

the past weeks, Dogecoin has had a stellar run. The meme coin's market cap currently stands at \$37 million, trading at around \$0.2515. Intra-day, we saw a dip to \$0.2489, while the closing showed a bounce to \$0.2689. Along with the rumored Grayscale Dogecoin Trust set for launch on January 31, 2025, this price movement indicates that people are willing to start investing in the asset again. The DOGE Trust's inception is critical to Dogecoin's significant adoption, as it incorporates institutional funding into the meme coin for the first time. Such institutional backing will likely generate interest in Dogecoin, resulting in its price appreciation in the forthcoming months. In addition, some experts believe that a Dogecoin ETF will likely be approved within a few months. They estimate a 75% probability of approval. Such sentiments regarding anticipation of the Dogecoin ETF and the already existing whale accumulation could propel the cryptocurrency's value towards breaking the \$7 mark in the next two months. If this prediction holds true, DOGE will have outperformed all expectations for early investors, making it one of the greatest crypto opportunities in 2025.

Sui (SUI) Shows Strength with Bullish Momentum Sui describes one of the most successful emerging blockchain protocols, with its fundamental technological indices suggesting a rally is underway. Currently, Sui is trading at \$3.01, with a market cap of \$9.29 billion. The token has traded for \$1.33 billion in the past day, demonstrating market activity. Sui's price action shows a bullish engulfing pattern on the weekly chart, which indicates an uptrend continuation. After roughly two weeks of consolidation, Sui is more likely to retest its all-time high of \$5 in the coming weeks. Should the momentum continue to build, analysts suspect SUI could reach \$10 before the year's end, substantially rewarding long-term investors. Robust factors work in Sui's favor, along with the growing ecosystem over which it is positioned. As decentralized applications, partnerships, and institutional adoption grow, Sui is becoming an essential player. Notwithstanding market volatility, SUI remains one of the top crypto investment options.

Rexas Finance (RXS) Leads the Pack with Unmatched Growth Potential Despite Dogecoin and Sui's profitability, Rexas Finance (RXS) is your best investment option for turning that \$500 investment into a wealth course. The project is single-handedly disrupting real-world asset tokenization by allowing users to access valuable physical assets through blockchain technology. RXS presale is one of the most successful presale events, as it has raised \$46.15 million so far and sold 450.7 million tokens. It is currently at the last stage and is 90.15% complete, selling tokens at \$0.200. Additionally, RXS will be listed at an expected price of \$0.25 on June 19, 2025, making early investors set for instant returns. What makes RXS an even more attractive investment is its long-term potential. After the listing, analysts expect RXS to reach the \$5 to \$10 range within one year. Considering the use case and adoption rate, some high-thoughts predict a long-term valuation above \$50. Rexas Finance offers presale information, as the RXS token is rumored to be a top investment option before speculation about listing on exchanges soars. Explosive presale performance and volatility fuel RXS's prospective value.

Conclusion: Rexas Finance is the Best Investment of 2025 Rexas Finance possesses so much growth potential that metrics-ridden US institutional investment in Dogecoin and the DeFi expansion phenomena-ridden Sui can't keep up. The advancing approach to real-world asset tokenization is what sets Rexas Finance apart. With a successful presale campaign and upcoming exchange listing, RXS has shot itself to the top of crypto investments for 2025. Rexas Finance is the best-standing risk in the market, where \$500 could be gambled and turned into millions. With its impending return, RXS is poised to shift the market toward posterior advancement. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethena climbs to \$0.4271 after gaining 13%. - \$3.25M in ENA liquidations hit the market. The extended downturn in the crypto market has pushed Bitcoin down toward \$86K, while Ethereum hovers around \$2.1K. However, Ethena (ENA) tells a different story—defying the slump and rallying over 13.47%, securing its place as the day's top gainer. In the early hours, Ethena traded at a low of \$0.376. After riding the wave of bulls, ENA mounted to a high of \$0.4572, breaking crucial resistances at \$0.3979 and \$0.4487. At press time, Ethena traded at \$0.4271 with its market cap reaching \$1.37 billion. Furthermore, the market has observed a liquidation of \$3.25 million worth of Ethena within this period. Besides, the daily trading volume has touched \$695 million. ENA's monthly price chart exhibits a steady loss of over 21.72%. The asset began trading at its monthly high of \$0.5488. Ethena's momentum was highly volatile and it slipped to a low of \$0.3388 mark. Can Ethena Stay in the Green? The upside correction of Ethena might push the price to its crucial resistance at \$0.4688. Assuming the formation of the golden cross, a continued push past this threshold may send the asset's price soaring to \$0.52. On an uptrend reversal, Ethena's weaker support range could be found at \$0.3946. Holding this level is crucial to avoid more downside. A drop below might open the doors for a further slide to \$0.31. In addition, the Moving Average Convergence Divergence (MACD) line is above the signal line, indicating a bullish crossover. The asset's momentum is strong with the domination of the buying pressure. The Chaikin Money Flow (CMF) indicator settled at 0.04 suggesting some accumulation, but not strong enough to confirm a robust uptrend. Meanwhile, ENA's daily trading volume has surged by over 15.43%. The asset's Bull Bear Power (BBP) value of 0.05422 signals that bulls have slight control over the market. The current market sentiment of Ethena is bullish and might approach the overbought zone with the daily relative strength index (RSI) stationed at 60.13.

Highlighted Crypto News Dogecoin May Enter Powerful Wave (3) Expansion Amid Elliott Wave Signals

As the crypto market heats up in 2025, investors are on the hunt for the best crypto to buy now in

March 2025. With fresh presale opportunities, bullish trends, and explosive growth potential, certain cryptocurrencies stand out as must-have assets. Whether you're aiming for long-term gains or quick returns, these top picks should be on your radar.

1. BlockDAG (BDAG) – Presale Hits \$201.5M with BDAG800 Bonus BlockDAG has taken the spotlight, cementing itself as the best crypto to buy now in March 2025. Its presale has surged past \$201.5 million, fueled by the BDAG800 bonus, which gives investors a massive 400% additional BDAG allocation. That means for every BDAG purchased, investors receive five times the amount, leading to a rush to secure tokens before the next price hike. Since the presale launch, BlockDAG has seen over 18.7 billion BDAG coins sold, with its price rising from \$0.001 to \$0.0248. The rapid batch progress underscores the intense demand, and as the presale nears its later stages, investors are scrambling to lock in the BDAG800 bonus while it lasts. Security remains a top priority, with BlockDAG undergoing rigorous CertiK and Halborn audits, adding credibility and boosting investor confidence. Analysts predict BDAG could rival top crypto assets in terms of adoption and price appreciation, making it a prime choice for anyone looking for high-growth opportunities. With limited time left before the next presale batch increases the price, BlockDAG is the undisputed leader on this list, and its current incentives make it the best crypto to buy now in March 2025.
2. Cardano (ADA) – Smart Contracts Expansion Fuels Demand Cardano has been making major advancements in its smart contract capabilities, drawing developers and investors alike. The platform's recent upgrades are enhancing transaction speeds and reducing fees, making it a more attractive alternative to Ethereum. ADA's price has shown strong resilience, and its growing adoption in decentralized finance (DeFi) and institutional sectors suggests continued upward momentum. With a strong developer community and a roadmap focused on scalability, Cardano remains one of the best cryptos to buy now in March 2025 for long-term holders.
3. Dogecoin (DOGE) – Meme Coin with Massive Adoption Dogecoin continues to hold its ground as the top meme coin, backed by a passionate community and growing real-world utility. The integration of DOGE in payment systems and increasing endorsements from high-profile figures keep it relevant in the market. With potential network upgrades and further adoption in online transactions, Dogecoin's price action could surprise many in 2025. Investors looking for exposure to a high-visibility asset should consider DOGE as one of the best cryptos to buy now in March 2025.
4. BNB Coin (BNB) – Binance Ecosystem's Powerhouse BNB remains one of the most reliable assets in the market, benefiting from the strength of the Binance ecosystem. The coin's utility spans trading fee discounts, DeFi, staking, and NFT marketplaces, making it indispensable for Binance users. Recent developments, including regulatory compliance and expansion into new financial services, are positioning BNB for sustained growth. As Binance continues to dominate the crypto space, BNB is a solid pick for the best crypto to buy now in March 2025.
5. Pepe (PEPE) – Meme Coin with Explosive Potential Pepe has captured investors attention, experiencing massive price surges and strong trading volumes. Its recent bullish breakout indicates continued demand, and its presence on major exchanges has solidified its standing among meme coins. Unlike other speculative assets, Pepe has been steadily building a dedicated community, pushing for real utility beyond the meme culture. If the momentum continues, Pepe could deliver major gains, making it a high-risk, high-reward option for those looking for the best crypto to buy now in March 2025.

Final Thoughts With March 2025 presenting prime opportunities, BlockDAG leads the charge with its explosive presale growth, while Cardano, Dogecoin, BNB, and Pepe offer diverse investment potential. Whether you're looking for presale gains, utility-driven growth, or meme coin hype, these picks stand out in the market. If you're seeking the best crypto to buy now in March 2025, don't miss out on BlockDAG's BDAG800 bonus, as its presale momentum continues to break records. Timing is crucial, and locking in early could be the key to maximizing your returns this year.

Timing is crucial, and locking in early could be the key to maximizing your returns this year.

- XRP, Solana, and Cardano dropped due to Bitcoin reserve, thus Trump clarified only Bitcoin would receive active support. - Meme coins like Dogecoin and Shiba Inu fell due to unconfirmed reserve inclusion. - The crypto market dropped 4%, with uncertainty lingering ahead of the White House Crypto Summit. The crypto market has witnessed high volatility today, with top altcoins such as Ethereum (ETH), Solana (SOL), and XRP experiencing price drops. President Donald Trump's recent executive order to create a Bitcoin strategic reserve first fueled hopes of a wider U.S. push into crypto. But these altcoins are falling as the market responds to conflicting signals. XRP, Solana, and Cardano dropped despite Bitcoin reserve XRP, Solana, and Cardano enjoyed a brief burst of optimism after being included in Trump's reserve plan. But the optimism did not last long after Trump made it clear. The government would actively support only Bitcoin, while other coins such as XRP, Solana, and Cardano. Would only be included in the reserve if governments confiscated them. XRP dipped 2%, Solana lost 5%, and Cardano dipped 10%. This change suppressed investor sentiment and precipitated a sell-off, eliminating recent gains. The anticipation that the U.S. government would diversify its crypto reserves was dispelled, further fueling the downtrend in the market. Meme Coins declined Meme coins such as Dogecoin (DOGE), Shiba Inu (SHIB), and Pepe Coin (PEPE) reflected the general market decline after bitcoin reserve announcement. DOGE declined 5%, SHIB fell by 2%, and PEPE lost 6%. Earlier this week, rumors had circulated that DOGE could be added to the reserve, triggering a brief price increase. But with no official support from Trump's proposal, the gains were short-lived. The overall crypto market experienced a drop of almost 4%, with the world's market capitalization reducing to \$2.88 trillion. The reserve's under-diversification has instilled doubts in investors. Although the prices did fall, tokens such as MOVE, Sui, and Jito recorded some positive gains, yet the market is still bearish. White House Crypto Summit All eyes now shift to the White House Crypto Summit for possible policy updates that would give insight into the future of U.S. crypto rules. Investors are optimistic about a more open-minded approach, but hopes are low. The market, meanwhile, will probably continue to suffer from uncertainty as traders readjust their strategies because of the volatile market atmosphere. Trump's Bitcoin reserve announcement was a step forward for the crypto space, the market remains volatile, and investor confidence in altcoins is wavering. Highlighted Crypto News Today 4 Bullish Reasons Why Trump's Bitcoin Reserve Is a Game Changer

- Solana falls to \$142 with a 4% loss. - SOL has faced \$20.12 million in liquidations in the past 24 hours. Though US President Donald Trump signed an executive order to create a Strategic Bitcoin Reserve, BTC retraced back to its low. The action was supposed to improve the market sentiment but failed as the government would not acquire new Bitcoin. Anatoly Yakovenko, the Solana co-founder has expressed skepticism over the idea of a US crypto strategic reserve, saying that his first preference would be to have no crypto reserve. The Solana price has shown a mix of upticks, declines, and key support retests. With the SOL price bouncing between support and resistance levels, traders are watching for a potential breakout or another dip. Notably, Solana has plunged by over 4.29%, with a 72.42 billion market cap. At press time, SOL trades at \$142.55. The intraday trading price of the altcoin is noted at \$135.72, slipped from a high of \$149.53. Furthermore, Solana has witnessed a 24-hour liquidation of \$20.12 million, as per Coinglass data. Consequently, the daily trading volume of SOL has reached \$4.66 billion. Can Solana Reverse Its Losing Streak? Assuming the active downtrend forms a death cross, the price of Solana could steeply fall and test the \$133.16 support. A drop below this range might accelerate losses, pushing the price closer to the \$120 mark. On the upside, if Solana jumps to the \$148 level, the altcoin could target its crucial resistance at \$156.77. Overcoming this resistance level could set the stage for the altcoin to potentially climb toward \$170. Additionally, the Moving Average Convergence Divergence (MACD) line and the signal line are settled below the zero line. This infers the bearish crossover with the possibility of continued downside pressure. The Chaikin Money Flow (CMF) indicator is found at 0.06 signals more inflows than outflows but doesn't confirm a bullish trend. In the meantime, the altcoin's daily trading volume has increased by over 7.45%. Solana's Bull Bear Power (BBP) value of -2.24 suggests strong bearish momentum in the market. The asset's market sentiment rests in a neutral to slight bearish zone, as the daily relative strength index (RSI) stays at 47.40. Highlighted Crypto News Will Dogecoin (DOGE) Struggle to Recover After a Steep 8% Drop?

- Canary Capital filed for the first SUI ETF in Delaware. - SUI price is witnessing considerable price

surge, ready to break out of its resistance levels. Crypto-based investment products filings are increasing for the past few months. With the successful launch of multiple Bitcoin ETFs, altcoins investment product filings are increasing in number by the day. Ether, Solana, XRP, Cardano, and Dogecoin have already been introduced in recent filings. As per the latest news, SUI has also entered the ETF filings race. Canary Capital filed for a trust entity in Delaware for a SUI ETF. The present filing is for a Domestic Statutory Trust, which indicates there will be a potential SUI ETF filing submission to the SEC for regulatory approval. Yesterday, SUI announced its strategic partnership with the WLF1 on its official X post. This not only results in WLF1 adding SUI to its reserve but also a collaboration between two projects on product development. Amidst the increasing number of altcoin ETF filings to the SEC, Canary Capital took this opportunity to proceed with SUI ETF. The asset manager stays ahead being the first platform to file an SUI-based ETF. Even though Canary Capital's SUI ETF filing and SUI partnership with World Liberty Financial are two separate actions, one might lead to another. Can SUI ETF Push its Price to New Heights? SUI price has been surging since its partnership announcement with the WLF1. It is trading at \$2.82 with a 5.45% rise in the last 24 hours. The token price went close to the \$3 mark today and came back. Furthermore, the token faces key resistance levels at \$3.48 and \$3.78. If SUI price surge continues with the recent Canary Capital SUI ETF filing news, it could break out its resistance levels. The 144% surge in its trading volume reflects increased investor sentiment. Meanwhile, its market cap increased by 5.67%, standing at \$8.94 billion. Highlighted Crypto News Today:

After several years of turbulent market fluctuations, cryptocurrencies still attract the attention of many investors, who actively seek new opportunities and investment strategies. The fluctuation of Bitcoin prices and the sharp decline of altcoins such as XRP and DOGE have made traditional investment methods increasingly unsustainable. Therefore, innovative investment forms such as AI cloud mining have gradually become the focus. ðŸ”– The rise of cloud mining Compared with traditional mining, cloud mining has shown obvious advantages. Traditional mining requires high hardware investment and rich professional knowledge, while cloud mining has attracted more and more investors with its simple operation and considerable returns. Cloud mining platforms based on AI technology (such as Smart Mining) provide efficient and stable mining services through intelligent algorithms and automated management, lowering the investment threshold and becoming an ideal choice for investors seeking a safe haven in a turbulent market. ðŸ”– Smart mining leads the future of cloud mining Since its establishment in 2020, Smart Mining Services Ltd has rapidly emerged as a leader in the field of cloud mining. The platform has more than 10 million users. It not only supports Bitcoin mining, but also covers a variety of mainstream cryptocurrencies, allowing ordinary investors to participate easily. The combination of a user-friendly interface and a powerful AI management system maximizes mining benefits while reducing the risk of income interruption due to technical failures, allowing investors to enjoy stable passive income. ðŸ”– Easy to get started: Enjoy wealth appreciation in a few steps It is very simple to participate in smart cloud mining. Users only need to follow the steps below to start their mining journey: - Open a trusted wallet, connect to the on-chain mining company, and visit the relevant mining pool website (such as 3dmining.cc). - Visit the official website of smart mining, choose to mine on the ETH chain, and prepare 0.000133ETH as the mining fee to start mining. (Contact online customer service to get a \$3 reward for free) The smart cloud mining platform also has a friend reward mechanism. Users can get a 10% commission by sharing the invitation link. The basic mining income is set at 3%-10% per day, and the overall monthly income can reach 90%-240%. ðŸ”–Fund security and privacy protection You can start mining by placing funds in your own wallet, and you can control your funds at any time. When using the smart cloud mining platform, users do not need to register, and the system does not collect personal information. All transactions are guaranteed to be safe through smart contracts and blockchain technology. The decentralized nature not only improves the security of funds, but also enhances the privacy protection of users, allowing investors to participate in mining without worries. ðŸ”–Flexibility is the core of cloud mining Smart mining cloud mining adopts a new node mining technology. Users do not need to pay pledge fees and can choose to start or exit mining at any time. This flexible model allows investors to freely control their investment progress without being restricted by contracts. ðŸ”–Compliance: Grasp the mainstream of the future Smart mining nodes strictly follow anti-money laundering (AML), know your customer (KYC) and tax compliance requirements to ensure the transparency and security of the platform and provide investors with a stable and safe experience. ðŸ”–Summary Smart mining node cloud mining provides investors with an efficient, safe and flexible mining method. With its decentralized nature, compliance requirements and excellent user experience, smart cloud mining will become an increasingly important part of the crypto market. In the context of turbulence in traditional markets, seizing the opportunity of smart mining is the key for investors to unlock the code of wealth. Through this emerging investment method, investors are expected to usher in new opportunities and challenges in an uncertain market. - Official website: <https://3dmining.cc> - Telegram channel: <https://t.me/smartmining6> - Official email: SmartMining@3dmining.org Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is evolving faster than ever before, with new coins and tokens emerging all the time. Amid the chaos, there's one thing everyone is looking for: the best cryptos under \$1. These hidden gems present massive potential for future growth. As prices remain low, many savvy individuals are looking for opportunities to enter the market before the next big breakout. But finding a project that offers not just low prices but also true long-term value can be a real challenge. In this article, we'll be diving into some of the most exciting cryptocurrencies under \$1, including Qubetics (\$TICS), which is offering something entirely different from anything that has come before it. It's not just another token, it's a transformative force in the space—one that could change

the way digital assets are used in the real world. But what exactly sets Qubetics apart from its competition? Let's take a closer look.

1. Qubetics (\$TICS) Qubetics is one of the most exciting projects under \$1 right now. With the presale in its 24th stage, Qubetics is making waves in the crypto world and could be a massive game-changer in the coming months. Its focus on real-world asset tokenization (RWAT) could open doors for a whole new range of digital assets—especially in markets that are still underserved by traditional crypto solutions. Recent Developments Qubetics is already raising a lot of attention. Over 22,200 holders have already secured more than 495 million tokens, and the ongoing crypto presale has raised over \$14.6 million so far. This rapid growth shows there's real demand for what Qubetics is offering. The token price right now stands at just \$0.0976, but analysts predict it could reach \$0.25 by the end of the presale and as high as \$1 after the presale ends. That's a 923% ROI for early buyers! Once the project launches its mainnet, it could even hit \$5, which would mean a staggering 5018% ROI. But why is this such a big deal? Well, Qubetics is not just another crypto. The project focuses on solving a real-world problem: bridging the gap between digital assets and physical assets through tokenization. In simple terms, it's creating a way to own shares in real-world assets like real estate, commodities, and even art, all securely stored on the blockchain. Real-World Asset Tokenization Qubetics is breaking down barriers that have long existed between traditional investments and the crypto world. Imagine being able to own a fraction of a multi-million dollar building or high-end artwork. With Qubetics, this could soon be a reality. The tokenization of these assets allows for fractional ownership and trading, making what was once inaccessible to the average person suddenly available.

Decentralized VPN One of Qubetics's most interesting use cases is its decentralized VPN application. As businesses in Central Asia—especially in countries like Kazakhstan, Uzbekistan, and Kyrgyzstan—become more digitally connected, the demand for secure, private internet connections is skyrocketing. Qubetics aims to address this with a decentralized VPN solution, offering private and secure browsing for businesses and individuals alike. Imagine a world where you don't have to rely on central authorities or third parties to access the internet securely. Qubetics promises just that.

Why Did This Coin Make It to This List? Qubetics isn't just another coin; it's a solution to real problems in the financial and digital world. It stands out in the crowd due to its innovative approach to asset tokenization and its potential for huge growth as the presale nears its end. With predictions for sky-high returns, it's hard to ignore this opportunity for those looking for the best cryptos under \$1.

2. Dogecoin (DOGE) Dogecoin, originally created as a joke, has become one of the most talked-about cryptocurrencies in the world. While it hasn't always been taken seriously, the coin's community, combined with celebrity endorsements like Elon Musk, has helped propel Dogecoin to the forefront of the market. In recent months, Dogecoin has seen a resurgence thanks to the growing adoption of the coin. It's increasingly being used for payments, tips, and donations, with businesses around the world accepting it as a valid form of currency. Dogecoin's blockchain is also one of the fastest, making it a great option for microtransactions. Despite its humble beginnings, Dogecoin has proven to be more than just a meme. With a dedicated community and growing use cases, it continues to show potential for future gains. If you're looking for an affordable crypto that has already gained widespread recognition, Dogecoin remains one of the best cryptos under \$1.

3. Stellar (XLM) Stellar is another standout in the world of low-cost cryptos. Its primary goal is to make cross-border payments faster, cheaper, and more accessible to everyone. With partnerships with major companies and governments, Stellar is well on its way to becoming a key player in the global financial system. Stellar recently expanded its partnerships, with IBM backing the project and helping create real-time payment solutions for businesses. The Stellar network's ability to process transactions quickly and cheaply makes it an attractive option for institutions looking to streamline international payments. Stellar is not just a low-cost option; it's a powerful tool for institutions looking to disrupt traditional finance. Its growing adoption and real-world utility make it one of the best cryptos under \$1, especially for those looking to make a difference in the financial world.

4. Tron (TRX) Tron is a blockchain platform focused on creating decentralized applications (dApps) and content-sharing platforms. It has seen massive adoption, especially in Asia, and its founder, Justin Sun, has been incredibly active in promoting the platform. Tron has expanded its ecosystem significantly, adding new features like the ability to host decentralized exchanges (DEXs) and launch new tokens. The platform has also seen a rise in the number of dApps being developed, further expanding its use cases. Tron has rapidly become one of the most popular platforms for decentralized applications, and its low cost makes it an attractive option for those looking to dive into the world of decentralized finance. With its strong community and ongoing development, Tron remains one of the best cryptos under \$1.

5. Polygon (MATIC) Polygon has quickly become a vital part of the Ethereum ecosystem. It provides scalability solutions for Ethereum, allowing it to process transactions faster and at a lower cost. As Ethereum continues to grow, Polygon's importance in the ecosystem only increases. Polygon's growth is largely driven by its partnerships with big names in the DeFi space. It's also been expanding its suite of tools to help developers build scalable dApps on Ethereum. As Ethereum continues to grow, Polygon's role in supporting the network will only become more important. Polygon's position in the Ethereum ecosystem and its growing use cases in the DeFi space make it one of the best cryptos under \$1. With its low price and massive potential, it's a must-have for anyone looking to diversify their portfolio.

Conclusion Based on research and analysis, these cryptos represent some of the best cryptos under \$1 right now. From the potential of Qubetics to the widespread use of Dogecoin and the scalability of Polygon, there's a lot to be excited about. As always, the market is volatile, but these coins offer the best potential for growth in the near future. If you're looking to take advantage of these opportunities, it's important to act quickly. The presale of Qubetics is already underway, and with analysts predicting a massive return after the mainnet launch, now is the time to get in. For More Information: - Qubetics: <https://qubetics.com> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs What makes Qubetics (\$TICS) stand out from other cryptos? Qubetics is unique due to its focus on real-world asset tokenization and its decentralized VPN application, making it a game-changer in the crypto space. Is Dogecoin still a good option for buying under \$1? Yes,

Dogecoin's community and real-world use cases, combined with its low price, make it one of the best cryptos under \$1. How does Stellar (XLM) differ from other cryptos? Stellar's focus on cross-border payments and its partnerships with major companies like IBM give it a real-world utility that sets it apart from other cryptos. Can Polygon's (MATIC) scalability help Ethereum's growth? Absolutely. Polygon's scalability solutions are vital for Ethereum's future growth, making it a crucial part of the Ethereum ecosystem. AI coins made a comeback, boosting confidence about an overall market rally. IntelMarkets (INTL), a new AI coin, leads in gains after its recent performance. Meanwhile, the memecoin sector regains momentum: the Dogecoin price regains \$0.2 and the SHIB price inches closer to \$0.000015. The new AI coin INTL is on investors' radars for its remarkable performance. Additionally, as a low-cap, it has plenty of room to run, making it more appealing than top crypto coins with little upside. Tipped to lead the next AI coin craze, it is a bullish wave worth surfing this cycle. IntelMarkets (INTL): The Next Big Thing in the Crypto Scene IntelMarkets (INTL) is among the top gainers despite the significant decline in the SHIB price and Dogecoin price. With sentiment shifting to presale tokens' assets serving as safe haven, INTL has become a new favorite. Moreover, it is backed by a bullish narrative and vibrant community. Aiming to reshape the \$36 billion global crypto trading market, INTL will integrate AI across all levels, a modern-gen trading platform. In addition, its trading bots will be different from those used by standard exchanges, as they will be trained on over 100,000 data points. Further, the protocol will feature the first decentralized intelligence marketplace, offering the best place to buy and sell advanced AI agents. Primed for adoption, it is a new DeFi project to watch out for. At the same time, it has been dubbed the best ICO considering the projected 65x rally after Tier-1 exchanges. Priced at \$0.091 in the tenth ICO stage, experts consider it a steal. Amid rising interest, early funding has surpassed \$11.2 million, setting the stage for explosive growth. Dogecoin (DOGE): Regaining Key Price Levels The Dogecoin price rallied alongside the broader crypto market. It hovers around the \$0.2 support, regaining lost price levels. Meanwhile, technicals signal a potential bounce in the Dogecoin price, notably the 9-HMA and Commodity Channel Index (20). Further, experts are optimistic about further upswings in the Dogecoin price. SuzzyDeFi, a crypto analyst on X, expects a breakout above \$0.25 soon. VipRoseTr, another analyst, targets a rally above \$0.29, potentially pushing Dogecoin (DOGE) toward \$0.50 and \$0.60. Despite this, the declining interest in memecoins makes the dog-themed memecoin less appealing. Instead, investors have been doubling down on IntelMarkets (INTL), a new AI coin. With plenty of room to run, not forgetting it is more budget-friendly than the current Dogecoin price, it is among the best altcoins to invest in this year. Shiba Inu (SHIB): Bulls Target \$0.000015 With the memecoin sector making a comeback, so is the SHIB price. The leading ETH memecoin eyes a breakout above \$0.000015 after recent upswing. While further downswings aren't out of the question, a bounce unfolds. Moreover, key technical indicators like the Commodity Channel Index (20) and the MACD Level (12, 26) signal a bounce in the SHIB price. At the same time, bullish SHIB price predictions have been making the rounds, boosting confidence. LucieSHIB, maintaining a bullish outlook, expects the SHIB price to hit \$0.000035. Meanwhile, Smellyrino, another top analyst, targets a 400% upswing, citing a massive inverse head and shoulders pattern. However, IntelMarkets, a novel AI coin, has higher upside potential as a low-cap gem, tipped for a 65x rally. IntelMarkets (INTL): Leading Dogecoin (DOGE) and Shiba Inu (SHIB) in Gains In the past few months, IntelMarkets (INTL) has skyrocketed over 900%, from \$0.009 to \$0.091. In contrast, the SHIB price and Dogecoin price have been largely underwhelming, highlighting the growing interest in AI. Set for another 65x upswing after Tier-1 exchange listings, it is among the best presales to watch out for this year. For more information about IntelMarkets (INTL) visit the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin Cash (BCH) price increased by 33% this week. - With a 12% daily price surge, BCH is set to reach the 3-digit mark soon. Bitcoin Cash is witnessing a significant price surge for the past few days. Since its bull run at the end of 2024, BCH has been trending downwards. However, its price started to recover a couple of days ago and is recording two-digit price rises. Meanwhile, market analysts are forecasting whether BCH can sustain in the coming weeks. Bitcoin Cash (BCH) Price (Source: CoinMarketCap) BCH is trading at \$398.38 at press time with a 11.56% daily surge and 32.58% weekly surge. The rise in its trading volume of 88.45% reflects increased investor interest in BCH. Its market cap has also increased by more than 10% and it is currently standing at \$7.9 billion. The BCH price rise is gaining traction across the market as it is outshining the market performance of several top altcoins, including Bitcoin. While BTC price has only increased by 2.40%, Ether witnessed 1.93% surge, and XRP rose by 3.41%. Even Solana and Dogecoin prices increased by only 2.74% and 3.24% respectively. Will Bitcoin Cash (BCH) Sustain its Price Rally? Bitcoin Cash (BCH) price found support levels at \$279.2 and \$299.7 last week. At the time of writing, it is trading at \$394.75 and briefly touched the \$418 mark earlier today. If the rally continues, it could surge past the \$400 mark and reach further higher price levels. Since Bitcoin is facing extreme volatility in the present times, investors might start considering its alternative investments. Bitcoin Cash (BCH) and Bitcoin SV are the top two alternative investments to Bitcoin since they emerged from the original Bitcoin source code. Meanwhile, the hype around the White House Crypto Summit could also be one of the reasons behind the BCH price rally. As per TradingView, RSI indicates 66, which shows there is potential for further price rally of Bitcoin Cash. Highlighted Crypto News Today: Is a Run to \$20 in Sight for Chainlink (LINK) After Jumping 7%?

The crypto market is never static, as new challengers seem to arise with every passing day, ready to take on established competitors. In 2025, several altcoins are gaining traction among investors, each offering unique value propositions that could potentially lead to massive returns. While Ripple (XRP) broadens its foothold into financial systems, Rexas Finance (RXS), Mantra (OM), Dogwifhat (WIF), and PEPE are newer tokens that seem to be getting serious fanfare. These novel cryptos boast stronger fundamentals and fascinating use cases, making them candidates for best-performing assets this year.

Rexas Finance (RXS): Leading the Charge Of all the altcoins, Rexas Finance (RXS) stands out as one of the most talked about in 2025. The project aims at real-world asset tokenization, allowing investors to gain exposure to tangible assets on the blockchain, which positions it miles ahead of randomized speculative meme coins. The presale sales for RXS have crossed \$46.22 million and have sold 451.1 million tokens so far. Currently, the token is at its final presale and is priced at \$0.200, with the presale reaching 90.22% completion. Analysts have set the launch price at \$0.25 on June 19, 2025, but predict a price surge after the launch. Some forecasts suggest RXS could hit \$5-\$10 in 2025, with even higher gains if adoption increases. RXS has earned a reputable status as one of the most anticipated cryptos this year owing to outstanding investor demand, passive income opportunities, and staking rewards.

Ripple (XRP): Maintaining Strong Market Position With ongoing partnerships in banking and financial services worldwide, Ripple has remained a prominent player in cross-border payments. XRP has exhibited renewed institutional interest following the partial court win. It was attained against the SEC. XRP is currently trading at \$2.43, and its market cap is \$140.08 billion, making it one of the biggest cryptocurrencies in the world. Although its movement is sluggish compared to meme coins, its real-world use case continues to attract serious investors. Many analysts say that if it maintains its momentum and increases its adoption rate, XRP could reach \$10 or more in the next few years.

Mantra (OM): Showing Consistent Outperformance of the Market With its exceptional performance, Mantra (OM) has proven to be a winner in 2025, even with the market tailbacks, which surprises many investors. Over the last seventeen days, OM jumped 70%, from \$3.2 to \$6. This increase has received much attention, and investors look forward to gains. As analysts note, OM's bullish price action is expected to increase above \$7 and possibly \$10. The middle Bollinger Band support at \$5.22 indicates the token's potential to grow further. Given its swiftly flexing boundless set, Mantra is becoming a top contender for those looking for high-growth altcoins.

Dogwifhat (WIF): Proving Meme Coins Still Have Potential Compared to the more common meme tokens such as Dogecoin and Shiba Inu, Dogwifhat (WIF) has endured 2025 relatively unscathed, singlehandedly establishing credibility to the notion that meme coins can stick beyond a single market cycle. WIF's community remains active, and many developments are going on within the realm of WIF, which helps it retain its momentum. Currently, WIF is priced at \$2.50 and has a market cap of \$2.3 billion, making it one of the frontrunners of the meme coins. According to analysts, WIF can grow to \$10-\$15 by the end of the year, provided the hype doesn't die out. Meme coins tend to be volatility-ridden, but Dogwifhat, with its dedicated community, has the potential to be a long-term token.

PEPE: The Meme Coin's Attempt to Return to the Meme Scene In 2024, Pepe Coin (PEPE) was one of the top-performing tokens in the meme coin subsector, earning incredible returns for the earliest investors. Sadly, like many meme coins, it lost traction. In the past three months, the token has depreciated by more than 43%, and investors have lost patience waiting for adoption or new developments. However, PEPE still commands a market cap of over \$4 billion, showing that it can retain some followership despite the decline. Analysts remain divided on whether PEPE still possesses the potential for another explosive run. PEPE is currently trading at \$0.00000963. Skeptics among short-term traders have increased, while long-term holders think that if the token secures a solid use case, it can surge again. Some projections state that if PEPE resumes a bullish trend, it can touch \$0.000015 by the end of 2025, which is highly unpredictable based on the overall market.

Why These Altcoins Stand Out in 2025 Investors and traders selling speculative tokens are no longer the only participants in the market. Meme coins still have a place, but as the markets mature, Rexas Finance (RXS) and Mantra (OM) have made their argument for why dedicated long-term investors should highly covet them. Ripple (XRP) continues to assert its influence in the financial landscape, while Dogwifhat (WIF) and PEPE prove that meme coins can flourish under optimal conditions. With the development of these cryptocurrencies, their growth can provide some of the greatest ROI in 2025. Anyone wondering which cryptocurrency to invest in next needs to keep their eyes on these assets, as they can be highly profitable in the next few months. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Traders are looking for big profit opportunities this year—could one of these coins be their ticket to success? Solana price analysis shows SOL has dropped a lot since its all-time high of \$295.83, but it could rebound to \$182.81 if it holds support at \$136.62. Similarly, the Dogecoin (DOGE) price is bearish, but a recent buy signal could mean a potential price recovery. On the other hand, upcoming crypto coin BlockDAG (BDAG) is on a whole different level, recently hitting \$200.5 million in its presale. This comes as five new experts join the team, all focused on accelerating global growth and pushing the presale to \$600 million target. With their expertise across key areas like marketing, product development, and mining efficiency, the network is set for rapid growth. Batch 27 is nearly sold out as traders rush to secure the coin at its current price! Solana Price Analysis: Key Levels to Watch for SOL Solana (SOL) price analysis shows the coin has been struggling since its all-time high of \$295.83, hitting multi-month lows. Its RSI has dropped below 30, indicating it may be oversold and could be due for a rebound. Market sentiment is currently negative, with many investors selling in frustration, which could be nearing an end. If SOL finds support at \$136.62, it might stabilise and

see a potential recovery, targeting \$182.31 or even \$222.14. However, if it drops below that support, it could fall further to \$120.72 before finding new support. Dogecoin (DOGE) Price to Rebound or Further Decline? The Dogecoin (DOGE) price may face further declines, with analysts predicting a drop to \$0.125 if it fails to break through the key resistance at \$0.24. The market remains bearish, and more drops are expected. However, there is hope for a rebound. A recent buy signal from the TD Sequential indicator suggests a potential trend reversal. If this trend holds, Dogecoin's (DOGE) price could rise from its current value of \$0.21. Traders should stay alert to market movements, as a shift could lead to significant price changes in the future. BlockDAG's Team Expansion Sets the Stage to Hit \$600M! BlockDAG is having an exciting moment right now, with its presale hitting the \$200.5 million milestone! Along with this, five industry experts have joined the team, and their skills are expected to help push the network toward its \$600 million presale goal. Nicolaas David van den Bergh, the Chief Marketing Officer, is an expert in creating impactful marketing strategies, which will be essential in further driving visibility and user adoption for BlockDAG globally. Marcus Xavier, who heads the Learning Academy, brings expertise in education and will likely play a key role in making BlockDAG more accessible to new users. Robert Radek, the Product Manager, has an extensive background in innovative development and scaling fintech startups, which he will leverage to support BlockDAG's growth toward its \$600M presale target. Joshua Sack, with his knowledge of mining, will ensure that BlockDAG's infrastructure remains secure and efficient. Lastly, Liza van Der Berg, responsible for HR and Operations, will help build a strong team and streamline operations. Given BlockDAG's impressive presale performance, analysts predict that BDAG could hit \$20 by 2027. The price is currently just \$0.0248 in batch 27, which could mean over 800x returns for those who get in now! Batch 27 is almost sold out, as smart traders are jumping in to grab BDAG at its lowest price. With these experts driving global growth, BlockDAG is the top opportunity for anyone looking for the best upcoming crypto coins, as BDAG presents excellent profit potential. Which Crypto to Buy for Maximum Profits? Solana's price analysis shows that SOL may rebound if it holds support at \$136.62, but a drop below this level could see it reach the \$120 mark. Meanwhile, Dogecoin (DOGE) could see a rise if the recent buy signal holds, but a drop to \$0.125 is possible if resistance isn't broken. However, for those looking for the highest profit potential, the upcoming crypto coin BlockDAG is the clear choice! With its current price of just \$0.0248 in batch 27, it's expected to reach \$20 within the next two years, making it one of the most profitable coins on the market. The presale has already crossed \$200.5 million, and with new industry experts driving growth, the \$600 million target could be reached sooner than expected. As the presale nears its goal, this is the lowest price BDAG will ever be, so now is the perfect time to buy BDAG for potential historic returns. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Meme coins have emerged as some of the market's most exciting, high-risk, high-reward investments. Recent market trends show meme coins experiencing significant price swings, with new projects making waves in the industry. The viral nature of these tokens, combined with their growing popularity on social media, has led to explosive gains. With this frenzy comes an opportunity for investors to get in early on the next big meme coin. Among the top meme coins to invest in right now are Arctic Pablo Coin (\$APC), Dogecoin (\$DOGE), and Test Coin (\$TST). Each of these coins has a unique appeal, ranging from adventurous storytelling and strategic tokenomics to historical significance and unexpected market surges. Arctic Pablo Coin: A Legendary Adventure with Huge ROI Potential Arctic Pablo embarks on an extraordinary journey in the heart of an icy expanse where myths intertwine. Unlike your average meme coin, Arctic Pablo Coin (\$APC) is wrapped in an adventure-driven narrative, where every investor joins Pablo on his expedition through hidden locations filled with untold riches. Unlike traditional presales divided into stages, Arctic Pablo Coin's presale is mapped out like a grand adventure. Each presale phase represents a different location in Arctic Pablo's expedition, making it feel like a treasure hunt. The journey has reached Chillville, the 13th location, with \$APC priced at \$0.000070. Early investors have already poured in over \$1.71 million, and once Pablo moves to the next destination, the price will increase again—creating urgency to buy before the next phase. With a launch price of \$0.008, those who invest at the current price can see potential gains of 11,285.71%. Such returns are unheard of in traditional markets, making Arctic Pablo Coin one of the top meme coins to invest in before its price skyrockets. Arctic Pablo isn't just about hype—it's also designed to be deflationary. The project burns unsold tokens every week during the presale, permanently removing them from circulation. Once the presale concludes, any remaining tokens will also be burned, ensuring scarcity and boosting value for holders. Investors can also stake their \$APC tokens and earn an impressive 66% Annual Percentage Yield (APY). All staked tokens are vested for two months from the launch date, allowing investors to compound their earnings while Pablo continues his journey through the crypto landscape. With its engaging storyline, structured price increases, and tokenomics designed for long-term sustainability, Arctic Pablo Coin is capturing the attention of meme coin investors worldwide. This is the last chance to buy at the lowest price before the next location begins! Dogecoin: The Meme Coin That Started It All Dogecoin (\$DOGE) remains the undisputed king of meme coins. Created in 2013 as a joke, it has since evolved into a household name, amassing a loyal community of supporters, celebrity endorsements, and real-world utility. Despite countless new meme coins entering the market, Dogecoin remains a top meme coin to invest in, thanks to its established credibility. Currently trading at \$0.228361, DOGE has a market cap exceeding \$30 billion and continues to attract large investors, also known as "whales." Recent reports indicate that Dogecoin whales have accumulated 750 million DOGE, signaling strong confidence in an upcoming price surge. Analysts predict that if demand holds, DOGE could rally toward \$4 in the coming months, making it a lucrative

bet for long-term holders. With Elon Musk's continued support and the recent U.S. crypto strategic reserve announcement, Dogecoin's market sentiment remains strong. If the momentum continues, DOGE could once again see massive price appreciation. Test Coin: The Meme Coin That Makes Waves Test Coin (\$TST) is the ultimate underdog story in the crypto space. Created as a tutorial example by the Binance team, Test Coin wasn't meant to be more than a demonstration token. However, things turned wild when a Chinese crypto community stumbled upon the token's contract address and started hyping it up. In what can only be described as a meme coin miracle, Test Coin exploded in value, with its trading volume exceeding \$1 billion in a single day. Following a surprise listing on Binance, the coin surged 32% in just 24 hours, with a 700% gain in one week. Investors who got in early have already made life-changing returns. While Test Coin's meteoric rise is impressive, its future remains uncertain. The coin lacks a structured roadmap, and its value is driven purely by community hype and speculation. Still, for risk-tolerant investors looking for high-volatility, high-reward plays, \$TST remains an intriguing option. Conclusion: The Best Meme Coins to Invest in Right Now Our research and market trends show that Arctic Pablo Coin is the most promising new meme coin investment. Its adventure-driven narrative, structured price increases, deflationary token burns, and 66% APY staking rewards create the perfect storm for explosive growth. With the presale currently in Chillville, the price is about to increase soon—making this the last chance to invest at this low entry point before Pablo moves to the next location. For those looking to capitalize on the next big meme coin wave, Arctic Pablo Coin offers an unbeatable opportunity. Join the Arctic Pablo meme coin presale now before the next price hike! For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> FAQs 1. What makes Arctic Pablo Coin a top meme coin to invest in? Arctic Pablo Coin offers a unique adventure-driven presale, structured price increases, deflationary token burns, and a high 66% APY staking program—making it one of the best meme coins for early investors. 2. Can Dogecoin still go up in price? Yes. With ongoing whale accumulation and strong community support, analysts predict DOGE could reach \$4 if current market demand holds. 3. Is Test Coin a good investment? Test Coin's value is driven by speculation and community hype. While it has delivered massive gains, its future remains uncertain due to the lack of a structured roadmap. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bybit CEO shared that 77% of stolen funds are still traceable while 20% went dark and 3% froze. - On-chain data tracker, Ember reported that the Bybit hack laundered all the stolen funds, i.e., 499,000 ETH. The Bybit hack took a new turn as on-chain data tracker Ember reported that the hacker launched all the funds. Meanwhile, Bybit CEO Ben Zhou shared an executive summary on stolen funds. Out of the total stolen funds, 77% of them are still traceable, 20% of them went dark, and 3% were frozen. Ben Zhou shared a complete breakdown of funds and their conversion into other cryptocurrency. 83% of the total hacked funds were converted into Bitcoin using 6,954 wallets. Ben stated that the coming couple of weeks are crucial in tracing the funds because the funds will start clearing at exchanges through P2P and OTC. The Bybit hack worth around \$1.4 billion has shook the industry, involving the North Korean hacker group. Instead of feeling perplexed, Bybit closed the ETH deficit within 48 hours to maintain liquidity and offer uninterrupted services. Ember Reports The Hacker Laundered All the Stolen Funds of Bybit Hack On-chain data tracker Ember reported that the hacker laundered all the stolen funds from the Bybit hack earlier today. It stated that the hacker took 10 days to clear all the stolen funds. Meanwhile, THORChain received \$5.9 billion in transaction volume and \$5.5 million in fees as the hacker used THORChain to launder the funds. Bybit CEO Ben Zhou created the first of its kind Lazarusbounty.com website to share complete details regarding the stolen funds. 11 bounty hunters helped in freezing the funds and received a bounty of \$2,178,797 USDT. Mantle, Paraswap, and ZachXBT are the major players among the 11 bounty hunters. Out of the 20% funds that went dark, 16% of them went dark through ExCH exchange. The team needs an update from the OKX Web3 wallet to trace around 5% of the stolen funds. Since THORChain was used to clear most of the funds, the team can trace 72% of the stolen funds through this platform. Highlighted Crypto News Today: Dogecoin Eyes Bullish Resurgence as Analysts Predict a Major Upswing

- The SEC has agreed to dismiss the lawsuit against Kraken, marking a shift in regulatory attitudes. - Kraken's victory signals a potential end to aggressive legal actions against crypto firms. - Under new leadership, the SEC is adopting a more balanced approach to cryptocurrency regulation. The U.S. Securities and Exchange Commission (SEC) has agreed in principle to dismiss its lawsuit against cryptocurrency exchange Kraken. The decision marks a significant shift in the SEC's approach toward the cryptocurrency industry, following a turbulent legal period for crypto platforms. The SEC has agreed in principle to dismiss its lawsuit against @krakenfx. "Dave Ripley (@DavidLRipley) March 3, 2025 It's a massive win for crypto, the United States of America, and the world. Since our inception, Kraken has operated with integrity and dedication to doing the right thing. Regulation by enforcement has! SEC Lawsuit Against Kraken Accuses Unregistered Operations In November 2023, the SEC filed a lawsuit against Kraken, accusing the exchange of operating as an unregistered securities exchange, broker, clearing agency, and dealer. The agency also alleged that Kraken had commingled customer and corporate funds. However, Kraken denied these charges, asserting that the lawsuit misrepresented its business operations and was politically motivated. Despite a federal judge ruling that the case had enough merit to proceed, Kraken maintained that the allegations were baseless. In a blog post published on March 3, the platform emphasized that regulatory actions should be based on facts, not political agendas. Kraken also expressed optimism that the SEC's decision to drop the lawsuit signals a positive shift in the regulatory landscape for the cryptocurrency sector. "The SEC's lawsuit, which mischaracterized our consistent business model, was always without merit," the

company said. SEC Eases Crypto Regulation Amid Leadership Changes Kraken’s case dismissal coincides with a broader shift in regulatory attitudes toward digital assets in the U.S. Following changes in leadership at the White House and the SEC, the agency has pulled back from its aggressive stance on cryptocurrency oversight. Last week, the SEC ended a similar lawsuit against Coinbase and has since dropped investigations into firms like ConsenSys, Uniswap, Robinhood, and OpenSea. Kraken remains committed to collaborating with policymakers to create transparent regulations that protect consumers while fostering technological innovation. The platform views this development as a potential turning point. It also marks the end of a period of contentious legal battles between federal agencies and the crypto industry. Trump Administration’s Influence on SEC’s Crypto Policy The Kraken victory signifies SEC policy changes that occurred under the leadership of SEC nominee Paul Atkins, a pro-crypto who supports digital assets and is expected to lead the Commission toward minimal confrontational lawsuits involving cryptocurrency enterprises. Paul Atkins will lead an agency with distinctive tendencies from Chair Gary Gensler and his approach toward unregistered digital securities. Kraken’s legal proceedings indicate a potential change in regulatory practices by crypto firms and their regulators that aims to create standardized legal frameworks for the industry. Highlighted Crypto News for Today Dogecoin Eyes Bullish Resurgence as Analysts Predict a Major Upswing

Is your portfolio ready for the next wave of crypto millionaires? With meme coins defying the odds and turning early believers into overnight successes, the market is once again at a critical tipping point. The question is: are you positioned for the lucrative wave with the best cryptos to hold long term? The answer lies in seizing the right opportunities—especially in presales that offer insane ROI potential. While seasoned investors load up on Dogecoin, Pepe Coin, and Shiba Inu, a new king is rising, and its name is BTFD. This isn’t just another meme coin—it’s a bullish movement, and it’s bringing serious money to those who know how to play the game. BTFD Coin (BTFD) is currently in its 14th presale stage, priced at just \$0.00016, and analysts are buzzing about its explosive potential. With a presale that started at \$0.000004 and a listing price set at \$0.0006, early investors are eyeing a 3650% ROI. The final stretch has begun, and this is your last chance to grab the dip before it’s gone.

1. BTFD Coin (BTFD) – The Presale Powerhouse With a 3650% ROI Potential

Are you still watching from the sidelines while others cash in on crypto presales? The BTFD Coin presale is your ticket to the next level of meme coin dominance, and this is where the real money is being made. BTFD isn’t just another pump-and-dump meme coin—it has real-world utility, a thriving P2E ecosystem, and an army of dedicated believers. The full version of its P2E game launched on January 1, allowing players to earn rewards in an immersive gaming experience. Staking is live too, with APYs reaching 90%, making it one of the most lucrative opportunities for passive income. The presale has already raised over \$6.25 million, with more than 71 billion \$BTFD coins sold. Stage 14 won’t last long, and when it ends, the listing price of \$0.0006 per coin will make every early investor a serious winner. Let’s break it down: a \$1,000 investment today at \$0.00016 gets you 6,250,000 BTFD coins. When the price hits \$0.0006, that same investment turns into \$3,750. But if BTFD reaches its moon price of \$0.006, you’re looking at a jaw-dropping \$37,500. Now tell me, can you afford to miss out on this?

How to Buy BTFD Coins:

- Go to the BTFD Presale
- Connect Your Wallet (MetaMask, Trust Wallet, etc.)
- Enter Purchase Details
- Confirm and Buy

With every presale stage completed, the price increases. The clock is ticking, and this is your final shot before the real fireworks begin.

2. Dogecoin (DOGE) – The King of Meme Coins Never Backs Down

Dogecoin remains a market favorite, with a history of defying the odds and bouncing back stronger after every dip. Unlike many of its meme coin peers, DOGE has real-world utility, with Tesla and multiple online merchants accepting it as payment. Its massive community support and integration into X (formerly Twitter) under Elon Musk’s vision have cemented its place as the go-to meme currency. Why did DOGE make this list? It continues to dominate, proving that meme coins with strong fundamentals and adoption aren’t just fads but long-term players.

3. Pepe Coin (PEPE) – The Meme Sensation That Refuses to Fade

Pepe Coin has turned heads in 2024 with its surprising market surge. PEPE thrives on community-driven momentum, taking advantage of the decentralized culture that meme investors love. Its recent token burns and deflationary mechanics have created a supply crunch, fueling speculation about another price explosion. Why should you care? Because PEPE is no longer just a joke—it’s a contender with serious market-staying power. If meme coin history has taught us anything, it’s that when communities rally, the gains can be legendary.

4. Shiba Inu (SHIB) – More Than Just a Meme, It’s an Ecosystem

Shiba Inu has evolved far beyond its meme coin origins, becoming a legitimate DeFi and gaming ecosystem. With Shibarium, its Layer-2 scaling solution, and ShibaSwap, the decentralized exchange, SHIB is proving that meme coins can have serious infrastructure. With a massive supply still in circulation, SHIB’s long-term play hinges on burning more tokens and expanding its use cases. But its loyal community and ambitious roadmap make it a worthy contender among the best cryptos to hold long term.

Final Word – The Window is Closing, and FOMO is Real

Crypto doesn’t wait for anyone, and the opportunities like the best cryptos to hold long term don’t stay on the table forever. The BTFD presale is in its final stretch, and the potential for 3650% ROI is unlike anything you’ll find in today’s market. Meanwhile, DOGE, PEPE, and SHIB continue to hold their ground as meme coin juggernauts, proving that this sector is far from dead. The question is, will you be one of those looking back in regret, or will you make the move before the rocket takes off? Time is running out. The next wave of crypto winners is being decided right now. Join the BTFD Presale before the dip disappears for good!

FAQs

1. What is BTFD Coin, and why is it gaining attention? BTFD Coin is a meme coin designed around the “Buy The Dip” strategy. With a 3650% ROI potential, staking rewards, and a play-to-earn (P2E) game, it’s one of the most hyped presales in the crypto space.

2. How much can I earn by investing in BTFD? If you invest \$1,000 at \$0.00016, your holdings could be worth \$3,750 at listing price (\$0.0006) and potentially \$37,500 at its moon price (\$0.006).

3. How do I buy BTFD Coin? Go to the BTFD presale, connect your wallet (MetaMask or Trust Wallet), enter purchase details, and confirm the transaction.

4. Is Dogecoin still

a good investment? Yes! DOGE remains the most widely accepted meme coin and has significant long-term adoption potential, especially with Elon Musk's involvement. 5. What makes Shiba Inu different from other meme coins? Shiba Inu has built an entire ecosystem with Shibarium (Layer-2 scaling), ShibaSwap (DEX), and various DeFi applications, making it more than just a speculative asset. - Nasdaq filed a 19b-4 with the SEC for Grayscale's spot Hedera ETF. - NYSE Arca also filed for a Bitwise Dogecoin ETF, with a 75% approval chance. Nasdaq has submitted a key 19b-4 filing with the U.S. Securities and Exchange Commission (SEC) to list and trade Grayscale's spot Hedera (HBAR) exchange-traded fund (ETF). The move marks the second step in the SEC's approval process. Once acknowledged, the filing will be published in the Federal Register, triggering the agency's review. Nasdaq files 19b-4 to list & trade Grayscale Hedera ETF (HBAR) | pic.twitter.com/lbuymptU7 "Nate Geraci (@NateGeraci) March 3, 2025 The submission follows a similar 19b-4 filing by Nasdaq last week for Canary Capital's spot Hedera ETF. Bloomberg Senior ETF Analyst Eric Balchunas recently noted that Hedera and Litecoin ETFs have the highest approval odds among altcoin ETF applications. Their progress with the SEC places them ahead of other filings. Hedera operates as a decentralized public network using the Hashgraph consensus algorithm. It facilitates secure transactions and is governed by a council that includes major companies like Google and IBM. The network's structure allows for scalable and energy-efficient operations. Since Donald Trump's reelection, crypto ETF applications have surged. Issuers in the U.S. have filed spot ETF proposals for Solana, XRP, Cardano, Litecoin, and Dogecoin. Optimism around a crypto-friendly SEC has driven this wave of applications. NYSE Arca Files 19b-4 for Bitwise Dogecoin ETF Earlier today, the New York Stock Exchange (NYSE) Arca filed a similar 19b-4 on behalf of Bitwise's Dogecoin ETF. The fund would provide institutional and retail investors with regulated Dogecoin exposure if approved. Bloomberg analysts estimated a 75% approval probability for Dogecoin ETFs. NYSE Arca's filing proposes a rule change to list and trade the Bitwise Dogecoin ETF. If accepted, Coinbase will act as the custodian for Dogecoin, while the Bank of New York Mellon will handle cash custody and administration. The ETF follows a cash-based creation and redemption model, preventing direct Dogecoin transactions. Bitwise initially submitted an S-1 registration form for the product in late January. On Feb. 13, the SEC acknowledged Grayscale's filing for a Grayscale Dogecoin Trust, marking the start of its review period. The potential deadline for a decision is mid-October. Highlighted Crypto News Today Crypto Market Liquidations Hit \$1.09 Billion As Market Cap Sinks 10%

Those watching the crypto market are considering Story (IP), Polkadot (DOT), and BlockDAG (BDAG) as potential big gainers for 2025, but one project is gaining the most attention. Story (IP)'s 24% increase has stirred interest as it tests important resistance, but market changes bring possible risks. Polkadot's ETF application, if approved, could bring in large institutional money, but the timing is unclear. Meanwhile, BlockDAG's actual results are more convincing than quick price changes. With a \$200 million presale, over 18.6 billion BDAG coins sold at \$0.0248, and a 2,380% gain for early buyers, BDAG's strength comes from real progress. Its \$30 million program to support developers, advanced AI tools, and ongoing talks with exchanges show a project focused on long-term use, not just short-term excitement. As BDAG's main network gets closer, those seeking real growth are paying attention. BlockDAG shows clear strength and a future that is not just speculative, but based on actual progress. Story (IP) Rises 24%: Can It Hit \$9 Again? Story (IP) has drawn market interest after increasing 24% in one day, making it possible for a big breakout. Trading around \$5.01, the altcoin is testing key resistance levels that, if passed, could push it to its all-time high of \$9. Positive signs support this rise. The Moving Average Convergence Divergence (MACD) shows strong buying activity, and the Elder-Ray Index suggests buyers are in control. If Story (IP) goes past \$6, it might rise even more. However, if it cannot hold support, it could drop to \$4.36. The 24% rise is significant, but it must keep up to hit its old high. Nasdaq Wants Grayscale Polkadot ETF: What This Means Nasdaq has filed a 19b-4 proposal with the SEC to list the Grayscale Polkadot ETF, which could offer big institutions a regulated way to access Polkadot (DOT). If approved, this ETF could increase DOT's market activity and attract large institutional interest. Grayscale's action fits its larger plan to turn crypto trusts into publicly traded ETFs. This follows recent filings for Grayscale's XRP and Dogecoin ETFs, showing a growing demand for easy-to-access crypto options. The ETF, if approved, will provide Polkadot with a lot of institutional visibility, but the approval process is not guaranteed. BlockDAG is already creating its own momentum without the need for regulatory approvals. BlockDAG's AMA Shows New Features & Sparks a Buying Spree BlockDAG's latest AMA revealed many developments that strengthen its position as a top crypto project for 2025. With its presale nearing \$200 million and over 18.6 billion BDAG coins sold at \$0.0248, the project is getting global attention as prices rise toward the next batch increase. With a \$600 million goal and talks with top exchanges, people are buying to take advantage before prices rise further. BlockDAG also started a \$30 million program to help developers, creators, and community leaders build within its system. Led by Steven, Head of Ecosystem Development, the program offers support from \$10,000 to \$100,000. Funds will be given in BDAG coins and USDT based on meeting key project goals. With advanced features like AI-powered analytics, a strong staking system, and active community involvement, BlockDAG's strength is clear. As the presale price increases and the main network launch gets closer, those who act now can gain from what might be the year's best crypto chance. BlockDAG is actively growing its ecosystem with direct community support. Key Points While Story (IP) relies on market excitement and Polkadot waits for regulatory approval, BlockDAG shows real progress and market interest. Its \$600 million presale goal is within reach, driven by a strong plan that includes developer support, AI tools, and business partnerships beyond just ideas. Unlike Story's price

changes or Polkadot's need for ETF approval, BlockDAG's presale success and upcoming exchange listings offer immediate potential. With the main network launch coming soon, early buyers can benefit from both short-term price increases and long-term network growth. BlockDAG is not just another presale; it's becoming a key Layer 1 solution with real-world use coming soon. For those watching, the chance to gain from BDAG's strength is closing fast. BlockDAG is setting itself apart with its clear, practical approach. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The world of cryptocurrency is changing all the time—like, seriously. For investors and traders, this means there's just a ton of projects to choose from. Every day, new and innovative solutions pop up, making it pretty tough to figure out where to put your money. So, in this piece, we're gonna dive into five digital currencies that might be worth adding to your collection. We'll focus on Aureal One and DexBoss, but we'll also touch on three well-known coins: XRP, Dogecoin, and Stellar. Let's get into it! List Of 5 Best Crypto to Buy Now - Aureal One(DLUME) - DexBoss(DEBO) - Ripple (XRP) - Dogecoin (DOGE) - Stellar (XLM) 1. Aureal One (DLUME) — Powering the Future of Gaming and the Metaverse So, Aureal One is like this cutting-edge blockchain network that's been crafted just for gaming and the whole metaverse scene. You've got speedy transactions that are super quick and low on fees, which is pretty attractive for both developers and players alike. The currency here, DLUME, is what keeps things moving in the Aureal ecosystem and doubles as in-game cash for different projects. Right now, they're in the presale phase, split into 21 rounds. It kicked off with a low price of \$0.0005 per token. By the fourth round, it's gone up to about \$0.0011, and the goal for the presale is a whopping \$50 million. What's really cool about Aureal One is its use of Zero-Knowledge Rollups technology. This tech not only scales well but keeps those transaction fees low, which is perfect for gaming applications that are all the rage in the metaverse. Plus, if you hold DLUME, you can stake those tokens to earn rewards and even have a say in governance, which helps build an active community. The first big gaming project on the network, Clash of Tiles, is getting a lot of buzz and really shows off what they can do. Click here to know more about Aureal One 2. DexBoss (\$DEBO) — Redefining the Future of DeFi Trading Now, let's talk about DexBoss. It's stepping up as a key player in the decentralized finance (DeFi) world, creating a trading platform that connects the dots between traditional finance and DeFi. The goal? To make DeFi easier for everyone. Thanks to its native token, \$DEBO, DexBoss is working to offer a trading experience that just clicks. The presale for DexBoss is happening right now, with 17 rounds planned and a target of raising \$50 million. It all started at \$0.01 per token, and it's set to climb to about \$0.0458 by the last round, which could mean some nice profits for early birds before it officially lists. DexBoss is trying to tackle some of the usual DeFi headaches, like liquidity problems and those annoying high transaction fees. They're rolling out advanced financial tools like margin trading and liquidity farming. And with features like almost real-time order execution and a buyback-and-burn strategy for \$DEBO, there's plenty of reason for users to get involved. 3. Ripple (XRP) XRP is all about making international transactions quick and affordable. It settles transactions in just 3-5 seconds, using a consensus protocol that skips the whole energy-draining mining process. So it's not just efficient but also eco-friendly. In December 2024, Ripple introduced RLUSD, a stablecoin tied to U.S. dollar reserves. This move has helped boost XRP's adoption and market value quite a bit. 4. Dogecoin (DOGE) Once just a meme coin, Dogecoin has really taken off as a popular cryptocurrency, thanks to its lively community and an unlimited supply model. With a block time of just one minute, it processes transactions faster than Bitcoin, making it a go-to for everyday payments. And the number of merchants accepting Dogecoin keeps climbing, showing its fun yet practical role in the digital currency world. 5. Stellar (XLM) Stellar is all about making cross-border transactions cheap and speedy. With a focus on bringing financial services to everyone, its consensus protocol allows for quick settlements without the need for mining — talk about being energy-efficient! Stellar has teamed up with major financial institutions, like IBM, which really illustrates its real-world applications. As the demand for global payment solutions increases, Stellar is definitely one to watch in the crypto landscape. Conclusion You know, diving into the world of crypto can be pretty tricky. But if you pick the right investments, well! you might just see some impressive returns. Take Aureal One and DexBoss, for example. These projects really shine with their solid fundamentals and fresh solutions aimed at specific areas—especially gaming and DeFi. With their state-of-the-art tech and well-organized presale phases, they've created a chance for early investors to get involved in ecosystems that could really shake things up in their industries. And let's not overlook the tried-and-true coins like XRP, Dogecoin, and Stellar. They're still holding strong and showing potential for growth, which makes them pretty nifty additions to anyone's investment mix. Now, here's the thing: every investment comes with its own set of risks, particularly in the ever-changing world of digital currency. So, it's super important for investors to do their homework, keep up with market trends, and be a bit cautious. By making informed choices, investors can really take advantage of opportunities while managing those risks in this fast-evolving digital economy.

- XRP soars 40% after Trump includes it in the U.S. Crypto Strategic Reserve. - Elliott Wave analysts predict a potential price surge to \$20 to \$66. - Bulls must secure a multi-day close above \$3 for further upside. XRP has exploded in price, gaining 40% in two days, after U.S. President Donald Trump revealed plans to include XRP in the newly established U.S. Crypto Strategic Reserve alongside Bitcoin (BTC), Ethereum (ETH), Solana (SOL), and Cardano (ADA). The news sent XRP soaring past \$3 before facing resistance, marking one of its most significant rallies in 2025. Trump took to Truth Social, stating: "A U.S. Crypto Reserve will elevate this critical industry after years of corrupt attacks

by the Biden Administration.. XRP, SOL, and ADA will be part of this reserve, making America the global leader in crypto.â€ With this unexpected bullish catalyst, XRPâ€™s market sentiment has turned overwhelmingly positive, driving renewed investor interest. Bulls Eye \$5 as Key Resistance XRPâ€™s rally has pushed it into a crucial price zone. Analysts highlight \$3 as the first major resistance level, with a break above this point potentially setting up a move toward \$3.40 and \$5, says \$8 is the target. Crypto analyst CasiTrades shared on X: â€œRight now, weâ€™re testing major resistance at \$3, and this is the critical level to break for the next wave higher.â€ However, technical indicators suggest caution. XRP has approached the upper Bollinger Band at \$2.99, signaling potential overbought conditions. The MACD line has crossed above the signal line, confirming bullish momentum, but any failure to sustain buying pressure could lead to a pullback. Key support levels are at \$2.80, \$2.53, and \$2.07, with dip buyers expected to step in if prices retrace. Elliott Wave Theory Signals a Long-Term Explosion Beyond the short-term rally, some analysts see XRP entering a much larger bull cycle. Market expert Egrag Crypto via an X(formerly Twitter) post has applied Elliott Wave Theory to predict a possible long-term price explosion. The theory suggests that XRP completed Wave 1 after surging 510% in Q4 2024. Currently, Wave 2 is showing corrective movement, with analysts expecting a temporary drop below \$1.77 before a recovery toward \$3.70â€\$3.90. The next phase, Wave 3, is typically the strongest in Elliott Wave Theory. Analysts estimate that if XRP follows historical patterns, the third wave could extend 1.618 times the length of Wave 1, potentially pushing XRP between \$17 and \$20. A temporary correction in Wave 4 may stabilize prices around \$6 to \$7, before the final Wave 5 sends XRP soaring to a peak range of \$20â€\$66. These targets depend heavily on market conditions and external catalysts, but investors are closely watching whether XRP will align with this cycle. Bitcoin Maximalists Push Back as XRP Adoption Grows Not everyone in the crypto space is pleased with XRPâ€™s rising prominence. Economist Peter Schiff took to X handle to criticize Trumpâ€™s decision, questioning the rationale behind an XRP reserve. â€œBitcoin is digital gold; I get that. But why the hell would we need an XRP reserve?â€ â€” Peter Schiff Despite the backlash, industry leaders have defended XRPâ€™s inclusion. Cardano founder Charles Hoskinson responded: â€œBecause XRP is great technology, a global standard, and has one of the strongest communities. I think the president made the right decision.â€ Meanwhile, XRPâ€™s open interest remains strong above \$2 billion, indicating continued trader engagement despite market volatility. However, trading volume has dropped from \$40 billion in early February to under \$19 billion, raising concerns about sustained buying pressure. For XRP to maintain its bullish trend, analysts say a multi-day close above \$3 is crucial. If bulls succeed, the next targets will be \$3.50 and \$5. However, failure to hold above \$2.80 could lead to another correction. Highlighted Crypto News for Today

Meme coins have taken the crypto world by storm, turning internet jokes into multi-million-dollar investments. With the explosive rise of digital assets like Dogecoin and Shiba Inu, a new wave of meme coins is capturing the marketâ€™s attention. From the internetâ€™s favorite feline to a coin inspired by the ultimate alpha male, these tokens arenâ€™t just funnyâ€theyâ€™re packed with real potential. Among them, Arctic Pablo Coin is among the best cryptos to buy now, offering an innovative approach and unparalleled ROI potential. Leading the charge is Arctic Pablo Coin, a token with a unique presale strategy and a well-structured allocation model. But itâ€™s not alone. Fartcoin, Snek, Gigachad, Non-Playable Coin, Simonâ€™s Cat, and Apu Apustaja are all gaining momentum, each bringing something unique to the meme coin ecosystem. Whether itâ€™s humor, nostalgia, or raw power, these cryptos are making waves in the market. 1. Arctic Pablo Coin: The Chillingly Profitable Opportunity Arctic Pablo Coin is among the best cryptos to buy now, boasting a structured token supply and a community-driven vision. With a total supply of 221,200,000,000 APC, the allocation ensures sustainable growth and long-term stability. The public presale accounts for 50% (110,600,000,000 APC), showing a strong commitment to decentralization. Liquidity is set at 25%, while marketing and development receive 37.5% each, ensuring continuous expansion. With staking at 15% (33,180,000,000 APC) and ecosystem growth at 20% (44,240,000,000 APC), investors can expect rewards for their loyalty. A 5% team allocation, locked for a year, guarantees long-term commitment. Arctic Pablo Coin is Among the Best Cryptos to Buy Now. Arctic Pablo Coinâ€™s Explosive Presaleâ€Donâ€™t Miss Out! The meme coin presale is where Arctic Pablo Coin truly shines. Unlike traditional presales with tiered stages, this one follows an innovative approach where Arctic Pablo â€œtravelsâ€ through different locations. Right now, the coin is in Penguinopolis, priced at just \$0.000067. Over \$1.69 million has already been raised, with massive gains projected. The launch price is set at \$0.008, promising a staggering 11,844.78% ROI for early investors. Investing just \$100 today will secure 1,492,537 APC, which could grow to an astounding \$11,940.30 upon listing. Arctic Pablo Coin is among the best cryptos to buy now, and those who act fast could see life-changing returns. 2. Fartcoin: The Token Thatâ€™s Breaking the Sound Barrier Fartcoin is shaking up the meme coin space with its absurdity and unexpected adoption. Marketed as the funniest digital asset on the blockchain, it has gained traction thanks to its meme-worthy branding and active online community. Fartcoinâ€™s deflationary model and token-burning mechanics ensure long-term sustainability while keeping investors entertained. This hilariously gassy token is blowing up for all the right reasons. 3. Snek: The Slithering Sensation of Crypto Snek has coiled its way into the meme coin charts, offering a fun and engaging investment opportunity. Inspired by the classic internet snake memes, this token capitalizes on nostalgia while integrating features like staking and community rewards. With an ever-growing fanbase and partnerships brewing, Snek is set to strike when least expected. 4. Gigachad: The Ultimate Alpha Crypto Representing internet masculinity at its peak, Gigachad is more than just a memeâ€itâ€™s a movement. With a focus on strength, dominance, and community-driven growth, this coin embodies the very essence of the â€œChadâ€ culture. Its NFT integrations and social media hype make it a formidable player in the meme coin market. Gigachad is flexing hard in the crypto space. 5. Non-Playable Coin: The Token for Gaming Fanatics Non-Playable Coin (NPC) is making waves as the go-to token for gamers and internet culture enthusiasts. Embracing the NPC meme, this token serves as a bridge between gaming communities and blockchain technology. Whether itâ€™s in-game integrations or metaverse applications, Non-Playable

Coin is proving to be anything but static. 6. Simonâ€™s Cat: The Purrfect Meme Coin Inspired by the beloved animated feline, Simonâ€™s Cat brings cuteness and community-driven engagement to the crypto scene. This token isnâ€™t just riding the nostalgia waveâ€”itâ€™s actively working on partnerships and charitable initiatives for animal welfare. With a loyal following and upcoming NFT collections, Simonâ€™s Cat is the top cat in the meme coin world. 7. Apu Apustaja: The Meme Warrior of Crypto Apu Apustaja is one of the most iconic internet characters, and its crypto counterpart carries the same meme energy. Focused on community-driven development, this token blends humor with serious blockchain utility. Apu Apustaja is known for its active engagement, staking options, and ever-growing fanbase, making it one of the strongest meme coins in the game. Conclusion: Arctic Pablo Coin and the Meme Coin Revolution Based on the latest research, Arctic Pablo Coin is among the best cryptos to buy now, alongside Fartcoin, Snek, Gigachad, Non-Playable Coin, Simonâ€™s Cat, and Apu Apustaja. Each of these tokens brings something unique to the table, from gaming integrations to viral meme culture. However, Arctic Pablo Coinâ€™s groundbreaking presale strategy, massive ROI potential, and strategic tokenomics make it the top pick for investors. With over \$1.69 million already raised and an 11,844.78% ROI potential, Arctic Pablo Coin is among the best cryptos to buy now for those looking for the next big opportunity. The window to invest at the current price is closing fastâ€”missing out could mean leaving life-changing gains on the table! For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> Frequently Asked Questions 1. What makes Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin stands out due to its unique presale structure, strategic tokenomics, and high ROI potential, making it one of the best cryptos to buy now. 2. How does Arctic Pablo Coinâ€™s presale work? The presale is location-based rather than tiered, with Arctic Pablo Coin â€œtravelingâ€ to new destinations. Currently, itâ€™s at Penguinopolis, priced at \$0.000067. 3. What is the expected ROI for Arctic Pablo Coin investors? Early investors could see gains exceeding 11,844.78%, with a projected launch price of \$0.008. 4. Which other meme coins are gaining traction in 2025? Besides Arctic Pablo Coin, other trending meme coins include Fartcoin, Snek, Gigachad, Non-Playable Coin, Simonâ€™s Cat, and Apu Apustaja. 5. Why is Arctic Pablo Coin among the best cryptos to buy now? With its innovative presale, strong community backing, and massive growth potential, Arctic Pablo Coin is positioned as one of the most promising meme coins in the market.

Ever scrolled through your feed, watched a meme coin explode, and thought, â€œI shouldâ€™ve gotten in earlyâ€? Youâ€™re not alone. The meme coin market moves at lightning speed, turning small investments into life-changing profits almost overnight. But hereâ€™s the thingâ€”getting in early is everything. Right now, a handful of top new meme coins to join for short term are making waves, attracting degens, whales, and everyone in between. One of them, BTFD Coin (\$BTFD), is already heating up with a presale thatâ€™s pulled in over \$6.24 million and an insane 90% APY staking program. The others, Peanut the Squirrel (PNUT) and Goatseus Maximus (GOAT), are riding massive hype cycles, and short-term traders are eyeing their next big breakout. Letâ€™s break down what makes these meme coins worth watching before the next FOMO wave kicks in. 1. BTFD Coin: The Meme Coin With Insane Staking Rewards Crypto investors know the drillâ€”get in early, stake, and ride the wave. BTFD Coin (\$BTFD) is making that strategy even more rewarding with its 90% APY staking program, letting holders grow their stacks while waiting for the tokenâ€™s moon moment. BTFD Coin is already in Stage 14 of its presale, selling at \$0.00016 per token. With over 11,100 holders and 70 billion tokens sold, this project is gaining major traction. Analysts predict a \$0.006 post-listing price, meaning that a \$5,000 investment today could balloon into \$187,500 if BTFD Coin reaches that target. Whatâ€™s fueling the hype? Aside from the high-yield staking, BTFD Coinâ€™s Play-to-Earn (P2E) game went live on January 1, 2025, adding another way for holders to earn. Its Bulls Squad community is growing fast, and with a limited supply, deflationary mechanics, and staking incentives, the project is building serious momentum. How to Buy BTFD Coin? Jumping into BTFD Coinâ€™s presale is straightforward. Set up a MetaMask or Trust Wallet, load it with BNB, ETH, or USDT, visit the official presale page, and make your purchase. Staking starts right away, and once the presale wraps up, tokens will be claimable before the official listing. Why did this coin make it to this list? With a fast-selling presale, 90% APY staking, and a projected 3,650% ROI, BTFD Coin is offering more than just meme coin hypeâ€”itâ€™s giving real earning potential. 2. Peanut the Squirrel: The Viral Story Turned Crypto Sensation The internet loves a good underdog (or under-squirrel) story, and Peanut the Squirrel (PNUT) turned one of the most emotional viral stories into a full-fledged meme coin. After Peanut, a squirrel raised by Mark Longo, was controversially euthanized by authorities, the internet exploded with outrage. This led to the creation of PNUT, a token dedicated to keeping Peanutâ€™s legacy alive. Launched in November 2024 on the Solana blockchain, PNUT quickly gained traction as a community-driven project. Traders are drawn in by its cult following, and early investors are stacking their bags in hopes that this meme-driven momentum will push the tokenâ€™s value sky-high. PNUT is riding on nostalgia, virality, and the strong emotions tied to its backstoryâ€”a combination that has fueled massive breakouts in meme coin history. Just like Dogecoin (\$DOGE) and Shiba Inu (\$SHIB), this token has the potential to thrive purely on its cult following and market sentiment. Why did this coin make it to this list? Peanut the Squirrelâ€™s viral story and dedicated community make it a short-term traderâ€™s dream, with high volatility and breakout potential. 3. Goatseus Maximus: The AI Meme Coin with a Cult Following What happens when an AI language model starts a meme religion? Apparently, a crypto project is born. Goatseus Maximus (GOAT) is one of the strangest, yet fastest-growing meme coins on the scene. It started when Truth Terminal, an AI bot, began tweeting about â€œThe GOAT Singularityâ€, predicting a meme-powered financial revolution. Shortly after, an anonymous user launched GOAT on Pump.fun, and the AI started endorsing it. GOAT has since gained traction as a community-run token, with the meme religion concept drawing in crypto degens and traders looking for their next short-term play. AI-driven meme coins have seen explosive rallies in recent months, and GOAT is riding that wave hard. The Solana-based token has a deflationary burn model, reducing supply over time, which could drive price appreciation. Additionally, with AI narratives dominating the crypto market, GOAT could be positioned for a rapid

short-term breakout. Why did this coin make it to this list? A meme coin endorsed by an AI? That alone is enough to make it a high-risk, high-reward play for short-term traders. Final Thoughts Based on our research and market trends, these three top new meme coins to join for short term are gaining momentum fast. BTFD Coin (\$BTFD) is the standout pick, offering a 90% APY staking program, a fast-selling presale, and a roadmap designed for long-term success. Meanwhile, Peanut the Squirrel (PNUT) and Goatseus Maximus (GOAT) each bring unique narratives, from heartfelt internet sensations to AI-powered meme movements. With meme coins moving fast, waiting too long could mean missing the best entry points. BTFD Coin's presale is already in Stage 14, and prices are set to rise again soon. Investors who get in now are positioning themselves for the potential 3,650% ROI if BTFD Coin reaches its projected \$0.006 post-listing price. Don't wait! secure your spot in the presale today and start staking for massive passive rewards before the next price jump. FAQs 1. What makes BTFD Coin different from other meme coins? BTFD Coin isn't just about hype—it rewards holders with a 90% APY staking program, a P2E game, and long-term value through deflationary mechanics. 2. Why is Peanut the Squirrel (PNUT) gaining traction? PNUT is riding a viral internet movement, drawing attention from both meme traders and community-driven investors. 3. Is Goatseus Maximus (GOAT) just a joke, or does it have real potential? While GOAT started as a meme, its AI narrative, deflationary burn model, and strong community engagement make it an interesting high-risk, high-reward pick. - After plunging as low as \$125.74 last week, Solana is now seeing a tremendous comeback. - At the time of writing, SOL is trading at \$178.14, up 24.51% in the last 24 hours as per data from CMC. In the first few days of the new month, cryptocurrencies such as Solana (SOL) are gaining attention in the cryptocurrency market. After plunging as low as \$125.74 last week, Solana is now seeing a tremendous comeback. Price action in the cryptocurrency market has cooled down compared to the massive liquidations that occurred earlier this week. Market watchers are beginning to think the worst may be behind, now that Bitcoin is back over \$90,000. US President Donald Trump's announcement of the Crypto Strategic Reserve made a market-wide upsurge. In his announcement on the formation of a US Crypto Strategic Reserve, Trump chose to include XRP, Solana (SOL), and Cardano (ADA) as initial assets. Bitcoin (BTC) and Ethereum (ETH) were eventually included. Bulls Back in Action The release of the FTX Estate's hoard was a key factor in the February Solana sell-off. The market's enormous liquidity caused a sell-off fear, which in turn accelerated the price decline. Despite a \$2 billion token unlock—the largest token unlock for Solana—on March 1—releasing more than 11.2 million SOL tokens into circulation—the price of Solana nevertheless managed to rebound over \$175 amid Trump's recent move. Now that this obstacle has been removed, investors are shifting their attention to the possible implications of the Solana ETF clearance. Meme coins have been a boon to SOL because of their significant popular appeal, but the ETF will increase institutional investment. At the time of writing, SOL is trading at \$178.14, up 24.51% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 251.91%. If the price manages to go past \$180 resistance level, then it will likely climb all the way to test \$205 level. However, if bears drive the price below \$138 level, then it will likely retest \$125 support level.

Shiba Inu has long been a main participant in the meme coin scene. However, recent market movements show that its position may be at risk. Investors are concentrating more on newly developed tokens with better long-term growth prospects and foundations. Rexas Finance (RXS) is an emerging star valued at \$0.20. Its remarkable presale performance, solid real-world value, and rising investor confidence help RXS gain popularity quickly. There are several speculations that Rexas Finance can, in fact, replace Shiba Inu in 2025. Let's look at three important warning signals indicating RXS might shortly replace SHIB. 1. Shiba Inu's Overwhelming Token Supply is Holding it Back Shiba Inu's massive token supply is one of the main factors keeping its price from increasing exponentially. SHIB initially launched with an astounding one quadrillion tokens—a figure so great that it greatly reduced the value of every single SHIB coin. The supply is still too large even after Ethereum co-founder Vitalik Buterin burned 410 trillion SHIB tokens. Why should this matter? The larger the supply, the harder it is to reach \$1 or even \$0.10. SHIB is trading at \$0.00001641 at press time, falling 24% in the past month. On the other hand, Rexas Finance (RXS) has a significantly smaller and regulated token supply. Thus, a major price increase is much more possible. Having a fixed supply of one billion tokens, RXS has built-in scarcity that drives price rise as demand rises. 2. Lack of Real-World Utility Is Limiting Shiba Inu's Adoption Projects like ShibaSwap, Shibarium (its layer-2 blockchain), and a metaverse initiative have expanded Shiba Inu's ecology outside its initial meme coin role. Though these initiatives show promise, they lack the practical value institutional and long-term investors seek. For instance, Shiba Inu's creators lately hinted at improvements on the SHIB Metaverse and the TREAT token. Yet, SHIB remains seen as a speculative asset rather than a significant investment without clear, strong utility. Meanwhile, Rexas Finance focuses on real-world asset (RWA) tokenization, a developing industry in blockchain technology. Rexas Finance now empowers users to create tokenized assets and trade them on the blockchain. This attracts both individual and institutional investors and offers actual worth beyond speculation. Some of the noteworthy features of Rexas Finance's ecosystem are: - Rexas Token Builder lets consumers quickly tokenize their actual assets even without technical expertise. - QuickMint Bot integrates with messaging platforms like Telegram and Discord, allowing seamless asset tokenization even while on the go. - Rexas Estate supports fractional real estate ownership, increasing the availability of property investment. - Rexas GenAI allows creatives to design high-quality digital artworks using artificial intelligence. - Rexas DeFi is a decentralized finance tool that lets users trade, swap, and profit on tokenized assets. 3. Negative Sentiment and Low

Investor Confidence The general market sentiment regarding Shiba Inu has become increasingly negative. At 44% fear right now, the Fear and Greed Index shows a bearish sentiment. Though not totally negative, this lack of interest can hinder SHIB's ability to rally. On-chain data also shows that large SHIB transaction volumes have dropped by 35%. Major investors' "whales" are thus selling out or lowering their stakes. This move points to a lack of faith in SHIB's capacity to see future returns. Whale activity is a crucial factor in determining the strength of a crypto asset. Thus, a drop in large transactions is a major red flag. Rexas Finance, on the other hand, has had overwhelming investor demand. Its presale is almost sold out and has raised over \$46 million. More than 450 million RXS tokens have been sold, showing great confidence in the project. Whales have been backing up the project. For instance, Etherscan reportedly spent 47.96 ETH to buy 796,795 RXS tokens. Unlike SHIB, which is uncertain, RXS is drawing a flood of early adopters seeking high-growth opportunities.

RXS Token Launch: A Potential 10000% Rally The forthcoming token launch on June 19 at \$0.25 will be a big driver for RXS. Strong presale performance historically usually results in exponential growth upon listing on main exchanges. Experts believe RXS could witness over 10,000% price increase in the months. Besides its remarkable presale performance, several factors boost such growth potential:

- Restricted supply dynamics: Unlike SHIB, RXS has a fixed supply that promotes price rises.
- Exchange listings: Demand is supposed to explode once RXS is listed on major exchanges.
- Growing adoption: As more people find practical uses for RXS, its value will rise dramatically. Rexas Finance could see massive growth, with the RWA sector worth hundreds of trillions.

Final Thoughts: RXS Is Poised to Overtake SHIB Shiba Inu's oversized token supply, lack of strong real-world utility, and declining investor confidence are significant challenges affecting its growth. Meanwhile, Rexas Finance's strong real-world applications and surging investor demand position it to replace SHIB as the next big altcoin. The upcoming June 19 token launch could trigger one of the biggest crypto rallies of 2025. Thus, RXS is a top contender to dethrone SHIB in the altcoin market. A Solana (SOL) trader who made millions riding SOL's 11,192% rally is now hunting for the next big opportunity and this time, it's not Solana. While Solana is currently trading at \$190, the days of 100x returns are likely over. Even if it reclaims its all-time high of \$258, that's only 1.36x gain. Good, but nowhere near life-changing. Investors looking for massive gains are now shifting their focus to a fast-rising crypto project that's still in its early stages. Rexas Finance (RXS) is quickly becoming the top choice for high-growth investors. The project is in its final 12th presale stage with 89.9% of tokens already sold. Rexas Finance is currently priced at \$0.20 and with its asset tokenization model set to disrupt industries like real estate, art, and commodities, analysts predict it could soar past \$50 in 2025, a 250x return for presale buyers. Rexas Finance is the next crypto to create multi-millionaires in the upcoming bull run.

Solana's Explosive Past and Strong Comeback, But Can It Still 100x? In 2021, Solana (SOL) was one of crypto's biggest success stories, delivering an insane 11,192% return as it became a top Ethereum competitor. However, the 2022 bear market saw SOL crash over 95% to \$8, wiping out most of those gains. Fast forward to 2025, and Solana has made a strong comeback, now trading at \$190. SOL remains a major player with fewer outages, rising developer activity and a booming DeFi ecosystem, but its days of 100x gains are behind it. As its market cap rises to 93.21B, SOL's upside is limited, which is why investors looking for massive returns are turning to newer, high-growth projects; Rexas Finance (RXS) instead.

Rexas Finance: Revolutionizing Asset Tokenization Rexas Finance is reshaping the Real-World Asset (RWA) market by making high-value investments accessible to all. By enabling fractional ownership, it allows everyday investors to participate in markets once reserved for the wealthy, fostering greater financial inclusivity. What sets Rexas Finance apart is its cutting-edge blockchain technology that simplifies asset tokenization. Tools like the Rexas QuickMint Bot and Token Builder make digital asset creation seamless, while the Rexas Launchpad supports multi-chain fundraising. Additionally, the ecosystem is enriched with AI-powered NFTs and fractional real estate opportunities through Rexas Estate. With an active community on Telegram and Discord, Rexas Finance is quickly establishing itself as a leader in blockchain-powered investing. Rexas Finance Presale Nears Completion with \$46M Raised The presale is nearing its conclusion having successfully sold over 450 million tokens and raised \$46 million. The token price has raised to \$0.20, marking a nearly 7x increase from its initial price of \$0.03, showcasing strong investor confidence and demand. Rexas Finance has completed a CertiK audit with a commitment to security and transparency and secured listings on top data tracking platforms CoinMarketCap and CoinGecko. To celebrate this milestone, the project is hosting a \$1 million giveaway, set to reward 20 winners with \$50,000 each. As tier-1 exchange listings approach, Rexas Finance is positioning itself for long-term success in the crypto market. As Solana's days of explosive growth seem to have passed, investors seeking the next big opportunity are increasingly turning their attention to Rexas Finance. With its innovative approach to asset tokenization and a rapidly growing ecosystem, Rexas Finance offers a unique chance to capitalize on the future of blockchain technology. The presale success, investor demand and solid security measures all signal that Rexas Finance will deliver life-changing returns in the coming years. For those looking beyond the established giants like Solana, Rexas Finance presents an exciting new frontier, potentially making early investors multi-millionaires in the next bull run. Meme coins have taken the crypto world by storm, captivating millions of investors with their fun and meme-inspired branding while providing massive returns. What started as a joke in the crypto space has quickly evolved into a thrilling, lucrative market. From viral phenomena like Dogecoin to newer entrants looking to capitalize on meme culture, these coins are changing the game. Among the most exciting presale events right now is Arctic Pablo Coin, a fresh contender that's offering a one-of-a-kind opportunity to invest early and reap substantial rewards. Alongside Arctic Pablo, coins like Neuro, Notcoin, Book of Meme, and TURBO are carving their own unique spaces, attracting both seasoned investors and newcomers to the meme coin movement. Amid the frenzy, Arctic Pablo Coin is a standout, gaining attention for its innovative approach to presale structure and its current price positioning. With over \$1.64 million raised and a launch price that promises an 11,844.78% return on investment, Arctic Pablo Coin has captured the attention of investors looking for the next big thing in the crypto world. But what makes Arctic Pablo truly unique? Let's dive deeper into this extraordinary project and explore why it's quickly becoming one of the Best meme coins to invest in March 2025.

Arctic Pablo Coin: A Presale Like No Other Arctic Pablo Coin isn't just another meme coin. The Arctic Pablo presale structure is designed to be as unique as its brand. Instead of the usual multi-stage presale, Arctic Pablo takes a location-based approach, as the coin "travels" across different stages and regions, adding an element of excitement and adventure for potential investors. Currently, Arctic Pablo Coin is at its Penguinopolis location with a price of just \$0.000067 per token, making it one of the most affordable meme coins to buy right now. With over \$1.64 million raised in its presale, Arctic Pablo is on track for a major launch, with an incredible potential return for early investors. If the presale continues to go as planned, those who invest now stand to gain over 11,844.78% ROI when the token launches at its price of \$0.008. Why has Arctic Pablo Coin made such waves? It offers both a fun, community-driven project with real financial opportunities, giving its early investors the chance to get in on the ground floor of an up-and-coming crypto. With such huge upside potential, Arctic Pablo Coin is undoubtedly one of the Best meme coins to invest in March 2025.

Excitement Builds: Why Arctic Pablo's Presale is the Talk of the Town Investing in Arctic Pablo Coin feels like a thrilling race to the top. The coin's presale is designed to be dynamic, exciting, and full of anticipation as it progresses through various "locations." Each stage presents a new chance for investors to join the action before the coin officially launches. Not only does this innovative structure keep things fresh, but it also ensures that early investors who get in now are positioned to experience massive returns as Arctic Pablo Coin continues its journey. Another exciting feature of Arctic Pablo Coin's presale is its built-in token burn mechanism, ensuring that the value of the coin increases over time as supply decreases. With the presale progressing steadily, it's clear that Arctic Pablo Coin is set to make waves in the market, offering huge potential for returns. The hype around Arctic Pablo's presale continues to grow, making it one of the Best meme coins to invest in March 2025. If you're looking for a presale opportunity that's both exciting and lucrative, Arctic Pablo Coin is the perfect fit.

Neuro: The Meme Coin with a Tech Twist Neuro stands out as one of the Best meme coins to invest in March 2025 thanks to its integration of innovative technology with meme coin culture. While other meme coins focus mostly on viral trends, Neuro combines blockchain technology with a social-driven platform, creating a hybrid experience for users. With a dedicated community, the coin continues to make strides as an investment vehicle that combines the best of meme coin excitement and practical applications. Why did Neuro make it to this list? Its ability to merge fun with function makes it a coin to watch closely.

Notcoin: A Joke No More, It's Real Value in the Crypto World Notcoin is a meme coin that defies expectations. Originally created as a joke, this coin quickly gained traction with investors thanks to its powerful community and growing market value. Notcoin brings a fresh take on meme coin investing by focusing on user rewards, making it one of the Best meme coins to invest in March 2025. As it continues to build on its foundation, Notcoin could prove to be one of the most profitable investments in the meme coin sector. Why did Notcoin make this list? Its serious value proposition behind the fun is what makes it so attractive.

Book of Meme: A Coin with a Literary Twist Book of Meme is not your average meme coin—it's a coin with a story. Drawing inspiration from the literary world, it blends memes with narrative, offering a unique community-driven experience. Book of Meme taps into a niche market, where users get to "read" the development of the coin through an evolving story arc. This engaging concept sets it apart from other meme coins, making it one of the Best meme coins to invest in March 2025. Why Book of Meme made it to this list? It's a coin that's creating its own narrative, attracting both crypto enthusiasts and fans of creative projects.

TURBO: Speed and Power Combined in the Meme Coin Market TURBO is a meme coin with a focus on speed and growth. As its name suggests, TURBO aims to accelerate the growth of its investors with fast-paced returns and rapid development. The coin's highly anticipated launch has garnered significant attention, positioning TURBO as one of the Best meme coins to invest in March 2025. With its community-driven platform and ambitious roadmap, TURBO could see explosive growth, offering high potential rewards. Why TURBO made it to this list? Its potential for rapid growth and impressive speed is what makes it a must-watch.

Conclusion Based on the latest research, Best meme coins to invest in March 2025 are gaining momentum, and the list includes Arctic Pablo Coin, Neuro, Notcoin, Book of Meme, and TURBO. Among them, Arctic Pablo Coin stands out with its unique presale structure, early investment ROI potential, and a price that's just waiting to explode. With a groundbreaking approach to presales, token burns, and community engagement, Arctic Pablo Coin offers one of the most exciting investment opportunities in the meme coin space. Don't miss out on your chance to be part of something big—invest in Arctic Pablo Coin now before it takes off! For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ>

Frequently Asked Questions What is Arctic Pablo Coin and why should I invest in it? Arctic Pablo Coin is an innovative meme coin offering an exciting presale structure with

massive ROI potential for early investors. How does Arctic Pablo Coin's presale structure work? Arctic Pablo Coin features a location-based presale, where stages progress as the coin "travels" across different regions, creating a unique and dynamic investment opportunity. What makes Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin stands out with its unique presale structure, massive early ROI potential, and built-in token burn mechanism. What is the ROI potential for early investors in Arctic Pablo Coin? Early investors in Arctic Pablo Coin can experience over 11,844.78% ROI from the presale price to the launch price. How can I buy Arctic Pablo Coin during the presale? You can buy Arctic Pablo Coin during the presale by participating through its official platform, where the presale is currently available at an affordable price. - Hsiao-Wei Wang and Tomasz StaÅ„czak appointed as EF's new co-executive directors. - Aya Miyaguchi transitions from executive director to EF president. The Ethereum Foundation (EF) has announced a major leadership change. Hsiao-Wei Wang and Tomasz StaÅ„czak will take over as the new co-executive directors. This transition follows Aya Miyaguchi stepping down from the role to become EF's new president. The Ethereum community has been debating the foundation's role for months. Many have criticized its leadership for Ethereum's struggles. Ether (ETH) has lagged behind competing cryptocurrencies in price performance. Additionally, Ethereum has attracted fewer developers than Solana for the first time. Wang has been part of EF since 2017. She has worked on Ethereum's major upgrade, "the Merge," and sharding research. Meanwhile, StaÅ„czak is the founder of Nethermind. His company operates one of the largest Ethereum execution clients. Danny Ryan Moves to Ethernize In addition to the leadership changes, ex-EF researcher Danny Ryan is joining Ethernize. The new firm aims to integrate Ethereum with Wall Street. Founded by former banker Vivek Raman, Ethernize focuses on educating institutions and marketing ETH as a key financial asset. At @ethernize_io, I intend to build a new Ethereum institution with Real World Ethereum as its north star " dannyryan (@dannyryan) March 1, 2025 The world is ready to come on chain, and we're here to do the hard work necessary to make it happen Ryan shared his vision on X. He said he wants to build a strong Ethereum institution centered around real-world Ethereum use cases. He also emphasized the importance of bringing the world on-chain. Strategic Moves for Ethereum's Future EF's leadership changes come at a crucial time. The foundation has faced criticism for not effectively supporting Ethereum's ecosystem. Investors worry about ETH prices and competition from high-throughput blockchains. Vitalik Buterin outlined a plan for January to strengthen Ethereum. His strategy included increasing the blob count to boost transaction capacity. Additionally, layer-2 solutions would be encouraged to pay some fees to Ethereum's base layer. On February 13, EF deposited 45,000 ETH, worth \$120 million, into Aave, Compound, and Spark. This move aimed to generate yield instead of selling ETH, which could suppress its price. The community welcomed this step. Highlighted Crypto News Today CZ Proposes a New Token Issuance Model to Support Long Term Growth

- According to the results of the on-chain analytics platform, competing stablecoins have very small market shares. - USDT constitutes 98.5% of the entire stablecoin supply on the Tron network, making it the de facto leader. A dominant player has emerged in the stablecoin market on the Tron network. The USDT stablecoin has become the de facto standard for most value transfers and trading. Specifically, the most recent analysis by CryptoQuant showed that USDT constitutes 98.5% of the entire stablecoin supply on the Tron network, making it the de facto leader. As the foundational stablecoin for Tron, USDT has a circulating supply of \$62.76 billion out of almost \$64 billion on the network. According to the results of the on-chain analytics platform, competing stablecoins have very small market shares: USDC represents 0.06%, USDD 1.15%, TUSD 0.26%, and USDJ 0.01% of the supply. Essential Building Block One thing to keep in mind is that other stablecoin supply has been flat since March 2024. However, USDT was able to maintain its growth and establish itself as the market leader. In addition to supply, USDT is vital to Tron's liquidity. When the price of TRX is very volatile, its on-chain volume from centralized exchanges might reach \$4-\$5 billion per day. As a result, USDT is not only the most abundant stablecoin on the network, but it is also an essential building block for all transactions and value transfers on the Tron blockchain. In addition, IntoTheBlock data showed that 69% of all USDT activity "more than 14 million transactions per week" occurs on the Tron network. This number is much higher than 61% at the end of January. In a recent post on X, Justin Sun, founder of Tron, revealed that Tether's USDT stablecoin would provide commission-free transactions on the Tron network. A more user-friendly way to send and receive USDT is using the Gas Free feature, which eliminates the need to use TRX tokens for gas costs. Highlighted Crypto News Today: XRP, Solana, Dogecoin Rally as Crypto Market Shows Signs of Recovery

Meme coins are the heart and soul of crypto's wild side, where fortunes are made overnight, and internet culture meets blockchain innovation. Whether it's a cat, a dog, or even a bullish philosophy, these digital assets are thriving with sky-high gains and cult-like followings. But finding the next big thing before it explodes is key. If you're looking for the best meme coins to invest in now, buckle up "this list is your golden ticket. One meme coin leading the charge is BTFD Coin. This bad boy is in its 14th presale stage, with over \$6.21 million raised and 70 billion coins sold. With experts eyeing a possible 3650% ROI if it hits its projected \$0.006 moon price, the time to get in is running out. 1. BTFD Coin " The Meme Coin With a Presale That's Blowing Up Built on the ethos of "Buy The Dip," this coin thrives on market cycles, rewarding diamond-handed holders who stay strong through the dips. And with a staggering \$6.21 million already raised, this presale is showing zero signs of slowing down. What's got analysts buzzing? The insane ROI potential. Right now, you can scoop up \$BTFD for just \$0.00016. If it hits \$0.0006 post-listing, that's a 275% gain.

But if it rockets to the forecasted \$0.006? Thatâ€™s an eye-watering 3650% return! For context, say you throw in \$2,000 at todayâ€™s price. If \$BTFD reaches \$0.0006, youâ€™re sitting on \$7,500. But if it moons to \$0.006, youâ€™re looking at a \$75,000 payday. Not bad for a meme coin, right? Why this meme coin made it to this list: BTFD Coinâ€™s explosive presale, insane analyst predictions, and sky-high investor interest make it one of the best meme coins to invest in now. Donâ€™t sleep on this oneâ€”the current presale price wonâ€™t last much longer! 2. Popcat â€” The Internetâ€™s Favorite Cat Born from the iconic open-mouthed cat meme, this Solana-based token has taken the crypto space by storm, capitalizing on viral engagement and community hype. Why this meme coin made it to this list: Popcat is riding the wave of meme virality and community-driven hype, making it a strong contender in the meme coin world. 3. Dogwifhat â€” The Doge Alternative With a Hilarious Twist Dogwifhat (WIF) is exactly what it sounds likeâ€”a meme coin featuring an adorable Shiba Inu wearing a knit hat. Itâ€™s a fun spin on the Doge ecosystem, proving that meme culture is as strong as ever. Why this meme coin made it to this list: Dogwifhat taps into the nostalgia of Dogecoin while carving out its niche in the meme market. 4. Bonk â€” The Solana-Based Meme Coin Making Waves Bonk is Solanaâ€™s answer to Dogecoin, a community-driven token that launched in late 2022 and quickly gained traction. As Solanaâ€™s first major meme coin, Bonk has a passionate community and strong ecosystem backing. Why this meme coin made it to this list: Bonkâ€™s early adoption on Solana, strong community, and viral potential make it a solid pick among the best meme coins to invest in now. 5. Floki â€” The Meme Coin With Huge Utility and a Norse Vibe Named after Elon Muskâ€™s dog, Floki started as another Doge-inspired token but quickly evolved into something much bigger, incorporating utility-driven projects like FlokiFi and Valhalla, its metaverse game. Why this meme coin made it to this list: Floki is creating real utility within its ecosystem, making it a long-term contender in the meme coin market. 6. Peanut the Squirrel â€” Everyoneâ€™s Favorite Nutty Contender Peanut the Squirrelâ€™s story has shaken the crypto universe, especially when it took a sad turn with his passing. So, itâ€™s only natural that this beloved squirrelâ€™s meme coin would rise to meteoric heights. It remains a solid contender among the best meme coins to invest in now. Why this meme coin made it to this list: Peanut the Squirrel has the potential for massive growth due to the solid community backing it. Final Thoughts â€” Donâ€™t Miss Your Shot at \$BTFD Meme coins are exploding in popularity, and the key to success is getting in before the masses. With BTFD Coinâ€™s presale almost closing in on its final stages, this is your last shot at locking in the best price before its projected 3650% ROI potential takes off. If you donâ€™t want to miss out, nowâ€™s the time to jump in before Stage 14 sells out. Hit the presale and stack your bags while you still can! Find Out More: - Website: <https://www.btfd.io/> - X/Twitter: https://x.com/BTFD_COIN - Telegram: https://t.me/btfd_coin Disclaimer: TheNewsCrypto does not endorse any content on this page. - TRUMP Coin surged 27%, jumping from \$11.27 to \$14.33 in the past 24 hours. - The rally was sparked by Donald Trumpâ€™s announcement of the first White House Crypto Summit on March 7. In the past 24 hours, the Official Trump (TRUMP) meme coin has seen an unexpected single-day rally, jumping from a low of \$11.27 to an intraday high of \$14.33. After a week of steep declines, the overall crypto market attempts a recovery following Bitcoinâ€™s (BTC) recent rally to \$85K after dropping to \$79K, which led TRUMP to benefit. The sudden surge in Trump Coin price was triggered by the announcement that President Donald Trump will host the first White House Crypto Summit on March 7. The event is expected to bring together industry leaders to discuss crypto regulations, stablecoins, and Bitcoin reserves. The rally isnâ€™t limited to TRUMP Coinâ€”leading altcoins like Ethereum (ETH), Solana (SOL) and XRP have also seen an uptick, along with popular meme coins such as Dogecoin (DOGE), BONK, and FLOKI. At the time of writing, Trump Coin is priced at \$13.23, with a market cap of \$2.64 billion. Additionally, its daily trading volume has surged by 87% to \$1.98 billion. TRUMP now stands as the fourth-largest meme coin by market cap, behind only DOGE, SHIB, and PEPE. However, despite the recent gains, Official Trump Coin is still down 20% over the past week, 50% for the month, and remains 75% below its all-time high of \$75.35, which it hit just two days after launching on January 17. Nonetheless, speculation is growing that TRUMP Coin could see a significant rally and potentially climb above the \$20 range in the coming week. Will the Official Trump Rise Above \$20? Currently, TRUMP Coin is showing short-term bullish momentum as it trades above the 9-day and 20-day EMAs. Zooming in, it remains below the 50-day EMA, indicating that the broader trend is still bearish. A breakout above the 50-day EMA (\$14.06) could confirm a trend reversal. TRUMP Coinâ€™s 4-hour technical indicators suggest a slightly bullish trend, but a strong external catalyst is needed for a full recovery. The signal line stands below the MACD line, hinting at bullish sentiment. Additionally, TRUMPâ€™s RSI value of 49 suggests a neutral market, with no strong indication of a trend reversal in either direction. The possibility of strong bullish momentum is challenging for TRUMP. To validate this, the memecoinâ€™s Bull Power at 2 and Bear Power at -4.26 indicate bearish dominance despite some buying pressure in the 4-hour timeframe. Looking ahead, if TRUMP Coin stabilizes above \$13 and breaks the \$15 resistance, it could rally toward \$20, with \$25 and \$30 as potential targets. On the downside, losing momentum could push it below \$13, possibly dropping to \$10 or even \$8. The next few days will be crucial in determining its short-term trend. Highlighted Crypto News Today:

Meme coins have taken the crypto world by storm, evolving from internet jokes to legitimate investment opportunities. The explosive rise of tokens like Arctic Pablo Coin, Cat in a Dogâ€™s World, Ponke, Baby Doge Coin, Dogs, and Pudgy Penguins proves that meme-driven cryptocurrencies are no longer just about hypeâ€”they are reshaping digital finance. With their unique branding, strong community backing, and potential for astronomical returns, these tokens have captured the attention of both seasoned investors and newcomers. Among them, Arctic Pablo Coin stands out with its distinct vision and strategic tokenomics. Unlike traditional meme coins that rely solely on hype, Arctic Pablo Coin

integrates an innovative presale strategy and a well-structured allocation model, making it a compelling choice for long-term crypto enthusiasts. While other meme coins thrive on community engagement, Arctic Pablo Coin offers a calculated approach to growth, ensuring sustainability beyond the initial buzz.

1. Arctic Pablo Coin: The Future of Meme Investments Arctic Pablo Coin is among the Best Meme Coins to Join for Long Term. With a total supply of 221,200,000,000 APC, it introduces a well-balanced allocation system designed for sustainable growth. The public presale holds 50% of the total supply, ensuring a fair and decentralized distribution. Furthermore, 25% is dedicated to liquidity, enhancing market stability, while strategic allocations for development, marketing, staking, and ecosystem growth ensure Arctic Pablo Coin's long-term potential. Unlike many meme tokens that lack structured expansion, Arctic Pablo Coin is meticulously designed to maximize investor benefits while fostering ecosystem longevity.

Arctic Pablo Coin Presale: A Limited-Time Opportunity to Join One of the Hottest Crypto Projects The Meme Coin presale is turning heads with its unique approach—no stages, just location-based releases as Arctic Pablo "travels" across different regions. Currently stationed in Penguinopolis, it boasts an impressive \$1.64 million raised. With a presale price of \$0.000067 and an anticipated launch price of \$0.008, early investors could see a staggering 11,844.78% ROI. A simple \$500 investment today secures 7,462,685 APC, which could skyrocket to \$59,701.48 upon listing. This unconventional presale method ensures an exciting and dynamic entry point for investors seeking massive gains in the meme coin market.

2. Cat in a Dog's World: The Underdog of Meme Coins Cat in a Dog's World defies expectations by capitalizing on the internet's love for feline supremacy in a dog-dominated meme space. Built on a strong narrative of an underdog cat thriving against the odds, it has captured a niche audience seeking unique projects. With strong community engagement and an expanding ecosystem, this coin proves that even in a world of dogs, cats can still rule.

3. Ponke: The Unstoppable Meme Phenomenon Ponke has emerged as a true meme powerhouse, leveraging an enthusiastic community and viral marketing. Its playful branding and strong social media presence have fueled its rapid adoption. Unlike many meme coins, Ponke has demonstrated staying power, continuously introducing new use cases and partnerships that keep its momentum going strong.

4. Baby Doge Coin: The Next-Gen Dogecoin As a successor to Dogecoin, Baby Doge Coin has perfected the art of meme-driven virality. With a deflationary model, automatic liquidity generation, and reflections for holders, it has created a sustainable ecosystem that rewards loyalty. Its deep-rooted connection to Dogecoin's legacy makes it a familiar yet innovative choice for investors who believe in the future of dog-themed cryptocurrencies.

5. Dogs: A Community-Driven Powerhouse Dogs embody the raw energy of meme culture, leveraging a passionate community that consistently pushes the coin forward. Unlike other meme coins, Dogs prioritizes decentralization and community governance, allowing holders to have a direct impact on its direction. With continuous marketing pushes and collaborations, Dogs remains one of the most engaging tokens in the market.

6. Pudgy Penguins: A Cold-Blooded Success Pudgy Penguins blends NFT culture with meme coin hype, creating a one-of-a-kind investment opportunity. With an established presence in the digital collectibles space, Pudgy Penguins has transitioned into the meme coin sector seamlessly. Its ability to merge two explosive markets makes it a unique and powerful contender in the crypto world.

Conclusion: Which Meme Coin Stands Out? Based on the latest research, Arctic Pablo Coin is among the Best Meme Coins to Join for Long Term, along with Cat in a Dog's World, Ponke, Baby Doge Coin, Dogs, and Pudgy Penguins. While each of these coins has a strong narrative and community, Arctic Pablo Coin stands out with its groundbreaking presale strategy, structured tokenomics, and astronomical ROI potential. With an expected 11,844.78% return upon launch, early investors have a golden opportunity to turn a small investment into a massive fortune. The presale won't last forever, and as Arctic Pablo Coin continues its journey, latecomers may regret missing out. The time to act is now—before the price surges and the Arctic Pablo Coin phenomenon becomes unstoppable.

Crypto traders are glued to the charts as a steep 20% Solana (SOL) price drop has some questioning its next move. Meanwhile, the Dogecoin (DOGE) technical analysis suggests a possible comeback despite the coin's recent slump. If it can break through key support levels, it might see another classic DOGE rally. But while SOL and DOGE play the waiting game, BlockDAG (BDAG) is already commanding interest with its Inter Milan deal, putting it on track to become the best crypto platform for global expansion. The presale is crushing it—booming past \$199.5 million and gunning for \$600 million. And with the Inter Milan deal bringing in new buyers by expanding BlockDAG's reach, it's clear why the project has gained more than 225K+ followers across multiple social platforms.

Solana Price Drop Raises Concerns The recent Solana (SOL) price drop has become a topic of discussion after SOL declined roughly 20% in less than 24 hours, falling from near \$170 to around \$137.77. Market analysts note that the upcoming token unlock on March 1 could add further selling pressure, as roughly 11.2 million tokens might enter circulation. Another factor that may contribute to the Solana price drop is reduced network activity, with daily addresses shrinking from 5.7 million to 3.5 million over four weeks. Some observers mention broader market drops as an additional catalyst for SOL's price drop, pointing to recent cryptocurrency downturns tied to macroeconomic concerns. Despite the short-term turbulence, others believe that Solana's price drop might offer an entry opportunity for long-term holders.

Dogecoin Technical Analysis Predicts Possible Upswing The Dogecoin (DOGE) technical analysis indicates that DOGE may stage a comeback despite its recent dip of over 34% in February. Observers stress that Dogecoin technical analysis shows a potential 404% surge, possibly sending the token above \$1.11 by next month if certain triggers align. Some point to a rebound above \$0.2180 and improved on-chain metrics as key elements to watch. A failure to hold essential support levels such as \$0.2050 could lead to a deeper pullback, according to DOGE's technical analysis. The Bybit hack and general

bearish sentiment have impacted the entire crypto market, adding pressure to DOGE. Although challenges persist, several forecasters remain optimistic that Dogecoin may see stronger gains if overall market conditions improve. BlockDAG & Inter Milan: A Partnership Driving Global Growth BlockDAG has captured widespread attention with its Inter Milan partnership, which has brought the project before millions of football enthusiasts. This collaboration highlights BDAG's understanding of marketing, proving it can align with prominent organizations and emerge as one of the best crypto platforms in the market. The presale reflects this momentum, already surpassing the \$199.5 million mark, with 18.6 billion coins sold since it began. Early supporters have seen a remarkable 2,380% ROI, and the coin holds steady at \$0.0248 in batch 27 up from \$0.001 in batch 1. But BDAG isn't just riding the hype. Its next-gen DAG Chain tech ditches slow, clunky blockchain transactions for parallel validation—meaning faster speeds, zero bottlenecks, and lower fees. Combine that with a major football collab, and traders are looking at a project that's merging two massive worlds: blockchain and sports. Granting fans a deeper sense of involvement while pushing the project closer to its ambitious \$600 million milestone. And people are paying attention. BDAG's social presence has exploded past 225.9K+ followers across Telegram, Discord, X, and Instagram. Analysts believe such mainstream adoption can propel BDAG toward new opportunities, reinforcing its potential for sustainable long-term expansion and solidifying its reputation as a strong player in the crypto sphere. The Crypto Market Keeps Traders Guessing Volatility continues to shape the market, which is evident from the recent Solana price drop, but some remain hopeful about long-term possibilities. The Dogecoin technical analysis indicates a possible run above \$1.11 if essential supports hold. Traders are weighing risks and opportunities, looking for the next big shift in price trends. Meanwhile, BlockDAG proves that strategic moves extend beyond price action. The highly successful Inter Milan partnership continues bringing blockchain to a global audience, with BDAG seeing an influx of both active traders and social engagement. And with over \$199.5 million raised and a presale heading toward \$600 million, BDAG's growth is hard to ignore. As more eyes turn toward the project, those looking for long-term potential may want to take a closer look. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu and Ripple have been top competitors in the crypto market, which has the potential for large growth. However, 2025 looks likely to be a year when investors look for alternatives with enhanced upside potential. Rexas Finance and Dogecoin are two cryptocurrencies that are gaining much attention today. Both present unique growth opportunities that could deliver substantial returns. Rexas Finance (RXS): The Rising Star in Asset Tokenization RXS is venturing into real-world asset (RWA) tokenization. Essentially, RXS allows users to tokenize real-world assets such as real estate, intellectual property, and art. This permits fractional ownership, which enhances accessibility and liquidity within traditionally difficult-to-enter markets. As institutional and retail investors start moving toward asset-backed cryptocurrencies, RXS is primed to meet this demand. Currently, RXS is at stage 12 of the token presale, which translates to \$0.200 per token. It is important to note that the presale is already successful, raising \$45.7 million through selling 448 million tokens and capturing 89.75% of the sale. As for the listing, RXS is set to go live on June 19, 2025, for \$0.25. Analysts believe the token will have a successful entry, which could significantly increase its valuation in the months after the launch. Some market analysts speculate that RXS could achieve 5x–10x growth after listing due to the increasing popularity of tokenized assets, representing a significant return on investment. Dogecoin (DOGE): A Meme Coin With Actual Use DOGE's market capitalization today stands at \$37.49 billion, with the price resting at \$0.2534. It is now considered to be one of the memorial coins. Lighthearted cryptocurrency is widely accepted by merchants, is preferred for tipping, and is recognized as a credible form of digital payment. The expected price growth for 2025 relies heavily on institutional interest, especially concerning a Dogecoin ETF. If a spot DOGE ETF is created, the meme coin will likely see a comparable price surge to what Bitcoin witnessed after the approval of ETFs. Technical analysis for DOGE also indicates a bullish breakout. Analysts note a descending channel pattern, suggesting an upside breakout is around the corner. If Dogecoin continues the previous price cycles, the cryptocurrency can hit \$1.25 by mid-2025. In turn, this would mark a 400% increase from existing levels. Why Investors Have Turned to RXS and DOGE Instead of SHIB and XRP Despite the fact that Shiba Inu and Ripple have serious remaining market potential, investors are shifting toward RXS and DOGE for several reasons: XRP's Regulatory Issues: While their most recent bouts with SEC have resulted in victories, regulatory threats persist. On the other hand, scrutiny is far less for RXS and DOGE. Shiba Inu's Burn Mechanism Is Not Enough: Though SHIB's burn mechanism has increased substantially to more than 7,000%, price movement is still very slow. Investors now focus on projects with clear utility instead of waiting on action, expecting supply reduction to enhance price. RXS Has More Use Cases: The world is experiencing a massive shift towards tokenization in finance. The asset tokenization market is worth \$16 trillion, and RXS is leading the way in this rapidly growing sector. DOGE Has Strengthened Support From Institutions: Unlike SHIB, Dogecoin has major endorsements from public figures like Elon Musk, which aid in promoting its use in payments. Additionally, many businesses accept DOGE for payments, increasing its value in practice. Conclusion Those who are interested in alternatives with higher growth prospects than Shiba Inu (SHIB) and Ripple (XRP) might want to invest in Rexas Finance (RXS) or Dogecoin (DOGE). RXS is particularly attractive for its asset tokenization model, as it will likely see exponential usage as blockchain technology continues to disrupt traditional finance. On the other hand, Dogecoin is still proving its relevance with new institutional support and bullish technical signals suggesting that it will make a major price move. RXS and DOGE have promising prospects for investors looking to make great returns in 2025. RXS will launch on June 19, 2025, and DOGE is working towards the \$1.25 target. For more information

Bitwise Asset Management has established a Delaware trust entity, taking the first step toward launching an Aptos exchange-traded fund (ETF). This move positions Bitwise as the first asset manager in the U.S. to pursue an ETF directly holding APT tokens. The Aptos ETF proposal reflects a growing trend of asset managers seeking crypto investment products beyond Bitcoin and Ethereum. Companies are now filing for ETFs linked to Solana, XRP, Cardano, Dogecoin, Litecoin, and HBAR. Meanwhile, Aureal One is emerging as the next big cryptocurrency, attracting attention in the expanding digital asset market. 5 Emerging Cryptocurrencies to Watch - Aureal One - DexBoss - Solana (SOL) - Avalanche (AVAX) - Algorand (ALGO) 1. Aureal One The blockchain system of Aureal One is designed exclusively for gaming and metaverse applications. The platform, which focuses on instant transactions and low gas fees, is intended to be appealing to both game developers and players. Click here to know more about Aureal One The native token of the platform, DLUME, is going to be used for in-game transactions, staking, and governance participation. As of today, Aureal One is holding a presale which is divided into 21 rounds, and has a starting price of \$0.0005 and then grows up till \$0.0045. The platform's first game, Clash of Tiles, is a prototype that shows off its technology and other projects like DarkLume has already been developed. The platform is aiming to include the Zero-Knowledge Rollups in order to simultaneously achieve high performance and scalability, and hence it can claim a position among the most advanced platforms in the blockchain gaming field. 2. DexBoss DexBoss is the creator of a decentralized trading platform that will simplify DeFi interactions, hence, this will be good for both new buyers and those that are already experts. The platform's native token, \$DEBO, will be a fundamental part of its governance model and it will be also used to charge fees to the users. The sale for \$DEBO includes 17 structured rounds, from \$0.01 to \$0.0458. The target listing price is \$0.0505. The project's goal is to secure \$50 million which will be used to develop and scale the DeFi trading ecosystem enabling features such as liquidity farming, margin trading, and automating portfolio tools. The goal of DexBoss is to address liquidity issues that DeFi is facing so as to make the process of getting into DeFi investing as uncomplicated as possible and attract both the bigwigs and the small scale investors. 3. Solana (SOL) Solana has gained the reputation of a high-speed blockchain network, capable of processing thousands of transactions per second, and with low fees. These are its advantages, which culminate in the possibility to develop decentralized applications (dApps) and NFT markets. The trend of the Solana chain in developing its ecosystem and forming bonds with the world's top companies is a valid indicator of the chain's move from finance to games and digital collectibles. One of the key features is the capability to manage high network demand, which is why developers prefer working with Solana to create high-performance applications. 4. Avalanche (AVAX) Avalanche is a programmable blockchain platform known for its scalability and utility in DApps. Avalanche's subnet architecture enables them to customize blockchain instances based on their specific use-case, which can range from DeFi platforms to enterprise solutions. Due to the fact that the transaction throughput is very high, the environment is low-cost and therefore individuals enter a high number of projects and make a lot of partnerships, usually DeFi projects are really strong. With respect to being both a fast and reliable mean of token transactions for your project, one important factor will be its modular design. 5. Algorand (ALGO) One of the best blockchain projects in the world that tries to have an environmentally sound system through high-speed is Algorand. Pure PoS helps the blockchain to be fast and energy-efficient, while at the same time ensures decentralization and security. Algorand has garnered a lot of interest from enterprises and governments looking into blockchain-based financial solutions and digital asset tokenization. Continuous updates and collaborations are driving its ecosystem further, hence making it the most anticipated platform as its adoption rises. The 5 Next Big Cryptocurrencies Offer Interesting Opportunities While cryptocurrency is expanding its scope over time, emerging new projects are gaining traction on account of their specific focus areas and technical innovations. Aureal One and DexBoss are two platforms aimed at gaming and DeFi, and so are the rest, Solana, Avalanche, and Algorand, which are growing their new abilities in a variety of different use cases. Investors and developers who are looking for the next wave of blockchain technology to be the best ones can track these projects as the digital asset landscape changes. What if you get to know that the next big crypto explosion is already happeningâ€”right under your nose? Meme coins have rewritten the rules of investing, turning ordinary traders into millionaires overnight. With projects soaring thousands of percent in days, missing out isn't an option. The real question isâ€”are you in, or will you be watching from the sidelines while others cash in? Among the hottest plays in this new cycle, BTFD Coin (BTFD) is stealing the spotlight with a game-changing presale offering a staggering 3650% ROI potential. Meanwhile, Notcoin (NOT) and Book of Meme (BOME) continue fueling the meme coin mania, cementing their place as powerhouse investments. If you're hunting for the best cryptos under \$1 with moonshot potential, this is your shot at life-changing gains! 1. BTFD Coin (BTFD)â€”The Presale That's Printing Future Crypto Millionaires Have you ever wished you could go back in time and buy Dogecoin at fractions of a cent? Or jump into SHIB before it exploded? Well, this might be your only second chance. BTFD Coin is setting the crypto world on fire with its presale, and the window to secure this golden ticket is closing fast! Why BTFD is the Hottest

Presale Right Now BTFD isn't just another meme coin. It's a fully loaded ecosystem, combining a P2E game (already launched), 90% APY staking rewards, and a roaring community of over 11,000 investors. Designed to capitalize on the legendary "Buy The Dip" mantra, BTFD is engineered for massive market cycles, offering traders a lucrative entry into the next meme coin explosion. Here's where things get crazy: BTFD started at just \$0.000004 and is now in Stage 14 at \$0.00016. When the presale ends, it's set to list at \$0.0006. That's an easy 3.75x gain before it even hits exchanges! But the real kicker? Analysts predict a moon price of \$0.006, which translates to an earth-shattering 3650% ROI. Staking and P2E Rewards "Printing Money for Holders" BTFD Coin isn't just about hype—it's delivering real utility. The full version of its P2E game launched on January 1, 2025, allowing players to earn real crypto rewards while battling through adrenaline-pumping levels. Combine that with a staking program boasting a massive 90% APY, and you're looking at a double-layered passive income machine. How Much Can You Make with BTFD? Let's talk numbers. If you invest \$2,000 at the current presale price of \$0.00016, you'll bag 12.5 million BTFD tokens. When BTFD hits its listing price of \$0.0006, that \$2,000 turns into \$7,500. But if it rockets to its projected moon price of \$0.006, you're sitting on a mind-blowing \$75,000 with a small initial investment! Why is BTFD One of the Best Cryptos Under \$1 Right Now? Simple—it's a rare presale opportunity with an insane ROI potential, powerful tokenomics, a rewarding ecosystem, and a die-hard community ready to take it to the moon. Get BTFD in the Presale! Go to the BTFD Presale and follow these steps: - Connect Your Wallet: Use MetaMask or Trust Wallet. - Enter Purchase Details: Input how much BTFD you want to buy. - Confirm and Buy: Click "Buy Now" and approve the transaction. With over \$6.21 million raised and 70 billion tokens already sold, this presale isn't lasting much longer! Get in before Stage 14 ends, because once it's gone, it's gone! 2. Notcoin (NOT) "The Viral Telegram Game That Turned into a Crypto Juggernaut" Notcoin (NOT) exploded onto the scene as a Telegram-based tap-to-earn game, racking up millions of users and solidifying itself as one of the biggest meme-fueled projects of 2024. What started as a simple game turned into a full-fledged crypto economy, with NOT now serving as the gateway to a new wave of interactive Web3 applications. Investors are bullish on NOT's adoption since it successfully converted millions of casual gamers into crypto holders. As it expands into DeFi and NFT integrations, NOT continues gaining traction as a new-age play-to-earn powerhouse. Why Did NOT Make This List? It's still under \$1, but its utility and gaming-first approach make it one of the most promising low-cap cryptos to watch. 3. Book of Meme (BOME) "The Ultimate Meme Coin for NFT Degens" BOME isn't just another meme token—it's the official currency for the meme NFT revolution. As one of the most community-driven projects, BOME is redefining how NFT culture meets meme economics. Built on Solana, BOME allows users to mint, trade, and stake meme-based NFTs, creating a decentralized marketplace for viral internet culture. BOME's rapid market adoption and NFT-based roadmap have attracted attention from big-name investors. With Solana's growing ecosystem and BOME's increasing visibility, this token has massive breakout potential as the NFT bull market reignites. Why is BOME a Must-Have Crypto Under \$1? It's pioneering a new niche in meme-based NFTs, making it a wildcard investment for those looking to tap into the next wave of internet culture tokenization. Final Thoughts "Don't Miss the Best Cryptos Under \$1 Before They Explode! The meme coin frenzy is just heating up, and these three cryptos—BTFD Coin (BTFD), Notcoin (NOT), and Book of Meme (BOME)—are sitting at the sweet spot for exponential growth. With BTFD's explosive presale, NOT's viral adoption, and BOME's NFT dominance, you're looking at three powerhouse investments primed for liftoff. But time is running out! If you want to maximize your gains, get in on BTFD before Stage 14 closes. This is your shot at a 3650% ROI and life-changing returns—don't let this golden opportunity slip away! Find Out More: Website: <https://www.btfd.io/> X/Twitter: https://x.com/BTFD_COIN Telegram: https://t.me/btfd_coin FAQs 1. What is the best crypto under \$1 to buy right now? BTFD Coin (BTFD) is the best pick due to its presale phase, staking rewards, and 3650% ROI potential. 2. How do I buy BTFD Coin? Visit the BTFD Presale, connect your wallet, enter your purchase amount, and confirm the transaction. 3. Is BTFD a good investment? Yes, its presale pricing, staking rewards, and P2E game make it an incredibly attractive investment. 4. What makes Notcoin (NOT) special? It's a viral gaming project with millions of users, making it a strong meme coin play with gaming utility. 5. Why is Book of Meme (BOME) a top crypto under \$1? It's the leading meme NFT project on Solana, with high potential for growth in the NFT bull market.

Meme coins have emerged as a dynamic and exhilarating segment, captivating investors and enthusiasts alike. From the pioneering Dogecoin to the latest sensations like Shiba Inu, Pepe Coin, Bonk, Dogwifhat, and Floki Inu, these digital assets have transformed internet culture into financial opportunities. Amidst this vibrant landscape, Arctic Pablo Coin (APC) stands out, offering a unique adventure that bridges the gap between myth and reality. Arctic Pablo Coin invites investors to join an expedition that uncovers the Earth's hidden mysteries. Unlike traditional presales, APC's journey is segmented by locations, with each phase unveiling a new chapter in its narrative. Currently priced at \$0.000067, the presale has impressively raised over \$1.61 million, with the latest stop at Penguinopolis. Dive more to explore the top trending meme coins now. 1. Arctic Pablo Coin: A Mythical Expedition Arctic Pablo Coin is an adventurous narrative that takes investors on a journey to uncover the Earth's hidden mysteries. Each presale phase is tied to unique locations and stories, creating an immersive experience that bridges the gap between myth and reality. This thematic approach sets APC apart, offering a fresh perspective in the meme coin arena. Diverging from conventional presale models, Arctic Pablo Coin's structure is divided by locations rather than stages. As Arctic Pablo "travels" to new destinations, each phase introduces a distinct narrative and investment opportunity. The current presale price is \$0.000067, with the project having raised over \$1.61 million. With a launch price of \$0.008, early investors have the potential to realize an astounding 11,844.78% ROI. The current location, Penguinopolis, adds an element of intrigue and adventure, inviting participants to be part of this top-trending meme coin journey. Arctic Pablo Coin offers a robust staking program, allowing investors to earn a 66% Annual Percentage Yield (APY) during the presale. This initiative lets participants stake their tokens and accrue rewards, fostering long-term

engagement and loyalty. Additionally, the project incentivizes community growth through referral programs and hosts competitions where members can earn APC tokens or USD rewards. These features enhance the value proposition for investors and cultivate a vibrant and active community.

2.Dogecoin: The Original Meme Coin Dogecoin, introduced in 2013, began as a light-hearted parody of the cryptocurrency craze, featuring the Shiba Inu dog from the popular “Doge” meme. Despite its whimsical origins, Dogecoin has achieved significant market capitalization and widespread recognition. Its community-driven approach and endorsements from high-profile figures have solidified its place in the crypto world. Dogecoin’s pioneering spirit and enduring popularity earn it a spot on this list.

3.Shiba Inu: The “Doge Killer” Launched in August 2020, Shiba Inu positions itself as an alternative to Dogecoin, earning the nickname “Doge Killer.” Built on the Ethereum blockchain, Shiba Inu has developed a decentralized ecosystem, including its own decentralized exchange, ShibaSwap. Its vibrant community and ambitious roadmap have attracted a substantial following. Shiba Inu’s rapid ascent and ecosystem development secure its inclusion here.

4.Pepe Coin: Embracing Meme Culture Pepe Coin draws inspiration from the internet meme “Pepe the Frog,” aiming to capitalize on the meme’s cultural significance. As a community-driven token, it seeks to create a fun and engaging environment for its holders. While it carries the inherent volatility of meme coins, its connection to a well-known meme has garnered attention. Pepe Coin’s cultural relevance and community focus justify its place on this list.

5.Bonk: Solana’s First Dog Token Bonk made headlines as the first dog-themed meme coin on the Solana blockchain. Launched in late 2022, it was airdropped to Solana users, injecting excitement into the ecosystem. Bonk aims to support Solana-based projects and foster community engagement. Its unique position within the Solana network and community-driven initiatives make it noteworthy. Bonk’s innovative approach within the Solana ecosystem earns it recognition here.

6.Dogwifhat: A New Contender Dogwifhat is a recent entrant into the meme coin market, combining elements of popular dog-themed tokens with unique features to stand out. While still in its early stages, it has begun to build a community and aims to differentiate itself through innovative use cases and engagement strategies. Dogwifhat’s potential for growth and community engagement merits its inclusion on this list.

7.Floki Inu: Inspired by Elon Musk Floki Inu gained attention after Elon Musk, CEO of Tesla and SpaceX, mentioned naming his Shiba Inu dog “Floki.” This token leverages the influence of Musk’s statements and aims to create an ecosystem that includes NFTs and gaming. Its community is actively working on developing use cases beyond its meme origins. Floki Inu’s ambitious plans and Musk-inspired branding secure its spot here.

Final Thoughts Based on the latest research, Arctic Pablo Coin, Dogecoin, Shiba Inu, Pepe Coin, Bonk, Dogwifhat, and Floki Inu are among the top trending meme coins captivating the crypto community. Arctic Pablo Coin, in particular, offers a distinctive investment opportunity with its adventure-themed meme coin presale and substantial ROI potential. Early investors are positioned to maximize their returns as the presale progresses through various mythical locations. Don’t miss the chance to be part of this groundbreaking journey with Arctic Pablo Coin. For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ>

Frequently Asked Questions

- What is Arctic Pablo Coin? Arctic Pablo Coin (APC) is a meme coin that combines an adventurous narrative with cryptocurrency investment. During its presale phases, it guides participants through mythical locations and stories.
- How does the Arctic Pablo Coin presale work? Unlike traditional presales, APC’s presale is divided by locations, with each phase representing a new chapter in its adventure. Investors can purchase tokens at the current phase’s price, with opportunities for significant returns upon launch.
- What are the staking rewards for Arctic Pablo Coin? During the presale, APC offers a staking program with a 66% Annual Percentage Yield (APY), allowing investors to earn rewards by staking their tokens.
- How can I participate in the Arctic Pablo Coin presale? Interested participants can join the presale by visiting the official Arctic Pablo website and following the instructions to purchase tokens at the current phase’s price.
- What makes Arctic Pablo Coin different from other meme coins? Arctic Pablo Coin stands out due to its unique adventure-themed narrative, location-based presale structure, substantial ROI potential, and robust staking and community reward programs.

Hundreds of millions of dollars were liquidated from the crypto market in less than an hour as asset prices tumbled. The memecoin sector was hit the hardest; Dogecoin (DOGE) and Shiba Inu (SHIB) were among the biggest losers. The Dogecoin price retested \$0.20 while the SHIB coin fell below the \$0.000015 support. Meanwhile, sentiment has shifted to DTX Exchange (DTX), an emerging cryptocurrency offering a safe haven against market shocks. At the same time, it promises significant returns on investment, dubbed the best presale to invest in this year. Further, it is competitively priced at less than \$0.2 and stands out more for its blend of DeFi and TradFi.

DTX Exchange (DTX): How High Can It Go? DTX Exchange (DTX) is an up-and-coming cryptocurrency at the crossroads between decentralized and traditional finance. Fundamentally solid, it is a new DeFi project to watch out for this year. Further, it offers a lower entry than the current Dogecoin price and has more room for growth than the SHIB coin. Priced at \$0.18 in the bonus ICO round—the final stage before listing—it is massively undervalued. A 100% upswing is anticipated at the listing price of \$0.36, driving funding past \$15.1 million, with the number of holders exceeding 700,000. Meanwhile, insiders consider a 45x jump in value after Tier-1 exchanges modest, dubbed the best new crypto to invest in this year. Moreover, as a blend of DeFi and TradFi, it sets the stage for massive adoption and growth. It will be the first crypto-native platform to offer conventional financial instruments. These include ETFs, stocks, bonds, forex, over 120,000 currency pairs and a broad selection of cryptocurrencies. Further, it will combine the best elements of CEX and DEX, standing out for its hybrid trading model.

Dogecoin (DOGE): Is a Bounce on the Horizon? The Dogecoin price nosedived alongside the broader crypto market, retesting levels last seen in November 2024. It hovers between \$0.20 and \$0.21, down over 15% on the weekly

chart. While a bounce is on the cards, further decline in the Dogecoin price cannot be ruled out. Nevertheless, top analysts maintain a bullish outlook and the Williams Percent Range (14) technical indicator suggests a bounce in the Dogecoin price. Igor Bondarenko, a crypto analyst and trader, expects the Dogecoin price to hit \$0.30 upon reclaiming EMA. Meanwhile, Cas_abe, a top analyst, predicted a dip toward \$0.19 and \$0.2, followed by a mega rally. With the first part of their forecast having played out, a bounce might be around the corner. However, for better positioning this cycle, savvy investors have been betting more on DTX Exchange (DTX), a new altcoin with huge upside and solid fundamentals. Shiba Inu (SHIB): Experts Target a Rebound The Shiba Inu coin wasn't spared during the latest bear attack. It fell below the \$0.00015 support, trading around \$0.00013. The SHIB coin price is down over 10% in the past week, reflecting current market conditions. On the bright side, it is in an attractive buy zone and technical indicators like Momentum (10) and Williams Percent Range (14) suggest a bullish reversal. At the same time, top analysts maintain a bullish stance on the SHIB coin. SPadigimus, a leading expert, suggests the SHIB coin could hit \$0.0047 this cycle "a bold prediction. Smellyrino, another top analyst, targets \$0.00016 in the short term. Amid the declining interest in memes, investors are shifting to new DeFi coins like DTX. Set for a 45x upswing after Tier-1 exchange listings, it might be this year's best ICO, edging out the SHIB coin. DTX Exchange (DTX): A Better Crypto Alternative Than Dogecoin (DOGE) and Shiba Inu (SHIB) Utility-backed, DTX Exchange is fundamentally more solid than the SHIB coin and more budget-friendly than the current Dogecoin price. The current decline in memecoins has sparked demand for emerging and promising altcoins like DTX, placing it among the best altcoins to invest in. With its launch date scheduled for Q1, it might be this year's best crypto investment. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The crypto market looks different, especially for Cardano (ADA) and Dogecoin (DOGE) holders. On the one-month chart, the Cardano price fell by double digits. At the same time, the price of Dogecoin also dipped. However, experts like Don and Trader Tardigrade have made bold price predictions for these crypto coins. Meanwhile, DTX Exchange (DTX) has become the newest opportunity investors are discussing. This presale star is now in its bonus phase, giving early investors an 800% return. With more gains coming fast as a Tier-1 crypto exchange listing is expected, many experts are bullish about its long-term growth potential. They foresee DTX possibly becoming the next 7x altcoin in 2025. DTX Exchange (DTX) Seen As the Hottest Altcoin Amid an 800% Price Pump While Cardano (ADA) and Dogecoin (DOGE) are showing volatility right now, DTX Exchange (DTX) is making headlines for a good reason. Its crypto ICO event has been amazing, having raised over \$15M and potentially hitting \$18M before this month ends. Also, early investors are already 800% richer, with this percentage expected to soar soon as a Tier-1 CEX listing is coming. Speaking of listings, CoinMarketCap recently listed this altcoin, which could lead to millions of new traders setting their sights on the DTX Exchange. Hype was already high as DTX Exchange launched its hybrid trading platform that combines the best of CEX and DEX. On it, traders get to experience complete anonymity thanks to no sign-up KYC checks and access to over 120K asset classes, including gold, CFDs and even crypto coins. All these features have helped DTX Exchange onboard over 700K users so far. Those interested are also stocking up on its native utility token, DTX. Holding this crypto coin will bring governance voting rights and discounts on trading fees. Currently, one DTX costs just \$0.18. However, FOMO is rising as a top-tier crypto exchange like Uniswap listing DTX is set to trigger a rally to \$0.36 " a 100% return for anyone who buys it now. The Cardano (ADA) Price May Soar Soon Amid a Bullish Flag, Expert Claims Cardano (ADA) is among the best cryptos in the market but its value has seen some turbulent movement. CoinMarketCap shows that the Cardano price fell over 20% in the past 30 days. During that time, its value fluctuated from around \$1 to nearly \$0.70. However, market expert Don remains bullish for Cardano (ADA). According to his X post, this altcoin now sees a bull flag. A breakout may soon lead the Cardano price to \$1.42. This Cardano price prediction has turned some heads at the moment. But, many traders are still skeptical about the future of the Cardano coin. This is because of its high market cap of around \$25B. In other words, much new money will need to flood in for the Cardano price to skyrocket. Thus, many are turning to DTX instead. Trader Tardigrade: The Price of Dogecoin (DOGE) Will See a Significant Pump Like the Cardano price, Dogecoin (DOGE) also shows some volatility. In the past 30 days, this meme coin has fallen from around \$0.35 to nearly \$0.20 on the price charts. In other words, the price of Dogecoin dropped over 30% in just a few short weeks. Thanks to Trader Tardigrade, the community is watching Dogecoin (DOGE). In a recent X post, Tardigrade said that this meme coin has performed well after breakouts of falling wedges. Thus, the next falling wedge pattern may lead to a potential pump to \$1.30 for the price of Dogecoin. Although this Dogecoin price prediction has made some waves in the market, many traders are sidestepping this token for DTX. This is because the price of Dogecoin has already surged over 150% on the YTD chart. Therefore, its highest upswings may have passed. Factors Impacting the DTX Exchange (DTX) Potential To Exceed Cardano (ADA) and Dogecoin (DOGE) Growth While Cardano (ADA) and Dogecoin (DOGE) try to regain their lost footing, DTX Exchange (DTX) is getting a head start. The boom in the online trading market, predicted to reach \$13B by 2026 as per Statista, coupled with DTX's innovative technology, makes the platform a front-runner. Additionally, DTX will have a smaller market cap than ADA and DOGE. This could result in its value soaring faster than the price of Dogecoin or Cardano. Because of this, market analysts foresee DTX potentially becoming the next 7x crypto coin in 2025. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. The meme coin phenomenon isn't slowing down—it's evolving. From Dogecoin's meteoric rise to Shiba Inu's billion-dollar dominance, these viral assets have reshaped the crypto market, creating overnight millionaires. But the game is changing. The best meme coins today aren't just speculative gambles; they're packed with real utility, strong communities, and massive upside potential. One project leading this new wave? BTFD Coin (BTFD)—a meme coin with an explosive presale, a P2E game, and a referral program that's making early investors rich. And it's still in Stage 14, meaning there's a short window to grab it before it skyrockets. Alongside it, other big names like Bonk (BONK), Osaka Protocol (OSAK), Turbo (TURBO), and Pudgy Penguins (PENGU) are making serious noise. Let's dive into why these five meme coins could be the best meme coins to invest in March 2025 and how you can ride the next meme-fueled wave to insane profits.

1. BTFD Coin (BTFD) — The Meme Coin Presale with 3650% ROI Potential

What if you could lock in a 3650% ROI before this coin even hits exchanges? That's the reality with BTFD Coin (BTFD), currently in Stage 14 of its presale at just \$0.00016 per coin. By the time it lists at \$0.0006, investors are looking at nearly 4x gains instantly—and that's before it catches mainstream hype. This isn't just another meme token. BTFD is backed by a thriving community, real utility, and insane earning potential:

- P2E Game is LIVE — Users are already earning rewards, and with more updates planned, the player base is growing fast.
- Staking Pays Big — With an average APY of 90%, BTFD holders can grow their stack just by holding.
- Referral Program That Pays — Earn 10% of the raise amount if you refer friends and land in the top 20 each month.

Investors are flooding in, pushing the presale tally past \$6.20 million with over 70 billion BTFD coins sold. And with only a few stages left, the \$0.00016 price won't last much longer.

Example Scenario: If you put \$2,350 into BTFD at today's presale price of \$0.00016, you'd receive 14,687,500 BTFD coins. When the price hits \$0.0006 at launch, your investment would be worth \$8,812—a 275% gain. But if BTFD reaches its projected moon price of \$0.006, your \$2,350 could turn into \$88,125!

Buy BTFD Coins Before the Presale Vanishes:

- Go to the BTFD Presale - Connect Your Wallet — Use MetaMask or Trust Wallet.
- Enter Purchase Amount — Decide how many BTFD coins you want.
- Confirm and Buy — Approve the transaction, and you're in.

Why is BTFD on this list? Simple. It's the best high-ROI presale in 2025, and analysts predict it could easily surpass its moon price of \$0.006 once live. This is your last chance to buy in before the price jumps!

2. Bonk (BONK) — The Solana Meme Coin Taking Over

Bonk (BONK) isn't just another meme token—it's become the face of Solana's meme coin ecosystem. With major Solana-based integrations and a powerful community, BONK continues to thrive despite market fluctuations. What's keeping BONK at the top?

- Solana Ecosystem Growth — More dApps and DeFi projects are integrating BONK, increasing demand.
- Massive Community Support — Airdrops and meme-driven marketing keep engagement sky-high.
- Mainstream Hype — BONK is now listed on multiple major exchanges, making it widely accessible.

Why did BONK make this list? It's proving that community-driven meme coins still have a major market pull, and Solana's growth only strengthens its case for long-term gains.

3. Osaka Protocol (OSAK) — The Next-Gen Meme Coin with Smart Utility

Osaka Protocol (OSAK) is blending meme culture with smart contract innovations, creating a token that's both fun and functional. Unlike other meme coins, OSAK has real-world use cases, including:

- Decentralized governance — Giving the community a say in major decisions.
- Layer 2 scaling solutions — Faster and cheaper transactions compared to Ethereum-based meme coins.
- Exclusive NFT integrations — Unique collectibles that provide holders with voting rights and rewards.

Why did the Osaka Protocol make this list? It's not just a meme; it's a tech-forward meme project that offers genuine value alongside the hype.

4. Turbo (TURBO) — AI-Generated Meme Coin with Viral Potential

Turbo (TURBO) made headlines as one of the first AI-generated meme coins, proving that AI can create viral tokens just as well as humans. But it's more than just a gimmick:

- AI-Driven Tokenomics — Algorithms optimize liquidity and burn rates for sustainability.
- Viral Community Growth — Turbo's marketing thrives on AI-generated memes and content.
- DeFi Integrations — Users can stake TURBO in liquidity pools for passive income.

Why did Turbo make this list? AI is the future of crypto, and TURBO is pioneering meme coins in this space with huge potential for viral adoption.

5. Pudgy Penguins (PENGU) — The NFT-Backed Meme Coin Gaining Momentum

Pudgy Penguins (PENGU) isn't just a meme coin—it's an NFT empire. What started as a playful penguin-themed collection has evolved into a full-fledged brand with real-world IP and licensing deals.

- Expanding NFT ecosystem — Pudgy Penguins are more than collectibles; they're assets in a growing ecosystem.
- Merchandise and Partnerships — Pudgy toys, media deals, and branding put PENGU in mainstream markets.
- DeFi Utility — PENGU token holders get access to staking rewards and community governance.

Why did Pudgy Penguins make this list? It's a meme coin with real-world branding power, showing how NFTs and meme culture can merge into something much bigger than a simple token.

Final Thoughts — Get In Before These Meme Coins Explode!

The crypto landscape is shifting, and the next big meme coin wave is already brewing. If you're serious about finding the best meme coins to invest in March 2025, these five projects stand out as the strongest contenders. But BTFD Coin (BTFD) remains the best play right now. The presale is nearly over, and the chance to lock in a 3650% ROI potential won't last. Whether it's the explosive P2E game, high-yield staking, or referral rewards, BTFD is built for moonshot gains. Don't wait—grab your share before the presale ends! Join the BTFD presale now.

FAQs:

- 1. What makes BTFD Coin different from other meme coins? BTFD Coin isn't just a meme—it offers staking rewards, a live P2E game, and a high-ROI presale, making it a utility-packed investment.
- 2. How much can I earn by investing in BTFD Coin's presale? At the current price of \$0.00016, an investment of \$2,350 could be worth \$88,125 if BTFD hits its projected moon price of \$0.006.
- 3. Why is Bonk (BONK) still a strong investment in 2025? Bonk dominates the Solana meme ecosystem, with strong community support and increasing adoption in Solana-based DeFi and NFTs.
- 4. How do AI-driven tokens like Turbo (TURBO) impact the market? Turbo leverages AI for tokenomics, liquidity, and viral marketing, proving AI-powered tokens can be sustainable and community-driven.
- 5. What role do NFTs play in meme coin success? Projects like Pudgy Penguins (PENGU) show how NFTs add real-world branding, licensing potential, and exclusive holder benefits to meme tokens.

Meme coins have gone from being crypto jokes to full-blown financial opportunities, and 2025 is shaping up to be a massive year for them. With the right picks, investors are seeing life-changing gains, especially when they get in at the right time. Some meme coins have established themselves as giants in the market, while others are emerging with fresh concepts, massive community hype, and even passive income rewards. With so many new options, picking the best meme coins to invest in now can be a game-changer for your portfolio. One meme coin is already making waves, still in presale, and showing the kind of momentum that early investors dream about. With over \$6.20 million raised and a projected 3,650% ROI, this token is attracting serious attention. As meme coins continue to dominate conversations in crypto, let's break down the best meme coins to invest in now before they hit their next major price points.

1. BTFD Coin: The Explosive Presale You Don't Want to Miss

BTFD Coin (\$BTFD) is quickly becoming one of the most talked-about meme coins of 2025, and for good reason. It's still in Stage 14 of its presale, with a price of just \$0.00016, and analysts predict it could hit \$0.006 after launch, delivering a massive 3,650% ROI for early investors. With its play-to-earn game already live, an active Bulls Squad community, and a staking system that offers 90% APY, BTFD is proving that meme coins can be both fun and financially rewarding. Presale momentum is key when it comes to meme coin investments, and BTFD is absolutely crushing it. With over 70 billion tokens sold and more than 11,000 holders, the token has built a strong foundation that suggests a bullish run once it hits exchanges. FOMO is kicking in as investors rush to grab BTFD before the next presale stage raises the price again. For investors looking to maximize gains, let's break it down with an example. A \$4,000 investment at \$0.00016 per token gets you 25 million BTFD tokens. If BTFD reaches \$0.0006 at launch, your holdings would be worth \$15,000. But if it moonshots to \$0.006, as analysts predict, that same investment could be worth a staggering \$150,000. Buying BTFD is simple. Investors need to set up a crypto wallet (like MetaMask or Trust Wallet), fund it with BNB, ETH, or USDT, and connect to the official presale page. After selecting the amount to purchase and confirming the transaction, tokens will be available for claiming once the presale ends. With prices set to rise in the next stage, securing BTFD now could be a smart long-term move. Why did this coin make it to this list? BTFD Coin isn't just another meme token—it's a presale powerhouse with massive potential gains. With presale numbers soaring, community growth accelerating, and price predictions looking highly favorable, it's easily one of the best meme coins to invest in now.

2. Dogecoin: The Meme Coin That Started It All

Dogecoin (DOGE) is the OG of meme coins, and despite its lighthearted origins, it remains one of the most recognized cryptocurrencies in the world. With a massive community-driven backing, DOGE has been accepted by major companies like Tesla and AMC Theatres for payments, making it more than just a speculative asset. One of DOGE's biggest strengths is its enduring popularity and mainstream appeal. While other meme coins rise and fall quickly, DOGE has consistently remained relevant, thanks in part to Elon Musk's vocal support. As the crypto market recovers in 2025, DOGE continues to see strong trading volumes, and with new potential use cases emerging, its long-term value remains promising. Why did this coin make it to this list? Dogecoin has proven itself as a resilient and widely adopted meme coin. With mainstream recognition and steady market demand, it remains one of the best meme coins to invest in right now for investors who want a balance of humor and utility.

3. Shiba Inu: From Meme to Multi-Billion Dollar Ecosystem

Shiba Inu (SHIB) started as a Dogecoin-inspired meme token, but it has quickly grown into something much bigger. With a full DeFi ecosystem, NFT marketplace, and staking rewards, SHIB has cemented itself as one of the most innovative meme coins in the market. One of SHIB's biggest developments has been the launch of Shibarium, its Layer 2 scaling solution. This update is designed to reduce fees and improve transaction speeds, making SHIB even more functional and efficient. Combined with its ShibaSwap staking and liquidity pools, SHIB offers multiple ways for investors to earn passive income while holding. Why did this coin make it to this list? Shiba Inu has evolved beyond just a meme coin and into a full-fledged DeFi ecosystem. With staking, real-world adoption, and continuous development, SHIB is a strong pick for investors looking for the best meme coins.

4. Pepe Coin: The Meme Token That Keeps Breaking Records

Pepe Coin (PEPE) took crypto by storm in 2023, and it hasn't slowed down since. As a pure meme token, PEPE has relied heavily on community-driven hype and viral marketing, making it one of the most explosive meme coins in recent years. Despite its meme-heavy nature, PEPE has seen some serious trading volume, with whales and retail investors alike piling in for potential gains. The token's liquidity is strong, and with new use cases and staking rewards being explored, PEPE is continuing to capture attention in 2025. Why did this coin make it to this list? PEPE has proven its ability to deliver massive price swings and attract high levels of investor interest, making it one of the best meme coins to invest in for those who thrive on high-risk, high-reward plays.

5. Bonk: Solana's Meme Coin Sensation

Bonk (BONK) is the first major meme coin on the Solana blockchain, and it has quickly gained traction as one of the top-performing Solana-based tokens. With fast transaction speeds and low fees, BONK offers an alternative to Ethereum-based meme coins while maintaining high community engagement. One of BONK's biggest advantages is its airdrop strategy, which helped thousands of new investors get involved in the project early on. As the Solana network continues to grow, BONK is positioned to benefit from increased adoption and expanding utility. Why did this coin make it to this list? Bonk is one of the most promising meme coins on Solana, and its growing adoption within the ecosystem makes it a solid investment choice for those looking for the best new meme coins to invest in now.

Conclusion

Meme coins are no longer just about jokes and internet culture—they're becoming serious investment opportunities. With presales, staking, and ecosystem expansions, they're offering investors real utility and major earning potential. BTFD Coin stands out with its explosive presale performance, growing community, and massive 3,650% ROI potential. As Stage 14 is almost over, the price will jump in the next stage, making this a limited-time opportunity to get in before the next increase. If you're looking for the best meme coins to invest in now, this might be the best chance to secure high returns before the market takes off!

FAQs

What is the best meme coin to invest in now? BTFD Coin is a top choice due to its strong presale momentum, community backing, and major ROI potential. How does a meme coin presale work? Presales allow investors to buy tokens before they list on exchanges, often at a much lower price. Can meme

coins be good investments? Yes! Meme coins like BTFD, DOGE, and SHIB have massive community support and have delivered huge gains for early investors. When will BTFD Coin list on exchanges? BTFD is expected to list after its presale, with projections pointing to a \$0.0006 listing price. Floki Price Prediction is creating a lot of buzz as crypto fans wonder if this token could be the next big thing in 2025. But let me tell you, if you're really looking for a chance at exponential growth, Dawgz AI is the smarter play. I've experienced the Dawgz AI's trade bots do their magic, giving you a shot at massive profits and helping you capitalize on Ethereum, the world's most powerful smart contract platform. Don't miss out on a future with bigger potential than what Floki can offer, Dawgz AI is the coin leading the charge today! Floki's Potential in 2025: What Investors Should Know Floki Inu has been gaining traction as a meme coin, and as we look ahead to 2025, investors are eager to see if it will explode like other meme coins in the past. But before jumping on the Floki bandwagon, it's essential to take a step back and evaluate the Floki price prediction 2025 and the challenges that come with investing in meme coins. While the Floki Inu price prediction has experienced some fluctuations, it's still difficult to predict whether it can achieve the same explosive growth as coins like Shiba Inu or Dogecoin. With the hype around meme coins, Floki Inu's value could be highly volatile, with unpredictable average price shifts that may not appeal to every investor. That said, Dawgz AI brings something to the table that Floki Inu doesn't have: AI-powered trading bots that automate buying and selling strategies 24/7. This means no matter what happens with the Floki price or Floki Inu's average price; investors can rely on Dawgz AI to maximize profits with minimal effort. Why Dawgz AI Is the Crypto to Watch in 2025 With Floki Inu's average price being a bit unpredictable, it's important to ask: how can you make the most out of crypto investing without the uncertainty? Enter Dawgz AI, the cryptocurrency that combines fun and profitability. At its core, Dawgz AI is all about using AI-powered trading bots to make investing in crypto effortless and effective. These bots run 24/7, ensuring that you never miss a trading opportunity, whether the market is up or down. This automated approach allows you to capture maximum returns without constantly monitoring the market, which is something Floki Inu can't provide in the same way. Another big reason \$DAGZ is poised for success in 2025 is its strong presale momentum. With over \$1.9 million raised in its presale phase and the next target at \$2.1 million, Dawgz AI is gaining significant attention. Unlike Floki Inu, which has struggled with price fluctuations and inconsistent growth, Dawgz AI offers a more stable and robust investment opportunity. AI-Powered Trading: How Dawgz AI Makes Every Investment Smarter One of the standout features of Dawgz AI is its AI-powered trading bots. These bots are designed to analyze the market capitalization, identify trends, and execute trades automatically, all while optimizing for maximum returns. This approach means that Dawgz AI doesn't rely on speculation or guesswork, unlike Floki Inu's price, which is often subject to unpredictable market shifts. When you invest in Dawgz AI, you're not just relying on human intuition or market speculation. Instead, you're placing your trust in a system that is designed to analyze the market with precision and accuracy. This AI-driven approach sets Dawgz AI apart from Floki Inu, as it provides real, actionable strategies that can lead to exponential growth over time. Staking with Dawgz AI: Generate Passive Income effortlessly Staking is another feature that gives Dawgz AI a competitive edge over Floki Inu. For Dawgz AI investors, staking rewards offer a way to earn passive income by holding onto your tokens. This is where Dawgz AI takes it to the next level: by offering one of the most competitive APYs in the market. In contrast, Floki Inu's price may increase, but the staking rewards for Floki users are not nearly as attractive. With Dawgz AI, staking rewards are designed to ensure long-term profitability and contribute to a steady stream of income for holders. This makes it a smarter choice for anyone looking to maximize their crypto investments in 2025. Presale Momentum: Dawgz AI's Road to \$2.1M and Beyond A significant aspect of Dawgz AI's success is its presale momentum. With over \$1.9 million already raised, it's clear that there's substantial investor confidence in Dawgz AI's future. And with the next presale milestone targeting \$2.1 million, it's likely that the price of Dawgz AI will continue to rise as more investors get involved. On the other hand, Floki Inu's price has been relatively inconsistent, with fluctuations that don't inspire the same level of confidence. While Floki Inu may have some potential, Dawgz AI is on track for even greater success due to its solid presale backing and community support. Strong Tokenomics: The Foundation for Sustainable Growth Something that makes Dawgz AI really stand out is its tokenomics. With 8.888 billion coins in total stock, 30% is to presale, 20% is staking, and the other 10% is for liquidity, \$DAGZ has a structure that ensures long-term value and growth potential. This is crucial in maintaining the stability of the coin, even as the market shifts. Comparatively, Floki Inu's price can often be driven by speculative hype, and while it has gained attention, its tokenomics don't offer the same kind of sustainability that Dawgz AI offers. If you're looking for a stable, long-term investment with real growth potential, Dawgz AI is the clear winner. Meme Coin with Utility: Fun Meets Profitability While Floki Inu has capitalized on the meme coin craze, it lacks the real utility that comes with Dawgz AI. As a meme coin, Floki Inu and the Floki community is fun to follow, but when it comes to actual profitability, Dawgz AI takes the lead by offering real AI-driven trading and staking rewards. With \$DAGZ, you're not just investing in a meme coin for the sake of fun; you're tapping into a system that's designed to generate profitability through intelligent, automated trading strategies. Floki Inu's token price may rise and fall with market sentiment, but Dawgz AI is set up to keep growing no matter what. Looking Ahead: Why Dawgz AI Is the Future of Cryptocurrency Investment As we look ahead to 2025, it's clear that Dawgz AI is the smarter play for anyone looking to capitalize on the crypto market cap. With AI-powered trading, staking rewards, strong tokenomics, and a presale that's already raising millions, Dawgz AI is poised for significant

growth in the coming years. Unlike Floki Inu, which faces current price fluctuations and volatility, Dawgz AI offers a much more stable and profitable investment opportunity. Whether you have no experience in crypto or you are a seasoned shareholder, Dawgz AI is the coin to watch in 2025.

Conclusion When considering the Floki price prediction and the potential for explosive growth in 2025, it's clear that Dawgz AI offers a smarter and more profitable investment option for savvy crypto enthusiasts. With its AI-powered trading bots, impressive staking rewards, and strong presale momentum, Dawgz AI is set to dominate the market in 2025. Don't miss out, make Dawgz AI your go-to crypto for a smarter, more profitable future.

Frequently Asked Questions Can Floki Inu reach \$1 dollar? While a Floki price prediction 2025 reaching \$1 may seem exciting, it's important to remember that Floki Inu's current price shifts have been unpredictable. Instead of focusing on Floki tokens and on the price of Floki potentially reaching higher levels, consider investing in Dawgz AI, which offers more reliable, AI-powered trading with consistent returns. With the right strategy, Dawgz AI can bring much more profitability than betting on Floki Inu's uncertain future. Does Floki have potential? While Floki Inu has gained attention in the Floki network, its potential is marred by maximum price changeability. On the other hand, Dawgz AI leverages automated AI trading bots 24/7, a better prediction than the Floki prediction, ensuring maximum returns and passive income through staking rewards. The Floki ecosystem and Floki team offer speculative risk, but Dawgz AI offers a smarter, more sustainable investment with strong tokenomics and real utility, providing better chances for long-term success. Should I sell Floki? If you're looking for consistent profitability, it is better to sell Floki rather than buy Floki Inu from the Floki project. With Floki Inu's price volatility and uncertain future, investing in a more stable option like Dawgz AI is a better choice. Unlike Floki Inu, which still faces challenges, Dawgz AI is backed by solid AI-powered trading and offers passive rewards, making it a more attractive investment opportunity compared to holding onto Floki tokens. What is Floki all-time high? While Floki Inu's all-time high sparked excitement, its long-term viability remains questionable due to fluctuating trading volume and a lack of clear growth. If you're looking for more stability, Dawgz AI provides a unique investment opportunity with AI-driven trading and strong Floki prediction alternatives. While Floki university may have peaked, Dawgz AI is positioned for steady growth with a higher return on investment.

- Bitcoin (BTC) drops below \$89K amid Bybit hack, ETF outflows, and market uncertainty. - Trump's tariffs on Canada and Mexico add pressure to global markets. Bitcoin (BTC) fell to \$86,008.23 before recovering slightly. It is now trading at \$88,763.49, down 0.15% in the last 24 hours. The market cap stands at \$1.76 trillion, with a 24-hour trading volume of \$81.23 billion, pushing the market cap ratio to 4.75%. BTC is facing immediate resistance at \$90,000, with stronger resistance near \$92,500. On the downside, support sits at \$86,000, with a critical level at \$84,500. A break below \$84,500 could send BTC toward \$80,000, while reclaiming \$90,000 could fuel a push to \$95,000. The Relative Strength Index (RSI) is at 28.98, indicating oversold conditions. The RSI average at 30.20 suggests weak momentum for recovery unless buying pressure increases. The Chaikin Money Flow (CMF) is at -0.03, signaling weak capital inflows. BTC remains below key moving averages, reinforcing the bearish trend.

Bybit Hack and Tariffs Weigh on Market Sentiment Bitcoin's decline follows the \$1.5 billion Bybit hack, which has shaken investor confidence. The incident raises concerns over security risks in centralized exchanges. Additionally, Donald Trump's new 25% tariffs on Canada and Mexico, including a 10% tax on Canadian energy exports, have impacted global markets. The uncertainty has led to capital outflows from risk assets, affecting BTC. Bitcoin ETFs have registered \$937.9 million in outflows, marking the largest ever outflows. The broader crypto market is also struggling, with Ethereum (ETH) and altcoins like Solana (SOL), Cardano (ADA), and Dogecoin (DOGE) losing over 20%. Despite the downturn, GameStop is considering BTC as a reserve asset, and states like Ohio and Oklahoma are pushing legislation to allocate public funds into Bitcoin. Public companies acquired 20,569 BTC last week, raising total holdings to 656,762 BTC. Institutional interest remains strong despite short-term volatility. Bitcoin's oversold RSI suggests a potential short-term bounce if buying pressure returns. However, weak CMF and moving averages point to continued caution. A sustained move above \$90,000 could trigger a relief rally, but failure to hold \$86,000 may lead to further downside toward \$84,500 and possibly \$80,000.

BTC is currently trading steadily above \$90,000 and could soon regain the \$100,000 milestone. Its stronghold above this support level shows its resilience and potential to regain its all-time high. Amidst this, six altcoins are warming up for big moves. They are beginning to form bullish patterns, while some have shown strong momentum, pointing to a potential huge rally ahead.

Rexas Finance (RXS): The Future of Real-World Asset Tokenization Rexas Finance is gaining traction, and experts believe it is gearing up for a major move post-launch. The presale has already laid a strong foundation for its growth, with the RXS token increasing by an impressive 566%. Investor enthusiasm has been high so far, leading to a remarkable presale that has raised over \$45.6 million and sold nearly 448 million tokens. With the official launch set for June 19 at \$0.25, analysts predict a massive rally, potentially leading to a 10,000% surge. What's drawing investors to Rexas Finance is its ambitious vision to transform asset viewing and handling. The platform is at the forefront of real-world asset (RWA) tokenization. It enables users to convert tangible assets like real estate and commodities into digital tokens, making high-value investments more accessible to everyday users. Rexas Finance achieves this by breaking RWAs into fractional shares. Thus, anyone, anywhere, can participate in markets that were once reserved for the wealthy. Rexas Finance's robust ecosystem further strengthens its appeal. The Rexas Token Builder simplifies asset tokenization for users without technical skills. Rexas GenAI harnesses AI to generate high-quality digital artworks, while Rexas

Estate facilitates fractional real estate investments. These tools set Rexas apart as a leader in RWA tokenization. With Bitcoin stabilizing above \$90K, the market is primed for high-growth altcoins. Analysts predict RXS could surge to \$25 post-launch. Increased liquidity, strategic exchange listings, and growing interest in asset tokenization will drive this surge. As institutional investors and retail traders seek new opportunities, Rexas Finance is positioned as a top contender in the next crypto bull run. Its unique utility and ability to create new opportunities in the real-world assets market make it an attractive project poised to dominate decentralized finance. This factor ensures not only Rexas Finance's short-term growth but also its long-term growth potential.

Dogecoin (DOGE): A Potential Breakout from Oversold Levels Dogecoin shows signs of a strong rebound after completing what analyst Asif.eth (@asifeth) believes is an ABC corrective pattern. He pointed out that Dogecoin's recent pullback has likely reached a key support zone between \$0.24 and \$0.18, which he considers a prime accumulation point. The RSI is also in oversold territory, which indicates selling exhaustion and can lead to a bounce back. While the bullish setup remains intact, the analyst warned that dropping below \$0.16 could invalidate the recovery.

TRON (TRX): Eyeing a Breakout After Months of Consolidation Since its 94% surge in December, TRX has been stuck in a falling channel, with key support at \$0.20. Analysts suggest a potential breakout if TRX maintains this level. It could form a double-bottom pattern, signaling bullish momentum. Technical indicators like RSI and MACD hint at a reversal. Meanwhile, a strong social sentiment shows investors increasing interest in the project. If TRX breaks out, it could rally toward \$0.30, a 30% gain. However, if selling pressure increases, it might retest \$0.20 before any major move upward.

Binance Coin (BNB): Expanding Ecosystem Poised for Growth As market sentiment builds, BNB is consolidating within the \$580-\$618 range. The BNB ecosystem continues to expand, with over 5,600 Dapps and \$3.6 billion in total value locked (TVL). This drives adoption across AI, decentralized science, gaming, and asset tokenization. Analysts predict a potential surge to \$2,000 soon. Rising institutional interest and high future open interest will drive this increase. If BNB breaks above \$590, increased volatility could push it toward its next resistance. Overcoming this can lead to further highs.

Ondo Finance (ONDO): Institutional Backing Fuels RWA Tokenization Ondo Finance is causing excitement with its new Ondo Chain, a blockchain built for tokenizing real-world assets. Backed by major institutions like Franklin Templeton and Wellington Management, it's gaining traction in traditional finance. The ONDO token ranked 33rd with a \$4.3 billion market cap. This comes after increased attention following a \$470,000 investment from World Liberty Financial, a Trump-linked project. With growing institutional interest and Ethereum compatibility, Ondo Chain could play a key role in bridging traditional finance and blockchain. Thus, it's a token to watch.

Ripple (XRP): Strong Institutional Interest Could Trigger a Rally XRP is gaining momentum as analysts predict a rally similar to its 2017 surge. The token recently saw a 2.5% price increase, sparking bullish sentiment. Veteran trader Peter Brandt also identified a flag pattern that could push XRP's market cap to \$500 billion within weeks. If this holds, XRP will take Ethereum's place on the chart. Institutional adoption, such as Bank of America integrating Ripple's technology, also drives optimism. Breaking past the key resistance level could send XRP soaring. Thus, it's a strong choice as Bitcoin stagnates.

Conclusion These six altcoins look bullish and could be preparing for a massive rally as BTC shows strength above \$90,000. Meanwhile, Rexas Finance offers the most promise with its strong presale performance and unique proposition. These factors, including its upcoming token launch, create a promising future for the token. Once it launches in June, it could surge from \$0.25 to \$25. - Metaplanet spent \$13 million (or around \$96,185) for 135 Bitcoin. - With its most recent acquisition, the Japanese company's BTC holdings now reach 2,225. Amid the recent crypto market crash Bitcoin fell as much as 5% in a span of 10 hours both Metaplanet and El Salvador piled on the Bitcoin. Metaplanet spent \$13 million (or around \$96,185) for 135 Bitcoin. While El Salvador, a country that stacks Bitcoin, bought 7 Bitcoin on February 24 (when the cryptocurrency was worth about \$94,050). These occurred just before Bitcoin's price dropped below \$91,000 in the early hours of February 25. Although crypto market sentiment has fallen to its lowest point in more than five months, Bitcoin has declined further and is now trading around \$89,663. With its most recent acquisition, the Japanese company's Bitcoin holdings now reach 2,225 Bitcoin. With a market value of more than \$205 million. Since announcing in April that it would accept Bitcoin as a treasury asset, the Simon Gerovich-led firm's investment in the cryptocurrency has increased by around 12.7%, with an average purchase price of \$81,834. But Metaplanet pointed out that their "BTC Yield" the percentage change from one period to another in the ratio of a company's Bitcoin holdings to its diluted shares "is up 23.3% this quarter, putting them on pace to hit their Q1 aim of 35% each quarter. El Salvador Buys the Dip Data from BitBo's Bitcoin Treasuries.NET indicates that Metaplanet is the fourteenth biggest corporate Bitcoin holder globally as of right now. Meanwhile, the El Salvador National Bitcoin Office said that the country's Bitcoin purchases were six times more than its daily average of one Bitcoin. The transaction was made only one hour before Trump said that the United States would still impose a 25% tariff on imports from Canada and Mexico, and the cryptocurrency markets promptly declined after his confirmation. With its most recent acquisition, the Central American nation now owns 6,088 Bitcoin, which is valued at \$560.7 million.
