

From the very beginning, our ultimate goal is to make WiFi access as seamless as possible, utilizing decentralized solutions to empower individuals. We said co-founder Jeffrey of Roam. Fast forward three years, Roam stands as a pioneering leader in the telecom industry, boasting 1.8 million app users and 1.1 million self-deployed WiFi nodes across nearly 200 countries and regions, delivering on Jeffrey's vision. The Intersection of Telecom and Web3 The telecommunications industry is at a crossroads, and users are the key. Traditional telecom models, often characterized by rigid contracts, outdated technology, and limited flexibility, have struggled to meet modern user expectations. Meanwhile, free alternatives like WhatsApp and WeChat have set new benchmarks for accessibility and affordability, exposing the limitations of conventional telecom services. These challenges demand a new approach—one that prioritizes user needs and empowers communities. This is where Roam makes its mark. Founded in 2021 to address the scalability challenges of the Wireless Broadband Alliance's (WBA) OpenRoaming, a program, Roam has reimagined telecommunications by placing users and community participation at its core. Through a decentralized, free-to-use wireless network, Roam provides seamless, secure, and globally accessible connectivity. By integrating Decentralized Identifiers (DIDs) and Verifiable Credentials (VCs), Roam ensures robust privacy and data security for its users. These advanced technologies enable Roam to deliver secure, seamless connections worldwide, empowering users to actively participate in building and validating the network while earning incentives—transforming them into key contributors to the ecosystem's growth. What sets Roam apart is its ability to appeal to both Web3 enthusiasts and Web2 users, demonstrating its potential to drive crypto mass adoption. By offering real-world services that anyone can use, Roam effectively bridges the gap between Web2 and Web3. Once onboarded, users can explore the possibilities of Web3, unlocking unique opportunities and benefits that many are encountering for the first time. Over the past year, Roam's user-first approach has led to remarkable milestones. Its free-to-use model has deeply resonated with individuals and communities worldwide. This rapid adoption has also captured the attention of traditional telecom operators, who see Roam as a model for a user-centric approach to telecommunications. Roam's success has also been noticed by investors. In late 2023, it completed a \$5 million strategic funding round led by Anagram and Volt Capital, followed by a strategic investment from Samsung Next in April 2024—the firm's sole DePIN-focused investment made by Samsung of that year. These investments reinforce Roam's mission to build an inclusive, sustainable ecosystem that empowers its global user base. By merging Web3 technologies with telecommunications, Roam is redefining connectivity. Its community of users, developers, and partners is shaping a decentralized future that places people at the forefront, transforming how the world connects. Incentivizing participation in the Roam Network Roam's vision prioritizes ecosystem collaboration and community participation, concepts that sharply differ from the centralized and hierarchical models of traditional telecom. Its strategy has already delivered tangible results, with millions of app users and over a million WiFi nodes contributing to a thriving ecosystem. Roam's philosophy is simple yet groundbreaking: incentivize participation through accessible and rewarding engagement. To encourage participation, Roam introduced community WiFi nodes as a foundational growth mechanism. Its latest hardware updates, including the Rainier MAX60 and Baker MAX30 routers, are designed not just as tools for connectivity but as gateways for users to actively update the network. These devices enable users to share OpenRoaming, a WiFi nodes, earn Roam Points, and contribute to the network's expansion while enjoying seamless and secure connections. In addition to hardware, Roam's eSIM launch in September 2024 further lowered the barriers to participation. By offering free global roaming data to users who engage with the network, such as checking in at hotspots, Roam incentivizes real-world service. The eSIM rollout pushed app users to grow from 750,000 to 1 million in less than a month, illustrating the effectiveness of Roam's community-centric approach. Roam rewards participants for their contributions with Roam Points, which can be converted into \$ROAM tokens after the Token Generation Event (TGE). From activating routers to participating in network validation through Check-Ins, every interaction is designed to recognize and reward user efforts. These rewards not only create a sustainable income model but also help offset initial hardware investments, making it easier for more users to join. Roam's strategy has proven successful, as highlighted in Syndica Research's Solana DePIN report for November 2024. The report revealed a 4.6x surge in user growth within the month, with 100,000 new WiFi setups stabilizing globally. Daily interactions on the Roam network now exceed 800,000, showcasing user engagement levels that surpass those of traditional telecom operators. By aligning its efforts with Web3 principles, Roam has demonstrated the power of decentralized collaboration in reshaping the telecom industry. The project's ability to achieve a massive user base in a relatively short time highlights the viability of its model. More importantly, it underscores a profound shift in how connectivity is approached—where users are not just consumers but active builders of the network. Roam is not merely a service provider; it is a movement that empowers individuals to take control of their connectivity. By bridging Web3 ideals with real-world telecom needs, Roam is setting a new standard for the future of decentralized communications. Lean In and Build the Physical Layer 1 for the DePIN Ecosystem Looking back at 2024, Roam stands out as a year of relentless building and delivering on its vision. Beyond its remarkable achievements, Roam continues to push the boundaries with innovative updates. Among these is the recently launched Loan Program with Huma Finance, designed to lower entry barriers and invite more participants into the Roam ecosystem. Roam's Loan Program provides financing solutions that make acquiring Roam miners, such as the Rainier MAX60 and Baker MAX30, accessible to a broader audience. Users can purchase miners through a flexible payment model: an upfront payment of 30% in stablecoins, with the remaining 70% covered by Huma Finance. Mining rewards and early airdrops can be used to repay the loan, and once it's fully paid, all future rewards belong entirely to the user. Roam miners are recognized for their exceptional reward mechanisms, including a 3,000 Roam Points welcome bonus, daily earnings of up to 60 Roam Points, and an additional 150 Check-In Roam Points from WiFi interactions. Moreover, miner owners who finished the registration before the TGE are eligible for a 20 million \$ROAM token airdrop, underscoring Roam's commitment to early supporters. The Loan Program marks the first phase of Roam Growth, a platform that transforms network devices into multifunctional economic tools. Roam Growth is designed to maximize user engagement and earnings by offering sustainable income streams and simplifying device operations. The platform automates service provisioning, integrates with markets, and enables opportunities such as WiFi advertising incentives. Additionally, it provides seamless financial management tools and ensures device performance, empowering users to unlock the full potential of their network devices. Roam Growth, alongside the Roam Network, is a cornerstone of Roam's broader initiative to build a global Telecom Data Layer. Announced in October 2024, this ambitious effort leverages Roam's decentralized OpenRoaming network and DID+VC-based identity verification mechanism to enable seamless data connectivity and sharing among people, devices, assets, and AI. This initiative aims to create a cohesive and interactive Blockchain of Things (BoT) ecosystem, laying the groundwork for advancing crypto mass adoption. Another pivotal element in this vision is Roam Discovery, which launched during the holiday season. Roam Discovery fosters collaboration among DePIN projects by creating a dynamic ecosystem where visionary projects and engaged communities can connect, share resources, and drive mutual growth. With 20 pioneering projects already onboard, Roam Discovery is setting a new standard for innovation in key areas such as Layer 1, PayFi, and AI. By providing access to Roam's robust network, cutting-edge tools, and engaged user base, Discovery offers unparalleled opportunities for scalability and success. In September 2024, Roam introduced its Physical Layer 1 narrative, signaling a pivotal step in the DePIN space. Within three months, Roam partnered with 20 leading projects, showcasing its role as a cornerstone of decentralized connectivity. Since December, Roam has maintained its position as the top-ranked project on DePINscan, with over 1.1 million active nodes and a user base of 1.8 million. The launch of the Roam Loan Program and Roam Discovery marks another milestone in Roam's journey to fulfill its final vision: Building a global open wireless network. As Co-founder Jeffrey envisioned before, Roam has transformed into a Web3 mass adoption example, uniting millions of users and empowering communities to build the future of connectivity. With its 2025 Roadmap guiding the way, Roam is not only redefining telecom but also forging a decentralized ecosystem where technology serves the people who drive it. In this evolving landscape, Roam isn't just connecting devices—it's connecting lives, proving that innovation powered by communities can reshape the world. - NFT trading volume dropped by 19% and sales decreased by 18% in 2024, compared to previous year. - 2024 marked the worst-performing year for the NFT market, says DappRadar. After 2021 remaining as the year of NFTs in the history of crypto, the NFT industry hasn't yet reclaimed its position completely. However, NFT collections such as Pudgy Penguins made news by the end of 2024 with their increasing demand and value. At one point, the floor price of Pudgy Penguins even crossed the price of Bitcoin. Decentralized application industry performance tracker DappRadar published a 2024 overview report and analyzed dApp, DeFi, and NFT spaces in crypto. One of the noteworthy findings is the weakened performance of the NFT market in 2024. The NFT trading volume and sales decreased by 19% and 18% respectively in 2024 compared to 2023. Even though the NFT trading volume surged to \$5.3 billion in Q1 2024, it dropped to \$1.5 billion in Q3. Despite rising to a \$2.6 billion trading volume in Q4, NFTs couldn't perform as they used to in 2021 and 2022. A Shift in Dominance of Top NFT Collections While Yuga Labs NFT collections used to be among the most-traded list, they faced a significant decline in sales. The floor price of Yuga Labs NFT collections has also decreased considerably, reflecting the drop in demand and hype around these NFTs. On the other hand, Pudgy Penguins NFT collections rose to be among the top ones. Their floor price increased by more than 100% in 2024, along with serious efforts by the team to increase their adoption. With their plushies launch announcements in major retailer platforms such as Walmart and Walgreens, they were probably the only NFT collections to gain some attention and growth. When it comes to NFT trading platforms, Blur remained the most-used trading platform and gave a stiff competition to OpenSea. The zero-fee trading feature and multiple airdrop announcements are behind the growth and usage of Blur platform. Another noteworthy mention here is the Magic Eden marketplace. It outperformed OpenSea and gained significant attention by launching its native ME token. Nonetheless, 2024 remains as the worst-performed year for the NFT industry in history. With innovation and real-time usage, 2025 could bring back the hype around NFTs. Highlighted Crypto News Today: Thailand Proposes Ban on Polymarket to Combat Illegal Gambling Risks

In the ever-expanding world of cryptocurrency, identifying the best crypto presale can be a game-changer. For investors who are looking to maximize profits in the next bull run, this is crucial. With numerous promising crypto presales emerging, many are priced well under \$0.1. Which makes them ideal for those seeking affordable yet high potential crypto opportunities. Among these, DexBoss (DEBO) stands out as one of the best new crypto projects, boasting a strong roadmap, impressive liquidity solutions, and a focus on addressing critical DeFi challenges. As we dive deeper into the best crypto presale options for 2025, it's clear that these coins could provide massive gains for savvy investors. Top 15 Best Crypto Presale Under \$0.1 to Watch in 2025 - DexBoss (DEBO) - Aureal One (DLUME) - Flockertz (\$FLOCK) - Chainaware.ai (\$AWARE) - Hyperbridge (BRIDGE) - Wall Street Pepe (WPEPE) - ChillShiba (ChillShiba) - Minotaurus (MTAUR) - Automated Meta Finance (AMFI) - Lunex Network (LNX) - Huzzl (HUZZL) - Arctic Pablo Coin (APC) - BlockDAG (BDAG) - iDEGEN (\$IDGN) - Pandana (\$PNDN) Let's dive into these high potential crypto projects. Each of these promising crypto presales offers a unique solution with significant growth potential. These best new crypto projects are under \$0.1. They have captured the attention of investors worldwide due to their innovative features and promising futures. 1. DexBoss (DEBO) DexBoss is one of the best crypto presale and is transforming the DeFi market by solving issues with congestion and liquidity. This high potential crypto offers an innovative platform at a \$0.011 presale price. This has the potential to expand liquidity pools, simplify trading, and offer deep liquidity for over 2000 currencies. The tokenomics include a total supply of 1 billion \$DEBO tokens, with 50% allocated to the presale, ensuring early investors can benefit from its potential growth. Click here to know more about DexBoss DexBoss stands out as one of the best new crypto options. With a well-planned roadmap that includes advanced trading features, margin trading, liquidity farming, and staking. This promising crypto presale is poised for massive gains. That makes it one of the most exciting projects in 2025 for anyone looking for solid returns. 2. Aureal One (DLUME) Aureal One is a promising crypto presale that combines blockchain technology with sustainable energy solutions. DLUME is one of the best new crypto picks for 2025. It promises massive gains with a presale price of just \$0.0011 and a listing price of \$0.005. This high potential crypto seeks to offer a low cost, scalable blockchain ecosystem with gaming and DeFi apps. The project's blockchain ecosystems, Clash of Tiles and DarkLume, are metaverse-focused. It ensures quick transactions while prioritizing sustainability. Aureal One could emerge as a leader in blockchain solutions due to its dedication to solving energy-related issues in the crypto industry. That makes it a standout in the world of promising crypto presales. 3. Flockertz (\$FLOCK) Flockertz is a decentralized meme coin that requires a vote to earn. This allows the community to guide the project's growth and rewards members for their votes. The presale is priced at \$0.0066616 per token and has raised \$9.5 million. The presale ends soon, and there is no minimum purchase requirement. Flockertz aims to disrupt the Web3 ecosystem and social media by increasing user interaction and providing rewards. That positioning it as a highly promising presale with massive growth potential. 4. Chainaware.ai (\$AWARE) ChainAware.ai is an AI-powered platform that aims to improve the Web3 ecosystem using new AI agents. It offers resources for user interaction, predictive analytics, and safe transactions. AWARE crypto presale is priced at \$0.035, and it is hosted on ChainGPT Pad. The goal of this high potential crypto project is to improve DeFi solutions by utilizing blockchain and AI. It provides real-time data and advanced market predictions. ChainAware.ai stands out as a promising

crypto presale. It gives investors a chance to get involved in an innovative project in the rapidly evolving DeFi market. 5. Hyperbridge (BRIDGE) Hyperbridge is a decentralized, permissionless interoperability system. This provides secure cross-chain communication, allowing developers to create interoperable blockchain apps. BRIDGE token is priced at \$0.05 per token in its ongoing crypto presale. With 100 million BRIDGE tokens for sale, accounting for 10% of the entire supply. The goal of this high potential crypto is to improve blockchain ecosystem liquidity and cross-chain communication. With its innovative approach, Hyperbridge positions itself as a promising crypto presale, providing a valuable opportunity for investors in the growing blockchain space. 6. Wall Street Pepe (\$WEPE) Wall Street Pepe is a meme-based crypto that aims to combine humor with finance. With substantial growth potential in the crypto market, it is providing a presale opportunity. nWEPE coin is currently available in its crypto presale at \$0.0003662 per WEPE. The presale raised \$45 million, with 40 billion tokens available for sale. This promising crypto presale aims to capitalize on the growing popularity of meme coins. This is an attractive opportunity for early-stage investors. 7. ChillShiba (ChillShiba) ChillShiba is a meme-based crypto token available on the Solana blockchain. Itâ€™s currently priced at \$0.0000000002168 per token, hosted on the Raydium decentralized exchange. The tokenâ€™s 24-hour trading volume is approximately \$1.27, with liquidity around \$124.57. With a fully diluted valuation (FDV) of approximately \$193.43, ChillShiba offers a unique opportunity in the meme coin space. This promising crypto presale stands out due to its affordability and potential for growth in the DeFi market. 8. Minotaurus (MTAUR) Minotaurus is a crypto project that includes Web3 game elements. Where players can have a game-like experience by using in-game currency, battling crypto creatures, and navigating a maze. The price of MTAURâ€™s crypto presale is \$0.00008135, and the goal is to raise \$6,440,000. The coin has a 100 billion supply and an initial market cap of \$5.6 million. It is set for a 50% price hike in the next stage, with a listing price of \$0.00020000. Built on the BNB chain, Minotaurus offers high potential crypto growth. That makes it an exciting promising crypto presale for investors. 9. Automated Meta Finance (AMFI) Automated Meta Finance is a DeFi platform. This uses automation and AI to optimize financial strategies and financial strategies across numerous blockchain ecosystems. It is now in its presale phase, with round 2 offering 38,850,000 AMFI tokens at \$0.035 each. This promising crypto presale focuses on DeFi solutions. It gives early investors the chance to participate in a crypto with significant growth potential. 10. Lunex Network (LNX) Lunex Network is a decentralized blockchain platform. Its goal is to provide dApps with high-speed, low-cost transactions and scalable solutions. It has a crypto presale price of \$0.0054 per token. This initiative intends to transform the blockchain ecosystem by providing scalable solutions. Lunex Network, a promising crypto presale, offers an interesting investment opportunity. Those looking to get in early on a blockchain project with significant growth potential. 11. Huzzl (HUZZL) Huzzl Coin is a crypto that focuses on offering decentralized solutions for content creators. It allows them to sell their work and interact with their audience directly. Currently, the crypto presale price is \$0.000273. So far, \$230,808.53 has been raised toward the target of \$3,450,000. This promising crypto presale allows early investors to participate in a project with significant growth potential. With the presale coming to a finish, this is an exciting moment to get involved. 12. Arctic Pablo Coin (APC) Arctic Pablo Coin is a meme-inspired altcoin built on Binanceâ€™s Smart Chain. Currently, the presale token is priced at \$0.00002 per APC. So far, \$46,865.73 has been raised, with the presale progress at 57.91%. The project offers a promising opportunity to purchase APC tokens using ETH, BNB, or SOL. Atlantis aims to create innovative blockchain solutions. That makes it a high potential crypto presale for those looking to get involved early in an emerging project. 13. BlockDAG (BDAG) BlockDAG is an advanced layer 1 blockchain. This uses a Proof-of-Work (PoW) algorithm to provide high speed, increased security, and decentralization. It is now in its 27th presale batch, with each BDAG token priced at \$0.0248. The presale raised more than \$180 million and distributed around 17.8 billion BDAG tokens. This promising crypto presale provides investors with an exciting opportunity to participate in a rapidly expanding project with great future potential. 14. iDEGEN (\$IDGN) iDEGEN is a crypto project that blends AI and memecoin features. It allows users to interact with AI-powered tools. That learns from community feedback on X (previously Twitter) and creates content accordingly. It is now in the pre-sales stage, with a price of \$0.01. The price will rise to \$0.011 in the next step, eventually reaching \$0.038. This promising crypto presale provides significant growth potential as the presale progresses through its stages. 15. Pandana (\$PNDN) Pandana (\$PNDN) is a panda-themed memecoin based on the Solana blockchain. It aims to join the meme elite with Pixar-level 3D designs and an engaging story. The presale is currently starting at \$0.0020 per token for the first 5 days. The price increases by \$0.0002 every five days. Tokens can be unlocked with zero fees within 48 hours of the presale ending. This makes it a high-potential crypto presale for early investors. Conclusion This article highlighted 15 high potential crypto presales that are priced under \$0.1. They offer exceptional opportunities for massive gains. Each of these promising crypto presales has something unique to offer, but among them, DexBoss (DEBO) emerges as the best crypto presale to watch for 2025. With its innovative DeFi solutions, liquidity pool expansion, and a solid roadmap. DexBoss is the best new crypto to watch for those aiming to maximize their returns in the upcoming bull run. Grab this chance to be part of its success story. Disclaimer: TheNewsCrypto does not endorse any content on this page. The pre-market is leading the trend in 2025, and Unich is launching a decentralized pre-market platform to allow investors to seize early trading opportunities for promising projects. Pre-Market Potential The crypto pre-market is attracting significant attention, with successful projects like Pudgy Penguins, Usual Protocol, Magic Eden, Ethena, and Hamster Kombat generating returns of 300%-400% for early investors. However, barriers like price volatility, lack of transparency, and high fees deter many from entering the market. Unichâ€™s Solution Unich developed a decentralized OTC (over-the-counter) platform that facilitates trading of tokens and Protocol Points for projects before their Token Generation Event (TGE). This ensures security, low fees, and transparency through smart contracts. The platform provides a seamless experience, from P2P trading to unique features like the Cashout Function and Bid Function. Mainnet Launch and Airdrop Unich will launch its Mainnet on December 30, 2024, with a \$500 million UN airdrop (50% of the total supply). Early participants can earn FD Points, redeemable for \$UN after the TGE. Their airdrop event has attracted over 1 million sign-ups, presenting an opportunity for early users to engage in platform trading. Donâ€™t miss the chance to participate in the Airdrop! Visit here What is Unich? Unich is an advanced blockchain platform optimized for the pre-market crypto trading experience. It allows investors to trade tokens before listings, featuring one-tap P2P trading, a Cashout Function, and a Bid Function. Beyond tokens, Unich supports trading of Points, convertible into tokens after TGE. Unich expands beyond an OTC platform, encompassing a pre-market, point-market, options OTC market, and integrations with AI, centralized exchanges (CEXs), and decentralized exchanges (DEXs). With strategic partnerships and substantial investments, Unich is building a Web2 and Web3 ecosystem, leading the pre-market space. Unich Highlights - P2P Trading: Unichâ€™s smart contract-powered P2P trading allows users to buy and sell tokens even before the TGE. This feature makes OTC trading for the pre-market secure, transparent, and cost-effective with near-zero slippage. - Easy Withdrawals with Cashout Function: Unichâ€™s unique Cashout Function avoids locking collateral throughout the trading process. Users can quickly exit positions and withdraw funds before the transaction is finalized, minimizing waiting periods or permanent asset lock-ups in case of project delays. - Professional Interface: The platform supports both mobile and web apps, allowing users to download and trade directly from their phones. The trading experience mimics leading CEX platforms on a decentralized platform, with instant â€œBuyâ€ and â€œSellâ€ transactions. - Easy Order Matching with Bid Function: Unichâ€™s Bid Function empowers users to proactively find trading partners and execute trades at desired prices. This system enables quick and optimized order matching, benefiting investors looking to capitalize on pre-market price fluctuations. Tokenomics and \$UN \$UN is Unichâ€™s native token, used for paying fees, staking rewards, and governance. With 50% of the total supply allocated to the community via the airdrop, Unich aims to maximize user value. - Ticker: \$UN - Total Supply: 1,000,000,000 \$UN - Network: Solana Token Distribution | Category | Allocation | Tokens | | Ecosystem | 23% | 230,000,000 | | Core Contributors | 20% | 200,000,000 | | Investors & Advisors | 7% | 70,000,000 | | Airdrop | 50% | 500,000,000 | Investors and Partners Unich raised \$2 million from angel investors. With over 30 strategic partners, including Kima Network, Gamic, Vemp Horizon, and EverReach Labs, Unich solidifies its leadership position in the pre-market space. Product Roadmap Following the Mainnet launch, Unich plans to expand features, including Options OTC Market, Freedom Market, AI integration, CEX and DEX integrations. Unichâ€™s testnet attracted over 1 million sign-ups and successfully hosted a \$20,000 Bug Bounty event. Unichâ€™s Commitment With the Mainnet launch, Unich promises collaborations with leading projects like Pump.fun, Backpack, Solayer, and Revenge, offering early trading opportunities to investors. Follow and Stay Updated Follow Unichâ€™s official channels for the latest updates. Visit the links below for more information: - Unich Website: <https://unich.com> - Unich Twitter (X): <https://x.com/unich.com> - Unich Analysis: <https://analysis.unich.com/vi/> - Unich Telegram Channel: <https://t.me/Unichcom> Disclaimer: TheNewsCrypto does not endorse any content on this page. - XLM has factored in a price increase of 12.86% in the last 30 days. - The altcoinâ€™s daily trading volume shows a significant 110.01% surge as per CMC data. The crypto market after several days has recorded a bullish momentum. Its overall market cap has surged by 1.06% with leading cryptocurrencies heading the upward momentum. Bitcoin reached its previous \$96K zone and other altcoins have factored in the hype. Meanwhile, one particular altcoin â€” Stellar has caught community attention with significant surges. Notably, XLM has factored in a 9.25% surge in the last 24 hours as bullish momentum intensifies. In the afternoon hours of January 14, the altcoin was trading at a low of \$0.4228 after which it fell downwards to an intra-day low of \$0.4155. However, it sparked bullish candles in the following hours and reached current trading levels. At the time of writing, XLM was trading at \$0.4664 as per CMC data. Moreover, Stellar has become one of the top players within the altcoin sector in the past month. Zooming out, onto its monthly chart, XLM shows a 12.86% surge in the past 30 days. It was trading at a low of \$0.4075 in the middle of December 2024. Over the course of the month, the altcoin tested a high of \$0.48 but failed to hold prices at the zone. Is XLM Inching Closer to its All-time High? When analyzing its technical indicators, XLMâ€™s Moving Average Convergence Divergence (MACD) signal line stands above the MACD line. The signal line shows a recent crossover suggesting the positive environment as per TradingView data. Additionally, the bull power indicator value stands at 3.65 while the bear power indicator value stands at -3.39 indicating the bulls striving to overpower the bears. If XLM manages to sustain this bullish hold it can be expected to inch closer to its all-time high zone â€” \$0.9. In doing so, it might also hit the \$0.8 level in the process. Meanwhile, other altcoins such as XRP and Solana have shown similar price movements in the past day.

- World Liberty Financial transferred \$61.4M of Ethereum in the last 24 hours. - The project clarified on X that the transfer is for treasury management and not token sales. World Liberty Financial, a crypto project supported by President-elect Donald Trump, has moved \$61.4 million worth of Ethereum in the past 24 hours. The data, provided by Arkham Intelligence, shows the funds transferred into several wallets, including Coinbase Prime. The project clarified these movements on X, stating that they were â€œroutineâ€ and part of treasury management. It further explained, â€œWeâ€™re reallocating assets to cover fees, expenses, and working capital requirements. This does not involve token sales but standard business operations to ensure a secure and efficient treasury.â€ World Liberty Financialâ€™s wallet previously held \$83 million in mid-December. As of now, the balance stands at \$16.7 million. Arkham data highlights that these transactions align with the projectâ€™s operational needs. Proactive Treasury Management In November, the project, an Aave fork linked to Trumpâ€™s associates, appointed Justin Sun as an advisor. Sun is the founder of Tron and has close ties to HTX, formerly Huobi. HTX invested \$30 million in World Liberty Financial, according to on-chain data. World Liberty Financial has gained attention for its high-profile backers and strategic partnerships. The recent Ethereum transfer underscores its focus on maintaining a robust treasury. Despite speculation, the project insists these actions are routine. This move reflects a growing trend of crypto projects optimizing their operations. By partnering with influential figures and securing significant investments, World Liberty Financial continues to make headlines in the crypto space. With treasury management in focus, the project aims to balance asset security and operational efficiency. The \$60 million Ethereum transfer showcases its proactive approach to crypto treasury operations. World Liberty Financial has yet to comment further on the transfer. However, its transparency on social media provides insight into its practices. The projectâ€™s strategic partnerships, including Justin Sunâ€™s advisory role, indicate its ambitions in the crypto ecosystem. Highlighted Crypto News Today Toshi is up 160% After Coinbase Asset Listing Announcement

- Coinbase asset listing included Toshi in its recent announcement. - Base memecoin Toshi price jumped over 160% today and reached a peak of \$0.0003662. The broader crypto market is still hesitating to resume the bull run that started in December 2024. While Bitcoin is trading at the \$96K price level, Ether is trading at \$3,220 range. However, altcoins such as XRP, Avalanche, Dogecoin, and Cardano are showing notable recovery

from recent price dips. Meanwhile, Toshi memecoin price is up by a whopping 130% in the past few hours. The TOSHI memecoin was launched on Base network, being named after Coinbase CEO Brian Armstrong pet cat and Bitcoin creator Satoshi Nakamoto. It finally broke its long-term downward price movement when its price spiked by over 160% earlier today. From trading in the price range of \$0.00014, Toshi price suddenly surged past \$0.00035 range. At press time, TOSHI is trading at \$0.0002404, with a 75% increase in the last 24 hours. While its market cap is \$98.26 million, 24-hour trading volume increased by more than 500%. After trading above the \$0.0035 price range in Nov and Dec 2024, this is the first time Toshi price surged again. Coinbase Asset Listing Included Toshi Memecoin Assets added to the roadmap today: Toshi (TOSHI) <https://t.co/rRB9d3HSr2> æ” Coinbase Assets ðŸ›i. (@CoinbaseAssets) January 14, 2025 Earlier today, Coinbase announced that Toshi will be added to its roadmap today. This created buzz around Toshi on social platforms such as X and drew significant attention to this cat-based memecoin. Within just a few minutes after the announcement, Toshi price witnessed a sharp price spike. Crypto investors and community members are perceiving this as a significant step for Toshi. Being one of the leading crypto exchanges, Coinbase asset listing is a crucial step for any crypto token to gain mass adoption. Toshi is the second Base-native memecoin to be listed on Coinbase exchange, as per Coinbase employee Rishi Prasad. Highlighted Crypto News Today:

- Bitcoin has recorded a modest price increase of 2.31% in the last 24 hours. - The cryptocurrency’s daily trading volume has dipped by 23.85% as per CMC data. The crypto community believes in everyday progress despite the market’s tendency for extremes. Thus members are rejoicing Bitcoin’s recent price increase that broke out of its resistance at \$94,000. It has resulted in a pivotal change in the altcoin sector, as tokens are grabbing at the opportunity of a positive momentum. Top players are expected to reinstate their bullish trends in case of sustaining the price increase. Notably, Bitcoin has experienced a modest 2.31% upward movement in price. In the morning hours of January 14, BTC was still combating its resistance at \$94,857. However, as the day progressed, it advanced into the \$95K zone and eventually to its current trading levels. According to CMC data, Bitcoin was trading at \$97,077 at the time of writing. Furthermore, the cryptocurrency briefly tested the \$97K level but briefly dropped back to the \$96K level. A few hours ago, its intra-day high was recorded as \$97,724.96. Zooming out, over the past week, the cryptocurrency shows a 0.38% increase after recent price surges. The past seven days saw BTC drop to a low of \$92K triggering speculations of a free fall below \$90,000. However, it began to progress upward over the past few days, particularly since Monday. Will Bitcoin Regain \$100K this Month? Analyzing its technical indicators, Bitcoin shows potential for further upward movements. Its Moving Average Convergence Divergence (MACD) signal line stands close to a crossover with the MACD line. Even in the case of modest increases, the crossover might occur. Additionally, the cryptocurrency’s Chaikin Money Flow (CMF) indicator value stands at 0.09 as per TradingView data. This suggests an increase in capital flow into the digital asset which further highlights incoming upward movements. In the case of a bull run, Bitcoin might encounter another resistance at \$98,745. Meanwhile, altcoins such as XRP and Solana have shown significant gains in the last 24 hours as per data aggregators’ recordings.

With established currencies like Dogecoin (DOGE) and Ripple (XRP exhibiting signs of revived activity, January 2025 is already heating up in the crypto market. Both coins are becoming more popular and attracting the curiosity of new and experienced traders. Though the hype around these assets is indisputable, astute investors are turning their attention to Rexas Finance (RXS), a rising star offering both thrill and long-term stability and large profits. Rexas Finance has become the æ”portfolio saveræ” and can provide unmatched expansion as DOGE and XRP are ready for a bullish surge. With its creative ecosystem and spectacular presale performance, RXS is opening a road map that might define investment in 2025. Dogecoin and Ripple’s Resurgence Dogecoin has often defied expectations. Its devoted community and celebrity sponsorships still drive its appeal, so it is usually a target during bull markets. Driven by conjecture and hope for the direction of the larger crypto market, DOGE is displaying symptoms of life as January develops. Likewise, Ripple is riding high on its recent legal triumphs, which have opened the road for XRP’s acceptance into world banking systems. As institutional interest rises and cross-border payments become increasingly important, XRP is set for significant increases in the following months. Although these coins promise, their paths are vulnerable to outside variables, including market mood and legislative changes. Rexas Finance is an enjoyable substitute for investors looking for a more substantial possibility with exponential potential. The Rise of Rexas Finance (RXS) Rexas Finance is a full-fledged blockchain ecosystem that transforms tokenization and distributed finance (DeFi), not just another cryptocurrency. In its 11th presale stage, RXS has sold 398 million tokens and raised an impressive \$36.2 million. Beginning at \$0.03, the presale price has risen to \$0.175æ”a roughly six-fold increaseæ”signifying great investor confidence and demand. Rexas Finance distinguishes itself by bridging the gap between blockchain technology and conventional finance. The technology allows for tokenizing actual assets, generating fresh liquidity and investment possibilities. Furthermore, its launchpad and token builder make it a necessary tool for companies wishing to enter the crypto market and developers. Why RXS is the Portfolio Saver While investing in Dogecoin or Ripple might provide quick profits, these coins carry hazards related to their dependency on outside events and market attitude. Conversely, Rexas Finance is a strong option for long-term investors since it is established on strong principles. RXS offers a sensible adoption strategy and the finest features of blockchain innovation: scalability, security, and value. Its Certik audit guarantees the platform’s dependability and its listings on CoinMarketCap and CoinGecko help demonstrate its legitimacy to the crypto community. Rexas Finance offers actual value, unlike meme coins, which can depend on hype. Offering tools for project development and tokenizing assets gives functionality appealing to a broad spectrum of consumers, from institutional players to retail investors. A 2025 Success Story in the Making The cryptocurrency market is not new regarding explosive increases; Rexas Finance is positioned to join the ranks of tokens with life-changing gains. As the network becomes popular, analysts estimate its price to approach levels similar to early Solana (SOL) or Ethereum (ETH) during their breakthrough phases. This offers investors a fantastic chance to participate on the ground level of a project likely to reshape the DeFi scene. The Strategic Choice for Savvy Investors While Dogecoin and Ripple make news, the true potential lies in spotting initiatives like Rexas Finance that combine creativity with clear advantages. As the crypto market develops, strong fundamentals and wide-ranging uses will outperform mood-driven assets. As the crypto market develops Rexas Finance provides the ideal mix of development potential and dependability for investors trying to protect their investments while optimizing profits. Its original method of asset tokenization and presale success set it apart for anyone hoping to profit from the bull market of 2025. Conclusion Though Rexas Finance is the asset that could change portfolios, January 2025 might see a comeback for Dogecoin and Ripple. More than just a cryptocurrency, RXS is a game-changer with its creative environment, established credibility, and excellent development potential. Investors looking for the next great opportunity would do well to have Rexas Finance at the foundation of their approach as the market heats up. Whether protecting your investments or creating riches, RXS provides a road to success that meme currencies and legacy tokens cannot match. New York City, United States, January 14th, 2025, Chainwire Purple Bitcoin (\$PBTC) is an emerging new token set to redefine the digital asset space. Built on the Solana blockchain, PBTC combines Bitcoin’s store-of-value principles with Solana’s cutting-edge blockchain advancements. Its deflationary design and community-focused approach provide a uniquely balanced offering within the cryptocurrency ecosystem. Purple Bitcoin distinguishes itself from emerging cryptocurrencies by offering immutable, irrevocable deflationary features, including: - Automated Token Burns: Reduces circulating supply with every transaction to enhance value. - Burn Halving Mechanism: Inspired by the Bitcoin halving event, PBTC incorporates a burn halving mechanism to provide adaptability and maintain alignment with evolving market dynamics - Capped Supply: A fixed maximum of 19,314,746 tokens ensures scarcity and underpins its value proposition. Additionally, Purple Bitcoin moves beyond traditional Solana meme tokens, often criticized for lacking trust, to provide investors with a stable asset thoughtfully designed for sustainable growth. A Transformative Era for Crypto Innovation PBTC’s emergence coincides with heightened public interest in cryptocurrencies, as discussions around digital assets gain prominence, with influential figures like President Donald Trump and Elon Musk championing digital assets as a cornerstone of financial innovation. Amid the new administration’s broader push to normalize cryptocurrency transactions, PBTC positions itself as a forward-looking solution aimed at redefining digital finance for a new generation. Built for the People, Run by the People Purple Bitcoin leverages Solana’s high-speed, eco-friendly blockchain to offer fast, low-cost transactions while ensuring scalability and sustainability. æ”Purple Bitcoin introduces an innovative approach to digital finance,æ” says a community leader from PBTC. æ”It’s built for us, by us, with a focus on sustainable growth, real utility and empowering owners through transparency.æ” With no reliance on mining and a strong foundation of community-driven value, PBTC is designed for sustainable growth and long-term investor confidence. Innovative Technologies and Marketing Strategies PBTC transforms community engagement with Purple Soltoshi, an AI ambassador inspired by Bitcoin’s creator, Satoshi Nakamoto. Powered by the advanced A16z AI framework, Purple Soltoshi fosters education, shares insights, and promotes technology adoption on platforms like X (formerly Twitter). Milestones and Growth Opportunities As Purple Bitcoin progresses, its roadmap outlines key milestones that reflect its transformative vision: - Deflationary Tokenomics: A capped supply of tokens governed by a robust smart contract. - Verified Listings: Achieved verified status on CoinGecko, Bifinance, and AscendEX platforms. - Community Wallet: Funded by member contributions to support marketing initiatives. - Autonomous AI Agent: Advances community engagement through AI-powered insights. - Deflationary Burn Mechanism: Reduces token supply and enhances value with every transaction. According to the team, the Purple Bitcoin community is dedicated to achieving one new exchange listing per week while strategically forming KOL partnerships to sustain PBTC’s momentum and growth. A Community of Participation PBTC’s community-focused approach encourages individuals to contribute in meaningful ways, leveraging their unique skills. Whether through creating brand assets, enhancing social media engagement, or supporting marketing efforts, the Purple Bitcoin community exemplifies collaboration and shared purpose. The Official Purple Bitcoin Telegram channel reflects this collaborative spirit, showcasing the integrity and professionalism that define this project. For more information on getting started with PBTC, users can refer to the How to Buy PBTC webpage for a step-by-step guide. About Purple Bitcoin (\$PBTC) Purple Bitcoin is a decentralized token built on the Solana blockchain, blending Bitcoin’s time-tested value principles with advanced blockchain technology and community-driven governance. With a limited supply, deflationary tokenomics, and a strong focus on innovation, PBTC delivers sustainable growth and real-world utility for the modern investor. Discover the potential and opportunities of KSD Miner Alex, a 33-year-old from Australia, had been working as a delivery driver for a local logistics company. Despite working long hours and navigating busy city traffic daily, Alex’s income barely covered his bills. He felt stuck, with little opportunity to improve his financial situation. However, Alex always had a keen interest in technology and finance, and he spent his spare time researching new opportunities in these fields.æ” In 2019, my coworkers and I went on a site visit to their company and I was impressed with their large scale mine, the friendly service of the staff, and the delicious coffee served. It was fantastic. The first choice for investment, KSD Miner Established in 2016 to build the world’s number one brand Sign up now to participate in free cloud mining. as the leading platform that will help you start earning \$931-\$41993 per day or more. One day, a friend mentioned the growing field of cryptocurrency mining and specifically introduced Alex to KSD Miner. Intrigued by the idea of passive income, Alex started reading more about cloud mining and how platforms like KSD Miner could help beginners get started without the need for expensive hardware or deep technical knowledge. With a small amount saved up, Alex decided to take a calculated risk. He initially invested \$50,000 into KSD Miner, attracted by the company’s focus on clean energy and ease of entry into the mining world. The initial investment paid off quicker than he expected; within just two months, Alex was able to recoup his initial investment. Encouraged by these results, he gradually increased his investments and continued to learn about the cryptocurrency market. The platform supports multiple payment methods including USDT-TRC20, BTC, ETH, LTC, USDC, BNB, USDT-ERC20, BCH, DOGE, SOL (Solana), XRP. Of course, I prefer to use BNB, which is convenient and fast. Three months have passed and Alex is now financially independent. Thanks to his smart investment in KSD Miner, he no longer has to worry about bills or financial constraints. Instead, he enjoys the freedom that comes with a steady passive income, which allows him to focus on the things he loves æ” spending time with his family, traveling, and exploring new hobbies. How Does KSD Miner Work? KSD Miner, as a promoter of cryptocurrency mining using clean energy, has gained significant attention in the digital currency field in recent years. Bitcoin mining is a fundamental aspect of this field, involving specialized mining equipment with immense computational power to solve cryptographic challenges. Offering rewards to miners, cloud mining allows users to participate in cryptocurrency mining by renting the

computational power of remote servers, thereby avoiding the high costs associated with traditional mining equipment and electricity. KSD Miner: Where laziness meets profit KSD Miner takes the simplicity of cloud mining to the highest level, making it perfect for newbies. The platform's user-friendly interface ensures that even cryptocurrency novices can navigate with ease. For KSD Miner, laziness is not a weakness; it's the path to success. As a pioneer in providing cloud mining services, KSD Miner has 100 mines around the world with more than 6.31 million mining machines, all powered by new renewable energy cycles, and has won the recognition and support of more than 8.53 million users with its stable income and security. Unimaginable Earning Opportunities What makes KSD Miner different is its extraordinary daily passive income, which provides the opportunity to earn \$931-\$41903 or more every day, allowing users to realize their dreams of getting rich online. Imagine earning a substantial income without constant effort or complex setup – that's what KSD Miner offers. Security and Sustainability In the world of mining, trust and security are crucial. KSD Miner knows this and puts the safety of users first. KSD Miner is committed to transparency and legality to ensure that your investment is protected and you can focus on profitability. All mines use clean energy, making cloud mining a carbon neutral. Renewable energy protects the environment from pollution and brings super value returns, allowing every investor to enjoy opportunities and benefits. Why Choose KSD Miner? KSD Miner utilizes clean energy to power its operations, drawing on renewable energy sources like wind, hydro, and solar to provide miners with a stable energy supply. It also employs the latest ASIC mining machines and GPU equipment, combined with extensive experience and competitive mining technology in cloud operations. Most of KSD Miner's funds are securely stored in offline cold wallets. Strong security measures like McAfee® SECURE and Cloudflare® SECURE are also in place for protection. KSD Miner's mining team consists of blockchain industry professionals and IT engineers, ensuring the team has the necessary expertise to meet user needs. Moreover, KSD Miner requires no personal hardware. It provides the computing power, and the platform handles the entire mining process. All you need to do is purchase a contract, sit back, and wait for your profits. Lastly, KSD Miner offers a professional customer service team available 24/7 to answer any of your questions. How to Use KSD Miner? - Sign Up: Fill in the form and get ready to start mining in under than 1 minute. - Choose Your Contracts: Choose one of the most profitable contracts and start cloud mining. - Start Earning: Withdraw your mining income on a daily basis to your crypto wallet. Select Mining Contract KSD Miner offers a variety of cloud mining contracts to get you started on your cryptocurrency mining journey with just one click. By purchasing one of our contracts, you can start earning a stable and reliable income without any of the traditional barriers of mining such as hardware costs or technical complexity. What You Will Get As An Affiliate Partner? Join our referral program (Partner Program) and earn up to 3% – 4.5% commission for life! Help your friends make money easily and benefit from our system. Share it with friends who want to make money, and they will thank you! - First, sign up for an account and get your own referral link/URL. - Next, invite new users by sharing your referral link via social media or your own website. You can advertise any way you like, and your referral link will always be active. When new users sign up using your referral link, you will receive a 3% bonus based on their initial investment amount. Run your business like a boss and start making money today! | Project Name | Amount | Day | Daily interest rate | Total revenue | | Daily Sign-in | \$10 | 1 | 0.6% | \$10.6 | | Experience Contract | \$100 | 2 | 4% | \$108 | | Classic Contract | \$500 | 7 | 1.30% | \$539 | | Classic Contract | \$3000 | 20 | 1.45% | \$3870 | | Advanced Contracts | \$5000 | 30 | 1.55% | \$7325 | | Advanced Contracts | \$10000 | 50 | 1.75% | \$19625 | Why Partner with KSD Miner? Partnering with KSD Miner not only allows you to earn commissions for referring new users, but it also helps to build a passive income stream. As your referrals continue to invest and grow, so does your commission. KSD Miner's affiliate program is a great opportunity for those looking to expand their income without any upfront costs or technical knowledge. With a professional team, cutting-edge technology, and reliable customer support, KSD Miner makes it easy to start earning from cryptocurrency mining today. Benefits of Choosing KSD Miner - Zero Hardware Requirements: Forget about expensive mining rigs and technical setups. KSD Miner provides all the hardware and computing power needed. - Daily Payouts: Experience the convenience of receiving mining rewards every day. You can withdraw earnings to your crypto wallet without delay. - Clean Energy Mining: KSD Miner prides itself on its commitment to sustainability. Using renewable energy sources makes our mining operations environmentally friendly. - Professional Support: Our support team is available 24/7 to assist with any questions or issues that might arise, ensuring your mining journey is smooth and successful. - Flexible Contracts: We offer a variety of contracts that can be tailored to suit both beginners and experienced miners. Whether you want to start small or go big, KSD Miner has a contract that fits your goals. With KSD Miner, anyone can get started with cryptocurrency mining without needing technical expertise. By combining advanced technology, green energy solutions, and comprehensive support, we make cloud mining accessible for everyone. Ready to Start Your Journey? KSD Miner APP gives you the tools you need to start earning today. Join thousands of users worldwide who are benefiting from our reliable, eco-friendly mining solutions. Whether you are looking to make a little extra income or become a serious investor, KSD Miner has the platform, the technology, and the support to help you achieve your financial goals. - XRP has factored in a notable price increase over the last few days as per reports. - The altcoin's daily trading volume surged by 46.60% as per CMC data. The crypto market in the past day has shown short-term bullish signs after days of price dips. While the leading cryptocurrency, BTC, hasn't shown much action, the same cannot be said for the altcoin sector. Several players have sparked bullish candles and recovered from past days' dips. Meanwhile, the US crypto regulatory sector has also caused waves in the market. On the other hand, one of the leading altcoins, XRP has factored in an additional 5.34% price increase in the last 24 hours. The cryptocurrency has reemerged to the \$2.55 level utilizing this current surge. In the afternoon hours of January 13, XRP was trading at \$2.41 after which it proceeded to fall to the \$2.3 level. However, it gained momentum later in the day to reach current trading levels. At the time of writing, XRP was trading at \$2.5708 as per CMC data. On Monday, XRP recorded a 10% surge and eventually took to the spotlight as bulls continued to gain momentum. Inferring its weekly chart suggests that the cryptocurrency has clocked in an equivalent 5.37% increase. Owing to multiple fluctuations during the past 7 days, the significant surges mentioned above were unable to propel prices further upwards. However, if XRP sustains the current trend, it can be expected to hit \$3. What to Expect for XRP Price in the Coming Days? On analyzing its price actions, XRP traces an ascending channel in concordance with its current bullish trends. The channel is an indication of forthcoming positive trends and thus it further corroborates the altcoin's upward momentum. Furthermore, Ripple's (XRP) Moving Average Convergence Divergence (MACD) signal line recently crossed over the MACD line. This suggests a positive trend in the altcoin. Finally, its bull power indicator value stands at 8.21 as per TradingView data. However, its bear power indicator value lies at -2.17 further confirming the bulls overpowering the bears. Finally, other altcoins such as Solana and Ethereum have shown price gains in the past day.

In the ever-evolving world of cryptocurrency, memecoins have emerged as a fascinating subculture, offering incredible gains for those brave enough to invest. From the explosive rise of Dogecoin to the meteoric success of Shiba Inu, memecoins have proven that, in the crypto market, the unpredictable can lead to extraordinary returns. As we look ahead, there's one new player in the game that has all the potential to deliver a jaw-dropping 1000x return on investment – HEADER. What is HEADER? HEADER is a fresh, Solana-based memecoin that combines the playful nature of memes with cutting-edge blockchain technology. Built on the Solana blockchain it is known for its fast transactions and low fees. What sets HEADER apart from other memecoins is its unique blend of humor, culture, and viral potential. With a chicken-themed branding, HEADER taps into the lighthearted spirit that drives the memecoin market. The coin's story began when a humorous talk between Elon Musk and Donald Trump about genetically engineered chickens for Mars went viral. Fans quickly turned this banter into memes, and thus HEADER was born. But it's not just about the memes – HEADER is designed to be more than just a meme token. It combines a fast and scalable blockchain with a vibrant, community-driven culture that has the potential to make it a force to be reckoned with. Why HEADER Has 1000x Potential Low Entry Price With Huge Growth Potential One of the most exciting aspects of HEADER is its low presale price. Priced at just 0.0000000075 SOL per token, the presale offers early investors an incredibly low entry point, making it easy for anyone to get involved. With a total supply of 1 trillion tokens, the potential for price appreciation is enormous, especially as the project gains momentum. The Power of Solana Blockchain Built on the Solana blockchain, HEADER benefits from the network's lightning-fast transaction speeds and minimal fees. This means that as HEADER grows, it can scale quickly without the bottlenecks or high transaction costs seen in other blockchain ecosystems. Solana's strong technical foundation gives HEADER an edge, ensuring a smooth and efficient experience for users and investors alike. Community-Driven Success Memecoins thrive on community engagement, and HEADER is no exception. The project has been designed with a strong emphasis on community involvement, ensuring that its supporters are actively shaping its future. HEADER's development team is continuously engaging with its audience, creating an ecosystem where users feel a sense of ownership and connection to the project. Celebrity Endorsements & Viral Culture Much like Dogecoin, HEADER is already attracting attention from celebrities and influencers. Speculation around celebrity endorsements and potential partnerships is fueling excitement around the token. As we've seen with other successful memecoins, celebrity endorsements can send prices soaring, and HEADER seems poised to capitalize on this viral aspect. Memes featuring high-profile figures like Trump and Musk are already circulating, generating buzz and anticipation for the coin's future. Innovative Tokenomics HEADER's tokenomics are designed with both growth and sustainability in mind. The token has a 0% tax structure, which sets it apart from many other tokens that charge high transaction fees. This encourages both frequent trading and long-term holding, helping to build a strong and active user base. Additionally, 40% of the total supply is allocated for the presale, ensuring that early adopters can grab a significant portion of the coin's supply at an affordable price. A Growing Market for Memecoins The memecoin market is more than just a passing trend – it's an established and growing niche within the cryptocurrency world. Memecoins have proven to be a fun and engaging way for investors to speculate, and HEADER is tapping into this trend at the perfect time. As more traders enter the memecoin space, HEADER is positioning itself to take full advantage of this surge, delivering the kind of excitement that drives massive gains. The Road Ahead for HEADER As the presale continues, HEADER is quickly gaining traction. The presale offers a rare chance to get in early on a project with massive upside potential. With its combination of viral culture, strong community involvement, and technical foundation on Solana, HEADER is positioned to capture the attention of both seasoned investors and newcomers to the crypto space. If HEADER continues to build momentum and gain exposure, there's no doubt that it has the potential to reach incredible heights. For those willing to take a risk on a promising memecoin with an engaging story and a vibrant community, HEADER could very well be the next token to deliver that coveted 1000x ROI. Conclusion In the unpredictable world of memecoins, HEADER stands out as one of the most exciting projects to watch. With its unique branding, fast transaction speeds, low fees, and strong community backing, HEADER has all the ingredients to make a massive impact in the memecoin space. As the presale heats up and more investors catch wind of its potential, HEADER is positioning itself to steal the spotlight in the crypto world – and with it, the chance for a 1000x return on investment. So, if you've been looking to ride the next big wave in memecoins, don't miss out on HEADER – it could be the game-changer you've been waiting for. Did you know that companies can revolutionize the crypto market? Metaplanet Inc. recently raised 9.5 billion yen, equivalent to \$61 million, to expand its Bitcoin holdings. Cryptocurrencies now act as both investments and hedges against financial instability. Metaplanet's approach may inspire more businesses to adopt crypto, potentially fueling the next crypto bull run. Experts highlight seven promising presales with high potential to attract corporate interest. Aureal One emerges as the best crypto presale and a top contender to become the next crypto to hit \$1. Aureal One's intuitive design and innovation in blockchain gaming and metaverse position it as a key player in the market. Such features make Aureal One the next crypto to hit \$1. Top 7 Best Crypto Presale - Aureal One (DLUME) - DexBoss (DEBO) - yPredict (YPRED) - Dreamcars (DCARS) - ShepskyAI (SEKY) - Dogesquared (DOGE2) - Solaxy (SOLX) Metaplanet Inc.'s \$61 million Bitcoin purchase highlights the rising appeal of cryptocurrencies as hedges against economic instability. This move reflects a broader trend of companies embracing crypto, potentially driving the next crypto to hit \$1. The featured coins in this article showcase immense potential to be the best crypto presale. These projects aim to disrupt traditional systems with affordability and significant growth potential. Read further to find which coin is the best crypto to buy now. Aureal One (DLUME) Aureal One is gaining attention in blockchain gaming and the metaverse. Its fast, low-cost platform solves current blockchain issues, offering a smooth experience for developers and players. The best crypto presale of 2025 includes Aureal One's DLUME token. It allows early investors to buy at a favorable price of \$0.0009 per token. As blockchain gaming expands, Aureal One's DarkLume metaverse and Clash of Tiles game stand out. For anyone searching for the next crypto to hit \$1, Aureal One's innovative ecosystem offers strong potential. Click here to know more about Aureal One Aureal One's growing community positions it well for the next crypto bull run. The demand for blockchain games and virtual

worlds continues to rise, boosting DLUME token adoption. Investors in the best crypto presale could see substantial gains as Aureal One develops further. With exciting plans for 2025 and beyond, Aureal One is set to lead the gaming and metaverse sectors, making it a promising investment opportunity for the long term. DexBoss (DEBO) DexBoss offers a promising opportunity for those seeking the best crypto presale with strong growth potential. Starting at just \$0.01, the presale increases in price, reaching \$0.15 at listing. Investors can buy tokens at a fraction of this price, positioning themselves for significant returns. The platform uses a deflationary buyback-and-burn mechanism, ensuring long-term value growth. With features like high-leverage trading, liquidity farming, and staking, DexBoss is set to attract a broad user base. As the next crypto bull run approaches, early investors could see returns of up to 15x. DexBoss is a utility-focused project with a clear roadmap and real value. The platform aims to simplify DeFi and attract the next billion users. \$DEBO powers the entire ecosystem, guaranteeing continuous demand. With a total supply of 1 billion tokens and a presale goal of \$50 million, DexBoss has strong tokenomics. Many investors are eager to know if \$DEBO will be the next crypto to hit \$1. As adoption grows, the platform is poised for significant price appreciation during the next crypto bull run. yPredict (YPRED) yPredict ranks as one of the best crypto presale projects, offering an AI-powered trading and research platform. It provides powerful predictive models to the cryptocurrency market, helping both traders and developers. yPredict uses machine learning for real-time signals, pattern recognition, and sentiment analysis. With a total supply of 100 million YPREd tokens, it supports staking for rewards and access to analytics. This unique structure boosts demand, making it a top pick for those eyeing the next crypto bull run. yPredict focuses on giving users a statistical edge in the growing world of algorithmic trading. Its predictive models and open marketplace for model creators enhance decision-making. Many now view YPREd as the next crypto to hit \$1, due to its innovative features and strong demand. With staking pools and DAO governance, yPredict fosters a sustainable ecosystem and offers long-term growth for token holders. Dreamcars (DCARS) Dreamcars introduces a unique crypto project that combines luxury car investments with blockchain technology. Investors can use \$DCARS tokens to own fractional shares of high-end vehicles, blending tangible assets with crypto investments. Earnings are paid in USDT, ensuring a secure and seamless experience for all participants. Dreamcars attracts both crypto and traditional investors, offering a straightforward model with monthly USDT payouts. By turning luxury cars into income-generating assets, Dreamcars presents a strong opportunity for passive income. This innovative approach could make Dreamcars one of the best crypto presale options, positioning it as a potential leader in the next crypto bull run. Investors see it as the next crypto to hit \$1 as the market evolves. ShepskyAI (SEKY) ShepskyAI combines AI and blockchain to engage crypto users with real-time insights and advanced tools. The platform offers an AI-driven chat assistant that helps users analyze performance and create custom trading strategies. ShepskyAI's presale runs from November 18, 2024, to February 18, 2025, positioning it as a key player in the next crypto bull run. The ecosystem includes staking for passive rewards and a governance model for token holders. Early investors in the \$SEKY presale can secure a low entry price with the potential for high returns. ShepskyAI is a strong contender for the next crypto to hit \$1, especially as it grows in anticipation of the next crypto bull run. Dogesquared (DOGE2) Dogesquared is gaining attention in the crypto market with its successful presale. Investors are excited about the next crypto to hit \$1, thanks to its unique features like governance rights and exclusive NFT drops. The project is building momentum and attracting early interest, positioning itself for major exchange listings. With strong community support and alignment with crypto trends, Dogesquared stands out in the best crypto presale category. Investors see it as a potential leader in the next crypto bull run. As the market heats up, Dogesquared could be one of the key players in the next crypto surge. Solaxy (SOLX) Solaxy is a new Solana Layer 2 token gaining attention in the best crypto presale market. It has raised \$3.5 million, showing solid growth potential. Market watchers see \$SOLX as a key asset for those aiming for the next crypto bull run. The token aims to improve Solana's scalability, addressing the blockchain's congestion and high transaction volumes. Experts predict Solaxy could be the next crypto to hit \$1, thanks to its multi-chain design. It combines Solana's speed with Ethereum's security and liquidity. This dual-chain approach makes Solaxy a standout in the competitive crypto space. With its presale success and strong tech foundation, Solaxy is a promising contender for investors eyeing the next crypto bull run. The Best Crypto Presale Metaplanet Inc.'s \$61 million Bitcoin purchase highlights growing confidence in cryptocurrencies as hedges against economic uncertainties. This trend could drive the next crypto to hit \$1 and create exciting opportunities in the market. Among the presales discussed, Aureal One stands out as the best crypto to buy now, thanks to its innovation and growth potential. Aureal One is transforming blockchain gaming and the metaverse with zero gas fees, lightning-fast transactions, and a robust ecosystem. Flagship projects like DarkLume Metaverse and Clash of Tiles amplify its appeal, offering immersive experiences for users. Investors should always conduct thorough research to make informed decisions.

Wilmington, Delaware, January 13th, 2025, Chainwire AI agents have rapidly gained attention in the cryptocurrency space in recent months. Following the rise of TruthTerminal as the first widely recognized AI agent, the agent-tracking platform cookie.fun currently monitors 996 active AI agents. However, Ahad, Founder of Moemate, projects that the number of AI agents will grow into the billions, with platforms like Moemate playing a central role in their development. While several multi-billion-dollar ecosystems such as ai16z and Virtuals have emerged over the past three months, these frameworks primarily target developers. Moemate differentiates itself by providing a platform where both technical and non-technical users can create highly capable AI agents. One such agent, Nebula (\$Moe), has gained significant recognition as an internet celebrity. Moemate enables anyone to create and operate sophisticated AI agents without technical expertise. Moemate agents feature advanced capabilities including the ability to see the screen or through the camera, cross-platform presence across X / Telegram / Discord, integration with AR/VR and video games, with ever-increasing on-chain and off-chain skills like trading and using other applications. The platform focuses on entertainment and media, allowing users to build engaging AI personalities and content, and for businesses to build on top of. The AI agents currently showcased in the market often face limitations, including a lack of contextual understanding and accessibility, as they generally require advanced technical expertise to develop. Moemate embodies our vision of a truly accessible AI agent ecosystem, said Chris, Co-Founder of Moemate. We're proud to have built and scaled a complete infrastructure that serves millions of users daily. The launch of \$MATES marks an exciting new chapter that will accelerate AI agent development and create opportunities for our vibrant community of creators and innovators. Moemate will revolutionize the future of media. Moemate provides tools for both non-technical creators and experienced developers to design AI agents capable of enhancing applications in entertainment, media, creativity, and productivity. These agents can function as virtual assistants, companions, and internet personalities, with features that include AR/VR interaction and gaming capabilities. Since launching in October 2023, Moemate has achieved: - 6 million+ users with 30+ minutes daily engagement - 500,000+ community-created agents - Recognition from TechCrunch and ai16z - Proven infrastructure for building and scaling AI agents The \$MATES token offers unique benefits: - Airdrops from all graduating agent tokens - Access to curated Moemate launches - Participation in the platform's growing AI agent ecosystem The team has also announced Agent Dojo in partnership with KIPprotocol and AethirCloud, which is going to be an incubator of Moemate's own flagship agents as well as agents created in partnerships with other projects. With the launch of the Agent Dojo, we will be focusing on launching more specialty agents with our partners, showcasing the complete capabilities of our infrastructure and expanding the boundaries of what these AI Agents can do. added Chris. \$Mates is launching on 14th Jan, on Solana, with a community launch. About Moemate Moemate is a platform designed to empower both technical and non-technical users to create and manage advanced AI agents. The platform offers tools for building AI-driven personalities capable of functioning across social platforms, AR/VR environments, and gaming ecosystems. With a focus on entertainment, media, and productivity applications, Moemate provides a scalable infrastructure for creators and businesses to develop innovative AI-powered experiences. Appendix: Thought piece on AI Agents from the Founder of Moemate Contact Dan Smith Moemate info@moemate.io

- The Solayer community sale is aimed at building a robust long-term connection between the developers and the over 230k Solayer users. - The Solayer Foundation will be dedicating the first \$LAYER public distribution to the Emerald Card holders soon. - The supported payment tokens for the community sales will include USDC and USDT on Solana, WIF, BONK, and SOL Solayer Protocol, a leading restaking network on the Solana (SOL) ecosystem, has postponed the highly anticipated community sale to ensure a fair distribution process. In partnership with Buidlapd, the Solayer protocol announced that the community sale has been moved from Monday, January 13, to Thursday, January 16, at 10:00 UTC. According to the announcement, the postponement of the Solayer Community Sale was crucial to protect the community from bot farming. Furthermore, Buidlapd received 15 times more registration for the community sale, thus triggering suspicions of bot activities to front-run genuine Solayer supporters. The Solayer team previously noted that the maximum amount for the upcoming community sale will be \$2k Top Reasons Why Solayer Community Sale is Solana's Holy Grail The Solana network has grown to a major Ethereum killer project, with a total value locked of over \$8.1 billion and a stablecoins market cap of nearly \$6 billion. With over 4.2 million active addresses in the past 24 hours, the Solana network has reached a point where scalable layer two protocols are crucial to its future growth prospects. Furthermore, Solana users have had to part with insane gas prices during peak usage as DeFi protocols fight for block space and transaction prioritization. As a result, the Solayer protocol was conceptualized to enable decentralized applications to enhance their performance on the Solana network and in turn reduce the associated costs by up to 50x. The Solayer ecosystem involves the restaking product, which involves the use of SOL or LSTs, and the delegation product. In a bid to ensure a scalable and decentralized future, the Solayer network has embarked on a journey to involve the community of more than 230k users in its public sale of the native token dubbed \$LAYER. The first public sale of the \$LAYER token will be done properly to be exclusive for our community members, the announcement noted. What Next The strategic launch of the Solayer Community sale will be crucial to the introduction of the Solayer Emerald Debit Card, a globally accessible metal card developed in collaboration with Visa Inc. (NYSE: V). The Solayer Emerald Debit Card will enable users to seamlessly spend their digital assets in global outlets. Additionally, the Solayer Emerald Debit Card will deliver the highest on-chain yields while still running on a fully non-custodial framework. The Solayer Foundation team opted to reward the participants of the upcoming community sales with eligibility for the Emerald Card.

The cryptocurrency market's buzzing with fresh innovations, and the competition to claim the spotlight is fierce. Investors are on the lookout for projects that not only promise growth but also tackle real-world issues. Among the contenders, Qubetics (\$TICS) has caught fire with its impressive presale stats, while Filecoin continues to redefine decentralized storage. And let's not forget Cosmos, the blockchain internet connecting siloed ecosystems. These top altcoins with 1000X potential aren't just making headlines; they're reshaping the crypto landscape. The common denominator? Each offers solutions that could propel blockchain technology into the future. Among this pack of trailblazers, Qubetics stands tall, addressing gaps that predecessors left behind. Its cutting-edge Non-Custodial Multi-Chain Wallet promises to transform how we interact with blockchain, ushering in a new era of user-centric digital finance. Let's dive into what makes these projects essential for any serious crypto portfolio. Qubetics (\$TICS): Leading the Charge with Its Non-Custodial Multi-Chain Wallet Qubetics isn't just another crypto project; it's a game-changer. With its Non-Custodial Multi-Chain Wallet feature, it's creating ripples across the blockchain world. This wallet offers seamless integration with multiple blockchain networks, empowering users to manage diverse digital assets without relying on centralized intermediaries. The wallet's beauty lies in its simplicity, security, and practicality, making crypto management as easy as scrolling through your favorite app. Imagine a freelance graphic designer working with clients across the globe. With Qubetics' wallet, they can effortlessly receive payments in Ethereum, convert them into stablecoins, or even dabble in Bitcoin—all without leaving the wallet. It's not just convenient; it's a complete financial ecosystem in your pocket. The partnership with SWFT Blockchain further amplifies Qubetics' impact. SWFT's robust cross-chain swap technology integrates flawlessly with the wallet, offering lightning-fast, low-cost token swaps. Whether it's businesses looking to streamline operations or individuals wanting more control over their assets, Qubetics is becoming a must-have tool. If the numbers are any indication, the market is taking notice. The ongoing presale is in its 17th stage, having already sold over 413 million tokens to more than 14,200 holders. The \$9.3 million raised so far isn't just a statistic; it's a statement. At \$0.0500 per token, Qubetics is poised to surge before the weekend when its price increases by 10%. It's no wonder this project is generating serious excitement. Filecoin: Redefining Decentralised Storage Filecoin has long been a cornerstone of decentralised storage solutions. In a world drowning in data, it offers a secure, efficient way to store files without the vulnerability of centralised systems. Think of it as the Airbnb of data storage, where unused space on devices across the world is put to work. Here's a practical example. A mid-sized business with sensitive client data can leverage Filecoin's network to ensure their files are safe, distributed, and accessible—all while saving costs. The decentralised nature of Filecoin eliminates single points of failure, making it far more resilient to cyberattacks. Developers, too, are reaping the benefits. Building DApps that require secure file storage becomes infinitely easier with Filecoin's APIs. It's not just about storage; it's about building trust in a decentralised future. The project's continuous updates and partnerships reflect its commitment to pushing the boundaries of what's possible. Whether it's through integration with blockchains like

Ethereum or enhancing user experience with tools for developers, Filecoin remains a favourite for those looking to invest in altcoins with 1000X potential. Cosmos: The Internet of Blockchains Cosmos is like the diplomat of the crypto world, bridging gaps between blockchain ecosystems that traditionally couldn't communicate. Its vision is simple yet powerful: enable blockchains to operate seamlessly together. Think of it as a universal translator for blockchain networks. Picture a scenario where a decentralised finance (DeFi) app on Ethereum needs to access the speed of Solana or the privacy features of Monero. Cosmos makes this possible through its Inter-Blockchain Communication (IBC) protocol. This innovation could be the missing puzzle piece for many developers aiming to create multi-chain applications. Cosmos's focus on scalability, interoperability, and user-centric design has earned it a spot among the top altcoins with 1000X potential. Its developer-friendly tools and vibrant ecosystem continue to attract talent and investment. For crypto enthusiasts and professionals alike, Cosmos is a project that's hard to overlook. What's the Deal with Non-Custodial Multi-Chain Wallets? Non-Custodial Multi-Chain Wallets like Qubetics are reshaping how we interact with crypto. Unlike traditional wallets, these give you full control of your private keys, ensuring only you have access to your funds. Combine that with the ability to operate across multiple blockchains, and you've got a powerhouse in your hands. Why is this important? Centralised wallets, while user-friendly, come with risks. Hacks and mismanagement have led to countless losses. Non-custodial wallets eliminate these vulnerabilities. Add multi-chain compatibility, and you're looking at the future of decentralised finance. For anyone who's juggled multiple wallets or struggled with cross-chain swaps, a non-custodial multi-chain wallet is a breath of fresh air. Whether you're a seasoned investor or a newcomer, tools like Qubetics wallet make crypto more accessible and secure for everyone. Conclusion: Embrace the Future of Crypto The world of cryptocurrency is evolving, and projects like Qubetics, Filecoin, and Cosmos are leading the charge. Whether it's through revolutionary wallet technology, decentralised storage solutions, or bridging blockchain ecosystems, these top altcoins with 1000X potential are reshaping the way we think about digital finance. Qubetics stands out not just for its innovation but also for its community's growing base of over 14,200 holders who believe in its vision. The presale's momentum, coupled with its cutting-edge features, makes it a compelling choice for anyone looking to join the next wave of blockchain evolution. Don't wait on the sidelines. Dive into the future of crypto with Qubetics, Filecoin, and Cosmos. These aren't just investments; they're opportunities to be part of something bigger. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. In the rapidly evolving blockchain industry, Lightchain AI is emerging as a transformative force, blending cutting-edge artificial intelligence with blockchain technology. With its presale raising over \$10.6 million at a price of \$0.00525, Lightchain AI is already making waves among investors and developers. Its groundbreaking approach is set to redefine how blockchain networks operate, making it one of the most talked-about projects of 2025. Bringing Intelligence to Blockchain with AI Integration At the heart of Lightchain AI's new idea is its skill to join smart thought into the blockchain world. Unlike normal systems, Lightchain AI helps builders make clever distributed apps (dApps) that use AI for quick choices and bettering things. Its smart structure lets for the doing of hard jobs like guessing trends, shared rules, and info-based tasks. This makes Lightchain AI a good pick for makers wanting to stretch the limits of block chain tech while solving real problems. Developer Tools That Unlock Innovation Lightchain AI prioritizes developers by offering an extensive suite of tools, including application programming interfaces (APIs) and software development kits (SDKs). These resources simplify the development process, enabling even less experienced developers to create scalable applications with ease. The platform also supports multi-chain compatibility, allowing projects to seamlessly interact with other blockchains. This interoperability addresses a significant limitation in the industry, opening new doors for cross-chain innovation and collaboration. For developers and businesses, these tools are invaluable in building efficient, scalable, and future-proof solutions. Decentralized Governance as a Catalyst Lightchain AI takes a unique approach with its community-driven governance model, making it stand out from Solana's more developer-focused strategy. This model puts inclusivity front and center, giving token holders a direct say in important decisions like network updates, partnerships, and the platform's overall direction. Thanks to a decentralized framework and quadratic voting, smaller stakeholders have a fair voice, while centralized control is kept in check. On top of that, community-driven initiatives like developer grants and public-funded AI projects are supported, encouraging innovation and collaboration. With this approach, Lightchain AI evolves alongside its community's shared goals, offering a more inclusive and collaborative alternative to Solana's centralized development style. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Did you overlook the opportunity to buy Solana at just one dollar? Those who took the chance turned their early moves into significant returns, though Solana's advanced Proof-of-History (PoH) approach also poses certain limitations. Kaspa, noted for its scalability, continues to gather interest with its stable pricing. Now, the focus is turning to BlockDAG (BDAG), a venture ready to exceed both in terms of performance and growth prospects. Built on an modern DAG-based system tailored for frequent transactions, BlockDAG promises unparalleled scalability and operational efficiency. As it prepares for its mainnet testing phase, BDAG emerges as a notable contender in the high-return crypto arena, with specialists foreseeing a bright future. BlockDAG: Next High-Return Crypto! For those who missed Solana's initial surge, BlockDAG presents a fresh opportunity. While Solana introduced rapidity and scalability to blockchain, it faces hurdles such as centralization and reliability. Here comes BlockDAG, merging blockchain with Directed Acyclic Graph (DAG) technology for superior scalability and endurance. Outperforming both Solana and Kaspa in transaction capacity, BlockDAG adeptly manages frequent transactions, retaining decentralization's ideal for applications in DeFi, NFTs, and gaming. Its mixed UTXO and account-based ledger system supports everything from basic transactions to intricate smart contracts. The ongoing success of BlockDAG's presale underlines its potential for high returns. Currently priced at \$0.0248 in its 27th batch, BlockDAG has amassed over \$180 million, distributing more than 17.8 billion BDAG. Early backers have realized an impressive 2380% return since its debut pricing of \$0.001, demonstrating robust demand and market trust. Anticipated to go live in 2025, the mainnet launch aims to broaden adoption through strategic partnerships and community initiatives. Experts maintain a positive outlook: if BDAG mirrors Solana's path, its value could hit between \$20 and \$30 in the next five years, propelled by increased institutional engagement and an expanding user base. For those searching for a crypto asset with strong fundamentals and high return potential, BlockDAG offers an enticing entry point to capitalize on before it reaches full maturity. Solana's Progress and Challenges in Blockchain Scalability Solana continues to demonstrate significant potential, with its Total Value Locked (TVL) in decentralized finance exceeding \$9.52 billion—a peak not seen in three years. This milestone underscores the robust engagement from both developers and users. Despite this, congestion remains an ongoing issue, leading to a growing reliance on layer 2 solutions for improved scalability. Currently trading at around \$215, Solana's market value is resilient, showing promise for future appreciation. Market experts anticipate it could surpass the \$300 mark, bolstered by rising activity in DeFi and a diverse network that includes pioneering AI initiatives such as Alchemist AI. Nevertheless, these scalability challenges render emerging alternatives like BlockDAG appealing for those seeking more efficient performance. Kaspa's Market Performance Amid Technological Updates Kaspa maintains its relevance in the crypto community, with a steady trading price of approximately \$0.121. Thanks to its advanced GHOSTDAG protocol, Kaspa supports simultaneous block processing and swift transaction speeds, establishing it as a formidable player in blockchain technology. This method enhances both scalability and security, attracting a larger following, further strengthened by recent improvements to the network. Forecasters believe Kaspa's valuation could climb if its adoption escalates, driven by its capability to efficiently manage large transaction volumes. The network's technological strides are commendable, yet its widespread acceptance is crucial for sustained growth. Given the industry's demand for high-performance, decentralized solutions, Kaspa is marked as a significant contender to observe closely in the coming year. Assessing the Future of Blockchain Technologies Solana's blockchain is pivotal in advancing DeFi, evidenced by unprecedented TVL figures, while continuing to evolve to address scalability issues. Meanwhile, the stability of Kaspa's price and the efficiency of its GHOSTDAG protocol showcase its capacity for rapid transaction processing, keeping it prominent among blockchain technologies. Nonetheless, with these networks encountering their own limits, BlockDAG emerges as an attractive option with its DAG-based structure and versatile ledger system. Having raised over \$180 million in its crypto presale and delivering a 2380% ROI, forecasts for BDAG reaching between \$5 and \$10 in the near future are increasingly plausible. Poised for its mainnet trial, BlockDAG is strategically positioned as a leader in the high ROI crypto arena, offering a sustainable and unique approach to the future of blockchain. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagNetworkOfficial> - Discord: <https://discord.gg/Q7BxgHMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Mango Markets faced a settlement with the SEC for selling unregistered tokens and paid a \$700,000 fine. - The platform was hit by a major exploit in 2022, losing over \$100 million, which further damaged its reputation. - After months of legal issues, Mango Markets decided to close, ending its operations in early 2025. Mango Markets, a decentralized exchange (DEX) on the Solana blockchain, is closing down after facing legal problems. Which is including a settlement with the US Securities and Exchange Commission (SEC). The platform was launched in August 2021 and was meant to provide fast and affordable trading and borrowing using its MNGO token. However, things took a turn when the SEC filed charges against Mango DAO, the platform's governing body, in September 2024. The SEC accused Mango of breaking securities laws by selling unregistered MNGO tokens during a fundraising round in 2021. Which raised over \$70 million. As part of the settlement, Mango agreed to pay a \$700,000 fine, get rid of its MNGO tokens. And have them taken off exchanges. This was a big hit to the platform, which had already been having trouble after a major hack in 2022. Mango Faces Legal and Financial Struggles In October 2022, Mango Markets was hit by a big exploit when trader Avraham Avia Eisenberg manipulated the price of MNGO and stole over \$100 million from the platform. Eisenberg returned \$67 million after a community vote, but kept \$40 million. This led to legal action, and Eisenberg was arrested and charged with fraud and market manipulation. His actions, along with the ongoing legal issues, caused a huge drop in user trust and the platform's value. Which went from \$210 million in November 2021 to just \$9 million by early 2025. The End of Mango Mar Mango Markets decided to close down after a proposal was passed to make borrowing and lending on the platform no longer possible. Everyone in the community agreed to the proposal, and it will take effect on January 13, 2025. The decision to shut down came after months of legal troubles, including the settlement with the SEC and other regulatory issues. The Mango DAO, which had been actively voting on the platform's future, decided to close the platform to avoid further complications. Many of Mango's contributors expressed a desire to move on from the ongoing legal battles and the financial decline. As the platform gets ready to shut down, it marks the end of a big project that had trouble dealing with the challenges of decentralized finance and increasing pressure from regulators. Highlighted Crypto News Today Can Hyperliquid (HYPE) Continue Its Uptrend Despite Consolidation?

The crypto space encourages innovation as new projects that change the market evolve every cycle. For instance, in 2021, SHIBA INU (SHIB) shocked the crypto space with an incredible surge, whereas Avalanche (AVAX) became the go-to blockchain for building scalable applications. In 2025, Rexas Finance (RXS) will be the next candidate, as it has an ecosystem that it uses to position itself among these top crypto leaders. Set to disrupt the DeFi market, Rexas Finance focuses on asset tokenization, DeFi, and community growth. This article explains why Rexas Finance could be the breakout token of 2025. Shiba Inu's Incredible Surge In 2021, SHIB rose by 11,200% in 37 days. Its success was largely driven by: - Community Hype: A passionate community built around meme culture. - Low Entry Cost: Fractional pricing that allowed small investors to buy billions of tokens. - Exchange Listings: Rapid adoption by major platforms like Binance and Coinbase. However, SHIB's reliance on hype rather than utility became one of its limitations. While efforts like ShibaSwap added value, SHIB struggled to sustain its momentum as more utility-driven projects entered the market. Avalanche: A Leader in Layer-1 Blockchains Avalanche (AVAX) sets itself apart by resolving the two main problems of every blockchain technological network: scalability and speed requirements. It included, among others: - Subnets: Tailored blockchains for niche applications. - High Throughput: Excellent performance – can process more than 4,500 transactions per second (TPS). - DeFi Adoption: Inclusion in the leading DeFi markets allows more liquidity and services. However, these strengths have a downside for AVAX because of stiff competition, especially with

Ethereum and Solana blockchains and many layer-1 protocols. It depends on DeFi, which is evolving with the market cycles. Rexas Finance (RXS): A Revolutionary Ecosystem Rexas Finance is a lot more than yet another digital currency; itâ€™s a whole new structure that takes tangible assets into the world of cryptocurrencies by converting them to tokens. The projectâ€™s unique utility, transparency, and inclusion features will likely make it competitive in 2025. Asset Tokenization: Merging Real World Assets with the Digital World With Rexas Finance, tokenizing physical items such as real estate, priceless artifacts, and jewelry is now possible. This was previously only available to institutional investors. All you need is the Rexas Token Builder. Following the simple step-by-step interface and raising tokens does not require coding skills, making it easier for everyone to use the blockchain system. Some of the main advantages are: - Shares in Property Funds: Individuals can stake equity in highly valued assets. - Increased Trading Volume: Tokenization improves the liquidity of the asset, creating new market opportunities. - Availability: With the help of blockchain technology, cross-border investments are made possible. A Strong Tokenomics Model RXS boasts a well-structured tokenomics model designed for sustainable growth. The total supply of 1 billion tokens is allocated to critical functions, including staking rewards (22.5%), liquidity (15%), and marketing (3%). The ongoing Stage 11 Presale is a testament to investor confidenceâ€™over 393 million tokens were sold, and \$35.55 million was raised, reflecting a 92.68% completion rate. DeFi Integration Rexas Finance includes a robust DeFi platform, Rexas DeFi, offering: - Multi-Chain Trading: Seamless swaps across multiple blockchain networks. - Yield Optimization: Through Rexas Treasury, users can earn compound interest on crypto deposits. These features cater to seasoned investors and newcomers, providing tools for diversified and profitable investments. Community Engagement and Rewards RXS mirrors SHIBâ€™s community-first approach but enhances it with tangible incentives. The \$1 Million Giveaway allows participants to win significant rewards, fostering loyalty and engagement. Additionally, governance features empower token holders to shape the projectâ€™s future. Why RXS Could Outpace SHIB and AVAX 1. Diversified Utility Unlike SHIB, which started as a meme coin, RXS is grounded in real-world applications. Its asset tokenization platform addresses a multi-trillion-dollar market, ensuring long-term relevance and demand. 2. Accessibility and Growth Potential Like SHIBâ€™s early appeal, RXSâ€™s presale offers affordability and significant growth potential. With analysts predicting a post-launch price of \$2-\$5, RXS could deliver returns exceeding 10x for presale participants. 3. Ecosystem Synergy RXS perfectly blends AVAXâ€™s scalable features and SHIBâ€™s community-based strength. Its ecosystem enables DeFi, NFTs, and real-world assets, which makes it a multi-dimensional and creative project. Conclusion: Rexas Finance â€™ The Next Big Thing Rexas Finance (RXS) redefines blockchain innovation with asset tokenization, DeFi tools, and a community-driven model. In Stage 11 of its presale, RXS offers tokens at \$0.175, with over \$35.55M raised. Positioned for 2025 growth, it rivals SHIB and AVAX as a potential breakout altcoin. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Cryptocurrency continues to shape the future of finance, offering investors a chance to diversify portfolios and explore groundbreaking technologies. Whether youâ€™re a seasoned trader or someone whoâ€™s just dipping a toe into crypto, finding the top coins to buy and hold for long term in January 2025 can be trickyâ€™but also incredibly rewarding. Among the endless sea of digital assets, three projects stand out: Qubetics (TICS), VeChain, and Quant. These cryptos are not only known for their unique approaches to blockchain but also for serving as alternative investments that could outpace traditional options. While VeChain and Quant are household names among crypto enthusiasts, Qubetics is catching serious attention, especially during its red-hot presale. Letâ€™s dive in and see what makes these coins the top choices for January 2025. Qubetics: A Rising Star Revolutionizing Interoperability Qubetics (TICS) is turning heads with its explosive presale milestones and groundbreaking focus on interoperability. Right now, the project is in its 16th presale stage, with more than 411 million TICS tokens sold to over 14,000 holders, raking in over \$9.2 million. At just \$0.0455 per token, this presale offers a golden opportunity for early birds. But act fastâ€™prices are set to jump by 10% at the weekend. So, whatâ€™s the big deal about interoperability? Imagine a world where different blockchain networks can work together seamlessly. Thatâ€™s the promise of Qubetics. Interoperability bridges the gaps between isolated ecosystems, enabling businesses, professionals, and individuals to interact across platforms without friction. For example, a logistics firm could sync its Ethereum-based supply chain with a Solana-powered inventory tracker. No middlemen. No headaches. This interoperability isnâ€™t just a techy buzzword; itâ€™s practical. Picture a freelancer in Mexico receiving instant payments in TICS from a client using a completely different blockchain. Or think about how hospitals could securely transfer patient data across varying systems to streamline healthcare. Qubetics is the solution the world has been waiting for, and its presale success speaks volumes about investor confidence. Analysts are already buzzing with predictions about TICSâ€™ potential. They project the token could hit \$0.25 by the presaleâ€™s end, translating to a whopping 448% ROI. And it doesnâ€™t stop thereâ€™estimates suggest TICS could climb as high as \$15 post-mainnet launch, delivering a jaw-dropping 32,816% ROI. If youâ€™re searching for top coins to buy and hold for long term in January 2025, Qubetics should be at the top of your list. VeChain: The Supply Chain Powerhouse VeChain (VET) is a veteran in the blockchain world and a go-to project for tackling supply chain inefficiencies. Founded in 2015, VeChain was built with one primary mission: to create transparency and trust across supply chains. And itâ€™s nailed it. From luxury brands combating counterfeiting to farmers ensuring organic certifications, VeChain has proven its worth time and again. Its dual-token modelâ€™VET for value transfer and VTHO for gas feesâ€™makes it a flexible and sustainable choice for businesses. By leveraging blockchainâ€™s immutable ledger, VeChain enables companies to track products from origin to destination. Think of it like a truth serum for supply chains. For instance, Walmart China has already adopted VeChainâ€™s technology to ensure food safety. Thatâ€™s a big deal, especially in an era where consumers demand accountability. But VeChain isnâ€™t just about business; itâ€™s a community favorite. With partnerships spanning industries from fashion to pharmaceuticals, VeChain has solidified itself as one of the top coins to buy and hold for long term in January 2025. Itâ€™s a staple in many portfolios because it offers something rare: proven utility. As investors look for alternatives to traditional stocks and bonds, VeChain provides a blockchain-based solution with real-world applications. Thatâ€™s why itâ€™s more than just a crypto; itâ€™s a movement toward accountability, sustainability, and innovation. Quant: The King of Overledger Technology Quant (QNT) is all about connecting the dots. While many blockchains aim to solve specific problems, Quantâ€™s Overledger technology takes a broader approach: uniting multiple networks under one roof. Think of Quant as the internet of blockchains, creating a seamless experience for users and developers. This interoperability-focused project is a pioneer in its field, making it a top contender for top coins to buy and hold for long term in January 2025. Its real-world applications are endless. For example, central banks can use Quant to roll out digital currencies without disrupting existing systems. Enterprises can integrate blockchain tech without a complete overhaul of their IT infrastructure. Quantâ€™s partnerships are another feather in its cap. The project has collaborated with heavyweights in finance and tech, proving its utility isnâ€™t just theoretical. Whether itâ€™s enabling cross-border payments or enhancing data security, Quant has carved a niche for itself in a competitive market. Investors are drawn to Quant because itâ€™s not just another blockchain; itâ€™s a bridge to the future. By focusing on interoperability and scalability, Quant has positioned itself as a key player in the crypto space. If youâ€™re serious about long-term gains, QNT deserves a spot in your portfolio. Conclusion: The Future Belongs to the Bold If youâ€™re on the hunt for top coins to buy and hold for long term in January 2025, Qubetics, VeChain, and Quant are three names you canâ€™t ignore. From Qubeticsâ€™ game-changing interoperability to VeChainâ€™s supply chain dominance and Quantâ€™s Overledger innovation, these projects offer a mix of proven utility and untapped potential. But the clockâ€™s ticking, especially for Qubetics. With its presale in full swing and TICS tokens priced at just \$0.0455, nowâ€™s the perfect time to get in before prices climb. Donâ€™t miss your chance to ride the wave of one of the most promising crypto projects of 2025. Ready to make your move? Visit Qubeticsâ€™ official website today and secure your TICS tokens before the next price surge. The future is here. Are you in? For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum (ETH) and Ripple (XRP) remain two of the most potent participants as the crypto market develops since they keep maturing. Investors and businesses have constantly been drawn to Ethereumâ€™s strong innovative contract features and Ripple, famed for its cross-border payment breakthroughs. But as the market prepares for a fresh bull cycle, Rexas Finance (RXS) is taking the front stage as a potential newcomer. With its creative tokenizing tools and utility-driven approach, RXS is likely to define the altcoins of 2025. Ethereum and Rippleâ€™s Growth Potential The improvements on Ethereum(ETH) should draw additional projects and developers, securing Ethereumâ€™s role as the preferred blockchain for innovation. Likewise, Ripple has been advancing the world financial scene. Notwithstanding legal obstacles, XRPâ€™s value in cross-border transactions has been well-known, particularly with Asian and Middle Eastern alliances. Financial institutions love it since it allows almost quick payments with low fees. For Ethereum and Ripple, these trends should propel a consistent price increase next year. The Rise of Rexas Finance Although Ethereum and Ripple are predicted to shine, Rexas Finance (RXS) is rising as the altcoin to keep an eye on in 2025. At around \$0.175 as of writing, RXS is using its unique qualities and expanding ecosystem to draw significant interest from investors. The platformâ€™s main attraction is its emphasis on real-world asset (RWA) tokenizing, a trend gathering steam as blockchain technology gets increasingly included in conventional sectors. Users of Rexas Finance can tokenize actual items, including intellectual property, goods, and real estate. In usually illiquid markets, this democratizes access to high-value investments and improves liquidity and openness. RXS is creating a niche that might alter crypto by closing the distance between blockchain technology and practical uses. Institutional Interest and Community Support The growing interest of institutional investors is one of the main reasons for RXSâ€™s development. According to reports, prominent participants in the crypto sceneâ€™including some who had formerly supported Ethereum and Solanaâ€™are now focusing on Rexas Finance. This change in attitude emphasizes the increasing acceptance of RXSâ€™s possible significant returns. Furthermore, the initiative has attracted great community support; during its 11th presale, over 394.2 million tokens were sold. Having secured \$35.6 million, RXS has shown that it can attract investor interest and create a strong ecosystem before its introduction. Its new listings on CoinMarketCap and CoinGecko confirm its reputation and guarantee a more significant market presence. A Breakout Year for RXS Rexas Finance is positioned to expand exponentially in 2025. Analysts estimate the token might exceed \$10 from its presale price, indicating a fantastic rise. The platform is a great candidate for outperforming even well-known cryptocurrencies like Ethereum and Ripple because of its creative elements and emphasis on practical uses. Moreover, the Certik audit of Rexas Finance guarantees that the project follows the best security guidelines, increasing investor trust. More users and developers expected from this emphasis on openness and dependability will help to generate demand for the RXS token even more. The Future of Crypto in 2025 Although Ethereum and Ripple will probably keep the front stage, the arrival of Rexas Finance marks a change in the market dynamics. Projects with straightforward use and real-world problem-solving ability should lead the next wave of acceptance as blockchain technology develops. With its creative approach to RWA tokenization and solid community support, Rexas Finance is especially positioned to become the standout altcoin of 2025. RXS presents an unmatched chance for anyone trying to profit from the approaching bull cycle. Rexas Finance could be the secret to releasing life-changing rewards the following year, given its modest starting price and excellent expansion possibility. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - ai16z climbed over 35% and recorded an intraday high of \$1.72. - Despite the price surge, technical indicators suggest the rally may be driven by speculation, not sustained growth. After a significant dip in the cryptocurrency market, the trend seems to have reversed slightly during Asian trading hours. Bitcoin has rebounded to around \$94K, inching closer to the \$95K mark. This movement has lifted leading altcoins such as XRP and ADA by approximately 1% to 4%. However, it was ai16z, a venture capital firm powered by AI agents, that led the pack, rising about 16% over the past 24 hours to top the gainers list. Today, the price of AI16Z surged from \$1.28 to an intraday high of \$1.72, reflecting a 35% increase. At the time of writing, AI16Z price stands at \$1.55 with a market cap of \$1.82 billion, placing it as the third-largest Solana-based memecoin. Additionally, the daily trading volume of this memecoin skyrocketed by 23%, reaching \$456 million. But it looks like the current bullish momentum for AI16Z may not

last long, as technical indicators suggest that the rally could be driven more by speculation rather than strong, sustained market interest. Bullish Momentum or Speculative Surge? Looking at the AT16Z/USD 4-hours chart, the stochastic value of 66, just above the neutral midpoint, signals bullish momentum, although it is approaching the overbought zone. On the other hand, the RSI reading of 47 indicates that the market is neither overbought nor oversold, but it slightly leans toward a bearish trend. To validate this, AI16Z is still trading below its 50-day exponential moving average (EMA) during Thursday's intraday session. A closer look at the BBPT indicator adding to the bearish outlook. It shows AI16Z's bull power at 2.58, but the bear power at -5.93 outweighs it, hinting at downward pressure. If the price fails to hold above the 50-day EMA, resistance could emerge near the previous peak just above the 20-day EMA. With current bearish signals from the BBPT and RSI, a retest of support levels near \$1.25 may be on the horizon. Highlighted Crypto News Today Whale Cashes Out \$4.61M in Profits as WIF Drops 10% to \$1.50

The cryptocurrency market is buzzing with opportunities, and investors are weighing their options between established coins like Dogecoin and rising stars like Lightchain AI. Lightchain AI, with its presale pricing LCAI tokens at \$0.00525 and over \$10 million already raised, is gaining momentum as a leader in decentralized AI innovation. Meanwhile, Dogecoin's strong community and mainstream appeal keep it in the spotlight. Other promising picks for today include SOL, MATIC, and FLOKI, each offering unique growth potential. Whether you prefer meme coins or cutting-edge technology, these five cryptos stand out as top choices for 2025. Dogecoin vs. Lightchain AI- Understanding Key Differences Dogecoin (DOGE) and Lightchain AI (LCAI) show different sides of the crypto world. Started in 2013 as a joke coin, Dogecoin has gained a big fan group and is mainly used for online buying and tipping. But it misses smart tech features and depends on a Proof of Work (PoW) way to agree, which brings up worries about how well it can grow and use energy. On the other hand, Lightchain AI combines smart thought with chain tech, bringing new ideas like the Proof of Smart (PoS) agreement plan that gives rewards to points for doing smart tasks, and the Smart Thought Virtual Place (STVP) for carrying out smart jobs on the chain. These changes let real-life uses happen in many fields including health care, money work, and delivery; making Lightchain AI a thinking ahead answer in a changing crypto world. While Dogecoin thrives on community engagement and meme culture, Lightchain AI focuses on technological innovation and practical utility, catering to different investor interests and use cases within the cryptocurrency market. 5 Top Cryptocurrencies for Today SOL (Solana) As one of the fastest-growing blockchain platforms, Solana has caught the crypto community's attention with its high-speed, low-cost transactions and advanced smart contract capabilities. With partnerships with leading companies like Chainlink and Serum DEX, Solana is poised for further growth and adoption in both DeFi and NFT markets. MATIC (Polygon) MATIC has emerged as a leading Layer 2 scaling solution for Ethereum, offering faster and cheaper transactions on its sidechain network. With over 650 decentralized apps (dApps) already deployed on MATIC, it presents a strong case for scalability in the crowded DeFi market. FLOKI (Floki Inu) Inspired by Dogecoin, FLOKI is a meme coin that has gained traction with its unique tokenomics and community-driven approach. While its use cases are yet to be fully realized, Floki Inu's market cap has seen significant growth since its launch in June 2021, making it an interesting pick for speculative investors. Lightchain AI (LCAI) Lightchain AI (LCAI) is an innovative blockchain platform that integrates artificial intelligence to enhance decentralized applications. Its unique features aim to revolutionize the crypto landscape by improving scalability, security, and efficiency. Currently in its presale phase, LCAI has garnered significant attention from investors and analysts, positioning it as a potential standout in the upcoming bull market. Analysts predict that Lightchain AI's price could experience significant growth, with some projections indicating a potential 20x increase, turning a \$500 investment into \$10,000 in a short period. Lightchain AI presents a unique opportunity for investors seeking both long-term growth potential and immediate gains. Dogecoin (DOGE) Despite its lack of advanced technology, Dogecoin's community-driven approach and mainstream appeal make it a top pick for those looking for short-term gains. Its price has seen significant fluctuations in recent months due to celebrity endorsements and social media hype surrounding the coin. While investing in Dogecoin comes with high risk due to its volatile nature, it remains a popular choice among traders and investors alike. Why Lightchain AI Outshines Competitors in Today's Market Lightchain AI introduces a groundbreaking approach to decentralization by integrating advanced cryptographic privacy measures like Zero-Knowledge Proofs, ensuring both scalability and compliance with global data regulations. The platform's emphasis on community-driven development stands out, empowering users to shape its evolution through decentralized governance models. Its roadmap features an Open-Source Innovation Hub set for August 2025, designed to attract global developers with resources and incentives. Additionally, its cross-chain integration, planned by June 2025, ensures interoperability with other blockchain networks, enabling seamless data sharing and collaboration. Unlike traditional projects, Lightchain AI prioritizes energy-efficient systems, optimizing its operations for lower energy consumption by October 2025 without compromising performance. Buy today and secure your stake in a dynamic, cutting-edge platform with limitless potential for growth and innovation. Join the Lightchain AI community and be part of the future of decentralized technology. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - UK Treasury amends law to exclude crypto staking from collective investment schemes. - The staking rules will take effect on January 31, 2025. The United Kingdom's Treasury has enacted a change in its regulation of cryptocurrency. It has announced the amendment to the Financial Services and Markets Act 2000 (FSMA) to exclude crypto staking from being classified as part of collective investment schemes (CIS). This rule will become effective on January 31, 2025. Besides, it reflects a changed UK position on how the blockchain validation process works. Also, providing transparency for the crypto community and crypto businesses operating in the UK. Under the new amendment, staking cryptocurrencies such as Ethereum (ETH) and Solana (SOL) will no longer be classified as collective investment schemes. Staking consists of securing tokens to participate in the validation of blockchain transactions. Along with receiving rewards, which will now classify as a blockchain validation process. Particularly, this resolves the long-standing uncertainty of whether staking activities should be treated as strictly regulated as they are in conventional, non-institutionalized pooled investment vehicles such as investment funds and exchange-traded funds (ETFs). In addition, the UK Treasury has also assured that staking of crypto assets with participants locking their assets in anticipation of use in transaction validation cannot be classified at the same regulatory tier as collective investment schemes. This illustrates that staking will be subject to much tighter regulatory control than investment funds, which the Financial Conduct Authority (FCA) exerts intensive controls over. According to Bill Hughes, a lawyer at Consensus, this adoption is a welcome event for the crypto world. Moreover, the blockchain's functionality is not an investment scheme, but an extension of cybersecurity. Collective Investment Schemes and The Regulatory Framework Collective investment schemes are set out in the UK as schemes under which parties invest to produce profit or income, including ETFs and funds. These schemes are subjected to rigorous regulation by the FCA. It ensures that regulators protect participants and authorize fund managers to comply with regulations. Furthermore, before entering a collective investment scheme, firms must register with the FCA and meet its strict requirements. Approved regulators continuously monitor compliance to ensure they maintain the standards. Highlighted Crypto News

As we approach Q1 2025, the cryptocurrency market is teeming with opportunities. Savvy investors are seeking out altcoins with the potential for 10x or greater returns. With innovation driving adoption and market momentum on the rise, here are the top five altcoins poised to deliver explosive gains in the coming months. Why Altcoins Are the Key to Massive Gains Different from the older coins, lots of altcoins are made with new traits, special uses, and solid base systems that can boost their rise. These traits make them really appealing to money makers hoping for big gains. Plus, altcoins seem to draw notice as new fads like decentralized finance DeFi, NFTs and block chain gaming keep on growing. The next items are set up to take advantage of these trends, giving investors a way to get into new tech and make big profits Top 5 Altcoins for 10X Gains As of January 2025, several altcoins demonstrate strong potential for significant growth, offering opportunities for substantial returns. Below are five promising contenders. Ethereum (ETH) As the foundation for decentralized applications (dApps) and smart contracts, Ethereum's transition to Ethereum 2.0 has greatly improved its scalability and energy efficiency. This solidifies its leadership in the DeFi and NFT sectors. Lightchain AI (LCAI) Lightchain AI is transforming the blockchain landscape by integrating artificial intelligence. Analysts project it as a potential 100x opportunity, making it a top altcoin to monitor in 2025. Its Artificial Intelligence Virtual Machine (AIVM) empowers developers to seamlessly integrate AI applications into blockchain ecosystems, making it a versatile solution for industries such as healthcare, finance, and logistics. Cardano (ADA) Renowned for its focus on sustainability and scalability, Cardano's research-driven development model has resulted in secure and reliable blockchain solutions. Its growing ecosystem and practical applications suggest considerable growth potential. Avalanche (AVAX) Known for its high throughput and low latency, Avalanche's innovative consensus protocol and expanding DeFi ecosystem position it as a competitive player in the blockchain sector. Chainlink (LINK) By bridging smart contracts with real-world data, Chainlink serves as a cornerstone within the DeFi space. Its established partnerships and essential functionality highlight its potential for continued growth. Investors are encouraged to perform thorough research and remain mindful of market volatility when evaluating these altcoins for potential investment opportunities. Why Lightchain AI Stands Out While all five altcoins present significant potential for returns, Lightchain AI stands out as a particularly compelling option due to its integration of artificial intelligence with blockchain technology. The Lightchain AI's roadmap outlines a clear path to growth, with milestones such as the testnet launch in January 2025 and the mainnet activation in March 2025. This structured plan demonstrates a commitment to innovation and scalability. Additionally, the price prediction is 2 to 3\$ in 2025, potentially making it a lucrative investment opportunity for those who believe in the potential of AI and blockchain integration. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - FET faces bearish patterns, risking a potential 40% price drop. - Bullish momentum hinges on overcoming \$1.71 resistance for upward movement. Fetch.ai (FET) has gained market attention recently, surging by 3% in the last 24 hours to trade at \$1.36, despite a 5% drop in trading volume. However, FET remains 21% lower than its value a month ago, reflecting challenges in maintaining momentum. On January 9, FET hit a nine-day low of \$1.258. Since testing the \$2 mark in December 2024, FET has struggled to replicate its early 2024 performance, when it soared to \$3.47 for the first time since its launch. The token's price was buoyed during that period by the Artificial Superintelligence Alliance merger with SingularityNET (AGIX) and Ocean Protocol (OCEAN). However, this collaboration did not result in sustained upward momentum. Moreover, technical indicators signal potential bearish movements. The Relative Strength Index (RSI) remains above oversold levels but has dipped below the midpoint, suggesting declining bullish sentiment. On the weekly chart, a bear flag pattern has formed, indicating a potential 40% drop to \$0.81 if critical support levels fail to hold. Additionally, a head-and-shoulders pattern on the daily chart raises concerns of further declines if the \$1.19 neckline is breached. Signs Of Bullish Recovery Despite these bearish patterns, there are signs of investor optimism. Data from CoinGlass shows a 92.5% surge in trading volume over the past day, with 80.23% of traders on Binance building long positions. Exchange outflows of \$1 million worth of FET tokens in the same period suggest accumulating interest, which typically creates upward momentum. Technical analysis highlights that FET recently broke out of a consolidation zone and retested the 200 Exponential Moving Average (EMA), indicating potential upside movement. With the RSI at 56, FET remains below the overbought zone, leaving room for growth. Should FET hold above \$1.40 and flip the \$1.71 resistance into support, it could rally to \$2.00, invalidating the bearish outlook. However, failure to sustain these levels could lead to significant declines. Investors remain watchful as market dynamics unfold. Highlighted News Of The Day Whale Cashes Out \$4.61M in Profits as WIF Drops 10% to \$1.50

- SUI is trading at \$5.10, having gained over 10%. - The altcoin is 5.13% below its all-time high. While the crypto market is stumbling to regain momentum from the bear trap, the altcoin, SUI, has recorded a notable gain of over 10.48%. With a constant uptrend in its trading pattern, will the asset attempt to achieve a new all-time high? SUI has managed to break through its crucial resistance levels at \$5.06 and \$5.10, inferring a potential upside correction. This surge of SUI might aim to potentially break the new ATH set a few days ago, which could stir the market sentiment. In the early hours, the asset began trading at \$4.59 and plunged toward the \$4.50 mark. Later, after the bullish correction, SUI jumped to a high of \$5.13. At the time of writing, it trades at \$5.10 with the asset's daily trading volume reaching \$2.26 billion. Besides, SUI has witnessed a 24-hour liquidation of \$7.54 million. On the other side, SUI has recorded a gain of over 18%. The asset began trading at \$4.31 and gradually mounted to hit its all-time high of \$5.35. The upward momentum of the altcoin was set in motion to last. Will SUI Sustain Its Upward

Trajectory? The four-hour trading pattern unveils SUI's recent rally, which might drive the asset closer to its all-time high. If the uptrend continues, the asset could test the nearby resistance at \$5.14. Extended gains could target a high. However, if the ongoing momentum weakens and a downtrend emerges, the SUI price might instantly plunge toward \$5.05. Should this level fail to hold, the asset could further drop to a low of \$4.94, acting as a crucial range for SUI. As SUI's Moving Average Convergence Divergence (MACD) line has crossed above the signal line, the asset's technical analysis reports an upside correction. This crossover also suggests potential buying opportunities. Moreover, the indicator that confirms the capital flow, the Chaikin Money Flow (CMF), is at 0.00. It indicates a neutral stance in the market's buying and selling pressures are balanced with no clear dominance. Meanwhile, the trading volume of SUI has increased by over 12.45%. In addition, the daily relative strength index (RSI) is positioned at 59.68, indicating moderate bullish momentum. This level might be a sign of a continued uptrend. The 24-hour frame of SUI displays the short-term 9-day MA below the long-term 21-day MA. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News

- The Senate Banking Committee, led by Senator Tim Scott, is creating its first crypto-focused subcommittee. - Pro-crypto Senator Cynthia Lummis is tentatively set to lead, pending a formal committee vote. The U.S. Senate Banking Committee is set to launch its first-ever subcommittee dedicated to digital assets. This move reflects the Senate's commitment to addressing the growing impact of cryptocurrency on the financial sector. Senator Cynthia Lummis (R-Wyo.), a staunch Bitcoin advocate, is expected to chair the panel pending a committee vote. The subcommittee's creation follows incoming Chair Tim Scott's (R-S.C.) promise to prioritize crypto legislation. He announced the idea during the Wyoming Blockchain Symposium in August, emphasizing the need for more hearings and faster legislative action. Scott's leadership aims to ensure the U.S. remains competitive in the digital asset economy. Pro-Crypto Leadership in Senate The subcommittee will include notable pro-crypto lawmakers such as Senator Bill Hagerty and newly elected Senator Bernie Moreno (R-Ohio). Both have expressed strong support for blockchain technology and cryptocurrency innovation. Moreno's election victory over outgoing Senator Sherrod Brown (D-Ohio), a vocal critic of crypto, signals a shift in the Senate's approach to digital asset regulation. Senator Lummis has long championed Bitcoin, calling it "a freedom money." She has proposed a strategic Bitcoin reserve for the U.S. and believes digital assets can enhance financial independence while hedging against inflation. Her leadership could shape a balanced regulatory framework to foster innovation and ensure market integrity. The Senate Banking Committee oversees critical financial regulators, including the SEC and FDIC. Outgoing Chair Sherrod Brown's stricter oversight stance contrasts with Scott's and Lummis's pro-innovation approach. The digital asset subcommittee's initial agenda will likely include holding hearings, engaging industry leaders, and advancing legislation. A committee vote is expected in the coming days to formalize the subcommittee's creation and leadership. If approved, it will set the stage for more focused and effective crypto legislation under Senator Lummis's guidance. Highlighted Crypto News Today Will Solana (SOL) Continue Its Downward Trend?

Kingstown, St. Vincent & the Grenadines, January 9th, 2025, Chainwire Halvin, a new meme coin project, today announced its marketing plan to boost its upcoming January 2025 presale, aiming to engage crypto enthusiasts across multiple channels. Set on the Solana blockchain and inspired by the nostalgic elements of Alvin & the Chipmunks, combining their whimsical charm with the revolutionary concept of Bitcoin halving. Halvin aims to combine the playful appeal of meme coins with functional features such as staking and structured tokenomics. Halvin is a community-focused crypto project that will launch its marketing campaign and presale in January 2025. The project aims to reach audiences worldwide through digital channels such as social media and newswire services. By outlining a clear roadmap, the team intends to inform potential holders about ongoing developments while raising awareness of the upcoming presale. Through this early phase, Halvin seeks to unite both seasoned crypto enthusiasts and newcomers by sharing its long-term vision and offering tokens at an introductory rate. The goal is to cultivate an active community, ensuring that everyone has equal access to updates, milestones, and the broader possibilities Halvin brings to the evolving cryptocurrency landscape. Marketing Plan Press Releases in Multiple Newswire Services Halvin will share official updates and milestones across leading global newswires to maintain transparency and keep readers informed of new developments. Ads on X Short, targeted ad campaigns will highlight Halvin's meme-inspired narrative, aiming to reach crypto-savvy audiences and engage potential token buyers. Email Marketing A major US-based email marketing firm has been contracted to distribute project updates, ensuring timely communication with interested subscribers throughout the presale period. Partners Hub Program Joining the Partners Hub Program (PHP). Through PHP, Halvin holders and the broader community access rewards, promotions, and perks from several projects within the program. Roadmap Highlights - January 2025: - Marketing Campaign Launch: Spreads awareness of Halvin's mission and token details. - Presale: Offers the first opportunity to buy Halvin tokens at an introductory rate. - February 2025: - Airdrop for Initial Holders: Rewards early supporters. - Staking Program: Provides ongoing incentives and fosters long-term engagement. Tokenomics - Ticker Symbol: HALVIN - Contract Address: AibmcpTsr9DeF2a9KqPFRFD5eWeJ3Y9Jw4ERVRBYjWuS - Blockchain: Solana - Total Supply: 21 trillion (21T) - Listing Price: \$0.0000002 - Presale: 40% of total supply - Airdrops: 20% of total supply - Staking Program: 20% of total supply - Liquidity and Listings: 20% of total supply These allocations aim to balance the project's early-stage momentum with its future potential liquidity, exchange listings, and community rewards. About Halvin Halvin is a meme coin that combines playful nostalgia with real-world crypto applications. Emphasizing fairness and engagement, it combines fun imagery, a supportive community, and a clear roadmap for growth. The crypto market often turns modest investments into substantial returns, especially with low-priced tokens poised for massive growth. Lightchain AI, Hedera (HBAR), and Algorand (ALGO) are three promising projects, currently priced in cents, that analysts predict could reach the \$1 mark. With Lightchain AI's presale raising \$9.7 million at \$0.004875, these cryptocurrencies offer investors the potential to see remarkable gains in the coming years. Hedera (HBAR) Revolution in Enterprise-Grade Solutions Hedera Hashgraph (HBAR) is changing business-level answers with its fast public network, made to fit the tough needs of today's firms. Its special Hashgraph agreement method lets quick, safe, and big transactions happen, handling more than 10 thousand transactions a second with end in seconds. In Q3 2024, a company called Hedera started the Asset Tokenization Studio (ATS), which is a free-to-use setup that makes it easier to turn real things into digital forms. ATS mixes rules and smart features, helping to turn things like homes and money tools into tokens. This new idea has drawn big companies, like DOVU for carbon credit tokens and Archax for money tools, showing Hedera's key part in the changing digital economy. With a rule setup led by big names such as Google and IBM Hedera makes sure of steadiness and clarity helping it stay on top in business blockchain fixes. Algorand (ALGO) Bridging Decentralization and Efficiency Algorand (ALGO) seamlessly integrates decentralization with efficiency, offering a robust blockchain platform for developers and enterprises. In March 2024, the launch of AlgoKit 2.0 introduced native Python support, enabling over 10 million Python developers to build applications on Algorand with ease. This enhancement simplifies the development process, broadening Algorand's appeal. Additionally, the October 2024 Algo Insights Report highlighted a 136% month-over-month increase in new asset creation, with 1,185,205 assets introduced, driven by real-world applications like TravelX's NFT tickets. These developments underscore Algorand's commitment to scalability, security, and developer accessibility, solidifying its position as a leading blockchain platform. Lightchain AI Simplifying Blockchain Integration Lightchain AI is gaining traction as a project dedicated to making blockchain adoption accessible and seamless. Its focus on creating simplified integration frameworks and fostering community engagement positions it as an ideal choice for businesses and developers. By removing traditional barriers to entry, Lightchain AI ensures its ecosystem remains inclusive and adaptable to diverse needs. Additionally, Lightchain AI is designed to address challenges in scalability and accessibility, making it a standout project in the crypto space. Its innovative tools and user-centric approach have captured investor attention, suggesting it could follow in the footsteps of other breakout tokens, delivering substantial returns post-launch. <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Bloccscale, The first IDO launchpad built on the XRP Ledger, has officially announced the launch of \$BLOC Token Private Sale to early investors, opening doors to a new era of fundraising and asset tokenization. The private sale for \$BLOC, the governance and utility token of the Bloccscale ecosystem, kicks off on the 8th of January 2025, marking a significant milestone for the XRP ecosystem. How Bloccscale Launchpad is Addressing XRP's Long-Standing Challenges Over the years, blockchains like Ethereum, Binance Smart Chain, and Solana have onboarded thousands of projects and unlocked billions in capital through their launchpad ecosystems. Meanwhile, the XRP Ledger, despite its superior scalability, low fees, and fast transaction speeds, has lacked a launchpad to attract and support new projects. Despite being one of the top cryptocurrencies by market capitalization, ranking at number three behind Bitcoin and Ethereum, XRP has faced limited adoption by developers and projects due to the absence of a launchpad to simplify fundraising and provide liquidity to support projects. Bloccscale Launchpad with the launch of \$BLOC Token Private sale is here to change that narrative by providing the XRP ecosystem with an IDO Launchpad that simplifies capital raising, enables asset tokenization, and fuels growth opportunities. Key features of Bloccscale Launchpad; No Tier Systems - Equal access to fundraising opportunities without barriers. Automated Trustlines - Simplified trustline setup for investors and XRP community to participate in token sales securely. Instant Liquidity on Exchanges - 40% of funds raised on Bloccscale Launchpad are allocated to DEX liquidity pools, ensuring smooth trading and stability post-sale. Marketing and Growth Support - Projects launched on Bloccscale launchpad gain exposure through Bloccscale's network of top influencers and big crypto media. Be Part of XRP's Next Growth Chapter, Join \$BLOC Private Sale Round. The Utility of \$BLOC Token 1. Governance Utility \$BLOC is the governance token of the Bloccscale ecosystem, allowing holders to have a direct say in the launchpad's growth and direction. Proposal Voting: \$BLOC holders will vote on future proposals, including: - Which projects to list and launch. - Platform upgrades and feature rollouts. - The development roadmap for Bloccscale ecosystem. This ensures that Bloccscale is community-driven, giving power to its token holders. 2. Fundraising Utility \$BLOC also plays a vital role in Bloccscale's fundraising process: - Raising Capital in \$BLOC: Projects launching on Bloccscale Launchpad can raise funds directly in \$BLOC tokens at a subsidized rate, encouraging adoption and liquidity. - Market Demand for \$BLOC: Investors purchase \$BLOC tokens from the open market to participate in sale rounds, driving demand and liquidity. - Exclusive Access: Holding \$BLOC provides priority access to high-potential projects and exclusive offerings. This dual utility establishes \$BLOC as the core fuel of the Bloccscale ecosystem, ensuring its long-term value and sustainability. PURCHASE \$BLOC TOKEN ON PRIVATE SALE Unlocking Capital and Innovation Bloccscale is more than just a launchpad, it's a growth engine for XRP Ledger. By onboarding thousands of projects and unlocking billions in capital, Bloccscale aims to: - Attract developers and businesses to XRP Ledger. - Enable real-world asset tokenization, including real estate, equity, and revenue shares. - Support fractional ownership models to drive global investor participation. Interested investors can visit the \$BLOC Token Private sale portal to participate in \$BLOC Private Sale Round here: <https://www.bloccscale.com/bloccsale> How To Participate in \$BLOC Token Private Sale Bloccscale has made it easy for investors to participate in the \$BLOC private sale. - Purchase XRP from exchanges like Binance, Coinbase, or Bitstamp, and send it to XRP native wallets like XAMAN or FirstLedger. - Visit \$BLOC Private Sale Portal: Head to \$BLOC Private Sale Portal to purchase \$BLOC tokens. Stay Connected With Bloccscale Launchpad; - Website: <https://www.bloccscale.com> - \$BLOC Private Sale Portal: <https://www.bloccscale.com/bloccsale> - X: <https://x.com/bloccscalex> - Telegram: <https://t.me/bloccscale> - Whitepaper: <https://bloccscale-launchpad.gitbook.io/bloccscale> Disclaimer: TheNewsCrypto does not endorse any content on this page. The Solana price analysis reveals a significant 21% decline over the previous month, underscoring its recent difficulties. Conversely, Ethereum ETFs are attracting substantial capital, with a notable \$349 million in recent inflows, despite overall price declines. Meanwhile, BlockDAG (BDAG) is creating significant buzz with its new Refer & Earn USDT system, igniting massive interest within the crypto community. This initiative, which provides users with instant USDT cashbacks, has propelled the presale figures beyond \$176.5 million. The daily influx of new participants highlights the widespread enthusiasm BlockDAG has generated. As the market unfolds, these three cryptocurrencies—Solana, Ethereum, and

BlockDAG's are contending for the title of the best crypto project in 2025. Let's delve deeper to determine the frontrunner. Solana Price Analysis: Stability Remains Elusive Solana price analysis suggests ongoing struggles, as its value has dipped by 21% over the last month, continuing to show bearish trends. The BBTrend's neutral rating of 0.18 implies that the market has not settled on a clear direction for Solana's price. Further analysis indicates that Solana's EMA lines are entrenched in a bearish formation. The short-term EMAs lag behind the longer-term EMAs, suggesting persistent selling pressure. Currently, the support level is pegged at \$182, with resistance near \$201. This paints a picture of Solana moving within a defined range, lacking substantial momentum in either direction. Ethereum ETFs Demonstrate Endurance Amid Price Volatility Ethereum ETFs are displaying exceptional endurance amidst a general downturn in Ethereum prices, which have dropped over 20% this month. SoSoValue Research reports a significant \$349.17 million in net weekly inflows from December 23 to 27, 2024, with ETHA and FETH leading with \$181.82 million and \$160.33 million, respectively. This demonstrates sustained investor interest despite the market dip. Even with the price decline, the robust inflow of funds into Ethereum ETFs over consecutive trading sessions, totaling assets of \$12.11 billion and a trading volume of \$1.47 billion, underscores confidence in Ethereum's underlying value and its pivotal role in blockchain innovation and decentralized finance. BlockDAG's Refer & Earn System: A Prime Opportunity? BlockDAG's new Refer and Earn USDT program is causing quite a buzz, making BDAG as the best crypto project in 2025. This innovative program allows users to instantly receive cashback in USDT (BEP-20) for referring others. When someone uses your referral link, you get a 6% cashback on their first purchase, and the cashback can increase to 10% if they make multiple purchases within 24 hours. Not just referrers, but buyers too benefit by getting a steady 6% cashback on each transaction. The system is straightforward yet rewarding. Sharing your referral link kicks off your earnings at 6% cashback for the initial purchase made through your link. More purchases within 24 hours mean higher rewards, with up to 10% cashback after the fifth purchase, maximizing what you can earn. Participants consistently get a 6% cashback on every transaction, which is a great deal for everyone. Rewards are instantly transferred to wallets that support BEP-20 USDT tokens, providing a smooth experience. This enticing offer has significantly boosted interest in BDAG coins, with presales soaring past \$176.5 million. Now is an ideal time to buy, with BDAG coins priced at just \$0.0248 batch 27. Be quick, though! Prices are expected to climb rapidly, and predictions suggest BDAG could hit \$1 this year. Don't miss out on this potentially lucrative opportunity. Which Is the Best Crypto Project in 2025? While Solana price analysis demonstrates ongoing challenges with a notable 21% drop, Ethereum ETFs maintain robust inflows, signaling strong investor confidence in Ethereum's future prospects. However, BlockDAG is fast emerging as the best crypto project for 2025, thanks to its innovative Refer & Earn system, which has already driven presale totals to over \$176.5 million. With the BDAG coin's value potentially reaching \$1 this year, overlooking this opportunity could mean missing out on one of the market's most promising prospects. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagNetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. Dogecoin (DOGE), Solana (SOL), and BlockDAG (BDAG) are breaking new ground in the cryptocurrency market with their recent developments and promising price predictions. The Dogecoin price prediction suggests potential growth as its Relative Strength Index (RSI) dips to 61.84, indicating more room for upward movement. Meanwhile, a recent Solana price analysis hints that SOL is set for a breakout, with analysts optimistic about the approval of its ETF in 2025. Finally, BlockDAG, a leading presale crypto priced at \$0.0248 in batch 27, is predicted to reach \$1 in 2025. This prediction stems from BlockDAG's \$176.5 million presale success and a 2,380% price surge since batch 1. BlockDAG's long-term forecasts, on the other hand, hint at a \$30 coin valuation by 2030. Let's examine what these three top projects bring to the table and find out which is the best crypto to buy now. Solana Price Analysis: Will SOL Cross \$330 This Year? Solana's price analysis shows strong potential for a breakout as it trades above \$200. Analysts are increasingly optimistic about the approval of a Solana ETF in 2025, with VanEck's Matthew Sigel suggesting chances are higher than the 84% forecast. Solana ETF applications are pending from top asset managers, with critical deadlines approaching. Technical analysis indicates SOL/USD shows momentum, with support at \$198.40, resistance at \$209.18, and key price targets of \$220.91 and \$264.39. Experts predict Solana could reach \$330 by 2025, backed by growing institutional interest and solid network performance. However, regulatory challenges and resistance levels could impact SOL's long-term growth. Dogecoin Price Prediction: Can DOGE Hit \$1 This Year? Dogecoin's price has shown significant growth recently, with its RSI dropping to 61.84 after previously hitting overbought levels. The recent Dogecoin price prediction suggests that historically, similar RSI retracements have led to substantial price increases, as seen in the 2017 and 2021 cycles. Analysts suggest that Dogecoin is nearing the end of a wave 2, signaling potential for further growth. Rising whale accumulation further boosts DOGE's market confidence. Currently priced at \$0.3881, DOGE's recovery and increased trading volume indicate renewed interest. Dogecoin's price prediction also hints that the coin could hit \$1 in the foreseeable future, depending on market conditions. BlockDAG's Bullish Forecast: BDAG to Hit \$1 in 2025 & \$30 by 2030 BlockDAG is an up-and-coming layer-1 blockchain giant, stirring up the cryptocurrency market with strong price predictions for both the short and long term. The project boasts the largest crypto presale the market has seen in recent history, with total revenue surpassing \$176.5 million. The price of the BDAG coin has also surged by 2,380%, rising from just \$0.001 in batch 1 to \$0.0248 in the ongoing batch 27, sparking extensive buyer optimism. With this progress, experts predict BlockDAG could reach \$1 this year, driven by increasing adoption and growing demand for its scalable, decentralized solutions. The long-term growth potential for BlockDAG is even more exciting. By 2027, some analysts forecast BDAG's price could soar to \$20, with the network's expanding ecosystem and rising utility supporting this upward swing. By 2030, BlockDAG is expected to reach \$30. What distinguishes BlockDAG apart is its exceptional directed acyclic graph (DAG) technology, which offers enhanced scalability and faster transaction speeds compared to traditional blockchain models. Additionally, the project's active community engagement and ongoing technological developments further strengthen its predicted bull run. With these factors combined, BlockDAG is set for notable growth, emerging as the best crypto to buy now for explosive long-term gains. Which Is The Best Crypto to Buy Now? In conclusion, the future looks promising for BlockDAG, Dogecoin, and Solana, with each showing unique growth potential. The \$1 Dogecoin price prediction is gaining traction as whale activity increases. However, reaching this milestone will largely depend on broader market conditions. In contrast, Solana's price analysis predicts a potential breakout towards \$330 in 2025, signaling solid progress. Meanwhile, BlockDAG pulls focus on its exceptional technology and a highly successful \$176.5 million crypto presale, bringing its \$1 by 2025 forecast closer to reality. With its scalability advantages and solid community backing, BlockDAG is primed to not only reach this target but continue its ascent to \$30 by 2030. As the year unfolds, BlockDAG presents an enticing opportunity, securing its position as one of the best cryptos to buy now for long-term gains. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagNetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin's price dropped 6.05% to \$94,661, with a \$1.87T market cap. - \$700M liquidations occurred, driven by an oversold RSI at 33.77. Bitcoin has dropped below \$95,000, down 6.05% in 24 hours. The current price sits at \$94,661.27, while the market cap has fallen to \$1.87 trillion. Trading volume surged by 38.90% to \$67.21 billion, reflecting heightened activity amid the selloff. Bitcoin's market cap ratio remains at 3.52%, with a total supply of 19.8 million BTC in circulation. Spot Bitcoin ETFs recorded inflows of \$52.39 million on January 7. BlackRock's IBIT led with \$596 million in net inflows. The combined net asset value of all Bitcoin spot ETFs stands at \$110.12 billion. Despite the selloff, institutional demand for ETFs indicates confidence in Bitcoin's long-term potential. Over \$700 million was liquidated in the past 24 hours, intensifying the selloff. Traders remain cautious as Bitcoin's hourly RSI hits its most oversold level since the \$60,000 mark. This data suggests that bearish sentiment dominates the current market environment. Will BTC Plunge Further? Bitcoin faces significant resistance at \$98,000. A breakout above this level could trigger a rally toward \$100,000. On the downside, support lies at \$92,000. Breaching this level might accelerate the decline to \$90,000. The 4-hour RSI (Relative Strength Index) stands at 33.77, suggesting oversold conditions. The RSI average of 57.42 confirms the bearish momentum. Chaikin Money Flow (CMF) at -0.14 reflects weak buying pressure in the market. These indicators highlight short-term selling dominance. Moving averages also signal caution. The price recently crossed below the 50-period moving average, implying potential further downside. However, a bullish crossover between the 20-period and 50-period moving averages could shift momentum if it occurs. Bitcoin's trajectory depends on its ability to hold above key support levels. A recovery above \$98,000 could restore confidence and attract new buyers. However, breaking below \$92,000 may push prices lower. Investors should monitor ETF inflows and moving averages for future direction. Highlighted Crypto News Today Can Solana (SOL) Find Its Footing After the Recent Setback?

The cryptocurrency world is full of activity as MTAUR, SOL, and XRP take the spotlight this January. From MTAUR's record-breaking presale to Solana news about new partnerships, and XRP Ripple raising questions about Trump's connections, these coins are at the center of attention. This article explains how these updates could affect markets and why each project stands out. MTAUR's Presale Surge Are you ready to dive into the world of Minotaurus (MTAUR)? The presale is in full swing, with over 1,165,000 USDТ recorded in token sales and counting! The current token price is 0.0008129 USDТ, giving you a 59% saving compared to the listing price of 0.0020 USDТ. If you were savvy enough to join at the starting price of 0.00004 USDТ, you've already seen a fantastic 103.23% growth. MTAUR is more than just a token—it's your ticket to a thrilling gaming experience. In the Minotaurus game, players use tokens to unlock exclusive features and get an edge in the competition. And for holders, the perks don't end there. The referral program allows you to receive bonuses alongside your friends, while the vesting program benefits those who commit for the long haul. The presale isn't just about building momentum; it's also packed with excitement. The 100,000 USDТ giveaway gives participants a chance to win big, with 50,000 USDТ in MTAUR going to one lucky winner. With solid audits from industry leaders like SolidProof and Coinsult, Minotaurus offers trust and transparency. The gaming market, valued at \$14.78 billion, is growing at a rapid 9% annually, and MTAUR is perfectly positioned to ride this wave. With balanced tokenomics and mechanisms to stabilize supply and demand, Minotaurus is built for long-term success. But time is of the essence. As tokens sell out and prices rise with each stage, your chance to grab MTAUR at this price is slipping away. Join the presale today and secure your spot in this exciting project! Solana's New Partnerships Recent Solana news announced that Solstrategies, a company listed in Canada, plans to buy CAD 25 million worth of Solana crypto. This deal, valued at USD 17.45 million, shows rising trust from institutions in the network. Solana's partnerships continue to expand its use and keep it a top choice for decentralized apps (dApps). One major strength of Solana is its ability to handle many transactions at a low cost. The network can process over 65,000 transactions per second (TPS), which is far more than many others. The Solstrategies partnership is expected to increase Solana wallet activity and bring more attention to Solana coin in 2025. This move also makes Solana a key link between Web3 and traditional industries. Analysts think this acquisition might also improve Solana's global exchange liquidity, making it easier to transact. With such developments, Solana could become a benchmark for speed and cost efficiency in blockchain technology. XRP Ripple and Trump's Connections In the latest XRP news, a photo of Ripple's leaders with Trump caused a stir. People think Ripple's legal troubles could see progress if Trump returns to power. Ripple's plans for an IPO and ETFs based on XRP are also creating excitement. The use of XRP coin by institutions is growing quickly. Reports show that XRP's payment tools are backed by over 83 patents and can settle transactions in under 4 seconds. As these developments continue, XRP Ripple stays one of the most-followed cryptocurrencies in 2025. Some say this could also bring clearer regulations, strengthening XRP's position in cross-border payments. Experts suggest these improvements could lead to wider global adoption. Additionally, Ripple's focus on building partnerships with large banks could further boost its credibility in financial systems worldwide. Conclusion January 2025 has already brought big changes for crypto fans. MTAUR's impressive presale, Solana's powerful partnerships, and XRP's notable connections show different ways the market is growing. Minotaurus, in particular, is blazing ahead, offering standout perks and massive potential. Don't wait too long—this chance won't last. Learn more about Minotaurus: - Website: <http://minotaurus.io/> - Announcements: <https://t.me/minotaurus-official> - Chat: https://t.me/minotaurus_chat - Twitter: https://twitter.com/minotaurus_io Disclaimer: TheNewsCrypto does not endorse any content on this page. Pepecoin (PEPE) whales have, in a surprising move, dumped their meme holding and turned their eyes to other places, mainly two cryptos. They've

shifted their capital away from speculative assets such as meme coins and moved them to fundamentally utility-driven projects. One of their picks is Cardano (ADA), while the other is a \$0.08 AI-powered crypto. Read to find out more about this move, whatâ€™s in store for Cardano price, and why the latter AI-powered altcoin emerges as the top pick of 2025. Pepecoin (PEPE): Down 35% Since Last Month In the last month of 2024, Pepecoin (PEPE) managed to reach its ATH of \$0.002129 on 9 December. However, its momentum has since died down significantly. Currently, PEPE is trading at \$0.0004597, a whopping 35% decrease since last month. Furthermore, its daily trading volume is down by almost 40% to only \$645.04K. To add fuel to the fire per many indexes, Pepecoinâ€™s sentiment seems to be bullish, only raising more questions about its performance. This downturn has left many traders and whales nursing losses after this drop, and multiple savvy whales have left the coin. PEPE has found it hard to sustain long-term value with little utility and tied to hype, ultimately making it hard to see the token return to previous highs. Pepecoin still attracts speculators as a potential investment tool, but its lack of utility, like Cardano and the mentioned altcoin, is redirecting whaleâ€™s dollars elsewhere. Cardano Price: Can It Finally Grow In 2025? Cardano (ADA) remains one of the most respected names in the cryptocurrency market thanks to its pioneering approach to blockchain technology. Built on a foundation of academic rigor, Cardano aids the creation of decentralized applications (dApps) and supports smart contracts, making it a go-to platform for developers and businesses. In September 2021, Cardano price hit an all time high of \$3.10 but it hasnâ€™t been able to retake those levels. With Cardano price now trading at \$1.13, itâ€™s roughly 70% down from its peak, making for an attractive entry point for long term investors. With the implementation of its Hydra Layer 2 solution, Cardano price is tipped to reach \$2 or higher in the next few months. However, despite its strong fundamentals and growth potential, Cardano price upside is constrained by its established market position and large circulating supply. Newer projects, such as the aforementioned about altcoin, offer far better risk vs reward for investors who are looking for exponential returns. IntelMarkets (INTL): The AI Crypto Revolutionizing the Market The biggest investment opportunity in 2025 is IntelMarkets (INTL), a project that utilizes artificial intelligence, blockchain and decentralized finance (DeFi) to launch the next generation trading platform. By applying AI to the global crypto trading market, the project changes the game of crypto trading at a level of accuracy and efficiency that was previously unobtainable. The platformâ€™s cross-chain compatibility across Ethereum and Solana provides scalability and massive market adoption. The process of democratizing access to sophisticated trading tools is another one of its appeals. It also has a team of former MIT and OpenAI experts. But what makes IntelMarkets a standout choice for investors looking to make life-changing gains is its high level of expertise, which has been achieved thanks to its innovative vision. When it comes to network infrastructure, IntelMarkets utilizes self learning AI algorithms that are optimized for real time market conditions which allow retail traders to take on the institutional players. IntelMarkets has so far raised over \$5.7 million in its presale, speaking for the amount of confidence it created. Currently priced at only \$0.08, it offers an incredibly attractive way to get in on a project that analysts expect to see 75x skyrocket after launch. Key Takeaways Whales are increasingly flowing capital into IntelMarkets, away from speculative assets such as Pepecoin (PEPE) and even established names Cardano (ADA). The reason for this trend is the projectâ€™s combination of low market capitalization, cutting-edge technology, and great potential growth. Unlike Cardano and Pepecoin, IntelMarkets has absolutely no legacy baggage. With its low entry price and AI-DeFi narrative, this fits perfectly well with a market trend in which investors are looking for exponential returns. Join today and receive a 20% welcome bonus. Learn More About IntelMarkets: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. The SHIB Army has been set agog with news of forthcoming events that might change the ecosystem and provide revolutionary returns. Ripple investors also expect very positive developments in 2025 that can put the ball rolling for notable gains within the year. Meanwhile, a new cryptocurrency, Rexas Finance, has created even more excitement. Its potential to generate generational wealth in 2025 and beyond is intriguing. Experts have, in fact, set high goals for the token, which would turn investors into multi-millionaires. Ecosystem Developments Spark Optimism Among Shiba Inu (SHIB) Investors Shiba Inu investors hope that forthcoming events in 2025 will bring great profits. This hope aligns with the teamâ€™s recent announcement about the upcoming TREAT token release. The token aims to improve SHIBâ€™s ecosystem and utility, particularly in the Metaverse. The lead developer, Shytoshi Kusama, also mentioned plans for a 44-episode podcast series. The podcast will highlight technological developments and practical uses of Shiba Inu, increasing visibility and interaction. Whale activity has further driven enthusiasm as they have accumulated massively, showing confidence in a potential price breakout. Technical indicators support this outlook as SHIB is on its way to a strong breakout. Analyst Rose Premium shared a chart suggesting a potential breakout for SHIB from a channel that began forming at \$0.00003343 in early December. The analyst outlined three price targets: a short-term resistance at \$0.00003236, an intermediate supply zone at \$0.00003870, and a long-term goal of \$0.00004349. If SHIB breaks out from this channel, it could witness a massive rally, leading to new highs. Ripple (XRP) Investors Anticipate a Breakout Fueled by Bullish Events Ripple investors are bullish, expecting key factors to drive significant gains by 2025. A major factor is the anticipated resolution of the SEC case, which could bring regulatory clarity to Ripple. Thereâ€™s also high optimism that the XRP ETF will get approved, especially as the crypto landscape anticipates favorable regulatory shifts. Additionally, Rippleâ€™s RLUSD stablecoin launch and tokenized money market funds are expected to expand XRPâ€™s utility and adoption. While strategic partnerships and technological upgrades on XRPL position XRP for growth, analysts have noticed bullish signals supporting a potential bullish reversal soon. This has left the Ripple community in high anticipation for an XRP comeback soon. Rexas Finance (RXS): The Path to Generational Wealth Meanwhile, Rexas Finance is creating a path to generational wealth by leveraging the real-world asset market. Unlike some RWA projects, Rexas Finance has created a niche for itself by revolutionizing asset tokenization. It doesnâ€™t just turn assets like gold and real estate into digital tokens. It sets itself apart by addressing key challenges in the asset management industry. These issues include high costs, illiquidity, and restricted access. Through its groundbreaking approach to asset tokenization, Rexas Finance turns real-world assets (RWAs) like real estate into digital tokens. Tokenization improves liquidity and makes these assets accessible to a broader audience. It does this by allowing investors to own fractions of these high-value assets. This lowers the cost barrier, allowing even small-scale investors to access the market. The Real-World Asset market is worth over \$587 trillion yet remains largely untapped. By tokenizing RWAs, Rexas Finance reduces transaction costs and unlocks liquidity and global access, making the platform appealing to a wide range of investors. The Rexas Finance ecosystem is built on advanced tools that cater to diverse investment needs. These include Rexas Token Builder, a user-friendly platform for tokenizing assets without technical expertise, and the Rexas QuickMint Bot, an innovative tool for creating and deploying tokens via platforms like Telegram and Discord. RXS is gearing up for its official exchange launch in Q1 2025, a milestone expected to drive significant demand for the token. With its presale success and robust ecosystem, many experts predict a strong post-launch rally. Experts have set high targets, expecting it to rally 10,000% months after the launch. RXS will launch on several exchanges, including the top ones. This will provide visibility and liquidity. The strong community backing and investorsâ€™ interest will propel RXS to rally from its launch price, possibly witnessing 10,000% growth within months. Generational Wealth: A Blueprint for the Future Rexas Finance is built for enduring impact. Its focus on RWAs ensures exposure to stable, high-value markets, offering a hedge against the volatility plaguing traditional crypto assets. Fractional ownership democratizes investment in markets like real estate, enabling individuals to accumulate wealth over time. Yield farming and staking within the Rexas ecosystem also provide compounding opportunities, amplifying returns and fostering wealth accumulation. Additionally, RXS could deliver explosive returns in 2025. Its current momentum has fueled its potential to witness a massive rally post-launch. Experts point to its strategic positioning in the RWA market and growing investor interest. RXS could deliver as high as a 10,000% increase, surging towards \$20 in 2025. In 2025 and beyond, Rexas Finance investors could create generational wealth for investors who capitalize on its early growth potential. - Swarms crypto token is up 18% today and it is trading at \$0.46 currently. - Whales are buying large volumes of SWARMS. - Binance announced SWARMS perpetual contracts listing today. The emergence of AI crypto tokens is accelerating in the industry with new token launches by the day. After memecoinâ€™s biggest trend, AI tokens are the latest trend to watch out in the market in 2025. Adding to the hype, Solanaâ€™s Pump.fun platform is acting as an interface to bring out new and trendy AI tokens and memecoins into the market. The latest AI token that is gaining traction from crypto communities is Swarms (SWARMS). Despite being new to the market, its price has been going on an uptrend since its launch on Dec 30, 2024. Whales are eyeing this token in recent days, implying further price surge in the coming days. SWARMS token is currently trading at \$0.4697 at press time, with over 17% price surge. The token started trading at the initial price of around \$0.1554 on Dec 30 and has surged by more than 190% since then. While its market cap doubled with a current value of \$467.2 million, trading volume rose by 164%. Whales Accumulate SWARMS Amidst Binance Perpetual Contracts Listing Whales haven't stopped buying \$swarms! â€™ Lookonchain (@lookonchain) January 7, 2025 Someone created a new wallet and withdrew 2M \$USDC from #Binance to buy 3.58M \$swarms.<https://t.co/xdkbb12Nv8><https://t.co/tyuwgz27Do> pic.twitter.com/YTxb1cutzH As per on-chain analytics platform Lookonchain, whales are buying SWARMS tokens continuously for the past 24 hours. A new wallet that was created today withdrew 2 million USDC and purchased 3.58 million SWARMS tokens. A whale is accumulating SWARMS using DCA trading strategy and has bought over 7.42 million SWARMS worth \$3.39 million today. Another wallet which probably belonged to the same whale withdrew \$3.67 million selling SWARMS two days ago. And, it purchased \$713K worth SWARMS today with an unrealized profit of \$1.75 million. On the other hand, Binance announced that it is going to launch SWARMS perpetual contracts along with COOKIE and ALCH perpetual contracts listing. This announcement combined with increased investor sentiment in the market could future push SWARMS token price to new highs. With the anticipation of a bigger bull run, along with an increasing AI token trend, SWARMS token surge seems to be sustainable in the near future. However, investors must be cautious when it comes to risky investments such as cryptocurrencies. Highlighted Crypto News Today: Nasdaq ISE Proposes Tenfold Increase in Bitcoin ETF Options Limits

- HashKey receives VASP license to offer virtual asset services in Ireland. - Exchange services from crypto-to-crypto, crypto-to-fiat, and custodian wallet services will be offered by HashKey. HashKey Europe Limited, a member of digital asset financial services group æHashKey Groupæ, obtained VASP license to operate in Ireland. The firm offers complete end-to-end crypto services such as exchange, asset management, Web3 infrastructure provider, and tokenization services across multiple countries. Being an Asian-based company, HashKey operates in Singapore, Japan, and Bermuda with headquarters in Hong Kong. This is the first license approved as per Europeæ’s Anti-Money Laundering policies. A fully compliant license from the Central Bank of Ireland marks a key milestone for HashKey, in the process of expanding its services globally. HashKey Gets VASP License from Central Bank of Ireland As per the latest announcement from HashKey, the firm obtained VASP (Virtual Asset Service Provider) license from the Central Bank of Ireland. This registration approval allows Hashkey to provide following digital asset services. - Exchange services from crypto to fiat - Exchange services from crypto to crypto - Virtual asset transfer - Custodial wallet services With this new addition, the HashKey Group is deepening its roots as a virtual asset provider across global countries. Obtaining a license from the Central Bank of Ireland is not a small feat and proves the firmæ’s commitment to expand globally, while being in compliance with the regulatory requirements. æHashKey remains dedicated to supporting the sustainable growth of the virtual economy by ensuring compliance with international regulations, delivering value-added services, and fostering trust within the ecosystem.æ The recently introduced Markets in Crypto-Assets Regulation (MiCA) came into force from Dec 30, 2023. This marked Europe as the worldæ’s first major jurisdiction to come up with a regulatory framework for virtual assets. HashKey remains one of the first virtual asset firms to obtain a regulatory license from MiCA. Highlighted Crypto News Today: Backpack Exchange Completes FTX EU Acquisition to Expand in Europe

- HBAR price has surged 10% in 24 hours, becoming a top gainer in the crypto market. - Hedera rose from \$0.3008 to \$0.3295 with a 102% rise in trading volume. The 2025 bull run has officially started with Bitcoin once again trading above \$101K. While the BTC rally has triggered optimism in the market, alcoins are showing incredible performance. Amid the 1-3% increase in the 24-hour charts of leading alcoins like Solana (SOL) and XRP, Hederaæ’s native cryptocurrency, HBAR, has climbed about 10% in the last 24 hours, topping the gainers list. Today, HBARæ’s price surged from \$0.3008 to an intraday high of \$0.3295 within a single day, before slightly sliding back to \$0.3199 at the time of writing. Despite this slight pullback, the altcoin boasts a market cap of \$12.23 billion and has seen its trading volume soar by more than 102% to \$925 million. Zooming in, over the week, HBAR has surged 17%, and seen an impressive 296% rally in the past year. However, it remains 5% below its monthly high, which was above \$0.3312. With these strong gains and the current market optimism, the big question is whether Hedera can break its all-time high of \$0.5701 during this altcoin season. HBAR 24-H Technical Analysis: Key Price Levels Looking at the technical overview, HBARæ’s chart suggests further bullish momentum. On the day chart, the altcoin has formed a bull flag pattern. A bull flag pattern starts with a steep, nearly vertical price surgeæ“referred to as the flagpoleæ“driven by buyers overwhelming sellers. This is supported by key indicators like the Exponential Moving Average. A ædeath crossæ occurs with EMA below HBARæ’s price, suggesting bullish momentum and an upward trend. Additionally, a CMF value of 0.08 indicates mild buying pressure in the market. To validate this, the RSI of 58 indicates a neutral to slightly bullish outlook, while the MACD suggests a continuation of the bullish trend. Based on the above technical analysis, key resistance and support levels have been identified as follows: - Short-term target: Around \$0.35 æ“ A possible resistance level based on prior price action. - Medium-term target: Reach \$0.40 if the bullish trend strengthens. - Support Level 1: \$0.30 æ“ This level has been a recent low and could act as a strong support zone. - Support Level 2: \$0.28 æ“ Another potential support if the price continues to drop, as itæ’s a key previous level where the price bounced. Highlighted Crypto News Today Do Kwonæ’s Terra Crash Millions Affected and Legal Fights Continue

As Bitcoinæ’s price edges closer to the \$100,000 milestone, the crypto market is buzzing with excitement. This bullish momentum is opening doors for promising alcoins, and Lightchain AI is emerging as a standout contender for exponential growth. With a presale price of \$0.004875 and over \$9.1 million raised, Lightchain AI is capturing the attention of analysts and investors who believe it could become the next 500x crypto titan. Bitcoinæ’s Rally Bull Market Catalyst for Alcoins Bitcoinæ’s recent jump over \$100,000 has sparked the crypto market, working as a cause for other coins. In the past, Bitcoinæ’s rise makes investors want to spread into other coins, looking for better gains. This style is clear as coins like Ethereum, Solana and XRP have had big gains with Bitcoinæ’s climb. The start of spot Bitcoin ETFs has pulled in a lot of large investments, boosting market flow and helping a good place for alcoins. Also, expected rule changes under President elect Donald Trumpæ’s team, like the picking of crypto friendly leaders, are likely to help the crypto ïworldÆ. As Bitcoin keeps going up, alcoins are set to gain from more people wanting to invest and join in on the market. Lightchain AI Unique Value Proposition in a Crowded Market Lightchain AI is not just riding the wave of Bitcoinæ’s successæ“itæ’s carving its own path with innovative blockchain solutions. A key feature of Lightchain AI is its decentralized data-sharing framework, which allows developers and enterprises to securely exchange information across networks. This capability addresses a critical need in the blockchain space, setting Lightchain AI apart from other emerging tokens. In addition, the projectæ’s growth-focused roadmap includes strategic partnerships and initiatives aimed at driving adoption. By prioritizing user accessibility and ecosystem expansion, Lightchain AI is building a solid foundation for sustainable growth. Tokenomics Of Lightchain AI æ“ Fueling the Next 500x Crypto Titan Lightchain AIæ’s tokenomics are designed to ensure sustainability, equitable distribution, and long-term value for its ecosystem participants. The total supply of LCAI tokens is capped at 10 billion, allocated as follows æ“ 40% for presale to fund development and adoption; 28.5% for staking rewards to incentivize network validators; 15% for liquidity to facilitate seamless transactions; 5% for marketing and partnerships to enhance global awareness; 6.5% for treasury to support future development and community initiatives; and 5% for the core team, with vesting schedules to align with long-term growth. LCAI tokens serve multiple utilities, including payments for AI services, staking for governance participation, and access to premium features within the Artificial Intelligence Virtual Machine (AIVM). This comprehensive tokenomics model fosters a balanced and value-driven ecosystem. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Seychelles, Seychelles, January 7th, 2025, Chainwire BYDFi, a leading crypto exchange, announced the launch of two new tokens: Swarms and Ai16z, on January 7, 2025. These tokens are AI-driven assets within the Solana ecosystem, representing the future of AI Agent technology. Their introduction further strengthens the integration of blockchain technology and artificial intelligence, marking a big step for the Web3 industry. Within 7 days, \$Swarms surged over 500%, making it one of the fastest-growing tokens in the market Swarms is a multi-agent LLM framework designed to offer efficient cluster architecture and seamless third-party integration. As a leading AI application for enterprises, Swarms enables businesses to manage collaboration between multiple AI agents, optimizing complex workflows. Its scheduling mechanism allows agents to coordinate tasks, potentially boosting enterprise productivity. As an open-source project, Swarms has garnered interest from the developer community, achieving over 2.1K stars on GitHub and receiving contributions from around the world. Founder Gomez remarked: æSwarms has been running for nearly three years, with over 45 million AI agents deployed in production environments across industries like finance, insurance, and healthcare, serving some of the worldæ’s top enterprises.æ These accomplishments highlight the maturity and innovation of Swarmsæ™ technology. Market Trends: - Price Surge: The price of Swarms stands at \$0.4934 at the time of writing, having risen over 500% in the past 7 days. - Market Trading Volume: In the past 24 hours, Swarmsæ™ trading volume exceeded \$244 million, with a market cap nearing \$500 million, hitting a historic high. According to the latest data from GMGN, Swarmsæ™ æwhaleæ holders still own 58.94 million tokens, with unrealized profits now exceeding \$27 million. Future Outlook: The upcoming launch of Swarms Marketplace will introduce a series of new features, including auto-generation and upload of agents, payroll integration, and Swarms token trading integration. These innovations will allow developers and creators to create, upload, and potentially monetize their AI agent applications, further accelerating the adoption of AI in enterprise applications. Ai16z Hits \$2.472 Billion Market Cap, Leading All AI Concept Tokens on Solana Ai16z is the first AI-driven Decentralized Autonomous Organization (VDAO) token, combining artificial intelligence with decentralized finance (DeFi). Ai16z allows token holders to make investment decisions alongside AI bots, introducing decentralization and automation to the investment process. Its innovative concept has attracted widespread attention in the crypto community and garnered interest from traditional venture capitalists. The famous investor Marc Andreessen once issued Ai16z on the Daos.fun platform. The basic technology, Eliza, was ranked first on the GitHub trend list in December. At the same time, Eliza is also supported in collaboration by Standford Labs. The partnership between Eliza Labs and the Ai16z team will focus on solving the application challenges of AI agents in DeFi systems, establishing a robust trust framework, multi-agent ecosystem, and DAO governance structure. This will position Ai16z as the core platform in the AI investment DAO field. Market Trends: - Price Performance: The current price of Ai16z is \$2.25, having increased by 313.7% in the past 30 days. - Market Trading Volume: In the past 24 hours, Ai16zæ’s trading volume exceeded \$600 million, with a market cap reaching \$2.472 billion, making it the first AI token on the Solana platform to surpass a \$2 billion market cap. Future Outlook: With the technical support from Eliza and the rapid development of AI DAOs, Ai16z aims to become a big platform in the AI-driven investment area. BYDFi: The Go-To Platform for AI Concept Coin Investors Regarding the launch of Swarms and Ai16z tokens, BYDFi Co-Founder Michael stated: æAs a global leader in the digital asset exchange space, BYDFi has always been at the forefront of the crypto market. Today, we are proud to be the platform of choice for many investors in AI concept tokens. The launch of Swarms and Ai16z represents a significant expansion of our AI offerings, providing users with even more diverse investment opportunities.æ Additionally, BYDFi has also listed several other AI-related tokens, including Cookie, Bio, Zailgo, GNOM, and ORDER. For more information, users can visit the BYDFi Website or download the BYDFi App. About BYDFi Founded in 2020, BYDFi is recognized as one of the top 10 global crypto exchanges by Forbes, trusted by millions of users worldwide. The platform supports over 600 cryptocurrencies for spot trading and perpetual contract trading, with leverage ranging from 1x to 200x. Its latest feature, Perpetual Contract Copy Trading, helps users mitigate market risks and maximize potential returns with ease. Through partnerships with renowned payment service providers like Banxa, Transak, and Mercury, BYDFi has simplified the cryptocurrency purchase process, enabling low-cost crypto acquisitions. Santa Clara, California, January 7th, 2025, Chainwire CARV, the AI chain ecosystem to enable data sovereignty at scale, announces the official launch of the CARV SVM Chain Testnet. CARV SVM Chain is an agentic infrastructure designed to enable data sovereignty at scale. As an AI agentic infrastructure that extends SVMæ’s capabilities onto Ethereum, it pioneers a secure and seamless ecosystem for AI agents. Built on zk-technology and powered by Trusted Execution Environments (TEE), CARV SVM Chain delivers unparalleled data privacy, scalability, and liquidity bridging between Ethereum and Solana. This milestone marks progress in developing secure, scalable, and decentralized ecosystems aimed at supporting AI agents with data sovereignty. CARV is Launching CARV SVM Chain In a time when data holds significant value, CARV remains committed to its mission of enabling individuals and developers to maintain control over their data. Building on its modular data solutionsæ“CARV Protocol, CARV ID, and CARV Play, which have collectively attracted over 15 million registered users and 9 million CARV ID holders, CARV is now extending its innovation to an agentic infrastructure tailored for the next wave of AI-driven applications. The CARV SVM Chain combines cutting-edge technologies to create an ecosystem where AI agents can autonomously fetch, authenticate, store, and process data, ensuring privacy and security at every step. This chain is built to meet the demands of developers, enterprises, and users seeking a scalable, privacy-preserving infrastructure for AI and beyond. Victor Yu, COO of CARV, emphasized the industry-shaping impact of this launch: æThe launch of the CARV SVM Chain testnet represents a transformative leap forward, not just for CARV but for the entire decentralized technology landscape. By providing a secure and scalable agentic infrastructure, we are enabling AI agents to operate with true data sovereigntyæ“empowering users, developers, and industries alike. This is the foundation for a new era where data ownership, privacy, and intelligent applications redefine whatæ’s possible in gaming, AI, and beyond.æ CARV SVM Chain The CARV SVM Chain is an AI agentic infrastructure that extends SVMæ’s capabilities onto Ethereum. It leverages zk-technology and Trusted Execution Environments (TEE) to ensure data privacy and security. Designed to support native AI agents, CARV SVM Chain empowers them to operate autonomously and interact seamlessly with users and other agents, unlocking unprecedented possibilities in decentralized applications. Key Technology Differentiators: - Scalability: Harnessing Solanaæ’s lightning-fast transaction speeds and low costs. - Security: Bolstered by Ethereumæ’s proven

security model and zk-technology. - Liquidity Bridging: Seamless integration with both Solana and Ethereum ecosystems, enabling liquidity access. - Privacy: Data interactions are secured through TEE and zk-proofs, ensuring user and agent data remains confidential. - AI Agent Support: Designed to foster intelligent interactions between autonomous agents, users, and applications. CARV SVM Chain For Developers and Users - For Developers: The chain incentivizes developers to build and maintain a thriving ecosystem of AI agents and decentralized applications. Its scalability, security, and interoperability remove barriers to innovation. - For Users: CARV SVM Chain empowers individuals with full ownership and control of their data, allowing them to monetize their information while ensuring privacy. Imagine owning your digital identity and receiving equitable rewards for its use in AI-driven services. - For AI Agents: Native AI agents benefit from an ecosystem designed specifically for their needs, enabling them to make intelligent decisions, collaborate autonomously, and solve complex problems in real-time. CARV SVM Chain Offerings The possibilities CARV SVM Chain offers: AI agents that autonomously learn, interact, and evolve with users, transforming how data is utilized across industries, empowering users to control, aggregate, and monetize their data while ensuring privacy, fairness, and equitable compensation. - In Gaming: Redefines engagement through intelligent NPCs and personalized experiences powered by AI agents. - In DeSci: Enables global researchers to collaborate on sensitive data with privacy-preserving tools, accelerating breakthroughs in areas like personalized medicine. - As a personalized AI companion: redefines digital interactions, providing emotionally intelligent support and companionship in a rapidly expanding market. CARV SVM Chain Testnet Launch The testnet launch is a unique opportunity for early adopters to gain firsthand experience with this infrastructure. Developers, AI enthusiasts, and blockchain pioneers are invited to: - Build applications that leverage the unparalleled scalability, security, and privacy of CARV SVM Chain. - Explore new potential earnings by developing AI-driven decentralized applications. - Shape the future of AI ecosystems and decentralized data sovereignty. About CARV CARV is building an AI chain ecosystem to enable data sovereignty at scale. By empowering AI agents with secure, unified infrastructure, CARV enables intelligent, collaborative operations through its SVM Chain, offering trustless consensus, cryptographic proofs, and verifiable execution. With the D.A.T.A Framework, CARV enriches AI with high-quality, on-chain and off-chain data, allowing agents to learn, evolve, and collaborate dynamically. With over 15M users and 9M CARV IDs, CARV ensures privacy and data control while providing AI agents with powerful, cross-chain insights, creating a secure, innovative ecosystem for both AI and human collaboration. Supported by \$50M in funding from top-tier investors like Tribe Capital, HashKey Capital, and Animoca Brands, and backed by a team of veterans from Coinbase, Google, and Binance, CARV is committed to fostering a decentralized future where data is a valuable, user-owned asset. Contact COO Victor Yu CARV vito@carv.io

It goes without saying that wise crypto investors will aim to look for new projects that have incredible value growth potential. Among the top contenders one can mention IntelMarkets (INTL), an AI-driven trading platform that is quickly making its way to the top. Having attracted more than 150k users in the early stages, it competes aggressively with giants like Solana (SOL) and Ripple (XRP). Though Solana price remains high while Ripple (XRP) fights for cross-border payments space, IntelMarket is steadily aiming to reach the top of the \$1 trillion trading market. With its innovative AI-based tools and a presale price that costs significantly less than your coffee, INTL might just be the breakout altcoin of 2025. Keep reading to be a part of the action. IntelMarkets (INTL): The Next Big Thing in the Crypto World The newly introduced coin, IntelMarkets (INTL), is revolutionizing the landscape of cryptocurrency with mind-blowing technology. The central focus of its current model is Intelli-Mā,¢, which is a trading robot. It encompasses a self-evolving system that adapts to actual market conditions as well as previous transactions. Intelli-Mā,¢ upgrades its efficiency and frequency of trades to keep its users updated in the fast-growing crypto markets. Adding to its edge is the Intell-Arrayā,¢ monitoring system, which tackles the conflicting market signals. Due to the availability of over 100,000 trading data points, this omnichannel processing system can produce evidence-based signals for each trade. It has high levels of visibility and accuracy for end users. Such an ambitious strategy has already attracted significant attention from the big stakeholders. IntelMarkets received \$1.61M from Fortune 500 investors and got partnered with a sovereign wealth fund. This company has an impressive team of specialists, graduates of MIT, and employees of companies like Renaissance Technologies and OpenAI. As the worldā,¢s first Layer-1 blockchain specializing in AI for trade analysis and automation, IntelMarkets continues to open new doors for crypto lovers and early investors. This is all thanks to the new generation solutions that are implemented by IntelMarkets (INTL). Selling at \$0.073, this coin is set to become the pioneer in the next revolution of crypto trading. Solana Price Makes Bullish Patterns, But Is It Losing Investor Confidence? Solana (SOL) has comfortably settled at number five in the list of largest cryptocurrency market capitalizations globally with a value of \$103.06 billion. However, recent Solana price movements reveal a mixed outlook. Solana price has had a 12.79% increase within the past week, however, it underperformed at 9.33% within the past month. This sort of volatility means there are prospects for income within close reach and potential pitfalls along the way. SOL has many positive structural indications of long-term higher prices. Analysts are predicting for the Solana price to reach \$4,000 eventually. SOL coin has recently emerged from a symmetrical triangle pointing to an even higher price increase. However, critics have warned about the centralization risk and periodical network outages. These factors are forcing users towards better alternatives than SOL. Rippleā,¢s Symmetrical Triangle Breakout: A \$3.63 Target or Profit-Taking Trap? Ripple (XRP) is now in a symmetrical triangle with a continuous rising and falling channel emanating from a series of high and low points. Basically, this formation, if viewed from early December to early in the New Year, tends to be bullish. If Ripple (XRP) is able to post a daily candlestick above the \$2.56 resistance, it might break from this pattern. However, before arriving at a higher level, a 17% price bounce might be capped at the price point of \$3.00. This is because traders will seek to book profits. The RSI of Ripple (XRP) indicates increasing bullish pressure, while the MACD is close to the bullish crossover on the daily bar chart. Although Ripple (XRP) demonstrates potential, there are already calls for decentralized options in the digital currency, such as IntelMarkets (INTL). IntelMarkets: Redefining the Crypto Market IntelMarkets (INTL) is an innovative company with self-learning AI integrated with a Layer-1 unique blockchain trading platform. By using the Intelli-Mā,¢ robots and Intell-Arrayā,¢ system, the platform gathers and sorts more than 100,000 data points. The high-speed calculations guarantee high accuracy of this platform. With \$1.61 million raised from Fortune 500 investors and headed by graduates from MIT and OpenAI, INTL is a new approach to trading. Final Thoughts SOL and Ripple (XRP) are two interesting opportunities in the crypto market which, however, have their backs against the wall with problems like XRPā,¢s centralization and Solana price fluctuation. IntelMarkets (INTL), on the other hand, provides users with revolutionary solutions. INTL stands as a transformation of trading rather than an investment. Join the presale now and be a part of this mind-blowing revolution. Learn more about the IntelMarkets (INTL) presale: - Presale: <https://intelmarkets.io/> - Buy Presale: <https://buy.intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: <https://x.com/intelmarkets> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

Have you been keeping an eye on the crypto market and wondering which viral altcoins to buy this month? The space is buzzing with new projects, but narrowing down the right picks can feel like a full-time job. Tezos and Bitcoin are still drawing attention with exciting advancements, but a new playerā,¢ Qubetics (\$TICS)ā,¢s stirring up interest for all the right reasons. While seasoned investors may already know about Bitcoinā,¢s steady rise and Tezosā,¢ expansion into gaming and DeFi, Qubetics is quietly making its mark by solving critical interoperability issues across blockchains. Qubetics isnā,¢t just another token in the crowd. It directly addresses some of the biggest problems in crypto, offering a solution that makes fragmented blockchains work together smoothly. As Bitcoin explores institutional pathways and Tezos continues to break into new sectors, Qubetics steps in as the missing link for seamless cross-chain functionality. Its presale figures are already drawing attention, and analysts are betting big on its future growth. Letā,¢s break down why Qubetics, Tezos, and Bitcoin are the viral altcoins to buy this month. Qubetics (\$TICS) Is Shaping the Future of Blockchain Interoperability Qubetics is rapidly gaining traction by tackling one of the biggest issues holding back blockchain adoptionā,¢ interoperability. Right now, most blockchains operate independently, which makes transferring assets or data between them unnecessarily complicated. This lack of connectivity slows down mass adoption, particularly for businesses trying to use blockchain technology across multiple platforms. Qubetics is stepping in as a web3 aggregator, connecting major blockchains like Bitcoin, Ethereum, and Solana, creating a unified ecosystem that allows seamless asset transfers and interactions between networks. For example, consider a retail company that wants to accept payments in multiple cryptocurrencies. Without Qubetics, this would require using several wallets and managing conversions manuallyā,¢an inefficient process prone to errors. With Qubeticsā,¢ interoperable framework, the company can easily accept and convert payments across blockchains without friction, opening up more payment options for customers and simplifying back-end operations. Independent creators or freelancers can also handle multi-chain payments effortlessly, reducing the need to juggle different platforms. One of Qubeticsā,¢ most exciting developments is its partnership with SWFT Blockchain to create a cutting-edge wallet designed to revolutionize cross-chain transactions. This wallet will allow users to swap tokens across various blockchains in seconds, making portfolio management a breeze. If youā,¢re curious to know more, this video explains how Qubeticsā,¢ technology is shaping the crypto future: Watch the Video. Currently, Qubetics is in its 16th presale stage, with each stage lasting only seven days and ending every Sunday at midnight. After each stage, the token price rises by 10%, making early participation highly attractive. At the moment, \$TICS is priced at \$0.0455, with more than 404 million tokens sold, raising over \$8.9 million from over 13,500 investors. The growing interest around the Qubetics presale reflects confidence in its future, with analysts predicting that by the end of the presale, \$TICS could climb to \$0.25, reflecting a massive return on investment. Some forecasts project that once Qubeticsā,¢ mainnet goes live, the price could surge to \$10, delivering exponential returns for early investors. To put that into perspective, a \$600,000 investment at the current price of \$0.0455 would secure roughly 13,186,813 tokens. If \$TICS reaches \$10 after launch, that investment could balloon to \$131,868,130. For those looking for viral altcoins to buy this month, Qubetics is quickly becoming a standout option. Tezos Expands Into DeFi and Gaming With Big Developments Tezos has been making steady progress in decentralized finance (DeFi) and gaming, strengthening its position as one of the more innovative blockchain platforms. One of its latest breakthroughs is the development of Etherlink, an enshrined Layer 2 EVM rollout, set to launch its mainnet in March 2024. This rollout aims to bring scalability and efficiency to decentralized applications (DApps) on the Tezos network, a move expected to boost adoption significantly. With Ethereumā,¢s scalability challenges still creating bottlenecks, Tezosā,¢ approach could carve out new opportunities in the DeFi space. The gaming industry has also caught Tezosā,¢ attention. Recently, TZ APAC secured a \$1 million investment pledge from Quantix Capital to fund gaming projects within the Tezos ecosystem. This initiative aims to attract more developers to build on Tezos, tapping into the growing market of blockchain-based games. By expanding into sectors that combine entertainment and decentralized technology, Tezos is positioning itself as more than just a smart contract platformā,¢itā,¢s becoming a hub for emerging industries. Another noteworthy development is Tezosā,¢ partnership with Banx, which led to the creation of the first non-custodial, on-chain crypto card. This advancement adds a practical layer to the Tezos ecosystem, allowing users to spend crypto assets directly while retaining full control. With these expansions, Tezos is proving to be one of the viral altcoins to buy this month for those seeking long-term value. Bitcoin Is Building New Bridges Into Institutional Finance Bitcoin remains the heavyweight in the crypto world, but its evolution hasnā,¢t stopped. Institutional interest in Bitcoin is heating up, with new financial products hitting the market that tie traditional finance closer to crypto. One major development is Strive Asset Managementā,¢s recent filing to launch a Bitcoin Bond ETF. This product will invest in bonds issued by companies specifically for Bitcoin purchases, demonstrating growing acceptance of Bitcoin within established financial markets. As Bitcoinā,¢s price continues to rise, analysts project that by 2025, it could potentially exceed \$200,000, driven by increasing demand and limited supply. Institutional adoption, ongoing developments in mining technology, and regulatory clarity all play a role in shaping this trajectory. For investors keeping an eye on viral altcoins to buy this month, Bitcoinā,¢s consistent growth remains hard to ignore. Closing Thoughts on These Viral Altcoins to Buy This Month For those scanning the market for viral altcoins to buy this month, Qubetics, Tezos, and Bitcoin each present compelling opportunities. Qubetics stands out for its innovative approach to interoperability and its highly successful presale, while Tezos continues to expand into new industries like gaming and DeFi. Meanwhile, Bitcoin remains a solid choice for investors looking for stability and institutional backing. Diversifying across these projects could offer a balanced mix of growth and security as the crypto market heads into its next chapter. - Bitcoinā,¢s position as a global financial powerhouse is gradually becoming more and more established. - For the month of December, decentralized

perpetual volumes reached \$356 billion, representing a 370% YTD increase. December 2024 was a month that saw the cryptocurrency landscape experience both extraordinary highs and major challenges, which helped to lay the scene for 2025 to be a year that would be marked by significant developments in the ecosystem of digital assets. The Monthly Markets Insights report from Binance Research reveals key highlights that shed light on trends in Bitcoin's supremacy, the comeback of DeFi, and the dynamics of the NFT industry. Bitcoin's Rise as a Global Asset Bitcoin's position as a global financial powerhouse is gradually becoming more and more established. As the year 2024 came to a close, the leading cryptocurrency reached a new all-time high of \$108,000. It also achieved a staggering 123.4% year-to-date (YTD) growth in market capitalization, which placed it as the seventh-largest asset in the world. Bitcoin's rise to prominence, which has allowed it to surpass established assets such as Saudi Aramco and silver, demonstrates the rising acknowledgment of Bitcoin as a genuine asset class. This increase may be attributed to a number of catalysts, including the inclusion of MicroStrategy in the Nasdaq 100 and the adoption of spot Bitcoin exchange-traded funds. Furthermore, the scarcity of Bitcoin, which was exacerbated by the Halving event, as well as the anticipation of favorable regulatory frameworks under the administration of Donald Trump, who is a proponent of cryptocurrency, have further fueled optimism. In the event that the present growth patterns continue, analysts anticipate that Bitcoin will eventually surpass gold in market rankings, therefore solidifying its role as both a hedge and a store of wealth. DeFi Hits New Highs Amidst Volatility The decentralized finance (DeFi) industry has shown remarkable endurance in spite of the turbulent market conditions, as shown by the fact that it has achieved record levels in decentralized spot and perpetual trading volumes. For the month of December, decentralized perpetual volumes reached \$356 billion, representing a 370% year-to-date increase. This increase was primarily driven by platforms such as Hyperliquid. It is a reflection of an ecosystem that is flourishing on innovation and increased adoption that the Total Value Locked (TVL) of DeFi has reached \$55 billion in lending protocols and \$71 billion in liquid staking. The sector, on the other hand, was marked by volatility as Solana's DeFi TVL dropped by \$1.1 billion, which indicated challenges associated with declines in on-chain activity and competition from emerging blockchains. While this was going on, the market for tokenization of real-world assets (RWA) gained momentum, with the total value of TVL reaching an all-time high of \$8.2 billion. Key players such as Usual and Hashnote saw substantial development, and the potential of the industry continues to draw the eye of institutional investors. Stablecoins: Ethereum's USDe Takes the Spotlight In the stablecoins market, Ethereum's synthetic dollar, known as USDe, has surpassed its rivals to advance to the position of third-largest stablecoin in terms of market capitalization, reaching \$5.9 billion. Several factors, including high yields from staking USDe and strategic integrations with platforms such as Aave, have been credited with contributing to its expansion. Ethereum's portfolio has been further strengthened by the introduction of USDt, which is supported by BlackRock's BUIDL fund. This development indicates the implementation of diversification strategies to manage risks. These new developments shed light on the evolving role that stablecoins play in providing opportunities for yield and supporting activities related to decentralized finance. AI Agents: A Rising Narrative Artificial intelligence (AI) is becoming more and more intertwined with crypto innovation. Artificial intelligence agent tokens are currently being valued at multiple billions of dollars, and platforms such as Virtuals and ai16z are gaining popularity. Virtuals gives users the ability to tokenize and create agents, whereas ai16z functions as a decentralized hedge fund that is powered by Eliza, its artificial intelligence partner. The utility-driven aspect of this industry is shown by individual agents such as aixbt, which provide daily analysis of the cryptocurrency market situation. In the course of its development, the story around artificial intelligence and cryptocurrency is positioned to bring forth new applications and efficiency within the sector. NFTs and Market Consolidation During the month of December, the non-fungible token (NFT) industry saw a revival, with sales volumes of Ethereum-based NFTs surpassing over \$888 million. This tendency of consolidation in the NFT market, in which fewer players drive greater transactions, is highlighted by institutional engagement, such as the cooperation between Andreessen Horowitz and OpenSea. As a result of the introduction of its SPENGU coin, Pudgy Penguins has stood out as a very successful project. The collection maintained its rank as the second most valuable in the world, despite the fact that floor values fluctuated after the airdrop did. Legacy collections, on the other hand, such as Bored Ape Yacht Club and CryptoPunks, saw market decreases, which reflected the altering dynamics in the NFT ecosystem. Challenges and Opportunities Ahead Although Bitcoin and a few other sectors had a strong finish to 2024, the overall market encountered difficulties. As the Federal Reserve updated its 2025 rate-cut projections, a late-December drop depleted \$0.5 trillion from the market value of cryptocurrencies. Among the most severely impacted were Solana and Dogecoin, with Solana seeing a decrease in TVL and Dogecoin experiencing a significant network vulnerability. Notwithstanding these obstacles, the Trump administration's pro-crypto posture and rising institutional involvement provide the groundwork for possible expansion in 2025. It is anticipated that advancements in DeFi, RWAs, AI integration, and NFTs would spur adoption and alter market dynamics. Conclusion The behavior of the cryptocurrency market in December 2024, which was characterized by resilience and rapid innovation, perfectly captures its transformational nature. It is anticipated that 2025 will be a pivotal year for the cryptocurrency ecosystem as Bitcoin solidifies its place among global assets and sectors like DeFi and RWAs evolve.

The cryptocurrency market is brimming with opportunities, and finding the right altcoin gems can be the key to achieving exponential growth. As the market prepares for the next bull run, analysts have identified five standout altcoins that have the potential to supercharge your portfolio. These tokens combine innovation, strong fundamentals, and significant upside potential, making them must-watch investments for forward-thinking investors. Why Altcoin Gems Are Essential for Portfolio Growth Altcoins have many times given some of the best gains in the crypto market often beating Bitcoin and Ethereum during up markets. These other coins fix certain issues, fill holes in the blockchain world, or create new things in small markets. Lots give special traits like better privacy, quick trades, or fresh agreement ways making them good parts of a mix bag. By finding good altcoins soon, investors can gain from quick use, growing systems, and more real-world use. As these projects grow, they drive blockchain development and offer significant financial potential. For long-term investors, the market's growth and recognition of certain altcoins' value can lead to substantial returns, especially as more industries adopt these technologies. Top 5 Altcoin Picks for 2025 1. Lightchain AI (LCAT) - Leading the way is Lightchain AI, a cutting-edge project that combines artificial intelligence with blockchain technology. Priced at \$0.0048 during its presale and raising over \$8.5 million to date, Lightchain AI is building a decentralized ecosystem for AI-driven applications. 2. Solana (SOL) - Renowned for its high-speed blockchain, Solana supports a dynamic ecosystem encompassing DeFi, NFTs, and Web3 projects. Its capability to handle thousands of transactions per second at minimal fees has made it a preferred choice among developers and investors alike. 3. Pepe Coin (PEPE) - This memecoin has established a significant presence in the crypto market, bolstered by its enthusiastic community and viral appeal. With plans to expand its ecosystem, Pepe Coin offers a balance of short-term momentum and long-term growth potential. 4. Polkadot (DOT) - A leader in blockchain interoperability, Polkadot facilitates seamless communication between different networks. Its innovative parachain technology and growing ecosystem make it a top contender among altcoins for the next market cycle. 5. Avalanche (AVAX) - Featuring a unique subnet architecture, Avalanche enables developers to create custom blockchains tailored to specific applications. Its emphasis on scalability and efficiency positions it as a strong choice for industries such as gaming and finance that are moving toward mass blockchain adoption. Why Lightchain AI Is the Standout Investment While Solana, Pepe Coin, Polkadot, and Avalanche each bring unique features to the table, Lightchain AI distinguishes itself as a leading choice for transformative growth. By integrating artificial intelligence with blockchain technology, it addresses key gaps in the market, enabling developers to build impactful decentralized applications. For investors seeking significant growth opportunities, Lightchain AI's early-stage pricing, innovative roadmap, and successful presale position it as a highly promising token to monitor. With the potential for 100x or greater returns, it is poised to become a leader in the next bull market and a valuable addition to any forward-looking investment portfolio. So don't miss out on this altcoin gem, and stay updated on its progress by following Lightchain AI today. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto investors are looking for one thing above all else: growth! You don't look for great growth in an old dog, but the young puppies can grow massive. This is why Tron and Cardano are not seeing that much investor inflow despite their massive size and recent dramatic price uptick. The Tron price is up 6% for the year so far, lagging far behind Cardano's 28%. The future looks bright for both tokens, but growth is to be found in crypto presales, and the ongoing Remittix crypto presale will make even Cardano's 30% look tame. Remittix (RMTX): PayFi crypto presale draws investor interest. Imagine buying Tron at \$0.0019 or Cardano at \$0.0024, sounds like a fever dream right? Not at all. These were the prices at which these tokens were listed during their respective crypto presales. Smart investors know not to disregard smaller tokens during their crypto presale phase, as this is where the real money is to be made. Remittix is a new PayFi token that's currently in its crypto presale phase. But what is PayFi exactly? Simply put, it will change the world! Remittix allows its users to make direct crypto-to-fiat payments to almost any fiat currency in the world. Remittix supports over 30 fiat currencies, and thanks to Remittix, international payments are now near-instant transactions at a fraction of the cost. Remittix is a crypto-to-fiat payment system that fulfills the promise XRP has been making for years, and its crypto presale is now ongoing. Tron (TRX): Tron price inched upwards as Web3 attraction grows Tron was one of the success stories of 2024, with the Tron price growing 150% in the year. That's more than Bitcoin and Solana! Tron is gaining traction as Web3 and decentralization come to the forefront of developer and consumer consciousness. Tron is the number one driving force behind a fully decentralized internet, and this is why the Tron price was so successful in 2023. The good news is that Web3 is still in its infancy, and the Tron price still has a lot of room to grow. But can the Tron price go up 100x? Unlikely. It's already a top 10 token and can be one of the most lucrative anchor tokens in a well-balanced crypto investment portfolio. Cardano (ADA): 30% in three days speaks of intention, but is it sustainable? Cardano is a brilliant chain. This is not just opinion: It has been designed to be the most technologically advanced blockchain on the market. Has it succeeded? Absolutely. Has it been successful? Well, not as successful as it can be. Cardano's problem is that it is an expensive chain to operate, and it places itself outside retail blockchain development's remit. But it is ideal for institutional use. This may be why Cardano is up 30% in just three days. It would be the perfect chain for governmental use should Trump's pro-crypto stance mandate US expenditures be recorded on the blockchain. Conclusion The Tron price will inch upwards as Web3 becomes more widespread, and the Cardano price can skyrocket if Trump uses it for governmental purposes, but neither of these holds the growth potential of the Remittix crypto presale. They are just too big and lack the massive 10x growth potential of Remittix. Remittix is now available at \$0.0172 marking an excellent entry point for those looking to acquire the RTX token before it skyrockets in 2025! Discover the future of PayFi with Remittix by checking out their presale here: - Website: <https://remittix.io/> - Socials: <https://linktr.ee/remittix> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. - PENGU rose 13.12% to \$0.04111, with strong trading volume up by 72.32%. - RSI at 66.56 signals bullish momentum; moving averages confirm upward. The global crypto market cap increased by 0.50% to \$3.5 trillion, while the overall market volume dropped 29.19% to \$88.22 billion. PENGU's 24-hour volume-to-market cap ratio of 29.36% highlights strong trading activity relative to its valuation. Pudgy Penguins (PENGU) is showcasing a solid recovery after a pullback from its recent high of \$0.04247. The token is trading at \$0.04111, reflecting a 13.12% surge over the past 24 hours. Its market cap is \$2.58 billion, with a significant 24-hour trading volume of \$758.89 million, up by 72.32%. The fully diluted valuation (FDV) is \$3.65 billion, and the circulating supply is 62.86 billion PENGU, with a maximum supply of 88.88 billion. Its position as #54 in the rankings further underscores its prominence among altcoins. Key Indicators and Price Movement The chart reveals critical support at \$0.03735 and resistance at \$0.04247. The price is trading above the 9-day and 21-day moving averages, with a bullish crossover signaling upward momentum. If PENGU breaks the resistance level, it could target \$0.045 and beyond. A downside break below support may trigger further declines toward \$0.035. The Relative Strength Index (RSI) is 66.56, near the overbought zone, suggesting strong buying pressure. The RSI average stands at 57.89, confirming bullish sentiment. The moving averages' positive alignment implies sustained growth in the near term. PENGU's current performance, supported by technical indicators, indicates potential for further gains. Its bullish crossover and RSI momentum favor continued recovery. However, traders should monitor key levels closely, as a breakout or breakdown will determine its next trajectory. With rising trading activity and investor interest, PENGU remains a strong contender in the crypto market. Highlighted Crypto News Today Solana quantum vault secures blockchain against future threats

The cryptocurrency market is buzzing with opportunities as investors seek the next big project to deliver exponential gains. Among the top contenders, Lightchain AI has emerged as a standout due to its innovative integration of artificial intelligence and blockchain technology. This rising star offers practical solutions to real-world challenges, positioning itself as a game-changer in industries like logistics and healthcare. Alongside Lightchain AI, other 2 coins are gaining traction, fueled by growing adoption and community support. Experts are keeping a close eye on these projects, predicting massive growth in the coming months. For investors looking to diversify their portfolios and capitalize on the next crypto wave, these three coins present high-potential opportunities that could reshape the market and deliver explosive returns. In this article, we'll take a closer look at these coins and why they should be on your radar. Why Only These Three Coins? Choosing Lightchain AI, Solana (SOL), and Polkadot (DOT) as main picks is based on their new ideas, chances to grow, and good place in the market. Lightchain AI is special for its smooth mix of smart machines and blockchain, solving real problems while making a new level for shared systems. Its early sale has caught much investor notice hinting at bright future. Solana (SOL) is a liked choice for its fast trades and small costs, which makes it good for decentralized money (DeFi) and NFT work. At the same time, Polkadot (DOT) puts effort on working together, helping easy talks between blockchains; this is an important trait for the changing crypto world. These three jobs mix use, growth, and new ideas putting themselves as leaders for big profits in the always tough crypto market. Top Reasons to Invest Investing in the right cryptocurrencies at the right time can significantly impact your portfolio, and Lightchain AI, Solana (SOL), and Cardano (ADA) are leading the pack for 2025. Lightchain AI shines with its innovative integration of artificial intelligence and blockchain, offering real-world applications that appeal to both retail and institutional investors. Its robust roadmap and successful presale have made it a strong contender for exponential growth. Solana (SOL) continues to dominate with its high transaction speed and low fees, making it a favorite for developers and NFT creators. On the other hand, Cardano (ADA) is steadily gaining traction due to its focus on sustainability and scalability, appealing to environmentally conscious investors. And with the upcoming launch of its smart contract capabilities, ADA is poised for significant growth in 2022. What Experts Say Which Coin Will Explode Soon? Experts are increasingly pointing to Lightchain AI as the top contender for explosive growth in the crypto market. This AI-driven blockchain project is making waves with its unique integration of artificial intelligence and blockchain technology, offering solutions that address real-world challenges across industries. What's truly capturing attention is the ongoing presale of Lightchain AI tokens, priced at just \$0.004, which has become a magnet for savvy investors. The presale's remarkable momentum showcases the market's trust in its innovative potential and roadmap. With predictions of substantial returns, Lightchain AI is being hailed as a project capable of delivering transformative gains. As its presale nears completion, analysts believe early investors have the opportunity to secure significant advantages before this rising star takes off, solidifying its position as a must-have in any forward-thinking crypto portfolio. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Just a Chill Guy price surged a significant 50% today and went past \$0.24. - Speculations around CHILLGUY Binance listing are increasing on social platforms. Solana memecoin Just a Chill Guy gained attention across the memecoin space and broader crypto market last year. The increased social media buzz around the token made it jump to new ATH by the end of Nov 2024. As a result, CHILLGUY remained one of the best-performing Solana memecoins of 2024. Just a Chill Guy went on a downward spiral in December 2024. However, the new year put a break on its month-long downward movement. With memecoin communities talking about the token on social media platforms, the CHILLGUY recorded exponential growth for the past 24 hours. Let us learn what caused Just a Chill Guy to soar again. Based on crypto price tracking platform CoinMarketCap, CHILLGUY price surged around 50% in the last 24 hours. The token went past \$0.25 today from the lows of \$0.15 by the end of 2024. While its market cap surged by 44%, trading volume witnessed a staggering rise of 200%. Wen Binance? Like & RT if you want Binance to list #chillguy. pic.twitter.com/WXSoSgybsz @BSCGemsAlert December 3, 2024 Several crypto enthusiasts and traders started posting on X speculating on when it is going to be listed on Binance. The buzz initially started when BSC Gems Alert account posted on X, encouraging traders to like and RT if they would like CHILLGUY to be listed on Binance. Being the leading crypto exchange platform, Binance token listing announcements have always resulted in huge price spikes. But, coming to CHILLGUY, the anticipation of Binance listing the token is itself causing the price to rise. However, Binance has not yet confirmed the token release, which might result in a price decline in the coming few days. Highlighted Crypto News Today: SUI Hits New All-Time High Outperforming Other Major Cryptos

With the global crypto market cap surpassing \$3.37 trillion, excitement is building around the next phase of explosive growth. Investors are eager to identify the coins that could lead the charge in the next bull run. Among them, Lightchain AI (LCAI), Solana (SOL), and Polkadot stand out as top contenders with unique value propositions and high growth potential. Here's why these tokens could be the stars of the next rally. Why the Current Market Is Poised for Exponential Growth The digital money market is not new to ups and downs but its steady rise shows its future promise. This latest jump in market value comes from a mix of big company use, rules getting better, and tech improvements like Layer 2 fixes and crossing-chain links. Also, world curiosity in blockchain's changing power in fields, from money to play, keeps on rising. With worries about rising prices pushing buyers to look at other assets, digital coins are seen more as risky bets and safe places for money over time. As the market gets ready for its next big upswing, right now is the moment to spot fast-growing tokens that fit with these trends. Lightchain AI, Solana, and Polkadot Top Coins for the Next Bull Run As the cryptocurrency market gears up for its next bull run, Lightchain AI (LCAI), Solana (SOL), and Polkadot (DOT) are standing out as exciting options to watch. Lightchain AI combines artificial intelligence with blockchain technology, introducing cool innovations like the Proof of Intelligence consensus mechanism and the Artificial Intelligence Virtual Machine, which boost scalability and real-world use. Solana is well-loved for its lightning-fast transactions and super low fees, making it a favorite for decentralized apps and DeFi projects. Meanwhile, Polkadot's interoperable blockchain lets different networks communicate seamlessly, focusing on scalability and flexibility. With all these strengths, LCAI, SOL, and DOT are shaping up to be some of the most promising investments for the upcoming market rally. Why Lightchain AI Leads the Pack While Solana and Polkadot are powerful contenders, Lightchain AI sets itself apart with its focus on merging artificial intelligence with blockchain. This innovative approach unlocks unprecedented opportunities for real-world applications, making it a standout choice in a crowded market. Its early-stage presale pricing offers investors a unique chance to capitalize on its massive potential before broader market adoption drives its value sky-high. For those seeking a transformative investment, Lightchain AI is more than just a cryptocurrency—it's a revolution in decentralized technology. Its combination of groundbreaking innovation, early affordability, and ambitious vision makes it the best bet for 2025, ensuring its place as a leader in the next crypto bull run. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - SUI surpassed its previous all-time high, reaching \$5.20, a 20% increase in 24 hours. - The total value locked (TVL) for SUI reached a record high of \$1.96 billion. As 2024 came to a close with some disappointment for Ethereum enthusiasts, who hoped for its price to reach new highs alongside Bitcoin's rally, other Layer 1 blockchains are beginning to take the spotlight. Among them, Solana (SOL) and SUI (SUI) are gaining significant attention for their impressive performance in the crypto market. While Bitcoin touched \$98K at the start of 2025, SUI's native token has surged, breaking its previous all-time high of \$4.98, set just weeks ago on December 16, 2024. The current all-time high stands at \$5.20, marking a 20% increase in just 24 hours. Along with this surge, SUI's daily trading volume has skyrocketed by 150%, reaching \$2.08 billion. These gains have allowed SUI to climb into the 12th spot in the crypto rankings, surpassing Toncoin (TON) and Chainlink (LINK), with a market cap of \$15.22 billion. This rally in SUI price follows a significant spike in open interest, which climbed 40% to hit a record \$1.05 billion, according to data from Coinglass. Further, the total value locked in SUI has soared to an all-time high of \$1.96 billion, as per DeFiLlama data. This surge in open interest and TVL has acted as a trigger point, fueling further bullish momentum and drawing increased investor attention. Speculation in the market is rising, with many wondering if SUI's price will hit the \$10 mark in the coming days. Can SUI Maintain Its Bullish Momentum? Key Levels to Watch Technical indicators also show strong bullish momentum for SUI. Its price is trading well above the Ichimoku Cloud on the 4-hour SUI/USDT chart, signaling potential for further upward movement. Further, the MACD above the signal line confirms this momentum. Looking ahead, an RSI of 75 on the 4-hour time frame indicates that SUI is currently in an overbought zone—signaling strong bullish momentum with buyers dominating the market. However, being in the overbought zone suggests a potential for consolidation or a slight correction soon. - Immediate Resistance: \$5.30—the first key level to watch for a potential breakout. - Short-Term Target: \$5.50—a significant resistance level that could act as a psychological barrier before further upside. - Extended Target: \$5.80—a possible area of strong bullish continuation, potentially targeting higher market sentiment. - Support Levels (if correction occurs): \$4.90—a critical support level that could help maintain upward momentum. - Secondary support level: \$4.70, which could provide a solid base for potential consolidation. Finally, if \$5.10 acts as a strong support, we could see a bounce off the support for further upside. The \$4.90 and \$4.70 levels could create double bottom formations if the price revisits these levels and then moves higher. Highlighted Crypto News Today XRP Moves Closer to its ATH After Surpassing USDT by Market Cap

- XRP recorded over 13% weekly surge and it is currently trading at \$2.44. - Ripple's XRP surpassed the largest stablecoin USDT again on Jan 3, 2025. XRP remained one of the best performing cryptocurrencies in 2024 with two major events behind it. One being Ripple winning the case against the US SEC and the second being Trump's election as the President of the US. These two major catalysts resulted in over 230% rise of XRP token, which is still continuing in 2025. Ripple's XRP even surpassed the layer 1 token Solana and the largest stablecoin USDT on Dec 1, 2025. However, it couldn't stay there for longer and fell back to the top 4th position. With increased investor confidence and positive market sentiment, XRP resumed its price rally as we enter the new year. The token has been making headlines for reclaiming top 3rd position by surpassing USDT again. On Jan 3, 2025, XRP climbed up as its market cap was above \$139 billion, while USDT market cap was slightly above \$137 billion. At press time, XRP token is trading at \$2.44 with daily and weekly price surges of 0.62% and 12.74% respectively. It went on a dramatic price rise in the second week of Nov 2024, after winning the case against SEC. Since then, XRP is trading above \$2.5 with short price dips in between. XRP to Shoot Past its Previous ATH Despite the current price rally, XRP is still way behind its previous all-time high value of \$3.40, which was recorded almost 7 years back. Though other altcoins recorded ATH values in the 2021 bull run, it couldn't surge because of the US SEC lawsuit against Ripple. For the entire bull run in 2021, XRP had to stay silent due to ongoing court hearings. When Ripple secured a partial win last year, which industry leaders perceive as a major one, the token witnessed a resurgence. In addition, crypto-friendly Donald Trump as the President of the US, XRP seems to climb higher in 2025. Well-known market analyst Ali Martinex predicted a conservative target of \$8.40 for XRP. He says, XRP looks undervalued considering the considerable price breakout recorded in the first week of DEC 2024. Considering all the factors, XRP price is not just moving closer to its previous ATH but it is prepping to shoot past it. Highlighted Crypto News Today MicroStrategy Raises Another \$2 Billion to Buy More Bitcoin in Q1 2025

- AI16Z's market cap surged past \$2 billion, rising roughly 430% in just 30 days, drawing attention from traders and whales. - One trader sold tokens at \$2.1 each to secure a 1000% profit, highlighting AI16Z's potential for high returns. - Despite these gains, AI16Z remains risky due to profit-taking and rapid price swings, raising questions about its long-term stability. AI16Z is a memecoin on the Solana blockchain. It caught a lot of attention by giving large returns to traders. Its market cap recently went past \$2 billion, rising around 430% in just 30 days. This has led some people to wonder if AI16Z can compete with tokens like Dogecoin. One trader sold 2.27 million AI16Z tokens for \$4.77 million. Data shows they made \$4.47 million in profit, a 1000% return on investment. The trader sold at \$2.1 per token, making the most of the memecoin's quick price spike. Despite strong numbers, AI16Z has been volatile. Its price dropped by over 15% after investors sold to take profits. Later, it recovered about 3%, trading at around \$2.16. The token's trading volume jumped 55% to \$459 million. AI16Z reached a 24-hour high of \$2.46, showing how sharply its price can move. Volatility and Whale Activity Whale activity also helped AI16Z gain popularity. A whale recently purchased \$4 million worth of the token. This big move hinted at strong investor confidence. Some think AI16Z could rival Dogecoin if its current pace continues.

However, the future is still unclear. AI162z's success depends on how traders feel about it and whether they keep buying in. Analysts say it needs ongoing support to maintain a multi-billion-dollar valuation. A 42% spike in Futures Open Interest shows that many expect more growth. Like most memecoins, AI16Z comes with big risks. Large gains are possible, but sudden sell-offs and profit-taking can make prices drop quickly. It remains to be seen if AI16Z can continue growing. Still, it has clearly made a mark on the Solana ecosystem. Highlighted Crypto News Today Elon Musk Post About Crypto Taxes Drives New Talk on IRS Rules

As the crypto market experiences a dip, savvy investors are eyeing the best opportunities for significant gains in 2024. Lightchain AI, Solana, and XRP stand out as top picks poised for a rebound. With the ongoing Lightchain AI Presale already raising over \$7.7 million and offering tokens at a discount, it's an ideal time to invest. Solana and XRP continue to show resilience, making these coins potential winners as the market recovers and positions itself for explosive growth in the year ahead. Capitalizing on Market Dips- A Strategic Guide to Crypto Investing Market drops in crypto offer great chances for smart buyers. Good planning is important. find strong projects with real use, good basics, and active teams. Keep some money ready just for market drops to buy goods at lower prices! Mix up your collection to handle risk well and skip trading based on feelings. Use things like limit orders to set up buys at goal prices. Keep yourself updated about market shifts and world happenings that affect crypto. By staying steady and calm, you can change ups and downs into a way for big profits. Top Cryptos Set for Massive Gains in 2025 Now that we have covered some general tactics for investing in a market dip, let's take a closer look at the three top cryptos to buy now for potential big gains in 2025. Lightchain AI Lightchain AI is positioned as a key player for massive gains in 2025, leveraging its innovative decentralized ecosystem to drive widespread adoption. With a strategic focus on growth, partnerships, and a clear roadmap, the platform is set to deliver significant returns for early investors. Lightchain AI's unique presale opportunity offers discounted tokens, paving the way for exponential value as adoption scales. By 2025, it aims to be a cornerstone in the next wave of decentralized technology growth. Solana Solana is another top contender for big gains in the coming years. As a high-performance blockchain, it has garnered significant attention and investments from major players like Alameda Research and FTX Exchange. With its rapidly growing ecosystem, Solana is poised to take on Ethereum as the go-to platform for decentralized applications. XRP Despite facing legal challenges, XRP remains a strong player in the crypto market with its established partnerships and real-world use cases. Its recent price surge during the dip showcases its resilience and potential to deliver massive gains in the long term. With developments like RippleNet's integration with PayPal, XRP could see widespread adoption by financial institutions in 2025, driving its value even higher. Lightchain AI- Standout Choice for Future Growth Lightchain AI emerges as the standout choice for future growth by pioneering a transformative approach to decentralized systems. Its focus on empowering users with cutting-edge technology and innovative tools makes it a platform to watch. The presale provides a rare opportunity for early investors to secure tokens at a discounted price, positioning them for significant returns as the project scales. With a strategic roadmap that prioritizes expansion, partnerships, and adoption across key sectors, Lightchain AI has built a strong foundation for long-term success. Its commitment to fostering an inclusive and dynamic ecosystem attracts developers and enterprises seeking innovative solutions. As the demand for decentralized, intelligent platforms rises, Lightchain AI is set to deliver substantial growth and exceptional market impact. Do not miss out on this opportunity to invest in the future of decentralized technology and reap significant gains in 2025. Keep a close eye on Lightchain AI, Solana, and XRP as they continue to make waves and position themselves for explosive growth in the years ahead. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum (ETH) and Cardano (ADA) are flashing reversal signals as January is starting out on a bullish note. However, newcomer Rollblock (RBLK) could grant significantly higher returns as its revolutionary utility and smaller market cap guarantee greater room for growth. Discover why 35,000 investors have chosen Rollblock and what 2025 has in store for the GambleFi gem. How Rollblock Disrupts A \$450 Billion Industry The global gambling industry is progressively migrating online, and GambleFi Protocol Rollblock is positioning itself to capture a significant share of this revenue through its DeFi platform. By leveraging the Ethereum blockchain, Rollblock solves issues that have plagued online gambling for years, such as the lack of transparency and safety. Since all transactions are recorded immutably on-chain, they are easily traceable and immune to tampering. To further solidify its credibility, Rollblock has been thoroughly audited by SolidProof and it also secured a license from Anjouan Gaming. Over 35,000 investors have joined the Rollblock ranks and close to \$8 million has been raised during the ongoing presale. Newcomers will find more than 7,000 games and a sports betting platform for a 360-degree gambling experience. One of Rollblock's most interesting features is the revenue-sharing mechanism powered by the RBLK token. Holders can stake their RBLK and earn passive income on a weekly basis, funded by the casino's own revenue and buyback mechanism. Simultaneously, an automated burn mechanism will continuously reduce the circulating supply, stabilizing the price and ensuring sustainable long-term growth. Ethereum Sees Modest Rebound, Has The Reversal Started? Ethereum's underperformance throughout 2024 has frustrated loyal holders, as other Layer-1s, such as Solana and Cardano, vastly outperformed ETH's price action. However, it seems like Ethereum will play the catch-up game and analysts believe that its 2025 rally will take many by surprise. Historically, once Bitcoin starts cooling off, profits start to flow into Ethereum, as the second-largest cryptocurrency. Analyst Crypto Patel points out that despite the slump, Ethereum is still moving within an ascending channel. A bullish impulse at the right moment could send Ethereum above the trendline, which could lead to ETH entering escape velocity and reaching the prophesied \$10,000 landmark. Cardano Ready To Reclaim \$1 After spending the last week ranging around the \$0.86 mark, Cardano (ADA) regained momentum and is currently on track to test the key \$1 resistance. At the time of writing, Cardano trades at \$0.96 with a 13.5% intraday increase. This movement is also reflected by the 145% surge in trading volume, with over \$1.47 billion worth of Cardano changing hands across platforms in the last 24 hours. Analysts believe that this surge in volume is foreshadowing a massive rally that could propel Cardano toward its previous local top of \$1.30 before the end of January. However, for this to happen, market conditions need to be ideal, and right now, uncertainty is still looming. Discover The RBLK Presale While both Ethereum and Cardano will likely see new peaks at the height of the bull run, savvy investors know that the real gains will come for undervalued low-cap projects that have yet to prove themselves. This is why Rollblock presents such an enticing opportunity, as it leverages real-world utility, a reward mechanism, and powerful tokenomics. Stage 9 of the presale is currently underway and RBLK is priced at just \$0.0445, with an 800% surge expected by the end of the final round. Investors who take action today could lock a potential 100x gem once RBLK is listed on major exchanges and the bull run is in full swing. Don't miss out! Discover the Exciting Opportunities of the Rollblock (RBLK) Presale Today! - Website: <https://presale.rollblock.io/> - Socials: <https://linktr.ee/rollblockcasino> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency world is no stranger to the meteoric rise of meme coins like Pepe Coin, which has captured the imagination of crypto enthusiasts worldwide. These community-driven tokens thrive on relatability, humor, and a touch of internet culture, creating viral sensations that dominate social media and investor conversations. If you've dreamed of creating your own viral meme coin, now is the perfect time. Blocksync is here to turn your vision into reality. From secure smart contracts to custom presale platforms and targeted marketing, we provide all the tools and expertise you need to launch a presale that positions your meme coin for success in the competitive 2025 crypto market. Why Meme Coins Like Pepe Coin Go Viral Meme coins succeed because they connect with people on a cultural and emotional level, leveraging humor and shared online experiences to build strong communities. While relatability and fun are key to their appeal, modern meme coins must also offer real utility and secure, transparent foundations to attract serious investors. As competition increases, launching a presale gives your meme coin a head start by generating buzz, raising funds, and establishing credibility. Blocksync specializes in helping creators develop and launch presales that combine the viral potential of meme coins with the technical sophistication that investors now expect. Custom Smart Contracts for Secure and Transparent Presales At the heart of every successful presale is a secure and reliable smart contract. Blocksync's custom smart contracts are tailored to your project's needs, ensuring seamless transactions and decentralized fund management. Our contracts support multiple blockchain networks, including Ethereum, Binance Smart Chain, and Solana, giving your investors the flexibility to participate using their preferred cryptocurrencies. By prioritizing transparency and security, Blocksync's smart contracts inspire confidence among investors, laying a strong foundation for your presale. Professional Presale Platforms That Reflect Your Meme Coin's Identity Your presale platform serves as the gateway for investors to learn about your project and participate in its success. Blocksync creates custom presale platforms that combine engaging visuals with seamless functionality, ensuring your platform captures attention and drives investor engagement. Key features of our platforms include: - Integrated cryptocurrency payment gateways for smooth transactions. - Real-time presale tracking to build transparency and excitement. - Responsive designs that work flawlessly across mobile and desktop devices. By tailoring your presale platform to reflect the humor, personality, and community-driven ethos of your meme coin, Blocksync ensures your project stands out in the crowded crypto market. Marketing Strategies to Propel Your Meme Coin to Virality Meme coins thrive on visibility and community support, making marketing a critical aspect of their success. Blocksync's marketing experts craft strategic campaigns designed to generate buzz and attract investors to your presale. Our strategies include: - Social media campaigns on platforms like Twitter, TikTok, and Reddit, tailored to highlight your meme coin's humor and relatability. - Collaborations with crypto influencers to expand your reach and build credibility. - Press releases and targeted advertising to drive attention from crypto enthusiasts and investors alike. With Blocksync's marketing expertise, your meme coin has the best chance of going viral and building a loyal community. Future-Proof Blockchain Solutions for Sustainability and Growth While virality drives the initial success of meme coins, sustainability is key to maintaining investor interest. Blocksync integrates future-proof blockchain solutions that position your project for long-term growth and relevance. These solutions include multi-chain compatibility, staking mechanisms, token utility enhancements, and DeFi integrations. By adding real value to your coin, Blocksync ensures it remains competitive and appealing to both early adopters and long-term investors. Comprehensive Support for Your Meme Coin Presale Launching a meme coin presale involves coordinating technical development, design, and marketing efforts. Blocksync simplifies this process by offering end-to-end support, allowing you to focus on refining your vision and building your community. Our services include: - Custom smart contract development to ensure secure and transparent transactions. - Professional presale platform design tailored to your project's unique personality. - Strategic marketing campaigns to build excitement and attract investors. - Advanced blockchain features to future-proof your project. With Blocksync managing the technical and operational details, you can confidently launch a presale that sets your meme coin on the path to viral success. Why Choose Blocksync for Your Meme Coin Project? Blocksync is a trusted partner for blockchain entrepreneurs, combining technical expertise, creative design, and strategic marketing to deliver a seamless presale experience. Our team has a proven track record of helping creators launch successful cryptocurrency projects that capture attention and build communities. Whether your meme coin draws inspiration from internet humor, cultural trends, or niche communities, Blocksync ensures your presale is tailored to your vision and positioned for success in the 2025 crypto market. For More Information on Blocksync, Visit: Don't wait to launch your own viral meme coin. Partner with Blocksync today to design, develop, and launch a presale that combines humor, community, and innovation to capture investor interest and take your project to the moon. Together, we'll create the next big sensation in the meme coin market.

- Ethereum trades at \$3,444 with a \$415.01B market cap and \$20.12B trading volume. - Endaoment sold 3,690 ETH for \$12.47M in its largest-ever sale. Ethereum (ETH) is currently trading at \$3,444.79, up 1.28% over the last 24 hours. Its market cap stands at \$415.01 billion, reflecting a 1.29% increase, while 24-hour trading volume has surged 18.09% to \$20.12 billion. Ethereum's circulating supply is 120.47 million ETH, with no maximum supply cap. Recently, Endaoment, an Ethereum-based charity fund, sold 3,690 ETH worth \$12.47 million in a single transaction their first sale in 10 months and the largest ever. The ETH originated from an Ethereum ICO participant who received 100,000 ETH at Genesis in 2015. The participant has now sold 14,990 ETH at an average price of \$2,409, including 13,190 ETH through Endaoment, and still holds 85,000 ETH (\$293.8 million) across two wallets. Ethereum's fully diluted valuation, at \$415.01 billion, matches its market cap, while the volume-to-market cap ratio is 4.89%, highlighting significant trading activity. The recent uptick in trading volume reflects increased investor interest despite broader market uncertainty. Technical Indicators for ETH Ethereum is below the 21-day moving average (\$3,503.89), acting as immediate resistance. The 9-day moving average (\$3,371.37) serves as a critical support level. A bearish crossover signals potential downward pressure, where the 9-day average is below

the 21-day. If ETH breaks below \$3,371, it could drop to \$3,200. Conversely, a break above \$3,779, the key resistance, might trigger a rally toward \$4,000. The Relative Strength Index (RSI) is at 43.60, reflecting weak momentum and indicating that sellers currently have the upper hand. The RSI average of 48.10 suggests the market is close to neutral territory but has yet to show significant buying strength. An RSI recovery above 50 could signal a bullish reversal. The Moving Average Convergence Divergence (MACD) indicates declining bullish momentum, as histogram bars have turned narrower. A bullish crossover on the MACD line would be essential for upward momentum. The support zone at \$3,371 aligns with the 50-day exponential moving average (EMA), which strengthens its significance. The resistance at \$3,779 aligns with a previous high, forming a critical price level to watch. A breach of this level would confirm a higher high, which is necessary to sustain bullish sentiment. The bearish crossover and declining RSI point to near-term consolidation or further downside if bulls fail to reclaim \$3,500. However, strong trading volume and sustained activity among early ICO participants show ongoing confidence in Ethereum's long-term fundamentals.

- Fartcoin hit an ATH of \$1.45 before correcting to \$1.36, showing strong bullish momentum. - Fartcoin's \$1.36B market cap now exceeds KuCoin Token (KCS), Brett (BRETT), and Pyth Network (PYTH). Cryptocurrency enthusiasts have often faced skepticism from traditional investors, especially when it comes to the rise of meme-based digital currencies. However, the latest trend in the crypto world is making waves, and it's all about memecoins—one such meme coin, Fartcoin (FARTCOIN), which started as a joke, is making a surprising splash. With a market cap of almost \$1.36 billion, it now surpasses several well-known cryptocurrencies, including Kucoin Token (KCS), Brett (BRETT), and Pyth Network (PYTH). Fartcoin was created on the Solana blockchain in October 2024. This quirky cryptocurrency was initially priced at \$0.00005908. By November, it surged past \$0.02, achieving a market cap of \$22 million. On December 19th, the token crossed the \$1 billion market cap milestone for the first time. The day after it reached an all-time high (ATH) of \$1.30, but its value soon halved over the subsequent days. Today once again the memecoin crossed \$1 billion in market cap and hit an all-time high of \$1.45 before dipping slightly to its current value. Fartcoin Price Analysis: Key Levels and Market Momentum At the time of writing, FARTCOIN priced at \$1.36 with a market cap of \$1.35 billion. Over the past 24 hours, Fartcoin has rebounded by 61%, from the low of \$0.90. Additionally, its trading volume has spiked significantly over 150%, reflecting strong market activity and optimism. In the FARTCOIN/USDT 4-hours chart, the technical indicators suggest the rally may continue. It is currently trading well above its 50-day SMA, signaling a potential for more short-term gains. The RSI stands at 68, signaling room for growth before entering overbought territory. Additionally, its price remains above the middle Bollinger Band, indicating strong bullish momentum. However, the gradient of the line suggests that a slight correction could be on the horizon, as the token nears overbought territory. Based on the current technical indicators, the next potential target levels for Fartcoin (FARTCOIN) could be as follows: - Immediate Resistance: \$1.45 (recent ATH) "This is the first key level to watch. Breaking past this resistance could confirm further upward momentum. - Short-Term Target: \$1.50 "a psychological level that could act as a magnet for bullish sentiment if \$1.45 is breached. - Extended Target: \$1.65 "A Fibonacci extension level that aligns with strong bullish continuation trends. If Fartcoin fails to hold above the \$1.30 support, a retracement could test: - Support Level 1: \$1.25 "the middle Bollinger Band and a potential consolidation zone. - Support Level 2: \$1.10 "A previous key support area during the rally. Highlighted Crypto News

- ADA surged amid accumulation, breaking resistance after prolonged consolidation. - Whales drove rally; \$1 remains critical psychological and technical barrier. Cardano (ADA) has recently captured the attention of the cryptocurrency market with a notable price surge. It reached a 16-day high of \$1.03, reflecting an 8% gain in the past 24 hours. The trading volume climbed by 5% within the same period, signaling renewed market interest. Over the past week, ADA has risen by 17%, supported by a daily Relative Strength Index (RSI) of 57, which remains in neutral territory. Moreover, this rally follows a prolonged two-week period of price consolidation. Analysts attribute the recent uptrend to a bullish breakout from a key resistance trendline that ADA has struggled with since early December 2024. The altcoin witnessed a significant 42% price correction during this bearish phase. Despite these setbacks, long-term holders and whales have accumulated ADA at discounted levels, as indicated by an on-chain analysis. Exchanges recorded an outflow of \$37.18 million worth of ADA over the past week, underscoring heightened accumulation during consolidation. ADA To Breakout or Breakdown? The breakout has positioned ADA for potential upside momentum, with technical analysts predicting a possible climb to \$1.26, provided the altcoin closes above the \$0.98 mark. ADA's RSI at 52.65 indicates sufficient room for further upward movement. However, ADA's journey to sustained gains faces challenges. The \$1 mark remains a critical psychological barrier, with three failed attempts in December highlighting resistance due to limited retail capital. A short squeeze, which recently liquidated \$107 million in shorts market-wide, has fueled ADA's recent spike. Yet, breaking and holding \$1 as support is essential for sustained momentum. Cardano's future performance hinges on market dynamics and Bitcoin's stability. With large holders pulling substantial ADA from exchanges, the coming days will determine whether this rally marks a lasting breakout or a fleeting speculative uptick. Investors are closely watching for it to flip \$1 into solid support, a decisive factor for its long-term trajectory. Highlighted News Of The Day

Coinomi, a trusted leader in secure, multi-chain cryptocurrency wallets since 2014, proudly marks its 10th anniversary with a renewed commitment to privacy, user empowerment, and cutting-edge innovation. Under the leadership of founder Giannis Jegutanis and returning director Koby Lazar, Coinomi continues its legacy of delivering a seamless, privacy-focused crypto experience. Since its inception, Coinomi has played a foundational role in the cryptocurrency ecosystem. As one of the earliest wallets to pioneer multi-chain support, its influence can be seen in countless other wallets and blockchain projects derived from its original code. Now, with a refreshed vision, Coinomi is raising the bar to meet the evolving needs of today's crypto users. Enabling Freedom and Trust "Coinomi has always been about enabling freedom and trust," said Giannis, Coinomi's founder. "Today, there's an even greater need for a wallet that is fast, secure, and unwavering in its dedication to privacy. Now, more than ever, we remain committed to the values that first made Coinomi a trusted name in the crypto world." What's Next for Coinomi: Key Innovations and Improvements - Open Source Development Coinomi is returning to fully open-source development, enhancing transparency and fostering community collaboration. This approach ensures Coinomi remains secure, reliable, and responsive to user input. - Expanded Blockchain Support By December 31, 2024, Coinomi integrated an additional 50 blockchains, including Solana. This expansion cements its position as a premier multi-chain wallet, giving users a truly comprehensive platform for managing diverse digital assets. - Improved User Experience Coinomi is introducing significant speed enhancements and refined UI/UX features. These updates ensure that both newcomers and longtime users can effortlessly manage their crypto portfolios. A Legacy of Growth and Personal Involvement Reflecting on Coinomi's journey, Koby Lazar, CEO of Eucalyptus Labs returning to lead the Coinomi team, shared: "I first started using Coinomi at just 13 years old in 2014, when crypto was still a wild frontier. Over time, that early enthusiasm evolved into a deep personal and professional journey—one that led me from a young user to working alongside the very people who built Coinomi's foundation. Now, as I help lead the combined team at Coinomi and Eucalyptus Labs, I'm honored to guide us into the next era, staying true to the values and community spirit that defined us from the start." Staying True to Community Values In an era when many crypto wallets are absorbed into larger fintech conglomerates, Coinomi remains proudly independent. This autonomy enables the platform to: - Innovate on its own terms - Stay agile in responding to user feedback - Prioritize community-driven development For a full decade, Coinomi has upheld its core principles of security, privacy, and user-focused design. Now, as it embraces open-source development and an expanded ecosystem, Coinomi is poised to remain a trusted partner for crypto enthusiasts around the world. About Coinomi Founded in 2014, Coinomi is a pioneering cryptocurrency wallet known for its enduring commitment to security, privacy, and usability. Recognized for its multi-chain support and early embrace of Web3 functionality, Coinomi has served millions of users worldwide. Now backed by Eucalyptus Labs, Coinomi continues to empower individuals with a secure, transparent, and community-driven platform for managing their digital assets. - AI tokens are growing fast, with coins like Virtuals Protocol and a16z doing well in the market. - AI agents, which are smarter than bots, are getting popular, but they still face issues like slow networks and high costs. - Solaxy, a new network on Solana, might solve these problems by speeding up transactions and lowering fees, helping those agents grow. AI tokens have seen a significant rise, with their cumulative market cap increasing by 14.9% in just 24 hours, reaching \$49B. In comparison, meme coins, a much older sector, have a market cap of \$117B with an 8.9% rise. Among the top gainers are Virtuals Protocol (\$VIRTUALS) and a16z (\$A16Z), both now in the top 10 AI coins. Haseeb Qureshi from Dragonfly Capital believes these agent coins will outperform meme coins in 2025. He sees the crypto community shifting from financial nihilism to over-optimism. The big question is whether the AI token trend will last. AI agents are leading the new era in crypto. The Rise of AI Agents in Crypto A year ago, the idea of AI agents managing a crypto ecosystem seemed futuristic. Projects like Virtuals Protocol, Artificial Superintelligence Alliance, and a16z are now emerging with a \$16B market cap. Virtuals Protocol, in particular, saw a massive surge of 9,190% in November 2023. However, those are more advanced than bots. They can learn, adapt, and make complex decisions, unlike bots that follow pre-defined rules. Despite the hype, most AI agents are just old chatbots with a new name. According to Qureshi, these agents are more about the appearance of intelligence rather than providing real value. AI's real potential lies in software engineering and trading, where it can increase efficiency. However, for these AI agents to function properly, they need scalable networks with low transaction costs. Currently, most of these tokens run on Ethereum or Solana, both of which struggle with congestion and high fees. Solaxy, an L2 network on Solana, promises to address these issues. By handling part of the workload off-chain, Solaxy aims to increase transaction speed and reduce gas fees. This could make Solana more attractive for AI agent developers and drive the platform's growth in 2025. Solaxy is currently in its presale phase, and the demand for its token, \$SOLX, could significantly increase as the L2 network rolls out. Overall, while AI agents are gaining popularity, their true potential is still limited by technical challenges. The novelty of these might wear off in 2026, but for now, they continue to capture the crypto community's attention. Highlighted Crypto News Today How a \$66 Investment Turned into \$3 Million After Elon Musk Name Change?

The cryptocurrency world is brimming with opportunities, but only a handful of projects have the potential to deliver massive returns in the short and long term. As 2025 approaches, Qubetics (\$TICS), Cronos, and Stellar are emerging as top contenders for investors seeking exponential growth. These coins have earned a reputation for their unique features and scalability, making them some of the best coins for massive return potential. In the case of Qubetics, the project is currently experiencing a presale surge, with \$8.5 million raised from over 12,800 holders who've bought 394 million \$TICS tokens. This innovative platform is bringing decentralized solutions like tokenized assets and a non-custodial multichain wallet to the crypto ecosystem. Meanwhile, Cronos continues to revolutionize blockchain interoperability, and Stellar offers a global payment solution that's transforming cross-border transactions. In this article, we'll break down why Qubetics, Cronos, and Stellar are poised to deliver massive returns in 2025 and beyond, highlighting their market position and innovative solutions. Qubetics (TICS): A Major Presale Triumph Qubetics has quickly captured attention due to its strong presale performance. Currently in its 15th stage, the project has sold over 394 million \$TICS tokens, raising more than \$8.5 million. The token price is currently \$0.0414, with analysts projecting that \$TICS could reach \$0.25 by the end of the presale, offering a 563% ROI. Long-term projections are even more exciting, with \$TICS potentially hitting \$15 after the mainnet launch, giving early investors a 39728% ROI. A standout feature of Qubetics is its multichain wallet, which is non-custodial and open-source. This offers investors and businesses a seamless, secure way to manage assets across multiple blockchain ecosystems. The security advantage is clear: users retain full control over their private keys, and transactions are secure without relying on third-party custodians. For example, a business might use the wallet to manage multiple crypto assets from different blockchains like Ethereum and Solana, all while ensuring that no central authority has access to their funds. In terms of scalability, Qubetics has designed its ecosystem to support the growing demand for decentralized solutions. By using Ethereum Virtual Machine (EVM) compatibility, the platform enables seamless integration with a variety of decentralized applications (DApps) and protocols, enhancing its scalability and adoption. If you invested \$1,000 in \$TICS at the current price of \$0.0414 per token, you would receive 26,552 \$TICS tokens. If \$TICS reaches \$0.25 by the end of the presale, your investment would grow to \$6,638, representing a 563% return. If \$TICS reaches \$1 post-presale, your \$1,000 investment could turn into \$26,552, giving you a 2555% ROI. With such massive growth potential, Qubetics truly stands out as one of the best coins for massive return potential in 2024. Cronos (CRO): Blockchain Power and DeFi Adoption Cronos is a project that's gaining traction for its innovative blockchain solutions, which provide interoperability across various ecosystems. Built within the Cosmos ecosystem, Cronos enables seamless cross-chain compatibility, allowing for greater flexibility and efficiency in the growing DeFi

sector. Cronos has become a go-to blockchain for DeFi projects, and its fast, low-cost transactions have attracted a wide array of developers and investors. With interoperability as its cornerstone, Cronos has established itself as an essential Layer 1 solution for decentralised applications. It bridges Ethereum and Cosmos blockchains, enabling cross-chain interaction without compromising speed or security. This has made Cronos a prime player in DeFi, where transaction speed and cost efficiency are paramount. By simplifying blockchain interoperability, Cronos is addressing one of the biggest challenges in the crypto space: enabling seamless communication between various blockchain networks. In addition to its scalability, Cronos also benefits from strong backing from Crypto.com, which gives it additional credibility in the market. Its robust developer ecosystem continues to grow, and decentralised finance solutions on Cronos are flourishing, making it an ideal choice for those seeking best coins for massive return potential. Stellar (XLM): Revolutionising Cross-Border Payments Stellar has long been a leader in global payments, and its position as a cross-border payment solution is now more important than ever. Stellar aims to provide fast, low-cost payments and remittance services, particularly for the unbanked and underbanked populations. Stellar's open-source network allows for the easy transfer of value across borders, and its partnerships with governments and financial institutions continue to drive its growth. Unlike many cryptocurrencies that focus purely on decentralised finance, Stellar is built to bridge the gap between traditional financial systems and the blockchain world. By allowing fiat-to-crypto exchanges and facilitating cheap remittances, Stellar plays a unique role in driving blockchain adoption in the financial sector. Stellar is known for its low fees and high transaction speeds, making it an ideal solution for cross-border payments. Its focus on real-world adoption and scalability has earned it the respect of major players in the financial sector. For example, a small business in a developing country can use Stellar's network to transfer funds cheaply and quickly across borders, cutting out traditional intermediaries like banks, which often charge high fees for international transfers. As blockchain adoption continues to expand, Stellar will remain a top choice for those seeking 1000x returns. Conclusion: Why Qubetics, Cronos, and Stellar Are the Best Coins for Massive Return Potential As we approach 2025, Qubetics, Cronos, and Stellar stand out as the best coins for massive return potential. With Qubetics' presale success, Cronos' blockchain interoperability, and Stellar's role in global payments, each project brings something unique to the table for investors looking to capitalise on blockchain technology. Whether you're interested in Qubetics' tokenized marketplace, Cronos' cross-chain solutions, or Stellar's financial inclusion, these projects offer unparalleled growth potential. If you're looking to diversify your portfolio and maximize returns, now is the time to invest in these game-changing coins. Start your investment journey today, and get ahead of the curve with these best coins for massive return potential. A new AI coin called IntelMarkets (INTL) is turning heads in the crypto space. The DeFi project which aims to revolutionize the crypto trading market that is worth over \$36.5 billion using AI tools recorded an increase of over 700% while many top altcoins dipped. The project has also raised over \$5.6 million in presale funding as investors identify it as the next big thing in the crypto exchange space. Given its low market cap and potential for adoption, the growth of INTL in 2025 could outshine that of Solana (SOL) and Shiba Inu (SHIB). Shiba Inu (SHIB) Forecasted To Rally 264% A top analyst called Javon Marks notes that Shiba Inu (SHIB) is set to end the year with a major breakout and is coming from bull signals on lower timeframes. He forecasts the value of the Shiba Inu crypto could surge by 264% to \$0.000081 in the coming weeks. Currently, the price of the Shiba Inu coin has dropped by 5.6% and 32.4% on the weekly and monthly timeframes. The memecoin is trading close to the \$0.00002 level and could lose it if the bearish momentum persists. The level has acted as a strong support in the past week despite several attempts by bulls. In the meantime, technical analysis of the Shiba Inu token shows that bears are in charge. First, the relative strength index is below the midline which is a bearish sign. Also, the VWMA (10) flashes a sell signal which means that selling pressure is high. Solana (SOL) Prepares for Breakout Solana (SOL) is making another attempt to breach the \$200 level for the umpteenth time in the last 30 days. Although the altcoin has failed to recover this key level, CryptoBoss remains bullish about the Solana coin. He posted a chart on X recently which showed the altcoin breaking out of a symmetrical triangle. Another analyst called CRG also posted a similar price chart. In the case of a successful breakout, the Solana crypto price could rally to \$250 in the coming weeks. If the momentum remains, the Solana token might even set a new all-time high of \$300 in 2025. Interestingly, technical analysis shows the sentiment surrounding the altcoin is bullish. The VWMA (10) and Average Directional Index (14) indicators are currently in the buying territory which indicates that bulls are gaining momentum. IntelMarkets (INTL) 11x Potential Surge Attract Investors IntelMarkets (INTL) is a new-generation decentralized cryptocurrency exchange that is rapidly gaining popularity in the DeFi market through the use of artificial intelligence and other innovative technologies. Still, in its presale stage, the project has attracted more than \$5.6 million in funding. The price of the token has risen by 700% to \$0.073273 since the start of the presale. The main focus of IntelMarkets' development is the unique AI-based trading bots. These complex bots efficiently extract data from more than a thousand sources, help users get valuable insights, and contribute to the creation of the best trading strategies. Recognizing the diverse needs of its users, the platform is compatible with two leading blockchains: Ethereum and Solana. This dual-chain utility allows traders to select the most appropriate blockchain depending on their needs, which is suitable for enhancing the speed and efficiency of Solana or for using the vast ecosystem of Ethereum. Also, Security is of great importance in IntelMarkets. To prevent the possibility of future attacks from quantum computing the platform employs quantum-resistant cryptography methods to protect its infrastructure. These powerful tools help both new and experienced traders to make the right decision and work in the constantly evolving crypto market. Why IntelMarkets is the Best DeFi Project for 2025 IntelMarkets is a project that is revolutionizing the crypto trading world. Given its successful presale and AI features, the value of INTL could skyrocket by 11x in 2025. Such potential makes it a great cryptocurrency to buy in 2025. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is buzzing after a whale investment of \$24.5 million was reported in Lightchain AI (LCAI) during its presale phase. With a token price of just \$0.0045, this substantial purchase highlights growing confidence in Lightchain AI's potential to become a dominant player in the blockchain and artificial intelligence (AI) sectors. Why Are Whales Investing in Lightchain AI? Lightchain AI has captured the attention of major investors due to its innovative approach to integrating blockchain and AI. The platform introduces a Proof of Intelligence (PoI) consensus mechanism, rewarding nodes for performing meaningful AI computations such as data analysis, machine learning, and optimization. This mechanism creates a direct link between blockchain security and real-world AI advancements, offering unparalleled utility. Furthermore, Lightchain AI's robust presale performance—already raising over \$7.4 million—signals strong early adoption. The whale's \$24.5 million investment underscores the potential for massive scalability and adoption in industries such as healthcare, logistics, and finance. Decentralized Governance as a Catalyst Lightchain AI stands out with a group-focused way of managing things that highlights being open to all. Unlike Solana's focus on developers, Lightchain AI lets token owners take part in shaping the platform future. With its shared setup, token owners can pick on big choices, like network updates, smart ties, and the way of the platform. To keep it just, we use a voting style that makes small holders have more say while holding back central power. This plan also helps group-led efforts like giving money to developers and public AI works which brings new ideas and teamwork. By putting inclusiveness and fairness first, Lightchain AI makes sure its growth fits with the common aims of its group. This way gives a special benefit over Solana's focused growth model, placing Lightchain AI as a smart platform led by shared taking part. What Does This Mean for the Market? Whale investments are often seen as a strong indicator of a project's future potential. Such large-scale participation validates Lightchain AI's vision and technological foundation. As the cryptocurrency market moves toward greater adoption of real-world applications, Lightchain AI's unique blend of blockchain and AI positions it as a project to watch closely. Its ability to tackle real-world problems with its PoI mechanism and community-driven governance model presents an attractive proposition for both investors and enterprises seeking innovative solutions. With its recent whale investment and growing interest from the crypto community, Lightchain AI is poised to become a top player in the industry. As more investors recognize the value of this project, we can expect to see further developments and partnerships that solidify Lightchain AI's position as a leader in blockchain-powered artificial intelligence. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Meme coins have taken the cryptocurrency world by storm, turning humor, creativity, and community engagement into viral success stories. From Dogecoin's rise to Shiba Inu's community-driven model, meme coins have proven their ability to captivate investors and build loyal followings. As the 2025 crypto market looms, there's never been a better time to launch your own meme coin. But standing out in this competitive space requires more than just a catchy name or logo—it demands a secure presale, a professional platform, and a strategy that builds excitement and trust. That's where Blocksync comes in. With expertise in Web3 development, marketing, and blockchain solutions, Blocksync is your go-to partner for creating a fully custom presale that positions your meme coin for success. Why Meme Coins Will Thrive in 2025 Meme coins thrive on community engagement, relatability, and the ability to generate viral interest. They often leverage humor and pop culture to create bonds with their communities while providing opportunities for investors to engage in the crypto space. As the market matures, investors are not only looking for fun but also projects with strong technical foundations and real utility. In 2025, meme coins are poised for even greater success as more developers combine viral appeal with innovative features. By launching a presale, you can secure funding, establish credibility, and attract a dedicated investor base. Blocksync helps you navigate this exciting landscape with services that make your project stand out. Custom Smart Contracts for Secure Presales The backbone of a successful meme coin presale is a secure and transparent smart contract. Blocksync develops custom smart contracts tailored to your specific needs, ensuring smooth transactions and decentralized fund management. Our contracts are designed to support multiple blockchain networks, including Ethereum, Binance Smart Chain, and Solana. This multi-chain compatibility allows you to attract investors from diverse ecosystems, broadening your reach and appeal. By ensuring that funds are deposited directly into wallets you control, Blocksync's smart contracts build trust and confidence among your backers. Engaging Presale Platforms That Reflect Your Meme Coin's Personality Your presale platform is where investors first connect with your project, making it a vital part of your launch strategy. Blocksync creates custom presale platforms that capture the unique personality of your meme coin while offering a seamless user experience. Our platforms include features like integrated cryptocurrency payment gateways, real-time presale tracking, and responsive designs optimized for mobile and desktop users. By combining functionality with creative design, Blocksync ensures your presale platform not only attracts investors but also keeps them engaged throughout the process. Viral Marketing Strategies for Maximum Impact Meme coins rely heavily on visibility and community engagement to achieve success. Blocksync's marketing experts craft strategic campaigns designed to generate buzz and make your meme coin go viral. Our approach includes: - Social media campaigns that tap into humor and pop culture. - Collaborations with influencers to amplify your project's reach. - Press releases and partnerships with crypto-focused media outlets to build credibility. By leveraging the channels where meme coins thrive, Blocksync helps you build excitement and attract a loyal community of backers who share your vision. Future-Proof Blockchain Solutions for Long-Term Growth While virality is critical, sustainability is just as important. Blocksync provides future-proof blockchain solutions to ensure your meme coin thrives beyond the presale phase. We integrate features such as multi-chain compatibility, staking mechanisms, DeFi applications, and token utility enhancements to add value to your project. These solutions not only attract investors during the presale but also position your meme coin for long-term success in the evolving crypto market. Comprehensive Support for Your Meme Coin Presale Launching a meme coin presale involves juggling technical development, creative design, and marketing execution. Blocksync simplifies the process by offering end-to-end support, so you can focus on building your community and refining your project's vision. Our services include: - Custom smart contract development for secure and transparent transactions. - Professional presale platform design tailored to your meme coin's identity. - Marketing campaigns to drive visibility and build excitement. - Advanced blockchain features for scalability and innovation. With Blocksync managing the technical and operational details,

you can confidently launch your presale and focus on fostering the community that will take your meme coin to the moon. Why Choose Blocksync for Your Meme Coin Project? Blocksinc is a trusted partner for blockchain innovators, with years of experience helping entrepreneurs launch successful cryptocurrency projects. Our team combines technical expertise, creative problem-solving, and strategic marketing to deliver a presale experience that sets your meme coin apart. Whether your meme coin is inspired by internet humor, pop culture, or niche communities, Blocksinc ensures your project has the foundation it needs to succeed in the 2025 crypto market. For More Information on Blocksinc, Visit: Make 2025 the year your meme coin takes off. Partner with Blocksinc to design, build, and launch a presale that captures investor interest and sets the stage for viral success. Together, weâ€™ll turn your vision into the next big thing in the meme coin market.

The year 2025 is set to be another exciting chapter in the evolution of meme coins. As the cryptocurrency market continues to thrive, meme coins stand out as a unique and community-driven segment that has captivated investors worldwide. Whether youâ€™re inspired by the meteoric rise of Dogecoin, Shiba Inu, or other viral tokens, launching your own meme coin can be a rewarding venture. To make this dream a reality, you need a partner who understands the intricacies of presale development and blockchain technology. Blocksinc is here to ensure your meme coin presale launches seamlessly, professionally, and with all the tools necessary for success. Why Blocksinc Is the Right Choice for Your Meme Coin Project When it comes to launching a cryptocurrency, having the right team on your side is critical. Blocksinc offers a full suite of services tailored to meet the specific needs of meme coin creators. From secure smart contracts to eye-catching website designs, Blocksinc provides end-to-end support for your project. Our team brings years of blockchain expertise, ensuring every aspect of your presale meets the highest standards of security, functionality, and scalability. Blocksincâ€™s track record of helping entrepreneurs launch successful crypto projects makes us the ideal partner for your 2025 meme coin. We understand the unique challenges and opportunities associated with these community-driven coins, and we are committed to helping your vision come to life. Custom Smart Contracts for a Secure and Transparent Presale A successful meme coin begins with a secure and reliable smart contract. At Blocksinc, we specialize in creating custom smart contracts that are tailored to your presaleâ€™s requirements. These contracts are the backbone of your presale, ensuring that funds raised during the process are handled securely and transparently. Our contracts support multiple cryptocurrencies, including Ethereum, Bitcoin, Solana, and others, giving your investors the flexibility they desire. Most importantly, the smart contracts we develop are entirely decentralized, meaning all funds are directed to a wallet you control. This not only builds trust with your investors but also aligns with the core principles of blockchain technology. Professional Presale Platform Design Your presale platform is the first interaction potential investors will have with your meme coin. To capture their attention and inspire confidence, Blocksinc delivers professional, user-friendly platforms that showcase the personality and vision of your coin. We handle both frontend and backend development, creating a presale website that is as functional as it is visually appealing. Features like integrated cryptocurrency payment gateways, real-time presale tracking, and responsive design ensure your platform operates smoothly and efficiently. Whether users access your site on desktop or mobile, theyâ€™ll have a seamless experience that encourages them to participate. By combining stunning visuals with robust functionality, Blocksinc ensures your platform reflects the energy and excitement of your meme coin project. Marketing Strategies to Build Hype Around Your Meme Coin One of the defining features of meme coins is their ability to generate buzz and build vibrant communities. Blocksinc understands that visibility and engagement are critical to your projectâ€™s success. Thatâ€™s why we offer comprehensive marketing strategies that ensure your meme coin reaches a broad audience. From partnerships with influencers to strategic social media campaigns, we help you tap into the networks that drive meme coin hype. Our team also connects you with leading media outlets to share your story and build credibility within the crypto space. Press releases, targeted ads, and viral content are just a few of the tools we use to generate excitement and attract investors to your presale. Future-Proof Solutions for Long-Term Success The crypto market moves fast, and meme coins often experience rapid growth. To ensure your project remains competitive, Blocksinc incorporates advanced blockchain solutions that prepare your coin for scalability and long-term success. Our team offers multi-chain compatibility, allowing you to operate across multiple blockchain networks. This not only increases accessibility for investors but also positions your meme coin to adapt to future trends. Additionally, features like DeFi integrations and token utility enhancements add value to your project, ensuring it remains relevant and appealing to the community. By building a strong foundation and integrating the latest innovations, Blocksinc helps your meme coin thrive beyond its initial presale. How Blocksinc Guides You Through the Presale Process From the moment you decide to launch a meme coin, Blocksinc is by your side, offering expert guidance and support. We begin with a consultation to understand your vision, goals, and target audience. From there, our team handles the technical and strategic aspects of your presale, allowing you to focus on building your community and promoting your coin. Blocksincâ€™s holistic approach ensures no detail is overlooked. Whether itâ€™s creating a secure smart contract, designing a high-converting presale website, or executing a viral marketing campaign, we manage every aspect of your project with precision and care. Partner with Blocksinc to Launch Your Meme Coin in 2025 The meme coin market is one of the most exciting and dynamic spaces in cryptocurrency. To make your mark and capture the attention of investors, you need a partner who can deliver a flawless presale experience. Blocksincâ€™s combination of technical expertise, creative design, and marketing savvy makes us the ultimate choice for launching your 2025 meme coin. From secure smart contracts and polished presale platforms to strategic marketing campaigns and scalable solutions, we provide everything you need to turn your vision into reality. With Blocksinc, you can confidently launch your meme coin knowing that every detail has been handled by a team of experienced professionals. For More Information on Blocksinc, Visit: Start your meme coin journey today and make 2025 the year your vision takes the crypto world by storm. With Blocksinc, success is just a step away. Meme coins arenâ€™t just jokes anymoreâ€”theyâ€™re full-blown investment phenomenons. The right meme coin can skyrocket your portfolio from â€œmehâ€”to â€œI might actually afford a Lambo now.â€” Whether youâ€™re chasing the next moonshot or just love the chaos of the crypto world, youâ€™ve landed in the right place. Today, weâ€™re diving into the best meme coins with 1000X potential, featuring three spicy contenders: BTFD Coin, Bonk, and Ponke. First, letâ€™s talk about BTFD Coin, the shining star of meme coins in 2024. In its 13th presale stage, itâ€™s raised over \$4.8 million, selling more than 61 billion tokens to a community of over 7300 bullish holders. The presale milestones are impressive: \$1M raised in under 10 days and \$2.5M in just two weeks. With its current price sitting at just \$0.000142 per coin, the FOMO is real. And with all the momentum behind it, BTFD Coin is the top dog in the race for exponential gains. BTFD Coin: From Dip to Moon Whatâ€™s in a name? For BTFD Coin, everything. BTFD Coinâ€™s fully-featured P2E game has gone live, allowing players to enjoy the game and earn rewards concurrently. Itâ€™s a rallying cry for investors who donâ€™t flinch during market dipsâ€”they double down. This coin takes that fearless mindset and turns it into a meme-backed ecosystem designed for serious returns. Hereâ€™s why itâ€™s grabbing all the headlines: - Staking Rewards: Offering a jaw-dropping 90% APY, BTFD Coin is not just about holdingâ€”itâ€™s about compounding your gains. The longer you stake, the harder your wallet flexes. - Play-to-Earn (P2E) Game: BTFDâ€™s P2E game is a four-stage masterpiece where players can earn real rewards in \$BTFD tokens. Who knew playing games could make you rich? - Referral Programme: The cherry on top is its referral programme, where users earn 10% of every referral purchase in BTFD tokens, with additional bonuses for top participants. Itâ€™s a community-building machine! What sets BTFD Coin apart from other meme coins is its multi-layered appeal: meme vibes, serious staking rewards, and community-driven utility. If youâ€™re hunting for the best meme coins with 1000X potential, this bull is charging straight toward your portfolio. \$BTFD, a token reflecting the resilience of the 1973 crash, presents investors with a chance to emulate legends like Warren Buffett. Priced at only \$0.000142 in Stage 13, itâ€™s an accessible entry point for potential significant returns. The limited-time BIG50 bonus grants you a 50% bonus on your purchase (e.g., buy 100, receive 150) with code BIG50. Nowâ€™s the time to acquire \$BTFD and capitalize on potential market upturns. Easy as pie! Join the BTFD Coin presale on their website. Connect your MetaMask or Trust Wallet, use bonus code BIG50 for a 50% \$BTFD Coin boost. This offer lasts until January 5th. Donâ€™t delay! Bonk: The Shiba Slayer Next up is Bonk, the Solana-based meme coin thatâ€™s been described as the â€œShiba of Solana.â€” Bonk launched with a bang, grabbing headlines for its airdrops and lightning-fast rise in popularity. This feisty little token took the phrase â€œbonk to the moonâ€” seriously, building a loyal community in no time. What makes Bonk special is its accessibility and speed. Built on the Solana blockchain, Bonk transactions are incredibly fast and dirt cheap. This has made it a darling for small investors and meme enthusiasts looking for a token with viral potential. Bonk is also big on decentralisation, with no insider wallets or pre-mined coins hogging the spotlight. Every holder gets an equal shot at success. If Solana keeps growing, Bonk could be its breakout star. Itâ€™s definitely one to watch for those eyeing meme coins that blend hype with smart tech. Ponke: The Monkey With an Edge Finally, we have Ponke, a newcomer thatâ€™s quietly building a reputation as one of the best meme coins with 1000X potential. While it may not have the mainstream buzz of its competitors (yet), Ponke is carving its own niche with a mix of humour, community, and an innovative rewards system. Plus, its marketing game is on pointâ€”expect viral campaigns, NFT drops, and collaborations that keep the hype alive. It also boasts a play-to-earn game as well as a decentralised exchange (DEX), making it an integral part of Solanaâ€™s ecosystem. Ponke might still be in its early days, but for those who like to get in on the ground floor, this could be the hidden gem of the meme coin world. The Bottom Line: Ready to Join the Bulls? Letâ€™s face it: meme coins are risky, but when the rewards hit, they hit hard. Of the three coins weâ€™ve discussed, BTFD Coin stands out as the one with the most momentum. With its 13th-stage presale price of \$0.000142 and a community thatâ€™s growing by the day, itâ€™s poised for a massive breakout once it hits exchanges. If youâ€™re serious about finding the best meme coins with 1000X potential, donâ€™t let this opportunity pass you by. The presale wonâ€™t last forever, and neither will the chance to invest at such low prices. Secure your BTFD Coins before the price soars, stake your holdings for unbeatable rewards, and spread the word to grow your stack even more. This isnâ€™t just a memeâ€”itâ€™s your chance to turn internet culture into exponential gains. The cryptocurrency market is set to explode with new opportunities in 2025, offering the perfect environment for innovative blockchain projects to thrive. Whether youâ€™re launching a utility token, a DeFi platform, or the next viral meme coin, a well-executed presale is the gateway to success. To ensure your project captures investor attention and secures the funding it needs, you need a partner with the technical expertise, design skills, and marketing strategies to make it happen. Blocksinc is your one-stop solution for creating a custom presale platform that sets your project up to dominate the market. Why 2025 Is the Ideal Time to Launch Your Crypto Presale The crypto market continues to mature, with increased adoption of blockchain technology by businesses, institutions, and individual investors. The rise of decentralized finance (DeFi), non-fungible tokens (NFTs), and multi-chain ecosystems has created an environment rich with potential for new projects. As competition intensifies, a well-designed presale can provide the foundation you need to stand out. Itâ€™s not just about raising fundsâ€”itâ€™s about building credibility, engaging a loyal community, and showcasing the value of your project. Blocksinc understands what it takes to succeed in this evolving landscape and delivers customized solutions tailored to your unique goals. Secure Smart Contracts for Transparent Fundraising A secure and reliable smart contract is the backbone of any successful cryptocurrency presale. Blocksincâ€™s team of blockchain experts creates custom smart contracts that provide the transparency and trust investors demand. Our contracts support multiple cryptocurrencies, including Ethereum, Bitcoin, Solana, and Binance Smart Chain, allowing investors to contribute using their preferred digital assets. These contracts ensure that funds are deposited directly into a wallet you control, aligning with blockchainâ€™s decentralized principles while providing investors with confidence in your project. By prioritizing security, automation, and multi-chain compatibility, Blocksincâ€™s smart contracts set your presale up for success. Custom Presale Platforms to Engage Investors Your presale platform is where potential investors interact with your project, making it a critical component of your launch strategy. Blocksinc designs and develops user-friendly presale platforms that combine professional aesthetics with robust functionality. Our platforms include features such as integrated crypto payment gateways, real-time presale tracking, and responsive design for mobile and desktop users. Whether youâ€™re targeting retail investors or institutional backers, we create a platform that engages your audience and simplifies their participation. By reflecting your projectâ€™s brand and values, Blocksinc ensures your presale platform makes a lasting impression on investors. High-Impact Marketing to Build Buzz Around Your Project Launching a presale isnâ€™t just about technologyâ€”itâ€™s about capturing attention and building excitement. Blocksinc helps you achieve this through strategic marketing campaigns designed to maximize visibility and drive investor interest. We work with top-tier media outlets, influencers, and crypto-focused advertising platforms to ensure your project gets noticed.

From social media campaigns and press releases to targeted ads and influencer partnerships, our marketing strategies are tailored to your specific goals and audience. By building a strong online presence and generating buzz, Blocksync helps you create a loyal community of investors eager to support your project. Future-Proof Solutions for Long-Term Success The crypto market moves quickly, and your project needs to be ready to adapt to new trends and demands. Blocksync provides scalable blockchain solutions that ensure your presale platform remains competitive long after launch. Our team integrates advanced features such as multi-chain compatibility, DeFi applications, staking mechanisms, and token utilities to enhance your project's value. These innovations not only attract investors during the presale but also position your token for sustainable growth in the years to come. By incorporating the latest blockchain trends, Blocksync ensures your project is built for long-term success in a rapidly evolving market. Comprehensive Support from Start to Finish Blocksync offers end-to-end support for your cryptocurrency presale, simplifying the process and ensuring no detail is overlooked. From the initial planning stages to post-launch growth, we guide you every step of the way. Our services include:

- Custom smart contract development for secure and transparent fundraising.
- Professional presale platform design to engage and convert investors.
- High-impact marketing campaigns to generate buzz and build community.
- Scalable blockchain solutions to future-proof your project.

By handling the technical, operational, and promotional aspects of your presale, Blocksync allows you to focus on your vision and strategy. Partner with Blocksync to Dominate the Crypto Market In 2025, the opportunities for innovative blockchain projects are immense, but success requires careful planning and flawless execution. Blocksync has the experience, tools, and expertise to help you dominate the crypto market with a presale that captures attention, builds trust, and secures funding. From secure smart contracts to polished presale platforms and strategic marketing, Blocksync delivers a comprehensive solution tailored to your project's needs. With our support, you can confidently launch your presale and make a lasting impact in the blockchain industry. For More Information on Blocksync, Visit: Don't wait to bring your vision to life. Partner with Blocksync today and take the first step toward dominating the 2025 crypto market with your custom presale solution. Together, we'll turn your ideas into a thriving reality. The PropFi ecosystem is being boosted significantly with the emergence of FXGuys (\$FXG). The project's presale has already attracted the attention of traders and investors in DeFi since it raised over \$3 million. It has also overtaken other prominent coins, such as Toncoin (TON) and Solana (SOL), with analysts estimating it could surge to \$1 by 2025. FXGuys is one of the high-potential altcoins created to address typical issues in crypto trading. It does this through its unique features and offers traders and investors a very rich experience in trading. Investors are starting to appreciate \$FXG growth, especially as it nears its launch. This article examines FXGuys presale growth and its potential to hit \$1 by 2025. Toncoin (TON): Pioneering Decentralized Payments Toncoin is an utility token of The Open Network, a decentralized and a layer-1 blockchain that is managed by the TON Foundation and enthusiasts. At first, it was imagined as an open network for the telegram with the "Gram" token in mind. The project was to be completed, but work stopped after the SEC issued a court order. Toncoin now uses a superior proof-of-stake algorithm permitting highest frequency and highest decentralization. It wants to have fast and secure payment services with charges that are very low and establish an environment. Looking at the price trend it is possible for the project to increase in price. Polkadot (DOT): Connecting Blockchains for Real-World Solutions With each new time, it is even more obvious that Polkadot can unite thousands of blockchains. This parachain is intended to increase capacity by placing dApps, which may be utilized on parachains. However, no other blockchain can do this while communicating with others. The Polkadot ecosystem has expanded to accommodate new projects in the last few years, and new projects on Polkadot are released monthly. To that end, professionals suppose that with the increase in the utilization of interoperability products, Polkadot will be more appreciated. Investor should use Polkadot's solution for real-world blockchain. FXGuys (\$FXG): A Promising Crypto in the PropFi Market \$FXG's presale has raised over \$3.2 million, and interest in the coin is not slowing down soon. Now, \$FXG is at Stage 2 of the public presale, where the tokens are sold at \$0.04 each. Investors are very interested in its launch since the token is expected to reach \$0.10. The 2nd stage presale investors are eligible for a 150% gain while putting \$FXG as one of the high-potential altcoins to watch. The more users there will be on the platform, the more demand \$FXG will receive. Experts predict that the DeFi crypto coin may reach \$1 by 2025, thanks to its real applications and leadership in the PropFi market. FXGuys (\$FXG): Empowering Traders with New Opportunities Besides its presale, this platform offers a Trade2Earn program for crypto traders. Whether the trader is making profits or not, here they are paid in \$FXG tokens, making it one of the most promising crypto out there. The main goal is to increase the number of users and then grow the platform globally. This DeFi crypto coin presents options for traders who may be looking for some new ways to create new income. You will be able to open trading accounts that can carry up to \$500,000 in value after passing an evaluation test. Furthermore, the profit split will be 80:20 in respect of the price and commission; this would enable you to trade large without loading your cash into it. Conclusion Presale of FXGuys has grown enormously, with the public round raising more than \$3 million and overtaking Solana and Sui. This project offers several unique solutions, which is why it is considered the most promising crypto coin available. With this value rising, this trading project is set to get to \$1 by 2025. The cryptocurrency industry is gearing up for unprecedented growth in 2025, with blockchain innovation driving new opportunities for entrepreneurs and developers. Whether you're launching a utility token, a decentralized finance (DeFi) platform, or the next viral meme coin, a well-executed presale is essential to stand out in a competitive market. A presale not only secures critical funding but also builds investor trust and positions your project for long-term success. At Blocksync, we specialize in simplifying the presale process. From secure smart contracts to professional platform design and strategic marketing, we provide all the tools you need to prepare for the 2025 crypto boom with confidence. Why 2025 Is the Perfect Time to Launch a Cryptocurrency Presale The cryptocurrency market continues to expand, with new trends such as multi-chain ecosystems, DeFi applications, and tokenized assets driving innovation. As blockchain technology becomes more accessible and widely adopted, investors are actively seeking fresh projects with strong potential. In this competitive environment, launching a presale allows you to gain early traction, raise funds, and build a community of loyal supporters. However, standing out in 2025 requires a secure, user-friendly platform and a compelling marketing strategy. Blocksync ensures your presale not only meets these demands but exceeds investor expectations. Custom Smart Contracts for Secure Fundraising A reliable smart contract is the foundation of a successful presale. Blocksync develops custom smart contracts tailored to your project's unique requirements, ensuring secure and transparent handling of all contributions. Our contracts support multiple blockchain networks, including Ethereum, Binance Smart Chain, and Solana, giving investors the flexibility to participate using their preferred cryptocurrencies. By prioritizing decentralization and transparency, Blocksync's smart contracts build trust and confidence among your investors, setting the stage for a successful presale. Engaging and Professional Presale Platforms Your presale platform is where potential investors connect with your project, making it a critical component of your launch strategy. Blocksync designs custom presale platforms that combine professional aesthetics with seamless functionality. Our platforms include:

- Integrated cryptocurrency payment gateways for smooth transactions.
- Real-time tracking of presale progress to build investor confidence.
- Responsive designs optimized for both mobile and desktop users.

By delivering a user-friendly and visually appealing platform, Blocksync ensures your presale attracts attention and inspires participation from a diverse audience. Strategic Marketing to Drive Visibility and Engagement Launching a presale is about more than just technology—it's about capturing the attention of the right audience. Blocksync helps you achieve this with strategic marketing campaigns designed to maximize visibility and generate excitement. Our marketing services include:

- Social media campaigns to connect with crypto enthusiasts.
- Collaborations with influencers to expand your reach.
- Press releases and targeted advertising to build credibility.

By creating buzz around your project, Blocksync helps you build a loyal community of backers who believe in your vision and support your token's journey. Future-Proof Solutions for Long-Term Success While a successful presale sets the foundation, your project needs to be equipped for future growth. Blocksync provides future-proof blockchain solutions that ensure your token remains competitive and scalable in a rapidly evolving market. Our services include multi-chain compatibility, DeFi integrations, staking mechanisms, and token utility enhancements. These features not only attract initial investors but also ensure your project remains relevant and valuable in the long term. End-to-End Support for Your Presale Journey Developing and launching a presale involves managing multiple moving parts, from technical development to marketing execution. Blocksync simplifies the process by offering comprehensive support tailored to your project's needs. We handle every aspect of your presale, including:

- Custom smart contract development.
- Professional presale platform design and development.
- Strategic marketing campaigns to build excitement and drive investor interest.
- Advanced blockchain features to future-proof your project.

With Blocksync managing the details, you can focus on refining your vision and engaging with your community. Why Choose Blocksync for Your Cryptocurrency Presale? Blocksync is a trusted partner for blockchain innovators, with years of experience helping entrepreneurs bring their visions to life. Our combination of technical expertise, creative design, and strategic marketing ensures your presale is executed flawlessly. Whether you're launching a utility token, a DeFi platform, or a meme coin, Blocksync tailors its services to your unique goals. By working with us, you gain access to the tools and guidance needed to stand out in the competitive 2025 crypto market. For More Information on Blocksync, Visit: Don't wait to prepare for the 2025 crypto boom. Partner with Blocksync today to design, build, and launch a presale that sets your project apart and positions you for lasting success. Together, we'll turn your vision into a thriving reality. - XLM surges 25%, driven by short liquidations and bullish patterns. - Technical indicators suggest potential gains, with resistance near \$0.47 level. Stellar's native token, XLM, is catching the spotlight as the crypto market starts the new year with significant volatility. On January 1, 2025, XLM surged 11% in the past 24 hours, trading at \$0.4253, marking a 14% increase over the last seven days. It hit a two-week high of \$0.4605 earlier today, showcasing its resilience despite broader market uncertainties. This remarkable performance can be attributed to several factors. A surge in trading volume, up by 95% during the Asian trading session, underscores growing investor interest. Data from research revealed that \$531,570 worth of XLM short positions were liquidated within four hours, indicating a shift in market dynamics towards bullish sentiment. XLM's technical indicators align with its upward momentum. Breaking out from a bullish flag and pole pattern, the token's trajectory hints at a potential 60% rally to \$0.60, provided it closes above the critical \$0.38 resistance level. However, a failure to maintain its gains could see it retrace to \$0.33 or even \$0.218, representing a 30% drop. The token's recent rally also coincides with Stellar's expanding ecosystem. A new partnership with Fnbank, enabling digital banking access via mobile SIM cards in Africa, highlights Stellar's commitment to utility-driven growth. This collaboration complements its robust blockchain performance, which processed over 1.16 million smart contract invocations last month without interruptions. Will XLM Maintain Bullish Trajectory? Analysts point to Stellar's doji candlestick patterns and a falling wedge breakout as signs of an impending uptrend. The Chaikin Money Flow (CMF) indicator turning positive reflects improving capital inflows, signaling rising investor confidence. Looking ahead, XLM's price action will be closely tied to breaking key resistance levels and maintaining its bullish trajectory. With a combination of technical strength and growing utility, Stellar appears poised for further gains, provided market conditions remain supportive. Highlighted News Of The Day Solana and Sui Outperformed Ethereum in 2024, What Lies Ahead?

- Several community members have predicted bullish prices for Bitcoin in 2025. - The cryptocurrency fell to the \$93K zone in the last 24 hours as per CMC data. In 2024, the crypto market showed leaps and bounds of progress, particularly in Q3. Several key instances shaped up to be the realization of dreams for community members. Spearheading such an instance is Bitcoin's price historically reaching \$100K, propelled by specific external factors. While multitudes of advancements occurred BTC's \$100K stood out among the crowd. Naturally, this has led to higher expectations for Bitcoin's 2025 journey. With the New Year just days away, here is a detailed analysis of what we can expect for Bitcoin in 2025. The Million Dollar Question â Will BTC Cross \$200K? Bitcoin price predictions always flood the market at crucial times of the year. With its recent all-time high of \$108,268, which the digital asset hit 15 days ago, projections have been bouncing off from the \$100K mark. Leading analysts Ali (@ali_charts), having read charts and historical data, predict a bouncing of price to \$168,500, as shown by the Mayor Multiple Indicator. On the

other hand, Ali posted a bearish forecast in the past week. He inferred that, based on other analysts, Bitcoin, if it gives in to current bears, could lead to a market crash that would cause it to fall to the \$60K zone. Analysts including Peter Brandt, ToneVays, and Thomas Lee expect a correction level of \$73,000 and \$70,000. @ToneVays believes that #Bitcoin \$BTC trading below \$95,000 is "very, very bad" because it increases the probability of a correction to \$73,000! pic.twitter.com/SPLWYI6rit æ" Ali (@ali_charts) December 26, 2024 At the time of writing, Bitcoin had lost its crucial support at \$97,300 and was trading at the \$93K level as per CMC data. But for BTC to hit \$168K, it is required to maintain prices above the aforementioned support and possibly above \$100K. Although, with prices still safely closer to the \$100K such an occurrence still holds potential. If Bitcoin rebounds to \$168,500, then it would bring the \$200K yardstick a lot closer for 2025. What Do Prominent Figures Forecast For Bitcoinæ"™s Growth? In the past two months, particularly after the digital assetæ"™s significant rally, numerous prominent figures have commented on the asset. Michael Saylor, the founder of MicroStrategy has been extremely bullish on Bitcoin. His firm has been accumulating the token over the past year. In numerous instances, Saylor has predicted Bitcoinæ"™s exponential growth in the coming days. With pro-crypto regulations ensuing he also expects BTC to show significant growth in 2025. Additionally, Saylor also pitched to Microsoft to initiate a Bitcoin Strategic reserve that resulted in the latest ATH. Another prominent personality, Eric Trump, President-elect Donald Trumpæ"™s son in a recent Conference predicted that Bitcoin could hit the \$1 million target. This would mean an advancement to the \$200K in 2025 a possible start for this journey. Similarly, Blockæ"™s founder Jack Dorsey had predicted during H1 2024 that Bitcoin might hit \$1M by 2030. Other prominent figures who expect Bitcoin to grow significantly in the coming year would include, spearheaded by Donald Trump, Elon Musk, and Jim Cramer. Finally, El Salvadoræ"™s president Nayib Bukee has also remained extremely optimistic towards Bitcoin. The governmentæ"™s pro-crypto stance has been observed previously, even before the recent rally. How is the Crypto Landscape Shaping Up for 2025 Bitcoinæ"™s \$200K Rally? When weighing the reasons for the cryptocurrencyæ"™s recent rally, a shift in the organization namely the US elections peaks its tower above others. A pro-crypto US government and the resultant regulatory landscape have caused such a rally. This leads to speculations that with pro-crypto regulations already underway further price breakouts can be expected. Donald Trump had made several promises during his campaign, the chief of which was replacing SEC chair Gary Gensler. The election of a new regulatory leader æ" Paul Atkins has propelled positive notions within the market. Additionally, this transformation in the West has resulted in a huge influx of new investors globally. Singapore recently reported a hike in crypto investors that surpassed 15 million for the first time. Such instances, paving the way for mainstream crypto adoption do reflect on the prices of cryptocurrencies. This means that with such actions set to kickstart the year, Bitcoin price breakouts may not be very far-fetched despite current bearish trends. Furthermore, Bitcoinæ"™s growth could also lead to growth in the altcoin sector as well. Several key altcoins including Solana, XRP, and HBAR have hit new all-time highs confirming the AltSeason. Conclusion The recent paradigm shifts in the crypto market caused Bitcoin to rally significantly which in turn set off the next batch of pro-crypto actions. The year ending on such notes leads to optimistic expectations and speculation for 2025 and the growth in Bitcoin that would accompany it. Contending from the aforementioned reasons, Bitcoinæ"™s rally to \$200K doesnæ"™t seem impossible with market potentials depicting green signals. Although bearish periods might be accompanied, BTC could still show significant growth in 2025. Highlighted Crypto News Today: Ethereum Approaches Triangle Pattern Climax as Institutional Flows Turn Negative

Cryptocurrency markets are brimming with opportunities, especially for those looking to invest in projects with strong fundamentals and future potential. Amidst a sea of blockchain innovations, projects like Qubetics, Stellar, and Render stand out for their unique contributions to the ecosystem. These cryptocurrencies promise transformative solutions and offer excellent entry points for investors aiming for substantial returns. Qubetics is rapidly becoming a name synonymous with innovation and practicality in the blockchain sphere. Its presale is breaking records, reflecting robust investor interest and confidence. Stellar, known for its focus on financial inclusion, and Render, which leverages blockchain for decentralised rendering, are also making waves in the crypto community. Letæ"™s delve into what makes these projects the best cryptos to invest in this week. Qubetics: Revolutionising Blockchain with a Multi-Chain Wallet and More Qubetics is taking the blockchain world by storm with its innovative offerings and a highly successful presale. With over 392 million \$TICS tokens sold to more than 12,700 holders, raising \$8.4 million, the project is in its 15th stage of presale. At \$0.041 per token, investors have a limited window to secure \$TICS before the price surges by 10% at the weekend. Analysts predict the token could soar to \$15 after the mainnet launch, making Qubetics one of the best cryptos to invest in this week. A standout feature of Qubetics is its Multi-Chain Wallet, which seamlessly integrates multiple blockchain networks into a single platform. Imagine a business professional needing to transact across Ethereum, Binance Smart Chain, and Solana. With Qubeticsæ"™ Multi-Chain Wallet, they can manage all their assets without switching between wallets or worrying about compatibility issues. Qubetics is a ground-breaking Layer 1, Web3 aggregated blockchain for individuals, the Multi-Chain Wallet simplifies managing diverse crypto portfolios. Whether itæ"™s trading, staking, or transferring assets, Qubetics offers an intuitive solution that enhances efficiency and security. By addressing real-world challenges, Qubetics is paving the way for mainstream blockchain adoption and solidifying its position as a leader in the industry. Stellar: Driving Financial Inclusion Through Blockchain Stellar has long been a favourite among blockchain enthusiasts for its mission to provide affordable and accessible financial services. Established as a network designed for cross-border payments, Stellaræ"™s blockchain facilitates near-instant transactions with minimal fees. The Stellar ecosystem is home to projects that enable remittances, tokenisation of assets, and even microfinance solutions. For example, a small business owner in a developing country can use Stellar to send and receive payments globally without the high fees associated with traditional banking systems. The networkæ"™s collaboration with financial giants like IBM further underscores its reliability and scalability. Stellaræ"™s focus on financial inclusion has garnered it a dedicated user base, making it one of the best cryptos to invest in this week for those seeking a project with real-world impact. Its utility and resilience in a competitive market demonstrate its potential for long-term growth. Render: Powering the Creative Economy with Blockchain Render is revolutionising the creative industry by providing decentralised rendering solutions powered by blockchain technology. By leveraging unused GPU power from participants across the network, Render offers a cost-effective and efficient solution for rendering tasks, which are essential in industries like gaming, film, and virtual reality. Imagine a small animation studio needing high-quality rendering for a project but lacking the budget for expensive hardware. Render allows them to tap into a decentralised network of GPUs, significantly reducing costs while maintaining quality. This democratisation of rendering power is what sets Render apart in the blockchain space. Renderæ"™s ability to blend blockchain with creative industries positions it as a project with massive untapped potential. Itæ"™s no wonder the crypto community views it as one of the best cryptos to invest in this week. As demand for rendering solutions grows, Render is well-poised to capture a significant market share. Why Qubetics Should Be on Your Investment Radar While Stellar and Render bring unique value propositions to the blockchain ecosystem, Qubetics offers an unmatched blend of innovation and investment potential. The current \$TICS price of \$0.041 provides a lucrative opportunity for early adopters. For example, an investment of \$25,000 could grow to \$182,748 if \$TICS reaches \$1 post-presale. Should the token hit \$15 after the mainnet launch, the same investment could yield over \$10.9 million. Qubetics Token isnæ"™t just about impressive numbers; its focus on solving real-world problems sets it apart. The Multi-Chain Wallet exemplifies its commitment to usability, making it an essential tool for both businesses and individuals navigating the blockchain space. Conclusion: Invest in the Future The cryptocurrency landscape is rife with opportunities, and Qubetics, Stellar, and Render exemplify projects that are making significant strides in their respective niches. Qubetics, with its innovative Multi-Chain Wallet and presale momentum, offers unparalleled growth potential. Stellar continues to redefine financial inclusion, and Render is empowering creators with decentralised solutions. For investors looking to diversify their portfolios, these projects represent the best cryptos to invest in this week. Qubetics, in particular, stands out as a must-watch investment opportunity. With its presale closing in on a price surge, now is the perfect time to secure your stake in a project thatæ"™s shaping the future of blockchain technology. - The top 10 cryptocurrencies to watch in 2025, excluding BTC & ETH, are XRP, SOL, LINK, AVAX, AAVE, DOGE, SHIB, PEPE, BONK, & PENGU. - In 2024, the crypto market saw a significant boom driven by Bitcoinæ"™s all-time high and Trumpæ"™s crypto-backed campaign. The global cryptocurrency market has experienced significant developments throughout 2024æ"™from Bitcoin ETF approvals to Bitcoinæ"™s historic \$100K milestone. Letæ"™s dive into the major events and their impact, setting the stage for the top 10 cryptocurrencies to watch in 2025. Key Events in 2024 - Bitcoin ETF Approval: The approval of the first Bitcoin ETF on January 11, 2024, fueled institutional investments. The cumulative total net inflow of U.S. ETFs is \$35.24 billion as of December 31. - Bitcoin Halving: On April 20, 2024, Bitcoinæ"™s halving event triggered another bullish momentum, eventually driving its price to \$70. - Ethereum Milestones: Ethereum touched the \$4,000 zone for the first time in three years, with its Ethereum ETF adding to the excitement. The U.S. Ethereum ETF recorded a cumulative total net inflow of \$2.66 billion, with \$390.23 million in total value traded. - Political Influence: President-elect Donald Trump has pledged strong support for Bitcoin, vowing to make America the global cryptocurrency capital. His campaign has emphasized Bitcoinæ"™s potential, with a vision to establish it as a reserve currency. Combined with Elon Muskæ"™s consistent endorsements, this political backing has fueled unprecedented enthusiasm in the crypto market, propelling Bitcoinæ"™s price to \$108K. - Altcoins and Memecoins: Leading altcoins like XRP and Solana, along with memecoins like DOGE and PEPE, turned into market favorites during the 2024 bull run. As we enter 2025, here are the top 10 cryptocurrencies to watch beyond Bitcoin and Ethereum, based on their 2024 performance and market developments. Further, the upcoming cryptocurrency trends in 2025 promise to shape the market in new ways, offering fresh opportunities. Ripple (XRP) - Market Cap: \$122.58B (#4) - 2H Trading Volume: \$6.37B - Circulating Supply/ Total Supply: 57.41B XRP/ 100B XRP Rippleæ"™s native cryptocurrency, XRP, has been somewhat volatile since the summer of 2023 when it secured a partial victory against the SEC. However, the real bull run for XRP began on November 16th, 2024, when it soared above \$1 for the first time in three years, even nearing \$3 in December. The significant rally was largely triggered by Ripple Labsæ"™ stablecoin, RLUSD, designed for cross-border payments, and DeFi, which is set to launch in 2025. Currently, XRP price is at \$2.14 and daily trading volume stands at \$6.37 billion, a 23% increase in 24 hours. Technical Indicators: - Price Trend: Above the 50 EMA and 200-day SMA, signaling bullish momentum. - RSI: Neutral zone (30-70), suggesting balanced market conditions. - Bull/Bear Power: Bull Power at 10, Bear Power at -4, indicating buying pressure outweighs selling. Future Outlook: XRP could break past \$3 and approach new all-time highs in early 2025. Solana (SOL) - Market Cap: \$94.62B (#6) - 2H Trading Volume: \$3.57B - Circulating Supply/ Total Supply: 479.53M SOL/ 590.92M SOL Solanaæ"™s native cryptocurrency, SOL, has been on a strong upward trend in 2024, gaining momentum with some key updates. A major driver behind this surge was the launch of the Solana Pump.fun meme coin launchpad in January, which sparked a lot of interest and boosted SOLæ"™s price. After Pump.funæ"™s launch, SOL surged above the \$200 in March and hit a new all-time high of \$263.83 in November. As of now, SOL is trading at \$197, with a market cap of \$94.62 billion. Technical Indicators: - Price Trend: Holding above the 50 and 200-day MAs, indicating a bullish trend. - RSI: Neutral at 38.91, slightly oversold, hinting at the potential for reversal. - MACD: Below the signal line, showing minor bearish pressure but the potential for a short-term bounce. Future Outlook: If SOL breaks \$250, it could rally toward \$300 and beyond in 2025. Chainlink (LINK) - Market Cap: \$13.43B (#13) - 2H Trading Volume: \$699.35M - Circulating Supply/ Total Supply: 638.09M LINK/ 1B LINK Chainlinkæ"™s Cross-Chain Interoperability Protocol (CCIP) launch in Q1 2024 boosted its adoption. This new feature allows seamless and secure token transfers across different blockchains, which has boosted the demand for LINKæ"™s services in the decentralized finance (DeFi) space. After the launch of CCIP, LINKæ"™s price surged, breaking past the \$20 zone in March and nearing \$30 by December. However, currently, LINK is priced at \$22.95æ"™trading in a range-bound pattern could mean the price is consolidating at higher levels, potentially forming a horizontal channel or sideways movement at elevated levels. Technical Indicators: - RSI: Neutral at 48.31, signaling balanced market conditions. - MACD: Above the signal line, showing bullish momentum. - Key Resistance: \$35-\$40 Future Outlook: LINK could climb toward \$60 as it continues its upward trajectory. Avalanche (AVAX) - Market Cap: \$15.2B (#11) - 2H Trading Volume: \$457.86M - Circulating Supply/ Total Supply: 409.86M AVAX/715.74M AVAX AVAX saw strong growth in 2024, driven by the launch of low-latency Data Streams on its mainnet, which has boosted decentralized market performance. Trading at \$37.65, AVAX holds promise with resistance levels at \$50 and \$75. Currently trading at \$37.10, AVAX is in a range-bound pattern, similar to LINK, hinting at consolidating at higher levels and possibly forming a sideways movement. But the overall trend remains positive. Technical Indicators: - RSI: Neutral at 41. - MACD: Below the signal line, showing slight bearish pressure but overall bullish potential. - Key Resistance: \$50-\$75 Future Outlook: AVAX could reach \$100 by 2025 as it breaks past key resistance levels. Aave (AAVE) - Market Cap: \$5.89B (#31) - 2H Trading Volume: \$658.3M - Circulating Supply/ Total Supply: 15.03M AAVE/16M AAVE Aaveæ"™s native cryptocurrency, AAVE, has been gaining attention in the crypto market following the introduction of Aave V3 in the mainnet. This upgrade brings improved scalability, cross-chain functionality, and gas optimizations,

boosting AAVE's adoption in the DeFi space. Further, AAVE recently saw a price surge after the launch of new lending pools on the Aave Protocol. Currently trading at \$344, AAVE's market cap stands at \$5.16 billion, showing steady growth. Technical Indicators: - Price Trend: AAVE is above both the 50 EMA and 200-day SMA, signaling a strong bullish trend. - RSI: At 56.66, showing a balanced market. - Chaikin Money Flow (CMF): Positive at 0.11, indicating buying pressure. Future Outlook: If AAVE surpasses \$350, it could rally to \$400, potentially reaching \$550 in 2025. When looking at the market boom, memecoins have turned out to be the main players, with new contenders emerging and experiencing unexpected growth. Dogecoin (DOGE) - Market Cap: \$48.18B (#7) - 2H Trading Volume: \$2.54B - Circulating Supply/ Total Supply: 147.37B DOGE/147.37B DOGE Dogecoin (DOGE), the largest memecoin, has seen exciting developments in 2024, especially with increased involvement from Elon Musk and the launch of the Department of Government Efficiency (D.O.G.E) initiative. Co-led by Musk and Vivek Ramaswamy, this initiative aims to streamline government operations and reduce spending in the United States, sparking more interest in DOGE. Following Musk's tweets and support for DOGE, the price surged from \$0.15 to nearly \$0.38 an unexpected turn since May 2021. Currently, DOGE is trading at \$0.3223 with a market cap of \$47.58 billion, making it the 7th largest cryptocurrency. Technical Indicators: - Price Trend: DOGE is above both the 50 EMA and 200-day SMA, signaling a strong bullish trend. - RSI: Neutral at 40. - Bull/Bear Power: Bull Power at 4.92, Bear Power at -5.9, signaling bullish momentum. Future Outlook: With Elon Musk's ongoing involvement and the DOGE initiative gaining momentum, Dogecoin's price may see further growth. In that case, DOGE could rally past \$0.45, potentially reaching \$0.75 in 2025. Shiba Inu (SHIB) - Market Cap: \$12.82B (#14) - 2H Trading Volume: \$M - Circulating Supply/ Total Supply: 589.25T SHIB/589.5T SHIB SHIB saw a 120% rally in 2024. A big factor driving SHIB's momentum is the launch of Shibarium, a layer 2 blockchain, and the Shiba Eternity gaming platform, which aims to bring gaming into the Shiba Inu ecosystem. At the time of writing, SHIB is priced at \$0.00002196 with a market cap of \$12.98 billion. Technical Indicators: - Currently, SHIB is testing key support at the 100 EMA around \$0.00002254. If this level holds, we might see a potential price rebound. However, if it breaks, SHIB could retest the 200 EMA at \$0.00002057. - RSI: Neutral at 41. Future Outlook: In short, SHIB is at a crucial support level, and the market is currently neutral, waiting to see if the price can hold steady or rebound higher. Pepe Coin (PEPE) - Market Cap: \$8.83B (#22) - 2H Trading Volume: \$3.82B - Circulating Supply/ Total Supply: 420.68T PEPE/420.68T PEPE PEPE has quickly become one of the top meme coins since its launch in 2023, gaining a lot of attention due to its growing community and active trading. The PEPE price has been strong this year, reaching new highs and drawing interest from both new and experienced investors. Although there's been some selling pressure, the bulls are still in control, with a rise in buying volume supporting the rally. This suggests that PEPE's price will likely stay strong for the next year. Technical Indicators: - Price trend: After hitting a new all-time high of \$0.00002825, PEPE faced some resistance, but the overall trend remains bullish. - RSI: At 43, indicating a neutral market with balanced buying and selling pressures. Future Outlook: If PEPE can maintain its current support, it could continue to rally, breaking past resistance and potentially reaching new highs of \$0.00003 to \$0.00005 in 2025. Bonk (BONK) - Market Cap: \$2.41B (#53) - 2H Trading Volume: \$306.47M - Circulating Supply/ Total Supply: 75.85T BONK/90.97T BONK As of December 31, 2024, BONK is trading at \$0.000032, with a 24-hour trading volume of approximately \$262 million. This uptrend was triggered recently, when the Bonk team announced plans to burn 1.69 trillion tokens, reducing the total supply by 1.8%. This move is aimed at enhancing scarcity, which could help increase the token's value in the future. Despite this token burn, Bonk's price has seen a slight decline of 1.86% in the last 24 hours and is down 45% from its all-time high of \$0.00005916 recorded on November 20. This reflects the ongoing market volatility. Technical Indicators: - RSI: 57, showing neutral-to-bullish momentum. - Chaikin Money Flow (CMF): -0.09, indicating slight selling pressure. Future Outlook: In summary, Bonk remains a significant player in the meme coin space, and the recent token burn could play a role in shaping its future performance. Pudgy Penguins (PENGU) - Market Cap: \$2.03B (#57) - 2H Trading Volume: \$503.19M - Circulating Supply/ Total Supply: 62.41B PENGU/88.88B PENGU PENGU, the native cryptocurrency of the Pudgy Penguins NFT project, launched in mid-December and has quickly become the top meme coin on the Solana network, surpassing BONK. The recent price surge can be attributed to large investors, or "whales," who have been buying up significant amounts of PENGU tokens. Despite this impressive rise, PENGU is still about 31.8% below its all-time high of \$0.05738, recorded just nine days ago. Technical Indicators: - RSI: At 60.2, the market is showing neutral-to-bullish momentum, with buying activity gaining traction. - Chaikin Money Flow (CMF): Positive at 0.17, indicating continued buying pressure and capital inflows. Future Outlook: In summary, PENGU is on an upward trajectory, supported by strong buying momentum. Floki (FLOKI) and Dogwifhat (WIF) are two meme coins that have recently made significant noise in the cryptocurrency market. However, WIF has captured even more attention, becoming a standout player among meme coins. These cryptocurrencies, backed by strong fundamentals and significant developments, are well-positioned for growth as the crypto market evolves in 2025. - Binance Labs will rebrand in 2025 to differentiate itself from the Binance exchange. - The firm plans to expand its investments into sectors like AI, DeFi, gaming, and biotech. - CZ will focus on guiding investments and projects, leveraging his expertise despite his leadership ban at Binance. Rebranding for Independence In 2025, Binance Labs, the venture capital arm of the Binance cryptocurrency exchange, will undergo a massive rebranding. The Binance Labs rebranding will seek a clear boundary between the mother company, Binance, and Binance Labs, defining its vision and independent identity. Part of Binance Lab's reformation is to boost its investment strategy, including second market liquidity expansion and over-the-counter trades. This shift represents a departure from emerging blockchain projects to new sectors, such as AI, DeFi, gaming, and biotechnology. Rebranding also fits into the trend that Binance's founder, Changpeng Zhao, or CZ for short, is going to dedicate more time interacting directly with projects and investments. After a stint in prison as a result of charges related to violating the US CZ shall not be part of any leadership at Binance, by virtue of the Bank Secrecy Act. CZ's Focus on Investment Guidance However, the man will contribute to guiding more investments into the firm, implementing all his skills and experience, which will now be directed to helping emergent projects in any niche. Of course, focusing on investment strategy will help the Binance Lab stay relevant for a long time in the continuously evolving blockchain and cryptocurrency fields. Binance Labs was a very aggressive organization in 2024, funding 46 projects spread across various themes such as DeFi, AI, gaming, Bitcoin infrastructure, and a bunch of new-age technologies that included zero-knowledge (ZK) protocols. It invested in diversified ecosystems like BNB Chain, Ethereum, Solana, and Berachain, among others, to have an adequately diverse portfolio. Binance Labs is still hopeful about the regulatory environment going forward to 2025 and anticipates much more institutional investment in the crypto space. Being in the best position for future growth, the firm should focus on making wider investments in innovative technologies that include underperforming sectors such as gaming and privacy solutions. But after all these, the announcement was deleted, which raises a question: is it a rumor? Are there any issues?

- \$PEPE's value jumped 8.55% on December 31st, thanks to Elon Musk's playful profile change on X. - Musk's "Kekius Maximus" update got people excited about Pepe, pushing its price up. - Kekius Maximus coin dropped 80% right after launch, raising concerns of a possible scam. Pepe Investors Celebrate 8.55% Surge Pepe investors were something to be happy about when the value of \$PEPE rose by 8.55% on December 31st. By making it one of the best-performing digital currencies of the day. This unexpected jump helped \$PEPE outpace most popular memecoins except ai16z. Which recently caught the crypto world's attention. This was driven by none other than Elon Musk, the most popular meme figure. On the same day that \$PEPE surged to its high. Musk created a stir on X when he changed his profile picture to that of a frog in ancient Roman garb, holding a video game controller. He also changed his username to "Kekius Maximus," a meme culture reference to the popular "Kek" meme often associated with Pepe the Frog. The playful gesture caught the attention of his followers quickly, building up excitement about the Pepe coin and sending a ripple through the crypto community. Musk's Latest move influences \$PEPE Musk's influence on the memecoin world has been well known, and the latest move added a much-needed spark to \$PEPE. Breaking out of its stagnant trading pattern and reaching the highest point for the week. At the time of the surge, \$PEPE was valued at \$0.00002100 The investors now believe that the coin will continue going up and probably revisit its all-time high at \$0.00002768. Pepe still stands as the third largest memecoin in terms of market cap, standing at \$8.4 billion. While \$PEPE celebrated its rise, Musk's move also created a new token called Kekius Maximus. The new cryptocurrency, inspired by Musk's profile update, was launched with great fanfare. However, its journey was short-lived, as the token experienced an over 80% loss in value. Within just an hour of being launched. Concern is spreading within Pepe's camp due to rapid declines, having even been as drastic as making it a possible "rug pull." The sharp falls have led more than a few investors to consider if the tumble was opportunistic. Kekius Maximus may be uncertain, but it is certain that Elon Musk still makes a big impact on the cryptocurrency market. He has proven his ability to affect the value of digital assets, especially memecoins like Dogecoin and now Pepe. The power he wields in the crypto space will be evident in his playful involvement in the meme world. The crypto community remains curious about what he will do next and how his actions will continue to shape the market. Highlighted Crypto News Today Solana and Sui Outperformed Ethereum in 2024, What Lies Ahead?

IntelMarkets is becoming a notable player in the DeFi space as it is continuously gaining traction and grabbing the attention of renowned figures. The current session sees a surge in INTL's momentum as the news of AI Czar David secretly stacking IntelMarkets spreads like fire. With its presale-making history, the AI coin is soaring unparalleled in the crypto realm. While established market players like PEPE and Ripple also show bullish momentum, INTL remains unbeatable. Though PEPE and XRP prices are surging, INTL's presale raise is on investors' radar! PEPE Gains Momentum: Community Support Pushes The Price! The PEPE coin is based on the famous PEPE meme. It was launched without taxes or presales, making it available to everyone. This approach has helped build a strong and active community for PEPE coin crypto. The PEPE coin price has been rising as more people show interest. PEPE news crypto mentions partnerships and new plans, which could make the token more valuable. Experts are optimistic about PEPE price prediction, with expectations of steady growth in the coming months. The optimistic price predictions for PEPE coins are largely because of their popularity and support from the community. The current session witnesses a surge in the price of PEPE, with the token surging by 2% within a day. XRP Price Analysis: Ripple Forms Bull Flag Pattern The daily chart for XRP price shows the formation of a bull flag pattern. The XRP price correction has already hit the Fibonacci retracement level of 38.2%, around \$1.98, which is the first support for this correction. The second and third support levels are at 50% and 61.8% Fibonacci retracement levels, measured from November's low. A break above \$2.87 will likely initiate the next strong upward move for XRP price. The 4-hour chart for Ripple shows that the XRP price has formed positive price action by consolidating within a channel. A break above \$2.87 is required to maintain the upward momentum. The RSI remains above the mid-level, indicating bullish momentum in the XRP price. IntelMarkets Attracts Investors to Its Perpetual Contracts Platform Crypto investors are showing significant interest in IntelMarkets as volatility hits the market. The interest in IntelMarkets stems from its ability to withstand the current storm, reflected in its token price gain while other assets sink. IntelMarkets is a crypto trading platform that facilitates the sales and purchases of perpetual contracts. Perpetual contracts are derivative contracts that allow traders to speculate on an asset's price with leverage and without expiry dates. On IntelMarkets, perps are tradable with up to 1,000x leverage, allowing traders to gain substantially from every trade. For example, traders can make \$10,000 on a \$10 investment using such a high-leverage option. The exchange was created using Ethereum and Solana's blockchain technologies to achieve efficiency. Ethereum's integration makes it secure and reliable, and users can access decentralized products. Meanwhile, Solana's integration allows it to lower costs and improve speed. IntelMarkets uses AI technology like self-learning robots to execute trades and the Intell-M Channel analytic tool to generate clear trading signals. With these tools, traders can enjoy a better trading experience. - Ai16z price soared over 30% and the token is trading at \$1.71 today. - Whales continue to purchase large volumes of Ai16z following its layer1 blockchain announcement. Ai16z, the venture capital firm led by AI agents, is making waves in the industry with its significant price surges amidst the market dip. While the Bitcoin price plunged to the \$92 level, Ai16z is recording new all-time highs followed by hygge community support, continuous whales accumulation, triggered by the recent Ai16z layer1 blockchain announcement. Ai16z Soars Over 30% Following Whale Accumulation Ai16z token price soared by over 30% today, after recording an all-time high value of \$1.77 a few hours ago. The token went from the lows of \$1.27 to the highs of \$1.7, triggered by the Ai16z layer1 blockchain announcement by the team. While the market cap is staggering \$1.87 billion with a 32% rise, trading volume increased by a substantial 120% and it is currently hovering around \$258 million. As per on-chain analyst Lookonchain,

whales are continuously purchasing large volumes of Ai16z tokens. A whale created a new wallet on Dec 11 and withdrew 10 million USDC to buy Ai16z. The whale activity has further increased for the past couple of days, with 2 whales buying 2.96 million and 1.51 million Ai16z tokens. Whales continue to accumulate \$ai16z. @lookonchain (@lookonchain) December 31, 2024 Wallets 62FcXRâ€¦JkZV and HRQXkjâ€¦bVfR might belong to the same whale, who spent 22,641 \$SOL(\$4.34M) to buy 2.62M \$ai16z at \$1.66 in the last 5 hours. Meanwhile, FU9b2câ€¦fhyc spent 1.65M \$USDC to buy 1.19M \$ai16z at \$1.39 8 hours ago.â€¦pic.twitter.com/Cpc6sgEoeA Based on the recent update from Lookonchain, a whale bought more than \$4 million worth of Ai16z and received 2.62 million tokens. Another whale spent 1.65M USDC to buy 1.19 million Ai16z less than 24 hours ago. The increasing investor confidence in Ai16z combined with the projectâ€™s ambitious announcements regarding layer 1 blockchain development is causing the current substantial price surge in the middle of a market dip. What is the Buzz Around Ai16z Layer1 Blockchain? The integration of AI into the blockchain ecosystem has been trending this year, with multiple AI token projects emerging with full force. Meanwhile, autonomous AI agents development is also taking off, showing signs of substantial growth potential with application across several industries. Taking this opportunity to shape the future of AI in blockchain, Ai16z project was developed by a group of AI leaders at the end of October this year. Originally, the Ai16z token was developed as just another memecoin but it is now having ambitious plans to grow into a serious blockchain project. The project aims to develop a layer1 blockchain along with a complete tokenomics overhaul. Based on the Ai16z tokenomics discussions on its governance forum, the team aims to develop and position Ai16z layer 1 blockchain for AI. The Ai16z utility will also be increased as the partners suggest staking, launch fees, and other exclusive offers to drive token adoption. In addition, the project plans to develop a platform, inspired by Pump.fun on Solana, that acts as a launchpad for Eliza AI projects. Overall, Ai16z team set several ambitious goals to make it a blockchain hub for all AI projects, making Ai16z a default currency. Commendable Growth and Development of Memecoins Memecoins have already showcased significant strength this year, becoming a large ecosystem. Binance blog has also covered how long memecoins came from being simple memes on the internet to growing into a billion-dollar ecosystem. In particular, Ai16z memecoin also gained attention when Binance Alpha picked it for its first batch of tokens to go live. The trend of memecoins turning into serious crypto projects with real-time use cases started with Dogecoin and Shiba Inu. While popular individuals like Elon Musk advocated Dogecoin as a preferable crypto to make online payments, Shiba Inu is growing into a complete blockchain ecosystem with ShibSwap, Shibarium, Shib metaverse, Shiboshi NFTs, Shiba Inu Burn, etc. On similar lines, Ai16z project is also becoming one of the crucial spaces for all the AI projects development and launch. With its staggering price rally and focus on project development, Ai16z is ending 2024 with a blast. Highlighted Crypto News Today:

Meme coins have become the talk of the town in the cryptocurrency world, offering explosive growth opportunities and unparalleled excitement. Who hasnâ€™t heard of early investors in Dogecoin or Shiba Inu making millions? But if you missed the ride with Book of Meme (BOME), hereâ€™s your chance: BTFD Coin (BTFD), the Best New Meme Coin Presale to Join Now, is stealing the spotlight with its ground-breaking features and a presale trajectory thatâ€™s smashing records. BTFD Coin isnâ€™t just another meme coinâ€”itâ€™s a movement built for those who know timing is everything. Itâ€™s already raised over \$4.6 million in its presale, hitting milestones faster than most coins dream of. This isnâ€™t just about buying in; itâ€™s about becoming part of a community of savvy investors poised to ride the next bull cycle. But first, letâ€™s dive into what makes BTFD Coin an unmissable opportunity before revisiting how the Book of Meme captured the meme coin frenzy. BTFD Coin: The Meme Coin Revolution Youâ€™ve Been Waiting For BTFD Coin is rewriting the rules of meme coin success. Built on Ethereum, this token embraces the â€œBuy the Dipâ€ ethos, rallying crypto enthusiasts to seize the lows and prepare for the highs. BTFD isnâ€™t just a coin; itâ€™s a lifestyle backed by a P2E game which is already in its beta version, staking opportunities with jaw-dropping APYs, and a dedicated Bulls Squad community. Whether youâ€™re here to play, earn, or stake, BTFD has got you covered. A Stellar Start with Groundbreaking Presale Success The presale journey of BTFD Coin has been nothing short of phenomenal. In just 14 days, it raised \$2.5 million. With the 13th presale stage now active, the current price of \$0.000142 offers a massive upside, as the listing price is set at \$0.0006. Use code BIG50 to get 50% extra coins while buying. Play-to-Earn and Staking: More Than Just Holding BTFD Coinâ€™s Play-to-Earn (P2E) game is the crown jewel of its ecosystem. Players can rack up rewards, smash challenges, and cash out or stake their earnings for long-term gains. This isnâ€™t just gaming; itâ€™s gaming that pays. Speaking of staking, BTFD offers a staggering 90% APY, making it a no-brainer for those seeking passive income. The Bulls Squad, led by the charismatic Baby Bull, is more than a mascot teamâ€”itâ€™s a symbol of resilience and strategy. Whether youâ€™re a newbie or a seasoned trader, the Bulls Squad ensures youâ€™re never alone on your crypto journey. Analystâ€™s Predictions: The Skyâ€™s the Limit Crypto analysts are buzzing about BTFD Coinâ€™s potential. With its presale gaining traction and its unique ecosystem, projections suggest the coin could reach \$0.001 by mid-2025. Thatâ€™s a 1,000% increase for those who get in early. Donâ€™t wait for regret to kick inâ€”this is the Best New Meme Coin Presale to Join Now! Book of Meme: The Wealth Train You Missed Before BTFD, Book of Meme (BOME) was the meme coin on everyoneâ€™s lips. Launched on the Solana blockchain, BOME combined the charm of memes with the utility of decentralized storage. Back in October 2024, BOMEâ€™s open interest hit an all-time high of \$161.97 million, propelling it into the spotlight. Those lucky enough to invest early watched their portfolios soar, with some bagging millions. BOME wasnâ€™t just hypeâ€”it was strategy. Its October surge coincided with record-breaking trader engagement, while its March 2024 market cap exceeded \$1 billion. Binanceâ€™s listing of BOME amplified its reach, though it faced insider trading allegations (later disproved). Today, the token is trading at approximately \$0.01036, with a market cap of \$714.7 million. Analysts believe itâ€™s still got room to grow, but the days of 1,000% gains are behind us. If you missed BOMEâ€™s early days, youâ€™re not alone. But history doesnâ€™t have to repeat itself as regret. Coins like BTFD are your second chanceâ€”a chance to invest early, ride the wave, and potentially turn a modest investment into life-changing wealth. Why BTFD Coin Is the Best New Meme Coin Presale to Join Now The crypto market is buzzing, and BTFD Coin is at the forefront. With its stellar presale performance, unique ecosystem, and bullish community, itâ€™s everything meme coin enthusiasts have been waiting for. Add in the fact that its P2E game and staking rewards are live, and youâ€™ve got a recipe for success. Think of BTFD as your golden ticket to the next bull run. While BOME had its moment, BTFDâ€™s presale is your chance to get in on the ground floor of a coin poised for massive growth. Donâ€™t let this one slip through your fingersâ€”sign up before the presale stages close, and let the Bulls Squad guide you to crypto glory! Conclusion: Donâ€™t Miss Your Shot Missing out on Book of Meme was painful for many, but opportunities like BTFD Coin donâ€™t come around often. With its presale already smashing milestones and analysts projecting explosive growth, itâ€™s the Best New Meme Coin Presale to Join Now. Whether youâ€™re here for the P2E rewards, staking APYs, or the chance to join a thriving community, BTFD has something for everyone. So, what are you waiting for? Secure your BTFD coins today, and letâ€™s ride this dip straight to the moon! Donâ€™t forget to use BIG50 code to get bonus rewards. - DOGE price rose over 300% from its January low, recording a yearly high above \$0.45. - Dogecoinâ€™s price currently sits at \$0.31, with a market cap of \$45.87B, after a pullback following BTCâ€™s trend. The global crypto market has seen a dip due to Bitcoinâ€™s slide to \$92K. However, optimism remains high as altcoins continue to hold steady, with notable support levels maintained by leading cryptocurrencies like XRP, Solana (SOL), and Dogecoin (DOGE). Among these, the leading memecoin DOGE is making waves with strong support from tech mogul Elon Musk. Following the buzz created by Musk and Trumpâ€™s D.O.G.E (Department of Government Efficiency) initiative, the price of Dogecoin soared above \$0.48, lifting the overall memecoin market cap to an impressive \$97 billion. However, it has since retreated back to the \$0.30 level, as it strongly follows Bitcoinâ€™s trend. At the time of writing, the DOGE price is \$0.31, holding a market cap of \$45.87 billion. Additionally, the daily trading volume of Dogecoin stands at \$2.36 billion, a 21% increase in the past 24 hours. Despite this recent dip, Dogecoin is still up over 300% from its January lows and market speculation is rising that DOGE could break into the \$1 zone in 2025 as the new year approaches. Dogecoin Technical Outlook On the technical front, Dogecoin is currently in a pullback phase, facing resistance that has resulted in bearish reversals, keeping the bullish momentum in check. The price is showing rejection at higher levels, with the current 4-hour candle failing to break above the resistance trendline. With an RSI of 43, the market sentiment remains neutral, showing no significant buying or selling pressure. The CMF at -0.00 indicates a balance between buying and selling, suggesting a period of consolidation in the coming days. Zooming in, Dogecoin is trading in a range, above the lower Bollinger Band but below the upper band, indicating neutral to slightly bullish conditions. However, the alignment of the 20, 50, 100, and 200 SMA lines above the Dogecoin price acts as dynamic resistance, potentially limiting any upward movement and causing fluctuations during attempts at a breakout. Further, the MACD below the signal line suggests a bearish trend, with selling pressure currently dominating. Finally the sideways trend over the past week hinting that momentum is needed for a breakout. If Dogecoin breaks above the \$0.34 resistance, the price could target \$0.37, potentially reaching \$0.40 or \$0.44. However, if it drops below \$0.30, it may test support at \$0.28 or \$0.2658. As the market braces for the upcoming year, Dogecoinâ€™s future remains uncertain, with many eyes on the potential for a breakout. Highlighted Crypto News

- Bitcoin faces profit-taking pressure, dropping below key \$92K support. - Macroeconomic uncertainties and rising bond yields weigh on crypto market. Bitcoin (BTC) has entered a consolidation phase, raising questions about its trajectory as 2025 approaches. After reaching an all-time high of \$108,278 just two weeks ago, Bitcoin has experienced a sharp decline, now trading at \$91,800, down 1.8% in the past 24 hours and over 14% from its peak. The downturn comes amid weak U.S. macroeconomic data and profit-taking by long-term investors, who have cashed out over \$1.2 billion on a seven-day moving average. The Chicago PMI has hit its lowest reading since May, indicating economic slowdown fears, while the Federal Reserveâ€™s decision to pause rate cuts until March has further unsettled markets. Additionally, President-elect Donald Trumpâ€™s upcoming inauguration and rising bond yields have added to the risk-off sentiment. Moreover, Bitcoinâ€™s struggles are mirrored across the cryptocurrency market. Ethereum (ETH) has dropped 0.7% to \$3,320, while Solana (SOL) has shown relative strength, with its SOL/BTC ratio rising 0.35%. And Crypto-related stocks have also felt the heat. MicroStrategy (MSTR) and Coinbase (COIN) fell 7% and 5.3%, respectively, while major mining firms like Marathon Digital (MARA) and Riot Platforms (RIOT) saw declines exceeding 7%. How Will BTC Start Off The Year 2025? Despite the slump, some remain optimistic. Analysts point to historical trends following Bitcoin halving events, often seeing price rallies in subsequent years. However, technical indicators show potential downside risks, with Bitcoin forming a bearish head-and-shoulders pattern and testing key support levels around \$91,430. January is expected to be quiet, with market activity likely picking up in February. While challenges persist, factors such as increased institutional adoption and potential economic stimulus could provide a favorable backdrop for the Bitcoin recovery. For now, traders remain cautious, closely monitoring support and resistance levels, as Bitcoinâ€™s performance continues to influence broader market sentiment.

- Grayscale highlights top 20 cryptocurrencies in its research insights report for Q1 2025. - HYPE, ENA, VIRTUAL, JUP, JTO, and GRASS are the new crypto assets in Grayscaleâ€™s top 20 crypto list. As the year comes to a close, leading asset management company Grayscale posted a research report highlighting crypto trends for Q1 2025. It started with acknowledging the overall crypto market surge in Q4 2024 and went on to explore smart contract competition, US election influence on crypto and DeFi, use of blockchain in AI Agents, and Solana ecosystem growth. The crypto market capitalization recorded a significant surge in Q4 2024, increasing by \$1 trillion in this period. Grayscale emphasised the growth of the Solana ecosystem in comparison to Ethereum. Alternative layer1 blockchain networks like Sui and Open Network (TON) have also gained attention as Ethereum slows down its progress. Grayscale Adds 6 New Cryptocurrencies to its Top 20 Crypto List for Q1 2025 Grayscale reports a top 20 cryptocurrency list for every quarter. This time, the asset manager added 6 new cryptocurrencies â€” HYPE, ENA, VIRTUAL, JUP, JTO, and GRASS to its top 20 list for Q1 2025. Grayscale picked cryptocurrencies that are related to one of the major themes of this quarter. These major crypto themes include US election implications on crypto regulation, DeFi, and staking, breakthroughs in AI technologies, and growth of the Solana ecosystem. Among the 6 newly added cryptocurrencies, Hyperliquidâ€™s HYPE and Ethenaâ€™s ENA got a spot in the top 10 cryptocurrencies, exhibiting remarkable growth and adoption this quarter. Hyperliquid price surged significantly during its airdrop and recorded new ATH values, driven by strong fundamentals and market optimism. On the other hand, Ethena price surged over \$1 with bulls activity. The ENA has also been making headlines for being acquired by Trumpâ€™s crypto project World Liberty Financial. Coming to Virtual, its VIRTUAL token plunged by 7% after recording a new ATH of \$3.71. The short bull run demonstrated in Q4 2024 revealed some of the strong layer 1 ecosystems like Solana, along with multiple innovative crypto projects that strive to push industryâ€™s limits. Highlighted Crypto News Today: DEX Monthly Trading Volume Surpasses \$320 Billion in December

- DEX monthly trading volume surged significantly, surpassing \$320 billion in December. - Spot trading volume on centralized exchanges also surged,

reaching more than \$2.8 trillion in December. When Bitcoin hit new all-time highs, surpassing the \$100,000 milestone and the entire crypto market was on a bull run earlier this month, it increased investor confidence. Being two major cryptocurrencies, Bitcoin and Ether traded above the \$102,000 and \$3,800 price ranges respectively, further stirred enthusiasm in crypto communities. However, the market is ending 2024 with price dips, hinting at a larger bull run in the new year. Meanwhile, trading volume on decentralized exchanges (DEXs) is making new records with its recent surge. As per The Block, total DEX monthly trading volume surpassed \$320.5 billion in December. One of the pioneering and major DEX platforms, Uniswap topped the list with more than \$105 billion volume, followed by PancakeSwap and Raydium. The largest DEX on Solana, Raydium's growth to the top 3rd position is commendable with over \$56 billion in volume. Trading Volume on Centralized Exchanges (CEX) Also Surged in December With an increased investor confidence and positive market sentiment, spot trading volume on CEXs has also increased this month. The total spot trading volume on centralized exchanges crossed \$2.8 trillion in December, slightly above November's spot trading volume of \$2.71 trillion. Both of the months recorded a significant surge in trading volume compared to previous months in 2024. Being the largest crypto exchange, Binance alone captured around \$961 billion spot trading volume, followed by Crypto.com, Upbit, Bybit, and Coinbase. The unprecedented surge in trading volume on both DEXs and CEXs prove increased investor activity on exchange platforms. Despite the crypto market's current price declines, the trading volume witnessed substantial increases on both centralized and decentralized exchanges. This could act as a precedent for the upcoming larger bull run in the new year. Highlighted Crypto News Today: South Korea Postpones Decision on Corporate Crypto Investment Ban to 2025

The fast ascent of Bitcoin has captivated the community, causing debates about the next major prospect. Among the voices is the investor who famously predicted Bitcoin reaching \$100,000 when trading under \$100. The focus now is on Rexas Finance (RXS) and Algorand (ALGO) as their following up-and-coming candidates. Both coins are positioned for fantastic expansion and bring transforming technologies to decentralized finance (DeFi). Rexas Finance (RXS): Redefining DeFi and Real Estate One unique blockchain platform that aims to transform DeFi and real estate via tokenization is Rexas Finance (RXS). Rexas Finance uses state-of-the-art technologies to enable the flawless tokenization of actual assets, including real estate. Once only available through conventional methods, consumers can obtain rapid, transparent, safe financial services. Rexas Finance presale valued RXS at merely \$0.030 at the first stage. Rising by 485% to \$0.175, the presale has progressed to stage 11; the token's value has skyrocketed; early investors have witnessed a remarkable 6x return on investment (ROI). Selling more than 381.2 million RXS tokens is a fantastic accomplishment for a presale campaign; the project has already raised over \$33.3 million. The community-driven approach of the project and its artistic aspects have attracted institutional and personal investors, creating demand and bolstering projections of RXS's future price. The expected tokenomics of Rexas Finance gives sustainability prioritized reach top importance. The initiative has set aside 42.5% to support the local community. Furthermore, 22.5% set for a staking pool has been promised its dedication and involvement in creating the ecosystem. The 15% set aside for liquidity controls market volatility and helps operations to be smooth. The 10% from smoothly is a safety net for the subsequent growth. The balance divides team operations, marketing plans, alliances, and promotions. Rexas Finance is positioned to gain from the \$486 trillion worldwide financial asset market, which includes real estate, commodities, and financial assets. Its ability as an ETH-based coin adds even more appeal and helps RXS position itself for a possible 10,000% surge following launch. Algorand (ALGO): The Scalable Blockchain for Real-World Applications Algorand is a distributed, self-sustaining blockchain system offering quick, scalable, safe solutions for pragmatic needs. It was designed to solve the slow transaction rates and expensive fees of past blockchains like Bitcoin. Algorand presents a pure proof-of-stake (PoS) system that guarantees strong security and decentralization while negating the necessity for energy-intensive mining. Algorand's live price as of writing is \$0.39, making it a reasonable investment for those wishing to diversify their portfolios with a beneficial utility-based cryptocurrency. Reliable performance guarantees and low transaction costs help create new trust-based systems, opening the path for creative ideas in supply chains, banking, and other sectors. Algorand distinguishes itself from rivals with its emphasis on sustainability and economy. It is perfect for companies and developers looking for consistent blockchain infrastructure because it offers near-instant transaction finality and scalable support computations. As the need for scalable blockchain solutions increases, Algorand is positioned to become a pillar of the decentralized economy. The investor who precisely predicted the success of Bitcoin's successor utility, scalability, and timing in selecting winning cryptocurrencies. Rexas Finance and Algorand both have the traits required for success in a growingly competitive market. The presale success of Rexas Finance presale success and tokenization present a special chance for investors to have a mix of innovation and development possibilities. Algorand is a dependable solution for anyone wishing to invest in basic blockchain technologies because of its scalability and environmental conscience. Conclusion The investor who precisely predicted the success of Bitcoin's successor utility, scalability, and timing selected Rexas Finance and Algorand because they have the traits required to succeed in a growing market. The success of the Rexas Finance presale presents a unique chance for investors to see a mix of innovation and development possibilities. Algorand is a dependable solution for anyone wishing to invest in essential blockchain technologies because of its scalability and environmental conscience. These two cryptocurrencies stand out as interesting choices for anybody hoping to profit from the next big wave in digital assets as the cryptocurrency market develops. With the support of a seasoned crypto visionary, Rexas Finance and Algorand might turn into the following major success stories in the crypto space. Victoria, Seychelles, December 30th, 2024, Chainwire Bitget Wallet, a leading Web3 non-custodial wallet, has exceeded 60 million global users, achieving 380% annual growth in 2024. Through strategic innovation and ecosystem expansion, the platform has seen substantial adoption across key regions, solidifying its position as a major player in the multi-chain wallet ecosystem. Bitget Wallet saw exceptional growth across key regions, particularly Africa, the Middle East, and Europe. Africa recorded over 1000% growth, led by Nigeria at 1468%. In the Middle East and Europe, the user base climbed by over 400%, with Saudi Arabia and the UAE showing 482% and 326% growth, respectively. France led in Europe with 1091%, followed by the UK and Germany at 687% and 657%. Bitget Wallet's growth is driven by innovative features designed to meet user needs. Leveraging the bull market recovery and Meme coin surge, tools like Instant Swap, Smart Money Tracking, Memex, and GetGas have enhanced the trading experience. Meme coins, DeFi, and AI are the top trading categories. Onchain data shows average annual per capita trading volumes of \$3,312 for DeFi tokens, led by East Asia, the Middle East, and the Americas, and \$1,337 for Meme coins, with the Middle East, Europe, and East Asia leading activity. Bitget Wallet has strengthened its integration with major mainnets and Web2 platforms. Data shows that blockchain adoption, with TON, Base, and Solana addresses, is increasing over 40 times year-on-year. The launch of Bitget Wallet Lite attracted over 10 million users in just a month, making it the largest Telegram multi-chain wallet. Supporting this, Bitget Wallet launched a \$20 million Telegram Mini-App Support Program and OmniConnect Dev Kit, connecting a billion Telegram users to the multi-chain Web3 ecosystem. Bitget Wallet introduced Bitget Onchain Layer in early 2024, and recently merged its platform token BNB with BGB tokens, with BGB becoming the sole ecosystem token. The integrated BGB will support multi-chain gas payments, staking, trading, and more DeFi functionalities while expanding into offline payment utilities. This move aims to bridge CeFi and DeFi ecosystems, delivering greater value to token holders. Looking ahead to 2025, Bitget Wallet aims to deliver seamless onchain financial services, offering fast, secure trading while helping users maximize digital asset returns. The platform will simplify crypto payments for effortless transfers and spending, and streamline asset management with easy fiat-to-crypto conversions. "Our vision is to build a superapp that seamlessly connects Web2 and Web3, enabling a billion users to embrace financial freedom," said Alvin Kan, COO of Bitget Wallet. "We are committed to leading this transformation and becoming the definitive bridge between the real world and the onchain economy." For more information, users can visit the Bitget Wallet blog. About Bitget Wallet Bitget Wallet is the home of Web3, uniting endless possibilities in one non-custodial wallet. With over 60 million users, it offers comprehensive on-chain services, including asset management, instant swaps, rewards, staking, trading tools, live market data, a DApp browser, and an NFT marketplace. Designed for everyone from beginners to advanced traders, it supports mnemonic, MPC, and AA wallet options. With connections to over 100 blockchains, 20,000+ DApps, and 500,000+ tokens, Bitget Wallet enables seamless multi-chain trading across hundreds of DEXs and cross-chain bridges, along with a \$300 million protection fund for your digital assets. Experience Bitget Wallet Lite to start your Web3 journey. For more information, users can visit: X | Telegram | Instagram | YouTube | LinkedIn | TikTok | Discord For media inquiries, users can contact media.web3@bitget.com Contact Public Relations media.web3@bitget.com

As the cryptocurrency market evolves, 2025 is shaping up to be a pivotal year for major tokens and emerging projects. Industry analysts are projecting stable but modest growth for established cryptocurrencies like Cardano (ADA) and XRP, with price targets of \$0.3 and \$5 respectively. However, a new contender, Lightchain AI (LCAI), is gaining significant attention with predictions of its price soaring to \$1, representing a remarkable increase from its current presale price of \$0.0045. Here's a closer look at these 2025 predictions and what makes Lightchain AI the standout among them. Cardano (ADA) Stable Growth but Modest Returns Cardano (ADA) has shown steady growth in 2024, with its price climbing nearly 90% year-to-date. It hit a yearly high of \$1.29 before settling around \$1.12. This growth comes as no surprise, given the platform's impressive advancements, like expanding its smart contract ecosystem and launching Plutus V3, which have drawn in developers and boosted investor confidence. While ADA's returns haven't been as wild as those of some other cryptocurrencies, its more measured growth offers a sense of stability. Analysts predict prices could range between \$0.81 and \$1.93 in 2024, with potential highs of \$2.42 by 2025, showing cautious yet steady optimism for the future. Cardano's focus on scalability and sustainability makes it a strong contender for long-term success. Its conservative growth might just be the perfect fit for investors looking for a bit more stability in the rollercoaster world of crypto. XRP Regulatory Wins Could Push It to \$5 XRP, the cryptocurrency created by Ripple, has seen an impressive surge in value, climbing over 300% since the U.S. election. A big part of this growth comes from hopes for a more crypto-friendly regulatory environment under President-elect Donald Trump. Adding to the excitement, Trump has nominated Paul Atkins, known for his supportive stance on digital assets, as a potential SEC chair. If Atkins takes on the role, many are expecting a shift toward more flexible policies, possibly opening the door for digital-asset ETFs and a more positive approach to cryptocurrencies like XRP. On top of that, Ripple recently got approval for its stablecoin RLUSD from the New York Department of Financial Services, which is another huge boost for XRP's value and adoption on Ripple's digital-payments platform. With all these developments lining up, some analysts believe XRP's price could hit \$5 by 2025. Exciting times for the crypto world! Lightchain AI (LCAI) Breakout Star of 2025 Lightchain AI is quickly becoming one of the most promising tokens of the year, blending artificial intelligence with blockchain technology. Priced at just \$0.0045 during its presale, the token has already raised over \$6.28 million, signaling strong investor enthusiasm. By 2025, its price is projected to hit \$1, delivering an astonishing 22,000% ROI for early investors. What sets Lightchain AI apart is its transparent AI framework, allowing open and auditable decision-making, and its integration of decentralized governance for smarter, community-driven choices. The platform is highly scalable, handling large transaction volumes and AI tasks efficiently while prioritizing privacy and security, key for industries like healthcare and finance. With a global developer community driving innovation, Lightchain AI is positioned as a standout investment with significantly higher growth potential than Cardano and XRP. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Cryptocurrency isn't just a buzzword anymore. It's a massive financial revolution, flipping the script on traditional investments like stocks and real estate. Over the years, projects like Binance, Render, and now Qubetics presale have taken centre stage in the crypto world. These aren't just coins; they're powerful ecosystems reshaping how we think about wealth, investments, and financial freedom. Qubetics is the newest kid on the block, but don't be fooled by its fresh face. With its staggering presale performance and jaw-dropping price predictions, it's clear \$TICS is here to disrupt the scene. Ready to deep-dive into why Qubetics, Binance, and Render are leading the charge as the best cryptos for exponential returns? Buckle up. Qubetics: Where Innovation Meets Investment Powerhouse Qubetics is more than just another coin in the crowded crypto market. It's a future-forward blockchain project shaking up how people interact with digital assets. Since its launch, Qubetics has smashed milestone after milestone. In its 14th presale stage, over 385 million \$TICS tokens have already been sold to 12,400+ holders, raising a

whopping \$8.1 million. The price of \$TICS currently sits at \$0.037, and itâ€™s set to jump 10% this weekendâ€”so you better act fast. But what really sets Qubetics apart? Its Multi-Chain Wallet. Imagine managing all your crypto assetsâ€”whether Ethereum, Binance Smart Chain, or Solanaâ€”from a single, seamless interface. This is a game-changer for businesses, professionals, and anyone tired of juggling countless apps and wallets. For instance, a digital artist could accept payments on Ethereum for their NFTs, pay vendors using Binance Smart Chain, and stake Solanaâ€”all without switching platforms. Itâ€™s a dream come true for anyone navigating the fragmented crypto universe. Now, letâ€™s talk about those wild predictions. Analysts are buzzing about \$TICS hitting \$0.25 by the presaleâ€™s end, offering a 630% ROI. Post-presale, itâ€™s expected to jump to \$1 (thatâ€™s 2820% ROI) and could skyrocket to \$15 after the mainnet launchâ€”an eye-popping 43711% ROI. To put this into perspective, a \$1000 investment today could turn into \$43,711. Mind-blowing, right? If youâ€™re wondering what makes Qubetics one of the best cryptos for exponential returns, this is it. Binance: The Veteran Giant Still Making Waves Binance isnâ€™t just a cryptocurrency exchange; itâ€™s the backbone of the industry. Since its inception in 2017, Binance has become the largest and most trusted exchange worldwide, offering everything from spot trading to staking, NFTs, and even loans. What makes Binance so appealing to investors? Itâ€™s all about reliability and utility. BNB, Binanceâ€™s native token, has grown from a simple utility coin to one of the top-performing crypto assets. Take a step back and think about the last bull run. BNB started as a mere \$0.10 token and surged past \$600 at its peak. Thatâ€™s a staggering 600,000% ROI. Binanceâ€™s continuous innovation, such as its Secure Asset Fund for Users (SAFU) and low trading fees, has kept its loyal user base hooked. And with its DeFi projects and growing influence in blockchain gaming, Binance continues to serve the appetite for crypto investments among newcomers and veterans alike. Investing in Binance is like investing in the backbone of the crypto market. Itâ€™s not just about buying into a token; itâ€™s about owning a piece of a thriving ecosystem. And while Qubetics and Render are rising stars, Binance remains a go-to for anyone looking to diversify their crypto portfolio. Render: Powering the Future of Digital Creation Render might not have the global fame of Binance, but among creators and tech enthusiasts, itâ€™s a heavyweight. Render token (RNDR) serves a very niche but rapidly growing market: decentralised GPU rendering. In plain English? Itâ€™s about enabling creators to render their 3D contentâ€”think movies, games, and VR experiencesâ€”in a faster, cheaper, and decentralised way. Imagine a small indie game studio accessing the same rendering power as a billion-dollar company. Thatâ€™s Renderâ€™s mission. Since its launch, Render has attracted a strong following among digital artists, studios, and developers. Its use case is crystal clear, and its growth potential is massive. Think about it: as metaverses and VR tech explode, the demand for rendering will hit the stratosphere. By holding RNDR tokens, investors are betting on the future of creative tech. Renderâ€™s tokenomics are another reason why itâ€™s one of the best cryptos for exponential returns. RNDRâ€™s capped supply and growing demand from its expanding user base create a perfect storm for price appreciation. Plus, itâ€™s aligned with the shift toward eco-friendly blockchain solutions, making it even more appealing in a world focused on sustainability. Why Qubetics Is Stealing the Spotlight While Binance and Render are rock-solid projects, Qubetics is the rising star with unmatched potential. Its Multi-Chain Wallet is a standout feature, solving real-world problems for crypto users. Imagine a freelance graphic designer getting paid in Ethereum but needing to convert some funds to Solana for staking rewards. With Qubetics, thatâ€™s no hassle. Or picture a small business accepting payments in various cryptocurrencies without needing multiple wallets. Thatâ€™s the kind of utility thatâ€™ll keep \$TICS relevant for years to come. And then thereâ€™s the presale. With \$8.1 million raised and over 12,400 holders already on board, the momentum is undeniable. At \$0.037 per token, the entry point is still ridiculously attractive. But donâ€™t sleep on it because prices will surge by 10% this weekend. Conclusion: The Time to Act Is Now Cryptocurrency is all about timing. Whether youâ€™re drawn to Binanceâ€™s legacy, Renderâ€™s innovative use case, or Qubeticsâ€™ groundbreaking features and potential for exponential returns, the key is to get in early. Analystsâ€™ predictions for \$TICS are nothing short of extraordinary. Investing \$1000 today could change your financial future forever. Donâ€™t wait. The Qubetics presale wonâ€™t last forever, and with each passing day, the price goes up. Secure your \$TICS tokens now and be part of the next big thing in crypto. Visit the Qubetics website and join the revolution. Itâ€™s your move. The crypto market never sleeps, and meme coins remain its beating heartâ€”quirky, unpredictable, and brimming with potential. Over the years, these coins have transitioned from mere jokes to serious investment opportunities, creating wealth and sparking trends along the way. This time, three meme coins are turning heads for all the right reasons: BTFD Coin, Book of Meme (BOME), and COQ Inu (COQ). At the forefront is BTFD Coin, with its eye-popping presale numbers and innovative offerings. For investors looking to seize a rare opportunity, the festive Stage 13 price rollback at \$0.00014 is a golden ticket. But thereâ€™s more to explore. Book of Meme is carving a space for cultural preservation on the blockchain, and COQ Inu is leading the pack on AVAX with its fully decentralised and community-driven approach. Together, they embody why meme coins are here to stay and offer some of the best meme coins to join for short term profits. Letâ€™s take a closer look at each project to understand what makes them so compelling and why you might not want to miss out. BTFD Coin: Turning Dips into Profits BTFD Coin is all about opportunity. True to its nameâ€”â€œBuy the Dipâ€”this meme coin encourages investors to embrace the chaos of market dips and turn them into lucrative gains. Its presale performance speaks volumes: over \$4.6 million raised, 60 billion coins sold, and more than 7,000 holders on board. Itâ€™s clear that BTFD Coin isnâ€™t just a meme; itâ€™s a movement. Currently, in Stage 13 of its presale, BTFD Coin offers an exclusive chance to buy at the Stage 13 price of \$0.00014 by using the BIG50 code. This is more than a bargain; itâ€™s a strategy for maximising returns. Once the presale ends, the coin will list at \$0.0006â€”a staggering 837.5% ROI for those who buy at the current price. But BTFD Coinâ€™s appeal isnâ€™t just about numbers. Itâ€™s building an ecosystem that merges fun with functionality. The beta version of its Play-to-Earn (P2E) game is already live, offering players an early glimpse of whatâ€™s to come. While rewards wonâ€™t be available during the beta phase, the full launch promises an engaging way to earn while gaming. In addition, staking went live earlier this month, offering a 90% APYâ€”a clear incentive for investors to hold onto their coins. This staking programme, combined with an active referral programme, highlights the coinâ€™s commitment to rewarding its community. The timing of this presale couldnâ€™t be better. Drawing inspiration from the 1973 financial crash, BTFD Coin embodies the spirit of resilience. Warren Buffett famously turned that downturn into a wealth-building opportunity by buying undervalued assets. Similarly, BTFD Coinâ€™s festive price rollback offers a chance to buy low and reap massive rewards. Imagine investing \$30,000 at \$0.000064 per coin. That would secure over 468 million coins. By the time the coin lists at \$0.0006, that investment would grow to \$280,800. Itâ€™s not just an investment; itâ€™s a game-changer. To join, visit the BTFD Coin buy page, connect your wallet, and enter the bonus code BIG50 to unlock extra coins. The window is closing fast, so act quickly to secure your position. Inspired by the strategies of Warren Buffett during the 1973 crash, \$BTFD is your ticket to turning dips into gains. At \$0.00014 in Stage 13, itâ€™s an unbeatable opportunity before listing. The festive BIG50 bonus adds even more value. Use code BIG50 to get 50% extra tokens. For every 100 coins bought, youâ€™ll receive 150. Donâ€™t waitâ€”secure \$BTFD today and prepare for market growth. Book of Meme: Preserving Culture on the Blockchain Book of Meme (BOME) is an experimental project that blends web3 innovation with the essence of meme culture. This unique initiative aims to immortalise memes through decentralised storage solutions like Solana, Arweave, and IPFS. By creating a blockchain-based compendium of memes, Book of Meme ensures that cultural moments are preserved forever, untouchable by the shifting sands of the internet. The \$BOME token plays a central role in this ecosystem. Built on Solana, it supports the projectâ€™s vision of decentralised social media and unstoppable meme sharing. Future expansions to Bitcoin inscriptions will further solidify its role as a cultural archive. What sets Book of Meme apart is its focus on creativity and community. It invites users to contribute to its digital library, creating a collaborative environment where everyone has a role in shaping the projectâ€™s future. This fusion of art, tech, and social engagement has made it one of the best meme coins to join for short term impact, especially for those passionate about the cultural side of crypto. COQ Inu: The Top Meme Coin on AVAX COQ Inu (COQ) has taken the AVAX ecosystem by storm, earning its reputation as the #1 meme coin on the platform. Founded by respected community members, COQ Inu prioritises transparency and fairness. The entire supply of the coin was initially paired with 150 AVAX in liquidity, and the contract has been fully renounced, with liquidity burnedâ€”ensuring a decentralised and community-driven foundation. What makes COQ Inu stand out is its simplicity. It doesnâ€™t rely on gimmicks or overhyped promises; instead, it focuses on delivering a secure and accessible meme coin for the AVAX community. This approach has garnered strong support, making COQ Inu a reliable choice for those exploring meme coins as an alternative investment. As meme coins continue to evolve, COQ Inu represents a grounded yet innovative approach. Itâ€™s proof that even in a fast-moving market, staying true to community values can lead to lasting success. Why BTFD Coin Stands Out While Book of Meme and COQ Inu bring unique value to the meme coin landscape, BTFD Coinâ€™s presale momentum and feature-packed ecosystem make it a standout choice. Its combination of extra coins, high staking rewards, and an engaging P2E game offers unparalleled potential for both short-term profits and long-term growth. With over \$4.6 million raised and the opportunity for an 837.5% ROI, BTFD Coin isnâ€™t just another meme coinâ€”itâ€™s a chance to make a significant impact on your portfolio. The Final Thoughts Based on market trends and each projectâ€™s unique strengths, BTFD Coin emerges as the most exciting investment among the best meme coins to join for short term. Its presale success, innovative ecosystem, and extra coins create a compelling opportunity for investors ready to act now. Donâ€™t miss your chance to be part of this movement. Visit the BTFD Coin buy page, secure your coins at the Stage 13 price, and position yourself for a lucrative future. Join the next wave of meme coin success today. As the New Year kicks off, Ripple (XRP) and Kaspa (KAS) are drawing major attention from crypto enthusiasts, standing out as key players in the fast-evolving blockchain space. However, stealing the spotlight early on is the Lightchain AI Presale, which is already creating buzz with its innovative decentralised AI integration. Ripple remains a leader in cross-border payments, solidifying its position in the market, while Kaspaâ€™s groundbreaking blockDAG technology is setting new standards for scalability. Meanwhile, emerging projects like Lightchain AI are redefining whatâ€™s possible in the crypto world, showcasing the industryâ€™s dynamic potential and fueling excitement for blockchain innovation in 2024. Ripple (XRP)- Dominating Market Attention with Resilience Rippleâ€™s XRP has shown great strength, grabbing a lot of market notice in 2024. After a bit of a win in court against the U.S. Securities and Exchange Commission (SEC) in 2023, XRPâ€™s worth jumped more than 300%, trading at around \$2.34 as of December 2024. This rise is linked to more people using Rippleâ€™s payment tools and hope about changes in rules with the new Trump team. Also, XRPâ€™s market value went over \$100 billion, beating Binanceâ€™s BNB to be the third-biggest crypto by market worth. Experts guess that with more big companies getting in and good rules changing, XRP might get to \$10 in the next years, making it a strong force in the crypto field. Kaspa (KAS)- The Rising Star in Blockchain Innovation Kaspa (KAS) has emerged as a significant player in blockchain innovation, addressing the industryâ€™s scalability, security, and decentralization challenges. Its unique BlockDAG architecture enables parallel block processing, enhancing transaction throughput and network efficiency. The GHOSTDAG protocol further distinguishes Kaspa by allowing the coexistence of parallel blocks, ensuring rapid transaction confirmations without compromising security. Launched in November 2021, Kaspaâ€™s fair launch and capped supply of 28.7 billion KAS coins reflect its commitment to decentralization and sustainability. The platformâ€™s energy-efficient Proof-of-Work consensus mechanism and support for layer-2 solutions position it as a versatile and forward-thinking blockchain platform. Emerging Market Leaders- Cryptos to Watch in 2024 While Ripple and Kaspa continue to dominate market attention, emerging cryptocurrencies are also worth keeping an eye on in 2024. One of these is Lightchain AI (LAI), which aims to revolutionize the crypto industry by leveraging decentralized Artificial Intelligence (AI). By integrating AI into blockchain technology, Lightchain AI seeks to improve scalability, security, and privacy while enabling advanced smart contract capabilities. The platformâ€™s innovative approach has already attracted significant investment interest, with its presale selling out in a matter of hours. Other emerging projects such as Algorand (ALGO) and Solana (SOL) are also gaining traction for their unique features and potential for mass adoption. So, while Ripple and Kaspa may be the most viewed cryptos at the moment but Lightchain AI making head lines early on, the crypto market is always evolving, and itâ€™s worth keeping an eye on emerging projects that could potentially disrupt the industry. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://twitter.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page.
