

blockchain. Although most people donâ€™t see it, MEV is essentially an invisible â€œtaxâ€ that users pay on their transactions without even realizing it. Its mysterious and concerning nature is exactly why itâ€™s important to understand what MEV is and how it works. This article will do precisely that by providing breakdowns of everything you need to know about MEV. These breakdowns are from ZENMEV, a research group working on mitigating the risks involved with MEV. Predators on the Blockchain In the world of Ethereum, MEV bots are the predators lurking in the shadows looking for opportunities to profit. They monitor the pending transaction pool, identify arbitrage opportunities or ways to front run trades, and then order transactions to maximize their profits. Successful MEV bots can extract millions of dollars over time. For individual and institutional investors transacting in large sizes, MEV can lead to substantial slippage and money left on the table. Unlike explicit fees you can see, MEV is stealthy and obscured from view. But make no mistakeâ€”itâ€™s draining value out of trades behind the scenes. Where Does MEV Come From? Simply put, MEV exists because miners have the ability to order transactions in different ways. They can sequence transactions to favor certain outcomes over others. And with a lot of money flowing through Ethereum, there are strong incentives for miners to maximize profits. Some common sources of MEV include: front running decentralized exchange orders, arbitraging price differences across protocols, exploiting rebate payments on lending platforms, and more. Specialized bots monitor the pending transaction pool for these money-making opportunities. And as Ethereum competition has increased, MEV has become a key revenue stream for miners. So we can expect these transaction ordering strategies to become more complex and aggressive as larger sums are at stake. Estimating the Cost of MEV In 2022, over \$675 million in MEV profits were realized on the Ethereum network alone. When taking into account other blockchains such as Solana and Binance Smart Chain, the total MEV market value exceeds \$1 billion in profits. For individual traders, the costs are hardly noticeable on small transactions. But for major institutional players like market makers and lending providers, MEV can rack up tremendous expenses over time. These â€œinvisible taxesâ€ end up acting like a regressive tax, diffused evenly across all users instead of proportionally impacting those with the deepest pockets. So even if the raw dollar costs seem concentrated, the effects touch everyone in the ecosystem. How to Protect Yourself from MEV While MEV is an inevitable aspect of DeFi trading currently, there are some ways to limit its impact. Use privacy-centric DEXs like Aztec or DeFi platforms with MEV protection. Break up large transactions into smaller chunks. Use services that optimize order execution to minimize slippage. Support efforts to build MEV-resistant protocols and incentives. The future of MEV Protection As MEV extraction becomes more widespread, the Ethereum community is exploring ways to curb harmful practices and limit unnecessary value leakage from the network. There are several promising areas that could provide better MEV protection in the future: - Zero-knowledge proofs: These cryptographic systems can enable privacy-preserving transactions that mask trading activity from MEV bots. Projects like Aztec and ZkSync aim to bring zero-knowledge technology to Ethereum for shielding transactions. - Improved transaction ordering: Mechanisms like fair ordering services and decentralized block building could remove the ability for miners to arbitrarily reorder transactions for profit. This cuts off some MEV opportunities at the source. - Incentive realignment: Adjusting block rewards or implementing miner donation schemes could better align miner incentives with network security and efficiency rather than short-term profit seeking. While the arms race is accelerating, developments on the protocol level combined with shifts in community norms offer paths to controlling MEV. Ongoing research and pressure from users will be key to enacting these next-generation solutions. ZENMEV group is constantly working to ensure that everyone can profit from MEV through mev trading. User Education and Activism One of the greatest tools regular users have against the predation of MEV is knowledge. By understanding how these practices work, the scale of value extracted, and what needs to be improved, users can make their voices heard and shape the evolution of Ethereum itself. Getting informed on the latest MEV research, discussing issues in community forums, and providing input to wallet services and Dapps puts direct pressure on elevating user protections. Even if not actively developing protocols or analyzing blockchain data, users still play a critical role in driving adoption of privacy-centric options and progressive roadmap priorities in Ethereum. Exercising choice of services that aim to mitigate MEV sends market signals. And vocal support of substantive solutions rather than superficial measures keeps projects focused on meaningful innovation. The collective voice and values of users can cut through the noise to advocate for practical solutions. ZENMEV also provides mev arbitrage opportunities to individual users. Wrapping Up MEV wonâ€™t be going away anytime soon. But understanding where it comes from and how participants are affected can lead to better protections and mitigation of its effects. Traders need to stay vigilant in Ethereumâ€™s dark forest if they want to avoid getting taxed by the MEV bots. The key here is education. By better understanding the invisible forces and risks in DeFi, users can make informed decisions and advocate for improvements to benefit the entire ecosystem. Shedding light on MEV is the first step toward tackling its downsides. The information in this article has been provided to you by ZENMEV a research and development group that is leading the cause of mitigating the risks involved with MEV. - The cash creation model might have a negative impact on the arbitrage trades. - A staking component for the issuerâ€™s spot Ether ETF is also proposed. ARK 21Shares has made changes to their spot Ether ETF application in order to implement a cash-creation approach, which is comparable to their authorized spot Bitcoin ETF. Additionally, they have also hinted to stake some of the ETFâ€™s Ether in order to produce more revenue. After many conversations with the U.S SEC, ARK 21Shares and BlackRock were among the first issuers to switch their spot Bitcoin (BTC) ETFs to a cash generation and redemption mechanism in December 2023. In-line with Earlier Authorized Spot Bitcoin ETFs ARK 21Sharesâ€™ spot Ether (ETH) ETF formerly had an in-kind redemption strategy, which means that non-monetary assets like Bitcoin could be redeemed. As part of the cash creates concept, ARK 21Shares would buy Ether with the amount of the order and then deposit it into the trustâ€™s custodian account. The next step is to establish shares of the spot Ethereum ETF. The revisions, as stated in its most recent Form S-1 amendment filed on Feb. 7, now â€œbring it in lineâ€ with authorized spot Bitcoin ETFs, according to Bloomberg ETF analyst Eric Balchunas. The Cathie Wood-led organization has admitted that the cash creates model might have a negative impact on the arbitrage trades that authorized players are trying to do in order to maintain a tight relationship between the share price and Ether. A staking component for the issuerâ€™s spot Ether ETF is also proposed in the most recent S-1 filing. The cold vault balance of the trust would be staked by ARK 21Shares, and the trust would get staking rewards, which are like revenue. Slashing is one danger associated with staking that ARK 21Shares has recognized, as is the possibility that staked ETH may be held up for long periods of time. Highlighted Crypto News Today: Solana (SOL) Surges to \$102, Outperforming BTC Despite Outage

Grand Cayman, Cayman Islands, February 7th, 2024, Chainwire Ondoâ€™s Sui upcoming integration will bring native access to new tokenized assets such as treasuries, securities, and stablecoins on chain Sui, the Layer 1 blockchain which has experienced explosive growth since its inception eight months ago. Today announced that Ondo Finance is expanding into the Sui ecosystem. The expansion will bring Sui Networkâ€™s first native dollar-denominated token (including stablecoins and interest-bearing stablecoin substitutes) in the form of Ondo USD yield of â€œodosyâ€ as a US treasury-backed and interest-bearing token issued by Ondo. Ondoâ€™s expansion to Sui adds to Suiâ€™s blistering DeFi momentum, demonstrating the growth and demand for financial applications and native functionality on chain. Suiâ€™s DeFi volume is up more than 1200% since October and Sui recently broke into the top 10 DeFi ecosystems as measured by TVL. Ondo Finance is the third-largest platform bringing tokenized derivatives of real-world assets onto public blockchains with \$185M in TVL and over \$1B worth of its newly-launched governance token trading in its first week in late January. In addition to stablecoins, Ondoâ€™s flagship Treasury-backed tokens, tokenized securities, and real-world assets will create countless new opportunities for teams building on Sui. Ondoâ€™s expansion into the Sui ecosystem also continues a trend of top projects affirmatively choosing to integrate into Sui. For example, in December 2023, leading Solana lending protocol Solend announced it would launch a lending protocol native to Sui and decentralized derivatives exchange Bluefin likewise shuttered its V1 Arbitrum implementation to focus entirely on Sui. â€œThe people who interact with our platform want fast and efficient transactions, which should be essential for any blockchain project,â€ said Ondoâ€™s founder and Chief Executive Officer, Adam Lindman. â€œGiven Suiâ€™s rapid growth and network performance, offering clear confirmation that its network is the perfect fit for Ondoâ€™s ecosystem.â€ Tokenized treasury offerings represent tradable tokens backed by real-world assets, and their presence on Sui is a significant step toward growing DeFi in the ecosystem and across the industry. â€œOndo is an amazing addition to the Sui ecosystem, providing a native yield-bearing stablecoin-like asset that will unlock new opportunities for Suiâ€™s builders and developers and essential new functionality for the users of their applications,â€ said Greg Siourounis, Managing Director of the Sui Foundation. â€œSuiâ€™s DeFi volume is already growing at a remarkable rate and Ondoâ€™s participation will make that trajectory even stronger. I am excited to see how Suiâ€™s community leverages the real-world assets and innovative financial products Ondo offers.â€ Contact Sui Foundation media@sui.io

UNKJD Studios (previously â€œUncaged Studioâ€), well recognized for its Web3 game MonkeyLeague, presents UNKJD Soccer as its new brand. It has a new vision to create the brand on the three main pillars of IP, game, and Web3, with the goal of going beyond the mobile soccer game. With new sports games added every six to eight months, UNKJD seeks to swiftly extend its universe while enhancing its IP via partnerships with prominent sports, entertainment, and fashion brands. The leading Solana blockchain-based gaming studio UNKJD has made a strategic step by appointing Maxim Bashkaev Vaysbord, a highly respected former Azuki executive, as its new Brand Director. The team behind the firm includes seasoned veterans from companies like Disney, Playtika, and Coti. Vaysbord, who has a history in fashion and successful Web3 companies, brings a lot of creativity and expertise to UNKJDâ€™s journey. Vaysbord stated: â€œWe firmly believe that gaming is at the forefront of the entertainment industry. At UNKJD, we aim to architect a universe where games are the centerpiece, and Web3 acts as the connective matrix, empowering the community with ownership and our games with interoperability.â€ The key to a cohesive game experience is UNKJD \$MBS, which is at the core of the UNKJD. Through the UNKJD \$MBS, users may discover new experiences inside a single, continuous world, connecting all of the UNKJD games. Yael Friedman, UNKJD CEO and a leader in the Israeli gaming industry stated: â€œUNKJD Soccer is more than a name changeâ€”itâ€™s a declaration of our commitment to providing a truly fun and unique experience to all players, regardless of whether youâ€™re a Web2 or Web3 enthusiast. UNKJD Soccer is just the beginning of our journey to redefine the next era of Web3 gamingâ€. Co-founder Raz Friedman, who helped create the free-to-play model and is well-known for his work at popular games like Slotomania, WSOP Poker, and House of Fun, says he is certain that UNKJD Soccer will continue to be at the forefront of gaming innovation. Friedman stated: â€œThe video gaming industry is on the brink of an extraordinary era with expected \$282 billion revenue and solid annual growth of 8.76% from 2024 to 2027. UNKJD is positioned at the forefront of this innovation. With UNKJD Soccer, weâ€™re not merely launching a game; weâ€™re leading the industry into a future where sports, strategy, and RPG seamlessly converge. The game provides a platform for adept players aspiring to â€œGo Pro,â€ allowing them to utilize and trade game collectibles and tokens. Our rebranding is a strategic move to align with the dynamic growth projected for the gaming marketâ€. UNKJDâ€™s 2024 roadmap begins with the much awaited upgrade of its debut game, Monkey League, to UNKJD Soccer in a crucial market: Brazil. The firm plans to progressively unveil its cutting-edge economics and game design over the year, in addition to exposing more uses for the UNKJD \$MBS token. The second part of 2024 is scheduled to see the worldwide debut of UNKJD.

In the rapidly evolving landscape of cryptocurrency, stories of young investors hitting it big are not just inspiring but also indicative of the marketâ€™s potential for life-changing returns. Among these success stories is that of a 19-year-old who struck gold with Bonk (BONK) in 2023, a memecoin from the Solana Network that witnessed a staggering 10,000% surge within the year. This young investorâ€™s strategic moves and timing allowed him to amass a \$25 million profit showcasing the explosive potential of well-timed investments in the crypto space. Click Here To Take Part In Retik Finance Presale The Bonk Phenomenon Bonkâ€™s meteoric rise is a testament to the volatile yet lucrative nature of meme coins within the crypto space. Launched in December 2022, amidst the tumultuous aftermath of the FTX saga, Bonkâ€™s resilience and staggering 16,000% increase from its all-time low highlight the unpredictable dynamics of cryptocurrency investments. With a market capitalization exceeding \$850 million and a circulating supply of about 63 trillion tokens, Bonkâ€™s journey from obscurity to peak performance showcases the immense potential for rapid growth in the crypto sector. A New Venture: Retik Finance (RETIK) The young millionaireâ€™s next venture into Retik Finance (RETIK) underscores the continuous search for the next big opportunity in the crypto landscape. Launched in December 2023, Retik Finance swiftly carved a niche for itself, with its presale stages selling out in record time. This new token, priced at \$0.1 during its 8th presale stage, demonstrates remarkable momentum, closely mirroring the early days of Bonk but with a foundation built on solid utility and a vision for the future. Retik Finance stands out not just for its impressive presale performance but also for its innovative approach to DeFi. With offerings such as Futuristic DeFi Debit Cards, a Smart Crypto Payment Gateway, AI-powered peer-to-peer lending, and a Multi-Chain Non-Custodial Highly Secured DeFi Wallet, Retik Finance aims to redefine global transactions and bridge the gap between cryptocurrency and everyday financial activities. As of now, Retik Finance is in its Presale Stage 8, priced at \$0.100 per token. This stage, already 95.37% complete, is on track to sell out ahead of schedule, continuing the trend

seen in previous stages. With over \$20 million raised and nearly 300 million tokens sold, the FOMO (Fear Of Missing Out) around Retik Finance is palpable, drawing in both seasoned investors and newcomers eager to be part of the next big success story. The Role of FOMO The Fear of Missing Out (FOMO) plays a significant role in the crypto investment landscape, driving demand and presale momentum for promising projects like Retik Finance. With only two stages left before its launch, the sense of urgency among investors is palpable. The community around Retik, now over 50,000 strong, is eagerly anticipating the potential gains as the token prepares for its debut on major exchanges. The Promise of Retik Finance Retik Finance's appeal lies not just in its potential for high returns but also in its mission to facilitate real-life utility for cryptocurrencies. The dynamic DeFi token, built on the Ethereum mainnet and adhering to the ERC20 standard, is poised to drive decentralised transactions and fuel innovative financial solutions. With a total supply of 1 billion tokens, Retik Finance is not just an investment opportunity but a pioneer in the integration of digital and traditional finance. Conclusion As the crypto market continues to evolve, stories like that of the 19-year-old Bonk millionaire serve as a reminder of the transformative potential of smart, timely investments. Retik Finance, with its blend of innovation, utility, and community support, stands as a testament to the enduring allure of cryptocurrencies as a vehicle for financial growth and empowerment. Additionally, the role of FOMO in driving presale momentum cannot be understated. With just two stages left before its launch, now might be the prime time for investors to secure their stake in Retik Finance. The young Bonk millionaire's decision to reinvest his profits into Retik underscores the potential that smart money sees in this new token. As we look ahead, Retik Finance not only promises to be a worthy successor to the success stories of 2023 but also a beacon of innovation and potential returns in the DeFi space. For investors seeking the next big opportunity, Retik Finance offers not just the promise of quick gains but the potential to be part of a project set to reshape the landscape of decentralised finance. - Withdrawals of these tokens will not be permitted post May 20, 2024. - Monero (XMR) would be delisted from the exchange on February 20, 2024. Following Binance's announcement that it would delist the Monero (XMR) privacy coin from its platform, the price of the privacy-focused cryptocurrency fell to levels not seen in months. Binance said on February 6 that Monero (XMR) would be delisted from the exchange on February 20, 2024, along with other currencies such as Aragon (ANT), Multichain (MULTI), and Vai (VAI). The notice points out that all trade orders will be erased immediately after trading stops in each trading pair. It further mentions that withdrawals of these tokens will not be permitted post May 20, 2024. Number of Points Taken Into Consideration Even after May 21, users of delisted XMR may still have their funds converted into stablecoins via Binance, but the process is not guaranteed, the exchange said. Users' Binance accounts will be credited with the stablecoins following the conversion, and a second notice will be sent before the conversion if relevant, according to the exchange. A number of points are taken into consideration when deciding to delist XMR. These include the following: the contribution to a thriving and sustainable crypto ecosystem, proof of fraudulent or unethical behavior or negligence, and compliance to Binance's periodic due diligence requests, among others. Upon hearing the delisting announcement, the price of the Monero cryptocurrency dropped precipitously. According to statistics from CoinMarketCap, XMR lost about 38% of its value, as it crashed to a low of \$103. The original intention of the 2014 debut of Monero was to facilitate anonymous, private transactions. Highlighted Crypto News Today: Solana Network Restored After Five-Hour Outage Post Validator Restart

The Polkadot blockchain has surpassed earlier records established by Solana and Polygon, setting a new record of 4930 NFTs per minute—a significant accomplishment for blockchain and Web3. Unique Network, a Polkadot parachain that specializes in composable NFTs, minted the NFTs for the interactive Web3 game Forever Has Fallen, marking a significant advancement in the scalability and efficiency of blockchain technology. Because they allow players to enter the Hunters Lair in the game's metaverse, the tokens, often referred to as Bounty Hunter Tickets (BHTs), are essential to the immersive experience of Forever Has Fallen. The project's developers tested extensively on a variety of blockchain networks, assessing important aspects including overall performance, minting speed, and gas costs. After minting three batches of 100,000 NFTs during this meticulous evaluation phase, developers came to the conclusion that Polkadot's infrastructure was best suited for the historic mass NFT minting. By showcasing Polkadot's capabilities, this historic accomplishment presents the layer-0 protocol as a very appealing network for Web3 gaming companies that need to provide consumers with NFTs quickly. With the help of Polkadot SDK and Unique Network's technology, Forever Has Fallen can transfer thousands of NFTs at previously unheard-of rates, which greatly enhances the influence of its story-driven interactive metaverse. Kimon Lycos, Founder and CEO of Incite, the Production Studio Behind Forever Has Fallen stated: "Because our production is first and foremost about fun, we want Web3 elements to be under the hood, and to have this type of speed will enable a Web2 type experience of instant gratification." Alexander Mitrovic, CEO of Unique Network added: "Working on Polkadot offers great flexibility. We are free to optimize the code and forkliftably upgrade the chain. Our core developers have been waiting for an opportunity to test a series of performance improvement ideas on a large scale. Forever Has Fallen gave them the opportunity to present a business case that talks to mass consumers. A revolutionary era in blockchain and NFT development is about to begin with Polkadot's Core developers' impending incorporation of Asynchronous Backing (AB), which is expected to substantially improve the network's speed and efficiency. Go to [www.foreverhasfallen.com/tickets](http://www.foreverhasfallen.com/tickets) to get your hands on a piece of history.

Cryptocurrency has been a hot topic in the investment world, and 2024 is shaping up to be an exciting year for the market. Recently, a top analyst who is known for predicting the next crypto gems unveiled his 2024 bull run picks, allocating a significant 75% of his portfolio to two specific cryptocurrencies that are set to dominate the market. These two tokens are Retik Finance (RETIK) and Solana (SOL). In this blog post, we will delve into the reasons behind this bold investment strategy and explore why these two cryptocurrencies have caught the attention of this top analyst. Click Here To Take Part In Retik Finance Presale Solana and Retik Finance: The 2024 Bull Run Picks Unveiling the anticipated bull run for 2024, a prominent analyst has stirred excitement within the investment community through their strategic portfolio picks. Retik Finance (RETIK) and Solana (SOL) claim the spotlight, with a substantial allocation of 75% of the portfolio. This bold move signals the analyst's conviction in the transformative potential of these cryptocurrencies. Among these, Retik Finance (RETIK) stands out as the recipient of a significant investment, comprising 55% of the portfolio. RETIK is poised to redefine the decentralised finance landscape with its cutting-edge protocol, providing users with innovative solutions and empowering them to maximise their financial opportunities. Solana (SOL), on the other hand, solidifies its position as an industry leader with its high-performance blockchain. Its ability to facilitate fast and secure transactions at minimal cost has attracted widespread adoption. The analyst's allocation of a substantial portion of the portfolio to SOL underscores their belief in the platform's scalability, robust ecosystem, and capacity to thrive in the rapidly evolving blockchain sector. This strategic allocation reflects the analyst's unwavering optimism about the future of RETIK and SOL. Their inclusion in the portfolio signifies their immense potential to deliver substantial returns and drive the upcoming 2024 bull run. Investors eagerly await the unfolding of this vision as RETIK and SOL position themselves to shape the trajectory of the cryptocurrency market. Click Here To Take Part In Retik Finance Presale Why the Top Crypto Analyst Allocates Larger Funds in Retik Finance (RETIK) Retik Finance (RETIK) has captured the attention of investors and analysts alike due to its revolutionary approach to decentralised finance (DeFi). Among its distinctive features is the lucrative Defi debit cards, enabling token holders to spend their cryptos in real life and earn substantial rewards for doing so. It also offers staking mechanisms which not only incentivizes long-term investment but also contributes to the stability and security of the network. Furthermore, Retik Finance's unwavering commitment to robust security measures sets it apart in the DeFi landscape. By employing cutting-edge encryption techniques, rigorous auditing processes from Certik, and transparent smart contract code, Retik Finance ensures the utmost protection of its users' funds and data. This dedication to security instills confidence among investors and positions Retik Finance as a reliable and trustworthy platform for DeFi transactions. The decision of a prominent analyst to allocate a significant portion of his investment portfolio to RETIK underscores their unwavering belief in the long-term potential and viability of the project. This bold move is backed by extensive research and careful consideration of market dynamics, technological advancements, and the overall growth trajectory of the cryptocurrency sector. The analyst's substantial allocation to RETIK reflects their conviction that the project is poised for substantial growth and outperformance during the anticipated 2024 bull run. As Retik Finance prepares for imminent listings on two of the five largest cryptocurrency exchanges, its price is expected to surge significantly. Analysts predict a meteoric rise from its current value of \$0.1 to over \$5 in the coming months. These upcoming exchange listings will provide increased visibility, liquidity, and accessibility to a broader investor base, propelling RETIK's price to unprecedented heights. Conclusion The top analyst's selection of Retik Finance (RETIK) and Solana (SOL) as the picks for the upcoming 2024 bull run has highlighted their potential to become major players in the cryptocurrency market. The strategic allocation of 75% of the portfolio to these two digital assets emphasises the analyst's confidence in their ability to deliver significant returns during the anticipated bull run. Notably, over 50% of the portfolio is dedicated to Retik Finance alone. RETIK's innovative features, unwavering commitment to security, and strategic positioning for top-tier exchange listings present an attractive investment opportunity. This substantial allocation to RETIK by an experienced analyst further reinforces the project's potential for substantial growth and outperformance during the upcoming bull market cycle. Victoria, Seychelles, February 5th, 2024, Chainwire Bitget Wallet, a global leading Web3 trading wallet, has officially announced the appointment of Alvin Kan as its Chief Operating Officer (COO) to lead the company's global growth strategy and coordinate brand development, operations, and growth initiatives. Alvin Kan brings a wealth of expertise with over 15 years of professional experience, having held prominent roles at BNB Chain and Sei Labs. Notably, he spearheaded ecosystem growth at BNB Chain and served as the Head of Asia for Sei Labs. Before this, Alvin spent almost a decade at LinkedIn, where he led the Asia-Pacific data team and played a crucial role in the company's strategic development across Asia. With a strong background in market growth and data analysis in the Web2 domain, coupled with his insightful understanding of building Web3 ecosystems, Alvin is well-equipped to introduce innovative ideas and steer global growth strategies at Bitget Wallet. His leadership will be instrumental in shaping the company's direction and planning for the upcoming year, elevating the brand's global presence. In outlining the company's 2024 development plan, Alvin emphasizes a strategic focus on acquiring new users, expanding the roster of supported assets, and exploring novel opportunities. Global Expansion and Growth In 2024, Alvin is charting a course for global expansion, outlining a comprehensive globalization strategy that involves deploying localized teams in strategic regions worldwide. This initiative aims to establish operational capabilities tailored to specific regions, facilitating accelerated growth and market penetration on a global scale and catering to the diverse needs of a global userbase. Initial endeavors in Turkey, Vietnam, and Pakistan have demonstrated promising outcomes, laying the groundwork for broader success. Amidst a bullish market outlook, the cryptocurrency sector is poised to attract a diverse influx of new users and key opinion leaders (KOLs) spanning various industries. Alvin's unwavering commitment involves fostering a symbiotic relationship between product development and market operations within the company. This approach ensures a seamless integration for new users, hailing from diverse backgrounds, into the dynamic realm of Web3. Moreover, strategic collaborations with well-established Web2 brands are on the horizon to amplify synergy and elevate Bitget Wallet's global brand recognition. Capturing New Narratives and Assets As the COO of Bitget Wallet, Alvin will be spearheading the establishment of a more adaptive team structure, geared towards swift responses to market dynamics and keen recognition of emerging narratives and assets. This initiative aims to facilitate the rapid implementation of technology and product strategies. "New assets will always be at the core of wealth generation within this industry," Alvin says. "Our goal is to be the first to uncover the next big opportunity for our users." Equipped with core features like Swap, smart quotes, Launchpad for new offerings, and inscription tools, Bitget Wallet is strategically crafted to empower users in capitalizing on valuable assets early, thereby maximizing returns. Alvin underscores a dual-strategy approach, advocating for the robust execution of long-term initiatives alongside flexible engagement with short-term trends. This balanced strategy ensures a nimble response to market shifts while concurrently focusing on meticulous infrastructure development. The overarching aim here is to fortify Bitget Wallet's

product suite and establish a robust infrastructure to fully harness the benefits of sustained growth. Exploring New Opportunities in Wallets Web3 wallets as an industry have witnessed significant growth from basic functionalities such as address creation, fund transfers, and receipts to more advanced features such as the integration of multi-chain DEXs, NFT marketplaces, and diverse protocols. This evolution has broadened the scope and redefined what it means to serve a Web3 wallet in today's context, elevating them to comprehensive Web3 gateways that encompass asset management, Swap transactions, inscriptions, NFT minting, and interactions across entire blockchain ecosystems. Notably, innovations like MPC and AA wallets have contributed to enhancing user experiences, introducing greater convenience. Throughout this transformative journey, Bitget Wallet has consistently positioned itself at the forefront, actively exploring and anticipating future trends in the realm of Web3 wallets. Under Alvin's leadership, Bitget Wallet is actively working towards establishing systematic capabilities, consistently expanding core product features, and fostering innovation based on emerging narratives. The goal is to carve out a distinctive competitive edge for Bitget Wallet in the dynamic market. Alvin places a strong emphasis on simplifying the product experience, aiming for Bitget Wallet to serve as a seamless Web3 bridge. In our recent App version, the team has thoroughly reconsidered and redesigned the UI, with a dedicated focus on enhancing user-friendliness and ease of experience, Alvin highlights. At Bitget Wallet has always been on what we believe is the right path to chart the future of Web3 wallets, he concludes. Continuous progress is key in ensuring that we continually place ourselves and our users at the forefront of Web3 innovation. About Bitget Wallet (Web3 Trading Wallet), Bitget Wallet stands as Asia's largest and global front runner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 15 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. Cryptocurrencies have evolved from being a niche interest to a global financial phenomenon. While many early investors have already realised substantial gains, the crypto market continues to offer opportunities for those looking to build substantial wealth. February 2024 presents an exciting landscape for crypto enthusiasts and investors alike. In this article, we'll explore five power plays in the crypto space that have the potential to make you a millionaire. Click Here To Take Part In Retik Finance Presale - Bitcoin (BTC): The King of Crypto No discussion about crypto millionaires can begin without mentioning Bitcoin. Often referred to as digital gold, Bitcoin has a track record of delivering exceptional returns. In February 2024, Bitcoin remains a power play for investors seeking long-term wealth accumulation. The recent Bitcoin halving, which occurred in 2024, has reduced the supply of new coins entering the market. Historically, halving events have been followed by significant price increases. With Bitcoin trading around \$42,890 at the beginning of February 2024, many analysts believe it has the potential to reach new all-time highs. - Ethereum (ETH): The Smart Contract Pioneer Ethereum has cemented its position as the second-largest cryptocurrency by market capitalization. It is often considered the backbone of the decentralised finance (DeFi) ecosystem. Ethereum's utility extends beyond being a digital currency; it enables the creation of decentralised applications (dApps) and smart contracts. In 2024, Ethereum's price is on an upward trajectory, driven by the growing interest in DeFi, NFTs (Non-Fungible Tokens), and the potential approval of an Ethereum ETF. With a price of around \$2,305 at the beginning of February, Ethereum is a formidable power play with the potential to reach new all-time highs. - Retik Finance (RETIK): The Rising Star Retik Finance has been making waves in the crypto world, and for good reason. It offers a comprehensive DeFi ecosystem that combines traditional and digital finance seamlessly. With features like the Retik Wallet, DeFi Debit Cards, and Retik Pay, it addresses practical financial needs. What sets Retik Finance apart is its rapid success in the presale stages. It sold out seven presale stages in seven weeks, raising over \$20 million and delivering early investors a quick profit of 15%. The potential for Retik Finance to disrupt the DeFi space and provide substantial returns makes it a compelling power play for February 2024. - Solana (SOL): The Scalability Solution Solana has gained significant attention for its scalability and low transaction fees. It has become a preferred platform for DeFi projects and NFT marketplaces. Solana's price has been on an upward trajectory, thanks to its efficient consensus mechanism and the growing adoption of its blockchain. With a price of around \$99 at the beginning of February 2024, Solana offers investors an opportunity to participate in the scalability revolution. As the demand for fast and cost-effective blockchain solutions continues to grow, Solana's potential for substantial gains remains promising. - Polygon (MATIC): The Layer-2 Solution Polygon, formerly known as Matic Network, has emerged as a prominent Layer-2 scaling solution for Ethereum. It aims to address Ethereum's scalability issues while maintaining compatibility with the Ethereum network. Polygon has gained popularity for its ability to enable fast and inexpensive transactions on the Ethereum blockchain. In February 2024, Polygon's price is hovering around \$0.79, and it remains an attractive power play for investors seeking to benefit from Ethereum's scalability upgrades. As Ethereum continues to evolve and scale, Polygon's role in the ecosystem becomes increasingly vital. Conclusion While the crypto market offers exciting opportunities, it's essential to approach it with caution and conduct thorough research before making investment decisions. Cryptocurrencies are known for their volatility, and fortunes can change rapidly. In February 2024, Bitcoin, Ethereum, Retik Finance, Solana, and Polygon stand out as five power plays with the potential to make you a crypto millionaire. However, it's crucial to diversify your investments, stay informed about market developments, and only invest what you can afford to lose. Remember that crypto investments come with risks, and the path to becoming a crypto millionaire requires patience, discipline, and a long-term perspective. Starting your investment journey just starting with crypto just now, the power plays mentioned in this article offer a glimpse into the exciting possibilities that the crypto world holds. The world of cryptocurrencies has been a hotbed for investors seeking to turn small investments into substantial gains. While it's true that the crypto market is highly volatile and comes with inherent risks, the potential for exponential growth cannot be ignored. If you're wondering what to buy to turn your \$500 into \$50,000, three cryptocurrencies stand out: Retik Finance (RETIK), XRP, and Solana (SOL). In this article, we'll delve into why these cryptocurrencies are worth considering and why Retik Finance comes out on top. Click Here To Take Part In Retik Finance Presale Retik Finance (RETIK): The DeFi Underdog Retik Finance is an emerging player in the world of decentralised finance (DeFi), and it has been making waves in the crypto community. Despite being a relatively new entrant, Retik Finance has demonstrated immense growth potential, making it an attractive option for investors looking to multiply their investments. The key factors that make Retik Finance a standout choice include its innovative approach to DeFi and its remarkable presale achievements. Retik Finance offers a range of groundbreaking features, including Futuristic DeFi, Debit Cards, Smart Contracts, DApp Browser, Private Swap, Peer-to-Peer Finance, and a robust Multi-chain Non-Custodial Hub. What sets Retik Finance apart is its impressive presale performance. The project has consistently surpassed expectations and set new records. During its presale journey, Retik Finance raised \$450,000 within the first 24 hours, followed by \$1 million in just one week. Most notably, the project sold out Presale Stage 7 in a mere week, raising over \$17,000,000. As Token Presale Stage-8 is ongoing, Retik Finance continues to attract investors who recognize its potential for disruptive growth. With a clear roadmap and a dedicated team, Retik Finance has all the elements needed to transform a modest investment into a substantial gain. XRP: The Low-Cost Giant XRP, the native cryptocurrency of the Ripple network, is another promising candidate for investors looking to grow their \$500 investment into \$50,000. While XRP has faced its share of controversies, it remains one of the most recognized and widely adopted cryptocurrencies in the market. One of XRP's key strengths is its ability to facilitate rapid cross-border transactions. Utilising the Ripple network, transactions can be processed in just 4-5 seconds, regardless of the geographical locations of the parties involved. Additionally, XRP transactions cost a fraction of a cent, making it a cost-effective solution for financial institutions engaged in cross-border payments. Despite its impressive market capitalization, XRP's token price is relatively low, hovering around \$0.50 at the time of writing. This affordability is partly due to its large circulating supply of over 54 billion tokens. However, it's important to note that XRP has previously reached an all-time high of \$3.84 in early 2018. Investors should consider XRP as a potential candidate for growth due to its history of significant price fluctuations. With a 52-week high of \$1.35, XRP presents an opportunity for substantial gains, potentially exceeding 180% if it revisits this level during the next crypto bull market. Solana (SOL): The High-Performance Contender Solana (SOL) is a cryptocurrency that has gained widespread recognition for its high-performance blockchain network. As one of the most promising blockchain projects, Solana has garnered substantial interest from investors and developers alike. Solana's claim to fame lies in its ability to process a high number of transactions quickly and cost-effectively. Its proof-of-history consensus mechanism enables rapid transaction validation without the need for energy-intensive mining. This makes Solana one of the most energy-efficient cryptocurrencies available. Currently priced at approximately \$99 per token, Solana's affordability is a key factor that makes it an attractive investment option for those looking to turn a small investment into significant gains. Solana's market cap of \$9.5 billion and its growing ecosystem of projects and developers further solidify its position as a strong contender. Why Retik Finance Comes Out on Top While XRP and Solana are both strong candidates for growing a \$500 investment into \$50,000, Retik Finance stands out as the top choice for several reasons. Firstly, Retik Finance's recent presale achievements, including raising over \$17,000,000 in just one week, indicate strong investor confidence in the project's potential for explosive growth. Secondly, Retik Finance's innovative approach to DeFi, including its range of cutting-edge features, positions it as a project with the potential to disrupt traditional finance and redefine global transactions. Finally, Retik Finance's presale journey has demonstrated its ability to attract a dedicated and active community of supporters. As the project continues to develop and expand, the strength of this community is likely to contribute significantly to its success. In conclusion, while XRP and Solana are viable options for those looking to grow their \$500 investment into \$50,000, Retik Finance emerges as the most promising choice due to its recent achievements, innovative features, and strong community support. As the crypto market continues to evolve, Retik Finance's potential for exponential growth makes it a standout candidate for investors seeking substantial gains. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance> - Website: <https://retik.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. The world of cryptocurrencies is known for its potential to deliver substantial returns on investment. While established giants like Ethereum (ETH) have historically led the pack, investors are always on the lookout for promising alternatives. One such alternative that has been gaining significant attention is Retik Finance (RETIK), priced at just \$0.1. In this article, we will explore how investing \$700 in Retik Finance today could potentially turn that investment into \$75,000 by 2024, taking into account the expected ROI. Click Here To Take Part In Retik Finance Presale Retik Finance: The Ethereum Alternative Ethereum has long been a dominant force in the world of cryptocurrencies, thanks to its pioneering role in enabling smart contracts and decentralised applications. However, with the cryptocurrency market constantly evolving, alternative projects like Retik Finance have emerged as potential contenders. Retik Finance, currently priced at \$0.1, offers an innovative approach to decentralised finance (DeFi) and aims to disrupt traditional financial systems. With its forward-thinking vision, growing ecosystem, and strong community support, Retik Finance has positioned itself as a viable alternative to Ethereum. Investing in Retik Finance To understand how investing in Retik Finance can potentially turn \$700 into \$75,000, let's break down the numbers. At the current price of \$0.1 per RETIK token, a \$700 investment would allow you to acquire 7,000 RETIK tokens ( $700 / \$0.1 = 7,000$ ). These tokens represent your initial investment in Retik Finance. ROI Calculation Now, let's consider the potential ROI (Return on Investment) if Retik Finance were to reach a price of \$75,000 per token by 2024, as some optimistic projections suggest. To calculate the ROI, we'll use the following formula:  $ROI = (Final Value - Initial Investment) / Initial Investment * 100$  In this case, the final value is \$75,000, and the initial investment is \$700.  $ROI = (\$75,000 - \$700) / \$700 * 100$   $ROI = \$74,300 / \$700 * 100$   $ROI = 10,614.29\%$  The ROI for a \$700 investment in Retik Finance, if it were to reach \$75,000 per token by 2024, would be an astounding 10,614.29%. Understanding the Potential It's important to note that while the potential ROI is exceptionally high, investing in cryptocurrencies also comes

with significant risks. The crypto market is known for its volatility, and prices can fluctuate rapidly. The \$0.1 price of Retik Finance represents an affordable entry point for investors looking to get in on the ground floor of a project with substantial growth potential. However, it's crucial to conduct thorough research, assess your risk tolerance, and make informed investment decisions. Factors Influencing Retik Finance's Growth Several factors contribute to Retik Finance's potential for growth: 1. Innovative Ecosystem: Retik Finance offers a comprehensive DeFi ecosystem, including decentralised exchange (DEX) capabilities, yield farming opportunities, and plans for a native stablecoin. These features attract investors and developers seeking diverse returns within the crypto ecosystem. 2. Community Support: Retik Finance has successfully completed a Certik audit, enhancing its credibility and security. Audited projects often gain trust among investors and users. 3. Market Trends: The cryptocurrency market is continually evolving, and projects that address emerging trends and challenges tend to gain attention and investment. Conclusion Retik Finance (RETIK), priced at just \$0.1, presents an intriguing investment opportunity for those looking to diversify their cryptocurrency portfolio. While Ethereum (ETH) remains a dominant player, Retik Finance offers an alternative with ambitious goals and a growing ecosystem. Investing \$700 in Retik Finance today could potentially yield an ROI of 10,614.29% if the project reaches a price of \$75,000 per token by 2024. However, it's essential to approach cryptocurrency investments with caution, conduct thorough research, and consider your risk tolerance. The cryptocurrency market is known for its volatility, and prices can fluctuate unpredictably. While the potential for substantial gains is enticing, it's crucial to make informed decisions and be prepared for the inherent risks associated with crypto investments. As always, consult with financial advisors and stay informed about market developments to make the best investment choices for your financial goals. The world of cryptocurrency continues to captivate investors and enthusiasts alike with its promise of financial freedom and innovation. Among the multitude of options available in this space, three assets stand out as potential tickets to financial liberation: Shiba Inu, Bonk, and Retik Finance. Click Here To Take Part In Retik Finance Presale Shiba Inu (SHIB): Riding the Wave of Whale Activity Shiba Inu, often dubbed the "Dogeecoin Killer," has made waves in the crypto sphere with its dog-themed branding and skyrocketing popularity. Recently, the cryptocurrency experienced a surge in whale activity, indicating strategic buying during market lows. This surge, coupled with increased transaction volumes by large investors, has propelled Shiba Inu towards breaking past key resistance levels. The unexpected rise in whale transactions signals confidence among big players in Shiba Inu's prospects. With substantial movement among large investors and a notable increase in overall transaction volume, Shiba Inu is poised for significant price momentum. At its current price of \$0.000009, the next target for SHIB could potentially reach \$0.00009984, should whale activity continue to rise. For investors seeking opportunities for financial freedom, Shiba Inu represents a promising asset with its growing community and bullish market sentiment. Bonk (BONK): The Meme Coin with Utility Bonk, the first dog-themed meme coin on the Solana network, distinguishes itself by offering a level of utility not commonly found in meme coins. Created to restore liquidity to Solana-based decentralised exchanges (DEXs), Bonk has garnered attention for its practical use case within the crypto ecosystem. With airdrops distributed to the Solana community and a focus on community-driven development, Bonk embodies the ethos of decentralised finance (DeFi). Its utility-driven approach sets it apart from other meme coins, positioning Bonk as a potential standout performer in the 2024 bull market. Trading at \$0.0001161 and showing a 10% increase in the last 7 days, Bonk has attracted the interest of experts projecting a potential 500% rally in the coming weeks. As Bonk aims to bring liquidity to Solana-based DEXs and foster community engagement, it emerges as a compelling asset for investors seeking financial freedom in the crypto space. Retik Finance (RETIK): Building Bridges Between Fiat and Crypto In the ever-evolving realm of cryptocurrency, bridging the gap between fiat and digital assets stands as a crucial challenge. Retik Finance emerges as a trailblazing solution, providing a robust platform for seamless transactions between these two financial worlds. With a steadfast commitment to interoperability and inclusivity, Retik Finance harnesses the power of decentralised smart contracts and blockchain consensus mechanisms. This approach empowers participants across both fiat and crypto spheres, facilitating swift, secure, and scalable global payment solutions. By democratising access to cryptocurrency and streamlining transactions for fiat currency holders, Retik Finance aims to revolutionise the financial landscape. Backed by Certik certification and a prominent presence on platforms like CoinMarketCap and CoinGecko, Retik Finance embodies trust and reliability within the crypto community. Since its inception, Retik Finance has delivered impressive returns on investments, with projections indicating even greater profitability in the months ahead. Serving as the architect of a groundbreaking bridge between fiat and crypto, Retik Finance offers investors a gateway to financial freedom by unleashing the full potential of digital assets on the global stage. Currently trading at \$0.1 in its seventh stage and having offered a 3x return over investments so far, Retik Finance has shown growth potential. Retik Finance has cemented its status as a Certik-audited and widely recognized presence in the crypto market. With its remarkable momentum and adoption, industry experts anticipate Retik Finance to potentially yield 10x profits in the foreseeable future, underscoring its significance as a vehicle for financial freedom in 2024 and beyond. Conclusion: A Path to Financial Liberation In a world where traditional financial systems are increasingly challenged by the disruptive force of cryptocurrency, assets like Shiba Inu, Bonk, and Retik Finance represent more than just investment opportunities; they symbolise a pathway to financial liberation. Whether through the exponential growth potential of meme coins like Shiba Inu and Bonk or the innovative solutions offered by platforms like Retik Finance, investors have a myriad of avenues to explore on their journey toward financial freedom. With careful consideration and strategic investment, these assets could very well be the tickets to a prosperous future in the decentralised economy of tomorrow. As we delve into the cryptocurrency market of February 2024, the focus turns to three standout digital assets that have captured the attention of whales: Retik Finance, Solana, and Polygon. In this dynamic market, large investors are strategically eyeing opportunities, recognizing the unique strengths and potential each cryptocurrency brings to the table. From Retik Finance's speed and scalability to Solana's resurgence and Polygon's scaling prowess, these assets present compelling narratives that attract whales seeking strategic investments. Join us on a brief exploration of the key factors making these cryptocurrencies noteworthy choices for influential players in the crypto space this February. Click Here To Take Part In Retik Finance Presale Retik Finance (RETIK): A Rising Star in Whales' Portfolios Retik Finance has emerged as a promising player in the crypto landscape, and whales are taking notice. The project, known for its speed and scalability, has become a magnet for large investors looking to diversify their portfolios within the decentralised finance (DeFi) sector. One of the key factors contributing to Retik's appeal is its strategic positioning on the Ethereum mainnet. This choice capitalises on Ethereum's robust infrastructure, providing exceptional speed and scalability. Whales recognize that the project's foundation on a network with proven capabilities can position Retik Finance as a significant contender in the DeFi space. Moreover, Retik Finance's ecosystem offers a comprehensive range of decentralised financial services, including yield farming and decentralised exchanges. This diversity caters to a broad audience, allowing whales to tap into multiple avenues of potential returns within a single platform. The completion of a Certik audit has further solidified Retik's standing in the eyes of whales. Security and reliability are paramount in the crypto space, and the successful audit assures large investors seeking trustworthy projects. Strategic partnerships play a crucial role in the growth of any cryptocurrency project, and Retik Finance is no exception. As the project continues to expand, whales see the opportunity for Retik to form strategic collaborations within the crypto industry, potentially enhancing its utility and market reach. Perhaps most noteworthy is the growing community support behind Retik Finance. Whales recognize the strength of a dedicated and enthusiastic community, understanding that a robust user base can significantly contribute to the success and sustainability of a project. The current presale stage of Retik Finance presents an attractive entry point for whales at \$0.1. The gradual increases in Retik's price with each stage of the presale provide early backers with the potential for substantial gains. This outlook adds fuel to the growing excitement surrounding Retik Finance, making it a compelling choice for whales in February 2024. Solana (SOL): A Phoenix Rising from the Ashes Solana, despite experiencing a significant decline in 2022, is poised for a potential resurgence in 2024. Whales are closely monitoring the developments on the Solana blockchain, recognizing the versatility and reliability of its underlying architecture. Decentralised applications (dApps) across various sectors, including decentralised exchanges, lending protocols, non-fungible tokens (NFTs), and Internet of Things (IoT) networks, showcase the robustness of Solana's blockchain. Whales understand that the current low prices present a strategic entry opportunity, especially given the on-chain reports revealing new user growth surpassing even that of Bitcoin in 2023. The allure for whales lies in the potential for Solana to regain its former glory. Despite SOL prices lingering 65% below all-time highs, signs of expanding adoption and substantial development on the network hint at a possible turnaround. If Solana can recapture its previous heights, whales stand to benefit from a significant upside. Polygon (MATIC): Scaling to New Heights Polygon, as a layer-2 scaling solution for Ethereum, has long been recognized for mitigating congestion and high fees on the Ethereum blockchain. The announcement of an upcoming token swap to POL brought some uncertainty, reflected in its price action amid the late 2023 crypto rally. However, whales are now closely eyeing Polygon, given its impressive user growth in 2023. Ranking second only to Ethereum itself, Polygon added over 15 million addresses, with more than one-third of daily transactions originating from these new participants. Whales recognize the heightened usage amid this transition, presenting Polygon with substantial upside potential if prices can overcome the current ceiling at \$0.80. Conclusion In conclusion, the cryptocurrency landscape for February 2024 presents a dynamic tapestry of opportunities for whales. Retik Finance, Solana, and Polygon have emerged as focal points of interest, each offering distinctive features that attract large investors. Retik Finance's speed, scalability, and growing community support position it as a rising star. Solana, with its versatile blockchain architecture, seeks to rise from previous setbacks, enticing whales with the prospect of regained glory. Meanwhile, Polygon's user growth and role as an Ethereum scaling solution draw attention. Whales, navigating these possibilities, look forward to capitalising on the unique strengths presented by these promising cryptocurrencies. In the ever-evolving world of cryptocurrencies, traders and investors are constantly on the lookout for the next big opportunity. For one astute trader, that opportunity came in the form of Retik Finance (RETIK), a rising star in the crypto space that has been gaining significant attention and market share. With a substantial investment in what is being touted as the new rival to Solana (SOL), this trader is on the path to potentially hitting millionaire status. In this article, we'll delve into the story of this trader and explore why Retik Finance is capturing the imagination of the crypto community as the new challenger to Solana. Click Here To Take Part In Retik Finance Presale The Ascent of Solana (SOL) Before we dive into the world of Retik Finance, it's essential to understand the significance of Solana (SOL) and why it has become a household name in the cryptocurrency sphere. Solana is a high-performance blockchain platform known for its incredible speed and scalability. It has gained a reputation as one of the leading contenders in the race to create a blockchain ecosystem that can handle large-scale applications and decentralised finance (DeFi) projects without the issues of congestion and high fees that have plagued platforms like Ethereum. SOL's success has been driven by its ability to process thousands of transactions per second at a fraction of the cost of other blockchains. As a result, SOL has attracted significant attention from both retail and institutional investors. Early backers of Solana have seen their investments multiply many times over, with the cryptocurrency reaching all-time highs and consistently ranking among the top cryptocurrencies by market capitalization. Retik Finance: The New Challenger While Solana's success is undeniable, the cryptocurrency space is highly dynamic and competitive. New projects are continually emerging, each aiming to address the limitations of existing blockchain platforms and offer innovative solutions. One such project that has recently caught the eye of crypto enthusiasts and investors is Retik Finance. Retik Finance, often referred to simply as RETIK, is a DeFi

(Decentralised Finance) platform that entered the crypto scene with a clear mission æ” to revolutionise the way people interact with decentralised finance and blockchain technology. Launched with a presale, RETIK quickly gained traction among early investors and crypto enthusiasts. Why RETIK is Gaining Momentum Several key factors have contributed to RETIKÆ”s rapid rise and its status as a potential rival to Solana: Innovative Technology RETIK is built on advanced blockchain technology and smart contracts, which enable it to offer fast and secure transactions. The platformÆ”s ability to process a high volume of transactions quickly and cost-effectively positions it as a strong contender in the blockchain space. Comprehensive DeFi Ecosystem Retik Finance aims to provide a comprehensive DeFi ecosystem, offering a range of financial services and products. This includes decentralised exchanges (DEXs), yield farming opportunities, liquidity provision, and more. RETIKÆ”s diverse offerings have garnered the attention of crypto enthusiasts looking for a one-stop solution for their DeFi needs. User-Friendly Interface One of the challenges in the DeFi space is the complexity of platforms, which can deter newcomers. RETIK addresses this issue by offering a user-friendly interface, making it accessible to both experienced users and those new to cryptocurrency. Community Engagement Retik Finance places a strong emphasis on community engagement and transparency. The projectÆ”s team actively communicates with the community, sharing updates, developments, and future plans. This approach has fostered a loyal and supportive community around RETIK. Strategic Partnerships To expand its reach and influence, RETIK has actively pursued strategic partnerships within the cryptocurrency space. These collaborations have introduced RETIK to new audiences and contributed to its rapid growth. The Millionaire Traders Bet on RETIK With the stage set, we return to the trader who could soon hit millionaire status. This individual recognized the potential of Retik Finance early on and made a substantial investment in the project during its presale stages. As RETIKÆ”s value surged, so did the traderÆ”s investment, propelling them on a path to potential millionaire status. The traderÆ”s belief in RETIK as a Solana rival is rooted in RETIKÆ”s ability to offer a scalable and cost-effective blockchain solution much like Solana. With transaction speeds that rival SolanaÆ”s and a rapidly expanding ecosystem of DeFi products and services, RETIK has positioned itself as a formidable competitor. While Solana remains a dominant force in the blockchain space, the traderÆ”s investment in RETIK reflects the ever-changing nature of the cryptocurrency market. New projects like RETIK can disrupt the status quo and offer innovative solutions that attract both investors and users. The Road Ahead As Retik Finance continues to gain momentum and challenge established players in the blockchain industry, the traderÆ”s bet on RETIK could prove to be a game-changer. While predicting the future of cryptocurrencies is inherently uncertain, RETIKÆ”s rise and its potential to rival Solana have piqued the interest of traders and investors alike. The cryptocurrency market is known for its volatility, and opportunities for substantial gains can emerge unexpectedly. Retik FinanceÆ”s journey from a promising DeFi project to a potential Solana rival showcases the dynamic nature of the crypto space and the potential rewards for those willing to take calculated risks. In conclusion, the traderÆ”s substantial investment in Retik Finance (RETIK) and the projectÆ”s emergence as a challenger to Solana (SOL) highlight the ongoing evolution of the cryptocurrency market. As RETIKÆ”s ecosystem continues to expand and innovate, it remains a project to watch closely. Whether or not RETIK can fully rival SolanaÆ”s dominance remains to be seen, but one thing is certain æ” the world of crypto is never short of surprises, and RETIK is a prime example of the excitement and potential it holds. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - PYTH token skyrocketed 29% amid Binance token listing. - Pyth Network engages the community with a 600M PYTH token airdrop. In a resounding success for Pyth Network, the PYTH token has become the talk of the town, soaring to new heights as the top gainer in the cryptocurrency market. The digital asset has experienced an impressive 29% surge in the past twenty-four hours, accompanied by a remarkable 239% spike in trading volume. Notably, this surge coincides with the announcement of PYTHÆ”s listing on the largest cryptocurrency exchange, Binance. With a total market value of \$540 million at debut, PYTH has seen steady growth, accumulating a 43% gain year-to-date. The latest surge in its rate is particularly noteworthy, aligning with BinanceÆ”s announcement that PYTH trading will commence on February 2nd. The listing will feature PYTH trading pairs against BTC, USD, FUSD, and TRY. The PYTH token is the governance token of Pyth Network, empowering holders to actively vote on proposals that shape the projectÆ”s future. WhatÆ”s More? Pyth Network has captured attention for its impressive token performance and expanded its influence beyond. The network recently made a strategic move to the Ronin Network, with MetaLend DeFi becoming PoweredByPyth. MetaLend, a leading money-lending protocol on Ronin, integrates with PythÆ”s Pull Oracle design. The secured real-time evaluation of deposited SHIBs and other assets stands at the intersection of Ronin DeFi and GameFi, providing users with a peer-to-pool borrow-lending protocol. That enables them to earn yield and access additional liquidity without selling their assets. Pyth Network has also demonstrated its commitment to community engagement through a token airdrop involving 75,000 wallets. In this initiative, the project distributed 600 million PYTH coins to reward the communityÆ”s contributions and attract new participants. With its recent achievements, Pyth Network aims to position itself as a force to be reckoned with in the evolving landscape.

Victoria, Seychelles, February 2nd, 2024 Chainwire Bitget Wallet, the leading Web3 trading wallet, has recently integrated with Berachain Artio Testnet, an EVM-compatible Layer 1 blockchain. Bitget Wallet users may now seamlessly add the testnet on both their app and browser extension wallets, which will allow them to enjoy convenient on-chain asset management, transfers, interaction with ecosystem Dapps, and the acquisition of BERA test tokens. Trending DApps on the Berachain ecosystem will also be featured on Bitget WalletÆ”s Dapp browser to facilitate ease of discovery and accessibility. Berachain is a high-performance, EVM-compatible blockchain built on Proof-of-Liquidity consensus. The network rearchitects the traditional smart contract platform to a novel, Cosmos-native configuration. Users provide liquidity into the chain-enshrined primitives (dex, perps, stable lend, or others voted in by governance) to earn BGT, delegate it with validators to earn fees/bribes, or burn it into Bera. Through their contribution to liquidity on the chain, users bootstrap its security. As Berachain gears up for its impending mainnet launch slated for the second quarter of this year, Bitget Wallet remains committed to its goal of providing close support for the ecosystem and being the first to deliver seamless access for all Bitget Wallet users. Additionally, the Bitget Wallet team has announced a collaboration with Berachain to initiate an incentive campaign for the testnet ecosystem next month, aimed at enhancing user engagement on the Berachain testnet. With a growing global user base of over 15 million, Bitget Wallet supports an impressive array of over 100 mainnets. Its custom network functionality enables the integration of hundreds of EVM-compatible chains, broadening usersÆ” access to the expansive Web3 ecosystem and accelerating the discovery of novel assets and emerging opportunities in the industry. About Bitget Wallet Bitget Wallet stands as AsiaÆ”s largest and global frontrunner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, Dapp browsing, and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 15 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. For more information, visit: Website | Twitter | Telegram | Discord Contact Rachel Cheung [media@bitget.com](mailto:media@bitget.com)

- Customers will be able to test crypto transactions at the major partner banks. - The bank has been tight-lipped about its new crypto trading pilot partner. DZ Bank, the second-largest bank in Germany, said on Thursday that it would begin testing retail crypto trading this year. The cryptocurrency-friendly financial institution intends to pilot Bitcoin transactions with clients after launching a cryptocurrency custody platform in November last year. Sometime later this year, DZ Bank will reportedly begin a cryptocurrency trading pilot, as reported by Bloomberg on February 1. The first group of partner banks will be included in the bankÆ”s crypto retail transaction pilot program. High Demand from Institutional Investors Customers will be able to test crypto transactions at the major partner banks. The bankÆ”s decision to not work with DWP Bank to execute it is in contrast to earlier intentions. The bank has been tight-lipped about its new crypto trading pilot partner. Souad Benkredda, a board member of DZ Bank, stated: æ”Over the course of the year we will enter the pilot phase for retail trading of cryptocurrencies with the first cooperative bankÆ”. In response to the high demand from institutional investors, DZ Bank has widened its focus to include the cryptocurrency industry. Now itÆ”s planning to provide crypto trading services, including Bitcoin, to further establish itself in the crypto space. For the purpose of processing and protecting digital financial instruments on the blockchain, DZ Bank announced the introduction of their digital assets custody platform last November. Harmonize, a platform for digital asset custody and orchestration, was used by the bank in conjunction with Metaco to oversee its cryptocurrency services. Metaco pointed out that DZ Bank is using Harmonize throughout a thorough Proof-of-Concept and vetting phase. Highlighted Crypto News Today:

Pyth Price Feeds, a runtime environment for smart contracts on the Filecoin network, has launched today on Filecoin VM. Data that is vital to mankind is intended to be stored on Filecoin, a decentralized storage network. The goal of this deployment is to provide worldwide Web2 and Web3 participants with access to data. Developers of smart contracts may now access over 400 real-time market data feeds on the Filecoin peer-to-peer network permissionlessly. Jonathan Victor, Co-Founder at Ansa Research stated: æ”This collaboration between the Pyth Network and Filecoin Ecosystem underscores a joint commitment to enabling robust markets in the Filecoin economy. The launch of Pyth Price Feeds is a critical pillar to enabling the DeFi ecosystem on the FVM to accelerate in 2024.æ” Filecoin Filecoin is a peer-to-peer file storage network that uses encryption to guarantee long-term file storage reliability and built-in financial incentives. Users of Filecoin pay storage providers to store their data. Computers serving as storage providers are in charge of keeping data and demonstrating over time that they have done so successfully. Anyone may sign up for Filecoin if they wish to store their files or be compensated for storing the files of other users. No one corporation has complete control over the amount of storage that is available or how much it costs. Rather, Filecoin makes open marketplaces possible for anybody to engage in while storing and retrieving data. Please visit FilecoinÆ”s website to find out more information. Pyth The Pyth Network is a first-party data oracle network that focuses on safely and transparently publishing low-latency financial information to blockchains. The worldÆ”s biggest institutional market players, including exchanges, market makers, and trading organizations, are urged to provide their proprietary data to the network via the Pyth protocol, which helps to achieve this goal. For usage in smart contract applications later on, Pyth collects their data on-chain. Smart contracts may retrieve Pyth price updates on demand. The network secured over \$2.0 billion in value in less than a year. At the moment, Pyth offers more than 400 real-time price feeds for commodities, stocks, FX, cryptocurrencies, and ETFs. Over 50 blockchains and over \$100 billion in trade volume have been made possible by the network. To learn more about Pyth, check out the documentation or website. What Comes Next? Developers are encouraged to start using Pyth Data by looking through the resources below. Please donÆ”t hesitate to ask questions and reach out to us. On the website, you may browse the complete Pyth Price Feeds inventory and find out which price feeds are currently being developed. Please contact us in the Discord channel if you would like to request a new data feed. Resources Pyth Website Pyth Docs Pyth Best Practices Pyth On-Demand Update - Pythnet - Pyth on EVM - Pyth Price Feeds IDs - Pyth Entropy - Pyth for Off-Chain Use - Pyth Discord - Pyth Telegram We eagerly await your thoughts! You may follow us on LinkedIn and X, as well as join the Pyth Telegram and Discord channels.

For those willing to step into the digital frontier, the rapidly evolving cryptocurrency market can bring dreams and fortunes. A high school teacher named Mr. Randon has a sharp eye for wise investments and a strong desire for financial independence. Merely possessing \$10,000, Mr. Randon sets out on an expedition that has the potential to make him a cryptocurrency millionaire. With a focused strategy and a strong sense of diversification, this high school teacher sets his sights on two tokens that have been causing a stir in the cryptocurrency space: Shiba Inu (SHIB) and Retik Finance (RETIK). Mr. Randon divides his \$10,000 investment between these two tokens in a calculated manner, seeing possibilities for exponential development and setting the stage for a potentially transformative experience. Click Here To Take Part In Retik Finance Presale Investing in Retik Finance (RETIK) His initial target? A new DeFi project called Retik Finance (RETIK) aims to close the gap between cryptocurrency and regular living. With its user-friendly wallet, DeFi debit card for everyday usage, and payment gateway, Retik Finance provides a useful value proposition that serves the diverse needs of everyone. The high school instructor saw the potential in this æ”crypto for the massesÆ” strategy and imagined a time when teens would use Bitcoin to buy pizza after school, in addition to learning about it in class. During the most recent 7th round of the presale phase of RETIK, Mr. Randon spent \$7,000, securing a sizable interest at a meagre price of \$0.09. Even though his salary might be

unable to buy him a Lambo. His early bird strategy positioned him for potentially changing returns that could make him a millionaire once Retik Finance begins to shine in the crypto space. Diversifying into Shiba Inu The high school teacher was far from finished. He learned the value of diversification—a concept that applies to investors with stock portfolios. He thus invested another \$3,000 into Shiba Inu (SHIB), a meme coin that had aroused the interest of the cryptocurrency community. Although some people might laugh at the idea of a meme coin, Mr. Randon sees an opportunity for viral growth and community-driven momentum. He understood that in the wild world of cryptocurrency, even the most ridiculous ideas might occasionally have uncontrollably positive ripple effects and yield millions. The Alluring Prospects of Retik Finance Retik Finance isn't a regular fad that comes and goes, it is a token for immediate gains and future wealth. Here are some of the factors that the high school teacher is keying into: - Early-Bird Advantage: Retik has a much cheaper token price than more established competitors like Ethereum and Solana because it is still in its pre-launch phase. Whales now have a unique chance to invest early in a possibly game-changing project before the price blows up. - Disruptive Potential: Retik's facilities address a major problem in the DeFi space; the infeasibility of crypto in practical applications. Its payment gateway and debit card have the power to completely transform the way we utilise digital assets, drawing in a sizable user base and encouraging broad adoption. - Robust Community and Openness: Retik has amassed a devoted and active community despite its recent inception. The initiative inspires confidence and draws whale investments because of its clear communication and well-thought-out roadmap. - Low Market Cap, Great Growth Potential: Retik has a smaller market capitalization when measured against a behemoth like Ethereum. This implies that even a slight price increase might result in substantial profits for investors, which has attracted the high school teacher who is aiming to become a crypto millionaire. Conclusion: From School to Crypto Millionaire The story of Mr. Randon serves as an example of how money has become more accessible in the digital era. He sets out on a trip as a high school teacher with a small investment that would enable him to overcome financial obstacles and fulfil his goal of becoming wealthy through cryptocurrency. He has a clear route to becoming a crypto millionaire thanks to his strategic investments, Retik Finance, and Shiba Inu, as well as his unwavering persistence and faith in the revolutionary potential of cryptocurrencies. Don't be surprised if tomorrow, Mr Randon shows up with his Lambo, he has paid the dues today by buying into Retik Finance and Shiba Inu. Want to become a crypto millionaire? Follow his footsteps, purchase RETIK, a 1000x potential token, and SHIB, a 100x prospect. Click here to take part in Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The organization stated that the attack was funded using Tornado Cash. - Early signs indicate a rounding error being the primary reason as per Certik. Decentralized platform Abracadabra.money's stablecoin, MIM, had a precipitous decline to \$0.76 after news of a \$6.5 million vulnerability. Initial details of the hack were revealed by blockchain security company PeckShield at 11:35 UTC Tuesday. The organization went on to say that the attack was funded using Tornado Cash, a sanctioned privacy crypto mixer. MIM team stated: "We are aware of an exploit involving certain cauldrons on Ethereum. Our engineering team is triaging and investigating the situation. To the best of its Ability, the DAO treasury will be buying back MIM from the market to then burn. More updates are coming." Buying Back MIM from the Market According to Certik, early signs indicate a rounding error being the primary reason. In order to maintain the peg, the Abracadabra DAO, according to the MIM developers, will be purchasing the stablecoin back from the market. The stablecoin is supposed to trade at \$1. At the time of publication, it was selling at around \$0.96 as per data from CoinGecko. A third of MIM's collateral was in FTT, the native token of FTX, hence the stablecoin also swung in 2022 when FTX collapsed. During the downturn of FTT, MIM dropped to \$0.95 before regaining its intended value of \$1. This project has been under fire since early this year for a number of reasons. The Abracadabra DAO's decentralized authority into a single body staffed by attorneys and trustees. To mitigate this risk with the curve protocol, the protocol raised the interest rate on the currency by 200% in August. Highlighted Crypto News Today: Solana (SOL) Positioned For "Significant Surge" Above \$115: Analyst

In the fast-paced cryptocurrency market, competition is fierce as new projects vie for investor attention and market share. While established names like Shiba Inu (SHIB) have cultivated loyal followings, there is always room for innovative newcomers to shake up the status quo. As we look ahead to 2024, three cryptocurrencies have emerged as particularly promising contenders poised to potentially surpass Shiba Inu: Bonk (BONK), Pandoshi (PAMBO), and Pepe (PEPE). Bonk (BONK): The Rising Meme Coin Launched in 2022 on the Solana blockchain, Bonk (BONK) quickly captured investor interest as a new meme coin. In just one year, Bonk delivered a staggering 918% gains for early backers as its price rocketed upward. This momentum positions Bonk as a serious rival to the more established meme coins Dogecoin and Shiba Inu. Bonk aims to differentiate itself through its brand identity and active community engagement. However, it likely does not have the grassroots supporter dedication or viral meme appeal to dethrone Shiba Inu's dominance. While impressive short-term gains are possible, replicating the "Shiba Inu phenomenon" long-term presents a taller order. Still, with room to run on platforms like Robinhood, Bonk remains an intriguing speculative bet for 2024. Click Here To Buy PAMBO Tokens Pandoshi (PAMBO): The Ambitious DeFi Visionary Where Bonk rides the meme coin wave, Pandoshi (PAMBO) opts for a serious blockchain infrastructure vision rooted in decentralization and privacy ideals. Drawing inspiration from Bitcoin creator Satoshi Nakamoto, Pandoshi champions freedom through its suite of decentralized finance (DeFi) products like PandoshiSwap Dex, Pandoshi Wallet, and the PandoshiChain layer 2 solution. Unlike fleeting meme coins without inherent utility, Pandoshi emphasizes real-world use cases like crypto payments, trading, and yield farming. Its robust DeFi ecosystem aims to shift control back into the hands of users instead of institutions. Pandoshi also employs compelling tokenomics, including a deflationary buyback mechanic that can apply constant upward price pressure to its PAMBO token over time. With bags of ambition, a dedicated community, and a long-term roadmap, Pandoshi possesses the breakout potential to climb the market cap charts in 2024. If executed smoothly, envisioning its ascent beyond Shiba Inu's heights is not unrealistic. Pepe (PEPE): Riding the Meme Coin Wave Rounding out the trio is Pepe (PEPE), a new meme coin capitalizing on the iconic internet frog. Launched in early 2023, Pepe's price exploded by 1700% within weeks as its market cap briefly surpassed \$1 billion at the peak frenzy. However, the team cautions that Pepe has no inherent investment value. Instead, it aims purely to pay tribute to memes within crypto culture rather than upend the space. Still, as previous meme coin manias demonstrated, irrational exuberance can ignite startling price spikes despite limited functionality. Comparatively, Shiba Inu boasts more entrenched support and higher visibility from major exchange listings. Of course, without real-world utility beyond entertainment, sustainability remains questionable. Conclusion: Winds of Change for 2024 While Shiba Inu retains its meme coin crown for now, it may face stiffer competition in 2024 as projects like Bonk, Pandoshi, and Pepe gain steam. Bonk and Pepe ride the viral meme coin trend and could plausibly experience short-term price explosions. However, only Pandoshi of the trio boasts Shiba Inu's long-term disruptor potential thanks to its formidable DeFi ecosystem. With eyes toward decentralization and user control, Pandoshi's vision could resonate widely enough to drive mass adoption if executed successfully. Click Here To Buy PAMBO Tokens Visit the links below for more information about Pandoshi (PAMBO): - Website: <https://pandoshi.com/> - Whitepaper: <https://docs.pandoshi.com/>

- Memecoin landscape diversifies, featuring Bonk, Pepe, and more. - Strong presale funding and social engagement drive memecoin success. The world of memecoins continues to evolve, and investors are eagerly eyeing the potential stars of 2024. Amidst well-established players like Dogecoin and Shiba Inu, new memecoins are gaining attention for their unique features and utility. Let's delve into five promising memecoins that have captured the interest of traders and enthusiasts. Memeinator (MMTR) Launched in September 2023, Memeinator sets itself apart with a strategic approach to market domination. Boasting regular price increases during its presale, Memeinator aims to attract investors through a powerful marketing campaign and various perks. With practical use cases like staking, gaming, and NFT purchases, it stands out for providing utility for its MMTR token. The project's commitment to security, validated by a third-party audit, positions Memeinator as one of the top investment option in 2024. Memecoin (MEME) Introduced by the 9GAG group and created by Web3 firm Memeland, Memecoin operates on the Ethereum-based ERC-20 network. Launched on October 28, 2023, with 95.8% allocated to the liquidity pool, Memecoin aims to carve its place in the meme coin landscape with its native token, MEME. As a latecomer to the scene, Memecoin aims to leverage its unique features and backing from the 9GAG community. Bonk (BONK) Based on the Solana blockchain, Bonk made a splash with a Christmas day airdrop in 2022. Listing on Coinbase in December 2023 fueled a surge of over 100% positioning Bonk as a noteworthy memecoin. The project's aim to be a "community coin of Solana" by airdropping tokens to NFT enthusiasts and DeFi traders sets it apart. With impressive tokenomics and a focus on community empowerment, Bonk stands out as a potential top performer. Pepe (PEPE) Making a grand entry into the memecoin world, PEPE coin witnessed a remarkable rally of almost 7,000% within a month of its launch in April 2023. Operating on the Ethereum blockchain, PEPE coin, inspired by the popular meme character "Pepe the Frog," has no formal team or roadmap. Despite lacking intrinsic value, PEPE's deflationary mechanism and redistribution system contribute to its appeal. The coin's rapid ascent to the top 100 cryptocurrencies by market cap makes it a compelling addition to the memecoin landscape. Meme Komбат (MK) Navigating the bearish market sentiment, Meme Komбат has gained significant attention with its play-to-earn game featuring popular meme-coin mascots. Having raised \$7.5 million out of its \$10 million presale goal, Meme Komбат's MK token is generating excitement. The upcoming web3-based game introduces diverse betting options, and with 80% of MK tokens already staked, investors anticipate solid returns. The project's commitment to continuous development and community engagement positions Meme Komбат as a top contender to watch. From innovative utility to strategic marketing and community empowerment, each memecoin brings its own flavor to the vibrant world of meme-inspired cryptocurrencies in 2024. Investing in cryptocurrencies, including memecoins, involves inherent risks, and readers are encouraged to conduct their research.

Victoria, Seychelles, January 30th, 2024, Chainwire Morph, the Layer 2 user-centric Blockchain, has officially launched its testnet beta and will be embarking on an exciting cooperation with Bitget Wallet, allowing Bitget Wallet users to connect to the Morph testnet on both the mobile and browser versions of Bitget Wallet, and explore Morph testnet bridge. Morph plans to launch its mainnet Beta version in the second quarter of this year, with Bitget Wallet being among the first wallets to support network integration and further development of the Morph ecosystem. From January 30th to February 15th, Bitget Wallet will be holding a Morph testnet launch event, rewarding limited edition commemorative Morph badges to all participants on the Morph testnet as a token of recognition for their loyalty and dedication to the Morph network. Further, 500 Morph badge holders will also be randomly selected to share in an additional 5,000 GASU airdrop from Bitget Wallet. Morph is a transparent, community-driven Layer-2 solution. Combining the best of OP and ZK rollups, it offers unmatched scalability and security, aiming to lay the foundations for a consumer-oriented ecosystem featuring value-driven DApps. Leveraging unique features including a Decentralized Sequencer Network, Responsive Validity Proof (RVP) system, and modular design, Morph is set to deliver efficient and flexible scaling while preserving the initial security, availability, and compatibility of the Ethereum network. In December 2023, Bitget completed a multimillion-dollar investment in Morph. Bitget Wallet currently supports over 100 mainnets and allows users to effortlessly integrate hundreds of EVM-compatible chains with a simple one-click customization feature. This diverse network array not only provides greater accessibility for users, it also introduces a cornucopia of novel assets and opportunities. Dedicated to embracing each new asset and market trend, Bitget Wallet will continue upgrading its product suite in line with new innovations and developments in the market, providing leading on-chain asset services for all its users. About Bitget Wallet Bitget Wallet stands as Asia's largest and global frontrunner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 15 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. For more information, visit: <https://linktr.ee/bitgetwallet> Contact Rachel Cheung [media@bitget.com](mailto:media@bitget.com)

After a turbulent year in the crypto market, the recent resurgence has ignited optimism among investors. As cryptocurrencies rally and the total market cap nearly doubles in 2023, many are looking for the next big opportunity. While Shiba Inu (SHIB) captured attention with its meteoric rise in 2021, the likelihood of it reaching \$1 remains a distant dream. Instead, there's a new player on the scene, Pandoshi (PAMBO), a \$0.01 token, that's generating significant buzz, and experts believe it has the potential to outshine Dogecoin. Shiba Inu's Transformation and Limitations Shiba Inu burst onto the crypto scene in 2020 and has since become the 17th most valuable cryptocurrency. Initially created as a meme coin, Shiba

Polygon fell around 160,000 users shy of Ethereum's 15.4 million in 2023. - Solana and Arbitrum completed the top five, with Bitcoin coming in third with 10.65 million. Flipside, a blockchain analytics startup, reports that in 2023, Polygon gained almost as many cryptocurrency users as Ethereum. Although it fell around 160,000 users shy of Ethereum's 15.4 million in 2023, the scaling solution Polygon reported 15.24 million gained users. According to Flipside, a user is considered acquired if they have made two transactions on a certain blockchain, with one of those transactions occurring in the year 2023. Curiously, Polygon held the lead in the first half of 2023, but Ethereum eventually caught up and maintained it during the second part of the year. Looking for Alternatives According to Flipside, Polygon had 2.8 million new users in January alone, which is huge compared to the network's entire user acquisition for 2023. From then, relative to other networks, Polygon's monthly user acquisition declined the most consistently during the year, while it still fared better than others. Moreover, Solana and Arbitrum completed the

top five, with Bitcoin coming in third with 10.65 million gained users. Out of the eight blockchains that were monitored, 62 million users were obtained; this includes Optimism, Avalanche, and Base. User acquisition peaked in May, according to Flipside, and then steadily fell after that. A rise in acquired users started in March, just around the time Silicon Valley Bank went bankrupt. This may have caused people to lose faith in centralized institutions and start looking for alternatives, the business said. Highlighted Crypto News Today: Ethereum Consolidates as Price Falls to Overcome Bearish Pressure

In the heart of the crypto realm, where fortunes rise and fall with the speed of a keystroke, a select few altcoins have captured the attention of the elusive Crypto Millionaire Club. As we step into 2024, the stakes are higher, and the excitement is palpable. Join us on a thrilling journey as we unveil the chosen ones, the altcoins favored by Bitcoin whales—Retik, Solana, and Cardano. In this high-stakes game of digital wealth, where every decision could lead to unimaginable gains, these altcoins stand poised on the brink of financial glory. Buckle up for a ride into the exhilarating world of crypto fortune. Retik (RETIK): Paving the Way for Financial Evolution Retik Finance has emerged as a top contender in the altcoin space, drawing the interest of Bitcoin whales for several compelling reasons. The project, founded with the vision of bridging the gap between traditional finance and the crypto world, has made significant strides in its development. One of Retik Finance's standout features is its versatile utility. The introduction of DeFi Debit Cards, Retik Wallet, Retik Pay, and the RETIK token showcases a commitment to real-world usability. The DeFi Debit Cards empower users to seamlessly spend their cryptocurrency holdings in everyday transactions, effectively merging the realms of traditional and digital finance. The Retik Wallet provides a secure platform for managing crypto assets, while Retik Pay revolutionises e-commerce by offering a crypto payment processor with low fees and real-time settlements. One of the key factors contributing to Retik's appeal is its bold listing price strategy. Setting the listing price at \$0.15, a substantial premium over the current price of \$0.080, signals confidence in the project's growth and utility. This strategy has garnered attention from Bitcoin whales who see the potential for substantial gains, potentially up to 1000%, for early investors. Furthermore, Retik Finance has plans to list on two of the top 5 centralised exchanges (CEX) globally, a move that enhances liquidity, visibility, and accessibility. Listing on reputable exchanges is often a crucial milestone for altcoins, providing them with a broader user base and increased trading volume. The commitment to this step indicates a strong belief in the project's viability and future success. In the eyes of Bitcoin whales, Retik stands out as an altcoin that not only offers innovative solutions but also demonstrates a strategic approach to market dynamics. Solana (SOL): Speeding Ahead in the Crypto Race Solana, often referred to as the "Ethereum Killer," has been making waves with its rapid blockchain infrastructure and scalability. Bitcoin whales have taken notice of Solana's unique features, positioning it as a favored altcoin for investment in 2024. At the core of Solana's appeal is its unmatched transaction speed. The Proof of History consensus mechanism allows Solana to handle approximately 65,000 transactions per second, making it one of the fastest blockchain networks. This efficiency, coupled with the ability to support smart contracts and decentralised applications (dApps), has propelled Solana to the forefront of the crypto space. Solana's popularity in NFT trading further enhances its attractiveness to Bitcoin whales. The combination of speed and support for digital art assets makes it an ideal platform for the burgeoning NFT market. As a result, Solana has become a go-to platform for opportunities that offer substantial gains, are drawn to Solana's attributes of speed, efficiency, and popularity in key sectors like NFTs. Cardano (ADA): A Steady Ascent in a Volatile Market Cardano, with its focus on sustainability, scalability, and interoperability, has garnered attention for its steady ascent amidst market fluctuations. Bitcoin whales, known for their strategic investment decisions, are recognizing the potential of Cardano as an altcoin favored in 2024. Cardano has recently seen a 9% surge in its price, indicating a strong comeback after a period of decline. This uptick has rendered more than 50% of Cardano investors profitable, a factor that draws attention from Bitcoin whales. The positive trend and profitability contribute to the narrative that Cardano is navigating market fluctuations with resilience. Whale activities play a significant role in Cardano's positive trend. The presence of significant players in the market signals confidence and often attracts more institutional interest. Bitcoin whales, being strategic investors, recognize the impact of whale activities on the overall market sentiment and are inclined towards altcoins that demonstrate such dynamics. Conclusion In conclusion, the Crypto Millionaire Club presents three compelling altcoins for Bitcoin whales in 2024. Solana impresses with its swift blockchain infrastructure and potential to outpace Bitcoin, while Cardano navigates market fluctuations with grace. However, Retik Finance stands out as the rising star, bridging the gap between traditional finance and the crypto world. Its utility-driven features, strategic listing price, and plans for top-tier centralised exchange listings make it an enticing choice for investors seeking innovation and substantial gains. As the market evolves, Retik Finance's unique proposition positions it as a frontrunner in the journey toward financial transformation. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Roman Storm and Alexey Pertsev have garnered over \$350,000 in legal fees. - The developers are now facing money laundering allegations brought by the U.S. DOJ. Tornado Cash developers Roman Storm and Alexey Pertsev have garnered over \$350,000 in legal fees and public support from former NSA whistleblower Edward Snowden. U.S. authorities have charged Roman Storm and Roman Semenov of Tornado Cash with violating sanctions and laundering money. The \$600 million Ronin Network assault and North Korean hackers have been associated with Tornado Cash. In August 2023, Storm, who is a dual citizen of the United States and Russia, was indicted with money laundering and sanctions breaches. The Department of Justice (DOJ) put him under house arrest in Washington State, and a trial is anticipated for 2024. To the accusations, he has entered a not guilty plea. Along with Roman Semenov, another co-founder and developer, there were charges, but he remains free as of now. Alexey Pertsev has been in Netherlands jail since 2023. Privacy is Not a Crime The crypto mixing service attempts to conceal the wallet addresses and provide anonymity for both the sender and the recipient, the DOJ claims that over \$1 billion in cryptocurrency was transferred via it. In a Twitter post, Storm forecasted that 2024 will be the defining year of his life. He said that he is terrified, however optimistic, nevertheless, that the community cares deeply. He urged the community to contribute to the cost of his legal defense. In his retweet, Snowden reiterated his call for assistance and said, "Privacy is not a crime." Storm, who was involved with developing Tornado Cash, is now facing money laundering allegations brought by the US Department of Justice. A trial is anticipated to take place in 2024. Highlighted Crypto News Today:

- Dogwifhat (WIF) token on Solana blockchain has surged over 60% in the last 24 hours. - WIF is outperforming well-known cryptocurrencies. - WIF's sustainability compared to Dogecoin and Shiba Inu remains uncertain. Amid a broader cryptocurrency comedown that has affected majors like Bitcoin and Ethereum, one meme coin has practically stolen the market spotlight. The Dogwifhat (WIF) token, created less than two months ago on the Solana blockchain, has skyrocketed over 60% in just the last 24 hours. Its abrupt rise catapulted WIF to the top spot among the day's best market performers, far outpacing well-known names. Dogwifhat has recently exploded into the spotlight Like popular meme predecessors Dogecoin and Shiba Inu before it, the animal-themed WIF phenomenon has spread like wildfire since its debut despite, or perhaps due to, its absurdity. The WIF coin generated a passionate community that evangelized the token on social media. That grassroots momentum now has WIF eying its next critical resistance point. After attaining an all-time high of around \$0.48 upon securing a Binance listing in mid-January, WIF pulled back 60% in recent days amid broader crypto consolidation. However, the token found support at \$0.21 before igniting huge gains once again. WIF currently trades around \$0.3482 as eager buyers pile back in, just shy of near-term resistance at \$0.34. Analysts believe reclaiming that level could open doors to retesting last week's historic highs. Meme token mania tends to strike without warning or rational basis in risk environments. WIF seizing the market spotlight as majors recoil shows that phenomenon still occasionally emerges despite ominous macro conditions. It remains anyone's guess whether the Shiba Inu sporting a brown Derby hat can sustain meaningful relevance like Dogecoin. But for now, all eyes are glued to this retail-driven enigma as it continues trotting uphill against all odds.

In the unpredictable landscape of cryptocurrency, the ability to accurately forecast market movements is a skill that distinguishes seasoned experts from novices. One such adept trader, celebrated for his uncanny predictions, has recently captured the interest of the crypto community. Having successfully foreseen the recovery of Solana (SOL) post the FTX saga, this trader is now redirecting his attention towards a new venture: Retik Finance. What adds a fascinating dimension to this development is not just his endorsement, but his tangible commitment as he is investing in Retik Finance's native token, currently priced at a modest \$0.08. His ambitious expectations predict that the token will surge to an impressive \$20 by the year 2024. This move reflects not only confidence in Retik Finance but also a strategic investment approach that aligns with his track record of prescient market insights. The Rise and Fall of SOL: A Trader's Tale The cryptocurrency market is no stranger to volatility, and Solana (SOL) experienced its fair share during the FTX saga. A major exchange outage sent shockwaves through the community, leading to a significant dip in SOL's value. Panic ensued as traders and investors grappled with uncertainty. However, amidst the chaos, our visionary trader, who prefers to remain anonymous, saw an opportunity. Armed with a deep understanding of blockchain technology and a keen eye for market dynamics, the trader predicted SOL's recovery when others doubted its resilience. True to their foresight, SOL rebounded, reclaiming lost ground and rewarding those who held firm in the storm. The Retik Finance Revelation Having proven their mettle with SOL, the trader is now turning their attention to a new player in the game—Retik Finance. Priced at an astonishingly low \$0.08, Retik Finance is positioning itself as a serious contender in the competitive world of decentralized finance (DeFi). Retik Finance aims to be a comprehensive solution for all trading needs, consolidating decentralized exchanges (DEXs) into a single application and providing access to diverse liquidity sources. The trader, impressed by the project's vision and potential, is betting big on Retik Finance and has set an ambitious target of \$20 for the token by 2024. Unveiling Retik Finance: More Than Just a Solana Rival Retik Finance is not just another Solana rival; it is a platform designed to revolutionize the way users engage with decentralized finance. The project encompasses a suite of features within its flagship product, the Retik Wallet. - Secure Non-Custodial Framework: Security is paramount with the Retik Wallet. Operating as a non-custodial wallet, users have complete ownership and control over their private keys and funds, mitigating the risks associated with hacks and unauthorized access. - DeFi Swapping and Trading: The Retik Wallet allows users to seamlessly navigate the diverse crypto landscape by swapping and trading various cryptocurrencies directly within the wallet. The intuitive interface and integration with leading decentralized exchanges ensure secure and rapid transactions. - Staking and Earning Opportunities: Users can unlock the full potential of their investments by engaging in staking activities, earning rewards for actively contributing to the ecosystem's growth. - Lending and Borrowing Facilities: Retik Finance reimagines financial fluidity by allowing users to leverage their crypto holdings for borrowing or providing liquidity for lending pools, empowering them to tap into their assets' potential without compromising ownership. - Dive into Yield Farming: The Retik Wallet facilitates a yield farming adventure, enabling users to explore various farming opportunities and earn rewards through liquidity provision and engagement with diverse DeFi protocols. - User-Friendly Interface: Prioritizing an exceptional user experience, the Retik Wallet is designed for both experienced and novice users, simplifying complex DeFi activities and making them accessible to everyone. - Future-Ready Integrations: The Retik Wallet is a dynamic platform poised for growth, with plans to seamlessly integrate with additional DeFi products and services, ensuring an evolving and enriched user experience. - Uncompromising Security and Privacy: The Retik Wallet employs state-of-the-art security measures to safeguard assets and personal data, ensuring privacy and fortifying digital wealth against potential threats. A Deeper Dive into Retik Finance The Retik Wallet consolidates all decentralized exchanges (DEXs) into a single application, providing access to diverse liquidity sources. Users can efficiently execute various traditional DeFi activities, introducing new functionalities typically offered by major centralized exchanges. Top-tier security is ensured through Retik Enclave technology, and users can expediently import wallets using phone cameras, facilitated by machine learning and AI. Additional security measures, including secure iCloud backup and optional Two-Factor Authentication (2FA), provide an extra layer of protection. The Retik Finance Token: A Rising Star in Presale Retik Finance's utility-rich token has achieved significant success in its presale stages. Currently, at stage 6, the tokens are being sold at \$0.080. The project has already sold over 203 million tokens, and with the increasing momentum and adoption, experts project that Retik Finance is poised to reach the \$20 price mark in 2024 upon listing in Q3. Conclusion: Embracing Financial Innovation As the cryptocurrency market continues to evolve, traders like our visionary investors are at the forefront of identifying opportunities that shape the landscape. From predicting SOL's recovery to setting ambitious targets for Retik Finance, this trader's journey is a testament to the dynamic nature of the

crypto space. Retik Finance, with its ambitious goals and comprehensive approach to decentralized finance, is positioning itself as a force to be reckoned with. Whether it achieves the projected \$20 mark in 2024 remains to be seen, but one thing is certain – the trader’s confidence in this Solana rival reflects a broader sentiment that the decentralized finance revolution is far from over. As investors eagerly watch the markets, the journey of Retik Finance and its visionary trader promises to be an exciting chapter in the ever-evolving world of cryptocurrency. On Horizen EON, Polytrade will facilitate the exchange, fractionalization, and trading of real world assets including real estate, collectibles, trade finance, and structured credit! Polytrade is a web3 protocol that intends to aggregate RWA demand and address it. Asset Originators may tokenize a variety of real-world assets using the Polytrade Marketplace platform, providing more liquidity at lower costs. A plethora of tokenized options, including trade finance, real estate, automobile loans, and collectibles, are available to asset purchasers. On Horizen EON, Polytrade Marketplace will make the following options available: - Indigenous support for RWAs within the Horizen ecosystem - Support for multichain via additional web3 ecosystems that feature Polytrade like BNB, Solana, and Polygon - An extra source of liquidity for RWA users Jordan Calinoff, VP of Strategy & Revenue at Horizen Labs stated: “We are thrilled to be kickstarting the RWA activation on Horizen EON with Polytrade. This collaboration is fueled by a shared passion for bringing real-world assets onchain amidst an ever-evolving landscape. Joining forces with the Polytrade team will activate the building blocks for RWAs in the Horizen ecosystem and beyond.”

Cryptocurrencies have gained immense popularity in recent years, offering investors unprecedented opportunities for wealth creation. While the market is known for its volatility, some coins have demonstrated the potential to yield substantial returns in a short time. In this article, we will explore three cryptocurrencies – Retik Finance (\$RETIK), Solana (SOL), and Binance Coin (BNB) – that could potentially turn a modest investment of \$5 into an impressive \$250 in just three months. Retik Finance (\$RETIK) Retik Finance has emerged as a promising player in the decentralized finance (DeFi) space, offering innovative solutions to reshape the global financial landscape. At its current presale stage 6 price of \$0.08, a \$5 investment in Retik would equate to approximately 83.33 \$RETIK tokens. The potential for Retik to multiply this investment lies in its ambitious goals and recent developments. Retik Finance aims to decentralize the banking sector through its comprehensive ecosystem, which includes the Retik Wallet, DeFi Debit Cards, and Retik Pay. These solutions empower individuals and businesses globally by providing enhanced security, accessibility, and privacy in financial transactions. The \$RETIK token serves as the backbone of the ecosystem, promoting financial autonomy and governance. Notably, Retik has achieved significant milestones, including a successful presale stage 5 sellout, raising \$5 million, and an approved listing on Coinbase and listing on reputable platforms such as CoinMarketCap and CoinGecko. Any Retik could profit \$5 into \$250 in 3 Months Retik Finance’s potential for growth lies in its increasing adoption by top crypto investors, positive sentiment, and rising demand for the \$RETIK token. As the project continues to gain visibility and enters more centralized exchanges (as planned), the demand for \$RETIK could surge, potentially driving up its value. If Retik Finance continues on its current trajectory, the \$5 investment could see substantial gains within the short span of three months. Cardano (ADA): Unlocking the Potential for Exponential Growth Cardano (ADA) has emerged as a cryptocurrency with substantial potential for rapid value growth, making it an intriguing prospect for investors looking to turn a modest investment into significant returns. The underlying factors contributing to Cardano’s potential for such impressive gains lie in its unique features and the overall cryptocurrency market dynamics. Cardano’s strategic approach, incorporating the “ouroboros proof-of-stake” consensus mechanism and a research-based development philosophy, has garnered attention. The project’s co-founder, Charles Hoskinson, a key figure in the early days of Ethereum, brings considerable expertise to the table. The meticulous research and development processes, underscored by over 120 peer-reviewed papers, form the robust foundation of Cardano’s blockchain. While Cardano is often referred to as an “Ethereum killer,” it is crucial to recognize its distinct objectives. The project aims to position itself as the world’s financial operating system, focusing on decentralized finance (DeFi) applications akin to Ethereum. As of writing, Cardano held the seventh-largest market capitalization at \$16.9 billion, with ADA trading at approximately \$0.47 per unit. In recent times, Cardano has witnessed a surge in transaction activity, with ADA whales engaging in sizable transactions totaling an impressive \$13 billion. This surge, particularly when compared to Ethereum’s transaction figures, hints at a potential shift in the behavior of large-scale investors within the Cardano ecosystem. As Cardano continues to evolve and advance its DeFi offerings, the cryptocurrency market could respond favorably, possibly turning a \$5 investment into \$250 within three months. Polygon (MATIC): The Multi-Chain Catalyst for Financial Growth Polygon (MATIC) has garnered attention not only for its role as a layer-2 solution addressing Ethereum’s congestion issues but also for its potential to provide substantial returns on investment over a relatively short period. The unique architecture of Polygon, utilizing layers such as Ethereum, Helmdall, and Bor, has allowed it to evolve into a versatile multi-chain system. One key aspect contributing to the investment appeal of Polygon is its responsiveness to the needs of developers. In 2023, Polygon attracted over 6,200 new developers, positioning itself as the second-most attractive blockchain for developers, following Ethereum. This influx of developers is crucial, as it enhances the likelihood of innovative projects emerging within the Polygon ecosystem. An additional factor contributing to Polygon’s attractiveness is its high percentage of shared developers with Ethereum, reinforcing the narrative that “Polygon is Ethereum.” As of writing, MATIC is trading at \$0.74, with a market capitalization of \$7.19 billion. The significant increase in developer interest aligns with Polygon’s unveiling of its multichain evolution through its 2.0 roadmap. With multichain development becoming a prevalent theme in 2023, Polygon’s ecosystem is poised for growth. If this trend continues, the potential for turning a \$5 investment into \$250 within a three-month timeframe becomes a plausible scenario, highlighting the project’s appeal and potential for rapid value appreciation. Conclusion The cryptocurrency market presents diverse opportunities for rapid growth and returns. Retik Finance’s innovative DeFi approach is highlighted, emphasizing its potential to turn a \$5 investment into \$250 in three months. Additionally, Cardano (ADA) and Polygon (MATIC) contribute to the transformative landscape, offering enticing prospects for investors. Retik Finance’s research-driven approach and the research-based foundation of Cardano suggest potential for substantial returns, while Polygon’s developer appeal and evolving multichain ecosystem position it as a dynamic investment. These projects showcase the transformative power of blockchain technology, pointing towards exciting possibilities for significant returns in the evolving cryptocurrency landscape. - Hayes predicted that the Bitcoin price would stay low until January 31. - As investors wait for key macro developments, he predicts liquidity issues in the markets. The co-founder of BitMEX, Arthur Hayes, recently predicted that Bitcoin prices would go under \$40,000 in a fresh forecast made on Monday. The approaching US Treasury quarterly refunding statement and a long-term projection of \$5,000 for Ethereum (ETH) and \$200 for Solana (SOL) have both contributed to the shift in mood. On January 22, the crypto exchange co-founder and billionaire expressed his pessimistic view on Bitcoin in a Twitter post. In addition, he predicted that the Bitcoin price would stay low until January 31, when the United States Treasury will reveal its quarterly refunding announcement. US Treasury Secretary Janet Yellen’s unfavorable comments have the potential to drive down the price of Bitcoin even further. However, the community still expects a significant change in momentum. Hayes’s prediction comes at a time when the price of Bitcoin is trading at \$40,631, down 2.31% in the last 24 hours. Highlighted Crypto News Today: Ethereum Foundation Offloads Millions in ETH Amid Market Volatility

In an intriguing turn of events, the cryptocurrency market is currently experiencing a bullish trend following the conclusion of 2023. Investors are particularly elated as the global crypto market cap witnessed a significant 20% surge, jumping from \$1.5 trillion to \$1.8 trillion in January. With the onset of the “altcoin season,” Solana has impressively rallied, securing its position as the fifth-largest cryptocurrency by market cap, surpassing Ripple (XRP). Conversely, Polygon (MATIC) has struggled to generate positive momentum over the past year, despite the overall surge in the altcoin market. Consequently, investors are shifting their focus towards potential early-stage gems backed by solid fundamentals and growth prospects, and Zeebu appears to be a promising choice. Here’s why investors are rushing towards this potential altcoin. The Emergence of the “Altcoin Season” In a cryptocurrency market where Bitcoin is trading at a two-year high, the Altcoin Season Index signals the advent of the Altcoin season. As we enter the altcoin season, the Index stands out at the 76 mark, prompting investors and industry experts to gravitate towards new altcoins. The prevailing bold prediction suggests that the prices of many altcoins, aside from BTC, demonstrate superior growth metrics compared to the leading cryptocurrency. Source: Altcoin Season Index The ongoing positive developments in the altcoin season are fueling excitement in the crypto market. At the same time, Zeebu, established as a Web3 Neobank in the telecom industry, is gaining prominence, drawing interest from significant coin holders eager to diversify their investment with its native cryptocurrency, ZBU. Solana – Climbing to Fifth Largest Cryptocurrency by Market Cap In January 2023, Solana (SOL) faced significant selling pressure, slipping to the 17th position with a \$3.6 billion market cap. As the altcoin season approached, SOL token rebounded and secured its position as the fifth-largest cryptocurrency by market cap, surpassing Ripple (XRP). Presently, SOL’s market cap is around \$38 billion. Exiting Holders – Polygon (MATIC) Struggling to Perform Despite the impressive performance exhibited by the SOL token in recent months, the comparatively lackluster showing of Polygon’s (MATIC) has sparked concerns. This has led to the speculation that large investors, or whales, may be opting to exit MATIC in favor of tokens with higher potential for growth. This concern is exacerbated by MATIC prices remaining unchanged, with a 22% loss over the past 12 months. Zeebu (ZBU) is gaining traction among large-cap coin holders. Zeebu has gathered attention from industry experts and prominent coin holders since its introduction, thanks to its transformative impact on finance within the telecom industry through an innovative B2B settlement platform. Before Zeebu’s introduction, telecom carriers, operators, and businesses grappled with challenges like lengthy remittance delays in cross-border payments, settlement fraud, lack of transparency, absence of traceability options, and more. Zeebu addresses these challenges, bridging the gap between conventional finance and contemporary payment solutions through its revolutionary platform. Zeebu eliminates the need for intermediaries like banks and financial institutions, addressing these long-standing issues by incorporating Blockchain technology into its platform. The rapid recognition stems from its loyalty rewards system. Telecom businesses or enterprises can earn rewards after each successful transaction or settlement. This loyalty reward system has fueled the swift adoption of Zeebu’s on-chain platform and its loyalty token on a global scale. ZBU’s Remarkable Surge to \$3.5 ZBU token entered the market in the third quarter of 2023, and early investors seized the opportunity to accumulate it from \$0.5, riding the bullish trend to an impressive new all-time high of \$3.5. This exceptional performance translated into a more than 300% return over the past few months, surpassing the growth seen in Polygon (MATIC) crypto. Investors express satisfaction with its consistent rally, deeming it a resilient crypto gem poised for success in 2024. ZBU sets its sights on \$4.1 as a Monthly Target Source: Tradingview Unsurprisingly, ZBU holds immense potential to emerge as a crypto gem in 2024. The price chart signals an imminent rally, as the pivotal RSI indicator rebounded from the middle (50 mark) in the previous week and is now trending towards higher territory. This bullish sign is expected to fuel the accumulation of ZBU tokens, with a similar price pattern having delivered outstanding returns in recent months. Looking ahead, ZBU token is anticipated to reach \$4.0 as an immediate upside level in the coming weeks. Furthermore, the 50-day moving average serves as a crucial demand zone. From a long-term perspective, this 50-DMA is anticipated to support Zeebu token (ZBU) in its pursuit of the key psychological milestone of \$10 this year. Conclusion A substantial number of

large-cap coin holders have accumulated Zeebu (ZBU) tokens. Industry experts and analysts are drawn to the technical and fundamental aspects of ZBU token, given its growing transaction volume, low market cap, and real-world use case. ZBU emerges as a contender in 2024, poised to deliver significant returns throughout the year.

HONG KONG—(BUSINESS WIRE)—Ondo Finance, a leading player in onchain finance, today announced its expansion into the Asia Pacific with the opening of its first office in the region. Ondo currently offers three tokenized products: OUSG, providing exposure to US Treasuries; OMMF, providing exposure to US money market funds; and USDY, providing a yield-bearing alternative to conventional stablecoins. Together, they enable investors from around the world to gain exposure to key US-based asset classes in tokenized form. Already the leading provider of tokenized securities with nearly 40% of global market share, Ondo's expansion into Asia Pacific coincides with the region's growing interest in digital assets, spurred by factors like a thriving crypto community, evolving regulatory landscapes, and increasing interest in exposure to US assets. These factors, coupled with the region's vast wealth and diverse investor base, make Ondo's expansion into the region timely. To facilitate this expansion, Ondo today announced the opening of its APAC office and the appointment of Mr. Ashwin Khosa as Vice President of Business Development in the region. With nearly ten years of Hong Kong-based institutional business development experience at Citi, Tether and Bitfinex, Mr. Khosa brings to Ondo both substantial understanding of onchain finance and deep knowledge of the Asia Pacific market. "I'm thrilled to be joining the Ondo team and building out our presence in APAC," said Mr. Khosa. "After the team's recent IPO and the mission to bring real world assets onchain, we're excited to expand our footprint and offering globally. We're looking forward to working closely with our investors on the next generation of high-quality assets." "We're very excited about our expansion into APAC," said Nathan Allman, founder and CEO of Ondo. "There is an active and rapidly growing crypto community and an appreciation for the type of high-quality exposure to US assets that our tokens provide." This most recent announcement comes on the heels of several major announcements by Ondo over the past few weeks such as its strategic roadmap, which lays out its view of the current state of the industry and its high-level plans over the next 24 months. It also comes on the tail of major announcements by other members of the Ondo Ecosystem: - Mantle and Solana recently announced partnerships with Ondo Finance to bring USDY to their chains. - The Ondo Foundation recently announced a points program and its proposal to unlock its ONDO token About Ondo Founded in 2021, Ondo Finance is a US-based technology company focused on making institutional-grade financial products and services available to everyone. Ondo focuses both on the tokenization of securities as well as on the development of decentralized protocols that improve the utility and distribution of those tokens. Ondo's leadership formerly ran the Goldman Sachs Digital Assets team. Ondo works with institutional partners like Blackrock and Morgan Stanley, and Ondo is backed by top VCs including Founders Fund, Pantera Capital, and Coinbase Ventures. Cryptocurrencies have become a hot topic of discussion among investors worldwide, and many are eager to discover the potential returns their investments could yield. In this article, we will explore what \$500 distributed among Shiba Inu (SHIB), BONK, and Retik Finance (RETIK) could potentially bring in 2024. While each of these cryptocurrencies has its unique characteristics, we will analyze them positively and aim to highlight why Retik Finance may have the potential to yield more substantial returns than Shiba Inu (SHIB). The meme coin phenomenon, where Shiba Inu (SHIB) gained immense popularity in the cryptocurrency space as a meme coin. Launched in August 2020, SHIB is an Ethereum-based token inspired by the famous meme involving the Shiba Inu dog breed. Despite its humble beginnings, SHIB attracted a massive following and became a part of the larger meme coin movement. As of early 2023, SHIB has made notable progress, and its price has seen significant fluctuations. With a large circulating supply, the coin's value remains relatively low, which makes it an attractive option for small investors looking to get into the cryptocurrency market. However, it's essential to note that SHIB's price is highly speculative and can be influenced by social media trends and market sentiment. As of now, \$500 invested in SHIB could potentially result in a substantial number of tokens. If SHIB's price experiences significant growth in 2024, your investment could yield substantial returns. BONK: The DeFi Gaming Token Initially, Bonk started as a meme coin on the Solana blockchain, primarily serving as a community and utility token within the Solana ecosystem. Its primary function is to facilitate participation in NFT marketplaces, DeFi protocols, and various on-chain activities. Bonk's strategic integration with popular games has attracted significant attention within the Solana gaming community. By incentivizing engagement and expanding its utility, users can earn BONK tokens while actively participating in gaming experiences. The prospect of winning prizes during gameplay has the potential to attract a broader audience, further enhancing Bonk's value and prominence in 2024. Over the past month, Bonk has experienced a remarkable surge in value, with a staggering 300% increase, as reported by CoinGecko. A \$500 investment in BONK in 2024 could provide opportunities for capital appreciation and passive income through staking. Retik Finance (RETIK): Revolutionising DeFi Retik Finance (RETIK) is a promising cryptocurrency project that aims to revolutionise the decentralized finance (DeFi) space. Unlike many meme coins, RETIK is designed with a clear and comprehensive ecosystem focused on empowering individuals and businesses in the world of decentralized finance. The Retik Finance ecosystem includes the Retik Wallet, DeFi Debit Cards, and Retik Pay, providing users with a seamless fusion of digital and traditional finance. The \$RETIK token serves as the backbone of the ecosystem, promoting financial autonomy, governance, and user engagement. One of the reasons RETIK stands out is its commitment to addressing the limitations of traditional banking systems. By embracing decentralized technologies, Retik Finance offers enhanced security, accessibility, and privacy while facilitating cross-border transactions. The Potential for Higher Returns with Retik Finance (RETIK) While Shiba Inu (SHIB) and BONK are intriguing investments, Retik Finance (RETIK) offers unique advantages that could potentially yield higher returns in 2024. Innovative Ecosystem: Retik Finance provides a comprehensive DeFi ecosystem, offering a wide range of financial services and products. This diversity enhances its utility and attractiveness to users, potentially driving demand for the \$RETIK token. 2. User Engagement: The project's emphasis on user engagement and governance ensures that the community has a say in the platform's development. This participatory approach can foster a loyal and active user base. 3. Real-World Application: Retik Finance's focus on bridging the gap between traditional and digital finance gives it a real-world use case. As more people seek accessible and secure financial solutions, Retik Finance's ecosystem could gain widespread adoption. 4. Strong Fundamentals: Retik Finance's commitment to compliance, security, and regulatory cooperation sets it apart as a trustworthy DeFi project. These strong fundamentals can attract institutional and retail investors. 5. Potential for Price Growth: With a well-rounded ecosystem and a clear vision for the future, Retik Finance has the potential for substantial price growth in 2024. A \$500 investment in RETIK could yield more substantial returns compared to other cryptocurrencies. Conclusion Investing in cryptocurrency is always a high-risk endeavor, and potential returns depend on various factors, including market conditions, adoption, and project fundamentals. While Shiba Inu (SHIB) and BONK are interesting investments in their own right, Retik Finance (RETIK) offers a unique and comprehensive DeFi ecosystem that sets it apart. If you're considering how to allocate your \$500 investment in 2024, it's essential to conduct thorough research, consider your risk tolerance, and stay updated on market developments. However, Retik Finance's innovative approach to DeFi, strong fundamentals, and real-world application make it a cryptocurrency worth exploring for potentially higher returns in the years ahead. However, always remember that the cryptocurrency market is highly speculative, and past performance is not indicative of future results. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Users will be able to easily switch from HT to HTX once they log in to their accounts. - Customers have until January 20, 2025, to complete the process. Under Justin Sun's leadership, HTX initiates the transformation from HT to HTX, which is a major milestone for Huobi Token (HT). The upgrade, detailed in a recent press release, brings about many improvements, including the listing of HTX DAO (HTX) and the ability for HT holders to willingly trade their tokens. This follows the rebranding of Huobi exchange to HTX in the month of September last year. Importantly, the goal of this strategic move is to introduce a new approach to the Huobi ecosystem by reshaping the benefits structure. According to the HTX news release, the conversion process has started, the HTX DAO (HTX) has been listed, and HT holders are invited to participate willingly. Users will be able to easily switch from HT to HTX once they log in to their accounts on January 22, 2024. It is worth mentioning that customers have until January 20, 2025, to complete the process. Enhanced Benefits Users will obtain a more advantageous conversion rate with early conversions and greater assets, according to the release. This change improves user governance and transparency and is in line with the rising trend of decentralized autonomous organizations (DAOs) in the cryptocurrency industry. Furthermore, token holders have a domino effect of advantages with HTX DAO's conversion from HT. As on February 2, 2024, the current HT-associated benefits will be superseded by the HTX-holder benefits structure. Notable changes include the addition of a fee reduction with HTX Deduction and the removal of a fee reduction spot/futures fees with HT Deduction. Spot trading costs will be reduced by 25%, futures trading fees by 5%, and interest on margin loans with HTX will be deducted with this modification. Highlighted Crypto News Today:

Staking is one of the most fundamental and essential elements of blockchain design. The process entails network users locking up a certain amount of their cryptocurrency holdings to support the blockchain's operation. It's how Proof of Stake (PoS) blockchains such as Avalanche are secured and entails validators being chosen to create new blocks based on the number of coins they hold and are willing to stake as collateral. The staking process involves actively participating in the Proof-of-Stake (PoS) consensus mechanism, which is an alternative to the Proof-of-Work (PoW) used with first-generation cryptocurrencies like Bitcoin. In return for locking their assets into a smart contract, to participate in network consensus, the staker receives the native asset in return. This is the reward that incentivizes staking and ensures PoS networks are secure and decentralized. In this guide, we'll detail how to participate in AVAX staking using one of the most popular non-custodial wallets - Core, as an example. But first, let's consider what staking entails and the most common staking options available to crypto holders. There's more than one way to stake. From Ethereum to Avalanche and Solana to Sei, the vast majority of second and third-generation blockchains utilize Proof of Stake. While the process works in a similar manner from chain to chain, the way in which stakers can participate in the process differs. It turns out there's more than one way to stake a blockchain's native token and participate in the network validation process. There are a number of reasons for this. One concerns the fact that while many holders of a native asset such as AVAX may wish to participate in staking and receive their share of the rewards, they may have no interest in running a validator node. It requires dedicated hardware, a degree of technical knowledge, and the ability to maintain uptime 24/7. Thankfully, there's a simple solution to this problem: delegated staking, whereby the user stakes their assets with a third party who will operate a node on their behalf and share the rewards. This is how the majority of users participate in staking on chains such as Ethereum, EOS, and Avalanche. But even within the context of delegated staking, there are a number of choices available, starting with a binary option: centralized or decentralized? The Pros and Cons of Keeping It Custodial The explosion in PoS blockchains has caused the number of staking services to rocket. It's great for the end user, as prospective stakers can now be "under-takers" and the subsequent rewards collected "in a couple of clicks." However, it's important to distinguish between delegated staking and non-custodial staking. In delegated staking, many central nodes are required to Layer-1 blockchains, but they retain custody of the assets. That means you have no recourse in the event of the exchange failing or being hacked. Exchanges also typically charge higher fees in return for the convenience they provide by automating the service. On account of these reasons, centralized staking is not recommended when using "life-changing" amounts of cryptocurrency. If you hold a few AVAX on an exchange and want to stake it using an integrated staking service, do so. Yet, you aren't truly participating in blockchain staking until you do so with a service that allows you to retain custody of your assets and the ability to unilaterally withdraw them. It is at the heart of blockchain's entire value proposition. The Best Way to Stake AVAX The best way to stake a native asset such as AVAX, in the case of Avalanche, is through a non-custodial solution such as a dedicated wallet. We'll use Core as an example here since it's one of the most popular Avalanche wallets, but the same procedure can be applied to other wallets and protocols that support AVAX staking. Core is available on mobile web and as a browser extension. In this guide, we'll use the latter option. After creating a Core wallet and authenticating using your desired method, such as Google, visit Core's staking portal and connect your wallet when prompted. AVAX Staking With Core On the Staking page, you'll see two options available: Validate and Delegate. As explained earlier, delegation is the most common means of staking, since it's user-friendly, simple, and doesn't require specialist knowledge. Select Delegate and, as Core explains, this "enables you to delegate without the need to operate your own validator node. Instead, you can delegate your tokens to a validator and receive rewards for staking and locking your tokens, minus a fee retained by the

validator.æ Select æGet Startedæ and youæll be informed that a minimum of 25 AVAX is required. With Avalanche, staking takes place on the P-Chain, while your tokens normally reside on the EVM-compatible C-Chain. Select æTransfer AVAXæ if you need to deposit tokens to the P-Chain and then æApprove Transfer.æ Core will prompt you to sign the transaction and then youæll receive a notification informing you of the successful transfer. Now select æBackæ and youæll return to the Delegate page. You can now select the amount you wish to stake. Remember to leave a small amount of AVAX in your wallet to cover gas. Enter your desired stake amount and hit æNext.æ Finally, select a node to delegate to. Core displays details for each of the available validators including the fee each collects. By default, this is set to 2%. Choose a node ID from the list available and again click æNext.æ Now select the staking duration; the minimum is 14 days. You will then be prompted to choose which Avalanche wallet address you want the staking rewards to be paid into. Youære best selecting your current Core wallet address. Youæll now be taken to a summary page detailing the staking particulars youæve selected. Check them over to make sure everythingæs to your liking and, when youære happy, select æSubmit Delegation.æ Thatæs it, youære now staking AVAX on Avalanche P-Chain while retaining full control over your assets. When the staking period has completed, you can withdraw your AVAX or restake it, while continuing to collect your rewards. Although there are a few steps to staking on Avalanche using a wallet such as Core, these are easy to follow and quick to complete. In just a few clicks, youæll be up and running and able to support network security while collecting AVAX rewards.

- Ethereum NFT market hits a 7-month high, reaching \$42.8 million. - Blur dominates with 82% volume, and PudgyPenguins surges 65% in 7 days. The Ethereum NFT market experienced a remarkable uptick on January 18, with the trading volume reaching an impressive \$42.8 million. This marked a significant milestone, surpassing the \$40 million threshold for the first time since June of the previous year. Notably, Blur dominated the scene, accounting for a substantial 82% of the total trading volume, hitting an impressive \$35 million. Adding to the intrigue, PudgyPenguins saw a staggering surge of over 65% in the past seven days. It showcases the dynamic nature of the NFT space. Contrastingly, Solana, a prominent NFT platform, had experienced a month-long decline in NFT sales in the past week. But on January 17, Solana NFT volume rose by an impressive 92.70%, comprising 141,120 unique transactions. Leading this surge were key Solana NFT marketplaces, with Tensor and Magic Eden capturing significant market shares at 75.74% and 18.85%, respectively. The catalysts behind this resurgence are attributed to the success of the NFT marketplace Tensor and the performance of the MadLads NFT collection. Amid Ethereumæ's NFT market soared to a seven-month high and Solana, after a month-long decline, experienced a substantial surge in NFT volume with major players, such as OpenSea, adapting to challenges, indicating the industryæ's resilience. This adaptability instills confidence in the NFT marketæ's continued growth and evolution.

The recent meme-coin craze witnessed a surge in the popularity of cryptocurrencies like Shiba Inu (SHIB) and Bonk Coin (BONK), with their values soaring due to a mix of excitement, community enthusiasm, and a touch of eccentricity. However, as the initial excitement subsided, many investors found themselves disheartened and on the lookout for the next promising opportunity. This is where Retik Finance (RETIK) steps inæ a token currently priced at \$0.08 that is gaining attention as a potential refuge for disillusioned meme-coin enthusiasts. The question remains: Does Retik Finance (RETIK) bring real value and functionality to the table? Letæ's explore this in more detail. Retik Finance (RETIK): Bridging the Gap Between Crypto and Real-World Utility Retik Finance (RETIK), currently in its presale phase at a value of \$0.08 per token, positions itself as a transformative link between the meme-coin trend and the decentralized finance (DeFi) space. Unlike its counterparts like SHIB and BONK, RETIK offers more than just a speculative asset. It presents a comprehensive ecosystem centered around practical utility, aiming to elevate the accessibility, security, and usability of cryptocurrencies. At the core of this ecosystem is the Retik Wallet, a secure and non-custodial solution for storing, managing, and transacting cryptocurrencies. Additionally, Retik Finance (RETIK) introduces DeFi Debit Cards, enabling anonymous real-world spending with instant crypto-to-fiat conversion, effectively merging digital and traditional finance. The platform further extends its utility with Retik Pay, a seamless crypto payment gateway for businesses, and AI-powered P2P Lending and Perpetual Futures & Options Trading, providing users with advanced trading strategies directly within the RETIK app. Moreover, RETIK goes beyond being a mere token, offering a diverse range of financial solutions and solidifying its presence in the evolving landscape of cryptocurrency. Shiba Inu (SHIB) and Bonk (BONK) Holders and Investors Become Frustrated Shiba Inu, often dubbed the æDogecoin killer,æ witnessed an astounding surge of over 10,000,000% in 2021, captivating the interest and investments of millions. However, the subsequent nosedive in its price has resulted in many investors facing losses. On a parallel track, Bonk Coin, the beloved meme-coin, thrives on the Solana blockchain. Similar to SHIB, the Bonk (BONK) meme token enjoyed a meteoric rise, only to experience a sharp correction in just a few weeks. These meme coins undoubtedly delivered substantial gains for some investors, transforming lives. Nevertheless, the erratic and unpredictable nature of these tokens, coupled with their lack of practical use, has left other investors feeling disenchanted. The tales of SHIB and BONK reflect the high-stakes rollercoaster ride that is investing in meme coins. While some bask in the glory of significant profits, others grapple with the harsh reality of volatile markets and the challenges these trendy yet unpredictable digital assets pose. Why RETIK Resonates with Frustrated Meme Coin Investors RETIKæ's increasing popularity among disheartened SHIB and BONK investors can be attributed to several compelling factors. One key element is RETIKæ's utility-driven ecosystem, which stands in stark contrast to pure meme coins by providing tangible value through a diverse range of financial solutions. Another appealing aspect is the advantageous presale price of \$0.08, offering investors a substantial discount in comparison to potential future valuations and an upcoming exchange listing price of \$0.15. Furthermore, RETIK, which is now available on CoinGecko and CoinMarketCap, distinguishes itself with a community-centric approach, where active users contribute to the ecosystem. The introduction of Retik Debit Cards, offering instant spending power, and the potential for a future presale price of \$0.15, further bolster its appeal. With a market cap of over \$10 million, indicating a high level of confidence among investors. Furthermore, Retik Financeæ's (RETIK) strategic decision to list on two top-tier centralized exchanges in the upcoming months will boost its liquidity and accessibility. This move is expected to broaden the projectæ's reach and provide investors with a more convenient trading experience. The multifaceted appeal of RETIK over the baseless and meme-driven popularity of BONK and SHIB lies in its utility-driven ecosystem, favourable presale pricing, community-centric ethos, robust fundraising performance, and strategic exchange listings, which collectively position it as a promising investment opportunity. Closing Thought Retik Finance (RETIK) stands out with its practical and security-focused strategy, which is a welcome change from the previous frenzy surrounding meme coins. This cryptocurrency adopts a utility-driven approach, emphasizing its practical applications and advantages. With a strong focus on security measures, RETIK aims to create a safe environment for investors. Furthermore, its community-focused ethos promotes a supportive and engaged user base. It is worthwhile to look into RETIK further if you are looking for a safe investment option with the potential for long-term growth. - There was a brief outage of service due to the 15-minute DDoS assault on HTX and its DAO. - Yesterday, Manta Network was targeted by a distributed denial-of-service (DDoS). After a recent Distributed Denial-of-Service (DDoS) assault, the services of Justin Sun led crypto exchange HTX and its decentralized autonomous organization (HTX DAO) have been restored. The platformsæ resilience and sophisticated security mechanisms were on display during the short disruption of operations caused by the DDoS assault that occurred on Friday. Catastrophe Avoided There was a brief outage of service due to the 15-minute DDoS assault on HTX and its DAO. Notwithstanding, the platforms showed incredible responsiveness in reducing the damage. Justin Sun confirmed the resurgence on twitter. He informed the community that their money was safe and commended them for their support. Not for the first time has the exchange had to respond quickly to a security breach, such as this cyberattack. A major security breach occurred on the platform on November 10th of last year, resulting in the loss of around \$97 million. Nevertheless, the cryptocurrency exchangeæ's further actions and Justin Sunæ's remarks, assured users that their funds were safeguarded. From its humble beginnings as an exchange, HTX has grown into a full-fledged blockchain ecosystem. Wallets, digital asset trading, financial derivatives, and other blockchain-related services are now part of this ecosystem. Yesterday, layer-2 blockchain powered by zero-knowledge proof Manta Network was targeted by a distributed denial-of-service (DDoS) attack just as its tokens were being listed on multiple exchanges. On the same day, Manta tokens were listed for trade on various exchanges, such as KuCoin, Binance, and BitHub. On January 18th, the blockchainæ's nodes received over 135 million remote procedure call (RPC) calls. Highlighted Crypto News Today:

- From the Q1 2022 through the fourth quarter, digital art volumes fell by more than \$10 billion. - However, late 2023 and early 2024 were promising times for the NFT market. The volume of NFT trades in 2023 was almost half of what it had been in 2022. The figure dropped from \$26.3 billion to \$11.8 billion, as reported by CoinGecko. Crypto investors have mostly ignored NFTs in the last two years after the meteoric rise in value of blue chip NFTs. Only \$50 million worth of digital collectibles were traded on secondary markets in the first week of October, marking the lowest weekly volume of NFT trading since 2020. Lackluster Performance The recession, however, has been building gradually. From the first quarter of 2022 through the fourth quarter, digital art volumes fell by more than \$10 billion, according to CoinGeckoæ's analysis. Disappointing macroeconomic circumstances and high-profile failures triggered the sectoræ's extended demise. These problems caused investors and the general public to lose faith in the crypto industryæ's more speculative segments. NFT marketplace OpenSea, whose valuation was \$13.3 billion at one point, has succumbed to the general decline in the NFT sector. Dune Analytics data shows that throughout 2021 and 2022, its trade volume was above \$2 billion for nine months in a row. In December 2023, it dropped to around \$170 million. Half of OpenSeaæ's employees were let off at the beginning of November last year. Coatue Management, an investor in OpenSea, allegedly wrote down its investment by 90% a few days later. However, late 2023 and early 2024 were promising times for NFT trading, thanks in part to the increased number of Bitcoin Ordinal inscriptions and enthusiasm for the Solana ecosystem. Highlighted Crypto News Today:

Introduction1.1 As a recent focus, the SEC approved 11 Bitcoin spot ETFs last week. UBS announced that it would allow certain clients to trade Bitcoin spot ETFs, and miner sell pressure reached its highest level since 2019 in the days leading up to the ETF approval. Additionally, Vitalik proposed to increase Ethereumæ's gas limit by 33% to 40 million, and the Dencun upgrade is scheduled to go live on the Goerli testnet on January 17 at 14:32. In terms of investment and financing, last week saw 22 global blockchain financing events, with a total capital scale exceeding \$105 million. Moreover, the U.S. FINRA released its 2024 regulatory report, which includes a chapter on crypto assets for the first time. This weekæ's investment research report from MIIX Capital not only provides data and analysis but also offers actionable insights, attempting to reveal the deep logic behind market trends to help you grasp the key to successful investing. 1.1 Key News Review 1.1 Hot Topics - The SEC officially approves all 11 BTC spot ETFs. - UBS to allow certain clients to trade BTC spot ETFs. - Robinhood lists all 11 Bitcoin spot ETFs. - Vitalik proposes to increase Ethereumæ's gas limit by 33% to 40 million. - Dencun upgrade is scheduled to go live on January 17 at 14:32 on the Goerli testnet. - X removes support for NFT profile pictures. - GameStop to shut down its NFT marketplace. - OpenAI officially launches the online store GPT Store. - Financing for AI-related Web3 projects in 2023 exceeds the total of the previous seven years. - Fines in the crypto payment sector in 2023 surpass those in the traditional finance sector for the first time. 1.2 Investment and Financing Observations Last week (1.8æ1.14), there were 22 investment and financing events in the global blockchain sector, with a total capital scale exceeding \$105 million. The overview is as follows - 6 financing events announced in the DeFi track, including a \$6.1 million seed round financing completed by DeFi lending service company Altitude; - 5 financing events announced in the blockchain gaming track, among which the 3A gaming platform SkyArk Chronicles completed a \$15 million financing round led by Binance Labs; - 5 financing events in the infrastructure and tools track, including the Bitcoin Layer2 project Bifinity raising \$7 million with participation from Polychain Capital; - 5 financing events announced for other Web3/crypto-related projects, with the Web3 music platform Tune.FM receiving a \$20 million investment from LDA Capital. 1.1 Financing Event in the centralized finance domain, where the German crypto custody and staking service provider Inoia completed a \$15 million strategic round led jointly by Haven 11 Capital and Balderton Capital. This week saw a significant increase in the number of investment and financing activities in the cryptocurrency market. In terms of sub-sectors, this weekæ's investment and financing were concentrated in the Web3 direction, but no significant active institutions were observed. In addition, OKX Ventures announced leading a new round of investment in the anti-hackathon platform Bewater, with the specific amount and other investors undisclosed; Quora CEO Adam DæAngelo announced receiving \$75 million in financing from a16z to accelerate the development of the AI chat platform Poe. 1.3 Policy

Dynamics - The U.S. FINRA releases its 2024 regulatory report, including a chapter related to crypto assets for the first time; - China's Central Bank Shanghai Headquarters 2024 Work Conference: Prevent and deal with the risks of speculation in virtual currency transactions; - Apple's App Store in India removes several crypto exchange apps including Binance and Kraken; - South Korea's Financial Services Commission: Trading Bitcoin spot ETFs is illegal, and there is consideration for regulating crypto mixers. 2. Cryptomarket Data 2.1 On-Chain Data Miners Selling BTC in Large Quantities In the days leading up to the ETF approval, the proportion of on-chain transactions by BTC miners reached its highest level since October 2019. Data from CryptoQuant shows that as BTC worth over \$1 billion was sent to exchanges, the outflow of BTC held by miners reached a six-year high. F2Pool analyst Bradley Park stated: The reason miners are selling BTC is due to the impending increase in costs. The move of F2Pool to Kazakhstan has led to increased mining costs, and the demand for upgrading to the Antminer T21 before the BTC halving has resulted in a significant outflow of BTC. Tether's market share has risen to 71%. The Block's data: USD's share of the global stablecoin supply has increased from 50% to 71%; As of now, the circulating supply of USD exceeds 95 billion tokens, a number greater than the GDP of countries like Guatemala and Bulgaria. Smart Money is taking profits and increasing holdings. In the past 24 hours, the top inflows into SmartMoney include stablecoins like USDC/USDT, LINK, UNI, SHIB, MKR, indicating that some SmartMoney has taken profits and converted into stablecoins. Volatility and Return Rate As the pioneering and largest digital asset, Bitcoin has lower volatility compared to ETH and SOL, but it offers greater potential for returns than tech stocks, indicating that it is evolving into a mature yet growth-oriented asset. Its largely uncorrelated nature with traditional assets further highlights its value in diversified portfolios and enhances its attractiveness to investors seeking opportunities. 2.2 CEX Data According to the Block data, in the past 24 hours, the long-to-short ratio has sharply risen to 2.86. Prior to the approval of multiple spot Bitcoin ETFs, the long-to-short ratio was at a low of 0.86. However, after the approval, this increase in the ratio may indicate that traders are predicting BTC to appreciate. Still, the sharp increase in the number of long positions implies a higher expectation of a potential decline in the market. Currently, the sentiment towards Bitcoin on Coinglass leans bullish. In the past 24 hours, the distribution of long positions and short positions indicates that approximately 42% of traders are bullish on BTC, while only 22% are bearish, with traders maintaining a neutral stance. 2.3 DEX Data This week, the total circulating market capitalization of DEX is \$12.61 billion, showing a 4.6% increase compared to the previous week. Here are the specific details: - Uniswap continues to dominate the market with a 2.4% increase compared to the previous week, holding a 47.2% market share. In terms of trading volume and total fees, Uniswap has surpassed Bancor to claim the top spot with a 36.25% market share. Regarding 24-hour trading volume, 1inch holds the top position with a market share of 55.4% and a trading volume of \$454.18 million. - PancakeSwap leads in both 7-day total income (27.38% market share) and active users (30.71% market share). - PancakeSwap also boasts the highest number of users, with a daily active user count of 509,910, representing 29.6% of the market. - The Ethereum-based crypto wallet MetaMask remains dominant with a market share of 29.5%. 2.4 Market Focus The correlation between BTC and NDX is 0 BTC has recently decoupled from the Nasdaq (NDX) index, ending the trend of moving in sync with Wall Street's heavyweight stock indices that had been observed for most of the past. According to Fairlead Strategies data, the 40-day correlation between Bitcoin and Nasdaq is zero, indicating a lack of correlation between these two asset classes. The collapse of correlation also suggests that Bitcoin can now serve as a diversification tool for portfolios, and it is expected that Bitcoin will remain unaffected by Nasdaq for some time. On January 14th, the Hong Kong Virtual Asset Classification (HKVAC) announced the index adjustments for the HKVAC Core Index and HKVAC Market Index: - Solana (SOL) will replace Ripple (XRP) as part of the top 5 constituents in the global large-cap cryptocurrency index. - Avalanche (AVAX) will replace TRON (TRX) as part of the top 10 constituents in the global large-cap cryptocurrency index. All changes will take effect on January 19, 2023. BTC may retrace to \$38,000. Since the approval of the BTC spot ETF by the SEC, BTC has fallen by more than 5%, displaying a typical sell price behavior. According to 10x Research analysis, this selling trend may continue in the short term. Bitcoin's RSI divergence signals an adjustment, and the retracement may stop around the dynamic support level near \$38,000. When prices reach new highs but momentum indicators like the Relative Strength Index (RSI) fail to confirm, bearish divergence occurs. Last week, BTC reached a two-year high, surpassing \$49,000, but the 14-day RSI did not confirm it. The subsequent price decline validated the bearish divergence. Additionally, the MACD histogram, used to measure trend strength and changes, has dropped below zero, indicating a bearish shift in momentum. 3. Trending Sectors 3.1 Re-staking EigenLayer is a middleware protocol based on Ethereum that introduces the concept of re-staking. Re-staking allows Ethereum nodes to re-stake their staked ETH or LSD tokens into other oracles, bridges, or public chains, enabling them to enjoy Ethereum-level security at lower costs. Users earn multiple rewards through this process. Recently, there has been a trend in the market where liquidity staked in EigenLayer is converted into a new layer of liquid staking tokens called LRT. Leading to the emergence of re-staking liquidity games like LRTfi. Some noteworthy projects in this space include: - Pendle (SPENDLE): An LSDfi protocol platform that is about to launch eETH, a liquidity staking token from ether.fi. Users can deposit eETH into Pendle's LP to earn EigenLayer points, EtherFi points, and multiple staking rewards. - Swell: An LSDfi protocol where users can stake ETH to earn PEARLS and staking rewards. Swell is planning to introduce a re-staking feature for swETH, allowing users to stake ETH to receive rswETH, unlocking liquidity for ETH and additional rewards. - Puffer Finance: A liquidity staking protocol based on EigenLayer that addresses forfeiture issues in both Ethereum and EigenLayer networks through its proprietary Secure-Signer tool and RAV technology. It aims to provide participants with low-risk double rewards and plans to launch its mainnet in 2024. 3.2 Modular Blockchain Modular blockchains are specialized blockchains designed to perform specific functions, such as execution, consensus, settlement, or data availability, relying on other blockchains or services to perform the remaining tasks. Modular blockchains address the performance bottlenecks of traditional monolithic chains by decoupling various functions and components of the blockchain. Each module is provided by specialized providers, offering the possibility of creating customized blockchains through a combination of these modules. This design enhances project security and allows project teams to focus on developing core features. Notable projects in the modular blockchain space include: - Celestia: It employs an off-chain approach to achieve data availability, using Reed-Solomon erasure codes and a specialized Namespaced Merkle Trees structure to ensure cost-effective and efficient data availability. While Celestia has already launched its own token, users can indirectly participate in all modular projects using Celestia by staking tokens within their accounts. - Manta: Manta is a modular blockchain for zero-knowledge (ZK) applications. It was the first to transition its data availability layer from the Ethereum mainnet to Celestia's Layer2. Since this transition, transaction fees on Manta have decreased by 99.8%. Currently, Manta has a TVL exceeding \$800 million, ranking just below OP and Arbitrum. - Altlayer: Altlayer is a decentralized Rollup as a service protocol with a modular design. End users can choose Rollups based on their requirements. Rollup SDKs support various options like Arbitrum Orbit and OP Stack. The data availability layer is compatible with EigenLayer, Celestia, and Astria Altlayer. Previously released the Otterli NFT series, which may receive token airdrops in the future. - Cevmos: Cevmos is a collaboration between Cosmos EVM application chain Evmos and Celestia to develop a rollup stack. It aims to be the best settlement layer for EVM rollups built on Celestia. The name "Cevmos" is derived from Celestia, Evmos, and Cosmos. 4. Recommended Projects to Follow 4.1 ZKFair L2beat data: The first community-driven ZK L2 network, ZKFair, has achieved a new all-time high in on-chain Total Value Locked (TVL), with the current TVL standing at \$132 million. In the past 24 hours, it has witnessed a staggering 109% increase in TVL, securing its position as the 12th highest-ranked L2 solution. ZKFair adopts a 100% fair launch token model and receives technical and computational support from the ZK-RaaS platform Lumoz. ZKFair utilizes USDC as the Gas token. Upon its mainnet launch, the TVL skyrocketed to \$124 million within six days. Currently, ZKFair's native token, ZKF, is listed on more than 10 exchanges, including Bybit, Gate, Bitget, Kucoin, and others. Additionally, ZKFair has introduced the ZKF staking mechanism, allowing users to stake ZKF tokens and receive a share of the Gas fee profits generated on the ZKFair network. The staking feature was officially launched on January 10th. To ensure fair participation, users could only perform Staking operations until January 15th. After this date, Gas fee profits will be distributed based on the proportion of staked tokens, with 15% going to users and the remaining 25% allocated to DAPP developers. As of the time of writing, the amount of tokens staked is over \$1 billion. 4.2 Berachain: Berachain is a community-driven L1 blockchain. Last year, Berachain launched a public testnet called Artio. The Berachain network is built on the Cosmos SDK and will be EVM compatible. Last year in April, Berachain completed a \$42 million funding round led by Polychain Capital. Berachain introduces the concept of "liquidity proof" consensus aimed at aligning incentives between security and liquidity. According to a statement, Berachain's previous private testnet was hosted under confidentiality agreements with multiple partners, and approximately 50 teams deployed contracts within a month. When it is finally released later this year, Berachain is expected to receive support from custodians, cross-chain messaging and bridging protocols, and data availability solutions. The mainnet for Berachain is planned to launch in the second quarter of this year. Berachain has stated that there are currently more than 30 local teams building on Berachain, and over 100 teams from other networks are planning to deploy on the testnet and mainnet, including well-known brands like Pendle, Redacted, Sudoswap, Abracadabra, and others. 5. Focus on Narratives Standard Chartered predicts BTC price Standard Chartered Bank has stated that after the approval of Bitcoin spot ETFs in 2024, the inflow of funds may range from 50 to 100 billion USD. By the end of 2022, the price of Bitcoin may reach 200,000 USD per unit. U.S. House of Representatives Optimistic About ETFs U.S. Representatives Patrick McHenry and French Hill have stated that the approval of Bitcoin spot ETFs marks a historic milestone for the future of the U.S. digital asset ecosystem. While legislation for digital assets still requires clarity and certainty, the actions taken today represent a significant improvement in SEC enforcement and oversight. SEC Discusses Bitcoin ETF SEC Chairman Gary Gensler released a statement: While we have approved the listing and trading of certain Bitcoin spot ETP shares today, we have not approved or endorsed Bitcoin, and investors should exercise caution regarding the risks associated with Bitcoin and cryptocurrency-related products. Bloomberg Predicts Ethereum ETF Bloomberg ETF analyst Eric Balchunas: There is a 70% chance that an ETH spot ETF will be approved in May. Fidelity Bullish on DeFi Yield Recovery Fidelity stated in its 2024 Digital Asset Outlook report: If DeFi yields become more attractive than traditional finance (TradFi) yields again, and more developed infrastructure emerges, institutions may show a renewed interest in DeFi in 2024. SINOHOPE to Deeply Engage in BTC Ecosystem SINOHOPE CEO Jun Du stated: Prepared to deeply engage in the Bitcoin ecosystem focusing on the Layer2 track with \$50 million in funds prepared and a publicized address dedicated to the project's development. Cathie Wood Bets on BTC Ark Invest CEO Cathie Wood mentioned: Excluding companies and real estate, it is estimated that at least 25% of financial net assets are in Bitcoin. Akash Founder Bullish on Cosmos Akash founder Greg Osuri posted on social media: Among the top 100 cryptocurrencies in the crypto market, 10% of projects are built using Cosmos SDK, compared to 6% a year ago. 6. This Week's Focus January 16th - The BRC20 cross-chain protocol Shell Trade launches its IDO, offering a total of 650 million tokens for sale; - The cross-chain trading infrastructure zkLink will conduct a community token sale on Coinlist, with the whitelist application closing today; - Manta Network's public chain liquidity incentive event, New Paradigm, closes the deposit window. January 17th - U.S. retail sales monthly rate for December; - The New York financial regulatory authority has approved Paxos's expansion to Solana, which plans to launch today; - The Dencun network upgrade is scheduled to be activated on the Goerli testnet at 14:32 Beijing time; - ApeCoin (APE) will unlock approximately 15.6 million tokens at 8 a.m., valued at about \$22.3 million; - The NFT platform Metaplex on Solana is fully on-chain on Solana with its inscriptions. January 18th - Number of initial jobless claims in the United States; - Axie Infinity (AXS) will unlock approximately 3.43 million tokens at 9:10 PM, valued at about \$27 million; - Bakery Launchpad launches its first free project OpenSky, with the launchpad starting at 4 PM; - Euler (EUL) will unlock 110,000 tokens at 8 AM, valued at about \$450,000. January 19th - Coinlist will start the sale of Subsquid tokens at 2 AM, with registration already open; - The adjustment of the HKVAC crypto index will take effect starting today. January 20th - The modular blockchain Dymension Genesis Drop from the Cosmos ecosystem will close applications at 8 PM; - The Web3 social and speculative platform Socrates.com launches its first community airdrop; - Injective (INJ) will unlock approximately 3.67 million tokens at 8 AM, valued at about \$133 million. 7. Summary Over the past week, we have witnessed a historic moment in the crypto world: the SEC officially approved all 11 Bitcoin spot ETFs, a decision akin to Washington's determined crossing of the Delaware River on a cold winter night, a move made after careful consideration and without regrets. The market dynamics, such as miners' sell pressure, smart money taking profits, and the relationship between Bitcoin's volatility and returns, are all making their moves on this chessboard. The rising ratio of long and short Bitcoin contracts on the Binance trading platform seems to foreshadow greater market turbulence; however, the disappearance of the correlation between BTC and NDX suggests an unusual calm. These indicators signify Bitcoin's uniqueness as a diversified investment tool in the broader financial market, which is a significant positive for the industry. Additionally, SOL has become one of the top five index members of HKVAC, SINOHOPE plans to deeply engage in the BTC ecosystem, and trends like re-pledging businesses and modular blockchain are gradually entering public view. These strategies and evolutionary trends seem to suggest that the entire industry is accelerating its pace, constantly innovating from within to stimulate and create vitality, bringing new experiences and services to the market and users. With the launch of the Bitcoin spot ETF, the market has shown a retracement trend, and whether it will pull back to \$38,000 remains a mystery. In this volatile and unpredictable crypto market, every participant, like Washington back then, bears the risks of their decisions. But just as his decision changed the course of history, our choices today may well be the key steps in ushering in a new era. Note: All of the above opinions are not investment advice. If there are any inappropriate points, please feel free to leave a message to supplement or correct them. Join

Victoria, Seychelles, January 17th, 2024, Chainwire Bitget Wallet, a leading Web3 trading wallet (formerly known as BitKeep wallet), has launched a comprehensive inscription ecosystem platform within its wallet dedicated to serving as a one-stop portal for users to access the broader inscriptions ecosystem. As one of the first platforms in the wallet industry to offer full-stack omnichain inscription management, GetScribe offers convenient single and batch inscriptions on both the app and browser extension platforms of Bitget Wallet. Currently, the portal supports 19 different blockchains including Bitcoin, Ethereum, Polygon, Avalanche, with plans to further expand support for more chains in the future. To keep users informed about the inscription market, GetScribe also integrates an inscription market leaderboard, covering the BTC Ordinals market and providing BRC-20 inscription market information. This real-time ranking list not only updates prices, price fluctuations, and trading information but also presents crucial data on market competition. Through this feature, users stand to gain access to key metrics such as inscribing progress and participant count, adding them to their inscriptions journey. Additionally, GetScribe is also set to introduce a launchpad function for BRC-20 tokens, which will feature emerging and popular inscriptions to provide Bitget Wallet users with early-access opportunities and even potential first-mover benefits. Alvin Kan, Chief Operations Officer of Bitget Wallet, emphasized the company's dedication to helping users navigate the emerging asset class of inscriptions in a recent closed-door interview, stating that Bitget Wallet will aim to contribute to the burgeoning growth of the inscriptions market against the backdrop of Bitcoin's growth and momentum set by the Ordinals protocol. The company will also be playing a key role in the fostering of growth of Bitcoin Layer 2 protocols, steering the entire ecosystem towards new innovation frontiers. On the company's brand positioning, Alvin added: "In this volatile bull market, our core value lies in helping users discover new assets and trading opportunities, gaining insights, and grasping new trends. We are committed to creating a rich on-chain asset selection platform, providing powerful on-chain trading services, and combining comprehensive market information to assist decision-making. Within the Bitget ecosystem, attention to the inscription ecosystem extends beyond Bitget Wallet to also include Bitget Exchange. Featuring multiple trendy projects such as BRC-20 tokens, Bitget Exchange recently introduced the Spot P2P market, offering an early trading platform for tokens not yet listed on major CEXs. This unique feature allows BRC-20 token trading via various sell orders, ensuring greater trading flexibility and enabling users to effortlessly move from the inscription minting process on Bitget Wallet to actively trading new inscription tokens on the Bitget Exchange. About Bitget Wallet (Web3 Trading Wallet) Bitget Wallet, formerly known as BitKeep, stands as Asia's largest and global frontrunner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 15 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. In March 2023, Bitget, a leading crypto derivatives trading platform made a substantial \$30 million investment in BitKeep, acquiring a controlling stake. Following this strategic move, BitKeep underwent a transformative and strategic brand evolution in August, officially rebranding itself as Bitget Wallet. For more information, visit: Website | Twitter | Telegram | Discord Contact Rachel Cheung [media@bitget.com](mailto:media@bitget.com)

The new product drives progress towards a true, end-to-end web3 experience NEW YORK (BUSINESS WIRE) "WalletConnect, a leading web3 communications protocol, today announced the launch of the Web3Inbox application, a new easy-to-use consumer product that provides both users and apps an essential communication point, flexible to the demands and needs of today's world. The platform gives users of any wallet an all-in-one inbox to subscribe and interact with updates from the apps they love, enabling a headache-free, web3-first notification experience that keeps them in control. The app launch follows the rollout of the Notify API for wallets and app developers to build Web3Inbox SDK. Together, the new Web3Inbox products empower developers to build the foundation for human-readable web3 messages to seamlessly work at scale, and provide the base layer for users to enjoy the benefits. The Web3Inbox app "WalletConnect's first-ever user-centric product" will enable users to access and manage important notifications from the apps they use "all in one place, all on their terms, all of the time. Through a single, sleek dashboard, users can receive and manage their notifications from multiple apps, just as they would in a wallet. The waitlist "boasting tens of thousands of end users" will gain access to the app upon launch. "Web3Inbox is much more than a win for WalletConnect, it's a game-changer for web3. It cuts through the jargon and puts human-to-human communication at the heart of the user experience," said Pedro Gomes, CEO and founder of WalletConnect. "Web3's cryptic language and reliance on web2 communications has been a barrier to wider adoption and WalletConnect's Web3Inbox shatters that barrier, embedding clear, accessible communication directly within the web3 experience." The Web3Inbox SDK, launched in December, enables apps to better connect with users through web3 notifications and allows wallets to empower users to receive notifications right within their wallet. With the new tooling provided by WalletConnect, wallets can offer their users ultimate control over their experience interacting with selected apps through their wallet. The new SDK has a number of APIs that will unlock messaging all across web3 including Notify API (app-to-consumer) and in the coming months, Chat API (peer-to-peer). Leading apps like PancakeSwap, SPACE ID, Guild, Trustalabs, Robots.Farm, Snapshot, Galxe, Sovereign Nature Initiative, Peanut Protocol, and Chainspot are all confirmed to launch notifications within the Web3Inbox app "enabling users to receive web3-based push notifications straight to their phones" with many also utilizing the Web3Inbox SDK to launch notifications within their own apps, too. To celebrate the launch of Web3Inbox, WalletConnect has partnered with non-profit Sovereign Nature Initiative (SNI) to create a first-of-its-kind bioacoustic NFT art collection, delivered to the web3 community in partnership with Transient Labs "on Arbitrum. Eligible Web3Inbox users will be airdropped NFTs that are linked to ecological data from real-world sperm whales and humpback whales in the Caribbean, collected by the conservation organization AquaSearch. Broken down into four limited-edition categories ranging in rarity and highlighting different communicative whale sounds, every NFT holder gains access to SNI's REAL Portal, where users can verify what animal their asset is linked to, information about the conservation project it supports and the impact the project is aiming to achieve. To learn more about Web3Inbox, please visit <https://web3inbox.com/> or for developers, visit <https://walletconnect.com/web3inbox>. To keep up-to-date with WalletConnect, please visit <https://walletconnect.com/> and follow us on Twitter at @WalletConnect. ABOUT WALLETCONNECT Founded in 2018 by CEO Pedro Gomes, WalletConnect is the web3 communications protocol enabling interoperability between wallets and dapps across chains. Having been integrated by over 500 wallets and 3,000 apps, it facilitates millions of end user connections each month. Today, it is also empowering developers to build engaging web3 experiences with a suite of SDKs: Web3Modal, Web3Wallet, and Web3Inbox. It has raised \$25 million from some of the world's leading tech and crypto investors, including Union Square Ventures, 1kx, Shopify, Coinbase Ventures, Circle Ventures, and Uniswap Labs Ventures. WalletConnect integrations currently span the Ethereum, Solana, NEAR, Cosmos, and other blockchains. For more information, please visit <https://walletconnect.com>. ABOUT SOVEREIGN NATURE INITIATIVE The Sovereign Nature Initiative (SNI) enables companies to create a verifiable nature-positive impact by connecting ecological data to digital products and building the infrastructure for nature-positive supply chains and ESG technology. AquaSearch is a premier innovation platform for Web3 creators, projects, and ecosystems around the world. Our mission is to unlock the potential of blockchain and smart contract technology, and redefine what ownership means now and in the future. For more information, visit [transientlabs.xyz](https://transientlabs.xyz) or follow us on Twitter. ABOUT AQUASEARCH AquaSearch offers expertise in the environmental and oceanographic fields, including scientific research projects (field and laboratory), as well as public awareness and communication (scientific popularization). Present in France and abroad, they carry out research projects in marine and freshwater environments and are jointly developing innovative research projects on the ecological and acoustic study of aquatic species. Follow them on Facebook and Instagram to learn more. Contacts Gianna Perera [WalletConnect@Wachsman.com](mailto:WalletConnect@Wachsman.com)

Bringing together key players, TAC aims to drive more than \$1 trillion in assets onchain NEW YORK (BUSINESS WIRE) "Today the Tokenized Asset Coalition (TAC) announced its inaugural State of Tokenization Report, a comprehensive look at the industry with data and insights from a variety of TAC members. In addition, the TAC announced it has welcomed 15 new members into its ranks, a first cohort selected from more than 300 applicants. The Tokenized Asset Coalition champions the adoption of public blockchains, asset tokenization and institutional DeFi to dramatically alter the way capital is formed, invested and managed onchain, paving the way for a more open, fair and transparent system for investors. The TAC was formed in the fall of 2023 with founding members Aave Companies, Base, Centrifuge, Circle, Coinbase, Credix, Goldfinch and RWA.xyz. This year's State of Asset Tokenization report provides a range of insights into the state of RWAs and tokenization, innovation happening to business models and products, the emergence of institutional investors, large market trends, and more. The report delves into specific topics that include: - The birth of a tokenized risk curve - A challenging two years for crypto & blockchain venture capital - Market commentary on currency, treasuries, private credit, digital bonds and other areas of interest - Bringing crypto to the world - Matching supply and demand To download the full report, visit this webpage: <https://www.rwa.xyz/blog/tokenized-asset-coalition-2024-outlook>. The TAC is proud to announce its 15 newest members, who come from a range of focuses within the RWA, TradFi, and DeFi industries. These members have a multitude of perspectives and approaches to asset classes, security, scale, infrastructure, analytics, and other critical components of the RWA ecosystem. "Our goal was always to bring together a diverse group of key players to ensure vast representation throughout the TAC," said Colin Cunningham, TAC Chair. "We want to bring together not only diverse representation, but the players we all can trust when it comes to compliance, security, growth and adoption." The new members include Ava Labs, Backed, Chainlink Labs, Fireblocks, Keyrock, Ondo, ParaFi, Polygon Labs, Provenance Blockchain, Republic, Securitize, Solana Foundation, and Steakhouse Financial. All members will join a TAC working group, participate in events, produce unique content and contribute toward the annual report. As a result of this growing membership, the TAC content will continue to become more robust as additional experience and expertise are added. As new builders, industry leaders and influencers come forth, the coalition welcomes the opportunity to expand and grow. The Coalition invites all relevant organizations to apply to become part of the coalition and contribute to the transformation of the financial landscape. Through collective efforts, a new era of efficiency, transparency, and accessibility in global finance can emerge. About the Tokenized Asset Coalition The Tokenized Asset Coalition seeks to unite traditional and crypto financial systems with the shared belief that many assets will eventually move on chain. By addressing the inefficiencies, opacity and fragmentation of the current financial infrastructure, the Tokenized Asset Coalition aims to spearhead the next wave of digital transformation. The founding Coalition members include Aave Companies, Centrifuge, Circle, Coinbase, Base, Credix, Goldfinch and RWA.xyz, are on a mission to educate and advocate for shared principles and best practices and build the on-chain infrastructure of tomorrow. Contacts Keith Chapman [keith@chappublicrelations.com](mailto:keith@chappublicrelations.com)

The 6th Annual Blockchain Futurist Conference, Canada's largest and longest-running blockchain event, is set to make its grand return at the Rebel Entertainment Complex and Cabana in Toronto, Canada, on August 13-14, 2024. Renowned for being one of the world's longest-running mega conferences in the Web3 sector, this year's event promises an even more spectacular experience. As a trailblazer in the Web3 community, the conference will delve into critical themes such as Bitcoin, Staking, Web3, and Decentralized Finance. With the upcoming Bitcoin halving, the rise of ETFs, and the evolving future of Bitcoin, these discussions are especially relevant this year. Past conferences have featured over 250 speakers annually, including keynotes like Ethe Anatoly Yakovenko, Founder of Solana. The event showcases keynotes, panels, roundtables, and presentations across three stages. The event is a fusion of cutting-edge design and immersive experiences, offering an extraordinary crypto setting. Highlights include crypto-enabled food trucks, NFT galleries, a crypto marketplace, Bitcoin ATMs, and crypto tickets "turning the conference into a fully functioning crypto-enabled world. The outdoor VIP Cabana, with its breathtaking view of Toronto, offers a premier networking space for global VIPs. Last year's conference hosted over 35 sub-events onsite that included networking opportunities, art galleries, private VIP events, and the much-anticipated Cabana Parties. For the technical community ETHToronto and ETHWomen hackathons will be held both online and in-person providing a platform for teams to compete and showcase their innovative builds. Blockchain Futurist Conference is not just an event; it's a beacon for the future of Web3 and blockchain technology. Organized by Untraceable Events, renowned for their 11-year legacy in the blockchain event space, the conference is a gathering of the brightest minds and the latest innovations. Join us in Toronto for a conference that's set to redefine the boundaries of blockchain and Web3 possibilities. To register for the Blockchain Futurist Conference 2024, or to apply for the hackathons, visit [FuturistConference.com](https://FuturistConference.com), or Register for the Hackathons at [ethtoronto.ca](https://ethtoronto.ca), or [ethwomen.com](https://ethwomen.com). "Since 2013, Untraceable Events has been a leading force in blockchain event organization, hosting over 150 major Web3 conferences globally, including in the Bahamas, Barbados, Australia, Italy, and the United States. Under Tracy Leparulo's leadership, Untraceable has pioneered many firsts, like the world's first

Ethereum Hackathon in 2014, Canada's inaugural Bitcoin Expo 2014 , and Founded ETHWomen. Their flagship event, the Blockchain Futurist Conference, is Canada's largest Web3 conference and a highlight of the Canada Crypto Week, consistently attracting over 10,000 attendees. - For media inquiries email [events@untraceableinc.com](mailto:events@untraceableinc.com) Disclaimer: TheNewsCrypto does not endorse any content on this page. - The approval of a spot Bitcoin ETF opens a new avenue for public investment. - Arbitrum (ARB) recorded a new all-time high of \$2.37 on January 11. While crypto investors eagerly await regulatory developments, most major cryptocurrencies displayed positive momentum recently. Also, cryptocurrency experts anticipate that regulatory clarity and the new crypto ETF could encourage the entry of institutional investors into the market. Despite the proliferation of thousands of alternative cryptocurrencies, the dominance of Bitcoin and Ethereum persists, with their combined market capitalizations exceeding two-thirds of the overall crypto market. However, speculation abounds regarding the top cryptocurrencies that have the potential to outperform BTC in 2024. Here are some top contenders. Polygon (MATIC) Formerly known as MATIC Network, Polygon has positioned itself as a prominent layer-2 scaling solution for Ethereum, tackling scalability issues. With its zkEVM boasting record-breaking transaction volumes, Polygon has garnered attention. Polygon zkEVM stands out as the first fully open-source zkEVM available in the market. MATIC effectively surpassed the support level at \$0.8487, and now sets its sights on the resistance level at \$1.2495. According to projections from cryptocurrency analysts, if Polygon experiences increased token accumulation by buyers, it could initiate a retesting at \$1.8. MATIC continues to be recognized by crypto experts as one of the top cryptocurrencies for investment in 2024. Avalanche (AVAX) Avalanche emerges as a pioneering blockchain platform reshaping decentralized finance (DeFi). AVAX is recognized as one of the top cryptocurrencies for investment in 2024 and boasts a distinctive consensus protocol known as Avalanche consensus, facilitating swift and secure transaction processing with minimal costs. Since September 2023, the price of AVAX has surged significantly, experiencing a significant 500% increase in 90 days and reaching a new yearly high of \$49.95 on December 25. Despite a recent surge, AVAX's price movement shows a bearish trend in the short term. However, AVAX is trading at \$38.86. Maintaining a range above \$35 is crucial for Avalanche, with a pivotal resistance level at \$40. If AVAX surpasses the \$40 mark, the subsequent resistance levels are anticipated at \$45 and \$48, potentially paving the way for a breakthrough towards the \$50 mark. Toncoin (TON) Toncoin (TON) stands as a decentralized layer-1 blockchain conceived in 2018 by the encrypted messaging platform Telegram. Originally named as Telegram Open Network, the project transformed after being abandoned, taken over by the TON Foundation, and rebranded as The Open Network. Toncoin seems to be entering a correction phase following a recent surge in bullish momentum. Still, over the past six months, Toncoin has witnessed a 65.5% increase in value, although it has experienced an 8.5% rally in the last week. At the time of writing, Toncoin is trading at \$2.40, reflecting a 2% decrease in the past 24 hours. Technical indicators suggest that Toncoin could reach a peak of \$2.80 by the end of January, marking a notable 20% increase. While bearish predictions hint at a drop to \$2.06, the majority of experts express confidence in Toncoin's bullish trajectory. Arbitrum (ARB) Arbitrum (ARB) has solidified its position as a leading layer-2 network, achieving a significant milestone in the realm of DeFi. Notably, the daily trading volume on Arbitrum network's decentralized exchanges recently surged beyond \$1.84 billion, surpassing even Ethereum and Solana. The total value locked on the Arbitrum network has concurrently risen to \$2.624 billion, nearing its highest recorded value. While this accomplishment underscores Arbitrum's substantial growth, the ARB coin has exhibited a flat performance on the weekly chart. In alignment with the bullish trend prevailing in the broader crypto market, ARB marked a new all-time high of \$2.37 on January 11. At the time of writing, Arbitrum is trading at \$2.28, with a daily trading volume of \$1.4 billion. If the current trend persists, experts anticipate that the price of ARB could potentially reach as high as \$2.5 in the forthcoming weeks. Kaspa (KAS) Kaspa operates as a proof-of-work project, utilizing the GHOSTDAG protocol that distinguishes itself from conventional blockchains by embracing parallel blocks. Towards the close of 2023, Kaspa showcased a bullish turn, achieving a new all-time high of \$0.15 on November 20. While the crypto's price saw modest gains at the beginning of 2024, a subsequent return of bears led to a steady decline in the last two weeks. Despite facing selling pressure, Kaspa's unique approach to parallel blocks could contribute to its upward trajectory. Currently, the coin is trading within the range of \$0.11 to \$0.12. Analysts foresee the potential for Kaspa to advance to a high of \$0.2 by the end of the year 2024.

- DePINs redefine networks with decentralization, crypto incentives, and trustless data exchange. - It offer diverse applications, from decentralized WiFi to healthcare, transforming industries. In the ever-evolving landscape of Web3, the DePIN, or Decentralized Physical Infrastructure Network, has emerged as a game-changer, offering decentralization, user ownership, and data sovereignty to various industries. As traditional crypto exchanges faced great challenges last year, the spotlight shifted to DePINs, holding the potential to rebuild public trust in blockchain technology. In this article, we'll delve into the DePIN concept and explore five top projects implementing this innovative model. What is DePIN? Understanding the Decentralized Physical Infrastructure Network The DePIN, or Decentralized Physical Infrastructure Network, represents a paradigm shift in how network services are provided. It operates on the principles of decentralization, eliminating server-based architectures and introducing crypto incentives for deployers. DePINs consist of geographically dispersed physical nodes that collectively verify and transfer data using consensus algorithms, enabling trustless, intermediary-free data exchange. Unlike traditional server-based models, DePINs use a distributed setup that enhances network reliability and security. The nodes in DePINs implement self-executing smart contracts, automating network protocols without the need for a central intermediary. The data transmitted over DePINs is not handled by a central server but is instead stored and verified in a distributed and automated way. Here are some of the top five trending DePIN projects currently in the market. MetaBlox MetaBlox is at the forefront of the design revolution, providing free and secure WiFi roaming services globally. Users deploying MetaBlox routers as nodes in the DePIN not only establish strong WiFi connections but also earn future MBX tokens as rewards. The more connections a router facilitates, the more tokens the host earns, creating a decentralized WiFi ecosystem. Hivemapper Hivemapper transforms dash cams into a dynamic world-mapping DePIN, rewarding users with HONEY tokens. By installing compatible cameras and connecting to the Phantom app, drivers earn tokens as their cameras upload visual data to the Solana blockchain. The collective data creates an interactive map, and users can also contribute by evaluating and annotating the data. PlanetWatch PlanetWatch is a decentralized network of sensors that can be deployed in various locations to monitor and upload local environmental data. With over 40,000 active sensors deployed, PlanetWatch's DePIN approach not only benefits individuals. But also contributes valuable air quality data for scientific analysis. GhostDrive & Filecoin GhostDrive has harnessed the power of the Filecoin DePIN to create a user-friendly storage platform. Computer owners can rent out disk space for cryptocurrency rewards in FIL tokens. Leveraging the InterPlanetary File System (IPFS), Filecoin ensures decentralized storage without relying on central servers. Moreover, GhostDrive offers a cost-effective alternative to traditional storage solutions. HealthBlocks In its Beta stage, HealthBlocks is pioneering the integration of DePINs into the medical realm. Users earn HEALTH tokens for making healthy decisions and sharing biometric data, all verified and stored on the IoTeX blockchain. With a focus on user goals and diverse health data, HealthBlocks aims to revolutionize healthcare by providing crypto rewards for proactive well-being. Conclusion These five DePIN projects showcase the versatility and potential of Decentralized Physical Infrastructure Networks. From revolutionizing WiFi services to incentivizing air quality monitoring and healthcare data sharing, these projects offer unique opportunities for both users and providers.

The cryptocurrency market is a realm of constant speculation and excitement, driven by the potential for massive gains and groundbreaking innovations. One cryptocurrency that has captured the attention of investors and analysts alike is Polygon (MATIC), an Ethereum side chain and layer two scaling solution. MATIC has a significant following and has witnessed substantial growth over the past few years, but the burning question remains: Will Polygon reach \$1 in 2024? Before we delve into MATIC's potential price trajectory, let's take a closer look at its journey and history. The Rise of Polygon (MATIC) Polygon, originally launched in 2019 under the name Matic, began its journey with an initial coin offering (ICO) on the Binance exchange. At the time of the ICO, MATIC was priced at \$0.00263, and its initial launch price post-ICO stood at \$0.00448. For the first couple of years, MATIC traded relatively flat, hovering around a few cents. However, it wasn't until January 2021 that MATIC experienced a significant breakout, surging above \$0.1. The catalyst behind this surge was the increasing gas fees on the Ethereum network, coupled with the rising interest in layer two scaling solutions like Polygon. The newfound narrative around layer two scaling solutions brought MATIC into the spotlight. MATIC's price continued to soar, reaching an all-time high (ATH) of \$2.92 on December 27, 2021. This remarkable growth was part of a broader crypto bull market that saw numerous cryptocurrencies reach new heights. But as the saying goes, what goes up must come down. Following its ATH, MATIC, like many other cryptocurrencies, experienced a market correction. It dropped to lows of \$0.3466, down 77% from its peak. Over time, it managed to recover to around \$0.6452, but it remained significantly below its previous ATH. Recent events have also weighed on MATIC's price, including the U.S. Securities and Exchange Commission (SEC) lawsuit against Binance and Coinbase for selling unregistered securities. Unfortunately, MATIC was among the cryptocurrencies named as securities by the SEC. Additionally, Robinhood's decision to delist Polygon, along with Cardano and Solana, further added to the negative sentiment. Despite these challenges, MATIC's price prediction for 2024 remains a subject of great interest and debate. Polygon Price Prediction for 2024 As experts anticipate the next cryptocurrency bull market in 2024, there is a likelihood that Polygon will begin to experience an uptrend. However, regulatory concerns could potentially hinder its growth, much like what occurred with XRP during the previous bull run when it struggled to regain its ATH due to an SEC lawsuit. Nevertheless, MATIC holds a unique position as a utility token within the Polygon ecosystem. It is required to pay gas fees and access network services, distinguishing it from traditional securities. There is a chance that the SEC's allegations might prove to be incorrect, classifying MATIC as a currency or commodity rather than a security. One significant factor working in MATIC's favour is its extensive enterprise adoption. Among all Ethereum scaling solutions, Polygon boasts the highest level of enterprise integration. Major corporations like Starbucks, Nike, Reddit, and Facebook have chosen to build on the Polygon network, signalling their confidence in its future. These large enterprises seem less perturbed by regulatory uncertainties surrounding Polygon. Furthermore, the Polygon team has recently unveiled an AI tool, Polygon Copilot, powered by ChatGPT. This tool empowers developers to analyse data and gain insights into their Polygon decentralized applications (dApps). By streamlining development and enhancing the dApp user experience, Polygon aims to strengthen its position in the market. Taking all these factors into account, Polygon has room for substantial growth in 2024. Price predictions vary, with estimates ranging from highs of \$1.97 to lows of \$0.95, and an average price projection of \$1.46 by the end of the year. Now, let's shift our focus to Retik Finance (RETIK), the newcomer in the crypto space that experts believe has the potential to outpace MATIC's price performance. Retik Finance (RETIK): The Challenger While Polygon has established itself as a dominant player in the crypto world, Retik Finance, often referred to as RETIK, is an emerging contender that seeks to disrupt the DeFi landscape. RETIK is currently priced at just \$0.08, which positions it as an attractive option for investors looking for substantial gains. Retik Finance's Ecosystem and Potential RETIK's ecosystem is built on innovation and practicality. It introduces groundbreaking DeFi solutions that include DeFi debit cards, a smart crypto payment gateway, AI-powered peer-to-peer lending, and a multi-chain non-custodial highly secured DeFi wallet. These features demonstrate RETIK's commitment to pushing the boundaries of what DeFi can offer. One of RETIK's primary goals is to bridge the gap between traditional finance and DeFi. By providing users with practical tools and services that facilitate the integration of cryptocurrency into everyday financial transactions, RETIK aims to democratize finance. The Presale Momentum RETIK's presale stages have been nothing short of remarkable. The project has attracted significant attention and investor confidence during these phases. The speed at which RETIK has progressed through its presale stages underscores the substantial interest in the project and its potential to compete with established players like MATIC. A Glimpse into the Future As RETIK approaches its official launch in Q3 2024 on two major exchanges, it stands as a compelling alternative for investors seeking significant gains. While MATIC has solidified its position as an Ethereum scaling solution, RETIK's focus on real-world utility and innovation sets it apart. In conclusion, both Polygon (MATIC) and Retik Finance (RETIK) hold promise in the ever-evolving world of cryptocurrencies. As we approach 2024 and the anticipated next bull market, these projects will likely continue to shape the DeFi landscape. MATIC's enterprise adoption and technology advancements make it a formidable force, while RETIK's fresh approach and rapid presale success position it as a challenger worth watching. The future of DeFi is marked by innovation, competition, and growth, and both projects have a role to play in this dynamic ecosystem. In 2021, Shiba Inu, the cryptocurrency often hailed as the “Doge Killer,” gained immense popularity, capturing attention with its adorable dog-themed branding and rapid price surge. Fueled by viral memes and Elon Musk’s tweets, Shiba Inu created an illusion of quick wealth and limitless potential within the cryptocurrency realm. However, as the initial excitement settles and the year 2024 unfolds, astute investors are redirecting their focus toward alternatives that boast stronger foundations and practical utility. Enter six emerging stars in the crypto space: RETIK Finance (RETIK), Bonk (BONK), Polygon (MATIC), Arbitrum (ARB), NEAR Protocol (NEAR), and Uniswap (UNI). Positioned as contenders set to overshadow Shiba Inu in the upcoming year, these cryptocurrencies are gaining traction for reasons beyond mere hype. Investors are drawn to their robust foundations and tangible use cases, signalling a shift towards more sustainable and purpose-driven investments in the dynamic world of cryptocurrencies. Top 6 Altcoins To Do Better Than Shiba Inu 2024 - Retik Finance (RETIK): World’s Leading Utility Token Ready to Outperform Shiba Inu in 2024 - Bonk (BONK): The Solana Community’s Rising Star - Polygon (MATIC): A Practical and Functional Alternative to Meme Coins - Arbitrum (ARB): A Solution to Ethereum’s Scalability Challenges - NEAR Protocol (NEAR): A User-Friendly Blockchain Platform - Uniswap (UNI): Transforming Users into Active Participants in DeFi Ecosystem Retik Finance (RETIK): World’s Leading Utility Token Ready to Outperform Shiba Inu in 2024 Retik Finance (RETIK) emerges as the all-encompassing force in the decentralized finance (DeFi) realm, currently at its presale stage. Unlike the speculative fervor surrounding meme coins, Retik Finance goes beyond being a mere token; it constitutes the core of a user-friendly DeFi ecosystem that seeks to demystify and simplify blockchain for everyone. Envision a seamless experience where your secure wallet seamlessly integrates with various DeFi protocols, supported by a sleek Retik Debit Card facilitating effortless cryptocurrency spending, all powered by the \$RETIK token. What might sound like a futuristic vision is becoming a reality with Retik Finance. In the ongoing presale, Retik Finance has not only attracted substantial attention but has also successfully raised nearly \$8 million in less than a month, showcasing a remarkable vote of confidence from investors. However, it’s not just the impressive fundraising that distinguishes Retik; the platform introduces innovative features such as the Retik Pay gateway and native DeFi integrations. These features are strategically designed to bridge the gap between conventional finance and the crypto sphere, making the entire experience accessible to a broader audience. Fueled by a dedicated team and a roadmap prioritizing real-world adoption, Retik Finance stands as a formidable presence, poised to reshape the narrative of DeFi. Bonk (BONK): The Solana Community’s Rising Star Bonk (BONK) is set to inject vibrancy into the Solana ecosystem, blending playful enthusiasm with ambitious goals. Unlike typical meme coins, Bonk’s dog-themed persona serves a purpose, aspiring to play a pivotal role in reinvigorating Solana by prioritizing community engagement and utility. Originating from lighthearted banter in the Solana community, Bonk’s strategic airdrop of 50% of its supply directly to users aims to foster ownership and encourage active participation, exemplifying its community-first approach. Actively pursuing partnerships with reputable dApps and DeFi protocols, Bonk transcends the dog park, aiming to seamlessly integrate into Solana’s financial fabric. Polygon (MATIC): A Practical and Functional Alternative to Meme Coins Polygon (MATIC) stands out as a beacon of practicality and functionality amid the chaos of meme coins like Shiba Inu. Unlike its flashy counterparts, Polygon is a seasoned player addressing Ethereum’s scalability challenges. From the likes of Quickswap for decentralized exchanges to OpenSea for NFT marketplaces, Polygon is a hotbed of innovation and opportunity. At the core of this thriving ecosystem is MATIC, more than just a token; it serves as the lifeblood of Polygon. Holding MATIC is akin to having a passport to a flourishing digital nation, offering not only a means of transaction but also voting rights. This involvement empowers holders to actively shape the future of Polygon’s infrastructure and overall trajectory. Arbitrum (ARB): A Solution to Ethereum’s Scalability Challenges Arbitrum (ARB) emerges as the beacon of hope in addressing Ethereum’s scalability challenges, offering an optimistic roll-up solution that accelerates transactions while preserving security. Picture a parallel racetrack running alongside the bustling Ethereum highway, Arbitrum’s optimistic roll-ups act as this high-speed lane, significantly reducing transaction fees and liberating vital space on the mainnet. Holding the governance token, ARB empowers users to actively participate in decisions ranging from protocol upgrades to fee structures, thereby collectively shaping the future trajectory of Arbitrum. The power truly lies with the people in this decentralized ecosystem, solidifying Arbitrum’s position as a groundbreaking force poised to surpass Ethereum’s shadows. NEAR Protocol (NEAR): A User-Friendly Blockchain Platform NEAR Protocol (NEAR) is more than just another blockchain; it’s a groundbreaking reimaging of decentralized technology interaction. With a focus on human-friendliness, NEAR introduces easily memorable account names, simplifying the user experience and welcoming newcomers to blockchain technology. Beyond its user-friendly interface, NEAR empowers developers with innovative features such as supporting intuitive languages like Rust and AssemblyScript, fostering a diverse ecosystem of decentralized applications. Addressing scalability concerns, NEAR employs sharding technology, network security, and a superhighway of near-zero-cost transactions. The combination of the blockchain consensus mechanism, sharding technology, network security, and a superhighway of near-zero-cost transactions sets NEAR apart as a platform; it’s a community-driven ecosystem, with the NEAR Collective actively shaping its evolution. >>> Click Here To Buy RETIK Tokens <<< Uniswap (UNI): Transforming Users into Active Participants in DeFi Ecosystem Uniswap (UNI) stands out as a game-changer in the cryptocurrency trading arena, revolutionizing the landscape with its decentralized approach to finance. Unlike traditional exchanges burdened with high fees and complex order books, Uniswap embraces decentralized finance (DeFi), empowering users to seize control of their assets and unlock a realm of exciting possibilities. At the core of Uniswap is its ingenious automated market maker (AMM) system, a departure from the conventional reliance on order books. Instead, Uniswap utilizes liquidity pools and collections of tokens contributed by users. This innovative approach eliminates the need for intermediaries, enables seamless token swaps with minimal slippage, and ensures price consistency during trades. Beyond facilitating simple swaps, Uniswap transforms users into active participants in the DeFi ecosystem. By becoming liquidity providers and depositing tokens into these pools, users earn fees each time trades occur, allowing for passive rewards in the dynamic world of decentralized exchanges. Closing Thoughts Among the top contenders to outperform Shiba Inu (SHIB) in 2024, Retik Finance (RETIK) emerges as the standout choice. At its presale stage, Retik Finance transcends the speculative fervor surrounding meme coins, presenting itself as the decentralized finance (DeFi) realm’s all-in-one powerhouse. Retik Finance not only showcases impressive fundraising, with nearly \$8 million raised in less than a month, but it also introduces innovative features such as the Retik Pay gateway and native DeFi integrations. Positioned as the core of a user-friendly DeFi ecosystem, Retik Finance seeks to demystify and simplify blockchain, making it accessible to a broader audience. As the global reach and impact of open money continues to gain pace “the number of on-chain wallets now holding at least \$10 in USDC grew nearly 60% in the last year “ 2024 marks a moment of critical inflection for the internet financial system DAVOS, Switzerland & BOSTON “(BUSINESS WIRE) “Circle, a global financial technology firm and the issuer of the leading regulated stablecoin, USDC, is proud to unveil its second annual State of the USDC Economy Report, entitled “Welcome to the Era of Open Money.” The State of the USDC Economy Report serves as a comprehensive overview of the dynamic landscape surrounding the company’s digital dollar “ including adoption trends and the global regulatory context for payment stablecoins. The report provides an in-depth analysis of the burgeoning internet financial system, with a focus on the concept of open money and the increasing significance of programmable payments. The “era of open money” signals a profound paradigm shift for global finance, in which financial value flows as seamlessly, cost-effectively, and instantaneously as other forms of data on the internet. Fast Facts | USDC: The Dollar’s New Form Factor - The number of USDC wallets with a balance of at least \$10 has grown 59% in the past year alone to a total of about 2.7 million. - Since its introduction in 2018, USDC has been used to settle over \$12 trillion in blockchain transactions. - Circle facilitated more than \$197 billion of transfers between the banking system and blockchain networks through minting and redeeming in 2023. - USDC facilitated 595 million transactions from January through the end of November 2023. - Circle’s Cross-Chain Transfer Protocol (CCTP), which helps reduce friction, increase safety and security, and reduce costs when sending USDC from one blockchain to another, has facilitated 66,500 transactions since release in April 2023. - USDC’s open technology is currently available on 15 different blockchains. - USDC not only settles faster than traditional forms of payments, but it is also cheaper. Even on Ethereum, which is recognized for occasionally high gas fees, the average cost per transaction with USDC was less than 1% of the transaction in 2023. On other blockchain networks, such as Solana, it was less than a tenth of a percent. “This year’s report sheds light on the transformative power of USDC in enhancing financial inclusion and access, as well as our efforts to build the most widely used open money network in the world,” said Jeremy Allaire, Co-founder and CEO of Circle. “Meanwhile we are still in the early stages of this mission, this year’s State of the USDC Economy Report details a set of unequivocal indicators for growing momentum. As regulatory clarity for stablecoins continues to emerge across every major financial market center, and as mainstream financial institutions, fintechs, internet firms and enterprises begin adopting this technology, USDC is poised to play a central role in the new internet financial system. A Dollar API for Internet Finance Featuring case studies with some of the world’s most prominent financial service providers and technology leaders, including Visa, MoneyGram, Grab, Nubank, Stripe, Worldpay from FIS, and others, this year’s edition of the report presents compelling insights into the pivotal role of USDC in streamlining global finance. The report also highlights how USDC is disrupting remittances, cross-border payments, aid disbursement and charitable giving, as well as how it is providing a stable store of value to mitigate the adverse effects of high inflation. “For over five years, USDC has been at the forefront of driving world-scale open payments to lower the bottom rung of economic mobility. Together with forward-looking regulators and global partners, we are paving the way towards a more equitable, inclusive, and promising future,” said Dante Disparte, Circle’s Chief Strategy Officer and Head of Global Policy. This year’s report is viewable for public access via a dynamic landing page interface, and also downloadable in PDF format. ## About Circle Circle is a global financial technology firm that enables businesses of all sizes to harness the power of digital currencies and public blockchains for payments, commerce and financial applications worldwide. Circle is the issuer of USDC and EURC “ highly liquid, interoperable, and trusted money protocols on the internet. Circle’s open and programmable platform and APIs make it easy for organizations to run their internet-scale business, whether it is making international payments, building globally accessible Web3 apps or managing their internal treasury. TORONTO, “(BUSINESS WIRE) “Tokens.com Corp. (CBOE Exchange Canada: COIN)(Frankfurt Stock Exchange: 76M) (OTCQB US: SMURF) (“Tokens.com” or the “Company”), a web3 technology company that owns an inventory of cryptocurrencies, is pleased to share an update of its cryptocurrency holdings. Crypto currency values have seen a steady increase in value since January 1, 2024. The table below shows our key crypto token holdings and corresponding value as of January 15, 2024 based on 1 Eth \$2543.75, 1 Dot \$7.59, 1 SOL \$95.32. | Crypto | Quantity | Value (\$USD) | Value (\$CAD) | | Eth | 3,148 | \$8,007,725 | \$10,722,344 | | Dot | 227,157 | \$1,724,122 | \$2,308,599 | | Solana | 18,055 | \$1,721,003 | \$2,304,423 | | Total | | \$11,452,850 | \$15,335,366 | \*340 Ethereum are held at Genesis Global Trading which is undergoing a restructuring process that may result in some of the tokens not being returned at full value. \*\*18,001 Solana are held at Genesis Global Trading which is undergoing a restructuring process that may result in some of the tokens not being returned at full value. In addition to the table above, Tokens.com is supported by a current cash position of approximately US\$3.05 million (Cdn\$4.1 million) in cash and cash equivalents. Management also notes, this does not include the value of the Company’s digital land assets. Other Updates: On November 8th, the Company announced that it has commenced a strategic review that could result in a full or partial sale of the business divisions or IP within those divisions. The Company is also exploring sale of its domain names and has retained a broker to accomplish that task. An independent committee of the board has been established to review potential transactions. Neither the Board nor the Committee have set a timetable to complete the strategic review process nor have any final decisions been made relating to strategic alternatives at this time. To date, management has been involved in several conversations with third parties to enhance shareholder value, although, at this time the Company does not have an update. The Company also anticipates releasing its 2023 year-end audited financial statements before the end of January. About Tokens.com Tokens.com is a technology company that builds products and services that connects brands to consumers in 3D internet environments, including popular gaming and metaverse platforms. The Company also earns revenues through staking an inventory of owned cryptocurrencies. Our solutions give our clients a more engaging way to connect with their existing clients, and access to a new generation of consumers who spend time on platforms such as Roblox and Fortnite. Tokens.com also manages an inventory of valuable cryptocurrency, digital real estate, and a collection of top ranked crypto related domain names. Visit Tokens.com to learn more. VICTORIA, Seychelles—(BUSINESS WIRE)—“In a landmark collaboration, KuCoin Labs has joined forces with ETGM, a revolutionary digital currency project designed to open new frontiers in blockchain technology. ETGM combines the warmth of a community with the mystery of outer space, aiming to create a digital ecosystem that is both friendly and filled with a spirit of exploration. ETGM has developed a multi-chain inscription bot on Telegram, aimed at providing users with a multifunctional platform that enables inscriptions and aggregated transactions on major blockchains including Bitcoin (BTC), Ethereum (ETH), Polygon (MATIC), Solana (SOL), and Cosmos (ATOM). This bot is intended to be a one-stop solution for easy access and management of assets across various blockchain platforms. ETGM believes in the power of community. ETGM actively promotes interaction and collaboration among community members through various interactive activities and reward mechanisms. Lou Yu, head of KuCoin Labs, expressed excitement about the partnership, stating, “The strategic partnership between KuCoin Labs and ETGM aligns with our commitment to supporting innovative blockchain projects. ETGM’s vision and technology have the potential to transform the way we interact with blockchain tools, and we’re thrilled to be part of this journey.” With the increasing popularity of inscriptions, the BTC ecosystem has seen an impressive performance with various native new protocols emerging one after another. KuCoin Lab’s strategic partnership with ETGM underscores its commitment to fostering innovation in the crypto industry. This collaboration is expected to drive advancements in the BTC ecosystem, enhancing user experience and broadening access to blockchain technologies. ABOUT KUCOIN Launched in September 2017, KuCoin is a global cryptocurrency exchange with its operational headquarters in Seychelles. As a user-oriented platform with a focus on inclusiveness and community action reach, it offers over 800 digital assets and currently provides spot trading, margin trading, P2P fiat trading, futures trading, staking, and lending to its 30 million users in more than 200 countries and regions. KuCoin is currently one of the top 5 crypto exchanges according to CoinMarketCap. In 2023, KuCoin was named one of the Best Crypto Exchanges By Forbes and recognized as a highly commended global exchange in Findex’s 2023 Global Cryptocurrency Trading Platform Awards. Learn more at <https://www.kucoin.com/> ABOUT KUCOIN LABS Since its launch in May 2018, the KuCoin investment and incubation program has brought together a group of crypto experts for in-depth market research, analysis, investment, and incubation in the crypto industry. KuCoin Labs has diversified investments into early-stage projects to help project owners achieve sustainable growth and success in the decentralized world. ABOUT ETGM ETGM is an evolutionary inscriptional bot which combines the warmth of a community with the mystery of outer space, aiming to create a digital ecosystem that is both friendly and filled with a spirit of exploration. - CEO Devin Finzer has said that this update is an effort to improve the user experience. - An adaptable marketplace interface to different use cases is what OpenSea is eyeing. A major NFT marketplace, OpenSea, is working on an update to its platform called OpenSea 2.0. In light of the fact that NFT categories are always evolving in response to new use cases, CEO Devin Finzer has said that this update is an effort to improve the user experience and set them apart. So far, OpenSea and similar platforms treat all NFTs the same way, whether they’re for games or events. A more adaptable marketplace interface to different use cases is what Finzer is really hoping to achieve. Revamped Interface The improvement is being worked on by OpenSea and will include the ability to organize ticket NFTs by date and show them on a calendar. This will allow for a more personalized experience. As rival professional trading platforms such as Blur and Tensor continue to gain traction, OpenSea has decided to update its own pro trading platform in an effort to attract more users. Thanks to the revamped interface, users will have no trouble moving between the collection view and the advanced view. Furthermore, in response to widespread security concerns, OpenSea has enhanced its ability to identify fraudulent NFT collections and malicious URLs. Despite Finzer’s silence on the subject of NFT creators’ required royalties being terminated, he failed to reveal if OpenSea intends to reinstate such a scheme at a later date. In terms of new developments, Finzer pointed out that NFTs are becoming more popular on the Solana blockchain and that Ordinals, which are similar to NFTs but on the Bitcoin blockchain, are becoming more popular. Regardless of these tendencies, he is still bullish about Ethereum’s prospects as the NFT blockchain of choice, thanks to the layer-2 chains that allow for faster and cheaper transactions.

Prior to the introduction of their L1 MNet Continuum, BitCountry, the Polkadot parachain project for building immersive metaverse communities, has announced the beginning of InnoVoy Event, a ground-breaking campaign intended to transform the web3 identity space. An opportunity to experience BitAvatar, a Universal Avatar identity with NFT-bound wallet, also known as Backpack wallet, firsthand is extended to Polkadot community members. BitAvatar, the MNet Innovation Hub’s first project, is the ultimate avatar customization technology, revolutionizing advanced user experiences and web3 project access. Justin Pham, Co-founder and CEO of BitCountry stated: “We are thrilled to introduce BitAvatar to the Polkadot community through the InnoVoy Event. BitAvatar is more than just an avatar, it’s a new way for users to express themselves and manage their profile in the web3 space. We believe that this technology will pave the way for more personalized experiences, partner project engagement and beyond.” The team has put together the InnoVoy Event in order to prepare for the official launch of MNet Continuum, a scalable EVM and WASM L1 network which includes BitCountry, BitAvatar, BitMeet, Social Pool Protocol, ESE SDK, and Developer Portal as part of its enhanced social layer. The campaign represents a critical turning point in the development of user engagement and digital ID within Polkadot and the larger blockchain space. The first 1,000 users will have the unique chance to free-mint their BitAvatar ID without requiring an Invite Code. Early adopters now have the opportunity to lead the BitAvatar revolution. Once the first 1,000 avatars have been created, additional users may sign up by utilizing an Invite Code that early adopters have provided. As a reward for their involvement in the ecosystem, stakers of DOT tokens will also have the chance to accrue additional XP. In addition, customers could get special NFT wearables based on the quantity of tokens staked. Being a preferred user for MNet’s current and future ecosystem initiatives is a perk of owning a BitAvatar. Moreover, BitAvatar has been developed to help people manage their digital assets and reputation across several virtual identities. A profile picture may be uploaded by users to symbolize their identity after mining, and they can customize their avatars using an experimental AI tool.

As Ethereum continues to dominate, several competing blockchains are emerging as potential alternatives that could shake up market share in 2024. Leading the pack of “Ethereum killers” is Retik Finance, an innovative decentralized finance (DeFi) platform surging with bullish momentum. While Solana and Cardano have garnered attention as well-positioned rivals, Retik brings next-level utility to conquer adoption hurdles. With core offerings like AI lending protocols, multi-chain wallets, and a next-gen payment gateway, Retik unlocks tangible value for the entire blockchain ecosystem. Solana and Cardano also flaunt their competitive advantages in the ongoing battle for crypto supremacy. But market dynamics continue to shift toward the advanced, real-world solutions that Retik specializes in. Retik Finance: A Pioneer in Crypto-Fiat Integration Retik Finance is a groundbreaking DeFi platform that’s revolutionizing global transactions. Retik Finance is distinguished by its DeFi Debit Cards, which serve as a link between the worlds of traditional finance and cryptocurrencies. Using these cards, users may spend their cryptocurrency holdings on real-world purchases without hurdles. Retik Finance introduces a tiered DeFi Debit Card system offering cashback rewards of up to 5% on transactions. Retik’s DeFi Debit Cards are unique in that they include cash back incentives with RETIK tokens, giving customers extra advantages with each purchase. Solana and Cardano concentrate on blockchain architecture, while Retik’s strategy makes cryptocurrency spending more appealing and is, hence, a more appealing option for customers. The dynamic ERC20 token, RETIK, powers this ecosystem. Retik Finance is currently in Presale Stage 5, with each RETIK valued at \$0.070. Its user-centric design and robust \$7 million presale funding make Retik a prime candidate to gain significant market share against Ethereum in 2024. Experts predict a robust growth trajectory for Retik Finance, with the token’s value anticipated to soar to an impressive \$10 by the end of 2024. Solana: The Ethereum Killer Solana, often dubbed the “Ethereum Killer,” has made headlines with predictions of a possible 50x surge in 2024. Despite a volatile start to the year, Solana showed a positive trend at the end of 2023, fueling speculations of an impending rally. What’s driving Solana’s growth is the expanding decentralized financial industry. With its scalable and effective blockchain, Solana stands out as DeFi continues to reshape old financial paradigms, drawing in projects and consumers looking for quick and affordable transactions. One of the main factors behind Solana’s recent price spike is the increasing DeFi activity on the cryptocurrency. The initial weeks of 2024 have seen Solana experiencing a decline of over 6%, bringing its market ranking to the fifth position. After a 700% surge in 2023, Solana witnessed a cool-off, fluctuating around the \$100 mark. It’s market capitalization, while impressive, is still 63% below its peak in November 2021. Cardano: A Steady Performer in the Crypto World Cardano, another significant player in the crypto world, has seen its fair share of ups and downs. Recently, Cardano’s price experienced a decline to around \$0.5716, marking a decrease of 1.24% over 24 hours. However, this downturn follows a year of strong performance, with Cardano surging over 80%. Ranked No. 8 in the crypto ecosystem, Cardano’s circulating supply is 35,378,565,284 ADA, with a market cap of \$17,957,163,175.54. The past week saw Cardano’s upward trend, increasing by 25.7%. This growth suggests strong potential, making it a lucrative investment opportunity. Over the past month, Cardano’s price has increased by 16.74%, signaling that the coin could become a solid asset if this growth trend continues. Final Thoughts Projects like Retik Finance stand out for driving innovation and real-world adoption in an ever-evolving crypto landscape. With its focus on convenience and accessibility, Retik brings advanced blockchain technologies into the hands of everyday users in a practical way. Its impressive presale fundraising confirms investor optimism, while projections point toward exponential growth as Retik cements its status as a true pioneer in crypto integration. Ultimately, solving problems and adding value for users are what set transcendent crypto projects apart. Retik Finance checks all the boxes to thrive on these fundamentals. Click Here To Take Part In Retik Finance Presale Visit the links below for more information about Retik Finance (RETIK): Website: <https://retik.com> Whitepaper: <https://retik.com/retik-whitepaper.pdf> Linktree: <https://linktr.ee/retikfinance>

- Ethereum (ETH) experienced a 20% surge this week, reaching a 620-day high. - The crypto community is uncertain about whether ETH can sustain this momentum to reach \$3,000 or if a market correction is imminent. - Solana’s 2023 appreciation is highlighted, attributed to its significant fall the previous year—nearly 97% compared to Ethereum’s 77%. Ethereum (ETH) has experienced a remarkable 20% surge this week, reaching a staggering 620-day high. As the crypto community watches this upward movement with bated breath, the looming question is whether ETH can maintain this momentum and potentially hit the coveted \$3,000 mark or if a market correction is imminent. Reasons Behind Ethereum’s Performance Relative to Solana In a conversation by BeInCrypto with Slater Heil, CEO at Composable Corp. and leader at Blueberry Protocol, insights into ETH’s perceived underperformance compared to Solana were discussed. One key factor highlighted was Solana’s appreciation in 2023, attributed to its substantial fall the previous year—nearly 97% compared to Ethereum’s 77%. Analyzing Fibonacci retracement levels, both Solana and Ethereum have retraced similarly, nearing their 0.382 Fib retracement resistance levels. Mr. Heil suggests that in cryptocurrency markets, the price often shapes the narrative, leading to the current belief that Solana has surpassed Ethereum. Noteworthy is the outperformance of Ethereum by its betas, such as Lido DAO (LDO), Arbitrum (ARB), and Optimism (OP). This divergence may be attributed to the perpetual quest for new opportunities among investors and speculators. Ethereum vs. Solana: A Narrative Shift on the Horizon? Mr. Heil emphasizes the prevailing narrative around Ethereum, highlighting concerns about high transaction fees and a user experience seemingly tailored for large investors. However, he underscores Ethereum’s deliberate prioritization of long-term security and scalability, attracting investors who value security over immediate low-cost transactions. Anticipating a narrative shift, Mr. Heil predicts that once the Bitcoin ETF fervor subsides, Ethereum will take center stage. Strong indications were observed in the ETH/BTC pair, showcasing signs of a bottom amid the fake ETF approval tweet. Technical analysis from the weekly timeframe reveals Ethereum’s gradual trajectory since May 2022. Breaking the critical \$2,410 resistance area and an ascending resistance trend line after four unsuccessful attempts, ETH surged to \$2,689 this week. The weekly Relative Strength Index (RSI) supports this increase, entering overbought territory and

indicating bullish momentum. If the rally continues, the next resistance lies between \$3,340 and \$3,500, presenting a 35% increase from the current price.

Victoria, Seychelles, January 12th, 2024, Chainwire As a world-leading Web3 trading wallet, Bitget Wallet (formerly BitKeep Wallet) has recently added support for tokens on the Avalanche chain on Bitget Swap, the wallet's integrated swap feature. Following this integration, users will be able to view real-time candlestick chart data as well as detailed on-chain transaction information on both their mobile and browser extension wallets. Users will be able to view important metrics such as transaction records, as well as capital and liquidity flow. Further, users can also view leaderboards for tokens on the Avalanche blockchain, gleaming comprehensive insights on the chain's market performance. Bitget Wallet has aggregated over 10 leading trading protocols on Avalanche, including Trader Joe, SushiSwap V2, and 1inch. By building cross-chain bridges and integrating protocols like SWFT and Bungee, it supports same-chain and cross-chain transactions for Avalanche mainnet tokens, offering users a fast, convenient, and gas-free on-chain trading experience. Bitget swap currently supports around 30 blockchains and integrates hundreds of popular DEXs and cross-chain bridges. Having pioneered useful trading features such as gas-free transactions and automatic slippage adjustment, users can expect to easily trade any assets on any blockchain and enjoy a hassle-free trading experience. Always at the forefront of industry innovation, Bitget Wallet was the first to introduce on-chain market data functionality. Based on full-chain DEX trading data, it provides candlestick market data and continuously optimizes its technology to enhance the overall user experience. The current intelligent market data feature includes full-chain market overview, allowing users to overview the macro dynamics of the market and hot sectors; a multi-dimensional market rankings, offering data on hot, new, and potential tokens across the chain, as well as price fluctuation and trading lists. It also boasts a new "Smart Money" feature which identifies and tracks thousands of historically high-performing "Smart Money" addresses, revealing the trading directions of professional investors and whales. These features enable users to discover new assets and capture trading opportunities in the crypto market earlier, leveraging battle-tested trading strategies to make well-informed trading decisions. About Bitget Wallet (Web3 Trading Wallet) Bitget Wallet, formerly known as Bitkeep, stands as Asia's largest and global frontrunner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, and more. With a 5-year legacy, Bitget Wallet has garnered acclaim from over 15 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. In March 2023, Bitget, a leading crypto derivatives trading platform made a substantial \$30 million investment in BitKeep, acquiring a controlling stake. Following this strategic move, BitKeep underwent a transformative and strategic brand evolution in August, officially rebranding itself as Bitget Wallet. - The recent spot Bitcoin ETF approval will provide a new avenue for public investment. - Attention is now turning to potential outperformers relative to Bitcoin in 2024. Bitcoin's remarkable surge over the past year, despite facing negative headlines, legal challenges, and regulatory scrutiny, has been further fueled by a significant development in the market. Additionally, the Securities and Exchange Commission's (SEC) approval for 11 Bitcoin Exchange-Traded Funds (ETFs), marks a major milestone for the cryptocurrency market. These investment funds will track Bitcoin prices, providing a new avenue for public investment in the digital asset. As the crypto market gains positive momentum, attention is turning to potential outperformers relative to Bitcoin in 2024. Here are the top five cryptocurrencies that analysts believe have the potential for superior performance. Ethereum (ETH) - 24-H Market Cap: \$312 Billion - 24-H Trading Volume: \$30 Billion Ethereum has demonstrated resilience and impressive gains. Following the approval of Bitcoin ETFs, Ethereum experienced a substantial surge, surpassing \$2,650. Analysts anticipate Ethereum to outperform Bitcoin in the first quarter of 2024, with the current price standing at \$2,646. Over the last 24 hours, ETH has witnessed a 12% increase, accompanied by a 53% rise in daily trading volume to \$30 billion. BNB (BNB) - 24-H Market Cap: \$47 Billion - 24-H Trading Volume: \$1 Billion Despite hurdles faced by the Binance exchange, its native cryptocurrency, BNB, has maintained stability at around \$316. While a meaningful recovery is yet to materialize, analysts suggest that a sustained price above \$310 could signal a slowdown in selling pressure. BNB's daily trading volume has soared by 25% in the last 24 hours, reaching \$1 billion. Solana (SOL) - 24-H Market Cap: \$42 Billion - 24-H Trading Volume: \$5 Billion Solana emerged as one of the best-performing cryptocurrencies in 2023, witnessing a remarkable 666% increase in value. The release of several new memecoins on the Solana blockchain has contributed to its ecosystem's growth. The demand for Solana memecoins, driven by the success of projects like BONK, has reached an all-time high. Solana is currently priced at \$106, exhibiting a 51.45% increase in value over the past month, with a daily trading volume of \$5 billion making it the 6th most traded cryptocurrency globally. XRP (XRP) - 24-H Market Cap: \$32 Billion - 24-H Trading Volume: \$2.6 Billion Ripple's XRP has been gaining attention since July 2023, particularly after a partial victory against the SEC. Recent bullish momentum and signs of a strong comeback are attracting traders. XRP, currently priced at \$0.6158, has seen a 10% increase in the last 24 hours, with daily trading volume surging over 48% to \$2.6 billion. Cardano (ADA) - 24-H Market Cap: \$20.6 Billion - 24-H Trading Volume: \$1.3 Billion Cardano (ADA) is making a strong comeback in the crypto market. CoinShares' latest digital asset fund flow report indicates a total market inflow of \$151 million in the first week of 2024. This surge is attributed to the bullish sentiment around spot Bitcoin ETFs, awaiting regulatory approval. ADA is currently trading at \$0.6007, marking an impressive 23% surge in the last 24 hours. Notably, the daily trading volume for ADA has surged by over 108% in the same period, reaching \$1.3 billion. Investors are closely eyeing Cardano's resurgence as it joins the ranks of cryptocurrencies with the potential for a robust performance in 2024.

ISTANBUL (BUSINESS WIRE) - Bitci, a leading cryptocurrency exchange in Turkey, and XDEFI, the pioneering multichain cryptocurrency wallet, today announced a partnership that will empower Bitci users to seamlessly navigate DeFi and Web3 applications. The partnership will enable Bitci users to access decentralised applications across more than 200 blockchains via the XDEFI Wallet, swap tokens across different networks, transfer funds between exchanges and wallets, and securely store Bitcoins on BitciChain. For a limited period, all Bitci users that install the XDEFI Wallet via the integration will receive an airdrop in XDEFI tokens. Emile Dubi, CEO of XDEFI, said: "We are proud to partner with Bitci to bring the XDEFI wallet and exchange systems to their global user base. This partnership will enable Bitci users to securely access decentralised applications across every major blockchain. As demand for streamlined, secure access to Web3 and DeFi continues to increase, we are excited about building out our offering and partnerships in the months and years to come." Ahmet Onur Yegor, CEO of Bitci, commented: "Our team at Bitci is always striving to provide the best experience for our users. A growing number of on-chain transactions are being made by users and we are proud to partner with XDEFI to bring the full potential of DeFi and Web3 to our community." About Bitci Bitci, which has been operating in the field of buying-selling, transfer and storage of cryptocurrencies since 2018, is Turkey's third largest cryptocurrency exchange according to CoinGecko data. Bitci, one of Turkey's fastest developing digital asset platforms, increased its market share from 0.9% in 2022 to 12% in 2023, and is integrated into Turkey's stock exchange. With BitciChain, the first blockchain network in Turkey, it enables companies and institutions to adopt blockchain. Bitci is spurring the development of cryptocurrency markets with products such as BitciCoin and Global Fan Token. About XDEFI XDEFI is a pioneering multichain cryptocurrency wallet with 200,000+ active users. XDEFI users have access to every application, asset, and NFT across major blockchain ecosystems such as Ethereum, Bitcoin, THORChain, Cosmos, Solana, and NEAR. In the 90 days through December 15, 2023, \$182 million in swap volume was processed in XDEFI swaps. Contacts Kevin Beardsley, COO, XDEFI info@xdefi.io

VICTORIA, Seychelles (BUSINESS WIRE) - KuCoin Research, the dedicated research arm of KuCoin, a top 5 global cryptocurrency exchange, has released its monthly report for January 2024, providing in-depth insights into the latest developments in the cryptocurrency market. The report offers a comprehensive analysis of macroeconomic factors, stablecoins, public chains, Layer2 trends, inscriptions, investment projects, and regulatory policies. The cryptocurrency market showcased an optimistic atmosphere around the end of 2023, fueled by factors such as the Federal Reserve's dovish turn, record highs in the US stock market, and increased positions in the Bitcoin options market. Net long positions of asset management institutions, and large holders remained high, indicating strong performance amid global macroeconomic changes. Stablecoin issuance continues to rise driven by the growing issuance of USDT, while USDC stabilizes. The Bitcoin and inscription ecosystems have risen unexpectedly, triggering a wealth effect from the BR20 tokens, which led to an influx of CEX, crypto veterans, and VCS into the inscription market. High-speed public chains like Solana and Avalanche exhibited a strong rebound, propelling uptrends in sectors such as MEME, DePIN, and GameFi, resulting in inscription markets across various ecosystems to flourish. Layer2 trends, particularly in ETH Layer2, show a rebound in Total Value Locked (TVL) after a slowdown. Projects like Metis and Manta set historical highs in TVL, benefiting from expectations surrounding the Cancun upgrade in Q1 2024. Overall, public chain ecosystems, including Solana, Avalanche, and Cardano, demonstrate impressive TVL growth. Despite the number of investment projects remaining high, seed rounds and strategic financing remained primary, with a notable increase in projects with financing exceeding \$10 million. In contrast to the November cryptocurrency investment and financing market, the proportion of projects with financing below 10 million tokens decreased from 85% to 68.25% and the proportion of projects with financing between \$10 million and \$100 million increased to 22.22%. Sectors like Infrastructure, NFT, and Gaming attract the most attention, establishing a tripartite dominance alongside the Ethereum Virtual Machine (EVM) ecosystem. These changes in the proportion of projects and financing amounts reflect the resurgence of investment and financing in the Web3 market as well as the potential shifts in investor behavior. The KuCoin Research January 2024 Monthly Report provides a thorough analysis of these key trends, offering valuable insights for investors, traders, and enthusiasts in the cryptocurrency space. For the full report, please visit KuCoin Blog. About KuCoin Launched in September 2017, KuCoin is a global cryptocurrency exchange with its operational headquarters in Seychelles. As a user-oriented platform with a focus on inclusiveness and community action reach, it offers over 800 digital assets and currently provides Spot trading, Margin trading, P2P Fiat trading, Futures trading, Staking, and Lending to its 30 million users in more than 200 countries and regions. KuCoin is currently one of the top 5 crypto exchanges according to CoinMarketCap. In 2023, KuCoin was named one of the Best Crypto Exchanges by Forbes and recognized as a highly commended global exchange in Finder's 2023 Global Cryptocurrency Trading Platform Awards. Cookie3, an attribution and user analytics platform for Web3 marketers, has collaborated with Chainwire, the industry's leading crypto PR distribution platform. Through the relationship, Chainwire's customers will get improved user and attribution data for their campaigns, while Cookie3 clients will have access to Chainwire's best-in-class PR capabilities. Web3 projects may choose the campaigns that provide the most performance by tracking the user journey from off-chain to on-chain thanks to Cookie3. Additionally, it makes it simple to create a customized campaign in under 60 seconds and use it to monitor important objectives like signing up for a whitelist, minting NFT, or buying a certain token. Projects are able to reward desirable results achieved by users and assign user behaviors as a consequence. In addition to supporting activities like page view, new user, completed registration, and website visit, this new project feature also enables Web3 marketers to track user behavior and determine how different users are engaging with their protocol. The code-free, completely automated solutions from Cookie3 provide 360° monitoring that takes into account every touchpoint along the user experience. Chainwire's PR syndication and news delivery network is used by hundreds of Web3 businesses, including exchanges, gaming studios, and PR firms. By integrating Chainwire, Cookie3 will be able to monitor all significant marketing metrics in addition to offering its customers automatic PR distribution and connecting it to ongoing marketing initiatives. Businesses may improve user experience and establish better funnels for their marketing efforts by using Cookie3's Web3 analytics services. This may result in a 20%+ increase in conversion rates and a 20% decrease in marketing expenses. Cookie3 may save teams hours in monthly analytics by precisely merging on- and off-chain events, allowing them to concentrate on their main business.

As the cryptocurrency market gears up for what many anticipate to be a substantial bull run in 2024, investors are eagerly eyeing tokens poised for exceptional performance. This article sheds light on six tokens, Retik Finance, Solana, Ripple, Cardano, Avalanche, and Dogecoin expected to perform best in the upcoming bull run, with a special emphasis on Retik Finance. Retik Finance (RETIK): Bridging the Gap Between Traditional and Digital Finance Retik Finance has emerged as a trailblazer in the decentralised finance (DeFi) space, introducing innovative solutions that seamlessly merge traditional financial concepts with the power of blockchain technology. One of Retik Finance's standout offerings is the Retik

DeFi Debit Cards, which empower users to spend their cryptocurrency holdings in real-world transactions. Key Features of Retik DeFi Debit Cards: - Spend Anywhere, Anytime: Users can utilise their cryptocurrency for everyday purchases, including online shopping, bill payments, and transactions at physical stores. - Cash Withdrawals: Access crypto funds in cash from ATMs worldwide, simplifying the process without the need for complex conversions. - Anonymity and Privacy: Unlike traditional financial systems, Retik DeFi Debit Cards do not require Know Your Customer (KYC) procedures, ensuring confidential and secure transactions. - Cashback Rewards in RETIK: Every transaction made with Retik DeFi Debit Cards earns users cashback in \$RETIK tokens, enhancing financial benefits with every purchase. - Seamlessly Integrated Wallet: The cards are linked to the Retik Wallet, providing a centralised platform to monitor transactions, track spending, and manage crypto holdings. - Empowering Financial Freedom: Retik DeFi Debit Cards serve as a gateway to financial autonomy, enabling users to use their crypto holdings in the real world. - Universal Acceptance: Through partnerships with Visa and Mastercard, Retik DeFi Debit Cards are accepted at millions of locations globally, ensuring unmatched accessibility. The RETIK token, currently in its presale stage, is expected to gain momentum as it approaches listing on exchanges in the third quarter of 2024. The presale success, raising over \$6.7 million after selling over 134 million RETIK tokens, underscores investor confidence in Retik Finance and its potential for growth in the upcoming Bull Run. As the cryptocurrency market enters the anticipated bull run, Retik Finance's innovative approach to merging traditional and digital finance positions it as a key player. The focus on user-friendly solutions, financial autonomy, and strategic partnerships sets Retik Finance apart, making RETIK a token with significant potential in the upcoming market surge. >>>> Click Here To Buy RETIK Tokens <<<< Solana (SOL): The Speed and Scalability Champion Solana has captured the crypto community's attention with its remarkable speed and scalability attributes, making it a prominent player in the blockchain space. With the capacity to handle a high volume of transactions per second at minimal fees, Solana stands out as a top choice for developers and users alike. Solana's Noteworthy Achievements: - NFT Sales Volume Surpassing Ethereum: Solana achieved a significant milestone by briefly surpassing Ethereum in NFT sales volumes, highlighting its potential to compete with established platforms. - Price Momentum and Golden Crossover: Solana's price has significantly surpassed both its 50-day and 200-day exponential moving averages, signalling a reinforced bullish trend in the foreseeable future. - Potential Price Surge: Trading below the recently established R1 level for January 2024, Solana anticipates a potential surge to \$140 upon a successful breakout beyond \$121. - Robust Support Levels: In potential downturns, the region between the psychologically significant \$100 level and the P level of the Fibonacci pivot point at \$95 is expected to provide robust support for Solana's price movement. As the crypto market enters the anticipated bull run, Solana's impressive performance and strategic positioning make it a token to watch in 2024. >>>> Click Here To Buy RETIK Tokens <<<< Ripple (XRP): Transforming Cross-Border Payments Ripple, with its digital asset XRP, has carved a niche for itself in facilitating efficient cross-border payments and enhancing liquidity within financial institutions. The Ripple Protocol Consensus Algorithm (RPCA) sets XRP apart by enabling swift transaction validation without extensive computational power. Key Points about XRP: - Regulatory Clarity: A significant development occurred on July 13, concluding a legal dispute with the United States Securities and Exchange Commission. The court ruled in favour of Ripple Labs, affirming that XRP is not a security. - Swift and Cost-Effective Transactions: XRP transactions are notably faster and more energy-efficient than other cryptocurrencies, making it an attractive choice for remittances and international money transfers. - Market Dynamics: Regulatory hurdles in specific jurisdictions have impacted XRP's market dynamics, but with the recent legal victory, XRP has witnessed a remarkable surge in price. As the regulatory landscape clears, XRP's focus on transforming traditional finance and its recent legal victory position it as a potential winner in the upcoming bull run. >>>> Click Here To Buy RETIK Tokens <<<< Cardano (ADA): Innovating with a Scientific Approach Cardano, renowned for its scientific methodology and commitment to security and scalability, is set to make waves in the upcoming bull run. The introduction of the Hydra Layer-2 solution marks a significant advancement, enhancing Cardano's scalability and throughput. Cardano's Strengths: - Scientific Approach: Cardano's approach to blockchain development is grounded in scientific research, contributing to its robust and secure platform. - Hydra Layer-2 Solution: The recent rollout of Hydra addresses scalability limitations, empowering Cardano to process a higher volume of transactions per second. - Bullish Recovery: ADA's bullish recovery in late 2023, breaching both the 50-day and 200-day exponential moving averages, indicates positive momentum. - Potential Targets: If key resistance levels are breached, ADA could target \$0.74 and eventually \$0.85, making it an intriguing prospect for investors. As Cardano continues to innovate and refine its ecosystem, ADA's potential for growth in the upcoming bull run stands out. >>>> Click Here To Buy RETIK Tokens <<<< Avalanche (AVAX): Resilience and Recovery Avalanche, with its AVAX token, has demonstrated resilience and recovery since mid-January 2023. Despite facing resistance around the \$21-22 range, Avalanche has overcome challenges and positioned itself for potential bullishness. Avalanche's Notable Points: - Range-Bound Movements: Avalanche experienced range-bound movements but doubled in price to touch \$48 before correcting slightly to \$41 as of writing this article. - Parallel with Cardano Price Action: Avalanche's price action closely mirrors that of Cardano, undergoing significant recovery between November and December 2023. - Immediate Target: AVAX is poised for a potential surge to \$48, with further targets at \$54.5 if key resistance levels are breached. - Support Levels: In potential downturns, support for AVAX price is expected around \$36, coinciding with the P level on the Fibonacci pivot points. Avalanche's resilience and recent price movements position it as a token with the potential for significant gains in the upcoming bull run. >>>> Click Here To Buy RETIK Tokens <<<< Dogecoin (DOGE): The MemeCoin with Momentum Dogecoin, initially conceived as a meme-based coin, has transformed into a favored digital asset with widespread acceptance. Its value stems from celebrity endorsements, social media attention, and a dedicated community. Dogecoin's Unique Characteristics: - Breakout from Descending Wedge Pattern: DOGE has demonstrated a notably bullish shift by breaking free from the descending wedge pattern, affirming an expected bullish trend. - Golden Crossover and Upward Momentum: The breakout is accompanied by a bullish golden crossover between the 50 and 200-day exponential moving averages, signalling upward momentum. - Support in Downturns: DOGE's price finds support around the S1 level of the Fibonacci pivot points, situated at \$0.083. As Dogecoin continues to stand out in the expansive crypto landscape, its distinctive nature and community-driven momentum make it an intriguing asset for the upcoming bull run. Conclusion: Diversifying Portfolios for Success The upcoming bull run in 2024 presents an array of opportunities for cryptocurrency investors. While Bitcoin and Ethereum remain foundational choices, tokens like Retik Finance (RETIK), Solana (SOL), Ripple (XRP), Cardano (ADA), Avalanche (AVAX), and Dogecoin (DOGE) offer unique features and potential for substantial gains. Retik Finance's focus on merging traditional finance with DeFi, Solana's speed and scalability, Ripple's transformation of cross-border payments, Cardano's scientific approach, Avalanche's resilience, and Dogecoin's unique community-driven momentum contribute to the diverse landscape of top-performing tokens. Investors are advised to conduct thorough research, assess risk tolerance, and consider the dynamic nature of the crypto market before making investment decisions. The upcoming bull run offers exciting possibilities, and a diversified portfolio that includes promising tokens like Retik Finance could be instrumental in capturing the full range of opportunities presented by the crypto market's growth. Leading liquid staking protocol for Cronos, Veno Finance, made its debut on the zkSync Era Layer-2 blockchain scaling solution. With its introduction, zkSync Era users may now directly stake their ETH tokens and obtain Liquid ETH (LETH) tokens, creating new opportunities for yield farming inside the platform's decentralized finance ecosystem. Users of zkSync may more easily support the Ethereum network thanks to the Veno protocol. It functions by creating a bridge between ETH tokens on the Ethereum mainnet and the zkSync Era, automating user staking and withdrawal of ETH. Users of zkSync Era may earn extra return on its DeFi protocols by staking ETH natively, for which they will get an equal number of LETH tokens. As part of its roadmap, Veno intends to add its native VNO token to the zkSync Era blockchain in order to reward LETH liquidity providers. Holders of VNO tokens are urged to support LETH liquidity in a variety of ways. Depending on how much and how long they commit to locking up their tokens, users may lock their VNO into the Fountain and get incentives in the form of extra VNO. As an alternative, customers may lock their VNO into the Reservoir and get Real Yield incentives in ETH, which make up half of all the revenues Veno receives from ETH staking. Users of zkSync Era may transfer their LETH-ETH-LP tokens into Veno Garden as part of an extra incentive mechanism to get more VNO rewards. Additionally, Veno creates additional chances by giving customers an NFT receipt each time they take their LETH tokens out, thereby enabling instant access to unstaked assets. This NFT gives consumers a method to spend their funds before they become accessible as a proof of withdrawal. It is anticipated that when the Exit Queue for staked ETH expands, this functionality will become more and more helpful. If this occurs, it may take weeks or even months for staked Ethereum withdrawals to be processed, which means those tokens are not being used for long stretches of time. Zimfony, Product Lead of Veno Finance stated: "Veno's latest LETH withdrawal NFT rings unprecedented advantages to the liquid staking arena. Users gain the ability to seamlessly manage their finances by transferring claim NFTs and tapping into their assets through borrowing. While protecting themselves against market uncertainties. This launch is a testament to our ongoing commitment to provide liquidity and amplify the utility of users' staked assets. As one of the most promising Ethereum scaling solutions, zkSync Era is the perfect vehicle for us to expand our vision for cross-chain liquid staking. With this announcement, Veno joins the ranks of the first native Ethereum liquid staking protocol, enabling native Ethereum staking and withdrawals on the zkSync Era blockchain. Veno is positioned to develop a protocol that has already seen substantial growth over the previous year by securing this first-mover advantage. For example, in the previous three months, Veno's total value locked (TVL) has doubled, while in the last year, the number of unique stakers has grown tenfold. After the introduction of its Veno Gardens platform, which offers VNO token holders a range of choices to optimize their income potential, Veno has reached yet another significant milestone with the extension to zkSync Era. In addition, Veno introduced its CRO Liquidity Strategy, which automatically harvests and compounds incentive rewards for users, and became the first to offer ATOM staking on Cronos. One of the Ethereum blockchain's fastest-growing L2 scaling solutions, zkSync Era allows the most widely used decentralized network in the world to rise to unprecedented heights. The use of zkSync Era has increased significantly due in large part to its innovative use of zero-knowledge proof technology, which allows for safe, quick transactions at a fraction of the usual cost.

Honeyland, the blockchain-based beekeeping sensation, is thrilled to announce the highly anticipated launch of Honeyland 2.0 this week. This major update brings many exciting features designed to elevate player experience and engagement. Key features of Honeyland 2.0 include: - Fun, mobile casual strategy game built on Solana - Created frictionless web3 gaming for anyone in the world - Discoverable on iOS/Android stores worldwide - Super simple onboarding with Google/Apple sign-in - Purchase \$HXD in-game as an in-app purchase using Google Pay or Apple Pay - Buy and sell NFTs in the app using \$HXD through partnership with Magic Eden - Players can convert \$HXD into other currencies using the Transak off-ramp - End to end web3 experience while completely removing the normal web3 friction. - \$3.5M of in-game revenues since launch - Partnership with Mastercard bringing unique branded in-game experience to players. The Honeyland team is dedicated to optimizing player experience and accessibility, solidifying its status as one of the premier blockchain games globally. Honeyland 2.0 promises a more immersive gaming environment and is now live, offering players an exciting new chapter in the world of beekeeping. Corey Wright, CEO of Honeyland, commented: "We've spent the past two years optimizing Honeyland to give players an insanely fun and competitive game, a frictionless onboarding experience, and a sustainable web3 game economy. Honeyland 2.0 begins the next step in Honeyland's future where we are excited to introduce it now to everyone. To learn more about Honeyland, visit their website at: <https://honey.land> or download the game and start playing now. About Honeyland: Honeyland is a popular blockchain-based casual strategy game known for its engaging gameplay and vibrant community. With the upcoming launch of Honeyland 2.0, players can anticipate a richer and more interactive gaming experience. Download Honeyland on iOS and Android now to join the buzz! - Despite a tough 2023, Binance Pay expanded and solidified its place as a premier crypto payment platform. - Binance Pay extended its user-centric innovation by integrating DeFi wallets and collaborating with organizations across several industries. - By promoting crypto payments as a key step toward wider crypto adoption, Binance Pay supports money liberation via crypto. In spite of the turbulent market, the crypto community's tenacity was evident while looking back on the eventful year of 2023. Together, we looked at creative approaches to incorporating cryptocurrencies into daily life, such as payment processing. The potential for widespread industry adoption of cryptocurrency payments is immense, which is why it is so encouraging to report on Binance Pay's extraordinary development and progress in 2023 despite a difficult environment. We introduced Binance Pay back in February 2021 as a cutting-edge method that allows customers to pay using cryptocurrency for a variety of transactions, including booking hotels and flights, buying apparel, and more. Binance Pay was first introduced as a straightforward online payment button, but it has subsequently expanded to include a wide range of cryptocurrency payment options. The platform has had consistent growth over the last three years, with total

transactions surpassing an astounding \$120 billion. As a result, using cryptocurrency for payments has never been simpler or more common. The segments that follow go into detail on Binance Pay's key moments of 2023, how our user-first philosophy has fueled our expansion, and how we plan to continue enabling cryptocurrency payments' role as the primary driver of worldwide adoption of cryptocurrencies. Boosting Development with User-Centric Dedication As with everything we do at Binance, the primary goals of Binance Pay have always been to establish trust and prioritize our users. In order to continue delivering even greater value to you, our worldwide clients, we onboarded a variety of new merchants and partners in 2023 and continued to improve our product. Let's examine a few of the highlights. Embracing Cryptocurrency with Binance Pay Binance Pay's success is a testament to the power of blockchain and cryptocurrency. Over the past year, we have seen a dramatic increase in the number of users who have adopted our platform. By the end of 2023, there were over 12 million active Binance Pay users, a almost 70% increase. A growing number of Binance users are now taking use of Binance Pay's gifting, sending, and receiving of cryptocurrency transactions capabilities. This development trajectory indicates a stronger integration of cryptocurrencies into regular transactions, a trend that will likely continue as more individuals and organizations take use of cryptocurrencies' immense potential. Thousands of new merchants have joined Binance Pay in just the last year. Collectively, these retailers provide a wide range of purchasing options, facilitating the assimilation of cryptocurrency payments into daily life. In 2023, Binance Pay initiated collaborations with prominent figures in several emerging sectors, both within and outside the cryptocurrency landscape, with the aim of enhancing the ease and accessibility of cryptocurrency transactions for everybody. One noteworthy instance would be Binance Pay's interfaces with DeFi wallets, such Trust Wallet, which streamline and facilitate asset transactions worth billions of dollars. In order to enable cryptocurrency payments to customers in a variety of contexts, such as salary distribution in the gig economy and loyalty incentive disbursements, we also collaborated and worked closely with a number of businesses. Building and developing crypto payments in an effort to stay up to date with our users' changing demands, we came up with ideas and added new features to Binance Pay. Every feature on Binance Pay has been carefully considered and created to assist make paying with cryptocurrency as easy and practical as possible, from the ability to transmit cryptocurrency quickly and simply with the 'Send Cash' option to the convenience of paying your portion of the bill in cryptocurrency using 'Split Bills.' Throughout the year, Binance also introduced a number of in-depth user campaigns to aid in the understanding of these functionalities. These are intended to demystify difficulties and make it easier for new and returning customers to utilize payment services by guiding them through a smooth transition into the realm of cryptocurrency payments. Cryptocurrency Payments' Future At Binance, we think that cryptocurrency payments might be a major factor in promoting the general acceptance of cryptocurrencies. This is consistent with our overarching goal of advancing financial independence for all people worldwide. In an interview with Coinbureau from September 2023, our CEO Richard Teng discussed how the emancipating power of cryptocurrency is already being felt in many developing nations. He stated: 'Today, they are able to use crypto to make payments, transfers and remittances at a fraction of the cost of what traditional finance offers. They are able to get exposure to financial assets at the fraction of the cost, at a 24/7 basis. That is the beauty of it.' But the potential and strength of cryptocurrency to provide people financial empowerment is not limited to developing nations; it also applies to everyone else. Beyond merely a way to send and receive funds, cryptocurrency has a large and intricate ecosystem that includes things like NFTs, SocialFi, DeFi, and more. At Binance, we see cryptocurrency payments as the entry point into the vast, intricate realm of Web3 and cryptocurrency. Since many consumers are already used to making cashless purchases, switching to cryptocurrency for payments is less scary and more normal. As they enter the cryptocurrency ecosystem, cryptocurrency payments become a crucial first step. Establishing Binance Pay the Payments Highway This year, Binance Pay intends to surpass its spectacular 2023 payment year. Our objective is to lead the market in cryptocurrency payment technologies and make using cryptocurrencies as simple as 'see, click, buy.' We're eager to build for the future and see what this year brings, whether that means adding even more creative ways for people to pay, creating new features that incorporate the newest payment trends into cryptocurrency, or onboarding fascinating new partners who want to integrate cryptocurrency payments into their business. The Global Head of Binance Pay, Jonathan Lim, revealed: 'Our team is incredibly heartened by the milestones we achieved in 2023. There's increasing recognition amongst users and businesses of the real world use cases that crypto offers, and we are happy to be able to provide the infrastructure to facilitate this process. At Binance Pay, we are not just building a product; we are cultivating a shift in financial paradigms across the globe. Our users' trust and adoption of Binance Pay reflect their belief in this seismic shift. As we forge ahead in 2024, our commitment remains intact: to offer a secure, convenient, and expansive crypto payments ecosystem that users value. This is just the beginning of an exciting journey towards global financial inclusion and democratization.' Cryptocurrency payments have a stronger future than ever, and they will only get more exciting! Please stay tuned for a ton of new announcements from our team this year.

NEW YORK (BUSINESS WIRE) Zebec, a category-defining fintech startup, proudly announces the launch of its advanced web3 payment and real-time payroll services in Japan. This strategic move not only marks Zebec's continued global expansion but also underscores its commitment to fostering collaborative financial innovation worldwide. Japan, known for pioneering a regulatory framework for digital finance, offers an optimal setting for Zebec's tech, tailored to complement the sophisticated and robust nature of Japan's financial ecosystem, providing significant enhancements to traditional payroll methods and digital payments options. Zebec's venture into Japan is logical; it's an opportunity for us to contribute to the country's already advanced financial infrastructure,' says Sam Thapaliya, founder of Zebec. 'Our continued focus on Asian markets positioned us to be able to quickly deploy comprehensive and flexible financial solutions to Japanese customers.' The suite of Zebec services now available in Japan includes: Zebec App and Nautilus Chain, ideal for streaming payments and real-time web3 payroll, supporting digital payments in USD, ERC, and Soon a Japan-native Stablecoin (JPY2). Wagelink and advanced payroll technology, modernizing traditional payroll with the inclusion of stablecoin salary payments and cross-border remittances, in partnership with global fintech firms Circle and Stellar. The Wagelink App, launched in the USA in late 2023, represents an innovation in traditional payroll systems for companies and their employees in the PGP/ Zebec investment portfolio. Zebec Instant Card, a groundbreaking crypto payment offering, supported globally by Visa and Mastercard, now enables spending in both USD and Japanese Yen. Zebec's innovative solutions are engineered for unrivaled efficiency, transparency, and security in financial transactions. Set to redefine payroll services and modernize payment into continuous streams, thereby granting businesses and individuals enhanced control and flexibility over their financial lives. 'As we expand to Japan,' Thapaliya concluded. 'We eagerly anticipate building enduring partnerships and becoming a part of innovation in the Japanese fintech sector.' Zebec enables real-time and continuous streams of payments and financial transactions for payroll, investments and more. Founded in 2021, with investments by Circle, Coinbase, Solana Ventures, Breyer Capital, DST Global, and Lightspeed Venture Partners among others, Zebec today services hundreds of companies, runs thousands of continuous payment streams and powers next generation payroll services. In effect, across its suite of real-time payroll, micropayments and on-and-off ramps through the Zebec Instant Card, Zebec is a crypto payments superapp, integrating the blockchain into everyday lives. - Asset manager Valkyrie was among the first businesses to submit its final S-1 modification. - Details on the fees or names of the market makers for the possible ETFs are included. As anticipated, on Monday, January 8, many applicants for a spot Bitcoin exchange-traded fund (ETF) hurriedly submitted their final Form S-1 modifications to the U.S SEC. It is generally anticipated that the first spot Bitcoin ETFs would be authorized in the United States on January 10, and asset manager Valkyrie was among the first businesses to submit its final S-1 modification before that date. All Eyes on SEC Now Moreover, expected to finish their Form S-1 revisions today, the optimistic issuers are kicking off what could be a historic week for Bitcoin with the fresh filings. Details on the fees or names of the market makers for the possible ETFs are included in the S-1 amendments. When it comes to trading the possible spot Bitcoin ETF products, several filers have drastically reduced fees. The most recent S-1 filing by ARK and 21Shares states that for the first \$1 billion in AUM within six months of listing, the ETF sponsor would not charge the 0.25% fee. Following an initial fee of 0.2% for the first twelve months or \$5 billion in AUM, BlackRock's Bitcoin ETF will subsequently charge 0.3%. Bloomberg ETF expert Eric Balchunas claims that the current fee battle among potential spot Bitcoin ETFs is not going to significantly impact competitiveness at this stage. Some filers, such as BlackRock, went over and above by including details on the seeding of spot Bitcoin ETFs alongside the fees. Using the funds from the seed creation baskets, the trust bought 227.9 BTC on January 5, 2024, for \$10 million, according to BlackRock. Highlighted Crypto News Today: Solana Faces Selling Pressure Amidst Ongoing Bears Dominance

- The corporations in question recently submitted their final Form S-1 modifications to the SEC. - ARK and 21Shares will not charge a fee of 0.25% on the first \$1 billion in transactions. Big names in finance, including BlackRock, Ark, Fidelity, Invesco, Galaxy Digital, WisdomTree, and Valkyrie, have taken a bold step toward launching the first Bitcoin exchange-traded fund (ETF) in the U.S as the deadline of January 10th draws near. The corporations in question recently submitted their final Form S-1 modifications to the SEC, marking a significant turning point in the history of the crypto sector. In a calculated move to entice investors, a number of applicants have announced steep cost reductions for their potential ETF offerings. To illustrate, during the first six months after listing, ARK and 21Shares will not charge a fee of 0.25% on the first \$1 billion in transactions. The first six months or \$5 billion in transactions will incur an initial cost of 0.2% from BlackRock, followed by an increase to 0.30%. The fierce rivalry among issuers to get a portion of this new market is evident in these initiatives. Watershed Moment In the following days, the crypto world will eagerly await the judgment of the SEC. These ETFs might be available for trading the next business day if the exchange's filings (19b-4s) and the issuers' S-1 forms are approved. The SEC has always been reluctant to approve such products, mostly because of worries about investor protection and market manipulation, so this change is very noteworthy. A spot Bitcoin ETF's approval may be a watershed moment for cryptocurrencies, opening the door to billions of dollars in capital from both individuals and institutions. The industry is keeping a careful eye on the clock since the decisions made by the SEC in the next few days have the potential to drastically alter the crypto investing setting. Highlighted Crypto News Today: Solana Faces Selling Pressure Amidst Ongoing Bears Dominance

- Full regulatory permission from MAS has allowed Upbit to expand its digital asset services. - This update follows the exchange's first in-principle approval, three months ago. Upbit Singapore has announced that it has obtained a Major Payment Institution (MPI) license from the Monetary Authority of Singapore (MAS), marking a major step towards solidifying its position in the regulated digital asset exchange. Moreover, Upbit Singapore is now well-positioned to play a key role in the growing digital asset industry in Singapore, thanks to this new accomplishment, which follows the previous in-principle clearance in October 2023 and is in line with the nation's strict regulatory criteria. Strategic Expansion Also, full regulatory permission from MAS has allowed Upbit to expand its digital asset services. This update follows the exchange's first in-principle approval, which occurred three months ago. Moreover, Upbit Singapore's chief operating officer, Mr. Raks Sondhi, has said that the new license would allow the company to hire more people, improve its services for institutions, and add more digital assets to its platform. Despite MAS's recognition of the crypto sector's growing potential, the regulator has warned ordinary investors of the inherent volatility of cryptocurrency trading. Significantly, Upbit Singapore, which was founded in 2018, caters to a wide range of customers, including both retail and institutional investors. The exchange's new regulated digital asset exchanges in Singapore, Indonesia, and Thailand demonstrate its dedication to a strong and compliant operating structure, and they are now part of Upbit APAC. Furthermore, gaining an MPI license is a major step forward for Upbit Singapore and the worldwide digital asset organization Upbit APAC as a whole. This multinational conglomerate is increasing its influence in the institutional and infrastructural sectors across a number of Asian nations. Highlighted Crypto News Today: Polygon Surpasses Solana in Daily NFT Sales Volume, Secures Third Place

- This comes days before the expected approval of spot Bitcoin ETFs. - A number of social media users have speculated a spot Bitcoin ETFs approval soon. The SEC has once again issued a warning on the fear of missing out (FOMO) while investing in cryptocurrency, and this comes days before the expected approval of spot Bitcoin ETFs. Digital assets, such as meme stocks, cryptocurrencies, and NFTs, pose dangers to ordinary investors, according to a Jan. 6 post on Twitter by the SEC's Office of Investor Education. In the midst of a raging crypto and stocks bull market that saw Bitcoin, Ether, and several altcoins hit new all-time highs by November 2021, the 'Say no go to FOMO' blog article made an early debut on January 23, 2021. When markets began to decline in March of 2022, the warning was reissued. All Eyes on SEC A number of social media users have speculated that the post indicates that the SEC will soon approve one or more spot Bitcoin ETFs, which are now awaiting a decision before a deadline of January 10th. Investors should not base their financial choices only on the endorsement of well-known personalities, such as sports or celebrities, for crypto assets, the warning said. Fines and penalties have been levied on celebrities by the authorities for their roles in

endorsing certain cryptocurrencies throughout the years. The report also cautioned investors against assets whose value is highly dependent on trends and influencers, stating that these assets may seem attractive at first, but that losses may accumulate rapidly when the market continues to function independently of them. The Bitcoin ETF market is now receiving a lot of attention from the crypto sector. Most applications will be authorized within the week, according to senior Bloomberg ETF analyst Eric Balchunas. Highlighted Crypto News Today: Polygon Surpasses Solana in Daily NFT Sales Volume, Secures Third Place

Shiba Inu (SHIB) has caught the attention of investors with its high buying interest, reached all-time high \$0.00008616, Oct 27, 2021. Amidst the optimistic start to the new year, the projections for SHIB's future price, including the prospect of reaching \$0.1 per token, have ignited speculative discussions. Shiba Inu (SHIB) Price Predictions SHIB's journey has been marked by parabolic moves, notably during the meme coin mania of late 2020. Predictions of SHIB reaching \$0.1 have been circulating for some time, contributing to the ongoing speculative rally. Despite facing skepticism from some analysts, the \$0.1 price target resurfaces as discussions around Shiba Inu gain momentum in 2024. A long position has already been initiated in anticipation of the breakout. Traders who have not entered yet can consider entering once the breakout above the resistance area at \$0.000015 is confirmed. Our target for this trade setup is set at \$0.000018, representing a favorable upside potential from the breakout level. This target indicates the projected price movement after the breakout occurs. To manage risk effectively, it is recommended to set a protective stop loss at \$0.00000575. Placing the stop loss slightly below the breakout zone can help mitigate potential downside risks. At its current \$0.00009725 level, SHIB would need a substantial increase to reach \$0.1 per token. While the cryptocurrency market is known for its volatile nature, achieving such a monumental leap raises questions about the realistic feasibility of these projections. The analysis delves into the challenges and considerations associated with SHIB's potential price trajectory. Examining potential catalysts, such as expanding utility into gaming and the metaverse, alongside continued retail interest, offers insights into the factors that could drive SHIB's price upward. However, maintaining a measured approach and avoiding unrealistic expectations, particularly with projections of SHIB hitting \$0.1, becomes crucial. Like many altcoins, Shiba Inu's price movements often align with Bitcoin's trends. While positive momentum in the overall crypto sector could propel SHIB upward, the unpredictable nature of the cryptocurrency market underscores the importance of balanced risk management. Investors are reminded to approach price predictions cautiously, recognizing the potential for volatility in this dynamic market. Exploring Better Alternatives: SOL, RETIK, BONK Solana (SOL) Solana stands out as a robust alternative with a focus on scalability and efficiency. Its high throughput, low transaction costs, and a flourishing decentralized finance (DeFi) ecosystem make SOL an appealing choice. The analysis explores Solana's potential for sustained growth and its position in the broader blockchain landscape. The project is recognized for its remarkable transaction speeds and minimal fees. Solana has captivated the attention of both traders and investors. Its adeptness in effortlessly managing high-demand applications has propelled it to the summit of the altcoin landscape. With its expanding share in the surge of open interest, SOL is reaffirming its standing as a top cryptocurrency to consider for those seeking a blend of outstanding performance and significant potential. Retik Finance (RETIK) Retik Finance introduces innovative features such as Futuristic DeFi Debit Cards, Smart Crypto Payment Gateway, and AI-Powered Peer-to-Peer (P2P) Lending. The ongoing presale success, community engagement, and commitment to user privacy make RETIK a compelling option in the evolving DeFi space. Retik Finance is revolutionizing financial accessibility and security with its innovative DeFi Debit Cards. These cards redefine traditional banking norms by enabling anonymous transactions, eliminating the need for Know Your Customer (KYC) procedures, and prioritizing user privacy. The Retik presale, structured in ten stages with incremental pricing, commences at \$0.03 in the first stage and progresses to \$0.04 in the second stage, \$0.05 in the third, and so forth. Impressively, the ongoing presale has surpassed \$5.6 million in the fourth stage, showcasing robust community support without reliance on venture capitalists (VCs). As a testament to user engagement, Retik Finance has launched an exciting \$333,000 giveaway, offering participants the opportunity to be one of ten winners to claim \$33,300 worth of RETIK each. Bonk Token (BONK) Bonk Token represents a community-driven project with unique characteristics and a strong emphasis on decentralization. Examining its features, potential for growth, and community engagement provides insights into why BONK could be an interesting alternative investment. As investors navigate the dynamic landscape of cryptocurrencies in 2024, Shiba Inu's trajectory remains a topic of intrigue and speculation. While the prospect of reaching \$0.1 generates buzz, it's essential to approach such predictions with caution, acknowledging the inherent uncertainties in the market. Exploring alternatives like Solana (SOL), Retik Finance (RETIK), and Bonk Token (BONK) offers a diversified perspective, allowing investors to consider innovative projects with unique features and potential for growth. The new year promises twists and turns in the crypto markets, emphasizing the importance of informed decision-making and strategic investment approaches. About Retik Finance Retik Finance emerges as a dynamic platform in the decentralized finance (DeFi) space, offering a comprehensive platform that seeks to redefine the way users engage with digital assets. With a commitment to bridging the gap between the cryptocurrency realm and real-world utility, Retik Finance positions itself as a versatile solution catering to diverse decentralized financial needs. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

The cryptocurrency market is ever-evolving, with price movements often shaped by a myriad of factors. One such token that has been in the spotlight is Shiba Inu (SHIB). In this article, we'll delve into the recent price analysis of SHIB, which currently signals a bearish trend. Additionally, we'll explore overlooked Retik Finance (RETIK) and Bonk (BONK), both poised to potentially outperform SHIB in 2024 due to their bullish projections. Retik Finance is a comprehensive platform that seeks to redefine the way users engage with digital assets. With a commitment to bridging the gap between the cryptocurrency realm and real-world utility, Retik Finance positions itself as a versatile solution catering to diverse decentralized financial needs. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

A breakdown following a short-term formation that emerged on December 17 has not been a positive sign, especially considering the recent drop in Bitcoin's price. On the weekly timeframe, SHIB has maintained an overall upward trend since June, with a breakout from a descending resistance trend line that had constrained the price for 480 days. However, despite this breakout, SHIB has not exhibited significant upward momentum. The latest sharp decline has pushed the token below the descending resistance trend line once again, indicating a potential shift in the market sentiment. The daily timeframe presents a more noticeable downtrend, attributed to both price movements and Relative Strength Index (RSI) readings. SHIB has been trading within a rising parallel channel since June 2023, typically associated with corrective movements. The recent breakdown from a symmetrical triangle formation is of particular significance, potentially signalling the end of an uptrend and hinting at a forthcoming decline. At the time of writing, SHIB is hovering around a minor support level of \$0.0000095. The RSI falling below 50 suggests the continuation of the downtrend. If this trend persists, SHIB's price could see a 20% drop, reaching the channel's support trend line at the \$0.0000075 level. While SHIB is facing a potential downtrend, Retik Finance and Bonk are the tokens expected to perform better than SHIB in 2024. Retik Finance: A Utility-Driven Token In contrast to the bearish signals surrounding SHIB, Retik Finance (RETIK) emerges as a token with a promising outlook for 2024. RETIK is not just a speculative asset; it boasts real-life applications that address the cryptocurrency-fiat payment system, providing it with practical utility. Retik Finance operates as a bridge between the traditional fiat currency realm and the emerging cryptocurrency world. Leveraging open-source protocols, rapid product development platforms, and decentralised smart contracts, RETIK facilitates seamless, secure, and convenient global payment solutions. The token has garnered attention during its presale, attracting investors and substantial liquidity from big wallet whales, setting the stage for potential growth in 2024. RETIK is currently trading at \$0.060 during its presale stage 4, with projections indicating a rise to \$0.15 as the presale stages advance. The token is anticipated to experience further growth, potentially reaching up to 2000%. This optimistic projection is grounded in RETIK's integration of real-life applications, offering solutions that cater to large-scale commercial applications, diverse payment options, and robust localization compliance and anti-money laundering programs tailored for different regions. >>> Click Here To Buy RETIK Tokens <<<< Bonk: Riding the Solana Wave Bonk (BONK) is another token-making wave in the cryptocurrency market, specifically within the Solana ecosystem. Unlike SHIB, Bonk has demonstrated remarkable growth, especially in December 2023, showcasing resilience amid market turbulence. As of the latest data, Bonk is positioned at 75th on CoinMarketCap, boasting a live market cap of \$922 million. This achievement is supported by a circulating supply of over 60 trillion BONK coins, inching closer to its maximum supply cap of 100 trillion. December 2023 witnessed Bonk skyrocketing by over 310%, establishing itself as a top performer in the cryptocurrency market. Technical indicators further support Bonk's potential for a sustained rise. The Moving Average Convergence Divergence (MACD) signals a potential bullish crossover, the RSI stands above 50, indicating bullish sentiment, and Bollinger bands hint at decreased volatility, possibly leading to consolidation. Comparative Analysis When comparing SHIB, RETIK, and BONK, it becomes evident that both RETIK and BONK have distinctive features that position them favourably against the bearish signals surrounding SHIB. Retik Finance stands out due to its utility-driven approach. Unlike SHIB, which is primarily a meme coin with no inherent utility, RETIK addresses the cryptocurrency-fiat payment system, offering practical solutions for seamless transactions between the traditional fiat currency realm and the cryptocurrency world. Bonk, on the other hand, has demonstrated significant growth within the Solana ecosystem. Its bullish trajectory in December 2023, coupled with positive technical indicators, showcases its resilience and potential for further gains. Conclusion As the cryptocurrency market continues to evolve, tokens like Shiba Inu face challenges with bearish signals and potential downtrends. In contrast, utility-driven tokens like Retik Finance and tokens demonstrating robust growth, such as Bonk, present alternative investment opportunities with bullish projections for 2024. Investors should carefully assess their risk tolerance and investment goals when considering these tokens, keeping in mind the dynamic nature of the cryptocurrency market. - On January 6, the cryptocurrency reached a new 52-week high of \$3.60. - A whale withdrew 450,000 LDO tokens, which were worth around \$1.5 million. The DeFi token Lido DAO (LDO) gained attention because of its spectacular price increase. On January 6, the cryptocurrency reached a new 52-week high of \$3.60 and gained more than 15% as per data from CoinMarketCap. Spot On Chain reported on twitter that in the wee hours of Saturday, a whale trader going by the name of 0xf9c9 made a large move on Coinbase. This trader made a swap, exchanging Render for Lido DAO. A whale withdrew 450,000 LDO tokens, which were worth around \$1.5 million, and deposited 750,000 RNDR, which were worth about \$3.01. The market was quite volatile when these deals were made. After that, the price of RNDR fell by 11% on the last day. At the same time, the price of LDO increased by 15%. Notably, \$0.95 million, the trader looked at earnings by trading seven additional tokens, including Fetch.ai (FET) and Aave (AAVE). Significant Gains After reaching a 52-week high of \$3.60, the price ascent of Lido DAO tapered off. The LDO price was trading at \$3.28, up 3.54% in the last 24 hours as of this writing. From its previous peak, this indicates a decline of more than 10%. However, LDO has achieved a rather remarkable gain of around 30% in the last 30 days. Aside from that, its value has increased by more than 119% in the last year. Although there has been some positive news recently, the cryptocurrency is still selling way below from its all-time high of \$11. Highlighted Crypto News Today: Solana Surpasses October 2022 Peak in Daily Transaction Volume

The potential to transform a modest \$10 investment into a substantial \$100 is undeniably enticing, particularly within the volatile and frequently unpredictable realm of cryptocurrency. While harnessing such potential demands a combination of strategic thinking and diligent risk-taking, January 2024 brings forth a host of captivating prospects. This article delves into three digital tokens – Retik Finance (RETIK), PancakeSwap (CAKE), and Bonk (BONK), examining their capacity for rapid expansion and evaluating their potential to unlock the coveted 10-fold return. Top 3 Tokens To Turn \$10 Into \$100 In 2024 - Retik Finance (RETIK): Building a Bridge Between Traditional and Digital Finance - PancakeSwap (CAKE): A Diverse Ecosystem on BNB Chain - Bonk (BONK): A Solana Gem with Unique Features Retik Finance (RETIK): Building a Bridge Between Traditional and Digital Finance Retik Finance (RETIK) is a decentralized finance (DeFi) platform that has gained significant attention within the crypto community. The platform offers a native token, also called RETIK, which is currently priced at \$0.060 during its ongoing presale stage 4. At the current presale price, users can gain up to three times immediately after listing at \$0.15 before the main trading frenzy starts. Retik Finance stands out from other DeFi platforms due to its unique ecosystem, which includes the Retik Wallet, DeFi Debit Cards, and Retik Pay. These features enable seamless integration of digital and traditional finance, providing users with greater flexibility and convenience in managing their finances. The RETIK token facilitates easy transactions, earnings, and spending of cryptocurrencies, promoting financial autonomy and user engagement. The presale has already raised approximately \$4.8 million, indicating the high demand for RETIK and its potential for significant growth. Retik Finance's innovative approach to enhancing the accessibility, security, and utility of cryptocurrencies has positioned it as a noteworthy player in the DeFi landscape. As more investors flock to secure a piece of the presale, RETIK has the potential to become a major player in the DeFi space, providing users with a range

of compelling opportunities to participate in the rapidly evolving world of decentralized finance. >>> Click Here To Buy RETIK Tokens <<<< PancakeSwap (CAKE): A Diverse Ecosystem on BSC PancakeSwap (CAKE) is an extensive DeFi ecosystem that originated in the BNB chain and has since expanded to offer a wide range of products. This includes a token swap exchange, yield farming, syrup pools for staking, Ethereum liquid staking, and various other features, making it a versatile platform for crypto enthusiasts. The platform made a strategic shift to a deflationary token model known as "ultrasound CAKE," which is designed to enhance the long-term value of the token. Operated by an anonymous team of "Chefs" in the PancakeSwap "Kitchen" and guided by a commitment to open-source principles, the platform has earned credibility through audits conducted by reputable blockchain security firms. Despite facing challenges in the market that have impacted Total Value Locked (TVL) and trading volume, PancakeSwap has achieved an impressive annualised revenue of \$27 million. Notably, 42% of CAKE tokens are staked, contributing to the token's scarcity and long-term value. Bonk (BONK): A Solana Gem with Unique Features Bonk (BONK) stands out in the cryptocurrency landscape as the first dog-themed coin on Solana, offering a distinctive proposition to the crypto community. Launched on December 25, 2022, with 50% of its total supply airdropped to the Solana community, BONK has garnered significant interest within the crypto space. The project's primary goal is to revitalise liquidity on Solana-based decentralized exchanges (DEXs) and establish itself as a community coin utilised across various Solana dApps. Drawing inspiration from popular meme coins like Shiba Inu (SHIB) and Dogecoin (DOGE), BONK has gained traction among enthusiasts. The team envisions an inclusive ecosystem where every user has an equal opportunity, aligning with the decentralized principles of blockchain technology. Despite its relatively modest online presence, characterised by limited available information beyond an active Twitter account, Bonk's strategic airdrop to Solana NFT collectors, developers, and artists positions it as an intriguing project with promising growth potential. >>> Click Here To Buy RETIK Tokens <<<< Closing Thought: Turn Your \$10 Into \$100 with RETIK In the fast-paced world of cryptocurrency investments, the ability to identify tokens with the potential to turn a small investment into significant returns is crucial. Retik Finance (RETIK) is a standout contender in this regard, alongside PancakeSwap (CAKE) and Bonk (BONK). Meanwhile, the ongoing success of Retik Finance's (RETIK) presale, combined with its robust product and a strong commitment to deflationary tokenomics, provides a unique growth and investment opportunity. While PancakeSwap offers a wide range of products and a supporting ecosystem, Retik Finance stands out with its unique adoption-driving features. As investors navigate the cryptocurrency landscape in January 2024, the distinct strengths of Retik Finance (RETIK) position it as an appealing option for those seeking the potential to turn a \$10 investment into \$100 this January. - The United States supposedly gained 216,000 jobs in December as per data. - Bitcoin price initially spiked but could not hold above the \$44,000 mark. According to the latest nonfarm payrolls statistics from the Bureau of Labor Statistics, the United States supposedly gained 216,000 jobs in December. The number of employment created in December was higher than the 199,000 positions added in November, according to the figures released on Friday. More jobs were created in December, according to U.S. nonfarm payrolls statistics, which topped the anticipation of analysts surveyed by Reuters. December employment growth of 170,000 was below the average forecast by economists. Stronger Than Expected Statistics Unemployment remained constant at 3.7% according to the data. Contrarily, the market was anticipating a 0.10 gain, or 3.8%. The monthly labor force participation rate was 62.5%, reflecting a decline of 0.3% from the previous month. The idea that the US economy would not be slowing down anytime soon is bolstered by stronger-than-expected statistics. The U.S Federal Reserve may still have to emphasize the idea of maintaining rates a little longer than what the market has already priced in, given the strong job market. Based on the data provided by CME Group's FedWatch Tool, the current chance of a March Fed rate decrease is around 65%. Following the release of the employment report, the dollar rose slightly as the U.S. Dollar Index (DXY) surged beyond 103 in response to a higher dollar. U.S. equities and the FTSE 100 fell. However, rumors surrounding the SEC's approval of the spot Bitcoin ETF mainly influenced the crypto markets, which remained range-bound. Bitcoin price initially spiked but could not hold above the \$44,000 mark. At the time of writing, Bitcoin is trading at \$43,551 as per data from CoinMarketCap. Highlighted Crypto News Today:

Victoria, Seychelles, January 5th, 2024, Chainwire The world-leading Web3 trading wallet, Bitget Wallet (formerly known as BitKeep Wallet), has unveiled its "Smart Money" feature, an advanced tool designed to refine trading strategies. This tool leverages state-of-the-art AI technology to rigorously analyze and process on-chain data in real-time. It identifies and tracks over 6,000 historically high-performing Smart Money addresses on Ethereum while also performing safety checks. These addresses are linked to traders renowned for their experience and strategic acumen, whose trading maneuvers frequently herald key market trends. Bitget Wallet is also gearing up to extend the Smart Money feature to additional blockchains like BNB Chain, Solana, Polygon and Avalanche, aiming to significantly widen its reach. The Smart Money feature is meticulously crafted to furnish individual traders with lucid and prompt trading signals alongside insights into market dynamics. It presents comprehensive details about the Smart Money addresses currently engaged in trading. This includes the trading cryptocurrency, transaction prices and volumes, and the number of holding addresses, thereby empowering traders with immediate access to trading signal alerts. Furthermore, users can effortlessly retrieve this information through their mobile app, akin to scrolling through social media feeds. This enables them to observe Smart Money movements, comprehend real-time trading profits and losses, assimilate trading strategies from professional investors and whales, and consequently unearth novel opportunities for on-chain trading. Discussing the ethos behind the product, Alvin Kan, Chief Operating Officer of Bitget Wallet, stated: "The core of our market-leading on-chain trading feature is to provide users with a comprehensive view of the market. We further elucidated, "Our mission is to empower users to preemptively discern market trends, promptly uncover investment opportunities, and consequently bridge the gap between ordinary investors and Smart Money." Bitget Wallet's on-chain trading feature, Bitget Swap, demonstrates formidable strength by supporting nearly 30 mainnets and aggregating the liquidity of hundreds of mainstream decentralized exchanges (DEXs) and cross-chain bridges. It effectively eliminates common on-chain trading issues such as gas tokens and high slippage, offering users a platform to freely trade any assets on any network, rivaling the experience provided by centralized exchanges. While other wallets may also offer swap functionality, Bitget Wallet has pioneered the introduction and continuous enhancement of on-chain market data. Its intelligent market data feature not only aggregates full-chain trends and multi-dimensional market leaderboards, but has now taken a significant leap forward by introducing the Smart Money feature, a capability not commonly found in most wallets on the market. The core value of intelligent market data lies in its ability to assist users in discovering new assets and trading opportunities. Alvin delved into the significance of this feature, "By utilizing the Smart Money feature, we're not just observing the buying and selling prices of tokens or determining the right time to exit based on selling trends. More importantly, it enables us to identify the emergence of new assets and trends, which are the new opportunities in Web3. Our aim is to provide users with a rich selection of on-chain assets and robust on-chain trading services, enabling them to seize these new opportunities." Together, Bitget Exchange and Bitget Wallet form an integrated ecosystem combining CeFi and DeFi. Bitget Exchange, adhering to the philosophy of "Intelligent Trading", leverages new technologies such as AI to help crypto investors trade smarter. On this platform, experienced traders can share their mature and market-validated trading strategies, allowing industry newcomers to swiftly and effortlessly emulate them. This process involves the application of tools once exclusively available to professional investors, thereby creating a win-win situation for all participants. About Bitget Wallet (Web3 Trading Wallet) Bitget Wallet, formerly known as BitKeep, stands as Asia's largest and global frontrunner among all-in-one Web3 multi-chain wallets. We offer a comprehensive range of on-chain products and DeFi services to our users, including wallet functionality, Swap feature, NFT trading, DApp browsing, and more. With a 5-year legacy, Bitget Wallet has earned acclaim from over 12 million users worldwide and has secured partnerships with prominent industry leaders including Bitcoin, Ethereum, TRON, BNB Chain, Solana, Base, and others. This success stems from our commitment to consistently delivering secure and convenient products and services. In March 2023, Bitget, a leading crypto derivatives trading platform made a substantial \$30 million investment in BitKeep, acquiring a controlling stake. Following this strategic move, BitKeep underwent a transformative and strategic brand evolution in August, officially rebranding itself as Bitget Wallet. For more information, visit: Website | Twitter | Telegram | Discord Contact Rachel Cheung media@bitget.com

With a price increase of over 10,000% in little over a year, Bonk (BONK), a meme coin built on the Solana (SOL) blockchain, has perhaps been the most successful so far. There have been a number of other meme coins that have also done quite well. The Polkadot community has taken the plunge by launching \$DED, a meme coin, implementing a unique strategy that distinguishes it from other cryptocurrency projects. There is no pre-sale or team allocation for the debut of \$DED, making it transparent and decentralized in contrast to other meme coins. Rather, it uses free airdrops as part of a fair token distribution scheme, particularly for Polkadot's native token DOT holders. The developers of DED have pledged to airdrop free DED tokens to all DOT holders, which is largely attributed to its attention-grabbing plan. All eligible holders of DOT tokens have a set percentage allocation as it has opted for a linear distribution methodology. This way, DED may reach a much larger audience without dealing with conventional venture capitalists and investors. Giotto De Filippi, a supporter of \$DED meme coin and a DOT activist, has lauded the new meme coin for its open and decentralized development process, saying that it exemplifies the power and dedication of the Polkadot community. Giotto De Filippi, DOT Activist and \$DED coin enthusiast stated: "The \$DED coin is really a testament to the strength of the Polkadot community. The dedicated Polkadot community have built this from the ground up in a completely permissionless, decentralized, and transparent way while bringing back the fun and whimsy that made many meme coins successful in their own right." There was a dramatic increase in involvement within just few days of launch implementing this novel approach, thanks to the enthusiastic backing of the Polkadot community. A committed team is working on DED, and many Twitter polls show that the project has a lot of support from the community.

- Binance introduced significant updates for XRP and Solana (SOL) traders and holders in 2024. - The launch of USDC-margined perpetual contracts, initially set for Jan. 3, was postponed due to unexpected market volatility. - Binance rescheduled the launch to Jan. 4 for BTC, ETH, BNB, SOL, and XRP, aiming for a smooth trading experience. As the crypto industry welcomed 2024 with optimism, Binance, one of the leading cryptocurrency exchanges, brought forth significant updates for traders and holders of XRP and Solana. Initially, an unexpected twist in the form of market volatility prompted Binance to postpone the launch of USDC-margined perpetual contracts, which were initially scheduled for Jan. 3. Following this announcement and Revised Launch Schedule Binance had previously announced its plans to introduce USDC-margined perpetual contracts for BTC, ETH, BNB, SOL, and XRP. The original launch date of Jan. 3 faced a delay, with Binance Futures rescheduling it to Jan. 4. The decision was attributed to the recent market upheavals and aimed at ensuring a smooth and favorable trading experience for users. According to the revised schedule, Binance initiated the launch with the USDC-margined BTC perpetual contract on Jan. 4 at 12:30 UTC. Subsequent contracts for SOL, XRP, ETH, and BNB followed at five-minute intervals. Crypto Market Performance Of XRP and SOL As the crypto market embarked on the new year, Bitcoin approached the \$46,000 price threshold, setting an optimistic tone. XRP and Solana also witnessed positive starts, achieving highs of \$0.639 and \$117, respectively, on Jan. 2. However, the bullish sentiment was short-lived. The market dynamics swiftly shifted as bears took control. Bitcoin faced a significant drop, erasing most of its early-year gains and interrupting a robust surge that had outpaced traditional assets. On Jan. 3, which marked the 15th anniversary of Bitcoin's first block, XRP and Solana experienced notable declines, with XRP dropping by 11% and Solana's SOL plummeting by nearly 20%. As of the latest data, both XRP and Solana continue to grapple with the aftermath of the market correction. In the previous 24 hours, XRP and Solana have exhibited single-digit losses.

VICTORIA, Seychelles (BUSINESS WIRE) "As the incubator and investment arm of the KuCoin ecosystem, KuCoin Labs has gladly announced its strategic investment in DeMR, a decentralized Mixed Reality (MR) infrastructure network (MR-DePIN) built on the Solana Chain, marking the inception of the DePIN era. KuCoin Labs is committed to supporting the development of the future DePIN ecosystem. This collaboration not only reflects the recognition of the DePIN's potential for collaboration but also highlights its profound understanding of the future development of the crypto industry. The recognition of growth in the DePIN track will incentivize more providers to join in a self-reinforcing, long-term growth cycle. KuCoin Labs will support DeMR in its efforts to continue to achieve its key milestones," said Lou Yu, Head of KuCoin Labs. DeMR, integrating MR seamlessly, stands out with assets like Compass NFTs, Land NFTs, and Node License NFTs, fostering strong connections with DeMR ecology and amplifying real-world influence and economic value. KuCoin looks forward to thrive with DeMR, and unlock more opportunities collaboratively for user in the future. About KuCoin Launched in September 2017, KuCoin is a global cryptocurrency exchange with its operational headquarters in Seychelles. As a user-oriented platform

with a focus on inclusiveness and community action reach, it offers over 700 digital assets and currently provides spot trading, margin trading, P2P fiat trading, futures trading, staking, and lending to its 30 million users in more than 200 countries and regions. KuCoin is currently one of the top 5 crypto exchanges according to CoinMarketCap. In 2023, KuCoin was named one of the Best Crypto Exchanges by Forbes and recognized as a highly commended global exchange in Findex's 2023 Global Cryptocurrency Trading Platform Awards. About KuCoin Labs Since its launch in May 2018, the KuCoin investment and incubation program has brought together a group of crypto experts for in-depth market research, analysis, investment, and incubation in the crypto industry. KuCoin Labs has diversified investments into early-stage projects to help project owners achieve sustainable growth and success in the decentralized world. About DeMR DeMR is a decentralized Mixed Reality (MR) infrastructure network (MR-DePIN) built on the Solana Chain. - Their most recent report indicates that all Bitcoin spot ETFs are expected to be rejected. - After the news broke, the price of BTC witnessed a flash selloff. Matrixport, a platform that specializes in financial services for the cryptocurrency industry, recently shocked the community with a wild prediction about the price of Bitcoin and the SEC's position on the highly anticipated Bitcoin Spot ETF ruling. Moreover, their most recent report indicates that all Bitcoin spot ETFs are expected to be rejected by the SEC in January, which may lead to a precipitous drop in Bitcoin's value possibly to \$36,000. All Eyes on SEC The market has been rocked by this discovery, and Matrixport has warned investors to be cautious and think about buying put options or even shorting Bitcoin directly as a precaution. Citing the SEC's probable rejection of spot ETFs as a crucial issue, Matrixport's analysis casts doubt on the positive predictions around Bitcoin's future. Also, the crypto platform has recently voiced its doubts over the SEC's openness to cryptocurrencies, contradicting its previous upbeat position. The report also notes that the Democratic leadership of the SEC has a significant impact, especially given Chairman Gary Gensler's cautious stance on cryptocurrency regulation. Furthermore, according to Matrixport, ETF approvals could not happen until Q2 2024, which would put a damper on expectations of an immediate market increase. Furthermore, the company is arguing that if the SEC rejects the plans, the present flood of capital into cryptocurrency, motivated by hopes of ETF approval, would lead to massive liquidations. Reverting to the zone of about \$36,000-\$38,000, the report predicts a quick 20% drop in Bitcoin price should the SEC reject the ETFs. After the news broke, the price of Bitcoin witnessed a flash selloff, dropping from above \$45,000 level to \$40,800 level. However, the price has recovered briefly and is now trading at \$43,470 as per data from CoinMarketCap. Highlighted Crypto News Today: Solana Faces Significant Selling Pressure as Market Turns Bearish

- Prominent institutions are depositing substantial amounts of Ethereum (ETH) on centralized exchanges. - Celsius Network initiated a significant deposit of 10,000 ETH (equivalent to \$23.56 million) into Coinbase. - Multiple addresses associated with Celsius Network indicate strategic moves, with recent deposits totaling 47,100 ETH. Prominent institutions, including Celsius Network and Alameda Research, are depositing substantial amounts of Ethereum (ETH) onto centralized exchanges like Coinbase. This strategic shift comes at a time when Ethereum's performance has lagged behind other major cryptocurrencies, such as Bitcoin and Solana, in the ongoing bullish market. Celsius Network's Noteworthy Ethereum Deposits Spotonchain, a blockchain analytics platform, has revealed that Celsius Network initiated a substantial deposit of 10,000 ETH, equivalent to \$23.56 million, into Coinbase. The transaction, carried out by the Celsius Network address 0x4131, occurred in two batches of 5,000 ETH each, as depicted in the provided screenshot. The Celsius Network address currently retains 10.2 ETH, valued at over \$24,000, and boasts a total crypto asset holding worth \$1.632 million. Spotonchain has identified multiple addresses associated with Celsius Network, signaling a series of strategic moves by the institution. In the last two weeks alone, Celsius Network addresses have funneled an impressive 47,100 ETH, totaling \$107.7 million, into Coinbase. This surge in deposits follows Celsius Network's court-approved decision in June 2023 to convert altcoins into Bitcoin and Ethereum. Alameda Research and FTX join the wave Adding to the intriguing trend, Alameda Research, a prominent entity in the crypto space, has been actively transferring Ethereum to Coinbase. On a recent Tuesday, the company executed a transfer of 1,550 ETH, amounting to \$3.67 million. Since October 2023, both FTX and Alameda Research have orchestrated deposits totaling 39,120 ETH, valued at an impressive \$79.5 million, into various crypto exchanges. Even Donald Trump, the former President of the United States, appears to be part of this trend. Recent reports from December 28 indicate that Trump has purportedly liquidated \$2.8 million worth of ETH on centralized exchanges. As Ethereum grapples with its underperformance compared to peers like Bitcoin and Solana, the increased supply of ETH on centralized exchanges introduces a layer of uncertainty.

- At the time of writing, ETH is trading at \$2363, down 1.63% in the last 24 hours. - If the price manages to go below \$2353 level, then it will likely test \$2277 support level. A strategic purchase of Solscan, the renowned block explorer of Solana, has been announced by Etherscan, a major Ethereum network block explorer, API, and analytics platform. As stated in the release, the Solscan ecosystem is now officially a part of the Etherscan portfolio, including Bscscan, an explorer for the BNB Smart Chain. In the midst of the Solana ecosystem's meteoric rise, the purchase by Etherscan guarantees long-term development with the support of a competent team. Market analysts and community are amazed at the recent increase in Ethereum's price. A positive trend in the cryptocurrency market caused Ether's price to jump beyond the \$2,400 level. The recent surge of Ethereum is also a reaction to the growing interest in Bitcoin and the cryptocurrency sector as a whole. The price of the cryptocurrency has increased by an astounding 97.1% over the last year. This price surge follows a string of posts by Vitalik Buterin, co-founder of Ethereum, on Twitter, in which he detailed the revised plan for the blockchain in 2024. Brief Correction Underway At the time of writing, ETH is trading at \$2363, down 1.63% in the last 24 hours. If the price manages to go below \$2353 level, then it will likely test \$2277 support level. However, if the price manages to go below \$2353 level, then it will likely test \$2277 support level.

Although the crypto world is a dynamic environment full of opportunity, navigating it may be challenging. Selecting the correct projects might be likened to discovering a rare diamond amidst a sea of pebbles, as there are many offering moonshot returns. As 2024 draws near, the cryptocurrency community is a hive of activity. One question is burning brightly as resolutions are written and investing strategies are honed: which altcoins hold the key to enormous gains in the upcoming year? Fear not, daring investors, for we have discovered three cryptocurrencies ready to rule in January 2024: Retik Finance (RETIK), Ethereum (ETH), and Solana (SOL). Sure, forecasting the future is an art, not a science. These are the rockets you want in your portfolio for the next rally, so fasten your seatbelts. Retik Finance (RETIK) Retik Finance facilitates the integration of cryptocurrency into the global payment macroeconomy, addressing the demand for speed, convenience, safety, and security for users, while enhancing efficiency and reliability for merchants. Drawing on the extensive experience and knowledge of Retik Finance and its partners in mobile payment applications, Retik Finance aims to spearhead the development of blockchain solutions in both traditional and popular payment contexts within the payment industry. As blockchain protocols offer novel ways to incentivize, gain consensus, ensure transparent rule implementation, and more, Retik Finance is poised at the forefront of these transformative developments. Retik harbours a visionary perspective that extends beyond the current financial landscape, envisioning a future characterized by heightened financial empowerment, unwavering dependability, and unparalleled transparency. This vision extends its reach to encompass individuals, enterprises, institutions, and even governments, transcending geographical boundaries and socioeconomic disparities. At the core of this transformative vision are cutting-edge technologies meticulously designed to serve as bridges, fostering seamless connections between the intricate realms of cryptocurrency and traditional fiat payment systems. Retik is positioned as a prospective game-changer in the decentralized finance market with its ambitious roadmap, which includes features like cross-chain compatibility and decentralized governance. Although there is some inherent risk in the early phases of crypto initiatives, Retik defies convention and offers too great a chance to pass up. Retik is an excellent low-risk investment for the risk-taking investor since it has the potential to break out from its early adopter phase and rocket toward widespread adoption in January 2024. Solana (SOL) It hardly takes an introduction to Solana, the speed demon of the cryptocurrency industry. Developers and users have been drawn to it by its lightning-fast transaction rates and inexpensive fees, which have led to the development of a thriving ecosystem of DeFi projects and NFTs. Solana's standing as a formidable force is further cemented by recent alliances with important organisations such as Google Cloud and Samsung. Solana had an amazing 2023, increasing from less than \$10 in January to more than \$120 in December 2023, before correcting to a current price of \$193 as of writing. Its development team is always coming up with new ideas, and its foundational architecture is still strong. Solana may maintain its current pace in January 2024, with new partnerships and initiatives adding to its ecosystem. This would make it an attractive option for investors looking for steady development. Ethereum (ETH) Even though there are more recent aspirants vying for the Ethereum crown, this king is still very powerful. Its strong network, steadfast security, and constantly growing dApp ecosystem make it a mainstay in the cryptocurrency world. Together with the ongoing expansion of NFTs, the Metaverse, and DeFi, all of which are powered by Ethereum's adaptable platform, you have a formula for steady upward momentum. Well-known companies like Microsoft and JP Morgan are adopting Ethereum, giving it more credibility in the mainstream and maybe bringing in money. Ethereum is a reliable investment that should be a cornerstone of any portfolio looking for stability and long-term gains. Ahead of its upcoming upgrade, investors are gearing up to see ETH yield massive profits pre-upgrade in January. Conclusion These three altcoins provide an enticing look into the future for investors looking for bold profits in January 2024. A varied and intriguing three is represented by Solana with its established track record, Retik with its bold potential, and Ethereum with its continuous upgrade. Now fill up your wallets in huge amounts, HODL patiently, and get ready to take off! These three cryptocurrencies are prepared to take the lead in the incredible voyage that the cryptocurrency world is expected to take in the new year. - Bullish KLAY price prediction for 2024 is \$0.2644 to \$0.3381. - Klaytn (KLAY) price might reach \$0.5 soon. - Bearish KLAY price prediction for 2024 is \$0.1439. In this Klaytn (KLAY) price prediction 2024, 2025-2030, we will analyze the price patterns of KLAY by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | KLAYTN (KLAY) PRICE PREDICTION 2024 | | KLAYTN (KLAY) PRICE PREDICTION 2025, 2026, 2027-2030 | | CONCLUSION | | FAQ | Klaytn (KLAY) Current Market Status | Current Price | \$0.2792 | | 24 hr Price Change | 6.88% Up | | 24 hr Trading Volume | \$26,658,459 | | Market Cap | \$971,367,568 | | Circulating Supply | 3,478,685,149 KLAY | All "e" Time High | \$4.38 (On April 02, 2021) | | All "e" Time Low | \$0.05733 (On May 06, 2020) | What is Klaytn (KLAY) | TICKER | KLAY | | BLOCKCHAIN | Klaytn | | CATEGORY | Blockchain | | LAUNCHED ON | 27 June 2019 | | UTILITIES | Governance, tipping system, gas fees & rewards | Klaytn (KLAY) is the native cryptocurrency of the Klaytn blockchain. Klaytn is an open-source, EVM-compatible blockchain that launched in 2019. This layer-1 blockchain aims to focus on aiding the creation and development of metaverses. Klaytn is secured by the Istanbul Byzantine Fault Tolerance (IBFT) consensus as a hybrid alternative to the traditional PoW and PoS models. IBFT offers more scalability to Klaytn. The business-focused blockchain serves as a launchpad for several blockchain apps (BApps). The Klaytn (KLAY) token is used for the transaction fees. Users deploy KLAY as a payment option for building BApps on Klaytn. Klaytn 24H Technicals (Source: TradingView) Klaytn (KLAY) Price Prediction 2024 Klaytn (KLAY) ranks 74th on CoinMarketCap in terms of its market capitalization. The overview of the Klaytn price prediction for 2024 is explained below with a daily time frame. KLAY/USD Rounding bottom pattern (Source: TradingView) In the above chart, Klaytn (KLAY) laid out the rounding bottom pattern. The price movements form a pattern that resembles a bow and hence is also known as the saucer bottom pattern. In general, the rounding bottom pattern indicates a long-term price reversal. This pattern also emphasizes the changes in the market sentiment as the trend seems to shift from bearish to bullish. Investors generally have to stay cautious and time the market well. If the price breaks and moves past the resistance level, it will enter a confirmed bullish trajectory. At the time of analysis, the price of Klaytn (KLAY) was recorded at \$0.2792. If the pattern trend continues, then the price of KLAY might reach the resistance levels of \$0.2874, and \$0.7604. If the trend reverses, then the price of KLAY may fall to the support of \$0.1884, and \$0.1095. Klaytn (KLAY) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Klaytn (KLAY) in 2024. KLAY/USD Resistance and Support Levels (Source: TradingView) From the above chart, we can analyze and identify the following as resistance and support levels of Klaytn (KLAY) for 2024. | Resistance Level 1 | \$0.2644 | | Resistance Level 2 | \$0.3381 | | Support Level 1 | \$0.1939 | | Support Level 2 | \$0.1439 | KLAY Resistance & Support Levels Klaytn (KLAY) Price Prediction 2024 "e" RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Klaytn (KLAY) are shown in the chart below. KLAY/USD RVOL, MA, RSI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the current Klaytn (KLAY) market in 2024. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$0.2198 Price = \$0.2405 (50MA <

Price) | Bullish/Uptrend | | Relative Strength Index (RSI) | Magnitude of price change/Analyzing oversold & overbought conditions | 54.0279 <30 = Oversold 50-70 = Neutral>70 = Overbought | Neutral | | Relative Volume (RVOL) | Asset's trading volume in relation to its recent average volumes | Below/Cutoff line | Weak volume | Klaytn (KLAY) Price Prediction 2024 | Average Directional Index (ADX) and Relative Volatility Index (RVI): Klaytn (KLAY) ADX, RVI (Source: TradingView) From the readings on the chart above, we can make the following inferences regarding the price momentum of Klaytn (KLAY). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 15.1678 | Weak Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 47.54 <50 = Low >50 = High | Low volatility | Comparison of KLAY with BTC, ETH Let us now compare the price movements of Klaytn (KLAY) with that of Bitcoin (BTC), and Ethereum (ETH). BTC Vs ETH Vs KLAY Price Comparison (Source: TradingView) From the above chart, we can interpret that the price action of KLAY is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of KLAY also increases or decreases respectively. Klaytn (KLAY) Price Prediction 2025, 2026 | 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Klaytn (KLAY) between 2025, 2026, 2027, 2028, 2029 and 2030. | Year | Bullish Price | Bearish Price | | Klaytn (KLAY) Price Prediction 2025 | \$1 | \$0.09 | | Klaytn (KLAY) Price Prediction 2026 | \$1.3 | \$0.08 | | Klaytn (KLAY) Price Prediction 2027 | \$1.5 | \$0.07 | | Klaytn (KLAY) Price Prediction 2028 | \$1.8 | \$0.06 | | Klaytn (KLAY) Price Prediction 2029 | \$2.1 | \$0.05 | | Klaytn (KLAY) Price Prediction 2030 | \$2.4 | \$0.04 | | Conclusion: Klaytn (KLAY) price prediction for 2024 is \$0.3381. Comparatively, if unfavorable sentiment is triggered, the bearish Klaytn (KLAY) price prediction for 2024 is \$0.1439. If the market momentum and investors' sentiment positively elevates, then Klaytn (KLAY) might hit \$0.5. Furthermore, with future upgrades and advancements in the Klaytn ecosystem, KLAY might surpass its current all-time high (ATH) of \$4.38 and mark its new ATH. FAQ 1. What is Klaytn (KLAY)? Klaytn (KLAY) is the native cryptocurrency of the Klaytn blockchain. Klaytn is an open-source, EVM-compatible blockchain that launched in 2019. 2. Where can you purchase Klaytn (KLAY)? Traders can trade Klaytn (KLAY) on the following cryptocurrency exchanges such as Binance, Upbit, Huobi, OKEx, and others. 3. Will Klaytn (KLAY) reach a new ATH soon? With the ongoing developments and upgrades within the Klaytn platform, Klaytn (KLAY) has a high possibility of reaching its ATH soon. 4. What is the current all-time high (ATH) of Klaytn (KLAY)? Klaytn (KLAY) hit its current all-time high (ATH) of \$4.38 on April 02, 2021. 5. What is the lowest price of Klaytn (KLAY)? According to CoinMarketCap, KLAY hit its all-time low (ATL) of \$0.0533 on May 06, 2020. 6. Will Klaytn (KLAY) reach \$0.5? If Klaytn (KLAY) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$0.5 soon. 7. What will be Klaytn (KLAY) price by 2025? Klaytn (KLAY) price is expected to reach \$0.8 by 2025. 8. What will be Klaytn (KLAY) price by 2026? Klaytn (KLAY) price is expected to reach \$1 by 2026. 9. What will be Klaytn (KLAY) price by 2027? Klaytn (KLAY) price is expected to reach \$1.3 by 2027. 10. What will be Klaytn (KLAY) price by 2028? Klaytn (KLAY) price is expected to reach \$1.5 by 2028. - Orbit Chain's bridging service, Orbit Bridge, reported on December 31 at 8:52 pm UTC. - \$1.51 billion and \$2 billion in total crypto losses occurred in 2023. There was an assault on Orbit Chain's cross-chain bridge recently, which led blockchain security organizations to estimate that about \$100 million worth of cryptocurrency was stolen in December. According to PeckShield, December saw the fifth-highest number of attacks in 2023, owing to the \$81.5 million Orbit Bridge cross-chain bridge vulnerability, which was announced on January 1st. According to the report, this exploit ranked as the ninth most common attack on a cross-chain bridge in the previous three years. Launched in South Korea in 2018, the cross-chain protocol Orbit Chain's bridging service, Orbit Bridge, reported on December 31 at 8:52 pm UTC that it had been hacked as a result of an illicit breach of access to its ecosystem. Moreover, major worldwide cryptocurrency exchanges were asked by the Orbit Chain team to seize the stolen funds, as stated on January 1st. The team stated: "We are in close contact with law enforcement agencies, and we are working diligently to track down and freeze the assets that have been stolen." Significant Loss Blockchain security companies PeckShield, Certik, and Beosin estimated that between \$1.51 billion and \$2 billion in total crypto losses occurred in 2023 as a result of hacks, frauds, and vulnerabilities. Also, data from PeckShield shows that the months of September and November were the most disastrous, with losses of approximately \$700 million. The Mixin Network lost \$200 million in September, while Poloniex and HX-Heco Bridge had the worst losses in November, at \$131.4 and \$113.3 million, respectively, due to exploits. In March, hackers stole \$197 million from Euler Finance, and in July, they stole \$125 million from Multichain, two other major attacks that happened that year. Highlighted Crypto News Today: Bitcoin ETF Approval Could Ignite a Massive Rally for Solana and Retik Finance

Welcome to the fascinating world of cryptocurrencies, where investors are frequently drawn to chances for significant profits. We've put together a list of seven tokens that are primed for quick 5x gains as January 2024 approaches. Retik Finance (RETIK) is a notable competitor among them all, providing a special combination of strategic alliances and decentralized financing solutions. Come along as we investigate the intriguing world of these tokens, each of which offers a chance for investors to boost their profits in the first month of the next year. Retik Finance (RETIK) Retik Finance (RETIK), with its novel approach to decentralized finance (DeFi), makes a strong argument for a possible 5x increase at the beginning of the upcoming year. RETIK, the native token of the Retik Finance platform, is essential to improving the usability, security, and accessibility of cryptocurrencies. Retik Wallet, DeFi Debit Cards, and Retik Pay are just a few of the ecosystem's many products that smoothly combine traditional and digital money to meet customers' changing demands. In addition, RETIK is positioned as a major participant in the DeFi landscape because of the platform's emphasis on user participation, financial liberty, and governance. Strong investor interest and confidence have already been shown by Retik Finance thanks to its successful presale stage, which has raised an amazing amount of \$2,207,242 and sold a total of 55,144,828 tokens. RETIK has the potential to see a significant 5x increase in value in January 2024, as it develops and broadens its capabilities and as the cryptocurrency community adopts and recognizes it more and more. >>>> Click Here To Buy RETIK Tokens <<<< Pepe (PEPE) Pepe Coin has had a significant influence on the community and used its great cultural appeal to achieve noteworthy success in the meme currency market. A novel redistribution scheme called \$PEPE rewards long-term participants and fosters a strong sense of community. Its foundation is Pepe the Frog's legacy. Since December 9th, Pepe has been in a correction phase; within the past week, the stock has increased by 3.85%, and its monthly performance has shown resilience, with a 17.21% increase in value overall. The most recent report indicates that \$PEPE is now priced at \$0.00000137. The \$PEPE market is currently positive, with a Relative Strength Index (RSI) score of 64.262. The moving averages study indicates short-term sale activity, with the 10-day Simple Moving Average (SMA) at \$0.00000139, and the 10-day Exponential Moving Average (EMA) at \$0.00000100 which all seem to support a positive long-term outlook and can give investors an easy 5x gain in the beginning of the coming year. Arbitrum (ARB) One of the best layer 2 scaling options for Ethereum is called Arbitrum. It makes use of optimistic roll-up technology to use the Ethereum main net's security while offering transactions that are much faster and less expensive. Arbitrum is now the most widely used layer 2 for Ethereum, according to the Ethereum layer 2 tracker, L2beat. Its total value locked, or TVL, is \$5.63 billion, compared to the \$2.60 billion of its next closest rival Optimism. At the time of writing, it was also the most active Ethereum layer 2 in terms of transaction volume, processing over 6.95 transactions per second. As of this writing, the project's ARB token ranks as the 37th largest cryptocurrency asset with a noteworthy market cap of \$1.07 billion. On the other hand, in a bull market, ARB might easily move up the largest cap ranks. Thus, Arbitrum appears to be a solid choice as Ethereum's preferred scaling solution if we witness a cryptocurrency market boom that attracts new investors eager to take advantage of on-chain opportunities, especially at the beginning of the new year 2024, which could potentially give investors a 5x profit gain. >>>> Click Here To Buy RETIK Tokens <<<< Dogecoin (DOGE) Given Dogecoin's remarkable durability since its 2013 introduction, we're highlighting it as one of the top cryptocurrencies to purchase by January 2024, before Bitcoin halving. One of the major winners in the most recent cryptocurrency market boom in 2021 was Dogecoin. A significant number of new investors have entered the cryptocurrency space, and Dogecoin was a clear pick for many of them because of its meme appeal, accessibility on popular trading platforms like Robinhood, and cheap unit price (albeit this is more of a psychological benefit than a practical one). DOGE may rank among the top cryptocurrencies if there is a surge in new investor interest in cryptocurrency following the next halving of Bitcoin. During the last bull market, Dogecoin had significant growth but fell short of \$1. Will it be any different the next time? Market experts believe so, as at the start of next year, it is expected that Doge will be more bullish and give investors a 5x profit gain. >>>> Click Here To Buy RETIK Tokens <<<< Polygon (MATIC) The Polygon team has made significant progress in forging alliances with household names like Reddit, Starbucks, DraftKings, and Robinhood. Reddity's Collectible Avatars offering, which uses NFTs on the Polygon blockchain and has already attained considerable popularity, is a prime example of this success. Heavyweights in the bitcoin sector are also embracing Polygon's technology, even if the project might need more widespread exposure. The OKX cryptocurrency exchange has revealed that they are working on the X1 blockchain technology. Since Polygon's CDK (chain development kit) forms the foundation of the X1 platform, this development is significant for Polygon. The team at Polygon is now working on a token migration from the existing MATIC to a new token called POL, which is an exciting development. The POL coin, according to the Polygon team, is "a more productive" because its holders may act as validators on several blockchains at once. In late October 2023, the POL token's smart contracts were made available on the Ethereum mainnet. We think Polygon is among the best cryptocurrencies to purchase before January 2024 because, should there be a spike in public interest in cryptocurrencies, the project might be in a very strong position to provide a 5x gain for investors. Solana (SOL) One of the quickest and most effective smart contract systems on the market right now is Solana. To be sure, Solana has seen some significant setbacks in the past year. The blockchain has repeatedly stopped due to technical difficulties, and one of its greatest supporters, the FTX cryptocurrency exchange, collapsed in one of the worst scandals in the history of the cryptocurrency business. Despite these problems, Solana continues to survive. Because of its remarkable scalability, it can handle use cases that most other blockchain systems just cannot support. Numerous well-known blockchain and cryptocurrency projects, including Stepn, Helium, Magic Eden, and Orca, are based in Solana. Comparing Solana's DApp ecosystem to rivals like Cardano, it is already far more varied. The simple fact that SOL is currently selling more than 90% below its all-time high is another element that makes it worthwhile to take into consideration. Therefore, purchasing some SOL at current rates may prove to be a wise move, as experts predict Solana has great long-term potential, particularly at the beginning of next year, which experts believe will provide a 5x gain for investors. >>>> Click Here To Buy RETIK Tokens <<<< Uniswap (UNI) Uniswap, a significant participant in decentralized exchanges, facilitates the automated trading of decentralized finance tokens among coin holders, enabling any coin holder to establish a liquidity pool for any chosen token pair. Uniswap has the benefit of being a pioneer in the decentralized exchange market, despite its extreme volatility, according to U.S. News. Although only from 3.9 million addresses, the coin's total trading volume just reached \$1 trillion, indicating lots of possibility for expansion. Experts also say now would be a good time to get UNI, as they predict it will make a 5x profit gain or even more during the beginning of the year. Conclusion Of the seven tokens on the list, Retik Finance (RETIK) stands out as the particularly intriguing one in the context of possible 5x profits in January 2024. Retik Finance distinguishes itself as a project with significant development potential by emphasizing decentralized finance and maintaining user-friendliness. RETIK stands out as a viable option for investors hoping to profit from the projected boom in the cryptocurrency market thanks to its distinctive features, strategic alliances, and creative solutions. Investors are searching for ways to make sizable profits. Retik Finance's unique advantages make it an appealing option for investors hoping to earn significant returns in the first month of 2024, even though other coins could present chances as well. - According to McDermott, this change has the potential to greatly increase institutional support. - The financial industry is on the edge of its seat, waiting for the U.S SEC to approve. Mathew McDermott, head of digital assets at Goldman Sachs, has highlighted the possible effects on the crypto market of approving spot Bitcoin and ether ETFs. According to McDermott, this change has the potential to greatly increase institutional support for digital currencies. He claims that the market's liquidity will be improved and diversified with this approval. He says that the development of institutional-grade products has increased liquidity since it simplifies the investment process for large financial institutions like pension funds and insurance companies in cryptocurrencies. Measured Change Throughout the Year McDermott warns against getting hopes up about a dramatic change to the cryptocurrency market just because these ETFs have been greenlit. He instead foresees a more measured change occurring over the course of the next year, subject to approval from relevant regulatory bodies. The financial industry is on the edge of its seat as big names like BlackRock and several others wait for the U.S SEC to rule on their applications for spot bitcoin ETFs. As a whole, the community is

hoping for the best possible outcome, believing that this would pave the way for institutional investors to put more money into bitcoin. Moreover, according to McDermott, the cryptocurrency sector is expected to have significant growth in the year 2024. Traditional financial institutions’ increased involvement in the cryptocurrency field and the widespread use of blockchain technology in commercial applications are fueling this confidence. The growth of tokenization marketplaces is an important focus for McDermott. Based on his analysis, the rise of secondary liquidity on-chain is a key factor that will propel these platforms to new heights, particularly among investors. Highlighted Crypto News Today:

- The increasing prevalence of AI-powered frauds is highlighted by this instance. - Singapore has warned the people to exercise caution and only trust official sources. Prime Minister Lee Hsien Loong of Singapore has issued a public warning against a new kind of cyber fraud that employs deepfake technology. Recent Facebook posts of his have drawn attention to the proliferation of videos purporting to show him encouraging crypto frauds, which he claims are the product of AI. These deceitful actions demonstrate how online scams are becoming more complex and how modern technology is being used to trick people. Misuse of Technological Advancements Scammers now have a powerful weapon in deepfake technology, which allows them to manipulate real video to make material that is very convincing yet completely fake. Recently, a deepfake video surfaced claiming that entrepreneur Elon Musk has an idea for a cryptocurrency investment platform that does not exist and that Prime Minister Lee Hsien Loong endorses it. This video shows how deepfake technology can modify an interview on CNN to an unsettling degree of realism. The increasing prevalence of AI-powered frauds is highlighted by this instance. These videos, Prime Minister Lee said, are harmful and misleading because they might trick people into investing in scams. Moreover, the government of Singapore has warned the people to exercise caution and only trust official sources for information. It is not new for prominent personalities to be used in financial schemes. Such schemes have repeatedly targeted the prime minister, with earlier incidents dating back to 2018. There was a time when the government had to warn the public against crypto investment schemes that made misleading claims regarding the Prime Minister’s support. Public warnings were reissued in July as yet another phoney video starring Lee Hsien Loong emerged. Highlighted Crypto News Today: Solana Rebounds Above \$105 Level After Severe Selling Pressure

Cryptocurrency enthusiasts are perpetually in search of the next potential gem in the digital asset landscape, especially those priced under \$0.1 with the promise of maximum profits. In this exploration of promising contenders, one standout player, Retik Finance, takes center stage. Let’s delve into the unique features of Retik Finance and explore its potential alongside other affordable tokens like Bonk and Dogecoin. Retik Finance (RETIK) Retik Finance emerges as a groundbreaking project aiming to bridge the gap between decentralized finance (DeFi) and real-world applications. The native token, RETIK, currently trades at an enticing \$0.05 in the project’s presale stage 3, providing an attractive entry point for early adopters. The potential for maximum profits is evident, considering that at its current price, holders could experience up to 300% profits upon listing on major exchanges. Impressively, Retik Finance has demonstrated robust presale performance, raising over \$2 million in just two weeks. This not only indicates strong community support but also boosts investor confidence. The upcoming listing on two top-tier centralized exchanges is expected to further enhance visibility and liquidity, potentially driving the value of RETIK even higher. Retik Finance’s unique approach distinguishes it from other projects, instead of aiming to eliminate fiat currency, Retik Finance seeks to bridge the gap between the fiat and crypto worlds. By drawing on extensive experience in fiat currency payment processing and leveraging early entry into blockchain technology, Retik Finance addresses challenges while providing innovative solutions. The three key categories of Retik Finance’s bridging agenda include payment functions for commercial applications, support functions for ongoing adjustments, and addressing prevailing issues in the cryptocurrency realm. Through these comprehensive strategies, Retik Finance aims to overcome challenges and create a seamless interface between the fiat and crypto worlds. Nevertheless, the potential for growth in Retik Finance, with the promise of up to a 300% increase upon listing, positions it as a token priced below \$0.1 for maximizing profits in 2024. Bonk (BONK) Known as a meme token built on the Solana blockchain, Bonk (BONK) has captured the attention of the crypto community. Priced at a mere \$0.00001558, Bonk offers affordability that appeals to a wide range of investors. With a total token supply of 100 trillion and a market capitalization exceeding \$1.1 billion, Bonk has already established itself as a significant player in the crypto space. Several factors contribute to the potential for Bonk to experience a tenfold increase in value in 2024. The rapid expansion of the Solana ecosystem is a key factor that could benefit all Solana-based tokens, including Bonk. Moreover, the active development of new initiatives such as a decentralized exchange (DEX) and a launchpad enhances the utility of Bonk, potentially driving its price upwards. Being a relatively new token, BONK also possesses ample growth opportunities. Bonk’s dedicated community of supporters and its listing on prominent cryptocurrency exchanges further bolster its liquidity and exposure. As the crypto market continues to evolve, Bonk stands out as a token with the potential for maximum profits in 2024. Dogecoin (DOGE) Dogecoin’s distinctive standing in the cryptocurrency realm, marked by its meme status and lively community, positions it as a compelling candidate for potential profits in 2024. With its current valuation at \$0.0921, Dogecoin remains within an accessible range for numerous investors, classifying it as a token below \$0.1 for maximizing profits in 2024. On the bullish front, Dogecoin’s underlying market data provides an optimistic outlook. The significant increase in new DOGE addresses and a high level of active addresses signal growing engagement and interest in the Dogecoin community. This influx of new and active addresses has the potential to drive demand and push Dogecoin towards higher resistance levels. If the current momentum continues and market sentiment strengthens, DOGE could break past \$0.098, aiming for the second barrier at \$0.104 and possibly testing the highest target at \$0.1159. The strong backing from the large and dedicated Dogecoin community, along with robust whale support, historically plays a pivotal role in DOGE’s price movements. In conclusion, within the cryptocurrency market’s landscape of promising opportunities, Retik Finance stands out as the optimal choice for investors seeking maximum profits in 2024 among tokens priced below \$0.1. While Bonk and Dogecoin also offer unique value propositions, Retik Finance distinguishes itself with a set of factors that uniquely contribute to its exceptional growth potential. Visit the links below for more information about Retik Finance (RETIK): - Website: <https://retik.com/> - Whitepaper: <https://retik.com/retik-whitepaper.pdf> - Linktree: <https://linktr.ee/retikfinance>

The past days have been marked by dynamic shifts, with notable developments in the fate of Dogecoin, the remarkable success of Retik Finance’s presale, and the rollercoaster ride of Bonk as it strives to secure a spot among the top 50 tokens. Let’s dive into these intriguing events that have captured the attention of crypto enthusiasts around the globe. Retik Finance Presale Surges Past \$2 Million Milestone In a significant milestone for the burgeoning decentralized finance (DeFi) platform, Retik Finance (RETIK) has successfully motored past the \$2 million mark in its presale journey. Launched on December 6th, 2023, the project has garnered tremendous support from enthusiastic investors, selling over 50 million of its total 85 million RETIK tokens allocated for the first three presale stages. What makes this achievement particularly noteworthy is the fact that Retik Finance is still in its early presale phase. The robust investor confidence is evident as the project gears up for the next phase, where the token price is set to increase from \$0.05 to \$0.06 offering a price growth of 20%. This accomplishment not only speaks to the potential perceived by the investor community but also highlights the growing interest in innovative DeFi solutions, such as those offered by Retik Finance. Retik Finance (RETIK) stands out as a pioneering decentralized finance (DeFi) platform with a bold mission: to establish a seamless connection between the conventional financial system and the realm of cryptocurrencies. At the heart of its offerings lies Retik DeFi Debit Cards, a groundbreaking solution that liberates users from the complexities of converting cryptocurrencies for real-world transactions. This innovative product empowers individuals to effortlessly utilize their digital assets in everyday scenarios, effectively bridging the gap between the virtual and physical economies. Dogecoin Volumes Dip Below \$0.10 Mark Meanwhile, in the realm of well-known and beloved meme-inspired cryptocurrencies, Dogecoin (DOGE/USD) has experienced a dip below the \$0.10 mark. Trading around \$0.0903 as of writing, Dogecoin has faced a modest 4.18% decline from the previous day, showcasing the inherent volatility of the crypto market. Despite this setback, Dogecoin continues to hold its position as the 10th largest cryptocurrency by market capitalization, boasting a significant value of \$13.02 billion. The 24-hour trading volume for Dogecoin stands at an impressive \$575.36 million, underscoring the coin’s continued popularity and trading activity. Dogecoin’s journey in the crypto space has been nothing short of remarkable, starting as a lighthearted internet meme and evolving into a widely recognized digital currency. The recent dip, while relatively minor, adds an interesting twist to Dogecoin’s ongoing narrative and leaves enthusiasts speculating on its future trajectory. Bonk’s Rollercoaster Ride to Top 50 Tokens In the volatile landscape of meme coins, Bonk has emerged as one of the most talked-about stories in the crypto sphere over the last few weeks. This dog-themed coin experienced an astonishing surge of nearly 1,000% in just a matter of weeks, contributing to the broader momentum within the Solana ecosystem. However, as is characteristic of meme coins, Bonk has faced substantial fluctuations, particularly after hitting a new all-time peak. Bonk soared to a remarkably high price of \$0.00003416 on Friday, capturing the attention of investors and crypto enthusiasts alike. However, in a swift turn of events, the coin has since experienced a nearly 44% drop in a matter of days, currently resting at \$0.00001593. Despite this substantial dip, Bonk remains resilient, only erasing about a day’s worth of gains. Over the past seven days, Bonk is still up by an impressive 56%, and over the last 30 days, it has surged by an astounding 502% and is riding its way up to the top 50 tokens. In conclusion, the recent events in the crypto space, from Retik Finance’s presale success to Dogecoin’s dip and Bonk’s rollercoaster ride, highlight the dynamic and ever-changing nature of the cryptocurrency market. The Retik Finance presale success reveals its massive adoption and acceptability among investors. The token has proven itself through its real-life applications and impressive growth potential. Transitioning into 2024, it’s a major token to look out for for substantial gains. NEW YORK (BUSINESS WIRE) – Having already named Bitcoin one of the firm’s “screaming buys” for 2024, VanEck is today sharing a number of other key updates around its views on digital assets and the growth in its global lineup of digital asset-linked funds. As the first ETF provider to file for a Bitcoin-related ETF back in 2017, VanEck has played a leading role in bringing relevant related exposures to the marketplace for the past several years. Globally, assets in VanEck’s crypto-linked funds are fast approaching \$1 billion and just yesterday (December 27) the firm’s VanEck Digital Transformation ETF (DAPP) surpassed \$100 million in AUM. “Crypto is the hottest part of the investment market today, and a range of factors, not the least of which being potential movement on the introduction of a spot Bitcoin ETF in the U.S., has Bitcoin and the broader crypto space poised to break out in 2024,” said Jan van Eck, CEO of VanEck. Added Matthew Sigel, Head of Digital Assets Research for VanEck: “DAPP provides an excellent window into the year that was in 2023 and an important lens through which to view the year to come. DAPP’s 2023 performance, which as of December 28 was at more than +300% year-to-date, has been driven by Coinbase and Bitcoin miners. Miners are earning solid margins as mining machine prices have lagged the price of the coin. Also, many on-chain fundamentals have improved in recent weeks as Bitcoin profits are redeployed into newer projects on the Bitcoin blockchain or on other open source chains like Solana. “Meanwhile, Coinbase, a large DAPP constituent, stands out for its market share gains, which we think are sustainable, as continued Sigel. “If we at VanEck are correct that Bitcoin will make an all-time high next year on the back of the Bitcoin halving, a more relaxed U.S. Federal Reserve, and continued crypto adoption in emerging markets, then 2024 may be another strong year for the universe of companies so well-captured by the DAPP ETF. “Sigel and the VanEck team are prolific producers of digital assets-focused research, which can be accessed here. DAPP is but one of several crypto-related funds the firm has available in the U.S., beyond its offerings in Europe, including the VanEck Ethereum Strategy ETF (EFUT), a unique actively managed ETF designed to seek capital appreciation by investing in Ether (ETH) futures contracts. EFUT is the only ETF providing focused exposure to ETH futures that is structured as a C-Corp., potentially offering a more efficient tax experience for long-term investors. EFUT does not invest in ETH or other digital assets directly. The firm’s lineup also includes the VanEck Bitcoin Strategy ETF (XBTF) which, like EFUT, is also structured as a C-Corp. XBTF does not invest in BTC or other digital assets directly. VanEck posts frequently on crypto-related news and trends on X (formerly Twitter) at @vaneck\_us and will continue to share updates with investors in the weeks to come as new developments arise. About VanEck VanEck has a history of looking beyond the financial markets to identify trends that are likely to create impactful investment opportunities. We were one of the first U.S. asset managers to offer investors access to international markets. This set the tone for the firm’s drive to identify asset classes and trends – including gold investing in 1988, emerging markets in 1993, and exchange traded funds in 2006 – that subsequently shaped the investment management industry. Today, VanEck offers active and passive strategies with compelling exposures supported by well-designed investment processes. As of November 30, 2023, VanEck managed approximately \$84.8B in assets, including mutual funds, ETFs and institutional accounts. The firm’s capabilities range from core investment opportunities to more specialized exposures to enhance portfolio diversification. Our actively managed strategies are fueled by in-depth, bottom-up research and security selection from portfolio managers with direct experience in the sectors and regions in which they invest. Investability, liquidity, diversity, and transparency are key to the experienced decision-making around market and

index selection underlying VanEck's passive strategies. Since our founding in 1955, putting our clients' interests first, in all market environments, has been at the heart of the firm's mission. Important Disclosures Digital asset prices are highly volatile and the value of digital assets can rise or fall dramatically and quickly. If their value goes down, there's no guarantee that it will rise again. As a result, there is a significant risk of loss of your entire principal investment. VanEck Digital Transformation ETF (DAPP) will not invest in digital assets (including cryptocurrencies) (i) directly or (ii) indirectly through the use of digital asset derivatives. The Fund also will not invest in initial coin offerings. Therefore the Fund is not expected to track the price movement of any digital asset. Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully various risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund. An investment in the Fund may be subject to risks which include, among others, risks related to investing in digital transformation companies, special risk considerations of investing in European issuers, equity securities, small- and medium-capitalization companies, information technology sector, financials sector, foreign securities, emerging market issuers, market, operational, index tracking, authorized participant concentration, no guarantee of active trading market, trading issues, passive management, fund shares trading, premium/discount and liquidity of fund shares, non-diversified and industry concentration risks, all of which may adversely affect the Fund. Emerging market issuers and foreign securities may be subject to securities markets, political and economic, investment and repatriation restrictions, different rules and regulations, less publicly available financial information, foreign currency and exchange rates, operational and settlement, and corporate and securities laws risks. Small- and medium-capitalization companies may be subject to elevated risks. The technology relating to digital assets, including blockchain, is new and developing and the risks associated with digital assets may not fully emerge until the technology is widely used. Digital asset technologies are used by companies to optimize their business practices, whether by using the technology within their business or operating business lines involved in the operation of the technology. The cryptographic keys necessary to transact a digital asset may be subject to theft, loss, or destruction, which could adversely affect a company's business or operations if it were dependent on the digital asset. There may be risks posed by the lack of regulation for digital assets and any future regulatory developments could affect the viability and expansion of the use of digital assets. An investment in the VanEck Ethereum Strategy ETF (EFUT) may be subject to risks which include, but are not limited to, risks related to market and volatility, investment (in ETH futures), ETH and ETH futures, futures contract, derivatives, counterparty, investment capacity, target exposure and rebalancing, borrowing and leverage, credit, interest rate, liquidity, investing in other investment companies, management, new fund, non-diversified, operational, portfolio turnover, regulatory, repurchase agreements, tax, of cash transactions, authorized participant concentration, no guarantee of active trading market, trading issues, fund shares trading, premium/discount risk and liquidity of fund shares, U.S. government securities, debt securities, municipal securities, money market funds, securitized/mortgage-backed securities, sovereign bond, ETH-related company, ETH-related concentration, and equity securities risks, all of which could significantly and adversely affect the value of an investment in the Fund. The value of Ethereum (ETH) and the Fund's ETH Futures holdings, could decline rapidly, including to zero. You should be prepared to lose your entire investment. The Fund does not invest in ETH or other digital assets directly. The further development and acceptance of the ETH network, which is part of a new and rapidly changing industry, is subject to a variety of factors that are difficult to evaluate, the slowing, stopping or reversing of the development or acceptance of the ETH network may adversely affect the price of ETH and therefore cause the Fund to suffer losses, regulatory changes or actions may alter the nature of an investment in ETH or restrict the use of ETH or the operations of the ETH network or venues on which ETH trades in a manner that adversely affects the price of ETH and, therefore, the Fund's ETH Futures. ETH generally operates without central authority (such as a bank) and is not backed by any government, ETH is not legal tender and federal, state and/or foreign governments may restrict the use and exchange of ETH, and regulation in the United States is still developing. An investment in the VanEck Bitcoin Strategy ETF (XBTF) may be subject to risks which include, among others market and volatility, investment, futures contract, derivatives, investments related to bitcoin and bitcoin futures, derivatives, counterparty, investment capacity, target exposure and rebalancing, borrowing and leverage, indirect investment, credit, interest rate, illiquidity, investing in other investment companies, management, new fund, non-diversified, operational, portfolio turnover, regulatory, repurchase agreements, tax, of cash transactions, authorized participant concentration, no guarantee of active trading market, trading issues, fund shares trading, premium/discount and liquidity of fund shares, U.S. government securities, debt securities, municipal securities, money market funds, securitized/asset-backed securities, and sovereign bond risks, all of which could significantly and adversely affect the value of an investment in the Fund. The value of Bitcoin and the Fund's Bitcoin Futures holdings, could decline rapidly, including to zero. You should be prepared to lose your entire investment. The Fund does not invest in bitcoin or other digital assets directly. The further development and acceptance of the Bitcoin network, which is part of a new and rapidly changing industry, is subject to a variety of factors that are difficult to evaluate, the slowing, stopping or reversing of the development or acceptance of the Bitcoin network may adversely affect the price of bitcoin and therefore cause the Fund to suffer losses, regulatory changes or actions may alter the nature of an investment in bitcoin or restrict the use of bitcoin or the operations of the Bitcoin network or venues on which bitcoin trades in a manner that adversely affects the price of bitcoin and, therefore, the Fund's Bitcoin Futures. Bitcoin generally operates without central authority (such as a bank) and is not backed by any government, Bitcoin is not legal tender and federal, state and/or foreign governments may restrict the use and exchange of Bitcoin, and regulation in the United States is still developing. VanEck Ethereum Strategy ETF (EFUT) and VanEck Bitcoin Strategy ETF (XBTF) Futures Contract Risk. The use of futures contracts involves risks that are in addition to, and potentially greater than, the risks of investing directly in securities and other more traditional assets. The market for Bitcoin and Ethereum Futures may be less developed, and potentially less liquid and more volatile, than more established futures markets. Bitcoin and Ethereum Futures are subject to collateral requirements and daily limits that may limit the Funds' ability to substitute or vary their portfolio exposure. Risks related to the Bitcoin and Ethereum Futures. Unlike the spot price of bitcoin and ethereum, which refers to the difference between the current market value of the underlying bitcoin or ethereum (the "spot" price) and the price of the cash-settled futures contracts. This risk may be adversely affected by a negative roll yield in a contango market. The Funds will roll out of one futures contract as the expiration date approaches and into another futures contract on bitcoin or ethereum with a later expiration date. The rolling feature creates the potential for a significant negative effect on the Funds' performance that is independent of the performance of the spot prices of bitcoin and ethereum. A market where futures prices are generally greater than spot prices is referred to as a "contango" market. Therefore, if the futures market for a given commodity is in contango, then the value of a futures contract on that commodity would tend to decline over time (assuming the spot price remains unchanged), because the higher futures price would fall as it converges to the lower spot price by expiration. Extended period of contango may cause significant and sustained losses. VanEck Absolute Return Advisers Corporation is registered with the CFTC as both commodity pool operator and commodity trading advisor, and is a member of the National Futures Association. EFUT and XBTF are speculative in nature and involves a high degree of risk. An investor may lose all or substantially all of an investment in EFUT and XBTF. Commodity futures generally are volatile and these Funds may not be suitable for all investors. Investing involves substantial risk and high volatility, including possible loss of principal. An investor should consider the investment objective, risks, charges and expenses of a Fund carefully before investing. - Arbitrum followed with 31.4 million transactions in the last 30 days. - The expansion of inscriptions has been cited as the reason for this significant volume. Over the last 30 days, zkSync's Ethereum's Layer 2 scalability solution processed 34.7 million transactions, surpassing the Ethereum mainnet in terms of volume. L2Beat statistics shows that over the same time period, 34.2 million transactions were registered on Ethereum's mainnet. Arbitrum followed with 31.4 million transactions in the last 30 days. On the Ethereum mainnet, zkSync functions as a Layer 2 network. It is a cheaper and quicker alternative to the mainnet for verifying transactions since it bundles hundreds or thousands of them into a single cryptographic proof. Inscriptions Craze The expansion of inscriptions, a feature initially developed for Bitcoin, across EVM networks, including the majority of Layer 2 chains, has been cited as the reason for the recent increase in zkSync transaction volume. L2Beat data shows that December 16th was the best day of the month for zkSync in terms of transaction volume. According to Dune data compiled by Dragonfly researcher Hildobbb, 4.6 million of the 5.3 million transactions that day were sync inscriptions, which was pushed out on the network at that time. Since the middle of December, zkSync has been able to outperform Ethereum and its Layer-2s because of transactions linked to inscriptions. Vitalik Buterin, one of Ethereum's co-founders, has recently proposed a way to make the proof-of-stake (PoS) consensus mechanism a considerably simpler and lighter, which would allow the Ethereum blockchain to handle more transactions per second. The co-founder proposed a solution to reduce validators' workload on December 28 by lowering the required number of signatures. The prospect of wealth in the world of cryptocurrency keeps investors enthralled. The prospect of earning millions through wise investments in accessible tokens is growing more and more alluring as we move toward 2024. Three tokens- Retik Finance, Cardano, and Bonk have the potential to create new millionaires and are the focus of this discussion. Affordability doesn't always mean less potential rather, it might reveal undiscovered treasures that have the potential to generate significant profits. These coins are reasonably priced, have distinctive features, and function in industries that are expected to experience explosive expansion. Examining the potential of these inexpensive yet promising tokens, we investigate the elements that may open doors for savvy investors to succeed financially in 2024 and amass wealth. Retik Finance (RETIK) Retik Finance is a complete decentralized finance (DeFi) ecosystem that seeks to revolutionize international commerce; it is more than simply a coin. Fundamentally, Retik Finance provides cutting-edge solutions, such as AI-powered peer-to-peer (P2P) lending, smart cryptocurrency payment gateways, futuristic DeFi debit cards, and multi-chain non-custodial highly secure DeFi wallets. Retik Finance is currently in its presale phase, offering a rare chance for investors to participate in a venture with substantial development potential. There are ten phases to the presale, and each one has a different pricing for RETIK tokens. The tokens were valued at \$0.040 during the just-ended second presale stage. And now as of writing, Retik Finance is currently at stage 3 of its presale, at which the cost of the token is \$0.050, a 66% increase from the start of its presale stage. Currently, Retik Finance has raised a total of \$2,184,442 and sold a total of 54,688,824 tokens. Retik Finance's continuous presale phases are worth keeping an eye on for investors because each one brings with it new price points. There is no denying the project's development potential. The current presale stage is over 64% complete, and the next stage presents a 20% increase with tokens priced at a cheap price of \$0.060. It would be a good time for investors to jump in as the trajectory points to a bright future, hoping to make investors millionaires in the coming year. Cardano (ADA) Cardano is still among the least expensive cryptocurrencies, trading at less than \$1 at a current price of approximately \$0.6. This is especially true in light of the recent cryptocurrency downturn, which has caused Cardano to retrace its losses from its peak of \$3.10 in September 2021. Cardano, according to Coinbase, is a blockchain platform based on the Ouroboros proof-of-stake consensus algorithm, which enables transaction validation at low energy costs. According to its creators, Ouroboros permits the decentralization of the Cardano network and can stably grow to meet demands worldwide without jeopardizing security. Cardano has a stellar track record thus far. According to InvestorPlace, by the end of 2022, it completed over 20 million transactions without experiencing any outages. On October 18, 2021, it introduced ADA Cash, a reward token that attracted 10,000 users in less than a month. It is now a well-liked blockchain for the exchange of DeFi transactions and non-fungible tokens. With the features above, market experts see Cardano, a very cheap token making lots of people new millionaires in 2024. Bonk (BONK) Bonk (BONK) has seen a notable increase after becoming public on Binance and other major exchanges. In just one month, the price of BONK has increased by almost 1000% thanks to these postings. By including Bonk (BONK) in its Binance Convert service, Binance has advanced its efforts even further by enabling fee-free trading of BONK. This action not only improves accessibility but also shows Binance's belief in the token's future. According to the most recent update, BONK's price is cheaply trading at \$0.00001825, with a 24-hour high of \$0.00001790 and a low of \$0.00001923, respectively. Experts predict that in 2024, BONK's value will rise even further, making investors among them millionaires. Conclusion Retik Finance (RETIK) stands out among the competition when it comes to tokens that are reasonably priced and have the potential to make new millionaires in 2024. Given its strategic emphasis on decentralized finance and its unwavering dedication to delivering inventive solutions, Retik Finance seems poised for
