

join this innovative movement. Officially set at \$0.25, the token should be shown on June 19, 2025. Given that RXS is already slated to be listed on three top ten tier-1 exchanges, this listing will be noteworthy. Due to community support and significant exchange backing, RXS is expected to soar after its official launch. The Certik audit of Rexas Finance is among the most important elements influencing confidence. Since security is a major issue in the crypto market, a Certik-certified audit gives investors trust and guarantees project validity. Following its listings on CoinMarketCap and CoinGecko, RXS has also become popular, increasing investor confidence and supporting the fast presale expansion. Can Rexas Finance (RXS) Replicate the Success of Bitcoin and Ethereum? Bitcoin and Ethereum are legendary because they offer huge rewards over time. Bitcoin climbed from fractions of a cent to over \$109,000, and Ethereum jumped from under a dollar to almost \$5,000. With a faster development path, crypto analysts and self-made millionaires are now recognizing similar promises in Rexas Finance (RXS). RXS is positioned to explode greatly, given the rising acceptance of RWA tokenization and the great market demand for creative blockchain solutions. Reflecting the explosive rise of ETH and BTC but in a shorter period, some analysts estimate its price could soar by over 700,000% in the next years. The growing interest in real-world asset tokenization, a market expected to reach trillions of dollars in value, explains this expected exponential rise. The Best Time to Get Involved in Rexas Finance (RXS) According to history, early identification of highly promising ideas yields the largest increases in cryptocurrency. Those who bought Bitcoin or Ethereum early on had transforming returns. Now Rexas Finance (RXS) offers a similar prospect; with its presale almost finished, this could be the last chance to get in before a significant price increase. With a launch date of June 19, 2025, and verified listings on elite exchanges, RXS is primed for explosive expansion. As the project gathers momentum, its value surpassing expectations via popular adoption could be one of the most fulfilling investments of this decade. Many times, crypto billionaires are people who see and seize possibilities before the general public. One such unusual investment that promises unmatched development in the changing digital economy is Rexas Finance (RXS). For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. As Ethereum (ETH) continues to lead the blockchain space, savvy investors are turning their attention to alternative tokens with significant growth potential. Here are three promising Ethereum alternatives under \$3 that could surge past \$10 before the 2025 bull run reaches its peak. At the forefront is Lightchain AI, an innovative project blending blockchain with artificial intelligence to revolutionize the space. Joining its ranks are Solaxy (SLXY), a rising star in decentralized finance (DeFi), and Retik Finance (RETIK), which focuses on sustainable, eco-friendly blockchain solutions. Currently in its presale phase at just \$0.007125 per token, Lightchain AI has already raised an impressive \$17.8 million—an indicator of strong investor confidence and immense potential for future growth. These projects are worth keeping on your radar as the next wave of blockchain innovation takes shape. 3 Leading Ethereum Alternatives Set for 10x Growth The cryptocurrency market is constantly evolving, with new projects emerging as strong contenders to Ethereum, each showing potential for impressive growth. Lightchain AI stands out by combining artificial intelligence with blockchain technology to revolutionize decentralized applications. This cutting-edge approach has garnered significant attention from investors, with its presale already surpassing \$17 million in funding. Solaxy (SLXY) tackles scalability and congestion challenges on the Solana network with its Layer 2 solution. Designed to boost efficiency, Solaxy provides multi-chain support and significantly increases transaction throughput, empowering decentralized applications to perform seamlessly at scale. Retik Finance (RETIK) is transforming decentralized finance with a range of groundbreaking solutions, including DeFi-powered debit cards, a cutting-edge crypto payment gateway, and AI-driven peer-to-peer lending. Since its launch, RETIK has seen exponential growth, with its token price skyrocketing by 2000% to an all-time high of \$3. These projects showcase the dynamic innovation within the cryptocurrency sector, providing investors with opportunities for significant returns. Why Lightchain AI is the Best Choice Under \$3 Lightchain AI is the top buy below \$3 because of its revolutionary union of blockchain and artificial intelligence, positioning it for explosive growth. The platform's groundbreaking Proof of Intelligence (PoI) consensus and Artificial Intelligence Virtual Machine (AIVM) enable scalable execution of AI tasks on the blockchain with minimal latency. Lightchain AI also leverages cutting-edge privacy-preserving usage mechanisms of data like Homomorphic Encryption, protecting sensitive data and allowing for secure decentralized AI applications. In addition, its cross-chain compatibility and interoperability ensure greater spread across blockchain platforms, hence greater adoption. As the platform grows, its solid tokenomics and ease of use by developers will continue to draw developers and investors to it, positioning Lightchain AI for long-term success and offering it as a great investment at below \$3. Could Lightchain AI Be Next Crypto to Hit \$10? Lightchain AI is making waves in the crypto world, raising an impressive \$17 million during its presale stage. With its powerful combination of AI and blockchain technology, this project is set to disrupt industries and could very well surpass the \$10 mark. As blockchain continues to expand and integrate across sectors, Lightchain AI stands out with its innovative approach. The rising demand for decentralized applications and secure data solutions positions Lightchain AI to become a go-to platform, potentially driving up the value of its native token. Right now, you have the chance to invest in this exciting Ethereum alternative for under \$3. With immense potential for growth, Lightchain AI is one to watch in the evolving blockchain space. Don't miss your chance to get in early! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Ethereum has fallen into the \$1.9K trading zone. - \$44.77 million worth of ETH was liquidated from the market. The crypto market's downturn has pulled the total market cap down to \$2.73 trillion, as major cryptocurrencies struggle to regain momentum. Ethereum (ETH), the largest altcoin, is under pressure, posting a 1.02% loss as its weakness becomes more pronounced. Ethereum is forming a potent bearish pattern as it trades below \$1,910. It could only kickstart a recovery attempt if it crosses over \$2.1K. The altcoin's upside correction was weak and faced a series of declines due to the broader market downturn. The current price action of the altcoin failed to cross the \$1,948 resistance level. In the early hours, Ethereum traded at around \$1,933. After the bears regained control of ETH, the price fell toward the \$1,863 range. At press time, Ethereum traded within the \$1,907 range with the daily trading volume touching \$9.95 billion. Notably, the market has observed a liquidation of \$44.77 million worth of Ethereum during this interval. As per the on-chain data, a dormant wallet sold about 1,014.67 ETH worth \$1.92 million after holding it for 3 years. Despite once having an unrealized profit of \$2.3 million, the wallet only made a \$126K profit on the sale. The ETH was bought for \$1.8 million at an average price of \$1,771. Where Could Ethereum Be Going Next? The ETH/USDT trading pair exhibits the overall dominance of the bears. Assuming the continuation of the downside correction, Ethereum could test the \$1,837 support. A failure to hold this level might push the price toward the \$1.7K mark. ETH could witness a rebound if the price jumps over \$2K. Upon breaking above this level might send the altcoin to trade at around \$2,176. In the event of a prolonged upside correction, it may help Ethereum for a rapid and sustained recovery. ETH's Moving Average Convergence Divergence (MACD) line and the signal line are stationed below the zero line. This shows a clear bearish crossover, indicating continued weakness unless bulls step in to spark a recovery. The Chaikin Money Flow (CMF) indicator settled at 0.02, suggesting weak buying pressure and mild accumulation within the market. Meanwhile, the daily trading volume of Ethereum has increased by over 56.39%. Moreover, the Bull Bear Power (BBP) value found at 4.05 signals a bullish strength and might trigger an upward momentum. ETH's daily relative strength index (RSI) settled at 46.35 is neutral to slightly bearish momentum.

Cryptocurrency has evolved from a niche concept to a globally recognized asset class, attracting millions of participants from all corners of the world. Its power lies in the innovation and decentralization that underpins it. People are looking for assets with strong fundamentals, offering not only long-term value but also explosive growth potential. Whether you're an experienced participant or just starting your journey, the right projects can change the game. Among these promising projects, Qubetics (\$TICS), Ethereum (ETH), and Tron (TRX) stand out. Each of them has cemented its place in the market, offering unique solutions to the challenges faced by businesses, individuals, and even entire industries. Let's dive into what makes them so exciting, focusing especially on the incredible journey of Qubetics and its current presale. Qubetics: The Future of Decentralized VPN and Blockchain Technology Qubetics is an emerging blockchain project that's on the rise with big expectations from the crypto community. While many cryptos claim they're building the next big thing, Qubetics is already showing strong potential, not just in terms of technology but also in market engagement. With more than 23,000 holders and over \$15 million raised in the presale, Qubetics has already captured the imagination of backers. The ongoing presale, now in its 25th stage, has already sold over 499 million tokens, and the price per \$TICS token is currently at \$0.1074. Qubetics' decentralized Virtual Private Network (VPN) provides businesses and individuals with enhanced privacy, security, and efficiency. Imagine a world where your data is fully protected, where individuals have control over their online presence, and where businesses can operate more securely. This is the future Qubetics is working towards. Real-life scenarios show just how valuable this is. For instance, a small business owner worried about cyber threats can leverage the Qubetics decentralized VPN to secure their communications and operations, ensuring they're not vulnerable to hackers. Professionals who rely on secure connections for sensitive data, like lawyers or financial consultants, can also benefit from the project's focus on enhanced encryption and anonymity. The decentralized nature of Qubetics also makes it an attractive option for individuals. For example, you could be traveling in a foreign country, using public Wi-Fi in a cafe. With a traditional VPN, you might be worried about the security risks or data leakage, but with Qubetics, you get an additional layer of protection without having to rely on centralized servers. Right now, the crypto presale has been moving at a fast pace, and analysts predict major gains for those who jump in early. \$TICS tokens are currently priced at \$0.1074, but the price is set to rise dramatically. At the end of the presale, \$TICS is expected to reach \$0.25, which would mark a 132% return on investment (ROI). After the presale, when the token price hits \$1, that's an 830% ROI. But it doesn't stop there—analysts are predicting a massive 13,859% ROI when \$TICS hits \$15 after the mainnet launch. Let's say you decide to buy \$TICS tokens for \$1,000 at the current presale price. You would receive approximately 9,300 tokens. If the price per token increases to \$1 post-presale, your \$1,000 investment would turn into \$9,300. But, if \$TICS goes even higher to \$5 or \$10, your returns would be mind-blowing. At \$5 per token, that \$1,000 would become \$46,500, and at \$10 per token, you'd see a return of \$93,000. Ethereum: The Blockchain Giant When it comes to top cryptos with 100x potential, Ethereum is one that automatically comes to mind. As the second-largest cryptocurrency by market cap, Ethereum has carved out its place in the crypto ecosystem. Known for its smart contract functionality, Ethereum has been the backbone for decentralized applications (dApps), decentralized finance (DeFi), and the Non-Fungible Token (NFT) boom. Ethereum's network is highly decentralized, offering the tools necessary for developers to build secure and trustless applications. Over the years, Ethereum has attracted thousands of developers and millions of participants looking to use the Ethereum blockchain to create new projects or trade digital assets. What makes Ethereum stand out is its ability to continually

evolve. Through upgrades like Ethereum 2.0, which focuses on improving scalability and energy efficiency, Ethereum is positioning itself to meet the growing demands of its ecosystem. The Ethereum network's smart contracts have allowed businesses to move away from traditional intermediaries, thus reducing costs and improving efficiency. For example, an insurance company can automate claims payouts based on pre-set criteria, while a real estate company can use smart contracts to handle property transactions more securely. It's this versatility that has made Ethereum the go-to platform for decentralized projects and enterprises looking for blockchain solutions. Ethereum has firmly established itself as a leader, serving the increasing appetite for alternative investment opportunities. It's not just a cryptocurrency; it's a protocol that has helped bring blockchain technology into the mainstream, pushing boundaries and creating new avenues for adoption.

Tron: The Blockchain for Digital Entertainment Tron, founded by Justin Sun, is another blockchain project that has cemented its place in the crypto ecosystem. Over the years, Tron has become known for its mission to decentralize the internet, focusing on empowering content creators and making the digital entertainment industry more accessible. Whether it's through its decentralized file storage platform or its ability to power dApps for the entertainment industry, Tron has consistently positioned itself as a go-to option for those in the media and entertainment sectors. Tron has made waves by offering high-speed transactions with low fees, making it an ideal solution for gaming platforms, social media networks, and content distribution. It's easy to see why backers are so excited about the potential for Tron's ecosystem to continue expanding. It's providing a way for content creators to gain more autonomy over their work, and for users to experience more transparent and efficient digital transactions. Much like Ethereum, Tron has found itself becoming a blockchain of choice for developers and businesses that want to explore decentralized solutions. However, what sets Tron apart is its laser focus on the entertainment and content space, offering a tailored solution for industries like video streaming and gaming. The future of Tron looks bright as it continues to empower a new generation of content creators, establishing itself as a key player in the world of decentralized digital entertainment.

Conclusion When it comes to top cryptos with 100x potential, Qubetics, Ethereum, and Tron each offer distinct advantages in the crypto space. From the groundbreaking decentralized VPN technology of Qubetics to Ethereum's smart contract prowess and Tron's focus on digital entertainment, these projects are shaping the future of blockchain technology. For anyone looking to jump into the crypto world, these three projects should certainly be on your radar. For those who want to get involved with Qubetics, now is the time to act. With over 23,000 community members already backing the project and \$15 million raised in the presale, the opportunity to secure \$TICS at its current price is one that could deliver huge returns. Don't miss out on one of the top cryptos with 100x potential—get involved today! A top crypto analyst, CryptooELITES, has posted a bullish Ethereum price prediction. They forecast the Ethereum price might rally to \$8k in the long term. However, while ETH rises, another DeFi competitor is emerging. DTX Exchange (DTX) is a new-generation trading platform that is gradually gaining popularity, and investors consider it a worthy rival to Ripple. DTX allows traders to trade both cryptocurrencies and traditional assets like forex, commodities, metals, and ETFs. Currently, in the crypto ICO phase, the value of DTX has risen by 800% and could surge by 10x in the coming months.

Analyst Forecasts Ethereum (ETH) To Reach \$8k The Ethereum price has dropped to the \$1,780 level this week as selling pressure continues to rise. Data from CoinMarketCap indicates the Ethereum price has plummeted by 14.4% and 29.3% on the weekly and monthly timeframes. Going forward, Ali Martinez notes the Ethereum price faces a strong resistance around \$2,250-\$2,610. Crossing this level is crucial for the Ethereum price as it could determine its trajectory in the coming weeks. CryptooELITES told his followers that an altcoin season is on the way. The analyst predicts the Ethereum price might soar to \$8k in the coming weeks based on a historical trend. CryptooELITES argued that the 2025 Ethereum price chart is similar to that of 2017. Another analyst called Crypto Rover reiterated the same Ethereum price prediction. The expert argued that investors should not be fazed by the current bear season as it would soon pass. In the meantime, the cryptocurrency community is monitoring the charts for signs of an uptrend.

Ripple (XRP) Price Continues Sideways Movement With losses of 9.8% and 11.6% on the weekly and monthly timeframes, the Ripple price continues to trade sideways. The Ripple price has been on a downtrend in the past few days after the effects of the US Crypto Reserve announcement faded from the market. According to data from CoinMarketCap, the Ripple price dropped to \$1.90 recently before bulls intervened. Looking ahead, RandomCryptoPal predicts the Ripple price might surge to \$9 in the coming months. A trader known as Trader Edge forecasts the Ripple price might surge to \$2.60 in the next few days if it remains above the \$2.00-\$1.90 support trendline. If the Ripple price drops below this level, the trader believes the \$1.60 level could act as a strong support. Based on technical analysis, the Hull Moving Average (9) and VWMA (10) indicators flash sell signs which means that bears are in charge. So, the Ripple price might fall to more lows in the coming days.

DTX Exchange (DTX) Raises Almost \$16M In Funding Although the Ethereum price is predicted to soar to \$8k, the altcoin's current movement has prompted investors to seek alternatives like DTX Exchange (DTX). Presently in the presale phase, the DeFi project has raised over \$15.9 million in funding. Its price will soar by 2x and be launched at \$0.36. The DTX token is already listed on data tracking platforms such as CoinMarketCap and CoinGecko. DTX Exchange can be described as a trading platform that combines centralized and decentralized financial systems. It provides its users with an opportunity to trade more than 120,000 asset classes including cryptocurrencies, forex, stocks, and ETFs. For instance, DTX Exchange is one of the first platforms that offer tokenized ETF trading services to users from over 80 countries. DTX has other features such as 1000x leverage trading options and the Phoenix Wallet, which

is a custody solution that is built for institutional-level security. With a decentralized Phoenix Wallet and multi-asset trading option, the DTX Exchange is expected to see massive adoption in the coming months. Why DTX Exchange is a Good Crypto To Buy While the Ethereum price is expected to expand, investors are doubling down on new altcoins like DTX Exchange. Its hybrid features and link to the forex market with a daily volume of \$6.6 trillion could increase its adoption and price in the long run. Such potential positions it as a top crypto to buy. Find out more information about DTX Exchange (DTX) by visiting the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. As the crypto sector is poised for explosive growth in 2025, one token is attracting the interest of investors looking to become crypto millionaires. Though its current price is less than \$0.30, Rexas Finance (RXS), a rising Ethereum competitor, has a trajectory that would make regular investors crypto millionaires. Rising as a must-have token, RXS is making news with its creative approach to the real-world asset (RWA) market and record-breaking presale. Rexas Finance (RXS): The Ethereum Rival Reshaping the Crypto Landscape Rexas Finance (RXS) is a groundbreaking initiative to reinvent asset ownership and investing accessibility. Using blockchain technology, RXS gives users easy access to tokenized real-world assets, allowing them to invest in intellectual properties, commodities, and high-value real-world assets with simplicity. The innovative solution presents RXS as a direct rival to Ethereum, bridging the gap between conventional banking and decentralized economies. Because RXS offers unparalleled promise, investors are swarming to it. Rexas Finance (RXS) runs more scalably and efficiently than Ethereum, which suffers from congestion and expensive gas prices. Both institutional and retail investors find it appealing because its expanding ecosystem guarantees easy tokenizing and trading of assets. RXS Presale Momentum and The \$1 Million Giveaway Currently, in its last round, priced at \$0.20, Rexas Finance (RXS) has been among the fastest-growing presales in the crypto sector. With the presale filled at 90.66%, the project has raised an amazing \$46.65 million. Given the great demand, the launch price has been fixed at \$0.25; the official launch date is planned for June 19, 2025. The large gains early investors have already achieved add to the appeal of this presale. Those who entered the first level have seen their money rise by more than 500%, indicating RXS's great upside potential. Many expect RXS to hit the \$150 mark and provide an unprecedented 750x return, and this momentum has driven conjecture that RXS will be among the largest gainers in 2025. Rexas Finance (RXS) has started an ambitious \$1 million giveaway to reward early supporters and develop a great community. Investors rushing to grab their opportunity to win a portion of the prize pool have entered over 1.53 million entries for this effort. Twenty winners will be chosen to get \$50,000 worth of RXS apiece, increasing project interest and involvement. To qualify for the giveaway and receive extra entries, participants must have at least \$100 in the RXS presale and complete some referral tasks. This campaign has greatly helped make the token visible and adopted by investors, making it among the most discussed crypto projects in 2024. >Rexas Finance (RXS) Prediction: How RXS Could Create Crypto Millionaires Experts in markets and cryptocurrencies think RXS is poised for a spectacular price explosion in 2025. Based on its solid foundations, general acceptance, and great demand, RXS might fly beyond \$150 within the year. One of the most profitable investment prospects available on the market, this possible rally would produce a 750x return from its presale price. For average investors, this means that by next year, even a small \$1,000 investment might become a life-changing \$750,000. Those investing more than \$1,300 will see their portfolio cross the \$1 million threshold and generate the next wave of crypto billionaires. Rexas Finance (RXS) is positioned for an unheard-of breakout with a developing ecosystem, institutional interest, and a well-organized road map. Furthermore, the great presale performance and investor interest indicate that RXS can outperform many current altcoins. As blockchain acceptance quickens and demand for actual asset tokenizing rises, RXS will likely become a major player in the market. Conclusion Rexas Finance (RXS) is a revolution, not just another coin. In 2025, its presale, which has already yielded huge returns, an expanding investor base, and a clear road map for success, has positioned RXS as the Ethereum challenger that transforms regular investors into crypto millionaires. With the launch price fixed at \$0.25, those who enter now can gain the most since the last presale stage is filling quickly. Investing in RXS could be the secret to obtaining unheard-of financial profits in the next 2025 bull run, as analysts forecast a possible leap to \$150. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum Foundation developers are planning to launch the Hoodi testnet before the Pectra upgrade mainnet launch. - Pectra upgrade mainnet launch was delayed after facing configuration issues on Holesky and Sepolia testnets. The Ethereum Foundation is one of the largest developer communities of crypto. They achieved the first of its kind Merge event, transitioning Ethereum from the PoW to the PoS consensus mechanism. The Ethereum developer community actively works towards improving the scalability and usability of the Ethereum network. The upcoming Ethereum Pectra upgrade launch on its mainnet is yet to take place. Despite several iterations and testnets, the Pectra upgrade faced several configuration issues before. After both the Holesky and Sepolia testnets faced issues, the developer community decided to introduce the Hoodi testnet. Hoodi Testnet to Ensure Pectra Ready to Go Live on Mainnet The Pectra upgrade will be deployed on the Hoodi testnet on Monday. Once everything goes well, the Pectra upgrade will be launched on the Ethereum mainnet by the end of April. This time,

the developer team is planning to invest significant resources to run a similar validator count as the Ethereum mainnet. Both Holesky and Sepolia faced issues regarding Pectra upgrade testing. Holesky lost finality because of configuration issues around a couple of weeks ago. Even though the testnet regained its finality this week, developers cannot use it for research purposes. On the other hand, there was an unknown attack on the Sepolia testnet recently. This further pushed the Pectra upgrade launch on the mainnet. The Ethereum developer community is facing criticism over the Pectra upgrade launch delay. However, Ethereum supporters are patiently waiting for the network to improve despite market price challenges. Ether price slightly improved today as it climbed to the \$1,900 price level. Its market price has been going on a cascading downtrend for a couple of months. While global macroeconomic conditions have their influence on the crypto market, Ethereum is also losing its shine amidst increasing layer 1 blockchains in the industry. Highlighted Crypto News Today: Russia Uses Crypto for Oil Trade with China and India Despite Sanctions

- Jake Gagain is buying XRP, Solana, Tron, SUI, and Ethereum amid the recent market dip. - Gagain believes XRP will surge once Ripple's SEC lawsuit ends, while Solana and SUI are trading at deep discounts. - Ethereum, despite being Bitcoin's closest rival, is down 62% from its all-time high, making it an attractive buy. Jake Gagain, a widely followed crypto analyst, has identified XRP as one of the best altcoins to buy during the current market downturn. Many crypto assets are trading at major discounts after Bitcoin dropped to \$76K this week, its lowest price in four months. With the bull market expected to continue for a few more months, analysts believe today's low prices could present a prime buying opportunity. Gagain shared his top altcoin picks, explaining why he is adding these assets to his portfolio. Why Gagain is Buying XRP Now Gagain listed XRP as his top pick, citing the potential for a price surge once Ripple's four-year-long legal battle with the SEC concludes. Recent reports suggest Ripple is negotiating favorable settlement terms, which could be a major catalyst for XRP. Currently trading at \$2.23, XRP has already rebounded 16% from this week's low of \$1.92. Solana is another coin on Gagain's list, following a 62% drop from its January high of \$295 to \$112. He sees this sharp decline as a prime buying opportunity, given Solana's strong presence in the crypto space. Beyond XRP and Solana, Gagain is bullish on Tron (TRX), citing its resilience during the market crash and its founder Justin Sun's close ties with Donald Trump. TRX has only declined 12% in the last 90 days, compared to Solana's 62% drop. Gagain is also accumulating SUI, which once surged past \$5 in January but now sits at \$2.20, a 58% drop. He highlights its rapid growth as a Layer 1 blockchain and notes that Eric Trump is reportedly a holder. Finally, Ethereum rounds out his list. Despite being Bitcoin's closest competitor, Ethereum has underperformed, dropping 62% from its all-time high. At \$1,862, Gagain considers ETH a steal compared to Bitcoin, which is only 24% below its peak.

- Ethereum recorded 15% and 30% weekly and monthly price drops. - Trading analysts forecast Ether could crash to much lower price ranges. The broader crypto market recovered slightly today with a 0.31% surge in overall market cap. While Bitcoin climbed above the \$80K price range, Ether is trading above the \$1,800 price level. The global macroeconomic conditions have been influencing the market ever since Trump's administration began in the US. Even though the crypto market witnessed a short bull run by the end of 2024, Ether couldn't reach its estimated potential. Now, the weakening market momentum is further pushing the Ethereum price downwards. ETH spot ETFs recorded a new outflow of \$21.5709 million yesterday. While BlackRock's Ethereum ETF has a net outflow of \$11.82 million, Fidelity's ETH ETF recorded a \$9.75 million outflow in a single day. Analyst Warns Upcoming Ethereum Price Crash Currently, the most important support level for #Ethereum is \$1,887, where investors accumulated 1.63 million \$ETH! pic.twitter.com/VGB37X4hyj Ali (@ali_charts) March 13, 2025 Renowned market analyst, Ali Martinez, posted today that the important support level for Ethereum is \$1,887. At this price level, investors accumulated around 1.63 million Ethereum. However, Ether is trading at \$1,864 at present, breaking past the \$1,887 price level. In one of his earlier predictions, Ali forecasted that Ether could fall to \$800 in the next few days if it continues its current momentum. The prediction is making investors feel worried about their ETH holdings as panic spreads across the crypto market. Even the crypto fear and greed index records 21, indicating fear sentiment in the market. Traders who purchased Ethereum at \$3,000 and \$4,000 price levels a few years back extremely disappointed with its market performance. On the other hand, the Pectra upgrade was delayed due to an unknown attack on the Sepolia network. Ethererum is facing huge pressure both on the market and development activity fronts for the past few months. Highlighted Crypto News Today: Babylon Foundation Airdrop Registration Deadline Extended to March 19

Blockchain networks battle to provide the most efficient solutions regarding scalability along with fast transactions and affordable fees. Ethereum and Solana remain the leading blockchain networks but they present different strengths and weaknesses to each other. The rising market demand for speed and efficiency has led Kaanch Network to emerge as an alternative network that offers superior innovations to both Ethereum and Solana across multiple performance domains. Ethereum: The Pioneer with Scalability Challenges The blockchain world shifted toward a new direction because Ethereum introduced smart contracts which led to the creation of DeFi and NFTs. Although Ethereum maintains a position as the cryptocurrency with the second-largest market capitalization it faces substantial scalability problems. Ethereum 2.0 introduced Proof of Stake (PoS) alongside improved efficiency yet the network performs transactions at a slow rate with 12-30 transactions per second (TPS). When network usage increases Ethereum fees increase dramatically which produces an expensive solution for developers and users. Solana: Speed and Efficiency, but at a Cost Solana introduced itself as a blockchain platform that provided high-speed operation with a transaction capacity of 65,000 TPS alongside instantly confirmed transactions. Solana achieves its high processing efficiency through Proof of History (PoH) which delivers enhanced speed at reduced expenses in comparison to Ethereum. The network faces reliability problems because it experienced several outages throughout the previous years which makes

users doubt its centralized structure and future stability. The superior speed of Solana transactions over Ethereum creates obstacles for mass adoption because the platform faces both technical security risks and limited evolution of its ecosystem. Kaanch emerges as the next-generation blockchain which transforms modern blockchain operations. The ongoing Ethereum vs. Solana competition brought Kaanch to the market as a solution that offers unmatched speed and scalability for blockchain operations. Real-time global transactions happen instantaneously through the network because it achieves 1.4 million TPS together with a 0.8-second block time. Kaanch stands out because it offers free transaction fees to users while Solana struggles with reliability and Ethereum has expensive gas fee requirements.

Unparalleled Security and Decentralization The Kaanch Network system achieves more than fast processing since its architectural design emphasizes both advanced security measures and high resilience capabilities. Through its 3,600 decentralized nodes Kaanch provides both strong attack resistance and increases developer and business trust. The AI-optimized governance framework enhances decision processes as well as smart contract execution and transaction handling to make Kaanch the smartest blockchain solution now in the market.

Real-World Asset Tokenization and Mass Adoption Real-world asset tokenization receives enhanced capabilities through Kaanch which surpasses both Ethereum and Solana in DeFi and NFTs. Real-time secure tokenization of assets through Kaanch Network enables businesses and individuals to adopt blockchain technology at a mass scale. Through its community-oriented approach Kaanch provides complete transparent governance and simple staking tools alongside complete development documents for blockchain integration.

The Development Community Moves Toward Kaanch Because of its winning approach Ethereum faces three key disadvantages through its expensive operations and sluggish processing and intricate network upgrade procedures but Solana faces two major issues because of its network stability and concentration problems. The solution offered by Kaanch stands unmatched as it starts attracting developers from the highest level. Growing numbers of developers are selecting Kaanch Network because it provides minimal transaction costs alongside rapid processing times and flexible network expansion. The upcoming year will witness a 125,890% growth according to top analysts because developers continue to build new projects within the space. Kaanch at \$0.08 won't last price doubling soon. Outpacing Ethereum and Solana, this is your chance to get in early. The ongoing Stage 4 presale phase of Kaanch presents investors with an ideal moment to buy at present prices that will eventually increase. The current price of Kaanch tokens sits at \$0.08 before moving to the following price level at \$0.16. Each Kaanch Token (Kaanch) holds a market value of \$0.080000 at present. The security audits performed by Spywolf and VerifyLab are establishing Kaanch as the future of blockchain technology which provides superior advantages than Ethereum and Solana.

Conclusion: The Future is Kaanch The foundational work of Ethereum and Solana in blockchain development opens doors for better blockchain solutions because they possess technical constraints. Kaanch stands as the superior blockchain solution through its combination of fastest speed along with unmatched scalability and virtually no fees. Kaanch positions itself to dominate the blockchain industry due to its rapid industry evolution. For more information about Kaanch Network visit the links below: BE A PART NOW at <https://presale.kaanch.com> - Official Website: <https://kaanch.com> - Whitepaper: <https://docs.kaanch.network> - Twitter / X: <https://x.com/KaanchNetwork> - Telegram: <https://t.me/kaanchnetwork>

Three blockchain giants—Ethereum (ETH), Solana (SOL), and Kaanch—are vying for dominance in the rapidly evolving crypto space. While Ethereum and Solana have cemented their places as leading smart contract platforms, Kaanch Network is emerging as a revolutionary Layer 1 blockchain that reigns supreme. With its superior scalability, unmatched transaction speeds, and AI-enhanced efficiency, Kaanch is set to disrupt the industry. As all three networks continue their expansion, 2025 is shaping up to be a pivotal year for blockchain innovation.

Ethereum: The Smart Contract Leader The dominant status of Ethereum as a smart contract platform continues due to its well-developed ecosystem managed by a wide range of developers. Ethereum 2.0 implementation method enables security improvements, advanced scalability, and system-wide operational efficiency. Ethereum utilizes proof-of-stake (PoS) to operate more energy efficiently, thus improving sustainability and increasing functional abilities.

Solana: High-Speed, Low-Cost Transactions Solana has become famous because it enables speedy transactions at affordable rates. Solana distinguishes itself through its blended proof-of-history (PoH) and proof-of-stake (PoS) consensus system, while Ethereum exclusively uses proof-of-stake. Both developers and users have chosen the network to establish its dominant position in the DeFi and NFT sectors. The network stability problems experienced by Solana occasionally resulted in platform reliability issues.

Ethereum's Market Position vs. Solana's Scalability Advantage Developers select Ethereum as their platform mainly because of its robust framework while appreciating its decisive significance to Web3 development. Developers aim to fix network congestion through Ethereum Improvement Proposals (EIPs) and layer-2 scaling solutions, including Optimistic Rollups and ZK-Rollups. Solana stands out to users who need swift transactions since it handles thousands at budget-friendly prices per second. The crypto community continues to discuss ongoing network outage problems with Solana. Solana develops its market clout by establishing flagship business partnerships among financial institutions.

Kaanch: The Ultimate Blockchain Revolution Kaanch Network is redefining blockchain technology with its high-performance Layer 1 network. Boasting an unparalleled 1.4 million transactions per second (TPS) and 0.8-second block finality, Kaanch is miles ahead of both Ethereum and Solana in terms of efficiency. Its Delegated Proof-of-Stake (DPoS) consensus mechanism, supported by 3,600 active validators, ensures security, decentralization, and smooth scalability. What sets Kaanch apart is its seamless AI integration, optimizing transactions with near-zero gas fees and enhancing smart contract efficiency. AI-powered governance ensures a transparent and accountable

framework, allowing the community to drive innovation and decision-making. Businesses, developers, and users alike benefit from cost-effective blockchain interactions, making Kaanch an all-in-one solution for DeFi, asset transfers, and decentralized applications. Kaanch: Closing in on the Competition

Kaanch is almost at the neck of Ethereum and Solana, and its rapid presale progress signals investor confidence in its potential. Currently in Stage 4 of its presale at \$0.08 per token, Kaanch is set to rise to \$0.16 in the next phase. Having already raised over \$636,942, the momentum behind Kaanch is undeniable. As it continues to gain traction, the blockchain world is witnessing the rise of a formidable contender poised to challenge Ethereum and Solana's market supremacy. The Competitive Outlook for 2025 While Ethereum is expected to maintain its dominance due to its established ecosystem and continuous development, Solana's efficiency and affordability position it as a strong market player. However, Kaanch offers the best of both worlds—scalability, speed, security, and cost-effectiveness—making it the superior blockchain network. As Kaanch continues its fast-moving presale and attracts investors globally, it presents a groundbreaking alternative to Ethereum and Solana. With AI-driven innovation, decentralized governance, and record-breaking transaction speeds, Kaanch is not just a competitor—it's the future of blockchain. - Solana nears a death cross, struggling below \$150 with potential drops to \$110 or \$100. - Dogecoin risks falling below \$0.14, possibly declining to \$0.10-\$0.12. - Ethereum breaks \$2,000 support, signaling bearish momentum and further losses. Solana approaches the death cross Solana is experiencing strong bearish pressure since it is moving towards a death cross formation. This is when the 50-day moving average crosses below the 200-day MA, which in the past has been used as a sign of a long-term downtrend and increased selling pressure. The breakdown of a key support level has impacted Solana's market negatively. The \$150 support level was strong but has weakened, and SOL has declined to about \$124. If the death cross is true, it could trigger more liquidations and lower prices. The price of Solana indicates a downtrend with short-term moving averages in favor of bearishness. The flattening 200-day MA suggests diminishing bullish momentum. If SOL is unable to sustain support, then it can fall to \$110, potentially testing \$100. Or, if the price is propped up by buyers above \$150, then a short-term bounce can be seen. Dogecoin Reaches Last Support Point Dogecoin is descending towards a critical support of \$0.14. This is the last major support. If DOGE dips below this, it can go to the \$0.10-\$0.12 level. DOGE is bearish with support levels failing to hold buyers. From a jump from \$0.22, the price dropped to \$0.18 and below. Currently, a death cross threat can extend losses if it occurs. As compared to earlier hype cycles, DOGE is exposed now since meme coins have very low demand. Without favorable catalysts, Dogecoin cannot gain momentum. Ethereum is below \$2,000 Ethereum has dropped below the \$2,000 support level, indicating bearish conditions. This decline was also indicated by rising trading volume, which indicates strong selling pressure. In the recent past, ETH has lost its bullish hold and weakened. The fall below \$2,000 has weakened its technical stance since it cannot trade above key moving averages. Ethereum is in a bear trend with the short-term moving averages falling. Without improved market conditions, ETH can continue to experience further corrections in the near future. Solana, Dogecoin, and Ethereum are under bear pressure after the collapse of important support levels. Death cross in SOL and DOGE is a cause for concern, and ETH dipping below \$2,000 is a weakness signal. Without stability, further corrections are in the pipeline. Alternatively, growing buying momentum might provide relief, and the next two days are crucial for their prices. Highlighted Crypto news Today Pierre Gasly's Fan-Designed Helmet Unveiled in Binance Mural in Melbourne

- Starknet plans to expand Bitcoin use cases by bridging Bitcoin and Ethereum. - StarkWare recently established a Bitcoin strategic reserve. StarkWare seems to have bigger plans for Bitcoin despite the weak crypto market. It joined the growing list of firms that have established a Bitcoin strategic reserve. On the other hand, Starknet plans to bridge two major blockchains, Bitcoin and Ethereum, on a single layer 2 network. The firm is making headlines with this remarkable initiative. Starknet is an Ethereum layer2 network developed by StarkWare. Despite being developed on the second-major blockchain, Ethereum, the firm has been focusing on Bitcoin research for a while now. The Starknet Foundation recently published a Bitcoin Roadmap and outlined its ambitious plans for Bitcoin. Starknet Unveils Bitcoin Development Plans Starknet CEO Ben-Sasson not only perceives Bitcoin as a mere store of value, he looks at the enormous potential it holds for real-time utility. To bring this vision forward, the firm revealed several plans they have for the Bitcoin blockchain. A Bitcoin wallet called Xverse is going to integrate with Starknet and allow users to access Bitcoin assets such as Ordinals on its network. Its Foundation is launching the "BTCFi Season" to offer yield opportunities on Bitcoin through the network. The initiative aims to bring DeFi use cases to Bitcoin holders. Starknet also aims to become the first layer 2 network to unify two major blockchains, Bitcoin and Ethereum. The firm believes Bitcoin is limited to a store of value, and it proposes to be the execution layer for Bitcoin blockchain. Once the firm achieves its vision, it could open doors to numerous possibilities. Ethereum co-founder Vitalik Buterin also supported Starknet's plans regarding Bitcoin. Lack of scalability is one of the major issues of Bitcoin blockchain, and Starknet aims to change that with its plans to bridge Bitcoin with Ethereum. Highlighted Crypto News Today: HYPE Token Drops as Whale Liquidation Triggers \$4M HLP Vault Loss

In light of the bearish pressure that is currently in dominance, ETH traders have found their new hope of direction in Ozak AI. With that momentum shifting, presale has become a center of attention, especially the Ozak AI with its tiered pricing and incorporated AI blockchain. Ozak AI's Market Position and Technological Edge Ozak AI has become relevant in the sphere of blockchain and artificial intelligence, and it is thus being actively discussed by Ethereum traders. It utilizes AI with a decentralized structure by having DePIN technology as both the platform for data storage and processing data in real time. Being developed on blockchain and IPFS, DePIN is free from the common issue of having all the information contained in one place and becoming a target for hackers. Smart contracts regulate data accessibility, while a blockchain maintains transactions' permanent ledger in a manner that is easily auditable. In its positioning within the industry, Ozak AI emphasizes using AI for real-time decision-making in the financial sector, market prediction, and analytics for enterprises. From the above discussion, it is understood that the combination of blockchain technology and AI leads to increased efficiency, as persons or businesses managing the data can make use of reliable tools.

Presale Performance and Listing Price The ongoing Ozak AI presale has drawn significant participation reflecting market confidence in the project's potential. Initially the \$OZ token launched at \$0.001 during the first phase before rising to \$0.002 in the second stage. Currently, it is priced at \$0.003 in the third phase, with the next stage expected to increase to \$0.005. Upon listing, the token is set to debut at \$0.05, presenting early adopters with a potential price shift to \$1 in 2025. Investor engagement in the presale has been strong, with over 162,704,601 \$OZ tokens sold and more than \$900,000 raised. The presale has reached 91% of its funding goal, positioning Ozak AI for a smooth transition toward its listing and broader market adoption. This steady progress has led traders to accumulate the token in anticipation of its upcoming exchange debut.

Use Cases and Market Applications Ozak AI's utility extends beyond speculative trading, offering practical applications across multiple industries. The platform's AI-powered analytics provide real-time insights for financial markets, enabling businesses to make data-driven decisions. Its predictive modeling capabilities assist in risk assessment, while blockchain integration ensures secure and verifiable transactions. The data analytics features of Ozak AI are available for both enterprise-level solutions and smaller implementations. The technology enables business operations to enhance efficiency, cut down waste, and strengthen planning strategies. Ozak AI uses decentralized networks to protect users against cyber threats by distributing data storage which decreases businesses' dependency on centralized systems.

Strong Market Response and Future Outlook Ethereum traders are becoming interested in \$OZ tokens as they view the current presale price as a good point of entry. The gradual increase in price is justified by the regularly growing demand, each step of which corresponds to the following stage. This comes as a relief since listing the token at \$0.05 will help the firm achieve its roadmap toward broader adoption of Ozak AI. As the project continues to grow and develop, it can be said that Ozak AI presents itself as a competitive project in the context of the current development of digital assets. Decentralized structure and the integration of the proposed analytical tools that are based on artificial intelligence technologies provide long-term value to both small-scale and large investment market players. Ozak AI has truly had strong presale numbers, and the fact that it has a more tenant-friendly technological advantage makes it more prepared as it transitions to going public. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI>

- Ethereum (ETH) has plunged 18% from \$2,150 to as low as \$1,750. - Large ETH holders face liquidation risks amid the downturn. - Some whales have injected millions in collateral to avoid liquidation. Ethereum's recent market downturn has left major investors scrambling to protect their holdings as liquidation risks mount. Over the past 24 hours, the cryptocurrency has fallen from a high of \$2,150 to as low as \$1,750. This sharp decline has put Ethereum whales, investors holding significant amounts of ETH, under pressure as they fight to maintain their DeFi loans and avoid forced liquidations. On-chain data from Lookonchain reveals that some of the largest Ethereum holders have taken urgent steps to rebalance their positions. One whale, who had taken out a loan of over 73 million DAI with 67,000 ETH (nearly \$122 million) as collateral on Maker, should have been liquidated when ETH dropped below \$1,800. However, due to oracle pricing inefficiencies that temporarily placed ETH's price just under \$1,900, the investor was able to repay 1.53 million DAI and sell nearly 3,000 ETH, adjusting their liquidation price to \$1,781. Another whale with nearly 61,000 ETH worth \$109 million in collateral and a liquidation price of \$1,798.64 also benefited from these oracle inefficiencies, allowing them to avoid forced liquidation without needing to add fresh collateral. Ethereum whales take aggressive measures A whale associated with the Ethereum Foundation took more aggressive measures by injecting an additional 30,000 ETH, worth over \$56 million, into Maker. This increased their total collateral to more than 100,000 ETH, valued at \$182 million, and significantly lowered their liquidation price to \$1,127. While this move reduced the immediate risk of liquidation, it also increased the investor's exposure to market volatility. Venture capital firm Longling Capital, founded by Meitu's CEO Cai Wensheng, is also facing liquidation risks. In the past 24 hours, the firm has offloaded 21,000 ETH, valued at nearly \$39 million, on Binance. Additionally, it transferred 299 ETH to Aave, likely as part of a broader strategy to rebalance its DeFi loans. Longling Capital is no stranger to high-stakes liquidations, having lost 94,000 ETH worth \$114 million in the 2022 bear market.

- Following an 8% drop, Ethereum is holding at the \$1.8K mark. - The decline triggered liquidations, wiping out \$252.09 million worth of ETH. Escalating fears over global trading conditions have amplified risks across the crypto space, leading to steep losses for Bitcoin and Ethereum. Ethereum (ETH) has endured weeks of downside pressure. It prompts the big question "will ETH recover from its

slump? In the early hours, the bulls led the charge, but the bears swiftly countered and took command of the ETH market. As of now, Ethereum faces an uphill battle pushing past the \$2.5K mark. The bears gained enough strength for a move below the \$1.8K support, reaching the lowest of \$1,760 from a peak of \$2,150. The altcoin is supposed to clear the resistance zones between \$1.9K-\$2.2K to stimulate a positive breakout. Ethereum has registered a loss of over 8.80%, trading at \$1,883 with the daily trading volume of the altcoin reaching \$39.13 billion. In addition, the market has observed a liquidation of \$252.09 million worth of Ethereum during this timeframe. As per on-chain data, a whale sold 25,800 ETH worth \$47.8 million, taking a \$32 million loss to prevent their position from being liquidated. They still hold 35,034 ETH on Aave, with a health rate of 1.4. Furthermore, a wallet suspected to belong to the Ethereum Foundation deposited 30,098 ETH valued at \$56.08 million to Maker to reduce its liquidation risk. How Long Will the Ethereum Bears Stay in Charge? Ethereum has established a mighty death cross with the altcoin nosedived to the unforeseen range. ETH might bring in a test of the crucial support at the \$1.7K mark. In a worst-case scenario, the altcoin could tumble to \$1,522, making a turnaround more difficult. Assuming the recovery of ETH, it could initially challenge the \$1,997 resistance. Ethereum might lay the groundwork for a climb toward \$2.2K if bullish momentum picks up. The confirmation of a definitive recovery hinges on the formation of the golden cross. The Moving Average Convergence Divergence (MACD) line and signal line of the ETH/USDT trading pair have been crossed below the zero line. This crossover signals the asset's active and broader negative sentiment in the market. Moreover, the Chaikin Money Flow (CMF) indicator resting at -0.11, infers the capital is flowing out of the asset, showing a bearish bias. In the meantime, the daily trading volume of Ethereum has increased by over 85.14%. Besides, a negative Bull Bear Power (BBP) value of -260.68, suggests strong bearish momentum, pushing the price significantly lower. ETH's daily relative strength index (RSI) at 30.40 indicates the asset is nearing oversold territory.

- Spain's second-largest bank, BBVA, has secured approval to offer Bitcoin and Ether trading. - The move aligns with the shift in European banking as institutions race to comply with MiCA regulations. Spain's banking giant Banco Bilbao Vizcaya Argentaria (BBVA) has been approved by the country's securities regulator, the Comisi3n Nacional del Mercado de Valores (CNMV), to offer Bitcoin (BTC) and Ether (ETH) trading services. BBVA now will allow clients to buy, sell, and manage digital assets directly through its official mobile banking app. Unlike third-party crypto platforms, the bank will provide custody services using its own cryptographic key management system. Initially, access will be limited to select users before rolling out to all private clients in the coming months. BBVA is valued at around \$840 billion, and this expansion follows a trend of traditional financial institutions moving into the crypto space. Now that regulations around digital assets are solidifying, major banks are already positioning themselves to satisfy the growing demand for secure crypto services. A Strategic Expansion Historically, BBVA's crypto journey began in Switzerland. In 2021, the bank introduced Bitcoin trading and custody services for private banking clients under the Swiss Financial Market Supervisory Authority (FINMA). Later, it expanded those offerings to include Ethereum and the USDC stablecoin. In January 2024, BBVA took another decisive step by launching crypto trading in Turkey through its subsidiary, Garanti BBVA Kripto. Now, with regulatory approval in Spain, the bank continues to widen its crypto recognition across Europe. Meanwhile, BBVA has been preparing for this expansion since 2020 but waited for clearer regulations and a healthy crypto environment. With Spain now on board, the bank is strengthening its position as a leader in crypto adoption within traditional finance. MiCA Compliance Fuels Institutional Crypto Adoption BBVA's approval comes at the right time, as the European Union's Markets in Crypto-Assets (MiCA) regulation is now fully in effect. This will bring a structured framework to digital asset services across the region. While companies have until July 2026 to achieve full compliance, many financial institutions are moving quickly to align with the new standards. Since MiCA's rollout, both traditional banks and crypto-native firms have been racing to secure regulatory approval. For instance, Hidden Road obtained its MiCA license in the Netherlands, while Standard Chartered received approval in Luxembourg, and Boerse Stuttgart Digital Custody became Germany's first MiCA-licensed crypto service provider in January. Crypto exchanges are also adjusting. OKX, Crypto.com, and HashKey all secured MiCA approval earlier this year. Meanwhile, Bybit, which suffered a record-breaking hack, recently made headlines by getting removed from France's blacklist as it works toward regulatory compliance. BBVA's move signals that mainstream banks are no longer sidelining crypto. Instead, they're integrating it within traditional banking services, making digital assets more accessible to everyday investors. Highlighted Crypto News for Today Arkham Report: WLF Portfolio Sinks and Ethereum Buys in Major Loss

- As the crypto market slumps, WLF portfolio dropped to \$79.6 million. - Ethereum accounts for a large portion of the loss of WLF. The crypto market is trending downwards with bearish sentiment looming over the industry. Due to a major crypto sell off yesterday, Bitcoin price fell to the \$81,000 - \$82,000 price range. The crypto fear and greed index further dropped to 17, into the "extreme fear" zone. As a result, crypto portfolios of several top organizations are at losses. The Trump family's World Liberty Financial is known for its series of crypto investments since last year. As the price of major cryptocurrencies are dropping, WLF's crypto portfolio is at loss under present market conditions. Based on the crypto portfolio analytics platform Arkham Intelligence, WLF's crypto portfolio is down significantly. The portfolio reached its peak value of more than \$400 million at the beginning of Feb 2025. It has now dropped substantially and is currently worth only \$78.9 million. Ether Purchases Amount to Major Loss on WLF Portfolio World Liberty Financial invested in several top cryptocurrencies such as wBTC, ETH, ONDO, ENA, MOVE, and more. Ether occupies a major portion of the WLF's crypto portfolio. World Liberty Financial purchased Ether at an average price of \$3,200. Since ETH is trading at \$2,100 after a major price drop, it amounted to a large portion of the WLF portfolio loss today. On the other hand, 600K Ethereum was withdrawn from the exchanges in the last week. Even though its trading volume increased by over 150% in the last 24 hours, the market witnessed \$108 million ETH liquidations. The second-largest token has been trending downwards for a while now. Even

during the short bull run by the end of 2024, Ether couldn't reach its full potential. Highlighted Crypto News Today: CZ Urges Elon Musk to Ban Bots on X Amid Rising Crypto Scams

- Ethereum is holding around the \$2K level. - ETH's daily trading volume has jumped by over 120%. - The market has witnessed over \$108 million worth of Ethereum liquidations. The crypto market has taken a hit, bleeding over the past few days and dragging the combined market cap down to \$2.69 trillion. Leading cryptocurrencies are feeling the heat, with Ethereum's weakness becoming more pronounced. The largest altcoin Ethereum, despite multiple attempts remains under bear pressure, lagging to break above crucial resistances. ETH's technical indicators confirm the persistent downtrend. Ethereum has tumbled by over 5.41%, raising concerns about further price volatility. In the early hours, the altcoin traded at the \$2,194 mark. As the bears gained more control of ETH, they pulled back the price to the unforeseen \$1,991 range. As of this writing, Ethereum traded at \$2,066, with its daily trading volume reaching \$21.56 billion. Notably, the market has observed a liquidation of \$108.00 million worth of Ethereum during the interval. Furthermore, the Ali chart reports that over 600,000 ETH have been withdrawn from crypto exchanges in the last week. The exchange reserves dropped from 19.2 million to 18.6 million. This decline points out reduced selling pressure, which can be a bullish signal if demand holds up. Could Ethereum Slide Further? The emerged death cross of Ethereum could find the crucial support at \$1,963. ETH will remain at risk of a prolonged downside if the bearish momentum sustains. The altcoin might plummet toward \$1.7K, delaying the recovery and signalling a phase of consolidation. However, assuming Ethereum reverses its in-progress trend, it could likely challenge the resistance at \$2,138. A strong upside correction might propel the asset above \$2.2K with the possibility of ETH reaching the \$2.5K mark as long as the bulls stay in control. The ETH/USDT trading pair's Moving Average Convergence Divergence (MACD) line and signal line have been stationed below the zero line. This crossover indicates strong bearish momentum with the dominance of selling pressure. ETH's Chaikin Money Flow (CMF) indicator resting at -0.04, infers that money flows out of the asset, and sellers have more control of the market. Meanwhile, Ethereum's daily trading volume has increased by over 120%. Moreover, the altcoin's Bull Bear Power (BBP) value of -94.14 suggests a substantial bearish tone. Besides, the daily relative strength index (RSI), at 39.36, signals that the asset is in bearish territory with weaker momentum.

Ethereum has been down 3.5% since a White House executive order introduced new digital asset regulations. Meanwhile, Ozak AI (\$OZ) is defying the trend and is up 180%, with its AI trading platform grabbing investors' attention. The growing use of AI in crypto has made Ozak AI the top player in AI crypto. In phase 3 of its presale, with over \$900,000 raised, analysts predict Ozak AI will grow exponentially in the next few months. Ethereum is under pressure as the market reacts to policy change. Ethereum's price went down after the Biden administration issued an executive order on stricter regulation of the crypto sector. Analysts say increased regulation is causing uncertainty among investors, leading to a pullback in Ethereum and other significant digital assets. Ethereum's long-term regulatory situation faces uncertainty because the order contains requirements about platform compliance and security alongside platform restrictions. The crypto market's strength continues regardless of recent adjustments, while AI projects maintain increasing popularity. Ozak AI has emerged as an alternative investment choice, which experienced substantial growth during the last few weeks because traders searched for novel investment avenues. Ozak AI's 180% Surge Signals Crypto is Here to Stay. Ethereum's regulatory challenges result in its declining performance, while Ozak AI continues to thrive because of its AI-powered trading platform. Ozak AI's market analysis automation and trading capability result from its blockchain integration with AI technology. Through its decentralized trading system Ozak AI delivers reduced errors and enhanced operational efficiency and enables users to access instant analytics for well-informed choices. Ozak AI's ability to deliver market reports and predictions has drawn institutional and retail investors. Market experts consider the project one of the top AI cryptocurrencies and expect it to go mainstream. Analysts predict Ozak AI could hit \$1 by 2025, 100x from the current price. Ozak AI Presale Booming with Over \$900K Raised The third presale phase for Ozak AI is hot. Over \$900K has been raised and 120 million tokens have already been sold. The token is currently priced at \$0.003. The next presale phase will be at \$0.005 so act fast before the price increases. Ozak AI's technology goes beyond trading with fraud detection, secure data processing and predictive analytics through its Ozak Stream Network (OSN) and Decentralized Physical Infrastructure Networks (DePIN). These innovations make the platform more scalable and reliable than other AI based cryptocurrencies. As AI is being adopted across industries, Ozak AI is gaining more momentum, and financial institutions are showing interest in AI-powered crypto projects. Analysts say institutional support could take Ozak AI's value even higher than projected. With presales ongoing and demand hot, investors are watching Ozak AI's move as it changes the landscape of AI-crypto. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto world has always been fast-moving, with new opportunities constantly emerging. Among the many players, there are three that stand out right now: Qubetics, Ethereum, and Near Protocol. Each of these coins brings something unique to the table in 2025. If you're searching for a top crypto to join this week, these projects are definitely worth exploring. Let's dive deeper into why these cryptos should be on your radar. Whether you're looking to explore decentralized finance, enhance security, or just see what the future of blockchain looks like, Qubetics, Ethereum, and Near Protocol each offer something exciting. But one coin stands out more than the rest, especially with its groundbreaking presale currently in full swing: Qubetics. Qubetics (\$TICS) doesn't just promise to

bring innovationâ€”itâ€™s designed to address real-world challenges that past projects failed to fully tackle. With a focus on decentralized VPN technology, Qubetics is looking to make digital transactions and internet browsing easier and more secure for businesses, professionals, and individuals alike.

Qubetics: Revolutionizing Digital Privacy and Blockchain Use (2025) When it comes to the top crypto to join this week, Qubetics (\$TICS) is on a mission to make waves. With the ongoing presale now in its 24th stage, this project has already captured attention by raising over \$14.7 million through the sale of more than 497 million tokens. A staggering 22,500+ holders are backing the project, proving that this is more than just another coinâ€”itâ€™s a movement in the making.

What Makes Qubetics Stand Out? At its core, Qubetics aims to solve critical real-life issues that its predecessors have struggled to address. Its main offering: a decentralized VPN service that ensures secure and private browsing for anyone who wants to protect their data. Whether youâ€™re an individual looking for more privacy or a business in need of robust security solutions, Qubetics has you covered. The decentralized nature of Qubeticsâ€™ VPN means that businesses can easily set up secure and scalable networks without relying on centralized servers. This model not only enhances security but also improves the flexibility and efficiency of digital transactions. As the demand for secure online solutions continues to grow, Qubetics is perfectly poised to meet the needs of the modern internet user.

Qubetics Token (\$TICS) Details Currently priced at \$0.0976 per token, the Qubetics presale is offering a unique chance for early adopters. And the best part? Analysts predict a whopping 923% ROI once the crypto presale ends, with potential for \$TICS tokens to hit \$1 after the presale. This kind of potential doesnâ€™t come around often in the crypto world. If youâ€™re wondering about the future of Qubetics, analysts are projecting that the \$TICS token could soar to as high as \$15 after the mainnet launch, offering a jaw-dropping 15,255% ROI. With numbers like that, itâ€™s no wonder why Qubetics is generating so much buzz.

Ethereum: The King of Smart Contracts (2025) Now, letâ€™s talk about the tried and true favorite in the crypto space: Ethereum. Despite facing stiff competition, Ethereum remains a top crypto to join this week for anyone interested in decentralized applications (dApps) and smart contract execution. Ethereum has become the foundation for many blockchain projects, and its continued updates, such as the recent Ethereum 2.0 transition, make it a solid choice. Ethereumâ€™s smart contract functionality is one of the biggest reasons itâ€™s so widely used. Developers from around the world are leveraging Ethereumâ€™s network to create dApps, which are revolutionizing everything from gaming to finance. Whether itâ€™s DeFi, NFTs, or decentralized governance, Ethereum provides the infrastructure that makes these innovations possible. Despite the competition, Ethereum remains a dominant force. As of now, Ethereumâ€™s market cap is still in the billions, and its ecosystem continues to expand. If youâ€™re thinking about joining the crypto world, Ethereum is still a safe bet for those interested in the long-term growth of decentralized finance (DeFi).

Near Protocol: Scaling Blockchain for the Future (2025) The third coin in our top crypto to join this week lineup is Near Protocol. Near is a highly scalable blockchain designed for building decentralized apps that can handle a high throughput of transactions. With the rise of DeFi, NFTs, and other blockchain-based solutions, Near Protocol is positioning itself as a major player for 2025 and beyond. For developers, Near offers an intuitive and low-cost platform to build on, making it an attractive choice for anyone interested in creating dApps. As the ecosystem grows, Near is positioning itself as the go-to blockchain for high-performance applications. In a crowded space, Nearâ€™s ability to provide a seamless, scalable, and affordable blockchain solution is exactly what the market needs in 2025. By focusing on scalability without sacrificing user experience, Near Protocol is poised for major growth in the coming years.

The Rise of Decentralized VPN: Why Itâ€™s the Next Big Thing As digital privacy becomes an increasing concern, decentralized VPNs like Qubetics are set to revolutionize the way of browsing the internet. In a world where data breaches are becoming more common and privacy is often compromised, the decentralized VPN model offers a level of security that centralized services simply canâ€™t match. In a traditional VPN, user data is routed through centralized servers controlled by a single entity. This can create a potential point of failure and vulnerability. However, with a decentralized VPN like Qubetics, data is routed through a network of nodes, making it far more secure and resistant to attack. For businesses and individuals looking for privacy, a decentralized VPN ensures that data stays encrypted and safe, free from third-party surveillance. This is especially important as cyber threats continue to rise.

Conclusion: Why You Shouldnâ€™t Miss Out on Top Crypto to Join This Week When it comes to the top crypto to join this week, Qubetics is making waves like no other project in 2025. With its focus on decentralized VPN technology and its already successful presale, Qubetics presents a unique opportunity for those looking to enter the crypto space. But donâ€™t sleep on Ethereum and Near Protocolâ€”both continue to dominate their respective niches in decentralized applications and scalability. So, whether youâ€™re interested in the potential ROI of Qubetics or the long-term growth of Ethereum and Near, now is the perfect time to explore these coins before they take off even further. The future of blockchain is looking brighter than ever.

The price of Ethereum and the SOL price are both expected to see a big jump soon. Prominent experts like Marco Polo and Mister Crypto have made some bold price predictions for these altcoins. However, many whales are pulling their capital into a presale opportunity that has already surged by 911% â€” IntelMarkets (INTL). This innovative project is gaining attention as it will bring AI technology to crypto trading and usher in the next generation of trading platforms. With a Tier-1 CEX listing this altcoin soon, its value will soar by 361%. As a result, many whales think INTL could have higher upside potential than ETH and SOL.

IntelMarkets (INTL) To Skyrocket by 361% Soon While the price of Ethereum and the SOL price could go up soon, IntelMarkets (INTL) is also making headlines. Recently, CoinMarketCap listed this altcoin. This event allows millions of new eyes to gravitate towards it.

Also, a top-tier crypto exchange like Uniswap will list INTL soon, bringing a guaranteed 361% price increase overnight. The hype was already intense for IntelMarkets as it aims to redefine crypto trading by launching the first AI-driven trading platform. Therefore, traders will get features like AI-driven trade signals that locate the best trades across different markets and self-learning trading robots that improve their performance over time. These AI features are designed to maximize trader profit potential while minimizing the risks. By holding the INTL token, traders will get governance voting rights and first dibs on new IntelMarkets features. Thus, 9M INTL tokens have been sold in phase ten of its presale alone. Currently, one INTL costs just \$0.091, which is a 911% rise from its starting price of \$0.009. However, this altcoin price will hit \$0.10 after phase eleven begins, while the CEX listing will trigger a rally to \$0.42. This 361% growth makes INTL one of the top altcoins for fast returns.

Marco Polo: The Price of Ethereum (ETH) Will Flip the \$3,000 Range Ethereum (ETH) is one of the top 5 cryptocurrencies but it has faced some turbulence recently. CoinMarketCap shows that the price of Ethereum fell nearly 20% on the monthly chart as its value dropped from around \$2,700 to nearly \$2,200. However, market expert Marco Polo remains bullish on Ethereum (ETH). According to his X post, this altcoin is showing signs of life at the moment. He also mentioned that the price of Ethereum could skyrocket past \$3,000 soon. This Ethereum price prediction has turned some heads but some traders are still skeptical. Since it has a high market cap of around \$270B, it will need a lot of new money for the price of Ethereum to skyrocket. But, crypto coins like INTL will not face this issue.

Analyst Claims the SOL Price May Skyrocket to \$325 One of the top crypto coins, Solana (SOL), is also seeing some volatility. For instance, the SOL price increased from around \$140 to over \$150 on the weekly chart. However, this is still nearly a 30% fall on the one-month chart when the SOL price sat above \$210. But, the community is still watching Solana (SOL) thanks to some bullish analysts like Mister Crypto. In a recent X post, Mister Crypto said that Solana is now seeing an ascending wedge, which is very bullish. He predicts that the SOL price will soar to \$325 soon. Although the Solana price prediction is positive, many investors are sidestepping it for INTL. This is because the SOL price has surged nearly 15% on the YTD chart, suggesting that its highest upswings may have passed.

What Attracts Ethereum (ETH) and Solana (SOL) Whales to IntelMarkets (INTL)? While the price of Ethereum and the SOL price could see big price gains soon, a lot of eyes are turning to IntelMarkets (INTL). This is because this innovative project will tap into the growing AI market which Statista predicts could be worth \$826B by 2030. As a result, the long-term growth potential and stability of IntelMarkets could stand out among other projects. Not only that, while ETH and SOL may see gains, INTL is guaranteed to provide a 361% return once a Tier-1 CEX lists this altcoin. Plus, its smaller market cap means faster price growth with less money. Due to all these factors, whales consider INTL the best crypto investment for fast returns in 2025. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets

The cryptocurrency market has become both a wellspring of opportunity and a labyrinth of challenges for investors. With over 20,000 active digital currencies and daily market volatility, separating the next big opportunity from fleeting hype is no small feat. While Bitcoin and Ethereum continue to dominate as colossal forces in the industry, they face growing criticism for high transaction costs, scalability issues, and limitations in their adaptability. Among this backdrop, a brand-new token is stepping into the spotlight—BinoFi (BINO). Priced at just \$0.02 during its current presale phase, BinoFi is generating discussions as a future-first cryptocurrency with Ethereum and Bitcoin-like potential, but without the barriers that have made these giants increasingly inaccessible to new investors.

The Current Crypto Landscape Despite occasional market pullbacks, cryptocurrency remains a thriving force, capturing the imagination of both retail investors and institutions. Bitcoin has long been crypto's crown jewel, paving the way as a store of value and digital alternative to gold. Ethereum, meanwhile, revolutionized the space with its pioneering smart contracts and decentralized applications (dApps). Yet both assets, for all their contributions, highlight a critical challenge in the market, barriers to usability and growth caused by their very success. Bitcoin's widespread popularity elongates transaction times, while Ethereum's network regularly faces congestion, driving gas fees to exorbitant heights. These issues make navigating the crypto world difficult, particularly for first-time investors or those working with limited capital. Investors have started looking for assets with room for explosive growth and solutions that push blockchain technology forward. Emerging tokens like BinoFi (BINO) are capturing attention by addressing head-on the shortcomings of the leaders, with a focus on user accessibility, speed, and important technical innovation.

What Sets BinoFi Apart? At the core of BinoFi's appeal is its groundbreaking hybrid crypto exchange. Described as the first of its kind, this exchange combines the speed and liquidity of centralized exchanges (CEXs) with the transparency and decentralization of decentralized exchanges (DEXs). By merging the strengths of these models, BinoFi's ecosystem is solving key pain points for traders and investors alike. These features position BinoFi as a leader in trust, engagement, and privacy within the crypto market.

Unique Features Driving Its Success BinoFi stands out in the crypto space with its innovative features designed to enhance transparency, engagement, and compliance. It offers Live Proof-of-Reserves, allowing users to verify that all funds are fully backed in real-time, and Immutable Audit Trails for tracking trade execution and system integrity. Its Trade-to-Earn model rewards users for trading activity, while Copy Trading lets beginners replicate the strategies of top investors, enabling both new and experienced traders to benefit. Additionally, BinoFi ensures privacy with Zero-Knowledge (ZK) KYC, allowing users to verify their identity without exposing personal data, and adapts compliance requirements based on user location for smooth global operations.

Expert Opinions and Early Success Industry analysts are starting to take note. BinoFi is part of the next generation of

crypto, offering a more user-centric and scalable approach than many of its predecessors," says one blockchain industry analyst. The strong demand analysts observe is evidenced by BinoFi's presale event. More than 3 million tokens sold out within hours, underscoring its ability to capture investor interest. Market insiders suggest that early adopters see not just novelty in BinoFi, but fundamentals capable of driving long-term value. Testimonials from some of the earliest community members echo these sentiments. "I've invested in a fair share of tokens over the years," says an individual token holder, "but BinoFi feels different. Its hybrid exchange is a game-changer, addressing so many pain points we've just learned to tolerate in crypto." The Verdict The momentum keeps building, thanks to key developments like BinoFi's recent listing on CoinMarketCap, which has expanded its visibility and enhanced its market credibility. For investors, this offers a rare chance to get involved early in a project with monumental potential. With predictions suggesting BinoFi's price could skyrocket to \$1.00 in the coming years, the 50x ROI opportunity is hard to ignore. - Website: <https://binofi.com> - Whitepaper: <https://whitepaper.binofi.com> - Telegram: <https://t.me/binofilabs> - Twitter: <https://x.com/Binoficom> - CoinMarketCap: <https://coinmarketcap.com/currencies/binofi/> Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum holders desperately want a huge price breakout, and March 2025 may be it. The crypto market is entering a bullish cycle; thus, all eyes are on ETH to regain dominance and leap past recent highs. Rexas Finance (RXS), a new entrant, is attracting investors looking for the next big thing with lofty estimates of a 20,400% gain. Could RXS shift liquidity away from Ethereum as it struggles with scalability and new chains? Will Ethereum deliver the long-awaited surge that holders want? Could March 2025 Finally Pump Ethereum to \$7,000? March 2025 may be the breakout that Ethereum (ETH) holders have been waiting for. Pectra upgrade and other factors have boosted Ethereum to \$2,694.09. This will increase Ethereum's competitiveness against other emerging competitors in blockchains because it will improve its scalability and efficiency. Ethereum's February price spikes usually boost altcoins, and analysts predict it to reach \$7,000 this year. Institutional adoption and a better regulatory environment might drive ETH's value to \$5,000-\$10,000. Despite favorable indicators, Ethereum's price is vulnerable to market factors. The crypto industry is volatile, as Ether's value dropped 20% due to geopolitical uncertainty. While prospects are favorable for a spike, investors must assess the dangers because ETH's performance in March will depend on technical advances, investor sentiment, and market conditions. Ethereum Rival Rexas Finance Could Rise 20,400% in March 2025 Retail and institutional investors have flocked to Rexas Finance (RXS), a strong Ethereum competitor. In contrast to Ethereum, which has high gas fees, network congestion, and reliance on layer-2 scaling solutions, Rexas Finance introduces a tokenized blockchain ecosystem for real-world assets (RWA). This novel technique tokenizes and trades actual assets like real estate, art, and commodities on the blockchain, bridging traditional finance and decentralized finance (DeFi). Analysts expect RWA tokenization to reach a multi-trillion-dollar valuation, placing Rexas Finance at the vanguard of this financial revolution. Investor trust was shown by Rexas Finance's 580% rise in few months from \$0.030 to \$0.20 in its 12th presale stage, raising over \$46.3 million while selling 451 million RXS tokens out of the 500 million tokens available. One of the few cryptocurrencies with a long-term strategy, Rexas Finance is based on actual utility and solid economic foundations, unlike speculative meme coins. As demand rises before its complete exchange debut on June 19, 2025, analysts estimate a 20,400% spike in March from its start price of \$0.25, an increase to \$51.25 by 2025. Market momentum, adoption, and clever presale allocations might boost Rexas Finance's valuation in March 2025. Rexas Finance's 500 million RXS presale supply has depleted quickly, suggesting that a supply shock could cause exponential price action once it hits major exchanges, making it one of the year's most anticipated launches. Rexas Finance Could Dominate Crypto in 2025 and Outperform Ethereum New blockchains like Rexas Finance are challenging Ethereum's smart contract dominance. Rexas Finance's cost-effective, high-speed environment allows seamless real-world adoption, unlike Ethereum's scaling issues, high transaction prices, and rising competition from layer-1 rivals like Solana and Avalanche. CoinMarketCap and CoinGecko list the project, strengthening its crypto industry respectability. Rexas Finance's community-first strategy distinguishes it from Ethereum's institutional investors. Rexas Finance has built a rapidly growing user base through grassroots acceptance and early investment incentives, fueling its bullish momentum. Security and transparency are crucial in the crypto market, and Certik, a leading blockchain security firm, audited Rexas Finance. This ensures smart contract stability and strong security, reducing hacking and vulnerability threats among blockchain projects. Rexas Finance also held a \$1,000,000 raffle, providing 20 winners with \$50,000 worth of RXS tokens to reward early adopters and raise global awareness. Over 1.48 million entries were received. Market demand, community participation, institutional interest, and technical innovation have analysts predicting a 20,400% spike in March 2025 as investors prepare for blockchain disruption. Ethereum dominates the sector, but Rexas Finance's scalability, pricing, and asset-backed architecture make it an interesting alternative. As blockchain use increases and demand for real-world asset tokenization rises, Rexas Finance may challenge Ethereum as the leading tokenized asset platform. With its presale selling out and its launch approaching, March 2025 might be the time Rexas Finance cements its position as Ethereum's strongest challenger. Early investors can't overlook the large profits. Ethereum's Long-Awaited Pump vs. Rexas Finance's Skyrocket The projected Pectra upgrade and a positive market cycle could finally push ETH to new highs in March 2025. However, Ethereum's historical price trends and rising institutional interest support recovery to \$7,000, market instability and new competitors present substantial difficulties. Rexas Finance's (RXS) revolutionary real-world asset (RWA) tokenization approach attracts consumers and institutional investors, signaling a shift in the Ethereum environment. With a 20,400% price spike, Rexas Finance might challenge Ethereum's dominance with a scalable, low-cost alternative with real value. March

2025 could be a turning point in the blockchain revolution, whether Ethereum can stay on or Rexas Finance becomes the next great thing in crypto. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bullish ENS price prediction for 2025 is \$27.79 to \$49.79. - Ethereum Name Service (ENS) price might reach \$60 soon. - Bearish (ENS) price prediction for 2025 is \$9.18. In this Ethereum Name Service (ENS) price prediction 2025, 2026-2030, we will analyze the price patterns of ENS by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency.

TABLE OF CONTENTS | INTRODUCTION | | ETHEREUM NAME SERVICE (ENS) PRICE PREDICTION 2025 | | ETHEREUM NAME SERVICE (ENS) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Ethereum Name Service (ENS) Current Market Status | Current Price | \$20.92 | 24 " Hour Price Change | 3.42% Down | | 24 " Hour Trading Volume | \$66.13M | | Market Cap | \$745.02M | | Circulating Supply | 35.59M ENS | All " Time High | \$85.69 (On November 11, 2021) | | All " Time Low | \$6.70 (On October 19, 2023) |

What is Ethereum Name Service (ENS) | TICKER | ENS | | BLOCKCHAIN | Ethereum | | CATEGORY | Decentralized Domain Name Service | | LAUNCHED ON | May 2017 | | UTILITIES | Governance, security, gas fees & rewards | The Ethereum Name Service (ENS) is a decentralized, open-source domain name system built on the Ethereum blockchain. It replaces the need for long, complex Ethereum addresses with human-readable names, making it easier to interact with blockchain addresses and decentralized applications. ENS domains are typically in the format "ename.eth" and can be used to represent Ethereum addresses, smart contracts, or other resources. ENS operates using smart contracts, ensuring security and censorship resistance. Users can register and manage their domains through an auction process or purchase them on the secondary market. ENS also supports reverse resolution, allowing users to link metadata, such as names or descriptions, to Ethereum addresses. The service enhances the user experience within the Ethereum ecosystem by simplifying address management and promoting trust and usability. This makes it easier for users to identify and interact with addresses and resources on the blockchain. ENS is an important tool for improving accessibility and functionality in the decentralized web.

Ethereum Name Service 24H Technicals Ethereum Name Service (ENS) Price Prediction 2025 Ethereum Name Service (ENS) ranks 83rd of CoinMarketCap in terms of its market capitalization. The overview of the Ethereum Name Service price prediction for 2025 is explained below with a daily time frame. In the above chart, Ethereum Name Service (ENS) laid out a horizontal channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. the exit often occurs at the fourth contact point on one of the horizontal channel's lines. At the time of analysis, the price of Ethereum Name Service (ENS) was recorded at \$20.55. If the pattern trend continues, then the price of ENS might reach the resistance levels of \$49.26 and \$373.51. If the trend reverses, then the price of ENS may fall to the support of \$19.24, and \$7.02. Ethereum Name Service (ENS) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Ethereum Name Service (ENS) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Ethereum Name Service (ENS) for 2025. | Resistance Level 1 | \$27.79 | | Resistance Level 2 | \$49.79 | | Support Level 1 | \$14.86 | | Support Level 2 | \$9.18 | Ethereum Name Service (ENS) Price Prediction 2025 " RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Ethereum Name Service (ENS) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Ethereum Name Service (ENS) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$27.89 Price = \$20.60 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 35.91 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Ethereum Name Service (ENS) Price Prediction 2025 " ADX, RVI In the below chart, we analyze the strength and volatility of Ethereum Name Service (ENS) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Ethereum Name Service (ENS). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 25.82 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 35.01 <50 = Low >50 = High | Low Volatility | Comparison of ENS with BTC, ETH Let us now compare the price movements of Ethereum Name Service (ENS) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of ENS is dissimilar to that of BTC and ETH. That is, when the price of BTC and ETH increases, the price of ENS decreases, if the price of BTC and ETH decreases, the price of ENS increases. . Ethereum Name Service (ENS) Price Prediction 2026, 2027 " 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Ethereum Name Service (ENS) between 2025, 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Ethereum Name Service (ENS) Price Prediction 2025 | \$62 | \$5 | | Ethereum Name Service (ENS) Price Prediction 2026 | \$64 | \$4.5 | | Ethereum Name Service (ENS) Price Prediction 2027 | \$66 | \$4 | | Ethereum Name Service (ENS) Price Prediction 2028 | \$68 | \$3.5 | | Ethereum Name Service (ENS) Price Prediction 2029 | \$70 | \$3 | | Ethereum Name Service (ENS) Price Prediction 2030 | \$72 | \$2.5 | Conclusion If Ethereum Name Service (ENS) establishes itself as a good

investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Ethereum Name Service (ENS) price prediction for 2025 is \$49.79. Comparatively, if unfavorable sentiment is triggered, the bearish Ethereum Name Service (ENS) price prediction for 2025 is \$9.18. If the market momentum and investors' sentiment positively elevate, then Ethereum Name Service (ENS) might hit \$60. Furthermore, with future upgrades and advancements in the Ethereum Name Service ecosystem, ENS might surpass its current all-time high (ATH) of \$85.69 and mark its new ATH.

FAQ 1. What is Ethereum Name Service (ENS)? The Ethereum Name Service (ENS) is a decentralized, open-source domain name system built on the Ethereum blockchain.

2. Where can you buy Ethereum Name Service (ENS)? Traders can trade Ethereum Name Service (ENS) on the following cryptocurrency exchanges such as Binance, Coinbase Pro, Kraken, Uniswap, and Gemini.

3. Will Ethereum Name Service (ENS) record a new ATH soon? With the ongoing developments and upgrades within the Ethereum Name Service platform, Ethereum Name Service (ENS) has a high possibility of reaching its ATH soon.

4. What is the current all-time high (ATH) of Ethereum Name Service (ENS)? Ethereum Name Service (ENS) hit its current all-time high (ATH) of \$85.69 on November 11, 2021.

5. What is the lowest price of Ethereum Name Service (ENS)? According to CoinMarketCap, ENS hit its all-time low (ATL) of \$6.70 on October 19, 2023.

6. Will Ethereum Name Service (ENS) hit \$60? If Ethereum Name Service (ENS) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$60 soon.

7. What will be the Ethereum Name Service (ENS) price by 2026? Ethereum Name Service (ENS) price might reach \$62 by 2026.

8. What will be the Ethereum Name Service (ENS) price by 2027? Ethereum Name Service (ENS) price might reach \$64 by 2027.

9. What will be the Ethereum Name Service (ENS) price by 2028? Ethereum Name Service (ENS) price might reach \$66 by 2028.

10. What will be the Ethereum Name Service (ENS) price by 2029? Ethereum Name Service (ENS) price might reach \$68 by 2029.

- Ethereum sees bearish social sentiment, signaling a potential turnaround per Santiment data. - ETH price drops 20% in a month, trades at \$2,175 with bearish technical indicators dominating. Ethereum has found itself in an unusual position as social sentiment around the second-largest cryptocurrency hits its lowest point this year. According to blockchain data platform Santiment, this bearish sentiment could actually signal a buying opportunity rather than a reason for concern. In an X post, the on-chain analytical platform Santiment said that Ether sentiment has declined to year-low levels. The discussions around it on various social media platforms such as Reddit, X, and Telegram are more bearish.

Weak Sentiments Indicating Potential Turnaround According to the Santiment data between March to September 2024, the investors were more bullish towards the Ether. However, from September 2024 to the present, investors have become more and more bearish towards it. Santiment said, "For those patiently holding their Ether, the bearishness being projected across social media is a good sign of a potential turnaround once crypto markets stabilize." Comparing Ethereum with Bitcoin, in recent months, ETH has fallen more comparatively to BTC. Over the last month, ETH is down by 20% while Bitcoin is only down by 10%. Moreover, community sentiment is also more bearish on Ether compared to other cryptocurrencies. On the technical chart, the ETH price is trading at its crucial support level of \$2,112. Moreover, a death crossover is also visible between the 50-day and 200-day EMA levels. As per CMC data, presently, the Ethereum price is trading at \$2,175 with an intraday drop of 6.02%. The daily trading volume is \$21.58 billion, and the market cap stands at \$262.34 billion. The community sentiment is 71% bullish and 29% bearish. Moreover, the TradingView technical summary indicates a strong sell signal. As per the technical summary of Ethereum, out of 26 indicators, 16 are on the sell side, 9 are on the neutral side, and 1 is on the buying side.

The Solana price is currently on a recovery path after its fall to \$120, with a crypto analyst predicting that a potential pump to \$300 could happen soon. With the recent rally after a strategic crypto reserve was announced by the US government, whales have renewed their interest in Ethereum. According to Santiment data, whales have bought over 190k ETH in anticipation of an Ethereum price pump. Whales are also moving their investments to a promising AI coin called IntelMarkets (INTL). Currently, in the tenth phase of its blockchain ICO, the value of IntelMarkets has skyrocketed by over 900% with the potential to climb by 10x in the next few months. Analysts Expect Solana (SOL) To Rise To \$300 After suffering long-term decline, the Solana price appears to be on a recovery path. CoinMarketCap's data shows that the Solana price has rebounded from a low of \$120 to briefly cross the \$170 level. However, \$SOL has retracted back to the \$150 range. According to Ali Martinez, the Solana price is on track to break out of a descending channel. The analyst forecasts the Solana price might pump to \$213 if the breakout is successful. However, other analysts have set a higher target. Another analyst called Lucky predicted that the Solana price could rally to a new all-time high above \$300 in the coming months. As one of the top crypto coins picked to be included in the US strategic crypto reserve, the Solana price could record this sort of increase.

Ethereum (ETH) Whales Buy Over 190K ETH The Ethereum price decline has seen some relief since the announcement of the strategic crypto reserve. Data from Santiment shows that whales have been adding ETH tokens to their portfolios as a result. According to CoinMarketCap, the Ethereum price has rebounded from \$2,100 to \$2,500. However, as the hype around the reserve fund waned, the Ethereum price dropped back to the \$2,100 range. Since it is not clear if the Ethereum price has bottomed out, it might need to break through the \$2.3k level in the coming weeks. On the other hand, positive inflows from the Ethereum ETF together with positive sentiment in the market could cause a trend reversal. CryptoGoos argues that the Ethereum price chart still looks great. They told their followers not to worry, as they believe the Ethereum price could skyrocket to \$10k in the coming months.

IntelMarkets (INTL) Crosses \$11.2M In Funding As Momentum Grows IntelMarkets (INTL) is one of the best ICO projects in the cryptocurrency market at the moment. It is currently holding a very successful presale campaign which has already attracted more than \$11.2 million. With the current price of \$0.091, those who joined at the early

stage have seen their investments rise by 900%. One of the most important aspects of IntelMarkets's upcoming trading platform is that it is user-friendly. It does not have the KYC procedures that are common in most trading platforms, which means that traders can trade freely without going through a process of identification. This approach makes it more convenient and friendly to the users, especially those who prefer to remain anonymous in their financial dealings. Meanwhile, this DeFi project has a flagship tool known as the Intelli-Mâ„¢ AI trading bots. These bots can process more than 100,000 variables in real time, and this makes them very fast and accurate in their trading activities. As the bots are programmed to learn from each mistake, the system provides the users with an automated solution that is dynamic in nature. What is the Best Altcoin To Buy As Solana Price Drops? While the hype around the reserve fund has waned and the Solana price, along with Ethereum, are dropping, IntelMarkets is gaining more momentum in the market. Its presale success is enough proof that investors are bullish about its potential. While others are sitting on the sidelines, savvy investors are already getting the INTL coin at \$0.091 before the price surges. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The Ethereum price and the ADA price are predicted to soar in the coming months according to some experts. For instance, market analysts like CryptoGoos and Lucky have made some bold price predictions for these top crypto coins. This is because of the recent bullish announcement by Donald Trump for a US crypto reserve. Meanwhile, a presale gem is also making headlines â€” IntelMarkets (INTL). Early buyers of this altcoin are already experiencing a 911% return. But, this percentage will rise by another 361% as a Tier-1 CEX listing is coming fast. This means anyone who buys INTL right now is guaranteed to capitalize on its growth. As a result, many investors think INTL has a higher upside potential than ADA and ETH. IntelMarkets (INTL) Set To See a 361% Price Pump Soon As the Ethereum price and the ADA price could see big price gains soon, only IntelMarkets (INTL) provides guaranteed returns. This is because a top-tier crypto exchange like Uniswap will list INTL soon. Once this occurs, this stage ten presale star will see a 361% price pump. This percentage could pale compared to what's to come as IntelMarkets will bring the next generation of crypto trading platforms. To clarify, IntelMarkets will launch the first AI-driven trading platform. Therefore, users will enjoy many features that do not exist elsewhere. For instance, AI-driven entity analytics will give traders the edge before any market reactions, while AI-driven trading robots will improve their performance over time. In other words, IntelMarkets helps maximize profit potential while minimizing risks. Those looking to support it are now buying its native token, INTL. Interest is high as over 9M INTL tokens have been sold in phase ten of its presale alone. INTL costs just \$0.091, a 911% rise from its starting price of \$0.009. However, this altcoin price will jump to \$0.10 after phase eleven begins. Not only that, a Tier-1 CEX listing will push this value to \$0.42 â€” a 361% return for anyone who buys INTL now. This makes INTL one of the best cryptos for fast returns. Expert Foresees the ADA Price Soaring Past \$1.80 Cardano (ADA) is currently among the top 10 altcoins. CoinMarketCap shows that the ADA price increased over 45% in the past week alone. During that time, the ADA price surged from around \$0.70 to over \$1. Market expert Lucky thinks that this bullish trend for Cardano (ADA) will continue. According to his X post, this token may reach the top 5 cryptocurrencies before this year ends. He also foresees the ADA price potentially soaring past \$1.80 soon. Although this Cardano price prediction has made some headlines, many investors are sidestepping it for INTL right now. This is because INTL's market cap sits at \$35B, which means a lot of new money will need to roll in for the ADA price to see a big jump. CryptoGoos: The Ethereum Price Will Soar to \$3,000 One of the top crypto coins, Ethereum (ETH), has been seeing some slight dips on the price charts. In the past week alone, the Ethereum price fell nearly 10%, as per CoinMarketCap. Its value moved between \$2,500 and almost \$2,200 during that time. However, the community is still watching Ethereum (ETH) thanks to some bullish statements from analysts like CryptoGoos. In a recent X post, CryptoGoos said that the Ethereum price will soar as the charts show a bullish divergence. He foresees the Ethereum price reaching \$3,000 soon. While this Ethereum price prediction is turning some heads, many traders are still skeptical. This is because larger market-cap projects need a lot of new money for their prices to skyrocket. And with ETH's market cap at around \$270B, the Ethereum price will not see any noteworthy pumps soon. Thus, traders are focusing on INTL instead. What Gives IntelMarkets (INTL) an Advantage Over Cardano (ADA) and Ethereum (ETH)? While the ADA price and the Ethereum price struggle to make any profit-wise move unless the whole market decides to shift, IntelMarkets (INTL) will see a guaranteed surge of 361% soon. Thanks to its groundbreaking technology, INTL will tap into the growing AI market, which Statista predicts could be worth \$826B by 2030. Plus, its smaller market cap means faster price growth with less money. Due to all these factors, investors look at INTL as the best crypto investment for fast returns this year. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum's struggles are creating opportunities elsewhere. In February 2025, ETH dropped by 23%, rattled by security concerns and macroeconomic shifts. The \$1.5 billion Bybit hack further destabilized confidence, leading to a wave of liquidations exceeding \$2 billion in a single day. Meanwhile, renewed U.S. tariffs triggered panic across risk assets, compounding Ethereum's bearish

outlook. With declining whale activity and oversold technical indicators, investors are questioning ETH's ability to regain momentum. In contrast, BlockDAG presale success is surging toward \$200.7 million, supported by CertiK audits, an expanding community, and a developer-driven Hackathon. As Ethereum battles volatility, BlockDAG is emerging as a high-growth alternative poised for significant gains. Let's find out, it is high time for investors to switch their investments to BlockDAG to earn instant cashback and greater ROI in 2025. Ethereum Drops 23% in February During Bybit Hack and Market Volatility Ethereum (ETH) experienced one of its most volatile months in recent history, tumbling over 23% due to mounting security risks and macroeconomic shifts. The \$1.5 billion Bybit hack, which targeted an Ethereum wallet, intensified selling pressure, shaking investor confidence in centralized exchanges. As traders scrambled to minimize risk, Ethereum's price plummeted. Beyond security concerns, broader economic uncertainty weighed on ETH. The renewed tariffs on Mexico, Canada, and China triggered a market-wide sell-off, causing \$2 billion in liquidations within 24 hours. This policy shift led investors to exit high-risk assets, further pressuring Ethereum's price. Technical indicators painted a bearish outlook. Ethereum's RSI dipped into oversold territory, and whale activity declined, signaling that large investors were offloading holdings. With sellers dominating the market and confidence waning, Ethereum's future price movement remains uncertain. BlockDAG Presale Nears \$200.7M as Investors Seek Stronger Opportunities While Ethereum faces uncertainty, BlockDAG (BDAG) is gaining momentum, positioning itself as one of the best investment opportunities of 2025. Unlike Ethereum, which is struggling with security risks and bearish sentiment, BlockDAG's presale success is drawing major investor interest. The BlockDAG presale has already raised nearly \$200.7 million, with its price surging 2,380% from \$0.001 to \$0.0248. Unlike Ethereum, which is battling selling pressure, BlockDAG's rising demand is fueling speculation of further gains before its listing on 10 major centralized exchanges (CEXs). Analysts predict BDAG could deliver substantial ROI, making it one of the top cryptos to buy today. Beyond its presale numbers, BlockDAG's developer-driven Hackathon is accelerating adoption, bringing together global developers to build applications on the network. This emphasis on real-world utility sets BlockDAG apart from speculative projects, giving it long-term growth trends similar to Ethereum's early days. Security is another key advantage. Ethereum holders suffered from the Bybit breach, raising concerns over network vulnerabilities. In contrast, BlockDAG has completed a CertiK security audit, ensuring its ecosystem remains robust and protected against exploits. This added layer of security enhances BDAG's appeal as a safer investment option. BlockDAG's community is also expanding rapidly. With over 170,000 unique holders and thousands of new investors joining daily, the momentum behind BDAG continues to strengthen. While Ethereum faces uncertainty, BlockDAG's strong presale performance, utility-driven ecosystem, and security measures position it as an attractive choice for long-term investors. Final Verdict: Ethereum Struggles While BlockDAG's Momentum Surges Ethereum's 23% decline in February has raised serious concerns among investors. The Bybit hack and macroeconomic pressures have exposed vulnerabilities, leading to \$2 billion in liquidations and a decline in whale confidence. As security risks and bearish sentiment mount, Ethereum's short-term prospects remain unstable. In contrast, BlockDAG's presale success continues to soar, attracting investors with its CertiK-audited security, expanding community, and growing developer adoption. With nearly \$200.7 million raised, BlockDAG stands out as one of the most promising investment opportunities of 2025. As Ethereum struggles to regain its footing, BlockDAG's momentum signals a shift in investor interest. For those seeking higher ROI and a more secure, utility-driven crypto, BDAG presents a compelling alternative—one that could define the next phase of blockchain innovation. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum's Pectra upgrade was successfully launched on Sepolia testnet. - Holesky testnet faced issues, but Sepolia deployment was flawless. Ethereum's highly anticipated Pectra upgrade has passed a key milestone. The upgrade successfully launched on the Sepolia testnet on March 5 at 7:29 AM UTC. This marks the second test phase after an earlier attempt on the Holesky testnet faced issues. Pectra is Ethereum's biggest upgrade since 2024. It includes 11 Ethereum Improvement Proposals (EIPs) designed to enhance staking, wallet functionality, and network performance. The update combines execution layer changes (Prague) with consensus layer improvements (Electra). EIP-7251 significantly increases the validator stake limit from 32 ETH to 2,048 ETH. This change addresses inefficiencies in Ethereum's staking system. Currently, validators must split large stakes across multiple nodes. The new limit simplifies staking for high-volume participants. EIP-7702 introduces smart contract capabilities for wallets. This proposal moves Ethereum toward account abstraction. Users may soon pay fees with stablecoins, set up automatic payments, or recover wallets without seed phrases. Holesky Testnet Issues and Developer Considerations The Holesky testnet activation on February 24 faced unexpected issues. Incorrect deposit contract addresses led to chain splits and network instability. Developers quickly addressed these problems, ensuring Sepolia's smooth upgrade. Testnets play a crucial role in Ethereum's development. Holesky closely mirrors Ethereum's mainnet, making it a critical testing ground. The recent failure raises concerns about whether further tests are needed before a full rollout. Ethereum developers will meet on March 6 to decide on the mainnet release timeline. They must assess whether Pectra is stable enough or if additional testing is required. The upcoming developer meeting will determine the next steps. A mainnet launch in early April remains possible, depending on the outcome. Highlighted Crypto News Today Is Pi Network (PI) Headed for a New High This Week?

With the recent decline in the market, Ali Martinez has posted a bearish XRP price prediction. The analyst says that the altcoin price could drop to \$1 soon if it loses the \$2 support. Meanwhile,

Ethereum investors are showing interest in another DeFi coin called IntelMarkets (INTL). This is a new trading platform that has recently attracted a lot of attention due to its advanced algorithms and AI-powered trading tools. With a price pump of 900% and a potential 20x on the way, IntelMarkets could be the best crypto to invest in. Ripple (XRP) Could Drop To \$1, Ali Martinez Says In a recent tweet, a top analyst called Ali Martinez noted the XRP price risks correcting to \$1 in the coming weeks. The analyst argued that there is a head and shoulder pattern on the XRP price chart which started forming in December 2024. The formation has support around the \$2 region. Ali notes that the XRP price has formed the right part of the shoulder which is a bearish sign. He told his followers that a sustained break below \$2 could pull the XRP price to \$1, a 40% decline. At the moment, the XRP price movement is showing mixed sentiment on the charts. While the XRP price has increased by 8.1% on the weekly chart, it has dropped by 18.4% on the monthly level. The crypto community is still waiting for news concerning the Ripple ETF and the verdict of the Ripple-SEC legal battle. CryptooELITES predicts the XRP price might rally to \$3 and then \$6.5. Ethereum (ETH) Predicted To Drop To \$1,250 The ETH price is currently consolidating between a low of \$2,060.16 and a high of \$2,542.79 on the weekly chart. CoinMarketCap data indicated the altcoin is under strong bearish control. Its price has plummeted by 12.8% on the weekly timeframe and 21.5% on the biweekly chart. The losses also extend to the monthly and yearly timeframes which shows the ETH price movement is bearish. On the other hand, technical indicators like the Hull Moving Average (9) and VWMA (10) are flashing buy signals which shows that bulls are gaining momentum. Going ahead, Ali Martinez forecasts the ETH price appears to be breaking out of a parallel channel. The analyst notes the ETH price could drop to \$1,250 in the coming weeks. On the flip side, CryptoGoos says the ETH price is in an accumulation phase. They forecast the ETH price could skyrocket like Bitcoin did in 2021 and rise to \$8,500. IntelMarkets (INTL) Eyes Potential 20x ROI IntelMarkets (INTL) is currently in its cryptocurrency ICO stage but has surged by more than 900% to reach \$0.091. The early investors have already invested \$11.2 million and are expecting to gain 20x ROI out of it as IntelMarkets prepares to disrupt the market with the help of artificial intelligence. Traditional trading has always been inclined towards institutional investors while leaving small traders in a disadvantaged position due to a lack of adequate information. IntelMarkets alters that narrative by providing market intelligence to retail traders to track the flows of wallets, liquidity, and institutional transactions. Unlike other platforms, IntelMarketsâ€™ Intelli-M AI notifies users of the trends that are yet to happen, whale movements, liquidations, and volatility. This enables the trader to make some decisions before the market shifts its position. The Rodeum AI bots are the on-chain detectives that scrutinize transactions and blockchain patterns to provide users with an advantage. Apart from trading, IntelMarkets allows users to create, train, and sell AI-based models, enhancing the accuracy of their predictions. Is IntelMarkets a Good Crypto To Buy? While the XRP price risks falling to \$1, IntelMarkets has captured the attention of Ethereum investors. There is a potential 20x surge waiting for those who enter the market now. So, investors who are looking for the best coins to invest in can turn their attention to new giants like IntelMarkets. For more information about IntelMarkets (INTL) visit the links below: - Presale: <https://intelmarkets.io/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is in full swingâ€”whoâ€™s making gains and whoâ€™s taking losses? The recent Ethereum price drop has led to significant liquidations, introducing new uncertainties. Meanwhile, the Binance Coin (BNB) price action is also unstable, facing difficulty in overcoming resistance and remaining indecisive. While traders are analyzing graphs, miners are gearing up for future gains. BlockDAG (BDAG) mining rigs are seeing robust sales, with over 16,200 units sold. These rigs, known as some of the best crypto miners, offer reduced energy use and enhanced profitability, making mining BDAG coins more viable, particularly as traditional mining systems are critiqued for their energy consumption. With a 2,380% increase in BDAGâ€™s price since its first presale, itâ€™s obvious why many view BlockDAG as the premier crypto to mine. Ethereum Price Drop Raises Many Questions The latest Ethereum price drop has surprised traders, especially following recent market fluctuations. This Ethereum price drop is believed to be due to negative market feelings and increased selling activity. Current trade uncertainties have also led to doubts during this Ethereum price drop. Furthermore, extensive liquidations have intensified the downturn, magnifying its effect. This Ethereum price drop has prompted analysts to wonder whether more decreases are on the horizon or if a rebound might occur soon. Traders are wary of potential macroeconomic factors and abrupt changes that could influence future prices. Binance Coin (BNB) Price Action Faces Uncertainty Currently, the Binance Coin (BNB) price action is erratic as the coin tests significant support levels near \$640. Observers point out that this Binance Coin (BNB) price action has had trouble breaking through the \$700 resistance level, indicating potent selling pressure at that mark. Funding rates have turned negative, reflecting a cautious outlook among leveraged traders. Some predict a possible short squeeze if BNBâ€™s price action stabilizes, which could force short sellers to close their positions. Experts also consider \$620 as a critical point to monitor if trends shift to bearish. Any decisive movements may depend on market news or updates related to the Binance platform, leaving traders in anticipation of abrupt market changes. Why BlockDAG Mining Rigs are Selling Rapidly BlockDAGâ€™s X Series Miners are in high demand due to their energy efficiency, enhanced profitability, and simplicity in mining BDAG coins. The range includes the X10, X30, and X100 models, which appeal to a broad spectrum of users, from beginners to experienced miners. Already, more than 16,200 units have been purchased, indicating strong interest from various users. The coin associated with these rigs is currently valued at \$0.0248, having attracted over \$200 million in funding and sold over 18.6 billion coins since the start of its presale, now in its 27th batch, with an impressive return of 2,380% for early participants. These rigs are leading the trend towards environmentally friendly mining solutions. They

operate on low power, are quiet, easy to set up, and come equipped with sophisticated ASIC chips for prolonged operation. The X10 model is perfect for beginners, yielding up to 200 BDAG daily. The X30 and X100 models offer higher outputs of 600 and 2,000 BDAG daily, respectively, without significant energy expenses. For miners, acquiring these rigs is viewed as a strategic move for sustained crypto gains, enhanced by continual technological updates that ensure security and efficiency, making BlockDAG some of the best crypto miners available. The Current State of Crypto Trading and Mining As the crypto market experiences fluctuations with the Ethereum price drop and uncertain Binance Coin (BNB) price action, traders are weighing their options amid resistance challenges and potential liquidation risks. In contrast, miners are focusing on securing a reliable income through BlockDAG's advanced mining rigs. With over 16,200 rigs sold, BlockDAG's equipment is recognized for its efficiency and profitability, positioning BDAG mining as a wise option. Despite market volatility, the network's crypto presale has amassed over \$200 million, and the coin's value has increased by 2,380% since the first batch, continuing to rise. While traders face unpredictability, BlockDAG miners have a clear advantage: opting for a controlled, stable approach to crypto earnings over speculative trading. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

The crypto market is ever-volatile. Currently, the spotlight is on specific cryptocurrencies, starting with the formidable ETH. Ethereum's price analysis indicates a possible death cross, yet, despite a \$1 trillion loss in related assets, its value hasn't plummeted significantly. Also, AI Superintelligence's price prediction is diverse, with projections ranging from \$0.864 to \$4.645, starting from its present price of \$0.64. As veteran coins tackle tough periods, BlockDAG (BDAG) is again capturing interest. This interest isn't solely due to their notable presale performance or the 2380% price increase since their initial offering, but because of the induction of five seasoned leaders, heightening expectations for BlockDAG's next moves. Death Cross & \$1T Theft Impact Ethereum's Price Analysis Ethereum's price analysis reveals the 50-day moving average falling beneath the 200-day, confirming a death cross that might pressure its value. Interestingly, the price remains relatively stable, even following a \$1 trillion theft of Ethereum-associated assets in a recent Bybit hack. Moreover, Ethereum's price analysis highlights \$2,700 as a crucial resistance level. Surpassing this might mitigate the ongoing bearish trends. Nonetheless, if the value fails to maintain, it could decline to about \$2,200 or less, depending on the market atmosphere and Bybit's resolution efforts. AI Superintelligence Price Prediction Offers Varied Outlooks The Artificial Superintelligence Alliance (FET) aims to forge an "intelligent economy" through AI and blockchain to streamline transactions and decision-making, utilizing FET tokens as the operational fuel. Despite heightened interest in AI, FET has seen a 40% drop in its value over the past month. AI Superintelligence's price prediction provides mixed forecasts; while CoinCodex suggests a slight increase to \$0.864, WalletInvestor predicts a significant rise to \$4.645. FET's prosperity largely depends on AI integration and strategic alliances, hence a prudently optimistic stance is advisable. BlockDAG Introduces Five New Leaders to Propel Growth BlockDAG has successfully raised over \$200 million through its cryptocurrency presale, with early adopters enjoying a remarkable 2380% ROI. To further its mission of innovation and growth, BlockDAG has welcomed five new leaders to its team. Nicolaas David van den Bergh steps in as the CMO, contributing his two decades of expertise in the media and digital sectors, while Marcus Xavier, now Head of Learning Academy, specializes in instructional design with a focus on course redesign and curriculum development. The contributions of these experts are crucial for boosting user acquisition, engagement, and education, laying a robust foundation for BDAG's ongoing growth and expansion. Robert Radek has joined as Product Manager, offering more than seven years of experience in product management within the cryptocurrency sector. His profound knowledge of crypto product development is poised to drive substantial innovation and enhancements at BlockDAG. Joshua Sack, an expert in crypto mining specializing in proof of work technology, has been appointed as a Mining & Miners Expert. His expertise will enhance BlockDAG's mining infrastructure to support the growing demands for mining power and hardware effectively. Liza van Der Berg, with her 13-year background in IT recruitment, sales, and business development, takes charge of HR and Operations. Her efforts in streamlining processes are essential as BlockDAG approaches its mainnet launch and prepares for CEX listings. This influx of experienced professionals suggests that BlockDAG's mainnet and CEX listings could be realized sooner than anticipated. Currently, as presale batch 27 progresses, BDAG is priced at \$0.0248 and is projected to hit \$1 this year. Closing Thoughts While Ethereum's price analysis indicates potential struggles with a looming death cross, and the Bybit hack hasn't severely impacted ETH prices, FET is diligently working towards an "intelligent economy" powered by AI and blockchain. Meanwhile, AI Superintelligence's price prediction shows a range of outcomes. BlockDAG, however, is looking particularly promising with its strategic addition of five adept team members. Their collective skills are set to elevate the company's mining infrastructure, product innovation, and operational efficiency, positioning BlockDAG as a top crypto for 2025. As the end of presale batch 27 nears, with \$200 million already raised, the excitement is building around how this skilled team will help drive BDAG's price towards the anticipated \$1 mark much sooner. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto history is full of “what if” moments, and Ethereum’s rise from an unknown project to a multi-billion-dollar powerhouse remains one of the most iconic stories in the industry. In 2014, Ethereum launched its ICO, offering ETH for just \$0.30 per token. Many early crypto adopters ignored it, dismissing the idea of smart contracts and decentralized applications as unnecessary innovations. Fast forward to today, and Ethereum has become the backbone of Web3, powering thousands of projects, from DeFi to NFTs. Those who bought in early and held on are now sitting on millions, if not more. For every person who rode Ethereum’s wave to the top, there are thousands more who looked back with regret, wishing they had taken the leap. But crypto never stops evolving. New projects emerge, solving challenges that even Ethereum struggles with, and the next game-changing blockchain is always on the horizon. Enter Qubetics—a project that is now drawing comparisons to Ethereum’s early days and could be the best crypto presale to join before its price takes off. Ethereum’s ICO: The Golden Opportunity That Most People Missed When Ethereum’s ICO went live, it didn’t receive the universal hype that new crypto projects see today. Bitcoin was still the dominant force, and the idea of a programmable blockchain with smart contract functionality sounded overly ambitious to many. Critics doubted whether developers would even adopt Ethereum’s technology, let alone whether it would have long-term value. Despite the skepticism, Ethereum’s visionaries saw what others didn’t. They knew that decentralization wasn’t just about storing and transferring digital money—it was about building an entire ecosystem of decentralized applications (dApps). The success of Ethereum became clear as projects like Uniswap, Aave, and OpenSea emerged, each leveraging smart contracts in ways that were previously unimaginable. A \$1,000 investment in Ethereum’s ICO would have bought over 3,300 ETH, which, at Ethereum’s all-time high of \$4,800, would have been worth over \$15.8 million. The people who dismissed Ethereum as “just another altcoin” watched from the sidelines as it became the second-largest cryptocurrency in the world. But this is how crypto works—every bull run, a new wave of projects emerges, and the smartest early adopters seize the moment before the mainstream catches on. That moment is happening again right now. Qubetics: The Multi-Chain Revolution That’s Making Crypto Easier Than Ever While Ethereum revolutionized blockchain development, it still struggles with high gas fees, slow transaction speeds, and limited interoperability. Moving assets between blockchains remains a frustrating experience, requiring users to rely on centralized exchanges, wrapped tokens, or complex bridges that often pose security risks. Qubetics is stepping in to solve this problem with its non-custodial multi-chain wallet, allowing users to store, transfer, and interact with assets across multiple blockchains in one seamless platform. The fragmentation of the blockchain industry has long been a barrier to mass adoption, but Qubetics is creating a Web3 aggregator that unifies different networks, making it easier for both everyday users and businesses to operate without limitations. Unlike wallets that restrict users to a single ecosystem, Qubetics supports multiple chains without requiring third-party intermediaries. A user who wants to swap Bitcoin for Ethereum no longer has to move through an exchange or worry about wrapped assets. Instead, they can conduct transactions directly within Qubetics’ interface, maintaining full control of their funds without additional fees or delays. The implications are massive. From traders who need cross-chain liquidity to businesses that want to accept crypto payments in various assets, Qubetics is eliminating the need for multiple wallets and fragmented solutions. Just as Ethereum unlocked the potential of smart contracts, Qubetics is unlocking the next generation of decentralized finance by making crypto truly interoperable. Qubetics Presale—The Best Crypto Presale to Join Before It Blows Up? Every major crypto success story starts before the project goes mainstream. Ethereum’s ICO was the perfect example—early buyers got in at \$0.30 per ETH, and today, those tokens are worth thousands each. Now, a similar scenario is unfolding with Qubetics, which is currently in Stage 24 of its presale, offering \$TICS at just \$0.0976 per token. The presale structure is designed to reward early adopters. Each stage lasts seven days, with a 10% price increase every Sunday at midnight. With over \$14.5 million raised and 495 million tokens sold, investors are securing their allocations before the price moves higher. Analyst projections show that if \$TICS reaches \$0.25 by the end of the presale, early buyers will see a 155.93% return. If it climbs to \$1 after launch, that ROI jumps to 923.72%, and the long-term potential could be 10,137.16% if Qubetics follows Ethereum’s trajectory to \$10 per token. For those looking to avoid the “I should have bought earlier” regret, the opportunity to join the best crypto presale of 2025 is here. With the Qubetics mainnet launch set for Q2 2025, the window to get in at presale prices is closing fast. Will Qubetics Follow Ethereum’s Footsteps? Crypto history repeats itself. Every cycle, new projects emerge that push the boundaries of blockchain technology, and early adopters who recognize their potential secure life-changing gains. Ethereum was once an ambitious project that most ignored. Today, it’s an industry titan. Qubetics is solving one of the biggest barriers to mainstream crypto adoption—interoperability. By making multi-chain asset management seamless, Qubetics is positioning itself as a fundamental piece of Web3 infrastructure. The same way Ethereum revolutionized decentralized applications, Qubetics is redefining how users interact with multiple blockchains in one unified platform. For those who missed Ethereum’s ICO, the chance to get in early on the next major crypto success story is happening right now. The crypto presale is open, prices are still low, and with every passing week, the opportunity to buy at a discount is fading. The biggest mistake in crypto isn’t making a bad investment—it’s missing the right one at the right time. With shifting investor focus, Ethereum’s potential breakout, Solana’s downward spiral, and BlockDAG’s \$30M developer grants are capturing investor attention. ETH is holding strong above \$2300, sparking speculation about a price surge past \$3,000. Meanwhile, Solana’s price continues to drop, dragged down by the decline of its meme coin sector. But BlockDAG is making the biggest impact,
