

Web3 liquidity layer Orderly Network has announced that it will be expanding to Sei, the first parallelized EVM blockchain that combines the greatest elements of Solana and EVM architecture. With this development, Sei builders will be able to offer onchain perps systems that are fueled by Orderly's top-notch liquidity and infrastructure. In order to enable local teams to provide institutional-grade perps trading solutions, Orderly has decided to bring its trading infrastructure and liquidity layer to Sei. Sei developers have access to bootstrapped liquidity and can quickly implement futures trading solutions using Orderly's white-label perps technology. By joining the Sei ecosystem, Orderly will reach a wider audience and provide the Sei community access to a trading venue that has a common orderbook and proven infrastructure. EVM traders from other well-known chains, such as Arbitrum and Polygon, may now share an orderbook with Sei traders. By integrating a front-end with Orderly's advanced perps infrastructure, Orderly allows developers to concentrate on the user experience with innovations like this shared orderbook and deep liquidity. Sei, the first parallelized EVM, combines the finest of Ethereum and Solana to create a scalable network that can execute more than 12,500 transactions per second with a finality of 380 milliseconds. Perpetual futures markets and other high-volume trading alternatives are well suited to its architecture. Developers working on Sei trading solutions that make use of Orderly's infrastructure will get continuous support. This will make native perps platforms that take use of the network's natural speed and low price environment available to Sei's expanding community. Orderly will increase the use cases and assets that may be traded on Sei while offering builders a useful primitive to use by linking its backend and liquidity layer to Sei. Teams working within Orderly's ecosystem will be able to create DEXs and other trading platforms that take use of strong liquidity and reliable infrastructure thanks to Orderly's integration with Sei. In addition to enabling a new generation of spot and perps DEXs that take full advantage of Sei's high throughput and low latency, this will shorten time-to-market.

- Among the top in the meme coin market, market capitalization of Dogecoin offers stability. - SHIB appeals to people looking for a high-potential meme coin with developing usefulness. From simple internet jokes to serious assets with great investor interest, meme coins have swept the crypto scene. Three outstanding meme coins worth looking at 2024 have shown encouraging development and community support. Based on current statistics and trends, the top meme coins are closely examined here. 1. Dogecoin (DOGE) Originally one of the most popular assets in this category, Dogecoin pioneered the meme coin space. DOGE's devoted community, persistent social media buzz, and frequent references from powerful people including Billionaire Elon Musk's help to keep it appealing in 2024. Low transaction fees and fast processing times of Dogecoin help it to remain relevant for daily, small crypto transactions. Among the top in the meme coin market, market capitalization of Dogecoin offers stability. Significant online following and active user involvement make it resilient, displaying significant community support. For those wishing to invest in established meme coins, Dogecoin's gradual adoption by businesses and great presence in pop culture maintain it an appealing choice. 2. Shiba Inu (SHIB) Emerging as a rival to Dogecoin, Shiba Inu drew a sizable following drawn by its unique tokenomics and expanding ecosystem. Projects like ShibaSwap (a decentralized exchange) and ongoing Shiba Inu metaverse development have elevated SHIB beyond mere a meme. Its acerbic approach to lower token supply demonstrates a dedication to raise its value, so it appeals for 2024. ShibaSwap and its forthcoming metaverse provide use cases outside of trading, therefore expanding the usefulness potential. The burning process encourages scarcity, therefore increasing its worth. Strong retail support together with fresh ideas maintains SHIB in front of audiences. Shiba Inu appeals to people looking for a high-potential meme coin with developing usefulness as it is well-positioned for expansion in 2024 and wants to boost interaction with Web3 projects. 3. Pepe (PEPE) Based on the internet-famous 'Pepe the Frog' meme, Pepe has become very popular as a prominent meme coin with a sizable social media following. Pepe has rapidly grown a sizable community, despite being younger than DOGE and SHIB. Its propensity to go viral and its playful branding drew in investors, which has resulted in amazing growth and trading volume. PEPE's recent expansion shows great market interest as shown by a fast increase in volume and adoption. Strong social media presence results from great community support on sites like Twitter and Reddit driving awareness. Using meme culture helps PEPE remain relevant and sought after. Pepe has great potential for exponential expansion if it keeps drawing social media attention given low entry price and great online engagement. High-risk, high-reward investors seeking for a younger meme coin with viral appeal would find this coin perfect. Conclusion Even though meme coins are very volatile, their community-driven nature and viral appeal make them unique assets on the crypto market. Among meme coins with strong communities, expansion plans, and the possibility for large returns in 2024 are Dogecoin, Shiba Inu, and Pepe. Highlighted Crypto News Today: Huge Solana (SOL) Rally Possible in 2025 According to This Analyst but Is it Realistic?

- Particularly in the DeFi and NFT domains, Solana has rapidly become a favorite in the US. - Cardano's development has been slower but very deliberate, appealing to Americans. Investors all over the world have been enthralled by the crypto market, especially in the United States, the excitement surrounding altcoins is still running strong. These are the top five cryptocurrencies that American investors really value for their innovative use cases, robust communities, and growth potential. Ethereum (ETH) Still the king of altcoins, Ethereum provides more than just a digital currency. Non-fungible tokens (NFTs) and decentralized finance (DeFi), both of which have become quite popular in the United States, are built on its innovative smart contract features. American investors are hopeful about Ethereum's long-term worth because of its large developer ecosystem and forthcoming improvements to increase scalability and lower energy usage. Decentralized applications that appeal to the U.S trend for financial independence and innovation find support in DeFi and NFT. Cardano (ADA) Renowned for its research-driven development, Cardano has drawn American capital focused on long-term sustainability and stability. Cardano's development has been slower but very deliberate, appealing to people who give security and transparency first priority unlike many cryptocurrencies that started with a 'move fast and break things' mentality. American environmental advocates find resonance with Cardano's eco-conscious proof-of-stake (PoS). Strong governance structure and consistent upgrades together with a well-organized road map appeal to those who respect planning and accountability. Solana (SOL) Particularly in the DeFi and NFT domains, Solana has rapidly become a favorite among U.S. investors thanks in great part to its cheap costs and fast transactions. Its capacity to manage thousands of transactions per second sets it apart from many other networks and attracts tech-savvy Americans who value quick and reasonably priced solutions. Solana's fast trading and cheap transaction costs made possible by its throughput appeal to American based traders. Popularizing U.S creators and investors with a variety of choices for purchasing and selling digital assets, Solana's NFT market has become very active. Polkadot (DOT) American investors that see a consolidated blockchain future have taken an interest in Polkadot's unique approach to interoperability connecting several blockchains. Its multi-chain technology lets many blockchain initiatives interact, resulting in ideas appealing to investors looking forward. Interoperability lets many blockchains cooperate in line with the drive for cross-platform solutions, especially in the U.S. IT sector. Dogecoin (DOGE) Originally created as a meme, Dogecoin has evolved into a treasured asset with a sizable following in the United States due in part to its humorous nature and celebrity sponsorships especially from Elon Musk. DOGE has become among the most easily available and well-known cryptocurrencies in the United States thanks in great part to its welcoming community and strong social media presence. Moreover, it is popular among Americans just beginning with cryptocurrencies. Dogecoin's active, encouraging community makes it accessible for newbies. Regular sponsorships from well-known personalities and extensive media coverage help to maintain Dogecoin in the public eye and attract fresh U.S-based aficionados. Conclusion As diverse as the altcoins themselves is the American crypto scene. From Ethereum's leadership in DeFi to Solana's emphasis on scalability, each of these cryptocurrencies has special qualities that fit U.S investor objectives in innovation, efficiency, and sustainability. These altcoins are probably going to remain top picks for Americans trying to diversify their crypto investments as the market evolves. Highlighted Crypto News Today: Crypto Traders' Top 3 Daily Trading Altcoins: Bitcoin, Solana, and SHIB

- Major cryptocurrencies, including BTC and ETH, saw significant drops, impacting sentiment in the crypto market. - The U.S. federal government is investigating Tether, a major stablecoin issuer of USDT. The global crypto markets experienced a turbulent day as negative sentiments swept through the trading floor. Bitcoin (BTC) initially dipped to around \$65,500 but later rebounded slightly to about \$67,085. In addition to Bitcoin's struggles, Ethereum (ETH) fell to approximately \$2,471 from \$2,563, marking a decline of over 7%. Solana (SOL) also faced challenges, dropping nearly 10% to around \$160, while XRP saw a decrease of about 7% to settle at \$0.514. The overall cryptocurrency market capitalization took a hit, decreasing by 2.48% to reach \$2.28 trillion. Interestingly, despite the downturn, total market volume surged by 43%, now standing at \$105.01 billion, indicating a flurry of trading activity despite the falling prices. A key reason for the market's tense atmosphere is the ongoing investigation into Tether, a prominent stablecoins issuer of USDT. The Wall Street Journal reported on October 25 that U.S. authorities are scrutinizing Tether, causing concern among investors. However, Tether's CEO, Paolo Ardoino, dismissed the news as 'old noise,' but the uncertainty has undoubtedly rattled the market. Mixed Performance in Memecoins and Altcoins In the memecoin arena, Dogecoin (DOGE) and Shiba Inu (SHIB) also faced declines, with DOGE falling by 4.59% and SHIB by 6.17%. Other popular tokens like Pepe, WIF, and BONK witnessed losses of 8% to 12%. On a more positive note, Goatseus Maximus (GOAT) stood out as a top gainer, surging by 30% to trade at \$0.8551. In contrast, Notcoin (NOT) faced an 11% drop, along with Celestia (TIA), which fell by 10% to \$5.37. Additionally, the cryptocurrency markets are highly sensitive to geopolitical risks. Israel's recent attack on Iran has contributed to a decline in prices. Investors often react swiftly to such events, leading to heightened volatility in digital asset prices. Highlighted Crypto News Today Emory University Invests Over \$15M in Grayscale Bitcoin Mini ETF

- ETH/BTC ratio drops to 0.037, lowest since April 2021. - Key support zones identified at 0.038 and 0.035 BTC levels. - Competing platforms like Solana gain momentum as ETH struggles. Ethereum's relationship with Bitcoin has reached a critical juncture as the ETH/BTC ratio plunges to levels not seen since April 2021. This significant decline, marking a 30% drop since July 1, signals a substantial shift in the relative strength between cryptocurrency's two largest assets. Michaël van de Poppe, CEO of MN Consultancy, has identified crucial support levels in his analysis of the ETH/BTC pair. The primary support zone at 0.035 BTC could provide a foundation for potential recovery, while an intermediate support at 0.038 BTC might offer temporary stability. These technical levels gain additional significance as the Relative Strength Index (RSI) enters oversold territory, potentially setting the stage for a price reversal. What can trigger a recovery for Ethereum? Long-term market observers offer diverse perspectives on Ethereum's current predicament. Pseudonymous analyst Moustache points to a historical trend line dating back to 2015, suggesting potential for altcoin strength. The rise of Layer 2 solutions presents a potential catalyst for Ethereum's recovery, though questions persist about the pace of real-world adoption. This technological evolution occurs against a backdrop of changing user preferences and platform competition factors that continue to influence Ethereum's relative value. Solana's recent performance highlights the competitive pressures facing Ethereum since October 2021. Solana has demonstrated an impressive momentum, posting an approximate 869% ETH gain and the accompanying increased trading volume. This surge suggests a potential rotation of capital towards alternative platforms perceived to offer superior growth prospects. As Ethereum navigates these challenges, the interplay between technical support levels, ecosystem development, and market sentiment will likely determine its near-term trajectory.

- MOODENG rises 128% after Binance announces USD-Margined perpetual contract listing. - Trading volume surges 293%, indicating heightened investor interest in MOODENG. The Solana-based meme coin, Moo Deng (MOODENG), has gained notable attention in the cryptocurrency market, with its value increasing by 128.4% in the last 24 hours. Currently trading at around \$0.1649, MOODENG has also seen a 293% rise in trading volume. This price action follows Binance's announcement of a USD-Margined perpetual contract for the token, which became effective on October 25 at 10:00 UTC. Notably, Binance's introduction of the MOODENGUSDT perpetual contract allows users to trade with leverage of up to 75x, providing opportunities for traders to manage their positions actively. The funding rate is capped at 2.00%, helping to regulate the costs associated with holding positions. The contract features a tick size of 0.00001, and funding fees settle every four hours. It may assist traders in making informed decisions. Moreover, this listing is part of Binance's ongoing strategy to expand its offerings of memecoin. It responds to the growing interest in this segment of the market. The market's favorable response to MOODENG stems from its unique branding. It draws inspiration from a viral baby hippo from Thailand. Upward Trend To Be Followed? Recent data highlights that Moo Deng's futures open interest (OI) has increased by 173%, reaching \$57.47 million, while derivatives volume has also risen by 234% to \$327.77 million. This indicates a rise in investor engagement and interest in the token, suggesting a potential upward trend. However, traders are advised to remain cautious. Binance reserves the right to adjust the specifications of the futures contract based on market conditions. Such adjustments could impact trading strategies. As market participants monitor these developments, memecoin community believes that MOODENG appears to be a significant asset within the memecoin space, attracting attention from both traders and investors seeking new opportunities in the dynamic cryptocurrency landscape. Highlighted News Of The Day

On October 25th, Binance and OKX exchanges announced the launch of GOAT futures trading, causing a price surge that fueled market excitement. Notably, MEXC was the first exchange to offer GOAT spot trading on October 13th, followed by futures trading on October 17th, complete with a

series of futures trading events to drive user engagement and rewards. According to MEXC market data, on October 24th, the market capitalization of GOAT token on the Solana chain surpassed \$800 million, with the price reaching 0.797 USDT at the time of writing and a historical peak of 0.90218 USDT. The 24-hour global trading volume reached \$246 million, maintaining high market interest. What is Goatseus Maximus (GOAT)? Goatseus Maximus (GOAT) originated from an idea generated by the Truth Terminal AI Bot in its self-conversations. The AI Bot operates in a semi-autonomous mode, with its posts on X (formerly Twitter) requiring approval from human moderators, who also decide which accounts the bot interacts with. Since the creation of the GOAT token on Pump.fun, it has quickly gained market attention, with its market capitalization soaring rapidly. GOAT has been listed for trading on major exchanges like Binance, OKX, and MEXC, continuing to attract market interest and supporting the project's future development. MEXC's Global First Listing of GOAT Sees a 2,471% Price Surge MEXC data shows that on the day of its listing, GOAT opened at 0.035 USDT and experienced a steep rise, reaching a record high of 0.90218 USDT by October 24th, reflecting an impressive 2,471% surge. As GOAT continued to gain market traction, Binance and OKX announced the launch of GOAT futures trading on October 24th, further fueling market enthusiasm and driving the token's price to new heights. MEXC, having listed GOAT early on, capitalized on this momentum, enabling users to benefit from the token's significant price increase. According to MEXC data, over 240 meme coins have been listed on the platform. In addition to GOAT, MEXC has also listed meme coins such as BONK, PEPE, and Neirocto, many of which have delivered exponential returns. In addition to the impressive returns of meme coins, MEXC offers a comprehensive range of trading pairs. According to CoinGecko data, MEXC has 3,027 spot trading pairs and 548 futures trading pairs. The platform also provides the lowest trading fees in the industry, helping traders reduce their trading costs. Industry-leading liquidity allows traders to execute orders faster with smaller spreads. MEXC also hosts free airdrops via its Kickstarter and Launchpool events throughout the year. These events allow users to participate by holding a specified amount of MX tokens, and offer potential cumulative annual returns of up to 65.82%. The rise in meme coins has sparked a fresh wave of trading excitement among investors. Trade meme coins on MEXC to catch the market's top gainers and uncover even more hidden gems. Your next wealth opportunity is in your hands! Disclaimer: Cryptocurrency investments carry inherent risk, and meme coins are characterized by high volatility and high risk. Past performance does not guarantee future results. Traders should conduct their own research and assess their risk tolerance. Disclaimer: TheNewsCrypto does not endorse any content on this page. - POPCAT, the Solana-based meme coin, hit an all-time high of \$1.67, marking a 24.64% increase. - POPCAT has seen a 31% increase in open interest in the futures market over the past 24 hours. While major cryptocurrencies like Bitcoin and Ethereum are declining, the Solana-based memecoin POPCAT (SOL) has been spotted as a top gainer, reaching an all-time high of \$1.67. In the last 24 hours, the POPCAT recorded maximum gains in the market, climbing over 24.63% from a low of \$1.34. The surge in the altcoin price comes after a brief dip earlier in the week, suggesting a resurgence in buying interest that has pushed POPCAT to its current peak. The recent movement signals a potential reversal from the bearish trend that has previously plagued POPCAT's price and its chart. Key Fibonnaci retracement levels indicate that the price is finding temporary support around \$1.50. This synchronization between the POPCAT price and the CMF indicates strong buying interest, adding credibility to the ongoing rally. Current Market Trends for POPCAT At the time of writing, the token retraced slightly to \$1.62; it remains above key support levels. Notably, there's been a 31% increase in open interest in the futures market. That indicates heightened market activity, as per Coinglass data. Adding to the optimism, the Relative Strength Index (RSI) is hovering around 57. Signaling that there's still room for growth before entering overbought territory. Furthermore, POPCAT is trading above its 9-day Exponential Moving Average (EMA), a sign that buyers are in control and the price could continue its ascent. If the current momentum persists and demand stays strong, POPCAT could break its recent peak of \$1.67 and possibly reach the \$2 mark. However, investors should remain cautious as profit-taking could lead to a drop below support levels, pushing the price to \$1.1975. POPCAT expected to trade between \$1.25 and \$1.42 before the end of October. Highlighted Crypto News Is SUI Set to Hit New All-Time High with Google Cloud Partnership?

Transforming a modest \$500 investment into a staggering \$5 million by 2026 is within reach. Hidden among the sea of cryptocurrencies are four overlooked altcoins with immense growth potential. These under-the-radar gems are poised for explosive gains, yet most investors are unaware of them. Discover these top picks before they capture the market's attention and redefine financial futures. CYBRO Presale Climbs Past \$3 Million: A One-in-a-Million DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Aave: Unlocking Decentralized Lending Opportunities Aave is a cryptocurrency in the DeFi space that offers a decentralized lending system on the Ethereum blockchain. It lets users lend, borrow, and earn interest on crypto assets without intermediaries. Using smart contracts, Aave manages assets through code instead of institutions. It supports lending and borrowing of 17 cryptocurrencies. Borrowers receive aTokens representing their loan and earn interest. Aave introduces flash loans, which are instant, require no collateral, and must be repaid within the same blockchain block. The AAVE token plays a key role in the ecosystem, providing benefits like fee waivers and voting rights on protocol changes. The platform's Safety Module allows users to stake tokens for risk mitigation. On-Chain Finance: Bridging Traditional Finance with Blockchain Efficiency On-Chain Finance combines traditional finance's reliability with blockchain technology's efficiency. It tokenizes stable, income-generating real-world assets, making high-grade financial products more accessible. By using blockchain, On-Chain improves financial infrastructure and broadens accessibility. The platform has an asset management arm that creates tokenized financial products. It also has a technology arm that develops decentralized finance protocols, enhancing functionality and scalability. On-Chain collaborates with reputable partners like BlackRock and uses Coinbase for crypto asset custody, emphasizing quality and security. USDY, one of its products, offers stablecoin accessibility with yield, secured by US Treasuries and bank demand deposits. This reflects On-Chain's commitment to providing non-US investors with high-quality, regulated, and transparent financial products. Jupiter Provides Liquidity Infrastructure and Expands DeFi on Solana Jupiter is an advanced swap aggregation engine in the Solana ecosystem. It delivers essential liquidity infrastructure, helping users find optimal prices for token swaps. Jupiter is expanding its decentralized finance products suite includes Limit Order, DCA/TWAP, Bridge, Comparative and Perpetuals Trading. These tools enhance the DeFi experience on Solana by offering more options and flexibility. Jupiter's technology supports traders and developers by providing efficient and comprehensive solutions. As Jupiter grows its offerings, it may play a significant role in Solana's DeFi landscape. Conclusion As the market enters a new bullish phase, timing is crucial. While AAVE, ONDO, and JUP present opportunities, their short-term potential is less promising. In contrast, CYBRO offers unmatched possibilities. This advanced DeFi platform leverages AI-powered yield aggregation on the Blast blockchain to maximize earnings. With generous staking rewards, exclusive airdrops, and purchase cashback, it promises a superior user experience with smooth transactions. Its dedication to transparency, compliance, and quality sets it apart, and strong interest from major investors and influencers underscores its potential. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Vietnam seeks to advance innovation in what it refers to as the Fourth Industrial Revolution. - One of the strategy's main objectives is to develop Vietnam's blockchain ecosystem. A National Blockchain Strategy has been formally released by Vietnam. On October 23, the Ministry of Information and Communications (MIC) unveiled the plan, which outlined a number of important goals to advance the nation's blockchain capabilities. It seeks to advance innovation in what it refers to as the Fourth Industrial Revolution, create relevant legal frameworks, and develop blockchain technology. Developing Vietnam's Blockchain Ecosystem Moreover, the Vietnam Blockchain Association (VBA) and the MIC are two of the government organizations in charge of the five key areas the plan describes. The official announcement states that the five suggested actions are: enhancing the legal environment; creating a blockchain industrial ecosystem and infrastructure; training human resources for the blockchain industry; encouraging the development and use of blockchain technology; and encouraging research, innovation, and global collaboration. Furthermore, one of the strategy's main objectives is to develop Vietnam's blockchain ecosystem. The government intends to create 20 blockchain-related platforms, goods, and services under these trademarks. In order to build a nationwide blockchain network, the National Blockchain Strategy also seeks to set up a minimum of three testing facilities in significant cities. Also, these facilities will be essential to the creation and implementation of blockchain applications, maintaining security and encouraging industry innovation. Since the nation wants to formally regulate digital assets, the plan statement highlights the legal recognition of these assets as a crucial issue. One measure to fulfill the Vietnamese government's commitment to stopping and combating money laundering, terrorist funding, and the financing of the spread of weapons of mass destruction is the legalization of the definition of digital assets. Vietnam is establishing aggressive goals to develop its blockchain sector by recognizing digital assets as protected by civil law and according to international norms. Highlighted Crypto News Today: Solana's \$6B TVL Milestone Clash With \$165 SOL Price Struggle

As the 2024 presidential election enters its final stretch, Students for Trump, a national grassroots movement that engages young Americans to get involved in the political process, has joined forces with the Restore the Republic initiative to boost voter outreach in key battleground states. This collaboration, announced with only two weeks left until Election Day, aims to energize and educate voters, particularly the younger demographic. Restore the Republic is best known as a community-driven crypto project on the Solana blockchain dedicated to promoting civic engagement, protecting American values, and supporting efforts to educate the electorate about the importance of informed participation in our democracy. Thanks to the support of the Restore the Republic community, Students for Trump is organizing events, community forums, and targeted voter outreach programs in crucial swing states. These efforts are designed to give young voters the information and tools they need to participate actively in the democratic process. Bo Hines, CEO of Today Is America, which oversees Students for Trump, emphasized the importance of the partnership. "We are excited to collaborate with Restore the Republic to amplify our efforts in these vital final weeks," Hines stated. "Our goal is to empower voters, especially young Americans, with the knowledge they need to make informed decisions. As part of the initiative, Students for Trump will be hosting a series of engaging activities in the lead-up to the election, aimed at increasing voter turnout. For those looking to get involved or stay updated on upcoming events, information can be found on their official website. This joint effort underscores the growing importance of youth activism in shaping the future political landscape, as both groups work tirelessly to leave a lasting impact on the 2024 election. While VeChain and Dogwifhat (WIF) look set to grow after their recent unpredictable prices, BlockDAG (BDAG) is capturing all the attention. This new Layer 1 network has launched a top-notch testnet, positioning itself as a strong contender against Kaspa and Solana. The feedback has been extremely positive, praising BlockDAG's security and quick operations. With over \$100 million already raised, the presale is pushing quickly towards its \$600 million target. Early participants are seeing profits soar up to 1960%. BlockDAG is quickly emerging as one of the top cryptos to get into, with a network that's ready for the future and can't be overlooked. VeChain Price Facing Resistance During Market Slumps VeChain is currently at \$0.02245 and is having trouble climbing, as seen in its recent price changes between \$0.02229 and \$0.02297. Even with attempts to recover, VeChain is struggling to break past the major resistance level of \$0.02300. This resistance is holding strong, possibly leading to selling as traders wait for a clear price direction. Immediate support is at \$0.02229, with a possible drop to \$0.02200 if negative sentiment grows. A

closer look at the market indicators shows a 2.27% decrease in value and a 17.85% reduction in trading activity, indicating low excitement in the market. The RSI is at 45.26, meaning the asset is neither overbought nor oversold. For a positive shift, VeChain needs to cross the \$0.02300 resistance level. Dogwifhat (WIF) Forecast: Positive Trends Based on Bitcoin's Solid Performance Dogwifhat (WIF) is displaying signs of positive momentum, supported by Bitcoin's solid performance. Currently testing the \$2.00 support level again, analysts think WIF could rise above \$3 if Bitcoin stays strong above \$60,642. This test is critical, and a successful defense of the support level could lead to a strong upward trend, potentially pushing WIF to new highs soon. Technical analysis shows WIF is trading above its 200-day, 50-day, and 20-day moving averages, a clear sign of ongoing upward momentum. Altcoin Sherpa's chart indicates that \$3 is a major resistance level for WIF, usually tough to surpass. Yet, with Bitcoin's stable condition, the forecast for Dogwifhat (WIF) is hopeful for more growth, fueled by long-term trust and wider market movements. BlockDAG æ A Budding Giant in the Crypto Market BlockDAG recently unveiled its powerful testnet, a big step towards launching its mainnet after September 20, 2024. This testnet gives the community a chance to check out the blockchain's tools firsthand, like the Blockchain Explorer, Blockchain Faucet, MetaMask Wallet integration, and smart contracts. The Blockchain Explorer offers deep insights into block details, transactions, and immediate updates, making everything clearer and more engaging for users. People can create their own BDAG coins using the Blockchain Faucet and move them through MetaMask Wallet, showing off the network's effectiveness and ease of use. The testnet supports transactions based on the Blockchain Virtual Machine (EVM) which lets developers and users try out smart contracts, create NFTs, stake coins, or launch their own tokens in the Blockchain system. These features and strong community adoption make it a highly competitive and strong performer, which has been well-received by the crypto community. The strong features of the testnet have drawn big players to the BlockDAG presale, which is expected to reach its \$600 million target very soon, starting the countdown to possibly one of the most successful presales ever. Early participants have already seen profits up to 1,960% from their initial contributions in the first batch, with the price now at \$0.0206 in batch 24. With 45 batches planned, early participants could see a ROI of 4,900%, not even factoring in future price increases. BlockDAG's impressive start and cutting-edge technology make it one of the top cryptos to consider right now. Analysts believe BDAG could soar to \$30 by 2030, surpassing many current market favorites. The combination of a strong testnet, increasing enthusiasm, and bold targets makes BlockDAG an attractive option for those looking to tap into new opportunities in the crypto market. The Bottom Line While VeChain and Dogwifhat have their strengths, BlockDAG stands out with its highly efficient testnet and a presale that's grabbing a lot of attention. The testnet's sophisticated features, like smart contracts and instant transaction tracking, are getting excellent reviews. With big players pushing BlockDAG's presale over \$100 million, it's quickly approaching the \$600 million mark, setting it up as one of the most triumphant presales so far. Early supporters have already seen returns of 1,960%, positioning BDAG as one of the top cryptos to consider. In comparison to VeChain's price analysis and Dogwifhat's (WIF) forecast, BlockDAG is setting the pace for significant returns. - Norges Bank of Norway will make its final decision on introducing a CBDC by 2025. - The deadline for the government task force to submit a report is on Nov 15. The central bank of Norway, Norges Bank, is on potential research to launch central bank digital currency (CBDC). The decision is to be finalized by 2025, as stated by Deputy Central Bank Governor, Pal Longva. The nation is in the pilot phase of CBDC exploration and Norway is among 134 nations planning to delve into this financial innovation. Norges Bank has released its insights from the fourth phase of CBDC trials. The findings concluded that a retail CBDC was unnecessary at the time. A retail CBDC would be appropriate for everyday public use, allowing users to conduct transactions using digital currency. On the other side, a wholesale CBDC would be limited to financial institutions to facilitate secure and efficient transactions between the central bank and other banks. Moreover, the Norges Bank has progressed to the fifth phase of its research into wholesale CBDC applications. The bank aims to make a final recommendation by 2025 by finishing the phase. However, Pal Longva emphasized that there is no urgency to accelerate the efforts, despite the European Central Bank's preparations for a potential CBDC rollout. Longva's opinions coincide with the upcoming November 15 deadline for a government task force to submit a report on improving the payment systems in Norway. It further includes recommendations for simple and safe payment mechanisms, incorporating digital central bank money. The final decision on whether Norway will introduce CBDC lies with the country's lawmakers. The outcome of the discussions will determine the future of digital currency in the form of retail or wholesale. Highlighted Crypto News

- Garanti BBVA partners with Ripple and IBM to improve the performance and security of its expanding digital platform. - Ripple has transferred 260 million XRP to an unknown wallet since October 22. As Turkey's cryptocurrency market expands, Garanti BBVA Kripto has announced a strategic partnership with Ripple and IBM to provide enhanced and secure crypto trading and custodial services to its customers. This partnership marks a significant milestone, as Garanti BBVA became the first major customer of Ripple's newly launched Ripple Custody solution earlier this month. Garanti BBVA's collaboration with these tech giants aims to elevate the performance and security of its crypto platform. Following a successful pilot program last year, the bank is preparing to roll out its advanced services across its entire customer base. The goal is to offer clients a seamless and highly secure trading experience, backed by IBM's infrastructure and Ripple blockchain technology. İYİA+1 KÄ+1Ä+nÄS GÄWrtuna, General Manager of IBM Turkey, stressed the importance of strong security in handling cryptocurrencies. She emphasized that their joint efforts would ensure a high-performance platform for managing digital assets. Ripple's Major XRP Transactions Stir Speculation Meanwhile, Ripple has been making headlines with a series of large XRP transactions. Today, the company moved 60 million XRP, valued at around \$31.5 million, in two separate transfers of 30 million each. This follows a previous transfer of 200 million XRP, made yesterday. Together, these transactions bring the total amount transferred this week to 260 million XRP, valued at \$136 million. Speculation is rife about the purpose of these transactions, with some linking it to Ripple's ongoing legal battle with the U.S. Securities and Exchange Commission (SEC). However, the company has not provided any official explanation. Amid these developments, XRP's price has seen a slight dip. Today the price of XRP fell nearly 3% from a recent high of \$0.5362 to a low of \$0.523 as the global crypto market faces pressure. Additionally, the daily trading volume of XRP has dropped by over 17% to \$989 million. On the 4-hour chart, XRP is trading below the 20-day EMA, with the RSI at 44, indicating weakening momentum. At the time of writing, XRP was priced at \$0.5256. Highlighted Crypto News

London, United Kingdom, October 24th, 2024, Chainwire Peanut launches a beta of the first self-custodial off ramp, allowing users to directly cash out any token on 20+ EVM chains to their bank accounts without relying on centralized exchanges. This beta feature is being rolled out in the EU and US first. This new beta feature creates an important bridge between crypto and fiat. Users can cash out funds from any token on 20+ EVM chains directly in US Dollars or Euros to their bank account, skipping the need for CEXes or other custodied solutions. This works by creating a bridge between the blockchains and fiat payments networks like IBAN, BIC, or SWIFT. Peanut's key feature is texting funds using QR codes or messengers such as WhatsApp, Telegram, email etc. With the self-custodial off ramp, recipients can now transfer their funds directly to their bank account without the need to have a wallet themselves. This breakthrough in crypto accessibility makes transferring money across platforms frictionless and user-friendly. In addition to texting funds without worrying whether the recipient uses crypto or fiat, users of self-custodial wallets can now directly off ramp into their bank account without using a CEX. æTexting money is now possible,æ said Hugo Montenegro, co-founder of Peanut and a Harvard graduate. æThis is a major step toward simplifying crypto for everyday use, meaning you can send stablecoins through channels like WhatsApp, Telegram, email, or even text messages.æ Peanut's self-custodial off ramp is a game-changer for the crypto community, offering a fully decentralized self-custodial protocol æ Peanut Protocol. It enables seamless, cross-chain and offramping transactions using seamless payment links. The platform allows users to easily send, receive, cross-chain swap and off ramp funds to fiat currencies, making crypto more accessible than ever. Peanut's unique secret-protected vault smart contracts provide top-tier security, ensuring that funds are only released when a private link is shared by the sender. æAnyone can now send funds seamlessly,æ said Derek, CTO of Reown. With support for over 20 blockchain networks and plans to expand to Bitcoin and Solana, Peanut Protocol is committed to simplifying the crypto experience for everyone. As a non-custodial, permissionless solution, Peanut empowers users with full control of their digital assets. Leading blockchain projects such as Blockscout, WalletConnect, and Clave Wallet are already leveraging Peanut's technology to enhance their user experience. It's not often that crypto presales steal the spotlight from major networks like Polkadot and Litecoin, but BlockDAG has done just that. The presale heavyweight smashed through the \$100 million mark across 24 batches, grabbing all the attention. As Polkadot's price prediction points to a potential breakout and Litecoin's ETF inches closer to approval, BlockDAG is making waves with its record-breaking presale performance. Traders looking for the next crypto to explode are flocking to BlockDAG, impressed by its strong community support and future-ready network. BlockDAG's ability to surpass these industry giants shows its potential to become a leading force in the market. Polkadot (DOT) has shown notable growth recently, with a 10.0% increase over the last week. Its price jumped from \$54.84 to \$60.33 before pulling back slightly. DOT also saw a major surge in market activity, with its daily trading volume hitting \$252.3 million, a 58% surge. Analysts are closely watching this movement as Polkadot broke out of its falling wedge pattern, signaling the potential for a strong upward trend. Some experts believe Polkadot could follow a similar pattern to Fantom, suggesting a price target of \$9.7 by Q4. Other predictions are even more optimistic, with some forecasting a rise to \$20 by early 2025 if the current momentum continues. Polkadot's future could hold big gains for investors. Litecoin ETF: Boosting Market Interest Litecoin (LTC) has been making headlines with the recent filing of an S-1 application by Canary Capital to launch a Litecoin ETF. This ETF, if approved, will provide easier access to LTC for institutional and retail investors, potentially driving more liquidity into the market. Following this news, Litecoin's price surged nearly 15%, hitting a high of \$73.01 before settling around \$70.95. This move has sparked renewed interest in Litecoin's market potential. On the technical side, Litecoin is holding above key levels, with short-term and long-term EMAs suggesting further upward movement. Resistance is currently seen at \$77, and a break above this level could push the price to \$85 or even \$115. If the bullish trend continues, Litecoin could reach \$153, making it a strong contender for future gains. \$100M Raised æ BlockDAG Clinches the Impossible BlockDAG has pulled off what many thought was impossible, smashing past the \$100 million milestone in record time during its presale. This makes BlockDAG one of the most successful crypto presales of the decade, surpassing even the wildest expectations. Traders are flocking to the project, drawn by its unique technology and potential for massive returns. The excitement around BlockDAG began with the launch of its testnet on September 20, 2024. The testnet allows users to interact with the blockchain's explorer, mint BDAG coins, and test smart contracts. The network's high scalability and power have already led experts to predict it could outperform established networks like Kaspero and Solana. This momentum has only fueled the presale's rapid success. Early backers have already seen a 1960% return on their outlays, and with the presale still in its 24th batch, the potential ROI could reach 4900%. Analysts are calling BlockDAG the next crypto to explode, and with predictions of BDAG reaching \$30 by 2030, it's no wonder the presale is racing toward a \$600 million goal. For traders looking for the next big opportunity in crypto, BlockDAG stands out. The network's success so far has been impressive, and with each milestone, it's becoming clear that BlockDAG is set to redefine the future of blockchain. Key Insights While Polkadot and Litecoin remain strong assets, their volatility continues to affect inflows, as seen with the Polkadot Price Prediction and potential delays around the Litecoin ETF. Meanwhile, BlockDAG is proving to be the crypto to explode with unmatched momentum. Surpassing \$100 million in record time, BlockDAG has become the most successful presale of the decade. Early backers have already seen a 1960% return, with experts predicting even higher gains as the presale progresses. With 45 batches in total, BlockDAG offers traders a unique opportunity to secure substantial returns in the evolving crypto market. Presale heavyweight BlockDAG has made a bold statement, racing past the \$100 million mark in just 24 batches of its highly successful presale. With its booming testnet rollout, BlockDAG has overtaken headlines about Toncoin Price and Uniswap trading volume, becoming the best performing crypto of the week. The testnet, praised for its efficiency and top-tier security, has sparked talk of BlockDAG as a future rival to Kaspa and Solana. Early buyers are already seeing massive returns of 1960%, and with the project still in its presale phase, the excitement continues to grow. BlockDAG’s impressive momentum is drawing in buyers from all corners of the market, setting it up for a strong Tier 1 future. Toncoin Price Holds High, Support Levels Confound, Toncoin Price Prediction 2024, 2025-2030, we will analyze the price patterns of MEW by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TICKER æ MEW | BLOCKCHAIN æ Solana æ CATEGORY æ MemeCoin æ LAUNCHED ON æ 2nd April 2024 | | UTILITIES æ Governance, security, liquidity & rewards | Cat in a Dogæ’s World (MEW) is a concept often used to describe someone or something that feels out of place or doesn’t fit into the norm. In the context of organizational dynamics, it refers to individuals who may feel marginalized, misunderstood, or out of sync with the dominant culture, much like a cat in a world of dogs. In professional settings, this might involve employees who have different work styles, perspectives, or personalities that stand out in an environment that favors a specific kind of approach, like extroversion in a field dominated by introverts or creative thinkers in highly structured industries. The challenge for such individuals lies in navigating this landscape, finding ways to thrive, while the organization must work to foster inclusivity. Embracing diversity can lead to innovation and a more dynamic work environment where all perspectives are valued, much like finding balance in a world of dogs. cat in a dogs world 24H Technicals (Source: TradingView) cat in a dogs world (MEW) Price Prediction 2024 cat in a dogs world (MEW) Ranks 88th on CoinMarketCap in terms of its market capitalization. The overview of the cat in a dogs world price prediction for 2024 is explained below with a daily time frame. MEW/USDT Rising Wedge Pattern (Source: TradingView) In the above chart, cat in a dogs world (MEW) laid out a rising wedge pattern. A rising wedge pattern suggests a reversal pattern frequently seen in bear markets. The rising pattern shows up in charts when the price moves upward with pivot highs and lows converging toward a single point. This pattern is made by drawing two trendlines, one trendline draws across two or more pivot highs, and the other one connects two or more pivot lows. At the time of analysis, the price of cat in a dogs world (MEW) was recorded at \$0.008814. If the pattern trend continues, then the price of MEW might reach the resistance levels of \$0.008490 and \$0.010492. If the trend reverses, then the price of MEW may fall to the support of \$0.005643. cat in a dogs world (MEW) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of cat in a dogs world (MEW) in 2024. MEW/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of cat in a dogs world (MEW) for 2024. | Resistance Level 1 | \$0.010544 | | Resistance Level 2 | \$0.018450 | | Support Level 1 | \$0.006678 | | Support Level 2 | \$0.003704 | MEW Resistance & Support Levels cat in a dogs world (MEW) Price Prediction 2023 æ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of cat in a dogs world (MEW) are shown in the chart below. MEW/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current cat in a dogs world (MEW) market in 2024. | INDICATOR æ PURPOSE æ READING æ INFERENCE æ | 50-Day Moving Average (50MA) æ Nature of the current trend by comparing the average price over 50 days | 50 MA æ \$0.005855 Price æ \$0.009089 (50MA < Price) æ Bullish/uptrend æ | Relative Strength Index (RSI) æ Magnitude of price change; Analyzing oversold & overbought conditions | 67.098467 < 30 æ Oversold 50-70 æ Neutral > 70 æ Overbought æ Neutral æ | Relative Volume (RVOL) æ Assetæ’s trading volume in relation to its recent average volumes | Below cutoff line æ Weak Volume æ | cat in a dogs world (MEW) Price Prediction 2024 æ ADX, RVI In the below chart, we analyze the strength and volatility of cat in a dogs world (MEW) using the following technical analysis indicators æ Average Directional Index (ADX) and Relative Volatility Index (RVI). MEW/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of cat in a dogs world (MEW). | INDICATOR æ PURPOSE æ READING æ INFERENCE æ | Average Directional Index (ADX) æ Strength of the trend momentum æ 51.196601 æ Strong Trend æ | Relative Volatility Index (RVI) æ Volatility over a specific period | 56.87 < 50 æ Low > 50 æ High æ High Volatility æ Comparison of MEW with BTC, ETH Let us now compare the price movements of cat in a dogs world (MEW) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs MEW Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of MEW is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of MEW also increases or decreases respectively. cat in a dogs world (MEW) Price Prediction 2025, 2026 æ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of cat in a dogs world (MEW) between 2025, 2026, 2027, 2028, 2029 and 2030. | Year æ Bullish Price æ Bearish Price æ | cat in a dogs world (MEW) Price Prediction 2025 æ \$0.3 æ \$0.003 æ | cat in a dogs world (MEW) Price Prediction 2026 æ \$0.5 æ \$0.002 æ | cat in a dogs world (MEW) Price Prediction 2027 æ \$0.7 æ \$0.001 æ | cat in a dogs world (MEW) Price Prediction 2028 æ \$0.9 æ \$0.0009 æ | cat in a dogs world (MEW) Price Prediction 2029 æ \$1 æ \$0.0008 æ | cat in a dogs world (MEW) Price Prediction 2030 æ \$1.3 æ \$0.0007 æ Conclusion If cat in a dogs world (MEW) establishes a prediction of 2024 æ 2025 æ 2026 æ 2027 æ 2028 æ 2029 æ 2030 æ, would it be a profitable investment? The conclusion is the bullish price prediction for 2024 is \$0.003704. If the market momentum and investorsæ’s sentiment positively elevates, then cat in a dogs world (MEW) might hit \$0.1. Furthermore, with future upgrades and advancements in the cat in a dogs world ecosystem, MEW might surpass its current all-time high (ATH) of \$0.01043 and mark its new ATH. FAQ 1. What is cat in a dogs world (MEW)? Cat in a Dogæ’s World (MEW) is a concept often used to describe someone or something that feels out of place or doesn’t fit into the norm. 2. Where can you buy cat in a dogs world (MEW)? Traders can trade cat in a dogs world (MEW) on the following cryptocurrency exchanges such as HTX. 3. Will cat in a dogs world (MEW) record a new ATH soon? With the ongoing developments and upgrades within the cat in a dogs world platform, cat in a dogs world (MEW) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of cat in a dogs world (MEW)? cat in a dogs world (MEW) hit its current all-time high (ATH) of \$0.01043 on October 21, 2024. 5. What is the lowest price of cat in a dogs world (MEW)? According to CoinMarketCap, MEW hit its all-time low (ATL) of \$0.000844 on Mar 27, 2024. 6. Will cat in a dogs world (MEW) hit \$0.1? If cat in a dogs world (MEW) becomes one of the active cryptocurrencies that majorly

The Stacks Foundation announced today that Asymmetric Research, a top security company, has joined the Stacks ecosystem as a security contributor to Bitcoin’s premier L2. By joining the Stacks signer network via our delegation program and serving as an embedded security team throughout their assessment of the future sBTC asset, the team is already significantly impacting the ecosystem. Asymmetric has shown success in securing some of the most well-known protocols in the market. Leading bridge Wormhole, Jump Crypto, a number of high-profile DeFi projects, and prominent protocols including Solana, Cosmos, Berachain, and others all have it as a security partner. Asymmetric is also a key component of Firedancer, Solana’s much awaited new validator client. In order to provide a smooth and safe transfer of Bitcoin to the Bitcoin L2 ecosystem, signers are essential to the Stacks network. They safeguard the deposit and withdrawal process between Bitcoin and sBTC. The Stacks Signer network will be the most resilient in the Bitcoin ecosystem as Asymmetric joins other industry leaders like Blockdaemon, Copper, Element, Rinn, Logos, Chorus One, and more than 30 other institutional node operators in supporting the network and general security of sBTC. With the anticipated introduction of sBTC in Q4 of this year, developers will have access to a decentralized, programmable, trust-minimized Bitcoin asset. Developers will be able to take use of the security, network effects, and 1.2T in latent capital of the Bitcoin network thanks to this asset, which is 1:1 backed by Bitcoin. Among other applications, sBTC will make it possible for more secure Bitcoin DeFi forms, which is anticipated to play a significant role in igniting the Bitcoin economy. Layers of security are essential for every project, and Asymmetric Research is a significant contribution to Stacks’s security program as a whole. In addition to sBTC’s design to include 100% Bitcoin finality, which secures sBTC at the consensus level of a \$2.5 billion network, this program currently incorporates sBTC’s decentralized network of validators/signers, eliminating the need to entrust a single organization and reducing counterparty risk. A well-rounded approach to Stacks’ security has been enhanced by several activities in addition to the many audits, such as the audits by Asymmetric Research. A notable whitehat security program, a consultation agreement with the Staking Defense League, an ongoing ImmuneFi bug bounty program, direct and continuous testing with the aforementioned top Signers, Hypernative’s onboarding, and Stacks Foundation Residents who are solely focused on fuzz and penetration testing through 2024 are all examples of this. Mitchell Cuevas, Executive Director at The Stacks Foundation said: æThe value of building on Bitcoin comes down to security æ” ecosystems must prioritize security at all layers as they seek to unlock the Bitcoin economy. With Asymmetric Research, the Stacks ecosystem is adding yet another high-caliber entity to the mix of industry leaders collaborating to make sBTC the best version of programmable BTC available. Stacks core developers and Asymmetric share a commitment to protecting users and developers, and in addition to being a match in technical pedigree, are culturally aligned groups that will enhance each otheræ’s thoughtful and rigorous approaches.æ Jonathan Claudius, Chief Executive Officer at Asymmetric Research added: æAsymmetric Research is proud to participate in the Stacks ecosystem as it pioneers trust-minimized, decentralized assets like sBTC.æ Join us in welcoming the Asymmetric Research team to the Stacks Ecosystem, and stay tuned for further details on how you may participate in the work in the next weeks.

- Bullish MEW price prediction for 2024 is \$0.010544 to \$0.018450. - cat in a dogs world (MEW) price might reach \$0.1 soon. - Bearish (MEW) price prediction for 2024 is \$0.003704. - Bullish ORDI price prediction for 2024 is \$40.53 to \$63.82. - ORDI (ORDI) price might reach \$120 soon. - Bearish ORDI price prediction for 2024 is \$18.42. In this ORDI (ORDI) price prediction 2024, 2025-2030, we will analyze the price patterns of ORDI by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ORDI (ORDI) PRICE PREDICTION 2024 | | | ORDI (ORDI) PRICE PREDICTION 2025, 2026-2030 | | CONCLUSION | | FAQ | ORDI (ORDI) Current Market Status | Current Price | \$35.25 | 24 æ Hour Price Change | 3.77% Down | | 24 æ Hour Trading Volume | \$94.93M | | Market Cap | \$740.20M | | Circulating Supply | 21M ORDI | All æ Time High | \$96.17 (On Mar 05, 2024) | | All æ Time Low | \$2.86 (On Sep 11, 2023) | What is ORDI (ORDI) | TICKER | ORDI | | BLOCKCHAIN | Bitcoin Blockchain | CATEGORY | Bitcoin-based MemeCoin | | LAUNCHED ON | March 2023 | | UTILITIES | Governance, tipping system, gas fees & rewards | Ordinals (ORDI) is a cryptocurrency protocol aiming to enhance the value of each Satoshi, Bitcoin's smallest unit. With a capped total of 21 million Bitcoins, Ordinals seeks to inscribe information onto each Satoshi, transcending its role as a mere unit of currency. Operating without modifying Bitcoin, the protocol turns each Satoshi into a Non-Fungible Token (NFT) through inscription, accommodating various forms like text and images. This innovation offers diverse use cases, potentially turning each Satoshi into a digital asset, such as an NFT, expanding possibilities for digital ownership and asset transfer in the cryptocurrency realm. The Ordinals protocol might also create digital tokens without relying on separate blockchains or token systems. The history of Ordinals aligns with Bitcoin's development, introducing a novel approach to elevate the value of Satoshis and explore new frontiers in digital ownership and asset transfer. ORDI 24H Technicals ORDI (ORDI) Price Prediction 2024 ORDI (ORDI) ranks 96th on CoinMarketCap in terms of its market capitalization. The overview of the ORDI price prediction for 2024 is explained below with a daily time frame. In the above chart, ORDI (ORDI) laid out the Ascending Triangle pattern. The ascending triangle is a characteristic pattern of an ongoing bullish trend. This triangle is formed by a horizontal upper trendline that connects the highs, indicating a consistent level of resistance, and a lower trending line that connects the rising lows, reflecting increasing buying pressure. As the price approaches the apex of the triangle, the tension between buyers and sellers intensifies. If the trend breaks out at the resistance level, the price will continue to move up in this ascending triangle pattern, often leading to further gains. Traders typically look for confirmation of the breakout, which can enhance the likelihood of a successful upward move. At the time of analysis, the price of ORDI (ORDI) was recorded at \$35.83. If the pattern trend continues, then the price of ORDI might reach the resistance levels of \$44.64 and \$71.41. If the trend reverses, then the price of ORDI may fall to the support levels of \$31.33 and \$22.69. ORDI (ORDI) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of ORDI (ORDI) in 2024. From the above chart, we can analyze and identify the following as resistance and support levels of ORDI (ORDI) for 2024. | Resistance Level 1 | \$40.53 | | Resistance Level 2 | \$63.82 | | Support Level 1 | \$25.93 | | Support Level 2 | \$18.42 | ORDI Resistance & Support Levels ORDI (ORDI) Price Prediction 2024 æ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA) and Relative Strength Index (RSI) of ORDI (ORDI) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current ORDI (ORDI) market in 2024. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$34.15 Price = \$35.90 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 50.72 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | ORDI (ORDI) Price Prediction 2024 æ ADX, RVI In the below chart, we analyze the strength and volatility of ORDI (ORDI) using the following technical analysis indicators æ Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of ORDI (ORDI). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 13.02 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 49.21 < 50 = Low > 50 = High | Low volatility | Comparison of ORDI with BTC, ETH Let us now compare the price movements of ORDI (ORDI) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of ORDI is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of ORDI also increases or decreases respectively. ORDI (ORDI) Price Prediction 2025, 2026, 2027, 2028, 2029, and 2030. The help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of ORDI (ORDI) between 2024, 2025, 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | ORDI (ORDI) Price Prediction 2025 | \$158 | \$30 | | ORDI (ORDI) Price Prediction 2026 | \$161 | \$28 | | ORDI (ORDI) Price Prediction 2027 | \$173 | \$23 | | ORDI (ORDI) Price Prediction 2028 | \$185 | \$21 | | ORDI (ORDI) Price Prediction 2029 | \$198 | \$18 | | ORDI (ORDI) Price Prediction 2030 | \$202 | \$20 | Conclusion If ORDI (ORDI) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish ORDI (ORDI) price prediction for 2024 is \$63.82. Comparatively, if unfavorable sentiment is triggered, the bearish ORDI (ORDI) price prediction for 2024 is \$18.42. If the market momentum and investors' sentiment positively elevates, then ORDI (ORDI) might hit \$120. Furthermore, with future upgrades and advancements in the ORDI ecosystem, ORDI might surpass its current all-time high (ATH) of \$96.17 and mark its new ATH. FAQ 1. What is ORDI (ORDI)? Ordinals (ORDI) is a cryptocurrency protocol aiming to enhance the value of each Satoshi, Bitcoin's smallest unit. 2. Where can you purchase ORDI (ORDI)? Traders can trade ORDI (ORDI) on the following cryptocurrency exchanges such as Binance, KuCoin, OKX, HTX (Huobi), Gate.io, Bybit, CoinEx. 3. Will ORDI (ORDI) reach a new ATH soon? With the ongoing developments and upgrades within the ORDI platform, ORDI (ORDI) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of ORDI (ORDI)? ORDI (ORDI) hit its current all-time high (ATH) of \$96.17 on March 05, 2024. 5. What is the lowest price of ORDI (ORDI)? According to CoinMarketCap, ORDI hit its all-time low (ATL) of \$2.86 on Sep 11, 2023. 6. Will ORDI (ORDI) reach \$120? If ORDI (ORDI) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$120 soon. 7. What will be ORDI (ORDI) price by 2025? ORDI (ORDI) price is expected to reach \$158 by 2025. 8. What will be ORDI (ORDI) price by 2026? ORDI (ORDI) price is expected to reach \$161 by 2026. 9. What will be ORDI (ORDI) price by 2027? ORDI (ORDI) price is expected to reach \$173 by 2027. 10. What will be ORDI (ORDI) price by 2028? ORDI (ORDI) price is expected to reach \$185 by 2028. - Bitcoin has taken a turn from its bullish movements as the price dropped in the past day. - The cryptocurrency's daily trading volume surged by 47.30% as per CMC data. The overall crypto market has encountered a mild speed bump as the market cap has turned toward a bearish end. Meanwhile, the crypto regulatory landscape has shown some activity with Coinbase filing a FOIA request on US regulators. On the other hand, Bitcoin has incurred a modest price dip. Other cryptocurrencies such as Ethereum and Solana, despite the overall dip in market cap, have managed to sustain modest hikes. However, Bitcoin has factored in a 2.15% price drop in the last 24 hours and slid to the \$66K level. At the beginning of the day, the cryptocurrency traded at \$68,387 before bearish candles took over. Following this, Bitcoin slid to an intraday low of \$66,581 before reverting to current levels. Bitcoin's modest dip has instigated a mild unease among investors as they have been rooting for the long-awaited bull run. At the time of writing, BTC was trading at \$68,839 as per CMC data. Secondly, less than 2 days ago, the cryptocurrency had risen to an 84-day high of \$69,519. However, Bitcoin failed to test the \$69K level and slid down to the \$68K support. Following this occurred a further price dip to the \$66K range. The cryptocurrency's daily trading volume has surged by 47.30% despite the price dip. Will Bitcoin Resume its Price Rally? On inferring Bitcoin's daily price chart, the recent price dip has not altered the ascending channel pattern. This shows that the cryptocurrency indicates a potential to resume its recent bull run and that the price dip is momentary. If BTC manages to overcome the current bearish attempt, then prices will continue their rally in accordance with market analysts' predictions. Moreover, the token's bull power indicator's value stands at 0.46 while its bear power indicator's value stands at 1.54. Although the bear trend shows a modest strength it still remains below the 2.00 point mark thus highlighting the potential to overcome the recent dip. Furthermore, the token's RSI stands at 59.00 indicating a neutral market sentiment as per TradingView data. Meanwhile, the spot Bitcoin ETFs have sustained the inflow streak with an additional influx of \$294.29 million in daily net flows. Highlighted Crypto News Today:

Shiba Inu (SHIB), Neiro (NEIRO), Rexas Finance (RXS) along with many other tokens that are trying to grab the market participants' attention are quite excellent. All these projects are different in their ways, however, it is worth mentioning that Rexas Finance (RXS) will have far superior performance than any of the others. As of now, Rexas Finance (RXS) is leading the presale campaigns, offering great promotions, and positioning itself rather attractively in the market which all points to Rexas giving the highest returns from that \$1000 investment. Outstanding Presale Performance The presale performance of Rexas Finance has caught the attention of investors, especially in stage 4. The token is priced at an appealing \$0.06 where it is possible to get an early-stage investment. The presale has attracted such progress and funding in the process which appears to alert to the token's demand. This increase signifies that investors trust Rexas's vision with a better profit and method of working in the decentralized finance (DeFi) space, concentrating on real estate tokenization. Rexas is unblocking a multi-trillion dollar market by making investing in real estate bits affordable and liquidating it, which will lead to a surge in value in the future as more investors come on board. The Meme Coin Phenomenon At present, Shiba Inu is priced at \$0.000018 below which price only a few people cared about as the coin had simply evolved to be a meme coin. And while indeed SHIB has had its highs, it must be emphasized that this is not the basis, and practice is often unreasonably reliant on sentiment-fueled price swings. It is important to note that while SHIB may not bring better profits with a \$1000, investors must understand that it does not address the same problems as Rexas Finance in particular its real estate tokenization and liquidity solutions. Thus, dependence on SHIB alone can have more risks compared to investment in Rexas, since there are clear use cases and a promising value proposition. Evaluating Neiro's Market Position Likewise, at \$0.11, it is correct to say that the Neiro (NEIRO) project has developed on the cryptocurrency market, though not to the level of the potential of Rexas Finance. Neiro is an attractive proposition with standout features integrating decentralized applications and blockchain technologies, however, it is quite a task to bring a better profit with a \$1000 investment like Rexas. Strategic Promotions and Community Building Rexas Finance's aggressive marketing campaign, where it gives away \$1 million to entice new investors, is another crucial aspect that works in the company's favor. This promotional drive helps to create awareness and allows more people to engage in the ecosystem thus creating ideal conditions for growth. By encouraging the first users of the platform, Rexas Finance is cementing the user base that can later improve the performance of the ecosystem. Credibility Boost: CoinMarketCap Listing Furthermore, listing Rexas Finance on CoinMarketCap adds to the credibility and visibility of the company's target market. To be listed on any active trading platform increases the trust of investors since such a facility is crucial for obtaining important information and trading resources. This means, that as the visibility of Rexas Finance gets bigger. The Investment Opportunity The competitive landscape of cryptocurrencies means that early investments are best rewarded with huge returns. With Rexas Finance currently priced at \$0.06 during its presale stage 4, the investment of \$1000 will be sufficient to acquire an impressive token amount. Taking into consideration the expected listing price of 0.20, it is evident that investors will be able to make 233% returns on their initial investment insights. This kind of analysis shows that Rexas is not just a token but a proper investment giving the possibility of making good profits for early investors. Conclusion: Rexas Finance as the Clear Winner Although Shiba Inu (SHIB) and Neiro (NEIRO) can be quite good, Rexas Finance (RXS) gives an edge to investors who are looking to maximize their profits from a \$1,000 investment. Rexas Finance has an interesting price of only \$0.06 at stage 4 and therefore it offers great potential for a much higher return on investments. Rexas Finance has developed a comprehensive promotion mechanism as well as undertaken a 1M giveaway and over \$3.6M raised. The company's new approach to real estate tokenization helps it stay on the growth trajectory. As the nature of the cryptography platform changes, it would therefore not be surprising if investing in Rexas is one of the most profitable decisions ever undertaken within the coming months as many profits would be made. - Pump.fun teases a new token launch and airdrop, sparking excitement in the crypto community. - Pump.fun launched Pump Advanced, a new trading terminal aimed at competing with tools like Photon and Bull X. Pump.fun, a Solana-based memecoin launch platform, has reignited excitement by teasing the release of a new token and a potential airdrop. In an official post on its X account (formerly Twitter), Pump.fun hinted at the airdrop, stating, "The top isn't in until this drops." This suggests that the platform believes the market's peak or best performance has not yet been reached and will only happen once this new token is launched. top isn't in until this drops pic.twitter.com/xlZwfp89op "Pump.fun (@pumpdotfun) October 21, 2024 On Saturday, the memecoin marketplace introduced its latest feature, Pump Advanced, during a Twitter Spaces session along with an airdrop launch. This new trading terminal is created to compete with other tools like Photon and Bull X, with features such as mini charts, top token holder stats, and social activity tracking. Further, Pump Advanced has 0% fees for the first month to attract new users and offers logins via the Privy wallet solution. How Has Pump.fun Performed in the Memecoin Market? Since launching in January, the platform has gained fame for its wild memecoin trends, from celebrity-inspired tokens to famed memes. Till now, Pump.fun has deployed over 2.5 million unique tokens and generated 965,003 SOL (\$147 million) in fees. Additionally, it has attracted more than 28,000 new users on Oct 21 alone. Moreover, the Pump.fun fee account sold 40,000 SOL (\$6.68M) around 10 hours ago, as per Lookonchain data. The memecoin marketplace sold a total of 503,343 SOL from its total revenue of 969,945 SOL tokens. Despite these sales, Pump.fun still holds a balance of 283,328 SOL, indicating it remains a significant player in the Solana ecosystem. Highlighted News Of The Day

- Coinbase files FOIA requests for clarity on crypto regulations. - FDIC allegedly imposed 15% deposit cap without public consultation. Coinbase has intensified its push for regulatory transparency, filing two Freedom of Information Act (FOIA) requests against U.S. agencies. The exchange aims to shed light on the growing restrictions faced by banks dealing with crypto deposits. It particularly targets the Federal Deposit Insurance Corporation (FDIC) and other regulators involved in the cryptocurrency crackdown. Paul Grewal, Coinbase's Chief Legal Officer, shared in an October 21 post on X (formerly Twitter) that the first FOIA request seeks information on an alleged 15% deposit cap imposed by the FDIC on banks accepting funds from crypto companies. Coinbase claims that the rule was made without public consultation, which is generally required under U.S. law. The company is pushing for clarification on how this restriction impacts the wider cryptocurrency industry. Meanwhile, the second FOIA request focuses on how regulators responded to previous FOIA inquiries concerning the treatment of cryptocurrencies. This follows Coinbase's 2023 legal actions against the FDIC and the U.S. Securities and Exchange Commission (SEC) for allegedly ignoring earlier FOIA requests related to the regulatory classification of Ethereum (ETH) and staking services. In the past, Coinbase also raised concerns over "pause letters," which the FDIC allegedly sent to banks, urging them to slow their crypto-related activities. The Political Drama This regulatory friction comes amid a broader political debate on cryptocurrency's future in the U.S. With the 2024 presidential election approaching, pro-crypto figures like Donald Trump have expressed support for making the U.S. a leader in the crypto space, while Democratic candidates, including Kamala Harris, have been less vocal. The crypto community feels Coinbase's ongoing regulatory battle reflects its broader effort to advocate for clearer, fairer crypto regulations through its "Stand with Crypto" campaign and political action committee (PAC), launched in early 2024. As Grewal emphasized, Coinbase seems committed to challenging regulatory opacity, stating, "So long as the government will not relent, neither will Coinbase." Highlighted News Of The Day

- ApeCoin has shown significant price increases in the last few days as per CMC data. - The ApeCoin DAO's ApeChain went live on October 20. Several memecoins have risen to prominence over the past few weeks. This has led to speculations of a returning memecoin season. The largest memecoin and Elon-Musk endorsed DOGE has shown significant surges in the past weeks. Specifically, ApeCoin has shown significant price surges over the weekend. The official ApeCoin account has been observed making movements in the past few hours. According to Arkham Intelligence data, the official account transferred 3.289 million tokens worth \$5.13 million to prominent liquidity platform Wintermute two hours ago. Following this, it moved another 1.297 million ApeCoins worth \$2.04 million to an anonymous address "0x00EA6." Additionally, the Wintermute account has received a total of 8.289 million APE tokens worth approximately \$12 million, in the last 5 hours. The liquidity firm has also received APE from several other exchanges including Coinbase, and transferred it to other accounts. Wintermute's current APE holdings stand at 972.818K. Moreover, the ApeCoin prices, as aforementioned, have shown significant upward movements over the last two days in particular. On inferring its daily price chart, APE shows an additional 1.73% price increase. Zooming out, in the past week the token has factored in a 96.28% price breakout. It rallied from a low of \$0.76 to a weekly high of \$1.74. At the time of writing, the token was trading at \$1.51 as per CMC data. Why Did ApeCoin Price Experience a Breakout? The memecoin which has taken to the spotlight began its rally on 20 October as the ApeCoin DAO announced the launch of its ApeChain. The blockchain is ApeCoin's Layer 3 mainnet built on the Arbitrum Orbit. This blockchain has introduced a new feature called the "Automatic Yield Mode." This doesn't require APE holders to stake to earn rewards and automatically rewards them. With this announcement, the token has shown a significant rise in price. Meanwhile, as aforementioned, other tokens such as DOGE and altcoins Solana and Ethereum have also progressed from their consolidation phases. Highlighted Crypto News Today: Shiba Inu Analyst Predicts SHIB to Reach \$0.00003 Level: Here's When

While new cryptocurrencies come into being one after another, staking has become one of the favorite ways for investors to make passive income by locking their crypto assets. This article will guide you to the best staking platforms to earn passive income in 2024 as follows. - OkayCoin - Binance - Kraken - Coinbase - Crypto.com - Nexo - KuCoin - Bybit - eToro - Stakefish What is staking? Staking generally refers to the process of locking up your cryptocurrency to contribute to the functioning of a blockchain, usually in proof-of-stake systems. By staking assets, you help in further verifying transactions and securing a network. Through this method, rewards are given to you, the user; rewards often take the form of extra cryptocurrency. Staking gives you a chance to generate some passive income with very little effort, and the rewards will often vary depending on the different platforms, cryptocurrencies, or lock-up period. 1. OkayCoin "Best for Staking The leading staking platform that users can use with ease securely to create passive income by means of staking in various cryptocurrencies. The key features supported by the platform include multifunctional PoS tokens and very competitive staking rewards. There is a referral program that rewards users by inviting others as an extra stream linked to creating an additional stream of income. pros - Low fees "competitive staking fees with many other platforms; - User-friendly interface" quite easy to use and is good for anyone carrying out various staking options; "one can choose the best variant meaning the most beneficial one for him. regulated and secure" carries out activities strictly in accordance with regulations. Hence such a platform has gained greater trust among users. How to Sign up: Joining OkayCoin is quite effective and simple. As a matter of fact, it only takes a few minutes to do so. For every new user that joins and then performs specific trading or staking activities, both the referrer and the new user get some form of bonus given. You will get a 3.5% commission for each order. Staking Plans in OkayCoin - Free Trial Staking Plan: \$100 for 1 day and earn \$1 daily. - Ethereum Staking Plan: \$300 for 1 day and earn \$6 daily. - Polygon Staking Plan: \$800 for 3 days and earn \$8 daily. - TRON Staking Plan: \$1200 for 7 days and earn \$12 daily. - Polkadot Staking Plan: \$3000 for 7 days and earn \$33 daily. - Celestia Staking Plan: \$6000 for 14 days and earn \$72 daily. - Aptos Staking Plan: \$10,000 for 15 days and earn \$140 daily. - Sui Staking Plan: \$20,000 for 15 days and earn \$280 daily. - Avalanche Staking Plan: \$35,000 for 20 days and earn \$525 daily. - Cardano Staking Plan: \$26,880 for 30 days and earn \$896 daily. - Solana Staking Plan: \$42,120 for 30 days and earn \$1404 daily. - Ethereum Liquid Staking Pro: \$90,000 for 45 days and earn \$2000 daily. 2. Binance: Global Leader Binance is one of the largest exchanges for cryptocurrencies and has the broadest variety of staking options, from locked to flexible, depending on the asset that one wants to stake. Also, it offers very competitive staking rates and is a highly secure platform for novice and professional stakers alike. Pros - High staking rewards "one of the most rewarding companies for staking. - Wide range of cryptocurrency: staking of hundreds of coins and tokens is supported. - Flexible and locked staking: Users will be allowed to stake their assets with flexible or fixed terms. - Security reliably: Robust security features, including insurance funds for protecting users' assets. 3. Kraken: Trusted for Security Kraken is known for its high level of security and great ease of use. It offers staking for popular cryptocurrencies such as Ethereum, Polkadot, and Cardano. The flexibility Kraken provides, regarding the staking duration, along with the ease of withdrawing, makes Kraken very attractive to users who put a premium on convenience and safety. Pros - User-friendly interface: Kraken provides a user-friendly and intuitive staking process for all users. - Instant rewards: Users can start getting their rewards immediately after staking. - Strong security features: It focuses on safety regarding user assets, hence robust security. - Compliance with regulations: Kraken works within strict frameworks of regulations and gives more trust to its users. 4. Coinbase: Great for Beginners Coinbase works perfectly for new users, as it offers an extremely user-friendly interface and pays staking rewards instantly. Ethereum, Solana, and all other supported cryptocurrencies can be easily staked without any complex procedures. The detailed guides make this platform very accessible for those just beginning in this respect of staking. pros - Easy to use: The UI is really easy to handle, therefore, the site is perfect for beginners in crypto. - Automatic staking: Available to turn on for selected assets. - Custodial service: Funds held in Coinbase are insured in case of hacks and other security breaches. - Low staking minimum: A user can stake small pieces of crypto. 5. Crypto.com: Flexible Staking Options Crypto.com offers flexible and locked staking. Rewards are paid in function of the stake duration meaning that longer-term lock-ups will earn the user higher rewards. It has a very user-friendly app and cashback, hence it's very popular among mobile staking enthusiasts. Pros - High staking rewards: Competitive interest rates, especially for CR0 and other supported assets. - A wide variety of supported assets: Most popular cryptocurrencies, even some niche tokens, are supported to stake. - Flexible and fixed terms: The opportunity to choose between flexible terms or choose a lock-in period with higher rewards. - Additional benefits to stakers: Higher cashback rates on the Crypto.com Visa card, events, and rewards exclusively available to stakers. 6. Nexo: Earn Interest with No Lock-Up Nexo doesn't require users to lock their crypto and earn interest from them. It is ideal for users looking to have flexibility because, on certain stablecoins, it offers up to 12% interest rates. Accredited for its security environment, Nexo features daily payouts that have gained trust for passive income. Pros - High staking yields: The site is offering really high APY for many kinds of cryptocurrencies. - Daily payouts: Users get their staking rewards on a daily basis, therefore, immediately. - Collateralized loans: The staked assets can be used as collateral for loans without liquidation. No fixed staking term: There are flexible staking options available, including those without any fixed staking terms; users are free to withdraw their tokens at any time. 7. KuCoin: Best for Smaller Tokens KuCoin offers staking for both major and small-cap tokens, making it more appealing to those looking for higher risk, higher-reward opportunities. KuCoin Earn makes it easy for users to stake and get interest in many cryptocurrencies that are not accessible on larger platforms. Pros - Lower threshold for staking: More accessible, since users holding smaller crypto volumes also have access. - Soft staking: Users are able to stake without freezing funds. This allows users to enjoy much better liquidity and more flexible options. - Rich variety of staking products on offer: Either from the variety in coins or the multiple options provided for fixed-term and flexible stakings. - Distribution of Staking Rewards: Regular distribution of rewards that are accrued by staked assets. 8. Bybit: Low-Fee Staking Bybit offers some of the smallest staking fees anywhere, with very competitive returns on staked assets. It supports major cryptocurrencies and further boasts unique benefits that include VIP staking tiers and referral bonuses. Transparency of the staking process and a user-friendly interface make Bybit ideal for efficiency-seeking customers. Pros - Competitive Staking Rewards: High yields for a range of staking products. - Flexible Staking: Users can choose between fixed and flexible terms. - Rich Educational Content: Educational content is available on Bybit to help users understand staking even better. - High Liquidity: Ability to easily withdraw or access their staked assets while minimizing or reducing downtime. 9. eToro: Best for Social Staking What really sets eToro apart, however, is its social features that allow interaction with other stakers and traders alike. It offers seamless staking for popular cryptocurrencies such as Cardano and Tron without too much hassle for rewards accruals. With a secure and regulated environment, eToro is particularly fit for those users who give importance to a social community-oriented staking experience. Pros - Passive Staking Rewards: Automatic staking of some assets for users; no extra steps necessary from them. - Secure Platform: Safety of funds through strong security protocols and regulated operations. - Staking Transparency: Clearly details the fees applied for staking and the distribution of rewards. - Community-Driven Platform: Houses social trading features in helping users share knowledge and strategies. 10. Stakefish: Leading Validator Stakefish is the industry-leading staking service provider and validator for various blockchain networks. It enables the services of non-custodial staking for Ethereum, Cosmos, and Polkadot assets. The focus of Stakefish is security and decentralization, which gives users assurance in its

transparency for staking. Pros - Industry Expertise: Operated by one of the most experienced teams within the staking industry. - Dedicated Staking Platform: Focuses solely on staking; thus, preferred services and support are accorded to the stake. - Extensive list of supported coins: The staking is supported for a wide number of POS cryptocurrencies. Conclusion From ease of use and flexibility to highly rewarding and robust security, the offerings that make up the top 10 staking platforms are all over the board. Whether a newcomer to this world of staking or an experienced crypto investor, these opportunities will offer excellent avenues for maximizing earnings in 2024. OkayCoin has been considered among the best staking players due to its low fees, flexible variants of staking, and ease in referral programs that help users boost their rewards. Other popular services include Binance and Coinbase; both of these platforms appeal to a wide class of users-from complete beginners in staking to more advanced ones. Be it security, convenience, or a range of various assets, above is likely to be a staking platform that covers your needs. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Stripe acquired Bridge for \$1.1 billion, its largest acquisition to date. - Bridgeâ€™s tools support stablecoin adoption in global finance. Stripe has acquired stablecoin platform Bridge in a landmark deal valued at \$1.1 billion. TechCrunch founder Michael Arrington confirmed the news on X, making it Stripeâ€™s largest acquisition ever. The deal also stands as the biggest acquisition in the history of the cryptocurrency industry. Bridge provides software that allows businesses to accept payments in stablecoins. Founded by Sean Yu and Zach Abrams, the platform raised \$58 million from investors. Before the acquisition, Bridge was valued at \$200 million, making the \$1.1 billion purchase a significant leap. This deal is done. \$1.1b <https://t.co/J7ppK4uHw0> â€” Michael Arrington @arrington October 20, 2024 Earlier this month, the company reinstated crypto payments for U.S. businesses. This move enabled the use of USDC on Ethereum, Solana, and Polygon. The acquisition of Bridge signals Stripeâ€™s commitment to expanding its presence in the crypto sector. Additionally, Stripe partnered with Coinbase in June, integrating Coinbaseâ€™s Base Layer 2 network into its payment system. This partnership allowed customers to buy cryptocurrency through Coinbase Wallet using Stripeâ€™s services. Stripeâ€™s Push into Stablecoins Bridgeâ€™s platform supports businesses by providing tools to create, store, and accept stablecoins. This acquisition will likely accelerate the adoption of stablecoin payments in mainstream financial services. With stablecoins gaining traction, Stripeâ€™s acquisition reflects the increasing intersection between traditional finance and digital currencies. Stripe, valued at \$70 billion in July, has been expanding its crypto offerings. The company processed over \$1 trillion in payment volume in 2023, which accounts for 1% of global GDP. The acquisition could transform how businesses use stablecoin solutions. Bridgeâ€™s platform will help Stripe offer more stablecoin-based services to its global customer base. Stripeâ€™s move into the stablecoin space reflects a shift toward more innovative payment options in the fintech world. This deal represents a significant milestone in the digital payments landscape and points to the growing role of stablecoins in global finance. Highlighted Crypto News Today Bitcoin Teases \$69K Briefly As Bull Run Establishes Its Dominance

- Bitcoin has factored a daily price increase of 1.36% as per CMC data. - The cryptocurrency is expected to hit a new high of \$78K according to analystsâ€™ predictions. The Asian end of the crypto community has woken up to good news as Bitcoin bulls sprung to new actions. Meanwhile, a recently launched meme token, Apecoin, has stirred market attention with its significant price breakouts. Several traders made notable profits by swapping the token over the weekend. Specifically, Bitcoin briefly hit \$69,000 in the last few hours before reverting to the \$68K level. The cryptocurrency has progressed impressively over the previous 24 hours, initiating its upward rally from \$68,223 to its current trading levels. This indicates the Uptober rallyâ€™s prolonged stay and dominance over bearish price actions. Moreover, Bitcoin price hit an intraday high of \$69,519 and has been experiencing tensions at this particular point multiple times in the span of a few hours. At the time of writing, BTC was trading at \$68,959 as per CMC data. Additionally, the digital assetâ€™s daily trading volume surged by 66.16%. Secondly, Bitcoinâ€™s recent bull run can be identified as falling in line with the market analystsâ€™ September predictions. Particularly, Ali (@ali_charts) mentioned his previous prediction of Bitcoin rebounding to \$78,000 after testing the \$57,000 support level. This suggests further price breakouts in store for the largest cryptocurrency in the coming days. Bitcoin Price Weekly Overview On inferring. BTCâ€™s weekly price chart, the cryptocurrency, has shown a price increase of 7.68%. At last weekâ€™s beginning, Bitcoin traded in the \$63K to \$64K range before progressing forward. This price increase has caused intensified buying pressures in the token pushing Bitcoin to an overbought situation. Its RSI currently stands at 70.18 as per TradingView data. Furthermore, the cryptocurrencyâ€™s Moving Average Convergence and Divergence (MACD) indicates the signal line standing above the MACD line. This highlights the existing positive environment and the aforementioned bullish dominance. Finally, Bitcoin is expected to sustain its positive momentum into the coming months and the new year. Meanwhile, other cryptocurrencies have also supported the bull market with their own price increases. Ethereum has been steadily progressing toward \$2.8K while Solana, XRP, and TON also show bullish candles. Highlighted Crypto News Today:

Envision a crypto wallet as your digital guardianâ€”a crucial asset that not only shields your cryptocurrencies but also propels your journey in managing them. As October 2024 approaches, we spotlight four formidable wallets, each flexing advanced features designed to meet varied user demands: MetaMask, Trust Wallet, Phantom, and Plus Wallet. This review will illuminate the unique attributes of each wallet, guiding you to select one that resonates with your strategy for handling digital assets. 1. Plus Wallet: Your All-in-One Gateway to Earn, Bill, & Trade Step beyond the ordinary with Plus Wallet, a tool that redefines the boundaries of typical crypto wallets by merging simplicity with lucrative opportunities. It supports powerhouse blockchains such as Ethereum and Binance, catapulting you past traditional network barriers. Plus Wallet shines with its innovative dual rewards system. The â€¢Swap to Earnâ€¢ feature rewards you with USDT for every swap, turning everyday transactions into chances for gaining rewards. Meanwhile, the â€¢Refer to Earnâ€¢ program lets you and your friends earn bonuses from trades, laying down a seamless path to accumulate passive income. Security is paramount with Plus Wallet, which fortifies your digital treasures with top-tier encryption and biometric authentication. Its integrated dashboard offers a consolidated view of your assets across multiple networks, ensuring seamless management of your portfolio. For those with billing needs, Plus Wallet accommodates by allowing invoices in both USD and cryptocurrencies, complemented by real-time alerts that keep you on the pulse of market fluctuations. Whether youâ€™re a novice or a seasoned trader, Plus Walletâ€™s intuitive setup makes it an ideal choice for anyone looking to enhance their digital asset management experience. 2. MetaMask: A Trusted Companion for Ethereum Enthusiasts MetaMask has cemented its reputation as a stalwart within the Ethereum universe. Catering to chains like BNB Chain, Polygon, and Avalanche, itâ€™s a reliable resource for those diving deep into decentralized finance (DeFi) and the bustling world of NFTs. With its robust integration into various decentralized applications (dApps), MetaMask facilitates effortless asset swapping, staking, and lending. Although itâ€™s tailored mainly for EVM-compatible chains, which might seem limiting for those craving extensive cross-chain interaction, MetaMask stands as a pillar of reliability for those deeply embedded in the Ethereum community. 3. Trust Wallet: Master of Blockchain Versatility Trust Wallet emerges as a champion with its expansive support for a multitude of blockchains, including Bitcoin, Ethereum, and BNB Chain. This wide-reaching capability makes it a compelling choice for those managing an eclectic mix of digital assets from a singular platform. While deeply integrated with the Binance ecosystem, enhancing its utility, this might narrow its appeal to those desiring a more blockchain-neutral tool. For those in search of a versatile wallet that can navigate across a broad spectrum of blockchains, Trust Wallet offers formidable features, though it may leave some yearning for more interactive rewards. 4. Phantom Wallet: The Go-To for Solana Devotees Phantom Wallet stands out as the preferred choice for those entrenched in the Solana landscape, designed specifically to accommodate Solanaâ€™s swift transaction dynamics. Known for its speedy and user-friendly interface, Phantom delivers a seamless experience tailored to the Solana networkâ€™s demands. However, its exclusive focus on Solana might be seen as a drawback for those looking to engage with a wider array of blockchains. For Solana loyalists, Phantom provides an exceptional, finely tuned experience, whereas those managing diverse blockchain activities might lean towards a more adaptable wallet. Whatâ€™s the Bottom Line? Each wallet showcases its unique strengths and caters to specific needs. MetaMask is the go-to for those immersed in the Ethereum space, offering extensive support for DeFi and NFT endeavors. Trust Wallet is ideal for those who enjoy a broad palette of cryptocurrencies, acting as a comprehensive management system. Phantom excels for those committed to Solana, optimizing both speed and integration for a frictionless user experience. Meanwhile, Plus Wallet rounds out the options as a jack-of-all-trades, offering cross-chain functionality, flexible billing options, and enticing rewards for trading and referrals, ensuring it meets a wide array of needs with efficiency and adaptability. Selecting a suitable cryptocurrency wallet is fundamental for safeguarding assets like Bitcoin. With an array of wallets available, each boasting distinct features from enhanced security to reward programs and staking opportunities, identifying one that suits your needs is crucial. This review will cover four prominent crypto walletsâ€”Plus Wallet, Coinbase Wallet Web3, Crypto.com DeFi Wallet, and Exodus Walletâ€”each tailored to different user requirements and offering unique advantages. 1. Plus Wallet: Secure, Comprehensive, & Rewarding Plus Wallet, available for iOS and Android, offers robust security and a broad range of features. It supports multiple blockchains and numerous cryptocurrencies, addressing diverse crypto needs. Key features include biometric authentication and local private key storage, granting users complete control over their assets. The interface is user-friendly, ideal for beginners, with added functionalities such as crypto swapping, NFT storage, and invoicing. Plus Walletâ€™s Refer to Earn program allows users to gain USDT rewards through referrals. As invitees perform swaps, both parties benefit, facilitating a steady flow of passive income. The potential earnings are unlimited, enabling users to significantly enhance their income as their referral network expands. This program converts everyday interactions into profitable opportunities, increasing the appeal of Plus Wallet for crypto users. 2. Crypto.com DeFi Wallet: Access to Over 700 Assets Crypto.com DeFi Wallet caters to those looking for a secure platform for prominent cryptocurrencies such as Bitcoin, Ethereum, and USD Coin (USDC). It is compatible with over 700 crypto assets, including significant stablecoins and leading cryptocurrencies by market cap. The wallet enables easy access to DeFi products and supports staking for tokens such as Cosmos (ATOM) and Cronos (CRO), with security enhancements like two-factor authentication and biometric access. However, it lacks direct customer support and has faced security issues. 3. Coinbase Wallet Web3: Flexible & Safe Coinbase Wallet Web3 from Coinbase is a premium choice that supports a broad array of cryptocurrencies and facilitates easy connectivity with several decentralized exchanges (DEXs) and a compatible with Ledger cold storage, offering robust security for long-term investments. Despite its higher fees and the lack of asset recovery options, its staking capabilities for various coins make it an attractive option for active cryptocurrency participants. 4. Exodus Wallet: Comprehensive Learning & Staking Options Exodus Wallet, supporting over 100,000 cryptocurrencies, stands out with its extensive educational content, perfect for beginners. It allows users to trade and stake cryptocurrencies like Cosmos, Tezos, and Solana directly in the wallet, with offline storage options via Trezor integration. While its security features may not be the most advanced, Exodus provides asset recovery services, offering additional reassurance for users prioritizing both ease of use and educational resources. Evaluating Your Choices Choosing a crypto wallet for 2025 is a personal decision influenced by individual preferences and needs. Each walletâ€”from Plus Wallet with its referral benefits, Coinbase Wallet Web3â€™s extensive asset compatibility, Crypto.com DeFi Walletâ€™s focus on DeFi, to Exodus Walletâ€™s educational offeringsâ€”provides distinct benefits. Considering aspects like security, potential earnings, and asset support is crucial in pinpointing the wallet that best meets your specific cryptocurrency objectives, ultimately enhancing your experience in the dynamic digital asset environment. As this year winds down, analysts and traders are on the lookout for the top crypto assets for next year. Thorchain (RUNE) is being praised for its promising price potential, while Sui has been noted for its remarkable innovations despite a tough year. However, BlockDAG (BDAG) is capturing attention with its advanced Layer 1 technology. BlockDAG recently launched a powerful testnet that has received glowing reviews, with many suggesting it could even outperform Solana. Its presale is drawing significant buying, pushing it toward the \$100 million mark and ranking it among the most successful and highly regarded presales ever. Everyone is now watching for what BlockDAG will achieve next. Thorchain (RUNE) Price Potential: Making Waves in DeFi Area Thorchain (RUNE) is revolutionizing decentralized finance (DeFi) by enabling smooth trades of assets across

different blockchains without needing centralized exchanges. This capability enhances liquidity and gives users access to a broader range of assets, making Thorchain a key player in the DeFi space. As investors look to diversify their portfolios, Thorchain's Automated Market Maker (AMM) model is proving popular, offering greater control over transactions. Looking forward, the price potential of Thorchain (RUNE) is garnering investor interest. With a rising demand for decentralized options, Thorchain remains a vital asset for those aiming to maximize returns, thanks to its groundbreaking cross-chain technology and liquidity solutions, which are attracting those keen on the rapidly changing DeFi market. Sui News: Driving Growth Through Innovation Sui (SUI) has grabbed the spotlight, earning praise from industry giants like Cardano co-creator Charles Hoskinson for its innovative approach. Supported by Mysten Labs and created by George Danezis, Sui is making a name for itself as a formidable rival to Solana. Focused on scalability and efficiency, Sui is pushing technical boundaries forward in the blockchain realm. Its recent price jump to \$1.92, a rise of over 10% in one day, showcases growing confidence in its future prospects. The buzz around Sui is sparking conversations about its role in the crypto world. While Hoskinson stays devoted to Cardano, he recognizes Sui's genuine innovations. As Sui builds on its solid foundation, its influence in the Layer-1 sector is expected to expand, leading to broader adoption and sustained growth, thus attracting more developers and investors. BlockDAG Testnet Receives High Praise BlockDAG has been making headlines since it launched its much-anticipated testnet on September 20, 2024. The testnet has given the community a chance to see the network's features up close. With Blockchain Explorer, users can monitor transactions as they happen, create their own BDAG coins, and even run smart contracts. These capabilities demonstrate BlockDAG's network scalability and efficient operation, marking a significant milestone in the blockchain arena. The robust performance of BlockDAG's testnet has generated a buzz in the market. Many are speculating that BlockDAG might surpass well-known cryptocurrencies like Kaspa and Solana. This excitement has triggered a wave of huge buying, pushing BlockDAG's presale close to the \$100 million mark. Early participants have already seen impressive returns, which has sparked even more interest. BlockDAG's presale, already among the most successful recently, is now seen as potentially setting new records. Having raised nearly \$99 million so far, the project is swiftly moving towards its \$600 million goal. The strong influx from both individual enthusiasts and big buyers shows increasing confidence in BlockDAG's future prospects. As BlockDAG continues to build momentum, the success of its testnet signals great things ahead. Buyers are keenly watching the presale, expected to keep growing, positioning it as one of the top coins for those seeking high-growth crypto assets. The Final Call While Thorchain (RUNE) and Sui remain competitive, BlockDAG is emerging as the standout crypto asset poised for significant returns. With its testnet now operational, BlockDAG has proven its high scalability and efficiency, receiving excellent reviews. Big buyers are getting on board, propelling the presale near the \$100 million milestone. This growing interest is setting BlockDAG on a path to becoming one of the most successful presales ever, making it a top-rated cryptocurrency. As Thorchain's potential grows and Sui continues to attract attention, BlockDAG remains the project to keep an eye on. - POPCAT price surges in 24 hours, leading market gains. - Chaikin Money Flow and On-Balance Volume show bullish trends. - Price targets: potential rise to \$1.55 all-time high, or drop to \$0.90 if support fails. POPCAT, the Solana-based meme coin, has emerged as the top gainer in the cryptocurrency market, registering an impressive price increase over the past 24 hours. This remarkable rally follows a brief period of decline earlier in the week, signaling a potential resurgence in buying pressure that could propel POPCAT towards reclaiming its all-time high of \$1.55. The recent price action marks a significant reversal from the bearish divergence previously observed between POPCAT's price and its Chaikin Money Flow (CMF). This technical indicator, which tracks capital flows in and out of an asset, has now aligned with the price trend, showing an upward movement and positioning itself above the zero line at 0.03. This synchronization between price and CMF suggests strong buying interest, lending credibility to the current rally. POPCAT's OBV shows upward trend further bolstering the bullish narrative, POPCAT's On-Balance Volume (OBV) indicator is trending upward, currently standing at 30.02 million. The OBV, which measures buying and selling pressure based on volume, indicates that more investors are accumulating the asset, potentially driving further price appreciation. The positive sentiment extends to POPCAT's futures market, where the funding rate across cryptocurrency exchanges stands at a bullish 0.014%. This metric suggests that derivatives traders are positioning themselves for continued price increases, reflecting broader market optimism. Currently trading at \$1.35, POPCAT sits just above its \$1.27 support level and 14% below its all-time high. If the current market momentum persists and demand remains robust, POPCAT could potentially challenge and surpass its previous peak at \$1.55. However, market participants must remain vigilant to potential downside risks. A surge in profit-taking could push POPCAT below its current support level, potentially triggering a decline towards the \$0.90 mark.

As the year 2024 draws to a close, the crypto scene is abuzz with anticipation for what 2025 might bring. Tron and Cosmos have been receiving some optimistic forecasts despite a turbulent year, yet it's BlockDAG (BDAG) that's truly turning heads. With the launch of its cutting-edge testnet, this Layer 1 blockchain is quickly gaining recognition as a formidable contender, potentially eclipsing Solana. BlockDAG's robust capabilities and efficient performance have ignited massive enthusiasm, particularly among prominent crypto backers, catapulting its presale toward the illustrious \$100 million milestone. While Cosmos shows hints of rebounding and Tron releases enticing updates, BlockDAG is positioning itself as the go-to crypto coin as we edge closer to 2025. Unexpected Resilience: Cosmos (ATOM) Shows Signs of Revival Having debuted before the 2018 halving and achieving a peak in 2019, Cosmos took center stage during the 2021 crypto rally, soaring to \$44.70. Despite a subsequent plunge during the crypto winter, which saw many tokens fading from prominence, Cosmos is now showing indications of a potential comeback as 2024 winds down. In a market that's largely seen other cryptocurrencies stumble, Cosmos has notably held its ground with positive price movements. This unexpected resilience has ignited buyer curiosity, leading some to speculate whether Cosmos is gearing up to revisit its former peaks. Tron: A Year Marked by Growth and Technological Advancements Tron (TRX) has demonstrated remarkable growth in 2024, boasting a 50% increase since the year's start. Recent enhancements to its Java-Tron client, which addressed critical vulnerabilities, have significantly bolstered confidence in its long-term prospects. Furthermore, the Tron DAO has amplified its security protocols, reinforcing Tron's reputation as a dependable blockchain platform. Another pivotal development is the heightened integration with Tether (USDT), which has significantly boosted trading activity on the network. Tron is also on the cusp of rolling out a new gas payment system by the year's end, which will allow transaction fees to be paid with USDT. Despite facing market headwinds, these strategic moves signal a bright future for Tron, with experts optimistic about its ability to withstand recent downturns and thrive. BlockDAG Network Soars to \$100M Milestone BlockDAG is making significant waves, particularly after its testnet debut in September 2024. While Cosmos and Tron maintain their positions in the marketplace, BlockDAG is fast becoming a powerhouse, with some analysts suggesting it could surpass stalwarts like Kaspa and Solana. This momentum indicates that BlockDAG is not merely another entry in the crowded crypto arena—it's a cornerstone for future growth, boasting stellar security and performance. The BlockDAG testnet invites users to delve into its innovative blockchain via a new explorer that offers real-time transaction tracking and supports a variety of transaction types, including both EVM and EVM-based frameworks. Developers have the ability to link their Metamask wallets, create tokens, and pilot smart contracts, all within the test environment. These features are tailored to provide a fluid and scalable experience, appealing to those eager to engage with cutting-edge blockchain technology. The success of BlockDAG's presale has been nothing short of phenomenal. With contributions of nearly \$99 million and rapidly approaching the \$100 million threshold, forecasts suggest the presale might escalate to \$600 million prior to the mainnet launch. Early participants have witnessed returns close to 1960%, sparking a rush of excitement and anticipation across the crypto community. The robust interest from substantial contributors reflects a broad confidence in BlockDAG's capability to revolutionize the market. Experiencing the BlockDAG network through the testnet, early users gain a practical understanding of its potential. The blockchain explorer provides comprehensive insights, and the faucet feature allows for the minting and testing of BDAG tokens. These preliminary achievements are cementing confidence in BlockDAG's prospects. Key Insights While the recovery of Cosmos (ATOM) prices and the latest news from Tron are generating attention, BlockDAG emerges as the standout choice for those seeking significant opportunities. Its highly efficient testnet is drawing attention from major players, contributing to a presale that is already one of the most successful in history. With its advanced network and solid community support, BlockDAG is uniquely positioned as we move toward 2025, offering a compelling opportunity for those looking to engage with a pioneering and potentially transformative platform. Join BlockDAG Presale Now: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYy> Disclaimer: TheNewsCrypto does not endorse any content on this page. George Town, Cayman Islands, October 18th, 2024, Chainwire Talisman, the leading web3 wallet that bridges the Polkadot and Ethereum ecosystems, has launched its new cross-chain swaps feature, solidifying its role in driving more users and liquidity to Polkadot. This feature simplifies the process of swapping assets between major blockchain ecosystems, enhancing connectivity for users trading between Polkadot, Ethereum, and Substrate networks. Simplifying Cross-Chain Asset Swaps Swapping assets across blockchain ecosystems has often been complex, requiring multiple custom bridges and Dapps. Talisman addresses this by integrating popular routes and assets directly into its Portal, enabling users to swap seamlessly between Polkadot, Ethereum, Arbitrum, Bittensor, Manta Network and even Bitcoin. Whether swapping ETH on Arbitrum for DOT or acquiring tokens like TAO or MANTA to stake, Talisman offers intuitive access to popular swap routes within its cross-chain swaps interface. By making cross-chain swaps more accessible, Talisman is not only streamlining the user experience but also bringing new liquidity into Polkadot's growing ecosystem. To get started, users can visit the Talisman Portal to begin their swaps. Supported Routes and Assets Talisman currently supports various cross-chain routes with key assets including stablecoins and native tokens across Polkadot, EVM, and Substrate projects, as well as Bitcoin. The supported routes include: - Polkadot <> Ethereum/Arbitrum with assets: USDC, USDT, ETH, WBTC, and DOT - All <> Manta Pacific EVM with assets: MANTA and ETH - All <> Bittensor with native TAO - All <> Bitcoin with native BTC Partnering with Top Swap Providers To ensure a smooth experience and optimal liquidity for Polkadot and other chains, Talisman has partnered with top providers such as: - Chainflip: A decentralized exchange protocol enabling seamless cross-chain asset swaps with minimal slippage and fast transaction speeds, supporting networks like Bitcoin, Ethereum, Solana, and Polkadot. - SimpleSwap: A non-custodial exchange service with access to over 2,000 cryptocurrencies and 800k crypto pairs across 100+ chains, providing 24/7 support with no registration required. User-Friendly Features Talisman's cross-chain swaps feature aggregates providers to help users compare options, costs, and estimated transaction times. Users can manage accounts across chains effortlessly, swapping between Substrate and EVM accounts directly within the Talisman Portal without needing separate transactions. How to Use Talisman Portal for Cross-Chain Swaps - Connect: Access the Talisman Portal via your Talisman wallet (Ethereum or Polkadot accounts) at app.talisman.xyz. - Navigate: Go to the 'Swap' section at app.talisman.xyz/transport/swap. - Select: Choose the assets you wish to swap. - Pick Account: Choose your destination account. - Complete: Select from the available swap providers and finalize your swap. Looking Ahead Talisman is committed to expanding cross-chain swap options, adding more routes and assets. The company is also integrating swap functionality directly into the wallet extension, making it even more convenient for users to swap on the go. By simplifying cross-chain swaps, Talisman is playing a crucial role in growing the Polkadot ecosystem, driving more users and liquidity into the network while enhancing the user experience across multiple blockchains. About Talisman Talisman is a web3 wallet that empowers users to explore applications across Ethereum and Polkadot ecosystems. With Talisman, users can securely store, send, and receive assets, and connect to a variety of applications. For more information, visit Talisman Website or follow us on Twitter and Discord. Contact Growth Associate Natti Talisman wallet natti@talisman.xyz

Ethereum, once hailed as the World Computer, now faces a critical crossroads. A recent article from CoinDesk shares that the network's original vision is at risk. Ethereum has become sidetracked by chasing trends like faster execution speeds and the 'aether-sound money' narrative, while losing focus on what made it revolutionary. The question of whether Ethereum has lost its way as the ecosystem contends with slow progress and increasing competition from blockchains like Solana and Bitcoin. Even Ethereum Team Lead Vitalik Buterin has said, 'Ethereum is losing the plot.' As inflation rises and the token price remains below its 2021 high, it's evident that Ethereum must re-focus. But what's the path forward? The Solution: Refocus on Infrastructure The article points out that Ethereum's true strength has always been its infrastructure,

enabling anyone to build decentralized apps. But short-term dApp hype, limited user growth, and siloed activity in L2s are detracting from its long-term vision. With major upcoming upgrades like Pectra and The Purge coming in late 2024, Ethereum will become leaner by purging old historical data. However, this introduces the risk of centralizing that data, undermining the network’s decentralization goals. Covalent’s Ethereum Wayback Machine Light Client Covalent’s Ethereum Wayback Machine (EWM) is designed to safeguard Ethereum’s historical data, ensuring it remains decentralized and accessible even as the network purges older data. To bolster this effort, Covalent has just launched its EWM Light Client Testnet, providing a crucial tool for maintaining decentralization. Now live, the Light Client Testnet enables participants to help strengthen Ethereum’s long-term data availability by playing a key role in protecting Ethereum’s decentralization and ensuring the network remains true to its original mission of being the World Computer. Read the full article on CoinDesk. About Covalent Covalent is the leading modular data infrastructure layer dedicated to solving major challenges in blockchain and AI, including verifiability, decentralized AI inference, and Long-Term Data Availability. Its large reservoir of structured, verifiable data enhances decentralized training and inference, reducing the risk of manipulated or biased AI models. Additionally, the Ethereum Wayback Machine ensures secure, decentralized access to Ethereum’s transaction data. Trusted by over 3,000 leading organizations, Covalent powers AI, DeFi, GameFi, and more with unfettered access to on-chain data from over 200 blockchains. Learn about the EWM: Technical | Non-Technical For more information, check out Covalent’s: Official Website | Twitter/X | Linktree Disclaimer: TheNewsCrypto does not endorse any content on this page. - Popcat’s price surged 9%, driven by community sentiment and futures interest. - Over 80,000 holders indicate growing investor confidence. Popcat (POPCAT), the Solana-based memecoin, has surged to the 56th position in market capitalization, overtaking competitors TIA and OM. The token has seen a significant 9% rise over the past 24 hours, propelled by improved community sentiment and a notable increase in futures open interest. Trading volume has surged by 56%, reflecting heightened investor interest, while it has skyrocketed 98% in the past month, drawing the attention of the broader crypto community. Data from CoinMarketCap indicates that sentiment among investors remains predominantly bullish regarding Popcat’s future. The token’s price has risen above its middle Bollinger band, suggesting a continuation of the bullish trend. The Relative Strength Index (RSI) has dropped to around 60, indicating room for further gains before entering overbought territory. What is Ahead for POPCAT? Analysts are closely monitoring Popcat’s price action. Trading Tank, a pseudonymous market analyst, highlighted a critical resistance level at \$1.54, the neckline of a bullish double-bottom pattern. If it breaches this level, it could reach new highs in the short term, with potential targets of \$1.9250, \$2.3850, and \$3.310. However, POPCAT has experienced price corrections alongside major cryptocurrencies like Bitcoin and Ethereum. For continued upward momentum, it needs to maintain a price above \$1.1735, as falling below this level could lead to a significant decline. Overall, the combination of strong community support, rising open interest, and positive technical indicators positions it as a notable contender in the cryptocurrency landscape. Highlighted News Of The Day

- Ethereum consolidates above \$2,580; bullish momentum may lead to gains. - Key resistance at \$2,650; breakthrough could propel price higher. Ethereum, the largest altcoin, is currently trading at \$2,619, marking a 0.63% decline from its 17-day high of \$2,688 three days ago. Despite the drop, Ethereum is up 9% over the past week. However, trading volume has decreased by 7%, signaling a potential shift in market sentiment. Ethereum’s price has consolidated gains above the \$2,580 resistance level, suggesting that it could gather momentum if it manages to clear the \$2,650 resistance zone. A bullish trend line has formed with support near \$2,600 on the ETH/USD hourly chart. If Ethereum breaks through the \$2,650 and \$2,688 resistance levels, it may continue its upward movement. However, it faces hurdles near \$2,650, aligning with the 76.4% Fib retracement level. Potential Breakdown Or Breakout? Key resistance levels lie at \$2,685, and if ETH breaks above this, the price could surge to \$2,750. A successful climb past \$2,750 might lead to a rise toward \$2,840, with the next resistance at \$2,880 or \$2,920. Meanwhile, on the downside, if ETH fails to break the \$2,650 resistance, it could see a decline. Initial support sits at \$2,600, with a major support zone at \$2,570. A drop below this level could drive the price to \$2,550 and potentially as low as \$2,480. Technical indicators show a bullish momentum in the short term, with the hourly MACD in the bullish zone and the RSI above 50. However, options data suggests a strong breakout above \$3,000 may not happen until after the U.S. elections in November. - Kraken has introduced Kraken Wrapped Bitcoin (kBTC), an ERC-20 token backed 1:1 by Bitcoin held in Kraken’s custody. - The kBTC token is compatible with Ethereum and OP Mainnet, enabling access to Dapps across blockchains. In 2024, the global crypto market has seen significant developments, including the launch of Bitcoin ETFs and growing adoption by both institutions and governments. As we enter Q4, the momentum continues with new projects and innovations. The leading crypto exchange Kraken has joined the action by introducing its own wrapped version of Bitcoin. On October 17, Kraken officially launched Kraken Wrapped Bitcoin (kBTC), an ERC-20 token that is backed 1:1 by Bitcoin held in Kraken’s custody. This move is part of Kraken’s broader effort to bring Bitcoin into more decentralized applications (DApps) and enable cross-chain compatibility. kBTC is officially onchain at Dave Ripley (@DavidRipley) October 17, 2024 Backed 1:1 with BTC held by Kraken Financial, allowing users to transact in DeFi with our best-in-class Special Purpose Depository Institution banking license. more peace of mind for usershttps://t.co/SO2NfZv2dQ What Makes Kraken’s New kBTC Stand Out in the WBTC Market? kBTC has been designed to operate across multiple networks, including Ethereum and OP Mainnet (formerly Optimism). By leveraging these networks, Kraken ensures that users can use Bitcoin’s value in various blockchain applications beyond its native network. Further, Kraken Financial, a Wyoming-chartered Special Purpose Depository Institution (SPDI), will oversee the custody of the Bitcoin-backed kBTC, ensuring maximum security. This SPDI status gives Kraken a solid regulatory framework and full-reserve backing, adding a layer of trust for users. This launch comes at a time when competition in the wrapped Bitcoin space is heating up. Kraken is joining the ranks of major players like Coinbase and 21Shares, both of which launched their own wrapped Bitcoin tokens at cbBTC and 21BTC last month. Wrapped assets like these help bridge Bitcoin with other networks, unlocking more functionality for users. Kraken’s approach includes rigorous security measures, including a thorough audit of the kBTC smart contract by the third-party firm Trail of Bits, ensuring user assets remain safe. Meanwhile, Kraken is also facing legal challenges. In 2023, the U.S. SEC filed charges against the exchange for allegedly operating without proper registration as a securities exchange. The lawsuit continues with a federal judge recently ruling in favor of the SEC’s case proceeding to trial. Despite this, Kraken is pushing forward with innovation, determined to strengthen its place in the market. Willemstad, Curaçao, Netherlands, October 17th, 2024, Chainwire New data from Cloudbet, a leading crypto casino and sportsbook, reveals that the emergence of newer, faster cryptocurrencies like Solana, Polygon, and Tron, are not as popular as mainstream coins for online gambling. The platform data suggests that gamblers prefer established cryptocurrencies such as Tether (USDT), Bitcoin (BTC), and Ethereum (ETH). Year-to-date data shows that USDT accounted for 47.3 percent of the platform’s total turnover, across more than 35 cryptocurrencies. Bitcoin claimed a 28.9 percent share followed by Ethereum at 11.5 percent. Altcoins with speedier transaction times, like Solana (SOL), Litecoin (LTC), Ripple (XRP), and Tron (TRX), are growing in usage but are still lagging behind. A company spokesperson highlighted, “After looking over the data, it was one of those moments where you’re just like, ‘Crypto gamblers. They’re just like us.’” The same concerns about volatility or price fluctuations bond every crypto holder, whether you bet or not. In June 2024, Cloudbet released an innovative new rewards program, awarding users in USDT without rollover restrictions. This month, the company released a second iteration of Cloudbet Rewards which now awards users in the cryptocurrency of their choice. For the majority of users, this will still be USDT, but it gives Cloudbet users the financial flexibility to play with more coins. “We’re interested to see how users will take advantage of the versatility of the rewards program,” says a Cloudbet spokesperson. “While the first iteration has clearly been a hit with our users and has accelerated the shift toward this next quarter, we might find that users start betting with PONKE or other memecoins as a way to lean into alternative crypto projects, especially if they’re bullish on their potential.” Since its founding in 2013 as the first licensed Bitcoin casino, Cloudbet has had a front-row seat to the evolution of crypto gambling preferences. “As a result, a variety of crypto gamblers have emerged, and we’ve seen a wide range of preferences for crypto gambling. The market is growing, and more robust blockchain security, among other strategies, can effectively manage and reduce a coin’s volatility. Gamblers using volatile coins can feel like placing a bet, only to see your winnings diminish with a price drop,” adds the Cloudbet spokesperson. About Cloudbet Cloudbet is a proud pioneer of crypto betting. Since its launch in 2013, as the world’s first crypto-friendly sportsbook and casino, Cloudbet has served hundreds of thousands of users and taken millions of bets, establishing a reputation as the most trusted, secure, and VIP-friendly brand in crypto gaming. Cloudbet users can bet with 35+ cryptocurrencies, from Bitcoin, Ethereum, and stablecoins like USDC and USDT, to SOL and other popular altcoins. The site is available in 18 languages (including Spanish, German, Italian, French and Japanese). For media inquiries, odds, and insights, users can contact irene@media.cloudbet.com or check out media.cloudbet.com. Contact Irene Halcyon Super Holdings B.V. irene@media.cloudbet.com

An authoritative analyst, renowned for accurately predicting Uniswap’s meteoric price rise, now forecasts that three specific cryptocurrencies are set to surge by an astonishing 200 times by November 2024. This article investigates these emerging digital assets, examining the unique factors and market conditions that could propel them to unprecedented heights in the rapidly evolving world of cryptocurrency. CYBRO: Your Gateway to Unmatched Crypto Gains! ðŸŒ€ Welcome to the world, where CYBRO is redefining the rules of crypto investing and putting GIGA PROFITS within your reach. Built on the revolutionary Blast blockchain, CYBRO maximizes your crypto earnings like never before. Whether you’re farming yield, stacking ETH, or just HODLing for those epic returns, this is the token for those who know how to win. ðŸ”¥ CYBRO’s Presale is Hot and Sizzling! 23 Million ðŸ”¥ CYBRO’s presale is skyrocketing and inching toward the \$3 million mark! At just \$0.001, you’re getting in at a massive discount, before the token hits the market at \$0.003. That’s an insane 200% ROI for those who jump in early. Over 9,000 holders have already joined the alpha squad, and they’re stacking rewards like never before! Why CYBRO? Because winning is the Only Option. ðŸŒ€ Here’s why the community is rallying around CYBRO: Here’s why the community is rallying around CYBRO: - Yield Farming: Top-tier user interface with multiple strategies to farm APY and Points. - Built on Blast: Native yield with an APY of 4% for ETH and 5% for stablecoins. - Effortless Deposits and Withdrawals: Easy in, easy out, so you’re always in control of your funds. - AI-Powered: Create AI-tailored portfolios, built for your preferences and optimal performance. ðŸŒ€ Early Investors Win Big! ðŸŒ€ Don’t wait until prices soar! By investing now, you’ll not only benefit from immediate growth potential but also unlock weekly ETH rewards and participate in community-driven airdrops. Early adopters are already seeing gains, and you can too! Join CYBRO today and secure your place in this fast-growing ecosystem. The future belongs to those who act now! ðŸŒ€ Don’t miss your chance before prices skyrocket! >>> Get in Early, Reap the Rewards with CYBRO! ðŸ”¥ Zc TRON (TRX) Shows Steady Growth Amid Price Consolidation TRON’s price is currently between \$0.16 and \$0.17, showing signs of consolidation. The nearest resistance level is at \$0.17, with support at \$0.15. Over the past month, TRX has risen by 7.06% and in the last six months, it has climbed nearly 46%. The Relative Strength Index (RSI) is slightly above neutral at 54.50, indicating moderate buying pressure. The Moving Averages for 10 and 100 days both sit at \$0.16, suggesting stability. If TRX breaks above the \$0.17 resistance, it could move toward the next level at \$0.18. However, if it fails to hold its current range, it might test the support at \$0.15. Solana’s Price Movement Signals Possible Uptrend Ahead Solana (SOL) is trading between \$138 and \$154.93, showing a monthly gain of 17.64%. The price is close to its 10-day simple moving average of \$154.77 and slightly above the 100-day average of \$151.35. With a Relative Strength Index (RSI) of 50.23, the market appears balanced, not overbought or oversold. The nearest resistance level is at \$162.09; if SOL breaks through this point, it could rise toward the next resistance at \$179, marking an increase of about 15%. On the downside, support is at \$128.27 and further at \$111.36 if the price drops. The current indicators suggest that SOL has potential for growth in the near term. Toncoin Eyes Potential Upside as It Nears Key Resistance Levels Toncoin is trading between \$4.997 and \$5.389, close to its 10-day and 100-day simple moving averages at \$5.232 and \$5.253. The RSI of 60.412 suggests moderate buying interest, while a high Stochastic of 88.965

indicates potential overbought conditions. A move above the nearest resistance at \$5.584 could see the price targeting the second resistance at \$5.976, offering a possible gain of about 7%. Though the past week saw a 1.808% increase, Toncoin has declined by 4.699% over the past month and 18.704% over six months, reflecting mixed performance. Strong support at \$4.800 may help prevent further declines. Optimism (OP) Price Nears Resistance: Will It Break Through? Optimism (OP) has seen an 18.46% increase in price over the past month, currently trading between \$1.55 and \$1.82. The price is nearing the resistance level at \$1.92. The Relative Strength Index (RSI) stands at 51.10, indicating neutral momentum. Both the 10-day and 100-day Simple Moving Averages are at \$1.74, showing consistent growth. If OP breaks through the \$1.92 resistance, it could target the next resistance at \$2.19, offering potential gains of over 20%. However, if it falls below the support level at \$1.38, the price might decline further. ~~Traders are closely watching these key levels to determine OP's next direction.~~ ~~Conclusion Although TRX, SOL, TON, and OP have potential, their short-term prospects may be limited.~~ ~~Cybro, a technologically advanced DeFi platform, offers investors unparalleled opportunities to maximize earnings through AI-powered yield aggregation on the Blast blockchain. With features like lucrative staking rewards, exclusive airdrops, and cashback on purchases, Cybro ensures a superior user experience with seamless deposits and withdrawals. Emphasizing transparency, compliance, and quality, Cybro stands out as a promising project attracting strong interest from crypto whales and influencers.~~ - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - XRP hits two-week high, nearing critical \$0.60 resistance level. - Bullish momentum driven by increased trading volume. XRP has regained momentum, hitting a two-week high of \$0.5666, marking a 2.72% surge in the past 24 hours, though it slightly retreated to \$0.5573. The altcoin's trading volume saw a notable 16% increase, reflecting heightened market activity. Despite the recent recovery, XRP is still down 5% over the past month, driven by a late September sell-off that resulted in an 18% price decline. This recent upward movement signals XRP's potential to reclaim lost ground, with key support levels being tested. The 50% Fibonacci retracement line at \$0.55 remains a crucial level, and breaching the 61.8% Fibonacci retracement at \$0.59 could pave the way for a rally above the long-awaited \$0.60 mark. However, XRP's upward trajectory hinges on overcoming this strong resistance, which has held firm for months. Meanwhile, fellow altcoins Solana, DOGE, ADA, are facing a decline of 2-5% in the past 24 hours. An XRP Rebound Rally? Technical indicators show a mixed outlook. The Relative Strength Index (RSI) has recently closed above the neutral 50 level, signalling an improvement in bullish momentum. Yet, the token remains under pressure, with the 20-day exponential moving average (EMA) trending downward, and a bearish crossover with the 200-day EMA looming. If this crossover materialises, XRP could struggle to regain its footing above \$0.56, leading to a period of consolidation. On the derivatives front, speculative activity surged, with a 753% increase in options volume and a 27.2% rise in open interest. While long liquidations outpaced shorts, indicating profit-taking, the predominance of long positions suggests traders remain hopeful of a potential recovery. As XRP continues to navigate resistance levels, traders are watching for a decisive breakout, with the \$0.60 level in focus. Overcoming this crucial hurdle could fuel a more sustained rally in the coming weeks.

Trust Wallet Launchpool offers users and TWT holders access to rewards and exclusive project tokens in a secure, decentralized environment. Trust Wallet, the world's leading self-custody Web3 wallet trusted by over 140 million users, has launched its newest feature, Trust Wallet Launchpool and the first projects and tokens users can explore: TWT, \$WHY and slisBNB. Trust Wallet Launchpool allows TWT holders and other token holders who are Trust Wallet users to earn rewards by discovering and engaging with promising projects in a secure and user-friendly way. By locking tokens like TWT or any partner tokens designated for each campaign, users can acquire new tokens or rewards from both pre-launch and launched token projects, diversifying their portfolios and supporting innovative ventures with minimal risk. With this feature addition, Trust Wallet becomes the first self-custody wallet to offer launchpool opportunities – providing its users with exclusive access to rewards and tokens from emerging projects, while supporting the growth of Web3 communities. Trust Wallet Launchpool aligns perfectly with our mission to build a more inclusive Web3 ecosystem while giving back to the community, including TWT holders and partner token holders. It provides our users with unique opportunities to engage with innovative projects and earn rewards, all without the risks typically associated with centralized platforms. ~~as said Eowyn Chen, CEO of Trust Wallet, how Trust Wallet Launchpool works: Trust Wallet Launchpool is part of the app's 'earn' section, designed to provide users with a simple and secure way to engage with early-stage crypto opportunities. Users can select projects they are interested in and lock TWT or other tokens in specific pools to earn new tokens as rewards. This offering is fully supported by on-chain smart contracts and open-source protocols, ensuring transparency and security, and setting it apart from centralized alternatives. First Project On Trust Wallet Launchpool For the first launchpool project, Trust Wallet users can lock their tokens in 2 pools and earn rewards. The locked tokens are: - TWT – Trust Wallet Token, an integral component of the Trust Wallet ecosystem, exhibiting versatility across multiple blockchain networks. It exists in various formats: as a BEP-20 asset on the BNB Smart Chain and also as an SPL token on the Solana network. TWT's primary utility lies in its governance function. It empowers token holders with the ability to influence key decisions regarding the development and evolution of Trust Wallet. And from today, TWT can be used as part of Trust Wallet Launchpool. - slisBNB – slisBNB unleashes the full potential of BNB, allowing users multiple layers of yield such as Launchpools, Liquidity Staking, DeFi Rewards. The reward token for this launchpool project is \$WHY, a top meme coin on BNB chain. Why is a bipolar elephant in a bipolar crypto market. Skyrocketing in popularity with a unique story, worldwide community, and commitment to fairness and longevity. \$WHY is an exciting project embodying everything we love about meme culture! As part of the campaign 4.2 Trillion WHY tokens (worth \$1.2+ Million) are available for rewards. Locking & Reward Structure: - Campaign Duration: 7 days - Locking Tokens Amount: No minimum or maximum limit - Reward Distribution: Every 8 hours. Users can claim rewards at any time after distribution. - Withdrawal Rules: Locked tokens cannot be withdrawn until the campaign ends. After the campaign ends, any unclaimed TWT will automatically roll over to the next session, ensuring continued participation and early access to future rewards. Additional Details: - Users need to hold TWT or slisBNB in their wallet to participate. - A small amount of BNB is required to cover gas fees for locking and claiming rewards. Benefits for Users and Web3 Projects Trust Wallet Launchpool benefits both users and projects by creating a mutually supportive environment. This feature provides a safe, decentralized way to earn project tokens, empowering users to engage with the evolving Web3 landscape while supporting the growth of promising ventures. For Web3 projects, Trust Wallet Launchpool offers a unique platform to increase visibility and build a solid community base. By connecting with Trust Wallet's extensive user base, projects can attract more users and gain momentum in a competitive market. Nate Zou, Head of Product at Trust Wallet, added: Trust Wallet Launchpool is a natural evolution of our commitment to our community. We want to provide our users with more ways to engage with Web3 opportunities while offering our partners a sustainable method to grow their user base and strengthen their community. Trust Wallet Launchpool is now available on the latest version of the Trust Wallet app. Be among the first to explore exclusive rewards and project tokens. Download Trust Wallet now. About Trust Wallet Trust Wallet is the secure, self-custody Web3 wallet and gateway for people who want to fully own, control, and leverage the power of their digital assets. From beginners to experienced users, Trust Wallet makes it easier, safer, and convenient for millions of people around the world to experience Web3, access dApps securely, store and manage their crypto and NFTs, as well as buy, sell, and stake crypto to earn rewards – all in one place and without limits. - For media enquiries, contact: - Dami Odufuwa, Head of Communications - press@trustwallet.com Disclaimer: TheNewsCrypto does not endorse any content on this page. Roam introduces Physical L1 model to build a decentralized Telecom Data Network, expanding market potential and leading new narratives in DePIN. The Decentralized Physical Infrastructure Network (DePIN) sector emerged in 2019 and has grown significantly over the years, with total token market capitalization reaching billions of dollars. However, DePIN still faces numerous challenges, including a mismatch between user needs and available products, scalability issues, unsustainable economic models, and limited infrastructure expansion. These obstacles have restricted the widespread adoption of DePIN projects, confining many participants to token speculation and limiting the sector's overall impact. An exceptional DePIN project should possess the following characteristics: - Real application needs - User-friendly products that meet those needs - Significant market potential - Solid data foundation - Strong industry endorsements Roam stands out as one of the few DePIN projects meeting all these criteria. With the recent launch of its Telecom Data Layer, Roam is building a decentralized telecom data network using the Physical Layer 1 (Physical L1) model to handle specific data types. This infrastructure enables the development of rich and practical applications that serve users effectively, elevating Roam beyond traditional DePIN projects. By becoming the foundational layer of DePIN, Roam significantly expands its market potential and opens up new possibilities for innovation. Addressing Real Needs with Innovative Products In today's society, internet access is as essential as water and electricity. However, seamless connectivity is not always readily available, especially for travelers who often face poor network signals, high data fees, repetitive logins, and lengthy registration processes. Roam is committed to building a global decentralized WiFi roaming network. Utilizing Decentralized Identity (DID) and Verifiable Credentials (VC) technologies, Roam offers users a secure, seamless, and global wireless experience. Key Features of Roam: - Global Free WiFi Roaming: Roam's services are free for end-users, providing unrestricted access to WiFi networks worldwide. Global Free Data with eSIM: Users can obtain free international data within the Roam app, even in areas without WiFi coverage, ensuring constant connectivity. - User-Friendly Experience: With a simple registration on the Roam app, users can connect to global WiFi networks effortlessly through Roam's multi-chain wallet. - Privacy and Security: DID and VC technologies safeguard user information, while zero-knowledge proof allows identity verification without disclosing personal data. - Token Incentives: Users receive token rewards for activities like registration, referrals, and sharing. Network providers earn tokens by sharing WiFi resources or using Roam routers like the Rainier MAX 60. - Comprehensive Network Infrastructure: Roam distributes hardware supporting computing, storage, and connectivity, such as WiFi routers and AP access points, forming the backbone of its network. Telecom Data Layer: Surpassing DePIN Roam's latest initiative introduces a broader vision for future development. Traditional DePIN projects focus primarily on user adoption at the application layer. In contrast, Roam extends its focus to the physical layer. A vast network of Roam mining nodes has been established, each providing network services and generating location and time data during user interactions. This forms a decentralized telecom data layer with core data synchronized to the blockchain in real-time and stored on Solana and other collaborative blockchains. This infrastructure unlocks broader application scenarios and offers richer services to users. Roam is not just connecting people to devices but also devices to devices (Internet of Things), devices to data, and devices to AI. While leveraging blockchain technology to build its digital ecosystem, Roam is not confined to blockchain data systems. It rapidly deploys infrastructure hardware using DePIN advantages but extends services beyond DePIN's traditional scope. For instance, Roam can support Content Delivery Networks (CDN) and Virtual Private Networks (VPN), positioning itself at a more foundational level than the application layer. Building a Platform for Diverse Applications The Roam Telecom Data Layer, built through the Physical L1 model, establishes a global decentralized telecom data network rooted in DePIN's foundational layer. This allows various projects to utilize Roam's Telecom Data Network to develop richer services and diverse applications – not limited to WiFi and data traffic related to Roam. The platform supports multiple sectors, including information storage, data communication, AI computing, and edge computing, fostering a robust ecosystem. It enables data interoperability between different projects and interconnection between devices. Implementing a data network is more challenging than developing application layers, but Roam has made significant strides. With over 600,000 nodes synchronizing information in real-time, Roam is constructing a new, expansive Internet of Things network. The ecosystem's data layer is based on blockchain technology, where DID usage extends beyond humans to devices and AI, advancing toward a Blockchain of Things (BoT). The Physical L1 model expands Roam's market potential, evolving it from a DePIN project into a platform capable of nurturing a prosperous ecosystem and enabling new narratives. Solid Data and Strong Endorsements As of now, Roam boasts over 760,000 app users across more than 190 countries, covering over 3.5 million OpenRoaming nodes. Users have added an additional 710,000 self-built network nodes, making Roam the third-largest DePIN project on Depinscan.io. Strong Industry Endorsements: - Wireless Broadband Alliance (WBA) Membership: Roam is the only Web3 Identity Provider (IDP) within the WBA, the global authority setting standards for the wireless broadband industry. Members include industry giants like AT&T, BT, Boingo, Cisco, Deutsche Telekom, KT, Orange France, True Internet, and TMN/Portugal Telecom. - Technology Partnerships: Roam has established deep collaborations with leading companies and platforms such as Samsung, Cisco, Intel, and Solana. - Hardware Manufacturing Collaborations: Partnering with Xiaomi's supply chain, Roam has developed and produced high-quality WiFi routers, including the Roam Rainier MAX 60 and Roam Baker MAX 90. Significant Investment Backing: Roam has secured tens of millions of dollars in two funding rounds.

from investors like Anagram, Volt Capital, Comma 3 Ventures, Iotex, Awesome People Ventures, Crowdcreate, Future Life, Slope, Stratified Capital, JDI Global, ZC Capital, Future 3 Campus, ECMC Group, SNZ, and DePIN Labs. In February 2024, Roam received strategic investment from Samsung Next. Over the past three years, Roam's team has grown from an initial five members to over 50, with its user base approaching the one million mark. With the introduction of the newTelecom Data Layer and Physical L1 blueprint, Roam is poised to lead a new wave of innovation, fostering a more prosperous and interconnected ecosystem. - Bonk's price climbed from a low of \$0.00002185 to a high of \$0.00002509, reflecting a 14% increase. - Bonk is above the crucial support level of \$0.000024 and faces resistance at \$0.000026, a level it struggled to break since July. The global cryptocurrency market turned positive mid-Wednesday, with Bitcoin (BTC) hitting the \$68K zone for the first time in three months, sparking enthusiasm among investors. This momentum also benefited meme coins, with Dogecoin (DOGE) and Bonk recording significant gains of 12% and 14%, respectively. The Solana-based meme coin BONK is leading the crypto market with a significant gain of 14% in the last 24 hours. The meme coin price surged from a low of \$0.00002185 to a high of \$0.00002509. At the time of writing, BONK is trading at \$0.00002433, showing a slight retracement but still above the crucial level of \$0.000024, which it struggled to surpass for over two weeks. Additionally, BONK's daily trading volume has soared by over 36%, reaching \$372.69 million. A technical analysis according to BONK's 1-hour price chart, there is a bullish momentum for the memecoin. The 1-day MA crossed above the 200-day MA, a "Golden Cross," signaling a shift from bearish to bullish sentiment. This trend suggests that BONK could maintain its upward momentum in the short to mid-term. Further, the Moving Average Convergence Divergence (MACD) is above the signal line, adding a positive outlook. If the upward trend continues, BONK's price could propel to new highs in the next rally. However, challenges remain. Currently, BONK sees a key resistance level at \$0.000026, a threshold that must be surpassed to maintain its upward momentum. Achieving this level may be difficult, as it previously attempted to reach it on October 1, but retraced and traded between \$0.000019 and \$0.000023. Furthermore, the current trend has faced obstacles, with the memecoin dropping below its intraday high, which was above \$0.000025. However, an RSI reading of 65 indicates that the asset is experiencing a moderately strong bullish trend. In that case, if BONK breaks through the \$0.000026 level, the next targets are set at \$0.000028 and \$0.000035, making these crucial levels for traders and investors to monitor during the potential breakout. Conversely, if BONK fails to hold its uptrend it could establish a support level of around \$0.00001975, which may act as a safety net if the price experiences a downturn. Highlighted News Of The Day

- Bitcoin price factored in an additional 0.42% increase in the last 24 hours. - The cryptocurrency has seen several whale movements over the past few days as per reports. As another day dawns, several firms released cryptocurrency data for Q2 and other reports. According to Aspen Digital's research, 94% of Asian private wealth owners are interested in digital asset investments. Relatedly, in Thailand, Siam Commercial Bank became the first to offer stablecoin-based cross-border payment services. Meanwhile, reverting to the market itself, prices have sustained bullish movements, reassuring investors. The largest cryptocurrency, Bitcoin, in particular, has shown significant progress in prices. In the last 24 hours, BTC revisited \$68K momentarily, eliciting much applause from the community. Bitcoin has factored in an additional 0.42% price increase in the past day. The token hit a low of \$66,938 on the morning of October 16. Following this, factoring in the price fluctuations, it progressively hit \$67K and is currently trading at this level. At the time of writing, Bitcoin was trading at \$67,381 as per CMC data. This price action has instigated a buy signal in the cryptocurrency as indicated by several market movements. Firstly, the token's RSI stands at 66.77 which leads to an inference of Bitcoin leaning towards a slightly overbought situation. Additionally, in the past day, several BTC whales have exhibited movements according to Whale Alert reports. Particularly, one whale showed activity after nearly 13.3 years of dormancy. What are Technical Indicators' Specifications for Bitcoin Price? On inferring Bitcoin's daily monthly price chart, the candles depict an ascending channel pattern. This pattern indicates an existing bullish trend in the token. Moreover, the bull run is further highlighted by the bull power indicator's value at 1.48. Meanwhile, the bear power indicator's value stands at 0.52 as per TradingView data. These indicators suggest a positive sentiment for Bitcoin which also falls in line with market analysts' predictions. Furthermore, historical data suggested that bull cycles began in October thus the October rally expectations. If Bitcoin price intersects with community expectations it can be expected to inch closer to its ATH in the coming months. Meanwhile, other cryptocurrencies such as Ethereum and Solana have also followed Bitcoin with bullish price movements. Highlighted Crypto News Today: Quantity Funds Launches Innovative US-based Bitcoin and Gold ETF

- Italy is raising the capital gains tax on Bitcoin and other cryptocurrencies from 26% to 42%. - This decision is part of Italy's 2025 budget plan to generate around 4 billion euros (\$4.35 billion) in revenue. As countries all over the world are mulling over imposing stringent digital currency regulations, Italy has decided to increase its capital gains tax on Bitcoin (BTC) from 26% to 42%. Vice Economy Minister Maurizio Leo announced this change during a press conference discussing the country's budget for 2025. This announcement comes after measures approved by the Council of Ministers on Tuesday evening, which are intended to generate resources to support families, youth, and businesses. Since the 2023 tax year, the government has taxed capital gains from Bitcoin exceeding a -2,000 (about \$2,180) at 26%. This change shifted the treatment of cryptocurrencies from foreign currency, which had lower tax rates. However, this current tax hike is part of Italy's broader plan to raise approximately 4 billion euros (\$4.35 billion) in 2025, targeting various sectors, including banks and gaming licenses. Economic Pressures Prompt New Tax Strategies in Italy The government is facing economic challenges, highlighted by a recent drop in inflation to below 1% in September. This low inflation rate underscores the urgency for the government to identify new revenue sources to enhance its economy. Further, the reports indicate that the UK may also raise capital gains taxes on digital assets. The current rate is 20%, and it could increase to as high as 39%. With this new tax, Italy will now have one of the highest capital gains taxes on cryptocurrencies worldwide. For comparison, Germany taxes Bitcoin gains if sold within a year of acquisition but offers tax-free status for holdings longer than a year up to a -600. India enforces a flat 30% tax on realized crypto gains, making it one of the strictest tax regimes globally. Highlighted Crypto News Today Solana Sustains Its Price Above \$155 Amid

As analysts predict the upcoming crypto bull run to peak in 2025, the possibility of making life-transforming gains is at the forefront. Investors will benefit more if they target the right altcoins before the rest of the market does. There are seven outlined as investable in the medium term, supported by strong fundamentals and growth for handsome profits. Rexas Finance (RXS) Rexas Finance (RXS) is improving RWA (Real World Assets) by developing solutions that enable clients to tokenize and trade real assets (for example, real estate, commodities) through blockchain. RXS has a current price of \$0.06 in its ongoing presale stage 4 and is then likely to be as high as \$12 in 2025. This makes it a suitable candidate for a high-growth position and, hence, worth the risk. There is a presale that has already raised over 2.75 million dollars, and currently, there is a running Rexas Finance giveaway costing one million dollars. Particularly, the token's ability to utilize trillion-dollar market potential makes RXS one of the best altcoins to hold for optimum returns in 2025 and beyond. Documents are exempt from fees, and some are burdened with an enhanced guarantee Avalanche (AVAX) A key contender in the Layer-1 blockchain space, Avalanche continues to maintain its strong position. Due to its usability in running DeFi projects and NFTs. AVAX as a platform has gained ground, particularly due to its scalability and transaction speeds. Avalanche was estimated at \$27 as of October 2024 and is expected to rise as high as \$300 by 2025 due to the growth of its use and the ecosystem. Avalanche possesses strong underlying technology and developer momentum, making it the best bet for any investor who intends to make large profits. Solana (SOL) Solana (SOL) is vibrant today and is currently selling at \$151. As an investor, this is another cryptocurrency that one should keep an eye on. It is well known for its cheap fees and fast transaction processing, hence projects that operate in the areas of DeFi and NFTs have so many of them in the ecosystem. As per analysts' forecast, the token could hit a price of \$500 within 2025, offering an opportunity for comfortable investments in one of the best large-cap altcoins in the next bull run. With the Solana network expected to grow with the DeFi sector, SOL will also have a considerable adoption which will make it a good value for now and the future. Dogecoin (DOGE) From the onset, it has been categorized as merely a Meme trend, yet Dogecoin (DOGE) has not dropped from the map in the crypto circle. Selling at \$0.15, DOGE can hit \$1 with a 2025 upside if the support from Elon Musk still lives on and if Twitter X decides to adopt the coin as a microtransaction tool. Supporting such an advanced community and usage of Dogecoin creates an interesting opportunity for an investor who accepts higher risks in order to reap decent rewards. Chainlink (LINK) Chainlink (LINK) today is valued at \$11 and possesses features that allow it to complement the entire DeFi space, owing to its provision of decentralized oracles linking smart contracts that cannot run without external data. With the rising trend of decentralized finance, Chainlink has unique opportunities to benefit, with forecasts suggesting that in the year 2025, the token could hit \$100. The deep-seated significance of LINK in the usage of blockchain technology assures its presence in the strategic portfolios of all crypto investors. Near Protocol (NEAR) The Near Protocol (NEAR) is an easily manageable Layer-1 blockchain architecture with the capability to scale. Thanks to its sharding technology, NEAR has been doing well in terms of transaction volumes, making it a perfect candidate for decentralized applications. The alternative token is valued at \$5.2, with analysts predicting it will hit \$50 by 2025, as more developers and projects utilize its platform. Near Protocol is rapidly capturing market share as an alternative to Ethereum, which can process transactions faster and at scale. Thus, NEAR is an effective long-term investment. Ripple (XRP) As a leader in cross-border payment solutions, Ripple has effectively addressed industry challenges and is currently priced at \$0.53. Some institutions still have horses in the race, and the industry is still extremely skeptical about XRP; however, it is one of the most used cryptos today. In fact, some analysts opine that if all goes well, Ripple's legal issue is resolved, and business keeps progressing, XRP could touch 5 dollars or more by the year 2025. Generally, XRP is one of the top altcoins to buy for those who want to place a wager on more adoption and eventually the recovery of Ripple's value. Conclusion: How to Optimize Returns for 2025 The market has reached a stage where the next bull run is expected, and now is the best time to stake in altcoins with great potential. Of these, Rexas Finance has the highest potential upside due to its unique model of RWA tokenization. That said, investment in Avalanche, Solana, Dogecoin, Chainlink, Near Protocol, and Ripple also holds great potential for those looking to maximize returns by 2025. Given that proper strategies are implemented, these altcoins are bound to bring life-changing gains as the crypto market continues to take new steps forward. - Grayscale seeks to convert its fund into a diversified crypto ETF. - Canary Capital files for spot Litecoin and XRP ETFs amid growing interest. The race to bring more cryptocurrency-based exchange-traded funds (ETFs) to the U.S. market continues to heat up as Grayscale Investments and Canary Capital make bold moves. Grayscale, the world's largest crypto asset manager, has filed to convert its Digital Large Cap Fund, which includes Bitcoin, Ethereum, Solana, XRP, and Avalanche, into an ETF. This follows Grayscale's recent victory in converting its Grayscale Bitcoin Trust (GBTC) into a spot Bitcoin ETF after a lawsuit against the U.S. Securities and Exchange Commission (SEC). Meanwhile, Canary Capital is targeting alternative cryptocurrencies. The firm has filed registration documents with the SEC for a spot Litecoin (LTC) ETF, which aims to track the performance of Litecoin, often seen as a faster and cheaper alternative to Bitcoin for small payments. Canary Capital is also pursuing a spot XRP ETF. It filed similar paperwork just days before Bitwise made its own XRP ETF filing. These filings come as institutional interest in cryptocurrencies grows, with Wall Street eager for more diverse crypto ETF products. Political Influence Political factors loom large over these developments. The upcoming U.S. presidential election in November is seen as a potential turning point for crypto regulation. Kamala Harris, the current vice president, is regarded as more supportive of blockchain technology than President Joe Biden. She has overseen aggressive regulation under SEC Chair Gary Gensler. Donald Trump, Harris's rival, has promised to fire Gensler if elected, signaling a possible shift in the regulatory environment. Nate Geraci, president of The ETF Store, highlights that the current wave of ETF filings could be influenced by the election, noting that politics "clearly matter in the short-term." Despite this uncertainty, he believes that the launch of more crypto ETFs is "inevitable." As the SEC reviews these filings, Grayscale and Canary Capital's latest moves reflect the increasing demand for sophisticated cryptocurrency

products. It signals a new chapter in the mainstream adoption of digital assets. Highlighted News Of The Day Ethereum Breaches Key Resistance: Long Term ETH Holders Move

As this year comes to a close, experts are selecting top assets for 2025. Stellar (XLM) and Ripple (XRP) are trending upward despite a tough 2024. Yet, BlockDAG, with its advanced layer 1 network, is capturing the spotlight with a significant market rise. Its strong testnet has received rave reviews, even considered a potential challenger to Solana. This stellar performance has attracted significant interest in BlockDAG's presale, drawing in major backers. With the \$100 million milestone in sight, BlockDAG is positioning itself as a leading crypto and one of the most successful presales ever. Stellar (XLM): Gradual Growth in October Stellar, focusing on making international payments easier, has kept a steady presence in the market. Experts predict XLM prices will swing between \$0.09 and \$0.26 in 2024 with an average likely around \$0.17, indicating steady, modest growth. By 2025, XLM might rise to \$0.27, with chances of price changes. Looking forward to 2026, forecasts for Stellar vary greatly, with a possible high of \$0.48 or a low of \$0.14. Unless Stellar finds a unique market niche like Bitcoin or Ethereum, its price will likely follow general market trends. However, with a proven history and a focus on making scaling and access better, Stellar is seen as a solid long-term purchasing. Ripple (XRP): Facing Challenges in Q4 XRP has had a roller-coaster year with price fluctuations and legal challenges affecting buyer confidence. The ongoing legal issues with the SEC continue, but XRP has managed to stay resilient. Recently, XRP's price rose by 8.7% in two weeks to \$0.58. Experts think that if XRP can break past the \$0.60 resistance, it might climb to \$0.64, suggesting a hopeful future for holders. However, challenges lie ahead. If prices fall below crucial levels, XRP might drop to \$0.50. Despite these hurdles, the expected launch of RLUSD on the Ripple blockchain and ongoing demand for international payment solutions could push XRP's price to \$0.69 by October 2024. Despite regulatory challenges, XRP's long-term potential looks promising. Is BlockDAG (BDAG) the Ultimate Kaspa Killer? BlockDAG's testnet, which launched on September 20, 2024, has made a big splash, demonstrating the strength and possibilities of its base blockchain technology. This advanced testnet lets users delve into features such as the Blockchain Explorer, which provides in-depth views of block data and tracks transactions. Supporting both UTXO and Account-Based addresses, the explorer ensures users have a smooth experience. Additionally, the testnet allows for the creation of BDAG coins through a blockchain faucet and for testing smart contracts, creating a dynamic environment for developers and testers. The testnet's robust performance has ignited a lot of interest in BlockDAG's current presale, drawing in significant support from major crypto backers. These early supporters have bought millions, quickly advancing the presale's success. In just three days, over \$10 million was raised, speeding up BlockDAG's momentum. This influx of funds is setting BlockDAG on track to surpass the \$100 million milestone, aiming to make it one of the most successful presales in crypto history. BlockDAG's ecosystem isn't just catching eyes for its tech skills but also for its potential to outdo competitors. Some experts are already suggesting it might outshine top cryptos like Solana in terms of scalability and efficiency. The testnet's support for EVM transactions and real-time monitoring positions BlockDAG as a highly efficient and secure system that is ready to rival the best in the business. As the presale continues to build momentum, BlockDAG is quickly becoming a preferred choice for those looking for substantial returns. The mix of a high-performing testnet, solid support from big backers, and its pioneering blockchain environment has positioned BlockDAG as one of the leading cryptos to watch, increasing excitement for its full launch. The race to \$100 million is progressing well, with BlockDAG gearing up to significantly reshape the crypto market. The Final Verdict While Stellar (XLM) and Ripple (XRP) are seeing predictions of steady growth, BlockDAG is emerging as the leading crypto to watch for impressive returns. Its testnet, launched in September 2024, has shown remarkable efficiency and scalability, attracting substantial backing to its presale. Within just 72 hours, it gathered over \$10 million, moving the presale toward the \$100 million target. With forecasts suggesting it could reach up to \$30 post-launch, BlockDAG is on its way to becoming one of the most triumphant presales ever, offering a significant opportunity for those looking to buy in the next major crypto breakthrough. Truflation, the leading provider of real-time financial data, and Digital Asset Solutions, the experts in financial solutions for the digital asset market, have announced the launch of its first Meme Coin Index. In addition to giving investors access to a diverse basket of meme coins, the index tracks the most well-known and significant meme coins across many chains, serving as a benchmark for tracking the sector's overall growth. Shiba Inu, Pepe, Dogwifhat, Floki, Bonk, Brett, Popcat, and Dogecoin are among the assets that make up the Truflation Meme Coin Index, which will monitor eight of the best-performing coins across Ethereum, Solana, Base, and Dogecoin. By trading the full index, cryptocurrency traders may diversify their investing approach and have exposure to a selection of the top meme coins based on market capitalization, trading volume, and liquidity. The index may be used to measure the performance of meme coins over time, as well as to make the meme coin economy accessible via a single method. As a result, it is simpler to see market patterns and determine if meme coins are more in demand versus other cryptocurrency sectors. With the use of indexes, which are a common method of investing in assets like equities and DeFi tokens, investors may profit from market development without having to concentrate on making particular investments. Meme coins, which have developed into a \$40 billion market and consistently generate more on-chain volume than any other crypto sector, now have this potential thanks to the Truflation MemeCoin Index. Truflation's MemeCoin Index, developed in partnership with Digital Asset Solutions, was created to diversify exposure to meme coins, lowering the risk of depending only on one coin's performance and doing away with the need to purchase individual coins from several chains. Like a traditional token, the index is readily purchased and sold by individual investors, which appeals to retail consumers. Stefan Hächle, Head of Investment Strategy at Digital Asset Solutions said: "Meme coins, driven by their growing market capitalization and increasing community engagement, have undeniably earned their place within the digital asset landscape. We're excited to partner with Truflation to bring clarity to this sector, making it easier to measure and invest in." Truflation CEO Stefan Rust said: "In a crypto bull market, meme coins defied all expectations with the number of projects and total capitalization increasing by multiples. The combination of community-powered humor, memes, and cultural references, coupled with the closest thing crypto has to a fair launch, has turned meme coins into a major catalyst for the entire industry. The Truflation MemeCoin Index provides a snapshot of the sector's performance while providing a passive investment solution for traders who'd rather back the entire pack than attempt to pick a winner." Decentralized finance apps often use Truflation's decentralized data feeds, indexes, and oracles to get precise pricing for a variety of real-world assets. Truflation provides onchain protocols with a dependable, real-time data source by tracking over 18 million products via the integration of more than 65 data source. Beyond RWAs, Truflation is moving closer to implementing more reliable and thorough data onchain by offering dedicated dashboards for monitoring inflation in nations like the US, UK, and Argentina. Truflation is revolutionizing the measurement of inflation and asset performance with these developments. The firm wants to improve decision-making processes for companies, investors and policymakers by offering alternative measurements and getting beyond the drawbacks of conventional indices. This will help to create a more robust and informed global economy.

New York, New York, October 15th, 2024, Chainwire With the cryptocurrency market entering the final quarter of the year with major bullish momentum, the emerging altcoin platform DTX Exchange (DTX) has made a strong impact. The DeFi platform has raised over \$4.75 Million weeks earlier than expected. This early success reflects growing interest in platforms that offer access to a diverse range of assets, including cryptocurrencies, equities, and real-world assets (RWA), under a unified trading system. Innovative Multi-Asset Platform Meeting Market Demand Despite the entry of financial giants like BlackRock and Morgan Stanley into the decentralized world, there is still a lack of a unified platform that integrates conventional assets like equities, stocks, and bonds with decentralized assets like cryptocurrencies. DTX Exchange has aimed to bridge the gap between traditional and decentralized financial markets by allowing users to trade over 100,000 assets on a single platform. This innovative solution makes it possible for traders to access a wide variety of assets under a single platform with minimal trading fees. The global cryptocurrency industry is worth \$2 trillion alone, with the broader equities market having over \$90 trillion worth of assets. By enabling the trading of these assets, DTX provides traders with the chance to enhance liquidity. The DTX team aims to attract the attention of millions of retail and enterprise traders through this unique feature. Notable Presale Participation and Platform Development DTX Exchange's presale has seen considerable early participation across its initial rounds. The first round raised approximately \$300,000 in a short period, while the second phase exceeded \$1 million in total funds raised. The third presale round concluded ahead of schedule, with the platform raising over \$4.75 million across all rounds to date. During this time the token price increased from \$0.01 to \$0.08, reflecting initial interest in the platform's offerings. Platform Features and Future Product Expansion DTX Exchange credits its early adoption to its unique product offerings, including: VulcanX Blockchain "This privacy blockchain powers the DTX ecosystem and is the first unified blockchain to support conventional financial assets. With a throughput of over 100,000, this blockchain is expected to power the next decentralized applications of the future. DTX Unified Wallet "The DTX Unified Wallet is the first crypto wallet to support forex, equities, and crypto assets under a single secure application. The product is expected to add features like P2P asset trading and portfolio management tools. Enterprise RWA Platform "DTX is onboarding conventional assets on the blockchain through the Real World Assets (RWA) builder platform. DTX Exchange Sells Out Round 3 In Days In the most recent development, the ongoing presale has sold over 50 million tokens and raised \$3 million to sell out the 3rd round weeks ahead of schedule. The DTX team is now raising the token price, giving investors another opportunity to join the presale and secure DTX tokens before they launch on public exchanges. Open Public Trading and Ecosystem Expansion DTX Exchange has outlined its plans to make DTX tokens available for open public trading following the launch of the VulcanX blockchain. With a growing community of over 70,000 members, the platform is preparing for broader accessibility, which may help increase its reach and user base significantly upon public launch. Additionally, DTX also has an active developer community that is actively developing new products. Exploring the DTX Ecosystem "Key Products Aside from offering a suite of trading features, DTX Exchange is expected to offer a wide range of products to developers and enterprise players in the finance world. Some notable products include the Real World Asset (RWA) tokenization tool that allows stakeholders in the Real Estate industry to tokenize assets and introduce new models of investment in illiquid assets. Additionally, DTX is expected to launch the DTX Unified Wallet, which allows holding stocks, cryptos, and forex assets. Additionally, future plans include holding the Digi-Hackathon to improve platform security and integrity. DTX Exchange: Unifying Digital Assets with Strong Growth Potential With the unique approach DTX Exchange has taken to unifying digital assets, its presale performance comes as no surprise. Built on the VulcanX blockchain, the platform is designed to improve transaction capacity compared to many layer-1 blockchains. Given the rapid pace of the presale sold, the altcoin could mirror the past trajectory of other cryptos that had exponential rallies. In the past, projects like Solana, Cardano, Polygon, and Dogecoin have all surged from small-scale altcoins into multi-billion dollar projects that have become household names. DTX Exchange aims to fulfill its potential and turn into a major powerhouse in the coming months. Investors can still become an early part of the DTX Exchange community. With a current price of \$0.08 and a listing price of \$0.20, investors are poised to enjoy growth in value in the coming months. With broad applications for the financial sector, DTX aims to become the cornerstone of the DeFi industry and carve out a sizeable portion of the \$2 Trillion trading industry. Users can learn more: Users can visit DTX Website here Users can join The DTX Community Contact DTX Exchange dtxinnovations@gmail.com

- Bitcoin price surpassed its key resistance at \$65K in the last 24 hours. - The cryptocurrency's daily trading volume surged 26.64% as per CMC data. Bitcoin price action is the day's breakfast convo for crypto community members. The cryptocurrency has begun to recover to its previous price levels at the \$60K range. Meanwhile, the web3 community is also awaiting several token unlocks this week, including the WLFi token from Trump's DeFi project. When reverting attention to the market price actions, following Bitcoin, Ethereum, Solana, and XRP have also turned bullish. Meanwhile, new top performers such as SUI and WorldCoin have also experienced price breakouts in the past few days. Notably, Bitcoin has factored in an additional 1.23% price increase in the past day. Moreover, BTC crossed its significant \$65,000 resistance level during the Asian evening hours of October 14. At the beginning of the day, the cryptocurrency had rallied to \$64K but showed modest struggles to surpass the aforementioned resistance. However, in the following hours, Bitcoin began showing consistent upward movements to hit a 17-day high at \$66,414. At the time of writing, Bitcoin was trading at \$65,544 per CMC data. Relatedly, the US spot Bitcoin ETFs also recorded the highest single-day inflows since October 1. According to Sosoalue data, the ETP products witnessed \$555.86 million in inflows. Fidelity Investments' FBTC ETF recorded the highest with \$239.25 million inflows among the 12 ETFs. Bitcoin Price Weekly Overview According to Bitcoin's weekly price chart, the

cryptocurrency shows a price increase of 5.12%. This increase has been accounted for as a modest bounce back from its consolidation phase at the \$50K range. At the beginning of the week, Bitcoin traded at \$62,180 and as the days progressed it revisited its previous support level at \$58,895. However, due to the bullish takeover, the cryptocurrency moved upwards to current trading levels. Subsequently, BTC's market sentiment depicts a buying pressure as indicated by the RSI standing at 61.65. Moreover, the digital asset's bull power indicator value of 1.53 stands above the bear power indicator value of 0.47 as per TradingView data. This highlights Bitcoin's existing bullish trend and has been interpreted by the community as an indicator of a price rally. Finally, if Bitcoin falls in line with the market analyst predictions it can be expected to reach new trading levels that lie closer to ATH of \$73,750. Highlighted Crypto News Today: Bitgert (BRISE) Sets Sights on New Highs as Bulls Charge Ahead

- Sui token surged 120%, facing allegations of insider selling. - Sui Foundation denied insider sales, attributing them to infrastructure partners. The Sui (SUI) token has seen a remarkable rally, gaining over 120% in the past month to trade at \$2.25 as of October 14. This surge, while impressive, has stirred controversy as allegations of insider selling have surfaced casting a shadow over the token's performance. Crypto analyst Light, in a post on X (formerly Twitter), claimed that wallets linked to SUI's initial coin offering (ICO) sold more than \$400 million worth of SUI tokens during the recent price increase. Light also suggested that this selling began when prices were lower and intensified as the token surged. This has raised concerns among investors, as large-scale sales by insiders or early holders can put downward pressure on a token's price, potentially destabilising its rally. Following an allegation of SUI insiders selling \$400M in tokens throughout this run-up, SUI Foundation would like to respond directly to this individual: "Sui (@SuiNetwork) October 14, 2024 1. No insiders, neither employees of the Foundation or Mysten Labs (including Mysten Labs founders), nor ML investors," Meanwhile, in response to these allegations, the Sui Foundation issued a statement on October 14 denying any involvement in insider selling. The foundation clarified that no insiders such as employees, founders, or investors had sold tokens during the rally or violated any lockup agreements. They attributed the sales to an infrastructure partner operating within the agreed lockup schedule, emphasizing that all token movements were compliant and monitored. Upcoming Token Unlock Set to Add Selling Pressure Adding to the situation, another potential wave of selling could occur soon. On October 23, \$114 million worth of SUI tokens, representing around 2.32% of the circulating supply, are set to be unlocked. This event could further increase selling pressure on the token. Despite these concerns, SUI has gained more than 164% year-to-date. Some analysts see the Sui blockchain emerging as a strong competitor to Solana, another prominent Layer-1 blockchain. However, investor caution remains, as further large-scale sales could impact the token's future trajectory. As the debate continues, market watchers will closely monitor both insider activity and the upcoming token unlock event to gauge the token's sustainability amid the ongoing rally. Highlighted News Of The Day USDT Issuer Tether Eyes Commodities Traders with US Dollar Lending

- SUI breaks \$2, reaching new ATH of \$2.36. - Short-term pullback expected to \$2.16 before potential rebound. Long-term projections suggest \$3 by month-end and \$5 by year-end. SUI has demonstrated remarkable resilience, surging past the \$2 threshold and establishing a new all-time high (ATH) of \$2.36 during early trading hours. This unprecedented price action has ignited optimism among traders, fueling expectations of sustained bullish momentum in the near term. As SUI regains lost ground and attention, market participants anticipate a period of price discovery and potential stabilization at these elevated levels. Drawing parallels to Solana's meteoric rise in 2021, which saw SOL skyrocket beyond \$220, analysts view SUI's recent performance as the potential beginning of a fresh upward cycle. However, the path to higher targets, such as the \$2.5 to \$2.55 range, hinges on specific market conditions being met. SUI technical analysis shows bullish sentiment. Technical analysis reveals SUI's price movement within a rising parallel channel, indicative of robust bullish sentiment. The recent touch of the upper resistance, coinciding with the new ATH, suggests a possible minor pullback to the channel's average bands. This short-term bearish narrative finds support in technical indicators, with the Stochastic RSI heading towards lower support and the MACD signaling a reduction in buying pressure. This confluence of factors points to a potential short-term retracement to the \$2.16 level over the next couple of days. However, this pullback may set the stage for a renewed upward move as bulls potentially reengage to defend the average bands and propel the price towards new heights above \$2.4. Looking beyond these short-term fluctuations, the broader outlook for SUI remains decidedly bullish. Market projections suggest the potential for SUI to close the month around the \$3 mark, with ambitious targets of \$5 by year-end. These long-term forecasts underscore the growing confidence in SUI's fundamental value proposition and its ability to capture market share in the competitive blockchain ecosystem.

Diving into DeFi? You'll need a wallet that does more than just store crypto—it needs to be your passport to a world of dApps, staking, NFT trading, and more. Think of it as your all-access pass to the digital universe, where you hold the keys. This article decodes the devious darlings of 4 of the best DeFi wallets in 2024. Whether it's Plus Wallet's rewards, MetaMask's Ethereum-savviness, Trust Wallet's multi-chain mastery, or Coinbase Wallet's simplicity for newbies; each has a unique vibe. Let's see which DeFi wallet is your perfect match! 1. Plus Wallet: More Control, More Security, More Rewards! While plenty of wallets are out there, few hit the sweet spot of control, security, and rewards quite like Plus Wallet. With its "More is More" philosophy, Plus Wallet aims to give users exactly that: more control over assets, more robust security, and more ways to earn. First, let's talk about control. Plus Wallet offers seamless cross-chain functionality, which means users can manage and swap various cryptocurrencies effortlessly all in one place. Next up is security. In a world where security breaches are a real concern, Plus Wallet doesn't take any chances. It uses advanced encryption to safeguard assets, along with Face ID and PIN code authentication, so that access remains strictly user-controlled. And then there are the rewards. Unlike wallets that occasionally offer bonuses, Plus Wallet keeps the rewards flowing with two consistent earning streams. With Swap to Earn, users collect rewards on every trade, turning routine swaps into profit-boosting opportunities. On top of that, Refer to Earn lets users benefit from their network's activity, earning a share of rewards from friends' swaps as well as their own. This dual system provides a steady way to increase holdings over time. 2. MetaMask: The DeFi Gateway That's All About Ethereum MetaMask is like a Swiss Army knife for Ethereum lovers. It gives you easy access to thousands of decentralized apps (dApps) right from your browser or mobile device. You can swap tokens with minimal fuss and buy crypto using fiat money directly within the app. However, MetaMask isn't ideal for everyone. It supports only Ethereum-based networks, which means if you're looking to handle Bitcoin or Solana, you'll need another wallet. Plus, MetaMask's interface can be a bit tricky for newbies. And let's not forget the 0.875% fee for swaps—worth considering if you're a frequent trader. 3. Trust Wallet: Mobile Multi-Chain Tool Trust Wallet shines when it comes to multi-chain support. With compatibility with multiple blockchains, this wallet lets you trade, store, and stake a vast array of digital assets. With its built-in dApp browser, you can explore DeFi platforms like Uniswap and even shop for NFTs on marketplaces like OpenSea. The downside? Trust Wallet's Android app doesn't get as much love as the iOS version, which receives updates more frequently. However, for mobile users who want a versatile multi-chain wallet, Trust Wallet is a solid pick. 4. Coinbase Wallet: DeFi Made Simple for First-Timers Coinbase Wallet makes stepping into DeFi simple, especially for beginners. With support for over 100,000 digital assets and dApps, it's a great starting point if you're new to crypto. You can swap tokens, manage NFTs, and even explore DeFi projects all while enjoying Coinbase's renowned security. While Coinbase Wallet offers easy access across iOS, Android, and browser extensions, it lacks a desktop version, which could be a letdown for those who prefer using a computer. Additionally, Coinbase customer support has been criticized for slow responses. Rounding Up: The Best DeFi Wallets for 2024 These DeFi wallets give you full control, opening doors to dApps and Web3 without any middlemen. MetaMask sticks to Ethereum, offering easy dApp access but limited blockchain support. Trust Wallet supports many blockchains but lacks a desktop option, which could be a hurdle for some. Coinbase Wallet is great for beginners with its user-friendly setup, but the limited customer support might be a drawback. For those seeking a well-rounded option, Plus Wallet delivers a standout mix of cross-chain functionality and rewards, helping you grow your crypto holdings effortlessly! - Following a range-bound weekend, Bitcoin reached \$66,000 today. - According to statistics, approximately \$101.4 million in short positions were liquidated. On the last day, when the price of Bitcoin rose, crypto derivatives traders who had bet on a decline in the market were liquidated for almost \$100 million. Following a range-bound weekend, Bitcoin reached \$66,000 today, gaining 5.73% on the previous day. Bitcoin's price returned to levels not seen since a long time. Reaching a high of \$66,178 according to data from CMC, the highest level it has achieved so far in October. According to statistics from CoinGlass, approximately \$101.4 million in short positions were liquidated throughout the crypto market due to Bitcoin's quick price surge. October begins? Over \$180 million was liquidated from 54,849 traders. On the last day, \$52.83 million was accounted for by Bitcoin shorts. And \$27.26 million was accounted for by Ether shorts. TradingView reports that Bitcoin's market domination is near its greatest point since April 2021. When it surpassed 58%, thanks to its recent huge surge. In nine out of the last eleven years, October has shown positive returns for BTC, therefore analysts have hypothesized when the so-called "October" might start. We are entering one of the most exciting stages in the market, according to Bitcoiner Kyle ChassÃ©, who addressed his 219,000 followers on X on October 14th. Ether, meanwhile, recovered above \$2,600, after a 7.76% increase in the last day. Alcoins have also been trending upwards over the previous day, with Solana seeing a 7.56% increase in value. According to CoinShares, \$407 million has been put into global crypto funds last week by asset heavyweights including BlackRock, Bitwise, Fidelity, Grayscale, and ProShares. After losing \$147 million the week before, this was a dramatic turnaround. Highlighted Crypto News Today: Bybit's bbSOL Surpasses \$100M TVL, Unlocks New Earning Potential

The world of cryptocurrency is buzzing with news these days, and many people are closely watching the latest trends. Ripple (XRP) has been a hot topic, especially with talks about a possible ETF approval. However, some experts warn that just because an ETF might happen, it does not mean it will protect people from losing money. Because of this uncertainty, traders are looking away from Ripple and checking out other promising coins like SEI which is becoming popular as a new opportunity in the market. As more people get interested in SEI, IntelMarket (INTL) is also making a name for itself by giving traders cool features and tools to help them navigate this exciting landscape. With so many interesting possibilities coming up, investors are eager to see what is next for Ripple (XRP), SEI, and the unique offerings from IntelMarket while searching for the next big change. Ripple (XRP) is Facing New Challenges and Uncertain Times Ahead Ripple (XRP) is priced at around \$0.5354 and its market value is about \$38.33 billion. Recently, its price went up by 1.53%, but many investors are feeling nervous. The excitement around the XRP ETF is real, but some people believe it might not be enough to keep prices steady. Lately, XRP has been having a tough time. There are 99.99 billion XRP coins in total, and about 56.65 billion are available for trade right now. As the 7th largest cryptocurrency, it has a strong place in the market, but its recent price movements show that things are shaky. Interestingly, some big holders of XRP are still active, which means there could be some big trades happening. However, the price has not been stable, which worries many people. Investors are keeping a close eye on any news about rules that could affect Ripple (XRP). While some are hoping for a comeback, the future seems uncertain for this well-known cryptocurrency. SEI is a New Player Stepping Up to Challenge the Big Names SEI is rising quickly after the Ripple (XRP) runs into some bumps in the road. Right now, it costs \$0.424, and its market cap is about \$1.49 billion. It has increased by 4.73% in a single day and more investors are beginning to have faith in it. What makes SEI special is its focus on being fast and efficient, which attracts both new and experienced traders. It has a total supply of 10 billion tokens, with 3.52 billion available to date. This foundation marks a new option for those looking to invest. SEI is also making its platform better and easier to use, helping users trade and earn more money. As the market changes, SEI looks ready to challenge older coins like Ripple (XRP). It is an exciting time to see how SEI grows and what it can offer to investors. IntelMarkets: Your Key to Smart Trading and Maximizing Profits While XRP and SEI are in the spotlight, IntelMarkets (INTL) is changing how people trade in cryptocurrency. This platform works on both Ethereum and Solana, giving traders fantastic options. With a price of about \$0.027364, IntelMarket has already raised over \$1,070,828, showing that lots of people are interested. At IntelMarket, traders can use leverage of up to 1000x which means they could earn big returns on their trades. The platform also offers smart tools to help users manage their risks whether they are experts or just starting plus it is easier to spot the best opportunities with many asset pairs available in the rapid crypto market. The future looks bright for IntelMarket as it continues to grow, and with so much interest right now, now is an excellent time to see what this platform can do for you. Do not miss the chance to be part of the next wave in crypto trading, so just take a look at IntelMarkets today and find out how it can help you trade better. The second-largest cryptocurrency exchange in the world based on trading volume, Bybit, is excited to announce the ongoing development and expansion of its ground-breaking liquid staking token, bbSOL. bbSOL, Bybit's first Liquid Staking Token (LST), keeps providing users with an easy, safe option to stake SOL and get lucrative payouts. The rapid adoption of bbSOL has quickly increased its total locked value to above \$100 million USD. In addition to staking benefits, holders of bbSOL may now take advantage of three significant options to increase their earning potential: - Providing Liquidity to bbSOL Trading Pairs: On decentralized exchanges like Orca, Raydium, and Kamino, users may provide liquidity in return for trading fees. - Using bbSOL as Collateral: Users may lend, borrow, and unlock better returns by using bbSOL as collateral on partner platforms like as Drift, Kamino, marginfi, and Save. - Restaking bbSOL to Earn Extra Rewards: Users may restake bbSOL to earn additional rewards while bolstering the security and governance of the Solana network by using partner platforms such as Solayer. Emily Bao, Head of Spot and Web3 at Bybit added: "We're excited to see bbSOL's continued growth and success. The increasing total locked value demonstrates the trust and confidence our users have in bbSOL as a reliable and rewarding digital asset. The fact that bbSOL is available on both centralized and decentralized exchanges confirms its standing as a leading liquid staking token. Bybit is still dedicated to providing cutting-edge products and services that enable consumers to prosper in the digital assets space."

Cryptocurrency has countless opportunities for earning passive income in 2024. With staking becoming a popular alternative to mining, investors are looking for crypto staking platforms that simplify the process and give the best rewards. STAKING AI, a leading infrastructure operator for PoS blockchains stands out in this space. With liquid staking, high rewards, and an easy-to-use interface, STAKING AI is designed for both retail and institutional investors to make big money from their crypto assets. Here are 12 ways you can make passive income with cryptocurrency, with STAKING AI as the platform of choice. Key takeaways: - STAKING AI makes staking easy with competitive rewards and a free \$100 staking bonus upon sign up. - The platform has various staking plans to suit different investment needs with daily payouts and referral rewards. - With STAKING AI's affiliate program, you can earn lifetime commissions by promoting the platform to others. - Liquid staking allows you to access staked assets while still earning rewards. 1. Staking with PoS Blockchains Proof-of-Stake blockchains allow users to stake their crypto assets to validate transactions and secure the network. In return they get rewards. STAKING AI makes this process easy by offering staking options for multiple blockchains like Ethereum, Solana, and Polkadot. Investors can get secure and stable returns without having to manage a validator node. . 2. Liquid Staking for Flexibility Traditional staking locks your assets for a certain period, limiting liquidity. STAKING AI partners with leading liquid staking providers so you can earn rewards while using synthetic tokens to trade or participate in other DeFi protocols. This is perfect for investors who want to access their assets without sacrificing staking rewards. 3. Free Trial Staking Pool For beginners or conservative investors, STAKING AI has a Free Trial Staking Pool. You can stake \$100 for 1 day and earn \$1. This is a short-term option to test the platform and see the returns without a big commitment. 4. TRX Staking Pool For a bit more commitment the TRX Staking Pool allows you to stake \$200 for 1 day and earn \$2.2 in daily rewards. You can also earn up to \$1.6 in referral rewards by referring friends to STAKING AI. 5. Long-Term Staking Options STAKING AI has more staking plans that give higher rewards. For example, staking \$21,000 in Polkadot (DOT) for 10 days earns \$315 daily and \$630 in referral rewards. These plans are for experienced investors looking for steady and big returns over a longer period. . 6. Diversified Staking Plans Investors can choose from a wide range of staking pools according to their risk tolerance and financial goals. STAKING AI has flexible options from 1 day to 45 days, so you can tailor your strategy for maximum returns. 7. Earn with STAKING AI's Affiliate Program The STAKING AI Affiliate Program is a great way to earn passive income. By referring others to the platform, you can earn up to 4% of the stake amount. Commissions are credited in real-time and there is no limit on how much you can earn, perfect way for influencers and crypto enthusiasts with a large network. 8. Low Risk, High Reward Pools For investors looking for steady returns, STAKING AI has low-risk staking options. The Cosmos Staking Pool for example allows you to stake \$58,000 for 15 days and earn \$1,044 daily with an additional \$2,088 in referral rewards. 9. Maximize Earnings with Ethereum Staking Ethereum is still the top choice for many crypto investors. STAKING AI's Ethereum Staking Pool has one of the highest returns, \$200,000 stake earns \$6,000 daily for 30 days. For those who want to stake even more, the Ethereum Plus Pool gives you 10,500 daily with a 45-day commitment. 10. User Friendly Interface One of the best features of STAKING AI is its user-friendly interface. Whether you're new to staking or a seasoned pro the platform's point-and-click system allows you to stake multiple assets and monitor your earnings easily. This is perfect for crypto enthusiasts who want a hassle-free way to earn passive income. 11. Safety and Security Safety is key when staking crypto assets. STAKING AI has a regulated and secure platform, where your assets are locked directly into PoS networks ensuring they are protected from external risks. This level of security makes STAKING AI the top choice for anyone who wants to have peace of mind while earning. 12. Joining STAKING AI Signing up to STAKING AI is a 1-minute process. Create an account with your email and choose from the available staking plans. Once you've chosen a plan and made a deposit with one of the supported cryptocurrencies like BTC, ETH, USDT, etc. you can start earning daily. You'll also get a free \$100 bonus for signing up. Why STAKING AI? STAKING AI stands out in the crowded staking space by offering a comprehensive staking solution with lucrative rewards, an intuitive platform, and unmatched security. From beginner-friendly pools to long-term staking plans, STAKING AI has something for every investor. With features like liquid staking, lifetime referral commissions, and diverse payment methods, it's easy to see why more than 630,000 stakers trust STAKING AI to maximize their earnings. Make the smart choice before 2024 ends by staking your digital assets with STAKING AI, a platform where you can stake, earn, and relax. - Ethena (ENA) saw a 22.55% price increase, rising from \$0.3312 to a high of \$0.4059. - Ethena Labs proposed adding Solana (SOL) as collateral for its synthetic stablecoin, USDe. The synthetic dollar protocol Ethena native crypto ENA has jumped more than 22.55% in the last 24 hours, rising from a low of \$0.3312 to a high of \$0.4059. Currently, ENA is trading at \$0.3941 with a market cap of \$1.09 billion. Over the past week, ENA has gained over 33.66%, and in the last month, it has surged by an impressive 77%. Additionally, the daily trading volume for ENA has soared over 128% in the past day to \$230.61 million. The exciting rally in the altcoin primarily driven by Ethena Labs' recent proposal to integrate Solana (SOL) into the USDe ecosystem as a backing asset. This announcement follows Ethena's launch of six USDe synthetic stablecoins on the Solana blockchain in August, which utilized LayerZero's OFT standard. What Makes Ethena's USDe Different from Other Stablecoins? What sets USDe apart from stablecoins like Tether (USDT) and Circle's (USDC) is its synthetic nature; it's not backed by fiat assets at a 1:1 ratio. Instead, USDe maintains its \$1 peg by collateralizing stablecoins and utilizing a hedged cash-and-carry trading strategy. This approach is further supported by a reserve fund created to mitigate risks arising from market fluctuations. However, the integration of SOL as collateral is still awaiting approval from Ethena's independent Risk Committee. If the Risk Committee greenlights the proposal, Ethena plans to allocate \$100-\$200 million in SOL. This allocation would constitute around 5-10% of SOL's open interest. Additionally, Ethena has recently allocated \$46 million from its reserve fund. This investment focuses on tokenized real-world assets through platforms like BlackRock's BUIDL and others. As the ecosystem continues to evolve, Ethena's innovative strategies are poised to capture the interest of both investors and enthusiasts alike. - The success of BNB has propelled it to the position of fourth biggest cryptocurrency. Investors are starting to wonder whether BNB's recent outperformance will be sustainable. After momentarily challenging the \$555 support level, BNB, the native token of BNB Chain, gained 4.1% from October 10th to October 11th, indicating resilience. Despite a drop in the overall cryptocurrency market since July, the price of BNB has been quite consistent. The success of BNB has propelled it to the position of fourth biggest cryptocurrency, surpassing Solana in market value by a substantial \$15 billion. Investors are starting to wonder whether BNB's recent outperformance will be sustainable. Since on-chain activity for the chain fell by 37% in the last week. When Base network went live, it offered lightning-fast and cheap integration with Coinbase, the top US exchange and Web3 wallet service, so traders were understandably skeptical. Lowest Level in 4 Years One may make the case that Binance's services, like as discounted trading fees and exclusive access to the launchpad, contribute to BNB's value even if they don't directly affect BNB's utility on the BNB Chain. Nevertheless, BNB is extensively used in the ecosystem's decentralized apps (dApps) for trading, staking, yield farming, RWA, lending, launchpads, gaming, and derivatives markets, among other things. This is in addition to its role in network transaction fees. Examining on-chain deposits and network fees are crucial indicators to determine whether BNB Chain activity is indeed sustaining the BNB price. The value of BNB has dropped 11% in the last 24 hours, which is relatively unchanged from two months ago. However, during the week ending October 7, network fees fell to their lowest level in almost four years. There was a substantial 56% drop from the previous week's total fees of 1,880 BNB during that time period. Highlighted Crypto News Today:

- Hoskinson implied that Wright's ongoing litigation was an abuse of the justice system. - Wright had harsh words for Hoskinson and the Cardano initiative last year. Charles Hoskinson, founder of Cardano, wasted no time criticizing Craig Wright after his most recent legal move, a massive \$911 billion lawsuit against Bitcoin Core and Square. An influential crypto figure, Hoskinson, has voiced his displeasure with Wright's continuing legal proceedings. He wanted to know why the authorities kept letting these legal manipulations happen. Additionally, he implied that Wright's ongoing litigation was an abuse of the justice system. What drives this, in his view, are irrational assertions and acts of delusion. Abusing the Legal System In a massive lawsuit filed against Bitcoin Core and Square in particular, Charles Hoskinson, founder of Cardano, has released Craig Wright's next legal volley, a massive \$911 billion (\$1.2 trillion) lawsuit. According to the CaseBoard, Wright has filed a massive lawsuit of around \$911 billion over a falsely representing that Bitcoin Core Vision/BTC is the original Bitcoin. The contentious individual persists in claiming, in spite of ongoing disagreements and suspicion, that they are the genuine Bitcoin inventor. Concerned that Wright was abusing the legal system with his fantasies and sociopathic delusions, Charles Hoskinson took to Twitter to express his displeasure and ask why the man wasn't behind bars. The widespread dislike of Wright's contentious legal methods is emphasized by this harsh criticism. Among the crypto community's more vocal voices, Charles Hoskinson wondered aloud why authorities let Wright keep abusing the courts. There is a lengthy history of animosity between the founder of Cardano and the controversial entrepreneur. Wright had harsh words for Hoskinson and the Cardano initiative last year. He said that by casting doubt on his contributions to the area, he was misleading the community. Highlighted Crypto News Today:

BNB's CEO, Richard Teng, recently talked about the release of Binance's founder CZ from jail, which has gotten people excited about BNB's future. At the same time, Immutable (IMX) is making news with a new partnership with GRAMPUS to grow in Web3 gaming. But the standout right now is BlockDAG, a new kind of network that's catching everyone's attention. Its testnet has gotten great feedback, and some think it might even outdo Solana. This success has helped BlockDAG's early sales, pulling in nearly \$10 million in just 72 hours. BNB CEO talking about CZ's future and what it means for BNB. BlockDAG is quickly becoming a crypto player everyone wants to buy. BNB CEO talking about CZ's future and what it means for BNB. Trends BNB's CEO, Richard Teng, recently spoke about the release of Binance's founder Changpeng "CZ" Zhao, saying CZ will decide his own future at the company. Teng also said Binance has learned a lot from past errors, which has helped build more trust. In the last week, BNB's price went up by 10%, helped a bit by the U.S. Federal Reserve's recent cut in interest rates. Even though it dropped 1.3% in the last 24 hours, BNB is close to hitting the important \$600 mark, a level a lot of people are watching. This threshold shows the coin's strong performance and the positive mood in the market. With these updates, BNB stays a major player in the crypto world, keeping its spot as one of the top tokens out there. Immutable (IMX) Boosts Its Web3 Gaming Plans Immutable (IMX) has made a big move in Web3 gaming by partnering with GRAMPUS CWC. This deal will add two popular games, Norma in Metaland and My Merge Chef, to the Immutable zEVM platform. The first game, a Web3 version of Cooking Adventure, already has over 3 million players worldwide setting the stage for Immutable's ongoing growth in the gaming world. Run the Polygon GRAMPUS Immutable zEVM makes things smooth for both players and developers. With more than 100 games being made on the platform, the deal with GRAMPUS shows Immutable's commitment to changing how digital ownership works in gaming. Robbie Ferguson, co-founder of Immutable, talked about how important it is for players to own their in-game items, letting them trade and sell things across different games. BlockDAG Presale Soon To Hit \$100M While BNB and Immutable have established strong names, BlockDAG is becoming a hot topic in the crypto world. With the launch of its testnet

and a planned update to its brand, the project is rapidly gaining traction. The BlockDAG Testnet, launched in September 2024, has earned high marks for its speed and security, with many suggesting it could compete with major players like Kaspa and Solana. The testnet lets users check out BlockDAG's blockchain explorer, create BDAG coins, connect MetaMask wallets, and even try out smart contracts. This direct interaction has been key in building trust and excitement among developers and potential users. The focus on scalability and security has led to notable presale achievements, with over nearing \$94 million collected and early supporters seeing profits of 1960%. Additionally, big buyers have invested over \$10 million in just 72 hours after the testnet launched, reinforcing predictions that BlockDAG could hit a \$30 value after it fully launches. If the momentum continues, analysts believe it could exceed \$600 million in presale funds, potentially making it one of the most successful crypto presales ever. As more people become interested in crypto, they increase the demand and liquidity, making BDAG coins even more appealing. Currently, in batch 24, BDAG coins are priced at \$0.0206, showing a huge 1960% increase for those who first bought in at batch 1 at just \$0.001. For those looking for a promising opportunity, BlockDAG offers an exciting choice. Its cutting-edge technology, strong community support, and successful presale are positioning it as a major player in the blockchain arena. As the network approaches its mainnet launch, the future looks bright for BlockDAG. Key Insights While comments from BNB's CEO about CZ and the new Immutable (IMX) partnership have generated buzz, BlockDAG has truly captured the spotlight. Its powerful testnet, known for its efficiency, has driven a record-breaking presale. Within just 72 hours, significant amounts exceeding \$10 million were contributed to BlockDAG, marking it as the fastest-growing presale to date. With nearing \$94 million already raised, BlockDAG is rapidly establishing itself as the top crypto to acquire. As enthusiasm grows, BlockDAG is outshining competitors like BNB and Immutable. - The global crypto market rebounded 2.5% following the stronger-than-expected CPI data. - Bitcoin climbed to the \$63K zone, catalyzing rallies in various altcoins. Currently, it is trading at around \$62,848. After a week marked by mixed sentiments, the cryptocurrency market has bounced back positively, particularly following the release of the Consumer Price Index (CPI) data for September. The CPI rose by 0.2%, while the core CPI increased by 0.3%, both exceeding expectations. This data has led analysts to believe that the Federal Reserve is unlikely to cut interest rates by 50 basis points in November, and they may even decide against trimming rates altogether. As a result, the global crypto market cap surged over 2.5%, reaching \$2.2 trillion. Bitcoin (BTC) took the lead, climbing to the \$63K zone, and propelled rallies among various altcoins. This momentum sets a hopeful tone for October, often referred to as 'Crypto October,' known for its potential price increases. Bitcoin and Altcoins Surge Amid Positive Market Sentiment In recent trading, Bitcoin peaked at \$63,400, although it has seen slight fluctuations, currently trading at around \$62,848 as per CMC data. Ethereum (ETH) also displayed a modest rise of 1.45%, trading near the \$2,450 mark. This positive trend has rippled through the altcoin market, with Avalanche (AVAX) seeing an impressive jump of over 10%, moving from a low of \$26.37 to a high of \$28.98. Other cryptocurrencies, such as SOL, also rose by about 12%, reaching \$2.16 from \$1.93. Major players like XRP, Solana, and BNB recorded increases between 3% and 4%. Even memecoins are enjoying the spotlight. Dogecoin (DOGE) rose by 3% to \$0.1112, while Shiba Inu (SHIB) climbed 5% to \$0.000179. Other leading memecoins, such as PEPE and Dogwifhat (WIF), have also experienced notable gains, rallying 7% and 8%, respectively. Furthermore, the relatively new meme coin Popcat (SOL) hit an all-time high of \$1.49, surpassing FLOKI in value. As the market shifts gears, investors remain optimistic about the potential for further gains this month. Highlighted Crypto News Today

The crypto world is electrified with new developments, as some of the biggest players make headlines. Binance Coin (BNB) is showing unusual stability, Polkadot is about to roll out a game-changing upgrade, and BlockDAG is causing a stir with an explosive presale that's hard to ignore. Let's dive into what's happening with these major players and why BlockDAG might be the breakout star of 2024. Binance Coin's Unshakable Stability In a market famous for wild swings, Binance Coin (BNB) is trying to stay steady. Since late August, BNB's price has been stuck in a tight range, signaling consolidation. Key technical markers, like the 20-day EMA and 50-day SMA, show flat lines, signaling market indecision. Indicators like the ATR at 24.6 and Bollinger Bandwidth at 18.48 further confirm the reduced volatility. Polkadot's JAM Chain: Ready to Take on Ethereum 2.0? Polkadot is preparing to flip the script with its upcoming JAM Chain upgrade. Historically, Polkadot's complexity has been its Achilles' heel, making it harder to compete with more user-friendly ecosystems like Ethereum and Solana. But JAM Chain promises to change the game. This upgrade will allow developers to directly deploy smart contracts on Polkadot's core layer, ditching the need for parachains and simplifying the process. BlockDAG's Explosive Rise: Why It's the One to Watch While BNB stays steady and Polkadot gears up for a major upgrade, BlockDAG has burst onto the scene with an explosive presale. It's made history by raising attention with a massive 1960% price surge, jumping from \$0.001 to \$0.0206. Such rapid growth is rare, signaling immense market confidence. Experts are already forecasting a potential 20,000% return for early backers. BlockDAG isn't just generating buzz; it's laying out a robust ecosystem. One standout feature is the TG Tap Miner game, where users can earn BDAG coins by playing. This approach not only makes the platform engaging but also fosters a vibrant, loyal community. Similar to how Polkadot's JAM Chain upgrade aims to simplify development, BlockDAG is focused on accessibility and user interaction. With a strong presale that has raised almost \$94.5M and an impressive 1960% increase, BlockDAG is clearly making a name for itself. If you're looking for a presale in the crypto market, BlockDAG's potential to become a leading name in the industry makes it one to watch closely in the coming months. The Final Thought The crypto market is constantly evolving as fresh developments and projects shift its direction. Binance Coin's steady performance, Polkadot's bold JAM Chain upgrade, and BlockDAG's remarkable presale each showcase unique qualities within this space. Whether you're seeking stability, cutting-edge technology, or a rising opportunity, these three cryptocurrencies cater to a range of interests. - The SEC has sued Cumberland DRW LLC for trading over \$2 billion in crypto assets without dealer registration. - The SEC's complaint names five assets as securities: SOL, POL, ATOM, ALGO, and FIL, noting that this is not an exhaustive list. The U.S. Securities and Exchange Commission (SEC) has taken legal action against Chicago-based Cumberland DRW LLC, accusing the firm of operating as an unregistered dealer in cryptocurrency assets. Cumberland allegedly handled over \$2 billion worth of crypto assets, which the SEC considers securities, without registering as required by federal securities laws. The SEC's lawsuit, filed in the Northern District of Illinois, claims Cumberland has been conducting this unregistered trading since at least March 2018. Cumberland is a well-known liquidity provider in the crypto space. It is the digital asset arm of DRW Holdings, a firm founded in 1992, recognized for its expertise in derivatives trading. The SEC emphasized in the document that laws designed to protect investors apply to all securities dealers. This includes those dealing in crypto assets. SEC Labels Five Cryptos as Securities in Cumberland Case According to the regulator, the firm operates Marela, a trading platform available 24/7. That allows over 1,500 high-net-worth individuals and organizations to trade crypto assets. This includes well-known participants in the crypto world. Further, the SEC complaint identifies five assets it classifies as securities, including Solana (SOL), Polygon (POL), Cosmos (ATOM), Algorand (ALGO), and Filecoin (FIL). However, the complaint specifies that this is not an exhaustive list of such assets. The SEC's complaint accuses Cumberland of violating Section 15(a) of the Securities Exchange Act of 1934. That seeking penalties, including the return of ill-gotten gains, interest, and other financial penalties. In response, Cumberland stated that it had made sincere efforts to comply with SEC regulations and expressed frustration over the allegations. However, this legal action marks another step in the SEC's ongoing efforts to regulate the crypto market. Also, it aims to ensure companies follow proper registration procedures to protect investors. Highlighted Crypto News Today Trump's World Liberty Financial to Raise \$300M via New Token Sale

Xandeum, the Solana scaling solution that unveiled its tech and tokenomics at Breakpoint 2024, has been catching a lot of attention lately. Its proposal for bringing virtually unlimited storage to Solana dapps has caught the interest of developers and the attention of builders. They are now transitioning to a new solution under Xandeum Foundations's reign, using the XAND token. If you're a Xandeum community member who's interacted with the project in the past, such as purchasing a node, you're eligible for an insane amount of points - which will be convertible into \$XAND when the token launches. Here's what you need to know to maximize your rewards. How to Win at Xandeum It's common for tech roadmaps to be adjusted on the fly, since concepts elucidated in documentation can require reconfiguring once it comes to production. In addition, new tooling and blockchain technology can alter the environment in which teams are planning to launch, necessitating a shift in strategy. While Xandeum's goal of providing the 'second drive' for Solana hasn't changed, the delivery mechanism has. The proposed L1, provisionally called Xandeum Classic and powered by the \$XAND token, has been replaced by a new solution led by the Xandeum Foundation. As revealed at Breakpoint 2024, Xandeum will now be developing a smart contract native storage layer featuring 'Xandeum buckets,' a scalable file system integrated directly into Solana RPC nodes that can hold exabytes of data. There's no need to delve deeper into the particulars of Xandeum's tech at this stage, other than to add that there'll still be a token - \$XAND - of 60 million of which will be airdropped during the first airdrop. If you're interested in maximizing your points, head to the Xandeum points app, connect your wallet and check your eligibility. Millions of Points to Be Earned Xandeum will be honoring points earned by community members up until now for completing various actions, and it's doing so generously. For example, if you purchased a node that was originally intended for use in Xandeum Classic, you'll be eligible for 1M points instantly. The value of these points comes when they're converted into a token airdrop. Thus, if you've yet to register with Xandeum's points app, now's a good time to do so in order to maximize your rewards for the forthcoming airdrop. Sixty-four million points have been collected so far by community members who've registered. While XAND's token listing price is still to be confirmed, it's believed to be in the cents rather than in fractions of a cent. Given the prospect of 1M points going to node owners, plus smaller amounts for other eligible claimants, there's the potential to do very well out of Xandeum's points program. If \$XAND lists at \$0.02 for instance, 1M points would be worth \$20K, while a token price of \$0.06 would boost that to \$60K. So now you know. If you're eligible, don't fade Xandeum's points program and forthcoming airdrop. Disclaimer: TheNewsCrypto does not endorse any content on this page. Sonic SVM, a Solana-based blockchain gaming Layer-2 infrastructure firm, has developed the first Web3 game with an embedded wallet on TikTok, the world's most popular video sharing app. With the help of its embedded wallet, the new game SonicX makes it easier for TikTok users to get started and introduces them to the advantages of Web3 and decentralization. The first atomic SVM L2 built to support sovereign game economies that finalize on Solana is Sonic SVM. It is powered by HyperGrid, a core technology developed by Mirror World to support Solana grids, which allows developers to implement unique Sonic Solana Virtual Machine (SVM) chains that provide significant scalability benefits. Building on the popularity of 'tap-to-earn' games like Notcoin and Hamster Kombat on Telegram, SonicX is an HTML5 clicker game. Users may start playing the game right away since it's embedded within the TikTok app. They only need to touch the screen to create rings that are hosted on-chain. Players will be able to earn more blockchain-based incentives, such as cryptocurrency and NFTs, by gathering rings. The game's inbuilt wallet offers account abstraction features that enable players to easily recover their passwords without having to handle private keys. To begin users just need to sign in using their TikTok account. From there, the blockchain will record all of their accomplishments and the rings they earn. Along with completing daily tasks and moving up the game's leaderboard, players may get extra rewards by recommending friends. With \$12 million in funding, Sonic SVM is building a foundation for Solana's blockchain gaming industry. It has created a cutting-edge Solana infrastructure that developers can use to build game-specific rollups, or Layer-2 networks that group transactions off-chain to execute them more quickly and at a reduced cost. This is an area that is ready to expand. Due in part to the emergence of blockchains specifically targeted at gaming, such as Immutable X, Solana has mostly gone unnoticed by blockchain game creators, despite the fact that it is already a formidable power in DeFi, where its expanding ecosystem rivals Ethereum's. Sonic SVM dramatically increases Solana's speed and scalability with its innovative architecture, which makes use of the Sonic Virtual Machine and

HyperGrid, a strong horizontal scaling framework. This makes Solana the perfect network for Web3 games. The ability to quickly export oneâ€™s private key for use with other Web3 apps in the Solana ecosystem is a fundamental benefit of SonicXâ€™s integrated wallet. Chris Zhu, Co-founder & CEO, commented: â€œThe way we simplified the SonicX login flow on TikTok allows us to tap into a totally new set of users globally. We are eager to further improve the user experience in TikTok and provide the same capabilities to tons of Solana applications.â€ The introduction of SonicX on TikTok demonstrates how much account abstraction wallets may hasten the adoption of Web3. More than 120,000 TikTok users have already been onboarded into Web3 for the first time since its introduction last month.

Bybit, the worldâ€™s second-largest cryptocurrency exchange by trading volume, is pleased to announce the successful completion of bbSOLâ€™s first month, a significant milestone in the quest to improve token staking on the Solana blockchain. With its innovative marketing approach and smooth integration across centralized and decentralized platforms, bbSOLâ€™the first exchange-backed liquid staking token (LST) on Solanaâ€has quickly garnered traction. Because of its distinct position at the nexus of decentralized finance (DeFi) and centralized finance (CeFi), bbSOL has been a standout in the Solana ecosystem since its introduction. Key Milestones of bbSOLâ€™s First Month: TVL (total value locked) exceeds 85 million: The fact that bbSOL has outperformed other exchange-backed staking tokens in TVL demonstrates both its enormous user appeal and its expanding power inside the Solana ecosystem. This spike in TVL is a result of both Bybitâ€™s dedication to provide outstanding staking possibilities and the tokenâ€™s widespread acceptance. Increased Accessibility: On October 10, 2024, at 10 AM UTC, bbSOL will be listed on Bybit Spot, giving users more access to trading possibilities and liquidity benefits across a variety of ecosystems. Token holders may benefit from a simplified experience thanks to bbSOL, which connects Bybitâ€™s centralized exchange with the larger DeFi ecosystem. Strategic Alliances: bbSOL has collaborated with Jupiter Exchange, the top swap aggregator in Solana, in addition to being available on Bybit Spot. This partnership improves liquidity options and expands bbSOLâ€™s functionality for users who want to trade effectively inside the Solana ecosystem. Emily Bao, Head of Spot and Web3 at Bybit stated: â€œWe are incredibly proud of the communityâ€™s enthusiastic response to bbSOL. bbSOLâ€™s success in its first month is a testament to the power of combining Bybitâ€™s global reach with the innovation and agility of decentralized platforms. With its listing, weâ€™re further expanding accessibility and unlocking even more opportunities for our users to trade and benefit from bbSOL. We look forward to building on this momentum and bringing even more partners into the fold as we continue to shape the future of token staking.â€

As Nasdaq investors take notice of the crypto market, past chartâ€™s long-term analysis have shown that a few names always seem to rise to the top: Bitcoin (BTC), Ethereum (ETH), and Solana (SOL). However, occasionally, a relatively unknown company appears in the market, draws the attention of experienced professionals, and creates a stir. A man who predicted the Nasdaq crash recently compared Ethereumâ€™s meteoric rise in 2021 to an obscure altcoin that is still under \$1. RCOF is the next altcoin being touted as the next big thing, and the numbers suggest that it has the potential to deliver a mind-boggling 10,000x in the next three years. Ethereumâ€™s 2021 Rally: A Blueprint for Explosive Growth The year 2021 marked a turning point in Ethereum, which rose from under \$1,000 to over \$4,800 in a few months. It was not only the spectacular price increase that caused people to pay attention to Ethereum; it was also the way Ethereum paved the way for DeFi and NFT. Smart contracts brought a new era in the blockchain world, and those who invested in Ethereum initially got very rich. Now, the crypto world is discussing another altcoin called RCO Finance, which many people expect to repeat Bitcoinâ€™s fate, begin with a minimum price and end up at the top. RCO Finance: The Altcoin Poised for Ethereum-Level Gains Like Ethereum in its early stages, the Nasdaq expert stated that RCO Finance is ready to revolutionize decentralized finance. Due to its features and integration of AI, RCOF will revolutionize the trading space, greatly improving how digital assets are traded and dealt with in the altcoin market. RCO Finance stands out from the rest due to the inclusion of an AI robo-advisor that provides customized trading solutions based on investorsâ€™ preferences. This feature is unique because, with its help, even inexperienced traders can interact with highly volatile financial markets. These strategies consider factors such as risk profile and investment objectives. They are dynamic and change in response to market conditions in real time. This continuous monitoring ensures that investors are always ready to exploit new opportunities without the emotions that are likely to affect human beings. Another strong selling point of RCO Finance is its versatility in trading in a variety of securities, such as real estate, stocks, bonds, and commodities like Nasdaq. Converting RWAs to cryptos erases barriers that were previously erected between traditional finance and digital currencies. Users can use their cryptos to trade these assets directly on the platform without cashing out their assets. This eases the trading process, improves liquidity, and expands investment opportunities for users. The features of automated market-making improve RCO Finance. Some of the features include: Users can supply liquidity into different trading pairs on the platform and earn some fees. This liquidity provision helps the ecosystem and enables participants to profit from yield farming. RCO Finance provides a high level of leverage of up to 1000:1 on crypto trading, allowing investors to make high profits with small amounts of money. Together with low transaction fees, it is a perfect choice for both old-timers and newcomers who look for powerful investment tools. Security is a significant factor in cryptocurrency, and RCO Finance excels in ensuring security with constant audits from leading security firm SolidProof. This commitment increases investorsâ€™ confidence, and users can use it without any concern. The non-availability of KYC verifications reduces privacy concerns. Invest in RCO Finance (RCOF) For High ROI The presale phase of RCOF has already attracted massive attention, with investors investing more than \$2 million to purchase RCOF altcoin at a relatively lower price than its future value. Currently trading at \$0.0344, early investors will make handsome profits because estimations indicate that RCOF could be valued between \$0.4 and \$0.6 during its launch. In addition to financial returns, RCOF altcoin holders will be able to enjoy other privileges within the ecosystem, including quarterly dividends depending on the amount of holding and the right to vote on significant decisions that will determine the further development of the platform and create a community around the RCOF ecosystem. RCO Finance is set up as another altcoin and a revolution within the altcoin industry. The combination of its AI technology, the integration of a wide range of assets, high-leverage options, and security make it possible to argue that it could replicate Ethereumâ€™s performance by 2025. For more information about the RCO Finance (RCOF) Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoinâ€™s price showed an additional 2.54% drop in the last 24 hours. - The cryptocurrencyâ€™s daily trading volume showed a 0.33% increase as per CMC data. While the world mourns the passing of tech giant Ratan Tata, cryptocurrency prices fell in the last 24 hours. The community also received news about the US FBIâ€™s creation of a new token to entrap suspects involved in market manipulation. Meanwhile, the largest cryptocurrency has yet again initiated a bearish price cycle in the past day. Notably, the altcoin sector also reflected the bearish sentiment as leading altcoins Ethereum and Solana fell to previous support levels. Bitcoin has recorded an additional 2.54% price decline revisiting its consistent support level at \$60K. This bearish cycle continues the tokenâ€™s dip from its opening price of \$62,000. As the day progressed, the token fell to an intra-day low of \$60,317. According to CMC data, at the time of writing, BTC was trading at \$60,981. Zooming out, on inferring the digital assetâ€™s weekly price chart, it depicts a persistent downward pressure in price actions. At the beginning of the week, the token was trading at \$60,153, however, in the following days, Bitcoin showed price increases. Following this, contrary to expectations, the digital asset failed to sustain the positive momentum and has bounced back to last weekâ€™s price cycle. Parallely, the US spot Bitcoin ETFs have also shown negative inflows in the last trading day. According to SoSoValue data, the ETFs recorded an outflow of \$30.59 million as of October 9, continuing the previous dayâ€™s outflows. Specifically, Ark Invest and 21Sharesâ€™s ARKB recorded the highest outflow of \$44.47 million. Will Bitcoin Price Overcome the Bearish Pressure? As the first quarter of the month approaches an end, there has been no sight of the bullish cycles that begin in October (Uptober). The community, investors, and market analysts alike have been keenly watching Bitcoinâ€™s price actions. On inferring TradingView data, Bitcoinâ€™s Moving Average Convergence Divergence (MACD) signal line stands below the MACD line suggesting a negative market sentiment. Additionally, the continuous price drop has rendered Bitcoin to lean toward an oversold state as indicated by the RSI with a value of 46.12. However, market analystsâ€™ previous predictions suggest a depreciation before the bullish cycles. This has led members to hold out for the bullish cycles to begin later this month. Meanwhile, other altcoins such as WorldCoin and SUI have also garnered market attention for their intriguing price activity. Highlighted Crypto News Today: Thai SEC Proposes New Regulations for Fund Investments in Crypto Assets

- Mythical Games, has migrated as a parachain into the Polkadot ecosystem. - For digital goods, the Mythical Platform also offers custodial and non-custodial gaming wallets. With over 3.6 million accounts established, Mythos is the main force behind the spike in activity on the Polkadot network. The creator of popular games like NFL Rivals, Mythical Games, has migrated as a parachain into the Polkadot ecosystem. By using Polkadotâ€™s EVM module, developers may leverage the WebAssembly-based Substrate framework and assure address compatibility with the EVM. According to Kasper, DMarket continuously has the greatest NFT collection in the world, with daily sales exceeding \$600,000 and over 25,000 transactions by gamers purchasing and selling in-game items. NFL Rivals transactions are handled mostly on Mythical Market, but other collectionsâ€™like Blankos, Nitro Nation, and many moreâ€will soon be available there as well. Mythical Gamesâ€™ CFO Kasper Joergensen told Investing.com: â€œIn July we migrated Mythical Market to Polkadot, and now we are migrating both the Blankos collection to Mythical Market as well as D-Market to Polkadot. This is currently in excess of 5M wallets being migrated to Polkadot.â€ Not only is Mythos supporting this game, but it is also growing by moving its Mythical Market and NFT collectionsâ€™like DMarket and Blankosâ€™to Polkadot. Mythical Games CEO John Linden claims that Polkadotâ€™s integration with Mythical Market is a component of a plan to improve gaming asset secondary trading. The decentralized nature of the platform guarantees the security and transparency of every transaction on the Mythos Chain. It is a significant participant in the gaming blockchain space thanks to this strategy, behind only large layer 1 chains like Ethereum, Bitcoin, Solana, and Polygon. Skylanders, Call of Duty, World of Warcraft, Marvel Strike Force, and other popular brands have all been built by Mythical Games, an organization led by veterans of the gaming industry that creates games with player-owned economies. For digital goods, the Mythical Platform offers custodial and non-custodial gaming wallets. This configuration safeguards novice players on the blockchain while enabling experienced players to link their own wallets via bridges connecting the Mythical Chain to public mainnets.

- The Thai SEC is proposing new regulations to enable mutual and private funds to invest in cryptocurrencies. - A draft proposal has been released for public feedback until November 8, with final regulations expected next year. The Thai Securities and Exchange Commission (SEC) has proposed updating investment regulations to allow mutual and private funds to invest in crypto assets. This comes as the country sees growing interest in cryptocurrency, especially with more institutional players getting involved. The draft proposal released by the Thai SEC on Oct 09 currently seeks public feedback on new criteria for funds investing in digital assets. This move follows the U.S. SEC approval of the first spot Bitcoin ETF in January, which sparked growth and attracted interest from Thai investors and securities firms. The Thai SEC is also looking to let securities companies and asset managers offer crypto-related services, including permitting funds to invest in crypto ETFs listed on U.S. exchanges, as well as investment tokens. Proposed Regulations and Investment Limits for Crypto Assets in Thailand These tokens will have similar investment limits as traditional securities like stocks and bonds, as they are considered to have comparable risks. The SEC also intends to provide more flexibility for funds targeting wealthy and institutional investors, removing investment limits for those interested in crypto ETFs. However, retail mutual funds will be capped at a 15% allocation to digital assets to manage risk. For institutional and ultra-high-net-worth investors, there are no limits on investments in crypto ETFs, and the funds are allowed to allocate up to 20% of their net asset value (NAV) to crypto assets and derivatives. Additionally, the SEC is allowing select private firms to participate in a sandbox project where digital tokens or cryptocurrency can be exchanged for Thai baht, as per a local report by Bangkok Post. The regulator is also considering stricter penalties for those violating SEC laws, with plans to raise fines and enforce penalties for serious offenses like stock manipulation and naked short selling. Mainly, the public comments on the proposal are being accepted until November 8, with final regulations expected to be implemented next year. Presale cryptos are like hidden gems in the crypto worldâ€™early participants can win big before these coins become well-known. Think of those who joined Solana or Bitcoin early on and are now seeing huge profits! This article explores four affordable presale cryptos priced under \$1 that are poised for significant growth. Each offers groundbreaking technology or just pure fun, making them unique. Letâ€™s review each one to see which could soar in October 2024. 1. BlockDAG: The Crypto Solving Big Challenges Cryptocurrency has always faced a critical problem: balancing speed,

security, and broad access without compromise. When other blockchains struggled, BlockDAG introduced a new solution. BlockDAG doesn't force a choice between speed and security. It uses a special blend of blockchain and Directed Acyclic Graph (DAG) technology. Imagine a multi-lane highway where cars (transactions) speed along without delays. That's how BlockDAG keeps transactions fast and secure. This breakthrough helped the project gather over \$92 million quickly during its presale, and early participants enjoyed gains of 1960%! BlockDAG also aims to make crypto easy for everyone, regardless of their tech skills. Experts believe BlockDAG could offer a return up to 30,000 times in the future. Right now, BDAG coins are just \$0.0206 each in the latest presale. So, even a small buy now could grow significantly later. 2. Pepe Unchained (PEPU): The Fast Track for Meme Coins Pepe Unchained (PEPU) is creating a Layer-2 network tailored for meme coin users, offering quicker and cheaper transactions than on Ethereum. If high fees are a hassle for moving your DOGE or PEPE, PEPU is here to help. Pepe Unchained also plans to develop a full trading ecosystem for meme coins, including grants to support more development. The project has already raised \$16.4 million in its presale, with PEPU tokens priced at just \$0.00989 currently. 3. Crypto All-Stars: Digital Coin Bank Crypto All-Stars (STARS) is quickly gaining attention with its new MemeVault, a unified staking platform. Picture it as a piggy bank for your favorite meme coins like DOGE, SHIB, or PEPE. By depositing them in the MemeVault, you'll receive rewards in STARS, the platform's own currency. This method not only allows meme coin enthusiasts to earn passive rewards but also unites the diverse meme coin community in a single hub. With over \$1.8 million gathered during the presale and STARS tokens valued at \$0.001471, Crypto All-Stars may be paving the way for remarkable growth. 4. Memebet: Virtual Meme Coin Casino Envision stepping into a casino where the chips are meme coins. That's precisely what Memebet (MEMEBET) provides. Whether you're playing with PEPE, WIF, or other well-known meme coins, this crypto casino offers meme coin fans a fresh, enjoyable experience. Memebet is also set to introduce lootboxes soon, promising an added thrill. Its presale has collected over \$330,000, with MEMEBET tokens at \$0.0255 each. The Bottom Line Pepe Unchained, Crypto All-Stars, and Memebet all offer an engaging blend of meme-coin fun and growth possibilities. However, for those aiming for substantial rewards, BlockDAG stands out as the top choice for October 2024. With its advanced blend of blockchain-DAG technology, features like mining directly from your phone, and a crypto payment card, it's viewed as the most reliable option for significant long-term gains. Having secured over \$92 million in its presale and with expectations of a 30,000x return, BlockDAG could be the gateway to potentially transformative outcomes for early participants! With MultiVM support for MoveVM and EVM dApps, Supra, the 500k TPS Layer-1 blockchain, presents Supra Containers, a revolutionary solution that may well do away with the requirement for Layer-2s (L2), Layer-3s (L3), and AppChains. Supra Containers herald a new era for dApps and on-chain development by providing builders with the flexibility of dedicated L2s and AppChains without the expensive infrastructure, fragmented liquidity, or difficult security concerns navigating the L2 maze. Composability and Security To get over the congestion and scalability problems they encounter on Layer-1s, builders have resorted to L2s and L3s. They quickly encountered their own set of issues, too, including the need to bootstrap network security, fragmented liquidity, and broken composability. By enabling developers to designate specific execution space for their dApps (DappSpace) and using the whole potential of Supra's high-performance Layer-1, Supra Containers remove these obstacles. Supra Containers: Access Seamless Composability and Shared Liquidity With dedicated compute or execution space, customizable governance, and the ability to create your own token economies, Supra Containers provide the flexibility of L2s without any of the drawbacks. Builders no longer have to invest time and money in developing sophisticated bridging systems, validators, or network security from scratch. Every Container is secured by Supra's L1 node network, allowing developers to concentrate only on creating cutting-edge dApps rather than infrastructure. Because Supra Containers preserve atomic smart contract transactions and connect easily with other Containers and Supra's ecosystem, dApps may communicate with one another without difficulty. Supra Containers may share liquidity over the whole Supra L1 network, guaranteeing seamless operations and access to a unified pool of assets, in contrast to L2s where fragmented liquidity becomes a major detriment. Built-In Services and MultiVM Ecosystem Compatibility Additionally, Supra Containers provide a built-in, vertically integrated stack of essential blockchain services that Supra L1 natively provides, including oracle price feeds, cross-chain connectivity, onchain verifiable randomness, and automation. Containers provide these functionalities natively, saving money on the expenditures otherwise incurred on integrating these external infrastructures. This is in contrast to L2 appchains, where oracle and bridge integrations may be expensive and difficult. Because Supra is also MultiVM compatible, developers from ecosystems like MoveVM, EVM, and eventually SolanaVM will be able to deploy dApps on their own Supra Containers right now without having to worry about laborious migrations. With this flexibility, developers from different ecosystems may take use of Supra Layer-1's 500k TPS throughput and sub-second consensus latency, launching a new wave of dApps and Containers that are scalable, effective, and interoperable. Every Supra Container Can Be an Entire Ecosystem Supra Containers have far more promise than just one or two dApps. By implementing many dApps and smart contracts within their Container, developers may even create whole ecosystems inside their custom environment. They have the ability to draw in new initiatives to implement in their infrastructure. A gaming studio, for instance, may introduce a Container as a decentralized gaming ecosystem with distinct token incentives, all the while taking use of Supra's shared security and liquidity. They could even utilize the same utility token in numerous games inside their Container ecosystem, or even in other Containers, and gate their Container with their own onchain passes or NFTs. Joshua Tobkin, CEO of Supra, explains: "With Supra Containers, we're not just simplifying dApp development - this might eliminate most needs for L2s and AppChains altogether. Developers now have the freedom to launch their own ecosystems with full control over governance and token economies, while enjoying the security, composability, and shared liquidity of Supra's Layer-1 infrastructure." A paradigm change, supra containers provide developers a quicker, less expensive, and more effective approach to create robust dApps and their own custom economies. Supra is revolutionizing the development of blockchain apps by offering dedicated execution space, customizable governance, and tokens without the trade-offs associated with conventional AppChains.

London, United Kingdom, October 9th, 2024, Chainwire - Stablecoin Standard's newly introduced set of global standards receives endorsement from a number of stablecoin issuers, including GMO-Z.com Trust Company ("GMO Trust"), StraitsX and Bilira, that offer 610 currencies including JPY, SGD, TRY & USD - Standards also endorsed by top ecosystem participants including Fireblocks, Solana, Bitstamp, Zodia Markets and JST Digital Stablecoin Standard, the industry body for stablecoin issuers globally, today announced that their recently unveiled set of global standards for stablecoin issuers have been endorsed by some of the leading stablecoin issues and ecosystem participants in the industry. Among those who have endorsed are Archblock, Bilira, Bitstamp, GMO-Z.com Trust Company ("GMO Trust"), JST Digital, Fireblocks, Solana Foundation, StraitsX and Zodia Markets, signaling a new era of cooperation and standardization within the stablecoin industry. The standards, announced by Beth Haddock, Global Policy Lead at Stablecoin Standard at the Annual Flagship Event in Singapore, were designed to promote operational resilience, transparency and consistent issuer commitments globally. Stablecoin Standard's Policy Working Group created the high-level standards that are both transparent and actionable, while being sensitive to the innovation in the market. Beth Haddock, Global Policy Lead at Stablecoin Standard, commented on the endorsements: "Our endorsement not only validates the rigor of our proposed framework but also underscores the importance of creating a stable, transparent, and resilient environment for digital currencies. This milestone, following discussions at our annual meeting, sets a strong foundation for the continued evolution of the ecosystem." The endorsement of the standards lays the groundwork for a stablecoin ecosystem that prioritizes transparency, security and consumer protection. With increased scrutiny from regulators and growing demand for digital assets, unified standards can provide clarity and assurance to both industry participants and the public. Stablecoin Standard's new framework aims to accelerate the adoption of stablecoins by fostering greater confidence among consumers, regulators, and traditional financial institutions. Ramy Soliman, Co-Founder of Stablecoin Standard, commented on the endorsements: "The endorsement of our standards by leading stablecoin issuers such as a unified, trusted framework for the entire sector. As stablecoins continue to redefine the future of digital payments, these standards will provide the foundation for long-term growth, transparency, and security. This collective commitment solidified during discussions at our annual meeting" not only underscores the industry's dedication to fostering innovation but also demonstrates a concerted effort to align with evolving regulatory expectations and build the consumer trust essential for stablecoins to thrive globally. Stablecoin Standard and its endorsing members plan to continue refining these standards for implementation with the goal of achieving industry-wide adherence by Q4 2025. Quotes from Endorsers: Sinan KoÅ, Co-founder and CEO of Bilira, commented on their endorsement, "As a stablecoin issuer, Bilira has always prioritized transparency, security, and adherence to high standards, which is why we are proud to endorse the Stablecoin Standard's newly introduced set of global standards. TRYB is governed with a commitment to uphold these principles, which we believe are essential for fostering trust and stability in the rapidly evolving digital asset space. We support this initiative as a significant step towards a more resilient and unified stablecoin ecosystem." Ran Goldi, SVP Payments and Network at Fireblocks, commented on their endorsement, "With more than a dozen stablecoins issued on Fireblocks, we strongly believe these standards are the right path for our ecosystem with regard to interoperability and reaching the holy grail of instant liquidity any time, anywhere. SCS is taking a big, bold step, and we proudly endorse and stand with them on this journey." Kenny Chan, Head of StraitsX, commented on their endorsement, "As one of the leading regulated stablecoin issuers in Asia, StraitsX is committed to upholding the highest standards of transparency and operational resilience. We are proud to support the Stablecoin Standard's newly introduced global standards, which will help build greater trust in the stablecoin ecosystem and ensure that digital currencies can be securely and seamlessly adopted by businesses and consumers worldwide. By working collaboratively with key industry participants, we believe these standards will provide a strong foundation for the future of stablecoins, promoting innovation while ensuring compliance with evolving regulatory frameworks." About Stablecoin Standard Stablecoin Standard (SCS) is the industry body focused on setting operational, transparency, and product related standards for stablecoins. The SCS plans to achieve industry wide standards by sharing international best practices, business development use cases, forming industry led working groups defining what a high-quality liquid stablecoin should look like, and engaging with policymakers domestically & internationally. The SCS ecosystem consists of over 30 advisory board members, industry partners and issuers that offer digital currencies in global jurisdictions such as the US, EU, Singapore, Australia, and Turkey - among others. Users can follow the Stablecoin Standard on LinkedIn and X and to learn more, please visit: <https://stablecoinstandard.com/> Contact Kevin McGrath stablecoinstandard@groupscs.com

Established cryptocurrencies like Cardano (ADA) and Ripple (XRP) set their eyes on the price of \$5 by 2025, in a new cryptocurrency that has captured the attention of analysts and investors the most: Rexas Finance (RXS). Currently priced at more than \$0.10, it seems some investment proprietors are artistic in thinking Rexas Finance could pump to a staggering \$17 by 2025 even with its relatively new approach to asset tokenization. The Rising Star: Rexas Finance (RXS) Rexas Finance (RXS) is not an ordinary altcoin that most people are used to. It revolutionizes in a way in which it permits someone to own a fraction of a real-world asset, in this case a real estate property. A variety of asset classes such as real estate, commodities, fine art,, and other high-value assets can be tokenized and made available for purchase through its Platform, This paradigm shift in asset ownership enables even ordinary people to participate in these markets which were previously all closed to the majority, without the need for a lot of money to invest. Recent Presale Success Rexas Finance's recent presale has been nothing short of remarkable which once again shows the growing confidence repose by the market for the project. After the completion of its third presale stage whereby 30 million tokens were sold, Rexas Finance has moved to stage 4 where tokens are going for \$0.06 each. The zeal at these earlier stages has been phenomenal as a lot of people are in a hurry to buy up their worth of RXS tokens before the price even goes higher. Indeed, to date, Rexas Finance has made a remarkable amount of up to 2.75 million US dollars in several presale phases which has seen the company selling 65 million tokens in the process from stage one to stage three. The speed at which these funds have been acquired and the pace at which these tokens have been sold is indicative of how much interest the investors have and the confidence they have in the platform in the years to come. What is The Problem That Rexas Finance is Seeking To Address At its core, Rexas Finance seeks to address several existing problems that investors and asset holders are encountering presently. - High Barriers to Entry: Real estate investing opportunities or even fine art investing opportunities are usually only available to those individuals with a high number of zeros in their bank since they are very capital intensive. Rexas Finance attempts to mitigate this problem caused by high capital by adopting fractional ownership of tokenized assets lets any user buy a small stake of the large assets therefore enabling a larger population in high worth markets. - Liquidity: There is an increase in liquidity in regard to tokenized assets because fractional tokens can be bought and sold in exchange markets easily. If an individual owns an asset that is split into various portions and represented by fractional

ownership tokens, it is no longer necessary to wait until that asset is entirely sold to realize any values on it. This enhanced liquidity is unprecedented compared to other investments in assets. - Transparency and Security: In the case of Rexas Finance, blockchain technology is utilized because it helps foster secure, traceable, and immutable transactions. The deployment of smart contracts also assists in the speedy completion of transactions by eliminating risks associated with human intervention and making transactions faster and safer. - Regulatory Compliance: Rexas Finance also considers regulatory compliance for the tokenized assets inasmuch as compliance requirements for institutional investors can be adhered to without worrying about scrutiny. Innovative Features: QuickMint Bot and More One of the key selling points of the Rexas Finance platform is the QuickMint Bot which expedites the creativity of tokens. The bot is available on several social media platforms including Telegram and Discord making it possible for users to mint out new tokens with simple commands. This process is simple whether one is a crypto enthusiast with vast experience or a novice in the industry thus giving all those who wish to develop and issue their own tokens a swifter and more comfortable experience. Rexas Finance even offers a dynamic Launchpad for young businesses soliciting investments or seeking to convert their assets through a token offering. The launchpad serves to reduce the costs of attracting investments and facilitate the implementation of new ideas on the blockchain. Reasons why Rexas Finance may reach \$17 by the year 2025 It is still in the pre-sale stage with the price of \$0.06 but many people consider it possible for members to use the platform and make \$17 by 2025 and here's why. Tokenized Ownership Will Be Mass Adopted: Rexas Finance has potential growth as it intends to be a tokenizing platform for all markets including those that are being adopted to tokenization for example real estate, fine art, and online services. This model allows tokenized investment in multiple assets providing it with a good market share in well established and fast-growing markets. Further Growth of Fractional Ownership: As high-value markets are being opened up to general public investors, the platform will also expect exponential growth in demand for Rexas Finance and other similar platforms. This in turn means that as more users join in the uptake of RXS tokens and more assets are tokenized, the price of the tokens could raise quite considerably. Prompt Presale: Successful completion of this presale has already shown that there is interest in the investment opportunity. With millions of dollars already raised and most of the tokens selling quickly, the project has enough resources to ensure that it carries out its course effectively and brings fruitful gains to those who invest early in the project. Conclusion In light of Cardano (ADA) and Ripple (XRP), setting their sights on the \$5 mark by the year 2025, those in search of investment with a potential to return greater than this in investment should look out for Rexas Finance (RXS). Available for merely \$0.06 in its current presale stage, Rexas Finance consists of the realizable strong-held features assisted market outlooks and community targeting the ever-biked price ambition of \$17 by the year 2025. Becoming one of the prominent players in the blockchain ecosystem is Rexas Finance who is tackling the major problems related to asset ownership and innovating the tokenization areas. As far as investors are concerned, Rexas Finance is likely the altcoin that could change their spans of life for the good when the next valuable opportunity knocks. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Linea has proposed transitioning its zkEVM rollout to a decentralized system. - The proposal includes a proof-of-stake (PoS) model for block validation. Linea, a Layer 2 zkEVM rollout backed by Consensus, recently dropped a detailed protocol proposal focused on decentralizing its network. The proposal, named 'Towards Linea's Decentralization', was introduced by Florian Huc, a software architect at Linea. The document outlined how the network will transition to a permissionless system and establish decentralized governance. A major shift in the proposal is the introduction of a proof-of-stake (PoS) model for block validation. Further, Validators need to stake tokens and participate in the QBT consensus algorithm to confirm transactions. Those who act against the network's interests could face penalties, including having part of their staked tokens burned. Another key highlight is an on-chain auction system for block proposers. In this system, any node can bid to propose a block, with the highest bidder winning the right. The winning bidder will burn the bid amount, reducing the total token supply and creating deflationary pressure. To further secure the network, a recovery mode has been proposed. This mode ensures that if the validators become inactive for six months, any node can step in and finalize blocks, keeping the network running smoothly. What Drives Linea's Shift Towards Decentralization? The proposal comes after Linea temporarily halted block production following a security breach on Velocore, a decentralized exchange within its ecosystem. In response, Linea paused block production to prevent more damage, revealing the risks of centralized control. On June 2, the exploit involved transferring 700 Ethereum (valued at over \$2.6 million) off Linea via a third-party bridge. After that, the block production paused between blocks 5,081,800 and 5,081,801. Highlighted News Of The Day

The crypto market is showing huge adoption in the industry with over 2.4M cryptos evolving around. Among those cryptos let us look into the top 6 best cryptos under \$0.1 that will make users a millionaires by the end of 2025: Shiba Inu (SHIB), Ripple (XRP), Solana (SOL), Dogecoin (DOGE), Tron (TRX), and Rexas Finance (RXS). Shiba Inu (SHIB) Shiba Inu is a meme-related crypto project, the ecosystem includes Shibaswap and Shibarium. Shibarium is a layer-2 blockchain solution that focuses on DeFi applications. In addition, the project has enabled NFTs and staking options, looking to add real-world uses and attract many users. Ripple (XRP) XRP has long been identified as one of the best cryptos in the world. Moreover, the XRP project works on a decentralized platform known as RippleNet. It is designed to enable real-time payments across the globe, providing a seamless experience for both individual users and financial institutions. Solana (SOL) Solana (SOL) provides a smart contract program, SOL will utilize a proof-of-stake. Notably, the Seeker, the web3 mobile launched by Solana Mobile has been signaled to feature a 6.36" display, with 128GB of storage and 8GB of RAM, a longer battery and two cameras. Dogecoin (DOGE) Dogecoin is a crypto meme-based project in 2013, providing the popular Shiba Inu as its logo. Besides its history as a joke crypto project, Dogecoin has created a strong community and gained real uses over time. Besides, all these crypto projects have the potential to provide 200% gains for crypto investors in the next five months. Tron (TRX) TRON is a decentralized, blockchain-based operating system with smart contract functionality, proof-of-stake principles as its consensus algorithm, and a cryptocurrency native to the system, known as Tronix. Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities. Rexas Token Builder: It is normally used to tokenize their real-world assets and commodities. To make it easy for individuals to get digital ownership and offer access to the global market. Rexas Launchpad: This feature helps the asset owners raise funds for their tokenized assets, offering liquidity and new investment options for the crypto users. Rexas Estate: The project's one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins. Rexas Finance began the presale of the native token RXS on September 8, 2024. The total supply of RXS tokens is 1 billion. Rexas project has raised over \$1,750K until now, with 60% of the third stage of presale over. This event is important for the platform as it allows early investors to engage in what might turn into a revolutionary solution for RWA tokenization. Rexas Finance's \$1M Giveaway is live, offering a huge chance for early adopters to join the project's growth. With a current token price of \$0.05 and a projected listing price of \$0.20, the potential for a 400% increase indicates a good opportunity for investors. About Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cardi B's account potentially compromised, raising crypto security concerns. - Celebrity accounts frequently targeted for promoting fraudulent crypto scams. Pop culture sensation Cardi B's social media account appears to have been compromised, according to a report by blockchain security firm PeckShieldAlert. The alert, issued a few hours ago, has raised concerns within the crypto community, urging users to be cautious when interacting with links or addresses shared from the artist's account. Experts warn these could be phishing attempts or scams targeting unsuspecting followers. This incident is part of a growing trend of celebrity crypto scams, particularly on X (formerly Twitter), where accounts of high-profile figures have been hacked to promote fraudulent cryptocurrency projects and meme coins. Notably, rapper Rich The Kid's account was hijacked earlier to promote a token called 'eRich' on the Solana network. Though the post was swiftly deleted, it garnered considerable attention during its brief time online. Similarly, Caitlyn Jenner's account promoted a meme coin dubbed 'eJENNER'. It initially led to confusion about whether the post was real or a deepfake. Jenner's team later confirmed the authenticity of the posts. Her name is 'SWAP.03%4y', 'e' Card B (@iamcardib) October 7, 2024 CA B27V2ZnmZKMW1GCrDrutegam1WfAS1DQ5YX4FkP pic.twitter.com/BDVJqdn0Uf MAYBE IT WAS NOT HACKED?! Some users on Crypto Twitter (CT), however, suspect that Cardi B's recent activity might be a deliberate marketing ploy rather than a hacking incident. The posts, rather than resembling typical spam, appeared as teasers, leading some to believe it was a calculated move. Comments like 'e we all know how this ends' and 'e no thanks, not ready for another rug' reflected skepticism in the community. Meanwhile, Australian singer Iggy Azalea, who has her own token called 'eMOTHER', took to X to mock Cardi B's post. Azalea tweeted, 'e Lmfao if y'all fall for this scam then I can't help you, Only MOTHER provides.' With the frequency of such incidents increasing, users are advised to remain vigilant when engaging with celebrity-endorsed crypto projects. Scams like these continue to raise security concerns worldwide. Highlighted News Of The Day

- Sales peaked at around \$84.9 million weekly from September 30th to October 6th. - NFT collection Dmarket topped all others in terms of sales, with 537,714 transactions. Despite a general market slump, weekly sales of non-fungible tokens (NFTs) reached a high, surpassing levels not seen since August. The NFT market tracker CryptoSlam reports that sales peaked at around \$84.9 million per week from September 30th to October 6th. Since the week ending August 25, when it surpassed \$93 million, this is the highest weekly volume of NFT sales. From August 23, 2021, to August 29, 2021, the highest weekly sales volume for NFTs was over \$2.2 billion, as reported by CryptoSlam. Also, trading volumes for Bitcoin, Ether, and Solana's three of the top five NFT blockchains were lower than the previous week. Much Awaited Rebound With sales of almost \$15 million a rise of over 6,000% in the previous seven days. Mythos Chain soared to second position, just behind Ethereum, in terms of gains. With a 210% increase in weekly sales volume, Polygon was also doing well. Over the last week, NFT collection Dmarket topped all others in terms of sales, with 537,714 transactions, totaling over \$14 million. There were more than 839,000 NFT purchasers in the past seven days, an approximately 22% spike from the previous week, according to CryptoSlam statistics. This is in addition to the increase in overall weekly volume. More over two million transactions were registered, which is a huge increase of 71% compared to the previous week. Even now, the NFT market as a whole is fighting to recover from last year's record highs. Sales of NFTs dropped to \$303 million in September from \$373 million in August, according to data from CryptoSlam. With a total of \$1.6 billion in sales, March was the best month for the market thus far in 2024. Highlighted Crypto News Today:

- Sui price retraced back to bullish movements in the past day after the recent price dip. - The altcoin's daily trading volume surged 117.71% as per CMC data. The cryptocurrency market turned bullish at the beginning of this week, garnering attention to price actions. Leading cryptocurrencies moved to previous resistance levels and have led speculations for the beginning of the October bull run. Meanwhile, a recently rallying altcoin, SUI, has resumed its bullish rally after a recent downward movement on Friday. Notably, Sui Network's native token SUI has shown a notable surge of 13.39% in the last 24 hours. In the Asian evening hours of October 6, the altcoin traded at its previous resistance of \$1.7. However, as the day progressed, Sui price began to rise, sparking bullish candles to reach current trading levels. At the time of writing, Sui was trading at \$1.9576 as per CMC data. Moreover, recently on October 3 and 4, Sui's price took a bearish turn and prices began to fall hitting a support level of \$1.59. During this time, market analyst Ali relatedly stated the detection of buy signals in the chart. However, over the weekend and specifically in the past day, it has bounced back to its bull run. Furthermore, the Sui Network recently surpassed \$1 billion TVL hitting a crucial milestone for the project. Additionally, the Network has shown a surge in activity within the community. Recently, Cardano's founder stated that Sui Network was a better alternative to Solana. Will Sui Price Rally Surpass its ATH? On inferring Sui's technical indicators data, the short-term 9-day MA stands above the long-term 21-day MA indicating the bull run. However, the Moving Average Convergence Divergence (MACD) indicates a bearish trend. It depicts a negative histogram which is further supported by the MACD line standing above the signal line. Meanwhile, the recent price

rally if continued might aid the altcoin in surpassing in PATH at \$2.18. Additionally, the token's RSI stands at an overbought situation indicating positive market sentiments. The altcoin's weekly and monthly price performances have also shown notable surges due to the September price rally. Meanwhile, other altcoins, particularly the memecoin sector have also shown notable upward movements in the past day. Highlighted Crypto News Today:

- EIP-7781 aims to decrease block times on Ethereum from 12 seconds to 8 seconds. - Increased blob capacity will help lower layer-2 network fees. Ethereum's latest proposal, EIP-7781, was introduced by Illyriad Games co-founder Ben Adams on Oct. 5. The proposal aims to cut block times from 12 seconds to eight seconds. This reduction would increase Ethereum's network throughput by 50%, benefiting decentralized finance (DeFi) platforms and decentralized exchanges (DEXs). Prominent figures like Vitalik Buterin and Justin Drake support this initiative. They believe that shorter block times could improve network efficiency while lowering user costs, particularly in DeFi. EIP-7781 also aims to enhance layer-2 scaling solutions by increasing blob capacity. Blobs, temporary data structures, help reduce network fees on layer-2 rollups like Arbitrum and Optimism. The proposed changes could improve transaction efficiency on DEXs by 22%. This efficiency boost could potentially save up to \$100 million annually by reducing arbitrage opportunities between centralized exchanges (CEXs) and DEXs. With Ethereum aiming to balance performance and cost efficiency, this proposal is a significant step forward. Concerns and Optimism Surrounding Ethereum's EIP-7781 Proposal However, concerns have emerged regarding its impact on solo stakers. Shorter block times could lead to faster state growth, requiring more powerful hardware to handle data propagation. Critics worry this could push solo stakers out of the network, threatening decentralization. Adam Cochran of Cinnehaum Ventures raised concerns about the impact on stakers with limited hardware. Yet, he believes the gas limit remaining unchanged could mitigate these issues for most participants. This proposal follows discussions about lowering the validator minimum from 32 ETH to as low as 16 ETH. Lowering this threshold would make it easier for more users to participate in staking, improving network security and decentralization. While EIP-7781 presents challenges, Ethereum developers remain optimistic about its potential. By enhancing throughput and reducing costs, the proposal aligns with Ethereum's long-term scalability goals. If EIP-7781 is adopted, it could significantly improve the Ethereum network's performance. The combination of shorter block times and increased blob capacity promises to enhance DeFi operations and boost transaction efficiency across the network. - Bitcoin price in the last 24 hours has begun to show upward movements. - The cryptocurrency's daily trading volume surged by 55.06% as per CMC data. On analyzing sentiment parameters in the cryptocurrency sector, readings show positive as investors await the Uptober bull run. The recent price recovery in the overall market has influenced the optimistic sentiment. Additionally, Bitcoin's price recovery has also raised traders' hopes for upward movements. In the past week, Bitcoin's price caused anxiety in the market, as contrary to expectations, the cryptocurrency experienced downward pressure. Notably, in the last 24 hours, BTC has incurred a 2.41% price increase and has climbed to the \$63K level. At the beginning of the day, on October 6th, the digital asset was trading at \$61,824, swelling to surge \$2K. However, as the day progressed, a booming out, over the last 7 days, the cryptocurrency, as aforementioned, showed price dips. Its weekly performance stands at a 1.51% decline as a result of the downward trend. At the beginning of the week, Bitcoin traded at \$64,510 propelled by the September end bull run. This caused quite a spur in expectations, as with the approaching October, market analysts had expected the bull run to extend taking BTC to new highs. On the other hand, the past day's upward movement has reinstated anticipations for the Uptober bullish cycles. How Will Bitcoin Price Perform in the Coming Days? On inferring Bitcoin's daily price chart, the cryptocurrency's bull power indicator stands at 6.66 while the bear power indicator stands at 1.90. This highlights Bitcoin's current bullish trend. Additionally, BTC's 200-day SMA stands above the current price. On closer analysis, the price stands close to the SMA and shows attempts to surpass it. Notably, market analyst Ali stated recently that Bitcoin's 200-day SMA when standing above the price indicates a bear market. However, when it stands below the price, then he said that Bitcoin can show price expansion. If BTC manages to sustain the positive momentum and move above the 200-day SMA it might set the stage for the bull run. Meanwhile, other cryptocurrencies such as Ethereum and Solana have not shown significant price surges in the past day. Highlighted Crypto News Today: Tether Celebrates 10th Anniversary with Documentary on USDT Stablecoin

The cryptocurrency market continues to develop and in the process, companies like Cardano (ADA) and Polygon (POL) have been performing well, which makes them interesting to watch. As for Rexas Finance (RXS), it seems to have some game-changer plans to change the real estate industry through real-world assets' tokenization. This article focuses on the news about these currencies in question and reveals information about the presale of Rexas Finance. Cardano (ADA) According to a recent analysis of TradingShot, a crypto expert, a major bullish signal was discovered with regards to Cardano, suggesting that the cryptocurrency is set for yet another parabolic rally boost. On 24th September, the analyst remarked that ADA is currently one of the few assets in the market that is sending one of the strongest long-term buy signals on a weekly chart. This revelation has created some excitement among investors, some of whom feel that it is now possible to see ADA's price rise as high as \$5. As for the primary factor for the bullish sentiment, the ADA's 1W Logarithmic Moving Average Convergence Divergence (LMACD) experienced a bullish cross formation, which is the first occurrence of a bullish cross since October 9, 2023. In addition, this shows that the bullish momentum supported by ADA is very firm. Further, the RSI has been ranging from May 2024, which means that Cardano has been below the views of short-term MA50, which is 1W. Comparing the prevailing situation of the global market of Cardano with that from the course of the 2021 bull market, TradingShot has come up with these specific observations. The analyst pointed to the formation of a bullish Megaphone pattern, which coincided with the 1W LMACD bullish cross pattern, which was a precursor to an explosive movement in price levels. It has encouraged TradingShot to become quite bold in its forecasting and ADA is now expected to move much higher from the current \$0.38 to a whopping \$1 which is great news to the investing public. Polygon (POL): Reaching New Heights Further, in another press release, Polygon has unveiled a highly anticipated new network update, which is a step toward the transition up the gradient of moving from MATIC to POL as the main gas and staking tokens of its Proof of Stake (PoS) network. This new approach, which launched on September 4th, is part of a comprehensive strategy aimed at improving the network's performance and efficiency. This particular action is most likely to cause an uptrend in Polygon's price because it has suffered declines in recent times and this announcement has got the market very excited. Today POL price is trading at \$0.4232, with a small price drop of 3% and price fluctuations. It can be noted that this drop was accompanied by an increase in trading activity as trading volume increased by 40% to reach \$203 million. In contrast, the trend follows bitter sentiments due to MACD remaining under the zero line. Blockchain gaming asset POL has been experiencing what is known as the market value to realized value or MVRV ratio, as a trend in the past few months. We explain this decline as being because when the POL token's value started to decrease, more and more losses were incurred, reaching -20.39 this month. Still, for those who are interested in Polygon, analysts say price resistance of \$0.45 can be breached and the man believes he can take on the level of \$0.5 with the \$1 mark in sight within a few months. Rexas Finance (RXS): Coming to Make Changes in the Real Estate Industry As Cardano and Polygon grow in the crypto world, Rexas Finance (RXS) plans to revolutionize the real estate market in asset tokenization. Rexas Finance seeks to level the playing field when it comes to real estate investments, letting low-capital investors join a sector that had been primarily occupied by wealthy investors. They will tokenize these real estate assets, thereby allowing them to provide fractional ownership to their customers, meaning less effort to pull together funds to purchase real estate and thus more liquidity. The market approach eliminates the bottlenecks that exist in real estate via the creation of an ecosystem wherein investment processes will be conducted more straightforwardly with the integration of blockchain technology in real estate trade to increase accountability, safety, and speed. Real estate investment is no longer limited to the traditionally used income, capital, and property appreciation methods. This approach brings new investment opportunities, eliminating some specific problems like high-cost liabilities and inefficient management concerning the length of time it takes to evaluate and complete real estate deals. The current Stage 3 of the presale of Rexas Finance is the phase where the early investors may step in at an attractive price. The presale has met with some level of success, indicating the level of confidence that the investors have in the project. At this time, the price for RXS tokens offered to investors in presale stage 3 is \$0.05, which creates a great opportunity for making high profits when the project is up and running in the market. Experts are bullish on the prospects of RXS being able to repay investors six times over at the stage of the project later on. This is very much in line with the wider supply in the market, as with every passing day, projects such as Rexas Finance are drawing attention from both retail and institutional investors in the crypto industry. Conclusion To sum up, there are prospects for substantial price fluctuations in Cardano and Polygon, and factors are pointing toward an upsurge towards dollar one and further. At the same time, Rexas Finance is revolutionizing the real estate sector through its unique approach towards asset tokenization. A great incentive for them is that the presale is underway and they can therefore take part in the project, which is likely to be game-changing. The next several weeks may be crucial for all three currencies, making them one of the best to be monitored for improvement. As the crypto market evolves, traders hunt for the next big opportunity. With multiple tokens vying for attention, predictions emerge about which will skyrocket. Among FTX (FTT), Aptos (APT), and CYBRO, one might deliver extraordinary returns by 2024. This article delves into analysis, trends, and growth potential to uncover which coin is poised for explosive gains. CYBRO Presale Exceeds \$3 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< FTT: Exploring the Potential of a Resilient Crypto Token FTT is the cryptocurrency token of the FTX trading platform. FTX launched in 2019, aiming to address issues with crypto exchanges. It offers features like clawback prevention and a universal margin wallet. FTT allows users to enjoy benefits like trading fee discounts and leverage trading. By regularly buying back and burning tokens, FTT seeks to maintain its value. Despite past challenges, FTX's backing by notable companies and unique offerings make FTT interesting. Traders use FTT as collateral, and staking it brings advantages. These include discounts and access to events. FTT remains a versatile and functional token for crypto traders. Aptos: Exploring a New Era in Scalable Blockchain Technology Aptos is gaining attention in the blockchain world. It's designed to be scalable and reliable, aiming to solve issues like high fees and congestion in other blockchains. Developed by core contributors from Diem, a Meta project, Aptos uses the Proof-of-Stake mechanism. This allows it to be more energy-efficient. Aptos uses the Move programming language, making it safe and flexible. It supports many Web3 applications. Some people call it a "Solana Killer" as hinting at its potential to be a strong contender in the space. Aptos is seen as a promising technology in the blockchain realm due to these features. Conclusion FTT, APT, and CYBRO each have unique strengths. However, their short-term potential appears limited compared to CYBRO. As a technologically advanced DeFi platform, CYBRO offers investors exceptional opportunities. Its AI-powered yield aggregation on the Blast blockchain maximizes earnings. Features like lucrative staking rewards and exclusive airdrops enhance the user experience. Additionally, cashback on purchases and seamless deposits and withdrawals make it user-friendly. Emphasizing transparency, compliance, and quality, CYBRO has garnered strong interest from crypto whales and influencers. Thus, it stands out as the most promising project among the three. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord:

October brings a fresh wave of excitement in the cryptocurrency world. Several digital coins are poised for impressive growth this month. The market is buzzing with potential opportunities. This article delves into which cryptocurrencies show the strongest signs of significant upward movement. Discover the coins set to make a big impact. CYBRO Presale Achieves \$3 Million Milestone: A One-in-a-Million Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In an exciting development, CYBRO has also launched a referral program, offering 12% from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are sent weekly in USDT, and referees earn double CYBRO Points on their first deposit using the referral code. In addition to tokens, CYBRO introduces exclusive Points, providing even greater benefits for investors. These Points grant automatic entry into the CYBRO Airdrop, where the number of tokens you receive is proportional to the Points you hold. Up to 1 million Points are distributed weekly, earned by investing in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Solana: Exploring the Potential of High-Capacity Blockchain Technology Solana is making waves in the blockchain world with its focus on scalability. The platform is designed to support decentralized applications, competing with others like Ethereum and Cardano. Solana stands out by offering faster transactions without using sharding or second-layer fixes. It uses its own coin, SOL, which is key to its ecosystem, enabling transactions and rewarding participants. Developers and investors are drawn to Solana's vision of handling high activity and versatile projects. This approach provides a foundation for running multiple programming languages and supporting custom programs. Solana's system is built to attract both developers and users looking for a high-capacity blockchain platform. Aave: Transforming Crypto Lending in the DeFi Landscape Aave is reshaping how people borrow and lend in the crypto world. It operates on the Ethereum blockchain, cutting out middlemen and letting users make decisions through smart contracts. Aave supports 17 different cryptocurrencies for lending and borrowing. Borrowers get tokens, representing their loans, while earning interest on them. A standout feature is its flash loans, allowing instant, collateral-free borrowing, with repayments required within Ethereum's block time. The AAVE token offers benefits like fee waivers and voting rights. It can also be used as collateral, providing added value. The Safety Module serves as a risk shield, enhancing AAVE's appeal by managing supply through its fee-using system. Aptos: Exploring a New Era in Scalable Blockchain Technology Aptos is gaining attention in the blockchain world. It's designed to be scalable and reliable, aiming to solve issues like high fees and congestion in other blockchains. Developed by core contributors from Diem, a Meta project, Aptos uses the Proof-of-Stake mechanism. This allows it to be more energy-efficient. Aptos uses the Move programming language, making it safe and flexible. It supports many Web3 applications. Some people call it a "Solana Killer," hinting at its potential to be a strong contender in the space. Aptos is seen as a promising technology in the blockchain realm due to these features. Conclusion SOL, AAVE, and APT show moderate potential for short-term growth. However, CYBRO stands out with its advanced DeFi platform. It uses AI-powered yield aggregation on the Blast blockchain. CYBRO offers investors enhanced earning opportunities through lucrative staking rewards, exclusive airdrops, and cashback on purchases. The platform also provides a seamless user experience for deposits and withdrawals. Emphasis on transparency, compliance, and quality has attracted significant interest from crypto whales and influencers. This positions CYBRO as a promising project in the market. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. A leading trader has highlighted six promising altcoins currently making waves in the crypto market. However, there are signs that the hottest coins could face a slowdown. This article delves into the details of these emerging stars and explores the potential for growth in a rapidly changing landscape. CYBRO Presale Achieves \$3 Million Milestone: A One-in-a-Million Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In an exciting development, CYBRO has also launched a referral program, offering 12% from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are sent weekly in USDT, and referees earn double CYBRO Points on their first deposit using the referral code. In addition to tokens, CYBRO introduces exclusive Points, providing even greater benefits for investors. These Points grant automatic entry into the CYBRO Airdrop, where the number of tokens you receive is proportional to the Points you hold. Up to 1 million Points are distributed weekly, earned by investing in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< FTT: Exploring the Potential of a Resilient Crypto Token FTT is the cryptocurrency token of the FTX trading platform. FTX launched in 2019, aiming to address issues with crypto exchanges. It offers features like clawback prevention and a universal margin wallet. FTT allows users to enjoy benefits like trading fee discounts and leverage trading. By regularly buying back and burning tokens, FTT seeks to maintain its value. Despite past challenges, FTT's backing by notable companies and unique offerings make FTT an interesting token for crypto traders. Fantom: Fast blockchain with Efficient Transaction Solutions Fantom is a smart contract platform for decentralized finance with unique technology. It aims to handle transactions very quickly, usually within one to two seconds. The system uses its own consensus method, called Lachesis, to ensure speed and security. Fantom can process thousands of transactions per second at a low cost. The network supports decentralized apps and digital assets, offering tools to easily integrate existing apps. FTM, the native token, powers transactions, staking, and governance. Users can vote on network decisions with their FTM tokens. Fantom aims to solve issues faced by other blockchains, like Ethereum, by balancing scalability, security, and decentralization. Sui Blockchain: User-Friendly Innovation in the Web3 Space Sui is an exciting layer-1 blockchain designed for global reach. It offers a secure, efficient, and scalable platform. At its heart is a unique object-centric data model powered by the Move programming language. This setup tackles many of the inefficiencies seen in older blockchain systems. Sui goes beyond strong technical features by focusing on ease of use. It breaks down common barriers in blockchain and enhances user experience with tools like zkLogin and sponsored transactions. Sui's approach aims to make Web3 more accessible and user-friendly, showing promise for widespread adoption. Sei: A Fast and Secure Blockchain for Seamless Trading Sei is a layer 1 blockchain tailored specifically for trading. It aims to provide exchanges with an unmatched speed advantage. With the ability to handle a large volume of orders each second, it offers a transaction finality of just 380 milliseconds. The focus on security is reinforced by backing from large institutions. Sei's technology has shown potential for significant growth, as it targets handling high-level trading efficiently. This makes it a promising player in the blockchain space, with the potential for substantial returns. Whether you're new to crypto or an experienced trader, understanding Sei's tech edge could be crucial for exploring new opportunities in the market. Aptos: Exploring a New Era in Scalable Blockchain Technology Aptos is gaining attention in the blockchain world. It's designed to be scalable and reliable, aiming to solve issues like high fees and congestion in other blockchains. Developed by core contributors from Diem, a Meta project, Aptos uses the Proof-of-Stake mechanism. This allows it to be more energy-efficient. Aptos uses the Move programming language, making it safe and flexible. It supports many Web3 applications. Some people call it a "Solana Killer," hinting at its potential to be a strong contender in the space. Aptos is seen as a promising technology in the blockchain realm due to these features. Conclusion The identified coins FTT, FTM, SUI, and SEI may see less potential in the short term. In this bullish market, CYBRO emerges as a top choice. This advanced DeFi platform uses AI-powered yield aggregation on the Blast blockchain. It offers lucrative staking rewards, exclusive airdrops, and cashback on purchases, providing a superior user experience with seamless deposits and withdrawals. With strong focus on transparency, compliance, and quality, CYBRO attracts significant interest from major crypto players and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is often associated with high risks due to the promise it bears to reap vast returns within a short period, with some coins such as Shiba Inu (SHIB) and Floki Inu (FLOKI) previously reaping tremendous rewards to their very early investors. However, new contenders from emerging Rexas Finance (RXS) are coming up with other useful utilities and value additions to the ever-crowded field of cryptocurrencies. For those who would want to invest for better returns in a few months, these three coins could provide 10x returns and more. Let's find out the reasons why. Shiba Inu (SHIB): The Meme Coin with Deflationary Potential Though your chances of becoming a millionaire overnight like some early investors were in 2021 when Shiba Inu exploded over 50,000,000% within a month, the possibility is still there. At the moment, SHIB has a price of \$0.000015, and while these days of out-of-body experiences may seem over this was arguably one of the most popular and commonly possessed meme coins ever. However, Shibarium stands to be the way forward for the token as investors stand to benefit more from its L2 solution with the addition of a fast and efficient layer to the ecosystem. Shibarium's burn system is perhaps the most notable attribute of the platform, whose intent is to lower SHIB's huge circulating supply, pegged at 589 trillion tokens. All transactions made on Shibarium include a part of SHIB that is remotely burnt, creating a level of deflationary pressure on the token. More supply curbs could bring upward price pressure if demand is strong enough. This is essential because, without a serious cut on the supply, there is no way that people are going to be able to realistically fantasize over SHIB attaining \$1 or even about \$0.01. However, the launch of Shibarium and its deflationary model regulate supply to spur further growth for SHIB in the next bull run. In addition, SHIB has launched a DeFi platform called ShibaSwap, and continues development in the direction of the metaverse and NFTs, thus increasing the token utility as well. It's clear that there is no chance of SHIB reaching \$1 very soon, but it is reasonable to expect growth of about 500%, which theoretically brings the price closer to \$0.00008. This would be encouraging for some investors aiming for medium-term returns. Floki Inu (FLOKI): Utility Token Evolution from Meme Coin Floki Inu (FLOKI) is a platform that suffered some design glitches as it was released during the period of the Dogecoin and Shiba Inu craze. Yet, now it is so developed that it can claim some utility in a manner that it never did before. Presently offered at \$0.000152, Floki has been creating an ecosystem comprising a play-to-earn gaming solution, strategic collaboration with some of the sports giants, and the recent movement containing the launch of GraFu, a meme coin exchange on the BNB chain. What makes Floki stand out from other collectors' coins is that it emphasizes the utility requirement and the growth of its ecosystem supported by its holders. For instance, GraFu has an advanced bonding curve structure which enables new memecoins in the platform to have lesser volatility in their price at launch. What's more, the cultivation of partnerships with sports and e-sports teams expands the scope of the audience beyond just crypto investors. Traders and experts are confident and positive regarding the Floki price forecast. Some heads are even saying the price can multiply by 1,800% or more in the coming months with the return of the larger cryptocurrency bull run. This would take Floki further, toward \$0.00018, its historical highest price and other ecosystems' development could even take it beyond that. The increasing use cases of Floki as a DeFi and NFT platform as well as its marketing efforts, position Floki as a candidate for price appreciation. Rexas Finance (RXS): A New Era in Real World Asset Tokenization Rexas Finance (RXS) looks like an uncomplicated project having great potential in the crypto world. This project seeks to promote one of the hot segments of RWA (real-world assets) tokenization. In contrast to meme coins dynamic SHIB and FLOKI, Rexas Finance seeks to penetrate the market by introducing the tokenization of high-end assets including real estate, artworks, commodities, etc. There is a growing

number of both retail and institutional investors who are fascinated by this phenomenon which concerns asset liquidity, transparency, and availability. At its presale, Rexas Finance is selling at \$0.05 and is expected to list on exchanges at \$0.20 which could potentially result in early investors earning a 400 percent return right at the start. Besides, the forecast issued for RXS indicates a high long-term growth potential wherein its pegged value could range from \$1 to \$2 by 2025 depending on how successful the tokenization model is. Rexas Finance has already attracted more than \$2 million in presale showing positive expectations for the prospects of the project evolution. Rexas Finance is not a standard hype speculative token; it is rather useful as it allows investors to invest in a fraction of the traditionally illiquid assets. This rectifies a big gap within this space and permits the conventional management of assets to more people. Additional features such as Rexas Launchpad, GenAI, and the DeFi capabilities of the network make the project even more intriguing as it is a complete project with promising prospects. Conclusion This means that each one of these tokens has and will offer its potential and risks depending on your investment objectives. On the one hand, SHIB and FLOKI parade after dense speculative community allocation while RXS has focused on utilizing blockchain technology in addressing real issues. As the next bull run approaches and expected returns of 10x within this period, any investor eyeing such levels of returns within this period should watch out for these three projects as they progress. As always, it's important to do proper research and weigh the risks involved in any kind of investment. The volatility in the cryptocurrency market can be quite high, but in case you are willing to take the plunge, considerable returns can be made with SHIB, FLOKI, and RXS. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - WIF marked a spike of over 12%, trading at \$2.36. - A bullish breakout for dogwifhat signals a potential rise. The crypto market has exhibited brief bullish turns, with the global market cap at \$2.16 trillion. Bitcoin (BTC) and Ethereum (ETH), the largest cryptocurrencies, staged brief recoveries over the past 24 hours. The Solana-based meme coin dogwifhat (WIF) has recorded a 50% uptick over the past thirty days. On the other hand, an analyst observed that as October arrives, \$WIF has broken out of a descending channel on the daily chart, signaling an upward trend. This breakout suggests the price may rise, potentially leading to an all-time high. After a 12.48% increase, WIF chose a bullish rally for the day, breaking the previous resistance levels. Over the last 24 hours, the meme coin managed to hit a high of \$2.37. At press time, WIF trades at \$2.36. Amid this, the daily trading volume stands at around \$633 million, according to CMC data. Can WIF continue this momentum? WIF has displayed the upward price action in the last seven days, with a brief gain of 4.38%. At the beginning of the week, the asset was trading in the \$2.31 range. The token has climbed to a high of \$2.59, eventually falling sharply to a low of \$2. The four-hour technical chart displays the daily relative strength index (RSI) of the asset positioned at 55.50 in the neutral zone. Moreover, the asset's daily frame suggests bullish momentum as the short-term 9-day and long-term 21-day moving averages are marked below the current price. Besides, the Chaikin Money Flow (CMF) indicator stays at 0.09, which indicates the increased money flow with selling pressure. Besides, the trading volume has spiked by 8.69%. However, if the asset continues to climb up, WIF's price might surpass the immediate resistance at \$2.48. Conversely, if the price attempts a reversal on the support side, the initial support might be at \$2.23. Disclaimer: The opinion expressed in this chart is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News Coinbase Prepares to Delist Stablecoins Ahead of EU MiCA Rules

The Shiba Inu (SHIB) craze brought a lucky trader an eye-popping \$30 million and this lucky trader is now keen to get hold of Rexas Finance (RXS) token. Why is this seasoned investor so adamant about Rexas Finance, which is currently valued at merely \$0.050 in presale stage? This generous venture capitalist has strong predictions for this cryptocurrency likely to go astronomical from below \$0.12 up to a mind-boggling \$12 by the year 2025. Rexas Finance (RXS): The Future of Crypto The Tokens of Rexas Finance (RXS) cannot be termed as normal tokens. In just a handful of days, Rexas Finance has progressed over time as evidenced by the impressive presale figures. The price of the token started at \$0.030 during phase one, rose to \$0.040 in phase two, and is \$0.050 in phase three. A considerable increase of nearly 69.7% has been achieved over this period which is greatly buoyed by the active participation of investors. As it stands 73.53% of the presale stage 3 is sold out which signals that there is an opportunity for smart investors as this is a reasonable discount. Those who vowed to board this time around will have huge dividends to count on since the likely listing price is apprehended to be a whopping \$0.20. This means that those buying Rexas Finance now at the current price of \$0.050 will end up making 6x ROI when the token starts trading at \$0.2. However, this is only a snapshot of where the flexibility is headed; there is a greater potential need for such completion as the project seeks to change the market of real-world assets and tokenization ahead of immense growth. trader Prediction of \$12: Reason Behind The Rexas Finance (RXS) Rise The trader who made \$30 million in the Shiba Inu 2021 rally, believes Rexas Finance does not just stop on the listing price. Rather they are forecasting unimaginable growth of 5,900% from \$0.20 to as high as \$12 in the next few years. What fuels their enthusiasm? Rexas Finance's novel concept of tokenization of real-world Assets. Rexas Finance is not simply another type of meme coin. It is addressing the humongous asset-based market which includes the \$379.7 trillion real estate market, the \$121.2 trillion commodities market (gold, oil, etc.), and even the \$65 billion art and collectibles market. In the case of RWAs, Rexas Finance sells unlimited real estate tokens, but by converting global real estate assets into various digital assets, this opens up a new door of opportunities for others in the market. In addition to tokenization, Rexas Finance has a simple to use Token builder for people to create their tokens for their assets with zero coding experience. In addition, the project has a Launchpad where potential new tokens can be raised and market engagements to help. Rexas Finance has a total supply of 1 billion RXS tokens and a development vision based on real-world asset integration, making Rexas Finance worthy of consideration as a utility token with huge growth prospects. It is only natural that the fortunate trader has decided to leave behind meme coins and invest in something that is real and has a strong base. Conclusion One cannot overlook the lucky trader's ability to consistently place the right bets in the crypto arena. After profiting nearly \$30 million off Shiba Inu's 100x growth, they are now backing Rexas Finance (RXS) and this time is different. The presale of the token is moving at a fast pace with a 5,900% expected increase coming up and those who are quick may make a fortune. Climb the ladder up to the moon with Rexas Finance as it ascends from \$0.050 to \$12, as you take your place. Will it be Shiba Inu on steroids? Perhaps only time will tell but so far the indications are good. - Coinbase to delist the unauthorised stablecoins in the European Economic Area (EEA). - Coinbase plans to update the conversion of non-compliant stablecoins. Cryptocurrency exchange Coinbase Global Inc. has announced plans to delist stablecoins that do not comply with the new requirements across the European Economic Area (EEA) by the end of this year. The European Union's Markets in Crypto-Assets (MiCA) regulation moves toward full implementation by the end of 2024. Coinbase plans to update the conversion of non-compliant stablecoins to approved options like USDC. Other exchanges, such as Bitstamp and OKX, have restricted access to Tether's USDT before the regulations. Moreover, Coinbase plans to offer the impacted EEA customers the option to switch to authorized issuers like Circle's USDC and EURC, whose value is pegged to the U.S. dollar and euro. Impact of MiCA in the Stablecoin Market MiCA was adopted by the European Parliament earlier this year to introduce a comprehensive legal framework for cryptocurrencies, stablecoins, and crypto-assets service providers (CASPs). Besides, fiat currency pegged stablecoins are crucial to the crypto market as they offer stability in the volatile market. To meet MiCA's requirements, stablecoin issuers have to hold reserves equivalent to their circulating supply. Furthermore, to ensure the assets maintain their peg. On the other hand, the issuers must obtain an e-money authorization. Stablecoin providers that fail to meet these regulations will no longer be allowed to operate within the EU. MiCA's implementation might limit the stablecoin availability in the EEA. Recently, retail investment platform Robinhood has expanded its cryptocurrency services throughout Europe. European Union customers can now transfer digital currencies in and out of the app. The new functionality supports cryptocurrencies like Bitcoin, Ethereum, Solana, and USDC. In December 2023, Robinhood launched its crypto trading service, Robinhood Crypto, in the EU. The service allowed users to buy and sell cryptocurrencies, but the access to move them out or to their own self-custodial wallet was restricted. Highlighted Crypto News

- Market performance in the future is highly dependent on central bank policy actions and forthcoming economic data. - In September 2024, the value of all on-chain Real-World Assets (RWAs) surpassed \$12 billion. The total market cap of the cryptocurrency market increased by 8.0% in September 2024, propelled by positive global macroeconomic trends as per the latest report by Binance Research. Market optimism was fueled by favorable U.S. job market statistics and the Federal Reserve's decision to reduce the federal funds rate by 50 basis points to a range of 4.75% to 5%. The crypto market received a boost as well as major financial markets rallied due to these macroeconomic factors. Market performance in the future is highly dependent on central bank policy actions and forthcoming economic data. Wrapped Bitcoin (WBTC) Maintains Strong Market Presence Weekly transactions of wrapped Bitcoin (WBTC) hit new records recently, demonstrating the segment's continued dominance. There are more than 20 other competitors in the market, yet it still manages to control more than 65% of the overall share. Disagreement has arisen regarding WBTC's new custody model, which is characterized by a multi-jurisdictional and multi-institutional approach. The established liquidity and user inertia of WBTC have allowed it to retain a prominent place in the market, despite the fact that some users have voiced worries about trust and transparency. The rivalry is growing, however, as Coinbase's cbBTC aims to take a portion of the WBTC market. Ethereum (ETH) Issuance and "Ultrasound Money" Status In September 2024, the issuance rate of Ethereum hit a two-year high, reaching an annualized rate of around 0.74%. Importantly, this change further distances Ethereum from its "Ultrasound Money" storyline, which suggests deflationary traits. The rising popularity of Layer 2 solutions has again ignited market activity, which has led to a decrease in network activity and a rise in ETH issuance. In a bear market, these developments have so far been the only ones that have kept the Real-World Assets (RWAs) market active and growing. RWAs (RWAs) surpassed \$12 billion (not including the stablecoin market, which is at \$175 billion). This was an all-time high. With a total value of around US\$9.1 billion, or over 70% of the RWA market, private credit is by far the most important factor. "Figure, a fintech startup that provides equity-backed lines of credit, is largely responsible for this. From a starting point of \$769 million in 2024 to a peak of nearly \$2.2 billion in September, tokenized treasuries likewise saw tremendous development. Cryptocurrency Hacks in 2024 Despite a steady drop in hacking occurrences since 2021, the total value lost to cryptocurrency attacks remained at US\$1.3 billion as of September 2024. There has been an uptick in hacking, but the industry has taken precautions by implementing stricter security measures. Both DMM Bitcoin and WazirX, two centralized exchanges, lost around US\$35 million and US\$235 million, respectively, in the biggest hacks of 2024. Although the industry has taken steps to improve security, investors should still make sure their crypto assets are well-managed and stored securely, particularly when the market is volatile. Performance of Leading Cryptocurrencies Avalanche (AVAX) had the most monthly increase of any cryptocurrency in September 2024, at 20.1%. The unveiling of the "Retrograde" grant program, which would provide developers with US\$40 million to enhance the Avalanche network in preparation for the much anticipated Avalanche 9000 update, was a major factor in this. Social media activity and a tweet by Elon Musk that prompted conjecture contributed to Dogecoin's (DOGE) substantial gains, which surged 14.9%. Important changes in its ecosystem, such as the introduction of the Jambophone 2 and the rising acceptance of Solana by large organizations like Citibank and Franklin Templeton, caused the price of Solana (SOL) to rise 12.0%. Following the Voltaire era's introduction of decentralized governance mechanisms, the Chang Hard Fork and its subsequent debut, Cardano (ADA) gained 9.3 percent. Developments on the XRP Ledger, such as the unveiling of smart contract capabilities and work on Ripple's RLUSD stablecoin, also contributed to XRP's 9.1% gain. The market performance of XRP was further enhanced by the successful resolution of Ripple's litigation against the SEC. However, Binance Coin (BNB) increased 6.9% after the Bohr Hard Fork, which brought many enhancements to enhance network performance, while Bitcoin (BTC) gained 7.5% due to global macroeconomic trends. Conclusion Positive macroeconomic conditions propelled the cryptocurrency sector to a robust 8.0% increase in total market cap in September 2024. The continuous growth of the cryptocurrency ecosystem is shown in the increase of RWAs and the general drop in hacking occurrences, even if Wrapped Bitcoin and Ethereum continue to dominate the market. Market players should be alert, however, since the market dynamics are still impacted by future actions of central banks and global economic

situations.

- Raydium's Teleport simplifies cross-chain transactions between Ethereum and Solana. - The feature allows 1-click swaps using USDC and Circle's CCTP for faster transactions. Raydium has launched Teleport, a groundbreaking feature that enables seamless token transfers from Ethereum-based networks to the Solana blockchain. This new tool leverages the Wormhole network to simplify cross-chain transactions. Consequently, users can transfer tokens effortlessly between these two ecosystems, improving overall efficiency. In an official announcement, Raydium emphasized its plans to enhance Teleport by introducing 1-click cross-chain swaps. This upgrade will facilitate native asset swaps using USDC and Circle's Cross-Chain Transfer Protocol (CCTP) as the settlement rail. Moreover, users can expect sub-30-second latency for cross-chain swaps. This quick processing time significantly improves the speed of transactions across networks. Raydium's integration with the Wormhole network connects Additionally, the integration of Circle's CCTP and Wormhole Connect represents a significant advancement in this space. This combination allows for a seamless flow of USDC through CCTP's native mint and burn mechanics. As a result, users can easily mint USDC on Solana or burn it on Ethereum. This feature not only enhances user experience but also bolsters liquidity across both networks. Furthermore, Raydium's Teleport addresses a crucial challenge in the blockchain ecosystem: interoperability. As decentralized finance (DeFi) continues to grow, the demand for seamless cross-chain solutions becomes more critical. By streamlining token transfers between Ethereum and Solana, Raydium positions itself as a vital player in the evolving DeFi landscape. Raydium's Teleport simplifies cross-chain transactions and enhances usability. By allowing quick and efficient token transfers, it strengthens interactions between Ethereum and Solana. Overall, this feature aims to improve liquidity while providing users with a convenient way to manage their assets across different networks. As Teleport rolls out, its impact on user experience and DeFi may be significant. Highlighted Crypto News Today Vitalik Supports Lower ETH Staking Minimum for Accessibility

- Bitcoin briefly surpassed \$62,000 but quickly fell back, currently trading around \$61,271. - BTC has risen over 7% this September, a notable change from its usual average loss of about 6% for this month. Bitcoin recently showed a modest rise above \$62K on October 2, but this rally quickly faded, reflecting a broader dip in the cryptocurrency market. Other major coins like Ethereum (ETH), Ripple (XRP), and Solana (SOL) faced declines of 5% to 10% over the past day. Analysts from QCP warn that if the situation in the Middle East escalates further, Bitcoin could drop to around \$55,000. However, the \$60K zone has provided solid support thus far. After a geopolitical sell-off, Bitcoin's bounce back was halted at \$62,357 during the U.S. session, with prices dipping back below \$60K later on. At the time of writing, Bitcoin trades around \$61,271, displaying a slight rebound despite a more than 20% drop in daily trading volume. Current Price Trends for Bitcoin Despite recent volatility, Bitcoin has performed significantly this September, gaining over 7%. Historically, September has not been kind to BTC, usually averaging a loss of about 6%. This month has been a refreshing change amid global uncertainties. The arrival of October, often called "October," initially brought disappointment for many crypto enthusiasts. Further, analyst Timothy Peterson suggests that the expected upward momentum may not kick off until after the 19th of this month. Historical patterns support a bullish outlook for Bitcoin in October, with an average gain of over 14% since 2018. Based on a technical analysis of the BTC/USDT 4-hour chart, it shows a slight upward trend after Bitcoin reached a recent low of \$59,996. Currently, the price sits below the 21-day moving average, and the 9-day moving average has also dipped beneath it. The RSI is at 39.48, indicating a neutral state, which supports the current price trend. Bitcoin must surpass the \$63.5K zone. If that happens, there's a possibility of climbing back to the \$65,000 level. This could further validate the bullish sentiment for October, possibly pushing it past \$68,000 or even \$70,000.

- Bitwise XRP ETF uses the cash-create technique or exchanges cash for shares. - The crypto asset manager was an early entrant in the Bitcoin spot ETF market in January. Bitwise, a cryptocurrency asset manager, has formally applied to the US Securities and Exchange Commission to become the first spot XRP exchange-traded fund (ETF). The filing states that, after the Bitwise XRP ETF receives SEC clearance, it will provide investors access to the value of the XRP owned by the trust, less the costs of the trust's operations and other liabilities. Bitwise CEO Hunter Horsley said in a press statement announcing the announcement on Oct. 2 that the company believes blockchains will bring about new monetary assets that are not tied to politics. And will have permissionless uses in the 21st century. The CEO added: "It's why for the past seven years we've helped investors access the opportunities in the space, and we're excited to continue that work with our filing for a Bitwise XRP ETF. Awaiting Regulatory Clearance Additionally, Bitwise said that the Bitwise XRP ETF uses the cash-create technique or exchanges cash for the creation and redemption of shares. According to the filing, the trust would inform shareholders if it manages to get the required regulatory clearances to permit creations and redemptions in kind. A formal filing with the SEC was expected to follow Bitwise's Oct. 2 filing for an XRP ETF Trust in Delaware, which was followed soon after by its ETF filing. Bitwise was an early entrant in the Bitcoin spot ETF market in January, before applying for an XRP ETF. Among the companies that began trading spot Ethereum ETFs in July was Bitwise. Moreover, Bitwise has not yet registered for a spot Solana ETF, whereas other crypto ETF issuers such as VanEck have. Highlighted Crypto News Today: Analysts Warn of Potential Price Correction Amid Bitcoin OI Surge

Ethereum's 29% decline in a single day serves as more than just a statistic. It's a clear reminder of the fragility and unpredictability that characterizes the crypto market. Meanwhile, VeChain, after briefly reaching \$0.026, tumbled by 19.2%, reflecting the volatility of the space. Still, a modest 4.7% weekly recovery brings it to \$0.021, highlighting resilience in a tumultuous market. In contrast, BlockDAG is making a notable entry with its advanced DAG technology backed by PoW. The recent AMA with the CEO unveiled a mining model that combines multiple miners, sparking a rush to purchase in batch 23. Is now the time to consider BDAG coins? Ethervista: Sudden Drop Catches Investors Off Guard Ethervista's rapid rise and equally fast downfall offer a stark reminder of the volatile forces at play in digital currencies. The market can be unforgiving, as even significant upward momentum can crumble in a blink. Ethereum Classic's recent decline has been eclipsed by Ethervista, a platform with roots in Solana's Pump.fun and Tron's SunPump. Ethervista recently soared to become the second-largest burner of ETH within a week, only to suffer a 29% drop in a single day. This dramatic shift reflects the high level of uncertainty that defines the cryptocurrency landscape. VeChain: A Lukewarm Offering for Now VeChain's story is one of endurance and resilience, even in an unforgiving market. Despite recent challenges, the community has remained committed, casting over 13 million VOT tokens to approve the VeChainDAO proposal. This collective decision isn't just symbolic; it reinforces the belief in shared governance and highlights the trust that persists, despite the shifting conditions beneath their feet. The proposal's approval signals upcoming technical improvements, including X-Nodes support and the introduction of GM NFTs, marking critical steps in VeChain's continued development. BlockDAG: X10 and X1 Miners for the Long Game In a crypto world filled with ambitious proposals and speculative predictions, BlockDAG is introducing a concept that goes beyond the traditional model of a better coin. It is proposing a fundamental shift in the way value is generated and distributed, offering a structure that empowers individuals directly. This isn't just a technological advancement; it signals a larger, inevitable realignment within the blockchain ecosystem, shaped by ongoing developments across the industry. BlockDAG's recent AMA with CEO Antony Turner has heightened interest, particularly within the crypto-mining sector. Turner emphasized the strategic advantage for early adopters, positioning the company's mining devices as a key opportunity to secure significant rewards before the market becomes more competitive. The logic is straightforward: fewer participants now lead to greater returns. Turner also noted that combining the X10 and X1 miners could boost efficiency tenfold, positioning this hardware as a particularly attractive option for those focused on maximizing output. Following the latest testnet launch, there has been a marked increase in purchasing activity, pushing the project forward through batch 23, where coins are priced at \$0.0192. This makes it a more accessible financial option for a coin with robust technical backing, potentially poised to succeed Kaspas. The project has already sold over 5 million ASIC miners, underscoring the strong demand for PoW mining. With more than \$78 million raised in presales, some experts suggest early adopters could realize returns up to 20,000%, with the coin's value possibly ranging from \$1 to \$20. Final Thoughts Ethervista's recent surge from \$21.26 to a high of \$27.60, only to crash to \$12.44, showcases the inherent volatility of the crypto market. This unpredictability, paired with long-standing concerns, makes the case for exploring alternatives. BlockDAG has already raised \$78 million in presales, signaling strong interest from both miners and buyers. - Ripple is gearing up for a crucial period of regulatory reviews and market integration. - To maintain parity, Ripple has been simultaneously minting RLUSD on the Ethereum network. In an effort to make sure the stablecoin works well when it launches, Ripple has minted an additional 1.35 million RLUSD to the XRP Ledger. Ripple is gearing up for a crucial period of regulatory reviews and market integration, which is when this development occurs. With 2.45 million RLUSD created in October alone, Ripple Labs has been ramping up the minting of its RLUSD stablecoin. The most recent minting, which took place on the XRP Ledger, included the minting of 1.35 million RLUSD and was one of four separate batches. Up until this point, this massive tranche has been the most noteworthy issuance. It also shows that the Ripple team is trying to increase liquidity and put RLUSD through its paces in different environments. Getting Ready Ahead of Regulatory Clearance Previous mints by the firm included smaller batches, such as the 80,000 RLUSD stablecoin that was recently minted, in addition to the 1.35 million tokens. All of these moves point to the corporation being ready to launch RLUSD, pending clearance from regulators. To maintain parity, Ripple has been simultaneously minting RLUSD on the Ethereum network and the XRP Ledger (XRPL) network. One way to improve scalability is to split token distribution across these two blockchains. It also guarantees that the stablecoin will work well in a scenario where many chains are active. A lesser number of tokens, including a 500,000 RLUSD tranche, were created on Ethereum, however the XRPL has issued the vast bulk of tokens. The complete launch of RLUSD is still contingent upon regulatory clearance, even though minting has advanced. In light of the recent legal challenges encountered by other stablecoin issuers, such as Paxos and TrueUSD, the firm is eager to guarantee that the stablecoin adheres to U.S. legislation. - Wormhole (W) jumped 20%, increasing from \$0.2787 to \$0.3959 after being listed on Upbit. - Wormhole's total value locked (TVL) reached \$3.2 billion. While the global crypto market is facing downturn, Wormhole (W) token displayed a significant 20% increase in value after South Korea's leading cryptocurrency exchange, Upbit, announced its listing for trading. The token is now available in trading pairs with the Korean Won (KRW), Bitcoin (BTC), and Tether (USDT), attracting attention from the crypto community. As per the latest data from CoinMarketCap, the price of Wormhole token soared to \$0.3959, climbing from \$0.2787. This surge was triggered by a rise in daily trading volume, which jumped over 742%, reaching \$495 million. The token marked its presence significantly with a market cap of \$949 million and a total value locked of \$3.2 billion. Wormhole's Ecosystem Growth and Era3 Launch Upbit's announcement, made on October 2 at 18:00 UTC+8, also included some trading guidelines. The exchange will allow selling at prices that are within 10% of the previous day's closing value. Additionally, there will be a temporary restriction of about five minutes on these orders after trading begins. Wormhole originally launched its W token on the Solana network. Since then, it has expanded its availability across various exchanges, including major platforms like Binance and Kraken. In addition to this listing, Wormhole recently introduced Era3, which plans to enhance cross-chain interoperability. This update set to simplify interactions among apps, tokens, networks, and financial institutions. That will pave the way for a more interconnected crypto ecosystem. According to their official site, Wormhole's Era3 represents a significant step forward in bridging the gap between traditional finance and the blockchain world. Highlighted News Of The Day

According to industry insiders, the blockchain space has been locked in a race to the bottom for years. What started as a promising new way to take the tech space to new heights has, in many instances, devolved into a competition to win market share, with innovation and advancement taking a back seat to marketing and expansion. For example, Ethereum co-founder Vitalik Buterin has long maintained that the future of blockchain will be multi-chain, not cross-chain, due to security issues, sovereignty concerns, and a lack of cohesiveness and integration across different chains and protocols. At the same time, others have maintained that blockchain will move toward a more cross-chain reality, with no single chain maintaining dominance in any single field. Unfortunately, many growing industries, including Web3 gaming, have suffered due to this lack of cohesiveness and interoperability. As a result, we have seen the rise of competing chains and platforms, each trying to establish itself as the next Google or Amazon within a specific niche. While this may serve to pad corporate bottom lines in the short run, it is detrimental to the long-term viability of the budding Web3 gaming space. The GR1D Hub Toward that end, 1KIN Labs is building the GR1D, a modular gaming network engineered specifically to

power the multi-chain, mass-market Web3 gaming ecosystem of the future. The product suite connects gamers with the worldâ€™s best community-focused titles, providing exclusive access to in-game content, rewards, digital asset management tools, and more â€” all with a single, secure, unified, and globally accepted sign-on. With a unified discovery and management hub for discovering and using exclusive content across multiple blockchain networks and platforms, along with an innovative subscription service available through Amazon, the GR1D is pushing the envelope and is helping Web3 gaming make meaningful strides forward. How it works The GR1D Network is the modular Layer-2 (L2) gaming-focused blockchain network that runs GR1D TERMINAL â€” a comprehensive hub that helps gamers discover, collect, and manage exclusive rewards across the ever-expanding Web3 multiverse. This all-in-one hub simplifies user experiences across the highly fragmented Web3 gaming landscape and, perhaps more importantly, brings about never-before-seen levels of interoperability and features across titles and offerings running on competing networks and blockchains. A closed beta test of the system with over 25,000 participants proved to be exceptionally successful, and the public release will continue to build on the betaâ€™s momentum by offering players access to an ever-expanding library of successful Web3 titles across multiple networks, from Solana and Avalanche to Polygon and more. The network has already signed over 100 games and studios and allows players to collect and trade a host of collectibles across global hits including Blocklords, My Angry Yakuza Girlfriend, Aurora, Aavegotchi, Legends of Venari, and more. The initial release will be accessible to all users, providing them with an inside peek at the systemâ€™s capabilities, with access to richer features and functionalities available by granting a user account GR1D TERMINAL Credit Packs. GR1D TERMINAL Credit Packs are now available on Amazon, and will be available on other major e-commerce credit packs. GR1D TERMINAL Credit Packs are thought of as a Web3 equivalent to Xbox Game Pass or Amazon Prime Gaming; it allows users to choose unique sets of in-game assets that they like and access other exclusive content every month. Such access through a digital storefront on Amazon is a first of its kind for Web3 gaming subscription services on the global platform. In this way, GR1D TERMINAL seamlessly connects Web3 games and other features to Amazonâ€™s massive global user base and an effective on-ramp for gamers looking to engage with the Web3 world. Jack Oâ€™Neill, the founder of 1KIN Labs, said that GR1D TERMINAL is a major step toward building a more cohesive and user-friendly Web3 gaming ecosystem, with one access point that bridges the many gaps that exist in Web3 gaming and blockchain networks. The end goal, according to Mr. Oâ€™Neill, is to bring the ease and convenience that gamers have become accustomed to on traditional, Web2 platforms such as Xbox Game Pass to the blockchain gaming space, making Web3 more accessible and enjoyable for everyone in the process. By building performant yet modular underlying technology needed to make the system run and abstracting it away from the user, GR1D Network is setting itself up to become a leading services provider in the Web3 gaming landscape. With unified and enriched experiences made possible via GR1D TERMINAL, distribution on Amazon, and the creation of value via seamless and cost-effective interaction between gamers, assets, titles, and platforms, GR1D is righting many longstanding industry wrongs â€” a development that will be to the sound of cheering from the worldâ€™s Web3 gaming userbase.

- Bullish MINA price prediction for 2024 is \$0.6139 to \$0.9675. - Mina (MINA) price might reach \$3 soon. - Bearish MINA price prediction for 2024 is \$0.2597. In this Mina (MINA) price prediction 2024, 2025-2030, we will analyze the price patterns of MINA by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. [TABLE OF CONTENTS](#) | [INTRODUCTION](#) | [MINA \(MINA\) PRICE PREDICTION 2024](#) | [MINA \(MINA\) PRICE PREDICTION 2025, 2026-2030](#) | [CONCLUSION](#) | [FAQ](#) | [Mina Protocol \(MINA\) Current Market Status](#) | Current Price | \$0.5539 | 24 â€” Hour Price Change | 4.19% Down | | 24 â€” Hour Trading Volume | \$35,962,439 | | Market Cap | \$644,076,209 | | Circulating Supply | 1,163,929,728 MINA | All â€” Time High | \$9.91 (On June 01, 2021) | | All â€” Time Low | \$0.3358 (On August 05, 2024) | What is Mina (MINA) | [TICKER](#) | MINA | | [BLOCKCHAIN](#) | Mina | | [CATEGORY](#) | Layer-One Blockchain | | [LAUNCHED ON](#) | March 2021 | | [UTILITIES](#) | Privacy-Focused, Accessible, Scalable, and Decentralized | Mina (MINA) is a decentralized cryptocurrency platform known for its lightweight blockchain design, enabling participants to run and verify the entire blockchain with minimal resources. Positioned as the worldâ€™s lightest blockchain, Mina leverages advanced cryptographic techniques, such as zk-SNARKs, to maintain a constant size of around 22 KB. This unique feature ensures that the blockchain remains accessible and easily verifiable, promoting decentralization and inclusivity. Mina serves as a layer-one protocol, allowing developers to build scalable and privacy-focused decentralized applications (DApps). Its design prioritizes user privacy by enabling transactions to be verified without the need to download the entire blockchain. This makes Mina an attractive option for a range of applications, including financial services, NFTs, and more. Governed by the community, Mina emphasizes accessibility, scalability, and decentralization in the evolving landscape of blockchain technology. Mina 24H Technicals (Source: TradingView) Mina (MINA) Price Prediction 2024 Mina (MINA) ranks 102nd on CoinMarketCap in terms of its market capitalization. The overview of the Mina price prediction for 2024 is explained below with a daily time frame. MINA/USDT Rounding Bottom Pattern (Source: TradingView) In the above chart, Mina (MINA) laid out a rounding bottom pattern. The price movements form a pattern that resembles a bow and hence is also known as the saucer bottom pattern. In general, the rounding bottom pattern indicates a long-term price reversal. This pattern also emphasizes the changes in the market sentiment as the trend seems to shift from bearish to bullish. Investors generally have to stay cautious and time the market well. If the price breaks and moves past the resistance level, it will enter a confirmed bullish trajectory. At the time of analysis, the price of Mina (MINA) was recorded at \$0.5539. If the pattern trend continues, then the price of MINA might reach the resistance levels of \$0.6541 and \$1.2725. If the trend reverses, then the price of MINA may fall to the support of \$0.4068, and \$0.3305. Mina (MINA) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Mina (MINA) in 2024. MINA/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Mina (MINA) for 2024. | Resistance Level 1 | \$0.6139 | | Resistance Level 2 | \$0.9675 | | Support Level 1 | \$0.4142 | | Support Level 2 | \$0.2597 | MINA Resistance & Support Levels Mina (MINA) Price Prediction 2024 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Mina (MINA) are shown in the chart below. MINA/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Mina (MINA) market in 2024. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.4634 Price = \$0.5603 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 60.9303 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Mina (MINA) Price Prediction 2024 â€” ADX, RVI In the below chart, we analyze the strength and volatility of Mina (MINA) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). MINA/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Mina (MINA). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 33.0088 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 71.16 < 50 = Low > 50 = High | High volatility | Comparison of MINA with BTC, ETH Let us now compare the price movements of Mina (MINA) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs MINA Price Comparison (Source: TradingView) From the above chart, the price action of MINA is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of MINA also increases or decreases respectively. Mina (MINA) Price Prediction 2024, 2025 â€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Mina (MINA) between 2024, 2025, 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Mina (MINA) Price Prediction 2025 | \$3.8 | \$0.5 | | Mina (MINA) Price Prediction 2026 | \$4 | \$0.1 | | Mina (MINA) Price Prediction 2027 | \$5.3 | \$0.09 | | Mina (MINA) Price Prediction 2028 | \$6.5 | \$0.08 | | Mina (MINA) Price Prediction 2029 | \$7.8 | \$0.07 | | Mina (MINA) Price Prediction 2030 | \$9 | \$0.06 | Conclusion If Mina (MINA) establishes itself as a good investment in 2024, this year would be favorable to the cryptocurrency. In conclusion, the bullish Mina (MINA) price prediction for 2024 is \$0.9675. Comparatively, if unfavorable sentiment is triggered, the bearish Mina (MINA) price prediction for 2024 is \$0.2597. If the market momentum and investorsâ€™ sentiment positively elevate, then Mina (MINA) might hit \$3. Furthermore, with future upgrades and advancements in the Mina ecosystem, MINA might surpass its current all-time high (ATH) of \$9.91 and mark its new ATH. FAQ 1. What is Mina (MINA)? Mina (MINA) is a decentralized cryptocurrency platform known for its lightweight blockchain design, enabling participants to run and verify the entire blockchain with minimal resources. 2. Where can you purchase Mina (MINA)? Traders can trade Mina (MINA) on the following cryptocurrency exchanges such as Binance, Coinbase, Kraken, Huobi, and Gate.io. 3. Will Mina (MINA) reach a new ATH soon? With the ongoing developments and upgrades within the Mina platform, Mina (MINA) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Mina (MINA)? Mina (MINA) hit its current all-time high (ATH) of \$9.91 on June 01, 2021. 5. What is the lowest price of Mina (MINA)? According to CoinMarketCap, MINA hit its all-time low (ATL) of \$0.3358 on August 05, 2024. 6. Will Mina (MINA) reach \$3? If Mina (MINA) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$3 soon. 7. What will be Mina (MINA) price by 2025? Mina (MINA) price is expected to reach \$3.8 by 2025. 8. What will be Mina (MINA) price by 2026? Mina (MINA) price is expected to reach \$4 by 2026. 9. What will be Mina (MINA) price by 2027? Mina (MINA) price is expected to reach \$5.3 by 2027. 10. What will be Mina (MINA) price by 2028? Mina (MINA) price is expected to reach \$6.5 by 2028. Dubai, United Arab Emirates, October 1st, 2024, Chainwire Bybit, the worldâ€™s second-largest cryptocurrency exchange by trading volume, is excited to unveil the World Series of Trading (WSOT) 2024, the worldâ€™s longest-running crypto trading competition. This year, WSOT pushes boundaries, integrating centralized and decentralized trading, allowing participants to experience the trustless trading of the future. Game-Changing Features Traders Will Love Individual traders can battle in three arenas depending on their capital size: lightweight, middleweight, and heavyweight. With separate prize pools for each league, the competition is fairer and ensures that talent wins the day, not account size. Furthermore, traders can add up to four subaccounts within their Unified Trading Account (UTA) and rack up PnL across multiple accounts and markets, increasing their chances of winning. Bybitâ€™s UTA calculates margin across positions, unifies collateral, and improves capital efficiency so traders can operate multiple positions from one account, making it a killer tool for the rigors of competitive trading. Expanding into Decentralized and Centralized Trading WSOT also includes Bybit Web3â€™s DEX Pro trading platform so participants can trade over 1 million decentralized tokens, including memecoins, DeFi, GameFi and more. Participants can also take part in the first-ever Web3 Idol competition. To play, traders earn votes through trading and completing daily tasks. Voters can support up to three projects daily and have the chance to win from a 1,000,000 MNT prize pool, including a 600,000 MNT grand prize for those who vote for the winning project and 200,000 MNT daily rewards. The winning project will receive exclusive CEO backing, prime listing, and marketing support, making it a key event in shaping the future of Web3. Over 100 ecosystem partners and decentralized projects such as MomoAi and Tars Protocol from Solana, and Catizen, KTX Finance via Mantle will participate in the DEX Pro competition as part of WSOT. By marrying centralized (CEX) and decentralized (DEX) trading, all crypto lovers can experience the wave of the whole ecosystem. â€”Bybit aims to create industry best practices for onboarding users for both CEX and DEX to help create a broader landscape of crypto adoption,â€”said Ben Zhou, co-founder and CEO. â€”By combining these two elements, we are enabling the smaller projects and specialist traders to rise up the competition ranks.â€”â€”10,000,000 Prize Pool and Participation Details The prize pool for WSOT 2024 is bigger and better, with rewards including yacht cruises, Rolex watches, world travel tickets, and up to 10,000,000 USDT. The more participants join the larger the prize pool grows, making this yearâ€™s competition the juiciest in crypto. To participate, simply sign up for WSOT when the event opens on October 1 and maintain at least \$500 in your Bybit UTA account. All participants can invite friends to join WSOT and get more chances in the lucky draw. Over the years, Bybitâ€™s WSOT has grown to historic heights, with nearly 117,000 traders entering competitions between 2020 and 2022. And in 2023, the competition attracted almost 120,000 traders globally. This resulted in a remarkable year-on-year trading volume surge of 42%, reaching a total trading volume of 70.5 billion. #Bybit / #TheCryptoArk / #WSOT2024 About Bybit Bybit is the worldâ€™s second-largest cryptocurrency exchange by trading volume, serving over 50 million users. Established in 2018, Bybit provides a professional platform where crypto investors and traders can find an ultra-fast matching engine, 24/7 customer service, and multilingual community support. Bybit is a proud partner of Formula Oneâ€™s reigning Constructorsâ€™ and Driversâ€™ champions: the Oracle Red Bull Racing team. For more details about Bybit, users can visit Bybit Press. For media inquiries, users can contact: media@bybit.com For more information, users can visit: https://www.bybit.com For updates, users can follow: Bybitâ€™s Communities and Social Media Contact Head of PR Tony Au Bybit tony.au@bybit.com

- Robinhood allows users to deposit and withdraw over 20 cryptocurrencies. - It provides crime insurance against security breaches and thefts. The retail investing platform Robinhood announced the launch of cryptocurrency transfers for its European users. This enables the Robinhood customers

to deposit and withdraw more than 20 cryptocurrencies, including major assets like Bitcoin (BTC), Ethereum (ETH), Solana (SOL), and USD Coin (USDC). Moreover, for a limited time, the platform offers its customers in Europe a one percent match on all crypto deposits, in the same cryptocurrency they deposit, subject to a cap. In addition, European customers can buy, sell, and hold over thirty-five cryptocurrencies at the lowest average cost. The users can also trade Bitcoin with zero fees. Besides, they can stake Solana to earn an estimated 5.23% annual percentage yield and earn up to 15% rewards on USD coin holdings, with no limit. Johann Kerbrat, VP and GM of Robinhood, stated, "With the launch of crypto transfers in Europe, we're making self-custody and entering DeFi simpler and more accessible for our customers." Support for deposits and withdrawals gives customers more control over their crypto, while ensuring they have the same safe, low-cost, and reliable experience they expect from Robinhood. Robinhood emphasizes protection and does not lend or leverage customer crypto assets. It stores the majority of the crypto in cold storage, and customers' accounts are backed by industry-leading security. Moreover, the platform provides crime insurance against security breaches and thefts. Robinhood's Crypto Correlation Report for the second quarter in 2024 was profitable. The total net revenue increased by 40% year-over-year to \$682 million. The platform's transaction-based revenues increased 69% year-over-year to \$327 million. It was primarily driven by the income from options, cryptocurrencies, and equities trading. On the other hand, Robinhood announced its plans to acquire the crypto platform Bitstamp in June. To facilitate this expansion, the deal, valued at approximately \$200 million in cash, is expected to close in the first half of 2025. - Moo Deng's price volatility highlights liquidity challenges in meme coin markets. - Major holders face risks when selling large amounts, impacting market stability. Moo Deng (MOODENG), a meme coin inspired by Thailand's pygmy hippo star, has seen a dramatic rise and fall in recent days, stirring excitement and concern in the crypto market. After reaching a peak market cap of \$322.7 million on September 28, the token has plummeted 50% in just three days, with its price dropping to \$0.18. Amid this, news about an early investor in the coin has gained wide attention. Identified as "Trader Db3P," the investor turned an \$800 purchase into \$10 million at its peak. Despite the sharp decline, this whale continues to hold \$5 million worth of the token, even as its value drops by roughly \$1 million daily. The trader's large holdings highlight a common issue in the memecoin space: liquidity. With Moo Deng's market cap now at \$176.1 million, there is concern that any large-scale sell-off by major holders could trigger further value declines. Speculative Short-Term Trend? Memecoins like Moo Deng are notorious for their volatility, often propelled by speculative trading. The launch of Moo Deng on Solana-based platform Pump.fun coincided with a viral internet sensation: millions of views on the baby hippo that inspired the token. By mid-September, Moo Deng's value surged 597% in one week, leading the memecoin category. However, the token's rapid ascent mirrors earlier meme coins, such as Dogecoin and Shiba Inu, which faced similar market volatility. Despite recent losses, Moo Deng remains a significant player in the memecoin sector, currently trading at \$0.2371, with a 6% recovery over the past 24 hours. As traders continue to engage, the coin's trading volume hovers at \$190 million, reflecting sustained interest despite its inherent risks. This latest memecoin craze underscores both the allure and unpredictability of speculative assets in the crypto world. Highlighted News Of The Day Ripple Obtained In-Principle Approval From DFSA to Expand Operations in UAE

- Bitcoin price showed a modest price dip of 1.28% in the last 24 hours. - The cryptocurrency is expected to witness price breakouts hitting new highs this month. With the new month bringing glad tidings for some, the digital assets community anticipates bullish rallies and god candles. In the midst of investors' expectations, Uptober faces pressures for significant price actions. However, in the Asian early morning hours, the cryptocurrency market has receded to a mild price dip sending mixed signals. The leading cryptocurrency, Bitcoin slid modestly and hit the support level of \$63,000 on Tuesday. In the last 24 hours, its price dip accounts for a 1.28% decrease. At the beginning of the day on September 30, the cryptocurrency traded at \$64,525 after which it slipped downward. At the time of writing, BTC was trading at \$63,672 according to CMC data. Meanwhile, during the last few days of September, Bitcoin's price movements suggested an early onset of its bull run. The cryptocurrency after its prolonged slump at the \$50K level hit \$66,000 propelled by this price cycle. Subsequently, investors and market analysts alike expected the bullish momentum to sustain through to October. However, the recent price dip has not disheartened the community as specific analysts also predicted that brief dips might precede bull runs as historical data suggests. Moreover, market analyst Ali stated how certain dips towards the end of September had always been followed by significant gains in October. What to Expect for Bitcoin Price this Month? On inferring Bitcoin's technical indicators, the short-term 9-day MA stands clearly above the long-term 21-day MA indicating the bull run. While this suggests the current market situation, the Moving Average Convergence Divergence (MACD) hints at Bitcoin's upcoming price movements. The signal line standing over the MACD line indicates a positive market situation. Additionally, BTC's Average Directional Index (ADX) value is locked at 21.57 highlighting a strong bullish trend per TradingView data. This indicates a bullish prediction for the largest cryptocurrency when inferring the different technical indicators. Meanwhile, other cryptocurrencies such as Ethereum and Solana are yet to witness their price breakouts.

CryptoGames, a prominent online cryptocurrency casino, has recently expanded its roster of supported digital currencies by including Shiba Inu (SHIB), one of the fastest-growing cryptocurrencies in the market. This announcement marks a significant development for both the gaming platform and the SHIB community, as it opens up new avenues for entertainment and financial engagement within the rapidly evolving crypto space. What is Shiba Inu (SHIB)? Shiba Inu (SHIB) is a decentralized cryptocurrency that was created in August 2020 by an anonymous individual or group known as "Ryoshi." Initially branded as the "Dogecoin killer," SHIB gained massive popularity due to its meme-inspired origin, low transaction costs, and rapidly growing community. Unlike many cryptocurrencies, SHIB has a substantial supply of tokens, which allows for accessibility and inclusivity, making it attractive to a broad audience of crypto enthusiasts. Over the past few years, SHIB has evolved beyond its meme roots, establishing itself as a serious contender in the world of digital currencies. The Shiba Inu ecosystem now includes a decentralized exchange called ShibaSwap, and its developers continue to work on various projects to expand its use cases, including NFTs and blockchain-based games. The addition of SHIB to CryptoGames is a testament to the token's growing acceptance and utility in the online gaming world. How SHIB Integration Benefits Players The integration of Shiba Inu (SHIB) into CryptoGames offers several advantages for players. First and foremost, it provides SHIB holders with a new and exciting way to utilize their tokens. Players can now use SHIB to place bets, participate in contests, and enjoy the wide variety of games available on the platform. This not only enhances the utility of SHIB but also adds to the overall player experience by offering more flexibility in payment options. Furthermore, the low transaction fees associated with SHIB make it an attractive choice for online gaming. Players can deposit and withdraw SHIB with minimal costs, allowing them to focus on their gaming strategies without worrying about high fees eating into their bankrolls. The addition of SHIB also introduces the SHIB community to CryptoGames, potentially attracting new users to the platform and fostering a vibrant and diverse gaming environment. A Closer Look at CryptoGames CryptoGames, established in 2020, has quickly become a leading platform in the online cryptocurrency gaming space. Licensed and regulated by the Government of Curacao, the casino offers a secure and fair gaming experience, with all games being provably fair. CryptoGames currently features 10 in-house games, including Dice, Roulette, Blackjack, Lottery, Video Poker, Plinko, Minesweeper, and Keno, each offering unique gameplay and competitive wage edges. One of the standout features of CryptoGames is its support for a wide range of cryptocurrencies. In addition to the newly added SHIB, players can bet with Bitcoin, Ethereum, Litecoin, Dogecoin, Solana, and several other major digital currencies. The platform also provides convenient features like "ChangeNow," which allows users to deposit over 50 different altcoins and convert them instantly to supported currencies. Additionally, the "Swapped" feature enables players to buy crypto directly with fiat currencies using popular payment methods like Google Pay and Apple Pay. CryptoGames also offers a variety of bonuses and incentives, including a faucet bonus for testing games, random vouchers, and daily and weekly challenges. The monthly wagering contest is another highlight, with rewards of up to \$500,000 USD (based on current crypto values) distributed among top players. For those seeking an enhanced experience, CryptoGames offers a VIP membership program. VIP members enjoy perks such as a lower house edge on dice games, priority betting, increased exchange limits, and access to exclusive chat rooms and vouchers. This program rewards the most dedicated players, making it a desirable goal for regular users. Conclusion The addition of Shiba Inu (SHIB) to CryptoGames is a strategic move that benefits both the casino and the SHIB community. It reflects CryptoGames' commitment to staying at the forefront of the crypto gaming industry by continuously expanding its offerings and embracing new trends. As more players explore the possibilities of using SHIB on the platform, CryptoGames is poised to further solidify its reputation as a premier destination for crypto-based entertainment. Whether you're a seasoned player or new to the world of crypto gaming, CryptoGames offers a dynamic and engaging experience that now includes the excitement of SHIB.

- Ethereum's price has dropped to \$2,598, a 1.90% decline in 24 hours. - The Ethereum Foundation sold 100 ETH for approximately 262,474 DAI. Ethereum's price has dropped to \$2,598, marking a 1.90% decline over the last 24 hours. Meanwhile, trading volumes surged, reaching \$13.31 billion, which represents a significant 30.25% increase. Additionally, the top 10 Ethereum market capitalizations surged by 1.40%, now totaling \$316 billion, combined with a steady circulating supply of 120.37 million ETH, raises concerns among investors. These factors point to potential further corrections. Several large-scale whale transactions currently influence market sentiment. The most notable transfer involved a staggering 43,331 ETH, valued at over \$113 million, which moved to Coinbase Institutional. This significant shift raises questions about potential large-scale liquidations or repositioning by institutional players. Consequently, this movement may contribute to Ethereum's current downtrend. In addition to this major transfer, two other prominent transactions were observed. A combined total of 25,194 ETH, with an estimated value of \$66.13 million, was transferred to Coinbase in two separate transactions. Thus, this activity adds downward pressure to Ethereum's price in the short term. Another major movement involves 8,487 ETH, worth \$22.38 million, which was transferred to Binance. This influx of ETH to the exchange could increase selling pressure further. If liquidation occurs, it may drive down Ethereum's value even more. Moreover, a noteworthy transfer of 9,534 ETH from Wintermute, a prominent market-making firm, to an unknown wallet has drawn attention. Valued at \$25.05 million, this move hints at behind-the-scenes market maneuvers. Meanwhile, a dormant address holding 70 ETH was activated after more than 9.2 years, but the impact of this specific transfer is likely minimal compared to larger whale movements. Ethereum ETH Approaches Critical Support Levels Ethereum faces strong resistance at \$2,634 and support at \$2,593. A bearish crossover appeared between the 9-day and 21-day moving averages (MA). Currently, the price sits below both \$2,600 and \$2,605, which signals potential further declines. Technical indicators suggest that Ethereum could encounter further challenges as it approaches critical support levels. The Relative Strength Index (RSI) currently stands at 28, while the average RSI is 31. This low RSI level indicates that Ethereum is oversold, which could suggest a potential reversal may occur soon. However, the average RSI signals continued bearish momentum in the short term. Therefore, market sentiment remains negative. Investors should exercise caution as oversold conditions can persist longer than expected. Additionally, the Ethereum Foundation sold 100 ETH for approximately 262,474 DAI just 10 minutes ago. This sale marks a total of 3,766 ETH sold for 10.46 million DAI in 2024. Notably, 1,250 ETH, valued at \$3.06 million, sold in September alone. Such sales could indicate ongoing efforts by the foundation to manage its holdings. Ultimately, this activity may impact market supply and price stability. Due to the relentless pace of development in the cryptocurrency market, one can always try to find something that could be called a breakthrough opportunity. Interestingly, one particular token has been targeted as a very strong challenger to Cardano (ADA) with many predicting that its worth will swell from below the \$0.10 mark to \$10 within six months. Rexas Finance (RXS): The Cardano (ADA) Rival Rexas Finance has established itself as an innovative project intended to change how people deal with real-world assets. The platform aids users in fractionalizing and exchanging properties, gold, and shares on the blockchain using self-managed resources. The method adopted by the firm is different from traditional financial systems where the approach to transacting is long, complex, and involves many parties. Rexas Finance seems to lead in providing assets in the form of tokens in the DeFi world thus ensuring liquidity and accessibility that has not been experienced before. As a result of this innovative character, it is expected that RXS will play a vital role in the ecosystem of the new financial order as more assets are being digitized and, consequently, tokenized. Successful Presale Phases: A Strong Start The RXS token has especially garnered the enthusiasm of investors during these presale phases. Selling of the first 15,000,000 tokens was carried out in the first presale step and this lasted less than three days proving the level of confidence the investors have on this project. After this, stage two presale of 20 million tokens was done at the price of \$0.04 each and raised an impressive total of \$1,250,000 within a brief period. Investors are beginning to compete to invest in the project looking at the returns hence, this huge success comes as a product of the increasing interest in the project. The presale appetite has persisted into stage three as well as the price for the tokens, which the investors now scoop at \$0.05. Up to now, the amount already put in the project has surpassed \$1.5 million

which illustrates the increasing wait and positive expectancies in the crypto community. Considering such great demand, analysts are cautious and therefore say investors that did not participate in presales one and two should be quick as stage three might also be finished quickly as stage two was completed. The market price of the token upon its listing is projected at \$0.20 making it possible for early investors to realize a 4x return on their investment during its listing. Bold Predictions for the Future: \$10 in Just 6 Months Many of the market experts are quite positive regarding Rexas Finance which is why they are optimistic that in the coming six months the token will increase from \$0.05 to \$10 or thereabout. If this prediction holds, early investors are set to make a 200x return on their investment from now. It is these very conditions that have been instrumental in attracting the traders as well as the long-term holders, a rapid appreciation of RXS is in the offing come the year 2024. Rexas Finance's prudent use case, skilled development team, and an increasing need for RWA tokenization explain why the market is optimistic about the asset. It is not only the speculation on the value of a \$500 trillion tokenized asset but a functional RWA platform that can transform various sectors as real estate, commodity trading, and beyond. A \$1 Million Giveaway Adds to the Excitement Seeking the improvement of community participation, Rexas Finance has even started a giveaway reward amounting to \$1 million. This reward will see 20 lucky winners rise and take home \$50,000 each. This also includes over 80,000 people already participating with only 128 days left. Hence, this giveaway serves to add an extra appeal to potential investors. This reward campaign is another proof of the team's efforts in establishing an active and growing RXS token community. As with any other growing platform, such efforts may enhance the brand and lure even more investors. Conclusion For those looking to capitalize on the future of blockchain and real-world asset tokenization, Rexas Finance is a project that should be on your radar. With a solid roadmap, a rapidly growing community, and the potential for substantial returns, RXS is well-positioned to become a key player in the DeFi space with its predicted price jump in the next 6 months. - The altcoin SUI has shown significant price increases over the last 30 days. - Sui blockchain hit a milestone of \$1 billion TVL in the last 24 hours as per reports. As another week begins, the crypto community resumes its wait for the full-fledged price rally. Contrary to the weekend's expectations, Bitcoin has receded to the concurrent \$64K causing the community to tighten its hopeful reins on the UpTober landmark. Meanwhile, the altcoin SUI has continued its price rally undeterred by the negative circumstances. Sui blockchain's native token SUI has recorded a significant price increase over the past month. Notably, in the last 24 hours, SUI added an additional 4.29% price increase to its bullish rally. The token is currently trading at the \$1.7 level inching closer to the \$2 milestone. Specifically, at the time of writing, SUI was trading at \$1.74 as per CMC data. Additionally, the altcoin's daily trading volume surged by a significant 103%. Moreover, SUI witnessed a brief price dip to the \$1.6 level in the early hours of September 29 after which it altered its pace on the bull run. Secondly, on examining the token's weekly price actions, SUI in light of its upward movements has factored in a 10.20% hike. Furthermore, the recent bull runs have propelled the token's year-to-date increase to 125.28%. On the other hand, SUI has shown increased volatility in its price movements as indicated by the RVI standing at 60.74 as per TradingView data. SUI Price Monthly Overview In September 2024, the SUI, despite market struggles, managed to establish a price rally that accounted for a 111.79% increase in value. At the beginning of the month, SUI traded at a low of \$0.7854. Moreover, in August SUI witnessed a bearish market situation as prices dropped further following key market crashes after Bullish May. Additionally, SUI's short-term 50-day MA is moving closer toward a golden crossover to stand above the long-term 200-day MA. If the token manages to refrain from price dips, then the occurrence of a golden cross can be expected. Moreover, SUI's bull run is further highlighted by its bull power indicator standing at 1.27 while its bear power indicator stands at 0.73. Additionally, the Sui Blockchain reported hitting a TVL of \$1 billion in the last 24 hours. Meanwhile, other cryptocurrencies such as Ethereum and Solana are struggling to factor in major price increases in the last 24 hours. The crypto world is abuzz due to a rather shocking announcement made by a SHIB whale, which not so long ago, was noticed by veteran members of the Shiba Inu community. Now that the whale has closed his SHIB position, he remains active as only this time, he is investing in Rexas Finance (RXS). Why? The reason he has in mind is that Rexas Finance is poised to outdo Shiba Inu (SHIB) in terms of valuation, functionality, and even market share. He claims that by 2025, Rexas Finance will displace SHIB from the top 15 cryptos. Quite interesting, I must say. Let us take a closer look and find out what is behind this astonishing and sudden change in attitude and why Rexas Finance is making waves amongst crypto fans all over the world. Why the SHIB Whale Jumped Ship To appreciate the whale's movement, we need to explore what has been going on with the Shiba Inu. In the last month, SHIB seems to have been falling in value even more, losing 20.93% of value. Although SHIB has many followers publicly known due to its meme culture, it has come under fire for having no real purpose leading to price instability. However, as it stands now, such a decline indicates a bigger problem: in the absence of real-life use cases, SHIB is very hard to keep afloat even in the cryptocurrency markets. The whale guardian thinks that the future of the crypto world is in the projects that can bring real benefits to the people and this is why Rexas Finance excels. Presenting Rexas Finance (RXS): The Real Thing Shiba Inu is simply hype, but Rexas Finance is based on the concept of RWA tokens that are not just for bragging. This means that one can own a piece of property like real estate, in any part of the world. What if I tell you I can even own a share in one of the luxurious apartments in New York City? With Rexas Finance all this can be bought with a few clicks. Buy an amount as low as \$1,300 or as high as you can to enjoy the convenience availed by Rexas Finance whether low, medium, or high investment appetite. And that is not all, activities do not end with real estate as Rexas Finance also works with commodities, collectibles, and artwork. The latter RWAs bring real value behind the RXS making it go beyond just another kissing the trend polarisation. This is a real investment in physical goods that appreciate over time. Rexas Finance Presale Saw Over 70% Appreciation. It is unmistakable that Rexas Finance is progressing further. The token has already increased by 70 % during the pre-sale within a very short space of time. Presale stage 1 started at \$0.030, stage 2 began at \$0.040, and stage 3 is being sold at \$0.050. Given the enthusiasm, more expansions are expected despite the official commencement of the marketing strategies. After Rexas Finance goes to exchanges, it will be listed at \$0.20, which is a 300% rise in value compared to the current price of \$0.050. Such growth brings about immense opportunities for Rexas Finance to create wealth for its initial investors. This is in stark contrast with SHIB considered very popular but has failed to show similar usefulness or potential for growth recently. The Reasons Why Rexas Finance (SHIB) Might Replace SHIB As most in the industry have come to accept, meme coins are preferable for the economy but there is a bet that real utility will win in the end. While the Shiba Inu community is still present, the SHIB whale thinks that there is something that SHIB does not have, which is Rexas Finance: the meaning and the application in the world. The possibility of owning piecemeal ownership of commoditized fine arts or real estate gives RXS a fundamental worth that SHIB lacks. What is more, Rexas Finance is not going to just sit and do the tokenization. The roadmap of the project presupposes the creation of a token builder and launchpad, thus making this platform an all-encompassing center for the launching of novel projects into the cryptocurrency domain in pursuit of funding. This gives RXS even more utility and positions it as a game-changer in the RWA space. Conclusion: There It Is, The Whale of A Future. The SHIB whale moving to Rexas Finance is proof that utility is the king in the crypto world. Unlike other speculative tokens, Rexas Finance concentrates on solving the actual problems of tokenization of Real World Assets. This is a mid-low tier-caps token that has great growth potential. Bearing in mind how much of a climb Meme coins will have over Rexas Finance as it transitions from its presale stages, exchange listings, and lastly having a significant role in managing assets, it appears that coins like SHIB will be eclipsed from the top 15 cryptos by RXS. And if that whale is correct, the people who are early in Rexas Finance are in for a pleasant surprise of having a mediocre crypto that is not just in the market for its ridiculous quotes but these equities are supporting tangibles. Well, will Rexas Finance be bigger than Shiba Inu? This is what the smart money pushes. The Solana-based Jupiter crypto price has surged by over 10% following the Federal Reserve's decision to cut interest rates by 50 basis points. The rally has pushed Jupiter's market capitalization to just over \$1 billion, resulting in the Jupiter price exceeding \$0.80 for the first time in several weeks. Beyond the Jupiter price rally, the rest of the crypto market has experienced a considerable swing in sentiment. Following weeks of disappointing price action, major cryptos such as BTC, ETH, and SOL all rallied following the Fed's decision. Amidst the bullish outlook, the Aarn team has demonstrated the power of their AI-driven DeFi Quant Vault, which has shown during a backtesting period to return over 300% APY through its sophisticated 30/7 deep learning models. The vault is designed to discover alpha while mitigating downside risks autonomously. This article will delve deeper into the recent Jupiter price rally, explore Aarn's innovative DeFi vault, and discuss the potential implications for the broader crypto market. Jupiter Crypto Price Jumps 10% as Fed Cuts Interest Rates The Jupiter crypto price rally has been welcomed by Solana bulls who have seen other tokens in the ecosystem suffer consecutive red days and weeks. Jupiter is a decentralized exchange aggregator on the Solana blockchain, known for its ability to find the best prices and lowest slippage for traders. Its native token JUP serves as a governance token, allowing holders to participate in decision-making regarding the platform's future. The recent 50 basis point interest rate cut by the Federal Reserve has injected optimism into the crypto market. Lower interest rates can encourage investors to seek higher-yielding assets, potentially driving capital toward DeFi platforms and tokens like Jupiter. Aarn's Unveils First AI-Powered DeFi Quant Vault Beyond the general bullish market sentiment, many high-value investors and crypto trading experts have been turning to Aarn's AI-driven DeFi quant vault, Afi 802, following an impressive launch at TOKEN2049 and an overwhelmingly positive result from a 12-month backtesting period that showcased the DeFi platform's capacity to outperform BTC and other crypto indices. The Afi 802 vault represents a shift in the way users approach DeFi asset management. Unlike traditional methods that rely on manual intervention and guesswork, Aarn's vault leverages the power of artificial intelligence and quantitative analysis to optimize asset allocation across the DeFi ecosystem. At the heart of this innovation lies Aarn's proprietary alpha AI 30/7 deep learning model. Trained on an extensive dataset encompassing blockchain transactions, technical indicators, and social sentiment, this model continuously scans the market to generate alpha while, at the same time, minimizing downside risks through probability filters and stop loss mechanism Aarn's commitment to transparency and security is also evident in the Afi 802 vault. The platform's smart contracts have undergone rigorous audits by Certik to ensure the security of the underlying smart contracts. Additionally, the vault's performance is continuously monitored and reported, providing users with real-time insights into their portfolio. How Does The Afi 802 Vault Give Users Access To DeFi Alpha? This is potentially a massive moment for DeFi and the crypto community. Users can now leave their DeFi asset management in the hands of deep learning with a proven track record. Imagine a high-value crypto investor seeking to optimize their substantial stablecoin holdings. The Afi 802 vault presents an attractive solution, offering a simplified yet powerful approach to DeFi yield farming. The process begins by connecting a compatible wallet to the Aarn dApp and depositing the desired amount of stablecoins (USDT, USDC, or DAI) into the Afi 802 vault. The deposited stablecoins are then converted into the Afi vault tokens, granting the user a share of the diversified portfolio autonomously managed by the vault. The model's insights drive the vault's investment strategy. On a weekly basis, the vault's smart contracts execute automated trades, rebalancing the portfolio to maintain an optimal allocation that aims to maximize returns and minimize risk. This dynamic approach ensures the vault remains adaptable to the crypto market in near real-time without the need for manual intervention. For the high-value investor, the Afi 802 vault offers a compelling combination of potential high returns, automated management, and reduced risk. By leveraging AI and quantitative analysis, the vault aims to consistently outperform the market, providing a valuable tool for optimizing DeFi investments. These repayments are part of the long aftermath of the scandalous collapse of FTX. - This impending infusion of capital will trigger the greatest bull run in the industry's history. The reimbursements procedure for the insolvent derivatives exchange FTX, which is one of the most eagerly awaited, starts next week, which might be a pivotal moment for the crypto market. However, experts predict that the purchasing demand for Bitcoin and altcoins in particular is going to grow dramatically. As almost \$16 billion is expected to be returned to crypto traders. Those who were unable to invest during the market drop in August will have a fantastic opportunity during this payback wave. Impending Infusion of Capital Moreover,
