Matic Network, presently Polygon, a definitive structure targeting further developing interoperability between the Ethereum blockchain and compatible networks. It has as of late seen a critical expansion in rush hour gridlock. Recommended for You

Celebrities bringing out and barging themselves on their non-fungible tokens (NFT) is not so new for the industry. And so, adding on to the line is Katy Perry, looking forward to launching a line of NFTs

upon her show “Play” in Las Vegas. Theta Labs will be the blockchain developer and platform provider for this. Katy Perry’s NFTs The American singer and songwriter Katy Perry needs no introduction though. Celebrities coming into the NFT market is nothing new. It has been going on for a while ever since the introduction of the NFTs. Likewise, Katy Perry joins the line too. Katy Perry will be releasing her NFTs on her much-awaited show, the “Play” residency. This “Play” residency is sought to be a tour all over Las Vegas consisting of 16 shows. The tour is said to start by this year’s end by December 2021. Upon all this, Katy Perry will be working together with Theta Labs, a leading decentralized video platform that works on its own developed blockchain. Theta Labs will be accountable for all attributes for the creation of the NFTs, their trading, and as the blockchain developer and provider. In spite of this alliance, it’s rumored that Katy Perry will be also soon owning a significant stake of Theta Labs. This contradicts a win-win combination agreement by both. Theta will be accountable for Katy Perry’s NFTs. On the other hand, Katy Perry will back up Theta Labs as a stakeholder. In addition, all this came to lime-light upon Katy Perry’s Tweet on Thursday. The Google cloud and Sony will be indirectly in support of Katy Perry’s NFTs as they are the ones backing up Theta labs. Celebrities and Their NFTs Almost everyone is into the NFT market and industry these days. With the foresee of rapid growth and finance through the NFTs, celebrities have been throwing themselves upon it. Celebrities like actress Mila Kunis recently announced her NFTs in form through an animated series called “Stoner Cats”. Also, the famous rapper Jay-Z already brought out NFTs in form of tokens for his very first debut album. In addition, many more like, Snoop Dogg, Paris Hilton, Ellen DeGeneres, and also Twitter CEO Jack Dorsey all are into NFTs. Moreover, prominent motorhead firms like McLaren, Ford are also into NFTs. Football spikes like Juventus F.C, the DFB, etc are also into NFTs, despite looking for ways to make money during the pandemic situation. Recommended for you

Almost the entire banking sector and credit unions suffered miserably ever since the cryptocurrency industry spiked. Now, the miserable fate reverses back to the banks and credit unions as 650 banks and more credit unions offer the purchase of Bitcoin (BTC) through them. NYDIG and NCR’s Efforts The New York Digital Investment Group (NYDIG) is one of the most prominent leaders for technology and further financial services, all solely dedicated only to Bitcoin (BTC). On the other hand, the Atlanta-based American software and technology services provider firm the National Cash Register Corporation (NCR) is into various attributes from retailing, kiosks, retailers, restaurants, etc. Both these entities have strived hard together and have made history together. The NYDIG and NCR have now made it possible to purchase Bitcoin (BTC) through 650 banks across the nation. In addition, numerous credit unions are included for these BTC purchases. On the contrary, the cryptocurrency exchanges which have thrived off the success of the industry will now face huge negative impacts and losses, as the banks and credit unions take over their efforts. The NCR will be responsible for building mobile applications through which BTC purchases through banks and credit unions by the clients could be traded upon efficiently. Also, the NYDIG will be accountable for the custody of the holdings through these banks and credit unions. Epic Heights of NCR and Impacts on Exchanges In spite of this, it’s evident that the efforts of NYDIG and NCR together will completely abolish the cryptocurrency exchanges throughout. All the major functions offered by the crypto exchanges will now be taken over by NYDIG and NCR together. With a history of more than 135 years, NCR is focused on its goal of providing BTC services to nearly more than 24 million customers. Moreover, the NCR evidently increased its stock value by almost 238%, owing to its extreme fidelity throughout the Covid-19 pandemic. In addition, NCR has also partnered with Flexa, a cryptocurrency payment firm. This is to enable acceptance of various cryptocurrencies like BTC, Ethereum (ETH), Dogecoin (DOGE), Litecoin (LTC), and much more for more than 650 shops, restaurants, and retail units across the nation. Michael Edward Novogratz is an ex-hedge funds manager, formerly of the investment firm Fortress Investment Group. He is the CEO of Galaxy Investment Partners, which center’s around cryptographic money like Bitcoin and Ethereum. As significant miners are going out of China consistently after the country’s crackdown on Bitcoin (BTC), Galaxy Digital CEO Mike Novogratz has described different specialists in seeing the movement out of China as a positive turn of events. Novogratz clarified on Bloomberg that regardless of China’s endeavor to sabotage Bitcoin “like forbidding mining, restricting leverage, and in any event, prohibiting Bitcoin in certain spots” the first digital currency is as yet perfectly healthy. The most recent few weeks, where the crypto market experienced high instability with abrupt value crashes in all cases, was an incredibly effective test for the crypto environment overall, as per Novogratz. He further added “we didn’t have the plunge protection team. We didn’t have lawsuits. The system worked how it was supposed to work. It is a very robust system that has been built in a small amount of time.” Crypto Ecosystem Novogratz likewise recorded more recent additions to the crypto biological system, as decentralized finance and non-fungible tokens, before finishing up. Talking on the general impression of the crypto biological system, Novogratz singled out Bitcoin as “it cut out its path as something which has made its way and calling it as digital gold. He anticipated Bitcoin to be the digital form of gold for the next 3,000 years. Notwithstanding China’s undermining, Bitcoin exists and stands strong from various perspectives, Galaxy Digital’s CEO said. Recommended for you

In Marlin POND Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about POND to analyze the future movement of the cryptocurrency. POND is an open protocol that provides a high-programmable network infrastructure for DeFi and Web 3. Marlin network nodes, called Metanodes, operate the MarlinVM, which provides developers with a virtual router interface to implement custom coverage and perform edge computing. It aims to fulfill the promise of a

decentralized network, where the performance of applications supported by the blockchain is indistinguishable for users accustomed to Web 2.0 in terms of performance. Marlin POND Current Market Status According to CoinGecko, the Marlin POND price is trading at \$0.06 with a 24-hour trading volume of \$4,834,763, at the time of writing. However, POND has decreased by 2.4% in the last 24 hours. In addition, POND has a circulating supply of 774,908,425 POND. Currently, POND trades in Binance, Huobi Global, HitBTC, Gate.io, and Hoo. Marlin POND Technical Analysis 2021 Marlin (POND) holds the 408th position on CoinGecko right now. The recent development and upgrades might push Marlin (POND) to reach new heights. Now, let's deep dive into the Marlin POND technical analysis 2021. The daily time frame chart of Marlin(POND) as shown below. The above chart forms the "Lower High and Lower Low pattern". It is a technical pattern and considered a continuation pattern. This is similar to the higher high/higher low pattern, except that there is a downward trend in the opposite direction. POND trades in a range of \$0.069. If the price breaks the trend line support level of \$0.042 then it will lead to a further drop up to the \$0.026 level. If the pattern continues to the top side, then it will reach the \$0.31 level soon. Marlin (POND) RSI The below chart shows the relative strength index (RSI) of POND. As shown in the below chart, RSI remains at 38. This shows that POND's price is in a nearly oversold state. However, this indicates a major price reversal may occur in the next few days. So, traders need to trade carefully. Marlin (POND) RVOL The below chart shows the Relative Volume (RVOL) of POND. It is an indicator that tells the trader how the current trading volume compares with the previous trading volume over a period of time. Notably, in Mid May, it is found that the RVOL of POND observed is stronger. From the last week of May till at the time of writing, the RVOL of POND stays below the cutoff line which indicates the weaker participants in the current trend. Marlin (POND) MA POND's Moving Average (MA) is shown in the chart below. It is a part of technical analysis that helps traders to find trends. In the 50 MA (short-term), the price of the POND is in a bearish state, and still, it has not broken the 200 MA. Once it breaks the 200 MA level of POND, it completely goes to a bearish state. Currently, the price of POND is trading near to the 200 MA level so we can expect some reversal at these points. Marlin (POND) Price Comparison With Bitcoin The below chart shows the price comparison between POND and BTC. The trend of the BTC and POND is moving at the same level as the trend. Conclusion With the ongoing developments and upgrades that are taking place within the POND platform. Marlin has a fantastic future ahead in this crypto market. However, it is possible to see POND reaching new heights. Bullish POND price prediction 2021 is \$0.35. As said above, it may reach great heights, however reaching \$0.5, if investors have decided that Marlin POND is a good investment in 2021. FAQ POND is a high-performance network infrastructure for modern decentralized networks. Its native coin is Marlin. POND is listed on many cryptocurrency exchanges that include Binance, Huobi Global, HitBTC, Gate.io, and Hoo. It is available for trading against crypto fiat coins, stablecoins, and other cryptocurrencies. With the ongoing developments and upgrades within the POND platform, it has the high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. New York billionaire Steve Cohen's Hedge fund Point72 holds \$22B worth of assets. The management is currently ready to hire a "crypto head" as it is ready to jump into the crypto sector. Point72 is the early-stage venture capital strategy funded over \$22 billion under asset management. Thus with a good asset level, the firm decides to hire a "crypto head". This move depicts that Cohen is impending to invest the capital asset into the crypto world. In addition, the founder and investor of Point72 owns the New York Mets Major League Baseball team. Mets owner Steve Cohen is looking to hire a "Head of Crypto" for Point72 "his \$22 billion hedge fund." Boardroom (@boardroom) June 30, 2021 Sources said the directive to make the hire were "reflecting a level of urgency in getting into the market." (h/t @michael_bodley) pic.twitter.com/NJtTV6xww3 Moreover, the action of a multi-strategy hedge fund firm hiring a head for its cryptocurrency division passes a positive signal around Wall Street. Thereby indicating it can be a bullish time for Bitcoin and other digital assets in the market. Notably, in a recent interview in May, Cohen stated that he is fully converted to crypto. More so the firm is examining cryptocurrency investments and exploring opportunities in the blockchain industries. Additionally, he says, "I don't care about bitcoin. I care more about the technology behind the blockchain and how transformational it is and how disruptive it could be. We would be remiss to ignore a now \$2 trillion crypto currency market." However, a lot of businesses are sharpening interest in digital assets and betting higher in crypto investments. With this hype, Point72 is now investing 3% of the money in digital investments from its traditional hedge funds. Therefore, it clearly shows big institutions and large investors are investing their funds into digital assets. This increases the urge and hype for cryptocurrency and blockchain in the present and for the near future. Thus, Point72 is eyeing cryptocurrency investments and joins the growing number of funds and legacy institutions entering the crypto-ecosystem. Recommended for you

On looking at the history of the cryptocurrency market, it sure has risen profusely over time. Yet at times subject to certain downfalls too. The recent crypto market crash which has prolonged for nearly a month, has brought mostly all the cryptocurrencies down. Now, skeptics are debating whether this is the right time to invest in cryptocurrencies. Can We Invest Now in This Dip? The past year has been one hell of a roller coaster ride for the cryptocurrency industry. Most of the cryptocurrencies reached their highest peaks this year. Despite this, the recent crypto market crash has completely shaken the whole industry. The whole cryptocurrency market has been down for the past whole month, literally plunging all the prices down extremely. Moreover, all into the industry were affected, including the blockchains, the crypto exchanges etc. Furthermore, it's a well-known thing, buying the cryptocurrencies at lower prices and selling them at the time they reach high prices obviously is profitable. Also, one has to be patient about this at times. Not all cryptocurrencies spike up overnight. The best thing with cryptocurrencies is to hold them for a long period of time. This eventually for sure will be profitable as the prices will increase over a long period of time. On the

other hand, quick trade and daily trading are also yet another attribute contributing to profit at a much shorter period. In contrast, this consumes a lot of time and continuous monitoring. Moreover, daily trading can bring one good profit but at the same time, it's highly risky too. One should have enough knowledge on what crypto they are going to invest in and it's advisable to always go for the prominent top ten. They usually have a better reputation. Also, another major aspect is the time period for which you have decided to hold it up. The more time, the greater will be your profit. Best Notable Cryptos Investing upon cryptocurrencies should be one's own decisions. Also, it's advisable to risk it only for the amount you are capable of and not to risk much. At the same time, it's also the best to invest in the top few cryptocurrencies. The top two game players of the crypto industry, Bitcoin (BTC) and Ethereum (ETH) are prominent reliable ones always. This is because of their long-time reputation and moreover their real-world usability in many aspects. Investing in these two and holding them for a longer time period for sure is fruitful. On the other hand, recent coins with much hype like the Dogecoin (DOGE) are not quite advisable. Owing to the fact it's the sudden rise and sudden fall down is extremely speculative. It's better to avoid such standardless cryptocurrencies. Recommended for You

U.S. Senator Cynthia Lummis recommends crypto-friendly retirement plans by turning Bitcoin and other cryptocurrencies as retiral wage for the U.S citizens. Senator Lummis about Crypto Future During the CNBC Financial Advisor Summit held on 29th June, 2021 Senator Cynthia revealed her ideal crypto future. Cynthia opens up saying that she wants to see cryptocurrency, like Bitcoin, become part of a diversified asset allocation. In addition, the senator is more concerned about the future of daily consumers and shares digital assets are a good store of value. Senator Cynthia Lummis: "I encourage people to buy and hold. I encourage them to save #bitcoin for their retirement, for their future." I only have, I think, five bitcoin. " Neil Jacobs @NeilJacobs June 29, 2021 @CynthiaLummis @SenLummis pic.twitter.com/BiDVjXQYh Senator also added, "An employee with a retirement fund æ™d like to see those retirement funds invested in bitcoin and other cryptocurrencies, but I æ™d also like to see individuals be able to use bitcoin and cryptocurrencies of their preference that are safe, that have met the hurdles of anti-money laundering and Bank Secrecy Act.æ™ Moreover, Lummis insisted on the importance of saving money on different assets which can help the people in future. Additionally, the senator also discuss about inflation risks caused by the government on currencies. Hence to maintain a diverse asset allocation she encourages people to buy and invest in bitcoin- a long term investment. Interestingly, Lummis also revealed the count of bitcoin she owns. It is 5 BTC in total and the price of the first bitcoin was \$330 in the year 2013. The Senator is also known as a Bitcoin proponent, as her investment on BTC remains the same even if the price drops to extremes. Therefore, at last Lummis advised the U.S. people saying, I donæ™t want everybody putting all their money in Bitcoin just like I donæ™t want everybody putting it in dollars and putting it under a mattress. - Elon Musk pops up fueling a new meme-coin. - He says that Shiba Inu is named æ™ Flokiæ™. - The value of Floki has surged to 3500% within hours. Elon Musk fuels a new meme-coin named æ™ Flokiæ™, this has been in the trend right now following the tweet of Musk. The dogecoin enthusiast pops up with another meme-currency tweeting from his account this weekend. The tweet says that his Pet Shiba Inu is named æ™ Flokiæ™. \$FLOKI just did a 3500% thanks to this tweet lmao pic.twitter.com/Xse3WUv7Fs æ™ \$SHIBro (@CryptoCanineNFT) June 25, 2021 Following the tweet, the value of Floki skyrockets to 3500% within hours, as it did following the coinæ™s launch. Many investors rushed to purchase the meme-coin within hours of his tweet. As a result, the coinæ™s price skyrockets, increasing its market capitalization. According to Uniswap, the coin currently has a large supply, while the number of coins in circulation is in the trillions. Floki is also not available on any other major cryptocurrency exchanges. About Floki Floki is an unknown currency that gained popularity as a result of Elon Muskæ™s tweet. Floki Inu is a speculative cryptocurrency that only a small number of cryptocurrency users are aware of. It is one of the cryptocurrencies that is gaining attention among users and the value also surged 3500% within hours, following Muskæ™s tweet. Investors can purchase Floki coins on the Uniswap trading platform. Additionally, the trading platform does not enable users to buy Floki with USD or AUD. They can use intermediate coins to purchase Floki. However, since Muskæ™s tweet, the market has seen an increase in the number of fake Floki coins, so investors should research and invest in the original coin. Floki Inu is trading at \$0.00000625 with a trading volume of \$8,884,142, according to Coingecko at the time of writing. Recommended for You

Bitcoin has gone through some bad days, in fact, few bad months since hitting another untouched high this year. The asset, as of late, broke the \$30K resistance level the previous week and tumbled down to \$28K. Before immediately recuperating back up more than \$30K and moving upwards towards \$34K. This is a crucial resistance point for bitcoin. Breaking this could be the start of a bear market. Anticipations are that Bitcoin could go as low as \$10K if the value breaks \$30K. Yet, imagine a scenario in which it never breaks that and stays upwards of \$30K. Then, at that point, Bitcoin could be in for another enormous move that could take the asset as far as possible up to \$100K. Generally, there has consistently been a significant plunge before Bitcoin rallies. The price, for the most part, remains inside a specific range for a while. It is fluctuating somewhat all over. Be that as it may, constantly failing to make any significant development. From that point onward, the resulting movement takes the asset as a rule to another unequalled high. Bitcoin has now gone through 17 days of exchanging inside the \$20K to \$30K territory. While not a high number, it is the first occasion when this has occurred. This implies that there is an air pocket underneath the \$30K line. It clarifies why investors have been engaging to keep the price above \$30K. Price Seems To Most Likely Touch \$100K

Assuming the price can hold this line for the following month, almost certainly, we will see \$100K per bitcoin by year-end. Holding at a critical point implies that there is still confidence on the lookout. Individuals are repurchasing it because they accept that the coin has arrived in a desperate predicament. Also, that may very well be valid. Bitcoin has lost more than half of its all-time high value. A number that usually spells the start of a bear market for a resource. Yet, it has not been down long enough for it to be authoritatively called a bear. As per a Bloomberg report recently, Bitcoin cost will probably hit \$100K in 2021. The Bloomberg Crypto Index asserts that Bitcoin is in a resting bull-cap market, so while it may appear as though it is in a bear market, the coin is simply taking a break before its next convention. The Tesla founder, Elon Musk, waved a positive signal as a response for a proposal to change dogecoin's fee structure. This tweet surged the price of Dogecoin in the market. Elon Musk's support for DOGE Dogecoin (DOGE) developer and Software engineer, Ross Nicoll posted a tweet regarding fee policy change proposal for Dogecoin. As a reply to the tweet, Elon Musk commented "Important to support." Thus it became another strategic tweet for the raise of the DOGE value in the market. Important to support " Elon Musk (@elonmusk) June 28, 2021 Moreover, the reason for the tweet is to reduce the gas fee to 0.01 DOGE. Thus it supports the crypto industry to maintain a competitive edge. The document of the Fee Policy change proposal was submitted by Dogecoin developer Patrick Lodder. In addition to the proposal, he says, "This proposal to all dogecoin stakeholders suggests to reduce average fees 100x for standard transactions on the Dogecoin chain, and bring back a functional (small) free transaction space that incentivizes keeping the network healthy." Furthermore, after Musk's support for the DOGE fee change proposal the value of dogecoin showed an increase in the market. According to CoinMarketCap, the current price of Dogecoin is \$0.265855 USD with a rise of 3.81% at the time of writing. The meme-coin still remains competitive positioning #6 in the market. Earlier to this tweet, Musk initiated a talk about enhancing Dogecoin last month. With respect to the context, he tweeted, ideally, Doge speeds up block time 10X, increases block size 10X & drops fee 100X. Therefore, through Musk's views and ideas, DOGE can remain strong and competitive among all cryptocurrencies. Recommended for You

Asia is emerging as one of the biggest crypto markets in the world. With it being the home to India and China, the most populous countries. It is primed to become the leader in the crypto world. Asia has been the primary market for many cryptos and exchanges. CoinMarketCap, the biggest destination online for crypto prices, in a tweet gave an overview of the top 10 crypto in Asia. While the list may seem simple, however, it is very shocking. Top 10 cryptocurrencies list is as follows: - Xenon Pay II (X2P) - MoonStar (MOONSTAR) - IRON Titanium Token (TITAN) - SHIBA INU (SHIB) - Mozart Finance (MELODY) - Bitcoin (BTC) - Safe Energy (ENERGYX) - Keep Network (KEEP) - SafeMoon (SAFEMOON) - Baby Doge Coin (BabyDoge). Here are last weekâ€™s Top 10 Trending Tokens in Asia ðŸš€ Anyone hodling any of these? #CoinMarketCap #Crypto #Cryptocurrency #Bitcoin #Altcoin #DeFi #Dogecoin #Ethereum #Shibhttps://t.co/pHhPfYiKNb pic.twitter.com/cXrj0gwS7 â€” CoinMarketCap (@CoinMarketCap) June 25, 2021 Rise of The Meme coins While to most this list may not look shocking but it is. Thereâ€™s no Ethereum in the list, nor Cardano or DOT. Most of the top 10 cryptos are memecoins. MoonStar, SHIBA Inu, Safe Moon, Safe Energy, Mozart Finance are all meme tokens with some others as well. The only tokens that are not meme tokens are Bitcoin, Xenon Pay II and Keep Network. It is very shocking to see bitcoin on the 6th number. This may have been due to the price fall since May which has discouraged many investors. Ethereum and other fundamental coins are also not included because of this, in our view. Recommended for you

Robinhood, a prominent trading and stocks exchange firm, now leading in cryptocurrency exchanges too planned to make Initial Public Offering (IPO). Under the sightings of the recent cryptocurrency market trend by SEC, Robinhoodâ€™s IPO plans are halted for now. The Postpone of Robinhood IPO Robinhood Markets Inc is basically an American firm into many sorts of financial services. Itâ€™s headquartered in Menlo Park, California. Robinhood initially was started up on trading and exchanges all based upon stocks. Although started up in the year 2015, it slowly started to indulge in trading and exchange, on a commission-free basis for various cryptocurrencies too. Thereby, entering into the crypto industry for the past few years. In Spite of all the success in its endeavors, Robinhood looked forward to making itself an IPO. Robinhoodâ€™s sole goal is to expand the business through IPO for much betterment. Accordingly, it filed for IPO officially on March 23rd, 2021. Furthermore, the firm was confident of offering its IPO live by this month. However, the U.S Securities and Exchange Commission (SEC) as of now has forced Robinhood to postpone its IPO. The SECâ€™s crucial screening on the companyâ€™s cryptocurrency market business has led them to such a situation. Moreover, the SEC concerns about the recent crypto market crash, still prevailing though. The Crypto market crash now prevailing for nearly more than a month has affected various exchanges profusely. On the contrary, this impacts Robinhoodâ€™s business too, thus forcing SEC to make it wait for a time period. Thus, Robinhoodâ€™s IPO plans are moved over to next month, under the reviews of the SEC. Robinhoodâ€™s Crypto History On tasting the success through exchange and stocks, Robinhood entered into the trade and exchange of cryptocurrencies. Moreover, it restricted itself to the trade of prominent cryptocurrencies, like Bitcoin (BTC), Ethereum (ETH), and Dogecoin (DOGE). Robinhoodâ€™s CEO Vlad Tenev put forth the cryptocurrency attributes and operations will be their major focus for this year. Also, he adds the firm has employed many and has so far made a lot of investments towards its cryptocurrency sector. On the other hand, contradicting the fact of increase from \$1.7 million to \$9.5 million upon its cryptocurrency trading and rise in the number of investors made Robinhood focus on cryptocurrency trading. This spikes to nearly more than six times increase. Despite all the success, the recent cryptocurrency market fall made it all hard for Robinhood too. Moreover, everything started from Elon Muskâ€™s radical gameplays controlling the Dogecoin and Bitcoin (BTC) market since his Saturday Night Live (SNL). Furthermore, his tweets and decisions upon the Bitcoin (BTC) ban for Tesla products worsened the situation for Robinhood. Ever since then, the users of Robinhood have faced many challenges in trading Dogecoin and Bitcoin on its firm. Recommended for you

- Bitcoin price again trades above \$34 k after deep fall - A strong flow of cash into a market in 24 hours. - Creator of Dogecoin invested in Cryptocurrency for the first time. On Wednesday, Bitcoin price recovered slightly. The crypto belongings currently moved above \$34,000 assembling over 10%. After the deep fall below \$29,000, it looks to be heading upwards. The crypto world has observed a strong flow of cash into a market in 24 hours, totaling \$198.91 billion. Moreover, Bitcoin has faced a series of price drops over the previous several days which have sent the cryptocurrency to its lowest point in 2021. This fall is due to the CEO of Tesla, Elon Muskâ€™s concerns about Bitcoinâ€™s carbon footprint. Accordingly, Elon Musk revealed his reservations about the more energy consumption necessary to mine Bitcoin (BTC). Even more, Coinmarketcap specifies that the global crypto market cap is up by nearly 8% in a day. Sudden deep dive that sent bitcoin to lows unexpected in 2021. But the crypto asset has recovered widely \$30,000 and now trading much higher than it was previous Henceforth, the flow has been mirrored by Ethereum (ETH), Cardano (ADA), Dogecoin (DOGE), and other leading cryptocurrencies. More so, the investors tend to believe the latest news, the another \$500million in Bitcoin, invested by MicroStrategy earlier this week. The creator of Dogecoin, Billy Markus, noted that he had invested in the cryptocurrency for the first time in eight years. Accordingly, the founder of Technical Traders Chris Vermeulen stated, â€œIt going to take a while for this damage to resolved on the chart, and eventually it will start another rally and potentially go up and hit 100K, but I do

not think it could happen anytime soon; it could be a year plus. Recommended for you

The ever-increasing hype for the world of cryptocurrency suggests the 7 best altcoins that will make you a billionaire. Although these cryptocurrencies may never reach the same heights as Bitcoin, they are still some of the best altcoins with potential. Now, let's look into the best altcoins that will make you rich by 2022. Here the 7 Best Altcoins Fox Finance (FOX) Fox Finance FOX is also one of the best altcoin and it's Binance Smart Chain auto-staking token that rewards its holders. With a rolling four-year lock, 6% of each transaction is allocated to liquidity, and the remaining 6% is allocated to each stakeholder. Through the advocacy platform FOXES IN ACTION, the platform hopes to create an ecosystem and community of awareness focused on wildlife conservation. FOX is decentralized, which means the market manipulation is impossible, and investors can control their currency and the funds are simply safe. Besides, FOX is listed on Binance, which provides zero-gas fee and swaps are instantaneous. Currently, FOX is trading for \$0.00000001 with the trading volume of \$75,319.74 in the last 24 hours. According to CoinMarketCap, Fox Finance has fallen to 20.46% in a day. So, if the investors are magnificent in investing then they would choose Fox Finance (FOX). As the price of FOX has dropped, there is a good chance of regaining it. If users invest \$10 in FOX today, then it might gain profit. Because, when the price of FOX raises to \$0.5 or \$1 this year, then it would be a huge gain. So, if you feel FOX is a good investment this year then there are many possibilities that you would become a billionaire in 2022. Bafe (BAFE) The Next best altcoin Bafe is a community driven & fair launch DeFi token. Dev burned all team tokens. It has Static Rewards, LP Acquisition, Automatically Burn. The subjectivity of the impermanent loss from staking an LP (liquidity provider) in a farming reward generator is a common misconception with the heavy APY average. Automatic LP is BAFE's secret sauce. The platform has a function that serves as a two-way beneficial implementation for holders. Moreover, every trade on Automatic LP contributes to the automatic generation of liquidity held within PancakeSwap LP. RFI Static Rewards holders earn passive rewards via static reflection while watching their Bafe.io balance growing indefinitely. Safety A step-by-step plan to ensure complete safety. According to CoinMarketcap, the current price of BAFE is beyond \$0.00000001 with 24-hour trading volume of \$46,637.65. Besides, BAFE is down 32.76% in the last 24 hours. As the price of BAFE is at its low, investors can invest a small amount in BAFE. When the price even rises slightly, it might result in huge profit. Moreover, BAFE has all the possibilities to rise this year. So, if the investors think that BAFE is a good investment, then there is a high chance of smelling massive profit in 2022. Carillonium Finance (CAROM) Carillonium Finance (CAROM) is a community-driven token on the Binance smart chain that aims to be more deflationary. Carillonium levies a 7% transaction tax, with 5% going to liquidity and the remaining 2% going to CAROM holders. Carom stakers can also receive BUSD as a reward from Carillonium. Additionally, its wallet is known as Carillonium Finance wallet. It is a digital application, in which you can store/hold your Carillonium finance without hesitation because it is very safe. Technically, it's similar to a bank. After the currency is credited in the bank, the application displays the amount you have credited to the account. The current trading price of CAROM is less than \$0.000000000004 with 24-hour trading volume of \$821.53, according to CoinGecko. Besides, Carillonium finance is down 15.18% in the last 24 hours. If investors consider this token as a good investment then there is a chance that the trend may reverse and result in profit. The token has a high probability of reaching a new ATH this year. So, if investors are confident that this token will generate a profit, they may have a chance to become a billionaire by 2022. FREE COIN (FREE) The FREE COIN (FREE) is the perfect coin for starters in crypto. The FREE COIN includes a low introductory price so real growth potential, a friendly community to support traders, and a wide range of Exchanges and wallets. SHIB is a new cryptocurrency that has already taken over some Dogecoin markets. The 50% of its token supply is locked on Uniswap and the other 50% was burned to Vitalik Buterin. He burned 90% of his SHIB coin, burning tokens increases scarcity and as a result, the price is likely to go up. You can purchase Ethereum (ETH) and convert it into SHIB. As of the time of writing this Shiba Inu (SHIB) price analysis, SHIB trades at \$0.000006 with a 24-hour trading volume of \$725,565,155. The price of SHIB has increased by 7.79% in the last 24 hours. SHIB is the "DOGECOIN KILLER" and it will be listed on their own decentralized exchange ShibSwap. Current SHIBA INU is trading on Binance, Huobi Global, OKEx, FTX, and Hotcoin Global. Also Read: Predictions Speculate Shiba Inu (SHIB) To Reach \$1 SafeMoon (SAFEMOON) SafeMoon (SAFEMOON) is one of the latest cryptocurrencies, which hit the market in 2021. SafeMoon is a community-driven approach to decentralized financial systems. SafeMoon has three functions that take place during each trade: reflection, LP acquisition, and burn. As of the time of writing this SafeMoon (SAFEMOON) price analysis, SAFEMOON trades at \$0.000003 with a 24-hour trading volume of \$8,224,526. The price of SAFEMOON has increased by 7.99% in the last 24 hours. SafeMoon plans to build a Non-fungible token (NFT) exchange. The creator of SafeMoon says they want to fix some of the problems like price volatility which are common in other cryptocurrencies. If the traders sell SafeMoon, they must pay a 10% fee. So the people are encouraged to stick with SafeMoon rather than feeling pressured to sell. The developers of SafeMoon manually burn tokens regularly. SafeMoon can be purchased on PancakeSwap and Bitmart. Zeppelin DAO (ZEP) The final best altcoin from the list is Zeppelin DAO (ZEP) is a next-generation auto yield community token. The token develops the backbone of the Zeppelin Ecosystem which grows to include extensive Community Governance and an IDO platform. Liquidity is auto-locked during launch. As of the time of writing this Zeppelin DAO (ZEP) price analysis, ZEP trades at \$0.00000001 with a 24-hour trading volume of \$62,028. The price of ZEP has increased by 12.20% in the last 24

hours. ZEP has been listed on several crypto exchanges. Moreover, like other main cryptos, ZEP cannot be directly purchased with traditional money. We can easily buy ZEP coin by first buying Bitcoin from any popular exchanges and transfer to the exchange in which ZEP can trade. Currently, ZEP is trading on PanCakeSwap. If the investors think that ZEP is a good investment, then there will high chance to become a billionaire Disclaimer: The opinion expressed in this chart solely author's. It does not interpreted as investment advice. Recommended Articles

The best crypto market referral website, CoinMarketCap will soon be announcing and ranking countries based on those which have made cryptocurrency as their legal tender. Binance's CEO Changpeng Zhao, also known as 'CZ', has put forth this officially through a tweet of his. CZ Binance, tweeted today stating CoinMarketCap will soon start listing countries that have crypto legalised tender. In addition, he gave a thumbs up, next to this statement of his. He depicts that such listing is obviously a much welcomed propaganda though. I heard @CoinMarketCap will start to rank countries that accept #crypto as legal tender. ' CZ ' Binance (@cz_binance) June 23, 2021 It's an evident fact, on CZ tweeting on CoinMarketCap. Moreover, who else would come forth to publicize an attribute coming from his very own firm. Yes, not much known by many, CZ has acquired CoinMarketCap in 2020 along with the cryptocurrency card payment platform, Swipe.io. Moreover, being an avid business executive, he strongly supports Bitcoin (BTC). In addition, CZ many times has supported the legal tender of cryptocurrency. Accordingly, he views a true potential growth for those countries which have cryptocurrency as their legal tender. Crypto Legal Tender All started with the announcement from the CEO of Zap solutions, Jack Mallers, at the Bitcoin 2021 conference in Miami. Mallers put forth El-Salvador will be making Bitcoin (BTC) as its legal tender. In addition, soon enough, the President of El-Salvador too stated the passing of the bill for this. Accordingly, El-Salvador became the first country in the world to legalize cryptocurrency (Bitcoin) as its legal tender. The bill got through, and Bitcoin (BTC) was made the legal tender for El-Salvador on June 8th. Speculations rose, debatably on all basis. However, CZ welcomed this through a tweet by himself. Following this, the second in line might be Paraguay. They too have proclaimed their bid to make Bitcoin (BTC) as their legal tender by July 2021. Paraguay lawmaker, Carlitos Rejala tweeted upon this a few days back. Recommended for You

Fireblocks is facing a legal suit for failing to backup the private keys to the pockets. The lost pocket contained 38,178 ETH, estimated to be greater than \$72 million at the time. Fireblocks Faces a Lawsuit The Crypto-custody provider, Fireblocks is an all-in-one platform to store, transfer, and issue digital assets across the entire ecosystem. On June 22nd, StakeHound, a crypto staking provider, sued for lost access to more than \$72 million worth ETH. Moreover, StakeHound claims a Fireblocks employee apparently failed to protect the private keys of the wallet. It then deleted and prevented access to its crypto assets. In regards, StakeHound raised a petition in the Tel Aviv District Courtroom on June 22nd for this issue. Further, StakeHound boldly claimed stating, 'The worker didn't shield or again up the defendant's non-public keys wanted to open the related digital pockets, and for no obvious motive, the keys have been deleted, stopping the plaintiff's digital property from being accessed.' The firm adds, it can be a human error committed by a worker of the defendants, who labored in an unsuitable work atmosphere. The court revealed the judgement as Fireblocks workers failed to guard or backup the private keys to the pockets. Which then deleted and prevented StakeHound from accessing its property. Fireblocks Response With all the controversies, the Israeli media Fireblocks denied the negligence and reported against the case. As per the rule, the client's private keys must be stored outside Fireblocks platform. Moreover, the customer did not store the backup with a third-party service provider per our company's guidelines. Besides, Fireblocks is working towards resolving the issue by initiating and involving all parties. To avoid such scenarios, in December 2020, Fireblocks requested StakeHound to create a set of 'BLS key shares' associated with an ETH 2.0 staking mission. Finally, Fireblocks clarifies, no production keys ever affected, and all Fireblocks customers funds are safe, and customer keys are backed up and recoverable. Recommended for you

Founder of Basic Element a Russian industrial Group, with businesses such as Aluminum, Construction and Energy Billionaire Oleg Deripaska came out gun blazing at the Central Bank. According to Forbes is worth around \$4.7 billion. Citing that even El Salvador realises the potential of crypto and the Russian bank is halting progress. El Salvador this month legalised bitcoin and cryptocurrency. The move will help the devastated economy of El Salvador. Oleg said about this: 'Even El Salvador) realised the need for digital currencies and took a simple path ' recognised bitcoin as a means of payment.' Oleg Deripaska said all this on his Telegram Channel this week. His frustration was evident from his words saying the Russian Banking system has walls of superstition. In his view development in fin-tech will lead to the breaking of the wall. Launch of Digital Ruble: The Russian Federation has been preparing for the launch of the digital Ruble for a while now. Just last month it was reported that the bank has finally been able to build a prototype. The prototype will get its launch this year probably. This shows a little leniency of the country towards crypto and digital assets. The Foreign minister of Russia also said last week about crypto: The time will inevitably come when cryptocurrencies will play a very significant role, occupy a very significant segment in international settlements. The Crypto landscape in Russia is changing rapidly and Deripaska's criticism might bore some fruit in the future. Russia is progressing in the field of Crypto however we really need to understand that the Russian government is not the biggest fan of autonomy and decentralization. Recommended for you

In Kusama KSM Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about KSM to analyze the future movement of the cryptocurrency. Kusama is a scalable dedicated blockchain network, built using a substrate and almost the same code base as Polkadot. The

network is an experimental development environment for teams that want to move forward and innovate quickly in Kusama, or are ready to deploy in Polkadot. Kusama was founded in 2019 by Gavin Wood, founder of Polkadot, co-founder, and former CTO of Ethereum. Kusama (KSM) Current Market Status According to CoinGecko, the KSM price is trading at \$298 with a 24-hour trading volume of \$237,096,342, at the time of writing. However, KSM has decreased by 3.8% in the last 24 hours. In addition, KSM has a circulating supply of 8,980,098 KSM. Currently, KSM trades in Binance, OKEx, Huobi Global, CoinTiger, and FTX. Kusama KSM Technical Analysis 2021 Kusama (KSM) holds the 40th position on CoinGecko right now. The recent development and upgrades might push Kusama (KSM) to reach new heights. Now, let's deep dive into the Kusama KSM technical analysis 2021. The weekly time frame chart of Kusama (KSM) is shown below. The above chart shows the formation of the "Ascending Channel Trend pattern". This pattern is the price action contained between upward sloping parallel lines. KSM trades in a range of \$313. If the price breaks the trend line support level of \$270 then it will lead to a further drop up to the \$180 Level. If the pattern continues to the top side, then it will reach the \$630 level soon. Kusama (KSM) RSI The below chart shows the relative strength index (RSI) of KSM. As shown in the above chart, RSI remains at 37. This shows that KSM's price is in a nearly oversold state. However, this indicates a major price reversal may occur in the next few days. So, traders need to trade carefully. Kusama (KSM) RVOL The below chart shows the Relative Volume (RVOL) of KSM. Generally, Relative trading volume is an indicator that tells the trader how the current trading volume compares with the previous trading volume over a period of time. Notably, in Mid May, it is found that the RVOL observed is stronger. From the last week of May till at the time of writing, the RVOL stays below the cutoff line which indicates the weaker participants in the current trend. Kusama (KSM) MA KSM's Moving Average (MA) is shown in the chart below. MA is also part of technical analysis that helps traders to find trends. In the 50 MA (Short-term), the price of the KSM is in a bearish state, and still, it has not broken the 200 MA. Once it breaks the 200 MA level, it completely goes to a bearish state. Currently, the price of KSM is trading near to the 200 MA level so we can expect some reversal at these points. Kusama KSM Price Comparison With Bitcoin The below chart shows the price comparison between KSM and BTC. The trend of the BTC and KSM is moving at the same level as the trend. Conclusion With the ongoing developments and upgrades that are taking place within the KSM platform. The cryptocurrency KSM has a fantastic future ahead in this crypto market. However, it is possible to see KSM reaching new heights. Bullish KSM price prediction 2021 is \$628. As said above, it may reach great heights, however reaching \$1719, if investors have decided that KSM is a good investment in 2021. FAQ Kusama is Polkadot's public pre-production environment, allowing any developer to experiment and test new blockchains or applications before they are released on the network. Its native coin is Kusama. KSM is listed on many cryptocurrency exchanges that include Binance, OKEx, Huobi Global, CoinTiger, and FTX. It is available for trading against crypto fiat coins, stablecoins, and other cryptocurrencies. With the ongoing developments and upgrades within the KSM platform, it has the high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. - A general assumption that an increase in the US Dollar impacts Bitcoin's fall. - The influencers and analysts have examined the inverse correlation. - Huobi has temporarily halted futures trading for Chinese users. According to the report, the analysts and influencers have been examining the demographics of the US Dollar and Bitcoin (BTC). There is a general assumption that the increase in value of the US dollar has a negative impact on Bitcoin. For the past few months, analysts have been examining the issue regarding the inverse correlation. So I guess we're not all obsessed with \$DXY anymore? Because it's looking super bullish & had provided an almost perfect inverse correlation for over a year. Either way we're about to find out if \$BTC has matured to the point of being uncorrelated. ðŸ†¸ðŸ†¸, ðŸŒ¸ðŸŒ¸~i, #Banks #Brrrr #Bitcoin pic.twitter.com/gequzmr6p2 â€” Alex Saunders ðŸ†¸ðŸ†¸ðŸŒ¸~ðŸŒ¸~ (@AlexSaundersAU) February 2, 2021 Many influencers predict that if the value of DXY falls then it would trigger the value of BTC to surge. What could be the trigger of #Bitcoin top? A #DXY bottom! And we may just have that around the corner! https://t.co/1Cy03QuMgb pic.twitter.com/zKU9CwC72 â€” Henrik Zeberg (@HenrikZeberg) January 2, 2021 For the past few months, it is visible that the correlation has inverted between Bitcoin and the US Dollar index. Correlation timeframe However, a surge in the value of the US Dollar results against the major global cryptocurrency. Moreover, Bitcoin price fell to 8% low on June 8, strengthening the inverse correlation hypothesis. The demographic of BTC (orange) and DXY (blue) depicts correlation statistics. Since mid-March, the correlation indicator has been above 50%, indicating that DXY and BTC have generally followed similar trends. Significantly, analysts prefer to use an extended timeframe of the past data to understand the nature of DXY and Bitcoin. In this timeframe, it is noticeable that both the markers have been relatively down since last May. Consequently, the DXY index surged while Bitcoin stuck to the same flat range in June. Many factors could have contributed to Bitcoin's failure to maintain \$40,000 support on June 16 and the subsequent price drop. Furthermore, a meeting led by Liu He, Vice Premier of China, and all members of the all-powerful eight-person politburo on May 24 regarding the control of financial risks. Besides, Huobi has temporarily halted futures trading for Chinese users. The discussion includes the crackdown on Bitcoin Mining and trading activities. As a result, US regulation, as well as the current Chinese crackdown on bitcoin mining and trading activities, appear to be critical to bitcoin's recent poor performance. When those issues are no longer a threat, the gap created by DXY's positive move may close. Recommended for you

The non-fungible tokens (NFT) have been a huge hit which apparently faced quite a few downfalls here and there. Yet, the market at present is brimming to the tip. Various forecasts suggest hellish contradiction upon both yin and yan on the future of NFTs. The NFT at Present The Non-fungible tokens (NFT), have been into play ever since the introduction of blockchain technology. The very first NFT dates back to the year 2012. Although being around for nearly a decade, they became erratically famous

between 2013 to 2014. Thus, since then the whole world focuses on creating new NFTs and trading them, all next to Bitcoin (BTC) itself. Now, the year 2021, and still the spikes and hype are high and on the rise for the NFT market. The recent NFT news being, Tom Brady, the Superbowl champion builds his own NFT including a company for it. Besides, the latest CryptoPunks, the Saturday Night Live stagger upon NFTs, enthusiasts like Mark Cuban are running behind cases on NFTs. Famous movie stars like Lindsay Lohan, prominent automotive industry tycoons like Ford, McLaren, etc, are all into the production of NFTs, with a future seek. In addition, the latest NFT trending news of prominent production houses like Fox Entertainment and Bento Box Entertainment have now entered into the NFT market with an investment of a whopping \$100 million. All seems extravagant for the NFT market, but it has faced its fair share of bears too. Basically, depending and entirely based upon blockchain and its algorithms. In addition, as these blockchains get revamped quite often, new technologies etc, with its development growth, so does the NFT together. Difference Between NFT and BTC The NFTs are for sure revolutionary and game changing prospects for the digital market. NFTs and cryptos like Bitcoin (BTC) are not the same. Bitcoin (BTC) and other cryptocurrencies are of a stored value subjected to either rise or fall upon market trends and trade volumes. They are entirely on the blockchain networks like Ethereum, Ethereum 2.0, Polkadot, and Cardano, etc. On the other hand, the non-fungible tokens (NFT) are usually tokens of value on the Ethereum blockchain network. These NFTs are nothing but digital representations of an asset, place or thing, or any subject, depicting complete ownership over the time. The Future of NFTs Skeptics reveal that the whole world is into the NFT craze. Each and every personality backing up and coming up with their own NFTs. Indeed, this comprehends a growing bubble with the same craze. Once this craze calms down or the bubble bursts out, the NFT market will become a question mark upon survivability. Furthermore, once the craze settles, people will start taking the digital certificates ownerships as nothing but for granted. Also, with value lost, there's no use in investing millions for an image which could be saved instantly just by click of the right mouse button. Yet, taking the brightside, there are higher possibilities for the NFTs to play a major role upon daily use than cryptocurrencies. Just imagine, real estate works and paper works done in a second by just transferring the NFT on ERC721 from the landlord to the customer. In addition, think about the role it could play in license records and vehicle papers, making everything transparent, easy, safe and secure. Also promoting easy transfer of name, being verified completely. Yet, let's wait though and witness the furthermore future of NFT, will it last forever or will it vanish! Recommended for you

- PERL's 24-hour trading volume surged from \$3 million to \$122 million. - Following the PERL.eco launch and Listing BSC, the price soared. - Listing on Binance Smart Chain leads to low transaction fees. Perlin (PERL) bills itself as a leaderless, scalable, PoS smart contract platform. It intends to supply the future of decentralized technologies while accelerating the transformation of international trade. For the past few months, the crypto market has been experiencing a collapse which made investors struggle in trading. Besides, even in downtime of the crypto market, PERL maintained a stability supporting the investors. PERL has rallied 140% from \$0.052 to \$0.134 in just 10 days. The average 24-hour trading volume of PERL has surged from \$3 million to \$122 million. Moreover, it is discovered the reason for the price hike includes the release of PERL.eco Registration ledger, listing on Binance Smart Chain (BSC), and fascinating staking option. This option enables token holders to earn a yield on cryptocurrencies. Introducing <https://t.co/XHAPjVv8Cj>, the Planetary Ecosystem Registration Ledger " PERL.eco (@PERL_eco) June 5, 2021 Tokenization of real-world bioecological assets Read more: <https://t.co/OISGvY9wgk#WorldEnvironmentDay> pic.twitter.com/VfKSCmN6nf The launch of PERL.eco (Planetary Ecosystem Registration Ledger) took place on June 5th, 2021. In regards to the launch, the price of the token rallies on June 6 and June 14. Besides, Perl.eco stated that, "PERL.eco is an attempt to democratize the biosphere economy by utilizing liquidity pools and tokenizing ecosystems and carbon credits for decentralized finance". Moreover, PERL token holders can participate in voting for the important decisions which affect the ecosystem. Listing on BSC Leads to a Low Transaction Fee The other main reason for the surge in price is the launch of a token on Binance Smart Chain in mid-April for low transaction fees. Following the launch of the protocols Defi interface platform PerlinX on BSC, Perlin's liquidity pools were also available on PancakeSwap. Furthermore, it helped the community in getting farming opportunities and users can earn a yield on PancakeSwap with its native token CAKE. Significantly, blockchain projects that provide working solutions for the green energy concerns of increased carbon-dioxide will definitely gain traction. The co-owner of MTI, Clayton Marks owns about 50% of the Mirror Trading Investment (MTI). He reluctantly repels and is defensive on the latest liquidation put upon MTI for their Bitcoin (BTC) scam. The MTI BTC Scam The Mirror Trading Investment (MTI) based in South Africa, is a cryptocurrency trading investment firm. Their main trading schemes are based mostly on Bitcoin (BTC). Speculations rose massively upon their Bitcoin (BTC) scam between 2019 and 2020. The scam accounted for about 1600 Bitcoins. Besides, all these 1600 BTCs acquired by MTI are based on funds sourced by the investors. MTI started this scam scheme marketing it as extreme high returns of 0.5% on daily basis on the investment by the investors. Also, depicting yearly gains of almost 500%. In addition, they portrayed their scheme and justified it showcasing the use of artificial intelligence-powered algorithm trading software sourced from exile. By the year 2020, MTI accumulated about 1600 BTCs and started to collapse before August 2020. By July 2020, the Texas State regulators officially announced that the MTI BTC scheme and overall MTI is a scam. Once branded a scam, the funds of the MTI platform of 1600 BTCs were transferred to a brand new FX trading platform. However, the MTI denies any such transfer of accounts. In Spite of this, complaints from the investors started to rise upon them being unable to withdraw their funds deposited. On the other hand, as soon as complaints started to flow in, the CEO of MTI,

Johann Steynberg disappeared and went anonymous. Nevertheless, citing all this, the MTI BTC scam has been ranked the biggest cryptocurrency scam of the year 2020. The Liquidation and Clayton's Disapproval Meanwhile, by the end of 2020, investors started to protest cases for the complete liquidation of MTI and release whatever funds they could get back on their investments. Ever since then, the case is still going on for the final judgment for the judiciary. The court's final judgment is yet to appear upon liquidation of MTI. Yet, many liquidators are fighting profusely for the court to grant it. On the other hand, Clayton Marks who owns about 50% of MTI opposes the put forth of the liquidators. Adding to this, Marks propagates the liquidation process has not been carried out properly by the team of liquidators. Furthermore, Clayton insists, he and his wife, Cheri Marks, who is actually the head of communications of MTI, were not served the notice for it. In addition, Marks exclaims by recovering the 1200 BTCs which is the actual presence in the FX platform account which is from MTI, would solve the entire liquidation. However, Marks persists liquidating MTI wouldn't help in pacifying the investors. Also, he remarks the best solution for this is to find Johann Steynberg and rightfully ask him to rectify his wrong-doings. As of now, the judgment has been reserved. Yet, the legal team of liquidators is confident in passing the final judgment for the liquidation of MTI. Recommended for you

- Bitcoin Whales acquires \$367 billion worth of Bitcoin. - Large bitcoin holders are called whales. - Plunged to a five-month low of approximately \$1.7 million. In the last 25 days, Bitcoin (BTC) whales stocking up along with millionaire addresses acquiring over 90,000 Bitcoin worth \$367 billion. Bitcoin whale refers to an individual who holds a large amount of bitcoin. There are nearly 1,000 individuals who own 40% of the market. Whales hold sufficient cryptocurrency that they have the potential to manipulate currency valuations. Large bitcoin holders called whales because their movements disturb the waters that smaller fish swim in, Furthermore, Santiment, a crypto market data aggregator has founded the accumulation. This identifies that the wallets hold 100 and 10,000 BTC. And the total Bitcoin supply is 48.7%. Moreover, the millionaire addresses are at the seven-week high for the number of the bitcoin held, this place by the buying spree. The addresses representing more than 9.11 million BTC. Hence more, miners also involve in gathering BTC, along with on-chain analytics provider, Glassnode. From the miner addresses, the weekly bitcoin discharged, which has plunged to a five-month low of approximately \$1.7 million. Even more, seeing at the other end of the scale from whales, the share of supply indicated by addresses holding below one Bitcoin has doubled in December 2017 to produce nearly 5% of Bitcoin's market capitalization, this noted by Glassnode. Accordingly, many whales and miners are still holding their coins in expecting higher prices. And the transaction monitor Whale Alert has found the two transactions of nearly 5,000 BTC, or which equals to \$200 million each, destined for Coinbase on Monday. Suggests at least any large investors who are looking at trade their Bitcoin. Recommended for you

- TITAN drops to near zero from Wednesday's high. - Whales started to sell TITAN tokens which flooded in excess coins in the market. - As TITAN began to fall precipitously, so did the pegged value of IRON. The Iron Titanium token (TITAN), the share token of once-multibillion-dollar decentralized finance (DeFi) protocol, has dropped to near zero. The token was last seen trading for around \$0.000000035, down from a high of \$65. The project has come to a halt as a result of the rapid fallout. TITAN is owned by Iron Finance, it began bridging to Polygon's chain on May 18 in order to benefit from Polygon's performance and low transaction fees. Moreover, in recent times the billionaire Mark Cuban has shown interest in investing in NFT's. Besides, people on the Reddit platform found the billionaire investor Cuban's interest in DeFi which has worsened the problem. The article claims that he is the sole provider of TITAN/Dai on the Polygon chain for 75k. The project intended to launch IRON, which is a partially securitized stablecoin. Besides, a stablecoin is a cryptocurrency that has its value tied up with government-issued currency to keep it 'stable'. IRON Became Unstable As TITAN Falls Significantly, this stablecoin IRON is made up of Circle and Coinbase stablecoins and TITAN, and it is pegged to \$1. Moreover, with this Defi project's tokenomics work, when IRON stablecoins slews, the price of TITAN drops. Consequently, when the price of TITAN falls then the peg becomes unstable as on Wednesday. Fred Schebesta, founder of Finder.com.au and Iron Finance investor states: 'TITAN's price rose to \$65 before falling back to \$60. This resulted in a significant de-pegging of IRON.' Schebesta also expresses that this caused whales to start selling TITAN. When whales started to sell TITAN tokens, it flooded with excess tokens in the market. This also resulted in a bank run, it occurs only when many people try to withdraw money at the same time. As TITAN began to fall precipitously, so did the pegged value of IRON. The value of IRON fell further as a result of whale dumps. The stablecoin's mechanism kicked in, issuing new TITAN and removing liquidity in an attempt to stabilize IRON at \$1. This created the price difference between IRON and TITAN, which flooded the market with more TITAN tokens, adding additional sell pressure and further weakening IRON's price. Recommended for you

- Shiba Inu, Chiliz, and Keep Network listing on Coinbase Pro. - All tokens have experienced a brief surge of around 30%. - The trading pair has three levels: post-only, limit-only, and full trading. The price of Shiba Inu (SHIB) and Chiliz (CHZ) soared to 33% and 26% respectively, following the announcement of pair listings on Coinbase Pro. Coinbase Pro will begin to accept Shiba Inu, Chiliz, and Keep Network (KEEP) from Thursday onwards if liquidity conditions are met. SHIB, CHZ, and KEEP on Coinbase Pro Shiba Inu came to the attention after a series of Elon Musk's tweet on the meme-currency Dogecoin (DOGE). Besides, the image on the token is a meme version of the Shiba Inu dog breed, similar to Dogecoin. The token's value, while still in the semi-range, increased by more than 2,000,000% in the run-up to hitting its peak in early May following the listing announcement in Binance and other exchanges. Moreover, SHIB value ascended from \$0.000007002 to \$0.000009331, consequently, CHZ soared from \$0.2773 to \$0.3495 with 26% following CoinbasePro announcement. Chiliz, an Ethereum-token that powers Socio.com fan-token platform, which allows users to trade tokens for

showing support for professional sports-teams. The tokens entitle users to rewards and promotions, and they can also be the impact for team decisions via popular voting on the Chiliz blockchain. Besides, Chiliz recently assisted in launching fan tokens in collaboration with FC Barcelona, Manchester City, and other major European football teams. Keep Network, the other token adds to the list on Coinbase, saw a brief 26% surge in price, rising from \$0.49 to \$0.62 in response to the exchange's announcement. This is a platform that aspires to connect public and private blockchains. Keep Network's first product, tBTC, is an Ethereum token that represents one Bitcoin. Users can deposit Bitcoin and redeem tokenized tBTC, where Ethereum ecosystem can use it without the need for centralized intermediaries. Recommended for you

- A new Survey in the UK reports that most British responders have bought crypto. - Those crypto investors are mostly male under 35. - The survey records these youngsters have a better understanding of crypto. According to a survey conducted by UK investment firm AJ Bell, the reports say that Brits are investing in cryptocurrencies rather than stocks and shares. The report of the past year records 7% of the British respondents for the survey have invested in crypto assets whereas 5% have invested in stocks and shares ISAs. A stocks and shares ISA is a type of savings account that allows users to invest without paying tax on their income or capital gains. Findoutnow, an online market research tracker, polled 1,269 respondents for the survey. Laith Khalaf, a financial analyst at AJ Bell, stated that as a result of many investors stepping into crypto would end the world to go after crypto. Young Investors on Cryptocurrency According to the poll, crypto investors are mostly men under the age of 35, where 71% of the respondents said that their crypto investment is profit. On the other hand, 12% who invested have lost their money but 17% of people have no idea about their crypto investments whether it is profit or loss. According to the UK finance outlet This is Money, AJ Bell's analyst stated that the survey records these youngsters have a better understanding of cryptocurrencies. They have more confidence in jumping into the depth of cryptocurrencies. Moreover, he was also cautious that young investors are stepping into the shallow end of crypto without learning to swim in shallower water. He also added that: "The young age profile of crypto buyers suggests they may have accumulated few assets thus far and may find their finances severely harmed if crypto markets deteriorate." Additionally, Khalaf's discussion about Musk's influence on Bitcoin stating "they are hardly a measure of wider business sentiment towards Bitcoin". Besides, with the released data from last-week, it is noticeable that this current investment in cryptocurrency trend has no signs of abating. Recommended for you

The philanthropist, billionaire, CEO of the hedge fund, Tudor Investment Corporation Paul Tudor Jones reveals in an interview, his interest and views on Bitcoin (BTC). Furthermore, he exclaims on investing 5% of his total resources onto Bitcoin (BTC). Tudor Jones Comments Being a billionaire from America, a hedge fund manager, CEO of Tudor Investment Corporation, a philanthropist and conservationist, a profile of diversity, Paul Tudor Jones, is so optimistic about Bitcoin (BTC). Upon his interview on Monday for CNBC, he revealed all his plans and views further on the all-time emperor of cryptocurrencies, the Bitcoin (BTC). Hence, Tudor claims he will be investing 5% of his overall resource on acquiring Bitcoin (BTC). He will be holding it in as Bitcoin (BTC). In addition, he backs up Bitcoin depicting Bitcoin is basically based on maths. Mathematics has been prevailing for ages and till now. As an example, he says if two plus two is four, this will be the same in the future and past. Two thousand years back two plus two is four, and two thousand years to the future too two plus two will be four. Tudor accredited symbolically and logically the everlasting standard of Bitcoin (BTC). In addition, he claims, investing in Bitcoin is 100% reliable, stable, and trustworthy. Accordingly, he revealed he will be investing 5% of his resources on Bitcoin, 5% on gold, 5% in cash, and 5% in commodities. The remaining 80% he has not yet decided. He instigates he will wait till the U.S. Federal Reserve announces changes next week. Tudor's BTC History and Future Views Tudor's been an active Bitcoin investor for a long time. He exclaims his fascination and interests upon the cryptocurrency profusely. Also, last year he opened up 2% of his overall assets and resources as Bitcoins. It is speculated whether he has acquired any more Bitcoins further though. Although, the overall net worth of Tudor's estimated to be around \$7 billion. In spite of all this, he also put forth his views on the environmental impacts due to crypto mining. He stated, if he was the king of the entire world, he would have banned the entire bitcoin mining to safeguard the environment. In addition, he said on making new means to safeguard the environment along without increasing the Bitcoin quantity. Nevertheless, Bitcoin now stands at the price of \$40k, depicting the highest peak over the past weeks.

The CoinSwap founder Erik Nurm puts his views straight in a rather abrupt manner, completely thrashing Elon Musk. He shoots out the way and the impact his tweets create completely manipulates the overall cryptocurrency market. Amidst, yet Musk's tweet surely does bring a whole lot of attention throughout the world. Thrashing of Musk Being the CEO of Tesla and SpaceX, Elon Musk is still considered a key game player in the overall crypto industry and market. Radical are his tweets and the way it shoots up the price of the coins he tweets upon. Although many other cryptocurrency founders, Investment firm CEOs are all skeptical of the way Elon Musk dominates and controls the crypto market through his tweets. The CEO and founder of CoinSwap, Erik Nurm pinpoints the habit of Musk to comment and tweet on cryptocurrencies, started after his ban from tweeting his own company, the Tesla. The United States, Securities and Exchange Commission (SEC) is responsible for this action upon Elon Musk. In addition, the CoinSwap founder comments, the CEO of Tesla is playing the same game all over again as he earlier did for the stock market. Now the game is vitally played on many cryptocurrencies, promptly the Bitcoin (BTC) to be more specific, adds Nurm. Furthermore, Nurm persists and stands firm upon his thoughts Elon Musk is radically controlling and dominating the overall crypto market completely. Elon's Comprehensive Actions and Tweets The thrashing of Elon Musk by prominent personalities is not a new thing though. Various celebrities and influential persons altogether come

against Musk from time to time. More recently, Sygnia's Founder and Non-Executive Director, Magda Wierzycka burst out on Elon Musk on his complete crypto market manipulation. She furiously shot out, Musk should be caught, investigated, and fined for such market manipulations. In spite of all, we all do know how his tweets made the price of Dogecoin and Bitcoin (BTC) shoot up and fall down, all on his tweets. Moreover, Elon Musk's recent Bitcoin manipulation accounts for his stopping Tesla payments in Bitcoins. As a result of his tweet for it and announcement, the price of Bitcoin dropped tragically down. He justified that his decision is to stop and control the carbon footprints created by the mining of Bitcoins. Nevertheless, a few days back he again revised his decision, stating Tesla will accept BTC payments if 50% of the mining for that particular BTCs are from clean green energy. Also, Nurm pointed out a similar gamble of Musk, regarding the CumRocket (CUMMIES), a token based on the Binance smart chain, solely for use in the adult industry. His tweet on June 5 set the token on blaze and increased over 350% on its price so far. Despite all this yet Nurm ended that, Musk does affect the crypto market and the novice and intermediate traders, but his attempts will be useful for the whole crypto industry alive in the long run. In the middle of last month the crypto market cap peaked at more than \$2.5 Trillion. The massive increase in the market cap of crypto happened on the back of the bitcoin's price increase. Amongst the \$2.5 Trillion more than half of it was due to bitcoin's massive market cap which crossed \$1 trillion. However as of now the market is at almost 75% of its highs, with bitcoin's market cap also halved in a month. Other cryptos such as Ethereum also suffered almost a 50% decline. Overall the whole crypto market did not fare well in the past month. Another factor to the astronomical market cap last month was the rise of meme coins. Meme coins such as DogeCoin, Shiba Inu SafeMoon were all the rage. They gained billions of dollars in market cap last month. Contributing heavily to the overall crypto market cap. Elon Musk and His Involvement Elon Musk, the CEO of Tesla and SpaceX has come across as a force in the crypto world recently. Tesla under his leadership became one of the companies to hold bitcoin. He was also very instrumental in the rise of meme coins especially DogeCoin. While other meme coins also came into existence based on his tweets. Elon sent the price of bitcoin to the stars with his tweets, which was a very good thing for the crypto community. However, many enthusiasts pointed out that this is not healthy for the ecosystem. Their predictions came true when in May Elon Musk's single tweet whipped almost \$1 trillion from the crypto market cap. His tweet in which he criticized bitcoin's energy usage caused the price of bitcoin to fall more than 50% in just two days. While DogeCoin and other coins also suffered immensely. This even proved to Elon Fans that his involvement had its downside as well. However, his involvement has been mostly great for bitcoin, and cryptos and it is expected that the segment will keep on growing. Recommended for you

The largest stock exchange of Africa, the Johannesburg Stock Exchange (JSE) has rejected the proposal of a new Bitcoin Exchange Traded Fund (ETF) put forth by Sygnia. Johannesburg stock exchange located in South Africa, reveals that the rejection is due to poor framework and regulations. Sygnia's Actions and Reactions Sygnia is a prominent asset management and financial services provider which is also into the Exchange Traded Fund (ETF). It is a well-recognized innovative fintech company located in South Africa. Additionally, it promotes a diverse range of funds and investment solutions at low fees. Citing a new Bitcoin (BTC) based ETF, Sygnia put forth the proposal to Johannesburg Stock Exchange (JSE). However, Johannesburg Stock Exchange (JSE) rejected the proposal abruptly. Furthermore, JSE states the rejections are due to an improper framework for the ETF. The regulations were not implemented and constructed according to the norms. Consequently, Sygnia's Founder and Non-Executive Director, Magda Wierzycka reacted in surprise to the JSE's rejection. Wierzycka exclaimed she knew the JSE wouldn't approve of the Bitcoin ETF instantly. But such immediate rejection is totally unacceptable, she portrays. In addition, Wierzycka insists the JSE would probably put on hold the Bitcoin (BTC) ETF, to file 13 for now. She was confident the JSE would later pass the ETF through file 13. Furthermore, she depicted if the ETF went through, Sygnia would be the first for the Bitcoin ETF. In spite of the rejection, Wierzycka exclaims the Bitcoin ETF will receive plenty of fame and attention. It would have turned in money to the JSE too. Wierzycka on Bitcoin In a previous report, Wierzycka commented Bitcoin will be a standard asset throughout time. She expresses Bitcoin as stable and concrete, with ever-growing prices. Also, Wierzycka depicts Elon Musk, how being an individual of such potential influence backed up Bitcoin effortlessly. Despite this, Elon Musk has complete manipulation over Bitcoin she exclaims. Wierzycka goes on, the recent market falls down and instability including Bitcoin is solely due to Elon Musk's market manipulation. Wierzycka blazed out such actions done for a listed company, Elon Musk arrested, investigated, and penalized. However, the South African Intergovernmental Fintech Working Group (IFWG) is currently working on reform to regulate cryptocurrencies. It is expected that the JSE couldn't hold up the Bitcoin ETF for a long time after IFWG releases announcements officially upon regulations on cryptocurrencies. Recommended for you

In Quantum Coin QTUM Technical Analysis 2021, we use past statistics, Price Patterns, RSI, and various other QTUM information to analyze the future trend of cryptocurrencies. Qtum (pronounced "æQuantum") is an open source Proof-of-Stake (PoS) smart contract blockchain platform and value transfer protocol. Its goal is to combine the advantages of Bitcoin and Ethereum in one chain. UTXO transaction model with smart contract execution and DApps additional functions. The platform recently added support for DeFi applications. The project was announced in March 2016, and a year later, in March 2017, an ICO was conducted, raising \$15 million for its founder. The Qtum main chain was started on September 13, 2017. Qtum coins were initially issued in the form of ERC20 tokens, but with the launch of the mainnet, it was converted to native blockchain. Quantum Coin (QTUM) Current Market Status According to CoinGecko, the QTUM price is trading at \$9.3 with a 24-hour trading volume of \$285,666,630, at the time of writing. However, QTUM has increased by 5.5% in the last 24 hours. Moreover, QTUM has a circulating supply of 103,482,795 QTUM. Currently, QTUM trades in Binance, Huobi Global, OKEx, FTX,

and BitForex. Quantum Coin QTUM Technical Analysis 2021 The recent development and upgrades might push Quantum Coin (QTUM) to reach new heights. Now, let's deep dive into the Quantum Coin QTUM Technical Analysis 2021. The weekly and daily time frame chart with two views of the pattern of Quantum (QTUM) as shown below. The weekly time frame chart shows the "Consolidation Phase" from 2018 to 2020 in which cryptos are traded within a certain range (\$1.5 - \$5.5). This indicates a strong base area for QTUM. Initially, volume is dry for QTUM, after 2021, it has been increased (Volume Spurts) which shows that more buyers are active in this token. Then the price breached the resistance level of \$5.520 and entered into the Markup zone and made an All-time high. After the Strong Rejection at Resistance area, the price plummeted to the previous Resistance area (\$5.5) that indicates in the above chart. Moreover, there is a chance to hit the price range between \$40 - \$50, if more traders show interest to buy this token. The daily time frame chart shows the Expansion pattern of QTUM. This pattern indicates the price of QTUM is traded at the trendline support level. If the token breaks the trendline resistance level means it will reach the target of \$21. Quantum Coin (QTUM) RSI, RVOL, and MA The below chart shows the Relative Volume (RVOL) of QTUM. Generally, Relative trading volume is a trading indicator, used by day traders to compare the current trading volume with the normal trading volume in the past. Notably, in March, April, and the start of May, it is found that the RVOL stays three times above the cut-off line making a Higher RVOL. From mid of May month to till at the time of writing, the RVOL stays below the cut-off line which indicates the weaker participants in the trend. Now let's look at the relative strength index (RSI) of QTUM. As shown in the below chart, RSI remains at 39. This shows that QTUM's price is in a nearly oversold state. However, this shows that major price reversal could occur in the upcoming days. So, traders need to trade carefully. QTUM's Moving Average (MA) and Exponential Moving Average (EMA) as shown in the chart below. MA is a crypto indicator widely used in technical analysis. The reason for calculating the crypto moving average is to smooth the price data over a period of time by creating a constantly updated average price. While EMA is a type of moving average. From the beginning of 2021, it is clear that the QTUM price has shown many bullish patterns. Furthermore, taking all these into account, QTUM could have a competitive market in 2021. Conclusion With the ongoing developments and upgrades that are taking place within the QTUM platform. The cryptocurrency QTUM has a fantastic future ahead in this crypto market. However, it is possible to see QTUM reaching new heights. Bullish QTUM price prediction 2021 is \$20. As said above, it may reach great heights, however reaching \$50, if investors have decided that QTUM is a good investment in 2021. FAQ Qtum is a decentralized open-source smart contract platform. The Qtum value transfer protocol uses proof-of-stake consensus, which means that node operators get rewards by verifying transactions. Its native coin is QTUM. QTUM is listed on many cryptocurrency exchanges that include Binance, Huobi Global, OKEx, FTX, and BitForex. It is available for trading against crypto fiat coins, stablecoins, and other cryptocurrencies. With the ongoing developments and upgrades within the QTUM platform, it has the high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Recommended Article

- Tesla again continues with Bitcoin Transaction. - In mid-may, Tesla stopped car purchases with bitcoin. - The price of bitcoin raised about 8% during the day. On Sunday Elon Musk, the CEO of Tesla said the company again continues with Bitcoin (BTC) transactions after it confirms there, acceptable clean energy usage by miners. Elon Musk stated, "When there's confirmation of reasonable (~50%) clean energy usage by miners with the positive future trend, Tesla will resume allowing bitcoin transactions." Moreover, the CEO of South African asset manager Sygnia, Magda Wierzycka commented Musk's tweets on bitcoin prices were market manipulation and must have manipulated an investigation by the U.S. Securities and Exchange Commission. Henceforth, Tesla revealed that it purchased \$1.5 billion worth of bitcoin. Also, Tesla noted that it starts accepting bitcoin as a payment method for its products. Even more, in mid-may Tesla stopped a car purchase with bitcoin. This is because of concern over how cryptocurrency mining, which requires banks of powerful computers, contributes to climate change. However, in May Musk noted, "We are concerned about rapidly increasing use of fossil fuels for Bitcoin mining and transactions. Especially coal, which has the worst emissions of any fuel." Accordingly, on Sunday Elon Musk denied Wierzycka's statement of market manipulation, he explains, nearly 10% of bitcoin holding sold by Tesla to confirm that Bitcoin (BTC) could be liquidated easily without moving the market. \$272 million worth of digital assets sold by Tesla during the first quarter. This helped it reduce operating losses by \$101 million, revealed by the company during the earnings statement. Moreover, on social media Musk commented about cryptocurrency often sends price tumbling, but appeared to have a sudden effect Sunday. Although, the price of bitcoin raised about 8% during the day. Crypto Lark also known as Lark Davis a professional crypto trader and youtuber tweeted today that he thinks this is not the best time to leave the Market. Currently the market is low, but people should rather earn money through yield farming instead of getting out. He thinks in the longer run the market will be beneficial and it is not the time to liquidate everything. Crypto Lark is one of the biggest youtubers in cryptocurrency related content creator on YouTube. He has a massive following on social media and he also has had great success with crypto trading as well. Coming from one of the biggest people in crypto this seems to be a sigh of relief for many novice investors. Many users were very quick to point out that they wouldn't be making much profit with small amounts of coin. To which he replied it's all relative. You would also not get a very good return on your investment if the crypto goes up as well. The Uncertainty in the Market: Currently, the crypto market is in limbo. Bitcoin wiped out half its value in less than a month, and other cryptos have lost significantly more. This has prompted a lot of people to really think about bitcoin as an investment option, thus affecting its popularity. Many people have also been concerned about the energy use of bitcoin, as pointed out by Tesla's CEO Elon Musk. However, not just Lark, but many crypto analysts predict that bitcoin will bounce back. So taking Lark's suggestion we should start yield farming with our bitcoin

and ETH meanwhile. Recommended for you

Twitter CEO, Jack Dorsey reveals that Twitter will soon announce its acceptance of Bitcoin(BTC) payments. Twitter's most ambitious project on work for making a decentralized standard for social media, Bluesky, will also join its parent Twitter upon accepting Bitcoin(BTC). Jack Dorsey's Comments The Bitcoin(BTC) over time was endorsed by many influencers and tech syncs. Furthermore, Elon Musk has got the foremost credits for boosting Bitcoin(BTC). It's because of Elon Musk, that the price of Bitcoin(BTC) has soared to its epic heights last year. However, being the CEO of Tesla, Elon Musk's recent degradation of Bitcoin, portraying it as high energy consumption. Accordingly, proving high carbon footprints made Musk eventually leave backing up BTC. His focus shifted towards the other altcoins such as Ethereum and the memecoin, the Dogecoin. Nevertheless, the CEO of Twitter, Jack Dorey is now bracing up the BTC as much as he could. He has revealed that either Twitter or his decentralised standard for social media, the project Bluesky, will integrate Bitcoin(BTC) payments very soon. On Bitcoin 2021, Dorsey exclaimed that if he didn't head either Twitter or Square, he would be probably working for Bitcoin(BTC). It's known to the fact that Jack Dorsey is also the CEO of Square, an ecosystem-based upon commerce and eCommerce. Eye on the Lightning Network In spite of all, Dorsey replied positively in response to a fan's tweet regarding if he will incorporate the Bitcoin Lightning network into his Twitter or Bluesky. Henceforth, Dorsey replied that it will be done anytime soon. The lightning network serves as a second layer of a payment protocol for Bitcoin. It is actually based upon the blockchain of Bitcoin. It helps in building up the network. The transactions are fast and at a low rate of gas fees. The recent announcement by President of El-Salvador to work with Lightning Network, in order to help reform BTC as its legal official currency for the nation. Indeed, this has served as a boost to the Lightning Network. Likewise, Dorsey thrashed U.S. senator Elizabeth Warren, when she put out cryptocurrencies should be blocked out as many are just consuming ample energy for solving useless mathematical problems. Dorsey sarcastically replied Bitcoin(BTC) now shifts the power from the banks and corporations to the people directly and globally. In fact, Dorsey himself has been an avid backer of Bitcoin for ages. Accordingly, he has acquired 8,000 Bitcoin, worth about \$170 million dollars, under the heads of Square. In Spite of all his efforts and seriously backing up Bitcoin, Jack Dorsey is now the new epitome overtaking Elon Musk for the Bitcoin brace. Ethereum Co- founder Anthony Di Iorio revealed that he bets bigger in larger projects predicting the future of both Cardano (ADA) and Polkadot (DOT). Anthony Di Iorio, Co founder of Ethereum, decentralized smart contract platform. He is also a Canadian Entrepreneur and founder and CEO of the blockchain company Decentral, Jaxx wallet. In a recent interview with The Pomp Podcast, Di Iorio broke his future plans on cryptocurrency. Ethereum co-founder @diiorioanthony on why he believes in #Cardano/@IOHK_Charles and #Polkadot/@gavofyork:\$ADA \$DOT pic.twitter.com/DGvkGa5lYy "Dean " (@CardanoDean) June 9, 2021 Further in the interview, Di Iorio admitted he made huge investments on large projects including Cardano and Polkadot. Despite the hype created on DeFi (decentralized finance), he made simple investments on valuable projects. Anthony Di Iorio Interest in Cardano & Polkadot Moreover, Di Iorio showed huge interest in narrating his belief on both the projects. Cardano and Polkadot founders are the co-founders of Ethereum. Besides, Di Iorio formed a healthy relationship with both the Co-founders including Vitalik Buterin. Charles Hoskinson, Co-founder of Cardano and Gavin Wood, current CEO of Polkadot. However, Di Iorio shared his working experience with these dedicated professionals in forming the Ethereum network. He also comments, "Knowing those guys from the days back at Ethereum " their drive, their competitiveness and their smarts " I was able to see those projects for the last few years and know that they were gonna get to where they've gotten up to." Likewise, Iorio's narration added more interest for the viewers as well. He openly shares that he is a Big fan of Cardano and Polkadot. Iorio added, he had just fallen back to simplicity. Besides being in a number of different projects, his majority of the stuff is in the top projects. Therefore, Anthony Di Iorio is clear in his future projects. He predicts Cardano and Polkadot will reach greater heights increasing its value in the near future. Similarly, Iorio is not interested in wasting time investing in recent evolving stuff. Rather simplified his future assets keeping investments in larger projects over a few years. Recommended for You

- Whale purchases more Bitcoin at its lowest price. - Using the market correction whales are buying with confidence. - Ethereum's whale addresses show that these holders are not rising much. Whale's purchase on Bitcoin is rising recently, as they add more Bitcoins to their account at the lowest price. Ethereum on the other side is still hanging tight with the purchase made in October 2020. According to the reports of Santiment on June 8, 2021, it is clearly noticeable that whales are attempting a tactic move of purchasing BTC when people are confused. Using the market collapse as an advantage whales are buying with confidence. The above demographic shows the whale addresses with 100-10,000 BTC have been gradually soaring since two weeks ago. Besides, Bitcoin trading has fallen after experiencing a significant rise in mid-May. As per Santiment, the investors are holding their large portion of coins to store for a longer period. Also, it seems like a bullish sign. ETH's Whale Behaviour Ethereum, the head of altcoins, showing its address to stick with the same place since the end of last year. Moreover, Ethereum whale addresses holding 1,000 to 100,000 ETH tokens aren't moving much where holders are still holding massive tokens acquired last October. Additionally, the circulation supply of Ethereum is considerably dropping in June. Besides, a lot of ETH holders are waiting for the next move of Bitcoin. The data, according to the report, is bearish for the digital asset. Recommended for You

The recent reveal of the news upon introduction of Digital Dollar has created wide speculations. Debates are everlasting based upon the fact that the digital dollar could affect Bitcoin (BTC) and other cryptocurrencies too. In Spite of all this, many crypto investment firms have said that the digital dollar would not affect cryptocurrencies by any means. Bitcoin (BTC)â€™s Mighty Stand The Digital dollar soon to be revealed out officially has always been a subject of debate ever since. Many have put forward the notion that the digital dollar would have a certain impact and alternative thoughts upon the crypto industry. Besides, many crypto firms and crypto-related bulls portray the introduction of digital dollars would not impact Bitcoin(BTC) or any other cryptocurrencies. Instead, it will be only a boon to the crypto world and BTC. In addition, digital dollars will only drive investors upon the cryptocurrencies and BTCs even more effortlessly. Cryptocurrency investment management company, Grayscale Investments, CEO Michael Sonnenshein states BTC would not be affected by digital dollars. Also, he states there wouldnâ€™t be any effects on the overall BTCsâ€™ market share altogether. Sonnenshein went on, the digital dollar is nothing but a digitized version of normal dollar currency. Thereâ€™s a huge difference between cryptocurrencies and the digital dollar. Digital dollars or digitized money would be just to serve the common person. Whereas, cryptos are the ones through which an individual could make profits and gains. He proclaimed further, nothing could take the place of decentralized currencies like Bitcoin. People who are to make gains will only come towards cryptocurrencies, not towards digital dollars. Another well-renowned crypto investment firm Osprey funds, founder and CEO Greg King exclaims digital dollar will only push people towards decentralized cryptocurrencies, especially Bitcoin. Control Over CBDC King exclaims the government is into reforming many regulations in order to control the Central Bank Digital Currencies. Consequently, all those countries that are looking forward to bringing out their own form of digital money are all working to set reforms to regulate CBDC. Furthermore, China is in a race to launch its very own digital money, the digital yuan very soon. Indeed, the Federal Reserve System points out it needs the support of Congress for bringing out the digital dollar. In fact, this is due to the negative criticisms cast upon the digital dollar by lawmakers. Nevertheless, the plan is to bring out the U.S digital currency firstly into 5 main projects. This will be based on testing the real-time usage of the digital dollar. Recommended for You

Justin Trudeau the Prime Minister of Canada has a half-brother who is a crypto enthusiast. Kyle Kemper has announced that he is launching a Bitcoin 2021 conference in Miami where he will give out free Dogecoin. The event has been called the â€œMillion Doge Disco.â€ Kyle Kemper is the founder of the crypto wallet service Swiss Key. He said that the event will be a fun event around the Dogecoin universe. Every participant in the event will also be given an Augmented Reality Disco Doge NFT as well. The idea is to create a party metaverse around Dogecoin. It will be a new â€œParty Layerâ€ that will make its participants step into a dimension that is alive and moving, with positive vibes. The event will give away more than one million Dogecoin valued over \$320,000. The people who attend the event will be given an NFT based on the Dancing Dogecoin theme. With the NFT the people will get the Dogecoin payment directly on their phones. Bad Blood Amongst Brothers Kemper has been really vocal about his thoughts against his brother. He has been in headlines a lot in Canadian news because of his antics against his brother. He has also been very critical about his brotherâ€™s crypto related policies as well. He has also been very vocal about his anti-vaxxing views. Sharing a very different view from his brother who is a very keen supporter of vaccination drives. Recommended for You

In Harmony ONE Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about ONE to analyze the future movement of the cryptocurrency. Harmony is a blockchain platform for decentralized applications. The production mainnet supports 4 shards of 1000 nodes, creating blocks in two seconds. The network aims to create an open node network operated and managed by a large community. This node community is called Pangaea. The platform implements a Proof-of-Stake (EPoS) protocol, which helps to reduce centralization and increase transaction speed. According to the projectâ€™s website, Harmony is expected to launch cross-shard contracts and cross-chain infrastructure by the end of 2021. Harmony Coin (ONE) Current Market Status According to CoinGecko, the ONE price is trading at \$0.083 with a 24-hour trading volume of \$42,930,852, at the time of writing. However, ONE has decreased by 3.3% in the last 24 hours. Moreover, ONE has a circulating supply of 10,195,178,970 ONE. Currently, ONE trades in Binance, Huobi Global, HitBTC, Bitcoin.com Exchange, and Gate.io. - This investment is a G series fund that was executed in January. - Nubank says that its customers have reached 40 million. - The acquisition of Easynvest by Nubank will enable investment in Bitcoin. Bitcoin critic Warren Buffett's Berkshire Hathaway has made an investment of \$500 million in the parent company of the private digital bank, Nubank. This act indicates that Warren Buffet is indirectly helping Bitcoin. Nubank is a Brazil-based friendly digital bank founded in 2013, reaching

40 million customers. Besides, this investment is an extension of the G series fund, which was carried out five months ago. The digital bank, Nubank established itself as one of the most valuable financial institutions in Latin America, moreover it is acknowledged by TIME and CNBC as one of the most prominent and innovative companies. Nubank Opens a Bitcoin ETF On Tuesday, Pro-Bitcoin Nubank shares – It plans to use the money raised to fund its international expansion to Mexico and Colombia, launch new products and services, and hire more employees. Moreover, Bitcoin-friendly Nubank plans to open a Bitcoin Exchange Traded Fund (ETF). For the further process, Nubank must receive approval from the Brazilian central bank. As per the request, the Brazilian bank approved the bank to acquire the ETF in May. Further, Nubank named the brokerage firm as “Easynvest”, enabling user investment in Bitcoin via Bitcoin ETF. NEWS: Berkshire Hathaway invests \$500 million in Brazilian digital bank, Nubank. “ Blockworks (@Blockworks_) June 8, 2021 That bank recently bought Easyinvest to allow users to buy and trade #Bitcoin. Therefore, a notable record states, the Securities and Exchange Commission of Brazil (CVM) approved the Bitcoin ETF. It also marked the approval that was given for the very first time. Along with this, it is also appearing on the B3 exchange, one of the largest and leading exchanges in Latin America. Berkshire Hathaway has previously invested significantly in financial firms, with traditional banks and insurance companies accounting for a sizable portion of its portfolio. Recommended for you

Statistics reveal America has made the most profit through Bitcoin (BTC) among the whole world for the year 2020. Taking the year 2020 into consideration, America has made a profit of a whopping \$4 billion through BTC. This is more than 4 times the profit made by China. Americans’ BTC Profits Statistics and data shootout that Americans have made the most profit through Bitcoin (BTC) in the year 2020. They count the most compared to any other nationalities all over the world. The data was given by chainanalysis, a leading blockchain analyst firm. According to it, Americans in the year 2020 have made an overall of \$4 billion profits through BTC. The second to make high profits through BTC for the year 2020 is China. Chinese profits through BTC amount to only \$1.1 billion. This is just one-fourth of the profit Americans have made. The third comes Japan, making a profit of \$900 million. Following Japan comes the United Kingdom with \$800 million and Russia as fifth with \$600 million. All this data for the year 2020 was sourced through, BTC transactions, payments, trading transactions, deposits, withdrawals, etc. Crypto Exchanges’ transaction history and web traffic also accounted for the data. Making a conclusive draft upon the profit charts is usually hard when it comes to cryptocurrencies. This is because of their decentralized nature. Reasons Behind the Profits Last year’s surge in Bitcoin price was the highest, surpassing the previous all-time high of \$20,000. The overall percentage rise of BTC price in the year 2020 estimated at 224%. Such massive growth inspired all the profits throughout the world. Besides, reasons speculated behind Americans making \$4 billion profit are the unemployment and jobless situation reforms. The year 2020, besides the Covid-19 crisis, made many jobless throughout the world. Americans were affected due to it adversely. They sought cryptocurrencies and Bitcoins for making money faster. Also, contrary to stock exchange fluctuations, BTC proved to be more stable. The future for BTC remains high as investors keep on pondering on it. The gains through BTC are more bankable than other traditional investments. Although, it’s not the same case for all countries. Recent regulations put forth by China upon crypto trade and exchanges have made the future of cryptos quite quivering. Recommended for you

- Vitalik Buterin talks about Ethereum and Dogecoin Collaboration - Nearly five years taken to get to where they are now. - \$25,000 turned into \$4.3 million by investing only in DOGE. Last week Vitalik Buterin, Ethereum Co-founder talked about the collaboration between Ethereum and Dogecoin in one interview with Lex Fridman, Artificial Intelligence Researcher. According to the CEO of Tesla and SpaceX tweet about dogecoin, Thereâ€™s a power behind someone like Elon Musk pushing the development of a cryptocurrency Fridman asked Buterin whether there is a way to leverage that power and momentum to improve Ethereum. Buterin answered if DOGE wants to somehow bridge to Ethereum, and then people can trade DOGE thousands of times a second inside of looping, then that would be amazing. Moreover, he detailed that he thinks if we can have a secure Doge-to-Ethereum bridge, it would be amazing, and then when Ethereum gets any scalability that works for Ethereum belongings, you would be able to trade wrapped DOGE with very low transaction fees and very high speed as well. Hence more, Musk commented in the interview that â€œhe pretty much agrees with Vitalikâ€™. Buterin explained about the upgrade from a proof-of-work (PoW) to proof-of-stake (PoS), why itâ€™s taking more time than expected. He said the biggest problems that he found are not technical problems, but the problems are only related to people. Buterin said that it took nearly five years to get to where they are now. Accordingly, in the previous month, Musk suggested some improvements for Dogecoin. Elon Musk said, â€œIdeally, Doge speeds up block time 10X, increases block size 10X & drops fee 100X. Then it wins hands downâ€. Recently Vitalik Invested \$25K in DOGE The Ethereum co-founder Vitalik Buterin revealed how \$25,000 turned into

\$4.3 million in just 3 years by investing only in DOGE. Moreover, he gave all the away to charity. Vitalik Buterin described being in Singapore the price of the DOGE erect 775% from \$0.008 to \$0.07 over a single day. He immediately called up some of his friends and told them to drop everything. Added to this, he sold half of the DOGE, and he got \$4.3 million. He donated the profits to charity. And a few hours after he did this, the price then dropped back from nearly \$0.07 to \$0.04. Accordingly, after selling half of his DOGE. Buterin felt like an amazing trader till the price went back to \$0.04, then to \$0.07, then to \$0.5. Currently, Ethereum co-founder holds nearly \$20 million worth of the Doge token. Recommended for You

In Neo Coin Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about NEO to analyze the future movement of the cryptocurrency. NEO is the first open-source cryptocurrency launched in China in 2014. It supports its own cryptocurrency and allows it to develop digital assets and smart contracts. In addition to NEO tokens, NEO has one more crypto-token called GAS, which was formerly known as ANC-Antcoins. The ultimate goal is to create a smart economy that bridges digital and traditional assets. Neo Coin (NEO) Current Market Status According to CoinGecko, the NEO price is trading at \$47.07 with a 24-hour trading volume of \$628,546,479, at the time of writing. SkyBridge Capital, one of the largest global investment firms throughout the world, is so devoted to the good grace of Bitcoin(BTC). The co-chief investment officer of SkyBridge Capital, Troy Gayeski commented in complete support and backing of Bitcoin(BTC). Gayeski's Views Being the co-chief investment officer of SkyBridge Capital, Gayeski's comments on Bitcoin(BTC) have raised ample attention. Gayeski portrayed his views on Bloomberg Surveillance on Monday. He states BTC will forever be considered the best investment option even despite the recent fallouts. Many corporates and investment firms became skeptical of BTC on its recent fallouts. Still, though, Gayeski states BTC will be a strong investment option for a long-term basis. He also stated that few business establishments might slow down their concentration towards BTC. This may be majorly due to the environmental aspects of mining BTC. He put forward BTC will be a strong choice next to gold on aspects of digital currency for making investments. He proclaims on the longer run, BTC will only be of profits and nothing else. He adds the current downfall of BTC is majorly due to the recent halving which took place on May 11th. Gayeski further continued despite the long run of the bull after a halving event, BTC will witness spikes soon. Debate on BTC Various factors have led to the recent down surge of BTC. The major debate goes towards the energy consumption for mining BTC and its effects on the environment. Citing this, Elon Musk's decision to ban BTC as a payment option for Tesla-based products depicts BTCs environmental disturbance. Apart from this, China's decisive restrictions and regulations on the trade of cryptocurrency and its exchanges created certain red flags for all cryptocurrencies. BTC was the worst affected due to this. Many factors, one after the other led to the downfall of BTC from \$64k to \$33k. This nearly amounts to an epic fall of about 50%. Furthermore, Gayeski depicts BTC will struggle to get past \$45k in the near future. But he assures BTC's bloom in the long run.

In Monetha (MTH) Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about MTH to analyze the future movement of the cryptocurrency. - Phillips Auction House Accepts Bitcoin and Ethereum as payments for auction. - Upcoming Auction is for Banksy's Artwork "Laugh Now Panel A" in Hong Kong. - The value of the Artwork worth millions of dollars. Prestigious Phillips auction house reveals to accept the auction payments in digital assets. The upcoming auction will present the artwork of Banksy's "Laugh Now Panel A". The painting is worth millions of dollars estimated between US\$2.8 million and \$4.1 million. The auction takes place in a 225-year-old auction house in Hong Kong on Tuesday, June 8th 2021. Digital Payments for Digital Artwork The Auction held at Phillips auction House presents artwork of digital artist Banksy's "Laugh Now Panel A". The value of the artwork covers US\$2.8 million and \$4.1 million dollars. The British auction team plans to accept the payment in Bitcoin and Ethereum. Moreover, South China Morning Post reports the auction conducts bidding for the digital artwork. The bidding will cover the value in Hong Kong Dollars. But in parallel, it also accepts crypto payments in referral to US Exchange Coinbase. It also added, crypto payments are accepted as cryptocurrency users are increasing in number. Further, Phillips Asia's chairman, Jonathan Crockett shares "Over the past few years many have made fortunes in cryptocurrency and so it was only a matter of time before cryptocurrency started to be used as a payment method for art and other collectibles." Remarkable Banksy's Artwork Numerous Banksy's paintings cover digital and blockchain concepts and also sold for crypto assets in recent times. The digital artist sold all his artworks at massive prices. The viewers are much interested with his paintings as it conveys a good concept through the art. Besides, last week auction house Sotheby's decided to sell Banksy's painting. Dubbed "Love is in the Air", the oil and spray painting sold for a notable cost US\$12.9 million. To be added, this price was much above its original estimated value. Therefore, as the crypto industry paves way for multiple users, the source and service of crypto also exceeds. By accepting crypto assets, Auction house encourages many digital investors to spend their virtual money in the real world. Recommended for You

Bitcoin (BTC) suffered from a massive blow after Elon Musk, CEO of Tesla and SpaceX let it down earlier last month. Despite facing serious hard times and lows from last month till now, BTC gets further endorsements from many celebrities. The list gets growing bigger and bigger. BTC's Celeb Supports The past month was not so kind on BTC. Even though it reached its all-time highest of \$63k, it continued its reign successfully upon the \$60k range. This continued till tragedy struck earlier last month citing a downfall. Throughout the month BTC slipped to the lowest of \$32,000. With all such negativity, all sought BTC's reign would end, but not so fast yet. BTC to date stands as the king of Cryptocurrencies. Amidst all that happened over the past month led to numerous ups and downs for BTC. Still, though celebrities poured down their support on BTC gushing immensely. The Bitcoin 2021 conference in Miami sought numerous celebrities. The boxing champion Floyd Mayweather and skateboarder Tony Hawk bragged continuously on BTC. This included the CEO of Twitter, Jack Dorsey trumpeting on BTC. The celebrity list included political personalities like Senator of Wyoming, Cynthia Lummis, and Senator of Kentucky Ron Paul. One of the first to uplift BTC is Paris Hilton, who was actually not present in the Bitcoin 2021 though. Paris Hilton has been actively involved in BTC since 2016. Nowadays, she focuses more peculiarly on NFTs. Apart from BTC, all other cryptocurrencies too at times get their fair share of celebrity support. Like the Dogecoin, it still receives enormous show-offs from Mark Cuban, the American Billionaire, and entrepreneur. The rapper Snoop Dogg is also actively tweeting on Dogecoin from time to time. BTC Now The price of BTC now stands in the \$36k range, which is actually low. And the peaks are yet to appear anytime soon. Whatever the path till now, and the path towards the future, BTC's reign will always prevail. Owing to such tremendous support all over

and all by organic means will always be a red carpet making BTC fly and soar up to the sky.

In Theta (THETA) Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about THETA to analyze the future movement of the cryptocurrency. Theta (THETA) is a blockchain-related network developed for video streaming. Started in March 2019, the Theta mainnet works as a decentralized network in which the bandwidth and computing resources are shared by users on a peer-to-peer (P2P) basis. THETA is its own native cryptocurrency token. More so, it performs various governance tasks within the network. Theta (THETA) Current Market Status According to CoinGecko, the Theta price is trading at \$7.87 with a 24-hour trading volume of \$409,502,647, at the time of writing. However, THETA has increased by 5.2% in the last 24 hours. Moreover, THETA has a circulating supply of 1,000,000,000 THETA and a maximum supply of 1,000,000,000. Currently, THETA trades in Binance, Huobi Global, OKEx, FTX, and Upbit. Theta Technical Analysis 2021 The recent development and upgrades might push Theta (THETA) to reach new heights. Now, let's deep dive into the Theta technical analysis 2021. The weekly time frame chart with two views of the pattern of Theta (THETA) is shown below. View 1: The view 1 chart of THETA shows the Bullish flag pattern. A bullish channel is a continuation chart pattern. A bullish channel is created by two parallel bullish lines. Moreover, the price progresses between these two parallel trend lines. More so, the upper trend line is called the resistance line and the lower trend line is called the support line. View 2: The view 2 chart of THETA shows Falling Wedge pattern The above chart shows the Falling Wedge Pattern of THETA. Moreover, the Falling Wedge is a bullish pattern that starts wide at the top and contracts as prices move lower. However, this price action forms a cone that goes down as the reaction highs and reaction lows converge. Notably, both the patterns indicate bullish signals. This shows the THETA price will surge even higher over taking its all-time high price in the near future. Theta (THETA) RSI, MACD, and MA The below chart shows the Moving Average Convergence/Divergence (MACD) of THETA. Notably, the MACD (blue) made a crossover and stayed just above the signal indicator (orange line). This means that cryptocurrency traders can still expect more bullish days ahead. In contrast, if the MACD begins to move below the signal indicator and performs a bearish crossover. Then the crypto has a high possibility of reaching new lows. Now let's look at the relative strength index (RSI) of THETA. As shown in the chart above, the RSI remains at level 48. This shows that THETA's price is in a nearly oversold state. However, this gives confidence for the traders to trade without any fear. Theta's Moving Average (MA) and Exponential Moving Average (EMA) is shown in the chart below. Moreover, MA is a part of technical analysis that helps traders to recognize trends. While EMA is a type of moving average. From the beginning of 2021, it is clear that the THETA price has shown many bullish patterns. Furthermore, taking all these into account, THETA could have a competitive market in 2021. Conclusion With the ongoing developments and upgrades that are taking place within the THETA platform. The cryptocurrency THETA has a fantastic future ahead in this crypto market. However, it is possible to see THETA reaching new heights. Bullish THETA price prediction 2021 is \$15. As said above, it may reach great heights, however reaching \$50 if investors have decided that THETA is a good investment in 2021. FAQ THETA is listed on many crypto exchanges that include Binance, Huobi Global, OKEx, FTX, and Upbit. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the THETA platform, it has the high possibility of reaching its ATH soon. For users' participation in governance activities, THETA uses a financial incentive scheme. Hence, the

The case filed against YouTube last year regarding the Bitcoin scam by former Apple co-founder, Steve Wozniak is now discharged. Court now asks Steve Wozniak to amend his complaint to proceed further on the case. History of Bitcoin Scam case On July 22, last year the co-founder of Apple, Steve Wozniak sued YouTube and its parent firm Google upon a fake Bitcoin BTC giveaway scam. Not only was Steve Wozniak alone affected, including him more than 17 others too joined together. A hijacked channel on YouTube featured images and videos portraying Steve Wozniak upon a free giveaway event on Bitcoins. The scam run such whatever be the investment you are putting in terms of Bitcoins will be doubled back up to you upon receiving. But in reality, nothing sent to the address got returned. It was a complete scam. Steve Wozniak wasnâ€™t the only victim, many other popular names were also affected by the scam. Steve Wozniak sued over the scam against YouTube and its parent firm Google, as he states they could have prevented it. Steve Wozniak at the time of the issue put forward that only if YouTube and Google acted quickly, they could have stopped and prevented this whole scam to a greater extent. Scam Case Present Status The case hearing took place yesterday at Santa Clara County Superior Court under Judge Sunil Kulkarnia. Judge Sunil Kulkarnia depicted both YouTube and Google as being protected by Section 230 of the Communications Decency Act. According to the act the media platforms cannot be responsible or held accountable for the content published by the users. This act was actually put forward by Google based on YouTube a few years back. The judge further states the challenges put forth by Steve were not enough to fight against the protection lines of section 230. The judge further asks Steve now to revise his complaint made within a period of 30 days. This same scenario has happened previously in the case of Ripple Labs. Ripple Labs similarly filed a complaint on YouTube for promoting scam content and likewise, the case got dismissed. Seems all YouTubeâ€™s media cyber protection laws are ever to be broken, even not by the Crypto industry! Recommended for you

Speculations are on the rise as many predictions are put forth upon the Shiba Inu , the SHIB coin. It is predicted that the price of Shiba Inu coin will reach a target value of 1 USD. DJ JY on SHIB Amidst the fact that SHIB dropped down about 5% recently, it has not lost its charm though. It now got the attention of the famous U.K rapper DJ JY. Heâ€™s definitely intrigued by SHIB which made him tweet upon it. You see them spikes? ðŸ’€ #shibainu â€” DJ JY (@DJJY) May 31, 2021 Upon his tweet, itâ€™s evident that he has been keeping an eye on SHIB. Launched just last August, Shiba Inu (SHIB) subsequently followed the footprints of Dogecoin. Investors did see a potential profit on SHIB last month until it fell back to 5% down about 2 weeks ago. The attention received upon SHIB from DJ JY will set his 43,000 plus followers on twitter to go and seek themselves regarding SHIB. Being priced not even a penny, investors will be pouring in for sure. SHIB for sure has gained a good amount of popularity through DJ JYâ€™s tweet on it. Future of SHIB When Shiba Inu coin was launched initially last year August, it featured just as a replica of Dogecoin. Contrary to the fact that the mascot of Dogecoin, the Shiba Inu Japanese breed of dog is the name for SHIB. Regardless of all contradictions, Shiba Inu proclaimed itself as the â€”Dogecoin Killerâ€” openly making Dogecoin its sole rival. Though SHIB has not yet been able to match up to the Dogecoin which is supported by Elon Musk profusely, SHIB more or less maintains a significant place in the market. SHIB managed to reach the list of top 20 altcoins within a short period of gradual budding. Its growth could be apparent as the largest crypto exchange Binance added it. Even though the price of SHIB is less than a cent, the momentum for it now has reached more than 3.4 billion USD ever since its launch. This is a vital sign stating the base of SHIB is firm and strong. It set forth SHIB to reach its sole target of USD 1. Apart from the investors being hopeful and pragmatic about it, analysts have also put forth that the price of SHIB will double up massively soon. News is circulating around the market regarding Shiba Inu coin developing its own new decentralized exchange. Most such decentralized trading platforms are now facing immense success in the decentralized finance DeFi market. If Shiba Inuâ€™s decentralized exchange just gets even a small ray of success as other trading platforms like Uniswap, this will slingshot SHIB to USD 1 target. Recommended for you

In Litecoin (LTC) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about LTC to analyze the future movement of the cryptocurrency. Litecoin (LTC) is a cryptocurrency that was developed to provide fast, secure and low-cost payments by leveraging the unique properties of blockchain technology. Moreover, the crypto was created based on the Bitcoin (BTC) protocol, but it varies in terms of the hashing algorithm used, hard cap, block transaction times and a few other factors. - Traders are using different strategies to price the value of Bitcoin. - Crypto expert Davis says that \$60,000 is not the final all-time high for BTC. - Bitcoin touched the \$40,000 level but did not last long. Traders are implementing different strategies to evaluate whether Bitcoin's price has begun to fall or not. According to Twitter, 2 bitcoin price indicators have been stated with the data chart of derivatives and on-chain activity which seems risky. Additionally, traders are expecting the Bitcoin trend again since the price value began to fall under \$40,000. Also, traders are not cheered up with confidence to this day. People don't bother who is holding BTC but some applaud Tesla and other large firms for building up Bitcoin. Besides, many are worried about the challenges of scalability and fungibility. Experts View on BTC The crypto expert Lark Davis has posted a tweet saying that, around \$64,000 is not at all the all-time high price of Bitcoin. So it brings joy to the crypto fans. \$64,804 is not the final all time high price for #bitcoin æ Lark Davis (@thecryptoLark) May 31, 2021 In addition, users began to look for trend reversal everywhere, including technical patterns, US CPI inflation data, and Bitcoin exchange deposits. Some analysts, for example, have stated that we can expect a value of \$50,000 by a move above \$40,000 would suffice. Anyhow, after two days, Bitcoin touched the \$40,000 level but did not last long. On the other hand, other traders believe that a reattempt of the \$30,000 bottom is required before a bounce. #Bitcoin \$BTC #BTC is forming a Descending Broadening wedge here. It's bullish but there are two possible scenarios. æ Johnny Woo | Never DM you for Money (@johannyw00) May 25, 2021 Green: breaking the resistance and maintain the uptrend. Red: retest the bottom of the wedge (~30k) and bounce from there. pic.twitter.com/8L26kQvf7X Bitcoin's Price Analysis The price of Bitcoin is \$37,160.52 with a total market cap of \$695,754,025,821 at the time of writing. It is up 4.18% within 24 hours and trading volume of \$37,010,031,560. Currently, BTC has 2.2 million active users over the past 30 days while this is high when compared before October 2020. Significantly, the metric clearly shows the peak of Bitcoin which hit the new all-time high price on April 14, 2021, with \$64,900. When the metric sharply slides down then it is understandable that no more users are interested in purchasing BTC. Recommended to you

In Ethereum Technical Analysis 2021, we use past statistics, price patterns, RSI, and much other information about ETH to analyze the future movement of the cryptocurrency. Ethereum is the second largest crypto in the market. It is a decentralized open-source blockchain platform that features its own cryptocurrency, Ether. ETH stays as a platform for numerous other cryptos, as well as for the decentralized smart contracts execution. Ethereum (ETH) Current Market Status According to CoinGecko, the Ethereum price is trading at \$2,534.95 with a 24-hour trading volume of \$39,252,607,613, at the time of writing. However, ETH has increased by 7.1% in the last 24 hours. Moreover, ETH has a circulating supply of 116,100,134 ETH and a maximum supply of infinity. Currently, ETH trades in Binance, Huobi Global, ZG.com, OKEx, and CoinTiger. Ethereum Technical Analysis 2021 The recent development and upgrades might push Ethereum (ETH) to reach new heights. Now let's deep dive into the Ethereum technical analysis 2021. The weekly time frame chart of Ethereum (ETH) is shown below. The above chart shows the Ascending Triangle pattern. An ascending triangle is a chart pattern used in technical analysis. It is created by price moves that allow for a horizontal line to be drawn along the swing highs, and a rising trendline to be drawn along the swing lows. The two lines form a triangle. Traders often watch for breakouts from triangle patterns. In simple terms, the price of ETH might surge to almost \$2920, a bullish signal. Change in Polarity (CP) æ according to this principle, whenever support is broken, its role is reversed and it starts to act as new resistance. Similarly, when any resistance is broken, it changes its role and tends to act as the new support level for the price. Ethereum (ETH) RSI, MACD, and MA The below chart shows the Moving Average Convergence/Divergence (MACD) of ETH. Notably, the MACD (blue) continues to stay just below the signal indicator (orange line). This means that cryptocurrency traders can still expect more bearish days ahead. In contrast, if the MACD begins to move above the signal indicator and performs a bearish crossover. Then the crypto has a high possibility of reaching new highs. Now let's look at the relative strength index (RSI) of ETH. As shown in the chart above, the RSI remains at level 44. This shows that ETH's price is in a nearly oversold state. However, this gives confidence for the traders to trade without any fear. From the beginning of 2021, it is clear that the ETH price has shown many

bullish patterns. Furthermore, taking all these into account, ETH could have a competitive market in 2021. Conclusion With the ongoing developments and upgrades that are taking place within the ETH platform. The cryptocurrency ETH has a fantastic future ahead in this crypto market. However, it is possible to see ETH reaching new heights. Bullish ETH price prediction 2021 is \$3,500. As said above, it may reach great heights, however reaching \$7,000 if investors have decided that ETH is a good investment in 2021. FAQ ETH is listed on many crypto exchanges that include Binance, Huobi Global, ZG.com, OKEx, and CoinTiger. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the ETH platform, it has the high possibility of reaching its ATH soon. As of August 2020, Ethereum is secured via the Ethash proof-of-work algorithm, and belongs to the Keccak family of hash functions. However, to transition the network to a proof-of-stake algorithm connected to the major Ethereum 2.0 updated, which launched in late 2020. In Mdex (MDX) Technical Analysis 2021, we use past statistics, price analysis, RVOL, MA, and much other information about MDX to analyze the future trend of the cryptocurrency. Mdex (MDX) is a new decentralized trading protocol that launched in January 2021, but has already surpassed Ethereum's Uniswap and SushiSwap, BSC's PancakeSwap, and the 1inch exchange in popularity, dethroning Uniswap as the top-ranked DEX. MDX is a decentralized automated market-making (AMM) exchange protocol based on the concept of fund pools. The platform also shares some similarities with traditional DEXs. However, by employing a dual-chain model based on both the Ethereum network and the Huobi Ecological Chain, it distinguishes itself from competitors (HECO). This allows it to benefit from both HECO's super-low transaction fees and the Ethereum ecosystem's deep liquidity. Mdex (MDX) Current Market Status According to CoinGecko, the Mdex (MDX) price is trading at \$2.22 with a 24-hour trading volume of \$101,845,272, at the time of writing. However, Mdex has increased by 6.81% in the last 24 hours. Moreover, Mdex has a circulating supply of 427,240,277.24 MDX. Currently, MDX trades in Binance, Huobi Global, Bibox, HitBTC, and Gate.io. Mdex (MDX) Current Market Status According to CoinGecko, the MDX price is trading at \$1.11 with a 24-hour trading volume of \$45,812,964, at the time of writing. However, MDX has surged to 0.10% in the last 24 hours. In addition, MDX has a circulating supply of 592,699,713 MDX coins. Currently, MDX trades in Binance, Tokocrypto, Huobi Global, CoinTiger, and BitWell. Mdex (MDX) Technical Analysis 2021 Mdex (MDX) holds the 104th position on CoinGecko right now. The recent development and upgrades might push MDX to reach new heights. Now, let's deep dive into the MDX technical analysis 2021. The daily time frame chart of Mdex (MDX) is shown below. A descending channel is one type of charting pattern that technical analysts will use to analyse a security's trend. A channel is formed by drawing trendlines along the support and resistance levels of a security's price series. In general, channels can be used to determine the best levels of support and resistance to buy or sell securities. Currently, MDX trades in a range of \$1.11. If the price breaks the trend line support level of \$1.05 then it will lead to a further drop up to the \$0.98 level. If the pattern continues to the top side, then it will reach the \$1.73 level soon. Mdex (MDX) RSI The below chart shows the relative strength index (RSI) of MDX. As shown in the above chart, RSI remains at 34.26. This shows that MDX's price is in a nearly oversold state. This shows that traders have to trade carefully, however, major price reversal could take place. Mdex (MDX) RVOL The below chart shows the Relative Volume of MDX. It is an indicator that indicates to traders how the current trading volume has changed over a period of time compared to the previous trading volume. Currently, the RVOL of MDX lies below the cutoff line which represents the weaker participants in the current trend. Mdex (MDX) Moving Average Mdex's Moving Average (MA) is shown in the chart below. MA supports traders to find trends. Currently, MDX is in bearish state. However, MDX price touches 50 MA (short-term), and it has a high chance of moving above 50-MA level. Possibly, MDX can also move above 200 MA (long-term) soon. Once it moves above 50 MA and 200 MA level, it completely goes to a bullish state. Moreover, there is a high possibility of Trend reversal at any time. Mdex (MDX) Price Comparison With Bitcoin The below chart shows the price comparison between MDX and BTC. From the chart, we can identify the trend of the BTC and MDX is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of MDX also increases or decreases respectively. Conclusion With the ongoing developments and upgrades that are taking place within the MDX platform. Mdex has a great future ahead in this crypto market. However, MDX can reach new heights. Bullish MDX price prediction 2021 is \$1.73. As mentioned above, it may reach great heights, however reaching \$2.70 is also possible, if investors have decided that MDX is a good investment in 2021. FAQ Mdex is an automated market making (AMM) decentralized exchange protocol that works on the concept of fund pools, sharing some similarities with standard DEXs. Mdex is listed on many crypto exchanges that include Binance, Tokocrypto, Huobi Global, CoinTiger, and BitWell. In which the crypto is available to be traded against fiat currencies, stablecoins, and other cryptos. With the ongoing developments and upgrades within the Mdex platform, it has the high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. Bitcoin price somehow traced back slowly to its \$40k stand amidst the recent market crash. Yet this was short-lived as the Bitcoin price fell drastically to \$37k, a decrease of over \$3k. This in reflex drowned down the entire market cap by \$100 Billion in just a day. The Fall of Bitcoin Again On 14th, April Bitcoin observed its highest peak ever touching \$63k. After that till 1st week of May bitcoin galloped in glee between \$60k and \$54k profusely. This depicted a time of prosperity for the traders to buy and sell BTC evaluating profits in thousands. Upon the 2nd week of May, BTC witnessed a slow slip down from \$50k. And by the end of the week when the epic crypto market crash took place, the price of BTC plunged down to \$32,000. After much struggle and market collapse, BTC strived hard at a leisurely pace to make its way up, to at least \$40k. The whole market came alive and hopes were high

for BTC to reign again upon \$50k. The hopes were high as BTC soared up upon Joe Biden's \$6 trillion budget proposal which is to be divided into 2 years that follows. But sadly the momentum was short-lived as it beared down back to \$37k, instigating a fall of \$3000. The effect was not only on the price of BTC but upon its market cap value which dropped to \$100 billion within a day. Following this, now the market cap value of BTC stands at \$700 billion only. Aftermath on Altcoins - As the Captain goes down, so does the crew and the ship - and so the altcoins followed the same path as that of BTC in the past 24 hours. Ethereum anxiously looked upon reaching \$3000 respect to a couple of days back. But the effect of BTC reflected on Ethereum brought it further down to \$2,600, depicting a 6.5% declination in the past few hours. BNB dropped about 6.5% too accounting for \$340, Dogecoin by 4.5% at the price of \$0.325, Uniswap by 3.5% at price down of \$27. Bitcoin Cash dropped to \$648, denoting a decline of 4.8%. Following this decline are ADA at 8.5%, XRP at 9.5%, and LINK at 10.5%. Taking into account the highest drop in the past 24 hours are Enjin Coin by 15%, Polygon by 13%, Telcoin by 11%, Stacks by 11%, Revain by 10%, OMG Network by 10%, Aave by 10%, and Zilliqa by 10%. All this decline in the past few hours now made the whole crypto market cap into a great depreciation making it now stand at \$1.6 trillion. Recommended for you

Ever Since last week, the complete crypto market is in a very miserable state of condition. This directly affected most of the crypto exchanges as well as top DeFi tokens too. Exchanges like Coinbase, Binance, Kraken, and Gemini are taken into account including DeFi tokens like Uniswap (UNI), Chainlink (LINK), Aave (AAVE), and Maker (MKR). Crypto Crash Effects Wednesday marked the debut of the epic downfall of the complete crypto market. The instant effects directly hit most of the centralized exchanges such as Coinbase, Binance, Kraken, and Gemini. During this time the only ones that kind of narrowed out of the impacts were the decentralized exchanges such as Uniswap and 1 inch. Yet, there's no point in comparing centralized to decentralized exchanges, still, many crypto traders turned their heads and eyes towards the DeFi tokens. It's a known fact, DeFi's are of less trading volumes compared to the coins. Furthermore, ecstatic changes took place on Sunday which witnessed complete swiping of the crypto market upon the bear hands. Uneventfully, now the DeFi's faced the same fate as the cryptocurrencies. Bitcoin(BTC) dropped to \$32,000 due to plunging 14%, Ethereum (ETH) down to \$1,900 denoting 16% drop, and Binance Coin (BNB) down to \$235 denoting 24% drop. Regarding the DeFi's, Uniswap (UNI) drops by 25%, Chainlink (LINK) drops by 24%, Aave (AAVE) drops by 24%, CAKE (native token of PancakeSwap) drops by 29% and Maker (MKR) by 19%. All this contradicts, if crypto suffers, so do the tokens too. Crypto Crash Engenders The collapse of the entire market started around 10 days ago when Elon Musk officially announced the cease of Bitcoin (BTC) payments for Tesla products. Though by constantly degrading BTC during the following period, he meanwhile assured grade endurance for Dogecoin. In addition to this, a week before, China officially announced a ban on crypto exchanges, trading, and regulations for them. This furthermore worsened the situation of the crypto market. Furthermore, the news of a hack on the Colonial Pipeline added more fuel to the fire. This ransomware hack accounts for about \$90 million worth of BTC. All the above took place one after the other leading to the epic collapse of the complete crypto market. Recommended for You

ProtonMail, the highly secured mail platform refuses to sell off its Bitcoins amidst the complete market slump. Bitcoin (BTC) reached the price of about \$30,000 just 2 days back. Among this complete fuzz and buzz in the market, many sold off their crypto holdings. Along with BTC, all other altcoins also faced the same fate for the past few days. ProtonMail's Decision on BTC ProtonMail announced officially through its tweets just a few hours back regarding its holding of BTC. Responsible financial diversification requires holding some assets outside of the traditional government controlled banking system. That's why Proton will continue to #HODL a significant proportion of our reserves in #Bitcoin to safeguard our independence. <https://t.co/AKQPxlpx9U> - ProtonMail (@ProtonMail) May 21, 2021 In the post it also retweeted Bitcoinmagazine's tweet, upon the support of BTC holding during this crisis period. ProtonMail instigates that it is extremely vital for diversifying its finances outside the governed bank systems. One such efficient means is by acquiring digital assets as much as possible. ProtonMail depicts encashing on digital assets like BTC will help the company to stay independent even in hard times. ProtonMail isn't the first to go into such decisions. MicroStrategy's CEO Michael Saylor, tweeted on Wednesday that all the firm's Bitcoin shares of 111,000 Bitcoin, worth of \$4.5 billion have been left untouched and would never sell them off. ProtonMail has been accepting payments by means of BTC ever since August 2017. In 2019, it also stated it has not cashed out the BTCs it has received so far as payments. So far, ProtonMail stocks about 2.2 BTC, amounting to roughly \$90,500. Future of BTC Bitcoin over the past month faced all the market heights and dips, of which all were not really expected. After its rise to \$ 59,428.07 as its highest, it came all the way down to around \$33,000. Speculations for this downfall are Tesla ceasing its BTC payments, the carbon footprints left by over-mining of BTC, China's recent official announcement to stop any sorts of trade of either buying or selling in terms of BTC, and much more. Market analysts predict that the downfall of BTC will touch down to even \$20,000 in short. Recommended for you

Cryptocurrency reaches its highest level of search volume in Google trends. The search interest peaked during the week of May 9th- May 15th, due to the fluctuations of bitcoin value. Google Trends tweeted a report showing that cryptocurrency holds more search quantity in recent times and reaches its all-time high (ATH) yet both in the U.S and worldwide. The term "cryptocurrency" has triggered a curiosity among the users as crypto is emerging in all real-life applications. Moreover, the searches can be initiated from audiences who are more interested in cryptocurrency and its trading platforms. Users Interest in Crypto Market The prominent truth behind the subject crypto is due to the interesting trading activities of main cryptocurrencies like Bitcoin and Ethereum. The search volume of cryptocurrency shows a wider view of users' interest into the crypto space. So some possible

reasons for the urge of crypto interest is, - Bitcoin: The price value of bitcoin reached above \$50,000 during the week of May 9- 15, where at the same time, search volume of cryptocurrency was also at its peak. More than 65% of users have searched for a combination of cryptocurrency and bitcoin in google trends. - Ethereum: The price value of ETH reached above \$4,300 in the same week, which created an urge among the viewer. Additionally, it is Ethereum's bull-run as it reaches its all-time high price for the first time. So Ethereum also gains high search volume along with cryptocurrency keywords. - Dogecoin: Tesla CEO Elon Musk's organized SNL night on May 8th to discuss the value of dogecoin. At that time the search volume of Dogecoin was recorded high. To be added, Ethereum miners earned a profit of \$128.04 million beating the profit of bitcoin's value \$61.6 million. This happened on the same day on May 15th 2021. Besides these two top cryptocurrencies, the trading aspects of other Altcoins has also created an urge and interest among the public users to know more about the crypto world. Therefore, we easily understand that users always expect to work with new technologies and trends. For instance, when a new news, post or a tweet emerges into the media platforms, users are very much eager to know more about them. And this act increases the search volume of any keywords and terms in search engines. Recommended for You

The CEO and Managing Director of Fundstrat, an independent research boutique on market analysis and sector research stated the possible next target for Bitcoin price. In an interview with CNBC recently, he depicts that the price of Bitcoin will surpass \$1,25,000. His statement and prediction are completely contrary to the current slash-down price of Bitcoin. Tom Lee's Prediction Speculations have raised and are all on contrary ever since that depiction from Tom Lee. Tom Lee who himself is a proclaimed Bitcoin bull, participates in continuous study analysis and market prediction of Bitcoin. He claims that Bitcoin will hit the bullseye of \$1,25,000 exponentially. His statement is completely contrary to Elon's depiction through his recent tweets. Upon Elon's tweet on his cease of Bitcoin payment for his Tesla products, the complete crypto market faced a tragic downfall. Prices surged down tremendously for not only Bitcoin but also for all other altcoins. Ever since this big dump, not many cryptocurrencies came up including Bitcoin. The price of BTC dropped from \$58,000 to \$42,000 from the
