge. The QuickMint Bot enables users to create and deploy tokens through messaging apps like Telegram and Discord, making tokenization more accessible than ever. Additionally, the Rexas Estate allows investors to buy and sell fractional shares of real estate, removing the traditional barriers to property investment. As the launch date approaches, excitement around Rexas Finance continues to grow. With its strong momentum and innovative approach to asset tokenization, it has positioned itself as a top contender in the next bull run. If the predictions hold, RXS could be one of the biggest breakout tokens of the year, delivering massive returns for those who get in early.

**Sui (SUI): A High-Speed Blockchain Poised for Explosive Growth** SUI is making big moves, and investors are watching closely. After a 10% breakout, it's back above key levels, signaling that the rally might just be starting. The token has now pushed past the \$2.60 resistance, and analysts believe it could soon hit \$3. Institutional interest is increasing, with major players like Canary Capital filing for a SUI ETF. Sui's ecosystem is also booming. The number of stablecoins on its network has nearly doubled this year. Daily active addresses have also surged from 19,000 to 1.5 million. With transaction speeds over four times faster than Solana and fees 90% lower, Sui is proving to be a real contender in the smart contract space. Some experts believe the token mirrors past breakouts, which previously led to all-time highs. If history repeats, SUI could skyrocket past its \$5.37 peak, making it a major player in this market cycle. Currently, momentum indicators are bullish, and the token's breakout from a multi-month falling wedge pattern suggests a strong uptrend. As the market regains confidence, SUI is becoming a serious wealth multiplier.

**Conclusion** While XRP continues to face resistance and uncertain price action, Rexas Finance and Sui are emerging as top contenders in the current market cycle. RXS, with its real-world asset tokenization model, is set for explosive growth following its upcoming exchange launch. Meanwhile, SUI's strong ecosystem expansion and technical breakout signals indicate further gains. As investors seek high-growth opportunities, these two alternative cryptos could significantly outperform XRP in the near term, offering massive returns for those who get in early. - Canary Capital files for a Tron ETF with staking, awaiting SEC approval amid regulatory uncertainty.
- Crypto ETF market expands as optimism grows for staking approval under new SEC leadership. Canary Capital has requested from the US Securities and Exchange Commission (SEC) approval to create a Tron-based exchange-traded fund (ETF) that supports staking functions. The Nashville-based asset manager firm, Canary Capital, presented its "Canary Staked TRX ETF" prospectus to the SEC through an S-1 filing on Friday to track Tron's native token TRX spot prices. Staking Feature Faces Regulatory Uncertainty The proposed ETF would distribute stakeable assets to third-party providers using BitGo as its custodial service. The staking component enters the market at a time when regulatory uncertainty persists. Recently, the SEC delayed its decision regarding Grayscale's February request for Ethereum ETF products that incorporated staking features. Staking is the method of pledging digital assets to help secure a network in exchange for rewards. It could provide investors with additional yield, but it remains a contentious issue in the regulatory landscape. Previous Ethereum ETF applications initially included staking features removed by issuers due to gain SEC approval. Industry observers

have noted increased optimism about staking approval possibilities following the appointment of crypto-friendly Chair Paul Atkins to replace former Chair Gary Gensler, who had opposed the feature. The firm has not yet disclosed the proposed ticker symbol or any administration fee for the product. This filing joins a growing wave of crypto ETF applications targeting various digital assets, including XRP, Solana, Dogecoin, and Sui. Industry analysts suggest XRP and Solana ETFs may be next in line for potential SEC approval, following the successful launches of Bitcoin ETFs that have attracted over \$35 billion in net inflows during the past 15 months. Highlighted Crypto News Today:

Momentum is building fast around Ozak AI, one of the most talked-about emerging crypto projects of 2025. With over \$1 million already raised in its presale phase, investors—both retail and institutional—are starting to take serious notice. Unlike meme coins that rely on hype and speculation, Ozak AI is rooted in utility, leveraging artificial intelligence and blockchain technology to deliver real-world solutions. As the crypto space shifts toward utility-driven projects, Ozak AI is gaining traction as a top project for explosive growth. Presale Milestone Signals Growing Confidence Crossing the \$1 million threshold during presale is no small feat—especially in a volatile and uncertain market. It signals a strong vote of confidence from early investors who believe in the project’s fundamentals, long-term vision, and the team behind it. At its current presale price of just \$0.003, Ozak AI presents a ground-floor opportunity, particularly with a long-term target of reaching \$1. That would mean a potential 300x return for early backers—an opportunity reminiscent of the early days of Solana or even Shiba Inu. The growing momentum is also attracting attention from crypto influencers and analysts, many of whom are starting to recognize Ozak AI as one of the most undervalued tokens in the AI crypto space. Why AI + Crypto Is the Next Big Thing Artificial Intelligence is rapidly transforming industries—from healthcare and finance to logistics and marketing. When combined with blockchain, AI becomes even more powerful by offering transparency, decentralization, and accessibility. Ozak AI aims to democratize AI by creating a decentralized ecosystem where developers and businesses can access powerful tools without relying on centralized tech giants. This combination of AI and crypto is proving to be one of the hottest narratives of 2025, and Ozak AI is at the forefront. Its ability to deliver scalable, decentralized AI services sets it apart from meme coins or traditional layer-1 tokens. It’s not just another speculative asset—it’s a project with a clear use case, real-world demand, and a fast-growing community. Retail and Whales Are Both Getting Involved It’s not just retail investors piling in—crypto whales are starting to make strategic moves as well. Wallet data shows increasing inflows from high-net-worth individuals and investment groups into the Ozak AI presale. The combination of low entry price, strong project fundamentals, and a compelling narrative makes it an ideal asymmetric bet in the current cycle. Meanwhile, the project’s transparency, active social media presence, and well-documented roadmap are increasing investor trust. With plans to launch its native platform post-presale and integrate AI modules into DeFi applications, Ozak AI is showing that it’s more than just hype—it’s execution-ready. With over \$1 million raised and growing investor enthusiasm, Ozak AI is quickly establishing itself as a top crypto project to watch in 2025. Its fusion of artificial intelligence and blockchain utility provides a powerful use case that goes beyond speculative trading. As hype coins like Dogecoin and PEPE begin to lose steam, Ozak AI’s fundamentals are pulling in smart money—and it’s only getting started. For investors looking for the next big opportunity, the window to get in early on Ozak AI may be closing fast. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Bullish HNT price prediction for 2025 is \$4.404 to \$10.066. - Helium (HNT) price might reach \$15 soon. - Bearish HNT price prediction for 2025 is \$1.130. In this Helium (HNT) price prediction 2025, 2026-2030, we will analyze the price patterns of HNT by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | HELIUM (HNT) PRICE PREDICTION 2025 | | | HELIUM (HNT) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Helium (HNT) Current Market Status | Current Price | \$3.57 | 24 “ Hour Price Change | 9.62% Up | | 24 “ Hour Trading Volume | \$20.47M | | Market Cap | \$643.27M | | Circulating Supply | 177.39M HNT | All “ Time High | \$55.22 (On Nov 13, 2021) | | All “ Time Low | \$0.2534 (On Jun 10, 2020) | What is Helium (HNT) | TICKER | HNT | | BLOCKCHAIN | Helium | | CATEGORY | Ethereum based token | | LAUNCHED ON | July 2019 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Helium (HNT) is the native utility token of Helium, a decentralized wireless Internet-of-things (IoT) network. HNT was launched in 2019. The token was created based on a burn-and-mint equilibrium (BME) model. HNT are burnt and converted to Data Credits (DCs) that users hold to access and use the network. Helium operates on a proof-of-coverage (PoC) consensus algorithm. PoC relies on Honey Badger Byzantine Fault Tolerant (HBBFT). With this algorithm, the transactions are encrypted by a shared public key and can only be decrypted by an elected consensus group. HNT tokens can be mined through “hotspots”, wireless devices that use radio waves. Miners mine HNT and create network coverage for IoT devices. Also, the network aims to achieve decentralized IoT communication Helium 24H Technicals Helium (HNT) Price Prediction 2025 Helium (HNT) ranks 83rd on CoinMarketCap in terms of its market capitalization. The Helium price prediction for 2025 is explained below with a daily time frame. In the above chart, Helium (HNT) laid out a Horizontal Channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In

this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the price of Helium (HNT) was recorded at \$3.80. If the pattern trend continues, then the price of HNT might reach the resistance levels of \$4.436 and \$8.673. If the trend reverses, then the price of HNT may fall to the support levels of \$3.173 and \$2.254. Helium (HNT) Resistance and Support Levels The chart below elucidates Helium's possible resistance and support levels (HNT) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Helium (HNT) for 2025. | Resistance Level 1 | \$4.404 | | Resistance Level 2 | \$10.066 | | Support Level 1 | \$2.246 | | Support Level 2 | \$1.130 | Helium (HNT) Price Prediction 2025 " RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (HNT) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Helium (HNT) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$3.086 Price = \$3.2991 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 54.332 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Helium (HNT) Price Prediction 2025 " ADX, RVI In the below chart, we analyze the strength and volatility of Helium (HNT) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Helium (HNT). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 33.626 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 28.25 <50 = Low >50 = High | Low volatility | Comparison of HNT with BTC, ETH Let us now compare the price movements of Helium (HNT) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of HNT is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of HNT also increases or decreases respectively. Helium (HNT) Price Prediction 2026, 2027 " 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Helium (HNT) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Helium (HNT) Price Prediction 2026 | \$19 | \$1.5 | | Helium (HNT) Price Prediction 2027 | \$21 | \$1.3 | | Helium (HNT) Price Prediction 2028 | \$23 | \$1.1 | | Helium (HNT) Price Prediction 2029 | \$25 | \$0.9 | | Helium (HNT) Price Prediction 2030 | \$27 | \$0.7 | Conclusion If Helium (HNT) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Helium (HNT) price prediction for 2025 is \$10.624. Comparatively, if unfavorable sentiment is triggered, the bearish Helium (HNT) price prediction for 2025 is \$1.130. If the market momentum and investors' sentiment positively elevate, then Helium (HNT) might hit \$15. Furthermore, with future upgrades and advancements in the Helium ecosystem, HNT might surpass its current all-time high (ATH) of \$55.22. and mark its new ATH. FAQ 1. What is Helium (HNT)? Helium (HNT) is the native utility token of Helium, a decentralized wireless Internet-of-things (IoT) network. HNT was launched in 2019. 2. Where can you purchase Helium (HNT)? Helium (HNT) has been listed on many crypto exchanges which include Binance, and KuCoin. 3. Will Helium (HNT) reach a new ATH soon? With the ongoing developments and upgrades within the Helium Platform, HNT has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Helium (HNT)? On Nov 13, 2021, Helium (HNT) reached its new all-time high (ATH) of \$55.22. 5. What is the lowest price of Helium (HNT)? According to CoinMarketCap, HNT hit its all-time low (ATL) of \$0.2534, On Jun 10, 2020. 6. Will Helium (HNT) reach \$15? If Helium (HNT) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$15 soon. 7. What will be Helium (HNT) price by 2026? Helium (HNT) price is expected to reach \$19 by 2026. 8. What will be Helium (HNT) price by 2027? Helium (HNT) price is expected to reach \$21 by 2027. 9. What will be Helium (HNT) price by 2028? Helium (HNT) price is expected to reach \$23 by 2028. 10. What will be Helium (HNT) price by 2029? Helium (HNT) price is expected to reach \$25 by 2029. Top Crypto Predictions Dogecoin (DOGE) Price Prediction Shiba Inu (SHIB) Price Prediction Render (RENDER) Price Prediction Disclaimer: The opinion expressed in this chart is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

The cryptocurrency market is filled with speculation about 2025, and Lightchain AI (LCAI) is emerging as a key contender. As investors search for the next major opportunities, comparisons to well-known tokens like Shiba Inu (SHIB) and TRON (TRX) highlight Lightchain AI as a project with the potential to outpace them in both value and innovation. Currently in its presale phase, Lightchain AI has already raised \$19.2 million at a price of \$0.007 per token, positioning it as an exciting, high-growth investment for early backers. Rise and Stagnation of SHIB and TRX However, the crypto market has seen very different trajectories for Shiba Inu (SHIB) and TRON (TRX). The meme dog token SHIB peaked at \$0.00008616 in October 2021; since then, its value has fallen more than 85% to around \$0.000012 as of April 2025. Nonetheless, SHIB currently stands as one of the top 20 cryptocurrencies by market capitalization, propelled by a dedicated community and projects such as the Shibarium Layer-2 network. That said, issues like its excessive token supply and price volatility remain. On the other hand, TRON has been more consistent in that it does not jump in and out of these trends, rather sticking around a theme of decentralized internet infrastructure. Currently priced around \$0.239, it sports a market cap greater than \$22 billion, and continues to power decentralized applications and smart contracts. Similar to Dogecoin, TRON did not see the same explosive growth as SHIB, but the constant development and utility of TRON has allowed the TRX cryptocurrency to remain relevant. Lightchain AI " Revolutionizing Market Lightchain AI is redefining the landscape by addressing shortcomings in older

projects. Unlike SHIB and TRX, which focus on community hype or limited use cases, Lightchain AI prioritizes practical solutions through the integration of blockchain technology and artificial intelligence. The platform stands out by enabling intelligent computations and data-driven applications, empowering developers to create advanced decentralized applications (dApps) tailored to industries in need of secure and scalable systems. Lightchain AI (\$LCAI) also features a deflationary tokenomics model designed to boost the ecosystem's value. By burning a portion of transaction fees and payments for AI-related tasks, tokens are permanently removed from circulation. This strategy reduces supply, fostering scarcity and potentially driving up the value of the remaining tokens. Following a successful presale, Lightchain AI has already attracted investors seeking innovative and growth-oriented opportunities. Lightchain AI- Bright Spark in Crypto Predictions Move over SHIB and TRX, there's a new player in town, and it's turning heads. Lightchain AI is lighting up the crypto world with its early-stage price of just \$0.007 per token—a bargain with big potential for sky-high returns. What makes it shine? Its genius combo of AI and blockchain, a pairing that's as innovative as peanut butter and jelly (but way more lucrative). Investors seem to agree, pouring \$19.2 million into its presale—talk about putting their money where their mouth is. Analysts are buzzing with predictions: \$5 by 2025, and some are bold enough to bet on \$10+ within five years. If you're looking for a project with serious glow-up potential, Lightchain AI might just be your golden ticket.

- <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Even as altcoins continue to plunge under market pressure, one project is capturing the spotlight for all the right reasons—Lightchain AI. While much of the crypto sector faces red charts and shrinking sentiment, Lightchain AI is moving in the opposite direction, fueled by a wave of retail interest and growing analyst attention. Its early-stage potential, paired with a compelling vision, has made it one of the few tokens gaining momentum during a downturn. With the Lightchain AI Presale already raising \$19.2 million and tokens priced at just \$0.007125, it's fast becoming the breakout project that stands above the chaos. Altcoins Tumble Under Market Pressure On the date of 2025-04-13, altcoins are facing substantial selling pressure in the wake of a widespread crypto market downturn. Ethereum (ETH) has dropped to \$1,629.58, 1.16% lower than yesterday's closing price. Currently, XRP is up 1.4% at \$2.17. Third place Cardano (ADA) is at \$0.6575, and Solana (SOL) is the fourth with \$131.76. Dogecoin (DOGE) has a price of \$0.1673. The market's fluctuations are largely driven by widening global trade tensions, as escalating tariff threats from the United States have weakened investor confidence and increased the volatility of global stocks. If critical areas of support give way, analysts caution that more downside could follow, driving a bearish Bitcoin back towards the \$55,000—\$57,000 region. The total cryptocurrency market capitalization has dropped by \$270 billion in early April, indicative of the deteriorating market environment. Lightchain AI Surges with Unique Strength Lightchain AI is surging ahead in the crypto space with a combination of unique strengths that set it apart from traditional blockchain projects. At its core is a decentralized architecture designed to mitigate AI bias through federated learning, ensuring inclusive and accurate data usage without compromising privacy. Its innovative Memecoin Launchpad brings creative energy to the ecosystem, enabling secure, AI-enhanced token launches that add utility beyond hype. The platform's workflow and data flow are engineered for real-time performance—AI tasks are efficiently distributed, executed, and cryptographically verified across nodes. Combined with adaptive scalability and a clear, multi-phase roadmap, Lightchain AI presents a powerful blend of utility, innovation, and community-driven growth. These strengths position it as a true standout in today's evolving market. Analysts and Investors Turn to Lightchain AI — Secure Your Spot Today Lightchain AI is turning heads in the tech world, earning praise from industry analysts and catching the eye of investors alike. What's all the buzz about? Its game-changing blend of blockchain and AI. This disruptive technology not only tackles major challenges like data privacy, scalability, and real-time performance but also lays out a clear, ambitious roadmap for the future. Analysts are impressed by Lightchain AI's seamless integration of cutting-edge solutions, while investors see massive growth potential as businesses increasingly seek secure, efficient AI platforms. As the demand for smarter, safer AI accelerates, Lightchain AI is leading the charge. Keep an eye on this rising star—it's just getting started.

- Bullish FLOKI price prediction for 2025 is \$0.00011131 to \$0.00032355. - FLOKI (FLOKI) price might reach \$0.001 soon. - Bearish (FLOKI) price prediction for 2025 is \$0.00002050. In this FLOKI (FLOKI) price prediction for 2025, 2026-2030, we will analyze the price patterns of FLOKI by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency.

TABLE OF CONTENTS | INTRODUCTION | | FLOKI (FLOKI) PRICE PREDICTION 2025 | | FLOKI (FLOKI) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | FLOKI (FLOKI) Current Market Status | Current Price | \$0.00005356 | 24 — Hour Price Change | 4.48% Down | | 24 — Hour Trading Volume | \$73.23M | | Market Cap | \$515.55M | | Circulating Supply | 9.62T FLOKI | All — Time High | \$0.0003462 (On June 05, 2024) | | All — Time Low | \$0.00000002 (On Aug 09, 2021) | What is FLOKI (FLOKI) | TICKER | FLOKI | | BLOCKCHAIN | Ethereum | | CATEGORY | Memecoin | | LAUNCHED ON | September 2021 | | UTILITIES | Governance, security, gas fees & rewards | Floki, often referred to as Floki Inu or simply Floki is

a cryptocurrency that emerged as a meme-inspired digital asset. It gained popularity and recognition due to its association with the enigmatic Norse character, Floki from the TV series Vikings, and the broader “dog meme” coin trend that began with Dogecoin. Floki’s development and community are driven by a group of enthusiasts and developers. While its long-term viability and utility remain uncertain, it serves as a symbol of the unpredictable and speculative nature of the cryptocurrency market, attracting both fervent supporters and critics within the crypto space.

### FLOKI (FLOKI) Price Prediction 2025

FLOKI (FLOKI) ranks 100th on CoinMarketCap in terms of its market capitalization. The overview of the FLOKI price prediction for 2025 is explained below with a daily time frame. In the above chart, FLOKI (FLOKI) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of FLOKI (FLOKI) was recorded at \$0.00005341. If the pattern trend continues, then the price of FLOKI might reach the resistance levels of \$0.00008033, and \$0.00029754. If the trend reverses, then the price of FLOKI may fall to the support level of \$0.00004626.

### FLOKI (FLOKI) Resistance and Support Levels

The chart given below elucidates the possible resistance and support levels of FLOKI (FLOKI) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of FLOKI (FLOKI) for 2025.

Resistance Level 1	Resistance Level 2	Support Level 1	Support Level 2
\$0.00011131	\$0.00032355	\$0.00004865	\$0.00002050

### FLOKI (FLOKI) Price Prediction 2025 – RVOL, MA, and RSI

The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of FLOKI (FLOKI) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current FLOKI (FLOKI) market in 2025.

INDICATOR	PURPOSE	READING	INFERENCE
50-Day Moving Average (50MA)	Nature of the current trend by comparing the average price over 50 days	50 MA = \$0.00006287 Price = \$0.00005362 (50MA > Price)	Bearish/Downtrend
Relative Strength Index (RSI)	Magnitude of price change; Analyzing oversold & overbought conditions	43.35587034 <30 = Oversold 50-70 = Neutral >70 = Overbought	Oversold
Relative Volume (RVOL)	Asset’s trading volume in relation to its recent average volumes	Below cutoff line   Weak Volume	FLOKI (FLOKI) Price Prediction 2025 – ADX, RVI

In the chart below, we analyze the strength and volatility of FLOKI (FLOKI) using the following technical analysis indicators – Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of FLOKI (FLOKI).

INDICATOR	PURPOSE	READING	INFERENCE
Average Directional Index (ADX)	Strength of the trend momentum	27.49292584	Very Strong Trend
Relative Volatility Index (RVI)	Volatility over a specific period	43.62 <50 = Low >50 = High	Low Volatility

Comparison of FLOKI with BTC, ETH Let us now compare the price movements of FLOKI (FLOKI) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of FLOKI is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of FLOKI also increases or decreases respectively.

### FLOKI (FLOKI) Price Prediction 2026, 2027 – 2030

With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of FLOKI (FLOKI) between 2026, 2027, 2028, 2029, and 2030.

Year	Bullish Price	Bearish Price
FLOKI (FLOKI) Price Prediction 2026	\$0.002	\$0.00002
FLOKI (FLOKI) Price Prediction 2027	\$0.004	\$0.00001
FLOKI (FLOKI) Price Prediction 2028	\$0.006	\$0.000009
FLOKI (FLOKI) Price Prediction 2029	\$0.008	\$0.000008
FLOKI (FLOKI) Price Prediction 2030	\$0.01	\$0.000007

Conclusion If FLOKI (FLOKI) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish FLOKI (FLOKI) price prediction for 2025 is \$0.00032355. Comparatively, if unfavorable sentiment is triggered, the bearish FLOKI (FLOKI) price prediction for 2025 is \$0.00002050. If the market momentum and investors’ sentiment positively elevate, then FLOKI (FLOKI) might hit \$0.001. Furthermore, with future upgrades and advancements in the FLOKI ecosystem, FLOKI might surpass its current all-time high (ATH) of \$0.0003462 and mark its new ATH.

### FAQ

- What is FLOKI (FLOKI)? Floki, often referred to as Floki Inu or simply Floki is a cryptocurrency that emerged as a meme-inspired digital asset.
- Where can you buy FLOKI (FLOKI)? Traders can trade FLOKI (FLOKI) on the following cryptocurrency exchanges such as Binance, OKX, CoinW, Deepcoin, and Bittrue.
- Will FLOKI (FLOKI) record a new ATH soon? With the ongoing developments and upgrades within the FLOKI platform, FLOKI (FLOKI) has a high possibility of reaching its ATH soon.
- What is the current all-time high (ATH) of FLOKI (FLOKI)? FLOKI (FLOKI) hit its current all-time high (ATH) of \$0.0003462 On June 05, 2024.
- What is the lowest price of FLOKI (FLOKI)? According to CoinMarketCap, FLOKI hit its all-time low (ATL) of \$0.00000002 on Aug 09, 2021.
- Will FLOKI (FLOKI) hit \$0.001? If FLOKI (FLOKI) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.001 soon.
- What will be the FLOKI (FLOKI) price by 2026? FLOKI (FLOKI) price might reach \$0.002 by 2026.
- What will be the FLOKI (FLOKI) price by 2027? FLOKI (FLOKI) price might reach \$0.004 by 2027.
- What will be the FLOKI (FLOKI) price by 2028? FLOKI (FLOKI) price might reach \$0.006 by 2028.
- What will be the FLOKI (FLOKI) price by 2029? FLOKI (FLOKI) price might reach \$0.008 by 2029.

With the rapid development of blockchain technology and the continued popularity of the cryptocurrency market, cloud mining has gradually become the focus of investors. As a way to participate in cryptocurrency mining without purchasing expensive hardware equipment, cloud mining has opened a new

door for users to invest. Among many cloud mining platforms, DNMiner stands out with its innovative technology and efficient services, especially in the field of XRP (Ripple) and DOGE (Dogecoin) mining. The outbreak of XRP and DOGE cloud mining XRP has always attracted much attention from the market. Many experts predict that by 2025, the price of XRP may usher in a sharp rise, which undoubtedly injects more potential into XRP. As a community-driven cryptocurrency, DOGE's unique culture and broad user base also make it an important choice in the field of cloud mining. Against this background, DNMiner seized the market opportunity and launched efficient and convenient XRP and DOGE cloud mining services. Through DNMiner's platform, users do not need to buy expensive hardware equipment, nor do they need to worry about electricity costs and technical maintenance issues. They can start mining with simple operations. It also allows more people to share the dividends of the cryptocurrency market. How to start DNMiner cloud mining? 1. Register an account Visit the DNMiner official website and get \$100 immediately after successful registration. 2. Choose a mining plan After logging in to your account, choose a suitable cloud mining plan according to your needs. The platform will list the cost, profit estimate and other information of each plan in detail to help users make the best decision. | Contract Name | Contract Term | Contract Price | Daily Reward | Total Reward (Principal Returned) | Daily Return Rate | | Experience Mining | 1 day | \$100 | \$1 | \$100 + \$1 | 1% | | Classic Miner | 2 days | \$200 | \$7 | \$200 + \$14 | 3,5% | | Jinbei E-DG1M | 3 days | \$500 | \$9.4 | \$500 + \$28.2 | 1.88% | | GoldShellMini-DOGE II | 10 days | \$3500 | \$73.5 | \$3000 + \$735 | 2.10% | | ice Rivera l0 | 12 days | \$5000 | \$110.5 | \$5000 + \$1326 | 2.21% | 3. Recharge and activate computing power After selecting a plan, complete the recharge through the supported payment method, and you can activate the computing power to start mining. The platform will automatically allocate computing power without manual operation by the user. 4. Real-time monitoring of income After mining starts, users can check their income at any time through the platform. The income will be settled on a fixed period and directly deposited into the user's account. How does DNMiner change the rules of the game? 1. Advanced technical support DNMiner uses the most advanced cloud computing technology and optimized mining algorithms to ensure that the platform runs efficiently and stably. Its data centers are distributed all over the world. 2. Transparency and security DNMiner attaches great importance to the security of user assets. The platform uses multi-layer encryption technology and conducts regular security audits. Users can check their mining income and computing power usage at any time to ensure that the entire process is transparent and open. 3. Professional customer support DNMiner provides 7\*24 hours of professional customer service support. Whether it is technical problems or operational questions, they can be answered in time, making the user experience smoother. 4. FCA regulated The DNMiner platform is regulated by the Financial Conduct Authority (FCA) of the United Kingdom, which provides users with higher security and trust. Whether it is a novice or a senior investor, you can operate on the platform with confidence. Summary: The DN cloud mining platform provides users with a new way of investment with its innovation and reliability. In the field of popular cryptocurrencies such as XRP and DOGE, DNMiner has shown strong potential to lead the industry in the next few years. If you are looking for a convenient, efficient and secure way to participate in the cryptocurrency market, then why not try the DN cloud mining platform and start your digital asset journey! - Company name: DNMiner - Company email: info@dnminer.com - Company website: https://dnminer.org Disclaimer: TheNewsCrypto does not endorse any content on this page. As the next bullish crypto market approaches, low-cap tokens are in the limelight"providing investors a rare opportunity to increase their portfolios with relatively small initial investments exponentially. Of the many altcoins, four spectacular coins under \$0.40 are gaining attention: Shiba Inu, Dogecoin, Pepe, and the up-and-coming Rexas Finance (RXS). These coins possess strong communities, solid technical backed reasons, and strategic developments that may result in huge returns. Rexas Finance (RXS): The \$0.20 Powerhouse Providing actual, practical value, an imperative element that could push Rexas Finance's value to \$2 and more, is precisely what Rexas Finance offers. The presale of Rexas Finance already determines the trajectory of its remarkably bright future. The project has raised an astonishing \$47.6 million by selling over 458.1 million tokens at a minimal price of \$0.20. The early investors' confidence index indicates strong market confidence supporting the project's long-term strategy. The preliminary forecast puts the listing price at \$0.25, with an official launch on June 19, 2025. This guarantees that once RXS enters the market, liquidity and momentum will surge, paving the way for exceptional returns. Rexas Finance is predicted to reach \$2 before the end of June, representing a 900% increase from current estimates. Any investment made in expectation of such high returns is extremely attractive to any investor. Meanwhile, the presence of RXS on major monitoring platforms like CoinMarketCap and CoinGecko boosts visibility and makes it easier for new investors to monitor its growth. Dogecoin Might Get a Boost: The Crypto Pirates Speak DOGE is among the top meme coins, considering its volatile price charts. DOGE's price increased by nearly 5% on the weekly chart but fell by almost 35% within the last month, moving from approximately \$0.25 to around \$0.17. Crypto Pirates' market analyst also intrigued investors with his Dogecoin price forecasts. He believes that the external structure remains largely bullish regarding the meme coin's movement and expects Dogecoin to reach \$0.40 again. Shiba Inu (SHIB) Anticipates a Long-term Breakout as it Forms a Falling Wedge Shape. Shiba Inu (SHIB) has been in deep, unrelenting bearish momentum since it lost 62% of its value from its November ATH. Meanwhile, analysts point out a symmetry triangle pattern on Shiba Inu's (SHIB) monthly chart, which can potentially create a 17x rally for Shiba Inu (SHIB). This would lead to a climb from \$0.00001260 to an impressive \$0.0002141, but it could take years. Optimism in the short term stems from a daily fall wedge pattern, which indicates that Shiba Inu (SHIB) could soar 161% to \$0.000033, provided it breaks resistance. Despite these indicators, Shiba Inu (SHIB) relies heavily on a sustained market pullback and ETF approvals. Pepe Coin's Inverse Head and Shoulder Patterns Reveal a 40% Upward

Momentum. PEPE's price has jumped 35% from its yearly lows and is now trading at \$0.000007181, making it unprecedented in a buoyant crypto market. Analysts have noticed an inverse head-and-shoulders pattern appearing, which is likely to see PEPE rally by 40% to \$0.000010. Active exchanges for the PEPE token have dropped by 1.21% this week, indicating that investors have moved their tokens into private wallets, which reduces selling pressure. Open interest on Futures has increased by 8%, now at \$237.9 million. This showcases growing interest from speculators. A bearish breach below \$0.0000053 would omit the proposed bull run, thus compromising Pepe Coin's uptrend vigour.

**Conclusion** The most expensive cryptocurrencies usually dominate the headlines. Still, the best opportunities are underpriced altcoins, which could soar to triple-digit. As attention returns to the market, Shiba Inu and Dogecoin are doing their part to stir the community with new updates. While PEPE continues to ride the waves of meme popularity, Rexas Finance (RXS) is grabbing attention from early investors with its utility-based model that is refreshing the strategy. If history is anything to go by and the altcoin season kicks off, these tokens are bound to be some of the biggest winners. The clock is running out for those investors looking for asymmetric returns, so set your focus on these four names. Is smart money shifting gears again? A fresh XRP price analysis shows the coin struggling to hold above \$2.20, with falling futures interest pointing to shaky ground. Meanwhile, a new Dogecoin (DOGE) price forecast hints at a possible 50% breakout after DOGE reclaimed critical support zones, flipping bearish structure into bullish momentum. But while these two coins dominate headlines, there's a stealth move happening elsewhere—and it's drawing serious attention. Rumors are flying about VCs quietly buying into BlockDAG ahead of its 10 centralized exchange listings. This comes after the network raised over \$214 million in its presale without any venture capital. Now that its testnet is live and a full launch is in sight, institutional players are circling. It's being seen as the highest roi crypto before listings kick in—an early stage bet that could snowball into a billion-dollar opportunity. BlockDAG's Quiet Power Move Before Listings There's a quiet buildup happening behind BlockDAG—and it's coming from VCs. After raising over \$214 million entirely through retail support, reports now suggest that venture capital firms are preparing to enter before the network's upcoming listings on 10 major centralized exchanges. This shift is happening just as BlockDAG's beta testnet goes live, adding serious credibility to the network's technical progress. With CEX listings around the corner, smart money appears to be positioning early. BlockDAG's presale has been nothing short of a machine. It's now in Batch 27, with each BDAG coin priced at \$0.0248—marking a 2,380% increase from its opening batch price of \$0.001. The presale is moving toward its final batches out of a total of 45, and momentum hasn't slowed. Over 19.2 billion coins have been sold, and more than \$214 million have already been raised without relying on institutional backers—until now. VC interest is being seen as a sign that BlockDAG may have serious upside left. If firms are betting ahead of the listings, retail buyers may still have a short window to secure the coin before it hits broader markets. With its hybrid DAG + PoW structure, live testnet, global marketing events, and 10 upcoming exchange listings, the fundamentals are hard to ignore. BlockDAG is now being talked about as a highest roi crypto candidate. And with bonus offers still active before the testnet ends, some see this as the final stretch to grab what could become the highest roi crypto opportunity of 2025.

**XRP Price Analysis: Can It Stay Above \$2?** The latest XRP price analysis shows the token still facing pressure after bouncing from \$1.61. It's now hovering below the key \$2.20 resistance level, which it failed to flip twice this month. With funding rates negative since February and open interest in futures dropping from \$7.87B to \$3.06B, momentum appears weak. Without stronger volume or renewed trader interest, even a small sell-off could send XRP sliding toward its previous low. There is short-term support at \$1.86, backed by the 200-day moving average, but the RSI is still leaning bearish. A clear close above \$2.20 and the 50-day SMA at \$2.28 could bring back buyers, with a shot at the 100-day SMA near \$2.50. Until then, caution dominates this XRP price analysis, especially with veteran traders warning of a possible dip to \$1.07 if support fails. For now, XRP needs more than just a bounce—it needs strong confirmation.

**Dogecoin (DOGE) Price Forecast Signals First Major Breakout in 2025** The latest Dogecoin (DOGE) price forecast points to a possible 50% rally after DOGE reclaimed a critical level it lost earlier this year. Analysts like David Perk and Trader Tardigrade highlight smart money indicators—like liquidity sweeps and order flow changes—that signal a trend reversal. If DOGE holds above \$0.15 and reclaims the midpoint of the CLS candle, it could push toward the \$0.23–\$0.25 range. Volume and momentum are key for the next leg up. What makes this setup different is DOGE's structural reclaim, which hasn't happened since its January downtrend. That shift hints at a real bottom forming. The Dogecoin (DOGE) price forecast also notes a potential move to \$0.43 if market sentiment continues to improve. With the broader crypto market gaining strength, Dogecoin may finally be ready to turn its technicals into real upside. Traders are watching closely—this could be DOGE's first big run of the year.

**Summing Up XRP price analysis** shows the token still struggling to clear resistance at \$2.20, with weak futures data pointing to more downside unless momentum returns. On the other hand, the Dogecoin (DOGE) price forecast looks far more optimistic, with smart money indicators supporting a 50% breakout if DOGE maintains structure and volume. Both coins are being watched, but neither offers what BlockDAG is delivering right now. With its testnet live and over \$214 million raised without VC help, BlockDAG is already in Batch 27 at \$0.0248 per coin. Now, with 10 CEX listings lined up, reports suggest VCs are quietly buying in ahead of the next phase. The market is starting to treat BlockDAG like the highest roi crypto before listings go live. If this behind-the-scenes action continues, BlockDAG could quickly turn into a billion-dollar bet. For anyone still on

the sidelines, this might be the last real shot at catching the highest roi crypto before it breaks out. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Cryptocurrencies have emerged as a popular investment avenue that can earn investors rewards. Even though the market is highly volatile, Rexas Finance, Cardano, Ripple, and PEPE cryptocurrencies stand out as prime investments for 2025 if investors are willing to take risks. Let's examine these four altcoins and how they could turn an investment of \$1,000 into \$10,000 within a year. Rexas Finance (RXS) Rexas Finance emerged as one of the fastest-growing new cryptocurrencies of this year and was of immense interest because of its unique features and constantly growing backing. This token is priced at \$0.20 and is currently in its presale's final stages. With 91.60% of its presale sold, Rexas Finance is valued at \$0.25, given its major exchange listing date on June 19, 2025. Presale Rexas Finance tokens are valued at over \$47.6 million, proving how much they can grow when listed on exchanges. Rexas Finance looks to differentiate itself within the DeFi space by offering the Rexas Token Builder and Rexas Launchpad as unique offerings that provide exceptional opportunities for new projects to utilize our platform. Investors seem to gravitate towards such tokens as they possess more value than merely speculative. Considering the competitive pricing, particularly the impending rise after the presale period of \$0.20, investing in Rexas Finance could offer massive returns, significantly when the price surpasses \$0.25. Cardano (ADA) ADA's price is above \$0.85, and analysts anticipate that Cardano will have substantial price benefits in the foreseeable future. Its recent achievements and strategic developments in DeFi, lending, and innovative contract technologies fueled growing attention to Cardano. Along with constantly provided upgrades, Cardano is also awaiting multi-phased roadmaps for its ecosystem and infrastructure, which assures price growth. Various analysts expect Cardano to exceed almost \$1.35, which is highly plausible as more people continue adopting blockchain technologies. Assuming ADA meets these predictions, returning a \$1,000 investment into \$10,000 is feasible, given crypto's long-standing institutional backing. The rising institutional and developer activity on the network contributes heavily to making Cardano a blockchain powerhouse and boosts the chances for appreciation of its value in the long run. Ripple (XRP) Despite Ripple's ongoing legal war with the SEC, XRP is rising. Due to increased legal market exposure, XRP could possibly rise beyond the current price mark of \$2.31. Ripple's stance on cross-border payments and the institutional trust it gains in the financial sector further improves the long-term XRP outlook. If Ripple's legal case is settled amicably, XRP's price might increase significantly beyond the \$3.50 mark. Analysts even predict a point at around \$7 or \$13. Having such potential means a minor jump in price could turn a \$1,000 investment into \$10,000. As a solution for live, cross-border settlements for banks, XRP holds significant value. Ripple's fluctuation also puts it in and makes it advantageous that technology becomes more embraced. PEPE Coin Alongside popular names like Dogecoin and Shiba Inu, meme coins gained financial traction in 2025 with the emergence of PEPE Coin. While newer meme coins tend to be labeled as Ponzi schemes, PEPE's emerging community and the increasing popularity of its memes distinguish it from the rest. PEPE is currently priced at \$0.000009, making it attractive to small investors and larger whales fond of the token's communal aspect. The coin is trending viral owing to the community built around it, making it highly judicious to watch for this token. The value of PEPE coins, in contrast with other altcoins, is extremely low, but, like all meme coins, it is expected to yield very high profits. This profit can be anticipated owing to virality-driven price surges. Should PEPE sustain its popularity in the crypto community and trends, investing \$1,000 has the potential to reach sky-high amounts, plus the increase in community participation further fuels the growth potential. Conclusion Rexas Finance (RXS), Cardano (ADA), Ripple (XRP), and PEPE remain four cryptocurrencies of interest due to their specific traits that make them attractive to crypto investors. Rexas Finance develops novel DeFi financial products and solutions and powers the growth of Cardano the same way its technologically adept infrastructure supports expansion. Ripple is still the frontrunner for cross-border payment solutions as PEPE rides the meme coin frenzy. Supplied with ample upside, particularly in a bullish environment, these altcoins have the potential to grow an initial investment of \$1,000 into tens of thousands of dollars in profits by 2025. The most important factor for success is knowing when to enter and exit while considering the underlying events and trends that drive these tokens. With sound judgment and a focus on the right coins, turning \$1,000 into \$10,000 is entirely feasible by 2025. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto markets in 2025 are buzzing with each meme coin insanity and smart-tech innovation. While meme coins like Pepe retain to ride the waves of social hype and speculative interest, a more modern project, Ozak AI, is moving focus in the direction of software and real-world application through the energy of artificial intelligence. As investors hunt for the next massive mover, the query turns clear: do you need 10x amusing, or 300x profits with real tech? Pepe Coin's Popularity and Its 10x Potential Pepe Coin (PEPE) has made a name for itself because of the ultra-modern meme coin darling, joining the ranks of Dogecoin and Shiba Inu. Its explosive boom in early 2023 turned heads, and on the grounds that then, it remained a crowd preferred on crypto Twitter and across meme-loving groups. As of April 2025, Pepe is trading close to its local support level of \$0.000007 after seeing big volume

spikes earlier this year. Analysts suggest that in a strong bull run, Pepe should see a potential 10x circulateâ€”in all likelihood hitting \$0.00007 or greater. While that might be an amazing surge for quick-term investors, the underlying threat is obvious: meme coins frequently lack fundamentals and are at the mercy of social sentiment. Ozak AI: From \$0.003 to \$1? Thatâ€™s a 300x Opportunity Now contrast that with Ozak AI (OZ), which continues to be in its presale phase with a token price of \$0.003. This AI-powered crypto project is not approximately memes or viral tweetsâ€”it is about building a sensible infrastructure for data, analytics, and decentralized insights. Ozak AI combines artificial intelligence with blockchain, enabling real-time evaluation of market tendencies, sentiment, and big information without relying on centralized APIs. OZ has already raised over \$950,000 in its presale, and investor demand is rising rapidly because the assignment heads into its next stage. If Ozak AI reaches its projected target of \$1â€”a figure some experts believe is sensible by means of late 2025â€”that could represent a thought-blowing 300x return for early buyers. That method of \$500 funding should potentially develop into \$150,000 if the roadmap remains on track. What Sets Ozak AI Apart? Unlike meme coins, Ozak AI is rooted in fixing real-world troubles. Its platform goals are to make Web3 data more accessible, accurate, and actionable. With growing demand for decentralized infrastructure and the increase in AI-powered solutions, Ozak AI is nicely-positioned to steer a new generation of smart, utility-based tokens. Add to that the developing enchantment of DePIN (Decentralized Physical Infrastructure Networks)â€”a middle factor of Ozakâ€™s systemâ€”and youâ€™ve got a token with true use case and scalable capability. While meme coins ride emotional waves, Ozak AI rides technological innovation. Pepe Coin may want to absolutely pump again and supply first rate returns, specifically in short bursts. But while comparing speculative meme hype to Ozak AIâ€™s forward-questioning method and 300x upside, the selection turns into clearer for long-term investors. With a presale access at just \$0.003 and a \$1 goal in sight, Ozak AI is not only a projectâ€”it may be the breakout star of this cycle. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Fartcoin surges 78% over the past week, nearing \$1B market cap amid strong investor interest and bullish momentum. - Despite popularity, Fartcoin remains unlisted on major spot exchanges, fueling speculation. Fartcoin (FARTCOIN) continued its impressive upward trajectory today, rising by 19.47% over the last 24 hours to trade at \$0.8701. During that period the token performed a strong price recovery that reached its maximum point at \$0.8849 from \$0.6806 as market trust strengthened. A recent consolidation period was followed by a market breakout that shows fresh bullish market trends for FARTCOIN. With its market capitalization climbing to \$870 million, an increase in investor interest drives the strong performance of the token while the trading volume decreased by 30.64% to reach \$318.99 million. While Fartcoin has enjoyed substantial price gains and trading activity, it remains absent from spot listings on top centralized exchanges like Binance, Coinbase, Bybit, OKX, and Upbit. This is surprising, considering the tokenâ€™s consistent outperformance in perpetual futures markets, where it trails only Dogecoin in volume among memecoins. Fartcoinâ€™s earlier growth from a \$300 million to a \$3 billion market cap between 2023 and 2024 shows the success of meme tokens like PEPE. The restricted spot market access of Fartcoin generates concern about why leading trading platforms decide to hold back its distribution. Two opposing views emerge regarding this situation: either major platforms avoid this opportunity or they hesitate due to Fartcoinâ€™s unusual approach. honest question: â€” Unipcs (aka 'Bonk Guy') ðŸŽŹ (@theunipcs) April 10, 2025 why isn't FARTCOIN listed on Binance, Coinbase, Bybit, OKX, and Upbit spot? it is listed on Binance/Bybit/OKX perps and is consistently doing more perps volume than literally every other memecoin on on these CEXs except \$DOGE fartcoin is doing more perpsâ€”! Users can currently trade Fartcoin on derivatives markets offered by Binance Futures and Bybit as well as OKX. The trading performance of Fartcoin stands above PEPE and TRUMP tokens on exchanges due to growing interest in the cryptocurrency market. Key Levels: Resistance at \$0.88, Support at \$0.64 The recent increase in Fartcoin values occurred at the same time as a broader crypto market recovery that the United States president Donald Trump started when he suspended trade tariffs for some countries. The crypto market experienced an overall 11.55% rise but Fartcoin outshined all competitors by reaching a 78% increase in value over the week. Key resistance levels are now seen at \$0.88, \$0.96, and \$1.15, while immediate support lies near \$0.64 and \$0.572. The token recently rallied over 15%, pausing just below the \$0.88 resistance mark. A close above \$0.88â€”\$0.90 could open the door to testing the psychological \$1.00 level, with the potential for further gains toward \$1.20 if momentum persists. From a technical perspective, the MACD has made a bullish crossover, signaling strength. Meanwhile, the RSI currently sits at 70.86, entering overbought territory. While this suggests a possible short-term pullback, the overall setup remains bullish. As long as RSI stays elevated while the price climbs, upward strength is confirmed. Fartcoin maintains its status as the most tracked asset within the memecoin market dynamics. Market participants are intensively observing the important resistance zone between \$0.88 and \$0.90. The price breakout potential will push the market toward additional highs while rejection at that boundary could initiate short-term market correction. Technical signals together with the ongoing market momentum indicate Fartcoin possibly has more prosperous days ahead. From satire to sky-high utility, \$NORDO brings a new era to meme coins by introducing real-world travel functionality. Meme coins have long lived at the edge of humor and speculation in the crypto

world. With roots in online jokes and viral communities, coins like Dogecoin and Shiba Inu showed that community power could translate to real market traction. But despite the attention, most meme coins have struggled to build lasting utility. That's where \$NORDO steps in. Born from a mix of political satire and environmental commentary, \$NORDO began as a humorous response to former U.S. President Donald Trump's infamous 2019 proposal to purchase Greenland. The project's mascot, a stoic polar bear, symbolizes resistance to political absurdity, climate change denial, and cultural imperialism. But in 2025, \$NORDO is taking things to a whole new level: launching an actual airline booking engine powered by crypto. A Meme Coin with Real Utility In an unprecedented move, the \$NORDO team has unveiled its upcoming flight booking platform that will allow users to reserve flights and pay with \$NORDO tokens, as well as other cryptocurrencies and traditional payment methods. This is the first known case of a meme coin deploying a fully functional utility with real commercial value. Rather than being a joke taken too far, this evolution proves that meme coins can be more than a punchline. They can offer engaging narratives, powerful communities, and now, access to services people use in everyday life. Why Airline Booking? The link between Greenland and travel is no accident. Trump's original plan to buy Greenland was met with global mockery, turning a serious geopolitical moment into viral comedy. The \$NORDO team saw an opportunity to turn this meme into a meaningful metaphor. Greenland isn't for sale "but it might be worth flying to. As a result, the booking engine acts as both a narrative extension and a utility. Travelers will soon be able to browse flights, compare prices, and check out using \$NORDO. Integration with other popular cryptos (like SOL, USDC) and even credit/debit cards will ensure accessibility. Bridging the Gap Between Meme and Market What sets \$NORDO apart from other meme coins is its strategic use of utility to grow its market cap and token relevance. Currently boasting a modest \$1.1M market cap, \$NORDO's upcoming utility launch could mark a turning point. Community excitement is already high, with traders speculating that a real use case could position \$NORDO as the Dogecoin of the new generation. Beyond booking flights, future updates may include hotel reservations, car rentals, and travel-related NFTs. This would allow \$NORDO to operate as a complete travel ecosystem built on humor, narrative, and real functionality. Community First, Always Despite the hype, \$NORDO hasn't chased listings for the sake of exposure. The team has focused instead on building a resilient community and delivering features users care about. As the flight booking engine enters beta, community members are already testing early versions and suggesting improvements. This grassroots approach has made \$NORDO one of the most organic projects on Solana, with over 5,000 wallet holders and growing. The Telegram group is active with daily memes, governance discussions, and development leaks. On-chain transparency is prioritized, and the core team is publicly known. Tokenomics and Liquidity \$NORDO has a total supply of 1 billion tokens. 91% of the tokens are held by the foundation to be gradually used for liquidity, ecosystem incentives, and future utility expansion. Currently, \$NORDO is live on Raydium DEX with a \$100K liquidity pool in the \$NORDO/SOL pair and a newly launched \$NORDO/USDC and \$NORDO/TRUMP pair on Orca DEX. The inclusion of a \$NORDO/TRUMP pair adds to the narrative rivalry that has defined the project since its inception. It also allows users from politically themed coins to migrate or diversify into \$NORDO's more utility-driven future. Vision and Values The \$NORDO team has always believed that memes are just the beginning. Utility is the destination. This philosophy has guided every step of their roadmap. The slogan "Meme was the runway, utility is the flight" perfectly captures the ethos. In a time when the crypto industry is under pressure to prove real value, \$NORDO is demonstrating that narrative strength combined with clever utility can set a new standard. What's Next? - Full launch of the flight engine is expected in late August 2025. - New exchange listings are being evaluated, but not prioritized over utility. - Marketing efforts are focused on meme-native communities and DeFi explorers. - Partnerships with travel services and eco-charities are under discussion. Conclusion \$NORDO is a case study in how meme coins can evolve beyond hype and into real-world use. With a strong foundation, a loyal community, and a clear vision, this polar bear isn't just surviving the bear market—it's flying above it. For anyone watching the future of crypto unfold, one thing is clear: Greenland isn't for sale. But you can book a flight there with \$NORDO. - Website: <https://nordo.wtf> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cardano continues to show price drops raising speculations of hitting the \$0.4 support. - The altcoin's daily trading volume showed a modest increase of 2.07% as per CMC data. In the past day, the crypto market has retraced back to previous support levels after a brief recovery. Meanwhile, the US regulatory sector is drumming up with a major announcement. The final voting to nominate SEC Paul Atkins is looming closer. On the other hand, the global economic landscape is still shaky as tariff wars continue to escalate. Within the cryptocurrency sector, Bitcoin is trading at its November 2024 all-time high of \$77,000. This modest drop has had its effect in the altcoin sector as well. Notably, Cardano, one of the leading altcoins, has factored in further drops after Monday's significant freefall. Over the last 24 hours, ADA has factored in a modest price drop of 7.25%. In the afternoon hours of April 8, the altcoin was trading at a high of \$0.6058. However, as bearish candles sparked it fell to current levels. At the time of writing, Cardano was trading at \$0.5556 as per CMC data. On Monday, April 7, the altcoin crashed to the \$0.52 level, hitting its November low similar to that of BTC. Owing to recent dips and previous bearish trends, Cardano's weekly price performance stands at 17.16%. Will Cardano Reach \$0.4 Support Soon? On analyzing its recent price movements, as expected Cardano traces a descending channel pattern. A descending channel pattern is testimonial for bearish overpowering of price movements. Further price dips are usually expected for this pattern. ADA's technical indicators also confirm this prediction. Its bull power value stands at 0.76 as per TradingView data. Its bear power, value on the other hand, stands at a high of -10.65. This further elucidates the bearish trend. Subsequently, Cardano's RSI value stands at a low of 33.15 suggesting negative market sentiment. If the bears continue to affirm their hold, the token can be expected to

fall to a \$0.4 support. Meanwhile, other altcoins such as Story (IP) have shown modest price increases in the last 24 hours. Highlighted Crypto News Today: 21Shares to Launch Officially Endorsed Dogecoin ETP on SIX Swiss Exchange

- Cboe filed a 19b-4 request with the SEC to list the first U.S. ETF backed by SUI. - If approved, it would be the first U.S. ETF to hold and stake the Sui Network's native token. Canary Capital has taken a significant step toward launching the first U.S. exchange-traded fund (ETF) tied to the Sui Network's native token, SUI. The asset manager filed an S-1 registration for the proposed ETF in March. On April 8, the Cboe BZX Exchange submitted a 19b-4 rule change request to the U.S. Securities and Exchange Commission (SEC) to list and trade the fund. If approved, the Canary SUI ETF would be the first U.S. ETF to hold SUI, a layer-1 blockchain token currently ranked 21st by market cap. SUI trades near \$1.94, with a market cap of around \$6.7 billion, according to CoinGecko. The Sui Network, launched in May 2023, competes with Solana and Ethereum. It uses a dual-layer consensus model called Narwhal and Bullshark. SUI ETF Gains Momentum The ETF may stake part of its SUI holdings through trusted providers. According to regulatory filings, the fund aims to collect staking rewards as income. Cboe emphasized that existing surveillance tools can prevent fraud and manipulation, mirroring SEC-approved Bitcoin and Ethereum ETF safeguards. Canary Capital has set up a Delaware trust for the SUI ETF. This move follows its earlier attempts to list ETFs for Litecoin, Hedera, XRP, and Solana. The firm's Litecoin ETF, listed under the ticker LTCC, has already appeared on the DTCC site, signaling possible launch readiness. The SEC must approve the 19b-4 rule change before Cboe can list the ETF. Canary's move comes after dozens of crypto ETF filings in 2024. Since President Trump took office in January, the SEC has acknowledged new proposals for ETFs based on altcoins and memecoins, including Dogecoin and the Trump-themed token TRUMP. Sui aims to offer Web3 functionality with a user-friendly experience. The network hosts projects like SatLayer, which provides Bitcoin staking and is compatible with the Phantom wallet. Sui currently holds about \$1.1 billion in total value locked, per Defillama. Highlighted Crypto News Today What's the Story Behind Michael Saylor's Strategy Filing With SEC For Potential BTC Selling?

Meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), and Bonk (BONK) have captured headlines with viral popularity and explosive, hype-driven rallies. But as the crypto market matures, investors are increasingly transferring recognition toward projects with real-world utility and long-term potential. One standout gaining momentum is Ozak AI (OZ), a blockchain-based totally AI project aiming to supply powerful use instances far beyond memes. With a price target of \$1 from a presale price of just \$0.003, Ozak AI is being visible as a serious project poised to outperform some of the most well-known meme coins. The Rise and Limitations of Meme Coins Meme coins have carved out a completely unique niche in the crypto market by leveraging net culture and social media affect: Dogecoin (DOGE): Initially created as a joke, DOGE has experienced good sized price fluctuations, often influenced by using high-profile endorsements. Despite its recognition, DOGE's utility stays limited, and its price is exceptionally volatile. Shiba Inu (SHIB): Dubbed the "Dogecoin killer," SHIB has advanced a robust community and brought projects like ShibaSwap. However, its value is still broadly speaking driven by means of market sentiment rather than intrinsic utility. Bonk (BONK): As a more recent entrant, BONK has captured interest in the Solana space. While it has visible fast price movements, its long-term viability is uncertain due to a lack of substantial use cases. While those meme coins have supplied short-term gains for some traders, their reliance on hype and limited real-world applications increase questions about their sustainability. Ozak AI (OZ) Ozak AI represents a new wave of cryptocurrencies that integrate artificial intelligence with blockchain technology to provide tangible solutions: AI-Powered Predictive Analytics: Ozak AI utilizes machine learning algorithms to research giant quantities of data in real-time, providing users with actionable insights for informed decision-making. Decentralized Infrastructure: By leveraging decentralized networks, Ozak AI complements security and data privacy, addressing issues related to centralized structures. Financial Market Applications: The platform aims to deliver superior market evaluation equipment, benefiting buyers, investors, and financial institutions seeking to optimize their techniques. This focus on real-world programs positions Ozak AI as a mission with the potential for sustainable increase, distinguishing it from meme coins that lack sizeable utility. Ozak AI's current Ozak AI presale price of \$0.003 gives an reachable access point for investors. Projections advocate that the token could attain \$1, representing a potential boom of over 33,000% . This anticipated boom is underpinned by the coin's creative approach and the growing demand for AI-driven solutions in numerous industries. Market Dynamics and Investor Sentiment Investor interest is gradually moving toward projects that offer innovation and practical applications. Ozak AI's emphasis on AI integration aligns with this trend, attracting interest from the ones looking for investments with long-term potential. While meme coins like DOGE, SHIB, and BONK have benefited from viral popularity, their long-term trajectories remain uncertain without underlying technological advancements. Crypto market is evolving, with a growing emphasis on projects that integrate technological innovation with realistic programs. While meme coins have showcased the power of community-driven momentum, Ozak AI's integration of AI and blockchain positions it as a platform with the potential to supply massive and sustainable returns. As the market matures, investments in technologically strong projects like Ozak AI may also provide greater promising prospects compared to traditional meme coins. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish SHIB price prediction for 2025 is \$0.00001750 to \$0.00003370. - Shiba Inu (SHIB) price might reach \$0.0001 soon. - Bearish SHIB price prediction for 2025 is \$0.00000528. In this Shiba Inu (SHIB) price prediction for 2025, 2026-2030, we will analyze the price patterns of SHIB by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency.

TABLE OF CONTENTS | INTRODUCTION | | SHIBA INU (SHIB) PRICE PREDICTION 2025 | | | SHIBA INU (SHIB) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Shiba Inu (SHIB) Current Market Status | Current Price | \$0.00001129 | 24 " Hour Price Change | 8.12% Up | | 24 " Hour Trading Volume | \$420.96M | | Market Cap | \$6.65B | | Circulating Supply | 589.25T SHIB | All Time High | \$0.00008845 (On Oct 28, 2021) | | All " Time Low | \$0.0000000008165 (On Sep 01, 2020) | What is Shiba Inu (SHIB) | TICKER | SHIB | | BLOCKCHAIN | Ethereum | | CATEGORY | Decentralized cryptocurrency | | LAUNCHED ON | August 2020 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Shiba Inu (SHIB) was launched on the Ethereum blockchain and also resides on the Binance Smart Chain (BSC). This popular memecoin was developed and launched in 2020 by a pseudonymous founder Ryoshi. Shiba Inu exists as a potential contender to the largest memecoin, Dogecoin (DOGE). The Shiba Inu ecosystem will likely launch its layer-2 blockchain called Shibarium by 2023. In March 2023, Shibarium Beta " named Puppynet " was launched. Alongside SHIB, Bone ShibaSwap (BONE) and Doge Killer (LEASH) are other tokens of the Shiba Inu ecosystem. Shiba Inu 24H Technicals (Source: TradingView) Shiba Inu (SHIB) Price Prediction 2025 Shiba Inu (SHIB) ranks 17th on CoinMarketCap in terms of its market capitalization. The overview of the Shiba Inu price prediction for 2025 is explained below with a daily time frame. SHIB/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Shiba Inu (SHIB) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. The descending channel pattern is often followed by higher prices. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a security's price with parallel trendlines to show a downward trend. At the time of analysis, the price of Shiba Inu (SHIB) was recorded at \$0.00001129. If the pattern trend continues, then the price of SHIB might reach the resistance levels of \$0.00001534 and \$0.00003402. If the trend reverses, then the price of SHIB may fall to the support of \$0.00001083. Shiba Inu (SHIB) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Shiba Inu (SHIB) in 2025. SHIB/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Shiba Inu (SHIB) for 2025. | Resistance Level 1 | \$0.00001750 | | Resistance Level 2 | \$0.00003370 | | Support Level 1 | \$0.00000963 | | Support Level 2 | \$0.00000528 | SHIB Resistance & Support Levels Shiba Inu (SHIB) Price Prediction 2025 " RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Shiba Inu (SHIB) are shown in the chart below. SHIB/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Shiba Inu (SHIB) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.00001321 Price = \$0.00001143 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 35.18392179 <30 = Oversold 50-70 = Neutral >70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Shiba Inu (SHIB) Price Prediction 2025 " ADX, RVI In the below chart, we analyze the strength and volatility of Shiba Inu (SHIB) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). SHIB/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Shiba Inu (SHIB). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 13.66213078 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 63.19 <50 = Low >50 = High | High Volatility | Comparison of SHIB with BTC, ETH Let us now compare the price movements of Shiba Inu (SHIB) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs SHIB Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of SHIB is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of SHIB also increases or decreases respectively. Shiba Inu (SHIB) Price Prediction 2026, 2027 " 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Shiba Inu (SHIB) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Shiba Inu (SHIB) Price Prediction 2026 | \$0.0004 | \$0.000005 | | Shiba Inu (SHIB) Price Prediction 2027 | \$0.0008 | \$0.000004 | | Shiba Inu (SHIB) Price Prediction 2028 | \$0.001 | \$0.000003 | | Shiba Inu (SHIB) Price Prediction 2029 | \$0.005 | \$0.000002 | | Shiba Inu (SHIB) Price Prediction 2030 | \$0.008 | \$0.000001 | Conclusion If Shiba Inu (SHIB) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Shiba Inu (SHIB) price prediction for 2025 is \$0.00003370. Comparatively, if unfavorable sentiment is triggered, the bearish Shiba Inu (SHIB) price prediction for 2025 is \$0.00000528. If the market momentum and investors' sentiment positively elevates, then Shiba Inu (SHIB) might hit \$0.0001. Furthermore, with future upgrades and advancements in the Shiba Inu ecosystem, SHIB might surpass its current all-time high (ATH) of \$0.00008845, and mark its new ATH.

FAQ 1. What is Shiba Inu (SHIB)? Shiba Inu (SHIB) is a popular memecoin that was launched in 2020 as an ERC-20 token. It is compatible with both the Ethereum blockchain and Binance Smart Chain (BSC). 2. Where can you purchase Shiba Inu (SHIB)? Shiba Inu (SHIB) has been listed on many crypto exchanges which include Binance, Bybit, OKX, UZX, and Bitget. 3. Will Shiba Inu (SHIB) reach a new ATH soon? With the ongoing developments and upgrades within the Shiba Inu Platform, SHIB has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Shiba Inu (SHIB)? On Oct 28, 2021, Shiba Inu (SHIB) reached its new all-time high (ATH) of \$0.00008845. 5. What is the lowest price

or loss related to content, products, or services stated in this Press Release.

- The total crypto market cap dropped by over 8.6%, falling to \$2.44 trillion. - Over \$1.41 billion worth of crypto positions were liquidated in just 24 hours. - Trump's sudden "Liberation Day" tariffs triggered a massive sell-off, crashing global stock markets. The global financial world is in panic mode and crypto is right at the center of it. After what's now being called a new "Black Monday," both traditional stock markets and crypto markets are seeing red. It all started with U.S. President Donald Trump's sudden declaration of April 6 as "Liberation Day," alongside new tariffs that triggered a major market sell-off worldwide. Stock markets in the U.S., China, Japan and Europe tumbled for the second straight day. But crypto investors didn't escape the storm either. Market in Freefall: Major Cryptos Crash in Single-Day Panic Sell-Off The overall crypto market cap fell by over 8.64%, dropping to \$2.44 trillion. The largest cryptocurrency, Bitcoin (BTC), slipped around 10.44%, falling from \$83,108 to an intraday low of \$74,436. Meanwhile, Ethereum (ETH) took an even harder hit, plunging more than 21% to a low of \$1,415, though it is currently priced at \$1,496. Other altcoins like XRP and Solana (SOL) also suffered sharp losses, dropping by 22% and 19% respectively. XRP has fallen below \$2 for the first time since early December, while SOL has dropped below \$100 a level not seen since January 2024. Furthermore, major tokens like Binance Coin (BNB), Cardano (ADA), and Tron (TRX) are experiencing even deeper pains. Memecoins weren't spared either, with leading tokens Dogecoin and Shiba Inu recording single day losses of 20% and 15% respectively. DOGE lost momentum and dropped below \$0.15 while SHIB hit a new yearly low. What's scarier? Over \$1.41 billion in crypto positions were liquidated in just 24 hours—a 750% spike and the worst wipeout since March 2020. This wave of forced selling shows just how fragile investor confidence is right now. The Fear & Greed Index dropped to 17, signaling "extreme fear." While panic spread, only a few tokens like KAVA managed to stay afloat with 1.22% rise. Others like BERA (25.56%), LTC (23%), and MOVE (24.5% to ATL) saw some of the biggest drops and topped the losers list. Global Stock Markets Crumble Under Tariff Pressure The stock market hasn't been spared amid the escalating global trade war. Tariffs ranging from 10% to 50% on imported goods have led to significant declines in global stock markets with Wall Street losing \$9 trillion in value. The Australian Securities Exchange (ASX) also suffered a \$160 billion loss. Asian markets have also felt the brunt of these developments. Japan's Nikkei 225 plunged by 7.8% while South Korea's KOSPI dropped 5.6%, prompting a temporary halt in trading. In China, the Hang Seng index fell 11.7%, and the SSE Composite decreased by 7.7% following the announcement of retaliatory tariffs. Despite market reactions, President Trump remains steadfast describing the tariffs as "a very beautiful thing." He acknowledged potential short-term market volatility but emphasized the necessity of these measures to correct longstanding trade imbalances, stating, "Sometimes you have to take medicine to fix something. However, Prime Minister Keir Starmer warned of severe ramifications from a full-blown trade war and indicated potential interventions to protect affected industries. Similarly, financial experts are also expressing concern. Jim Cramer of CNBC warns that without a policy reversal, the market could face a crash reminiscent of Black Monday in 1987.

Investors are constantly trying to find the next large opportunity in the crypto market, and two essential tendencies have dominated recent years—meme coins and AI-powered cryptocurrencies. Meme coins like Dogecoin (DOGE) and Shiba Inu (SHIB) have thrived on community hype and celeb endorsements, often experiencing huge but volatile price swings. Meanwhile, AI-driven tasks along with Ozak AI (OZ) are gaining traction because of their real-world applications and technological improvements. With Ozak AI aiming for a \$1 goal, many wonder whether or not it may outperform DOGE and SHIB within the coming bull run. Understanding Meme Coins: Dogecoin and Shiba Inu Meme coins are cryptocurrencies that originate from internet memes or have funny developments. Dogecoin, created in 2013 as a joke, features the Shiba Inu dog from the "Doge" meme as its logo. Despite its satirical beginnings, DOGE has finished widespread market capitalization, pushed via a passionate community and endorsements from high-profile individuals like Elon Musk. Shiba Inu, launched in 2020, positions itself as the "Dogecoin killer." It won rapid recognition, in element because of its low price in line with token, permitting investors to maintain massive quantities with minimal funding. SHIB's surroundings has elevated to consist of decentralized finance (DeFi) projects and non-fungible tokens (NFTs), aiming to offer greater software program beyond its meme origins. Price Predictions for DOGE and SHIB: Dogecoin (DOGE): Analyst predictions for DOGE's price by using the 2025 range. Some forecasts endorse that DOGE must reach as much as \$1.07, contingent on factors including extended adoption and favorable market situations. Shiba Inu (SHIB): SHIB's price projections for 2025 moreover range amongst analysts. Estimates vary from \$0.00003 to \$0.00010, depending on market tendencies and the enlargement of its ecosystem. The Rise of AI Coins: Spotlight on Ozak AI AI coins constitute a fusion of artificial intelligence and blockchain era, aiming to offer advanced solutions in data analytics, automation, and predictive modeling. Ozak AI is at the forefront of this motion, integrating machine learning algorithms with decentralized networks to provide real-time, actionable insights for monetary markets. Key Features of Ozak AI: Predictive Technology: At its core, Ozak AI makes use of Prediction Agents (PAs), flexible AI algorithms designed to deliver forecasts based totally on historic and present statistics. These agents can be customized to meet individual user needs, improving their applicability across numerous financial situations. Ozak Stream Network (OSN): This aspect allows low-latency data ingestion and processing, allowing customers to access timely and unique statistics—a vital gain in the fast-paced financial area. Decentralized Framework: By combining AI with blockchain, Ozak AI offers a decentralized platform for AI solutions, allowing companies and builders to leverage AI without counting on centralized entities. Ozak AI's Price Potential: Currently, Ozak AI is in its presale phase, with tokens priced at approximately \$0.003. Analysts are expecting that the token ought to attain \$1 by 2025, representing a 333x go back for early investors. This positive outlook is based on the project's innovative integration of AI and blockchain, in addition to the developing demand for AI-driven solutions in numerous industries. Ozak

AI vs. DOGE and SHIB When evaluating the potential of Ozak AI relative to Dogecoin and Shiba Inu, several factors come into play: Utility and Innovation: While DOGE and SHIB originated as meme coins with limited initial utility, Ozak AI gives a robust technological framework that addresses real-world demanding situations in data analytics and predictive modeling. This intrinsic utility may also appeal to a broader variety of buyers in search of great price propositions. Market Positioning: DOGE and SHIB have hooked up massive, loyal communities, contributing to their market presence. However, their cost is heavily encouraged by social media trends and celebrity endorsements, which may be risky. In contrast, Ozak AI's value proposition is rooted in technological innovation and practical applications, doubtlessly offering extra stable and sustainable growth. Growth Potential: Given its low entry price and formidable \$1 target, Ozak AI presents a high-risk, high-reward possibility. Early traders stand to gain substantially if the challenge achieves its targets. Conversely, DOGE and SHIB, having already skilled large increase, can also offer comparatively modest returns moving forward. While Dogecoin and Shiba Inu have confirmed the strength of network-pushed momentum within the crypto market, the emergence of AI coins like Ozak AI introduces a compelling combination of technological innovation and practical utility. Ozak AI's formidable \$1 price goal, underpinned by its advanced AI and blockchain integration, positions it as a noteworthy project in the evolving cryptocurrency landscape. Investors in search of opportunities beyond meme coins may also discover Ozak AI's proposition especially appealing, especially given its ability for tremendous returns. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. As the crypto market heats up in anticipation of the next bull run, buyers are searching for assets with the very best ability for exponential gains. Meme coins like Pepe Coin (PEPE) have received massive traction, with many predicting a probable 10x surge. However, AI-pushed cryptos like Ozak AI (OZ) are rising as stronger projects, with the potential for an awesome 300x rally. While PEPE may additionally see vast growth, Ozak AI's technological advantages, real-world application, and developing adoption ought to function as the better investment possibility. Pepe Coin's 10x Ambition: Can It Deliver? Pepe Coin, stimulated by using the net's iconic meme way of life, has attracted a big following. Like Dogecoin and Shiba Inu earlier than it, PEPE prospers on network engagement, social media hype, and speculative buying and selling. With improved adoption and potential bull run beforehand, a 10x surge for Pepe Coin isn't out of the question. However, its lack of real-world use cases and reliance on meme-pushed momentum makes it an unstable long-term bet. Meme coins have historically shown parabolic rises, observed by sharp declines as hype fades. While PEPE can also provide short-term gains, its ability to preserve long-term boom remains unsure. Investors seeking out extra solid and essentially robust opportunities may also find better prospects in AI-powered blockchain projects like Ozak AI. Ozak AI's 300x Potential: A Game-Changer in AI and Blockchain Ozak AI is at the leading edge of artificial intelligence integration with blockchain technology. The Ozak AI project leverages predictive AI, machine learning, and decentralized analytics to offer real-time insights and automation equipment for investors, traders, and organizations. Unlike meme coins, which rely on community hype, Ozak AI has a clear technological benefit and a swiftly developing ecosystem. Currently priced at just \$0.003 in its presale, Ozak AI has the capability to skyrocket to \$1 within the coming months, representing a huge 300x go back for early investors. With increasing adoption, strong technological backing, and a clear roadmap, Ozak AI stands out as one of the most promising AI-driven crypto projects in the market. Why Ozak AI Could Outperform Pepe Coin Real-World Utility " Unlike Pepe Coin, which is mainly pushed by memes and social media buzz, Ozak AI gives AI-driven predictive analytics, making it a treasured asset for traders and businesses. Massive Growth Potential " With its presale price at \$0.003 and a projected goal of \$1, Ozak AI has a much higher upside than PEPE's potential 10x increase. Institutional Interest " AI and blockchain integration is drawing the eye of institutional buyers, making Ozak AI a strong candidate for long-term fulfillment. While Pepe Coin may also obtain a 10x return within the short term, its long-term sustainability remains uncertain because of its speculative nature. On the other hand, Ozak AI's AI-powered blockchain solutions offer a strong foundation for explosive increase, with a projected 300x rally that might leave PEPE in the dust. Investors seeking out life-changing gains have to consider positioning themselves in Ozak AI early earlier than it skyrockets to its \$1 goal. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - DOGE is holding within the \$0.1635 range. - The meme coin's daily trading volume has surged by over 52%. Market-wide bearish pressure has triggered sharp losses across crypto assets. The meme coin market cap has reached \$49.4 billion, losing over 6.5%. Following the downtrend, Dogecoin (DOGE) has slipped by 4.69%. The meme coin opened the day, trading at around \$0.1681, and the price climbed

toward a peak range of \$0.1787. With bears in command, DOGE tumbled to a low of \$0.1624. At the time of writing, DOGE traded at \$0.1635, with the market cap at \$24.26 billion. The daily trading volume of the meme coin has reached \$1.9 billion. Besides, the market observed a liquidation of \$11.49 million worth of DOGE. Notably, Dogecoin has plunged by over 17% in the last seven days. The asset began trading the week at the \$19 range, and the weekly low was formed at \$0.1609. Will DOGE Continue Its Decline? DOGE's strong bearish momentum is exhibited with the Moving Average Convergence Divergence (MACD) line and signal line crossing below the zero line. A continued stay below the zero line may lead to further declines. The Chaikin Money Flow (CMF) indicator at -0.03 indicates a weak accumulation and conservative market sentiment, though not very negative. In the meantime, DOGE's daily trading volume has increased by more than 52.61%. If DOGE fails to hold above the \$0.17 mark, the price might fall back toward \$0.1537. Losing this key support range could send the meme coin into deeper correction territory. On the upside, a recovery of the meme coin could likely attempt to reclaim the \$0.20 range. The emergence of a golden cross could drive DOGE to a retest of the \$0.2446 resistance. In addition, the meme coin's Bull Bear Power (BBP) value of -0.0081 suggests mild bearish momentum. DOGE's daily relative strength index (RSI) at 40.30 indicates a neutral-to-bearish zone. Disclaimer: The opinion expressed in this article is solely the author's. - Cronos (CRO) rose 6.06% in 24 hours, trading at \$0.1062 with a \$2.82B market cap. - Trading volume surged 99.30% to \$70.58M, signaling heightened interest. Cronos (CRO) is among the top three gainers today, surging 6.06% in the last 24 hours. The cryptocurrency now trades at \$0.1062, with a market capitalization of \$2.82 billion. Trading volume spiked 99.30% to \$70.58 million, reflecting increased investor interest. The fully diluted valuation (FDV) stands at \$10.62 billion, while the circulating supply is 26.57 billion CRO out of a maximum 100 billion. Can Cronos (CRO) Sustain Its Surge? From a technical standpoint, CRO recently bounced from key support, demonstrating resilience in market structure. Resistance at \$0.112 presents an immediate hurdle. A breakout could push prices toward \$0.116, where further selling pressure may emerge. Conversely, failure to hold \$0.102 as support could trigger a decline toward \$0.098, exposing downside risks. The Relative Strength Index (RSI) currently sits at 58.26, with its moving average at 51.74. This positioning signals moderate bullish momentum. A continued rise above 60 could confirm an uptrend, while a drop below 50 might indicate weakening strength. The Chaikin Money Flow (CMF) indicator remains at -0.08, reflecting mild capital outflows. A return to positive territory could reinforce bullish momentum, signaling increased accumulation. If CMF continues to decline, it may indicate weakening demand, potentially limiting CRO's upside potential. Moving average analysis highlights a potential bullish crossover, with shorter-term moving averages beginning to trend upward. The price currently hovers near the 50-period moving average, an essential level for trend confirmation. A clean break above this moving average could accelerate CRO's rally, confirming a sustained bullish trend. If the 50-period moving average rejects further price increases, consolidation may follow before another breakout attempt. Shorter-term moving averages also suggest increasing bullish sentiment, as CRO's price structure is forming higher lows. If these levels hold, momentum may continue building, potentially leading to another leg higher. However, a downturn in moving averages would shift market structure toward a possible correction.

- VanEck announces newest ETF registration for a BNB-based product. - The firm has filed for several altcoin-based ETP products over the past few months. In the last 24 hours, the crypto community rejoiced in a brief recovery in the market. Bitcoin is currently docked at the \$84K level after testing a high of \$85,466. Following this the altcoin sector also recovered modestly, sparking hope among investors. Meanwhile, the ETF market is seeing increasing activity as we enter Q2 2025. Recently, prominent ETP issuer VanEck announced registering for a new ETF product. The firm has submitted filings for a BNB-registered ETF with the state of Delaware. Notably, the firm has been expanding its range of ETP products in the past few months with new altcoin ETF filings. Recently, in March, it filed for a spot Avalanche ETF with the SEC. With this filing, the firm becomes the first to register for a US-based BNB ETF. Additionally, the recent BNB product is its fifth filing with the State of Delaware. While issuing Bitcoin and Ether ETFs, VanEck has also registered for Solana and the abovementioned Avalanche ETF. What Other Issuers Accompany VanEck in the ETF Market Boom? Q1 2025 saw multiple ETF filings for various altcoins. Major altcoins such as Cardano, Solana, Litecoin, and SUI have drawn capital management firms' attention. In the past week, SUI showed upward movements as Canary Capital filed for an ETF. Moreover, memecoins such as DOGE also saw institutions' interest in an ETP product. Additionally, earlier regulatory processes for ETF approvals were excruciating, however, recent shifts hint at a change. Additionally, other issuers apart from VanEck include Grayscale, Franklin Templeton, and Bitwise. While these firms were existing players, the recent interest has also seen an influx of new capital management firms. For instance, Tuttle Capital began filing for memecoin ETFs in January recently. Highlighted Crypto News Today: USDC Issuer Circle Files for IPO After Recording Revenue Growth

What's the secret behind these internet-inspired tokens that have seen astronomical growth, turning early investors into millionaires practically overnight? From the iconic Dogecoin to the quirky Pepe Coin, meme coins have proven that they're much more than just a joke. But with so many options flooding the market, which ones are actually worth investing in for long-term success? Among the rising stars of meme coins, there's one in particular that's quickly grabbing attention: Troller Cat. Not only is it riding the wave of meme coin fever, but it's also offering unique advantages for those who get in early. With the ability to join its whitelist for exclusive access to its upcoming presale, Troller Cat is a coin to watch closely. Alongside other contenders like Sudeng, Official Melania, and Turbo, it's clear that some meme coins are poised for long-term success, and Troller Cat might just be the next one to explode. Keep reading as we dive into why these Top New Meme Coins

to Buy Today could be your ticket to huge returns.

- 1. Troller Cat (\$TCAT) Whitelist: Your Early Access to Big Profits** The first step to capitalizing on the incredible potential of Troller Cat is getting on the Troller Cat whitelist. By signing up for the whitelist, investors gain exclusive early access to the coin's presale. This is an opportunity that could yield high rewards, as Troller Cat is quickly becoming one of the top new meme coins to buy today. Analysts predict that this coin will not only capture the attention of meme coin enthusiasts but also attract investors seeking serious gains in the crypto space. Joining the Troller Cat whitelist now means that you'll be one of the first to access the token before it goes live to the masses. Early buyers often have the chance to make extraordinary profits, especially when they buy before widespread hype. It's rumored that Troller Cat will offer high staking rewards for early adopters, and with the potential for a Play-to-Earn Game Center in the works, this coin is set to become a deflationary asset—meaning the supply will decrease over time, creating greater demand. Don't miss out on the opportunity to get in on this top new meme coin to buy today and join the whitelist for Troller Cat.
- 2. Sudeng (\$HIPPO): A Meme Coin Gaining Momentum** Sudeng is one of the more recent meme coin entrants, but its rise in popularity has been swift. What makes Sudeng stand out is its commitment to creating a community-driven ecosystem. With a focus on building strong connections among its holders, Sudeng aims to differentiate itself from other meme coins by fostering an environment where users feel more connected to the project. Despite its relatively new entry, Sudeng has already gained attention from crypto influencers, which has led to a growing following. While the coin is still in its early stages, many analysts predict that Sudeng could be a major player in the meme coin market. If the community and engagement continue to grow at this pace, Sudeng could be a top new meme coin to buy today for those looking for the next big opportunity.
- 3. Official Melania (\$MELANIA): A Meme Coin with Political Appeal** The Official Melania meme coin is a perfect example of how meme coins are often tied to internet culture and public figures. Inspired by Melania Trump, this coin capitalizes on the political landscape and internet humor, making it highly attractive to those who are passionate about politics or just enjoy following trending cultural moments. What sets Official Melania apart is its ability to tap into a niche market, turning political figures into meme-worthy icons. The Official Melania coin has quickly garnered attention thanks to its connection to the high-profile Trump family. Given its ability to spark interest and discussions, Official Melania has the potential to maintain a loyal following and achieve long-term success, making it a top new meme coin to buy today for those looking to diversify their meme coin portfolio.
- 4. Official TRUMP (\$TRUMP) Meme Coin: Political Influence in Crypto Form** Much like the Official Melania coin, the Official TRUMP Meme Coin seeks to capitalize on the massive global interest surrounding former President Donald Trump. With political memes gaining traction online, this coin aims to cater to both the political and crypto communities. It's a fun, satirical way to engage with crypto, and its branding has garnered significant interest in the meme coin space. While some may view Official TRUMP Meme Coin as a purely political joke, its ability to capture the attention of a global audience is undeniable. As political memes continue to gain popularity, Official TRUMP Meme Coin is positioning itself as a contender in the market. If it can ride the wave of political memes and crypto enthusiasm, it could become a top new meme coin to buy today.
- 5. Turbo (\$TURBO): A Meme Coin for Speed Enthusiasts** If you're looking for a meme coin that's built for speed, Turbo might just be the one. With a focus on fast transactions and scalability, Turbo is positioning itself as a coin designed for those who value efficiency in the crypto space. Whether it's for trading or future developments, Turbo aims to offer a seamless experience for its users. Turbo is rapidly gaining attention due to its unique focus on low fees and high-speed transactions, both of which are essential for mainstream adoption in the future. This focus on technology and speed could give Turbo a leg up in the highly competitive meme coin market, making it a top new meme coin to buy today for anyone seeking both fun and practicality.
- 6. Popcat (\$POPCAT): A Meme Coin That's Always in the Spotlight** If there's one thing Popcat excels at, it's keeping the internet's attention. Inspired by the viral "Popcat" meme, this coin is all about fun and entertainment. Since its inception, Popcat has maintained a strong presence on social media, constantly engaging with users and making sure that the meme stays relevant. While Popcat may not have the same level of mainstream attention as Dogecoin, it's still managed to attract a dedicated fan base. For those looking to invest in a meme coin that's poised for growth, Popcat is a top new meme coin to buy today due to its viral nature and strong community involvement.
- 7. Mog Coin (\$MOG): A Hidden Gem with Strong Community Support** Mog Coin is a lesser-known meme coin that has been quietly gaining traction. With a unique concept and a strong emphasis on community development, Mog Coin is quickly becoming a favorite among those who believe in the power of decentralized finance (DeFi) and community-driven projects. While Mog Coin has yet to hit mainstream popularity, its growing support among niche investors suggests that it could see significant gains in the near future. This hidden gem has the potential to become a top new meme coin to buy today as its community continues to grow and develop.

**Conclusion:** Based on the latest research, the top new meme coins to buy today are Troller Cat, Sudeng, Official Melania, Official TRUMP Meme Coin, Turbo, Popcat, and Mog Coin. Each of these coins has unique features that make them stand out from the crowded meme coin market, but Troller Cat is quickly rising to the top as a top new meme coin to buy today due to its innovative features, including high staking rewards and a Play-to-Earn Game Center. Troller Cat offers one of the most promising opportunities for those looking to capitalize on the next big meme coin.

- Bullish ADA price prediction for 2025 is \$1.3564 to \$3.0711. - Cardano (ADA) price might reach \$5 soon. - Bearish ADA price prediction for 2025 is \$0.2410. In this Cardano (ADA) price prediction 2025, 2026-2030, we will analyze the price patterns of ADA by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency.

TABLE OF CONTENTS | INTRODUCTION | | CARDANO (ADA) PRICE PREDICTION 2025 | | | CARDANO (ADA) PRICE PREDICTION 2025, 2026-2030 | | CONCLUSION | | FAQ | Cardano (ADA) Current Market Status | Current Price | \$0.6735 | 24  Hour Price Change | 4.55% Up | | 24  Hour Trading Volume | \$759.48M | | Market Cap | \$23.77B | | Circulating Supply | 35.26B ADA | All  Time High | \$3.10 (On Sep 02, 2021) | | All  Time Low | \$0.01735 (On Oct 02, 2017) | What is Cardano (ADA) | TICKER | ADA | | BLOCKCHAIN | Cardano blockchain | | CATEGORY | Public blockchain platform | | LAUNCHED ON | September 2017 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Cardano (ADA) is the native token of the Cardano blockchain. This sustainable blockchain uses the Proof-of-Stake (PoS) consensus mechanism, Ouroboros. This third-generation blockchain initially existed as a layer-1 solution. Eventually, the layer-2 update, Hydra, was integrated into the existing network in late 2021. Cardano has been built as an upgraded version of Ethereums smart contract network. Moreover, it aims to scale the permissionless nature of the DeFi space and aid the mission of banking the unbanked. Cardano 24H Technicals Cardano (ADA) Price Prediction 2025 Cardano (ADA) ranks 9th on CoinMarketCap in terms of its market capitalization. The overview of the Cardano price prediction for 2025 is explained below with a daily time frame. In the above chart, Cardano (ADA) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. the exit often occurs at the fourth contact point on one of the horizontal channels lines. At the time of analysis, the price of Cardano (ADA) was recorded at \$0.6692. If the pattern trend continues, then the price of ADA might reach the resistance levels of \$1.2663 and \$6.3188. If the trend reverses, then the price of ADA may fall to the support levels of \$0.5435 and \$0.2389. Cardano (ADA) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Cardano (ADA) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Cardano (ADA) for 2025. | Resistance Level 1 | \$1.3564 | | Resistance Level 2 | \$3.0711 | | Support Level 1 | \$0.5144 | | Support Level 2 | \$0.2410 | Cardano (ADA) Price Prediction 2025  RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (ADA) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Cardano (ADA) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.7572 Price = \$0.6690 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 42.7940 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Assets trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Cardano (ADA) Price Prediction 2025  ADX, RVI In the below chart, we analyze the strength and volatility of Cardano (ADA) using the following technical analysis indicators  Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Cardano (ADA). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 6.9285 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 55.36 <50 = Low >50 = High | High volatility | Comparison of ADA with BTC, ETH Let us now compare the price movements of Cardano (ADA) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of ADA is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of ADA also increases or decreases respectively. Cardano (ADA) Price Prediction 2026, 2027  2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Cardano (ADA) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Cardano (ADA) Price Prediction 2026 | \$5.5 | \$0.2 | | Cardano (ADA) Price Prediction 2027 | \$6 | \$0.1 | | Cardano (ADA) Price Prediction 2028 | \$6.5 | \$0.09 | | Cardano (ADA) Price Prediction 2029 | \$7 | \$0.08 | | Cardano (ADA) Price Prediction 2030 | \$7.5 | \$0.07 | Conclusion If Cardano (ADA) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Cardano (ADA) price prediction for 2025 is \$3.0711. Comparatively, if unfavorable sentiment is triggered, the bearish Cardano (ADA) price prediction for 2025 is \$0.2410. If the market momentum and investors sentiment positively elevate, then Cardano (ADA) might hit \$5. Furthermore, with future upgrades and advancements in the Cardano ecosystem, ADA might surpass its current all-time high (ATH) of \$3.10 and mark its new ATH.

- The crypto market recovers ahead of Trump's Liberation Day tariff announcement. - Bitcoin reclaims its \$84K price level with a 2.41% rise in the last 24 hours. Bitcoin finally shows signs of recovery today by reclaiming its \$84K price level. It has been going on a downward trend for the past few days as tension around Trump's Liberation Day tariffs builds. The overall crypto market capitalization jumped 2.50% even though the crypto fear and greed index continues to indicate a fearful market. Bitcoin recorded a 2.47% daily price rise today. Other noteworthy cryptocurrencies like Ether, XRP, Solana, Dogecoin, and Cardano prices also witnessed considerable price surges today. This reflects the increasing investor confidence in the crypto market, followed by four consecutive days of a downtrend. As Bitcoin started making some gains today, tomorrow is crucial in deciding its next price movement. Tariff announcements initially caused fear and resulted in a market sell-off. However, today's gains tell a different story. Whether Trump's tariff announcements tomorrow will boost or shake the market is hard to predict for sure. The Crypto Market in a "Wait-and-See" Mode Ahead of Trump's Liberation Day Tariff Announcement Industry leaders and market experts are saying that the crypto market is in a "wait-and-see" mode ahead of Trump's Liberation Day tariff announcement. There is a mixed sentiment in the crypto community at present. It is difficult to predict whether the crypto market will boom or bust in the next couple of days. One thing is clear that Trump's decisions on tariffs will surely impact the market either way. The Guardian report estimated that Trump's reciprocal tariffs will eventually trigger a global trade war. Trump's main target countries are the European Union, South Korea, Brazil, India, and China. If the crypto market reacts positively, we might witness a V-shape recovery in Bitcoin's price, and it could go as high as its last week's peak of \$88K. On the other hand, if the market reacts adversely, Bitcoin might crash to the \$70K price level this time. We must wait a few more hours to see what's ahead for the crypto market. - Senator Tuberville plans to launch a bill to allow Americans to invest their retirement funds in cryptos. - The Trump administration backs crypto with reserves and policy support. U.S. Senator Tommy Tuberville has announced plans to introduce a bill that would allow Americans to invest their retirement savings in Bitcoin and other cryptocurrencies. The proposed legislation expands retirement planning possibilities because digital assets are gaining popularity throughout American regions. According to the Senator, the legislation moves forward through direct support from the administration for cryptocurrencies. Senator Tuberville asserts that President Donald Trump leads America with renewed leadership after the previous administration maintained restraint. America is the country of FREEDOM, but under Joe Biden, the federal government tried to control how Americans invest their money. "Coach Tommy Tuberville (@SenTuberville) March 31, 2025 President Trump is the Crypto President. That's why I am re-introducing the Financial Freedom Act to give AMERICANS the freedom to invest their pic.twitter.com/28T7ZiRfPK Federal agencies operating under Biden imposed restrictions on digital asset ownership by banks while focusing mainly on crypto-related fraud prevention. New legislative reform provides Americans with several different methods to control their long-term savings accounts. Social media users expressed various comments when Tuberville made this choice. Investors view this move as it gives them better investment choices because crypto markets often yield substantial profits. Elderly people worry that enabling retirement vehicles to invest in unstable assets like Dogecoin would endanger their retirement savings. However, digital assets receive recognition across the nation through this bill that balances diverse legislative opinions about their position within traditional financial systems. Legislators currently assess how much regular Americans should get access to cryptocurrency while attempting to incorporate these assets into traditional finance platforms, especially for retirement investments. Trump Administration Continues to Advance Crypto Policies When beginning his term as president this year Trump made it clear he supports cryptocurrency usage. Trump created the Strategic Bitcoin Reserve and Digital Asset Stockpile through executive order. Start-up funding for these reserves relies on digital assets recovered through present federal government seizures. The Bitcoin Reserve Bill in Oklahoma received a 77-15 vote approval making it the latest among 24 states to explore this approach. The investment firm VanEck determined that 247,000 BTC equaled a worth of \$23.7 billion based on present market values, and these funds could be achieved by 24 U.S. states. President Trump holds plans to approve stablecoins legislation before the August recess as his administration moves forward with a cryptocurrency-friendly financial system. - Bullish FORM price prediction for 2025 is \$2.6521 to \$3.1141. - Four (FORM) price might reach \$5 soon. - Bearish FORM price prediction for 2025 is \$1.8974. In this Four (FORM) price prediction 2025, 2026-2030, we will analyze the price patterns of FORM by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | FOUR (FORM) PRICE PREDICTION 2025 | | | FOUR (FORM) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Four (FORM) Current Market Status | Current Price | \$2.39 | 24 " Hour Price Change | 54.62% Up | | 24 " Hour Trading Volume | \$52.48M | | Market Cap | \$913.26M | | Circulating

Supply | 381.86M FORM | All Time High | \$2.62 (On March 25, 2025) | All Time Low | \$0.143 (On Feb 03, 2025) | What is Four (FORM)? | TICKER | FORM (Formerly BNX) | BLOCKCHAIN | BNB Chain | CATEGORY | GameFi | LAUNCHED ON | May 2021 | UTILITIES | Governance, Staking, Payments, Rewards, NFTs | Four (FORM) is the rebranded cryptocurrency that evolved from BinaryX (BNX), marking a significant step in the project's journey toward blockchain innovation. Four is a blockchain gaming platform that initially focused on decentralized derivatives trading before transitioning into GameFi. It powers several play-to-earn (P2E) games, including CyberDragon and CyberArena, which are built on the BNB Chain. FORM is the platform's native token, used for governance, in-game transactions, and staking rewards. Four offers a dual-token economy with in-game currencies and FORM, ensuring sustainability and long-term engagement. The project aims to create a decentralized gaming ecosystem by integrating NFTs and innovative game mechanics. In late 2023, Four underwent a token split to enhance accessibility and liquidity. The platform continues to evolve, with a focus on metaverse expansion and blockchain-based game development. Its strong community and partnerships make it a notable player in the GameFi sector. As GameFi gains momentum, Four positions itself as a leading force in merging gaming with decentralized finance (DeFi).

Four (FORM) 24H Technicals (Source: TradingView) Four (FORM) Price Prediction 2025 Four (FORM) ranks 68th on CoinMarketCap in terms of its market capitalization. The overview of the Four price predictions for 2025 is explained below with a daily time frame. FORM/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, Four (FORM) laid out an horizontal channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contact point on one of the horizontal channel's lines. At the time of analysis, the price of Four (FORM) was recorded at \$2.39. If the pattern trend continues, then the price of FORM might reach the resistance levels of \$2.5560 and \$3.0012. If the trend reverses, then the price of FORM may fall to the support of \$2.3512 and \$2.1663. Four (FORM) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Four (FORM) in 2025. FORM/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Four (FORM) for 2025.

Indicator	Purpose	Reading	Inference
Resistance Level 1		\$2.6521	
Resistance Level 2		\$3.1141	
Support Level 1		\$2.2115	
Support Level 2		\$1.8974
