- There has also been a resurgence of interest in stablecoins like USDC and USDT: From around 37% in January to almost 50% in March. - During the week of January 27, 2025, sales of Bitcoin increased by 13%, whilst Ethereum (ETH) and Solana (SOL) saw declines. According to statistics released today by Mercuryo, a global payments infrastructure platform, traders have turned to the relative safety of bitcoin (BTC) and stablecoins this year as the fear of a global trade war and economic collapse is heightened by US President Donald Trump's sweeping tariffs. Although the cryptocurrency market started 2025 in a euphoric state, this was short-lived as the S&P 500 entered correction territory due to a worldwide stock market sell-off. A fresh sensation of Fear, Uncertainty, and Doubt (FUD) is engulfing cryptocurrency traders. According to statistics from CoinMarketCap, the overall market cap of the cryptocurrency industry fell 18% in 2025, from \$3.25 trillion on January 1, 2025, to \$2.67 trillion on April 3, 2025. However, despite decreasing purchasing pressure for competing cryptocurrencies, demand for Bitcoin on the Mercuryo platform has remained strong. For instance, during the week of January 27, 2025, sales of Bitcoin increased by 13%, whilst Ethereum (ETH) and Solana (SOL) saw declines of 4% and 10%, respectively. Additionally, during the week of March 24, 2025, Bitcoin purchases increased by 8%, whilst Ethereum purchases saw a 20% weekly decline. As the meme coin frenzy that swept the network in 2024 and the first few days of this year starts to subside, the flight to Bitcoin coincides with a decline in demand for SOL. For instance, during the week of February 24, 2025, Bitcoin purchases surged 47%, whilst SOL only saw a meager 9% increase. There has also been a resurgence of interest in stablecoins like USD Coin (USDC) and Tether tokens (USDT): From around 37% in January to almost 50% in March, stablecoins accounted for a larger share of weekly transactions on the Mercuryo platform. Greg Waisman, Chief Operating Officer at Mercuryo stated: "This year we've witnessed a retreat to bitcoin and stablecoins as these assets represent a safe haven in an edgy cryptocurrency market now in the throes of FUD as Trump's tariffs threaten the global economy. Demand for Bitcoin, which is viewed by some as digital gold, has remained robust. Meanwhile, we've seen a flight to the sanctuary of stablecoins. Retail mania around meme coins already feels like a distant memory and this is reflected in a significant pullback in the buying of Solana on the Mercuryo platform." With a range of payment options and smooth on-chain integration, Bitcoin and Stablecoins Surge as Traders Seek Safety Amid Market FUD Mercuryo is a pioneer and innovation in the rapidly evolving Web3 sector. For those who are new to the digital token arena, Mercuryo's user-friendly solutions are making things easier. Mercuryo integrates many payment options into a single interface and specializes in efficient capital flow within the DeFi ecosystem. In the rapidly evolving Web3 arena, Mercuryo is a pioneer and innovator that offers a range of payment options in addition to integrated on-chain capabilities. For those who are new to the digital token arena, Mercuryo's user-friendly solutions are making things easier. With ambitions to grow even more as it keeps innovating with the stack of products, Mercuryo has been proudly collaborating with industry giants like MetaMask, Trust Wallet, Ledger, 1inch, PancakeSwap, and more since 2018.

As the cryptocurrency market continues to evolve, 2025 has started with a wave of enthusiasm. Those looking for reliable long-term cryptos have various options offering stability and the potential for substantial growth. With well-established names like Bitcoin and Ethereum, and newcomers making waves, this guide introduces the six best cryptos to buy today for those aiming for long-term value.

1. Bitcoin (BTC) Bitcoin, the pioneer of cryptocurrencies, remains the most well-known digital currency worldwide. Dominating the market with a valuation of over \$1.7 trillion, Bitcoin comprises more than 60% of the entire cryptocurrency market value. Its straightforward design, limited availability, and increasing acceptance are its core appeals. Following the U.S. SEC's approval of several spot Bitcoin ETFs in early 2024, Bitcoin became more accessible, attracting significant capital inflows and driving the price to peak at over \$109,000 by early 2025. Although the price has adjusted to about \$87,000, Bitcoin is still considered digital gold. The halving event, which occurs every four years, cuts mining rewards in half, often catalyzing significant price increases within the following 12 to 18 months. With the most recent halving in April 2024 and growing support from U.S. politicians, Bitcoin is a prime choice for those seeking durable value and broad adoption.
2. Ethereum (ETH) As the second-largest cryptocurrency in terms of market capitalization, Ethereum serves as a fundamental pillar of the decentralized internet. It facilitates smart contracts, DeFi protocols, NFTs, and Web3 applications, extending its utility beyond mere currency. The transition of Ethereum from proof-of-work to proof-of-stake has notably decreased its environmental impact, aligning it with a more sustainable future. The SEC's nod to spot Ether ETFs in mid-2024 has enhanced its credibility, broadening access across the market. Although Ethereum has experienced a 40% decline over the previous year, its ecosystem is swiftly growing. Anticipated scalability improvements like sharding suggest that Ethereum remains a prime choice among the best cryptos to buy today, appealing widely to those

engaged in technological development. 3. Solana (SOL) Recognized for its superior performance capabilities, Solana has established itself as a go-to blockchain for decentralized applications, thanks to its exceptional speed, minimal cost per transaction, and a vibrant ecosystem supporting meme coins. The platform's revival is partly thanks to popular new entries like Dogwifhat (WIF) and Bonk (BONK), alongside a meme token inaugurated by President Donald Trump. Past challenges with network stability have been addressed, boosting confidence and lifting Solana's valuation to over \$70 billion. With its robust infrastructure and increasing cultural impact, Solana continues to be one of the best cryptos to buy today, especially attractive to those investing in the ongoing popularity of dApps and meme-driven assets. 4. Avalanche (AVAX) Avalanche Analysis: Known for its distinctive subnet architecture, Avalanche supports the creation of specialized blockchains for diverse applications, from finance and gaming to enterprise solutions. While AVAX is rebounding from significant losses in 2022, its prospects are promising. Ava Labs remains committed to a vision of a scalable, multi-chain ecosystem, positioning Avalanche at the forefront should bespoke blockchains become mainstream. With a current market capitalization around \$8.5 billion, AVAX offers a potentially lucrative but high-risk opportunity. For those exploring the best cryptos to buy today with a focus on foundational blockchain technology, Avalanche merits consideration. 6. BlockDAG (BDAG) BlockDAG (BDAG) is quickly gaining attention as an advanced force in the cryptocurrency world. It has successfully raised over \$210.5 million during its ongoing presale and is often referred to as a "Kaspa killer" because of its cutting-edge Directed Acyclic Graph (DAG) technology. This technology allows BlockDAG to handle transactions concurrently, which results in extremely fast processing times and no traffic jams. It is also compatible with EVM and WASM, enhancing its appeal to developers. Among its features is the Token & NFT Wizard, designed to simplify the entry process for creators. Currently, as of Batch 27, BDAG's price has risen to \$0.0248 from an initial \$0.001, marking a 2,380% increase for early participants. With its beta testnet already live in March 2025 and ten major exchange listings anticipated, there is a strong expectation that BDAG could climb to \$1 post-launch, making it one of the best cryptos to buy today with significant potential for returns. Final Thoughts The cryptocurrency market remains unpredictable, yet it still offers substantial profit opportunities, particularly through projects that boast robust technology, clear development plans, and dynamic communities. While Bitcoin and Ethereum continue to be prominent players, emerging entities like BlockDAG are making significant inroads and have the potential to surpass others in future market cycles. For those weighing risk against potential rewards, these six cryptocurrencies provide a balanced array of stability, cutting-edge innovation, and prospects for long-term growth. Caution is advised, as market fluctuations can be harsh. It's essential to conduct thorough research before making any decisions. Disclaimer: TheNewsCrypto does not endorse any content on this page. Bitcoin (BTC) continues to dominate the crypto market, fluctuating around the \$85,000 mark as crypto investors gauge the next move. While BTC remains the flagship cryptocurrency, its rate volatility makes it a difficult entry point for many traders. Meanwhile, Ozak AI (OZ) is gradually gaining momentum, growing from just \$0.003 in its presale with a strong trajectory towards the \$1 mark. With progressive AI-powered blockchain solutions and growing investor interest, Ozak AI is proving to be a high-potential funding in 2025. Bitcoin's Price Fluctuations and Market Sentiment Bitcoin's latest price movements around \$85K replicate the continuing tug-of-war between bullish momentum and profit-taking. Despite achieving new highs in 2025, BTC remains volatile, stimulated through macroeconomic factors, institutional adoption, and regulatory developments. While long-term holders continue to build up, short-term buyers are capitalizing on price swings, leading to market fluctuations. Although Bitcoin is a validated asset, its high price makes it less available to new traders seeking out sizable booms. Many are now turning to emerging cryptocurrencies with better upside capability, inclusive of Ozak AI, which gives a possibility to multiply investments significantly. Ozak AI's Steady Surge Toward \$1 Ozak AI is making waves within the crypto area through combining artificial intelligence with blockchain technology to revolutionize predictive analytics and decentralized data processing. Unlike meme coins or simply speculative assets, Ozak AI provides real-world application, attracting buyers who are searching for long-term boom. Currently priced at simply \$0.003 in Ozak AI presale stage, OZ has already garnered huge interest, with expectancies of attaining \$1 in the near future. This represents a 300x benefit for early traders, a degree of boom that a far outpaces Bitcoin's trajectory. Why Ozak AI Offers a Unique Investment Opportunity AI-Powered Blockchain Innovation "Ozak AI integrates machine learning and AI-pushed analytics into the blockchain era, providing practical solutions for agencies and investors. Early-Stage Growth Potential " With 3rd OZ presale providing an access point at \$0.003, investors have the possibility to gain exponential returns as demand increases. Limited Token Supply " Unlike Bitcoin's slow halving mechanism, Ozak AI has a structured tokenomics version designed to power scarcity and long-term value appreciation. Institutional and Retail Investor Interest " The AI crypto market is gaining traction, with major investors recognizing the transformative potential of projects like Ozak AI. While Bitcoin maintains to lead the marketplace, its volatility and high entry price are pushing buyers to seek alternative possibilities. Ozak AI, with its modern AI-powered blockchain solutions, provides a unique chance for large gains. As it moves gradually from \$0.003 closer to its \$1 target, early buyers stand to advantage from exponential boom. With increasing adoption and a robust use case, Ozak AI could emerge as one of the biggest stories in the subsequent bull run. About Ozak AI Ozak AI is a blockchain-based project that provides a technology platform that specializes in predictive AI and advanced data analytics for financial markets. Ozak AI helps crypto investors and businesses in decision-making by providing real-time, accurate, and actionable insights through machine learning algorithms and decentralized network technologies. A three-day sprint for Bitcoin developers to prototype, compete, and take the main stage at the world's largest Bitcoin conference. LAS VEGAS – April 2, 2025 – BTC Inc., the organizers of the world's largest Bitcoin conference, today announced the The Bitcoin Games B25 Hackathon presented by Bitcoin++ – a high-impact builder event designed to push the boundaries of what's possible on Bitcoin. Submissions open April 7, with the winner being announced during the conference (May 27–29). The Hackathon will bring together developers, designers, protocol engineers, and startups from around the world to build and ship new open-source tools that move the ecosystem forward. With a current prize purse of \$30,000 and growing, the hackathon offers one of the most visible platforms in the industry for emerging Bitcoin infrastructure. Finalists will present their work in front of 30k+ attendees including investors, media, and the broader Bitcoin community. Whether one is working on Lightning, custody, privacy, AI integrations, or protocol innovation – this is where ideas gain visibility. – "This isn't a side event – it's where the next generation of Bitcoin begins," said Justin Doochin, Head of Events at BTC Inc. – "There are no gatekeepers here. No pitch decks, no panels – just builders, real code, and a shot to show the world what Bitcoin will do next." Participation is free and open to all skill levels. Builders can register solo or as a team, and all eligible submissions will receive complimentary festival passes to attend Bitcoin 2025. – "What we're creating is a launchpad," Doochin added. – "This Hackathon is where ideas find collaborators, prototypes become products, and open-source work gets the visibility it deserves. If you're building on Bitcoin, you need to be here." The Hackathon builds on a growing legacy of open-source experimentation that has seeded real innovation across the Bitcoin ecosystem. Past participants have gone on to develop impactful projects like ZBD, Trade Guardian, El Tor and TwelveCASH – tools focused on improving bitcoin. This year's competition is made possible with the support of key sponsors including exSat, B++, and UTX0, a venture capital fund, who are helping to fuel the next wave of Bitcoin-native development. Together, they reflect Bitcoin 2025's broader mission: to accelerate open-source progress, empower grassroots contributors, and give builders the space and the spotlight to shape Bitcoin's next chapter. Journalists are invited to tune in to a special kickoff X Space hosted by @TheBitcoinConf on Monday, April 7th at 6:00pm, where full details of the competition will be revealed and questions from interested participants will be answered live.

Sponsorship Opportunities The Bitcoin Games B25 Hackathon offers strategic opportunities for sponsors looking to support Bitcoin-native innovation and connect with technical talent. Sponsors can fund bounties, offer developer tools or infrastructure, and mentor participating teams. Supporting the hackathon will position brands in front of a highly engaged audience of open-source contributors, founders, and future ecosystem leaders. To learn more or inquire about sponsorship: <https://b.tc/conference/2025/sponsor>

About The Bitcoin Conference The Bitcoin Conference, organized by BTC Media (parent company of Bitcoin Magazine), is a global event series featuring notable industry speakers, policymakers, workshops, exhibitions, and entertainment. These events serve as vital platforms for Bitcoin industry leaders, developers, investors, and enthusiasts to gather, network, and exchange ideas. The flagship event took place in Nashville, Tennessee, in 2024, and Bitcoin 2025 is scheduled to be held in Las Vegas in May 2025. Its international events include Bitcoin Asia (Hong Kong, August 2025), Bitcoin Amsterdam (2025 TBD), and Bitcoin MENA (Abu Dhabi, 2025 TBD).

BlackRock CEO Larry Fink delivered an alert regarding the possibility for the U.S. dollar to lose its global reserve currency position. The letter from Chief Executive Larry Fink shows how the national debt increases interest payments beyond \$952 billion during this year. According to the BlackRock CEO, Bitcoin may become more appealing to buyers than the dollar if America does not manage its debt effectively.

U.S. Debt Crisis Raises Questions About the Dollar's Stability The United States national debt keeps rising beyond \$35 trillion throughout 2025. The rapid inflation reached over 10% in 2022 because of government spending, which included the Covid-era stimulus programs. The Federal Reserve intensified interest rate hikes to fight inflation while this monetary policy measure drove up loan costs and intensified market sentiments about an approaching economic recession. According to Fink, the federal budget would exhaust all revenue through debt payments and government expenditures in 2030 leading to a lasting deficit condition. Among his worries he mentioned that the United States risks reducing dollar confidence unless it initiates debt reduction. According to him Bitcoin might become more attractive to investors than the dollar which could cost America a key advantage in the market.

Bitcoin and Digital Assets Gain Attention as Alternative Investments The concerns over the dollar's future have driven renewed interest in Bitcoin and other digital assets. Bitcoin spot ETFs, including BlackRock's iShares Bitcoin Trust (IBIT), have attracted billions in assets, reaching \$100 billion in net holdings by late 2024. Despite some market corrections, Bitcoin remains a key asset for buyers looking for alternatives outside traditional financial markets. Elon Musk has also voiced similar concerns, previously calling the rising U.S. debt levels "terrifying." He has warned that without financial reforms, economic instability could lead to increased adoption of decentralized assets. As a result, many are looking beyond Bitcoin and exploring other blockchain innovations that combine technology with financial applications.

Ozak AI Gains Momentum Amid Changing Market Trends As interest in digital assets grows, AI-driven blockchain projects like Ozak AI are gaining attention. Ozak AI combines artificial intelligence with blockchain technology to provide predictive analytics and decentralized automation tools. The \$OZ token functions as the native currency of Ozak AI, which enables users to obtain AI analysis tools while enabling token holders to vote on governance matters. The current phase of the Ozak AI presale offers \$OZ tokens at \$0.003 each. Buyers have previously contributed more than \$900,000 to the project before the next price increase to \$0.005 takes place. Security audits will protect the project before its market launch at \$0.05 listing price. Ozak AI's

Reward System and Future Prospects Ozak AI has introduced rewards to incentivize participation in its presale. The project is offering \$100,000 in rewards, with an additional \$50,000 distributed among 100 winners. This initiative has contributed to growing demand for the \$OZ token. Security and transparency remain a priority for Ozak AI. The project has completed audits to ensure the safety of its smart contracts. The \$OZ token is expected to be listed at \$0.05, providing early buyers with a potential rally once it reaches exchanges. As economic uncertainty continues, many holders are exploring alternative assets. Bitcoin continues as a leading cryptocurrency, although AI-based blockchain ventures represented by Ozak AI are debuting into the market with growing momentum. Decentralized assets have become an essential part for investors within the changing financial market, regardless of whether AI solutions or Bitcoin retain market dominance. For more information about Ozak AI, visit the links below: - Website: <https://ozak.ai/> - Twitter/X: <https://x.com/OzakAGI> - Telegram: <https://t.me/OzakAGI> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- GameStop raises \$1.48B to purchase Bitcoin, surpassing initial expectations. - The company plans to use its \$4.77B cash reserves to acquire Bitcoin and stablecoins. GameStop, a video game-selling company, has recently closed its issuance of \$1.5 billion convertible senior notes. Following this, the firm reported its intention to utilize the funds raised to buy Bitcoin for its balance sheet. This announcement reflects a vital move given GameStop's need to find new income sources as it strives to secure more assets. The offering, which closed on April 1, 2025, aimed to raise \$1.3B but ended up collecting \$1.48B in gross with the intervention of fees. In its filing to the SEC, GameStop stated that sales were record-setting by achieving \$200 million more in notes than its goal. The funds from the offering will be issued for corporate activities, with a significant portion earmarked for purchasing Bitcoin. The recent decision to include Bitcoin in its treasury points to the evolving traction among public-related companies' view of digital assets. Gamestop is following a path similar to Strategy, formerly known as MicroStrategy, headed by Michael Saylor. Market analysis hints that Strategy is the largest Bitcoin treasury. The Board of Directors, in its meeting held on March 25th, 2025, endorsed the proposal to include such financial tools as Bitcoin and more regulated US dollar-linked stablecoins. The cash reserves of \$4.77 billion will be used to acquire Bitcoin at GameStop. The company aims to leverage Bitcoin opportunities to strengthen its financial security. Concerns Amid the Transition Despite GameStop's announcement on the BTC purchase plan, concerns have been raised in the market. Analyst Bret Kenwell from eToro raised concerns about the future of GameStop's retail operations if Bitcoin becomes the primary focus. The company has already been dealing with issues in its key retail business, including the closure of several locations this year. However, the market showed a slight response; market data indicates that GameStop stock closed its trading day with a surge of 1.34%. Despite the positive news, the stock's minimal rise suggests that investors remain cautious about the long-term implications of the company's shift toward Bitcoin. The raise of \$1.5 billion for BTC acquisition forms the plans by Gamestop to stretch its assets. While the recent update stands as an opportunity to boost its financial standings, issues about the effect on retail operations still remain. Highlighted Crypto News Franklin Templeton Eyes Bitcoin ETP in Europe as Crypto Adoption Grows

- The \$1.5 trillion asset manager Franklin Templeton plans to launch a Bitcoin ETP in Europe. - BlackRock and 21Shares have launched crypto ETPs in Europe, showing rising demand for regulated digital asset investments. Franklin Templeton, a global investment firm managing over \$1.5 trillion in assets, is exploring the launch of a Bitcoin Exchange-Traded Product (ETP) in Europe. As institutional interest in the crypto market continues to grow the company joins other major financial players like BlackRock and 21Shares which have already introduced similar products in the region. Franklin Templeton's interest in a Bitcoin ETP comes after its U.S. spot Bitcoin ETF launch in January 2024 which has gained significant attention from investors. While there's no official launch date announced yet a company spokesperson shared that they're keeping a close eye on regulations to make sure they create the best crypto products for their clients, according to the ETF Stream report. Even though the firm is actively exploring innovative opportunities across various asset classes. Institutional Players Expand Bitcoin ETP Offerings in Europe The race for crypto ETPs in Europe is heating up. BlackRock recently launched its iShares Bitcoin Trust (IBIT) now trading on Xetra and Euronext Paris. At the same time 21Shares is stepping up its game too adding new Bitcoin, Solana and XRP ETPs on Nasdaq Stockholm just last week. With Franklin Templeton now considering a European Bitcoin ETP institutional interest in crypto continues to gain momentum. If approved, this could boost Bitcoin's role in traditional finance and attract more institutional capital into the digital asset space. Highlighted Crypto News Today: Is Peanut the Squirrel Eyeing Bearish Trends as Token Outlives Hype?

- Metaplanet acquires 160 BTC for \$13.3M, increasing its total holdings to 4,206 bitcoins. - With \$356.2M worth of BTC, it has become Asia's largest and 9th-largest corporate Bitcoin holder. Metaplanet, also referred to as 'Asia's MicroStrategy', has added another 160 BTC worth \$13.3 million to the Bitcoin stack. It appears that the Japanese firm is going all in on Bitcoin. The company acquired 696 Bitcoins worth \$67.8 million on April 1st which made it the 9th-largest corporate holder of Bitcoin. Metaplanet Bitcoin Accumulation Strategy Metaplanet uses Bitcoin accumulation strategy to benefit from market adjustments. The company continues to take brave actions during a period of market uncertainty and US tariff hikes which has people across the board feeling anxious. On Wednesday, the firm revealed that it acquired 160 Bitcoins, which are valued at \$13.3 million with an average price of \$83,264. Now by this purchase, its holding increased to 4,206 BTC. As per the current market price, Metaplanet's current holdings are worth about \$356.2 million. Metaplanet Bitcoin Goals In 2025,

Metaplanet has some bigger ambitions; the firm aims to expand its Bitcoin holdings by more than fivefold from its current treasury. Simon Gerovich, CEO of Metaplanet said in a previous X post that in 2025 they will expand their BTC holding to 10,000, utilizing the most accretive capital market tools available to them. Through partnerships the company plans to promote Bitcoin adoption across Japan and worldwide. Simon clarified that The company plans to solidify its leadership position as Asia's top Bitcoin treasury organization during this current year. "We maintain complete focus on execution while working to deliver maximum value to our shareholders during this year." Now with this massive latest purchase, Metaplanet entered the top 10 publicly traded corporate holders of Bitcoin. Currently, the company is in the 9th position, but it is the largest in Asia as per BitcoinTreasuries.net data. Highlighted Crypto News Today: Is Cronos (CRO) Preparing for a Major Price Breakout Above Key Levels?

Bitcoin has long been celebrated as the pioneer of digital currency, fundamentally changing how we perceive money and value in the digital age. Its introduction redefined the financial system, offering a decentralized, peer-to-peer network that put power back in the hands of individuals. While Bitcoin remains a powerful force in the crypto market, the industry is evolving, and new challenges demand fresh innovation. Enter RUVI, a project set to take the lead by combining artificial intelligence with decentralized technology. With its highly anticipated token presale just around the corner, RUVI is gearing up to redefine blockchain's role in solving real-world problems. Bitcoin's Legacy: The Original Crypto Trailblazer When Bitcoin launched in 2009, it did more than introduce a digital currency. It established blockchain as a secure, transparent, and decentralized ledger system. Bitcoin paved the way for countless innovations within the cryptocurrency ecosystem, from decentralized finance (DeFi) to smart contracts and tokenized assets. But Bitcoin's legacy hasn't just been technological. It has fundamentally shifted economic paradigms, captured the imagination of global markets, and proven that blockchain solutions have a place in mainstream industries. While Bitcoin continues to dominate as a digital currency leader, the spotlight is now shifting to projects with a wider vision, using blockchain to address challenges in sectors like artificial intelligence, automation, and data management. RUVI's Vision: AI Meets Blockchain RUVI's mission is to marry the power of artificial intelligence with the security and transparency of blockchain technology. By integrating AI-driven solutions, RUVI aims to create a decentralized ecosystem that is efficient, scalable, and capable of solving real-world challenges. Unlike many crypto projects that focus solely on price speculation or niche applications, RUVI's AI-powered tools are designed to serve businesses, developers, and everyday users. These solutions can streamline operations, improve data accuracy, and drive innovation in industries increasingly reliant on advanced machine learning systems. Presale Incentives: Rewards for Early Supporters RUVI's upcoming presale is designed to reward those who recognize its potential early. The bonus structure ensures that early adopters can maximize their investments through both VIP bonuses and Top Holder Rewards. For instance, VIP 3 comes with a significant 60% bonus. If an investor purchases 100,000 \$RUVI tokens at \$0.01 each, the cost would be \$1,000. The VIP 3 bonus adds an extra 60,000 tokens, bringing the total to 160,000 tokens. With the projected listing price of \$0.07, this initial \$1,000 investment could potentially translate into \$11,200, yielding a remarkable 1,020% return! RUVI also spices up the presale with a Leaderboard Rewards system for its top holders. This provides additional incentives for investors aiming to secure higher positions:

- Top 10 holders receive 500,000 bonus \$RUVI tokens each.
- Top 50 holders secure 250,000 bonus tokens.
- Top 100 holders earn 100,000 tokens.
- Top 200 holders gain 75,000 tokens.
- Top 500 holders are rewarded with 40,000 tokens.
- Top 1,000 holders receive 20,000 extra tokens.

Not only do these bonuses align with RUVI's mission to incentivize early engagement, but they also create a more inclusive investment opportunity for participants of varying budgets. The \$RUVI Token: A Utility-Driven Asset At the heart of RUVI's ecosystem is the \$RUVI token, purpose-built for utility and scalability. Unlike many crypto tokens that depend on market hype for demand, \$RUVI offers real-world functionality. Token holders gain access to premium AI-powered tools, voting rights within the platform's governance system, and the ability to stake tokens for additional rewards. This utility-first approach ensures that \$RUVI has intrinsic value in addition to its growing market potential. Businesses can harness RUVI's ecosystem for smarter decision-making, while individual users benefit from reliable AI-driven insights. By addressing both enterprise and personal needs, RUVI solidifies its position as an asset that goes beyond speculative investing. The Future of Blockchain Bitcoin changed the world by proving that decentralized systems could work on a global scale. RUVI builds on that legacy by tackling the next frontier of innovation with AI integration. For investors, RUVI offers an opportunity to support a project that blends futuristic vision with practical utility. With its presale launching in just a few hours, now is the time to act. Visit RUVI's official platform to explore the presale and secure your tokens. Be a part of this AI-powered revolution that has the potential to redefine blockchain's role in the modern world. Learn More - Website: <https://ruvi.io> - Whitepaper: <https://docs.ruvi.io> - Telegram: <https://t.me/ruviofficial> - Twitter/X: <https://x.com/RuviAI> - Try RUVI AI: <https://web.ruvi.io/register> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this Press Release.

- Metaplanet bought 696 BTC for ¥10.15 billion (\$67.9 million) via options. - The total Bitcoin holdings now stand at 4,046 BTC, worth \$340 million. Metaplanet Inc., a Japanese investment firm, has acquired an additional 696 BTC through cash-secured put options. This purchase brings its total Bitcoin holdings to 4,046 BTC, worth approximately \$340 million. The company has been aggressively expanding its Bitcoin treasury since adopting a BTC-focused strategy in April 2024. *Metaplanet Purchases Additional 696 \$BTC* pic.twitter.com/ppnm8ZNH5X "Metaplanet Inc. (@Metaplanet_JP) April 1, 2025 Metaplanet executed the purchase at an average price of ¥14,586,230 (\$97,512) per BTC. The

total expenditure for this acquisition reached ¥10.15 billion (\$67.9 million). By utilizing options instead of direct market purchases, the company reduced its effective cost per Bitcoin to ¥13,479,404 (\$90,073). The firm's Bitcoin Income Generation business earned ¥770.35 million (\$5.2 million) in Q1 2025. This revenue came from selling cash-secured Bitcoin put options, allowing the company to collect premiums while setting aside funds for future acquisitions. The company deployed ¥9.39 billion (\$62.7 million) as collateral, securing more BTC than it could have via direct purchases. Metaplanet's Bitcoin Yield Performance Metaplanet reported a BTC Yield of 309.8% in Q4 2024 and 95.6% in Q1 2025. BTC Yield measures how effectively the company's acquisition strategy benefits shareholders while accounting for dilution. Over the past nine months, Metaplanet has increased its Bitcoin holdings nearly 28-fold. It held just 141.07 BTC in June 2024 but has now reached 4,046 BTC. The company aims to hold 10,000 BTC by the end of 2025 and 21,000 BTC by 2026. Stock Performance and Market Context Metaplanet's stock price experienced a 9% drop due to market turmoil but rebounded 2% to 409 JPY (\$2.73). Over the past year, the stock has surged over 1,950%, peaking at 665 JPY in February. Last week, the company market bought 150 BTC (\$12.6 million) at an average price of \$83,801 per Bitcoin. It also issued ¥2 billion (\$13.3 million) in zero-interest bonds to finance further Bitcoin acquisitions. Metaplanet now ranks among the top corporate Bitcoin holders, alongside firms like MicroStrategy and Tesla. The company remains committed to its Bitcoin-first strategy, reinforcing its position as a leader in Japan's Bitcoin adoption efforts. - Bitcoin has factored in a mild price increase of 1.39% in the last 24 hours. - The cryptocurrency has seen a prolonged hold-up at the \$80K level in the past two months. Members of the Web3 community are turning attention away from the market due to a lack of significant activity. On the other hand, other subsectors are increasingly spiraling with activity. Global adoption is on the rise, as depicted by instances such as Pakistan's recent pro-crypto stance. Turning to the crypto market, the largest cryptocurrency, Bitcoin, tested the \$81K support over the weekend. In the last 24 hours, BTC has recorded a mild price increase of 1.23%, which has caused it to progress yet again to the \$83K resistance. In the morning hours of March 31, Bitcoin was trading at a low of \$81,816. However, as the price fluctuated it rose to current trading levels. At the time of writing, Bitcoin was trading at \$83,149 as per CMC data. Below \$80,000, #Bitcoin \$BTC faces an air gap! There's little to no support until \$70,000. pic.twitter.com/22HQNTctJ1 Ali (@ali_charts) March 31, 2025 The lack of action in Bitcoin has raised several questions. The prominent analyst, Ali (@ali_charts) stated that if the digital asset falls below \$80K, it has little to no support till \$70,000. This has raised speculations about whether previous support testing could lead to bullish turns. Will Bitcoin's Further Descent Cause the \$90K Rebound? The present consolidation and prolonged hold-up at the \$80K level has caused much frustration in the market. Meanwhile, on the other hand, during the previous consolidation, Bitcoin tested the \$78K level after which it rebounded to \$90,000. Additionally, several analysts similar to Ali, have predicted a testing of the \$70K level. It has led to members expecting the descent to be followed by the desirable upward movement. Meanwhile, Bitcoin's technical indicators reconfirm its existing bearish trend. The Moving Average Convergence Divergence (MACD) signal line is above the MACD line. Further, its RSI value stands at 43.97 as per TradingView data. This indicates an oversold market situation. Meanwhile, other altcoins such as Toncoin showed modest bullish signs in the last 24 hours as per CMC data.

- The Trump family expands its crypto involvement with Bitcoin mining. - Hut 8 owns 80%, supplying mining machines and hosting operations. The Trump family is deepening its involvement in cryptocurrency with a major move into Bitcoin mining. Eric Trump and Donald Trump Jr. have partnered with Hut 8 to launch American Bitcoin, a large-scale U.S.-based mining firm. Hut 8, a publicly traded crypto infrastructure company, will control 80% of American Bitcoin. It will supply nearly 61,000 mining machines and host operations across its 11 U.S. data centers. Eric Trump and Donald Trump Jr.'s company, American Data Centers, will merge with the new venture, holding a 20% stake. No cash was exchanged in the deal, according to Hut 8's press release. Eric Trump, serving as chief strategy officer, sees the venture as part of the family's focus on hard assets. He plans to build a Bitcoin reserve and potentially take American Bitcoin public. The company will be led by Matt Prusak, Hut 8's former chief commercial officer. The venture follows the Trumps' growing crypto footprint. Alongside Bitcoin mining, they have backed projects like World Liberty Financial, memecoins, and a planned stablecoin. President Donald Trump has also positioned himself as the "crypto president," pledging to support the industry. How Will American Bitcoin Compete in Mining? Despite environmental concerns over Bitcoin mining, Eric Trump argues that lower U.S. energy costs will make American Bitcoin competitive globally. Hut 8 CEO Asher Genoot emphasized the firm's scalable infrastructure and cost-efficient energy strategy. The American Bitcoin board will include Tinder co-founder Justin Mateen and FabFitFun co-founder Michael Broukhim. The Trump family will not handle day-to-day mining operations. Hut 8 will manage core business functions, including finance, compliance, and human resources. Hut 8's stock initially surged in premarket trading after the announcement but later settled at \$11.69. The company has faced a 42.8% decline in stock value this year. Donald Trump Jr. highlighted the advantages of mining over simply buying Bitcoin. He believes favorable mining economics create a larger opportunity. The company aims to establish itself as a major player in Bitcoin mining while expanding its Bitcoin holdings. American Bitcoin's long-term goal is a public listing to attract capital. After his re-election, he issued executive orders supporting Bitcoin and digital assets. Hut 8 will hold a conference call on Tuesday to discuss the venture. Highlighted Crypto News Today Elon Musk Confirms U.S. Government Has No Plans to Use Dogecoin

- Bitcoin price is hovering around \$81,360, slipping below \$82K. - Trump's upcoming tariffs on "Liberation Day" resulted in the crypto market sell-off. The crypto market has been facing hard times so far this year. Trump's presidency is focused on bringing clear regulations to take the

country ahead in terms of tech innovation. However, the same presidency is the reason behind the dull market performance of the crypto market. Tariffs and uncertain trade tensions among countries adversely impacted crypto. Bitcoin price slumped to \$81K today with a 2.09% drop in the last 24 hours. The BTC price recorded 6.54% and 4.01% weekly and monthly price drops, respectively. Bitcoin is down by around 7% from its recent peak of \$88,300 recorded last week. Bitcoin's price has maintained a sustained price drop with no signs of recovery since then. Bitcoin price will have a significant impact on the broader crypto market. The present considerable drop in Bitcoin price has caused crypto liquidations to hit \$260 million in the last 24 hours. While the overall crypto market cap dropped by around 3%, the crypto fear and greed index continues to indicate fear sentiment. Trump's Impending Tariffs on Liberation Day Impact Bitcoin Market President Trump is about to reveal "reciprocal tariffs" on Liberation Day, which is on April 2 this week. The anticipation of the upcoming tariffs added pressure to the crypto market. Bitcoin started this week with a price drop below its \$82K support level as a result of upcoming tariffs. Other macroeconomic signals are also causing uncertainty in the market. Core PCE data was released last week. And, it indicated a higher-than-expected inflation. Consumer confidence dropped to its lowest level, further adding to market uncertainty. This explains decreasing investor confidence in cryptocurrencies along with price drops. What's Ahead for Bitcoin Price? For #Bitcoin \$BTC to resume its bull trend, it must clear two critical levels: " Ali (@ali_charts) March 31, 2025 " Short-term holder realized price: \$90,700 " 3-month realized price: \$97,300 pic.twitter.com/7HpxU9xAY5 Renowned market analyst Ali Martinez made a post earlier today on the Bitcoin price. As per his technical analysis, Bitcoin should clear two critical levels to resume its bull trend. They are a short-term holder realized price at \$90,700 and a 3-month realized price at \$97,300. Trump's upcoming tariff announcement on April 2, i.e., Liberation Day, is focused on decreasing US dependence on foreign goods. It is expected to target mainly countries such as the European Union, South Korea, Brazil, and India. Bitcoin market price movements depend on Trump's decisions on April 2 as anticipation builds up across the crypto community.

- Metaplanet issued \$2B in 0% bonds, fully allocated to EVO FUND, to acquire more Bitcoin. - Bitcoin holdings reached 3,350 BTC after a March purchase of 150 BTC at \$12.57M (\$80K) per BTC. Metaplanet has launched its 10th Series of Ordinary Bonds in the amount of \$2 billion (\$13.33 million) to boost its Bitcoin holdings. The company submitted the details of the issuance on March 31, which states that the bonds are due on September 30, 2025. The company said that the issuance will not attract any interest and that the funds raised from the same will be used to buy more BTC. EVO FUND received the full allocation of this bond issuance, reinforcing the firm's Bitcoin acquisition strategy. This development follows Metaplanet's continued efforts to strengthen its balance sheet with more Bitcoin reserves. The company previously announced it would rely on structured bond sales to increase its BTC exposure over time. Company Adds 150 BTC in March, Holdings Reach 3,350 BTC On March 24, Metaplanet added 150 Bitcoin to its corporate treasury at an average price of \$12.57 million per BTC. At current exchange rates, this places the average cost per Bitcoin at approximately \$80,000. The new purchase raised the company's total holdings to 3,350 BTC. Metaplanet has now spent \$42.22 billion (\$270 million) on Bitcoin since it formally adopted it as a key asset in 2024. This makes the firm the biggest Bitcoin staker in the Asian market by volume. The financial reports show stability in the company's buying habits, which shows that it has been accumulating Bitcoins in the long term. In Q4 2024, Bitcoin Yield increased by 309.8% which signifies its exponential growth to outstanding shares. In Q1 2025, the metric currently stands at 68.3%, showing steady performance. The Bitcoin Yield metric is a key measurement the firm uses to assess BTC growth in relation to its equity structure. These figures indicate how quickly the company is expanding its Bitcoin base without diluting shareholder positions excessively. Leadership Team Expands as Strategic Planning Intensifies As reported by NewsCrypto earlier, On March 21, Metaplanet announced the appointment of Eric Trump to its newly formed advisory board. The company said the new board will include experienced voices focused on Bitcoin-related business development. Trump brings experience in real estate and finance and will support ongoing treasury strategies. Simon Gerovich notes that the advisory board will provide support toward a strategic Bitcoin position path. The firm plans to use the board to guide efforts toward expanding BTC reserves while maintaining corporate stability. Metaplanet intends to reach 10,000 BTC in holdings by the end of 2025. The target for 2026 stands at 21,000 BTC. Although it has not tabled out a clear plan of action, it is still obtaining BTC through working with bond financing strategies. Following the implementation of this strategy, the company's stock has increased by over 3,000%, pointing towards commendable BTC index response. - California's AB-1052 bill secures crypto self-custody rights and prohibits payment-based restrictions. - The bill introduces legal handling for unclaimed digital assets and separates politics from crypto activity. California has taken legislative steps to protect digital asset rights, introducing a bill that supports self-custody, blocks discrimination on crypto usage, and addresses unclaimed property in the digital space. The bill, titled AB-1052, seeks to establish a legal foundation for digital assets in the state, with provisions that could affect nearly 40 million residents. In a recent post on X, the nonprofit advocacy group Satoshi Action Fund confirmed that California Assemblymember Avelino Valencia introduced the AB-1052 bill. The legislation was filed earlier as the "Money Transmission Act" on February 20, 2025. However, it was amended on March 28 and renamed "Digital Assets" to incorporate self-custody protections and regulatory clarity. Valencia chairs the Banking and Finance Committee, which governs financial services regulation in California. The bill is currently being processed at the desk and is awaiting its first reading. Bill AB-1052 Enters Legislative Process with Payment Protection Measures AB-1052 affirms the right of individuals to self-custody Bitcoin and other digital assets without restrictions. It blocks public agencies from imposing taxes or discriminatory regulations based solely on the use of digital assets

in payments. The bill also acknowledges the use of digital assets as legitimate legal tender in private transactions. The introduced bill is aimed at protecting digital assets without tough penalties. Another part of the bill introduces a structure of abandoned assets. According to this part, the responsibility of the licensed individuals is to prevent confusion. In addition, the bill includes language that prohibits public officials from promoting any cryptocurrency, security, or commodity. This move modifies California's existing Political Reform Act of 1974, creating separation between public duties and digital asset activities. One section reads that public officials shall not engage in transactions involving digital assets that could cause a conflict of interest.

USA-Related Bitcoin Push Activity Revealed According to a recent update by BTC Maps, a total of 1035 US locations accept Bitcoin payments. Ripple Labs, Solana Labs, and Kraken are key digital asset firms headquartered in the state. In addition, California legislators introduced a separate stablecoin bill on February 2, 2025. It addresses collateral, liquidation, redemption, and audit requirements for stablecoins. Tracking Bitcoin-related bills, 95 of them have already been filed in 35 different states. Just recently, Texas and Kentucky have already passed Bitcoin reserve and right bills. This development follows a recent executive order signed by President-elect Donald Trump, commissioning the formation of a Strategic Bitcoin Reserve (SBR). Highlighted Crypto News

Identifying top cryptos with 1000x potential demands more than trendspotting. It requires evaluating long-term utility, protocol innovation, and resilience in real-world environments. Among the expansive landscape of digital assets, Qubetics, Bitcoin, and Monero consistently emerge with powerful narratives, robust infrastructure, and growing adoption. As blockchain adoption rises across sectors, projects delivering privacy, decentralization, and scalable solutions are gaining serious momentum. These platforms not only address legacy system inefficiencies but also empower businesses and individuals in meaningful ways. The combination of technical depth, visionary roadmaps, and community-driven growth positions them as top cryptos with 1000x potential for those seeking transformative returns.

Qubetics (\$TICS): Enabling Privacy with a Decentralized VPN Qubetics introduces a Decentralized VPN service that enhances privacy, security, and accessibility across digital networks. Unlike centralized VPN providers, Qubetics leverages blockchain to eliminate intermediaries and enhance transparency. This benefits businesses, professionals, and individuals seeking secure communication in an era of data surveillance. The decentralized VPN ensures encrypted traffic routing via peer-to-peer nodes, minimizing single points of failure and shielding user activity from data collectors. This model is especially beneficial for professionals in restrictive jurisdictions, remote teams managing sensitive data, and freelancers needing secure online access. It empowers users with sovereign digital presence without sacrificing usability or performance.

Qubetics Presale and Performance Outlook The Qubetics crypto presale is currently in its 27th stage. Over 504 million tokens have been sold to more than 23,900 holders, raising \$15.5 million in total. Community members can purchase \$TICS tokens at \$0.1300 during this phase. Analyst Predictions: - Current \$TICS Price: \$0.1300 per token - \$TICS at \$1 post-presale: 669% ROI - \$TICS at \$5 post-presale: 3,745% ROI - \$TICS at \$6 post-presale: 4,514% ROI - \$TICS at \$10 post-presale: 7591% ROI - \$TICS at \$15 post-mainnet: 11,437% ROI Early buyers from Stage 1, priced at \$0.01, are already enjoying a 1200% ROI. Stage 27 still offers buyers a 669% potential return if \$TICS hits \$1 after the presale. Qubetics's emphasis on real-world functionality, decentralized security, and cross-chain development makes it one of the top cryptos with 1000x potential.

Bitcoin (BTC): Foundation of Digital Value Bitcoin remains the most recognized and widely adopted digital asset. With a capped supply of 21 million coins, Bitcoin introduces a deflationary monetary policy that contrasts with fiat currency models. Its decentralized network, underpinned by proof-of-work consensus, secures transactions without reliance on centralized authorities. Bitcoin's role has evolved from a peer-to-peer payment system to a digital store of value. Institutions now hold Bitcoin as a treasury asset, and its role in inflation hedging has gained traction. According to Fidelity's digital asset research, institutional participation in Bitcoin custody and trading increased significantly between 2020 and 2023. The Lightning Network, Bitcoin's layer-2 scaling solution, allows microtransactions with minimal fees. This paves the way for broader adoption in gaming, content tipping, and cross-border micropayments. Despite market cycles, Bitcoin consistently demonstrates resilience and continues to attract new users, developers, and infrastructure support. For participants focused on long-term digital preservation and decentralized economics, Bitcoin remains a top contender. Its historical trajectory and technological improvements support its position among the top cryptos with 1000x potential.

Monero (XMR): Leading the Privacy Revolution Monero is a privacy-centric blockchain known for its advanced cryptographic techniques. Using ring signatures, stealth addresses, and confidential transactions, Monero ensures complete anonymity for senders, receivers, and transaction amounts. Unlike transparent chains where transaction histories are publicly visible, Monero offers non-traceable payments by default. This has made it a preferred choice for users prioritizing financial confidentiality. Monero's block size is adaptive, and it uses a proof-of-work algorithm called RandomX, optimized for CPUs. This encourages broader participation by reducing mining centralization. Recent upgrades, including Bulletproofs+, have significantly lowered transaction sizes and fees, enhancing network efficiency. From journalists protecting sources to enterprises handling sensitive transactions, Monero's privacy features make it indispensable in an increasingly monitored world. It upholds core blockchain principles—decentralization, privacy, and fungibility—making it one of the top cryptos with 1000x potential.

Final Thoughts Qubetics, Bitcoin, and Monero deliver more than theoretical gains—they enable practical solutions for privacy, decentralization, and secure communication. Qubetics enhances internet sovereignty with its decentralized VPN. Bitcoin anchors digital economics through scarcity and security. Monero defends privacy at the protocol level. These platforms are shaping the digital future with distinct use cases and committed communities. Their utility, resilience, and development momentum elevate them among the top cryptos with 1000x potential. As technology adoption expands, assets focused on empowering users rather than extracting value stand to gain the most. Informed participation, awareness of market dynamics, and alignment with long-term

fundamentals are crucial. These projects represent more than just holdings—they are foundations of tomorrow's decentralized infrastructure. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> FAQs - Why is Qubetics's decentralized VPN unique? It removes centralized control, providing secure, peer-to-peer internet access for global users. - What makes Bitcoin a contender for long-term gains? Its capped supply, institutional backing, and scaling solutions like Lightning Network enhance value and adoption. - How does Monero protect privacy? Monero uses ring signatures, stealth addresses, and confidential transactions to fully anonymize payments. - What risks do privacy coins face? They may attract regulatory scrutiny, especially from agencies focusing on AML compliance. - How does the Qubetics crypto presale work? Participants can buy tokens at discounted rates before public exchange listings, with high projected ROI. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Bitcoin is holding above \$82,197 with key resistance at \$85K and support at \$78.5K - Institutional demand remains strong, with ETF inflows and whale accumulation driving bullish sentiment. Bitcoin's price has been all over the place lately, with uncertainty growing due to economic factors, market conditions, and investor sentiment. After starting the week strong, BTC fell to a weekly low of \$82,030, sparking debates about whether a bigger drop is coming. Experts are keeping an eye on liquidity, how Bitcoin moves in relation to stocks, and key support levels. Some believe it could fall to around \$72,000-\$75,000, while others think it might bounce back if it holds certain price levels at \$85,000-\$90,000. With global events like U.S. tariffs and money supply changes affecting investor confidence, Bitcoin's future remains uncertain, leaving traders to weigh short-term risks against its long-term potential. Macroeconomic Pressure: CPI Report and Fed Decisions The newly released March U.S. Consumer Price Index (CPI) report is playing a key role in influencing Bitcoin's movement. The inflation rate rose to 3.5%, higher than February's 3.2%, signaling persistent inflationary pressures. If inflation remains elevated, the Federal Reserve may delay expected interest rate cuts, which could impact investor sentiment across risk assets, including Bitcoin and the broader crypto market. Currently, traders see a 54.9% chance of a Fed rate cut in June, down from 65% last week. The Federal Reserve has maintained interest rates steady, signaling a "wait and see" approach as inflation and economic conditions evolve. Historically, Bitcoin has shown a strong correlation with monetary policy, meaning prolonged high interest rates could lead to increased volatility. Despite this, Bitcoin continues to attract investors as an inflation hedge, with steady ETF inflows reflecting confidence in its long-term value. However, Market Analyst Capital Flows expressed his concerns that Bitcoin could correct to either \$72,000-\$75,000 if liquidity conditions remain a challenge. Technical Breakdown: Resistance and Support Levels Bitcoin faces resistance at \$85,000. A breakout past \$85K could open the door to \$88K, the level facing multiple rejection since March start. Failure to break above \$85K may lead to a retest of \$80K. Meanwhile, Bitcoin's 50-day moving average at \$78,500 serves as crucial support. Macro Researcher and Bitcoin analyst Axel Adler Jr, remains bullish after highlighting three important resistance levels for BTC; The realized price at \$90K, the 111 day SMA at \$95K and the 3-6 months short-term holders realized price at \$89K Zooming in, the Relative Strength Index (RSI) is at 30 indicating oversold conditions, which could trigger profit-taking or selling pressure. However, the Moving Average Convergence Divergence (MACD) remains bullish, supporting continued upside. On-chain data shows Bitcoin's short-term holder realized price is at \$75,800—if BTC drops below this, selling pressure may increase. Digital Asset Analyst Crypto Chase in an X post thinks BTC is at a do or die point, might be up to a retest at \$80k. Bitcoin's Strong Accumulation Continues Bitcoin's exchange supply keeps shrinking, suggesting strong demand from institutions and long-term holders. GameStop also plans to invest a whopping \$1.3 billion on Bitcoin, boosting Bitcoin's corporate adoption. BlackRock's IBIT ETF saw \$600 million in net inflows in March, reflecting heightened interest from traditional finance. CryptoQuant data shows whale addresses holding over 1,000 BTC have added 30,000 BTC in the past month. Some short-term traders are cashing out near current levels, causing small pullbacks. However, the ongoing accumulation trend indicates steady demand, which could support Bitcoin's price in the weeks ahead. Bitcoin's bullish momentum remains intact despite macroeconomic headwinds. Key levels to watch are \$85,000 resistance and \$78,500 support. Institutional demand and ETF inflows continue to strengthen Bitcoin's outlook, setting the stage for a potential push toward \$90K.

- Bitcoin dominance reaches 62.18%, up from 53% in December. - The growing number of new tokens weakens capital flow to altcoins. Bitcoin's dominance in the crypto market has surged to 62.18%, up from 53% in December. Despite expectations for an altcoin season, BTC continues to gain market share. Traders typically expect capital to rotate into altcoins after Bitcoin rallies. However, this shift has not happened as anticipated. Why Is Bitcoin's Dominance Rising? Several factors have contributed to Bitcoin's growing dominance. Institutional investors continue accumulating Bitcoin, increasing demand. Companies like Strategy consistently raise funds to buy more BTC. This creates sustained buying pressure, keeping Bitcoin's market share high. The launch of spot Bitcoin ETFs has also strengthened Bitcoin's position. These ETFs provide institutional investors with easier access to Bitcoin. Meanwhile, most altcoins lack similar financial instruments. This has made BTC the preferred choice for traditional investors. Another key factor is the growing number of new tokens. With so many options, capital spreads across different assets rather than concentrating on established altcoins. This fragmentation has limited the potential for an altcoin rally. Many expected Ethereum ETF approvals to reduce Bitcoin's dominance. However, their impact has been smaller than anticipated. While ETH ETFs saw strong initial inflows, they failed to boost the broader altcoin market. As a result, BTC remains the dominant force. Is Altcoin Season Still Possible? Some analysts believe an

altcoin season is only delayed, not canceled. Crypto analyst Rekt Capital has highlighted a key technical indicator. According to him, if the altcoin market cap closes above \$250 billion, it could trigger a rally. Altcoins recently recovered from a sharp decline in early March. The total altcoin market cap briefly dropped below \$200 billion before bouncing back. It now sits at around \$249 billion. A confirmed breakout above \$250 billion could push the market toward \$315 billion. However, reaching December 2024's high of \$451 billion will require more momentum. Highlighted Crypto News Today WazirX Scheme of Arrangement Vote Ends—What Investors Must Know

- The price of bitcoin has been going through a rough patch post the announcement of tariffs by the US President. - Gold reached \$3,080 on March 28, 2025, coinciding with Schiff's most recent remarks. The price of bitcoin (BTC) fell to \$83,865, a decrease of 4.12% in the last 24 hours, while the price of gold reached a record \$3,080. Economist and crypto skeptic Peter Schiff takes this as proof that he is right. The price of bitcoin has been going through a rough patch post the announcement of tariffs by the US President. The evidence lends additional credence to Schiff's case, while his boasting is not new. Criticism Continues After the American video game retailer's shares fell by more than 2%, Schiff blasted GameStop for their Bitcoin investment. The cryptocurrency industry is divided over GameStop's recent plans to use proceeds from a convertible debt issue to finance the retailer's planned Bitcoin acquisitions. While several investors have voiced their approval of the decision, Peter Schiff has been the most vocal opponent. He claims that a short-lived price surge occurred as a result of FOMO-driven purchasing caused by the publicity around GameStop's Bitcoin flip. Schiff, nevertheless, said that investors who do not consider Bitcoin a sustainable long-term investment have started to sell as the company lost its fast gain for the day. He said that those selling their \$GME were "smart." Gold reached \$3,080 on March 28, 2025, coinciding with Schiff's most recent remarks. The weakening of the dollar and inflation exceeding the Federal Reserve's 2% objective are the macroeconomic concerns he cites as causes of the increase. Gold is shining, while U.S. equities and bonds are falling with Bitcoin. According to Schiff, the rise in gold prices is due to certainty on the dollar's future, not chaos. - Velar PerpDex provides users with access to substantial liquidity and rigorous security, in addition to advanced trading capabilities. - With sBTC-USDh serving as the first trading pair, the exchange is currently operational and can be accessed via perpdex.velar.com. The first decentralized perpetuals exchange (PerpDEX) on Bitcoin in the world has recently been launched by Velar. Velar PerpDex, which is deployed on Stacks, is a significant advancement for Bitcoin DeFi. It enables users to trade leveraged futures while maintaining full custody of their funds. With sBTC-USDh serving as the first trading pair, the exchange is currently operational and can be accessed via perpdex.velar.com. Hermetica is responsible for the creation of USDh, which is the first synthetic Bitcoin dollar. The Velar PerpDex platform will progressively get more pairings, which will enable users of Stacks to create leveraged long and short bets on a wide range of assets, including Bitcoin. Velar PerpDex provides users with access to substantial liquidity and rigorous security, in addition to advanced trading capabilities. The fact that it is hosted on Stacks' Bitcoin L2 gives it the advantages of five-second block times, true decentralization, and Bitcoin finality of one hundred percent. Velar CEO Mithil Thakore said: "At Velar, our goal has always been to build core trading infrastructure that keeps users and liquidity on Bitcoin. Launching the first PerpDEX on Bitcoin is a defining milestone for the future of DeFi on Bitcoin, enabling traders to access leverage and deep liquidity without leaving the Bitcoin ecosystem." Hermetica CEO Jakob Schillinger added: "Perpetual trading is one of the most important products in crypto, and now thanks to Velar, it's finally possible on Bitcoin. USDh powers perp trading by serving as the stable, yield-bearing base pair, designed specifically for Bitcoin DeFi." As a result of the introduction of Velar PerpDex, the billions of dollars in idle funds that are accessible inside the Bitcoin ecosystem will be unlocked. This will enable Bitcoin holders to fully engage in decentralized finance without incurring any risk associated with custodial. It does this by introducing a strong primitive to Bitcoin DeFi, which will serve as a foundation for subsequent innovation on Stacks. Velar is now in the process of developing the user interface for the most secure blockchain that has ever been produced. Velar Dharma provides a user-friendly interface that makes it possible for anybody to trade their preferred Bitcoin-based tokens with ease and with just a few clicks on the platform. While at the same time enabling consumers to take ownership of their digital assets and unlocking previously untapped liquidity, Velar is building the framework for a new era of financial innovation that is driven by Bitcoin. Visit Velar.co/ for more information.

- South Carolina dropped its staking lawsuit against Coinbase on March 27. - The lawsuit accused Coinbase of offering unregistered securities. South Carolina has dismissed its lawsuit against Coinbase over its staking services, following Vermont's lead. The lawsuit accused Coinbase of offering unregistered securities. The state's decision marks a significant shift in regulatory actions against crypto staking in the U.S. On March 27, Coinbase and the South Carolina Attorney General's securities division reached a joint agreement to dismiss the case. Paul Grewal, Coinbase's chief legal officer, announced the news on X, calling it a win for American consumers. He urged other states to reconsider their stance on staking. South Carolina and Vermont were among the ten U.S. states that sued Coinbase on June 6, 2023. That was the same day the SEC filed its lawsuit against the exchange. The federal regulator officially dropped its case on February 27, 2025. Grewal stated that South Carolina residents lost an estimated \$2 million in staking rewards due to the lawsuit. He emphasized the need for clear regulations and consumer protections for the 52 million Americans who own crypto. Meanwhile, South Carolina lawmakers introduced a new bill supporting Bitcoin reserves. The Strategic Digital Assets Reserve Act of South Carolina seeks to allocate up to 10% of selected state funds to cryptocurrencies, including Bitcoin. Push for Bitcoin Reserve Rep. Jordan Pace introduced House Bill 4256, which explicitly mentions Bitcoin multiple times. If passed, the bill

would allow state treasurer Curtis Loftis to manage a Bitcoin reserve. The reserve could hold up to 1 million BTC, aligning with the U.S. federal government's Strategic Bitcoin Reserve plans. The bill permits Bitcoin investments in the General Fund, the Budget Stabilization Reserve Fund, and other state-managed assets. It does not mention stablecoins, NFTs, Ether, or other crypto tokens. However, it clarifies that the Strategic Digital Assets Reserve is not limited to Bitcoin. Bitcoin reserve bills have been introduced in 19 states. Lawmakers have kept 36 of them active. Earlier this month, U.S. President Donald Trump signed an executive order to establish a Strategic Bitcoin Reserve and Digital Asset Stockpile. - Bitcoin holders may now utilize Solana's DeFi ecosystem, enabling cross-chain Bitcoin liquidity. - Zeus Network's flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana. The first on-chain Bitcoin exchange developed on Solana, APOLLO, Zeus Network's flagship decentralized application, was formally launched. Zeus Network has unveiled zBTC, the first fully permissionless Bitcoin asset on Solana, in addition to APOLLO. Bitcoin holders may now utilize Solana's DeFi ecosystem, enabling cross-chain Bitcoin liquidity, without depending on centralized wrapped solutions. APOLLO adds Bitcoin liquidity in a completely decentralized, non-custodial setting by enabling users to lock native BTC and mint zBTC directly on Solana at a 1:1 ratio. While traditional wrapped Bitcoin models depend on opaque systems and centralized custodians, APOLLO and zBTC provide a transparent, trustless experience free from custodial concerns and KYC requirements. During the private mainnet phase, the platform has shown a great deal of interest, minting 50 zBTC before launch and registering over \$40 million in on-chain volume. With a range of decentralized financial services that take use of Bitcoin's unparalleled liquidity and security to interface with contemporary DeFi infrastructure, APOLLO's debut marks the arrival of Bitcoin Finance, also known as BTCFi, on Solana. Bitcoin holders may now engage in a variety of DeFi strategies across Solana by using zBTC, such as trading zBTC on Jupiter and offering liquidity on Meteora, HawkFi, and Raydium. In the near future, vault tactics for yield optimization will also be introduced, including depositing zBTC on Drift and Neutral Trade. Through ZeusScan, a specially designed Proof of Reserves system that guarantees every Bitcoin transaction is completely auditable, Zeus Network further offers on-chain insight into Bitcoin reserves. This utility preserves the integrity of APOLLO's trustless architecture while bolstering user confidence. Zeus Network intends to roll out additional services that further modularize Bitcoin liquidity in the next months. It will be simpler than ever to manage Bitcoin holdings across protocols and formats when APOLLO allows users to switch between zBTC, cbBTC, and wBTC and withdraw any version back to native Bitcoin. Users will have more freedom and control thanks to this modular structure, which will also improve market efficiency. Along with many other things, users will be able to borrow and lend funds on Drift and Save Finance. Onboarding institutional liquidity partners, including other UTXO-based assets like DOGE, LTC, and KAS, and evolving ZPL-assets to improve liquidity coverage are among Zeus Network's top goals for the future. As Zeus continues to build BTCFi on Solana, other Bitcoin-native apps will be released on Solana. The Solana Virtual Machine (SVM) serves as the foundation for the multi-chain layer Zeus Network, which enables permissionless communication between Bitcoin and other significant blockchain ecosystems. It creates safe, scalable cross-chain connections by smoothly integrating liquidity from UTXO-based blockchains like Litecoin, Dogecoin, and Kaspa as well as Bitcoin into the Solana ecosystem. Zeus Network's flagship dApp, APOLLO, enables the Solana-native asset, zBTC, to unleash Bitcoin finance (BTCFi) prospects on Solana by showcasing the decentralized, trustless integration of native Bitcoin using a lock-mint mechanism.

- GameStop is issuing \$1.3B in convertible senior notes to fund Bitcoin purchases. - GameStop's bonds have a 0% interest rate, mature in 2030, and offer a 35-40% conversion premium for stock conversion. - GameStop's BTC purchase could boost buying pressure, potentially sparking a Bitcoin rally. Just a day after revealing plans to add Bitcoin (BTC) to its balance sheet, GameStop (GME) is taking things a step further. The company, led by CEO Ryan Cohen, is raising \$1.3 billion by issuing convertible senior notes, aiming to use the funds for Bitcoin purchases. The five-year bonds, set to mature in 2030, come with a 0% coupon, as per press release. Investors will have the option to convert their notes into GameStop shares if the stock price reaches a predetermined level, with a conversion premium set between 35% and 40%. An additional \$200 million may also be raised through an underwriter option. By adopting this Bitcoin strategy, GameStop joins companies like MicroStrategy (MSTR), MARA Holdings (MARA), and Riot Platforms (RIOT), all of which have issued convertible debt to buy Bitcoin. However, GameStop's board has unanimously approved Bitcoin as a treasury reserve asset, without setting a maximum limit on how much BTC it can hold. According to its SEC filing, the company also retains the right to sell Bitcoin when necessary. Market Reactions: GameStop Stock and Crypto Rally Following the Bitcoin announcement, GME stock surged 11.65%. The crypto market also responded positively, with Bitcoin holding strong at \$88K and meme coins like Dogecoin (DOGE), Shiba Inu (SHIB), PEPE, and FLOKI trading in the green for the second consecutive day. GameStop has a history of influencing meme coins, dating back to the 2021 "meme stock" frenzy. During the GameStop short squeeze, DOGE and SHIB saw explosive gains. More recently, the meme coin market got another boost when Keith Gill, known as Roaring Kitty, the key figure behind the GameStop short squeeze, returned online. However, historically, major corporate Bitcoin purchases have contributed to bullish momentum, as seen with MicroStrategy. If GameStop follows through on significant BTC acquisitions, it could add buying pressure to the market, potentially sparking a new rally. For now, GameStop's decision to integrate Bitcoin into its financial strategy marks another major step in corporate BTC adoption, one that could influence both stock and crypto markets in the coming months. Highlighted Crypto News Today ChatGPT Forecasts XRP Price Impact from Potential \$10 Billion ETF Adoption

- Bitcoin has shown a modest price increase of 1.27% in the last 24 hours. - The cryptocurrency's

daily trading volume has dipped by 11.94% as per CMC data. The overall crypto market has shown a glimmer of hope after days in the dark consolidation tunnel. While the altcoin sector has not shown much action over the past few weeks, other sectors have been booming. Several ETP issuers are taking measures to introduce altcoin ETFs and the regulatory sector is buzzing with new laws and reforms. Meanwhile, the largest cryptocurrency, Bitcoin, has shown a modest price increase of 1.27% in the last 24 hours. Propelled by this movement, BTC briefly tested the \$88,000 range after weeks of the \$85K consolidation. In the afternoon hours of March 25, the digital asset was trading at the \$87.1K level. However, as bullish candles sparked, Bitcoin surged to trade at the border between \$87K and \$88K, after briefly testing and failing the higher range. In the past hour, it has managed to climb to \$88.1K level. At the time of writing, BTC was trading at \$88,152.17 as per CMC data. Zooming out onto its weekly chart, the cryptocurrency's price consolidation is quite evident. While prices now show a 5.51% increase, a prolonged consolidation between \$83K and \$85K, can be observed mid-week. From a low of \$83,546, Bitcoin has climbed to current trading levels. Will the Bitcoin Bulls' Slow Progress Reach \$90K? On analyzing its recent price movements, Bitcoin shows a price breakout from a recent horizontal channel pattern. Often, when such a trend occurs, it is expected to witness further upward movements. Secondly, the lack of selling activity by BTC traders as reported by prominent analyst Ali (@ali_charts) is also promising. Moreover, Bitcoin's Moving Average Convergence Divergence (MACD) MACD line stands below the signal line. Although this is an indicator of a bearish trend, the MACD line shows signs of moving towards a crossover. Additionally, the Chaikin Money Flow (CMF) indicator value stands at a positive 0.03 as per TradingView data. This indicates a capital influx into Bitcoin, thus suggesting positive investor sentiment thus reiterating a possibility of hitting \$90K in the coming days. Finally, prominent crypto-based firm GameStop has announced investing in a Bitcoin reserve, which also adds to the positive momentum. Meanwhile, other altcoins such as DOGE have also shown price surges.

- GameStop adds Bitcoin to treasury with unanimous board approval. - GameStop will use a portion of its cash reserves, and potentially future debt or equity, to invest in Bitcoin. GameStop, the video game retailer and original meme-stock company, has officially announced that its board has unanimously approved adding Bitcoin as a treasury reserve asset, as per its press release on March 25th. This means GameStop will start using some of its corporate cash "possibly even future debt or equity" to invest in Bitcoin. The decision follows a growing trend among public companies adopting Bitcoin as part of their financial strategy. A major influence seems to be Strategy (formerly MicroStrategy), the biggest corporate holder of Bitcoin. CEO Ryan Cohen even fueled speculation when he was seen with Strategy's Executive Chairman, Michael Saylor, at Donald Trump's Mar-a-Lago estate in February. Shortly after, Strive Asset Management urged GameStop to use its \$5 billion cash reserve to buy Bitcoin. GameStop Adds Bitcoin to Treasury Amid Business Restructuring GameStop's announcement comes at an interesting time "just weeks after President Trump signed an executive order to establish a U.S. strategic reserve of cryptocurrencies. While the company hasn't revealed how much Bitcoin it will buy or when, it has confirmed that "BTC will be part of its long-term financial strategy." Alongside this news, GameStop reported strong fourth-quarter earnings, with net income more than doubling to \$131.3 million. However, revenue dropped to \$1.28 billion from \$1.79 billion last year, reflecting struggles in the retail gaming market. To cut costs, the company closed 590 stores in 2024 and plans to shut down more in 2025. However, following the Bitcoin treasury reserve announcement, GameStop's stock jumped over 8% to \$27.50 in extended trading, but later it closed the day at \$25.40. Meanwhile, Bitcoin itself, which recently soared past \$100,000, has dropped about 18% and is currently trading around \$87,325. Highlighted Crypto News Today:

Over the past two decades, Amazon and Bitcoin have delivered massive returns. Amazon (NASDAQ: AMZN) transformed e-commerce and cloud computing, while Bitcoin (BTC) introduced decentralised digital assets. Investors are looking for the next major opportunity today, and blockchain-based asset tokenization is emerging as a strong contender. Rexas Finance (RXS) is leading this movement, offering a unique approach to real-world asset (RWA) investment. Amazon Stock AI Investments Spark Short-Term Volatility Amazon shares dropped 10.7% in February despite strong 2024 earnings. The company's operating income surged 86% year over year to \$68.6 billion, with Amazon Web Services (AWS) generating over half of these profits. AWS remains a dominant force in cloud computing, growing its revenue by 19% to surpass \$100 billion. The stock decline was triggered by Amazon's plan to invest \$100 billion in capital expenditures (capex) in 2025, mostly for AI infrastructure in AWS. CEO Andy Jassy stated, "The vast majority of that capex spend is on AI for AWS." This spending is expected to reduce operating income by \$700 million compared to 2024. Some analysts believe that Amazon's AI investment is long-term. The \$38 billion of free cash flow after capital expenditures in 2024 can be spent to fund new projects while still ensuring that the company is financially secure. In previous years, the ticker has thus bounced back following big spending, thus signaling that the recent selloff may present a buying opportunity. Bitcoin Price Fluctuations as Market Consolidates Bitcoin's price has been quite unstable, and has ranged between \$85,000 and \$95,000 at some time this past. Falling short on its attempt to rise higher than \$95,000, BTC retested key support near \$85,843, which is the 200-day EMA. In this case, Bitcoin may drop toward \$73K. Once again, it could reach a level close to the established maximum prices once again. Despite these occurrences, institutional investors are actively participating, and the ETFs recently saw an inflow. Accounts are being supplied by the short-term holders while the long-term holders are exiting from the market. Based on their calculations, Bitcoin is currently range-bound, as it reached its record high in the recent past. Bitcoin continues to have a strong representation in the cryptocurrency market due to regulatory shifts and rising institutional demand. Toppers are closely focusing on the levels of resistance and support to predict the next direction of Bitcoin. Rexas Finance (RXS) The Future of Real-World Asset Tokenization Investors are always on the lookout for high-growth opportunities, and one of the emerging companies that is finding favor for its RWAs tokenization model is Rexas Finance (RXS). It has received over \$47 million in

presale funding and has sold more than 90% of its tokens. The token presale price is 0.20 USD, and it is planned to be listed on exchanges on June 19, 2025, at 0.25 USD. Rexas Finance provides clients with the opportunity to invest and actively trade stakes in physical corporate assets like real estate, commodities, and trademarks. This has done away with the traditional barriers of the market that increase liquidity and accessibility. Investors can own a small interest in a valuable asset and trade it on blockchains in real-time. It comprises a token builder for forming tokens based on a business model, a secure decentralized exchange, and a DeFi Treasury that facilitates yield enhancement plans. Also, the Rexas Launchpad provides more solutions for blockchain start-ups, such as fundraising and token generation events. Rexas Finance, a defi platform, has received an audit from CertiK, a blockchain security firm, to make it secure and trustworthy. Some analysts expect the price to grow drastically and place RXS above \$10 by the end of the year. Its thrust on decentralized finance (DeFi) and blockchain investment management makes it a contender for the financial reshaping agenda. - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - U.S. spot Bitcoin ETFs saw \$84.17M net inflows on Monday, marking a seven-day streak. - Total inflows reached \$860.6M, with cumulative net inflows now at \$36.13B. Spot Bitcoin exchange-traded funds (ETFs) recorded a seven-day inflow streak, signaling a potential shift in market sentiment. On Monday, U.S. spot Bitcoin ETFs saw net inflows of \$84.17 million, extending their positive momentum. This marks the longest streak of consecutive inflows since January 24. Bitcoin ETF Inflows Continue According to SoSoValue data, Fidelity's FBTC led Monday's inflows with \$82.85 million. Bitwise's BITB followed with \$19.23 million, while BlackRock's IBIT saw \$18 million. VanEck's HODL recorded a \$5 million inflow. However, outflows from Ark and 21Shares' ARKB, totaling \$41 million, offset part of the gains. Over the past seven days, total net inflows reached \$860.6 million. Cumulative net inflows across all spot Bitcoin ETFs now stand at \$36.13 billion. Analysts see this as a strong indicator of improving market conditions. Daily ETF Flows Reflect Momentum Spot Bitcoin ETF flows remained positive on March 21 and March 24. IBIT led inflows on March 21, attracting \$105 million. BTCW, however, recorded an outflow of \$21.9 million. Other ETFs, including FBTC, BITB, and ARKB, showed no significant changes. The net inflow for the day stood at \$83.1 million. On March 24, FBTC led again with an \$82.9 million inflow. BITB and IBIT followed with \$19.2 million and \$18.1 million, respectively. ARKB saw a \$41 million outflow, reducing the overall net inflow to \$84.2 million. Brickken analyst Enmanuel Cardozo said the market is "warming up." He noted that global liquidity has climbed roughly 8% this year, creating favorable conditions for Bitcoin. The cryptocurrency's maturing role in portfolios is also contributing to ETF inflows. While Bitcoin ETFs gained momentum, spot Ether ETFs remained stagnant. They saw zero net inflows on Monday after enduring a 13-day outflow streak, which led to \$400 million in withdrawals. Highlighted Crypto News Today BNB Price Analysis: Can It Hold the Uptrend to \$700?

- Kentucky Governor Andy Beshear signed the "Bitcoin Rights" bill (HB701) into law on March 24, 2025. - The law protects self-custody, blockchain nodes, and crypto transactions from regulatory discrimination. On March 24, 2025, Kentucky Governor Andy Beshear signed House Bill 701, commonly known as the "Bitcoin Rights" bill, into law. This legislation ensures the protection of digital asset users and cryptocurrency miners within the state, prohibiting discriminatory regulations against them. The law specifically secures key rights such as self-custody of digital assets, running blockchain nodes, and engaging in crypto transactions without fear of government interference. It also prevents local authorities from imposing restrictive zoning laws targeting cryptocurrency mining operations. Additionally, the bill clarifies that crypto mining and staking activities do not require money transmitter licenses and are not considered securities offerings. Kentucky Considers State-Backed Crypto Reserve The bill received overwhelming bipartisan support, passing the Kentucky House with a 91-0 vote on February 28, followed by a unanimous 37-0 vote in the Senate on March 13. Its swift approval highlights Kentucky's growing commitment to blockchain technology and digital finance. Kentucky is considering House Bill 376 (KY HB376), which proposes creating a crypto reserve for the state. If passed, it would allow the State Investment Commission to invest up to 10% of excess state funds in digital assets with a market cap over \$750 billion, mainly Bitcoin. However, the bill is still under review and has not yet become law. For it to pass, HB376 must be approved by both the House and Senate before being signed by the governor. The House has yet to vote on the proposal. This move aligns with broader trends across the U.S., as other states like Oklahoma and Arizona are advancing legislation to protect Bitcoin users and even create state-managed Bitcoin reserves. - BlackRock has launched its first Bitcoin ETP in Europe under the ticker IB1T. - The product will trade on Xetra, Euronext Paris, and Euronext Amsterdam. BlackRock has introduced its first Bitcoin exchange-traded product (ETP) in Europe. The iShares Bitcoin ETP (IB1T) will trade on Xetra and Euronext Paris under the ticker IB1T and on Euronext Amsterdam under BTCN. The launch follows the success of BlackRock's U.S. spot Bitcoin ETF. The asset manager is offering a temporary fee waiver of 10 basis points, initially reducing IB1T's expense ratio to 0.15% until the end of 2024. However, after that, fees will increase to 0.25%, aligning with major competitors like CoinShares. The asset manager is offering a temporary fee waiver of 10 basis points, reducing IB1T's expense ratio to 0.15% until the end of 2024. After that, fees will increase to 0.25%, aligning with major competitors like CoinShares. The ETP will be backed by Bitcoin held in cold storage by Coinbase Custody International Ltd. The product is available to institutional and informed retail investors.

BlackRock's expansion into Europe comes as demand for Bitcoin investment vehicles grows. Manuela Sperandio, head of Europe & Middle East iShares Product at BlackRock, said the launch signals a shift in the industry. BlackRock's U.S.-listed iShares Bitcoin Trust (IBIT) has seen significant growth. As of Monday, it holds \$50.69 billion in net assets. It is currently the largest spot Bitcoin ETF in the U.S., with cumulative net inflows of \$39.8 billion. Bitcoin ETP Demand Grows The U.S. market has witnessed strong demand for Bitcoin ETFs. On Monday, these funds saw \$84 million in net inflows, bringing total trading volume to \$1.97 billion. The decision to expand into Europe was backed by research. A survey by BlackRock and Focal Data showed that 75% of professional investors are interested in Bitcoin ETPs. Jane Sloan, EMEA head of global product solutions at BlackRock, highlighted the role of ETPs in bridging traditional finance with crypto. Leading providers, including CoinShares, WisdomTree, and Invesco, have adjusted fees to match U.S. spot Bitcoin ETFs. The iShares Bitcoin ETP's fee structure places it among the most cost-effective in the market. The cryptocurrency hit \$100,000 in December but has since pulled back. It is currently trading at around \$87,000. Highlighted Crypto News Today FLOKI Eyes \$0.000070, Can the Uptrend Hold?

Ethereum held strong near \$1,861 for the past two weeks, shaking off bearish pressure and sparking a 7% recovery. Hovering around \$1,980 now, Ethereum is pushing toward reclaiming its March highs. With the RSI creeping up and MACD flashing green, the bulls are eyeing \$2,258 next. But the catch? Holding above \$1,861 is crucial, or it's a slippery slope back to \$1,700. Meanwhile, Bitcoin is throwing punches of its own. Smashing past its 200-day EMA at \$85,502, the price is now teasing \$85,600. If support holds, \$90,000 is on the table. RSI is crawling toward 50, MACD's bullish crossover screams momentum, and the community is buzzing. Still, a drop below \$85,000 could drag it down to \$78,258 real quick. The big question is who's got the stamina for the next leg up? Now, while Bitcoin and Ethereum dance with technical levels, Qubetics (\$TICS) isn't just following the trend. It's busy rewriting the rulebook. Unlike its predecessors stuck in the same old loop, Qubetics is building real-world solutions for businesses, professionals, and individuals tired of clunky platforms and high fees. With AI-powered tools like QubeCode IDE, Qubetics isn't just aiming for market share—it's gunning for mass adoption. Perfectly positioned for the future of blockchain and digital finance, Qubetics is that one project daring enough to shake things up. Qubetics (\$TICS) is "Revolutionizing Blockchain Utility with QubeCode IDE" Qubetics kicks off this list of top cryptos to hold for short term because it ain't playing around. Designed for real-world applications, Qubetics offers the AI-powered QubeCode IDE, making blockchain development smoother than ever. Professionals, businesses, and everyday users can build smart contracts, dApps, and entire ecosystems without the headaches of outdated systems. Imagine dragging and dropping complex functions, automating smart contracts, and slashing development time like slicing through butter. This is where Qubetics leaves others eating dust. It simplifies everything. Need enterprise-grade security? It's baked in. Want seamless integrations? That's standard. For South American businesses juggling cross-border transactions, Qubetics offers a no-brainer solution—efficient, secure, and lightning-fast. Presale Buzz and Insane ROI Potential Here's the kicker—"The crypto presale is in its 27th stage, and the numbers are off the charts. Over 503 million tokens sold, 23,700+ holders strong, and \$15.4 million raised. Right now, \$TICS is priced at just \$0.1300. Early adopters who snagged tokens at \$0.01 are sitting on a juicy 1200% return already. But the game's not over. There's still a shot to jump in and grab serious returns. Adopters entering now can still ride a wave of ROI that's hard to find elsewhere. Analysts predict \$TICS hitting \$1 post-presale, locking in a 669% ROI. If it touches \$5, that's 3,745% ROI. The stakes climb—" \$6 brings a 4,514% return, and if \$TICS hits \$10, backers are staring down 7,591%. The real jaw-dropper? A potential 11,437% ROI when the mainnet launches and \$TICS cracks \$15. Blink, and it might be too late. Bitcoin (BTC) is "The Undisputed Heavyweight Targeting \$90K Bitcoin isn't just back—it's clawing its way to the top again, earning its place as one of the top cryptos to hold for short term. After breaking the 200-day EMA at \$85,502, BTC holds steady around \$85,600. The bulls are pushing, looking to smash through the psychological \$90,000 barrier. The technicals are lining up. RSI is flirting with neutral territory, while MACD's bullish crossover last week lit up buy signals. With green histograms building, momentum is shifting north. But there's no room for error. If Bitcoin loses ground and falls below \$85,000, it could tumble fast toward \$78,258. For community members and early adopters stacking sats, this is the zone to watch. Bitcoin's proving again why it's the go-to store of value and a top crypto to hold for short term. High volatility? Sure. But that's where the biggest paydays come from. Ethereum (ETH) is "Bouncing Back with a Target on \$2,258 Ethereum isn't sitting on the sidelines either. After grinding down to \$1,861, ETH found its footing and rebounded nearly 7%. Now circling \$1,980, Ethereum is positioning itself as another top crypto to hold for short term. The chart looks decent. RSI is slowly picking up, working its way to that crucial 50-level, while MACD flashed a bullish crossover. Momentum's leaning bullish, but ETH needs to hold that \$1,861 level like life depends on it. Crack that, and it's heading down to \$1,700. Stay above, and \$2,258—the March 7 high—isn't out of reach. For buyers hunting for solid projects with smart contract dominance, Ethereum continues to be a heavyweight contender. Technical upgrades, DeFi dominance, and a vast ecosystem keep Ethereum in every savvy backer's portfolio. Conclusion: Get In Before the Window Shuts Bitcoin and Ethereum are flexing their muscles, battling key levels and setting up the next big moves. Both deserve their spot among the top cryptos to hold for short term. But Qubetics? That's a whole different beast. With its AI-driven QubeCode IDE, Qubetics is solving problems Bitcoin and Ethereum never even touched. The presale is rolling, the ROI potential is off the chain, and real-world use cases make it the one crypto no smart participant should ignore. Backers still have a window to jump in, grab \$TICS at \$0.1300, and potentially ride it all the way to \$15 post-mainnet launch. The future's not waiting. Neither should anyone looking to level up in crypto. Dive into Qubetics while the door's still open, or watch from the sidelines as others cash out big. For More Information: - Qubetics: <https://qubetics.com> - Presale: <https://buy.qubetics.com/> - Telegram: <https://t.me/qubetics> - Twitter: <https://x.com/qubetics> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is witnessing a powerful resurgence, with Bitcoin soaring past the \$87,000 mark and XRP reclaiming its bullish momentum, currently trading close to \$2.47. Amidst this rally, ExoraPad's presale is turning heads as investors rush to secure their positions, filling an impressive 75% of its softcap. Crypto Market Momentum Boosts ExoraPad Bitcoin's robust rally, pushing prices above \$87,600, has reignited bullish sentiment across the crypto space. XRP's recent rise, driven by Ripple's favorable resolution with the SEC, further adds fuel to investor optimism. ExoraPad, the first AI-powered Initial DEX Offering (IDO) launchpad on the XRP Ledger (XRPL), is perfectly positioned to capitalize on this renewed confidence. Why ExoraPad Is the Talk of the XRP Ecosystem ExoraPad uniquely integrates advanced artificial intelligence with blockchain technology, creating an unparalleled platform that identifies and vets the most promising projects in Real-World Assets (RWAs), Decentralized Physical Infrastructure Networks (DePIN), and premium blockchain startups. Its innovative approach drastically reduces investment risk, offering unmatched security and reliability. The presale, which has rapidly filled 75% of its softcap, underscores XRP community enthusiasm for ExoraPad's potential. The urgency to participate is intensifying, driven by the platform's promise to transform fundraising on XRPL, streamlining processes and ensuring only top-tier projects are incubated. Riding the Wave of Market Optimism With Bitcoin and XRP prices experiencing renewed strength, ExoraPad's presale timing couldn't be better. By bridging AI technology and blockchain innovation, ExoraPad is not just another IDO launchpad, it's built to serve the community by ensuring only top tier Web3 projects are launched by carefully vetting projects leveraging Advanced AI analytics. Time Is Running Out to Join the ExoraPad Presale ExoraPad Presale is rapidly filling up as over 75% of Presale Softcap has already been snatched up by early adopters and XRP whales. Early adopters will not only secure their investment at the best possible price but also position themselves to benefit significantly from the anticipated growth post-launch. With less than 25% of the Softcap remaining, missing out could mean foregoing substantial returns. Secure Your \$EXP Tokens Now ExoraPad's presale is fast approaching full subscription. This could be your chance to participate early in what many analysts predict could become one of the most influential and successful projects on the XRP Ledger. Holding \$EXP token guarantees and unlocks exclusive access to only top tier Web3 projects launching on the ExoraPad IDO Launchpad including RWAs and DePIN. Don't miss out on your chance to ride the next wave of XRP innovation. Join the ExoraPad presale today and become a part of XRP's bright future. Join Now: - Presale: <https://exorapad.com/presale> - Telegram: <https://t.me/exorapad> - Twitter/X: <https://x.com/Exorapad> - Documentation: <https://docs.exorapad.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Mt. Gox moved 11,501 BTC worth \$1.01 billion to an unmarked and hot wallet. - The exchange still holds 35,583 BTC, valued at around \$3 billion. Defunct crypto exchange Mt. Gox transferred 11,501 BTC worth \$1.01 billion on Monday. Blockchain analytics firm Arkham Intelligence tracked the movement, noting that 10,608 BTC (\$927.5 million) went to an unmarked wallet, while 893 BTC entered a hot wallet. Despite the transfer, the exchange still holds 35,583 BTC valued at around \$3 billion. Bitcoin's price surged to \$87,000 during the transaction, marking a 2% gain in 24 hours, according to CoinGecko. However, recent movements from the exchange have shown minimal market impact. Past Mt. Gox transactions sometimes signaled repayments to creditors. Monday's transaction originated from Mt. Gox's "Pazv" wallet, which received 11,502 BTC from another exchange wallet last week. Notably, this wallet was not previously labeled as a Mt. Gox address, raising speculation that the recipient's wallet might also belong to the exchange. This marks Mt. Gox's third major Bitcoin move this month. On March 6, the exchange transferred 12,000 BTC worth over \$1 billion. On March 11, another 11,833 BTC, valued at approximately \$1 billion, was moved. These large transfers have fueled speculation that creditor payouts are approaching. Creditors can choose to receive their repayments in Bitcoin. Mt. Gox Delays Payouts Mt. Gox's repayment deadline was initially set for October 31, 2024. However, it was recently extended to October 31, 2025, due to ongoing verification and processing requirements. Some creditors have received fiat payments, but many await full compensation in Bitcoin or Bitcoin Cash. The Exchange collapsed in 2014 after losing 850,000 BTC in one of history's largest crypto hacks. Before its bankruptcy, it handled 70-80% of all Bitcoin trades. The Tokyo court-appointed trustee has managed the bankruptcy process for over a decade. Meanwhile, the Bhutan government also moved 600 BTC, worth \$53 million, on Monday. Bhutan has been mining Bitcoin since 2019, utilizing its hydroelectric power. The country's crypto holdings now make up 30.7% of its GDP. Highlighted Crypto News Today Chainlink Shows Signs of Strength, Analysts Set Big Targets

- The Oklahoma House passed the Strategic Bitcoin Reserve Act in a 77-15 vote. - The bill supports allocating up to 10% of public funds to Bitcoin or any digital assets. The Oklahoma House of Representatives has voted 77-15 in favor of House Bill 1203, also referred to as the Strategic Bitcoin Reserve Act. The bill allows the state to invest a maximum of 10% of public assets in Bitcoin or other digital currencies that have held a market capitalization of over \$500 billion over the last calendar year. Purpose and Provisions of Oklahoma HB1203 Introduced by Representative Cody Maynard on January 15, 2025, HB1203 aims to diversify Oklahoma's financial portfolio by integrating digital assets into state reserves. The bill gives the state treasurer the authority to invest funds in different accounts of the state, such as the general fund, revenue stabilization fund, and constitutional reserve fund, into authorized digital assets. This strategic move is intended to hedge against inflation and enhance the state's financial stability. Significantly, the passage of this bill makes Oklahoma part of an

increasingly large cohort of states considering the addition of Bitcoin to their financial plans. In November 2024, the Pennsylvania House of Representatives introduced a bill to invest up to 10% of major state funds. In December 2024, Texas legislator Giovanni Capriglione introduced a bill to create a Bitcoin reserve for the state. Further, representative Derek Merrin proposed the Ohio Bitcoin Reserve Act to create a separate Bitcoin fund within the state treasury. New Hampshire legislation has been proposed to allow the state treasurer to invest in digital assets and engage in practices like lending or staking to generate additional returns. The Wyoming state senators presented legislation that would allow the State Treasury to invest as much as 3% of specific state funds in Bitcoin with safe custody options. National and Political Context The state reserve of Bitcoin is part of broader national discourse on adopting digital assets. President-elect Donald Trump and Senator Cynthia Lummis have proposed that the U.S. government set aside Bitcoin as a reserve asset. Trump’s plan involves retaining 198,000 seized bitcoins, while Lummis suggests the Treasury purchase one million bitcoins, potentially linking the funding to the revaluation of the gold reserve. Although supporters hold the view that investment in Bitcoin can be an inflation hedge as well as protection against economic volatility, critics mention the asset’s volatility and its speculative nature. - Metaplanet acquired 150 BTC, raising total holdings to 3,350 BTC, valued at \$291M. - The company aims to hold 10,000 BTC by the end of 2025. Tokyo-based investment firm Metaplanet has expanded its Bitcoin holdings with the acquisition of 150 BTC. The company now holds a total of 3,350 BTC, valued at approximately \$291 million. The purchase, announced on March 24, 2025, follows the recent appointment of Eric Trump to Metaplanet’s newly formed Strategic Board of Advisors. Trump, the son of U.S. President Donald Trump, is expected to bring business expertise to the firm’s Bitcoin strategy. Metaplanet bought the latest 150 BTC at an average price of ¥12.57 million (\$80,000) per coin. The total cost of the acquisition was ¥1.886 billion (\$12.1 million). So far, the firm has accumulated 3,350 BTC at an overall cost of ¥42.22 billion (\$270 million). The company’s stock has surged since it began its Bitcoin accumulation strategy in April 2024. Since then, Metaplanet’s share price has risen by over 3,000%, reflecting strong investor confidence. BTC Yield and Financing Methods Metaplanet tracks its Bitcoin strategy using BTC Yield, a metric that measures Bitcoin growth relative to the number of company shares. From January to March 2025, its BTC Yield reached 68.3%. In Q4 2024, this metric spiked to 309.8% due to aggressive Bitcoin purchases. To finance these acquisitions, Metaplanet has used stock acquisition rights and zero-coupon bonds. In March, the company redeemed ¥2 billion (\$12.8 million) in bonds ahead of schedule and issued new bonds for the same amount. Eric Trump’s appointment, announced on March 21, 2025, is part of Metaplanet’s effort to attract influential voices in the Bitcoin industry. CEO Simon Gerovich stated that the advisory board will include key figures committed to advancing Bitcoin adoption. Trump, a vocal Bitcoin advocate, has also been involved in World Liberty Financial, a crypto venture that recently raised \$550 million. His crypto holdings include Bitcoin, Ether, Solana, and Sui. Metaplanet aims to increase its Bitcoin reserves significantly. The firm has set a target of holding 10,000 BTC by the end of 2025 and 21,000 BTC by 2026. - Bullish BSV price prediction for 2025 is \$61.33 to \$127.84. - Bitcoin SV (BSV) price might reach \$200 soon. - Bearish BSV price prediction for 2025 is \$16.00. In this Bitcoin SV (BSV) price prediction 2025, 2026-2030, we will analyze the price patterns of BSV by using accurate trader-friendly technical analysis indicators and predict the future movement of the cryptocurrency. TABLE OF CONTENTS | INTRODUCTION | | BITCOIN SV (BSV) PRICE PREDICTION 2025 | | | BITCOIN SV (BSV) PRICE PREDICTION 2026, 2027-2030 | | CONCLUSION | | FAQ | Bitcoin SV (BSV) Current Market Status | Current Price | \$34.94 | 24 “ Hour Price Change | 2.14% Up | | 24 “ Hour Trading Volume | \$51.14M | | Market Cap | \$693.28M | | Circulating Supply | 19.84M BSV | All “ Time High | \$491.64 (On Apr 16, 2021) | | All “ Time Low | \$23.30 (On Jun 10, 2023) | What is Bitcoin SV (BSV) | TICKER | BSV | | BLOCKCHAIN | Bitcoin SV blockchain | | CATEGORY | Bitcoin Cash Hard Fork | | LAUNCHED ON | November, 2018 | | UTILITIES | Governance, Fast Transactions, gas fees & rewards | Bitcoin SV, also known as Bitcoin Satoshi Vision (BSV), serves as the native cryptocurrency for the Bitcoin SV blockchain, which emerged as a result of a hard fork from Bitcoin Cash (BCH) in 2018. Notably, BCH was the first hard fork of the original Bitcoin network, making Bitcoin SV the second hard fork of the Bitcoin blockchain. Similar to the original Bitcoin network, Bitcoin SV relies on the proof-of-work (PoW) consensus mechanism for security. This “Bitcoin clone” aims to stay true to Satoshi Nakamoto’s original vision for Bitcoin while enhancing scalability. One of the key improvements is the introduction of expanded block sizes, enabling the network to handle more transactions efficiently. With these developments, Bitcoin SV endeavors to maintain the essence of Bitcoin while offering enhanced capabilities for its users. Bitcoin SV 24H Technicals Bitcoin SV (BSV) Price Prediction 2025 Bitcoin SV (BSV) ranks 86th on CoinMarketCap in terms of its market capitalization. The overview of the Bitcoin SV price prediction for 2025 is explained below with a daily time frame. In the above chart, Bitcoin SV (BSV) laid out a descending channel pattern. A descending channel, also known as a falling channel, is a bearish technical analysis pattern formed by two parallel downward-sloping trendlines. The upper trendline connects a series of high points, indicating resistance where the price struggles to rise above, while the lower trendline connects the lower points, acting as support. This pattern suggests that sellers are in control, with the price consistently making lower highs and lower lows. Traders often look to sell near the upper trendline and buy near the lower trendline, as the price typically oscillates within this defined range. Overall, the descending channel helps traders identify potential shorting opportunities and assess market sentiment. At the time of analysis, the price of Bitcoin SV (BSV) was recorded at \$35.14. If the pattern trend continues, then the price of BSV might reach the resistance levels of \$40.20, \$51.85, and \$87.03. If the trend reverses, then the price of BSV may fall to the support of \$29.51. Bitcoin SV (BSV) Resistance and

Support Levels The chart given below elucidates the possible resistance and support levels of Bitcoin SV (BSV) in 2025. From the above chart, we can analyze and identify the following as resistance and support levels of Bitcoin SV (BSV) for 2025. | Resistance Level 1 | \$61.33 | | Resistance Level 2 | \$127.84 | | Support Level 1 | \$29.82 | | Support Level 2 | \$16.00 | Bitcoin SV (BSV) Price Prediction 2025 â€” RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Bitcoin (BSV) are shown in the chart below. From the readings on the chart above, we can make the following inferences regarding the current Bitcoin SV (BSV) market in 2025. | INDICATOR | PURPOSE | READING | INFERENCE | | 50-Day Moving Average (50MA) | Nature of the current trend by comparing the average price over 50 days | 50 MA = \$36.40 Price = \$35.44 (50MA> Price) | Bearish/Downtrend | | Relative Strength Index (RSI) | Magnitude of price change;Analyzing oversold & overbought conditions | 51.87 <30 = Oversold 50-70 = Neutral >70 = Overbought | Neutral | | Relative Volume (RVOL) | Assetâ€™s trading volume in relation to its recent average volumes | Below cutoff line | Weak volume | Bitcoin SV (BSV) Price Prediction 2025 â€” ADX, RVI In the below chart, we analyze the strength and volatility of Bitcoin SV (BSV) using the following technical analysis indicators â€” Average Directional Index (ADX) and Relative Volatility Index (RVI). From the readings on the chart above, we can make the following inferences regarding the price momentum of Bitcoin SV (BSV). | INDICATOR | PURPOSE | READING | INFERENCE | | Average Directional Index (ADX) | Strength of the trend momentum | 22.46 | Strong Trend | | Relative Volatility Index (RVI) | Volatility over a specific period | 58.29 <50 = Low >50 = High | High volatility | Comparison of BSV with BTC, ETH Let us now compare the price movements of Bitcoin SV (BSV) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of BSV is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of BSV also increases or decreases respectively. Bitcoin SV (BSV) Price Prediction 2026, 2027 â€” 2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Bitcoin SV (BSV) between 2026, 2027, 2028, 2029, and 2030. | Year | Bullish Price | Bearish Price | | Bitcoin SV (BSV) Price Prediction 2026 | \$220 | \$15 | | Bitcoin SV (BSV) Price Prediction 2027 | \$230 | \$14 | | Bitcoin SV (BSV) Price Prediction 2028 | \$240 | \$13 | | Bitcoin SV (BSV) Price Prediction 2029 | \$250 | \$12 | | Bitcoin SV (BSV) Price Prediction 2030 | \$260 | \$11 | Conclusion If Bitcoin SV (BSV) establishes itself as a good investment in 2025, this year would be favorable to the cryptocurrency. In conclusion, the bullish Bitcoin SV (BSV) price prediction for 2025 is \$127.84. Comparatively, if unfavorable sentiment is triggered, the bearish Bitcoin SV (BSV) price prediction for 2025 is \$16.00. If the market momentum and investorsâ€™ sentiment positively elevate, then Bitcoin SV (BSV) might hit \$200. Furthermore, with future upgrades and advancements in the Bitcoin SV ecosystem, BSV might surpass its current all-time high (ATH) of \$491.64. and mark its new ATH. FAQ 1. What is Bitcoin SV (BSV)? Bitcoin SV (BSV) is the native cryptocurrency of the Bitcoin Satoshi Vision (BSV) blockchain. Bitcoin SV was launched in 2018 as the second hard fork of the original Bitcoin protocol. 2. Where can you purchase Bitcoin SV (BSV)? Bitcoin SV (BSV) has been listed on many crypto exchanges which include OKX, Bybit, DigiFinex, BingX, and Bitget. 3. - BitMEX CEO Arthur Hayes predicts Bitcoin price to reach \$110K. - Bitcoin is trading above the \$87K price level amidst increasing institutional investments. The crypto market is showing signs of recovery as Bitcoin shoots past the \$87K price level. Even though the crypto fear and greed index still shows fear market sentiment, its number increased from 27 to 31 today. Meanwhile, BitMEX CEO Arthur Hayes predicted that Bitcoin will hit \$110K before falling to \$76.5K. I bet \$BTC hits \$110k before it retests \$76.5k. â€” Arthur Hayes (@CryptoHayes) March 24, 2025 Y? The Fed is going from QT to QE for treasuries. And tariffs donâ€™t matter cause â€œtransitory inflationâ€. JAYPOW told me so. Iâ€™ll expound on that in my next essay, thatâ€™s the TLDR for your TikTok peanut brain. Arthur Hayes posted his bold BTC prediction on his official X account earlier today. He mentioned the reason behind his estimation is the upcoming pivot in the Fed policy. Arthur Hayes suggested that the Fed will move from quantitative tightening (QT) to quantitative easing (QE) for treasuries. The BitMEX CEO didnâ€™t give much importance to Trumpâ€™s tariffs in terms of their impact on the BTC market price. He termed it as â€œtransitory inflation,â€ which doesnâ€™t last long and doesnâ€™t have a lasting impact on BTC. Arthur Hayes also hinted that he is going to cover this prediction in detail in his next essay. White House Considers Narrowing Upcoming Tariffs on April 2 According to the latest Wall Street Journal article, the US White House is planning to narrow down tariffs scheduled to take place on April 2. They are going to avoid certain industry-specific tariffs and apply reciprocal tariffs on targeted nations. Hours after this announcement, Bitcoin price started to surge, moving past the resistance levels at the \$84K range. It is trading at \$87,352 at present with a 3.59% daily surge. Bitcoinâ€™s 24-hour trading volume increased by a significant 127%. Even though increased institutional interest is pushing the BTC price, the new tariff announcement mightâ€™ve had a positive impact on Bitcoin. Earlier when Trump first announced increased tariffs on Canada, Mexico, and China, the Bitcoin market slumped. It took several weeks after that to recover. Even though Arthur Hayes stated that tariffs are

transitory inflation, their impact on BTC is undeniable. Highlighted Crypto News Today: Lisa Gordon Calls for UK Crypto Tax to Boost Stock Investments

- Bitcoin trades at \$86,793, up 3.21% in the last 24 hours. - Market cap hits \$1.72T, with a 66.56% rise in trading volume. Bitcoin (BTC) continues its upward trajectory as institutional interest strengthens. As of now, BTC trades at \$86,793.60, marking a 3.21% gain in the past 24 hours. The market cap has reached \$1.72 trillion, accounting for over 60% of the global crypto market cap of \$2.82 trillion. Meanwhile, the 24-hour trading volume surged to \$15.96 billion, a notable 66.56% increase, signaling renewed market activity. In addition to this, the market cap ratio stands at 0.9262%, indicating Bitcoin's dominant share. Bitcoin's total supply remains at 21 million BTC, with a circulating supply of 19.84 million BTC. One major catalyst behind the surge is rising institutional demand. Bitcoin ETFs bought 8,775 BTC this week, far exceeding the 3,150 BTC mined. This accumulation indicates bullish institutional sentiment. Moreover, ETFs saw \$83 million in inflows with \$94 billion in assets, further reinforcing market confidence. Additionally, a \$13 billion whale injection has signaled strong long-term holder conviction. Can Bitcoin Rally Toward \$90K? From a technical perspective, Bitcoin currently shows bullish signals. The price is trading at \$86,500 on the 4-hour chart, just below the resistance zone near \$87,000. If it breaks above this resistance, BTC could test the next key level around \$88,500. However, immediate support sits at \$85,000; further downside could bring it to \$83,800. The Relative Strength Index (RSI) is at 69.01, indicating a nearing overbought condition. Its moving average is at 54.52, showing momentum is building. If RSI breaks above 70, a short-term correction could follow. The Chaikin Money Flow (CMF) is at 0.10, suggesting positive buying pressure. The moving average crossover on the RSI also confirms a bullish trend. The RSI line recently crossed above its average, often a signal of continued upward momentum. The candlestick structure supports this outlook. After consolidating nearly \$84,000, BTC broke out with strong green candles. The consistent higher lows also confirm bullish sentiment. Overall, both price action and technical indicators suggest further upside. However, overbought signals hint at potential short-term corrections. Traders should watch for a confirmed break above \$87,000. Sustained momentum could lead Bitcoin towards \$90,000 in the coming sessions.

- Crypto Scam demands Bitcoin for fake jury duty fines. - They use fake warrants and threats to deceive victims. - Verify court notices and report suspicious demands. The United States District Court for the Western District of Virginia has issued a public alert in response to a surge of jury duty scams. The criminals are presenting themselves as court officials and are threatening people into making payments. In the form of Bitcoin, gift cards, or bank transfers without any real intention of serving on a jury. Increase in Jury Duty Scams Scammers are allegedly calling their victims and informing them that they failed to show up for jury duty, reported by official channels. They later display fake arrest warrants, meant to look legitimate, to terrify and alarm their victims. Preying on their fear, they provide the solution to this purported problem they require instant payment via untrackable means such as cryptocurrency or gift cards. The court has made it clear that it does not issue warrants of arrest for nonappearance. For jury duty unless one has been formally summoned and has defaulted. In its advisory, the court cautioned the public to be careful and confirm the authenticity of such claims before acting on them. How the Scammers Operate Their victims are usually led through the payment process. With the scammers directing them on how to deposit money into Bitcoin ATMs or buy gift cards. In many instances. The scammers portray themselves as law enforcement officers or court representatives, employing sophisticated jargon and realistic-looking documentation to sound credible. These strategies are not limited to Virginia only. The same kind of scams have been witnessed in Arizona. Where criminals have been targeting senior-citizens. By posing as officers of the Pima County Sheriff's Department. PCSD financial crimes investigator Detective Michael Wilson reported a rise in such scam activities, specifically threats of arrest for failure to appear for jury duty. Authorities Respond to Bitcoin ATM crypto Scam The proliferation of Bitcoin ATMs throughout the U.S. has given scammers a convenient means of stealing money from unsuspecting victims. Law enforcement authorities have been fighting against this problem. With some jurisdictions posting warning signs around ATMs to inform users of possible fraud. In September 2024, a group of U.S. senators asked Bitcoin ATM operators to institute stricter control and monitoring procedures, with the rising tide of scams involving these machines. Despite all that, the authorities still report a rise in fraud cases. Preventing from Getting Scammed Authorities have laid out some very important suggestions on how not to get scammed: - Check Court Communications: In case of phone calls regarding failure to report for jury duty, verify with the court via official contact information or websites. - Be Wary of Payment Requests: There is no government agency that will ask for payment in the form of Bitcoin, gift cards, or telephone-based payment systems. - Report Scams: All victims of such phone calls and documents must report them immediately to local authorities or the concerned court office. With each new development in scams, public awareness is still the greatest defense against financial fraud. Being aware and cautious, people can safeguard themselves against such fraudulent activities and prevent unnecessary loss of money. Highlighted Crypto News Today Shiba Inu (SHIB) Eyes Breakout: Can It Sustain the Recovery?

- Crypto stock market crash happened as Bitcoin's decline drags the market down. - Mining firms like Marathon Digital and Riot Blockchain are facing steep losses. - The U.S. government and SEC are adopting a more crypto-friendly stance despite the slump. The digital currency market is in free fall, taking top crypto-related stocks with it. Bitcoin's decline has shaken the industry, with big exchanges, trading venues, and mining companies falling victim to it. Coinbase Drops Coinbase, the largest US cryptocurrency exchange, had its stock fall from close to \$350 a share in November to \$190. This steep plunge has caused a huge loss of market capitalization, from \$86 billion to \$48 billion, which represents a \$38 billion drop. MicroStrategy's Bitcoin Strategy Under Pressure MicroStrategy, rebranded as Strategy, has also taken a big hit. The firm, which continues to add Bitcoin to its

balance sheet, has lost market capitalization from \$106 billion in the previous year to \$79 billion. With 499,226 Bitcoins on its balance sheet, the firm's fate is still directly linked to the price action of Bitcoin. Robinhood, once known for retail trading, is now a force to be reckoned with in the cryptocurrency world. Its shares, though, have not escaped the downturn in the market, falling from a high of \$66.85 this year to \$45. The fall has wiped out about \$18 billion in value. Robinhood has not let such challenges deter it from further expanding its footprint in the crypto arena, especially with its acquisition of BitStamp scheduled later this year. Bitcoin Miners under Strain Companies involved in mining Bitcoin have experienced a rough blow as decreasing BTC prices compress profitability margins. Mara Holdings, a company once recognized as Marathon Digital, lost more than \$4.6 billion in its market value. Several other mining businesses, such as Riot Blockchain, Core Scientific, CleanSpark, Hut 8 Mining, and TeraWulf, too, posted multi-billion-dollar losses. The decline in the crypto market has resulted in a substantial drop in overall market capitalization. The overall worth of all cryptocurrencies has fallen from more than \$3.7 trillion in 2024 to \$2.7 trillion now, as reported by CoinMarketCap. Bitcoin alone has taken a dramatic fall, dropping from \$109,300 in January to \$85,000. Altcoins have performed even worse, with Solana-based meme coins losing more than \$18 billion in worth. Regulatory Developments and Market Crash In spite of the decline, the regulatory environment has become more positive. The U.S. government has committed to backing the industry through projects such as the Strategic Bitcoin Reserve. The Securities and Exchange Commission (SEC) has also become more welcoming, settling lawsuits against leading players in the industry such as Coinbase, Ripple Labs, and Kraken. The fate of crypto stocks is unclear. Some analysts expect the recovery, while others believe the market slump means the bull run of the latest phase has ended. Standard Chartered has modeled Bitcoin to rise to \$500,000 in the long run, while Ki Young Ju, the founder of CryptoQuant, thinks all signs are currently pointing towards a bearish future. As the market rides out this trying time, investors and sector players alike will pay close attention to any indications of a turnaround or continuing slide in the coming months.

- A dormant Bitcoin whale transferred \$250M in BTC after eight years. - Bitcoin (BTC) trades at \$84,319, with a market cap of \$1.67T. A long-dormant Bitcoin whale has resurfaced, transferring over \$250 million in BTC after more than eight years. Blockchain analytics firm Arkham Intelligence detected the movement late last night. The whale initially acquired Bitcoin in late 2016 and held it in a single address for nearly a decade. At the beginning of 2017, the holdings were worth only \$3 million. Due to BTC's price surge over the years, the same assets are now valued at over \$250 million. \$250M BITCOIN WHALE WAKES UP AFTER 8 YEARS " Arkham (@arkham) March 22, 2025 A Bitcoin Whale that has held BTC since late 2016 has just moved over \$250M in BTC last night. His Bitcoin stack went from \$3M in early 2017 to over \$250M today " and he's held Bitcoin on one address for over 8 years. pic.twitter.com/RF1aewYVgy Large movements from dormant wallets often spark speculation. Some believe the whale could be preparing to sell, while others suggest fund reallocation. Such transfers can influence market sentiment, especially if funds move to exchanges. Adding to market concerns, the Bitcoin Exchange Whale Ratio has spiked to levels not seen since last year. This metric measures the share of large holders in total exchange inflows. A rising ratio indicates increased whale activity, signaling potential selling pressure. Bitcoin in Today's Market Bitcoin is trading at \$84,319.64, reflecting a 0.11% gain over the past seven days. The market cap stands at \$1.67 trillion, with a fully diluted valuation (FDV) of \$1.77 trillion. The 24-hour trading volume surged to \$9.26 billion, indicating a 44.74% increase in activity. Bitcoin faces resistance at \$87,000. If it breaks above this level, it could surge toward \$90,000. On the downside, support is at \$82,500. A drop below this could push BTC toward \$80,000. The RSI is at 52.35, indicating neutral momentum. The RSI moving average is 49.84, suggesting a slight upward trend. The Chaikin Money Flow (CMF) is -0.21, signaling weak buying pressure. If this continues, Bitcoin might struggle to sustain its current price level. Bitcoin's 50-day moving average is above the 200-day moving average, showing a bullish crossover in the past. However, recent price fluctuations suggest a slowdown in momentum. Highlighted Crypto News Today Pakistan Explores Bitcoin Mining to Utilize Surplus Energy

Bitcoin's price went up a little this week. At 07:48 GMT, it was around \$87,514 when news came that old Bitcoin accounts began to move. The change of these coins, set aside since 2011 when Bitcoin cost only \$1, has led many to guess a large sale may follow. Earlier this week, six Bitcoin accounts, each with a large sum of BTC, sent nearly \$22 million worth of Bitcoin after 14 years of no use. These accounts used early addresses from Bitcoin's start; their sudden use troubles experts. In the past, such moves have warned of market drops when large holders sell their coins. This event made traders ask if major holders would sell or shift their coins for safety. Bitcoin's rise above \$85,000 means that new actions by early owners might affect short-run prices. Yet, Bitcoin's future looks positive, with more interest from institutions and stronger market fundamentals. FXGuys Presale Continues Its Unstoppable Momentum While Bitcoin moves, FXGuys gains attention for solid performance. The blockchain-based Top PropFi Project attracts support, having collected over \$4.5 million in its Stage 3 presale at \$0.05 per \$FXG token. Investors join its funding rounds, which helps FXGuys earn status as a promising altcoin in the market. FXGuys has now changed the financial trading space with a prop trading funding program that grants traders access to up to \$500,000 in capital. Compared to normal trading groups, FXGuys offers a fast funding approach; top traders join its Trader Development Ecosystem and receive an 80/20 profit split in their favor. Another point that raises interest in FXGuys is its staking model, which gives investors a 20% share of broker trading volume. This trait builds a steady revenue stream, setting it apart from other leading defi coins. FXGuys also lets traders make trades on its own FXGuys Trader platform along with platforms such as MT5, Match-Trader, cTrader or DXtrade, depending on location. Why Investors Are Choosing FXGuys Over Other Projects As the crypto industry changes, investors favor projects that serve real needs. FXGuys grows not only with its Trade2Earn rewards but also through clear practices and fairness. A main strength of FXGuys is its absence of fees when buying or selling, which helps traders keep their earnings free from extra

costs. It also allows withdrawals of money and crypto on the same day, making it a very open platform. It supports more than 100 local currencies connecting decentralized to conventional markets. The platform's Trade2Earn plan rewards traders with \$FXG tokens for every trade. This method promotes trade activity while raising the token's demand and market standing. The Future of FXGuys and Crypto Market Outlook Bitcoin moved \$22M from a wallet, which caused doubt, yet FXGuys earns a role as a prop trader system. It gives staking funding for prop traders plus fast financing. FXGuys changes how traders or investors use crypto. Now that the presale moves ahead, early investors have set their plans to win thanks to FXGuys's steady growth. FXGuys has a firm base while growing its users quickly; it joins blockchain with standard finance to change trading. To find out more about FXGuys follow the links below: [Presale](#) | [Website](#) | [Whitepaper](#) | [Socials](#) | [Audit Disclaimer](#): TheNewsCrypto does not endorse any content on this page. Bitcoin Cash (BCH) has risen over 30% in value and is now considered as one of the best performing cryptocurrencies in terms of market capitalization. Though Bitcoin Cash is gaining much attention due to its rather massive development, the main focus is now on DuragDoge as the next ideal coin to trade. Due to its innovative features and fast-rising value, DuragDoge quickly gained its place as one of the most exciting coins in the market. DuragDoge is not just another token, it is a movement for people who are confident in their success. Its main goal is to create a system that allows staking, rewards, and expansion of the network for holders of coins. Thanks to its high presale demand, more and more enthusiasts are paying attention to this DeFi crypto currency. This article explains why traders are eyeing DuragDoge as the next big platform as Bitcoin Cash price surges Bitcoin Cash (BCH): Price Surge and Whale Activity Signal Strong Market Momentum The price of Bitcoin Cash hit the highest point of \$ 391 in early trading in the United States. This was its highest level since early February whereby it was trading below the \$400 mark. The rise in BCH price is correlated with the breakout of the falling wedge pattern as part of the longer-term accumulation phase that has been taking place for several years. BCH has recently registered an increased volume of transactions by whales, and as data from IntoTheBlock reveals, 73% of BCH holders are now in profit. The market data shows that Bitcoin Cash was at \$389 with about a 29% increase and is integrated into the list of top ten Bitcoin alternatives. Daily trade volume rose by 83 per cent to over \$942 million, and it has a market capitalization of \$7.65 billion to be the best-performing cryptocurrency among the top 100. DuragDoge (\$DURAG): A Rising Star in Crypto with Staking Rewards and Deflationary Model While traders are seeking for the next big investment opportunity, DuragDoge is being considered as a top crypto ICO with great potential. This meme coin is known for having a very bullish community consisting of hustlers and dreamers. With the increased adoption of cryptocurrency, DuragDoge is set to make a difference in the market. Staking rewards are also one of the main benefits that enable stakeholders to make passive earnings. Staking \$DURAG comes with up to 20% Annual Percentage Yield, which promotes long-term holding. This increases the ecosystem, making it one of the best coins to invest in DuragDoge also has a deflationary mechanism that helps reduce total token circulation. Unlike many other similar projects, this DeFi crypto currency has no transaction fees, so investors will be more inclined to make purchases. This helped contribute to its rising popularity in the market. Conclusion With the growing adoption rate of Bitcoin Cash, many traders are now eyeing DuragDoge as the next potential point of interest. It boasts of a solid community, its staking rewards, and a deflationary model, making it among the best coins to invest in. As hype increases with time, investors are eagerly watching this top crypto ICO. Follow Durag Doge on X and Telegram for the latest news and updates. - Pakistan's Crypto Council proposes using surplus electricity for Bitcoin mining. - The government plans market-based electricity tariffs for crypto miners. Pakistan is considering Bitcoin mining as a way to use excess electricity and boost its economy. The proposal was discussed during the first meeting of the Pakistan Crypto Council (PCC) on March 21. Finance Minister Muhammad Aurangzeb chaired the meeting, attended by key financial and regulatory officials. PCC CEO Bilal Bin Saqib highlighted the potential of surplus energy for Bitcoin mining. He stressed the need for tailored regulatory models and a clear national blockchain policy. According to Saqib, using excess power for mining could turn liabilities into assets and attract global investment. The government is developing a framework to regulate the digital asset sector. Authorities plan to introduce market-based electricity tariffs for crypto mining and blockchain data centers. These tariffs will not rely on subsidies. The initiative aims to reduce financial losses from unused electricity. Pakistan's Crypto Strategy and Global Mining Trends Pakistan is looking to become a regional crypto hub. Officials emphasize the need for a stable and scalable regulatory environment. They also aim to ensure consumer protection, licensing, and compliance with global regulations. The strategy includes pilot programs and gradual rollout phases. The move aligns with global trends in crypto mining. Russia recently legalized the industry, leveraging its abundant energy resources. The U.S. states of Texas and Wyoming have implemented crypto-friendly regulations. Meanwhile, China banned mining in 2021 but still accounts for a significant share of global hashrate. El Salvador has embraced Bitcoin mining using geothermal energy. However, the IMF has urged the country to halt mining operations as part of a financial agreement. Pakistan's approach could position it as a competitive player in the crypto space. Pakistan's finance chief supports a future-ready financial ecosystem. Authorities are working to develop a regulatory structure that ensures transparency and attracts investment. Highlighted Crypto News Today BONK Eyes Key Resistance At \$0.000013, After 9% Surge

The crypto market has steeply declined since January 20th, when Donald Trump assumed office as the U.S. president. The recent sell-offs have seen Bitcoin and Ethereum dip sharply as investors liquidate their crypto holdings. Analysts believe the sell-off could result from macroeconomic uncertainty in the U.S. following Trump's proposed economic policies regarding tariffs and taxes. As the two crypto assets decline, Ethereum and Bitcoin traders have shifted their focus to a new DeFi project with massive long term potential. Bitcoin price prediction Bitcoin's price recently fell to a four-month low, dipping below \$77,000 before recovering slightly above \$80,000. As of this writing, the crypto asset is trading at \$83,414. Analysts have observed parallels between current market conditions and the end of the 2021 crypto bull market, suggesting a potential further drop to \$73,000. Despite the recent selloff, many believe Bitcoin is undergoing a temporary correction, and the asset is set to rebound soon. Bitcoin could reclaim the \$100k mark in May. Ethereum price prediction Ethereum (ETH) is trading at approximately \$1,890 at the time of this publication. The digital asset has suffered under the prevailing bearish market sentiment. However, Ethereum is still one of the most utilized blockchain networks. Analysts expect a strong recovery once market conditions stabilize. The continued development of Ethereum Layer-2 scaling solutions and potential ETF approvals could drive a price resurgence shortly. Ethereum could surge to an all-time high before the year ends. According to analysts, Ethereum could see \$2,800 sometime in April. Why BTC and ETH Traders Are Turning to BinoFi (BINO) As Bitcoin and Ethereum remain under bearish pressure, investors seek alternative projects with strong growth potential. BinoFi (BINO) has emerged as a compelling DeFi opportunity for presale investors. The project is gaining traction among BTC and ETH traders due to its hybrid exchange model, cross-chain trading, gasless transactions, and high-yield staking incentives. Unlike traditional exchanges, BinoFi offers a hybrid model that merges the speed and liquidity of centralized exchanges (CEXs) with the security and autonomy of decentralized exchanges (DEXs). This means traders can enjoy fast trade execution without compromising transparency or security. This innovative model helps BinoFi solve the long-standing problem of liquidity and efficiency that has plagued both CEXs and DEXs. BinoFi's cross-chain compatibility is another major draw. The feature allows users to trade assets across multiple blockchain ecosystems without limitations. Gasless transactions significantly reduce costs, making trading more efficient and affordable. With Ethereum gas fees fluctuating unpredictably, many traders are eager to adopt a new platform that eliminates unnecessary transaction expenses and has lightning-fast transaction speeds. High-Yield Staking and Passive Income Beyond trading, BinoFi offers lucrative staking rewards, providing passive income opportunities for investors. Given the current market uncertainty, BTC and ETH holders are increasingly looking for ways to earn yield on their holdings without taking excessive risks. BinoFi's staking program offers an attractive alternative, enabling traders to maximize their earnings while stabilizing the market. One of the most compelling reasons traders are flocking to BinoFi is its ongoing presale, where BINO tokens are priced at just \$0.02 per token. With a projected listing price of \$0.30, early investors can secure a 15x potential return before the token hits significant exchanges. The presale's ongoing phase 1 is on the verge of selling out and investors will need to pay more for BINO tokens in the next presale phase. - Bitcoin ETFs saw a \$165M inflow, marking five straight days of gains. - The Fed's decision to hold rates triggered a 1,300% surge in ETF inflows. - Analysts remain split on Bitcoin's short-term trend amid key resistance levels. Bitcoin exchange-traded funds (ETFs) saw a return of inflows, posting \$165 million on Thursday according to SoSoValue data. This is the fifth day in a row that ETFs have seen inflows, marking increased institutional demand after weeks of outflows. Institutional Interest Surges Following a loss of more than \$6 billion in outflows, Bitcoin ETFs are now experiencing a turnaround. BlackRock's iShares Bitcoin Trust ETF (IBIT) topped with \$172 million in new investments. Followed by Fidelity Wise Origin Bitcoin Fund (FBTC) and Grayscale Bitcoin Trust ETF (GBTC) with \$9.19 million and \$5.22 million, respectively. Bitwise Bitcoin ETF (BITB), however, experienced \$17.4 million in outflows, and Grayscale's GBTC lost almost \$8 million. Fed's Interest Rate One of the key factors behind this revival was the Federal Reserve's choice to keep interest rates unchanged. On March 20, spot Bitcoin ETFs experienced a 1,300% increase in inflows, amounting to almost \$166 million. Bitcoin ETFs accumulated almost \$700 million in five days. The Fed, which suggested rate cuts in the future, spurred risk-on assets' optimism. Bitcoin momentarily jumped 4.5% to \$87,431 before falling back. Ethereum and Solana also gained, while the overall crypto market cap rose to \$2.947 trillion. Even with bullish ETF inflows, analysts are split on the short-term direction of Bitcoin. Technical analysis places Bitcoin at crucial resistance, challenging a falling trendline and the 100-day moving average. Analyst's view Crypto analyst RJT_WAGMI indicated a potential breakout might spark a rally, while rejection can induce a dip. Trader Great Mattsby mentioned that Bitcoin is still in a long-term trend channel, and the next major high is due in 2025-26. CryptoQuant CEO Ki Young Ju cautioned that although ETF demand is high, on-chain metrics indicate slowing bull cycle, with Bitcoin potentially taking 6-12 months to cross its all-time high. Inflows for Bitcoin ETFs indicate renewed institutional optimism, spurred by the Fed's move and clarity in regulation. Nevertheless, macroeconomic forces and technical resistance will dictate the path of Bitcoin, with both short-term volatility and long-term appreciation.

- Analyst Sam Price dismisses peak claims, citing strong macro indicators like the Pi Cycle Indicator and hidden bullish divergence. - Bitcoin's RSI, Fear & Greed Index, and Fibonacci levels suggest the

market is near a bottom, not a top. - Price sees the recent 23% dip as a chance to accumulate before Bitcoin's next rally Prominent market analyst Sam Price has pushed back against claims that Bitcoin's bull cycle has ended, citing multiple macro indicators that suggest the market is far from its peak. In a recent tweet, Price argued that Bitcoin is closer to the price bottom than the top, urging investors to take advantage of the recent dip. His perspective contradicts growing speculation that the 2024/2025 bull run peaked at \$109,000—a notion reinforced by CryptoQuant CEO Ki Young Ju, who recently declared the bull market over. Why the Bull Cycle is Still on Price's analysis centers on several key indicators, including the Pi Cycle Indicator, macro price action, hidden bullish divergence, and oversold readings on RSI and the Fear and Greed Index (FGI). One of the strongest signals, according to Price, is the Pi Cycle Indicator, developed by Phillip Swift. This tool has historically predicted Bitcoin's tops with precision. A top is confirmed when the 111-day moving average crosses the 350-day moving average x2 (350DMA x2). Currently, these moving averages remain far apart, signaling that Bitcoin is still in an uptrend and closer to a bottom than a peak. Additionally, Bitcoin's recent dip aligns with a macro higher-low structure, which typically precedes higher highs. However, Price cautioned that a weekly close between \$58,000 and \$56,000 would invalidate this bullish outlook. Hidden Bullish Divergence Signals Uptrend Continuation Another critical metric identified by Price is a hidden bullish divergence on Bitcoin's weekly timeframe. This occurs when price forms a higher low, while an oscillator—such as the Relative Strength Index (RSI)—forms a lower low, suggesting a continuation of the uptrend. Supporting this view, BTC recently saw a 23% correction from its January 20 high, but the RSI formed a lower low. Historically, this pattern has preceded strong rebounds. Furthermore, Bitcoin is hovering near the 1.618 Fibonacci level (Golden Pocket), a key retracement zone where price reversals often occur. Price also pointed to Bitcoin's daily RSI, which dropped to 23 on March 11—a level seen only twice in recent years. Both previous instances marked significant macro bottoms: - November 10, 2022 — RSI hit 23 as Bitcoin fell to \$15,854 before a major rally. - September 7, 2023 — RSI hit 23 at \$25,639, marking another price low before a surge. Similarly, Bitcoin's Fear and Greed Index (FGI) plunged to 10 on February 27, historically aligning with major buying opportunities. Price believes this, alongside other indicators, reinforces the case for investors to dollar-cost average (DCA) their Bitcoin positions before the next leg up.

- North Carolina's Bitcoin Reserve Act (SB327) allows up to 10% of public funds to be invested in Bitcoin. - The state treasurer will oversee the funds, secured with multi-signature cold storage. North Carolina is considering a groundbreaking bill that would allow the state to allocate public funds to Bitcoin. The Bitcoin Reserve and Investment Act (SB327) proposes investing up to 10% of the state's general fund in the digital asset. With North Carolina's general fund currently holding \$9.5 billion, this move could reshape state financial strategies. The bill, led by Republican Senators Todd Johnson and Brad Overcash, seeks to establish a secure Bitcoin reserve. To ensure transparency and security, the funds will be held in multi-signature cold storage. The bill also mandates monthly audits to verify the Bitcoin holdings, ensuring accountability. A key provision in the bill restricts Bitcoin sales to cases of severe financial crisis. Even in such situations, strict conditions must be met before any liquidation occurs. This safeguard aims to maintain Bitcoin as a long-term asset rather than a short-term investment. NC's Bitcoin Bill Could Set a Precedent The proposal aligns with a growing trend of government interest in digital assets. With two Bitcoin reserve bills currently under consideration in North Carolina's House and Senate, the state could become a leader in crypto adoption for public finance. If passed, this legislation might encourage other states to follow suit. Despite its potential benefits, Bitcoin's volatility and regulatory uncertainties pose risks. However, supporters argue that diversifying reserves with digital assets could offer a hedge against traditional financial market fluctuations. The bill seeks to balance investment opportunities with strict oversight, ensuring responsible Bitcoin management. As more governments explore digital asset adoption, North Carolina's decision could serve as a model for other states. The success of SB327 will depend on regulatory approval, financial impact, and long-term crypto market stability. Highlighted Crypto News Today Is Maker (MKR) Ready for Lift-Off, with Eyes Set on the \$1.5K Resistance?

Bitcoin, the world's first and largest cryptocurrency, is once again capturing headlines as it holds at \$83,925. With institutional players ramping up their exposure to the asset, Bitcoin's trajectory continues to maintain a steady upward climb. Recent data highlights the enthusiasm of hedge funds, corporations, and even sovereign wealth funds, who are growing their holdings as part of long-term investment strategies. Ethereum: A Stout Force in DeFi, But with Stagnant Growth On the other hand, Ethereum, the second-largest cryptocurrency by market capitalization, is priced at \$1,900. Known for its pioneering role in smart contracts, decentralized applications (dApps), and NFTs, Ethereum remains a juggernaut in the blockchain space. However, it's fair to say Ethereum's price movements have been less inspiring lately. Despite leading innovations and commanding dominance within the DeFi and NFT ecosystems, Ethereum has struggled to break out of its recent price consolidation zone. Still, Ethereum's enduring utility and growing network adoption make it a mainstay in most portfolios. Its role as the backbone of decentralized finance ensures that Ethereum will remain relevant even as the broader market seeks greener pastures. Enter BinoFi (BINO): A Revolutionary DeFi Solution While Bitcoin and Ethereum anchor the crypto narrative, newer projects are emerging that aim to revolutionize how the industry operates. BinoFi (BINO) is quickly becoming one of the most intriguing names in decentralized finance. With a clear focus on solving real-world inefficiencies in trading, security, and cross-chain connectivity, BinoFi is positioning itself as a category leader in DeFi innovation. A Trailblazing Approach to Financial Systems BinoFi's most unique offering lies in its hybrid exchange model, which blends the liquidity and speed of centralized exchanges (CEX) with the transparency and control of decentralized exchanges (DEX). This hybrid approach gives users a smooth trading experience, free from the limitations of traditional platforms. Adding to its appeal, BinoFi

introduces true cross-chain trading without bridges. By eliminating the risks of legacy bridging systems, which are prone to exploits, BinoFi enables direct swaps across major ecosystems like Ethereum, Binance Smart Chain, Solana, and Polygon. This innovation drastically reduces friction for traders and developers navigating different blockchain environments. Additionally, the inclusion of AI-driven trading tools elevates the user experience. These tools offer features like predictive analytics, portfolio optimization, and automated trading strategies, catering to both beginner and professional traders looking to gain a competitive edge. Understanding the importance of security in crypto transactions, BinoFi incorporates non-custodial MPC (multi-party computation) wallets. These advanced wallets remove the need for traditional seed phrases and add layers of cryptographic safety. With gas-free transactions and user-friendly recovery options, BinoFi ensures a seamless yet secure experience for all users.

\$BINO Presale Sparks Excitement At the heart of BinoFi's ecosystem is its native token, \$BINO, which powers the platform's various functionalities. The ongoing presale has seen tremendous momentum, with 45% of the first phase allocation sold, amounting to approximately 20 million tokens. The success of the presale reflects mounting investor confidence in BinoFi's roadmap and market potential. Priced at \$0.02 per token during this first phase, \$BINO offers significant upside as analysts project a potential listing price of \$0.30 per token. This represents a staggering 1,400% return for early adopters, making the presale a focal point for both retail and institutional investors alike. The funds raised from the presale are earmarked for accelerating platform development, expanding partnerships, and scaling community engagement efforts. From governance voting to trading rewards, \$BINO holders stand to gain a wide array of benefits as BinoFi's ecosystem grows.

Why BinoFi Could Be a Game-Changer The rise of BinoFi reflects the growing demand for platforms that deliver both innovation and accessibility. By addressing the critical pain points of traditional DeFi, such as liquidity limitations, high security risks, and lack of interoperability, BinoFi is carving out a distinct niche in the market. Its roadmap, which includes added staking features, yield optimization tools, and integration with major DeFi protocols, further cements its potential as a visionary project. By prioritizing user-centric solutions and offering real-world value, BinoFi is prepared to challenge longstanding incumbents in the space. Final Thoughts Bitcoin may remain the king of cryptocurrencies, and Ethereum the face of DeFi. However, the spotlight is increasingly shifting to next-generation platforms like BinoFi, which aim to redefine what decentralized finance can offer. With its hybrid infrastructure, cross-chain capabilities, advanced security and trading tools, BinoFi is positioning itself as a serious contender in the race to become the next big thing in crypto. For those looking to capitalize on the future of DeFi, BinoFi represents not just an investment, but a vote of confidence in innovation itself.

Did you ever know that meme coins have taken the crypto world by storm, creating wealth overnight for early investors? But which project stands out? While AI Companions and Dog Bitcoin are making headlines, Arctic Pablo Coin (\$APC) is emerging as the hottest contender. With a revolutionary presale model, a strategic burn mechanism, and an innovative approach, this project is attracting massive interest. This article will cover the developments and updates of Arctic Pablo Coin, AI Companions, and Dog Bitcoin, exploring why these are the Top New Meme Coins to Invest in March 2025.

Arctic Pablo Coin's Deflationary Strategy: How Token Burns Boost Value Arctic Pablo Coin (\$APC) is unlike any other meme coin. Built on Binance Smart Chain (BSC), it integrates a unique deflationary mechanism where unsold tokens are permanently eliminated weekly during the presale. Hence it is one of the top new meme coins to invest in March 2025. The remaining supply after presale completion will also be burned, ensuring scarcity and long-term sustainability. Token burns not only reduce supply but also increase demand. As the available APC tokens decrease, each coin becomes more valuable, rewarding early adopters. This scarcity-driven model positions Arctic Pablo Coin as a prime investment in the meme coin space.

Presale: Arctic Pablo Coin's Journey Hits Nippy Nook! The Arctic Pablo meme Coin presale follows an unconventional route inspired by the character's journey through various locations. Currently, the presale is at Nippy Nook, the 15th phase, where the token price sits at \$0.000079. With over \$1.93 million raised, the excitement is at an all-time high. Investors at this stage have a potential ROI of 10,027.85%, as the launch price is set at \$0.008. As Arctic Pablo Coin progresses through its journey, prices will rise, making this the perfect time to secure tokens at a low entry point. Don't wait! Once Nippy Nook concludes, prices will increase again.

AI Companions Surges with Major Development AI Companions, a cutting-edge meme coin that merges artificial intelligence with blockchain, recently announced a groundbreaking update: a decentralized AI-driven trading bot. This innovative feature aims to revolutionize automated trading, giving users access to real-time AI predictions. With its increasing utility and an expanding user base, AI Companions is carving out a unique niche in the crypto space.

Dog Bitcoin Gains Momentum Amid Market Volatility Dog Bitcoin, a meme coin inspired by the success of Dogecoin and Bitcoin, has been experiencing significant volatility. Recently, the project announced a new mining rewards system, which is expected to boost its adoption. With increasing attention from investors and growing community support, Dog Bitcoin remains a strong contender in the meme coin market.

Final Thoughts: Arctic Pablo Coin Leads the Pack With Arctic Pablo Coin's deflationary mechanism, exciting presale structure, and staking rewards, it stands out as one of the Top New Meme Coins to Invest in March 2025. AI Companions and Dog Bitcoin also bring innovative features to the table, but Arctic Pablo Coin's unique approach is drawing the most attention. As the presale reaches its final stages, the opportunity to invest at this price point is slipping away. Get in before the next phase kicks in and the price jumps! For More

- Metaplanet recently purchased another 150 BTC for \$12.5M, bringing its total Bitcoin holdings to 3,200 BTC, and also targets 10,000 BTC by year-end. - The Japanese company issued ¥2 billion (\$13M) in zero-coupon bonds to fund further Bitcoin acquisitions, following MicroStrategy's steps. Metaplanet Inc. is now going bullish on Bitcoin. The Japanese company recently acquired another 150 BTC worth \$12.5 million at an average price of \$83,508. This latest purchase totaled its Bitcoin holdings to 3,200 BTC. The company aims to reach 10,000 BTC by year-end. Metaplanet CEO Simon Gerovich emphasized the firm's commitment to expanding its Bitcoin reserves despite market turbulence. Metaplanet has acquired 150 BTC for ~\$12.5 million at ~\$83,508 per bitcoin and has achieved BTC Yield of 60.8% YTD 2025. As of 3/18/2025, we hold 3200 \$BTC acquired for ~\$266.2 million at ~\$83,188 per bitcoin. pic.twitter.com/UMmVan28Xe " Simon Gerovich (@gerovich) March 18, 2025 The strategic purchases follow a similar move by institutional players like MicroStrategy (now Strategy), which recently acquired 130 BTC, bringing its total to 499,226 BTC "representing 2% of Bitcoin's total supply. As institutional investors adopt Bitcoin as a treasury asset, Metaplanet's long-term vision mirrors broader trends in corporate crypto adoption. Debt Financing and Institutional Strategy Drive Bitcoin Expansion Metaplanet is financing its Bitcoin accumulation through strategic debt offerings. The company issued ¥2 billion (\$13M) in zero-coupon bonds to Evo Fund, aiming to implement MicroStrategy Bitcoin purchase history. *Metaplanet Issues 2 Billion JPY in 0% Ordinary Bonds to Purchase Additional \$BTC* pic.twitter.com/RhXoSZD3bw " Metaplanet Inc. (@Metaplanet_JP) March 18, 2025 These bonds allow Metaplanet to secure funds without immediate interest payments, enabling it to maximize Bitcoin purchases while leveraging market corrections. Metaplanet has already secured over 50,000 shareholders, including strong endorsements from Strategy. The company's aggressive stance signals its belief in Bitcoin's long-term potential despite short-term volatility. MicroStrategy's influence on Metaplanet is evident, with both firms leveraging debt to expand holdings. MicroStrategy's past acquisitions at Bitcoin's all-time highs resulted in unrealized losses, yet the firm remains committed to its Bitcoin-first approach. Metaplanet, learning from this, appears to be timing its acquisitions more strategically. Market Reactions and the Bigger Institutional Crypto Play The crypto market remains in a state of correction, with Bitcoin ETFs seeing outflows of \$5 billion in recent weeks. Despite this, institutional demand for Bitcoin continues to grow. According to bitcointreasuries.net, over 170 entities now hold more than 3.1 million BTC. Market analysts are divided on Bitcoin's next move. While some argue the correction could deepen, others believe the Fear and Greed Index "now in "fear" territory" suggests a potential rebound. Historically, such conditions have preceded major price surges. For Metaplanet, these price fluctuations present buying opportunities. Its recent acquisition, alongside its strategic funding approach, positions it as one of the most aggressive corporate Bitcoin adopters. With its holdings nearing \$1 billion in value, the company is emerging as a major player in the institutional Bitcoin landscape. Highlighted Crypto News for Today Santiment Hints DOGE Rebound Amid Rising Smart Money & Active Addresses

- With the help of this collaboration, miners all around the globe will have easy access to flexible lending options in USDT. - By utilizing their Bitcoin as collateral, miners may access liquidity and take advantage of various repayment alternatives. Today, M2, a prominent cryptocurrency exchange and investment platform, announced a strategic alliance with NiceHash, the leading hashrate marketplace in the world that serves more than a million miners worldwide. With the help of this collaboration, miners all around the globe will have easy access to flexible lending options in USDT, enabling them to realize the full value of their Bitcoin holdings. Miners may now get easy USDT loans by securing their Bitcoin, which allows them to grow their businesses, pay bills, and maximize profits "all without having to liquidate their priceless assets. By utilizing their Bitcoin as collateral, miners may access liquidity and take advantage of various repayment alternatives, such as assigning a percentage of their hash rate. They can easily manage both their open loans and mining pool rewards via a single, user-friendly dashboard, thanks to NiceHash's technology, which integrates seamlessly. Earnings are immediately directed toward loan payback, removing complexity and guaranteeing a hassle-free experience. Sudhu Arumugam, Chief Product Officer, M2, added: "At M2, we understand the challenges miners face in maintaining liquidity while preserving their Bitcoin investments. Our partnership with NiceHash represents a shared vision of empowering miners with smarter financial solutions that allow them to grow their businesses without sacrificing their Bitcoin holdings. This is just the beginning "we are committed to continuously innovating and delivering financial services that support the crypto mining ecosystem in meaningful ways." Well-known for its state-of-the-art hash power marketplace and mining solutions, NiceHash keeps empowering the mining community worldwide with its creative and intuitive services. NiceHash contributes to the introduction of a world-first option for funding large mining operations and growth by enabling the technology behind M2's lending offerings. For miners throughout the globe, this collaboration is revolutionary since it offers financial freedom without jeopardizing Bitcoin ownership. M2 and NiceHash are here to help your journey with customized lending options, regardless of whether you're a solo miner or a large operation. M2, which was established in 2023, aims to promote the use of virtual assets by providing investors with a safe and transparent trading environment. For purchasing, selling, expanding, and protecting virtual assets, M2 offers consumers a dependable and regulated increasing range of products, services, and solutions. The Securities Commission of the Bahamas regulates the digital asset business M2 Global Wealth Limited (M2GWL). The products that M2GWL offers include M2 Lending and the MMX Token. In order for users to be fully informed and engaged in their virtual asset
