

change. One of Trump's pivotal initiatives is the launch of World Liberty Financial, a decentralized finance (DeFi) platform designed to democratize financial services. Set to raise \$300 million through a new token sale, this venture emphasizes his commitment to integrating cryptocurrency into everyday financial transactions. By positioning himself as a pioneer in this emerging sector, Trump appeals to younger, tech-savvy voters eager for a leader who understands the nuances of modern finance. I am honored to endorse @realDonaldTrump for President! pic.twitter.com/nd295MQJWM " Thomas Massie for Congress (@MassieforKY) October 25, 2024 Moreover, Trump's campaign has gained significant traction with endorsements from influential figures like Elon Musk. Musk recently stated he could help cut U.S. government spending by \$2 trillion should Trump be re-elected. This declaration resonates with voters frustrated by soaring national debt, which currently exceeds \$32 trillion. Polling data reflects Trump's increasing popularity. According to Polymarket, a decentralized predictions platform, Trump holds a 66.6% probability of winning the presidency, compared to Harris's 33.4%. This indicates a growing confidence among bettors and highlights Trump's appeal, particularly in battleground states. While traditional polls may still show Harris with slight advantages, the betting odds suggest a different narrative—one where Trump's message resonates more effectively with the electorate. Donald Trump's Economic Revival Trump's focus on economic revitalization and job creation is particularly crucial. His promises to bring manufacturing jobs back to the U.S. resonate with working-class voters who have felt the impacts of globalization. Recent surveys reveal that 70% of voters are concerned about job losses to overseas competitors. By advocating for American industry, Trump captures the sentiment of those who feel neglected by current policies. In contrast, Harris's administration has faced criticism for its handling of inflation and economic recovery. With inflation rates remaining high, many Americans are feeling the pinch in their daily lives. Consequently, some voters may view Trump's aggressive economic policies as a solution to their financial woes, while Harris's approach appears less appealing to those prioritizing immediate economic stability. The issue of cryptocurrency also plays a significant role in shaping public opinion. A recent study indicates that 75% of Americans believe cryptocurrencies can boost the economy. Trump's proactive stance on crypto is vital for appealing to younger voters and those frustrated with traditional banking systems. By emphasizing innovation and deregulation, Trump positions himself as a leader ready to harness the potential of digital currencies. Additionally, Trump's ability to galvanize crowds at campaign events contrasts sharply with Harris's lower-profile approach. Recent rallies have drawn thousands of supporters, showcasing a united front eager for change. This enthusiasm is crucial as election day approaches, as energized voters often translate into higher turnout. Trump's assertive foreign policy also appeals to many voters. His stance on national security, which prioritizes American interests, resonates strongly in an era of geopolitical uncertainty. While Harris advocates for a more diplomatic approach, many Americans favor Trump's tough stance on immigration and trade, viewing it as essential for safeguarding U.S. jobs and security. As the 2024 election draws near, Donald Trump's commitment to cryptocurrency, fiscal responsibility, and economic revitalization positions him as a strong contender against Kamala Harris. His innovative policies and robust campaign strategies resonate with voters seeking meaningful change. As the electoral landscape continues to evolve, many Americans may find themselves leaning toward Trump's vision for the future, especially in the face of ongoing economic challenges and concerns about government spending. The upcoming weeks will be crucial as both candidates ramp up their efforts to capture the electorate's support leading into November. Highlighted Crypto News Today Huge Solana (SOL) Rally Possible in 2025 According to This Analyst but Is it Realistic?

As popular cryptocurrencies like Dogecoin and Shiba Inu lose momentum, a new player steps into the spotlight. Cybro, focused on real-world applications, is drawing attention from investors and enthusiasts. What sets it apart from the fading stars, and could it be the cryptocurrency with lasting power? CYBRO Presale Exceeds \$3 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Dogecoin Shows Upward Potential Amid Recent Price Movements Dogecoin is currently trading between \$0.12 and \$0.16, showing signs of a steady climb. Over the past month, its price has increased by nearly 29%, indicating bullish momentum. The coin is approaching its nearest resistance level at \$0.17, and if it breaks through, it could target the next resistance at \$0.21. The Relative Strength Index is around 53, suggesting the market is balanced. Both the 10-day and 100-day Simple Moving Averages are at \$0.14, pointing to stability. However, traders should watch the support level at \$0.09, as a drop below could signal a reversal. Overall, Dogecoin shows potential for further growth in the near term. Shiba Inu (SHIB) Shows Upward Momentum with Potential for 15% Gain Shiba Inu is trading between \$0.00001774 and \$0.00001996. Over the past month, the price has risen by 22.64%,

showing upward momentum. The nearest resistance level is at \$0.00002087, and surpassing it could lead to \$0.00002309, a potential gain of around 15%. The Relative Strength Index is 52.44, indicating a neutral market. The 10-day Simple Moving Average is below the current price, while the 100-day average is close to current levels. However, in the last week, the price has decreased by 4.36%. If the price falls, the nearest support is at \$0.00001643, which would be a decline of approximately 17%.

**Conclusion** As the market evolves, coins like DOGE and SHIB show diminishing potential in the short term. In contrast, CYBRO emerges as a powerful option for investors. By leveraging AI-powered yield aggregation on the Blast blockchain, CYBRO offers unmatched opportunities to maximize earnings. Its features include generous staking rewards, exclusive airdrops, and cashback on purchases. With seamless deposits and withdrawals, CYBRO provides a superior user experience. The project's commitment to transparency, compliance, and quality sets it apart, attracting significant interest from crypto whales and influencers. CYBRO stands poised to make a significant impact during the current bullish phase. - Site: <https://cybro.io> - Twitter: [https://twitter.com/Cybro\\_io](https://twitter.com/Cybro_io) - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: [https://t.me/cybro\\_io](https://t.me/cybro_io) Disclaimer: TheNewsCrypto does not endorse any content on this page. - Among the top in the meme coin market, market capitalization of Dogecoin offers stability. - SHIB appeals to people looking for a high-potential meme coin with developing usefulness. From simple internet jokes to serious assets with great investor interest, meme coins have swept the crypto scene. Three outstanding meme coins worth looking at 2024 have shown encouraging development and community support. Based on current statistics and trends, the top meme coins are closely examined here. 1. Dogecoin (DOGE) Originally one of the most popular assets in this category, Dogecoin pioneered the meme coin space. DOGE's devoted community, persistent social media buzz, and frequent references from powerful people including Billionaire Elon Musk's help to keep it appealing in 2024. Low transaction fees and fast processing times of Dogecoin help it to remain relevant for daily, small crypto transactions. Among the top in the meme coin market, market capitalization of Dogecoin offers stability. Significant online following and active user involvement make it resilient, displaying significant community support. For those wishing to invest in established meme coins, Dogecoin's gradual adoption by businesses and great presence in pop culture maintain it an appealing choice. 2. Shiba Inu (SHIB) Emerging as a rival to Dogecoin, Shiba Inu drew a sizable following drawn by its unique tokenomics and expanding ecosystem. Projects like ShibaSwap (a decentralized exchange) and ongoing Shiba Inu metaverse development have elevated SHIB beyond mere a meme. Its "burn" approach to lower token supply demonstrates a dedication to raise its value, so it appeals for 2024. ShibaSwap and its forthcoming metaverse provide use cases outside of trading, therefore expanding the usefulness potential. The burning process encourages scarcity, therefore increasing its worth. Strong retail support together with fresh ideas maintains SHIB in front of audiences. Shiba Inu appeals to people looking for a high-potential meme coin with developing usefulness as it is well-positioned for expansion in 2024 and wants to boost interaction with Web3 projects. 3. Pepe (PEPE) Based on the internet-famous "Pepe the Frog" meme, Pepe has become very popular as a prominent meme coin with a sizable social media following. Pepe has rapidly grown a sizable community, despite being younger than DOGE and SHIB. Its propensity to go viral and its playful branding drew in investors, which has resulted in amazing growth and trading volume. PEPE's recent expansion shows great market interest as shown by a fast increase in volume and adoption. Strong social media presence results from great community support on sites like Twitter and Reddit driving awareness. Using meme culture helps PEPE remain relevant and sought after. Pepe has great potential for exponential expansion if it keeps drawing social media attention given low entry price and great online engagement. High-risk, high-reward investors seeking for a younger meme coin with viral appeal would find this coin perfect. **Conclusion** Even though meme coins are very volatile, their community-driven nature and viral appeal make them unique assets on the crypto market. Among meme coins with strong communities, expansion plans, and the possibility for large returns in 2024 are Dogecoin, Shiba Inu, and Pepe. Highlighted Crypto News Today: Huge Solana (SOL) Rally Possible in 2025 According to This Analyst but Is it Realistic?

- In August 2020, Michael Saylor's MicroStrategy made its first Bitcoin purchase. - MicroStrategy stock has hit a 25-year high of \$236. The co-founder of MicroStrategy, Michael Saylor has transformed the firm's financial approach by making Bitcoin at the core of its asset strategy. Saylor turned to Bitcoin, describing it as the "digital gold." In August 2020, MicroStrategy made its first Bitcoin purchase, acquiring 21,454 Bitcoin for \$250 million, citing the potential of Bitcoin as a hedge against inflation and a promising store of value. It is crucial to note that by September 2024, MicroStrategy had become one of the largest corporate holders of Bitcoin with 244,800 Bitcoin. This resulted in a total investment worth nearly \$9.45 billion. Besides, Saylor predicted that Bitcoin's value could reach \$13 million per coin by 2045 if it captures 7% of global financial capital. On the other hand, by using traditional financial systems like the stock market, Michael Saylor made the asset more accessible. He's encouraging the public to buy stocks of companies that hold Bitcoin, like MicroStrategy. His strategy of integrating Bitcoin into regulated markets could make it harder for governments to impose restrictive regulations. MicroStrategy Hits Another High Recently, Michael Saylor's MicroStrategy stock (MSTR) hit a 25-year high of approximately \$236, surging 7%. It reflects a stock rally specifically driven by the BTC holdings strategy approach. The firm stood with a current market cap of \$47 billion, which outperformed others in the S&P 500 index and outpaced Microsoft's growth since 1999. On the other hand, Saylor's vision involves the use of debt to buy Bitcoin as it is a hedge against inflation. His vision includes leveraging debt and equity to raise capital at low interest rates for investing in Bitcoins. It could make MicroStrategy the first

trillion-dollar bank of Bitcoin. Michael Saylor mentioned that Bitcoin is the most valuable asset in the world and the endgame is to be the leading Bitcoin bank. At the time of writing, the largest cryptocurrency in the market is trading at \$68,594, gaining over 2.30%. The daily trading volume of the asset has soared by 50% to \$22.57 billion, as per CMC data. Notably, BTC is only 6% away from its all-time high price record at \$73,750. Highlighted Crypto News Floki, Shiba Inu, and Pepe Will Flip Dogecoin in Upcoming Bull Run

- Particularly in the DeFi and NFT domains, Solana has rapidly become a favorite in the US. - Cardano's development has been slower but very deliberate, appealing to Americans. Investors all over the world have been enthralled by the crypto market; especially in the United States, the excitement surrounding altcoins is still running strong. These are the top five cryptocurrencies that American investors really value for their innovative use cases, robust communities, and growth potential. Ethereum (ETH) Still the king of altcoins, Ethereum provides more than just a digital currency. Non-fungible tokens (NFTs) and decentralized finance (DeFi), both of which have become quite popular in the United States, are built on its innovative smart contract features. American investors are hopeful about Ethereum's long-term worth because of its large developer ecosystem and forthcoming improvements to increase scalability and lower energy usage. Decentralized applications that appeal to the U.S trend for financial independence and innovation find support in DeFi and NFT. Cardano (ADA) Renowned for its research-driven development, Cardano has drawn American capital focused on long-term sustainability and stability. Cardano's development has been slower but very deliberate, appealing to people who give security and transparency first priority unlike many cryptocurrencies that started with a "move fast" mentality. American environmental advocates find resonance with Cardano's eco-conscious proof-of-stake (PoS). Strong governance structure and consistent upgrades together with a well-organized road map appeal to those who respect planning and accountability. Solana (SOL) Particularly in the DeFi and NFT domains, Solana has rapidly become a favorite among U.S. investors thanks in great part to its cheap costs and fast transactions. Its capacity to manage thousands of transactions per second sets it apart from many other networks and attracts tech-savvy Americans who value quick and reasonably priced solutions. Solana's fast trading and cheap transaction costs made possible by its throughput appeal to American based traders. Popularizing U.S creators and investors with a variety of choices for purchasing and selling digital assets, Solana's NFT market has become very active. Polkadot (DOT) American investors that see a consolidated blockchain future have taken an interest in Polkadot's unique approach to interoperability—connecting several blockchains. Its multi-chain technology lets many blockchain initiatives interact, resulting in ideas appealing to investors looking forward. Interoperability lets many blockchains cooperate in line with the drive for cross-platform solutions, especially in the U.S. IT sector. Dogecoin (DOGE) Originally created as a meme, Dogecoin has evolved into a treasured asset with a sizable following in the United States due in part to its humorous nature and celebrity sponsorships—especially from Elon Musk. DOGE has become among the most easily available and well-known cryptocurrencies in the United States thanks in great part to its welcoming community and strong social media presence. Moreover, it is popular among Americans just beginning with cryptocurrencies. Dogecoin's active, encouraging community makes it accessible for newbies. Regular sponsorships from well-known personalities and extensive media coverage help to maintain Dogecoin in the public eye and attract fresh U.S-based aficionados. Conclusion As diverse as the altcoins themselves is the American crypto scene. From Ethereum's leadership in DeFi to Solana's emphasis on scalability, each of these cryptocurrencies has special qualities that fit U.S investor objectives in innovation, efficiency, and sustainability. These altcoins are probably going to remain top picks for Americans trying to diversify their crypto investments as the market evolves. Highlighted Crypto News Today: Crypto Traders' Top 3 Daily Trading Altcoins: Bitcoin, Solana, and SUI

- Memecoin MOG Coin rose to its 2-month high but failed to retest the key resistance. - The memecoin market surged 13% to hit \$59.31 billion. The October cycle was indeed a not-so-bearish phase for the meme players. Notably, the current cap of the overall memecoin market jumped 13% from \$52.48 billion to form this 4-month peak at \$59.31 billion. This upswing was revived following the recent listings of emerging memecoins on Binance, the largest crypto exchange. Multiple memecoins recorded bullish rallies spurred by news of their Binance listings. In contrast, despite MOG being traded on prominent CEXs, its community feels let down that MOG Coin isn't listed on Binance yet. Let's analyze how this cat-themed memecoin is currently performing and predict its potential trajectory in the market. Analysis of MOG Coin's 24H Price Outlook Over the last 24 hours, MOG Coin recorded a decline of 2.77%, hitting a low of \$0.000001656. Amid this decline, the memecoin's daily trading volume noted a surge of 50.72%. The 4-hour price chart of MOG reflects bearish patterns through its key indicators. Currently, the price of the cat-themed memecoin hovers below two moving averages (MA), the 9-day MA [\$0.000001749] and the 21-day MA [\$0.000001787]. Moreover, the following chart shows a bearish crossover, where the 9MA dips below the 21MA. Meanwhile, MOG is closer to the oversold zone, with its relative strength index (RSI) at 42.17. At the time of analysis, MOG Coin (MOG) traded at \$0.000001728 with a market cap of \$674.52 million. MOG Coin Price Prediction 2024 The cat-themed memecoin recorded a 4854% surge over the past year — from \$0.0000004632 to \$0.000002295. In 2024, MOG reached two notable price peaks — \$0.000002487 and \$0.000002300. Looking at the following price chart, you can see the formation of a rounding bottom pattern as price action had a curved, bottoming structure from July through early October. Significantly, MOG signaled a potential bullish trend after laying a breakout in mid-October. However, the rounding bottom's breakout turned out to be a false breakout, as the price failed to retest the resistance. Later, it began falling back into the bottoming range. If the bearish cues gain the upper hand, MOG Coin might plunge to two critical support levels \$0.000001250 and \$0.000000951. Further negative sentiment could push the memecoin to the September bottom — \$0.000000695. On the flip side, if the memecoin experiences a bullish price correction, it might rally and test key resistances such as \$0.000001999 and \$0.000002206. Also, a strengthened

upward momentum could push MOG to claim a new all-time high (ATH) at \$0.000002541. Disclaimer: The opinion expressed in this article is solely the author's. The holy grail of investors is to find the next gem before it blows up in value. Comparing Rexas Finance (RXS) to Fantom's trajectory before the historic surge in 2021 is a revelation. As Fantom (FTM) did with the DeFi world through its ingenious solutions, Rexas Finance plans to disrupt the asset management market with real-world assets (RWA), and tokenization. Here are 3 excellent reasons why RXS can be set up for a big breakout. Revolutionary Real-World Asset Tokenization Platform The crypto market tends to shift the focus more and more on practical applications and Rexas Finance is perfectly placed to benefit from it. Fantom has helped grow DeFi towards addressing real-world problems, and Rexas too is modernizing traditional asset management through blockchain. What separates Rexas is its all-in-one asset tokenization. However, most platforms know how to tokenize specific asset classes, whereas Rexas has developed a universal framework to handle real estate to intellectual property. Fantom's versatility is just how it began in the early days, distinguishing itself by way of better tech and flexibility. With its ability to create fractional ownership and enable 24/7 trading, Rexas Finance democratizes access to high-value assets in a similar way to Fantom in the DeFi space by facilitating fast and cheap transactions. Strong Presale Performance and Market Validation The presale performance of RXS is one of the most bullish indicators. The market itself is clearly validating the project's potential with over \$4.2 million raised, more than 81% of tokens sold, and more. It's a bit reminiscent of Fantom's early momentum before its monster price rise. By driving the price up through the presale stages, from \$0.060 toward the price of the next stage \$0.070 the natural upward pressure of the token's value is created. A well-stereotyped token distribution structure sets the foundation for a conducive environment that welcomes sustainable growth, just as Fantom's carefully deployed development enabled its price to run wild. Key metrics worth noting: - Current price: \$0.060 - Next stage price: \$0.070 - Total raised: Over \$4.2 million - Token sale completion: 81.45% Perfect Market Timing and Sector Growth Rexas Finance couldn't be at a better time. Leading financial analysts say the real world asset (RWA) tokenization market will grow to \$16.1 trillion by 2030. Due to the current crypto market cycle showing signs of a recovery, and the massive market potential this presents, this is the perfect storm for explosive growth. Rexas is already positioned to benefit from the RWA tokenization trend that is so much in vogue now, and like Fantom's 2021 surge, it too occurred at the tail end of the DeFi boom. That means the project launches at a time when there is institutional interest in blockchain-based and managed asset management solutions, which could lead to another explosion of historical Fantom proportions. Comparative Analysis: Rexas vs. Fantom To more clearly understand the possibility of Rexas Finance, looking at the path that Fantom (FTM) took can be quite educational. Fantom was centered on decentralized finance and Rexas Finance focuses on real-world asset tokenization. Rexas Finance is currently priced below \$0.10 while Fantom went from \$0.016 to over \$3.47. Just like Fantom, the presale of Rexas has already raised over \$4.2 million and gained early investor backing. The real-world asset market is large and is expected to be worth \$16 trillion, while Fantom became a beneficiary of the DeFi boom. Rexas utilizes a universal tokenization framework in terms of tech, whilst Fantom's efforts ring with speed in transactions. It also compares how both projects have critical similarities that could generate a huge value appreciation. Conclusion: A Rare Opportunity in the Making It is a rare opportunity to pick up early in this sub \$0.10 entry point. As the presale wraps up and more and more individuals seek returns like the ones seen in Fantom 2021, the catalog of the RWA tokenization market is coming into play. - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Smart investors are looking for the next great prospects as the bitcoin market recovers and veers in new directions. Three particularly interesting contenders among the coins likely to show a notable increase by early 2025 are Rexas Finance (RXS), Dogecoin (DOGE), and Pepe Coin (PEPE). Different driving forces support each of these currencies, offering investors several options to profit from the next possible bull run. Rexas Finance (RXS) Rexas Finance (RXS) has attracted a lot of interest for its innovative strategy of tokenizing real-world assets (RWA), comprising real estate, artwork, and commodities. Rexas Finance wants to democratize access to usually high-entry-barrier markets by using blockchain technology. The platform allows investors to possess fractional shares of valuable assets, therefore upsetting the traditional scene of asset management. Aimed to bring real-world assets (RWAs) into the blockchain, Rexas Finance is a new platform. Rexas Finance democratizes access to investment prospects traditionally beyond reach for many by tokenizing tangible and intangible assets including real estate, commodities, and even fine art. Fractional ownership is made possible via the tokenization process, which turns asset ownership rights into digital tokens traded on the blockchain, therefore improving liquidity and providing an open means of asset management. Rexas Finance distinguishes itself for several factors. To expedite asset tokenizing, it combines modern technologies such as blockchain, smart contracts, artificial intelligence, and distributed finance (DeFi). The platform provides easy tools for token production and maintenance, including the Rexas QuickMint Bot, which streamlines Integrated with well-known messaging platforms like Telegram and Discord; this bot lets users rapidly create tokens and handle them without any technical knowledge. With over \$4 million thus far and more than 86 million tokens sold in its first three phases, the presale has been a tremendous success. Currently in progress is the fourth stage; RXS tokens cost \$0.06. From \$0.03 in the first stage, early purchasers have seen a token price rise indicating great investor demand and momentum. Rexas Finance is more easily reachable to a larger audience since its placement on CoinMarketCap (CMC) adds to its legitimacy and visibility. There is a

great possibility for a significant price increase as RXS gets ready for its ultimate listing on both centralized and distributed markets. With a projected listing price of \$0.20, the present presale price of \$0.06 seems to be somewhat below. The demand for RXS is probably going to rise as more assets are tokenized, therefore perhaps driving prices upwards. Rexas Finance offers a good bet for significant returns by early 2025 for investors wishing to have exposure to the expanding realm of tokenized real-world assets. Dogecoin (DOGE) Originally a joke coin, Dogecoin (DOGE) has become somewhat well-known in the crypto industry largely because of its community-driven character and well-publicized sponsorships—most memorably from Elon Musk. With a market valuation of more than \$15.9 billion, Dogecoin has far outperformed forecasts multiple times, especially in bull market cycles when meme currencies often find appeal. Market analysts predict a fresh flood of money into the crypto field. With its past of riding Bitcoin's coattails, Dogecoin is positioned to gain greatly from this trend. Experts have estimated that from its present value, Dogecoin might rise to \$2.1 by 2025—a significant increase. This aim would suggest a market cap of more than \$320 billion, so DOGE would be among the most valuable altcoins available. Dogecoin appeals because of its simplicity and strong community support, which usually translates into higher trading volumes in a bullish market. Furthermore, the approaching halving of Bitcoin could have a spill-over effect whereby other well-known cryptocurrencies, such as Dogecoin, get additional attention and funding. Should these variables line favorably, DOGE could indeed reach its lofty pricing goal, therefore benefiting long-term holders with significant returns. Pepe Coin (PEPE) Originally introduced as a light-hearted and sarcastic bitcoin, Pepe Coin (PEPE) has rapidly gained prominence in the memecoin market thanks to a significant 1242.2% annual-to-date rise in value. Its popularity stems from the Pepe meme's broad cultural acceptance as well as the market's inclination for high-risk, high-reward assets during upward movements. Pepe Coin, trading above notable support levels, has lately gained 8.56%; its price today is \$0.057847. Reaching \$769.32 million, a recent increase in trading volumes by 53.64% points to a rise in investor interest as traders search for the next major meme currency prospect. Based on analysts' bullish trend, Pepe Coin's price might rise by thirty percent to \$0.000010 by the end of 2024. Memecoins appeal because they can produce quick and significant gains, particularly in market fluctuations driven by things like reduced interest rates and more liquidity. Meme coins like PEPE should draw speculative money once the larger Bitcoin market gets under control. Moreover, the increasing prominence of "whale" activity—big transactions above \$100,000—suggests that major players are collecting PEPE, maybe preparing the ground for more price rises. Which Token Has the Most Potential Overall? Though all three cryptocurrencies—Rexas Finance, Dogecoin, and Pepe Coin—offer convincing arguments for possible 10x profits by early 2025—they appeal to distinct kinds of investors. Particularly in the field of actual asset tokenization, Rexas Finance (RXS) is perfect for individuals wishing to invest in a project with robust foundations. Its platform-oriented value proposition and effective presale stages appeal for long-term development. Dogecoin (DOGE) presents a mix of great visibility, strong community support, and past success riding on Bitcoin-led bull runs. Among its contemporaries, Dogecoin could be the safer choice for people who want a memecoin with a track record. Investors looking for the excitement of quick returns find attraction in Pepe Coin (PEPE). Though Pepe's recent performance and expanding fanbase point to another spectacular surge, the memecoin market is naturally erratic. Every token has a different story and growth driver, hence diversification across several assets is a possibly profitable approach for investors hoping for maximum profits by early 2025. Although the road to 10x profits has hazards, these three tokens are positioned to ride the next wave of expansion in the crypto market. LBank, leading global cryptocurrency exchange, has officially launched its "Spooky Season" Halloween Campaign, running from October 22 to November 3, 2024. With a total prize pool of \$7,000 USDT, this festive event invites crypto enthusiasts to engage in a series of activities that celebrate the Halloween spirit while promoting visibility for participating projects. Participants can join the excitement through LBank and the various communities of collaborating projects, including 4CHAN, Turbo, Neiro On Ethereum, Xi Jinpeng, BlackFort BXN, Bad Idea AI, and MetaMUI, across Twitter and Telegram. The campaign's centerpiece is a series of exclusive Twitter Spaces, where each meme project hosts its own event. Participants can join these lively discussions with project leaders, share insights, and win prizes. Each session will offer \$200 USDT in rewards, providing opportunities for listeners to earn while connecting with these projects. Event Details: Join the Halloween festivities with a variety of thrilling activities: - Exclusive Twitter Spaces: Participate in a series of Twitter Spaces hosted by each meme project, where you can engage in lively discussions with project leaders. Each session offers \$200 USDT in prizes, creating a unique opportunity for participants to earn while learning about the projects directly. - Quick Giveaways: Throughout the campaign, there will be seven Quick Giveaways, each offering \$150 USDT. These flash events are designed to reward active participants and encourage community involvement. - Halloween Special Spooky Airdrop: Get ready for six spooktacular Galxe Airdrop events and even more chances to win big! LBank will team up with six meme projects to host a special Halloween-themed joint airdrop, featuring a chilling total prize pool of \$2400. Complete simple tasks to secure your share of these exciting rewards. By uniting multiple meme projects, this Halloween campaign fosters deeper connections within crypto space, while offering participants a chance to enjoy festive rewards and engaging conversations. About the 7 Collaborating Projects - 4CHAN: This meme token is inspired by the infamous 4chan internet forum, known for its raw, chaotic culture. The project embraces the spirit of decentralization and online freedom, with a strong community backing and engagement. - Turbo: Turbo Coin (TURBO) is an innovative meme coin characterized by its unique frog mascot. The project began as

an experiment initiated by its founder, who challenged GPT-4 to create a meme coin with just a \$69 budget. TURBO features a total supply of 69 billion tokens, which are distributed fairly without any transaction taxes. The project's commitment to transparency and simplicity, including the transfer of the contract, distinguishes it from other cryptocurrencies. - Neuro on Ethereum: \$NEIRO is a newly launched cryptocurrency with a total supply of 1 billion tokens, designed to foster community engagement through a zero buy/sell tax policy and no allocation of tokens to the development team. This approach emphasizes transparency and decentralization, positioning it as a significant opportunity within the crypto market. Neuro draws parallels to the rise of Dogecoin, capitalizing on its community-driven ethos and potential for meme-inspired growth. - Xi Jinping: A meme cryptocurrency NOT AFFILIATED WITH ANY POLITICAL ENTITIES, aimed at transforming finance and empowering individuals to invest in their future. - BlackFort BNX: BlackFort Exchange Network (BNX) is a Layer 1 EVM-compatible blockchain that utilizes the Proof-of-Staked-Authority (POSA) consensus algorithm. It offers a comprehensive ecosystem with various utilities, including a multichain wallet, payment solutions, and decentralized exchanges. - Bad Idea AI: Bad Idea AI (\$BAD) is a decentralized project that fuses Blockchain, AI, and DAOs. It explores the potential of AI as both a benefit and a risk to humanity, engaging the community in decision-making. With an emphasis on collaboration, \$BAD aims to ensure that AI technology is used for the greater good. The token supply is verified by data aggregators, ensuring transparency and security in its management. - MetaMUI: MetaMUI is an innovative identity-based blockchain developed by Sovereign Wallet, designed to create a more inclusive financial ecosystem. It enables digitization of essential infrastructures like identity and transactions, allowing for self-sovereign finance without traditional paper reliance. By supporting privacy-preserving digital currencies and balancing decentralization with efficiency, MetaMUI addresses the limitations of previous blockchain systems, paving the way for a more equitable financial future. Embracing the Meme Revolution Meme tokens have gained significant momentum in the cryptocurrency market, fostering creativity, community engagement, and rapid market growth. Their playful nature attracts a diverse range of participants eager to explore new opportunities. LBank is leading this movement by enhancing its platform to support the meme token ecosystem. Initiatives like the Halloween Campaign celebrate community spirit and encourage participation, paving the way for exciting new projects and partnerships. Through initiatives like the "Spooky Season" campaign, LBank continues to support the growth of this dynamic space. By partnering with meme projects such as 4CHAN, Turbo, Neuro On Ethereum, Xi Jinping, BlackFort BNX, Bad Idea AI, and MetaMUI, LBank demonstrates its commitment to driving innovation and community engagement within the meme sector. This proactive approach facilitates a vibrant exchange of ideas, creating valuable connections among users. As the meme token phenomenon evolves, LBank is positioned to be a key player, empowering its community to ride the wave of this dynamic trend. About LBank Founded in 2015, LBank is a leading global cryptocurrency exchange, serving over 12 million registered users in more than 210 countries and regions. With daily trading volumes surpassing \$20 billion and support for over 800 cryptocurrencies, LBank is committed to delivering a comprehensive and user-friendly trading experience. Through innovative trading solutions, LBank has helped users achieve average returns of over 130% on newly listed assets. As a pioneer in the Meme coin market, LBank has listed over 240 mainstream Meme coins and 40 Meme gems, with several achieving gains of over 500%. As the industry leader in first-time Meme coin listings, LBank has become the go-to platform for Meme coin investors. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Major cryptocurrencies, including BTC and ETH, saw significant drops, impacting sentiment in the crypto market. - The U.S. federal government is investigating Tether, a major stablecoin issuer of USDT. The global crypto markets experienced a turbulent day as negative sentiments swept through the trading floor. Bitcoin (BTC) initially dipped to around \$65,500 but later rebounded slightly to about \$67,085. In addition to Bitcoin's struggles, Ethereum (ETH) fell to approximately \$2,471 from \$2,563, marking a decline of over 7%. Solana (SOL) also faced challenges, dropping nearly 10% to around \$160, while XRP saw a decrease of about 7% to settle at \$0.514. The overall cryptocurrency market capitalization took a hit, decreasing by 2.48% to reach \$2.28 trillion. Interestingly, despite the downturn, total market volume surged by 43%, now standing at \$105.01 billion, indicating a flurry of trading activity despite the falling prices. A key reason for the market's tense atmosphere is the ongoing investigation into Tether, a prominent stablecoins issuer of USDT. The Wall Street Journal reported on October 25 that U.S. authorities are scrutinizing Tether, causing concern among investors. However, Tether's CEO, Paolo Ardoio, dismissed the news as "old noise," but the uncertainty has undoubtedly rattled the market. Mixed Performance in Memecoins and Altcoins In the memecoin arena, Dogecoin (DOGE) and Shiba Inu (SHIB) also faced declines, with DOGE falling by 4.59% and SHIB by 6.17%. Other popular tokens like PEPE, WIF, and BONK witnessed losses of 8% to 12%. On a more positive note, Goatseus Maximus (GOAT) stood out as a top gainer, surging by 30% to trade at \$0.8551. In contrast, Notcoin (NOT) faced an 11% drop, along with Celestia (TIA), which fell by 10% to \$5.37. Additionally, the cryptocurrency markets are highly sensitive to geopolitical risks. Israel's recent attack on Iran has contributed to a decline in prices. Investors often react swiftly to such events, leading to heightened volatility in digital asset prices. Highlighted Crypto News Today Emory University Invests Over \$15M in Grayscale Bitcoin Mini ETF

- Analyst FOUR predicts SHIB to reach \$0.00003260 sooner than expected. - SHIB up 30% in past month, approaching \$0.00002169 resistance. - Meme coin sector flourishing despite positive utility token news. Shiba Inu (SHIB) finds itself at the center of bullish speculation as market analysts predict an imminent surge in its value. The 13th-largest cryptocurrency by market capitalization has demonstrated impressive performance, recording a 30% increase over the past month, outpaced only by Dogecoin among

the top 15 crypto assets. Pseudonymous analyst FOUR has sparked discussion with a bold prediction, suggesting that SHIB will reach \$0.00003260 faster than most market participants anticipate. This forecast implies a potential 71% uptick from current price levels, underscoring the analyst's bullish outlook on Shiba Inu's near-term prospects. FOUR's analysis draws on SHIB's 1-week chart, which the analyst interprets as indicating sufficient bullish momentum to overcome the looming resistance at \$0.00002169 and propel towards the \$0.00003260 target. The recent weekly close, marked by a healthy bullish candle near this significant resistance level, adds weight to this optimistic projection. What's next for Shiba Inu? The analyst also points to the 'super' bullish meme coin cycle as a catalyst for Shiba Inu's potential surge. This sentiment is echoed by IBC founder Mario Nawfal, who highlights SHIB's impressive performance within the context of the broader meme coin sector's upward trajectory. The flourishing meme coin sector stands in contrast to the performance of utility tokens, even in the face of positive developments such as the SEC's approval of options trading for Bitcoin spot ETFs. Despite Bitcoin's brief touch of \$69,000 following this news, meme coins continue to attract attention and capital inflows.

- Elon Musk acknowledged XRP for the first time. - Musk's opinion is not an endorsement or a lack of endorsement for XRP. Elon Musk has made headlines in the crypto industry by mentioning particular crypto assets. Recently, he has mentioned XRP, making an impact across the market. Notably, Musk has been actively campaigning for Donald Trump in recent weeks and discussed various topics such as the economy, politics, and cryptocurrency. Musk mentioned XRP during a discussion about digital assets and blockchain technology. Elon was asked to comment on whether he thinks XRP could be integrated into the global financial system in the future. He responded without specifying XRP that cryptocurrency is an interesting and probably valuable bulwark against centralized control. However, Elon Musk clarified that his comment does not imply support or opposition towards XRP. He emphasized that cryptocurrencies like XRP promote individual freedom. Musk's interference in the crypto industry has previously led to significant price movements. While Elon Musk did not endorse or criticize XRP, the indirect mention has fueled optimism among XRP investors amid the ongoing regulatory challenges with the Ripple Labs and SEC. On the other side, widespread speculation about whether his mention of XRP could boost its price and adoption is a concern among the community. Notably, over the last 24 hours, XRP has gained over 2.50%, and trades at \$0.5529, with its daily trading volume increasing by 81% to \$1 billion, as per CMC data. Furthermore, Santiment reveals that the number of active wallets on the XRP Ledger has increased, reaching 35,799 unique wallets making at least one transaction a day. Highlighted Crypto News

The alluring promise of enormous expansion possibilities in the cryptocurrency sector has maintained the interest of investors particularly those who have experienced immense profits during previous bull markets. As the space of digital assets progresses over time, certain altcoins have the best chance of achieving moonshot by the year 2025. One of these is Rexas Finance, which has caught a lot of interest owing to its exclusive characteristics and well-orchestrated presale, in addition to four other highly promising altcoins with great potential. Rexas Finance (RXS) In hardly any time, Rexas Finance has carved a niche in the populace of Cryptocurrency people, attracting investors who have pegged it as the pioneer in the tokenization of real-world assets and the investment platform. The business model of the platform centers around the integration of blockchain and radical improvements in asset management by creating tokens of real-world assets (RWA). The fractionation brings down the minimum investment requirements thereby allowing more people to invest in nonliquid assets such as real estate, precious metals, collectibles, and other investments and also improving the liquidity of these asset classes. Rexas Finance's presale has particularly enjoyed favourable conditions and registered accumulated sales of more than \$3.5 million through several stages. At the moment, the fourth stage is ongoing and tokens at the price of just \$0.06 are on sale which is an ideal level for investors. All and sundry have witnessed the excitement around RXS as they are already listed in CoinMarketCap (CMC) and this only exemplifies the level of confidence and credibility the RXS association has regarding the birth and subsequent performance of the said coin. Not only that, but Rexas Finance ensures that its ecosystem contains various unique aspects whose sole purpose is to improve user experience and aid in mass adoption. Through the Rexas QuickMint Bot, users can create their own token on Ethereum Virtual Machine (EVM) based blockchains using Telegram or Discord quickly and easily. Out of the many advantages the platform offers, it also features a Launchpad where new projects can raise funds and use AI to create non-fungible tokens (NFTs) artwork. Furthermore, a \$1 million giveaway motivates the community to participate, as the chance of winning significant rewards while advertising RXS is enticing to the participants. Rexas Finance intends to be in the business of responding to the changing dynamics of the asset management market by utilizing technology aimed at dramatic growth. The emphasis on facilitating the democratization of investment via the use of blockchain technology together with the ways to bring down transaction costs by use of smart contracts makes it stand out within the changing DeFi space. Neuro (NEIRO) This project Neuro is another crypto project that has been gaining attraction with the holistic combination of AI and blockchain technology endeavours. The aim of this project is to provide a more efficient way of looking after and using the data present in decentralized networks. This includes AI-based smart analysis for trading and making predictions in order to enhance trading tactics and also the usage of DeFi mechanisms to enhance the operational efficiency and profitability of the users. With the use of artificial intelligence being incorporated in various industries, especially in the field of finance, the supply of AI-based blockchain solutions is also expected to grow. With Neuro's position in this niche market, she could offer considerable yield to first-tier investors. Given the extension of its use, token exchange rates may appreciate and may return significant gains by the year 2025. Shiba Inu (SHIB) Contrary to common perception, Shiba Inu is still relevant in the memecoin space and commands a good share mainly due to its active community as well as the expanding ecosystem. Despite the bad press and skepticism about this 'Doge coin killer', SHIB is more than just a meme coin as it is building its own decentralized

exchange (ShibaSwap), NFT marketplace, and other more productivity-oriented practical needs. Considering these properties that the SHIB possesses, plus the fact that meme coins generally flourish during bull seasons, there is a likelihood that SHIB will be back in the limelight due to the forthcoming upgrades and new projects in its ecosystem. Shiba Inu continues to be the favorite of investors who are searching for the next explosive asset in the meme coin sector. Floki Inu (FLOKI) Floki Inu is an extension of the surge in popularity of meme coins which stems from the Shiba Inu that belongs to Elon Musk. However, it sets itself apart by aiming at creating real use cases, which include gaming and borrowing, lending, etc. Developing real products and services is what underpins initiatives such as the "Valhalla" NFT gaming metaverse and the "FlokiFi" suite of decentralized finance instruments. With the popularity of GameFi on the rise and growing attention to metaverse-related projects, the ecosystem of Floki Inu could boost the price of the token all the same. Long-term prospects of growth in these markets may encourage some investors to hold on to FLOKI as an attractive asset. Blast Up (BLAST) Blast Up is more obscure compared to other exchanges and has lofty goals as a token with high potential aimed at offering DeFi products and services to newbies. It presents tools and services such as lending, borrowing, and staking designed to enable users to participate in earning passive income in the DeFi section. Offering educational solutions and simple designs, Blast Up plans to explain DeFi and help more people into it. Most importantly, as DeFi keeps growing and more customers look for solutions outside the traditional finance world, Blast Up's objectives cater to a considerable market need. Its ability to grow further by increasing users bodes well for its prospects in the market in the coming years. Realistic Target of 5,000% Returns By 2025 Although it is quite challenging to give levels in terms of price movements within the crypto space because of its inherent volatility, one snapshot history has it that good returns are not a tale too far fetched. Many crypto enthusiasts remember: at the last bull market several altcoins showed increases of over 5,000% as technological, market, and blockchain Adoptions combined and took off. In order for the tokens to achieve such a highly appreciated value, growth-enhancing ideal execution has to be pursued. Some of the factors that call for such growth are, the promise development made, the target user acquisition rate, collaboration accomplishment, and regulation compliance. Due to the high volatility associated with such investments, the investors in such cryptocurrencies must however take into consideration the factors above and the risks associated with investments in the specific markets. To sum up, although it is possible to get up to 5000% returns by the year 2025, one must keep in mind that it depends largely on how well these projects' roadmaps are implemented and other such factors beyond their control. For those investors who would like to embrace that risk, this might be the right time to think about getting into those markets in advance of the next bull market taking hold. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Among many big names flooding the markets with Toncoin (TON) and meme coins like Dogwifhat (WIF), Zig Network (ZIG) is here to absolutely change the game and become one of the most promising investments for 2024. It features a novel revenue sharing model, along with the capability to earn daily rewards. Let's explore why Zig Network (ZIG) is catching the eyes of smart investors, leaving behind the likes of Toncoin (TON) and Dogwifhat (WIF). Toncoin (TON): A Struggle for Recovery Toncoin (TON) reached as high as the level of \$8.25 in June 2024, after which it entered a correction phase. Toncoin (TON) is now trading at nearly the \$5 mark, with resistance acting as a ceiling to the upward push. Toncoin (TON) is still slowly recovering, but there isn't much certainty regarding reaching its previous high levels. However, Zig Network (ZIG) is coming off the ground with an attractively priced presale at \$0.01. The appealing offerings for ICO participants and its revenue sharing model give it a lot of space for enormous growth. Since Toncoin (TON) is still searching for stability, Zig Network (ZIG) is a much more dynamic investment opportunity, especially for those seeking early entry into a project that has promising potential. Dogwifhat (WIF): Memecoin Hype or Real Potential? Dogwifhat (WIF) has been showing explosive growth with it shooting over 110% in a month. Though the hype for Dogwifhat (WIF) and other meme coins like Dogecoin (DOGE) can bring short term gains, given the fact that meme coin investing is at the whims of sentiments in the market, it is the least predictable at times. The returns provided by Dogwifhat (WIF) during recent periods have been quite high but highly volatile, thus making it risky to long term investors. For the investment trader seeking a stable yet profitable asset, Zig Network (ZIG) offers better long term opportunities. With such an intense focus on user rewards and a Zig debit card directly linked to token balances, Zig Network (ZIG) presents real world utility above and beyond purely speculative investment. Why Zig Network (ZIG) is Gaining Traction Zig Network (ZIG) is more than just another crypto asset in the market because it is dedicated to fairness in rewards and active community participation. By engaging with the platform, users can earn daily rewards through transaction fees and staking, creating passive income opportunities. 60% of the total token supply is already being offered in the presale and all the early Zig Network (ZIG) investors stand to benefit from the potential surge in value. As Zig Network (ZIG) is preparing for the official launch, it's clear that it has what it takes to become a leader in the crypto space. With its innovative approach to blockchains, Zig Network (ZIG) far surpasses being just another coin. Many experts see this crypto asset as a revolution in how users can earn and use cryptocurrencies. To find out more about the Zig Network (ZIG) presale use the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. A trader who turned \$25 million profit from the PEPE token now foresees a staggering 7000% surge for a new AI-powered cryptocurrency. This bold prediction for the altcoin's growth before 2025 is stirring excitement in the crypto community. Could this be the next big opportunity in digital assets?

**CYBRO Presale Climbs Past \$3 Million: A One-in-a-Million DeFi Investment Opportunity**

CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million.

**>>>Join CYBRO and aim for future returns up to 1200%<<< Introducing PEPE: A Deflationary Memecoin**

Inspired by Pepe the Frog, PEPE is a deflationary memecoin launched on the Ethereum network, inspired by the Pepe the Frog meme. It aims to replicate the success of memecoins like Shiba Inu and Dogecoin. PEPE stands out by having no transaction taxes and embracing its status as a pure memecoin without utility. It reached a peak market cap of \$1.6 billion, sparking enthusiasm in the crypto community. PEPE's roadmap focuses on increasing visibility through social media trends and listings on major exchanges. The coin features a burning mechanism to enhance scarcity and a redistribution system that rewards long-term holders. As an ERC-20 token, PEPE benefits from Ethereum's Proof-of-Stake security. It is available on platforms like Uniswap, Binance, and KuCoin.

**Conclusion**

While coins like PEPE may have limited potential in the short term, CYBRO presents a unique opportunity in the DeFi space. As a technologically advanced platform, CYBRO utilizes AI-powered yield aggregation on the Blast blockchain to maximize earnings. With features like attractive staking rewards, exclusive airdrops, and cashback on purchases, it offers a superior user experience with seamless deposits and withdrawals. Its focus on transparency, compliance, and quality has attracted attention from prominent investors and influencers. CYBRO's innovative solutions make it a noteworthy project with significant growth potential leading up to 2025.

- Donald Trump's total crypto holdings have surged by 364%. - Trump's winning odds appear to be influencing the crypto market. The cryptocurrency portfolio of the 2024 U.S. presidential election candidate, Donald Trump, has witnessed a substantial increase in value of \$6.1 million since the beginning of 2024. According to an Arkham Intelligence report, over 65% of Donald Trump's current crypto assets consist of meme coins. Among them, the largest position concentrated in the Trump-themed cryptocurrency, \$TRUMP. The correlation of cryptocurrency and politics has forged a new wave in the crypto market with politically themed meme coins. Among these, Trump-themed tokens have taken the public eye, inviting both political supporters and traders. As the 2024 U.S. elections are approaching, Trump's meme coins are gaining traction in the crypto market. Will the Trump-Themed Meme Coins Climb? Donald Trump's influence on the political scenario and his pro-crypto stance drove the meme coins price to swing. His chances of winning the election have been increasing. Moreover, if Donald Trump wins the election, the meme coin prices could see a significant rise. Notably, Trump's betting odds have recently surged for the upcoming presidential election, holding a 16% lead over Democratic candidate Kamala Harris on the decentralized prediction market platform, Polymarket. Currently, his odds of winning stood at 60.5%, while Harris's chances sit at 39.5%. Price Momentum of Trump-Themed Meme Coins Several Trump-themed meme coins, like MAGA, TRUMP, Donald Trump, and MAGA TRUMP have gained momentum over the past 24 hours. MAGA has hit a high of \$5.44 over the day, currently gaining over 1%. Meanwhile, its daily trading volume has plunged by 14.41% to \$7.33 million. Over the past seven days, the meme coin gained over 9.90%, hitting \$5.42. TRUMP token has soared by 21.23%, trading at \$0.00003192 with its trading volume increased by 134%. The upside momentum of the asset over the past week resulted in a gain of over 72.90%. The asset hit a high of \$0.00003381. The Donald Trump coin has recorded a price surge over the past week to date, gaining over 62%. The surge in price resulted in the meme coin hitting \$0.005038. At press time, the meme coin is trading at \$0.005822 noting an increase of over 32.50%. Highlighted Crypto News

- Popcat's price surged 9%, driven by community sentiment and futures interest. - Over 80,000 holders indicate growing investor confidence. Popcat (POPCAT), the Solana-based memecoin, has surged to the 56th position in market capitalization, overtaking competitors TIA and OM. The token has seen a significant 9% rise over the past 24 hours, propelled by improved community sentiment and a notable increase in futures open interest. Trading volume has surged by 56%, reflecting heightened investor interest, while it has skyrocketed 98% in the past month, drawing the attention of the broader crypto community. Data from CoinMarketCap indicates that sentiment among investors remains predominantly bullish regarding Popcat's future. The token's recent price rally coincides with a 21% spike in open interest in the futures market over the last 24 hours, according to CoinGlass. Moreover, the number of Popcat holders has surpassed 80,000. On the technical front, the 1D POPCAT/USDT chart reveals that the price is trading above its middle Bollinger band, suggesting a continuation of the bullish trend. The Relative Strength Index (RSI) has dropped to around 60, indicating room for further gains before entering overbought territory. What is Ahead For POPCAT? Analysts are closely monitoring Popcat's price action. Trading Tank, a pseudonymous market analyst, highlighted a critical resistance level at \$1.54, the neckline of a bullish double-bottom pattern. If it breaches this level,

it could reach new highs in the short term, with potential targets of \$1.9250, \$2.3850, and \$3.310. However, POPCAT has experienced price corrections alongside major cryptocurrencies like Bitcoin and Ethereum. For continued upward momentum, it needs to maintain a price above \$1.1735, as falling below this level could lead to a significant decline. Overall, the combination of strong community support, rising open interest, and positive technical indicators positions it as a notable contender in the cryptocurrency landscape. Highlighted News Of The Day

- Radiant Capital lost over \$50 million in a cyber attack on October 16, 2024. - Malicious Trojans misled team members into signing unauthorized transactions. Radiant Capital, a cross-chain lending protocol backed by Binance Labs, fell victim to a serious cyber attack. It resulted in losses exceeding \$50 million in cryptocurrency On October 16, 2024. This incident underscores the significant vulnerabilities within decentralized finance (DeFi) platforms. Attackers gained control of the private keys belonging to multiple signers and subsequently manipulated smart contracts. As a result, they executed unauthorized transactions, compromising the security of the platform. Yesterday's sophisticated 50 million Radiant Capital hack happened after attacker's trojaned the computers of multiple team members. " Daniel Von Fange (@danielvf) October 17, 2024 Team members saw and verified good multisig data on screens, but their hardware wallets signed evil data. 1/7 [pic.twitter.com/zE7Hk0zN22](https://pic.twitter.com/zE7Hk0zN22) The sophistication of this attack distinguishes it from previous breaches. Hackers successfully implanted Trojans on the computers of several team members. This malicious software misled developers by showing legitimate multisig data, causing hardware wallets to sign harmful transactions without the team's awareness. How is Radiant Capital Responding to the Cyber Attack? In light of this major breach, Radiant Capital is collaborating with the FBI and cybersecurity experts to recover the stolen funds. The company is focused on strengthening its security measures by implementing stricter verification protocols and introducing new cold wallet addresses. Additionally, Radiant has reduced the number of signers required for multisig transactions to enhance oversight. Users have been advised to revoke any existing approvals for tokens associated with the protocol to protect their remaining assets. The attacker's wallet reportedly held over \$32 million in Arbitrum based assets and about \$18 million in BNB Chain tokens, further complicating the recovery efforts. Daniel Von Fange in a recent tweet mentioned that this incident serves as a stark reminder of the ongoing vulnerabilities faced by DeFi platforms. The attack's complexity raises serious questions about the adequacy of current security measures. Moreover, the breach emphasizes the need for continuous vigilance and proactive security enhancements within organizations to prevent similar incidents in the future. Highlighted Crypto News Today Dogecoin (DOGE) Strengthens Ground Amid a 9% Price Jump

- XRP hits two-week high, nearing critical \$0.60 resistance level. - Bullish momentum driven by increased trading volume. XRP has regained momentum, hitting a two-week high of \$0.5666, marking a 2.72% surge in the past 24 hours, though it slightly retreated to \$0.5573. The altcoin's trading volume saw a notable 16% increase, reflecting heightened market activity. Despite the recent recovery, XRP is still down 5% over the past month, driven by a late September sell-off that resulted in an 18% price decline. This recent upward movement signals XRP's potential to reclaim lost ground, with key support levels being tested. The 50% Fibonacci retracement line at \$0.55 remains a crucial level, and breaching the 61.8% Fibonacci retracement at \$0.59 could pave the way for a rally above the long-awaited \$0.60 mark. However, XRP's upward trajectory hinges on overcoming this strong resistance, which has held firm for months. Meanwhile, fellow altcoins Solana, DOGE, ADA is facing a decline of 2-5% in the past 24 hours. An XRP Rebound Rally? Technical indicators show a mixed outlook. The Relative Strength Index (RSI) has recently closed above the neutral 50 level, signalling an improvement in bullish momentum. Yet, the token remains under pressure, with the 20-day exponential moving average (EMA) trending downward, and a bearish crossover with the 200-day EMA looming. If this crossover materialises, XRP could struggle to regain its footing above \$0.56, leading to a period of consolidation. On the derivatives front, speculative activity surged, with a 753% increase in options volume and a 27.2% rise in open interest. While long liquidations outpaced shorts, indicating profit-taking, the predominance of long positions suggests traders remain hopeful of a potential recovery. As XRP continues to navigate resistance levels, traders are watching for a decisive breakout, with the \$0.60 level in focus. Overcoming this crucial hurdle could fuel a more sustained rally in the coming weeks.

As major cryptocurrencies like Bitcoin, Solana, and Dogecoin experience soaring prices, savvy investors are taking their profits and turning their attention to a new opportunity within the SUI ecosystem—Suirum (\$SUIR). With Bitcoin recently surpassing the \$68,000 mark, marking its highest level since late July, and the overall crypto market on an upward trajectory, the search for the next big investment leads to Suirum. Bitcoin's Recent Surge and Market Dynamics Bitcoin's recent ascent over \$68,000 has been catalyzed by various factors, including significant inflows into Bitcoin ETFs and a rise in market dominance to 58.91%—a peak last observed in April 2021. This surge reflects growing investor confidence and a renewed appetite for risk in the crypto markets. However, as the giants of the crypto world continue their upward march, many investors are exploring new avenues to diversify their portfolios and maximize returns. Why Investors Are Shifting to Suirum (\$SUIR) Amidst the market highs, Suirum is emerging as a compelling investment for those looking to diversify into memecoins with substantial growth potential. Unlike traditional investments, Suirum offers a unique mix of engaging community-driven dynamics and innovative financial mechanics, such as its deflationary token model which automatically reduces supply with every transaction, potentially driving up the value per token over time. Suirum: A New Era of SUI Memecoins Suirum is not just another memecoin; it's a pioneer in the space on the SUI blockchain, offering a unique proposition with its deflationary model and robust community engagement strategies. As Bitcoin and other major cryptocurrencies are reaching new heights, Suirum presents an alternative for investors looking to

capitalize on the next wave of crypto innovations. The Attraction of Suirum's Presale The ongoing Suirum presale is rapidly gaining momentum, with over 19,000 SUI raised in just days. Investors are drawn to its low entry price and high potential for appreciation. As the crypto market thrives, the appeal of getting in early on a project like Suirum with the prospect of significant returns becomes increasingly attractive. The presale offers an exclusive opportunity to buy \$SUIR tokens at a substantial discount before its broader market launch, where it is set to debut on major exchanges at a higher valuation. How to Invest in Suirum Investors looking to take advantage of the potential upside in Suirum can participate in the presale by following these steps: Set Up a SUI-Compatible Wallet: Ensure you have a wallet that supports the SUI blockchain, such as SUI Wallet or Suiet Wallet. Purchase \$SUI: Acquire \$SUI tokens from major cryptocurrency exchanges to use in the Suirum presale. Participate in the Presale: Visit [suirum.com/sale](https://suirum.com/sale) to buy \$SUIR tokens. Follow the straightforward instructions to send your \$SUI and secure your tokens. Receive and Hold Your \$SUIR Tokens: Once the presale concludes, your tokens will be airdropped to your wallet, ready for the upcoming listings and trading. Conclusion: Don't Miss the Suirum Opportunity As the crypto market continues its bullish run, diversifying into emerging coins like Suirum could not only enhance your portfolio but also position you for exceptional gains. Suirum is poised to become a standout in the meme coin market, potentially delivering impressive returns similar to early investments in now-major coins. - Bonk's price climbed from a low of \$0.00002185 to a high of \$0.00002509, reflecting a 14% increase. - Bonk is above the crucial support level of \$0.000024 and faces resistance at \$0.000026, a level it struggled to break since July. The global cryptocurrency market turned positive mid-Wednesday, with Bitcoin (BTC) hitting the \$68K zone for the first time in three months, sparking enthusiasm among investors. This momentum also benefited meme coins, with Dogecoin (DOGE) and Bonk recording significant gains of 12% and 14%, respectively. The Solana-based meme coin BONK is leading the crypto market with a significant gain of 14% in the last 24 hours. The meme coin price surged from a low of \$0.00002185 to a high of \$0.00002509. At the time of writing, BONK is trading at \$0.00002433, showing a slight retracement but still above the crucial level of \$0.000024, which it struggled to surpass for over two weeks. Additionally, BONK's daily trading volume has soared by over 36%, reaching \$372.60 million. BONK 24-H Technical Analysis According to Bonk's 4-hour price chart, there is bullish momentum for the memecoin. The 50-day MA crossed above the 200-day MA, a "Golden Cross," signaling a shift from bearish to bullish sentiment. This trend suggests that BONK could maintain its upward momentum in the short to mid-term. Further, the Moving Average Convergence Divergence (MACD) is above the signal line, adding a positive outlook. If the upward trend continues, BONK's price could propel to new highs in the next rally. However, challenges remain. Currently, BONK sees a key resistance level at \$0.000026, a threshold that must be surpassed to maintain its upward momentum. Achieving this level may be difficult, as it previously attempted to reach it on October 1, but retraced and traded between \$0.000019 and \$0.000023. Furthermore, the current trend has faced obstacles, with the memecoin dropping below its intraday high, which was above \$0.000025. However, an RSI reading of 65 indicates that the asset is experiencing a moderately strong bullish trend. In that case, if BONK breaks through the \$0.000026 level, the next targets are set at \$0.000028 and \$0.000035, making these crucial levels for traders and investors to monitor during the potential breakout. Conversely, if BONK fails to hold its uptrend it could establish a support level of around \$0.00001975, which may act as a safety net if the price experiences a downturn. Highlighted News Of The Day

As analysts predict the upcoming crypto bull run to peak in 2025, the possibility of making life-transforming gains is at the forefront. Investors will benefit more if they target the right altcoins before the rest of the market does. There are seven outlined as investable in the medium term, supported by strong fundamentals and growth for handsome profits. Rexas Finance (RXS) Rexas Finance (RXS) is improving RWA (Real World Assets) by developing solutions that enable clients to tokenize and trade real assets (for example, real estate, commodities) through blockchain. RXS has a current price of \$0.06 in its ongoing presale stage 4 and is then likely to be as high as \$12 in 2025. This makes it a suitable candidate for a high-growth position and, hence, worth the risk. There is a presale that has already raised over 2.75 million dollars, and currently, there is a running Rexas Finance giveaway costing one million dollars. Particularly, the token's ability to utilize trillion-dollar market potential makes RXS one of the best altcoins to hold for optimum returns in 2025 and beyond. Documents are exempt from fees, and some are burdened with an enhanced guarantee Avalanche (AVAX) A key contender in the Layer-1 blockchain space, Avalanche continues to maintain its strong position. Due to its usability in running DeFi projects and NFTs. AVAX as a platform has gained ground, particularly due to its scalability and transaction speeds. Avalanche was estimated at \$27 as of October 2024 and is expected to rise as high as \$300 by 2025 due to the growth of its use and the ecosystem. Avalanche possesses strong underlying technology and developer momentum, making it the best bet for any investor who intends to make large profits. Solana (SOL) Solana (SOL) is vibrant today and is currently selling at \$151. As an investor, this is another cryptocurrency that one should keep an eye on. It is well known for its cheap fees and fast transaction processing, hence projects that operate in the area of DeFi and NFTs have so many of them in the ecosystem. As per analysts' forecasts, Solana could reach the level of \$500 within 2025, thus providing an opportunity for comfortable investments in one of the best large-cap altcoins in the next bull run. With the Solana network expected to grow with the DeFi sector, SOL will also have a considerable adoption which will make it a good value for now and the future. Dogecoin (DOGE) From the onset, it has been categorized as merely a Meme trend, yet Dogecoin (DOGE) has not dropped from the map in the crypto circle. Selling at \$0.15, DOGE can hit \$1

with a 2025 upside if the support from Elon Musk still lives on and if Twitter X decides to adopt the coin as a microtransaction tool. Supporting such an advanced community and usage of Dogecoin creates an interesting opportunity for an investor who accepts higher risks in order to reap decent rewards.

Chainlink (LINK) Chainlink (LINK) today is valued at \$11 and possesses features that allow it to complement the entire DeFi space, owing to its provision of decentralized oracles linking smart contracts that cannot run without external data. With the rising trend of decentralized finance, Chainlink has unique opportunities to benefit, with forecasts suggesting that in the year 2025, the token could hit \$100. The deep-seated significance of LINK in the usage of blockchain technology assures its presence in the strategic portfolios of all crypto investors.

Near Protocol (NEAR) The Near Protocol (NEAR) is an easily manageable Layer-1 blockchain architecture with the capability to scale. Thanks to its sharding technology, NEAR has been doing well in terms of transaction volumes, making it a perfect candidate for decentralized applications. The alternative token is valued at \$5.2, with analysts predicting it will hit \$50 by 2025, as more developers and projects utilize its platform. Near Protocol is rapidly capturing market share as an alternative to Ethereum, which can process transactions faster and at scale. Thus, NEAR is an effective long-term investment.

Ripple (XRP) As a leader in cross-border payment solutions, Ripple has effectively addressed industry challenges and is currently priced at \$0.53. Some institutions still have horses in the race, and the industry is still extremely skeptical about XRP; however, it is one of the most used cryptos today. In fact, some analysts opine that if all goes well, Ripple's legal issue is resolved, and business keeps progressing, XRP could touch 5 dollars or more by the year 2025. Generally, XRP is one of the top altcoins to buy for those who want to place a wager on more adoption and eventually the recovery of Ripple's value.

Conclusion: How to Optimize Returns for 2025 The market has reached a stage where the next bull run is expected, and now is the best time to stake in altcoins with great potential. Of these, Rexas Finance has the highest potential upside due to its unique model of RWA tokenization. That said, investment in Avalanche, Solana, Dogecoin, Chainlink, Near Protocol, and Ripple also holds great potential for those looking to maximize returns by 2025. Given that proper strategies are implemented, these altcoins are bound to bring life-changing gains as the crypto market continues to take new steps forward. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

Truflation, the leading provider of real-time financial data, and Digital Asset Solutions, the experts in financial solutions for the digital asset market, have announced the launch of its first Meme Coin Index. In addition to giving investors access to a diverse basket of meme coins, the index tracks the most well-known and significant meme coins across many chains, serving as a benchmark for tracking the sector's overall growth. Shiba Inu, Pepe, Dogwifhat, Floki, Bonk, Brett, Popcat, and Dogecoin are among the assets that make up the Truflation Meme Coin Index, which will monitor eight of the best-performing coins across Ethereum, Solana, Base, and Dogecoin. By trading the full index, cryptocurrency traders may diversify their investing approach and have exposure to a selection of the top meme coins based on market capitalization, trading volume, and liquidity. The index may be used to measure the performance of meme coins over time, as well as to make the meme coin economy accessible via a single method. As a result, it is simpler to see market patterns and determine if meme coins are more in demand versus other cryptocurrency sectors. With the use of indexes, which are a common method of investing in assets like equities and DeFi tokens, investors may profit from market development without having to concentrate on making particular investments. Meme coins, which have developed into a \$40 billion market and consistently generate more on-chain volume than any other crypto sector, now have this potential thanks to the Truflation Memecoin Index. Truflation's Memecoin Index, developed in partnership with Digital Asset Solutions, was created to diversify exposure to meme coins, lowering the risk of depending only on one coin's performance and doing away with the need to purchase individual coins from several chains. Like a traditional token, the index is readily purchased and sold by individual investors, which appeals to retail consumers. Stefan Hächle, Head of Investment Strategy at Digital Asset Solutions said: "Meme coins, driven by their growing market capitalization and increasing community engagement, have undeniably earned their place within the digital asset landscape. We're excited to partner with Truflation to bring clarity to this sector, making it easier to measure and invest in." Truflation CEO Stefan Rust said: "In a crypto bull market, meme coins defied all expectations with the number of projects and total capitalization increasing by multiples. The combination of community-powered humor, memes, and cultural references, coupled with the closest thing crypto has to a fair launch, has turned meme coins into a major catalyst for the entire industry. The Truflation Memecoin Index provides a snapshot of the sector's performance while providing a passive investment solution for traders who'd rather back the entire pack than attempt to pick a winner." Decentralized finance apps often use Truflation's decentralized data feeds, indexes, and oracles to get precise pricing for a variety of real-world assets. Truflation provides onchain protocols with a dependable, real-time data source by tracking over 18 million products via the integration of more than 65 data source. Beyond RWAs, Truflation is moving closer to implementing more reliable and thorough data onchain by offering dedicated dashboards for monitoring inflation in nations like the US, UK, and Argentina. Truflation is revolutionizing the measurement of inflation and asset performance with these developments. The firm wants to improve decision-making processes for companies, investors, and policymakers by offering alternative measurements and getting beyond the drawbacks of conventional indices. This will help to create a more robust and informed global economy.

New York, New York, October 15th, 2024, Chainwire With the cryptocurrency market entering the final quarter of the year with major bullish momentum, the emerging altcoin platform DTX Exchange (DTX) has

made a strong impact. The DeFi platform has raised over \$4.75 Million weeks earlier than expected. This early success reflects growing interest in platforms that offer access to a diverse range of assets, including cryptocurrencies, equities, and real-world assets (RWA), under a unified trading system. Innovative Multi-Asset Platform Meeting Market Demand Despite the entry of financial giants like Blackrock and Morgan Stanley into the decentralized world, there is still a lack of a unified platform that integrates conventional assets like equities, stocks, and bonds with decentralized assets like cryptocurrencies. DTX Exchange has aimed to bridge the gap between traditional and decentralized financial markets by allowing users to trade over 100,000 assets on a single platform. This innovative solution makes it possible for traders to access a wide variety of assets under a single platform with minimal trading fees. The global cryptocurrency industry is worth \$2 trillion alone, with the broader equities market having over \$90 trillion worth of assets. By enabling the trading of these assets, DTX provides traders with the chance to enhance liquidity. The DTX team aims to attract the attention of millions of retail and enterprise traders through this unique feature.

**Notable Presale Participation and Platform Development** DTX Exchange's presale has seen considerable early participation across its initial rounds. The first round raised approximately \$300,000 in a short period, while the second phase exceeded \$1 million in total funds raised. The third presale round concluded ahead of schedule, with the platform raising over \$4.75 million across all rounds to date. During this time, the token price increased from \$0.01 to \$0.08, reflecting initial interest in the platform's offerings.

**Platform Features and Future Product Expansion** DTX Exchange credits its early adoption to its unique product offerings, including: **VulcanX Blockchain** – This privacy blockchain powers the DTX ecosystem and is the first unified blockchain to support conventional financial assets. With a throughput of over 100,000, this blockchain is expected to power the next decentralized applications of the future. **DTX Unified Wallet** – The DTX Unified Wallet is the first crypto wallet to support forex, equities, and crypto assets under a single secure application. The product is expected to add features like P2P asset trading and portfolio management tools. **Enterprise RWA Platform** – DTX is onboarding conventional assets on the blockchain through the Real World Assets (RWA) builder platform. **DTX Exchange Sells Out Round 3 In Days** In the most recent development, the ongoing presale has sold over 50 million tokens and raised \$3 million to sell out the 3rd round weeks ahead of schedule. The DTX team is now raising the token price, giving investors another opportunity to join the presale and secure DTX tokens before they launch on public exchanges. **Open Public Trading and Ecosystem Expansion** DTX Exchange has outlined its plans to make DTX tokens available for open public trading following the launch of the VulcanX blockchain. With a growing community of over 70,000 members, the platform is preparing for broader accessibility, which may help increase its reach and user base significantly upon public launch. Additionally, DTX also has an active developer community that is actively developing new products. **Exploring the DTX Ecosystem** – Key Products Aside from offering a suite of trading features, DTX Exchange is expected to offer a wide range of products to developers and enterprise players in the finance world. Some notable products include the Real World Asset (RWA) tokenization tool that allows stakeholders in the Real Estate industry to tokenize assets and introduce new models of investment in illiquid assets. Additionally, DTX is expected to launch the DTX Unified Wallet, which allows holding stocks, cryptos, and forex assets. Additionally, future plans include holding the Digi-Hackathon to improve platform security and integrity.

**DTX Exchange: Unifying Digital Assets with Strong Growth Potential** With the unique approach DTX Exchange has taken to unifying digital assets, its presale performance comes as no surprise. Built on the VulcanX blockchain, the platform is designed to improve transaction capacity compared to many layer-1 blockchains. Given the rapid pace of the presale sold, the altcoin could mirror the past trajectory of other cryptos that had exponential rallies. In the past, projects like Solana, Cardano, Polygon, and Dogecoin have all surged from small-scale altcoins into multi-billion dollar projects that have become household names. DTX Exchange aims to fulfill its potential and turn into a major powerhouse in the coming months. Investors can still become an early part of the DTX Exchange community. With a current price of \$0.08 and a listing price of \$0.20, investors are poised to enjoy growth in value in the coming months. With broad applications for the financial sector, DTX aims to become the cornerstone of the DeFi industry and carve out a sizeable portion of the \$2 Trillion trading industry. Users can learn more: Users can visit DTX Website here Users can join The DTX Community Contact DTX Exchange [dtxinnoventions@gmail.com](mailto:dtxinnoventions@gmail.com)

The crypto market is showing a drastic price surge. Among them are three top cryptos, they are NEIRO, XRP, MATIC, and RXS.

1. NEIRO \$NEIRO is a new cryptocurrency with a total supply of 1 billion tokens, offering zero buy/sell tax and no team tokens, which suggests a community-driven approach. It promotes itself as the next big opportunity in the crypto space, drawing comparisons to Dogecoin's rise.
2. XRP (XRP) is Ripple's native digital asset that aims to interconnect traditional financial institutions and cryptos by offering a seamless cross-border payment solution.
3. Polygon (MATIC) Polygon is a Layer 2 scaling solution for Ethereum, developed to develop the network's performance by improving transaction speeds and reducing costs.
4. Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities.

**Rexas Token Builder:** It is normally used to tokenize their real-world assets and commodities. To make it easy for individuals to get digital ownership and offer access to the global market.

**Rexas Launchpad:** This feature helps the asset owners to raise funds for their tokenized assets, offering liquidity and new investment options for the crypto users.

**Rexas Estate:** The project's one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins.

**Rexas GenAI & DeFi:** It is mainly utilized by artists who can use Rexas GenAI to develop and tokenize digital artworks, while Rexas DeFi allows users to easily swap digital assets across multiple networks.

**Rexas Treasury:** A multi-chain yield optimizer that enables users to earn compound interest on their crypto deposits, which adds one more layer of financial utility to the project.

Rexas Finance began the presale of the native token RXS on September 8, 2024. The total supply of RXS tokens is 1 billion. Rexas project has raised over \$2.75M until now, with the third presale stage over. This event is important for the platform as it allows early investors to engage in what might turn into a revolutionary solution for RWA tokenization. Rexas Finance's \$1M Giveaway is live, offering a huge chance for early adopters to join the project's growth. With strategic investments, these coins could be the ticket to a massive return during the next market cycle. About Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The global crypto market rebounded 2.5% following the stronger-than-expected CPI data. - Bitcoin climbed to the \$63K zone, catalyzing rallies in various altcoins. Currently, it is trading at around \$62,848. After a week marked by mixed sentiments, the cryptocurrency market has bounced back positively, particularly following the release of the Consumer Price Index (CPI) data for September. The CPI rose by 0.2%, while the core CPI increased by 0.3%, both exceeding expectations. This data has led analysts to believe that the Federal Reserve is unlikely to cut interest rates by 50 basis points in November, and they may even decide against trimming rates altogether. As a result, the global crypto market cap surged over 2.5%, reaching \$2.2 trillion. Bitcoin (BTC) took the lead, climbing to the \$63K zone, and propelled rallies among various altcoins. This momentum sets a hopeful tone for October, often referred to as "Uptober," known for its potential price increases. Bitcoin and Altcoins Surge Amid Positive Market Sentiment In recent trading, Bitcoin peaked at \$63,400, although it has seen slight fluctuations, currently trading at around \$62,848 as per CMC data. Ethereum (ETH) also displayed a modest rise of 1.45%, trading near the \$2,450 mark. This positive trend has rippled through the altcoin market, with Avalanche (AVAX) seeing an impressive jump of over 10%, moving from a low of \$26.37 to a high of \$28.98. Other cryptocurrencies, such as SUI, also rose by about 12%, reaching \$2.16 from \$1.93. Major players like XRP, Solana, and BNB recorded increases between 3% and 4%. Even memecoins are enjoying the spotlight. Dogecoin (DOGE) rose by 3% to \$0.1112, while Shiba Inu (SHIB) climbed 5% to \$0.0000179. Other leading memecoins, such as PEPE and Dogwifhat (WIF), have also experienced notable gains, rallying 7% and 8%, respectively. Furthermore, the relatively new meme coin Popcat (SOL) hit an all-time high of \$1.49, surpassing FLOKI in value. As the market shifts gears, investors remain optimistic about the potential for further gains this month. Highlighted Crypto News Today

- Popcat (SOL) surged 16.41% to a new all-time high of \$1.49 after bouncing from an intraday low of \$1.28. - The global crypto market rose by 2.46%, reaching a total value of \$2.19 trillion. Bitcoin (BTC) has surged back to the \$62.5K mark with a 4% rally, and leading altcoins are following the upward trend. Memecoins are also experiencing notable gains, with Dogecoin (DOGE) and Shiba Inu (SHIB) seeing gains between 4% and 10%. However, one memecoin has taken the spotlight—Popcat (SOL), which has soared over 16.41% and reached a new all-time high of \$1.49, climbing from an intraday low of \$1.28. Also, Popcat's rank has risen and now holds the position of the 6th largest memecoin, surpassing FLOKI. Popcat (SOL) Shows Positive Trend Amidst Volatility Popcat (SOL) has been trading in a rangebound pattern since hitting its previous high on October 7. The token's price has been quite volatile; it started the week at \$1.21 and quickly rose to an all-time high of \$1.47 before dipping to a weekly low of \$1.11. It has since rebounded and set a new record high at \$1.49. Although Popcat has slightly retraced, it still remains strong above the \$1.40 zone. At the time of writing, Popcat (SOL) is priced at \$1.44, with a market capitalization of \$1.40 billion. Additionally, the daily trading volume has increased by around 16% to \$169.40 million, reflecting high market activity. Much of this activity is driven by traders looking to capitalize on the token's price swings. From a technical view, Popcat (SOL) is in a bullish phase and may still have room to grow. The Relative Strength Index (RSI) is currently at a neutral 65, indicating a balance between buying and selling pressure. The MACD indicates upward momentum, suggesting that Popcat may push to \$1.50 or even \$1.53. However, if the momentum fades, the token could revisit the \$1.40 or even \$1.24 levels. Highlighted Crypto News Today

What can be expected as the boom of crypto continues: whales—those valued businessmen with volumes of cryptocurrency—tend to stir things up quite a bit. Not so long ago, one more Ethereum whale with a jaw-dropping \$130 million bag of ETH has turned some of the most optimistic investors in the market by reallocating some of his investments in meme coins and the up-and-coming project in the blockchain ecosystem. According to reports, the whale has exchanged part of his massive ETH holdings for relatively new digital assets such as Shiba Inu and PEPE Coin, which are the current favorites, and Rexas Finance (RXS), which is also a low-market cap coin. This action has led to even more assumptions concerning the future of these altcoins as well as what this bold step taken by the whale entails for the skeletal investors Shiba Inu (SHIB) Shiba Inu coin is at the very forefront of the meme coins that are found in the cryptocurrency space sometimes making it be referred to as the "Dogecoin Killer." Perhaps, with their highest brand and loyal followers, they have come up with a DeFi project called ShibaSwap, which is a DEX where the holders can stake, supply liquidity, and participate in governance. This development has broadened the attractiveness of Shiba Inu since it has widened the demographic of the offerings of the project to include more DeFi investors. At least one time it dropped to \$0.0000182 on 30 September 2024. The price of SHIB has sustained its uptrend even as technicals showroom for correction. At present, SHIB has recuperated and at this time, it is at a high

of \$0.0000200. Still, it has a resistance level of \$0.0000202. If SHIB goes on to surpass this level on the downside, there are higher chances the next level of \$0.0000229 will be reached before new all-time highs are experienced by the close of the year. Experts say the price of SHIB in October can grow by about 34%. Price calculations indicate that it can approach the \$0.0000221 mark within 10 days. Those who are looking at SHIB feel this Ethereum Whale's interest is a good sign for potential wins down the line, as many feel SHIB is one of those coins that can produce millionaires again as it did in the 2021 huge round of price surges. PEPE Coin (PEPE) Another meme coin that has drawn the interest of an Ethereum whale is the PEPE Coin. With a devoted fanbase and a widening variety of partnerships, PEPE has been climbing higher and higher over the past month, even registering more than a 100% increase in gains. As of October 2024, the PEPE price is around \$0.000013, which has increased from \$0.0000029 and the daily trade volume has increased by more than 30% over the last 24 hours. Such a notable increase in both price and volume does point out that the token value still has some more upside, as an analyst envisages PEPE may even reach \$0.0005 in an astonishing 28,000% surge. Currently, the token carries the rank of No. 22 in the cryptocurrency ecosystem and has a circulating supply of over 5.6 trillion PEPE tokens. Many investors have now shifted to PEPE aimed at the possibility of life-changing returns based on the fact that most people expect the coin will smash its previous highest mark at the end of the year. If you're looking for a low-cost crypto investment that's likely to perform extraordinarily well, circle PEPE on your calendar for the year 2024. Rexas Finance (RXS) As much of the spotlight was focused on meme coins, especially SHIB and PEPE, the Ethereum whale also placed an interesting bet on Rexas Finance (RXS), an upcoming rapidly rising star in blockchain. Rexas Finance buttresses that it is shifting the narrative of Real World Assets (RWA) from being a fashionable term into a practical business flatter. With the current trend of enclosure in an asset tokenization society, RXS is well-placed to take up a significant market position, attracting institutional as well as retail investors. RXS's presale is already on fire, with Stage 4 of the presale being offered at \$0.060 per token. The presale has been very promising, with a total amount of \$2.75 million being raised and 65 million tokens sold. Cryptocurrency communities are aware that it is expected that this sale will be completed and the next stage will entail a price of \$0.070 for each token. Some conservatives believe that early investors can expect very good returns, adding that there are expectations for the token to gain up to 45 times by early 2025. Taking into account the whale's position regarding RXS, the majority are sure that the token's price will rise above 0.20 after the token launch. And if the asset tokenization model is already remarkable for its originality, attracting, then Rexas Finance will attract even more due to such promotions as Rexas Millionaire Giveaway, where one lucky investor gets to win US \$50,000 in USDT investing. Such a marketing trend, along with the technologically advanced and continuously novel platform, makes Rexas Finance one of the promising investment opportunities for the year 2024. Conclusion The fact that the big holder of Ethereum has opted to invest in Shiba Inu, PEPE Coin, and Rexas Finance clearly shows that confidence in the potential of these altcoins is growing. Shiba Inu is eons away from its all-time highs, PEPE is gaining ground rapidly and Rexas Finance presents a promising investment opportunity in asset tokenization. Hence, any crypto investor searching for a chance to cash in on the next breakout could consider mimicking the whale's move. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

With the cryptocurrency market preparing for yet another massive surge, investors are focusing on inexpensive tokens that might yield enormous profits. Four tokens under \$1 have emerged as leading competitors for anyone looking to transform a tiny investment into substantial profits: Rexas Finance (RXS), Shiba Inu (SHIB), Dogecoin (DOGE), and SEI. If you have patience and the correct time, these tokens have the potential to yield returns far greater than your monthly paycheck. Rexas Finance (RXS): A Lucrative Prospect for Vast Gains Leading the way in real-world asset (RWA) tokenization, Rexas Finance (RXS) is targeting the trillion-dollar sectors, including commodities and real estate. Rexas Finance democratizes access to previously institutionalized investments by enabling investors to own fractionalized assets on the blockchain. With its cutting-edge tokenization platform, Rexas Finance hopes to take a sizable chunk of the approximately \$379 trillion global real estate market. Rexas Finance is a great investment opportunity since it can yield profits that exceed average salaries. Impressive results have been achieved by the RXS token presale; Stage 3 sold out ahead of schedule and raised \$2.75 million. Each RXS token now costs \$0.06 in Stage 4, which will rise to \$0.07 in the following stage. With a listing price of \$0.20, experts predict that the token's price could rise by more than 150% after listing due to high demand and limited availability. Rexas Finance is notable for having purposefully refrained from seeking venture capital support to preserve control over its mission and guarantee a decentralized future for its community. Rexas Finance offers several important features that improve its value offering, making it more than just a presale success story. Real estate, artwork, and commodities may all be easily tokenized by users with the Rexas Token Builder. Additionally, the platform offers a special launchpad for brand-new tokenized projects, giving institutions and entrepreneurs a more efficient way to raise funds. Rexas Estate also makes tokenized real estate properties globally accessible to investors, providing a safe and effective way to access high-value investments. Rexas Finance is positioned to emerge as a leader in the quickly expanding RWA market because of its wide range of features. Furthermore, Rexas Finance has introduced a \$1 million USDT giveaway campaign, in which twenty lucky people might earn \$50,000 USDT apiece. This initiative appreciates early adopters and increases awareness of the project's potential value. Rexas Finance is a coin that might yield profits considerably above a monthly salary because of its

solid fundamentals, cutting-edge features, and the large markets it targets. Shiba Inu (SHIB) Steady Growth in the Accumulation Phase Investors are accumulating Shiba Inu (SHIB) tokens amid the ongoing market dips. As per the price, which trades around \$0.00001594 currently, the coin has taken a dip of 5.46% in the last week, which is not causing paranoia among analysts but rather sees it as an opportunity for investors to seize the moment. Shiba Inu is known for its outstanding performances in October, and experts believe it may be capping off the current price mark by eliminating a zero. With its continued accumulation phase, SHIB is a good addition to any cryptocurrency portfolio due to its great potential for large returns. Dogecoin (DOGE) Faces Critical Test as \$0.10 Support Holds the Key After a 20% decline in market capitalization, Dogecoin (DOGE) is now at a critical juncture, retesting its psychological support of \$0.10. If DOGE breaks above \$0.10, a rebound might take the price to \$0.1130, paving the way for a \$1 price rally. Prominent analysts such as Ali Martinez emphasize the significance of the \$0.10 mark, as positive signals suggest a potential reversal. For investors seeking a high-reward investment in the meme currency arena, Dogecoin continues to be a strong contender, with a market cap currently circling around \$10 billion. SEI Crypto Displays Abrupt Growth, Up 34% in Just 7 Days With a 34% increase in just seven days, the SEI has been rising impressively. SEI's Total Value Locked (TVL) doubled over the past month; currently, it is at an all-time high of \$217.5 million. Trading volume shot shockingly 245.93% to hit \$961.82 million. Analysts predict that SEI will continue to rise in the upcoming weeks due to bullish liquidation tendencies and increasing open interest. For investors hoping for enormous profits during the upcoming bull market, SEI is still a great choice because it continues to rule the DeFi space. Conclusion Affordably priced tokens like Rexas Finance (RXS), Shiba Inu (SHIB), Dogecoin (DOGE), and SEI are well-positioned to generate remarkable gains as we anticipate the next bull run. Rexas Finance, in particular, stands out for its creative tokenization of real-world assets and strong presale results. Now is the ideal time for investors looking to optimize their returns to invest in Rexas Finance before its value soars in the upcoming months. - Taiwan FSC plans to trial the crypto custody services of the virtual assets. - Applications for the crypto custody trial will begin from Early 2025. Taiwan's Financial Supervisory Commission (FSC) plans to trail the custody services of open digital assets. Three domestic banks have taken the initiative to participate in the trial program, which is set to kick off in the first quarter of 2025. These banks are expected to provide storage solutions for the cryptocurrencies such as Bitcoin (BTC), Ethereum (ETH), and Dogecoin (DOGE). The Financial Supervisory Commission (FSC) has laid strict guidelines for the institutions. It requires them to specify the assets they support and identify their target user base. Hu Zehua, FSC Global Planning Division Director, has stated that the authority plans to release information about the project trial at least 15 days before it begins accepting applications. Moreover, the FSC plans to collect feedback from the public on the proposed trial. On the other hand, the Taiwan FSC has informed that it would allow institutional investors to trade foreign crypto exchange-traded funds (ETFs). The regulators plan to draft a proposal for crypto laws by December 31. It aims to formally propose by June 2025. The Financial Supervisory Commission of Taiwan has assured the security of the custody business and the prevention of money laundering. Furthermore, it stated that the financial institutions should block the virtual assets based on illegal funds to avoid the risk. Highlighted Crypto News

The crypto market is showing huge adoption in the industry with over 2.4M cryptos evolving around. Among those cryptos let us look into the top 6 best cryptos under \$0.1 that will make users a millionaires by the end of 2025: Shiba Inu (SHIB), Ripple (XRP), Solana (SOL), Dogecoin (DOGE), Tron (TRX), and Rexas Finance (RXS). Shiba Inu (SHIB) Shiba Inu is a meme-related crypto project, the ecosystem includes ShibaSwap and Shibarium. Shibarium is a layer-2 blockchain solution that focuses on DeFi applications. In addition, the project has enabled NFTs and staking options, looking to add real-world uses and attract many users. Ripple (XRP) XRP has long been identified as one of the best cryptos in the world. Moreover, the XRP project works on a decentralized platform known as RippleNet. It is designed to enable real-time payments across the globe, providing a seamless experience for both individual users and financial institutions. Solana (SOL) Solana (SOL) provides a smart contract program, SOL will utilize a proof-of-stake. Notably, the Seeker, the web3 mobile launched by Solana Mobile has been signaled to feature a 6.36" display, with 128GB of storage and 8GB of RAM, "a longer battery" and two cameras. Dogecoin (DOGE) Dogecoin is a crypto meme-based project in 2013, providing the popular Shiba Inu "Doge" as its logo. Besides its history as a joke crypto project, Dogecoin has created a strong community and gained real uses over time. Besides, all these crypto projects have the potential to provide 2000% gains for crypto investors in the next five months. Tron (TRX) TRON is a decentralized, blockchain-based operating system with smart contract functionality, proof-of-stake principles as its consensus algorithm, and a cryptocurrency native to the system, known as Tronix. Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities. Rexas Token Builder: It is normally used to tokenize their real-world assets and commodities. To make it easy for individuals to get digital ownership and offer access to the global market. Rexas Launchpad: This feature helps the asset owners raise funds for their tokenized assets, offering liquidity and new investment options for the crypto users. Rexas Estate: The project's one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins. Rexas Finance began the presale of the

native token RXS on September 8, 2024. The total supply of RXS tokens is 1 billion. Rexas project has raised over \$1,750K until now, with 60% of the third stage of presale over. This event is important for the platform as it allows early investors to engage in what might turn into a revolutionary solution for RWA tokenization. Rexas Finance's \$1M Giveaway is live, offering a huge chance for early adopters to join the project's growth. With a current token price of \$0.05 and a projected listing price of \$0.20, the potential for a 400% increase indicates a good opportunity for investors. About Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- Memecoins surge as market recovers, with significant trading volume increases. - Popcat and Mog Coin experience remarkable price gains and bullish momentum. The cryptocurrency market is experiencing a bullish revival after a brief downturn, with the overall market up 2% and trading volume surging by 62%. Bitcoin, the leading cryptocurrency, has increased by 2%, while Ethereum has risen by 1.2%. Currently, the total volume in DeFi stands at \$3.19 billion, accounting for 5.60% of the total crypto market's 24-hour volume. In the stablecoin sector, the volume is \$50.74 billion, representing a substantial 88.89% of the overall crypto market's 24-hour trading volume. Bitcoin's dominance is currently at 56.88%, marking a slight increase of 0.05% over the day. Despite the broader market's fluctuations, the memecoin sector has garnered renewed attention, with tokens in this space reaching new highs after a prolonged period of stagnation. Popcat (POPCAT) Popcat has seen a remarkable 15% increase in the past 24 hours, currently trading at \$1.44. During this period, trading volume skyrocketed by 124%. POPCAT recently hit an all-time high of \$1.48, just one hour ago, with trading fluctuations between \$1.25 and \$1.48 today. Over the past month, POPCAT has surged by 180%. The 9-day Exponential Moving Average (EMA) stands at \$1.17, while the daily Relative Strength Index (RSI) is approaching oversold territory at 80. Analysts suggest that if bullish momentum continues, POPCAT could reach \$1.65; however, sustained bearish pressure might drive it down to \$1.06. Pepe (PEPE) Pepe has experienced an 11% increase over the last 24 hours, currently trading at \$0.00001035. Despite some price drops, trading volume rose by 118%. PEPE reached a five-day high of \$0.00001079, fluctuating between \$0.00000931 and \$0.00001075 today. Over the past month, PEPE has increased by 52%. The 9-day EMA is at \$0.00000975, and the daily RSI is nearing overbought conditions at 60. Analysts predict that if bullish momentum persists, PEPE could rise to \$0.00001194, while a bearish scenario could see it drop to \$0.00000824. Mog Coin (MOG) Mog Coin has seen a significant 18% surge in the past 24 hours, currently trading at \$0.000001697, with an impressive 141% increase in trading volume. It reached a six-day high of \$0.000001786, fluctuating between \$0.00000142 and \$0.00000177 today. Over the past month, MOG has increased by 114%. The 9-day EMA is at \$0.000001687, and the daily RSI is at 63, indicating it is nearing overbought conditions. If bullish momentum continues, MOG could reach \$0.000001979, while bearish pressure could push it down to \$0.000001161. Market Trends In a notable development, large Dogecoin holders accumulated 2.07 billion DOGE last week, marking the highest accumulation since January of this year. Additionally, Doge Wifhat has hit a three-month high of \$2.71, with a 15% surge in the past 24 hours. Highlighted News Of The Day Metaplanet Boosts Bitcoin Holdings with \$1 Billion Investment

The cryptocurrency market is often associated with high risks due to the promise it bears to reap vast returns within a short period, with some coins such as Shiba Inu (SHIB) and Floki Inu (FLOKI) previously reaping tremendous rewards to their very early investors. However, new contenders from emerging Rexas Finance (RXS) are coming up with other useful utilities and value additions to the ever-crowded field of cryptocurrencies. For those who would want to invest for better returns in a few months, these three coins could provide 10x returns and more. Let's find out the reasons why. Shiba Inu (SHIB): The Meme Coin with Deflationary Potential Though your chances of becoming a millionaire overnight like some early investors were in 2021 when Shiba Inu exploded over 50,000,000% within a month, the possibility is still there. At the moment, SHIB has a price of \$0.000015, and while these days of out-of-body experiences may seem over this was arguably one of the most popular and commonly possessed meme coins ever. However, Shibarium stands to be the way forward for the token as investors stand to benefit more from its L2 solution with the addition of a fast and efficient layer to the ecosystem. Shibarium's burn system is perhaps the most notable attribute of the platform, whose intent is to lower SHIB's huge circulating supply, pegged at 589 trillion tokens. All transactions made on Shibarium include a part of SHIB that is remotely burnt, creating a level of deflationary pressure on the token. More supply curbs could bring upward price pressure if demand is strong enough. This is essential because, without a serious cut on the supply, there is no way that people are going to be able to realistically fantasize over SHIB attaining \$1 or even about \$0.01. However, the launch of Shibarium and its deflationary model regulate supply to spur further growth for SHIB in the next bull run. In addition, SHIB has launched a DeFi platform "ShibaSwap", and continues development in the direction of the metaverse and NFTs, thus increasing the token utility as well. It's clear that there is no chance of SHIB reaching \$1 very soon, but it is reasonable to expect growth of about 500%, which theoretically brings the price closer to \$0.00008. This would be encouraging for some investors aiming for medium-term returns. Floki Inu (FLOKI): Utility Token Evolution from Meme Coin Floki Inu (FLOKI) is a platform that suffered some design glitches as it was released during the period of the Dogecoin and Shiba Inu craze. Yet, now it is so developed that it can claim some utility in a manner that it never did before. Presently offered at \$0.000152, Floki has been creating an ecosystem

comprising a play-to-earn gaming solution, strategic collaboration with some of the sports giants, and the recent movement containing the launch of GraFun, a meme coin exchange on the BNB chain. What makes Floki stand out from other collectors' coins is that it emphasizes the utility requirement and the growth of its ecosystem supported by its holders. For instance, GraFun has an advanced bonding curve structure which enables new memecoins in the platform to have lesser volatility in their price at launch. What's more, the cultivation of partnerships with sports and e-sports teams expands the scope of the audience beyond just crypto investors. Traders and experts are confident and positive regarding the Floki price forecast. Some heads are even saying the price can multiply by 1,800% or more in the coming months with the return of the larger cryptocurrency bull run. This would take Floki further, toward \$0.00018, its historical highest price and other ecosystems' development could even take it beyond that. The increasing use cases of Floki as a DeFi and NFT platform as well as its marketing efforts, position Floki as a candidate for price appreciation.

**Rexas Finance (RXS): A New Era in Real-World Asset Tokenization**

Rexas Finance (RXS) looks like an uncompiled project having great potential in the crypto world. This project seeks to promote one of the hot segments of RWA (real-world assets) tokenization. In contrast to meme coins dynamic SHIB and FLOKI, Rexas Finance seeks to penetrate the market by introducing the tokenization of high-end assets including real estate, artworks, commodities, etc. There is a growing number of both retail and institutional investors who are fascinated by this phenomenon which concerns asset liquidity, transparency, and availability. At its presale, Rexas Finance is selling at \$0.05 and is expected to list on exchanges at \$0.20 which could potentially result in early investors earning a 400 percent return right at the start. Besides, the forecast issued for RXS indicates a high long-term growth potential wherein its pegged value could range from \$1 to \$2 by 2025 depending on how successful the tokenization model is. Rexas Finance has already attracted more than \$2 million in presale showing positive expectations for the prospects of the project evolution. Rexas Finance is not a standard hype speculative token; it is rather useful as it allows investors to invest in a fraction of the traditionally illiquid assets. This rectifies a big gap within this space and permits the conventional management of assets to more people. Additional features such as Rexas Launchpad, GenAI, and the DeFi capabilities of the network make the project even more intriguing as it is a complete project with promising prospects. Conclusion This means that each one of these tokens has and will offer its potential and risks depending on your investment objectives. On the one hand, SHIB and FLOKI parade after dense speculative community allocation while RXS has focused on utilizing blockchain technology in addressing real issues. As the next bull run approaches and expected returns of 10x within this period, any investor eyeing such levels of returns within this period should watch out for these three projects as they progress. As always, it's important to do proper research and weigh the risks involved in any kind of investment. The volatility in the cryptocurrency market can be quite high, but in case you are willing to take the plunge, considerable returns can be made with SHIB, FLOKI, and RXS. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance>

- Market performance in the future is highly dependent on central bank policy actions and forthcoming economic data. - In September 2024, the value of all on-chain Real-World Assets (RWAs) surpassed \$12 billion. The total market cap of the cryptocurrency market increased by 8.0% in September 2024, propelled by positive global macroeconomic trends as per the latest report by Binance Research. Market optimism was fueled by favorable U.S. job market statistics and the Federal Reserve's decision to reduce the federal funds rate by 50 basis points to a range of 4.75% to 5%. The crypto market received a boost as well as major financial markets rallied due to these macroeconomic factors. Market performance in the future is highly dependent on central bank policy actions and forthcoming economic data.

**Wrapped Bitcoin (wBTC) Maintains Strong Market Presence**

Weekly transactions of wrapped Bitcoin (wBTC) hit new records recently, demonstrating the segment's continued dominance. There are more than 20 other competitors in the market, yet it still manages to control more than 65% of the overall share. Disagreement has arisen regarding wBTC's new custody model, which is characterized by a "multi-jurisdictional and multi-institutional" approach. The established liquidity and user inertia of wBTC have allowed it to retain a prominent place in the market, despite the fact that some users have voiced worries about trust and transparency. The rivalry is growing, however, as Coinbase's cbBTC aims to take a portion of the wBTC market. Ethereum (ETH) Issuance and "Ultrasound Money" Status In September 2024, the issuance rate of Ethereum hit a two-year high, reaching an annualized rate of around 0.74%. Importantly, this change further distances Ethereum from its "Ultrasound Money" storyline, which suggests deflationary traits. The rising popularity of Layer 2 (L2) solutions has eaten into mainnet activity, which has led to a decrease in network activity and a rise in ETH issuance. Broader market circumstances have also played a role. Growth in Real-World Assets (RWAs) In September 2024, the value of all on-chain Real-World Assets (RWAs) surpassed \$12 billion (not including the stablecoin market, which is at \$175 billion). This was an all-time high. With a total value of around US\$9.1 billion, or over 70% of the RWA market, private credit is by far the most important factor. "Figure," a fintech startup that provides equity-backed lines of credit, is largely responsible for this. From a starting point of \$769 million in 2024 to a peak of nearly \$2.2 billion in September, tokenized treasuries likewise saw tremendous development. Cryptocurrency Hacks in 2024 Despite a steady drop in hacking occurrences since 2021, the total value lost to cryptocurrency attacks remained at US\$1.3 billion as of September 2024. There has been an uptick in hacking, but the industry has taken precautions by implementing stricter security measures. Both DMM Bitcoin and WazirX, two centralized exchanges, lost around US\$35 million and US\$235 million,

respectively, in the biggest hacks of 2024. Although the industry has taken steps to improve security, investors should still make sure their crypto assets are well-managed and stored securely, particularly when the market is volatile. Performance of Leading Cryptocurrencies Avalanche (AVAX) had the most monthly increase of any cryptocurrency in September 2024, at 20.1%. The unveiling of the ÆRetro9000 grant program, which would provide developers with US\$40 million to enhance the Avalanche network in preparation for the much anticipated Avalanche9000 update, was a major factor in this. Social media activity and a tweet by Elon Musk that prompted conjecture contributed to Dogecoin's (DOGE) substantial gains, which surged 14.9%. Important changes in its ecosystem, such as the introduction of the JamboPhone 2 and the rising acceptance of Solana by large organizations like Citibank and Franklin Templeton, caused the price of Solana (SOL) to rise 12.0%. Following the Voltaire era's introduction of decentralized governance mechanisms the Chang Hard Fork and its subsequent debut, Cardano (ADA) gained 9.3 percent. Developments on the XRP Ledger, such as the unveiling of smart contract capabilities and work on Ripple's RLUSD stablecoin, also contributed to XRP's 9.1% gain. The market performance of XRP was further enhanced by the successful resolution of Ripple's litigation against the SEC. However, Binance Coin (BNB) increased 6.9% after the Bohr Hard Fork, which brought many enhancements to enhance network performance, while Bitcoin (BTC) gained 7.5% due to global macroeconomic trends. Conclusion Positive macroeconomic conditions propelled the cryptocurrency sector to a robust 8.0% increase in total market cap in September 2024. The continuous growth of the cryptocurrency ecosystem is shown in the increase of RWAs and the general drop in hacking occurrences, even if Wrapped Bitcoin and Ethereum continue to dominate the market. Market players should be alert, however, since the market dynamics are still impacted by future actions of central banks and global economic situations.

- DOGE faces key support levels amid rising exchange netflow and sell-offs. - Trading volume and Open Interest decline, signaling reduced market interest. Dogecoin (DOGE) is witnessing turbulent market conditions, despite a 5.48% price surge to \$0.1086 today. This comes after the coin hit a 14-day low of \$0.10108 yesterday. Over the past week, DOGE has declined by 12%, with market bears exerting pressure. Notably, trading volume fell by 9%, signaling a potential lack of sustained interest. Despite the downturn, 80% of traders remain bullish, according to market sentiment. In the last 24 hours, crypto whales purchased over 1 billion DOGE, valued at \$108.7 million, per analyst Ali. However, the influx of large transactions and increased exchange netflow, up by 135.2 million DOGE, has driven the price lower. This influx has resulted in substantial sell-offs, with 1.56 thousand large transactions recorded, suggesting continued bearish sentiment. Bitcoin (BTC), meanwhile, is experiencing similar volatility. Trading at \$61,164 with a 0.31% dip, it reached a 16-day low. Adding on to it, DOGE has been struggling to maintain bullish momentum. Also, data suggests this downturn may be linked to decreasing trader confidence, as well as volume spikes and increased exchange netflow. Moreover, Dogecoin's exchange netflow turned positive, indicating a large inflow of DOGE into exchanges. This excess supply likely contributed to the price decline. IntoTheBlock reported an inflow of 135.2 million DOGE last week, suggesting active selling by investors. Where is DOGE Headed? On the technical side, DOGE's daily chart suggests a bullish trend. The 9-day Exponential Moving Average (EMA) sits at \$0.11036, and the Relative Strength Index (RSI) stands at 48, indicating it might reach an oversold condition. Immediate resistance levels for BTC are set at \$0.13072 and \$0.14270, while downside risks could see it drop to \$0.09615, with support at \$0.08246. DOGE's ability to maintain its bullish momentum amid fluctuating trading activity and whale sell-offs will be key in the coming days. Traders and investors are closely watching for any signs of strength or potential reversals as the cryptocurrency navigates these pivotal resistance levels.

- Over 94% of Dotcom creditors support FTX's reorganization plan. - A confirmation hearing is scheduled for October 7, 2024, to finalize the reorganization. FTX's reorganization plan has gained overwhelming support, with a significant majority of Dotcom voting creditors approving it. According to the final report released by the Kroll Restructuring Administration, 94.48% of creditors who returned their ballots voted in favor of the proposal. This support marks a crucial step toward resolving FTX's bankruptcy. Moreover, it facilitates the redistribution of assets back to creditors. Estimates suggest that the recovery and distribution of assets will amount to between \$14.5 billion and \$16.3 billion. This figure covers various entities involved in the bankruptcy proceedings, including FTX Digital Markets. The reorganization plan also includes specific provisions for U.S.-based creditors. Notably, 89% of these creditors support the proposal. These creditors can expect to receive up to 118% of their claims, which provides a substantial return on their losses. Additionally, the plan outlines a repayment structure that includes interest payments of up to 9% for major creditors. These payments will be calculated from the start of Chapter 11 proceedings until distributions are complete. FTX's Reorganization: Creditor Support and Legal Hurdles The final confirmation hearing is scheduled for October 7, 2024. This hearing will be pivotal in finalizing the reorganization. If approved, the plan will allow creditors to begin recovering their assets. While the process moves forward, FTX continues to face legal challenges. Ongoing litigation involves its former executives, including Sam Bankman-Fried. His involvement in the company's collapse has led to criminal charges and other legal hurdles. This overwhelming support reflects a positive outlook among creditors. The reorganization plan offers a clear path toward asset recovery. FTX's management remains optimistic about the plan's approval at the upcoming hearing. Overall, the plan is expected to restore confidence in the process. It also provides much-needed clarity for those affected by the bankruptcy. With such strong approval ratings, this restructuring could become a turning point in resolving one of the largest crypto bankruptcies in history. Highlighted Crypto News Today| Is Crypto Market Ready for These Uptober Token Unlocks?

- Moo Deng's price volatility highlights liquidity challenges in meme coin markets. - Major holders face risks when selling large amounts, impacting market stability. Moo Deng (MOODENG), a meme coin

inspired by Thailand's pygmy hippo star, has seen a dramatic rise and fall in recent days, stirring excitement and concern in the crypto market. After reaching a peak market cap of \$322.7 million on September 28, the token has plummeted 50% in just three days, with its price dropping to \$0.18. Amid this, news about an early investor in the coin has gained wide attention. Identified as "Trader Db3P," the investor turned an \$800 purchase into \$10 million at its peak. Despite the sharp decline, this whale continues to hold \$5 million worth of the token, even as its value drops by roughly \$1 million daily. The trader's large holdings highlight a common issue in the memecoin space: liquidity. With Moo Deng's market cap now at \$176.1 million, there is concern that any large-scale sell-off by major holders could trigger further value declines. Speculative Short-Term Trend? Memecoins like Moo Deng are notorious for their volatility, often propelled by speculative trading. The launch of Moo Deng on Solana-based platform Pump.fun coincided with a viral internet sensation—millions of views on the baby hippo that inspired the token. By mid-September, Moo Deng's value surged 597% in one week, leading the memecoin category. However, the token's rapid ascent mirrors earlier meme coins, such as Dogecoin and Shiba Inu, which faced similar market volatility. Despite recent losses, Moo Deng remains a significant player in the memecoin sector, currently trading at \$0.2371, with a 6% recovery over the past 24 hours. As traders continue to engage, the coin's trading volume hovers at \$190 million, reflecting sustained interest despite its inherent risks. This latest memecoin craze underscores both the allure and unpredictability of speculative assets in the crypto world. Highlighted News Of The Day Ripple Obtained In-Principle Approval From DFSA to Expand Operations in UAE

CryptoGames, a prominent online cryptocurrency casino, has recently expanded its roster of supported digital currencies by including Shiba Inu (SHIB), one of the fastest-growing cryptocurrencies in the market. This announcement marks a significant development for both the gaming platform and the SHIB community, as it opens up new avenues for entertainment and financial engagement within the rapidly evolving crypto space. What is Shiba Inu (SHIB)? Shiba Inu (SHIB) is a decentralized cryptocurrency that was created in August 2020 by an anonymous individual or group known as "Ryoshi." Initially branded as the "Dogecoin killer," SHIB gained massive popularity due to its meme-inspired origin, low transaction costs, and rapidly growing community. Unlike many cryptocurrencies, SHIB has a substantial supply of tokens, which allows for accessibility and inclusivity, making it attractive to a broad audience of crypto enthusiasts. Over the past few years, SHIB has evolved beyond its meme roots, establishing itself as a serious contender in the world of digital currencies. The Shiba Inu ecosystem now includes a decentralized exchange called ShibaSwap, and its developers continue to work on various projects to expand its use cases, including NFTs and blockchain-based games. The addition of SHIB to CryptoGames' list of supported currencies is a testament to the token's growing acceptance and utility in the online gaming world. How SHIB Integration Benefits Players The integration of Shiba Inu (SHIB) into CryptoGames offers several advantages for players. First and foremost, it provides SHIB holders with a new and exciting way to utilize their tokens. Players can now use SHIB to place bets, participate in contests, and enjoy the wide variety of games available on the platform. This not only enhances the utility of SHIB but also adds to the overall player experience by offering more flexibility in payment options. Furthermore, the low transaction fees associated with SHIB make it an attractive choice for online gaming. Players can deposit and withdraw SHIB with minimal costs, allowing them to focus on their gaming strategies without worrying about high fees eating into their bankrolls. The addition of SHIB also introduces the SHIB community to CryptoGames, potentially attracting new users to the platform and fostering a vibrant and diverse gaming environment. A Closer Look at CryptoGames CryptoGames, established in 2020, has quickly become a leading platform in the online cryptocurrency gaming space. Licensed and regulated by the Government of Curacao, the casino offers a secure and fair gaming experience, with all games being provably fair. CryptoGames currently features 10 in-house games, including Dice, Roulette, Blackjack, Lottery, Video Poker, Plinko, Minesweeper, and Keno, each offering unique gameplay and competitive house edges. One of the standout features of CryptoGames is its support for a wide range of cryptocurrencies. In addition to the newly added SHIB, players can bet with Bitcoin, Ethereum, Litecoin, Dogecoin, Solana, and several other major digital currencies. The platform also provides convenient features like "ChangeNow," which allows users to deposit over 50 different altcoins and convert them instantly to supported currencies. Additionally, the "Swapped" feature enables players to buy crypto directly with fiat currencies using popular payment methods like Google Pay and Apple Pay. CryptoGames also offers a variety of bonuses and incentives, including a faucet bonus for testing games, random vouchers, and daily and weekly challenges. The monthly wagering contest is another highlight, with rewards of up to \$500,000 USD (based on current crypto values) distributed among top players. For those seeking an enhanced experience, CryptoGames offers a VIP membership program. VIP members enjoy perks such as a lower house edge on dice games, priority betting, increased exchange limits, and access to exclusive chat rooms and vouchers. This program rewards the most dedicated players, making it a desirable goal for regular users. Conclusion The addition of Shiba Inu (SHIB) to CryptoGames is a strategic move that benefits both the casino and the SHIB community. It reflects CryptoGames' commitment to staying at the forefront of the crypto gaming industry by continuously expanding its offerings and embracing new trends. As more players explore the possibilities of using SHIB on the platform, CryptoGames is poised to further solidify its reputation as a premier destination for crypto-based entertainment. Whether you're a seasoned player or new to the world of crypto gaming, CryptoGames offers a dynamic and engaging experience that now includes the excitement of SHIB.

- Binance Pool launched merged mining for BEL with rewards in LTC, DOGE, and BEL. - BEL is not listed on Binance, and mining does not guarantee a future listing. Binance Pool has officially launched merged mining for Bellscoin (BEL), allowing miners to earn rewards in LTC, Dogecoin (DOGE), and BEL while mining Litecoin (LTC). The service went live on September 29, 2024, providing users with new opportunities to diversify their mining earnings. Miners must have a verified Binance account and

register with Binance Pool to start mining. While BEL is now included in Binance's merged mining offering, the token is not yet listed for trading on the exchange. The exchange has emphasized that the launch of the mining service does not guarantee a future listing of BEL. Additionally, BEL earnings are separate from those of LTC and DOGE, meaning users can receive rewards in all three cryptocurrencies without affecting each other. How Does Binance's Merged Mining for BEL Work? The merged mining feature operates under a PPLNS (Pay Per Last N Shares) payout model, which determines rewards based on the miner's contribution to the pool. Users can track their hashrate and earnings through the Binance Pool platform. BEL rewards require a configured payout address, and miners will not accumulate rewards if the payout address is missing. BEL, created by Dogecoin's developer Billy Markus, predates Dogecoin by eight days, adding a historical connection between the two cryptocurrencies. Binance also offers miners the chance to apply for VIP status if they meet certain hashrate thresholds, unlocking additional rewards. Cryptocurrency remains one of the most exciting and profitable ways of investing money. In 2024, more and more people think about how to get rich with the crypto market, from long positions to passive income creation. Whether you're a professional trader or just a beginner willing to enter this promising market, there are several ways to get rich with cryptocurrencies. In this article, we are reviewing 12 effective ways to increase passive income. Staking Crypto One of the most famous ways of gaining wealth in crypto space involves staking. In other words, staking is a process that permits crypto holders to receive reward means by digitally locking their assets and lending them to support blockchain network operations, including validation in several transactions. With time passing, for a product stakers are interested in, new tokens are rewarded, which makes this method an effective way to gain passive income. The tool is generally used with the networks under the Proof of Stake consensus mechanism. The longer you stake, the more rewards you accrue. For those seeking lower-risk opportunities in this ultra-volatile crypto world, staking does offer a fairly stable method to grow your digital holdings without the need for active trading. StakingBonus.com StakingBonus.com is a platform committed to assisting crypto investors in earning as much as possible with staking. It gives a complete comparison among various types of cryptocurrencies, where one can find the best returns and opportunities to grow wealth. In a few clicks on StakingBonus.com, users would be brought to several staking plans that have different lock-up periods with their APYs attached and the condition to stake a particular coin. The intuitive web platform has been fully optimized so that staking will indeed be seamless—either for the fledgling crypto investor or an experienced one. Signup Process on StakingBonus To get started on StakingBonus.com, one is required to create an account, which is quite easy and less time-consuming. - Go to the Website: Once on the homepage, click the "Sign Up" button. - Create an account with your basic information, such as email address, and set a secure password. - Activate Account: Verify your email to conclude your sign-up. - Stake Options: After you log in, browse the available staking plans, compare the rewards, and get started on your journey of building your wealth. Staking Plans Available Bitcoin (BTC): The most popular cryptocurrency in the world provides stable long-term returns. BTC Plan: \$100 for 2 days and earn \$2 daily. Litecoin (LTC): Litecoin offers fast transaction time and low transaction fees, making this coin the best choice for those seeking efficiency. LTC Plan: \$500 for 3 days and earn \$6 daily. ETH: Ethereum's migration to Proof of Stake makes staking on ETH one of the best methods to contribute to the network and get your reward in the process. ETH Plan: \$1200 for 7 days and earn \$16 daily. Bitcoin Cash: This is, like Bitcoin, highly scalable, which renders the process of staking with it very secure for earning passively. BCH Plan: \$3000 for 14 days and earn \$42 daily. Dogecoin: Staking DOGE on StakingBonus will return some quite surprisingly good figures. DOGE Plan: \$6000 for 15 days and earn \$90 daily. XRP: Attributing to a number of cross-border transactions at pace, the staking of XRP ensures absolute coherence in return. XRP Plan: \$10,000 for 20 days and earn \$160 daily. TRON: A content-related blockchain, staking of TRX gives some of the highest returns on the platform. TRON Plan: \$20,000 for 30 days and earn \$340 daily. Tether: This is a stablecoin pegged against the U.S. dollar. Staking in USDT provides for non-risky return, hence ideal for investors who seek stability. USDT Plan: \$50,000 for 45 days and earn \$900 daily. 2. Cryptocurrency Trading Probably the most straightforward way of increasing wealth is buying and selling cryptocurrency on exchanges. Traders will take full advantage of the market ups and downs, usually buying when prices are low and selling at higher prices. Crypto trading, if done well, may bring high returns. 3. Yield Farming Yield farming is a way of reaping returns by lending or giving liquidity to DeFi protocols. Investors can lend their crypto or give liquidity to liquidity pools and collect interest or token rewards in return. 4. Mining Crypto Crypto mining involves the solution of complex algorithms that contribute to validating the transaction and securing blockchain networks. As such, this activity is rewarded with cryptocurrency for the miners. While it requires special hardware and considerable amounts of electricity in order to execute, if done for the right coins, such as Bitcoin, it can be a pretty lucrative venture. 5. Crypto Lending Crypto-lending platforms allow users to lend their digital assets to borrowers. In return, they get interested in it. Other platforms, such as BlockFi and Nexo, can generate yield on your crypto without having to sell your holdings. 6. Initial Coin Offerings (ICOs) This covers a new cryptocurrency project before it enters the larger exchanges. Investors with such projects in their ICO stages may be able to purchase tokens at a low price and earn high returns if the project should turn out to be one of those successful stories. 7. Airdrops Airdrop essentially means that you get free tokens from some cryptocurrency projects to promote their cryptocurrency or sometimes because you hold some other tokens. It's basically free money for using and participating in specific blockchain ecosystems. 8. Running a Masternode A masternode is a kind of server with special responsibilities, such as transaction validation or increasing the privacy of the blockchain it serves. Masternode setup requires a quite high investment from its very beginning but pays regular rewards for such services provided. 9. Non-Fungible Tokens (NFTs) The popularity of NFTs has increased, especially within the sphere of art and collectibles. Investors in buying and selling rare or popular NFTs can make a really

huge profit. The key to success here is ensuring that you are one of the early spotters of an NFT that is going to perform in the markets. 10. Crypto Arbitrage Arbitrage means buying cryptocurrency on one exchange and selling it on another with a view to taking advantage of the price difference. This tends to pay well in fast-moving and sometimes fragmented crypto markets. 11. Referral Programs Most of the crypto platforms give referral programs, wherein if anybody refers to new people coming onto their platform. The users are rewarded for bringing new people onto the platform. Users will be able to share referral links with friends or on social media to collect a certain amount in bonus tokens or another form of reward. 12. HODLing (Long-Term Investment) HODL, in simple terms, means holding the cryptocurrencies for a long period, whatever may be the short-term market fluctuation. Investors believe that over time, the value will surely go up. The strategy demands patience and finds its basis in belief in future growth. It is one of the most popular strategies among Bitcoin and other top coins. HODLing minimizes emotional trading and hence presents ideal cases among those interested in long-term gains. Conclusion A number of paths to wealth exist in the world of cryptocurrency in 2024: staking, trading, and participating in various innovative DeFi strategies. StakingBonus.com covers simplifications in staking that let any user get the maximum from his passive income. Knowing the pros and cons of each method, one will confidently navigate in diversification of strategy towards financial success in the crypto market. When creating a deposit, be sure to pay attention to the term of the deposit (number of days) and the payout schedule. - How long will it take to withdraw my profit to my wallet? Yes, All withdrawals on our system are instant.

- PEPE hit \$0.00001051 after marking an increase of 15.47% in the last 24 hours. - Arthur Hayes endorsed PEPE and bought 24.39B PEPE tokens. The crypto market has witnessed brief bullish turns, with the market cap recording a 1.65% spike. After a 15.47% gain, PEPE chose a bullish rally for the day, breaking the previous resistance levels. The meme coin opened the trading day at \$0.000009121 and eventually led to break the resistance and climbed to a high of \$0.00001072. Besides, the asset's daily trading volume has increased by over 41% to \$1.29 billion. At the time of writing, the asset was trading at \$0.00001051, according to CMC data. Notably, during the early hours, Arthur Hayes, the founder of BitMEX, revealed his new endorsement for meme coins. He mentioned three tokens in particular: Iggy Azalea's MOTHER, cat-themed MOG, and PEPE. According to the on-chain data, over the last five hours, Hayes deposited 1 million USDC to Binance and withdrew 24.39 billion PEPE, worth \$252K to his wallet for the first time. Will PEPE Sustain at the Current Level? PEPE has shown notable price momentum over the last month by gaining over 31.80%. The upward trend persists till the last seven days, with a 25.75% increase. At the beginning of the week, the asset was trading at \$0.000008321. In the following days, the token's price fluctuated and climbed to a high of \$0.000008743. If PEPE's price could fall to \$0.000009937, it will likely take the price to the downside and drop further to \$0.000009303. On the other hand, if the token manages to climb and break above the current level, it might push the token toward the major resistance at \$0.00001098. Notably, the current price momentum of PEPE reveals that it has entered the overbought zone in the market, as indicated by the RSI standing at 86.61. Besides, the daily frame of the asset suggests the bullish trend as the short-term 9-day MA and the long-term 21-day MA found below the current price. Highlighted Crypto News Dogecoin (DOGE) Climbs to \$0.12 as Bulls Seek a Continued Rally

- NEIRO whale activity has surged, with notable purchases. - Wintermute holds 5.3% of the total supply, adding to market stability. Neiro Ethereum (\$NEIRO) is currently in an accumulation phase, with significant whale activity noted over the past week. According to on-chain data, several key whales have increased their holdings, adding to the growing momentum behind the asset. Whale 0x6ab, for example, accumulated 17.7 million NEIRO at an average price of \$0.086. This buying spree indicates potential bullish sentiment, especially with \$NEIRO now priced at \$0.0915, reflecting a 2.12% gain in the last 24 hours. Trading volume, however, shows mixed signals. Over the last 24 hours, the volume fell by 2.96%, reaching \$28.37 million, which translates to a 30.75% volume-to-market cap ratio. This drop in volume contrasts with the rising market cap of \$92.27 million. Despite this, the consistent whale purchases suggest a strategic build-up, possibly in anticipation of a larger market move. Could Whale Activity and Neutral RSI Propel \$NEIRO Higher? One interesting aspect of \$NEIRO's performance is the involvement of well-known entities like Wintermute. As a major market maker, Wintermute holds 52.97 million NEIRO tokens, about 5.3% of the total supply. This large stake, coupled with the actions of other whales, may have a stabilizing effect on the asset's price in the near term. Looking at the technical indicators, \$NEIRO's price movements in the last 7 days suggest some volatility, with highs reaching \$0.098 and lows close to \$0.086. The Relative Strength Index (RSI) is trending toward neutral, suggesting the asset is neither overbought nor oversold. This neutral zone leaves room for upward movement if buying pressure continues. As Binance considers new listings, the potential for \$NEIRO to be added to their spot market grows. With an expanding decentralized base and increasing market cap, \$NEIRO is positioned for broader visibility. Whether this accumulation phase will lead to a price breakout depends on sustained buying interest and rising trading volume. Highlighted Crypto News Today Dogecoin (DOGE) Climbs to \$0.12 as Bulls Seek a Continued Rally

- POPCAT becomes Solana's first memecoin to hit \$1 billion market cap. - Memecoins like DOGE, SHIB, and PEPE surged 3%-15% in 24 hours. The cryptocurrency market, fraught with regulatory battles over ETF approvals, high-profile founder arrests, and large-scale hacks, has been in a state of turbulence. As bears held their grip, price rallies became a rarity. However, anticipating the beginning of October, dubbed "Uptober," has brought a breath of fresh air. The global market cap is up 2%, trading volume has surged by 5%, and Bitcoin has reached a 29-day high. Amidst this resurgence, memecoins have also captured attention. Major tokens like Dogecoin (DOGE), Shiba Inu (SHIB), Pepe (PEPE), DogWifhat (WIF), and Bonk (BONK) saw price surges ranging from 3% to 15% in the past 24 hours. However, the spotlight has shifted to POPCAT, the first Solana-based memecoin to hit a \$1 billion market cap, achieving an all-time high (ATH) of \$1.07 after a 13% rise in the last 24 hours. Trading volume for POPCAT also jumped by 31%, with the token gaining 44% over the past week. Moreover, analysts report that the momentum suggests further gains for POPCAT, with projections of it potentially reaching \$2 by year-end. This would result in a 100% gain if market conditions remain favourable. Additionally, POPCAT's open interest has reached a new ATH, and funding rates are positive, reinforcing a bullish outlook. When Will POPCAT Hit \$2? Technically, POPCAT remains in an upward trend. The 9-day Exponential Moving Average (EMA) sits at \$0.9055, while the Relative Strength Index (RSI) at 63 indicates that it is approaching an overbought territory. Key resistance levels are anticipated at \$1.20 and \$1.71, with potential support around \$0.8703. As traders closely watch its movement, POPCAT's ability to break through these critical levels will determine whether it can sustain its bullish momentum or face a possible pullback. Now picture that it is the time for the ICO of the Solana (SOL) and the price was at \$0.22. Today the prices on the plate of the Solana bread at a whopping \$147.75. Quite a growth of 67,059%. Now what if I said that a similar situation is presented to you with Rexas Finance (RXS), the low-cap crypto currently trading at just \$0.05 at its phase three presale? Experts are predicting that this coin will experience a steep 25x jump once it is launched in the early parts of the year 2025. If you are searching for a crypto that will reach new heights, Rexas Finance may be the precious stone you have been looking for. Why Rexas Finance (RXS) Will Come Next After Solana (SOL) Rexas Finance makes it possible for everyone interested in real estate investment to go global and buy real estate of any type in various countries. It is even better in that you do not have to go for the entirety of the property. You can take a lesser share of ownership of the property depending on your investment threshold. This paves the way for all people be it ordinary would-be investors or real estate professionals to play in the real estate market. There's no need to be wealthy or be part of an elite group to access profitable property markets anymore. Rexas Finance lets everyone buy real estate development projects from anywhere in the world and it's as convenient as online shopping. The Price and Potential of Rexas Finance (RXS) As of now, the Rexas Finance (RXS) cryptocurrency is at the presale stage 3, which means, it sells for \$0.05. As soon as the value is listed to the higher exchanges at \$0.20 at the beginning of 2025, the analysts predict a rise of 25x in price which means approximately \$1 or above would be the normal pricing post-launch. If you had invested \$100 in the Solana blockchain at \$0.22, you would today be enjoying a return of over \$67,000. So, with similar images, how could a Rexas Finance investment on the same day in the future look like? One such image could now pay its investors handsomely in the future. Real Estate Investment from the Comfort of Your Home What Rexas Finance is doing interestingly is to simplify the whole process of investing in real estate around the world. One no longer has to worry about flying to different parts of the globe, confronting foreign legal regimes and systems, as well as the need to have huge capital for the purchase of real estate. With Rexas, you can purchase a fraction of a property, which can be anywhere—the latest apartment in New York City or a house on a tropical island. And the best part is when one doesn't have to purchase the whole property. Even if you have \$500 to invest, that is okay. Rexas Finance allows you to invest in real estate by having a fraction of property which makes it possible to invest in properties in different areas and types. Conclusion: The Time to Act Is Now Rexas Finance (RXS) is a fantastic opportunity for people who have missed the early days of projects such as Solana. Considering these potential benefits and the uncanny way of raising funds for real estate from any nation of the world, Rexas Finance is set to usher in a new dimension in the world of property investment through the use of cryptocurrency. Then, add in a chance to scoop \$50,000 in the USDT contest, and you have one of the best avenues for altcoin investment in recent times. Avoid the urge to procrastinate until RXS achieves \$1 level, instead take action right now while the price level is at \$0.05 and establish yourself in this potential new venture. With or without experience in cryptocurrency Rexas Finance provides a different way for one to invest in the growing real estate sector of a global economy. Hurry up and do it now, and who could ever tell? In a couple of years, you might be patting yourself on the back for being in it at the right time, just as many did when they joined Solana when it was an ICO. - Individuals to launch a memecoin must take note of several necessary actions before the project launch. - The memecoin sector has shown a surge in new project launches in the past months. The revolutionary introduction of Decentralization has equipped creators with enhanced tools for development and revenue generation. In recent times, numerous enthusiasts have turned to exploring memecoins to unleash their creative skills. However, DeFi has expanded beyond utility tokens and has become inclusive through memecoins, allowing any creative individual to contribute to the sector. The past few months have seen widespread incorporation of memecoins within the cryptocurrency sector.

Let's unravel the mystery behind this comical digital asset by understanding how to launch memecoins, and the facets surrounding it. What was the May Memecoin Mania? While memecoins have always been on the market, in May 2024 they took over the crypto spotlight. During that time, multitudes of crypto community members released meme tokens and the market saw huge inflows in new tokens. Additionally, prominent celebrities began launching their own meme tokens. Initiated by popular reality TV personality, Caitlyn Jenner, the memecoin frenzy saw endorsements from popular singers and celebrities across different platforms. Notably, Caitlyn Jenner launched her memecoin JENNER on May 28. Following her, other celebrities began shelling memecoins. Prominent instances include Iggy Azalea's MOTHER token and Andrew Tate's DADDY token dispute. Apart from this, heavyweight champion Hulk Hogan was also involved in the memecoin shellings. Most of the aforementioned celebrities proceeded to launch their memecoins on Solana's pump.fun platform. The platform enabled individuals to release their tokens in a simplified manner. However, the May month also saw several rug-pull scams with celebrity tokens. This caused community members to abstain from celebrity-launched memecoins as they suspected scams associated with the tokens. Furthermore, a new category of tokens called the PolitiFi memecoins have also sprung up reflecting the current US political landscape. PolitiFi memecoins have inspired ways to represent societal circumstances within the cryptocurrency sector which can be expected for implementation in the coming months.

### What is the Memecoin Launch Checklist?

A memecoin, similar to any creation, first begins with an idea. When launching your token, it requires a concept that stands as core to the memecoin project. Following this, the individual can begin to design their token, specifying and customizing it according to the concept. The memecoin concept and design must be optimized in order to make it appealing. Secondly, the creator needs to choose a particular blockchain on which you plan to launch your token. Several blockchains, presently, provide platforms acting as memecoin launchpads. Ethereum, the aforementioned Solana, Polygon, Binance Smartchain, and Tron Network are some of them. The Operational Checklist – Smart Contracts, White Paper & Tokenomics Every memecoin requires a smart contract for deployment and transactions within the blockchain. While other steps in launching a memecoin may not require full-fledged coding, a smart contract will need to be coded. In such a case, individuals can employ blockchain developers to prepare a smart contract and get it audited. Moreover, when you launch a memecoin or any token, it is customary to write a White paper. The White Paper is a documentation outlining all the important facets of your memecoin project. When a project includes a white paper it communicates authenticity and makes it more professional. Thirdly, and importantly, TokenDistribution or Tokenomics – a memecoin or any token's crucial step before launch, is determining its tokenomics. Tokenomics of a memecoin informs the crypto community about the project's token allocation. Additionally, the distribution entails your marketing strategies and draws market attention to your memecoin project.

### Enhance your Memecoin with a Burn Mechanism

A burn mechanism destroys tokens permanently from supply thus maintaining a limited supply. This ensures a limited token supply thus creating scarcity in the market which helps maintain price levels. One of the leading Dog-based memecoin Shiba Inu (SHIB), is known for its burn mechanism. Additionally, other memecoins such as PEPE and BONK also have a burn mechanism instilled to alter the supply of tokens. On the other hand, memecoins also have a minting option where new tokens can be minted to be added to circulation.

### How Do You Sell Your Memecoin?

A memecoin launch isn't limited to designing and operational aspects. A key facet of a memecoin launch is marketing and listing the token on exchanges. In order for your token to succeed in the crypto market, you must grab investors' attention. This requires an optimized marketing strategy that begins with the token idea itself. Additionally, when designing your token it is necessary to keep in line with the current trends that will garner attention. For instance, DOGE, when it was first launched, was inspired by the trending Kabuso dog and saw massive interest from the crypto community. Secondly, a community is a crucial element for any memecoin. When deploying your token, initiating and creating an active community will play a prominent role in the success of your memecoin. Additionally, when your memecoin includes a community it will aid in further project expansions both in terms of blockchain and token utility. Furthermore, a second facet within marketing is getting your coin listed in different crypto exchanges. Every exchange has a particular set of regulations that the cryptocurrency must adhere to for being listed. Some of the prominent crypto exchanges to keep in mind include – Binance, Raydium, KuCoin, Coinbase, and Uniswap. Once listed the token goes live for investors to begin trading, officially launching your memecoin on the cryptocurrency market.

### Challenges that You Might Face When Launching a Memecoin

During the May memecoin frenzy, as aforementioned, several rug-pull scams occurred. This has caused a distrust among community members towards newly launched tokens. This has been one of the major challenges that memecoin creators have faced in recent times. Additionally, another crucial issue might be the memecoin sector having lost its spotlight over the past two months. Towards the end of June, the community began speculating whether the memecoin season had come to an end. This was due to the reduction in performance as suggested by Dune Analytics data in May and June. Other challenges might be encountered in technical fronts and garnering attention from the community. Creators often tend to resolve these challenges by adopting required strategies at the time of the problem.

### Security & Regulatory Awareness

Finally, one important aspect that you need to keep in mind is your memecoin's security. Several memecoin wallets and custody hacks have been reported in the past months. Thus when creating a token, the individual must formulate contingency plans and enhance security measures. Furthermore, once you create a token you must hold a strong knowledge about regulatory compliance to avoid any scrutiny from regional and national regulatory bodies such as the US SEC. Moreover, compliance with regulations also adds to the authenticity of the memecoin project.

### Conclusion

In the present cryptocurrency landscape memecoins hold a significant position as digital assets. Apart from witnessing an influx of investors, it has also seen a surge in individuals launching their tokens. Thus, launching a memecoin holds immense scope in current circumstances amid an expanding and diversifying crypto ecosystem.

**Disclaimer:** The above article curated is for informational and educational purposes only, and is not to be construed as investment advice. TheNewsCrypto advises readers to conduct their own research before investing or making any decisions.

Crypto has grown into a lucrative space in which investors seek to create new avenues of return and wealth. From staking to trading, the manners in which one can make out-of-this-world returns with crypto are endless. Going into 2024, this is going to be a great avenue to make one wealthy with digital assets, which make it easier to earn rewards and find profitable strategies. In this article we are going to review, step by step, eight ways to get rich through cryptocurrency in 2024.

1. Staking  
Crypto Probably the most reliable form of passive income with cryptocurrency is crypto-staking. All you really have to do is lock up your crypto and contribute to blockchain operations. This way, you will get some staking rewards afterward. StakingBonus.com is designed to help users discover and compare the best crypto staking opportunities. Detailed analysis of staking plans, rewards, and platforms that will help maximize passive income is provided on the website. Since it is focused on simplifying staking, this could be a real game-changer, whether you are a beginning crypto investor or an experienced one.

Staking Plans Available

Bitcoin (BTC): The most popular cryptocurrency in the world provides stable long-term returns. BTC Plan: \$100 for 2 days and earn \$2 daily.

Litecoin (LTC): Litecoin offers fast transaction time and low transaction fees, making this coin the best choice for those seeking efficiency. LTC Plan: \$200 for 4 days and earn \$2 daily.

ETH: Ethereum's migration to Proof of Stake makes staking on ETH one of the best methods to contribute to the network and get your reward in the process. ETH Plan: \$400 for 6 days and earn \$2 daily.

Bitcoin Cash: This is, like Bitcoin, highly scalable, which renders the process of staking with it very secure for earning passively. BCH Plan: \$500 for 8 days and earn \$2 daily.

Dogecoin: Staking DOGE on StakingBonus will return some quite surprisingly good figures. DOGE Plan: \$1200 for 7 days and earn \$15 daily.

XRP: Attributing to a number of cross-border transactions at pace, the staking of XRP ensures absolute coherence in return. XRP Plan: \$3000 for 7 days and earn \$39 daily.

TRON: A content-related blockchain, staking of TRX gives some of the highest returns on the platform. TRON Plan: \$6000 for 14 days and earn \$81 daily.

Tether: This is a stablecoin pegged against the U.S. dollar. Staking in USDT provides for non-risky return, hence ideal for investors who seek stability. USDT Plan: \$10,000 for 15 days and earn \$140 daily.

How to Get Started with Staking on StakingBonus  
To stake with StakingBonus, one just has to create an account through their website. The sign-up process is very easy and requires only basic information and wallet integrations to start staking. StakingBonus maintains a handpicked list of the best stakings for Ethereum, Polkadot, Cardano, and many more. It will compare staking yield, lock-up time, and other factors that could influence your decision when choosing a staking plan for your goals.

2. Staking Referral Programs  
Referral programs are the common feature of many staking platforms. you can receive additional rewards by inviting others to join. Thus, when a user uses your referral link to register on that website and starts staking, then you earn certain rewards in the form of a definite percentage.

3. Crypto Trading  
Crypto trading is the process of selling and buying digital assets with the help of exchanges to make use of favorable market fluctuations. Staking platforms collaborates with several exchanges and provides information about, and reviews of, websites offering the best conditions of trading.

4. HODLing (Long-Term Investment)  
HODLing is an acronym, which was originally a typo of "hold", that became a strategy and means holding onto cryptocurrency for the long haul, hoping over time, it increases in value. This will be suitable for people who believe in the future growth of cryptographically secured virtual currencies such as Bitcoin and Ethereum.

5. Yield Farming and Liquidity Provision  
Yield farming is the feature to supply cryptocurrency liquidity to DeFi protocols for rewards. Lock your cryptocurrency into liquidity pools and help in facilitating the trades within decentralized exchanges; earn some uncalculated portion of transaction fees.

6. Crypto Mining  
Crypto mining is the process of using computing power to validate cryptocurrency transactions on proof-of-work blockchains, such as Bitcoin. Miners are incentivized with freshly minted coins that constantly pump new cryptocurrency into the market.

7. Earning from Airdrops  
Airdrops are promotional events where new or emerging cryptocurrencies distribute free tokens to users. By holding specific cryptocurrencies or joining certain platforms, you can receive free tokens that may increase in value over time.

8. Initial Coin Offerings (ICOs)  
An ICO is basically a fundraising event where a new cryptocurrency project sells its tokens to early investors before they hit the public market. If the project happens to be successful, such early investors may return home with manifold returns.

Conclusion:  
By the year 2024, cryptocurrency has it all: staking, trading, farming yields, and ICOs. StakingBonus will be a great source for you to maximize your staking returns through easy access to the best staking platforms, with elaborate comparisons. Each carries a different risk and reward, so select the strategy in accordance with your goals and risk appetite. With StakingBonus comparisons for the best staking plans and platforms, you can diversify your strategy and make the most out of this skyrocketing crypto industry-possibly reaping enormous financial gains.

FAQs - What personal data do you need to provide to the company?  
The main personal information we need is your email, payment details and username.

- Who can become an investor of the company?  
Any competent person who has reached the age of majority according to the laws of his country (or in any case, no less than 18 years old) can become an investor of StakingBonus.

- How do I open a staking?  
It's easier than ever - all you need to do is to register on our website, choose a suitable stake plan and replenish your account with a suitable amount.

- Which payment systems do you accept?  
We work with such crypto payment systems as Bitcoin, Litecoin, Ethereum, BitcoinCash, Dogecoin, Ripple, Tether, Tron.

- What is the minimum amount of staking?  
The minimum staking amount only starts from 100 USD.

- When will I receive an interest on my deposit?  
Accruals on our clients' staking occur every 24 hours, starting from the moment of staking creation, according to the conditions of a chosen investment plan. When creating a deposit, be sure to pay attention to the term of the deposit (number of days) and the payout schedule.

- How long will it take to withdraw my profit to my wallet?  
Yes, All withdrawals on our system are instant.

- BabyDoge climbed over 222.96% to \$0.000000002201 following its listing on Binance Thailand. - Since September 17, the token has risen significantly, climbing over 55% from its previous low. Baby Doge Coin (BabyDoge) has seen a notable rise, jumping over 22.96% in the last 24 hours, reaching a peak of \$0.000000002201 from a low of \$0.00000000179. This surge comes as the overall cryptocurrency market turns bullish, with Bitcoin (BTC) trading at around \$64,000. One of the main reasons behind Baby Doge Coin's current surge is its listing on Binance Thailand, which enables users in the country to participate in spot trading of the memecoin on a regulated exchange. This has boosted the token's visibility and accessibility in the region.

### Current Trends and Technical Analysis of BabyDoge

Since September 17, when Binance introduced perpetual market trading for BabyDoge, the token has seen a significant price increase of over 55%, climbing from \$0.000000001586 to \$0.000000002472. This marks an important recovery for the token, which had been struggling since June. Currently, the memecoin is experiencing a slight correction, trading at \$0.000000002074. Despite this, its daily trading volume has surged by 88%, reaching \$41.06 million, indicating strong market activity. Technical indicators suggest mixed signals for BabyDoge. The 21-day moving average sits above the 9-day moving average on the 4-hour chart, hinting at a short-term downtrend. However, the price remains above both averages, which could signal a potential reversal to an upward trend. On the other hand, the Chaikin Money Flow (CMF) for Baby Doge Coin is -0.19, showing moderate selling pressure. This means more people are selling than buying, leading to a bearish trend. While the pressure isn't very strong, it suggests that sellers are currently in control. If the current upward trend continues, Baby Doge Coin could reach levels around \$0.0000000025 or even \$0.0000000027 in the coming days, building on the momentum from positive market sentiment. However, if the trend falters and selling pressure increases, the price might slip back to support levels near \$0.0000000019 or \$0.0000000017. These are key levels to watch for potential corrections or recovery.

### Highlighted Crypto News Today

Whether you are an experienced or novice investor, the fast-developing market of cryptocurrency altcoins always gives room for thoughts towards possibilities of making shocking returns. Many of the mature coins have already attained high prices but other potential investments remain on the market at an astonishing price of less than \$1. For those who are prepared to make a smart gamble, this is the right moment to focus the attention on Rexas Finance (RXS), Pepecoin (PEPE), and Toncoin (TON). Of these three cryptos, the analysts claimed that they are the ones that can reward the highest return in a matter of months, possibly creating even more than a 5,000% ROI. Because of their unique propositions, expansive ecosystems, and robust community support, these are regarded as some of the most incredible low investment potential that you will find.

### Rexas Finance: Asset Tokenization

Powerhouse Rexas Finance (RXS) spearheads the real-world assets tokenization effort by employing blockchain technology in the creation and management of digital tokens which are pegged to both hard and soft assets. With traditional finance and interacting with blockchain becoming ever more common, Rexas Finance is one of the leaders in this trend and provides solutions that open the way to the markets previously accessible only to institutional players. The platform's Token Builder provides a convenient means for users to convert their properties into valuable tokens so that everyone including the small enterprises wishing to break into the blockchain economy can do so. Also, its Rexas Launchpad provides a complete service for launching new tokens with the participation of raising funds for the project, while its QuickMint Bot makes it easy to create tokens through messaging services such as Telegram and Discord. There is an increasing need for tokenized assets, as well as an opportunity in the fact that Rexas Finance can overcome such market inefficiencies as liquidity and large transaction costs. It completed the first presale stage in less than three days with \$200,000 raised able to suggest great interest by early investors. Rexas Finance has development goals in improving current offers and using sophisticated AI systems, thus its growth would be very significant making it an ideal target for investors focused on making good returns. Present pricing for RXS, \$0.04, is at the base where one is likely to invest at this level before the price takes a sharp upside.

### PepeCoin (PEPE)

Another altcoin that's making waves in the crypto market is Pepe. Based on the famous internet meme known as "Pepe the Frog", this token is a lot more than just a generic meme coin. While it initially developed as one of the latest trends of the meme coin discord, Pepe has since been focusing on building a more mature ecosystem that accommodates meme lovers and investors as well. Due to the price of the coin, a huge number of retail investors populations have found entry into the project, while engaging in consistent promotion of the project irrespective of the competitive landscape. The uniqueness of Pepe is driven by an active community-oriented model and incentives and rewards to holders, which ensures and maintains an interest in the token in the long run. The phenomenon of such a token is that more and more people using the Pepe ecosystem record increase its value owing to the enthusiasm and zeal of users. The future of Pepe relies on its attraction to the meme coin model and providing something beyond win, which will even include DeFi.

### Reshape yourself as much as possible in the world of dogecoin and Shiba Inu.

Returns to the early investors could be outsized. It's trading at such low prices further adds to its appeal, especially for those who wish to get a high-growth asset with minimal initial deeper pocketing. At the right market conditions, and with the community carrying on the support, Pepe would likely undergo a breakout, making and giving great profits to its holders.

### Toncoin (TON): The Telegram Coin

Toncoin, on the other hand, is an ambitious blockchain project that is based on ideas of secure and scalable decentralized communication. Toncoin is the native currency of the Open Network blockchain, developed by Telegram, a multinational messaging application that supports fast and cheap transactions for a number of use cases. In particular, the best features of Toncoin focus on its linkage with Telegram, whereby this provides a wide audience for adoption. Equipped with the capabilities to handle millions of transactions each second, TON is fit for a number of decentralized applications ranging from payments, DeFi as well as NFTs. To begin with Toncoin's strengths, it is its technological base together with the facts of the endorsement by Telegram, which has a ready-made audience for the services based on blockchain technology. As more users begin to learn about the TON ecosystem using Telegram, the demand for Toncoin will surely grow significantly. Its current price which is below the

dollar mark is appealing to the investor since it provides an opportunity to reap the benefits of a growing market for decentralized technologies. There is optimism that as the technology reaches maturity, there is a possibility for Toncoin to occupy a considerable share of the blockchain industry, and in turn, its low price creates a perfect opportunity for heightening growth. Conclusion Complementing each other remarkably, these three alternative cryptocurrencies Rexas Finance, Pepe, and Toncoin encapsulate advanced technology, develop rapidly due to community support, and have practical use as well. In the coming days, each of these coins has certain advantages that should allow them to appreciate tremendously. Relatively new crypto projects focus on tangible assets tokenization, addressing problems of the current global economy and making finances more accessible to more people. Meme coins have the potential popularity of meme-centric culture and new utility options in the DeFi field, making it a good investment for those watching for community-driven expansion. The combined high rate of adoption through its embeddedness in Telegram and hitherto unparalleled scalability makes toncoin one of the best blockchain projects you can ever get under \$1. For a small investment looking at these three altcoins might be a smart thing since there is a chance of getting back most of the initial investments plus a lot more. With a possible return on the investment ratio of 5,000%, it would be wise to think about including Pepe, Toncoin, and Rexas Finance into one's portfolio. - Baby Dogecoin's price has surged by 23.87% following its Binance listing. - The coin's total burn rate stands at 51.512%, with significant recent burns aimed at increasing scarcity. Binance has expanded its offerings by listing Baby Doge Coin (BabyDoge) alongside Neiro and Turbo. This new listing has sparked significant interest, leading to an immediate price surge of 1MBABYDOGE. In a strategic move to boost its value further, Baby Doge Coin has announced that it will be conducting manual token burns throughout the week. The decision to burn tokens comes as part of Baby Doge Coin's broader strategy to enhance its market presence and attract more investors. Following the Binance listing and the announcement of token burns, 1MBABYDOGE has seen a notable pump in its price, reflecting heightened investor enthusiasm. The Baby Doge Coin (BabyDoge) ecosystem has seen significant activity recently. The total burn rate stands at 51.512%, with the current burn rank at 14. The total amount burned so far is 216,349,328,772,251,424 tokens. In the past hour, no tokens have been burned, while the last day saw a burn of 102,365,518,498.64 tokens (~\$194.80). Over the past week, 186,756,078,931.96 tokens (~\$355.40) were burned. The total supply of Baby Doge Coin is 42 quadrillion tokens. Baby Doge Coin Surges After Binance Listing At press time, the 1MBABYDOGE is trading at \$0.00192, reflecting a 23.87% increase according to CMC. The 24-hour trading volume is \$112 million, with a market cap of \$281 million, up by 39.36%. In the moving average (MA) cross data for the 9-day and 21-day periods, the sell signals are slightly higher than the buy signals. The 9-day MA value is 0.00000001217, while the 21-day MA value is 0.00000001330. The support level is at 0.00000000824, recorded on August 5th, and the resistance level is at 0.00000001950. Following its listing on Binance, the cryptocurrency is experiencing bullish momentum, indicating a positive market trend. - Meme coins have briefly gained amid the volatile market. - The market sentiment entered into the fear zone, as the fear and greed index stays at 33. The cryptocurrency market continued to struggle to recover from the recent plunge. The global crypto market cap has briefly gained 0.26% to position above \$2 trillion, over the last day. Whereas, the total market volume plummeted over 16.70% to \$58.65 billion. The largest cryptocurrency, Bitcoin (BTC), is trapped between the \$50-60K mark, and Ethereum (ETH) fails to hit the \$3,000 threshold. The downside price momentum potentially affects cryptocurrency prices. Alongside, the meme coins price displays severe volatility. Let's delve into the top meme coins that have captured the attention in the volatile market. Dogecoin (DOGE) DOGE is currently trading at \$0.1047, gaining over 2.65% over the past 24 hours. The lowest price the meme coin hit was noted at \$0.1006 and the highest price recorded was \$0.1066. Zooming in on the past seven days, the asset has spiked over 8.40%. Dogecoin started trading at \$0.0965 and climbed to \$0.1043, over the past week. Whereas, the monthly chart reveals the dip of 1.90%. BOOK OF MEME (BOME) Over the last 24 hours, the asset lost over 0.80%. BOME currently trades at \$0.006191. The asset traded at the lowest and highest of \$0.006117 and \$0.006318, respectively. While analyzing the weekly chart, the asset has spiked by 4.28%. BOME started trading at \$0.005954 and it gradually climbed to \$0.006657. Pepe (PEPE) PEPE witnessed a brief recovery of 1.25% over the past 24 hours. The meme coin went through the lowest and highest prices at \$0.057227 and \$0.057457, respectively. Over the past week, PEPE has briefly spiked by 1.43%. It began trading at \$0.057243, and the asset jumped to \$0.057553 as days progressed. Highlighted Crypto News

The cryptocurrency market continues to evolve rapidly, with various altcoins showing potential for massive growth in the mid-term. While some of these coins started with niche appeal or meme origins, others focus on innovative solutions such as real-world asset (RWA) tokenization. In this article, we'll explore the mid-term price predictions for Toncoin (TON), Dogs (DOGS), and Rexas Finance (RXS), each of which could see significant gains in the coming months. The cryptocurrency market keeps on developing at a great pace, with several altcoins projecting several times their current value over the mid-term horizon. Some of the coins have been positioned to cater to a particular audience or for memetic purposes; others have been instrumental in focusing on the RWA tokenization. In this article, we will dig into the price forecast in the mid-term of Toncoin (TON), Dogs (DOGS), and Rexas Finance (RXS) which all have the potential to appreciate over the next months. Toncoin (TON) to Reach \$10 The rise of Toncoin (TON) in the world of crypto cannot come as a surprise because of the functionalities that Blockchain technology brings into play with a common messaging application

such as Telegram. Still, the cryptocurrency has had several adverse incidents or controversies for instance the controversy that arose after the arrest of telegram CEO Pavel Durov which were negative in their impact. Toncoin has lost 21 % in value in the past month. Even though there have been challenges, the Toncoin has a bright outlook in the medium term. At present, TON is trading at \$5.21, 36% lower than its peak level of \$8.24 which it reached three months ago. Long story short, Changelly data indicates that the altcoin may have hit its all-time high in November of the same year at \$8.34. The figure remains under the significant \$10 threshold but indicates a good potential for development and rise over time. Expansion of the number of users because of the popular appeal of Telegram and the development of more features within the Toncoin network could be some of the factors that will help predict how much Toncoin will surge. However, in order to achieve the \$10 target, the asset will have to deal with current factors such as regulatory challenges and the controversies surrounding Telegram. While this September may offer more of moderate relays, It may take time to hit the \$10 mark which may need more factors favourable to the market. Dogs (DOGS) Targets \$1 Having started as merely a dog meme, Dogs (DOGS) has come a long way. The coin has performed well, particularly with the help of a popular Shiba Inu mascot, similar to Dogecoin and Shiba Inu (SHIB) although on a different trajectory. The listing of the coin on the exchanges has also contributed to its growth as it has introduced the currency to other potential users and enhanced its recognition in the world of cryptocurrency. The DOGS token enjoys the loyalty of its fans grouped as the DOGS Army whose members are actively involved in marketing the token online. Such activities have fueled the fame of DOGS allowing it to gather speed ahead in the relevant market despite the stiff competition. However, moving forward and achieving even a \$1 mark does show promise but certainly is going to garner some roadblocks. Like most meme coins, DOGS is also hard on the scooter market and is subject to high fluctuations in price. Any negative information that can come even from government regulation of the market or other unwanted phenomena can greatly influence the value. Additionally, the chances of moving up may be hampered by the emergence of other meme tokens and even already renowned cryptocurrencies. That is so, after its introduction to exchange, and with the active participation of members in the project development, DOGS has been set on the right path. The token has already been pumped up by a new cycle of investors and in case the market situation will not change for the worse, we may expect a bullish trend for DOGS with ringing targets close to \$1 in the course of the next few months. Rexas Finance (RXS) Set for a Steep 100x Climb to \$4 Among the most exciting cryptocurrencies in the market today is Rexas Finance (RXS), a token that is gaining substantial attention due to its potential for steep growth. Currently priced at just \$0.03 during its presale stage, Rexas Finance is poised for a 100x climb, with price predictions estimating a surge to \$4 in the coming months. The token's focus on Real-World Asset (RWA) tokenization is the driving force behind its expected growth. Rexas Finance is dramatically transforming and making it easier for consumers by offering a blockchain-powered infrastructure to tokenize tangible assets which include real estate, commodities, and even art. This helps people to purchase, trade, and invest in fractions of physical assets which earlier seemed hard for most people because of the high threshold levels. This is a multi-trillion dollar market in RWA and as Rexas Finance opens up these assets to regular investors it is entering a potential trillion market. The presale stage of Rexas Finance has already attracted significant attention from major investors, signalling strong confidence in the project's long-term success. The RXS token allows users to participate in this innovative ecosystem, offering both liquidity and accessibility to high-value markets. Additionally, the presale has demonstrated robust performance, with investors flocking to secure their stake before the token's price rises upon its official launch. Even as the number of markets and the number of investors willing to invest in such tokenized real-world assets grow, the appreciation of the RXS price according to the \$4 implied hard cap will not be outstretched. Rexas Finance has solid financial health, a feasible and original purpose, and increasing support from institutional investors which puts it at the right place and time to grow below the level that makes it one of the best projects worth investing in, in the crypto market. Conclusion The mid-term outlook for Toncoin (TON), Dogs (DOGS), and Rexas Finance (RXS) is promising, with each offering unique opportunities for investors. While Toncoin continues to face external challenges, its association with Telegram and expanding ecosystem suggest that it could eventually reach \$10. Dogs, meanwhile, aims for \$1 as it capitalizes on its meme status and community-driven growth. However, the most exciting prospect is Rexas Finance, which is set for a 100x climb to \$4, thanks to its pioneering approach to real-world asset tokenization. With strong backing from investors and a rapidly growing user base, Rexas Finance could be the standout performer in the coming months, offering both short-term gains and long-term growth potential. Ethereum is showing signs of recovery, with prices climbing and pointing to a possible market rebound. Cardano (ADA), despite bearish short-term predictions, is also hinting at a potential upswing. However, amidst these recoveries, BlockDAG is catching attention as a bullish crypto with high potential. Its advanced tech and ecosystem, set to launch its testnet on September 20, have sparked interest. Still in its presale phase, BlockDAG has outpaced many market leaders in terms of inflows and engagement. The project has raised over \$71.6 million, delivering profits up to 1680% for early backers. This success shows strong confidence in BlockDAG's future, making it a project that can potentially yield more than 30,000x ROIs to its holders. Ethereum News: A Closer Look at Price Movements Ethereum is currently in a consolidation phase, with prices stabilizing after the recent dip. At present, it remains below the key \$2,800 resistance level, giving sellers the upper hand. However, Ethereum bounced from the \$2,400 and \$2,500 support zones, offering hope for a potential rally. Over the past week, Ethereum has dropped 6%, but trading volumes have improved, standing at over \$12 billion. The short-term outlook remains uncertain, as technical indicators point to a possible downturn. The recent increase in Ethereum flowing into exchanges is a bearish sign, often linked to selling pressure. Despite this, a push above \$2,800 could spark a significant rise, with

targets set at \$3,300 and \$3,500 if momentum builds. Ethereum's price movements are key for traders to watch. Cardano (ADA) Price Prediction: Current Outlook Cardano has faced a challenging market recently, slipping to 12th place in terms of market cap, behind assets like Dogecoin and Toncoin. Despite Charles Hoskinson's claims that Cardano could surpass Bitcoin and Ethereum, ADA now holds just 1% of Bitcoin's market cap, a significant drop from 10% three years ago. The much-anticipated Chang hard fork failed to boost Cardano's price, disappointing many in the community. Looking ahead, the Cardano (ADA) price prediction remains mixed. Prominent Bitcoin advocates predict that ADA could collapse by another 90%, questioning the project's long-term potential. Still, Cardano's development team continues pushing for innovation, keeping some optimism alive. However, ADA's position in the market remains precarious, and further downturns could be possible without significant updates or market shifts to reverse the current trend.

BlockDAG Testnet Launch Date Closes In BlockDAG is gearing up for a significant milestone with the launch of its testnet on September 20, 2024. This marks an exciting step forward for the project, giving the community a first-hand experience of its blockchain's capabilities. With tools like the Blockchain Explorer, users can explore transaction details and test out smart contracts. Features like MetaMask Wallet integration and a blockchain faucet will also allow users to mint and transfer BDAG coins. This testnet release is a crucial moment, showcasing how far BlockDAG has progressed toward its mainnet launch. The upcoming testnet launch has generated excitement in the market, boosting the presale and attracting traders eager to see the technology in action. The high-tech roadmap and early access to BlockDAG's blockchain offer a preview of what's to come. With full EVM support, developers can test smart contracts and explore the platform's real-time transaction capabilities, positioning BlockDAG as a key player among bullish cryptos. The presale has already raised over \$71.6 million, and early backers have seen remarkable returns, with BDAG's price increasing by 1680%. This surge reflects the growing confidence in BlockDAG's long-term potential, as the project continues to outperform many established cryptocurrencies to give holders with potential 30,000x ROIs. The roadmap is designed for long-term growth, and the upcoming testnet is just the beginning. For those looking for a promising long-term asset, BlockDAG's strong presale success and innovative technology suggest a bright future ahead. Key Insights While Ethereum and Cardano navigate market uncertainties, BlockDAG's swift rise and innovation make it a standout in the world of bullish cryptos. With its testnet launching on September 20, the project is set to showcase its advanced blockchain technology, offering users a glimpse of what's ahead. The presale has already raised over \$71.6 million, delivering 1680% returns to early backers, and potential 30,000x ROIs in the long run. As Ethereum news highlights market volatility and Cardano (ADA) price predictions remain mixed, BlockDAG's strong roadmap and presale success position it as a promising long-term asset with huge potential for future growth. Staking in cryptocurrency lately has been something in high demand among those investors who are willing to generate some passive income by locking up their digital assets for the benefit of blockchain networks. The thing is, though, in a sea of staking services, picking the one that suits your needs might be an issue. This article reviews what is special about StakingBonus.com and compares how staking plans are conducted. The Magic of Customizable Staking Portfolio One of the cutting-edge aspects of StakingBonus is the customized portfolio feature, whereby users can create a staking portfolio in line with the results desired. Instead of staking only a single cryptocurrency, users can distribute their assets across several staking plans, hence ensuring maximum rewards with the balancing of risks.

Staking Plans on StakingBonus Bitcoin (BTC) As the most mature and safe cryptocurrency, Bitcoin offers regular rewards for long-term stability. Although the staking return on BTC is middle-sized compared to smaller coins, it is a very good choice for the conservative investor who looks for steady earnings within the highly volatile crypto market. Litecoin (LTC) Litecoin is sometimes promoted as "lighter" compared to Bitcoin, with quicker transaction speeds and smaller fees. Staking LTC serves as a good addition to one's stake, thanks to high liquidity and practical utility. Ethereum (ETH) ETH staking gained great popularity when Ethereum finally transformed into a full-on PoS network, which happened with the release of Ethereum 2.0. Competitive rewards from it in general make it perfect for those looking to support one of the largest, most used blockchain ecosystems. Bitcoin Cash (BCH) Staking Bitcoin Cash provides for active involvement in a blockchain-centric, focused approach to quick and low-cost transactions. It is ideal for investors who believe in the long-term potential of a peer-to-peer electronic cash system. Dogecoin (DOGE) Although it was created as a memecoin, DOGE today has evolved into a more strong community-based asset. Staking DOGE comes with higher rewards but proves to be highly volatile in price. For those who bear bigger risks, the process can be very rewarding. Ripple (XRP) XRP primarily serves cross-border transactions and collaborates with several leading financial institutions. XRP staking offers a great balance between reward potential and network stability, making it ideal for those investors who want to invest in a platform catering to real-world utility. TRON (TRX) TRON is also renowned for its high-speed transaction capability and developer-friendly environment. Staking TRON offers attractive rewards, in particular to users that remain keen on supporting a blockchain that presently sees growing adoption on both decentralized apps and entertainment platforms. Tether (USDT) USDT is a stablecoin, pegged in value to the U.S. dollar, making it a low-risk option to stake. While less rewarding than staking more volatile coins, the rewards on USDT are quite stable and predictable. Why Choose StakingBonus.com? Customizable Portfolio In addition, with StakingBonus, it is easy to create and manage several staking portfolios because the platform does not limit the user to staking just one cryptocurrency at a time. Such functionality gives room to investors because they can then distribute strategies of risk and

reward effectively. Ease of Use The intuitive design of the platform ensures that even the most inexperienced user will find the process of staking painless. Whether you want to adjust your portfolio, view earnings, or track staking periods, the dashboard offers all you may need for the smooth execution of functions. Tracking of Earnings in Real Time StakingBonus allows users to track rewards as they are accrued in real-time, thanks to analytics. This transparency helps them monitor the performance of their portfolio and make changes where needed. Low Entry Barrier Most of the platforms come with high minimum staking amounts, but StakingBonus will offer multiple staking options without the need to meet a minimum requirement. It will thus reach investors of every level, starting from those just starting up and ending with seasoned crypto investors. Competitive Rewards Focusing on high rewards and low fees, StakingBonus ensures users get the most out of their staked assets. This platform gives some of the best rates in the market, which will enable users to maximize their crypto gains. Enhanced Security StakingBonus takes security seriously, with multi-sig wallets and 2FA, including regular audits. That gives complete peace of mind for the user-the assets are well taken care of while staked on the platform. How to Sign Up and Start Staking on StakingBonus.com Registration and staking at StakingBonus is pretty straightforward. To get started earning your rewards today, follow these steps: Create an Account: Go to the website of StakingBonus and sign up on it using your e-mail address, a created password, and confirmation with one simple confirmation letter sent to your email. Deposit Cryptocurrency: With an already registered account, you can deposit cryptocurrency (BTC, LTC, ETH, BCH, DOGE, XRP, TRX, USDT) by transferring funds from your crypto wallet to the site's wallet. Custom Portfolio: Go to the staking part and create your own custom portfolio. You will be able to distribute parts of your assets into different types of staking plans, thus optimizing your income based on your acceptable level of risk. Start Staking: After creating the portfolio, you'll be able to start staking. Assets will be locked, and by utilizing any provided staking strategy, you will immediately start receiving rewards you can observe in real time on the dashboard. Withdraw or reinvest: You may withdraw the rewards and principal, or you may reinvest at the expiration of the staking term. This depends on the offering terms of the staking period. Conclusion StakingBonus offers a unique staking experience to its users by making it possible to manage and optimize one's portfolio of staking across a range of cryptocurrencies. With competitive rewards, real-time analytics, and an effortless UI, it is perfectly suited for those looking to diversify their staking strategy and maximize cryptocurrency earnings. - WIF drops 7%, topping losers chart with 37% volume decline. - Whales accumulate \$33.35 million in WIF, signalling market confidence. WIF, a popular memecoin, has experienced significant volatility in recent days. After hitting a two-week high of \$1.77 just two days ago, WIF is now trading at \$1.56, reflecting a 7% decline. This drop has placed it at the top of today's loser chart, with a notable 37% decrease in trading volume over the past 24 hours. Despite the bearish trend, on-chain data from Lookonchain revealed that two whales have accumulated a substantial amount of WIF in the last two weeks. Whale addresses D2Noa1.. and 22Ntâ€ have together purchased 20.58 million WIF tokens, valued at \$33.35 million, from Binance and Bybit. This accumulation has sparked optimism among market participants, hinting at confidence in the token's future. Analysts suggest that current dips may present attractive buying opportunities. They note that when short-term declines occur during a broader upward trend, it often signals a local bottom, providing potential entry points for traders. The memecoin market, however, remains under pressure. DOGE has dropped by 3%, SHIB by 2%, PEPE by 4%, and FLOKI by 4%, reflecting a sector-wide downturn. What is the Next Stop For WIF? On the daily chart, WIF is clinging to a bullish trend despite the sell-off. The 9-day Exponential Moving Average stands at \$1.579, while the Relative Strength Index (RSI) sits at 47, nearing oversold territory. Analysts predict resistance at \$1.91 and \$2.03 if bullish momentum returns. On the downside, WIF could drop to \$1.46, with support at \$1.29. As WIF navigates this crucial phase, investors are closely monitoring its price movements to gauge whether it can maintain strength or face further declines in the coming days. Highlighted News Of The Day

- Leading memecoins such as DOGE, SHIB and FLOKI showed significant price dips in the past day. - WIF recorded the highest price dip in the overall market with a 7.39% decline. The overall crypto market has been oscillating between a price recovery and modest price dips these past few weeks. Leading cryptocurrencies are showing obvious struggles to surpass their respective resistance levels after the recent dip. Meanwhile, the memecoin sector garnered community attention in the last 24 hours, as top coins began dipping significantly. Notably, over the past day, leading memecoins have recorded price declines apart from some of the tokens being the top losers of the day. The largest memecoin Dogecoin (DOGE) recorded a price decline of 3.11%. SHIB followed closely with a 1.57% daily decline in prices. On the other hand, significant memecoins â€ WIF, POPCAT, and FLOKI showed the highest dips and appeared on the Top Losers list. dogwifhat (DOG) On inferring the memecoin's daily price chart, dogwifhat (WIF) has shown a 7.39% decline in price. At the beginning of September 11, the token began to slide downwards in price to reach current trading levels. At the time of writing, the token was trading at \$1.561 as per CMC data. Additionally, the token's 9-day SMA stands above the current trading price indicating the bearish trend. This bearish trend is reflected in the token leaning towards a selling market sentiment. The token's RSI stands at 47.52 highlighting the aforementioned selling pressures. Popcat (SOL) (POPCAT) Solana-based memecoin POPCAT recorded the second-highest price dip within the memecoin sector. The token, after attempting to witness a price breakout momentarily, succumbed to bearish movements sliding 6.35% over the past day. Additionally, the memecoin's short-term 9-day MA stands below the long-term 21-day MA indicating the bearish trend. According to TradingView data, POPCAT slid to an intraday low of \$0.5592. At the time of writing, the
