- IDEX will debut a v3 Hybrid Liquidity DEX on Polygon. - A new play-to-earn fantasy game was released on Solana. Although the overall crypto market has been flat, MATIC has lately risen in value. In the past 24 hours, MATIC has risen 15% to \$2.20. With this move, MATIC has increased its weekly gains to almost 20%. Several reasons have contributed to the recent price increase in Polygon (MATIC). Wednesday, December 1, 2018, 21Shares, a cryptocurrency exchange-traded product (ETP) provider, introduced a Polygon ETP on Euronext exchanges in Paris and Amsterdam. Strategic Alliance The ETP will follow MATIC, Polygonæ”s native cryptocurrency. 21Shares currently has 20 crypto ETPs. It also unveiled a crypto ETP tracking Ethereum-killer Solana earlier this year. Furthermore, Polygon has teamed with UK-based infrastructure provider Copper to create its Polygon (MATIC) ETP. IDEX, located in San Francisco, will debut a v3 Hybrid Liquidity DEX on Polygon. This hybrid architecture combines standard order book functions with AMM liquidity pools. According to CoinMarketCap, the Polygon price today is \$2.07 USD with a 24-hour trading volume of \$3,717,310,500 USD. Polygon has been up 7.48% in the last 24 hours. Typical investment features like stop losses, limit orders, and real-time execution will be introduced. It will also increase liquidity providersæ” financial rewards. However, Solana (SOL) has been in a tight race with MATIC. On Wednesday, a new play-to-earn fantasy game released on Solana generated a stir in the crypto world, questioning the present fundraising mechanism in DeFi. SolChicks garnered a lot of attention for having 113 different VC firms behind it. Moreover, the projectæ”s official website contains some recognized names, such as Gate.io, but the bulk are unknown small-cap DeFi funds. According to CoinMarketCap, the Solana price today is \$226.60 USD with a 24-hour trading volume of \$3,841,525,752 USD. Solana has been up 1.68% in the last 24 hours.

Amsterdam, The Netherlands, 2nd December, 2021, Chainwire Solice, a Solana-based 3D Metaverse, has successfully closed \$4.36 million in a seed and private sale led by Three Arrows Capital, Animoca Brands and Defiance Capital. Soliceæ”s vision is to offer a deeply immersive Metaverse in which users can play, build, own, socialize, and monetize their virtual experiences across multiple platforms. Additional backers and partners in the round include Alameda Research, Solanium Ventures, Skyvision Capital, Jump Capital, Genblock Capital, Kucoin Labs, Solar Eco Fund, CMS Holdings, Maven Capital, A41 Ventures, ZBS Capital, Peech Capital, Icetea Labs, SkyNet Trading, Double Peak Group, Rarestone Capital, DaoMaker, Cropperbros Research, Mintable, DWeb3 Capital, and many more. Soliceæ”s Founder Christian Zhang says, æ”Solice will provide a convenient and fun solution for regular people who want to enjoy themselves in a virtual and dworld living a different life. We plan to expand our team rapidly, onboarding industry veterans from both the traditional gaming industry as well as blockchain experts. We strive to deliver our soft launch within the next 3 to 4 months in 2021 Q1.æ”Three Arrows is delighted to support Solice, disrupting the Solana ecosystem with a true immersive VR Metaverse. Blockchain secures the immutability of our connection and access; VR brought us a new immersion that engages our senses. The Metaverse offers a combination of both in what we might call a complete liberation of the human experience,æ” said Kyle Davies & Zhu Su, Founders of Three Arrows Capital. æ”We are excited to lead this fund-raising round for Solice as the leading metaverse VR platform. The metaverse space is poised to grow exponentially going forward and Christian and team are amongst the most experienced veterans of Virtual Reality weæ”ve met, we believe they will be able to create a phenomenal and immersive VR user experience in the Solice metaverse,æ” said Arthur Cheong, Founding Partner, Defiance Capital. Solice plans on allocating a certain percentage of their total token supply to a public sale for their community members. More details around the upcoming public sale will be soon released on the companyæ”s official social media platforms. About Solice Solice is an open 3D world with limitless possibilities. A VR (Virtual Reality) Metaverse where users can play, build, own, socialize and monetize their virtual experiences in an immersive way on the Solana blockchain. - Website: <http://www.solice.io/> - Twitter: http://www.twitter.com/solice_io - Medium: https://medium.com/@solice_io - Discord: <https://discord.gg/solice> - Official Community Telegram: https://t.me/solice_io_chat - Official Announcement Telegram: https://t.me/solice_io Contacts - Christian Zhang - info@solice.io

Valais, Switzerland, 1st December, 2021, Solajump, the worldæ”s first play-to-win short game based on Solana blockchain, is thrilled to bring back the fun of classic short games. Developed by Kokeshi Academy Nerd 148 Studios, it uses NFTs to revolutionize the world of short gaming with its play-to-win model. Short games are fun, easy to play, and easy to get into. However, game designers who came up with Pong, Tetris, Arkanoid, Pac-Man and other major hits had to make do with the limited power of computers in the past. Computing power is no longer an issue for players, unlocking the doors to a richer and more engaging experience. Visually appealing and fun to play, Solajump draws on the key principles of Doodle Jump. The playeræ”s objective is to jump higher and higher by bouncing off platforms randomly placed in the 2D space. The further you progress, the rarer the platforms become, and therefore, the higher the risk of a game over. With Solajump, the playeræ”s purpose is not only to achieve the highest score but also to win. Players can access the game by owning a Solajumper NFT, which allows them to compete in tournaments that offer significant rewards for winners. The initial minting of 10,000 algorithmically generated Solajumper NFTs will take place starting from December. To participate, players must get one of the 10,000 Solajumper NFTs, each priced at 1 SOL, during December. Owning the NFT entitles players to many perks and bonuses such as 10 chances to reach first place in the Genesis tournament. At the end, players with the best scores will win five-figure rewards, with the ultimate winner bagging more than \$30,000. After the Genesis tournament, players can choose to trade their NFTs on the secondary market or keep it and participate in the monthly tournaments. æ”SOLAJUMP is the result of the partnership between 2 studios, NERD148 and KOKESHI ACADEMY the idea is to provide the defi ecosystem with emerging tools for NFTæ”s and play to earn. Solajump is the beginning of an era for mini arcade games connected with NFTsæ”, said Jeff Meguir, CEO of Solajump. The monthly tournaments will start from January 2022, where the best players will share a prize pool worth 100 SOL. Kokeshi Academy Studios will launch the æ”Jump Coinæ” in February 2022 to allow players to bet in private tournaments and the PVP mode, which will launch in March 2022. That will make it possible for players to win NFTs, Jump Coins, and many other prizes by beating the score of their direct opponent. According to the developers, 20% of the funds raised during the minting will go into the æ”Genesis tournamentæ” prize pool. The amount will be added to the current initial prize pool of 2000 SOL. Another 20% of the minting amount will be allocated for all the monthly tournaments held throughout the year. Each year, new tournaments and NFT mintings will be held to keep expanding the prize pool. Kokeshi Academy Studios is also preparing to launch a Solana-based arcade game incubator in the second half of 2022. About Solajump Developed by Kokeshi Academy and NERD 148 Studios , Solajump is a fun and simple play-to-win NFT game on the Solana blockchain. It aims to revive the short gaming trend and enable players to not only achieve the highest score but also to win. - Solana (SOL) performance for the year 2021 was not so remarkable as others. - Axie Infinity (AXS) tops by gains of 21,500% for the year 2021. - Followed by Sandbox (SAND) as Ethereum (ETH), and Bitcoin (BTC). Upon a debate, we cannot just simply state that Solana (SOL) performed badly for the year 2021. However, one could put it up as SOL did not perform as well as many other cryptocurrencies indeed. Accordingly, SOL overall surges for the year 2021, amounts to about 11,770%. Yet, there are four other cryptos that outperformed SOL evidently. Axie Infinity (AXS) Apart from being the worldæ”s most loved blockchain game, the Axie Infinity (AXS) has topped the charts up to the highest gains and performance for the year 2021. Accordingly, the AXS has gained so far a whopping surge of 21,500% for the past year. The epic reason may be in terms with the pandemic as all were restricted and so the number of players increased upon the platform like anything. At present, the price of AXS stands at \$138.04 at gains of 2.98%. Sandbox (SAND) Besides being more than just a complete virtual world, the Sandbox (SAND) surprised the entire crypto industry with amazing surges in recent months. In addition, the SAND overall gains for the year are about 12,300%. Also, the SAND plays a huge deal with the NFTs and gaming platforms too, all sourced from its virtual world. Ethereum (ETH) Being the top altcoin obviously needs a topping performance. Accordingly, the Ethereum (ETH) has spiked to about 150,000% since its launch. Many factors and hype for the ETH-2 all surrounding ETH, plays a prominent role in the surge of ETH. Currently, ETH trades for about \$4,672.54 at a 24 hours gains surge of 8.87%. Bitcoin (BTC) So far so true, nothing can go beyond the king of the cryptocurrencies, the Bitcoin (BTC). BTC accounts for gains of 70,000,000% ever since its initial launch. Taking a look back BTC first started off with a price of \$0.08 in 2010. From there, right now, BTC stands at \$58K predominantly. However, for the year 2021, BTC has only gained about a 100% surge.

Cyclos, the concentrated liquidity AMM on Solana, is partnering with Solatars to launch Le Cougar Clique, a unique NFT drop tied to the CycloSwap DeFi platform. Le Cougar Clique connects NFTs to DeFi through a æ”cullingæ” mechanic that deflates the NFT supply to increase their scarcity. The deflation mechanism, called Cougarnomics, relies on CycloSwap platform revenue to burn the existing supply of Cougars. After the mint event, 25% of CycloSwap platform fees and 15% of Cougar sale royalties will be used every two weeks to æ”cullæ” the weakest Cougars. The platform will buy back the NFTs from the market and destroy them, thus reducing the supply of Cougars. The liquidity connection for Cougars goes both ways. One quarter of the proceeds from Cougar royalties will be used to purchase CYS and stake it in liquidity pools, giving the Cougar Clique DAO agency over a portion of the CYS token supply. Le Cougar Clique NFTs will be released in a batch of 10,000 Cougars, all hand drawn in collaboration with the Solatars team. The release is planned for early December through a minting event held on cyclos.io. Cyclos is the first concentrated liquidity automated market maker on Solana. Utilizing this powerful concept pioneered by Uniswap V3, Cyclos can support any type of pair from basic stablecoin-to-stablecoin swaps to highly exotic tokens. Building on the highly-scalable Solana platform enables CycloSwap liquidity providers to fine-tune their positions, offering much more precision and much cheaper active management compared to Uniswap V3. æ”By linking the supply of Cougars with Cyclos, our aim is to create a virtuous cycle between the two products and their communities,æ” says Jason Oæ”Brian, co-founder of Cyclos. æ”As the Cyclos ecosystem continues to expand, so too will the utility cases for the Cougars. Our intent behind founding the Cougar Den (the DAO behind the project) will be for the community to collaborate on developing future use cases together with the Cyclos team.æ” About Cyclos Cyclos is the first concentrated liquidity AMM on Solana. It enables higher yields for LPs and better rates for traders by merging the revolutionary concept of concentrated liquidity with the high speeds and low transaction costs of the Solana blockchain. On Cyclos, concentrated liquidity allows users to choose a price range within which they are willing to make markets, reaping LP rewards with only a fraction of the previously required capital. - This network uses a hybrid proof-of-stake. - Solana was listed on Coinbase Pro earlier this month. Solana, one of the yearæ”s best-performing cryptocurrencies, has become a popular subject among crypto fans. Year-to-date, the asset has increased by almost 15,000 percent. Investors are intrigued by Solana for several reasons. Investors are very interested in the cryptocurrencyæ”s success this year. This newly-minted æ”top 10æ” cryptocurrencyæ”s market cap has surged. Investors will pay close attention to any asset that increases from under \$1 billion to over \$70 billion in a few months. Many reasons exist for investors to examine Solana right now. Nonetheless, these three reasons are key to comprehending Solanaæ”s tale. 1. Solanaæ”s Mining Strategy The increasing focus on energy use associated with proof-of-work mining for cryptocurrencies like Bitcoin has prompted some investors to seek more eco-friendly cryptocurrencies. Proof-of-stake models, like Solana, have outperformed. This is not a coincidence. But Solanaæ”s blockchain innovation is really special. This network uses a hybrid proof-of-stake and proof-of-history consensus process. This implies that transactions are executed in sequence, first-in-first-out. This reduces network transaction times and keeps costs low (around \$0.01 per transaction). 2. Spike in NFT Interest with Solana Solanaæ”s high-powered platform has demonstrated a remarkable capacity to promote innovation in a variety of ways. Investors are interested in the simplicity of online shopping with Solana. Unlike other large-cap crypto coins, this one has some compelling real-world application cases. The non-fungible token (NFT) market is one of Solanaæ”s recent hot topics. NFT investors may purchase and sell popular NFTs on the Solana networkæ”s Solanart marketplace. 3. Solana Has Wide Market Acceptance As with other cryptocurrencies, wide adoption by exchanges and crypto funds has fueled interest among ordinary investors. This seems to be the case with Solana. Solana was listed on Coinbase Pro earlier this month. Itæ”s a significant thing to be listed on a major exchange like Coinbase. These exchanges attract a larger range of investors. Solanaæ”s increased liquidity has created a æ”Coinbase impactæ” for freshly listed coins. Crypto researcher Messari claims that tokens listed on Coinbase gain an average of 91% in the five days after their placement. - Solanaæ”s price violated the uptrend line around \$230. - The price must hold around \$202, or it will fall below \$190. The crypto market is experiencing a correction that has pulled most assets. Bitcoin is on the brink of dropping below \$60,000 but is holding firm. Thus, the top 10 cryptos, including Solana, are going southwards. After a long decline, the SOL price finally broke through \$200. The asset had been trending upward since the start of the current trading month. A big drop sent the price below \$220 a few days ago. But it survived the trembling and recovered the losses. The massive sell-off again drowned the price as it approached the important \$250 levels. Solanaæ”s price violated the uptrend line around \$230 and fell little. It is still on an upswing, but it is already turning. The crypto needs to break the triangle and reach \$250. The asset might regain momentum and reach its ATH at \$260 if the uptrend resumes. Nearing Critical Levels Alternatively, if the cryptocurrency continues to move south, which is probable, \$200 levels may be at risk. With the selling pressure increasing, the SOL price may lose a considerable share. The price must hold around \$202, or it will fall below \$190. Collectively, Solana (SOL) price is drifting near-critical zones, requiring a

breakthrough to reverse the negative trend. However, the present decline may be a temporary setback, and a comeback may be imminent. According to CoinMarketCap, the Solana price today is \$223.17 USD with a 24-hour trading volume of \$3,382,779,893 USD. Solana has been down 6.60% in the last 24 hours. Recommended for You

- Solana is more scalable than Ethereum. - Metaplex is the heart of Solana’s NFT market. Many dislike Ethereum, citing it’s too costly and sluggish. Alternatives arise. A few, like Cardano, are long-standing. Another is Solana Labs, new (SOL). This year’s favorite. Solana this year has climbed 12,000%. That is, 120%. Hundred dollars invested in SOL in December would have been \$12,000 now. Solana is a blockchain platform that enables developers to create new applications for decentralized finance or non-fungible token creation. According to a recent Lisbon presentation, it already has 1.3 million active accounts and has handled 38 billion transactions. On November 7, they had locked in \$15.23 billion in decentralized financing initiatives. Metaplex is the heart of Solana’s NFT market, presently transacting over \$32 million in NFTs every week. Ben McMillan, founder & CIO of IDX Digital Assets, stated: “As asset managers, we like Solana both as an investment as well as a development platform.” Betamax Vs VHS Cassettes Solana is more scalable than Ethereum and has a lower gas price. The ecology is expanding due to cost basis. A true Ethereum gas station would have inflation greater than the requirements required. Many people have compared this to Betamax, better than VHS cassettes but never achieved enough adoption to matter. The big concern today is how effectively Solana scales. On September 15, the network was congested. Could this issue endure if developers move away from Ethereum? Solana and other blockchain initiatives need more users. They require developer support, meaning computer programmers pick their system over, or alongside, another blockchain. Recommended for You

- Solana is presently ranked fifth in the industry by market worth. - The analyst underlines the importance of levels around \$200. The global crypto market has been sluggish, with various crypto across blockchains underperforming. Similarly, Ethereum-killer Solana moves behind the market sentiment. As the digital asset wobbles, it has fallen from fourth place in terms of market value. Solana is presently ranked fifth in the industry by market worth. An analyst sets Solana (SOL) price goals. Relating the present situation’s positive and negative moves. Traders and investors are still looking for dips. According to CoinMarketCap, the Ethereum-killer was trading at \$233.52, up 2.92 percent at press time. Solana’s market cap is presently \$70,702,215,315. The 24-hour trading volume is roughly \$2,274,238,056. The coin’s price has fallen from its last ATH of \$259.96. Importance of Levels Around \$200 The analyst explains SOL price fluctuation and direction. The digital coin had dropped into a parallel channel on the chart, post a good leg-up till September 9th. But the crypto is still rising over the trend line aiming for new highs. The currency is now in a bearish divergence, trying to remain above the daily local support. A comeback from present levels might send the digital currency to \$300 after claiming \$260. However, it may fall to its support zones of \$173-178. Rarely will a huge sell-out get the digital currency to near \$120. The analyst underlines the importance of levels around \$200. The trend line levels are crucial for Solana, as the currency may bounce back to highs from here. The recent Breakpoint incident may increase traffic to the Ethereum-killer network. Recommended for You

- The latest ongoing FUD around the trending crypto Solana - Solana (SOL) is market’s foremost projects in recent months - Besides rising FUD, SOL is closing on the \$255 mark. Cryptocurrencies are recording a wide attention from the people for the past two years in specific. Businesses around the world, financial institutions are adopting digital payments and services. Thus supporting in great hand for the rise of cryptocurrencies in the existing market. In particular, it is worth saying that Solana (SOL) has become the center of attraction among other cryptocurrencies. For the past few months, Solana has been performing smartly with remarkable surges. Also, Solana is expanding its network inaugurating NFTs to with-stand as a long term competitor against Ethereum platform. Thus, with a continuous spike, Solana wallet Phantom holds 1,000,000 active users also achieved in making new ATH in recent months. Solana’s challenging FUD As the presence of Solana is booming with surging price values, there is some ongoing FUD trying to affect its performance. There are some allegations raised from the CEO of Cyber Capital, Justin Bons against Solana (SOL). He claims that the recent hype of Solana is a long series of lies, fraud & deception. Further Bons is raising all his accusations through a series of tweets posted in twitter outbreaking. Besides, Bons is stating that, Solana community released its total circulating supply as 8.2M in early April 2020. But, the total supply was above 20M in reality. Thus, Solana had additional 13M coins hidden in a wallet uncovered. In addition, the CEO, Bons is adding up its claims saying, Solana failed to officially publish its circulation supply in the info page in Binance as well as in its CoinMarketCap profile. Further, when related questions and critics were pushed, the CEO of Solana, Anatoly Yakovenko released a post addressing the issue. Justin Bons Continuous Claims However, Bons is stating that, even the published post was a Medium article admitting to the fraud, he adds. As an immediate solution, Yakovenko announced to burn those extra 13M coins within 30 days as it is loaned to the market maker. Even strengthening the case, Bons is claiming that, Solana team did not burn those coins as per their commitment. Likewise he was raising the accusations against Solana to prove that is fraud in nature. Surprisingly, along with Bons, there were many crypto whales and individual users claiming the same concerns. However it is a hard time for Solana (SOL) to face all these challenges, it is still a good performer in the market. Importantly, to sum up SOL’s performance, its current market value is \$252.29 with a spike up to 3.62% in the last 24 hours. Hence it is clearly seen that these FUD remains unaffected the Solana value in the crypto marketplace. But, the crypto industry is full of twists and turns, so let’s wait and watch about the FUD roll out on Solana. Recommended for You

- Solana has displayed a bullish trend with an increase in price and volume. - The month of November has been successful for SOL prices. - We can expect SOL to surge close to \$300 levels. Recently, Solana has displayed a bullish trend with an increase in price as well as in volume. If this bullish trend is continuous, for sure we can expect Solana to reach \$300 soon. Accordingly, the month of November has been successful for SOL prices. Eventually, Solana is a descent into the gaming space. That could impart immense value to the blockchain and the NFT space. Meanwhile, traders are looking forward to SOL price gaining leaps and bounds ahead of its current valuation. Solana venture is entering into the world of gaming and NFTs, and many blockchains are moving towards the revolution. More so, Solana ventures, FTX, Lightspeed are creating a \$100 million Web3 gaming investment. The initiative has already directed \$21 million to a gaming project based on Solana. The first investment in faraway games raised \$30 million. Henceforth, the project aims to expand new decentralized models for gaming as well as the tools which are required to develop the same. As per some sources, the representatives are in association with the fund. Expecting that Solana could thrive in the crypto gaming space, Owing to its high speed, cheaper cost, performance, and its capabilities. At the time of writing, as per CoinMarketCap, Solana’s (SOL) price was trading at \$253.13 with a 24-hour trading volume of \$3,457,706,641. SOL price has gained over 8% in the last 24-hour. The circulating supply of SOL is 301,210,970.77 SOL. The crypto asset has surpassed its descending triangle pattern and is currently trending within a bullish flag. If it breaks the resistance level we can expect SOL to surge close to \$300 levels. If it breaks its resistance level at \$300, it might also reach its target level at around \$360. Recommended for You

- Solana and Arweave’s respective tokens gained on blockchain gaming news. - OMG Network token owners will receive new tickets to use Boba Network. - The news hit on Friday that Solana was launching a \$100 million fund in conjunction. Many cryptocurrencies have experienced another day of solid trading. As of 7:15 p.m. EDT on Friday, Solana (SOL), Arweave (AR), and OMG Network (OMG) were among the cryptocurrency companies benefiting from the bullish market momentum, with their tokens up approximately 17 %, 45 %, and 26%, respectively. Additionally, a new funding action plan for blockchain-playing games appears to have aided the rise of Solana and Arweave. In addition to the general bullish trend in the cryptocurrency space as a whole. Meanwhile, token holders of the OMG Network are expected to receive a new supplementary token. Certainly, which is causing a surge in the price of the ticket. On Friday, it was revealed that Solana was launching a \$100 million fund in partnership with Lightspeed Venture Partners and FTX. To engage in blockchain-focused playing games studios, according to reports. Like Ethereum, Solana’s blockchain serves as a platform to build other cryptocurrencies. And decentralized financial applications comparable to how Ethereum does. Now, switching gears, it appears that increases in the price of OMG Network’s tokens over the last week have been fueled. By the expectation for the new cryptocurrency that tickets will soon receive. Shareholders of the OMG Network are expected to obtain a cryptocurrency token that can be staked for rewards on the Boba Network shortly. This is scheduled to take place on November 12th, 2018. The various tokens of Solana, Arweave, and OMG Network differ from other cryptocurrencies. Such as they are being used to support or transact for offerings that are particular to their network systems rather than simply serving as digital currencies. They may have a more compelling fundamental valuation case than tokens that conduct business solely on supposition or adoption. However, investors should please remember that they are still extremely high investments. And the market is likely to remain volatile shortly. Recommended for You

- Solana is a \$63 billion programmable blockchain. - The second-largest cryptocurrency, Ethereum is valued at \$490 billion. A cutting-edge cryptocurrency investment. Consider Ethereum and Solana. Both blockchains are establishing themselves as decentralized application (Dapp) development platforms, which may help attract investors and promote long-term price growth. Ethereum Ethereum, launched in 2015 to explore the possibilities of blockchain technology, is now the world’s second-largest cryptocurrency, valued at \$490 billion. Furthermore, Ethereum’s responsive development team and first-mover advantage position it well to continue its dominance. If Bitcoin, considered as a calculator, then Ethereum is definitely a smartphone: a general-purpose computing platform with smart contracts (self-executing programs stored on a blockchain). In addition to non-fungible token marketplaces (typically in the form of digital art), decentralized crypto exchanges, and decentralized financial platforms, consider it the first blockchain geared for Dapp development. This is part of an upgrade dubbed Ethereum 2.0 that seeks to make the Ethereum blockchain more eco-friendly and boost transaction throughput. However, the timing of the entire changeover is unknown due to the involvement of several parties. Solana Solana is a \$63 billion programmable blockchain. It has several important technological benefits that may help it attract Dapp development and possible real-world applications. Solana, which debuted in 2019, isn’t as well-known as its competitors. However, in terms of market cap, it is the sixth biggest cryptocurrency. Furthermore, the Solana website is the world’s fastest blockchain, processing 50,000 transactions per second compared to Ethereum’s 15. It does it by using an innovative consensus technique. By embedding time on the blockchain, the Solana blockchain combines PoS with proof-of-history. Which token suits you? The two coins seem to be direct competitors. However, it’s important to remember that crypto isn’t a zero-sum game. Solana’s technological characteristics make it attractive for utility investors. Also, when developers seek to improve the network’s technical capabilities, Ethereum’s strong brand and first-mover advantage will help it.

- A single Solana transaction takes 400ms and costs the user \$0.0005. - Members of the community may earn tokens and even delegate to a Pro Player NFT. SAIL is the native utility coin of the SolanaSail ecosystem—one of the most flexible and scalable digital assets available today. Moreover, SolanaSail provides real-time worldwide payments at competitive rates, with fair governance, cutting-edge vaults, and an NFT marketplace. Furthermore, the SolanaSail ecosystem’s principal utility coin, interoperable with gSAIL, dSAIL, vSAIL, and nSAIL platforms. The SolanaSail ecology will culminate in a Play-to-Earn game akin to Battleship. Accordingly, the game will take advantage of them all (vaults, staking, governance, and NFTs). Furthermore, members of the community may earn tokens and even delegate to a Pro Player NFT to boost their chances of winning. The objective of this PTE model is to disrupt the \$200 billion gaming business, provide more opportunities for digital natives internationally, and establish the Metaverse presence. \$200 Billion Gaming Business The objective of this PTE model is to disrupt the \$200 billion gaming business, provide more opportunities for digital natives internationally, and establish the Metaverse presence. Fortunately, the Solana blockchain already addresses many concerns, and SolanaSail seeks to build on what Ethereum has already achieved. SolanaSail, like other initiatives in the Solana ecosystem, aims to make global payments and financial services accessible to everyone without prejudice or knowledge walls. Compare SolanaSail’s transaction speed to Compound Finance on Ethereum. A single Solana transaction takes 400ms and costs the user \$0.0005. Moreover, it wants to differentiate itself from other initiatives in the field. By keeping these benefits for the users and members. Furthermore, SolanaSail is unique in that it is built from the ground up with the community in mind. According to CoinMarketCap, the SolanaSail price today is \$0.255718 USD with a 24-hour trading volume of \$216,091 USD. Recommended for You

- SOL’s monthly time frame has been fairly bullish lately. - Synchrony Finance secured \$4.2 million in strategic capital. Bitcoin price hit \$64.2K on Wednesday and is now trading at \$64.8K on Thursday. Solana, the sixth most valued cryptocurrency, outperforms. SOL drew in all the bulls, gaining 12.4% on the past day. SOL hit a high of \$214.14 just before publication. With few technical resistance levels, the market seems poised to rise. Globally, the bitcoin market is quite bullish, which might lead to further volatility. SOL’s monthly time frame has been fairly bullish lately, but it has begun to reject and lose momentum. This shows the bulls’ long-held market control is starting to unravel. Price Has Steadily Increased After reaching an all-time high of \$214.96 in September, the SOL currency has steadily increased since January 2021. SOL may easily surpass \$200 and the critical resistance level of \$215. The bullish triangle’s target is \$226. Sellers may swap their Solana between \$200 and the all-time high of \$216. Upon a break of \$195, two areas may provide significant resistance. MonkeyBall, a play-to-earn gaming platform, has closed a recent fundraising round of over \$3 million from venture and angel investors. Synchrony Finance, a Solana-based asset management firm, secured \$4.2 million in strategic capital. Andrew Fraser, the co-founder of Synchrony, said that the money was raised in two stages: seed and private. According to CoinMarketCap, the Solana (SOL) price today is \$207.35, and the 24-hour trading volume of \$7,149,607,088. Recommended for You

- Terra’s price moved in a rising and sliding wedge. - The LUNA price may return to \$50 in the near future. The crypto market seems to be heating up as the market leader Bitcoin hits fresh highs. After a brief pause for profit-taking, the other major cryptocurrencies are poised to break new highs. Terra (LUNA) and Solana (SOL) prices benefited from the chance to rise. The asset rallied along with Solana but fell short of \$50. But it held firm over \$34 and bounced off the lower levels of the bullish pattern. Thus, the Terra (LUNA) price may return to \$50 in the near future. \$100 Price Goal is Possible After reaching its peak, Terra’s price moved in a rising and sliding wedge. After trending inside the collapsing wedge, the asset is now preparing to go north. A \$100 goal is possible during the

Bull Run based on the pattern. Solana’s price has been on a slow decline after peaking at \$215. Despite the violent September, the price stayed over \$100. After swinging inside the ascending triangle, the asset lately broke the pattern to shoot high. To avoid severe depletion, the asset is progressively approaching the \$200 mark. So, following a bit of pullback, the asset may reach \$216. With the Fibonacci 1.6 level around \$230, a breakthrough from the trend line may push prices to these levels. Finally, while the bitcoin price lays the groundwork for the return of the Bull Run in 2021, numerous altcoins anxiously await, XRP, Cardano, and Ethereum. The prices of Solana (SOL) and Terra (LUNA) may also achieve their targets. According to CoinMarketCap, the price of Solana (SOL) is \$183.28, and the price of Terra (LUNA) is \$39.92. Play-to-Earn startup and NFT game MonkeyBall has announced the completion of its latest funding round, raising over \$3 million from a large cohort of both venture and angel investors. MonkeyBall is a fast, turn-based, play-to-earn arcade soccer game that can be described as an intersection between FIFA Street and Final Fantasy. In the game, each user controls a team of four monkeys with the objective of winning matches against other teams. Users are able to earn tokens for each victory, though they can also be gained by buying stadiums, hosting games or even by cheering for winning teams while attending other games. MonkeyBall offers a high production value, AAA-grade gaming experience and is being developed on the Unity game engine, allowing it to deploy on both Desktop and Mobile. The game is being developed by a team with unmatched experience in both game development and crypto. The company behind MonkeyBall has now collected the funds necessary to complete and launch the game, with a \$3M investment round from a list of angels, crypto-native and “traditional” venture funds, and exchanges. Specifically, the investment was made by Solana Capital , Republic, NFX, iAngels, Longhash, CMS, Jump Capital, Youbi, Morningstar Ventures, Banter Capital, Ascentive Assets, MarketAcross, Node Capital, ZBS Capital, Metaversal, Collider, BFF and 6th Man Ventures. Angels who took part in the investment round are Shalom Meckenzie and founders of DraftKings; Noam Lanir founder of Livermore, Amir Carmi co-founder of IronSource; founders from Dafabet, Nimrod Lehani, co-founder of Simplex; Yoni Assia, co-founder of eToro; Joe Mccann, Yenwen Feng, Shao-Kang Lee, co-founders of Perpetual Protocol and Shahaf Bar-Geffen the CEO of Coti who will serve as MonkeyBall’s Chairman. Truly excited to unveil this amazing roster of investors who are supporting MonkeyBall, said Oren Langberg, Head of Marketing at MonkeyBall. “Play-to-earn is an exciting and quickly growing application for blockchain and NFTs, but it’s not easy to find games with great production quality. The first play-to-earn game to truly become mainstream is still in the future, and we are hard at work to realize that future for MonkeyBall. “Play-to-earn games are a revolution in how gamers interface with the virtual world,” says Shalom McKenzie, of DraftKings. “Gaming and NFTs will be the first true mass appeal application of blockchain, all that is missing is to actually make a game that would stand tall among AAA titles. I believe the Monkey Ball team has what it takes to get there.” Gigi Levi of NFX added: “As an early-stage investor in some of the most successful mobile/casual gaming start-ups in the world, we at NFX have been looking at the booming play-to-earn market for a while now. We believe that the space will only continue to grow, and that the winners will be those teams that combine the best of blockchain know-how with amazing game-design capabilities, that know how to utilize and unite the best of both Blockchain and “traditional” gaming sectors. MonkeyBall is the best one we’ve seen yet!” About Monkey Ball Monkey Ball is a Solana-based Play-to-Earn turn-based soccer game, a kind of FIFA Street and Final Fantasy rolled into one fun monkey-themed game. Gamers can earn tokens by winning or simply enjoying other people’s matches. The game offers a high production value gaming experience and is being developed on Unity, making it cross-platform with Desktop and Mobile. - Benyamin Ahmed, a 12-year-old artist, is also dipping into NFT poetry. - Sold approximately \$435,000 worth of NFTs via the Solana network. Five years ago, kids couldn’t have dreamed that their random art might be used for anything other than schoolwork. However, things have changed. Teenagers are especially appealing to digital art collectors. Thus, raking in millions from the sale of Non-Fungible Tokens. Abigail, also known as “PeachSunday” in the realm of digital art, is one such youngster who has caused to cheer. The 14-year-old, who is in her first year of high school, sold approximately \$435,000 worth of NFTs via the Solana network. Furthermore, her “Belugies” were posted on Alpha Art. An NFT marketplace that allows users to purchase and trade Solana-based NFTs for free. Moreover, the top NFT sold for 300 SOL, 299 SOL, 125 SOL, 100 SOL, and 75 SOL. With the White Belugie (7,980 characters) selling for an average of 1.83 SOL. Abigail claims the artwork was motivated by her passion for animals, creativity, and marine life. Particularly the endangered Beluga Whale. After integrating the contract. Successful purchasers will see their Belugie paintings on the phantom wallet app and the Solana marketplace. Ten Percent Towards Charity Abigail intends to donate 10% of her main and secondary NFT sales profits to various Beluga whale groups. And also to the Sunshine Kids Foundation, a children’s hospital program (10 percent). Benyamin Ahmed, a 12-year-old artist, is also dipping into NFT poetry. The adolescent programmer who began his project as an educational effort earned over 1,800 ETH (about \$6,773,190) from his collection named Weird Whales. The introduction of digital art and smart contracts has changed the way artists compete for a piece of this lucrative industry. Despite claims that 90% of all NFTs are worthless, the recent rush to establish NFT markets by giant exchanges like Coinbase portrays a different image. Twitter, Tiktok, and Visa have already shown interest in this sector, indicating a promising future. Recommended for You

Bangalore, India, 11th October, 2021, Chingari, one of India’s leading short-videos sharing platforms with over 78 Million downloads, successfully completed a funding round that raised over \$19 Million for its token round across more than 30 venture funds and individual investors. Some of the biggest firms in crypto investment participated in the funding round, including Republic Crypto, Galaxy Digital, Alameda Research, Solana Capital, Valor Equity Partners, Kraken Ventures, Blackpine, NGC, Coinfund, LD Capital, 11-11 Ventures, AU21, Cultor3 Capital, Long Term Ventures, Afton Capital, CSP DAO, among others. Since its redesign in June 2020, many new apps such as Chingari, Roposo and Trell worked to fill the vacuum created by TikTok’s ban in India. Ever since, the number of Chingari users have increased exponentially, surpassing milestones of 100k, 1M, 10M and then 50M “all in just six months. Spurring its growth is the creator-centric model, attracting top talent and generating intriguing content for its nearly 80 Million users. The platform won the “App Innovation Challenge” by the Government of India, was mentioned by name in a speech given by the Prime Minister, and has one of the best metrics for India social media for Engagement Time, Video Watched, DAUs, and MAUs (daily and monthly active users). The venture firms participating were enthusiastic about the roadmap of Chingari, the app’s meteoric rise in popularity in 2021, as well as the \$GARI token developments made to date. Investors were especially excited about how Chingari is creating a mainstream use case for crypto in India. The tokens are powered by Solana’s high performance blockchain “making for the first major web2 company integrating web3 into its product. Andrew Durgue, Managing Partner at Republic Capital, stated: “At Republic, we believe social tokens are an essential piece of the crypto community and creator economy. Chingari shares this vision and has taken innovative steps to bring that vision to life. Their creators and users will now be able to more truly monetize their own engagements and experiences.” Sumit Ghosh, CEO of Chingari, said in response to the successful funding round: “The future of a platform lies in its creators. On one side, we have an immense talent pool that needs to be explored, and rewarded with an ethical amount of monetization. On the other side, while Crypto experiences a rapid expansion in India, \$GARI is poised to make it mainstream. We are infusing the two, through robust strategies and incorporation of the most-promising industry advances.” He added, “The result of this infusion is Social Tokens as the future of community platforms for Creator Monetization. It is reaching new milestones as we speak.” With the funds raised, key features will continue development for the Chingari platform. Near-term roadmap milestones include testing of the blockchain live, Chingari Integration beta, and the upcoming \$GARI token sale. The token is a critical piece of the platform, enabling creators to set up their own e-commerce space that includes physical merchandise, their NFT creations, and the ability for fans to fund their favorite artists. Token owners will also help guide the future of the platform. This round of funding is an important and positive step towards realizing Chingari’s vision as a global leader in blockchain-based Social Infotainment. About Chingari: Chingari is one of India’s leading short-videos sharing platforms with over 78 Million downloads. With 30 Million monthly active users, it offers users the option of downloading & uploading videos, chatting with friends, interacting with new people, sharing content, e-shopping, watching movies on Chingari Multiplex and browsing through the feed. With Chingari, users enjoy: - Videos customized just for them - Hyper-realistic AR filters - Massive Song Library - Content in more than 20 languages Chingari won the award for “The Most Popular Social Media App” at the recently held “Times Business Awards 2021”. This prestigious honour has been a major motivation to shape Chingari’s onward journey to continue surprising users with the finest in entertainment, technology & innovation. Chingari’s token \$GARI, powers India’s only blockchain-based Social Infotainment platform. With its launch, Chingari aims to revolutionize Creator Monetization in the market, while enabling creators to hone their skills. - Solana’s DeFi projects surpassed \$3 billion. - SOL’s NFT market value reached \$1 billion. It was a thrilling and nerve-wracking quarter for the crypto-community. While Bitcoin and Ethereum had good quarters, it was the younger protocols that dominated. Projects like Solana, Avalanche, and Terra have seen substantial growth in smart contract platforms, outperforming the broader market. All of the above gained above 300 percent on the charts. Despite a surge in new user adoption owing to the fast growth of NFTs, the Ethereum network suffered from record high transaction fees throughout the year. This includes \$1.96 billion in fees only in Q3. As consumers looked for low-cost Ethereum alternatives, this helped competitors like Solana and Avalanche. With ETH’s transaction cost above \$55, SOL’s price soared almost \$200 in early September. Solana Can Compete with Rivals The corresponding peak in SOL and ETH’s mean transaction cost raised suspicion that Ethereum was driving SOL’s rise. Was this all SOL’s growth? As the alt currency reached \$200 per token in August-September, the market dubbed it “Solana Summer.” This from only \$2 at the start of the year. Pessimism took hold shortly after the asset’s ATH of \$215. This fueled suspicion that ETH had triggered SOL’s rise. But Solana’s rally was more organic than it appeared. In September, Solana’s DeFi projects surpassed \$3 billion. The sheer number of SOL projects shows it can compete with ETH and other ETH-killers. Solana benefited from the emergence of NFTs as an interoperable blockchain platform. On October 2, SOL’s NFT market value reached \$1 billion. The same highlighted the fact that new funds have entered the coin markets. Solana’s market has been slow lately, but it has held onto the \$164 barrier. With Ubeswap collaborating with Allbridge to provide both Solana’s native asset SOL and Saber’s governance token SBR to Celo, the alt got a social boost. Regardless of the costs. Even if a price pump reverses the damage, it is doubtful that SOL will see a prolonged recovery in the foreseeable future. Nonetheless, Solana’s rise has been undeniable. Despite price consolidation, the seventh-ranked coin has maintained its chart position. Daily and weekly advances of 2.89 and 10.10 percent may make a bigger return when cryptocurrencies rise. According to CoinMarketCap, the price of Solana today is \$157.83 with a 24-Hour trading volume of \$1,776,247,536. Recommended for You

Chingari is India’s popular short video sharing mobile application which has numerous facilities to attract the users. This entertainment app now secured \$19 million in crypto funding rounds to build its token “\$GARIA” with advanced crypto technology “Solana blockchain.” However, the Crypto industry is growing at a fast pace attracting almost all other groups into its digital world. It is significantly visible that crypto adoption is bubbling up along with its innovative technologies supporting the industry. Chingari (\$GARI) with Solana The CEO of Chingari, Sumit Ghosh is smartly moving along with the trend of crypto’s which will be the vital source in the near future. So, he planned to launch a new token called “\$GARIA” which will be the sensitive piece of the network. Thus, the capital amount \$19 Million will be utilized to upgrade the platform, to inaugurate a Chingari’s crypto token with Solana blockchain. Moreover, the crypto funding was successful involving great investing ventures and individuals associated with crypto firms. It includes RepublicCrypto, Alameda Research, Solana Capital, Valor Equity Partners, Galaxy Digital along with Kraken, a US based Crypto exchange. Besides, the most interesting part of Chingari network is partnering with Solana Blockchain which is a popular crypto technology at present. In addition, the crypto market has a wide range of followers and users in India which can boost this partnership to a greater extent. Also, Solana is reaching its all-time high value in the marketplace for its transparent ecosystem and low transaction cost. Additionally, Solana blockchain is owning a censorship which develops an open network for platforms to achieve global adoption. Thus, Solana’s fame in the crypto market will raise the monetisation of the app. Crypto Funding Further, the \$19 million secured through fundraising includes various crypto assets such as Tether (USDT), stablecoins and USDC. More so, the short video app has a great reach covering up 30 million active users with over 78 million visual downloads. The CEO of Chingari app shares that the high scope of cryptocurrency in India will support the platform to achieve new milestones. And the robotic strategy of combining the new token with Solana will deliver promising industry developments in the market. However, the new advancement of launching the crypto token with the blockchain technology empowers the creators. It allows them to create their own digital space such as physical merchandise, non-fungible tokens (NFTs) creations. Besides, the creators are eligible to fund their favorite artists and stars. Solana is one of the leading cryptocurrencies in the market and a high-performing smart contracts blockchain. Now, Solana is available in Skrill and NETELLER, where users can now buy and sell Solana through Paysafe services. Both Skrill and NETELLER are cryptocurrency services from the specialized payment platform Paysafe. Solana is a blockchain platform that prioritizes smart contracts and has an active ecosystem of DeFi and NFT projects. It is a Proof-of-Stake (PoS) blockchain which makes it more friendly than Proof-of-Work (PoW). In addition, Skrill and NETELLER users can use their Solana accounts directly via the app. Users can also set up

alerts to notify them of major movements in price value. Even more, this service allows users to set up automated options to repeat purchases for the cryptocurrencies available on the two digital wallets. The major cryptocurrencies in the wallets are Bitcoin, Ethereum, Chainlink, and Uniswap. On the other hand, this service is available in countries where Skril and NETELLER crypto services currently operate. As of now, it is not yet released in the United States. Skril is a global payment platform that has been offering simple and secured solutions since 2001. This platform has worked as the best solution for people's businesses for buying online or sending money to family and friends. Whereas, NETELLER is a digital wallet that works in a simple way for sending and spending money online. It enables users to upload funds using credit or debit cards, bank accounts and other alternative payment options are also available. Jordan Stoev Views On Solana The head of crypto services, Skril and NETELLER from Paysafe, Jordan Stoev says that the addition of Solana to their services is exciting and it would help in the growth of these services. He adds that Solana is growing rapidly in terms of price as well as in terms of projects that it is working on. Moreover, the performance and developments from the ecosystem of Solana will make users use the opportunity to buy and sell cryptocurrency. Stoev also stated that: "With the continuous surge in interest in cryptocurrencies over the last few years, and especially since the outbreak of the pandemic, we are excited to launch new features for our service, such as the addition of Solana." However, adding Solana to their services seems to help the platform in terms of growth. The payment solutions have initiated a step for their users to provide better, new, and secured ways to use their money conveniently. As Solana is an improved blockchain solution, the features from the platform will grab the attention of users. Moreover, the cryptocurrency services offer their users a better opportunity to experience the taste of Solana features. Recommended for You

- Grayscale's AUM was \$41.5 billion as of Oct. 1. - The rebalance shows how the crypto market values Solana. Grayscale Investments revealed the quarterly rebalance of its two diversified portfolios, the large-cap fund, and the DeFi fund. They are Uniswap and Solana. This is the first time Solana (SOL) has been featured in a Grayscale fund. Furthermore, the firm sold specific existing components and utilized the cash to buy Solana (SOL) and Uniswap (UNSW) (UNI). This was also Uniswap's first entry into the large-cap fund. In any case, the token since July has been in the Grayscale DeFi Fund. Uniswap (UNI), 1.06 percent; Chainlink (LINK), 0.82 percent; Bitcoin (BTC), 62.19 percent and Litecoin (LTC), 0.77 percent, made up the large-cap fund at the close of the day on Oct. 1. Solana and Uniswap joined Cardano (ADA), which was added to the large-cap fund in July. Moreover, no new tokens were contributed to the Grayscale DeFi Fund. Grayscale's AUM was \$41.5 billion as of Oct. 1. Furthermore, the company also offers single asset funds in bitcoin, bitcoin cash, basic attention token, Chainlink, Ethereum, Ethereum classic, and others. The company also offers single asset funds in bitcoin, bitcoin cash, basic attention token, Chainlink, Ethereum, Ethereum classic, and others. Grayscale said: "[This is] the first time Solana (SOL) will be included in a Grayscale investment vehicle." Solana on the Rise The rebalance shows how the crypto market values Solana. The Solana blockchain is a fast, low-cost competitor to Ethereum, Cardano, Polkadot, and Binance Smart Chain. Solana's price rose with its fame. Moreover, starting this summer, the coin rose to \$191 in mid-September before dropping to \$161 now. Furthermore, Solana has a market value of \$48 billion, and Solana-based NFTs just reached \$1 billion. The rebalance also indicates Bitcoin's decline in dominance. In April, the fund had 79.8% Bitcoin and just 17% Ethereum. Bitcoin's market cap dominance has slipped from 69% in April to 42% now. Recommended for You

- Solana maintained its pricing over \$100. - LUNA remains the most undervalued currency. The crypto industry appears to be purging weak hands as Chinese market manipulation continues to wreak havoc. The overall market value is \$1.857 trillion, down from \$2.2 trillion on September 26th, 2021, as per CoinMarketCap. Despite the market collapse, Solana maintained its pricing over \$100. Furthermore, it is now trying to exceed the psychological threshold of \$150. Several improvements are planned for the platform. Terra Luna's price has soared recently, setting a new high. It just reached a new ATH of \$44.34, making it one of the top 15 crypto assets. Terra is preparing for the much-anticipated Columbus 5 upgrade launch on September 30th, 2021. Bridge Between Terra and Solana Cross-chain integration with popular crypto blockchains as Solana, Polkadot, and Cosmos. In addition, the update may increase the prices of SOL, DOT, and ATOM. Furthermore, Terra's upgrade will also include a wormhole that will serve as a bridge between Terra and Solana. Current projects and platforms can transfer tokenized assets across blockchains easily. Sized \$LUNA into the biggest position in my portfolio again. " Daniel Cheung (@HighCoinviction) September 14, 2021 Terra is now the most undervalued L1 despite one of the best TVL growth prospects vs peers given Columbus 5 upgrade in few weeks. TVL can easily double and multiple rates to 6x which implies a \$10 price target EOY. pic.twitter.com/nvde8DLdH2 According to renowned crypto expert Daniel Cheung's chart, the Solana ecosystem grew rapidly. Solana's total value locked (TVL) increased by 1,657,943 percent in six months to 11.6 billion. Despite the improvements and massive TVL, LUNA remains the most undervalued currency. According to CoinMarketCap, the SOL price is \$137.99. Bulls may hit new highs if the price bounces off it. Moreover, if the market falls, the SOL has significant support at around \$75. SOL price may still hold between \$110 and \$115. Terra Luna has created few big bull flags in September, previous to the upgrade. How it affects the SOL pricing can be known after it's implemented. - The 14-day RSI rises over the midline, indicating further upward potential. - The People's Bank of China (PBOC) has banned all crypto transactions. Solana is a protocol for creating decentralized apps (Dapps). It attempts to enhance scalability by combining proof-of-history (PoH) with proof-of-stake (PoS) consensus. Unique Hybrid Consensus Approach Solana's unique hybrid consensus approach attracts both retail and institutional traders. Moreover, the Solana Foundation is working hard to provide access to decentralized finance (DeFi) on a large scale. Saturday, Solana reverses Friday's brief dip to around \$127.50. SOL bears regained control the day prior, mirroring the general market gloom after China's blow. The People's Bank of China (PBOC) has banned all crypto transactions, calling them illegal financial activity. Its price has reclaimed the \$140 level, gaining approximately 1% on the day, but is still on pace to lose money for the second week in a row. After two unsuccessful tries earlier this week, SOL bulls are targeting the falling trend line resistance at \$148. If SOL bulls maintain a daily closing position above the latter, it will indicate an upward breakout from a falling wedge pattern. The SOL price has been moving bullishly since hitting an all-time high of \$221.38 on September 9. In the stated period, the price formed lower highs and lows, forming a falling wedge. The 14-day RSI rises over the midline, indicating further upward potential. So, a wedge breakthrough would allow a rise towards \$200. Its horizontal 21-day Moving Average (DMA) at \$159.40 may challenge bearish commitments first. The SOL price may retreat towards the upward-sloping 50-DMA at \$110.50 if the wedge barrier is difficult to overcome. Under \$100.60, a new downswing may occur towards the moderately positive 100-DMA at \$71.54. According to CoinMarketCap, the price of SOL is \$137.59 and has a 24-hour trading volume of \$2,246,125,994. Over the years Solana (SOL) has been doing a great job in developing its ecosystem. Moreover, Solana offers a secure, fast, and censorship-resistant blockchain enhancing an open ecosystem needed for global adoption. For this reason, investors are curious to grab Solana tokens. In addition, Solana is one of the widely chosen platforms developing Decentralized Finance (DeFi), Web3, and blockchain gaming which can process about 50,000 transactions per second. What is Solana? Solana (SOL) is a digital asset token based on blockchain technology. The platform founded in the year 2017. Solana seeks to offer solutions to the traditional issues which faced by Bitcoin and Ethereum blockchain. Moreover, the Solana network utilizes proof of history consensus. Notably, this technology enhances the network to develop records. These records can be used to track and prove historical events. Solana tech team, the crew is backed with experienced professionals from top organizations like Apple, Qualcomm, Intel, Google, Microsoft, Twitter, Dropbox, and more. With this, we can say that Solana is really competitive in developing groundbreaking technologies. Solana Market Status Solana (SOL) is one of the cryptocurrencies that took the crypto market by storm when it smashed the ATH price of \$214.96. Its network's native token is SOL. Specifically, this crypto has seen great moves since the early days of the year. In fact, SOL successfully nailed a huge growth rate of over +8,500% in the past 12 months. Currently, SOL holds the 7th position on CoinMarketCap. The SOL price is trading at \$162.67 with a 24-hour trading volume of \$4,592,073,834, at the time of writing. SOL can trade on exchanges such as Binance, Coinbase, Huobi Global, and many more. Solana Ecosystem Solana (SOL) is one of the digital assets that took the crypto market by storm. Now let us deep dive into the Solana ecosystem. 1. AMM Serum developed a decentralized exchange with an on-chain order book. This order book developed using Solana, a fast and cheap blockchain. This new paradigm offered a huge chance to address DeFi's significant problems. It creates an AMM that could utilize the current Serum order flow and provide liquidity to the rest of the ecosystem. Raydium: It is an AMM and liquidity provider for the Serum Decentralized Exchange based on the Solana blockchain (DEX). In addition to providing on-chain liquidity to a central limit orderbook, Raydium is unique among AMMs. Orca: As one of Solana's first general-purpose AMMs, it allows users to exchange assets, offer liquidity, and earn interest. Orca is Solana's easiest DEX. It aims to make DeFi accessible to everyone with simple and efficient financial solutions. Saros Network: It's a mineable masternode coin, a fork of Dash. The currency adds anonymity, security, and speed to the network. Using the X11 algorithm, Saros network launches a successful and helpful network for the crypto community. Saber: A reliable cross-chain stablecoin on Solana, Saber. To keep liquidity providers capital-efficient, Saber allows minimal slippage trading at significant volumes. Recently, Solana-based Saber raised \$7.7M to expand the team and tokens. Mercurial Finance: Mercurial vaults provide steady minimum slippage swaps while boosting LP profitability via dynamic fees and allocation of capital. SenSwap: SenSwap is an Open Liquidity Protocol for Token Swap on Solana aims to eliminate technological obstacles and make AMM more accessible. The pool is no longer divided into two tokens. Cyclos: They may choose the price ranges where their liquidity is active. Larger orders may be executed at a better price by establishing the depth of liquidity around the anticipated market price. HydraSwap: HydraSwap is an intelligent, multi-module, cross-chain DEX based on the speedy Solana chain. An HMM core, cross-chain technology, and multi-module solid components support it. 2. Orderbook Serum: The unprecedented speed and cheap transaction costs are brought to decentralized finance via DEX. Serum is Solana-based and is completely permissionless. Dexlab: Dexlab has a token minting lab, a launchpad, and a dedicated DEX for all listings, making it easier to launch on Solana. Recently, the price of Dexlab surged, showing a bullish trend. SolAPE Finance: It offers a new perspective on Decentralized Exchanges inside the Solana Ecosystem. SolAPE Decentralized Exchange (DEX) allows new projects inside Solana to list their tokens and trade the biggest market cap coins. Open Serum: A Solana-based Project Serum DEX. Open Serum is a decentralized exchange with the speed and ease of DeFi while being transparent. Samoyedcoin: Samoyedcoin (\$SAMO) is Solana's community-owned meme coin. It seeks to expand Solana's ecosystem by appealing to users outside its core of high-tech currencies. A fun coin to trade, Solana's blockchain offers all the benefits (scalability, speed, cheap costs). Slope Funding: The slope is a Solana-based decentralized exchange. Slope Dex is a decentralized automated full limit orderbook, the first Serum-based smartphone app. Built for, and hosted by, the community. Cryptocurrencies.ai: Aldrin's goal is to make DeFi simple and create powerful tools for all traders. Aldrin is now Cryptocurrencies.ai (CCAI) (RIN). Professionals will appreciate the live decentralized exchange and future centralized exchange since it offers pros that utilize unique capabilities. 3. Solana Lending/Borrowing The existence of a middleman is one of the main problems with centralized institutions. Aside from needless verification, these numbers frequently cost both parties additional money. DeFi steps in here. Decentralized lending systems provide loans directly to companies or individuals. Oxygen: It is a DeFi prime brokerage service powered by Serum's on-chain infrastructure for the future. Oxygen is built around Pools or baskets of assets that function together. Parrot: Bridging assets from ETH DeFi to Solana imposes an opportunity cost for consumers. The Parrot protocol seeks to utilize collaterals to create synthetic assets as debts. Solend: Solend is a decentralized borrowing and lending system based on the Solana blockchain. DeFi can replace the global financial system; however, specific problems exist. Port Finance: Port Finance is a lending protocol that seeks to offer variable rate, fixed-rate, and interest rate swaps. The main contributors are a tight-knit group of engineers from Google, Facebook, and Microsoft who worked on Serum and Solana. Jet Protocol: Jet is a decentralized borrowing and lending system based on Solana. To add, Jet will provide customers with faster and cheaper transactions. Acumen: Based on the Solana blockchain, the Acumen protocol allows open financial apps to determine interest rates algorithmically. Larix: Larix is the ultimate loan gateway. The well-constructed interest rate mechanism rewards both borrowers and lenders with Larix tokens. Ratio Finance: Ratio Finance allows Solana users to earn interest, take out collateralized loans, and maximize their financial potential, all through a user-friendly interface. Apricot Finance: Apricot Finance wants to capitalize on Solana ecology development by creating a unique initiative to become the DeFi industry standard by acting as a decentralized lending system. Zero Interest: A fast, secure, and censorship-resistant blockchain, Solana provides access to the open infrastructure needed for the worldwide adoption of ZIP. The Zero Interest Protocol is built on Liquity's excellent concept for zero-interest loans. Everlend: Everlend is a decentralized cross-chain lending system based on Solana. Users may either lend money or give it. They will no longer need to worry about their portfolio, best bargains, and different calculations/scenarios. 4. Derivatives Mango Markets: The Mango Markets DEX provides spot and futures trading on-chain. It is also a lending platform, drawing liquidity from its pools and Serum, another Solana-based exchange. Synthetify: It is a decentralized system for creating and exchanging synthetic assets. Synthetify is a Solana blockchain-based platform that allows for the production and burning of synthetic assets. Hedgehog: In addition to trading on over 130 cryptocurrency exchanges, Hedgehog allows users to monitor their assets and learn about cryptocurrency. It replaces spreadsheets with real-time data from over 130 exchanges and 1000+ coins. Drift Protocol: Drift wants to put centralized exchanges' trader-centric experience on-chain. An expert team from DeFi and traditional finance is working together to make this a reality. Sypool: You may create, manage, and trade your portfolio tokens using Sypool's synthetic asset management system. This is another invention that brought money on-chain. Digital Asset: The tokenized eco-system includes digital assets AG. It will deploy its tokenized stock system on the Solana blockchain. FABRIC: FABRIC uses the Solana Ecosystem and the Serum DEX GUI to trade FAB. To use any synthetic asset, it must be backed by FABRIC tokens (FAB). Plutos Network: Plutos Network, a multi-chain synthetic investment hub built on multi-chain architecture. With Solana, it will be easier to scale its Synthetic Issuance and trading platform. 5. Options Zeta: It is the first under-collateralized platform based on DeFi

choices allowing users to hedge risk against market movements. Zeta is the first under-collateralized platform based on DeFi choices allowing users to hedge risk against market movements. PsypOptions: PsypOptions is a system based on the Solana blockchain in an American style. Flexibility and composability are the concepts that drive the design and development of the core protocol. UNK Finance: UNK Finance is a market for on-chain options on Solana. We may establish call contracts backed by Bitcoin and Ethereum and stacked by providers of liquidity. 01: 01 is a decentralized derivative that helps create genuinely autonomous contracts, immediate liquidity, millisecond transaction speeds, and cheap costs across DeFi. 6. Aggregator SolFarm: SolFarm is Solanaa€™s first yield aggregation platform with self-assembly vault methods. The Dapp is intended to use Solanaa€™s low-cost, high-efficiency blockchain, enabling vault techniques to compound regularly. Sunny: Sunny is a Solana-driven composable DeFi yield aggregator. The Sunny Protocol has been built as a fundamental component with composability, allowing other apps and protocols to make it easier. SolYard: SolYard is a new Solana Ecosystem Yield Farming Aggregator. SolYard offers methods to improve your Solana crypto assets. Francium: Francium is a unique Solana-built leveraged yield aggregator. It provides consumers with high APY via various community strategies. OpenOcean: OpenOcean is the first complete aggregator of DeFi & CeFi. It finds the best price and lowest slip for traders using an advanced routing system that is thoroughly optimized. 1Sol: 1Sol is a decentralized Solana DEX cross-chain aggregator that enables DeFiâ€™s most smooth, efficient, and secured activities. With DeFiâ€™s fast-growing infrastructures, highly demanded aggregators, and future cross-chain transactions, 1Sol created in Solana. DAGG Trade: DAGG Trade offers the finest protocol for the DEX aggregator, built for the Solana blockchain. These are Solana liquidity aggregators, which aggregate the exchange rates of several DEX platforms (Serum, Orca, and forthcoming Sushi). Apollo: Apollo seeks to combine the desire to make Terraâ€™s yield stronger. Initial UI images indicate that vaults will be available with UST and ANC, MIR, and mAssets, but it appears evident that this is just the start of the Apollo team. 7. Asset Management Solrise: Solrise Finance is a Solana-built decentralized and non-custodial asset management platform. It enables anyone to establish or invest in a \$20 fund. Symmetry: Symmetry facilitates the creation and investment of bespoke crypto indexes. Users may build their index using Symmetry or buy an index produced by someone else. Step Finance: Step Finance is Solanaa€™s front page. Visualize, analyze, execute and combine transactions in one location across all Solana contracts. Stacked: Stacked Crypto is the investing platform for cryptocurrencies. Manage your assets and invest in pre-developed portfolios and strategies of top hedge funds and traders immediately. Laguna Finance: It offers customers access from a single platform to the finest investment possibilities in the Solana ecosystem. Laguna Finance develop, combine and capitalize on DeFiâ€™s unique composability to provide the consumers the greatest yield possibilities. 8. Launchpad AcceleRaytor: AcceleRaytor is a Raydium effort to expand the Solana Ecosystem. It will allow Solana initiatives to obtain funding and initial liquidity in a decentralized and interoperable way. Initially, each AcceleRaytor launch project will include two kinds of pools: Community Pools and RAY Pools. Solstarter: Solstarter is Solanaa€™s initial IDO platform. It enables launchpad projects to increase liquidity and in a decentralized manner fairly. Solstarter ensures fair distribution and is entirely decentralized. Solstarter determines guaranteed allocations for each pool member depending on tiers. Solanium: In addition to the launchpad, the platform features DEX UI and staking. Solanium adds inline wallet administration to any linked wallet. The platform allows users to see token balances, send and receive tokens, and manage token accounts. xSLIM may be obtained by staking SLIM tokens. Solpad: It is Solanaa€™s first Multichain IDO platform. It provides a decentralized platform for initiatives to raise funds. Solpad is based on Solana, but its reach extends to other blockchain ecosystems. Incubated projects on SolPad will automatically list on SolSwap. It was designed to link Solana and other blockchains. Solster: Solster Finance is a decentralized financial ecosystem that assists investors. A platform with guaranteed participant token distribution. It is an ecosystem to help diversify investorsâ€™ decentralized funds (DeFi). Boca Chica: HAPIâ€™s Boca Chica is a cutting-edge IDO platform on Solana. The HAPI team recognizes the value of Solanaa€™s blockchain and its potential to become the most important blockchain network. Because of the close relationship with Solana, Boca Chica token may only be purchased through the Solana Staking Reward system. OxBull: OxBull is a new Blockchain startup incubator based on Binance Smart Chain. Moreover, OxBull wants to offer the advantages of blockchain to the broader community by facilitating access to blockchain enthusiasts. Solcubator: With the Solcubator communityâ€™s help, projects may raise funds in a safe and decentralized manner while investors can navigate the chaotic terrain to enjoy the rewards of a developing ecosystem. 9. GUI Bonfida: Bonfida connects Serum, Solana, and the user. With Solana Data analytics, it is the flagship Serum GUI. Bonfida API has witnessed a 25% increase in queries from major market makers in the last week. It aspires to be a single data truth source in the cryptocurrency sector. Bonfida additionally handles a range of data aggregation and visualization. 10. Gaming/NFT Non-Fungible Token is the recent trend in the digital world and has set a great impression for the gaming industry. This impeccable technology has the potential to strike the attention of internet users globally. It is capable of converting video gaming into NFTs using the concept of metaverse. Significantly, Solana has many projects on the list to build virtual gaming experience for the users. One such project is ATLAS which is paving the way for the future generation of gaming platforms. The world is about to witness the evolution of technology into the gaming industry in the near future. Star Atlas is a blockchain-based, space-themed video game which is built in the Solana blockchain. It is the next generation gaming metaverse where users can play, create and learn with other players globally. Moreover, Players on the Star Atlas metaverse can trade, obtain and create NFTs . ATLAS is set to be the platformâ€™s native token which will be empowering the economy of the entire metaverse. Whereas, POLIS is the governance token in the Star Atlas metaverse. Thus it will allow the POLIS holders to influence the decision-making of the development team. Another project from Solana is OpenEra. OpenEra is a MMORPG which is built on the Solana blockchain and powered by Serum. The story behind OpenEra is to create a virtual place where players live, create and explore. Aurory is another gaming project which is powered by Solana and Serum. This platform operates with the concept of â€œPlay-to-Earnâ€. Aurory allows players to earn while they play and the platform wants the gamers to know the blockchain uses in entertaining and educating perspective. Next project is DeFi Land which is a web-game invented to gamify decentralized finance (DeFi). The major goal is to interact with DeFi via gaming experience. COPE is next on the list which is minted on the Solana blockchain and most of its supply will be available in Solana. Then followed by All Art created by the team VR-All-Art, which is the protocol that provides constant liquidity of NFTs. All Art allows NFTs to be traded indefinitely, just like other crypto tokens, with constant liquidity provided by a new type of AMM liquidity pool. Then comes Metaplex on the list which is built on Solana Blockchain. Besides it is for creating and minting NFTs in a way via wallets and apps. The other project Degenerate Ape academy is a collection of NFTs which is running on the Solana blockchain network. Degenerate Ape platform allows participants to exchange digital artwork collectibles. Through the sale of Degenerate Ape, Solana entered the million-dollar NFT club. Significantly, Solana is a part of the growing NFT ecosystem in the market. One such NFT is Kaiju Cards which is a NFT game built on the Solana network. Kaiju Cards provides dynamic NFTs and an environment for players to use it. The platform marches towards the growing next generation NFT technology related to games. As a matter of fact, there are numerous NFT marketplace where users can trade, buy and sell NFTs. Likewise, Solanaa€™s Sollectify is a creator-centric NFT marketplace where users can buy, sell, and trade NFTs in the platform. Another NFT marketplace is Solanart which is the first NFT marketplace on Solana. Solanart platform allows users to access different digital collectibles and explore them. Then comes Solsea which is an open NFT marketplace on Solana. Solsea enables creators to choose and embed licenses in NFTs. 11. Social Platforms The first application on the list is MAPS, it is the worldâ€™s leading offline navigation app with 100 million users globally. Maps are a great companion for travellers as well as it is a wallet where users can exchange money with no hidden fees. The next platform is Media Network which is a new protocol that avoids the centralized approach of traditional CDN providers. Media Network is a peer-to-peer content delivery network that is a highly scalable and community-governed CDN. Then comes the music streaming platform â€œeAUDIUSâ€. It is one of the well-known platforms in the crypto market from the Solana foundation. Audius is a high-quality music streaming application where content creators can upload their tracks and share the music globally. Followed by Only1, which is a NFT-powered social engagement platform developed on Solana. Only1 platform enables users to buy and sell NFTs from any favourite creators. Moreover, the next app on the list is GRAPE protocol. It is a protocol for creating token-based membership communities on Solana. \$GRAPE uses the power of Solana to create, reward, and secure online communities. The most comfortable platform for messaging is Satellite.im. It is a messaging app with end-to-end encryption built on Solana and IPFS. Satellite.im uses serverless technology without sacrificing quality. Followed by an online dating app â€œSolDateâ€ which is also built on Solana. SolDate is a secure platform which enables users to search for a partner and its native token is \$DATE. \$DATE will enable users to explore blockchain in a simple and fun way. However, Solana has many platforms which ensures security and protection. It is created with a mission of providing easy access to their users and reaching millions of users globally. Solana has developed applications for all kinds of usage digitally. 12. Oracle Oracles are a major component of DeFi infrastructure that allows smart contracts to mingle with the real world. Many solutions have focused on financial and time series data instead of generalizing to all types of data. Solana blockchain contains two oracle Pyth networks and Switchboard Pyth Network: The Pyth Network is a decentralized data oracle that launched on the Solana blockchain. It is an oracle that builds a bridge between a blockchain and real-world data. The Pyth network will support DeFi projects on the chain. Pyth will gather data from conventional markets as well as for cryptocurrencies and crypto assets, and aggregating the data on the blockchain which will utilized for other crypto projects such as smart contracts. Accordingly, the data provided by Pyth will be more accurate. Therefore, the price will be updated on Solana every 400 milliseconds, this very quicker compared with Ethereum oracle which updates prices on the network only every 10-15 seconds. More so, the Pyth network will connect high-fidelity, time-sensitive, real-world data with defi applications, and this will play a major role in the industryâ€™s evolution. Switchboard: Switchboard is building a platform that curates the oracle ecosystem on Solana. The main goal of Switchboard is to provide censorship-resistant access to all forms of data on-chain. Switchboard creates a market of curators incentivized to organize different and unique off-chain data sources and publishers to decentralize quantitative data feeds. Switchboard provides a much broader set of data providers and customers to choose what they would like to see on-chain. Solana will become one of the quality destinations for developers building high performance 13. Bridge Solana has disclosed cross-chain bridges such as Allbridge, Swim protocol, Wormhole, Synapse protocol that will allow users to transfer assets easily. Allbridge: Allbridge is a decentralized, modular, and expanding token bridge with on-chain consensus. It is the easiest and modern way to transfer assets between networks. The most important aim of Allbridge is to expand the blockchain world and provide a tool to freely move assets between networks. Allbridge is going to bridge the Impossible Finance (IF) token from Binance Smart Chain (BSC) to Solana, adding it to the borderless list of the supported token. Swim Protocol: Swim protocol neglects the need for wrapped assets on one chain to a native asset on any other supported chain. This is done combining the ideas produced by existing stable asset AMMs with Wormholeâ€™s bridging technology. The Swim protocol aims to create a fast, flawless experience that links between smart contract chains, also creating a network of native asset pools on multiple chains through which users can swap flawlessly from one chain to another without using wrapped assets. Wormhole: Solana introduced Wormhole, a secure and decentralized bridge that connects Ethereum to Solana. Wormhole allows surviving projects to move tokenized assets flawlessly and trustlessly across blockchains to benefit from Solanaa€™s high speed and low cost. A wormhole opens a quicker way for non-native belongings to enter Solanaa€™s decentralized finance (DeFi) ecosystem. Synapse Protocol: Synapse enables users to flawlessly bridge assets across the most popular chains. It is a cross-chain layer protocol powering interoperability between blockchains. Cross-chain swap can be done in a bridge single transaction, with any chain connected by the Synapse in less than 3 minutes. Synapse builds the nervous system for all interchain activities across blockchains. 14. Staking Pool A staking pool enables multiple stakeholders to combine their computer resources to improve their chances for reward. In other words, they join forces in the testing and validation of new blocks, so they are more likely to earn a reward for the block. Marinade.finance: Marinade.finance is a liquid staking protocol which is developed on Solana. Marinade provides users with the easiest way to stake their tokens. Users can stake SOL tokens using automated staking strategies without lockup period. Thus the platform allows users to enjoy automatic compounded rewards. Consequently, the other staking pool is Socean. Socean: Socean is a 100% transparent, algorithmic, and decentralized stake pool for Solana blockchain. Moreover, the Socean stake pool offers SOL holders the opportunity to participate in DeFi and earn rewards. Socean is fully transparent is developed with a real-time dashboard. Users can monitor where their stake \$SOL is going or can identify with whom they stake. Furthermore, this staking pool is fair and decentralized with a strong staking strategy. 15. Wallet Extension The primary use of crypto wallet is friendly-access. It is an application that stores our tokens and users can send or receive and can track ownership of cryptocurrencies. The wallet has navigation where users have easy access to trade or store digital-assets. Wallets offer different solutions and approaches to transact or interact with the tokens. It works in an encrypted method where users can use a wallet to transact or receive addresses in a secured way. Solana supports a wide range of wallets, allowing you to strike the balance of safety and reliability. Wallet extensions offer users easy access to the wallet via browser with wallet information. Coin98: Coin98 is a non-custodial crypto wallet which supports the Solana Networkâ€™s SOL and SPL tokens. Moreover, the wallet offers payment gateway features to its users. Significantly, the next wallet on the list is Phantom. Phantom: It is a friendly digital wallet developed on Solana for DeFi and NFT. This platform offers easy access for users where they can store, receive, collect, send, and swap tokens on Solana Blockchain. Phantom enables users to interact with blockchain-applications directly from web browsers. Moreover, it is a non-custodial wallet and the platform focuses on sending and receiving NFT collectibles in a secure way. Sollet: Sollet, a web-based crypto wallet that allows users to manage digital assets on the Solana blockchain in a secure manner. It is an open-source wallet for users and developers where they can send and receive SOL and SPL tokens. The other multi-chain wallet on the Solana blockchain is Math wallet. Even more, it is a multi-chain and cross-chain assets hub that supports more than 60 blockchains. Math wallet: Math wallet offers Math DApp Store, MathStaking, Math Custody, Math NFT, Math Chain, Math Hub, Math DEX, Math ID, and Math Pay. Furthermore, this app is available in both Apple Store and Android Play Store, so users can download the app to interact with the Solana network. Solong wallet: Solong wallet is a one place wallet where users can manage all your Solana assets. Thus users can send, receive and interact with SOL tokens. However, wallets are a key component to manage collection of tokens in a user-friendly way. 16. Tools Sonar: Sonar is employed to trace Yield Farming and Liquidity Pool performance on the Solana platform. In addition, Sonar dashboard will survey the Solana blockchain and shows collection statistics from the Serum or Orca or Radiyum pools and Radiyum farms. Apeboard: A cross-chain DeFi dashboard, Apeboard, is used to observe the portfolio balances over DeFi protocols. Moreso, Apeboard also supports various protocols on Solana. Serum Pulse: Serum Pulse is the top analytics platform and inbuilt dashboard for market and staking the data for Serum and Solana platform SolanaProject: SolanaProject is a weighted index that traces the performance of decentralized financial (DeFi) assets over the market. It will display all projects that build on Solana Solscan: Solscan is the user-friendly scanning tool that is available on Solana Ecosystem. More so, Solscan is utilized to look for the entire transaction history which includes the transfer of tokens and the performance of the contract. Synchro: Synchro brings the best tools together and performs the traditional and decentralized finance space into a

solution. Moreover, Solana is the most scalable blockchain so synchrony builds on Solana. Neon Labs: A blockchain software company, Neon Labs is utilized to make it easier to port Ethereum applications to the Solana blockchain. Therefore the Ethereum developers will soon be able to deploy their applications to Solana. LIQ Protocol: LIQ Protocol is a decentralized liquidation engine that built for Serum decentralized exchange (DEX) margin markets on the Solana platform. It will enable liquidity through its engine to manage liquidation for Solana-based borrowing projects. Solanatip: Solanatip is a Google extension that utilizes sollet.io and encourages users to provide a small number of cryptocurrencies to tweets. Furthermore, it will enable users to give and receive tips on Twitter, all the credits will go to the Solana blockchain and its Name Service MetaSol: Metasol, a meta transaction protocol that encourages users to transfer Solana Program Library (SPL) tokens without holding Solana (SOL) on Solana blockchain. P2P Validator: P2P Validator offers secure staking, so it will allow the investors to compound their cryptocurrency investment. QuickNode: QuickNode is a Web3 developer platform that will guide the user to build and operate blockchain-powered applications (dApps). Bitquery.io: Bitquery is a collection of software products that store, parse and index blockchain data in a unified way. Bitquery offers APIs, Dashboard Analytics, Explorers, and widgets. GenesysGO: Blockchain Service Provider GenesysGO provides robust and secure infrastructure, to facilitate blockchain developers and operators the performance they need Boring protocol: A decentralized Virtual Private Network (VPN) that builds on Solana is Boring Protocol. It provides an economic incentive for node providers with transparent programs to secure network users 17. Others HXRO: A cryptocurrency platform that provides perpetual, time-based digital derivatives markets is Hxro. More so, it provides an easy and simple way to interact with the crypto market and traders get an alternate way to express a view on price, hedge risk, and trade digital assets. Burnt Finance: Burnt Finance is developed to prove that physical artwork values can be channeled into an NFT. Even more, it is a decentralized auction protocol powers the Solana blockchain but created on the injective protocol Steaking: Steaking makes staking simple, easy, and secure. It allows users to stake Solana more easily and simply. Solstake: Solstake makes staking on Solana easier. Users can stake SOL, manage accounts and earn rewards just in a single app. Rope Official: ROPE is a next-generation, full-scale decentralized ecosystem that brings the famous and well-known market volatility index to the crypto market. Lava Cash: A decentralized privacy preservation protocol built for the Solana blockchain is Lava Cash. It was the first privacy-preserving smart contract on Solana. Solar system: The solar system is the one-stop platform for discovering projects, maintaining track of news, and buying merchandise on the Solana Ecosystem. Solana.bet: Solana.bet is a decentralized sportsbook settlement on Solana Fluidity: Fluidity allows assets based on Solana to convert into a Fluid version. It is a Solana grant recipient and it will launch on Solana and integrate Defi protocols that are based on Solana. SolLotto: The first decentralized pooled giveaway platform built on Solana is SolLotto. It plans to operate several pooled giveaways compatible with several SPL tokens, providing the convenience of entry to members of the Solana network. Summary Solana has a fantastic ecosystem which indicates the growth of the platform. Solana is normally called the "Ethereum Killer". Moreover, adoption is one of the big challenges for Solana's long-term prospects. Furthermore, the growing adoption of the crypto industry continues to increase, there will be enough space for digital assets such as Solana, Ethereum, and others.

- PAI, an algorithmic stablecoin, backs Parrot Protocol. - Grape Protocol was the primary source of the downtime. Solana has been up nearly 3200% since August. Investors' interest in Ethereum rival systems featuring DeFi, NFT, and smart contract services has risen dramatically. The software applications that simulate legal contracts are smart contracts. Once housed on a blockchain network, the software application will run automatically without human intervention. This month, Solana's DeFi initiatives raised millions of dollars. This is another proof of Solana's potential to compete with Ethereum. Currently, Ethereum has the most DeFi and NFT projects. Bots raced to invest in a token sale for Grape Protocol overflooded the blockchain, causing Solana to collapse for 17 hours on Tuesday. Let us take a look at the few IDOs that helped raise millions. Grape Protocol Grape Protocol, the primary source of the downtime, managed to raise just \$600,000 on Raydium's Accelerator. Tokenized communities may use Grape Network to connect to platforms like Discord, Telegram, and soon Twitter to collaborate over Solana and reward members with crypto. Parrot Protocol Parrot Protocol is based on Solana. Investors in the Initial DEX offering included Sino Global Capital, Alameda Research, and QTUM VC. Moreover, to put it simply, Parrot is a non-custodial lending platform and decentralized exchange. PAI, an algorithmic stablecoin, backs Parrot. Furthermore, Parrot offered a governance token called PRT in its IDO. Thus, allowing investors to vote on the protocol's operation and farm yields on Solana without affecting other Layer 1 blockchains. Solana's failure impacted Parrot's IDO, but it was resolved by Sept. 16. Moreover, the team said it would start working on PRT staking, NFTs, and adjustable interest rates in a letter from the Parrot. Several Solana initiatives will be launched in the next day's/weeks. Examples include Solanium, Boca Chica, and Solstarter. On Solanium, whitelisted users may buy MatrixETF. Recommended for You

- Saber initiatives surpassed \$4 Billion TVL. - Wormhole is the first of several bidirectional cross-chain bridges to link Ethereum to Solana, an open-source initiative launched Wormhole, a safe and trustless bridge. Wormhole is the first of several bidirectional cross-chain bridges for the Solana network and is present in the testnet phase. Wormhole links ETH and ERC20 to SPL tokens, the Solana blockchains standard token. Solana, founded in late 2017 by former Qualcomm, Intel, and Dropbox employees. The Solana Foundation is hosting a Wormhole hackathon starting on October 28th. The virtual hackathon will bring together crypto enthusiasts to build highly scalable Web3 apps. Solana was designed to address blockchain scaling problems, and it has already been tested on Serum, Anchor, Terra, Stardust, and most recently, Tether. For decentralized applications, Solana's size, speed, and cheap cost make it ideal. Also, most Dapps must outperform Web2 products. Furthermore, Wormhole enables existing businesses, platforms, and communities to transfer tokenized assets across blockchains quickly and cheaply. Furthermore, interoperability is important because it unlocks network effects and maximizes resource usage. It's not unrealistic to expect a whole ecosystem of value to migrate instantly across networks, and teams can't afford to wait. Moreover, it is the first of many similar chains. Solana and Serum utilize decentralized cross-chain oracles called guardians, run by node operators that include top Solana validators and other ecosystem players. Solana AMM Saber Surpasses \$4 Billion Furthermore, projects like MatrixETF, Parrot Protocol, Solanium, Grape Protocol, Boca Chica, and others have increased demand for SOL-based IDOs. The Wormhole Network team tweetstorm said: "Speaking of TVL, we're excited to announce that Saber HQ will support the migration of Wormhole V1 assets to V2 [and] move over incentives to Wormhole V2 assets. Saber has been on an absolute tear with growth since launch having just surpassed \$4 Billion in TVL. Serum, Raydium, Orca, Mango Markets, and Oxygen are all Saber initiatives worth a value of more than \$4 Billion TVL. Also, cope, step finance, maps. SOL supporters have paid keen attention to me, kin, and bonfida. Recommended for You

Solana (SOL) is now the recent hype which creates a huge curiosity among the millions of investors with its exciting developments. At present, all crypto users are planning to invest their assets into Solana for its massive performance in the marketplace. Besides, all investors believe that SOL will overtake Ethereum (ETH) in the near future. Moreover, Solana is progressing forward offering great deals to the investors and to the entire crypto space. All investors must know when to invest their savings into the crypto assets as the market is always unpredictable. But now, Solana is fast approaching and SOL adoption is remarkable with a market cap of \$50 billion. Why invest in Solana (SOL) ? Solana is the decentralized Finance (DeFi) token which recently gained the users' attention with its innovation in the market. The creative ideas of the developers working behind the Solana network provides the users with unique features and infrastructure. Moreover, SOL's decentralized applications (Dapps) offer the users fast, safe and secure transactions. Notably, Solana protocol strengthens the network to provide nearly 50,000 TPS, much faster than ETH network's 30 per second. Also the Solana network is capable of working with a variety of Dapps on its infrastructure. Thus, these features create a hype among the investors for Solana to become the world's most popular DeFi network. Earlier in September, Solana grabbed the title of best Ethereum killer in competition with Cardano. Also proving that SOL is 3,800 times faster than the ETH network. Hence with its significant utility and conduct it will increase its value and reach greater heights in the digital space. Following, Solana is massively rocking the crypto industry by thrashing the value of other digital assets. Recently, SOL's continuous rise pushed itself into the top 10 cryptocurrencies with remarkable market cap. Surprisingly, Solan surpassed XRP, Polkadot, Dogecoin and became the seventh-largest cryptocurrency by market value. SOL Market Status According to CoinMarketCap, the Solana (SOL) holds the value of \$163.61 with a rise of 15.98% in the last 24-hours. Besides, with a 16.81% increase its current market capitalization is \$48 billion with huge trading volume. Also, Solana's innovative proof-of-history (POH) will boost its value and usability in the industry very soon. Thus, with an unique integrated blockchain technology, Solana (SOL) will incredibly fly high in a very short period. With its developments and smart contracts it has attracted millions of investors in a lightning processing time. Hence, it is a good time for all the investors, crypto traders to cash out their assets into the digital currencies. Recommended for You

- DexLab Market is open to everyone. - DexLab's main aim is to be Solana's entrance center. The Solana Blockchain is a scalable network. A stake-proof-of-history consensus system allows for fast transactions with low costs. Unfortunately, it is still a new network, and many are still learning about it or how to develop on it. DexLab will attempt to remove these obstacles. DexLab's main aim is to be Solana's entrance center. Moreover, it is a platform that will perfect the process of token minting in Solana. DexLab is a GUI for issuing Solana-based tokens without coding. It uses the Serum DEX's central order book to provide ultra-fast transactions, pooled liquidity, and additional monetization capabilities. DexLab Market is open to everyone. To verify custom market registration, one can use only the registered PC. When registering the market, DexLab allows anybody to trade via an address or a separate area (like Uniswap). Few advantages of DexLab that set it apart: - Allows traders who wish to see TradingView charts, place limit orders, and manage their trading. - GUI-based token issuance and administration. - It offers a platform for IDO creation and participation. - Scalable system trading API Is It the Right Time to Invest in DEX? DexLab offers a crucial onramp for developers to build new DeFi primitives underpinned by native tokens with solid foundations. This will boost network effects and align user incentives. Furthermore, allows users to create, manage, and list SPL tokens and NFTs with a single click. Thus, eliminating the need for scripting. Moreover, DexLab's price has risen 16 percent in the past 24 hours due to increased trading volume and market cap. DexLab has recently demonstrated great potential and could be an excellent time to invest. According to CoinMarketCap, DexLab price is \$0.868470 USD with a 24-hour trading volume of \$1,328,038 USD. With the rise of the non-fungible tokens (NFT) market and its evolution so far, far by now, it's highly evident that the NFTs will be playing a vital role forever till human existence in this world. Even cryptos are like a cat on the wall, not sure if they deserve the term "forever". Yet, the NFTs sure do, owing to the entire world widely into it. Everything and everyone is into these NFTs either directly or indirectly. In spite of all this, the whole NFT market took everyone to extreme astonishments and in awe during the month of August. Also, last month witnessed epic heights of almost the entire NFT market as never as before. However, the following month the situation was not the same though. Splendors of August for the entire NFT market, the month of August, 2021 is the golden month in its history so far. The month of August saw an epic surge in the NFT market overall drastically. Various factors and numerous outperforming NFTs are to be the main reasons for this recordable month. Accordingly, OpenSea, the biggest and largest global platform for all sorts of buy, sell, and trade of digital collectibles, assets and NFTs, witnessed the same personally last month. In spite of this, the overall trading volume for the platform crossed over a whopping \$3.4 billion. This is the highest for the firm so far. Furthermore, this remarks an epic surge of over 950% more than that of the previous month of July. And so comparing the previous year of 2020, with complete 2020 sales markets combined together, OpenSea is 140 times more than that for the month of August alone! Moreover, the majority of the NFTs record sales amounts to Ethereum (ETH) based NFTs like CryptoPunks and Art Blocks. In addition, the Solana (SOL) based NFTs like Degenerate Ape made impeccable records so far and still much more to go too. The Settle of September Despite such a surge one could ever imagine upon such a market, the case is not the same at present for the month of September 2021 though. In addition, the recent downfall of most of the leading cryptocurrencies in the past few days imposed certain impacts to the NFT market. Moreover, the increase of the Ethereum transaction gas fees proves to be another factor for such subtle performance of the whole NFT market for September, 2021. On the contrary, seeking this in terms of OpenSea, the first week of September saw \$274 million in ETH trade up its platform. However, the present week, taking the past few days into account, witnessed only \$107 million in ETH trade. In addition, all this is due to the fact that the price of Ethereum (ETH) has dropped down recently. Also taking the past 1 week into consideration the graph has been down to about 18%. Just exactly four days back, it was a moment of history for Solana (SOL), as it overtook Ripple's XRP, becoming the new 6th biggest cryptocurrency in the world. However, despite all such efforts in gaining an overall market cap greater than that of XRP, the reign of SOL was so short-lived. And so, SOL could only keep up the title of "the 6th largest cryptocurrency in the world" just for a period of four days! Within a time period of just four days, XRP gained back its momentum, with a raise in its market cap. Accordingly, it gained back its title of being the 6th largest crypto. The Rise of the Fallen When it comes to the top ten largest cryptocurrencies in the market, it's not an often site to see one overtaking the position of the other. However, the whole market sprung to surprise when Solana (SOL) overtook Ripple's XRP in terms of higher market capitalization. At the time of its rise, SOL managed to back together a market capitalization of \$60 billion. This made SOL the 6th digital crypto asset in the world, dethroning XRP. In addition, at the same time SOL touched it's all-time high of \$214.96, which is something extraordinary for a crypto who started its journey as low as \$0.515. Also, the major thing to note is that SOL was launched just about a year and a half back, in March of 2020 to be more precise. Despite all this, the new title for SOL was extremely short-lived though. The Ripple's XRP sprung up again, rising from the fall on Monday, just a few hours back. It gained momentum of over all market cap of \$50 billion plus. On the other hand, at the same time SOL dropped down today suffering drastically, with the graph all moving down in red, taking the 24 hours charts into consideration. SOL dropped about more than 20%, with its market cap drawing down. And so, with the rise of XRP and fall of SOL, XRP gained back its title as the 6th largest digital crypto asset back again. XRP's Reign At present the overall market cap of XRP is around the \$50 billion range profusely. The price of Ripple (XRP) at time of writing is \$1.06 with its graph down about 4.4% though. However, the XRP has an overall market dominance of about 2.43%, making it remain stable, not breaking or from letting it go off its tracks. On the other hand, the profuse and well established open-sourced platform of XRP is an extremely vital point for the market dominance. Moreover, many don't know that the XRP is actually the cryptocurrency used upon the RippleNet payment platform. Also, this RippleNet payment platform is run by the firm, the

Thanks to Degen Ape #7225, Solana has joined the million-dollar NFT Club. Moonrock Capital bought a Degenerate Ape Academy NFT for 5,980 SOL (\$1.1 million) on Saturday. Degen Ape #7225 is the 13th rarest NFT. Its odd appearance makes it easier to detect. Itæ™s not often you see a scarred zombie ape with a gold tooth and a brain in its mouth. The company also bought the 18th rarest SolPunk for 1388 SOL (\$260,000). The number and money involved are remarkable, but what strikes out is that Solana achieved this in just two months. However, Ethereum, the most popular NFT network, took three years to register its first million-dollar sale. Solanaæ™s first major NFT was Degenerate Apes. This group of dressed apes has varying degrees of rarity. Some NFTs are wearing sunglasses, while others are munching on shoes and sandwiches. Collection of 10,000 Sold Out in Just 10 Minutes However, the proliferation of NFT experiments on Solana has begun to diminish the usefulness of previous efforts like the degenerate apes. Many projectsæ™ floor prices have fallen recently, with some mints not selling out and others selling below minting price. Despite technological difficulties, the Collection of 10,000 sold out in just 10 minutes. Solana is a proof-of-stake network, which means it can compete with Ethereum on speed and pricing. Solana is destroying the crypto charts. Solana has a market value of approximately \$52 billion and a price of Solana (SOL) \$176.79 at the time of writing, according to CoinMarketCap. Four days ago, the blockchainæ™s SOL token hit an all-time high of \$214.36, breaking the previous NFT record (September 8). This new record marks a 13,200% increase from the January 1 price of \$1.61. Due to his swagger and being investment savvy, Sam Bankman-Fried has gained immense popularity in the world of crypto. Bankman-Fried, the founder of the popular FTX exchange, is known in the industry as SBF. He is a maverick trader who likes to make moonshot bets. He made a bet in January with a crypto investor who goes by the handle Coinmamba. The exchange was initiated after Coinmamba became bearish on Solana. It is a new blockchain with SOL as its cryptocurrency. The trading was between 2-3\$. In response, Bankman-Fried made various public offers to buy the position of the Coinmamba in SOL. Furthermore, after the tweet became viral amongst the crypto world this week, the Solana price went to \$170. Earlier this week, SOL touched the price of above \$200 per coin. SOL Price Surging We all know that all cryptocurrencies are doing well in the market, but Solana is the best amongst them. Moreover, it is also seen as an Ethereum killer and exceeds its rivals and maybe is on the road to living up to its reputation. We all know that SOL is amongst the fastest cryptocurrencies available in the market, and its makers are constantly improving their features. The current price of Solana is \$187.54 as per CoinMarketCap. The tweet became extremely popular and has gained an insane amount of popularity. The major question is not answered: Did Coinmamba or other people in the crypto world take up SBF on his offer to buy All of the SOL tokens. Moreover, if the deal had gone on, it would have gone down as historyæ™s greatest trades.

Delta exchange is a crypto derivatives exchange which supports future tradingæ™s on Bitcoin, and on other altcoins. The platform announced that it has added future tradingæ™s on Solana (SOL) and Cardano (ADA) on Wednesday. The future tradingæ™s on SOL and ADA gives Delta users new access to leading cryptocurrencies. Significantly, Delta exchange already offers trading for BTC, ETH, XRP, Binance Coin (BNB) and also over 50 other top DeFi coins. Besides, the derivatives exchange has integrated many options on future tradingæ™s in mid-2020. Moreover, at the initial stage, call and put options for SOL and ADA will have daily maturities. Whereas, weekly maturities and monthly maturities will be made available later in the future. Options allows users to sell and buy specific security at a particular price within a predefined time frame. Growth Of Crypto Derivatives Crypto derivatives are financial tools whose value is derived from a primary underlying asset. The crypto derivatives market has experienced massive growth this year despite the fact that the market faced regulatory crackdown from financial authorities. After the crackdown in the crypto market since mid-May, it has regained its old level significantly in August. The crypto-sector has rebound from its dump and according to Bybt data, the open interest in Bitcoin options has doubled. Furthermore, the crypto derivatives market accounted for 55% of the overall crypto market in December 2020. As of now, the platforms for crypto derivatives are expanding at a rapid pace. While some platforms like FTX, Delta states that it may account for a larger percentage of the overall crypto market in future.

Solanaæ™s momentum seems limitless, with the SOL token continually rising to previously unseen heights. Over the last few weeks. Over the last few weeks, Solana climbed above a lot of its competitors and entered the marketæ™s top 10. SOLæ™s price has risen dramatically after the switch. It even surpassed USDC, Dogecoin, and Polkadot on the charts and has been rising since as per the ranking on CoinMarketCap. Solanaæ™s SOL token has surpassed XRP to become the sixth-largest cryptocurrency by market value. Solanaæ™s market cap is now \$59,164,244,981 against XRPæ™s \$51,796,731,234 as per CoinMarketCap. Just a week ago, Solana surpassed Dogecoin to claim sixth place. Since September 8, XRPæ™s market valuation has ranged between \$50-53 billion. Still reeling from Tuesdayæ™s debacle, Solana began September 8 at almost \$50 billion. Solana crossed the \$52 billion market cap barrier, surpassing XRP to Rank #6 on CoinMarketCap, and seems unstoppable. SOLæ™s price rose 81.14 percent in the last week. SOL is now \$201.07. Aside from USDC, it is the only currency in the top 10 to increase the price since last week. Tether has a market value of \$68,584,501,423 ranking fifth. Anticipation of a Major Shift The Degenerate Ape Academy NFTs released in mid-August boosted its NFT system. The network got praised for its cheap transaction costs and lack of congestion. XRP has found a place in the global payment ecosystem. However, regulatory ambiguity has slowed its adoption rate. However, Solanaæ™s adoption has recently been remarkable. Institutional investors have shown significant interest in SOL. Considering XRPæ™s on-chain stats, itæ™s safe to say SOL may hold the sixth spot for a little longer. So anticipate another major shift in the coming days.

- Solana has to overtake Cardano to claim it as an Ethereum killer. - Solana is around 3,800 times faster than Ethereum. - For Solana, it is more difficult to overtake Ethereum Solana, a competitor to Ethereum which has gotten a lot of buzz recently. Solana has more than 250 projects in its ecosystem, with partners like USDC, Chainlink, and Serum. Solana seems to be similar to Cardano Killer than in an Ethereum realm. Furthermore, Cardano positioned in 3rd place by market cap. But Solana is in 7th place. So, if Solana wants to claim to be an Ethereum Killer, it has to overtake Cardano in market cap. Solana is known as a fourth-generation blockchain. More so, Solana is around 3,800 times faster than Ethereum and it costs nearly 0.00025 per transaction, compared to Ethereumæ™s average of \$6.498 per transaction. Speed and transaction costs are both crucial for blockchain technologyæ™s real-world use cases and future adoption. Furthermore, one of the major investors in the token sale, Polychain Capital, believes Solana is complementary to Ethereum, not an Ethereum killer. Eventually, Cardano founder and a co-founder of Ethereum, Charles Hoskinson might also say the same about this blockchain technology. The founder of Cardano, Charles Hoskinson, often jumps first to mind when it comes to Ethereum killers. Cardano is a public, open-source blockchain for building dApps and for running smart contracts, with the latest feature still in development. Ethereum has a clear first-mover advantage compared to Cardano, but its scalability and performance-related issues started driving away companies and developers. So, whether this is enough for Cardano to take its place is unpredictable. In addition, the race for the second most popular protocol will be based on the successful implementation of their updates, and the several technical difficulties each network faces during the rollout. Final Thoughts Finally, Solana may provide significant utility and it might also move high over the next year, but there is only less chance to override Cardano. And for Solana, it is more difficult to overtake Ethereum. In comparison to Solana Cardano seems to be a better Ethereum killer. But this thought might also change in the forthcoming days. Meanwhile, Cardano will play an important part in the growth of decentralized finance (DeFi). But overriding wonæ™t happen without a few strikes. But it might get there.

- Solana shows an unstoppable market uprise for the past few weeks. - The price of Solana hits a new all-time high of \$194.82. - The total value locked (TVL) also hits a new ATH of \$5.98 billion. Solana shows an unstoppable market uprise for the past few weeks. The price of Solana gained 35% in the last 24-hours, hitting a new all-time high of \$194.82. If this bullish trend continues, the price of SOL will hit \$300 soon. Solana is mentioned to be one of the leading competitors to be an Ethereum killer because of its high transaction speeds. Notably, the transaction speed is 6,000 times faster than ETH. In addition, the network also supports NFT with the æ™Degenerate Ape Academyæ™ NFT series selling out its 10,000 unique NFTs in 8 minutes proceeding its launch in mid-August. Currently, SOL holds 7th place on CoinMarketCap. More so, it wonæ™t be a great surprise in case the price of SOL breaks into the top five crypto tokens by the end of this year. As per CoinMarketCap data, the SOL price trades at \$178.7, at the press time. Reason for Solanaæ™s Price Uprise The recent price surge of SOL came due to the increased decentralized finance (DeFi) activity in the ecosystem. Notably, the total value locked (TVL) on the Solana blockchain has increased over 350% in the last six weeks from the beginning of August 2021. In addition to the price surge of Solana, the TVL also hit a new ATH of \$5.98 billion. Evenmore, Saber (SBR), Raydium (RAY), Sunny (SUNNY), Serum (SRM), and SolFarm (TULIP) are the top five DeFi projects on the Solana blockchain. In fact, Saber (SBR) alone dominates approximately 29% of the TVL on the Solana blockchain. As of press time, the SBR price is up by a staggering 48% in the last 24 hours and is currently trading at \$0.634. With upcoming developments and upgrades within the Solana ecosystem the price of SOL might reach new heights soon.

- The top 5 crypto based on Solana blockchain by volume includes Tether, Solana. - Chainlink (LINK), Terra (LUNA), Serum (SRM). The crypto market shows a bullish trend. Notably, once again the crypto market is back in trend now. This time altcoin takes the centre stage. Moreover, the crypto worlds show no signs of slowing despite the issues it faces all day. Now, letæ™s look into the top 5 crypto based on Solana blockchain by volume. Tether (USDT) USDT holds the first position. Tether is a stablecoin which mirrors the price of the USD, offered by a Hong Kong-related company Tether. As per CoinMarketCap, the USDT price is trading at \$1, with a 24-hour trading volume of \$83,376,966,219, at the time of writing. Solana (SOL) Solana is a highly functional open source platform that banks on blockchain technologyæ™s permissionless nature to offer decentralized finance (DeFi) solutions. According to CoinMarketCap, the SOL price is trading at \$123.49, with a 24-hour trading volume of \$4,246,438,279, at press time. Chainlink (LINK) Chainlink is a blockchain abstraction layer which empowers the universally connected smart contracts. Through a decentralized oracle network, Chainlink enables blockchains to securely interact with external data feeds, events and payment methods. As per CoinMarketCap, the LINK price is trading at \$29.59, at the time of writing. Terra (LUNA) Terra is a blockchain protocol that utilizes fiat-pegged stablecoins to offer price-stable global payments systems. Terra joins the price stability and wide adoption of fiat currencies with the censorship-resistance of Bitcoin (BTC) and provides fast and affordable settlements. According to CoinMarketCap, the LUNA price is trading at \$32.16, at time of writing. Serum (SRM) Serum is a decentralized exchange (DEX) which brings unprecedented speed and low transaction costs to DeFi. According to CoinMarketCap, the SRM price is trading at \$8.96, at the time of writing.

Solana has captured its position in the top 10 cryptocurrencies by market capitalization. Now, SOL holds the eighth position following its boom in non-fungible tokens (NFT) and decentralized finance (DeFi). At the time of writing, SOL trades for \$99, and its total market capitalization is \$28.30 billion. Solana has outperformed Polkadot (DOT) and captures the eighth position in the market. The chart of SOL depicts that it has surged to 6.64% in 24-hours and its 7-day statistics show that SOL has risen to 35.37%. SOL boomed after the launch of Degenerate Ape Academy into NFT space which was held two weeks back. It was the debut of NFT sales from SOL but it has sold over 10,000 unique cartoon ape pictures in just ten minutes. As a result, SOL increased in value because people needed to buy the cryptocurrency in order to buy apes. Significantly, the author of the Not Boring newsletter has mentioned that once users experienced low transaction costs and speed while purchasing SOL, the price surged. This has led to more gains and the chart presents a bullish signal. Following the entry into NFT, SOL has boomed and resulted in a price hike. Solana Might Hit In NFT And DeFi Platform The theory of reflexivity or a positive feedback loop seems to be part of an NFT market, according to Amber Group. Moreover, Amber Group states: æ™Thereæ™s a price discovery, supply crisis and opacity. As a result, price bands are wide, and gap up appears to be the trend for the time beingæ™. Since the crackdown in the crypto market, many digital-assets have been down for the past few months. But according to Bill Noble, a chief analyst at Token Metrics, SOL wonæ™t stop rising in value. Noble has mentioned that SOL will hit highs in NFT and DeFi platforms. Moreover, it will reach its long-term target of \$126 when the breakout is confirmed. If the trend reverses and follows a bearish signal then it may reach the support level at \$70. When the price value crosses below \$70 then it might again hold to its old-high \$58.

While NFTs have gained the most attention via the high volume and spectacular sales of Art Blocks and Bored Apes this week. Decentralized finance protocols have discreetly attracted bigger capital stores. According to statistics from DeFi Llama. The æ™total locked valueæ™ (TVL) of the DeFi protocols across blockchains has reached an all-time high of \$157 billion this week. DeFi refers to blockchain-based apps that enable various financial activities, from loans and borrowing to trading in derivatives and asset swaps. Although DeFi has begun the Ethereum blockchain that uses automated smart contracts. Thus eliminating middlemen such as banks and brokers. It has become a smart blockchain, with Binance Smart Chain and Solana as its largest. When traders, investors, or speculators utilize a DeFi lending platform such as Aave or Compound. Crypto-assets are deposited with them so that others may buy them and receive crypto incentives. Which are similar to a reduction in the interest rate, in exchange. The assets are the total value locked, or TVL, a contentious measure that is exaggerated since it includes the same assets again. Overall, DeFi Llama networks, Ethereum, is the leading TVL blockchain. With \$114 billion locked within its different protocols. (On 22 August, the record hit \$117 billion.) Distressing Indication for Polygon But DeFi protocols do not deal with fiat but create crypto-focused economies. DeFi Llama estimates that in Ethereum-based protocols, 36 million ETHs worth \$114 billion floats about. This implies that the growth in Ethereum DeFi, partly associated with the increased value of ETH. Which rises over \$3,200 after spending below \$3,000. In a distressing indication for Polygon. The new figures indicate that DeFi merchants are more

ready to carry out their business outside of Ethereum, provided the price is right. Recommended for You

In the cryptocurrency market, Solana’s SOL token has soared 41 percent to a new all-time high price of \$64.48. A communication bridge between Solana and other top decentralized finance networks, known as Wormhole, has helped Solana’s price rise by more than 65 percent in the past seven days. This week, SOL soared by 90 percent. From its 200-day MA support at \$24.50, it surged to \$40 before the end of the month. Last week, SOL continued to rise over the 100-day MA in the first week of August. It soared above \$40 to reach a high of \$45. If we want to make 10x to 100x profits, we need to look into altcoins, although some of them that we are about to mention are not technically in the Solana ecosystem. Based on volume growth and analysis, let us look at the top 6 Solana altcoins that will skyrocket in 2021. Arweave The price of Live Arweave today is \$20.86, with a trading volume of \$61,085,949 over 24 hours. In the past 24 hours, Arweave has increased by 5.61 percent. Arweave is a novel storage system that supports sustainable and permanent data and enables users and developers to store data. As a collective hard drive, Arweave enables us to save important information, applications and history forever. It stops others from rewriting by conserving history. It is not recommended to buy this coin in the short term but instead wait for it to smooth down in terms of price movements. And it is advisable to hold this coin for the long term once the prices smooth out. Raydium Today’s live Raydium price is \$6.76, for a 24-hour volume of \$305,534,065. Raydium has increased by 8.69% during the past 24 hours. It is one of the most important tokens to have in recent times. An automated market maker (AMM) and liquidity provider for Serum decentralized exchange (DEX). Compared with major DEX, it is not too far and is competing well in terms of volume. Raydium is pretty similar to Sushi Swap in terms of usage. As with most Solana tokens, the only bad thing is the inflation the token will have in current months. Mango Markets The live price of Mango Markets is now \$0.204854, with a trading volume of \$6,209,355 over 24 hours. In the past 24 hours, Mango Markets have fallen 13.56 percent. Mango aims to combine the liquidity and usefulness of CeFi with the DeFi innovation at a cheaper cost than both presently provide. Over the long term, Mango’s permissionless ecosystem promotes amazing, bizarre and unexpected breakthroughs in overcoming centralized financing. They have already built an interface on their website to start trading by simply connecting your wallet. Furthermore, Mango Markets raised \$70 million in Mngo token sales. SolFarm The current price of the SolFarm is \$11.51, with a trading volume of \$4,872,677 USD 24 hours. SolFarm has fallen by 24.98% in the past 24 hours. SolFarm, founded on the Solana base is a decentralized yield aggregator and is the first in the Solana ecosystem. The methods used in the vaults are developed internally to enhance the revenue of the user. Users may put their money in vaults and sit back. Auto-compounding produces optimum returns with efficient intervals between harvests. With the cheap transaction costs of Solana, the methods may multiply user profits regularly. Step Finance The current price of Live Solanum is USD 0.63999, with a 24-hour trade volume of USD \$1,548,767. In the past 24 hours, Solanum is up 27.28 percent with a live market cap of \$26,239,977 USD Step Finance is Solana’s front page. Visualize, analyze, execute and aggregate transactions in one location for all Solana contracts. Step Finance is a dashboard and transaction aggregator in portfolio management, where users may monitor tokens linked with wallets, LP holdings, Staked Yield farms, margin positions and more. Step Finance users may additionally run Swaps and enter different yield farms, and automated vaults from inside steps with any costs related to such value-added services returned to STEP stakers The live price of Step Finance today is USD 0.502260, and the trading volume is 24 hours and USD 25,613,756. Step Finance has decreased by 9.50% during the last 24 hours with a live market cap of \$2,009,041 USD Solanium Today’s live solanium price is US\$0.660471, with a trading volume of \$1,602,042 over 24 hours. Over the past 24 hours, solanium has increased by 22.55%. On the Solana blockchain, Solanium is termed as a decentralized financing and trading platform. Users may receive xSLIM staking SLIM tokens. xSLIM is the platform’s governance token for: - Early or exclusive access to the pool - Distribution of launchpad fees - Better chance in the lottery to receive project allocations - Vote in ideas for governance Recommended for You

Saber has received \$7.7 million in a seeding fund round and is valued at \$185.77 million. Thus, making it the second most valuable platform on Solana. Last month, the platform went live, allowing for the cross-chain trading of stablecoins and wrapped resources. Saber Labs, the company that developed Saber, announced the funding round on Wednesday. The improvement team now consists of three people. Moreover, the company plans to use its resources to hire about seven more people this year. Furthermore, will also give support for additional resources on the exchange. Race Capital, which includes billionaire Chamath Palihapitiya’s Social Capital, Jump Capital, Multicoin Capital, and the Solana Foundation, provided the money. The initial round was sponsored by angel investors such as Ryan Shea of Stacks, Julien Bouteloup of Curve Finance, and Jeff Kuan of Terraform Labs. The CEO and Co-founder, Dylan Macalinao of Saber noted on Twitter:

“For DeFi to reach millions of users and trillions in value, we need a blockchain that can handle mass scale. Due to its low transaction costs and high performance, we believe Solana is that blockchain.”

According to the company’s website, the platform delivers low slippage trading even at large volumes. Saber also offers exchange-based liquidity-based yield returns. Total Value Locked Saber has the second-highest total value locked (TVL) on Solana. According to data from decentralized money (DeFi) network DeFiLlama, at \$185.77 million. Besides, Solana is intended to be a more flexible competitor to the Ethereum network. Also, it has been gaining traction since March, with numerous DeFi applications starting on the platform. Anatoly Yakovenko, the founder and CEO of Solana Labs, stated at the time of the \$314.14 million symbolic sales. The goal was to achieve one billion members on the network. Recommended for You

In Solana (SOL) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about SOL to analyze the future movement of the cryptocurrency. Solana is a powerful open source project built on the unauthorized nature of blockchain technology to provide decentralized finance (DeFi) solutions. Although the idea and the first project work began in 2017, Solana was officially launched by the Solana Foundation in March 2020. Headquartered in Geneva, Switzerland. It aims to improve scalability by using Proof-of-History (PoH) consensus and basic Proof-of-Stake (PoS) block consensus. Solana (SOL) Current Market Status According to CoinGecko, the SOL price is trading at \$34.93 with a 24-hour trading volume of \$546,813,703, at the time of writing. However, SOL has increased by 8.6% in the last 24 hours. In addition, SOL has a circulating supply of 272,637,122 SOL. Currently, SOL trades in Binance, OKEx, Huobi Global, and Bilaxy. Solana (SOL) Technical Analysis 2021 Solana (SOL) holds the 13th position on CoinGecko right now. The recent development and upgrades might push SOL to reach new heights. Now, let’s deep dive into the SOL technical analysis 2021. The weekly time frame chart of Solana (SOL) is shown below. The above chart forms the “Rising Wedge pattern”. This pattern is a bearish pattern that starts wide at the bottom and contracts as trading range narrows and the prices move higher. It indicates a slowdown in momentum, usually before a bearish reversal, which means that traders can spot potential selling opportunities. SOL trades in a range of \$33.9. If the price breaks the trend line support level of \$18.5 then it will lead to a further drop up to the \$1.12 Level. If the pattern continues to the top side, then it will reach the \$80 level soon. Solana (SOL) RSI The below chart shows the relative strength index (RSI) of SOL. As shown in the below chart, RSI remains at 51. This shows that SOL’s price is in a neither overbought nor oversold state. However, this shows that traders can trade fearlessly. Solana (SOL) RVOL The below chart shows the Relative Volume of SOL. RVOL is an indicator that tells traders how the current trading volume has changed over a period of time compared to the previous trading volume. Notably, in the mid May to third week of June, it is found that the RVOL of SOL observed is stronger. From the last week of June till at the time of writing, the RVOL of SOL stays below the cutoff line which indicates the weaker participants in the current trend. Solana (SOL) Moving Average SOL’s Moving Average (MA) is shown in the chart below. Moving Average is a part of technical analysis that helps traders to find trends. In the 50 MA (Short-term), the price of the SOL is in a bearish state, and still, it has not broken the 200 MA. Once it breaks the 200 MA level of SOL, it completely goes to a bearish state. Currently, the price of SOL is trading near to the 200 MA level so we can expect some reversal at these points. Solana (SOL) Price Comparison With Bitcoin The below chart shows the price comparison between SOL and BTC. The trend of the BTC and SOL is moving at the same level as the trend. Conclusion With the ongoing developments and upgrades that are taking place within the SOL platform. Solana has a great future ahead in this crypto market. However, SOL can reach new heights. Bullish SOL price prediction 2021 is \$80. As mentioned above, it may reach great heights, however reaching \$117, if investors have decided that SOL is a good investment in 2021. FAQ SOL is a fast, secure, and censorship-resistant blockchain that provides the open infrastructure required for global adoption. Its native coin is Solana. SOL is listed on many cryptocurrency exchanges that include Binance, OKEx, Huobi Global, and Bilaxy. It is available for trading against crypto fiat coins, stablecoins, and other cryptocurrencies. With the ongoing developments and upgrades within the SOL platform, it has the high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author’s. - ROK Capital and Solana announced a \$20 million fund. - This partnership focuses on Solana’s expansion in the Korean market. - FactBlock and DeSpread are also the partners of the eco fund. ROK Capital, Korea’s leading blockchain accelerator joins with Solana Foundation and launches a \$20 million for Solana Eco Fund. This ecosystem fund focuses on developing infrastructure projects, Web3, DeFi, and NFT’s. ROK Capital has 20 years of experience in the field across Korean industries, banks, marketing, and media. Acala, SolStarter, and Clover are among the notable startups that have been bootstrapped by the company. The firm is a blockchain fund majorly focused on investing in infrastructure blockchain projects and acceleration to Solana’s expansion in the Korean market. Besides, the partners for the eco fund include FactBlock, a blockchain consulting firm, and DeSpread, a community-based accelerator. The ROK Capital’s general partner Brian Kang expressed his joy for joining with Solana Foundation. Besides, this eco fund is provided for tailored services to help projects speed up in Korea. Solana is the fastest-growing blockchain ecosystem in crypto. It delivers projects with security and composability. Also, it can process thousands of smart contracts and with Proof-of-History it unlocks low-latency and sub-second finality. The President of Solana Foundation, Anatoly Yakovenko says: “ROK Capital has been a valuable partner to ecosystem companies, assisting with project launch and capitalization. We are excited to collaborate with the new fund to help more entrepreneurs and teams build on Solana.” Moreover, ROK Capital has invested in Mercurial Finance, Synthetify, Symmetry, and Parrot through the newly established Solana Eco Fund. It also bootstrapped Serum, a decentralized exchange (DEX) and ecosystem that brings decentralized finance immense speed and low transaction fees. The serum is based on Solana and is permissionless. - SOL surpassed Bitcoin and Ethereum on Sunday. - Solana with a total market capitalization of \$13.2 Billion. - Solana raised 24% within 24 hours of time. Solana(SOL) has boomed to new heights on Sunday for \$52.60, surpassing Bitcoin(BTC) as well as Ethereum. Solana is a blockchain that is fast, secure, and resistant to censorship, and it provides the open infrastructure required for global adoption. SOL has raised 24% within a 24-hour trading cycle, which represents a new all-time high. Besides, the first conclusive break above the psychological \$50 level. Currently, total market capitalization for SOL is \$13.2 billion, where it all started at the price of \$1.51 this year. This new all-time high has merely bought about 3100% gain in 2021 alone. Moreover, SOL was surpassing Bitcoin and Ethereum on Sunday, while both of the largest cryptocurrencies remained the same. SOL was up 24% in comparison to Bitcoin and 28% in comparison to ETH in the previous 24 hours. Meanwhile, Ethereum was 3.2% down on Sunday. Start of Solana’s Rapid Growth Following the launch of Solana’s Hackathon, it reached heights which began on May 15, 2021. In addition, this hackathon has enticed over 10,000 registration for the event. The hackathon will take place from May 15 to June 7. The event includes an all-star lineup of speakers and up to \$1 million in global prizes and seed funding for participants. Solana has seen its growth in crypto space in 2021, recently it loomed as one of the active blockchain platforms. Through the Solana Foundation grants programme, the network recently received \$40 million in strategic investments to advance its protocols and decentralized applications. Since March, Solana saw the launch of over 50 market-ready projects, with a big focus on DeFi applications. Recommended for You

| -The Solana Foundation partnered with Project Serum to host a global hackathon focused on DeFi. -The hackathon will begin from February 15 through March 1st. -Moreover, participants will compete for a seed funding round of \$200k. | The Solana Foundation is engerised to partner with Project Serum. In order, to host a global hackathon focused on DeFi. Solana Foundation x Serum DeFi Hackathon Solana is excited to announce a forthcoming DeFi hackathon. In order to compete for a seed funding round of \$200k from the Solana Foundation. However, the hackathon will begin from February 15 through March 1st. Moreover, the hackathon aims to connect together developers, designers, business operators, and entrepreneurs from around the globe. The reason is to experiment and deploy apps/tools that move the DeFi ecosystem forward. Anyone with an internet connection can participate in the event. Added to this, the event supports leading projects. Moreover, these projects include Aave, Chainlink, SushiSwap, Circle, CoinGecko, and more. In addition, there is also an all-star lineup of judges and speakers from across the crypto globe. Participants will compete for a prize of up to \$400k total. Even more, there is a \$200k prize pool. Nevertheless, the prize is distributed to the 9 best projects. More so, those top 9 teams will have the chance to continue building their projects for a seed funding round. This gives serious builders a chance at jumping full-time into the Solana ecosystem. And receive extensive resources from the Solana Foundation, Project Serum, and leading venture capital firms. Recommended for You

- WIF breaks out of long-term downtrend with eyes on \$1.30 next. - Whale accumulation and bullish patterns back the uptrend narrative. Dogwifhat (WIF) is heating up again, gaining traction after a sharp 40% rally this past week and currently trades at \$0.67. The token is now trading around \$0.67 with trading volume spiking to over \$550 million æ” a clear sign that fresh interest is pouring in from retail and big-money players. After weeks of consolidation and sharp rejections, the meme token flashes powerful reversal signals across multiple timeframes. A surge in trading volume, breakout patterns, and strength in key indicators now position WIF for a potential multi-leg rally that could stretch beyond the \$1 mark.

WIF Breaks Out of Downtrend, Bulls Set Sights on Higher Targets After months of sliding, WIF finally broke through a stubborn downward trendline—a move to which technical traders paid close attention. This breakout opens the door for a shift in momentum. WIF has surpassed its 50-day EMA around \$0.506; and now pushes toward key support levels at \$0.80, \$1.30, and possibly \$1.97. Analysts at World Of Charts noted that this move “looks set for a 2A—run, signaling strong confidence in a continued climb. Combined with higher volume and increasing chatter across crypto circles, this setup has sparked hopes of a sustained upward trend. Indicators Show Momentum Is Building Beneath the Surface. In past weeks, WIF’s price pulled back to \$0.37 after initially being rejected at the \$0.50 line. But technical indicators present a bullish run. Relative Strength Index at the peak of 96 suggest an overbought level, where possible price correction might happen before a further bullish rally begins. Meanwhile, the Awesome Oscillator (AO) has started to flash green bars. While still in the red zone, this shift shows that selling pressure is easing. According to Fibonacci levels, if buyers hold the line, WIF could punch through the \$0.50 area and head toward \$0.75 and \$1.27. That said, if momentum fades and volume dries up, there’s a risk of a slide toward \$0.30. But for now, bulls are in control, and the chart is leaning positive. Whales Are Loading Up As Breakout Patterns Confirm the Shift The chart isn’t the only thing turning heads. Whale wallets have started quietly loading up on WIF, with recent buys of \$30K at \$0.639 and another \$150K around \$0.55. When big wallets step in, it usually means something is brewing. Chart-wise, WIF just broke through two important bullish patterns—an inverse head-and-shoulders and a falling wedge. Both suggest more room to run. Even better, the token moved above the Ichimoku cloud on the daily chart—a key signal many traders use to spot reversals. According to Solberg Invest, price targets for this move land between \$1.10 and \$1.70, with a possible stretch goal of \$2 if Solana meme coins keep their momentum. With coins like Bonk and Fartcoin making headlines, WIF could ride that wave, too. Highlighted Crypto News for Today Atkins Promises Pro-Crypto Regulatory Shift In SEC’s Crypto Roundtable

- Brazil has become the first one with the first XRP ETF, and in the US, the SEC is still reviewing applications for spot Solana and XRP ETFs. - In February 2025, an XRP-focused ETF was approved by the Brazilian Securities and Exchange Commission (CVM) in the country. Brazil has recently launched its world’s first exchange-traded fund (ETF) to track the spot price of XRP. Valor Economico revealed through its press release that the major stock exchange of Brazil, B3, started trading funds on April 25. Hashdex is the manager of the ETF named Hashdex Nasdaq XRP Fundo de Índice (FI), and Genial Investments Securities Brokerage SA and Genial Bank SA will be responsible for the administration and serving as custodian, respectively. In February 2025, an XRP-focused ETF was approved by the Brazilian Securities and Exchange Commission (CVM) in the country. Before this, in August 2023, the agency approved the spot Solana ETF of Hashdex. The fund officially launched on B3 under the ticker XRP11. The ETF reflects the XRP Reference Price Index (NQXRP), tracking the real-time spot price of XRP over different crypto exchanges. The funds document shows that around 95% of the net assets of XRP11 will be sent to XRP and associated digital assets, securities, or futures linked with the index. Hashdex Expands Its Crypto ETF Lineup XRP11 includes some features such as a competitive fee structure, with a maximum annual fee of around 0.7% for administration, management, and distribution, as well as a custody fee rounded off at 0.1% every year. Any structuring fee will not be charged at all. This introduction has opened the doors to around nine products of Hashdex’s crypto ETF offerings on B3. The Chief Investment Officer at Hashdex, Samir Kerbage, revealed that XRP11 has joined the lineup of the company’s mono-asset ETFs, consisting of products linked with Bitcoin (BIT11), Ethereum (ETHE11), and Solana (SOLH11). The funds are made mainly for institutional investors looking for exposure to virtual assets by the regulated markets of Brazil. The nation has become the first one with the first XRP ETF, and in the US, the SEC is still reviewing applications for spot Solana and XRP ETFs. Highlighted Crypto News Today: Atkins Promises Pro-Crypto Regulatory Shift In SEC’s Crypto Roundtable

- BONK broke out of a broadening wedge pattern, with its current price at \$0.00001862. - The next price targets are \$0.00001950, \$0.0000250, and \$0.0000370 if BONK surpasses the MA 100. BONK, a Solana-based, dog-themed meme coin that debuted in December 2022 through a massive airdrop, has recorded a price surge in the last 24 hours. According to market data, BONK now trades at a price value of \$0.00001862, as a breakout from the upper border of a broadening wedge pattern on the daily timeframe has been observed. This movement suggests a strong bullish momentum following a period of volatility. Broadening Wedge Pattern Breakout and Potential Price Targets According to an analysis prepared by Rose Premium Signals. BONK’s price is showing signs of strength as it surges past the upper boundary of a broadening wedge pattern. An upper price breakout during such periods suggests growing market demand. When price swings grow larger during a broadening wedge pattern this indicates that consolidation phase may transform into strong directional price movement. Following the breakout, attention now turns to key price levels. Next goals are \$0.00001950, \$0.0000250, and \$0.0000370 if the token successfully breaks above the 100-day moving average. To further support the broadening wedge pattern, another detailed analysis by Jonathan Carter points to the same where the 100-period moving average (MA 100) acts as secondary resistance. A move above the MA 100 could serve as a confirmation for further upward movement. If these targets are met, they will serve as crucial levels to watch for further market developments. Tracking the current market trend, CoinMarketCap indicates that BONK saw a price increase of 15.24% in one day, reaching \$0.00001862. The market cap rose to \$1.46B, a 15.30% gain. Trading volume surged by 207.89% to \$630.76M. The circulating supply stands at 78.78B BONK, with a total supply of 88.83B. The token’s fully diluted valuation (FDV) is \$1.65B. The price chart shows significant upward movement, with the token reaching its peak during the observed period. Highlighted News Today:

- Bitcoin’s consolidation is pushing traders toward altcoins. - Low volatility and interest rate pauses boost altcoin appeal. - Increased buying in DeFi, gaming, and AI tokens signals a rally. The crypto market is buzzing once more, and this time, it’s not Bitcoin that is dominating the headlines. Indications are pointing towards a potential altcoin rally, and all signs suggest that the long-awaited altcoin season is indeed close at hand. As Bitcoin holds steady, market participants are set to diversify, and altcoins are increasingly in focus. Bitcoin Consolidation Fuels Altcoin Potential Bitcoin’s momentum has cooled off, entering a consolidation phase that typically signals capital rotation into smaller-cap digital assets. This shift historically marks the beginning of strong upward movements in altcoin prices. The current market sentiment, supported by increased trading activity and price breakouts on altcoin charts like Ethereum, Solana, and Avalanche, suggests this could be the case once again. Traders Seek Higher Gains in Altcoins One of the key reasons the market is primed for altcoins is the reduced volatility in Bitcoin. Traders often shift funds to altcoins seeking higher short-term gains, especially when BTC hits strong resistance zones. This creates opportunities for other crypto assets to shine and even outperform. Macroeconomic Factors Favour Risk Assets Macroeconomic factors are also adding fuel to the fire. Central banks are signalling a pause or reversal in interest rate hikes. Lower interest rates often increase risk appetite among investors, leading to a surge in capital entering the crypto market, particularly altcoins, which are seen as higher-risk, higher-reward assets. Retail Investors Return to the Market Retail interest is making a comeback, too. Social media discussions and on-chain data show rising transaction activity and renewed enthusiasm for altcoins like Dogecoin, Chainlink, and XRP, which have already posted double-digit gains in recent days. Meanwhile, smart money is moving in. Institutional investors are quietly accumulating tokens in trending sectors like DeFi, gaming, and AI. Blockchain data confirms large wallet movements, a typical precursor to major rallies, as these investments often spark wider retail adoption and FOMO. Although nothing is guaranteed in the crypto world, current signals, both technical and fundamental, indicate that altcoins could be gearing up for a significant run. With market conditions shifting and investor appetite growing, now might be the time to keep a close watch on the altcoin space. A new wave of crypto headlines may be just ahead. Highlighted Crypto News Today: Skip Solana (SOL), These 4 Altcoins Are Expected to Rip Higher in the Next Bull Phase

- POPCAT has seen a 21.5% price increase with a surge in trading volume, pushing its market cap to \$384.56 million. - The MACD indicates a bullish trend, while the RSI shows overbought conditions, suggesting a potential short-term price correction. POPCAT, a memecoin built on the Solana blockchain that functions as a digital collectible and speculative asset within the cryptocurrency community, has recorded a massive pump in the last 24 hours. According to market data, during the Asian trading session, POPCAT opened today’s market with a price value of \$0.3732, while the volume saw a 37.28% surge, reaching a price value of \$0.3970 at the time of press. POPCAT Technical Analysis: What Do MACD and RSI Indicators Hint? The RSI is at 72.38, suggesting the token is in the overbought area. This suggests that there may be a potential price correction in the short term as the token has seen significant buying pressure. Usually, a high RSI above 70 indicates that the asset might be overbought and a pullback might follow. However, since the RSI is still below the extreme overbought level of 80, the price could continue rising if market momentum remains strong. The MACD line is currently at 0.0417, while the signal line stands at 0.0237, with the histogram bars showing positive momentum. The MACD is above the signal line, which is a bullish sign, indicating that the price could continue to rise. The histogram bars are in green, further suggesting that the bullish trend is gaining strength. Positive market momentum is suggested by the MACD and signal line convergence as well as the rising histogram, therefore supporting the view for a possible near-term uptrend. Current Market Movement Revealed The Popcat (SOL) price stands at \$0.3924, showing a 21.50% increase in the last 24 hours. Trading volume has increased by 37.83%, pushing market capitalization to \$384.56 million. Reflecting an active trading period, the volume-to-market cap ratio is 76.18%. The maximum supply is also the circulating supply at 979.97 million POPCAT tokens. The price chart shows a consistent upward trend with price changes regularly over \$0.380, indicating bullish market momentum. With the current price trend and the technical analysis, the POPCAT token is likely to experience some price consolidation or a slight pullback before continuing its upward trajectory. The overbought RSI could lead to a temporary dip, but the bullish MACD signals suggest that any correction might be short-lived. Highlighted News Today: Stacks (STX) Price Surged 21%, Hinting at Potential Recovery

- Bullish TRUMP price prediction for 2025 is \$13.81 to \$22.53. - Official Trump (TRUMP) price might reach \$50 soon. - Bearish TRUMP price prediction for 2025 is \$5.89. In this Official Trump (TRUMP) price prediction 2025, 2026-2030, we will analyze the price patterns of TRUMP by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | OFFICIAL TRUMP (TRUMP) PRICE PREDICTION 2025 | | OFFICIAL TRUMP (TRUMP) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Official Trump (TRUMP) Current Market Status | Current Price | \$12.40 | 24 h Hour Price Change | 0.62% Down | | 24 h Hour Trading Volume | \$1.57B | | Market Cap | \$2.48B | | Circulating Supply | 199.99M TRUMP | All h Time High | \$75.35 (On Jan 19, 2025) | | All h Time Low | \$6.24 (On Jan 18, 2025) | What is Official Trump (TRUMP)? | TICKER | TRUMP | | BLOCKCHAIN | Solana | | CATEGORY | Meme Coin | | LAUNCHED ON | January 2025 | | UTILITIES | Governance, social media engagement, & rewards | Donald Trump, the President of the United States, has introduced a meme coin named \$TRUMP, built on the Solana blockchain. Launched on January 17, 2025, just days before his inauguration, the token’s value surged from less than \$10 to a peak of \$74.69, achieving a market capitalization of over \$14.93 billion. The \$TRUMP token has a total supply of 1 billion coins, with 200 million released at launch and the remaining 800 million held by CIC Digital LLC and Fight Fight LLC, both affiliated with the Trump Organization. These holdings are scheduled for gradual release over the next three years. The introduction of \$TRUMP has sparked discussions regarding the ethical implications of a sitting president promoting a personal financial venture. Critics express concerns about potential conflicts of interest and the influence of public figures on speculative markets. TRUMP 24H Technicals (Source: TradingView) Official Trump (TRUMP) Price Prediction 2025 Official Trump (TRUMP) ranks 42nd on CoinMarketCap in terms of its market capitalization. The overview of the TRUMP price prediction for 2025 is explained below with a daily time frame. TRUMP/USDT Descending Right Angled Broadening Wedge Pattern (Source: TradingView) In the above chart, Official Trump (TRUMP) laid out a descending right-angled broadening wedge pattern. A Descending Right Angle Broadening Wedge is a bullish reversal pattern. The pattern is formed by two diverging lines, with the resistance being a horizontal line and the support being a bearish downward slant, forming an inverted ascending triangle. At the time of analysis, the price of Official Trump (TRUMP) was \$12.40. If the pattern trend continues, then the price of TRUMP might reach the resistance levels of \$18.82 and \$52.78. If the trend reverses, then the price of TRUMP may fall to the support level of \$9.97 and \$7.14. Official Trump (TRUMP) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Official Trump (TRUMP) in 2025. TRUMP/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Official Trump (TRUMP) for 2025. | Resistance Level 1 | \$13.81 | | Resistance Level 2 | \$22.53 | | Support Level 1 | \$8.80 | | Support Level 2 | \$5.89 | TRUMP Resistance & Support Levels Official Trump (TRUMP) Price Prediction 2025 h RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Official Trump (TRUMP) are shown in the chart below. TRUMP/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Official Trump (TRUMP) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$9.99Price = \$12.01 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions |

63.17 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Official Trump (TRUMP) Price Prediction 2025 â€" ADX, RVI In the below chart, we analyze the strength and volatility of Official Trump (TRUMP) using the following technical analysis indicators â€" Average Directional Index (ADX) and Relative Volatility Index (RVI). TRUMP/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Official Trump (TRUMP). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 29.53 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 32.93 <50 = Low >50 = High | Low Volatility | Comparison of TRUMP with BTC, ETH Let us now compare the price movements of Official Trump (TRUMP) with those of Bitcoin (BTC) and Ethereum (ETH). BTC Vs ETH Vs TRUMP Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of TRUMP is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of TRUMP also increases or decreases, respectively. Official Trump (TRUMP) Price Prediction 2026, 2027â€" 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Official Trump (TRUMP) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Official Trump (TRUMP) Price Prediction 2026 | \$60 | \$4 | | Official Trump (TRUMP) Price Prediction 2027 | \$70 | \$3 | | Official Trump (TRUMP) Price Prediction 2028 | \$80 | \$2 | | Official Trump (TRUMP) Price Prediction 2029 | \$90 | \$1 | | Official Trump (TRUMP) Price Prediction 2030 | \$100 | \$0.9 | Conclusion If Official Trump (TRUMP) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Official Trump (TRUMP) price prediction for 2025 is \$22.53. Comparatively, if an unfavorable sentiment is triggered, the bearish Official Trump (TRUMP) price prediction for 2025 is \$5.89. If the market momentum and investors' sentiment positively elevate, then Official Trump (TRUMP) might hit \$50. Furthermore, with future upgrades and advancements in the Trump ecosystem, TRUMP might surpass its current all-time high (ATH) of \$75.35 and mark its new ATH. FAQ 1. What is Official Trump (TRUMP)? Official Trump (TRUMP) is a meme cryptocurrency launched on the Solana blockchain, symbolizing cultural allegiance to President Donald Trump. 2. Where can you purchase Official Trump (TRUMP)? Official Trump (TRUMP) has been listed on many crypto exchanges which include Binance, OKX, and Bybit. 3. Will Official Trump (TRUMP) reach a new ATH soon? With the ongoing developments and upgrades within the Official Trump Platform, TRUMP has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Official Trump (TRUMP)? On January 19, 2025, TRUMP reached its new all-time high (ATH) of \$75.35. 5. What is the lowest price of Official Trump (TRUMP)? According to CoinMarketCap, TRUMP hit its all-time low (ATL) of \$6.24 on Jan 18, 2025. 6. Will Official Trump (TRUMP) reach \$50? If Official Trump (TRUMP) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$50 soon. 7. What will be the Official Trump (TRUMP) price by 2026? Official Trump (TRUMP) price is expected to reach \$60 by 2026. 8. What will be the Official Trump (TRUMP) price by 2027? Official Trump (TRUMP) price is expected to reach \$70 by 2027. 9. What will be the Official Trump (TRUMP) price by 2028? Official Trump (TRUMP) price is expected to reach \$80 by 2028. 10. What will be the Official Trump (TRUMP) price by 2029? Official Trump (TRUMP) price is expected to reach \$90 by 2029. Top Crypto Predictions Polkadot (DOT) Price Prediction Disclaimer: The opinion expressed in this article is solely the author's. The world of cryptocurrency is revolving at a rapid pace and presales are generally the best chances for investors who want to enter the market at a lower price before cryptocurrencies are exchanged publicly on stock exchanges. In this blog, we bring forth five of the best crypto presales that are currently making a mark in the market. List of 5 best crypto presales: 1.AurealOne (DLUME) 2.DexBoss (\$DEBO) 3.MetaNest (MNST) 4.ChainPortX (CPX) 5.QuantShield (QSH) 1. AurealOne (DLUME): Trends determining the future of Gaming and the Metaverse AurealOne is the fastest-growing Layer-2 blockchain designed exclusively for gaming and metaverse applications. This might be fast and reliable, so all transactions are processed in no time and the fees are also remarkably low; furthermore, it is the DLUME native token that powers all transactions on the platform and the economies inside the game. Click here to visit best crypto presale â€" AurealOne Along with the use of smart contracts (Zero-Knowledge Rollups) for scalability and efficiency, it has become the preferred choice for the developers and gamers. DLUME token holders can stake their assets, generate profit, and participate in governance decision-making. The flagship game Clash of Tiles as well as new titles like DarkLume are only the initiation of a budding content ecosystem. The presale consists of three main rounds â€" the first one starts at \$0.0005 and the cap is set at \$0.0045 â€" and the target is to reach \$50 million. With a current price of about \$0.0013, early buyers can expect a significant return on their investments. Some key events on the roadmap include: presale launch in Q4 2024, blockchain rollout in Q1 2025, alpha game release in Q2, and DLUME's official debut in Q4 2025, with more innovations expected into 2026. 2. DexBoss (\$DEBO): Making DeFi Simple and Accessible With the help of its native token, \$DEBO, DexBoss is a game-changing system that changes the way decentralized finance (DeFi) is viewed. In fact, it is a true-defi platform that makes using DeFi products very easy. It has mind-blowing features such as a user-friendly interface, plenty of liquidity, and a buyback-and-burn mechanism which should be enough to assure the long-term value of \$DEBO. Dexboss has what it takes to gather the next billion users and that is why it creates a very appealing presale. The presale is set out into 17 rounds. The presale starts from \$0.01 and rises to \$0.0458 and has a funding goal of \$50 million. The price currently of \$DEBO is only \$0.011. The roadmap is very clear: important events: exchange listings in Q2 2025, new trading tools in Q3, and fiat on/off ramp growth in Q4 2025 will accompany this. In a scenario where the increase in the number of users occurs, DexBoss could become a notable name in the DeFi sector. 3. MetaNest (MNST): Building the Future of Virtual Real Estate Users can acquire virtual properties through MetaNest for purchasing and leasing land ownership in immersive metaverse areas. Users can use the MNST token as the primary power source to interact with the platform features which include land staking along with virtual architecture and earning passive income through ads and events. MetaNest implements a 12-step presale process which starts at \$0.003 and seeks to generate \$40 million. The MetaNest land marketplace launch is scheduled for Q1 2025 and the addition of 3D building tools together with VR integrations is planned for Q2. 4. ChainPortX (CPX): Cross-Chain Bridges Made Easy The operational challenge of blockchain industry interconnection has a solution through ChainPortX. Across major blockchain networks users can make smooth token transfers through this platform that operates a high-speed protected bridge fuelled by CPX tokens. SDK plugins found in ChainPortX enhance developer friendliness since they provide easy integration possibilities in DeFi as well as NFTs and gaming settings. The initial presale launch started at \$0.015 while the developers set their fundraising objective at \$35 million. The expected delivery date for the beta bridge project is Q1 2025 for Ethereum and its additional blockchain partners BNB Chain and Solana. For individuals who believe in a multi-chain future this solution serves as an important watch. 5. QuantShield (QSH): Smart Security for Smart Contracts Through QuantShield AI security protects Web3 by developing a set of proactive tools which locate and stop smart contract exploitations. QSH permits developers to gain immediate auditing features as well as automated patch releases and NFT and DeFi protocol security evaluations. An early backer investment of over \$5 million has been received by QuantShield through its presale pricing starting at \$0.007. QuantShield plans to launch its contract scanning engine public beta version in Q2 2025. Final Thoughts: Is Now the Time to Get In? The gaming platform and metaverse transformation capabilities of AurealOne establish it as the foremost competitor amongst its peers. The platform's DeFi solutions together with tokenomics design that creates deflation are what distinguishes DexBoss from other options. It is advised that one should invest in well-known cryptocurrencies like Bitcoin alongside the presales because they offer holding diversity which decreases your financial risk. The blockchain industry receives new value through MetaNest, ChainPortX alongside QuantShield while they deal with digital real estate and cross-chain operations and blockchain security issues. Perform comprehensive market research to make investments based on your risk tolerance alongside your future planning objectives. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish SUI price prediction for 2025 is \$3.7677 to \$7.0827. - Sui (SUI) price might reach \$15 soon. - Bearish SUI price prediction for 2025 is \$1.0624. In this Sui (SUI) price prediction 2025, 2026-2030, we will analyze the price patterns of SUI by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | SUI (SUI) PRICE PREDICTION 2025 | | | SUI (SUI) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Sui (SUI) Current Market Status | Current Price | \$3.23 | 24 â€" Hour Price Change | 9.86% Up | | 24 â€" Hour Trading Volume | \$2.77M | | Market Cap | \$10.52B | | Circulating Supply | 3.24B SUI | All â€" Time High | \$5.35 (On Jan 06, 2025) | | All â€" Time Low | \$0.3643 (On Oct 19, 2023) | What is Sui (SUI) | TICKER | SUI | | BLOCKCHAIN | Sui | | CATEGORY | Decentralized Layer 1 Blockchain | | LAUNCHED ON | April 2023 | | UTILITIES | Governance, security, gas fees & rewards | Sui is an innovative smart contract platform that operates with a decentralized group of validators, similar to those in other blockchain systems. Its native token, SUI, is used for gas fees, and users can stake their tokens with validators using a Delegated Proof-of-Stake model during designated epochs. One of Sui's standout features is its ability to process transactions in parallel, greatly improving scalability. This altcoin is gaining traction in the crypto world with its unique consensus mechanism, which includes two components: Narwhal and Tusk. These elements work together to sequence and finalize complex transactions efficiently. Additionally, Sui has a dedicated storage fund that manages transaction records and metadata, where users pay for storage while validators compensate. In a recent analysis, K33A's DeFi expert David Zimmerman highlighted that Sui's performance against Solana, combined with its cutting-edge architecture and an upcoming gaming console, could position it as a leading contender among emerging layer 1 solutions. Moreover, in September, Circle, a stablecoin issuer, announced the upcoming launch of its USD Coin (USDC) on the Sui network, marking an important step towards broader adoption and support from key players in the industry. Sui 24H Technicals Sui (SUI) Price Prediction 2025 Sui (SUI) ranks 11th on CoinMarketCap in terms of its market capitalization. The overview of the Sui price prediction for 2025 is explained below with a daily time frame. In the above chart, Sui (SUI) laid out an Horizontal Channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the Sui (SUI) price was \$2.95. If the pattern trend continues, then the price of SUI might reach the resistance levels of \$3.0226 (already crossed) and \$4.9050. If the trend reverses, then the price of SUI may fall to the support level of \$2.3867 and \$1.8835. Sui (SUI) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Sui (SUI) in 2025. From the above chart, we can analyze and identify the following as the resistance and support levels of Sui (SUI) for 2025. | Resistance Level 1 | \$3.7677 | | Resistance Level 2 | \$7.0827 | | Support Level 1 | \$1.9549 | | Support Level 2 | \$1.0624 | Sui (SUI) Price Prediction 2025 â€" RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Sui (SUI) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Sui (SUI) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$2.3401 Price = \$2.9875 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 69.6485 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Sui (SUI) Price Prediction 2025 â€" ADX, RVI In the below chart, we analyze the strength and volatility of Sui (SUI) using the following technical analysis indicators â€" Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Sui (SUI). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 17.7288 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 74.88 <50 = Low >50 = High | High Volatility | Comparison of SUI with BTC, ETH Let us now compare the price movements of Sui (SUI) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of SUI is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of SUI also increases or decreases, respectively. Sui (SUI) Price Prediction 2026, 2027 â€" 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Sui (SUI) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Sui (SUI) Price Prediction 2026 | \$20 | \$1 | | Sui (SUI) Price Prediction 2027 | \$23 | \$0.9 | | Sui (SUI) Price Prediction 2028 | \$25 | \$0.8 | | Sui (SUI) Price Prediction 2029 | \$27 | \$0.7 | | Sui (SUI) Price Prediction 2030 | \$30 | \$0.6 | Conclusion If Sui (SUI) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Sui (SUI) price prediction for 2025 is \$7.0827. Comparatively, the bearish Sui (SUI) price prediction for 2025 is \$1.0624. If there is a positive elevation in the market momentum and investors' sentiment, then Sui (SUI) might hit \$15. Furthermore, with future upgrades and advancements in the Sui ecosystem, SUI might surpass its current all-time high (ATH) of \$5.35 and mark its new ATH. FAQ 1. What is Sui (SUI)? Sui is a smart contract platform maintained by a permissionless set of validators that play a role similar to

validators or miners in other blockchain systems. 2. Where can you buy Sui (SUI)? Traders can trade Sui (SUI) on the following cryptocurrency exchanges such as Binance, OKX, Bybit, Bitunix, and DigiFinex. 3. Will Sui (SUI) record a new ATH soon? With the ongoing developments and upgrades within the Sui platform, Sui (SUI) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Sui (SUI)? Sui (SUI) hit its current all-time high (ATH) of \$5.35 on January 25, 2025. 5. What is the lowest price of Sui (SUI)? According to CoinMarketCap, Sui hit its all-time low (ATL) of \$0.3643 on October 19, 2023. 6. Will Sui (SUI) hit \$15? If Sui (SUI) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$15 soon. 7. What will be the Sui (SUI) price by 2026? Sui (SUI) price might reach \$20 by 2026. 8. What will be the Sui (SUI) price by 2027? Sui (SUI) price might reach \$23 by 2027. 9. What will be the Sui (SUI) price by 2028? Sui (SUI) price might reach \$25 by 2028. 10. What will be the Sui (SUI) price by 2029? Sui (SUI) price might reach \$27 by 2029. - The goal of this initiative is to provide UNDP staff and partners with the skills, resources, assistance, and guidance they need. - This multi-year accelerator, which focuses on capacity building, solution development, and ecosystem expansion, will onboard two cohorts every year. Together with EMURGO Labs and the United Nations Development Programme (UNDP), the global non-profit Blockchain for Good Alliance (BGA) has launched the SDG Blockchain Accelerator, a global initiative to leverage blockchain-powered social impact endeavors across the UN Sustainable Development Goals (SDGs). The goal of this initiative is to provide UNDP staff and partners with the skills, resources, assistance, and guidance they need to create, test, and expand blockchain-based solutions that tackle real-world economic development problems. This multi-year accelerator, which focuses on capacity building, solution development, and ecosystem expansion, will onboard two cohorts every year, each lasting four months, and is backed by a worldwide network of industry experts. With the help of EMURGO Labs' experience and Cardano's infrastructure, the initiative will provide up to 40 SDG-aligned blockchain solutions, establish an open-source resource center, and encourage cross-chain cooperation to increase blockchain's influence in the development sector. The partnership, which will cover five worldwide regions and be led by BGA Managing Partner Glenn Tan and UNDP AltFinLab members, will provide finance and strategic assistance to blockchain initiatives that address issues related to the 17 SDGs. Teodor Petricevic, UNDP Accelerator Lead stated: "At UNDP, we believe blockchain is not just a technology - it is a transformative force capable of reshaping how we address humanity's most pressing challenges. This accelerator program is more than an initiative; it is a call to action for innovators worldwide to harness blockchain's power to drive sustainable development. By fostering bold collaboration and leveraging its transparency and efficiency, we are paving the way for groundbreaking solutions that can uplift communities globally." Bybit, a founding supporter of the Blockchain for Good Alliance, has collaborated closely with BGA on a number of endeavors aimed at advancing the use of blockchain technology for the benefit of society. The cryptocurrency exchange has pledged US\$1 million in funding via its "Bybit Pool" effort to promote EthicHub, a blockchain platform that empowers and enables smallholder farmers. This contribution demonstrates how blockchain may be used to create transparent supply chains and supports ethical financing models. Expanding Impact Across Europe By formally entering the UNDP Brussels Roundtable "Empowering the Future: A Strategic Dialogue on Emerging Technologies and Impact Entrepreneurship in the Western Balkans," BGA achieved a major milestone in January 2025. Including the Ethereum Foundation, Solana Labs, Stellar Development Foundation, Algorand Foundation, Cardano Foundation, Celso, Metis, Cotrugli Business School, Science Technology Park Belgrade, BlackVogel, and the World Metaverse Council, the roundtable included 30 key delegates from the UNDP, European Commission, leading Web3 foundations, tech hubs, and policy think tanks. BGA is actively participating in grassroots initiatives, establishing strategic alliances, and contributing to high-level policy discussions as part of its larger European strategy. With blockchain increasingly recognized as a driver for transparent, inclusive, and sustainable development, BGA encourages cooperation with like-minded organizations to promote real-world solutions and establish blockchain as a cornerstone of digital equity and innovation throughout the continent.

Ripple's XRP plummeted by 7% due to the negative impact of macroeconomics, such as President Donald Trump's threats to impose tariffs and rising US inflation. The pressure on XRP could worsen rapidly if its on-chain activities do not increase with the growing supply. While XRP continues to battle regulatory uncertainties and struggles to reclaim past highs, two coins are starting to attract major attention for their exponential growth potential over the next eight months: Rexas Finance (RXS) and Solana (SOL). One thing ties these two assets together - even if their structures and scopes are somewhat different - momentum. RXS and SOL have started beating traditional tokens like XRP as altcoin season starts to stir, and Bitcoin's rise feeds fresh investor excitement. What's capturing attention isn't just hype but utility, vision, and the pace of adoption. Rexas Finance (RXS): The Underrated Powerhouse at \$0.20 Rexas Finance (RXS), a fast-rising crypto gem now valued at just \$0.20, sits at the core of this paradigm change. The hands-on approach of this initiative to address a very real issue in the crypto ecosystem - the complexity of token generation, deployment, and scaling - makes it special. Built on Ethereum, Rexas Finance provides a simplified toolkit featuring the Rexas Token Builder, Rexas Launchpad, and QuickMint Bot. This toolkit enables developers and entrepreneurs to create, launch, and oversee tokens in minutes. This low-code/no-code technique opens the door to mass tokenization; hence, RXS is among the most easily accessible utility tokens on the market. But the narrative does not end with utility. Rexas Finance is also delving headfirst into tokenizing real-world assets (RWA) - a rapidly expanding industry expected to change our view of physical asset ownership. Rexas wants to tokenize real estate, commodities, and intellectual property, linking the digital and physical financial worlds. The numbers also create a striking narrative. Starting at \$0.03, RXS has increased six times in value to reach its ultimate presale level at \$0.20. Selling about 458.8 million tokens, the presale has raised \$47.7 million. Officially scheduled for June 19, 2025, at a listing price of \$0.25, it is just the start of what many regard as a historic bull run. Rexas is more than just a speculative token; it's a thoroughly audited, fast-growing ecosystem with sights toward redefining DeFi. A Certik audit has already been passed; listings on CoinMarketCap and CoinGecko reflect this. Given the tools, adoption rate, and launch timing, a rise from \$0.20 to even \$16 would represent an 8,000% return. RXS has a real chance at hitting those levels in a few months. Solana (SOL): The Proven Contender With Gas in the Tank SOL price today was up 3% at \$125, with daily trading volumes surging 94.9% to more than \$2.67 billion. Still commonly disregarded, though, is Solana's resilience during market volatility. Following a terrible 2022, the network recovered more robustly with fresh project announcements, increased institutional interest, and big announcements, including the possible Solana ETF development. With the strengthening of macro conditions, Solana looks ready for a breakout phase from this ETF speculation alone. One of SOL's most appealing qualities now is its capacity for scalable efficiency and support of practical uses. Solana's performance stays flawless and consistent while others grovel under heavy gas prices or network congestion. That is precisely the basis required for parabolic increases in a hot market. Should the general altcoin market heat up, Solana could readily review and surpass its former all-time high of \$293. But optimistic projections drive that figure considerably higher - many analysts suggest \$500+ expectations for Q4 2025. From present values, that would show a 500% - 1000% increase. Solana completes a powerful team that might significantly outline XRP's predicted returns over the next eight months when teamed with Rexas Finance, which presents a new frontier in tokenization and accessibility. Conclusion: The Old Guard Faces Fresh Competition XRP has had time in the limelight, and its cross-border payment use case still makes sense. However, investor expectations change as the crypto industry develops. They want for ecosystems, utility, and game-changing innovation - not only for a store of value or a bridge asset. Rexas Finance and Solana offer both. One is a rising star that combines utility, token creation tools, and real-world asset tokenization into one streamlined package. The other is a seasoned top performer ready to gain from significant institutional support based on speed and scalability. Together, they may completely replace XRP and provide the kind of 8,000% gains that transform small investments into life-changing portfolios. The clock is running out; those who find the change early could simply ride the wave to the next major crypto bull surge. Massive interest in new data infrastructure project signals renewed market enthusiasm SkyAI, a Web3 data infrastructure platform, has raised approximately \$50 million in its presale conducted via Four.meme, drawing participation from 112,306 unique addresses in just 36 hours. The presale, launched on April 17, marked the first-ever presale on BNB Chain and was oversubscribed by 167 times, making it the largest presale not only in the history of BNB Chain but across all blockchain networks to date. SkyAI aims to provide foundational infrastructure for large language model (LLM) applications by extending the Model Context Protocol (MCP) to connect blockchain data. The protocol is compatible with existing MCP clients and introduces specialized clients for enhanced data functionality. Currently aggregating over 10 billion rows of data from BNB Chain and Solana, SkyAI plans to integrate Ethereum and Base through MCP data servers. In addition, the project has introduced the concept of "data liquidity" and intends to launch an MCP marketplace, building toward a decentralized, on-chain data economy. SkyAI has pledged that 100% of its token supply will be allocated to supporters and participants, with zero token retention by the team, underlining its community-first approach. The project encourages all token holders to contribute to the development of the SkyAI MCP OS and its broader ecosystem. During the presale period, SkyAI's social media traction surged, with its official X (formerly Twitter) account gaining over 10,000 new followers. Tweets averaged 30,000 views, peaking at 125,000 views, demonstrating significant public interest and engagement. The successful launch also had ripple effects for the hosting platform, Four.meme, which has emerged as one of the most prominent protocols on BNB Chain. At times, it even surpassed Pump.fun in daily revenue. In response to the presale's overwhelming success, Four.meme has updated its token launch model to better support future projects. SkyAI's performance is already reshaping investor behavior, with many now closely monitoring upcoming launches on BNB Chain. The momentum may be signaling a potential bull run for BSC - a trend market observers will be watching with keen interest. Disclaimer: TheNewsCrypto does not endorse any content on this page. - MELANIA price rose 11.39% in 24 hours, reaching \$0.542 on April 24. - Market cap hits \$254M as volume surges 177% to \$ 73.9 M. In just a 24-hour timeframe, Official Melania Memecoin has recorded an uptick in its price value. According to market data, MELANIA now trades at a price value of \$0.4569 after recording an intraday high of \$0.542, noting a 11.39% uptick in the same period. Additionally, the market cap read at a value of \$254M, up by 10.90%, while the volume noted a value of \$73.96M, up by over 177.12%. MELANIA memecoin, the official cryptocurrency launched by the First Lady of the United States, Melania Trump, has got analyst eyes due to the continuous uptrend that started on the 23rd. Melania Trump launched her own meme coin, MELANIA, on January 19, 2025, following the debut of the TRUMP token. Built on the Solana blockchain, the MELANIA coin combines political influence and Web3 technology. According to official sources, the total supply of MELANIA tokens is capped at one billion. Of that, 15% is available for public distribution. Team members receive 35% under a vesting structure that includes a 30-day lock period. The remainder supports liquidity, the treasury, and community-based initiatives as the token release for the team follows a linear schedule over one year. Is the Washington DC Dinner Behind MELANIA Surge? The recent surge in MELANIA digital assets is closely linked to an announcement made by Donald Trump. Both the MELANIA memecoin and its affiliate, the TRUMP token, saw notable price changes following the news, as they are tied to the Trump family. Trump's latest move to promote his memecoin came with the announcement of an exclusive dinner event for the top 220 TRUMP holders. Scheduled for May 22 at his private club in Washington, D.C., the event has drawn attention across crypto communities. The official website features the invitation under the headline "Have Dinner with President Trump," describing it as one of the world's most limited opportunities. After the announcement, both the TRUMP and MELANIA tokens experienced a significant rise in market value, further fueling interest in the Trump-linked digital assets. Tracking the current market performance, CoinMarketCap data indicates that MELANIA recorded a sharp movement beginning April 22, showing a significant breakout from a steady downtrend. Today, MELANIA opened at \$0.4104 during the Asian session, maintaining upward pressure from recent gains with current price at \$0.4627. Previous months showed minimal movement with the token staying within a specific range while a major spike in token activity occurred throughout two consecutive days. The data shows an ascending trend which later entered a condition of heightened market instability with momentary downturns. - PayPal is planning to offer a 3.7% annual yield on PYUSD stablecoin balances. - PayPal aims to contribute to the broader stablecoin adoption through this initiative. PayPal is stepping forward in terms of its stablecoin development and adoption with a new announcement. It is planning to offer a 3.7% annual return on its PYUSD stablecoin balance to its users. The yield accumulates daily, and users will receive it on a monthly basis. Payment platform PayPal seems to take this initiative to take its PYUSD stablecoin adoption to the next level. Bloomberg reported that the firm is aiming to move ahead of its stablecoin competitors in the crypto space. PayPal users will get annual returns on their PYUSD balances from this summer. Users can spend their PYUSD for payments or transfer it into traditional currencies. PayPal's head of blockchain and digital currencies, Jose Fernandez da Ponte, stated, "We are halfway through a 10-year journey. We see stablecoins as building the next generation of payment rails but we are aware that is something that takes time." PayPal Aims to Stay Ahead in the Race for Stablecoins Donald Trump's re-election has eased stringent rules imposed on the crypto industry. The Trump government is particularly prioritizing stablecoin regulation and adoption, recognizing its ability to increase US dollar dominance. Meanwhile, PayPal aims to stay ahead in the race for stablecoin growth and adoption. PayPal recently enhanced its offerings by adding Chainlink and Solana to its supported cryptocurrencies list. The firm supports a total of 7 cryptocurrencies for payments to its users. The payment firm even announced its plans to boost its PYUSD adoption in 2025 by offering PYUSD payment options for merchants to realize its vision of stablecoin adoption in the US. The firm estimated that around 20 million small and medium-scale businesses will benefit from its support for merchant payments. PayPal is stepping up its game in terms of its PYUSD stablecoin adoption. With a crypto-favorable environment in the US administration, PayPal is focusing on its stablecoin growth and adoption at the right time. - Bullish BONK price prediction for 2025 is \$0.00001708 to \$0.00002629. - Bonk (BONK) price might reach \$0.0001 soon. - Bearish BONK price prediction for 2025 is \$0.00000766. In this Bonk (BONK) price prediction 2025, 2026-2030, we will analyze the price patterns of BONK by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | BONK (BONK) PRICE PREDICTION 2025 | | | BONK (BONK) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Bonk (BONK) Current Market Status | Current Price | \$0.00001580 | 24 h Hour Price Change | 20.20% Up | 24 h Hour Trading Volume | \$368.79M | Market Cap | \$1.24B | Circulating Supply | 78.11T BONK | All Time High | \$0.00005916 (On Nov 20, 2024) | All Time Low | \$0.0000009197 (On Dec 30, 2022) | What is Bonk (BONK) | TICKER | BONK | | BLOCKCHAIN | Bonk | | CATEGORY | DEXs | | LAUNCHED ON | December 2022 | | UTILITIES | Governance, security, gas fees & rewards | Bonk, the dog-themed memecoin on the Solana network, distinguishes itself by offering a level of utility not commonly found in meme coins. Created to restore liquidity to Solana-based decentralized exchanges (DEXs), Bonk has garnered attention for its practical use case within the crypto ecosystem. With airdrops distributed to the Solana community and a focus on community-driven development, Bonk embodies the ethos of decentralized finance (DeFi). Its utility-driven approach sets it apart from other meme coins, positioning Bonk as a potential standout performer in the 2024 bull market. The memecoin has recently announced the launch of its US ETP launch which has also propelled a price rally in the token. A New York-based firm, Osprey Funds plans to assist the Solana-based meme coin team to launch the ETP. As Bonk aims to bring liquidity to Solana-based DEXs and foster community engagement, it emerges as a compelling asset for investors seeking financial freedom in the crypto space. Bonk 24H Technicals Bonk (BONK) Price Prediction 2025 Bonk (BONK) ranks 60th on CoinMarketCap in terms of its market capitalization. The overview of the Bonk price prediction for 2025 is explained below with a daily time frame. In the above chart, Bonk (BONK) laid out a Horizontal Channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the Bonk (BONK) price was \$0.000015. If the pattern trend continues, then the price of BONK might reach the resistance levels of \$0.00001639, and \$0.00003052. If the trend reverses, then the price of BONK may fall to the support levels of \$0.00001208 and \$0.00000890. Bonk (BONK) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Bonk (BONK) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Bonk (BONK) for 2025. | Resistance Level 1 | \$0.00001708 | | Resistance Level 2 | \$0.00002629 | | Support Level 1 | \$0.00001133 | | Support Level 2 | \$0.00000766 | Bonk (BONK) Price Prediction 2025 RVL, MA, and RSI The technical analysis indicators, such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bonk (BONK) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Bonk (BONK) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.00001185 Price = \$0.00001580 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 66.85540817 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Bonk (BONK) Price Prediction 2025 ADX, RVI In the below chart, we analyze the strength and volatility of Bonk (BONK) using the following technical analysis indicators Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Bonk (BONK). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 17.59368215 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 69.75 < 50 = Low > 50 = High | High Volatility | Comparison of BONK with BTC, ETH Let us now compare the price movements of Bonk (BONK) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of BONK is dissimilar to that of BTC and ETH. That is, when the price of BTC and ETH increases, the price of BONK decreases, if the price of BTC and ETH decreases, the price of BONK increases. Bonk (BONK) Price Prediction 2026, 2027 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Bonk (BONK) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Bonk (BONK) Price Prediction 2026 | \$0.0003 | \$0.000006 | | Bonk (BONK) Price Prediction 2027 | \$0.0004 | \$0.000005 | | Bonk (BONK) Price Prediction 2028 | \$0.0005 | \$0.000004 | | Bonk (BONK) Price Prediction 2029 | \$0.0006 | \$0.000003 | | Bonk (BONK) Price Prediction 2030 | \$0.0007 | \$0.000002 | Conclusion If Bonk (BONK) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Bonk (BONK) price prediction for 2025 is \$0.00002629. Comparatively, if unfavorable sentiment is triggered, the bearish Bonk (BONK) price prediction for 2025 is \$0.00000766. If the market momentum and investors' sentiment positively elevate, then Bonk (BONK) might hit \$0.0001. Furthermore, with future upgrades and advancements in the Bonk ecosystem, BONK might surpass its current all-time high (ATH) of \$0.00004704 and mark its new ATH. FAQ 1. What is Bonk (BONK)? BONK is Solana's first dog-themed coin for the people, by the people, with the Solana community receiving 50% of the cryptocurrency's entire supply via airdrop. 2. Where can you buy Bonk (BONK)? Traders can trade Bonk (BONK) on the following cryptocurrency exchanges such as Binance, Grovex, Bybit, OKX, and UZX. 3. Will Bonk (BONK) record a new ATH soon? With the ongoing developments and upgrades within the Bonk Platform, Bonk (BONK) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Bonk (BONK)? Bonk (BONK) hit its current all-time high (ATH) of \$0.00004704 on Mar 04, 2024. 5. What is the lowest price of Bonk (BONK)? According to CoinMarketCap, BONK hit its all-time low (ATL) of \$0.0000009197 on Dec 31, 2022. 6. Will Bonk (BONK) hit \$0.0001? If Bonk (BONK) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.0001 soon. 7. What will be the Bonk (BONK) price by 2026? Bonk (BONK) price might reach \$0.0003 by 2026. 8. What will be the Bonk (BONK) price by 2027? Bonk (BONK) price might reach \$0.0004 by 2027. 9. What will be the Bonk (BONK) price by 2028? Bonk (BONK) price might reach \$0.0005 by 2028. 10. What will be the Bonk (BONK) price by 2029? Bonk (BONK) price might reach \$0.0006 by 2029. TheNewsCrypto team encourages all to do their own research before investing.

- WIF has marked a 27% jump and is trading at around \$0.56. - Dogwifhat's daily trading volume has surged by over 176%. With the 6% recovery of the crypto market, Bitcoin has jumped to \$93.6K, while Ethereum is trading within the \$1.8K range. The recent gains have pushed the assets to their former highs. Meanwhile, the Solana-based dogwifhat (WIF) has lined up with a 27.12% rally. The WIF has tested its crucial ranges between \$0.48 and \$0.55. The recent command of bulls should hold the ground for a sustained bull run. In the early hours, the meme coin visited its daily low of \$0.4466. As the sturdy bulls chose to reign, the daily high was hit at around \$0.5662. As of now, dogwifhat trades at \$0.5648, with its daily trading volume reaching \$393 million. Besides, the market has observed a \$3.65 million WIF liquidation, as per Coinglass data. Will WIF Maintain Its Momentum? WIF's four-hour price graph exhibits the bullish trajectory. The price might mount above the crucial \$0.5607 resistance. If the uptrend persists, the meme coin could eventually climb and test the \$0.57 resistance, also has the potential to eye more upside. On the downside, if dogwifhat failed to hold the uptrend, it could trigger the price to slide to the \$0.5502 range. Assuming further downside correction for the meme coin, breaking down below the crucial level and moving to its former lows at around \$0.54. The asset's Moving Average Convergence Divergence (MACD) line is residing above the signal line. This crossover indicates that the buyers are in control, with the potential for more upside. Additionally, the Chaikin Money Flow (CMF) indicator, found at 0.15, suggests a positive money flow and steady bullish sentiment. Meanwhile, dogwifhat's daily trading volume is up by over 176%. Notably, the market sentiment of the meme coin is overbought with the daily relative strength index (RSI) at 82.84. WIF's Bull Bear Power (BBP) reading of 0.128 signals the momentum is bullish but not strong. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News

- Ether price briefly touched the \$1,800 mark after recording over a 10% price surge. - Ethereum market dominance recovered from its all-time low as the token outperformed Bitcoin and the broader crypto market. - Ether whale accumulation is further boosting the Ether market price, as of April 23. Ethereum price surprised the entire crypto market after it briefly touched the \$1,800 mark earlier today. The broader crypto market reclaimed the \$3 trillion overall market cap, while Bitcoin recorded a 5.62% surge and climbed to the \$93k price level. However, the entire crypto community is having its eyes on Ether as it outperformed BTC after a long time. As the trade tension between the US and other countries eased and Trump announced that he has no intention to fire the Fed chair, the crypto market witnessed positive market sentiment. Meanwhile, the crypto fear and greed index recorded 52, which turned fear market sentiment into neutral today. Ethereum Price Records Over 10% Surge Before Hitting \$1,800 Ethereum price surged by more than 10% today after the market sentiment improved in the crypto market. Ether is trading at \$1,795.87 at the time of reporting. It reached a 24-hour peak of \$1,816.52. Bitcoin also recorded a price surge of 5.9% and climbed to the \$93,600 price level. Major altcoins, such as XRP, Solana, BNB, Dogecoin, and Chainlink, have also recorded price gains today. This has resulted in a 6% increase in the overall market cap, close to \$3 trillion. There have been several times the crypto market showed recovery gains in the past few months after a short bull run in December 2024. However, Ether recorded average market performance every time, disappointing ETH long-term holders. With a price surge of more than 10%, Ether has outperformed most of the major altcoins and Bitcoin today. Ethereum market dominance started showing signs of recovery from its all-time low value. It hit an ATL of 7.07% a couple of days ago and increased by 1.67% today to 7.50%. Can Ethereum Whale Accumulation Further Push Its Market Price? ETH just hit \$1,800! Lookonchain (@lookonchain) April 23, 2025 Whales continue to buy \$ETH. 0x2D0E withdrew 5,531 \$ETH (\$9.8M) from #Binance in the past hour. 0x2088 spent 4.61M \$USDC to buy 2,568 \$ETH at \$1,794 in the past 40 minutes. https://t.co/jzoEHdh2Fshts https://t.co/Gz3tdRjNwp pic.twitter.com/FoW5pZ20LM On-chain analytics platform Lookonchain reported Ethereum whale accumulation today. As the second-largest cryptocurrency by market cap recorded gains, ETH whales took this opportunity to increase their ETH holdings. Whale 0x0x2D0E withdrew 5,531 Ethereum from Binance. Another whale 0x0x2088 purchased 2,568 ETH at an average price of \$1,794. The increasing investor confidence in Ethereum might bring further gains for the token in the next few days. Its 73% surge in 24-hour trading volume also suggests the same. However, the broader crypto market must sustain its upward momentum for that to happen. And it is too early to say whether the crypto market is completely on track for the next bull run or will face pullbacks.

- BONK is trading at \$0.00001593 with a 24-hour volume jump of over 308%, setting the stage for a triangle breakout toward \$0.00002. - The RSI above 60 and the bullish crossover of the MACD confirm growing momentum, while \$0.000001350 acts as a solid support base for further upside. BONK (BONK) is setting up for a significant price surge as technical indicators align across key timeframes, volume surges past 308%, and the meme coin trades above crucial moving averages. A decisive breakout could ignite a rally toward the \$0.000016 zone, and a potential bullish run to \$0.00002. BONK is the second-largest memecoin on Solana and currently trades at \$0.00001593, marking a 27% gain in the last 24 hours. Its volume

surged over 308% to \$351.21 million, a clear sign of renewed trader interest. Its \$1.24 billion market cap underscores its momentum revival. Technical Indicators Signal Potential Bullish Breakout BONK's trading chart reveals a tightening symmetrical triangle, typically a precursor to a significant directional move. The RSI is reading at 67 with strength, while the MACD has printed a bullish crossover supported by expanding green histograms. These indicators suggest mounting bullish pressure and an imminent attempt to breach the \$0.000016 resistance level – the triangle's upper boundary. Notably, BONK has climbed above its 50-day EMA and 100-day EMA at \$0.00001370 and is already aiming to rise beyond its 200-day EMA at \$0.000016, a critical resistance for the next leg up. Major Support Zones Establish Safety Net for Bulls The structure below shows substantial accumulation. BONK has formed a solid double bottom between \$0.00000960 and \$0.00000900, acting as a resilient support area through recent retests. This zone builds the foundation for further upside momentum. If \$0.000016 is broken decisively, BONK could test \$0.0000175 and extend to \$0.000019 or \$0.000020, which would match prior resistance zones and Fibonacci targets. On the daily timeframe, BONK is reclaiming relevance among meme tokens. Volume spikes are recurring, and the price has closed multiple sessions above the 50-day EMA – a positive development. Technical indicators, price structure, and the triangle pattern collectively point toward a probable bullish breakout. Traders and investors should monitor the \$0.000016 level; a breakout there could trigger explosive moves in the near term. Highlighted Crypto News for Today Cantor Plans \$3B Bitcoin Venture With SoftBank, Tether, Bitfinex

- This collaboration will expedite Analog's goal of integrating liquidity across blockchains and establish Analog as the premier liquidity hub for Web3. - With more than 60 partners covering DeFi, RWAs, wallets, AI, gaming, and other domains, Analog's ecosystem is still growing quickly. Through a significant token purchase, Analog, a pioneer in interoperability, formally announced today that Bolts Capital, a prominent financier in the digital asset industry, has committed \$15 million in strategic capital. By establishing an ecosystem for asset mobility, liquidity, and capital efficiency, this collaboration will expedite Analog's goal of integrating liquidity across blockchains and establish Analog as the premier liquidity hub for Web3. Victor Young, Founder of Analog stated: "This \$15 million in a strategic funding commitment from Bolts Capital is a major step forward for Analog as we continue building the infrastructure layer for unified liquidity in Web3. With this capital, we're accelerating the development of groundbreaking solutions like (Omnichain Analog Token Standard) OATS, Firestarter, and Zenswap, which will drive scalable RWA adoption, optimize liquidity, and unlock deeper markets for DeFi applications." Top-tier investors have continued to strongly back Analog. Some of the most reputable names in the industry, such as Tribe Capital, Wintermute, NGC Ventures, NEAR Foundation, Samara Asset Group, OrangeDAO, and GSR, have contributed \$21 million to the protocol in the past. With partnerships on leading exchanges including Bitget, Gate.io, KuCoin, MEXC, and Kraken, Analog has since accomplished major milestones, such as the launch of its mainnet and the \$ANLOG token generation event in February 2025. Additionally, as of this writing, Analog's staking APY is 82.7%, offering \$ANLOG stakers significant payouts. Analog's Thriving Ecosystem With more than 60 partners covering DeFi, RWAs, wallets, AI, gaming, and other domains, Analog's ecosystem is still growing quickly. Prominent partners working toward building one liquidity layer for Web3 include OKX Wallet, Frax, MetaStreet, Rarible, E Money Network, and Base. Analog's testnet and community programs have also benefited from the momentum. As early January, there were 384,000+ users on the Analog testnet, with 121,000+ claims having submitted and over 182,000 users eligible for airdrop rewards. Pixelport and other ecosystem applications have successfully bridged 14,980 NFTs across chains and onboarded around 58,000 users, indicating great early momentum for omnichain assets. Analog is becoming the omnichain coordination layer driving liquidity, asset movement, and RWA infrastructure at scale, with increasing support across verticals and chains. Product Roadmap Analog is embarking on a significant expansion phase with a number of new projects and products aimed at advancing omnichain infrastructure. Omnichain Analog Token Standard (OATS), a new token standard created by Analog that facilitates the smooth transfer of both fungible and non-fungible assets between EVM and non-EVM chains, lies at the heart of this expansion. Analog is getting ready to introduce Firestarter, a user-driven marketplace supported by Black Label Ventures, in the RWA space. Through on-chain transactions, Firestarter enables fractional ownership, unlocks liquidity, and tokenizes real-world assets like real estate, collectibles, and revenue-producing items, making these markets more accessible and transparent. Analog is introducing Zenswap, a cross-chain DEX developed in partnership with Soramitsu, on the DeFi side. Zenswap abstracts the multi-step swap process, including routing, messaging, and asset conversion, into a smooth user interface and enables users to swap native assets across linked chains in a single transaction. A wider ecosystem growth, which includes the introduction of GMPV2, Analog's next-generation omnichain messaging protocol, liquidity initiatives, and the newly announced integration of Solana and EVM, supports these product releases. Analog is forming the infrastructure layer required to unify Web3 and advance seamless interoperability as momentum grows across DeFi, RWA, and business collaborations. The infrastructure needed to unify liquidity across Web3 is being built by Analog. By bridging disparate liquidity across Web3 ecosystems, the protocol provides users, investors, and projects with access to a single pool of capital that expands reach and opens up new possibilities. This is crucial for the next generation of RWAs, which need omnichain liquidity to expand across dispersed blockchain settings, in addition to DeFi and native crypto apps. Assets may move easily across chains thanks to Analog's ability to make liquidity accessible and comprehensible without sacrificing user experience or security. With its expanding product stack designed for scalability and compatibility for both EVM and non-EVM networks, Analog is well-positioned to become the connective layer that drives the flow of value, data, and capital across Web 3. What's Next For Analog With ecosystem silos and fragmented liquidity restricting asset adoption and mobility, cross-chain infrastructure is still a significant barrier in Web3. Analog is expanding its product range, ecosystem integrations, and technological development in order to make interoperability smooth and cost-effective with this new commitment. Managing Director of Bolts Capital stated: "We see Analog as one of the few teams truly solving for interoperability at scale. As more use cases emerge across chains, especially in RWAs, there's a real need for foundational infrastructure like what Analog is building. And we're excited to support their vision and growth with this \$15 million strategic commitment." Analog is well-positioned to spearhead the next stage of cross-chain liquidity and RWA adoption throughout Web3, supported by Bolts Capital, key partners, and an expanding network of builders.

- Oregon sues Coinbase for offering 31 unregistered crypto tokens, including XRP and ADA. - State claims Coinbase misled users by promoting risky, unvetted investments. - Lawsuit could spark similar state-level actions, reshaping crypto regulation. Oregon has brought legal action against Coinbase, charging the cryptocurrency exchange with selling and marketing unregistered digital currencies to citizens. The lawsuit may disrupt the way cryptocurrencies are treated at the state level, particularly as it expands beyond earlier federal enforcement. State-Level Crackdown Escalates Sued by Oregon Attorney General Dan Rayfield, the lawsuit alleges Coinbase violated local securities regulations by listing 31 crypto tokens which ought to have been registered prior to being made available to the public. The list includes big names such as XRP, Cardano (ADA), Solana (SOL), Chainlink (LINK), and Uniswap (UNI). Unlike the SEC's previous complaint that involved 18 tokens, Oregon's case involves 13 more, signaling an increased willingness on the part of states to enter the crypto enforcement arena on their own terms. Oregon Attorney General Rayfield claims that Coinbase earned the trust of Oregonians but used it abusively by promoting unregulated and volatile investments. According to the lawsuit, as the site reaped millions in fee income from transactions, numerous local investors experienced financial losses. "Coinbase gained the trust of users in Oregon and then put them into investments that weren't properly supervised. People lost money as a result, and we think there needs to be accountability," said Rayfield. Coinbase Pushes Back Against Claims In return, Coinbase Chief Legal Officer Paul Grewal denounced the action, saying the state is overreaching by bringing the suit on behalf of over 500,000 residents without direct input. He cautioned that this kind of state enforcement could lead to fragmented rules and hurt the larger crypto ecosystem. Grewal stated that the lawsuit not only targets Coinbase but poses a threat to innovation and investor access across the entire digital asset space. XRP is again in the legal headlines. A federal court has previously stated XRP isn't a security under certain circumstances. But now Oregon takes the opposing stance. The new contention resurfaces the debate with implications that interpretations could be state versus federal. That is fueling renewed compliance ambiguity for Ripple and other industry participants. The resolution will change token definition and regulation depending on where a token or offering. Which was subject to which law potentially precipitating future judicial contests elsewhere. While this is a state-level case, the ripple effects could be national in scope. If Oregon prevails, other states may follow suit with similar moves, creating a patchwork legal environment for crypto firms operating in multiple states. For Coinbase, this is just another test in its ongoing battle with regulators. For the broader industry, it's a reminder that crypto compliance is no longer a federal matter.

- ETH/BTC exchange rate falls to 0.01791, lowest since 2020. - Galaxy Digital, Paradigm, and Ethereum Foundation shuffle millions worth of ETH. - ETH's staking ratio at 28% lags behind competitors like Solana. The Ethereum market is facing mounting pressure as the ETH/BTC exchange rate has plummeted to its lowest level in nearly five years, according to recent TradingView data. The ratio has fallen to 0.01791, marking a significant decline in Ethereum's value relative to Bitcoin not seen since 2020. This downward trend coincides with increased selling activity from major institutional players and whales in the Ethereum ecosystem. According to blockchain expert OnchainDataNerd on X, Galaxy Digital sent an extra 5,000 ETH (about \$8.11 million) to Binance on April 22, 2025. Major firms reducing Ethereum exposure As previously revealed on April 18, 2025, Galaxy Digital moved about \$100 million worth of ETH to exchanges in a few days prior to this transaction. There are other significant companies lowering their exposure to Ethereum besides Galaxy Digital. Three hours before Galaxy's transaction, Paradigm sent Anchorage Digital 5,500 ETH, which is worth around \$8.65 million as per EmberCN. Furthermore, Lookonchain discovered that 1,000 ETH was sent to the Kraken exchange from an address connected to the Ethereum Foundation. These substantial movements from institutional holders are placing significant downward pressure on Ethereum's price at a time when the token is already struggling against Bitcoin's dominance. Currently, ETH is trading at \$1,574, representing a 2.5% decline over the past 24 hours, while Bitcoin approaches the \$90,000 mark. The widening performance gap between the two largest cryptocurrencies may prompt investors to shift their allocations toward Bitcoin, potentially intensifying the selling pressure on Ethereum. The Ethereum Foundation's history of multiple recent ETH sales further suggests that these large institutional transactions can significantly impact price volatility and impede Ethereum's growth trajectory. Beyond whale activity, ETH faces additional challenges that may be contributing to investor hesitation. The network's staking ratio currently stands at just 28%, substantially lower than competitors like Solana, which boasts a 65% staking ratio. This disparity, coupled with less attractive staking yields compared to alternatives, may be eroding investor confidence in ETH as a long-term holding. Bitcoin's market dominance has reached a four-year high, indicating capital is flowing away from Ethereum and other alternative cryptocurrencies. This trend could exacerbate ETH's relative underperformance if it continues. Despite these concerning short-term signals, some experts maintain optimism about Ethereum's long-term prospects.

- Stablecoins that are going to be deployed on Concordium are tied to three distinct fiat currencies: the USD, GBP, and the AED. - Concordium makes it possible for institutions to launch stablecoins natively without the need of smart contracts, therefore opening the way for a vibrant new age of digital finance on the blockchain. According to an announcement made by Enterprise-oriented blockchain Concordium, four of the most prominent stablecoin platforms will issue their assets natively on its chain. In order to power their stablecoins and become part of Concordium's expanding PayFi ecosystem, Agant, Noon, Deep Blue, and AEDX have made the decision to use the Protocol-Level Token technology that Concordium has developed. Due to the fact that they are natively issued and kept directly in wallets, the four stablecoins that will be launched on Concordium will benefit from the absence of smart contracts. This removes typical attack vectors that are available on smart contract chains like Ethereum and Solana, which results in a huge reduction in risk. Concordium CEO Boris Bohrer-Bilowitzki said: "We are delighted to welcome such exciting projects to our evolving ecosystem. Not only do these partnerships reflect the success of our platform and its ability to support smart contract-less execution, but it underlines the real-world impact of web3 technology, particularly when it comes to stablecoins. We look forward to working more closely with Agant, Noon, Deep Blue, and AEDX and to welcoming more innovative projects into our ecosystem." Agant, a financial technology company located in the United Kingdom, is the creator of GBPA, a stablecoin that is entirely backed by reserves and is tied to the British pound sterling. In order to promote financial inclusion and ease seamless international transactions, Agant, which is a member of both the Digital Pound Foundation and the Stablecoin Standard, is working to bridge the gap between conventional fiat currency systems and decentralized finance (DeFi). USN, the USD-pegged stablecoin that is issued by Noon, may be minted by depositing collateral in the form of Tether (USDT) or USD Coin (USDC). The collateral can then be deployed into delta-neutral strategies in order to create yield. Despite the fact that Noon's TVL has already reached \$33 million, the company's staff has a solid combination of TradFi and Web3 expertise, with members coming from companies like as McKinsey & Company, Goldman Sachs, Aave, and OKX. Furthermore, the company has released its public beta in recent weeks. Both Deep Blue and AEDX are responsible for the issuance of the remaining stablecoins, which are DBUSD and AEDX, respectively. The DBUSD is Jersey's very first stablecoin, and it is a

symbol of the Crown dependencyâ€™s forward-thinking attitude to the development of financial technology. It is supported by USD reserves. AEDX, which has been nicknamed â€œthe stablecoin for a better world,â€ is integrated with important financial and commercial institutions, mostly in the Middle East and North Africa (MENA) and Central Asian (CIS) markets. It is tied to the United Arab Emirates Dirham (AED). In the course of its pilot period, it is anticipated that 5 million AEDX tokens would be distributed. Depending on the level of market acceptance and demand, the number of tokens might potentially increase to 1 billion during the next three to five years. The majority of AEDXâ€™s revenues are committed to providing contributions to nonprofit organizations and public purposes. Julien Bahurel, CEO and co-founder of Deep Blue stated: â€œLaunching DBUSD on Concordium is an important milestone in our roadmap, and a reflection of our vision to bridge traditional finance and Web3. We are looking forward to redefining how stablecoins can power cross-border finance with trust and efficiency in the years ahead.â€ Stablecoins that are going to be deployed on Concordium are tied to three distinct fiat currencies: the USD, GBP, and the AED. This will enable worldwide adoption. Concordiumâ€™s position as a premier L1 for stablecoin issuance is strengthened by their debut, and the options that are open to users inside its expanding PayFi ecosystem are expanded as a result. The built-in ID layer and protocol-level token technology of the blockchain made it an ideal venue for the issuance of stablecoins since they considerably minimize the risk of security breaches. The blockchain was designed to satisfy the requirements of apps that are used in the real world. Concordium makes it possible for institutions to launch stablecoins natively without the need of smart contracts, therefore opening the way for a vibrant new age of digital finance on the blockchain. Concordium is a scalable Layer 1 blockchain that provides a unique identity layer at the protocol level. This layer ensures that user interactions are verified and confidential, and it is enabled using zero-knowledge proof technology. The research-backed chain was established in 2018, and it enables Smart Money with programmable protocol-level tokens, advanced PayFi features such as time releases and compliance controls, and secure ID-based geofencing for cross-border transactions. As a result, it is the chain of choice for enterprise-ready stablecoins that are willing to adhere to new regulatory frameworks while also achieving real-world adoption.

- Metaplex is facing legal scrutiny from Burwick Law over its transfer of more than 54K unclaimed SOL. - Holders have until April 25, 2025, to reclaim funds. The U.S.-based law firm Burwick Law has publicly challenged the Solana NFT platform Metaplex over its upcoming plan to transfer unclaimed SOL tokens, worth approximately \$7.3 million, into its DAO treasury. The issue revolves around the resize rent, originally paid by users as part of a blockchain optimization introduced last year. In a strongly worded open letter posted on X on April 22, the firm warned that the decision could pave the way for legal action. The Backstory Last year, Metaplex rolled out a system-wide improvement that shrank the on-chain footprint of its NFTs. As part of this technical adjustment, holders of Metaplex Token Metadata (TM) NFTs were eligible to reclaim a few of the SOL used as rent for on-chain storage. Notably, the reclaim window closes on April 25, 2025. So far, around 7,043 SOL have been claimed. Metaplex intends to transfer the remaining 54,000 SOLâ€™roughly \$7.3 million at current pricesâ€™into its DAO treasury. It intends to fund community-driven projects like grants, airdrops, and governance initiatives. Concerns of Burwick Burwick Law argues that many NFT holders were never clearly notified that their unused funds might be swept into a treasury they donâ€™t control. Their concerns fall into the fact that the rent fees were originally paid with the expectation that they served a functional, not financial, purpose. Redirecting those funds now creates what Burwick calls a retroactive fee grab. It follows that the principle of the code is law only holds if the rules are immutable and transparent. If protocols can change prior agreements unilaterally, the foundation of decentralization weakens. In addition, permitting such broad actions would open the door to similar choices by other DAOs. It might erode trust in user-held assets. Rather than pursuing litigation, Burwick has shared a potential resolution that balances user interests with DAO needs. Their proposal includes pausing the token sweep to allow more time for NFT holders to claim their SOL, refunding remaining rent directly to current NFT holders through an on-chain upgrade, and retaining a 10% network-maintenance bounty for the DAO. They also contend that the 90/10 split model would prove that the Solana ecosystem is capable of regulating itself and safeguarding users, without needing a courtroom intervention. Highlighted Crypto News

Investors are expressing increasing excitement for a younger competitor, Rexas Finance (RXS), presently valued at \$0.20, as the cryptocurrency market changes. They are also cautious toward established competitors like Dogecoin (DOGE) and Cardano (ADA). This change in attitude draws attention to a more general trend whereby market players seek creative ideas with factual value propositions instead of speculative or meme-driven assets. Dogecoin Faces Declining Investor Confidence Once a darling of the cryptocurrency scene because of its meme-coin status and well-publicized sponsorships, Dogecoin has struggled to keep momentum. Reflecting a loss of investor confidence, its price has dropped drastically to roughly \$0.18 after reaching a post-election top of \$0.4843 early this year. The meme coinâ€™s dependence on hypeâ€™primarily related to leaders like Elon Muskâ€™appears to be diminishing, given its limited use. Even though Dogecoin is still among the most identifiable cryptocurrencies, its long-term survival is now in doubt. Unlike other blockchain initiatives emphasizing DeFi, NFTs, or real-world asset tokenization, DOGE does not have a defined roadmap for its next evolution. Compared to rivals, its transactional use is negligible. Hence, it is more of a speculative asset than a significant investment. Many investors are now seeking alternatives like Rexas Finance with better fundamentals since there are few well-known sponsorships and no considerable technology developments. Cardano (ADA) Struggles to Gain Momentum Cardano has also had its set of challenges. Trading at \$0.70 as of writing, ADA has faced volatility while having a sound technical basis and an ambitious business map. Though rumors of its possible inclusion in a U.S. crypto strategic reserve spurred a brief increase in price of over 60% following remarks from President Donald Trump, subsequent market downturn and lack of apparent catalysts have left investors cautious. The slow rate of Cardanoâ€™s development raises one of his main worries. Although the project has battled to be widely adopted, its proof-of-stake (PoS) blockchain and innovative contract features make it a viable rival in the Ethereum-dominated industry. Delays in its upgrades irritate many investors; with the enhancement of Ethereum scaling solutions, ADAâ€™s prospective market share is in danger. Due to this ambiguity, many investors have looked at younger and more exciting crypto businesses. Rexas Finance (RXS): The Token Investors Are Turning to Rexas Finance (RXS) is drawing interest in its original method of tokenizing real-world assets (RWA), unlike DOGE and ADA. Priced at \$0.20 during its presale phase, Rexas Finance allows investors to leverage blockchain technology to link physical assetsâ€™such as real estate, commodities, and intellectual propertyâ€™with a market expected to upset a \$16 trillion sector. Rexas Finance provides a physical use case by including tokenized assets into the blockchain economy, unlike slow-moving ventures or meme coins. For investors wishing to vary their portfolios, this method offers stability, practical applicability, and accessibility. Rexas Finance is positioned to profit from the demand for more distributed and efficient transaction solutions for the real estate and commodities industries. Rexas Financeâ€™s presale performance and audacious forecasts clearly show the excitement about it. Analysts have said the token might enjoy phenomenal profits, with some predicting a jump as high as 21,805% â€œperhaps propelling its value to \$33 or more. Unlike speculative cryptocurrencies dependent on social media hype, RXS is supported by an expanding ecosystem featuring tools like the Rexas QuickMint Bot and Token Builder, simplifying tokenization for companies and people. Beyond its technological prowess, Rexas Finance gains from significant investor support. Previously supporting successful initiatives like Shiba Inu and Solana, crypto whales have allegedly been aggressively accumulating Rexas Finance, indicating faith in its long-term trajectory. The projectâ€™s early-stage price and strong tokenomics have attracted people trying to maximize returns before its official listing. Conclusion Rexas Finance is becoming an enjoyable substitute while Dogecoin battles to recover its previous glory and Cardano encounters opposition in breaching critical pricing levels. Driven by its promise of real-world use and explosive growth potential, investorsâ€™wary of the volatility and uncertainty surrounding DOGE and ADAâ€™are flooding RXS. With its formal release scheduled for June 19, 2025, Rexas Finance could alter how the crypto market rewards invention over hype. As blockchain technology develops, investors will probably continue moving away from speculative assets toward initiatives with real-world answers. If it continues on its current trajectory, Rexas Finance could be one of the leading companies in the next major cryptocurrency bull run. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Dogecoin (DOGE) remains one of the most recognized names in the cryptocurrency market, but popularity alone might not be sufficient to propel its price over the \$0.20 resistance level. While DOGEâ€™s meme status and celebrity endorsements have helped preserve its recognition, the coin has struggled to keep steady momentum. On the other hand, Ozak AI (OZ), an AI-powered blockchain project, is emerging as a powerful project within the spaceâ€™specifically after surpassing the \$1 million mark in its presale. The contrast among these two projects offers a revealing glimpse into the evolving crypto panorama in 2025. Dogecoin: Fame Without Fundamentals? Dogecoinâ€™s origins as a meme coin gave it an instantaneous appeal and viral attraction, with supporters ranging from regular traders to billionaires like Elon Musk. Despite multiple surges in popularity, DOGE has remained fairly flat since its ultimate major rally, hovering just beneath the \$0.20 mark. While it sometimes spikes on social media activity or speculative hype, many investors query whether or not DOGE can preserve long-term boom without real-world utility. One of the challenges dealing with Dogecoin is its loss of a defined use case beyond being a digital tipping currency or speculative asset. In a market where application, adoption, and innovation are increasingly vital to long-term viability, DOGEâ€™s basics remain to lag. Analysts are expecting the coin would possibly attain an average price of \$0.34 by the end of 2025, with a bullish goal of \$0.73. But those predictions rely heavily on external elements in place of inner development or technological enhancements. Ozak AI: A Rising Star in AI-Driven Crypto In stark contrast to Dogecoinâ€™s meme-fueled narrative, Ozak AI is built on cutting-edge technology. The project merges artificial intelligence with blockchain infrastructure to provide real-time predictive analytics, decentralized data management, and AI-enhanced decision-making tools for crypto investors and businesses. It is this strong technological foundation that has led to growing investor confidence in Ozak AI. Ozak AI recently hit a key milestone by raising over \$1 million in its Ozak AI presale, positioning it as one of the most promising new entries in the crypto space. The OZ token, currently priced at \$0.003, is set to increase to \$0.005 in the next stage of the presale. Market experts and early adopters suggest the token has the potential to surge to \$1 by the end of 2025â€™a projected 300x return that far outpaces the forecasted growth of Dogecoin. What Makes Ozak AI Stand Out? The core appeal of Ozak AI lies in its innovative ecosystem. It incorporates: - Ozak Stream Network (OSN): A decentralized infrastructure designed to handle massive data processing in real-time. - Ozak Data Vaults: Secure and private storage solutions for sensitive data. - Prediction Agents: Customizable AI agents that help users make better trading and investment decisions. - DePIN (Decentralized Physical Infrastructure Networks): This feature integrates physical systems with blockchain for real-world applications. This unique combination enables Ozak AI to provide accurate, actionable insights to traders, analysts, and institutions. It bridges the gap between traditional AI services and decentralized platforms, making it especially attractive as AI adoption increases globally. Presale Success Reflects Strong Market Sentiment Presales regularly serve as a barometer of investor enthusiasm, and Ozak AIâ€™s performance thus far has been superb. Crossing the \$1 million threshold now not only validates the ventureâ€™s roadmap but additionally signifies growing acceptance as true within its long-term potential. This level of presale engagement mirrors early success stories like Polygon, Solana, or even Chainlinkâ€™initiatives that saw big profits following strong early backing. Moreover, the challengeâ€™s low entry rate and high increase ceiling create a compelling possibility for retail investors who neglected earlier crypto booms. With each stage of the presale increasing the tokenâ€™s value, Ozak AIâ€™s momentum indicates that it is able to turn out to be one of the breakout stars of this market cycle. Can Ozak AI Outperform Dogecoin? While Dogecoinâ€™s name popularity and large network cannot be brushed off, it faces challenges in scaling without a stable technical backbone. Ozak AI, by contrast, has carved out a niche that aligns with foremost developments in AI and blockchainâ€™two of the most transformative technologies of our time. Given its real-world utility, innovative features, and growing market traction, many believe that Ozak AI could outperform Dogecoin in terms of ROI over the following 12â€™18 months. DOGE might retain a place in portfolios due to its meme power and potential for short-term spikes, but for those seeking long-term value rooted in innovation, OZ presents a more compelling case. Dogecoin continues to hover below \$0.20, held back by its limited use cases and over-reliance on social media buzz. In contrast, Ozak AI is leveraging advanced AI technologies to create a decentralized platform with real utility. With \$1 million already raised in its presale and significant technological backing, Ozak AI is well-positioned to reach \$1 by 2025, delivering exponential gains to early investors. As the crypto market matures, projects like Ozak AI are proving that innovation and utilityâ€™not memesâ€™will shape the next generation of digital assets. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable

insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter: <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. In April 2025, as investors seek the next big opportunity in the crypto market, Lightchain AI is emerging as a standout contender. With its presale already raising \$19.3 million, the project demonstrates strong investor confidence. Priced at just \$0.007125, Lightchain AI offers an accessible entry point for those looking to capitalize on its potential. The platform's innovative integration of artificial intelligence with blockchain technology positions it uniquely in the market, aiming to revolutionize decentralized applications. As the crypto landscape continues to evolve, Lightchain AI's momentum and forward-thinking approach make it a top altcoin to watch for explosive growth this month. Why Investors Are Exploring Beyond Traditional Altcoins However, the cryptocurrency landscape is dynamic, and the focus is now on disruptive projects, from well-established altcoins, such as Solana, XRP, and avalanche to new innovative projects that provide a cutting-edge solution. On the other side of the arc, the next growth phase is expected to belong to blockchain initiatives that incorporate artificial intelligence, improve scalability, and provide real functionality. A standout in this space is Lightchain AI, an asset to bet on for 2025. This next-gen crypto takes far more than simple transaction processing by merging AI with blockchain tech itself, unearthing intelligent automation and operational efficiency for a multitude of industries. Lightchain AI: Pioneering the Next Frontier of Web3 AI Integration as the Next Level of Blockchain Adoption Investors and businesses are watching closely. Lightchain AI is Leading Contender for 2025 Lightchain AI is making waves with its advanced AI-powered automation engine. This cutting-edge feature enables businesses to simplify complex operations through decentralized AI algorithms, driving down costs, boosting efficiency, and offering blockchain-secured AI infrastructure for unparalleled reliability. One standout feature is its smart contract optimization layer, which ensures smooth functionality for AI-driven applications on the blockchain. This innovation empowers developers to create high-performance decentralized applications (dApps) capable of handling AI tasks in real time. Industries relying on intelligent automation can greatly benefit from this technology. With these capabilities and significant investor backing, Lightchain AI is well-positioned for significant growth by early 2025. Why Lightchain AI Could Dominate Crypto Market in April 2025 AI-driven projects are taking the crypto world by storm, and Lightchain AI is positioning itself as a major contender. With an impressive presale and innovative technology, it's shaping up to be one of the most promising altcoins of the year. So, what makes Lightchain AI unique? It integrates off-chain tools like IPFS, Filecoin, and Arweave to securely store data and AI models, while its blockchain focuses on metadata, cryptographic proofs, and access controls. This delivers unmatched security, transparency, and dependability—qualities that set it apart from competitors in a crowded space. For investors looking for high-growth projects with real-world utility, Lightchain AI could be the breakthrough opportunity. As April 2025 approaches, keep an eye on this altcoin—it might just be your next big win. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. With market sentiment turning, the next crypto bull run could be around the corner. Traders, early investors, and even part-time promoters are now searching for projects that offer not only growth potential but also ways to get involved before the wave crests. While names like Solana, Aptos, and Sui remain under the spotlight for their networks and technical upgrades, one project is grabbing attention for a different reason. BlockDAG is offering real-time earning potential—and that's creating buzz that's spreading fast. 1. BlockDAG (BDAG): Turning Referrals Into Real Rewards BlockDAG has pulled in \$216 million during its presale and isn't slowing down. The current batch 27 price is \$0.0248, and those who got in early are already up 2,380% from batch 1. More than 19.2 billion coins have already been sold. But price growth isn't the only reason people are paying attention. BlockDAG's 5% affiliate program lets users earn a commission from every referral. This has opened the door for crypto YouTubers, Telegram channel admins, and even Reddit posters to turn their traffic into income. Reports suggest that some promoters are now making thousands each week simply by sharing links. No major holdings required—just community outreach and consistent effort. The program's appeal lies in its simplicity. Anyone can participate with a link and basic crypto know-how. This has helped fuel momentum beyond traditional investor circles. As the next crypto bull run picks up, BlockDAG's dual appeal—early-stage entry and income potential—makes it a clear front-runner. Whether you're a full-time investor or just starting out, BlockDAG gives people a chance to get involved beyond just token speculation. 2. Solana (SOL): Focusing on Speed and Scalability Solana continues to benefit from its reputation as a high-speed network. Its low fees and fast confirmation times have made it a favorite among NFT marketplaces and GameFi projects. After a difficult stretch, Solana is showing signs of recovery. Its core infrastructure remains solid, and developers are once again launching projects. With improved uptime and technical upgrades, Solana could regain lost ground as broader market activity picks up. Investors are watching closely for new integrations, network usage spikes, and larger ecosystem milestones to build momentum. 3. Aptos (APT): High Throughput Backed by Strong Tech Aptos came from former Meta engineers and was designed to increase speed and reduce costs while maintaining decentralization. Its Move-based programming model and parallel execution system are built to handle heavy loads. This has made it a go-to chain for developers looking for flexible tools and strong backend support. If gas fees on older networks remain an issue, Aptos may see a lift from projects looking to move somewhere more efficient. Still, Aptos will need to attract more users and grow its total value locked (TVL) if it wants to compete long-term. The foundation is there, but adoption will be the key metric to track going forward. 4. Sui (SUI): User-Friendly Blockchain with Parallel Processing Sui is also backed by ex-Meta engineers and is gaining traction with developers thanks to its object-first model and focus on ease of use. The network's design supports quick transactions and scalable growth. Its ecosystem is beginning to take shape, with tools for DeFi and NFTs already in the works. Because it focuses heavily on simplicity, Sui could pull in first-time crypto users who are looking for a smoother experience. However, like Aptos, it still needs to build a base of active users. The tech is solid, but sustained growth will depend on onboarding new projects and keeping them there. Final Thoughts: Why BlockDAG Leads This List Solana, Aptos, and Sui all offer unique tech angles and have teams focused on growth. But BlockDAG is delivering results now. It's raised over \$216 million, sold more than 19.2 billion tokens, and launched a referral program that's already generating income for everyday users. This mix of accessibility, community growth, and real-world results is rare in a presale. As excitement builds for the next crypto bull run, BlockDAG is doing more than waiting—it's rewarding action. Whether you're a long-term holder or looking for ways to earn before the rally starts, BlockDAG's combination of traction and participation makes it one to watch. - The meme coins market peaked at \$137 billion in 2024 but crashed to \$49 billion by 2025—a drop of nearly 62%—due to short-term hype cycles, scams, and rug pulls. - Political and influencer-backed meme coins like LIBRA, TRUMP, and HAWK crashed after early hype, causing billions in losses and legal troubles. The cryptocurrency market has seen significant changes over the years. Bitcoin (BTC) and Ethereum (ETH) have evolved from speculative assets to mainstream investments with institutions such as BlackRock and Fidelity launching Bitcoin ETFs. Meanwhile, Solana and other blockchain networks have enabled a new wave of crypto adoption by focusing on speed, lower fees and scalability. Mainly due to Solana's Pump.fun meme coin launchpad. Meme coins, initially a playful offshoot of crypto culture have grown into a major market sector. These assets, which began with Dogecoin (DOGE) and Shiba Inu (SHIB), are now seen as both high-risk speculative investments and social media driven financial experiments. Meme coins have come a long way since Dogecoin (DOGE) was created as a joke in 2013. Inspired by the famous Shiba Inu meme, Dogecoin unexpectedly became a major player in the crypto market, reaching a market cap of billions after endorsements from Elon Musk. Following DOGE success Shiba Inu (SHIB) created in 2020 and positioned itself as the "Dogecoin Killer" and built an ecosystem with staking, NFTs and a decentralized exchange. Also, SHIB leverages strong community marketing and strategic token burns to create scarcity and increase its perceived value. The "SHIB Army" played a crucial role in sustaining the hype. Yet, memecoins in 2024-2025 are different. Instead of long-term communities, most new meme coins now follow a short-term hype cycle with many fading within weeks or months. How Meme Coins Create and Lose Hype The lifecycle of a meme coin typically follows these stages: Launch & Community Hype - Meme coins usually come out with viral marketing on social media platforms like X (Twitter), Reddit and Discord. A single viral post or meme can send their prices to the next level. - Developers push narratives that attract early buyers, some even promise utility while others lean purely into humor. Celebrity Endorsements & Social Media Boosts - Influencers and celebrities' involvement always fuel massive price spikes in meme coins. ur welcome pic.twitter.com/e2KF57KLxb "Elon Musk (@elonmusk) February 4, 2021 - Elon Musk's past Dogecoin tweets are the most famous example. Recently, politicians have entered the scene. - For example, the U.S. President Donald Trump has directly or indirectly influenced meme coin trends. The Trump Coin was one example of a politically themed meme coin that gained traction but later lost steam. Similarly, Argentine President Javier Milei linked the Libra token, which sent to the peak and crashed in a single X post of Milei shook the mark. Exchange Listings: A listing on major platforms like Binance, Robinhood or Coinbase brings legitimacy and increases demand. Recently, these exchanges listed TRUMP, MELANIA and Libra Coin. Even Robinhood listed POPCAT, PENGU, and PNUT, causing an instant price surge. Short-Term Price Surge - As FOMO (fear of missing out) kicks in, prices surge. - AI-driven trading and automated market-making often amplify the growth phase. Peak Hype & Early Investors Sell - Once a coin reaches a peak price, whales (large holders) and early investors often sell to take profits. - Developers may also cash out that leading to suspicions of rug pulls (fraudulent exits). Sharp Decline & Community Collapse - As demand slows and liquidity dries up, prices fall. - Retail investors, who bought in late, suffer the biggest losses. This cycle has repeated for most meme coins launched in 2024-2025. The 2024-2025 Meme Coin Market Boom & Crash Since mid-2024, the meme coin landscape has exploded with dozens of new entrants. Also, coins like PEPE, FLOKI, and BONK attracted traders hoping to replicate DOGE's success. In September 2024, the meme coins market cap reached \$137 billion for the first time in history. However, many of these coins followed the typical hype cycle—massive surges followed by sharp declines. Currently, the market cap stands at \$47 billion, crashing nearly 66%. Beyond just jokes to meme coins, political memecoins are another hit. Several high-profile memecoins, including TRUMP (memecoin of President Trump), CAR (memecoin from the President of the Central African Republic), and LIBRA (memecoin from the President of Argentina) have suffered massive crashes in early 2025, leading to billions in losses and political controversy. Political Meme Coins: A New Trend with Heavy Losses Libra Coin Collapse (\$4.5B Lost) The Libra Coin, linked with Argentine President Javier Milei, which he promoted on his X account, collapsed by 95% over a weekend and wiping out around \$4.5 billion in value. Initially it was promoted as a financial tool for Argentina's informal economy. Later the token raised suspicions due to its ties to anonymous wallets and non-KYC exchanges. Later Milei distanced himself from the project but the fallout led to legal battles, political resignations and even impeachment threats against him. Trump Coin Crash (85% Drop) The Trump memecoin, launched three days before Donald Trump took office as President of the United States, has lost over 86% of its value. The coin initially surged \$75.35 due to political speculation but later plummeted as insiders dumped their holdings. Currently, Trump Coin is priced at \$8.46 with a market cap of \$1.69 billion. Earlier, the Trump Coin market cap hit over \$20 billion and even flipped Shiba Inu to claim the 2nd spot in the meme coin ranking, just falling below 40th rank just in a week. The combined losses from Trump Coin and Libra Coin alone are estimated at \$3.94 billion with 75% of Libra Coin investors sitting on unrealized losses. The collapse of these political memecoins highlights their high volatility and the risks involved. Similarly, Melania Trump, the First Lady of the U.S. and wife of Donald Trump launched a memecoin that initially gained attention but crashed in one day, dropping over 96% from its all-time high. Then, the CAR token connected with the Central African Republic's President Faustin-Archange Touadéra followed the same pattern, displaying a sudden drop after the initial hype. Influencer Meme Coins: The Hawk Tuah Controversy Haliey Welch popularly known as the "Hawk Tuah" girl, launched the HAWK meme coin in December 2024 on the Solana blockchain. Then the coin quickly gained traction, reaching a market cap of \$490 million but collapsed by 93% within minutes sparking backlash and accusations of a rug pull. Following the crash Welch deactivated her social media and faced criticism for allegedly misleading investors. A federal lawsuit was filed against the creators and promoters of \$HAWK, though Welch was not named as a defendant. The SEC also launched an investigation but later dropped the probe without any charges or fines against her. Welch has since distanced herself from crypto stating that she had little knowledge of how the market worked and regrets her involvement. Not only HAWK but several other influencer promoted meme coin projects have followed a similar pattern that includes DADDY backed by internet personality Andrew Tate and MILADY, linked to the controversial NFT community. In early 2025, SPEED a meme coin linked to Logan Paul saw a meteoric rise before plummeting by 89% in just 48 hours that leading to accusations of market manipulation. Similarly, LIV—a meme coin promoted by a viral TikTok star—was marketed as the

“next big thing,” only to lose over 95% of its value within a week. The trend of influencers capitalizing on short lived meme coin hype has intensified with many of these projects following a pump and dump routine that leads normal investors at a loss. Solana-Based Meme Coins: A Rise and Fall The Solana ecosystem known for fast and cheap transactions has turned to be a hotspot for meme coins. These Solana-based meme coins, which had been experiencing a surge earlier this year, are now facing significant declines. GOAT: leveraged AI-driven marketing and trading algorithms to gain momentum, reaching a \$1.3 billion valuation before declining. AI16Z Coin: This AI-themed Solana memecoin lost 92% of its value due to insider selling, mirroring past rug pulls. Fartcoin (FARTCOIN): A meme token that briefly touched a \$2 billion market cap before falling by 82% in March 2025. Market manipulation and insider profit-taking were blamed. Similarly, Dogwifhat (WIF) is down by 92%, while Pudgy Penguins (PENGU) have fallen by 91% from their peaks respectively. Other Solana-based meme coins also saw losses after a brief rebound. However, some of these tokens have still attracted speculative interest, leading to temporary price spikes. General Scam Losses: A Merkle Science report revealed that \$500 million was lost to memecoin scams in 2024 alone, with 75% of these frauds happening on X (formerly Twitter) and 19% on YouTube. Are Meme Coins Still Worth It? While meme coins remain risky, some strategies can help investors navigate this volatile market. - Strong community backing: The best meme coins grow on active communities. Check for real engagement on X, Reddit and Discord. - Utility beyond speculation: Coins integrating with gaming, DeFi or real world applications have better survival chances. - Solana’s growing role: Solana’s fast transactions and low fees make it a popular choice for meme coins with Pump.fun meme coin launchpad but they also attract scams. - Regulatory impact: Countries are continuing to crack down on speculative assets, so making compliance a factor for long term meme coin success. Biggest Risks - Extreme volatility: Meme coins can drop even more than 90% in a day. - No intrinsic value: Most meme coins offer no real use case beyond speculation. - Rug pulls & scams: Many projects are launched with the sole intent of exiting with investor money. Conclusion: Meme Coins “A Bubble or a New Market Force?” Meme coins started as internet jokes but have now become a big part of crypto trading. While Dogecoin and Shiba Inu proved that strong communities can keep a coin alive, most new meme coins rely on short-term hype and automated trading. As 2025 turns out to be a big year, meme coins will either grow with real use cases or stay a risky bet for traders. For investors the key to success lies in understanding market trends and be part of strong communities and avoid making decisions based on FOMO. As history has shown the meme coin craze can make millions but for every success story, there are countless losses. The question is: will meme coins become more than just internet jokes, or will they remain a fleeting speculative trend? Meme coins may come and go but they still have a big impact on the crypto market. Even though most of the coins fade away quickly, they influence trading trends, investors sentiment and even major cryptocurrencies. Whether they become a stable part of the market or just stay a short term craze will depend on new ideas, regulations and how investors react in the future.

- After a 3% spike, XRP is trading around \$2.12. - The 24-hour trading volume has jumped by over 46%. Like putting a break to the sustained bearish pressure, the crypto market is attempting a recovery, with the market cap climbing to \$2.75 trillion. Amid this, Ripple’s XRP has posted a gain of over 3.48%. XRP has failed to breach the ATH even after a series of recovery attempts. The key resistance levels are to be tested to wake the bulls for a prolonged bullish rally. The asset traded at a low of \$2.04 in the early hours, and the bulls gradually sent the price to \$2.14. At the time of writing, XRP traded at \$2.12, with its daily trading volume reaching \$2.26 billion. Notably, the XRP market has witnessed a \$3.34 million liquidation during this period. Furthermore, the Bollinger Bands on the 4-hour chart for XRP are tightening. This usually indicates a period of low volatility and often precedes a significant price move. Can XRP Hold the Line or Is a Breakdown Brewing? XRP has the potential to trigger a plunge in the price below \$2.04. A sturdy bearish pace could drive the asset to fall sharply toward \$1.40. This might invite deep correction, and the asset likely enters a strong bearish zone. Assuming the asset holds solidly at the \$2.16 range, it might kickstart an early recovery. Breaking above this crucial resistance could widely open the gate for an upward move, targeting the next resistance at the \$2.87 range. The Moving Average Convergence Divergence (MACD) line of XRP is stationed above the zero line, but the signal line remains below zero, indicating that the asset’s uptrend is in its early stage. Moreover, XRP’s Chaikin Money Flow (CMF) indicator at -0.04 suggests the outflow of money with mild selling pressure in the market. Concurrently, the daily trading volume has soared by over 46.23%. The asset’s Bull Bear Power (BBP) value at 0.0697 signals a slight upper hand of bulls in the market. Besides, the daily relative strength index (RSI) of XRP, found at 58.36, implies a neutral to mildly bullish condition. Disclaimer: The opinion expressed in this article is solely the author’s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News

- PEPE is consolidating above the 200 EMA with neutral RSI and MACD setting the stage for a potential breakout in the next 24 hours. - PEPE Price action shows tight resistance at \$0.00000890; a strong daily close above this level could trigger short liquidations and open up higher targets. PEPE (PEPE) is quietly building pressure on the daily chart, trading in a tight range between \$0.00000768 and \$0.00000788. The memecoin continues to hover right above the 200-day EMA, at \$0.00000700, a key indicator often used to track long-term momentum. This base could be the springboard bulls need, but the signals remain mixed right now. Looking at the 24-hour chart, the RSI is sitting close to 68, a clear indicator to buy and hodl, suggesting a potential bullish breakout. The MACD is flat, meaning there’s little difference between the two lines. This shows the price has no strong momentum right now. But when a coin slows down after big moves, it usually makes another strong move soon. Although, Volume is low right now “but that’s not necessarily bad. When trading gets quiet during a tight price range, it often means a big move is coming soon. Historically, PEPE has followed this pattern before rallying, especially when just above long-term moving averages like the 200 EMA at \$0.00000700. Looking ahead, Pepe now has a tight structure, with clear support near \$0.00000714 and resistance around \$0.00000800. These levels have been tested multiple times over the past week but have yet to be broken. That tells us this isn’t just noise—it’s a genuine consolidation zone. Candle formations are showing indecision, too. The past few daily candles have closed with small bodies and long wicks, signalling equal pressure from both sides. That’s classic behaviour in a coiled-up market just before a breakout. Further, retail wallets have been loading up again, with a noticeable rise in sub-\$1,000 PEPE transactions. According to data from Lookonchain, five wallets recently scooped up 611 billion tokens, totalling over \$4 million. These moves show growing confidence from smaller traders “even if the big players (whales) are still sitting out. What to expect if PEPE breaks above or below range If PEPE breaks above the \$0.00000800 line on substantial volume, it could quickly shoot toward the next resistance at \$0.00000890. Beyond that, the \$0.00000910 zone “identified by Fibonacci extensions “becomes the next target. That would be a significant shift from the current sideways action and might even trigger short liquidations in the \$0.00000760 to \$0.00000780 range, forcing quick buybacks from bearish traders. Conversely, a drop below \$0.00000760 would put the \$0.00000714 support back in play. That level has held firm in previous pullbacks, but a deeper correction could unfold if it breaks. With Bitcoin still consolidating around \$87,000 and overall market sentiment turning cautious, memecoins like PEPE often become hotspots for short-term action. All eyes are now on the daily close “if PEPE stays above the 200 EMA and breaks past \$0.00000800 with volume, it could be game on for bulls. Highlighted crypto news today: Top Cryptos to Watch This Week: Ethereum, XRP, and Solana Signal Strong Rebound

- Buterin suggested swapping out the present Ethereum Virtual Machine (EVM) contract language. - The idea brings attention to Ethereum’s ongoing battle to enhance throughput while staying competitive. To make the Ethereum network’s execution layer faster and more efficient, Vitalik Buterin, a co-founder of Ethereum, has suggested swapping out the present Ethereum Virtual Machine (EVM) contract language for the RISC-V instruction set architecture. Buterin listed zero-knowledge EVM proving, reliable data availability sampling, and maintaining competitive block creation as long-term obstacles to growing the Ethereum network in his proposal from April 20. Staying Competitive Implementing the RISC-V architecture in smart contracts, according to the Ethereum co-founder, would make zero knowledge functions for the execution layer more efficient. And maintain competitiveness in the block production markets. As investors begin to lose faith in the original smart contract blockchain, the idea brings attention to Ethereum’s ongoing battle. To enhance throughput while staying competitive with next-generation monolithic blockchains like Sui and Solana. Based on statistics from Etherscan, the blob fees for Ethereum, which are transaction fees extracted from Ethereum layer-2 scaling networks, hit a new weekly low of 3.18 Ether for the week ending March 30. Blob fees received throughout the time were 3.18 ETH, which, at the current price of Ether, is almost \$5,000. Ethereum network costs were around \$0.16 per transaction in April 2025, its lowest level since 2020. As per industry experts, the steep drop in costs is because fewer people are using the Ethereum base layer to make transactions. Instead, they are turning to smart contracts or one of Ethereum’s several layer-2 scaling solutions. The layer-2 networks of Ethereum have been characterized as both a boon and a bane. Since they have reduced base layer transaction costs significantly while also eating into base layer revenue. Highlighted Crypto News Today: Pi Network Founder to Attend Consensus 2025, Will Pi Coin (PI) Revive?

Have you ever wish you could rewind the clock and catch DOGE or SHIB right before they popped off? While some of those chances are long gone, the market’s heating up again, and three meme coins are commanding attention: Dogwifhat (WIF), Official Trump (TRUMP), and the upstart BTFD Coin (BTFD). Unlike the others, BTFD Coin isn’t trading yet—it’s in Stage 15 of its presale with an ultra-low entry of \$0.0002. The big hype? Its Play-to-Earn (P2E) game is already live, staking is clocking 90% APY, and if analysts are right, a moon price of \$0.006 could bring early backers a staggering 2900% ROI. This isn’t just another meme coin—it’s an opportunity to invest before the rocket launches. For those chasing the top new meme coins to buy and hold for short term, the clock’s ticking on this one. BTFD Coin: Final Stretch Starts with 2900% ROI Potential So what makes BTFD Coin different from the usual meme suspects? For starters, it’s not just about hype—it’s about utility. The full version of BTFD’s P2E game launched on January 1, 2025, and lets players earn real rewards while smashing through immersive levels with the Bulls Squad. This isn’t some vaporware promise. It’s live. It’s working. And it’s paying. Add to that the chance to earn up to 90% APY through staking, which has been live since December 2. That means while you wait for the coin to moon, your bag’s already growing. Now toss in the referral program: share your unique code, and if you make the top 20 leaderboard, you pocket 10% of the total raise your referrals generate—plus your referrals get 10% more BTFD on purchases of \$50 or more. Easy money. Here’s what’s wild: an investment of \$2,000 at today’s presale price of \$0.0002 gets you 10 million BTFD coins. At the \$0.006 launch price, that turns into \$6,000. But if BTFD hits its projected moon price of \$0.006, you’re looking at \$60,000—a clean 2900% ROI. The presale ends on May 26 at 23:59 UTC, with the launch locked in for May 27. Stage 15 is already picking up serious traction, and once Stage 16 rolls out, that \$0.0002 price is history. With over 72 billion BTFD coins already sold, 11,800+ holders strong, and \$6.54 million raised, this isn’t a “maybe.” It’s happening. Meme coin whales are already stacking. Miss it now, and you’re watching the moonshot from Earth. BTFD’s P2E Game: Where the Bulls Play and Pay The BTFD Bull Run game isn’t just a bonus feature—it’s the backbone of BTFD’s ecosystem. Players control Bulls Squad members across multi-level maps, collect in-game coins, and convert them into BTFD tokens. Think of it like playing Mario Kart, but instead of bananas, you’re collecting coins that earn you crypto. Invite your friends, stack rewards, and climb the leaderboard—because here, the more you play, the more you earn. And since withdrawals are tied to vesting schedules, it creates a sustainable economy instead of a pump-and-dump joke. This is the meme coin presale redefining the space with real-world gaming mechanics and rewards. Dogwifhat (WIF): The Meme That Wears the Crown WIF is the Solana-based dog token that turned heads with its quirky name and massive community. It became a breakout star in the meme space, not by reinventing the wheel but by showing how vibe, memes, and timing can still rule the market. WIF has carved out its lane as the new-gen Dogecoin and is seen as one of the top new meme coins to buy and hold for short term by risk-savvy traders. Its appeal is raw and nostalgic—a Shiba Inu in a pink beanie riding the Solana wave. But while it’s shown explosive past runs, there’s no presale or APY here. WIF is an active token trading in the open market, making it more vulnerable to swings. Still, it holds strong as a recognizable face in the meme wars. Official Trump (TRUMP): Patriot-Backed Memecoin Mania The TRUMP token surged with political memes and MAGA-powered meme culture. It gained traction as an alternative investment play aligned with supporters of the former President. While it doesn’t have the deep tech or utility of BTFD, TRUMP is a cultural bet—a coin riding waves of sentiment, virality, and public headlines. TRUMP has drawn a community of holders who view it as a digital flag bearer, making it more than just a speculative asset for some. It’s one of the top new meme coins to buy and hold for short term if you’re banking on socio-political momentum. But keep in mind, like WIF, there’s no staking, no game, no presale advantage—you’re entering with the market. Final Countdown for the Top New Meme Coins to Buy and Hold for Short Term! Crypto’s meme coin season is back, but not all projects are built the same. WIF is already crowned by the community. TRUMP rides the wave of real-world headlines. But BTFD? It’s still early, it’s loaded with features, and it’s about to close its door to early entries. Based on the current market buzz and real-time traction, BTFD Coin checks all the boxes: a working P2E game, 90% APY staking, referral rewards, and an entry price of \$0.0002. If you’re looking for the top new meme coins to buy and hold for short term, this isn’t just a suggestion—it’s your last boarding call. Secure your stack before the presale ends on May 26 and ride the moonshot to launch on May 27. Find

XRP has struggled to deliver significant gains, even after winning its legal battle with the SEC. Despite hopes for a rally, the token remains below \$2.50, with bearish patterns hinting at a further downside. While some analysts predict long-term growth, XRP's short-term potential appears limited. Meanwhile, two alternative cryptocurrencies—Rexas Finance (RXS) and Sui (SUI)—are gaining traction, showing the potential to surge 50x much sooner than XRP. With strong fundamentals and growing investor interest, these tokens could turn a \$200 investment into \$10,000 faster than XRP. Ripple (XRP): Struggling to Break Out Amid Bearish Signals XRP failed to rally significantly even after its legal victory against the SEC. The token has remained stuck below \$2.5. Now, bearish patterns suggest it could dip further. Analyst Peter Brandt warns that if XRP slips below \$1.9, it could crash 43% to \$1.07 due to a textbook head-and-shoulders pattern. On-chain data supports this, with active XRP Ledger addresses down 62% since December and indicators showing that it remains overvalued. Despite this, some analysts predict a rally. EGRAG CRYPTO has set a conservative target of \$15, with extended projections at \$22 and \$44. Another analyst, Dark Defender, says XRP must break \$2.75 to push higher. Fibonacci analysis also suggests key breakout dates, including March 30 and April 8. Bitwise, a crypto fund manager, has a more long-term outlook. Their bullish scenario sees XRP reaching \$12.70 by 2030. If XRP dominates payments and tokenization markets, an extreme case suggests \$29.32. However, even if XRP rallies, these forecasts indicate it won't surge 50x this year. Any massive gains would likely come much later, making short-term expectations of a price explosion unrealistic. Meanwhile, two coins could rally by 50x faster than XRP. Their momentum suggests they could turn \$200 into \$10,000, possibly before the year ends. Rexas Finance (RXS): The Future of Real-World Asset Tokenization with 50x Potential Rexas Finance is backed by real-world utility, giving it a strong foundation for long-term success. The project focuses on real-world asset (RWA) tokenization, a sector expected to see massive growth in the coming years. Through tokenization, Rexas Finance aims to create new opportunities in the market. This process turns assets into digital tokens, making them more accessible. With tokenization gaining popularity, Rexas Finance is positioned for rapid adoption. Investors have already recognized the potential of RXS, leading to a record-breaking presale. The project has raised over \$47.7 million as investors have already bought over 91% of its allocated tokens. Since the presale launched, RXS has also shown strong momentum. Many investors have seen a 566% increase in their holdings, which may be only the beginning. With RXS set to launch on major tier-one exchanges on June 19, demand is expected to skyrocket. Considering its current momentum, the token could rally 50x from its launch price of \$0.25 within months. Rexas Finance's ecosystem supports its vision with tools. The Rexas Token Builder allows businesses and individuals to create and launch their own tokens with ease, even without technical knowledge. The QuickMint Bot enables users to create and deploy tokens through messaging apps like Telegram and Discord, making tokenization more accessible than ever. Additionally, the Rexas Estate allows investors to buy and sell fractional shares of real estate, removing the traditional barriers to property investment. As the launch date approaches, excitement around Rexas Finance continues to grow. With its strong momentum and innovative approach to asset tokenization, it has positioned itself as a top contender in the next bull run. If the predictions hold, RXS could be one of the biggest breakout tokens of the year, delivering massive returns for those who get in early. Sui (SUI): A High-Speed Blockchain Poised for Explosive Growth SUI is making big moves, and investors are watching closely. After a 10% breakout, it's back above key levels, signaling that the rally might just be starting. The token has now pushed past the \$2.60 resistance, and analysts believe it could soon hit \$3. Institutional interest is increasing, with major players like Canary Capital filing for a SUI ETF. Sui's ecosystem is also booming. The number of stablecoins on its network has nearly doubled this year. Daily active addresses have also surged from 19,000 to 1.5 million. With transaction speeds over four times faster than Solana and fees 90% lower, Sui is proving to be a real contender in the smart contract space. Some experts believe the token mirrors past breakouts, which previously led to all-time highs. If history repeats, SUI could skyrocket past its \$5.37 peak, making it a major player in this market cycle. Currently, momentum indicators are bullish, and the token's breakout from a multi-month falling wedge pattern suggests a strong uptrend. As the market regains confidence, SUI is becoming a serious wealth multiplier. Conclusion While XRP continues to face resistance and uncertain price action, Rexas Finance and Sui are emerging as top contenders in the current market cycle. RXS, with its real-world asset tokenization model, is set for explosive growth following its upcoming exchange launch. Meanwhile, SUI's strong ecosystem expansion and technical breakout signals indicate further gains. As investors seek high-growth opportunities, these two alternative cryptos could significantly outperform XRP in the near term, offering massive returns for those who get in early. Crypto investors are always hunting for the next token to explode—and Ozak AI might just be it. With its presale already crossing the \$1 million mark, momentum is quickly building around this emerging AI-powered crypto project. Starting at just \$0.003, analysts and early adopters are already predicting a potential surge to \$1, representing a 300x return. In a market where utility, innovation, and hype matter more than ever, Ozak AI is ticking all the right boxes. AI Meets Blockchain: Why Ozak AI Stands Out Artificial intelligence is dominating tech headlines in 2025, and crypto is no exception. Ozak AI leverages the power of AI to offer decentralized solutions that go far beyond basic utility. From predictive data analytics to smart contract automation and AI-driven DeFi strategies, Ozak AI isn't just another token riding a trend—it's aiming to redefine how AI and blockchain can work together. With demand surging for AI-integrated blockchain projects, Ozak AI is well-positioned to capitalize on this fusion. Investors aren't just buying a token—they're supporting an ecosystem that could become integral to the future of decentralized tech. \$1M Raised in Presale and Growing Fast Raising over \$1 million in presale funding is no small feat, especially during periods when the broader market sentiment is mixed. But Ozak AI's ability to generate this kind of early traction highlights two important things: investor confidence and market demand. This early-stage funding gives Ozak AI the financial resources needed to continue development, expand marketing, and attract key partnerships. The fact that so many investors are pouring in now, before the token even lists on exchanges, signals a belief in the project's long-term vision and explosive upside potential. From \$0.003 to \$1—Is 300x Really Possible? Crypto history is full of tokens that turned pennies into fortunes. Shiba Inu, Solana, and Polygon all started small and grew into billion-dollar projects. Ozak AI's roadmap and technology give it a similar breakout potential. Starting at just \$0.003, a move to \$1 would mark a staggering 33,000% return—something only possible in crypto's most disruptive and innovative phases. More importantly, Ozak AI has the one thing many meme coins lack: real-world use cases. By integrating AI to enhance decision-making and operational efficiency within the blockchain space, it stands on much stronger fundamentals than many of its predecessors. With a presale price of \$0.003 and over \$1 million already raised, Ozak AI is quickly becoming one of 2025's most talked-about altcoins. Its unique blend of AI utility, decentralized architecture, and early investor enthusiasm paints a bullish picture for the road ahead. While many coins promise hype, few back it with real innovation. Ozak AI might just be the rare project that delivers both. As it edges closer to its \$1 target, those getting in early could be looking at one of the most rewarding investments of the year. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Flare shoots up 5.91% as excitement builds around Flare 2.0's game-changing upgrade - FLR might climb and mark a strong reversal and signalling potential for continued growth in the coming weeks Flare (FLR) is making waves again. After months stuck in a downtrend, the token has suddenly come alive, jumping over 5.91% in the past week as excitement builds around the upcoming Flare 2.0 upgrade. At its peak during the rally, FLR hit \$0.01605, marking a 7% single-day surge and pushing its market cap to \$1 billion. Trading volume exploded by more than 245% to \$26.2 million, with futures open interest rising to \$3.1 million—clear signs that traders are piling in. The buzz started when Flare developers via an X post teased a major overhaul to the network, dubbed Flare 2.0. This new version isn't just a routine update—it aims to reshape how Flare operates across multiple blockchains. Instead of simply bridging assets, Flare 2.0 introduces a concept called Protocol Managed Wallets, which could allow for direct control of protocols on other chains. While there's no launch date yet, traders aren't waiting. FLR's name started trending on Google, and data from Santiment shows a sharp flip in community sentiment, from cautious to clearly optimistic. The rally hasn't happened in a vacuum either. Broader markets got a lift this week after the U.S. government pressed pause on its tariff hike plans and lowered reciprocal rates to 10%. This news helped the total crypto market cap rebound 5% to \$2.68 trillion. Major altcoins like Ethereum (ETH), XRP, Solana (SOL), and DOGE also saw gains between 7% and 10%, giving FLR a tailwind to ride on. Flare Breaks Free From Downtrend Channel From a technical point of view, FLR has gained momentum. The token just punched through the upper boundary of a falling channel that's held it back since December. This kind of breakout often signals the start of a longer rally. On the daily chart, the MACD just flipped bullish, and the Relative Strength Index (RSI) climbed above the neutral 50 mark—both classic signs that buying momentum is picking up steam. If FLR can push past its yearly high, the next psychological milestone might be crucial, which was rejected by bulls late last year. However, if the price dips below the trendline again, support could be found between \$0.012 and \$0.011, which has acted as a key floor in the past. Flare's 70% Bounce Builds on Weekly Strength Looking at the broader picture, FLR's recent surge started gaining traction on April 7. That's when it formed a bullish engulfing candle on the weekly chart—often a strong sign of a trend reversal. The token rebounded off the \$0.012 support level, forming what analysts are calling a double bottom. Since then, FLR has climbed its way to the top boundary of a 130-day descending channel. It's now testing that resistance for the third time. If it finally breaks through, the next upside target sits around \$0.023, where several technical levels converge. Highlighted Crypto News for Today Canary Capital Requests SEC Nod for Tron ETF With Staking Capabilities

- Canary Capital files for a Tron ETF with staking, awaiting SEC approval amid regulatory uncertainty. - Crypto ETF market expands as optimism grows for staking approval under new SEC leadership. Canary Capital has requested from the US Securities and Exchange Commission (SEC) approval to create a Tron-based exchange-traded fund (ETF) that supports staking functions. The Nashville-based asset manager firm, Canary Capital, presented its Canary Staked TRX ETF prospectus to the SEC through an S-1 filing on Friday to track Tron's native token TRX spot prices. Staking Feature Faces Regulatory Uncertainty The proposed ETF would distribute stakeable assets to third-party providers using BitGo as its custodial service. The staking component enters the market at a time when regulatory uncertainty persists. Recently, the SEC delayed its decision regarding Grayscale's February request for Ethereum ETF products that incorporated staking features. Staking is the method of pledging digital assets to help secure a network in exchange for rewards. It could provide investors with additional yield, but it remains a contentious issue in the regulatory landscape. Previous Ethereum ETF applications initially included staking features removed by issuers due to gain SEC approval. Industry observers have noted increased optimism about staking approval possibilities following the appointment of crypto-friendly Chair Paul Atkins to replace former Chair Gary Gensler, who had opposed the feature. The firm has not yet disclosed the proposed ticker symbol or any administration fee for the product. This filing joins a growing wave of crypto ETF applications targeting various digital assets, including XRP, Solana, Dogecoin, and Sui. Industry analysts suggest XRP and Solana ETFs may be next in line for potential SEC approval, following the successful launches of Bitcoin ETFs that have attracted over \$35 billion in net inflows during the past 15 months. - Altcoin Oracle predicts massive Cardano price surge based on Bitcoin DeFi integration. - ChatGPT analysis suggests Cardano market cap could reach \$500 million to \$1 trillion. - Partnership aims to bring smart contract functionality to Bitcoin's \$1.6 trillion ecosystem. A prominent Cardano ecosystem participant has excited the community with a bold prediction that ADA could reach \$20 if a recently announced partnership achieves its full potential. Altcoin Oracle, a delegated representative (DRep) in Cardano's newly implemented decentralized governance system, shared this

optimistic outlook in an April 17 tweet. The prediction is mainly based on a strategic partnership between the Cardano and Bitcoin ecosystems. This aims to launch Cardano as a primary Bitcoin decentralized finance (DeFi) enabler. To substantiate this forecast, Altcoin Oracle consulted AI assistant ChatGPT to analyze potential price targets and ecosystem impacts. This collaboration originated last year when Cardano's development arm, EMURGO, partnered with BitcoinOS to introduce DeFi capabilities that leverage Bitcoin's network. Cardano founder Charles Hoskinson has emphasized that this initiative represents the ecosystem's main focus for the current year. The ambitious project aims to unlock smart contract functionality for Bitcoin developers while simultaneously tapping into Bitcoin's massive \$1.6 trillion liquidity for the benefit of the Cardano ecosystem. According to Hoskinson, this innovation could potentially surpass DeFi implementations on both Ethereum and Solana blockchains. Cardano market cap predicted to surge ChatGPT's analysis, as shared by Altcoin Oracle, projected that Cardano's market capitalization could surge to between \$500 million and \$1 trillion by 2030 if the network successfully establishes itself as Bitcoin's primary DeFi platform. This growth would be driven by liquidity influx and increased institutional adoption. Based on a hypothetical supply of 50 billion ADA, these market cap projections would translate to a price range of \$10 to \$20 per token representing a staggering increase of 1,522% to 3,144% from current levels. If Cardano maintains its current supply of 35.28 billion ADA, the price potential increases further to between \$14 and \$28. The current DeFi landscape shows Ethereum commanding \$46.32 billion in TVL according to DeFiLlama, representing approximately 52% of all value locked across crypto networks. By contrast, Cardano's TVL stands at just \$288 million. It is trailing behind newer networks like Aptos (\$973 million) and also Sui Network (\$1.2 billion). This partnership exemplifies Cardano's strategic approach to ecosystem growth by bridging with Bitcoin's established liquidity and user base rather than competing directly. As this collaboration develops, it will be closely watched by both communities to see if it can deliver on its ambitious technological and financial promises.

- Hyperliquid's on-chain perpetuals occupy a total of 70% of the market share. - The blockchain processed a whopping \$175 billion in perpetual protocol trade market share in the last month. The Hyperliquid blockchain platform has created a name for itself in the industry with its unique offerings. It particularly strengthened its position in the perpetual protocol market from 2024. As per The Block Data analytics, Hyperliquid recorded a 70% market share in the last month. Hyperliquid recorded a significant \$175 billion in the last month. It has already recorded \$83 billion this month, leaving room for more growth before we enter the next month. The blockchain's growth indicates the increasing adoption of decentralized derivatives trading in the crypto market. While the total volume of perpetuals is over \$7.8 billion as per DeFiLlama, Hyperliquid alone accounts for \$4.765 billion in the last 24 hours. Solana DEX Jupiter holds the 2nd position with \$579.02 million volume. Apex Protocol, Vertex Edge, RabbitX Fusion, and GMX occupy the subsequent positions with considerable perpetual volumes. HYPER Records Over 10% Monthly Surge Amidst Increasing On-chain Activity Hyperliquid native token HYPE is trading at \$16.68 with a slight increase of 1.23% in the last 24 hours. It recorded price surges of 9.67% and 11.41% on a weekly and monthly basis, respectively. While its market cap is \$5.58 billion, its 24-hour trading volume surged by more than 17%. The HYPE token jumped 8% at the beginning of this month with a trading volume surge of 47%. The token could reach \$18.485 to \$27.340 in 2025, as per price prediction estimates. The bearish prediction indicates a drop towards the \$8.834 price level. Highlighted Crypto News Today: Crypto Exchange Exch to Shut Down Following Bybit Hack Money Laundering Allegations

VICTORIA, Seychelles, April 18th, 2025, Chainwire In April 2025, at the Paris Blockchain Week(PBW), BYDFi, as one of the official sponsors, unveiled its new Web3 product MoonX, highlighted during the event. MoonX is an on-chain smart trading tool designed specifically for MemeCoin investors, integrating features such as hot trend discovery, risk screening, smart money following, and trade optimization. The launch of MoonX marks BYDFi's official entry into the Dual Engine Era of both Centralized Exchange (CEX) and Decentralized Exchange (DEX) platforms. In a highly competitive global crypto exchange market, BYDFi is one of the first to complete this platform upgrade. Traditional exchanges are shifting from a competition based solely on trading speed and fees to a broader ecosystem competition, said Michael, CEO of BYDFi, at the launch event. The explosive growth of MemeCoins is driving a new wave of user growth. The future market leaders won't just be those offering fast matching and low fees on CEXs, but platforms that can simultaneously link the on-chain ecosystem with user demand. As the on-chain investment entry point, MoonX complements the main BYDFi platform (CEX) with a hybrid structure: - Centralized Matching System: Ensures liquidity and depth for transactions. - On-Chain Discovery and Interaction Product: Tracks hot trends and seizes early opportunities. This structural upgrade gives BYDFi a competitive advantage as CEX and DEXs increasingly merge in the future. Currently, MoonX is deeply integrated with two major ecosystems: Solana and BNB Chain, covering leading liquidity pools like Pump.fun, Raydium, and PancakeSwap, while supporting real-time tracking of over 500,000 MemeCoin assets. Key features of the product include: - Fast Token Listing: API data exchange with platforms like Pump.fun to capture hot projects as liquidity pools are launched, exploiting trading time differences. - Smart Risk Control: Multi-dimensional models evaluate token security (contract permissions, blacklists, token lock-up status, etc.), filtering out high-risk tokens. - Smart Money Following: The system tracks millions of on-chain addresses, identifying whales and high-probability addresses, allowing users to copy trades with one click and easily share strategy profits. - Trade Optimization: Built-in gas optimization algorithms and slippage control mechanisms ensure smooth transactions and cost control, even during peak times. For a long time, complex processes and asset security risks have been major concerns preventing ordinary users from participating in on-chain investments. MoonX's mission is to reinvent the on-chain trading experience, allowing more people to participate in Web3 investments as easily as using an app-based exchange. With just a BYDFi account, users can instantly connect to the blockchain and trade the next trending Meme project before it takes off. About BYDFi Founded in 2020 BYDFi was recognized by Forbes as one of the Top 10 Global Crypto Exchanges and has been certified by major data platforms such as CoinMarketCap and CoinGecko. The platform currently serves users in over 190 countries and regions, earning the trust of more than 1,000,000 users worldwide. BYDFi is committed to providing users with a world-class crypto trading experience. - Website: <https://www.bydfi.com> - Support Email: cs@bydfi.com - Business Partnerships: bd@bydfi.com - Media Inquiries: media@bydfi.com Twitter(X) | LinkedIn| Facebook | Telegram| YouTube Contact Senior Marketing Director Chloe BYDFi Fintech LTD chloe@bydfi.com

- Render is trading at \$4.03 after climbing 3.13%. - Price discovery could accelerate into the \$6.37 region, with analysts pointing to \$7.50 as the next medium-term objective. Render (RNDR) is set for a major breakout, with a bullish pennant pattern pointing toward explosive targets of \$7.50 and \$12! Render's price gains momentum following RenderCon and rising institutional demand. Render (RNDR) is nearing a major breakout or breakdown zone, signalling a powerful bullish surge as it reclaims crucial support and challenges key resistance. Trading at approximately \$4.03 as of April 18, 2025, the asset has climbed 3.13% over the last 24 hours, accompanied by a 0.42% spike in trading volume. This price action is not just a reaction to broader market sentiment but a reflection of Render's emerging structural strength as it approaches the \$4.17 resistance, a level that now represents the technical gatekeeper to an extended rally. Trading Signals, RSI, and MACD Confirm Strength The daily and weekly charts indicate a classic bullish pennant formation - a technical setup characterised by converging trend lines following a steep upward move. This structure suggests that Render is consolidating within a narrowing range before a potential breakout, a pattern often observed before explosive moves. On the four-hour chart, RNDR recently saw a validated bounce from the \$3.33 zone, where the Agent Singularity system triggered an AI-backed trading signal, as flagged by Flagship. Following this signal, the price rallied nearly 12% while maintaining consistent volume, a textbook confirmation of bullish momentum continuation. This short-term support equals some key exponential moving averages, which reinforce its importance. Also, Render's RSI sits around 53, remaining in a neutral zone territory, and has not yet entered the overbought level, where price correction is important. The MACD histogram has also flipped positive, with the signal line beginning to cross over - a potential early-stage trend reversal cue. Key Levels to Watch as Breakout Looms The most immediate target remains a confirmed daily or weekly close above \$4.17. Such a close would likely trigger a rally toward \$5.00, a psychological and technical resistance zone. From there, price discovery could accelerate into the \$6.37 region, with analysts pointing to \$7.50 as the next medium-term objective. If Render maintains momentum and broader crypto sentiment remains positive, reclaiming the \$11.90 cycle high from Q1 2024 is not out of the question. However, if the breakout fails, prices may continue to consolidate in the \$2.70 to \$4.00 range, with the \$3.20-\$3.30 zone providing strong structural support. Crypto Analyst, Anyil, via his X handle, predicts Render is about to launch a massive run immediately after reaching its \$4 resistance level. Overall, Render (RNDR) presents a compelling combination of bullish technical structure, post-event strength, and a robust, expanding ecosystem. With AI-backed trading signals reinforcing the trend, analysts are confident in a breakout scenario - one that could see RNDR climb toward \$7.50 and beyond in the months ahead. Ecosystem Expansion Adds Fuel to Technical Fire Render's recent bullish potential is powered by its growing ecosystem. The protocol recently launched advanced new AI tools such as Flux, a real-time text-to-video engine, and Dream Machine by Luma Labs, all geared toward AI-assisted 3d creation. OctaneRender's integration of neural rendering technologies has introduced a scalable, AI-native rendering layer, while partnerships with Dropbox and AWS signal serious infrastructural expansion. Tokenomics are also tightening with a 35% reduction in mint inflation recently implemented, making RNDR more deflationary and aligning incentives for long-term holders. Render's migration to Solana has already paid dividends in terms of transaction speed and cost efficiency, and the recent listing on South Korea's Upbit exchange has opened the door to a broader liquidity base in Asia. Highlighted Crypto News for Today

Crypto insiders are always on the lookout for the next project with breakout potential. Now, in 2025, all eyes are on Ozak AI (OZ) - an emerging AI-powered blockchain project that's already raised over \$1 million in its presale phase and is being hailed as one of the smartest plays of the year. With a presale price of just \$0.003, Ozak AI offers not just affordability but enormous upside for early investors. But it's more than just the low entry price that has investors buzzing. It's what Ozak AI is building - and the timing couldn't be better. Ozak AI - Where AI Meets Decentralized Artificial Intelligence is transforming nearly every industry, and blockchain is enabling decentralized, trustless systems across the web. Ozak AI aims to bring these two worlds together. The platform is creating a decentralized infrastructure where users, developers, and businesses can access advanced AI tools securely and transparently - without the need for centralized intermediaries. Whether it's smart automation, predictive analytics, or machine learning for decentralized finance (DeFi), Ozak AI is building the rails for next-gen AI adoption in Web3. At the heart of it all is the OZ token, which powers everything from governance and staking to AI tool usage and ecosystem incentives. It's a powerful use case - and investors are taking notice. \$1 Million Raised Is Just the Beginning Raising over \$1 million in a presale is no small feat, especially in a crowded crypto market. It shows strong early interest and market belief in the project's vision. The fundraising momentum continues to grow as more investors recognize the potential for massive returns on a low-cap, utility-driven token. For comparison, many now-famous projects started with similar presale milestones. Solana raised \$1.7M in its seed round. Polygon's early supporters saw a 1000x return. If Ozak AI can deliver on its roadmap, it may follow a similar trajectory. With a limited token supply and rapidly growing demand, early adopters are positioning themselves before OZ makes its way to major exchanges. Could OZ Be the Sleeper Hit of 2025? Analysts and influencers are starting to point to Ozak AI as a hidden gem with the potential to 100x by the time of its official launch. The token's low price, strong tech foundation, AI-driven utility, and growing investor base create a perfect storm for exponential growth. More importantly, Ozak AI is not just another memecoin or short-term hype play. It's solving a real problem - making AI accessible and decentralized. That narrative is powerful, especially as more developers and businesses look for alternatives to centralized AI providers like OpenAI or Google. With the AI boom just getting started, Ozak AI is arriving at business the right time. If you're searching for the smartest crypto move of 2025, Ozak AI (OZ) deserves a spot on your radar. With over \$1M raised, a solid roadmap, and a presale price of just \$0.003, it offers one of the most compelling risk-reward profiles in the market today. This could be your chance to catch a true breakout project before the rest of the world catches on. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Pump.fun's co-founder slammed Base's auto-minted token, calling it premature and harmful. - Base's unofficial token spiked to \$17M, then crashed, raising concerns over transparency. - Alon Cohen urged crypto builders to act responsibly and align with community values. Alon Cohen, co-founder of Solana-based meme coin launchpad Pump.fun, has voiced strong criticism over Coinbase's Layer 2 network Base and its recent auto-minted

token experiment. He made it clear that his platform has æno plans to follow suit.æ The issue arose when a post from Baseæ’s official X account ææBase is for everyoneæ was automatically turned into a token on the onchain social platform Zora. Within minutes, the token reached a \$17 million market cap, only to crash over 90%, sparking outrage. On-chain analysis revealed that the top three wallets held nearly half of the tokenæ’s supply, raising concerns over fairness and transparency. ææThereæ’s a reality where what Base did is normal in a few yearsæ time but it DEFINITELY isnæ today and that has resulted in hurt,ææ Cohen tweeted. He continued: ææDonæ’t expect coins from me or @pumpdotfun or any employees (no ææstealth launchesæ either).æ Base responded by stating that the token was unofficial and would never be sold. ææWe did not sell the token, nor was it official in any way,æ Jesse Pollak, the creator of Base. He added, ææWeæ’re building a global onchain economy.æ Despite disclaimers, many traders felt misled. ææIf you launch a coin AND have social influence, that comes with responsibility,æ Cohen wrote. He emphasized the need for platforms to remain aligned with their communities and avoid setting unrealistic expectations. Cohen also pointed out that community norms matter deeply in crypto. These standards, he said, ææare not dictated by myself, Pump.fun, Coinbase, or the President,æ but by ææthe users that are in the trenches every single day.æ Despite the crash, DexScreener data shows the token has since recovered to a \$16.5 million market cap. Highlighted Crypto News Today Security Fears Still Biggest Barrier to First Crypto Purchase as per New Survey

- Bitcoin is repeatedly failing to hold the price above \$86K over the past month. - The cryptocurrencyæ’s daily trading volume has shown a dip of 13.18% as per CMC data. In the last 24 hours, the crypto market has shown a modest upward movement. The overall market cap shows a slight increase of 1.17%, however, the overall consolidation still remains. On the other hand, the ETF market saw some action with VanEck filing for a new ETP product. Regulatory actions in crypto continue uninterrupted. Notably, on reverting to the crypto market, Bitcoin is currently docked at the \$84K level. Over the past day, BTC revisited its \$83K support before moving upwards. While this has seen a modest positive effect in altcoins such as Solana, BTC still has a long way to go. In the afternoon hours of April 16, the cryptocurrency was trading at a low of \$83,586. However, as bullish candles sparked it rose to current levels. At the time of writing, Bitcoin was trading at \$84,378.02 as per CMC data. On the other hand, traders have been losing patience over the cryptocurrencyæ’s continuous struggle with the \$86K resistance. Even in the past day, Bitcoin tested the \$85K level but failed to hold prices. However, analysts expect that if it surpasses the resistance, there are chances of upward movements. Will Bitcoin Advance to \$90K on Tackling \$86K? Prominent market analyst Ali posted a prediction on X recently. He says that on the weekly chart BTC shows a buy signal. This he stated is resultant from expecting a sustained close of the TD sequential indicator near \$86K. This could then open gates for \$90K and possibly even \$95K. On turning to its technical indicators, Bitcoin shows mixed signals. Its Moving Average Convergence Divergence (MACD) MACD line stands below the signal line indicating the overall bearish trend. However, its RSI value stands at 51.65 as per TradingView data. This suggests that the market sentiment and investors hold a somewhat positive attitude toward the cryptocurrency. As predicted by Ali, if Bitcoin overpowers the bears at \$86,000 it might reestablish the bullish trend. Meanwhile, other altcoins such as Raydium have shown significant upward movements in the last 24 hours.

- Bullish RAY price prediction for 2025 is \$2.664 to \$4.481. - Raydium (RAY) price might reach \$10 soon. - Bearish RAY price prediction for 2025 is \$0.864. In this Raydium (RAY) price prediction 2025, 2026-2030, we will analyze the price patterns of RAY by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | RAYDIUM (RAY) PRICE PREDICTION 2025 | | RAYDIUM (RAY) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Raydium (RAY) Current Market Status | Current Price | \$2.34 | 24 æ” Hour Price Change | 12.75% Up | | 24 æ” Hour Trading Volume | \$258.55M | | Market Cap | \$681.23M | | Circulating Supply | 290.82M RAY | All æ” Time High | \$16.93 (On September 13, 2021) | | All æ” Time Low | \$0.1343 (On December 30, 2022) | What is Raydium (RAY) | TICKER | RAY | | BLOCKCHAIN | Solana | | CATEGORY | DeFi (Decentralized Finance) | | LAUNCHED ON | February 2021 | | UTILITIES | Governance, Launchpad, Staking and Token Burning | Raydium (RAY) is a decentralized exchange (DEX) and automated market maker (AMM) built on the Solana blockchain. Known for its high-speed transactions and low fees, Raydium provides liquidity and trading capabilities for the Solana ecosystem, supporting both its native tokens and various assets bridged from other blockchains. Unlike traditional AMMs, Raydium integrates directly with Serumæ’s on-chain central limit order book, giving it access to Serumæ’s liquidity and enabling traders to interact with an order book model. Raydium offers yield farming, allowing users to earn RAY tokens by providing liquidity. It also features ææFusion Poolsæ for staking and yield optimization. The platform aims to deliver a comprehensive DeFi experience with fast, secure, and scalable options for swapping, trading, and earning within Solana. As Solanaæ’s DeFi space expands, Raydium remains a key player in facilitating seamless and efficient trading and liquidity solutions. Raydium 24H Technicals Raydium (RAY) Price Prediction 2025 Raydium (RAY) ranks 78th on CoinMarketCap in terms of its market capitalization. The overview of the Raydium price prediction for 2025 is explained below with a daily time frame. In the above chart, Raydium (RAY) laid out a Horizontal Channel pattern also known as the sideways trend. In general, the horizontal channel is formed during the price consolidation. In this pattern, the upper trendline, the line which connects the highs, and the lower trendline, the line which connects the lows, run horizontally parallel and the price action is contained within it. A horizontal channel is often regarded as one of the suitable patterns for timing the market as the buying and selling points are in consolidation. At the time of analysis, the Raydium (RAY) price was recorded at \$1.93. If the pattern trend continues, then the price of RAY might reach the resistance levels of \$2.326 (already crossed) and \$3.637. If the trend reverses, then the price of RAY may fall to the support levels of \$1.854 and \$1.461. Raydium (RAY) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Raydium (RAY) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Raydium (RAY) for 2025. | Resistance Level 1 | \$2.664 | | Resistance Level 2 | \$4.481 | | Support Level 1 | \$1.484 | | Support Level 2 | \$0.864 | Raydium (RAY) Price Prediction 2025 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Raydium (RAY) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Raydium (RAY) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$1.896 Price = \$2.215 (50MA > Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 58.170 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetæ’s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Raydium (RAY) Price Prediction 2025 æ” ADX, RVI In the below chart, we analyze the strength and volatility of Raydium (RAY) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Raydium (RAY). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 17.483 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 56.66 <50 = Low >50 = High | High volatility | Comparison of RAY with BTC, ETH Let us now compare the price movements of Raydium (RAY) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that RAYæ’s price action is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of RAY also increases or decreases respectively. Raydium (RAY) Price Prediction 2026, 2027 æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Raydium (RAY) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Raydium (RAY) Price Prediction 2026 | \$12 | \$0.9 | | Raydium (RAY) Price Prediction 2027 | \$14 | \$0.8 | | Raydium (RAY) Price Prediction 2028 | \$16 | \$0.7 | | Raydium (RAY) Price Prediction 2029 | \$18 | \$0.6 | | Raydium (RAY) Price Prediction 2030 | \$20 | \$0.5 | Conclusion If Raydium (RAY) establishes itself as a good investment in 2025, this year will favor the cryptocurrency. In conclusion, the bullish Raydium (RAY) price prediction for 2025 is \$4.481. Comparatively, if unfavorable sentiment is triggered, the bearish Raydium (RAY) price prediction for 2025 is \$0.864. If the market momentum and investorsæ” sentiment positively elevate, then Raydium (RAY) might hit \$10. Furthermore, with future upgrades and advancements in the Raydium ecosystem, RAY might surpass its current all-time high (ATH) of \$16.93 and mark its new ATH. FAQ 1. What is Raydium (RAY)? Raydium (RAY) is a decentralized exchange (DEX) and automated market maker (AMM) built on the Solana blockchain. 2. Where can you buy Raydium (RAY)? Traders can trade Raydium (RAY) on the following cryptocurrency exchanges such as Binance, Coinbase, KuCoin, Gate.io, Kraken, OKX, Bybit, and Huobi 3. Will Raydium (RAY) record a new ATH soon? With the ongoing developments and upgrades within the Raydium platform, Raydium (RAY) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Raydium (RAY)? Raydium (RAY) hit its current all-time high (ATH) of \$16.93 on September 13, 2021. 5. What is the lowest price of Raydium (RAY)? According to CoinMarketCap, RAY hit its all-time low (ATL) of \$0.1343 on December 30, 2022. 6. Will Raydium (RAY) hit \$10? If Raydium (RAY) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$10 soon. 7. What will be the Raydium (RAY) price by 2026? Raydium (RAY) price might reach \$12 by 2026. 8. What will be the Raydium (RAY) price by 2027? Raydium (RAY) price might reach \$14 by 2027. 9. What will be the Raydium (RAY) price by 2028? Raydium (RAY) price might reach \$16 by 2028. 10. What will be the Raydium (RAY) price by 2029? Raydium (RAY) price might reach \$18 by 2029. Momentum is building fast around Ozak AI, one of the most talked-about emerging crypto projects of 2025. With over \$1 million already raised in its presale phase, investorsæ”both retail and institutionalæ are starting to take serious notice. Unlike meme coins that rely on hype and speculation, Ozak AI is rooted in utility, leveraging artificial intelligence and blockchain technology to deliver real-world solutions. As the crypto space shifts toward utility-driven projects, Ozak AI is gaining traction as a top project for explosive growth. Presale Milestone Signals Growing Confidence Crossing the \$1 million threshold during presale is no small featæ especially in a volatile and uncertain market. It signals a strong vote of confidence from early investors who believe in the projectæ’s fundamentals, long-term vision, and the team behind it. At its current presale price of just \$0.003, Ozak AI presents a ground-floor opportunity, particularly with a long-term target of reaching \$1. That would mean a potential 300x return for early backersæ an opportunity reminiscent of the early days of Solana or even Shiba Inu. The growing momentum is also attracting attention from crypto influencers and analysts, many of whom are starting to recognize Ozak AI as one of the most undervalued tokens in the AI crypto space. Why AI + Crypto Is the Next Big Thing Artificial Intelligence is rapidly transforming industriesæ from healthcare and finance to logistics and marketing. When combined with blockchain, AI becomes even more powerful by offering transparency, decentralization, and accessibility. Ozak AI aims to democratize AI by creating a decentralized ecosystem where developers and businesses can access powerful tools without relying on centralized tech giants. This combination of AI and crypto is proving to be one of the hottest narratives of 2025, and Ozak AI is at the forefront. Its ability to deliver scalable, decentralized AI services sets it apart from meme coins or traditional layer-1 tokens. Itæ’s not just another speculative assetæ itæ’s a project with a clear use case, real-world demand, and a fast-growing community. Retail and Whales Are Both Getting Involved Itæ’s not just retail investors piling inæ crypto whales are starting to make strategic moves as well. Wallet data shows increasing inflows from high-net-worth individuals and investment groups into the Ozak AI presale. The combination of low entry price, strong project fundamentals, and a compelling narrative makes it an ideal asymmetric bet in the current cycle. Meanwhile, the projectæ’s transparency, active social media presence, and well-documented roadmap are increasing investor trust. With plans to launch its native platform post-presale and integrate AI modules into DeFi applications, Ozak AI is showing that itæ’s more than just hypeæ itæ’s execution-ready. With over \$1 million raised and growing investor enthusiasm, Ozak AI is quickly establishing itself as a top crypto project to watch in 2025. Its fusion of artificial intelligence and blockchain utility provides a powerful use case that goes beyond speculative trading. As hype coins like Dogecoin and PEPE begin to lose steam, Ozak AIæ’s fundamentals are pulling in smart moneyæ and itæ’s only getting started. For investors looking for the next big opportunity, the window to get in early on Ozak AI may be closing fast. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - Helium (HNT) forms a bullish cup-and-handle setup with targets at \$5.00 and \$6.75 as momentum builds above key support. - SEC dismissal and new DePIN features like 5G roaming and real-time metrics ignites positive momentum. Helium (HNT) is trading around \$3.53, holding steady after a short pullback from its recent high near \$5.59. Despite the overall market dip, HNT shows strong resilience with a 31% rally over the past week compared

to the broader crypto market. Whatâ€™s happening now on the charts is particularly interestingâ€”a classic cup-and-handle formation is starting to take place. Traders watch this setup as in the history of the token, it often leads to a sharp breakout when confirmed. Over the last few weeks, HNT price has been bouncing within a tight range, specifically between \$3.35 and \$3.50. Notably, this same zone acted as resistance earlier in the yearâ€”and now, itâ€™s flipped into support. That shift indicates buyers are stepping in and holding the line. All eyes are now on the \$4.20 level, which marks the top of the â€œhandleâ€ in the current formation. If Helium can break through this level, thereâ€™s a real chance the price could push up to \$5.00, and if momentum builds, potentially head toward \$6.75 in the coming months. This \$6.75 target isnâ€™t arbitrary. Itâ€™s derived from technical projections using Fibonacci levels and previous price action. In 2021 and again in late 2023, HNT followed similar patterns before launching into major rallies, so repeating that behaviour wouldnâ€™t be surprising. Momentum Grows as Indicators Align for Breakout Technically, Helium (HNT) is flashing signs of renewed strength. The RSI currently sits at around 57 on the 1 day HNT/USDT chart which suggests quiet accumulation is underway without tipping into overbought territory. Volume has risen again, climbing more than 6.8% in the last 24 hours with over \$40 million in trading activity. This type of volume uptick often foreshadows a more significant move. The MACD also shows a potential bullish crossover. The histogramâ€™s red bars, which reflect selling pressure, are shrinking. If this continues, it could confirm that sellers are losing grip. Further, HNT remains above its 50-day- and 200-day moving averagesâ€”a textbook sign of a healthy trend. Earlier this quarter, those two averages completed a golden cross, a bullish technical signal often preceding extended upward movement. Bulls remain firmly in control as long as Helium stays above the \$3.00 mark. Zooming out, the price structure looks increasingly supportive of another leg higher. The \$3.35 and \$3.00 levels provide solid support, while a breakout above \$4.20 could pave the way toward \$5.00 and, if momentum persists, toward \$6.75. The only key level to watch on the downside would be \$2.85, but that risk appears limited for now. Legal Clarity and DePIN Expansion Strengthen Fundamentals On the legal front, Helium notched a significant win that cleared a major hurdle. A federal judge recently dismissed the SECâ€™s case against the project, ruling that the HNT token, when traded on secondary markets, does not constitute security. That ruling has added a layer of confidence to the ecosystem. With regulatory fears lifted, investors are more comfortable participating in the network. It also reaffirms Heliumâ€™s role as a frontrunner in the rapidly growing DePIN (Decentralized Physical Infrastructure Network) space. Meanwhile, the team continues to ship. Helium has rolled out real-time network quality metrics, allowing users to monitor 5G and LoRaWAN performance more precisely globally. Additionally, hotspot earnings and network activity can now be viewed directly in the official Helium Wallet, giving contributors easy access to performance data. Highlighted Crypto News for Today

- Bullish MNT price prediction for 2025 is \$0.9379 to \$1.5204. - Mantle (MNT) price might reach \$3 soon. - Bearish (MNT) price prediction for 2025 is \$0.3852. In this Mantle (MNT) price prediction 2025, 2026-2030, we will analyze the price patterns of MNT by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | MANTLE (MNT) PRICE PREDICTION 2025 | | | MANTLE (MNT) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Mantle (MNT) Current Market Status | Current Price | \$0.7010 | 24 â€ Hour Price Change | 0.38 Up | | 24 â€ Hour Trading Volume | \$231.41M | | Market Cap | \$2.35B | | Circulating Supply | MNT 3.36B | All â€ Time High | \$1.51 (On April 08, 2024) | | All â€ Time Low | \$0.3136 (On October 18, 2023) | What is Mantle (MNT) | TICKER | MNT | | BLOCKCHAIN | Ethereum | | CATEGORY | Layer 2 Blockchain | | LAUNCHED ON | 17 July 2023 | | UTILITIES | Governance, security, gas fees & rewards | Mantle Network positions itself as a technology stack designed to enhance the scalability of Ethereum, emphasizing EVM (Ethereum Virtual Machine) compatibility. The commitment to EVM compatibility ensures seamless functionality for contracts and tools, requiring minimal adjustments for migration from Ethereum to Mantle Network. This compatibility enables users to explore a diverse range of web3 applications, while developers benefit from an efficient, low-fee environment for deploying smart contracts. At its foundational level, Mantle Network adopts a modular architecture that integrates an optimistic roll-up protocol with an innovative data availability solution. This unique combination not only inherits the security features of Ethereum but also introduces cost-effectiveness and increased accessibility in terms of data availability. Mantle Networkâ€™s approach aims to contribute to the broader blockchain ecosystem by addressing scalability challenges while maintaining compatibility with the established Ethereum infrastructure. Mantle 24H Technicals Mantle (MNT) Price Prediction 2025 Mantle (MNT) ranks 35th on CoinMarketCap in terms of its market capitalization. The overview of the Mantle price prediction for 2025 is explained below with a daily time frame. In the above chart, Mantle (MNT) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. The descending channel pattern is often followed by higher prices. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a securityâ€™s price with parallel trendlines to show a downward trend. At the time of analysis, the Mantle (MNT) price was \$0.6860. If the pattern trend continues, then the price of MNT might reach the resistance levels of \$0.8788 and \$1.4306. If the trend reverses, then the price of MNT may fall to the support of \$0.6426. Mantle (MNT) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Mantle (MNT) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Mantle (MNT) for 2025. | Resistance Level 1 | \$0.9379 | | Resistance Level 2 | \$1.5204 | | Support Level 1 | \$0.5578 | | Support Level 2 | \$0.3852 | Mantle (MNT) Price Prediction 2025 â€ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Mantle (MNT) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Mantle (MNT) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.7581 Price = \$0.7016 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 40.1306 <30 = Oversold 50-70 = Neutral >70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Mantle (MNT) Price Prediction 2025 â€ ADX, RVI In the below chart, we analyze the strength and volatility of Mantle (MNT) using the following technical analysis indicators â€ Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Mantle (MNT). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 41.8812 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 44.88 <50 = Low >50 = High | Low Volatility | Comparison of MNT with BTC, ETH Let us now compare the price movements of Mantle (MNT) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of MNT is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of MNT also increases or decreases respectively. Mantle (MNT) Price Prediction 2026, 2027 â€ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Mantle (MNT) between 2025, 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Mantle (MNT) Price Prediction 2026 | \$3.5 | \$0.4 | | Mantle (MNT) Price Prediction 2027 | \$4.8 | \$0.3 | | Mantle (MNT) Price Prediction 2028 | \$5 | \$0.2 | | Mantle (MNT) Price Prediction 2029 | \$6.3 | \$0.1 | | Mantle (MNT) Price Prediction 2030 | \$7.5 | \$0.09 | Conclusion If Mantle (MNT) establishes itself as a good investment in 2025, this year would be favorable to cryptocurrency. In conclusion, the bullish Mantle (MNT) price prediction for 2025 is \$1.5204. Comparatively, if unfavorable sentiment is triggered, the bearish Mantle (MNT) price prediction for 2025 is \$0.3852. If the market momentum and investorsâ€™ sentiment positively elevate, then Mantle (MNT) might hit \$3. Furthermore, with future upgrades and advancements in the Mantle ecosystem, MNT might surpass its current all-time high (ATH) of \$1.51 and mark its new ATH. FAQ 1. What is Mantle (MNT)? Mantle Network positions itself as a technology stack designed to enhance the scalability of Ethereum, emphasizing EVM (Ethereum Virtual Machine) compatibility. 2. Where can you buy a Mantle (MNT)? Traders can trade Mantle (MNT) on the following cryptocurrency exchanges such as Bybit, MEXC, Bingx, Huobi, Gate, Coinone and Korbit 3. Will Mantle (MNT) record a new ATH soon? With the ongoing developments and upgrades within the Mantle platform, Mantle (MNT) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Mantle (MNT)? Mantle (MNT) hit its current all-time high (ATH) of \$1.51 on April 08, 2024. 5. What is the lowest price of Mantle (MNT)? According to CoinMarketCap, MNT hit its all-time low (ATL) of \$0.3136 on Oct 18, 2023. 6. Will Mantle (MNT) hit \$3? If Mantle (MNT) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$3 soon. 7. What will be the Mantle (MNT) price by 2026? Mantle (MNT) price might reach \$3.5 by 2026. 8. What will be the Mantle (MNT) price by 2027? Mantle (MNT) price might reach \$4.8 by 2027. 9. What will be the Mantle (MNT) price by 2028? Mantle (MNT) price might reach \$5 by 2028. 10. What will be the Mantle (MNT) price by 2029? Mantle (MNT) price might reach \$6.3 by 2029. Singapore, Singapore, April 17th, 2025, Chainwire Solinabot Records Over 2900 SOL in Processed Payouts on Telegram Since February Launch Since its launch at the end of February 2025, Solinabot, a Telegram-based decentralized finance (DeFi) application built on the Solana blockchain, has processed over 650 verified payouts, totaling more than 2900 SOL. The team reports that all payouts are verifiable on-chain, with transparency maintained via the official Telegram payout channel, where users can observe recent transactions and associated TxIDs. The Solinabot community has grown steadily, reaching over 1050 members, reflecting increased engagement and interest. According to internal analytics and search console data, the platform continues to see a rising number of new users and activity. Solinabot: Telegram-Based Solana Deposit Bot Solinabot is a Telegram-integrated service that facilitates Solana (SOL) deposits with the stated goal of doubling a userâ€™s deposit within a seven-day period. According to its description, if the cycle does not complete successfully, the original deposit is returned in full. The service emphasizes simplicity, requiring no Know Your Customer (KYC) procedures or complex setup. Users can begin by interacting with the bot through Telegram, with a minimum deposit of 0.05 SOL. Overview of the Solinabot Protocol Solinabot is designed to operate on a 7-day cycle in which deposits made through the bot are processed with the intention of being returned at twice their value. If the system does not successfully complete the cycle, the deposit is automatically refunded to the user. Users can start the Bot here: START BOT The systemâ€™s mechanism is based on algorithmic trading strategies, incorporating a combination of AI-driven analysis, real-time long and short positioning, and a decentralized validator network. The platform aims to offer a seamless, user-directed experience on Telegram, requiring only a supported Solana wallet and Telegram access to participate. Underlying Mechanism Solinabot functions as a decentralized finance (DeFi) protocol built on the Solana blockchain and accessed through Telegram. It is described as utilizing a combination of technologies and strategies designed to manage user deposits and protocol operations. According to available information, its core components include: - 1. Smart AI-powered trading strategies - Tactical leverage with real-time long/short positions - A network of validators and collaborative bots - Real-time analytics with minimal latency - Secure, transparent, and fully verifiable operations A detailed description of Solinabotâ€™s operational structure is available in the published whitepaper: <https://www.solinabot.com/whitepaper> Growth of Referral Activity The team behind Solinabot has also noted increased usage of the integrated referral system. Participants may share a personal link and receive a 4% commission on deposits made through referred entries. This feature has contributed to increased platform activity and onboarding, with referrals visible on an individual user basis. Public Resources - Starting the Bot: <https://t.me/startsolinabot> - Step-by-Step Guide: <https://solinabot.com/step-by-step> - Community Chat: <https://t.me/solinabotcommunity> - Live Payouts: <https://t.me/solinabotpayouts> About Solinabot Solinabot is a Telegram-based decentralized application (dApp) developed on the Solana blockchain. It integrates automated trading mechanisms, artificial intelligence, and real-time data processing to facilitate a structured 7-day operational cycle. Solinabot aims to deliver a streamlined and transparent experience for users within the DeFi ecosystem. Contact Lina Douso lina.dousol@gmail.com

- Core (CORE) price prediction for 2025 is \$0.7798 to \$2.0029. - Core (CORE) price might reach \$5 soon. - Core (CORE) price prediction for 2025 is \$0.1942. Core (CORE) price prediction 2025, 2026-2030, we will analyze the price patterns of CORE by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | CORE (CORE) PRICE PREDICTION 2025 | | | CORE (CORE) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Core (CORE) Current Market Status | Current Price | \$0.5838 | 24 â€ Hour Price Change | 4.79% Up | | 24 â€ Hour Trading Volume | \$69.15M | | Market Cap | \$583.41M | | Circulating Supply | 999.28M CORE | All â€ Time High | \$6.47 (On Feb 08, 2023) | | All â€ Time Low | \$0.3432 (On Nov 03, 2023) | What is Core (CORE) | TICKER | CORE | | BLOCKCHAIN | Core Chain | | CATEGORY | Blockchain Infrastructure | | LAUNCHED ON | January 14, 2023 | | UTILITIES | Governance, Community Engagement, & Rewards. | Core (CORE) is designed as an L1 blockchain that is compatible with the Ethereum Virtual Machine (EVM), allowing it to run Ethereum smart contracts and decentralized applications (dApps). The Core network operates on the â€œSatoshi Plusâ€ consensus mechanism, which secures the network by combining delegated Bitcoin mining hash with delegated Proof-of-Stake (DPoS). Its native token, CORE, supports the protocol. The developers aim to build an

infrastructure that serves as the backbone of Web 3.0, introducing innovative solutions to tackle the blockchain trilemma. The mainnet launched in January 2023, and the blockchain is governed by a decentralized autonomous organization (DAO), with the Core DAO overseeing the development of the Satoshi Plus ecosystem. Core (CORE) 24H Technicals Core (CORE) Price Prediction 2025 Core (CORE) ranks 93rd on CoinMarketCap in terms of its market capitalization. The overview of the CORE price prediction for 2025 is explained below with a daily time frame. In the above chart, Core (CORE) laid out an Ascending Channel. An ascending channel, or rising channel, is a bullish pattern that forms when an asset's price makes higher highs and higher lows. The price moves between two parallel trend lines, an upper line connecting the higher highs and a lower line connecting the higher lows. As the channel slopes upward, it signals a continued uptrend. Traders see this as a positive sign, with the price likely to keep rising as long as it stays within the channel. At the time of analysis, the price of Core (CORE) was recorded at \$0.5823. If the pattern trend continues, then the price of CORE might reach the resistance levels of \$0.6420 and \$1.0594. If the trend reverses, then the price of CORE may fall to the support levels of \$0.4812, and \$0.3856. Core (CORE) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Core (CORE) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Core (CORE) for 2025. | Resistance Level 1 | \$0.7798 | | Resistance Level 2 | \$2.0029 | | Support Level 1 | \$0.3669 | | Support Level 2 | \$0.1942 | Core (CORE) Price Prediction 2025 RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Core (CORE) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Core (CORE) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.4662 Price = \$0.5857 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 66.9341 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Core (CORE) Price Prediction 2025 ADX, RVI In the below chart, we analyze the strength and volatility of Core (CORE) using the following technical analysis indicators: Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Core (CORE). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 11.9499 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 49.14 < 50 = Low > 50 = High | Low volatility | Comparison of CORE with BTC, ETH Let us now compare the price movements of Core (CORE) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of CORE is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of CORE also increases or decreases respectively. Core (CORE) Price Prediction 2026, 2027, 2028 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Core (CORE) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Core (CORE) Price Prediction 2026 | \$10 | \$0.1 | | Core (CORE) Price Prediction 2027 | \$15 | \$0.09 | | Core (CORE) Price Prediction 2028 | \$20 | \$0.08 | | Core (CORE) Price Prediction 2029 | \$25 | \$0.07 | | Core (CORE) Price Prediction 2030 | \$30 | \$0.06 | Conclusion If Core (CORE) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Core (CORE) price prediction for 2025 is \$2.0029. Comparatively, if unfavorable sentiment is triggered, the bearish Core (CORE) price prediction for 2025 is \$0.1942. If the market momentum and investors' sentiment positively elevate, then Core (CORE) might hit \$10. Furthermore, with future upgrades and advancements in the CORE ecosystem, Core might surpass its current all-time high (ATH) of \$6.47 and mark its new ATH. FAQ 1. What is Core (CORE)? Core serves as Solana's primary liquidity aggregator, facilitating seamless token trading and Core (CORE) is a decentralized blockchain platform designed to offer scalable and secure solutions for various applications. 2. Where can you buy Core (CORE)? Traders can trade Core (CORE) in the following cryptocurrency exchanges such as MEXC Global, OKX, Gate.io, Bybit, Coinbase, Huobi (HTX), Bitget, LBank, and DigiFinex. 3. Will Core (CORE) record a new ATH soon? With the ongoing developments and upgrades within the Core platform, Core (CORE) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Core (CORE)? Core (CORE) hit its current all-time high (ATH) of \$6.47 on Feb 08, 2023. 5. What is the lowest price of Core (CORE) According to CoinMarketCap, CORE hit its all-time low (ATL) of \$0.3432 on Nov 03, 2023. 6. Will Core (CORE) hit \$5? If Core (CORE) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon. 7. What will be the Core (CORE) price by 2026? Core (CORE) price might reach \$10 by 2026. 8. What will be the Core (CORE) price by 2027? Core (CORE) price might reach \$15 by 2027. 9. What will be the Core (CORE) price by 2028? Core (CORE) price might reach \$20 by 2028. 10. What will be the Core (CORE) price by 2029? Core (CORE) price might reach \$25 by 2029. - Corporate holdings of Bitcoin reached 688,000, or around 3.3% of the total supply, as a result. - The number of corporations investing in Bitcoin increased by 18% in the first quarter of 2025. In the first quarter of 2025, public corporations acquired a record-breaking 95,431 BTC, according to asset management Bitwise's report on April 14. Corporate holdings of Bitcoin reached 688,000, or around 3.3% of the total supply, as a result. The preceding quarter was also a significant one for Bitcoin accumulation, so this is an increase of 16% from that. The number of corporations investing in Bitcoin increased by 18% in the first quarter of 2025, with 12 new firms joining the ranks of the 79 existing corporate BTC investors. Banking on Bitcoin With 531,644 BTC after its most recent acquisition of 3,459 BTC for \$286 million on April 14, MicroStrategy maintains a commanding lead. Approximately 77% of the asset value that firms have acquired falls into this category. At an average price of \$67,556 per BTC, the business announced that it had bought the asset worth \$36 billion. As of March 31, Bitwise reported that MARA Holdings was the second largest corporation, with 47,531 BTC, or approximately 7% of the total. The third- and fourth-largest Bitcoin mining businesses, in terms of total corporate BTC holdings, were Riot Platforms (2.8% share) and Cleanspark (1.7%). Additionally, on April 14, the Japanese Bitcoin investment company Metaplanet purchased 319 BTC, or around \$26 million, at a discount. The company is Asia's biggest Bitcoin holder, while owning less than 1% of all corporate Bitcoins. The asset had fallen 24% from its all-time high on January 20th to close the three months period at \$82,350, making the big purchasing quarter that much more impressive. Highlighted Crypto News Today:

There are thousands of cryptocurrencies in the market today. Bitcoin (BTC) has been the leading token for a long time. Selling at \$88,430, it has increased in value by 23.85% in the past year, but recent technical signals have indicated a downward trend in value coupled with reduced market interaction. This forces investors to search for other interesting initiatives with great long-term returns on investment. Among these interesting initiatives are Cardano (ADA), Tron (TRX), Binance Coin (BNB), Rexas Finance (RXS), Solana (SOL), and Ripple (XRP). Rexas Finance (RXS) Rexas Finance is just a project aimed at revolutionizing the real-world asset (RWA) tokenization market. It is a platform through which illiquid assets such as property, corporate debt securities, and even artwork can be tokenized to the blockchain. As analysts dig deep to find the next Bitcoin, Rexas Finance stays on top. Its presale value skyrocketed by a significant 567% from \$0.03 to \$0.20, showing a massive interaction volume. Rexas Finance has also successfully sold 458,248,493 RXS tokens out of 1,000,000,000 available tokens and raised \$47,650,156, making it one of the best presales of the year. After the presale, RXS will be listed on June 19, 2025, at \$0.25. As the token launch date draws near, analysts are hopeful about its prospects and anticipate a 50,000% post-launch increase in RXS tokens. Such success in its presale phase alone grants Rexas Finance the highest possibility of overtaking BTC regarding wealth creation. Solana (SOL) Solana is also in the race to replace Bitcoin, trading at \$141.77 with a market capitalization of \$72.5 billion. Having increased in value by approximately 15,935%, SOL has given users the luxury of high-performance transactions and low transaction fees. Technical signals indicate SOL has an RSI of 51.34 in the neutral zone with a positive Chaikin Money Flow (CMF) indicator, highlighting a significantly increased buying pressure. This has led analysts to predict a possible 367.7% ROI by December 2028. Binance Coin (BNB) BNB has recently transformed into a more versatile asset by introducing cross-chain transactions and its role in decentralized finance. Technical analysis displays a bullish MACD crossover that may see BNB gain upward momentum. RSI, however, stands at 56.15, indicating a neutral position. BNB currently trades at \$635.93 with a market cap of \$90.6 billion. Its value has increased by an extraordinary 635,490% since its launch, which has led analysts to predict that it could rise to \$5217.5 in five years. Ripple (XRP) Ripple (XRP), currently trading at \$2.46 with a market capitalization of \$143 billion, was hit with a lawsuit by the U.S. Securities and Exchange Commission (SEC), which shook the entire crypto community. However, the coin recovered approximately 32% over two weeks following the lawsuit's resolution. This reassures analysts of the coin's resilience to unstable market conditions. Technical indications point to a positive trend, with an RSI of 52.2 and notable support levels pointing to rising investor confidence driven by alliances with financial institutions hoping to use XRP's blockchain for cross-border payments. This causes experts to project a possible rise in value by December 2030 of 1064.6%. Cardano (ADA) Cardano is also a top contender with the possibility to provide significant ROI. Currently trading at \$0.73 per token and a market capitalization of \$21.67 Billion, ADA has increased in value by approximately 3550% since its introduction. Technical signals indicate a bullish trend with a possible year-over-year return of 5%. The RSI of 48.19 is in the neutral zone, meaning more profits than losses. This chart behavior influences analysts' predictions that Cardano (ADA) will be somewhere around \$1.5 in 2026. Tron (TRX) Similar to Solana, TRON can be used to execute DeFi applications like smart contracts. With a market cap of \$21.65 billion, sold at \$0.22 per token, Tron has had a substantial price increase of 11,984%. The technical signal for TRX indicates a bullish outlook. At 47.19, the Relative Strength Index (RSI) indicates that the asset is in the neutral zone. Furthermore, the MACD value of 0.001 bolsters a positive view. Signals predict a possible increase of about 53.33% in a few months, supported by the success of TRON's focus on decentralizing the internet for sharing content without intermediaries. Conclusion For those seeking the next Bitcoin-like opportunity, these cryptocurrencies offer compelling cases for long-term investments, with Rexas Finance standing out as the most promising alternative to Bitcoin. MEXC, a leading global cryptocurrency exchange, announced the listing of PAWS (PAWS) on April 16, 2025(UTC). This move underscores MEXC's ongoing commitment to supporting diverse blockchain ecosystems and providing users with access to high-quality, emerging crypto assets. PAWS is a SocialFi project with over 85 million users. It began as the #1 mini-app on Telegram and later migrated to the Solana blockchain to achieve full decentralization. Users earn PAWS points by participating in group discussions, consuming content, completing tasks, and inviting friends. The project introduces a new attention economy, where meaningful engagement translates into tangible value. \$PAWS is the native utility token of the PAWS ecosystem, forming the foundation for user participation and long-term growth. It enables holders to engage in platform governance, vote on key decisions, and shape the project's direction. As a marker of social identity, \$PAWS fosters stronger community interaction. It also bridges value across different blockchain ecosystems and anchors the SocialFi model by combining social engagement with financial incentives. Serving as both a medium of value and a core incentive, \$PAWS drives user activity and ecosystem development. MEXC has established itself as a leading exchange by consistently offering users early access to high-potential crypto assets. In 2024 alone, the platform listed 2,376 new tokens, including 1,716 initial listings. According to the latest TokenInsight report, MEXC led the industry with 461 spot listings between November 1, 2024, and February 15, 2025. During this period, the exchange maintained a high listing frequency, consistently ranking among the top six platforms, demonstrating its agility in capturing emerging market trends. Looking ahead, MEXC remains focused on expanding its asset offerings and helping users seize timely opportunities in the fast-evolving crypto landscape. For more information about the listing, please refer to the official announcement. About MEXC Founded in 2018, MEXC is committed to being the Easiest Way to Crypto. Serving over 36 million users across 170+ countries, MEXC is known for its broad selection of trending tokens, everyday airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. OnEquity, a leader in innovative trading education and committed to empowering traders at every stage, proudly introduces its latest collection of intermediate-level trading resources. Tailored specifically for traders ready to deepen their understanding and expand their skill set, OnEquity's comprehensive guides offer a valuable pathway to mastering complex markets, from forex and commodities to crypto and major indices. Deepen Your Market Knowledge For traders aiming to move beyond the basics and seeking to refine their strategies, OnEquity's latest educational content provides advanced insights and practical tools. These resources are designed to help you navigate the complexities of today's fast-evolving financial markets with greater confidence and precision. Must-Read Guides Include: • Solana: The Fast-Rising Ethereum Rival Revolutionizing Crypto Understand how Solana's high-speed blockchain technology is reshaping the crypto ecosystem and what it means for traders and investors. • Understanding the DXY Index: A Key to Forex and Global Market Insights Explore the critical role of the U.S. Dollar Index (DXY) in forex markets and its influence on global macroeconomic trends. • Trading Commodities: The Ultimate Guide to Gold, Oil, and Beyond Master advanced strategies for trading commodities like gold and oil, and learn how to leverage market cycles for consistent results. • How Metal Trading Can Boost Your Portfolio Discover how incorporating metals like silver, copper, and platinum into your portfolio can offer diversification and risk-adjusted returns. • What Is the Russell 2000 and How to Invest in It? Learn how to trade and invest in the Russell 2000, a key index representing small-cap U.S. stocks with high growth potential. • Demystifying the Nasdaq 100: Your Guide to Tech's Leading Index Unpack the major players and trends driving the Nasdaq 100, and discover how tech stocks shape broader market momentum. Sharpen Your Competitive Edge OnEquity's core mission is to equip intermediate traders with the essential confidence, in-depth knowledge, and cutting-edge tools necessary to excel in today's highly competitive markets. These expertly curated resources are specifically designed to seamlessly bridge the gap between beginner-level knowledge and advanced trading mastery, empowering you to reach your full potential. Whether you are strategically expanding into new and emerging asset classes, meticulously fine-tuning your technical analysis skills, or proactively seeking to better understand complex market dynamics, OnEquity's comprehensive Education Hub provides you with the resources you need to trade smarter, manage risk more effectively, and capitalize on market opportunities with greater confidence. Each guide is meticulously crafted to deliver clear, practical insights that you can directly apply to your trading activities, helping you navigate market volatility and make well-informed decisions. Ready to level up your trading journey? Access OnEquity's full range of intermediate guides and discover proven strategies to elevate your success in the financial markets. By joining the growing OnEquity community, you gain exclusive access to a constantly expanding library of valuable educational content that reflects the latest trends, innovative methodologies, and cutting-edge insights shaping modern financial markets. From in-depth explorations of commodities and forex to cutting-edge crypto insights and advanced trading strategies, OnEquity equips intermediate traders with the essential tools and knowledge needed to confidently compete at a higher level. Explore the OnEquity Education Hub today and take the next step toward unlocking your full trading potential. Disclaimer: TheNewsCrypto does not endorse any content on this page. As the crypto market evolves, a new wave of low-cost tokens is redefining how investors approach opportunity and Lightchain AI, priced at just \$0.007125, is leading the charge. Much like SHIB once turned pennies into fortunes, Lightchain AI is now sparking similar excitement. With \$19.2 million already raised in its presale, the project is gaining serious momentum among early adopters. As more investors look for high-upside plays with minimal entry cost, tokens like Lightchain AI could soon be seen as the future's equivalent of spare change affordable today, potentially game-changing tomorrow. For those watching the next SHIB-level breakout, this is where attention is shifting. Success of SHIB and the Growing Popularity of Low-Cost Tokens Low-cost cryptocurrencies can be transformative, as evidenced by Shiba Inu (SHIB) launched in 2020, SHIB made small bets into huge wins, with \$65 turning into more than \$1 million at the altcoin peak in 2021. This success has put the focus on affordable tokens, which enable investors to obtain large amounts with relatively limited capital. The increasing interest in such tokens is clear as many investors are looking for low-cost cryptocurrencies (those that cost less than \$1) with room for substantial gains. Still, as enticing as potentially high returns are, it's important for investors to invest cautiously, understanding the market volatility and risks that come with cryptocurrencies. Why Lightchain AI is the Future of Affordable Tokens Unlike meme coins that thrive on hype, Lightchain AI is built on advanced technology and practical applications. A key feature is its Memecoin Launchpad, an AI-driven platform that simplifies the process of creating, managing, and monetizing meme-based tokens. With its secure, automated, and scalable system, Lightchain AI is revolutionizing the meme economy by making it easier than ever to launch new tokens. It also hosts a Developer Grants & Incentives program to attract top talent, driving ongoing innovation and growth within the ecosystem. By nurturing a strong developer community, Lightchain AI ensures its blockchain remains cutting-edge and ready for the future. Decentralized Governance • Lightchain AI's Revolutionary Approach Lightchain AI is rewriting the rules of blockchain governance with its community-driven model, putting inclusivity and fairness front and center. Unlike Solana's developer-focused strategy, Lightchain AI empowers its users to shape the platform's future. Token holders get a direct say in big decisions like network upgrades, partnerships, and growth plans through a fair quadratic voting system that elevates smaller stakeholders' voices and keeps centralized control in check. But that's not all. The community drives innovation by funding developer grants and groundbreaking public AI projects, fostering a culture of collaboration and progress. With its user-first approach, Lightchain AI isn't just a platform; it's a movement built on the power of collective vision and shared purpose. Join the revolution and help shape the future! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin fell to \$83,600, while XRP and ADA declined after Nvidia reported a \$5.5B charge and an 8% stock drop. - The market is watching retail sales data and Powell's speech to gauge the Fed's next move amid rising trade tensions. The cryptocurrency market dropped late Tuesday after Nvidia reported a \$5.5 billion charge due to halted chip sales to China, causing its stock to fall nearly 8% in after-hours trading. This negative sentiment spilled over into the crypto space, pulling down major coins like Bitcoin (BTC), XRP, Cardano (ADA), Ethereum (ETH), and Solana (SOL). Bitcoin, which had earlier touched \$86,440, slipped over 2% to around \$83,900. Meanwhile, Ethereum fell by about 1.98% to \$1,575, and Solana dropped roughly 2.99% to around \$126. Further, XRP declined more than 1% to \$2.08, and ADA dip 4% to \$0.61, losing recent gains as market sentiment turned negative. The decline followed Nvidia's confirmation that it would stop shipping its H20 chips, designed for China's AI market, due to new U.S. export restrictions. This added pressure to an already volatile crypto market, extending broader losses. U.S.-China Tensions Push Global Tech and Crypto Lower Nvidia's H20 chip, a key product for the Chinese market, was hit by new U.S. export restrictions due to national security concerns. Officials warned that the chip's high-speed memory could help power Chinese supercomputers. Big tech firms like Tencent, Alibaba, and ByteDance had heavily invested in these chips, expecting strong AI demand. Now, Nvidia faces a multibillion-dollar write-down this quarter tied to unused inventory, canceled deals, and supply issues. The market reacted fast as tech stocks fell, Nasdaq futures dropped over 1%, and AMD, also affected by the ban, saw its shares sink 7%. The move adds to growing fears of a deeper tech divide between the U.S. and China, which could keep impacting global markets. Crypto Prices React to External Forces, Not Internal Weakness With markets under pressure, attention now shifts to two key events. First, the U.S. retail sales report for March is expected to show a 1.2% increase. Second, a speech was given by Federal Reserve Chairman Jerome Powell at the Economic Club of Chicago. A solid retail report could ease some nerves about the economy, but many traders believe it may not reflect the fast-moving developments around trade and tariffs. Powell's remarks, meanwhile, are expected to be closely watched for any clues on interest rate changes. All eyes are on Powell. Markets are holding their breath, as analysts at Secure Digital Markets in a research note. The concern is that if trade tensions keep rising, the Fed may need to cut rates sooner than expected to keep the economy stable. Earlier this week, Fed Governor Christopher Waller said the central bank could be forced into making a quick round of rate cuts if U.S. trade policy tightens further. On April 2, President Trump announced sweeping tariffs on 180 countries, though most were passed for 90 days, China was not. Overall, the crypto downturn was driven more by macroeconomic uncertainty than by any fundamental flaws within crypto assets. The sell-off reflected general market risk aversion sparked by Nvidia's financial hit. Highlighted Crypto News for Today Coinbase Calls on Australian Leaders to Prioritize Crypto Policy Reform

Even as altcoins continue to plunge under market pressure, one project is capturing the spotlight for all the right reasons: Lightchain AI. While much of the crypto sector faces red charts and shrinking sentiment, Lightchain AI is moving in the opposite direction, fueled by a wave of retail interest and growing analyst attention. Its early-stage potential, paired with a compelling vision, has made it one of the few tokens gaining momentum during a downturn. With the Lightchain AI Presale already raising \$19.2 million and tokens priced at just \$0.007125, it's fast becoming the breakout project that stands above the chaos. Altcoins Tumble Under Market Pressure On the date of 2025-04-13, altcoins are facing substantial selling pressure in the wake of a widespread crypto market downturn. Ethereum (ETH) has dropped to \$1,629.58, 1.16% lower than yesterday's closing price. Currently, XRP is up 1.4% at \$2.17. Third place Cardano (ADA) is at \$0.6575, and Solana (SOL) is the fourth with \$131.76. Dogecoin (DOGE) has a price of \$0.1673. The market's fluctuations are largely driven by widening global trade tensions, as escalating tariff threats from the United States have weakened investor confidence and increased the volatility of global stocks. If critical areas of support give way, analysts caution that more downside could follow, driving a bearish Bitcoin back towards the \$55,000-\$57,000 region. The total cryptocurrency market capitalization has dropped by \$270 billion in early April, indicative of the deteriorating market environment. Lightchain AI Surges with Unique Strength Lightchain AI is surging ahead in the crypto space with a combination of unique strengths that set it apart from traditional blockchain projects. At its core is a decentralized architecture designed to mitigate AI bias through federated learning, ensuring inclusive and accurate data usage without compromising privacy. Its innovative Memecoin Launchpad brings creative energy to the ecosystem, enabling secure, AI-enhanced token launches that add utility beyond hype. The platform's workflow and data flow are engineered for real-time performance as AI tasks are efficiently distributed, executed, and cryptographically verified across nodes. Combined with adaptive scalability and a clear, multi-phase roadmap, Lightchain AI presents a powerful blend of utility, innovation, and community-driven growth. These strengths position it as a true standout in today's evolving market. Analysts and Investors Turn to Lightchain AI • Secure Your Spot Today Lightchain AI is turning heads in the tech world, earning praise from industry analysts and catching the eye of investors alike. What's all the buzz about? Its game-changing blend of blockchain and AI. This disruptive technology not only tackles major challenges like data privacy, scalability, and real-time performance but also lays out a clear, ambitious roadmap for the future. Analysts are impressed by Lightchain AI's seamless integration of cutting-edge solutions, while investors see massive growth potential as businesses increasingly seek secure, efficient AI platforms. As the demand for smarter, safer AI accelerates, Lightchain AI is leading the charge. Keep an eye on this rising star; it's just getting started. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish ENA price prediction for 2025 is \$0.3427 to \$0.4815. - Ethena (ENA) price might reach \$5 soon. - Bearish ENA price prediction for 2025 is \$0.1823. In this Ethena (ENA) price prediction 2025, 2026-2030, we will analyze the price patterns of ENA by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ETHENA (ENA) PRICE PREDICTION 2025 | | | ETHENA (ENA) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Ethena (ENA) Current Market Status | Current Price | \$0.2742 | 24 hr Price Change | 7.45% Down | 24 hr Trading Volume | \$115.12M | Market Cap | \$1.52B | | Circulating Supply | 5.55B ENA | All Time High | \$1.52 (On April 11, 2024) | | All Time Low | \$0.1953 (On September 07, 2024) | What is Ethena (ENA) | TICKER | ENA | | BLOCKCHAIN | Ethereum | | CATEGORY | Stablecoin Protocol | | LAUNCHED ON | April 2, 2024 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Ethena (ENA) is a decentralized finance (DeFi) platform aiming to bring stability and innovation to the cryptocurrency space. It

leverages a unique dual-token system comprising the ETHA token, used for governance, and the ENA token, a stablecoin designed for minimal price volatility. Ethena focuses on providing a reliable stablecoin solution while enabling decentralized financial services like lending, borrowing, and trading. Through its robust smart contract infrastructure and community-driven governance, Ethena seeks to offer a secure and efficient ecosystem for users to manage and grow their digital assets. Recently, the Ethena community proposed to integrate a decentralized exchange (DEX) called Ethereal into its reserve management system. This would make Ethereal the on-chain venue for spot and derivative positions that back its synthetic stablecoin, USDe. The proposal, submitted by a member named æFell\$0x, æF aims to gain community support for this integration, which is expected to enhance hedging transactions through Ethena's hedging engine. Fell\$0x emphasized the mutual benefits of this move, stating that Ethereal could create new demand for USDe while ensuring increased transparency, as the management of USDe backing would occur entirely on-chain. Additionally, the Ethereal team has suggested allocating 15% of future governance tokens to Ethena (ENA) token holders. Ethena 24H Technicals Ethena (ENA) Price Prediction 2025 Ethena (ENA) ranks 50th on CoinMarketCap in terms of its market capitalization. The overview of the Ethena price prediction for 2025 is explained below with a daily time frame. In the above chart, Ethena (ENA) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Ethena (ENA) was recorded at \$0.2714. If the pattern trend continues, then the price of ENA might reach the resistance level of \$0.3067, \$0.3509 and \$0.4438. If the trend reverses, then the price of ENA may fall to the support level of \$0.2640. Ethena (ENA) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Ethena (ENA) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Ethena (ENA) for 2025. | Resistance Level 1 | \$0.3427 | | Resistance Level 2 | \$0.4815 | | Support Level 1 | \$0.2571 | | Support Level 2 | \$0.1823 | Ethena (ENA) Price Prediction 2025 æF RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Ethena (ENA) are shown in the chart. From the readings on the chart above, we can make the following inferences regarding the current Ethena (ENA) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.3632 Price = \$0.2708 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 38.6367 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Ethena (ENA) Price Prediction 2025 æF ADX, RVI In the below chart, we analyze the strength and volatility of Ethena (ENA) using the following technical analysis indicators æF Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Ethena (ENA). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 25.0344 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 36.16 <50 = Low >50 = High | Low volatility | Comparison of ENA with BTC, ETH Let us now compare the price movements of Ethena (ENA) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of ENA is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of ENA also increases or decreases respectively. Ethena (ENA) Price Prediction 2026, 2027 æF 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Ethena (ENA) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Ethena (ENA) Price Prediction 2026 | \$9 | \$0.1 | | Ethena (ENA) Price Prediction 2027 | \$11 | \$0.09 | | Ethena (ENA) Price Prediction 2028 | \$13 | \$0.08 | | Ethena (ENA) Price Prediction 2029 | \$15 | \$0.07 | | Ethena (ENA) Price Prediction 2030 | \$17 | \$0.06 | Conclusion If Ethena (ENA) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Ethena (ENA) price prediction for 2025 is \$0.4815. Comparatively, if unfavorable sentiment is triggered, the bearish Ethena (ENA) price prediction for 2025 is \$0.1823. If the market momentum and investors' sentiment positively elevate, then Ethena (ENA) might hit \$5. Furthermore, with future upgrades and advancements in the Ethena ecosystem, ENA might surpass its current all-time high (ATH) of \$1.52 and mark its new ATH. FAQ 1. What is Ethena (ENA)? Ethena (ENA) is a decentralized finance (DeFi) platform aiming to bring stability and innovation to the cryptocurrency space. 2. Where can you purchase Ethena (ENA)? Ethena (ENA) has been listed on many crypto exchanges, which include Binance, 1Bank, 4E, Toobit, and CoinW. 3. Will Ethena (ENA) reach a new ATH soon? With the ongoing developments and upgrades within the Ethena platform, ENA has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Ethena (ENA)? On April 11, 2024, Ethena (ENA) reached its new all-time high (ATH) of \$1.52. 5. What is the lowest price of Ethena (ENA)? According to CoinMarketCap, ENA hit its all-time low (ATL) of \$0.1953 on September 07, 2024. 6. Will Ethena (ENA) reach \$5? Ethena (ENA) is one of the active cryptos that continues to maintain its bullish state. Eventually, if this bullish trend continues then Ethena (ENA) will hit \$5 soon. 7. What will be Ethena (ENA) price by 2026? Ethena (ENA) price is expected to reach \$9 by 2026. 8. What will be Ethena (ENA) price by 2027? Ethena (ENA) price is expected to reach \$11 by 2027. 9. What will be Ethena (ENA) price by 2028? Ethena (ENA) price is expected to reach \$13 by 2028. 10. What will be Ethena (ENA) price by 2029? Ethena (ENA) price is expected to reach \$15 by 2029. Crypto investors looking for the next big move in 2025 are paying close attention to two very different projects: Avalanche (AVAX), a well-established smart contract platform, and Ozak AI (OZ), a rising star in the artificial intelligence and blockchain space. While Avalanche is expected to perform steadily and potentially double in value over the next year, Ozak AI is capturing headlines for its mind-blowing upside potential—from \$0.003 in presale to a projected \$1, offering early investors a chance at 300x returns. The contrast between these two makes one thing clear: Ozak AI is where the explosive growth might really be hiding. Avalanche Could See Steady GainsæBut Limited Upside Avalanche is no stranger to the crypto top 20. As a Layer 1 blockchain with strong smart contract capabilities, low fees, and high throughput, it's earned its place as a reliable platform. In fact, analysts expect AVAX to reach \$80 or even \$100 in a bullish market, potentially doubling from its current price near \$40æ\$45 in early 2025. While doubling your money is never a bad thing, AVAX's market cap and wide circulation mean that such growth will likely be gradual and tied closely to broader market movements. Avalanche is now more of a blue-chip cryptoæa solid hold, but no longer offering the explosive returns seen in its early days. Ozak AI: The 300x Opportunity Backed by Real Utility Ozak AI is still in its early stagesæcurrently in presale at just \$0.003 per token. What makes this opportunity stand out isn't just the low entry point but the massive upside potential. If Ozak AI reaches its projected \$1 target, that's a staggering 33,000% return, or 300x. But this isn't a meme coin fantasyæit's grounded in fundamentals. Ozak AI is building a decentralized AI infrastructure that aims to serve developers, businesses, and everyday users with cutting-edge tools for automation, predictive analytics, machine learning integrations, and more. As AI adoption explodes globally, crypto projects that combine blockchain scalability with real-world AI use cases are likely to attract major attentionæand investment. Why Ozak AI Could Outpace Avalanche in 2025 Avalanche's growth depends heavily on DeFi activity, NFT platforms, and continued ecosystem adoption. While it remains a strong project, it's also facing increasing competition from other L1s like Solana, Near, and Ethereum L2s. Ozak AI, on the other hand, is operating in a niche sector that's gaining momentum daily: AI. The AI narrative in crypto is only growing stronger. Tokens like FET, AGIX, and RNDR have already seen huge rallies in 2024 and early 2025. Ozak AI is next in line, but still undervalued and under the radar. With its unique blend of utility, early-stage access, and perfect timing within the current AI boom, OZ stands a real chance to skyrocket while other tokens play catch-up. Furthermore, Avalanche remains a dependable crypto with upside. But for investors chasing life-changing ROI potential in 2025, Ozak AI offers a rare window of opportunity. A move from \$0.003 to \$1 isn't just possibleæit's backed by market trends, technological innovation, and strategic timing. The next 300x may not come from a big-name blockchainæit may come from a disruptive AI project like Ozak AI. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. Ethereum (ETH) may have spent early 2025 in a sideways trend, but the winds are shifting rapidly. Institutions are returning, whale activity is increasing, and network domination is regaining traction. Over the next 60 days, three big drivers could propel ETH to unprecedented heights. Ethereum Price Forecast: Three Catalysts for Growth After a 50% drop in Q1, Ethereum is progressively recovering as it flips the \$1800 support. This is aided by strong fundamentals and increased institutional activity. Ethereum is trading around \$1820 as of press time, with the next critical resistance level at \$2,200. A move above this level could set the token up for a rally to \$4,000. While the general crypto market remains in the red, experts believe ETH can achieve this feat in the next 60 days, buoyed by several factors, including: 1. Whale Accumulation Is Surging Ethereum whales have been accumulating tokens at a rapid pace. According to market researcher Crypto_Goos, ETH is undervalued compared to its ecosystem domination, pushing major holders to hoard ahead of a potential breakout. Over the last 45 days, addresses with more than 10,000 ETH added approximately 1.8 million coins to their balance sheets. Historically, this level of accumulation has frequently preceded multi-month rallies. 2. Ethereum Reclaims DEX Supremacy In an unexpected twist, Ethereum has surpassed Solana in DEX volume for the first time since September 2024. This reflects its continued prominence in the DeFi space. Combined with Layer 2 scaling technologies such as Optimism and Arbitrum, Ethereum is beginning to solve its previous speed and gas price limitations. These changes are attracting many high-frequency traders and protocol developers back to Ethereum. 3. The Pectra Upgrade May Change the Game The forthcoming Pectra upgrade is likely Ethereum's best short-term catalyst. Pectra's features, such as transaction batching, ERC-20 gas charge payments, sponsored transactions, and enhanced staking limits, have the potential to address various long-standing issues. Analysts anticipate a significant attitude shift once the mainnet is activated, which is expected to happen within 30 days. This might propel ETH beyond \$4,000 soon. Amid this ETH's bullish storm, one new altcoin, Rexas Finance (RXS), is also up for a revolutionary breakout. It targets a market debut on June 19. Here is why experts classify it as a potential biggest gainer in 2025. Rexas Finance (RXS): The Under \$1 Altcoin Set to Explode Rexas Finance is opening up the real-world asset (RWA) market like never before. By converting historically illiquid assets like real estate, commodities, and fine art into blockchain-based tokens, Rexas Finance provides regular investors access to markets previously only available to institutions. Imagine buying a fraction of a \$5 million Manhattan house or a chunk of a gold deposit on your smartphone. Rexas Finance facilitates this. For example, a \$1 million office building can be tokenized into 1 million RXS-backed units, allowing investors to purchase them for as little as \$10. The result is instant liquidity, fractional ownership, and reduced barriers. What is the most impressive part? You do not require coding abilities. The Rexas Token Builder allows anyone to construct a tokenized asset in minutes. Its QuickMint Bot even supports fast deployment using Telegram or Discord, making token manufacturing as simple as sending a message. These technologies represent the foundation for a future in which tokenization becomes the norm for asset management. RXS Presale: Nearly Sold Out with Over \$47.8M Raised RXS is currently in Stage 12, the final round of the public presale, with a price of \$0.20, up 566% from its \$0.03 launch. Over \$47.8 million has been raised, and over 459 million tokens have been sold. The final presale stage is 91% complete; over 50,000 holders have joined this movement. Importantly, Rexas Finance is a zero-VC project. No venture capital means no early unlocks, dumping, or market manipulation. Retail investors have complete power, which generates unparalleled grassroots enthusiasm. Can RXS 1000x? Exchange Listing Could Be the Spark The official RXS listing date is June 19, 2025, and the entry price is \$0.25 on at least three tier-1 exchanges. With exposure to global audiences and strong liquidity, this IPO might catalyze spectacular price activity. Furthermore, an ongoing \$1 million giveaway is increasing attention, and the top 20 contestants will receive \$50,000 in RXS apiece. With over 1.8 million entries, this campaign has increased investor participation and brand awareness before its market debut. With its institutional-grade infrastructure, rapidly rising user base, and exclusive access to RWA tokenization, Rexas Finance is poised to be one of 2025's most formidable gainers. Conclusion: All Eyes on Ethereum, But Don't Sleep on Rexas Finance Ethereum's bullish momentum is increasing. With whale accumulation, reinvigorated DeFi leadership, and the Pectra upgrade on the horizon, ETH appears primed to provide big returns in the next 60 days. However, as Ethereum builds momentum, Rexas Finance provides exponential growth at a fraction of the cost. With its presale nearly sold out, tier-1 listings secured, and a game-changing use case in asset

tokenization, RXS could be the biggest altcoin breakout of 2025. Do not wait. The last chance to buy RXS at presale prices is now. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Animecoin has shown a significant price increase of 27.46% in the last 24 hours. - The altcoin began to show recovery over the past week after significant bearish movements last month. Over the past few hours, the crypto market has begun to show mild recovery signs after a bearish lean in the last 24 hours. Bitcoin is progressing slowly towards its \$86K resistance, raising speculations amid investors for a potential resurfacing above \$88,000. Meanwhile, global tariff discussions have been reinitiated over the past few days. Notably, within the altcoin sector, significant members like Ethereum and Solana have begun to show upward movements, after weeks of dormancy. One other altcoin that showed significant growth is Animecoin. The digital asset shows a 27.46% surge in its daily price chart, thus catching market attention. In the evening hours of April 14, the altcoin was trading at a low of \$0.01581. However, as bullish candles sparked, it has risen to current trading levels at the \$0.020 level. With prices increasing exponentially, at the time of writing, ANIME was trading at \$0.02006 as per CMC data. Zooming out onto its weekly price chart, Animecoin shows a significant 54.32% increase. This increase is mostly concentrated on the past day's significant surge, although there were modest upward movements throughout the week. Will Animecoin Hit \$0.01 Soon? On analyzing the altcoin's technical indicators its Moving Average Convergence Divergence (MACD) signal line stands way above the MACD line. This indicates the existence of an overall bearish trend. However, the RSI value stands at a high of 71.80 as per TradingView data. This suggests that Animecoin is holding a positive market sentiment, from its existence in the oversold zone. If the digital asset manages to maintain its positive momentum in the coming days, then it can be expected to reestablish a bullish trend. In such a case ANIME might face resistance at \$0.02919 and \$0.04128. Meanwhile another altcoin, Kaspia, has shown similar price movements in the last 24 hours. LBank, a globally recognized leading cryptocurrency exchange, is excited to announce the upcoming 1001 Crypto Nights Beach Music Festival. Set to take place on April 30, 2025, from 17:00 to 24:00 (UTC+4) at the iconic Bohemia Beach Club in Dubai, this exclusive and electrifying side event during TOKEN2049 promises to deliver an unforgettable experience. Featuring world-class DJs, celebrity interactions, and a breathtaking beachfront atmosphere, the festival will seamlessly blend the magic of music and entertainment with the dynamic energy of crypto innovation, creating a groundbreaking platform for networking and collaboration within and beyond the crypto space. Register now to start your magic tour. LBank, in collaboration with Memecore, Shiba Inu, and Solana, is proud to host this epic event, offering a prime networking opportunity with a lineup of powerful partners involved. With support from over 60 leading projects across various sectors, the 1001 Crypto Nights Beach Music Festival is set to be an unparalleled gathering. Major sponsors include OneCloud, AWS, InfinitoCoin, XODE Blockchain, BLOX, XPIN Network, Interlace and Janction. Ecosystem partners such as Avalanche, Kaspia, Polkadot, Polkadot Now, Polygon, Dabl Club, Sonic and Story are driving the Web3 innovation at the event, while Memex Festival and RaveDAO power the overall experience. The event also benefits from the presence of premium meme co-organizers like WIF, BABYDOGE, Brett, DOG, TURBO, NEIRO, ELON, SUNDOD, PONKE, NEIRO on ETH, APU, SLERF, MIGGLES, WOJAK, QUACK, KIKI, KOKO, TREMP and PIT, bringing the unique energy of the meme community. Nearly 30 leading media partners, including UToday, CoinGape, Bein Crypto, Crypto.news, Foresight News, MetaEra, PANews, TechFlow, Jinse Finance, Odaily, Tokenpost, Coinpost, CoinPedia and others, will ensure the event reaches a global audience, amplifying its impact and visibility. With an anticipated 100 million exposure and over 3,000 attendees, including 100+ renowned KOLs in attendance, 1001 Crypto Nights is the must-attend event of the year for anyone in the crypto and Web3 space. The event's star attractions include world-renowned DJ Nicky Romero and the captivating Japanese actress Ai Uehara. Nicky, a global top 100 DJ, will electrify the crowd with an unforgettable set, taking the energy to new heights. Ai, adored by fans for her magnetic presence, will surprise lucky attendees with exclusive interactions, creating once-in-a-lifetime moments. Her participation has sparked excitement, with a viral campaign offering weekly rewards and a grand prize—an all-expenses-paid trip to meet her in person at 1001 Crypto Nights. Full details are available here. Adding to the excitement is the integration of a gamified online and offline experience designed to further immerse attendees. Featuring a ground-breaking æChips System, æ attendees can collect chips through online and onsite activities and exchange them for exclusive rewards at the event, including gourmet dining, premium drinks, luxury shisha, and exclusive merchandise. For those looking to engage early, an online treasure hunt campaign has been launched, allowing participants to earn points by completing tasks and climbing the leaderboard for a chance to win big at the event. On-site, attendees will enter an Aladdin-inspired wonderland, filled with exciting activities at every turn. From fortune-telling and thrilling money games to mesmerizing street sketches, glowing body paint, and magical cosplay photo ops, there's no shortage of interactive fun. Each experience is packed with surprises, and guests earn rewarding chips for every interaction. The night culminates in a breathtaking drone show, featuring 300 illuminated drones creating stunning, awe-inspiring patterns in the sky. It's an unforgettable festival experience, where every moment dazzles. 1001 Crypto Nights is a groundbreaking fusion of entertainment, culture, and crypto innovation. Uniting top artists, influencers, blockchain leaders, and global media, the event redefines immersive experiences that connect communities and drive progress. With its unique blend of music, art, and tech, 1001 Crypto Nights sets a new standard for Web3 events, solidifying Dubai's role as a global digital economy hub. By offering unparalleled networking and collaboration opportunities, 1001 Crypto Nights is sure to leave a lasting impact on the crypto world. About 1001 Crypto Nights æ1001 Crypto Nightsæ is a global top-tier Web3 festival presented by LBank on April 30, aimed at building a super hub for meme culture and the crypto community. As the most anticipated side event during TOKEN2049 Dubai, æ1001 Crypto Nightsæ is jointly created by LBank, Memecore, and Shiba Inu. It will grandly debut at the iconic luxury Bohemia Beach Club. This epic event seamlessly blends the spirit of Web3, electronic music euphoria, and Arabic aesthetics, bringing together global crypto elites, representatives from over 20 meme communities, and pioneers in the financial field, creating an immersive experience that unites æCrypto Å Entertainment Å Culture.æ Stay updated with LBank: - Website: <https://www.lbank.com/> - Twitter: https://twitter.com/LBank_Exchange - Telegram: https://t.me/LBank_en - Instagram: https://www.instagram.com/lbank_exchange - LinkedIn: <https://www.linkedin.com/company/lbank> For media inquiries, please contact: Email: press@lbank.com Disclaimer: TheNewsCrypto does not endorse any content on this page. MEXC, a leading global cryptocurrency exchange, announced it will list WalletConnect Network (WCT) on April 15, 2025 (UTC), accompanied by Airdrop+ rewards totaling 273,000 WCT and 50,000 USDT for users. WalletConnect is a leading network enabling seamless on-chain user experiences. As the backbone for wallet-to-DApp communication across blockchains like Ethereum, Solana, and Cosmos, it facilitates secure interactions without requiring users to switch wallets. With over 275 million connections and 45 million users worldwide, WalletConnect empowers users to engage with DeFi, NFTs, swaps, and staking applications through a unified interface. This infrastructure drives Web3 innovation by bridging wallets, applications, and blockchains effortlessly. \$WCT is the native token of WalletConnect, used for network incentives, governance, and transaction fees. It also supports validator staking rewards and decentralized decision-making. By staking \$WCT, holders contribute to network security and protocol upgrades, ensuring a decentralized, permissionless, and community-driven ecosystem. To celebrate the official listing of WalletConnect (WCT) on MEXC, MEXC is launching a limited-time Airdrop+ Event, open to both new and existing users. Event Period: April 9, 2025, 10:00 æ" April 25, 2025, 10:00 (UTC) Here are the key benefits of the event: Benefit 1: Deposit and share 195,000 WCT (Exclusive for new users) Benefit 2: Futures Challenge æ" Trade to share 50,000 USDT in Futures bonus (Open to all users) Benefit 3: Invite new users and share 78,000 WCT (Open to all users) For full event details and participation rules, please visit here. MEXC has established itself as an industry leader by consistently providing users with early access to promising crypto projects. In 2024, MEXC introduced 2,376 new tokens, with 1,716 initial listings. According to the latest TokenInsight report, from November 1, 2024, to February 15, 2025, MEXC led the industry with an impressive 461 spot listings. Additionally, during the bi-weekly periods, MEXC maintained a high listing frequency, consistently ranking among the top six exchanges and demonstrating its ability to capture market trends quickly. MEXC will continue to innovate and expand its offerings, providing users with the best opportunities in the ever-evolving crypto space. About MEXC Founded in 2018, MEXC is committed to being æYour Easiest Way to Crypto.æ Serving over 36 million users across 170+ countries, MEXC is known for its broad selection of trending tokens, everyday airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. - Phantom Wallet is facing a lawsuit from Attorney Thomas Liam Murphy over allegations of negligence and fraud. - Hackers stole \$500K in Wiener Doge tokens through a security flaw in Phantom's browser wallet. - The lawsuit claims Phantom stored users' private keys in unencrypted browser memory, leaving them vulnerable to attacks. Crypto wallet provider Phantom is facing legal trouble after a group of investors, led by attorney Thomas Liam Murphy, filed a lawsuit accusing the company of serious security failures. The complaint, filed on April 14 in New York, claims a flaw in Phantom's browser extension led hackers to steal over \$500,000 worth of Wiener Doge (WIENER), a Solana-based memecoin created by Murphy himself. According to the lawsuit, a hacker gained access to Murphy's private key by pulling it from the wallet's unencrypted browser memory—a vulnerability Phantom allegedly knew about but never fixed or warned users about. Once inside, the attacker bypassed two-factor authentication and drained three Phantom wallets, using the built-in æSwapperæ feature to convert the stolen memecoins into Solana (SOL) through OKX's smart contract system. The impact was massive. Wiener Doge, which once boasted a \$1 million market cap, crashed in value after the theft and is now worth less than a penny per token. Thirteen other investors' friends and family of Murphy's joined the lawsuit, saying they lost their money too. OKX Integration Alleged to Have Enabled Quick Swap of Stolen Memecoins What made the attack worse, according to the complaint, was the role of cryptocurrency exchange OKX. Phantom had quietly integrated OKX's smart contract routing into its Swapper tool in late 2024. This allowed the hacker to instantly swap the stolen memecoins for SOL using OKX's pricing and transaction services. The lawsuit argues that without OKX's system, the hacker wouldn't have been able to quickly liquidate the funds. It also points out that OKX had previously admitted to processing \$5 billion in illegal transactions as part of a federal money laundering case. Now, Murphy and 13 other plaintiffs æ" who also lost money in the crash æ" are seeking \$3.1 million in damages. Phantom has yet to respond publicly. Perp Labs, the core development team behind Perpetual Protocol and Nekodex, has launched a new campaign aimed at rewarding \$PERP users through its flagship DeFi app, Nekodex. Starting this week, users who hold or trade \$PERP can earn daily rewards æ" no staking, farming, or lockups required. This marks the first major utility upgrade for \$PERP in years. Perpetual Protocol is one of the earliest and most established decentralized perpetual futures protocols in DeFi. Since its launch in 2020, it has facilitated over \$25 billion in trading volume and helped define what modern decentralized derivatives look like. Now, with this campaign, its native token \$PERP is gaining fresh utility. The campaign is powered by Nekodex, which brings the ecosystem into its next phase: a gasless, seedless, and chain-abstracted DEX experience. Nekodex is a cross-chain crypto dApp that leverages advanced account abstraction and chain abstraction to eliminate the traditional pain points of DeFi. It delivers a smooth, intuitive user experience designed for the mobile-first generation. Since launch, Nekodex has onboarded over 41,000 users and currently sees between 4,000 to 5,000 daily active users æ" quietly setting a new benchmark for usability in the DeFi app space. With its upcoming V2 release, Nekodex will expand
