

beyond EVM to support Solana, Sui, and BNB Chain, further solidifying its position as one of the most user-friendly and technically advanced crypto apps on the market. This rewards campaign officially went live on April 12, 2025, and features three core reward mechanisms specifically designed for \$PERP users, allowing token holders to directly and continuously benefit from the platform's activity and growth: 1. Hold & Trade to Earn Users can earn daily rewards simply by holding or trading \$PERP on Nekodex. Rewards are automatically calculated and distributed based on user wallet activity and holdings; the process is simple and transparent. 2. Surplus Bonus Nekodex trading includes a system called surplus, where users receive a portion of the positive price difference when trades execute more favorably than previewed. \$PERP holders now earn an increased share of this surplus, up to 50% for users holding 5,000 or more tokens. 3. Binance Square Campaign To boost visibility, Nekodex is encouraging users to post about \$PERP and Nekodex on Binance Square. Verified posts will earn 10,000 Nekocoin instantly as part of a limited-time social quest. As DeFi shifts toward more user-centric, mobile-native experiences, Nekodex is positioning itself at the forefront of this evolution. And now, \$PERP holders can directly benefit from the platform's growth and community momentum. At the same time, Perp Labs' pace of innovation has not stopped. The development team has revealed that more exciting product innovations are currently in the pipeline, including an AI-powered, on-chain prediction market. These new products are expected to further enrich and expand the overall ecosystem under the \$PERP token umbrella, bringing users more diversified application scenarios and value capture opportunities. Don't Miss Out This campaign is live now and rewards are distributed to eligible users. Cardano (ADA) appears to be regaining lost strength, prompting analysts to suggest that it might breach its 2021 peak anytime soon. Its investors seem largely optimistic despite the recent market corrections, thanks to the blockchain advances in applicable scalability and real-life use cases. While Cardano is trying to grab attention, another altcoin is Rexas Finance (RXS), which is basking on the popularity surge. With an innovative approach to real-world asset (RWA) tokenization and an explosive presale, Rexas dominates Google searches as investors look for the next major breakout project. Rexas Finance (RXS) Captures Market Attention The innovation on Rexas Finance (RXS) is at the forefront of the asset tokenization innovation cycle in the cryptocurrency industry. While Cardano works on improving the performance of smart contracts, Rexas is dedicated to the onboarding of real-world assets to blockchain technology, facilitating new avenues for investment. Interest from investors has surged, turning it into the most searched cryptocurrency in recent weeks, surpassing competitors. Rexas is completing the last phase of the RXS presale. With a presale price of \$0.20 per RXS and an imminent launch price of \$0.25, whale demand from ADA, Solana, and XRP has surged. Investors regard Rexas Finance as a high-utility, low-entry opportunity because it can fractionalize real estate, commodities, and even intellectual property. As traditional finance approaches blockchain technology, Rexas Finance uniquely solves real-world investment constraints. The Rise of RWA Tokenization The growing popularity of real-world asset (RWA) tokenization is a significant factor behind the surge in searches for Rexas Finance. The idea is to convert physical assets into tokens on the blockchain, increasing their liquidity and accessibility. With the Rexas Token Builder, Rexas Finance streamlines this process, permitting both individuals and institutions to tokenize their assets with ease and no knowledge of blockchain technology necessary. This has been great for investors wishing to diversify away from traditional markets like real estate and gold, as Rexas provides an exceptional, clear, and non-centralized system. In contrast to other speculative meme coins, Rexas Finance has real use, which makes it a powerful candidate for long-term growth. The power to own portions of valuable assets removes barriers, allowing more people to partake in wealth creation. This has caused a surge of investors from the ADA and SOL ecosystems as well as XRP, most of whom are reserving their investments in Rexas, awaiting its market launch. A Strong Presale with Institutional Interest Rexas Finance's presale is regarded as one of the most successful in 2025. It is currently in Stage 12, with over 91.63% of its allocation sold. It has already raised 47.6 million dollars, which signals strong demand from both retail and institutional investors. Long-term value-driven investors from the Cardano ecosystem are also looking at RXS due to its structured tokenomics and strategic presale. Attaining liquidity, staking rewards, and boosting the ecosystem's growth is what Rexas Finance is establishing. This is not a project that uses speculative hype like many others. Rexas Finance is building a sustainable framework. Now, many investors view Rexas Finance as a long-term wealth accumulation asset, similar to how early adopters used to see Cardano. With the limited supply of presale tokens, the launch on June 19, 2025, is predicted to drive more adoption. Rexas Finance vs. ADA: Complementary Growth Rather than competing, Cardano and Rexas Finance represent different but complementary aspects of blockchain evolution. Because Cardano concentrates on the scalability of decentralized applications (dApps), it remains competitive in terms of future blockchain technology infrastructures. At the same time, Rexas Finance has broadened its appeal beyond crypto traders by utilizing asset tokenization. The way blockchain technology is currently being integrated into various industries suggests that both projects are in good standing to be successful. ADA's potential rally could fuel more investment into innovative altcoins like Rexas Finance, reinforcing the broader movement toward decentralized asset ownership. With Google searches for RXS skyrocketing, it is evident that investors are looking for the next breakthrough token, and Rexas Finance is delivering with its secure, audited, and high-utility ecosystem. Conclusion: The Future of Blockchain Investment Cardano's rally could mark the beginning of a new market cycle, one where high-utility projects gain dominance over speculative plays. Rexas Finance has positioned itself at the forefront of this shift, offering real-world asset tokenization, a secure ecosystem, and a rapidly growing investor base. With the RXS presale nearly sold out and a Google search explosion indicating rising public interest, Rexas Finance is shaping up to be one of the most anticipated launches of 2025. For those looking to capitalize on the next evolution of blockchain investment, RXS is proving to be a standout contender in the race for long-term adoption and growth. - Mantra's native token, OM, saw a dramatic intraday drop of over 90%, falling to as low as \$0.4222 before recovering slightly. - Binance said the crash was mainly due to heavy cross-exchange liquidations causing intense selling pressure. The native token of Mantra, OM, has seen a shocking price drop of over 90% within a single day, with the token even hitting a low of \$0.4222 before slightly recovering to \$0.7162. This sudden crash had the crypto community buzzing with concerns, prompting Binance to step in with an explanation. In a post shared on X (formerly Twitter), Binance clarified that the steep fall was mainly due to cross-exchange liquidations, a situation where heavy selling pressure happens across multiple platforms at once, often triggering a cascade of price drops. Binance also pointed out that it had already taken several steps to protect users from risks tied to OM. Since October 2024, the platform reduced leverage levels for OM trading. And from January 2025, it even issued pop-up warnings on OM's spot trading page to alert users about major changes in the token's supply and tokenomics. Interestingly, blockchain tracker Lookonchain flagged that 17 wallets had deposited \$227 million worth of OM tokens into exchanges just before the crash. That accounts for nearly 4.5% of OM's total circulating supply, a huge dump that likely added fuel to the fire. With rug-pull fears circulating, Binance assured users that it's monitoring the situation closely and will continue to take necessary steps to protect traders. NOLLAXY proudly announces the launch of its innovative investment platform, designed to transform the way investors interact with crypto assets. Leveraging the powerful combination of artificial intelligence technologies, copy trading, and crowdfunding strategies, NOLLAXY offers a smart, secure, and reliable approach to the modern digital financial environment, tailored for both beginners and experienced investors. From Idea to Realization: The Evolution of NOLLAXY Starting its journey as a copy trading service, the NOLLAXY team quickly gained recognition thanks to its proprietary trading strategies and development of AI-based trading bots. Recognizing the limitations of typical copy trading systems, the team focused on building a closed, integrated ecosystem, creating a trusted investment environment where advanced strategies and machine learning algorithms work together to generate sustainable profits with minimized risks. Innovation as the New Standard of Smart Investing Unlike traditional platforms, NOLLAXY stays ahead of the market. By integrating cutting-edge AI technologies, algorithmic trading, and collective investing, the platform transforms market analysis into accurate forecasting. This synergy provides investors with data-driven, timely, and customized opportunities aligned with their risk profiles and financial goals. Mission & Vision: Intelligence, Transparency, and Growth NOLLAXY's mission is to create a transparent, secure, and consistently profitable environment for capital growth. The platform eliminates emotional decision-making and randomness, optimizing asset allocation through automation, data analysis, and strategic investments in promising crypto and NFT projects. Why Investors Choose NOLLAXY Stable Income 5 Days a Week: The platform provides daily returns from Monday to Friday through diversified digital assets. AI-Powered Precision: Proprietary bots and predictive models respond swiftly to market changes, ensuring optimal entry and exit points. Multi-Asset Flexibility: The opportunity to invest in USDT, BTC, ETH, and Solana with customizable investment plans. Rewarding Partnerships: A profitable referral program allows users to earn from network growth, increasing their potential income. Join the Future of Investing NOLLAXY invites investors worldwide to experience a new standard in financial technology. Whether you are seeking passive income or strategic portfolio growth, NOLLAXY combines technology, strategy, and trust to help you achieve success. MEXC, a global leader in cryptocurrency exchange services, will proudly participate as one of the seven exclusive Title Sponsors at TOKEN2049 Dubai, taking place from April 29 to May 1, 2025, at the prestigious Madinat Jumeirah. This premier industry event coincides with MEXC's milestone 7th Anniversary, providing an ideal platform to showcase the exchange's continued commitment to innovation and user-centric solutions. Leading the Way in Crypto Accessibility As TOKEN2049 Dubai prepares to welcome 15,000 attendees from over 4,000 companies worldwide, MEXC will demonstrate why it has become the preferred platform for 36 million users across 170+ countries. Under the brand promise "Your Easiest Way to Crypto," MEXC has consistently delivered a trading experience that is fast, economical, and user-friendly. Visitors to MEXC's booth will discover why the platform has earned its reputation for accessibility and innovation. The exchange offers a broad selection of trending tokens, regular airdrop opportunities, and competitive trading fees within a secure and efficient environment designed to meet the needs of both newcomers and experienced traders. Celebrating 7 Years of Growth with Global Campaign and Exclusive Announcements TOKEN2049 Dubai provides the perfect backdrop for MEXC to commemorate its 7th anniversary, a journey marked by consistent growth, technological advancement, and an unwavering focus on user satisfaction. From its founding in 2018, MEXC has evolved into one of the industry's most trusted exchanges, known for its liquidity strength and comprehensive service offerings. Tracy Jin, Chief Operating Officer of MEXC, who will be joining a panel at the mainstage, expressed enthusiasm about the upcoming event: "Our 7th anniversary represents a significant milestone in MEXC's evolution from a startup to a global leader serving over 36 million users. We're particularly excited to use TOKEN2049 Dubai as a platform to unveil several major announcements that will shape the future of our exchange and bring even more value to our users. The crypto community can expect groundbreaking new features and partnerships that reflect our commitment to continuous innovation." As part of the celebration, MEXC has launched a global anniversary campaign featuring a massive 10,000,000 USDT prize pool. The campaign, running from April 13 to May 7, 2025, invites users to participate in three exciting arenas: Team PNL Rate Competition, Collect, Assemble & Win, and Solo Leaderboard Battle. These competitive events offer opportunities for both individuals and teams to showcase their trading skills while earning substantial rewards, reinforcing MEXC's commitment to community engagement and user empowerment. As part of the anniversary celebrations, MEXC will also host special events including the "Celebrate MEXC Party" on April 30th and an exclusive yacht experience for select partners on May 1st. These gatherings will provide valuable networking opportunities while highlighting MEXC's appreciation for its global community of users and partners. Revolutionary DEX+ Platform: Bridging Centralized and Decentralized Trading The spotlight on MEXC's TOKEN2049 presence will be on its DEX+ platform, launched in March 2025. This innovative hybrid solution seamlessly integrates centralized and decentralized trading capabilities, allowing users to access over 15,000 tokens across the Solana and BNB Chain ecosystems without leaving the familiar MEXC interface. DEX+ represents a significant advancement in trading technology, enhancing user experience while expanding MEXC's appeal to on-chain trading enthusiasts. By eliminating the traditional barriers between centralized and

decentralized exchanges, MEXC continues to drive innovation that serves the evolving needs of the global crypto community. Connect with MEXC at TOKEN2049 Dubai TOKEN2049 Dubai attendees are encouraged to visit MEXC's booth to explore the platform's features, learn about the revolutionary DEX+ technology, and discover special promotions available exclusively during the event. As a special highlight of the 7th-anniversary celebration, MEXC will showcase a collection of seven limited-edition commemorative merchandise items, attractively displayed and available for visitors at the booth. MEXC representatives will be available throughout the conference to provide demonstrations, answer questions, discuss potential partnerships, and help attendees acquire these exclusive anniversary items. TOKEN2049 Dubai presents an extraordinary opportunity for industry professionals and crypto enthusiasts to experience firsthand the innovations that have established MEXC as a leading exchange. Whether exploring cryptocurrency for the first time or seeking advanced trading solutions, visitors to MEXC's booth will find knowledgeable representatives ready to demonstrate the platform's capabilities and explain why MEXC continues to be the Easiest Way to Crypto for millions of users worldwide. About MEXC Founded in 2018, MEXC is committed to being the Easiest Way to Crypto. Serving over 36 million users across 170+ countries, MEXC is known for its broad selection of trending tokens, everyday airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. ETH and BTC rule the market right now as the largest cryptos. However, other cryptocurrencies have replicated their achievements over time. This year, five altcoins might replace Ethereum and Bitcoin. Their strong fundamentals and bullish momentum drive their ability to yield returns similar to ETH and BTC's. Among these, Rexas Finance (RXS) stands out due to its unique approach to real-world asset tokenization. Though a newcomer, experts think it could be among the best performers in this cycle. Rexas Finance (RXS) Rexas Finance is well-positioned to thrive in the real-world asset (RWA) tokenization sector, which is expected to grow to \$16 trillion by 2030. Rexas Finance turns physical assets like real estate and fine art into digital tokens. Through this tokenization process, Rexas Finance is unlocking investment opportunities that were once out of reach to regular investors. One of the biggest catalysts for RXS is its upcoming official token launch on June 19. The presale has already been a massive success, raising over \$47.5 million and selling 457 million tokens. With this level of demand before even hitting the broader market, analysts predict a major surge in value post-launch. RXS has already shown its potential, surging 566% since the presale began. This momentum shows strong investor confidence and highlights the massive upside still ahead. Demand is expected to skyrocket as the token lists on top-tier exchanges. Hence, explosive price growth could be seen in the coming months. Rexas Finance boasts a powerful ecosystem that sets it apart. The Rexas Token Builder is an easy-to-use tool for creating digital tokens. The QuickMint Bot allows users to create and deploy tokens quickly via Telegram and Discord. Meanwhile, the Rexas Estate is a dedicated platform for fractional real estate investments. Tokenomics is crucial in price sustainability, boosting Rexas Finance's long-term growth potential. Because of its limited supply, scarcity will naturally drive up the token's value. Rexas Finance's ecosystem and promising role in real-world asset tokenization give it an edge in the market. Institutional interest could rise, making RXS a top altcoin to buy, as RWA tokenization has been marked as one of the most promising sectors in crypto this year. Analysts believe RXS could reach \$10 quickly and eventually rocket about 100x within twelve months. If its presale momentum continues, RXS could deliver the predicted ROI. Ondo Finance (ONDO) Ondo Finance is making waves in the real-world asset (RWA) space. Recently, crypto whales bought 1.08 million ONDO tokens in just a week. This growing demand could push ONDO's price toward \$0.95, up from its current \$0.8. ONDO's tokenized treasury assets, OUSG and USUDY, recently crossed \$1 billion. This milestone proves the strong appetite for RWAs in digital finance. With the tokenized Treasuries market hitting an all-time high of \$4.6 billion, Ondo is well-positioned for future growth. Its ability to bridge DeFi and traditional finance makes it a strong contender for investors seeking stability and yield. Uniswap (UNI) UNI is gaining significant attention from crypto whales, with large holders' netflow surging over 3900% in a week. This signals strong accumulation. It has also reduced supply and could drive UNI's price higher. Riding the crypto market rebound, UNI recently broke key resistance levels. It surged over 8% to \$7.04. Indicators like MACD and Chaikin Money Flow suggest continued upward movement. Targets are at \$8 or higher. As demand for decentralized exchanges grows, Uniswap remains a top pick for investors eyeing long-term gains in DeFi. Hyperliquid (HYPE) HYPE has been recovering strongly, gaining 35% in just ten days after rebounding from \$12. Currently trading around \$16, it's eyeing the \$18.5-\$20 resistance zone. Technical indicators signal bullish momentum. For example, traders are growing confident as Open Interest surged by \$44 million. If HYPE breaks \$16.50, it could push toward \$19.16 and even \$21. However, a failure to clear resistance may send it back to \$13.44. With growing interest and improving market sentiment, Hyperliquid remains a solid investment this year. Tron (TRX) Tron is gaining traction as one of the most profitable blockchains, handling billions in Tether (USDT) transactions daily. Crypto analyst Javon Marks predicts a 516% price surge to \$1.11m. Founder Justin Sun's expansion of meme coins and planned integration with Solana further boost its appeal. With over 3 million active accounts and strong profitability, TRX is a top altcoin to buy. Conclusion Each of the five mentioned altcoins offers unique advantages that position them as the next Ethereum and Bitcoin. If the narrative sustains, they could be the best investment choices for the year. However, Rexas Finance stands out as the strongest contender. With an upcoming token launch and a rapidly expanding ecosystem, RXS has the potential for exponential growth. Following its presale momentum, analysts believe Rexas Finance is the best investment to make right now. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Crypto traders in 2025 are maintaining a close eye on familiar names like Polkadot (DOT), which has long been taken into consideration as a top-tier venture with multichain interoperability at its core. After a turbulent 2024, DOT is now eyeing a return to the \$10 mark—an optimistic aim, but one that could take time. While Polkadot continues its slow recovery, a lesser-known yet fast-growing project is capturing interest throughout the market: Ozak AI (OZ). Priced at just \$0.003 in its ongoing presale, Ozak AI isn't just aiming for a small rally—it's concentrated on a competitive move towards \$1. That's a 300x gain, one that might outshine nearly every other project in this cycle. Polkadot's \$10 Goal—Realistic, But Slow Polkadot has been through a rollercoaster during the last couple of years. Its imaginative and prescient of allowing a completely interoperable blockchain environment stays intact, and its recent development efforts, parachain auctions, and network enhancements have helped it regain investor confidence. From a low of around \$3.25 in April 2025, DOT has all started to trend upward again, with many analysts concentrating on \$10 as the next full-size resistance level. That would be roughly a 3x from its current price—a solid go back, but not one that screams exponential growth. For long-term holders and institutional backers, this slow and constant rise may additionally appear comforting. But for retail buyers chasing life-changing profits, 3x isn't quite enough. Ozak AI's \$1 Ambition Is Fueling Investor Frenzy While DOT appears to reclaim past highs, Ozak AI is developing new momentum from the ground up. Built at the intersection of artificial intelligence and blockchain, Ozak AI gives a next-gen ecosystem designed for data automation, smart prediction models, and scalable AI-driven applications. With AI still one of the most up to date developments in both tech and crypto, OZ reveals itself in the proper storm of investor interest. Currently in its third Ozak AI presale stage at \$0.003, OZ is gaining traction quickly. Its roadmap consists of more than one exchange listings, AI device rollouts, and ecosystem partnerships. If it grants on even half of what it guarantees, hitting \$1 would constitute a 33,000% return. That sort of surge places it in the conversation alongside giants like Shiba Inu and Solana throughout their early stages. AI Tokens Are Leading the Narrative in 2025 Much like the DeFi boom of 2020 or the NFT surge of 2021, AI-targeted cryptocurrencies are dominating discussions in 2025. Investors are actively rotating capital from slower assets into projects that align with emerging tech trends. While Polkadot is a demonstrated infrastructure asset, it lacks the thrill and novelty of riding more modern tokens like OZ. That narrative benefit can't be underestimated—in particular in a bull market where hype regularly performs a huge role in price discovery. Polkadot's return to \$10 is both possible and probable—however it's a route as a way to likely be measured in months, if not years. In contrast, Ozak AI is charging out of the gate with a compelling vision, strong narrative, and a tiny entry rate that makes 300x gains absolutely viable. As investor attention shifts closer to the next breakout star, OZ may additionally thoroughly go away DOT and lots of the market trailing in its wake. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - AB price prediction for 2025 is \$0.018294 to \$0.184572. - AB (AB) price might reach \$0.5 soon. - AB price prediction for 2025 is \$0.000268. AB (AB) price prediction 2025, 2026-2030, we will analyze the price patterns of AB by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | AB PRICE PREDICTION 2025 | | AB PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | AB (AB) Current Market Status | Current Price | \$0.01318 | 24 6¢ Hour Price Change | 1.60% Down | | 24 6¢ Hour Trading Volume | \$77.49M | | Market Cap | \$704.44M | | Circulating Supply | 53.4B AB | All 6¢ Time High | \$0.01729 (On Mar 21, 2025) | | All 6¢ Time Low | \$0.00002173 (On Aug 21, 2024) | What is AB (AB) | TICKER | AB | | BLOCKCHAIN | ABchain | | CATEGORY | RAW | | LAUNCHED ON | February 2024 | | UTILITIES | Tokenization, Governance, Staking, Payment, Settlement | AB (AB) is a cryptocurrency project designed to bridge real-world assets (RWA) with decentralized applications, aiming to connect traditional industries to blockchain technology. The AB ecosystem uses a heterogeneous blockchain architecture, which includes a main chain and multiple subchains, enabling scalability, flexibility, and cross-chain interoperability. This structure supports use cases across diverse sectors, such as the Internet of Things (IoT), artificial intelligence, logistics, insurance, and agriculture. AB focuses on tokenizing real-world assets, making them accessible, tradable, and transparent on the blockchain, thus enhancing efficiency and trust in transactions. The project promotes decentralized governance and community-driven development, aligning its mission with modern blockchain principles of openness and security. AB's vision is to offer infrastructure solutions that integrate everyday business operations with blockchain networks, supporting the future of decentralized finance (DeFi) and digital asset management while making blockchain technology more accessible and functional for real-world applications. AB (AB) 24H Technicals (Source: TradingView) AB (AB) Price Prediction 2025 AB (AB) ranks 82nd on CoinMarketCap in terms of its market capitalization. The overview of the AB price prediction for 2025 is explained below with a daily time frame. AB/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, AB (AB) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contact point on one of the horizontal channel's lines. At the time of analysis, the price of AB (AB) was recorded at \$0.01318. If the pattern trend continues, then the price of AB might reach the resistance levels of \$0.016833 and \$0.047407. If the trend reverses, then the price of AB may fall to the support of \$0.010084 and \$0.005977. AB (AB) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of AB (AB) in 2025. AB/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of AB (AB) for 2025. | Resistance Level 1 | \$0.018294 | | Resistance Level 2 | \$0.184572 | | Support Level 1 | \$0.007964 | | Support Level 2 | \$0.000268 | AB Resistance & Support Levels AB (AB) Price Prediction 2025 6¢ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of AB (AB) are shown in the chart below. AB/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the

chart above, we can make the following inferences regarding the current AB (AB) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.013047Price = \$0.013496 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 53.975938 <30 = Oversold 50-70 = Neutral>70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | AB (AB) Price Prediction 2025 â€™ ADX, RVI In the below chart, we analyze the strength and volatility of AB (AB) using the following technical analysis indicators â€™ Average Directional Index (ADX) and Relative Volatility Index (RVI). AB/USDt ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of AB (AB). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 52.408290 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 55.12 <50 = Low >50 = High | High volatility | Comparison of AB with BTC, ETH Let us now compare the price movements of AB (AB) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs AB Price Comparison (Source: TradingViewC) From the above chart, the price action of AB is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of AB also increases or decreases, respectively. AB (AB) Price Prediction 2026, 2027 â€™ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of AB (AB) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | AB (AB) Price Prediction 2026 | \$0.7 | \$0.0002 | | AB (AB) Price Prediction 2027 | \$0.9 | \$0.0001 | | AB (AB) Price Prediction 2028 | \$1 | \$0.00009 | | AB (AB) Price Prediction 2029 | \$1.3 | \$0.00008 | | AB (AB) Price Prediction 2030 | \$1.5 | \$0.00007 | Conclusion If AB (AB) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish AB (AB) price prediction for 2025 is \$0.184572. Comparatively, if an unfavorable sentiment is triggered, the bearish AB (AB) price prediction for 2025 is \$0.000268. If the market momentum and investorsâ€™ sentiments positively elevate, then AB (AB) might hit \$0.5. Furthermore, with future upgrades and advancements in the AB ecosystem, AB might surpass its current all-time high (ATH) of \$0.01729 and mark its new ATH. FAQ 1. What is AB (AB)? AB (AB) is a cryptocurrency project designed to bridge real-world assets (RWA) with decentralized applications, aiming to connect traditional industries to blockchain technology. 2. Where can you buy AB (AB)? Traders can trade AB (AB) in the following cryptocurrency exchanges such as BitMart, Bitget, WEEX, LBank, BingX, HTX, MEXC, 4E Exchange, Hotcoin, and Gate.io. 3. - Ethereum price crashed to \$2,000, its lowest in 16 months. - Whale liquidations and \$168M in ETH longs wiped out in 24 hours. - If \$2K support fails, ETH could drop to \$1,540â€™or even \$1,000. Second-largest market capitalization cryptocurrency Ethereum price has dipped below the important \$2,000 handle, touching its November 2023 levels. The steep fall, a 12.4% dip in 24 hours, has left eyebrows raised across the crypto community. But what caused the fall? The latest price action comes on the heels of a fleeting bout of optimism after the previous President Donald Trumpâ€™s proposal of adding Ethereum to a proposed U.S. cryptocurrency reserve. While the news initially triggered a rally, euphoria proved short-lived amid prevalent market worry. Some major reasons are responsible for Ethereumâ€™s recent decline: Macroeconomic uncertainty Offshore markets are in disarray. Geopolitical tensions are increasing and fresh US tariff ideas have unleashed a wave of risk aversion. And, as has been the pattern in previous cycles of the market, crypto tokens, as riskier assets, are the first to absorb the shock. Whale liquidations and exchange supply surges. On-chain data shows that the supply of Ethereum on centralized exchanges recently reached an all-time high of 16.2 million ETH over the last 12 months. Such a spike shows that large holders have been selling their holdings, which totals up to selling pressure. Over \$160 million worth of ETH long positions were realized within a day, which intensified the price drop. Bearish technical indicators Technical analysis indicates Ethereum price has created a double-top pattern, a bearish indicator that will propel prices even lower if the \$2,000 support is broken. Analysts are speculating about support levels of \$1,540 and even lower to \$1,000, with the more ominous predictions portending a plunge to \$174 levels last seen in 2020. Increased competition and network limitations Ethereum is also under greater threat from more scalable and faster blockchains such as Solana. Layer-2 networks have also redirected traffic away from Ethereumâ€™s mainnet, removing direct demand for ETH. Despite Ethereum moving to proof-of-stake, inflationary trends have seeped in with 0.37% supply growth since April 2024. Despite the difficulties of today, the future of Ethereum looks bright with precautions. The exchangesâ€™ reserves are once again dropping, which shows the shift toward long-term storage. Future network upgrades such as EIP-7781 are focused on scaling improvements and lowering ETH supply via more aggressive burning of fees. Others opine that if the adoption is accelerated and Ethereum price recovers significant resistance levels like \$2,800, it can bounce back strongly. Bullish estimates see Ethereum breaking to \$7,000 by the fourth quarter of 2025. Although predicated on macroeconomic stability and increasing institutional investment. In total, while Ethereum price has endured a rocky stretch driven by extrinsic market forces, technical letdowns. And increasing selling pressure, it is still well-rooted in the greater blockchain cosmos. Whether it rebounds or heads towards lower support levels is yet to be determined by future economic signals and investor sentiment. TABLE OF CONTENTS | INTRODUCTION | | BIG TIME PRICE PREDICTION 2025 | | | BIG TIME PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Big Time (BIGTIME) Current Market Status | Current Price | \$0.07171 | 24 â€™ Hour Price Change | 1.76% Up | | 24 â€™ Hour Trading Volume | \$132.48M | | Market Cap | \$131.3M | | Circulating Supply | 1.83B BIGTIME | All â€™ Time High | \$0.9827 (On Dec 05, 2023) | | All â€™ Time Low | \$0.04126 (On Mar 11, 2025) | What is Big Time (BIGTIME) | TICKER | BIGTIME | | BLOCKCHAIN | Ethereum | | CATEGORY | .GameFi | | LAUNCHED ON | October 2023 | | UTILITIES | Crafting, Upgrading, Trading, Staking, Governance | Big Time (BIGTIME) is a play-to-earn action RPG that blends fast-paced combat with NFT-based item collection, developed by Big Time Studios. Set in a time-traveling universe, players explore different eras, battle enemies, and collect rare digital assets known as NFTs, which can be used to customize characters or traded on the marketplace. The gameâ€™s economy revolves around the \$BIGTIME token, which powers crafting, upgrades, and in-game purchases. Big Timeâ€™s unique feature is its focus on cosmetic NFTs rather than pay-to-win mechanics, aiming to balance gameplay fairness while allowing players to own valuable items. The game has drawn attention for its strong team, which includes veterans from major studios like Blizzard, EA, and Epic Games. With its blend of engaging gameplay, Web3 integration, and a sustainable token economy, Big Time seeks to bridge traditional gaming with blockchain rewards, making it attractive to both crypto enthusiasts and mainstream gamers alike. Big Time (BIGTIME) Price Prediction 2025 Big Time (BIGTIME) ranks 268th on CoinMarketCap in terms of its market capitalization. The overview of the BIGTIME price prediction for 2025 is explained below with a daily time frame. BIGTIME/USDt Descending Channel Pattern (Source: TradingView) In the above chart, Big Time (BIGTIME) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. Higher prices often follow the descending channel pattern. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a securityâ€™s price with parallel trendlines to show a downward trend. A trader could make a selling bet within a descending channel when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Big Time (BIGTIME) was recorded at \$0.07171. If the pattern trend continues, then the price of BIGTIME might reach the resistance levels of \$0.07074, \$0.07437, and \$0.07781. If the trend reverses, then the price of BIGTIME may fall to the support of \$0.06776. - Bullish S price prediction for 2025 is \$0.25206 to \$0.36247. - Sonic (prev. FTM) (S) price might reach \$1 soon. - Bearish S price prediction for 2025 is \$0.12420. In this Sonic (prev. FTM) (S) price prediction 2025, 2026-2030, we will analyze the price patterns of S by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | SONIC (prev. FTM) PRICE PREDICTION 2025 | | | SONIC (prev. FTM) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Sonic (prev. FTM) (S) Current Market Status | Current Price | \$0.4752 | 24 æ” Hour Price Change | 2.50% Up | | 24 æ” Hour Trading Volume | \$164.61M | | Market Cap | \$1.36B | | Circulating Supply | 2.88B S | All æ” Time High | \$1.03 (On January 05, 2025) | | All æ” Time Low | \$0.3337 (On February 03, 2025) | | What is Sonic (prev. FTM) (S) | TICKER | S | | BLOCKCHAIN | Sonic Chain | | CATEGORY | Layer-1 Blockchain | | ORIGIN DATE | December 2024 | | UTILITIES | DeFi, GameFi, Staking, Payments, Smart Contracts | Sonic (S), formerly known as Fantom (FTM), is a next-generation blockchain platform designed for high-speed, low-cost transactions. The rebranding marks a shift toward improved scalability and broader adoption. Sonic maintains Fantomæ”s core principles, utilizing a Directed Acyclic Graph (DAG) structure for near-instant finality and enhanced security. The network introduces Sonic Chain,

a high-performance layer-1 blockchain with transaction speeds of up to 180 million daily transactions and sub-second finality. It remains Ethereum-compatible, allowing seamless smart contract deployment. The transition includes an upgrade from FTM to S tokens, with enhanced liquidity and ecosystem incentives. Sonic aims to support DeFi, GameFi, and enterprise solutions while ensuring decentralization through its validator network. With its innovative consensus mechanism and robust infrastructure, Sonic positions itself as a major player in the blockchain space, offering a scalable alternative to traditional networks like Ethereum and Solana. Sonic (prev. FTM) (S) 24H Technicals Sonic (prev. FTM) (S) Price Prediction 2025 Sonic (prev. FTM) (S) ranks 53rd on CoinMarketCap in terms of its market capitalization. The overview of the Sonic (prev. FTM) price prediction for 2025 is explained below with a daily time frame. In the above chart, Sonic (prev. FTM) (S) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, Sonic (prev. FTM) (S) æ's price was \$0.23470. If the pattern trend continues, then the price of S might reach the resistance levels of \$0.26909, \$0.37723 and \$0.49525. If the trend reverses, then the price of S may fall to the support of \$0.16875. Sonic (prev. FTM) (S) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Sonic (prev. FTM) (S) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Sonic (prev. FTM) (S) for 2025. | Resistance Level 1 | \$0.25206 | | Resistance Level 2 | \$0.36247 | | Support Level 1 | \$0.17675 | | Support Level 2 | \$0.12420 | Sonic (prev. FTM) (S) Price Prediction 2025 æ" RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Sonic (prev. FTM) (S) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Sonic (prev. FTM) (S) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.20791 Price = \$0.24410 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 71.43655 <30 = Oversold 50-70 = Neutral >70 = Overbought | Overbought | | Relative Volume (RVOL) | Assetæ's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Sonic (prev. FTM) (S) Price Prediction 2025 æ" ADX, RVI In the below chart, we analyze the strength and volatility of Sonic (prev. FTM) (S) using the following technical analysis indicators æ" Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Sonic (prev. FTM) (S). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 20.58831 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 72.84 <50 = Low >50 = High | High Volatility | Comparison of S with BTC, ETH Let us now compare the price movements of Sonic (prev. FTM) (S) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of S is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of S also increases or decreases respectively. Sonic (prev. FTM) (S) Price Prediction 2026, 2027 æ" 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Sonic (prev. FTM) (S) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Sonic (prev. FTM) (S) Price Prediction 2026 | \$3 | \$0.1 | | Sonic (prev. FTM) (S) Price Prediction 2027 | \$5 | \$0.09 | | Sonic (prev. FTM) (S) Price Prediction 2028 | \$9 | \$0.08 | | Sonic (prev. FTM) (S) Price Prediction 2029 | \$11 | \$0.07 | | Sonic (prev. FTM) (S) Price Prediction 2030 | \$13 | \$0.06 | Conclusion If Sonic (prev. FTM) (S) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Sonic (prev. FTM) (S) price prediction for 2025 is \$0.36247. Comparatively, if unfavorable sentiment is triggered, the bearish Sonic (prev. FTM) (S) price prediction for 2025 is \$0.12420. If the market momentum and investorsæ" sentiment positively elevates, then Sonic (prev. FTM) (S) might hit \$1. Furthermore, with future upgrades and advancements in the Sonic (prev. FTM) ecosystem, S might surpass its current all-time high (ATH) of \$1.03 and mark its new ATH. FAQ 1. What is Sonic (prev. FTM) (S)? Sonic (S), formerly known as Fantom (FTM), is a next-generation blockchain platform designed for high-speed, low-cost transactions. 2. Where can you purchase Sonic (prev. FTM) (S)? Sonic (prev. FTM) (S) has been listed mostly on all crypto exchanges æ" from Binance, Bybit, OKX, KuCoin, gate.io, Bitunix, Crypto.com, tokenize, and Bittime. 3. Will Sonic (prev. FTM) (S) reach a new ATH soon? With the ongoing developments and upgrades within the Sonic (prev. FTM) platform, S has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Sonic (prev. FTM) (S)? On January 05, 2025, Sonic (prev. FTM) (S) reached its new all-time high (ATH) of \$1.03 5. What is the lowest price of Sonic (prev. FTM) (S)? According to CoinMarketCap, S hit its all-time low (ATL) of \$0.3337 on February 03, 2025. 6. Will Sonic (prev. FTM) (S) reach \$1? If the bullish trend continues and if Sonic (prev. FTM) (S) retests its resistance levels, it will hit \$1 soon. 7. What will be the Sonic (prev. FTM) (S) price by 2026? Sonic (prev. FTM) (S) price is expected to reach \$3 by 2026. 8. What will be the Sonic (prev. FTM) (S) price by 2027? Sonic (prev. FTM) (S) price is expected to reach \$5 by 2027. 9. What will be the Sonic (prev. FTM) (S) price by 2028? Sonic (prev. FTM) (S) price is expected to reach \$7 by 2028. 10. What will be the Sonic (prev. FTM) (S) price by 2029? Sonic (prev. FTM) (S) price is expected to reach \$9 by 2029. - XCN price prediction for 2025 is \$0.0187860 to \$0.0519865. - Onyxcoin (XCN) price might reach \$0.1 soon. - XCN price prediction for 2025 is \$0.0035436. Onyxcoin (XCN) price prediction 2025, 2026-2030, we will analyze the price patterns of XCN by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | ONYXCOIN (XCN) PRICE PREDICTION 2025 | | | ONYXCOIN (XCN) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Onyxcoin (XCN) Current Market Status | Current Price | \$0.02154 | 24 æ" Hour Price Change | 76.72% Up | 24 æ" Hour Trading Volume | \$607.18M | | Market Cap | \$702.14M | | Circulating Supply | 32.59B XCN | All æ" Time High | \$0.1841 (On May 27, 2022) | | All æ" Time Low | \$0.0007038 (On Oct 12, 2023) | What is Onyxcoin (XCN) | TICKER | XCN | | BLOCKCHAIN | Chain | | CATEGORY | DeFi | | LAUNCHED ON | March 2023 | | UTILITIES | Payments, Smart Contracts, Governance, Compliance | Onyxcoin (XCN) is a blockchain-based cryptocurrency designed to facilitate decentralized finance (DeFi) solutions and enterprise-grade blockchain applications. It operates on the Chain protocol, providing a scalable and secure infrastructure for financial institutions and developers to build and manage digital assets efficiently. Onyxcoin focuses on offering low-cost transactions, high-speed processing, and advanced security features, making it a suitable choice for businesses seeking blockchain integration. The project aims to enable seamless tokenization of assets, smart contracts, and financial services, driving innovation in the fintech sector. Additionally, Onyxcoin has governance features, allowing XCN holders to participate in decision-making processes related to protocol upgrades and ecosystem development. With strategic partnerships and a strong development team, Onyxcoin seeks to revolutionize financial operations by bridging traditional finance with blockchain technology. Its utility within the Chain ecosystem supports a range of applications, from payments and lending to identity verification and compliance solutions. Onyxcoin (XCN) 24H Technicals (Source: TradingView) Onyxcoin (XCN) Price Prediction 2025 Onyxcoin (XCN) ranks 81st on CoinMarketCap in terms of its market capitalization. The overview of the XCN price prediction for 2025 is explained below with a daily time frame. XCN/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, Onyxcoin (XCN) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contact point on one of the horizontal channelæ"s lines. At the time of analysis, the price of Onyxcoin (XCN) was recorded at \$0.02154. If the pattern trend continues, then the price of XCN might reach the resistance levels of \$0.0436266 and \$0.02274087. If the trend reverses, then the price of XCN may fall to the support of \$0.0188428 and \$0.0082531. Onyxcoin (XCN) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Onyxcoin (XCN) in 2025. XCN/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Onyxcoin (XCN) for 2025. | Resistance Level 1 | \$0.0187860 | | Resistance Level 2 | \$0.0519865 | | Support Level 1 | \$0.0081487 | | Support Level 2 | \$0.0035436 | XCN Resistance & Support Levels Onyxcoin (XCN) Price Prediction 2025 æ" RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Onyxcoin (XCN) are shown in the chart below. XCN/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Onyxcoin (XCN) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.0130424 Price = \$0.022504 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 78.8922902 <30 = Oversold 50-70 = Neutral >70 = Overbought | Overbought | | Relative Volume (RVOL) | Assetæ's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Onyxcoin (XCN) Price Prediction 2025 æ" ADX, RVI In the below chart, we analyze the strength and volatility of Onyxcoin (XCN) using the following technical analysis indicators æ" Average Directional Index (ADX) and Relative Volatility Index (RVI). XCN/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Onyxcoin (XCN). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 36.6188149 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 78.46 <50 = Low >50 = High | High volatility | Comparison of XCN with BTC, ETH Let us now compare the price movements of Onyxcoin (XCN) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs XCN Price Comparison (Source: TradingView) From the above chart, the price action of XCN is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of XCN also increases or decreases, respectively. Onyxcoin (XCN) Price Prediction 2026, 2027 æ" 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Onyxcoin (XCN) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Onyxcoin (XCN) Price Prediction 2026 | \$0.3 | \$0.003 | | Onyxcoin (XCN) Price Prediction 2027 | \$0.5 | \$0.002 | | Onyxcoin (XCN) Price Prediction 2028 | \$0.7 | \$0.001 | | Onyxcoin (XCN) Price Prediction 2029 | \$0.9 | \$0.0009 | | Onyxcoin (XCN) Price Prediction 2030 | \$1.1 | \$0.0008 | Conclusion If Onyxcoin (XCN) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish Onyxcoin (XCN) price prediction for 2025 is \$0.0519865. Comparatively, if an unfavorable sentiment is triggered, the bearish Onyxcoin (XCN) price prediction for 2025 is \$0.0035436 If the market momentum and investorsæ" sentiments positively elevate, then Onyxcoin (XCN) might hit \$0.1. Furthermore, with future upgrades and advancements in the XCN ecosystem, XCN might surpass its current all-time high (ATH) of \$0.1841 and mark its new ATH. FAQ 1. What is Onyxcoin (XCN)? Onyxcoin (XCN) is a blockchain-based cryptocurrency designed to facilitate decentralized finance (DeFi) solutions and enterprise-grade blockchain applications. 2. Where can you buy Onyxcoin (XCN)? Traders can trade Onyxcoin (XCN) in the following cryptocurrency exchanges such as Coinbase, Kraken, KuCoin, Gate.io, HitBTC, Huobi, Bibox, and Coinstore. 3. Will Onyxcoin (XCN) record a new ATH soon? With the ongoing developments and upgrades within the Onyxcoin platform, Onyxcoin (XCN) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Onyxcoin (XCN)? Onyxcoin (XCN) hit its current all-time high (ATH) of \$0.1841 on May 27, 2022. 5. What is the lowest price of Onyxcoin (XCN)? According to CoinMarketCap, XCN hit its all-time low (ATL) of \$0.0007038 on Oct 12, 2023. 6. Will Onyxcoin (XCN) hit \$0.1? If Onyxcoin (XCN) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$0.1 soon. 7. What will be the Onyxcoin (XCN) price by 2026? Onyxcoin (XCN) price might reach \$0.3 by 2026. 8. What will be the Onyxcoin (XCN) price by 2027? Onyxcoin (XCN) price might reach \$0.5 by 2027. 9. What will be the Onyxcoin (XCN) price by 2028? MEXC has achieved a net inflow of \$77.5 million over the past 7 days, positioning itself as one of the few major centralized exchanges (CEXs) to demonstrate positive momentum during a widespread market decline, according to DeFillama. The exchangeæ"s total monthly net inflow reached \$1.79 billion, a 12.4% rise from the previous month, highlighting its resilience and consistent growth amid cautious user behavior across the broader market. DeFillama data also ranks MEXC among the top 3 exchanges for monthly inflows, with \$84.25 million recorded in April alone and a total value locked (TVL) of \$2.8 billion as of April 9, 2025. This performance reflects MEXCæ"s growing credibility and ability to attract liquidity despite ongoing market volatility. | Exchange | 7-Day Net Inflow | 30-Day Net Inflow | | Binance | +\$888 million | +\$3.7 billion | | Bybit | +\$564.9

million | +\$3.2 billion | | MEXC | +\$77.5 million | +\$1.79 billion | | Kucoin | +\$40 million | +\$893.5 million | | HTX | +\$402.1 million | +\$464.9 million | Net Inflow Trends Across Major CEXs (Source: <https://defillama.com/cexs>) MEXC's standout performance over the past month can be attributed to its strategic focus on trading initiatives and ecosystem development. The key drivers behind this success include the following: - Strategic Initiatives: Through its Zero Trading Fee campaign, MEXC significantly boosted trading volume and user engagement. - BNB Chain Ecosystem Focus: MEXC's targeted approach to CZ/BNB-Chain concept tokens, coupled with high returns and trading volumes of popular tokens, further drove user fund inflows. - Capturing High-Potential Tokens: As the first platform to list CZ/BNB-Chain concept tokens like MUBARAK, MEXC created opportunities for low-cost entry and high returns, drawing significant user capital. - Launch of DEX+: The launch of DEX+, a hybrid centralized-decentralized trading platform, lowered the barriers to on-chain trading, enhancing MEXC's appeal to users and boosting fund inflows. 1.Zero Trading Fee Strategy Significantly Boosts Trading Activity During its March Zero Trading Fee campaign, MEXC introduced trading pairs such as SOL/USDT, HYPE/USDT, and S/USDT, resulting in a 17.8% month-over-month increase in the number of traders and a remarkable 170.2% surge in trading volume. Notably, SOL/USDT saw a 185.62% increase in trading volume, with its average daily trading volume accounting for 19.0% of MEXC's total futures trading volume - a growth rate of 189.69% making it the standout pair of the quarter. ADA/USDT recorded the highest growth, with a 369.44% increase in trading volume and a 393.05% rise in its share of MEXC's daily futures trading volume. Additionally, DOGE/USDT and SUI/USDT saw trading volume increases of 82.87% and 70.84%, respectively. 0 Trading Fee strategy also significantly enhanced MEXC's market share. Trading pairs such as AIXBT/USDT, DOGE/USDT, and SOL/USDT led market share growth with increases of 331%, 283%, and 209%, respectively. DOGE/USDT and SOL/USDT achieved market shares of 30.5% and 30.3%, respectively, ranking first among the same pairs on CoinMarketCap (CMC), while ADA/USDT secured the second spot with a 20.6% market share. These figures demonstrate that the 0 Trading Fee campaign effectively ignited user trading enthusiasm, driving substantial fund inflows to the platform. 2.Strategic Focus on BNB Chain Ecosystem Fuels Hot Token Trading The BNB Chain ecosystem has emerged as a new hotspot for on-chain assets over the past month, and MEXC's strategic focus on this ecosystem has paid off. In March, BNB Chain ecosystem tokens accounted for 50.8% of new token spot trading users, a 30.1% month-over-month increase, while their trading volume share soared to 56.6%, reflecting a 63.5% month-over-month growth. This made the BNB Chain ecosystem a core driver of MEXC's trading surge. The top five BNB Chain ecosystem tokens delivered an average return of 3,760%, creating significant profit opportunities for users while fueling a trading frenzy. Star tokens like MUBARAK, BUBB, and TUT led the charge with gains of 10,900%, 4,168%, and 2,000%, respectively, contributing 17%, 4%, and 7% to new token trading volume. MUBARAKAH and BMT also performed strongly, contributing 4% and 3% to trading volume, respectively. The robust trading activity of BNB Chain ecosystem tokens further attracted user fund inflows, injecting fresh momentum into MEXC's growth. 3.First-Mover Advantage in Token Launches Makes MEXC a Go-To Platform for Low-Cost Entry MEXC demonstrated industry-leading prowess in launching CZ-concept tokens. On March 14, 2025, at 12:35:00 (UTC+8), MEXC became the first exchange to list MUBARAK, outpacing all other platforms. Within 24 hours of its launch, MUBARAK surged by 1,377.5%, reaching a peak price of \$0.22 - a staggering 10,900% increase from its listing price. By the close of March 18, MUBARAK's average daily trading volume had grown by 197% compared to March 15 - 16, with the number of traders rising by 76% month-over-month, reflecting sustained user enthusiasm. 4.DEX+ Launch Enhances User Experience and Fund Attraction Through Innovation In March, MEXC introduced DEX+, a hybrid centralized-decentralized trading platform that allows users to engage in decentralized trading without leaving the MEXC app or website, providing access to a wide range of on-chain assets. Currently, DEX+ supports over 15,000 tokens across the Solana and BNB Chain ecosystems, covering a broad spectrum of on-chain assets. This innovative model not only enhances trading convenience but also strengthens MEXC's appeal to on-chain trading users, further driving fund inflows. Conclusion With \$1.79 billion in fund inflows over the past month and a 63.9% fund inflow efficiency, MEXC has demonstrated its competitive strength among global cryptocurrency exchanges. Whether through its 0 Trading Fee campaign to boost trading activity, its strategic focus on the BNB Chain ecosystem, its first-mover advantage in launching high-potential tokens, or the innovative launch of DEX+, MEXC has leveraged innovation to drive rapid fund inflows. Looking ahead, as the crypto market continues to evolve, MEXC is well-positioned to attract more global users and solidify its market standing by further enhancing user experience and expanding its market presence. About MEXC Founded in 2018, MEXC is committed to being the Easiest Way to Crypto. - Serving over 36 million users across 170+ countries, MEXC is known for its broad selection of trending tokens, everyday airdrop opportunities, and low trading fees. From satire to sky-high utility, \$NORDO brings a new era to meme coins by introducing real-world travel functionality. Meme coins have long lived at the edge of humor and speculation in the crypto world. With roots in online jokes and viral communities, coins like Dogecoin and Shiba Inu showed that community power could translate to real market traction. But despite the attention, most meme coins have struggled to build lasting utility. That's where \$NORDO steps in. Born from a mix of political satire and environmental commentary, \$NORDO began as a humorous response to former U.S. President Donald Trump's infamous 2019 proposal to purchase Greenland. The project's mascot, a stoic polar bear, symbolizes resistance to political absurdity, climate change denial, and cultural imperialism. But in 2025, \$NORDO is taking things to a whole new level: launching an actual airline booking engine powered by crypto. A Meme Coin with Real Utility In an unprecedented move, the \$NORDO team has unveiled its upcoming flight booking platform that will allow users to reserve flights and pay with \$NORDO tokens, as well as other cryptocurrencies and traditional payment methods. This is the first known case of a meme coin deploying a fully functional utility with real commercial value. Rather than being a joke taken too far, this evolution proves that meme coins can be more than a punchline. They can offer engaging narratives, powerful communities, and now, access to services people use in everyday life. Why Airline Booking? The link between Greenland and travel is no accident. Trump's original plan to buy Greenland was met with global mockery, turning a serious geopolitical moment into viral comedy. The \$NORDO team saw an opportunity to turn this meme into a meaningful metaphor. Greenland isn't for sale - but it might be worth flying to. As a result, the booking engine acts as both a narrative extension and a utility. Travelers will soon be able to browse flights, compare prices, and check out using \$NORDO. Integration with other popular cryptos (like SOL, USDC) and even credit/debit cards will ensure accessibility. Bridging the Gap Between Meme and Market What sets \$NORDO apart from other meme coins is its strategic use of utility to grow its market cap and token relevance. Currently boasting a modest \$1.1M market cap, \$NORDO's upcoming utility launch could mark a turning point. Community excitement is already high, with traders speculating that a real use case could position \$NORDO as the Dogecoin of the new generation. Beyond booking flights, future updates may include hotel reservations, car rentals, and travel-related NFTs. This would allow \$NORDO to operate as a complete travel ecosystem built on humor, narrative, and real functionality. Community First, Always Despite the hype, \$NORDO hasn't chased listings for the sake of exposure. The team has focused instead on building a resilient community and delivering features users care about. As the flight booking engine enters beta, community members are already testing early versions and suggesting improvements. This grassroots approach has made \$NORDO one of the most organic projects on Solana, with over 5,000 wallet holders and growing. The Telegram group is active with daily memes, governance discussions, and development leaks. On-chain transparency is prioritized, and the core team is publicly known. Tokenomics and Liquidity \$NORDO has a total supply of 1 billion tokens. 91% of the tokens are held by the foundation to be gradually used for liquidity, ecosystem incentives, and future utility expansion. Currently, \$NORDO is live on Raydium DEX with a \$100K liquidity pool in the \$NORDO/SOL pair and a newly launched \$NORDO/USDC and \$NORDO/TRUMP pair on Orca DEX. The inclusion of a \$NORDO/TRUMP pair adds to the narrative rivalry that has defined the project since its inception. It also allows users from politically themed coins to migrate or diversify into \$NORDO's more utility-driven future. Vision and Values The \$NORDO team has always believed that memes are just the beginning. Utility is the destination. This philosophy has guided every step of their roadmap. The slogan "Meme was the runway, utility is the flight" perfectly captures the ethos. In a time when the crypto industry is under pressure to prove real value, \$NORDO is demonstrating that narrative strength combined with clever utility can set a new standard. What's Next? - Full launch of the flight engine is expected in late August 2025. - New exchange listings are being evaluated, but not prioritized over utility. - Marketing efforts are focused on meme-native communities and DeFi explorers. - Partnerships with travel services and eco-charities are under discussion. Conclusion \$NORDO is a case study in how meme coins can evolve beyond hype and into real-world use. With a strong foundation, a loyal community, and a clear vision, this polar bear isn't just surviving the bear market - it's flying above it. For anyone watching the future of crypto unfold, one thing is clear: Greenland isn't for sale. But you can book a flight there with \$NORDO. - Website: <https://nordo.wtf> Disclaimer: TheNewsCrypto does not endorse any content on this page. - THENA gains prominence as critical liquidity infrastructure for BNB Chain. - DEX volume places BNB Chain fourth globally with \$117.57 billion traded. - Concentrated liquidity solutions offer improved execution compared to traditional AMMs. BNB Chain's expanding ecosystem continues to solidify its position as a major DeFi contender in 2025, with liquidity layer solution THENA emerging as a standout contributor to the network's growing financial infrastructure. As BNB Chain maintains its position among the top blockchain ecosystems with a total value locked (TVL) of \$5.5 billion on BSC and \$25.21 million on opBNB, THENA's specialized liquidity solutions are playing an increasingly vital role in the ecosystem's competitive positioning. According to Messari's Q4 2024 report, BNB Chain ranked fourth in global DEX volume with \$117.57 billion traded, trailing only Solana (\$305.56 billion), Ethereum (\$204.27 billion), and Base (\$128.69 billion). Within this thriving DEX landscape featuring over 71 exchanges, THENA has distinguished itself alongside pioneer Pancakeswap as one of the ecosystem's most significant trading venues. THENA's spot DEX has gained attention for its concentrated liquidity approach, offering users more capital-efficient trading with reduced price impact. The platform's swap engine leverages the ORBS liquidity hub to tap external liquidity sources, resulting in more favorable execution for traders compared to traditional automated market makers. This technical advantage provides meaningful differentiation in a competitive DEX market where execution quality increasingly matters to sophisticated traders. Beyond its spot trading capabilities, THENA has developed a comprehensive liquidity-focused ecosystem that includes multiple complementary components. The platform's perpetual DEX named ALPHA enables leveraged trading, while its social trading platform ARENA fosters competitive trading engagement. An upcoming launchpad called WARP further extends THENA's service offerings within the BNB Chain ecosystem. BNB Chain shows impressive growth This expansion of liquidity infrastructure comes as BNB Chain continues to post impressive growth metrics despite broader market challenges. The BNB native token maintains its position in the cryptocurrency top five with a market capitalization of \$92 billion at the time of writing. While Q1 2025 has seen some slowing of momentum as the initial market enthusiasm following Trump's presidency has faded, the ecosystem's fundamentals remain strong. Messari's data revealed that network revenue surged 28% between Q3 and Q4 2024. It has risen from \$34.9 million to \$44.6 million. The circulating market capitalization of the BNB native token closed 2024 at \$101.1 billion, representing a 113.7% increase compared to the beginning of the year. Even more impressive, the total value staked in USD on BNB Chain surged by 202.4% to reach \$20.8 billion during the same period. These growth indicators align with BNB Chain's ambitious technical roadmap for 2025, which includes several major upgrades. The network aims to further enhance performance by reducing block time from 3 seconds to sub-second intervals, significantly decreasing transaction latency.

- Onyxcoin jumps 39%, now hovering near \$0.012. - XCN's daily trading volume explodes by over 613%. The cryptocurrency market is trying to escape its bearish trend, rising more than 5.65%. Bitcoin and Ethereum have recorded notable gains, while Onyxcoin (XCN) has emerged as one of the gainers with a 39.46% increase. Aiming for a steady breakout rally, Onyxcoin has chosen to trade on the upside. The active upside correction has triggered to break through crucial resistances between \$0.00939 and \$0.01147. The asset has reached a peak of \$0.0128. Before the rise of bulls, the asset traded within a bottom level of \$0.008391. At press time, Onyxcoin traded at \$0.01206, with the daily trading volume skyrocketing by over 613%, reaching \$154 million. Notably, XCN has registered a solid gain above 40% over the last seven days. The asset opened the week trading at around \$0.008694 and slipped to its weekly low at \$0.007631. Will XCN Continue Its Bullish Streak? The active XCN bulls could push the price above the \$0.013 range. A steady recovery might pave the way for moving toward \$0.01507, which reinforces the bulls. Price fluctuations ahead may shift the asset's trajectory. Contrarily, a rejection at the crucial \$0.01289 resistance level might trigger the mighty bears to appear. A breakdown below this mark could push Onyxcoin toward \$0.011, making the upturn more challenging. The asset's Moving Average Convergence Divergence (MACD) line

has crossed over the signal line. This hints at a bullish crossover and potential uptrend. Besides, XCNâ€™s Chaikin Money Flow (CMF) indicator at 0.13 infers that the money is flowing into the asset. The Bull-Bear Power (BBP) value of 0.00367 suggests a slight bullish sentiment. Additionally, Onyxcoinâ€™s daily relative strength index (RSI), positioned at 71.69, indicating the assetâ€™s overbought condition. - Bullish CAKE price prediction for 2025 is \$2.146 to \$3.298. - PancakeSwap (CAKE) price might reach \$10 soon. - Bearish CAKE price prediction for 2025 is \$0.905. In this PancakeSwap (CAKE) price prediction for 2025, 2026-2030, we will analyze the price patterns of CAKE by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | PANCAKESWAP (CAKE) PRICE PREDICTION 2025 | | | PANCAKESWAP (CAKE) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | PancakeSwap (CAKE) Current Market Status | Current Price | \$1.89 | 24 â€” Hour Price Change | 17.34% Up | | 24 â€” Hour Trading Volume | \$129.67M | | Market Cap | \$550.28M | | Circulating Supply | 290.77M CAKE | All â€” Time High | \$44.18 (On Apr 30, 2021) | | All â€” Time Low | \$0.0002318 (On Sep 29, 2020) | What is PancakeSwap (CAKE) | TICKER | CAKE | | BLOCKCHAIN | BNB Smart Chain | | CATEGORY | Decentralize Exchange | | LAUNCHED ON | September 2020 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | PancakeSwap, a decentralized finance (DeFi) protocol launched in 2020, operates as an automated market maker (AMM) on the Binance Smart Chain. It facilitates token trading and liquidity provision through user-contributed funds, rewarded with liquidity provider (LP) tokens. With features like token swaps, liquidity provision, farming, staking, perpetual trading, lottery, NFT marketplace, and launchpad, PancakeSwap offers a comprehensive DeFi experience. Users can also farm CAKE and SYRUP tokens, with SYRUP serving as a governance token within the exchange. PancakeSwap 24H Technicals (Source: TradingView) PancakeSwap (CAKE) Price Prediction 2025 PancakeSwap (CAKE) ranks 92nd on CoinMarketCap in terms of its market capitalization. The overview of the PancakeSwap price prediction for 2025 is explained below with a daily time frame. CAKE/USDT Horizontal Channel Pattern (Source: TradingView) In the above chart, PancakeSwap (CAKE) laid out a Horizontal Channel pattern. A horizontal channel or sideways trend has the appearance of a rectangle pattern. It consists of at least four contract points. This is because it needs at least two lows to connect, as well as two highs. Horizontal channels provide a clear and systematic way to trade by providing buy and sell points. The longer the horizontal channel, the stronger the exit movement will be. There is frequently a price on the channel after exit. The exit often occurs at the fourth contact point on one of the horizontal channelâ€™s lines. At the time of analysis, the price of PancakeSwap (CAKE) was recorded at \$1.89. If the pattern trend continues, then the price of CAKE might reach the resistance levels of \$2.016, \$3.001, and \$6.512. If the trend reverses, then the price of CAKE may fall to the support of \$1.383. PancakeSwap (CAKE) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of PancakeSwap (CAKE) in 2025. CAKE/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of PancakeSwap (CAKE) for 2025. | Resistance Level 1 | \$2.146 | | Resistance Level 2 | \$3.298 | | Support Level 1 | \$1.352 | | Support Level 2 | \$0.905 | CAKE Resistance & Support Levels PancakeSwap (CAKE) Price Prediction 2025 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (CAKE) are shown in the chart below. CAKE/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current PancakeSwap (CAKE) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$2.046(Price = \$1.889 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 47.385 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | PancakeSwap (CAKE) Price Prediction 2025 â€” ADX, RVI In the below chart, we analyze the strength and volatility of PancakeSwap (CAKE) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). CAKE/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of PancakeSwap (CAKE). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 16.147 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 30.14 <50 = Low >50 = High | Low volatility | Comparison of CAKE with BTC, ETH Let us now compare the price movements of PancakeSwap (CAKE) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs CAKE Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of CAKE is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of CAKE also increases or decreases, respectively. PancakeSwap (CAKE) Price Prediction 2026, 2027 â€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of PancakeSwap (CAKE) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | PancakeSwap (CAKE) Price Prediction 2026 | \$12 | \$0.9 | | PancakeSwap (CAKE) Price Prediction 2027 | \$14 | \$0.8 | | PancakeSwap (CAKE) Price Prediction 2028 | \$16 | \$0.7 | | PancakeSwap (CAKE) Price Prediction 2029 | \$18 | \$0.6 | | PancakeSwap (CAKE) Price Prediction 2030 | \$20 | \$0.5 | Conclusion If PancakeSwap (CAKE) establishes itself as a good investment in 2025, this year will favor the cryptocurrency. In conclusion, the bullish PancakeSwap (CAKE) price prediction for 2025 is \$3.298. Comparatively, if an unfavorable sentiment is triggered, the bearish PancakeSwap (CAKE) price prediction for 2025 is \$0.905. If the market momentum and investorsâ€™ sentiments positively elevate, PancakeSwap (CAKE) might hit \$10. Furthermore, with future upgrades and advancements in the PancakeSwap ecosystem, CAKE might surpass its current all-time high (ATH) of \$44.18. and mark its new ATH. FAQ 1. What is PancakeSwap (CAKE)? PancakeSwap(CAKE) is the native utility token of PancakeSwap. PancakeSwap is a decentralized exchange (DEX) native to the Binance Smart chain. 2. Where can you buy PancakeSwap (CAKE)? Traders can trade PancakeSwap (CAKE) on the following cryptocurrency exchanges such as Binance, Bybit, Bitunix, DigiFinex, and Bitru. 3. Will PancakeSwap (CAKE) record a new ATH soon? With the ongoing developments and upgrades within the PancakeSwap platform, PancakeSwap (CAKE) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of PancakeSwap (CAKE)? PancakeSwap (CAKE) hit its current all-time high (ATH) of \$44.18 on April 30, 2021. 5. What is the lowest price of PancakeSwap (CAKE)? According to CoinMarketCap, CAKE hit its all-time low (ATL) of \$0.0002318 on September 29, 2020. 6. Will PancakeSwap (CAKE) hit \$10? If PancakeSwap (CAKE) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$10 soon. 7. What will be the PancakeSwap (CAKE) price by 2026? PancakeSwap (CAKE) price might reach \$12 by 2026. 8. What will be the PancakeSwap (CAKE) price by 2027? PancakeSwap (CAKE) price might reach \$14 by 2027. 9. What will be the PancakeSwap (CAKE) price by 2028? PancakeSwap (CAKE) price might reach \$16 by 2028. 10. What will be the PancakeSwap (CAKE) price by 2029? PancakeSwap (CAKE) price might reach \$18 by 2029. - Ukraine revealed a new regulatory framework for digital currencies. - The new framework imposes a 23% tax on cryptocurrencies. The National Securities and Stock Market Commission of Ukraine (NSSMC) has announced a proposed framework for the taxation of cryptocurrencies. This new framework will impose a 23% tax on certain crypto transactions while strategically exempting crypto-to-crypto transactions and stablecoins. Released on April 8, 2025, the proposal comes as Ukrainian lawmakers continue developing comprehensive virtual asset regulations. On this Ruslan Mangomedov stated, â€œIn the digital era, the issue of cryptocurrency taxes is not a hypothesis, but a reality that is fast approaching. The task of the matrix developed by the NSSMC is to help the responsible authorities make an informed resolution. And in this process, it is important to take into account the advantages and disadvantages of each model.â€ New Tax Frameworks Aim To Clear Regulation And Market Growth According to Ukrainian officials, an 18% tax will be imposed on crypto transactions with a 5% military levy. Moreover, the tax will only be applied when an investor converts their assets into fiat currency or exchanges them for goods and services. On the other hand, stablecoins and crypto-to-crypto transactions are entirely exempt from taxation. The new regulatory framework gave special treatment to stablecoins as they were backed by foreign currencies. The existing tax code in Ukraine recommends either complete exemption or reduced tax rates of 5-9% on stablecoins. For crypto mining, staking, and airdrops, the proposal offers flexible options. Mining could be classified as business activity but potentially benefit from tax-free thresholds for small operators. Staking might be taxed only upon conversion to fiat. Taxation on hard forks and airdrops may occur as ordinary income or when the tokens are cashed out. Furthermore, to protect retail investors, the new regulatory framework proposes exemptions for donations, family transfers, and long-term holders. Highlighted Crypto News Today:

- WLF1 wallet sold 5,471 ETH at \$1,465 just before the project went public. - Technicals show ETH is oversold, with RSI at 35.98 and CMF at -0.21. A wallet allegedly tied to Trump-supported World Liberty Financial (WLF1) sold 5,471 ETH at \$1,465 per coin, according to Lookonchain data sourced from Arkham. The sale, valued at \$8.01 million, occurred just before the news broke, prompting questions about the projectâ€™s financial position and broader market strategy. WLF1 initially spent \$210 million, acquiring 67,498 ETH at an average of \$3,259 per token. The fire-sale price reflects a steep 55% decline from its entry point, leaving the project nursing an unrealized loss of roughly \$125 million. This decline comes as Ethereum struggles under persistent market pressure, shedding 24% in the past seven days. WLF1â€™s ETH sale aligns with a deeper trend across crypto. Market-wide losses accelerated after Trumpâ€™s proposed global tariffs rattled investor confidence. Bitcoin has dropped over 20% since February, while altcoins like XRP, Cardano, and Solana plunged up to 50%. Ethereum (ETH) in Todayâ€™s Market Ethereum currently trades at \$1,480.25, down 5.61% on the day. Its market capitalization stands at \$178.63 billion, with a 24-hour trading volume of \$27.67 billion, down 12.56%. The market cap ratio of 15.59% signals moderate market activity despite the broader sell-off. Technical indicators from TradingView suggest that Ethereum remains under intense bearish pressure. The Relative Strength Index (RSI) is at 35.98, just below its moving average of 30.99, showing weak momentum and signaling that the asset is oversold but not yet poised for a reversal. The Chaikin Money Flow (CMF) stands at -0.21, confirming sustained capital outflows and negative buying pressure. Despite a brief bounce, Ethereum has yet to reclaim key resistance levels. Immediate resistance is observed near \$1,540, while support lies around \$1,420. If the latter breaks, prices could retest the \$1,360 zone. Meanwhile, Lookonchain also tracked two whale transactions unrelated to WLF1. One whale injected 10,000 ETH to prevent liquidation, while another lost 67,570 ETH worth over \$100 million in a failed DeFi position. Highlighted Crypto News Today Is PancakeSwap (CAKE) Gearing Up for a Breakout or Breakdown?

- Bullish HBAR price prediction for 2025 is \$0.38500 to \$1.28156. - Hedera (HBAR) price might reach \$3 soon. - Bearish HBAR price prediction for 2025 is \$0.04332. In this Hedera (HBAR) price prediction for 2025, 2026-2030, we will analyze the price patterns of HBAR by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | HEDERA (HBAR) PRICE PREDICTION 2025 | | | HEDERA (HBAR) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Hedera (HBAR) Current Market Status | Current Price | \$0.1520 | 24 â€” Hour Price Change | 2.27% Down | | 24 â€” Hour Trading Volume | \$502.6M | | Market Cap | \$6.41B | | Circulating Supply | 42.22B HBAR | All â€” Time High | \$0.5701 (On Sep 16, 2021) | | All â€” Time Low | \$0.01001 (On Jan 03, 2020) | What is Hedera (HBAR) | TICKER | HBAR | | BLOCKCHAIN | Ethereum | | CATEGORY | Energy-Efficient cryptocurrency | | LAUNCHED ON | August 2018 | | UTILITIES | Governance, transaction fees, & rewards | HBAR is the native utility token of the Hedera network. Hedera is a decentralized hashgraph distributed ledger technology. HBAR was launched during its ICO in 2018. Hedera networkâ€™s mainnet went live in 2019. Hedera network serves majorly as a distributed file service. Rather than being built on any blockchain, the Hedera network is built on the hashgraph model that is secured by the proof-of-stake (PoS) consensus mechanism. It uses a patented algorithm that makes it a non-forkable network. The transactions on Hedera are faster and occur at low costs. The hashgraph distributed ledger is secure and immutable as Hedera deploys asynchronous byzantine fault tolerance (aBFT). Recently, Hedera has integrated MetaMask via HIP-583, expanding user accessibility. Additionally, Hedera concluded a successful proof-of-concept (PoC) trial for stablecoin remittances was conducted with Shinhan Bank and SCB TechX. HBAR 24H Technicals Hedera (HBAR) Price Prediction 2025 Hedera (HBAR) ranks 16th on CoinMarketCap in terms of its market capitalization. The overview of the HBAR price prediction for 2025 is explained below with a daily time frame. In the above chart, Hedera (HBAR) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Hedera (HBAR) was recorded at

\$0.14681. If the pattern trend continues, then the price of HBAR might reach the resistance levels of \$0.17810, \$0.27743 and \$0.40506. If the trend reverses, then the price of HBAR may fall to the support of \$0.12551. Hedera (HBAR) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Hedera (HBAR) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Hedera (HBAR) for 2025. | Resistance Level 1 | \$0.38500 | | Resistance Level 2 | \$1.28156 | | Support Level 1 | \$0.13423 | | Support Level 2 | \$0.04332 | Hedera (HBAR) Price Prediction 2025 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Hedera (HBAR) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Hedera (HBAR) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.19418 Price = \$0.14794 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 36.42329 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Assetæ”s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Hedera (HBAR) Price Prediction 2025 æ” ADX, RVI In the below chart, we analyze the strength and volatility of Hedera (HBAR) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Hedera (HBAR). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 29.68949 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 50.28 <50 = Low >50 = High | High volatility | Comparison of HBAR with BTC, ETH Let us now compare the price movements of Hedera (HBAR) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of HBAR is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of HBAR also increases or decreases respectively. Hedera (HBAR) Price Prediction 2026, 2027 æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Hedera (HBAR) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Hedera (HBAR) Price Prediction 2026 | \$5 | \$0.04 | | Hedera (HBAR) Price Prediction 2027 | \$7 | \$0.03 | | Hedera (HBAR) Price Prediction 2028 | \$9 | \$0.02 | | Hedera (HBAR) Price Prediction 2029 | \$11 | \$0.01 | | Hedera (HBAR) Price Prediction 2030 | \$13 | \$0.009 | Conclusion If Hedera (HBAR) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Hedera (HBAR) price prediction for 2025 is \$1.28156. Comparatively, if unfavorable sentiment is triggered, the bearishHedera (HBAR) price prediction for 2025 is \$0.04332. If the market momentum and investorsæ” sentiment positively elevates, then Hedera (HBAR) might hit \$3. Furthermore, with future upgrades and advancements in the HBAR ecosystem, HBAR might surpass its current all-time high (ATH) of \$0.5701 and mark its new ATH. FAQ 1. What is Hedera (HBAR)? Hedera (HBAR) is the native utility token of the Hedera network. Hedera is a decentralized hashgraph distributed ledger technology. 2. Where can you buy Hedera (HBAR)? Traders can trade Hedera (HBAR) on the following cryptocurrency exchanges such as Binance, Deepcoin, OKX, Bitrue, and Bybit. 3. Will Hedera (HBAR) reach a new ATH soon? With the ongoing developments and upgrades within the Hedera platform, Hedera (HBAR) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Hedera (HBAR)? Hedera (HBAR) hit its current all-time high (ATH) of \$0.5701 on September 16, 2021. 5. What is the lowest price of Hedera (HBAR)? According to CoinMarketCap, HBAR hit its all-time low (ATL) of \$0.01001 on Jan 02, 2020. 6. Will Hedera (HBAR) reach \$3? If Hedera (HBAR) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$3 soon. 7. What will be the Hedera (HBAR) price by 2026? Hedera (HBAR) price might reach \$5 by 2026. 8. What will be the Hedera Hashgraph (HBAR) price by 2027? Hedera (HBAR) price might reach \$7 by 2027. 9. What will be the Hedera (HBAR) price by 2028? Hedera (HBAR) price might reach \$9 by 2028. 10. What will be the Hedera (HBAR) price by 2029? Hedera (HBAR) price might reach \$11 by 2029. - Bullish JASMY price prediction for 2025 is \$0.01141 to \$0.02315. - JasmyCoin (JASMY) price might reach \$0.2 soon. - Bearish (JASMY) price prediction for 2025 is \$0.00303. In this JasmyCoin (JASMY) price prediction 2025, 2026-2030, we will analyze the price patterns of JASMY by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | JASMYCOIN (JASMY) PRICE PREDICTION 2025 | | JASMYCOIN (JASMY) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | JasmyCoin (JASMY) Current Market Status | Current Price | \$0.01051 | 24 æ” Hour Price Change | 2.44% Up | | 24 æ” Hour Trading Volume | \$158.88M | | Market Cap | \$520.34M | | Circulating Supply | 49.44B JASMY | All æ” Time High | \$4.99 (On February 16, 2021) | | All æ” Time Low | \$0.002747 (On December 30, 2022) | What is JasmyCoin (JASMY) | TICKER | JASMY | | BLOCKCHAIN | Ethereum | | CATEGORY | Internet of Things (IoT) | | LAUNCHED ON | February 2021 | | UTILITIES | Governance, security, gas fees & rewards | JasmyCoin (JASMY) is a cryptocurrency developed by Jasmy Corporation, a Japanese company specializing in Internet of Things (IoT) solutions. The coin operates on the Ethereum blockchain and aims to provide a decentralized platform for secure data exchange. By leveraging blockchain technology, JasmyCoin seeks to enhance data sovereignty and security for users, allowing them to control and manage their personal data independently from centralized entities. The primary focus of JasmyCoin is on IoT devices and data management. It facilitates data sharing and storage between various devices while ensuring data integrity and privacy. This is particularly relevant in an era where data breaches and privacy concerns are prevalent. Jasmyæ”s platform offers businesses and individuals the tools to harness IoT data in a secure and efficient manner. JasmyCoin also serves as a utility token within the Jasmy ecosystem, enabling transactions, incentivizing data sharing, and rewarding participants. As the project grows, it aims to foster a more connected and secure IoT environment, contributing to the broader adoption of blockchain technology in everyday applications. JasmyCoin 24H Technicals JasmyCoin (JASMY) Price Prediction 2025 JasmyCoin (JASMY) ranks 92nd on CoinMarketCap in terms of its market capitalization. The overview of the JasmyCoin price prediction for 2025 is explained below with a daily time frame. In the above chart, JasmyCoin (JASMY) laid out a descending channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of JasmyCoin (JASMY) was recorded at \$0.01024. If the pattern trend continues, then the price of JASMY might reach the resistance levels of \$0.01189, \$0.02141, and \$0.03504. If the trend reverses, then the price of JASMY may fall to the support of \$0.00825. JasmyCoin (JASMY) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of JasmyCoin (JASMY) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of JasmyCoin (JASMY) for 2025. | Resistance Level 1 | \$0.01141 | | Resistance Level 2 | \$0.02315 | | Support Level 1 | \$0.00536 | | Support Level 2 | \$0.00303 | JasmyCoin (JASMY) Price Prediction 2025 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of JasmyCoin (JASMY) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current JasmyCoin (JASMY) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.01455 Price = \$0.01048 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 39.07248 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Assetæ”s trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | JasmyCoin (JASMY) Price Prediction 2025 æ” ADX, RVI In the below chart, we analyze the strength and volatility of JasmyCoin (JASMY) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of JasmyCoin (JASMY). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 36.36646 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 58.95 <50 = Low >50 = High | High Volatility | Comparison of JASMY with BTC, ETH Let us now compare the price movements of JasmyCoin (JASMY) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of JASMY is dissimilar to that of BTC and ETH. That is, when the price of BTC and ETH increases, the price of JASMY decreases, if the price of BTC and ETH decreases, the price of JASMY increases. . JasmyCoin (JASMY) Price Prediction 2026, 2027 æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of JasmyCoin (JASMY) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | JasmyCoin (JASMY) Price Prediction 2026 | \$0.3 | \$0.003 | | JasmyCoin (JASMY) Price Prediction 2027 | \$0.4 | \$0.002 | | JasmyCoin (JASMY) Price Prediction 2028 | \$0.6 | \$0.001 | | JasmyCoin (JASMY) Price Prediction 2029 | \$0.8 | \$0.0009 | | JasmyCoin (JASMY) Price Prediction 2030 | \$1 | \$0.0008 | Conclusion If JasmyCoin (JASMY) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish JasmyCoin (JASMY) price prediction for 2025 is \$0.02315. Comparatively, if unfavorable sentiment is triggered, the bearish JasmyCoin (JASMY) price prediction for 2024 is \$0.00303. If the market momentum and investorsæ” sentiment positively elevate, then JasmyCoin (JASMY) might hit \$0.2. Furthermore, with future upgrades and advancements in the JasmyCoin ecosystem, JASMY might surpass its current all-time high (ATH) of \$4.99 and mark its new ATH. FAQ 1. What is JasmyCoin (JASMY)? JasmyCoin (JASMY) is a cryptocurrency developed by Jasmy Corporation, a Japanese company specializing in Internet of Things (IoT) solutions. 2. Where can you buy JasmyCoin (JASMY)? Traders can trade JasmyCoin (JASMY) on the following cryptocurrency exchanges such as Binance, UZX, LBank, Toobit, and Bybit. 3. Will JasmyCoin (JASMY) record a new ATH soon? With the ongoing developments and upgrades within the JasmyCoin platform, JasmyCoin (JASMY) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of JasmyCoin (JASMY)? JasmyCoin (JASMY) hit its current all-time high (ATH) of \$4.99 on February 16, 2021. 5. What is the lowest price of JasmyCoin (JASMY)? According to CoinMarketCap, JASMY hit its all-time low (ATL) of \$0.002747 on December 30, 2022. 6. Will JasmyCoin (JASMY) hit \$0.2? If JasmyCoin (JASMY) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.2 soon. 7. What will be the JasmyCoin (JASMY) price by 2026? JasmyCoin (JASMY) price might reach \$0.3 by 2026. 8. What will be the JasmyCoin (JASMY) price by 2027? JasmyCoin (JASMY) price might reach \$0.4 by 2027. 9. What will be the JasmyCoin (JASMY) price by 2028? JasmyCoin (JASMY) price might reach \$0.6 by 2028. 10. What will be the JasmyCoin (JASMY) price by 2029? JasmyCoin (JASMY) price might reach \$0.8 by 2029. Top Crypto Predictions Fartcoin (FARTCOIN) Price Prediction Disclaimer: The opinion expressed in this chart is solely the authoræ”s. - Cboe filed a 19b-4 request with the SEC to list the first U.S. ETF backed by SUI. - If approved, it would be the first U.S. ETF to hold and stake the Sui Networkæ”s native token. Canary Capital has taken a significant step toward launching the first U.S. exchange-traded fund (ETF) tied to the Sui Networkæ”s native token, SUI. The asset manager filed an S-1 registration for the proposed ETF in March. On April 8, the Cboe BZX Exchange submitted a 19b-4 rule change request to the U.S. Securities and Exchange Commission (SEC) to list and trade the fund. If approved, the Canary SUI ETF would be the first U.S. ETF to hold SUI, a layer-1 blockchain token currently ranked 21st by market cap. SUI trades near \$1.94, with a market cap of around \$6.7 billion, according to CoinGecko. The Sui Network, launched in May 2023, competes with Solana and Ethereum. It uses a dual-layer consensus model called Narwhal and Bullshark. SUI ETF Gains Momentum The ETF may stake part of its SUI holdings through trusted providers. According to regulatory filings, the fund aims to collect staking rewards as income. Cboe emphasized that existing surveillance tools can prevent fraud and manipulation, mirroring SEC-approved Bitcoin and Ethereum ETF safeguards. Canary Capital has set up a Delaware trust for the SUI ETF. This move follows its earlier attempts to list ETFs for Litecoin, Hedera, XRP, and Solana. The firmæ”s Litecoin ETF, listed under the ticker LTCC, has already appeared on the DTCC site, signaling possible launch readiness. The SEC must approve the 19b-4 rule change before Cboe can list the ETF. Canaryæ”s move comes after dozens of crypto ETF filings in 2024. Since President Trump took office in January, the SEC has acknowledged new proposals for ETFs based on altcoins and memecoins, including Dogecoin and the Trump-themed token TRUMP. Sui aims to offer Web3 functionality with a user-friendly experience. The network hosts projects like SatLayer, which provides Bitcoin staking and is compatible with the Phantom wallet. Sui currently holds about \$1.1 billion in total value locked, per DefiLlama. The XFounders Startup Warriors reality show is breaking new ground in Web3 by offering an unprecedented blend of edutainment (educational entertainment), entrepreneurial challenges, and personal growth. Produced by XFounders, a company led by Nelson Lopez, former Head of People and Culture at Gate.io and 1Inch and Advisor for Accelerators and Startups, the show provides viewers with an insideræ”s look at the highs and lows of

building a Web3 startup. The show is available on YouTube, and it invites audiences to follow the journey of nine Web3 projects, worth a combined \$300 million, as they compete, collaborate, and grow together. Filmed in Bali, XFounders Startup Warriors captures the intense pressure, strategic thinking, and raw determination of startup founders, all while delivering high-quality, binge-worthy content. A Reality Show Like No Other XFounders Startup Warriors stands out as the inaugural reality show dedicated to the world of Web3 startups, seamlessly blending entertainment and education. The show is a unique fusion of business strategy and personal development challenges, set against the backdrop of the Solana (SOL) blockchain. The show is produced to Netflix-level standards, ensuring top-tier visuals and production values. Throughout the series, viewers are introduced to the personal stories of real founders navigating the complexities of creating blockchain-native businesses. From ideation to launch, the series highlights the intense pressure faced by the participants, who undergo high-risk challenges while also being mentored by leading experts in the Web3 space. The show's production is also supported by reputable names in the industry such as Solana Foundation, BeInCrypto, AWS, Antipad, Webwise Capital, and GrIGon, ensuring participants receive world-class training as they work to launch their projects. The Power of Entertainment in an effort to be more than just a simple reality show, XFounders Startup Warriors is also an educational experience designed for both current and future founders. Each episode features insights from industry experts like Matt Sorg, VP of Technology at Solana, and Stacey-Ann Pearson, Head of Web3 in AWS, who offer invaluable lessons on topics such as leadership and innovation. In addition to the in-depth training provided by experts, the series also showcases the human side of entrepreneurship. Viewers will witness the founders confronting burnout, personal struggles, and the sacrifices necessary to make their projects a success. Why Is This Show Important? Building a Web3 startup is a monumental task, and one of the biggest challenges that founders often face is reaching an audience beyond the already tech-savvy Web3 community. XFounders Startup Warriors aims to bridge that gap by using the power of reality TV to bring Web3 startups into the mainstream. As reality shows are designed to have a global reach, XFounders can offer viewers around the globe a deeper understanding of Web3 technology and its real-world applications, all while building an emotional connection with the startups and their founders. This format fosters a unique bond between the audience and the projects featured on the show, giving a personal face to the often abstract and complex world of Web3. Backing And Support XFounders Startup Warriors is not only backed by an experienced team including but not limited to Chase Barker, Matt Sorg, Stacey-Ann Pearson, Cem Arcan, and Abhishek Bansal, but also supported by leading organizations in the Web3 space. Season 1 is proudly supported by OKX, Redot Pay, and Travalá, and the involvement of these partners lends further credibility to the series. The premiere episode of XFounders Startup Warriors has already garnered millions of views, signaling strong interest from both Web3 enthusiasts and the general public. The show's 10-episode season is also set to release biweekly, ensuring a consistent flow of high-quality content for its audience. Looking Ahead As the season progresses, viewers can expect to see more challenges, more growth, and more breakthroughs from the startups featured on the show. The upcoming episodes will dive deeper into the intricacies of blockchain technology, the struggles of launching a business in the Web3 space, and the personal journeys of the founders. XFounders Startup Warriors promises to be an ongoing source of inspiration, education, and entertainment for entrepreneurs, investors, and anyone curious about the future of Web3. About XFounders XFounders is an accelerator created by founders, for founders. It helps Web3 and Web3+AI entrepreneurs achieve major influence on technologies and communities by scaling their businesses and turning ideas into real-world products. Over the last two years, XFounders has developed a unique format, namely 4-week real-life bootcamps, to equip entrepreneurs with everything they need to grow, from business insights to transformative connections and a go-to-market boost in the form of a reality show. For more information and regular updates, visit XFounders' official website. Disclaimer: TheNewsCrypto does not endorse any content on this page. - DOJ disbands National Cryptocurrency Enforcement Team (NCET) under Trump administration. - DOJ will now focus on prosecuting scams, fraud, and market manipulation. The U.S. Department of Justice (DOJ) has officially disbanded the National Cryptocurrency Enforcement Team (NCET), marking a major policy shift under President Donald Trump. The move aligns with the administration's push to ease crypto regulations and promote innovation in the sector. NCET was launched in 2021 under the Biden administration. It focused on tackling high-profile crypto crimes, including cases against Tornado Cash and Avraham Eisenberg. It also investigated North Korean cybercriminals laundering stolen crypto assets. The task force included experts in cybercrime, money laundering, and digital asset law. Deputy Attorney General Todd Blanche confirmed the decision in a memo cited by Fortune. He criticized the prior administration's approach of "overregulation by prosecution." Blanche emphasized that the DOJ is not a digital assets regulator and should not police the industry. Trump's Order Triggers Regulatory Overhaul According to the memo, the DOJ will now prioritize criminal prosecutions. The focus will shift to scams, fraud, and market manipulation. Blanche instructed personnel to avoid enforcement actions against exchanges, mixers, and offline wallets. This decision follows President Trump's January 2025 executive order on digital assets. The order seeks to provide regulatory clarity and support crypto-friendly policies. It also created the President's Working Group on Digital Asset Markets, led by crypto and AI Czar David Sacks. The Trump administration has also directed the SEC and CFTC to revisit their crypto oversight strategies. Acting SEC Chair Mark Uyeda confirmed a review of the Howey Test. Recently, SEC Commissioner Hester Peirce said meme coins fall outside the agency's jurisdiction. The SEC also clarified that stablecoins are not securities. Additionally, the OCC rolled back earlier guidance that restricted banks from crypto activity. Federal agencies were ordered to report their crypto holdings to the U.S. Treasury by April 7. However, those disclosures remain confidential. Highlighted Crypto News Today Bitcoin (BTC) Hovers Below \$80K Amid Mixed Technical Signals

Meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), and Bonk (BONK) have captured headlines with viral popularity and explosive, hype-driven rallies. But as the crypto market matures, investors are increasingly transferring recognition toward projects with real-world utility and long-term potential. One standout gaining momentum is Ozak AI (OZ), a blockchain-based totally AI project aiming to supply powerful use instances far beyond memes. With a price target of \$1 from a presale price of just \$0.003, Ozak AI is being visible as a serious project poised to outperform some of the most well-known meme coins. The Rise and Limitations of Meme Coins Meme coins have carved out a completely unique niche in the crypto market by leveraging net culture and social media affect: Dogecoin (DOGE): Initially created as a joke, DOGE has experienced good sized price fluctuations, often influenced by using high-profile endorsements. Despite its recognition, DOGE's utility stays limited, and its price is exceptionally volatile. Shiba Inu (SHIB): Dubbed the "Dogecoin killer," SHIB has advanced a robust community and brought projects like ShibaSwap. However, its value is still broadly speaking driven by means of market sentiment rather than intrinsic utility. Bonk (BONK): As a more recent entrant, BONK has captured interest in the Solana space. While it has visible fast price movements, its long-term viability is uncertain due to a lack of substantial use cases. While those meme coins have supplied short-term gains for some traders, their reliance on hype and limited real-world applications increase questions about their sustainability. Ozak AI (OZ) Ozak AI represents a new wave of cryptocurrencies that integrate artificial intelligence with blockchain technology to provide tangible solutions: AI-Powered Predictive Analytics: Ozak AI utilizes machine learning algorithms to research giant quantities of data in real-time, providing users with actionable insights for informed decision-making. Decentralized Infrastructure: By leveraging decentralized networks, Ozak AI complements security and data privacy, addressing issues related to centralized structures. Financial Market Applications: The platform aims to deliver superior market evaluation equipment, benefiting buyers, investors, and financial institutions seeking to optimize their techniques. This focus on real-world programs positions Ozak AI as a mission with the potential for sustainable increase, distinguishing it from meme coins that lack sizeable utility. Ozak AI's current Ozak AI presale price of \$0.003 gives an reachable access point for investors. Projections advocate that the token could attain \$1, representing a potential boom of over 33,000% . This anticipated boom is underpinned by the coin's creative approach and the growing demand for AI-driven solutions in numerous industries. Market Dynamics and Investor Sentiment Investor interest is gradually moving toward projects that offer innovation and practical applications. Ozak AI's emphasis on AI integration aligns with this trend, attracting interest from the ones looking for investments with long-term potential. While meme coins like DOGE, SHIB, and BONK have benefited from viral popularity, their long-term trajectories remain uncertain without underlying technological advancements. Crypto market is evolving, with a growing emphasis on projects that integrate technological innovation with realistic programs. While meme coins have showcased the power of community-driven momentum, Ozak AI's integration of AI and blockchain positions it as a platform with the potential to supply massive and sustainable returns. As the market matures, investments in technologically strong projects like Ozak AI may also provide greater promising prospects compared to traditional meme coins. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. MEXC, a leading global cryptocurrency exchange, announced the launch of MEXC Alpha on its decentralized trading platform, MEXC DEX+. This innovative product focuses on early-stage, high-potential crypto projects, aiming to help over 34 million users worldwide get ahead of market trends and seize the next big opportunity in the crypto space. MEXC DEX+ now fully supports the Solana ecosystem, integrating popular liquidity pools like pump.fun, PumpSwap, and Raydium, offering a wide selection of over 10,000 on-chain assets. DEX+ has also integrated top DEXs from the BSC ecosystem, including PancakeSwap, covering more than 5,000 popular tokens, ranging from DeFi projects to memecoins. The crypto market evolves rapidly and unpredictably. For everyday users to stay ahead of the curve and spot promising projects early requires deep industry knowledge combined with significant investments of both time and effort. MEXC DEX+ continues to roll out new features to help users invest with greater precision, which is exactly what MEXC Alpha is designed to do. MEXC Alpha highlights early-stage, high-potential projects across multi-chain ecosystems like Solana and BSC, keeping pace with trends in DeFi innovation, memecoin surges, and emerging trends. Backed by expert industry insights and real-time market data, Alpha provides trustworthy investment references. MEXC Alpha is a direct response to user needs: it leverages expert curation and robust technology to lower investment barriers, enabling every user to easily and efficiently select promising targets, invest in early-stage projects, and seize opportunities ahead of the market. MEXC Alpha features three core principles: Security, Efficiency, and Simplicity. Security: Backed by MEXC's team of professionals, Alpha leverages industry insights and market data to carefully select and showcase high-potential projects from over 10,000 trending tokens. This helps users quickly identify promising opportunities and boost investment impact. Efficiency: Designed to secure the best trading prices and streamline the trading process, Alpha is available on both MEXC's App and Web platforms, allowing users to monitor markets and seize opportunities anytime, anywhere. Simplicity: There's no need to create a Web3 wallet or manage private keys. Users only need to create an MEXC account and activate the DEX+ wallet. By depositing SOL or BNB, they can start trading on-chain instantly, significantly lowering the entry barrier for everyday users. As the crypto market rapidly evolves and trends become increasingly fragmented, everyday users face greater challenges when it comes to research and decision-making. MEXC Alpha, powered by the insights of a professional team and a data-driven selection strategy, provides a simple and efficient trading experience to help users get ahead and discover the next potential 100x gem. Alpha is more than just a tool for uncovering valuable investments: it offers listed on-chain projects the opportunity to be featured on MEXC's Spot or Futures markets. This mechanism shortens the complex path from on-chain discovery to exchange listing, enhancing both project visibility and trading efficiency, while giving early participants a unique edge. Join MEXC now, explore Alpha, and embark on your next journey in crypto investing. About MEXC Founded in 2018, MEXC is committed to being "Your Easiest Way to Crypto". Serving over 34 million users across 170+ countries and regions, MEXC is known for its broad selection of trending tokens, frequent airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. For more information, visit: MEXC Website: <https://www.mexc.com> Telegram: <https://t.me/mexc> How to Sign Up on MEXC For media inquiries, please contact MEXC PR Manager Lucia Hu: [lucia.hu@mexc.com](mailto:lucia.hu@mexc.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. Introduction to WORLD AI Protocol The WORLD AI Protocol represents a groundbreaking architecture that bridges the gap between decentralized

applications and artificial intelligence, creating a secure and flexible framework for AI-powered automation in blockchain environments. WORLD AI Protocol creates an ecosystem where AI agents can execute complex tasks like in-game actions, yield-farming strategies, and administrative functions across multiple blockchain environments. This innovative approach not only enhances user experience in decentralized applications but also opens new possibilities for AI integration in the blockchain space, positioning WORLD3 at the forefront of the convergence between artificial intelligence and decentralized technologies. Architecture WORLD3 is powered by a three-layer architecture that includes the Agent Application Layer, WORLD AI Protocol Layer, and Blockchain Layer. Each layer serves a distinct function that enhances the power and adaptability of AI Agents. Layer 1: Agent Application Layer The Agent Application Layer serves as the user-facing interface for creating, managing, and deploying AI Agents with minimal technical barriers. Featuring a No-Code AI Agent Portal for intuitive agent design, an Agent Marketplace for trading pre-built solutions, a Multi-Agent Playground for testing agent interactions, and User-Created Apps that empower custom application development, this layer democratizes access to advanced AI capabilities. By transforming complex AI implementation into accessible workflows, the Agent Application Layer enables organizations of all sizes to leverage intelligent automation without specialized expertise, fostering innovation while ensuring that agent deployment remains intuitive, transparent, and adaptable to evolving business needs. Layer 2: WORLD AI Protocol The WORLD AI Protocol forms the intelligence core of WORLD3, equipping AI Agents with powerful capabilities that extend far beyond basic functionality. This protocol has two components, an offchain component and onchain component. The offchain component includes Skill Plugins for connecting to external applications and workflows, Knowledge Packs that provide domain-specific expertise, and Planning and Execution Modules that enable agents to automate complex processes autonomously. The onchain components include multi-chain Agentic Wallet for executing on-chain transactions and trading, while Multi-chain WORLD AI Protocol Contracts authorize time-bound, pre-approved actions to ensure security across GameFi, DeFi, and TradeFi applications. Layer 3: Blockchain Layer The Blockchain Layer establishes the foundation for decentralization, security, and cross-platform interoperability, creating a seamless bridge between artificial intelligence and Web3 technologies. This infrastructure supports AI-Generated Assets (AGAs) and the ecosystem's native \$WAI token, which powers transactions and system operations throughout the platform. Through decentralized governance mechanisms, the community actively participates in guiding the ecosystem's development, ensuring that WORLD3 evolves according to collective input while maintaining the robust security framework necessary for trustless agent operations. Deep Dive into the WORLD AI Protocol The WORLD AI Protocol powers the functionality of fully autonomous AI Agents in WORLD3. It allows agents to have unique personalities and mimic human behavior. The key components included in the WORLD AI Protocol are: - Knowledge Packs & Skill Plugins - Skill Plugins: Empower agents to acquire new capabilities and integrate with millions of apps and services. - Knowledge Packs: Specialize agents in specific domains, making them experts on targeted topics. - Personality - Powered by LLMs, each agent's personality is initially defined by its creator and evolves through interactions and experiences. - Memory - Agents maintain short-term memory to store prompts, executed tasks, and contextual data, enabling better cross-referencing and decision-making. - Planning & Execution Module - This module interprets natural language prompts, creates a detailed task plan, and schedules atomic tasks for individual execution. - Agentic Wallet - Each agent has its own multi-chain wallet, enabling it to sign on-chain transactions, receive tokens, and trade autonomously. - Multi-chainWORLD AI Protocol Contracts - These on-chain contracts authorize agents to perform time-bound, pre-approved actions, ensuring security for applications like GameFi, DeFi, and TradeFi. - AI-Generated Assets (AGAs) - Tradeable assets (FT/NFTs) created by AI Agents, including meme tokens, game items, and artwork. - Developer APIs & Webhooks - APIs allow developers to access agent data (execution tasks, logs, etc.), fostering the creation of full-fledged applications integrated with AI Agents. WORLD3 AI Protocol & Contracts: Secure and Scalable Delegation for AI-Driven Automation The on-chain component of the WORLD3 AI Protocol introduces a secure, flexible, and chain-agnostic delegation framework that enables principals to authorize AI agents to perform specific on-chain actions within granular, time-bound, and usage-limited constraints. By incorporating features like function-level permissions, batch operations, and agent consent, the protocol ensures robust security while empowering automation in dApps, games, and DeFi. It enhances usability by allowing principals to revoke or update permissions seamlessly and includes advanced capabilities such as batch authorizations and event logging for transparency. With planned enhancements like RBAC, gasless meta-transactions, and cross-chain expansions (L1/L2s including Base), the protocol is poised to drive secure AI automation and workflow management across blockchain ecosystems. Developers can explore the open-source smart contracts, currently available for the EVM, in our repository. Core Security Features At its foundation, the protocol allows principals (users or organizations) to authorize AI agents to perform clearly defined blockchain operations under strict parameters: - Granular Permission Control: Define exactly which functions an agent can execute - Time-Bound Constraints: Set specific timeframes for agent authorization - Usage Limitations: Restrict the number of times an agent can perform actions These boundaries ensure that while AI agents gain autonomy to execute transactions, they remain within carefully established guardrails that protect user assets and interests. Enhanced Usability & Management The protocol prioritizes user control through multiple management features: - Simple Permission Updates: Modify agent authorizations as needs evolve - One-Click Revocation: Instantly withdraw permissions when necessary - Batch Authorization Processing: Package multiple updates into a single transaction for greater efficiency and reduced gas costs - Comprehensive Event Logging: Maintain complete transparency through detailed activity records Sui Integration: Expanding Cross-Chain Capabilities The WORLD3 AI Protocol's expansion to the Sui blockchain represents a key milestone in its cross-chain development roadmap. As part of WORLD3's commitment to chain-agnostic functionality, the Sui integration will enable AI agents to execute secure, delegated transactions within this high-performance Layer 1 ecosystem. By extending to Sui, the protocol ensures that principals can authorize their AI agents to perform specific on-chain actions across multiple blockchain environments while maintaining the same granular permission controls, time-bound constraints, and usage limitations that define WORLD3's security model. This integration will allow users and developers in the Sui ecosystem to leverage AI-driven automation for dApps, games, and DeFi applications with the reliability and flexibility that the WORLD3 AI Protocol provides. Microsoft Partnership and Azure Integration With support from Microsoft for Startups, WORLD3 harnesses Azure's advanced AI and cloud infrastructure to revolutionize the WORLD AI Protocol. By leveraging key Azure services, WORLD3 ensures a cutting-edge foundation for its ecosystem: - Azure OpenAI Service: Delivers state-of-the-art AI capabilities, such as text generation and image creation. - AI Studio: Enables the development and fine-tuning of custom AI models for immersive storytelling and enhanced user interactions. - Cosmos DB: Provides a scalable, high-performance database for managing and querying vast volumes of data efficiently. What's Next for WORLD AI Protocol The WORLD AI Protocol team is actively developing several key enhancements to further strengthen the platform's capabilities and user experience: Role-Based Permissions Soon, users will be able to bundle multiple function permissions into defined roles (such as WorkerRole or TreasuryRole), dramatically streamlining the authorization process. This enhancement will make managing AI agent permissions more intuitive while maintaining granular security controls. Gasless Meta-Transactions A significant usability upgrade is on the horizon with the implementation of relay infrastructure. This will enable AI agents to execute transactions without requiring native gas tokens, removing a major friction point and allowing for more seamless automated operations across the ecosystem. Cross-Chain Expansions The protocol is set to break beyond current blockchain boundaries, with planned extensions to multiple environments including EVM chains, Sui, NEAR, and Solana. These expansions will maintain the protocol's signature function-level delegation logic while embracing the unique capabilities of each blockchain ecosystem. Multi-Call & Batch Operations To further optimize efficiency, especially for AI-driven workflows, the protocol will introduce enhanced multi-call and batch operation capabilities. These features will make repetitive tasks significantly more streamlined, reducing transaction costs and complexity for both users and developers building on the protocol. These upcoming features represent WORLD AI Protocol's commitment to creating a more secure, efficient, and versatile foundation for AI agent operations across the decentralized landscape. About WORLD3 WORLD3 is pioneering a revolutionary ecosystem of AI-powered fully autonomous agents that are transforming how people interact with technology and each other. The platform's vision centers on creating an Autonomous Worlds where AI Agents operate with unprecedented independence, managing themselves and collaborating seamlessly across digital environments. With over 2 million transactions processed across multiple chains, WORLD3 has also forged key partnerships with major blockchain ecosystems such as Aleo, BNB Chain, SKALE, Immutable X, CKB and Flow. By breaking traditional boundaries between human and machine interaction, WORLD3 is establishing a new paradigm where AI doesn't simply assist but actively participates in digital ecosystems. This approach is redefining what's possible in the rapidly evolving landscape of decentralized technologies and artificial intelligence. Follow WORLD3 AI on X! - Bullish SPX price prediction for 2025 is \$0.6780 to \$1.0891. - SPX6900 (SPX) price might reach \$5 soon. - Bearish SPX price prediction for 2025 is \$0.2550. In this SPX6900 (SPX) price prediction 2025, 2026-2030, we will analyze the price patterns of SPX by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | (SPX)6900 PRICE PREDICTION 2025 | | (SPX)6900 PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | SPX6900 (SPX) Current Market Status | Current Price | \$0.4581 | 24 hr Hour Price Change | 14.61% Up | | 24 hr Hour Trading Volume | \$84.96M | | Market Cap | \$426.58M | | Circulating Supply | 930.99M SPX | All hr Time High | \$1.77 (On Jan 20, 2025) | | All hr Time Low | \$0.000002634 (On Aug 16, 2023) | What is SPX6900 (SPX) | TICKER | SPX | | BLOCKCHAIN | Ethereum | | CATEGORY | Meme Coin | | LAUNCHED ON | August 2023 | | UTILITIES | Trading, Speculation, Community Engagement | SPX6900 (SPX) is a meme-based cryptocurrency that operates primarily on the Ethereum blockchain, with availability on other platforms like Solana and Base. It has a total supply of 1 billion tokens, with a significant portion currently in circulation. The token has gained popularity due to its strong community engagement and social media presence, which significantly influence its market trends. SPX6900 is mainly used for speculative trading and investment, with availability on various exchanges, including decentralized platforms like Uniswap V2 and Aerodrome. As a meme coin, its value is highly susceptible to market sentiment and online trends, leading to rapid fluctuations in interest and price. Despite its speculative nature, the project continues to attract attention from traders seeking high-risk, high-reward opportunities. Investors should approach with caution and conduct thorough research before participating in the SPX6900 ecosystem. SPX6900 24H Technicals SPX6900 (SPX) Price Prediction 2025 SPX6900 (SPX) ranks 107th on CoinMarketCap in terms of its market capitalization. The overview of the SPX6900 price prediction for 2025 is explained below with a daily time frame. In the above chart, SPX6900 (SPX) laid out an Ascending Triangle pattern. The ascending triangle is a characteristic pattern of an ongoing bullish trend. This triangle is formed by a horizontal upper trendline that connects the highs, indicating a consistent level of resistance, and a lower trendline that connects the rising lows, reflecting increasing buying pressure. As the price approaches the apex of the triangle, the tension between buyers and sellers intensifies. If the trend breaks out at the resistance level, the price will continue to move up in this ascending triangle pattern, often leading to further gains. Traders typically look for confirmation of the breakout, which can enhance the likelihood of a successful upward move. At the time of analysis, SPX6900 (SPX) 's price was \$0.4826. If the pattern trend continues, then the price of SPX might reach the resistance levels of \$0.7666, and \$2.0389. If the trend reverses, then the price of SPX may fall to the support levels of \$0.3905, and \$0.2508. SPX6900 (SPX) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of SPX6900 (SPX) in 2025. From the above chart, we can analyze and identify the following as the resistance and support levels of SPX6900 (SPX) for 2025. | Resistance Level 1 | \$0.6780 | | Resistance Level 2 | \$1.0891 | | Support Level 1 | \$0.3846 | | Support Level 2 | \$0.2550 | SPX6900 (SPX) Price Prediction 2025 's RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of SPX6900 (SPX) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current SPX6900 (SPX) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.4768 Price = \$0.4592 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 45.4332 <30 = Oversold 50-70 = Neutral >70 = Overbought | Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | SPX6900 (SPX) Price Prediction 2025 's ADX, RVI In the below chart, we analyze the strength and volatility of SPX6900 (SPX) using the following technical analysis indicators 's Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of SPX6900 (SPX). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 13.6697 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 44.69 <50 = Low >50 = High | Low Volatility | Comparison of SPX with BTC, ETH Let us now compare the price movements of SPX6900 (SPX) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of SPX is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of SPX also increases or decreases respectively. SPX6900 (SPX) Price Prediction 2026, 2027 's 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of

SPX6900 (SPX) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | SPX6900 (SPX) Price Prediction 2026 | \$7 | \$0.2 | | SPX6900 (SPX) Price Prediction 2027 | \$9 | \$0.1 | | SPX6900 (SPX) Price Prediction 2028 | \$11 | \$0.09 | | SPX6900 (SPX) Price Prediction 2029 | \$13 | \$0.08 | | SPX6900 (SPX) Price Prediction 2030 | \$15 | \$0.07 | Conclusion If SPX6900 (SPX) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish SPX6900 (SPX) price prediction for 2025 is \$1.0891. Comparatively, the bearish SPX6900 (SPX) price prediction for 2025 is \$0.2550. If there is a positive elevation in the market momentum and investorsâ€™ sentiment, then SPX6900 (SPX) might hit \$5. Furthermore, with future upgrades and advancements in the SPX6900 ecosystem, SPX might surpass its current all-time high (ATH) of \$1.77 and mark its new ATH. FAQ 1. What is SPX6900 (SPX)? SPX6900 (SPX) is a meme-based cryptocurrency that operates primarily on the Ethereum blockchain, with availability on other platforms like Solana and Base. 2. Where can you buy SPX6900 (SPX)? SPX6900 (SPX) has been listed on many crypto exchanges which include Bybit, Uniswap v2 (Ethereum), Gate.io, Uniswap v3 (Ethereum), Kraken, KuCoin, BitMart, LBank and Deepcoin. 3. Will SPX6900 (SPX) record a new ATH soon? With the ongoing developments and upgrades within the SPX6900 platform, SPX6900 (SPX) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of SPX6900 (SPX)? SPX6900 (SPX) hit its current all-time high (ATH) of \$1.77 on Jan 20, 2025. 5. What is the lowest price of SPX6900 (SPX)? According to CoinMarketCap, SPX hit its all-time low (ATL) of \$0.000002634 on Aug 16, 2023. 6. Will SPX6900 (SPX) hit \$5? If SPX6900 (SPX) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon. 7. What will be the SPX6900 (SPX) price by 2026? SPX6900 (SPX) price might reach \$7 by 2026. 8. What will be the SPX6900 (SPX) price by 2027? SPX6900 (SPX) price might reach \$9 by 2027. 9. What will be the SPX6900 (SPX) price by 2028? SPX6900 (SPX) price might reach \$11 by 2028. 10. What will be the SPX6900 (SPX) price by 2029? SPX6900 (SPX) price might reach \$13 by 2029. - ARK Invest purchased 83,157 Coinbase shares worth \$13.4M on April 4. - The buy was split among ARKK, ARKW, and ARKF ETFs. Cathie Woodâ€™s ARK Invest has acquired Coinbase (COIN) shares worth \$13.4 million across three of its ETFs. The move comes amid a broad market sell-off triggered by President Trumpâ€™s new tariff policies. Despite the turmoil, ARK doubled down on its long-term crypto strategy. According to ARKâ€™s daily trade report for April 4, the ARK Innovation ETF (ARKK) led the purchase. It acquired 54,988 shares valued at \$8.8 million. The ARK Next Generation Internet ETF (ARKW) bought 15,982 shares for \$2.5 million. Meanwhile, the ARK Fintech Innovation ETF (ARKF) added 12,187 shares worth \$2 million. Together, the ETFs purchased over 83,157 Coinbase shares, based on Fridayâ€™s closing price. COIN closed the week with a double-digit decline of over 12%. ARK Doubles Down on Coinbase ARK Invest views the dip in Coinbase shares as a buying opportunity. The firm uses a strategy of acquiring high-tech stocks during market downturns. It also bought 54,120 shares of Amazon (AMZN) worth \$9 million the same day. This reflects its ongoing approach of investing in companies focused on blockchain, AI, and innovation. Coinbase remains one of ARKâ€™s top holdings across its ETFs. Within the ARKF fund, Coinbase now represents 9.4% of the portfolio. Shopify remains the largest at 13%. ARK maintains a self-imposed rule of not allowing any single holding to exceed 10% of a fund. Last month, ARK bought \$11.5 million worth of Coinbase stock during another price dip. It also added \$8.7 million in Coinbase shares to its ARKW fund in February. These purchases demonstrate Cathie Woodâ€™s sustained confidence in crypto infrastructure. Coinbase is the largest publicly traded crypto exchange in the U.S. It offers services including trading, custody, and staking. ARK Invest continues to bet on Coinbase as a key player in the evolution of digital finance. The firmâ€™s total Coinbase holdings under ARKK now stand at \$342 million. This accounts for 7.5% of the ETFâ€™s portfolio. Highlighted Crypto News Today Bitcoin Fails If Used as a Store of Value? Jack Dorsey Thinks So

- TRUMP Coin MACD confirms bearish crossover amid sustained selling pressure. - RSI plunges below 30, reinforcing tokenâ€™s current oversold market status. Official Trump (TRUMP), a Solana-based memecoin launched by President-elect Donald Trump, has joined the crypto market bearish momentum as confirmed by its recent price movement. According to market data, TRUMP declined by over 18% today, settling at \$7.34, down from a daily high of \$9.12. Technicals Analysis: MACD and RSI Indicators Action Revealed The MACD holds confirmation that the TRUMP token is under bearish pressure in the ongoing trading sessions. At the moment, the MACD line stands at -1.15 which is below the signal line -1.03, therefore depicting a bearish crossover. Also, the histogram has a negative momentum which stands at -0.12 showing that there is a continuous downtrend. As a result, these MACD figures are in line with the further decline in the price of the token. Moreover, there is a Market Action with Relative Strength Index decreasing. The present value of relative strength index or RSI is 27.40 which is rather low when compared with the specific level of 30 that is indicative of the overbought zone. The downward move from 35.61 to the current figure of 27.40 points hint at the ongoing selling spree. It is notable that MACD and RSI indicators point toward a sustained bearish trajectory for Official Trump. The token remains in a bearish phase, consistent with the broader crypto market downturn. Moreover, the oversold RSI and negative MACD crossover present factual evidence of ongoing downward pressure, limiting bullish market possibilities. TRUMP Futures and Current Market Performance Open interest, which indicates the tokensâ€™ futures, read at \$242.03 million. This follows a uniform trend on 23 January 2025 with open interest hovering around \$1.08 billion. However, this index of open interest took a fall and was valued at a little over \$400 million by the first of February 2025. After that, the amount rose slightly only to drop again before rising to another high of nearly \$500 million on March 3, 2025. CoinMarketCap data indicates that TRUMP recently recorded a price decline of 18.44% within one day. At the times of writing, TRUMP trades at \$7.34, a drop from its 24-hour peak of \$9.12. The market capitalization demonstrated an 18.42% decrease between this period that brought it to \$1.46 billion. During this period TRUMP attained a daily minimum value of \$7.65 as it demonstrated a downward shift in market trends. Besides the daily changes, the digital assets ATH was recorded at \$75.35, registered three months ago on January 19, 2025. Consequently, TRUMP is down by 89.66% from its historical high, reflecting market volatility. However, the coin rose from its all-time low of \$1.21, recorded on January 18, 2025, marking a 545% increase. Moreover, the coinâ€™s trading chart shows compatible dips in a day as the gradual reduction in value began above the \$9 mark, steadily moving downward to the current price of \$7.34. Highlighted Crypto News Hong Kong to Roll Out Stablecoin Law, Expand Web3 Regulations in 2025

- Hong Kong will pass stablecoin legislation and introduce related licenses within the year. - New rules will cover OTC virtual asset trading and custodial services. Hong Kong will soon pass stablecoin legislation and establish licensing rules for over-the-counter (OTC) transactions and digital asset custody services. Financial Secretary Paul Chan announced the plans during the Hong Kong Web3 Festival on Monday, signaling the cityâ€™s ongoing push to refine its Web3 policy. The new legislative framework will include compliance licenses for OTC and custodial businesses. Additionally, licensed spot exchange-traded funds (ETFs) will gain permission to offer staking services. Hong Kong will also explore legislative steps for token issuance by different market entities. Hong Kong Tightens Web3 Laws Later this year, the government will release a second policy statement on virtual asset development. This builds on its first statement from October 2022, which outlined a high-level virtual asset roadmap. The upcoming update will focus on using Web3 technologies to support traditional finance, bolster the real economy, and enhance digital asset applications. Chan emphasized the need to create a balanced environment. He said the regulatory framework should enable innovation while protecting market integrity. Hong Kongâ€™s approach continues to support growth without compromising stability. So far, the Securities and Futures Commission has granted licenses to ten virtual asset trading platforms. At the same time, the city has become the largest virtual asset ETF market in the Asia-Pacific region. The planned stablecoin regulations will strengthen this progress, with a licensing regime expected before year-end. Meanwhile, the government is conducting consultations on regulating OTC trading and custodial services. These steps aim to expand oversight and ensure consistent rules across the virtual asset sector. Chan stressed that regulation alone is not enough. He highlighted the importance of collaboration among governments, regulators, and private stakeholders. This multi-stakeholder approach will help drive sustainable Web3 development across borders. Highlighted Crypto News Today Hong Kong SFC Releases Staking Guidelines for Licensed Crypto Firms

- The total crypto market cap dropped by over 8.6%, falling to \$2.44 trillion. - Over \$1.41 billion worth of crypto positions were liquidated in just 24 hours. - Trumpâ€™s sudden â€˜Liberation Dayâ€™ tariffs triggered a massive sell-off, crashing global stock markets. The global financial world is in panic mode and crypto is right at the center of it. After whatâ€™s now being called a new â€˜Black Monday,â€™ both traditional stock markets and crypto markets are seeing red. It all started with U.S. President Donald Trumpâ€™s sudden declaration of April 6 as â€˜Liberation Day,â€™ alongside new tariffs that triggered a major market sell-off worldwide. Stock markets in the U.S., China, Japan and Europe tumbled for the second straight day. But crypto investors didnâ€™t escape the storm either. Market in Freefall: Major Cryptos Crash in Single-Day Panic Sell-Off The overall crypto market cap fell by over 8.64%, dropping to \$2.44 trillion. The largest cryptocurrency, Bitcoin (BTC), slipped around 10.44%, falling from \$83,108 to an intraday low of \$74,436. Meanwhile, Ethereum (ETH) took an even harder hit, plunging more than 21% to a low of \$1,415, though it is currently priced at \$1,496. Other altcoins like XRP and Solana (SOL) also suffered sharp losses, dropping by 22% and 19% respectively. XRP has fallen below \$2 for the first time since early December, while SOL has dropped below \$100â€a level not seen since January 2024. Furthermore, major tokens like Binance Coin (BNB), Cardano (ADA), and Tron (TRX) are experiencing even deeper pains. Memecoins werenâ€™t spared either, with leading tokens Dogecoin and Shiba Inu recording single day losses of 20% and 15% respectively. DOGE lost momentum and dropped below \$0.15 while SHIB hit a new yearly low. Whatâ€™s scarier? Over \$1.41 billion in crypto positions were liquidated in just 24 hoursâ€a 750% spike and the worst wipeout since March 2020. This wave of forced selling shows just how fragile investor confidence is right now. The Fear & Greed Index dropped to 17, signaling â€˜extreme fear.â€™ While panic spread, only a few tokens like KAVA managed to stay afloat with 1.22% rise. Others like BERA (25.56%), LTC (23%), and MOVE (24.5% to ATL) saw some of the biggest drops and topped the losers list. Global Stock Markets Crumble Under Tariff Pressure The stock market hasnâ€™t been spared amid the escalating global trade war. Tariffs ranging from 10% to 50% on imported goods have led to significant declines in global stock markets with Wall Street losing \$9 trillion in value. The Australian Securities Exchange (ASX) also suffered a \$160 billion loss. Asian markets have also felt the brunt of these developments. Japanâ€™s Nikkei 225 plunged by 7.8% while South Koreaâ€™s Kospi dropped 5.6%, prompting a temporary halt in trading. In China, the Hang Seng index fell 11.7%, and the SSE Composite decreased by 7.7% following the announcement of retaliatory tariffs. Despite market reactions, President Trump remains steadfast describing the tariffs as â€˜a very beautiful thing.â€™ He acknowledged potential short-term market volatility but emphasized the necessity of these measures to correct longstanding trade imbalances, stating, â€˜Sometimes you have to take medicine to fix something. However, Prime Minister Keir Starmer warned of severe ramifications from a full-blown trade war and indicated potential interventions to protect affected industries. Similarly, financial experts are also expressing concern. Jim Cramer of CNBC warns that without a policy reversal, the market could face a crash reminiscent of Black Monday in 1987.

- A massive crypto market crash, \$1.35 billion was lost from the crypto market in one day. - Bitcoin and other big coins dropped a lot in price. - New tariffs and fear of higher interest rates caused panic in the market. The cryptocurrency market has crashed over the last 24 hours. Approximately \$1.35 billion has been washed out as prices plunged rapidly. The global crypto market is valued at \$2.49 trillion now, which is a 11.4 percent decrease from yesterday. Top Cryptos Drop Sharply Bitcoin dropped to \$75,000, while Ethereum is currently at \$1,480. Other top coins also declined. XRP dropped to \$1.68, while Solana is currently at \$98. This global crash is attributed to new global tariffs made by the previous US President Donald Trump. Other nations such as China and the European Union are set to impose their own tariffs as a reaction. Chinaâ€™s share market began with deep losses, which put an extra strain on it. All markets react to this world tension. Investors are spooked. The Fear and Greed Index is at 17 now, indicating extreme fear in the markets. That typically results in panic and selling. Will Interest Rate Cuts Help? Most folks currently anticipate that central banks will slash interest rates to soothe things. If the rate cuts do occur, then they may shore up the markets. But for now, prices are declining quickly, and everyone is uncertain as to what may occur next. Briefly, the market lost \$1.35 billion in one day, and major cryptocurrencies are all in decline. The cause is fear of new tariffs and poor economic conditions globally. Everyone is waiting to see if world leaders will negotiate to de-escalate tensions or the situation becomes worse.

Ethereum has long been a dominant force in the crypto market, performing as the backbone for DeFi, NFTs, and thousands of smart contract applications. However, its journey to \$5,000 has been slow, weighed down by using scalability concerns, high transaction fees, and growing competition. While Ethereum keeps evolving, modern and more agile projects are taking pictures of tradersâ€™ interest. One such project is Ozak AI (OZ), an AI-powered cryptocurrency that is swiftly gaining momentum. With a rate still in its early stages, Ozak AI provides a possibility for exponential boom, with analysts predicting a potential 300x rally to \$1 in the coming bull run. Ethereum Struggles to Gain Momentum Ethereumâ€™s

price moves had been fantastically slow as compared to some of the more modern, high-growth altcoins in the market. Although ETH remains a leader in smart contract technology, its scalability challenges and expensive gas fees continue to be a concern. The transition to Ethereum 2.0 and the Proof-of-Stake (PoS) version has helped improve energy efficiency, but it has yet to fully remedy transaction bottlenecks. Additionally, opposition from high-speed blockchains like Solana, Avalanche, and Layer-2 solutions is putting pressure on Ethereum's dominance. While ETH may want to ultimately reach \$5,000, its growth trajectory is a ways from explosive, making it much less appealing for investors seeking speedy gains. Ozak AI's 300x Potential Gains Attention In contrast to Ethereum's gradual ascent, Ozak AI is making waves in the market with its AI-pushed blockchain solutions. By integrating artificial intelligence with decentralized networks, Ozak AI is creating a brand new frontier in crypto, supplying improvements in automatic buying and selling, AI-powered DeFi solutions, and predictive analytics. This unique use case has attracted a developing wide variety of buyers searching out the next big aspect. With Ozak AI presale pricing at just \$0.003 in line with token, the opportunity for huge returns is obvious. If the undertaking achieves its formidable roadmap and profits mainstream adoption, a price surge to \$1 or past it representing a 300x growth should turn out to be a reality. Why Ozak AI's Growth Is Outpacing Ethereum One of the main reasons Ozak AI is seeing extended growth is its low market capitalization and early-stage investment potential. Unlike Ethereum, which already has a large valuation, Ozak AI is still in its early stages, making it a high-reward opportunity for those who get in early. Furthermore, the upward thrust of AI in various industries has fueled interest in AI-powered cryptocurrencies, giving Ozak AI a completely unique advantage in a market that is hungry for innovation. The increasing demand for AI-based total blockchain solutions ought to catapult Ozak AI into the highlight, permitting it to attain exponential boom faster than Ethereum. While Ethereum stays a stronghold within the crypto space, its path to \$5,000 is sluggish and unsure. Ozak AI, then again, is displaying strong momentum, with the capability for a 300x rally to \$1 in the near future. As AI adoption continues to amplify, Ozak AI's innovative method positions it as one of the most promising crypto projects of the year. For investors looking for fast growth and high returns, Ozak AI offers an unparalleled possibility that would reshape the AI-crypto space. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin trades at the \$83,700 price level while the stock market has lost over \$3.5 trillion. - Crypto experts and market analysts are celebrating as Bitcoin decouples from the traditional stock market. Donald Trump's Presidency has brought significant changes to the crypto industry in terms of market prices and regulation. After the announcement of Trump's win in 2024, the crypto market went on a short bull run where Bitcoin and several altcoins recorded all-time highs. However, the anticipated extension of the bull run is not happening in 2025. Trump's crypto regulation initiatives are beneficial for broader crypto adoption. But his tariff announcements are not helping the market prices. Bitcoin price took a hit last month and lost its \$90K price level. The largest crypto by market cap has been trading at the same price range of \$87,000 to \$81,000. Bitcoin Price in the Last Week (Source: CoinMarketCap) BTC is trading at \$83,640 with a 2.32% rise at press time. The cryptocurrency recorded weekly and monthly price movements of +1.70% and -8.49% respectively. While its market cap is hovering around \$1.65 trillion, 24-hour trading volume dropped by 17.76%. Bitcoin Shows Resilience While Stock Market Plunges The much-anticipated Trump's reciprocal tariffs were announced on the Liberation Day. As expected by market leaders and experts, these tariffs impacted US stock markets negatively. Market Analyst platform Watcher.Guru reported that the stock market lost \$3.25 trillion earlier today, while only \$5.4 billion was added to the market. S&P 500 lost \$5.4 trillion in market cap in the last couple of days. The BTC market showed strong resilience in contrast to the stock market. BTC market price recorded a seven-week low of above \$81K on April 3, but quickly regained its \$83K price level. Bitcoin's ability to hold on to its previous price range without dropping further is garnering attention across the market. #Bitcoin decoupling finally. was thinking the coupling was fake. maybe market makers using bitcoin market shortage of fiat liquidity to auto-correlate bitcoin, noticeable on US market open. Adam Back (@adam3us) April 4, 2025 Bloomberg analyst James Seyffart made a post on X expressing his shock over Bitcoin's resilience. He didn't think BTC floats above the \$80K price level under present market conditions. The founder of Blockstream, Adam Back, replied to this post, stating that BTC is decoupling from the traditional stock market. Back also said that he always thought the coupling between BTC and the traditional stock market was fake. His post read, "Maybe market makers using Bitcoin market shortage of fiat liquidity to auto-correlate Bitcoin, noticeable on US market open. What's Next For Bitcoin Price? #Bitcoin BTC is up against a major resistance cluster at \$87,000, where the 50-day MA, 200-day MA, and the descending trendline from the all-time high all converge. pic.twitter.com/1lxPxsFQ0Y Ali (@ali\_charts) April 5, 2025 The resilience of the Bitcoin market price is making investors and traders anticipate its next course of action. Some people still cannot believe Bitcoin is decoupled from the traditional stock market. BTC is raising hopes of investors for a further price rally by staying firm on its price level. Renowned market analyst Ali Martinez made a post earlier today regarding the Bitcoin market price. Based on his analysis, Bitcoin is going for a major resistance cluster at the \$87,000 price level. The 50-day MA, 200-day MA, and descending trendline from Bitcoin's ATH value all seem to converge at this price level. If Bitcoin succeeds in breaking the resistance at \$87K, we can anticipate a further price rally. Even though Bitcoin decoupled from the traditional stock market, global macroeconomic conditions must support it to sustain its price rally. Highlighted Crypto News Today: PayPal Expands Crypto Access with Solana and Chainlink Integration

- The broader DeFi sector is witnessing revenue decline where most of the platforms faced declines of over 50% in March. - MakerDAO was the only good performer in March with an 11% revenue surge. The decentralized finance (DeFi) sector witnessed a massive revenue downturn in March 2025. Most of the major protocols across multiple blockchains reported over 50% decline in their revenues. DeFi protocols generate their revenue from transaction fees, lending fees, and other service charges. The drop in revenues indicated a decline in on-chain activity, reduced trading volumes, and a decrease in user activity on DeFi platforms. Weak Revenues Hinting at Market Headwinds A 50% revenue loss might reflect a potential market sentiment shift, which could lead to negative market sentiment and further outflows of capital from the ecosystem. In March, Solana-based protocols such as Pump.fun, Jito, and Raydium generated approximately \$42 million in revenue. The data revealed that March revenue was a 55% drop from February and a 75% decrease from January's peak. Meanwhile, BNB Chain's Pancakeswap generated a revenue of \$21 million which marked a decrease of 54% in revenue on a month-over-month basis. The trend was similarly concerning on the Ethereum-based protocols. The platforms such as Ethena, Lido, Aave, Curve, Compound and Sushi collectively generated just \$24.5 million of revenue in March. Ethereum-based protocols witnessed a 52% and 65% drop in revenues compared to February and January 2025. MakerDAO (recently rebranded as Sky) emerged as the only solo performer who witnessed a month-over-month increase in revenues. It generated over \$10 million in revenue in March, which is an 11% increase compared to February. The broader implications of this revenue collapse are already visible in DeFi token performance. The GMCI's GMDEFI index, which tracks tokens from various DeFi projects across multiple chains, is down 40% year-to-date. This significant underperformance highlights growing investor concerns about the sector's immediate growth prospects as on-chain activity continues to decline. Highlighted Crypto News Today:

With the market moving away from fading altcoins Ripple (XRP) and Shiba Inu (SHIB), investors now focus on projects that demonstrate solid fundamentals and offer better growth prospects. A \$300 investment in these three altcoins possesses the potential to grow to \$27,000 by the end of 2025. Read on to find out how 1. Rexas Finance (RXS) The Next Big Altcoin for Solana Traders Rexas Finance (RXS) attracts crypto whales, as evidenced by raising over \$47 million and selling 91.49% of its presale tokens. The Real-World Asset (RWA) tokenization system supports RXS, as it allows users to acquire fractional ownership of real estate together with commodities and valuable art pieces. RXS stands as an ideal choice for mass adoption because analysts predict the RWA market will reach \$16 trillion by 2030. Also, RXS operates through a deflationary burn system, which decreases supply, thus potentially pushing its price upward. Key Highlights of RXS: - The RXS presale has sold more than 457 million tokens. - Tier-1 exchange listings are confirmed for June 19, 2025 at \$0.25. - 50x price surge predicted post-listing. - The security audit conducted by Certik provides investors with assurance about RXS's safety. Investors can take advantage of the brief opportunity to acquire RXS tokens at \$0.20 since the price will increase to \$0.25, which could result in substantial returns. 2. Toncoin (TON) Surging After Telegram Founder's Release Toncoin (TON) prices increased by 20% to \$3.48 while its market capitalization exceeded \$8.5 billion after Telegram's founder Pavel Durov released the platform. The recent event has led many to believe that Telegram will increase TON adoption rates. Why Toncoin is Gaining Traction: - The system enables lightning-fast transactions along with minimal fees which makes it suitable for payment purposes. - The cryptocurrency transaction process becomes effortless since TON integrates seamlessly with Telegram. - The DeFi sector continues to expand through rapid growth of staking services and governance functions, as well as lending facilities. The expansion of blockchain services by Telegram creates conditions for Toncoin to experience increased adoption throughout 2025. 3. Cosmos (ATOM) The Internet of Blockchains is Gaining Momentum Cosmos (ATOM) reached \$4.57 after experiencing its yearly minimum point while attracting over \$90 million in open interest from investors. The blockchain interoperability sector continues to recognize Cosmos as one of its top projects. Why Cosmos Stands Out: - Seamless blockchain interoperability via the IBC Protocol. - The Cosmos SDK offers developers tools to create blockchains more efficiently. - Expanding the DeFi ecosystem, with Osmosis and THORChain driving liquidity. Cosmos demonstrates its commitment to security by offering \$150K to anyone who discovers system weaknesses. ATOM maintains its position as a long-term investment because of ongoing development efforts and DeFi sector expansion. Why RXS is the Best Bet for 2025 The highest potential for returns belongs to Rexas Finance (RXS) among Toncoin and Cosmos. The combination of real-world assets with deflationary tokenomics and whale accumulation activities creates optimal conditions for a substantial market breakthrough. The upcoming June 19, 2025 exchange launch date of RXS presents investors with a chance to accumulate at its current price of \$0.20. Is it time for you to buy RXS before its market value rises? - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - In March, the overall cryptocurrency market capitalization shrank by 4.4%, a continuation of February's correction. - Fueling further unease was a controversial decision by President Trump to reimpose 25% tariffs. April 2025 has ushered in a critical chapter in the cryptocurrency industry, marked by a delicate swing between macroeconomic forces, regulatory breakthroughs, and evolving on-chain dynamics. While the broader market saw a modest retreat, deeper analysis by Binance Research reveals a vibrant reshaping of the ecosystem from decentralized exchanges and meme coins to strategic government actions and institutional activity. A Volatile March for Crypto Markets In March, the overall cryptocurrency market capitalization shrank by 4.4%, a continuation of February's correction. The root causes were largely exogenous, tied to macro-level factors. Notably, the U.S. Federal Reserve maintained interest rates, citing persistent inflationary concerns. This wait-and-see stance kept risk appetite subdued, weighing down crypto valuations. Fueling further unease was a controversial decision by President Trump to reimpose 25% tariffs, which Canada and Mexico promptly opposed. Their public backlash and the geopolitical friction that followed triggered a \$1 billion liquidation in the crypto derivatives market a stark reminder of how vulnerable digital assets remain to global policy decisions. Regulatory Progress: A Beacon in the Storm Yet, it wasn't all gloom. On the regulatory front, substantial advancements brought a breath of fresh air to the sector. The GENIUS Act a comprehensive crypto regulation framework made headway, clearing the Senate Banking Committee with bipartisan support. More importantly, the Office of the Comptroller of the Currency (OCC) released guidelines permitting banks to custody crypto assets. These moves point to a slow but steady normalization of crypto within the traditional financial system. The possibility of interest rate cuts later in the year, combined with this favorable regulatory backdrop, could create fertile ground for a mid-year crypto rally. Bitcoin: Strategic Accumulation Amid Price Weakness Despite falling 2.4% in March, Bitcoin (BTC) remains at the heart of a strategic pivot by the U.S. government. Trump's executive order to establish a Strategic Bitcoin Reserve sent mixed signals while symbolically bullish, the reserve is funded by forfeited BTC rather than new purchases, limiting its short-term price impact. However, data shows long-term BTC holders are resuming accumulation, a sign of confidence in the asset's long-term value. Even more compelling is the growth of Bitcoin DeFi (BTCFi), which saw a staggering 2,767% increase in Total Value Locked (TVL) over the past year. This trend hints at a paradigm shift where Bitcoin, traditionally seen as a passive store

of value, is now actively integrated into decentralized financial products. Altcoin Standouts: TON, ADA, BNB Lead the Pack Several altcoins showed resilience amid the broader pullback. Toncoin (TON) led the charge with a 17.1% gain, spurred by news that VCs like Sequoia and Benchmark collectively purchased over \$400 million in TON from early holders. Its user base exploded, from 4 million to 41 million accounts in a year – a remarkable feat that reflects growing utility and adoption. Cardano (ADA) also had a moment of glory, gaining 4.4%, largely on the back of speculation around its inclusion in the government’s Digital Asset Stockpile. Its DeFi ecosystem grew as well, with stablecoin market cap exceeding \$30 million – a milestone for a network often criticized for its slow development pace. Meanwhile, BNB climbed 2.5%, supported by the launch of the World Liberty Financial USD1 stablecoin and the blockchain’s dominance in memecoin trading. BNB Chain even surpassed Solana in DEX volume on certain days in March, reflecting its growing traction. Ripple’s Cross-Border Play and Tron’s Stablecoin Reign While XRP saw a marginal decline of 0.4%, the Ripple network made strategic strides. A new partnership with Chipper Cash, a key African payment provider, will enable XRP-based cross-border transfers across nine countries. The legal cloud from its ongoing battle with the SEC still hangs over Ripple, but operationally, the network continues to expand. Tron (TRX) dropped by 0.8%, but continued to assert dominance in the USDT ecosystem, commanding 78% of all Tether addresses. Tron’s low fees and fast settlement make it the network of choice for stablecoin transfers, even if it doesn’t capture the headlines often. Decentralized Exchange (DEX) Wars: Uniswap Loses Ground In perhaps one of the most telling shifts, Uniswap’s market share dropped from 45% last year to just 29% in March 2025. New challengers – PancakeSwap and Raydium – are encroaching fast, leveraging aggressive ecosystem incentives and better user experiences. As liquidity fragments and users diversify across chains like BNB and Solana, the once-unassailable position of Uniswap is under serious threat. This shift underscores a broader transformation in the DEX landscape, where users are no longer loyal to a single platform but are instead following incentives, speed, and chain-native opportunities. Wallet Wars: Binance Wallet Takes the Crown March saw a dramatic change in the Web3 wallet arena, as Binance Wallet surpassed 50% market share. This followed a temporary halt in OKX’s DEX aggregator services, which triggered a significant user migration. But Binance’s dominance is not solely opportunistic – it also rolled out new features and incentives tied to BNB Chain activity, making it the go-to wallet for many retail users. As wallet ecosystems become critical infrastructure for DeFi, NFTs, and GameFi, the battle for user onboarding is intensifying. Expect more innovation, cross-chain support, and gamified experiences to come. Memecoins: The Supercycle May Be Over One of the most fascinating narratives in 2025 has been the memecoin mania on Solana, centered around the Pump.fun launchpad. But signs suggest the hype is fading. Since the launch of \$TRUMP, weekly metrics have dropped sharply – volume is down 69.9%, token creation by 51.8%, and active wallets by 45.1%. While memecoins are unlikely to disappear entirely, the drop in user interest suggests that speculative fatigue may be setting in. The smart money may now be rotating back into more utility-driven protocols. The Road Ahead: What to Watch in Q2 With interest rate cuts still on the table, increased regulatory clarity, and institutional capital flowing into select projects, Q2 could set the stage for a strong rebound. However, risks remain – from geopolitical tensions to market fragmentation and overregulation in key regions. Key upcoming events to monitor include: - The final vote on the GENIUS Act in Congress. - Token unlocks for several major projects in mid-April. - Potential U.S. government announcements regarding the Digital Asset Stockpile composition. In summary, April 2025 presents a mixed but ultimately promising outlook. Strategic realignments in DeFi, rising Bitcoin confidence, and the end of the memecoin supercycle all signal a maturing market. Investors and builders who can adapt to this shifting terrain stand to benefit in the months ahead.

- Alex Becker predicts ADA could rally up to 672% from current price. - Analyst cites speed, decentralization, and ecosystem growth as key factors. - Cardano’s social sentiment reaches multi-month bullish high. Crypto influencer Alex Becker has turned bullish on Cardano, predicting the cryptocurrency could surge to \$5 from its current price of \$0.648. This remarkable shift comes from a pundit who was previously skeptical about ADA’s prospects. Cardano has experienced a significant correction, retracing 51% from its December 3 high of \$1.327. This decline aligns with the broader crypto market’s loss of momentum following the initial rally after Donald Trump’s November election victory. However, despite this downturn, Becker and other analysts remain optimistic about ADA’s mid and long-term outlook. In a recent YouTube video highlighting eight cryptocurrencies he believes will increase fifteenfold by 2026, Becker acknowledged his change of heart regarding Cardano. “Despite my long-standing Cardano feud, I would admit that the token looks extremely bullish from here,” he stated. Analyst praises Cardano’s speed Becker pointed to several factors supporting his bullish perspective. He described Cardano as “fast as hell” and praised it as “the most decentralized, reasonable blockchain next to Ethereum.” The pundit emphasized that ADA represents an “easy bet” at current price levels, suggesting the asset has reached “insane bargain” territory. The growing momentum around the Cardano ecosystem appears to be a significant catalyst for Becker’s optimism. Recent developments, including institutional interest through ETF filings and ADA’s inclusion in the US crypto reserve, have generated renewed enthusiasm for the project. Reports also indicate that Cardano’s crowd social sentiment has reached a bullish multi-month high. From a price perspective, Becker envisions Cardano surging between 363% and 672% from current levels, targeting a range of \$3 to \$5. Other market analysts have made similar predictions, with commentator Madmaudo projecting a rise to \$3 and describing such a rally as “overdue.” Even BitBoy, another crypto influencer, has called for ADA to reach \$5 this bull cycle, despite previously expressing concerns about the ecosystem. Becker’s bullish outlook extends beyond Cardano, with the pundit also highlighting Ethereum, Solana, Avalanche, and Sui as cryptocurrencies poised for significant gains in the mid to long term.

- Coinbase Institutional filed with the CFTC to self-certify XRP futures. - XRP futures contracts will be cash-settled and margined under the symbol XRL. Coinbase Institutional has lodged a petition with the U.S. Commodity Futures Trading Commission (CFTC) for the launch of XRP futures. This contract offers a regulated and capital-efficient avenue for exposing traders to XRP. The contract’s launch is on April 21, 2025, pending regulatory review. The XRP futures contract will trade under the symbol XRL. Each contract will represent 10,000 XRP and settle in U.S. dollars. The contract will be cash-settled and margined, allowing traders to speculate on the prices of XRP without owning the asset. Traders can buy or sell contracts for the current month and two months ahead. In the event of an XRP price move greater than 10% over any hour period, trading will stop for that duration. Coinbase noted that Futures Commission Merchants (FCMs) and market participants support the launch of the contract. Regulatory and Market Expansion Coinbase uses self-certification as a method of launching this contract without CFTC approval. During the review process, however, the regulator can still object. The exchange has previously utilized this avenue to launch futures on Solana (SOL) and Hedera (HBAR). It is awaiting CFTC approval for future trading based on Cardano (ADA) and Natural Gas (NGS). The launch of XRP futures is complementary to an increasing institutional appetite for the token. It is highly possible that the newly included Ripple USD (RLUSD) could significantly affect XRP’s trading volumes. Previous Coinbase XRP Futures Attempts In 2023, Coinbase launched its XRP perpetual futures products for users outside the United States, leaving the derivative unregulated in its domestic offerings. This allows the current action, coming as it is, just as regulatory clarity improves, to be taken. Coinbase is, therefore, looking to scale up liquidity for XRP through this launch. The contract will then enable institutional and retail traders a much safer hedge against price movements and an opportunity to speculate on the future prices of XRP. If successful, it could drive further adoption of crypto derivatives in the U.S. market. Highlighted Crypto News Today When Will Cardano (ADA) Break the \$1 Barrier?

- There has also been a resurgence of interest in stablecoins like USDC and USDT: From around 37% in January to almost 50% in March. - During the week of January 27, 2025, sales of Bitcoin increased by 13%, whilst Ethereum (ETH) and Solana (SOL) saw declines. According to statistics released today by Mercuryo, a global payments infrastructure platform, traders have turned to the relative safety of Bitcoin (BTC) and stablecoins this year as the fear of a global trade war and economic collapse is heightened by US President Donald Trump’s sweeping tariffs. Although the cryptocurrency market started 2025 in a euphoric state, this was short-lived as the S&P 500 entered correction territory due to a worldwide stock market sell-off. A fresh sensation of Fear, Uncertainty, and Doubt (FUD) is engulfing cryptocurrency traders. According to statistics from CoinMarketCap, the overall market cap of the cryptocurrency industry fell 18% in 2025, from \$3.25 trillion on January 1, 2025, to \$2.67 trillion on April 3, 2025. However, despite decreasing purchasing pressure for competing cryptocurrencies, demand for Bitcoin on the Mercuryo platform has remained strong. For instance, during the week of January 27, 2025, sales of Bitcoin increased by 13%, whilst Ethereum (ETH) and Solana (SOL) saw declines of 4% and 10%, respectively. Additionally, during the week of March 24, 2025, Bitcoin purchases increased by 8%, whilst Ethereum purchases saw a 20% weekly decline. As the meme coin frenzy that swept the network in 2024 and the first few days of this year starts to subside, the flight to Bitcoin coincides with a decline in demand for SOL. For instance, during the week of February 24, 2025, Bitcoin purchases surged 47%, whilst SOL only saw a meager 9% increase. There has also been a resurgence of interest in stablecoins like USD Coin (USDC) and Tether tokens (USDT): From around 37% in January to almost 50% in March, stablecoins accounted for a larger share of weekly transactions on the Mercuryo platform. Greg Waisman, Chief Operating Officer at Mercuryo stated: “This year we’ve witnessed a retreat to bitcoin and stablecoins as these assets represent a safe haven in an edgy cryptocurrency market now in the throes of FUD as Trump’s tariffs threaten the global economy. Demand for Bitcoin, which is viewed by some as digital gold, has remained robust. Meanwhile, we’ve seen a flight to the sanctuary of stablecoins. Retail mania around meme coins already feels like a distant memory and this is reflected in a significant pullback in the buying of Solana on the Mercuryo platform.” With a range of payment options and smooth on-chain integration, Bitcoin and Stablecoins Surge as Traders Seek Safety Amid Market FUD Mercuryo is a pioneer and innovation in the rapidly evolving Web3 sector. For those who are new to the digital token arena, Mercuryo’s user-friendly solutions are making things easier. Mercuryo integrates many payment options into a single interface and specializes in efficient capital flow within the DeFi ecosystem. In the rapidly evolving Web3 arena, Mercuryo is a pioneer and innovator that offers a range of payment options in addition to integrated on-chain capabilities. For those who are new to the digital token arena, Mercuryo’s user-friendly solutions are making things easier. With ambitions to grow even more as it keeps innovating with the stack of products, Mercuryo has been proudly collaborating with industry giants like MetaMask, Trust Wallet, Ledger, 1inch, PancakeSwap, and more since 2018.

As the cryptocurrency market continues to evolve, 2025 has started with a wave of enthusiasm. Those looking for reliable long-term cryptos have various options offering stability and the potential for substantial growth. With well-established names like Bitcoin and Ethereum, and newcomers making waves, this guide introduces the six best cryptos to buy today for those aiming for long-term value. 1. Bitcoin (BTC) Bitcoin, the pioneer of cryptocurrencies, remains the most well-known digital currency worldwide. Dominating the market with a valuation of over \$1.7 trillion, Bitcoin comprises more than 60% of the entire cryptocurrency market value. Its straightforward design, limited availability, and increasing acceptance are its core appeals. Following the U.S. SEC’s approval of several spot Bitcoin ETFs in early 2024, Bitcoin became more accessible, attracting significant capital inflows and driving the price to peak at over \$109,000 by early 2025. Although the price has adjusted to about \$87,000, Bitcoin is still considered digital gold. The halving event, which occurs every four years, cuts mining rewards in half, often catalyzing significant price increases within the following 12 to 18 months. With the most recent halving in April 2024 and growing support from U.S. politicians, Bitcoin is a prime choice for those seeking durable value and broad adoption. 2. Ethereum (ETH) As the second-largest cryptocurrency in terms of market capitalization, Ethereum serves as a fundamental pillar of the decentralized internet. It facilitates smart contracts, DeFi protocols, NFTs, and Web3 applications, extending its utility beyond mere currency. The transition of Ethereum from proof-of-work to proof-of-stake has notably decreased its environmental impact, aligning it with a more sustainable future. The SEC’s nod to spot Ether ETFs in mid-2024 has enhanced its credibility, broadening access across the market. Although Ethereum has experienced a 40% decline over the previous year, its ecosystem is swiftly growing. Anticipated scalability improvements like sharding suggest that Ethereum remains a prime choice among the best cryptos to buy today, appealing widely to those engaged in technological development. 3. Solana (SOL) Recognized for its superior performance capabilities, Solana has established itself as a go-to blockchain for decentralized applications, thanks to its exceptional speed, minimal cost per transaction, and a vibrant ecosystem supporting meme coins. The platform’s revival is partly thanks to popular new entries like Dogwifhat (WIF) and Bonk (BONK), alongside a meme token inaugurated by President Donald Trump. Past challenges with network stability have been addressed, boosting confidence and lifting Solana’s valuation to over \$70 billion. With its robust infrastructure and increasing cultural impact, Solana continues to be one of the best cryptos to buy today, especially attractive to those investing in the ongoing popularity of dApps and meme-driven assets. 4. Avalanche (AVAX) Avalanche Analysis: Known for its distinctive subnet architecture, Avalanche supports the creation of specialized blockchains for diverse applications, from finance and gaming to enterprise solutions. While AVAX is rebounding from significant losses in 2022, its prospects are promising. Ava Labs remains committed to a vision of a scalable, multi-chain ecosystem, positioning Avalanche at the forefront should bespoke

blockchains become mainstream. With a current market capitalization around \$8.5 billion, AVAX offers a potentially lucrative but high-risk opportunity. For those exploring the best cryptos to buy today with a focus on foundational blockchain technology, Avalanche merits consideration.

6. BlockDAG (BDAG) BlockDAG (BDAG) is quickly gaining attention as an advanced force in the cryptocurrency world. It has successfully raised over \$210.5 million during its ongoing presale and is often referred to as a "Kaspa killer" because of its cutting-edge Directed Acyclic Graph (DAG) technology. This technology allows BlockDAG to handle transactions concurrently, which results in extremely fast processing times and no traffic jams. It is also compatible with EVM and WASM, enhancing its appeal to developers. Among its features is the Token & NFT Wizard, designed to simplify the entry process for creators. Currently, as of Batch 27, BDAG's price has risen to \$0.0248 from an initial \$0.001, marking a 2,380% increase for early participants. With its beta testnet already live in March 2025 and ten major exchange listings anticipated, there is a strong expectation that BDAG could climb to \$1 post-launch, making it one of the best cryptos to buy today with significant potential for returns. Final Thoughts The cryptocurrency market remains unpredictable, yet it still offers substantial profit opportunities, particularly through projects that boast robust technology, clear development plans, and dynamic communities. While Bitcoin and Ethereum continue to be prominent players, emerging entities like BlockDAG are making significant inroads and have the potential to surpass others in future market cycles. For those weighing risk against potential rewards, these six cryptocurrencies provide a balanced array of stability, cutting-edge innovation, and prospects for long-term growth. Caution is advised, as market fluctuations can be harsh. It's essential to conduct thorough research before making any decisions. Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. As cryptocurrency markets continue to fluctuate, users are looking for smarter ways to maximize their digital assets beyond traditional trading. Many crypto holders leave their assets dormant, missing out on potential earnings. CoinEx Financial Account emerges as a standout solution, offering a seamless and highly competitive savings experience that prioritizes accessibility, flexibility, and consistent returns. Unlike conventional investment products that require lock-up periods or complex management, CoinEx Financial Account enables users to earn passive income effortlessly with minimal effort. Key Advantages of CoinEx Financial 1. Market-Leading Returns CoinEx Financial Account offers one of the highest APRs in the market at 3.87% for USD savings. In contrast, most leading exchanges offer only 1-2% for flexible savings accounts. With no tiered rates, all users enjoy the same competitive return, regardless of their deposit amount. 2. Ultimate Flexibility: No Lock-in Periods Traditional savings plans often impose restrictions, requiring users to commit their funds for 7 days, 14 days, or even longer to earn competitive rates. CoinEx Financial Account eliminates these constraints, offering full withdrawal flexibility with no penalties, so users retain complete control over their assets. 3. Simple and Transparent Earnings Unlike traditional staking or investment products, which often involve complicated multi-tiered structures, CoinEx Financial Account simplifies the earning process. With a straightforward APR model, users can easily calculate their expected returns without navigating through different interest tiers or lock-up conditions. 4. Accessible for Everyone Many platforms impose high minimum deposit requirements, limiting participation to wealthier investors. CoinEx Financial Account lowers this barrier with a minimal entry requirement, ensuring that crypto savings are accessible to all users, regardless of experience level or portfolio size. 5. A Safe and Reliable Passive Income Solution While high-risk trading strategies can yield substantial gains, they also come with significant risks. CoinEx Financial Account prioritizes stability and security, making it an ideal option for users who prefer a low-risk, stable return rather than the volatility of futures or margin trading. CoinEx Financial Account vs. Competitors: How It Stacks Up When comparing CoinEx Financial Account to other leading exchanges, the advantages become even clearer: | Platform | APR (%) for 500 USD+ | Fixed Terms Required? | Tiered Rates? | Withdrawal Flexibility | Minimum Deposit | | CoinEx | 3.87% | No | No | Withdrawal anytime | Very Low (\$16 for staking)\* | | Platform A | 1.5% - 2% | Yes (Flexible APR lower) | Yes | Restrictions Applied. | Varies by plan | | Platform B | 1.5% - 2.5% | Yes (7-day, 14-day) | Yes | Restrictions Applied. | 100 USD+ for certain plans | | Platform C | 1% - 2% | Yes (Locked plans offer more) | Yes | Limited on fixed-term plans | 50 USD+ | \*Based on Solana's minimum staking entry as of Mar 3, 2025 (\$SOL = \$160, minimum staking = 0.1 \$SOL). A Smarter Way to Grow Your Crypto Holdings In an unpredictable market, having a reliable way to earn passive income is invaluable. CoinEx Financial Account provides users with an unmatched combination of high returns, ease of use, and flexibility, making it one of the most attractive crypto savings solutions available today. Whether you're a seasoned investor or new to crypto, CoinEx Financial Account offers a simple yet effective way to maximize your digital assets without unnecessary complexity. For more details, visit CoinEx Financial Account today and start earning effortlessly!

- The Core Substrate makes it possible to deploy custom DePIN networks, giving developers instant access to a live, scalable node network on top of Datagram's infrastructure. - The substrate is operational and in talks to form partnerships with significant blockchain infrastructure ecosystems. Datagram has introduced its Core Substrate, a fully operational connectivity baselayer built to power DePIN (Decentralized Physical Infrastructure Network) networks and real-world applications. The substrate is operational and in talks to form partnerships with significant blockchain infrastructure ecosystems. Similar to building on frameworks like the Cosmos SDK or Polkadot's Substrate, the Core Substrate makes it possible to deploy custom DePIN networks, giving developers instant access to a live, scalable node network on top of Datagram's infrastructure. Full-service platforms may be launched by projects in a variety of sectors, such as decentralized SaaS tools, AI applications, and content delivery networks. Furthermore, Datagram offers a decentralized drop-in substitute for centralized cloud infrastructure. Applications that currently use services like AWS for distributed compute, communication layers, file storage, or multiplayer synchronization can switch to Datagram's platform, that typically offers 70% - 90% lower costs, better privacy protections, no vendor lock-in, and no requirement for blockchain-specific expertise or engineering resources. Every action in the chain is still automated and abstracted. Jason Brink, Co-Founder of Datagram stated: "What we really are is a substrate and foundation upon which other DePINs can be built and can operate. When you think of Ethereum, you think of token launches. When you think of Solana, you think of meme coins. When you think of DePIN, you should think of Datagram. Numerous blockchain-based platforms are dependent on pre-existing forks or frameworks. Built from the bottom up, Datagram's infrastructure platform is a proprietary system. It provides a number of technical firsts, including the effective delivery of UDP-based, real-time communication via a decentralized network, and builds on decades of experience with distributed systems. Voice and video services, multiplayer gaming platforms, AI inference layers, and low-latency computation workloads are just a few of the various types of decentralized applications made possible by this feature. Because of the abstracted Web3 architecture of the Datagram decentralized infrastructure platform, companies may join without having to deal with blockchain infrastructure directly. Datagram's native token (\$DGRAM) and fiat like credit cards may be used to pay for transactions and service use. Meanwhile, on-chain processes work in the background to reward node operators, initiate token consumption, and support the network's integrity and economic alignment. With this strategy, Datagram's protocol-to-business-to-consumer paradigm may provide decentralized infrastructure while maintaining the usability of traditional corporate SaaS platforms. The DePIN sector, which has often been defined by early-stage ventures and untested ideas, has advanced with this release. With live deployments, proven adoption, and quantifiable performance at scale, Datagram's Core Substrate makes its market debut. Its architecture gives enterprises and end users the performance, dependability, and cost-effectiveness of a next-generation network while allowing them to connect with decentralized infrastructure often without realizing it. Datagram is a globally Hyper-Fabric Network powered by AI that is creating the next era of DePIN cross-network interoperability and Internet connectivity. In order to provide smooth, low-latency performance across gaming, artificial intelligence, telecom, and other sectors, the network dynamically optimizes traffic, minimizes congestion, and grows with ease by using idle hardware and bandwidth. Datagram is the next-generation baselayer for DePINs and high-performance applications, having serviced more than 200 businesses and one million customers globally.

- DOGE is holding within the \$0.1635 range. - The meme coin's daily trading volume has surged by over 52%. Market-wide bearish pressure has triggered sharp losses across crypto assets. The meme coin market cap has reached \$49.4 billion, losing over 6.5%. Following the downturn, Dogecoin (DOGE) has slipped by 4.69%. The meme coin opened the day, trading at around \$0.1681, and the price climbed toward a peak range of \$0.1787. With bears in command, DOGE tumbled to a low of \$0.1624. At the time of writing, DOGE traded at \$0.1635, with the market cap at \$24.26 billion. The daily trading volume of the meme coin has reached \$1.9 billion. Besides, the market observed a liquidation of \$11.49 million worth of DOGE. Notably, Dogecoin has plunged by over 17% in the last seven days. The asset began trading the week at the \$19 range, and the weekly low was formed at \$0.1609. Will DOGE Continue Its Decline? DOGE's strong bearish momentum is exhibited with the Moving Average Convergence Divergence (MACD) line and signal line crossing below the zero line. A continued stay below the zero line may lead to further declines. The Chaikin Money Flow (CMF) indicator at -0.03 indicates a weak accumulation and conservative market sentiment, though not very negative. In the meantime, DOGE's daily trading volume has increased by more than 52.61%. If DOGE fails to hold above the \$0.17 mark, the price might fall back toward \$0.1537. Losing this key support range could send the meme coin into deeper correction territory. On the upside, a recovery of the meme coin could likely attempt to reclaim the \$0.20 range. The emergence of a golden cross could drive DOGE to a retest of the \$0.2446 resistance. In addition, the meme coin's Bull Bear Power (BBP) value of -0.0081 suggests mild bearish momentum. DOGE's daily relative strength index (RSI) at 40.30 indicates a neutral-to-bearish zone. Disclaimer: The opinion expressed in this article is solely the author's. - First Digital plans to take legal action against Tron founder Justin Sun. - FDUSD regained its dollar peg today after First Digital burned 87 million tokens. - The stablecoin lost its dollar peg yesterday when Justin Sun claimed First Digital is insolvent. The First Digital assured its users that FDUSD continues its 1:1 backing and its redemption channel is operating without any issues. It has completed the first batch of redemption requests and ensures that FDUSD regains its dollar peg. The First Digital proved its robust maintenance of the stablecoin with this move. The first few redemptions after the recent FUD have been processed, please refer to the on-chain burn transactions. "First Digital (@FirstDigitalHQ) April 3, 2025 FDUSD remains fully backed 1:1, and our redemption channels are operating smoothly. We will continue to process all redemption requests promptly. First Digital announced that the first few redemptions were processed after the recent FUD in its latest post on X. It also clarified that FDUSD remains fully backed 1:1 and all the redemption requests will continue to be executed without any complications. Wu Blockchain reports that the First Digital burned around 87 million tokens in the last 24 hours as per cybersecurity firm PeckShield. The token burn helped FDUSD regain its dollar peg today. Even crypto live-price tracking platform CoinMarketCap also that FDUSD regained its peg. First Digital Plans to Proceed Legally Over FDUSD's Recent FUD Tron co-founder Justin Sun claimed that the FDUSD issuer is insolvent yesterday. The news quickly impacted the FDUSD market price and caused its depeg. First Digital didn't take much time to respond, and it condemned Justin Sun's accusations. It clearly stated that Tron's TUSD has issues with solvency and First Digital is completely solvent. FDUSD issuer also said it is going to pursue legal action to protect its rights and reputation. The firm even accused Justin Sun of doing a smear campaign to attack a competitor and his business. First Digital Trust (FDT) issued an official statement referring to Justin Sun's false claims. It called them baseless accusations and ensured the firm remains fully backed and solvent. The statement referred to Sun calling FDT insolvent is a malicious attempt to damage its reputation. It reiterated its plans to pursue legal action to protect its reputation. Highlighted Crypto News Today:

VICTORIA, Seychelles, April 3rd, 2025, Chainwire April 1, 2025 marks the 5th anniversary of BYDFi, a globally renowned crypto trading platform. Over the past five years, BYDFi has evolved from a rising platform focusing on lightweight contract trading to a diversified ecosystem offering spot, perpetual contract, strategic trading, and on-chain MemeCoin assets. With a series of breakthroughs and legendary milestones, BYDFi has completed a remarkable transformation, from inception to exponential growth. Now, the platform celebrates this important milestone with a grand anniversary celebration, reflecting on a journey marked by innovation, resilience, and growth. BYDFi's Evolution: A Leap in Brand Growth BYDFi's rapid rise in the crypto field is reflected in a series of key milestone events: - April 2020: The platform officially launched, marking BYDFi's entry into the cryptocurrency trading market. - May 2021: The platform expanded to support over 500 spot trading pairs. - August 2022: The platform introduced perpetual contract trading, offering over 150 contract pairs and providing flexible leverage from 1x to 200x. - January 2023: Completed a global brand strategy upgrade and was listed on authoritative data platforms CoinMarketCap and CoinGecko, garnering widespread international attention. - December 2023: Ranked by Forbes as one of the world's top 10 crypto exchanges, a position it continues to hold. - October 2024: Ensured that all platform assets are fully backed with at least 1:1 reserves, and began publishing periodic Proof of Reserves (POR)

reports, setting the highest standards for asset security. - November 2024: Officially joined the South Korea CODE VASP alliance, laying the foundation for future regulatory compliance in the Korean market. - December 2024: Completed a comprehensive upgrade of the perpetual contract system, introducing three major features: new positions allowed even without unrealized profits, bidirectional long/short position support for hedging, and shared account funds under full margin mode to reduce liquidation risks. 2025 and Beyond: Expanding Web3 Products and Strategic Brand Partnerships On April 3, 2025, BYDFi will launch its Web3 on-chain trading tool, BYDFi MoonX, which focuses on the booming Meme coin market. Supporting both Solana and BNB Chain, MoonX introduces three key breakthroughs: Performance Breakthrough: Combining the smoothness of centralized exchanges (CEX) with the flexibility of decentralized exchanges (DEX), it leverages advanced technology to achieve near-instant transactions and minimal slippage, providing users with an ultra-smooth trading experience. Functional Breakthrough: Fast Listing: Ensures that users can trade the latest Meme coins instantly, accurately targeting the next 1000x Meme coin and seizing market opportunities. Smart Risk Control: Supports take-profit, stop-loss, and Sell Half on a Double, with an automated system that recycles capital to enable zero-cost positions. Copy Trading System: Exclusively offering Smart Money Tracking and Trading Signal Copying features, users can track whale addresses in real-time. Convenient Operation: Retains CEX-level features like limit orders and one-click buy/sell, eliminating the hassle of repeated wallet authorizations. Experience Breakthrough: From mainstream Crypto assets to Web3's hot Meme coins, users can seamlessly switch and trade freely with just one account. MoonX eliminates complex connection processes and wallet switching, offering a truly one-click experience. Meanwhile, BYDFi has entered into a strategic partnership with hardware wallet manufacturer Ledger, launching a co-branded wallet that further enhances the security of user assets. The product is currently in production and is expected to be launched soon. A Vision for the Future: Insights from BYDFi Co-Founder Since its inception, BYDFi has served users in over 150 countries and regions. Reflecting on the past five years and looking ahead to the next phase of growth, BYDFi Co-Founder Michael shares: "BYDFi's journey is more than just a historical timeline—it's a strategic transformation. Over the past five years, we have continuously pushed boundaries, we have continuously pushed our limits, with our product architecture undergoing multiple rounds of innovation and upgrades. At the same time, our brand recognition in the global market has been steadily increasing. Our core competitive edge lies in our ability to respond quickly to market trends. In product development, we always adhere to one principle: turning trends into products and simplifying complexity into user-friendly solutions. Whether it's the launch of Copy Trading or deepening Meme coin trading on-chain, we remain at the forefront of the industry. The future of the crypto world demands products with lower barriers to entry, greater openness, and a deeper understanding of user behavior. BYDFi 5th Anniversary Celebration: \$100,000 Prize Pool In celebration of its fifth anniversary, BYDFi has launched a series of exciting events: - Deposit Rebates and Prize Pool: Users who make deposits during the event period can enjoy generous rebates and a chance to share in the \$100,000 prize pool. - Red Envelope Rewards and Token Airdrops: The platform will distribute rich gifts and excess tokens via red envelope rewards and airdrops to users. For more event details, please visit the official website: BYDFi 5th Anniversary. About BYDFi Founded in 2020, BYDFi is a Forbes-recognized top 10 global cryptocurrency exchange trusted by over 1,000,000 users worldwide. BYDFi is committed to providing a world-class crypto trading experience for users globally. - Cybersecurity firm Kaspersky disclosed that hackers are utilizing malware installed in Android devices to steal crypto. - The Cybersecurity firm suggested that users take caution. As the crypto space is evolving, hackers finding new ways to steal users' digital assets. Kaspersky Lab experts revealed that hackers are using counterfeit Android smartphones to steal cryptocurrency. According to cybersecurity firm Kaspersky, they have discovered thousands of malware-infected Android devices specially developed to steal users' data and crypto. These Android devices are often available at low prices to lure buyers. The latest malware is a modified version of Triada, a remote access trojan malware that is used to compromise Android devices. The security firms reported they found more than 2,600 users who were at loss by the new version of Triada. These users are from different regions across the globe but the majority are from Russia. Kaspersky Lab Expert Sheds Light On Triada Trojan New Version Dmitry Kalinin, a cybersecurity expert at Kaspersky Labs, shed light on this malware and said it has existed for a long time. He categorised it as one of the most difficult and destructive threats to Android devices. Kalinin remarked that the latest version of this Triada preexist in the new devices. He further mentioned that the supply chain is likely compromised, leaving sellers and buyers unaware of this issue. Kalinin stated, "Judging by the analysis of transactions, they were able to transfer about \$270,000 in various cryptocurrencies to their crypto wallets. However, in reality, this amount may be larger; the attackers also targeted Monero, an untraceable cryptocurrency." The firm describes that this new version of the malware is present in the firmware of infected devices and located in the system framework. It can get full control of users' Android devices and steal cryptocurrency by replacing crypto wallet addresses. The cybersecurity firm suggested that users purchase smartphones only from authorized distributors and protect themselves from these types of scams. Highlighted Crypto News Today:

- Stay COTI is the beginning of a movement that will pave the way for the next generation of innovators, entrepreneurs, and creatives. - It will provide a playground for innovation in which anybody may build on blockchain and thrive. Following the successful launch of the mainnet, COTI is now entering an exciting new phase, which is focused on expanding the ecosystem and generating significant activity throughout the network. Stay COTI is a new community hub that is being released as part of this next step. It provides everyone, including those who do not have any prior knowledge with coding, with the help they need in order to create on COTI by utilizing straightforward AI prompts. It is with the assistance of artificial intelligence that we are transforming the Web3 builder experience from one of complicated coding to one of straightforward creation with the introduction of Stay COTI. As a result of artificial intelligence, a new toolkit of natural language prompts that do not need coding has emerged, which welcomes a new generation of builders: individuals who have huge ideas but no technical expertise. Stay COTI is, at its heart, a platform that provides these builders with assistance as they bring their ideas to life. This assistance may come in the form of artificial intelligence tools, hands-on coaching, financing, marketing, community build sessions, and other activities. Stay COTI is the beginning of a movement that will pave the way for the next generation of innovators, entrepreneurs, and creatives. It will provide a playground for innovation in which anybody may build on blockchain and thrive. Stay COTI: Built by You, for You Stay COTI participants will have the opportunity to apply for financial and marketing assistance to assist them in bringing their ideas to fruition, thanks to the \$50 million ABC Fund that is backed by COTI. Stay COTI is able to assist you with getting your own decentralized application (dApp) on COTI, a private non-fungible token (NFT) with confidential character qualities, an artificial intelligence agent for predictive analytics, a live event, or something else totally off the ground. Key components of Stay COTI include: - No-code Tools: Through hands-on supervision and mentoring, you will get the opportunity to experiment with the most recent no-code tooling and processes in order to bring your ideas to life. - Vibe Coding events: These hybrid gatherings, which will be conducted in cities and conferences all over the world, will bring together builders, creators, and ambassadors to brainstorm and create new initiatives. The first event will take place this week in Bangkok, and it will be followed by more hybrid gatherings that will take place online and in person. - Demos: As a source of motivation for eager builders who are interested in using COTI's ground-breaking privacy features in real-world experiences, demonstrations will display real-world instances of decentralized applications (dApps) and integrations. - Live Build Sessions: These sessions, which are broadcast on a weekly basis, provide a hangout that is engaging, entertaining, and experimental. They are conducted by experienced builders who are both within and outside of the COTI ecosystem. - Grants and funding: The experimental spirit of early Web3 is being channeled by COTI, which is bringing back the "WAGMI". Obtaining funding enables the COTI ecosystem to provide opportunities for experimentation, building, the organization of events, and the development of ideas and initiatives in conjunction with partner blockchains. - Problem-Solving Build Circles: There will be focused, blocker-based sessions that will link participants who are not technically savvy with technical mentors in order to solve typical issues that are experienced while working with AI technologies in a collaborative manner. - Plugins for Privacy-on-Demand: By using plugins for Privacy-on-Demand, COTI is able to be used across more than seventy blockchains, hence assisting builders in bringing privacy to projects that are part of the larger ecosystem. As builders experiment with quick engineering and COTI's privacy capabilities, Stay COTI is intended to release a wave of new use cases that may be taken advantage of later on. It is planned that the website [stay.coti.io](http://stay.coti.io) will serve as a central center for coordination, replete with an ideas board that will allow users to vote for the most compelling ideas and participate in the most recent Vibe Coding sessions and events. Any Chain, Any Community Interoperability and collaboration are two concepts that are deeply ingrained in the Stay COTI mindset. Developers working on popular chains, such as Solana, Cardano, Base, Arbitrum, and both EVM and non-EVM chains, will now be able to exploit COTI's privacy layer for use cases ranging from decentralized identity to decentralized finance to decentralized autonomous organizations (DAOs) and more. This will be accomplished using the Privacy-on-Demand framework. Stay COTI will bring back a spirit of collaboration that Web3 has, in some parts, lost. This will be accomplished by providing creators, developers, and communities across numerous blockchain ecosystems with the ability to collaborate. Launching with Vibe Coding in Bangkok This will be the first big activation of Stay COTI, and it will take place in Bangkok on April 2 and 3. Members of the COTI community are getting together for a Vibe Coding session and community hangout. This event will include two days of building in order to investigate what is possible when artificial intelligence and human creativity come together. The event is open to both novices and seasoned professionals, and it places an emphasis on quick ideation and experimentation. Artificial intelligence will take on a significant portion of the technical load, making it accessible to anybody who has a vision or concept. Participants will be able to enter a prize draw, which will include incentives such as grant funds, participation in COTI events, and marketing help. There will also be notable ecosystem sponsors present, including Bancor, Band Protocol, Codex, Crafter, UCTalent Labs, and ChainsAtlas. These organizations will provide possibilities for cooperation, as well as mentoring and resources. Building for a Human-First Future The doors to the future of Web3 are wide open as a result of the emergence of artificial intelligence. This is your opportunity to create, develop, and thrive in a network that was designed for everyone, regardless of whether you are a builder, a visionary, or simply someone who enjoys experimenting with the many technologies that are now available.

- North Korean IT workers are infiltrating European crypto companies, as per Google Threat Intelligence Group. - They falsely claim to be from other countries and generate revenue for North Korea through their remote jobs. As per the latest Google Threat Intelligence Group (GTIG) report, North Korean IT workers are spreading threats across the globe beyond the US. The last time it published a report on North Korean hackers was in September 2024, and the scope and scale of these people have expanded beyond the US in the last few months. North Korean IT workers are falsely claiming that they are from other countries and getting jobs in various companies in the UK and Europe. All these organizations that hire IT workers from North Korea are at risk of espionage, data theft, and disruption, as per GTIG's latest post on X. UK Projects Undertaken by North Korean IT Hackers The report even identified multiple projects that are under the DPRK IT workers. Most of these companies work in broader fields of web, bot, and CMS development, and blockchain technology. Next.js, React, CosmosSDK, and Golang, are some of the projects that are associated with these workers. The report also found that AI tools and blockchain job marketplaces built using the MERN stack and Solana are also undertaken by these workers. The bring-your-own-device (BYOD) culture in corporate firms is also posing data security threats. GTIG also found this BYOD culture is causing an increase in extortion threats. Thus, several former employees are threatening to leak companies' source code and files. GTIG adviser Jamie Collier concluded the report, "Global expansion, extortion tactics, and the use of virtualized infrastructure all highlight the adaptable strategies employed by DPRK IT workers. In response to heightened awareness of the threat within the United States, they've established a global ecosystem of fraudulent personas to enhance operational agility." Blockchain analytics platform, Chainalysis, linked the largest Bybit hack worth \$1.4 billion to North Korean hackers. They used sophisticated hacking and money laundering tactics. Within a few days, laundered stolen ETH and converted it into Bitcoin. South Korea imposed sanctions on North Korean DPRK hackers in December 2024. The GTIG report is a wakeup call for corporate firms that hire IT workers on a remote basis from other countries and that encourage a BYOD working culture. Highlighted Crypto News Today: Franklin Templeton Eyes Bitcoin ETP in Europe as Crypto Adoption Grows

- The \$1.5 trillion asset manager Franklin Templeton plans to launch a Bitcoin ETP in Europe. - BlackRock and 21Shares have launched crypto ETPs in Europe, showing rising demand for regulated digital asset investments. Franklin Templeton, a global investment firm managing over \$1.5 trillion in assets, is exploring the launch of a Bitcoin Exchange-Traded Product (ETP) in Europe. As institutional interest in the crypto market continues to grow the company joins other major financial players like BlackRock and 21Shares which have already introduced similar products in the region. Franklin Templeton's interest in a Bitcoin ETP comes after its U.S. spot Bitcoin ETF launch in January 2024 which has gained significant

attention from investors. While thereâ€™s no official launch date announced yet a company spokesperson shared that theyâ€™re keeping a close eye on regulations to make sure they create the best crypto products for their clients, according to the ETF Stream report. Even though the firm is actively exploring innovative opportunities across various asset classes. Institutional Players Expand Bitcoin ETP Offerings in Europe The race for crypto ETPs in Europe is heating up. BlackRock recently launched its iShares Bitcoin Trust (IBIT) now trading on Xetra and Euronext Paris. At the same time 21Shares is stepping up its game too adding new Bitcoin, Solana and XRP ETPs on Nasdaq Stockholm just last week. With Franklin Templeton now considering a European Bitcoin ETP institutional interest in crypto continues to gain momentum. If approved, this could boost Bitcoinâ€™s role in traditional finance and attract more institutional capital into the digital asset space. Highlighted Crypto News Today: Is Peanut the Squirrel Eyeing Bearish Trends as Token Outlives Hype?

- Peanut the Squirrel has factored in a price drop of 9.58% in the last 24 hours. - The altcoinâ€™s daily trading volume has dipped by a modest 1.14% as per CMC data. As news of a booming crypto ETF market reached investorsâ€™ ears, the pricesâ€™ signs of recovery seemed promising. However, contrary to expectations, the upward movement paused prematurely, before leading cryptocurrencies could reach previous resistance. Meanwhile, recent updates suggest a reemergence of international trade tensions. Notably, Bitcoin is currently trading at the \$84K level after a brief recovery. Other altcoins also have not shown significant actions in the last 24 hours. One particular memecoin, on the other hand, continues to show bearish dominance. Peanut the Squirrel recorded a drop of 9.58% in the last 24 hours. This drop has caused PNTU to drop to the \$0.15 level. In the afternoon hours of April 1, the memecoin was trading at the \$0.17 range. As bearish dominance continued, Peanut the Squirrel fell to current levels. At the time of writing, PNTU was trading at \$0.1504 as per CMC data. Zooming out, onto its monthly chart, the Solana-based memecoin has recorded a 30.03% drop. This has raised speculations if the token has outlived its market hype. If the bearish trend continues it is expected to fall below the \$0.1 level. Will Peanut the Squirrel Recover Anytime Soon? On analyzing its technical indicators, PNTUâ€™s Moving Average Convergence Divergence (MACD) MACD line stands above the signal line. This suggests that memecoin might see a positive trend approaching in the coming days. Contrastingly, its RSI value stands at 29.94 as per TradingView data. This indicates an oversold market situation and negative sentiment among investors. As technical indicators send mixed signals, in the case of a positive momentum, PNTU can be expected to witness upward trends. Meanwhile, other altcoins such as Raydium showed modest upward movements in the last 24 hours. Highlighted Crypto News Today: Pi Coin Price Approaches All-Time Low, Facing Community Backlash

- Grayscale filed an S-3 form with the SEC on April 1 to convert GDLC into an ETF. - The SECâ€™s final decision deadline for GDLCâ€™s ETF conversion is July 2. Grayscale Investments filed an Import-Form S-3 with the U.S. Securities and Exchange Commission (SEC) to convert its Digital Large Cap Fund (GDLC) into an exchange-traded fund (ETF). The application, submitted on April 1, seeks to change into a publicly traded product what is at present a private investment vehicle. The GDLC comprises Bitcoin (BTC), Ethereum (ETH), XRP, Solana (SOL), and Cardano (ADA) in its holdings. Grayscale estimates that the fund accounts for about 75% of the total market cap of cryptocurrencies, excluding meme coins and stablecoins. The SEC is progressing with its decision on the GDLC ETF conversion. NYSE Arca has also made a separate 19b-4 application on October 15, 2024, to list GDLC shares. That request is still with the SEC for review. The regulatory body has, therefore, set a second deadline for May 3 and a final one for July 2. Grayscale Expands Crypto ETF Push Grayscale would not move ahead with the offering until SEC approval is given for NYSE Arcaâ€™s listing, which, if granted, would possibly have an impact on Bitwiseâ€™s pending ETF application for its Bitwise 10 Crypto Index Fund. GDLC represents the same five cryptocurrencies that President Donald Trump mentioned when he proposed creating a U.S. digital asset stockpile. The fund is rebalanced every so often, and managers may exclude assets. The digital asset treasury was formalized by Trump using an executive order on March 7. The filing is also part of a general trend whereby most crypto ETFs are obtaining approval. Spot Bitcoin ETFs were launched in January next year, then followed closely by Ethereum ETFs in May. Recently, it has filed for an Avalanche ETF. Nasdaq also submitted a 19b-4 application to list that ETF, intending to convert the Avalanche Trust into a publicly traded product. Highlighted Crypto News Today Metaplanet Expands Bitcoin Holding with \$13M Purchase, Holds 4,206 BTC

- Bullish COMP price prediction for 2025 is \$73.13 to \$170.14. - Compound (COMP) price might reach \$200 soon. - Bearish COMP price prediction for 2025 is \$13.36. In this Compound (COMP) price prediction 2025, 2026-2030, we will analyze the price patterns of COMP by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | COMPOUND (COMP) PRICE PREDICTION 2025 | | | COMPOUND (COMP) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Compound Current Market Status | Current Price | \$43.63 | 24 â€™ Hour Price Change | 7.95% Up | | 24 â€™ Hour Trading Volume | \$579.39M | | Market Cap | \$390.77M | | Circulating Supply | 8.93M COMP | All â€™ Time High | \$911.20 (On May 12, 2021) | | All â€™ Time Low | \$25.55 (On Jun 10, 2023) | What is Compound (COMP) | TICKER | COMP | | BLOCKCHAIN | Ethereum Blockchain | | CATEGORY | DeFi (Decentralized Finance) | | LAUNCHED ON | June 2016 | | UTILITIES | Governance, tipping system, gas fees & rewards | Compound (COMP) is an ERC-20 asset that allows for community governance of the Compound protocol. COMP token holders and their participants debate, propose, and vote on all protocol changes. It aims to encourage a distributed network of computers to run a traditional money market. Compound, one of a growing number of decentralized finance (DeFi) protocols, uses multiple crypto assets to provide this service, allowing lending and borrowing without the need for a financial intermediary such as a bank. Compound 24H Technicals (Source: TradingView) Compound (COMP) Price Prediction 2025 Compound (COMP) ranks 119th on CoinMarketCap in terms of its market capitalization. The overview of the Compound price prediction for 2025 is explained below with a daily time frame. COMP/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Compound (COMP) laid out the descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. Higher prices often follow the descending channel pattern. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a securityâ€™s price with parallel trendlines to show a downward trend. A trader could make a selling bet within a descending channel when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Compound (COMP) was recorded at \$43.63. If the pattern trend continues, then the price of COMP might reach the resistance level of \$96.72. If the trend reverses, then the price of COMP may fall to the support of \$53.40 and \$37.92. Compound (COMP) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Compound (COMP) in 2025. COMP/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Compound (COMP) for 2025. | Resistance Level 1 | \$73.13 | | Resistance Level 2 | \$170.14 | | Support Level 1 | \$33.43 | | Support Level 2 | \$13.36 | COMP Resistance & Support Levels Compound (COMP) Price Prediction 2025 â€™ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Compound (COMP) are shown in the chart below. COMP/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Compound (COMP) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$46.74Price = \$44.86 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 49.29 <30 = Oversold 50-70 = Neutral>70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Compound (COMP) Price Prediction 2025 â€™ ADX, RVI In the below chart, we analyze the strength and volatility of Compound (COMP) using the following technical analysis indicators â€™ Average Directional Index (ADX) and Relative Volatility Index (RVI). COMP/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Compound (COMP). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 36.53 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 50.30 <50 = Low >50 = High | High volatility | Comparison of COMP with BTC, ETH Let us now compare the price movements of Compound (COMP) with that of Bitcoin (BTC), and Ethereum (ETH). BTC VS ETH VS COMP Price Comparison (Source: TradingView) From the above chart, we can interpret that COMPâ€™s price action is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of COMP also increases or decreases, respectively. Compound (COMP) Price Prediction 2026, 2027 â€™ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Compound (COMP) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Compound (COMP) Price Prediction 2026 | \$210 | \$13 | | Compound (COMP) Price Prediction 2027 | \$240 | \$12 | | Compound (COMP) Price Prediction 2028 | \$270 | \$11 | | Compound (COMP) Price Prediction 2029 | \$300 | \$10 | | Compound (COMP) Price Prediction 2030 | \$330 | \$9 | Conclusion If Compound (COMP) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish Compound (COMP) price prediction for 2025 is \$170.14. Comparatively, if an unfavorable sentiment is triggered, the bearish Compound (COMP) price prediction for 2025 is \$13.36. If the market momentum and investorsâ€™ sentiment positively elevates, then Compound (COMP) might hit \$200. Furthermore, with future upgrades and advancements in the Compound ecosystem, COMP might surpass its current all-time high (ATH) of \$911.20 and mark its new ATH. FAQ 1. What is Compound (COMP)? Compound (COMP) is a DeFi lending protocol that allows users to earn interest by depositing their cryptocurrencies in one of the many pools supported by the platform. 2. Where can you purchase Compound (COMP)? Traders can trade Compound (COMP) on the following cryptocurrency exchanges such as Binance, OKX, Deepcoin, Bittrue, and Bybit. 3. Will Compound (COMP) reach a new ATH soon? With the ongoing developments and upgrades within the Compound platform, Compound (COMP) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Compound (COMP)? Compound (COMP) hit its current all-time high (ATH) of \$911.20 on May 12, 2021. 5. What is the lowest price of Compound (COMP)? According to CoinMarketCap, COMP hit its all-time low (ATL) of \$25.55 on Jun 10, 2023. 6. Will Compound (COMP) reach \$200? If Compound (COMP) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$200 soon. 7. What will be Compound (COMP) price by 2026? Compound (COMP) price is expected to reach \$210 by 2026. 8. What will be Compound (COMP) price by 2027? Compound (COMP) price is expected to reach \$240 by 2027. 9. What will be Compound (COMP) price by 2028? Compound (COMP) price is expected to reach \$270 by 2028. 10. What will be Compound (COMP) price by 2029? Compound (COMP) price is expected to reach \$300 by 2029. Top Crypto Predictions Bitcoin Cash (BCH) Price Prediction Disclaimer: The opinion expressed in this chart is solely the authorâ€™s. - Bullish FIL price prediction for 2025 is \$3.611 to \$4.920. - Filecoin (FIL) price might reach \$15 soon. - Bearish (FIL) price prediction for 2025 is \$1.925. In this Filecoin (FIL) price prediction 2025, 2026-2030, we will analyze the price patterns of FIL by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | FILECOIN (FIL) PRICE PREDICTION 2025 | | | FILECOIN (FIL) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Filecoin (FIL) Current Market Status | Current Price | \$2.78 | 24 â€™ Hour Price Change | 4.94% Down | | 24 â€™ Hour Trading Volume | \$126.58M | | Market Cap | \$1.8B | | Circulating Supply | 647.13M FIL | All â€™ Time High | \$237.24 (On April 01, 2021) | | All â€™ Time Low | \$1.83 (On Aug 03, 2019) | What is Filecoin (FIL) | TICKER | FIL | | BLOCKCHAIN | Filecoin | | CATEGORY | Decentralized Storage Network | | LAUNCHED ON | July 2014 | | UTILITIES | Governance, security, gas fees & rewards | Filecoin (FIL) is the native cryptocurrency of the Filecoin blockchain. Filecoin is an open-source, decentralized storage protocol that exists on top of the InterPlanetary File System (IPFS). Filecoin (FIL) was launched in an ICO in 2017 whereas the Filecoin mainnet went live in October 2020. Filecoin was developed by Protocol Labs. Filecoin enables users to store any size of data on multiple hack-proof storage providers or devices. It serves as a better alternative to the existing cloud storage providers such as Dropbox, Google Drive, and Amazon S3. Filecoin deploys proof-of-replication (PoRep) and proof-of-spacetime (PoSt) consensus mechanisms to secure the blockchain. Miners use these consensus models to verify the data that is being stored on the blockchain. They require only GPUs, CPUs, and hard drives for mining. Filecoin nodes act as storage nodes. Filecoin (FIL) is given out as mining rewards and also as rewards to users for renting out the space for storage. Filecoin 24H Technicals Filecoin (FIL) Price Prediction 2025 Filecoin (FIL) ranks 47th on CoinMarketCap in terms of its market capitalization. The overview of the Filecoin price prediction for 2025 is explained below with a daily time frame. In the above chart, Filecoin (FIL) laid out a Descending Channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this

defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Filecoin (FIL) was recorded at \$2.816. If the pattern continues, the price of FIL might reach the resistance levels of \$3.695, \$5.826, and \$8.356. If the trend reverses, then the price of FIL may fall to support level of \$2.355. Filecoin (FIL) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Filecoin (FIL) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Filecoin (FIL) for 2025. | Resistance Level 1 | \$3.611 | | Resistance Level 2 | \$4.920 | | Support Level 1 | \$2.695 | | Support Level 2 | \$1.925 | Filecoin (FIL) Price Prediction 2025 æ” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Filecoin (FIL) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Filecoin (FIL) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$3.088 Price = \$2.813 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 41.931 <30 = Oversold 50-70 = Neutral >70 = Overbought | | Relative Volume (RVOL) | Assetæ”s trading volume in relation to its recent average volumes | Below cutoff line | Weak Volume | Filecoin (FIL) Price Prediction 2025 æ” ADX, RVI In the below chart, we analyze the strength and volatility of Filecoin (FIL) using the following technical analysis indicators æ” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Filecoin (FIL). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 21.181 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 54.32 <50 = Low >50 = High | High Volatility | Comparison of FIL with BTC, ETH Let us now compare the price movements of Filecoin (FIL) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of FIL is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of FIL also increases or decreases respectively. Filecoin (FIL) Price Prediction 2025, 2026 æ” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Filecoin (FIL) between 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | Filecoin (FIL) Price Prediction 2026 | \$18 | \$1.9 | | Filecoin (FIL) Price Prediction 2027 | \$20 | \$1.8 | | Filecoin (FIL) Price Prediction 2028 | \$23 | \$1.6 | | Filecoin (FIL) Price Prediction 2029 | \$27 | \$1.2 | | Filecoin (FIL) Price Prediction 2030 | \$30 | \$1 | Conclusion If Filecoin (FIL) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Filecoin (FIL) price prediction for 2025 is \$4.920. Comparatively, the bearish Filecoin (FIL) price prediction for 2025 is \$1.925. If there is a positive elevation in the market momentum and investorsæ” sentiment, then Filecoin (FIL) might hit \$15. Furthermore, with future upgrades and advancements in the Filecoin ecosystem, FIL might surpass its current all-time high (ATH) of \$237.24 and mark its FAQ 1. What is Filecoin (FIL)? Filecoin (FIL) is the native cryptocurrency of the Filecoin blockchain. Filecoin is an open-source, decentralized storage protocol that exists on top of the InterPlanetary File System (IPFS). 2. Where can you buy Filecoin (FIL)? Traders can trade Filecoin (FIL) on the following cryptocurrency exchanges such as Binance, OKX, Bybit, DigiFinex, and Cointr Pro. 3. Will Filecoin (FIL) record a new ATH soon? With the ongoing developments and upgrades within the Filecoin platform, Filecoin (FIL) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Filecoin (FIL)? Filecoin (FIL) hit its current all-time high (ATH) of \$237.24 on April 01, 2021. 5. What is the lowest price of Filecoin (FIL)? According to CoinMarketCap, FIL hit its all-time low (ATL) of \$1.83 on Aug 03, 2019. 6. Will Filecoin (FIL) hit \$15? If Filecoin (FIL) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$15 soon. 7. What will be the Filecoin (FIL) price by 2026? Filecoin (FIL) price might reach \$18 by 2026. 8. What will be the Filecoin (FIL) price by 2027? Filecoin (FIL) price might reach \$20 by 2027. 9. What will be the Filecoin (FIL) price by 2028? Filecoin (FIL) price might reach \$23 by 2028. 10. What will be the Filecoin (FIL) price by 2029? Filecoin (FIL) price might reach \$27 by 2029. TheNewsCrypto team encourages all to do their own research before investing.

- The ACT token price continues to drop, ever since a sharp price drop was recorded yesterday. - Binance is investigating to determine the actual reason behind the price drops of tokens such as DEXE and DF. - Binancæ”s preliminary investigation revealed that 4 users sold large amounts of ACT tokens yesterday, which led to its price crash. The crypto market showed a slight recovery yesterday as Bitcoin started to trade above the \$83K price level. Overall market cap has also increased as major altcoins recorded considerable price surges. On the contrary, several altcoins and memecoins crashed severely yesterday. ACT stood out among the other altcoins that dropped significantly. This is because it recorded around a 50% price drop within a few minutes in the Asian evening hours of the market. DEXE, DF, TST, LUMIA, KAVA, and QUICK tokens also recorded price drops, spreading panic in the market. ACT is the AI meme token of the Solana-based The AI Prophecy project. It is one of the noteworthy memecoin that recorded substantial gains during the AI memecoin mania in 2024. The token was trading in the \$0.189 price range before the crash. It is now trading at a \$0.069 price level with a 63.45% price drop in the last 24 hours. Binance Responds to the ACT Price Crash Binance published a statement a few hours after the price crashed. Its preliminary investigation found that 4 of its users combinedly sold over 1 million worth of ACT tokens on the platform. While 3 VIP users sold 514,000 USDT worth of ACT, one non-VIP user sold 540,000 USDT worth of the memecoin. Binance also clarified that it didnæ”t identify a single account that made significant profits from this price drop. This made the investigation further intriguing. The large token sell-off might cause the ACT price to crash. This further resulted in the liquidation of several ACT futuresæ” positions. Binance said that it will continue its investigation into the reasons for other token declines as well. Several crypto market experts attributed this price crash to Wintermute market maker. OnchainData Nerd posted that Wintermute sold a lot of memecoins, which is the reason behind this big dump. Another X user made a detailed post stating that Binancæ”s adjustment in the margin positions of these tokens triggered a chain reaction and resulted in the market plunge. Highlighted Crypto News Today: Solana-Based Meme Coin BONK Jumps 10% æ” Can It Sustain the Rally?

- VanEck announces newest ETF registration for a BNB-based product. - The firm has filed for several altcoin-based ETP products over the past few months. In the last 24 hours, the crypto community rejoiced in a brief recovery in the market. Bitcoin is currently docked at the \$84K level after testing a high of \$85,466. Following this the altcoin sector also recovered modestly, sparking hope among investors. Meanwhile, the ETF market is seeing increasing activity as we enter Q2 2025. Recently, prominent ETP issuer VanEck announced registering for a new ETP product. The firm has submitted filings for a BNB-registered ETF with the state of Delaware. Notably, the firm has been expanding its range of ETP products in the past few months with new altcoin ETF filings. Recently, in March, it filed for a spot Avalanche ETF with the SEC. With this filing, the firm becomes the first to register for a US-based BNB ETF. Additionally, the recent BNB product is its fifth filing with the State of Delaware. While issuing Bitcoin and Ether ETFs, VanEck has also registered for Solana and the abovementioned Avalanche ETF. What Other Issuers Accompany VanEck in the ETF Market Boom? Q1 2025 saw multiple ETF filings for various altcoins. Major altcoins such as Cardano, Solana, Litecoin, and SUI have drawn capital management firmsæ” attention. In the past week, SUI showed upward movements as Canary Capital filed for an ETF. Moreover, memecoins such as DOGE also saw institutionsæ” interest in an ETP product. Additionally, earlier regulatory processes for ETF approvals were excruciating, however, recent shifts hint at a change. Additionally, other issuers apart from VanEck include Grayscale, Franklin Templeton, and Bitwise. While these firms were existing players, the recent interest has also seen an influx of new capital management firms. For instance, Tuttle Capital began filing for memecoin ETFs in January recently. - Metaplanet bought 696 BTC for Å¥10.15 billion (\$67.9 million) via options. - The total Bitcoin holdings now stand at 4,046 BTC, worth \$340 million. Metaplanet Inc., a Japanese investment firm, has acquired an additional 696 BTC through cash-secured put options. This purchase brings its total Bitcoin holdings to 4,046 BTC, worth approximately \$340 million. The company has been aggressively expanding its Bitcoin treasury since adopting a BTC-focused strategy in April 2024. \*Metaplanet Purchases Additional 696 \$BTC\* pic.twitter.com/ppnm8ZNH5X æ” Metaplanet Inc. (@Metaplanet\_JP) April 1, 2025 Metaplanet executed the purchase at an average price of Å¥14,586,230 (\$97,512) per BTC. The total expenditure for this acquisition reached Å¥10.15 billion (\$67.9 million). By utilizing options instead of direct market purchases, the company reduced its effective cost per Bitcoin to Å¥13,479,404 (\$90,073). The firmæ”s Bitcoin Income Generation business earned Å¥770.35 million (\$5.2 million) in Q1 2025. This revenue came from selling cash-secured Bitcoin put options, allowing the company to collect premiums while setting aside funds for future acquisitions. The company deployed Å¥9.39 billion (\$62.7 million) as collateral, securing more BTC than it could have via direct purchases. Metaplanetæ”s Bitcoin Yield Performance Metaplanet reported a BTC Yield of 309.8% in Q4 2024 and 95.6% in Q1 2025. BTC Yield measures how effectively the companyæ”s acquisition strategy benefits shareholders while accounting for dilution. Over the past nine months, Metaplanet has increased its Bitcoin holdings nearly 28-fold. It held just 141.07 BTC in June 2024 but has now reached 4,046 BTC. The company aims to hold 10,000 BTC by the end of 2025 and 21,000 BTC by 2026. Stock Performance and Market Context Metaplanetæ”s stock price experienced a 9% drop due to market turmoil but rebounded 2% to 409 JPY (\$2.73). Over the past year, the stock has surged over 1,950%, peaking at 665 JPY in February. Last week, the company market bought 150 BTC (\$12.6 million) at an average price of \$83,801 per Bitcoin. It also issued Å¥2 billion (\$13.3 million) in zero-interest bonds to finance further Bitcoin acquisitions. Metaplanet now ranks among the top corporate Bitcoin holders, alongside firms like MicroStrategy and Tesla. The company remains committed to its Bitcoin-first strategy, reinforcing its position as a leader in Japanæ”s Bitcoin adoption efforts. - The crypto market recovers ahead of Trumpæ”s Liberation Day tariff announcement. - Bitcoin reclaims its \$84K price level with a 2.43% rise in the last 24 hours. Bitcoin finally shows signs of recovery today by reclaiming its \$84K price level. It has been going on a downward trend for the past few days as tension around Trumpæ”s Liberation Day tariffs builds. The overall crypto market capitalization jumped 2.50% even though the crypto fear and greed index continues to indicate a fearful market. Bitcoin recorded a 2.47% daily price rise today. Other noteworthy cryptocurrencies like Ether, XRP, Solana, Dogecoin, and Cardano prices also witnessed considerable price surges today. This reflects the increasing investor confidence in the crypto market, followed by four consecutive days of a downtrend. As Bitcoin started making some gains today, tomorrow is crucial in deciding its next price movement. Tariff announcements initially caused fear and resulted in a market sell-off. However, todayæ”s gains tell a different story. Whether Trumpæ”s tariff announcements tomorrow will boost or shake the market is hard to predict for sure. The Crypto Market in æ”Wait-and-Seeæ” Mode Ahead of Trumpæ”s Liberation Day Tariff Announcement Industry leaders and market experts are saying that the crypto market is in æ”wait-and-seeæ” mode ahead of Trumpæ”s Liberation Day tariff announcement. There is a mixed sentiment in the crypto community at present. It is difficult to predict whether the crypto market will boom or bust in the next couple of days. One thing is clear that Trumpæ”s decisions on tariffs will surely impact the market either way. The Guardian report estimated that Trumpæ”s reciprocal tariffs will eventually trigger a global trade war. Trumpæ”s main target countries are the European Union, South Korea, Brazil, India, and China. If the crypto market reacts positively, we might witness a V-shape recovery in Bitcoinæ”s price, and it could go as high as its last weekæ”s peak of \$88K. On the other hand, if the market reacts adversely, Bitcoin might crash to the \$70K price level this time. We must wait a few more hours to see whatæ”s ahead for the crypto market. - Compared to current solutions, the platformæ”s architecture lowers training expenses by ten times and verified inference overhead to 0.1%. - Ambient is the first system to combine the security assurances of PoW with the learnings from high-performance blockchains like Solana. A brand-new, innovative Web3 project has surfaced from stealth mode with the potential to fundamentally alter the way AI is used and accessible globally. The value proposition and business model of Ambient, which was founded by a technologist with a Harvard degree and backed by \$7.2 million in seed funding from a16zæ”s Crypto Startup Accelerator (CSX) program as well as other well-known industry leaders like Delphi Digital and Amber Group, can best be characterized as OpenAI powered by AI Bitcoin. Ambient addresses the main problems of closed-source AI, such as bias, censorship, restricted privacy, and model æ”bait-and-switches,æ” while providing the reliable performance and ease of use that have drawn more than 400 million weekly users to models like ChatGPT. Beyond the small transaction fees common in Proof-of-Stake (PoS) systems, its Proof-of-Work (PoW) technology rewards miners with predictable, Bitcoin-like incentives, enabling verified inference on a 600+ billion parameter model with low overhead and unmatched security. Compared to current solutions, the platformæ”s architecture lowers training expenses by ten times and verified inference overhead to 0.1%. Ambient is the first system to combine the security assurances of PoW with the learnings from high-performance blockchains like Solana, creating an innovative approach that specifically satisfies the security and performance requirements of AI systems. Max

Lang and Travis Good, PhD, established Ambient. Travis introduced advances in machine learning-based drug discovery and spectroscopy, as well as the first mathematically optimum freight railroad movement planner in history. The CTO of Ambient Max is a digital entrepreneur who has worked at Amazon and Microsoft and has made many exits. Max managed Vault Health's transition to COVID testing, growing to millions of tests throughout the country, and was instrumental in Cockroach Labs' 1.0 release. He also assisted Blend Labs (NYSE: BLND) in securing its first significant client. Because of their backgrounds, the founders are uniquely qualified to transform the way AI services are delivered. Travis stated: "Ambient directly aligns the economics of its network with the generation of useful output to create a focused competitor for closed-source AI unlike anything the market has ever seen. This raise marks a pivotal moment in our journey toward facilitating a future where AGI is ubiquitous and community-controlled. We're proud to have experienced and capable investors like a16z CSX, Delphi, and Amber Group helping us every step of the way." Tommy Shaughnessy, Founding Partner at Delphi Ventures stated: "Ambient's talented team has taken a contrarian but powerful approach to tackling the biggest challenges in the field. We're delighted to support them as they uniquely position themselves as a tentpole of the coming agentic economy that seamlessly merges Web3 and Web2." Michael Wu, Co-Founder and CEO of Amber Group adds: "We see tremendous potential in Ambient's technology. Their ability to deliver verified inference at unmatched speeds, while focusing an entire crypto network's resources on advancing model training, is a true game changer for the future of Crypto AI competitiveness." The platform intends to revolutionize the delivery and accessibility of AI services and provide decentralized power for the next agentic economy by fusing a trustless architecture, unparalleled computational capability, and strategically matched financial incentives. Later this year, Ambient's testnet is anticipated to launch.

- JUP price prediction for 2025 is \$0.5820 to \$0.8522. - Jupiter (JUP) price might reach \$3 soon. - JUP price prediction for 2025 is \$0.3054. Jupiter (JUP) price prediction 2025, 2026-2030, we will analyze the price patterns of JUP by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | JUPITER (JUP) PRICE PREDICTION 2025 | | JUPITER (JUP) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Jupiter (JUP) Current Market Status | Current Price | \$0.4270 | 24 " Hour Price Change | 10.65% Down | | 24 " Hour Trading Volume | \$101.9M | | Market Cap | \$1.19B | | Circulating Supply | 2.79B JUP | All " Time High | \$2.04 (On Jan 31, 2024) | | All " Time Low | \$0.4164 (On Apr 01, 2025) | What is Jupiter (JUP) | TICKER | JUP | | BLOCKCHAIN | Solana | | CATEGORY | DEX Exchange | | LAUNCHED ON | January 31, 2024 | | UTILITIES | Governance, Community Engagement, & Rewards. | Jupiter serves as Solana's primary liquidity aggregator, facilitating seamless token trading and optimal route discovery across various DEX markets and AMM pools. Its native cryptocurrency, JUP, launched on January 31, 2024, gained significant investor interest with a 1 billion airdrop. Jupiter directly connects all DEX markets and AMM pools regardless of the provider, enabling efficient route discovery between any two tokens on Solana. Recognized as one of the industry's most advanced swap aggregation engines, Jupiter plays a pivotal role in providing essential liquidity infrastructure for the Solana ecosystem. Additionally, Jupiter actively expands its DeFi product suite, offering a comprehensive range of services, including Limit Order, DCA/THAP, Bridge Comparator, and Perpetuals Trading. Jupiter (JUP) 24H Technicals (Source: TradingView) Jupiter (JUP) Price Prediction 2025 Jupiter (JUP) ranks 59th on CoinMarketCap in terms of its market capitalization. The overview of the JUP price prediction for 2025 is explained below with a daily time frame. JUP/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Jupiter (JUP) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. Higher prices often follow the descending channel pattern, but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a security's price with parallel trendlines to show a downward trend. A trader could make a selling bet within a descending channel when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Jupiter (JUP) was recorded at \$0.4270. If the pattern trend continues, then the price of JUP might reach the resistance levels of \$0.6045, \$0.9023 and \$1.0326. If the trend reverses, then the price of JUP may fall to the support of \$0.4112. Jupiter (JUP) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Jupiter (JUP) in 2025. JUP/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Jupiter (JUP) for 2025. | Resistance Level 1 | \$0.5820 | | Resistance Level 2 | \$0.8522 | | Support Level 1 | \$0.4188 | | Support Level 2 | \$0.3054 | JUP Resistance & Support Levels Jupiter (JUP) Price Prediction 2025 " RVOL, MA, and RSI The technical analysis indicators, such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Jupiter (JUP), are shown in the chart below. JUP/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Jupiter (JUP) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.6412 Price = \$0.4306 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 32.6380 < 30 = Oversold 50-70 = Neutral > 70 = Overbought | Nearly Oversold | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Jupiter (JUP) Price Prediction 2025 " ADX, RVI In the below chart, we analyze the strength and volatility of Jupiter (JUP) using the following technical analysis indicators " Average Directional Index (ADX) and Relative Volatility Index (RVI). JUP/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Jupiter (JUP). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 29.4961 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 49.20 < 50 = Low > 50 = High | Low volatility | Comparison of JUP with BTC, ETH Let us now compare the price movements of Jupiter (JUP) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs JUP Price Comparison (Source: TradingView) From the above chart, the price action of JUP is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of JUP also increases or decreases respectively. Jupiter (JUP) Price Prediction 2026, 2027 " 2030 with the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Jupiter (JUP) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Jupiter (JUP) Price Prediction 2026 | \$3.5 | \$0.3 | | Jupiter (JUP) Price Prediction 2027 | \$4 | \$0.2 | | Jupiter (JUP) Price Prediction 2028 | \$4.5 | \$0.1 | | Jupiter (JUP) Price Prediction 2029 | \$5 | \$0.09 | | Jupiter (JUP) Price Prediction 2030 | \$5.5 | \$0.08 | Conclusion If Jupiter (JUP) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish Jupiter (JUP) price prediction for 2025 is \$0.8522. Comparatively, if an unfavorable sentiment is triggered, the bearish Jupiter (JUP) price prediction for 2025 is \$0.3054. If the market momentum and investors' sentiment elevate positively, Jupiter (JUP) might hit \$3. Furthermore, with future upgrades and advancements in the JUP ecosystem, JUP might surpass its current all-time high (ATH) of \$2.04 and mark its new ATH. FAQ 1. What is Jupiter (JUP)? Jupiter is a liquidity aggregator for the Solana blockchain, facilitating seamless token trading and route discovery across decentralized exchange (DEX) markets and automated market maker (AMM) pools. 2. Where can you buy Jupiter (JUP)? Traders can trade Jupiter (JUP) in the following cryptocurrency exchanges such as Binance, OKX, Bybit, Bitget, and LBank 3. Will Jupiter (JUP) record a new ATH soon? With the ongoing developments and upgrades within the Jupiter platform, Jupiter (JUP) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Jupiter (JUP)? Jupiter (JUP) hit its current all-time high (ATH) of \$2.04 on January 31, 2024. 5. What is the lowest price of Jupiter (JUP)? According to CoinMarketCap, JUP hit its all-time low (ATL) of \$0.4164 on April 01, 2025. 6. Will Jupiter (JUP) hit \$3? If Jupiter (JUP) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$3 soon. 7. What will be the Jupiter (JUP) price by 2026? Jupiter (JUP) price might reach \$3.5 by 2026. 8. What will be the Jupiter (JUP) price by 2027? Jupiter (JUP) price might reach \$4 by 2027. 9. What will be the Jupiter (JUP) price by 2028? Jupiter (JUP) price might reach \$4.5 by 2028. 10. What will be the Jupiter (JUP) price by 2029? Jupiter (JUP) price might reach \$5 by 2029. - Sei Foundation revealed its plans to acquire 23andMe on a mission to protect the genetic data of millions of US users. - 23andMe raised concerns across the US after announcing its bankruptcy. Data sovereignty has always been the biggest concern in today's modern age. Blockchain technology is playing its part in giving control back to the rightful owners, who are users. Users can retain full control over their assets and data on the blockchain, which is impossible with centralized entities. Sei Foundation is promising to bring data sovereignty of genetic information by leveraging its blockchain platform. It made waves in the crypto industry last week on March 27 with its bold announcement of the 23andMe acquisition. Its announcement read, "We believe user data sovereignty is a matter of national security. When an American biotech pioneer faces bankruptcy, personal genomic data of millions becomes vulnerable to parties that may not share the same values of transparency and open access." What's Happening With 23andMe? 23andMe is a seasoned direct-to-consumer genetics company that offers DNA testing kits to its customers. Since its inception in 2006, the company has helped millions of US customers find out their ancestry, health traits, and genetic risks. Approximately 15 million users' sensitive personal data is in the hands of the 23andMe company. The company caused widespread fear across the country when it announced bankruptcy on March 23. Users panicked that their data would fall into the wrong hands after its bankruptcy announcement. The fact that its website traffic increased by 526% on the day of its bankruptcy filing announcement is noteworthy. While some experts believe this is the beginning of a much bigger problem we are yet to face, others say putting the genetic data of users on sale is a security disaster. Can Sei Deliver Its Promise of Data Sovereignty? Sei Foundation believes that 23andMe's data falling into the wrong hands could lead to more complications. It also assured US users that it would return DNA data to users. The blockchain platform compares sovereign ownership of financial assets with "Sovereign Genome." It promised to make the health of the US people survive on blockchain. Sei has also promised to give complete rights of their genetic data to users and give power to take back their consent at any time. It reminded the capabilities of blockchain and calls users to embrace this innovative technology. Blockchain technology is known for its immutable and secure nature. But several blockchain hacks have succeeded in stealing financial assets from the robust blockchain networks. The recent Bybit hack is an example of how sophisticated hackers are stealing and laundering funds on-chain. Blockchain bridges are still vulnerable to hacks, even though blockchain technology is secure. The idea of bringing genetic data on-chain seems exciting and promising. However, we cannot say for sure that it is the best possible idea to protect the DNA data of millions of US users. Highlighted Crypto News Today: Top Analyst Shares Timeline for XRP to Reclaim Its All-Time High

The crypto market is going through another rough patch, and XRP is taking the biggest hit among the top 10 cryptocurrencies. According to CoinGecko, XRP has dropped by 4.5% in the last 24 hours, now trading at \$2.09 after hitting a low of \$2.08. This makes it the worst performer among the top 10, even worse than Cardano (ADA), which fell 4.4%. XRP is getting close to an important support level at \$2.00, a price it hasn't fallen below since May 11. Over the past week, XRP has dropped by 14%, making it the worst-performing crypto among the top 20. In comparison, Bitcoin (BTC) is down 5.5%, while Ethereum (ETH) and Solana (SOL) have dropped 11.6% and 9% respectively. Ripple's SEC Victory Didn't Help XRP Price On March 19, Ripple CEO Brad Garlinghouse announced that the legal battle with the U.S. Securities and Exchange Commission (SEC) had ended. Initially, this pushed XRP's price up to \$2.6, but the excitement didn't last. Since then, the price has dropped by about 20%, showing a "sell-the-news" effect where traders sell after big news events. Even last week's final confirmation of the lawsuit's closure didn't help XRP's price recover. A major reason for XRP's price drop is the large number of coins being sold by whales (big investors). Reports show that whales have sold 1.12 billion XRP, worth about \$2.3 billion, in just two days. This massive sell-off, equal to about 2% of XRP's total market value, has pushed the price down even further. Technical Indicators Show More Downside Risk Looking at the charts, XRP is struggling to move higher. A downward trend has formed, with resistance at \$2.148. If XRP can't break above \$2.15, it may continue falling. The next key support levels are \$2.08 and \$2.05, with \$2.00 being a critical price level to watch. If XRP falls below \$2.00, the next major support is around \$1.88. On the other hand, if it rises above \$2.20, it could aim for \$2.25 or \$2.28. XRP isn't the only asset struggling. Global financial markets are also facing pressure due to rising trade tensions. Japan's Nikkei index recently dropped more than 4%, and these economic concerns are affecting crypto prices as well. Another issue for XRP is that fewer people are searching for it online. Google Trends data shows that XRP's search interest has hit its lowest level of 2025, despite Ripple winning its lawsuit. This suggests that the hype around XRP is fading. What's Next for XRP price? XRP is at a critical point, and the next few days will determine if it holds above \$2.00 or continues to drop. A potential game-changer could be the approval of an XRP exchange-traded fund (ETF) later this year, which could bring fresh interest and demand. Highlighted Crypto News Today South Korean crypto scammer jailed for \$460,000 Crypto Fraud

Jupiter, Nosana and Wormhole join a legion of projects looking to leverage Arcium's architecture to unlock the possibilities of encrypted computation. Arcium, an encrypted supercomputer that brings a trustless, verifiable, and efficient framework to run encrypted computations, has launched the Encrypted Ecosystem's network of projects exploring its technology to accelerate encrypted computation and unlock new possibilities in a data-driven world. Arcium is expanding its infrastructure to support new blockchain architectures and traditional enterprises, making privacy-focused solutions more accessible across industries. Arcium's encrypted infrastructure is designed for broad adoption, supporting both blockchain architectures and traditional enterprises. Its modular, scalable, and blockchain-agnostic design makes it adaptable to a wide range of industries, enabling businesses to unlock value from private data without compromising security. The Encrypted Ecosystem highlights this versatility, with over 25 projects exploring Arcium's technology across eight key sectors: - DeFi: Jupiter, DarkLake, JupNet, Ranger, Titan, Asgard, Tower, Orca, and Voltr - AI: Assisterr, Charka, io.net, Nosana, AlphaNeural, and SendAI. - Consumer Applications: Cudis, dReader, Send Arcade, Solana ID, and Chomp - Payments: Squads, Sphere, and Iron - Interoperability: Wormhole and Union - DePIN: Spacecoin - Gaming: Send Arcade - NFTs: Metaplex From onchain applications to off-chain implementations, Arcium leads the way in decentralized privacy and secure computation for both blockchain and traditional business applications. While chain-agnostic by design, Arcium is launching first on Solana, bringing encrypted capabilities to the ecosystem. Yannik Schrade, CEO and Co-Founder of Arcium, said: "We have always believed in the transformative potential of what we have built with Arcium, and establishing the Encrypted Ecosystem cements that as truth. Revolutionary infrastructure lays the foundation, but its true impact is realized when builders bring it to life. Arcium's encrypted infrastructure enables use cases that were historically impossible, unlocking a new design space for applications and innovative ways to utilize private data. Seeing so many projects joining the encrypted computing revolution with us reminds me of the importance of the work we are doing at Arcium." For more information about the Encrypted Ecosystem, please visit Arcium's blog post. About Arcium: Arcium, is an encrypted supercomputer that brings a trustless, verifiable, and efficient framework to run encrypted computations. Founded in 2022, Arcium provides developers, applications and entire industries with a trustless, verifiable, and efficient framework to run encrypted computations. With Arcium, the internet can use data to its full extent in an entirely encrypted state. Backed by investors such as Greenfield Capital, Coinbase Ventures, Heartcore Capital, Longhash VC, L2 Iterative Ventures and Anagram Arcium's goal is to allow the entire internet to run on encryption. - Japan's FSA plans to classify crypto as financial products by 2026. - Japan had 7.34 million active crypto trading accounts as of January 2025. The Financial Services Agency (FSA) of Japan is about to classify crypto assets as financial products. With this action, insider trading will be regulated, and investors will be given more protection. As a Nikkei report states, the FSA will submit these legislative amendments to the parliament by 2026. The amendments in question are the ones that intend to modify the Financial Instruments and Exchange Act. The division for crypto assets is not going to treat them as securities but give them investment features. Such news can make new rules related to it being susceptible to regulations similar to those of the current financial markets regarding insider trading. Japan Tightens Crypto Rules and Tax Policies Presently, Japan considers bitcoin and other cryptocurrencies as mere settlement methods and subjects them to the Payment Services Act. But even exchanges as well as all solicitors of crypto investments will be required to register with regulators. FSA would want to apply the rulings to firms providing services to local citizens irrespective of their location beyond Japan. The perception increased in terms of crypto scams, which has made them tighten. Last month, the FSA called upon Apple and Google to take down five "non-registered" overseas crypto exchanges from their app stores. The implementation of new rules might enact stricter requirements on crypto service providers to contravene fraudulent activities. Reclassification might also end up affecting taxation; currently, crypto investments can be taxed at rates as high as 55%, while financial instruments such as ETFs are taxed only at rates of 20%. Such a match would lower the crypto tax rates, which could lure more institutional investors. Japan has been extending its coverage on crypto regulation and at the same time promoting the adoption of it. Recently, lawmakers urged that they create a National Bitcoin Reserve. According to January 2025 records, Japan had about 7.34 million active accounts for cryptocurrency trading. Highlighted Crypto News Pumpswap DEX Nears \$2.5 Billion Trading Volume in Just 10 Days as Solana

- Metaplanet issued \$2B in 0% bonds, fully allocated to EVO FUND, to acquire more Bitcoin. - Bitcoin holdings reached 3,350 BTC after a March purchase of 150 BTC at \$12.57M (\$80K) per BTC. Metaplanet has launched its 10th Series of Ordinary Bonds in the amount of \$2 billion (\$13.33 million) to boost its Bitcoin holdings. The company submitted the details of the issuance on March 31, which states that the bonds are due on September 30, 2025. The company said that the issuance will not attract any interest and that the funds raised from the same will be used to buy more BTC. EVO FUND received the full allocation of this bond issuance, reinforcing the firm's Bitcoin acquisition strategy. This development follows Metaplanet's continued efforts to strengthen its balance sheet with more Bitcoin reserves. The company previously announced it would rely on structured bond sales to increase its BTC exposure over time. Company Adds 150 BTC in March, Holdings Reach 3,350 BTC On March 24, Metaplanet added 150 Bitcoin to its corporate treasury at an average price of \$12.57 million per BTC. At current exchange rates, this places the average cost per Bitcoin at approximately \$80,000. The new purchase raised the company's total holdings to 3,350 BTC. Metaplanet has now spent \$442.22 billion (\$270 million) on Bitcoin since it formally adopted it as a key asset in 2024. This makes the firm the biggest Bitcoin staker in the Asian market by volume. The financial reports show stability in the company's buying habits, which shows that it has been accumulating Bitcoins in the long term. In Q4 2024, Bitcoin Yield increased by 309.8% which signifies its exponential growth to outstanding shares. In Q1 2025, the metric currently stands at 68.3%, showing steady performance. The Bitcoin Yield metric is a key measurement the firm uses to assess BTC growth in relation to its equity structure. These figures indicate how quickly the company is expanding its Bitcoin base without diluting shareholder positions excessively. Leadership Team Expands as Strategic Planning Intensifies As reported by NewsCrypto earlier, on March 21, Metaplanet announced the appointment of Eric Trump to its newly formed advisory board. The company said the new board will include experienced voices focused on Bitcoin-related business development. Trump brings experience in real estate and finance and will support ongoing treasury strategies. Simon Gerovich notes that the advisory board will provide support toward a strategic Bitcoin position path. The firm plans to use the board to guide efforts toward expanding BTC reserves while maintaining corporate stability. Metaplanet intends to reach 10,000 BTC in holdings by the end of 2025. The target for 2026 stands at 21,000 BTC. Although it has not tabled out a clear plan of action, it is still obtaining BTC through working with bond financing strategies. Following the implementation of this strategy, the company's stock has increased by over 3,000%, pointing towards commendable BTC index response. Highlighted Crypto News Pumpswap DEX Nears \$2.5 Billion Trading Volume in Just 10 Days as Solana Market Shifts

MahA, Seychelles, March 31st, 2025, Chainwire Asterus, a multi-asset liquidity hub backed by YZi Labs (formerly Binance Labs), today announces its official rebrand to Aster, marking a significant strategic shift toward becoming the leading decentralized perpetuals exchange (perps DEX). The rebrand also introduces Aster's future token ticker \$AST, which will replace the current \$APX token. This follows the earlier merger between Asterus and decentralized perp protocol APX Finance. APX and Asterus have collectively processed over \$258 billion in decentralized perpetual trading volume to date. Building on this foundation, Aster introduces two seamless trading modes: - Simple Mode: On-chain, one-click, MEV-resistant perpetual trading - Pro Mode: Advanced order book interface with deep liquidity, extremely low trading fees, and advanced trading tools Aster is now strategically positioned to challenge industry leaders like Hyperliquid, with a roadmap that includes the integration of zero-knowledge proofs, a purpose-built Layer 1 blockchain, and intent-based architecture to simplify the DeFi trading experience. "The rebrand is central to our ambition of leading the DeFi perps market. Our strategic focus on perpetual trading will also ensure Aster's long-term sustainability," said Dust, a Core Contributor of Aster. "Our roots in APX and YZi Labs gave us a strong foundation in both trading infrastructure and yield strategies. Aster will continue to prioritize top-tier user experience, liquidity, and security." In line with its rebrand, Aster has significantly upgraded its platform, including: - A fully redesigned homepage reflecting its new identity - Enhanced trading UI and UX with seamless switching between modes - New fee structure: Maker 0.01%, Taker 0.035% - Deep liquidity provided in partnership with top-tier market makers - A referral program offering 20% commission, with a tiered system in the works - Rh Points Program, launching within the next 2 weeks, where traders earn points redeemable for future airdrops - Welcome all traders to try the platform just like CZ did "with a special \$10,000 trading campaign targeting users from other leading perp DEXs In the long term, Aster is building toward the launch of its own Layer 1 blockchain, optimized for trading performance, and will introduce Aster-native blockchain explorers to bring transparency and insight to on-chain trading activity. As part of the rebrand, Aster is introducing a new token ticker, \$AST, to represent the platform's evolving identity. While the token listing is planned for the future, Aster's top priority is building world-class product infrastructure. \$AST will play a central role in the ecosystem once the foundation is in place. Aster will continue to support Asterus' popular yield products under Aster Earn, including the BNB liquid staking derivative asBNB and yield-bearing stablecoin USDF. Further ecosystem partnerships, airdrop details, and token mapping timelines will be announced in the coming weeks and months. About Aster Aster is a next-generation decentralized perpetual exchange built for everyone. It offers MEV-free, one-click trading with up to 1001x leverage in Simple Mode (BNB Chain, Arbitrum), and full-featured, pro-grade tools in Pro Mode (BNB Chain, Ethereum, Solana). Backed by YZi Labs, Aster is building the future of DeFi: fast, flexible, and community-first. Multi-chain. Liquid. Secure. Users can learn more at <https://asterdex.com>, or connect with the team on the official X account Contact Marketing Lead Kathy Aster [Kathy@asterus.com](mailto:Kathy@asterus.com)

- California's AB-1052 bill secures crypto self-custody rights and prohibits payment-based restrictions. - The bill introduces legal handling for unclaimed digital assets and separates politics from crypto activity. California has taken legislative steps to protect digital asset rights, introducing a bill that supports self-custody, blocks discrimination on crypto usage, and addresses unclaimed property in the digital space. The bill, titled AB-1052, seeks to establish a legal foundation for digital assets in the state, with provisions that could affect nearly 40 million residents. In a recent post on X, the nonprofit advocacy group Satoshi Action Fund confirmed that California Assemblymember Avelino Valencia introduced the AB-1052 bill. The legislation was filed earlier as the "Money Transmission Act" on February 20, 2025. However, it was amended on March 28 and renamed "Digital Assets" to incorporate self-custody protections and regulatory clarity. Valencia chairs the Banking and Finance Committee, which governs financial services regulation in California. The bill is currently being processed at the desk and is awaiting its first reading. Bill AB-1052 Enters Legislative Process with Payment Protection Measures AB-1052 affirms the right of individuals to self-custody Bitcoin and other digital assets without restrictions. It blocks public agencies from imposing taxes or discriminatory regulations based solely on the use of digital assets in payments. The bill also acknowledges the use of digital assets as legitimate legal tender in private transactions. The introduced bill is aimed at protecting digital assets without tough penalties. Another part of the bill introduces a structure of abandoned assets. According to this part, the responsibility of the licensed individuals is to prevent confusion. In addition, the bill includes language that prohibits public officials from promoting any cryptocurrency, security, or commodity. This move modifies California's existing Political Reform Act of 1974, creating separation between public duties and digital asset activities. One section reads that public officials shall not engage in transactions involving digital assets that could cause a conflict of interest. USA-Related Bitcoin Push Activity Revealed According to a recent update by BTC Maps, a total of 1035 US locations accept Bitcoin payments. Ripple Labs, Solana Labs, and Kraken are key digital asset firms headquartered in the state. In addition, California legislators introduced a separate stablecoin bill on February 2, 2025. It addresses collateral, liquidation, redemption, and audit requirements for stablecoins. Tracking Bitcoin-related bills, 95 of them have already been filed in 35 different states. Just recently, Texas and Kentucky have already passed Bitcoin reserve and right bills. This development follows a recent executive order signed by President-elect Donald Trump, commissioning the formation of a Strategic Bitcoin Reserve (SBR). Highlighted Crypto News

- Aave (AAVE) is currently trading at \$164.90, down 6.36% in 24 hours. - RSI at 33.00, indicating oversold conditions; CMF at -0.30, signaling weak buying pressure. Aave (AAVE) is currently trading at \$164.90, marking a 6.36% drop in the last 24 hours. The market cap stands at \$2.48 billion, reflecting a 6.37% decline. The 24-hour trading volume is \$210.37 million, down by 19.21%. The market cap ratio is 0.1402, indicating an undervaluation compared to its locked assets. Will Aave Rebound or Drop Further? AAVE faces resistance at \$168 and support at \$160. If the price drops below \$160, it could test \$155 or lower. A break above resistance may push the price toward \$172-\$175. The Relative Strength Index (RSI) is

33.00, indicating that AAVE is in the oversold zone. The RSI moving average stands at 37.94, showing weak momentum. If RSI climbs above 40, it could hint at a recovery. A drop below 30 may signal more downside pressure. The Chaikin Money Flow (CMF) is at -0.30, suggesting capital outflow from AAVE. A negative CMF often indicates weak buying pressure. If it turns positive, it may reflect a shift in market sentiment. Recent candlestick formations show multiple bearish red candles, confirming a downtrend. The market has seen lower highs and lower lows, reinforcing selling pressure. Buyers must push the price above resistance to shift momentum. AAVE's short-term moving average is trending below the long-term moving average, confirming a bearish outlook. The price must sustain above key levels for a trend reversal. AAVE remains in a downward trend, with indicators signaling weakness. If buying pressure increases, the price could rebound from support levels. However, if sellers dominate, it may slide further. Traders should monitor RSI, CMF, and price action for confirmation of the next move. Highlighted Crypto News Today Vitalik Buterin's 'Meow' at Robot Sparks Crypto Speculation Amid Ether's Price Decline

- FTX will repay major creditors on May 30 using \$11.4B in cash. - Repayments are based on November 2022 asset values, not current prices. FTX will begin repaying its major creditors on May 30, marking a key step in the prolonged bankruptcy process. The collapsed crypto exchange has amassed \$11.4 billion in cash for repayments. However, the payments will follow valuations from the bankruptcy petition date of November 11, 2022, creating a stark contrast with current asset prices. Bitcoin, now worth five times its 2022 value, highlights the issue. Other tokens like Solana and XRP have surged by 650% and 450%, respectively. Ethereum has also gained 47%. Despite FTX estimating a 118% payout per claim, many creditors feel shortchanged due to this outdated valuation method. FTX's bankruptcy attorney, Andrew Dietderich, emphasized the challenge of sorting through claims. He noted that the company faces \$27 quintillion claims, many of which are fraudulent or duplicated. Bloomberg reported that FTX is prioritizing legitimate creditors while filtering out invalid claims. Smaller creditors, holding claims under \$50,000, have already begun receiving repayments. However, major creditors, including institutional investors and firms, will have to wait. The repayment process may take months due to the high volume of claims and the need to verify legitimacy. Ongoing Creditor Frustrations Creditors will earn a 9% annual interest rate on their claims while waiting for repayment. This creates pressure for FTX to expedite the process, as the accumulated interest increases the total payout. Meanwhile, FTX's cash reserves generate lower returns, further adding to financial concerns. The bankruptcy, filed in November 2022, left thousands of creditors uncertain about their recoveries. Many expected repayments in crypto rather than cash. With Bitcoin's four times higher price, frustration among claimants has grown. FTX secured court approval for its payout plan in October 2023. However, claim processing complexities have delayed the disbursement. The upcoming repayments will bring some closure, though many creditors remain dissatisfied. Highlighted Crypto News Today Is Sonic (S) Headed for More Losses After an 11% Drop?

Early positioning of investors will pay off as the cryptocurrency market prepares for a spectacular 2025. While Bitcoin and Ethereum still dominate headlines, the profits are well-chosen coins ready for explosive expansion. Strong ecosystems, creative technologies, and growing acceptance might cause valuations to expand quickly, transforming small investments into life-changing amounts. For those looking to turn \$1,400 into \$140,000, six standout cryptos should be on every investor's radar this week: Rexas Finance (RXS), Pudgy Penguins (PENGU), Tron (TRX), SEI, Cronos (CRO) and PYTH. Each of these projects is building innovative solutions that could reward early adopters in a big way. Rexas Finance (RXS) is 'The Future of Tokenization' Rexas Finance offers among the most exciting prospects in the field right now. Already showing promise, its growth from a presale price of \$0.03 to \$0.20 yields a 6.67x return before even approaching significant exchanges. The demand is clear: over 456.4 million tokens were sold, over \$47.2 million raised, and the last presale stage was 91.30% filled. Rexas Finance stands out, among other things, for its innovative emphasis on Real-World Asset (RWA) tokenization. By digitizing tangible assets, including real estate, commodities, and financial instruments, RXS closes the distance between conventional finance and decentralized technology. Most cryptocurrencies still ignore this ability, opening access to a multi-trillion-dollar industry. By doing this, Rexas Finance offers actual, practical value—a crucial component that can propel its value to \$18 or beyond. Rexas Finance, scheduled for launch on June 19, 2025, with an expected listing price of \$0.25, is attracting interest because of its great emphasis on actual asset tokenization. It is a top choice for investors looking for high multiple returns, as connecting traditional finance with blockchain is laying the path for long-term adoption. Pudgy Penguins (PENGU): From NFTs to Global Adoption Originally generating waves as a well-known NFT collection, Pudgy Penguins has developed into a multifarious ecosystem. Currently priced at \$0.0059, the project blends creative use cases in DeFi and gaming with its community-driven ethos. PENGU's commitment to developing metaverse alliances and cultivating a devoted following has helped it acquire popularity. As the NFT and blockchain gaming sectors expand, Pudgy Penguins could rocket past its present value, competing with meme tokens like Shiba Inu (SHIB) in popularity while offering superior returns. Tron (TRX): A Blockchain Giant Still Undervalued Tron is a blockchain tool that facilitates entertainment content and decentralized apps. Its market capitalization is \$21.1 billion, trading at \$0.22. A technical study shows a neutral short-term view for TRX, with a possible breakout should it exceed the resistance level of \$0.25. Tron's emphasis on decentralized entertainment and content creation helps it occupy an expanding area of the cryptocurrency market. SEI: The High-Performance DeFi Solution SEI is creating waves as a next-generation Layer 1 blockchain for fast decentralized applications. Priced at \$0.18 with a market capitalization of \$854.9 million, SEI provides scalability and efficiency that compete with more established platforms such as Ethereum (ETH) and Solana (SOL). Developers and investors love the platform because it emphasizes increasingly important institutional-grade DeFi apps. The next wave of blockchain adoption will depend much on SEI's unique approach to order-matching and liquidity provisioning. Cronos (CRO): The DeFi and NFT Powerhouse Cronos is the native token of the EVM-compatible Blockchain Network created by Crypto.com. With a market capitalization of \$2.1 billion, CRO is trading at \$0.07. With support levels at \$0.05 and \$0.03, the technical study shows a positive trend for CRO in the near term. The ease with which Cronos Chain fits the Ethereum Virtual Machine (EVM) lets developers migrate distributed apps from Ethereum, fostering adoption and expansion. PYTH Network (PYTH): The Future of Oracle Solutions The decentralized Oracle network PYTH offers blockchain applications with real-time financial data. With a market capitalization of \$502.4 million, PYTH is trading at \$0.14. A technical study points to a neutral short-term view of PYTH, with an upward trend should it surpass the resistance level of \$0.49. PYTH's role in giving DeFi apps consistent data sets makes it a vital infrastructure component in the distributed finance ecosystem. Final Thoughts The crypto industry is moving into a phase where carefully chosen investments could have transformative effects. Those who commit \$1,400 to these six initiatives and hold them through 2025 could see above-average returns. Strong foundations, creative uses, and rising acceptance make these cryptocurrencies the best way to transform a small portfolio into a six-figure fortune. - The SEC cleared Hailey Welch of any charges in the SHAWK token investigation. - The SHAWK token hit a \$490M market cap before crashing by 95% in minutes. The U.S. Securities and Exchange Commission (SEC) has closed its investigation into Hailey Welch, popularly known as the 'Hawk Tuah Girl.' The SEC found no evidence of wrongdoing related to the SHAWK meme coin collapse. Welch will not face any charges or monetary sanctions. The SHAWK token, launched on the Solana blockchain, surged to a \$490 million market cap before crashing by 95% within minutes. Investors accused the project of being a pump-and-dump scheme. However, the SEC clarified that meme coins do not qualify as securities, limiting its jurisdiction over such assets. SEC's Decision and Expert Opinions Welch confirmed the SEC's decision in a statement. 'The investigation is closed, and I will not face any charges,' she said. Her attorney, James Sallah, reiterated that no sanctions or restrictions were imposed on her future involvement in crypto. Former SEC lawyer Marc Fagel stated that the SEC's closure of the case does not mean it found 'no wrongdoing.' Instead, the agency determined it lacked jurisdiction. Legal expert James Murphy added that fraud cases, if any, could fall under criminal or state-level investigations. Although Welch avoided SEC penalties, investors have filed a class-action lawsuit against the token's creators. The lawsuit names OverHere Ltd., its founder Clinton So, influencer Alex Larson Schultz, and the 'Hawk Tuah the Moon Foundation.' Plaintiffs allege unlawful promotion and sale of unregistered securities. Welch gained internet fame in mid-2024 after a viral street interview. Her sudden popularity led to the launch of the SHAWK meme coin. The token initially soared in value but collapsed soon after, leaving many investors with losses. Following the SEC's decision, SHAWK's price spiked 25% on the Meteora decentralized exchange. The token now has a market cap of \$4 million and a 24-hour trading volume of \$333,000. Highlighted Crypto News Today April 2 Trump Tariffs Crash Stocks and Crypto, Markets Bleed

- Brianna Stern sues Andrew Tate for assault at the Beverly Hills Hotel. - Tate's legal team calls the lawsuit a 'blatant cash grab.' - SISTER meme coin surges 12% amid the controversy. Popular model and crypto influencer Brianna Stern has brought a civil suit against divisive social media personality Andrew Tate for allegedly assaulting her at the Beverly Hills Hotel on March 11. The charges have set off a big stir in both the crypto and entertainment worlds, but Solana-based meme token SISTER's whose owner is linked to Stern has recorded an unusual 5.4% price jump over the last week. Stern's Accusations Stern went on social media to post her accusations, claiming that she first met Tate for a modeling shoot for his meme coin, DADDY. Stern claimed that Tate had also offered to promote her own meme coin, SISTER. But Stern also accuses that their relationship turned sour when the consensual encounter became violent. According to her, Tate verbally, physically, and psychologically abused her. She also claimed that after the alleged assault, she went for medical attention in New York, where she was diagnosed with Post-Concussion Syndrome, a sign of possible traumatic brain injury. Legal Proceedings and Tate's Response The suit, allegedly brought in Los Angeles, charges Tate with sexual assault, battery, and gender violence. To date, though, a digital copy of the case hasn't turned up in public records. Stern has Buzbee Law on his side, a firm that specializes in representing high-profile clients, including those against music tycoon Sean 'Diddy' Combs. Tate has not yet issued a personal statement, but his attorneys at McBride Law have termed the lawsuit a 'blatant cash grab' and an attempt to take advantage of their client. Crypto Market Reaction In spite of the scandal, SISTER has seen a significant price appreciation. In the last 14 days, the token has appreciated by more than 12%, with a market cap of \$370,000 and 550 holders, based on GeckoTerminal statistics. This surprise rally indicates that the publicity around Stern's accusations might have inadvertently increased investor interest in her project. As the lawsuit proceeds, the cryptocurrency community remains in disarray, with some standing behind Stern and others defending Tate. The weeks ahead will provide insight into the legal and market implications of this widely publicized case. Highlighted Crypto News Today XRP Price Glitch To \$21,000 on Live TV Sparks Community Buzz

- A live TV broadcast mistakenly showed XRP surging to \$21,355, a 961,936% spike. - Other assets, including Bitcoin and Ethereum, also displayed a surge in prices. - This continues a long history of XRP price glitches, fueling speculation within the community. The XRP community is once again buzzing after a price glitch on live American television showed the asset soaring to \$21,355, a 961,936% increase from its actual market value of \$2.22. The anomaly appeared during a cryptocurrency market segment on American Sunrise Early Edition, a show on cable news channel Real America's Voice, hosted by Jake Novak. Is the XRP incident a widespread price glitch? The glitch persisted throughout the segment, causing confusion as XRP's price fluctuated between \$2.22 and \$21,355 on the display. While Bitcoin (BTC) also showed a dramatic price variation—falling to \$43,636 from its real value of \$86,246—Novak only acknowledged BTC's anomaly, ignoring the XRP issue. Other assets also experienced bizarre price distortions: - Ethereum (ETH) jumped from \$2,345 to \$6,000 (+156%). - Solana (SOL) surged from \$139 to \$2,896 (+1,983%). - Dogecoin (DOGE) skyrocketed from \$0.22 to \$32 (+15,900%). - Cardano (ADA) spiked from \$0.67 to \$69 (+10,198%). Despite the widespread impact of this latest glitch, XRP's price increase was by far the most extreme. Many in the XRP community believe these recurring glitches hint at deeper market manipulation or hidden valuation metrics. Skeptics, however, argue that similar glitches have affected multiple assets over the years, dismissing claims of the coin being uniquely undervalued. Whether this latest incident is another technical mishap or something more remains a topic of debate within the Ripple coin community.

Crypto market is constantly evolving, with innovative projects rising to venture mounted gamers. Ethereum (ETH) and Chainlink (LINK) have long been dominant in their respective areas—Ethereum because the leading smart contract platform and Chainlink because the go-to decentralized oracle network. However, a new AI-powered crypto, Ozak AI (OZAK), is gaining momentum, with a few analysts predicting a capability 300x surge. Could Ozak AI outperform these giants within the next bull run? Ethereum's Strengths and Challenges Ethereum remains the spine of decentralized applications (dApps), smart contracts, and DeFi. Its huge adoption has brought about large institutional interest and non-stop network enhancements, including

Ethereum 2.0 and the transition to proof-of-stake (PoS). However, Ethereum faces numerous demanding situations. High transaction prices and network congestion have led developers and customers to explore options like Solana, Avalanche, and Layer-2 solutions. While Ethereum's long-term potential stays strong, its ability to maintain dominance relies upon scalability upgrades and persevered innovation. Chainlink's Critical Role in DeFi Chainlink has mounted itself as the leading decentralized oracle company, securing billions in DeFi smart contracts. It performs a vital function in connecting real-world information with blockchain applications, allowing steady price feeds, smart contracts, and automation across more than one networks. Despite its utility, LINK's price growth has been slow compared to a few more modern crypto initiatives. Competition from emerging oracle solutions and evolving blockchain architectures could restrict its long-term upside. While Chainlink will likely remain a crucial part of the crypto surroundings, its boom potential may not suit that of AI-driven projects. Why Analysts Are Bullish on Ozak AI Ozak AI is an AI-powered blockchain project that merges predictive analytics, machine learning, and decentralized community innovation. Unlike Ethereum and Chainlink, which typically focus on smart contracts and oracles, Ozak AI is designed to transform monetary markets with real-time AI-pushed insights. In addition, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. Some key advantages of Ozak AI include: AI-Powered Market Predictions: The platform offers real-time, actionable insights for traders and buyers, making it a game-changer in the financial sector. Scalability and Efficiency: Ozak AI leverages Decentralized Physical Infrastructure Networks (DePIN) and Ozak Stream Network (OSN), ensuring rapid, stable, and cost-efficient transactions. Customizable Prediction Agents: Users can create tailored AI models to shape their funding techniques, supplying a degree of flexibility that Ethereum and Chainlink currently lack. Ozak AI's low initial market cap in comparison to Ethereum and Chainlink makes it a high-upside investment. If AI-pushed crypto adoption quickens, Ozak AI may want to attain a 300x surge faster than those established projects. Could Ozak AI Outperform Ethereum and Chainlink? Ethereum and Chainlink are well-mounted and unlikely to be replaced in their respective fields. However, Ozak AI operates in a special area of interest, targeting AI integration with blockchain's a zone that is swiftly expanding. If AI-powered blockchain initiatives continue gaining traction, Ozak AI should see exponential growth that outpaces Ethereum and Chainlink in percentage profits. While ETH and LINK may nevertheless respect appreciably, Ozak AI's early-level positioning and AI-driven approach give it the capability for a way more upside. For crypto enthusiasts seeking out high-reward opportunities, Ozak AI affords one of the maximum exciting prospects in the AI-crypto sector. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. - The SEC dismissed enforcement actions against Kraken, ConsenSys, and Cumberland DRW with prejudice. - Crypto.com also confirmed the SEC dropped its investigation without penalties. The U.S. Securities and Exchange Commission has officially dismissed enforcement actions against Kraken, ConsenSys, and Cumberland DRW LLC. On March 27, the agency filed joint ASA stipulations for dismissal with prejudice regarding the cases. This means that the case cannot be refilled, which indicates a major regulatory shift. The SEC explained that the termination is part of a broader policy shift under its overall crypto strategy. The agency argued, however, that such dismissals would not be based on the merits of the claims but rather on facilitating other regulatory approaches to crypto. According to Acting SEC Chairman Mark T. Uyeda, such a move will not affect other cases under consideration. It is these dismissals that emulate other cases that were dropped from being prosecuted against Coinbase, Robinhood, OpenSea, and Uniswap Labs. Many criticized the previous SEC administration for its relentless stance against crypto agriculture. Kraken was charged in November 2023 with operating an unregistered exchange, broker, dealer, and clearing agency. In June 2024, the SEC accused ConsenSys of offering and selling unregistered securities through MetaMask Staking. The SEC sued Cumberland DRW in October 2024 for acting as an unregistered dealer and flagged over \$2 billion in crypto transactions. Crypto.com Case Also Dropped Crypto.com also revealed that the SEC dropped its investigation and took no action. The company had first received a Wells Notice. Chief Legal Officer Nick Lundgren criticized the past SEC administration for what he calls overreach of its regulatory authority. Ripple CEO Brad Garlinghouse has revealed that the SEC has ditched its appeal in the age-old Ripple case. Meanwhile, the XRP holders, dubbed the "XRP Army," have complained about the delay in formally calling the case closed. Highlighted Crypto News Today SUI Hits \$2.47 as EMA Level Looms: Could This Lead to a Major Price Move?

- BlackRock posted four new high-level role job openings related to digital assets on its website. - BlackRock's tokenized BUIDL fund recently surpassed \$1.8 billion. Global asset manager BlackRock plans to expand its digital asset team as its tokenized fund witnessed exceptional growth. The careers portal of the BlackRock website shows four new roles related to digital assets. It is clear that a major traditional asset manager like BlackRock is going big on digital assets. As per the BlackRock website, the company is looking to hire individuals for various digital asset roles. The following are the aforementioned four roles, - Director, digital assets - Associate, digital assets - Director, Regulatory Affairs, Digital Assets - Vice President, Digital Assets and ETF Legal Counsel Three of the roles are based in New York while one of them is based in Atlanta. Even though the asset manager gave a clear description of the roles, they do not give any hints about BlackRock's plans for digital assets. One of the roles, Legal Counsel for ETFs, is noteworthy because BlackRock issued two major digital asset ETFs, such as iShares Bitcoin Trust and iShares Ethereum Trust. BlackRock BUIDL Tokenized Fund Surpassed \$1.87B, Tripled in Three Weeks Meanwhile, BlackRock's BUIDL tokenized fund TVL has been making headlines for its new record, as per Token Terminal. It skyrocketed in the past three weeks and rose from the low of \$667 million on March 3 to \$1.876 billion on March 24. This significant rise in the BUIDL tokenized fund is garnering attention across the industry. With a massive 400% rise in its TVL in less than a month, the BUIDL tokenized fund is circling across the crypto community. A major traditional asset manager such as BlackRock making this record on digital assets is a positive sign for the crypto industry. BlackRock is gradually expanding its blockchain ecosystem following the BUIDL record. It is expanding its blockchain-based money market to the Solana blockchain, as per the latest reports. Recently, BlackRock also launched Bitcoin ETP in Europe. All these moves reflect asset manager's commitment to digital asset ecosystem. Highlighted Crypto News Today:

MEXC, a leading cryptocurrency exchange, has officially announced that its innovative product, DEX+, now supports Binance Smart Chain. This milestone advances MEXC's efforts to connect centralized finance (CeFi) with decentralized finance (DeFi) through multi-chain trading, offering users low-cost, high-potential investment opportunities in the BSC ecosystem. DEX+ now fully supports the Solana ecosystem, integrating with popular liquidity sources such as pump.fun, PumpSwap, and Raydium, and offering access to over 10,000 on-chain assets. With the recent addition of BSC support, DEX+ also aggregates top DEXs like PancakeSwap, covering more than 5,000 popular tokens, including DeFi projects and memecoins. Looking ahead, DEX+ plans to integrate more leading DEXs across BSC, continuously enhancing liquidity depth and evolving into a one-stop, multi-chain trading platform. This upgrade enables a seamless "one account, multi-chain trading" experience, delivering CEX-level performance without the complexity of wallet creation or management. Users can now trade tens of thousands of assets across the Solana and BSC ecosystems, gaining early access to promising on-chain investment opportunities. BSC is renowned for its low gas fees and high transaction throughput, fueling the rise of leading DEXs like PancakeSwap. The recent surge in BSC memecoins has significantly boosted trading volume across the ecosystem, underscoring the growth potential of early-stage alpha tokens. With its rapid integration of BSC, DEX+ empowers users to access these trending assets early and seize high-return investment opportunities. In addition, DEX+ has upgraded its "Smart Money" feature, delivering real-time insights into tokens with high trading volumes, strong community traction, and notable growth potential. This allows users to better identify undervalued assets and optimize their investment strategies. Tracy Jin, Chief Operating Officer of MEXC, stated: "Integrating BSC marks a significant milestone in DEX+'s multi-chain strategy. Our goal is to provide users with broader access to on-chain investment opportunities, support the continued growth of the crypto ecosystem, and drive the true convergence of DeFi and CeFi. Through continuous cross-chain innovation, DEX+ empowers users to explore wealth opportunities across multiple blockchains" using just one account "ensuring a smooth and seamless transition from CeFi to DeFi." Looking ahead, DEX+ plans to extend support to more leading blockchain networks including Ethereum, Arbitrum, Polygon, Avalanche, and zkSync, further enhancing liquidity and broadening asset coverage to build a seamless, efficient, and robust full-ecosystem trading platform. As DeFi trading volumes continue to rise, the deep integration of CeFi and DeFi is becoming an increasingly recognized industry trend. By leveraging its innovative liquidity solutions and technological strengths, DEX+ is at the forefront of this evolution "delivering a simpler, more efficient, and secure trading experience, while cementing its position as a global leader in the cryptocurrency market. About MEXC Founded in 2018, MEXC is committed to being "Your Easiest Way to Crypto". Serving over 34 million users across 170+ countries and regions, MEXC is known for its broad selection of trending tokens, frequent airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. - Wyoming is set to launch a stablecoin, marking the first fiat-backed token issued by a public entity in the U.S. - The Wyoming Stable Token (WYST) is undergoing testing on various platforms, including Avalanche, Solana, and Ethereum. Wyoming is taking a step forward in the world of digital currency with the creation of the Wyoming Stable Token (WYST), setting itself up to be the first U.S. state to issue a fiat-backed stablecoin. The Wyoming Stable Token Commission has initiated testing of WYST across multiple blockchain networks. It includes Avalanche, Solana, Ethereum, Arbitrum, Optimism, Polygon, and Base testnets. These initial, insignificant test tokens are designed to test the functionality and security of the token before its official launch. LayerZero Labs, chosen via competitive RFP, is conducting this deployment with its Omnichain Fungible Token (OFT) Standard, allowing for frictionless cross-chain transactions. In partnership with LayerZero, a demo transaction was executed between the Ethereum and Avalanche testnets via Stargate, a third-party bridge fueled by LayerZero. This showcases WYST's capability for cross-chain interoperability, a critical feature for its anticipated widespread adoption. Regulatory Framework and Oversight The Wyoming Stable Token Act of March 2023 created the legal framework for WYST. In addition, the Act requires that the stablecoin be entirely collateralized with cash and U.S. Treasury instruments to promote stability and credibility. Besides, the interest accrued from these reserves is designated for the state's school foundation fund. It highlights the project's potential benefits for public education. Governor Mark Gordon has been a vocal advocate for this initiative, emphasizing its potential to position Wyoming at the forefront of digital asset innovation. Gordon further stated: "Our forward-thinking approach to blockchain and digital asset legislation has positioned Wyoming as a model for not only other states, but the federal government as well." Significantly, the trials are anticipated to be ongoing through the second quarter of 2025, with a possible formal launch targeted for July 2025. The Commission is in active talks with vendors in order to finalize major elements of WYST's development. Highlighted Crypto News ChatGPT Forecasts XRP Price Impact from Potential \$10 Billion ETF Adoption

Berachain (BERA) has also been on a stunning uptrend, rising more than 35% in the last week and gaining strength after consolidating. BERA was trading at \$7.89 at the time of writing, slowly approaching a key resistance of \$8.34. A breakout above that would open the doors to more upside, with the asset possibly being pushed toward the psychological mark of \$10. Technical Indicators The Relative Strength Index (RSI) has risen to 59, reflecting rising buying pressure but still leaving some room for further upside. An RSI value above 70 would reflect overbought levels and may initiate a pullback. Traders are watching this closely as it approaches the overbought region. Bollinger Bands reflect tightening price in a range, with near support at \$6.53 and a firmer floor at \$5.14. Both the 10-day and 20-day Exponential Moving Averages (EMA) provide support for further price growth, affirming a bullish trend. Also, the Moving Average Convergence/Divergence (MACD) gauge is still bullish at 0.282, indicating sustained momentum. Yet, the 24-hour trading volume has fallen 33% to \$187.7 million, indicating some letting up in the buying pressure. A volume

breakout would be necessary to sustain present momentum and indicate a breakout through resistance. On-Chain Data Supports Bullish Sentiment On-chain indicators also support Berachain's bullish argument. The total value locked (TVL) on the network has increased to \$3.14 billion, approaching its all-time high of \$3.26 billion set on March 3, DeFiLlama reports. Between March 23 and March 25, decentralized exchange (DEX) trading volume jumped from \$36 million to \$132 million, showing more investor activity. In the meantime, the stablecoin market cap in the Berachain ecosystem has hit an all-time high of \$1.2 billion, proving strong demand for liquidity. Proof-of-Liquidity System Berachain's recent surge comes on the heels of the introduction of its groundbreaking Proof-of-Liquidity (POL) system on March 24. This widening of governance and emissions outside its native BEX pools has brought new vaults that share BGT emissions. Active incentives reached \$355,000 within hours of its release, with the highest vault commanding a staggering annual percentage return (APR) of more than 200%. This mechanism is likely to be responsible for the price appreciation of BERA, with more users participating in the ecosystem to receive rewards. Can Berachain Sustain Its Momentum? In spite of the positive signs, BERA is still 45.8% down from its all-time high of \$14.83. The important level to observe is \$8.34 if the asset is able to close firmly above this resistance, it may be setting up for additional gains towards \$10. A failure to break through this level, however, may precipitate a pullback to the \$6.53 or \$5.14 support levels. Moreover, the movement of the RSI will be instrumental in deciding the direction of the asset in the next move. If it moves above 70, overbought levels may trigger profit-taking, and a short-term correction may ensue. But if the RSI settles while prices keep going up, BERA may be on the verge of a long-term uptrend. For the time being, Berachain traders can keep a close eye on resistance levels with a watch on volume trends and on-chain activity as further proof of where the market will trend. Whether or not BERA can maintain its upward trend or correct will be heavily reliant on ongoing buying pressure and investor sentiment. Highlighted Crypto News Today Solana Teeters on Brink of Death Cross as \$148 Resistance Holds Firm

Crypto market has seen life-changing opportunities in the beyond, from Bitcoin's meteoric upward push to the explosive boom of Solana. Now, as artificial intelligence (AI) turns into the driving pressure at the back of the next wave of technological innovation, a brand new class of AI-powered cryptocurrencies is rising. Ozak AI is leading this revolution, combining blockchain and AI to create a complicated, self-optimizing ecosystem. With AI adoption accelerating throughout industries, Ozak AI has the capability to skyrocket 300x, making it one of the most promising crypto investments of 2025. Ozak AI Could Skyrocket 300x as AI Adoption Grows Artificial intelligence is now not a futuristic idea—it is transforming finance, healthcare, security, and automation. Companies like OpenAI, NVIDIA, and Google are pouring billions into AI research, while blockchain technology is evolving to integrate AI-driven talents. Ozak AI is at the leading edge of this trend, making use of AI to enhance security, automate smart contracts, and optimize blockchain efficiency. Here's why Ozak AI could see 300x gains in the coming years: 1. AI-Powered Smart Contracts Traditional blockchain smart contracts are automatic but lack flexibility. Ozak AI integrates machine learning and predictive analytics, making its smart contracts more adaptable, efficient, and able to execute complex transactions in real time. This innovation has widespread programs in DeFi, supply chain management, and AI-powered trading algorithms. 2. Deflationary Tokenomics & Staking Rewards Ozak AI follows a deflationary token version, reducing its circulating supply over time through token burns and rewards for long-term holders. Stakers can earn passive rewards, encouraging traders to hold rather than sell, thereby driving shortage and increasing price—simply as visible with Solana, Binance Coin, and Ethereum in previous bull cycles. 3. Growing Institutional & Retail Demand for AI Projects Institutional traders are displaying a growing interest in AI-driven crypto projects, recognizing their capacity to revolutionize blockchain ecosystems. Hedge funds, venture capital firms, and tech giants are actively investing in AI-blockchain integration, positioning Ozak AI as one of the next primary winners. 4. Early Entry Equals Massive Potential Returns Many buyers regret missing Bitcoin when it changed into under \$100 or Ethereum at \$10. Ozak AI is still in its early tiers, providing an extraordinary opportunity to enter before mainstream adoption kicks in. Once demand surges and principal exchanges list Ozak AI, its price should boom exponentially, mirroring past crypto fulfillment testimonies with 300x potential profits. Ozak AI Presale — A Once-In-A-Lifetime Crypto Opportunity One of the best methods to maximize profits in crypto is via investing in high-ability initiatives during their early stages. Ozak AI's presale offers investors a chance to secure tokens earlier than its price skyrockets. Early buyers regularly benefit the most, as seen with Solana, Avalanche, and Polygon—initiatives that brought big returns after their preliminary release stages. By participating in Ozak AI's presale, investors gain: - Exclusive early get right of entry to tokens at the lowest possible price - Higher staking rewards and potential early-bird bonuses - A front-row seat to the AI-blockchain revolution With growing media coverage, investor interest, and blockchain integration, Ozak AI's presale is shaping to be one of the most beneficial crypto possibilities of 2025. AI adoption is accelerating, and blockchain is evolving to integrate AI's big potential. Ozak AI stands in the middle of this change, presenting modern-day solutions that would disrupt more than one industry. With AI-powered smart contracts, deflationary tokenomics, and early-stage momentum, Ozak AI has the capability to skyrocket 300x. For the ones looking to capitalize on the next large crypto increase, Ozak AI gives a as soon as-in-a-lifetime opportunity. As records have shown, the largest gains come from figuring out high-capability tasks earlier than they go mainstream—and Ozak AI is shaping up to be exactly that. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - After a 13% rally, PEPE is trading at \$0.000009039. - The meme coin's daily trading volume has soared by over 30%. The crypto market is rebounding, with the meme coin market cap climbing to \$63 billion, fueled by a 10% jump. The majority of meme tokens are flashing green, with PEPE, the frog-themed meme coin, standing out as one of the top gainers after a solid 13.78% rally. After opening the day at \$0.000007875, the meme coin gained traction as bulls drove it up to a peak of \$0.000009174. At the time of writing, PEPE traded within the \$0.000009039 range. Besides, the market has observed a \$2.25 million PEPE liquidation during this timeframe. Consequently, the meme coin's daily trading volume has reached \$805 million. The frog-themed meme coin has secured 21% over the last seven days. The asset opened the week trading at \$0.000007433 and PEPE plunged to \$0.000007036. The upward correction lifted the asset into its current trading range. Can PEPE Keep Up Its Pace? PEPE's Moving Average Convergence Divergence (MACD) line is laid over the signal line. This implies a bullish crossover within the market, which also reinforces the bullish trend of the meme coin. The Chaikin Money Flow (CMF) indicator staying at 0.28 signals the money inflows are dominant, supporting a bullish trend. Meanwhile, the meme coin's daily trading volume has surged by over 29.98%. The meme coin's active bullish pace could accelerate it to climb to the \$0.0000092 mark. Subsequently, PEPE might test the crucial resistance at \$0.000009410. Further upside might see it break past this level. Contrarily, if the uptrend faces disruption, a potential downside correction emerges and that might trigger the price to slide toward a low of \$0.0000089 level. The formation of a death cross could deepen the downturn. In addition, the current market sentiment of PEPE is in overbought territory, with the daily relative strength index (RSI) reaching at 81.82. The meme coin's Bull Bear Power (BBP) reading of 0.00000160 suggests that bulls have a slight edge over bears. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News Solana (SOL) Gains Momentum, Is Crucial Resistance at \$150 Within Sight?

Crypto market is continuously evolving, with new possibilities rising for investors looking for exponential gains. In past cycles, projects like Shiba Inu, Solana, and Chainlink have delivered life-changing returns, turning small investments into fortunes. Now, as artificial intelligence (AI) merges with blockchain innovation, the next wave of high-boom crypto projects is taking the middle level. Among them, Ozak AI stands proud as a potential 200x funding possibility that is nonetheless flying beneath the radar—but now not for long. Why AI-Powered Cryptos Are Surging Artificial intelligence is hastily reshaping industries, from finance to healthcare, and blockchain technology is no exception. AI-powered cryptocurrencies are gaining momentum as they introduce automation, predictive analytics, and enhance security to decentralized networks. With AI adoption accelerating, traders are searching out blockchain projects that could capitalize in this technological revolution. Ozak AI is at the forefront of this movement, presenting a present day AI-powered blockchain ecosystem that optimizes smart contracts, enhances safety, and allows AI-pushed financial solutions. As greater industries combine AI into their operations, Ozak AI is positioning itself as a dominant participant in this emerging area. What Makes Ozak AI a 200x Opportunity? 1. AI-Driven Smart Contracts & Automation Unlike traditional blockchain networks, Ozak AI utilizes artificial intelligence to automate complex transactions, reducing inefficiencies and enhancing the accuracy of smart contracts. This innovation makes Ozak AI an excellent solution for DeFi systems, company blockchain applications, and AI-powered analytics gear. As demand for AI-pushed automation will increase, Ozak AI's value proposition will become even stronger. 2. Deflationary Tokenomics & Staking Rewards One of the most huge factors that power long-term price appreciation in crypto is deflationary tokenomics. Ozak AI has applied a system that regularly reduces token supply via strategic burns, increasing shortage over the years. Additionally, stakers can earn passive rewards, encouraging long-term holding and reducing stress. This model has been a key driver behind the success of initiatives like Binance Coin (BNB) and Ethereum (ETH), and Ozak AI is following a similar course. 3. Institutional & Retail Interest in AI-Driven Cryptos Big buyers are taking notice of AI-powered blockchain projects. Institutional capital is flowing into the arena, as hedge funds and mission capital firms apprehend the large potential of AI-crypto integration. As Ozak AI keeps gaining publicity, its market capitalization could skyrocket, mirroring the parabolic boom seen in early AI and blockchain disruptors. 4. Early-Stage Entry with Massive Upside The key to locating the next 200x crypto growth is investing earlier than mainstream adoption kicks in. Ozak AI continues to be in its early levels, meaning its charge stays undervalued as compared to its long-term potential. As more traders find out Ozak AI's progressive use case, its demand should surge, triggering a rapid price appreciation just like what became seen with Solana, Chainlink, and Avalanche. Moreover, the 3rd stage of the Ozak AI presale is currently going on, and the project is already making waves in the crypto community. With an impressive over \$900K raised so far, Ozak AI tokens are currently priced at just \$0.003 each, with the next stage price set at \$0.005. This early-stage opportunity is poised for significant growth, with projections suggesting that the token could reach \$1 by 2025. Ozak AI won't Stay Hidden for Long With AI transforming global industries and blockchain adoption increasing, Ozak AI is flawlessly positioned to be one of the biggest winners in the next crypto cycle. Early investors who apprehend its ability now may want to see great returns as the market catches up. The next 200x crypto growth is already in motion, and Ozak AI is leading the charge. With AI-driven automation, deflationary tokenomics, and increasing investor interest, it's most effective a matter of time before this project takes off. For the ones trying to secure a position inside the subsequent predominant blockchain revolution, Ozak AI offers an exceptional opportunity to capitalize on the growing AI-crypto wave. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. For more visit: - Website: <https://Ozak.ai/> - Telegram: <https://t.me/OzakAGI> - Twitter : <https://x.com/Ozakagi> Disclaimer: TheNewsCrypto does not endorse any content on this page. - MANTRA crypto price suggests bullishness and delivers a positive perspective on the technical chart. - Bulls are regaining strength, and whales are accumulating OM. MANTRA's price demonstrated a remarkable performance in the last three months as it grew by almost 80%. But, after touching a high of \$9.08 it faced a mild price correction. However analysts predicted that investors could witness a price rally in the upcoming days. A popular technical and on-chain analyst Ali Martinez revealed in their latest X post that whales are accumulating OM. He highlights whales have bought more than 130 million Mantra (\$OM) in the past 20 days. According to crypto analyst King Crypto, MANTRA has the potential to hit its all-time high in the upcoming days. In an X post, he said, "Many were expecting a dump on March 23rd after the token unlocks, instead, we bounced from support. And here we are 2 days after, inching closer to breaking the \$7 resistance. Once we have a confirmation of reversal, it's back to the ATH and into double-digit territory." According to CMC data, currently MANTRA crypto price is trading at \$6.7764 with an intraday increase of 1%. The daily trading volume has decreased by 36% currently at \$68.29 million. The Market cap stands at \$6.68 billion. Will MANTRA Hit Its All-Time High Price? Despite mild correction OM price is trading in a bullish zone above major exponential moving averages, showing positive momentum. On

the daily chart, the MANTRA is heading in the upper direction by making higher high structures. However, RSI indicators are giving a neutral outlook as it is trading close to the median line at 51.02. MACD is also trading in a neutral zone suggesting neutrality. MANTRA (OM) shows bullish potential with whales accumulating over 130M tokens recently. Trading above EMAs, it could approach its all-time high soon if it maintains bullish momentum. - Bullish JTO price prediction for 2025 is \$2.840 to \$4.353. - Jito (JTO) price might reach \$10 soon. - Bearish JTO price prediction for 2025 is \$1.232. In this Jito (JTO) price prediction 2025, 2026-2030, we will analyze the price patterns of JTO by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | JITO PRICE PREDICTION 2025 | | JITO PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Jito (JTO) Current Market Status | Current Price | \$2.45 | 24 æ Hour Price Change | 8.38% Up | 24 æ Hour Trading Volume | \$55.76M | Market Cap | \$759.5M | | Circulating Supply | 308.93M JTO | All æ Time High | \$5.61 (On Dec 07, 2023) | | All æ Time Low | \$0.5362 (On Dec 07, 2023) | What is Jito (JTO) | TICKER | JTO | | BLOCKCHAIN | Solana | | CATEGORY | Liquid Staking & MEV | | LAUNCHED ON | December 2023 | | UTILITIES | Staking, Liquidity, Governance, MEV Rewards, Yield | Jito (JTO) is a liquid staking and MEV-sharing protocol built on Solana. It enhances staking efficiency by allowing users to stake SOL while maintaining liquidity through JitoSOL, a liquid staking derivative. This enables users to earn staking rewards while participating in DeFi without locking up their assets. Jito also optimizes Solana's transaction processing by using a sophisticated MEV (Maximal Extractable Value) infrastructure, which allows validators and searchers to share profits from optimized transaction ordering. This improves network efficiency and rewards stakeholders, including JitoSOL holders. The JTO token governs the Jito DAO, giving holders decision-making power over protocol parameters and treasury management. Since its launch, Jito has gained traction due to its innovative approach to staking and MEV revenue distribution. It plays a crucial role in Solana's DeFi ecosystem, offering enhanced rewards, decentralization, and network performance. Jito 24H Technicals (Source: TradingView) Jito (JTO) Price Prediction 2025 Jito (JTO) ranks 83rd on CoinMarketCap in terms of its market capitalization. The overview of the Jito price prediction for 2025 is explained below with a daily time frame. JTO/USDT Descending Channel Pattern (Source: TradingView) In the above chart, Jito (JTO) laid out a descending channel pattern. Descending channel patterns are short-term bearish in that a stock moves lower within a descending channel, but they often form longer-term uptrends as continuation patterns. The descending channel pattern is often followed by higher prices. but only after an upside penetration of the upper trend line. A descending channel is drawn by connecting the lower highs and lower lows of a security's price with parallel trendlines to show a downward trend. Within a descending channel, a trader could make a selling bet when the security price reaches its resistance trendline. An ascending channel is the opposite of a descending channel. Both ascending and descending channels are primary channels followed by technical analysts. At the time of analysis, the price of Jito (JTO) was recorded at \$2.45. If the pattern trend continues, then the price of JTO might reach the resistance levels of \$2.538, \$3.213, and \$4.385. If the trend reverses, then the price of JTO may fall to the support levels of \$2.015. Jito (JTO) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Jito (JTO) in 2025. JTO/USDT Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Jito (JTO) for 2025. | Resistance Level 1 | \$2.840 | | Resistance Level 2 | \$4.353 | | Support Level 1 | \$1.799 | | Support Level 2 | \$1.232 | JTO Resistance & Support Levels Jito (JTO) Price Prediction 2025 æ RVOL, MA, and RSI The technical analysis indicators, such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (JTO) are shown in the chart below. JTO/USDT RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Jito (JTO) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$2.501 Price = \$2.413 (50MA > Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change; Analyzing oversold & overbought conditions | 53.975 < 30 = Oversold 50-70 = Neutral 70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Jito (JTO) Price Prediction 2025 æ ADX, RVI In the below chart, we analyze the strength and volatility of Jito (JTO) using the following technical analysis indicators æ Average Directional Index (ADX) and Relative Volatility Index (RVI). JTO/USDT ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Jito (JTO). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 42.944 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 54.16 < 50 = Low > 50 = High | High volatility | Comparison of JTO with BTC, ETH Let us now compare the price movements of Jito (JTO) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs JTO Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of JTO is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of JTO also increases or decreases, respectively. Jito (JTO) Price Prediction 2026, 2027 æ 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Jito (JTO) in 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Jito (JTO) Price Prediction 2026 | \$15 | \$1.1 | | Jito (JTO) Price Prediction 2027 | \$20 | \$0.9 | | Jito (JTO) Price Prediction 2028 | \$25 | \$0.8 | | Jito (JTO) Price Prediction 2029 | \$30 | \$0.7 | | Jito (JTO) Price Prediction 2030 | \$35 | \$0.6 | Conclusion If Jito (JTO) establishes itself as a good investment in 2025, this year will be favorable to the cryptocurrency. In conclusion, the bullish Jito (JTO) price prediction for 2025 is \$4.353. Comparatively, if an unfavorable sentiment is triggered, the bearish Jito (JTO) price prediction for 2025 is \$1.232. If the market momentum and investors' sentiment positively elevates, then Jito (JTO) might hit \$10. Furthermore, with future upgrades and advancements in the Jito ecosystem, JTO might surpass its current all-time high (ATH) of \$5.61 and mark its new ATH. FAQ 1. What is Jito (JTO)? Jito (JTO) is a liquid staking and MEV-sharing protocol built on Solana. It enhances staking efficiency by allowing users to stake SOL while maintaining liquidity through JitoSOL, a liquid staking derivative. 2. Where can you purchase Jito (JTO)? Jito (JTO) has been listed on many crypto exchanges, which include Binance, Bybit, OKX, Coinbase Pro, BTCC, KuCoin, Bingx, eToro, FrameEX, and CoinEx. 3. Will Jito (JTO) reach a new ATH soon? With the ongoing developments and upgrades within the Jito Platform, JTO has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Jito (JTO)? On December 07, 2023, Jito (JTO) reached its new all-time high (ATH) of \$5.61. 5. What is the lowest price of Jito (JTO)? According to CoinMarketCap, JTO hit its all-time low (ATL) of \$0.5362 on December 07, 2023. 6. Will Jito (JTO) reach \$10? If Jito (JTO) becomes one of the active cryptocurrencies that maintains a bullish trend, it might rally to hit \$10 soon. 7. What will be Jito (JTO) price by 2026? Jito (JTO) price is expected to reach \$15 by 2026. 8. What will be Jito (JTO) price by 2027? Jito (JTO) price is expected to reach \$20 by 2027. 9. What will be Jito (JTO) price by 2028? Jito (JTO) price is expected to reach \$25 by 2028. 10. What will be Jito (JTO) price by 2029? Jito (JTO) price is expected to reach \$30 by 2029. Meme coins have taken the crypto world by storm, blending humor and financial opportunity in ways that no one could have predicted. What started as internet jokes has transformed into a serious market, with tokens like Cheems, Sudeng, Comedian, SLERF, Dogecoin, Bonk, and Dogwifhat capturing global attention. But one coin, in particular, has been making waves like no other: Arctic Pablo Coin. With its exciting meme coin presale and unique incentives, Arctic Pablo Coin is quickly gaining traction as the best meme coin to buy this month. Arctic Pablo Coin stands out for more than just its adventurous narrative. It's packed with innovative features that redefine what a meme coin can be. As other coins ride the hype, Arctic Pablo offers high APY staking, referral incentives, and community competitions that make it a project to watch closely. Let's dive into what makes Arctic Pablo Coin a frontrunner and explore why these other meme coins are also worth a closer look. 1. Arctic Pablo Coin: The Best Meme Coin to Buy for Passive Rewards Arctic Pablo Coin isn't just another meme token; it's an ecosystem designed to reward its community in multiple ways. Investors can stake their APC tokens during the meme coin presale to earn a remarkable 66% APY, turning passive holdings into steady growth. Plus, Arctic Pablo goes beyond traditional staking by offering referral incentives æ spread the word, bring in new investors, and get rewarded with additional tokens. To top it off, the project frequently holds community competitions, where participants can win extra APC tokens or even USD, keeping the engagement high and the rewards flowing. Currently in its 16th presale stage, called Crystal Cove, Arctic Pablo Coin is on fire. The price sits at a tempting \$0.000083, with over \$2 million raised so far. What's more? The ROI is already an astonishing 9552.41%, with the listing price projected at \$0.008. As the presale countdown continues, this could be the best meme coin to buy this month for those seeking explosive gains and a vibrant community. 2. Cheems: The Meme King with Staying Power Cheems has become synonymous with meme culture, with its iconic Shiba Inu mascot representing humor and lightheartedness. Beyond its meme status, Cheems has built a loyal community that continues to support its growth. The coin aims to fund community-driven projects and collaborations that keep the meme alive while offering real-world utility. Cheems made it to this list because of its ability to evolve beyond a meme, fostering a strong, engaged community that believes in its long-term potential. 3. Sudeng: Blending Humor with Blockchain Sudeng might sound playful, but it's built on a solid foundation. The project integrates NFT utilities and decentralized governance, ensuring its community has a say in development decisions. Its meme-centric branding appeals to a wide audience while offering more than just laughs. Sudeng earned its spot for blending meme culture with serious blockchain infrastructure, making it a unique contender among the best meme coins to buy this month. 4. Comedian: Laughter Meets Crypto Comedian is all about embracing humor in the crypto space. It's the first meme coin to sponsor live comedy events, bridging the gap between digital finance and real-world entertainment. Investors not only support the coin but also the comedic arts. Comedian made it to this list because of its innovative approach to combining entertainment and investment, offering holders more than just financial returns. 5. SLERF: The Wild Card of Meme Coins SLERF thrives on unpredictability. Its tokenomics are built around sudden burns and surprise airdrops, creating a rollercoaster ride for holders. Every transaction could trigger unexpected events, adding an element of fun and risk. SLERF earned its place by embracing the chaotic energy of meme coins, attracting thrill-seekers looking for high-risk, high-reward opportunities. 6. Dogecoin: The OG Meme Coin No meme coin list is complete without Dogecoin, the pioneer that started it all. Originally created as a joke, Dogecoin has grown into a symbol of community-driven success. It's been endorsed by major celebrities and used in countless charitable campaigns. Dogecoin made it to this list for its legendary status and unwavering community support, proving that meme coins can have staying power. 7. Bonk: The Solana Superstar Bonk exploded onto the scene as Solana's first major meme coin, quickly becoming a symbol of the blockchain's resilience. It's not just about hype æ Bonk integrates with Solana's DeFi ecosystem, offering practical use cases alongside its meme appeal. Bonk earned its place for bringing fresh energy to the Solana network and proving that meme coins can also offer serious utility. 8. Dogwifhat: The Whimsical Underdog Dogwifhat rides the wave of absurd humor that meme coin enthusiasts love. It thrives on community engagement and playful branding while steadily building its ecosystem. The coin has gained traction for its quirky charm and loyal supporters. Dogwifhat made it to this list for embracing meme culture at its finest, turning internet humor into a growing digital asset. Verdict: Arctic Pablo Coin Leads the Meme Coin Charge Meme coins have moved far beyond internet jokes, evolving into legitimate investment opportunities. Based on the latest research, the best meme coins to buy this month are Arctic Pablo Coin, Cheems, Sudeng, Comedian, SLERF, Dogecoin, Bonk, and Dogwifhat. Each brings its own flavor to the crypto space, but Arctic Pablo Coin stands out as the most exciting investment. Its high APY staking, engaging referral program, and community competitions create a dynamic ecosystem that rewards holders in more ways than one. If you're searching for the best meme coin to buy this month, Arctic Pablo Coin's explosive presale could be the opportunity you've been waiting for. For More Information: - Arctic Pablo Coin: <https://www.arcticpablo.com/> - Telegram: <https://t.me/ArcticPabloOfficial> - Twitter: <https://x.com/arcticpabloHQ> Frequently Asked Questions - What makes Arctic Pablo Coin unique among meme coins? Arctic Pablo Coin offers a 66% APY during its meme coin presale, referral rewards, and community competitions, creating multiple income streams for investors. - Why is Arctic Pablo Coin considered the best meme coin to buy this month? With over \$2 million raised and a staggering 9552.41% ROI in its current presale stage, Arctic Pablo Coin offers unmatched growth potential. - How can I participate in the Arctic Pablo Coin presale? Visit the official Arctic Pablo Coin website, connect your wallet, and follow the simple steps to secure your tokens. - Are meme coins like Dogecoin still worth investing in? Absolutely! Dogecoin remains a pioneer in the space, with strong community backing and ongoing development. - What factors should I consider when investing in meme coins? Look for community engagement, project utility, and long-term vision. Arctic Pablo Coin excels in all three areas. Disclaimer: TheNewsCrypto does not endorse any content on this page. MEXC, a leading global cryptocurrency exchange, has announced that MEXC DEX+ has become the first DEX aggregator to integrate with PumpSwap, the

new native DEX from pump.fun. This integration marks an important step in the strategic partnership between MEXC and pump.fun, as well as the integration of centralized finance (CeFi) and decentralized finance (DeFi). MEXC has recently launched its innovative hybrid product, DEX+, which enables users to trade directly on DEXs through the MEXC App and website, giving users the ability to trade over 10,000 tokens available on Raydium and pump.fun. In addition, MEXC has kicked off a strategic partnership with pump.fun. With the integration of PumpSwap, DEX+ will support more assets in the Solana ecosystem, offering higher liquidity and earlier access to potential on-chain assets. pump.fun is the world's leading crypto token launchpad where anyone can create their own token for free. Recently, pump.fun launched PumpSwap, its new native DEX, and MEXC DEX+ has become the first DEX aggregator to integrate with PumpSwap through this partnership. MEXC aims to provide a streamlined, accessible experience for the growing memecoin community, further solidifying its commitment to innovative solutions within the crypto space. Additionally, MEXC DEX+ will feature a trending assets leaderboard on pump.fun, showcasing top-performing assets from both its P2P market and external markets. Through DEX+, users will gain early access to a variety of trending assets. With the launch of DEX+ and integration with PumpSwap, MEXC is not only meeting the growing demand for decentralized trading solutions but also paving the way for the future of trading by providing users with access to a broader array of assets and more opportunities in the ever-evolving cryptocurrency landscape. DEX+ is positioning itself as the go-to platform for users seeking both security and cutting-edge access to on-chain assets," said Tracy Jin, COO of MEXC. Looking ahead, MEXC DEX+ will expand to include additional DEXs and blockchain networks and is set to play a pivotal role in the continued expansion of the DeFi and DEX ecosystems. As more users embrace decentralized trading, the convergence of CeFi and DeFi models will become increasingly crucial. Through DEX+, MEXC is at the forefront of this shift, offering users a seamless bridge between centralized and decentralized finance while enhancing the overall trading experience. To bring this vision to life and strengthen our commitment to innovative ecosystems, MEXC proudly introduces the "Rising Star" program, a new initiative designed to spotlight outstanding projects emerging from the DEX+ platform. Centered on community feedback, the program offers high-performing projects the unique opportunity to list on MEXC's centralized exchange at no cost, bridging the gap between decentralized and centralized trading environments. For more details, please visit: <https://www.mexc.com/rising-star> About MEXC Founded in 2018, MEXC is committed to being "Your Easiest Way to Crypto". Serving over 34 million users across 170+ countries and regions, MEXC is known for its broad selection of trending tokens, frequent airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. For more information, visit: MEXC Website or X Telegram. Is XRP really going to touch \$100? Will Aptos climb past \$7 by 2030? And what's the deal with Qubetics that has early adopters scrambling to lock in their spots? This isn't just another day in crypto—this is one of those moments where the right move could change everything. With big-time news dropping about XRP's institutional moves, Aptos's forecast heating up, and Qubetics delivering serious presale gains, the question is real: which are the best crypto coins to buy now? Here's what's wild—Qubetics is solving something the big names still haven't: true blockchain interoperability. It's not just launching a coin; it's launching a system that actually helps blockchains talk to each other without chaos or fragmentation. While Aptos and XRP are making solid moves in their own ecosystems, Qubetics is stitching the entire crypto space together into one unified flow. And with its presale numbers catching fire fast, there's serious momentum behind this project. Let's break down what each of these projects is bringing to the table—starting with the one that's turning heads for all the right reasons. Qubetics Is Unifying Web3 Like Never Before Most crypto platforms today are stuck in their own corners—isolated networks with zero ability to properly communicate. That's not just inconvenient; it kills real innovation. Qubetics changes that with a Web3-aggregated chain that connects major networks like Ethereum, Solana, and Bitcoin. This isn't about replacing other blockchains—it's about making them finally work together. Developers, enterprises, and everyday users can now transfer assets, share data, and launch cross-chain apps without friction. Imagine a DeFi app that needs to access liquidity from both Ethereum and Solana. With Qubetics, it happens in one smooth motion. A content creator paid in Bitcoin could easily swap into a stablecoin on Polygon without leaving the ecosystem. A logistics company could track inventory across multiple smart contracts, regardless of the chain they live on. This type of utility is what places Qubetics among the best crypto coins to buy now, not just because of its token—but because of the infrastructure it brings to the table. Why Qubetics Presale ROI Has Made It One of the Best Crypto Coins to Buy Now The Qubetics presale is exploding right now—and here's exactly why. Currently in Stage 27, \$TICS is priced at \$0.1300, with the next 10% price increase locked in for Sunday at 12 a.m. So far, the presale has already raised over \$15.4 million, with more than 503 million tokens sold and 23,700+ holders. These numbers aren't just good—they're a clear signal that this isn't going unnoticed. And with each stage lasting only 7 days, time's running out for those waiting on the sidelines. The real kicker? The returns. If \$TICS hits just \$1 post-presale, that's a 669.13% ROI. At \$5, you're looking at 3,745.67%. If it climbs to \$10 after the mainnet launch in Q2 2025, the ROI hits 7,591.33%, and at \$15, it rockets to 11,437%. Say someone puts in \$100 today—they'd get 769 tokens. If the price hits \$15, that \$100 turns into \$11,437. That's the kind of upside that has crypto communities labeling this one of the best crypto coins to buy now. And if there's one Qubetics presale people are talking about this week—it's this one. There's simply no comparison in the current Qubetics presale landscape, especially for early participants eyeing those ROI levels. It's loud, it's fast, and it's here. XRP Eyes \$100, ETF Buzz Builds, and Real-World Use Cases Are Leading the Way XRP has been stirring the pot lately with a question that sounds impossible: can it actually hit \$100? While it's currently trading around \$2.38, getting to \$100 would require a staggering \$5.8 trillion market cap—that's almost four times bigger than Bitcoin's. It would also mean XRP surpasses Apple, Microsoft, and Google in combined value. Is that realistic? Probably not right now. But here's what is realistic: strong price action fueled by serious real-world use. Unlike meme coins, XRP is diving deep into cross-border payments and is a favorite among banks for its low-cost, high-speed international transfers. The XRP Ledger is already being used to tokenize real-world assets like real estate and bonds. Plus, it's got upcoming Automated Market Maker (AMM) support to make DeFi even smoother. Ripple's regulatory engagement gives it a major edge over other cryptos still stuck in courtroom battles. If XRP continues evolving like this, its future is looking anything but boring. What's driving even more buzz are two massive game-changers. First, nine major asset managers are lobbying for an XRP Spot ETF—if the SEC greenlights it, XRP could see inflows similar to what happened with Bitcoin after its ETF debut. Second, there's talk of the U.S. government adopting XRP as a strategic digital reserve asset, which would shrink supply and potentially send the price soaring. Even if only one of these plays out, XRP could break past \$10 or more. And at those levels, XRP holders wouldn't need it to reach \$100 to lock in life-changing gains. Aptos Is Climbing Steadily—Here's What 2030 Might Look Like As of March 24, Aptos (APT) is priced at \$5.853319, climbing +4.05% in just 24 hours. But it's not just today's bump that's interesting—it's the long-term projection. Based on Binance's prediction tool, if Aptos continues growing at a modest 5% per year, the token could hit \$7.4 by 2030. That's not explosive, but it's stable growth in a space known for volatility. And for community members looking for something long-term and consistent, that could be more appealing than all-or-nothing plays. The forecast graph shows steady gains from 2025 to 2030, without the erratic swings that spook many people out of the market. This slow, sustainable increase is building confidence around Aptos as a smart long-term move. Sure, it's not pulling 10x headlines like some coins, and it's definitely not grabbing as much attention as the Qubetics presale, but that's what some people like about it. If you're looking for a token that feels more like a growth stock than a gamble, Aptos is one to watch. Final Take: Why These Are the Best Crypto Coins to Buy Now All three of these projects are making noise for different reasons—and all for good ones. XRP is charging ahead with major real-world use, ETF pressure, and reserve asset rumors that could change the game. Aptos is playing the long game, showing healthy gains and a promising path to 2030 for anyone looking for low-drama growth. But Qubetics? That's the head-turner. It's not just trying to win in one lane—it's building the highway for every chain to finally connect. And that kind of infrastructure can shake up the entire crypto space. With over \$15.4 million raised, 503 million tokens sold, and each presale stage lasting just 7 days, Qubetics is quickly becoming the center of the conversation around the top crypto presale opportunities of 2025. And with those ROI projections, it's easy to see why this is being called one of the best crypto coins to buy now. If there's one move that could seriously pay off before the Q2 mainnet launch, it's this one—don't miss your window to join this crypto presale while the price is still under \$0.14. Arcium, a leader in encrypted computing, today announced its Community Round in collaboration with CoinList. This initiative gives participants the opportunity to take part in Arcium's mission of enabling data to move across the internet in a fully encrypted state. Arcium is redefining core industries like blockchain, finance, healthcare, defense, AI, and more, by computing sensitive information without ever exposing it, unlocking a new era of privacy, security, and collaboration. Empowering the Community with a Fair and Transparent Token Launch Historically, the combination of poorly structured vesting schedules and inflated valuation leads to the problem of a low float, high FDV. Arcium takes a new approach, with the Community Round being 100% unlocked at the Token Generation Event (TGE). This ensures that the community—not VCs, early investors, or the team—holds immediate control over their tokens. Holders can fully participate in governance, contribute to the network, and stake their tokens from day one. Locked tokens will not be eligible for staking, reinforcing a fair and transparent launch structure. Fair Valuation and Strong Tokenomics Arcium enables its community to become true stakeholders, fostering decentralization and security while engaging freely in the network's growth. Yannik Schrade, CEO at Arcium, says: "At Arcium, we believe that real innovation happens when the community has ownership from day one. By ensuring 100% unlock at TGE, we are giving our supporters the freedom to fully participate in governance, staking, and network growth. A high initial token float ensures the Arcium Network can function effectively from the outset, empowering entirely new use cases across various verticals. The Arcium token is required for node activation, network security, and staking, making broad and immediate distribution essential to decentralizing control and preventing supply bottlenecks. CoinList Community Round Launch Details The Arcium Community Round is live from March 24th to April 1st on CoinList. To participate, sign up for a CoinList account and learn more about the sale here: <https://coinlist.co/arcium> Disclaimer: "This crypto-asset marketing communication has not been reviewed or approved by any competent authority in any Member State of the European Union. The offeror of the crypto-asset is solely responsible for the content of this crypto-asset marketing communication." About Arcium: Arcium is an encrypted supercomputer that brings a trustless, verifiable, and efficient framework to run encrypted computations. Arcium provides developers, applications and entire industries with a trustless, verifiable, and efficient framework to run encrypted computations. With Arcium, the internet can use data to its full extent in an entirely encrypted state. Backed by investors such as Greenfield Capital, Coinbase Ventures, Heartcore Capital, Longhash VC, L2 Iterative Ventures and Anagram Arcium's goal is to allow the entire internet to run on encryption. More up to date info about the project: website, blog, X and docs. For media queries, please contact: [arcium@wachsmann.com](mailto:arcium@wachsmann.com) About CoinList: CoinList helps the best builders in crypto launch and grow their products and protocols. Since 2017, CoinList has become the global leader in community growth, helping blue chip projects like Filecoin, Solana, Ondo, Near, Flow, and others launch their protocols and connect with hundreds of thousands of new token holders through more than \$1.2 billion in token sales. With a global community of over 11M users, CoinList supports the full crypto lifecycle, from token sales through token distribution, trading, and staking. - Pi Network (PI) falls 7.06% to \$0.9322, market cap of \$6.3B. - Trading near the lower band, indicating high selling pressure. Pi Network (PI) has extended its downward trend, dropping 7.06% in the last 24 hours to \$0.9322. Its market cap stands at \$6.3 billion, reflecting the same percentage decline, while 24-hour trading volume surged 57.46% to \$303.63 million, indicating increased market activity. Despite a broader crypto market recovery, PI struggles to regain lost ground. The token has dropped nearly 60% from its previous highs, raising concerns among investors. Technical indicators suggest further downside pressure unless buying momentum strengthens. Can Pi Network Recover? PI faces immediate resistance at \$1.00. A breakout above this could push the price toward \$1.20, a key psychological level. However, the support at \$0.90 remains crucial. If this level is

breached, PI could drop further to \$0.80 or lower. The RSI stands at 37.93, nearing oversold conditions. Typically, an RSI below 30 indicates extreme overselling, which could trigger a short-term bounce. However, the RSI moving average is at 39.61, confirming weak buying pressure. Unless the RSI moves above 50, a sustained recovery is unlikely. CMF is at -0.04, indicating weak capital inflows. A positive CMF reading would suggest renewed investor confidence, but the current negative value reflects ongoing outflows. If CMF drops further, it could confirm bearish dominance. PI&#x2013;s price is moving near the lower Bollinger Band, a sign of high selling pressure. If the bands expand, volatility could increase, leading to sharper price swings. A move toward the middle band would indicate stabilization. The BB&#x2013;trend indicator remains negative, reinforcing the bearish outlook. To reverse this trend, PI must reclaim the \$1.00 resistance level with strong volume support. Until then, downside risks remain high. A recovery depends on reclaiming key resistance levels and improving market sentiment. If buyers fail to step in, PI could continue its downward trajectory toward \$0.80 or lower. Highlighted Crypto News Today Metaplanet&#x2013;s Bitcoin Holdings Reach \$291M, Now Holds 3,350 BTC

- Metaplanet acquired 150 BTC, raising total holdings to 3,350 BTC, valued at \$291M. - The company aims to hold 10,000 BTC by the end of 2025. Tokyo-based investment firm Metaplanet has expanded its Bitcoin holdings with the acquisition of 150 BTC. The company now holds a total of 3,350 BTC, valued at approximately \$291 million. The purchase, announced on March 24, 2025, follows the recent appointment of Eric Trump to Metaplanet&#x2013;s newly formed Strategic Board of Advisors. Trump, the son of U.S. President Donald Trump, is expected to bring business expertise to the firm&#x2013;s Bitcoin strategy. Metaplanet bought the latest 150 BTC at an average price of \$12.57 million (\$80,000) per coin. The total cost of the acquisition was \$1.886 billion (\$12.1 million). So far, the firm has accumulated 3,350 BTC at an overall cost of \$42.22 billion (\$270 million). The company&#x2013;s stock has surged since it began its Bitcoin accumulation strategy in April 2024. Since then, Metaplanet&#x2013;s share price has risen by over 3,000%, reflecting strong investor confidence. BTC Yield and Financing Methods Metaplanet tracks its Bitcoin strategy using BTC Yield, a metric that measures Bitcoin growth relative to the number of company shares. From January to March 2025, its BTC Yield reached 68.3%. In Q4 2024, this metric spiked to 309.8% due to aggressive Bitcoin purchases. To finance these acquisitions, Metaplanet has used stock acquisition rights and zero-coupon bonds. In March, the company redeemed \$2 billion (\$12.8 million) in bonds ahead of schedule and issued new bonds for the same amount. Eric Trump&#x2013;s appointment, announced on March 21, 2025, is part of Metaplanet&#x2013;s effort to attract influential voices in the Bitcoin industry. CEO Simon Gerovich stated that the advisory board will include key figures committed to advancing Bitcoin adoption. Trump, a vocal Bitcoin advocate, has also been involved in World Liberty Financial, a crypto venture that recently raised \$550 million. His crypto holdings include Bitcoin, Ether, Solana, and Sui. Metaplanet aims to increase its Bitcoin reserves significantly. The firm has set a target of holding 10,000 BTC by the end of 2025 and 21,000 BTC by 2026. Highlighted Crypto News Today DWF Labs Rolls Out \$250 Million Fund to Power Blockchain Innovation

- Avalanche (AVAX) surged 12.88% from its recent low of \$18.14, showing signs of recovery. - AVAX flips resistance into support, trading above the 50-day EMA (\$18.80) and 200-day EMA (\$22.20), signaling bullish momentum. As the global crypto market sees a slight uptick, with Bitcoin (BTC) climbing to \$87K after a week, leading altcoins are also showing signs of recovery, including Avalanche (AVAX), which is attempting to reclaim its previous price range. AVAX price is making waves with a 12.88% rebound from its recent low of \$18.14. This has sparked optimism among traders, but the real question remains: Can AVAX sustain this momentum? AVAX Price Gains Strength After Finding Support Currently, AVAX is trading around \$23 after finding strong buying interest between \$15 and \$18. On the 4-hour chart, technical indicators show bullish momentum, with the RSI hitting 80.73, suggesting that buyers are in control. Additionally, AVAX has broken past key resistance levels on the daily chart, flipping the 50-day EMA (\$18.80) into support and trading above its 200-day EMA (\$22.20). This signals a potential long-term uptrend. Another promising sign is the MACD, which has turned bullish, hinting at a possible continuation of this rally. However, there&#x2013;s an important hurdle ahead&#x2013;the 0.5 Fibonacci retracement level at \$21.86. This zone will determine whether AVAX can push further or face rejection. Adding to the excitement, investment giant VanEck has recently registered an Avalanche ETF in Delaware. While it still awaits SEC approval, this move aligns with the growing interest in crypto ETFs, including those for XRP, Solana (SOL), and Litecoin (LTC). If approved, this could give AVAX a significant boost. Despite these positive signals, AVAX is still far from its all-time high of \$146.22. For the bullish trend to hold, the token must break above \$25 and sustain its position. If momentum fades, a drop to \$18.45 could be on the cards, with further downside risk to \$15 if selling pressure intensifies. In the coming days, AVAX will be at a crucial turning point. A successful breakout could open doors to the \$25&#x2013;\$30 range, while failure to hold key levels may lead to a deeper correction.

- Lisa Gordon urges the UK government to tax crypto purchases and incentivize domestic equities. - Gordon calls crypto a &#x201c;non-productive asset&#x2013; that doesn&#x2013;t contribute to economic growth. - FCA data shows rising crypto ownership and a decline in stock investments among young Brits. An investment executive has called on the UK government to impose a tax on cryptocurrency purchases. Lisa Gordon, chair of investment bank Cavendish, believes this move could encourage more Britons to put money into domestic equities instead. She shared her views in an interview with The Times on March 23. Gordon warned that the country should be concerned about the growing number of young adults holding crypto assets while avoiding the stock market. &#x201c;It should terrify all of us that over half of under-45s own crypto and no equities,&#x2013; she said. To address the trend, Gordon suggested applying stamp duty to crypto and cutting it for equities. Crypto as Non-Productive Asset, Tax Shift Could Boost Equities Gordon described crypto as a &#x201c;non-productive asset&#x2013; that does not benefit the wider economy. According to her perspective equity investment enables actual business operations which fuel innovation and employment creation and revenue generation. Shares enable companies to obtain capital for development and serve as part of the economic relationship between organizations and society. Currently, the UK imposes a 0.5% stamp duty on shares traded on the London Stock Exchange. This tax generates around \$3 billion (\$3.9 billion) annually. Gordon believes removing this tax for equities while introducing a similar charge on crypto could shift savings behavior toward productive investments. FCA Reports Rising Crypto Ownership, Declining Investment in Shares Data from the Financial Conduct Authority (FCA) shows that crypto ownership is on the rise. As of November, around 12% of UK adults about 7 million people own crypto. Among them, 36% are under 55 years old. Gordon noted that many younger people have moved toward saving instead of investing, which she argued is unlikely to secure a sustainable retirement. The savings account ownership rate reached 70%, yet stock ownership numbered 38% among adults, according to the FCA data in 2022. Only 25 percent of those between 18 and 24 possessed any kind of investment asset. The United Kingdom grants individuals a yearly tax-exempt saving or investment ability of \$20,000 (\$26,000). The FCA reported in a subsequent analysis that a total of 44% of grown-ups made the decision to discontinue or diminish their investment activities throughout the time period of January 2023 to January 2024. A quarter of the population utilized their savings together with investment product sales to pay for daily needs. Gordon is part of the Capital Markets Industry Taskforce, a group focused on revitalizing the UK&#x2013;s investment landscape. Cavendish, which helps firms prepare for stock listings, would likely benefit from renewed market activity. She also said the UK remains more stable than the US market, which has lost trillions due to economic concerns and trade policy fears. Crypto markets have mirrored the US downturn, with Bitcoin also falling sharply. Highlighted Crypto News for Today Bearish Clouds Over Ethena: \$10M Sell-Off and Massive Unlocks Threaten Price

- TRUMP Coin jumped over 13% in 24 hours, rising from \$10.85 to \$12.27. - Trump&#x2013;s Truth Social post calling \$TRUMP the &#x201c;greatest cryptocurrency&#x2013; sparked a price surge. The U.S. President Donald Trump set social media abuzz after he posted on Truth Social, calling his meme coin, TRUMP, the &#x201c;greatest cryptocurrency.&#x2013; His enthusiastic endorsement sent the token soaring over 13% in a single day, jumping from \$10.85 to an intraday high of \$12.27. However, the rally was short-lived as \$TRUMP soon dipped back to the \$11 range. Following this, many users on other platforms slammed Trump for promoting a crypto asset that benefits him directly. Trump&#x2013;s post also sparked criticism online, with some users on X mocking the move, saying, &#x201c;Pump and dump rhymes with Trump.&#x2013; Despite the backlash, the coin remains one of the biggest gainers of the past 24 hours, with its trading volume skyrocketing 314% to \$1.34 billion, making it the most traded meme coin of the day. Additionally, the rally in the Trump Coin comes as Bitcoin (BTC) rebounded to \$87K after dropping to \$81K last week, helping the overall crypto market recover. Major altcoins like Ethereum (ETH), XRP, and Solana (SOL) also saw positive movement on the charts. Interestingly, a whale investor who jumped in right after Trump&#x2013;s post bought \$5 million worth of \$TRUMP but ended up selling at a \$207,000 loss within an hour, according to Lookonchain. Previously, the same investor had made a massive \$108 million profit trading the meme coin. Since its market peak at \$75.35 in January, \$TRUMP has crashed nearly 85%, wiping out \$65 billion in market value. However, technical indicators suggest short-term bullish momentum. TRUMP Coin Gains Momentum as Indicators Turn Bullish In the TRUMP/USD 4 hours chart, the price sits above the 21-day and 50-day EMAs. This upward movement signals strong momentum in the market. Additionally, the Supertrend indicator has turned green, suggesting a potential shift into a more bullish phase. A closer look at the indicators reveals growing buying pressure. The CMF sits at 0.09, indicating a slight increase in demand for TRUMP Coin. Meanwhile, the RSI is at 61.41, which means the asset is in bullish territory but hasn&#x2013;t yet hit the overbought zone. IALSO, the MACD line crosses above the signal line, further confirming the ongoing positive trend. However, a breakout above \$14.37 is necessary to solidify a strong rally. If TRUMP Coin manages to stay above \$11.50 and surpass this key resistance, it could climb toward \$17.48, with \$24.67 and \$30 as potential targets. On the flip side, if momentum weakens and the price dips below \$11.36, it might slide down to \$9.51 or even \$8. In other news, First Lady Melania Trump who also entered the meme coin space with the launch of \$MELANIA, currently priced at \$0.6933. With both President Trump and the First Lady involved in the crypto scene, these political-themed tokens are drawing increasing attention. Highlighted Crypto News Today

- Crypto stock market crash happened as Bitcoin&#x2013;s decline drags the market down. - Mining firms like Marathon Digital and Riot Blockchain are facing steep losses. - The U.S. government and SEC are adopting a more crypto-friendly stance despite the slump. The digital currency market is in free fall, taking top crypto-related stocks with it. Bitcoin&#x2013;s decline has shaken the industry, with big exchanges, trading venues, and mining companies falling victim to it. Coinbase Drops Coinbase, the largest US cryptocurrency exchange, had its stock fall from close to \$350 a share in November to \$190. This steep plunge has caused a huge loss of market capitalization, from \$86 billion to \$48 billion, which represents a \$38 billion drop. MicroStrategy&#x2013;s Bitcoin Strategy Under Pressure MicroStrategy, rebranded as Strategy, has also taken a big hit. The firm, which continues to add Bitcoin to its balance sheet, has lost market capitalization from \$106 billion in the previous year to \$79 billion. With 499,226 Bitcoins on its balance sheet, the firm&#x2013;s fate is still directly linked to the price action of Bitcoin. Robinhood, once known for retail trading, is now a force to be reckoned with in the cryptocurrency world. Its shares, though, have not escaped the downturn in the market, falling from a high of \$66.85 this year to \$45. The fall has wiped out about \$18 billion in value. Robinhood has not let such challenges deter it from further expanding its footprint in the crypto arena, especially with its acquisition of BitStamp scheduled later this year. Bitcoin Miners under Strain Companies involved in mining Bitcoin have experienced a rough blow as decreasing BTC prices compress profitability margins. Mara Holdings, a company once recognized as Marathon Digital, lost more than \$4.6 billion in its market value. Several other mining businesses, such as Riot Blockchain, Core Scientific, CleanSpark, Hut 8 Mining, and TeraWulf, too, posted multi-billion-dollar losses. The decline in the crypto market has resulted in a substantial drop in overall market capitalization. The overall worth of all cryptocurrencies has fallen from more than \$3.7 trillion in 2024 to \$2.7 trillion now, as reported by CoinMarketCap. Bitcoin alone has taken a dramatic fall, dropping from \$109,300 in January to \$85,000. Altcoins have performed even worse, with Solana-based meme coins losing more than \$18 billion in worth. Regulatory Developments and Market Crash In spite of the decline, the regulatory environment has become more positive. The U.S. government has committed to backing the industry through projects such as the Strategic Bitcoin Reserve. The Securities and Exchange Commission (SEC) has also become more welcoming, settling lawsuits against leading players in the industry such as Coinbase, Ripple Labs, and Kraken. The fate of crypto stocks is unclear. Some analysts expect the recovery, while others believe the market slump means the bull run of the latest phase has ended. Standard Chartered has modeled Bitcoin to rise to \$500,000 in the long run, while Ki Young Ju, the founder of CryptoQuant, thinks all signs are currently pointing towards a bearish future. As the market rides out this trying time, investors and sector players alike will pay close attention to any indications of a turnaround or continuing slide in the coming months.
