

indicator value is 0.16 indicating increased capital influx. Moreover, its RSI standing at 73.09 suggests an overbought market situation. However, the crypto market has also witnessed increased liquidations in the past few hours. This was observed following the digital asset hitting its new high. Other cryptocurrencies such as Ethereum have also shown upward trends. Highlights Crypto News Today: ASIC Proposes Strict Licensing Rules for Crypto Firms in Australia

Today, Zeus Network announced that ZeusNode, the core infrastructure based on the Solana Virtual Machine (SVM), is live. With its first epoch well under way, Zeus has also released its whole roadmap for ZeusNode's cross-chain framework, which will easily integrate Bitcoin liquidity into Solana's blockchain. As the cornerstone of Zeus Network's cross-chain framework, ZeusNode presents its Guardian program, which establishes two separate categories of validators: Guardians and Institutional Guardians. While Institutional Guardians are designed for big organizations that can handle substantial amounts of \$BTC, Guardians may assign \$ZEUS to the network. ZeusNode Guardians use a Multi-Party Computation (MPC) model to make sure that Bitcoin transactions on Solana are safe and trustless. Guardians preserve the integrity of every transaction and uphold the network's security requirements while enabling smooth Bitcoin operations across Solana's blockchain using a decentralized validation and signing mechanism. While \$ZEUS deposits are locked for a six-month period to maintain network liquidity and security requirements, Institutional Guardians have freedom with their \$BTC deposits. Holders of \$ZEUS may also assign their tokens to Guardians, which helps to secure the network while rewarding them. ZeusNode uses a dynamic ratio mechanism linked to \$ZEUS delegation and \$BTC liquidity as part of the network's scaling approach. To facilitate the onboarding of Bitcoin liquidity into the network, the initial \$ZEUS-to-\$BTC ratio is established at 20,000:1. In order to guarantee flexibility and response to market situations, this ratio dynamically changes whenever a Guardian hits a delegation level of 5,000,000 \$ZEUS, enabling infinite \$BTC inflow capacity. Justin Wang, Co-founder and CEO of Zeus Network said: "Zeus Network and its Guardians are redefining Bitcoin's liquidity utilization, providing permissionless pathways for Bitcoin integration on Solana. With these new pathways for investments and validation, Zeus is the go-to choice for Bitcoin holders and institutions looking to leverage Bitcoin in a high-performance environment." The first Epoch of the ZeusNode roadmap's phased approach to capacity development is now in progress. - Epoch 1: Establishing a security foundation with a 25 BTC capacity and a 500,000 \$ZEUS delegation. - Epochs 2 and 3: Institutional Guardians are added, and the number of Guardians is increased to four, allowing for a total capacity of 1,100 BTC with up to 12,000,000 \$ZEUS delegated. - Epochs 4 and 5: Targeting 2,250 BTC inflow and delegating up to 25,000,000 \$ZEUS to onboard 1% of Bitcoin liquidity onto Solana, scaling to full capacity with 10 Guardians and several Institutional Guardians. - Epochs 6 and 7: Expanded asset capabilities and the integration of UTXO-based assets, such as \$DOGE, \$LTC, and \$KAS, open the door for smooth Bitcoin liquidity management on Solana. Zeus Network offers an interoperable solution for the Solana ecosystem, revolutionizing blockchain interaction. Zeus Network, which is powered by Solana Virtual Machine (SVM), enables Zeus Nodes to provide strong security and smooth data transfer. This endeavor makes it possible for Solana to emerge as the leading hub for all ecosystems, enthralling millions of people on many blockchains. By enabling interoperable communication amongst cross-chain dApps, Zeus Network enables complex apps and liquidity to interact with Solana in a decentralized, permissionless environment that is open to everyone.

- With 2.38% of BTC's total supply, IBIT becomes a significant participant in the crypto industry. - The asset manager accomplished this milestone in less than a year following the IBIT debut in January. Despite having only been available for trading for a little over a year, the BlackRock Bitcoin ETF (IBIT) has already amassed assets under management of about \$50 billion. That puts IBIT in the conversation for best ETF launch of 2024. With daily inflows into IBIT, market observers are eagerly anticipating the BTC price to surpass \$100,000. Massive Accomplishment in Less Than a Year A significant milestone was reached last week when the holdings of the BlackRock Bitcoin ETF (IBIT) surpassed more than 500,000 BTC. With \$48 billion in assets under management at the current Bitcoin price of \$96,000, that asset manager accomplished this milestone in less than a year following the IBIT debut in January 2024. With 2.38% of Bitcoin's total supply, IBIT becomes a significant participant in the crypto industry. Market watchers predict that IBIT might amass approximately 1 million BTC in the next few years, given the present rate of adoption. Not only that, but IBIT has lately been more exposed to the regular BlackRock funds as well. Noting that IBIT has already surpassed the iShares Gold ETF (IAU), which launched in 2005, Nate Geraci, President of the ETF Store, emphasized the incredible achievement in a recent statement. In addition, he said that despite skepticism over the need for a Bitcoin exchange-traded fund (ETF), the meteoric rise of IBIT has surprised everyone. Even more impressive is the fact that IBIT owns more than 500,000 Bitcoins in its vault, surpassing MicroStrategy's 402,100 Bitcoins. With a market valuation of \$1.91 trillion, the price of Bitcoin is presently trading at 96,262. Also, with Bitcoin hitting a big sell-wall near \$100,000 levels, daily trading volumes have been rather low. The selling pressure was mostly caused by long-term holders profit-booking. Highlighted Crypto News Today:

- Roger Ver faces U.S. tax evasion charges over a 2017 Bitcoin sale. - If convicted, Ver could face up to 30 years in prison. Roger Ver, known as "Bitcoin Jesus," is challenging a U.S. tax evasion indictment. The U.S. Attorney for the Central District of California has accused Ver of dodging over \$48 million in taxes. The charges stem from his 2017 sale of \$240 million worth of Bitcoin. In response, Ver's legal team is seeking to dismiss the charges, claiming that the case is unconstitutional. Ver renounced his U.S. citizenship in 2014. He became a citizen of Saint Kitts and Nevis and moved his business interests abroad. However, the U.S. tax system requires individuals who expatriate with assets over \$2 million to pay an "exit tax." Ver allegedly failed to file the required exit tax return, triggering the current charges. Ver's legal team argues that the IRS's exit tax laws are both vague and unconstitutional. They claim that the tax violates the Due Process

and Apportionment Clauses of the Constitution. Furthermore, they assert that the tax guidelines were unclear regarding digital assets, such as Bitcoin, at the time of the sale. Prosecutors also accuse Ver of underreporting his Bitcoin holdings in 2017. They claim he concealed the true extent of his Bitcoin ownership. Ver's companies, MemoryDealers and Agilestar, reportedly held around 70,000 Bitcoin at that time. Ver Cites Legal Ambiguities In 2017, Ver allegedly sold tens of thousands of these coins, generating \$240 million in revenue. According to the indictment, Ver provided false information about his assets, intentionally undervaluing them. Ver's defense counters these allegations by emphasizing the lack of clear guidelines for Bitcoin and other digital assets at the time. They point to evidence that shows Ver had no intent to violate tax laws. They also argue that Ver sought professional advice to ensure compliance with tax rules. Additionally, his lawyers claim that prosecutors misused privileged communications and ignored key evidence that supports Ver's case. If convicted, Ver could face up to 30 years in prison, depending on the charges. However, his legal team is hopeful that the new, crypto-friendly U.S. administration will impact the case's outcome. Ver's defense also includes claims of selective enforcement, citing his outspoken criticism of U.S. crypto regulations. Ver remains out on bail in Spain, where he is awaiting possible extradition to the U.S. for a trial scheduled for February 2025. Highlighted Crypto News Today Saxo Predicts Crypto Market Could Quadruple to \$10T in 2025

Undoubtedly, many people consider Bitcoin (BTC) the king of cryptocurrencies and the best possible haven out there. However, for experienced traders, knowing how to invest in other great projects can help break up the monotony of trading only one type of coin over the long horizon. While Bitcoin remains the ideal choice for most, many altcoins can appeal to those who want growth and security. Some of the most appealing options are Rexas Finance (RXS), Solana (SOL), Injective (INJ), and Sei (SEI). Here's why these cryptocurrencies stand out, with Rexas Finance taking the spotlight as the top pick. Rexas Finance (RXS): Bridging Real-World Assets with Blockchain The tokenization of Real World Assets (RWA) on Rexas finance (RXS) permits RXS to change investors' perspectives on the blockchain world. For example, it enables people to buy shares of high-value assets like properties, artwork, and other intellectual properties that most individuals cannot acquire. Rexas Finance operates as an ERC-20 token on the Ethereum chain, where users enjoy security and growth. A presale currently in stage 9 for the project is ongoing at \$0.125, while the expected price listing is \$0.20. With more than 290 million tokens sold, the presale has secured \$21 million, exhibiting great confidence from investors. It is observed that RXS's post-listing price could grow exceptionally well, especially since CertiK provided an audit, which adds a lot of trust, and being listed on CoinMarketCap and CoinGecko promotes their brand. Furthermore, developing and launching new features of Rexas Finance, such as Rexas Launchpad and Token Builder, allows the company to be considered one of the key platforms for tokenization solutions for developers and businesses that are in demand. As the vision is clear with increasing adoption going forward, RXS is safe and highly rewarding for long-time investors. Solana (SOL): A High-Performance Blockchain Powerhouse Solana has established itself progressively throughout the years as one of the fastest and most scalable blockchain networks with the potential to execute thousands of transactions per second. It employs an original hybrid consensus mechanism that integrates with Proof of History and Proof of Stake, the network performs at unforeseen speed and efficiency. Solana has managed to range between 230-240 dollars, indicating some good support levels in the asset. Its ecosystem, which is amenable to the development of DeFi platforms, NFTs, and dApps, is still drawing both developers and institutional investors. Solana enjoys a market valuation of over \$112 billion as of this writing and is the leader amongst Ethereum replacements, which ensures good long-term returns. Although the narrative of Solana being a centralized network always hovers in the background, the persistent network updates and enhancement of its ecosystem help Solana retain its position as one of the best cryptocurrencies. Injective (INJ): The DeFi Powerhouse One of the fastest blockchain implementations -The Injective Protocol is accelerating this vision through its newly developed layer 1 blockchain, which involves decentralizing the financial services industry. Some of its distinct advantages, even from other dapp blockchains are that it has no gas fees and the provision of sophisticated contracts. From a technical analysis perspective, growth is provided by developing an expanding ecosystem and partnerships. The price chart has been sustained on a consistent upward incline, which has been reinforced by increasing trading volumes and a solid community. Injective's attention to detail regarding the design of the processes involved gives it an advantage over its competitors. It is important to be interoperable, and in a market where blockchains are becoming increasingly interrelated, Injective is a good long-term investment. Sei (SEI): The Optimized Blockchain for Trading Sei Network is a Layer 1 blockchain that is developed to streamline trade into one ecosystem. Its architecture is appropriate for Decentralized Exchanges and trading apps, with a specific focus on low latency and high throughput In a way, the Sei price has been in range for quite some time, with excellent support levels developed around the key Fibonacci retracement areas. Its unique features, like native order-matching and frontrunning prevention, make it a favorite among developers looking to build decentralized trading platforms. Sei's focus on optimizing the trading experience positions it as a niche player with strong growth potential. As more applications launch on its network, Sei is poised to attract significant adoption and become a staple in the blockchain ecosystem. Conclusion: Rexas Finance Leads the Pack While Solana, Injective, and Sei all present robust opportunities for long-term profits, Rexas Finance stands out as the safest and most promising investment. Its innovative approach to tokenizing real-world assets, solid technical foundation, and strong presale performance make it a compelling choice. Investors seeking stability, growth potential, and cutting-edge innovation should keep Rexas Finance at the top of their watchlist. With its ability to bridge traditional and digital finance, RXS is not just a cryptocurrency; it's a transformative force in the blockchain space. Cryptocurrency has always been about identifying opportunities before they explode. Back in 2017, Bitcoin's meteoric rise made headlines worldwide, turning modest investments into fortunes. Fast forward to today, and another low-cap crypto, Lightchain Protocol AI (LCAI), is emerging as the next big thing. With its revolutionary approach to blockchain and artificial intelligence (AI) integration, Lightchain AI is positioned to deliver returns that could outpace even Bitcoin's legendary bull run. For just \$50, early investors in the Lightchain AI presale could see their stake multiply to \$5,200 in record time. Lightchain AI: The Future of Blockchain and AI What makes Lightchain AI stand out in the crowded cryptocurrency market is its innovative technology. While many projects promise high returns, Lightchain AI delivers a unique value proposition by merging blockchain with AI. Its platform is designed to address critical challenges like scalability, privacy, and equitable access to AI tools, making it a game-changer for the industry. Key features of Lightchain AI include:

- Proof of Intelligence (PoI): A groundbreaking consensus mechanism that incentivizes nodes for performing AI tasks like machine learning training and inference, rather than traditional mining or staking.
- Artificial Intelligence Virtual Machine (AIVM): A specialized virtual machine optimized for executing AI workloads on the blockchain, enabling seamless integration of AI-driven applications.
- Scalable and Secure: Lightchain AI incorporates advanced solutions like Zero-Knowledge Proofs (ZKPs) and federated learning to ensure data privacy and high throughput.
- Token Utility: The Lightchain Token (LCAI) powers transactions, governance, and access to premium AI services, creating constant demand and value for the token.

With these features, Lightchain AI offers more than speculative hype—it's a platform built for real-world impact and sustainable growth. Why \$50 Could Turn Into \$5,200 Lightchain AI's presale is a rare opportunity to get in on a promising project at the ground floor. Early-stage tokens often offer the most significant growth potential, and LCAI is no exception. Here's why your \$50 could grow exponentially:

- Presale Pricing Advantage: During the presale phase, LCAI tokens are priced well below their expected market value, providing incredible upside potential.
- Rising Market Demand: Lightchain AI addresses the intersection of blockchain and AI—two industries experiencing rapid growth and adoption.
- Token Scarcity: With a fixed supply of tokens, the value of LCAI is likely to rise sharply as demand increases post-launch.

Bitcoin's 2017 bull run turned modest investments into life-changing sums because of early adoption. Lightchain AI offers a similar opportunity with a much lower barrier to entry, making it accessible for all investors. Real-World Applications of Lightchain AI One of the reasons Lightchain AI is expected to see rapid adoption is its focus on solving real-world problems. Its platform supports applications across multiple industries, including:

- Healthcare: Securely analyze sensitive patient data using AI, improving outcomes without compromising privacy.
- Finance: Deploy AI models for fraud detection, risk analysis, and predictive insights to democratize financial tools.
- Supply Chain Management: Optimize logistics and transparency with decentralized AI-driven solutions.
- AI Marketplaces: Businesses can access a decentralized marketplace for AI services, reducing costs and increasing security.

These applications ensure that Lightchain AI isn't just a speculative investment—it's a token with genuine utility and long-term potential. How Lightchain AI Stands Out From Other Low-Cap Tokens The crypto market is no stranger to low-cap tokens promising exponential returns. However, many lack the substance to sustain growth. Lightchain AI distinguishes itself with its focus on innovation and utility:

- Technological Leadership: With PoI and AIVM, Lightchain AI introduces groundbreaking advancements in blockchain and AI integration.
- Real-World Relevance: While many tokens rely solely on market hype, LCAI's applications in AI and blockchain ensure sustained demand.
- Scalability: Lightchain AI's infrastructure is built to handle complex AI workloads, making it ideal for enterprises and developers.

For investors seeking a low-cap crypto with the potential for massive returns, Lightchain AI offers an unmatched combination of innovation and market relevance. Why Act Now? Timing is everything in cryptocurrency, and the Lightchain AI presale is your chance to act before the project gains widespread attention. Bitcoin's early investors saw massive returns because they acted before the mainstream caught on. Lightchain AI presents a similar opportunity with an even greater focus on real-world utility. A \$50 investment in LCAI during the presale phase could multiply into \$5,200 as adoption accelerates and demand for the token surges. With its unique approach to blockchain and AI, Lightchain AI is poised to redefine the crypto landscape—and early investors stand to benefit the most. Final Thoughts: Secure Your Spot in the Next Big Thing As the crypto market evolves, Lightchain AI is emerging as a leader in innovation and growth potential. Whether you're a seasoned investor or new to cryptocurrency, this low-cap gem offers a chance to be part of something transformative. Don't wait—join the Lightchain AI presale today and secure your place in a project that could deliver returns faster than Bitcoin's legendary 2017 run. - Bitcoin steadies at \$95K despite whale activity and political turmoil.
- MicroStrategy continues aggressive Bitcoin purchases, holding over 400,000 BTC.

Bitcoin (BTC) remains steady around the \$95,000 mark despite fluctuations. Trading at \$95,463 at the time of writing, the cryptocurrency has seen a 4.1% weekly gain and a modest 0.39% surge over the past 24 hours. After reaching an all-time high of \$99,655 on 11 November, Bitcoin's momentum has slowed, with analysts closely monitoring whale activity and broader market dynamics. Key metrics like Bitcoin's MVRV ratio, at 2.57, signal moderate profitability without overvaluation risks. Additionally, active addresses, a measure of network activity, have rebounded to over 900,000 after briefly dipping below 750,000 in early December, indicating renewed retail interest. The daily RSI shows that it is reaching an overbought

scenario. Meanwhile, MicroStrategy continues its aggressive Bitcoin acquisition strategy, now holding 402,100 BTC worth \$38.2 billion at an average purchase price of \$58,263. The company recently raised \$1.5 billion through share sales to buy 15,400 BTC between 25 November and 1 December. However, MicroStrategy's market capitalization has declined by over 35% since its November peak, erasing more than \$30 billion in value. Also, Bitcoin miner MARA Holdings acquired 6,484 BTC in October and November, bringing its holdings to 34,959 BTC, valued at \$3.3 billion. Tension Aroses Around BTC With K-Political Drama In South Korea, crypto trade volumes surged to a record \$34.2 billion in 24 hours amid political turmoil. President Yoon Suk-yeol declared martial law late Tuesday, sparking panic selling on local exchanges. Upbit alone processed \$27.25 billion in trades, with Bitcoin briefly dropping to 88 million won. The martial law was rescinded six hours later following a unanimous parliamentary vote. While prices have since stabilized, South Korea's opposition party plans to file treason charges against Yoon and key ministers, raising further political and market uncertainty. Highlighted News Of The Day BNB Price Jumps to New All-Time High Breaking Key Resistance Level

- The US government moved seized funds from the FTX cases in the last few hours. - FTX has been fumbling with a creditors' repayment plan over the past year. The crypto market is ablaze with activity as several altcoins stage bull runs. In an additional spur, discussions on who would succeed Gary Gensler as SEC Chair have spiked quite the interest. Prominent journalists such as Eleanor Terret speculate that Paul Atkins will be the next SEC Chair. Meanwhile, the US government has continued moving seized funds to anonymous wallets, intensifying further speculative areas in the sector. According to Arkham Intelligence data, the US government has moved funds worth approximately \$33.60 million in the last 10 hours. These funds were in the form of various cryptocurrencies, particularly altcoins. Some included ETH, WBTC, BUSD, SHIB, and other tokens. Moreover, these tokens were part of the funds the US government seized during the FTX collapse. The government seized these crypto funds in association with the FTX Alamada cases, two years back, in 2022. Arkham Intelligence updates show that the funds were moved to two anonymous wallets " " and " ". Previously, over the past day, the US government also caught market attention with the movement of another set of seized funds. These were Bitcoin tokens seized from the Silk Road cases. The wallet moved 19.8K BTC worth \$1.9 billion roughly 20 hours ago to a Coinbase wallet. How Is the FTX Repayment Plan Coming Along Amid US Government Transfers? Over the past year, the FTX crypto exchange has made several announcements regarding its repayment plans. In multiple instances, this has even contributed to existing bull runs in the market. Recently, on November 21, the firm stated that it would finalize plans by the end of December. Additionally, the FTT token has also witnessed several price surges in the past month. This resulted from rumors about the creditors' repayments prior to the official announcement. Meanwhile, the US government moving seized funds has sparked previous debates within the community. Finally, there have been no specific comments from sources within the authority regarding the transfers. The cause and reason behind this action have not yet been revealed. Highlighted Crypto News Today: Grayscale Files for Solana Spot ETF Listing on NYSE Amid Crypto Optimism

- Bitcoin has experienced a modest 0.49% price dip in the last 24 hours. - Investors anticipate whether the cryptocurrency will hit \$100K this month. The cryptocurrency market has remained bullish in the last 24 hours, as indicated by the market cap showing a 1.12% increase. However, signs of monthly first-week slumber can be detected, particularly in the leading assets. On the other hand, the market itself has remained quite active, with Michael Saylor's Bitcoin advocacy and altcoins surging. Meanwhile, the largest cryptocurrency, Bitcoin, has incurred a modest price dip of 0.49% in the past day. This downward trend has caused the token to fall back to the \$95K level. Bearish candles have pulled Bitcoin's price down by almost a thousand dollars. At the time of writing, BTC was trading at \$96,119, as per CMC data. This price activity reflects a prolonged consolidation in Bitcoin price activity. The digital asset's weekly chart further highlights the phase while showing a modest price increase of 1.67%. Seven days ago, Bitcoin's price was just recovering from its \$92K slump caused by the liquidations of long-term holders. Looking for reassuring insights from the community, market expert Ali (@ali\_charts) states that Bitcoin must hold above \$96,175. In such a case, the bulls are in favor. As long as #Bitcoin \$BTC holds above \$96,175, the odds favor the bulls! pic.twitter.com/18097D1APF " Ali (@ali\_charts) December 1, 2024 Although the cryptocurrency seems to have bounced back, it shows strong resistance at \$97,000 after this recent dip. Additionally, in the past day, fueled by Michael Saylor's proposing Bitcoin to Microsoft the token tested \$97K. Is Bitcoin Price Waiting For Bullcember to Hit \$100K? The cryptocurrency's technical indicator RSI stands at 63.59 after leaning towards an overbought situation earlier as per TradingView data. This is suggestive of a neutral investors' sentiment indicating possibilities for incoming bull runs. Additionally, Bitcoin is also trading closer to Ali's predicted price of \$96,175 in the past hour. Moreover, the asset's long-term bull power indicator value is 11.67, while the bear power indicator value is -1.29. This shows that Bitcoin still holds an opportunity to stage its bull run. Additionally, historic data elucidates several consolidation phases between bullish cycles as reflective of current market conditions. Meanwhile, Ethereum has also shown a modest price dip in the past day. Highlighted Crypto News Today:

- The firm now has 402,100 BTC, or more than 1.2% of the entire supply of Bitcoin. - The company paid \$23.4 billion, or \$58,263 per coin, for these coins. For the fourth week in a row, software firm MicroStrategy has bought Bitcoin, marking another acquisition. As a result of this change, the firm now has 402,100 BTC, or more than 1.2% of the entire supply of Bitcoin. A press statement was issued by the corporation announcing the acquisition of 15,400 BTC for \$1.5 billion, with an average price of \$95,976 per bitcoin. The return on bitcoins obtained so far is 38.7% for the quarter and 63.3% for the year. Banking on Bitcoin The latest acquisition brings MicroStrategy's total Bitcoin holdings to 402,100. The company paid \$23.4 billion, or \$58,263 per coin, for these coins. Michael Saylor, co-founder of the business, also verified this news in an X post. The most recent Bitcoin acquisition by

MicroStrategy is the fourth in as many weeks. Curiously, the firm had previously stated its intention to acquire further Bitcoin by raising \$42 billion over the course of three years. It has since bought Bitcoin valued at more than \$13.5 billion. The biggest acquisition to date was last week, when the firm paid \$5.4 billion for 55,500 BTC. This development coincides with the announcement by Marathon Digital, the publicly traded firm that has the second-largest Bitcoin holding, that it intends to raise \$700 million, with a portion of the profits going into more Bitcoin acquisitions. With just around 33,875 BTC in its possession, the Bitcoin miner lags well behind Michael Saylor's business, which has 402,100 BTC. In all likelihood, these BTC acquisitions bode well for the future of Bitcoin, the flagship cryptocurrency, which is now consolidating after reaching a local high of about \$99,000. Highlighted Crypto News Today: Polkadot Blockchain Academy Opens Applications for Cohort 6 in Swiss Campus

- Bitcoin prices surged from \$68,000 to \$99,000 during a month-long bull run in November. - A total of \$6.87B was received by spot Bitcoin ETFs, while \$411 million was withdrawn. November saw a record-breaking 45% rally in the price of Bitcoin. Sending \$6.4 billion into spot exchange-traded funds (ETFs) as investors in the US flocked to the cryptocurrency. Bitcoin prices surged from \$68,000 to \$99,000 during a month-long bull run in November. A total of \$6.87 billion was received by spot Bitcoin ETFs. While \$411 million was withdrawn, as a result of optimistic views. The iShares Bitcoin Trust ETF, which is managed by BlackRock, received \$5.6 billion in November. Making up about 87% of the total monthly inflows, according to statistics from Farside Investors. A number of other well-known players also received substantial investments. Including the \$962 million Wise Origin Bitcoin Fund from Fidelity, the \$211.5 million Bitcoin Mini Trust ETF from Grayscale, and the \$71.2 million Bitcoin ETF from VanEck. Positive Investor Sentiment With Bitcoin's high price and the continued influx of capital from institutional and individual investors, the bull run is likely to continue. A price discovery period for Bitcoin is about to begin. And traders and experts are predicting tremendous long opportunities for the cryptocurrency in the months to come. Meanwhile, the \$411 million in monthly withdrawals were accounted for by three players. A total of \$364 million left the Grayscale Bitcoin Trust ETF, \$40.4 million left the Bitwise Bitcoin ETF, and \$6.8 million left the Valkyrie Bitcoin Fund. Additionally, November was predicted to be a very optimistic month according to Alternative.me's Crypto Fear & Greed Index, which analyses investor sentiment. The Crypto Fear & Greed Index hit a new yearly high of 92 on November 22nd. Indicating that investors are quite positive. Highlighted Crypto News Today:

- Kiyosaki has long advocated for Bitcoin as a means to escape the effects of USD. - Robert now has 73 BTC and aspires to reach 100 BTC, according to the most recent disclosure. The bold statements made by Robert Kiyosaki on the US government, the Fed, and the financial market have earned him a legendary reputation. He has a lengthy history of ties to the cryptocurrency sector and has long advocated for Bitcoin as a means to escape the poverty-inducing effects of fiat currency and the Federal Reserve. In spite of his unwavering faith in Bitcoin, he has never shied away from predicting its price, particularly when it comes to its decline; for example, he recently said that BTC may plummet to \$60,000 despite its current position near \$100,000. Banking on Bitcoin Robert now has 73 BTC and aspires to reach 100 BTC, according to the most recent disclosure. That will happen when he waits for a negative time or when the price of bitcoin drops significantly. Curiously, Robert Kiyosaki has long predicted that the US economy would fail, bringing down almost every financial firm. This will cause the worst financial market meltdown ever in due time. But when it will happen is anybody's guess. Robert thinks momentum is gathering and it will happen shortly. Whatever the case may be, he has weighed in on the same, this time speculating that Bitcoin's pause around \$100,000 might portend a decline to \$60,000 in value. But instead of being scared about a Bitcoin meltdown, he's pleased since it's a sale and he can purchase more Bitcoins. The price of bitcoin has been skyrocketing since Donald Trump's victory in the US election; at the moment, it is trading at \$95,189, close to \$100,000. Highlighted Crypto News Today:

- Microsoft's BTC vote could push Bitcoin past \$100K milestone. - Shareholder exposure raises questions about necessity of BTC adoption. Bitcoin surged to \$98,000 over Thanksgiving, fuelled by Michael Saylor's presentation to Microsoft, advocating BTC adoption. In an unprecedented move, Microsoft's shareholders are set to vote on December 10 on whether the tech giant should add Bitcoin to its balance sheet. If approved, this could be a groundbreaking step for corporate adoption of cryptocurrencies and might propel Bitcoin beyond the much-anticipated \$100,000 milestone before year-end, states QCP. Moreover, the proposal has sparked debates. Heavyweights like Vanguard, BlackRock, and Fidelity, significant Microsoft shareholders, already have exposure to crypto through investments in companies like MicroStrategy (MSTR) and Coinbase. Critics argue this makes direct BTC adoption redundant. However, proponents suggest that Microsoft's adoption would cement Bitcoin's position as a mainstream asset, sending bullish ripples across both BTC and these firms' portfolios. Meanwhile, markets will also be closely monitoring macroeconomic indicators this week, with US employment data, ISM manufacturing, and PMI reports on the horizon. Friday's Non-Farm Payrolls (NFP) report is particularly crucial, as it will provide insights into inflationary pressures ahead of the Federal Reserve's December 17-18 rate cut decisions. Strong labor data could signal persistent inflation, potentially delaying the Fed's pivot to rate cuts, while weaker data might accelerate dovish policies. December - A Pivotal Month For Bitcoin, the intersection of macroeconomics and corporate adoption makes this a pivotal moment. If Microsoft's vote succeeds, it will underscore a growing institutional embrace of cryptocurrencies, giving BTC the momentum to breach six figures. Conversely, a rejection or hawkish signals from the Fed could temper investor enthusiasm. With December shaping up to be a decisive month for both Bitcoin and broader markets, all eyes remain on Microsoft's shareholders and the economic reports that will set the tone for 2025. Will BTC end the year with a bang, or will caution prevail? , The coming days hold the answer. Highlighted News Of The

Day

- Metaplanet plans to distribute BTC worth 30 million yen to its shareholders. - The reward program will be carried out in collaboration with SBI VC Trade. A Japanese firm popular for BTC acquisition, Metaplanet is planning to reward its shareholders with Bitcoins worth 30 million yen in collaboration with Japan crypto exchange SBI VC Trade. Metaplanet is often called Japan's Microstrategy, referring to its Bitcoin acquisition similar to Microstrategy. SBI VC Trade (SBI VC Trade (@sbivc\_official) December 2, 2024 3:00 AM) Driving Bitcoin Adoption With BTC Giveaway Campaign As per the official announcement from SBI VC Trade, a consolidated subsidiary of SBI Holdings, Metaplanet and SBI crypto exchange are holding a BTC give away campaign worth 30 million yen. This campaign is conducted to promote Bitcoin adoption so that more Japanese people can experience BTC. Metaplanet and SBI VC Trade have been partnering since September this year, especially in BTC trading, storage, and management. With this new BTC giveaway campaign, both of the firms are strengthening their partnership. Metaplanet will distribute the total 30 million yen Bitcoins to its 2,350 shareholders. Out of them, 50 winners will get 100k yen worth of Bitcoin each and 100 winners will get 30,000 yen worth of Bitcoin each. The remaining 2,200 winners will receive 10,000 yen worth of Bitcoin rewards. To receive BTC in this campaign, customers should meet eligible conditions such as they must be shareholders of Metaplanet with at least one unit, 100 shares, as of December 2024. Also, customers should complete their entry on the campaign website by March 2025. All the individuals and shareholders who opened an account between 18 Nov 24 and 31 March 25 are also eligible. Metaplanet's Bitcoin Acquisition Strategy Metaplanet falls into the category of firms that believe in Bitcoin acquisition. Similar to how Microstrategy keeps on accumulating Bitcoins to add to its treasury, Metaplanet also purchases Bitcoins. It recently raised \$62 million by offering the Moving Strike Stock Acquisition Rights to purchase more Bitcoins. With this recent purchase of Bitcoins, Metaplanet's total BTC holdings amounted to 1,100 BTC. Metaplanet announced its large amounts of Bitcoin purchases multiple times this year. When it acquired 107 Bitcoin in October, 2024, the Metaplanet shares price increased by 16%. With its continuous Bitcoin purchases and being called Japan Microstrategy, Metaplanet is drawing attention as Asia's first Bitcoin Treasury Company. On another note, SBI VC Trade is making headlines for planning to obtain assets from Japan crypto exchange DMM Bitcoin as part of its liquidation. Adding to this, the collaboration with Metaplanet is helping SBI VC Trade to emerge as one of the top crypto exchange firms in Japan. Highlighted Crypto News Today: Michael Saylor Advocates for Bitcoin Adoption to the Microsoft Board

- Bitcoin fell back to \$95K, marking a loss of 1.70% in the last 24 hours. - Historically, post-election Decembers have delivered strong growth. The largest cryptocurrency, Bitcoin (BTC), has registered a gain of over 37% in November. This notable surge and the entire crypto market rally followed Donald Trump's victory in the US presidential elections. BTC brought in an anticipation of hitting the long-term goal, trading at \$99K a few days back, hitting a series of record highs. Analysts predict that BTC could rally to the \$100K milestone in December, while BTC is currently hovering around \$96K. As per on-chain analysis, historically, post-election Decembers have delivered strong growth, ranging from 30% to 46%. This trend supports the earlier predictions of BTC reaching \$100K. With heightened FOMO-driven market and the recent momentum, it suggests Bitcoin could hit \$115K in December. As of press time, BTC has lost 1.70%, trading at \$95,408 with a market cap of \$1.89 trillion. The asset's intraday high and low were observed at \$98,152 and \$96,235, respectively. During this timeframe, Bitcoin has witnessed a 24-hour liquidation of \$54.96 million, with the daily trading volume increased by 47% to \$45.41 billion. In addition, the Fear and Greed Index of BTC stays at 80, suggesting extreme greed in the market. Will BTC's Price Surge or Slump? Inferring the four-hour BTC price chart, the possibility of a downside correction is revealed. The current price momentum of BTC fluctuates between \$98K and \$95K. Breaking past the \$95.5K mark might trigger a short-term rally. Further, the asset may test the potential resistance at the crucial zone for the bulls at \$96,117. In defiance, if the asset fails to hold up its price momentum, it might fall back to the \$94.7K mark. A steady decline below this mark could provoke Bitcoin to push the price to a low of \$94,106. Besides, the asset's technical indicators displayed a brief bearish momentum, with the Moving Average Convergence Divergence (MACD) line situated beneath the signal line, and traders can expect the incoming bear run. Moreover, it's crucial to note that the Chaikin Money Flow (CMF) indicator is at -0.04, referring to the negative money flow and selling pressure. Meanwhile, BTC's daily trading volume has surged by over 48%. The ongoing market sentiment of Bitcoin is neutral, as the daily relative strength index (RSI) is resting at 46.42. The asset's daily frame displays the short-term 9-day moving average below the long-term 21-day moving average. Highlighted Crypto News Japan Exchange DMM Bitcoin to Liquidate Assets Through SBI Group

- DMM Bitcoin liquidates and ceases its operations. It plans to transfer all accounts and assets to SBI Group. - Japan-based DMM Bitcoin exchange experienced a \$320 million fraud in May, 2024. A prominent crypto exchange platform in Japan, DMM Bitcoin is liquidating its assets through SBI Group. The exchange will completely cease its operations after the liquidation. The liquidation is caused by a \$320 million fraud which occurred in May, 2024 and affected over 450,000 accounts of DMM Bitcoin. As per the official announcement from SBI VC Trade, the crypto arm of Japanese financial organization SBI Group, DMM Bitcoin is scheduled to transfer all its accounts and assets to SBI Group in March 2025. Apart from the asset transfer, SBI VC Trade also plans to handle 14 crypto spot trading items that weren't previously handled by SBI but are handled by the DMM Bitcoin before the transfer. The specific transfer date and transfer method will be disclosed once they have been determined by the companies. DMM Bitcoin Lost \$320 Million in Hack DMM Bitcoin exchange was compromised on May 30 due to server breach and private key hack. The company reported that a single wallet containing more than

4,500 BTC was hacked in an unauthorized leak. Following the hack, the exchange halted spot trading temporarily and conducted an investigation. The hacker transferred the stolen Bitcoin to 10 different wallets, as per Lookonchain update. The DMM Bitcoin exchange hack was found to be the seventh largest crypto hack ever. While the Japan's Financial Services Agency instructed DMM Bitcoin to do a detailed investigation, the exchange firm finally decided to cease its operations after the liquidation. Even though hacks and frauds are not new to the crypto industry, the fact that crypto firms are not being proactive to take precautions for eliminating them is condemnable. The \$320 million hack of DMM Bitcoin has now led to its liquidation and shut down of operations. Highlighted Crypto News Today: Michael Saylor Advocates for Bitcoin Adoption to the Microsoft Board

- Michael Saylor pitched Bitcoin adoption to members in the recent Microsoft Board meeting. - The cryptocurrency has surged significantly in Q3 of 2024. As investors step gingerly into December expecting a modest price dip, the crypto market has held on to its bull run so far. In addition, it has also wavered off the weekend slump with fresh activity in the past day. On the regulatory end, the SEC has filed a new lawsuit against Touzi Capital for investors' defraud. Meanwhile, MicroStrategy executive chairman, Michael Saylor, presented Bitcoin as a promising investment option to the Microsoft Board. The executive chairman took to his X account to post his 3-minute presentation at the Microsoft Board of Directors meeting. In the presentation, Saylor highlights the advantages Bitcoin holds in turning things around for the firm. The chairman of MicroStrategy stated that "Microsoft cannot miss the next technology wave" Bitcoin. He outlined how the cryptocurrency, currently the 7th largest capital, has been outperforming Microsoft in the recent past. He stated, to grow further and combat current risks Microsoft could turn to "Digital Capital", i.e., Bitcoin. My 3-minute presentation to the \$MSFT Board of Directors and @SatyaNadella, articulating why the company should do the right thing and adopt #Bitcoin. [pic.twitter.com/aHp91V9Slz](https://pic.twitter.com/aHp91V9Slz) Michael Saylor (@saylor) December 1, 2024 Additionally, he also presented several statistical facts that showed Microsoft's needs to make alterations to its investment strategies. Saylor stated that the firm should embrace the future as the world enters the first year of a "Crypto Renaissance". What Does Michael Saylor Mean By "Crypto Renaissance"? MicroStrategy has been steadily buying Bitcoin over the past months. Recently, on November 20, the firm made yet another 51,780 BTC purchase adding to its total 331K holdings. Moreover, the firm and its founder have drawn immense market attention within the realm of institutional Bitcoin adoption. Michael Saylor refers to the rapid crypto adoption that can be seen materializing in the recent month. With the largest crypto asset nearing the \$100K milestone, it has created a lot of FOMO among investors in the financial sector. Subsequently, they have now begun getting into the market. This has further increased the necessity for several advancements and regulatory clarity which the US government and regulatory bodies such as the SEC are currently obliging. This, referred to by Saylor as the Crypto Renaissance has thrown a positive light within the community. Highlighted Crypto News Today: XRP Surpasses USDT and SOL to Claim Third Largest Cryptocurrency Spot

- Bitcoin has factored in a modest price increase over the past day, after its recent bearish descent. - The cryptocurrency's daily trading volume showed a 10.24% surge as per CMC data. On the last day of the month, the crypto market showed mild activity as leading currencies crawled towards higher levels. However, they have remained bullish, as indicated by the 0.92% increase in the overall market cap. Meanwhile, Justin Sun's eating the banana he purchased for \$6.2 million caused a frenzy. Additionally, Russian regulatory announcements also drew market attention in the past day. On reverting to the market price sector, Bitcoin has factored in a modest price increase of 0.37% in the last 24 hours. The cryptocurrency has not progressed much in price with the exemption of re-visiting the \$98,000 resistance on November 29. Towards the late evening, yesterday, fueled by a brief bullish trend, Bitcoin tested its previous resistance. The cryptocurrency, however, failed to establish a hold and subsequently fell back to its support levels. Bitcoin, at the time of writing, was trading at \$96,812 as per CMC data. BTC has resorted to trade at the \$91K to \$95K level in the past few days. Zooming out, into its weekly price chart, this is further confirmed. Bitcoin experienced a bearish takeover starting November 23, when prices began plunging down from \$98,904. The digital asset hit a weekly low of \$90,791 on November 26. While the community anticipated the cryptocurrency to fall further, it has regained fractions of the bull run. Will Bitcoin Surge Back to \$98K? When analyzing Bitcoin's price movements over the past few days, it traces a horizontal channel pattern. This pattern is followed by a bullish price breakout or a bearish descent. However, on inferring its other technical indicators BTC seems to lean towards a price breakout. Particularly, the Chaikin Money Flow (CMF) stands at 0.14 indicating an increasing capital flow in the asset as per TradingView data. Furthermore, BTC's bull power indicator value is 1.12, while its bear power indicator value is -0.88. This highlights the bulls holding power over the bears thus suggesting a price breakout following the horizontal channel. Meanwhile, other cryptocurrencies such as Shiba Inu (SHIB) and Hedera have shown upward movements in the past day.

- Robert Kiyosaki warns people not to get left behind and FOMO is good under current market conditions. - Kiyosaki affirms Bitcoin will soon break \$100K and it will be impossible for poor and middle class people to catch up. - Bitcoin holds above the \$96K price level, with no substantial highs or lows for the past 24 hours. Rich Dad Poor Dad author Robert Kiyosaki made another post on X reconfirming his belief in Bitcoin. He says FOMO is good as Bitcoin is on the verge to reach \$100K. Kiyosaki has multiple times endorsed Bitcoin investments and calls "Cash is Trash," as he stated in his book. THE RICH WILL GET RICHER: "Robert Kiyosaki (@theRealKiyosaki) November 29, 2024 Q: WHO WILL BE RICHER? A: The people who save Gold, Silver, Bitcoin. I own all three financial assets. Q: Who WILL BE POORER? A: The people who save dollars, Pesos, Yen, Euro, & Loonies. As I warned in Rich Dad Poor Dad "Savers are losers" because Rober Kiyosaki is a popular individual as an American businessman, founder of Rich Dad Company, and author of multiple finance books. His "Rich Dad Poor

Dadâ€ has sold millions of copies across the world, advocating financial literacy and wealth building. Kiyosaki praised Michael Saylor, Microstrategy CEO for stacking up Bitcoins several times. Bitcoin Will Soon Break \$100K: Robert Kiyosaki In his latest post on X, Robert Kiyosaki stated that â€Rich will get Richer.â€ He owns what he calls real money â€ Gold, Silver, and Bitcoin. And, he says people who save dollars, pesos, yen, and euros will be poorer because he believes traditional cash is trash.â€ As Kiyosaki mentioned in his Rich Dad Poor Dad book, he believes â€Savers are Losers.â€ Kiyosaki affirms Bitcoin will soon break \$100K and when it happens it will be impossible for poor and middle class people to buy it. He further says, â€The horse will be out of the barn and running. Why? Once Bitcoin breaks \$100,000, only the ultra-rich such as corporations, banks, and sovereign wealth funds will be able to afford Bitcoin of any consequence.â€ While most of the financial advisors say donâ€™t give into FOMO, especially in the case of cryptocurrencies, Kiyosaki says FOMO is good and warns people not to get left behind. While Bitcoin investment is one of the best options available for wealth building, whether investors buy it in the bull market or bear market at lower prices is completely their choice. However, Kiyosaki believes once BTC breaches \$100K, poor and middle class investors may not be able to afford it. Bitcoin Still Holds \$96K, Whatâ€™s Next? Bitcoin is trading at \$96,800 price level, with less than 1% price rise for the past 24 hours. It recorded 154% year-to-date price rise and went up 35% in the last month itself. While investors still believe it would soon reach the most awaiting six figures, the market is taking its time for the milestone. Highlighted Crypto News Today: Bitcoin Futures OI Surges to \$60.9B Amid Positive Investor Sentiment

Bitcoinâ€™s relentless march toward global acceptance has cemented its position as a leading cryptocurrency. With governments, institutions, and retail investors adopting Bitcoin, the crypto market is experiencing an unprecedented surge. However, as Bitcoin dominates headlines, a rising starâ€FXGuys (\$FXG)â€is capturing attention for its innovative approach to trading and decentralized finance (DeFi). Bitcoinâ€™s Role in the Global Market Bitcoin has become a global phenomenon, transcending its origins as a niche digital asset. From major financial institutions integrating Bitcoin to countries exploring it as legal tender, its influence is undeniable. However, Bitcoinâ€™s role as a store of value often overshadows emerging projects like FXGuys, which offer traders tangible benefits and new opportunities for wealth creation. Bitcoinâ€™s rise has created a wave of interest in the broader crypto market, drawing attention to projects that combine the best of PropFi and DeFi. FXGuys is one such project, leveraging its unique features to attract traders and investors. FXGuys: A Top PropFi Project with Real Utility While Bitcoin remains a cornerstone of the crypto market, FXGuys has emerged as a high potential altcoin offering unparalleled utility. Positioned as one of the best proprietary trading firms, FXGuys provides an ecosystem that empowers traders through innovative tools and rewards. Unlocking Potential with the Trader Funding Program The Trader Funding Program is a cornerstone of FXGuysâ€™ appeal. This program offers retail traders access to trading accounts with up to \$500,000 in capital, enabling them to execute strategies without risking personal funds. Profits are split 80/20 in favor of traders, making FXGuys a leader among proprietary trading companies. This initiative democratizes trading and fuels demand for the \$FXG token, creating a sustainable growth model. Staking: A Smart Way to Earn Passive Income FXGuysâ€™ Staking program offers users a 20% revenue share from broker trading volumes. This feature makes FXGuys one of the top defi coins for investors seeking consistent returns. Users earn passive income by staking their \$FXG tokens while supporting the platformâ€™s ecosystem. This incentivizes holding and positions FXGuys as a compelling investment for long-term growth. Trade2Earn: Redefining Trader Rewards FXGuys introduces the Trade2Earn model, where every tradeâ€profitable or notâ€earns users \$FXG tokens. This unique approach encourages active participation and ensures a steady demand for the token. Trade2Earn fosters a vibrant trading community, positioning FXGuys as a top contender in the best defi token category. This model also bridges the gap between traditional and decentralized trading, offering users the best of both worlds. Why Traders Are Choosing FXGuys FXGuysâ€™ appeal lies in combining cutting-edge DeFi features with TradFiâ€™s stability. The platform supports same-day fiat and crypto withdrawals in over 100 currencies, no buy or sell tax, and access to advanced trading tools through its custom FXGuys Trader platform. These features make FXGuys a standout among top defi coins and a viable alternative to Bitcoin for traders seeking growth and utility. The Future of FXGuys As Bitcoin continues its global ascent, projects like FXGuys are carving out their space in the crypto market. Analysts highlight FXGuys as a high potential altcoin, with its presale in Stage 2 and the \$FXG token priced at just \$0.04. With its robust ecosystem, including the Trader Funding Program, staking rewards, and the Trade2Earn model, FXGuys is well-positioned to capitalize on the growing interest in DeFi and PropFi solutions. Conclusion Bitcoinâ€™s global rise has set the stage for a new wave of crypto projects prioritising innovation and utility. FXGuys, as a Top PropFi Project, offers traders and investors an ecosystem that combines the best of DeFi and TradFi. With features like staking, the Trader Funding Program, and Trade2Earn, FXGuys provides tangible rewards and long-term growth potential. For traders looking to diversify their portfolios and capitalize on the next big opportunity, FXGuys represents a smarter investment alternative. As Bitcoin dominates the headlines, FXGuys is quietly gaining momentum, poised to become a standout in the crypto space. - The OI in Bitcoin futures has increased from \$39B on November 5 to the current level of \$60.9B. - Institutional and individual traders alike often use leverage build-up strategies as per analysts. An increase in trading activity and market speculation has been indicated by the substantial jump in bitcoin futures open interest after Donald Trumpâ€™s U.S. presidential election win on Nov. 5. Experts insist that leveraged trades are safe from an impending market correction, despite the spike.

Coinglass data shows that the open interest in Bitcoin futures has increased from \$39 billion on November 5 to the current level of \$60.9 billion. The value of positions linked to bitcoin derivatives contracts, some of which use leverage, has risen significantly as a result of this. Increased Market Leverage According to analysts, the increase in open interest seems to be natural and motivated by hopes for future price gains. Institutional and individual traders alike often use leverage build-up strategies to position themselves for future market fluctuations, they said. Also, as of November 22nd, they saw a little drop in open interest. Especially around the \$94,000 mark, where a lot of sitting orders were completed. Recent increases in leverage do not strike the analysts as unusual. The experts also noted that the Bitcoin priceâ€™s retesting of the \$93,000 zone was just a typical pullback. According to another analyst, the increased market leverage was precipitated by Trumpâ€™s election triumph. Analysts are optimistic that bitcoin will prosper under Trumpâ€™s administration. And the marketâ€™s high leverage is evidence that investors are starting to value the market based on regulatory and technological advancements. Price corrections, maybe in the form of long squeezes, are conceivable owing to bitcoinâ€™s intrinsic volatility, the expert said, and they might help calm the market when leverage becomes too high. - The lack of liquidity and scale will force the Bitcoin ecosystemâ€™s DeFi to surpass others. - Governments are discussing Bitcoin strategic reserves, according to Hoskinson. In the next two to three years, according to Charles Hoskinson, founder of Cardano, decentralized finance (DeFi) inside the Bitcoin ecosystem will surpass all other cryptocurrencies. In addition to making an audacious price forecast, he showcased a novel model for bridging Bitcoin that does not rely on centralized exchanges and gushed about the possibilities of Bitcoin DeFi. Hoskinson stated: â€œI started in the Bitcoin space and I loved Bitcoin. Bitcoin has been a big part of my life and the only reason Iâ€™m here today is because Bitcoin exists.â€ Sleeping Giant to Awakened Giant According to Hoskinson, the lack of liquidity and scale will force the Bitcoin ecosystemâ€™s DeFi to surpass other cryptocurrency ecosystemsâ€™ DeFi over the next 24 to 36 months. He shared his early problems with Bitcoin, stating: â€œBitcoin went from a sleeping giant never to awaken in an innovation coma, to an awakened giant that is four times the size of Solana and Ethereum combined.â€ Governments are discussing Bitcoin strategic reserves, according to Hoskinson. The massive interest and investment in Bitcoin has led him to believe that its value will skyrocket to \$250,000 to \$500,000 in the next twelve to twenty-four months. He began by saying that Bitcoin would continue to serve as the internetâ€™s value store even after adding a DeFi layer. He then went on to explain a new paradigm, the â€œDeFi mode,â€ that would allow Bitcoin to use Cardanoâ€™s network and its DeFi capabilities. Highlighted Crypto News Today:

The gaming sector is no longer limited to software functions but is expanding to the use of decentralized finance products, and the new Bitcoin price impact shops the concept of valuable physical objects in the hands of gamers through in-game assets. These and other gaming industry-transforming trends are among the things that the new Bitcoin price is impacting in the gaming industry, with its pluses turning machines into cryptocurrency miners and virtual reality technologies into real-world pathways for exploration and learning. This has a huge impact on gamers as it provides them with the chance to make money and grow. This article is a deep dive into the roles, of Bitcoin rising, and how gamers, developers, and investors are affected by the process. How the New Bitcoin Price Impact Gaming in 2025 New Bitcoin prices have resulted in such a powerful shift that gaming assets are becoming ownership of significant stock bonus shares. Since the hunter-gatherers moved into agriculture, Bitcoin price levels are increasing the resources of computer games, which are often compared to real money. The premise is that virtual and physical wealth are less distinct than they used to be. This evolution of recent technological development has been a cause of immense interest in the cryptocurrency gaming sector, we can already see when gamers choose playing roulette with Bitcoin or crypto-based websites to do their gaming, which provides good chances for gamers to also investors for gains and profits. Trump Election and Bitcoin Prices The gaming industry is closely malleable to the global financial market, and besides, the existence of politics on the road can provide us with a very elegant situation. The Bitcoin valuation soared to record highs after Donald Trumpâ€™s election. Trump, perhaps a deep sigh from people of certain thoughts, is thereby substituted with reality-like, substantial economic dividends accrued to investors who were betting on his second term. The regulatory environment that is friendly to cryptocurrency thus led to the increased intervention of Bitcoin through the investments of banks. Consequently, these political advancements have led to shockwaves in the gaming ecosystem. Since the majority of the investors in the cryptocurrency markets were the ones who brought in most of the mainstream cash, creating the necessary buzz about Bitcoinâ€™s security and long-term growth was the number one factor for crypto to facilitate transactions in games. Looking beyond the current trend of political stability and policies that could favor cryptocurrencies like bitcoin lies a chance for the gaming industry to take full advantage of this improved price performance. The probable Ignition of innovation in this area could be the result of convincing end-users to employ digital currency more in gaming environments. Bitcoinâ€™s Price Surge and the Gaming Industry Bitcoinâ€™s price rise is not merely a financial practice; it is an impetus to change the gaming industry. In the case of Bitcoin, its valuation appreciates. As a result, the way in-game digital assets are perceived and traded, along with the transformation of virtual items into commodities, is the outcome. Bitcoinâ€™s increase in price impacts the gaming sector in different ways, such as the economic impacts on the developers, augmented in-game purchases, and an increase in demand for blockchain technology. Economic Influence on Game Developers The rise of Bitcoin has opened up a new frontier for financing, providing game developers with the possibility of benefiting from the Breakeetaceras of Bitcoin, which is attracting increasing wealth from investors in the cryptocurrency market. In the short term, investments in blockchain gaming have increased to \$4.5 billion in 2023, making it a key driver for the industryâ€™s growth. This monetary support enables the creation of games that offer a better interactive environment for users to participate. Innovations that are blockchain-based such as the use of gaming tokens and other digital assets in the

monetization process draw more investors toward blockchain games than ever before. These methods give the developers more revenue channels and the players more involvement in the game, thus enriching the whole experience. Models such as the trading and ownership of in-game assets facilitated by these processes enable the creation of a much more engaging gaming ecosystem that can sustain its economic viability from within its own interactive universe. In-Game Purchases Powered by Bitcoin The introduction of Bitcoin into the gaming industry through in-game purchases is a major step forward. It provides fast and cheap transactions where players can easily buy virtual items in the game. It also improves the gaming experience as a whole, builds transparency, and supports community-centered projects across various gaming platforms. Imagine how easily you can get that precious item in your game with a few taps, instead of the cumbersome payment methods of the past. The predictions tell that by 2026, blockchain-based gaming could be a \$10.7 billion dollar sector, growing at an impressive CAGR of 70.3% starting from 2021. The increase in this sector is correlated to the fact that more people use Bitcoin and other digital currencies to make transactions within games. As more places add Bitcoin to their systems, gamers will experience smoother and more protected transactions thus enabling Bitcoin to gain momentum during this technological revolution in the gaming sector. Increased Demand for Blockchain Technology In the gaming sector, the demand for blockchain technologies has increased considerably due to the recent upsurge of Bitcoin and its inclusion in games. Different variants of this technology, namely Ethereum, a blockchain infrastructure, can be used to deface various aspects of the crypto-based gaming experience by providing special features. Blockchain is set to make gaming a more ubiquitous platform, eschewing in-effect tangible currencies for smart contracts as the new standard in seamless digital asset management. Blockchain technology, through decentralization and immutability, can enhance security within gaming, thus minimizing the risk of scam attempts. Bitcoin's decentralization feature is the major factor that gives it an edge when it comes to preventing risk related to cyberattacks and traceback. This enhances underlying security and, therefore, makes it a great option in online gaming systems. Gradually in the gaming market, the introduction of tokens that are only applicable in specific games and the usage of non-fungible tokens (NFTs) are invariably expected to expand. This process intensifies the gaming platforms by giving players more control over their digital assets and by the addition of these features to the system. The Intersection of Bitcoin and Crypto Gaming Market The gaming industry is a field, that due to the blending of Bitcoin and the crypto-gaming market, records a dramatic development of user interaction which opens a space for productive dialogue among developers and players. This process of centralization through NFTs and Bitcoin development has been triggered by innovative economic models and decentralized trading platforms for the blockchain's gaming assets. A trend of more and more crypto casinos and metaverse environments annotating the strong association Between Bitcoin and Gaming is a point of the fact that Bitcoin is no longer the preserve of a few in the gaming industry. A glowing future for crypto gaming where the players and the developers who make these dynamics will be experiencing more enriched and interactive environments during the player's time on these platforms as well as the evermore sheer dynamism of the latter. Growth of Crypto Games The Pole of potential that is electrifying the mass arrival of crypto gaming is the new innovations come in the context of the trip of Bitcoin Prices. The forecast for gaming tokens acting within blockchain games is somewhat on the bright side. Predictions indicate that more and more games with these tokens are poised to become popular, hence improving the experience of interactions and engagements within the game. Besides input of money which is known as the very common method of monetizing, the Play-To-Earn concept is activity-led, players gain back their earnings of production in currency, which can be gotten through real cash – thus, revolutionizing monetization strategies in crypto-based games. Besides the running corporation of crypto games has kept the name of the industry and gained the attention of established developers, who realize their path to success lies in means of the sale of crypto games as well. Those companies are involved in strategic partnerships with other blockchain-related firms to facilitate the widespread gaming adoption of the technology. Big corporations investing in expansion are quickly becoming the main contributors to Web3 development as they embrace the technology to bring new forms of blockchain technology to the gaming industry. This combination of old school and blockchain-centered ingredients in both sectors has the potential to bring along development and new amazing prospects for the entire industry that is focused on crypto-enabled digital entertainment experiences. Investment Opportunities in Blockchain Games The increasing popularity of blockchain has introduced different methods of investing in the gaming industry through the application of this technology. Furthermore, the increase in Bitcoin's value lures even more investors to delve into the blockchain games segment and thus develops a more rewarding market landscape. Though regulatory hurdles and uncertainties exist, nonetheless, blockchain gaming remains optimistic as new investment opportunities have been created due to Bitcoin's development. Investors and developers will have to guide themselves through the changing legislation to take advantage of these opportunities. Cryptocurrencies can be the cause of regulatory uncertainty, however, putting up an appropriate regulatory structure would be beneficial for players and it can also make a lot of companies decide to integrate Bitcoin in their gaming platforms. Among the fundamental elements in the area of blockchain games is the harmonization of the gains and the rules which can be applied to the whole sector.

- SOS Ltd invested \$50 million in Bitcoin, reflecting its confidence in the cryptocurrency's long-term value.
- The announcement caused SOS's stock to surge by nearly 100%, showing strong investor interest.
- This move aligns with the global trend of companies adopting Bitcoin to optimize asset structures and boost profits. Chinese company SOS Ltd, listed on the New York Stock Exchange, announced on November 27 that it will invest \$50 million in Bitcoin. This move shows the company's growing belief in Bitcoin's potential as a valuable asset. The company aims to use this investment to strengthen its position in the digital asset market and create more value for its shareholders. After this announcement, SOS Ltd's stock price surged nearly 100%, reflecting strong investor interest. The company's CEO, Yandai Wang, said the decision highlights their confidence in

Bitcoin's ability to boost competitiveness and profitability. The investment plan includes directly buying Bitcoin, using quantitative trading methods, and arbitrage techniques. SOS also noted Bitcoin's growing role in the global economy and its potential to become a reserve asset. SOS's Crypto Journey SOS has been involved in the cryptocurrency sector for several years. It operates a Bitcoin mining facility in Wisconsin, USA, and has invested significantly in mining equipment and infrastructure. In 2020, the company spent \$20 million on Bitcoin and Ethereum mining machines, and in 2023, it launched 5,000 mining machines in Texas. This investment in Bitcoin comes as the cryptocurrency is gaining popularity worldwide. Bitcoin's price has been volatile, but many companies see it as a long-term investment opportunity. Currently, Bitcoin is trading at around \$93,000 per coin, and SOS expects it to cross \$100,000 soon. The rise in SOS's stock price reflects a broader trend, Companies buying Bitcoin see their shares increase in store of value. Many publicly traded companies are adding Bitcoin to their financial portfolios in the U.S. and other parts of the world. These moves are seen as a way to optimize asset structures and potentially boost profits. For example, other Chinese companies like Meitu and Boyaa Interactive have also invested in Bitcoin. Meitu holds 941 Bitcoins, which have earned the company over \$40 million in profits. Similarly, Boyaa Interactive owns 2,641 Bitcoins and 15,445 Ethereum, resulting in significant gains. The growing interest in Bitcoin is linked to favourable policies and increasing acceptance in global markets. Companies are recognizing Bitcoin's role in diversifying assets and enhancing financial stability. SOS's investment decision aligns with this global shift and signals its commitment to staying ahead in the rapidly evolving digital economy. By focusing on Bitcoin, SOS hopes to improve its financial performance and contribute to the broader adoption of digital assets. This investment reflects the company's belief in cryptocurrencies' transformative power and potential to reshape traditional financial systems. Highlighted Crypto News Today Japan's Metaplanet Unveils \$62M Worth Bitcoin Acquisition Strategy

- Bitcoin reaches \$96,859, edging closer to the \$100K milestone. - Dormant Whale transfers 16.2 BTC; another wallet moves 1,900 BTC worth \$180M. Bitcoin (BTC) surged to \$96,859 today and is currently trading at \$96,171, reflecting a 0.55% daily gain. With a market cap of \$1.90 trillion, the cryptocurrency showcases resilience, despite reduced block rewards and low transaction fees. The 24-hour trading volume spiked to \$47.13 billion, accounting for 2.5% of the market cap. Miners are nearing a \$40 billion market cap as mining difficulty rises for the fifth consecutive time. The strong recovery from \$90,775 highlights robust investor confidence. A major whale address, dormant for 11 years, suddenly transferred 16.2 BTC valued at \$1.56 million to an anonymous address at 06:47 UTC on Nov. 29. Such movements by long-dormant wallets often spark speculation about market dynamics and potential price action. In a separate transaction, a massive 1,900 BTC, worth nearly \$180 million, was transferred between two unknown wallets. These whale activities highlight ongoing interest and large-scale involvement in the Bitcoin market. Despite these significant movements, investor sentiment remains subdued. Analysts suggest that Bitcoin still has room to grow before hitting a market top. Options Expiry Sets the Stage for Milestones BTC's largest 2024 options expiry occurs today, worth \$13.6 billion. Bulls dominate, with 19% more call options than puts, focusing on surpassing \$100,000. Gains for bulls escalate significantly if BTC closes above \$98,000, potentially adding \$4.58 billion. If Bitcoin holds between \$94,000 and \$98,000, call options would gain \$3.55 billion. A slip to \$90,000-\$94,000 would still provide a \$2.6 billion gain for bulls. These scenarios underline a high-stakes trading environment, driving price volatility. The RSI currently stands at 67.02, below the average of 73.35. This indicates bullish momentum but suggests potential consolidation. The Chaikin Money Flow (CMF) at 0.16 signals steady capital inflow into Bitcoin. Moving averages show an upward trajectory, with no bearish crossovers observed. A critical support zone is \$93,580, where 667,000 addresses purchased approximately 504,000 BTC. Staying above this level is essential to prevent selling pressure from these holders. On the upside, the next resistance zone is between \$98,000 and \$102,000. Breaking this level could push Bitcoin to \$100,000 or beyond. Holding above \$90,000 will remain vital for maintaining bullish momentum. Highlighted Crypto News Today Can Worldcoin (WLD) Break Through Resistance Following a 14% Surge?

As Bitcoin continues to rise, experts are watching closely, predicting it might breach the \$100,000 level soon. NEAR Protocol is also experiencing a notable boost, thanks to a new partnership with Deutsche Telekom that solidifies its role in decentralized finance. In a thriving market, BlockDAG (BDAG) is making waves by enhancing blockchain efficiency with its DAG-based architecture. This key advantage has enabled the platform to gather over \$150 million, yielding a 2,240% ROI for early participants. With the mainnet development now in the audit phase, BlockDAG is on the brink of its public launch. Bitcoin's Recent Price Surge and Market Optimism Bitcoin's escalating price has gripped the financial world, soaring to a peak of \$93,400 and then leveling at \$90,000. This upswing is driven by a positive shift in U.S. policy towards cryptocurrencies and expectations of rate cuts by the Federal Reserve. Observers link this upward trend to Bitcoin's robust technical indicators and strong market confidence, with the community eyeing the significant \$100,000 threshold. The continued interest from major market players boosts Bitcoin's standing as a stable and appealing asset. NEAR Significant Gains and Strategic Partnerships The recent surge in NEAR's price, a 42% increase last week approaching \$20, is attributed to its collaboration with Deutsche Telekom, which now supports NEAR Protocol as a validator. This has increased confidence in NEAR's capacity for innovation and scalability. This partnership supports NEAR's objective to push forward with decentralized solutions and data autonomy. Analysts believe NEAR's rally may be sustained, with price forecasts between \$15 and \$20 in upcoming months, enhancing NEAR's influence in the decentralized finance and artificial intelligence domain. BlockDAG Moves Towards Audit Phase: A Look at What Lies Ahead Political support and backing from significant players are propelling growth in major cryptocurrencies such as Bitcoin and NEAR. In a similar vein, BlockDAG, an emerging Layer 1 powerhouse, is harnessing this momentum with substantial support from prominent figures, especially as its mainnet development heads into the

audit phase. In addition, the network's ongoing BULLRUN100 bonus, which doubles the BDAG coins received on each purchase and grants early access to airdrops, is ending in a few hours. This incentive has sparked an exceptional surge in demand. With over \$150 million raised and 16.4 billion coins distributed since its initial presale, BlockDAG is gaining recognition as a leading cryptocurrency to consider in 2024. Early participants have already seen a tremendous 2,240% return, emphasizing the project's high profitability potential. Current price at \$0.0234, BlockDAG's presale provides a unique opportunity, particularly before the audit phase of its mainnet development concludes. This key technical achievement underscores BlockDAG's dedication to innovation, powered by its Directed Acyclic Graph (DAG) technology that addresses the blockchain trilemma of speed, security, and scalability. The BULLRUN100 bonus, set to expire in less than 20 hours, has attracted thousands of new participants eager to join the BDAG movement. With BlockDAG's prospects appearing more promising than ever, participants have a fleeting chance to turn modest amounts into significant gains in the coming years. Top Cryptocurrency Picks for 2024 As Bitcoin approaches the \$100,000 mark and the NEAR Protocol gains ground with its partnership with Deutsche Telekom, the market is ripe with opportunities. BlockDAG is making strides with these industry giants and establishing itself as a groundbreaking force in blockchain innovation. The project has successfully raised \$150 million, delivering early participants a 2,240% return, and has progressed its mainnet development into the audit phase. Achieving these milestones in succession has marked BlockDAG as a prime cryptocurrency to consider in 2024. The addition of the BULLRUN100 bonus, which doubles holdings and offers early access to airdrops, continues to energize the community. As BlockDAG gears up for its mainnet launch, it is not just participating in the current bull market but actively leading it. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Metaplanet announced today that it will be issuing its Moving Strike Stock Acquisition Rights. - The business will strengthen its position as Asia's first Bitcoin Treasury Company. Following the announcement that the business will raise \$62 million by offering the Moving Strike Stock Acquisition Rights in order to buy more Bitcoins, Metaplanet's shares jumped 6.5% during Thursday's trading session. The stock has increased by 102% in the last month, which is three times the 36% gain made by Bitcoin. Aiming to raise up to 9.5 billion yen (about \$62 million), Japan's MicroStrategy Metaplanet announced earlier today that it will be issuing its Moving Strike Stock Acquisition Rights. Banking on Bitcoin Thus, MicroStrategy's "At-the-Market" strategy allowed the Japanese company to raise more money while maintaining its emphasis on long-term Bitcoin accumulation. The news was made only one week after Metaplanet bought 124 Bitcoins, bringing its total holdings to almost 1,100 BTC. The business will strengthen its position as Asia's first Bitcoin Treasury Company. And buy more Bitcoin using the money raised from this campaign. Metaplanet said in its filing that this action would raise the quantity of Bitcoin owned per share. Thus, increasing the value of each Metaplanet share by reflecting a greater percentage of the company's overall Bitcoin holdings. Metaplanet hopes to increase its Bitcoin reserves faster than the growth of its existing shares by using this capital-raising strategy, providing substantial advantages to shareholders. Like the MicroStrategy shares, Metaplanet's stock has increased 1,300% since the start of 2024, mostly due to the company's decision to include Bitcoin in its treasury in May. Last week, the stock's daily trading volumes on the Japanese market reached \$174 million, surpassing those of companies like Nintendo and Honda. As a result, Metaplanet is among the best-performing stocks in Japan. Highlighted Crypto News Today:

- Bitcoin's Mean Dollar Invested Age has dropped 27% since October 2023, signaling a bullish trend. - Bitcoin's price surged to \$95,583.63 with a market cap of \$1.89 trillion. Bitcoin's market sentiment has been significantly influenced by a crucial metric, the Mean Dollar Invested Age (MDIA). This metric measures the average age of each BTC that has been sitting in wallets on the network. A rapid drop in MDIA indicates that dormant coins are moving back into circulation, a sign that higher market utility and possible bull trends are forming. From May 2021 to October 2023, MDIA was rising, showing that coins were becoming more stagnant. This stagnation contributed to volatile market behavior, with several major downswings. At its peak, the average BTC age reached 637 days. However, since mid-October 2023, MDIA has dropped significantly. This decrease suggests that previously dormant coins are now being transferred and actively traded. As a result, the average age of Bitcoin has fallen by 27%, from 637 days to 466 days. The most notable change occurred over the past three weeks, coinciding with the "Trump Pump" in the market. In this period, the average wallet has become 9% younger, reflecting a sharp increase in activity. As long as MDIA continues to drop, the market is expected to stay in a bullish phase, increasing the probability of continued market cap growth. BTC in Today's Market Bitcoin's current price stands at \$95,583.63, marking a 2.62% increase in the last 24 hours. The market cap has risen to \$1.89 trillion, with a 24-hour trading volume of \$70.93 billion. This surge is supported by a strong market cap ratio of 3.76%. As Bitcoin's total supply approaches 19.79 million BTC, the token remains under its max supply of 21 million BTC, which adds to its scarcity factor. Turning to technical indicators, Bitcoin's chart highlights critical levels of resistance and support. Currently, Bitcoin is facing resistance around \$100,000. A break above this level could push the price higher, potentially targeting \$110,000. On the downside, support lies at \$90,000, with a potential drop to \$85,000 if this level is breached. The Relative Strength Index (RSI) currently shows a value of 75, indicating that Bitcoin is in the overbought territory. However, the RSI average suggests that the market might still have room for growth, though caution is advised. Moving averages further confirm the bullish outlook, with the short-term moving average above the long-term moving average. This crossover signals an ongoing uptrend, reinforcing the likelihood of

further price increases.

- MARA's Bitcoin holdings totaled 34,794 BTC with the recent purchase of 703 Bitcoins. - The firm announced the purchase with its 0% convertible note offerings due 2030. - Microstrategy purchased 55,500 BTC with its \$3B convertible note offerings due 2029. Bitcoin mining company, MARA Holdings announced an additional acquisition of 703 BTC, totaling 6,474 BTC holdings at an average price of \$95,395 per 1 BTC. The company acquired these Bitcoins with its latest 0% \$1B convertible notes offering, following in the footsteps of Microstrategy. With our 0% \$1 billion convertible notes offering, we are excited to share an update: " MARA (@MARAHoldings) November 27, 2024 " Acquired an additional 703 BTC, bringing the total to 6,474 BTC, at an average price of \$95,395 per BTC " YTD BTC Yield Per Share 36.7% " Total owned BTC: ~34,794 BTC, currently valued at \$3.3 billion. [pic.twitter.com/bzbunlyBRN](https://pic.twitter.com/bzbunlyBRN) As per the announcement posted on X, MARA Holdings company added another 703 Bitcoins to its existing BTC holdings. Combined with an initial purchase of 5,771 BTC, MARA obtained a total of 6,474 BTC in the recent bull trend. With this acquisition, MARA's BTC holdings amounted to a total 34,794 BTC, valued at \$3.3 billion, if we consider BTC's price to be \$95,000. The Trend of 0% Convertible Note Offerings by MSTR and MARA MARA holdings purchased additional Bitcoins with its 0% convertible senior note offerings worth \$1 billion. The firm also purchased a portion of its 2026 notes for \$200 million and overall \$160 million is available for future Bitcoin dip purchases. Offering 0% convertible notes is a new fundraising plan started with Microstrategy. While Microstrategy is only a mobile software company that acquires Bitcoins, MARA Holdings is directly linked with BTC, being the largest Bitcoin mining company that mines around 23 BTC per day. Thus, the current fundraising with the zero-coupon notes and BTC purchases could benefit MARA stock more than MSTR. MicroStrategy has acquired 55,500 BTC for ~\$5.4 billion at ~\$97,862 per #bitcoin and has achieved BTC Yield of 35.2% QTD and 59.3% YTD. As of 11/24/2024, we hodl 386,700 \$BTC acquired for ~\$21.9 billion at ~\$56,761 per bitcoin. \$MSTR <https://t.co/79ExzXk4UM> " Michael Saylor (Saylor) November 25, 2024 Microstrategy recently purchased 55,500 BTC at an average price of \$97,862 per BTC. With this purchase, the firm holds a total of 386,700 Bitcoins as of November, 2024. Despite the major corporate companies buying Bitcoins with debt financing, analysts say it is risky and unsustainable. In case the bull market ends and Bitcoin goes down, these companies face a huge risk. Nonetheless, Microstrategy offered convertible notes due 2029 and MARA's note offerings due 2030. That gives ample time for these companies to cover any short-term risks in case Bitcoin's price declines.

- Senator Cynthia Lummis claims that Trump is assembling a team to advocate for Bitcoin and blockchain technology. - The leadership team plans to integrate Bitcoin, crypto, and blockchain into a U.S.-centric 21st-century economy. The excitement for new announcements and developments, particularly President-elect Donald Trump, pushes the Bitcoin market to new highs. Today, the market reacted to another level with Senator Cynthia Lummis's new statement linking Trump to pro-Bitcoin initiatives. Sharing a video on Twitter, Lummis claimed, "President Trump is assembling an army to fight for Bitcoin," sparking curiosity and debate among crypto enthusiasts. Further, Lummis highlighted Trump's efforts to bring a Bitcoin-friendly administration, emphasizing the growing importance of digital assets. According to the senator, Trump's team not only recognizes Bitcoin's potential but also envisions a broader integration of blockchain and AI technologies to "anchor the United States as a leader in the 21st-century global economy." Senator Lummis' Advocacy and Bitcoin Price Surge Lummis has been an outspoken advocate for Bitcoin, a stance that has recently gained significant attention from key players in the crypto market. Also, Lummis has consistently compared Bitcoin to gold and oil in terms of its economic significance. Even recently, she proposed a strategy for the U.S. to reserve Bitcoin, suggesting an acquisition of 200,000 BTC with a long-term goal of reaching one million BTC within two decades. However, following Cynthia Lummis's current announcement, BTC climbed back to the \$93K zone after plunging to \$90K earlier today. At the time of writing, BTC is priced at \$93,377, a 1.5% increase in the past 24 hours. On Nov 23, BTC recorded an all-time high of \$99,655. Highlighted News Of The Day

- Bitwise proposed a mix-crypto Bitcoin and Ethereum ETP, weighted by market capitalization. - Bitwise CIO Matt Hougan believes the ETP will be a huge hit with investors, offering a balanced exposure to two largest cryptocurrencies. One of the largest crypto asset management companies, Bitwise has proposed a mix-crypto ETP consisting of both Bitcoin and Ethereum, weighted by market cap. NYSE Arca filed a 19b-4 form to list this product. Bitwise is a crypto specialist asset manager with more than \$11 billion in client assets and its recent product listing is only going to deepen its roots in the crypto market. Today, NYSE Arca filed to list a Bitwise ETP that would hold both spot bitcoin AND ether, weighted by market cap. " Bitwise (@BitwiseInvest) November 26, 2024 The goal: Give investors balanced exposure to the two largest crypto assets in the world in an easy-to-access format. [pic.twitter.com/TcBpQM80HW](https://pic.twitter.com/TcBpQM80HW) As per the full press release by Bitwise Investments, the Bitcoin and Ethereum ETP is pending approval of the Form 19b-4 filed by NYSE Arca, along with the effectiveness of a Form S-1 registration statement. They aim to offer a balanced exposure to investors, combining two largest crypto assets in the market. Bitwise Bitcoin and Ethereum ETP: The First Mix-Crypto ETP Bitcoin is known for its limited supply and exponential growth of value over the years. On the other hand, Ether fuels one of the most sophisticated blockchain, Ethereum. Both of these largest cryptocurrencies in the market account for roughly 70% of the global crypto market. Bitwise CIO Matt Hougan believes that Bitcoin and Ethereum aren't competitors anymore and their relation is similar to gold and tech stocks. That is the reason why he suggests investors to invest in both. Bitwise Investments is bringing the Bitcoin and Ethereum ETP to offer a simpler way to invest in both the cryptocurrencies at a time. Hougan believes the ETP is going to be a huge hit, offering a balanced exposure to BTC and ETH. Bitwise Plans to Become a Strong Contender in Crypto The latest Bitcoin and Ethereum ETP filing added to the list of highlights the Bitwise firm achieved so far in 2024. The

crypto asset manager launched spot Bitcoin and spot Ethereum ETPs and acquired \$4.2 billion worth of assets. Additionally, it also launched an Aptos staking ETP in Europe and acquired European crypto asset manager ETC Group. Bitwise filed an S-1 for XRP ETP and a 19b-4 for spot Solana ETP. Furthermore, it also launched a staking service for Ethereum layer 2 blockchain Starknet. With all these filings and acquisitions, Bitwise emerges to be a strong contender in the crypto industry. Highlighted Crypto News Today: Donald Trump Administration Looks to Expand CFTC's Role in Crypto Oversight

- Bitcoin's increased liquidations has caused a bearish turn in the cryptocurrency's price. - The digital asset's daily trading volume showed an increase of 7.28% as per CMC data. In less than 48 hours, the crypto market, and particularly Bitcoin, has taken a downturn. The cryptocurrency dropped 7% on Tuesday, hitting the \$91K level after days of trading above \$95,000. This price movement has had minor effects on the altcoin sector, but tokens have bounced back to previous trading levels. Meanwhile, the industry also saw DeFi hit a new 3-year high in the past day. Inferring Bitcoin's daily chart, it shows an additional 1.89% dip. In the Asian morning hours of November 27, the digital asset was trading at \$94,683. However, more bearish candles sparked, causing prices to drop to current levels. At the time of writing, Bitcoin was trading at \$92,487, as per CMC data. Secondly, when analyzing the causative factors, as widely discussed on X, the whales' liquidations resulted in the price drop. Moreover, according to Glassnode reports, BTC long-term holders sold a total of 507,000 tokens in this cycle, which resulted in intense liquidation. Subsequently, the huge influx of Bitcoin tokens into the market caused the prices to drop. The report also stated that this recent selling was lesser compared to the March selling. At the time, the holders sold a significant amount of 934K Bitcoins. However, the recent liquidation frenzy has led to reemerging speculation, if BTC whales are attempting to manipulate market prices. Does Bitcoin Price Have an Opportunity to Bounce Back? The largest cryptocurrency's TradingView data shows intriguing inferences. On analyzing technical indicators, its long-term bull power indicator's value stands at 9.91. However, its bear power indicator value stands at -2.10. This variation suggests that Bitcoin does hold a window of opportunity to reinstate its bull run. Additionally, the RSI standing at a neutral 62.32 further highlights this analysis. On the other hand, a continuation of selling can endanger the bull run and lead to Bitcoin dropping further. Meanwhile, as aforementioned, altcoins such as Ethereum and Chainlink have shown price increases.

Velar, the leading Bitcoin-based liquidity protocol that brings trillions of dollars in dormant capital to DeFi markets, has partnered with StackingDAO to provide the first-ever dedicated stableswap trading pair for STX/stSTX tokens on Stacks. By using a unique stableswap curve to facilitate quick, low-slippage swaps for STX tokens and their staked equivalent, stSTX, with negligible fees, the STX/stSTX stableswap trading pair on Velar DEX will address a crucial liquidity demand for the Stacks ecosystem with its alluring rewards. Because there would be less friction for investors to join and leave their STX staking holdings, stacking should become more attractive. Holders of STX and stSTX will also be able to benefit from attractive yield prospects. A dual rewards structure that offers a 50% increase in StackingDAO points in addition to 5,000 VELAR in daily rewards is used to attract liquidity providers. LPs may be eligible for rewards, airdrops, and other perks in the future by accumulating StackingDAO points. The STX/stSTX stableswap trading pair will provide Stackers a way to earn more StackingDAO points while also offering supplementary functionality to seasoned DeFi users in the Stacks ecosystem. Additionally, it will provide enough liquidity for institutional investors that need the capacity to execute effective, large-scale STX/stSTX swaps thanks to its substantial incentives. Additionally, two of Stacks' top projects will work together more synergistically to benefit the Stacks ecosystem as a whole. Velar has become the largest DEX on Stacks, and StackingDAO has a unique position as its leading Liquid Stacking protocol, enabling liquidity for Stacked STX and making STX staking available to everybody. Furthermore, competing market pools put liquidity providers at greater risk of temporary losses, but Velar's upgradeable variable midpoint solution will lessen this risk for StackingDAO customers, resulting in a more lucrative farming program. Philip de Smedt, Co-founder of StackingDAO, commented: "The introduction of the stSTX/STX stableswap on Velar DEX is a significant step forward for the Stacks ecosystem. This partnership brings unmatched liquidity efficiency, ultra-low slippage, and a first of its kind variable midpoint implementation on Stacks to limit impermanent loss." Velar's CMO, Peter Watson, added: "At Velar, we're constantly driving innovation, and partnering with StackingDAO to build the first-of-its-kind stableswap pool with an upgradeable variable midpoint is a proud moment for us. This feature, designed to better protect liquidity providers, showcases the cutting-edge solutions we're bringing to the Stacks ecosystem. Collaborating with the talented StackingDAO team has been an incredible experience, and together, we're setting a new benchmark for what's possible in Bitcoin DeFi." Velar's goal of unlocking around \$2 trillion in capital that is now dormant inside the Bitcoin ecosystem will be expedited by the enhanced synergies. At the vanguard of Bitcoin's development, the protocol gives Stacks and other L2s the infrastructure and liquidity they need to enable a new wave of DeFi apps that are native to Bitcoin. By creating a range of effective tools and technologies for DeFi, Velar is working to realize the full potential of Bitcoin. Velar's AMM, Dharma, encourages trading on Stacks, the leading Bitcoin L2, and the supply of liquidity. With a strong transaction finality and unparalleled security, Velar fully fulfills the potential of Bitcoin-based assets.

- Bitcoin's price plummeted to the \$91K zone, marking a 7% decline from its high of \$98,360. - Over \$687 million in crypto liquidations occurred, with BTC alone accounting for \$178.25 million. Just an hour before, Bitcoin (BTC) saw a significant drop in the Asian trading hours, plunging into the \$91K range after a loaded crypto liquidation totaling \$687 million. BTC alone accounted for \$178.25 million in liquidations, reflecting the market's struggle with overheating leverage positions and profit-taking among holders. Over the past 24 hours, Bitcoin's price fell by more than 7%, dipping from a

high of \$98,360 to an intraday low of \$91,463. This sharp decline led the broader cryptocurrency market into a downward spiral, with altcoins like Ethereum (ETH), BNB, and XRP all experiencing losses between 5% and 10%, respectively. At press time, Bitcoin is trading at \$91,902 with a market cap of \$1.82 trillion. Bitcoin (BTC) Faces Short-Term Setback The sudden pullback comes after Bitcoin failed to reach the highly anticipated \$100K milestone, despite expectations fueled by the Trump presidency's impact on crypto. Traders were caught off guard as Bitcoin's price dropped nearly 8.22% from its all-time high of \$99,655, which was recorded on Nov 23. Despite this short-term dip, analysts remain optimistic about Bitcoin's long-term outlook. Technical indicators such as the RSI at 62 and a Chaikin Money Flow of 0.18 suggest moderate buying pressure, indicating the potential for further upward movement without immediate reversal risks. On the other hand, BTC's price dropping below both the 20-day EMA and 50-day SMA signals a short-term bearish trend with increased selling pressure. This indicates a potential for correction or consolidation before a continued upward move.

- Daily active addresses of Bitcoin are approaching the 1 million mark with a prolonged increase of scale since 2021. - 458K addresses brought 344k BTC above the \$97,000 price level, laying a strong foundation for Bitcoin to cross the \$100K mark. The daily active addresses on the Bitcoin blockchain are witnessing a substantial increase and are approaching the 1 million mark, as per IntoTheBlock market intelligence platform. As Bitcoin is marching towards the \$100k level, the on-chain activity is rising with the increased interest among Bitcoin users. Bitcoin's long-term activity trend has decisively shifted, with on-chain activity seeing significant growth. " IntoTheBlock (@intotheblock) November 26, 2024 The number of daily active addresses is approaching 1 million, representing the first prolonged increase of this scale since 2021. pic.twitter.com/PheqxY52ej Market intelligence and data analysis platform, IntoTheBlock posted on X depicting the rise in daily active addresses of Bitcoin from 2014 to 2024. The chart represents a prolonged increase in the number of active addresses which was recorded last time in 2021. While the long-term activity of Bitcoin has clearly shifted and is on an upward movement, the on-chain activity is witnessing a significant growth. After a continuous spike in Bitcoin's price for the last month, it is currently on a short-term downward trend. Despite the downfall, the on-chain activity is still on the rise, with several Bitcoin enthusiasts believing BTC will reach \$100k by the end of 2024. Bitcoin To Go Beyond \$100K: IntoTheBlock The battle for \$100k \$BTC rages on. " IntoTheBlock (@intotheblock) November 25, 2024 While 60k addresses acquired 22.74k BTC above the current price, the real highlight is the growing support below: 458k addresses have amassed a staggering 344k BTC. A strong foundation to fuel a move beyond \$100k pic.twitter.com/jj9zqSX1kR In a different post by IntoTheBlock, the data intelligence platform talked about the number of BTC addresses and the different price levels at which they accumulated Bitcoin. While 60,000 addresses bought more than over 22,700 BTC above the \$90,000 price level, 458k addresses amassed more than 340,000 BTC above the \$97,000 price level. IntoTheBlock refers to these statistics as a strong foundation for Bitcoin's price to go beyond \$100K. On another note, Bitcoin fell back to \$92,000 to \$94,000 range after rising slightly less than the \$100K mark last week. Despite the dip, the community is still confident about Bitcoin, referring to the dip as a healthy pullback before Bitcoin finally reaches the \$100K. Highlighted Crypto News Today: Bitcoin Faces Worst Drop Since Trump's Win, Drops Below \$100,000

- A recent release states that Semler Scientific now has 1,570 BTC in Bitcoin reserves. - The acquisition of 297 BTC for \$29.1 million was made with an average price of \$97,995 per BTC. In an announcement about its Bitcoin holdings, healthcare-focused technology business Semler Scientific revealed the purchase of 297 BTC between November 18 and 22, 2024. With fees included, the average price of a Bitcoin was \$97,995, and the total cost to the business was \$29.1 million. A recent release states that Semler Scientific now has 1,570 BTC in Bitcoin reserves. The aggregate cost of the company's Bitcoin acquisitions is \$117.8 million. Which translates to an average price of \$75,039 per Bitcoin. Banking on Bitcoin Moreover, the acquisition of 297 BTC for \$29.1 million was made by the corporation between November 18 and 22, 2024. With an average price of \$97,995 per Bitcoin. In view of the increasing demand for digital assets as a reserve asset, this new addition further demonstrates Semler Scientific's dedication to its Bitcoin strategy. The healthcare IT business has already spent \$3 million, or around \$67,500 per Bitcoin. Increasing its holdings to 1,058 BTC earlier in November, so this isn't their first buy this month. Furthermore, the business was able to raise a total of \$100 million under its Controlled Equity Offering agreement. With an additional \$50 million obtained via its at-the-market (ATM) offering. The extra funds will be used for operating expenses and future Bitcoin acquisitions. Which will strengthen its approach to managing its treasury. Coinciding with Semler Scientific's plan to use stock sales to finance its Bitcoin investments, the ATM offering is in line with that approach. Since implementing this method, the company's bitcoin holdings have grown thanks to this financial mechanism. Semler Scientific's Bitcoin treasury approach has been successful, as seen by its BTC Yield, which has achieved 58.4 percent since its start in July 2024. Highlighted Crypto News Today: MicroStrategy Acquires 55,500 BTC, Total Holdings Reach 386,700

The buzz around Bitcoin's potential to hit \$100,000 by 2025 has reignited enthusiasm in the cryptocurrency market. While Bitcoin remains the benchmark for crypto growth, its success often catalyzes high-potential altcoins. FXGuys, a Top PropFi Project, and Sui stand out as key players ready to capitalize on the momentum. With FXGuys currently in its Stage 2 presale, raising over \$2.6 million at \$0.04 per token, the project has emerged as a prime candidate for massive growth. Let's look at why FX Guys is positioned to benefit from Bitcoin's rise and establish itself as one of the top defi coins in the market. Bitcoin's \$100K Forecast: A Game-Changer for Altcoins Bitcoin's growth has historically ripple effect on the broader crypto market. When Bitcoin surges, it often increases liquidity and investor interest in altcoins. Projects like FX Guys, with its innovative approach to combining DeFi with proprietary trading, are poised to attract a significant share of this renewed attention. As Bitcoin's market cap grows, institutional and retail investors often seek high

potential altcoins for diversification. The FXGuys fits this profile perfectly, offering robust utility, staking rewards, and trader-centric features that set it apart. Why FXGuys Stands Out as a Top Altcoin FXGuys is more than just another altcoin; it's a comprehensive ecosystem designed to redefine DeFi and trading. Here's what makes it a standout: 1. Staking for Passive Income The \$FXG token provides an unparalleled staking experience, allowing holders to earn a 20% profit and revenue share from broker trading volumes. This feature ensures consistent returns, making the FX Guys one of the best defi token choices for long-term investors. 2. Trader Funding Program for Skilled Traders FXGuys brings unique value to traders through its Trader Funding Program. Retail traders who pass the evaluation phase gain access to up to \$500,000 in trading capital, with an attractive 80/20 profit split in the trader's favour. This program elevates FXGuys to the ranks of the best proprietary trading firms, offering opportunities that few altcoins can match. 3. No-Tax and Privacy-Focused Trading The FXGuys ecosystem eliminates buy-and-sell taxes on the \$FXG token, maximizing traders' profitability. Additionally, the platform offers no-KYC decentralized trading, catering to privacy-conscious investors while supporting seamless transactions. The Role of FXGuys in the Altcoin Surge With its presale gathering significant momentum and innovative features like the Trade2Earn program, FXGuys is well-positioned to capture a share of the increased trading activity expected during Bitcoin's rise. The Trade2Earn program incentivizes trading by rewarding traders with \$FXG tokens, boosting the platform's activity and token demand. Moreover, FXGuys operates as a proprietary trading company supported by its broker-backed crypto prop firm. Based on their geographic location, traders can use the FXGuys Trader platform or choose from other popular trading platforms like MT5, Match-Trader, cTrader, and DXtrade. Sui: A Parallel Altcoin to Watch While FXGuys leads in innovation and trader-centric features, Sui offers a unique focus on scalability and Web3 development. These diverse projects highlight the richness of opportunities in the altcoin market, especially as Bitcoin inches closer to its \$100K target. Conclusion Bitcoin's \$100K forecast for 2025 could mark a turning point for the entire cryptocurrency market, with altcoins like the FXGuys and Sui poised for exponential growth. FXGuys, with its \$FXG token, staking rewards, Trader Funding Program, and no-tax trading, is positioned to emerge as a leader in the DeFi and proprietary trading space. As the presale continues to gain traction, raising over \$2.6 million so far, early investors have a unique opportunity to join one of the most high potential altcoins in the market. For those seeking to diversify and benefit from Bitcoin's next rally, FXGuys represents a blend of innovation, utility, and growth potential that's hard to ignore. To find out more about FXGuys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin dropped to \$92,000 after a profit taking pullback and global uncertainty from Trump's tariffs. - Trump's crypto friendly policies are increasing investors with \$7 billion invested in U.S. Bitcoin ETFs. - VanEck predicts Bitcoin could hit \$180,000 in 18 months. Bitcoin's Recent Pullback Despite Trump's Winning Bitcoin recently saw its longest losing streak since Donald Trump's election victory, dropping 6% over three days and stabilizing around \$92,000. There was huge expectation around it to cross \$100,000 but it failed, with profit-taking and global market uncertainty by Trump's recent tariff proposals on China, Canada, and Mexico. Despite this, the broader crypto market remains up \$1 trillion since Election Day. Trump's pledges to establish a national Bitcoin reserve and regulations, has created belief in the crypto space. Analysts like TD Cowen's Jaret Seiberg suggest his upcoming influence over the SEC could ease crypto regulations, increasing market growth. Meanwhile, \$7 billion flowed into U.S. Bitcoin ETFs after Trump's victory, though some outflows have occurred during the recent market correction. Donald Trump collaborating with tech visionary Elon Musk to ensure all future Bitcoin mining takes place in the U.S. These initiatives have created a wave of excitement, with Bitcoin's price surging by \$25,000 after Trump's election win and reaching \$98,500, just shy of the \$100,000 milestone. VanEck's \$180,000 Bitcoin Prediction VanEck predicts Bitcoin could reach \$180,000 within the next 18 months, signalling the start of a potentially historic bull run. VanEck's \$180,000 Bitcoin prediction, Analysts Nathan Frankovitz and Matthew Sigel highlight that Bitcoin is just beginning its next bull market. They believe that increasing participation from institutions, favourable regulations, and Bitcoin's strengthened market dominance, currently at 59%, drive its growth. Bitcoin's transformation from a niche asset to a globally recognized financial tool has made it more liquid and appealing to investors, further supporting VanEck's long-term bullish outlook. Despite nearing the \$100,000 mark, Bitcoin recently experienced a three-day pullback, dropping 6% to stabilize at \$94,000. This marked its longest losing streak since Trump's victory. Analysts say the correction happened because traders took profits after the price rally, along with concerns over Trump's potential tariffs on China and Canada. While this caused market uncertainty, experts see the dip as a normal adjustment, not a sign of a trend reversal. The temporary setback has not dampened optimism. VanEck's report indicates that Bitcoin's market fundamentals remain strong. Elevated funding rates for perpetual futures contracts suggest continued momentum in the near term. At the same time, Trump's influence over regulatory bodies like the SEC could pave the way for crypto-friendly reforms, including approving Bitcoin ETFs—these developments, coupled with advancing market maturity, position Bitcoin for long-term growth. The future for Bitcoin looks promising. With Trump's pro-crypto vision, Elon Musk's collaboration, and VanEck's bullish projection. While short-term corrections are part of the journey, the combination of political support, institutional backing, and favourable regulations indicates that Bitcoin's rise is far from over.

- Dogwifhat surged 15% after its Robinhood listing but lost all gains due to Bitcoin's sudden price drop to \$92K. - Currently, WIF priced at \$3.11, a 12% decline from its intraday high of \$3.57. Earlier

today, the largest Solana-based memecoin, dogwifhat (WIF), saw its price climb by over 15.91%, rising from a low of \$3.08 to a high of \$3.57 following its listing on popular crypto exchange Robinhood. This surge was triggered by a cryptic post from the exchange on Monday, featuring the iconic wool hat linked with the token. The post created significant excitement among traders, and shortly after, CEO Vlad Tenev confirmed WIF's official listing on the platform. However, the excitement was short-lived as the cryptocurrency market experienced a downturn. By the time of writing, dogwifhat had retraced to \$3.14, largely due to a global market decline caused by Bitcoin's sudden plunge below \$92.5K. JUST IN: 📉 Bitcoin drops back to the \$92K zone, leading to a 3.63% decline in the global market cap. 📊 TheNewsCrypto (@The\_NewsCrypto) November 26, 2024 Currently, \$BTC is priced at \$92,792! 📉»#Bitcoin #BTC pic.twitter.com/MYEU3aFddI This drop has been caused by institutional activity and the looming expiry of Bitcoin and Ethereum derivatives. A total of \$9.4 billion in Bitcoin options and \$1.3 billion in Ethereum options nearing expiry—traders have been adjusting positions, which may result in significant market volatility. Interestingly, dogwifhat open interest decreased by 7.21%. Although it still maintains a \$2.98 billion volume, marking a 103% increase, as per Coinglass data. Despite the retracement, dogwifhat remains above its key support level at \$3 with a market cap of \$3.15 billion. However, the speculation is rising that the altcoin could face further declines as traders engage in profit-taking. Will the Dogwifhat Price Drop Below \$3? On the 4-hour WIF/USDT trading pair, the memecoin shows an RSI of 45, indicating relatively neutral to slightly bearish market sentiment. However, there is no strong indication of an extreme oversold condition. While the RSI suggests a modest downward trend, the negative CMF indicates that there is currently more selling activity than buying. Zooming in, the 20-day EMA and 50-day SMA are both above the WIF price, suggesting that both short-term and medium-term trends are bearish. The 20-day EMA and 50-day SMA are now acting as resistance. If the price fails to break above these moving averages, downward pressure may continue. If dogwifhat finds support at this level and bounces back up, it could signal that the correction is over. Also, the asset is ready to continue its bullish trend. In the event of a downtrend, if the WIF price breaks below the 78.6% Fib level at \$2.19, the next significant support could be around the 88.6% Fib level (usually around \$2.03). Alternatively, the price may continue to the \$2.00 region or lower, depending on overall market conditions.

- Rumble is investing up to \$20 million of its excess cash reserves in Bitcoin. - Following the announcement, Rumble's stock surged 12.63%, reaching \$7.31 per share. While the flagship cryptocurrency Bitcoin is hitting new highs every day, Rumble, the popular video platform known for its conservative audience, is making a significant shift in its financial strategy by investing in Bitcoin. On Monday, the company's Board of Directors approved a plan to allocate a portion of its excess cash reserves to buy leading cryptocurrency up to \$20 million. This marks Rumble's entry into the world of digital assets, signaling the growing corporate interest in Bitcoin as part of strategic financial planning. BREAKING: Rumble Announces Bitcoin Treasury Strategy 📈 Rumble 📈 📊 (@rumblevideo) November 25, 2024 📈 Rumble's Bitcoin allocation strategy will include purchases, at the discretion of the company, of up to \$20 million. 📈 pic.twitter.com/J40IuW1Nnp Rumble CEO Chris Pavlovski expressed his belief in Bitcoin's potential, calling it a valuable tool for both inflation hedging and long-term growth. 📈 Bitcoin's adoption is still in its early stages, and we believe it's a valuable addition to our treasury, 📈 Pavlovski said. He also pointed out that Bitcoin's unique nature, free from government-controlled inflation, makes it an attractive asset for the company's future plans. Rumble Joins Crypto Trend Following Trump's Bitcoin Support Rumble's decision comes amid growing institutional adoption of cryptocurrency and heightened interest following Donald Trump's support of Bitcoin and his advocacy for pro-crypto policies. However, Rumble has not yet decided on the timing or amount of its first Bitcoin purchase—citing market conditions and the platform's financial needs. According to the report, the decision would be made by the management, considering factors such as Bitcoin's price and broader market trends. Anyways, this move puts Rumble alongside other companies, such as MicroStrategy, Metaplanet, and MARA Holdings, that have already made Bitcoin a part of their financial portfolios, signaling a wider trend of corporate crypto adoption. Further, with Trump pledging to make America a 📈 crypto capital 📈 post-2025 the U.S. could see even greater Bitcoin integration into its economy.

- Bitcoin dropped to \$93K with \$553M in liquidations, mostly from long positions. - Spot Bitcoin ETFs faced \$435M in outflows, except BlackRock's IBIT. Bitcoin steadied at \$94k on Tuesday, rebounding after a sharp sell-off that pushed its price below \$93,000 earlier in the day. The cryptocurrency saw a 24-hour decline of 5.1%, with liquidations across the crypto market reaching \$553 million, including \$415 million in long positions. Bitcoin is trading at \$94,408, and its market cap currently stands at \$1.87 trillion, down 3.42% from the previous day. The total crypto market cap dropped by 2.88% to \$3.25 trillion. Trading volume surged 20.96% over the past 24 hours to \$240.41 billion, with Bitcoin contributing \$84.77 billion, representing a 58.59% increase. Despite the dip, Bitcoin maintains its dominance, supported by its 19.79 million circulating supply. The crypto's fully diluted valuation (FDV) stands at \$1.98 trillion, with a volume-to-market-cap ratio of 4.54%, indicating active trading. The sell-off follows Bitcoin's rapid ascent above \$99,000 last week, driven by ETF demand and favorable macroeconomic conditions. However, long-term holders offloaded over 461,000 BTC, triggering Monday's correction. Market makers are suspected of driving prices lower to liquidate leveraged longs. Spot Bitcoin ETFs saw net outflows of \$435 million, with Fidelity's FBTC and ARK Invest's ARKB losing \$135 million and \$111 million, respectively. Conversely, BlackRock's IBIT attracted \$268 million in inflows. MicroStrategy bolstered market confidence with its largest-ever Bitcoin purchase of 55,500 BTC worth \$5.4 billion. What's Next for BTC? Bitcoin's key support levels are \$88,000 and \$90,000. A deeper correction could test the \$80,000 mark, consistent with past bull-market behavior. On the upside, resistance at \$95,000 could pave the way for a rally toward \$98,000 if breached. The RSI currently reads 76.23, signaling overbought conditions, declining from its recent peak of 80. Moving averages indicate caution. The 9-day moving average is \$95,251, slightly above the

current price, while the 21-day average of \$88,953 suggests strong medium-term support. The bearish crossover implies continued consolidation in the short term. Despite bearish momentum, analysts remain optimistic about Bitcoin's year-end potential. Polymarket data shows a 72% probability of Bitcoin hitting \$100,000 before Christmas. A rebound above \$95,000 could lead to liquidations of \$772 million in short positions, potentially fueling further gains.

- President Nayib Bukele proposed a rent your volcano to mine Bitcoin initiative recently. - El Salvador has extensively used its natural resources, particularly its 170 volcanoes. In a novel and innovative move, El Salvador is mining Bitcoin utilizing the strength of its volcanic landscape. While praising the country's geothermal energy potential, President Nayib Bukele proposed a "rent your volcano to mine Bitcoin" initiative recently. El Salvador has used its natural resources, particularly its 170 volcanoes, to generate clean energy, mostly from geothermal power. The country's active volcanoes have transformed geothermal energy into a 25% contributor to the overall power production. Leveraging Geothermal Power El Salvador's top geothermal power provider, LaGeo, has two massive facilities that harness massive amounts of energy from volcanic heat, providing power to homes and businesses while cutting down on fossil fuel use. Moreover, El Salvador extracted 1.5 MW of power from the Tecapa volcano in 2021, making it the first nation to do so for Bitcoin mining. As a bold step toward combining renewable energy with cryptocurrency, this mining operation has already produced 474 Bitcoins, valued at almost \$46 million. Geothermal power provides a greener alternative to conventional energy sources, and this project has garnered both support and criticism. By striking a similar balance between ecological sustainability and technological innovation, it paves the way for other volcanically active nations to accomplish the same. El Salvador is becoming a major player in the cryptocurrency industry, and its geothermal-powered Bitcoin mining is a model for how the nation might use its natural resources to finance future technological developments. - Customers would be able to borrow money using Bitcoin as collateral. - Wall Street's and the crypto industry's mutually beneficial connection has grown stronger. Cantor Fitzgerald, a bond and financial services trading business in the United States, is allegedly in talks with Tether about launching a multibillion-dollar lending program backed by Bitcoin. Customers would be able to borrow money using Bitcoin as collateral under the proposed program. According to a Bloomberg article on Saturday, the operation is set to start with a \$2 billion allocation. But it might grow if cryptocurrency gains more popularity. Wall Street's and the crypto industry's mutually beneficial connection has grown stronger this year. And this is especially true in light of the anticipated shift in crypto policy as Trump readies himself to take the charge. According to the report, Tether is only one of many financial backers. That would put money into the Bitcoin lending program, which is still in its beginnings. Candidates for the effort are being sought after by Cantor. Leadership Shift It is said that Cantor's chief, Howard Lutnick, is planning to sell his shares in the company. This comes after being nominated as the secretary of commerce under president-elect Trump on Wednesday. After being nominated, Lutnick read from a prepared statement in which he stated his intention to do so in order "to comply with U.S. government ethics rules." Lutnick's resignation from his positions at Cantor, BGC, and Newmark affects all three of those companies. Lutnick intends to transfer the firm's Tether connection to colleagues when he gets ready to leave Cantor, which is pending approval by the Senate. According to Bloomberg, his son Brandon is being mentioned as a potential contender. During his time as an intern in Lugano, Brandon "now at Cantor" was allegedly responsible for tallying the gold bars that support Tether Gold, a \$660 million token backed by the gold. - South Korea's FSC has rejected the creation of a national Bitcoin reserve. - Chairman Kim Byung-hwan emphasized caution and investor protection. South Korea's Financial Services Commission (FSC) has rejected plans to create a national Bitcoin reserve. The decision comes as U.S. President-elect Donald Trump pushes pro-crypto policies. FSC Chairman Kim Byung-hwan expressed caution, prioritizing investor protection over rapid adoption. ðŸ“¡JUST IN: SOUTH KOREA'S FINANCIAL SERVICES COMMISSION (FSC) DROPS PLANS TO ESTABLISH A BITCOIN RESERVE "FOR THE TIME BEING" â€” BSCN Headlines (@BSCNheadlines) November 25, 2024 During a televised interview on November 24, Kim dismissed the idea of stockpiling Bitcoin, calling it "far-fetched at the moment." He acknowledged the U.S.'s shift toward nurturing crypto but emphasized South Korea's need for careful observation. He stated that the country must first connect digital assets to its financial system. Economic Priorities Over Bitcoin Kim highlighted the importance of traditional markets like KOSPI and KOSDAQ. He noted that stock investments create a positive cycle for the economy. In contrast, the FSC remains uncertain about Bitcoin's economic benefits. Crypto trading volumes have recently surpassed stock trading, raising concerns about volatility. "We need funds flowing into the stock market," Kim said, stressing the need to monitor the rapid rise in virtual asset prices. The FSC will focus on combating unfair trading practices in the crypto sector. Kim explained that South Korea is not dismissing Bitcoin entirely. Instead, the country will wait to see how U.S. policies shape global crypto regulations. Trump's administration plans to adopt a Bitcoin Strategic Reserve Act, which could influence South Korea's stance. The FSC chief admitted that the volatile nature of digital assets remains a concern. South Korea enacted the Virtual Asset Protection Act in July 2024. This legislation focuses on regulating and protecting crypto investors, laying the groundwork for future policies. Highlighted Crypto News Today Avalanche Hits 7-Month High Above \$45 Amid November Bull Run

As the price of Bitcoin gets closer to its peak, the focus now shifts to the coins that have the potential to change one's future. Of the hundreds of other cryptocurrencies in the market today, four are notable due to their exceptional capacity and potential growth: Rexas Finance (RXS), Cardano (ADA), Toncoin (TON), and Stellar (XLM). These tokens have the potential to surge up to 25,000% in

gains, making it possible for investors to achieve great wealth if they hold until the peak. **Rexas Finance (RXS): Driving Blockchain Innovation** Rexas Finance is not just another cryptocurrency like Bitcoin or Ethereum. Rexas does not offer empty promises; it is a utility token with specific use cases. RXS has garnered over \$12.5 million in funding with 203,960,029 tokens sold in presale stages. Currently, at stage 7, the token is priced at \$0.09. What is so attractive about RXS is the diversification of its ecosystem, which is not purely gambling but provides value to investors and users of the blockchain. At the center of Rexas Finance is a distinct set of features: - Rexas Token Builder enables end-users and companies to easily tokenize any real-world asset. - Rexas Launchpad offers a decentralized marketplace for financing and executing new blockchain ventures. - Investors can now participate in fractional investing through Rexas Estate, enabling them to invest in high-ticket assets. - Rexas GenAI facilitates the development of various digital artworks using artificial intelligence technology. - Rexas DeFi is a robust decentralized trading solution providing liquidity and efficiency in crypto swaps. - The Rexas Treasury leverages multi-chain yield optimization, allowing users to earn compound interest on their deposits. An aspect that makes RXS stand out is the opportunity to launch at \$0.20 on powerful exchanges, where early investors can make a 2x profit compared to the presale price. This opportunity makes sense, as RXS is listed on CoinMarketCap and CoinGecko and has been audited by CertiK, making it secure and transparent. Projections suggest it could perform even better than other top-performing coins when Bitcoin reaches its cycle peak.

**Cardano (ADA): The Next Generation Blockchain** With a present market cap of approximately \$28 billion, alongside a token valued at \$0.78, Cardano has indeed garnered quite a buzz within the waves of blockchain development. Thanks to its emphasis on scalability and sustainability, it has become the go-to platform for institutional developers and investors. Its distinctive proof-of-stake mechanism is designed to enable large-scale usage, allowing room within the rapidly developing space. With the expansion of the blockchain ecosystem, Cardano, in the same way, has enhanced its functionalities with the addition of smart contracts, dApps, and governance changes. Market analysts maintain that ADA may get quite high, owing to its secondary offensive mechanics, as high-end energy-efficient scalable blockchain structures will be required, even reaching the upper three figures of dollars during the astronomical growth of Bitcoin. A remarkable prediction.

**Toncoin (TON): The Best Blockchain in Application** Toncoin currently stands at \$5.45 with a total market cap of \$13.9 billion, distinguished by its blockchain designed for mass adoption. Originating from Telegram, TON offers a fast and scalable blockchain suitable for developers and enterprises. Its integration with instant messaging gives it an upper hand by making blockchain technology applications easy for users. Toncoin's extensions and development prospects depend on its ability to attract institutional and retail investors with innovative features and a user-friendly approach. As TON's applicability grows, analysts create increasingly bullish views of its value as the market picks up. Its potential for extreme returns makes it a promising token.

**Stellar (XLM): Transforming Global Payments** Stellar has been a stalwart in cryptocurrency, emphasizing cross-border payments. With a current price of \$0.25 and a market cap of \$7.37 billion, its partnerships have made it a go-to solution for international transactions. It bridges conventional finance and blockchain, spanning global financial systems. As Bitcoin approaches its next peak, Stellar stands on solid ground to benefit from the shift toward blockchain-based payment systems. Low transaction fees and quick settlement times make it attractive to individuals and institutions, likely increasing demand and price.

**Why the Presence of RXS Will Shock These Giants** All four tokens have bright futures and immense potential. However, for those seeking life-changing returns, Rexas Finance is the most attractive. It is the only project with a clearly structured, multi-faceted ecosystem targeting real-world usage and the development of cutting-edge technology. From AI-based art generation to DeFi and fractional asset investing, RXS addresses retail and institutional needs, setting it apart in the market. The projected value of \$0.20 at the start of its exchange listing provides early adopters with a safe profit margin. RXS combines sound presales, audited transparency, and aggressive strategies to achieve the 25,000% returns investors dream of.

**Conclusion: The Need to Take Action is Urgent** As Bitcoin trends toward its cycle peak, the desire for exponential returns in the crypto market grows stronger. While Cardano, Toncoin, and Stellar offer growth prospects, Rexas Finance is unmatched for its innovative structures and applicability. Strategic investors looking to build lasting wealth should consider RXS not as a project to observe but as one to capitalize on immediately. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Metaplanet partners with BTC Media to launch Bitcoin Magazine Japan, set to debut in early 2025. - The magazine will provide news, interviews, and resources to grow Bitcoin awareness in Japan. - Metaplanet uses Bitcoin as a reserve asset to tackle Japan's economic challenges and support growth. Metaplanet Teams Up with BTC Media Japanese investment firm Metaplanet has finalized a licensing agreement with BTC Media to launch Bitcoin Magazine Japan, which is aiming to drive nationwide awareness and Bitcoin adoption. This collaboration, which was initially outlined in July, was announced at the Bitcoin Conference in Nashville, Tennessee. Consequently, it marks a step in integrating Bitcoin into Japan's financial and cultural landscape. Moreover, Bitcoin Magazine Japan will provide news, analysis, and educational content tailored to the Japanese audience. As part of this initiative, Metaplanet will deliver high quality, localized content, including interviews with prominent Japanese Bitcoin figures, special edition publications, and interactive online sessions. Metaplanet plans to launch Bitcoin Magazine Japan in the first quarter of 2025. Demonstrating its commitment to building a strong editorial and operational team. To ensure a smooth magazine rollout, the company has also started recruiting for editorial, content creation, business management, and social media roles. Bitcoin Magazine, founded in 2012 by Vitalik Buterin, Mihai Alisie, and others,

became one of the first publications. Which is dedicated to Bitcoin and digital currency. Operated by Nashville-based BTC Media, it has become a leading source of Bitcoin-related news and analysis worldwide. Additionally, the publication's expansion into Japan is crucial, especially as the country shows growing interest in digital currencies. Earlier this year, Bitcoin Magazine launched Bitcoin Magazine Pro. Which offers institutional-grade research, real-time data, and advanced investment tools. Beyond publishing, Metaplanet has integrated Bitcoin into its corporate strategy, viewing it as a primary treasury reserve asset. Inspired by companies like MicroStrategy, Metaplanet's decision gives a strong confidence in Bitcoin's fixed supply. As Japan faces economic challenges like yen volatility and rising government debt. In response to these issues, Metaplanet believes Bitcoin can provide much-needed stability and growth potential. The company currently holds 1,142 Bitcoin, valued at around \$111.7 million, underscoring its strong commitment to the cryptocurrency. Japan's Cryptocurrency Approach Overall, Metaplanet's initiative promotes Bitcoin. Which addresses current economic challenges, enhances shareholder value, and solidifies Bitcoin's role in the future of finance. By creating localized content and adopting Bitcoin as a corporate asset, Metaplanet sets the stage for broader adoption and contributes to Japan's leadership in the cryptocurrency revolution. With the first issue of Bitcoin Magazine Japan set for early 2025. This partnership could spur innovation and adoption within the Japanese Bitcoin community. In summary, Metaplanet's exclusive licensing agreement for Bitcoin Magazine Japan aims to increase Bitcoin adoption in the region. Highlighted Crypto News Today SUI Price Encounters Bearish Week After Its 90% Monthly Surge

- Liquidations soared to \$511M, with \$383M in long positions wrecked. - Resistance stands at \$100K, with support at \$95,354; RSI shows overbought levels. Bitcoin retraced from its record-breaking rally, trading at \$97,954, down 0.03% in 24 hours. BTC's market cap fell below \$1.9 trillion, losing over \$60 billion since Friday. Meanwhile, the global crypto market cap dropped 0.74% to \$3.34 trillion, with a trading volume of \$199.2 billion, down 3.24% over the last day. Crypto liquidations soared to \$511 million in the past 24 hours. Long positions faced \$383 million in losses, while shorts lost \$136 million. Binance recorded the largest single liquidation order of \$13.4 million. Bitcoin accounted for \$78.94 million of the liquidations, followed by Ether (\$42.25M) and DOGE (\$34.96M). Geopolitical unrest has pressured Bitcoin's price. The recent escalation of tensions in the Middle East led many investors to choose gold over cryptocurrencies. Following Iran's missile attack in October, Bitcoin initially dropped, underscoring its vulnerability to global instability. In the U.S., macroeconomic factors also shaped Bitcoin's price movement. A stronger-than-expected labor market and solid payroll reports hinted at further Federal Reserve rate cuts. Historically, such cuts have boosted Bitcoin as investors shift to riskier assets for higher returns. Technical Indicators Remain Positive Bitcoin faces resistance at \$100,000, with support at \$95,354. If the price breaks above resistance, it could target \$105,000. A drop below \$95,000 may result in further declines to \$90,000. Technical indicators remain positive for Bitcoin. The RSI stands at 78.55, showing overbought conditions and signalling potential consolidation. The 9-day moving average at \$95,354 remains above the 21-day moving average at \$88,044, indicating bullish momentum. Their recent crossover reinforces a positive medium-term outlook. Despite the correction, Bitcoin's prospects remain strong. Institutional and retail demand shows no signs of slowing, especially with the incoming pro-crypto Trump administration. Analysts expect easing monetary policies and increasing adoption to support Bitcoin as 2024 progresses. With solid fundamentals and supportive policies, Bitcoin could regain its upward momentum toward year-end, potentially setting new milestones.

The cryptocurrency world is excited as Bitcoin ETF launches set new records. The debut of BlackRock's Bitcoin ETF was spectacular, seeing a surge in trading volumes and driving predictions of Bitcoin reaching \$100,000 soon. Meanwhile, Toncoin's market analysis suggests robust short-term growth potential. The indicators are pointing towards an impressive rally, setting the stage for a significant rise to previous peak levels. Simultaneously, BlockDAG (BDAG) is drawing considerable attention with its remarkable \$20 million presale fundraising in the last 48 hours. With only 4 days left, the BULLRUN100 offer is seeing a surge in participation. BlockDAG's ROI of 2240% and its impressive \$150 million fundraise earmark it as a standout crypto for 2024. Is this the opportunity traders have been waiting for? Let's dive into the specifics. Bitcoin ETF Marks a Historic Launch The introduction of Bitcoin ETF options has marked a monumental milestone in the crypto market. On its first day, the trading volume reached about \$1.9 billion, an extraordinary amount that has intrigued analysts. This significant interest has helped propel Bitcoin to an unprecedented high of \$94,105, with bullish market sentiments suggesting even higher prices in the near future. This dynamic trading activity has sparked discussions about Bitcoin potentially reaching the \$100,000 mark by year-end. Toncoin's Market Analysis Predicts 30% Growth Examining Toncoin's market behavior reveals a promising outlook with a potential 30.21% increase by next week. Trading at \$5.39 currently, the analysis identifies crucial resistance levels at \$5.64 and \$5.88, with the target possibly reaching \$7.13. Despite the broader market's high enthusiasm, Toncoin maintains a steady growth projection, showing a 131% rise over the past year. Traders are advised to watch for Toncoin's next movements as it aims to regain its top performance levels. BlockDAG's BULLRUN100 Offer is a Must-Catch! BlockDAG's BULLRUN100 promo is turning heads by offering doubled coin bonuses for a short time, giving early participants a jump start with airdrops. Currently in batch 26, BDAG coins are set at an appealing price of \$0.0234, showing an impressive 2240% ROI for early participants. Having gathered \$20 million in the last 48 hours and pushing the presale to a total of \$150 million, the BULLRUN100 promo is a major attraction for both experienced participants and those new to the crypto scene. For instance, a \$5,000 allocation with the BULLRUN100 code effectively doubles the coin amount, matching a \$10,000 value. This means, should BDAG hit a future price of \$1 per coin, this allocation could grow to about \$427,350—a potential windfall of nearly half a million dollars. Overlooking the BULLRUN100 offer could lead to missed substantial returns, making it a critical opportunity for traders with just

4 days left before the offer ends. Experts anticipate a robust increase in BDAG's value once it hits the market, likening its potential to Bitcoin's anticipated climb to \$100,000 and Toncoin's positive trends. The active BULLRUN100 promo is reinforcing BlockDAG's reputation as a leading crypto prospect for 2024. As Bitcoin and Toncoin achieve significant market progress, BlockDAG is positioning itself as the most exciting presale of the year. What Crypto Will Dominate in 2024? The groundbreaking debut of Bitcoin's ETF, Toncoin's bullish momentum, and BlockDAG's presale success are shaping the narrative for the 2024 crypto market. Bitcoin's journey towards \$100,000 demonstrates growing institutional trust, while Toncoin's anticipated 30% rise underscores potential short-term profits. However, it is BlockDAG's presale success, especially its BULLRUN100 offer, that is truly reshaping the crypto landscape, offering a doubling of purchases and an irresistible 2240% ROI as it prepares for listing. The real question is not if BlockDAG will succeed, but rather how high it will soar post-listing. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cboe claims that the options will provide consumers with exposure to spot bitcoin ETFs. - Cboe Bitcoin US ETF Index is set to debut on Monday, Dec. 2. The first bitcoin spot index options including a cash settlement will be introduced by Cboe Global Markets. Options based on the newly created Cboe Bitcoin US ETF Index, which will monitor the performance of spot bitcoin ETFs traded on U.S. exchanges, are set to debut on Monday, Dec. 2. Cboe Global Head of Product Innovation Rob Hocking stated: "Our index options offer a unique value proposition that we believe will appeal to both institutional participants and retail traders alike, who are looking to capitalise on or hedge against bitcoin's price movements without directly holding the asset." Cash-settled Index Options Moreover, Cboe claims that the options will provide consumers with exposure to spot bitcoin ETFs. Providing a roundabout method to become involved with bitcoin. With these index options being cash-settled, the hassle of physically transferring bitcoin ETFs is eliminated since positions are closed in cash upon expiry. The options will be able to be exercised only on the expiry date and will also provide cash settlement, similar to how options in Europe work. Furthermore, Cboe Mini Bitcoin U.S. ETF Index options (MBTX), with a notional value one-tenth that of conventional options, will also be introduced by the exchange. Cboe Digital Exchange users may now purchase ether and bitcoin margin futures with cash settlements as part of this launch. Expanding the digital asset derivatives portfolio of Cboe. With Chair Gary Gensler's departure, the US Securities and Exchange Commission (SEC) will most certainly look different after years of litigation and attempts to regulate the cryptocurrency sector. Also, large corporations have been the targets of the agency's heavy-handed prosecutions in recent years. - Robert Kiyosaki lauded Saylor as a "genius" in a recent X post. - Saylor got praise from the author for allocating business funds to Bitcoin. Robert Kiyosaki, an author and Bitcoin advocate, has spoken out against the Federal Reserve. In addition, Kiyosaki praised Michael Saylor's Bitcoin approach, founder of MicroStrategy, for its ability to help investors avoid financial problems. It is worth mentioning that this statement is made after the author's recent endorsement of Saylor's ambitious prediction that Bitcoin would reach \$13 million in the next few years. Robert Kiyosaki lauded Saylor as a "genius" in a recent X post. Describing his acquisition of Bitcoins via the clever usage of MicroStrategy's treasury. Saylor, his firm, and stockholders had benefited from these daring investments, according to Kiyosaki. Who also noted that they had helped to secure employment amid the difficult financial times. Banking on Bitcoin In an effort to refute his detractors, Kiyosaki said that those who were critical of Saylor's decision to invest in Bitcoin rather than gold had failed to see Bitcoin's potential. He reiterated his belief in the value of gold and silver as assets, but he blamed the printing of "fake dollars" by the Fed for the true issue. Saylor got praise from the author of Rich Dad, Poor Dad for allocating business funds to Bitcoin, a cryptocurrency that is creating wealth for investors and stable employment for many. It is worth mentioning that this statement is made after he supported Saylor's forecast that Bitcoin would reach \$13 million in the near future, describing it as a strategic protector against economic instability. At the same time, Michael Saylor has been purchasing Bitcoin nonstop. To finance more Bitcoin acquisitions, MicroStrategy recently completed a \$3 billion note offering Highlighted Crypto News Today:

- Bitcoin reached a new ATH of \$99,655, with November gains at 40.8%. - US spot Bitcoin ETFs added over \$30B in inflows, led by BlackRock's \$2.05B purchase. Bitcoin (BTC) reached a new all-time high of \$99,655.50, edging closer to the \$100,000 mark. Although the price slightly dipped to \$98,515 today, Bitcoin has posted its largest monthly gain ever, surging over 40.8% in November. This growth reflects increasing optimism in the broader crypto market. Over the past 15 hours, 1.38B \$USDT has flowed from Tether to exchanges. The total global crypto market cap has risen to \$3.35 trillion, with Bitcoin dominating at \$1.95 trillion. Daily trading volume for Bitcoin reached \$73.14 billion, while the entire crypto market traded \$222.62 billion in the last 24 hours. Notably, US spot Bitcoin ETFs recorded cumulative inflows exceeding \$30 billion, marking their largest weekly net inflow since launch. BlackRock alone added 21,304 BTC, worth \$2.05 billion, to its holdings this week. The firm now holds 492,633 BTC, valued at \$48.62 billion. Bitcoin's technical chart indicates strong bullish momentum. The current support level lies at \$85,216, while resistance at \$99,000 is in focus. If BTC breaks above \$99,000, it could reach \$105,000 in the short term. Conversely, a breakdown below \$85,000 may trigger a decline toward \$80,000. The Relative Strength Index (RSI) is at 78.95, signaling overbought conditions. The RSI average at 80.88 further confirms Bitcoin's current bullish trend.

However, overbought signals suggest caution for potential profit-taking. The chart also highlights a bullish crossover of the 9-day and 21-day moving averages. This crossover indicates continued upward momentum, reinforcing the bullish outlook for Bitcoin. Broader Market Rally Bitcoin's 60% rally since the US election day reflects strong investor confidence. The crypto market has gained over \$800 billion since early November, benefiting from increased institutional interest. ETFs have experienced record inflows, with BlackRock driving the surge in demand. Despite the minor dip today, Bitcoin remains poised for further growth. If it crosses the \$100,000 psychological barrier, it may attract additional institutional and retail investors. However, traders should monitor key levels and indicators to manage risks effectively.

- Wednesday was the day when the funds' overall net asset worth surpassed \$100 billion. - The most significant inflows were \$608.41 million into BlackRock's IBIT. The cumulative total net inflow for U.S. spot bitcoin exchange-traded funds has surpassed \$30 billion for the first time since debut in January. The strong market sentiment that followed former president Trump's re-election has caused the bitcoin ETFs to see increased levels of trading activity and net inflows. Wednesday was the day when the funds' overall net asset worth surpassed \$100 billion. According to statistics from SoSoValue, the 12 bitcoin ETFs had a net inflow of \$1 billion on Thursday, bringing the cumulative total flow to \$30.35 billion. BlackRock Leading the Way The most significant inflows were \$608.41 million into BlackRock's IBIT and \$300.95 million into Fidelity's FBTC. Bitwise's bitcoin spot fund brought in \$68 million, while ARKB, a joint venture between Ark and 21Shares, brought in \$17 million. In addition to Grayscale's Mini Bitcoin Trust, net inflows were also contributed by VanEck and Franklin Templeton's bitcoin ETFs. The only fund that saw negative flows yesterday was Grayscale's GBTC, which had a net outflow of \$7.8 million. There was no activity in any of the other four funds for the day. The total value of yesterday's trades in all twelve ETFs was \$7.1 billion. With its unrelenting ascent, Bitcoin has reached new all-time highs and is now targeting the much-anticipated \$100,000 price milestone. Its current market value is \$98,641, up 1.64% from the previous day as per data from CMC. Meanwhile, U.S. spot Ethereum ETFs have been seeing negative flows for the last six days, with Thursday's net outflows totaling \$9.05 million. Yesterday, a total of \$839.64 million was traded across the nine ether ETFs. Highlighted Crypto News Today: CFTC Commissioner Summer Mersinger Advocates for Clear Crypto Regulations

- The Senator has praised the flagship cryptocurrency's long-term prospects. - Senator Cynthia Lummis compared Bitcoin to gold and oil in the country's reserves. Market excitement was sparked by Senator Cynthia Lummis' recent statement that increasing Bitcoin holdings might contribute to halving the US debt in 20 years. Notably, Lummis has been an outspoken advocate for Bitcoin, which has recently drawn a lot of interest from players in the cryptocurrency market. Despite this, the Senator has praised the flagship cryptocurrency's long-term prospects as Bitcoin sets new records every day and reaches new highs. Senator Cynthia Lummis compared Bitcoin to gold and oil in the country's reserves, highlighting its ability to stabilize the American economy in a recent FOX interview. She recommended setting aside money to buy around 200,000 Bitcoin and accumulating one million Bitcoin over the course of 20 years. According to the senator, this action might contribute to halving the US debt within the same time span. Banking on Bitcoin Growth She also emphasized how the growing value of Bitcoin would offset the US dollar's diminishing buying power, preserving the dollar's position as the global reserve currency. Additionally, Lummis stressed that Bitcoin fits into a strategic reserve and is a long-term store of wealth, similar to gold or oil. She stated that this asset may support the US dollar's dominance on the international scene and protect investors against inflation. Moreover, her Bitcoin Act of 2024, which combines proactive debt reduction with asset diversification, seeks to codify her plan. Also, the strategy fits with her goal of incorporating contemporary financial instruments into established institutions by taking use of Bitcoin's deflationary properties. Notably, Michael Saylor of MicroStrategy recently expressed a similar opinion. Saylor said in a recent interview that the US could reduce its \$16 trillion debt by acquiring Bitcoin. Highlighted Crypto News Today: Sui Foundation Enters into Strategic Partnership with Franklin Templeton Digital Assets

- DOGE trades at \$0.39 after a modest gain of 2.23% in the last 24 hours. - The meme coin has observed a 24-hour liquidation of \$11.32 million. With Bitcoin (BTC) mounted above \$99.5K, leading traders to label November as "Moonvember." Extreme greed dominates the cryptocurrency market, as the Fear and Greed Index is settled at a high of 88. Notably, the meme coin market cap has reached \$125 billion with a 4.7% spike in the last 24 hours. The leading meme coin, Dogecoin (DOGE), has been trending sideways over the past 24 hours. A potential breakout above the crucial resistance could initiate an uptrend. DOGE recorded a modest gain of 2.23% over the past 24 hours. At the time of writing, the meme coin trades at \$0.39, with its daily trading volume resting at \$8.68 billion. In the morning hours, DOGE has plunged to a low of \$0.3783. Eventually, it climbed to the current trading level. Furthermore, the market observed a liquidation of \$11.32 million worth of DOGE during this timeframe, noting the daily trading volume of the asset at \$8.68 billion. An on-chain analyst recently noted that the Dogecoin whales accumulated 550 million DOGE, amounting to \$214.5 million, over the past seven days. This surge in whale activity has sparked concerns regarding the price movements of DOGE. Where Is DOGE's Price Headed? The four-hour price chart of DOGE shows a brief upward momentum. If the bullish momentum builds, the asset could drive its price toward new highs. The asset could breach and hold above the \$0.43 barrier. Reinforcing the momentum would likely push the meme coin toward the \$0.50 mark. On the flip side, the meme coin's failure to hold the \$0.35 support level could lead to a steeper correction. A potential break below that mark could push the price of DOGE to the \$0.30 mark. DOGE's ongoing market sentiment is in the neutral zone, with the daily relative strength index (RSI) found at 57.31. Besides, the daily frame of the meme coin displays the short-term 9-day moving average above the long-term 21-day moving average. In addition, the technical indicators of the meme coin exhibit the current brief bullish momentum. The Moving Average Convergence Divergence (MACD) line

is likely positioned above the signal line. This indicates an upcoming uptrend in the market. Moreover, the Chaikin Money Flow (CMF) indicator is settled at -0.09, suggesting a negative money flow. In the meantime, DOGE's daily trading volume has moderately spiked by 3.35%. Highlighted Crypto News

- Bitcoin reached \$99,000, nearing the \$100K milestone with a 4.4% daily surge. - President-elect Trump's pro-crypto stance fuels market optimism. Bitcoin (BTC) reached a new milestone, breaking \$99.3K for the first time, with a 24-hour increase of 4.4%. Its market cap climbed to \$1.96 trillion, representing 59.2% of the global crypto market cap, which surged to \$3.31 trillion. Trading volume also jumped by 31.25% in the past day, totaling \$103 billion. The rally extends beyond Bitcoin. Ethereum (ETH) and Solana (SOL) surged by 9% and 12%, respectively, while XRP soared by 25%. Whales have been actively accumulating BTC, with one whale adding 3,577 BTC (\$330 million) in the past four days, bringing their total holdings to 25,298 BTC (\$2.5 billion). Spot Bitcoin ETFs recorded \$396.56 million in inflows on November 21, marking a fourth consecutive day of increases. The total value of options for BlackRock's ETF on its first day reached \$1.9 billion. Experts link these inflows to Bitcoin's price momentum. Additionally, U.S. Bitcoin ETFs surpassed \$100 billion in total assets held, with \$773 million in net inflows on Wednesday alone. MicroStrategy added \$4.6 billion worth of BTC to its holdings last week, reinforcing institutional demand. President-elect Trump's pro-crypto stance and nomination of Howard Lutnick as commerce secretary have also strengthened market confidence. CME Bitcoin futures open interest reached record highs this week. Investors are buying long-term call options, signaling confidence in Bitcoin's future. The easing of global monetary policies is also enhancing Bitcoin's appeal as an inflation hedge. These factors support Bitcoin's price trajectory, keeping it firmly above \$98,000. Technical Upward Potential Bitcoin's technical indicators point to bullish momentum. The RSI is at 82.36, indicating overbought conditions but signaling sustained demand. The RSI average of 78.47 supports this upward trajectory. The moving averages (9-day at \$92,619 and 21-day at \$83,865) indicate strong support levels, with a bullish crossover confirming the trend. Key support levels lie at \$92,000 and \$83,000, while resistance stands at \$99,314. If Bitcoin breaks above this, it could challenge \$100,000 in the near term. The market's strength suggests further growth, barring unforeseen corrections. However, experts like Mike Novogratz caution that a price correction remains possible. Investors are also monitoring potential impacts of Trump's proposed economic policies, including inflation risks and Fed responses. As Bitcoin inches closer to \$100,000, its role as a digital asset continues to expand.

- Bitcoin Cash (BCH) broke its prolonged bearish trend with a 24% rally, rising from \$429 to \$533. - The recent surge in BCH follows Bitcoin's record high above \$98.3K. As Bitcoin (BTC) recorded a new all-time high of \$98,342 on Thursday, its hard fork, Bitcoin Cash (BCH), broke a prolonged bearish trend and entered the \$500 zone for the first time since May. Over the past 24 hours, BCH's price soared over 24%, rising from a low of \$429 to an intraday high of \$533. Bitcoin Cash has had a slow start in the current bullish trend. Although it began the year with positive momentum, later it has fallen sharply since reaching its yearly peak of \$714 in April. Nevertheless, the recent rally has brought renewed optimism, with BCH gaining 24% in a single day and topping the gainers list. Will this current rally in the altcoin send it above \$1000 once again? 24-H Technical Analysis Shows Bullish Outlook for Bitcoin Cash (BCH) At the time of writing, Bitcoin Cash is priced at \$520, with a market cap of \$10.19 billion. Additionally, the daily trading volume of BCH has soared over 310%, reaching \$1.73 billion. Further, the technical indicators are also offering a bullish outlook. The 4-hour chart reveals a falling-edge breakout rally, suggesting that BCH is gaining momentum. The cryptocurrency has broken above the 50-day EMA, signaling the end of its six-month consolidation phase. Additionally, the Ichimoku Cloud in the daily chart shows positive signals, with the conversion line at \$469 and the baseline at \$515 suggesting continued upward movement. Moreover, the MACD above the signal line is a sign of bullish momentum in the market, making it a favorable time for potential long positions. The CMF at 0.20 supports the idea of moderate bullish momentum, and traders may consider this as confirmation to maintain long positions. To validate this, Bitcoin Cash could set a target at \$621 and \$695, potentially breaking its 52-week high. If the upward momentum continues, BCH could reach the possible price target of \$849 by December 2024, with hopes that BCH might even climb to the \$1,000 zone by the end of this year. However, downside risks remain, with the immediate support levels at \$449 and \$429. Breaking these levels could dip BCH to \$329. Highlighted News Of The Day

- Bitcoin institutional adoption and ETF inflows drive the price surge. - Trump's reelection boosts market optimism, contributing to Bitcoin's growth. Bitcoin has surged to a new all-time high of \$98,309, marking a 4.78% increase in the past 24 hours. As the digital asset continues to break records, the question on many investors' minds is: when will Bitcoin hit the \$100K milestone? The rally is largely driven by growing optimism for cryptocurrencies, fueled by institutional adoption and rising capital inflows. MicroStrategy, for instance, is set to raise \$2.6 billion to buy more Bitcoin, and several corporate treasuries are following suit, adding Bitcoin to their reserves. This institutional support has significantly impacted its price trajectory, with major ETFs recording substantial net inflows, further pushing it toward new highs. Meanwhile, in addition to corporate interest, Bitcoin's role in the financial ecosystem has gained prominence, with Bitcoin futures open interest on the CME reaching record levels. The sustained buying of long-term calls signals that investors are confident about its future and expect the price to climb higher in the coming months. Bitcoin To Create History The recent surge also comes on the heels of Donald Trump's reelection, which has reignited optimism in the crypto market. Trump's plan to make the U.S. the "crypto capital of the planet" and his proposal to accumulate a national Bitcoin stockpile have further bolstered market sentiment. As it remains firmly above \$97,000, it seems the \$100K milestone is within reach. With strong institutional participation, a steady stream of ETF inflows, and a bullish market outlook, it could easily cross the \$100K mark in the coming days, if not sooner. The easing of global

monetary policy also adds to Bitcoin's appeal as a hedge against inflation, ensuring its price remains supported through the year. With the market momentum strong and volatile forces at play, it may very soon reach the coveted \$100K level, solidifying its status in the financial world.

### Highlighted News Of The Day

- Bitcoin ETFs reach \$100.55B just 10 months post-launch. - Trump explores White House crypto policy role, boosting Bitcoin. US spot Bitcoin exchange-traded funds (ETFs) have achieved a historic milestone, surpassing \$100 billion in total assets. This comes just ten months after their debut in January, marking one of the fastest fund category launches in history. Twelve spot Bitcoin ETFs, including products from BlackRock Inc. and Fidelity Investments, reached a combined asset value of \$100.55 billion on Wednesday. This figure represents 5.4% of Bitcoin's total market capitalization. BlackRock's IBIT leads the pack with \$45.4 billion, while Grayscale's GBTC holds \$20.6 billion. Bitcoin's surge continues to drive ETF inflows, which totaled \$733.5 million on Wednesday and \$837.36 million the day before. Since the US election on November 5, ETFs have seen \$5.8 billion in net inflows, fueled by optimism around President-elect Donald Trump's pro-crypto stance. Record 2024 Gains for Bitcoin Trump's transition team is reportedly exploring a dedicated White House digital-asset policy post, signaling potential institutional support for cryptocurrencies. This pro-crypto sentiment has bolstered Bitcoin's price, which climbed 3.6% to a record \$97,892 on Thursday. The cryptocurrency's value has risen 129% in 2024, outperforming traditional assets like stocks and gold. Futures markets reflect similar optimism, with March contracts trading at a premium of 5% to the spot price. Analysts attribute the rally to several factors, including increased institutional adoption and the recent introduction of Bitcoin ETF options. BlackRock's iShares Bitcoin Trust led the launch of these options on November 5, followed by products from Grayscale and Bitwise. The availability of Bitcoin ETF options has further solidified Bitcoin as a mainstream asset. It has attracted a growing number of institutional investors seeking to integrate cryptocurrency into their portfolios. Bitcoin futures on platforms like Deribit also signal strong market sentiment. Contracts expiring in 2024 trade above \$100,000, while options with \$100,000 strike prices show significant interest. [Highlighted Crypto News Today Why Is Ethereum \(ETH\) Stalling at \\$3.1K While Bitcoin Surges?](#)

- Ethereum continues to hover around the \$3.1K mark. - A breakout above \$3.4K resistance could ignite ETH's next rally. The largest crypto asset, Bitcoin (BTC), is in the spotlight in the crypto market, nearing the much-anticipated \$100K threshold and setting a new all-time high of \$97,862. The BTC rally has driven gains across altcoins, but Ethereum (ETH), the largest altcoin, remains an exception. As Ethereum lags behind Bitcoin, the price has stepped into the consolidation phase. ETH price soared to \$3,420 on November 12, and this level is the crucial resistance. Notably, the asset fluctuates between \$3.2K and \$3K. The asset faces strong challenges in breaking through significant resistance levels that could reignite bullish sentiment. According to analysts, a breakout above the crucial resistance could initiate a new upward phase for ETH. ETH has a modest gain of 0.58% over the past 24 hours. At press time, the asset trades at \$3,141, and it has dipped to a low of \$3,032. Furthermore, the market observed a liquidation of \$65.67 million worth of Ethereum during this timeframe. In the meantime, the daily trading volume of ETH stays at 44.99 billion. On the other side, the seven-day outlook of Ethereum shows a loss of over 2.45%, completely drenched in red. The asset began the week trading at \$3,209 and ETH visited its weekly low at \$3,018. ETH itself hinted at a steady downside correction through its trading pattern. Is Ethereum Susceptible to a Decline? Ethereum's four-hour price chart exhibits the continued downside momentum. A gain beyond the current level will occur only if the asset hits \$3.2K. In the scenario where ETH pushes its price higher, it might test the nearby resistance at \$3,294. If the asset holds steady, it could surge to \$3.4K. On the other side, if the current declining pace continues, Ethereum could test its nearest support level at \$2,915. A potential break below this price range could push ETH to slip even lower and the price might fall to the \$2,760 mark. In addition, the technical analysis of Ethereum exposed the current bearish momentum. The Moving Average Convergence Divergence (MACD) line is likely settled beneath the signal line. This could indicate an upcoming downturn in the market. Besides, the Chaikin Money Flow (CMF) indicator is situated at 0.08 indicating a brief positive money flow, hinting at a possible surge in demand. Meanwhile, Ethereum's daily trading volume has increased by over 25.50% to \$35.13 billion. ETH's current market sentiment is in the neutral zone with the daily relative strength index (RSI) found at 51.69. Moreover, the daily frame of the asset reveals the short-term 50-day moving average above the long-term 200-day moving average.

- Bitcoin's Resistance at \$97,024 is broken, targeting \$100,000 next. - RSI at 70.66 and CMF at 0.312 confirm bullish momentum. Bitcoin (BTC) surged to a new all-time high of \$97,628 and is currently trading at \$97,360 marking a 5.60% gain in the past 24 hours. The global crypto market cap climbed 2.77% to \$3.15 trillion, driven by a pro-crypto U.S. government and institutional demand. Trading volume for Bitcoin rose 6.74% to \$80.61 billion, while its dominance increased 1.20% to 60.64%. Bitcoin's market cap now stands at \$1.91 trillion, with a 4.69% gain. Spot Bitcoin ETFs launched by BlackRock on Nasdaq fueled market enthusiasm. BlackRock's Bitcoin options ETF contributed to a record \$1.9 billion trading volume, showcasing surging institutional interest. Whale activities also indicated strong accumulation, with one whale amassing 3,289 BTC worth \$302 million over the past two days. Notable transfers included 552 BTC from Coinbase to an unknown wallet and 800 BTC to Antpool. Bitcoin added 30% in 14 days, benefiting from Federal Reserve rate cuts and a "Trump trade" optimism. Analysts attributed the rally to Donald Trump's pro-crypto policies and a supportive cabinet. BlackRock's IBIT ETF inflows further reinforced BTC's upward momentum. Alongside Bitcoin's rise, the cryptocurrency market saw \$393 million in liquidations. Of this, \$267 million were long positions, and \$126 million were short positions. Bitcoin led the liquidations with \$77.4 million, followed by Ethereum and Dogecoin. A total of 149,210 traders were liquidated, with the largest liquidation occurring in the ETH/BTC trading pair on Binance. Bullish Indicators for BTC The
