

first approach, and itâ€™s a serious contender for short-term traders looking for the next big thing. 5. Popcat | Purring Up the Charts Popcat, inspired by the viral internet meme featuring the Popcat sound, is gaining traction in the meme coin world. With its fun, meme-based branding and growing community, Popcat is quickly becoming one of the more entertaining tokens to watch. Its developers are looking to turn it into a platform for gaming and NFT rewards, which could give it a serious boost in the short term. Why this meme coin made it to this list: Popcatâ€™s growing meme appeal, coupled with upcoming developments, makes it an exciting project to keep an eye on. Itâ€™s got that meme magic and a roadmap that could lead to explosive gains for those getting in early. 6. Floki Inu | Viking-Fueled Meme Coin with a Global Reach Floki Inu, named after Elon Muskâ€™s dog, has become a global meme coin phenomenon. With strong marketing campaigns and sponsorships (even with soccer teams), Floki Inu is carving out its niche. Its offerings include a decentralized finance (DeFi) platform, NFT marketplaces, and even educational initiatives. This coin is serious about building long-term value for its community. Why this meme coin made it to this list: Floki Inuâ€™s continued partnerships, growing adoption, and strong community make it a meme coin worth watching. If youâ€™re looking for a meme coin with massive brand recognition and a diversified ecosystem, Floki Inu offers potential short-term growth. Conclusion: Ride This Growing Wave of Meme Coins Looking for top cryptos to join for the short term? Whether youâ€™re all in with the Bulls Squad or dipping your toes in Dogecoin and Shiba Inuâ€™s established ecosystems, these meme coins are the place to be. From explosive gains to innovative features like staking, gaming, and NFTs, the meme coin space has never been more exciting. And rememberâ€“BTDF Coin is still in presale, and with the potential for incredible short-term returns, now is the time to get involved. So, donâ€™t miss outâ€“grab your \$BTDF today and ride the meme coin wave into 2025! - Cardano founder Charles Hoskinson plans to launch a Political Action Committee (PAC) in Wyoming. - The move follows his frustration with the Wyoming Stable Token (WST) bidding process, which excluded Cardano. - Hoskinson claims the process favored Ethereum and major stablecoin issuers due to an alleged bias. Cardano founder Charles Hoskinson is no stranger to controversy, and his latest battle centers around Wyomingâ€™s Stable Token (WST) project. After Cardano was excluded from the blockchain selection process, Hoskinson is now looking to reshape Wyomingâ€™s political landscape, launching a Political Action Committee (PAC) to influence policy and procurement rules. Challenging the System: Hoskinsonâ€™s PAC Plans In statements to local media, Hoskinson revealed his plan to fund and support political candidates who will advocate for more transparency in state contracts. His main grievance lies in the WST Commissionâ€™s decision to consider only pre-qualified blockchains, which included Ethereum, Avalanche, Solana, Stellar, and Sui, but excluded Cardano. â€œThat is not procurement, that is a no-bid contract built to benefit a small group of people,â€ Hoskinson argued, calling the process unfair and biased. His PAC aims to challenge such closed-door decision-making and promote open bidding for blockchain projects in Wyoming. Allegations of Bias in the WST Selection Process Hoskinson suggests that the exclusion of Cardano was part of a broader conspiracy involving former Ethereum developers, stablecoin issuer Circle, and BlackRock to favor Ethereum-based solutions. At the center of his claims is Anthony Apollo, the executive director of the WST Commission, whose background includes several years at ConsenSys, a leading Ethereum development firm. Apollo has defended the selection process, stating that Cardano failed the â€œasset freeze and seizure test, one of the criteria for selection. However, Hoskinson criticized the commission for not making these criteria public and denying Cardano the opportunity to showcase compliance. According to Hoskinson, lack of transparency in state decisions could allow major firms to manipulate contracts, keeping innovation concentrated in the hands of a few players. Beyond his exclusion from the process, Hoskinson has expressed doubts about the long-term success of the WST project. He argues that the \$5.8 million budget is insufficient to compete with private firms making billions annually. Calling the current plan doomed to fail, Hoskinson suggests that Wyoming should scrap the current approach and start over, this time with a transparent procurement process that includes all qualified blockchain networks.

- Grayscale wants to turn its XRP Trust into an ETF, and people think big companies like BlackRock might do the same. - BlackRock has already made Bitcoin and Ethereum ETFs, so many believe it could soon make one for XRP. - XRPâ€™s price is going up and down, but with more ETF filings and the Ripple vs. SEC case ending soon, investors are hopeful. Grayscale has submitted an application for an XRP ETF with the SEC: looking to make its XRP Trust an ETF tracked on the New York Stock Exchange. Grayscaleâ€™s Move Raises Questions About BlackRockâ€™s Next Step The asset currently worth \$16 million is the creation of Judge Analisa Torresâ€™ decisions in the Ripple vs. SEC case. Grayscaleâ€™s move follows its recent ETF filings for Litecoin, Solana, and Bitcoin miners, showing the companyâ€™s aggressive expansion in the ETF market. The filing has sparked speculation that other big players, including BlackRock, could soon enter the race for an XRP ETF. FOX journalist Eleanor Terrett added to the discussion by hinting that more applications could be coming soon, though she did not confirm BlackRockâ€™s involvement. BlackRock, a dominant player in the ETF market, has already launched successful Bitcoin and Ethereum spot ETFs, making it a key name to watch. Its Bitcoin ETF, iBIT, has nearly \$60 billion in assets, while its Ethereum ETF holds \$3.7 billion. Given this, the possibility of a BlackRock XRP ETF has generated excitement in the crypto community. Meanwhile, eight asset managers, including Bitwise, CoinShares, 21Shares, and WisdomTree, have already applied for an XRP ETF, further driving speculation about growing institutional interest in XRP. If BlackRock joins the list, it could significantly strengthen XRPâ€™s position in the market and attract more investors. XRP Price Moves as Investors Watch for ETF Approvals XRPâ€™s price has seen fluctuations amid these developments. It traded at around \$3.08 while experiencing a 31% drop in trading volume, reflecting cautious investor sentiment after the US Fed maintained interest rates. Traders are also closely watching upcoming US inflation data, which could influence market trends. Despite the recent slowdown, XRP remains one of the best-performing cryptos in January, gaining over 43%. Analysts suggest that a breakout above \$3.55 could push XRP toward \$4, while a dip below \$2.6 might allow bears to take control. With ETF filings increasing and the Ripple vs. SEC case nearing a conclusion, many investors remain optimistic about XRPâ€™s future. Highlighted Crypto News Today Pi Network Price Fluctuates as Community Questions Grace Period Extension

- Hyperliquid (HYPE) trades at \$27.46, gaining 5.57% in 24 hours. - Golden crossover hints at potential continuation toward \$31.00. Hyperliquid (HYPE) is currently trading at \$27.46, reflecting a 5.57% gain over the last 24 hours. The token holds the 29th position in the crypto market rankings. With a total market capitalization of \$9.16 billion, it shows a 5.57% surge from previous levels, indicating steady growth. Trading volume over the past 24 hours reached \$224.22 million, marking a significant 16.12% increase. The Market Cap ratio stands at 2.45%, demonstrating solid liquidity. Hyperliquidâ€™s fully diluted valuation (FDV) is now \$27.45 billion, with 333.92 million tokens circulating out of a maximum supply of 1 billion. Technical Indicators for HYPE Based on the price chart, Hyperliquid shows strong price activity near critical resistance and support levels. The primary resistance is at \$28.50, while \$26.20 serves as a critical support. If the price breaches the resistance, it may target \$30.00. A break below support might push the price toward \$25.50. The Relative Strength Index (RSI) stands at 65, close to overbought territory, indicating bullish momentum. The RSI average remains around 60, supporting sustained upward movement. The Chaikin Money Flow (CMF) displays positive trends, confirming strong buying activity. Moving averages further affirm the bullish sentiment. The 50-day moving average has crossed above the 200-day moving average, forming a golden crossover pattern. If the trend holds, Hyperliquid may push toward \$31.00 in the coming days. Short-term price action also remains supported by the 20-day moving average, which has acted as a key dynamic support line. The market outlook remains optimistic. Strong trading volumes and positive technical indicators suggest that Hyperliquid may maintain its bullish momentum in the near term. However, traders should closely monitor support and resistance levels for any potential reversals. Highlighted Crypto News Today Coinbase Eyes CFTC Green Light for Solana and Hedera Futures Listings

Dubai, United Arab Emirates, January 31st, 2025, Chainwire Following a recent article in Fortune Magazine, Musk It has sparked speculation as the next breakout memecoin, driven by its undeniable ties to the Musk family. While Elon Musk has yet to officially endorse a token, history suggests that when he does, the results can be explosive. Could Musk It be the one to carry that legacy forward? The Musk Factor: Exploring Musk Itâ€™s Connection to Elon Elon Musk has made it clear that heâ€™s a fan of memecoins, single-handedly pushing Dogecoin to unprecedented heights. While he hasnâ€™t officially commented on Musk It yet, his father Errol Musk has embraced the project, and that connection alone fuels speculation that Elon and Kimbal could be paying attention. After all, if thereâ€™s one thing the crypto world knows, itâ€™s that Elon moves marketsâ€“and anything remotely tied to his name has explosive potential. Dogecoin started as a joke, then skyrocketed to a \$60 billion market cap. Shiba Inu (SHIB) followed suit, peaking at \$40 billion. Floki, PEPE, and countless others have turned early adopters into millionaires. What do they all have in common? A strong community, a compelling story, and viral potential. Musk It has all threeâ€“and then some. A Coin with Family Ties Musk It is being positioned as the Musk family coin, and while Errol Musk has publicly endorsed it, the bigger question remains: Could Kimbal or Elon step in? In December 2024, Errol Musk met with Kimbal Musk in Dubai, a meeting that has left crypto enthusiasts speculating whether Kimbal might take an interest in Musk It. Given Kimbalâ€™s entrepreneurial spirit and past involvement in innovative projects, his potential endorsement could be a game-changer. And if Elon ever tweets about Musk It? That could be the catalyst that propels it to Doge-level dominance. Risk-Adjusted Gains: Evaluating Musk Itâ€™s Growth Potential Musk It stands at a \$10 million market cap compared to Dogecoinâ€™s \$60 billion. Thatâ€™s a massive risk-adjusted ratioâ€“a potential 6000x upside if Musk It follows a similar trajectory. For those looking for the next viral, community-driven crypto project, Musk It presents a unique opportunity. With undeniable ties to the Musk family and speculation swirling around potential future endorsements, the project continues to attract attention. About Musk It Musk It is more than just a meme coinâ€“itâ€™s a movement. A mindset that embodies taking bold action, breaking barriers, and achieving greatness. Inspired by the revolutionary spirit of innovation and efficiency, Musk It represents the drive to do things better, challenge the status quo, and redefine success. With over 40,000 holders already holding Musk It, its expanding community reflects its growing presence. Unlike traditional meme coin, which is meant only to embody an idea, Musk It is backed by the Musk Family and will serve as the official coin of Errolâ€™s Musk Institute. Musk It: the coin for those who donâ€™t let anything stand in their way. Musk Family Endorsed and Approved. - Pump.fun got a class action lawsuit for violating U.S. securities laws. - The lawsuit claims all tokens of Pump.fun are unregistered Security Memecoins. Pump.fun, the memecoin launchpad and trading platform, is in some serious trouble. The platform received a class action lawsuit for violating U.S. securities laws. Its allegations include Pump.fun offering and selling risky unregistered securities to users. And, it made approximately \$500 million from fees. The lawsuit was filed by Diego Aguilar in the New York court. It claimed that the platform indulged in activities that were not aligned with U.S. securities laws. Moreover, there are other allegations that it is run by the UK-based Baton Corporation and used guerrilla marketing to sell risky tokens, which resulted in retail investors suffering significant losses. Besides this, the lawsuit has other names such as Alon Cohen, Dylan Keller, and Noah Bernhard Hugo Tweedale. These people are Baton Corporationâ€™s officers in UK Companies. Are Pump.fun Tokens Unregistered Security Memecoins? Diego Aguilar named all the tokens of the platform as â€œunregistered security meme coins.â€ He claimed that the platform has the control of tokenâ€™s technical infrastructure, liquidity, pricing, and promotion. Thus, the platform manipulated the market with this advantage. The lawsuit asserts breaching of the Security Act. It further demands relief for the affected investors in the form of compensation for all monetary damages, legal proceeding fees, and rescission of all token purchases. Pump.fun and its official team hasnâ€™t reacted yet. However, this is not the first time Pump.fun got into legal trouble. In January, US law firm Burwick Law intended to file a case against Pump.fun for conducting rug pulls and other unfulfilled promises. Solana memecoin creation platform Pump.fun is now considered the king of controversies. The platform has faced various allegations in recent times. In November 2024, the Pump.fun was seen with various disturbing live streams featuring violent, racist, and shocking content that went viral on all social media platforms. Moreover, the platform has some serious allegations of illicit drug use, promoting self-harm, racism, and more. These activities harm the reputation of the platform, including Solana. Highlighted Crypto News Today: Elon Muskâ€™s Father Targets \$200M with â€œMusk Itâ€ Memecoin Launch

- Mention like Elon Muskâ€™s father backs â€œMusk Itâ€ memecoin, aiming to raise \$200M for a new think tank. - The token surged to \$0.20 before falling back to \$0.02, with market doubts persisting. Elon Muskâ€™s father, Errol Musk, has backed â€œMusk It,â€ a memecoin aiming to raise up to \$200 million for a new think tank. However, concerns over transparency and Elon Muskâ€™s lack of involvement cast doubt on the projectâ€™s credibility. Errol Musk and business partner Nathan Browne have partnered with a Middle Eastern crypto company to promote â€œMusk Itâ€ (MUSKIT), a

SEC approves Bitwise Bitcoin-Ethereum ETF, exposure to both assets in one regulated product. - Bitwise joins Hashdex and Franklin Templeton and becomes the third firm approved for a joint BTC-ETH ETF. The Securities and Exchange Commission has approved the Bitwise Bitcoin and Ethereum ETF (Exchange Traded Fund) which allows investors to gain exposure to both assets in a single-regulated product. The approval of the fund's 19b-4 filing for the Assets Management Firm is a first step before it launches, then SEC clearance for its pending registration application (FORM S-1). Bitwise ETF Gains Key SEC Approval Amid Expanding Crypto Offerings Bitwise's ETF, named the Bitwise Bitcoin and Ethereum ETF, will track the spot prices of Bitcoin and Ethereum, with their relative market capitalization. The filing emphasizes that the funds are composed of 83% Bitcoin and 17% Ethereum. The fund will be managed by Bitwise Investment Advisers, Coinbase handles custody, while Bank of New York Mellon serves as the cash custodian, administrator, and transfer agent. The SEC's decision comes during a regulatory shift under the Trump administration, which has led to an uptick in crypto-related ETF applications. Bitwise already filed for its joint Bitcoin-Ethereum ETF in November 2024, shortly after Trump's election victory. Bloomberg Intelligence analyst Nathan Dean commented on the growing wave of ETF filings; he said, "Issuers are probing the SEC's boundaries with unique filings, including memecoin ETFs." This ETF approval makes Bitwise the third asset manager allowed for a joint Bitcoin and Ethereum ETF, following similar approvals for Hashdex and Franklin Templeton on Dec. 19. Unlike some ETFs that track multiple crypto assets, Bitwise's fund focuses solely on Bitcoin and Ethereum, the two largest cryptocurrencies by market cap. ETF Issuers Test SEC Limits as Crypto Regulation Evolves The global crypto industry is pushing new investment products into the market. Bloomberg ETF analyst James Seyffart recently noted that issuers are "testing the limits of what this SEC is going to allow" following Tuttle Capital's filing for ten leveraged crypto ETFs. Several asset management firms have also recently submitted applications for ETFs tracking alternative cryptocurrencies like Dogecoin (DOGE) and Solana (SOL). Eric, an analyst, also noted that the role of the new SEC will be of great importance in the crypto industry. Moreover, Coinbase already introduced futures products for Solana (SOL) and Hedera (HBAR), adding further developments to crypto investment offerings in regulated markets. Bitwise expressed optimism about the future of crypto in a post on X. "The current bull market could run into 2026 and beyond, with Washington embracing digital assets like never before." Highlighted Crypto News Today

You've heard of Bitcoin-grade Y, it's typically in reference to its robustness or general quality. Industrial-grade sanitizer Military-grade encryption. Space-grade titanium. Well here's another Y you can add to that list: blockchain-grade storage. As you've probably guessed, this entails a solution that maintains a high degree of security and decentralization, qualities that are deeply enshrined in web3 protocols. But there's more to it than simply optimizing for these two characteristics. Because to warrant the blockchain-grade tag, a data storage solution must go further, setting a benchmark for tamper-proof design and privacy. It's a lot to have to juggle simultaneously, which is why the blockchain-grade moniker can't be applied to every web3 data network out there. Putting it on a blockchain does not mean it makes the grade, any more than an item can be assumed to be high-quality just because the military uses it. In designing its Solana storage layer, Xandem has given careful consideration to the standards its solution must adhere to. And it's confident that as a consequence it's raised the bar for web3 data storage and delivery. But talk is cheap and the real measure of Xandem's capabilities comes from a thorough appraisal of what it can do and whether it can do it without introducing serious trade-offs along the way. So let's take a closer look at what Xandem's packing beneath the hood.

Web3 Storage That Makes The Grade

The backbone of Xandem's storage layer is a network of decentralized storage nodes. Unlike centralized servers, where data resides in a single, vulnerable location, Xandem distributes data across a global network of nodes. This design eliminates single points of failure. If one node goes offline, the data remains accessible through other nodes in the network. Xandem's solution has also been engineered for maximum security. Ensuring a high degree of decentralization minimizes the risk of data manipulation or loss as no single entity has full control over the stored information. This architecture functions as a digital fortress, where data is safeguarded by multiple, independently operated nodes, ensuring continuity and reliability even under adverse conditions. Uncompromising Encryption Xandem further strengthens data security through fragmentation and encryption. When users store data, the system breaks it into smaller shards and encrypts them before distributing them across the network of storage nodes. By segmenting data, the network can more easily balance loads and handle traffic spikes without slowing down. Each node only holds a small, scrambled piece of the total data, so even if a node is compromised, the attacker only gains access to an encrypted fragment. Without the decryption key, these fragments are meaningless, ensuring that sensitive information remains confidential even if a node is compromised. This mechanism is akin to shredding a document into pieces and locking each piece in a different secure vault - only the document owner can reassemble the original content.

Tamper-Proof Design One of the most critical requirements of blockchain-grade storage is the ability to detect and prevent unauthorized data alterations. Xandem achieves this through cryptographic proofs embedded within the blockchain layer. Each data shard carries cryptographic signatures that are verifiable onchain, ensuring true immutability. Once data is recorded and hashed, it cannot be changed without leaving a trace. Any unauthorized change to a data shard is instantly flagged during the verification process. At the same time, trust minimization is maintained. This means that users don't have to trust a single entity to confirm data integrity; the network's consensus mechanism and cryptographic proofs collectively guarantee authenticity. Think of it as a tamper-proof seal on a package; if someone tries to open or modify the contents, the broken seal reveals the tampering immediately. Censorship Resistance Finally, we have censorship resistance, an essential quality for all blockchain systems. Beyond preventing unauthorized manipulation, Xandem's network design prioritizes free and open data access. By distributing encrypted data fragments across an international network of nodes, the system ensures that no central authority controls access. Because no single entity can decide to withhold data, it becomes exceedingly difficult for external forces to block or censor specific information. Even targeted attempts to shut down certain nodes or data centers will likely fail since the same data is mirrored in multiple locations around the world. In this way, Xandem's storage layer serves as a robust guardian of information that it would be virtually impossible to censor or shut down. Setting the Standard for Blockchain-Grade Storage By combining decentralized storage nodes, advanced encryption, data fragmentation, and onchain verification, Xandem's vision of blockchain-grade storage ticks all the right boxes. It should be noted, of course, that it's by no means the first web3 project to emphasize its commitment to such attributes as security, privacy, decentralization, and resilience. But beyond the big picture stuff, Xandem has drawn the detail that shows its solution has been meticulously thought out and carefully optimized to complement Solana's architecture. From the read and write design of its storage layer to the use of the Solana chain for data anchoring, Xandem's rigor is impressive. Its green paper forensically details the features that will enable Xandem to balance decentralization and cost with efficient random access. The theory checks out. But it's the next stage that'll be the making of Xandem's solution as it deploys its mainnet and onboard developers who start using its data layer to power their Solana dapps. If it succeeds in this endeavor it will expand the possibilities of what can be created on Solana - think AI apps consuming exabytes of data while setting a standard for other blockchain-grade protocols to emulate.

As we gear up for 2025, a new crypto project is stealing the spotlight – Lightchain AI (LCAI). Priced at just \$0.005625, it's already raised over \$13.8 million in its presale and it's turning heads. Traders are starting to move away from big names like PEPE and Solana (SOL) to jump

on this exciting opportunity. With experts predicting a potential 10,000% ROI, Lightchain AI is shaping up to be one of the most talked-about projects in the crypto space. Could this be your next big win? Lightchain AI: Where Blockchain Meets AI Innovation Lightchain AI is shaking things up in the blockchain space by combining the power of artificial intelligence with real-world problem-solving. Unlike meme coins like PEPE, this project is all about delivering actual value. Whether it's finance, supply chain management, or predictive analytics, Lightchain AI is here to make a difference. What makes it stand out? Lightchain AI offers cool features like secure AI model training and decentralized computations, so you get both scalability and efficiency. By blending blockchain and AI, it's creating practical solutions that businesses can actually use to streamline operations and achieve more with advanced tech. If you're tired of all the hype with no substance in the blockchain world, Lightchain AI might just be the game-changer you're looking for. It's not just another project; it's a smart move for those who want a serious investment with real potential. Why Solana Traders Are Turning to Lightchain AI Solana (SOL) has been a go-to for many crypto enthusiasts, thanks to its speed and low costs. But let's face it—issues like centralization and those pesky network outages have prompted some traders to explore other options. Enter Lightchain AI. With its privacy-first approach and ability to work seamlessly with other blockchain networks, it's offering something fresh. Unlike Solana, Lightchain AI is built for the long haul, using cutting-edge cryptographic methods and robust infrastructure to handle high transaction volumes while staying secure and decentralized. For traders who value trust, innovation, and a future-proof platform, Lightchain AI is quickly becoming the next big thing. PEPE Traders Are Ready for the Next Big Opportunity? PEPE shook up the crypto world during the meme coin craze, but let's face it—without real utility, its future feels uncertain. So, where's the smart money heading next? Meet Lightchain AI—a true game-changer in blockchain. This isn't just another coin riding the hype wave; Lightchain AI offers practical solutions, a thriving ecosystem, and serious appeal for developers and businesses. For traders looking to turn the page on pure speculation, Lightchain AI delivers solid fundamentals and a clear vision for the future. Think innovation meets opportunity. The best part? Analysts are buzzing about a potential 10,000% ROI. Yes, you heard that right—this could be your chance to get in early on a crypto project poised for explosive growth. Lightchain AI is more than hype; it's rewriting the rules of the game. Don't miss out on what could be your next big win. Ready to level up? Check it out here! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Majuro, Marshall Islands, January 30th, 2025, Chainwire Funding accelerates the development of Elastos's ELA token, Native Bitcoin DeFi protocol, and Web3 data economy – positioning Elastos as the utility layer for Bitcoin. Elastos, a decentralized web infrastructure pioneer, today announced a \$20 million strategic investment from Rollman Management to scale its Bitcoin-aligned ecosystem. Rollman Management, recognized for its high-profile investments in blockchain projects like Ripple, Ethereum, Solana, and Planck, now ranks Elastos among its top five holdings. The partnership will fuel the launch of Elastos's Native Bitcoin DeFi protocol, Bel2, expand its merge-mined ELA token as a Bitcoin reserve asset, and accelerate Elacity's Web3 data marketplace that enables creators to monetize content without intermediaries on top. With Bitcoin's market cap surpassing \$2 trillion, Elastos solves critical gaps in Bitcoin's ecosystem: - ELA as Bitcoin's Merge-Mined Reserve Asset: ELA tokens have been secured by Bitcoin's hash power through merge-mining since 2018, aligning with Satoshi Nakamoto's 2010 vision for decentralized networks. With a total of 28,220,000 by 2105 and around 50% of Bitcoin's hashrate, ELA gains security and decentralization, provides additional revenue for BTC miners at no extra cost, and creates a crypto economically sound reserve asset for Elastos's Bitcoin-native DeFi system. - Bel2: Bitcoin's DeFi Breakthrough: Launching in Q2 2024, Bel2 allows Bitcoin holders to collateralize BTC in personal wallets and access Ethereum smart contract services. These include minting stablecoins, performing swaps, and borrowing assets peer-to-peer, unlocking its value all whilst eliminating reliance on synthetic BTC (e.g., WBTC) and centralized custodians. Bel2 combines locking scripts, zero-knowledge proofs, oracles, and an arbiter network where ELA stakeholders can stake ELA and earn BTC fees as decentralized nodes to support the protocol. - Elacity: Web3's Creator Revolution: Already proven in early tests, where one creator earned \$5,600 in 24 hours through tokenized podcast access, Elacity v2 will launch in April with channels and subscription models. It enables influencers to encrypt, tokenize, and sell content/royalties on Elastos for audio and video markets, with plans to extend its technology to support the tokenization of AI markets. - Leveraging Bitcoin's trillion-dollar consensus to empower Web3 users with scalable utilities—that's where Elastos comes in, said Rong Chen, Elastos Founder. - Merge-mining ties ELA's security to Bitcoin's, and Bel2, Elastos's decentralized finance protocol, unlocks BTC-backed DeFi without compromises, whilst Elacity creates a decentralized digital goods economy on top. Rollman's investment supports our role as Bitcoin's utility layer. The \$20M investment from Rollman will drive the advancement of Elastos technologies and also help Elastos reorient its branding, mature its technological stance, and go to market. This includes enhancing marketing efforts, which will further position Elastos as a leader in the growing Bitcoin-native DeFi space. Elastos as a Pioneer in Bitcoin-secured Governance Beyond its technological advancements, Elastos stands out for its Cyber Republic Consensus (CRC) governance model, formalized as a DAO LLC in the Marshall Islands, which signed this agreement with Rollman. This delegate-based system allows community members to stake Bitcoin merge-mined ELA, earn APY, and annually elect or run as one of 12 council members who vote on proposals, drive innovation, sign contracts, and validate Elastos's Smart (EVM) and Identity (DID) sidechains. This ensures governance decisions reflect the community's interests and demonstrates Elastos's commitment to a truly decentralized and transparent ecosystem rooted in Bitcoin. As Elastos enters its next phase of growth, participants can join the ecosystems CRC DAO by acquiring merge-mined ELA, which has a market cap of \$48,542,586 and is secured by nearly 50% of Bitcoin's hashrate (366.01 EH/s, equivalent to 244,008 Frontier Supercomputers). ELA offers 6+ years of proven security, a fixed cap of 28.22M tokens to be fully mined by 2105, and 3.29% emissions via its Essentials Wallet, ensuring scarcity and predictability for holders. Available on Centralized Exchanges (Coinbase, KuCoin, Gate.io, Huobi, Bitget, Crypto.com) and Decentralized Exchanges (Uniswap, Chai Finance, Glide Finance), ELA empowers holders to shape Elastos's future through CRC governance—driving innovation, reinforcing Bitcoin-level security, and building the next generation of decentralized applications. Additional Information - ELA Merge Mining - Bel2 - Elacity - Cyber Republic Consensus (CRC) - Users can contact info@elastos.org for partnership inquiries or media requests. About Elastos Elastos is a SmartWeb ecosystem builder focused on enabling decentralized application creation and cross-chain connectivity. Built on top of Bitcoin merge-mining, Elastos relies on the security of the world's largest public blockchain and extends it with additional layers. The introduction of Bel2 and its Arbiter Network marks Elastos's latest effort to advance a more open, clear, and trustless global financial system. Website: [Elastos.info](https://elastos.info) X/Twitter: @ElastosInfo About Rollman Management Digital Rollman Management Digital is a private investment and management consulting boutique that is incorporated in the British Virgin Islands. The firm seeks to invest in talented teams and their blockchain protocols to further develop their technology and business while adding significant value to the future of the modern economy. RMD is led by Victor R. Ch. Rollman, the founder of Rollman Capital, Rollman Mining, and Rollman Management. The Group offers a wide range of investment opportunities, financial services, and management consultancy to UHNWIs, entrepreneurs, developing governments, commodity trading firms, banks, family offices, and pension funds. London, United Kingdom, January 30th, 2025, Chainwire Funding \$1 million in its third presale round, highlighting continued engagement in its early-stage development. This progress reflects growing interest in Dawgz AI's approach to combining blockchain technology with internet culture. Built on the Ethereum blockchain, Dawgz AI positions itself in a competitive market by prioritizing utility, security, and long-term value. The team hopes to attract crypto participants who are interested in developments that extend beyond conventional market trends. Dawgz AI (DAGZ): Redefining Meme Coins Through AI Innovation Over the years, meme coins have often been dismissed as fleeting internet jokes. However, Dawgz AI positions itself as a hybrid ecosystem where artificial intelligence meets decentralized finance. At its core, the project incorporates proprietary Blackbox AI technology, designed to automate trading functions with the goal of optimizing returns for token holders without requiring active market participation. This passive reward mechanism aims to democratize access to algorithmic trading strategies, traditionally reserved for institutional investors, while minimizing risk through diversified AI-driven portfolios. The team behind Dawgz AI highlights transparency in its operations. By auditing its smart contract through SolidProof, a blockchain security firm, the project addresses common concerns about vulnerabilities in decentralized platforms. Such are intended to enhance trust and support the project's long-term development. Tokenomics and Strategic Growth Framework Dawgz AI's tokenomics model is designed to balance rewards with scalability. With a total supply of 8,888,888,888 DAGZ tokens, its allocation strategy is structured to encourage long-term participation. 30% for presale investors, offering early adopters discounted entry. 20% allocated to staking rewards, enabling passive income opportunities. 24% reserved for marketing aimed at expanding global visibility. 15% for community rewards to incentivize active participation. 10% for exchange listings, adding liquidity post-presale launch 1% allocated for foundation, funding future projects. The token price is currently \$0.00231 and is set to increase by the team to \$0.00259 in the next stage. This tiered pricing structure is designed to reflect the project's phased development approach. Dawgz AI has raised over \$1 million in its ongoing presale. The project also includes a staking mechanism, providing participants with a chance to earn an annual percentage yield (APY) of up to 700% during the presale phase. Meanwhile, the project's roadmap suggests sustained utility, including AI bot enhancements and NFT launches. The team's long-term vision includes cross-chain interoperability, strategic partnerships, and continuous AI upgrades. Such developments could position Dawgz AI as a benchmark for utility-focused meme coins, appealing to retail and institutional investors. Dawgz AI's Market Traction and Community Engagement Dawgz AI has gained attention across crypto forums, social media platforms, and industry news outlets. Discussions on Reddit and Twitter have noted interest in its AI integration. Additionally, coverage by prominent crypto publications like CoinTelegraph and CryptoSlate has contributed to its exposure. The project's Google News mentions, and influencer partnerships signal strategic efforts to penetrate mainstream consciousness. Notably, community-building remains central to Dawgz AI's ethos. Interactive campaigns, such as NFT collectibles and cross-chain expansions (planned for Solana and BNB Chain post-launch), aim to foster loyalty among holders. These initiatives diversify utility and position DAGZ as a multi-chain asset, thus broadening its accessibility. Security and Transparency Security remains a priority for Dawgz AI, given the challenges in the broader crypto industry. The project's smart contracts have undergone an audit by SolidProof, aimed at verifying their integrity and addressing potential vulnerabilities. Additionally, the team has implemented liquidity pool locks and ensures fund allocations are transparently accessible via blockchain explorers, aiming to enhance security and accountability. Participating in The Dawgz AI Presale The Dawgz AI presale process is designed to be accessible to participants. Interested users can visit the official presale website, ensuring they use verified links to avoid phishing risks. A compatible wallet, such as MetaMask or Trust Wallet, is required, with support for Ethereum, Solana, or BNB Chain. DAGZ tokens can be acquired using ETH, SOL, BNB, USDT, or USDC. Once the transaction is confirmed, purchased tokens will be distributed post-presale, with staking options available immediately. A New Contender in The Meme Coin Arena The Dawgz AI team sees the presale progress as reflecting ongoing interest in projects that incorporate both utility and meme culture elements within the cryptocurrency space. With AI-driven automation, security measures, and community-focused initiatives, the project seeks to differentiate itself within the space. Surpassing \$1 million in fundraising represents an early stage of growth as Dawgz AI continues its development into 2025. About Dawgz AI Dawgz AI is an Ethereum-based cryptocurrency project that combines AI algorithms with meme coin virality. Its mission is to bridge the gap between decentralized finance and advanced technology. Aims to redefine expectations for meme-driven tokens by focusing on security, community, and innovation. - With a more than 30% price surge, Onyxcoin's XCN is trading above \$0.03886. - Onyxcoin soared 1,500% in 2025, after being dormant for 2 years. Onyxcoin's native XCN token price skyrocketed in 2025 with its historical performance in the market. After being dormant for almost 2 years, the XCN price shot up significantly in Jan 2025. With over 1,500% price surge, the Onyxcoin token outperformed major altcoins such as Ether, XRP, Solana, BNB, Dogecoin, etc. That brings the question of whether the price surge is random or if the XCN token is really worth the hype. As per live price-tracking platform CoinMarketCap, XCN token is currently trading at \$0.03886. It recorded daily, weekly, and monthly price surges of over 30%, 200%, and 1,500% respectively in 2025. While the market capitalization surpassed the \$1 billion mark last week, 24-hour trading volume jumped by 90%. Even though Onyxcoin token price is increasing tremendously in 2025, it was not always the case. The XCN price suffered a major crash in 2022 due to disputes with Tron founder Justin Sun and HTX Global crypto exchange. After decreasing from its ATH of \$0.1726, XCN crashed to \$0.01213 by

the end of 2022. Is XCN Worth the Hype? XCN has been dormant for almost 2 years until the recent hype in 2025. The price surge is backed by strong causes instead of just randomly increased interest on social platforms. One of the noteworthy drives of XCN price is its resolution of long-standing dispute with Justin Sun. OnyxDAO announced that they resolved issues with Tron founder and HTX Global. They deployed OIP-51 improvement protocol, which will make Justin Sun and HTX a part of the DAO after passing. Furthermore, both of them will also involve in the XCN staking and governance. Additionally, the project also came up with major platform upgrades in the new year. The first one being the launch of an OIP on Feb 01, 2025 that will incentivize Onyx Core Nodes. In addition to that, the project reminded its community once again of the upcoming updates and the launch of a new blockchain, Onyx XCN Ledger. OnyxDAO is also going to feature a brand new whitepaper, with refined tokenomics model. Amidst the relentless preparation for the new blockchain, the Onyx team is increasing its partnerships. One of the notable partnerships of Onyxcoin is with Chain.com, which allows token holders to pay with XCN for Chain.com services. As the team is coming up with platform upgrades and the skyrocketing Onyxcoin token price, crypto exchanges are considering XCN token listing. This is further stirring the hype around Onyxcoin, attracting investors. Thus, Onyxcoin's XCN seems to be worth the hype this time. Once the project unveils its platform upgrades and the new blockchain, it would further impact the XCN price. However, the team must deliver what it's promising to the community to keep up with the increased interest and market performance. Highlighted Crypto News Today:

Did you know this crypto presale is projected to become a crypto giant? With cryptocurrency adoption accelerating worldwide, governments are beginning to recognize its value in financial stability and growth. Texas Lieutenant Governor Dan Patrick has announced plans to establish a Bitcoin reserve for the state. This initiative, listed as Senate Bill 21, is part of his top 40 priority bills for the 2025 legislative session. Increased institutional interest boosts emerging blockchain projects, creating massive opportunities for early investors. To help investors capitalize on the next wave of adoption, we identified five of the best crypto presale projects. These include DexBoss (DEBO), which transforms DeFi with advanced trading solutions, and Aureal One (DLUME), which drives innovation in blockchain gaming. Qubetics (TICS) improves blockchain connectivity, and The Last Dwarfs (TLD) merges GameFi with financial opportunities. Best Wallet Token (BEST) enhances digital asset management. Among them, DexBoss stands out, but each project shows strong growth potential. So keep reading to discover which one could be your next big investment. Top 5 Crypto Presales - DexBoss (DEBO) - Aureal One (DLUME) - Qubetics (TICS) - The Last Dwarfs (TLD) - Best Wallet Token (BEST) These promising crypto presales reflect the growing demand for innovative blockchain solutions in an evolving digital economy. Early-stage investments like these offer strong growth potential, attracting investors looking for high returns. Let's learn more and find out why DexBoss is leading the wave of innovation in DeFi. 1. DexBoss (DEBO) DexBoss is redefining decentralized finance by providing access to over 2,000 cryptocurrencies on a seamless exchange. The platform integrates advanced liquidity solutions and innovative trading tools to help users execute transactions with precision. DexBoss prioritizes user experience with an intuitive interface, ensuring easy navigation for both beginner and experienced traders. These features position DexBoss as the best crypto presale opportunity for investors looking to enter the DeFi space early. Click here to know more about DexBoss Enhancing Value with DEBO DEBO offers more than just token ownership; it creates passive income opportunities within the DeFi ecosystem. Holders can stake their DEBO tokens to earn rewards or participate in liquidity farming for additional income. These options provide multiple earning streams while strengthening the platform's liquidity. DexBoss also implements a deflationary model, automatically buying back and burning DEBO tokens with each transaction. This strategy increases scarcity and drives long-term value. With these features, DexBoss stands as a top ICO, offering strong potential for future growth and investment. DexBoss Presale Performance Highlights - USD Raised: \$536,373.7 out of \$750,000 - Presale Progress: 72% - Current Price: \$0.011 - Listing Price: \$0.0505 2. Aureal One (DLUME) Aureal One leads blockchain innovation with a focus on gaming and metaverse applications. It eliminates high gas fees and slow transaction speeds, creating a seamless user experience. Developers benefit from an efficient, low-cost platform tailored to interactive digital environments. The blockchain's scalability enhances in-game transactions, ensuring smooth and reliable performance. With these advancements, it emerges as a top ICO for investors seeking cutting-edge blockchain solutions. Aureal One's Innovative Ecosystem The Aureal One ecosystem is enriched by its flagship projects, DarkLume Metaverse and Clash of Tiles. DarkLume offers a vast virtual world where users can engage in various activities like trading and building on their own digital land. Meanwhile, Clash of Tiles introduces a strategic game where players battle using cryptocurrencies and stocks, demonstrating the real-time transaction capabilities of the Aureal One blockchain. These applications not only showcase the technical prowess of Aureal One but also highlight its potential to host complex digital environments. Key Investment Details for Aureal One - Total funds raised so far: \$2,847,695.2 from \$3,200,000 - Current Price: \$0.0011 - Listing Price: \$0.005 - Estimated profit potential: 400% 3. Qubetics (TICS) Qubetics introduces a groundbreaking Layer-1, EVM-compatible, aggregated multichain platform that transforms blockchain technology. It enhances scalability, security, and interoperability, redefining decentralized solutions. By bridging major networks like Ethereum, Solana, and Bitcoin, Qubetics allows seamless cross-chain transactions. This capability is vital for decentralized applications, digital payments, and asset tokenization. These innovations make Qubetics one of the hidden gems in the crypto space, providing unique advantages for users and investors alike. Future Prospects and Vision Qubetics continues to push the boundaries of blockchain innovation with a forward-thinking approach. It simplifies complex blockchain processes, encouraging adoption across finance, technology, and commerce. Its commitment to usability makes it accessible for businesses and individuals looking for efficient decentralized solutions. The development team remains dedicated to improving the network, ensuring it adapts to market demands. As a high potential crypto, Qubetics offers scalability and security, positioning it as a major player in the digital economy. Qubetics Token Performance Overview - Current Price: \$0.0605364 - USD Raised: \$11,411,413.85 - Tokens Sold: 452,070,867 TICS - Token Holders: 17,413 4. The Last Dwarfs (TLD) The Last Dwarfs (TLD) is making waves in the crypto space, particularly within the GameFi sector. This project introduces a blockchain-based game where players defend a declining dwarf kingdom. The immersive ecosystem combines resource management, strategy, and investment opportunities. TLD's built-in launchpad allows users to access and invest in emerging blockchain projects. This unique combination of gaming and investment makes TLD one of the hidden gems in the crypto market. Expansion and User Growth The Last Dwarfs continues to grow rapidly, reaching over 300,000 users and securing 50 strategic partnerships. These collaborations within the TON blockchain ecosystem boost its credibility and adoption. The project merges gaming with decentralized finance (DeFi), attracting both gamers and investors. By integrating financial incentives with entertainment, TLD offers a compelling experience. As a high potential crypto, it presents significant opportunities for users seeking engagement and investment in blockchain gaming. Key Investment Details of The Last Dwarfs - Current Price: \$0.0085 - Token Supply: 10 billion tokens - Tokens to Distribute in Presale: 40% - Token Use for Ecosystem and Rewards: 10% 5. Best Wallet Token (BEST) Best Wallet Token (BEST) is transforming the crypto wallet landscape with advanced features for modern cryptocurrency users. The wallet ensures complete self-custody, allowing users full control over assets without depending on centralized platforms. Best Wallet supports diverse transactions, including fiat conversions and seamless interaction with decentralized applications (DApps). Its growing adoption highlights its potential as one of the most promising crypto presales in the market. Unique Features and Expansion Plans Best Wallet plans to expand its ecosystem with innovative features throughout 2025. The platform will introduce a decentralized exchange, enabling secure and direct crypto transactions. Airdrop programs will reward token holders, enhancing engagement and investment appeal. The launch of Best Card, a debit card for direct crypto spending, further strengthens its ecosystem. These advancements position Best Wallet as the ultimate choice for seamless digital asset management. Key Financial Metrics for Best Wallet Token - Current Price: \$0.0238 - USD Raised: \$8,619,616.58 - Tokens Supply: 10,000,000,000 - Tokens set to be used in Airdrops: 10% Concluding Words With the increase in corporate and governmental confidence in crypto, emerging and innovative projects are set to benefit greatly. As adoption grows, the best crypto presale opportunities offer investors the chance to maximize potential gains. As such, Each featured project offers unique advancements that could transform industries, making them valuable investment opportunities. Among these projects, Aureal One is attracting a lot of attention with its groundbreaking innovations in blockchain gaming. So don't miss your chance to invest in these emerging giants now to benefit from their explosive growth. However, remember to conduct careful research before investing. - Donald Trump related merchandise websites are accepting TRUMP memecoin payments. - Users can make TRUMP payments through Solana Pay on websites. Donald Trump branded merchandise websites are accepting TRUMP memecoin payments. Some of the popular websites selling Trump branded goods are gettrumpwatches.com, gettrumpfragnances.com, and gettrumpsneakers.com. Users can now purchase these items by paying in Trump tokens, in addition to credit card and Bitcoin payments. All the TRUMP memecoin payments will be processed through Solana Pay on these websites. Thus, the payments do not involve any intermediaries and go directly to the merchant. Travel booking platform Travaala has also announced that it accepts TRUMP payments days after the memecoin launch. It allows users to book hotels, flights, and more by making Trump token payments. TRUMP Memecoin Payments: From Memecoin to a Utility Token The US President Donald Trump launched the TRUMP memecoin on Jan 17 a few days ahead of his inauguration day as the 47th president. It quickly gained traction across the crypto community and broke records by reaching a billion-dollar market cap within a few hours. While traders took this opportunity to make themselves rich, several industry officials criticized the memecoin coming from the US President. Nonetheless, the TRUMP memecoin climbed to the 27th position on crypto aggregator platform CoinMarketCap. Both TRUMP and MELANIA memecoins became popular within no time, having top most influential figures behind them. While TRUMP memecoin is trading at \$27.24, MELANIA is trading above \$2.26, with a 5% dip in the last 24 hours, as per CMC. From being a mere memecoin backed by the Donald Trump name and nothing else, TRUMP memecoin has now grown into a utility token. The merchandise websites accepting TRUMP tokens have brought a new facet to the memecoin. However, this is not the first time memecoins found utility as payment options. Tesla CEO Elon Musk has several times publicly shown his support to Dogecoin and even accepted DOGE payments on Tesla and his other ventures. Highlighted Crypto News Today:

Crypto marketplace has yet again proven its dynamic nature, with Bitcoin (BTC) reclaiming the \$100,000 mark even as altcoins face full-size sell-offs. As the marketplace adjusts to those shifts, an emerging AI-powered crypto Ozak AI's presale is attracting huge investor interest, providing a glimpse into the destiny of blockchain innovation. Here's an in-depth examination of the modern day market developments and why this AI presale is making waves. Bitcoin Surges Back to \$100,000 Bitcoin has reasserted its dominance by means of crossing the \$100,000 threshold, a degree not seen from its preceding all-time highs. This recovery comes amid growing institutional adoption, renewed retail interest, and macroeconomic elements favoring virtual property as a hedge in opposition to inflation. The recent rally has been fueled by several key developments: Institutional Buying: Major economic institutions have ramped up their Bitcoin holdings, signaling long-term self-belief within the asset. ETF Approvals: The approval of a couple of spot Bitcoin ETFs has extended accessibility for traditional traders, driving up call for. Decreasing Supply: With greater BTC being locked in long-time period wallets and a halving event at the horizon, scarcity is turning into an essential thing in Bitcoin's charge surge. While Bitcoin's recovery is a nice signal for the market, it has also highlighted a developing divergence between BTC and altcoins, many of which can be experiencing big losses. Altcoins Suffer Double-Digit Losses As Bitcoin soars, the wider altcoin market has been hit hard, with many tokens experiencing double-digit losses. This trend underscores a classic "flight to safety" scenario, in which buyers pull finances from riskier belongings to consolidate positions in Bitcoin in the course of unsure instances. Key factors driving altcoin losses include: - Market Rotation: As Bitcoin reclaims the spotlight, capital is flowing out of altcoins, leading to a sharp decline of their costs. - Regulatory Uncertainty: Continued regulatory scrutiny of altcoins has dampened investor sentiment, specifically for smaller, much less-hooked-up projects. - Overleveraged Positions: Many altcoins faced liquidations as buyers did not control leveraged positions amid marketplace volatility. Despite these challenges, not all altcoins are faltering. Some innovative projects, particularly those leveraging AI and blockchain technology, are gaining traction and offering a glimpse of hope for the altcoin market. Ozak AI Presale Steals the Show Amid the market turbulence, an AI-powered crypto Ozak AI presale is heating up, drawing significant attention from retail and institutional investors. This mission, which combines artificial intelligence with the blockchain era, promises to revolutionize industries by presenting real-world solutions powered by modern algorithms. The Ozak AI presale has officially launched, and it's already making waves in the crypto community. With an impressive \$500K raised so far, Ozak AI tokens are currently priced at just \$0.003 each. This early-stage opportunity is set to soar, with projections suggesting that the token could reach \$1 by 2025. Why Ozak AI Presale Is Gaining Momentum Innovative Use Cases: The undertaking focuses on leveraging AI for predictive analytics, decentralized decision-making, and stronger user reviews, making it enormously applicable in nowadays tech-pushed international. Strong Community Backing: The presale has already raised a substantial price range, demonstrating robust investor confidence and enthusiasm. Early-Bird

Advantages: With tokens priced attractively throughout the presale section, early adopters stand to gain substantially if the project gives you on its promises. Market Timing: As AI continues to dominate headlines, this venture is perfectly placed to capitalize on the growing demand for AI-included blockchain solutions. The buzz around this presale is a testament to the market's urge for food for innovation, even as conventional altcoins face challenges. The crypto market is undergoing a duration of enormous realignment. Bitcoin's restoration to \$100,000 marks a pivotal second, reaffirming its role as the market chief. Meanwhile, the altcoin quarter struggles with double-digit losses, highlighting the challenges of navigating an unstable space. However, amidst these shifts, the upward thrust of AI-powered crypto tasks offers a beacon of hope. This presale, especially, demonstrates the ability for blockchain technology to adapt and evolve, attracting buyers seeking out the following big possibility. As the market continues to mature, one issue is obvious: innovation stays the using pressure behind cryptocurrency's enduring enchantment. About Ozak AI Ozak AI is an AI-blockchain based crypto project that provides a technology project that specializes in predictive AI and advanced data analytics for financial markets. Through machine learning algorithms and decentralized network technologies, Ozak AI enhances real-time, accurate, and actionable insights to help crypto enthusiasts and businesses make the correct decisions. - WIF has marked a gain of over 15% and is trading at \$1.32. - The Dogwifhat's daily trading volume has increased by over 288%. With Bitcoin retreating to \$102K, the broader crypto market has dipped, dragging most assets to their lows. However, Solana-based Dogwifhat (WIF) defied the trend with a 15% rally despite the downturn. Notably, the WIF has retested its crucial levels at \$1.19 and \$1.30. Nevertheless, the meme coin continues grappling to hold its ground. In the early hours, it has visited its daily low at \$0.9783. As the bulls chose to rule the day, the highest price was hit at \$1.37. At the time of writing, WIF trades at \$1.32, with its market cap resting at \$1.32 billion. Meanwhile, the daily trading volume has reached \$1.1 billion. Besides, the market has observed an \$8.93 million Dogwifhat liquidation, as per Coinglass. On the other side, after a three-month break, a wallet named Ansem has spent 1.2 million USDC to purchase 915,828 WIF at \$1.31 per token, signaling renewed interest in the asset. Where Is WIF Headed Next? The four-hour trading window of WIF infers the overall weak momentum. The meme coin's price might slip below the current level if the downtrend persists. Extended loss of the asset could bring in a retest at the \$1.18 support zone or even lower. On the flip side, if dogwifhat reclaimed its lost momentum, it could drive the price to a high of \$1.41. Assuming further gains for the meme coin, it might break the crucial mark and move toward a high of \$2 mark. WIF's Moving Average Convergence Divergence (MACD) line is residing above the signal line but both are located beneath the zero line. This indicates that the overall trend remains negative in the market. Moreover, the Chaikin Money Flow (CMF) indicator, which is positioned at 0.05, suggesting the positive money flow and mild buying pressure in the market. Meanwhile, dogwifhat's daily trading volume has surged by over 288%. Additionally, the market sentiment of the meme coin is neutral to slightly oversold with the daily relative strength index (RSI) at 41.19. The 24-hour chart of dogwifhat has displayed the short-term 9-day moving average below the long-term 21-day moving average. Disclaimer: The opinion expressed in this article is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News South Dakota Joins the Bitcoin Revolution with a New Reserve Bill

As the cryptocurrency market prepares for its next bull run, investors are seeking high-growth opportunities to maximize their returns. While established coins like Bitcoin and Ethereum remain strongholds, the real potential for explosive gains lies in emerging altcoins with innovative technology and market appeal. Here are three cryptocurrencies that experts believe could deliver 20x returns in the upcoming bull market, with Lightchain AI (LCAI) taking center stage. Solana (SOL) - Leader in High-Speed Transactions Solana (SOL) is a high-performance blockchain platform renowned for its rapid transaction speeds and scalability, capable of processing thousands of transactions per second with minimal fees. Recently, Solana's native cryptocurrency, SOL, has experienced significant growth, surpassing \$200 and achieving a 13% surge over the past week. As of January 27, 2025, SOL is trading at approximately \$251.28. This upward momentum is attributed to increased adoption and positive market sentiment. Notably, the Chicago Mercantile Exchange (CME) plans to introduce SOL futures trading in February 2025, signaling growing institutional interest. Additionally, Solana's ecosystem continues to expand, with decentralized exchanges like Jupiter acquiring stakes in projects such as Moonshot, further solidifying its position in the decentralized finance (DeFi) space. Polygon (MATIC) - King of Layer-2 Solutions Polygon, formerly known as Matic Network, is a leading Layer-2 scaling solution designed to enhance Ethereum's performance by providing faster and more cost-effective transactions. In September 2024, Polygon transitioned its native token from MATIC to POL, aiming to improve network utility and governance. As of January 27, 2025, POL is trading at approximately \$0.435 per token. Recently, Polygon Labs partnered with India's largest telecom operator, Reliance Jio, to integrate blockchain capabilities for over 450 million users, signaling a significant move towards mainstream adoption. Additionally, the Polygon Community Grants Program announced its second season, allocating 35 million POL to support projects at the intersection of blockchain and artificial intelligence, further solidifying its position as a pioneer in scalable blockchain solutions. Lightchain AI (LCAI) - Future of AI-Driven Blockchain Lightchain AI (LCAI) is an innovative blockchain platform that seamlessly integrates artificial intelligence to revolutionize decentralized applications. At its core is the Proof of Intelligence (PoI) consensus mechanism, which rewards nodes for executing valuable AI computations, such as model training and optimization, thereby enhancing network security and promoting meaningful contributions to AI development. Central to its architecture is the Artificial Intelligence Virtual Machine (AIVM), a dynamic computational layer enabling the execution and evolution of AI-specific tasks directly on the blockchain. Currently, LCAI is in its presale phase, offering tokens at \$0.005625 each, with over \$13.5 million already raised, reflecting significant investor confidence. This strategic fusion of AI and blockchain positions Lightchain AI as a transformative force in the decentralized technology landscape. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin price has factored in a modest price dip of 0.94% in the last 24 hours. - The cryptocurrency's daily trading volume depreciated by 47.22% as per CMC data. Bearish trends have been gallivanting through Bitcoin's price action over the past day. However, turning to other activities, the sector has kept the liveliness going. Recently, pro-crypto senator Cynthia Lummis filed a lawsuit in support of Coinbase against the SEC. Meanwhile, reverting to Bitcoin's daily price action, the cryptocurrency trades at the \$100K to \$102K margin. It has dipped several times in the last 24 hours to \$100K. Additionally, on January 28, BTC revisited its \$98K support briefly before consolidating at current trading prices. The past day's price performance stands at a 0.94% dip as inferred from its daily price chart. At the time of writing, BTC was trading at \$102,204.92 as per CMC data. Meanwhile, in the week's beginning, the crypto community saw major speculations regarding Bitcoin's price. Prominent analyst Arthur Hayes, recently posted on his X account, that Bitcoin might reach a correction to the \$75K level. This is expected to be followed by a rally to a whopping \$250,000 by the year's end. Meanwhile, another analyst Ali, has predicted a short-term critical support at \$91,700. What Do Speculations Suggest For Bitcoin Price? The above-discussed predictions clearly indicate an imminent bearish period for Bitcoin before it rallies upward. However, the cryptocurrency's Hull Moving Average (HMA) stands below the current trading price indicating an upward movement. On in-depth analysis, BTC might experience a consolidation phase. However, to witness significant upward strides, traders may have to sit through a full-blown price depreciation. Presently, investors are buying the dip as suggested by Bitcoin's RSI standing at 53.79. Meanwhile, other cryptocurrencies have also reflected Bitcoin's past week price movements. Ethereum took to the spotlight specifically for its price drop, while other altcoins such as Solana and XRP also proceeded in their respective bearish lanes.

The cryptocurrency market continues to thrive as whales' large investors with substantial holdings strategically accumulate altcoins poised for significant growth. Among the top picks are Ripple (XRP), Ethereum (ETH), Cardano (ADA), Polkadot (DOT), and the rising star Lightchain AI (LCAI). Here's why these coins are capturing whale attention. Ripple (XRP) and Ethereum (ETH) - Institutional Use, Cross-Border Potential, and DeFi Leadership Ripple's XRP and Ethereum's ETH are leading in getting backing from large firms, altering how global payments and decentralized finance functions. XRP aids Ripple's payment system by enabling quick, affordable international money transfers that solve issues in normal banking. Over 200 banks such as Bank of America use XRP as a connection currency for simple cross-border payments. Ethereum, with its smart deal skills, is the heart of DeFi, offering help like loans, borrowing and trade without middle men. Big money buyers are more and more drawn to Ethereum for its DeFi lead and great profit chance. New boss changes at the Ethereum Foundation aim to improve skill knowledge and team talk showing its promise to privacy open-source growth and no censorship. XRP and ETH are altering cash, with XRP making buys simple and ETH in front of DeFi both drawing great attention from groups. Cardano (ADA) and Polkadot (DOT) - Top Picks for Innovation and Interoperability Cardano (ADA) and Polkadot (DOT) are leading blockchain platforms renowned for their innovation and commitment to interoperability. In November 2023, Cardano announced a strategic partnership with Polkadot to enhance blockchain interoperability and scalability. This collaboration leverages Polkadot's Substrate framework to develop Cardano's 'partner chain' project, enabling the creation of specialized blockchains that can seamlessly interact with the Cardano network. The first implementation of this initiative is 'Midnight,' a blockchain focused on data protection, developed by Input Output Global (IOG), the team behind Cardano. This partnership exemplifies a shared vision for a connected blockchain ecosystem, addressing challenges such as interoperability, security, and scalability. By integrating Polkadot's modular framework, Cardano aims to offer developers and validators new avenues to harness its core strengths and innovative technologies, fostering a more interconnected and scalable blockchain world. Lightchain AI (LCAI) Rising Star Redefining Blockchain Lightchain AI has gained significant attention in the market for its innovative integration of artificial intelligence and blockchain technology. The project's presale has already secured \$13.2 million, with tokens priced at \$0.00525, demonstrating strong confidence from investors. A key differentiator for Lightchain AI is its emphasis on privacy-preserving AI computations and seamless cross-chain compatibility, making it a versatile solution for decentralized applications. Investors, particularly high-net-worth individuals, are drawn to its robust roadmap, which includes advanced AI-powered tools and an open-source innovation hub. These features position Lightchain AI as a potentially transformative player in the blockchain industry, with the capability to outperform competitors in the years ahead. Plus, its low token price and high potential for growth make it an attractive option for whales looking to accumulate. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Tuttle Capital files for 2X leveraged ETFs for cryptocurrencies like XRP, Cardano, and Bonk. - Rex Financial and Bitwise are also exploring crypto ETF opportunities, including Dogecoin. - Critics argue meme coin ETFs are speculative and better suited for gambling than capital markets. Tuttle Capital Management has recently filed for a series of exotic 2X leveraged cryptocurrency ETFs. These filings, targeting assets like XRP, Cardano (ADA), and the Solana-based Bonk (BONK) meme coin, appear to test the regulatory boundaries under the SEC's new leadership. The move follows a recent filing by Rex Financial for a Dogecoin ETF. Meanwhile, Bitwise, a leading crypto index fund manager, has registered a new legal entity in Delaware, signaling its potential entry into the spot ETF race. Criticism of Meme ETFs Not everyone is enthusiastic about the prospect of meme coin ETFs. A report by the Financial Times highlights concerns over rampant speculation in such products. Critics argue that these ETFs bring more risk than value to U.S. capital markets. Bryan Armour of Morningstar expressed skepticism, stating that meme coin ETFs might be more appropriate for a casino given their speculative nature. Unlike Bitcoin and Ethereum, which had futures markets before receiving SEC approval for spot ETFs, many of these exotic meme coins lack a similar framework. Could Meme Coin ETFs Be Approved? Despite the criticism, industry experts acknowledge the possibility of approval for these unconventional ETFs. Nate Geraci, president of ETF Store, remarked, 'Anything is possible,' leaving the door open for regulatory acceptance. With the SEC having recently greenlit spot Bitcoin and Ethereum ETFs, these filings could mark the next phase of development or controversy in the crypto ETF market. However, concerns about speculative risks and the lack of robust futures

markets for meme coins could pose significant hurdles. As Tuttle Capital and other firms push the boundaries, the debate over the role of meme coin ETFs in regulated markets is likely to intensify.

Analog, the pioneers of blockchain interoperability Proof of Time protocol, has announced the closing of a \$5 million fundraising round backed by leading venture capital companies. As Analog is ready to start its public token sale, the raise was completed, bringing its total investment to \$21M. Analog serves as a safe, one-stop hub for cross-chain and multi-chain interoperability. It makes it possible for developers to create and implement dapps that function flawlessly across all chains. Analog is well-positioned to simplify the multi-chain experience as a natively chain-agnostic protocol, enabling users and dapps to extend to new blockchain networks. Investor trust in Analog's ambition to enable smooth cross-chain interaction and web3 data accessibility is shown by the total amount raised, which includes its seed and later fundraising rounds. Participating were prominent investors Tribe Capital, Balaji Srinivasan, Wintermute, and Mask Network. In addition to Foresight Ventures, Near Foundation, Contango Digital, Outliers Fund, GSR, NGC Ventures, and a number of angel investors, Analog's first funding round was originally incubated by Binance. As Analog is ready to begin its Token Generation Event (TGE), it has a \$300M FDV thanks to the \$21M in capital it has so far collected. With the help of the private funding it has obtained, Analog is accelerating the development of its tech stack, which includes developer-centric tools and its General Message Passing (GMP) protocol. Building omnichain decentralized apps that function flawlessly across many blockchains is made possible by these innovations. For cross-chain applications, analog functions as a universal interoperability solution. This makes it possible for developers to create and implement robust dapps that work flawlessly across many chains. Soon, Solana and TON integration will be added to the Analog SDK's support for EVM and Polkadot chains, making it easier to develop innovative omnichain applications. Zenswap, the decentralized exchange Analog developed with its proprietary technology, is evidence of its cross-chain capabilities. The DEX facilitates the swapping of assets across many blockchains, including TON, Solana, and Bitcoin, which are supported via USDC-based liquidity routing. Analog's position as a major player in blockchain infrastructure has already been strengthened by its partnerships with cutting-edge initiatives including Rarible, Pixelport, Zenswap, Belong Network, XYO, Meson Network, Dmail, and StationX. More than 345,000 accounts have joined its testnet, establishing the foundation for its mainnet deployment, and more than 50 projects are now developing or committed to developing on its protocol. Web3's main problems, including as fragmentation, inefficiency, and restricted cross-chain operability, are intended to be addressed by analog's unique architecture. Developers may create interoperable dapps with features like omnichain DEX trading, NFT minting, and liquidity aggregation thanks to the GMP protocol. With its scalable, developer-friendly platform, Analog is well-positioned to spearhead the blockchain industry's shift toward multi-chain and omnichain ecosystems. Its strategy guarantees strong security and efficiency, which are essential for integrating institutions, developers, and end users into the decentralized economy, in addition to improving interoperability.

- Tuttle Capital files for 10 leveraged crypto ETFs, including Solana, XRP, Cardano, and more. - This marks the first-ever leveraged ETFs for assets like Chainlink, Cardano, and Polkadot. Tuttle Capital has made a bold move by filing for 10 leveraged cryptocurrency exchange-traded funds (ETFs) with the U.S. Securities and Exchange Commission (SEC). Notably, the list features Solana (SOL), XRP, Litecoin (LTC), and Cardano (ADA), alongside lesser-known tokens like TRUMP, MELANIA, BONK, Chainlink (LINK), and Polkadot (DOT). These ETFs will offer 2x long exposure to their respective assets. This means they aim to deliver twice the daily performance of both gains and losses of the underlying cryptocurrencies. The products utilize financial derivatives, such as swaps and call options, to achieve this amplification. SEC's Stance and Crypto Market Implications While these ETFs may appeal to investors seeking higher returns, the associated risks are high. The potential for significant losses is equally amplified, with investors facing the possibility of losing their entire principal in a single trading day if the underlying asset drops by more than 50%. The filings represent the first-ever leveraged ETFs for Chainlink, Cardano, and Polkadot. Additionally, Tuttle Capital's proposal includes products for meme coins like TRUMP and MELANIA, signalling the firm's willingness to experiment with more volatile and speculative assets. This filing comes amid regulatory uncertainty, as the SEC's stance on crypto ETFs remains unclear. However, industry experts suggest that certain assets, like Solana, XRP, and Litecoin, have better chances of approval due to their market capitalization and decentralization. In contrast, meme coins like TRUMP and MELANIA face greater scrutiny due to their extreme price volatility. Despite these challenges, some experts remain optimistic about the future of crypto ETFs, especially with the recent changes at the SEC, including the appointment of pro-crypto Acting Chair Mark Uyeda. According to Bloomberg's James Seyffart, the firm is experimenting with what the SEC will allow. The filing is also significant because it could pave the way for further innovation in the crypto ETF space, especially if the SEC approves these new products. Highlighted Crypto News Today DeepSeek's Rise: What Is It and How It's Shaking Up the Crypto Market

As Dogecoin (DOGE) enthusiasts reevaluate their options, many are shifting focus to Lightchain AI, a rising star with immense growth potential. Combining blockchain with artificial intelligence, Lightchain AI is revolutionizing decentralized applications, offering real-world utility and innovation. Currently in its presale phase at \$0.005625 per token, the project has already raised \$13.2 million, showcasing strong investor confidence. With its cutting-edge technology and clear roadmap, Lightchain AI is emerging as the next big mover in the evolving crypto market. Dogecoin's Momentum Slows- Enthusiasts Look for New Opportunities After its quick rise this year, Dogecoin has seen a big drop in worth, leaving many backers and fans sad. As the buzz around DOGE fades, fans are looking at other plans with good basics and chance for growth. Lightchain AI is fast getting attention from the crypto group because of its rare way to mix blockchain tech with smart machines. By using the strength of both tools, Lightchain AI hopes to build apps that are not controlled by one place and give real-life answers and new ideas. Why Lightchain AI Could Be Next Big Mover in Crypto Lightchain AI is emerging as a potential frontrunner in the cryptocurrency space due to its innovative integration of artificial intelligence with blockchain technology. The platform introduces the Proof of Intelligence (PoI) consensus mechanism, rewarding nodes for executing valuable AI computations, thereby enhancing network security and efficiency. At the core of its ecosystem is the Artificial Intelligence Virtual Machine (AIVM), designed to seamlessly execute AI-specific tasks on the blockchain, fostering the development of advanced decentralized applications. Lightchain AI's focus on scalability, transparency, and decentralized governance positions it as a transformative force in the crypto industry. Its successful presale, raising over \$13.2 million, underscores strong market confidence and suggests significant growth potential. Go with Lightchain AI for Bright Future in Crypto As Dogecoin's hype begins to wane, a new contender is entering the spotlight; Lightchain AI. With cutting-edge technology, a clear vision, and strong market backing, Lightchain AI is positioning itself as the next big name in the ever-evolving crypto world. Why should you care? Lightchain AI's upcoming mainnet launch in Q3 2021 could be a game-changer. For investors ready to diversify and explore new opportunities, this is one to watch. Momentum is building, adoption is growing, and the potential for long-term rewards is undeniable. Join the movement and become part of the forward-thinking community fueling Lightchain AI's rise. Together, we can take this to the moon! Stay tuned, stay ahead, and let's meet at the top. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - DOGE is trading at \$0.3372, marking a modest gain of over 4%. - The meme coin's daily trading volume has surged by more than 79.54%. Following the unforeseen plunge in the crypto market, Bitcoin (BTC) rebounded to the \$103K level. Meanwhile, other tokens, including Ethereum (ETH), Solana (SOL), Shiba Inu (SHIB), and Dogecoin (DOGE), also briefly bounced from the red zone. The dog-themed DOGE has spiked by over 4.20%. At the time of writing, it trades at \$0.3372, with a market cap of \$49.82 billion. The meme coin visited its low in the early hours at \$0.3078 and eventually climbed to a high of \$0.3386. Furthermore, the market observed a liquidation of \$20.21 million worth of DOGE during this timeframe, as per Coinglass. Notably, the daily trading volume of the meme coin has reached \$3.83 billion. The DOGE market has failed to pick up the upward momentum over the past few weeks, noting a modest spike below 5%. Sustaining a price level above the \$0.40 mark would trigger a rally, which might inch close to its ATH. Could DOGE's Momentum Shift? DOGE's price pattern reports a downward momentum. Assuming the meme coin's in-progress trend sharpened, its price might test the support at \$0.3328. Losing this key level could escalate the downtrend, with the following support lying at \$0.3237. However, a bullish shift will nullify this bearish outlook. A breach of \$0.3394 could drive the DOGE price higher. It might open the door toward more gains, potentially eyeing the \$0.35 mark as the subsequent focus. Additionally, the meme coin's Moving Average Convergence Divergence (MACD) line and signal line are found below the zero line. This crossover indicates the broader bearish trend in the market and the sellers are in control. The Chaikin Money Flow (CMF) indicator positioned at -0.05, suggests a negative money flow. A negative value below zero signals weaker demand. In the meantime, DOGE's daily trading volume has soared by over 79.54%. Moreover, DOGE's daily frame reveals the short-term 9-day moving average beneath the long-term 21-day moving average. The daily relative strength index (RSI) of 46.43 infers that the asset is neither overbought nor oversold, sitting in the neutral zone.

In the ever-changing world of cryptocurrency, meme coins like Trump and Melania coins have stirred up excitement, but their volatility and lack of long-term stability have left investors uncertain. On the other hand, Lightchain AI is carving its own path, offering a more reliable and steady investment opportunity. As the crypto market faces ups and downs, driven by hype and speculation, Lightchain AI stands out with its strong technological foundation and focus on real-world applications. With its AI-powered infrastructure and unique consensus mechanism, it positions itself as a project built for long-term growth rather than short-lived gains. While Trump and Melania coins may capture attention for their novelty, Lightchain AI's innovation and stability make it a safer choice for investors looking for a steady and promising future in the crypto space. Rise of Meme Coins and Their Pitfalls Meme coins have been a recent trend in the crypto market, gaining massive attention due to viral marketing and celebrity endorsements. However, their rapid rise often comes with significant risks, as their value is heavily influenced by speculation and social media hype rather than solid fundamentals. Coins like Trump and Melania coins are prime examples of how meme coins can quickly attract massive investment only to fall just as quickly once the hype dies down. These assets lack the underlying technological advancements or real-world use cases that could drive sustainable growth. While meme coins can offer short-term profits, their volatility makes them a risky choice for long-term investors. In contrast, cryptocurrencies like Lightchain AI, with its focus on blockchain innovation and AI, provide a more reliable and stable path for those seeking growth grounded in real-world value rather than fleeting trends. Lightchain AI: Innovation, Stability, and Long-Term Growth Lightchain AI stands out in the crypto market by offering a combination of innovation, stability, and long-term growth potential. Unlike meme coins, which often ride the wave of speculation, Lightchain AI is grounded in cutting-edge blockchain and AI technology. Its unique approach to integrating artificial intelligence with decentralized finance positions it to offer real-world utility, which is a key factor for sustainable growth. The stability of Lightchain AI lies in its thoughtful design, focused on solving scalability and efficiency issues, making it an attractive option for both short-term and long-term investors. As more blockchain and AI-driven projects emerge, Lightchain AI is poised to lead the way in shaping the future of decentralized applications. With its solid roadmap and growing support from the crypto community, Lightchain AI offers a promising alternative to volatile investments like Trump and Melania coins, providing a more reliable and innovative path for investors. A Steady Future with Lightchain AI Lightchain AI presents a steady and promising future in the ever-evolving crypto space. Unlike the unpredictable movements seen in meme coins like Trump and Melania's, Lightchain AI offers a well-founded foundation built on innovative AI and blockchain technology. By addressing challenges such as scalability and efficiency, Lightchain AI is positioning itself as a long-term player, focusing on creating real-world utility through its decentralized infrastructure. This focus on utility and development ensures a more stable trajectory compared to short-lived trends driven by hype. As the platform continues to grow and attract attention from serious investors, it stands out for its sustainability and innovative vision. Lightchain AI is not subject to the drama that often surrounds meme coins, making it a reliable and forward-thinking investment option for those seeking solid returns in the future. Its steady path towards progress sets it apart in a market filled with volatility. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. MamaBull Token, built on Solana, is set to revolutionize crypto for developing countries with the upcoming Mamapay.io platform, which blends

blockchain with real-world finance and offers generous rewards. MamaBull Token (\$MAMA), a highly anticipated cryptocurrency built on the Solana blockchain, will officially launch on January 27, 2025. Designed to symbolize strength and innovation in the crypto space, MamaBull offers a unique combination of speed, affordability, and real-world utility. The project's dedicated website, mamabulltoken.com, is live and provides insights into the token's features and upcoming developments. A key component of MamaBull's ecosystem is Mamapay.io, an upcoming financial platform scheduled for April 2025. The platform aims to transform the way users manage and transfer assets globally. By integrating blockchain with traditional banking services, Mamapay.io delivers a seamless experience for handling crypto and fiat assets. With features such as offshore bank accounts, debit cards, and compliance-focused financial solutions, the platform ensures security and regulatory adherence for a user-friendly experience. Why MamaBull Token? MamaBull sets itself apart in the crypto market by utilizing Solana's high-speed infrastructure, guaranteeing ultra-fast transactions and low fees. Dedicated to financial inclusion, MamaBull aims to offer accessible financial services to underserved regions, connecting decentralized finance (DeFi) with traditional banking systems. More than just a meme-inspired digital asset, MamaBull is dubbed "The Mother of All Streets" delivers practical applications and long-term utility for holders while offering significant profit potential. As a memecoin with real utility, MamaBull presents an exciting opportunity for users to earn substantial returns by participating in its ecosystem. Through its staking and rewards system, MamaBull allows holders to generate passive income over time. Users who stake their \$MAMA tokens on mamapay.io can expect generous returns, which will encourage long-term participation and foster ecosystem stability. The token's design prioritizes community incentives, ensuring that loyal holders are well-rewarded for their commitment. Future cross-chain integrations with Ethereum and BNB Chain will further expand MamaBull's reach. These integrations will ensure smooth connectivity across multiple blockchain networks and enhance users' access to the DeFi ecosystem. Within the Mamapay.io ecosystem, \$MAMA holders can access exclusive benefits, including cashback rewards, reduced transaction fees, and revenue-sharing opportunities. These benefits significantly increase the potential profits available to participants. Mamapay.io: A Game-Changer in Global Finance As a pivotal part of the MamaBull ecosystem, Mamapay.io is set to redefine global financial operations by merging blockchain technology with traditional finance. The platform will enable crypto-to-fiat conversions, simplifying cross-border transactions for users. By offering offshore banking solutions, Mamapay.io provides enhanced security and financial flexibility. Additionally, \$MAMA-powered debit cards will allow seamless spending worldwide, integrating crypto into daily financial activities easily. Compliance remains a top priority for Mamapay.io. The platform fully complies with AML and KYC regulations to create a secure and trusted financial environment for all users. Security and Transparency Security and transparency are fundamental to MamaBull's development, ensuring confidence among investors and users. The project's smart contracts have been fully audited, and ownership has been renounced. Most importantly, minting operations have been permanently turned off to prevent potential manipulation. A burned liquidity pool has been implemented to support price stability and reinforce long-term sustainability within the ecosystem. A Roadmap for Sustained Growth MamaBull's roadmap outlines a strategic path toward long-term growth and adoption. The initial phase focuses on launching the token and building a strong community through targeted marketing campaigns. Subsequent phases will introduce strategic partnerships with influencers and secure listings on major exchanges, increasing visibility and market reach. The rollout of governance features and staking mechanisms will empower the community to actively shape the project's future. Future developments will emphasize the integration of Mamapay.io's banking solutions, further positioning MamaBull as a key player in merging traditional and digital financial systems. Long-term initiatives include regular token burns and continuous feature enhancements to drive sustained value for holders. Join the MamaBull Revolution MamaBull is more than just a crypto; it represents a movement toward financial inclusion, empowerment, and innovation. Combining speed, affordability, and groundbreaking financial solutions, MamaBull is set to make a lasting impact in the evolving crypto-fintech landscape. With its potential for high profits and real-world utility, MamaBull offers an exciting opportunity for those looking to capitalize on the growing crypto space. For the latest updates and developments, visit mamabulltoken.com and follow social media accounts: - Telegram: t.me/mamabulltoken - Twitter/X: x.com/mamabull_token - Instagram: [instagram.com/mamabulltoken](https://www.instagram.com/mamabulltoken) - Media inquiries: media@mamabulltoken.com Disclaimer: TheNewsCrypto does not endorse any content on this page. - XRP price witnessed a 10% price dip today, falling below the \$3 mark. - Bitcoin price briefly fell below \$100,000 while major altcoins are dumping. - Crypto experts are bullish on XRP, estimating another price rally. XRP price declined over 10% today and fell below the \$3 mark it surpassed earlier this month. Meanwhile, several other altcoins and Bitcoin are also witnessing price declines amidst bear pressure. While Bitcoin briefly fell below \$100,000, altcoins such as Ether, Solana, XRP, Cardano, Dogecoin, Chainlink, and Tron are facing deep price dips. XRP price declined by more than 10% today. During early Asian hours, the token was trading at around the \$3.13 price level and then deeply plunged to as low as \$2.71. However, the XRP token is currently trading at \$2.91, with over 6% price dip in the last 24 hours. Even though the market cap declined by more than 6% and is hovering above the \$167 billion level, the trading volume is surging. A staggering 300% increase in its 24-hour trading volume is indicating a price increase. While the token price has declined sharply, its trading volume is telling another story. Experts Remain Bullish on XRP The Bollinger Bands are squeezing on the \$XRP daily chart, signaling that a significant price move could be on the horizon. pic.twitter.com/Sv7mIRIdtB Ali (@ali_charts) January 27, 2025 Even though XRP witnessed a steep decline of over 10% today, several market experts remain bullish on XRP. Renowned crypto market analyst Ali Martinez posted on X earlier today, demonstrating Bollinger Bands technical indicator on the XRP price chart. He further emphasized that a significant price surge is on the horizon for XRP. Another popular crypto expert BitBoy posted on his official X account recently saying, "XRP has never sustained these prices before. Not a bad time to buy as it forms new support lines above \$3.00" Even though the XRP fell below the support level at \$3, it remains true that it's been years since XRP witnessed sustained price surges. Nonetheless, XRP is set to witness another price surge with new favorable crypto regulations forming in the US.

In an almost anticlimactic turn of events after Trump's inauguration, Bybit, the second-largest cryptocurrency exchange in the world by trading volume, presented the most recent weekly crypto derivatives report in partnership with Block Scholes, acknowledging the muted optimistic mood in the crypto markets. With the Trump family meme coins TRUMP and MELANIA, the 2025 presidential inauguration set off a wild weekend of speculation that swung derivative markets in a strong direction. But when the expected presidential actions pertaining to crypto did not come to pass, implied volatility decreased while actual volatility increased. The complicated speculative climate as political uncertainty and cryptocurrency's optimistic expectations collided was reflected in the perpetual and options markets, which continued to have high funding rates and a persistently positive skew. Important Takeaways: Solana's Highlight: As traders awaited crypto-friendly regulations, Trump's release of his husband and wife's coins caused Solana perpetual swaps to reach an all-time high. The introduction of the TRUMP meme currency on Solana DEXs increased the network's fee generation and placed it in a symbolic position superior to Ethereum's rivals. Sources: Block Scholes and Bybit Derivatives Market Resilience: Open interest indicated steady positions, while perpetual swap financing rates were neutral to optimistic despite little reports of a crypto-positive inauguration. The occurrence was seen by derivatives markets as one of many possible catalyst possibilities. BTC Options Speculation: Strong call purchasing and the greatest at-the-money term structure inversion since the November 2024 election were the outcomes of earlier expectations of a possible strategic BTC reserve, which led to considerable short-tenor options posture. There is still a significant bias for out-of-the-money calls even though front-end volatility pricing has decreased. Get the whole research report here, which includes a thorough examination of financing rates, options market dynamics, and volatility patterns.

Ripple's XRP is once again at the center of bullish forecasts, with analysts speculating that the cryptocurrency could reach \$50 by 2025. This optimism is fueled by Ripple's ongoing expansion of cross-border payment solutions and its potential to secure further regulatory clarity. However, while XRP is making headlines, another cryptocurrency is quietly gaining traction. Lightchain AI, a blockchain platform integrating artificial intelligence, is turning heads with its innovative technology and rapid presale success. Priced at \$0.005625 and having raised over \$13.2 million, Lightchain AI is emerging as a compelling alternative for forward-thinking investors. XRP's Bold Path to \$50 As of January 25, 2025, XRP is trading at \$3.14. Analysts predict that XRP could reach \$50 in 2025, driven by anticipated regulatory clarity under the new U.S. administration and Ripple's advancements in cross-border payments. The appointment of pro-crypto advocate Paul Atkins as SEC head is expected to favorably impact XRP's regulatory environment. Additionally, Ripple's recent launch of the stablecoin RLUSD aims to strengthen its position in the financial ecosystem. However, some experts caution about potential volatility and emphasize that XRP's future value will depend on broader adoption and the resolution of ongoing regulatory challenges. Lightchain AI - Rising Star in the Crypto Market Lightchain AI is redefining what's possible in the blockchain space by combining artificial intelligence with decentralized technology. One of its standout features is its AI-Optimized Blockchain Protocol, which streamlines processes such as data analysis, automation, and secure data sharing. This innovation makes Lightchain AI particularly attractive to industries like logistics, advanced analytics, and decentralized governance. The project's presale success is turning heads, with over \$13.2 million raised and a growing community of early adopters. Unlike XRP, which focuses on financial solutions, Lightchain AI targets a broader range of industries, giving it a unique edge in the market. Diversification for the Future XRP's ambitious \$50 price target is undoubtedly exciting, but it's not the only opportunity in the crypto market. For investors looking to diversify into innovative projects, Lightchain AI provides a compelling alternative. With its unique blend of blockchain and artificial intelligence, strong presale performance, and focus on solving real-world problems, Lightchain AI is positioned to be a rising star in the years to come. Whether you're an XRP enthusiast or exploring the broader crypto market, Lightchain AI offers a chance to be part of a project that's shaping the future of blockchain technology. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Jupiter native token JUP price surged over 10%, and the token is currently trading at \$0.98. - The exchange announced Moonshot App and SonarWatch acquisitions at the Catstanbul event. - Jupiter also launched a Jupiter omnichain network and a \$10M AI fund. Jupiter exchange has always been a major DEX aggregator, contributing largely to the Solana DeFi ecosystem. With recent platform upgrades and major acquisitions, the JUP token price surged considerably for the last 24 hours. In addition, Jupiter has brought various platform features to enhance trading experience to its users. JUP token price is up by over 7% and is currently trading at \$0.98. At some point in the last 24 hours, JUP token price even surged by around 20% and went to as high as \$1.2594 from the lows of \$0.90. Its market capitalization surged by around 7% and 24-hour trading volume witnessed a staggering 114% surge so far. However, the JUP token price is witnessing a steady decrease in its token price surge for the last few hours. Jupiter Acquires Moonshot and SonarWatch Platforms Moonshot is a memecoin trading platform and its mobile application was launched in July 2024. The App became popular within no time after allowing TRUMP memecoin trading on Jan 18, 2025. Thus, Moonshot became one of the top mobile applications in the Apple App Store, recording around 1 million daily active users. Jupiter recently announced that it acquired a majority stake in Moonshot, during its Catstanbul event. Apart from being the top memecoin trading platform in the App Store, Moonshot also gained recognition for its innovative payment options. Being Solana's largest DEX platform, Jupiter is poised to take memecoin trading to the next level with this acquisition. Another major Catstanbul announcement is that Jupiter also acquired the SonarWatch portfolio tracking tool. As a result, SonarWatch is going to cease its operations and completely integrate into its exchange platform. Furthermore, all the SONAR token holders will be awarded JUP tokens, following the discontinuation of SONAR. Jupiter Upgrades the DEX Platform With New Features In addition to acquisitions, Jupiter exchange also announced various platform upgrades during the Catstanbul event. It launched a new version of the platform, adding new features such as Ultra Mode, Organic Scoring, Jupiter Shield, and RTSE. Jupiter introduced the Jupiter network to enhance crypto trading by aggregating all of the cryptocurrencies in one single decentralized ledger. Another major announcement includes the launch of a \$10 million AI fund that supports open-source AI development. And, Jupiter also announced to buyback tokens, spending 50% of all fees. In addition, the exchange also stated on one of its posts on X that 3 billion JUP tokens have been burnt. The token buyback plan, token burn, platform upgrades, and acquisitions led to the price surge of JUP tokens and are set to enhance the Solana DeFi ecosystem further. Highlighted Crypto News Today:

- Within 60 hours of its inception, the memecoin had risen by more than 300% and reached a FDV of \$70 billion. - Memecoins garnered 30.67% of the

attention in 2024, making them the most popular crypto story. During the weekend before his inauguration, President Trump's associated memecoin \$TRUMP was the talk of the cryptocurrency world and beyond. Late Friday, Trump revealed the Solana-based memecoin via his Truth Social and X accounts. The post read: "My NEW Official Trump Meme is HERE! It's time to celebrate everything we stand for: WINNING! Join my very special Trump Community. Within 60 hours of its inception, the memecoin had risen by more than 300% and reached a fully diluted valuation (FDV) of \$70 billion. Even though the market has already recovered some of its gains after the inauguration, \$TRUMP is presently ranked 29th by CoinGecko metrics and has a \$6.8 billion market value. Across the financial market and cryptocurrency divide, this development has generated both excitement and criticism. Supporters of the move contend that it is a positive indication of the Trump administration's commitment to fostering innovation in the crypto space, while opponents worry about the blurring of the boundaries between Trump's personal projects and his position as president. Both sides have good points, of course, but if you've been watching the cryptocurrency scene for a while, you're surely be aware that \$TRUMP is revolutionizing the memecoin market. First lady Melania also revealed her memecoin, albeit it hasn't done as well as \$TRUMP's. This is the first time in history that a sitting president has created a memecoin. A Favourable Era for Memecoins Memecoins garnered 30.67% of the attention in 2024, making them the most popular crypto story. The other 19 segments split the remaining interest. Interest in this market has grown even more since the launch of \$TRUMP; recent statistics from Chainalysis show that 50% of buyers of \$TRUMP and \$MELANIA have never bought an altcoin on Solana. Actually, on the day of the purchase, 47% of the customers created a wallet. Source: Chainalysis Among the causes is the impact of individuals such as President Trump. More significantly, his administration had promised to establish America's crypto capital of the world. As the SEC Chair, Gary Gensler is already thrilled about the opportunity to make room for Paul Atkins, a crypto enthusiast. Additionally, an executive order recently issued by the president of the United States will encourage the prudent expansion of the digital asset sector. A part of the order read: "The digital asset industry plays a crucial role in innovation and economic development in the United States, as well as our Nation's international leadership. It is therefore the policy of my Administration to support the responsible growth and use of digital assets, blockchain technology, and related technologies across all sectors of the economy." The United States is anticipated to start the process of creating a government regulatory framework to direct developments in the digital asset field when this order is in effect. One of the most important parts discusses the formation of the President's Working Group on Digital Asset Markets, which will be crucial in putting forth the legal framework and performing other duties including assessing the feasibility of building a national digital asset stockpile. With memecoins better positioned to draw in a broader spectrum of investors, these regulations are probably going to benefit the broader cryptocurrency market. Which Memecoins Will Ride the Trump Wave? In terms of speculative narratives, it is very obvious that memecoins that have gained popularity have some "wow" factor behind them. This is the case with Elon Musk's "mentioned" memecoins, including DOGE and LADYS, and the \$TRUMP, which is just a month old. Since Musk posted a picture of a Milady along with the lines, "There is no meme. I love you" the latter has increased by more than 9600%. Despite having nothing to do with the Milady NFT project, the tweet caused a sharp increase in LADYS value. Some examples that are likely to follow the Trump trend are these memecoins, but why exactly? First of all, Elon and Trump will both play important roles in the next U.S. government; any action they do might set off a chain of speculative events. What better way to join the culture than by buying the "affiliated" memecoins? It's also expected that pioneer memecoin ventures will flourish well, particularly those with animal or internet culture themes like Mog Coin, Popcat, and Shiba Inu. Given that the overall value of the cryptocurrency market is almost surpassing the \$4 trillion mark, the current memecoin market cap of \$115 billion indicates that there is still a lot of space for development. Bias against memecoins is likely to lessen now that Trump is in office, drawing a significant amount of funding from other cryptocurrency niches that are receiving less attention. Conclusion Since Elon Musk began making jokes about DOGE, the memecoin ecosystem has advanced significantly. Musk isn't the only one influencing memecoin price swings these days; President Trump and other powerful individuals are also embracing the trend. This precedent will probably pave the way for the next wave of memecoins, where personality cults will be utilized to generate financial gains through the memecoin market in addition to their social value. It will be fascinating to see how important memecoins like Shiba Inu, DOGE, LADYS, PEPE, and TRUMP respond to the upcoming legislative changes in the United States. Will they reap the greatest rewards? Time will tell, but based on current trends, the memecoin sector is expected to see significant growth during Trump's second term.

The cryptocurrency world is buzzing with excitement as Lightchain AI (LCAI) emerges as the top pick for 2025, according to a renowned Ripple millionaire. The project has already gained significant traction, with its presale raising a staggering \$13.1 million and tokens currently priced at \$0.005625, reflecting immense investor confidence. Lightchain AI is quickly becoming a standout contender in the blockchain space, leveraging its innovative features to tackle some of the industry's most pressing challenges. With an eye on scalability, security, and decentralization, Lightchain AI is poised to rival XRP and other established players in the crypto market. Why Lightchain AI Is Positioned to Rival XRP Lightchain AI sets itself apart by integrating advanced blockchain technology with artificial intelligence, targeting real-world applications that demand both scalability and efficiency. Unlike XRP, which has primarily focused on cross-border payments, Lightchain AI broadens its scope by creating a flexible platform for decentralized applications (dApps). The project's modular framework enables developers and businesses to adopt blockchain solutions seamlessly, eliminating many of the complexities that have hindered widespread blockchain adoption. With a strong focus on usability and innovation, Lightchain AI offers a versatile ecosystem that can support a wide range of industries and use cases. Ripple Millionaire's Endorsement Sparks Investor Interest The endorsement of Lightchain AI by a prominent Ripple millionaire has further propelled the project into the spotlight. Known for his early investment in XRP, which turned modest amounts into a fortune, this investor has highlighted Lightchain AI as the next big opportunity. This endorsement comes as XRP continues to face regulatory hurdles, prompting investors to explore promising alternatives. With its presale success and growing community support, Lightchain AI has all the hallmarks of a project destined for long-term success. Its focus on innovation, transparency, and scalability aligns perfectly with the needs of both retail and institutional investors. Decentralized Governance as a Catalyst Lightchain AI stands out with its community-driven governance model, prioritizing inclusivity over centralized control. Unlike Solana, which focuses primarily on developer tools, Lightchain AI empowers token holders to directly shape the platform's future. Through a decentralized framework, token holders vote on key decisions like network updates, partnerships, and ecosystem growth. The use of quadratic voting ensures fairness by amplifying the voices of smaller stakeholders while discouraging centralized dominance. Additionally, community initiatives such as developer grants and public-funded AI projects are directly supported through governance mechanisms, fostering innovation and collaboration. This approach allows Lightchain AI to evolve in line with the collective goals of its community, offering a unique advantage over Solana's more centralized development model. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. London, United Kingdom, January 26th, 2025, Chainwire HUGO Meme Coin, a newly launched cryptocurrency project, has officially debuted on the Base blockchain, with plans to expand to Ethereum (ETH) and Solana (SOL) in the coming weeks. The project introduces FOMA AI, an AI-driven tool designed to provide accurate and transparent insights into the cryptocurrency space, with a focus on meme coins. Introducing HUGO Meme Coin HUGO Meme Coin positions itself as a community-driven initiative aimed at promoting transparency and informed decision-making within the cryptocurrency ecosystem. Central to the project is "Hugo," a thematic character representing the project's mission to address misinformation in the crypto space through advanced AI solutions. At the core of the initiative is FOMA AI, an artificial intelligence platform designed to deliver unbiased and data-driven insights into meme coins, providing users with tools to navigate the often speculative market with greater clarity. Expanding to Ethereum and Solana Currently operating on the Base blockchain, HUGO Meme Coin plans to adopt a multi-chain strategy by integrating with Ethereum and Solana in the near term. This expansion aims to enhance accessibility and interoperability, ensuring a broader reach within the global cryptocurrency community. Marketing and Community Engagement HUGO Meme Coin has outlined a comprehensive marketing plan aimed at increasing visibility and fostering community participation. The strategy includes partnerships with influencers across platforms such as TikTok, YouTube, and Instagram, alongside community-focused initiatives such as meme creation challenges, giveaways, and exclusive merchandise. Key marketing highlights include: - Collaborations with global influencers to expand awareness. - Interactive community events and contests. - Partnerships with strategic media outlets to enhance project visibility. A Focus on Transparency and Innovation The HUGO Meme Coin project seeks to distinguish itself in the cryptocurrency space by combining the widespread appeal of meme culture with AI-driven solutions. The initiative emphasizes transparency and knowledge-sharing, aiming to foster a more informed and engaged community. About HUGO Meme Coin HUGO Meme Coin is a blockchain-based cryptocurrency project dedicated to promoting transparency, informed decision-making, and community engagement within the digital asset space. Featuring FOMA AI, an advanced AI-driven platform, the project focuses on providing accurate insights into meme coin markets. By combining technology, transparency, and a community-centered approach, HUGO Meme Coin aims to redefine how individuals interact with the cryptocurrency ecosystem. For more information about HUGO Meme Coin, including updates on the multi-chain expansion and community initiatives, users can visit: Official website: www.hugomeme.com. Twitter (X): <https://x.com/hugofoma> Telegram: <https://t.me/Hugofoma/1> Contact Mark Knorr johnlemonmeme@gmail.com

The overall cryptocurrency market is experiencing renewed investor interest as the new U.S. administration kicks off with a strong pro-crypto stance. Further proving the stance of the Trump administration is the recent setup of a crypto task force under the guidance of Hester Peirce, publicly known for her crypto-friendly position. This regulatory shift, coupled with growing institutional interest, is driving market optimism. Major financial players such as BlackRock, which recently purchased \$600 million worth of Bitcoin, and MARA Holdings, which is planning to establish a national Bitcoin reserve, highlight the strategic investor shift towards crypto assets. With such positive developments, it is no surprise that Bitcoin surged to a new peak on Monday, climbing past \$109K and the altcoin market also seems to be building momentum. The potential approval of DOGE's ETFs after a sudden proposal by Bitwise could trigger parabolic movements for DOGE price. Investors are keen to identify the top altcoins and the best crypto to buy for the biggest wins in 2025. Let's discuss the details. Ripple's Legal Battle and Solana ETF Proposal One of the most talked-about topics in the crypto space is the prolonged legal tussle of Ripple's XRP with the SEC. This ongoing litigation process, which questions whether XRP is a security or otherwise, has followed a path of leaving indelible marks on its price and overall market sentiment. Although the court case remains unclear, Ripple continues to expand its cross-border payment solutions, still boasting an excellent position in the DeFi market. Analysts believe that a positive verdict would send the price skyrocketing, and XRP would be one of the top altcoins to watch. Adding to the market's excitement was the recent proposal for a Solana ETF. Solana's high-speed blockchain and market potential have made it a top choice for both developers and investors. An ETF approval would further validate its standing among leading Layer-1 blockchains and attract even more institutional capital. DOGE ETF Approval: A Potential Game Changer? Dogecoin is back in the limelight following the recently filed exchange-traded fund proposal for Dogecoin (DOGE) by Bitwise Asset Management on Thursday. The company started by registering its application at the Delaware Department of State's Division of Corporations as its first step toward officially getting a DOGE ETF. Although this is an early-stage development, the news has already triggered a 5% intraday spike in DOGE Price, reaffirming its position as one of the top altcoins to watch. However, while the DOGE ETF approval could attract more institutional investment and increased adoption, experts believe that a price target of \$15 for the DOGE price remains ambitious. The token's supply dynamics and speculative nature pose challenges to such extreme price movements. Despite this, the DOGE community remains optimistic, and any ETF approval would undoubtedly provide a major boost to its market performance. Remittix: The Next 5000% Gainer? While DOGE continues to grab headlines, a new crypto project, Remittix (SRTX), is shaping up to revolutionize the DeFi space. Remittix offers seamless crypto-to-fiat payments, allowing users to send funds to any global bank account with ease. This innovative PayFi platform supports cross-border payments via crypto in over 30 fiat cryptocurrencies, providing a cheaper and faster alternative to traditional banking solutions like SWIFT, which processes over \$5 trillion daily. One of Remittix's standout features is its flat-fee model, ensuring that recipients receive the exact amount sent without hidden charges. This advantage, combined with its ability to facilitate instant cross-border transfers irrespective of the location (i.e. even underdeveloped and underbanked regions), has positioned it as one to dominate the PayFi sector. Businesses can utilize Remittix Pay, an API that enables companies to accept crypto payments and settle them in fiat, streamlining international payroll and operations. Remittix also emphasizes security and transparency, having passed rigorous audits by Solidproof and BlockSAFU. Additionally, with team tokens locked for three years, investor confidence in the project remains high. As the crypto market continues to evolve, Remittix's unique value proposition and its ability to tap into the \$190 trillion banking industry make it a prime candidate for a potential 5000% rally before the

yearâ€™s end. With its presale aiming to raise \$36 million and an expected listing on top centralized exchanges and Uniswap, the market outlook for \$RTX is exceptionally bullish. As investors look for the best crypto to buy, Remittix stands out as a project capable of delivering astronomical returns. Discover the future of PayFi with Remittix by checking out their presale here: - Website: <https://remittix.io/> - Socials: <https://linktr.ee/remittix> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Trump is encouraging banks to invest more in Bitcoin. - Solanaâ€™s AI meme coins are growing, while Ethereum remains steady by focusing on value. - Legal issues with Ripple and many new tokens might stop altcoins from rising this year. Political Influence on Cryptocurrency The crypto world is abuzz with the political and market developments that will impact whether an Altseason will occur this year. Recent events indicate a growing trend in the intermingling of politics and cryptocurrency, which poses questions about the future of altcoins. Recently, the TRUMP coin â€˜launchâ€™ brought political attention to crypto: end Considering these, cryptocurrencies raise questions about their position in politics and governance. If one mentions Bitcoin, this is the most highlighted cryptocurrency; however, some consider it the only crypto worth mentioning, eclipsing other promising altcoins. SEC vs Ripple Keeps Bitcoin in the Spotlight The case filed by the SEC against Ripple is still ongoing, which has kept Bitcoin in the spotlight. The case questions whether XRP issued by Ripple should be classified as a security, and this has massive implications for the entire crypto market. As the case continues, the dominance of Bitcoin continues to influence investor behavior and market trends. On the other side, the Solana ecosystem is booming. The AI agent meme coins on Solana have broken all-time highs and surpassed all previous records. These meme coins, powered by innovative AI technology, have captured a lot of attention and investment. Solanaâ€™s rapid growth presents the potential that blockchain combined with artificial intelligence might be one of the most crucial players in the crypto space. Despite Solanaâ€™s success, Ethereum remains steady. According to Vitalik Buterin, co-founder of Ethereum, Ethereum is built for value and accountability, not hype. This focus on long-term utility keeps Ethereum strong, even if it doesnâ€™t experience the same rapid price movements as some altcoins. Ethereumâ€™s consistent performance underlines its importance in the crypto ecosystem. Will Altseason Occur This Year? Amidst these developments, the question now is: Will Altseason occur this year? An Altseason is when alternative cryptocurrencies, commonly known as altcoins, appreciate in price compared to Bitcoin. An Altseason could occur, but several factors will determine if it does. Market dynamics show that many investors are currently looking towards altcoins, which can be attributed to trends and hype on social media. However, the market makers do not want it to happen just yet, thereby preventing a full-fledged Altseason. Moreover, the entry of new tokens and meme coins might dilute the market, where altcoins could not hold onto their value. Besides, the current regulatory environment further adds uncertainty as the SEC also took an action against Ripple and this will have two effects either restricting or boosting their growth depending upon the outcomes of these regulations. Therefore, in spite of this promise of altcoins, the overall market remains somewhat unpredictable. Conclusion While strong indicators point toward an Altseason, the timing is still not certain. One should be vigilant, aware of the happenings, focus on value-driven projects such as Ethereum, and keep the market volatility in mind. Time will only tell if this year will witness an Altseason of a big upsurge for altcoins. Highlighted Crypto News Today Brian Armstrong says Trump is pushing everyone to step up their efforts

- Perpetual trading, made possible by the two platformsâ€™ integration, allows users to trade 80+ pairs with ease. - Trading activity on Orderly has skyrocketed since it integrated with Raydium; the companyâ€™s peak daily trading volume is now approaching \$500M. With an impressive 30-day trailing trade volume of approximately \$100 billion, Raydium Protocol proves once again that it is the leading DEX for all blockchains, not only Solana. This achievement highlights Raydiumâ€™s capacity to draw in and hold on to users in DeFi field that is becoming more and more competitive. Concurrently, Orderly has been making headlines, cementing its position as a major player with a monthly trading volume that increased by a whopping 157%. This development has been gaining traction and weâ€™re going to delve deeper into the latest developments. With its competitive valuation, expanded distribution through Raydium, and scalable tokenomics, Orderly is able to sustain its rapid growth. Perpetual trading, made possible by the two platformsâ€™ integration, allows users to trade 80+ pairs with ease, which is a huge step forward for both platforms and the whole DeFi ecosystem. Trading activity on Orderly has skyrocketed since it integrated with Raydium; the companyâ€™s peak daily trading volume is now approaching \$500 million. Based on Orderlyâ€™s net flows, itâ€™s clear that the Raydium integration was the primary driver of this surge in organic adoption. By providing access to 80 trading pairs instead of Driftâ€™s limited number, Orderly has also reached a significant milestone: it now has more daily trading volume than Drift. This signifies a significant change in the competitive landscape, as Orderly is attracting traders with its expanded pair offerings and strong liquidity. In order to fuel its growth and compete in the crowded DeFi space, Orderly has relied on Raydiumâ€™s established user base and infrastructure. There is enormous expansion potential made possible by Orderlyâ€™s integration with Raydium. The scalability of Orderlyâ€™s operations could be demonstrated if even 12% of Raydiumâ€™s trading volume switched to perpetual trading, following the DEX-to-perpetual volume ratio of platforms like Jupiter. This would result in a six-fold increase in Orderlyâ€™s volume. Traders gain from the strong ecosystem that is created when the two platforms combine their resources and volume, which in turn fosters long-term development. Raydium and Orderlyâ€™s collaboration goes beyond mere integration; it signifies a change in the way decentralized financial platforms work together to fulfill user needs. Both platforms are removing obstacles in perpetual trading and fostering more innovation by using Orderlyâ€™s infrastructure and Raydiumâ€™s vast network. Platforms like as Raydium and Orderly are leading the charge in DeFiâ€™s ongoing evolution, providing state-of-the-art solutions that optimize the user experience and facilitate eternal trading. Both systems have great development potential, which bodes well for the future of DeFi.

- ETF president Nate Geraci reports stated several ETF issuers registering in the US ETF market. - The pro-crypto administration change could be one of the top reasons for the ETF boom. Community members are settling into the weekend, and todayâ€™s crypto status stands as such â€˜ Bitcoin has climbed to the \$104K level. Activity is far from diminished as more pro-crypto instances continue to occur. Yesterdayâ€™s highlights included Donald Trump signing an executive order for a digital asset strategic reserve in the US. Amid these events, the ETF market caught membersâ€™ attention the past day. Multiple institutions including Grayscale, the New York Stock Exchange (NYSE), and CoinShares have filed for ETP products. According to Nate Geraci, the President of the ETF storeâ€™s recent X post, these institutions have filed for the ETP products in the last 24 hours. In the Asian early morning hours of January 25, NYSE filed for a Grayscale Litecoin Trust. This has resulted in a price surge for Litecoin, which has taken the crypto spotlight. Recapping Day 4â€™: â€˜ Nate Geraci (@NateGeraci) January 25, 2025 Nasdaq files for in-kind creation & redemption on iShares Bitcoin ETF CoinShares files for ltc & xrp ETFs NYSE files to list & trade Grayscale ltc & sol ETFs Grayscale files for btc adopters ETF Grayscale files for eth premium income ETF Entertained yet? <https://t.co/715gESQSAW> Secondly, Nasdaq is reported to have filed for an â€˜in-kind & redemptionâ€™ on the iShares Bitcoin ETF. Thirdly, CoinShares registrations include two ETF filingsâ€˜LTC and XRP. The last day also saw Bitwise file for the very first Dogecoin ETF. What is Behind the US ETF Boom? The US ETF market had previously hit a slump in H2 2024. Spot ETFs Bitcoin and ETH showed minimal and volatile capital influx. The spot Bitcoin ETFs had lost the hype that existed at the yearâ€™s beginning. Additionally, the SEC also rejected the Solana ETF filings by leading issuers. This caused quite the dejection in the market. However, the past few days have seen a spur in activity within the ETF sector. This could be a reflection of the overall optimistic crypto sector fueled by the USâ€™s current pro-crypto administration. With Donald Trumpâ€™s inauguration, the market has seen several updates as aforementioned. This includes the release of Silk Road Founder Ross Ulbricht over the past week. Highlighted Crypto News Today: A Quick Guide to Adapting Crypto Payment Gateway with CryptoProcessing

- Crypto payment enables the use of cryptocurrencies for purchasing goods and services. - Payment gateways allow businesses to accept crypto securely and efficiently. With the increasing use of cryptocurrency, individuals and companies are looking into the use of cryptocurrency payment gateway. Knowing the workings and the apparatus at hand may encourage the user to experiment with this payment method. In this article, weâ€™ll delve into crypto payments, how theyâ€™re processed, and the platforms that make it seamless to accept cryptocurrencies. What Is the Concept of Crypto Payments? Crypto payments are the use of the leading cryptocurrencies, Bitcoin (BTC) and Ethereum (ETH), or a stablecoin like USDT, to purchase goods or services. Unlike conventional payments through banks or middlemen, crypto payments occur on a blockchain, the decentralized, secure, and open record management system in the form of a ledger. Why Choose Crypto for Payments? Global Accessibility: It is possible to make cryptocurrency transactions at any location, provided a modem link exists. Speed: Transactions can clear much sooner than conventional banking services, particularly for cross-border payments. Lower Costs: When it comes to crypto payment, usually there is no fee like credit card or bank transfer. Security: Encryption techniques in blockchain make it extremely difficult to gain unauthorized access or exploit the system. Applications, Protocols, and Platforms for Crypto Payments Various applications and protocols make crypto payment practical for companies and consumers. Here are the major components involved: 1. Payment Gateways Crypto payment gateways work as interlayers to provide customers with the ability to transact with merchants. They make it possible for merchants to accept cryptocurrencies and they often offer the ability to convert cryptocurrencies to fiat. Examples include: CryptoProcessing: Multi-cryptocurrency support, real-time support for fiat currency conversion and integration with e-commerce platforms. Coinbase Commerce: Offers the means of accepting cryptocurrencies with simple to configure and secure capabilities. BitPay: It enables companies to receive payments in major cryptocurrencies and settle in fiat if necessary. 2. Protocols Protocol describes the rules and standards of payment crypto processing. Examples include: Lightning Network: A two-layer alternative to Bitcoin for faster, cheaper transactions. Ethereum Layer-2 Solutions: Optimism and Arbitrum flagship scaling and lowering transaction fees of Ethereum. 3. Wallets Crypto wallets are key instruments for distributing, receiving, and keeping cryptocurrencies. The types include: Hot Wallets: Software wallets like MetaMask, Trust Wallet, and Coinbase Wallet. Cold Wallets: Hardware devices like Ledger and Trezor for enhanced security Understanding the Mechanics of Crypto Payments Crypto payments are processed through blockchain networks, which verify and record transactions. Hereâ€™s an overview of how a transaction works: Initiation: The customers use their cryptocurrency wallet to initiate a transaction by entering the recipientâ€™s wallet address and the amount to be paid. Verification: The blockchain network receives the transaction announcement. Its validity is verified by miners or validators. Settlement: When the transaction is verified and included in a block, the transaction becomes immutable. Thus, the required amount of crypto will be deposited into the beneficiaryâ€™s wallet. Breaking Down the Process of Crypto Transactions The mechanisms underlying cryptographic transactions guarantee transparency, security, and effectiveness. The following are the key steps: Public and Private Keys: Every wallet has a public key, used for the receiving of funds, and a private key which is used for the authorization of specific transactions. Decentralized Validation: Transactions are confirmed across the network of nodes, achieving accuracy and security without the need for central authorities. Smart Contracts: In blockchains such as Ethereum smart contracts, automatically enforce the transfer of money depending on specified conditions, thus decreasing the role of the middleman. Buying, Sending, and Swapping with Crypto Cryptocurrencyâ€™s multifunctionality allows users to perform a range of financial operations: 1. Buying Goods and Services Cryptocurrency payments are used in retail, travel, real estate and other industries by an ever-increasing number of merchants. To buy: - Ensure the merchant supports cryptocurrency payments. - Scan their QR code with their wallet or paste their wallet address. - Complete the crypto payment by authorizing the transaction. 2. Sending Crypto To send funds: - Open your wallet and select the send option. - Enter the recipientâ€™s wallet address and the amount. - Confirm the transaction and pay the network fee. 3. Swapping Crypto Swapping involves exchanging one cryptocurrency for another. Service platforms such as Uniswap and PancakeSwap, or central exchanges like Binance provide effortless exchange options. Prominent Crypto Payment Applications and Platforms Following is an overview of some of the major platforms for cryptocurrency processing: 1. CryptoProcessing - Supports a wide range of cryptocurrencies. - Provides instantaneous fiat currency conversion to reduce sensitivity to price fluctuations. - Integrates with platforms like WooCommerce and Shopify. 2. Coinbase Commerce - It allows merchants to accept Bitcoin, Ethereum, and other cryptocurrencies. - No transaction fees for crypto payment. - Provides secure and non-custodial wallets. 3. BitPay - Offers settlement in fiat or crypto. - Supports multiple cryptocurrencies and provides invoices for easier tracking. - Features debit cards linked to crypto wallets for spending. 4. NOWPayments - It allows the subscription-based services to be monetized potentially recurring crypto payments. - It supports over 100 cryptocurrencies with easy API integration. 5. PayPal (Crypto) - Enables users to purchase their way around by buying, selling and using cryptocurrencies such as Bitcoin on the platform. Why Should Businesses Accept Crypto? - Global Reach If companies will accept crypto, it will allow them to market to a global customer base. But even cryptocurrencies do not depend on national boundaries or national currencies. So the merchant is free from the problems associated with exchange rate complications and international

boundaries. This creates new markets to expand the scope of global trade and allows businesses to reach different economies. - Reduced Fees One of the benefits of transacting using cryptocurrency is the savings of transaction charges. Traditional payment systems like credit cards and bank transfers usually carry high processing charges. These fees are so low with cryptocurrencies and can be highly useful in cases of high-volume transactions. - Fast Settlements Cryptocurrency payments provide real-time settlement, even if that is compared to conventional banking systems. Specifically, cross-border payments, in general, can require days to settle as bank transfers, while a crypto-transaction takes moments, be it transcontinental or transatlantic. This can greatly enhance cash flow and give companies quicker access to funds. - Fraud Prevention Payment using cryptocurrency is final after a cryptocurrency transaction is confirmed on the blockchain it is permanently irreversible since a cryptocurrency transaction cannot be undone. This removes the liability risk of chargebacks, which are a very normal part of credit card payments and adds another layer of security from being fraudulent for merchants. - Future-Proofing When using cryptocurrency payment means the firms are taking their place at the technological edge. The emergence of digital currencies and decentralized finance (DeFi) leads to a transformation of the economic environment. Accepting crypto as a means of payment will guarantee that any business stays competitive in a world of increasing up-scale digitalization and at the same time entice a rising generation of tech-oriented consumers. The Growing Role of Crypto Payments in Global Transactions The prospect of crypto payments in the future is bright as cryptocurrencies gain more mainstream recognition and acceptance. With the recognition that facilitating rapid payments, lower transaction fees and international scale is a great competitive advantage for businesses. The inclusion of blockchain technology, responsible for security and transparency, will lead to increased trust in crypto transactions. Moreover, with the development of regulatory frameworks in different countries, the credibility and validity of crypto payments will be improved and therefore become more desirable by the common people as a means of payment. The emergence of digital currencies, of which some will be in the form of central bank digital currencies (CBDCs), also has a key role to play in the development of crypto payments and will pave the way for more interoperability between traditional and digital financial systems. The expansion of crypto payment will most certainly be a major factor in the continuing digital revolution in the world of finance.

In January 2025, the crypto community is abuzz with presales such as Wall Street Pepe, Lightchain AI, Jetbolt, and PlutoChain. Wall Street Pepe has raised over \$48 million, blending meme culture with trading tools. Lightchain AI attracts attention with its innovative blend of AI and blockchain technology. On the other hand, PlutoChain (\$PLUTO), the first hybrid Layer-2 solution for Bitcoin, plans to introduce smart contracts and Ethereum Virtual Machine compatibility, potentially transforming Bitcoin's ecosystem. This innovation has caught the eye of many early adopters, which could position PlutoChain as a potential game-changer in decentralized technology. Let's check out the details! Bitcoin Meets Innovation after PlutoChain Could Redefine Blockchain Capability PlutoChain (\$PLUTO) could transform Bitcoin into more than a store of value by introducing a hybrid Layer-2 solution that supports DeFi, NFTs, AI, and dApps. This groundbreaking technology might enable Bitcoin to compete with Ethereum and Solana in terms of scalability and utility. Through its Layer-2 technology, PlutoChain offers a block time of just 2 seconds and lower fees. It could also make Bitcoin's infrastructure faster, more efficient, and more competitive. One of PlutoChain's standout features is its EVM compatibility, allowing Ethereum-based applications to seamlessly migrate to Bitcoin. This could bridge the gap between two leading blockchain ecosystems, creating new opportunities for developers and users. With 43,200 transactions processed daily on its testnet, PlutoChain proves its scalability and readiness for deployment. Additionally, the project's community governance system empowers users to shape the protocol's future, enhancing decentralization. Supported by multiple independent audits from SolidProof, QuillAudits, and Assure DeFi, PlutoChain combines security and innovation. The project's presale momentum and unique features might position it as a game-changer in the Bitcoin ecosystem. Wall Street Pepe Hits \$48 Million Milestone, Redefining Meme-Inspired Finance Wall Street Pepe (\$WEPE) has achieved a significant milestone, raising over \$48 million in its presale phase. This rapid fundraising reflects strong investor interest in the meme-inspired cryptocurrency. By combining meme culture with financial tools, Wall Street Pepe aims to empower retail investors and challenge traditional market dynamics. Its staking mechanism offers a 27% annual percentage yield (APY), incentivizing long-term participation. Analysts predict substantial growth for \$WEPE, suggesting it could rival or surpass other meme coins in the market. Artificial Intelligence Boosts Lightchain AI's Rise in the January 2025 Presale Race Lightchain AI (\$LCAI) is making significant strides in the January 2025 presale race, raising over \$11 million in its limited-time presale phase. This success stems from its innovative integration of artificial intelligence with blockchain technology, aiming to enhance decentralized applications and governance. The platform's unique Proof of Intelligence (PoI) consensus mechanism rewards nodes for performing AI computations, ensuring scalability and efficiency. Investors are drawn to Lightchain AI's potential to revolutionize sectors such as healthcare, finance, and logistics by providing scalable, efficient, and secure solutions. Jetbolt's Ultra-Fast Blockchain Targets Global Adoption in January 2025 JetBolt (\$JBOLT) is rapidly advancing toward global adoption with its ultra-fast, zero-gas blockchain technology. In January 2025, the presale has already sold over \$265 million tokens, reflecting strong investor interest. Built on the Skale network, JetBolt eliminates gas fees and offers instant transactions, enhancing user experience and accessibility. Its developer-friendly platform supports decentralized applications (dApps) and SocialFi projects, fostering innovation in the Web3 ecosystem. Analysts predict that JetBolt's unique features could position it as a leading altcoin in 2025, potentially reshaping the future of blockchain technology. Final Words Wall Street Pepe has dazzled the presale scene with \$48 million raised, blending meme culture and finance. Lightchain AI's innovative use of artificial intelligence has secured \$11 million, while JetBolt's ultra-fast, zero-gas blockchain shows global adoption potential. In contrast, PlutoChain (\$PLUTO) could stand out with hybrid Layer-2 technology that might expand Bitcoin's use case. By introducing smart contracts and potentially bridging Bitcoin with Ethereum via EVM compatibility, PlutoChain could enhance scalability and functionality. With its testnet processing 43,200 daily transactions, PlutoChain might be poised to redefine blockchain innovation and unlock Bitcoin's full potential for decentralized finance and dApps. KTON, Launching February 2025, Poised to Unleash 18X Growth in TON's Liquid Staking Market KTON, an institutional-grade liquid staking protocol incubated by TONX, the leading TON-focused venture studio backed by top VC firms from the Asia-Pacific region, is gearing up for its V1 launch in February 2025. TONX, which recently unveiled a \$5M accelerator program to foster innovation within the TON and Telegram ecosystem, is behind TONX API, the leading developer platform trusted by Blum, Catizen, Google Cloud, and over 20 leading projects. TONX is also the force behind Tonkey, a multisig solution managing \$400M in assets and adopted by the TON Foundation. KTON is set to enter the United States and global markets, bringing its enterprise-grade liquid staking solution to institutional and retail users. Telegram recently announced it will exclusively support The Open Network (TON) for its blockchain ecosystem. KTON is uniquely positioned to capitalize on this growth as it is being built specifically for TON users. Building on TONX's success in the API and security space, KTON is positioned to capture the \$6.12 billion TON liquid staking market opportunity. KTON allows users to stake TON while receiving \$KTON, unlocking liquidity without sacrificing staking rewards. Unlike existing solutions that often concentrate risk or lack robust standardization, KTON provides institutional-grade security tailored for family offices, trusts, and exchanges. Users can start staking with as little as 1 TON, and there is no lock-up period. Unlocking TON's \$6.12B Liquid Staking Market Potential Liquid staking has transformed blockchain ecosystems with Lido Finance dominating Ethereum's LST market at \$30B TVL. KTON aims to capture similar potential in TON's nascent LST market, currently valued at \$0.36B. Our research reveals TON's LST ratio matches Solana at 10% of staked tokens, yet TON's total staking rate is merely 13.7% versus Solana's 69%, indicating a 5x growth potential. Furthermore, if TON's LST ratio reaches Ethereum's 36%, the market could surge 18X, unlocking an additional \$6.12B in value, said Dr. Awesome Doge, founder of TONX and KTON. KTON aims to bridge this gap by providing the infrastructure needed to unlock this liquidity and drive TON's DeFi expansion. KTON's staking service will unlock liquidity, enabling seamless integration with leading TON native DEXs and protocols, and more DeFi giants which are entering TON like Ethena and Curve Finance. This offers TON users flexible and stable yield strategies through various DeFi opportunities while maintaining staking rewards. TONX's triumph is a powerful testament to why KTON has solidified its place as a trusted pillar in the ecosystem, said Howard Peng of TON Ventures. KTON Sets New Standards for TON Liquid Staking Infrastructure KTON is addressing the critical challenges of existing liquid staking solutions, such as concentration risks and lack of standardization, by introducing a decentralized protocol with institutional-grade security. To further enhance accessibility, KTON is launching a Telegram Mini App designed for the platform's 950M users in a move to bridge DeFi adoption and mainstream accessibility. By integrating liquid staking directly within Telegram, KTON simplifies the process, ensuring that anyone can participate with ease. This innovative approach positions KTON to drive the widespread adoption of TON blockchain technology, expanding its reach in the US market and globally. The platform's roadmap goes beyond staking rewards. Following the launch of KTON V1, the planned upgrade will introduce a dual-token model featuring \$KTON and a new governance token. This system allows \$KTON holders to earn rewards while actively participating in KTON DAO governance. Unlock Your Yield with KTON, Launching February 2025 KTON is poised to seize the \$6.12 billion market potential in TON's liquid staking ecosystem with its enterprise-grade staking services. Launching this February, KTON provides the most secure and user-friendly solutions for both retail and institutional clients, enabling them to unlock liquidity, maximize staking rewards, and confidently participate in TON's thriving DeFi ecosystem. TON's commitment to security, combined with a decentralized governance structure, makes KTON a trusted choice for staking at scale. For partnerships and customized solutions, contact: contact@kton.io About KTON KTON is a next-generation liquid staking protocol built for the TON ecosystem, designed to unlock liquidity for both retail and institutional users. Through its liquid staking token \$KTON, users can participate in TON's growing DeFi ecosystem while earning staking rewards. Combining institutional-grade security with decentralized governance and seamless Telegram integration, KTON aims to drive TON's ecosystem growth and mass adoption. About TONX Founded in 2021, TONX is a SuperApp platform layer driving the new Web3 economy. As a cornerstone of the TON ecosystem, it delivers powerful tools like TONX API, a trusted RPC solution integrated with over 20 leading projects, and Tonkey, a secure multi-signature wallet managing over \$400 million in assets. - DeFi eliminates intermediaries, enabling permissionless access to financial services. - By 2025, DeFi and traditional banking are merging to create a decentralized financial ecosystem. Decentralized Finance, often referred to as DeFi transitioned from a niche to a mainstream industry over the years. It is projected to be a disruptor for the global banking system in 2025, valued at over 30 trillion dollars. Traditional financial services are now facing competition as DeFi protocols offer open, borderless, and transparent services. Automated trading and decentralized loans have been made available for millions across the world, which has compelled traditional banks to reconsider their roles in the financial ecosystem. What Sets DeFi Apart from Traditional Banking? The hallmark of DeFi can be seen as the elimination of intermediaries. Smart contracts on blockchain networks, including Ethereum, Binance Smart Chain, and Solana serve as relay points. Censorship and failure are no longer an issue, as operating on distributed networks provides stability, unlike traditional banking systems. DeFi has a permissionless system, allowing anyone with a digital wallet access to loans without KYC procedures or credit checks. Accountability is ensured through DeFi's commitment to transparency. All transactions are logged, and the public ledger makes it accessible to all. The automation of intricate tasks within the DeFi program helps to ensure there is less reliance on human discretion. Tasks such as lending, trading, and staking are now increasingly seamless, making advanced technologies such as AI a necessity within the finance sector. The Impact of DeFi on Banking Services DeFi's most revolutionary components include decentralized lending and borrowing. For instance, instructions and evaluation of credit history documents are mandatory for loans to be granted at traditional banks. Aave and Compound, alongside other DeFi protocols like them, undertake this fundamentally differently by providing loans that are automatically collateralized. Instead of waiting for approval, borrowers just deposit cryptocurrencies and receive stablecoins against them. And at the same time, lenders earn on DeFi by providing liquidity that pays one of the most competitive interest rates. Transfers have also benefited immensely from DeFi. Bank cross-border payments can take days and cost a fortune. However, DeFi-constructed platforms like Stellar and Ripple make it possible for people and companies to send money anywhere in the world in a matter of minutes and at a fraction of the

cost. This shift helps to eliminate the expenses and time that accompany traditional banking systems. DeFi protocols like Yearn Finance have certainly made wonders with asset management. They have all but eliminated the need for user intervention to increase yield. With DeFi providing endless opportunities, traditional banks cannot compete with their miserable savings plans and meager interest rates. Similarly, decentralized exchanges like Uniswap and Curve Finance have replaced conventional forex and stock exchanges by providing decentralized markets where users can trade cryptocurrencies directly, bypassing brokers and other intermediaries. Top DeFi Protocols Transforming Banking in 2025 Aave with its new flash loans and lending pools, remains at the forefront of decentralized borrowing and lending. Banks do not offer loans without collateral, however, these loans are conveniently available to be paid back within a small amount of time. With its widely adopted DAI stablecoin, MakerDAO has achieved some level of financial stability. The ability to mint DAI against fiat-backed volatile assets gives MakerDAO a decentralized alternative to traditional currency. The first AMM, Uniswap, allows for decentralized trading with high liquidity and low fees. Users of Uniswap have a greater ability to influence the protocol's governance compared to traditional banking. Synthetix brings the world of finance to DeFi by allowing users to trade synthetic assets. Its tokenized versions of real-world assets like gold or stocks are a modern take on traditional investment options. As an important Oracle service, Chainlink allows DeFi applications to use real-world data safely. This is important to enable the blockchain protocols to interact with the outside world, increasing their value. The Convergence of DeFi and Traditional Banking While DeFi poses a significant challenge to traditional banks, it also presents collaboration opportunities. By 2025, many banks have started adopting blockchain technology and partnering with DeFi platforms to remain competitive. Tokenized assets are becoming mainstream, with banks exploring tokenized real estate and equities to modernize investment options. Blockchain payments are also gaining traction, as institutions like JPMorgan use blockchain to streamline international payments and settlements. Regulated DeFi is emerging as governments and central banks experiment with decentralized systems to launch Central Bank Digital Currencies (CBDCs), integrating DeFi principles into regulated frameworks. Challenges and Risks Despite its transformative potential, DeFi faces significant challenges. Regulatory uncertainty remains one of the biggest hurdles, as governments struggle to define and regulate DeFi protocols without stifling innovation. Security concerns are another major issue, with high-profile hacks exposing vulnerabilities in smart contracts. Scalability issues also persist, with network congestion and high transaction costs hindering mass adoption, especially on older blockchains like Ethereum. Moreover, the lack of user education slows global adoption, as many individuals are unfamiliar with the technical aspects of DeFi platforms. The Role of DeFi in Global Finance Decentralized finance (DeFi) will prove to be a vital component of the financial ecosystem by 2025. It is expected to increase access to banks for the unbanked and the underbanked around the world. DeFi will continue to transform investment with its novel approaches, allowing for even easier access to synthetic assets and tokenized securities. The scalability problems in DeFi services will probably be solved by cross-chain protocols and Layer 2 solutions, which will enhance the effectiveness and usability of these platforms. The future of finance may not involve the obliteration of banks, but the merging of the DeFi system with the traditional system. An ecosystem that embraces the strengths of both DeFi and traditional finance would combine the former's trustlessness and efficiency with established norms, trust, and regulation of traditional banking. This fusion will most likely accelerate growth and broaden the scope of financial services to new heights. Conclusion Decentralized Finance in 2025 is not just an alternative to traditional banking but a transformative force reshaping the way individuals and institutions interact with money. By removing intermediaries, lowering costs, and increasing transparency, DeFi protocols challenge traditional banking systems on every front. However, addressing regulatory, security, and scalability challenges remains crucial for sustained growth. - Binance Futures launches VINEUSD and PIPPINUSD perpetual contracts on January 24, 2025. - VINEUSD is based on Vine Coin, while PIPPINUSD focuses on AI-driven PIPPIN memecoin. Binance Futures has announced the launch of two new perpetual contracts: VINEUSD and PIPPINUSD. The contracts will be available from January 24, 2025, with VINEUSD launching at 10:00 (UTC) and PIPPINUSD launching at 10:15 (UTC). Both contracts will allow traders to leverage up to 25x, offering increased flexibility for experienced traders. The VINEUSD perpetual contract will be based on Vine Coin (VINE), a Solana-based memecoin introduced by Vine's co-founder, Rus. This new asset adds another option to Binance's growing list of trading pairs in the memecoin sector. Similarly, the PIPPINUSD contract is based on the PIPPIN token, a Solana memecoin focused on AI applications. VINEUSD and PIPPINUSD Contract Overview Traders can use USD as the settlement asset for both contracts, allowing easy access to these new pairs with the stablecoin. The tick size for both contracts is set at 0.00001, ensuring high precision in trade execution. Additionally, Binance Futures has set a capped funding rate of +2.00% / -2.00%, which will apply to both contracts at launch. The funding fee for these perpetual contracts will be settled every four hours, maintaining a steady flow of funding adjustments throughout the day. With trading available 24/7, users can manage their positions at any time. Multi-Asset Mode is also supported, offering flexibility in trading different asset types on Binance Futures. Binance Futures has emphasized the importance of risk management with a maximum leverage of 25x. This leverage allows traders to amplify their positions but also requires careful attention to market movements. Highlighted Crypto News Today Vitalik Buterin Reveals the Future of Scaling Ethereum in 2025

Shiba Inu's price patterns have drawn comparisons to Dogecoin's explosive growth, sparking interest in its potential for future gains. However, analysts suggest that another altcoin, Lightchain AI, might outperform both, delivering even higher returns. With its innovative technology and growing investor interest, Lightchain AI presents a unique opportunity for those looking to capitalize on the next big crypto trend. As Shiba Inu's hype continues, many are keeping a close eye on Lightchain AI's rapid momentum for potential double the gains. Shiba Inu vs. Dogecoin- Identifying the Similarities in Price Patterns Shiba Inu and Dogecoin, two of the well-known joke coins, have many things in common with their price moves, especially when pushed by online buzz and market feel. Both items first got attention because of their fun, group-focused charm and support from famous names like Elon Musk's tweets. Due to this, their cost changes are often shown by quick jumps, then sharp drops. Even with their ups and downs, both coins have drawn a faithful crowd with backers wishing for big payoffs. Also, the two coins often see same trends in market actions, with Shiba Inu copying Dogecoin's moves during good times. These alike things show the guessing kind of meme coins and the power of social factors in pushing their prices. Why Lightchain AI Could Outperform Both Shiba Inu and Dogecoin Lightchain AI's groundbreaking approach positions it as a superior investment compared to Shiba Inu and Dogecoin. Unlike meme coins, which lack substantial technological backing, Lightchain AI integrates advanced AI-driven solutions, enabling real-world use cases with real-time data processing. The platform's unique tokenomics ensures sustainable growth, providing investors with long-term value through careful token distribution and rewards for validators and contributors. Lightchain AI's decentralized governance ensures transparency and community-driven decision-making, fostering trust and engagement. Furthermore, its interoperability across blockchain networks sets it apart, offering scalability that meme coins cannot match. As Lightchain AI scales through its roadmap phases, from testnet rollouts to global adoption, its emphasis on latency reduction and innovative AI applications ensures it is primed to outperform meme coins by 2025. Future Is Bright for Lightchain AI As the crypto market keeps evolving and new trends pop up, Lightchain AI is shaping up to be an exciting investment opportunity for anyone looking for strong growth potential. While Shiba Inu and Dogecoin can be fun options, their speculative nature makes them a bit riskier compared to the solid foundation and clear roadmap Lightchain AI offers. If you're keeping an eye on altcoins, Lightchain AI is definitely worth watching as it moves through its development and picks up momentum. With its innovative approach, it has the potential to deliver even bigger gains than meme coins like Shiba Inu and Dogecoin. For those looking to diversify their portfolio with high-growth assets, Lightchain AI might just be the perfect pick! - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. With sentiment quickly turning bullish, Dogecoin (DOGE) is on track to hit the elusive \$1. The closest it was to this feat was 2021, after hitting \$0.73. However, with another bull cycle unfolding, Dogecoin (DOGE) is one of the altcoins to watch. Meanwhile, new crypto funds have been betting on Cardano (ADA), a Layer-1 token and IntelMarkets (INTL), a low-cap AI crypto. The former is primed for a breakout and huge leap, while the latter could soar as high as 70x this year as a new altcoin with huge growth prospects. IntelMarkets (INTL): On the Radars of Savvy Investors IntelMarkets (INTL), a low-cap AI crypto, is gearing up to become this cycle's best bet. It skyrocketed over 800% in the past few months, rising from \$0.009 to \$0.082 in the current ICO stage. Another 35% gain is anticipated at the listing price of \$0.11 before its explosive growth post-launch. As one of the top ICOs, its upside potential is staggering, not to mention its bullish AI narrative. In the ninth stage of the ICO, a token costs less than \$0.1, with its budget-friendliness as one of its biggest attractions. At the same time, it is undervalued, tipped by experts for a 70x uptick after the scheduled listing on Tier-1 exchanges this quarter. Given the above, it might be a more compelling alternative to Dogecoin (DOGE) and Cardano (ADA). Moreover, its intriguing blend of AI and DeFi paints a bullish picture. It will be the first AI-driven trading platform to integrate artificial intelligence across all levels. In addition, its blockchain will be AI-based and its trading bots will be automated. Its dual-chain functionality's compatibility with the Ethereum and Solana blockchains will be another of its biggest attractions. Dogecoin (DOGE): Eyes on \$1 Dogecoin (DOGE), the leading memecoin, changes hands above \$0.35. The past few weeks have been a wild ride, to say the least, but a more sustained bullish trajectory is anticipated. A breakout above \$0.43, its month high, might ignite a significant jump in the Dogecoin price. Meanwhile, Kev_Capital_TA, a top analyst and trader on X, believes Dogecoin (DOGE) will hit \$1.30 if it doesn't break below the \$0.26 support. Dark64, another crypto analyst, has \$0.51 as a short-term target, placing DOGE on the list of the best coins to invest in. Further painting a bullish picture are key technical indicators like the 9-HMA and Bull Bear Power. Despite this, IntelMarkets's projected 70x rally is more attractive to savvy investors, contributing to the rise in early demand. Cardano (ADA): Can it Hit \$5? Cardano (ADA), one of the top ten cryptocurrencies, is a popular Layer-1 token. The top altcoin hovers around the \$1 support, with a big leap around the corner after consolidating for days. ADA_ONEVETCOTI, a crypto analyst and trader, expects ADA to hit \$3 in February and \$5 before the end of April. VellaCryptoX, another top analyst, targets \$1.50 in the near term, provided Cardano (ADA) holds the \$1.07 support. This bullish forecast is supported by key indicators like the 9-HMA and 200-SMA's a top crypto to invest in. However, to make the most of this year's bull run, IntelMarkets (INTL) might be a better bet than Cardano. The new AI coin is up over 800% in the past few months and the projected 70x uptick makes it arguably the best new crypto to invest in. IntelMarkets (INTL): A Good Crypto to Buy Over Dogecoin (DOGE) and Cardano (ADA) The early demand for IntelMarkets (INTL) can be linked to its growth prospects and AI narrative, pushing funding past \$7.3 million. With the launch date scheduled for Q1 and considering its huge upside potential, it might be a better alternative to Dogecoin (DOGE) and Cardano (ADA). For more information about IntelMarkets (INTL) visit the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - SHIB's burn rate increased by 1000% in the last 24 hours. - CMF shows positive inflows, indicating rising buying interest Shiba Inu (SHIB) is currently trading at \$0.0002028, marking a 1.34% gain in the past day. Shiba Inu's burn rate skyrocketed by 1000% in the last 24 hours, reflecting a strong effort to reduce supply. The market capitalization stands at \$11.95 billion, with a trading volume of \$450.53 million up 42.29% in 24 hours. The market cap ratio is at 3.76%, signaling decent activity in the market. The burn rate surge indicates a commitment to reducing SHIB's circulating supply, which is currently \$89.25 trillion. Higher trading volume shows increasing market activity, suggesting growing interest in the token. Technical Indicators Show Mixed Momentum The 4-hour chart for Shiba Inu reveals a critical battle between buyers and sellers. The RSI is at 46.86, indicating neutral momentum but leaning slightly toward the oversold zone. Its moving average (yellow line) at 41.19 confirms the same trend. The Chaikin Money Flow (CMF) value stands at 0.16, suggesting positive inflows into SHIB. This uptick indicates accumulating interest, a positive signal for bulls. The moving average (MA) crossover indicates potential upward momentum. The short-term MA shows signs of aligning with the longer-term MA, implying bullish pressure if this trend continues. The primary resistance for SHIB lies at \$0.0002100. If bulls break this level, the price could test \$0.0002250. On the downside, the support level sits at \$0.0001950. A breakdown below this could push SHIB toward \$0.0001880. If the current trend strengthens, the price may climb beyond \$0.0002150. Otherwise, it might consolidate in the \$0.0001950-\$0.0002050 range before determining direction. Investors should monitor the moving averages and CMF for clearer trends. However,

resistance at \$0.00002100 remains critical. Market participants should stay alert for trend confirmations through technical indicators.

- President Trump pardoned Ross Ulbricht after 11 years in prison, and Ulbricht publicly thanked him. - Ulbricht received over \$270,000 in cryptocurrency donations, including \$111,111 from Kraken. - Approximately 430 BTC worth \$47 million linked to Ulbricht remain untouched in wallets. Silk Road founder Ross Ulbricht thanks Trump for pardon after 11 years in prison Ross Ulbricht Thanks Trump President Donald Trump freed Ross Ulbricht, the founder of Silk Road, after more than 11 years in prison. Ulbricht was serving a double life sentence without parole. He is the first to thank Trump in public, identifying him as a man of his word. For the first public statement since he was released from prison, a video of Ulbricht has been captured, speaking on his X post. "Last night, Donald Trump granted me a full pardon," he said. "I was doing life without parole, and I was locked up for over 11 years. But he let me out. I am a free man now. So let it be known that Donald Trump is a man of his word." Thank you so much, President Trump, for giving me this amazing blessing. I am so, so grateful to have my life back, to have my future back, to have this second chance. This is such an important moment for me and for my whole family. Since his release, supporters have mobilized in many ways to try to help Ulbricht get back into society as easily as possible. The Free Ross campaign on X states that over \$270,000 has been donated in Bitcoin. Some of the biggest donations include: \$111,111 from Kraken crypto exchange, 2,400 in Ether (ETH), 900 in Solana (SOL), 200 in Cardano (ADA), and several smaller donations in BNB and Dogecoin (DOGE). Ulbricht would want to take some time out to spend it with his family and heal his time in the incarceration. "This feels amazing to be free," he said. "This is a victory for everybody everywhere who loves freedom and who cares about second chances." Unclaimed Bitcoin Holdings Linked to Ulbricht Other than donations, Coinbase director Conor Grogan asserted that around 430 BTC, worth around \$47 million, are sitting in wallets that likely belong to Ulbricht. Those wallets haven't been accessed since more than 13 years ago, and the authorities did not seize them. Arkham Intelligence confirmed what Grogan found out—he said there are 14 Bitcoin addresses that connect to Silk Road. One of those accounts has over \$9 million in BTC. In 2015, Ulbricht was found guilty of setting up and running the dark net-based marketplace, Silk Road where users buy illegal goods using a virtual currency, bitcoin in total anonymity. Multiple conviction under different charges also meant that he is to be imprisoned for life with accusations of conspiracy against the RICO act and laundering money, some computer hacking frauds proved his guilt as well. In fact, Ulbricht only tweeted this year for the very first time since more than 11 years of his silence over the Internet. He was obviously ecstatic and has tweeted, "Chances to begin anew." He also pointed out his admirers and revealed pardon was indeed collective victory. Digital Privacy and Crypto Regulation Well, even with his supporters' wonderful contributions, Ulbricht has yet to recover from his looted money. The BTC he held when he was caught exceeded 144,000. The court had then confiscated close to \$184 million worth of the Bitcoin that the United States Marshals Service sold in 2014 when the prices for the BTC were extremely low. Those sales then raised just \$48 million, a far cry from today's price for the BTC. The FBI wallet selling Ulbricht's crypto now holds nearly \$129,000. On January 23, Kraken donated around \$111,111 in BTC for Ulbricht to start living his new life. This really shows that he has a big community supporting him as he gets ready to return into society. This is the end of the world for Ulbricht. All the debates going on regarding digital privacy, the regulation of cryptocurrency, and justice are all at the limelight. Highlighted Crypto News Today Web3 Meets Idle Gaming: Slime Miner Launch Celebrates Players With Exclusive Rewards

We're entering a significant new era for crypto under Donald Trump. It's a chapter that has the potential to open up digital asset management to a much wider community of users, all while delivering huge returns. We're already seeing savvy investors getting their houses in order by moving away from meme coins like Pudgy Penguins and Shiba Inu towards technically advanced solutions such as 1FUEL. Read on to find out why 1FUEL's cross-chain crypto transactions promise to be transformative for the sector with 500% plus returns expected for early investors. Pudgy Penguins: A cute penguin meme coin with an NFT spin Pudgy Penguins is a meme coin for the digital art community. Pudgy Penguins' PENGU token launched in December with a \$2.3 billion market cap. Pudgy Penguins fans quickly clocked up trading volumes of \$90 million as the coin launched, but the token hasn't been able to maintain that momentum. Like all meme coins, Pudgy Penguins depends on its branding and social hype to stay relevant. It has little in the way of widespread use cases. Maintaining momentum is therefore difficult, as shown by the fact that Pudgy Penguins has seen its price decline by more than 23% since its launch last month. Pudgy Penguins' market cap has also fallen substantially and is now \$1.5 billion. For serious investors, there is little long term potential to get excited about. The secure crypto wallet 1FUEL is an example of what the future of crypto could look like for Pudgy Penguins investors. With advanced technology, endless use cases, robust privacy measures and physical debit and credit cards, 1FUEL is a serious all-round contender with enormous profits set to be delivered to investors. Shiba Inu: testing times for the community-run coin Shiba Inu had a strong 2024 and managed to stay the course despite new meme coins flooding the market on what seemed like a weekly basis. Shiba Inu's luck hasn't carried through into 2025. Despite an overall storming start to the year for crypto, Shiba Inu has found its price trajectory moving in the wrong direction. Shiba Inu is currently testing support at \$0.000020, but analysts say this could move lower with \$0.00001923 the next stop, followed by a second bottom at \$0.000017. At more than 77% below its all time high, Shiba Inu seems unable to find a second gear. Investors seeking more rewards and higher profit levels will need to consider alternatives like 1FUEL. The secure crypto wallet is set to 100x on public launch, which blasts Shiba Inu right out the water. 1FUEL: The cross-chain crypto transactions pioneer with unlimited potential and sky high profits 1FUEL is a serious contender for the title of best cryptocurrency to buy now. Not because of a cute animal logo or social hype, but for its very real innovative technology and game changing, one-click, cross-chain crypto transactions concept. It unlocks the gates to digital asset management for millions of people, meaning its potential, and potential profit for investors is exponential. 1FUEL's unprecedented one-click solution stands tall as one of the most exciting innovations in the crypto industry. It is set to deliver enormous profits, with its presale selling out stages one, two and three in record time. Join the 1FUEL presale Don't miss out. The 1FUEL presale is happening now. Secure your investment at the lowest possible price. To Find Out More About The 1FUEL Presale Use The Links Below: - Website: <https://1fuel.io/> - Telegram: <https://t.me/Portal1Fuel> - Twitter / X: <https://x.com/1Fuel> Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency market advances and the buzz around a bull run grows, the best crypto picks for 2025 are gaining attention. Among them, FXGuys (\$FXG), Solana (SOL), Jupiter (JUP), and Hedera (HBAR) offer unique utilities and substantial growth prospects, making them the best altcoins to buy during this rally. Here, we will discuss why these DeFi coins are generating excitement and why they could be game-changers this year! Why FXGuys is Among the Best Crypto Picks for 2025 FXGuys is gaining significant attention in the crypto space, combining utility with strong profit potential. Currently, in Stage 2 of its public presale at \$0.04 per token, FX Guys has already raised over \$3.4 million. This momentum positions FXGuys as one of the best crypto picks and a top contender among altcoins to buy ahead of the next bull run. A key feature driving its success is the Trade2Earn program, which rewards traders with \$FXG tokens for every transaction. This approach boosts trading activity while creating a dynamic ecosystem where active participation is continuously incentivized. The FX Guys staking rewards program adds another layer of value. By staking \$FXG tokens, users earn a 20% APY along with revenue shares. This strategy promotes price stability and encourages long-term holding, making it a strong player in the DeFi coin sector. The FXGuys platform also prioritizes accessibility and decentralization by removing KYC requirements, enabling global access, and addressing issues like high fees and limited entry points. These innovative elements make FXGuys a standout in decentralized finance, offering investors a unique opportunity to capitalize on its potential. With its focus on utility, rewards, and user-friendly features, FXGuys is shaping up to be more than just another DeFi coin; it is a complete ecosystem poised for substantial returns. Solana's DEX Volume Dominance Makes It One of the Top Altcoins to Buy in 2025 Solana has made headlines by surpassing all other blockchain networks in the 24-hour DEX volume, showcasing its dominance in the decentralized finance space. This achievement underscores Solana's efficiency and scalability, reinforcing its appeal to investors seeking altcoins to buy with high growth potential. This milestone positions Solana as one of the best crypto picks for those eyeing the next big opportunity in the cryptocurrency market. The DeFi coin's impressive performance has analysts predicting it could initiate a bull run, attracting attention to tokens utilizing its network. Thanks to its robust infrastructure, Solana is primed to retain its dominant position in the blockchain space. Within 24 hours, SOL saw a 23% boost, climbing from \$218.82 to \$271.08. With strong market sentiment, analysts predict it could top \$300 by February 2025. The JUP Token Airdrop Sparks Excitement: A Top DeFi Coin for the 2025 Bull Run! Jupiter Exchange founder Lochie Jarvis has unveiled plans for a 700 million JUP token airdrop this January, aimed at rewarding community contributions and strengthening the Jupiiverse ecosystem. The initiative allocates 50% of the token supply to the community, incentivizing activities such as onboarding new users, creating JUP-related content, and engaging in forums like Discord and X. With rewards also linked to trading volume and expertise, JUP is emerging as one of the best crypto picks for investors seeking top altcoins to buy. Analysts predict this airdrop could trigger a bull run, solidifying JUP's reputation as a promising DeFi coin and highlighting its long-term growth potential within the cryptocurrency market. Over the past 15 days, JUP has experienced a 13% price increase, rising from \$0.953 to \$1.080 between January 4 and January 19, 2025. Analysts are forecasting that the DeFi coin could reach \$1.5 by February 2025. Tokenized Diamonds: WGI and Vaultik's \$3 Billion Partnership on Hedera Fuels Excitement The World Gemological Institute (WGI) has announced a groundbreaking partnership with luxury fintech Vaultik to tokenize \$3 billion worth of diamonds, gemstones, watches, and jewelry on the Hedera blockchain. This deal introduces immutable digital certificates, ensuring secure tracking of asset provenance, grading, authenticity, and ownership, providing unparalleled transparency to the \$100 billion diamond industry. The integration of an insurance feature via global broker Acrisure adds further value, enabling clients to insure their certified assets directly. This move positions WGI and Vaultik as major players in the blockchain space. For those seeking altcoins to buy or promising DeFi coin projects, this partnership could serve as a key catalyst for a bull run in the crypto market. In just four days, HBAR has seen a 22% price increase, rising from \$0.289 to \$0.353 between January 15 and January 19, 2025. Market analysts project continued upward momentum, with HBAR potentially reaching \$0.50 by February 2025, making it one of the best crypto picks for 2025. Top Altcoins to Buy: The Best Crypto Picks for 2025 and Beyond! As the bull run approaches, the best crypto picks for 2025, including \$FXG, SOL, JUP, and HBAR, are emerging as top altcoins to buy with a promise of substantial returns. For investors looking to take advantage of the ongoing rally, these DeFi coins present promising opportunities. \$FXG tokens are now available in Stage 2 of their public presale, priced at just \$0.04. With more than 200 million tokens already sold, investor confidence continues to rise. As the token is expected to launch at \$0.10, early buyers have the opportunity to earn a 150% return on investment. Experts predict a potential 100x surge post-launch, making \$FXG among the top altcoins to buy in the bull run. Don't miss out on this opportunity. Secure your \$FXG tokens today and position yourself for the next big crypto wave! The cryptocurrency market is buzzing as Tron (TRX), Cardano (ADA), and BlockDAG (BDAG) outperform in recent updates. Tron faced a challenging week with a 16% drop from \$0.2688 to \$0.2231, but there's new optimism. A 2% rise within a day to \$0.2251 and the appearance of a bullish morning star pattern hint at a possible turnaround. Continuing this trend might bring TRX to potential highs of \$0.2826 and \$0.3272, keeping it in the spotlight. Adding to this positive outlook, Cardano has showcased its robustness. After briefly hitting \$1.14, ADA is now stable at the \$0.92 support mark. Predictions reaching from \$0.95 to \$5.10 by 2025 underscore Cardano's strong focus on scalable infrastructure, making it a viable option for those desiring consistent advancement. Amid these dynamics, BlockDAG captures significant attention. Its \$183.5 million presale and 2,380% returns mark an extraordinary success. With future exchange listings, the momentum behind BlockDAG appears relentless. Can Tron (TRX) Climb Above \$0.28? Currently, Tron is feeling the market pressure, with its value on a downtrend. Yet, it maintains a robust position as the 10th largest cryptocurrency with a market capitalization of \$19.25 billion. Despite the downturn, including a 16% reduction last week from \$0.2688 to \$0.2231, a silver lining emerges. A 2% gain in a day to \$0.2251, alongside signs of a possible bullish shift, hints at a forthcoming recovery. Should this recovery take hold, Tron might aim for \$0.2826, aligning with the 23.6% Fibonacci level, and could even push towards \$0.3272. Given these recovery indicators and its solid market presence, Tron continues to be of interest for those eyeing long-term growth in the cryptocurrency field. Is Now the Moment for Cardano's Price Surge? Cardano price has recently garnered significant interest, indicating a potential upward trajectory. Its price momentarily escalated to the \$1.14 resistance before settling back to \$0.92, a critical support level. This past month, Cardano witnessed an 8% decrease, pointing to a prevailing downtrend. Nevertheless, projections for 2025 place the Cardano price between \$0.95 and \$5.10, revealing its

capacity for substantial growth. Backed by solid fundamentals with an emphasis on scalability and sustainability, Cardano remains attractive for those seeking enduring investment opportunities in the cryptocurrency sector. BlockDAG: Defining the Future of Cryptocurrency? BlockDAG has marked a significant milestone in the cryptocurrency sector with its extraordinary \$183.5 million presale, demonstrating robust confidence from its community. Across 27 batches, the value of BDAG coins rocketed from \$0.001 to \$0.0248, yielding a remarkable 2,380% return for early participants. For example, a simple \$100 contribution grew to \$2,380, highlighting BlockDAG as a notable opportunity for early entrants. Distinct from other altcoins, BlockDAG was developed from the ground up, with an emphasis on scalability and user experience. This bespoke strategy has led to the formation of a strong community of over 170,000 holders, which has been fostered through clear communication and engaging activities that enhance trust and loyalty. Final Analysis and Outlook As the cryptocurrency market continues to develop, Tron, Cardano, and BlockDAG are outshined as significant players. Tron's modest 2% recovery and positive market signals hint at a possible turnaround, with targets potentially reaching \$0.2826 and higher. Meanwhile, the Cardano price is stable at \$0.92, with future predictions between \$0.95 and \$5.10 by 2025, underscoring its potential for long-term growth. BlockDAG, meanwhile, is carving a niche in cryptocurrency innovation. Its \$183.5 million crypto presale generated an unprecedented 2,380% return, indicating substantial growth. With additional exchange listings imminent and a robust community of over 170,000 holders, the momentum behind BlockDAG is undeniable. For those interested in scalable, progressive projects, BlockDAG represents a pivotal opportunity to be part of what may become the next major development in the crypto market. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkofficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Blockchain analytics firm Bubblemaps has revealed alarming insider activity surrounding \$AINTI, a token launched on Solana by the late John McAfee's official handle on X. Promoted as an "AI version" of McAfee himself, the token's launch has come under scrutiny for its unusual pre-launch distribution and massive sell-offs, hinting towards pump and dump scheme. According to Bubblemaps, McAfee's official Twitter handle (@officialmcafee) transferred 90% of the token's supply to multiple addresses before the official launch. On January 7, the token deployer, identified as "ViruS," began distributing 60% of the total supply to 218 wallets. By the time the token launched, 287 wallets held 90% of the entire supply. As the token went live, 60 of these wallets dumped \$AINTI, netting \$1.5 million in profits. Shockingly, insider wallets still control 71% of the remaining supply. With only 1.6% of the supply allocated to liquidity pools, the centralized concentration of tokens raises concerns about transparency and market manipulation. Stark Reminder for Investors What makes this situation even more unsettling is the risk inherent in distributing tokens pre-launch. Typically, this could allow unauthorized wallets to establish liquidity pools and initiate trading early. However, the coordinated behavior of these wallets strongly suggests they belong to the project's team. Minted just 16 days prior, \$AINTI's distribution strategy appears designed to favor insiders at the expense of retail investors. While the token's branding may intrigue McAfee's followers, its questionable practices underscore the need for caution. This case serves as a stark reminder for investors to prioritize due diligence, as even high-profile projects can harbor red flags that jeopardize their credibility and fairness. Dubai, United Arab Emirates, January 23rd, 2025, Chainwire Bybit, the world's second-largest cryptocurrency exchange by trading volume, has shared its vision for 2025 during the livestream event: Keynote with Ben: In the Driving Seat to the Moon "Beat the Unknown. Ben Zhou, Co-founder and CEO, reflected on Bybit's 2024 journey, emphasizing the company's dedication to growth, innovation, and its guiding principle: "Listen, Care, Improve." The event, featuring insights from Bybit's leadership team, highlighted key milestones, solutions to major challenges, and plans to empower users and advance the cryptocurrency ecosystem. A Transparent and User-Centric Approach Bybit's 2025 vision is a testament to the company's commitment to placing its users at the center of every initiative. Zhou, in a keynote address, underscored the importance of embracing both achievements and challenges. "To build a better Bybit for all, we must listen to our users, care deeply about their needs, and constantly improve. Our vision for 2025 reflects these values," Zhou stated. The keynote showcased Bybit's accomplishments in 2024 while openly discussing areas for improvement, underscoring the company's pledge to maintain transparency and foster trust within its community. Staying Connected to Users At the core of Bybit's philosophy lies an unwavering commitment to listening to its users. "Our goal is to be the exchange that truly understands its users and acts on their feedback," Zhou emphasized during the keynote. This user-centric approach has driven Bybit to engage actively with its community to identify and address pain points. In 2024, the Bybit Card program, enhanced in response to user feedback, expanded into six regions with improved features such as faster support response times (reduced from 32 to 12 hours), better rates, and seamless integration with digital wallets like Apple Pay and Google Pay. Turning Challenges into Opportunities Bybit's dedication to its users was exemplified in how it transformed challenges into growth opportunities. For instance, the \$NOT coin incident, which impacted over 310,000 users, highlighted gaps in handling high traffic and trading volumes. Zhou remarked, "We listened, owned our mistakes, and used these experiences to build better systems." These lessons enabled Bybit to seamlessly handle the \$HMSTR token airdrop later in the year, delivering tokens to 4.3 million participants without delays. Bybit took this chance to build an effective traffic prediction model and upgraded its SOPs to manage massive volume spikes in the future. Stablecoin partnerships with Circle, Ethena, and Tether reinforced Bybit's focus on user needs. These collaborations solidified Bybit's position as a leader in USDC trading, achieving a 36% market share, while USDe dominated with a 99% market share in the second half of 2024. Advancing Products and the Industry Bybit's pursuit of improvement translated into several innovations in 2024. TradeGPT, the industry-first platform's AI-powered trading assistant, attracted over 5 million users, redefining how traders access insights and market analysis. Pre-Market Perpetuals, allowing traders to hedge and speculate before token launches, saw notable engagement with tokens like \$HYPE and \$TRUMP. The platform also enhanced its Puzzle Hunt program, combining gamified education with rewards, and continued expanding Launchpool, which simplifies earning rewards from promising projects. With ByVote 2.0, users can gain a greater voice in project listings, reinforcing Bybit's community-focused ethos. Bybit also launched bbSQL, the world's first exchange-backed liquidity staking token on Solana, achieving a Total Value Locked (TVL) of \$240 million within just five months. Bybit continued its role as an innovator in ecosystem expansion, forming strategic partnerships with Solana, TON, and Sui. These collaborations introduced new opportunities for users while underscoring Bybit's commitment to fostering blockchain innovation. The exchange achieved record growth, tripling its user base to over 60 million and surpassing an average daily trading volume of \$36 billion. "Our progress is a reflection of the trust our users place in us and our determination to set new standards in the industry," Zhou remarked. A Visionary Roadmap for 2025 Bybit's roadmap for 2025 reflects its core philosophy of Listen, Care, Improve, prioritizing tools, liquidity, and user-centric initiatives that redefine the crypto landscape. Strategic partnerships will further diversify Bybit's offerings. Collaborations with Ethena have introduced innovations like USDe, and upcoming products such as real-world asset (RWA)-backed instruments, including T-bills, will enrich Bybit Earn's portfolio. These initiatives align with Bybit's commitment to integrating traditional assets into crypto portfolios, enhancing both flexibility and reliability. Bybit envisions a future deeply integrated with Web3 under the banner of The Future of Onchain Bybit: Your Gateway to Web3. This includes integrating on-chain asset management, advanced trading tools, and DeFi solutions into a seamless, all-in-one Web3 platform for all. Bybit also plans significant on-chain asset expansions and new wallet and infrastructure upgrades, while deepening integration with growing ecosystems like Atom, Ada, Babylon, Athena, Sei, Monad, Bera, and more. "Our roadmap for 2025 reflects our commitment to empowering users and advancing the crypto ecosystem," Zhou stated. "We will continue to innovate, improve, and make crypto accessible for everyone." #Bybit / #TheCryptoArk / #KeynoteWithBen About Bybit Bybit is the world's second-largest cryptocurrency exchange by trading volume, serving a global community of over 60 million users. Founded in 2018, Bybit is redefining openness in the decentralized world by creating a simpler, open and equal ecosystem for everyone. With a strong focus on Web3, Bybit partners strategically with leading blockchain protocols to provide robust infrastructure and drive on-chain innovation. Renowned for its secure custody, diverse marketplaces, intuitive user experience, and advanced blockchain tools, Bybit bridges the gap between TradFi and DeFi, empowering builders, creators, and enthusiasts to unlock the full potential of Web3. Toronto, CA, January 23rd, 2025, Chainwire NOT FOR DISTRIBUTION TO UNITED STATES NEWS WIRE SERVICES OR FOR DISSEMINATION IN THE UNITED STATES SOL GLOBAL ANNOUNCES BINDING COMMITMENT FOR C\$10 MILLION DEBENTURE PRIVATE PLACEMENT FROM STRATEGIC INVESTOR 70% OF NET PROCEEDS WILL BE USED FOR ADDITIONAL SOLANA PURCHASES SOL Global Investments Corp. (CSE: SOL) (FSE: 9SB) (the "SOL Global" or the "Company"), one of the first publicly traded companies focused on institutional Solana investments, is pleased to announce that it has entered into a binding letter of intent on January 22, 2025 (the "LOI") for the sale of an unsecured convertible debenture of SOL Global (the "Convertible Debentures") with a principal amount of C\$10,000,000 (the "Offering"). The Convertible Debenture will be convertible into units of the Company at a conversion price of \$0.50 per unit, such that each unit shall include one common share of the Company (the "Common Shares") and one-half warrant whereby a full warrant is exercisable for an additional Common Share for a period of 12 months at an exercise price of \$0.65. The Debenture shall be funded in advances such that \$2 million will be advanced on closing and four advances of an additional \$2 million each shall be advanced every 60 days following the closing. The holder of the Debenture and SOL Global may mutually agree to accelerate the date of one or more advances. The holder of the Debenture shall be entitled to a 2.5% set-up fee of \$250,000, to be settled by the reduction of the amount payable under the initial advance. The Debenture will mature 24 months from the date of issue and shall be subject to a 10% interest rate, payable in cash at the time of each advance and at maturity. The LOI is a binding commitment of the purchaser and the transaction is expected to close on or before January 30, 2025 (the "Closing Date"), subject to the entering into a definitive subscription agreement and Debenture, and certain customary conditions including, but not limited to, the receipt of all necessary regulatory and other approvals, and is subject to the policies of the Canadian Securities Exchange (the "CSE"). Use of Proceeds The Company intends to allocate 70% of the proceeds of the Offering toward the acquisition of Solana tokens, reinforcing its commitment to digital assets and blockchain technology. Strategic Focus This financing is aligned with SOL Global's strategy to expand its digital asset portfolio and capitalize on emerging opportunities in the blockchain and cryptocurrency sectors. By allocating a significant portion of the proceeds to Solana tokens, the Company is reaffirming its belief in the potential of decentralized ecosystems. The Units will be offered on a private placement basis in such jurisdictions as the Agents and the Company may mutually agree, including (i) in all provinces of Canada pursuant to available exemptions from the prospectus requirements of those provinces, (ii) in the United States pursuant to available exemptions from U.S. registration requirements, and (iii) international or offshore jurisdictions pursuant to available exemptions from the prospectus, registration or other similar requirements in such international or offshore jurisdictions, such that no prospectus, registration statement or similar document is required to be prepared or filed by the Company in any such jurisdiction, in each case in accordance with applicable laws. All Common Shares and Warrants issued pursuant to the Offering are subject to a hold period of four months plus one day from the date of issuance of such securities under applicable securities laws in Canada. This press release does not constitute an offer to sell or a solicitation of an offer to buy any of the securities described herein in the United States. The securities described herein have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act"), or any state securities laws, and may not be offered or sold within the United States unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration requirements is available. For Further Information Please Contact: SOL Global Investments Corp. Paul Kania, Interim CEO, CFO Tel: (212) 729-9208 Email: info@solglobal.com Website: <https://solglobal.com> About SOL Global Investments Corp. SOL Global is a diversified international investment and private equity holding company. The Company is in the process of divesting its current investment partnerships and minority holdings. SOL Global recently announced the transition of investments to focus exclusively on digital asset technology, primarily on Solana and Solana based technologies. Caution Regarding Forward-Looking Statements This press release includes certain "forward-looking information" within the meaning of applicable Canadian securities legislation. All statements herein, other than statements of historical fact, constitute forward-looking information. Forward-looking information is frequently, but not always, identified by words such as "expects", "anticipates", "believes", "intends", "estimates", "potential", "possible", and similar expressions, or statements that events, conditions, or results "will", "may", "could", or "should" occur or be achieved. Forward-looking information in this press release includes, but is not limited to,

statements regarding anticipated completion of the Private Placement; the proposed use of proceeds of the Private Placement; and statements relating to the Company's intention to increase its investments in Solana. Forward-looking information reflects the beliefs, opinions and projections on the date the statements are made and are based upon a number of assumptions and estimates that, while considered reasonable by the Company, are inherently subject to significant business, technical, economic, and competitive uncertainties and contingencies, including the speculative nature of cryptocurrencies. Many factors, both known and unknown, could cause actual results, performance or achievements to be materially different from the results, performance or achievements that are or may be expressed or implied by such forward-looking information. Such risks, uncertainties and other factors include, without limitation, the Company's ability to complete the Private Placement, on the proposed terms and the proposed timeline, or at all; the Company's ability to execute on its business and investment plans, including the Company's ability to raise debt or equity through future financing activities and divest its current investment partnerships and minority holdings; the growth of the Solana ecosystem; growth and development of decentralized finance and digital asset sector; rules and regulations with respect to decentralized finance and digital assets; and general business, economic, competitive, political and social uncertainties. There can be no assurance that such forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on the forward-looking information. The Company does not undertake to update any forward-looking information, except in accordance with applicable securities laws. UxLINK, the world's first blockchain designed exclusively for social growth, has announced revolutionary innovations that promise to reshape the blockchain landscape. With a unique fusion of SocialFi and Web3 infrastructure, the UxLINK One Chain introduces user-centric technologies aimed at bridging the gap between complex blockchain systems and seamless user experiences. Pioneering a New Era in Blockchain Technology The UxLINK One Chain positions itself as a User-Oriented Public Chain with Chain Abstraction, offering unprecedented simplicity for Web3 application users. By leveraging chain abstraction and account abstraction technologies, UxLINK eliminates traditional blockchain complexities, enabling high-frequency social interactions and dynamic incentive mechanisms. Acting as a unified gateway, the platform facilitates a robust cross-chain ecosystem with a single account system and gas fees powered by the UxLINK Token. The OAOG Protocol: Redefining Blockchain Interactions At the core of UxLINK's innovation lies the OAOG (One Account One Gas) Protocol, which introduces groundbreaking capabilities, including: - Account Abstraction: Seamlessly operate across multiple chains without being restricted to any single public chain. - Universal Payment Engine: Utilize the UxLINK Token for gas fees, eliminating the need for chain-specific tokens. - Optimized Cross-Chain Communication: Enable secure, real-time asset and data transfers across chains. - High-Performance L2 Framework: Powered by the Optimism Stake architecture, this framework ensures low-cost, scalable, and secure transactions. Chain Abstraction: Bridging Complexity and Usability With chain abstraction, UxLINK One Chain bridges blockchain complexities and user accessibility. Operations such as wallet management, network switching, and gas token management are simplified, allowing users to interact as intuitively as on Web2 platforms. This innovation enhances user retention and conversion rates while supporting ecosystems like Ethereum, Solana, Ton, and Bitcoin. Optimistic Rollup: A Strategic Choice for Scalability UxLINK leverages the OPStack framework for scalability and efficiency. This architecture balances performance, scalability, and developer-friendly design. Unlike zkRollup systems that demand high computational resources, OPStack offers a modular framework that is adaptable to UxLINK's current development phase while enabling future zk technology integration. User-First Blockchain Design Setting itself apart from developer-focused chains, UxLINK prioritizes end-users, addressing challenges like multi-chain switching, opaque gas fees, and high operational thresholds. Through innovative chain abstraction technology, UxLINK elevates Web3 interactions to match, or surpass, Web2 user experiences. A Multi-Chain Ecosystem for Developers and Users Unlike single-scenario consumer chains, UxLINK One Chain supports a diverse multi-chain ecosystem. Its chain abstraction technology empowers applications across SocialFi, NFT trading, DeFi, and payments. Simplified operations, such as the "One Gas" payment function and "One Account" system, make UxLINK equally accessible for consumers and developers. Balancing Performance, Security, and Experience UxLINK ensures a secure and intuitive blockchain experience by incorporating: - High-Performance Architecture: Optimism Stake ensures high throughput and low latency. - Multi-Level Scalability: Cross-chain verification and real-time monitoring enhance security. - Optimized User Experience: Simplified and intuitive Web3 interactions through chain and account abstraction technologies. About UxLINK UxLINK is dedicated to revolutionizing blockchain technology with advanced innovations and a user-first approach. By simplifying blockchain operations and enabling seamless cross-chain interactions, UxLINK One Chain is redefining the future of Web3 applications. For media inquiries or more information about UxLINK One Chain, please contact: Media Contact Information - Website: <https://www.uxlink.io/> - UxLINK : admin@uxlink.io - Twitter : <https://x.com/UxLINKofficial> - Telegram: <https://t.me/uxlinkofficial> - CMC: <https://coinmarketcap.com/currencies/uxlink/> PR Contact: - Rachita Chettri - MediaX Agency - contact@mediax.agency Disclaimer: TheNewsCrypto does not endorse any content on this page. - Nasdaq stock exchange's X social media account was hacked to promote fake STONKS memecoin. - The post promoting STONKS was deleted and the fake Nasdaq account was suspended. - STONK's market capitalization ballooned to \$80 million within a few hours after the promotion and then crashed. Nasdaq is one of the reputed stock exchange platforms and financial services corporations in the US. Despite being a renowned firm, it couldn't avoid social media hackers from hacking its official X account. When a hacker compromised its account and promoted STONKS memecoin, its market capitalization skyrocketed. As per the latest report from The Block, a hacker created a fake X account as an affiliate to Nasdaq's official X account. He used the fake account to make a post promoting STONKS memecoin. The hacker made the official Nasdaq account to retweet his post promoting this newly created STONKS memecoin. Within just a few hours after Nasdaq promoting the memecoin, STONK's market capitalization surpassed \$80 million. When the promotional post was deleted and the fake Nasdaq account was suspended by X, it didn't take long for the token to crash. Is STONKS Memecoin Fake? Original STONKS memecoin exists on the Solana blockchain and has been trading in the open markets since June 2024. The STONKS memecoin promoted by the hacker using the Nasdaq account is fake and was created on that day. Thus, STONKS is not a fake memecoin but the STONKS memecoin that was promoted on X using Nasdaq was fake. "STONKS" is a popular internet meme, represented by Stonks Guy or the Meme Man who is depicted as a bald-headed person with a smooth and robot-like head having blue eyes. The word is the international misspelling of "Stocks", similar to "HODL" for "Hold" and "BUIDL" for "Build", etc. Using this humorous word, a STONKS memecoin was created on the Solana blockchain. The memecoin name connected with Stocks and Nasdaq being a popular stock exchange platform, users didn't question its legitimacy and flocked to invest in the fake memecoin. As a result, the market capitalization of STONKS memecoin increased significantly within the matter of a few hours. However, this is not the first time official X accounts of celebrities and top companies have been hacked on the X social platform. Thus, staying cautious before investing in any cryptocurrency is always recommended. Highlighted Crypto News Today: Will DOGE Bulls Return as Bitwise Initiates Dogecoin ETF Filing?

- Pudgy Penguins price attempts to reclaim its bullish trend as token surges 8% in the past day. - The token's daily trading volume has increased 24.62% as per CMC data. A mid-week crisis seems to have hit the crypto market as Bitcoin decides to tank prices to a \$102K level. This occurring just days after a new all-time high also indicates a consolidation after the fluctuations. Subsequently, altcoins have begun to reflect the price drop just minutes after the largest cryptocurrency's downward movement. Notably, Pudgy Penguins, the cryptocurrency of the famed NFT collection, has finally begun to show bullish signs in the past few hours. In the afternoon hours of January 22, the altcoin dunked to the \$0.022 level. Following this, having factored in a 8.85% increase, PENGU has resurfaced in the \$0.24 range. At the time of writing, the altcoin was trading at \$0.025736 as per CMC data. Zooming out, onto its weekly chart, Pudgy Penguins' price stands out with a significant drop of 24.33%. This notable freefall has pulled prices from a high of \$0.035 to the current aforementioned levels. This past day's surge has caused us to expect a recovery road in the process. If Pudgy Penguins manages to sustain its current positive momentum, it might combat the bears to regain its bullish momentum. Will Pudgy Penguins Recover Soon? On analyzing its price actions, PENGU traces a horizontal pattern. Additionally, recent day's movement suggests the altcoin breaking out from this pattern. It could indicate incoming bullish trends in the coming days. Meanwhile, its Moving Average Convergence Divergence (MACD) signal line stands way below the MACD line. This also suggests that Pudgy Penguins price has to surpass multiple ranges to reach previous high trading levels. Additionally, its Chaikin Money Flow (CMF) value stands at -0.19 indicating the low capital influx as per TradingView data. Other altcoins such as Cardano and Solana have also shown similar movements. Highlighted Crypto News Today: Will DOGE Bulls Return as Bitwise Initiates Dogecoin ETF Filing?

Financial markets attract people with their dynamics and the opportunity to earn income, but successful work on them requires a deep understanding of many factors. Every trader, regardless of their level of experience, faces the need to analyse the current market situation. Some investors want to develop strategies on their own, using proven methods and available data, while others prefer to rely on the advice of experienced specialists. ChainsLama understands the importance of high-quality information and provides its clients with a wide range of analytical tools that help them confidently navigate the world of finance. Analytical tools cover both fundamental and technical analysis, giving traders the opportunity to make informed and profitable decisions. No less important is the possibility to receive qualified advice, and the broker's team can both provide individual recommendations and help build a full strategy. Understanding global processes and their impact Fundamental analysis is the basis for those who seek to understand market processes in the context of global and local events. Financial markets are sensitive to news, political events, and macroeconomic data. Knowing these factors allows traders to predict how they may affect the value of assets. ChainsLama offers its clients access to up-to-date information in full. They have news that covers events, analytics on key economic sectors, and data on the state of various markets at their disposal. In addition, ChainsLama analyses global trends and their impact on markets. Clients receive structured data that helps them understand long-term prospects. Thus, the broker creates a complete information field necessary for making informed decisions. Working with numbers and charts While fundamental analysis helps to assess the general state of the market, technical analysis focuses on specific data that allows traders to identify patterns and predict asset behaviour. ChainsLama provides its clients with all the necessary tools for working with charts. Traders can study price growth in various time intervals, analyse trading volumes, and use technical indicators. Particular attention is paid to the ease of use of analytical tools. The broker's platforms are intuitive, making them accessible to both experienced market participants and beginners. In addition, the broker regularly updates its systems, adding new features so that clients can work with up-to-date analysis tools. Help from the support team In addition to providing powerful analysis tools, ChainsLama also pays special attention to the quality of customer support. Clients have a team with many years of experience in trading. These experts are ready to answer any questions related to trading, give useful recommendations and help users find the most effective approaches to working in financial markets. Thanks to their professionalism, clients receive valuable advice that can be immediately put into practice. It is especially important that the ChainsLama support team helps in forming a trading strategy from scratch. Beginners taking their first steps in trading can count on detailed explanations and help in choosing a suitable approach to trading. Experienced traders, in turn, can discuss their ideas with experts and receive professional feedback. This individual approach allows each client to effectively use the opportunities provided by ChainsLama. Summing up By combining fundamental and technical analysis with the help of the support team, ChainsLama creates unique conditions for its clients to make the right decisions. Providing access to relevant information and convenient tools helps traders navigate the system of financial markets and confidently achieve their goals. ChainsLama strives to ensure that each client can realize their potential. Its support extends to all stages of work: from market research to the formation and implementation of a trading strategy. This makes the broker a partner who helps make balanced and informed decisions. Every trader cooperating with ChainsLama can be sure that he receives all the necessary information and analytical data to confidently move towards his/her goals in the financial market. Ethereum may be slow in growth, but it still dominates the altcoin market. ERC-20 compatible tokens are almost ubiquitous, with many a new altcoin being built on the Ethereum ecosystem. This is why tokens like Immutable X will always have a place in the cryptosphere, and tokens like Rollblock,

an ERC20 token, will have the backbone to withstand the strongest attacks. Rollblock (RBLK): Online casino secured by Ethereum. A massive problem with the \$500 billion online gambling industry is mistrust. Gamers do not trust that their results are not being fixed, and investors don't trust the security of their networks and that they are not being hacked. Rollblock, a new online casino, has solved this problem beautifully. Rollblock's RBLK is an ERC20 token, and the online casino is built on the Ethereum blockchain. This means every flip of the card and roll of the dice is immutably etched on the Ethereum chain, giving unprecedented levels of transparency and security to the world's first play-to-earn Ethereum-based casino. It is this security that has users coming to the online casino in droves and also why Rollblock's ERC20 token has seen over \$9 million in liquidity raised. Rollblock also offers token holders a weekly dividend from the income generated by the online casino, making it the must-have token for immediate price gains and long-term sustainability. Ethereum (ETH): The giant continues to produce Ethereum has many detractors, but despite that fact, the bulk of altcoins coming to the market are backed by Ethereum. ERC20 is still the gold standard for dApp development, and tokens like Rollblock just prove it. The ERC20 standard simplifies altcoin creation by offering a universal framework that ensures compatibility with wallets, exchanges, and dApps. Ethereum's early adoption and large developer community have made it the go-to blockchain for launching projects, offering extensive documentation and support. As long as ERC tokens are the easy way to develop altcoins, ETH will be at the top of the crypto food chain. Immutable X (IMX): Scaling Ethereum for maximum engagement Ethereum's detractors have a point in that ETH is terribly slow, and gas fees are expensive, and this is where scaling solutions like Immutable X come in. Immutable X scales Ethereum to make it faster and cheaper, and in Immutable X's case, it specifically gears the ETH ecosystem towards NFTs and gaming. Immutable X boasts over 9,000 transactions per second and gas-free minting of NFTs. Solutions like this keep Ethereum at the top of the smart contract providers, making Ethereum a smarter, faster, cheaper chain to operate. Conclusion Ethereum is the backbone of altcoin and dApp development, which is why, despite stiff competition from tokens like Solana and Toncoin, Ethereum still has a larger market cap than the next three layer1 solutions combined. While Ethereum's own growth is slow by comparison to other tokens, even altcoins developed on its own ERC20 chain, its stability makes it a stalwart, and Ethereum should form part of every good crypto portfolio; and its scaling solution, Immutable X, along with it. For investors seeking real growth, though, the answer lies in Rollblock. The ERC20-based crypto casino is primed and ready to explode once the presale ends and the token lists on the open markets. Rollblock is now available at \$0.046 directly from the website. Discover the exciting opportunities of the Rollblock (RBLK) presale today! - Website: <https://presale.rollblock.io> - Socials: <https://linktr.ee/rollblockcasino> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is buzzing with contrasting narratives the launch of Donald Trump's \$TRUMP token, a meme coin powered by viral hype, and the methodical rise of Lightchain AI, a project built on innovation and technological advancement. While \$TRUMP attracts speculators with its comedic branding and cultural relevance, Lightchain AI is capturing the attention of serious investors by offering practical solutions for the evolving blockchain landscape. Let's explore how these two vastly different projects are shaping the crypto conversation. \$TRUMP Token: Fueling FOMO and Market Hype On January 17, 2025, the soon to be President Donald Trump started the \$TRUMP coin, a meme coin on the Solana blockchain. At first priced below \$10, \$TRUMP's worth jumped to a high of \$74.59, reaching a market value near \$11 billion. The Trump Group keeps 80% of the full \$TRUMP supply which brings up worries about possible issues with interest and market control. Even with the early buzz, the coin's ups and downs show how risky meme coins can be; this makes people talk about what is right or wrong for a sitting president to be in crypto business. Lightchain AI: Redefining Blockchain Innovation In contrast, Lightchain AI has steadily gained traction by focusing on solving practical problems and offering advanced blockchain-based tools. The project's presale has raised over \$12.3 million, with tokens priced at \$0.005625, reflecting strong confidence in its vision. Lightchain AI's ability to support diverse industries with scalable, privacy-preserving technology ensures its relevance in a competitive market. Additionally, the project's roadmap emphasizes continuous innovation, including plans for partnerships and ecosystem growth. Its appeal lies in its potential to drive meaningful adoption of blockchain technology, positioning itself as a platform that empowers businesses and developers. Investment Opportunities: Hype vs. Utility The investment opportunities in \$TRUMP and Lightchain AI highlight two contrasting approaches. \$TRUMP Token appeals to investors seeking short-term gains driven by viral momentum. However, its lack of utility raises concerns about its ability to maintain value over time. On the other hand, Lightchain AI offers a utility-focused approach with long-term growth potential. Early investors can join its presale at \$0.005625 per token, securing approximately 35,556 tokens with a \$200 investment. If the token price reaches \$0.50 by 2025, this could grow to \$17,778, demonstrating significant returns. While speculative meme coins like \$TRUMP may deliver quick wins, utility-driven projects like Lightchain AI are better positioned to provide sustainable and exponential value for investors. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency world is abuzz as Donald Trump enters the market with his own meme-inspired token, \$TRUMP Coin. Designed to capture the spotlight with its association to the former president, \$TRUMP Coin has quickly garnered attention for its cultural appeal. In the midst of this volatility, Lightchain AI has emerged as a stark contrast, offering technological innovation and real-world utility. With its presale reaching \$12.3 million at \$0.005625 per token, Lightchain AI is carving its niche as a transformative force in the blockchain landscape. \$TRUMP Coin: Riding the Meme Coin Trend On January 17, 2025 President-elect Donald Trump gave \$TRUMP a meme coin on the Solana blockchain. First priced at \$0.18 the coins worth jumped over 300% in one night reaching a market value of about \$8 billion. The full amount is limited to 1 billion tokens, with 200 million put out during the first coin sale and the other 800 million kept by Trump-related groups, CIC Digital LLC and Fight Fight LLC, set for slow release over three years. The start has made a lot of buzz but it has also brought up moral worries about possible mixed interests and market messing. Some say that the guesswork charm of meme coins such as \$TRUMP might hurt the trust in the whole crypto market. On January 22 2025, \$TRUMP still sees lots of ups and downs showing the uncertain nature of meme-themed digital funds. Lightchain AI: Innovation Driving Growth Unlike speculative tokens, Lightchain AI is redefining blockchain technology with features designed for scalability and practical applications. Its real-time data processing framework ensures seamless integration of AI capabilities into decentralized applications (dApps), enabling industries to leverage blockchain for advanced analytics and decision-making. Another standout feature of Lightchain AI is its zero-trust data security protocol, which ensures sensitive information is protected while enabling secure transactions and computations. This approach appeals to enterprises looking for blockchain solutions that meet stringent privacy and compliance standards, particularly in sectors like healthcare, finance, and supply chain management. Why Lightchain AI Outshines \$TRUMP Coin While \$TRUMP Coin capitalizes on meme culture, Lightchain AI delivers tangible solutions to real-world challenges. Its innovative architecture, including the modular developer toolkit, empowers developers to build AI-enhanced dApps with ease. This focus on empowering its ecosystem has helped Lightchain AI attract significant attention, as evidenced by its successful presale raising \$12.3 million. Additionally, Lightchain AI's roadmap outlines a clear vision for future growth, including partnerships and cross-chain integrations that will expand its reach and adoption. This positions it as a project with sustainable growth potential, unlike the speculative nature of meme coins. Disclaimer: TheNewsCrypto does not endorse any content on this page. The 2025 crypto market is shaping up for a notable rally. Savvy investors want to capitalize on this trend, hoping to turn a low-budget investment into notable gains. We explore six cryptos to watch, including Rexas Finance (RXS), Sui, AIXBT by Virtuals, Official Trump, Ripple, and Cardano, among the front-runners to convert \$625 to \$62,500 in 2025. Here's why these tokens deserve your attention. Rexas Finance (RXS) Rexas Finance has made news for its impressive presale achievements, raising \$41.5 million and selling 427 million RXS tokens throughout multiple presale stages. In an unprecedented move, the community opted to prolong the presale by one stage, raising the token's presale price to \$0.20 at Stage 12. This early success demonstrates the platform's market appeal and investor confidence. Rexas Finance seeks to revolutionize real-world asset (RWA) tokenization and trading. The platform uses blockchain technology to make illiquid assets like real estate, commodities, and artwork tradeable and investable in fractional units. Someone could buy a fraction of a luxury home or a rare artwork without spending millions. Accessibility is changing investment. The Rexas Finance ecosystem includes tools such as the Rexas Token Builder, Rexas QuickMint Bot, Rexas GenAI, and Rexas Treasury, each providing unique utility to users. The Token Builder enables anybody, including those without technical knowledge, to build their own blockchain-based tokens, and QuickMint Bot facilitates token production using popular chat networks such as Telegram. Furthermore, Rexas GenAI provides cutting-edge AI-powered art generation for NFTs, while Rexas Treasury improves yield farming and multi-chain asset management. Regarding investor perks, Rexas Finance's ongoing \$1 million giveaway generates a lot of publicity. Each of the top 20 participants wins \$50,000 worth of RXS tokens. This gift boosts awareness and encourages involvement in the growing Rexas community, enhancing the utility of the platform's tokens. Rexas Finance's community-driven development achieved new heights when holders opted for an extra presale stage, bringing the presale to Stage 12. The presale price is now 6x its stage 1 price of \$0.03, selling at \$0.20. This extra presale stage provides investors with a last-minute opportunity to purchase RXS tokens at a discounted price before they are listed on major exchanges. The developers behind Rexas Finance recently announced the platform's debut date: June 19, 2025. This date is greatly anticipated because it represents the project's official launch following a successful presale phase. The listing will first occur on at least three of the top ten global cryptocurrency exchanges, making RXS more available to a wider audience and projected to increase the token price by 100x. This upside potential makes Rexas Finance a top crypto to buy for high ROI. Sui (SUI) With a maximum supply of 10 billion tokens, Sui is a widely anticipated coin with huge market potential. Although it struggled to gain traction when it began in May 2023, its market cap has since grown to \$4.73. Like Solana (SOL), analysts expect Sui's market cap to rise to \$70 billion in the coming years. Sui's success is due to its revolutionary blockchain, which scales and has great throughput for apps and gambling. Since it's fast and flexible, developers and businesses will use the network more. The 2025 release of Sui's gaming device could boost its price, offering a long-term investment opportunity. AIXBT by Virtuals (AIXBT) AIXBT stabilizes within a bull pennant shape, implying a 45% gain to \$1.33 if it breaks out. Due to strong bullish momentum, its price increased from \$0.37 to \$0.92, and the current consolidation period suggests a high possibility of a breakthrough. Analysts see AIXBT's technical setup as a good indicator, making it a potential short-term investment. AIXBT, powered by the Virtuals Protocol, stands apart in the fast-expanding AI agent token market. Its incorporation of AI with decentralized finance and tokenization protocols paves the way for new blockchain use cases, particularly in asset management and AI-powered apps. Official Trump (TRUMP) Since its inception, the TRUMP coin, built on Solana's blockchain, has skyrocketed in value, with a market capitalization approaching \$9 billion. This memecoin, connected with US President-elect Donald Trump, has aroused enormous attention and trading, particularly among whales. Within hours of its debut, notable traders increased their USD Coin investments from \$1 million to \$2 million, demonstrating TRUMP's enormous short-term growth potential. Memecoins have repeatedly demonstrated their ability to develop quickly through viral interest and celebrity involvement. TRUMP's performance on decentralized exchanges and restricted supply make it a unique asset with speculative and long-term potential. Cardano (ADA) The price of Cardano has risen 5% in the past 24 hours and 20% in the past week in 2025. At \$1.15 right now, experts value the coin as ADA prepares for a significant breakthrough. Based on historical fractal research, crypto specialist Ali Martinez has noted a 400% possible spike for ADA, setting a price objective of \$6 that suggests Cardano might follow the same price trend as it did in late 2020 when it shot to \$3. Strong foundations include blockchain scalability, the Ouroboros protocol, and sustainability elements. These elements set Cardano apart from other smart contract platforms like Ethereum and drive its growth. ADA's growth may accelerate in the next few months, making it a crypto to watch. Ripple (XRP) XRP has rebounded after a poor start to the year. It is 17.74% below its January 2018 high of \$3.84, but its current trading price of roughly \$3.31 indicates huge comeback potential. Analysts believe the asset will soon surpass its ATH, particularly as it gains momentum from rising open interest in futures markets. Experts think Donald Trump's inauguration will drive XRP's upward trajectory, as his pro-crypto position may result in favorable regulations for assets like XRP. The continuous jump in XRP open interest, worth more than \$7.4 billion in the last 24 hours, suggests increased investor confidence and the possibility of another rally. With the ongoing SEC litigation, XRP is poised to benefit from any positive legal outcomes, strengthening its market status. Conclusion The crypto market in

2025 is ripe for opportunity, with Rexas Finance (RXS), Official Trump, Sui, aixbt by Virtuals, Cardano, and XRP all vying for major growth. Investors seeking high-reward prospects in the cryptocurrency industry should closely monitor these assets, as they have the potential to yield significant gains. For those contemplating blockchain investments, Rexas Finance shines out for its creative approach to RWA tokenization, a robust utility ecosystem, and successful presale rounds. With an imminent market listing and planned growth goals, Rexas Finance (RXS) is a project with both short- and long-term promise for investors. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Ethereum is facing a sharp price decline as broader market conditions continue to weigh on its performance. Despite optimism surrounding the potential approval of an ETH ETF, the cryptocurrency has struggled to hold key support levels, prompting investors to explore alternative opportunities. One such opportunity gaining traction is DTX Exchange (DTX), a rising DeFi altcoin that has quickly become a top pick among Ethereum whales. With its innovative features and scalability, DTX Exchange is emerging as a game-changer in the crypto space, providing significant upside potential for investors seeking diversification. Ethereum Price Faces Decline but Remains Buoyed by ETF Potential Ethereum's price recently dipped below \$3,300, reflecting bearish sentiment as macroeconomic factors and profit-taking weigh on the cryptocurrency. Despite the downturn, optimism surrounding the potential approval of Ethereum ETFs remains high. Analysts suggest that ETF approvals could unlock billions in institutional investments, potentially driving ETH's value to new highs by late 2025. However, Ethereum's immediate price action presents a mixed outlook. After briefly testing resistance above \$3,400, ETH has struggled to maintain upward momentum. Analysts point to reduced demand from long-term holders and waning inflows into Ethereum-focused investment products as contributing factors to its recent sluggish performance. Despite these short-term challenges, the potential approval of Ethereum ETFs offers a beacon of hope. If approved, broader institutional access could serve as a catalyst for significant growth, reinforcing Ethereum's position as the second-largest cryptocurrency by market cap. DTX Exchange: The DeFi Altcoin ETH Whales Are Banking On As Ethereum investors navigate uncertainty, DTX Exchange is emerging as a preferred choice among ETH whales. With its 200,000 transactions per second (TPS) scalability, the VulcanX-powered platform aims to redefine the standards of blockchain efficiency. DTX's unique offering lies in its ability to bridge traditional and decentralized finance. By integrating stocks, forex, cryptocurrencies, and tokenized real-world assets into a unified ecosystem, DTX is positioned to deliver a seamless trading experience unmatched by most Layer-1 blockchains. The platform's ongoing presale, which has raised over \$12 million, underscores its strong market appeal. With DTX Token priced at just \$0.14, analysts are projecting a potential 13,200% surge, driven by its innovative features. For ETH whales, DTX offers a compelling opportunity to diversify into a high-growth DeFi project with real-world utility. ETH ETFs and the Broader Altcoin Landscape The broader market sentiment around Ethereum ETFs and other institutional products highlights a growing appetite for cryptocurrency investments. Last week, digital asset investment products saw \$2.2 billion in inflows, marking one of the best weeks on record. While Bitcoin continues to dominate, Ethereum-focused products attracted \$246 million, signaling strong interest in the potential of ETH ETFs to reshape the market. Meanwhile, Solana-based products, bolstered by President Donald Trump's choice to launch meme coins like \$TRUMP and \$MELANIA on the network, also saw increased inflows. Solana's price surged to an all-time high amid these developments, reflecting the impact of high-profile endorsements on altcoin performance. As Ethereum and Solana battle for dominance, DTX Exchange is carving out its own niche by focusing on real-world applications and unmatched scalability. This positions it as a compelling alternative for investors seeking exposure to the DeFi sector. Market Outlook Ethereum's current price struggles highlight the volatility of the crypto market, even as long-term prospects remain bright due to anticipated ETF approvals. In contrast, DTX Exchange is riding a wave of innovation and investor interest, making it a top pick for those looking to diversify into DeFi altcoins. For investors, the choice between established giants like Ethereum and emerging players like DTX will depend on their appetite for risk and desire for high-growth opportunities. As Q2 2025 approaches, both assets offer unique value propositions that could define the next phase of the crypto market. To know more about the DTX Exchange ecosystem, visit: Disclaimer: TheNewsCrypto does not endorse any content on this page. Victoria, Seychelles, January 22nd, 2025, Chainwire In recent years, the crypto market has evolved from a niche financial space to an integral part of the global financial system. Notably, the launch of tokens representing the personal images of U.S. President Donald Trump and his wife Melania has drawn attention to politically-themed digital currencies. For those interested in trading such assets, BYDFi crypto exchange has emerged as a preferred platform due to its asset protection measures, low fees, and strong reputation. BYDFi has now launched Perpetual Contract Trading for \$TRUMP and \$MELANIA tokens, offering spot trading, perpetual contracts, and perpetual copy trading. Traders have the chance to utilize leverage ranging from 1x to 50x, providing opportunities to tailor strategies based on market dynamics. Additionally, BYDFi offers a \$8,100 USDT welcome bonus to help new users mitigate initial investment risks and provide more funding for future trades. The platform supports fiat deposits in over 150 countries, allowing users to easily purchase cryptocurrencies via credit or debit cards. For more details, users can visit the BYDFi website or contact customer support. SEC's Historic Shift: A New Era of Crypto Regulation and the Rise of Political Memecoins On January 20, 2025, the resignation of U.S. Securities and Exchange Commission (SEC) Chairman Gary Gensler was followed by the announcement of the creation of a cryptocurrency-focused task force led by Hester Peirce. A steadfast supporter of the crypto community, Hester Peirce made it clear that what the crypto industry needs is clear regulation and transparent rules, not excessive intervention. Against this backdrop, this development helped politically-themed memecoins \$TRUMP and \$MELANIA gain more visibility in the market. \$TRUMP, the official Memecoin launched just ahead of Donald Trump's 2025 inauguration, is built on the Solana blockchain. The token not only symbolizes Trump's supporters but also represents the intersection of politics and cryptocurrency. Within just 48 hours, \$TRUMP's market cap briefly exceeded \$10 billion. Though it has since been corrected, it remains one of the top three Memes globally, surpassing \$Pepe. Currently priced at 42.205, it has seen a staggering 800% increase from its lowest price (within less than four days). Recently, U.S. asset management firm Rex Shares filed for an ETF based on \$TRUMP, highlighting the growing interest from traditional investors in the crypto market. Meanwhile, Melania Trump also launched her own Memecoin, \$MELANIA. This token capitalizes on the influence of the Trump family to attract supporters of the former president, while tapping into the broader trend of political cryptocurrency. The launch of \$MELANIA caused a stir in the market, attracting over \$2 billion in investments within 24 hours and sending its price soaring to over \$10. Built on the Solana blockchain, \$MELANIA also contributed to increased transaction volume and attention on the Solana network (current price: \$257.45, market cap: \$125.3 billion). The launch of \$TRUMP and \$MELANIA Memecoins represents not only a commercialization attempt by political figures but also a snapshot of a broader societal phenomenon. The brand effect of Donald Trump and Melania Trump has undoubtedly brought substantial attention and capital inflows to these Memecoins. As the popularity of these tokens rises, so does the spread of fraudulent activities, becoming an increasing risk in the market. Leading up to and following President Trump's inauguration, counterfeit Trump and Melania tokens, along with fake websites themed around \$TRUMP and \$MELANIA, flooded the market. Many malicious actors exploited these fake tokens, stealing \$4.8 million from 12,641 wallets within just 24 hours. BYDFi urges users to obtain project information through official channels and to always use secure and reliable trading platforms to ensure the safety of their funds. BYDFi's Strict Auditing and Security Assurance BYDFi always prioritizes the safety of its users' assets. For every token listed on the platform, BYDFi conducts rigorous audits to ensure that only tokens meeting high security standards are allowed for trading. Unlike some other platforms that have had their funds stolen, BYDFi has never had such an incident and has been providing reliable protection for users' assets continuously. Specifically, BYDFi has obtained MSB (Money Services Business) licenses in multiple countries and regions and has joined the Korean CODE VASP Alliance. Furthermore, all user assets are stored in offline multi-signature wallets, with each account holding a reserve of at least 1:1, and regular Proof of Reserves (POR) reports are published to provide greater transparency for the platform's assets. Michael, the co-founder of BYDFi, stated: "Political Memecoins like \$TRUMP and \$MELANIA represent a market phenomenon where speculation and risk profit. While they have attracted significant attention from investors, ensuring fund security and mitigating market risks remain critical concerns for every investor. BYDFi boasts a strict risk control system, robust security measures, and advanced infrastructure to safeguard user assets. At BYDFi, users can trade cryptocurrency with confidence, enjoying safe, transparent, and efficient services." About MSB Licenses MSB (Money Services Business) licenses are financial permits granted by local governments to regulate financial markets and protect consumer interests. Companies holding an MSB license can legally conduct a range of money services within the jurisdiction and benefit from government policies and support. About the CODE VASP Alliance The CODE VASP Alliance is a coalition of leading cryptocurrency exchanges in South Korea, dedicated to promoting compliance and regulatory adherence within the digital asset space. It advocates for the adoption of the Travel Rule solution CODE to ensure cryptocurrency transactions are transparent and traceable, in line with global AML (Anti-Money Laundering) and CTF (Counter-Terrorist Financing) standards. The alliance seeks to create a safer and more reliable environment for cryptocurrency users. About BYDFi Founded in 2020, BYDFi is ranked among Forbes' top 10 global crypto exchanges and trusted by over 1,000,000 of users worldwide. The platform supports over 600 cryptocurrencies for spot trading and offers perpetual contracts with leverage ranging from 1x to 200x, meeting diverse user needs. Strategic partnerships with leading payment providers like Banxa, Transak, and Mercuryo simplify the crypto purchasing process, ensuring low-cost transactions. - Website: <https://www.bydfi.com> - Customer Support: CS@bydfi.com - Business Inquiries: BD@bydfi.com - Media Contact: media@bydfi.com - Social Media: Twitter | LinkedIn | Facebook | Telegram | YouTube Contact Senior Marketing Director Chloe BYDFi Fintech LTD chloe@bydfi.com

- Bullish AI16Z price prediction for 2025 is \$1.2645 - ai16z (AI16Z) price might reach \$3 soon. - Bearish AI16Z price prediction for 2025 is \$0.4743. In this ai16z (AI16Z) price prediction 2025, 2026-2030, we will analyze the price patterns of AI16Z by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | AI16Z (AI16Z) PRICE PREDICTION 2025 | | AI16Z (AI16Z) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | ai16z (AI16Z) Current Market Status | Current Price | \$1.24 | 24 hr Hour Price Change | 31.54% Up | | 24 hr Hour Trading Volume | \$362.82M | | Market Cap | \$1.36B | | Circulating Supply | 1.09B AI16Z | All hr Time High | \$2.48 (On Jan 02, 2025) | | All hr Time Low | \$0.001725 (On Oct 25, 2024) | What is ai16z (AI16Z)? | TICKER | AI16Z | | BLOCKCHAIN | Solana | | CATEGORRY | Memecoin/AI Agents | | LAUNCHED ON | October 2024 | | UTILITIES | Governance, fee payment & rewards | AI16Z (AI16Z) is an innovative token that combines artificial intelligence (AI) and blockchain technology, positioning itself as the first decentralized autonomous organization (DAO) led by an autonomous AI agent. However, it is often viewed as a memecoin built on the Solana blockchain, reflecting both its innovative aspirations and its lighthearted appeal in the crypto space. Launched in October 2024, the project is led by an AI agent called Marc Andreessen, inspired by venture capitalist Marc Andreessen. This smart AI makes data-driven investment decisions, cutting out human biases and inefficiencies typically found in traditional venture capital and DAO systems. AI16Z 24H Technicals ai16z (AI16Z) Price Prediction 2025 ai16z (AI16Z) ranks 80th on CoinMarketCap in terms of its market capitalization. The overview of the AI16Z price prediction for 2025 is explained below with a daily time frame. In the above chart, ai16z (AI16Z) laid out a Rounding Bottom. The price movements form a pattern that resembles a bow and hence is also known as the saucer bottom pattern. In general, the rounding bottom pattern indicates a long-term price reversal. This pattern also emphasizes the changes in the market sentiment as the trend seems to shift from bearish to bullish. Investors generally have to stay cautious and time the market well. If the price breaks and moves past the resistance level, it will enter a confirmed bullish trajectory. At the time of analysis, the price of ai16z (AI16Z) was recorded at \$1.18. If the pattern trend continues, then the price of AI16Z might reach the resistance levels of \$1.3187, and \$2.3786. If the trend reverses, then the price of AI16Z may fall to the support level of \$0.7213. ai16z (AI16Z) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of ai16z (AI16Z) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of ai16z (AI16Z) for 2025. | Resistance Level 1 | \$1.2645 | | Resistance Level 2 | \$1.8764 | | Support Level 1 | \$0.7284 | | Support Level 2 | \$0.4743 | ai16z (AI16Z) Price Prediction 2025 hr RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of ai16z (AI16Z) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current ai16z (AI16Z) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.9753 Price = \$1.2231 (50MA < Price) | Bullish/Uptrend | | Relative Strength Index (RSI) |

Magnitude of price change;Analyzing oversold & overbought conditions | 70.7055 <30 = Oversold 50-70 = Neutral >70 = Overbought | Nearly Overbought | Relative Volume (RVOL) | Asseta€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | ai16z (AI16Z) Price Prediction 2025 a€” ADX, RVI In the below chart, we analyze the strength and volatility of ai16z (AI16Z) using the following technical analysis indicators a€” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of ai16z (AI16Z). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 26.9995 | Very Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 78.99 <50 = Low >50 = High | High volatility | Comparison of AI16Z with BTC, ETH Let us now compare the price movements of ai16z (AI16Z) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of AI16Z is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of AI16Z also increases or decreases respectively. ai16z (AI16Z) Price Prediction 2026, 2027 a€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of ai16z (AI16Z) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | ai16z (AI16Z) Price Prediction 2026 | \$5 | \$0.10 | | ai16z (AI16Z) Price Prediction 2027 | \$5.8 | \$0.16 | | ai16z (AI16Z) Price Prediction 2028 | \$7.2 | \$0.18 | | ai16z (AI16Z) Price Prediction 2029 | \$8.6 | \$0.20 | | ai16z (AI16Z) Price Prediction 2030 | \$10 | \$0.27 | Conclusion If ai16z (AI16Z) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish ai16z (AI16Z) price prediction for 2025 is \$1.8764. Comparatively, if unfavorable sentiment is triggered, the bearish ai16z (AI16Z) price prediction for 2025 is \$0.4743. If the market momentum and investorsa€™ sentiment positively elevate, then ai16z (AI16Z) might hit \$3. Furthermore, with future upgrades and advancements in the ai16z ecosystem, AI16Z might surpass its current all-time high (ATH) of \$2.48, and mark its new ATH. FAQ 1. What is ai16z (AI16Z)? AI16Z is a Solana-based token combining AI and blockchain as the first DAO led by an autonomous AI agent, blending innovation with a memecoin vibe. 2. Where can you purchase ai16z (AI16Z)? ai16z (AI16Z) has been listed on many crypto exchanges which include Binance, OKX, Bybit, Bitget, and Gate.io. 3. Will ai16z (AI16Z) reach a new ATH soon? With the ongoing developments and upgrades within the ai16z Platform, AI16Z has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of ai16z (AI16Z)? On Jan 02, 2025, ai16z (AI16Z) reached its new all-time high (ATH) of \$2.48. 5. What is the lowest price of ai16z (AI16Z)? According to CoinMarketCap, AI16Z hit its all-time low (ATL) of \$0.001725, on October 25, 2024. 6. Will ai16z (AI16Z) reach \$3? If ai16z (AI16Z) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$3 soon. 7. What will be ai16z (AI16Z) price by 2026? ai16z (AI16Z) price is expected to reach \$5 by 2026. 8. What will be ai16z (AI16Z) price by 2027? ai16z (AI16Z) price is expected to reach \$5.8 by 2027. 9. What will be ai16z (AI16Z) price by 2028? ai16z (AI16Z) is expected to reach \$7.2 by 2028. 10. What will be ai16z (AI16Z) price by 2029? ai16z (AI16Z) is expected to reach \$8.6 by 2029. Memereuma€™s presale has hit a major milestone, raising over \$1.7 million, fueled by the recent launch of the Spin Bonus promotion. This unique feature has captivated investors, offering them the opportunity to spin and win up to a 100% bonus on their token purchase. Exciting Spin Bonus Feature The Spin Bonus allows participants to enjoy bonuses starting from 5%, with the potential to double their holdings. The promo code generated from the spin remains valid until the next price increase, which occurs every 72 hours, creating a strategic window for investors to maximize their gains. For those who arenaa€™t satisfied with their initial spin result, Memereum offers flexibilitya€”users who choose not to apply their spin promo code can re-spin after 24 hours, adding an element of excitement and strategy to their participation. Attracting Whale Investors This innovative approach to token distribution has not only attracted retail investors but has also drawn the attention of whale investors, who are eager to capitalize on the platforma€™s momentum. Furthermore, the buzz surrounding Memereuma€™s upcoming insurance feature for Solana tokens on MemeSwap has contributed to the surging interest, positioning Memereum as a major contender in the blockchain ecosystem. Community Excitement and Growth a€œWea€™re thrilled with the overwhelming support from our community and the broader crypto space. The Spin Bonus campaign has added an engaging layer to our presale, and the growing anticipation around our upcoming features is driving demand even further,a€ said Cameron Wills, the chief developer from Memereum. With every 72-hour price increase, investors are racing to secure their tokens before the next milestone, further accelerating the projecta€™s traction and community growth. About Memereum Memereum is a next-generation blockchain platform designed to revolutionize the decentralized finance (DeFi) space. With a focus on innovation, scalability, and security, Memereum aims to empower users with cutting-edge solutions. One of its standout features is the first blockchain insurance offered through its own decentralized exchange, allowing users to insure tokens selected by the community DAO across BNB, ETH, and the upcoming SOL chains update.MemeSwap is already featuring insurance coverage for famous tokens like DOGE, FLOKI, and others, providing additional security and confidence for investors. - Presale: <https://buy.memereum.net/> - Website: <https://memereum.net/> - Telegram: <https://memereum.net/> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Donald Trump says he doesnaa€™t know much about the TRUMP memecoin. - The TRUMP token broke records, reaching \$13 billion within less than 24 hours after the launch. Donald Trump commented for the first time on the memecoin launched by his name. When a reporter asked for his comments on the TRUMP memecoin making billions, Trump shrugged off and said he doesnaa€™t know much about the token other than its launch. On the other hand, TRUMP memecoin surpassed the market cap of multiple well-established memecoins and climbed up to the top 4th position in the memecoin space. While the TRUMP memecoin is making waves in the industry, Donald Trump seems to be unaware of the repercussions of his memecoin launch. During a press conference of Donald Trump along with executives from SoftBank, Open AI, and Oracle, a reporter asked for Trumpa€™s comments on his memecoin. The reporter questioned whether Trump intends to continue launching products that benefit himself, referring to TRUMP memecoin. Surprisingly, Trump replied he doesnaa€™t know if the TRUMP memecoin benefited. Donald Trump Remains Ignorant of TRUMP Memecoin Impact on the Crypto Industry During a recent press conference, Donald Trump admitted he doesnaa€™t know much about the TRUMP memecoin other than launching it. He heard the memecoin was very successful and didnaa€™t check it. With Trump taking responsibilities as the 47th President of the US on Monday, his focus seems to be on other pressing issues in the United States rather than on a memecoin launched by his name. The reporter at the press conference said Trump made a lot of money out of the TRUMP memecoin. When Trump got to know that he made several billion dollars through the memecoin, he just shrugged it off as if it was nothing. And, he replied, a€œseveral billion? Thata€™s peanuts for these guys,a€ referring to the executives present at the same press conference. Donald Trump attended a press conference earlier today, along with SoftBanka€™s Masayoshi Son, OpenAIa€™s Sam Altman, and Oraclea€™s Larry Ellison. He even announced a \$500 billion investment into AI infrastructure project Stargate. On another note, most of the industry officials criticized Trump for launching a memecoin. The Wall Street Journal even made an article, a€œCrypto thought Trump would bring it legitimacy. Then he launched memecoin.a€ No matter the criticism, the TRUMP memecoin made it to the top memecoin list within a matter of days, despite extreme price fluctuation. Highlighted Crypto News Today:

The cryptocurrency market is buzzing with activity, as XRP and Avalanche (AVAX) lead the charge in decentralized finance (DeFi) discussions. Amid this momentum, Lightchain AI is stealing the spotlight, targeting \$500,000 in daily presale contributions. With a total of \$11.7 million already raised, Lightchain AI is gaining traction as a transformative platform blending blockchain and artificial intelligence, appealing to both DeFi enthusiasts and forward-thinking investors. XRP Reinventing Cross-Border Transactions XRP, developed by Ripple Labs, is transforming cross-border transactions by offering a faster, more cost-effective alternative to traditional banking systems. Utilizing blockchain technology, XRP enables near-instantaneous settlements with minimal fees, addressing inefficiencies such as high costs and lengthy processing times. Recent strategic partnerships, including Ripplea€™s collaboration with American Express, have further enhanced XRPa€™s role in global finance, facilitating seamless international payments. Additionally, Ripple received final approval from the New York Department of Financial Services for its stablecoin, RLUSD, pegged to the U.S. dollar, signaling regulatory progress and potentially increasing XRPa€™s value. These developments position XRP as a pivotal player in revolutionizing cross-border transactions, offering efficient and secure financial solutions worldwide. Avalanche Scalable Solution for DeFi Avalanche is a high-performance blockchain platform designed to address the scalability challenges in decentralized finance (DeFi). Launched in 2020 by Ava Labs, it employs a unique consensus mechanism that enables the network to process over 4,500 transactions per second (TPS) with low latency and minimal fees. This efficiency has attracted numerous DeFi projects to build on Avalanche, including decentralized exchanges like Trader Joe and Pangolin, as well as lending platforms such as BENQI. As of January 2025, Avalanche continues to expand its ecosystem, focusing on interoperability and the development of custom blockchains, known as subnets, to cater to diverse application needs. These advancements position Avalanche as a formidable player in the DeFi landscape, offering scalable and efficient solutions for decentralized applications. Lightchain AIa€™s Daily Presale Momentum Lightchain AIa€™s presale is gaining significant attention, with daily contributions nearing \$500,000. This impressive performance highlights the growing confidence in its ability to redefine blockchain innovation. By integrating AI capabilities into its decentralized framework, Lightchain AI offers a fresh perspective on how blockchain can solve complex, real-world problems. The platforma€™s collaborative approach to AI development ensures that developers, businesses, and token holders all benefit from its advancements. This inclusive model has attracted a diverse group of investors, positioning Lightchain AI as a leading contender in the blockchain space. What Sets Lightchain AI Apart While XRP and Avalanche focus on specific niches, Lightchain AI stands out for its ability to bridge multiple industries through its unique blend of blockchain and AI. The platform supports AI-driven analytics and decision-making, offering solutions for sectors such as healthcare, logistics, and finance. In addition, Lightchain AIa€™s inclusive ecosystem encourages community participation in governance, fostering a sense of ownership and trust. This emphasis on transparency and collaboration makes it a strong alternative to traditional blockchain platforms, appealing to both seasoned and new investors. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Fraction AI, the pioneering decentralized intelligence protocol, made the announcement today that its testnet v0.1 has been launched. Following the completion of a successful closed beta, during which users generated more than 300,000 high-quality data sessions, the testnet represents the next milestone in Fraction AIa€™s goal to allow decentralized AI agents to grow via competition and collaboration. Fraction AI is redefining data labeling by combining human insights with those of artificial intelligence agents. Humans are able to guide artificial intelligence agents through labeling tasks using this approach, which allows for higher accuracy while maintaining the efficiency of automation. Fraction AI is able to generate high-quality training data by utilizing a framework that is both competitive and real-time. Additionally, it is able to reward participants, encourage innovation, and advance the ecosystem of artificial intelligence. Through the launch of testnet v0.1, Fraction AI is making its proven intelligence framework available to a more extensive user base. It is anticipated that Testnet v0.1 will serve as the gateway to the Fraction AI ecosystem. Users have the ability to link their wallets, create artificial intelligence agents by using natural language, and take part in an intelligence network that has already proved its capacity to bring about transformation. Decentralized artificial intelligence will have a future that is shaped by the agents that users create, the Fractals that they earn, and the contributions that they make. Fraction AIa€™s ecosystem is constantly advancing the state of intelligence. Inspired by the principles of evolution that may be seen in nature, the protocol enables artificial intelligence agents to compete with one another and work together to generate important, high-quality data across a permissionless network. The system provides continuous optimization by using economic incentives, which helps to cultivate an environment in which the agents with the highest levels of performance may flourish and contribute to the advancement of collective intelligence. Everyone is able to develop artificial intelligence agents by writing in English; there is no need to know how to code. The emphasis is on simplicity and accessibility. It is via competition that these agents are able to improve their skills in a variety of sectors, including programming, marketing, law, and entertainment. This decentralized network helps to develop an intelligence economy that is always evolving. Fraction AI employs judge LLMs who stake FRAC tokens for trustless review in order to accomplish the goal of maintaining quality. Staking ETH and LSTs allows users to earn rewards while also contributing to the ecosystem. Ether L2s, Near, Solana, and other cryptocurrencies are supported by the protocol. During the course of their

evolution, agents accumulate XP via data sessions, which enables them to access features such as premium tiers, token launches, and persistent existence in TEE settings. Additionally, Fractals, which are earned by users, are used to quantify influence and decide FRAC token allocations during the mainnet launch. XP is used to fuel agent autonomy. Get more information on the launch of the testnet by joining the Discord server for Fraction AI here.

- \$1.28 billion liquidated, impacting over 386,000 traders. - Rumors persist about a U.S. Bitcoin Strategic Reserve under Trump. The cryptocurrency market experienced heightened volatility as Donald Trump was inaugurated as the 47th U.S. President. His speech, which omitted any mention of bitcoin or crypto policies, triggered widespread sell-offs. According to Coinglass, total liquidations surged to \$1.28 billion, affecting over 386,000 traders. Long positions bore the brunt of the sell-off, with \$816 million liquidated as market optimism faded. Short positions also saw a significant impact, with \$307 million liquidated amid market fluctuations. Key trading volumes included \$2.56 million in BTC, \$1.98 million in ETH, and \$1.08 million in Trump's \$TRUMP memecoin. Altcoins Slide Amid Crypto Market Uncertainty Bitcoin demonstrated relative stability, dropping 1% to \$102,219, while altcoins faced sharper declines. Solana plummeted from \$289 to \$241, driven by concerns over infrastructure strain linked to the \$TRUMP memecoin frenzy. Cardano also dipped 5% during the market turmoil. The \$TRUMP memecoin, which previously surged, lost 22% of its value to trade at \$36.31. This decline coincided with the rise of competing tokens, such as Melania Trump's \$MELANIA, which skyrocketed by 12,000% within 24 hours. The intense competition between these tokens added to the market's instability. Bitcoin's current trading metrics highlight the market's uncertainty. BTC is priced at \$104,368.97, reflecting a 2.48% daily drop. Its market cap stands at \$2.06 trillion, with a 24-hour trading volume of \$103.37 billion. Bitcoin's circulating supply is 19.81 million, nearing its maximum cap of 21 million. Despite the absence of crypto in Trump's speech, speculation about a U.S. Bitcoin Strategic Reserve (SBR) persists. Polymarket suggests there is a 40% chance of an SBR being announced during Trump's first 100 days. Such a move could significantly impact the crypto market. Analysts warn that the market could remain volatile, mirroring trends observed during Trump's previous presidency. With ongoing speculation and heightened trading activity, traders should prepare for further turbulence. The cryptocurrency market continues to navigate uncertain waters as Trump's administration begins.

January 2025 is a bullish month in the crypto industry where major turning events such as the inauguration of the new president of the U.S. are on the way, who is pro-crypto, and top analysts have identified four tokens that do have the potential to surge this are Rexas Finance (RXS), XRP, Cardano, and Tron. Of the four, one stands out, which is Rexas Finance (RXS), with its focus on real-world asset (RWA) tokenization and its jaw-dropping presale, which has a lot of demand from investors. Currently, it is in presale stage 11, where one token is priced at \$0.175. Rexas Finance: Revolutionizing Investment with Real-World Assets RXS Presale Hits \$36.38M, Analysts Predict 3520% ROI! With only \$4,619,867 left to raise from a \$41,000,000 target, RXS is currently in presale Stage 11, where it is presently priced at \$0.175 and has already raised \$36,381,133. This marks a tremendous achievement for the RXS token, which is gaining momentum and has already sold 398,604,189 tokens from a total supply of 425,000,000. RXS is a hot topic at the moment, and the momentum behind the token is already recognizable, with analysts expecting some pretty hefty price movements for this token in the near future. Rexas Finance stands apart from other cryptocurrencies that only focus on digital assets as it focuses on real-world assets, and analysts predict a 3520% ROI in RXS. XRP Eyes a Breakout in January: Analysts Project 233% ROI as Regulatory Winds Shift in Favor of Ripple! XRP is another token to consider this January. It is currently priced at \$2.40, up 10.31% in the last week. Analysts observe that XRP has been building sideways off of \$1.97 and is accumulating there, signaling a possible breakout soon. According to projections, XRP could hit \$8, which would be an attractive 233% return on investment. Recent developments regarding XRP's regulatory environment add to the optimism around this cryptocurrency. XRP has better odds for ETF approval since positive changes within the U.S. SEC leadership have increased the odds from 60% to 70%. With that, XRP is ready for significant institutional support. Moreover, EU regulations favoring the launch of Ripple's USD-backed stablecoin RLUSD have made XRP the third largest cryptocurrency. Cardano (ADA) Surges 20%: Analysts Forecast 200% Gain, Targeting \$3! Another token making waves in the market this January is Cardano (ADA). ADA is currently trading at \$1.07, up over 20.38% over the last week. Cardano's future is bright, according to analysts, who expect it to hit \$3, which would imply a 200% gain if the predictions are correct. Tron (TRX) Set for Potential 200% Gain: Analysts Predict \$0.40 Target Amid Recent Momentum Another cryptocurrency investors should watch this month is Tron (TRX). Tron currently trades at \$0.2665, up 2.59% from the past week; experts suggest that it will reach its all-time high of \$0.40 before making further movements, which could give a 200% return on investment. Conclusion With Rexas Finance (RXS), XRP, Cardano, and Tron appearing on the list of the top analysts, Rexas Finance stands out on the rest, with the analyst predicting a 3520% ROI in RXS. This is due to its focus on RWAs and its explosive presale, where it is selling out the presale stage in a very short period. With that jaw-dropping ROI, any investor should consider adding RXS to their portfolio and also diversify the remaining based on the ROI each token has. - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

After the early January slump, many cryptocurrencies have experienced strong rebounds reclaiming critical resistance levels. It's always a good idea to keep an eye on the projects that recover the fastest, as this is typically a sign of a fundamentally strong price action that will translate into massive returns once the market enters its parabolic phase. Among these top gainers are Solana (SOL), Chainlink (LINK), and Stellar (XLM). However, a newcomer is also making rounds with its unique DeFi framework - Elluminex (ELX). Built on the Toncoin blockchain, Elluminex emerges as one of the most promising DeFi protocols in the space and could disrupt the entire industry while minting the next generation of crypto millionaires along the way. How Elluminex Unlocks TON's Potential With a first-mover advantage, Elluminex could soon become one of the key players in the DeFi industry and propel the TON ecosystem to new heights. Its DEX platform is designed to empower users by offering a secure, intermediary-free environment through its non-custodial framework, which puts control in the hands of investors. Additionally, users will be able to enjoy complete privacy when operating the DEX, as no KYC is required to join. Elluminex employs a revolutionary cross-chain bridge that brings together isolated blockchains, allowing for seamless swaps between Ethereum, Solana, Bitcoin, and many others. Simultaneously, the platform ensures near-instantaneous speed and significantly lower fees, while also reducing slippage, as liquidity is sourced from the various chains. The ELX token plays a central role in the Elluminex ecosystem, powering all essential features like governance, and staking. Staking opportunities will provide passive income to holders of the ELX token for up to 18% APY. This is also aligned with a deflationary mechanism that will continuously reduce the circulating supply and prime the token for explosive scarcity-driven growth. Donald Trump's Solana-Based Meme Coin Propels SOL To New ATH Donald Trump's \$TRUMP meme coin, launched on the Solana blockchain, sending the crypto market into a frenzy and reaching a staggering \$15 billion in valuation in less than a day. This funneled staggering amounts of revenue back into the Solana ecosystem, accelerating a surge toward a new peak of \$294. Predictably, as traders booked profits, Solana (SOL) retraced, settling on a higher support level. At press time, Solana trades for \$246 following an 8.7% intraday decrease. Despite this correction, Solana is still up by over 35% on the monthly time frame, indicating strong bullish momentum. Chainlink Consolidates After Reclaiming Key Resistance The Trump effect has extended to Chainlink as well as Trump's crypto fund, World Liberty Financial made waves on social media with a \$4.7 million purchase of LINK tokens. This is more than double the amount that the fund purchased in December, indicating strong confidence in Chainlink's future and its role in the DeFi realm. Chainlink is already hailed as an industry standard by professionals and the latest show of confidence came from none other than Ripple. Ripple integrated Chainlink's bridging protocol and data feeds to expand the utility and strengthen the fundamentals of the newly launched RLUSD stablecoin. Chainlink currently trades at \$25.90 with a 2.8% daily increase, bringing its total monthly gains to a noteworthy 46%. Stellar Slips 4% As It Enters Cool-Off Phase Stellar ended 2024 with a bang, raking in triple-digit gains and finding its place in the crypto top 20. At the time of writing, Stellar (XLM) is priced at \$0.45 following a 4% daily drop, while the monthly time frame shows a 27% gain. Over the last 24 hours, the Stellar volume exploded by 70%, as enthusiasts rushed to scoop up the dip. CoinMarketCap data shows that over \$1.65 billion worth of XLM has changed hands across trading platforms, suggesting growing confidence in Stellar's performance in the coming months. Stellar's macro price structure remains intact, and predictors are expecting a run toward the \$1 mark, which represents a key psychological zone. Why Elluminex Could Become The Hottest New Entry Of 2025 Chainlink, Stellar, and Solana are undoubtedly sensible additions to any future-proof portfolio, however, Elluminex is on track to become the most asymmetrical play of the cycle. With its robust fundamentals and small-cap status, Elluminex is primed for explosive growth and the crypto community is taking notice, with hundreds of enthusiasts joining the viral \$ELX presale. The ELX supply is capped at 350 million tokens, 50% of which are on sale for a discounted price of only \$0.06. Early buyers have already claimed nearly 5 million, raising more than \$270,000 in record time. Want to win the bull run? Sleeping on ELX is not an option! For more information about Elluminex (ELX) visit the links below: - Website: <https://elluminex.com/> - Twitter/X: <https://x.com/elluminex> - Telegram: <https://t.me/elluminex> Disclaimer: TheNewsCrypto does not endorse any content on this page. In a rapidly evolving crypto market, investors are always on the lookout for projects with exponential growth potential. One coin that has captured the attention of analysts and experts alike is Lightchain AI, a revolutionary project blending artificial intelligence with blockchain technology. With a presale already raising \$11.6 million at \$0.00525 per token, Lightchain AI is being hailed as a game-changer poised for a staggering 12X growth in the near future. What Sets Lightchain AI Apart? Lightchain AI's potential lies in its unique ability to address critical gaps in the blockchain and AI space. The project introduces features that go beyond traditional blockchain use cases, offering solutions tailored for the modern era. At the heart of its ecosystem is its energy-efficient architecture, which significantly reduces the environmental footprint of blockchain operations while maintaining high performance. This eco-conscious design appeals to investors who prioritize sustainability, especially as the crypto industry faces increasing scrutiny over its energy consumption. Additionally, Lightchain AI supports seamless scalability, enabling the platform to handle large volumes of transactions and computations without compromising efficiency. Path to 12X Growth Analysts are particularly optimistic about Lightchain AI due to its well-structured roadmap and strategic focus on industry adoption. Another factor driving Lightchain AI's growth potential is its community incentives program, which rewards early adopters, developers, and contributors. By aligning incentives with participation, the project fosters an engaged ecosystem where stakeholders actively contribute to its success. These strategic initiatives provide a solid foundation for the projected 12X increase in value. The LCAI token has a total supply of 10 billion, allocated as follows - 40% for presale, 28.5% for staking rewards, 15% for liquidity, 5% for marketing, 6.5% for the treasury, and 5% for the team. This distribution ensures sustainability and equitable participation within the ecosystem. Why Analysts Are All In on Lightchain AI Lightchain AI's presale success, coupled with its innovative features and strategic roadmap, has positioned it as a strong contender for massive growth. Unlike speculative tokens, Lightchain AI combines cutting-edge technology with practical applications, making it an attractive investment for those seeking long-term gains. For investors looking to multiply their portfolio's value, Lightchain AI offers a rare opportunity. Its commitment to sustainability, scalability, and real-world impact ensures it stands out in a crowded market. Analysts agree - betting on Lightchain AI could be the smartest move of 2025. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - David Bailey got confirmation that crypto will be included in the first 200 executive orders. - The crypto community got disappointed as there was no mention of crypto on Donald Trump's first day as the president. As Donald Trump's inauguration as the 47th President of the US completed successfully, the crypto community is eagerly awaiting major reforms to the industry. However, Trump made no sound on cryptocurrencies on his first day. Despite there was no mention of crypto, the industry remained hopeful of regulation and adoption of crypto in the US. Got confirmation tonight that our EOs are among the first 200. I have no idea what made it in, but good news cometh - David Bailey's \$0.85mm/btc is the floor (@DavidFBailey) January 21, 2025 Adding to the existing hopes of the community members, industry leaders, and investors, Bitcoin Magazine CEO David Bailey stated that he got confirmation that the first 200 executive orders (EOs) include crypto. While he has no idea about what the EOs include,

he confirmed that it will be good news for the industry. Bailey didnâ€¢t reveal any sources, through which he got this confirmation. Donald Trump Made no Mention of Crypto on the First Day The President, who launched his own memecoin and the World Liberty Financial crypto project, did not mention crypto in his inaugural address. After the inauguration, White House announced â€œAmericaâ€¢s First Priorities,â€¢ in which crypto was supposed to be included. To our surprise, there was not a single mention of crypto, blockchain, or Bitcoin. Even though the crypto community got disappointed, several industry officials and leaders are confirming that his next EOs will include crypto. On the other hand, community members are commenting that Trump has already proved his commitment to crypto with his TRUMP memecoin launch and WLF1 project. The community is still hopeful that he will regulate the industry to help increase crypto adoption. Circle CEO Says Upcoming Executive Orders Increase Crypto Adoption in the US During an interview with the Reuters Global Markets Forum at World Economic Forumâ€¢s annual meeting in Davos, Circle CEO Jeremy Allaire also confirmed there going to be crypto EOs. He further stated that upcoming crypto EOs could allow banks to trade crypto and offer crypto investments to wealthy clients. Jeremy Allaire also said he would like to see the revocation of the SECâ€¢s Staff Accounting Bulletin 121. Because, the SEC made it difficult for banks and financial institutions to hold crypto assets in their balance sheets. Allaire said he would watch EOs especially in regards to the SEC Staff Accounting Bulletin 121. During the same, Coinbase Chief Policy Officer also said that they expect the new SEC will take action and bring banks into the custodial space. Nonetheless, several sources including industry officials and leaders are confirming that we will see crypto in the first 200 executive orders. As there was no mention of crypto on the first day, the crypto community is staying wide awake waiting for EOs that bring major changes favorable to the crypto industry.

The price of bitcoin (BTC) has risen to a new record high, surpassing \$109,000. Markets for cryptocurrencies are showing signs of increasing optimism as this surge coincides with Donald Trumpâ€¢s inauguration as the 47th president of the United States. Institutional demand and optimistic sentiment have been boosted by the pro-crypto stance of the Trump administration. Newly launched cryptocurrencies like the Solana-based TRUMP memecoin are attracting attention from investors. After Trump promoted it on his social media accounts, the value of this token skyrocketed to \$70 and holders crossed 850k globally. Its market cap momentarily put it in the top 10 among cryptocurrencies. Even with a brief correction, TRUMP is still one of the top meme coins, just after DOGE and SHIB. According to analysts, itâ€¢s a lucrative long-term investment. Even if Bitcoin is all anybody can talk about, the TRUMP token is making waves. In spite of the recent correction, it is still one of the biggest memecoins, ranking 18th by market capitalization. A variety of services focused on cryptocurrency payments are offered by the Singapore-based cryptocurrency company Oobit. One can buy anything from daily necessities to luxury goods with ease using crypto thanks to tether-backed Oobitâ€¢s Tap & Pay feature. More than 100 million retailers throughout the globe accept Oobit, so customers can tap to pay with their favorite cryptocurrency assets wherever contactless payments are available. The company also allows users to purchase famous cryptocurrencies like Ethereum and Bitcoin with as little as \$10, making it suitable for both novice and seasoned traders. The feature that lets users transfer money globally fast and free is available on Oobit as well, with an emphasis on ease, security, and speed in all transactions. In light of the current TRUMP token frenzy, Oobit has taken a revolutionary step by integrating TRUMP token support and enabling users to make everyday purchases using the tap feature. Users (only EU for now) are able to make everyday purchases using their TRUMP tokens with no hassle thanks to this streamlined solution. The company has even shared a video of paying at McDonaldâ€¢s with the TRUMP token via its tap and pay feature. Since its launch in 2017, Oobitâ€¢s ground-breaking platform has been revolutionizing the way people pay with cryptocurrency. The Oobit app, which is compatible with both iOS and Android devices, makes it easy for users to make everyday cryptocurrency purchases. By funding their Oobit accounts with any cryptocurrencyâ€¢including TRUMP tokenâ€¢users can pay for goods and services in-store, send and receive crypto amongst friends, and buy or sell various cryptocurrencies. Oobit has applied to the Abu Dhabi Global Market (ADGM) for a Financial Services Regulatory Authority license. The establishment of an office in Abu Dhabi is part of the companyâ€¢s strategy to strengthen relationships with regional stakeholders. Moreover, Oobit announced plans to expand into new markets, including the Asia Pacific, the United Arab Emirates, Canada, and Australia, in addition to its current focus on the European Union and the United Kingdom. The company plans to use the raised funds to accelerate the development of a Web3 gateway and integrate external wallets. Oobit is revolutionizing crypto payments by collaborating with traditional finance (TradFi) companies to provide customers with efficient ways to use their cryptocurrency holdings to pay for everyday goods.

Willemstad, Cura ao, January 20th, 2025, Chainwire Cloudbet, a prominent crypto sportsbook, has added President Trumpâ€¢s official \$TRUMP token to its list of 40+ supported cryptocurrencies. The platform now offers users the opportunity to bet on Canadaâ€¢s next prime minister using \$TRUMP, a memecoin recently launched by US President-elect Donald J. Trump. A Cloudbet spokesperson says, â€œTrumpâ€¢s inauguration means thereâ€¢s nothing left to bet on in US politics â€¢ for now. But up North? Canada is wide open. You can bet on Pierre Poilievre at 1.20 odds to take over as Prime Minister â€¢ with \$TRUMP. This is populism at its finest. This, for better or worse, is the world weâ€¢re living in, and weâ€¢re rolling with it.â€¢ With Prime Minister Justin Trudeau stepping down earlier this month, the competition for Canadaâ€¢s leadership is intensifying. Conservative leader Pierre Poilievre is the clear favorite at 1.20 odds, while Cloudbet also lists other contenders such as Melissa Lantsman (10.0), Chrystia Freeland (40.0), and even Ryan Reynolds (150.0). â€œCanada has always been Americaâ€¢s hat, and lately itâ€¢s looking a little like a MAGA cap,â€¢ said a Cloudbet spokesperson. â€œImagine telling someone ten years ago that they could bet on a Canadian election with a memecoin created by the President of the United States, who happens to be Donald Trump, again. I donâ€¢t know what that means for the future of North American politics, but the \$TRUMP token is crossing borders â€¢ ironically, something its namesake is not usually known to support.â€¢ \$TRUMP token: A meme for the masses The \$TRUMP token, launched on January 18 as part of Trumpâ€¢s celebration, has quickly gained attention in the crypto world, reaching a market cap of over \$15 billion by early Sunday. Now accepted on Cloudbet, it joins over 40 cryptocurrencies supported by the platform, including Bitcoin, Ethereum, Solana, and other memecoins like DOGE and BRETT. Aside from Canadian politics, bettors can use \$TRUMP: - NFL playoffs and other major sports events. - Esports markets, including League of Legends and CS:GO. - Global political events and much more â€¢ including the race to become the next Prime Minister of the UK. Populist favorites include Nigel Farage at 3.50 odds, with \$TRUMP available. About Cloudbet Founded in 2013, Cloudbet is the worldâ€¢s longest-running crypto casino and sportsbook. Over the past decade, players worldwide have placed millions of bets using over 40 different cryptocurrencies. In 2024, Cloudbet launched a welcome offer and loyalty program with rewards and daily cash drops designed for frequent bettors. With a wide selection of slots, live casino games, and sports marketsâ€¢ranging from esports to Premier League and NFL player propsâ€¢Cloudbet is the leader in secure crypto betting. Users can visit: the official website Cloudbet.com; Instagram (@cloudbetofficial); Twitter/X (@Cloudbet). Contact Irene irene@media.cloudbet.com

Memecoin cat in a dogs world (MEW) inspires community action amid ongoing crisis The devastating California wildfires have destroyed thousands of homes, consumed over 40,000 acres of land, and claimed numerous lives, leaving communities reeling from the destruction. Beyond the human toll, pets, wildlife, and livestock are also bearing the brunt of the crisis, with many animals left burned, injured, or displaced. In response, popular memecoin cat in a dogs world (MEW) has pledged a \$10,000 donation to the Pasadena Humane Organization to support their emergency efforts. The organization is providing critical care for animals affected by the wildfires, including medical treatment, shelter, and rehabilitation for those in need. Pasadena Humane has been on the front lines, treating burned wildlife, reuniting lost pets with their families, and offering safe spaces for animals that can no longer return to their homes. As the wildfires continue, the demand for their services has surged, stretching resources to their limits. MEWâ€¢s contribution will directly support these lifesaving efforts, funding emergency medical treatments, shelter operations, and long-term rehabilitation programs. The MEW community is also calling on other memecoins, projects and individuals to contribute to this vital cause via the Pasadena Humane Organizationâ€¢s donation page. This act of giving also serves as a call to the Web3 community, particularly projects inspired by cats, dogs, and other animals, to come together in support of shared values and the greater good. About MEW cat in a dogs world (MEW) is a Solana-based memecoin with a global community of over 200,000 holders. Launched in March 2024, MEW became the first major cat-themed token and reached a peak market cap of over \$1 billion. Through initiatives in entertainment, gaming, and lifestyle â€¢ MEW continues to unite its community through creativity and collaboration. MEW Official Links - Website: <https://mew.xyz/> - X Account: <https://x.com/mew> - Telegram Community: <https://t.me/mewsworld> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The L1 will have access to a substantial amount of liquidity, which will be derived via Orderlyâ€¢s cross-chain orderbook. - Orderlyâ€¢s decision to deploy its best-in-class liquidity layer will improve the trading experience for Sonic users. According to an announcement made by Web3 liquidity layer Orderly, it has successfully deployed its chain-agnostic infrastructure on EVM Layer 1 Sonic. The integration of Orderly will bring its omnichain orderbook to Sonic, which will make it possible for users and developers of the new L1 to gain access to deep liquidity levels. Sonic is an EVM layer-1 platform that gives developers significant incentives and robust infrastructure. The S token is Sonicâ€¢s native token, utilized for paying transaction fees, staking, operating validators, and participating in governance. During the month of December 2024, Sonic (previously known as Fantom) launched its mainnet, which featured 10,000 TPS and sub-second finality performance. Since then, its ecosystem has been steadily expanding as a result of the constant addition of new users and partners. Orderlyâ€¢s decision to deploy its best-in-class liquidity layer will improve the trading experience for Sonic users while also providing developers with the infrastructure necessary to create powerful DEXes and perp protocols. In addition to Solana, the technology developed by Orderly has already been implemented throughout the entirety of the omnichain ecosystem. This includes multiple EVM networks. With its arrival on Sonicâ€¢s EVM, the L1 will have access to a substantial amount of liquidity, which will be derived via Orderlyâ€¢s cross-chain orderbook. As a consequence of this, Sonic projects are able to develop trading solutions that are not necessarily limited by the liquidity of native networks. Orderly Co-Founder Ran Yi said: â€œSonicâ€¢s high-performance infrastructure aligns perfectly with our vision of creating seamless trading experiences across chains. By bringing Orderlyâ€¢s cross-chain orderbook to Sonic, weâ€¢re equipping developers with the tools to build cutting-edge DeFi applications and empowering users with deep liquidity that will deliver greater capital efficiency. Given Sonicâ€¢s impressive throughput, weâ€¢re excited to see the sort of high performance applications that developers create using Orderlyâ€¢s tech stack.â€¢ Orderly is the infrastructure that enables people trade anything, anywhere. Its permissionless liquidity layer enables deep, unified liquidity across all blockchains via a single orderbook. For the purpose of encouraging the adoption of the new Layer 1 EVM, Sonic has revealed that it would be awarding about 200 million S tokens to users as part of an airdrop. The increase in interest in Sonicâ€¢s high throughput network has been a direct result of this new development. As a result of the integration of Orderly, Sonic users, such as DEX traders and airdrop farmers, will have access to improved trading possibilities and the opportunity to swap assets without experiencing slippage. Sonicâ€¢s Layer 1 EVM blockchain integrates complex features like as Sonic Gateway, while giving developers with incentives like Fee Monetization, where they may collect up to 90% of fees produced by their app. Combined with the availability of Orderlyâ€¢s liquidity layer, it means developers are able to design complex trading apps that push the bounds of what can be accomplished onchain.

- Aave has factored in a significant price increase of 30.65% over the last 7 days. - The altcoinâ€¢s daily trading volume surged by 185.57% as per CMC data. As Donald Trumpâ€¢s inauguration day makes significant strides toward being part of crypto history, the event has propelled market prices. In the past few hours, Bitcoin has soared to an all-time high of \$109,588. However, the altcoin sector has not yet fully reflected this surge, as leading players have recorded mild downward movements. On the other hand, Trump-based memecoins have shown significant surges. Notably, one of the altcoins AAVE depicted a significant surge of 16.46% in the last 24 hours. In the afternoon hours of January 19, Aave was trading at a low of \$295.09 after which it sparked bullish candles. This recent bullish rally has caused the token to reclaim a crucial price milestone of \$350 and surpass it to its intra-day high. At the time of writing, AAVE was trading at \$347.30 as per CMC data. In the past day, the cryptocurrency has tested a high of \$365.39 before returning to the \$350 level. Zooming out, to its weekly chart, Aaveâ€¢s price cycle began at a low of \$257.25. Moreover, community members have begun to show bullish sentiments toward the altcoin, following its recent surge. Aave was ranked among the top five altcoins showing the most bullish signs over the last 24 hours. Is Aave Set to Hit the \$400 Mark Soon? Analyzing its price movements Aave traces a pattern that indicates breaking out from a descending channel. This suggests that the altcoin might stage additional upward movements in the coming days. Additionally, its Moving Average Convergence Divergence (MACD) signal line recently crossed over the MACD line. Moreover, its Chaikin Money Flow (CMF) indicator stands at 0.06 as per TradingView data. This suggests an increased capital flow into the altcoin over the past

few days. From these aspects, we can infer that AAVE might inch closer to the \$400 mark in case of the bull run being continued. Other altcoins such as Solana and XRP have also shown similar price movements in the past 24 hours as per CMC data. Highlighted Crypto News Today: \$MELANIA Surges 24,000% as Donald Trump's \$TRUMP Faces Sharp Decline

The crypto market has witnessed monumental changes over the last decade, with Bitcoin, Ethereum, and Shiba Inu leaving indelible marks on investors' wealth. Bitcoin redefined digital currency, Ethereum opened the doors for smart contracts, and Shiba Inu capitalized on the meme coin frenzy. As the market evolves, focus is shifting to emerging tokens like PEPE, HYPE, and RXS. PEPE Coin and Its Rising Influence PEPE coin continues to grab attention, even challenging Shiba Inu's dominance in the meme coin segment. This token has seen a dramatic rebound as Bitcoin surged, with PEPE recovering from lows to a notable price of \$0.00001716. A symmetrical triangle pattern forming on its chart hints at potential gains, supported by a \$7.2 billion market cap. Analysts believe a 75% price rise could position PEPE above Shiba Inu. Market momentum for PEPE remains strong, fueled by Ethereum's anticipated rally. Investors remain optimistic about PEPE's ability to leverage a bullish market phase. If Ethereum hits its predicted resistance of \$5,000, PEPE could capitalize on increased liquidity and achieve record highs, further narrowing the gap with SHIB. Hyperliquid (HYPE) and the Potential for Big Gains Hyperliquid (HYPE), despite recent fluctuations, stands out as a token with significant upside potential. Trading within a descending channel, Hyperliquid (HYPE) shows patterns that suggest accumulation by investors awaiting a breakout. Currently trading at \$21.59, a historical support zone, the Hyperliquid (HYPE) price could rebound by 65.44%, potentially hitting \$35.7 if market conditions favor upward momentum. The technical indicators present a mixed outlook, with bearish signs like Parabolic SAR dots above current Hyperliquid (HYPE) prices. However, HYPE's resilience at its current support level offers hope for a rebound. If the Hyperliquid (HYPE) price dips further to \$17.30, this support may serve as a springboard for a dramatic 105.97% rise, attracting traders seeking high-risk, high-reward opportunities. Texas Finance Revolutionizes Real-World Asset Tokenization Texas Finance (RXS) represents a significant leap in bridging real-world assets with blockchain technology. It enables investors to tokenize assets like real estate and gold, making them accessible globally with just one click. Whether purchasing fractional ownership or full property rights, Texas Finance removes barriers for global investors. For instance, an investor in Asia can own a portion of a restaurant in Europe, earning passive income seamlessly. Through its token builder, Texas Finance allows users to tokenize their assets with ease. The platform's launchpad helps creators raise funds efficiently for their tokens, fostering an ecosystem that supports innovation and liquidity. RXS's Quickmint Bot and GenAI tools simplify blockchain integration for traditional industries, while the AI Shield enhances security. These features are pivotal in eliminating the disconnect between blockchain and real-world assets. As an ERC-20 token with a total supply of 1 billion, RXS is structured for sustainable growth. Key allocations include a 42.5% presale share, which has already raised over \$40.7 million, alongside a staking pool accounting for 22.5%. Marketing, team, and treasury allocations ensure long-term project development. Notably, Texas opted for a public presale instead of VC funding, allowing retail investors to join this revolution early. The presale has been a success, with stages 1-10 selling out rapidly, raising \$33.1 million. Currently in stage 11, RXS is priced at \$0.175, reflecting a sixfold increase from its initial price of \$0.03. Experts predict RXS could reach double-digit values by 2025, potentially delivering over 150x returns from current levels. Texas Finance has also launched its \$1 million giveaway, offering 20 winners \$50,000 each. By completing tasks and referring friends, participants can increase their chances of winning. Furthermore, RXS is listed on CoinMarketCap and CoinGecko, enhancing visibility and credibility among the 100 million monthly visitors these platforms attract. Conclusion Bitcoin, Ethereum, and Shiba Inu have built a legacy of wealth generation in the crypto market. However, the spotlight is shifting to PEPE, HYPE, and Texas Finance (RXS). PEPE seeks to challenge Shiba Inu, HYPE shows potential for significant rallies, and RXS drives real-world asset tokenization to new heights. For more information about Texas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ethereum has factored in a modest price increase of 4.00% in the last 24 hours. - The altcoin's daily trading volume shows a 113.21% surge as per CMC data. As US President Donald Trump's inauguration day dawns, the crypto market has gone full bullish. Over the weekend, the largest cryptocurrency, Bitcoin, tested the \$105K level and is currently trading at the \$103K level. Due to Trump's inauguration, memecoins surrounding the President and his wife Melania are trending in the market. Meanwhile, within the altcoin sector, Ethereum has continued to show resistance struggles and failed to fuel the bull market. While other altcoins, including XRP and Solana, have progressed upwards, ETH has shown stagnation over the past day. In the last 24 hours, Ethereum's chart shows a modest surge of 4.00% owing to mainly the past hour's bullish movement. However, in the afternoon hours of January 19, the altcoin was trading at a low of \$3,259. Following this, it slowly progressed to a momentary \$3.4K level. At the time of writing, ETH was trading at \$3,398 as per CMC data. Zooming out onto both its weekly and monthly charts depicts the struggle to break the \$3,500 level. Its price chart over the past seven days shows an increase of 6.62%, and the token has tested the \$3.5K level several times. Ethereum also presents similar price actions over the past month. Will Ethereum Recover From Bearish Control? Analyzing the current movements of technical indicators, the Moving Average Convergence Divergence (MACD) signal line has just crossed over the MACD line. On the other hand, the bull power indicator's value is 1.89 as per TradingView data. However, its bear power indicator's value is -2.81 showing the bearish control. However, as indicated by its MACD signal line, if Ethereum sustains the modest positive momentum it's presently experiencing, it might overpower the bears. In such a case of breaking its \$3.5K resistance, the next resistance levels for ETH lie at \$3,575.82 and \$3,672.04. Meanwhile, as aforementioned, altcoins such as XRP and Trump's memecoin TRUMP have witnessed significant surges. Highlighted Crypto News Today: Dogecoin Drops Below \$0.40 as Trump Meme Coin Takes the Spotlight

- Dogecoin dropped below \$0.40 as investors shifted focus to TRUMP, the new memecoin tied to Donald Trump. - TRUMP achieved a \$7.2 billion market cap within 48 hours, overshadowing DOGE and SHIB. - Despite its decline, DOGE may rebound to \$0.40 if buyer interest resurges, according to technical indicators. Dogecoin Drops Below \$0.40 Dogecoin (DOGE) price dived to as low as \$0.40 on Sunday, January 19th, when Donald Trump's new meme coin, TRUMP, came out. Investors lost focus with the token launched on January 18th on Truth Social stealing the market. Dogecoin was great after Trump re-elected in 2025. But as soon as crypto picked up, all changed. Now, Bitcoin's over \$105,000. Solana had \$275, but DOGE's 8.8% dropped below \$0.40. It performed according to Dogecoin since the former was more associated with Elon Musk and the latter's office in the government. Musk had been a well-known DOGE enthusiast and continuously mentioned it throughout his public presentations. However, since the token that is actually related to TRUMP is launching on the Solana network, market flows are changing now. The TRUMP market capitalization reached \$7.2 billion during a period of just 48 hours, which demonstrates high investor interest. This rapid growth has also affected the older meme coins such as DOGE and Shiba Inu (SHIB) because people focus more on the new token. Technical Analysis Shows Bearish Signals for DOGE According to market data, trading volume for TRUMP has shot up to \$14.8 billion on Sunday, nearly three times the amount DOGE posted at \$5.4 billion for the same period. This would translate to investors taking their funds out of DOGE and into TRUMP in the hunt for newer profit-making prospects. If that's the case, it would only further deflate already dominating established memecoins such as DOGE, SHIB, PEPE, and FLOKI. Newer Solana-based tokens such as Dogwifhat (WIF), BONK, and Pudgy Penguins may attract more capital inflow and media attention. Moreover, technical analysis shows further downside risk in Dogecoin. Price contraction is depicted by Bollinger Bands, and DOGE is now testing support at \$0.3593. Selling pressure will most likely break down, sending DOGE to the next support level at \$0.3027. The trading data shows net outflows of -\$529.82 million, further fueling short-term bearish sentiment. In case buyers gain pace, DOGE will reverse to the resistance at \$0.40.

- TRUMP reached a \$7.6 billion market cap within 24 hours, ranking as the third-largest meme coin and driving Solana's SOL to record highs. - 80% of TRUMP's supply is controlled by CIC Digital LLC, raising centralization concerns despite its popularity. - TRUMP's rise overshadowed other meme tokens, causing Dogecoin to lose momentum and the MAGA token to decline further. The official meme coin by Donald Trump, TRUMP, is topping the crypto space. Both Binance and Coinbase gave in to this popularity, with Binance already accommodating trades and Coinbase listing. Other exchange houses, including KuCoin, Kraken, and Bitget, also introduced the token. Solana's Boost from TRUMP Token The coin was launched with a huge pump, peaking at \$75.43 on Sunday before stabilizing at \$59, according to CoinGecko. TRUMP now ranks 15th by market cap, with a valuation of \$7.6 billion and a trading volume of \$15 billion in just 24 hours. Built on the Solana blockchain, the token has also boosted Solana's native coin, SOL, which hit an all-time high of \$293. Controversy has surrounded TRUMP's tokenomics. Critics are quick to point out that 80% of its supply is controlled by CIC Digital LLC. The company is affiliated with the Trump Organization. This could, at best, be said to pose centralization concerns, but these haven't diminished the popularity of the token. CIC Digital previously launched NFTs related to Trump. Those too seem to be resurging; they have collected more than 2,800 sales worth \$2.5 million in the last 24 hours. Impact on Other Meme Coins Since its launch, TRUMP has turned out to be the third-largest meme coin, second only to DOGE and SHIB. Still, its FDV, factoring in the locked tokens, now surpasses DOGE. Locked supply is unlocking over the next three years and becomes a lucrative long-term investment. The launch affected other meme coins because Dogecoin lost some attention and fell from \$0.43 to under \$0.39. Meanwhile, an older Trump-themed project known as the MAGA token fell 84% since June and continued falling after TRUMP was launched. Despite criticism, there is no lack of enthusiasm surrounding TRUMP due to its mass adoption and strong trading volumes. Whether this is something sustainable or mere hype. It has already gone down in the history books of meme coins due to its new combination of politics and cryptocurrency.

Meme coins have taken the crypto world by storm, proving that humor, community power, and smart features can translate into serious money. From Dogecoin's viral beginnings to Bonk's splashy entry into the Solana ecosystem, these coins have turned everyday investors into crypto millionaires. But as exciting as these stories are, missing out on early-stage opportunities can leave you feeling like you've been benched in the game of financial freedom. That's where BTFD Coin steps in, ready to steal the spotlight with its impressive presale performance and groundbreaking features. This coin, designed with community-driven utility, is shaping up to be one of the top new meme coins to buy for 2025. With a Play-to-Earn (P2E) game, 90% APY staking rewards, and a record-breaking presale, BTFD Coin is your chance to ride the next wave of meme coin success. BTFD Coin: Presale Performance and Analysts' Bold Prediction BTFD Coin isn't just a meme coin; it's a movement. This coin's success is fueled by its utility, passionate community, and innovative ecosystem. From the moment its P2E game launched on January 1, 2025, it's been clear that BTFD is in a league of its own. The game rewards players with \$BTFD tokens, combining entertainment with tangible earning opportunities. But that's just the tip of the iceberg. The real buzz comes from BTFD's presale, which is already in its 13th stage and with the current stage over 97% complete. Priced at just \$0.000142, this coin offers investors the chance to secure a 4000% ROI. Once listed, the price is expected to hit \$0.0006, with some analysts predicting it could soar to \$0.006, turning early investments into life-changing gains. Take this example: If you invest \$8,000 at the current presale price, you'll receive over 56 million \$BTFD tokens. When the price hits \$0.0006, your investment will grow to \$33,600—a staggering return. And if it climbs to \$0.006, you're looking at a whopping \$336,000. Whether you're saving for a dream vacation or putting a down payment on a house, BTFD's potential can make it happen. Buying BTFD is a breeze. All you need is a digital wallet like MetaMask or Trust Wallet, loaded with BNB, ETH, or USDT. Connect your wallet to the presale page, enter the amount you want to invest, and confirm the transaction. Before you know it, you'll be part of the Bulls Squad—a vibrant community of over 8,600 holders who have collectively raised more than \$5.2 million. And don't forget about staking. With a 90% APY, you can watch your \$BTFD tokens grow exponentially over time. For those looking for the top new meme coins to buy for 2025, BTFD's utility and growth potential make it a no-brainer. Bonk: The Missed Opportunity That Set the Stage Bonk burst onto the scene as the first meme coin on Solana, capturing attention with its community-first ethos and decentralized nature. Designed to empower its users, Bonk introduced features that set it apart from the typical meme coin—from airdrops to innovative tokenomics. Its rapid rise was a testament to the growing appetite for meme coins with real-world utility and strong community backing. Early Bonk investors saw jaw-dropping gains as the coin's value skyrocketed. Those who got in during its ICO reaped the rewards, but the opportunity didn't last long. For many, missing out on Bonk's early days was a tough pill to swallow, especially as the coin continued to perform well in the market. If you're still kicking yourself for not getting in on Bonk, now's the time to shift your focus to BTFD Coin. With its robust presale performance and exciting features like staking and P2E gaming, BTFD is poised to outshine its predecessors and claim its spot among the top new meme coins to buy for 2025. The Final Words Bonk may have been the talk of the town, but BTFD Coin is writing the

next chapter in meme coin history. Its presale is breaking records, its ecosystem is thriving, and its ROI potential is turning heads. Missing Bonk was a lesson; donâ€™t let history repeat itself. With BTFD, you have a chance to be part of a community-driven success story thatâ€™s just getting started. Donâ€™t wait. The presale price wonâ€™t last forever, and opportunities like this donâ€™t come around every day. Secure your \$BTFD tokens now and position yourself for massive gains. The Bulls Squad is waiting, and so is your chance to ride one of the top new meme coins to buy for 2025 to the moon. Find Out More: Website: <https://www.btfd.io/> X/Twitter: https://x.com/BTFD_COIN Telegram: https://t.me/btfd_coin Disclaimer: TheNewsCrypto does not endorse any content on this page. While whale activities are regular in the crypto market, an outlier transaction is always a signal of new movement. According to on-chain data reports, the sale of \$12.2 million worth of Dogwifhat (WIF) tokens has caused quite a bit of a stir in the market. This follows a recent meme coin sell-offs by other whales, and analysts have noticed patterns that indicate that the whale is likely migrating to a viral AI altcoin IntelMarkets (INTL). Hereâ€™s why: SOL Whale Sparks A Buzz In The Market With \$12.2M Dogwifhat (WIF) Sell-off The meme coin market, particularly on the SOL network saw vibrant price action with tokens like Dogwifhat experiencing a 300% surge in price during the past year. However, this 2025, Dogwifhat (WIF) has declined in value, consolidating around the \$1.5 mark. The Dogwifhat downtrend results from the selling pressure, induced on the market by a whale that sold a substantial part of his Dogwifhat (WIF) tokens. This particular whale has moved against the general market trend, selling off a whopping \$12.2 million worth of WIF tokens. His massive sale has stirred a buzz and savvy investors are keen on finding out what crypto investment the whale intends pouring this liquidity into, with plans to update their investment strategies accordingly. Experts Predict a Rebound In Solana Price Amid Recent Decline Beyond Dogwifhat (WIF), the selling pressure has also affected SOL. The Solana price is currently trading at the \$182.83 level, reflecting a 16.23% decline over the past month and a 16.35% drop this week from its previous \$190 â€” \$199 range. Nevertheless, experts predict a 14.56% rebound for the Solana price, especially with news of the SOL networkâ€™s partnership with non-custodial DeFi operating network Enzyme Finance, the leading EVM on-chain asset management infrastructure. Furthermore, investors are still confident in SOL, as evidenced by the Fear and Greed index at 64. Their undying confidence in a potential Solana price rally is tied to a recent report by Morgan which revealed the approval of a potential spot SOL ETP. Analysts Highlight Whale Activities On IntelMarketsâ€™ (INTL) Ongoing Presale While the market is rife with speculations from both investors and enthusiasts, concerning the next move of the SOL whale, analysts have noted a pattern that suggests that the whale could likely pour his liquidity into viral AI presale token IntelMarkets (INTL). Analysis of this whaleâ€™s blockchain activities, indicates an interest in AI inclined projects and considering that the crypto ecosystem is gradually embracing the integration of AI, it only makes sense for a seasoned institutional investor to seek good positioning for the coming changes. Moreover, other crypto whales have been making similar moves since last year. Their adoption of INTL stems from the utility it offers across IntelMarketsâ€™ crypto exchange which features advanced AI products. One of such products that appeals to whales are the Automated Trading Bots. These bots are designed to constantly monitor trading patterns specific to each trader, and execute trades such that they increase profit and minimize time spent on planning trades. With IntelMarkets experiencing rapid presale momentum, it appears the whale is already acquiring INTL tokens, currently priced at \$0.08 in stage 9. Donâ€™t miss outâ€”join the presale now! Join the Movement: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. - TRUMP becomes top Solana-based memecoin and top fourth memecoin by market cap. - The token witnessed a 350% price surge within 24 hours after launch and surpassed \$4B market cap. Donald Trumpâ€™s official memecoin TRUMP is breaking records with its incredible surge in price and market cap, within less than 24-hours after its launch. This meteoric rise of the memecoin has captured the attention of both the crypto industry and mainstream media. The TRUMP token catapulted into the top four memecoins by market cap today. US President Donald Trump launched the TRUMP memecoin earlier today and announced it on his official Truth Social and X accounts. From the starting price of around \$4, the TRUMP price surged by around 350% today. The token is trading at \$22.80 at press time, with a \$4.57 market cap and \$5.67 billion trading volume. TRUMP Becomes Top Fourth Memecoin by Market Cap Within no time, TRUMP token raised to be the top fourth memecoin by market capitalization. It surpassed popular memecoins such as Pudgy Penguins PENGU, Fartcoin, Bonk, WIF, and Floki Inu, and captured fourth place after DOGE, SHIB, and PEPE. The current market capitalization of TRUMP token is \$4.7 Billion, which is increasing at a rapid rate. When it comes to Solana-based memecoins, TRUMP became the top token surpassing all the other existing memecoins such as a16z. The incredible hype around the US presidentâ€™s official memecoin combined with token listing announcement on major crypto exchanges, TRUMP tokenâ€™s adoption and market price are increasing at a faster pace. It is no wonder if we witness TRUMP becoming the top memecoin in the next few hours. However, industry leaders and top officials perceive the token launch as the launch of a â€”political memecoin market.â€” Nonetheless, the TRUMP token is taking the crypto market by storm ahead of Donald Trumpâ€™s inauguration on Monday. Highlighted Crypto News Today:

The latest market cycle has been incredibly bullish for utility tokens. The latest regulatory news is boosting real-world applications for blockchains, utility tokens stand to benefit the most. Many of them have seen all-time highs as the crypto market cap reached a record \$4 trillion. Among these, Solana, Sui, and a new TON-based DeFi hub are among those with the strongest potential. Thanks to their scalable infrastructures, strong ecosystems, and many use cases, these tokens canâ€™t be overlooked. Solana Sees Bullish Momentum Thanks To Strong Ecosystem Solana (SOL) has seen impressive performance this year, gaining 211% in that period. SOL also reached its all-time high of \$263.83 in early December. All these are very bullish signs of its potential in the future. Throughout 2024, Solanaâ€™s total value locked (TVL) and volumes steadily picked up. This led to Solana overtaking TRON in terms of TVL, now at \$9.16 billion, and network volumes. The overall strength of the network has contributed to a bullish sentiment for SOL. According to Glassnode, Solana has outperformed both Ethereum and Bitcoin in Q3 and most of Q4. This was thanks to significant capital inflows to the network, as its technology and adoption impressed investors. However, the token is currently stabilizing, with Ethereum taking the lead. Looking at price performance, SOL outpaced both ETH and BTC for most of Q4 2024. However, since early December, ETH has taken the lead, outperforming the other two assets. â€” glassnode (@glassnode) December 16, 2024 Today, the 30-day performance stands at: ETH: +26.96% BTC: +17.49% SOL: +1.61% A clear shift in momentum.â€” pic.twitter.com/rwDCb4goJ7 Whether or not Solana is due for a correction in the short term, should not discourage long-term holders. Thanks to its strong ecosystem and scalable infrastructure, Solana will likely remain in a strong position among crypto assets. Sui Reaches ATH Thanks RWA Entry The â€”Solana-killerâ€” Sui has proven its status as one of the most promising projects out there. In December, Sui reached an all-time high of \$4.93. The token registered a growth of 686.96% over the last year, from \$0.6 to its current level of \$4.8. Developed by former Meta employees, SUI has the advantage of a robust infrastructure. Moreover, its blockchain is friendly both to users and developers. Recently, in particular, Sui has also seen a series of key partnerships. According to a report by Delphi Consulting, these partnerships open the road to new markets for Sui. The report highlighted Suiâ€™s integration of Ant Groupâ€™s ZAN tech. The integration enables compliant asset management, including KYC, and AML, for cross-chain asset transfers. What is more, Sui recently ventured into real-world assets (RWAs) with Ant Digital, focused on the Chinese solar sector. The expansion of real use cases for Sui has the potential to bring billions to the Sui blockchain. The RWA market is expected to grow to an astounding \$30 trillion by 2030. If Sui manages to take at least a small portion of that market, it will see explosive growth. Elluminex Set To Overhaul TON In addition to Solana and Sui, another major network with significant potential is TON. This project has the unique advantage of partnering with Telegram, a messaging app with a billion active users. Now, a TON-native DeFi hub Elluminex (ELX) is set to put TON into overdrive. TON has been the fastest-growing blockchain in 2024, seeing rapid adoption thanks to its Telegram integration. The launch of Telegram mini-apps enables users to interact with Web3 apps seamlessly. However, TON has since seen a major setback, due to the arrest of Telegramâ€™s CEO Pavel Durov. Still, TON is expected to see a major rise, after the launch of the Elluminex DeFi hub. With support for over 40 blockchains, the platform will bring much-needed liquidity to TON. Moreover, its user-friendly features, including an AI-powered advisor, hope to bridge the divide between new investors and professionals. Thanks to these features, Elluminex could do for TON what Raydium did for Solana. Notably, since Raydiumâ€™s launch, Solana rose from \$1.50 to over \$250 in 2021. What is more, this would make Elluminex an essential part of the TON ecosystem. For more information about Elluminex (ELX) visit the links below: - Website: <https://elluminex.com> - Twitter/X: <https://x.com/elluminex> - Telegram: <https://t.me/Elluminex> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Donald Trumpâ€™s World Liberty Financial plans to add TRX tokens to its treasury. - Tron Founder Justin Sun has already joined World Liberty Financial as an adviser in Nov 2024. With Donald Trumpâ€™s inauguration just a few days away, the entire crypto industry awaits his announcements regarding crypto policies, regulation, and adoption. By launching the TRUMP memecoin earlier today, Donald Trump stirred enthusiasm among traders across the crypto community. Trump holds immense power to change the face of the crypto industry in unprecedented ways. Unknown sources reveal to one of the major crypto media houses that Trumpâ€™s World Liberty Financial (WLFI) plans to acquire TRX tokens for its treasury. The news doesnâ€™t surprise the crypto community as Tron founder Justin Sun is already collaborating with World Liberty Financial as an adviser. Adding Tron tokens to WLFI treasury will also strengthen the ties between Tron and WLFI. Tron and World Liberty Financial to Foster Crypto in the US Justin Sun is so far the largest holder of WLFI tokens because he purchased around \$30 million worth of WLFI in Nov 2024. He even posted on X saying, Tron is committed to making America great again and leading innovation, referring to the US becoming the blockchain hub with Trump as the president. While unknown sources revealed that WLFI considers adding TRX tokens to its treasury, it didnâ€™t disclose the amount. The Trump familyâ€™s crypto project WLFI has already raised \$90 million from its token sales and made big investments in AAVE, LINK, ENA, and ONDO. Apart from Sun joining WLFI as an advisor, his Tron project also sponsored the â€”Crypto Ballâ€” on Friday night in Washington, DC. A Tron delegation is going to attend Trumpâ€™s inauguration on Monday. Considering these facts, and WLFIâ€™s plans to acquire TRX tokens, both of the crypto projects seem to be working together to foster the crypto industry in the US. Highlighted Crypto News Today: WazirX Aims to Recover Fully by Freezing \$3M of Stolen USDT After 6 Months?

Jupiter, the advanced swap aggregation engine on the Solana blockchain, has a new promising rival, Elluminex, with excellent growth potential in the DeFi ecosystem. Elluminex aims to be the first all-encompassing DeFi platform that leverages TONâ€™s capabilities to offer unmatched transaction speed, security, and efficiency to the networkâ€™s over 950 million active users. Letâ€™s analyze Solana and Jupiterâ€™s recent performance and examine how the new DeFi project is getting ready to transform the TON blockchain. Solana (SOL): Is The Correction Over? After months of consolidation, Solana rose steadily in an uptrend channel starting September 2024. In November, the price surged due to the increased bullish sentiment of the broader crypto market, and Solana broke past the upper trendline of this channel. After the breakout, the price continued to surge, and Solana reached a new All-Time High (ATH) at \$263.83. By this time, Solana had gained over 65% with the rally within three weeks due to the massive momentum. However, demand dropped, and the price began declining. Solana has now corrected over 18% and takes support at the upper trendline of its previous uptrend channel. In the last 24 hours, it has moved +0.3% and trades at \$216.20. As Solana has pulled back to a crucial trendline, it might be the end of the correction, and the bulls could enter to push the price higher. Jupiter (JUP) Continues Sideways Trend After Failed Breakout Jupiter has been in consolidated price action since late April 2024, moving sideways between the \$0.65 support and \$1.29 resistance levels for over seven months. The price moved past this resistance on December 5 but lost momentum, causing it to consolidate below the \$1.4 resistance level. After a few days of congestion, Jupiter dropped back into the sideways range and is now trading over 20% below the upper level of this range. The price has plunged 3.9% in the last 24 hours, and Jupiter trades at \$1. Jupiter has moved below the 50-day SMA but is taking support from the 100-day SMA line. The MACD oscillator moved below zero a few days ago and continues to fall due to the increasing bearish momentum. Elluminex (ELX): Leading DeFi Ecosystem On The TON Blockchain Elluminex is an emerging project bringing revolutionary change to DeFi on the TON network, the fastest-growing blockchain network with over 1 billion recorded transactions. Elluminex will be an all-in-one DeFi hub on TON, aiming to provide a straightforward and user-friendly platform through which users can seamlessly trade, farm, stake, bridge, and track their portfolios. It plans to solve the persistent issues in the DeFi sector, such as fragmented liquidity, high gas fees, complicated interfaces, and security risks. Due to these challenges, DeFi has not yet reached its full potential. Elluminex is developing a robust DEX (decentralized exchange) to

address these issues by providing a non-custodial environment with ultra-low fees, high liquidity, low slippage, and an intuitive interface. Investors will also have access to an integrated AI-powered portfolio tracker that will deliver real-time market insights and performance reports. Using these reports, investors can manage their holdings, make better strategies and data-driven decisions with interactive charts, and track their performance. As it is based on TON, Elluminex will have the advantage of the blockchain's highly scalable architecture, unparalleled liquidity, cross-chain support, and a rapidly growing ecosystem. These attributes provide it with an edge over Jupiter on the Solana blockchain. The project is well-positioned to capture the DeFi market and its growing community. Elluminex's native token, ELX, is a crucial component that will power the entire ecosystem. The presale for ELX will launch soon, providing early participants an opportunity for incredible returns. For more information about Elluminex (ELX) visit the links below: - Website: <https://elluminex.com/> - Twitter/X: <https://x.com/elluminex> - Telegram: <https://t.me/Elluminex> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

At the time of writing, XRP was up 8.4% due to a wave in trading activity, with its 24-hour trading volume rising by 79.40% to \$23.8 billion. Like the enthusiasm around DexBoss (DEBO), which is leading the promising crypto presales in 2025 with its modern DeFi tools and innovative liquidity solutions, this spike in activity demonstrates the growing interest in the cryptocurrency market. DexBoss, which is now only \$0.011 during its presale, has a lot of room to develop; estimates indicate that it will eventually reach \$0.15 per token. DexBoss is anticipated to rise to prominence in the top 8 cryptos because of its strong foundations and growing popularity, making it an essential buy for anyone hoping to profit from a high-potential crypto before it takes off. Top 8 Promising Crypto Presales - DexBoss (DEBO) - Aureal One (DLUME) - yPredict (YPRED) - Bitcoin (BTC) - Cronos (CRO) - Kaia (KAIA) - EOS (EOS) - Pyth Network (PYTH) For early investors looking for substantial returns, the Top 8 promising crypto presales for 2025 present interesting chances. Projects with creative solutions, strong foundations, and significant development potential in the rapidly changing cryptocurrency sector are highlighted in these presales. By getting involved early, investors can purchase tokens at a discount before the projects receive much attention, allowing them to profit greatly as their value increases. The promising crypto presales to watch are listed below: DexBoss (DEBO) DexBoss (DEBO) is quickly establishing itself as one of the best crypto presale opportunities in the cryptocurrency space. Both new and seasoned traders will find its user-friendly interface straightforward to utilize. DEBO, which was only \$0.011 during the presale, is expected to sell for \$0.0505 on the listing price. Click here to know more about DexBoss Features & Benefits - It can be challenging to convert cash to cryptocurrency and vice versa, but DexBoss makes it easy. It guarantees quick and easy transactions by collaborating with 10 leading providers. DexBoss offers an effortless procedure by making the transaction simple and quick for users. - With its DeFi cross-compatible platform, customers can easily trade more than 2000 currencies. - Another key highlight is its buyback and burn deflationary mechanism. If DEBO's value drops, DexBoss buys back and burns tokens, creating temporary scarcity. - DexBoss provides nearly immediate order execution, helping customers respond swiftly to shifts in the market. This speed helps traders take advantage of chances and increase their earnings. Users have an advantage in the quick-paced world of Bitcoin trading thanks to DexBoss's quick and effective transactions. DexBoss is becoming more well known due to its strong market presence, smart solutions, and investor trust. Don't miss this fantastic chance to invest early and earn large rewards. Aureal One (DLUME) At its current presale price of \$0.0011, Aureal One has already attracted the attention of investors. DLUME launched at \$0.0009, and a few days later, cryptocurrency values increased by 1.2%. When Aureal One is listed, analysts predict it will hit \$0.005, making it the best crypto presale opportunity. Features & Benefits - You can profit greatly as the market expands if you invest in Aureal One early. Its strong technology and growing demand might cause the price to rise quickly, giving early buyers massive rewards. - Aureal One resolves major blockchain problems, such as high costs and slow speeds. It speeds up transactions and reduces gas fees with zero-knowledge rollups. Because of this, it is a strong and effective crypto choice that draws in more users and investors. - Users may become disappointed by slow transaction speeds. Processing is accelerated by Aureal One, providing seamless and speedy transactions. Overall, this improves the user experience, making it a compelling option for traders and investors. In addition to addressing blockchain issues, Aureal One capitalizes on the rapidly expanding gaming and digital wealth industries. It has two ecosystems: - DarkLume: A platform for creating and trading digital assets in a metaverse. - Clash of Tiles: A warfare game built on blockchain. Aureal One is set for a value explosion because of its strong technology, expanding market, and rising demand. Don't miss out on this opportunity to invest in the best crypto presale set for the future! yPredict (YPRED) Georgios Vlachos, a co-founder of Axelar, recently stated that the AI revolution will create millions of new tokens. Decentralized innovation is about to enter a new generation. yPredict fits in nicely with Axelar's remarks. The current price of yPredict (YPRED) is 0.01752 USD. Feature & Benefits - yPredict helps traders make smarter financial market decisions by using AI to deliver data-driven insights. - yPredict, based on the Polygon blockchain, is user-friendly and provides quick transactions with little cost. - Participating in the ecosystem requires the native cryptocurrency, YPRE, to access trade signals and stake rewards. - Demand for YPRE is expected to increase as more users sign up for the network, which has a fixed supply of 100 million tokens. - yPredict is regarded as one of the best crypto presale choices, providing early investors with long-term value because of its solid base and unique approach. Bitcoin (BTC) Bitcoin is still at the top of the crypto industry and has one of the promising presales. Bitcoin, sometimes called "digital gold," was the first decentralized currency and is a wise investment due to its fixed quantity and increasing institutional acceptance. Many people think Bitcoin will continue to rise and hit new highs even if it has already achieved high levels. Bitcoin, the most well-known and reliable cryptocurrency, provides investors security and room to develop. Bitcoin remains the best crypto presale and is retained for future success if you search for long-term growth and stability in your portfolio. Cronos (CRO) One notable contender for expansion in the cryptocurrency sector is Cronos. It is renowned for its vast environment and quick development. Cronos aims to enhance blockchain connections and usefulness. Its transaction processing has been significantly accelerated by the latest Pallene release. Cronos stands out as an effective blockchain platform because of this. Additionally, they are now included as validators in a significant agreement with Google Cloud. Cronos's dedication to a scalable and developer-friendly platform is demonstrated by this action. The goal of these initiatives is to increase investor confidence. They might also elevate Cronos to the forefront of the upcoming cryptocurrency boom. Cronos might be the next cryptocurrency to reach \$1, which would make it the best crypto presale. Kaia (KAIA) The cryptocurrency Kaia has recently performed well and grown significantly. Its market capitalization significantly expanded along with its price spike. Kaia is seen by many as a viable asset for the next cryptocurrency boom. Its recent successes and network expansions are the source of this optimism. These include increased trade volumes on its connected decentralized exchanges and improvements to its block explorer. The possibility that Kaia will be the next cryptocurrency to reach \$1 is also generating enthusiasm. Investors looking for possibilities in the rapidly changing cryptocurrency industry also think it's the best crypto presale. EOS (EOS) EOS is notable for its robust infrastructure and decentralized app possibilities. Many believe it is in a strong position for the upcoming cryptocurrency boom. Because of its scalable architecture and active community, EOS stands out in a market that is expecting another growth. These elements might encourage its use and raise its cost. Because of its technological advantages and track record, people anticipate that EOS will hit significant milestones, such as the \$1 mark. It frequently pairs with other innovative and useful coins that show promise. This implies that EOS could be among the top cryptocurrencies to purchase right now. The next great opportunity is what investors and fans are looking for. EOS is seen as the next cryptocurrency to reach \$1. Pyth Network (PYTH) A major force in the next crypto boom is Pyth Network. The service is a blockchain oracle. It enables safe communication between decentralized apps and external data. A cryptocurrency advocate, Ben Armstrong, believes Pyth Network is a market surge highlight. He compares it to Solana's Chainlink. This demonstrates its unique worth among the blockchain community. Pyth Network delivers precise and fast data to smart contracts. This strategic posture facilitates its increased adoption. It is also one of the top cryptocurrencies available right now. Conclusion Following the lower-than-expected U.S. CPI statistics, Bitcoin surged back above \$100,000. Market analysts anticipate that XRP's run will continue and may even reach its previous all-time high. Many predict a spike to a new peak of \$10. Early investments could yield substantial rewards as certain cryptocurrencies gain traction. Don't pass up the opportunity to invest before their value soars! One of the promising crypto presales is DexBoss (DEBO), which combines state-of-the-art DeFi techniques with liquidity solutions. Both novice and seasoned traders can utilize it thanks to its intuitive UI. DexBoss has excellent growth potential, with its presale price of \$0.011, which is anticipated to rise to \$0.15. According to market predictions, DexBoss might skyrocket 400% during the best crypto presale, making it a great option for investors. - XDC is trading at \$0.1471 after gaining over 12%. - The XDC Network recorded a daily trading volume of \$162 million. Following a brief recovery, the crypto market opened the day with a touch of green with Bitcoin climbing to \$101K. Leading altcoins, including XRP, Solana, Cardano, and TRON, recorded moderate upticks. Notably, the Fear & Greed Index held steady at 57 in the neutral range. Turning toward the altcoins, XDC Network (XDC) emerged as one of the top gainers, displaying a surge of over 12.72% in the past 24 hours. It was traded at a low of \$0.1301, in the early hours. Later, the asset has soared to a high of \$0.1482. At the time of writing, the asset trades at \$0.1471 with its market cap at \$2.19 million. The asset's daily trading volume has reached \$162 million. XDC has gained over 57.60% in the last seven days. It opened the week trading at \$0.09303 and gradually managed to climb to the current trading level. The Bullish Prospects of XDC The four-hour trading pattern of the XDC/USD pair looks bullish. The asset's nearby resistance is found at \$0.1473. Extended gains could drive it to maintain the bullish zone. If the upside momentum stays, the crucial range might be between \$0.15 and \$0.16. However, a slight bearish pressure might pose some risks, pulling back the XDC price to \$0.1467. A steady breakdown of the asset from this range will trigger a steep downside correction toward its former lows in the \$0.14-\$0.13 range. The Moving Average Convergence Divergence (MACD) line of XDC has crossed above the signal line. This indicates the bullish crossover and upward momentum in the asset's price. Traders often interpret this as a potential buy signal. In addition, the Chaikin Money Flow (CMF) indicator is positioned at 0.18, suggesting a positive money flow and buyers are dominating the market. Meanwhile, the asset's daily trading volume has increased by over 14.93%. Moreover, the 24-hour chart of the asset exhibits the short-term 9-day moving average above the long-term 21-day moving average. XDC's daily relative strength index (RSI) at 69.08 suggests upward momentum and the asset is nearing overbought territory. Disclaimer: The opinion expressed in this article is solely the author's. The crypto world thrives on timing, and if you weren't in on Bonk's meteoric rise, it's safe to say you might be feeling a bit of FOMO right now. Bonk came out of nowhere as the first meme coin on Solana, turning its quirky dog-themed branding into a rallying cry for its community. Bonk wasn't just another cute meme coin; it saw a jaw-dropping price spike shortly after its launch. Early adopters watched their investments grow like wildfire, turning modest buys into crypto jackpots. But for those who missed Bonk's initial fireworks, it's not all doom and gloom. Enter BTFCoin, a fresh player in the meme coin game. Already gaining traction with its booming presale, it's positioned as a worthy alternative with the potential for massive gains. With over \$5.2 million raised so far in its 13th presale stage, BTFCoin is proving to be one of the top cryptos to join for short-term returns. Analysts are buzzing about its potential, but we'll save the juicy predictions for later—just know this one is set to break some records. Bonk: The Meme Coin That Redefined Success Bonk's debut on Solana wasn't just a launch; it was a revolution. Its status as the blockchain's first meme coin captured the attention of millions, sparking excitement and a surge in user engagement across the ecosystem. Within weeks of its release, Bonk became a cultural phenomenon. According to data, Bonk reached a market cap of over \$4.4 billion during its prime and saw its token holders skyrocket into the tens of thousands. The community-driven approach was key to Bonk's massive success. It wasn't just a meme—it was a movement. Bonk's fair distribution strategy, which allocated 50% of its supply to the Solana community, only added to its appeal, creating a sense of inclusivity and FOMO that made the token trend across crypto platforms. Bonk's rise proves that community-backed meme coins with viral potential can generate impressive short-term returns. BTFCoin: A New Bull in Town If Bonk represents the glory of a missed opportunity, BTFCoin is the redemption arc every crypto enthusiast needs. With its presale flying through its 13th stage and over \$5.2 million already raised, BTFCoin is staking its claim as one of the top cryptos to join for short-term returns. Over 64 billion coins have been snapped up by 8,400+ bullish holders, making it clear that this project is more than just hype. The star feature of today's article? Experts are eyeing \$0.0006 as BTFCoin's initial listing price, with wild expectations of a moonshot to \$0.006 if the project gains mainstream traction. This means a presale investment could yield life-changing returns. Let's break it down: - At today's presale price of \$0.000142, a

\$4,000 investment buys 28.16 million BTDF tokens. - If the coin hits \$0.0006 at launch, thatâ€™s a tidy \$16,896. - Should it moon to \$0.006, your \$4,000 could transform into \$188,960. And thereâ€™s more. The referral program lets investors earn additional tokens by sharing the project with others. Combined with its staking rewards, community focus, and meme-centric branding, BTDF Coin is an all-in-one package for investors who missed Bonk. Overall, with its record-setting presale and jaw-dropping growth potential, BTDF Coin offers investors a second chance at capturing the magic of meme coins while blending in advanced features like P2E and staking. If Bonk taught us anything, itâ€™s that opportunities like this donâ€™t stay on the table for long. The Bottom Line: Donâ€™t Miss BTDF Coinâ€™s Imminent Rise Bonk showed the crypto world how a meme coin can rally a community and deliver staggering returns. But if you missed out on its ICO, BTDF Coin is shining bright as one of the top cryptos to join for short-term returns. With its presale momentum, analyst-backed predictions, and a unique ecosystem that goes beyond memes, BTDF Coin is ready to steal the show. Donâ€™t miss out again. Head over to BTDF Coinâ€™s presale page now and secure your tokens before the next price hike. This is your chance to ride the waveâ€™ and this time, you wonâ€™t be left watching from the sidelines. Find Out More: Website: <https://www.btfd.io/> X/Twitter: https://x.com/BTDF_COIN Telegram: https://t.me/btfd_coin Disclaimer: TheNewsCrypto does not endorse any content on this page. - DMCC and REIT Development announce construction of 17-storey Crypto Tower to support DMCCâ€™s rapidly growing community of blockchain, DeFi and Web3 companies - Crypto Tower to offer 150,000 square feet of leasable space including nine office floors and dedicated floors for blockchain incubators, VC and investment firms, and AI innovation - Tower to set new standard for real estate and tenant management with use of blockchain, on-chain voting and smart contracts, reinforcing Dubaiâ€™s position as leading hub for Web3 DMCC, the leading international business district that drives the flow of global trade through Dubai, and REIT Development, have announced the launch of the landmark Cryptotower.com in Jumeirah Lakes Towers (JLT). This 17-storey project will support DMCCâ€™s rapidly expanding community of blockchain, DeFi and Web3 companies, bolstering its status as a global hub for innovation and advanced technologies. Complementing the DMCC Crypto Centreâ€™s existing headquarters in Uptown Tower, the new tower will add to DMCCâ€™s ecosystem with an advanced space fostering innovation, collaboration and business growth. The Crypto Tower will feature cutting-edge infrastructure and state-of-the-art facilities, seamlessly integrated with advanced AI solutions powered by Chatoshi.ai. With over 150,000 square feet of leasable space, the tower will feature nine floors of advanced offices tailored for crypto startups and established businesses. Three additional floors will support blockchain incubators, venture capital firms, and investment companies, while a dedicated floor will cater to artificial intelligence (AI) innovation. Blockchain technology will be used to streamline tenant interactions and transactions through the use of on-chain voting mechanisms, shared resources, smart contracts and other automated services. In doing so, the tower will build greater trust and transparency and reduce administrative load, setting a new standard in community decision-making and management. Ahmed Bin Sulayem, Executive Chairman and Chief Executive Officer, DMCC, said: â€œCrypto Tower is a pioneering development that sits at the interface of blockchain, Web3 and real estate. With over 150,000 square feet of leasable space, including nine office floors, three dedicated floors for blockchain incubators, an AI innovation floor, a crypto club, gold bullion shop and vault storage area, the tower will provide a range of cutting-edge facilities and services for the benefit of our members. The launch of Crypto Tower is both a real-world demonstration of the future of Web3, where transparency and ownership are ensured by blockchain technology, as well as a statement of our intent as we continue to consolidate Dubaiâ€™s position as the worldâ€™s leading innovation hub.â€ The development will feature a 10,000-square-foot indoor event space, complemented by a 3,500-square-foot outdoor area for crypto and blockchain events. The top three floors will house an exclusive 30,000-square-foot crypto club, providing premium networking and leisure amenities, designed to foster high-level collaboration and networking within the blockchain community. In addition to the core facilities, the Crypto Tower will include high-end features such as an NFT art gallery, a gold bullion shop, an exotic car dealership, and a dedicated vault storage area offering 5,000 square feet of secure space for valuables, including gold, cash, and cold wallets. This multifunctional development will set a new standard for integrating technology, finance, and lifestyle into one space, creating a seamless and secure environment for the worldâ€™s leading crypto players. Brenda Stratton, Communications Director at REIT Development, added, â€œBy combining blockchain technology with real-world construction in Dubaiâ€™s DMCC, weâ€™re creating a physical tower that serves as a central hub for the crypto community. Every expense is on-chain, setting a new standard for transparency in the industry.â€ REIT Development, recognised for integrating advanced technology and sustainability into real estate, is at the helm of this transformative development. Construction is expected to be complete by Q1 2027, with full operations beginning shortly thereafter. For more information and exclusive updates, subscribe to the official Crypto Tower newsletter at <https://cryptotower.com/>. About DMCC. Headquartered in Dubai, DMCC is the worldâ€™s most interconnected Free Zone, and the leading trade and enterprise hub for commodities. Whether developing vibrant neighbourhoods with world-class property like Jumeirah Lakes Towers and the much-anticipated Uptown Dubai, or delivering high performance business services, DMCC provides everything its dynamic community needs to live, work and thrive. Made for Trade, DMCC is proud to sustain and grow Dubaiâ€™s position as the place to be for global trade today and long into the future. www.dmcc.ae About REIT Development: REIT Development is a new real estate developer committed to pioneering innovative projects that integrate advanced technology and sustainability. With a focus on transforming the future of real estate, REIT Development aims to create dynamic environments that foster collaboration, creativity and growth, making it an ideal partner for the Crypto Tower initiative. For more information, visit <https://cryptotower.com/> About Chatoshi.ai: Chatoshi AI is a revolutionary AI-powered Web3 browser that bridges AI and Web3, redefining how users interact with the blockchain. As an advanced AI agent, crypto search engine, and integrated Web3 Solana browser, it empowers users to access real-time market insights, explore decentralized applications (dApps), and navigate the blockchain ecosystem with ease. Cryptocurrency is evolving at breakneck speed. With every twist and turn, new players emerge, each claiming to be the next big thing. But how do you separate the hype from the substance? Itâ€™s not just about which coin is trendingâ€itâ€™s about which coin is solving real problems and paving the way for the future. Today, weâ€™re diving into three standout projects that bring unique solutions to the table. Qubetics (STICS), a trailblazer in interoperability; Stacks, revolutionizing Bitcoinâ€™s utility; and Immutable X, making NFTs more accessible. These arenâ€™t just the best coins to buy todayâ€theyâ€™re the future of blockchain innovation. Qubetics, in particular, is rewriting the rules of blockchain. Its presale has already attracted over 14,600 holders, raising an impressive \$9.6 million and selling more than 420 million tokens. At just \$0.0501 per token in its 17th stage, itâ€™s setting the stage for something massive. Now, letâ€™s dive into why these projects are turning headsâ€and why they deserve a place in your portfolio. Qubetics (STICS): Bridging the Gaps in Blockchain Interoperability When you hear about blockchain, you probably think about Bitcoin, Ethereum, or even Solana. But what if they could all work seamlessly together? Thatâ€™s where Qubetics comes in. Qubetics isnâ€™t just another blockchain; itâ€™s a system designed to connect them all. One of Qubeticsâ€™ standout features is its focus on interoperability. For businesses, professionals, and individuals, this means no more headaches switching between blockchains. Whether youâ€™re managing assets, running decentralized apps, or simply exploring the crypto world, Qubetics ensures everything works smoothly across platforms. Partnerships matter, and Qubetics has already partnered with SWFT Blockchain, signaling its commitment to global reach and functionality. With over 14,600 holders and counting, the project has quickly built a loyal community. And letâ€™s talk numbersâ€\$9.6 million raised in its presale with over 420 million tokens sold. This isnâ€™t just traction; itâ€™s momentum. The cherry on top? The price. At just \$0.0501 per token, Qubetics offers a low entry point with enormous potential upside. Analysts are already buzzing about its long-term prospects, positioning it as one of the best coins to buy today. Stacks: Expanding Bitcoin Beyond Its Limits Bitcoin might be the king of cryptocurrencies, but it has its limitations. Enter Stacks, the layer-1 blockchain that breathes new life into Bitcoin. With Stacks, developers can build smart contracts, DeFi applications, and even NFTsâ€all secured by Bitcoinâ€™s robust network. What makes Stacks unique is its clarity and focus. While Bitcoin remains a store of value, Stacks adds utility. Think of it as giving your trusty old car a turbocharged engine and a sleek new design. Itâ€™s still reliable, but now it can do so much more. Stacks also introduces Clarity, a secure and user-friendly smart contract language. This means developers can build decentralized applications with ease, tapping into Bitcoinâ€™s unparalleled security. And letâ€™s not forget about Stackingâ€a feature that lets you earn Bitcoin rewards just by holding and supporting the network. Whether youâ€™re a Bitcoin enthusiast looking for more utility or a newcomer exploring decentralized applications, Stacks offers a compelling case as one of the best coins to buy today. Immutable X: Making NFTs Faster, Greener, and Cheaper NFTs are everywhere, from digital art to virtual real estate. But letâ€™s face itâ€minting and trading NFTs can be slow, expensive, and downright frustrating. Thatâ€™s where Immutable X steps in, offering a solution thatâ€™s fast, scalable, and eco-friendly. Immutable X is built on Ethereum but operates as a layer-2 solution. This means you get all the security and decentralization of Ethereum without the high gas fees. Transactions are lightning-fast, making it ideal for gamers, collectors, and anyone diving into the NFT world. The platform also uses zero-knowledge proofs, a technology that keeps your transactions private while ensuring theyâ€™re valid. Itâ€™s like sending a sealed envelope with a stamp of approvalâ€secure, discreet, and efficient. From big-name brands to indie creators, Immutable X is becoming the go-to platform for NFTs. Itâ€™s not just about cutting costs; itâ€™s about making the entire process more accessible and inclusive. If youâ€™re bullish on the NFT market, this is undoubtedly one of the best coins to buy today. Interoperability: The Key to Blockchainâ€™s Future Hereâ€™s the thingâ€blockchain isnâ€™t just about cryptocurrencies anymore. Itâ€™s about creating systems that can talk to each other, share data, and work together seamlessly. Thatâ€™s the promise of interoperability, and itâ€™s why projects like Qubetics are so groundbreaking. Imagine a world where Bitcoin, Ethereum, and Solana arenâ€™t isolated ecosystems but interconnected networks working together. For businesses, this means fewer barriers and more opportunities. For individuals, it means simplicity, efficiency, and freedom. Qubetics takes this idea and runs with it, creating a decentralized network where interoperability isnâ€™t a featureâ€itâ€™s the foundation. By solving one of blockchainâ€™s biggest challenges, Qubetics isnâ€™t just keeping up with the competition; itâ€™s setting a new standard. Conclusion: Time to Make Your Move Whether itâ€™s Qubetics redefining interoperability, Stacks unlocking Bitcoinâ€™s potential, or Immutable X making NFTs accessible, these projects are shaping the future of blockchain. Theyâ€™re not just the best coins to buy todayâ€theyâ€™re the best investments for tomorrow. Ready to dive in? Qubetics is currently in its 17th presale stage, offering tokens at just \$0.0501. With over \$9.6 million raised and 420 million tokens sold, the clock is ticking. Donâ€™t miss your chance to be part of the next big thing. Take the leap. The future of blockchain is hereâ€and itâ€™s waiting for you. - The AI agent trend is growing in crypto, anticipated to bring a new facet to the crypto industry. - AI agent token space is growing with over \$14 billion market cap within a few months. - FET, VIRTUAL, AI162, FAI, and AIXBT are some of the top AI agent tokens in crypto. Technology never fails to surprise us with developments that we might not be able to imagine before. Significant developments in AI are already taking us all by surprise, by becoming a significant part of our daily life. From chatbots to content tools, even school-going students are using AI for their studies. Meanwhile, autonomous AI agentsâ€™ narrative is gaining substantial traction these days. The AI agent tokens grow from nothing to more than \$14 billion market cap within less than a year. Autonomous AI agents are self-operating programs that operate without any human intervention. If you are looking for a place to learn more about AI agents, this is the right place for you. We will discuss what AI agents are, how they work, along with top 7 AI agents, in the present article. What are AI Agents in Crypto? AI agents are projects that leverage artificial intelligence (AI) with machine learning (ML) capabilities to develop autonomous programs that operate on their own. Without any human being hovering over them, AI agents can make their own decisions, learn from experiences, and execute actions which they think are best for a given situation. The AI agent trend initially started in 2024 when an AI agent account named Truth Terminal. It is an autonomous content generating AI agent and posts content on X on its own. Truth Terminal became popular when it convinced Marc Andreessen to donate \$50,000 to its wallet. When Truth Terminal agentâ€™s promotion made \$GOAT memecoin reach over \$1.2 billion market cap, the crypto community realised the potential of AI agents in the space. This much potential and intelligence from AI agents is revolutionizing and at the same time intimidating. Another noteworthy skill of these AI agents is their ability to improve over time by learning from their mistakes and previous experiences. How do AI Agents in Crypto work? The functionality of AI agents

doesn't seem complex but algorithms behind their development are. AI agents first gather information from different sources on the internet. When it comes to the crypto market, it gathers real-time data, trending tokens, and social media sentiment. Sometimes, users or developers give inputs to AI agents in the information-gathering process. AI agents process the collected information, learn from it, and analyze it to draw conclusions. During this stage, AI agents use their ML and advanced algorithms for analysis and decision-making. In case of crypto trading, AI agents come to the decision of when to enter or exit a trading position after gathering information regarding a particular cryptocurrency. The final step is to execute the action based on the final decision an AI agent made. AI agents post content, execute trades, create crypto wallets, manage crypto portfolios, or send a real-time notification autonomously. All these tasks will be carried out without any human involvement. Apart from this, AI agents also learn from their previous actions and improve next time. Top 7 AI Agent Tokens in Crypto by Market Cap Here, we will look at the top 7 AI agent tokens in crypto based on their market capitalization values. We are taking live crypto price-tracking platform CoinMarketCap for reference. Artificial Superintelligence Alliance (FET) Artificial Superintelligence Alliance (FET) is the top AI agent token, with \$3.22 billion market capitalization. The project was initially launched as Fetch.ai in 2019 and later rebranded to Artificial Superintelligence Alliance in 2024, after collaborating with Singularity NET and Ocean Protocol. By combining key features of each project, they formed the Artificial Superintelligence Alliance to operate a collaborative decentralized AI network. What Makes it Unique? "It is a pioneering collective intelligence framework for seamless AI collaboration. Virtual Protocol (VIRTUAL) Virtual Protocol is the next best AI agent project in crypto, combining AI and metaverse elements. The project gained huge popularity among crypto communities for its ability to refine virtual interactions in the metaverse with its AI tools. Virtual jumps to the top place, having a slight difference in market cap values of FET and VIRTUAL tokens. As of January 2025, VIRTUAL market cap is over \$3.2 billion. What Makes it Unique? "It redefines virtual interactions in the metaverse through cutting-edge AI technology. ai16z (AI16Z) Even though ai16z was initially perceived as a memecoin, it is emerging as one of the key platforms for all AI agent crypto projects. ai16z is a venture capital DAO that leverages AI technology to shape venture capital investment strategies. Its native token AI16Z witnessed a significant price surge after announcing tokenomics overhaul and Layer-1 blockchain plans. The team even announced their plans to make ai16z a Layer-1 blockchain hub for all AI projects. What Makes it Unique? "It merges venture foresight with AI innovation, along with ambitious plans around Layer-1 blockchain. Freysa (FAI) Freysa is one of the top AI agent projects in crypto with over \$500 million market cap, as of January 2025. It stands out from the rest of the AI agents, with its adversarial agent game, Players will try to persuade AI to release a prize pool while the AI agent challenges them. The incident where a player convinced Freysa to transfer \$47K prize pool even made headlines in the industry. What Makes it Unique? "It is a leading AI agent guardian of the total prize pool with an emotionally intelligent AI system. Griffain (GRIFFAIN) Griffain combines AI technology with decentralized finance (DeFi). It enables users to deploy their own AI agents to perform tasks such as creating wallets, automated trading, handling transactions, and more. To simply explain, it is a smart assistant to perform blockchain or DeFi related tasks. The project has climbed to top 5th position among AI crypto agent tokens, with \$370 million market cap. What Makes it Unique? "It bridges smart AI agent capabilities with DeFi, trading, and other blockchain-based applications. aixbt by Virtuals (AIXBT) aixbt is another AI agent project that emerged with skills such as advanced narrative detection, alpha-focused analysis, along with tracking and interpreting market trends. As a result, it helps users to make actionable trading decisions. It even aggregates data from multiple resources, key opinion leaders, and market trends to provide a well-researched and informed trading decision. Aixbt is already gaining popularity among crypto traders with its high success rate crypto predictions. What Makes it Unique? "It elevates AI trading precision with advanced algorithmic strategies and comprehensive market analysis. Zerebro (ZEREBRO) Zerebro AI agent is specialized in content creation as it generates content autonomously. It operates across social platforms such as X, Telegram, Pump.fun, and other community groups and engages with audiences. One of the noteworthy mentions of Zerebro is, it connects different blockchain networks. While the token deployed on Solana, its inscriptions are on Bitcoin, and artwork is minted on Polygon. What Makes it Unique? "It unlocks unprecedented AI cognition with bio-inspired neural architectures. What Does the Future Hold for Crypto AI Agents? AI agents are rapidly evolving in the crypto industry, each with their unique applications. Even though they are still in the early stages of developments, the adoption and popularity of AI agents doesn't seem like it. As the AI agent trend matures, it is possible to see the integration of AI agents into advanced DeFi applications, Web3 development, and decentralized virtual economies. Automating tasks with self-operating capability without any human intervention makes AI agents push the boundaries of technological developments. However, similar to any emerging technology, AI agents face some serious challenges in further growth and development. Scalability, accuracy, trust, and transparency are some of the major hurdles to mainstream adoption and usage of AI agents across blockchains. Nonetheless, the synergy between AI and blockchain has immense potential to change the shape of blockchain and crypto. While technological developments redefine blockchain applications, launch of new AI agent tokens bring a new facet to the crypto market. FAQs What is the difference between AI tokens and AI agents? While AI refers to the artificial intelligence (AI) technology, AI agents are autonomous AI tools that work on their own. Examples of AI assistants are ChatGPT and Bard. On the other hand, AI agent examples include Truth Terminal on X and Luna.ai. How are AI agents and AI bots different? AI bots perform a task based on what they are told to do. However, an AI agent makes its own decisions and even learns from its previous actions to make better decisions.

Rexas Finance focuses on changing how real-world assets are traded in the market. It tokenizes assets into fractional units that anyone, including big and small investors, can own. The project provides unique utility by solving key problems in traditional finance. Many traders are beginning to notice Rexas Finance's potential, shifting their attention from tokens like Pepe Coin (PEPE) and Dogecoin (DOGE) to RXS. Although Pepe Coin and Dogecoin have long been popular among memecoin lovers, investors are progressively turning toward RXS for its strong foundations and use cases, something memecoins cannot offer. What Makes Rexas Finance Stand Out? Rexas Finance is at the forefront of RWA tokenization, an innovative concept transforming real-world assets into digital tokens. It converts assets like real estate and art into tradable blockchain tokens. This innovative approach allows anyone to access high-value investments. Even smaller investors can participate in markets traditionally reserved for the wealthy. The project converts real-world assets like real estate and art into tradable units. Through tokenization, both small and big investors can buy expensive assets. Through tokenization, Rexas Finance creates opportunities for investors in the crypto market by offering many token use cases. Besides eliminating the cost barrier, Rexas Finance also allows RWAs to be accessible worldwide. Assets like immovable real estate can easily be accessed in fractions on blockchains. These assets can be bought from the comfort of your house; investors do not have to travel great distances to buy them. Rexas Finance is thereby making the market open to many investors. Blockchain technology also reduces issues regarding fraud and lack of transparency, making the market more efficient. Why Are Pepe Coin and Dogecoin Holders Opting for Rexas Finance? Both Pepe Coin and Dogecoin have enjoyed massive popularity due to their memetic appeal and strong community support. However, their value is primarily hype-driven, and they have limited use cases beyond speculative trading. On the other hand, Rexas Finance provides real-world applications, giving it a competitive edge in a market increasingly focused on utility. RXS's ability to tokenize assets solves critical issues such as illiquidity, high transaction costs, and market inaccessibility. Moreover, the platform's user-friendly tools make tokenizing assets easy for anyone. Strong Growth Potential of RXS Rexas Finance presale has been outstanding, with over \$37 million raised so far. It's currently at stage eleven, and RXS is worth \$0.175. This reflects a 483% increase from the token's initial price of \$0.03. This remarkable increase has fueled optimism about the token's future potential. This has further found solid ground, with analysts predicting it could surge by 10,000%. This outstanding growth trajectory sets early investors up for enormous returns. The platform's forthcoming launch on three top exchanges could increase its adoption and price appreciation even further. CertiK has also thoroughly audited the project's code for vulnerabilities, strengthening investors' confidence. Additionally, RXS is listed on CoinMarketCap and CoinGecko, giving investors access to real-time data. Also, Rexas Finance is building a community by running a giveaway offer where twenty lucky winners get \$50,000 each. The initiative also stands out for its focus on community building. In line with that, Rexas Finance is giving away \$50,000 each to twenty fortunate presale participants. Tools that Redefine Tokenization Rexas Finance's ecosystem is designed to make tokenization accessible and efficient. Key tools include: - Rexas Token Builder is a no-code platform that allows users to create tokens effortlessly. - Rexas GenAI is an AI-powered platform that enables creators to design NFTs and tokenize digital art. - Rexas Treasury is a multi-chain yield optimizer that uses advanced algorithms to identify the best yield farming opportunities. - Rexas QuickMint Bot works on messaging platforms like Telegram and Discord. It allows users to create and deploy tokens directly from their mobile devices. - Rexas Estate supports fractional ownership of real estate. Users can invest in fractions or whole assets. RXS Token Launch: A Catalyst for a Mega Rally While memecoins are entertaining and can offer short-term gains, they lack the sustainability and long-term potential that RXS brings to the table. Rexas Finance offers both massive upsides and utility, making it an attractive opportunity for investors. The token has already witnessed significant growth. This has built optimism that it could surge by over 10,000% within a few months. This provides incredible returns for investors, making it a standout choice. With the RXS token launch coming up, now is a great time to invest in the presale for exciting returns. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market never stops evolving, and investors are always on the lookout for the next breakout stars. Lightchain AI, MetaNova (MNV), and AquaChain (AQC) are three of the hottest new coins analysts are betting big on, thanks to their groundbreaking technologies and immense growth potential. With Lightchain AI's presale raising over \$11 million at \$0.00525 per token, these coins are reshaping the blockchain landscape and offering unparalleled opportunities for early adopters. MetaNova (MNV) Building the Future of Metaverse Economies MetaNova Verse (MNV) is a next-generation Layer 1 blockchain platform designed to empower developers, businesses, and communities by providing a robust foundation for decentralized applications. Optimized for speed, scalability, and security, MNV ensures efficient operations with lightning-fast transactions and minimal gas fees. Its cross-chain compatibility facilitates seamless interoperability with other blockchains, unlocking new possibilities in decentralized finance (DeFi) and beyond. The platform's developer-friendly environment offers comprehensive tools and resources, fostering innovation and collaboration within its ecosystem. Additionally, MNV's commitment to sustainability is evident through its energy-efficient design, aligning technological advancement with environmental responsibility. AquaChain (AQC) Revolutionizing Water Conservation with Blockchain AquaChain is a blockchain-based system designed to enhance water and waste resource management by leveraging Solana's scalable and cost-effective infrastructure. It employs smart contracts to implement innovative water tariff structures that consider factors such as seasonal and geographical variations, aiming to optimize water usage and promote conservation. By utilizing real-time monitoring and tokenized transactions, AquaChain facilitates automated billing and resource tracking, ensuring transparency and efficiency in water distribution and wastewater treatment processes. This approach addresses challenges like water scarcity and infrastructure inefficiencies, particularly in regions such as the Caribbean, by incentivizing sustainable practices and enabling fair pricing mechanisms. Lightchain AI Where Blockchain Meets Artificial Intelligence Lightchain AI is spearheading a new wave of blockchain innovation by seamlessly integrating artificial intelligence into decentralized systems. The platform addresses inefficiencies in industries such as automation, data analytics, and real-time decision-making, making it a go-to choice for developers and enterprises alike. Lightchain AI's unique features include its decentralized infrastructure optimized for high-efficiency computations and its ability to handle AI-driven workloads securely. As the adoption of AI grows across industries, Lightchain AI's advanced capabilities position it as a leader in this transformative market. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is buzzing with excitement as new projects and established favorites position themselves for potential gains in 2025. Among the top coins gaining traction are Lightchain AI, Shiba Inu (SHIB), and Bonk, each offering unique opportunities for investors. With Lightchain AI's presale surpassing \$10.9 million at a price of \$0.00525, it's clear that these tokens are setting the stage for significant growth. Lightchain AI Redefining Blockchain with AI Integration Lightchain AI is shaking up the cryptocurrency world by fusing the power of artificial intelligence with blockchain technology. Developers can now build smart, decentralized applications (dApps) that tackle real-world

problems in revolutionary ways. And the buzz is real! Lightchain AI has already raised an impressive \$10.9 million during its presale, a clear sign of strong market confidence. For investors, the potential is hard to ignore. A \$500 presale investment could secure 95,238 tokens, with projections estimating a token value of \$2.50 by 2025. That's a staggering potential return of \$238,095! With cutting-edge tools for developers and a forward-thinking vision, Lightchain AI isn't just another crypto project—it's a game-changing opportunity for short-term gains and long-term growth. Don't miss your chance to be part of this revolutionary journey. Shiba Inu (SHIB) Meme Coin With Staying Power Shiba Inu (SHIB), launched in August 2020 by the pseudonymous Ryoshi, has evolved from a meme-inspired cryptocurrency into a significant player in the digital asset space. Built on the Ethereum blockchain as an ERC-20 token, SHIB has developed a comprehensive ecosystem that includes ShibaSwap, a decentralized exchange; Shibarium, a layer-2 solution for enhanced scalability; and Shiboshis, a collection of unique NFTs. This expansion has attracted a passionate community known as the ShibArmy, which has been instrumental in promoting and supporting the project's growth. Analysts note that SHIB's real-world applications and partnerships, such as the collaboration with Zama.ai to enhance security in financial technologies, have further solidified its position beyond that of a typical meme coin. Bonk Community-Driven Contender Bonk (BONK), launched on December 25, 2022, is a community-driven meme coin operating on the Solana blockchain. Positioning itself as the first Solana dog coin for the people, by the people, Bonk aims to revitalize the Solana ecosystem by empowering its community. Half of its total supply was airdropped to various Solana users, including artists, developers, and collectors, fostering inclusivity and broad participation. Bonk's integration with Solana ensures high-speed, low-cost transactions, enhancing its appeal within decentralized finance (DeFi) and non-fungible token (NFT) platforms. Its deflationary tokenomics, featuring token burns, aim to increase scarcity and value over time. The project's emphasis on community engagement and fair distribution has garnered a dedicated following, distinguishing it from other meme coins and contributing to its growing prominence in the crypto space. - <https://lightchain.ai> - <https://lightchain.ai/lightchain-whitepaper.pdf> - <https://x.com/LightchainAI> - <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. Coinomi, the trusted pioneer in secure, multi-chain cryptocurrency wallets since 2014, celebrates its 10th anniversary with a bold vision for the future. Under the continued leadership of founder Giannis Jevatanis and the return of director Koby Lazar, Coinomi is strengthening its commitment to privacy, innovation, and user empowerment. A Decade of Innovation in Crypto Wallets Since its founding, Coinomi has been a cornerstone of the cryptocurrency ecosystem, renowned for introducing multi-chain wallet support. As one of the first wallets to support multiple blockchains, Coinomi's influence has shaped countless other wallets and blockchain projects. Now, with its renewed focus, Coinomi is poised to meet the demands of today's rapidly evolving crypto landscape. Empowering Users with Privacy and Freedom Coinomi has always stood for privacy, security, and user control, said Giannis, Coinomi's founder. With the growing challenges in today's crypto space, our mission to provide a fast, secure, and privacy-centric wallet is more important than ever. Upcoming Innovations from Coinomi - Open-Source Crypto Wallet Development Coinomi is transitioning back to a fully open-source development model, ensuring greater transparency and fostering collaboration with the global blockchain community. This move underscores Coinomi's dedication to security, reliability, and community-driven progress. - Expanded Multi-Chain Support By early 2025, Coinomi will integrate an additional 50 blockchains, including high-demand networks like Solana. This significant expansion will solidify its status as a top-tier multi-chain cryptocurrency wallet, empowering users to manage diverse assets on a single platform. - Enhanced User Experience Major updates will introduce speed improvements and refined UI/UX features, catering to both new users and seasoned crypto enthusiasts. Coinomi's intuitive design ensures effortless crypto portfolio management. Leadership Rooted in the Crypto Community Reflecting on Coinomi's journey, Koby Lazar, CEO of Eucalyptus Labs and returning director at Coinomi, shared: I first discovered Coinomi as a teenager in 2014 when the crypto space was still uncharted territory. That initial passion evolved into a professional mission, leading me to work alongside the pioneers who shaped Coinomi. Today, I'm honored to lead this team into a new era, staying true to our community-focused roots while driving innovation. Remaining Independent in a Changing Crypto Landscape Amidst growing consolidation in the crypto wallet space, Coinomi remains fiercely independent, allowing the platform to: - Innovate freely without corporate restrictions - Respond quickly to user feedback - Prioritize community-driven development For 10 years, Coinomi has adhered to its core principles of security, privacy, and usability. As it embraces open-source development and expands blockchain support, Coinomi is set to continue empowering cryptocurrency users worldwide. About Coinomi Founded in 2014, Coinomi is a trailblazer in cryptocurrency wallet technology, known for its early adoption of multi-chain support and Web3 functionality. With a focus on privacy, security, and user-friendly design, Coinomi has served millions of users globally. Backed by Eucalyptus Labs, Coinomi is committed to providing a transparent, secure, and community-focused platform for managing digital assets. - Ethereum TVL share decreased to a 3-month low of 54% in January 2025. - Ether is trading at \$3,368 currently, with a daily increase of 4%, after a month-long downward trend. Ethereum dominance is gradually decreasing among blockchains that enable dApp development and DeFi. With the emergence of blockchain networks such as Solana, Tron, Sui, Base, Hyperliquid, Ethereum is losing its share of TVL in the blockchain ecosystem. Even the short bull run we witnessed in December 2024 couldn't favor the second largest cryptocurrency by market cap. As per DeFiLlama statistics, Ethereum TVL share recorded a 3-month low in January 2025. Ethereum used to capture around 60% of the total DeFi TVL in mid 2024. However, by the end of the year, it dropped to 56% and further plunged to 54% this month. On the other hand, Tron blockchain recorded its highest TVL share of 17% in Sept 2024, which also dropped this month to 5.82%. Will Ethereum Reclaim its Dominance in 2025? Ethereum witnessed a significant decrease in its dominance over other layer1 blockchains with dApp support. As per Matrixport report, Ethereum dominance decreased from 18% to 12% by the end of 2024. The attention shifted from Ethereum to other blockchain networks such as Solana, Tron, and Sui, particularly in 2024. Matrixport further stated that Ethereum could regain its dominance in 2025. While Bitcoin acts as the initiator of the bull run, Ethereum has been prepping for a bigger price rally in 2024. However, Ethereum has to come up with more adoption and large institutional investor accumulations to regain its dominance. While most of the altcoins recorded ATH values in December 2024 bull run, Ether struggled hard to stay above the \$4,000 price level for the entire 2024. After a month-long downward trend, Ether price rose by 5% today and is currently trading at \$3,380. With the anticipation of a larger crypto bull run in 2025, upcoming Trump's inauguration, combined with institutional inflows into Ether ETFs, Ethereum could regain its dominance among altcoins and layer1 blockchains in 2025.

Crypto staking is revolutionizing the way investors earn passive income in the digital asset space. By staking cryptocurrencies, users can enjoy the highest APY crypto staking while contributing to the security of blockchain networks. Although there are countless crypto staking platforms, selecting the best platform to maximize your earnings will be difficult. We present the top 5 crypto staking platforms of 2025. Keynode is the best choice of all. 1. Keynode The Premier Staking Platform Why Keynode Takes the Top Spot: - Industry-Leading APY: Earn up to 17% annual percentage yield (APY), making it one of the most lucrative options in the market. - Welcome Bonus: New users immediately receive a \$100 bonus upon registration, connected to the ETH Lite Plan for a seamless onboarding into crypto investment. - Unmatched Security: Built with institutional-grade security, Keynode prioritizes safeguarding user assets while maintaining operational transparency. Why Choose Keynode.net? Keynode.net has always been concerned about security and flexibility, which allows you to protect your assets through top-tier security standards in collaboration with regulated entities. Various crypto staking plans align with different investment goals, empowering you to optimize your crypto's potential, whether you're new to crypto or an experienced investor. How to Get Started with Keynode.net in 3 Simple Steps Getting started with Keynode.net is simple, and easy. You can start earning rewards from staking without prior knowledge and experience. Follow these three simple steps to begin earning staking rewards: - Sign Up: Create your account on Keynode.net with a simple registration process, you'll be ready to start staking in no time. - Select an Asset to Stake: Choose from our variety of staking plans to find the best fit for your investment goals. Whether you're looking for short-term gains or long-term growth, we've got options to suit your needs. 3. Earn Rewards: Once your assets are staked, you'll start earning daily rewards effortlessly. Monitor your portfolio growth as your crypto works for you. Join the Keynode Affiliate Program and Maximize Your Earnings! The Keynode Affiliate Program will unlock your earning potential. With an affiliate, one earns a referral commission of 4% when the other users make a purchase through a referral link. The program is so designed to keep on offering fantastic benefits and makes sharing Keynode with others quite easy and rewarding. Benefits of the Keynode Affiliate Program: - No Deposit Required Enjoy all the perks of our affiliate program without needing to make an initial deposit. - High Pay-Outs Earn up to 4% in referral rewards for every purchase made by users you refer. - Instant Payments We think it's important to quickly reward our partners! When you refer someone, the reward is added to your account right away in cryptocurrency, so you can easily get your money. - No Limits on Referrals There are no restrictions on how many users you can refer. Your earning potential is limitless, allowing you to grow your income as your network expands. How It Works: Keynode Affiliate Program 1. Sign Up and Get Your Referral Link: Join the affiliate program and get the unique referral link instantly. This link will track all your referrals, you will get rewards for every purchase made through it. 2. Invite Your Friends: Share your referral link with friends, family, or anyone interested in crypto. You will earn more when you invite more people! 3. Earn Rewards: Once your referrals complete their purchases using your link, you'll receive your commission immediately. 4. Get Your Rewards: See your earnings increase as you invite more users. Benefit from immediate cryptocurrency payments sent straight to your account. Active Users Bonus Structure Keynode.net not only offers generous referral commissions through its affiliate program but also rewards you for maintaining a network of active users. Every user who purchases a product on the platform becomes an active user, unlocking additional bonuses as your referral count grows.
