

The Bitcoin (BTC) value dropped under the \$100,000 threshold trading at \$97,133.86, a 1.82% price decrease during the last 24 hours. Its market value has dropped to \$1.92 trillion, a 1.90% reduction. The trading volume for the past 24 hours increased significantly, as 154.11% more transactions were observed at \$109.07 billion while prices fluctuated. The current cryptocurrency market fluctuates at volatile levels. Since its initial launch, Bitcoin has maintained its position as a major market indicator among decentralized digital assets. Bitcoin price movements affect how investors feel about digital assets and reshape their investment approach toward them. Ozak AI's AI-Driven Approach to Market Volatility Through Ozak AI, users can employ structured, AI-driven decentralized network processing to manage unpredictable markets as an innovative platform. The platform uses advanced machine learning algorithms to examine current information, giving investors vital information needed to make proper decisions. The Ozak Stream Network (OSN) is the platform's core component for delivering fast real-time data communication with reduced time delays. The system provides fast access to current market patterns, which allows investors to base their decisions on changing prices. Ozak AI's financial data analysis is strengthened through decentralized infrastructure supported by Decentralized Physical Infrastructure Networks (DePIN), which provides enhanced security and reliability. Presale Strategy and Market Positioning The current third presale phase of Ozak AI features a token price of \$0.003 for their \$OZ tokens. The following stage for the price will start at \$0.005 before reaching the ultimate goal at \$1. Through predictive AI analytics, investors during the presale period obtain structured investment opportunities that help them enter markets at their best timing. It is soon expected to be listed on leading exchanges, with a final listing price of \$0.05. The presale includes a \$1 million giveaway to motivate investors to join early. Investors must possess \$100 worth of \$OZ tokens to participate, and they can obtain bonus entries by referring others to join. The initiative seeks to draw investors through AI-based financial decisions and monetary benefits. Ozak AI's Prediction Agents (PAs) are critical, leveraging historical and real-time data to deliver personalized investment insights. These agents help users determine optimal presale participation moments, mitigating risks associated with volatile market conditions. Future outlook As Bitcoin's latest price fluctuations highlight the market's uncertainties, Ozak AI offers an AI-powered solution for investors seeking stability through data-driven strategies. With its advancing presale and AI-driven analytics optimizing investment decisions, Ozak AI is a leader in predictive market intelligence. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI> Disclaimer: TheNewsCrypto does not endorse any content on this page. - BlackRock intends to launch its first Bitcoin ETP in Europe, based in Switzerland. - Inflows to US Bitcoin ETFs totaled \$35B (\$40.6B) in 2024, indicating substantial institutional interest. Blackrock, the world's biggest asset manager, is launching a Bitcoin exchange-traded ETP product in Europe. The fund, based in Switzerland, will be its first foray into the European market in the crypto-linked ETP arena. According to a Bloomberg report, Blackrock can begin marketing the product as soon as this month. This recent step came after Blackrock performed admirably in the United States through its iShares Spot Bitcoin ETF, in which IBIT collected close to \$60 billion in assets after going live nearly a year ago. Blackrock launched a new Bitcoin ETP in Europe as an effort to continue increasing the interest in Blackrock's offer of crypto-backed securities all around the globe. Blackrock Extends Its Bitcoin Offering into Europe The European market has seen an influx of investment firms that are vying to give crypto-linked products, including Kraken, Bitstamp, and FTX EU. Blackrock's entrance into the competitive market will also cause further action by the other firms as they seek to entice investors with fee waivers. The actual fee structure of Blackrock's Bitcoin ETP is not known, but it will define its performance greatly. U.S. spot Bitcoin ETFs currently dominate 91% of the global market share. If Blackrock moves into the European market, that should increase the competitive landscape there and could drive a change in fee structures of the entire industry along with their respective liquidity levels. This is a key step forward for Blackrock on its international strategy for crypto development. BlackRock takes another step forward with International crypto-product offerings by launching European Bitcoin ETP. Similarly, the company launched a Bitcoin ETF earlier this year at US, allowing trading on Cboe Canada opening the door for investors to the US spot Bitcoin fund for trading purposes. One of the largest issuers of ETPs manages \$4.4 trillion in diversified ETPs. Following the success of US Bitcoin ETFs, sustenance of interest from the institutions is being furthered by these products. As of the reporting date of this report, US Bitcoin ETFs have seen net inflows of more than \$40.6 B to date. On top of all the adoption that speaks to portfolios' use of Bitcoin and its relationship to inflation and geopolitical risks, Investors are now preparing for this, prompting demands for further expert analysis. The continued inflow into Bitcoin ETFs is driving Bitcoin's price even higher in 2025. Going forward, as BlackRock continues to push to expand its global presence more in the world of crypto assets, its European Bitcoin ETP can heighten the companies' dominance as the fast-evolving space picks up. Highlighted Crypto News Today: MicroStrategy Rebrands as "Strategy" to Strengthen Its Bitcoin Mission

- MicroStrategy rebrands to Strategy using a Bitcoin logo to emphasize a solid Bitcoin First mission. - "Strategy" now holds 471,107 BTC accumulation, worth \$46 billion, and continues mass purchases. On February 5, the largest institutional holder of Bitcoin and intelligence firm, MicroStrategy, announced a rebranding of its company to "Strategy". The decision reinforced the firm's commitment to Bitcoin as a treasury asset. The rebranding decision included changing the company's logo to a stylized Bitcoin "B" signature orange color. Michael Saylor, in a post on X, confirmed the decision about the new brand, he also added, "New Brand, Same Strategy." A Rebrand Rooted in Bitcoin Advocacy The company's decision to simplify its name to "Strategy" is meant to reflect

its dual focus on business intelligence and Bitcoin accumulation. In a Feb. 5 announcement, Michael Saylor, CEO, and his co-founder explained the initiative behind the decision to rebrand: “Antoine de Saint-Exupery said, “Perfection is achieved, not when there is nothing more to add, but when there is nothing left to take away.” After 35 years, our new brand perfectly represents our pursuit of perfection,” Saylor stated. The visual transformation aims to solidify Strategy’s identity as the first and largest Bitcoin Treasury Company. President and CEO Phong Le echoed this sentiment, stating that the name change aligns with the firm’s long-term mission of advancing both Bitcoin and artificial intelligence. Financial Strength and Bitcoin Holdings Despite the rebranding, the company’s core financial strategy remains unchanged. Strategy currently holds 471,107 BTC, valued at approximately \$46 billion. This accumulation has been steady, with the firm actively purchasing Bitcoin for 12 consecutive weeks. In an effort to expand its holdings, Strategy raised over \$563 million through a public offering of Strike Preferred Stock (STRK) in January. Each STRK share, set to launch on March 31, carries a \$100 liquidation preference, with quarterly dividends paid in cash or stock. The company’s stock (MSTR), widely regarded as a proxy for Bitcoin exposure, surged 422% last year, reaching a record high of \$421.88. However, following the rebranding announcement, MSTR stock did not experience a significant rebound, suggesting investors are focused on the firm’s Bitcoin strategy rather than cosmetic brand changes. Industry Influence and Adoption Trends MicroStrategy’s Bitcoin-focused corporate strategy has influenced other publicly traded companies. Firms such as Semler Scientific and Metaplanet have followed suit, adopting Bitcoin as part of their corporate treasuries. Metaplanet, a Japanese investment firm, announced its Bitcoin treasury strategy in April 2024, with CEO Simon Gerovich stating plans to accumulate 10,000 BTC by 2025. Similarly, Semler Scientific’s Bitcoin adoption in May 2024 resulted in a 30% stock price increase, demonstrating investor confidence in the approach. Speaking at the Bitcoin 2024 conference, executives from these firms emphasized how Bitcoin had revitalized their businesses, with some describing their companies as “zombie firms” before integrating Bitcoin. Michael Saylor also weighed in on the trend, noting that many companies listed in the S&P 500 struggle with excess capital for growth—an issue Bitcoin holdings could potentially address. Rumble, a video-streaming platform, also committed to a Bitcoin treasury strategy, announcing a \$20 million Bitcoin purchase as a hedge against inflation. Highlighted Crypto News for Today Public Citizen Calls for an Investigation Over TRUMP Memecoin Risks

- Bitcoin price has shown a modest price drop of 0.40% in the last 24 hours. - The cryptocurrency’s daily trading volume shows a 32.80% drop as per CMC data. The global crypto market has been on rocky terms over the past few days. As another weekend approaches, community members are expecting further price consolidations. However, looking into what has occurred particularly in the last 24 hours, trading conditions don’t look very bright. Notably, Bitcoin, after its recent visit to the \$93K level, managed to crawl back to the current \$97K range. The last day saw BTC testing \$98,000 briefly, after which it proceeded downward. Two months ago, these price levels were seen as new highs; however, after Bitcoin’s all-time high of \$109,114.88, they have been labeled with bearish tags. Moreover, market analyst Ali observed that Bitcoin and Ethereum are facing continuous capital outflows. They are in turn being directed toward stablecoins as per the report. Additionally, the altcoin sector has also not shown any signs of a bullish market in the coming weeks. Capital continues to flow out of #Bitcoin and #Ethereum into stablecoins. No signs of altseason yet! pic.twitter.com/k7cDphNn7i “ Ali (@ali_charts) February 6, 2025 These conditions indicate a bleak trading season unless prices are propelled by strong external factors. In the past day, Bitcoin hit an intra-day low of \$96,306. At the time of writing, BTC was trading at \$97,796 with a 0.40% price drop as per CMC data. Zooming out, on to its weekly performance, the cryptocurrency records a 6.91% downward movement. Will Bitcoin Recover Anytime Soon? Bitcoin’s technical indicators further confirm its bearish dominance. Its Moving Average Convergence Divergence signal line stands below the MACD line. This suggests that a negative sentiment is approaching the cryptocurrency’s trading season. Additionally, the aforementioned capital flow is further confirmed by Bitcoin’s RSI value “ 44.84, as per TradingView data. In order for Bitcoin to break free from the bearish hold, strong propellants are required in the coming days. Crypto Czar, David Sacks’s positive Bitcoin comment did not cause significant surges in Bitcoin. Meanwhile, other altcoins such as XRP and Chainlink have shown minor price drops in the past day as per CMC data.

- El Salvador purchased 12 BTC, raising its total reserve to 6,068 BTC. - Bitcoin acquisitions have continued following a \$1.4 billion agreement with the IMF. El Salvador continues to expand its BTC holdings despite recent policy changes. On February 4, the Central American nation added 12 Bitcoins to its reserves, increasing the total to 6,068 BTC, valued at over \$554 million. The government purchased 11 Bitcoin for about \$1.1 million, averaging \$101,816 per BTC. Later, an additional BTC was acquired for \$99,114. The recent BTC purchases follow a broader trend of consistent accumulation by El Salvador. According to the Bitcoin Office, the country bought 21 BTC in the past week, with 60 BTC acquired over the past 30 days. These acquisitions support El Salvador’s vision of building the world’s first Strategic BTC Reserve. The country’s commitment to BTC is evident, even as it adapts policies to comply with its agreement with the International Monetary Fund (IMF). El Salvador’s Bitcoin Strategy Last month, President Nayib Bukele reached a \$1.4 billion financing agreement with the IMF. As part of this deal, El Salvador agreed to adjust some of its BTC policies. Specifically, the government made Bitcoin adoption voluntary for the private sector and reduced its involvement in the Chivo crypto wallet. Additionally, El Salvador’s Congress quickly passed legislation on January 29 to amend its BTC laws in response to the IMF’s concerns. The day after finalizing the IMF agreement, the country purchased \$1 million worth of BTC. National Bitcoin Office Director Stacy Herbert emphasized that the country’s long-term Bitcoin strategy remains unchanged. Tether, a leading stablecoin issuer, recently moved its headquarters to El Salvador, praising the country’s crypto-friendly regulations. Additionally, President Bukele encouraged Rumble CEO Chris Pavlovski to consider relocating to El Salvador as well. Highlighted Crypto News Today Bitcoin Faces Weakening

Momentum, Signaled by RSI Divergence

- Bitcoin is trading above the \$97,000 price level, with less than a 1% drop in the last 24 hours. - The increased RSI divergence indicates a weakening BTC price momentum. Bitcoin is witnessing price fluctuations and is struggling to keep pace with its previous price ranges. Its price is trading close to the \$98,000 price level, with less than 1% drop in the last 24 hours. The price drop triggered by uncertain global macroeconomic conditions hasn't fully recovered yet. As per the recent Matrixport report, the BTC price shows a notable divergence from its RSI market indicator. The consolidating RSI indicates a weakening momentum of Bitcoin. And, the report further says that BTC offered buying opportunities when RSI dropped nearly to 40%. Since the present RSI has only dropped to around 48%, this might not yet be the best time to enter long positions. The Matrixport report suggests investors to be patient and wait for an optimal entry point into the BTC market. This implies we might witness the BTC price to drop in the coming few hours. Bitcoin is trading at \$97,923 at press time with no significant ups or downs in the last 24 hours. While its market cap is \$1.94 trillion, 24-hour trading volume dropped by 20% and it is hovering around \$64.6 billion. Bitcoin Struggles to Get Back Up Amidst Global Uncertainty With the new Trump administration in the US, crypto is about to face a huge shift in the coming months. The crypto community is awaiting a friendly regulatory framework and a potential Bitcoin reserve as promised by Donald Trump. However, the recently signed crypto executive order stated that the Presidential Working Group will be evaluating the creation of a Bitcoin strategic reserve. The term "evaluation" is causing uncertainty for the crypto proponents. Commenting on the same, macro strategist Jim Bianco posted on X stating, "Wait, Trump said he would do a BTC reserve, not promise to evaluate it." Evaluate/Study is what Washington does when they don't want to do something. However, Crypto & AI Czar David Sacks said that evaluating a BTC reserve is one of their top priorities, in his latest interview with CNBC. He even called Bitcoin an excellent store of value, reminding it's the first and original digital currency. Nonetheless, it is worth waiting and watching what happens to the BTC price next.

- Ohio Senator Sandra O'Brien proposes a bill to establish a state Bitcoin reserve. - The bill requires Bitcoin investments to be held for at least five years. - The proposal includes accepting Bitcoin for government payments and donations. Ohio is advancing a proposal to establish a "Bitcoin Reserve Fund." Senator Sandra O'Brien introduced Senate Bill 57, which aims to authorize the state treasurer to invest public funds exclusively in Bitcoin (BTC). The bill was referred to the Financial Institutions, Insurance, and Technology Committee the day after its introduction, on January 28. I just introduced legislation to create an Ohio Bitcoin Reserve Fund. The crypto world is here, and Ohio needs to be a leader. Crypto will be a major part of President Trump's term. When his working group issues recommendations, Ohio will be ready. " State Senator Sandra O'Brien (@OBrienOH32) January 28, 2025 State Bitcoin Reserve Proposal If passed, the bill will require Bitcoin holdings to be stored securely for at least five years. Ohio's treasury will manage these assets using approved custody solutions. Beyond investments, the bill mandates state agencies to accept Bitcoin for various payments. Residents will be able to use Bitcoin for taxes, fines, and other fees. Any received cryptocurrency will be converted into Bitcoin and stored in the reserve. The proposal allows Ohio residents, government agencies, and universities to donate Bitcoin to the fund. It also includes a recognition program to honor significant contributions. O'Brien has emphasized the importance of embracing digital assets, stating that Ohio must lead in cryptocurrency adoption. Furthermore, O'Brien noted that growing interest in cryptocurrency at the federal level could influence state policies. She referenced former President Donald Trump's recent executive order, which created a working group to evaluate a potential national digital asset reserve. A similar effort was introduced in December by House Republican leader Derek Merrin. His bill, HB 703, proposed granting the treasurer the authority to allocate Bitcoin to a reserve fund. Merrin argued that Bitcoin could serve as a hedge against the declining value of the U.S. dollar. Growing Crypto Adoption Among US States Several other U.S. states are also advancing cryptocurrency-related legislation. On January 28th, the Arizona senate gave a nod to their strategic Bitcoin reserve bill, becoming the first US state to approve it. The Senate panel authorized public funds to invest more than 10% of their assets in virtual currencies. At least twelve U.S. states have proposed legislation for Bitcoin reserves, signaling a growing interest in cryptocurrency at the state level. Texas and South Dakota are among the states considering Bitcoin as a strategic asset. Highlighted Crypto News Today:

- White House Crypto & AI Czar David Sacks called Bitcoin an excellent store of value. - David Sacks stated evaluating a Bitcoin reserve is their top priority on the latest CNBC interview. US White House Crypto & AI Czar David Sacks talked about various things related to crypto on the latest CNBC interview. From forming a regulatory framework to establishing a Bitcoin reserve, David clarified on their upcoming plans for crypto. David Sacks revealed that he was in a meeting with House and Senate Committee leaders to discuss banking and finance. They are committed to move forward with a clear regulatory framework for the crypto industry to support its innovation. However, Sacks said that "moving legislation through Congress takes time" to bring regulation into the market. They are aiming to develop the regulatory framework in the next 6 months. When the interviewer asked about Bitcoin reserve, Sacks said it is one of the first things they are looking into to evaluate its feasibility as part of the Presidential Working Group responsibilities. Sacks also stated that Commerce Secretary Howard Lutnick is the right person to say whether the Sovereign Wealth Fund includes Bitcoin and other digital assets. David Sacks Appreciates Bringing Tech People into Washington DC David Sacks appreciated bringing people from the technological industry to Washington is a positive thing. Because the software systems there are outdated and it will improve efficiency, referring to the impact of Elon Musk's actions as part of D.O.G.E. When the interviewer asked about Bitcoin, David Sacks called it an excellent store of value. He further stated, "It was the first digital currency. And, it's the original. It's the strongest one in the parlance of the industry."

And, itâ€™s been around for over a dozen years now. No oneâ€™s ever cracked the security around it. And so it is an excellent store of value.â€ Apart from emphasizing blockchainâ€™s capabilities for more innovation, Sacks also talked about stablecoins. He revealed plans to bring stablecoin innovation onshore and allow stablecoin issuance in the US. David opines that stablecoins have the potential to extend dollarâ€™s dominance internationally and digitally. Thus, stablecoins can create trillions of dollars of new demand to US Treasuries. Highlighted Crypto News Today: WazirX users choose between a new refund plan or waiting until 2030

As Bitcoin price eyes a staggering \$150,000 valuation, the crypto market is heating up with fierce competition. Analysts are bullish on the leading cryptocurrency, but thereâ€™s a captivating underdog story unfolding. Dogecoin, a fan favorite, now faces a formidable rival AI altcoinâ€”WallitIQ (WLTQ)â€”priced at just \$0.0420 and already creating waves with advanced technology. With the race to \$1 wide open, smart investors are turning their attention to this rising star, fueled by groundbreaking features and an unbeatable presale opportunity. The Analystâ€™s Bitcoin Price Prediction And Dogecoins New Rival The analyst forecast of Bitcoin price hitting \$150,000 is sparking fresh enthusiasm among crypto investors. This bullish sentiment signals a seismic shift, encouraging a deeper exploration of emerging altcoins. Dogecoin, which once captured headlines as the â€œpeopleâ€™s coin,â€ is now facing stiff competition from WallitIQ (WLTQ), a cutting-edge AI altcoin rival poised for rapid growth. With a presale price of just \$0.0420, WallitIQ (WLTQ) stands out as a smarter and more advanced choice for forward-thinking investors. Analysts believe that Bitcoin price surging to \$150,000 will trigger a massive shift in the crypto landscape, attracting both institutional and retail investors. Such a monumental rally often lifts other cryptocurrencies, including Dogecoin, which has long relied on its vibrant community and high-profile endorsements. However, Dogecoinâ€™s momentum seems to be waning as analysts and investors search for altcoins with real utility and innovation. With AI-driven technology, WallitIQ (WLTQ) is emerging as a rival contender in this dynamic space, offering advanced features that Dogecoin simply doesnâ€™t match. As Bitcoin price continues to capture headlines, the competition between Dogecoin and WallitIQ (WLTQ) intensifies, making this a pivotal moment for investors to secure their stake in the next AI-powered success story. But what makes this AI-driven platform such a threat to Dogecoin? Beyond its low price, WallitIQ (WLTQ) offers a suite of powerful features, including a newly launched MVP crypto wallet management app. This innovative tool lets users manage multiple wallets with real-time pricing and streamlined transactions, all within a sleek interface. With Ethereum and USDT wallet management capabilities, CoinGecko price integration, and interactive candlestick charts, itâ€™s redefining user experience in the crypto space. AI Technology And Features That Set WallitIQ (WLTQ) Apart The Bitcoin price is a great attraction for crypto enthusiasts as analysts project a \$150,000 mark for it. Dogecoin in its own right may have community support, but WallitIQ (WLTQ) offers real innovation. Powered by AI, the platform delivers smart suggestions for portfolio optimization and automated transactions based on market trends. This enables users to seize investment opportunities at the right time without constant monitoring. One standout feature is WallitIQâ€™s (WLTQ) QR code payment system, which simplifies crypto transactions for everyday use. Imagine scanning a code and completing payments easily without navigating complex interfaces. Moreover, the multilingual AI chatbot offers 24/7 assistance in multiple languages, making the platform accessible to users across the globe. Security is another key differentiator. With a SolidProof-audited system, WallitIQ (WLTQ) puts investorsâ€™ minds at rest, making sure of a secure environment for transactions and asset management. And with a Beta platform launch on the horizon, the excitement surrounding this altcoin is palpable. Why WallitIQ (WLTQ) Is The Best Investment Move Of 2025 As Bitcoin price targets \$150,000, the altcoin market is poised for explosive growth. Dogecoinâ€™s loyal community may be cheering for a rally, but WallitIQ (WLTQ) is quickly emerging as the smarter bet. Its combination of AI-driven features, secure infrastructure, and user-friendly technology makes it a game-changer. Analysts are already buzzing about its potential to reach \$1, making the current presale price of \$0.0420 a rare and compelling opportunity. With Dogecoin battling to maintain its relevance, this AI-powered altcoin is capturing investor attention for all the right reasons. Donâ€™t miss out on this chance to join WallitIQ (WLTQ)â€™s presale and ride the wave of innovation as it reshapes the crypto landscape. As analysts predict Bitcoin price soaring to \$150,000 and AI altcoins like WallitIQ (WLTQ) climbing to \$1, now is the time to act. Secure your position in this groundbreaking project and watch your investment grow. Join the WallitIQ (WLTQ) presale and community: Disclaimer: TheNewsCrypto does not endorse any content on this page. The UK governmentâ€™s recent Â£5.2 billion Bitcoin (BTC) seizure has sent ripples through the crypto market, creating a wave of uncertainty. Historically, such large-scale government seizures have led to sell-offs, causing short-term volatility and price dips for BTC. In light of this, investorsâ€™ focus is rapidly shifting toward the AI altcoin WallitIQ (WLTQ) with tremendous growth potential. UK Government Grapples With Â£5.2 Billion Bitcoin (BTC) Dilemma With the UK government holding about Â£5.2 billion in seized Bitcoin (BTC), some analysts speculate that this huge fund could be used to alleviate the Â£22 billion budget deficit if liquidated. While this news has increased the focus on Bitcoin (BTC) as a legitimate financial instrument, more concerns are being directed to what the UK government plans to do with such huge funds. RoundtableSpace, a top X analyst, recently cited that the UK government is eyeing a sell-off. However, if the UK government sells this huge holding, it risks overwhelming the Bitcoin (BTC) market. It is uncertain how this massive Â£5.2 BTC sell-off by the UK government will affect the Bitcoin (BTC) price. Thus, Bitcoin holders are redirecting their holdings to AI altcoins. In fact, analysts believe the Bitcoin sell-off could redirect capital into these emerging AI altcoins, triggering a massive rally for WallitIQ (WLTQ). WallitIQ (WLTQ) Gains Increased Exposure As The Next Best Crypto Bet Among AI Altcoins One primary reason investors are eyeing

WallitIQ (WLTQ) is the rising institutional interest in AI-driven crypto projects. The AI-crypto market is now valued at over \$45 billion, and as the industry continues to expand, investors are looking for innovative projects that combine AI with blockchain. WallitIQ's (WLTQ) AI-powered asset management system, which allows users to trade, track, and store crypto securely, has made its native token one of the most promising altcoins in this space. Unlike other AI altcoins, WallitIQ (WLTQ) offers an advanced wallet-based platform with a suite of features like predictive analytics, biometric security, and automated transaction management, etc. Besides enhancing user security through features like AI-driven fraud detection, the platform houses a SolidProof-audited smart contract for safe and secure transactions. The recent £5.2 billion Bitcoin windfall could be a potential catalyst for broader cryptocurrency adoption, reflected in WallitIQ's (WLTQ) emergence as a next-level AI altcoin. Currently priced at \$0.0420, this AI altcoin is already gaining high exposure in its presale and through a CoinMarketCap listing. Investors who are seeking assets with strong fundamentals and growth potential amidst market volatility are urged to consider throwing their investment in WallitIQ (WLTQ). With extra unique perks like an Escrow Connect for secure and transparent P2P transactions of over 1,000 crypto assets and a Physical 2 Digital tool that enables storing physical assets on-chain, this new AI platform's token is poised for massive adoption. Furthermore, WallitIQ (WLTQ) is set to launch the MVP (minimum viable product) of its Crypto Wallet Management Mobile App. This sleek, intuitive, and responsive application is designed to facilitate the simulated transaction of ETH and USDT, the management of over crypto assets, and the tracking of real-time crypto prices through the CoinGecko API. WallitIQ (WLTQ) Is Positioned To Benefit From Capital Rotation When Bitcoin (BTC) prices fell in previous cycles, investors shifted their profits into emerging altcoins. With AI tokens trending in 2025, WallitIQ's (WLTQ) real-world use cases and innovative crypto management features make it a prime candidate for reinvestment. At just \$0.0420, WallitIQ (WLTQ) presents a rare chance for early accumulation before mass adoption drives its price up exponentially. Analysts predict that as AI continues to dominate the crypto market, the AI altcoin could surge by 50,000%, mirroring past parabolic runs from early-stage projects. With BTC facing a potential price decline due to the recent £5.2 billion seizure by the UK government, it's best to invest in the WallitIQ (WLTQ) token now before its price starts a parabolic rise due to heightened demand. Join the WallitIQ (WLTQ) presale and community: Disclaimer: TheNewsCrypto does not endorse any content on this page. With the broader crypto market anticipating a Bitcoin (BTC) bull run, investors are strategically positioning themselves for massive gains by accumulating altcoins like Ethereum (ETH). However, a Wall Street analyst recently advised against investing in Ethereum (ETH) at \$3,000. The Wall Street analyst instead reveals a better altcoin alternative called WallitIQ (WLTQ), whose growth potential is primed to deliver up to 10,000% gains. Bitcoin (BTC) Poised To Experience Giga Bullish Trend—Expert Says In the past few weeks, Bitcoin (BTC) has gone through a compression phase with its price hovering around \$90,000 and \$100,000, after completing a short bull run in 2024. However, 9 days ago, Bitcoin (BTC) hit an all-time high above \$109,000, allowing its price to stabilize above the \$100,000 price mark. Consequently, a prominent crypto trader, TraderMagnus, recently highlighted that Bitcoin (BTC) is experiencing a macro-up trend, and its price is poised to experience a giga bull run in this Q1. With Bitcoin (BTC) already nearing its ATH again, in a 10% monthly spike, investors are positive that it could start a bull run soon. Furthermore, TradingView shows that the moving averages on the Bitcoin (BTC) price chart point to a strong buy signal, which indicates increased buying pressure and a potential breakout. In other words, Bitcoin (BTC) is on the verge of mirroring a bull run very soon. WallitIQ (WLTQ) is Your Safest Bet for Explosive Growth as Bitcoin's Bull Run Gains Momentum WallitIQ (WLTQ) is currently claiming the most innovative presale altcoin title right now. This followed after, a Wall Street analyst recently revealed that this altcoin is set to mirror a 10,000% surge. This positive sentiment from the Wall Street analyst stems from the platform's unique and advanced AI-powered wallet-based features, specifically designed to transform how investors store, manage, and transact crypto assets. Using artificial intelligence (AI) and machine learning (ML) technology, WallitIQ (WLTQ) has employed a wide array of innovative features to enhance safety, ease, convenience, and security in its crypto wallet network. Aside from being able to transact over 1000 cryptocurrencies, this AI-powered wallet offers its users predictive market analysis, AI-driven custom alerts, multilingual AI chatbots, and enhanced security tools. These advanced tools further support the 10,000% growth surge that the Wall Street analyst predicted. These features are indeed set to influence WallitIQ's (WLTQ), with its altcoin possibly topping charts in the year's bull run. Additionally, the platform which has been properly audited SolidProof, offers other robust security features like an AI fraud detection tool, motion detectors, liveness detectors, and AES encryption codes for heightened user-data security. With the MVP of its Crypto Wallet Management Mobile App already set to launch soon, it's no surprise that the Wall Street analyst directed investors to invest in WallitIQ (WLTQ) for a 10,000% surge. Its MVP is set to reel in massive traction due to its ability to allow users to simulate the transfers of USDT and ETH, track real-time prices of crypto assets, and also assess candlestick charts alongside adjustable timeframes. Ethereum (ETH) Consolidates Heavily Below Weekly Resistance Ethereum (ETH) rose dramatically from lower levels of around \$2,300 in November to peak at \$4,000 in December 2024, following Bitcoin's bull run. However, this bullish surge soon came to an end at the start of the new year. Ethereum (ETH) has declined by over 7.20% in the past month and over 5% in the past week. Ethereum (ETH) has fallen even lower in the past two months as its price dropped from a peak price of \$4,000 to a weekly range of \$3,036.49–\$3,406.17. According to technical indicators on TradingView, the moving averages on the Ethereum (ETH) price chart point to a strong sell signal, indicating that its price may drop even lower. However, Virtual Bacon posted on X, saying that the Ethereum (ETH) token will shine in the next 6 months. Buy This New Altcoin And Get A 10,000% Profit Immediately Although Ethereum (ETH) is

expected to surge when the Bitcoin bull run hits, its high price and large market cap limit its potential for significant gains. In contrast, WallitIQ (WLTQ), still in its presale phase and selling at a cheap price of \$0.0420, offers immense growth potential when the next Bitcoin (BTC) rally kicks in. Wall Street analysts predict a staggering 10,000% surge for this AI-powered altcoin, with some projecting even higher gains due to the platform's increasing investor interest. A key attraction is its lucrative staking rewards, offering up to 180% APR. Additionally, early investors have already gained over 250% profit just from its presale alone. With exponential growth still on the horizon, now is the time to invest and capitalize on the 10,000% ROI projected by Wall Street analysts. Hurry and invest now before the anticipated bull run comes. Join the WallitIQ (WLTQ) presale and community: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin trades at \$99.5K, posting a modest gain of over 5% in the last 24 hours. - Donald Trump's AI Crypto Czar will hold a press conference to outline the digital asset regulatory plans. Donald Trump's AI Crypto Czar, David Sacks, is scheduled to hold a press conference today at 2:30 PM Eastern Time, where he is expected to outline the U.S. government's plan for the leadership strategy in the digital asset domain. The press conference schedule features a lineup of GOP lawmakers and pro-crypto politicians including Senate Agriculture Committee chair John Boozman, House Agriculture Committee chair G.T. Thompson, Senate Banking Committee chair Tim Scott, and House Financial Services Committee chair French Hill. Notably, Perianne, founder and CEO of the Digital Chamber, view this collaboration between Congress and the administration as a positive step and stated: "Very good sign to see multiple Congressional committees come together with the Administration to deliver a unified message. The pro-crypto admin and Congress are preparing to make big moves." On the other hand, ahead of the conference, Bitcoin has rebounded to \$102.5K after a major market crash caused by Trump's tariff. Over the last day, BTC experienced a pullback, dropping toward \$92.5K. The asset has shown resilience, with the bulls eyeing higher targets. At press time, Bitcoin traded at \$99,577, spiking over 5.69%. The asset's intraday fluctuations are observed between \$94,354 and \$102,420. Consequently, BTC has stepped into the greed zone as the Fear and Greed Index stays at 72. Is BTC About to Soar or Crash? Bitcoin's four-hour candlestick chart has exhibited an overall bearish outlook. Assuming the asset's failure to hold above the current trading level, it could retest the \$97,864 support. If the BTC market turns intensely bearish, the price might drop toward \$95K. From a bullish perspective, the BTC price could climb to the \$101,261 level. Amid a raging bull run, Bitcoin might break the \$102K mark and would potentially rally toward reclaiming the \$105K range. The Moving Average Convergence Divergence (MACD) line of Bitcoin is above the signal line, but both are located below the zero line. This crossover indicates a weak bullish momentum within a broader bearish trend. Moreover, BTC's Chaikin Money Flow (CMF) indicator settled at 0.16, highlighting the positive money flow and moderate buying pressure. Meanwhile, the daily trading volume of the asset has plunged by over 14.13% to \$82.37 billion. The asset has displayed the short-term 50-day MA above the long-term 200-day MA. Besides, the daily relative strength index (RSI) at 46.50 infers the current market sentiment is neutral to slightly bearish. While a drop below 40 may lead to increased selling pressure. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

The recent speculation around the approval of the BTC proposal by the Czech National Bank has been stirring excitement in the market. This is because it could lead to the adoption of cryptocurrencies in mainstream financial systems. As a result, the Bitcoin price and other altcoins like Cardano (ADA) are anticipated to see considerable surges. Alongside this, IntelMarkets (INTL), a viral AI-powered altcoin is aiming to lead this new era of crypto adoption with its innovative approach. Let's see how: BTC Widespread Adoption: Is a New Surge in Bitcoin Price Coming? The governor of the Czech National Bank has proposed to allocate 5% of the bank reserves to BTC. Although this proposal has not yet been approved, the board members are analyzing its potential. Analysts are speculating that this possible step toward BTC widespread adoption could mark a new era for not just Bitcoin price but also other cryptocurrencies like Cardano (ADA) and new entrants like INTL. From a technical standpoint, Bitcoin price has done exceptionally well in the last 30 days by reaching an all-time high of \$108k. However, the start of February has not been quite fortunate for Bitcoin price as it fell below its immediate support at around \$104k. Nevertheless, analysts are still speculating a bullish trend in Bitcoin price as the RSI of BTC is above neutral. It indicates an upcoming upward momentum for the Bitcoin price. Meanwhile, IntelMarkets is also experiencing increasing adoption from traders all over the world with its smart AI-driven solutions. Cardano Recovering its Momentum: What's Next for ADA? The ADA price has experienced significant fluctuations in the past week and dropped almost 5%. However, the recent optimistic macroeconomic conditions have positioned Cardano on a path to recovery. The possibility of BTC adoption by the Czech National Bank has boosted the positive sentiment around ADA as well. Along with this, the announcement of the U.S Fed to leave the interest rate unchanged for cryptocurrencies is another notable factor in the Cardano price improvement. The technical indicators suggest that if ADA maintains its key support level from \$0.8 to \$0.9 it could hit the \$1 mark. Similarly, a retest to \$1.2 resistance is also speculated if Cardano successfully targets \$1 in the upcoming cycle. However, the future of ADA is still dependent on the broader market sentiment around Cardano. Nevertheless, IntelMarkets (INTL) is coming up as a potential leader in the AI-altcoin space with its viral presale that has already crossed \$7.9 million in funding. IntelMarkets Could Lead the Next Wave of Crypto Adoption As the Czech National Bank approves BTC as a potential reserve, IntelMarkets is speculated to lead this upcoming wave of crypto adoption with its AI advancements. This platform stands out with its smart tech-driven features like AI-powered trade signals and

sentiment analysis tools. These tools leverage Intelli-M AI bots that are trained on 100,000 data points to analyze market trends in real-time. Along with this, these bots could provide ultimate precision as they are trained with self-learning capabilities and advanced AI algorithms. In addition, IntelMarkets (INTL) helps traders make well-informed decisions with its AI Trade Advisor. It can significantly optimize the trading strategies of investors by identifying risk factors and historical patterns. For security-conscious users, IntelMarkets has incorporated Route X21 which is a quantum-proof protocol that could provide protection against advanced cyber threats. With all these smart offerings, INTL has already gathered a lot of attention in its pre-launch phase, with more than 20 million tokens already sold. Experts believe IntelMarkets could emerge as the next big giant like BTC and could offer promising gains. Bottom Line The possible approval of BTC as a reserve of the Czech National Bank has stirred a storm in the crypto industry. It could lead to the widespread adoption of cryptocurrency in retail transactions. Therefore, the current outlook of Bitcoin price and Cardano (ADA) is showing a potential bullish trend. Similarly, this broader crypto adoption could also boost the surge around IntelMarkets (INTL). It could offer opportunities for higher gains in this new era of advancement. - Bitcoin (BTC) fell to \$91,242.89, now trading at \$94,504.96 after a 5.93% drop. - Market cap declined 5.92% to \$1.87T, while trading volume spiked 175.69%. Bitcoin (BTC) recently dipped to \$91,242.89 and is trading at \$94,297.01, marking a 5.93% decrease over the past 24 hours. The current market cap is \$1.87 trillion, reflecting a 5.92% decrease. However, trading volume surged by 175.69%, reaching \$96.08 billion, indicating heightened market activity despite the price drop. BTC remains under pressure due to recent market liquidations totaling \$1.8 billion. From a technical standpoint, Bitcoin shows mixed signals. The Relative Strength Index (RSI) sits at 21.53, signaling an oversold condition, while the RSI average is at 33.39. This suggests the potential for a bullish reversal if buying pressure increases. The Chaikin Money Flow (CMF) indicator is at -0.04, indicating a slight bearish sentiment but showing signs of recovery. Moreover, the moving averages highlight bearish momentum, but a crossover could shift the trend. Support levels at \$90,300, \$93,000, and \$94,300 are critical for Bitcoin's stability. If BTC maintains support above \$90,500, it could reclaim the \$96,150 mark. A break above this could lead to further gains, testing the \$102,000 to \$105,000 range. The Bollinger Bands indicate resistance near \$105,800, with a stronger barrier at \$108,000. Surpassing these levels could establish a new bullish trend. Can Bitcoin's Dip Spark a Strategic Buying Frenzy? Savvy investors may capitalize on this price dip to increase their BTC holdings. Some Bitcoin maximalists argue that ongoing trade tensions could drive sovereign entities toward Bitcoin as an inflation hedge. Furthermore, U.S. states and corporations may adopt blockchain solutions to navigate trade barriers. Bitcoin's future hinges on both technical and macroeconomic factors. The double-bottom pattern forming on the charts often precedes bullish breakouts. However, Bitcoin must hold key support levels to sustain recovery hopes. If the global trade environment sparks a BTC buying frenzy, Bitcoin could break out toward \$108,000, reinforcing its role as a politically neutral asset.

- Currently, the El Salvador government has 6,055 BTC worth over \$612 million. - The country made a \$1.4 billion deal with the IMF as part of the deal they have to make BTC payments optional. El Salvador making waves in the crypto market purchasing two additional Bitcoins in a single day. According to its Bitcoin strategic reserve initiative, the country buys one BTC per day but recently the country has increased its acquisition rate. Recently, the country revoked Bitcoin's legal tender status due to International Monetary Fund (IMF) Pressure. This news gathered immense criticism from the crypto community. Currently, the El Salvador government has 6,055 BTC worth over \$612 million and acquired over fifty Bitcoins last month. Bitcoin Is No More a Legal Currency in El Salvador El Salvador was the first nation to adopt Bitcoin as a legal tender and now also became the first to revoke its status as legal currency. This decision comes after two years of consistent pressure from the International Monetary Fund (IMF). The country made a \$1.4 billion deal with the IMF as part of the deal they have to make BTC payments optional, reduce their involvement in the crypto space, and make the Chivo wallet private. The nation purchased over eleven bitcoins at \$1 million just one day after finalizing the IMF deal. Stacy Herbert, the director of El Salvador's National Bitcoin Office, recently stated that El Salvador will increase its BTC acquiring speed. She said: "As I said above, El Salvador is still stacking Bitcoin into its Strategic Bitcoin Reserve. And this is just the beginning. We have a lot in store for 2025." The National Bitcoin Office purchased 12 BTC on January 19. The act was praised by Bitcoin supporters and also grabbed the attention of crypto experts and firms. By all this El Salvador signifies that they will continuously dominate the Bitcoin adoption race and contribute to the innovative journey of the crypto space. Highlighted Crypto News Today:

- After reaching \$102,412 in January, Bitcoin has fallen under \$100,000. Some experts think it could briefly hit \$95,000 before going back up. - A U.S. job report on February 7 might impact Bitcoin's price. If the economy looks weak, the Federal Reserve might cut interest rates. - Even with the recent drop, experts believe Bitcoin could reach \$160,000 to \$180,000 by the end of 2025, especially with more interest in Bitcoin ETFs. Bitcoin Falls Below \$100,000, but It Might Be a Short-Term Drop For the first time since 27 January, bitcoin fell under \$100,000. Although closing January with a record value of \$102,412 is great, others feel it would briefly go back to \$95,000 as an analyst has suggested. Bitget Research's chief analyst pointed out that, at this rate, \$95,000 stands as a fundamental support level for Bitcoin. According to him, Bitcoin will move during the coming weeks based on any key issues in the labor market trend, concerns or views regarding the Federal Reserve policies, and

overall market sentiment. During this period, the U.S. Bureau of Labor Statistics will release its job market report on February 7, which can have a great impact on the direction of Bitcoin. Should data indicate economic weakness, it should increase the prospect of a federal interest rate cut by the Federal Reserve, benefiting Bitcoin. Experts Believe Bitcoin Could Hit New Highs in 2025 While some analysts speculate that this could be a "bear trap"-a short term drop before it climbs higher-in a bear trap, controlled selling causes a decline, which actually tricks traders that a larger price drop is eminent. But experts forecast that Bitcoin can go as high as between \$160,000 to \$180,000 toward the end of 2025. One of the main bright spots is growing interest in spot bitcoin ETFs. At this point in time, these funds have expanded to over \$125 billion in total assets, just a year after launching in the U.S. This increasing institutional interest has been considered very promising about the appreciation that Bitcoin is going to make. While Bitcoin is experiencing short-term price sways, most say this correction is normal and might help the market stabilize for further growth. Some investors believe it is the best time to buy, while others think that more losses might be expected since uncertainty has led to increased volatility in the crypto market, making investors cautious. Many experts however believe that Bitcoin will recover soon. Nonetheless, still, the whole cryptocurrency market highly risks it for investors who shall always prepare losses before taking their decisions.

- Cynthia Lummis advocates Plan To Pass Bitcoin Reserve Bill. - Senator highlights that Bitcoin is a store value, not a speculative investment. Senator Cynthia Lummis advocates Bitcoin again and reiterates her support for creating a law that would make BTC a strategic reserve for the U.S. government. She believes this would strengthen America and help fix the financial issues that their generation is creating. Moreover, the bill proposes that the U.S. government acquire 1 million Bitcoins in the next five years and keep them for at least 20 years. Lummis highlights that the government will use preexisting money within the Federal Reserve and the Treasury to buy these Bitcoins rather than raise taxes. Bitcoin as Store Value According to Senator Lummis's latest interview, she is gathering senate support to establish a Bitcoin strategic reserve in America. This new legislation requires sixty votes for approval. Senator Lummis stated that the ongoing process is good but needs some more efforts to advance it. She also highlighted that the Congress members are expressing their interest in these policies as they are worried about the future stability of the U.S. dollar. The supporters of this reserve see Bitcoin as the tool that helps the U.S. to fight against inflation. Senator also highlights how Bitcoin reserve is a way to make things better for younger generations. Lummis said: "The Strategic Bitcoin Reserve is the only tool I see that can help people in my generation right the wrongs that we did to younger generations and generations to follow with respect to our debt and fiscal mismanagement." Lummis said Bitcoin is not just a speculative asset it is a store value that will provide long-term financial security for the United States of America. Now other countries' governments and crypto leaders are also attracted to Bitcoin Reserve. Recently Changpeng Zhao former CEO of Binance also urged the European Union to adopt Bitcoin as their reserve. Highlighted Crypto News Today:

- Bitcoin (BTC) fell to \$99,082.51 before recovering to \$100,193.79. - BTC mining revenue dropped to \$1.4 billion in January. Bitcoin (BTC) fell below \$100,000, reaching a low of \$99,082.51. The cryptocurrency currently trades at \$100,193.79, down 2.28% in 24 hours. Its market cap stands at \$1.98 trillion, with a 24-hour trading volume of \$34.22 billion, marking a 22.95% decline. The fully diluted valuation (FDV) is \$2.1 trillion, while the volume-to-market cap ratio is 1.71%. U.S. President Donald Trump signed an executive order imposing a 25% tariff on Canadian goods, excluding energy products, which will face a 10% tariff. These duties take effect on Tuesday. Tariffs on Mexico and China will also be implemented. Bitcoin dropped to \$100,279 following the announcement, reflecting market uncertainty. Bitcoin's mining revenue fell to \$1.4 billion in January, down \$40 million from December. Julio Moreno, head of research at CryptoQuant, reported that Bitcoin transactions hit their lowest level since March 2024. Mempool usage is low, with transaction fees dropping to 1 sat/vb. Over the weekend, unprocessed transactions decreased sharply, leaving multiple blocks partially empty. Bearish Momentum Strengthens Bitcoin faces immediate resistance at \$103,622 and strong support at \$99,000. If BTC breaks above resistance, it could rally toward \$106,000. A drop below support may push it down to \$97,500. The Relative Strength Index (RSI) stands at 43.96, near oversold territory. A further drop could trigger additional selling pressure, but if RSI rebounds above 50, a bullish reversal may begin. The Moving Average (MA) crossover signals bearish momentum. The 9-day MA is at \$101,382.30, below the 21-day MA of \$103,279.02. A bullish crossover, where the short-term MA crosses above the long-term MA, would indicate a trend reversal. The Chaikin Money Flow (CMF) suggests capital outflows from Bitcoin. The indicator remains in negative territory, reflecting weak buying pressure. If inflows increase, Bitcoin could reclaim \$105,000. The MACD histogram is in negative territory, with the MACD line below the signal line. This confirms the bearish trend. A crossover above zero could indicate renewed bullish sentiment. Highlighted Crypto News Today Kraken delists USDT and other stablecoins Under EU MiCA

- Industry experts believe Bitcoin may soon hit its new all-time high. - US crypto development could push Bitcoin price to \$130,000. Bitcoin has been facing weakness in recent days getting rejected from the \$105k mark. Despite that, analysts believe it may reach a new all-time high in the first quarter of 2025. According to Standard Chartered analyst Geoff Kendrick, the king crypto may leapfrog the \$109k price point soon, and before March end its price could reach the \$130k mark. Donald Trump Pro-Crypto Policies Benefit Bitcoin Price Experts believe Donald Trump's pro-crypto policies could push Bitcoin prices to new highs. There has been optimism around Bitcoin investors. Not only this, according to recent reports Czech National Bank could convert 5% of its reserves into Bitcoin. Moreover, the Swiss National Bank is also planning to embrace BTC as Swiss campaigners gather signatures to force a vote to hold Bitcoins. Big investors believe that the US's creation of a Strategic Bitcoin reserve might trigger other countries to do the same, which will impact the Bitcoin

price positively. According to CoinMarketCap data Bitcoin price is trading at \$102.3K with an intraday drawdown of 2.26% and has a market cap of \$44.02 billion. It hit its all-time high price of \$109,114.35 on January 20, 2025. As per the technical analysis, Bitcoin price is consolidating between a price range of \$100K to \$109K. However, its price is still trading above the key moving averages of 50 days and 200 days, showcasing that bullish momentum still exists. Currently, the RSI indicator is showing neutrality. The RSI curve is at 52.62 and the 14 day SMA curve is at 57.14, indicating neutral perspective. If Bitcoin surpasses the 109K level then it can reach new highs in the upcoming months.

The crypto market has witnessed its share of highs and lows, with Bitcoin (BTC) creating millionaires during its early days and Ethereum price the talk of town, spearheading the DeFi revolution. Yet, as the Bitcoin (BTC) and Ethereum prices grapple with market fluctuations, investors are turning their focus to a promising new player: WallitIQ (WLTQ). With analysts predicting a 14,650% surge, the token, with its presale, presents an unprecedented opportunity for investors seeking to capitalize on the next big thing in crypto. Is it time to get in? WallitIQ's (WLTQ) Uniqueness: Why It Stands Out In A Crowded Market Unlike Bitcoin (BTC) and Ethereum prices, which had high entry prices that limit accessibility, WallitIQ (WLTQ) offers a low-cost entry at just \$0.0420 in its presale. This makes it a magnet for seasoned and novice investors interested in the Ethereum price. The token is projected to surge 14,650%, rivaling the life-changing gains achieved by early Bitcoin (BTC) investors. What is the driving force behind WallitIQ's (WLTQ) success? The answer lies in its innovative technology and robust ecosystem, epitomized by the MVP of its Crypto Wallet Management Mobile App. The app offers a user-friendly interface for managing multiple wallets, with real-time crypto pricing and transaction capabilities. It integrates with the CoinGecko API and provides Interactive candlestick charts and simulated transactions. This gives users access to a financially risk-free test zone where they can pre-test how they trade without interacting with an actual blockchain. All of these features make WallitIQ (WLTQ) a standout from other tokens. Additionally, its SolidProof-audited smart contract adds more trust and transparency for investors. In the future, services like AI-powered trading and customizable price alerts will be available to keep users informed about sudden price movements, help them capitalize on opportunities or avoid losses, provide updates on wallet activity, such as incoming and outgoing transactions, and maintain transparency and security. These features highlight why crypto analysts champion WallitIQ (WLTQ) as the next big thing in the market. Its focus on practical utility and innovation sets it apart from other tokens, making it an ideal choice for investors seeking exponential returns. Is this the time to get in? A resounding yes is the answer! Bitcoin (BTC): The Crown Jewel Of Crypto Faces Challenges. Bitcoin (BTC), the pioneer cryptocurrency, has seen astronomical growth since its inception. A bull run took it from a few cents to an all-time high of \$69,000 in November 2021. However, recent market turbulence caused by events like the Department of Justice's asset sales has created uncertainty, pushing Bitcoin's (BTC) price below \$100,000. Many wondered whether to sell or retain their assets due to the decline. Although Bitcoin (BTC) is slowly recovering, its massive market cap limits its growth potential compared to newer projects like WallitIQ (WLTQ). While Bitcoin (BTC) strives to soar higher and regain its title as the crown jewel of cryptocurrency, WallitIQ (WLTQ) is turning heads and winning hearts with a low entry price of \$0.0420 during its presale and projections of a 14,650% surge. Ethereum Price Stalls: Is It Over Yet? Similarly, Ethereum (ETH), once hailed as the backbone of decentralized finance, revolutionized the crypto space with its smart contract capabilities, solidifying its place as the second-largest cryptocurrency. However, in recent times, the Ethereum price has grappled with stability. Currently trading at \$3,197, the Ethereum price has dipped well below its all-time high of \$4,878 in 2021. While the Ethereum 2.0 upgrades aim to revitalize its ecosystem, analysts argue that WallitIQ's (WLTQ) innovative approach and lower market entry price offer a more lucrative opportunity for investors seeking exponential returns. WallitIQ (WLTQ) Token Presale: A Once-In-A-Lifetime Opportunity The WallitIQ (WLTQ) presale is a game-changer, combining accessibility with unmatched growth potential. While Bitcoin (BTC) and Ethereum price face challenges, WallitIQ (WLTQ) is emerging as the ultimate investment opportunity. Priced at just \$0.0420, its presale offers unparalleled growth potential, with projections of a 14,650% surge, making now the perfect time to invest. Don't miss your chance to be part of the future of crypto. Join the WallitIQ (WLTQ) presale today and secure your stake in a project that promises to rewrite the rules of wealth creation. Act now before this once-in-a-lifetime opportunity passes you by. Join the WallitIQ (WLTQ) presale and community: Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency market continues to evolve, savvy investors are always on the lookout for the next big opportunity. With the potential to deliver exponential returns, altcoins are gaining traction among traders seeking innovation and utility. Among the most promising are Lightchain AI, Bitcoin Cash (BCH), and Tron (TRX)—each offering unique advancements that could shape the future of blockchain technology. With Lightchain AI raising \$14.2 million in its presale at \$0.005625 per token, this groundbreaking project is standing out in the race for 1000X returns. Here's a closer look at these top-performing altcoins and what makes them contenders for massive growth. Bitcoin Cash, Innovating Payment Solutions Bitcoin Cash (BCH) came in 2017 from a hard split of Bitcoin, made to make deals faster and cut costs while keeping the first goal of person-to-person digital money. By making the block size 32MB, Bitcoin Cash lets quicker transactions and cheaper costs which make it good for daily buys like getting stuff and services. By 2024, Bitcoin Cash has grown its grasp, getting accepted by big sellers and payment sites like PayPal and Venmo. This smooth mix lets users to buy sell and pass BCH easy, boosting its part in the decentralized finance (DeFi) system. With its aim on growth and real-life use, Bitcoin Cash keeps making new ways to pay, placing it as a top choice in the money type payment field. Tron, Redefining Blockchain Trends in Entertainment TRON, established in 2017 by Justin

Sun, is a blockchain-based decentralized platform aiming to revolutionize the entertainment industry. It facilitates direct interactions between content creators and consumers, eliminating intermediaries and reducing fees. In January 2025, TRON introduced JustinMoonAI, an AI-powered platform designed to enhance digital interaction and content creation through open-source AI protocols and the MOON token ecosystem. This innovation showcases TRON's commitment to integrating cutting-edge technologies into its blockchain. Additionally, TRON's acquisition of BitTorrent in 2018 strengthened its decentralized content distribution capabilities, further cementing its role in entertainment and digital media. With ongoing advancements, TRON continues to reshape blockchain trends, bringing decentralization, AI, and digital content closer together. Lightchain AI, Power of Artificial Intelligence and Blockchain Combined Lightchain AI is revolutionizing blockchain technology by integrating artificial intelligence with decentralized systems, paving the way for more efficient, scalable, and privacy-focused solutions. At the heart of Lightchain AI is the Artificial Intelligence Virtual Machine (AIVM), which allows on-chain AI computations such as predictive modeling and real-time analytics. Unlike traditional blockchains, Lightchain AI is built for real-world applications, enabling businesses and developers to leverage AI-driven automation in various industries. Beyond its technological innovations, Lightchain AI operates under a decentralized governance model, ensuring that its ecosystem evolves based on user needs and community consensus. With \$14.2 million raised during its presale, strong investor confidence continues to fuel Lightchain AI's rapid expansion. Its unique combination of AI and blockchain positions it as a leader in driving mass adoption and creating a sustainable, future-proof digital ecosystem. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Robert Kiyosaki predicts Bitcoin crash to follow Trump tariffs. - Trump tariffs from Mexico, Canada, and China, will begin today. As Donald Trump's presidency began on Jan 20 in the United States, it is going to bring some significant changes into international trade and finance. Trump has been threatening to implement the new tariffs on neighbour countries for the past few weeks. They are finally going to be implemented from today, Feb 01. TRUMP TARRIFS BEGIN: Gold, silver, Bitcoin may crash. GOOD. Will buy more after prices crash. Real problem is DEBT, which will only get worse. CRASHES mean assets are on sale. Time to get richer. " Robert Kiyosaki (@theRealKiyosaki) January 31, 2025 Renowned personality Robert Kiyosaki made a statement today on the new Tariff system. He warns of a major crash in Gold, Silver, and Bitcoin markets. However, Kiyosaki looks at market crashes as opportunities to buy assets at lower prices. He even revealed his plans to buy more after the prices crashed. The real problem highlighted by the Rich Dad Poor Dad author is "Debt". He stated that Debt issues will get worse as the new tariff system becomes effective. Kiyosaki is popular for his bold statements when it comes to financial markets and investment advice. Trump to Impose Heavy Tariffs on Goods from Mexico, Canada, and China The new tariff system includes hefty taxes on imported goods from neighboring countries. In his recent statement, Donald Trump said he would impose new tariffs of around 25% from Mexico and Canada. Furthermore, China will face 10% tariffs from today. Trump's statement includes, "tariffs are coming and nothing can forestall them." Meanwhile, the new tariff system received attention in the mainstream media, with industry officials forecasting significant issues in international finance. Trump also indicated wider tariffs on oil and natural gas from the next few weeks, which could send oil prices higher. Public Policy Chief at the Canadian Chamber of Commerce, Matthew Holmes stated, "President Trump's tariffs will tax America first. From higher costs at the pumps, grocery stores and online checkout, tariffs cascade through the economy and end up hurting consumers and businesses on both sides of the border." However, Trump is popular for his own ways of imposing rules and regulations. He is never seen following conventional ideas, having the determination to make "America great again." - The crypto market is preparing for a big options expiry event of \$10 billion. - Derivative market traders turned bearish as Bitcoin dropped below the \$100k mark this week. Bitcoin's (BTC) market is preparing for a massive options expiry, a significant event will occur on Friday, which means today. This week's option expiry event is big because of the month's end. Approximately 80,000 BTC option contracts will expire, valued at \$8.36 billion, making it a big deal. However, there is no reason to worry as the crypto derivative market doesn't impact the spot market that much. This week there are more call options compared to put options, which implies there are many traders who are bullish on BTC. Bitcoin options contracts contain a put-to-call ratio of 0.68. As per the Derbit report, after the Bitcoin price dropped below the \$100k mark this week, the short-term traders turned bearish and bought more put options. While the long-term traders looked optimistic buying call options. Besides Bitcoin, 600,000 Ethereum contracts were also expiring today, which have a put/call ratio of 0.43, valued at \$1.95 billion. When combining Bitcoin and Ethereum option expiry values, it amounts to \$10.3 billion. Broader Crypto Market Overview As per the CoinMarketCap data, the broader crypto market is looking neutral, with the overall market cap up by 0.07% stands at \$3.56T. However, Bitcoin is reflecting a mildly bearish sign as it is down by almost 1.01% in the last 24 hours. At the time of writing, it is trading at the value of \$104,236.96, with a market cap of \$37.53 billion. Furthermore, its 24-hour trading volume also declined by 29.14%. Moreover, the meme sector is also in the red zone. Its total market cap is down by 1.07% and stands at \$92.02 billion. However, the AI sector took a sharp rebound with a 2.35% spike in its market cap, which currently stands at \$45.07 billion. Highlighted Crypto News Today: SEC Greenlights Bitwise Bitcoin-Ethereum ETF, Expands US Crypto Investment Options

- SEC approves Bitwise Bitcoin-Ethereum ETF, exposure to both assets in one regulated product. - Bitwise joins Hashdex and Franklin Templeton and becomes the third firm approved for a joint BTC-ETH ETF. The Securities and Exchange Commission has approved the Bitwise Bitcoin and Ethereum ETF (Exchange Traded Fund) which allows investors to gain exposure to both assets in a single-regulated product. The approval of the fund's 19b-4 filing for the Assets Management Firm is a first step before it launches, then SEC clearance for its pending registration application (FORM S-1). Bitwise ETF Gains Key SEC Approval Amid Expanding Crypto Offerings Bitwise's ETF, named the Bitwise Bitcoin and Ethereum ETF, will track the spot prices of Bitcoin and Ethereum, with their relative market capitalization. The filing emphasizes that the funds are composed of 83% Bitcoin and 17% Ethereum. The fund will be managed by Bitwise Investment Advisers, Coinbase handles custody, while Bank of New York Mellon serves as the cash custodian, administrator, and transfer agent. The SEC's decision comes during a regulatory shift under the Trump administration, which has led to an uptick in crypto-related ETF applications. Bitwise already filed for its joint Bitcoin-Ethereum ETF in November 2024, shortly after Trump's election victory. Bloomberg Intelligence analyst Nathan Dean commented on the growing wave of ETF filings; he said, "Issuers are probing the SEC's boundaries with unique filings, including memecoin ETFs." This ETF approval makes Bitwise the third asset manager allowed for a joint Bitcoin and Ethereum ETF, following similar approvals for Hashdex and Franklin Templeton on Dec. 19. Unlike some ETFs that track multiple crypto assets, Bitwise's fund focuses solely on Bitcoin and Ethereum, the two largest cryptocurrencies by market cap. ETF Issuers Test SEC Limits as Crypto Regulation Evolves The global crypto industry is pushing new investment products into the market. Bloomberg ETF analyst James Seyffart recently noted that issuers are "testing the limits of what this SEC is going to allow" following Tuttle Capital's filing for ten leveraged crypto ETFs. Several asset management firms have also recently submitted applications for ETFs tracking alternative cryptocurrencies like Dogecoin (DOGE) and Solana (SOL). Eric, an analyst, also noted that the role of the new SEC will be of great importance in the crypto industry. Moreover, Coinbase already introduced futures products for Solana (SOL) and Hedera (HBAR), adding further developments to crypto investment offerings in regulated markets. Bitwise expressed optimism about the future of crypto in a post on X. "The current bull market could run into 2026 and beyond, with Washington embracing digital assets like never before." - Tether is launching the USDT stablecoin on the Bitcoin and Lightning Networks. - Taproot Assets supports the integration. The world's biggest stablecoin issuer, Tether, has announced that the USDT asset is now connected to Bitcoin both at its fundamental level and through the Lightning Network. The Taproot Assets protocol engages in this by leveraging Bitcoin's Taproot improvement to be able to improve security and increase functionality. Moreover, the integration goal is the merging of Bitcoin decentralization and security issues with the speed and scalability of Lightning Network. Paolo Ardoino, CEO of Tether, stated: "By enabling USDT on the Lightning Network, we are not only reinforcing Bitcoin's foundational principles of decentralization and security but also creating practical solutions for remittances, payments, and other financial applications that demand both speed and reliability." Furthermore, this merging creates a scalable and seamless payment solution. It opens up a new scenario of microtransactions, remittances, and efficient cross-border settlements. Elizabeth Stark, CEO of Lightning Labs, stated: "Today marks a new era for stablecoins. Bringing USDT to Bitcoin combines the security and decentralization of Bitcoin with the speed and scalability of Lightning. Millions of people will now be able to use the most open, secure blockchain to send dollars globally. It all comes back to Bitcoin." With over 350 million Tether users worldwide, the move to integrate USDT into Bitcoin's ecosystem positions it as an essential component of Bitcoin-based financial systems. In addition, using stablecoins, the integration also brings Bitcoin to many individuals in developing markets who need to do so to curb the devaluation of their local currencies and savings. Also, it creates financial inclusion by making possible high-speed, low-cost transactions and by giving people a trustworthy and effective way to do business with the Bitcoin network. Highlighted Crypto News What's Next for Cryptocurrency Under President Trump's Administration?

- Illinois has proposed a plan to hold Bitcoin in a state fund for at least five years before selling or using it. The bill is still being reviewed. - Arizona, Texas, and a few other states are also planning Bitcoin reserves. Experts think more states might follow. - More countries and big companies like BlackRock are investing in Bitcoin, but groups like the IMF and World Bank warn about its unstable price. A bitcoin reserve bill is now introduced to the state's legislative body of Illinois, hence one of the newest U.S. states venturing into a financial strategy regarding Bitcoin. Sponsored by State Representative John Cabello, the House Bill 1844 or HB1844 recommends the setting up of a Bitcoin reserve in the form of a special fund within the state treasury. Illinois Proposes a Bitcoin Reserve A crucial condition of the bill is that any Bitcoin introduced into the fund should be kept in the account for at least five years before it can be sold, converted, or transferred to another. This approach tries to introduce Bitcoin into state finance with long term stability in the holdings. The bill has been referred to the Rules Committee for further discussion and approval. More U.S. States and Countries Show Interest in Bitcoin Reserves Illinois is not the only state considering Bitcoin reserves. Just a day before this proposal, Arizona made progress with its own Bitcoin reserve legislation, allowing public funds and pensions to invest in Bitcoin. Texas has also included the creation of a Bitcoin reserve in its 2025 legislative priorities. At least five other states, including Utah, are looking into similar measures. Supporters believe this move could encourage more states to recognize Bitcoin as a financial asset. While a step-by-step approach will allow risk management before wider adoption. Mouloukou Sanoh, CEO of MANSA, sees this as a strong step toward bringing cryptocurrency into traditional finance, though nationwide approval may take time due to regulatory uncertainties. Beyond the U.S., central banks in other countries are also considering Bitcoin. The Czech National Bank is exploring a plan to allocate up to 5% of its reserves to Bitcoin, following the example of El Salvador. Governor AleÅi Michl stated that Bitcoin could help diversify

the bank's assets. U.S. Senator Cynthia Lummis has again talked about Bitcoin reserves, saying it could help protect against inflation. The Federal Reserve has also said that banks can use crypto, but they need to handle the risks properly. At the same time, Bitcoin ETFs are becoming more popular. And big companies like BlackRock are investing in them, making Bitcoin more accepted. However, groups like the IMF and World Bank still warn that Bitcoin's price can be unstable and risky. Hold on to your hats, crypto enthusiasts, because the market is about to go wild! BlockDAG is making a HUGE move with its upcoming launch on 10 major exchanges. Meanwhile, Hyperliquid is soaring to new heights and swiftly making its way into the top cryptos of the market, and Bitcoin Cash is facing a critical test. This article dives into the latest crypto frenzy, revealing why BlockDAG is the hottest ticket in town and what the future holds for these exciting projects. Bitcoin Cash: A Critical Juncture Bitcoin Cash (BCH) is at a crossroads, facing a critical test after a recent 10% decline. The price is currently hovering around \$388, a key support level that has historically been a make-or-break point for BCH. Technical indicators are flashing warning signs, with the RSI showing a bearish divergence. If BCH fails to hold this support level, it could be facing a deeper retracement, potentially targeting \$322 or even \$215. However, there's still hope for BCH. A decisive break above \$472 could invalidate the bearish outlook and signal a potential recovery. The Elliott Wave analysis also suggests the possibility of an upward movement if BCH completes its ABC correction at \$300. Hyperliquid's Rise to Fame: The HYPE is Real Hyperliquid's HYPE coin is the new kid on the block, but it's already making a big splash. Launched just a few months ago, HYPE has quickly climbed into the top 30 cryptocurrencies by market capitalization. Despite a recent dip, HYPE is currently trading around \$25.95, and analysts are predicting big things for its future. With its innovative perpetual futures trading platform and robust proof-of-stake blockchain infrastructure, Hyperliquid is attracting a lot of attention. Technical indicators are also looking bullish for HYPE, with a recent breakout from a descending channel and a strong RSI suggesting further upward momentum. As Hyperliquid continues to gain traction and expand its ecosystem, HYPE coin is one to watch closely. BlockDAG: Exchange Listing Frenzy That's Got Everyone Talking While Bitcoin Cash and Hyperliquid are navigating the twists and turns of the crypto market, BlockDAG is steadily building momentum with its upcoming exchange listings and impressive presale performance. BlockDAG is making waves with its upcoming launch on 10 major exchanges, a move that's set to catapult this blockchain project into the spotlight. With its presale already exceeding \$187 million, BlockDAG is on track to smash its ambitious \$600 million target. BlockDAG is building a blockchain that's ready for the future. With its unique DAG architecture, BlockDAG offers lightning-fast transactions, lower fees, and a more scalable and efficient network than traditional blockchains. With its upcoming exchange listings, BlockDAG is poised to become a household name in the crypto world. This increased accessibility will not only attract new users but also boost trading volume and liquidity, creating a thriving ecosystem for BDAG coins. Currently in its 27th presale batch, BDAG has already delivered a remarkable 2,380% return for early backers. And with a price of just \$0.0248, it's still an absolute steal. But don't wait too long; once those exchange listings go live, BDAG could be on its way to the moon! A Quick Recap The crypto world is full of opportunities, Hyperliquid is growing in popularity while Bitcoin Cash is testing some key resistance levels. However, BlockDAG is the one that's got everyone talking. With its upcoming exchange listings, record-breaking presale, and innovative technology, BlockDAG is the hottest ticket in town. Don't wait until it's too late. The BlockDAG train is leaving the station, and you don't want to be left behind. Get in early, secure your BDAG coins, and get ready to ride the wave to crypto riches! - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - A feud between the XRP and Bitcoin communities has escalated over the proposed U.S. strategic crypto reserve. - Forbes legal analyst Hailey Lennon advocates for a Bitcoin-only reserve, sparking backlash from XRP supporters. - The debate has led to heated exchanges, with both sides challenging decentralization claims and motives. The divide between the XRP and Bitcoin communities continues to widen as both sides clash over what assets should be included in the proposed U.S. strategic crypto reserve. The dispute, fueled by ongoing discussions within the crypto industry, has led to a war of words between Bitcoin maximalists and XRP supporters. Hailey Lennon, a Forbes Crypto legal analyst, has been a key figure in the debate, strongly advocating for a Bitcoin-only reserve. Her stance has triggered backlash from the XRP Army, with Ripple executives arguing for a more diverse and inclusive approach. Bitcoin-Only Reserve vs. XRP Inclusion: The Debate Lennon has argued that a strategic reserve should exclude cryptocurrencies backed or promoted by a centralized entity that profits from them. While she didn't explicitly mention Ripple, many supporters assumed she was taking aim at their ecosystem. "The fact that I haven't mentioned XRP and you all keep assuming it's about XRP is actually telling," Lennon remarked in response to criticism. She later directly stated her skepticism about XRP's inclusion, arguing that a national reserve should not be built on the premise of "I want my coin in there so the price goes up." This further fueled outrage from the XRP community, with many accusing her of bias and dismissing the legitimacy of Ripple's contributions to the financial system. Lennon's comments reignited tensions between the two communities, with Bitcoiners defending BTC's decentralization and the Ripple coin supporters highlighting Ripple's institutional partnerships and real-world utility. Some XRP proponents criticized Bitcoiners for following an anonymous founder (Satoshi Nakamoto) and claimed Bitcoin's mining was influenced by China. Lennon mocked this, sarcastically noting that Ripple coin holders prefer trusting a "well-known company" and CEO who controls about 50% of the supply. Additionally, Lennon referenced past

claims that Ripple had lobbied against Bitcoin, though Ripple has since clarified that it has advocated for Bitcoin, not against it.

Majuro, Marshall Islands, January 30th, 2025, Chainwire Funding accelerates the development of Elastos's ELA token, Native Bitcoin DeFi protocol, and Web3 data economy – positioning Elastos as the utility layer for Bitcoin. Elastos, a decentralized web infrastructure pioneer, today announced a \$20 million strategic investment from Rollman Management to scale its Bitcoin-aligned ecosystem. Rollman Management, recognized for its high-profile investments in blockchain projects like Ripple, Ethereum, Solana, and Planck, now ranks Elastos among its top five holdings. The partnership will fuel the launch of Elastos's Native Bitcoin DeFi protocol, BeL2, expand its merge-mined ELA token as a Bitcoin reserve asset, and accelerate Elacity's Web3 data marketplace that enables creators to monetize content without intermediaries on top. With Bitcoin's market cap surpassing \$2 trillion, Elastos solves critical gaps in Bitcoin's ecosystem: - ELA as Bitcoin's Merge-Mined Reserve Asset: ELA tokens have been secured by Bitcoin's hash power through merge-mining since 2018, aligning with Satoshi Nakamoto's 2010 vision for decentralized networks. With a total of 28,220,000 by 2105 and around 50% of Bitcoin's hashrate, ELA gains security and decentralization, provides additional revenue for BTC miners at no extra cost, and creates a crypto economically sound reserve asset for Elastos's Bitcoin-native DeFi system. - BeL2: Bitcoin's DeFi Breakthrough: Launching in Q2 2024, BeL2 allows Bitcoin holders to collateralize BTC in personal wallets and access Ethereum smart contract services. These include minting stablecoins, performing swaps, and borrowing assets peer-to-peer, unlocking its value all whilst eliminating reliance on synthetic BTC (e.g., WBTC) and centralized custodians. BeL2 combines locking scripts, zero-knowledge proofs, oracles, and an arbiter network where ELA stakeholders can stake ELA and earn BTC fees as decentralized nodes to support the protocol. - Elacity: Web3's Creator Revolution: Already proven in early tests, where one creator earned \$5,600 in 24 hours through tokenized podcast access, Elacity v2 will launch in April with channels and subscription models. It enables influencers to encrypt, tokenize, and sell content/royalties on Elastos for audio and video markets, with plans to extend its technology to support the tokenization of AI markets. – Leveraging Bitcoin's trillion-dollar consensus to empower Web3 users with scalable utilities – that's where Elastos comes in, said Rong Chen, Elastos Founder. – Merge-mining ties ELA's security to Bitcoin's, and BeL2, Elastos's decentralized finance protocol, unlocks BTC-backed DeFi without compromises, whilst Elacity creates a decentralized digital goods economy on top. Rollman's investment supports our role as Bitcoin's utility layer. The \$20M investment from Rollman will drive the advancement of Elastos technologies and also help Elastos reorient its branding, mature its technological stance, and go to market. This includes enhancing marketing efforts, which will further position Elastos as a leader in the growing Bitcoin-native DeFi space. Elastos as a Pioneer in Bitcoin-secured Governance Beyond its technological advancements, Elastos stands out for its Cyber Republic Consensus (CRC) governance model, formalized as a DAO LLC in the Marshall Islands, which signed this agreement with Rollman. This delegate-based system allows community members to stake Bitcoin merge-mined ELA, earn APY, and annually elect one or run as one of 12 council members who vote on proposals, drive innovation, sign contracts, and validate Elastos's Smart (EVM) and Identity (DID) sidechains. This ensures governance decisions reflect the community's interests and demonstrates Elastos's commitment to a truly decentralized and transparent ecosystem rooted in Bitcoin. As Elastos enters its next phase of growth, participants can join the ecosystems CRC DAO by acquiring merge-mined ELA, which has a market cap of \$48,542,586 and is secured by nearly 50% of Bitcoin's hashrate (366.01 EH/s, equivalent to 244.008 Frontier Supercomputers). ELA offers 6+ years of proven security, a fixed cap of 28.22M tokens to be fully mined by 2105, and 3.29% emissions via its Essentials Wallet, ensuring scarcity and predictability for holders. Available on Centralized Exchanges (Coinbase, KuCoin, Gate.io, Huobi, Bitget, Crypto.com) and Decentralized Exchanges (Uniswap, Chainge Finance, Glide Finance), ELA empowers holders to shape Elastos's future through CRC governance – driving innovation, reinforcing Bitcoin-level security, and building the next generation of decentralized applications. Additional Information - ELA Merge Mining - BeL2 - Elacity - Cyber Republic Consensus (CRC) - Users can contact info@elastos.org for partnership inquiries or media requests. About Elastos Elastos is a SmartWeb ecosystem builder focused on enabling decentralized application creation and cross-chain connectivity. Built on top of Bitcoin merge-mining, Elastos relies on the security of the world's largest public blockchain and extends it with additional layers. The introduction of BeL2 and its Arbiter Network marks Elastos's latest effort to advance a more open, clear, and trustless global financial system. Website: [Elastos.info](https://elastos.info) X/Twitter: @ElastosInfo About Rollman Management Digital Rollman Management Digital is a private investment and management consulting boutique that is incorporated in the British Virgin Islands. The firm seeks to invest in talented teams and their blockchain protocols to further develop their technology and business while adding significant value to the future of the modern economy. RMD is led by Victor R. Ch. Rollman, the founder of Rollman Capital, Rollman Mining, and Rollman Management. The Group offers a wide range of investment opportunities, financial services, and management consultancy to UHNWIs, entrepreneurs, developing governments, commodity trading firms, banks, family offices, and pension funds. - El Salvador makes Bitcoin acceptance voluntary in order to comply with an IMF loan agreement. - The government intends to continue acquiring Bitcoin despite policy changes. El Salvador's Congress approved a legislative bill on Wednesday amending the country's Bitcoin law in response to a \$1.4 billion loan agreement by the International Monetary Fund, which conditioned approval on conditions that included keeping acceptance of the cryptocurrency voluntary instead of mandatory for businesses. The measure was sent by President Nayib Bukele just minutes before the vote. It has been nearly three years since El Salvador became the first country globally to adopt Bitcoin as a lawful tender beside the U.S. dollar. Although the move made Bukele the frontier of Bitcoin promotion, it raised loud criticisms from global financial institutions, including the IMF, which called on the nation to

minimize its usage of the cryptocurrency. El Salvador Revises Bitcoin Law to Comply with IMF Agreement

As a result of the new reform, businesses would no longer be obligated to accept Bitcoin, which the IMF said was an indispensable step for getting the loan deal. According to Elisa Rosales, a legislator from Bukele's New Ideas party, the amendment was a necessary step toward making sure that Bitcoin would be permanent as legal tender but practical to implement. The measure passed easily after it was voted on by 55 lawmakers in support and only two who opposed it. Though the Bukele government has reduced the fraction of required Bitcoin use in transactions. However, it is still continuing to accumulate more Bitcoins. The government recently reaffirmed plans to buy more Bitcoins. This decision was arrived with a consensus that even more value will be attributed to Bitcoins in the long run. The official tracker of Bitcoin Office reports that El Salvador owns 6,049 BTC, worth around \$633 million. With an average price per Bitcoin at \$46,000, the portfolio for the country has appreciated by 127%. Amid the market buzz, Bitcoin hit an all-time high of \$109,114 on January 20 before dropping to \$98K on January 27, 2025. It then surged and stabilized. According to CMC, at the time of writing, BTC is trading at \$105,190, up 2.54% in the last 24 hours. The amendment follows a surge in Bitcoin's price, fueled partly by U.S. President Donald Trump's recent election victory and the expectation of more favorable crypto policies under his administration. With these policy changes, El Salvador remains a central player in Bitcoin's mainstream adoption while balancing global financial partnerships. Highlighted Crypto News Today:

- Tesla reports a \$600 million gain from its Bitcoin holdings. - Despite getting a hike from its Bitcoin holding Tesla missed analysts' expectations. Elon Musk's Tesla (TSLA) reported a strong gain of \$600 million and took benefit of a new accounting rule that allows firms to showcase the market value of their crypto assets. Tesla recently released its Q4 results, which showcased \$600 million in profits via its Bitcoin holdings. As per Bitcoin Treasuries, the company's Bitcoin holdings now have a value of over \$1 million and it holds \$9,720 BTC. Before the new rule was introduced, companies had to report their crypto holdings at the lowest value registered during their ownership, despite any price gains. On this, CFO Vaibhav Taneja noticed an increased EPS of 68 cents in this quarter. Taneja stated, "It's important to point out that the net income in Q4 was impacted by a \$600 million mark-to-market benefit from bitcoin due to the adoption of a new accounting standard for digital assets." Despite Bitcoin Boost Tesla Missed Analyst's Expectations Despite getting a boost from Bitcoin holding Tesla missed the analyst expectations of \$27.22 billion. It reported a revenue of \$25.71 billion and Earnings Per Share (EPS) of \$0.73. Moreover, the operating expenses spiked by \$2.59 billion, compared to the last quarter. After the result, the Tesla stock price down by almost 2.26%. However, later it bounced back to 4.4%. Currently, TSLA stock price stands at \$389.10, with a market cap of \$1,249.0 billion. As Bitcoin price is reaching new heights global shifts have seen in its adoption. Now corporations are adopting Bitcoin as a store value to boost their earnings and governments to boost their economies. The US, the world's largest economy, is planning to establish its Bitcoin Strategic Reserve soon. Highlighted Crypto News Today: Texas Pushes for Bitcoin Reserve as Legislative Priority in 2025

- Texas prioritizes a state Bitcoin reserve, joining other states in the crypto reserve race. - Senate Bill 21 advances Texas' digital asset strategy, enabling Bitcoin reserves via taxes and donations. Texas is taking a bold step in digital asset adoption, with Lieutenant Governor Dan Patrick announcing that the establishment of a Texas Bitcoin Reserve is one of the state's top legislative priorities for 2025. Senate Bill 21, which Patrick has placed at the forefront of the 89th regular legislative session, aims to position Texas as a leader in cryptocurrency adoption by allowing the state to accumulate Bitcoin. If implemented, Texas will join at least five other U.S. states, including Arizona, Utah, Pennsylvania, Ohio, and Florida, that are advancing similar Bitcoin reserve initiatives. Pennsylvania, for instance, introduced the Bitcoin Strategic Reserve Act to allocate up to 10% of its \$7 billion Rainy Day Fund and \$9.7 billion General Fund into Bitcoin. Similarly, Ohio's Bitcoin Reserve Act grants the State Treasurer the authority to purchase Bitcoin at any time. Texas' initiative, however, is seen as one of the most ambitious yet. The bill proposes the creation of a reserve separate from the \$250 billion annual state revenue fund, with Bitcoin acquired through tax payments and voluntary contributions rather than direct state purchases. State Senator Charles Schwertner wrote on X, "It's time for Texas to lead the way in establishing a Strategic Bitcoin Reserve. That's why I filed SB 778, which, if passed and signed into law, would make Texas the first state in the nation to establish a Strategic Bitcoin Reserve," Texas Joins Growing National Movement Toward Bitcoin Reserves Texas' push for a Bitcoin reserve is closely tied to its dominant position in the U.S. Bitcoin mining industry. The state has become a major hub for mining due to cheap electricity, abundant renewable energy sources, and a deregulated power grid. It currently hosts some of the largest mining operations globally, making it an ideal candidate for integrating Bitcoin into state finances. The Texas economy, valued at \$2.4 trillion, is the 8th-largest in the world if treated as a sovereign nation. With the state generating over \$250 billion in annual revenue from taxes, fees, and assessments, the potential scale of its Bitcoin holdings could be substantial. The bill also aligns with broader national efforts to integrate Bitcoin into public financial reserves. At the federal level, U.S. Senator Cynthia Lummis has introduced legislation proposing the U.S. Treasury acquire 1 million Bitcoin over five years, reflecting growing interest in crypto reserves. Prediction markets such as Polymarket currently place a 56% probability on the federal Bitcoin reserve becoming a reality in 2025 Challenges and Unanswered Questions While the initiative has gained strong political backing, several challenges remain. The bill does not currently include provisions for direct Bitcoin purchases by the state, focusing instead on accepting Bitcoin for payments. This raises questions about how the state will store, secure, and manage Bitcoin holdings. Texas also faces regulatory uncertainties. With federal oversight on the rise, state-run Bitcoin reserves could eventually be subject to new financial and tax regulations. Critics argue that Bitcoin's volatility makes it an unpredictable asset for government treasuries. Despite these concerns, Texas lawmakers remain

confident that the bill will gain support. “These priorities represent the will of the conservative majority of Texans,” said Lt. Gov. Dan Patrick. Highlighted Crypto News Today

Crypto marketplace has yet again proven its dynamic nature, with Bitcoin (BTC) reclaiming the \$100,000 mark even as altcoins face full-size sell-offs. As the marketplace adjusts to those shifts, an emerging AI-powered crypto Ozak AI’s presale is attracting huge investor interest, providing a glimpse into the destiny of blockchain innovation. Here’s an in depth examination of the modern day market developments and why this AI presale is making waves. Bitcoin Surges Back to \$100,000 Bitcoin has reasserted its dominance by means of crossing the \$100,000 threshold, a degree not seen from its preceding all-time highs. This recovery comes amid growing institutional adoption, renewed retail interest, and macroeconomic elements favoring virtual property as a hedge in opposition to inflation. The recent rally has been fueled by several key developments: Institutional Buying: Major economic institutions have ramped up their Bitcoin holdings, signaling long-term self belief within the asset. ETF Approvals: The approval of a couple of spot Bitcoin ETFs has extended accessibility for traditional traders, driving up call for. Decreasing Supply: With greater BTC being locked in long-time period wallets and a halving event at the horizon, scarcity is turning into an essential thing in Bitcoin’s charge surge. While Bitcoin’s recovery is a nice signal for the market, it has also highlighted a developing divergence between BTC and altcoins, many of which can be experiencing big losses. Altcoins Suffer Double-Digit Losses As Bitcoin soars, the wider altcoin market has been hit hard, with many tokens experiencing double-digit losses. This trend underscores a classic “flight to safety” scenario, in which buyers pull finances from riskier belongings to consolidate positions in Bitcoin in the course of unsure instances. Key factors driving altcoin losses include: - Market Rotation: As Bitcoin reclaims the spotlight, capital is flowing out of altcoins, leading to a sharp decline of their costs. - Regulatory Uncertainty: Continued regulatory scrutiny of altcoins has dampened investor sentiment, specifically for smaller, much less-hooked up projects. - Overleveraged Positions: Many altcoins faced liquidations as buyers did not control leveraged positions amid marketplace volatility. Despite these challenges, not all altcoins are faltering. Some innovative projects, particularly those leveraging AI and blockchain technology, are gaining traction and offering a glimpse of hope for the altcoin market. Ozak AI Presale Steals the Show Amid the market turbulence, an AI-powered crypto Ozak AI presale is heating up, drawing significant attention from retail and institutional investors. This mission, which combines artificial intelligence with the blockchain era, promises to revolutionize industries by presenting real-world solutions powered by modern algorithms. The Ozak AI presale has officially launched, and it’s already making waves in the crypto community. With an impressive \$500K raised so far, Ozak AI tokens are currently priced at just \$0.003 each. This early-stage opportunity is set to soar, with projections suggesting that the token could reach \$1 by 2025. Why Ozak AI Presale Is Gaining Momentum Innovative Use Cases: The undertaking focuses on leveraging AI for predictive analytics, decentralized decision-making, and stronger user reviews, making it enormously applicable in nowadays tech-pushed international. Strong Community Backing: The presale has already raised a substantial price range, demonstrating robust investor confidence and enthusiasm. Early-Bird Advantages: With tokens priced attractively throughout the presale section, early adopters stand to gain substantially if the project gives you on its promises. Market Timing: As AI continues to dominate headlines, this venture is perfectly placed to capitalize on the growing demand for AI-included blockchain solutions. The buzz around this presale is a testament to the market’s urge for food for innovation, even as conventional altcoins face challenges. The crypto market is undergoing a duration of enormous realignment. Bitcoin’s restoration to \$100,000 marks a pivotal second, reaffirming its role as the market chief. Meanwhile, the altcoin quarter struggles with double-digit losses, highlighting the challenges of navigating an unstable space. However, amidst these shifts, the upward thrust of AI-powered crypto tasks offers a beacon of hope. This presale, especially, demonstrates the ability for blockchain technology to adapt and evolve, attracting buyers seeking out the following big possibility. As the market continues to mature, one issue is obvious: innovation stays the using pressure behind cryptocurrency’s enduring enchantment. About Ozak AI Ozak AI is an AI-blockchain based crypto project that provides a technology project that specializes in predictive AI and advanced data analytics for financial markets. Through machine learning algorithms and decentralized network technologies, Ozak AI enhances real-time, accurate, and actionable insights to help crypto enthusiasts and businesses make the correct decisions. - South Dakota announces the introduction of a strategic Bitcoin reserve. - Donald Trump has recently signed an executive order aimed at advancing cryptocurrency adoption. South Dakota is up to introduce legislation that would establish a strategic Bitcoin reserve. It joins a growing movement among U.S. states looking to integrate cryptocurrency into their financial strategies. South Dakota State Representative Logan Manhart shared his plans to bring a bill to the state’s House. It’s likely aiming to create a Bitcoin reserve, on January 28, 2025. He emphasized the importance of taking proactive steps now, highlighting Bitcoin’s role in the state’s financial future. Besides, Kentucky State Representative TJ Roberts plans to introduce comparable legislation upon his return to the General Assembly. Recently, the Arizona Senate approved the Arizona Strategic Bitcoin Reserve Act (SB1025). It allows the state to invest up to 10% of public funds in Bitcoin. In addition, the acts of the Federal government over currency issues have resulted in negative momentum for the Bitcoin stocks of a state. On January 23, 2025, President Donald Trump put his signature under a bill on the Federal government to examine a crypto reserve. Numerous states passed Bitcoin-related laws after the year 2024. If Kentucky and South Dakota move forward with their proposals. Hence, there will be a

corresponding increase in the number of states that are exploring similar measures. Contrarily, Senator Cynthia Lummis outlines a complete strategic framework for the enactment of the Bitcoin Act in the United States. It proposes a Bitcoin Purchase Program, which can acquire up to 1,000,000 BTC over five years. These reserves will safely housed in a distributed network of cold storage sites funded by the United States government. In addition, the BTC has gotten through the Bitcoin Purchase Program in which at least a 20-year hold back from the sale or other transfer to an individual or entity exists. Also, it is never to be disposed of except for the retirement of Federal debt. Highlighted Crypto News Trump Re-Election Impact on Crypto: What Lies Ahead for Crypto in 2025?

- Bitcoin price has factored in a modest price dip of 0.94% in the last 24 hours. - The cryptocurrency's daily trading volume depreciated by 47.22% as per CMC data. Bearish trends have been gallivanting through Bitcoin's price action over the past day. However, turning to other activities, the sector has kept the liveliness going. Recently, pro-crypto senator Cynthia Lummis filed a lawsuit in support of Coinbase against the SEC. Meanwhile, reverting to Bitcoin's daily price action, the cryptocurrency trades at the \$100K to \$102K margin. It has dipped several times in the last 24 hours to \$100K. Additionally, on January 28, BTC revisited its \$98K support briefly before consolidating at current trading prices. The past day's price performance stands at a 0.94% dip as inferred from its daily price chart. At the time of writing, BTC was trading at \$102,204.92 as per CMC data. Meanwhile, in the week's beginning, the crypto community saw major speculations regarding Bitcoin's price. Prominent analyst Arthur Hayes, recently posted on his X account, that Bitcoin might reach a correction to the \$75K level. This is expected to be followed by a rally to a whopping \$250,000 by the year's end. Meanwhile, another analyst Ali, has predicted a short-term critical support at \$91,700. What Do Speculations Suggest For Bitcoin Price? The above-discussed predictions clearly indicate an imminent bearish period for Bitcoin before it rallies upward. However, the cryptocurrency's Hull Moving Average (HMA) stands below the current trading price indicating an upward movement. On in-depth analysis, BTC might experience a consolidation phase. However, to witness significant upward strides, traders may have to sit through a full-blown price depreciation. Presently, investors are buying the dip as suggested by Bitcoin's RSI standing at 53.79. Meanwhile, other cryptocurrencies have also reflected Bitcoin's past week price movements. Ethereum took to the spotlight specifically for its price drop, while other altcoins such as Solana and XRP also proceeded in their respective bearish lanes.

Bitcoin's steady climb remains a hallmark of the crypto market, with its resilience and dominance capturing investor confidence as 2025 unfolds. However, competition is heating up as emerging projects like Lightchain AI make waves with their projected growth. Offering a groundbreaking blend of AI and blockchain technology, Lightchain AI is quickly becoming a standout in the industry. Currently in its presale phase at \$0.005625 per token, Lightchain AI has already raised \$13.2 million, signaling immense potential and strong investor interest in its innovative ecosystem. Bitcoin's Steady Ascent- Trusted Investment in 2025 Bitcoin's climb in 2025 shows its increasing role as a reliable investment. The crypto money went past the \$100,000 point in December 2024, pushed by hopes of a friendly rule for crypto under the current U.S. government. The ok of spot Bitcoin ETFs has made Bitcoin more real pulling in big institutional funds. Experts guess that Bitcoin's value might hit \$200,000 by the close of 2025. This rise could come from more use by big companies, groups, and maybe even states. But money helpers say to be careful. They tell people to put just a tiny part of their funds into Bitcoin because it can change a lot in price. As Bitcoin moves up, it makes its place as an important thing in money matters. Why Lightchain AI Could Outpace Bitcoin's Growth Trajectory Lightchain AI is positioned to outpace Bitcoin's growth trajectory by redefining the blockchain landscape with advanced utility and innovation. While Bitcoin pioneered decentralized digital assets, Lightchain AI goes further by integrating AI to enhance functionality and real-world adoption. Its emphasis on transparency, decentralized governance, and scalable infrastructure creates a robust foundation for long-term success. The platform's clear roadmap for 2025, including ecosystem expansion and global adoption, highlights its commitment to building a transformative and inclusive network. Lightchain AI's presale, priced at \$0.005625 per token, has already raised millions, showcasing significant investor confidence. By addressing key limitations of traditional blockchain systems, Lightchain AI is poised to redefine how blockchain technology contributes to a smarter, decentralized future. Discover Lightchain AI - Smart Choice for Your Portfolio in 2025 As Bitcoin and other cryptocurrencies dominate the headlines, it's time to look beyond the usual players and explore exciting opportunities like Lightchain AI. By blending AI and blockchain, Lightchain AI is paving the way for innovation and redefining what's possible in the crypto space. This groundbreaking project doesn't just follow trends-it sets them. With strong investor backing and a clear, ambitious roadmap, Lightchain AI is positioned as a leader in the next wave of crypto evolution. If you're seeking a forward-thinking, high-growth investment, this could be the game-changer you've been waiting for. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Hive Digital Technologies spends \$56 million to acquire Bitfarms mining site. - The company is planning a two-phase development approach for its new mining site. HIVE Digital making headlines with its new acquisition of Bitfarms's 200-megawatt Bitcoin mining farm located in Yguaz , Paraguay. The business is expanding its crypto-mining operations at a significant level through this acquisition. The strategic acquisition will propel company growth while expanding Bitcoin mining hash rate capabilities to 25 EH/s by September 2025 according to the press release. HIVE Digital invested \$56

million to purchase the Paraguay mine from Bitfarms. The acquisition provides HIVE Digital with a 240 MVA substation which offers 200 MW of capacity together with its associated infrastructure and other facilities. HIVE Digital's Two-Phase Development Plan The HIVE Digital is planning a two-phase development approach for the 200 MW Yguaz  site. Phase one is scheduled for completion by April 1, 2025, as the construction is in progress and 80% completed. This Phase will add approximately 6 EH/s of capacity to its global Bitcoin mining hash rate. Phase two is expected to be completed by August 31, 2025, and this phase will add 6.5 EH/s through the deployment of hydro-cooled ASICs, leveraging advanced efficiency. The strategic mining acquisition aligns with the company's commitment to sustainable operations, as the whole infrastructure will run on green hydroelectric energy. Frank Holmes, HIVE's Executive Chairman, emphasized the significance of the acquisition, noting that it will enable the company to control approximately 3% of the global Bitcoin mining network by September 2025. To achieve the 25 EH/s target, Hive Digital already secured ASICs for 15 EH/s from its order of Bitmain and Canaan in 2024. The company aims to achieve a global fleet efficiency of 16.5 joules per Terahash once the project gets fully operational. Through all these Hive Digital Technologies is planning to become a leader in the mining space. If this project is successful, it will make Hive the most efficient Bitcoin miners across the globe. Highlighted Crypto News Today: Binance Research Highlights How DeSci Tackles the "Valley of Death" in Research

- Arizona became the first US state to approve a strategic Bitcoin reserve bill. - The Senate panel allows public funds to invest around 10% of funds in virtual currencies. Around one week after Trump took an oath as the 47th US President, the US state of Arizona approved a strategic Bitcoin reserve bill. Under the pro-crypto Trump administration, we are yet to see more states coming up with their own strategic Bitcoin reserve bills. The Arizona Senate Finance Committee approved a strategic Bitcoin reserve bill, gathering 5 out of 7 votes. The bill "Arizona Strategic Bitcoin Reserve Act" is also known as SB 1025. Pro-crypto leaders Arizona Senator Wendy Rogers and former state representative Jeff Weninger played an important role in pushing forward this bill. Lawmakers of the Arizona state advanced the bill to allow state funds to invest in Bitcoin. As per the bill, the state can invest no more than 10% of public funds in virtual currency holdings such as Bitcoin. The bill also allows public funds to store virtual currency holdings within the strategic Bitcoin reserve. This is in case the US Secretary of the Treasury establishes a strategic Bitcoin reserve. Arizona Becomes the First State to Advance Strategic Bitcoin Reserve BIG BREAKING: I can confirm that Arizona has become the 1st state in the nation to pass out of committee a bill to create a 'Strategic Bitcoin Reserve'. " Dennis Porter (@Dennis_Porter_) January 27, 2025 The bill will soon move to a floor vote in the Senate. Congrats to co-sponsors @WendyRogersAZ and @JeffWeninger for their pic.twitter.com/nUjt5HccbZ Satoshi Act Fund CEO Dennis Porter posted X confirming that Arizona became the first US state to advance the strategic Bitcoin reserve bill. In addition, Dennis Porter congratulated both Wendy Rogers and Jeff Weninger for leading this bill. To Dennis Porter's post, Jeff Weninger replied indicating more Bitcoin-related laws from both of them. After pro-crypto Donald Trump's inauguration as the US President, he signed a crypto executive order. This has opened doors to US states exploring strategic Bitcoin reserves. Previously, Dennis Porter also announced that up to 20 strategic Bitcoin reserve bills are going to be introduced at the state level. Highlighted Crypto News Today: Binance Research Highlights How DeSci Tackles the "Valley of Death" in Research

- Bitcoin (BTC) price declined to \$99,381, with \$98,000 as critical support. - Bitcoin supply on exchanges dropped to a multi-year low, supporting long-term bullish sentiment. Bitcoin price has dropped to \$99,381, reflecting a 1.95% decline in the last 4 hours. Its market cap now stands at \$1.97 trillion, maintaining a market cap-to-volume ratio of 2.03%. Trading volume has surged by an impressive 88.19% in the last 24 hours, reaching \$40.65 billion. This sharp increase in volume indicates heightened trader activity and potential volatility in the market. In the past year, Bitcoin wallets holding at least \$100 have grown by 25%, surpassing 30 million. Additionally, Bitcoin held on exchanges has dropped to 2.3 million, the lowest in years. What's Next For BTC? Bitcoin faces a significant resistance level at \$104,680. If the price breaks above this threshold, the next target could be \$110,000, signaling a recovery phase. On the downside, Bitcoin is approaching a crucial support level at \$98,000. If it breaks below this, the price could decline further to \$95,000, testing the strength of buyers at lower levels. The Relative Strength Index (RSI) sits at 28.22, indicating oversold conditions. This suggests the market has been under significant selling pressure. However, the RSI's oversold nature signals that a price rebound could be imminent if buyers regain control. The 14-day RSI average is 48.42, emphasizing that bearish sentiment has recently dominated. The moving averages show a bearish crossover, with the 9-day moving average falling below the 21-day moving average. This crossover often signals further downside momentum in the short term. Traders should monitor this crossover, as any reversal in the pattern could signal renewed bullish sentiment. The Chaikin Money Flow (CMF) is currently in negative territory, suggesting weak capital inflows. While Bitcoin is under pressure, the declining supply on exchanges supports a long-term bullish outlook. Tightening liquidity creates the potential for significant price increases once the market stabilizes. In the short term, traders should closely watch the \$98,000 support level. A recovery above \$100,000 would strengthen market confidence, while a break below \$98,000 could invite further downside risk.

- Trump shifts focus to a U.S. digital asset reserve, sparking debates over XRP's potential inclusion. - Ripple's lobbying efforts, critics claim, influence U.S. crypto policy direction. President Donald Trump has reignited crypto discussions with his push for a national digital asset reserve. Initially focused on creating a Bitcoin-centric stockpile, Trump's strategy has shifted toward a broader reserve, including altcoins like XRP. This move has divided the crypto community, sparking debates over political influence, lobbying, and the future of U.S.-based cryptocurrencies. Ripples CEO, Brad Garlinghouse has consistently promoted XRP as a key asset for U.S. digital innovation. His advocacy, alongside Ripple's lobbying efforts, has drawn scrutiny, with critics

claiming the company prioritizes its interests over the broader crypto ecosystem. Ripple's Lobbying: Influence or Innovation? Ripple's close ties with policymakers have fueled speculation about its role in Trump's crypto agenda. The company has reportedly spent millions lobbying for clearer regulations and promoting XRP. Pierre Rochard, Vice President at Riot Platforms, remains unconvinced. Rochard claims Ripple's lobbying disrupts Bitcoin's dominance, potentially skewing U.S. crypto policies. Brad Garlinghouse denies allegations of undermining Bitcoin-focused initiatives, emphasizing Ripple's aim to include Bitcoin and XRP in a comprehensive reserve. "Unless you are choosing to ignore the core tenants of the POTUS campaign (which aggressively supports American companies and technologies), our efforts are actually INCREASING the likelihood of a crypto strategic reserve (which includes bitcoin) happening." Garlinghouse stated, defending his company against accusations of blocking a Strategic Bitcoin Reserve (SBR). Critics Call for Bitcoin-Only Reserve Ryan Selkis, founder of Messari, strongly opposes XRP's inclusion in Trump's reserve. Selkis argues that Bitcoin's decentralized nature and fixed supply make it the only viable choice. "BTC is unique as a reserve." Selkis tweeted, emphasizing Bitcoin's superiority as a reserve asset. Adding to the controversy, critics claim Ripple's lobbying efforts favor central bank digital currencies (CBDCs) over decentralized cryptocurrencies. Bitcoin maximalists like Samson Mow echo these sentiments, criticizing XRP for its centralized structure and questioning its legitimacy in a national reserve. Despite the criticism, XRP continues to gain attention. Valued at \$181 billion, it ranks as the third-largest cryptocurrency by market capitalization. Market analysts predict XRP could see significant price surges, with forecasts ranging from \$5 to \$20 by Q1 2025. Ripple's CEO having dinner with Trump and Ripple's Legal Officer suggest ongoing discussions about XRP's inclusion in the reserve, though no official confirmation has emerged. Despite ongoing legal challenges with the SEC, XRP remains resilient. Currently trading at \$3.14, the token shows strong market demand, driven by speculation around its potential role in Trump's reserve. Ripple's legal clarity following partial victories in its lawsuit has further boosted investor confidence. Highlighted Crypto News Today: BlackRock Pushes In-Kind Model to Revolutionize Bitcoin ETFs

- Nasdaq suggests in-kind creation and redemption for the BlackRock ETF. - The in-kind concept could improve Bitcoin ETF efficiency for institutions. Nasdaq filed a proposed rule change with the U.S. Securities and Exchange Commission (SEC) to let in-kind creation and redemption take place for the BlackRock iShares Bitcoin Trust (IBIT). This could hugely boost the operating efficiency of the largest spot Bitcoin exchange-traded fund on the market. In-kind creation and redemption enable institutional investors, or authorized participants (APs), to trade shares of the Bitcoin trust directly for Bitcoin (BTC) instead of cash. This is more efficient than a cash-only method because the APs can better track demand, they can be highly responsive by buying or selling shares of the fund without actually going through the cash. This process works for institutional investors but leaves retail investors out. In-Kind Creation Model Aims for Efficiency The application builds on the SEC's initial approval of spot Bitcoin ETFs, such as IBIT. While it has a cash redemption feature rather than a redemption in Bitcoin, advocates now argue that its result is flawed because only the in-kind process was approved and should have been allowed since inception. "First of all, they didn't want brokers to get their hands physically on real Bitcoin," Seyffart said, citing this reluctance as being the regulatory quarters, mainly the leadership at the SEC, such as Chairman Gary Gensler and Commissioner Caroline Crenshaw. Crypto analyst Tom Wan noted this structure would render Bitcoin ETFs more effective as in Europe-based ETPs by enabling the APs to print and deliver directly against the Bitcoin. Bloomberg's ETF analyst James Seyffart supported this view as he demonstrated how in-kind transfers involve fewer steps and intermediaries than the cash-based system, which makes it smoother. This is when the Bitcoin ETF market is maturing and demand for more flexible structures has been increasing. When the first spot Bitcoin ETFs were introduced in January 2024, the SEC requested a cash redemption model citing concerns over brokers touching real Bitcoin. However, proponents claim that in-kind transfers are better suited to the decentralized nature of digital assets, and now it is an industry push, a shift. Such is the filing set to revolutionize the kind of pace offered by other cryptocurrency ETF issuers in terms of considering in-kind redemption for such products. BlackRock has not filed a similar change for its Ethereum ETF but leads the space through innovative approaches. The efforts of BlackRock, combined with its substantial market success, are placing the firm ahead of its competitors in the evolving crypto ETF market, potentially reshaping the landscape for Bitcoin and other crypto-backed ETFs. Highlighted Crypto News Today: Why is Trump's World Liberty Financial Accumulating Ethereum?

- Bitcoin has factored in a modest price increase of 2.56% in the last 24 hours. - The cryptocurrency's daily trading volume shows a significant surge of 72.87% as per CMC data. The crypto community is swarming with activity that seems to be reflecting an ascending channel every day. With such increased shifts, most of them are inclined to the positive, making members quite content. However, prices have resembled previous months' actions. Over the past week, after a brief significant increase, the bull market seems to have taken a slump. Notably, Bitcoin trumped this week's price cycle with a new all-time high of \$109,114.88. The cryptocurrency, followed with a significant drop to the \$101K level in the past few days. This freefall was viewed as an attempt to regain stability after recent fluctuations. Additionally, Bitcoin's price movement also had its effects on the altcoin sector. In the last 24 hours, the leading cryptocurrency has factored in a 2.56% increase and reached the \$104K level. In the January 24 morning hours, Bitcoin was trading at a low of \$101,894 before dipping further. BTC managed to hold onto its \$101K support before the bulls decided to lend a hand. At the time of writing, BTC was trading at \$104,897.93 as per CMC data. Moreover, according to analyst Ali's reports, the cryptocurrency has seen buying activity from long-term holders. Will Bitcoin Bulls Propel Price to \$120K Next Month? The crypto market is always swarming with Bitcoin price projections with the recent one at \$175,000. Particularly, when drawing an analysis from technical indicators, the cryptocurrency shows potential. Its Moving Average Convergence

Divergence (MACD) signal line stands above the MACD line indicating the sustenance of the positive environment. Additionally, the Chaikin Money Flow (CMF) value is at 0.11 affirming the increasing capital flow as per TradingView data. These nuances corroborate the previous statements about Bitcoin's potential. In the case of its bull run resuming full-fledged, its next can be expected to be closer to \$110,124. Other altcoins such as XRP are also combating resistance periods.

Debifi, the leading platform in non-custodial Bitcoin-backed lending, has announced a strategic partnership with Berglinde, a recognized innovator in Bitcoin-centered investment solutions. This alliance signifies a major step in connecting the traditional financial landscape with the Bitcoin economy. Together, they will offer fiat loans in USD, EUR, and CHF, providing users with expanded financial options while safeguarding their Bitcoin holdings. United by a Commitment to Financial Empowerment This collaboration unites two forward-thinking firms driven by a mission to enable financial sovereignty. By merging Debifi's pioneering lending infrastructure with Berglinde's regulatory expertise, they aim to create a dynamic ecosystem that underscores Bitcoin's role as a premier global asset for collateralization. Why This Partnership Changes the Game Opening Institutional Liquidity Channels Debifi's secure, non-custodial, multisig lending system will integrate with Berglinde's regulated financial frameworks, unlocking institutional liquidity for Bitcoin-backed loans. This synergy ensures a secure and transparent gateway for capital flows. Elevating Bitcoin's Position in Global Markets By leveraging Berglinde's expertise in compliance and investment management, this partnership supports Debifi's mission to scale globally, allowing Bitcoin to penetrate deeper into capital markets and diversify its utility. Setting a Benchmark for Lending Excellence The partnership is dedicated to establishing a gold standard in Bitcoin-backed lending. Their approach emphasizes security, transparency, and non-rehypothecation practices, reinforcing Bitcoin's reputation as "super collateral" for both traditional and decentralized financial systems. This collaboration highlights how the convergence of visionary companies can expand the potential of Bitcoin as a transformative force in global finance. Comments from Leadership Max Keidun, CEO of Debifi: "The partnership with Berglinde marks a significant milestone for Debifi, as it unlocks seamless fiat loan access for our platform users. By combining Bitcoin's unmatched value as collateral with Berglinde's financial expertise, we're bridging the gap between Bitcoin economy and traditional finance, creating unparalleled opportunities for our users. Berglinde is one of the first fiat lenders on our platform, and we're excited to announce more partnerships in the coming months." Phil Lojacono, Co-Founder of Berglinde: "Our mission at Berglinde has always been to drive innovation at the intersection of Bitcoin and traditional finance. Debifi's groundbreaking approach to Bitcoin lending aligns perfectly with our vision of empowering institutions to invest in Bitcoin with confidence and integrity. This partnership sets the stage for a prosperous Bitcoin economy." About Debifi Debifi is a non-custodial lending platform designed to unlock Bitcoin's potential as a superior collateral asset. Through secure multisig escrow and no-rehypothecation lending, Debifi offers individuals and institutions unmatched borrowing solutions. About Berglinde Berglinde bridges traditional finance and the Bitcoin economy, offering secure, regulated, and innovative investment opportunities. The firm is committed to empowering institutions to embrace Bitcoin and its transformative potential. For more information, visit Debifi.com and Berglinde.com. Nano Labs Ltd. (NASDAQ: NA) has unveiled a significant development in its journey to strengthen its leadership in the digital asset ecosystem. The company's wholly-owned subsidiary, Nano Bit HK Limited, will initiate Bitcoin-related business activities, marking a pivotal step in its strategic growth. As part of this initiative, Nano Bit has entered into a formal partnership with BitFi, a leading cryptocurrency asset management platform. This collaboration underscores Nano Labs's commitment to innovation and sustainability in the blockchain and cryptocurrency markets. Under this partnership, Nano Labs will acquire Bitcoin as a part of its long-term strategic reserve. Nano Bit will manage and oversee these assets' operational aspects, while BitFi will provide a comprehensive suite of services, including: - Asset Custody: Secure storage solutions to safeguard Bitcoin holdings. - Yield Management: Strategies to maximize the value and returns of the assets. - Asset Growth: Advanced approaches to ensure sustainable performance and development. This strategic move not only enhances Nano Labs's position within the cryptocurrency sector but also reinforces BitFi's role as an industry leader in Bitcoin asset management. Together, Nano Labs and BitFi aim to deepen their engagement with the Bitcoin ecosystem and promote its long-term, sustainable development. "This partnership represents a milestone in our strategic evolution," said Nano Labs. "By combining our vision with BitFi's expertise, we are taking a significant step toward realizing the full potential of Bitcoin as a cornerstone of the digital economy." BitFi added, "We are thrilled to partner with Nano Labs to support their Bitcoin initiatives. This collaboration highlights our shared commitment to advancing the digital asset industry through innovation and secure asset management." About Nano Labs Ltd. Nano Labs Ltd is a leading fabless integrated circuit (IC) design company and product solution provider in China. Nano Labs is committed to the development of high throughput computing (HTC) chips, high performance computing (HPC) chips, distributed computing and storage solutions, smart network interface cards (NICs) vision computing chips and distributed rendering. Nano Labs has built a comprehensive flow processing unit (FPU) architecture which offers a solution that integrates the features of both HTC and HPC. Nano Lab's Cuckoo series are one of the first near-memory HTC chips available in the market*. About BitFi BitFi is a premier cryptocurrency asset management platform, delivering advanced CeDeFi solutions for secure custody, yield optimization, and long-term asset growth within the broader cryptocurrency ecosystem. The scene of cryptocurrencies is changing fundamentally. Although Bitcoin (BTC) and Ethereum (ETH) have long prevailed as the top picks for institutional and retail investors, a new competitor subtly replaces them among Wall Street's elite. With rising momentum and modern utility, Rexas Finance (RXS), a presale altcoin, is heralded as the next major player in the crypto scene. Rexas Finance is becoming a dynamic substitute that grabs the attention of institutional players and high-net-worth individuals as conventional giants like Bitcoin and Ethereum struggle with scalability issues and market saturation. Wall Street's New Darling Traditionally slow to embrace new technologies, Wall Street is changing as creative cryptocurrencies show practical use. Experienced investors have been interested in Rexas Finance because of its innovative ecosystem, which blends blockchain technology with AI-powered solutions meant to solve actual issues. Rexas GenAI is the platform's exclusive artificial intelligence tool, designed to streamline blockchain integration for companies and individuals. Rexas Finance enables distributed technology by providing tools for building bespoke currencies, presale management, and new blockchain projects. Rexas Finance has positioned itself as a platform created for innovation and expansion, unlike Bitcoin and Ethereum, which are frequently attacked for their limited flexibility in meeting changing business demands. A Record-Breaking Presale Data support Rexas Finance's success. Hence, it is not only hypothetical. With its presale already in its 12th round and tokens valued at \$0.20, the project has raised an amazing \$41.5 million and sold 427.8 million tokens thus far. This great investor confidence emphasizes Rexas Finance's conviction about its ability to upset the crypto market. Recently, holders voted for one more presale round and a \$0.25 raised listing price under a community-driven initiative. This choice not only accentuates the initiative's democratic values but also shows the great demand for the token. Already causing waves on sites like CoinMarketCap and CoinGecko, RXS has June 19, 2025, as their official launch date. Its growing appeal points to a robust market for this next-generation bitcoin. Institutional Investors Embrace RXS Rexas Finance's appeal to Wall Street stems from its increasing relevance and possibility for outsized gains. Although institutional investors now often include Bitcoin and Ethereum in their portfolios, their growth potential is more constrained than that of newly proposed ventures like RXS. For institutional players trying to vary their crypto holdings, Rexas Finance presents a convincing value proposition. Already drawing companies keen to tokenize real-world assets, its creative token constructor and launchpad will help to drive this trend in the next years. Rexas Finance offers hedge funds and high-net-worth investors a rare chance to enter a business early on with great upside potential. As Wall Street's interest in alternative assets grows, RXS is quickly becoming the preferred cryptocurrency for investors looking to profit from the following major wave of invention. Outshining Bitcoin and Ethereum Bitcoin and Ethereum have limits, even though they are the gold standard of cryptocurrencies and the foundation of distributed finance. Due to Bitcoin's energy consumption problems and scalability, Ethereum's network congestion, and excessive fees, younger, more nimble technologies have space to grab market share. Rexas Finance tackles these issues with a simplified ecosystem that emphasizes actual use. Its AI-driven platform offers quicker transactions, lower fees, and user-friendly interfaces, making it a sensible option for corporate and personal users. Furthermore, the initiative distinguishes itself as a distributed platform that listens to its users by its dedication to community-driven development. Rexas Finance demonstrates that it can keep up with the fast-changing crypto scene by including comments and adjusting to market demands. The Road Ahead Anticipation is spiraling as the countdown to the Rexas Finance launch gets underway. Analysts see the token's \$0.25 listing price as the beginning of a far more significant climb. Rising attention from Wall Street, a solid ecology, and strong community support help RXS to stand out as one of the best success stories of the upcoming bull market. Rexas Finance offers individuals who missed the early days of Bitcoin and Ethereum a second chance to ride the wave of a transforming cryptocurrency. Its combination of AI-powered tools and creative tokenization approach makes it a strong contender for leading the next generation of blockchain technologies. Conclusion Rexas Finance is a movement reinventing what cryptocurrencies can achieve, not just another altcoin. Wall Street investors are embracing RXS's new possibilities as they turn away from established leaders like Bitcoin and Ethereum. With its presale success, innovative technology, and great community support, Rexas Finance has shown what it takes to guide the cryptocurrency sector into a new age. The moment to act now if one wants to keep ahead of the curve. Rexas Finance is looking to be the investment opportunity of the decade with its debut approaching and increasing institutional support base. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Austin, Texas, January 20th, 2025, Chainwire A.R.T. Digital Holdings Corp. (OTCMKTS: CGAC), a publicly traded Digital Energy and Bitcoin mining company, has entered into a binding exclusivity agreement to secure the rights to utilize Forced Physics's JouleForce[®] cooling technology in the cryptocurrency mining sector. By leveraging this breakthrough innovation, A.R.T. Digital is advancing the development of a scalable mining system built to JouleForce specifications, addressing Bitcoin mining's greatest challenges: thermal management, sustainability, and operational efficiency. This exclusive agreement highlights A.R.T. Digital's commitment to advancing Bitcoin mining technology. It unlocks new

opportunities to redefine industry approaches to thermal management, reinforcing the company's role in next-generation mining solutions. A.R.T. Digital will deliver its first system, built to JouleForce specifications. This initiative combines Forced Physics's transformative cooling innovation with advanced system development, ensuring seamless integration, aiming to enhance efficiency and scalability in the mining sector. "This project highlights the power of innovation and collaboration," said Brian Snyder, Chief Strategy and Innovation Officer at A.R.T. Digital. "By bringing JouleForce technology to life, we're not just solving Bitcoin mining's most critical challenge—we're creating an entirely new standard for sustainable, high-performance operations." This breakthrough technology and strategic collaboration underscore A.R.T. Digital's commitment to advancing the Bitcoin mining industry, opening doors to untapped energy-rich regions, and setting the stage for transformative growth.

Advancing Cooling Efficiency As Bitcoin mining hardware evolves to smaller, more powerful nodes like 3nm processors, thermal management has emerged as a critical challenge. Traditional cooling systems depend on large temperature differentials (ΔT) between the chip's operating temperature and intake air to dissipate heat effectively. In warmer climates where ambient air exceeds 95°F (35°C), this reliance significantly reduces efficiency, forcing machines to throttle performance, lower hash rate output, and ultimately diminish mining profitability. Even in controlled environments with intake air at 70°F, conventional heat sinks fall short. A chip operating at 185°F typically exhausts air at only 100-110°F, creating a large and inefficient temperature differential. This inefficiency drives higher energy consumption for fans, HVAC systems, and other cooling infrastructure, adding substantial operational costs. Forced Physics's JouleForce cooling technology addresses this challenge head-on. By utilizing a vapor chamber coupled with their patented engineered blades, the system maximizes thermal exchange between air molecules and the heat sink surface. Unlike traditional systems, JouleForce minimizes the temperature gap, allowing exhaust air temperatures to approach the chip's operating temperature even in extreme heat, enabling efficient and reliable performance where conventional solutions fail. In cooler environments, this innovation allows for effective overclocking. Key benefits of JouleForce cooling technology include:

- Exhaust air temperatures can reach near the chip temperature through improved thermal exchange, maintaining optimal ASIC operating temperatures in hot environments.
- Reliable operation in hot climates without throttling performance or reducing hash rate.
- Elimination of expensive cooling infrastructure like water chillers, HVAC, or wet walls.
- This water-free solution not only reduces operational costs but also supports environmentally sustainable mining practices, a growing priority in the cryptocurrency sector.
- Reduced energy consumption by simplifying airflow systems and cooling requirements. This breakthrough enables mining systems to operate efficiently in extreme environments, unlocking opportunities in energy-abundant but traditionally impractical regions.

"This isn't just incremental progress—it's a complete rethinking of air cooling," said Brian Snyder, Chief Strategy and Innovation Officer at A.R.T. Digital. "While ΔT inefficiencies limit traditional systems, JouleForce technology aligns cooling performance directly with the chip's needs. This enables Bitcoin miners to operate efficiently where other systems simply cannot. Real-World Validation and Scalability JouleForce cooling technology has demonstrated stable operation in extreme temperatures where traditional systems fail or throttle performance. Powered by a single high-power blower, the system optimizes energy efficiency and density, offering a scalable, water-free solution. This innovative design eliminates operational complexities and reduces infrastructure costs, making it ideal for deployment in energy-rich but hot climates like the Middle East, South America, and other regions with scarce water resources. Unlocking a New Era of Mining JouleForce technology empowers Bitcoin miners to:

- Operate in extreme climates with intake air temperatures up to 120°F.
- Eliminate reliance on water-based cooling infrastructure.
- Reduce energy consumption while maximizing performance and profitability. This innovation addresses the thermal limitations of modern mining hardware. It sets a new standard for efficiency and sustainability, paving the way for the future of Bitcoin mining in underdeveloped, energy-abundant regions. Interested users can see the Demonstration of the Bitmain S19 Pro Hydro Running in Scottsdale, AZ at 105°F here: [About Forced Physics Forced Physics specializes in pioneering thermal management technologies. Its patented JouleForce cooling technology enables unmatched cooling performance using only air, making it ideal for high-density electronics and energy-efficient solutions. About A.R.T. Digital Holdings Corp. A.R.T. Digital Holdings Corp. is a leader in energy-efficient computational technology, dedicated to converting electrical energy into computational output for global data transmission. Under the leadership of CEO Greg Bachrach, A.R.T. Digital Holdings Corp.'s solutions are pioneers that meet diverse data processing needs through innovative, sustainable practices in the Digital Energy industry. - Analysts project Bitcoin prices between \$175,000 and \$250,000 by 2025.
- TRUMP token sees strong gains, ranking as a top meme coin by market cap. Bitcoin (BTC) has surged above \$109,000, setting a new all-time high. This rally coincides with Donald Trump's inauguration as the 47th U.S. President, signaling growing optimism in cryptocurrency markets. The pro-crypto stance of Trump's administration has spurred institutional demand and bullish sentiment. Trump acknowledged Bitcoin's performance during a recent address. His administration plans to introduce a national Bitcoin reserve and deregulate the crypto sector. Bitcoin first crossed \$100,000 in December following his election win. As of now, BTC trades at \$108,900.35, up 3.52% in 24 hours. Institutional adoption has played a vital role in Bitcoin's rise. Major financial players like Standard Chartered predict Bitcoin prices will reach \$200,000. Analysts such as Tim Draper and Arthur Hayes project price targets ranging from \$175,000 to \$250,000. The 2024 halving event has further reduced Bitcoin supply, driving prices higher. TRUMP Token Gains Momentum The market is also eyeing new tokens like the TRUMP cryptocurrency. This token, launched by Trump on his social media platforms, saw a sharp rise to \$70. It briefly entered the top ten cryptocurrencies by market capitalization. However, a competing token, MELANIA, caused a price drop to \$47.35. TRUMP token currently ranks 18th with a market cap of \$9.47 billion and

a trading volume of \$42.51 billion. Despite corrections, TRUMP remains a top meme coin, second only to DOGE and SHIB. Analysts view it as a lucrative long-term investment. While Bitcoin dominates headlines, the TRUMP token has gained significant attention. Launched by Trump through his social media platforms, the token initially soared to \$70. Despite a recent correction to \$47.35, it remains one of the largest memecoins, ranking 18th by market capitalization. The TRUMP token has a market cap of \$9.47 billion and a trading volume of \$42.51 billion. Its fully diluted valuation (FDV) of \$49.69 billion highlights strong investor interest. Analysts see potential for the token to hit \$100, driven by its association with Trump and increasing adoption. The token's locked supply, set to unlock over three years, could drive long-term investment value. Although competition from the MELANIA token caused some short-term volatility, the TRUMP token remains a top contender in the meme coin space. This optimism has also fueled broader market gains, with Bitcoin leading the charge. Highlighted Crypto News Today Donald Trump Family's DeFi Platform Secures Four ENS Domains

Cloud mining has changed the way people access and use cryptocurrencies. It allows users to extract digital currencies without expensive hardware or technology. This accessibility is crucial for those who may not be able to invest in mining equipment or understand its complex configuration. In this article, we'll take you through BCH Miner, the world's leading cloud mining platform, and how it can help you start making \$13,800 or more a day. How to mine DOGE, BTC, LTC in the cloud: 1: Register now to get a \$10 bonus (which can be used to earn \$0.5 for daily check-ins). 2: Choose a contract: After successfully registering, the next step is to choose a mining contract that suits your goals and budget. BCH Miner offers a variety of contracts to meet different needs, whether you are a beginner or an experienced miner. Take a close look at the available options, considering factors such as contract duration, potential returns, and associated costs. Choose a contract that fits your investment strategy: 1: Experience Contract: Investment amount: \$100, total net profit: \$100 + \$6. 2: Basic Contract: Investment amount: \$500, total net profit: \$500 + \$32. 3: Smart Contract: Investment amount: \$2,800, total net profit: \$2,800 + \$812. 4: Classic Contract: Investment amount: \$7,500, total net profit: \$7,500 + \$4,950. 5: Advanced Contract: Investment amount: \$20,000, total net profit: \$20,000 + \$20,130. 6: Super Contract: Investment amount: \$50,000, total net profit: \$50,000 + \$58,500. For more information about new contracts, please visit the official website of the BCH Miner platform: <https://www.bchminer.com/> 3: Start making profits: Once you have selected and activated your mining contract, you can sit back and let the system do the work for you. BCH Miner's advanced technology ensures that your mining operation runs efficiently, maximizing your potential earnings. As your mining activities progress, you will begin to see profits accumulating in your account. Track your performance through the platform's dashboard and withdraw your earnings when you are ready. Advantages of BCH Miner Platform: 1: Cutting-edge equipment: Using mining equipment provided by top mining machine manufacturers such as Bitmain, Shenma Miner, and Canaan Creative to ensure stable operation and efficient production capacity of Bitcoin mining machines. 2: Legality and global audience: The platform was legally established in the UK in 2016, authorized and regulated by the UK Financial Services Authority, and has attracted more than 5 million real users around the world with cutting-edge technology. 3: Intuitive interface: The platform's user-friendly interface ensures that even cryptocurrency novices can easily navigate. 4: Supports a variety of popular cryptocurrencies: such as DOGE, BTC, ETH, USDC, USDT, BCH, LTC, XRP, SOL, etc. for settlement. 5: Stable income: The contracts launched by the platform have income every 24 hours, and the principal is automatically returned after the contract expires. 6: Professional team: The platform has an experienced IT team and 24/7 real-time customer service team support to ensure that users can solve problems in a timely manner. 7: Affiliate program: allows you to recommend your friends and get a referral bonus of up to \$15,000. Conclusion: Cloud mining improves the accessibility and efficiency of the cryptocurrency world. Whether you are a beginner or an experienced miner, you can enjoy the fun of passive income in the cryptocurrency world. BCH Miner has been engaged in network encryption technology services since its establishment in 2016 and is authorized and regulated by the UK Financial Services Authority and complies with local laws and regulations. A platform known for offering stable income opportunities, join BCH Miner to explore the world of cloud mining. - For more details, please visit the official website: <https://www.bchminer.com/> - Mobile application download address: <https://bchmimer.info/download/> - Or contact the company email: info@bchminer.com Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish BTC price prediction for 2025 is \$110,424.53 to \$133,148.56. - Bitcoin (BTC) price might reach \$150,000 soon. - Bearish (BTC) price prediction for 2025 is \$75,949.30. In this Bitcoin (BTC) price prediction for 2025, 2026-2030, we will analyze the price patterns of BTC by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | BITCOIN (BTC) PRICE PREDICTION 2025 | | | BITCOIN (BTC) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Bitcoin (BTC) Current Market Status | Current Price | \$108,317.11 | 24 " Hour Price Change | 3.42% Up | | 24 " Hour Trading Volume | \$109.59B | | Market Cap | \$2.13T | | Circulating Supply | 19.81M BTC | All " Time High | \$109,114.88 (On Jan 20, 2025) | | All " Time Low | \$0.04865 (On July 15, 2010) | What is Bitcoin (BTC)? | TICKER | BTC | | BLOCKCHAIN | Bitcoin | | CATEGORY | Bitcoin | | LAUNCHED ON | January 2009 | | UTILITIES | Store of value | Bitcoin (BTC) is the original decentralized digital currency created by the pseudonymous founder(s) Satoshi Nakamoto in 2009, introducing the concept of blockchain technology. BTC utilizes a peer-to-peer network and operates on a proof-of-work (PoW) consensus, where validators secure transactions through energy-intensive "mining." The cryptocurrency has a fixed supply cap of 21 million BTC, with less than 1.35 million BTC remaining to be mined as of February 2024. Bitcoin has shown a significant transformative journey since its inception. From being the first cryptocurrency to

gaining widespread recognition, it has become a dominant force in the global financial landscape. Bitcoin holds the title of the “largest cryptocurrency” by market capitalization, and its adoption has expanded into various sectors, from retail to education and the introduction of real-world Bitcoin ATMs. Bitcoin has recently gained mainstream attention, experiencing widespread adoption following Donald Trump’s victory in the U.S. presidential election. The cryptocurrency has been reaching new highs daily, as the U.S. administration under Trump plans to adopt “Bitcoin as a reserve currency.” Additionally, Trump has promised to make America the global crypto capital, signaling strong support for the pro-crypto agenda.

Bitcoin 24H Technicals

Bitcoin (BTC) Price Prediction 2025

Bitcoin (BTC) ranks 1st on CoinMarketCap in terms of its market capitalization. The overview of the Bitcoin price prediction for 2025 is explained below with a daily time frame. In the above chart, Bitcoin (BTC) laid out an Ascending Channel pattern. An ascending channel, or rising channel, is a bullish pattern that forms when an asset’s price makes higher highs and higher lows. The price moves between two parallel trend lines—an upper line connecting the higher highs and a lower line connecting the higher lows. As the channel slopes upward, it signals a continued uptrend. Traders see this as a positive sign, with the price likely to keep rising as long as it stays within the channel. At the time of analysis, the price of Bitcoin (BTC) was recorded at \$108,472.43. If the pattern trend continues, then the price of BTC might reach the resistance levels of \$110,073.10 and \$134,569.77. If the trend reverses, then the price of BTC may fall to the support levels of \$99,584.36 and \$89,267.91.

Bitcoin (BTC) Resistance and Support Levels

The chart given below elucidates the possible resistance and support levels of Bitcoin (BTC) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Bitcoin (BTC) for 2025.

Indicator	Purpose	Reading	Inference
50-Day Moving Average (50MA)	Nature of the current trend by comparing the average price over 50 days	50 MA = \$99,776.36	Price = \$108,421.87 (50MA < Price) Bullish/Uptrend
Relative Strength Index (RSI)	Magnitude of price change; Analyzing oversold & overbought conditions	67.40	<30 = Oversold 50-70 = Neutral >70 = Overbought
Relative Volume (RVOL)	Asset’s trading volume in relation to its recent average volumes	Above cutoff line	Strong Volume

Bitcoin (BTC) Price Prediction 2025

“RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (BTC) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Bitcoin (BTC) market in 2025.

Indicator	Purpose	Reading	Inference
Average Directional Index (ADX)	Strength of the trend momentum	31.61	Very Strong Trend
Relative Volatility Index (RVI)	Volatility over a specific period	77.24	<50 = Low >50 = High

High Volatility | Comparison of BTC with ETH Let us now compare the price movements of Bitcoin (BTC) with that of Ethereum (ETH). From the above chart, we can interpret that the price action of BTC and ETH are seen to exhibit similar trajectories.

Bitcoin (BTC) Price Prediction 2026, 2027 – 2030

With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Bitcoin (BTC) between 2026, 2027, 2028, 2029, and 2030.

Year	Bullish Price	Bearish Price
Bitcoin (BTC) Price Prediction 2026	\$154,000	\$50,050
Bitcoin (BTC) Price Prediction 2027	\$175,130	\$61,960
Bitcoin (BTC) Price Prediction 2028	\$200,000	\$62,251
Bitcoin (BTC) Price Prediction 2029	\$230,600	\$70,700
Bitcoin (BTC) Price Prediction 2030	\$250,600	\$92,000

Conclusion

In conclusion, the bullish Bitcoin (BTC) price prediction for 2025 is \$133,148.56. Comparatively, if unfavorable sentiment is triggered, the bearish Bitcoin (BTC) price prediction for 2025 is \$75,949.30. If the market momentum and investors’ sentiment positively elevate, then Bitcoin (BTC) might hit \$150,000. Furthermore, with future upgrades and advancements in the Bitcoin ecosystem, BTC might surpass its current all-time high (ATH) of \$109,114.88 and mark its new ATH.

FAQ

- What is Bitcoin (BTC)? BTC is the world’s largest cryptocurrency built on the peer-to-peer blockchain network Bitcoin. It was launched in 2009.
- Where can you buy Bitcoin (BTC)? Traders can trade Bitcoin (BTC) on almost all crypto exchanges or virtual asset trading platforms.
- Will Bitcoin (BTC) record a new ATH soon? With the ongoing upgrades within the Bitcoin ecosystem and positive regulatory moves, Bitcoin (BTC) has a high possibility of marking its new ATH soon.
- What is the current all-time high (ATH) of Bitcoin (BTC)? Bitcoin (BTC) hit its current all-time high (ATH) of \$109,114.88 on Jan 20, 2025.
- What is the lowest price of Bitcoin (BTC)? According to CoinMarketCap, BTC hit its all-time low (ATL) of \$0.04865 on July 15, 2010.
- Will Bitcoin (BTC) hit \$150,000? If Bitcoin (BTC) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$150,000 soon.
- What will be the Bitcoin (BTC) price by 2026? Bitcoin (BTC) price might reach \$154,000 by 2026.
- What will be the Bitcoin (BTC) price by 2027? Bitcoin (BTC) price might reach \$175,130 by 2027.
- What will be the Bitcoin (BTC) price by 2028? Bitcoin (BTC) price might reach \$200,000 by 2028.
- What will be the Bitcoin (BTC) price by 2029? Bitcoin (BTC) price might reach \$230,600 by 2029.

The crypto market has witnessed monumental changes over the last decade, with Bitcoin, Ethereum, and Shiba Inu leaving indelible marks on investors’ wealth. Bitcoin redefined digital currency, Ethereum opened the doors for smart contracts, and Shiba Inu capitalized on the meme coin frenzy. As the market evolves, focus is shifting to emerging tokens like PEPE, HYPE, and RXS. PEPE Coin and Its Rising Influence PEPE coin continues to grab attention, even challenging Shiba Inu’s dominance in the meme coin segment. This token has seen a dramatic rebound as Bitcoin surged, with PEPE recovering from lows to a notable price of \$0.00001716. A symmetrical triangle pattern forming on its chart hints at

potential gains, supported by a \$7.2 billion market cap. Analysts believe a 75% price rise could position PEPE above Shiba Inu. Market momentum for PEPE remains strong, fueled by Ethereum's anticipated rally. Investors remain optimistic about PEPE's ability to leverage a bullish market phase. If Ethereum hits its predicted resistance of \$5,000, PEPE could capitalize on increased liquidity and achieve record highs, further narrowing the gap with SHIB. Hyperliquid (HYPE) and the Potential for Big Gains Hyperliquid (HYPE), despite recent fluctuations, stands out as a token with significant upside potential. Trading within a descending channel, Hyperliquid (HYPE) shows patterns that suggest accumulation by investors awaiting a breakout. Currently trading at \$21.59, a historical support zone, the Hyperliquid (HYPE) price could rebound by 65.44%, potentially hitting \$35.7 if market conditions favor upward momentum. The technical indicators present a mixed outlook, with bearish signs like Parabolic SAR dots above current Hyperliquid (HYPE) prices. However, HYPE's resilience at its current support level offers hope for a rebound. If the Hyperliquid (HYPE) price dips further to \$17.30, this support may serve as a springboard for a dramatic 105.97% rise, attracting traders seeking high-risk, high-reward opportunities. **Rexas Finance Revolutionizes Real-World Asset Tokenization** Rexas Finance (RXS) represents a significant leap in bridging real-world assets with blockchain technology. It enables investors to tokenize assets like real estate and gold, making them accessible globally with just one click. Whether purchasing fractional ownership or full property rights, Rexas Finance removes barriers for global investors. For instance, an investor in Asia can own a portion of a restaurant in Europe, earning passive income seamlessly. Through its token builder, Rexas Finance allows users to tokenize their assets with ease. The platform's launchpad helps creators raise funds efficiently for their tokens, fostering an ecosystem that supports innovation and liquidity. RXS's Quickmint Bot and GenAI tools simplify blockchain integration for traditional industries, while the AI Shield enhances security. These features are pivotal in eliminating the disconnect between blockchain and real-world assets. As an ERC-20 token with a total supply of 1 billion, RXS is structured for sustainable growth. Key allocations include a 42.5% presale share, which has already raised over \$40.7 million, alongside a staking pool accounting for 22.5%. Marketing, team, and treasury allocations ensure long-term project development. Notably, Rexas opted for a public presale instead of VC funding, allowing retail investors to join this revolution early. The presale has been a success, with stages 1-10 selling out rapidly, raising \$33.1 million. Currently in stage 11, RXS is priced at \$0.175, reflecting a sixfold increase from its initial price of \$0.03. Experts predict RXS could reach double-digit values by 2025, potentially delivering over 150x returns from current levels. Rexas Finance has also launched its \$1 million giveaway, offering 20 winners \$50,000 each. By completing tasks and referring friends, participants can increase their chances of winning. Furthermore, RXS is listed on CoinMarketCap and CoinGecko, enhancing visibility and credibility among the 100 million monthly visitors these platforms attract. **Conclusion** Bitcoin, Ethereum, and Shiba Inu have built a legacy of wealth generation in the crypto market. However, the spotlight is shifting to PEPE, HYPE, and Rexas Finance (RXS). PEPE seeks to challenge Shiba Inu, HYPE shows potential for significant rallies, and RXS drives real-world asset tokenization to new heights. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin sets a new all-time high of \$109,114.88 before dropping below \$108K. - Trump's pro-crypto policies drive market optimism and institutional demand. Bitcoin reached a new all-time high of \$109,114.88 on Jan. 20. It briefly surpassed \$109,000 before retreating below \$108,000 within minutes. At 06:55 am UTC, BTC hit \$109,036, breaking the previous record of \$108,000 from December 2024. The rally comes hours before Donald Trump's inauguration as the 47th U.S. President at 4:00 pm UTC. His presidency has driven optimism in crypto markets. Bitcoin crossed \$100,000 for the first time in early December after his election victory. Trump's plans for a Bitcoin reserve and crypto deregulation continue to fuel bullish sentiment. Currently, Bitcoin trades at \$108,900.35, up 3.52% in 24 hours. The market cap has risen to \$2.15 trillion, a 3.43% increase. Daily trading volume surged by 108.72%, reaching \$104.38 billion. Bitcoin ETFs added \$974 million to BTC reserves yesterday, signaling robust institutional demand. **What's Next for BTC?** Bitcoin's support sits at \$94,979, while the nearest resistance lies at \$109,500. A break above this resistance could push BTC toward \$115,000. Conversely, dropping below support may lead to a dip toward \$90,000. The RSI stands at 64.55, indicating slightly overbought conditions but room for further upward movement. The RSI average of 63.48 supports the ongoing bullish momentum. If RSI surpasses 70, Bitcoin could enter an overbought zone, signaling potential consolidation. The moving averages confirm a bullish outlook. The 9-period MA (\$104,583.19) is trending above the 21-period MA (\$103,752.38), forming a golden crossover. This indicates the continuation of an upward trend. Short-term moving averages also suggest sustained buying interest. The Chaikin Money Flow (CMF) shows strong capital inflows, reflecting heightened buying activity. If maintained, a positive CMF trend supports further price gains. Bitcoin's price is above the 50-day and 200-day moving averages, confirming a long-term bullish trend. The moving average convergence suggests increasing momentum, reducing the likelihood of major pullbacks in the short term. If resistance at \$109,500 breaks, BTC could extend gains toward \$115,000 and higher. However, failure to hold support at \$94,979 could trigger a correction, testing the \$90,000 level. Traders are monitoring these levels closely for the next move. With Trump's pro-crypto stance and rising institutional interest, Bitcoin's bullish trajectory remains strong. Investors expect increased volatility and potential further gains as crypto markets react to new U.S. leadership.

- Switzerland crypto advocates propose Bitcoin reserve to SNB portfolio, alongside gold, dollar, and euro. - The crypto campaigners started collecting 100,000 signatures to push SNB to adopt Bitcoin reserve. Switzerland has always been on the frontline in terms of crypto and blockchain adoption. The
