- Whale investor acquires 2% of SHIB's total supply and DOGE tokens, worth \$170M. - The connection between the investor and Jump Trading raises intrigue and speculation. - Detailed transaction records verify the whale's activity and emergence as a significant holder. In a surprising turn of events, the cryptocurrency world has witnessed a massive purchase by a whale investor. Reports indicate that a single entity has acquired a substantial portion of the total supply of two prominent cryptocurrencies, SHIB and DOGE. The significant acquisition amounts to a staggering 170 million USD, attracting attention from the crypto community worldwide. According to Lookonchain, a platform known for providing insightful analyses of blockchain data, the fifth-largest holder of SHIB and DOGE appears to be associated with Jump Trading or a partner of the prominent trading firm. This revelation raises intriguing questions about the motivations and strategies behind such a synchronized move in two separate cryptocurrencies. In the case of SHIB, the whale investor, known by the address `0x73AF`, recently transferred a substantial amount, totaling 20 trillion SHIB tokens, equivalent to \$176 million, to the address `0x40B3`. Consequently, `0x40B3` became the fifth-largest holder of SHIB. Coinciding with this transfer, another significant transaction took place involving DOGE. A separate entity named `DDuXa` transferred a considerable sum of 3.4 billion DOGE tokens, valued at \$248 million, to the address `DEgD`. As a result, `DEgD` emerged as the fifth-largest holder of DOGE. Whales Could Impact the Market and Motivations Examined The data presented by Lookonchain also reveals an interesting correlation between the two cryptocurrency transactions. While `0x73AF` acquired a substantial amount of SHIB, it received a remarkable influx of 310,000 Ethereum (ETH) tokens, valued at \$563 million, from two addresses associated with Jump Trading: `0x0716a` and `0xeA3e`. These addresses are believed to be either internal addresses of Jump Trading or belonging to its partners. The connection between the whale investor and Jump Trading raises further questions about the motives behind this synchronized acquisition and its potential impact on the cryptocurrency market. Detailed transaction records can be verified on well-known blockchain explorers such as Etherscan and Bitinfocharts, providing transparency and credibility to these findings. The address `0x40b38765696e3d5d8d9d834d8aad4bb6e418e489a` on Etherscan displays the recent transfers of SHIB tokens, highlighting the whale investor's activity and subsequent emergence as a significant holder. Similarly, the address `DEgDVFa2DoW1533dxeDVdTxFhMzs1pMke` on Bitinfocharts showcases the transactions involving DOGE, shedding light on the whale's involvement in the token. The implications of such a massive acquisition by a single entity must be considered. With a substantial stake in both SHIB and DOGE, the whale investor's actions expected to significantly influence the price movements and market dynamics of these cryptocurrencies. Traders, investors, and enthusiasts closely monitor the situation, eagerly awaiting further developments and potential ripple effects in the crypto market. While the motivations and long-term objectives of the whale investor remain unclear, this synchronized acquisition of SHIB and DOGE raises speculation and generates discussions within the crypto community. As the crypto market continues to evolve and attract attention from institutional investors and established trading firms, events like these shed light on the complexities and intricacies of this fast-paced industry. - Pepe Coin outpaces Shiba Inu in growth rate. - PEPE reached a \$1 billion market cap in 19 days. - The trending meme coin is down by 65.5% since its all-time high. Meme coins, which frequently feature popular creatures such as cats and dogs, have been a common presence in the cryptocurrency sector. Pepe Coin, a new player in this arena, has recently debuted, grabbing engagement with its outstanding price performance. Early Pepe Coin investors saw substantial gains ranging from hundreds to millions of dollars. On May 5, 2023, PEPE reached an all-time high of \$0.000004354. However, Pepe Coin has plummeted by 65.4% since its all-time high. According to the crypto analytics platform Messari, PEPE has exhibited a skyrocketing growth rate in comparison to Shiba Inu and other popular meme coins. Pepe Coin outpaces other meme coins in growth Messari has released a report stating that the average value per holder for PEPE, calculated based on the market cap value per holder, exhibits a growth pattern that is comparable to SHIB but with a faster pace. Additionally, a tweet has been circulating on Twitter, showing the quick growth of PEPE to a \$1 billion market cap. The data from the tweet shows that PEPE just took 19 days since its inception to reach a billion-dollar market cap. Shiba Inu and Dogecoin, on the other hand, took 279 days and 2585 days, respectively. This data denotes the staggering growth of the new meme coin over a span of a few days. Even though PEPE has attained such feats, it should also be noted that these coins are extremely volatile and should be dealt with with caution.

- Token deposits for trading on the platform may begin on May 16 at 08:00 UTC, 2023. - There have been no positive price swings in BONE and BABYDOGE over the last day. Two tokens, Bone ShibaSwap (BONE) and Baby Doge Coin (BABYDOGE), have been added to Tarmex, a well-known crypto exchange. Token deposits for trading on the platform may begin on May 16 at 08:00 UTC, 2023. ðŸ“£Tarmex will list @Shibtoken and @BabyDogeCoin tokens on 2023.05.16 at 08:00 UTC â€” Tarmex (@Tarmexio) May 15, 2023 â€”Users Can start Deposit at 2023.05.16 at 08:00 UTC ðŸ”ˆTrading pairs â€” BONE/USDT , BABYDOGE/USDT Learn More:â€”
11. [#BONE #ELON #BabyDoge #altcoin #Altseason #Crypto #Memes](https://t.co/8DX6JDXmmV#BONE)
[#BONE #ELON #BabyDoge #altcoin #Altseason #Crypto #Memes](https://t.co/8DX6JDXmmV#BONE)
pic.twitter.com/FtnptE450b The tokens' exposure in the cryptocurrency market has been boosted thanks to the exchange's introduction of BONE/USDT and BABYDOGE/USDT trading pairings. OKX, Poloniex, and Huobi are just a few of the big exchanges that have both tokens listed. More liquidity and maybe more

price movement for these tokens, however, is anticipated with the listing on Tarmex. No Positive Price Swings There have been no positive price swings in BONE and BABYDOGE over the last day, despite the fact that their listings on Tarmex are a major event for the tokens and their communities. According to CoinMarketCap, BABYDOGE has increased by 0.70% while BONE has decreased by 3.11%. Another popular token, SHIB, has also seen an increase in its burn rate during this time. Burned tokens in the last 24 hours totaled 3,034,309,519, a rise of 26450.21% as per the most recent hourly SHIB report. This comes after a week in which the burn rate dropped by 70%. The expanded availability of tokens like BONE and BABYDOGE to more investors is good news for the general growth and development of the crypto ecosystem, notwithstanding the volatility of token prices and burn rates. These tokens are becoming more widely available to traders all over the globe since they are being adopted by a growing number of platforms, which might lead to an increase in market liquidity and volatility.

- Shiba Inu (SHIB) burn rate has surged over 26K% - SHIB price hasn't witnessed any increase. The so-called 'DogeCoin Killer' Shiba Inu continued to trend; even new meme coins, such as PEPE and Milady Coin, appeared to have more attention. Hence, Shiba Inu's total burn rate skyrocketed by more than 26450% in the last 24 hours. Over 3 billion SHIB tokens were burned in a single transaction by Blaze Token, a recently launched project within the Shiba Inu community. The project has now burned 6.7 billion SHIB since it started the burning campaign, which is a major improvement. The latest burn transaction brings Blaze Token's total burned value to 6.7 billion SHIB in just two weeks. Meanwhile, Shiba Inu trading has been down since April. However, the SHIB community keeps wondering about the popular memecoin. Shiba Inu Price Analysis Shiba Inu's price action on the daily chart demonstrated bearish dominance in the market. Since the middle of April, when the bears stopped the bullish rally at the \$0.000011 resistance, SHIB has been in a sharp downward trend. As of now, SHIB has witnessed a 14% loss just in May. This suggested that bears were attempting to increase their level of dominance. The Bulls still have some hope, though. As a result, SHIB's price edged closer to the important \$0.000009 support level. Before the YTD high, this level served as a rallying point for bulls in January. At the time of writing, SHIB traded at \$0.00000879, with a 24-hour trading volume of \$89 million and a market cap of \$5.1 billion. Shiba Inu prices are slightly recovering from past lows. In conclusion, the SHIB price may have spiked as a result of the surge in burning volume. Recommended for you

- BRISE placed in the top three positions with the highest social engagement. - Bitgert Skynet Trust Score is 81.49 as per CertiK. The global cryptocurrency market has been overshadowed by too many events, but this hasn't stopped developers from creating new strategies to boost the token value. One project that has recently started to gain attention is Bitgert (BRISE). The crypto engineering project sparked the crypto market with its recent dominance. Bitgert aims to build a low-cost blockchain network. A network that is capable of processing 100,000 transactions per second at low or no cost to the user. BRISE Weekly Watch Out Moreover, recently, Bitgert's native token, BRISE, has marked a major boom in the market with massive returns. Let's see the weekly roundup of Bitgert crypto. Last week, the innovative token witnessed significant returns of more than 99%. Investors turned \$64 into \$1,864,630 and \$127 into \$4,120,139. In addition, LunarCrush, a social intelligence platform for the cryptocurrency market, revealed the top BNB projects with the highest social engagements on May 9th, 2023. In that Bitgert (BRISE) was placed in the top three positions along with leading memecoins Floki Inu (FLOKI) and Baby Doge Coin (BABYDOGE) On May 10th, Travalat, an online travel agency backed by Binance, integrated with the team behind the ground-breaking token BRISE. Crypto enthusiasts and BRISE token users can now book hotels, flights, and many other activities. Further, according to CertiK, a well-known security tracker in the Web3 sector, Bitgert scored 84 in the Skynet Security Score. The Skynet Trust Score is an updated version of the Security Score. Bitgert (BRISE) Trust Score (Source: CertiK) The exceptional result of the CertiK Audit certifies Bitgert (BRISE) as a very safe cryptocurrency. This is great news for BRISE token investors and holders since it adds credibility and security to the token. Since token burning is often associated with price hikes, the Bitgert development team on May 13 burned a total of 900 billion BRISE tokens over two distinct transactions in an effort to promote interest in the asset. Bitgert's native token, BRISE, has witnessed a significant price increase over the previous days, and investors will be quite happy with the current development, possibly causing the price to soar. Moreover, Q-BRISE, backed by Bitgert, created headlines in the EV business on April 3 when they released a website with the first information about their forthcoming electrical car model. The introduction of the new EV version garnered further increased interest in the BRISE coin. As of right now, Q-BRISE is also releasing its first electric vehicle model in the United Arab Emirates.

- Today, CateCoin price soared over 40%. - CateCoin trending on Twitter with more than 1.4m tweets. After a quiet 2022, memecoins gained immense popularity due to the launch of the frog-themed meme token Pepe Coin. Also, the 'memecoins fiesta' seems to have no end. Since the peak of the meme coin market in 2021, these tokens have actually experienced explosive returns. Firstly, Dogecoin (DOGE) and Shiba Inu (SHIB) are two of the most popular cryptocurrencies in the world. Both cryptos have seen massive rises in value in recent years, and they continue to be popular investments for many people. The Never Ending Memecoin Fiesta However, there is one cryptocurrency that is quietly gaining ground in front of the giants 'CateCoin'. As the weekend buzzed with the first popular cat-themed cryptocurrency, CateCoin (CATE), which was launched in 2021. Further, CATE is set to launch on the Ethereum network. Soon, users will have the opportunity to buy and trade the token with Uniswap. CateCoin is a deflationary token due to the fact that the supply of tokens is continually decreasing. As a result, CateCoin has become more rare and expensive over time. Catecoin is not just a speculative investment. It is also a utility token that can be used to purchase goods and services. According to many memecoin whales, CATE may become the next PEPE coin. In addition, CateCoin's several distinctive characteristics, which set it apart from other cryptocurrencies, attracted many crypto

investors'™ attention. At the time of writing, CateCoin traded at \$0.0000004782 with a 24-hour trading volume of \$2.5 million, which increased by about 100%. CateCoin's™ price climbed over 35% in a day. Additionally, the token is up more than 33% compared to market leaders Bitcoin (BTC) and Ethereum (ETH).

- Linda recently resigned from her job at NBC Universal as Head of Global Advertising. - According to the new CEO, she wants to help usher in Twitter 2.0. Twitter, the microblogging social media site, has been on fire for the last week after current CEO Elon Musk dropped hints about appointing a new leader. Elon Musk quickly verified any rumors that Linda Yaccarino would be taking over the firm's affairs in the next six weeks, with Musk assuming the roles of Chairman and CEO. Linda took to social media for the first time to address the public after her appointment was announced, saying that she shares Musk's desire to improve the world and is eager to rebrand the company. I see I have some new followers - I'm not as prolific as @elonmusk (yet!), but I'm just as committed to the future of this platform. " Linda Yaccarino (@lindayacc) May 13, 2023 Your feedback is VITAL to that future. I'm here for all of it. Let's keep the conversation going and build Twitter 2.0 together! Focusing on Twitter 2.0 A lot has changed with the company's management and marketing strategy since Elon Musk bought it. The wealthy investor has done a lot to illustrate that there are major plans for web3 and the digital currency ecosystem, including frequent employment cutbacks and product enhancements that have been reported on Twitter. Elon Musk made a well-publicized action earlier this year when he temporarily replaced the Twitter logo with the Dogecoin icon. Now that Linda Yaccarino is in charge, many people are wondering whether the fortunes of Dogecoin and the industry as a whole will change. According to Linda, she wants to help usher in Twitter 2.0 and promises to take user criticism to heart. She openly asked for any feedback, right in her first post. While Twitter 2.0's specifics have yet to be disclosed, they may be consistent with Musk's stated desire to incorporate the company's principal product with payment services. Linda recently resigned from her job at NBC Universal as Head of Global Advertising.

- This happened only a few hours after Musk announced Linda Yaccarino as the new CEO. Tesla's CEO posted a meme that clearly focuses on the US Constitution's amendments. Elon Musk, indirectly mentioned Pepe Coin in a joke just as the crypto market was debating whether the current meme coin season had reached its height. This happened only a few hours after Musk announced that Linda Yaccarino would be taking over as Twitter's CEO. She plans to give her whole attention to company matters. Reportedly slated to take over as CEO of the social media giant, Linda Yaccarino recently announced her resignation from NBCU. The new CEO has been said to be a fan of meme coins, which is a positive development for the crypto trading community. PEPE Community Excited Meanwhile, Tesla's CEO posted a meme that clearly focuses on the US Constitution's amendments. What really got people's attention, however, was the inclusion of "Pepe the frog" inside the meme, which could be seen as a subtle endorsement by Musk, who is famous for his advocacy of another meme coin, Dogecoin (DOGE), in addition to his promotion of the Shiba Inu and Floki Inu cryptocurrencies. Explaining Constitutional Amendments pic.twitter.com/oYkMPBe9Zi "Elon Musk (@elonmusk) May 13, 2023 Musk posted a meme using the cartoon frog Pepe to illustrate the concept of constitutional amendments. Pepe Coin's official Twitter account responded with "seize the memes of production." The price of PEPE Coin increased dramatically when Elon Musk made reference to the frog. According to CMC the price of PEPE is \$0.000001916 and is up 17% in the last 24 hours. The trading volume at the time of writing is \$1,004,985,829 and is up 133% in the last 24 hours. Whether Musk supports PEPE is something time will tell, but his indirect mention has got the PEPE community on its heels.

- Baby Doge will be traded with 0% transaction fees on the ETH network soon. - As the report says, 85 quadrillion tokens will be left once a cent quadrillion gets burnt. Baby Doge, a meme coin, has now opted to vote for zero transaction fees on ETH along with a cent quadrillion token burn lately over the last week. As per Baby Doge's recent tweet, it is said that sooner 0% trade on ETH will be incorporated. Just a few days away from "Baby Doge (@BabyDogeCoin) May 13, 2023 0% fees on ETH #babydoge pic.twitter.com/VKN4NN48sA" Moreover, this would probably boost security with improved project integrity. The proposal was given last Saturday in order to strengthen the securities with innovative solutions. Baby Doge's Proposal Response The crypto community has now voted to support Baby Doge for the 0% transaction fees and a massive token burn over the snapshot website. Meanwhile, the Baby Doge team is set to draft an official proposal to the Decentralized Autonomous Organization (DAO) as per the overwhelming response from the voters. To consider, this Baby Doge is trying to build a seamless and cost-effective experience for the ecosystem. However, this would prolong the exploration of the BNB chain relying upon the ETH initiation. Considerably, the burn is supposed to happen on June 1 whereas 85 quadrillion Baby Doge tokens will be in circulation once done. The trading is expected to happen over the ETH network, apart from 85 quadrillions, the rest will be happening over the BNB chain possibly. On the other hand, there is a lot of discussion about the burn on Twitter. The Baby Doge team has detailed that the non-circulating supply has nothing to do with the price surge. Nevertheless, a massive token burn happened recently of around 500T. As per CoinMarketCap, the Baby Doge is pricing at \$0.00000000218 over a trading volume of more than \$7 million in the last 24 hours. It seems to be bearish with a decrease in price change of about 1.84% since the previous day. Recommended For You:

Twitter's new CEO, Linda Yaccarino, follows Shiba Inu. - The SHIB army is excited that Twitter's CEO is interested in memecoins. On May 12, Elon Musk announced that he was going to step down from the Twitter CEO post and appointed Linda Yaccarino as the new CEO. After the announcement, some crypto users spotted that Yaccarino follows Shiba Inu's (SHIB) Twitter account. The talks started around the crypto market about the new CEO's involvement in the digital asset, following in the footsteps of Elon Musk. Elon Musk has made a lot of impact on the popular memecoin Dogecoin. Some crypto users

are expecting Yaccarino to make an impact on Shiba Inu. However, Yaccarino has yet to say anything about the memecoin publicly. So her level of interest in cryptocurrency has not been identified. The SHIB army is excited after knowing that the new CEO is following the Shiba Inu Twitter page. Recommended For You:

- BTC price breaks below the 55-day support at \$27,000, causing a 7% correction and liquidation of \$100 million worth of long BTC futures contracts. - Despite the price drop, Bitcoin's margin and futures markets show resilience during the downturn. - The market's strength during the correction fuels optimism for a potential recovery toward the \$28,000 level. Today's Bitcoin price analysis indicates the king coin has followed a declining trendline since recording a 12% price decline from a high of \$29,865 on May 6. The price has dropped to as low as \$26,166.87 on some exchanges, indicating a 3.16% dip in the last 24 hours. The current Bitcoin downtrend comes amid a substantial influx of capital into meme-inspired digital assets such as Pepe Token, Dogecoin, and Shiba Inu. These assets are experiencing a surge in popularity as investors focus on them instead of Bitcoin. This has caused some to question whether or not the current crypto market is in a bubble. Despite Bitcoin's dive below \$27,000 and the subsequent liquidation of \$100 million, margin traders are not flipping bearish. This resilience can be attributed to several factors. Firstly, regulatory pressure in the United States has increased, with Bitcoin miner Marathon Digital receiving a subpoena from the SEC. This regulatory uncertainty adds complexity to the market but doesn't necessarily deter margin traders from maintaining their positions. BTC/USD Technical Analysis on a 4-Hour Chart: Bitcoin Forms a Falling Wedge The BTC/USD pair trades bearishly below the \$27,200 level, although a bullish continuation pattern has formed. The 4-hour chart shows that Bitcoin has formed a falling wedge pattern, signaling an impending reversal if Bitcoin can break above the upper trendline of the wedge at \$28,500. Bitcoin is trading at \$26,295.69 after breaking below the SMA50 and SMA200. If Bitcoin reclaims the key support level near \$27,000, it could form an inverted head and shoulders pattern. This would signal a trend reversal upward, allowing Bitcoin to break out of the wedge pattern and test resistance at \$28,500. Looking ahead, the current crypto market is in flux, with regulatory uncertainty and a weak dollar both making the landscape somewhat unpredictable. However, Bitcoin margin traders remain resilient despite these factors. Professional traders have retained their leveraged long positions and are optimistic about BTC's potential to recover from its recent dip below \$28,000. Technical analysis suggests that a break above \$28,500 could be in store for Bitcoin, although the digital asset will need to reclaim \$27,000 for this scenario to become more likely.

- This is yet another huge upheaval at the top of Twitter leadership. - Linda Yaccarino, the head of advertising for NBCUniversal, resigned recently. On Friday, billionaire Elon Musk announced that Linda Yaccarino will be taking over as Twitter's chief executive officer. After Musk ousted the executive team in October 2022, when he took over the social media firm, this is yet another huge upheaval at the top of Twitter leadership. Musk has said that he would continue to concentrate on product development and technological advancements while the next CEO handles day-to-day business operations. Not just Twitter and Tesla, but the cryptocurrency industry as a whole, will benefit from this new development. All Eyes on New CEO If Musk stays on to manage Twitter's tech, it's possible that users may be able to make cryptocurrency payments over the service. In addition to his well-known involvement with Dogecoin, the billionaire has hinted at the possibility of using cryptocurrency-based payments on the social media firm. Musk made the statement on Friday, less than 24 hours after announcing his appointment of a new Twitter CEO. He also said that in around six weeks, the new CEO will begin working. However, at that time Musk didn't disclose the details of the new CEO. Now Musk has openly announced the new CEO name. And it is none other than Linda Yaccarino. Musk recently made the following statement: "I am excited to welcome Linda Yaccarino as the new CEO of Twitter! Linda will focus primarily on business operations, while I focus on product design & new technology. Looking forward to working with Linda to transform this platform into X, the everything app." Linda Yaccarino, the head of advertising for NBCUniversal, resigned amid rumors that she might replace Elon Musk as CEO of Twitter. With Musk's latest tweet, all speculation has been put to rest.

- The new Twitter CEO will take charge in six weeks. - Elon Musk will be positioned as Twitter's executive chair and CTO. Elon Musk's hunt to find a new CEO for the microblogging social media platform, Twitter, has finally come to an end. After a few months of taking over the position at Twitter, his search appears to be over. The Twitter boss announced on May 12th that he has hired a new CEO for the social media platform. Also, the billionaire withheld the person's name. But Musk didn't disclose any names; he just revealed that "She" would take up the new Twitter CEO role in six weeks. Excited to announce that I've hired a new CEO for X/Twitter. She will be starting in ~6 weeks!" Elon Musk (@elonmusk) May 11, 2023 My role will transition to being exec chair & CTO, overseeing product, software & sysops. Elon Musk will be replaced by the new person as the head of Twitter's newly named parent company, X Corporation. The CEO of Tesla announced that he would switch his position as Twitter's executive chair and CTO. Further, the 51-year-old will oversee products, software, and sysops. Elon Musk vs Criticism When Elon Musk revealed an announcement about the future Twitter CEO, most people took this opportunity to mock Musk in a friendly manner. However, Musk himself self-described himself as the "chief meme officer" of the microblogging platform. Further, netizens on Twitter welcomed the new CEO of Twitter with memes that featured Musk wearing a wig. However, Elon Musk bought Twitter for \$44 billion last October and said he would only be in charge for a short period of time to complete the organizational overhaul. Aside from social media, Musk has stated that he wants to expand Twitter into an "everything app," which would include financial services. Currently, Twitter has cryptocurrency price tracking features. Soon, users will be able to trade it. Moreover, a poll on Twitter that Musk started in December received 57.5% of the vote for him to leave his position as CEO of the social media site. - The creators and moderators behind some of the recent developments behind SHIB took to a Twitter Spaces AMA on May 11, in an event hosted by the exchange Huobi. - The popular meme cryptocurrency Shiba Inu recently burned 1.6 billion tokens, a move often used by cryptocurrency projects to optimize a token's supply/demand dynamic. Shiba Inu, the meme-inspired cryptocurrency that skyrocketed to fame earlier this year, has continued to captivate the attention of investors. With a current market capitalization of \$5.16 billion and a fully diluted market cap of \$5.17 billion, the token has maintained its position as the 15th largest cryptocurrency by market cap. Its trading volume in the last 24 hours alone is \$148.3 million, with a market dominance of 0.46%. Huobi, the 11th largest cryptocurrency exchange, recently hosted an AMA for Shib Army moderators on May 11, asking some of the leaders behind the project what the community can expect in the days and weeks ahead. According to Mazrael, the transition from a meme token to a vaulted and respected crypto project did not happen by accident, it was thanks to a large and dedicated team of developers who helped propel the project's utility and entertainment value forward. He mentioned specifically Shibarium Shiba Inu 2, which is currently in the testnet phase, and will eventually form the layer 2 blockchain for SHIB that, he said, will include a cutting-edge technology like A.I. Also, we've got a successful mobile game that's been developed by Shytoshi and with PlaySide Studios using Shiboshis, providing an update on the NFT collection of 10,000 unique and playful Shiba Inus with different traits and abilities, telling listeners to the AMA that the mobile game is expected to be deployed to fans soon. Furthermore, Mazrael added that the SHIB metaverse is still in production, though gave no exact date or timeline as to its eventual release but added that they had enlisted the services of one of the industry's largest visualization studios, the Third Floor, which previously collaborated on Hollywood movies like Marvel and Star Wars. When it came to assessing the macroeconomic conditions around meme coins like SHIB and alt-coins in general, Digarch says that questions around adoption for risk-on assets tend to do worse in environments that experience high inflation: when you have high inflation, high-risk assets tend to get affected because what people do is sell off their high-risk assets and pay off their debts because with high inflation you get a high-interest rate high. So the cost of debt is expensive, so they sell off their high-risk assets and they pay off their debts. And unfortunately, cryptocurrency falls within the high-risk asset class. On how these macroeconomic conditions may affect the adoption and price of SHIB, Digarch says a large part of it depends on liquidity in the Bitcoin market, mentioning specifically the upcoming Bitcoin halving, expected for April 2024. "To sustain those rallies, you would require more liquidity. And as we head into the end of 2023, that liquidity pump will be determined by the pace of US crypto regulation," Digarch says. Yet Digarch remains optimistic about the potential of meme coins in general. "Memes are lovely, we know that in 2021, that bull run in all coins was actually driven largely by meme tokens. Remember Dogecoin and a few others back then that helped drive new crypto adoption from non-crypto natives? So meme tokens, contributed a lot to the 2021 bull run. But will this repeat in the next cycle? Well, that's quite tough to tell at the moment," Digarch concluded.

- From a low of 3.75 ETH (\$6,920) to a high of 5.70 ETH (\$10,371) was the after-effect. - The trading volume of Milady NFTs had surged by a factor of 500%. On Wednesday, Elon Musk tweeted a meme featuring the instantly familiar figure from the NFT collection with the words "There is no meme. I love you." Many Milady NFT holders found this to be amusing. As a result, the base price of the digital collectable on the OpenSea marketplace reached unprecedented heights. "Elon Musk (@elonmusk) May 10, 2023 From a low of 3.75 ETH (\$6,920) to a high of 5.70 ETH (\$10,371), the collection's entry-level price skyrocketed on crypto markets, as shown by data from the primary NFT marketplace. Information collected as of Wednesday afternoon indicated that the trading volume of Milady NFTs had surged by a factor of 500% during the previous twenty-four hours, and that the floor price had jumped by over half. Not the First Time For Musk The Milady meme is the most recent example, but it is not the first time that Musk has used Twitter to drive up the price of digital assets. After Musk modified the Twitter logo to include the Doge icon, the price of Dogecoin increased over the preceding month. Musk has been quite vocal about his admiration for DOGE and has often driven prices with his unique ways of supporting the meme coin. Multiple recent scandals have surrounded the Milady NFT collection. After Charlotte Fang, the creator of Milady Maker, revealed in May 2022 that she had used a fake Twitter account to send racist and nasty tweets, the price of NFTs plummeted. About 9,823 NFTs with features like those of young children and wide, anime-style eyes are classified as Miladys, a subset of the profile-pic (PFP) NFT collection. - SHIB has been experiencing vast selling pressure. - Developers have been distributing large amounts of the tokens to various wallets. Shiba Inu (SHIB) has been experiencing significant selling pressure in recent weeks. After hitting \$0.00001018 in early May, the token has been on a downward trend, causing concern among its investors. At the time of writing, SHIB was trading at round \$0.000008885, a far cry from its all-time high of \$0.000088. The token's marketcap has also taken a hit, dropping from over \$12 billion to around \$3.3 billion. SHIB/USDT Price Chart (Source: TradingView) The selling pressure on SHIB can be attributed to a number of factors. Firstly, the broader cryptocurrency market has been experiencing a downturn in recent weeks, with many major cryptocurrencies experiencing significant losses. Bitcoin, and other major cryptos like Ethereum, Binance Coin, and Dogecoin have also seen significant losses. Moreover, there has been an increase in supply of SHIB tokens. The developers behind the token have been distributing large amounts of the tokens to various wallets and exchanges. This has led to concerns of oversupply and dilution of the token's value. All-in-all, there has been a lack of significant positive news or developments surrounding SHIB. Unlike other cryptos, like Bitcoin and Ethereum, which have seen increased adoption and institutional interest in recent months, SHIB has not seen any major developments that could drive its value up. Despite the selling pressure, there are still some bullish indicators for SHIB. Firstly, the token is still relatively new. This means that it is still in the early stages of its development and adoption.

Secondly, SHIB has a large and active community of supporters, which could help to drive its value up in the future. In order for the bullish indicators to take effect, however, the selling pressure on SHIB will need to be reversed. This will require a significant increase in buying volume and positive news or developments that can drive the token's value up. Overall, while the current selling pressure on SHIB is cause for concern, there are still reasons to be optimistic about the token's future. Its active community, as well as upcoming developments like ShibaSwap, could help to reverse the current trend and drive the token's value up in the long term.

- Gemini mobile app and website for trading PEPE will be available soon. - Compared to BTC and ETH, Pepe coin is up 6% more. The leading cryptocurrency exchange Gemini added recent investors' favorite memecoin Pepe (PEPE) to its trading list. Soon, trading for \$PEPE will begin. British, European, Canadian, Australian, Hong Kong, and Singapore investors can now access Pepe coin through Gemini. Trading will be accessible first via the exchange API/FIX and ActiveTrader applications for the USD trading pair. Then for the USD, GBP, EUR, CAD, AUD, HKD, and SGD trading pairs via the Gemini Mobile App and website soon. The Memecoin Dominance Pepe is an Ethereum-based token that launched on April 14, 2023. After that, it gained popularity quickly, following in the footsteps of memecoin such as Dogecoin (DOGE) and Shiba Inu (SHIB). Since the arrival of PEPE, the memecoin competition has started. After this, WOJAK, BOB, TURBO, BONK, and 4TOKEN all experienced significant spikes. Also, the crypto industry is currently seeing meme token dominance while the top cryptocurrencies like Bitcoin (BTC) and Ethereum (ETH) are trading low. However, the well-known "Pepe the Frog" meme, holds a market cap of \$784 million. In addition, PEPE recorded an all-time high of \$0.000004354 on May 5th, with a market cap of more than \$1 billion. At the time of writing, Pepe price surged about 7.5%, traded at \$0.000001996, and had a 24-hour trading volume of \$561 million. Further, the PEPE token is 6% higher than BTC and ETH, as per CoinMarketCap data. Also, it is Recommended for you

- LunarCrush announced the top BNB projects with the highest social engagements. - Bitgert (BRISE) takes the lead on the top BNB project list. LunarCrush, a social intelligence platform for the crypto market, announced the top BNB projects with the highest social engagements. There were lots of cryptocurrencies featured on the list, but Bitgert (BRISE), the popular memecoins Floki Inu (FLOKI), and Baby Doge Coin (BabyDoge) took the top three positions in the list. On May 9th, the LunarCrush source revealed the most engaging BNB projects in the crypto market. Bitgert (BRISE) took the top spot on the list as a project with the highest social engagement. BRISE is a blockchain project that aims to provide a fast, secure, and efficient payment solution. In recent days, BRISE, the innovative cryptocurrency, has made a big impact on the crypto market with a massive increase. Memecoins Take the Top Spots on BNB Projects The following two spots are taken by the popular memecoins Floki Inu and Baby Doge Coin, continuing the memecoin domination in the crypto market. Floki Inu has witnessed a massive increase in its popularity in recent days. Floki Inu's active presence in social engagement has fueled the coin's growth. With the focus on the memecoin season, Floki continues to get attention in the crypto market. Moreover, the world's largest crypto exchange, Binance's listing of Floki Inu, takes the memecoin to higher levels. Baby Doge Coin has taken over social media platforms with the announcement of the top 5 crypto exchanges to list the coin. And it gained significant traction within the crypto market. By then, BabyDoge had become an overnight sensation and had the third-highest social engagement on BNB projects.

- A newly emerged Blaze token burnt more than 1.6B SHIB. - Currently, Shiba Inu is down by \$0.000008841 as per CoinMarketCap. Shiba Inu (SHIB), a special meme coin called "DOGECOIN KILLER" has become popular over the weeks. Consequently, more Shiba Inu tokens got burnt and kept surging. In the meantime, CoinMarketCap reported that SHIB reached a peak at \$0.00001 in the last week. Moreover, another emerging token named Blaze (BLZE) has joined hands with Shiba Inu. This leads to massive SHIB burns over a different daily volume. The timeline of the Blaze token is quite interesting and is planned for the year 2023. The execution of each quarter is specified for Q2, Q3, and Q4 respectively. Burn Rate On Massive Increase On a recent report, Blaze has burnt 1,695,524,269 SHIB tokens which are worth \$15,327 to the current market price. Overall, 3,700,789,543 SHIB tokens are burnt by Blaze. Meanwhile, a set of 1,079,412,440.61 Blaze is burned on the other hand. Totally, an account of 6,463,010,909.18 Blaze tokens is burned in the process so far. In the end, the burn rate skips to 38071.39% than the last day, lead by the recent burn transaction. <https://t.co/yzqjpuP3qX#SHIBARMY> We have done it again! " Blaze Token (@blaze_token) May 8, 2023 Another 1,695,524,269 \$Shib BURNED! Total \$Shib burned by #Blaze = 3,700,789,543 \$Shib Another 1,079,412,440.61 \$Blze BURNED! Total \$Blze burned = 6,463,010,909.18 \$Blze Join @blaze_token Together We Grow #Shibburn In the last 24 hrs, more than 3.9 million SHIB tokens are transferred to a dead wallet. As per CoinMarketCap analysis, Shiba Inu is currently down at \$0.000008841 with an 11.23% decrease over a \$213,102,594 trading volume. Whereas, the circulating supply values more than 589 trillion in the crypto market. Recommended For You:

- Some tokens, however, will be set aside to ensure compatibility as a bridge to ETH. - There have been 4,812 votes cast thus far, with 96% favoring a burn. To improve the safety and reliability of its platform, BabyDoge seems certain that it has found a workable solution. The deflationary token platform apparently wants 100 quadrillions of BABYDOGE on the Ethereum blockchain to be burned, as suggested in a Twitter poll post. Exciting News: A Proposal to Strengthen Security with a 100 Quadrillion Token Burn on ETH and fee reduction to 0% " Baby Doge (@BabyDogeCoin) May 6, 2023 We've been listening to your concerns and have come up with an innovative solution to further enhance the security and integrity of our project. As these 100 " Some tokens, however, will be set aside to ensure compatibility as a bridge to ETH. It's anticipated that once this plan is fully implemented, transaction costs on the protocol will drop to zero. The BabyDoge team has responded to community concerns by bringing up this proposal. The company said that it plans to burn 100 quadrillion tokens

since doing so would “reduce potential exploitation risk associated with them.” These tokens have been lying unused since its launch on Ethereum. Formal DAO Proposal Expected Shortly Meme coins often burn millions of their tokens, with Shiba Inu standing out for this practice. BabyDoge, to its credit, is dedicated to serving its community with efficiency and economy. Therefore, it is necessary to fortify the initiative and tighten up security. Users are able to conduct transactions on the ecosystem at a low cost and with increased efficiency. There have been 4,812 votes cast thus far, with 96% favoring a burn and 4% asking that everything be kept the same. Those who have yet to cast a ballot have around 23 more hours to do so. Although this vote is not binding, the protocol has committed to creating a formal proposal for the DAO when the time is right. This would happen after the existing idea has received unanimous backing from the community who are impacted. Recent developments suggest a formal proposal will be sent out shortly.

- The BOB Token price jumped 4744% in just two weeks. - The meme token recorded a new all-time high of \$0.000020111. Everyone is enthusiastic about the controversial PEPE, just as they were attracted to Dogecoin (DOGE), Shiba Inu, and other meme tokens in the past “memecoin season.” As the popularity of the meme token featuring the well-known Pepe has grown, the frog-themed token has given rise to a new story about “frog” tokens, despite its troubled past and controversy. One of these was BOB, the native token of the “Explain This Bob” bot. How is BOB Performing? The new memecoin BOB Token (BOB) was launched in April 2023. Also, the crypto token buzzed, “Crypto Twitter and being the Talk of the Town.” Over the past two weeks, \$BOB has seen immersive gains, with a price surge of 4744%. Also, the coin has seen a 1000% growth in unique holders and a tenfold increase in trading volume, which indicate short-term growth. Even recently, Elon Musk, who currently rules Twitter, is one of those who have already been attracted by “Bob.” The billionaire was so impressed by the virtual explainer’s responses that he even declared his love for him. Further, the BOB token is trending with leading memecoins such as FLOKI, MONG, WOJAK, TURBO, and the new coin OGGY. Also, it may have a chance to shift crypto investors’ attention. At the time of writing, BOB Token (BOB) recorded a new all-time high of \$0.000020111, which soared more than 200% in a day from \$0.00006677 to \$0.000020111 and 383% in a week. The token has a 24-hour trading volume of \$50 million, has climbed about 145%, and has a market cap of \$111 million.

- Bullish SNX price prediction for 2023 is \$3.195 to \$4.397. - Synthetix Network (SNX) price might reach \$5 soon. - Bearish SNX price prediction for 2023 is \$1.410. In this Synthetix Network (SNX) price prediction 2023, we will analyze the price patterns of SNX by using accurate trader-friendly technical analysis indicators and also predict the future movement of the cryptocurrency. Synthetix Network (SNX) Current Market Status | Current Price | \$2.49 | | 24 “ Hour Trading Volume | \$18,519,403/td> | | 24 “ Hour Price Change | 0.30% up | | Circulating Supply | 258,974,006 | | All “ Time High | \$28.77 (On Feb 14, 2021) | What is Synthetix Network (SNX)? Synthetix Network (SNX) is an ERC-20 token native to the Synthetix network. Synthetix is a DeFi protocol for the creation and trading of synthetic assets, and synths. The protocol was launched amid the 2018 bear markets. Synthetix operates on a proof-of-stake (PoS) consensus model that supports the operations of crypto-backed synthetic assets. Synths mirror the price movements of real crypto assets and serve as their derivatives. For instance, synthetic Bitcoin (sBTC) and synthetic Ethereum (sETH) serve as the derivatives of real Bitcoin and Ethereum. Investors can use these synths as bets on the price of the respective cryptos without actually holding the actual assets. Synths also represent and mimic real-world assets such as fiat currencies, stocks, bonds, and commodities. Synthetic USD (sUSD) can be deployed to track the prices of US dollar (USD). Synthetix also hosts a peer-to-peer decentralized exchange (DEX) specially devoted to the trading of synthetic assets. Users will have to stake Synthetix Network (SNX) tokens to use the services provided by this protocol. SNX tokens can also be locked in and used as collaterals to create synths. SNX tokens also facilitate the exchange or swapping of various synthetic assets. Synthetix Network (SNX) Price Prediction 2023 Synthetix Network (SNX) ranks 69th on CoinMarketCap in terms of its market capitalization. The overview of the Synthetix Network price prediction for 2023 is explained below with a daily time frame. The above chart of SNX laid out an ascending broadening wedge pattern. An ascending broadening wedge is a bearish chart pattern. It is formed by two diverging bullish lines. An ascending broadening formation forms an inverted triangle shape in the price chart. In ascending broadening wedge structure, the price makes a low and rises. The price must touch both the upper and the lower trend lines three times in an uptrend movement, with the resistance line rising more steeply than the bottom line, to confirm the pattern. While the pattern is forming, volume rises significantly when the price line breaks the support line. It is a bearish reversal pattern that forms in the uptrend. In an ascending wedge pattern, the price fluctuates between the upper resistance line and the lower support line. At the time of analysis, the price of Synthetix Network (SNX) was recorded at \$2.48. If the pattern trend continues, then the price of SNX might reach the resistance levels of \$3.095 and \$4.173. If the trend reverses, then the price of SNX may fall to the support of \$2.290. Synthetix Network (SNX) Resistance and Support Levels The chart given below elucidates the possible resistance and support levels of Synthetix Network (SNX) in 2023. From the above chart, we can analyze and identify the following as the resistance and support levels of Synthetix Network (SNX) for 2023. | Resistance Level 1 | \$3.195 | | Resistance Level 2 | \$4.397 | | Support Level 1 | \$2.183 | | Support Level 2 | \$1.410 | As per the above analysis, if Synthetix Network’s (SNX) bulls take the lead, then it might hit and break through its resistance level of \$4.397. Conversely, if Synthetix Network’s (SNX) bears dominate the trend, the price of SNX might plunge to \$1.410. Synthetix Network (SNX) Price Prediction 2023 “ RVOL, MA, and RSI The technical analysis indicators such as Relative Volume (RVOL), Moving Average (MA), and Relative Strength Index (RSI) of Synthetix Network (SNX) are shown in the chart below. The technical analysis indicator Relative Volume (RVOL) is used to measure the trading volume of an asset in relation to its recent average volumes. It is typically calculated by dividing the current day’s trading volume by the average volume over a specified period, such as the past 20 or 50 trading days.

Also, it helps traders in identifying unusual trading activity and changes in market sentiment. At the time of analysis, the RVOL of Synthetix Network (SNX) was found below the cutoff line. Thus, it denotes a weak volume of participants trading in the current trend. The next technical indicator is the Moving Average (MA). This momentum indicator is used to smooth out price data and identify trends in the market. It helps in calculating the average price of an asset over a specific period. Particularly, the 50-day moving average (50 MA) evaluates the average closing price of the asset over the past 50 days. When the price of an asset is above 50MA, it is considered to be in an uptrend (bullish), and if laid below 50MA, it is in a downtrend (bearish). Notably, in the above chart, the SNX price lies below 50 MA (short-term), indicating its downward. Hence, SNX is in a bearish state. Although this is the current state, a trend reversal might occur. Next up is the Relative Strength Index (RSI). Significantly, this analysis indicator helps traders to determine the strength and momentum of an asset's price movement over a specific period. In this analysis, the RSI is calculated by comparing the average gains and losses of the asset over the past 14 periods. The resulting value lies between a range of 0 and 100. Hence, the readings above 70 indicate an overbought state, and below 30 indicate an oversold state. Significantly, traders often use the RSI to identify potential trend reversals or to confirm the trend's direction. For instance, if an asset is in an uptrend and the RSI reaches an overbought reading of 70, it may suggest that the asset is due for a pullback or correction. Conversely, if an asset is in a downtrend and the RSI is in an oversold reading of 30, it may suggest a potential reversal. At the time of analysis, the RSI of SNX is at 48.45. Therefore, this indicates SNX is neither an overbought nor oversold state.

Synthetix Network (SNX) Price Prediction 2023 – ADX, RVI. In the below chart, we analyze the strength and volatility of Synthetix Network (SNX) using the following technical analysis indicators – Average Directional Index (ADX) and Relative Volatility Index (RVI). To analyze the strength of the trend momentum, let us take note of the Average Directional Index (ADX). The ADX value is derived from the two directional movement indicators (DMI) such as +DI and -DI and is expressed between 0 to 100. According to the data on the above chart, the ADX of SNX lies in the range of 4.263 pointing out a weak trend. The above chart also displays another technical indicator – the Relative Volatility Index (RVI). This indicator measures the volatility of an asset's price movement over a specific period. With respect to the chart's data, the RVI of SNX lies above 50, indicating high volatility.

Comparison of SNX with BTC, ETH Let us now compare the price movements of Synthetix Network (SNX) with that of Bitcoin (BTC), and Ethereum (ETH). From the above chart, we can interpret that the price action of SNX is similar to that of BTC and ETH. That is, when the price of BTC and ETH increases or decreases, the price of SNX also increases or decreases respectively.

Synthetix Network (SNX) Price Prediction 2024-2030 With the help of the aforementioned technical analysis indicators and trend patterns, let us predict the price of Synthetix Network (SNX) between 2024 and 2030.

Synthetix Network (SNX) Price Prediction 2024 If bulls dominate the price momentum and trend patterns, then Synthetix Network (SNX) might successfully test and surpass its resistance levels to hit \$6 by 2024.

Synthetix Network (SNX) Price Prediction 2025 The significant upgrades in the Synthetix Network ecosystem might persuade the entry of an increased number of investors. This may eventually boost the Synthetix Network (SNX) price to reach \$7 by 2025.

Synthetix Network (SNX) Price Prediction 2026 If Synthetix Network (SNX) successfully tests its major resistance levels and continues to move upside, then it would rally to hit \$8.

Synthetix Network (SNX) Price Prediction 2027 If Synthetix Network (SNX) sustains major resistance levels and stands as a better investment option in the market, then SNX would rally to hit \$10.

Synthetix Network (SNX) Price Prediction 2028 If Synthetix Network (SNX) holds a positive market sentiment amid the highly-volatile crypto market by driving significant price rallies, then SNX would hit \$12 by 2028.

Synthetix Network (SNX) Price Prediction 2029 If investors flock in and continue to place their bets on Synthetix Network (SNX), then the crypto would witness major spikes. Hence, SNX might hit \$14 by 2029.

Synthetix Network (SNX) Price Prediction 2030 By 2030, the SNX price might rally to \$16 if the trend momentum aligns in favor of Synthetix Network. Furthermore, SNX would hold a positive market sentiment and be labeled as a long-term investment with highly profitable ROI.

Conclusion If Synthetix Network (SNX) establishes itself as a good investment in 2023, this year would be favorable to the cryptocurrency. In conclusion, the bullish Synthetix Network (SNX) price prediction for 2023 is \$4.397. Comparatively, the bearish Synthetix Network (SNX) price prediction for 2023 is \$1.410. If there is a positive elevation in the market momentum and investors' sentiment, then Synthetix Network (SNX) might hit \$5. Furthermore, with future upgrades and advancements in the Synthetix Network ecosystem, SNX might surpass its current all-time high (ATH) of \$28.77 and mark its new ATH.

FAQ

1. What is Synthetix Network (SNX)? Synthetix Network (SNX) is an ERC-20 token native to the Synthetix network. Synthetix is a DeFi protocol for the creation and trading of synthetic assets, synths.
2. Where can you buy Synthetix Network (SNX)? Traders can trade Synthetix Network (SNX) on the following cryptocurrency exchanges such as Binance, OKX, CoinW, Bittrue, and Bybit.
3. Will Synthetix Network (SNX) record a new ATH soon? With the ongoing developments and upgrades within the Synthetix Network platform, Synthetix Network (SNX) has a high possibility of reaching its ATH soon.
4. What is the current all-time high (ATH) of Synthetix Network (SNX)? Synthetix Network (SNX) hit its current all-time high (ATH) of \$28.77 on Feb 14, 2021.
5. What is the lowest price of Synthetix Network (SNX)? According to CoinMarketCap, SNX hit its all-time low (ATL) of \$0.03258 On Jan 05, 2019.
6. Will Synthetix Network (SNX) hit \$5? If Synthetix Network (SNX) becomes one of the active cryptocurrencies that majorly maintain a bullish trend, it might rally to hit \$5 soon.
7. What will be the Synthetix Network (SNX) price by 2024? Synthetix Network (SNX) price might reach \$6 by 2024.
8. What will be the Synthetix Network (SNX) price by 2025? Synthetix Network (SNX) price might reach \$7 by 2025.
9. What will be the Synthetix Network (SNX) price by 2026? Synthetix Network (SNX) price might reach \$8 by 2026.
10. What will be the Synthetix Network (SNX) price by 2027? Synthetix Network (SNX) price might reach \$10 by 2027.

Top Crypto Predictions - Cardano (ADA) Price Prediction 2023 - Shiba Inu (SHIB) Price Prediction 2023 - Dogecoin (DOGE) Price Prediction 2023

- Pepe (PEPE) has experienced an impressive surge in its market cap nearing the \$1B milestone. - The meme-inspired coin has soared by 78% in the last 24 hours, with its trading volume surpassing \$859M. - Binance announces the PEPE Buying Guide, experts believe its release on the exchange is imminent. Pepe, the cryptocurrency linked to the internet meme icon Pepe the Frog, has become a notable contender in the meme coin market, challenging the likes of Shiba Inu (SHIB) and Doge (DOGE). Itâ€™s recent listing on BitMEX, a significant player in the cryptocurrency exchange sector, has contributed to Pepeâ€™s surge in market capitalization and trading volume. BitMEXâ€™s listing allows users to trade Pepe with up to 50x leverage against the US dollar and Tether. Pepeâ€™s growing popularity has seen its 24-hour trading volume outpace even that of the well-established Dogecoin (DOGE), and early buyers are now taking profits. On the OKX exchange, the PEPE/USDT pair is currently trading at a price of \$0.00000209. Over the past 24 hours, the trading volume for this pair has reached \$318 million. PEPE Bullish or Bearish? In the past week, there has been a steady acquisition of this new coin by investors, causing the meme coin to soar to the top. Based on information from CoinMarketCap, since its launch, PEPE has given its initial investors a remarkable 2790% return on investment. Since listing a spot PEPE/USDT pair on OKX on May 1, the exchange has shot to the top of PEPE volume. Binance, for its part, has released a How to buy Pepe (PEPE) Guide, with some users on Twitter speculating that a listing on the worldâ€™s biggest exchange is also close, with the coin entering the top 100 cryptocurrencies on May 3, it seems the top may be getting frothy for the frog-inspired meme coin.

- Elon Muskâ€™s tweet with #Dino420 sparks speculation about the connection of the DinoLFG token. - WhaleChartâ€™s market expert has been tracking the Dino token and replied to Muskâ€™s Dino420 tweet. - DinoLFGâ€™s price sinks to lows of \$0.06831 amid speculation. Elon Muskâ€™s endorsement of popular memecoins is an increasingly common occurrence in the cryptocurrency space. WhaleChart market experts have been closely monitoring the Dinoshi token and its potential connection to Musk, which remains unconfirmed. There has been speculation that the Dinoshi token may be connected to Elon Musk. This speculation arises from a tweet by Musk that featured the hashtag #Dino420, which was posted one week after the launch of the #DinoLFG campaign. However, the tweet was deleted on the same day it was posted. A leaked conversation between a team member and the founder of Dinoshi, dated November 18th, reveals that Dinoshi believes that Elon Musk will tweet again about the DinoLFG campaign. Additionally, the team allegedly possesses a physical Dogecoin that was signed by Dogecoin founder Billy Markus inside his home. This has led to speculation that Elon Musk may have connections with both Dinoshi and DinoLFG and possibly even know the founder of Dinoshi. WhaleChart, a market tracker, has also replied to Muskâ€™s Dino420 tweet, further fueling speculation. Bears Mount Pressure On DinoLFG Prices DinoLFG price movement in the past 24 hours shows the altcoin has been trading in a descending trendline, moving from an intraday high of \$0.09122 to a low of \$0.05982. The DinoLFG token is trading at \$0.06808 at press time. WhaleChart market experts noted that bears have been increasing the pressure on DINO token prices and suggest that DINO/USD will continue to remain in a bearish trend for the next few days before mounting a recovery. The daily, 4-hour, and hourly timeframes show that the DINO/USD pair has formed a bearish pennant pattern, which suggests further downside in the price of DINO. The 50-period moving average on the hourly chart is acting as strong resistance for DINO and will continue to weigh on DINOâ€™s recovery. Meanwhile, the Average Directional Movement Index (ADX) is currently at 16.99, which suggests that the bears are trying to break out of the current trading range. Most of the technical indicators are bearish, with the Relative Strength Index residing in negative territory. The immediate support for DINO is placed at \$0.05982, and the resistance lies around \$0.07203, with an upward break of this level likely to propel DINO token prices further up. Speculation has been increasing over a potential connection between the Dinoshi token and Elon Musk after his Dino420 tweet. While there is no concrete evidence connecting the two, WhaleChartâ€™s market expert has been closely monitoring Dinoshiâ€™s token and its potential connection to Musk.

The major cryptocurrencies to be considered low-cost with an effective surge in 2023: Shiba Inu (SHIB), RenQ Finance (RENQ), and Polygon (MATIC). The prominent growth in these cryptocurrencies over the previous year through fascinating features to stand ahead of other coins in the crypto market. Get to know some of the reasons and keep an eye before considering such crypto investments. Shiba Inu (SHIB): Dogecoin Killer Shiba Inu (SHIB), a meme-based altcoin in the crypto industry debuted on the Ethereum (as an ERC-20) network in the year 2020. SHIB developers hoped to establish competition with Dogecoin (DOGE) by capitalizing on meme-based popularity. Moreover, SHIB attracted a huge following among the crypto community once it got introduced. Firstly, Shiba Inu has an enthusiastic community named the â€œShib Army.â€ Nextlly, SHIB is limited to one quadrillion tokens, 50% of which were burnt by transferring them to Ethereum co-founder Vitalik Buterinâ€™s wallet. Further, Shibarium, a layer 2 protocol is a great initiative that allows for instant and cheaper transactions. Shiba Inu (SHIB) is predicted to continue its upward trajectory in 2023, hoping to reach a value of \$0.0000158684. However, to mention, the growth potential is dependent on the overall health of the crypto ecosystem. RenQ Finance (RENQ): Cross-Chain Asset Exchange Network RenQ Finance (RENQ), a unified platform for decentralized exchange (DEX) launched in 2023 that currently gaining traction in the DeFi space. Meanwhile, it focuses on connecting all isolated blockchains thereby establishing a cross-chain asset exchange network. This is helpful in providing effective underlying support for the DeFi ecosystem. However, RenQ Finance (RENQ) supports multiple blockchains like Ethereum, Binance Smart Chain, Polygon, Solana, and more. These blockchains allow users to access various DeFi protocols and assets across different chains in a safe and efficient way. RENQ possesses a greater community contributing to its development and growth. In overall, it acquired over \$14.5 million within two months of its nearly sold-out presale campaign. The RenQ wallet software unites all decentralized exchanges into one decentralized application (dApp), providing consumers to exhibit diverse liquidity options. With this capability, DeFi users may now easily conduct all classic DeFi trading, farming, mining, staking, lending, borrowing, and shorting respectively. Meanwhile, this gives a positive impact on a variety of

new products which are available through massive centralized exchanges. This supposes the ecosystem of DeFi to be indulged with the advantages of centralized exchanges. Alongside, RENQ is exhibiting a greater response with a price surging to \$2 in the year 2023. Overall, the successive transformation takes a unique liquidity approach to the platform building a strengthened community of supporters.

Polygon (MATIC): Ethereum Scaling Solution Polygon (MATIC), is an Ethereum scaling solution that aims to provide a secure and worthwhile replacement for traditional financial services. It utilizes technologies like smart contracts and blockchain for several services including lending, borrowing, staking, gaming, and NFTs. Furthermore, Polygon is enriched with EVM compatibility providing instant transactions at near-zero gas fees. Additionally, it supports multiple scaling solutions, such as Plasma chains, ZK-rollups, and Optimistic rollups. It also allows users to rely on Polygon for their needs and preferences and it holds a large and thriving ecosystem of over 28K contract creators.

1/ Which countries are most interested in meme coins? " CoinGecko (@coingecko) May 3, 2023 Our recent study shows that the United States is leading the meme coin craze, accounting for 23.6% of the interest in 2023 so far with over 2M views of the top meme coin pages. Read the full study: <https://t.co/KI4AghcAiz> pic.twitter.com/aMXthJKkIm According to the CoinGecko report, the United States got more interested in memecoins. The US leads the memecoin craze, accounting for 23.6% with over 2 million views of top memecoin pages. Shiba Inu is the most popular memecoin in the United States. It has attracted about 60.7% of US interest in the memecoin sector. Moreover, Pepe gets 11.8% memecoin interest followed by Bonk and Volt. Following the United States, India holds second place in the list with 20.3% of interest across countries. Shiba Inu is the most popular memecoin in India, making up 55.8%. At the same time, Baby Doge Coin has attracted a relatively high 29.9% of India's interest over memecoins. Shiba Inu Dominates the Memecoin Sector The United Kingdom takes third place, with around 16.35% of memecoin interest. Floki has been the most popular memecoin in the Philippines, country, with 26.7% of the country's memecoin interest. Shiba Inu and Bonk receive the same levels of interest at 18.3% and 17.8%, respectively. Moreover, the report shows that people in Nigeria and the Philippines are keeping focused on less known memecoins. CoinGecko's report clearly shows that Shiba Inu dominates the memecoin sector compared to the other memecoins. Shiba Inu has generated 46.7% of the interest among the top 10 memecoins. At the same time, the newly launched memecoin Pepe has gained 26.9% of people's interest in Canada. And the largest memecoin, Doge, has received only minor interest around the countries.

- Baby Doge Coin announces indirectly that Binance will be listing them. - The price of Baby Doge decreases by 1.33% in the last 24 hours. BABYDOGE is a meme-based cryptocurrency that launched in 2021 and gained popularity. The price surge over a month was predominantly higher than expected. Now, a recent tweet from Baby Doge's official account depicted that the top cryptocurrency exchange, Binance will list the BABYDOGE sooner or later. Make #Binance Chain Great Again #BABYDOGE pic.twitter.com/7zPhUvrYmW " Baby Doge (@BabyDogeCoin) May 3, 2023 Also, in April, 3600 billion of BABYDOGE tokens are transferred to a dead wallet. At the same time, it got listed on one of the top five crypto exchanges over a week. Concerning this, the price of the coin spiked higher before the announcement unveiling in the crypto market. Meanwhile, 5001 tokens are burnt two days before, witnessing a massive burn in recent times which led to a decrease in overall supply. As per the CoinMarketCap, the Baby Doge Coin values at \$0.000000002644 a 1.33% decrease in price over the past 24 hours. Whereas, the trading volume is around \$8,379,678 over 27% of BABYDOGE tokens in its circulating supply. Recommended For You:

With the integration of its API Portal on Google Cloud Marketplace, Flare, a Layer 1 blockchain that provides decentralized access to high-integrity data from other chains and the internet, has launched some of the first blockchain APIs to be made accessible on the platform. This makes it possible for developers utilizing Google Cloud Marketplace to access blockchain data from Flare's nodes and Connected Chain nodes to carry out simple blockchain transactions and read the most recent state. The built-in Cloud Marketplace for Google Cloud now supports blockchain APIs for Algorand, BNB Smart Chain, Bitcoin, Dogecoin, Ethereum, Flare, Litecoin, Songbird, and XRP. Google Cloud developers will get access to any blockchain APIs that are subsequently introduced to Flare's API Portal. Blockchain APIs let programmers design apps that execute transactions and access on-chain information about the chain's most recent state. Developers don't have to operate their own nodes for any blockchain they want to communicate with since they have access to APIs. When building cross-chain applications that need to query numerous data sources, this capability is especially beneficial. The API Portal is also used as a hedge against their own infrastructure by well-known exchanges and wallets. Anyone who uses Google Cloud can easily access all of Flare's current APIs through their pre-existing Google Cloud account thanks to the Marketplace integration between Flare and the service. A customer's committed spending on Google Cloud may include money spent on Flare APIs via the Google Cloud Marketplace. Josh Edwards, Flare's VP of Engineering, said, "Greater availability of leading blockchain APIs on platforms such as Google Cloud Marketplace reduces the barriers to Web3 participation. It makes it easier for developers to experiment with blockchain technology and its many use cases without being burdened by onerous hardware costs and ongoing maintenance. It also opens up the possibility for larger organizations and partners to experiment with a safe, secure, and approved

set of Web3 APIs. As a result, developer teams have the flexibility to create applications without any infrastructure headache and allows them to focus on creating and shipping great products.â€ James Tromans, Head of Web3 Engineering at Google Cloud, said, â€œWeâ€™re excited to support and promote the ambitions of our Web3 partners in our ecosystem, with the integration of Flareâ€™s high performance APIs into our Marketplace.â€ By offering decentralized access to high-integrity data from other chains and from Web2 sources, Flareâ€™s EVM-based Layer 1 is intended to increase the usefulness of blockchain. Google Cloud will eventually include all of the blockchains linked by Flareâ€™s data and interoperability architecture, providing developers access to the top 100 chains.

- Some people have become millionaires by investing in meme coins, but itâ€™s a highly risky and volatile market. - Memecoins like Dogecoin have gained popularity due to their cultural significance, but thereâ€™s no guarantee of continued price increases. - Itâ€™s crucial to understand the technology and market forces behind cryptocurrencies and seek professional advice before investing. Have you seen the recent Elon Musk Twitter logo bearing Dogecoinâ€™s logo? Or the recent debate ongoing about Elon Musk introducing Twitter payments using Dogecoin? If yes, youâ€™re probably wondering what all the fuss is about. Memecoins have become hugely popular in recent years and have been at the forefront of conversations around cryptocurrency investment. But are meme coins really creating millionaires? In short, itâ€™s possible. Some people have become very wealthy by investing in meme coins. But itâ€™s important to understand the risks and rewards associated with investing in meme coins before diving into this highly volatile market. Memecoins, like Dogecoin, are digital currencies created for fun or as an experiment. They often have recognizable logos that represent their cultural significance and catch peopleâ€™s attention. Recently, these coins have gained even more attention due to their potential as investments. Unleashing The Power Of Crypto Community: How Memecoins Like Dogecoin, Shiba Inu, And Dogetti Are Taking Over The Market. Unleashing The Power Of Crypto Community: How Memecoins Like Dogecoin, Shiba Inu, PEPE Coin, Monk, Dino, and Wojak are Taking Over The Market. Memecoins are known for their quick price jumps, as well as their tendency to fall just as quickly. This means there is a high risk associated with investing in meme coins. Crypto communities have proven to possess unique power, particularly when it comes to meme coins. These coins, which are known for their quirky themes and often humorous origins, depend heavily on a devoted and robust following to drive their success. In this article, we will delve into the world of three dog-themed meme coins, their beginnings, distinct advantages, and potential for the future: Dogecoin (DOGE), Shiba Inu (SHIB), and Dogetti (DETI). The Grand-Doggy of Meme Coins: Dogecoin (DOGE) Dogecoin (DOGE), known as the largest memecoin, started as a joke in 2013 by its creators, Billy Markus, and Jackson Palmer. They aimed to create a fun and light-hearted alternative to Bitcoin that would attract a broader audience. Today, Dogecoin boasts a market cap of over \$9 billion, largely thanks to its devoted and active community. One of Dogecoinâ€™s exceptional advantages is its speedy transaction times and low fees, making it a practical option for microtransactions. Moreover, itâ€™s branding as a â€œfriendlyâ€ coin has helped it gain mainstream recognition, including support from celebrities such as Elon Musk. PEPE, a meme-based cryptocurrency, has reached a new all-time high of \$0.000000816, representing a nearly 38,900% increase since its launch on April 14. The token has a market capitalization of over \$326 million and ranks 17th by 24-hour trading volume. Its ascendancy has seen it break into the top 125 coins by market capitalization. The coin is based on Pepe the Frog memes and follows an established pattern characterized by social media-fueled hype. The longevity of the meme coin may depend on a listing on a major cryptocurrency exchange, which could extend its impressive run. Meme coins are high-risk investments since their price is essentially tied to how much people are talking about them online, and they are extremely vulnerable to price manipulation. The Shiba Inu Coin: Shiba Inu (SHIB) Shiba Inu (SHIB) is a newly-launched meme coin with a market cap of \$5.9 billion. Unlike Dogecoin, Shiba Inu is based on the Ethereum blockchain and operates as an ERC-20 token. The distinguishing feature of Shiba Inu lies in its distribution: 20% of all SHIB tokens are given to holders of Dogecoin at a 1:1 ratio every month, while 80% go to its founders. This â€œDogecoin-sharingâ€ mechanism is meant to encourage the growth of its community and ensure that SHIB remains a popular coin among Dogecoin holders. Shiba Inuâ€™s technology also has some unique features, such as the ability to vote for block producers in its decentralized autonomous organization (DAO). This offers additional security and transparency for users. The story of Glauber Contessoto, also known as the Dogecoin millionaire, teaches valuable lessons about investing in cryptocurrency. He invested his life savings of \$180,000 in Dogecoin at a price of \$0.04 per coin, and when the price rose to \$2.5 million, he did not sell. Instead, he held onto his investment, believing that it would continue to rise due to the community and hype. However, the price eventually fell, and his portfolio went from \$2.5 million to \$1 million in a month. Two years later, the price of Dogecoin is \$0.08, and he has doubled his investment to \$360,000. Despite this, he lost out on \$2.5 million. The key takeaway is that if you hold onto an investment for too long, especially when it starts to decline, youâ€™ll eventually get scorched. Itâ€™s important to be willing to sell if your thesis changes or the market turns upside down. Overall, meme coins are a high-risk, high-reward investment. While Dogecoin, Shiba Inu, and Dogetti offer distinct advantages and potential for the future, they can also lead to significant losses if mismanaged. - Baby Doge has witnessed a massive increase in its burning rate. - This leads to a decrease in the tokenâ€™s overall supply. Baby Doge Coin, the popular memecoin, continues to attract users with its massive burn rate. The Baby Doge team has recently announced the burn of 500 trillion Baby Doge coins. This move has sparked a lot of interest among investors, as it is expected to have a significant impact on its trading price. 500 Trillion BabyDoge was just burned ! â€” Baby Doge (@BabyDogeCoin) May 2, 2023 Worth an estimated \$1.3 million according to BSC scan Proof: <https://t.co/Rx0w3CAR7J> pic.twitter.com/1CVuBmNFP Recently, the burning rate of Baby Doge has witnessed a massive increase.

On Tuesday, the Baby Doge team tweeted that the burn rate of the coin had surged overnight, with 500 trillion tokens burned in a single transaction. According to the report of the BSC scan, the transaction's worth estimated at \$1.3 million. Baby Doge has a dead wallet address and holds over 45% of the 420 trillion token supply. Baby Doge burns the token by sending it to this wallet address. This leads to a decrease in the token's overall supply. At the time of writing, the trading price of Baby Doge is around \$0.000000002725, with an increase of 0.72% in the last 24 hours, according to CoinMarketCap. Recommended For You:

- Pepe (PEPE) has recently flipped Shiba Inu and FLOKI in trade volumes. - The meme currency will be available in a PEPE/USDT pair on the exchange. Several cryptocurrency exchanges have moved quickly to list various meme coins as they gain popularity in the market. Pepe (PEPE) has recently flipped Shiba Inu and FLOKI in trade volumes, therefore the market is paying close attention. OKX, a cryptocurrency exchange, has announced that it would be offering PEPE, a meme coin that has been trending and rallying higher over the weekend. " #Memecoin New Listing Update " \$PEPE @pepecoineth gets listed on #OKX! " OKX (@okx) May 1, 2023 " PEPE/USDT Spot Trading: 9:00 am May 1 (UTC) Details: <https://t.co/jzMvhs0QaH> pic.twitter.com/VRnX3glD5Q The cryptocurrency exchange made the formal statement that they will be offering Pepe (PEPE), on May 1. OKX has added the PEPE to its spot trading platforms, and trading will begin at 9:00 UTC on May 1. Withdrawals will begin the next day, on May 2. The meme currency will be available in a PEPE/USDT pair on the exchange. Price Rallies Post Announcement OKX said that "Pepe the Frog" was originally a cartoon by Matt Furie and has now become an Internet meme. It looks like a humanoid frog but is really green and anthropomorphic. One of the most trending meme coins, PEPE is an Ethereum-based deflationary memecoin. The crypto exchange used Twitter to share the good news regarding the addition of PEPE to its trading pairs. OKX Chief Executive "Star" Xu also made a tweet on the listing. Pepe is predicted to become more popular than Shiba Inu and Dogecoin, as per investors. The price of PEPE has increased by more than 100 percent in the last day, and it is now trading at \$0.00000106. Within that time frame, the price has gone as low as \$0.0000005221 and as high as \$0.00000106.

- Dogecoin is now available on Binance alongside the USDT and BUSD trading pairs. - The TUSD trading pair for Dogecoin will be live on April 27. On Thursday, the biggest cryptocurrency exchange in the world, Binance, announced the addition of the DOGE/TUSD trading pair in an attempt to boost Dogecoin trade volume. Dogecoin is now available on Binance alongside the USDT and BUSD trading pairs. Binance

is the dominant Dogecoin trading platform, therefore their action is likely to cause a quick price surge that might push DOGE over \$1. The DOGE/TUSD listing on Binance wasn't met with instant enthusiasm by the trading community as the price didn't rally. @binance will add \$DOGE/TUSD trading pair at Apr 28th 08:00 (UTC) â€” TrueUSD (@tUSDio) April 27, 2023 Binance Spot Grid will be enabled for the trading pair within 48 hours of the trading start time. <https://t.co/b1qqU3R7Qu> Binance has announced that the TUSD trading pair for Dogecoin will be live on April 27. Beginning at 08:00 UTC on April 28th, trading in DOGE/TUSD will commence. Both the USDT/ARS and WBTC/USDT pairs are now available on Binance. Increased Volume for DOGE Expected Additionally, the crypto exchange has announced that the DOGE/TUSD and WBTC/USDT trading pairs would be added to the Binance Spot Grid within 2 days after the pairings' respective trading openings. The TrueUSD team went to Twitter to announce Binance's latest initiative to increase the TUSD stablecoin's visibility in the market. Since U.S. authorities cracked down on BUSD, Binance has shifted to the lesser-known TUSD. After terminating fee-free Bitcoin trading for all pairings last month, the exchange currently only allows fee-free trading in the TUSD pair. In terms of daily volume, Binance is by far the largest cryptocurrency exchange. It is anticipated that the DOGE/TUSD would increase Dogecoin's total trading volume. Both liquidity and the price of DOGE will benefit from this. According to CMC, the Dogecoin price today is \$0.080856 USD with a 24-hour trading volume of \$706,139,269 USD. Dogecoin is down 1.62% in the last 24 hours. Recommended For You: Binance U.S Allows Users to Create Domains as Digital Identities

Online gambling has revolutionized how people enjoy their favorite casino games, but concerns about privacy and security have led many players to seek out anonymous and no-KYC (know your customer) crypto casinos. These types of casinos allow players to gamble with cryptocurrencies without having to reveal their personal information or complete lengthy verification procedures. In this article, we will explore the benefits of playing at anonymous and no-KYC crypto casinos and the importance of safety when choosing one. By understanding these key concepts, you can make an informed decision about which casino to choose and have a more enjoyable and secure gambling experience. Top 10 Anonymous and No-KYC Crypto Casinos of 2023 In addition to offering a wide variety of games and the benefits of anonymous and no-KYC play, the top anonymous and no-KYC crypto casinos of 2023 also prioritized safety and security for their players. Features and Benefits of Anonymous Casinos Each of the casinos mentioned above has unique features and benefits that make them stand out in the world of anonymous and no-KYC crypto casinos. Some offer a wider variety of games, while others focus on specific areas like sports betting. However, common benefits across the casinos include: - Anonymous play without requiring personal information - Quick and easy deposit and withdrawal processes - Support for multiple cryptocurrencies - Provably fair games - Competitive bonuses and promotions Comparison of Anonymous Casinos When comparing the top anonymous and no-KYC crypto casinos of 2023, it's important to consider factors like game selection, security, and customer support. Based on these factors, Stake.com and Bitcasino stand out for their comprehensive game libraries and strong security measures. However, other casinos like Crashino and Trustdice offer unique features that cater to specific player

preferences, such as live casino games and provably fair games. Ultimately, the best casino for you will depend on your individual needs and preferences. How to Choose a Safe Anonymous Crypto Casino? While anonymous and no-KYC crypto casinos offer a range of benefits, it's important to prioritize safety and security when choosing where to play. Here are some criteria to consider when selecting a safe anonymous casino:

- Licensing and regulation: Look for casinos that are licensed and regulated by reputable authorities, such as the Malta Gaming Authority or the UK Gambling Commission. These licenses ensure that the casino operates in a fair and transparent manner and that players are protected against fraud and other criminal activities.
- Security measures: Ensure the casino utilizes the latest security measures, such as SSL encryption, two-factor authentication, and firewalls. These measures protect your personal and financial information from hackers and other online threats.
- Payment options: Choose a casino that offers secure and reliable payment options, such as cryptocurrencies or e-wallets. These options not only provide anonymity but also protect your financial information from being shared with third parties.
- Game fairness: Select a casino that offers provably fair games, which allows players to verify the randomness and fairness of each game outcome. This ensures that players have a fair chance of winning and that the casino isn't manipulating the results.
- Customer support: Choose a casino that offers responsive and knowledgeable customer support. This ensures that any issues or concerns can be addressed promptly and you can enjoy a seamless and stress-free gaming experience.

By considering these criteria when selecting a safe anonymous casino, you can ensure that you have a positive and secure gaming experience. Tips for staying safe while playing at Anonymous and No-KYC Crypto Casinos While anonymous and no-KYC crypto casinos offer a range of benefits, it's important to take certain precautions to stay safe while playing. Here are some tips for staying safe while playing at these casinos:

- 1- Use a VPN: To protect your privacy and security, use a virtual private network (VPN) when accessing the casino. A VPN encrypts your internet connection and hides your IP address, making it harder for hackers or other malicious actors to track your online activity.
- 2- Use secure payment methods: When making deposits and withdrawals, use secure payment methods such as cryptocurrencies or e-wallets. These methods provide an added layer of anonymity and security, as they don't require you to share your personal or financial information with the casino.
- 3- Read reviews and do research: Before playing at a particular anonymous and no-KYC crypto casino, read reviews and do thorough research. Look for casinos that have a good reputation in the industry and that have positive feedback from other players.
- 4- Set limits and manage your bankroll: To stay in control of your gaming experience, set limits on your deposits and wagers, and manage your bankroll carefully. This can help you avoid overspending or getting caught up in the excitement of the games.
- 5- Understand the risks associated with anonymous and no-KYC crypto casinos: While anonymous and no-KYC crypto casinos offer a range of benefits, they also come with some risks. These include the potential for fraud, identity theft, and other criminal activities. By understanding these risks and taking the necessary precautions, you can minimize the likelihood of falling victim to these threats. By following these tips, you can enjoy a safe and secure gaming experience at anonymous and no-KYC crypto casinos.

Play Safe and Enjoy the Best Anonymous and No-KYC Crypto Casinos of 2023 When it comes to online gambling, anonymity, and privacy are becoming increasingly important. That's why anonymous and no-KYC crypto casinos have gained so much popularity in recent years. By offering players the ability to play without revealing their identity or personal information, these casinos provide a unique and exciting gaming experience. However, it's important to prioritize safety and security when choosing where to play. By selecting a reputable and trustworthy casino that prioritizes security measures and fairness, you can ensure that you have a positive and secure gaming experience. Out of the top anonymous and no-KYC crypto casinos of 2023, we have identified Crashino as the best option. With its wide range of games, generous bonuses, and commitment to player security, Crashino offers a top-notch gaming experience for players who value anonymity and privacy. Remember to follow our tips for staying safe while playing at these casinos, including using a VPN, using secure payment methods, reading reviews and doing research, setting limits and managing your bankroll, and understanding the risks associated with anonymous and no-KYC crypto casinos. By prioritizing safety and security, you can enjoy all the benefits of anonymous and no-KYC crypto casinos without compromising your personal information or financial security.

FAQ Is it legal to play at anonymous and no-KYC crypto casinos? Yes, it is legal to play at these casinos in most jurisdictions. However, it's important to check the laws in your specific country or region to ensure that online gambling is legal and regulated. What are the benefits of playing at anonymous and no-KYC crypto casinos? The main benefit is anonymity and privacy, as you don't have to reveal your personal or financial information to play. Additionally, these casinos often offer faster payouts, lower fees, and a wider selection of games. Are anonymous and no-KYC crypto casinos safe? It depends on the casino you choose. It's important to choose a reputable and trustworthy casino that prioritizes security measures and fairness. Look for casinos with licensing and regulation, SSL encryption, fair game outcomes, and positive player feedback. How can I deposit and withdraw funds at anonymous and no-KYC crypto casinos? Most anonymous and no-KYC crypto casinos accept a variety of cryptocurrencies and e-wallets for deposits and withdrawals. These methods offer added anonymity and security, as they don't require you to share your personal or financial information with the casino. Can I still receive bonuses and promotions at anonymous and no-KYC crypto casinos? Yes, many anonymous and no-KYC crypto casinos offer generous bonuses and promotions to their players. These can include welcome bonuses, free spins, cashback offers, and more. However, make sure to read the terms and conditions carefully to understand the requirements and restrictions of each offer. **Disclaimer:** TheNewsCrypto does not endorse any content on this page. Through Pepe tokens, cryptocurrency investors made a significant profit in a few days. - Pepe launched the stealth coin, Pepe Inu, on April 20th. Almost anyone engaged in the crypto industry is

aware of the existence of successful meme coins such as Shiba Inu (SHIB) or Dogecoin (DOGE). In addition, the new frog-theme meme token "Pepe" grabbed significant investors' attention in a few days. The emergence of Pepe's distinctive and entertaining asset in the cryptocurrency market was recently announced with the launch of the new crypto token. A new cryptocurrency called "Pepe Inu" (PEPEINU) was created to pay tribute to the well-known meme figure Pepe the Frog. Also, the Pepe Inu coin is easy to use, entertaining, and has no current intrinsic value. Further, Pepe Inu's friendly and playful dog-themed interface aims to make the experience more approachable and enjoyable. Pepe Inu The firm launched this secret coin with no presale, and its supply is limited. In total, 90% of the tokens were sent to the liquidity pool. The remaining 10% of the supply is being held in owner wallets only to be used as tokens for future centralized exchange listings, bridges, and liquidity pools and to ensure the stability of the coin's value. Moreover, Pepe has gained popularity among other crypto enthusiasts and meme lovers. The memecoins unique strategy and approach to the market have sparked interest among those who are tired of the usual hype. Pepe Inu (PEPEINU) Price Chart (Source: CoinMarketCap) At the time of writing, Pepe Inu (PEPEINU) traded at \$0.0005034 with a 24-hour trading volume of 80,259 and a market cap of 204,435. Despite the hype over the meme token today, PEPEINU declined by more than 6.90%.

- FLOKI witnessed one of the most notable outcomes in the crypto market in April. - The current price of FLOKI is \$0.00003693. Since its launch in 2021, Floki, an Elon Musk-inspired cryptocurrency, has witnessed remarkable growth. Despite being one of the newest meme coins available, it has grown to become one of the top five meme coins. In April, FLOKI had one of the most significant outcomes in the cryptocurrency market. Investors from across the world are now interest in one of the most well-liked memecoins, Floki Inu. FLOKI April Roundup On Monday, April 24, Floki made an impact in the Decentralised Finance (DeFi) industry. FLOKI has been confirmed for listing on Binance.US, the most popular and well-known cryptocurrency exchange in the world for residents of the United States. After that, FLOKI acquired popularity in the cryptocurrency community, especially on Twitter. According to reports, Dogecoin [DOGE], Shiba Inu [SHIB], and other memecoins combined, FLOKI was the most traded meme token on KuCoin. More investors reportedly intended to trade FLOKI. In addition, the network's expansion increased. hence indicating that additional addresses took part in the token transfer. From being just a memecoin, Floki Inu has grown into a real-world utility. These include the FlokiFi DeFi network, the Floki University Crypto Education platform, and the FlokiPlaces NFT and goods marketplace. The fact that the coin has a devoted fan base and is listed on numerous significant cryptocurrency exchanges shows that it has some level of market trustworthiness. FLOKI currently trades for \$0.00003693 with a 24-hour trading volume of \$44,508,139. In the past 24 hours, FLOKI has decreased by 5.87% as per CoinMarketCap. Recommended For You:

- Bitcoin shows a continuous decline in trading price. - Gensler refused to answer whether ETH should consider security or not. The crypto market has witnessed lots of ups and downs in recent days. The U.S. Securities and Exchange Commission chairman, Gary Gensler, refused to answer the questions about whether Ethereum (ETH) should be considered a security or not. This leaves the crypto industry in an uncertain position about the future of ETH and other cryptocurrencies. While Bitcoin (BTC), the dominant player in the crypto market, suffered a price decline, the global crypto market declined by 0.37%. The trading price of Bitcoin started to decline after a long stay at the \$30K mark. BTC continued to witness a decline, which resulted in the trading price dropping to the \$27K mark just in a week. At the same time, Tesla reported that there were no Bitcoins sold or bought in Q1 2023. This is the third consecutive quarter with no changes in BTC holdings. The company's decision to hold the Bitcoin may be an indication of its belief in the potential of BTC. Losers of the Week in the Top 10 Cryptocurrencies: The top 10 cryptocurrencies by market capitalization have witnessed a continuous fall following Bitcoin. The biggest weekly losers among the top cryptocurrencies are Polygon (MATIC), Solana (SOL), and Ethereum (ETH). Polygon's native token, MATIC, has witnessed a massive decline in the last week. The trading price of MATIC has declined by 17.39% in the last seven days. At the time of writing, MATIC's price is around \$0.9611. Following that, Solana has shown a decline of around 14.09% in the past seven days, and its trading price is around \$21.10. Moreover, the first altcoin, Ethereum, witnessed a downfall after the Shapella upgrade. The upgrade takes the ETH trading price to the \$2000 mark. However, the SEC chair's statements had a big impact on the ETH trading price. It lowers the ETH price to \$1,838.59, with a decline of 11.31% in the last week. And also, XRP, Cardano, and Dogecoin have shown a decline following the bearish trend.

Dubai, United Arab Emirates, April 25th, 2023, Chainwire The team at Unizen, operating the Web3 ecosystem found at zcx.com, is pleased to announce a strategic partnership with the team at THORChain. Specifically, Unizen has integrated the THORChain settlement layer to enable swaps between ETH (Ethereum) and AVAX (Avalanche C-chain) to BTC (Bitcoin) and vice versa. "THORChain has devised an exceptionally refined solution that has proven resilient against the trials of time and fluctuations in market conditions, facilitating decentralized liquidity for assets on non-programmable chains," says Martin Granström, CTO of Unizen. "This made THORChain the obvious selection for empowering trades on the Unizen Trade platform involving Bitcoin, Litecoin, Dogecoin, and additional cryptocurrencies." "Unizen is an excellent venue to offer cross-chain swaps powered by THORChain. The industry has been slowly moving from centralized swap services to DeFi protocols. The goal is to bring the centralized exchange trading experience to users while maintaining the security of self custody," says Gavin McDermott, CEO of Nine Realms. "Unizen already offers a best-in-class experience as a DEX aggregator and we are excited to help them expand their cross-chain routes with native Bitcoin and more." About Unizen Unizen is a cutting-edge operating system for Web3 applications that enables users to seamlessly, cost-efficiently, and securely interact with all things Web3. It is designed to provide a non-custodial, unified user experience for interacting with various Web3 applications and assets, regardless of the underlying blockchain technology. Unizen uniquely

frequently traded digital asset in India this week, according to a tweet by SHIB KNIGHT. ðŸ“€ #Shiba Inu Most Traded Asset on Top Exchange in #India, Displaces BTC pic.twitter.com/RsAIIGMHs â€” \$SHIB KNIGHT (@army_shiba) April 22, 2023 This news is supported by data from CoinSwitch, one of India's largest exchanges, which revealed that Shiba Inu secured the top position in its list of the top 5 traded assets between April 15 and 20. This surge in popularity has put Shiba Inu ahead of other well-known cryptocurrencies such as Bitcoin (BTC), Ethereum (ETH), and Dogecoin (DOGE), which of these coins starred in your portfolio last week? #SHIB #BTC #DOGE #LRC #ETH pic.twitter.com/95f7NxDAQm â€” CoinSwitch: India's Largest Crypto App ðŸš€ (@CoinSwitch) April 22, 2023 The Indian business community has shown immense enthusiasm for Shiba Inu. This is because two years ago, Ethereum founder Vitalik Buterin donated 50 trillion Shiba Inu tokens to the Indian Covid-19 Relief Fund, which had a total value of \$1 billion at the time. This move created a lot of buzz around SHIB in the country. Shiba Inu Dominates Indian Crypto Market As a result of this publicity, Shiba Inu has gained a significant share of the Indian cryptocurrency market and is now the most preferred digital currency for Indian crypto investors. WazirX, a prominent cryptocurrency exchange in India, had previously shared an analysis stating that Shiba Inu was the preferred asset for novice traders in India in 2022. Additionally, SHIB ranked as the fifth most frequently traded asset on WazirX during the same year. These recent reports further reinforce the widespread popularity of Shiba Inu among Indian investors, as it continues to dominate the Indian cryptocurrency market. Recommended For You:

- The new meme token PEPE price climbed about over 21,000%. - Uniswap witnessing highest number of transactions today. Today, while the global crypto market leaders Bitcoin (BTC) and Ethereum (ETH) were declining, the one-week-old frog-themed memecoin Pepe (PEPE) surged more than 41% in the last 24 hours. In comparison to BTC and ETH, Pepe coin is up 38% and 36%, respectively. Also, PEPE is the talk of the town. â€” Some traders on Crypto Twitter seem to be shifting their attention from leading memecoins such as Dogecoin (DOGE) and Shiba Inu (SHIB) to the internet meme Pepe. The PEPE token was introduced on Sunday and has seen a significant price rally in value over the last three days, more than 21,000%. Pepe Coin Price Surging Rapidly The new meme token is also gaining popularity in cryptocurrency and social media communities. At the time of writing, Pepe traded at \$0.0000002576 with a 24-hour trading volume of \$76 million and a market cap of \$101 million. Further, PEPE triggered other small-cap meme coins, like Dogelon Mars and Baby Doge Coin, to briefly explode before reverting to their nominal values. Also, a drastic price rally in Pepe coin is helping cryptocurrency investors win big profits. One fortunate buyer turned \$250 into \$1.02 million in just four days. Moreover, the decentralized cryptocurrency exchange Uniswap had its highest number of transactions today due to the PEPE token transactions. Trade volume on the exchange has increased by more than 66% since its peak.

- Bitcoin faces an abrupt downfall below \$28K. - However, Altcoins too facing a downward momentum. As per yesterday's reports, Bitcoin dropped over 3% in just 15 mins that led the cryptocurrency to fall below \$30,000. The decline in price influenced market sentiment, and also \$100M worth of bitcoins are liquidated to Binance. On Thursday, the European Parliament also passed a crypto legislation making it a positive move in the market. However, Bitcoin couldn't see a price surge as before. Cryptocurrency Movements in the Market Several other altcoins including Ethereum (ETH), Polygon (MATIC), and Dogecoin (DOGE) started falling around 5% in the meantime. This Friday, when compared to the last 24hrs, BTC is down for the consecutive third day with a 3% fall, reaching \$28,000. The popular bitcoin lost nearly 10% over a week whereas, the second popular cryptocurrency, ETH, has lost 8% considerably. The United States Securities and Exchange Commission (U.S. SEC) comes into the picture concerning the advisers and investors of crypto. In detail, the SEC recommends crypto enthusiasts to ensure safety cautions for digital assets. However, the release of the staff bulletin pictured the roles and duties that advisers carry over to the customers. Currently, Coinbase seeks a license in Bermuda for expanding its operations across the world. This happened with respect to Brian Armstrong, the CEO of Coinbase, who gave a speech at an event following the statement of quitting Coinbase U.S. if crypto regulations are emerging higher. If this could be the case, there might exist a bearish movement among cryptos including BTC, ETH, and others. As per CoinMarketCap, the current price of BTC values \$27,812.23 at a 10.79% decrease in trading volume in the last 24 hours. Recommended For You:

- North Macedonia became the most popular country for Shiba Inu. - Shiba Inu's governance token, BONE, continues to get attention from exchanges. Google Trends reported that North Macedonia, a landlocked country in Southeast Europe, became the most popular country for Shiba Inu memecoin. Recently, SHIB has been getting more attention everywhere. Even CNBC, the company that provides real-time market analysis, argues that SHIB will outperform Dogecoin (DOGE) this year. In recent months, searches for the coin SHIB in North Macedonia have skyrocketed, surpassing those of any other country in the world. According to the report, Dogecoin still outperforms SHIB in terms of the total average of interest over time. But the significant fact to notice is that SHIB is already on the fast race track with Dogecoin. Moreover, the sudden popularity of the memecoin SHIB in North Macedonia may be an indication of the global reach of cryptocurrency, while people are getting more interested in decentralized finance. At the time of writing, the trading price of SHIB is around \$0.00001049, with a decline of 0.64%. The trading volume of the coin also witnessed a decline of around 38.40% in the last 24 hours, according to CoinMarketCap. Recommended For You:

Every April 20 which is 4/20, is considered the DogeDay prominently in the United States. Dogecoin, the most popular cryptocurrency in recent times is expected to skyrocket due to the recent DogeDay update. Currently, there are 4 million active holders of Dogecoin. However, there is widespread news of BabyDoge's virtual credit card announcement at 4:20 pm PST (Pacific Standard Time) on 4/20 day. Happy to announce our virtual crypto card will go live on May 4th! â€” BabyDogeSwap.com LIVE (@BabyDogeCoin) April 21, 2023 You can now spend your #babydoge and other

cryptos as simple as sending it! Can be used globally ! -google and Apple Pay for in person purchases pic.twitter.com/3P9ht5RhR7 Meanwhile, Elon Musk, the CEO of SpaceX, Twitter, and Tesla has done the first integrated test launch of Starship on the "DogeDay". He also pointed out that the learnings are ahead for the further test launch in a few months. Whereas, in the meantime, Elon Tweeted: "The team is working around the clock on many issues. Maybe 4/20, maybe not." The excitement over Doge and BabyDoge would intrigue crypto enthusiasts and investors as DogeDay hits. This is due to several factors including Tesla's approval of DOGE payments and Elon's tweets on various cryptocurrencies promotion through the Twitter logo change. As per CoinMarketCap, Baby Dogecoin prices at \$0.000000003089 with a decrease of 4.86% trading volume over the last 24 hours. Currently, the hashtag "DogeDay" is on Twitter trend "as the talk of the town. Recommended For You

- Launch of new memecoins in the crypto market. - Shib is likely to enter the metaverse by the end of the year. The global crypto market is witnessing a memecoin season with the launch of new cryptocurrencies. Recently, three memecoins (PEPE, Wojak, and Chad) were introduced to the market. The new memecoins are also making a good impression. Whatever, if we take the memecoin sector, Dogecoin, and Shiba Inu are the two tokens taking the top spot. Now CNBC argues that SHIB will outperform DOGE. By market capitalization, Dogecoin (DOGE) takes the top position among the other memecoins in 2023. This way Dogecoin differs from its rival, Shiba Inu (SHIB). However, this year things may go differently, and Shiba Inu will be able to outperform Dogecoin this year. Let's discuss some key differences between the two cryptocurrencies. Will Shiba Inu Outperform Dogecoin? The DOGE vs. SHIB battle has been going on since its debut. Both Doge and SHIB are the most popular memecoins, with huge fan bases. When comparing the usage of the tokens, undoubtedly, DOGE comes in first. Compared to last year, DOGE witnessed a huge price increase, and the business has started to accept it as a payment method. Twitch, Tesla, AirBaltic, and AMC are the few businesses that accept DOGE payments. At the same time, SHIB has been used in a variety of situations. It has its decentralized exchange called ShibSwap, which allows users to swap tokens and access liquidity pools. Moreover, it can be used to buy and sell NFTs, participate in governance, and stake tokens. Additionally, the SHIB's lead developer stated that Shiba Inu's layer-2 solution, called Shibarium, will see the light of day in two to four months. And SHIB is likely to enter the metaverse by the end of 2023 with its wide range of games, including Shib Eternity. The initiatives are expected to attract more investors to the token. On the other hand, Dogecoin holds the upper hand due to its well-known celebrity support, such as that of Twitter CEO Elon Musk, and its early mover advantage. Moreover, Shiba Inu holders reported lastly 1.28 million, which is less than half of Dogecoin. However, both memecoins are rushing to reach the \$1 mark. At the time of writing, the trading price of DOGE is around \$0.08354, with a decline of 5.59% in the last 24 hours. On the contrary, the trading price of SHIB is around \$0.0001052, with a decline of 4.42%. As of now, Dogecoin has the upper hand in the dominance of memecoin compared to the SHIB. Let's wait to see if SHIB's upcoming updates are going to help it outperform DOGE. Recommended For You:

- Elon's Tesla neither bought nor sold any BTCs in Q1 of 2023. - The BTC price is down at the range of \$29,123.33 currently. Tesla, a leading car manufacturer owned by Elon Musk, has announced the reports for the first quarter of 2023. On April 19, it is noted that Tesla neither buy nor sell any of the bitcoins (BTC) that it holds as of Feb 2023. Moreover, the report says that the total bitcoins Tesla holds ranges to more than 11k BTC, worth over \$348 M up to date. Tesla reveals none of their Bitcoin was sold in Q1 2023 pic.twitter.com/Z1Khv9m9k "DogeDesigner (@cb_doge) April 19, 2023 After the Q1 update, the sales drop slightly to \$23.33 billion which was expected to be \$23.39 billion. Whereas, the profit gained is around \$2.5 billion which is lesser compared to \$3.32 billion the previous year. It was evident that Tesla sold 75% of their BTC in June 2022 around \$936 million when converted to fiat. Yet, when Tesla bought 9,700 BTC in 2021, the coin spiked higher in the crypto world. Consequently, the value ranges to \$29,123.33 as per CoinMarketCap at the moment. Meanwhile, Elon substantially concentrates on meme coins, particularly Dogecoin (DOGE). The recent change of logo on Twitter was a hit in the crypto market. Recommended For You:

- XRP trading volume increased In South Korea. - XRP currently trades at \$0.4982. Ripple (XRP) has reportedly one of the greatest-performing assets in the cryptocurrency industry. The price of Ripple has been steadily rising since the start of 2023. On March 21, the token moved from the \$0.3 zone to the \$0.4 zone. The token eventually conquered a fresh hurdle to reach \$0.5 on March 28. This year, the price of Ripple had an incredible surge. The asset's rising value has also been boosted by South Korean investors' growing curiosity. XRP allegedly has the highest trading volume on the major Korean exchanges. More people than simply South Korean investors are paying attention to Ripple. Along with Ripple, many well-known digital currencies are highlighted in South Korea's list of the top altcoins. These include meme coin Dogecoin (DOGE), Ethereum Classic (ETC), and Nano (XNO), which came in second and fourth, respectively. The expectation of a favorable outcome in the Ripple vs SEC lawsuit is related to the rising stockpile of Ripple. The current price of XRP is \$0.4966 with a 24-hour trading volume of \$1,874,678,233. Recommended For You:

- Their potential use cases acted as game-changer. - Dogecoin and Shiba Inu are two popular instances of this. In a world where meme coins such as Shiba Inu (SHIB), Dogecoin (DOGE), and Floki (FLOKI) have survived and thrived, they have become the "talk of the town" in Twitter Space through their unexpected success and the future of these tokens. Their potential use cases acted as a game-changer and turned some meme coins from internet jokes into legitimate businesses with real-world use cases as they evolved beyond their meme origins to develop utility. Meme coins are a subset of cryptocurrencies that take their inspiration from memes or share some other funny quality with viral internet memes. Dogecoin and Shiba Inu are two popular instances of this. Moreover, Meme coins are notorious for their extreme swings in price due to their plentiful availability and cultural relevance. There are hundreds

of different meme currencies, with Dogecoin and Shiba Inu being the most popular. Verifying that liquidity pools are linked to burn addresses, validating that third-party audits have been performed on the project, and ensuring that no one entity holds more than 5% of the entire supply are all essential steps in getting a comprehensive picture of a meme currency. Rise in Adoption Globally The introduction of utility meme currencies is shifting the perception that meme coins have no practical use or advantages. Some meme currencies have practical applications or are integrated into larger DeFi (decentralized financial infrastructure) ecosystems. ShibaSwap is a decentralized exchange (DEX), and its governance token is Bone ShibaSwap (BONE). Meme coins have just recently been popular, but their popularity has skyrocketed. In early 2021, they entered the popular consciousness when celebrities like Elon Musk, Mark Cuban, and Snoop Dogg endorsed Dogecoin, driving its price up by more than 800% in only 24 hours. Dogecoin's value has spiked on many occasions since then every time Elon Musk tweeted about it. There are now hundreds of different meme coins available, many of which are based on the popular doge meme. The acceptance of meme currencies by some large corporations has been widely publicized. It comes as no surprise that the Tesla shop now accepts Dogecoin, given Elon Musk's penchant for parody currency. Merchants across the globe accept these meme coins and their adoption is on the rise rapidly.

- Floki is the first and only dog-themed crypto to have a golden checkmark. - FlokiUltras 2.0 announcement drops with a \$37K prize pool. Floki Inu ecosystem's official Twitter account gained a golden checkmark. A golden tick in a Twitter account basically means it is a business organization account. Notably, Floki is the first and only dog-themed crypto ecosystem to have this mark. Even Elon Musk's favorite Dogecoin has only a blue checkmark along with the fellow meme tokens, Shiba Inu, and BabyDogeCoin. BREAKING: Twitter has verified \$FLOKI as an organization. " FLOKI (@RealFlokiInu) April 18, 2023 The official #Floki Twitter page now has a GOLD check mark! " Just in time for 4/20! FUN FACT: #Floki is currently the only memecoin in the trilogy (of \$DOGE, \$SHIB, \$FLOKI) to have the gold verification.  pic.twitter.com/c6SXY0W9Hz As the announcement about FlokiUltras 2.0 drops, engagement over the network is increasing. This is the second phase of the guerilla marketing competition organized by the Floki Inu organization, with a \$37K prize pool. And the tweet regarding the golden tick is also hinting at some event on 4/20. Since the start of the week, the crypto market has witnessed the emergence of new meme tokens that are not in the shiba inu doge theme. Tokens like PEPE and MOJAK are promoting themselves as replacements for existing memecoins. One thing that is evident from these is that the craze over these fun and alternative cryptos is not going away any time soon. Recommended For You

- Pepe's memecoin has 155K tweets and retweets. - Token's maximum supply is 420,690,000,000,000 PEPE. The two-decade-old meme cartoon, Pepe the Frog, is creating sensations on crypto Twitter for the past few days. One of the OG meme idol's fans are fed up with the sounds of Shiba Inu dog memes and cryptocurrencies. Pepe's memecoin has been the talk of the Twitter and Reddit crypto communities, with 155K tweets and retweets. 10,000 holders "i, \$pepe pic.twitter.com/vZoXTboaf3 " Pepe (@pepecoineth) April 18, 2023 On the token's official website, the roadmap with three different phases is listed. And within four days of launch, the Pepe token had achieved the goals of the first phase. Especially, the goals of 1000+ holders, listing on CoinGecko and CoinMarketCap, along with capturing Twitter fame. The frog token's marketing is focused on positioning itself as the replacement for all the doge-related tokens. Also, the official website's "About" section states: "Pepe is tired of watching everyone play hot potato with the endless derivative ShibaCumGMElonKishuTurboAssFlokiMoon Inu coins. The Inu's have had their day. It's time for the most recognizable meme in the world to take his reign as king of the memes." Etherscan's current Pepe crypto statistics show 11K+ holders and the token's maximum supply is 420,690,000,000,000 PEPE. Within days of launch, the token has surged enormously. In the last 24 hours of listing in CMC, the trading price is \$0.00000008648, with a surge of over 50%. Cryptocurrency analysts don't show much hope for this, as they consider it to be another joke coin without any real-life utility. First dogs, followed by frogs, what is next in line?

- Twitter supports crypto trading, enhancing a partnership with eToro. - Bitcoin has already been traded on Twitter in the last 24hrs. Elon Musk, the CEO of Twitter has always had a connection over meme coins especially Dogecoin as shown in the recent logo change. Whereas, the impact was prominently huge than expected over the price surge on Dogecoin at that time. Now, Twitter permits cryptocurrency trading along with stocks and other financial assets by enabling a partnership with eToro, an authorized financial services-led investment company for multiple assets. How eToro Supports Crypto Trading? It is reported that Twitter would enhance market charts for trading stocks and assets from eToro. Using this, users can involve in crypto trading. One of the spokespersons of eToro has said that Twitter cashtags will be expanded to cover far more instruments and asset classes. Moreover, users will be enabled with a "view on eToro" option. This will help users to understand the criticalities of the platform supported by TradingView as a market data partner. The eToro's CEO, Yoni Assia said: "As we've grown over the past three years immensely, we've seen more and more of our users interact on Twitter [and] educate themselves about the markets." He also added that eToro's partnership with Twitter would support the users regards to financial analysis in real-time. Furthermore, it is observed that the collaboration might increase various asset classes towards Twitter using eToro's Cashtag feature. Cashtag is something associated with TradingView. It is meant that entering the ticker with the dollar sign might lead to the price details of the particular crypto asset through an API (Application Programming Interface). In the last 24 hours, as soon as the partnership of Twitter enabled with eToro, Bitcoin trading has been started. Currently, it is evident that bitcoin trading is now live at the price ranging to \$29,534.30 with a decrease of 3.34%. Recommended For You:

- Kucoin will list the Baby Doge Coin on April 18. - The trading price of the coin is expected to increase after the following listings. Baby Doge Coin is a cryptocurrency inspired by the meme token Dogecoin. On April 13, BabyDoge announced on Twitter that a big announcement was coming. Without unveiling the announcement, the trading price of the coin started to surge. After that, it revealed that the top five crypto exchanges will list the coin next week. Following the announcement, the crypto exchange KuCoin announced that the Baby Doge Coin will be listed on their platform starting April 18. The supported trading pair is BABYDOGE/USDT. The deposits will take effect immediately, supported by the networks BEP20 and ERC20. The trading will start at 10:00 UTC on April 18. And the withdrawals will start at 10:00 UTC on April 19. Will Binance list Baby Doge Coin? Moreover, the top five crypto exchanges by CoinMarketCap are Binance, Coinbase, Kraken, KuCoin, and Bitfinex. One of the top five exchanges, KuCoin, has announced the listing of Baby Doge. So the crypto market expects the world's largest crypto exchange, Binance, to list the coin. However, it will be one of the biggest listings for the memecoin. Currently, the coin is supported by popular exchanges including Gate.io, Bybit, and OKEx. At the time of writing, the trading price of BabyDoge is around \$0.000000003432, with a decline of 5.29% in the last 24 hours. The coin's trading volume is \$28,297,431, with an increase of 1.32%. The crypto market is expecting the coin's price may witness a surge after its upcoming listing.

- The top 5 most attractive cryptocurrencies are SOL, AVAX, SHIB, DOGE, and INJ. - Avalanche (AVAX) price soared over 15% in the last 24 hours. As the cryptocurrency market evolves, new and cutting-edge projects appear, offering investors chances for substantial returns. Early on April 17, major cryptocurrencies experienced mixed trading as the market cap of all cryptocurrencies increased by 0.10 percent to \$1.27 trillion from the previous day. Over the past 24 hours, the total volume of the crypto market has climbed 26%, reaching \$42.67 billion. Let's take a look at the top 5 cryptocurrencies that have potential price rallies in the market. SOL/USD - Market Cap: \$9.7 billion - 24H Trading Volume: \$797 million Solana (SOL), the eighth-largest cryptocurrency in the market, gained attention from crypto investors due to its recent integrations and price surges. Saga, an Android smartphone integrated with the Solana blockchain, was announced by Solana Mobile, a division of Solana Labs, on April 13. Additionally, Solana Labs joined forces with American beverage retailer Boba Guys to launch an in-store loyalty rewards program. In recent times, SOL, the native token of Solana, has witnessed a bullish trend with a price surge of over 5% in a day and 23% in a week. Also, Solana registered a 151% year-to-date increase. Solana (SOL) Price Chart (Source: CMC) At the time of writing, Solana traded at \$25.23 with a 24-hour trading volume of \$796 million, which soared more than 134%. AVAX/USD - Market Cap: \$6.7 billion - 24H Trading Volume: \$496 million The AVAX token from the Avalanche network gets a spot on this list due to the bold aims of the Avalanche blockchain. Today, the altcoin Avalanche's momentum seems to be a significant move to end April at a very bullish level. With a price of \$25.92 and gains of 15% per day and 19% in a week, the cryptocurrency is still holding onto its ranking as the 13th largest coin. Avalanche (AVAX) Price Chart (Source: CMC) The price movement of Avalanche has been interesting to watch as it largely declined in what seems to be a strong correlation with the Terra (LUNA) token. At the time of writing, AVAX traded at \$20.69 with a 24-hour trading volume of \$496 million, up over 205%. Further, the Avalanche's price has soared about 152% year to date. SHIB/USD - Market Cap: \$6.7 billion - 24H Trading Volume: \$351 million The second-largest memecoin, Shiba Inu (SHIB), never failed to attract crypto enthusiasts with its new updates and price gains. Also, the "SHIB Army" hype over the token has never ended. Recently, Shiba Inu's price and its burn rates have been surging. Even whales have started to show more interest in the meme token after its "Shibarium," the layer 2 blockchain beta release. Shiba Inu (SHIB) Price Chart (Source: CMC) At the time of writing, SHIB traded at \$0.00001154 with a 24-hour trading volume of \$351 million, which increased by around 6%. Also, Shiba Inu soared more than 5.5% in the last 7 days and 43% year to date. DOGE/USD - Market Cap: \$12 billion - 24H Trading Volume: \$1.2 billion Over the past year, Dogecoin (DOGE), a cryptocurrency that first emerged as a meme coin, has experienced tremendous growth in popularity. Billy Markus and Jackson Palmer made it in 2013 as a parody of Bitcoin, but it has since turned into a real cryptocurrency. Influential people like Elon Musk, who has been outspoken about his support for Dogecoin on social media, have helped to increase its popularity. Despite being a meme coin, Dogecoin has made significant advancements in the cryptocurrency market. Dogecoin (DOGE) Price Chart (Source: CMC) At the time of writing, Dogecoin traded at \$0.09428 with a 24-hour trading volume of \$1.2 billion, climbing about 145%. Also, DOGE's price soared over 5% in a day and 11% in a week, and it has surged more than 32% in the year to date. INJ/USD - Market Cap: \$956 million - 24H Trading Volume: \$224 million Injective is an open, interoperable layer-one blockchain, and its native crypto token is gaining popularity in the crypto community. Bulls in Injective (INJ) gave in to the bear rule, effectively retracing the price to an \$8.48 intraday low. Bulls quickly recovered despite this pessimism, sending the price of INJ to a new 52-week high of \$9.6138 within hours. Injective (INJ) Price Chart (Source: CMC) At the time of writing, the bullish trend continued, with INJ trading at \$9.42 with 24 hours of trading volume of \$224 million, an increase of about 22%. Also, the price of Injective surged by about 8% in a day, 67% in a week, and more than 644% since the start of the year.

- The market cap of all altcoins attains an 8-month-high above \$663 billion. - Ethereum price is in the greed zone with a Fear and Greed Index of 73. - Injective (INJ) is the altcoin with the highest 30-day gain of over 118%. Bitcoin (BTC) and Ether (ETH) crossing their crucial resistances at \$30K and \$2.1K respectively "escalates the likelihood of the next bull run. Parallel to them, other altcoins project their upside potential and bolster the crypto market's recovery since the onset of this year. The collective price action of altcoins, cryptocurrencies other than Bitcoin, was found above the 200-day moving average (200 EMA), as per the above chart, to signify their bullish state. Notably, this is quite a strong trend as the average direction index (ADX) was recorded at 26.12. Significantly, the altcoin market laid this bullish breakout in January. During the US stock market

sell-off in March, the market observed a bearish breach alongside the \$19K BTC. But it bounced back along with the two largest cryptocurrencies. Moreover, the altcoins' market cap surged to hit its 8-month-high above \$663.57 billion, as per TradingView. At press time, their total market value was \$652 billion. At the time of analysis, the relative strength index (RSI) of all the altcoins combined was on the edge of entering the overbought state " at 69.09 on the scale. Bullish Stats of the Altcoin Season The dominant altcoin " Ether (ETH) " drove a bullish rally above \$2,000 and hit its 11-month-high amid its major Shapella upgrade. Thereby, it recorded a weekly price gain of 12.69%. At the time of writing, ETH traded at \$2,095. The price rallies and social trends of memecoins also dominated this altcoin season. Their new launches, global adoption, and speculations were the triggers. In the last 7 days, Elon Musk's favorite Dogecoin (DOGE) surged by 7.65%, Shiba Inu (SHIB) by 4.34%, Floki Inu (FLOKI) by 12.24% and Baby Doge Coin (BABYDOGE) by 49.09%. The newcomer and Ethereum's descendant Arbitrum (ARB) spiked 38.57% in a week to trade at \$1.64 at press time. With its Saga mobile launch, Solana (SOL) witnessed an increase of over 25% to trade above \$25. Likewise, Ripple (XRP) with its ongoing SEC lawsuit hearings displayed a 30-day price gain of 38.66% to trade at \$0.5133. Cardano (ADA) also registered a 14% weekly surge. Web3-exclusive altcoins stole the spotlight with their remarkable price gains. Firstly, Injective (INJ) recorded a weekly surge of 65.38% and a monthly gain of 119.74%. This is because of their prominent integrations with the Solana and Cosmos ecosystem. Secondly, Space ID (ID) outperformed with a 7-day surge of 87.63%. On the other side, Bitcoin (BTC) dropped 1.37% in the last 24 hours to trade below \$30K, approximately \$29,919, at press time as per CMC. Recommended For You

- BABYDOGE becomes the 3rd largest memecoin as per market cap. - The meme token price surged about 50% in a week. Baby Doge Coin, another prominent dog-themed memecoin, attracted many investors' trust in the crypto market and never failed to surprise the "BABYDOGE Army" with its price actions. Yes, apart from Dogecoin (DOGE) and Shiba Inu (SHIB), Baby Doge is advancing alongside the broader cryptocurrency market, with gains of 5% over the previous day and 50% in the last 7 days. In just two short years, Baby Doge Coin has experienced tremendous growth. BABYDOGE has a market cap of \$564 million and has grown to be the third-largest meme coin, as per its official Twitter account. Also, the development team announced on April 14 that the altcoin will be "listed on the top 5 crypto exchanges," which is scheduled today. The listing may increase traffic to the well-known cryptocurrency, even though the team has not disclosed the name of the exchange. According to CoinMarketCap, the top 5 crypto exchanges are Binance, Coinbase, Kraken, KuCoin, and Bitfinex. The Baby Doge Army awaits the largest cryptocurrency exchange, Binance, to list it. Crypto Market Attention Turns to BABYDOGE However, following the exchange listing news, the token price climbed over 30% from \$0.000000002584 to \$0.000000003703 the day between April 14 and April 15. At the time of this writing, BABYDOGE traded at \$0.000000003654 with a 24-hour trading volume of \$27 million. Also, its price has skyrocketed by more than 300% in the year to date (since the beginning of 2023). Further, the infant Doge Coin continued to be the "talk of the town" with more than 60.5K tweets in the last 24 hours. And the meme token has been listed on the leading travel service "Travel Care," as the users can now use BABYDOGE to book services with them. Recommended for you

Their Project Scoop has completed 4 audits on BabyDoge under the meme category. As a result, their mission is to include redistribution for holders and charity donations. Time for another CertiK Project Scoop! " " CertiK (@CertiK) April 14, 2023 This week we're featuring @BabyDogeCoin, a meme community built on BNBCHAIN. It's mission goes includes redistributing to holders & charity donations. So, let's get the scoop -i, <https://t.co/QUSRq09acq#BabyDogeArmy> #BabyDoge #CertiK pic.twitter.com/4gfGysfeYX Certified Kernel Tech (aka CertiK) is the security firm that focuses on Web3 projects to monitor and examine blockchain and DeFi protocols respectively. Whereas, BabyDoge is a meme coin created on Binance Smart Chain(BSC), Ethereum. This coin redistributes 5% transaction fees to their token holders concerning the number of tokens they hold. BabyDoge ranks 273rd position as per CertiK Skynet Security Score which is among the top 10%. Furthermore, the security score is 91.79. More recently, CertiK has completed 5 smart contract audits on various blockchains. Also, one of the smart contract audits includes Merlin Dex (Merlin coin's Decentralized Exchange), a ZkSync powered permission-less community-centric exchange. Recommended For You:

- BabyDoge skyrockets more than 15% following the announcement. - However, 3600B tokens are transferred to a dead wallet. BabyDoge is a popular meme coin created by the dogecoin community in the crypto world. More recently, this meme coin is drastically spiking at a higher rate. Today, it is reported that the BabyDoge will be listed on any one of the top 5 crypto exchanges in the coming week. Meanwhile, there was an unexpected surge following the unveiled announcement. News is spreading that #BabyDoge is listing on a top 5 exchange next week! " BabyDogeSwap.com LIVE (@BabyDogeCoin) April 14, 2023 A nice feature of BabyDoge making its way to #Binance feed <https://t.co/47MB0uymcu> Sooner the tweet, the price range of BabyDoge increased by more than 15% in the last 24 hrs. Alongside, Elon has commented "Dogs rock" favoring the Dogecoin community. It is quite familiar that Elon supports Dogecoin through his humorous tweets all the time. BabyDoge Skyrockets to Peak! As soon as the announcement of listing on the top crypto exchange, BabyDoge has become trending in the crypto market. As per the CoinMarketCap data, the major exchanges on the top 5 list include Binance, Coinbase, Kraken, KuCoin, and Bitfinex. There is a belief that says KuCoin will be listing BabyDoge sooner whereas Binance is the one most preferred by crypto enthusiasts. Yet, the price started skyrocketing before getting listed on any of the crypto exchanges. In the last 24 hrs, more than 846 million BabyDoge tokens worth \$2,332 were burnt from the overall supply. Additionally, a huge transaction of 3600 billion tokens valuing \$10,238.40 is moved to a dead wallet under block number 27348064.

Currently, as per CoinMarketCap, the price list of BabyDoge values \$0.000000002886 ranking in the 217th position. Notedly, the 24-hour trading volume is around \$22,199,949 at an increase of 228.49%. Recommended For You:

- In the last 24 hours, SHIB rallied 2% in price and 27% in trading volume. - Over 410.6 trillion SHIB are burnt from the initial supply up-to-date. The burn rate of Shiba Inu (SHIB) enormously rose to 30929.3% in the last 24 hours. A single giant transaction initiated the burn of 1,494,278,561 SHIB, worth \$16,885 at press time. The official SHIB burn tracker, Shibburn, detected this burn activity at 07:14:59 UTC. As per the portal, at the time of writing, Shiba Inu stood with a circulating supply of 573,935,573,168,902 SHIB after burning approximately 410,632,896,262,191 tokens. In recent times, the hike in burn rate failed in triggering a price gain in SHIB. But contrarily, at this cycle, Shiba Inu (SHIB) recorded a bullish 24-hour price change. The market sentiment and adoption rates coordinated with the burn rate to favor the goal of burning & accelerating scarcity to increase value. At press time, as per CMC, SHIB traded at \$0.00001134, up 2.25% in the last 24 hours, and held a market cap of \$6,687,863,752. Alongside the token, Shibarium's Beta testnet, Puppynet, also achieved significant milestones this week. On the other hand, SHIB's memecoin pioneer & Dogecoin (DOGE) exhibited a notable surge in its 24-hour trading volume. The rise in DOGE was initiated predominantly by Elon Musk's constant support. - BabyDoge announced that there is big news coming up. - The trading price of BabyDoge has increased by 5.14% in the last 24 hours. The dog-themed cryptocurrency BabyDoge coin's trading price witnessed an increase after they tweeted that a big announcement coming. Without unveiling the announcement, the BabyDoge coin started surging. The coin's trading price has increased by around 2.94% in the last hour. Our biggest news. Ever. & BabyDogeSwap.com LIVE (@BabyDogeCoin) April 13, 2023 Stay tuned & pic.twitter.com/3Ar5xlTiDt At the end of yesterday, the BabyDoge official Twitter page tweeted that there is big news coming up. The eagerness in the crypto space about the upcoming update is reflected in the trading price of the coin. At the same time, BabyDoge keeps attracting attention as one of the most popular currencies worldwide, according to the CoinMarketCap Q1 report. At the time of writing, the trading price of BabyDoge Coin is around \$0.000000002657, with an increase of 8.68%. And the trading volume of the coin is \$8,635,794, which surged by 5.14% in the past 24 hours. The announcement update significantly affected the price of the coins. So, it is anticipated to experience tremendous growth following the announcement.

- Cardano has undergone a 5% price surge in the last 24 hours. - This may be the significant 5th week of the green candle march. Cardano blockchain's native token, ADA, has undergone a 5% price surge in the last 24 hours. Albeit all the Ethereum Shapella Upgrade hype, most of the altcoins in the crypto market are moving flat, but ADA, AVAX, UNI, and Dogecoin (DOGE) made quite an impact for the day. Each of the above-mentioned coins in the top 20 cryptos has seen a surge of over 4 percent. More importantly, the Cardano token is the 7th continuous green candle (in day count) since January. And hopes are high for this week to break the pattern and start the 5 weeks green candle march. The token has not attained this note post-September 2021. As for price analytics, Cardano has surpassed the existing resistance level of \$ 0.4134, and the next resistance is set at \$0.5698. The current RSI is marked at 53.28, indicating neither a sell nor buy signal. So it is difficult to understand the next movement of the ADA. At press time, the trading price of ADA was \$0.4146 with a market capitalization of \$14,413,120,398. As per the official monthly on-chain report from the Cardano Foundation, the number of native token transactions is increasing along with the wallet count. To conclude, ADA has hopes for ending this week in green. Recommended For You

- Musk promoted his dog Floki as the new CEO of Twitter. - Elon Musk's total net worth recorded a gain of over \$39.4 billion year-to-date, as per Bloomberg. Elon Musk's confession about his painful Twitter moments is a hot topic on almost all media platforms. His tweets are a collage of content that portray his impulsions and sense of humor. Remarkably, the experimental executions he induced on Twitter in recent months never failed to catch the community's attention. The Tesla CEO averted his focus on spurring Twitter's improvement plans and exploring the hyped AI innovations. Consequently, speculative tweets from Elon Musk exhibited bullish episodes in the price momentum of the following cryptocurrencies. Elon Musk's Favorite & Dogecoin (DOGE) Elon Musk is popularly nicknamed the & Dogefather& for his fondness of the largest memecoin Dogecoin. His appearance on Saturday Night Live (SNL) in 2021 initiated the DOGE wave. Musk's memecoin affinity even made his mother think he would gift her Dogecoin for Mother's Day. & Dogecoin to the moon& emerged as the famous slogan for the memecoin. As days passed, the billionaire upgraded his public display of Dogecoin love on Twitter. Any single tweet regarding DOGE eventually resulted in the token's price surges. When a popular crypto influencer requested a visit to Twitter HQ in San Francisco, he mentioned 3 DOGE as the entry fee. Above all these, the Twitter logo change to Doge led to huge gains in Dogecoin. With this, he declared his never-ending love for the memecoin. Confirming this, in the interview, he stated: &there is a lot of potential around Doge that people don't realize.& Expectedly, this resulted in a notable brief rally in DOGE. As per CMC, Dogecoin surged 2.4% from \$0.08186 to \$0.08381 in the 24h time window. Floki (FLOKI) Enthusiasts will never forget the amusing announcement of Twitter's new CEO in February & his dog Floki. It was only assumed as sarcasm posted by Musk. But yet again during Tuesday's interview, Musk jokingly stated: &I did stand down. I keep telling you I'm not the CEO of Twitter, my dog is the CEO of Twitter.& Significantly, this initiated a rally of over 2% in FLOKI price to hit the day's high of \$0.00003401. Alongside these indirect social mentions from Elon Musk, FLOKI witnessed prominent collaborations toward its global adoption. SingularityNET (AGIX) Besides the Doge-linked memecoins, Musk's tweets also featured a single term &Singularity& amid the AI craze. Tesla's CEO did hint at his wish to begin special research for a native AI project. However, the possible threats of AI models, more advanced than ChatGPT-4, concerned Musk and led him to support an

open letter for an AI Halt. The “Singularity” evidently initiated price surges in the AI token “SingularityNET (AGIX)”. AGIX is the native token of SingularityNET, an all-inclusive AI service marketplace developed by the creators of the famed bot Sophia. Likewise, Musk’s tweet reply on Wednesday to a user succeeded in inducing a short spike of 2% in the last 24h. According to CoinMarketCap, AGIX surged from \$0.3855 to \$0.3972. The Singularity is near “Elon Musk (@elonmusk) April 12, 2023 Markedly, Elon Musk resumes warning the world regarding the potential loopholes or threats AI innovations can cause in the future. - Over 204 quadrillion BABYDOGE were burned from the total supply. - The memecoin price soared over 2.5% in a day. The Everyday Baby Doge Coin trend is growing with its recent updates and utilities. As the Baby Doge has always been the “talk of the town” due to the massive numbers of burn tokens. In the last 24 hours, the BABYDOGE burn portal processed 4,399,094,168,320.30, which is worth over \$10,619; in that, 120 billion Baby Doge Coin were burned in just an hour. In addition, the dog-themed memecoin was spotted as the favorite cryptocurrency for many. Over 204 quadrillion (204,922,132,541,167,936), or 48.79%, of Baby Doge tokens have been burned since the burn portal launched on February 13, 2023. BABYDOGE tokens’ total supply is 420 quadrillion (420,000,000,000,000,000), so now there are only 204 quadrillion Baby Doge Coin left in the crypto market. BABYDOGE Stays Neutral According to CoinGecko, at the time of writing, BABYDOGE traded at \$0.000000002401 with a 24-hour trading volume of \$6.5 million and a market cap of \$276 million. Elon Musk’s favorite coin surged over 2.5% in the last 24 hours and is up 2.3% over Bitcoin (BTC) and 2.9% over Ethereum. But it’s down around 7% in a week. However, the Baby Doge community’s efforts and support brought new highlights to the token. At the time, the infant doge ecosystem has 1.8 million followers on the social media site Twitter. Further, the team works with cryptocurrency and exchange companies to organize frequent giveaways and rewards to encourage followers. Recommended for you

- Elon Musk hinted at the return of advertisers on Twitter. - Currently, Twitter stands with a workforce of 1,500 after losing 81% since last December. - Musk neither supports nor stands against the US TikTok ban proposal. Elon Musk reveals unfiltered perspectives about Twitter and its mission of transforming it into the best source of truth. The Tesla CEO and Twitter boss joined nearly 3 million people in the live interview with the prominent UK-based media BBC. Notably, this session recorded several viewpoints that can be perceived as behind-the-scenes of Elon Musk while handling the struggling Twitter. Events like the replacement of Twitter Bird logo with Doge and the Twitter to Titter change served as Musk’s humorous and impulsive cover-ups. The Tesla CEO pointed out the shutdown of numerous service centers as one of the most difficult things in Twitter in the last six months. Significantly, over 81% of the company’s workforce was cut-down since December 2022. As per his updates, the count of Twitter employees dropped from 8,000 to 1,500 at present. Elon Musk’s Ambitious Twitter Plan In recent months, Twitter rolled out the paid Twitter Blue labels and enabled long-form tweets and videos of any length. The platform also has other upgrades “subscriber programs, content monetization service, and open-source algorithms” in the queue. Ultimately, he asserted Twitter is primed to eradicate misinformation and bots through verification labels and affiliation badges. Elon Musk affirmed: “No system is going to be perfect in the pursuit of truth. We, at Twitter, are extra vigilant against impersonation. [“!”] We’re going to be very focused in figuring out what’s real and if not real, “ trying to address it. If you want real time in news, this is the best place, it’s Twitter.” The final phase of the interview got reserved for an open-ended interaction between Elon Musk and the community. A popular crypto influencer posted a question demanding Musk’s opinion of his favorite memecoin, Dogecoin. As expected, his opinion towards DOGE remained unchanged. He stated, “there is a lot of potential around DOGE that people don’t realize.” Another crypto influencer asked if Elon Musk stalked other Twitter Spaces via secondary/fake accounts. He promptly replied he does not enter any Space but does own a second account. As per his saying, this account is for the purpose of beta testing new Twitter features. Furthermore, the listeners of Space enquired about further information on X “the “everything app.” Elon revealed no specific details related to it, amplifying the community’s interest.

- Every coin in the market is passing through a dip of about 3 to 4%. - Market cap has plunged to \$1.22 trillion from \$1.24 trillion. Cryptocurrency started green and fresh as the day began but is ending in the red zone. Every other coin or token in the market is passing through a dip of about 3 to 4% in the hour. Though major crypto updates are pipelined in consecutive days, such as the Ethereum Shapella upgrade, the market is not experiencing any positive impact because of it. From market pioneer Bitcoin (BTC) to other not-so-significant altcoins, the price has dropped. The overall market capitalization of cryptocurrencies has even plunged to \$1.22 trillion from \$1.24 trillion. Crypto names like Conflux (CFX), Optimism (OP), and Arbitrum (ARB) are on the losers list of CoinMarketCap. Some major price changes to be remembered are, | Crypto | From | To | | Bitcoin (BTC) | \$30,509.08 | \$29,865.20 | | Ethereum (ETH) | \$1,927.23 | \$1,860.04 | | Solana (SOL) | \$23.64 | \$22.18 | | Polygon (MATIC) | \$1.13 | \$1.09 | | Dogecoin (DOGE) | \$0.08571 | \$0.08132 | The trading volume has also fallen to \$41 billion, a reduction of \$3 billion in the overall 24 hours of trading. Crypto analysts consider this to be a little setback before the great push. The market sentiment is also positive, with the greed index at 65. Recommended For You

- Floki will be listed on Indonesia’s largest crypto exchange, Indodax. - The trading volume of Floki is surged by 31.09% in the last 24 hours. Floki’s payment adoption continues after declaring payment options across various social media platforms. Travel Care, the popular crypto travel agency, has announced its integration with the memecoin Floki Inu. We are pleased to announce that

@RealFlokiInu has been listed on <https://t.co/wLQ11XKK9J> Travel Care (@TravelCareToken) April 11, 2023 From now on you can book millions of #travel services with \$FLOKI token More than 600.000 hotels worldwide. More than 100.000 unique experiences Flights on more than 600 airlines pic.twitter.com/K0e84HQtkT This allows users to book their travel tickets with the Floki Inu token on Travel Care. The integration with Travel Care may increase the usage of the Floki among traders. The announcement boosted the Floki token with an increase in trading volume. Floki Inu, the memecoin, is taking its next step in the crypto market. After the announcement of integration with Travel Care within hours, Floki comes with the next big one. Indonesia's biggest cryptocurrency exchange, Indodax, added that memecoin would include on its trading platform. And the trading will begin on April 13. Floki Inu Joins the Memecoin Trend Adding to that, the exchange Cryptocom just listed the Floki token on a perpetual basis. It is the first-ever USD perpetual pair listing for projects. By this, Floki joins the memecoin week, followed by Elon Musk's Dogecoin play and SHIB's massive whales. Moreover, the memecoin is also leading the list of the most viewed metaverse projects of Q1'23 on CoinMarketCap. The project runs in its native metaverse system, Valhalla, and it captured over 36.44% of all views. Floki has been showing bullish intent for the past few days. At the time of writing, FLOKI is up 1.76% in the last 24 hours, and the trading price is around \$0.00035. The trading volume of the coin surged by 31.09%, reaching \$15,333,877 in the past 24 hours, according to CoinMarketCap. Recommended For You:

- Recent launch: Polygon zkEVM; Upcoming launch: Shanghai Upgrade. - DOGE priced \$0.1 as a response to Twitter's logo, currently at \$0.08. In order to remove the intervention of third-party services to buy, sell, or trade for transaction validation, cryptocurrencies are born. Since 2008, the crypto market is evolving to a position of aiming for a \$5.15B global estimation in the year 2023. Soon in 2030, it is predicted to be doubled by around \$11.71B with an increase in growth rate at a percent of 12.5 on a whole from 2023 to 2030. Greater demand for crypto surges the value of its own native coin. As prolonging the popularity of cryptocurrencies, companies started to adopt crypto payments. For example Burger Kings, Luxury hotels, and others. Several factors including regulatory laws, market capitalization, and others disrupt the value of cryptocurrency. In this Quarter 2 of 2023, there are certain cryptocurrencies considered must-haves. Some of them are listed below. ETHEREUM (ETH) Despite the upcoming Shanghai Upgrade on April 12, researchers suggest staking ETH for futuristic gain. Whereas, it is expected to down surge in price for a shorter span. Being the most popular altcoin, ETH comes up with the least power consumption called Merge. Surprisingly, the price prediction irrespective of all these leads to nearly \$2k per coin by the end of the year 2023. Currently, ETH values \$1,890.48 as per CoinMarketCap. SHIBA INU (SHIB) Recently, Shiba Inu is ruling over all cryptocurrencies including several whale transactions and huge token burns. In a week, 18 million SHIB tokens are burnt at a 1391.51 uprate. And also, Shiba Inu payment is now accepted in Georgia. However, Shiba Inu is majorly utilized and investors purchase in massive numbers. This could also be the reason leading to the current price value of SHIB at \$0.00001101 with a 0.27 increase rate, in accordance with CoinMarketCap. TERRA CLASSIC (LUNC) With the legal dispute on Terraform Labs by the U.S. SEC, Do Kwon, the founder, and CEO of Terra is facing criticalities. Whereas the other co-founder, Daniel Shin denied his role with a rejection of an arrest warrant. Being fined, Do Kwon is proven to hold no assets confirmed by authorities. On the other hand, Terra is surging up despite these issues and overall, it staked around 30 million Terra at the current market price. Suddenly, there is an increase in price over 24hrs. It is expected to prolong for a period of time. In such a case, it would be beneficial to stake Terra's native coins in this Q2, 2023. DOGECOIN (DOGE) Elon's gameplay of replacing Twitter's logo with DOGE, there occurred an abrupt peak in DOGE pricing within hours. The recent massive whale transaction on DOGE's dormant address turned active costing more than \$116k. Over the last week, the pricing reached \$0.1 per Dogecoin. Currently, as per CoinMarketCap, DOGE is valued at \$0.084 with an increase of 0.90% over the last 24hrs. Elon's preference for the DOGE coin accelerated investors and crypto enthusiasts over the bullish market. Nevertheless, the DOGE coin submerged over time with an expected price rally within the upcoming months of 2023. POLYGON (MATIC) Lately, Polygon is leveraging Polygon zkEVM for increasing efficiency with lowered costs. Also, Polygon might involve tether for future growth and development. Last week, Coinbase Wallet started supporting Polygon zkEVM initiating a "Wallet-as-a-service". This successive change results in a price range of \$1.11 as per CoinMarketCap. Experts aim that Polygon would lead to an increase in price surging to \$1.22 in the upcoming months of 2023. Recommended For You

- At press time, the total market capitalization of fan tokens adds up to \$384 million. - The token OG surged over 240% in price in the last 7 days. The crypto market, at present, continues to witness astounding surges from low-cap altcoins alongside the top cryptocurrencies. Bitcoin's consolidation, Ethereum's anticipated Shanghai upgrade, new protocol launches, and exchange listings are registered as the reasons. Particularly, the memecoins initiated a strong trend wave in the sector in the last week as Dogecoin on top with Elon Musk's Twitter play. Surprisingly, the unique set of cryptocurrencies as Fan Tokens climb up to the top ranks as the top trending cryptocurrencies on CoinMarketCap. The Q2 2023 has got prominent football and e-sports league matches lined up in the schedule. Multiple factors influence the trend and price surge of these tokens. First, the popularity and fandom strength. Second, the clubs or teams' position in their corresponding leagues or games at the time period. These two are spotted as the prime factors that spurred the spike in the tokens' trend. At the time of writing, CoinMarketCap featured the following fan tokens native to renowned football clubs and e-sports clubs. Top 3 Trending Fan Tokens OG Fan Token (OG) OG Fan Token (OG) ranks first on the list of top trending cryptocurrencies, as per CoinMarketCap. Remarkably, this crypto hit its 23-month-high of \$14.92 on April 9. This token is native to the fandom of its parent organization OG. OG is a popular European esports organization crowned with great popularity and dominance in Dota 2 a MOBA-based video game and Counter-Strike: Global Offensive (CS: GO) a shooter game. Also, OG is a well-known rival of Berlin-based G2 e-Sports and US-based

TSM teams. Currently, OG Dota 2 team is contending in the Dreams League 2023 As per CMC, OG displayed a surge of over 241% in the last 7 days. At the time of writing, 3,857,913 OG " out of the fixed supply of 5 million " were in circulation with each token price at \$9.36. Paris Saint-Germain Fan Token (PSG) PSG is the native cryptocurrency created for the fandom of Paris Saint-Germain Football Club, which was founded in 1971. This Parisian FC onboarded the world's top players such as Lionel Messi and Kylian Mbappé. At present, it captured the football fandom's major attention with its fiery matches in the French Ligue 1 series. At press time, Paris Saint-Germain leads Ligue 1 by holding the first position. At the time of writing, as per CMC, PSG traded at \$5.53 with a circulation of over 4.84 million. The token has a fixed supply of 20 million. Juventus Fan Token (JUV) Juventus Fan Token (JUV) is the cryptocurrency reserved for the fandom of the Italian FC Juventus, popularly known as the Juve. It is one of the oldest football clubs existing since the 1890s " established in 1897. The fans of Juventus await the team's victories in the Europa League and Coppa Italia. In UEFA Europa League, currently, Juventus held the seventh position in Series A. At press time, the Juve fandom had exposure to 4,411,222 JUV tokens with each token trading at \$3.32. Similar to PSG, JUV had a fixed supply cap of 20 million. What are Fan Tokens? Fan tokens are a unique set of cryptocurrencies that are exclusively created for dedicated fandoms of diverse kinds " from football FCs and F1 races to e-sports. To sum up, these are proof of ownership and membership. By holding them, users are entitled to special privileges in the official club's decisions, favorite celebrity events, and merchandise. Also, the main objective of fan tokens is to monetize the fandom with lucrative rewards. Unlike non-fungible tokens (NFT), these tokens are fungible. That is, these are replaceable and exchangeable. Most of them, including the tokens mentioned above, are built on the Chiliz, an EVM-compatible blockchain. In general, these cryptocurrencies are launched through fan token offerings (FTO) on specific platforms and marketplaces. Especially, OG, PSG, and JUV can be purchased via the famed fan token platform " Socios. " This platform allows users to buy, sell and exchange a wide variety of fan tokens with the help of CHZ, the native cryptocurrency of Chiliz.

- San Francisco HQ changes the name from "twitter" to "titter". - Elon Musk's activities resemble a pattern in these changes. Twitter CEO, Elon Musk, has brought about quite a few changes to the micro-blogging site over the last week. And latest among them is the change in the company name board at San Francisco HQ, from "twitter" to "titter". The month of April for Twitter started with replacing the iconic blue bird logo with Elon's favorite Shiba Inu dog representation, which is the official face of the meme token Dogecoin. Many assumed the change would disappear in a few hours, but the Doge stayed for three long days. When the bluebird returned, the site's name underwent a few changes. SF headquarters staff hide the "w" alphabet in the name board. As per Elon's tweet, when the landlord of the building raised queries, the team just camouflaged the alphabet with the background color. Elon Musk tweeted: "Our landlord at SF HQ says we're legally required to keep sign as Twitter & cannot remove "w", so we painted it background color. Problem solved!" Why the Series of Changes? Apart from Elon, "Chief Twit", nobody really gets the plan or idea behind all these changes. Juggling with logos, wordplay with the name, introducing the affiliation badge, and so on. People who have been following the activities of Elon for a longer time see a pattern in these changes. Replace bird with doge and... " DogeDesigner (@cb_doge) April 5, 2023 Twitter -> Titter and... Doge payments next? " @elonmusk pic.twitter.com/T31c63GaHI All the given changes were earlier put forward to the follower community via various tweets. And considering that, the payment options on Twitter may include Dogecoin very soon. The change of the site's logo did impact the token's price and market capitalization. The price surged from \$0.07 to \$0.1, and the market cap increased by \$4 billion. So, DogeFather's mascot for the crypto token is always beneficial. Recommended For You

- SLP has support at \$0.00272164 and resistance at \$0.00323355. - The bullish optimism in the SLP market might continue in the hours ahead. In the last 24 hours, the Smooth Love Potion (SLP) token prices have been dominated by bulls, resulting in a significant increase in their value by over 9%. As a result, the SLP/USD pair has been trading at \$0.003022. This bullish pressure has let to the bulls in the SLP market to establish a support level of \$0.00272164 and a resistance level of \$0.00323355. The current trading volume in the Smooth Love Potion tokens has also increased by 7.75%, indicating that the current bullish sentiment in the SLP token might continue in the hours ahead. SLP tokens have experienced a decrease in price by 6.34% from its 7-day all-time high of \$0.003214 and a 14.10% increase from its 7-day all-time low of \$0.002638. The circulating supply of Smooth Love Potion tokens currently stands at 42.25 B SLP. SLP 24-Hour Price Analysis According to the 24-hour price analysis of Smooth Love Potion, the digital assets are exhibiting bullish momentum, as indicated by the Relative Strength Index (RSI) moving above its signal line (yellow), indicating that buyers are in control of the market. This suggests a potential price increase for Smooth Love Potion in the short term. However, the current RSI line reading stands at 58.60, indicating a neutral level for the SLP token price, implying equal buying and selling pressure in the SLP market. The Smooth Love Potion market shows a bullish trend as the 50-day Moving Average (MA) is above the 100-day MA, with readings of 0.002836 and 0.002866, respectively. This suggests that the bullish pressure is expected to continue in the hours ahead, providing optimism for investors and traders in the market. In conclusion, the Smooth Love Potion market has recently experienced a significant increase in value due to bullish pressure. This has established support and resistance levels, providing a positive outlook for investors and traders. Recommended For You

- They rank fifth and third, respectively, among crypto investors in terms of DOGE holdings. - DOGE as a Twitter logotype increased search volume by over 2,000%. Several minor holders started adding additional DOGE to their crypto stashes after the famous meme currency rose over 30% at the beginning of the week when Elon Musk momentarily made it the logo of Twitter. According to "SmartMoney" tracker @lookonchain, when DOGE's price surged by over 30% this week because of Elon Musk's alteration to the Twitter logo, two of the five largest DOGE whales dumped large quantities of this

famous meme currency. Enormous Gains by Whales Such walletsâ€™ histories and transactions were made public by the account @lookonchain. Dogecoin â€œwhaleâ€ â€œDduXâ€ dumped 1.1 billion DOGE, or around \$95.2 million, from his holdings. D8ZE, the second wallet, made \$28.6 million from the sale of 300M DOGE. They rank fifth and third, respectively, among crypto investors in terms of DOGE holdings. Santiment, an on-chain data aggregator, also weighed in on the Twitter logo change and the subsequent Dogecoin rise earlier this week, claiming that whales earned enormous gains. Moreover, Santiment reports that the use of DOGE as a Twitter logotype increased search volume by over 2,000% and boosted Dogecoinâ€™s social sentiment to the 15,000 level. According to analyst Ali Martinez, large price drops have followed similar spikes in social media discussions twice previously this year. However, the logo switch was only temporary, and the familiar blue bird is once again the symbol of Twitter. As a result, the value of Dogecoin started to decline. According to CMC, the Dogecoin price today is \$0.081525 USD with a 24-hour trading volume of \$494,137,104 USD.

- Dogecoin (DOGE) is currently trading at \$0.08206. - Elon Musk changing Twitterâ€™s logo to Dogecoin caused hype in the DOGE market. - Bears currently have control of the Dogecoin market The recent surge of Dogecoin (DOGE) has captured the cryptocurrency marketâ€™s attention. Twitter CEO Elon Musk changed the social media platformâ€™s logo to that of his favourite memecoin, Dogecoin. Muskâ€™s actions have brought even more hype to the already-popular cryptocurrency, which has seen a significant increase in value over the past few days. The cryptocurrency market has been abuzz with the news of Dogecoinâ€™s surge as more individuals and companies take notice of its potential. The pump in the Dogecoin market has enabled the bulls to establish a weekly high of \$0.1026 and a low of \$0.07614. However, over the past four days, the bulls have lost momentum in the market where the pressure of bears has increased, resulting in them taking over the Dogecoin market. Moreover, the social platform Twitter is back to normal as Elon removed the Dogecoin picture from Twitter as its logo. This news has caused a stir among cryptocurrency enthusiasts, as many speculate on the implications of this action. Bears appear to push the memecoin to a long-term floor at \$0.0770, with prices down by over 9% in the last 24 hours. The DOGE coin market has been experiencing a slow but steady value increase following a significant price rise over the past 30 days. CoinMarketCapâ€™s data indicates that the lowest price the token traded for in March was 0.06446. According to the recent development within the DOGE market, they propose that the price of DOGE tokens will likely record another price increase in the coming days. The start of this month saw an upward solid momentum for Dogecoin. However, as is often the case with such surges, cryptocurrency is now experiencing a period of consolidation and decline. This week has been particularly bumpy for Dogecoin. DOGE Prepares for Bullish Run Dogecoin (DOGE) has formed a W pattern from 1-Dec-2022 to 5-Apr-2023, with a price range of \$0.060 to \$0.100. This pattern is a bullish reversal pattern that signals a potential price surge shortly. The W pattern is characterized by a double bottom formation, with the price dropping twice to form a W shape. This pattern suggests that the price has reached its lowest point and is likely to rise. Currently, DOGE is trading at \$0.08206, and we can expect the price to hit the order block level at \$0.06969 before we see a good rally in price. Smart money is expected to accumulate more volume near the order block zone, resulting in many odds of exiting from the trend. Once the order block level is reached, we expect the price to rally to \$0.13 by 30 May 2023. The formation of the W pattern indicates that DOGE is preparing for a bullish run, and traders can use this pattern to plan their trading strategies. With a potential price increase of around 58% from its current level, traders can earn significant profits by trading DOGE. DOGE/USDT price charts (source: TradingView) The surge in Dogecoin price has led to a period of consolidation and decline, but the formation of a W pattern suggests that the market is preparing for a bullish run. - FLOKI can be wired to and transferred across several websites via unique Web3 IDs. - At press time, FLOKI holders account for up to 71K on Ethereum and 377K on BNB Chain. The viral memecoin FLOKI is now a payment option across various social media platforms â€” Twitter, Discord, Reddit, GitHub, and Twitch. This integration is enabled and facilitated by Pip, a Solana-based crypto payment platform. #FLOKI adoption continues! â€” FLOKI (@RealFlokiInu) April 7, 2023 The PIP integration of \$FLOKI allows users to send and receive #Floki on Twitter, Discord, Reddit, Twitch, and other social networks â€” further enhancing the utility of the \$FLOKI token. More details on how it works in the thread below ðŸ’šðŸ’š <https://t.co/cUYZQCZ0oq> Significantly, Pip allows users to acquire unique Web3 ID tags â€” â€œusername@flokiaâ€ â€” for initiating Floki payments across websites and social media platforms. Previously, last month, the project forayed into the dominant social media platform TikTok. Recently, the memecoin project rolled out phase 1 of Floki Cards â€” unique virtual Visa/Mastercard prepaid debit cards. Q1 2023 marked key milestones for the memecoin project. Notably, it garnered major recognition from crypto investors via popular exchange listings recently â€” such as Crypto.com, and Bybit exchange (as perpetual). Surprisingly, the memecoin also topped the list of most-viewed metaverse projects of Q1â€™23 on CoinMarketCap. It captured over 36.44% of all views. To note, the project runs its native metaverse ecosystem â€œValhalla.â€ Hence the Viking-themed memecoinâ€™s expansion and adoption are emerging bullish. However, the Floki Inu price was down 1.84% in the last 24 hours. According to CoinMarketCap, at press time, the memecoin traded at \$0.00003395. The memefied crypto community is being fed with intriguing collaborations of memecoins with famed real-world entities. The list included this weekâ€™s Elon Musk-Dogecoin show on Twitter, Shiba Inu payments in nations, and Floki Ads in ongoing Real Madrid matches. Recommended For You

- Dogecoin (DOGE) experienced a surge in value earlier this week. - Dogecoin has experienced a 5.80% decrease in value in the past 24 hours. - The decline in DOGEâ€™s price suggests that the hype generated by Muskâ€™s endorsement may end. In the past 24 hours, Dogecoin (DOGE) has experienced a 5.80% decrease in value. And indicating that the price of the worldâ€™s most popular meme coin may be undergoing a correction. This decline follows a brief surge in price earlier in the week, which was attributed to a pump caused by Twitter CEO Elon Muskâ€™s endorsement of the cryptocurrency. On Monday,

Dogecoin experienced a price surge of more than 10% following Elon Musk's decision to change Twitter's logo to a picture of the cryptocurrency's unique dog logo. The surge in price demonstrates the influence that Musk, known for his love of memes and social media presence, has on the cryptocurrency market. The price of DOGE has declined for the third consecutive time, following a price increase earlier this week. The current dip in price reflects a negative trend in the overall market and is likely due to investors taking profits after the recent surge in value. Dogecoin is currently being traded at \$0.09014, which reflects a decline of 5.80% over the past 24 hours. This price decline has established support levels at \$0.08826, while the resistance level is at \$0.09585. In addition to the decrease in price, DOGE's trading volume has also decreased by 29.44% and is currently at \$1,228,272,111, while its market cap has declined by 4.04% to \$12,540,586,968. These trends suggest that bears are currently in control of the market. The decline in the DOGE market suggests that the hype generated by Elon Musk's endorsement may end. And also the asset may soon reach new lows. This decline serves as a warning to investors and traders to exercise caution before investing in digital assets. Dogecoin Technical Analysis The Relative Strength Index (RSI) indicates the bearish trend of DOGE, which is moving southward, suggesting that the selling pressure is increasing. Traders may consider short positions or wait for a potential reversal signal before entering long positions. Currently, the readings of the RSI are 62.12, suggesting that there is neutrality in the market between buyers and sellers. The alignment of dots on the southern side of the Parabolic SAR indicator suggests that Dogecoin is likely to experience a bearish trend in the short term, leading to a potential further decline in the cryptocurrency's price in the near future. On a positive note, the Moving Average Convergence Divergence (MACD) line offers a ray of hope for investors and traders. The blue MACD line is currently moving above its signal. This indicates the possibility of a price reversal toward the bullish side shortly. This is further supported by forming a trajectory histogram on the positive side. In conclusion, Dogecoin's recent price decline indicates that the market may be undergoing a correction after a surge in value attributed to Elon Musk's endorsement. Recommended For You:

- Twitter got "DOGE" as its logo promising Elon's tweet. - DOGE is named after a living dog "Kabuso" in Sakura, Japan. Around 12 am today, Elon Musk, the CEO of Twitter replaced the logo of Twitter with Dogecoin (DOGE), a cryptocurrency of memecoin type. Following the change, the price of Dogecoin abruptly peaked bullishly to \$0.1004 with a 25% price change over 24 hrs. Is DOGE's Sudden Surge Impactful? The sudden and drastic upsurge of Dogecoin increased the trading volume in the crypto market. Mentioning the promise that Musk made, as per the following tweet. As promised, pic.twitter.com/JC1tnAqXAV "Elon Musk (@elonmusk) April 3, 2023 If you wonder how Dogecoin aroused, history is alive. The dog named Kabosu, a rescue dog owned by Atsuko Sato who lives in Sakura, Japan. In 2010, Atsuko uploaded several pictures of Kabosu, which then turned the reference to Dogecoin, a meme coin. Last Friday, Musk wanted to cut off the \$258 B lawsuit filed against him, which claimed Musk was the executor of the Dogecoin support pyramid scheme. Later that evening, Musk's lawyers called off the lawsuit with Dogecoin investors over his "silly and harmless tweet". Also, Musk shared a picture post for the change of the Twitter logo to DOGE saying: SEIZE THE MEMES OF PRODUCTION Musk, on "Weekend update," reminded investing with the cause and effect of coin value during spikes and not "in 2021 before Saturday Night Live. Henceforth, he tried to stir up the crypto market with a succeeding tactic towards Dogecoin. Though the recent craze on Doge's bullish market upliftment seems like this change will prolong only for a day. Yet, the hype and buzz around social media are crazy. Now, as per the records of CoinMarketCap, the price ranges at \$0.095 approximately with a trading volume of 251.08%. Recommended For You:

- Elon Musk changed the Twitter logo to the Dogecoin logo. - Dogecoin price is increased by 12.97% in the last hour. Twitter CEO Elon Musk continues to back the memecoin, Dogecoin (DOGE). The trading price of DOGE increased by 12.97% in the last 24 hours. Its trading price is reached the \$0.1 mark. Elon Musk has been a great supporter of Dogecoin, and he promoted cryptocurrency directly and indirectly. From the initial stage, Elon Musk has always backed Dogecoin by posting its logo on Twitter and mentioning its name in interviews. Now Musk has changed the Twitter logo into the Dogecoin logo. Moreover, he posted a tweet about the new logo. This caused a huge increase in its price. "Elon Musk (@elonmusk) April 3, 2023 At the time of writing, the Dogecoin price was around \$0.1004, with an increase of 4.35% in the last hour. In the last seven days, the price has surged up to 38.10%. The trading volume increased by around 108% in the last hour, according to CoinMarketCap. Recommended For You:

- The month of March saw a huge surge in Bitcoin prices. - Despite the increased volatility, the market is still responding positively. The monthly close of Bitcoin in March has painted a bullish picture, indicating a strong potential for the cryptocurrency to continue its upward momentum. This is an especially encouraging sign as the month also saw a significant increase in volatility. Above all the prices dropping as low as \$50,000 before recovering to a high price. BTC/USD March 2023 (Source: Trading View) The month of March saw a huge surge in Bitcoin prices, with the asset climbing an impressive 22%, beginning at \$23,450 and ending at over \$28,500 by the end of the month. The next major move for Bitcoin is eagerly anticipated following this significant upward trend. This shows that despite the increased volatility, the market is still responding positively to positive news and developments surrounding Bitcoin. The bullish outlook for the digital asset appears to be further supported by recent analysis from financial firms such as JPMorgan Chase & Co. He stated that "the current rally reflects strong institutional demand." Crypto Market Outlook The crypto market has seen a slight decline in the short term. However, this happened with total capitalization falling by 1.9% to \$1.2 trillion on CoinGecko. This downward trend is being led by Bitcoin, which has dropped below \$28,000, and Ethereum (ETH) which is down 2.2% to \$1,778 at the time of writing. Altcoins have also been affected by this downturn, with several seeing heavier losses of over four percent; these include

Dogecoin (DOGE), Solana (SOL), Polkadot (DOT), Shiba Inu (SHIB), and Avalanche (AVAX).

- BabyDoge price soared about 36% in the last 24 hours. - The memecoin trading volume rose by over 531%. Baby Doge Coin has buzzed on Crypto Twitter with more than 113K tweets with the hashtag #BabyDogeArmy in the last 24 hours in response to the news of the top 10 crypto exchange list. Also, BabyDoge is enjoying its part in the current bull market, as evidenced by a more than 36.5% price surge in a single day. Due to Baby Doge's recent activities, the memecoin has continued to be the talk of the town. The Elon Musk-inspired token also attracted the cryptocurrency community. And the meme token's 24-hour trading volume underwent a significant surge. At the time of writing, Baby Doge Coin traded at \$0.000000002886 with a 24-hour trading volume of \$34 million, which climbed more than 531%. BabyDoge's price jumped around 32% in a week, and it holds a market cap of \$330 million, which rose about 34.5% in a day. Further, BABYDOGE COIN witnessed a massive burn, during which over 3 trillion tokens were burned, on March 28. Top Crypto Exchanges to List BabyDoge According to the official Twitter account of Baby Doge Coin, it will get listed on the top 10 crypto exchanges today. The top 10 exchanges are Binance, Coinbase, Kraken, Kucoin, Bitfinex, Bybit, Bitstamp, OKX, Gate.io, and Binance US, as per CoinMarketCap data. Further, Baby Doge Coin holds a new multi-chain proposal. And the community vote is being held by the BNB Chain. The MemeFi projects to determine which blockchain BabyDoge should first expand to. However, the BabyDoge community and its army expect the Binance list, the largest cryptocurrency exchange in the world by daily trading volume. If the crypto coin is added to the Binance trading list, it may have a chance to endorse notable price gains. All these events seem to indicate that the community is working hard to keep the platform trendy. Recommended for you

Sometimes it can be difficult to understand the true value of any given cryptocurrency, or if it's a worthwhile investment at its current market price. But what if you could earn cryptocurrency tokens for free? If you're not paying a single dime to top up your wallet, then for sure whatever you can accumulate is going to be a worthwhile investment. The most common way to earn crypto for free is to mine it or stake it to earn rewards, but doing so requires a significant, upfront investment itself. As such, these remain somewhat risky endeavors. Luckily, there are still plenty of other ways to earn free tokens, so keep reading to find out how: Participate In Surveys Freecash is an Android and Web application that partners with various research firms and advertisers to incentivize people to perform certain tasks in their spare time. It basically involves clicking on adverts and taking surveys to earn free cryptocurrency rewards. Alternatively, users can earn various gift cards, skins for games like Counter-Strike Global, and other prizes. Some users report being able to earn up to \$20 worth of crypto per day, including Bitcoin, Litecoin and Dogecoin. The great thing about Freecash is that each task informs users how much they stand to earn before they complete it, and it allows users to cash out their earnings once they have made a minimum of just 10 cents. What's more, it's easy to sign up – simply login with your Google or Steam account, or register with email to get started. Once you've earned some tokens, you can withdraw them to your crypto wallet or else exchange them for cash and withdraw using PayPal. Crypto Airdrops Airdrops present an even easier way to earn free coins. They're a common marketing tactic used by new crypto projects, with the aim being to attract new users and reward early adopters for their loyalty, while promoting their new token. Participating in airdrops is usually very simple, and involves taking small steps like joining the project's Telegram group or following it on social media. One of the most exciting airdrops to launch this year is Metatime's MetaAirdrop, which claims to be one of the largest token giveaways ever. Following its recent token presale, the MetaAirdrop event runs from now until January 1, 2024, and will see more than 200 million MTC gifted to followers over the duration. Each month, the project will distribute 10 million MTC to the top 100 participants in the airdrop, based on their MTAP scores. To earn MTAP points, users are required to promote the event on social media sites like YouTube and Twitter. Once the event concludes, the remaining MTC rewards will be distributed among all participants in the event. Learn and Earn The popular CoinMarketCap website offers a 'learn and earn' program that aims to educate users about cryptocurrency. After signing up, all the user has to do is watch videos and learn about different crypto tokens, then complete a test afterwards for the chance to earn rewards. Note however, that CoinMarketCap requires that users score a perfect score to claim any rewards, and there may also be specific tasks that have to be completed too. In addition, there are a number of countries whose citizens are barred from participating. Another thing to note is that prizes are limited, based on a first come, first served basis, so once the distribution is used up, there'll be no more rewards, even if you do everything right. Still, CoinMarketCap's program undoubtedly offers more free tokens than anywhere else, providing the opportunity to earn BNB, DFI, TRX, SXP, ROSE, NEAR, LIKE, PERP, XMS, NFTB, SAND, CYBER, FOL, IOTX, SUSHI, POLS and many other cryptos. Browse The Web Perhaps the simplest way to get free crypto is to do something you already spend lots of time on – browsing the internet. Simply swap Google Chrome for the Brave Browser, make sure Brave Rewards are switched on, and you'll accrue a small amount of crypto in your wallet for each website you visit. Brave's rewards are paid out in Basic Attention Tokens, which are a cryptocurrency designed to encourage users to engage with advertisers. Basically, Brave Browser blocks standard ads with its built-in adblocker, and instead only shows a few, unobtrusive ads from select partners, and they won't be targeted ads because your privacy is respected at all times. Each ad that's viewed comes with a small reward in BAT. While the rewards may seem minimal at first, they can quickly add up for those who spend several hours a day browsing the web. Brave users can choose to tip their favorite websites with the BAT they've earned, or alternatively they can cash out those tokens on an exchange once they verify their Brave wallet. Final Thoughts Many times when we see the words 'earn free crypto' we immediately assume it to be a scam. Indeed, people are right to be suspicious because scams are abound in the world of crypto, and one should never respond to random messages from strangers on Twitter offering free tokens. However, the above examples all provide legitimate ways to earn free crypto without having to take any personal risks. Simply support their

initiatives and you'll be rewarded for doing so.

- The top trending cryptocurrencies are BTC, ETH, XRP, ARB, and SHIB. - While the top cryptos trading in red XRP soared over 3.5% in a day. The global crypto market seems to be recovering from the prolonged bear market. And the traditional banking crisis gives positive movements to digital assets and gains investors' attention. There are thousands of different cryptocurrencies, ranging from the two largest, Bitcoin and Ethereum, to prominent altcoins like Dogecoin and Tether circulating in the market. Here are the top 5 cryptocurrencies that could stay on the top trending crypto list this week with significant updates and price surges, as per CoinMarketCap. Bitcoin (BTC) - Market Cap: \$522 billion - 24H Trading Volume: \$18 billion Bitcoin is currently the most trending cryptocurrency after its recent bullish price rally. Also, the digital market's sovereign currency, BTC, outperforms the global crypto market with a 70% price surge since the start of the year. BTC started experiencing super hikes in mid-March, and in just 14 days, its price soared by more than 33%, from \$19K to \$29K. The week ended on a positive note that keeps \$30K out of reach and holds 46% of the market share. At the time of writing, Bitcoin traded at \$27,025 with a 24-hour trading volume of \$18 billion, up around 29%. BTC declined by 2.90% in one day. Ethereum (ETH) - Market Cap: \$210 billion - 24H Trading Volume: \$8 billion The second-largest cryptocurrency, Ethereum, buzzing the crypto community with its layer-2 platform, Polygon. That introduced the Zero Knowledge Ethereum Virtual Machine (zkEVM) scaling to the mainnet on Monday. ETH has also experienced the same price changes as BTC. The price of Ethereum rose from the \$1.4K range to the \$1.8K range. And ETH is up by over 45% year-to-date. At the time of writing, Ethereum traded at \$1,720 with a 24-hour trading volume of \$8 billion, an increase of about 27%. But the leading altcoin price is down 2.42%. Ripple (XRP) - Market Cap: \$25 billion - 24H Trading Volume: \$3 billion The winning path against the Ripple vs. SEC case grabs Crypto Twitter and XRP community attention. Also, the altcoin price surged while the top cryptocurrencies traded in the red and placed as the top performers of the week. At the time of writing, XRP traded at \$0.483 with a 24-hour trading volume of \$3 billion, climbing about 114%. XRP soared over 3.5% in a day and skyrocketed over 25% in the last 7 days. Arbitrum (ARB) - Market Cap: \$1 billion - 24H Trading Volume: \$990 million It's not surprising that Arbitrum's native governance token, ARB, has attracted so much attention, given the uproar surrounding the ARB airdrop. After the airdrop, there was a significant sell-off, and the price fell dramatically. But still, Arbitrum is trending among the crypto community, and they are expecting that ARB will make its way to the top soon. At the time of writing, Arbitrum traded at \$1.13, declining by over 11% in the last 24 hours. Shiba Inu (SHIB) - Market Cap: \$6 billion - 24H Trading Volume: \$273 million Finally, one of the talkative memecoins, Shiba Inu, is still on the trending list even though it has no price momentum following the layer-2 blockchain Shibarium update. The hype over the SHIB is still there, but the price action of the Dogecoin rival may be muted. At the time of writing, Shiba Inu traded at \$0.00001033, down by 2% in one day and 7% in the last 14 days. However, SHIB's 24-hour trading volume has surged over 99% to hold \$273 million. - THORChain stated the move was made out of an abundance of caution. - The value of THORChain's native token Rune has dropped by about 5.27% in last 24 hours. In light of recent concerns about a possible network vulnerability, THORChain has temporarily suspended network operations. Following concerns of a possible vulnerability with a THORChain dependency that may harm the network, THORChain went to Twitter on March 28 to say it has paused all trade. THORChain stated the move was made out of an abundance of caution while they confirmed the claims. The disclosure was made after reliable reports of a possible vulnerability in THORChain were received by the liquidity platform Nine Realms and the specialized security team THORSec, according to social media postings. It has now been claimed that the THORChain network has been shut down throughout the world. Rune Price Takes a Hit CMC statistics show that in light of the announcement, the value of THORChain's native token Rune has dropped by about 5.27%. The coin has lost 18% of its value in the last 30 days, trading at \$1.31 at press time. THORChain was launched in 2018 and is a cross-chain liquidity protocol that eliminates the need for centralized exchanges when trading assets across blockchains. Swaps may be made between Bitcoin, Ethereum, BNB Chain, Avalanche, Cosmos, Dogecoin, Litecoin, and Bitcoin Cash on the settlement layer of THORChain. This current network outage on THORChain is far from the first. In October of 2022, a software glitch resulting in "non-determinism between individual nodes" caused the network to be shut down. After 20 hours of repair, the network was back up and running normally. THORChain also shut down its network in 2021 after hackers stole \$7.6 million in cryptocurrency and compromised the system. - The new initiative further establishes the Italian luxury fashion brand as an industry pioneer. - The connection between fashion and entertainment in the Metaverse will be the core focus. A multi-year relationship between Gucci and Yuga Labs, the firm behind well-known NFT lines including Meebits, Bored Ape Yacht Club (BAYC), and CryptoPunks, was recently revealed. A press announcement states that the connection between fashion and entertainment in the Metaverse will be the primary focus. The new initiative further establishes the Italian luxury fashion brand as an industry pioneer on Web3. At a recent fashion-tech conference, Gucci's senior executive vice president, of corporate and brand strategy, and chief executive of Gucci Vault & Metaverse Ventures, Robert Triefus, hinted at a possible long-term commitment in the Web3 domain. Not First Foray Into Web3 Market In an interview, Triefus was quoted as saying that the initial excitement around the NFTs sector was akin to the "wild west." But that the subsequent decline from its highs in late 2021 was a "correction." That helped the market to a more "sensible" position. The Executive is optimistic about the prospects for the next generation of the Web. In terms of community building, consumer loyalty, and revenue growth. This week, Gucci will begin using Otherside, a metaverse platform built by Yuga-Labs and powered by the ApeCoin cryptocurrency. This is not Gucci's first foray into the Web3 market. In

2022, Gucci collaborated with 10KTF on a project dubbed "Gucci Grail," in which the company's "digital artisan," Wagmi-san, created apparel and accessories based on the ideas of Gucci's then-creative director, Alessandro Michele, to be utilized in the customization of NFTs. SuperGucci, the retailer's second NFT line, debuted in the same time period. In addition to traditional payment methods, Gucci accepted Bitcoin, Bitcoin Cash, Ethereum, Wrapped Bitcoin, Litecoin, Dogecoin Shiba Inu, and five USD-pegged stablecoins at five of its U.S. shops late last year. Winz.io, a leading online casino renowned for its exceptional gaming experiences worldwide, has recently been nominated for multiple gambling awards, cementing its status as a prominent player in the online gambling industry. Nominated for its exceptional performance in the past year, Winz.io's recognition across multiple categories serves as a testament to its unwavering commitment to providing players with a top-notch gaming experience. Winz.io's first nomination is for the Best Casino 2022 category by Casinomeister, one of the most prominent gambling awards. With Winz.io's inclusion in the top five casinos in this category, the nomination marks a significant achievement, considering the fierce competition in the industry. The recognition highlights the online Casino's dedication to offering an unparalleled gaming experience to its players. The second nomination for Winz.io is for the Most Transparent Casino category by Casino Guru, where it was among the top four casinos to make the cut. The nomination acknowledges the Casino's commitment to transparency, a crucial factor in building trust with players. This is not the first time Winz.io has been nominated for prestigious awards in the online gambling industry. In 2020, the Casino was a finalist in the AskGamblers awards for Best New Casino, followed by another nomination for Best Casino in 2021. The Casino also bagged the Best New Casino title by Casinomeister in the same year. Winz.io was launched in April 2020 and has since established itself as one of the leading online casinos in the industry. The platform offers a wide range of games catering to cryptocurrency and fiat players, ensuring a seamless gaming experience for everyone. In 2022, Winz.io expanded its services to include a sportsbook section covering dozens of sports and leagues globally, providing users with fair and transparent wagering opportunities. Winz.io's nominations for multiple gambling awards highlight the online Casino's exceptional performance and commitment to transparency and fair play. The team behind Winz.io is ecstatic about this recognition and promises to continue providing players worldwide with an unparalleled gaming experience. About Winz.io Casino Winz.io is a cryptocurrency-friendly casino and sportsbook that was launched in April 2020. The goal of Winz.io casino is to offer a fair and fast crypto gambling experience. All the bonuses and rewards won in promotions at Winz.io come with no wagering requirements. The casino has established itself as a leading online casino in the industry with a wide range of games for cryptocurrency and fiat players, enabling a seamless gaming experience. Winz.io enabled sportsbook betting in 2022, providing fair betting odds for over 180 sports. The team regularly expands the covered competitions and wagering opportunities. Crypto withdrawals for the casino and sportsbook are processed within 10 minutes. The following crypto assets are supported at Winz.io both for deposits and withdrawals: Bitcoin, Ethereum, Litecoin, Dogecoin, Bitcoin Cash, Tether, Ripple, Tron, and BNB. - 25 trillion SHIB moved from Crypto.com to an Unknown wallet. - Shiba Inu's price declined by 4% in a day. The dog-themed memecoin Shiba Inu (SHIB) witnessed a massive whale transfer since its Shibarium beta release. Over "25 trillion SHIB tokens" worth around \$263 million have left a major crypto exchange Crypto.com to an Unknown wallet with various transactions. Also, the transaction has not yet been noticed widely and led SHIB Army to confusion. According to the blockchain tracker and analytics Whale Alert, an unknown Ethereum (ETH) address transferred 2,49,39,48,25,10,232 SHIB into a self-custody wallet in six separate transactions. This largest whale transaction occurred on March 20th between 09:06:23 and 09:38:23 UTC, which has a slight time difference between each transfer. At the time of writing, the moved meme tokens were worth about \$263 million. However, all transferred Shiba Inu tokens are now stored at a new address. It's unclear about the transactions whether another whale is moving its tokens or Crypto.com is isolating its SHIB to a new wallet. Whale Effects on SHIB Price The hype over the layer-2 blockchain Shibarium which debuted on February 12, is muted. And the price of the second-largest memecoin, Shiba Inu, did not soar as the Shiba community expected. Further, following the whale transfer, the Dogecoin revival price declined by over 4%. And the SHIB burn rate was down by more than 60%, as per the Shibburn portal. At the time of writing, Shiba Inu traded at \$0.00001070 with a 24-hour trading volume of \$322 million, which declined by more than 10%. Also, SHIB
