

layer from Xandium, which will soon be released and integrates directly with Solana RPC nodes, will increase incentives even more by giving applications that use the solution a portion of the costs they pay. With more benefits to come, itâ€™s future-proof staking. Exabytes of data will be accessible using Xandiumâ€™s storage solution, enabling Solana dapps to grow. New use cases like moving data-rich web2 applications to web3 will be supported by this. Because it is scalable, inherent to smart contracts, and allows for random access, Xandium was created to address the blockchain storage trilemma. The expansion of LSTs on Solana is mostly due to the increase in TVL for Xandiumâ€™s liquid staking program. Itâ€™s also democratizing access to Solana staking and contributing to the networkâ€™s further decentralization. Xandium is leading the way in a more equitable staking strategy by sharing block rewards and MEV with SOL stakers. Furthermore, all pool fees are being sent by Xandium straight into the Xandium DAO treasury, which is governed by XAND token holders. Xandium is the first storage-enabled liquid staking platform in the world and a storage scaling solution for Solana. With the help of the XAND token, Xandium is expected to introduce its network of storage providers in early 2025, bringing with it a significant advancement in decentralized Solana storage that will enable a new generation of dapps. Visit <https://www.xandium.network> to find out more.

- XRP has shown modest price increases after its 106% price rally over the past month. - The altcoinâ€™s daily trading volume has surged by 27.37% as per CMC data. Just days after the community discussed a price slump, Bitcoin began its rally disproving bearsâ€™ intentions. The cryptocurrencyâ€™s recent November 20-21 rally has aided it to reach \$98K. This has raised speculations about Bitcoinâ€™s \$1 million milestone being reached early. On turning attention to the altcoin sector, bullish movements meet us here as well. In the last 24 hours, leading altcoins including Ethereum have been propelled to show modest price increases. Particularly, the Ripple ecosystemâ€™s native token, has shown a modest price increase of 2.33% over the past day. In the Asian afternoon hours, the altcoin was trading at \$1.09 and has now raised to \$1.11. At the time of writing, XRP was trading at \$1.1202 as per CMC data. XRP price has rallied 61.83% over the past 7 days despite price fluctuations as depicted by the increased volatility. Zooming out, the altcoin has recorded a significant 106.63% price rally over the last 30 days. This caused the altcoin to test and surpass the crucial resistance of \$1 and progress further. Meanwhile, on inferring its daily price chart, the altcoin shows high volatility further highlighted by its RVI â€” 59.48. Additionally, XRP, in the last few days has not shown much movement, indicating a price consolidation. In order for the token to witness further bullish cycles, it has to break out of the current slump. How Will XRP Price Perform in the Coming Months? On analyzing its data, XRP shows a horizontal channel pattern further highlighting the price consolidation. This pattern is usually followed by either a price breakout or a descent. However, when looking at technical indicators, XRPâ€™s bull power indicatorâ€™s value stands at 10.88, while its bear power indicatorâ€™s value stands at -3.39 as per Tradingview data. Subsequently, the horizontal pattern can be expected to break out into an upward direction as suggested by the above indicator. In the case of such an occurrence, XRP price might face resistance at \$1.2603 and \$1.3099. On the other hand, other altcoins such as Floki and Solana have also shown upward movements in the past day. Highlighted Crypto News Today: Russia Approves Law Limiting Crypto Mining to Conserve Energy

- ETFs issuers have made registrations for Altcoin ETFs stated the ETF expert Nate Geraci. - The cryptocurrency market might witness the launch of new ETF products in the near future. The Asian crypto community has yet again woken to Bitcoin hitting a new ATH. This time the digital asset has traversed into the \$96K level, and has managed to hold prices there. This price movement has also made up for the brief slump the overall market reflected this week. Meanwhile, the market has seen new ETF applications in the past day. Particularly, ETF market analyst and expert, Nate Geraci stated that there have been registrations for Solana, XRP, and Hedera (HBAR). The community has been awaiting the arrival of the altcoin sectorâ€™s ETF. With the current bullish market, ETF issuers seem to have taken steps towards expanding products onto other cryptocurrencies as well. In addition to crypto index fund uplistings from Grayscale & Bitwise, there are currently spot ETF filings for the following: â€” Nate Geraci (@NateGeraci) November 21, 2024 -SOL -XRP -HBAR Guessing at least one issuer takes a flier on ADA or AVAX ETF as well. Additionally, Geraci also said that, any of the issuers can be expected to file for ADA or AVAX in the coming days. Previously, on November 11, the ETF expert posted a prediction that expected ETF registrations for several altcoins in the following week. As per his predictions, issuers have taken to file for the aforementioned altcoins. Moreover, prominent ETF analyst, Eric Balchunas also replied to Nate Geraciâ€™s tweet discussing a DOGE ETF. He stated that by the end of December, a DOGE filing can be expected. Additionally, the analyst was also seen discussing ETFs reaching new milestones in market cap. What Would an ETF Market Expansion Look Like? The US ETF market has seen quite the activity over the past 24 hours. Prominent ETF issuer Bitwise has filed a registration for a spot Solana ETF in the State of Delaware as per reports. When analyzing how an ETF market expansion would materialize several factors need consideration. Firstly, the launch of these ETFs might take more time due to legal and regulatory proceedings. During the launch of the spot Ethereum ETFs, long waiting periods and registrations were observed. On the other hand, a Donald Trump-headed government and a pro-crypto SEC chair could dismantle certain complications. In terms of the market itself, product expansion in ETFs could draw in more mainstream investors into the crypto sector. Meanwhile, the spot Bitcoin ETFs have recorded positive flows, while the ETH ETFs have shown outflows in the past trading day. These ETFs, particularly, Bitcoin ETFs have been received well by investors. Highlighted Crypto News Today:

Sydney, Australia, November 21st, 2024, Chainwire The GMT DAO, an independent community organization of GMT holders, is excited to announce the launch of the GMT Burn Initiativeâ€”an event designed to place the future of GMT firmly in the hands of its community. Through this initiative, GMT holders will vote on the decision to burn up to 600 million GMT, equivalent to 100 million USD, marking this as one of the most ambitious token burns in the web3 ecosystem. The GMT Burn Initiative reflects the GMT DAOâ€™s commitment to transparency, governance, and sustainable token management. This community-driven approach aligns with the DAOâ€™s goal to shape GMTâ€™s future responsibly and collaboratively. How It Works: - Lock and Vote: GMT holders can participate by visiting burngmt.com, where they can lock their tokens and cast their vote on various proposals, including the first of its kind â€”GMT Burn Initiativeâ€”. Participants will receive an exclusive soulbound â€”Make GMT Great Againâ€” Red Hat NFT as a token of acknowledgement for their involvement. This NFT will record metadata detailing the claimed and eligible airdrops, as well as the votes cast. - Earn Rewards: A total of 100 million GMT will be distributed at the end of the 60-day voting period as rewards to participants, contingent on achieving milestones. - On-Chain Transparency: The voting process is recorded on the blockchain, allowing anyone to verify results and ensuring the integrity and transparency of each decision. - Regular Voting Cycles: This burn initiative is just the beginning. Moving forward, GMT DAO will introduce new proposals and voting cycles every quarter, giving holders regular opportunities to shape the future of GMT via gmtdao.com. This initiative showcases a proactive effort to ensure GMTâ€™s sustainable future, emphasizing innovation and community engagement. The GMT DAO remains committed to true decentralization, empowering GMT holders to shape its direction. By enabling votes on key proposals, including a potential major token burn, the DAO highlights the power of collective input and its dedication to building a strong, thriving ecosystem. The GMT Burn Initiative marks a new chapter in GMTâ€™s journey, giving every holder a voice. Voting, which starts at 100 GMT, is now open at burngmt.com, inviting all GMT holders to help shape the tokenâ€™s future. About GMT DAO The GMT DAO is an independent organization of GMT holders dedicated to overseeing GMTâ€™s future through transparent and community-led governance. The DAOâ€™s formation represents a commitment to empowering GMT holders with a voice in key decisions, from token management to ecosystem development. For more information on the GMT Burn Initiative and to participate, users can visit burngmt.com. About GMT GMT sits at the heart of the FSL ecosystem. Exclusively earned through STEPn, this token plays a crucial role across all FSL products. GMT operates on four blockchainsâ€”Solana, BNB Chain, Ethereum, and Polygonâ€”and is pivotal in Gas Hero, where itâ€™s used to trade items and burn for NFT level-ups. On MOOAR, all items can be traded using GMT, and itâ€™s also central to primary sale raffle mints with key partners and is used in the newly launched STEPn GO to buy Sneakers and perform various in app functions. Contact GMT DAO hello@gmtdao.com

Frankfurt, Germany, November 20th, 2024, Chainwire KYVE is entering its expansion era, introducing an enhanced web app packed with new features and collaborations to support users and unlock multi-network potential. From experienced developers to crypto newcomers, the platform aims to make it easier for users to jump in, contribute, and benefit as part of KYVEâ€™s mission to make blockchain data accessible to all. The latest updates are meant to make it easier for users of all levels to engage with KYVEâ€™s ecosystem, fostering cross-network collaboration and data support across diverse blockchain platforms. Whatâ€™s New? - Staking and Participation in KYVEâ€™s Network: The KYVE web app now features an in-app guide designed to facilitate staking of \$KYVE. Participants may receive rewards in \$KYVE as well as in other tokens integrated into the KYVE protocol. This feature supports a diverse range of opportunities for stakers and validators, contributing to broader participation in the KYVE ecosystem. - What is backing this? KYVEâ€™s multi-coin funding feature and Public Goods Funding Program already partnered with SOURCE Protocol, Andromeda, a dYdX grant, Lava Network, and others to come. â€”Weâ€™re proud to support KYVE Network in permanently archiving all historical dYdX data and further streamlining data accessibility for ecosystem participants!â€” dYdX Grants on X. - Testing with Mainnet Faucets: KYVEâ€™s newly introduced faucets allow users to test the platformâ€™s features in a low-commitment environment. Whether theyâ€™re exploring staking or running a validator, these faucets are designed to make it easier for new users to experiment and get comfortable before fully committing. - One-Stop Access with Kado and Skip: Integrated directly into the KYVE web app, Kado and Skip simplify the process of swapping or purchasing \$KYVE, removing entry barriers and making it easier for users to start participating in KYVEâ€™s network. What This Means for Users With these new features, KYVE is unlocking a wide range of opportunities for users to support the future of blockchain data scalability while earning rewards across multiple networks. The updated web app is designed to accommodate both experienced blockchain developers and newcomers, KYVEâ€™s new web app enhancements are designed to support contributions to the platformâ€™s mission of preserving historical chain data while providing value to participants. As KYVE expands its solutions to more ecosystems, the focus remains on providing streamlined access, empowering users to play an active role in supporting blockchain scalability and data preservation. KYVE is dedicated to ensuring that all blockchains receive the data support they need to thrive and that all types of users can take part in this mission. About KYVE KYVE Network is a decentralized data management solution that provides specialized tools for data archiving, validating, and accessing blockchain data. KYVEâ€™s protocol ensures that only accurate historical data from a blockchain is made immutable and easily accessible for all. As a result, KYVE allows other chains to decentralize their historical data and overall data accessibility management and provides essential tooling to access this data, enabling enhanced scalability of chain and ecosystem development. KYVE is one of the top rated sub-oracle blockchains in the space, backed by a diverse, Ava Labs, Solana Foundation, Interchain Foundation, Moonbeam, TheGraph, Parity Technologies, Composable Finance, Zilliqa, Mina Foundation, Aurora, and NEAR Foundation. As well as VCs such as Hypersphere Ventures, Coinbase Ventures, Distributed Global, Mechanism Capital, CMS Holdings, IOSG Ventures, and others. Contact Head of Marketing Margaux Stancil KYVE@margaux@kyve.network

With the announcement of HARD.fun, the first decentralized memecoin creation platform in the market, Kava, the open-source, non-custodial DeFi ecosystem, has opened the door for the entire cryptocurrency community to realize their memetic visions. An overwhelming majority (more than 80%) of holders of Kava Lendâ€™s governance token, HARD, voted in favor of the proposition, which led to the introduction of HARD.funâ€™s. It is intended to serve as the worldâ€™s first memecoin launchpad, embodying the core principles of cryptocurrency itself: enjoyable, community-led movements that distribute their gains back to their owners. Although memecoin launchpads are not new, the most well-known onesâ€”Moonshot, Pump.fun, and Gra.funâ€”are all centralized initiatives run by their inventors that provide no assistance to memecoin communities. A decentralized version that guarantees the value of memecoins is appropriately dispersed among their communities is desperately needed, and HARD.fun will fulfill that requirement. AI brings your memecoins to life The recently released Kava AI chatbot, which can directly query the Kava Chain as well as any EVM and Cosmos-based network, may completely automate the process of breaking down the hurdles to memecoin creation, which is one of HARD.funâ€™s main goals. All users need to do is instruct the chatbot on the kind of token they want to produce and the necessary variables, and the platform will generate it instantly on the blockchain of their selection. This is significant because the finest ideas, not the best codebase, are the foundation of the most successful memecoins. For the most creative ideas to be realized, HARD.fun wants everyone to be able to mint a memecoin. HARD.funâ€™s AI integration will eventually do much more than only make creating memecoins easier; it will also make marketing possible. Users will be able to develop AI-based agents that can automatically tweet news and updates by using Kava AIâ€™s access to the whole Kava Chain user base. This makes them an invaluable tool for community management. Additionally, there are a ton of upcoming AI improvements for memecoin developers. Another important objective of HARD.fun is accessibility. Creators will be able to introduce memecoins that span the Ethereum, Cosmos, IBC, and Kava EVM ecosystems by using Kava Chainâ€™s interoperable cross-chain bridge. Later, BNB Chain, Solana, Tron, and other ecosystems will be able to

join the mix. The goal of HARD.fun is to make memecoins accessible to the general public, and every token that is introduced on the platform will ultimately be able to be traded on each of those networks. HARD.fun is a community-run platform that uses a decentralized governance approach that gives everyone a voice in the platform's and its memecoins' future, as well as a new reward-sharing scheme that guarantees memecoin token holders profit from the success of their projects. In addition to voting on the long-term objectives and features of the HARD.fun platform itself, users will have the ability to choose the tokenomics of specific memecoins. By giving HARD token holders more uses, HARD.fun generates a positive feedback loop of community benefits that will raise transaction volume, improve demand, and strengthen HARD's value in the long run. With platforms like Pump.fun and Moonpay speeding up Solana's development and Gra.fun and Sun Pump attracting more people to BNB Chain and Tron, the popularity of memecoins has played a significant role in the success and growing uptake of blockchains. With each successful token launch, HARD.fun, the first community-run memecoin platform, will contribute to the substantial expansion and modification of Kava Chain, enhancing its significance. Those with the most creative ideas will benefit greatly from the next generation of memecoins, which will reward users and pioneer the use of AI chatbots to remove friction.

- Dogecoin has shown significant bullish momentum, rising from \$0.3778 to an intraday high of \$0.4183. - The Ichimoku Cloud indicator suggests that DOGE could maintain an upward trend and rise above \$0.45. Dogecoin (DOGE) shows signs of a potential breakout as the Ichimoku Cloud suggests continued bullish momentum. While tech mogul Elon Musk's tweets on DOGE have historically created price pumps, the current rally seems different. The memecoin clearly follows Bitcoin's trend; as of Nov 20, BTC hit a new all-time high at \$94,002. Following this, DOGE climbed from a low of \$0.3778 to an intraday high of \$0.4183. At the time of writing, DOGE trading at \$0.3933 has seen a 3.2% increase in the last 24 hours, with its daily trading volume climbing to \$11.47 billion, an impressive 22.20% jump. This surge in volume reflects growing interest among traders as Dogecoin breaks free from its previous bearish trend. The recent rally began on November 6, on the day of the US election, when DOGE broke above the prolonged bearish trend above \$0.21922. Since then, the memecoin has soared by over 90%, continuing its upward trajectory. Adding to the fuel, Musk's recent tweet sparked another level of excitement as he posted a photo of himself with the caption "The Dogefather." 24-H Technicals Shows Bullish Outlook for Dogecoin The Ichimoku Cloud, a widely used indicator for identifying trends and momentum, offers promising signs for Dogecoin. The conversion line at \$0.38279 and the base line at \$0.28465 indicate extended upward momentum. Further, the upper boundary at \$0.39124 signals a potential breakout if the price stays above \$0.38, while the lower boundary at \$0.26983 provides a solid support zone. Beyond the Ichimoku Cloud, other indicators also support a bullish outlook. According to the DOGE/USDT 4-hour chart, the RSI, currently at 55, shows room for upward movement, staying comfortably below overbought levels. Additionally, the MACD has also turned positive, with the MACD line crossing above the signal line, highlighting increasing momentum in the short term. As all the indicators create a favorable setup for further gains, key resistance levels to watch out for include \$0.41, \$0.42, and \$0.45. If Dogecoin falls below the conversion line at \$0.38279, the bullish outlook could be invalidated, with the support at \$0.28465. That would mark a short-term bearish turn for Dogecoin. However, if the momentum continues, Dogecoin could be on its way to even higher highs soon. Highlighted Crypto News Today

- Cardano has regained momentum, rising over 13% to trade at the \$0.84 mark. - The daily trading volume of ADA surged over 61% to \$2.74 billion. The cryptocurrency market exhibits mixed trends, with assets rising and falling. With Bitcoin's steady momentum, major altcoins like Ethereum, Solana, and XRP fluctuate and face varying levels of volatility. While looking at Cardano (ADA), it has registered a 13.35% gain over the past 24 hours. In the early hours, ADA visited its lowest trading level at \$0.7239 and eventually ascended to the current price range. As of the current time, Cardano trades at \$0.8499, with its daily trading volume reaching \$2.74 billion, as per CMC data. Notably, Cardano has gained over 58.24% in the past seven days. ADA hit a weekly high of \$0.8889 from a low of \$0.5332. However, the bullish outlook favors the asset avoiding a deeper slide. As per Santiment data, Cardano with its transaction volume reached a 7-month high, and over 8,900 whale transactions were recorded for the second consecutive week. The asset's price ratio against Bitcoin is also nearing an 8-month high. Such activity levels, like in June, have preceded notable price surges with over 26% increase in the ADA/BTC pairing. On the other hand, the large-scale Cardano holders with over \$10 million in ADA, have increased their holdings, by 145.72%, over the past month. This accumulation suggests strong whale activity. What Lies Ahead for ADA? The current market sentiment of ADA is approaching the overbought zone with the daily relative strength index (RSI) positioned at 71. Besides, the asset's short-term 9-day moving average is found above the long-term 21-day moving average at \$0.763 and \$0.744, respectively. Cardano's daily price chart exhibits an upside correction after breaking the crucial price ranges. Cardano's uptrend factors could propel the asset to hit and test a high of \$0.8846. An extended bullish trend might push ADA to climb to a level higher than \$0.92. On the contrary, if the ongoing momentum reverses, ADA might slip to the downside, testing the nearby support at \$0.943. If the altcoin continues to trade on the downside, it could further retrace down to \$0.7334. The technical analysis of ADA suggests the existing positive sentiment as the Moving Average Convergence Divergence (MACD) line settled above the signal line. This suggests the potential emergence of a bullish trend. In addition, the Chaikin Money Flow (CMF) indicator of ADA is found at 0.21, which refers to the increased demand and positive money flow within the market. Notably, the trading volume of the asset has increased by over 61.53%. Highlighted Crypto News Will Michael Saylor Bring Bitcoin to Microsoft's Balance Sheet?

- Pepe's price witnessed a modest increase of 0.52% in the last 24 hours. - The memecoin's daily trading volume showed a 9.57% increase as per CMC data. This week the cryptocurrency market has undergone a slump, with trading volume much action in price. Meanwhile, a shift in focus from the crypto sector has propelled the altcoin sector into the limelight. On the other hand, traders are considering a respite. Goody Guillian has received market interest. Despite the market slump, particular altcoins and especially the memecoin sector have seen several top performers this week. Frog-based memecoin PEPE has shown notable performance over the past week. In the last 24 hours, the cryptocurrency has shown a modest price increase of 0.52%. In the Asian afternoon hours of November 19, PEPE was trading at \$0.00002008, after which it progressed to an intra-day high of \$0.00002118. Following this, it dipped to current levels once again docking at the \$0.000020 level. At the time of writing, PEPE was trading at \$0.00002028 as per CMC data. Zooming out, over the past week, PEPE has shown a significant price increase of 57.85%. This price rally saw the memecoin break notable resistance levels at \$0.000017 and \$0.00002. In this week the cryptocurrency also hit a new ATH at \$0.00002524. Will PEPE Surpass Price Correction onto Another Rally? On inferring its price movements PEPE, as aforementioned, seems to have entered a price correction, reflecting Bitcoin. The memecoin shows struggles to break resistance beyond \$0.000026 after a recent price rally. However, when analyzing technical indicators, they show potential for upward movements. Pepe's bull power indicator value stands at 0.15 while its bear power indicator value stands at -1.82. Additionally, according to TradingView data, its RSI stands at 70.55 indicating a slightly overbought situation in the market. These inferences suggest that the PEPE price could witness another rally in the coming days. Meanwhile, other memecoins such as DOGE and SHIB have also shown upward movements. Recently, in the past day, BONK hit a new ATH and flipped dogwifhat in market cap, becoming the fourth largest altcoin. Highlighted Crypto News Today:

- Michael Saylor set to pitch Bitcoin investment strategy to Microsoft. - A vote on December 10 will determine if Microsoft considers Bitcoin as an investment. Microsoft plans to assess and incorporate Bitcoin into its balance sheet. This decision aligns with the shareholders preparing to vote on a proposal in December, coinciding with an upcoming presentation by Michael Saylor, Executive Chairman of MicroStrategy, to Microsoft's board of directors. During a November 19 X Spaces session hosted by VanEck, Saylor disclosed that he was invited to present a three-minute pitch to Microsoft's board about Bitcoin investment. This board is led by the firm's Chairman and CEO, Satya Nadella, and other executives from Disney, Citigroup, and Wells Fargo. Microsoft has been focused on investments like U.S. government securities and corporate bonds, which are widely regarded as reliable in the uncertain economic scenario. The firm's large portion of the cash reserves are invested in low-risk assets. On the other hand, the December 10 vote, initiated by the National Center for Public Policy Research (NCPPr), will decide whether the board should approach Bitcoin as a potential corporate investment. In addition, the proposal cites the growth of Bitcoin over the last five years. It further highlights the success of MicroStrategy with its Bitcoin-focused strategy. Notably, MicroStrategy's shares have surged more than 300% in 2024, outpacing Microsoft. Bitcoin Holdings of MicroStrategy As a pioneer in corporate Bitcoin adoption, MicroStrategy has recently purchased 51,780 BTC for its Holdings. As of now, the company's 331,200 bitcoins are valued at approximately \$29.7 billion. The assets were acquired at an aggregate cost of \$16.5 billion, or \$49,874 per BTC. Michael Saylor emphasized that firms like Microsoft, Berkshire Hathaway, Apple, and Google should leverage their cash reserves by investing in Bitcoin to enhance shareholder value. The Corporate Bitcoin Adoption The implications include the increased credibility of digital currency; embracing Bitcoin could expand the acceptance of cryptocurrencies as legitimate assets. This could influence government policies and financial regulations globally. Furthermore, the Bitcoin investment could allow corporations and individual investors to diversify their portfolios by integrating traditional assets with cryptocurrencies. Besides, the largest crypto asset, Bitcoin, is currently trading at \$92.3K with its market cap resting at \$1.83 trillion. The daily trading volume of BTC has settled at \$75 billion. Analysts anticipate the asset will reach \$100K shortly by evaluating its momentum within the market. Highlighted Crypto News BONK Hits New ATH and Flips dogwifhat as Top Solana Memecoin

- Bitcoin's price has shown only modest gains in the last 24 hours as movements indicate consolidation. - The cryptocurrency's daily trading volume dropped by 2.24% as per CMC data. As good times in the digital assets sector persist, this week has seen a short pause in price rallies. The community known for its endless optimism has been sportive as investors wait for the next bull cycle. Meanwhile, smart traders have gotten to work beginning to accumulate tokens before it hits new highs. Notably, the overall market has seen a modest dip in market cap at 0.53%, while Bitcoin is reflecting modest gains of 0.51%. Meanwhile, the slump could be seen reflected in the altcoin sector as well. Ethereum and Solana have shown price drop percentages under 5%. The past day's price movements ranged from \$91,294 to the current \$92,290 before it rose to a new all-time high at \$94,002. After testing this new level, the cryptocurrency receded to the aforementioned prices. At the time of writing, BTC was trading at \$92,335, as per CMC data. Bitcoin is mirroring the behavior of the last two bull cycles. Ali (@ali_charts) November 19, 2024 After surpassing its previous all-time high, BTC has been consolidating for a week. If history repeats, we could see another breakout in the next day or two, targeting ~\$150,000, followed by a ~30% correction. pic.twitter.com/EQIX62BSdE Ali (@ali_charts), the prominent crypto market expert posted a prediction for Bitcoin on his X account yesterday. He outlined how BTC has been mirroring the previous bull cycles and predicted another price rally. This rally would result in Bitcoin hitting the \$150,000 level followed by corrections stated the analyst. Bitcoin Whales Accumulations - Sign of Incoming Bull Run? According to on-chain investigators reports, several Bitcoin whales have shown activity this week. Lookonchain posted two BTC whales buying tokens and selling them at highs. Moreover, MicroStrategy founder Michael Saylor recently announced plans to invest more funds in the cryptocurrency. Moreover, on its price charts, Bitcoin's signal line stands above the MACD line indicating a positive trend as per TradingView data. In the case of Ali's aforementioned price breakout materializing, the cryptocurrency can be expected to face slight bumps at resistance levels of \$94,164 and \$96,974. Furthermore, the aforementioned whale accumulations have led to market anticipations of yet another mind-boggling bull run. The coming days hold an answer to whether Bitcoin will stage this price rally dropping more fortunes into our laps.

London, UK, November 19th, 2024, Chainwire Real-World Assets (RWA) are rapidly becoming a strong sector of blockchain adoption, linking tangible assets to decentralized networks to create more transparent, efficient financial systems. ChainBank is uniquely positioned to capitalize on this trend with its multichain Web3 neobank model. The ChainBank team has officially launched the presale of its \$CHAINBANK token, offering investors an early opportunity to become part of its innovative ecosystem. Designed to support the platform's growth and development, the \$CHAINBANK token plays a central role in ChainBank's vision of bridging traditional banking and blockchain technology. Early participants in the presale will gain access to a key project positioned at the forefront of the Real-World Assets (RWA) movement, which is redefining how financial systems operate globally. The \$CHAINBANK token presale aims to build a strong community of supporters and contributors who believe in ChainBank's mission. Proceeds from the presale will be directed towards developing solutions like crypto-to-fiat cards, multichain interoperability, and AI-driven financial tools, all designed to enhance the everyday banking experience. Joining the \$47 billion neobank sector, ChainBank introduces multichain interoperability, supporting blockchain networks such as Bitcoin, Ethereum, Binance Smart Chain, and Solana. This functionality provides users with the flexibility to interact across diverse financial ecosystems, catering to both individual and business needs. ChainBank is designed to streamline interactions between crypto and TradFi systems, simplifying transitions for users. Rivaling traditional systems like SWIFT while complementing cryptocurrency exchanges such as Coinbase and Binance. ChainBank enhances utility for Web3 participants, creating an RWA banking

protocol similar to Robinhood or Crypto.com. Additionally, the platform integrates with widely used altcoins, fundamental coins like \$ETH, \$BTC, \$SOL, memecoins, and stablecoins like USDT and USDC. Key Features and Upcoming Launch Key offerings include a user-friendly app, a physical crypto card for everyday transactions, and virtual card options. According to its roadmap for Q4 2024 through Q1 2025, the ChainBank team plans to roll out features such as a loyalty program, an affiliate program, and a minimum viable product (MVP) app. These developments are aimed at delivering a seamless experience for users navigating blockchain-based financial solutions. Highlights of the upcoming features: - Complimentary first ChainBank card for new users. - Virtual card options for instant online payments. - Comprehensive card management via the mobile app. - Rewards in \$CHAINBANK tokens with eligible purchases. Users can discover more by visiting their official website at chainbank.network. The launch is expected soon, and users can follow ChainBank on Twitter to keep up with the most important announcements. About ChainBank ChainBank is a cutting-edge multichain Web3 neobank built for seamless global crypto payments. It empowers users with a unified platform to manage, transact, and interact with digital assets across various blockchain networks. By prioritizing interoperability, efficiency, and security, ChainBank bridges the gap between traditional banking and decentralized finance. Users can explore more about their solutions at chainbank.network. Contact Luke ChainBank contact@chainbank.network

San Francisco, USA, November 19th, 2024, Chainwire The Keanu (KNU) token, a new Solana-based meme coin inspired by cultural icon Keanu Reeves, has officially hit the market via a fair launch on Pump.fun. The release comes amid a surge in meme coin market activity, with the Keanu team positioning the project as a community-driven initiative leveraging viral potential. The broader meme coin market has seen massive growth in recent months, with notable projects contributing to an industry market cap of \$125 billion. The team aims to capitalize on this momentum with a token launch designed to appeal to a broad demographic, from crypto enthusiasts to pop culture fans. This launch perfectly aligns with what investor and commentator Murad Mahmudov has described as an unprecedented \$eame coin supercycle, \$e creating fertile ground for viral, community-focused crypto projects. Keanu (KNU): A Cultural and Community-Driven Token Keanu leverages the widespread popularity and meme culture heritage of actor Keanu Reeves, a figure celebrated across generational and cultural divides. The token seeks to distinguish itself through its ethos, emphasizing positivity and inclusivity, \$e eroding speculation that this could be the making of a new crypto cult. Keanu's branding incorporates community-oriented principles such as \$eBe Excellent to Each Other, \$e signaling a departure from the often intense and competitive nature of the crypto landscape. The team behind Keanu plans to cultivate an engaged community by focusing on a balance between entertainment and functionality. This strategy positions the token as an accessible entry point for new users exploring the world of cryptocurrencies while fostering a strong connection with existing crypto participants. Bridging Pop Culture and Cryptocurrency Meme coins have historically gained traction for their simplicity and relatability, making them an accessible entry point for newbies. While Dogecoin has been the most prominent example of a meme coin achieving mainstream recognition, the Keanu project seeks to expand on this foundation, offering a culturally resonant alternative designed to engage a diverse audience. Unlike many projects that rely solely on novelty or fleeting trends, Keanu's developers emphasize its potential for sustained community growth, \$e targeting both experienced crypto enthusiasts and newcomers alike. The token's roadmap includes plans for additional listings, structured to encourage widespread participation. The project's debut on Pump.fun represents the first phase of its roadmap, with plans for additional listings to follow. By tapping into Keanu Reeves's universal popularity and the current momentum of the meme coin market, the token seeks to carve out its place in the evolving crypto landscape. For updates on the project's progress, Keanu encourages the community to follow its official channels on X (formerly Twitter) and Telegram. About Keanu Keanu (KNU) is a meme token built on the Solana blockchain. It prioritizes community engagement and inclusivity, aiming to foster a positive cultural movement within the cryptocurrency space. The token launched via a fair listing on Pump.fun, with plans for expanded availability on decentralized exchanges and additional trading platforms. Contact Keanu pr@keanu.xyz

Cryptocurrency enthusiasts are buzzing about the next big opportunity. As the market shows signs of heating up, attention is turning to a select group of altcoins. These digital assets are poised for massive growth, with some experts predicting gains of up to 10,000%. Discover which five altcoins could lead the charge in the upcoming market surge. CYBRO: Your Multichain Gateway to Unmatched Crypto Gains! \$y\$ Welcome to the world, where CYBRO is redefining the rules of crypto investing and putting GIGA PROFITS within your reach. As a multichain platform designed to enhance yield opportunities across multiple blockchains, CYBRO maximizes your crypto earnings like never before. Whether you're farming yield, stacking ETH, or just HODLing for those epic returns, this is the token for those who know how to win. \$y\$ CYBRO's Presale is Hot and Approaching \$4 Million! \$y\$ CYBRO's presale is skyrocketing and inching toward the \$4 million mark \$e and there's a reason for that. At just \$0.04, you're getting in at a massive discount before the token hits the market at \$0.06. Over 11,000 holders have already joined the alpha squad, and you're stacking rewards like never before! Why CYBRO? Because Winning is the Only Option. \$y\$ Here's why the community is rallying around CYBRO: Here's why the community is rallying around CYBRO: - Yield Farming: Top-tier user interface with multiple strategies to farm APY and Points - Multichain capabilities: flexibility and access to diverse yield opportunities - Effortless Deposits and Withdrawals: Easy in, easy out, so you're always in control of your funds. - AI-Powered: Create AI-tailored portfolios, built for your preferences and optimal performance. \$y\$ Early Investors Win Big! \$y\$ Don't wait until prices soar! By investing now, you'll not only benefit from immediate growth potential but also unlock weekly ETH rewards and participate in community-driven airdrops. Early adopters are already seeing gains, and you can too! Join CYBRO today and secure your place in this fast-growing ecosystem. The future belongs to those who act now! \$e don't miss your chance before prices skyrocket! \$y\$ Get in Early, Reap the Rewards with CYBRO! \$y\$ Solana's Price Surge Continues as SOL Eyes Key Resistance Levels Solana (SOL) is on a steady climb. In the past week, its price increased by 15.11%. Over the past month, it rose by 56.10%. The current price is moving between \$211.69 and \$252.67. The next resistance level is at \$267.85. If SOL breaks this point, it might reach the second resistance at \$308.83. This would be a significant percentage increase from the current price. Technical indicators like the RSI at 63.01 show positive momentum. The 10-day simple moving average is higher than the 100-day average, suggesting an upward trend. Toncoin Approaches Key Resistance Level Amid Upward Trend Toncoin's price has been climbing recently, ranging between \$5.03 and \$5.78. In the past week, it gained 4.30%, and over the past month, it's up 4.84%. The current price is above the 10-day and 100-day simple moving averages, which are around \$5.44 and \$5.48. The relative strength index is neutral at 53.27, while the stochastic oscillator is high at 91.89, indicating overbought conditions. Toncoin is approaching its resistance level at \$6.18. If the price moves above this level, the next resistance is at \$6.92. If it doesn't, the price may move back towards the support level at \$4.68. Sui (SUI) Climbs 76% in a Month, Eyes Next Resistance at \$4.63 Sui (SUI) has surged 76.06% over the past month, currently trading between \$3.09 and \$4.21. The coin is approaching its nearest resistance level at \$4.63. Both the 10-day and 100-day simple moving averages are above \$3.50, signaling a positive trend. With a 1-week price increase of 23.38% and a substantial 6-month gain of 227.65%, SUI shows strong momentum. The Relative Strength Index stands at 46.71, indicating neutral market conditions. If SUI breaks through the \$4.63 resistance, it could target the next level at \$5.75, which would be an approximate 36% increase from current prices. However, if it fails to break resistance, support is observed at \$2.40. Aptos (APT) Gains Momentum with Potential Breakout Above \$15 Aptos (APT) is trading between \$10 and \$13. It has gained nearly 10% in the past week and over 1% in the past month. The 10-day and 100-day simple moving averages are both around \$12, showing steady momentum. The RSI is close to 47, which is neutral. The nearest resistance is at \$15.71; breaking above this could see Aptos reach the next resistance at \$19.27, a potential increase of more than 40%. However, if the price drops below the support at \$8.59, it might fall to the next support at \$5.03. Conclusion SOL, TON, SUI, and APT may have limited short-term potential. In contrast, CYBRO offers investors exceptional opportunities to boost their earnings. By leveraging AI-powered yield aggregation on the Blast blockchain, CYBRO provides features like attractive staking rewards, exclusive airdrops, and cashback on purchases. The platform ensures a superior user experience with seamless deposits and withdrawals. With a strong emphasis on transparency, compliance, and quality, CYBRO stands out as a promising project attracting significant interest from crypto whales and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Altcoin SUI has factored in a modest price increase in the last 24 hours. - The cryptocurrency hit a new ATH at \$3.93 on November 17 as per CMC data. The Asian crypto sector has shown increased activity in the past day. According to reports, crypto mining firm BIT Mining was charged a penalty fee of \$10 million for bribery by the Japanese government. Meanwhile, the crypto market has entered a brief consolidation as prices have not shown significant movements compared to last week. However, the altcoin sector has been projecting mixed signals. While some cryptocurrencies have reflected the leading assets, others have continued to soar. Tokens such as \$BAR and \$CHAIN have remained consistent in the upward movements. Sui Network's SUI has shown minimal price movements in the past day. The altcoin has reflected the overall crypto market in price action this week. After hitting an ATH at \$3.93 on November 17, SUI has failed test levels above \$3.90 exhibiting resistance levels. Additionally, the cryptocurrency has also been witnessing increased volatility as indicated by the RVI standing at 78.88. Several market analysts have discussed how the cryptocurrency has been facing resistance at current levels. Inferring its daily price chart, SUI shows a modest price increase of 0.33% as it sparked bearish candles. However, it currently is on a recovery and is trading at the \$3.8 level. At the time of writing, SUI was trading at \$3.76 as per CMC data. What to Expect for Sui Price In the Coming Months? On inferring SUI's price chart, it shows a horizontal trend followed by a price breakout. This bullish rally is further confirmed by its bull power indicator value standing at 1.47. Its bear power indicator value stays at 0.52 below zero as per TradingView data. However, as aforementioned, the altcoin is combating resistance at the \$3.90 level. If SUI manages to surpass this level it can be expected to face its next resistance at \$3.92. On the other hand, if it moves downward, it might fall to a support of \$3.60. Relatedly, the Sui Network recently made an update by integrating native USDC into its ecosystem. Meanwhile, other altcoins such as Solana and Ethereum have also shown similar price actions over the past few days. Highlighted Crypto News Today:

With the crypto market on the cusp of a potential upswing, some altcoins are positioned to make significant strides before 2025. Innovative projects are capturing attention with unique offerings, sparking interest among investors looking for the next big opportunity. The excitement is building around digital assets that could soar to unprecedented levels. Among these promising projects, XYZVerse (XYZ) stands out as a pioneering memecoin uniting sports enthusiasts across football, basketball, MMA, and more within a dynamic ecosystem that blends meme culture with athletic passion. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition \$e \$dollar sign coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. \$y\$ Own the field, earn while the crowd plays \$y\$ XYZ is more than just a benchwarmer in the meme coin game; it's creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarket's massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. \$y\$ Missed meme coin supercycle? \$y\$ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T. of meme coins. BOME's 5,000% takeoff and WIF's 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the tide and outshine its sensational predecessors. Get in the game early to secure your spot \$e Currently undervalued, XYZ is going the distance to break new records! \$y\$ Rallying the community, securing the win \$y\$ XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem's direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. The XYZ presale is live \$e don't miss out on this knockout 99,900% opportunity! Ethereum (ETH) Ethereum is more than just a cryptocurrency; it's a groundbreaking platform that has transformed the blockchain world. Launched in 2015 by Vitalik Buterin, Ethereum introduced smart contracts, allowing developers to build decentralized applications (dApps) that run without downtime or interference. This innovation has led to a rich ecosystem of services, including decentralized finance (DeFi) platforms and Layer 2 solutions like Arbitrum and Polygon, which make transactions faster and cheaper. With the switch

to Proof-of-Stake through ÆThe MergeÆ in 2022, Ethereum has shown its commitment to energy efficiency and scalability. In todayÆs market, Ethereum stands out for its robust technology and active community. The introduction of ERC-20 tokens has expanded its use in areas like governance and value storage, even though ETH is still needed for transaction fees. Upcoming improvements aim to boost scalability and reduce costs, making the network more accessible. Compared to other coins, EthereumÆs blend of innovation and practical use makes it a compelling option for those interested in the evolving world of blockchain. As the industry progresses, EthereumÆs role in powering transactions, rewarding participants, and serving as a valuable asset keeps it at the forefront of decentralized finance. Solana (SOL) Solana is a blockchain platform built for speed and scalability. It offers a fast, secure, and scalable solution for decentralized applications (dApps). Solana stands out for its ability to process transactions quickly without sacrificing security. SOL is the native cryptocurrency of Solana. ItÆs used to pay for transactions, run programs, and reward those who support the network. Many are excited about Solana because it doesnÆt rely on methods like sharding or extra layers to scale up. This simplicity makes it attractive to developers aiming to create high-performance applications with less hassle. Compared to Ethereum, which can have high fees and slower speeds, Solana offers faster transactions and lower costs. In todayÆs market, where speed and capacity are crucial, SOL is catching attention. Its potential to handle busy products and services could make it a strong player in the crypto world. However, as with all cryptocurrencies, there are risks involved, and staying informed about market trends is important. Cardano (ADA) Cardano is making waves in the cryptocurrency world with its native coin, ADA. Designed as a flexible and scalable blockchain platform, Cardano supports smart contracts, enabling the creation of decentralized finance apps, crypto tokens, and games. Unlike many other cryptocurrencies, ADA offers an environmentally friendly approach. By using the Ouroboros proof-of-stake mechanism, it consumes far less energy than traditional proof-of-work models. This makes it a strong rival to EthereumÆs ETH, providing users with a way to store value, make payments, and participate in network staking. What sets Cardano apart is its innovative two-layer architecture. The Cardano Settlement Layer handles transactions, while the Cardano Computing Layer manages smart contracts. This design boosts its potential to process up to a million transactions per second. Since the introduction of Cardano native tokens in March 2021, users enjoy secure and low-fee interactions with smart contracts. As the crypto market seeks more sustainable and scalable solutions, ADA stands out as an attractive option in the current market cycle. Its commitment to efficiency and environmental sustainability positions it well against competitors like Ethereum, marking it as a coin to watch. Dogecoin (DOGE) Dogecoin started in 2013 as a joke. Created by Billy Marcus and Jackson Palmer, it used a funny image of a Shiba Inu dog as its logo. Unlike Bitcoin, which has a limited supply, Dogecoin was designed to be abundant. Every minute, 10,000 new coins are mined, and there is no maximum supply. People first saw it as a Æmemecoin,Æ but in 2021, its value skyrocketed. It became one of the top ten cryptocurrencies, with a market cap of over \$50 billion. This surge was driven by social media buzz, especially from Elon Musk, and a booming crypto market. Dogecoin showed how powerful online communities and social media can be in the financial world. Today, Dogecoin continues to capture attention. Its technology is similar to Litecoin, with fast transaction times and low fees. Some see potential in its widespread supply and active community. Others are cautious because of its origins as a joke and its inflationary supply. In the current market cycle, with cryptocurrencies facing volatility, DogecoinÆs future is uncertain but intriguing. Compared to coins like Bitcoin and Ethereum, which have strong use cases and developer support, Dogecoin relies heavily on community sentiment. If social media interest remains high, Dogecoin could continue to perform well. Conclusion ETH, SOL, ADA, and DOGE are promising, yet XYZVerse (XYZ) stands out. It unites sports fans in a memecoin, aiming for 20,000% growth and becoming a leading cultural icon. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. - CardanoÆs Hoskinson advances US crypto regulation efforts - Reveals meetings with senators and industry leaders - Targets a comprehensive framework within 60-90 days Cardano founder Charles Hoskinson has revealed significant progress in his efforts to establish comprehensive cryptocurrency regulations in the United States. During a November 17 surprise AMA session, Hoskinson detailed recent meetings with government officials and industry leaders aimed at creating a workable regulatory framework. Cardano Key Industry Collaborations Emerge The initiative has gained momentum through strategic partnerships within the crypto space. Hoskinson confirmed direct conversations with Ripple CEO Brad Garlinghouse and efforts to engage Hedera co-founder Leemon Baird in the regulatory dialogue. ÆWeÆve found great partners in this push for regulatory clarity,Æ Hoskinson stated during the AMA. ÆThe next 60-90 days will be crucial for bringing these efforts together.Æ The proposed framework aims to address multiple aspects of crypto governance, including asset classification, custody standards, and tax clarity. Hoskinson emphasized studying successful models from Switzerland, Singapore, and the UAE to position America as the global cryptocurrency leader. ÆWeÆre exploring every avenue Æ from administrative changes to executive orders and new legislation,Æ Hoskinson explained. ÆOur goal is to create a regulatory environment that surpasses other jurisdictions.Æ The initiative targets resolving ongoing conflicts with the SEC regarding asset classification, particularly concerning tokens like XRP, Solana, and Cardano. Hoskinson projects the regulatory clarity would establish a multi-trillion-dollar industry within the United States. In a separate development, Hoskinson dismissed circulating rumors about an upcoming appearance on the Joe Rogan Experience podcast. Through a tweet, he urged the community to await official announcements rather than spread unverified information. ÆI have no scheduled appearance on the show,Æ Hoskinson clarified. ÆIf such plans materialize, IÆll be the first to announce it.Æ

Significant players in the cryptocurrency market are making strategic moves, adding specific tokens to their holdings in anticipation of remarkable returns by 2025. Observing the actions of these large investors can offer insights into potential high-performing assets. Uncover the five tokens that are capturing their attention and could lead to substantial profits in the near future. CYBRO Presale Soars Past \$4 Million: A One-in-a-Million NeoBank Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$4 million. This cutting-edge NeoBank offers investors unparalleled opportunities to enhance crypto earnings across multiple blockchains. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.04 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In addition to tokens, CYBRO introduces special points offering even more opportunities for investors. CYBRO holders of these points will automatically participate in the CYBRO Airdrop, where the more points you hold, the more tokens you will receive. CYBRO distributes up to 1 million points weekly, which can be earned by investing in DeFi Vaults in the CYBRO app. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project thatÆs truly one in a million. Join CYBRO and aim for future returns up to 1200% SolanaÆs Upward Momentum Signals Potential for Further Gains Solana (SOL) is on a strong upward trajectory, with its price increasing over 18% in the past week and more than 40% in the last month. Currently trading between \$171.70 and \$231.97, SOL is approaching its nearest resistance level at \$253.79. If it breaks through this point, the price could aim for the next resistance at \$314.06, indicating substantial growth potential. The 10-day and 100-day simple moving averages are both above \$212, reflecting positive momentum. Additionally, the Relative Strength Index is at 60.56, suggesting bullish sentiment without being overbought. These indicators point to the possibility of SolanaÆs price continuing to rise in the near future. Toncoin shows upward momentum with 13% weekly gain Toncoin is experiencing an upward trend, with its price increasing by 13.38% over the past week. Currently trading between \$4.69 and \$5.72, it hovers near its 10-day and 100-day simple moving averages around \$5.39. The Relative Strength Index is at 58.06, indicating neutral conditions but leaning towards overbought, while the Stochastic oscillator at 85.69 suggests overbought territory. The next resistance level is \$6.17, about 18% above current prices. If momentum continues, Toncoin could test this level. However, if the price reverses, the nearest support is at \$4.10. With positive short-term indicators, Toncoin shows potential for further growth. Aptos (APT) Gains 26% in a Week, Eyes Breakout Above \$13.83 Resistance Aptos (APT) has surged by 25.97% in the past week and 18.41% over the last month. Trading between \$8.59 and \$12.37, the cryptocurrency is nearing its nearest resistance level at \$13.83. A successful breakout above this point could see APT aiming for the second resistance at \$17.60, which would be an additional gain of around 42%. The Relative Strength Index (RSI) stands at 53.24, indicating neutral momentum. Meanwhile, the MACD level is slightly negative at -0.026, suggesting possible consolidation. If APT fails to break resistance, it may retrace to the nearest support level at \$6.27. Traders are watching closely for the next move. Avalanche (AVAX) Gains 24% in a Week, Potential for Further Growth Ahead Avalanche (AVAX) has gained 24.82% over the past week, with its price moving between \$28.05 and \$36.04. The 10-day simple moving average is \$33.37, slightly above the 100-day average of \$33.27, indicating a positive short-term trend. The Relative Strength Index is at 54.10, suggesting there is still room for growth. The nearest resistance level is \$40.18; breaking this could lead to a rise toward the second resistance at \$51.17, which would be an increase of around 40% from current prices. The recent upward movement hints at the potential for further gains. Conclusion In summary, while tokens like SOL, TON, APT, and AVAX hold potential for future gains, their short-term prospects appear limited. Conversely, CYBRO stands out as a sophisticated DeFi platform offering investors exceptional opportunities to boost their earnings through AI-powered yield aggregation on the Blast blockchain. With features such as attractive staking rewards, exclusive airdrops, and cashback on purchases, CYBRO ensures a superior user experience with seamless deposits and withdrawals. Its commitment to transparency, compliance, and quality sets it apart, drawing significant interest from crypto whales and influencers. CYBRO represents a promising project poised to deliver substantial benefits to its users. - Site: <https://cybro.io> - Twitter: <https://twitter.com/Cybro.io> - Discord: <https://discord.gg/xFMGD0PhrB> - Telegram: <https://t.me/cybro.io> Disclaimer: TheNewsCrypto does not endorse any content on this page. According to expert predictions, most of the new crypto billionaires are likely to emerge in the next sixteen months; the trade in cryptocurrencies is about to explode. The secret to exponential wealth increase may just be choosing the correct tokens to hang on to, even if the market is at its euphoric top. Six cryptocurrencies including Rexas Finance (RXS) are expected to be fairly helpful in creating large-sized portfolios at its leading top. Rexas Finance (RXS): Tokenization of assets Rexas Finance (RXS) keeps rising ceaselessly and arrives at the current stage 6 of the presale, where tokens are sold for \$0.08. Confirming its status as a game-changer at an amazing fifth stage, previous presale stages over \$8,600,000. Rexas Finance is focused on RWA tokenizing, which lets asset sections of valuable itemsÆ such as gold or real estateÆ be owned by several persons so increasing the number of investors in these high-value assets. The platform became somewhat well-known because of its CertiK-verified smart contracts. Coinmarketcap and CoinGecko have made the platform more visible, which attracts institutional as well as retail investors. Apart from that, the platformÆs million-dollar RXS giveaway offer is also facilitating fast community development since each of the twenty users qualified to get RXS tokens worth 50,000 dollars is benefiting. Given the successful presale plus the forthcoming listings on Tier 1 exchanges, RXS offers a great chance for expansion. Early investors could obtain up to 150 percent return on investment by the time the RXS launches from an expected listing price of \$0.20. Anyone looking to profit from the forthcoming tsunami of multi-million crypto investors will find Rexas Finance as a custodian of the RWA tokenizing revolution to be the ideal choice. Solana (SOL) Solana (SOL), sometimes known as the future Ethereum, is another fascinating rival with quick transaction rates and reasonable costs. Solana, which presently stands at \$213.99, is the greatest solution for d Apps and DeFi projects since it offers t great edge on scale thanks to its special consensus mechanism that makes use of proof of history. After FTX fell, Solana cautiously marked a strong return and today has almost \$100 billion market capitalization. Clearly, SOL will be a long-term holding and a sensible investment for those looking for consistent appreciation given the estimated price of about \$300 by 2025. Ripple (XRP) Æ Global Payments Revolution Leading the transformation in cross-border payments is XRP, whose goal is to outsell the SWIFT payment system using a blockchain equivalent. With a market cap value of \$47 billion, Ripple presently retails at \$0.8261 despite constant SEC battles. Analysts expect an enormous comeback as witnessed in past patterns when such regulatory clarity is discovered; predictions for 2024 will be about \$3.10. It will be a necessary tool in the next bull run since it has become crucial in enabling international payments. Cardano (ADA) Æ Customized smart contracts for several applications. Cardano (ADA) can improve security while also improving grading performance mostly thanks to its two-layer design. CardanoÆs environmental issues drew a lot of investors, which explains the ADA trading around \$0.5826 proof-of-stake. Although ADAÆs price swings soon may stay boring, experts expect an enormous \$3.50 objective by 2025, which investors shouldnÆt be astonished by especially considering the new potential Alonzo upgrading driving the Cardano ecosystem. CardanoÆs practical and scientific outlook will guarantee its competitiveness in this very competitive market of ours. Shiba Inu (SHIB), Meme King Shiba Inu replaced Dogecoin as the current meme

coin only to penetrate various markets including building its own blockchain, Shibarium, and funding other DeFi projects. Some of Shiba Inu's primary selling propositions are its cheap offers and more loyal fan aggregate valued at \$0.000010. With Shiba Inu defining its long-term goal for enhanced usefulness and acceptability reaching prices of \$0.0001 in the next bull run, expectations for Shiba Inu projection are strong. Targeting Shiba Inus is therefore a wise possibility on some level since it would be a high-risk high-reward venture. Ethereum (ETH) It is still a fundamental component of any investment portfolio since most of the advancements and innovations are being carried out in the blockchain resource Ethereum in which ETH is a vital component. ETH's value rose to over 2000 and demand grew mostly owing to its lowered power usage with the passage of its new verified assets, change from proof of work to proof of stake, and its smart contracts. Ethereum will be valued at a least \$5000 by 2025, so, it is a wise investment portfolio for those looking for a long-term investment. DeFi projects, and smart contracts. Conclusion: \$5000 by 2025. Though at a level of maximum fervor in the Bitcoin market, the next generation of billionaires will also be strategic with an eye toward highly promising sprouting tokens. From Rexas Finance, Scalability of Solana, and Transformational Riple, new RWA ideas from all provide special chances for development. By carefully diversifying across several assets, investors can themselves get ready for amazing profits as the market approaches its future height. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Bitcoin has led the cryptocurrency world for years, but a shift is underway. Other digital coins are gaining momentum and might soon surpass the leader. This article reveals five cryptocurrencies that are poised to outperform Bitcoin in 2024. Discover these emerging contenders that could redefine the crypto market. CYBRO Presale Climbs Past \$4 Million: A One-in-a-Million DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$4 million. This cutting-edge multichain DeFi platform offers investors unparalleled opportunities to maximize their earnings across various blockchains in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.04 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 100 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. Join CYBRO and aim for future returns up to 1200% Ethereum Eyes Recovery: Potential Break Above \$3823 Amid Neutral Sentiment and Recent Gains Ethereum's price is showing signs of recovery with a 6.64% gain over the past week and an 18.50% increase in the last month. Currently trading between \$2612.72 and \$3504.77, it is approaching the 10-day simple moving average of \$3068.60. The RSI at 47.20 suggests a neutral market sentiment. If the price breaks above the nearest resistance level at \$3823.66, it could target the second resistance at \$4715.71, offering significant potential upside. However, if it dips below the support level at \$2039.56, the next support is at \$1147.51. The MACD level of -26.07 indicates slight bearish momentum, but recent gains hint at a possible upward trend. Solana (SOL) Eyes Resistance Level After Recent Gains Solana (SOL) is trading between \$171.70 and \$231.97, showing signs of growth after rising 8.3% in a week and 37.51% in a month. The coin is neither overbought nor oversold, suggesting room for movement. If it breaks above the resistance level at \$253.79, the price could climb further. However, some indicators show momentum might be slowing down. Watching if the price stays above the 10-day average of \$210.88 and the 100-day average of \$213.97 could signal continued upward movement. Reaching the next resistance at \$314.06 would mean a significant gain from current levels. TRON Gains Momentum with 47% Growth Over Six Months TRON (TRX) is trading between \$0.16 and \$0.17, showing strong growth. Over the past week, it gained 13.22%, and over the month, it's up by 14.18%. In the last six months, TRX has soared by 47.41%. The nearest resistance is at \$0.17, with a second at \$0.18, which matches the 10-day and 100-day simple moving averages. The Relative Strength Index is at 59.75, indicating room for further growth before overbought conditions. The Stochastic oscillator stands at 89.60, reflecting high momentum. With these positive indicators, TRON may test the \$0.18 resistance level soon, potentially increasing its price further if it breaks through. SUI Cryptocurrency Shows Strong Growth, May Continue Upward Trend SUI has seen significant price gains recently. In the past week, its price increased by over 44%, and in the last month, it rose more than 63%. The current price ranges from about \$2 to \$3.50. The coin is approaching a resistance level at \$4. If it rises above this level, the next target could be around \$5. If the price falls, the nearest support is at \$1.30. The average prices over the past 10 and 100 days are both around \$3.20, showing an upward trend. Strength indicators suggest the coin is not overbought. With these factors, SUI may continue its upward movement. Conclusion While established altcoins like ETH, SOL, TRX, and SUI might show steady growth, their short-term potential appears limited. In contrast, CYBRO emerges as a standout opportunity for investors. As a technologically advanced DeFi platform, CYBRO offers unparalleled earning potential through AI-powered yield aggregation on the Blast blockchain. Its features include lucrative staking rewards, exclusive airdrops, and cashback on purchases. CYBRO ensures a superior user experience with seamless deposits and withdrawals. With a strong emphasis on transparency, compliance, and quality, CYBRO is attracting significant interest from crypto whales and influencers, marking it as a promising project in the current market. - Site: <https://cybro.io> - Twitter: https://twitter.com/cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto space has been going through a massive pullback, but it is clear that the currency market is preparing for an important bull run. Among the promising coins, Rexas Finance (RXS), Solana (SOL), Aptos (APT), Litecoin (LTC), and Chainlink (LINK) are likely to do exceptionally well in the next 4 months. Rexas Finance (RXS): Changing the Tokenization of Assets Rexas Finance is one of the companies spearheading the tokenization of real-world assets, allowing investors to buy fractions of shares from expensive assets such as property, fine art, and various copyrights. RXS, contrary to many speculative tokens, rides on strong utility and innovative aspects. During presale, RXS surpassed its target of \$8.6 million, with sales of 155 million tokens being completed. From \$0.03 in Stage 1 of the token sale, the price rose to \$0.08, while initial exchange rates for the coin are expected to reach \$0.20. In addition, the token of Rexas has already been listed on CoinMarketCap and CoinGecko, which has increased interest in the project. The tools served by the RXS ecosystem, such as the Rexas Token Builder, AI integration, and DeFi, provide a comprehensive package for investors. Also, the pause due to the \$1 million giveaway campaign allows the community to have strong ties, making RXS a force to be reckoned with in the market. Predicted at \$15 within a few years, RXS is something that every investor should buy if they want to enjoy the bull run. Solana (SOL): Blockchain With the Biggest Potential Solana has also emerged as a rival in the blockchain world with its impressive updates of low fees and high transaction rates. Today, its price is \$212.49, with a market capitalization of more than one hundred billion. The ecosystem supports thousands of dApps and has become the hub for numerous NFT projects. Solana can now reach a new price peak of \$260 in the next bull cycle due to its increasing use on the DeFi and NFT platforms. In portfolios, the Transactions Per Second of Solana stands at 65,000, which has made it a darling among developers and investors. Aptos (APT): The Layer-1 Blockchain Revolution Aptos is gaining quite the attention for its consensus mechanism and scalability coined as the "Solana killer." Currently, with a price tag of \$12.04 and a market capitalization of \$6.4 billion, Aptos has great prospects for exponential growth. The emphasis is on building the Aptos blockchain for the end-user experience with integrated developer tools for quick market penetration. With over a dozen partnerships and even more dapps in the making, there is a simple bullish narrative forming for Aptos to take advantage of the coming bull run. It would not be surprising if the APT token goes past \$20 in the next few months. Litecoin (LTC): Litecoin More Stable Cryptocurrencies Litecoin has always been seen as a more stable cryptocurrency and the recent activities only seem to complete the picture. Litecoin's current price is sitting at a whopping \$83.80, and it lets users enjoy low transaction fees and quick transaction times, which makes it more practical for people in everyday situations. The estimated Litecoin halving event in 2025 could result in plenty of price movement when the supply decreases. And given its past history and current rate of adoption, Litecoin will make a good addition to any portfolio in this bull run. Chainlink (LINK): Enabling Smart Contracts to Start Chainlink emphasizes economic stability in a decentralized manner by solving the questions of data integration into a smart contract. As of now, LINK is being sold at a \$13.47 price point with a market cap of about \$8.4 billion. In the future, LINK will be a vital link in the expansion process of decentralized financial services. The Chainlink staking feature is expected to become the life source and continued partnership with leading players in the blockchain ecosystem should create a lot of interest in LINK. Some analysts believe this increase in popularity of the DeFi sector means price um uptick LINK is also putting if between \$25 to \$30 Conclusion: RXS is the Most Promising One Even though each of these coins has its respective advantages, Rexas Finance (RXS) shines the brightest due to its revolutionary concept of tokenizing real-life assets! Given the clear development strategy, community relations, and successful performance during the presale stages, RXS Token has every chance to become the market leader in the next bull run. Investors wanting to ride the bull wave will find these five coins—RXS, Solana, Aptos, Litecoin, and Chainlink—provide a well-balanced mix of speculation and utility across the investor base. This trend will only get stronger as the bull cycle deepens. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - For the week, Ethereum's NFT sales reached \$67 million, a 111% rise over the previous week. - The average value of an NFT transaction increased significantly, with growing sales volumes. The substantial advances in the cryptocurrency market drove a weekly sales volume of \$181 million for non-fungible tokens. According to statistics compiled by CryptoSlam, a digital collectibles tracker, NFTs sales volume recorded for \$181 million in the seven days ending November 17th. Compared to the previous week, when NFTs only made \$93 million in sales, the data reveals a 94% rise. For the week, Ethereum's NFT sales reached \$67 million, a 111% rise over the previous week, putting it in first place among all blockchains. Close behind, Bitcoin had a 115% week-over-week increase in NFT sales, reaching \$60 million. Meanwhile, a total of \$45.5 million was generated in sales for Solana. Mythos Chain, Immutable, Polygon, and BNB Chain in a single week. The average value of an NFT transaction increased significantly with growing sales volumes. A week ago, the average value of an NFT sale was \$71.11. This week, it jumped 87% to \$133.68. Recovery Mode Underway the market had a recovery, ending its decline in the monthly sales charts, which coincided with the spike in weekly NFT sales volume. October sales of digital collectibles reached \$356 million, an increase of 18% from September's record monthly low of about \$300 million for NFTs. As a result, digital collectibles have broken a seven-month slump. Not only did sales volumes rise in October, but NFT transactions did as well. With a 42% rise over the previous month, the total number of NFT transactions for the month hit 7.2 million. The overall cryptocurrency markets have been trending upward, which has coincided with the meteoric rise in NFT sales volumes. Crypto markets, topped by Bitcoin, surged in the days after the US elections. Highlighted Crypto News Today: BlackRock Secures Commercial License in Abu Dhabi, Eyes AI Expansion

- Polter Finance lost over \$7 million in a Crypto hack after the attacker used TornadoCash to move funds from Ethereum to the Fantom blockchain. - The platform paused operations and, which was alerted by Cyvers Alerts, is working with authorities to trace the stolen assets and prevent future attacks. Polter Finance, a platform that lets people borrow and lend cryptocurrency caught into a Crypto hack on November 18, 2024, and over \$7 million was stolen. How the Crypto Hack has Happened The hacker used TornadoCash, which lets people send cryptocurrency. Which is to hide where the stolen funds came from. They first moved the money from Ethereum (another blockchain) to the Fantom blockchain. Where Polter Finance operates. Once the money was on Fantom, the hacker used a weakness in Polter Finance's system to steal over \$7 million in digital assets. What Polter Finance Did Next Once Polter Finance realized what had happened through Cyvers alerts, it quickly paused its platform to prevent more money from being stolen. It also notified services that help move assets between different blockchains to prevent the stolen funds from spreading further. Polter Finance traced the stolen money to some wallets linked to Binance, a major cryptocurrency exchange. The team is now working with authorities to figure out exactly how the hack happened and try to recover the stolen funds. Experts believe the attack could have happened because of an empty market's problem. It happens when a market has very few buyers or sellers. By making it easier for hackers to manipulate the system. Others think the problem might have been caused by incorrect price data used by the platform. This hack shows the risks of using platforms that allow cryptocurrency to be moved between blockchains. Especially when privacy tools like TornadoCash are involved. These tools let hackers hide their

identities, making it harder for platforms to track stolen funds. The DeFi industry must improve security to protect against future attacks like this. What's Next for Polter Finance? Polter Finance is still investigating the hack. They have even contacted the hacker, offering to drop legal action if the stolen money is returned. The platform is currently paused while they work to fix the problem. This incident reminds us that while DeFi offers many opportunities, it also comes with risks. The Polter Finance team is working hard to solve this issue, but better security is needed across the industry to keep users safe.

\$HBAR's price rose 43% with a market cap reaching \$4.49 billion. Speculation grows about Brian Brooks becoming the next SEC chairman. Hedera (\$HBAR) has seen a remarkable price surge, climbing by 43% in one day. Its current price stands at \$0.1193, with a 37.84% increase in market capitalization, now at \$4.49 billion. The trading volume surged by 29.33% to \$1.21 billion, showing strong investor activity. The market cap ratio of 26.05% highlights the high trading momentum. This growth comes alongside key developments that have caught the market's attention. Notably, speculation is rising about HBAR board member Brian Brooks potentially becoming the next chairman of the U.S. Securities and Exchange Commission (SEC). **ØYŠ BREAKING: \$HBAR Board Member @BrianBrooksUS potentially the next chairman of the SEC æ Shawn (@o0roogle) November 18, 2024 Brooks was nominated twice by President Donald Trump for a five-year term as Comptroller of the Currency, once during the 116th Congress, and once in the 117th Congress. The former CEO of æ, pic.twitter.com/jiRyQoYsCW Brooks, a former CEO of Binance US and previously nominated by President Donald Trump for Comptroller of the Currency, is considered a top candidate for this influential role. If appointed, Brooks's familiarity with blockchain and cryptocurrencies could create a more crypto-friendly regulatory environment, boosting investor confidence in assets like HBAR. In parallel, Canary Capital filed with the SEC to list a Hedera-focused exchange-traded fund (ETF), proposing broader accessibility to U.S. investors. This ETF filing, combined with the possibility of a Hedera-savvy SEC chair, further strengthens the bullish sentiment around Hedera. Technical levels for \$HBAR HBAR's technical indicators reveal strong bullish momentum. The price is breaking out of a symmetrical triangle on the weekly chart, supported by increasing trading volume. Consecutive large green candles indicate strong buying pressure. This suggests a continuation of the upward trend in the short term. Key resistance levels for HBAR are at \$0.1331 and \$0.1372. If these levels are breached, the next target is \$0.1562, with no significant resistance beyond that. To maintain its upward trajectory, these resistance levels must transform into support. The Relative Strength Index (RSI) for HBAR stands at 89.20, indicating overbought conditions as it crosses the typical overbought threshold of 70. This suggests strong buying momentum, but a potential cooldown or correction could follow if the RSI remains elevated for too long. The RSI average, calculated over a 14-day period, is currently 65.98. This value shows a steady upward trend in momentum, reflecting a gradual increase in buying interest over time. The Moving Averages (MA) provide further bullish signals. The 9-day MA is at \$0.07461, and the 21-day MA is at \$0.05911, with the shorter-term MA positioned significantly above the longer-term one. This bullish crossover is a strong indicator of an upward trend, signalling the potential for continued price growth. Highlighted Crypto News Today Will XRP Reach \$1.50 as Price Rallies 7% Continuing Bull Run?**

As Bitcoin continues to dominate the crypto headlines, several decentralized finance (DeFi) and traditional finance (TradFi) projects are quickly catching up. These altcoins present unique financial opportunities and are poised to outshine Bitcoin's functionality and potential rewards. One of these altcoins leading the charge is FX Guys, a PropFi project with robust staking, trader funding, and Trade2Earn incentives. Let's dive into the top three altcoins, including FX Guys, which are ready to make their mark. 1. FXGuys: The Top PropFi Altcoin Making Waves At the forefront of the PropFi movement, FX Guys (FXG) has been gaining traction for its all-encompassing ecosystem designed for traders, stakers, and investors. The project is currently in Stage 1 of its presale, with the FXG token priced at just \$0.03 after raising over \$1,000,000 from selling 68,000,000 tokens in a private round. So, what makes FX Guys stand out? Staking for Revenue and Profit Sharing One of FX Guys's major benefits is its Staking Program, which allows users to stake FXG tokens and earn up to 20% profit and revenue share from the broker's trading volume. This unique model rewards token holders and increases overall trading activity, making FX Guys a top contender in the best DeFi projects and PropFi sectors. Trader Funding Program and Development Ecosystem Another key advantage is its Trader Funding Program, which gives top retail traders access to up to \$500,000 in trading capital after passing a set of evaluations. This feature is ideal for traders looking to scale their operations, with an 80/20 profit split in the trader's favour, further solidifying FX Guys's position among the best proprietary trading firms and funded prop firms. Trade2Earn: Boosting Trading Volume FX Guys has incorporated a Trade2Earn program where every trade on the platform earns FXG tokens. This not only incentivizes more trades but also rewards users for their activity, leading to increased trading volumes across the platform. With no buy or sell tax and no KYC decentralized trading, the FX Guys is poised to challenge Bitcoin in its ability to offer diverse and trader-centric benefits. 2. Solana: The DeFi Powerhouse Another altcoin vying for the spotlight is Solana (SOL), which has earned its reputation as one of the fastest blockchains in the world. Solana's high transaction speed and low costs make it a favorite for DeFi applications, and it continues to lead among the best DeFi tokens in the market. Solana's focus on scalability has positioned it as a critical player in the evolving DeFi space, challenging Ethereum and even Bitcoin in certain respects. With Solana's vast ecosystem supporting decentralized exchanges, NFTs, and smart contracts, its utility continues to expand. For those interested in fast, secure, and scalable blockchain solutions, Solana is an altcoin that deserves attention. In comparison, FX Guys focuses more on traditional financial models with its unique Top PropFi Project features like broker-backed trading platforms and trader funding, offering a different value proposition for investors. 3. Aptos: A New DeFi Innovator Aptos (APT) has been making waves as one of the newest contenders in the DeFi space. Its focus on decentralized applications (dApps) and security enhancements places it among the best DeFi projects to watch. The blockchain protocol leverages a new language for smart contracts, ensuring higher efficiency and scalability for future applications. Aptos is quickly emerging as a futures prop firm competitor with its innovative technology and DeFi integration. While Aptos aims to revolutionize the DeFi ecosystem through its technology, the FX Guys offers a more robust trading environment with its suite of futures prop firms tools, including its Trade2Earn program, Staking, and Trader Funding Program. Both projects stand as powerful alternatives to traditional financial systems, offering investors new possibilities. Conclusion: Is Bitcoin's Reign Under Threat? Bitcoin may be the king of cryptocurrencies, but its next challenge comes from a wave of innovative altcoins like FXGuys, Solana, and Aptos. These projects offer unique incentives through staking, profit-sharing, or decentralized trading ecosystems. FX Guys, in particular, is making a strong case with its Trader Funding Program and Staking Program, positioning itself as one of the most exciting Top PropFi Projects on the market today. As the DeFi and PropFi ecosystems evolve, investors have many opportunities to diversify their portfolios beyond Bitcoin. With the ability to earn, stake, and trade in dynamic ecosystems like the FX Guys, these altcoins are ready to steal the spotlight in the cryptocurrency world. To find out more about FX Guys follow the links below: Presale | Website | Whitepaper | Socials | Audit Disclaimer: TheNewsCrypto does not endorse any content on this page. - Ripple's native token XRP has shown a price surge of 101% over the last 7 days. - The altcoin's daily trading volume has dipped by 54.70% as per CMC data. After the weekend slump, the crypto market has begun to show mixed signals. While Bitcoin has stagnated at the \$90K level, particular altcoins have continued in their upward rally. Meanwhile, regulatory measures by Trump's government have taken the spotlight within the sector. Moreover, the community has entertained rumors that Donald Trump will meet with crypto leaders soon. On the other hand, reverting to the cryptocurrency prices, Ethereum has docked at modest price movements, denying breakouts. However, Ripple's native token, XRP has drawn attention with significant price surges in the past day. The altcoin has factored in a price increase of 6.85% in the last 24 hours to reach current levels. Inferring its daily price chart, XRP in the Asian afternoon hours of November 17, was trading at \$1.06. It then rallied further to reach current trading levels. At the time of writing, XRP was trading at \$1.14 as per CMC data. Moreover, on Saturday the altcoin hit the \$1 milestone much to the joy of investors. Zooming out, over the past week, XRP has shown an incredible surge of 101.9% rallying from a low of \$0.5. Will XRP's Price Rally Continue? Ripple's native token has remained in a prolonged consolidation over the past two months as highlighted by XRP's price movements data. The current price breakout is further suggested by the Moving Average Convergence Divergence (MACD) signal line's sharp crossover above the MACD line. Additionally, the token's high volatility index indicates the recent change in trend. Its RVI value is 71.53 as per TradingView data. However, as indicated by the signal line, XRP's technical indicators suggest a positive trend in the token which can be expected to continue in the coming months. In such a case it can be expected to face resistance at \$1.24 and \$1.32. Meanwhile, Ripple and the SEC lawsuit persists. Over the past few weeks, there have been no updates regarding further legal procedures as attention has diverted to the US Elections. Highlighted Crypto News Today:

- Robert Kennedy Jr. has expressed pro-Bitcoin opinions several times over the past. - Donald Trump's new government sees multiple members having positive notions towards cryptocurrency. The cryptocurrency market is all set to begin another week, and with a headstart, too. Bitcoin's price has managed to hold above the \$90K level, and thus, it might be expected to reach new highs if the bullish cycle is sustained. Meanwhile, Ethereum receded to the 3.1K range over the weekend. On the other hand, the crypto regulatory space also remained vibrant in the past two days. In particular, Trump announced Robert F. Kennedy Jr. as the Health Secretary on November 15. The well-known personality has expressed pro-crypto opinions in the past. He also advocated for Bitcoin on a November 16 X post. Bitcoin is the currency of freedom, a hedge against inflation for middle class Americans, a remedy against the dollar's downgrade from the world's reserve currency, and the off-ramp from a ruinous national debt. Bitcoin will have no stronger advocate than Howard Lutnick. æ Robert F. Kennedy Jr (@RobertKennedyJr) November 16, 2024 Robert Kennedy Jr discussed that Bitcoin was the æ-currency of freedomæ and how it would act as a hedge against inflation. Previously, RFK Jr. also was known to have said that he attended the Bitcoin conference and had put a lot of his wealth into the asset. The health secretary discussed that Bitcoin would also be the æoff-rampæ from the USA's national debt. Trump's appointment of pro-crypto members in several leading roles has led to community members seeing it as a reflection of his promises. Does Trump's Appointment of Robert Kennedy Jr Reflect His Pro-Bitcoin Stance? Over the past few days, Donald Trump has made several announcements, forming his new government. The President-elect recently announced Elon Musk and Vivek Ramaswamy as leading members of the Department of Government Efficiency (DOGE). This saw the crypto community's interest in Bitcoin and Solana shift in favor of the æDOGE æ. Several leading members of the crypto community have also expressed their support for Bitcoin, including Robert F. Kennedy Jr. Furthermore, several other nations worldwide also show interest in cryptocurrency. This raises the question æ is Bitcoin finally receiving the long-awaited spotlight on the global level? Meanwhile, the crypto regulatory landscape has not yet materialized the different shifts that the community is expecting. However, the bullish crypto market has seen altcoins such as Solana hit new trading levels. Highlighted Crypto News Today:

- FLOKI surges post-Coinbase roadmap, hitting five-month price highs. - Analysts predict 500% gains, citing validation and strong fundamentals. FLOKI, an Ethereum-based meme coin, has captured market attention with a remarkable surge, reaching a five-month high of \$0.000283. This rally follows Coinbase's recent inclusion of FLOKI on its listing roadmap, marking a significant milestone for the dog-themed cryptocurrency. The token has gained 12% in the past 24 hours and 74% over the past week, trading at \$0.0002524 at the time of writing. The announcement spurred FLOKI's price to rise 21% in under an hour, supported by a trading volume increase of 46%. Analysts are optimistic about its potential, with some predicting a 500% price surge to \$0.0015732. Prominent crypto analysts view Coinbase's move as validation of FLOKI's fundamentals and utility, reinforcing market confidence. Moreover, Coinbase's listing roadmap has historically hinted at future listings, adding credibility to tokens. In addition to FLOKI, the exchange recently added Ethereum's PEPE and Solana's Dogwifhat (WIF) to its roadmap, signaling a growing acceptance of meme coins. FLOKI's rise comes amidst broader market corrections, showcasing its resilience and investor enthusiasm. Adding to the momentum, Coinbase announced a 3 billion FLOKI token distribution for eligible on-chain users, further incentivizing engagement. FLOKI Bulls To Hit New Heights? Technical indicators support the bullish outlook. It's Relative Strength Index (RSI) has surged to 71.42, suggesting overbought conditions but leaving room for continued growth. Historically, the RSI has exceeded 80 before corrections, implying the rally could persist. The Cloud analysis reflects strong upward momentum, with it's price well above critical support levels. Analysts forecast potential gains of 57%, with resistance at \$0.000349, though a retracement could test support at \$0.00016. FLOKI's rise underscores the impact of major exchange inclusions on meme coin performance, solidifying its position among the top 50 cryptocurrencies by market capitalization. As the market eyes regulatory shifts and evolving sentiment, it's bullish trajectory could redefine its standing in the crypto space. Highlighted News Of The Day

- Bitcoin's price has factored in an increase of 4.25% over the last 24 hours. The cryptocurrency's daily trading volume has dipped by 14.11% as per CMC data. As the crypto market enters the weekend slumber, Bitcoin has decided to stay upbeat. The cryptocurrency changed gears to alter its course in the bull run after the modest drop. In reflection, the overall market shows a 3.71% increase in market cap. Meanwhile, the crypto regulatory space has shown some activity in the past 24 hours. Other altcoins, such as Ethereum and Solana, have also surged following Bitcoin's bull run. The largest cryptocurrency has factored in a price increase of 4.25% over the past day. This has resulted in it once again testing the \$91k level after several attempts to break it in previous cycles. In the Asian morning hours of November 15, Bitcoin traded at a low of \$87,350 as prices dipped on Friday. However, following this, the cryptocurrency made a quick recovery to current levels. Additionally, the digital asset hit an intra-day high of \$91,709. At the time of writing, BTC was trading at \$91,356 as per CMC data. Meanwhile, several dormant BTC wallets have begun to show activity as the bull run accelerates. Recently, one particular Bitcoin miner who had remained inactive for nearly 14 years sold 2000 BTC in the past day as per Lookonchain reports. Additionally, several governmental institutions such as Pennsylvania have also expressed interest in Bitcoin reserves. Will Bitcoin Stay Above the \$90k Mark This Time? Inferring Bitcoin's price chart, reveals optimistic indications. For instance, the Chaikin Money Flow (CMF)'s value recedes at 0.28. This highlights the increased incoming money flow into the asset that can be observed in the market. Additionally, BTC's bull power indicator value stands at 1.54 while its bear power indicator value stands at 0.46 below zero. These indicators suggest an existing positive environment in the market and thus indicate that Bitcoin could potentially maintain price stability above the \$90,000 level. In such a case, the digital asset can face resistance at \$92,026 as current prices suggest breaking resistance at \$90,916. Finally, adding to the positive note, the memecoin sector has also shown significant price surges. Top memes such as DOGE and PEPE have reached new trading levels.

New generation of altcoins is emerging with the potential to surpass established giants like Ethereum. Innovative projects are capturing attention with unique features and strong community support. These tokens hint at significant growth before 2025, stirring excitement among investors and enthusiasts who are eager to discover the next big thing in crypto. One such contender is XYZVerse (XYZ), a pioneering memecoin that unites fans of football, basketball, MMA, and more within a single, vibrant ecosystem. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition's "bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. Own the field, earn while the crowd plays XYZ is more than just a benchmarker in the meme coin game; it's creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarket's massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the game! arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. Missed meme coin supercycle? By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOME's 5,000% takeoff and WIF's 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot! Currently undervalued, XYZ is going the distance to break new records! Rallying the community, securing the win XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem's direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live! don't miss out on this knockout 99,900% opportunity!<< Solana (SOL) Solana is making waves in the blockchain world with its focus on speed and scalability. While platforms like Ethereum and Cardano have dominated the space, Solana sets itself apart with its unique approach to handling transactions. It doesn't rely on sharding or second-layer solutions. Instead, Solana's architecture allows for fast transactions and flexible development options in multiple programming languages. At the heart of this ecosystem is the SOL coin. It's more than just a cryptocurrency; it's the fuel that powers transactions, runs custom programs, and rewards those who support the network. In the current market cycle, SOL is attracting attention from both developers and investors. Its high-capacity network is ideal for hosting decentralized applications (dapps) that require speed and efficiency. As more projects move to Solana, the demand for SOL could increase. Compared to other coins, SOL offers a combination of technology and potential that is hard to ignore. With the crypto market constantly evolving, coins that provide real solutions and scalability are in a strong position. Solana's approach to handling high activity without compromising on speed makes the SOL coin an attractive option in today's market. Sui (SUI) Sui is a new blockchain platform designed to make digital transactions fast, secure, and easy for everyone. Unlike traditional blockchains, Sui uses an object-focused model that helps solve common problems in other systems. This means developers can create apps that are both powerful and safe. With the Move programming language at its core, Sui offers a strong foundation for building the next generation of blockchain applications. Features like zkLogin simplify how users log in while sponsored transactions reduce costs, making the overall experience smoother and more accessible. In today's market, user experience is more important than ever. Sui stands out by breaking down the barriers that often make blockchain technology hard to use. Its focus on simplicity and accessibility could set it apart from other cryptocurrencies. As more people look for easy-to-use blockchain solutions, platforms like Sui may attract more attention. While the crypto market can be unpredictable, Sui's commitment to making blockchain user-friendly might make it an appealing choice for both developers and users in this evolving landscape. Conclusion Though SOL and SUI show promise, XYZVerse (XYZ) stands out as a pioneering sports memecoin poised for significant growth before 2025. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. Envision turning a few hundred dollars into millions within the next couple of years. Hidden within the vast crypto market are little-known coins with explosive potential. This article reveals five cryptocurrencies that could make a huge impact by 2025, offering a chance to convert a small investment into life-changing wealth. CYBRO Presale Achieves \$4 Million Milestone: A One-in-a-Million Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$4 million. This cutting-edge platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.04 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In an exciting development, CYBRO has also launched a referral program, offering 12% from direct referee's token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are sent weekly in USDT, and referees earn double CYBRO Points on their first deposit using the referral code. In addition to tokens, CYBRO introduces exclusive Points, providing even greater benefits for investors. These Points grant automatic entry into the CYBRO Airdrop, where the number of tokens you receive is proportional to the Points you hold. Up to 1 million Points are distributed weekly, earned by investing in CYBRO's DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 100 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Solana: A Scalable Platform for Decentralized Applications Solana is a blockchain platform focused on scalability. It provides a foundation for decentralized applications, competing with platforms like Ethereum and Cardano. Solana aims for faster transactions and offers flexible development options in multiple programming languages. Its native cryptocurrency, SOL, is central to the ecosystem. SOL facilitates transactions, runs custom programs, and rewards network supporters. It underpins the operation of the Solana ecosystem, rewarding participants and giving users access to various projects on the platform. Unlike some others, Solana avoids sharding or second-layer solutions for scalability. It seeks to attract developers and investors with its high-capacity network and potential for hosting high-activity products and services. SUI: A New Layer-1 Blockchain Aiming for Global Adoption Sui is a layer-1 blockchain platform designed to meet global adoption needs. It offers a secure, powerful, and scalable development platform. At its core, Sui uses a novel object-centric data model and the Move programming language. This approach addresses inefficiencies found in other blockchain architectures. Sui focuses on user experience by removing common barriers in blockchain interactions. With features like zkLogin, sponsored transactions, and programmable transaction blocks, Sui aims to make Web3 applications more accessible and user-friendly. Avalanche (AVAX) Layer-1 Blockchain with Customizable Subnets Avalanche is a Layer-1 blockchain that is eco-friendly and offers low fees. It can process up to 4,500 transactions per second and allows users to launch customizable subnets. Its hybrid consensus mechanism combines classical and Nakamoto principles, achieving transaction finality in less than 2 seconds. The platform includes three interoperable chains: X-Chain, C-Chain, and P-Chain, which handle transactions and smart contracts. AVAX, the native token, is used for transaction fees, securing the network through staking, and operating Subnets. The technology enables payments, staking, and the creation of custom tokens and blockchains within its ecosystem. Polkadot (DOT): Connecting Blockchains for a Scalable and Decentralized Future Polkadot is a decentralized protocol that allows different blockchains to communicate securely. It enables value and data to be shared between blockchains like Ethereum and Bitcoin without intermediaries. Polkadot uses parachains to improve speed and scalability, processing more transactions than Bitcoin and Ethereum. The DOT token is used for governance and staking in the network. Holders can participate in the development of the protocol and verify transactions. Polkadot was developed by Gavin Wood, co-creator of Ethereum, and is maintained by the Web3 Foundation. It aims to create a more interconnected and efficient blockchain ecosystem. Conclusion While coins like SOL, SUI, AVAX, and DOT have potential, their short-term gains may not match expectations. In contrast, CYBRO emerges as an advanced DeFi platform offering investors unmatched opportunities to maximize earnings. Through AI-powered yield aggregation on the Blast blockchain, CYBRO enhances profitability with lucrative staking rewards, exclusive airdrops, and cashback on purchases, offering a superior user experience. Seamless deposits and withdrawals, along with a strong emphasis on transparency, compliance, and quality, make CYBRO stand out. Interest from crypto whales and influencers underscores its promise. As the 2024 bull run gains momentum, CYBRO presents a compelling option for investors aiming for significant returns. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMDGQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Peanut the Squirrel (PNUT) saw a 40% increase and hit an all-time high at \$2.47. - Since its launch in early November, PNUT has skyrocketed by over 3480%, reflecting its rapid rise in value and popularity. The global crypto market is buzzing with the rapid rise of a new memecoin, Peanut the Squirrel (PNUT), which has surged by more than 490.70% in a single day. Today, the Solana-based memecoin PNUT reached a new all-time high of \$2.47 from a low of \$0.4181, which was recorded on Nov 13. This dramatic rise has pushed its market cap to \$1.88 billion, overtaking Popcat (SOL) and Brett (Based) to secure the 56th spot in the crypto rankings. Further, the 24-hour trading volume for PNUT skyrocketed to \$5.16 billion, an increase of over 85%. While the broader crypto market is experiencing a bull run fueled by the Donald Trump victory and Bitcoin's \$93K entry, PNUT's story is one to watch. But what's behind this sudden rise? The story begins with a viral tweet from Elon Musk, who posted that, "America was saved by a squirrel and a memecoin." His endorsement quickly caught fire, sparking massive interest in the token. Musk's involvement with memecoins is no secret, as his tweets have previously fueled the rapid rise of Dogecoin and Pepe. PNUT's rapid rise to a unique backstory. The coin was created in response to an incident where New York officials euthanized a pet squirrel named Peanut. The heartbreaking story sparked outrage, and figures like Musk voiced their dismay, generating a wave of support for the token. PNUT Memecoin Holds Strong Above \$1.8 After 40% Surge Things took a further turn for the better when Binance listed PNUT, boosting its legitimacy. With this milestone, it now ranks as the third-largest Solana-based memecoin, trailing dogwifhat (WIF) and Bonk (BONK). Since its launch in early November, PNUT has climbed by over 3480%, highlighting its rapid growth in value and popularity. By the time of writing, the PNUT price was adjusted to \$1.94 but still holding its foot strong above \$1.80. Additionally, memecoin's 24-hour surge of 40% makes it the largest daily gainer in the market. On the technical side, PNUT's RSI has hit 80.30, signaling that the asset is in an overbought zone and suggesting that a correction may be coming soon.

Still, with strong buying pressure reflected in the Chaikin Money Flow, the momentum doesn't seem to be slowing down anytime soon. Moreover, PNUt's rapid rise has made it one of the fastest-growing memecoins, joining the ranks of PEPE and WIF. Grand Cayman, Cayman Islands, November 13th, 2024, Chainwire With a 70-year legacy of offering investment solutions across diverse industries and asset classes, privately held VanEck now provides millions of customers access to SUI Investment firm VanEck has introduced a product representing SUI. VanEck, known for its financial products that provide access to Bitcoin, Ethereum, and Solana, now offers exposure to SUI, the token behind the groundbreaking Layer 1 blockchain recognized for its industry-leading performance and infinite horizontal scalability. This fully-collateralized financial instrument provides millions of investors access to SUI. With the new offering from VanEck, millions can now access SUI without needing to hold SUI in a crypto wallet. VanEck holds the referenced SUI tokens in a regulated custodian environment covered by each note, ensuring that the product's value tracks the underlying tokens' value. Like other financial products, the new VanEck offering enables users to easily invest and divest. The launch of VanEck's SUI-backed product is the latest demonstration of institutional confidence in SUI, following notable on-chain developments. These include partnerships with services like Copper, Zero Hash and Fordefi and the integration of stablecoins such as USDC, AUDS, and the stablecoin-like USDY. Over the past year, Sui has experienced remarkable growth, with total value locked (TVL) increasing by 430% and DeFi volume surging by 692%. In August, 2024, in another show of support, Grayscale, one of the world's largest crypto asset managers, launched its Grayscale Sui Trust. "We are excited to introduce this product as part of our growing portfolio of digital asset investment products," said Menno Martens, Crypto Specialist and Product Manager at VanEck. "Sui's proven track record and reputation as an industry leader, as well as its innovative and technological advancements, made this the next logical product to house in the portfolio. We believe this development will give investors a unique opportunity to access one of the most advanced blockchain networks available today." "The creation of this SUI-based product by VanEck is a pivotal moment for the Sui ecosystem and a significant vote of confidence in Sui's technology and long-term vision," said Cap Kim, Head of Marketing for the Sui Foundation. "VanEck is a trusted leader in the investment industry, and the decision to offer SUI as part of their product suite underscores the growing institutional interest in Sui. To learn more, visit <https://blog.sui.io/vaneck-investor-product/> or <https://www.vaneck.com/>. About Sui Sui is a first-of-its-kind Layer 1 blockchain and smart contract platform designed from the ground up to make digital asset ownership fast, private, secure, and accessible to everyone. Its object-centric model, based on the Move programming language, enables parallel execution, sub-second finality, and rich on-chain assets. With horizontally scalable processing and storage, Sui supports a wide range of applications with unrivaled speed at low cost. Sui is a step-function advancement in blockchain and a platform on which creators and developers can build amazing user-friendly experiences. For more information about Sui, users can visit <https://sui.io>. About VanEck VanEck has a history of looking beyond the financial markets to identify trends that are likely to create impactful investment opportunities. VanEck was one of the first U.S. asset managers to offer investors access to international markets. This set the tone for the firm's drive to identify asset classes and trends including gold investing in 1968, emerging markets in 1993, and Exchange Traded Funds in 2006 that subsequently shaped the investment management industry. Today, VanEck offers active and passive strategies with compelling exposures supported by well-designed investment processes. The firm's capabilities range from core investment opportunities to more specialized exposures to enhance portfolio diversification. VanEck's actively managed strategies are fueled by in-depth, bottom-up research and security selection from portfolio managers with direct experience in the sectors and regions in which they invest. Investability, liquidity, diversity, and transparency are key to the experienced decision-making around market and index selection underlying VanEck's passive strategies. Since VanEck's founding in 1955, putting its clients' interests first, in all market environments, has been at the heart of the firm's mission. Contact Sui Foundation media@sui.io

Pepe Coin (PEPE) is the token that has swept over the Bitcoin scene. PEPE has exceeded expectations by more than 969% and confirmed its ranking among the top meme currencies during the past year. But given such fast increases, investors wonder, can this fantasy last? And in the following bull run, how high might PEPE possibly rise? Let's examine expert forecasts and investigate whether this frog-themed coin has staying power and how another developing project, Rexas Finance, can present even more significant returns. Pepe Coin's Journey: From Meme to Market Powerhouse Often mentioned alongside Dogecoin and Shiba Inu, PEPE has become one of the most successful meme coins ever invented. Unlike most popular meme currencies, which are dog-themed, PEPE's frog mascot has managed to break through, especially remarkable since it accomplished this among the demanding conditions of a crypto winter. PEPE traded sideways for much of 2023 but kept a market worth above \$1 billion. Meme coins are causing waves as the crypto market gets ready for a fresh bull run; PEPE is leading the charge. Designed on Ethereum, PEPE distinguishes itself from other meme coins already popular on Solana by displaying resilience and promise as investor excitement returns to the market. PEPE Long-Term Price Forecast: \$25 Although meme currencies are erratic, PEPE should keep on its increasing slope until 2025 and beyond. Should the crypto market start, PEPE could gain more trading volume and a favorable attitude among meme coin aficionados. Though it is a big participant in the meme coin market, there is still plenty of opportunity for expansion. Leading meme coin dogecoin has a market capitalization of almost \$25 billion. Should PEPE match this, its price would have to rise by almost 6.25x. Keeping that aim in mind, by the end of 2025 we project PEPE will have a price of about \$0.000050. Under a somewhat optimistic scenario, PEPE might hit \$0.00010, therefore bringing its market capitalization to a startling \$42 billion. Rexas Finance (RXS): Maybe a More Profitable Prospect For those enthralled with PEPE's spectacular expansion, smart investors have also come across another developing project called Rexas Finance (RXS) which is also built on the Ethereum blockchain. Leading real-world asset (RWA) tokenizer, Rexas Finance provides a distinct kind of value, promising stability, creativity, and significant growth potential that might outperform even meme coins like PEPE. The continuous presale of Rexas Finance has attracted enormous support and shows no slowing down tendency. Recently ending, Stage 4 of the presale raised over \$5.4 million and gave early investors returns of more than 130%. In just two months. Rexas Finance, now in Stage 5, has already raised \$6,977,925 with a token price of \$0.07 and over 76% completion at this level. In expectation of the project's forthcoming IPO at \$0.20 on major exchanges, investors are feverishly acquiring RXS tokens, a possible gain of 186% for present buyers and 330% for those who joined earlier stages. Through its Millionaire Giveaway, a \$1 million prize pool in RXS tokens, Rexas Finance has also attracted notice. Twenty fortunate victors in this event stand to get RXS tokens valued at \$50,000 apiece. Investors who want to take part should finish community tasks and provide their ERC20 wallet addresses, therefore fostering a vibrant community surrounding the project. This project has drawn a lot of attention, therefore strengthening the market's visibility and reputation of credibility for it. Rexas Finance is getting ready for a first significant listing on three top-tier exchanges in Q1 2025. Originally priced at \$0.20, RXS is projected to see demand surge and higher trading activity, thereby offering liquidity and perhaps significant profits. Recent listings on CoinMarketCap and CoinGecko have made it simpler for investors to manage their holdings and track the progress of the presale, therefore strengthening faith in the future of the project. Rexas Finance is positioned to lead in the unexplored industry of real-world asset tokenization given the rising price of Bitcoin and generally optimistic crypto market. With some analysts projecting a significant gain of up to 200% by the end of 2025, the project's development potential is amazing. An empty choice for short-term gains, Rexas Finance offers an interesting substitute for investors looking for long-term development possibilities and a strong use case. Rexas Finance distinguishes itself as a potential competitor for investors wishing to profit from the forthcoming bull run with its creative approach to asset tokenization, continuous presale success, and active community projects. Both coins show interesting prospects whether your interests are drawn to the meme magic of PEPE or the real potential of RXS; but, Rexas Finance may provide a more solid route to millionaire status in the next crypto cycle. - The U.S. DOJ seeks to seize \$16M in crypto from a Binance account. - More than half of the tokens in the account were Solana. The U.S. Department of Justice (DOJ) has registered a civil forfeiture lawsuit to recover \$16 million worth of crypto assets, assumed to be linked to the controversial crypto exchange, FTX and its founder Sam Bankman-Fried. Among the crypto assets, more than half of the assets were held in Solana (SOL), amounting to around \$8.5 million. The other cryptocurrencies include Internet Computer (ICP), Avalanche (AVAX), Ripple (XRP), and Cardano (ADA). Notably, the DOJ claims that suspicious transactions were found within the Binance account, including near-daily stablecoin and Bitcoin deposits, which were converted into other assets employing over-the-counter (OTC) transactions. While Binance is not directly accused, the DOJ's investigation mentions the exchange's role in facilitating transactions linked to illicit activities. The funds held in the Binance account have increased in value due to the recovery of the crypto market. The Alleged Scheme These assets are believed to derive from a transfer orchestrated by Bankman-Fried in late 2021. As per the lawsuit, Bankman-Fried authorized the transfer of 40 million USDT from the Alameda Research wallet, intending to offer bribes to Chinese officials. The move was reportedly part of the effort to unfreeze \$1 billion worth of cryptocurrency assets frozen on two Chinese exchanges. Besides, the funds were traced through several private wallets. It eventually ended up in a Binance deposit account, whose activity spanned from December 2021 to December 2023. The Legal Battle Despite the conviction of Bankman-Fried's seven criminal charges, which include fraud and money laundering, the DOJ investigation into assets linked to FTX remains ongoing. Moreover, Bankman-Fried currently serving a 25-year sentence, has filed an appeal against his conviction. It claims that he was presumed guilty before he was even charged. The case adds more complexity to the ongoing asset recovery efforts for FTX creditors. As the FTX bankruptcy proceedings open, the firm has filed a lawsuit against Binance and its CEO, Changpeng Zhao to recover \$1.8 billion in transferred assets. Highlighted Crypto News

- Peanut the Squirrel (PNUT) soared 1505.29% since its debut in early November. - The memecoin's market cap surpassed the \$900 million mark. Solana-based memecoin Peanut the Squirrel (PNUT) surged over 97.3% over the past 24 hours to mark its new all-time high (ATH). Notably, Elon Musk's recent tweet on X, mentioning a "squirrel and memecoin" as the saviors of America, emerged as the stimulus behind the price rally. America was saved by a squirrel and a meme coin! "Elon Musk (@elonmusk) November 13, 2024 Certain activities of Tesla's CEO on social media have fueled the rallies of several memecoins. Dogecoin (DOGE) is the biggest beneficiary, as Musk has both directly and indirectly endorsed the coin. Recently, PNUT has emerged as another memecoin in this category alongside DOGE. This memecoin gained attention during the pre-election phase, recording impressive price rallies. Recently, crypto exchange Binance announced the listing of PNUT alongside another AI-related memecoin, ACT (Act 1: The AI Prophecy), sparking a rally in both coins and turning heads in the crypto community. So, how did PNUT rise to fame, and what is its connection to Elon Musk? Here's a brief story. In early November, PNUT originated in the crypto meme space to honor a "Peanut, the squirrel euthanized by New York's Department of Environmental Conservation (DEC). Musk supported the animal's justice on X, thereby spurring the story's visibility on the internet. Since its debut, PNUT price surged over 1627%, claiming a market share of \$931 million. At press time, the memecoin traded at \$0.9337. Peanut the Squirrel (PNUT) Price Trend Analysis 30 months ago, the crash of Terraform Labs' altcoin Terra Classic (LUNC), previously LUNA, from a high of \$119 to \$0, triggered the 2022 crypto bear market. Amid the ongoing crypto bull run, Solana memecoin PNUT jumped 147% from \$0.3854 to \$0.9890 in the last 30 hours. The hourly price chart shows the bullish trend of PNUT's current price action. Meanwhile, investor sentiment around the memecoin appears bullish, as two metrics "On-Balance Volume (OBV) and Chaikin Money Flow (CMF)" indicate this. The rise in OBV highlights increasing buying pressure, while the increase in CMF points to more capital flowing into PNUT. According to CoinMarketCap data, the daily trading volume of Peanut the Squirrel (PNUT) spiked 39.5% to reach \$1.78 billion. Disclaimer: The opinion expressed in this article is solely the author's. - BONK surged over 10%, trading at \$0.00003212. - The trading volume of the meme coin has soared over 175%. The global cryptocurrency market exhibits mixed signals, with assets fluctuating between gains and losses. The recent recovery of major assets has extended support to meme coins. However, at press time, prominent meme coins like DOGE and SHIB are recording double-digit declines. Despite this, the Solana-based meme coin BONK leads the pack of gainers in the early hours. The asset currently manages to settle within the top five gainers and chooses a bull run for the day. Breaking past a crucial resistance level at \$0.00002841, BONK currently trades at \$0.00003212, with a 10.38% gain. The meme coin's price climbed from a low of \$0.00002663 to a high of \$0.00003965. In addition, BONK's daily trading volume has reached \$2.31 billion. The market has recorded

\$7.18 million worth of BONK liquidated in the past 24 hours. The upside trajectory of BONK over the past seven days recorded over 47% gain. The meme coin began the week trading at a low of \$0.00002197, and eventually, the asset ascended to the current trading marks. Are New Highs Within Reach for BONK? BONK's ongoing market sentiment is neutral, as the daily relative strength index (RSI) settles at 62.78. The four-hour frame of the asset unveils the short-term 9-day moving average above the long-term 21-day moving average. The daily price chart of BONK suggests the recent upside correction. If the bulls could maintain the current momentum, the price of the meme coin might likely hit a high of \$0.00003828. Further gains might push the price of BONK to hit high targets. On the support side, if BONK loses its grip on the upside, the meme coin could retreat to its support zone at \$0.00002583. A steady decline could unfold if the meme coin continues to retreat. Besides, the technical analysis highlights the Moving Average Convergence Divergence (MACD) line over the signal line, exposing the meme coin's upward momentum and the incoming bull run. The Chaikin Money Flow (CMF) indicator is positioned at 0.17, which denotes the positive money flow and buying interest. Meanwhile, BONK's trading volume has increased by over 175%. Disclaimer: The opinion expressed in this chart is solely the author's. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News Bitcoin Price Steadies at \$86K Post Bull Run Hitting \$89K Milestone

As the year draws to a close, the cryptocurrency market is buzzing with promising tokens that could deliver significant gains. Leading analysts are spotlighting digital assets poised for remarkable growth. One standout is XYZVerse (XYZ), the first memecoin uniting sports fans from football to esports, aiming for substantial growth and blending meme culture with athletic passion. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition's bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. Own the field, earn while the crowd plays XYZ is more than just a benchmark in the meme coin game; it's creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarket's massive \$1 billion trading volume during the US election betting frenzy? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. Did you miss the meme coin supercycle? Own it by capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOME's 5,000% takeoff and WIF's 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot as currently undervalued, XYZ is going the distance to break new records! Rallying the community, securing the win XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem's direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. The XYZ presale is live and don't miss out on this knockout 99,900% opportunity! Solana (SOL) Solana is a blockchain platform built for speed and scalability. Unlike some of its competitors like Ethereum and Cardano, Solana focuses on handling many transactions quickly. This makes it a strong foundation for decentralized applications, or dApps. Its unique architecture allows for fast transactions and lets developers use different programming languages. At the heart of Solana is SOL, its native cryptocurrency. SOL is used to make transactions, run programs, and reward those who support the network. The SOL coin holds real value in the Solana ecosystem. It rewards network participants and gives users access to many projects on Solana. Unlike some others, Solana doesn't use sharding or second-layer solutions to scale up. This makes it attractive to developers and investors who want a high-capacity network. In the current market, SOL looks promising. Its ability to handle high activity could make it a top choice for hosting products and services. Compared to other coins, SOL offers speed and flexibility, which could set it apart in the growing crypto market. Pepe (PEPE) PEPE is a deflationary memecoin launched on Ethereum, paying homage to the iconic Pepe the Frog meme created by Matt Furie in the early 2000s. Aiming to ride the wave of popular meme coins like Shiba Inu and Dogecoin, PEPE seeks to establish itself as a leading meme-based cryptocurrency. It attracts the crypto community with a no-tax policy and embraces its lack of utility, keeping things pure, simple, and fun. In late April to May 2023, PEPE experienced an explosive surge, pushing its market cap to a peak of \$1.6 billion. Early holders saw significant gains, and a strong community of like-minded followers emerged. This phenomena sparked what some call a memecoin season, with other meme tokens experiencing dramatic rises and falls within hours. As the crypto market anticipates the next Bitcoin halving cycle, many enthusiasts wonder if PEPE will reach new highs. While its future is uncertain, PEPE's strong community support and meme-driven appeal keep it in the spotlight, making it an intriguing player in the current market landscape. Shiba Inu (SHIB) Shiba Inu (SHIB) is a cryptocurrency that started as a meme, inspired by Dogecoin (DOGE). But unlike Dogecoin, SHIB runs on the Ethereum blockchain. This means it can interact with Ethereum's network of decentralized apps. Launched in August 2020 by an anonymous developer named Ryoshi, SHIB began with a supply of one quadrillion tokens. Half of these tokens were sent to Vitalik Buterin, co-founder of Ethereum. Buterin donated a large portion to the India Covid Crypto Relief Fund and burned 40% of the supply, boosting SHIB's profile. SHIB's integration with Ethereum allows for more than just memes. It powers ShibaSwap, a decentralized exchange where users can trade tokens without a middleman. There are also plans for an NFT platform and a governance system where holders can vote on changes. This gives SHIB real utility and sets it apart from other meme coins. In the current market, with growing interest in decentralized finance (DeFi) and NFTs, SHIB might attract investors looking for coins with potential beyond hype. While the crypto market is volatile, SHIB's connection to Ethereum and its ambitious plans could make it a coin to watch. Sui (SUI) Sui is a new blockchain platform built to meet the needs of a global audience. It focuses on being secure, powerful, and able to grow with demand. Sui uses a unique way of handling data that centers on objects, making it different from other blockchains. It also uses the Move programming language, known for its safety. This combination helps Sui overcome common issues found in other blockchain systems. Importantly, Sui puts user experience first. With features like zkLogin, sponsored transactions, and programmable transaction blocks, it removes many of the hurdles people often face when using blockchain technology. Looking at its potential, Sui could make a significant impact in the blockchain world. Its emphasis on making applications accessible and easy to use sets it apart from many other platforms. In a market where user experience and scalability are increasingly important, Sui stands out. Compared to other coins, its focus on removing barriers could attract more users and developers. With current trends favoring technologies that are both powerful and user-friendly, Sui appears to be a promising option for those interested in the future of Web3. Conclusion While SOL, PEPE, SHIB, and SUI are promising, XYZVerse (XYZ) uniquely combines sports and memes, targeting massive growth and community benefits in the ongoing bull run. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. Whispers are circulating in the crypto community about undervalued altcoins primed for extraordinary growth. Seasoned investors hint at affordable tokens that could multiply in value, offering rare opportunities for significant returns. The market seems poised for those who can spot the next big breakout. One such contender is XYZVerse (XYZ), the pioneering memecoin uniting sports fans across football, basketball, MMA, and more, aiming to surpass previous record-breaking tokens with its unique community-driven approach. Dominate the Field with XYZ: The Next Meme Coin Champion! The game is on, and XYZ is leading the charge in the meme coin arena! This sensational all-sports meme token has hit the market with unstoppable momentum, knocking out weak competitors and scammy cryptos. As it charges ahead, XYZ is set to deliver jaw-dropping gains, leaving the likes of BOME and WIF far behind. With eyes on a staggering 99,900% growth, XYZ is ready to claim the meme coin crown in the next crypto bull marathon! Own the game, cash in as the bets roll in XYZ is the star player in XYZVerse's ultimate fusion of sports thrill and meme culture. This community-centered ecosystem is the perfect playground for crypto degens and sports fans alike, offering everything from entertainment apps to prediction markets. Think back to Polymarket's \$1 billion trading volume during the US elections betting frenzy, and now, picture that on steroids with XYZVerse. With millions of sports bettors getting ready to jump in the action, opportunities for early investors in XYZ are really huge! XYZ is currently undervalued, and with major listings on the way, presale participants stand to secure life-changing gains. Don't miss your shot at being part of the XYZ winning team! Ethereum (ETH) Ethereum is a leading blockchain platform that introduced smart contracts to the world. Created by Vitalik Buterin and launched in 2015, it has become the foundation for many decentralized apps, known as dApps. These apps range from finance to games, all running on Ethereum's network. In 2022, Ethereum shifted to a Proof-of-Stake system, making it more efficient and eco-friendly. Soon, it plans to introduce sharding, a technology that will make transactions faster and cheaper. Price predictions suggest that Ethereum could reach as high as \$6,580.53 next year, with estimates of continued growth up to 2030. This optimism is based on its past performance and patterns in the crypto market. Compared to other coins, Ethereum stands out because of its large ecosystem and ongoing improvements. With plans to enhance speed and reduce costs, Ethereum shows strong potential. In the current market cycle, ETH appears to be an attractive option for those interested in cryptocurrency's future. Solana (SOL) Solana is a blockchain platform built for speed and scalability. Unlike some of its competitors like Ethereum and Cardano, Solana focuses on handling many transactions quickly. This makes it a strong foundation for decentralized applications, or dApps. Its unique architecture allows for fast transactions and lets developers use different programming languages. At the heart of Solana is SOL, its native cryptocurrency. SOL is used to make transactions, run programs, and reward those who support the network. The SOL coin holds real value in the Solana ecosystem. It rewards network participants and gives users access to many projects on Solana. Unlike some others, Solana doesn't use sharding or second-layer solutions to scale up. This makes it attractive to developers and investors who want a high-capacity network. In the current market, SOL looks promising. Its ability to handle high activity could make it a top choice for hosting products and services. Compared to other coins, SOL offers speed and flexibility, which could set it apart in the growing crypto market. XRP (XRP) XRP is a cryptocurrency designed to make sending money across borders faster and cheaper. It doesn't rely on banks or central authorities. This means transactions are direct, secure, and can't be reversed. Created by Jed McCaleb, Arthur Britto, and David Schwartz, XRP started with 100 billion coins. The founders gave 80 billion to a company called Ripple. Ripple uses XRP to improve how money moves around the world. They even set aside 55 billion XRP to release slowly, keeping the supply in check. Many see XRP as a game-changer in the world of digital money. Its technology allows easy swapping between different currencies. This makes it useful for international payments. In the current market, XRP looks promising. While some cryptocurrencies are slow or have high fees, XRP offers quick and low-cost transactions. As global trade grows, the need for efficient cross-border payments increases. XRP could be a strong contender in meeting that demand compared to other coins. Dogecoin (DOGE) Dogecoin started as a joke in 2013. It used a Shiba Inu meme for its logo. Unlike Bitcoin, there's no limit to how many Dogecoins can exist. Every minute, 10,000 new coins are made. In 2021, its value shot up. Social media buzz and tweets from Elon Musk helped it become one of the top cryptocurrencies. Its total value went over \$50 billion. This showed how a strong community and online support can boost a coin's success. Today, Dogecoin is more than a meme. Its technology allows quick and easy transactions. Compared to other coins, it's abundant and affordable. Some people like it because it's friendly and fun. In the current market, many are watching Dogecoin closely. While its unlimited supply raises questions, its popularity keeps it in the spotlight. As the crypto world changes, Dogecoin might continue to surprise everyone. Conclusion While ETH, SOL, XRP, and DOGE have potential, XYZVerse (XYZ) aims for 20,000% growth by uniting sports fans in a unique, community-driven memecoin movement. You can find more information about XYZVerse (XYZ) here: Site, Telegram, X Disclaimer: TheNewsCrypto does not endorse any content on this page. - Fake Zoom link phishing attack led to \$6.09 million in stolen GIGA tokens. - Malware installed on victim's laptop drained crypto wallets, including 95.3M GIGA. A Gigachad (GIGA) token investor lost \$6.09 million after falling victim to a phishing attack through a fake Zoom meeting link. The large-scale sell-off caused an unusual price drop in the GIGA token on November 12, sparking community speculation before prominent investor aetstill in the Game confirmed the incident. In a statement on social media, Still in the Game disclosed the phishing attack, explaining, "I just want to be transparent" as the massive sell on GIGA today was due to one of my wallets being drained by a fake Zoom link. This hurts bad, but I will be back. I will always stay in the game. This proactive warning highlighted the dangers of increasingly sophisticated phishing methods targeting cryptocurrency investors. Meanwhile, Crypto investigation firm Scam Sniffer detailed that the investor had clicked on a

- Worldcoin has surged 23.55% in the last 24 hours reaching new trading levels. - The altcoin's daily trading volume surged by 79.14% as per CMC data. After nearly six months of speculations, the crypto market has finally witnessed the bull run that it was waiting for. With Bitcoin's rally, altcoins have followed suit in the upward movement over the past week. In the last 24 hours, the community rejoiced at the market cap reaching closer to the \$3 trillion mark. One specific altcoin, Worldcoin, also initiated its upward movement with a significant price surge. The altcoin has been maintaining upward movements in the past few days, however, particularly, in the last 24 hours, WLD has witnessed a price breakout. The altcoin's daily chart shows a price surge of 23.55% causing Worldcoin to reach a 28-day high of \$2.85. In the Asian afternoon hours of November 11, WLD was trading at a low of \$2.15 before moving upwards to the current levels. At the time of writing, the cryptocurrency was trading at \$2.63 as per CMC data. Zooming out, over the past week WLD has rallied by 53.63% rising from a low of \$1.6. The token also surpassed the \$2 milestone in the last 7 days. Additionally, the cryptocurrency also recently rebranded World and has launched its own blockchain. World Chain went live on October 17 as per reports. Will Worldcoin Rally to Further Highs? Inferring to technical indicators, WLD's Moving Average Convergence Divergence (MACD) shows an existing positive trend as per TradingView data. The altcoin's signal line recently crossed over the MACD line suggesting the above inference. Furthermore, the token's bull power indicator value stands at 1.21 while its bear power indicator value is at a low of 0.78. These indicators and the prevailing external conditions in the market highlight expectations for Worldcoin to continue its upward rally. In such a case, the altcoin can be expected to face resistance at \$2.65 and \$2.96. Meanwhile, other altcoins such as DOGE and SOLANA have also factored in bullish movements in the last 24 hours. Highlighted Crypto News Today:

The meme coin frenzy shows no signs of slowing, and now, even investors from top blockchains like SOL, Bitcoin, and Polkadot (DOT) are turning their attention to a new and exciting project on the SUI blockchain: Suiroto (\$SHIN). With a unique Naruto inspired theme and an enthusiastic community, Suiroto is quickly becoming the talk of the SUI ecosystem. Suiroto's \$SHIN presale launched recently and has already raised over 5,000 SUI within hours. It's clear that Suiroto's combination of community driven features and ambitious vision is drawing interest from all corners of the crypto world. Why Investors Are Choosing Suiroto Suiroto is one of the first meme community driven projects that offers real value to early supporters on SUI. Here's why SOL, BTC, DOT, and SUI investors are taking profits to get involved - Early Investment Opportunity: Meme coins have a history of delivering substantial returns to those who get in early. The \$SHIN presale gives investors the chance to acquire tokens before the public listing, which opens up the potential for significant returns. - Presale Success: Raising over 5,000 SUI in just a few hours highlights the demand for Suiroto. This presale success speaks to the project's appeal, driven by features like staking, clan battles, and exclusive Ninja Scroll NFTs that provide \$SHIN holders with additional perks. Listing at a 50% Higher Price: Once the presale concludes, Suiroto will be listed on Cetus Protocol, the SUI blockchain's largest DEX, at a price 50% higher than the presale. This gives presale participants a major advantage, offering a chance to buy \$SHIN at an exclusive rate. - Whale Attention: Here's where it gets really interesting. Word on the street is that whales from Solana, Polkadot, Ethereum, Bitcoin and other blockchains are jumping in on Suiroto as their next big play. When the big money starts circling, you know something's up. Suiroto Presale Details The \$SHIN presale is structured to be fair and accessible: - Total Supply: 100 Million \$SHIN Tokens - Presale Allocation: 50 Million \$SHIN Tokens (50% of total supply) - Presale Duration: 30 Days - No Minimum or Maximum Contribution: Fair for everyone - Price: 1 \$SHIN = 0.002 SUI How to Buy \$SHIN in the Presale Getting involved in Suiroto's presale is straightforward: - Set Up a SUI Wallet: Choose a compatible wallet like SUI Wallet or Suiet. - Purchase SUI: You'll need SUI tokens, which you can get from major exchanges like Binance or Coinbase. - Visit Suiroto's Presale Page: Fund your wallet and go to suiroto.com/ and send your SUI to the presale address. - Track Your Allocation: Use the Suiroto dashboard to see your \$SHIN allocation based on the total SUI contributed. Once the presale ends, \$SHIN tokens will be airdropped directly to participants, giving them immediate access to their holdings. Don't Miss Out on Suiroto's Presale! With its presale now live and momentum building, Suiroto is quickly establishing itself as one of the most exciting projects on the SUI blockchain. Early investors are already securing their spots, and with a listing price set to be 50% higher than presale, the potential for returns is clear. Stay Connected with Suiroto: - Website: suiroto.com - X: [x.com/SuiRotoMeme](https://twitter.com/SuiRotoMeme) - Telegram: t.me/suiroto - Discord: discord.gg/bn7fUFEWQR - Email: nick.burton@suiroto.com Secure your \$SHIN and join the Suiroto adventure today! Leading cloud liquidity infrastructure Orderly Network has announced that it has expanded to Avalanche, a high-performance blockchain platform designed to support custom blockchain networks and decentralized applications. It solves issues with scalability, centralization, and poor transaction speeds that were present in previous blockchain systems. Avalanche is renowned for its efficiency; it can complete a transaction in less than two seconds and execute over 4,500 transactions per second. Avalanche's consensus process, which securely validates transactions, is one of its distinctive features. This system, which sets a high bar for blockchain technology, is designed to be safe, quick, and energy-efficient using the patented Avalanche consensus. By combining all orders into one shared orderbook across many chains, Orderly Network's cloud liquidity infrastructure improves trading efficiency. Deeper liquidity and narrower spreads are provided by this method, which unifies the liquidity landscape. Built on top of the OP Stack, the Orderly Chain serves as the settlement layer and ledger for all transactions by combining LayerZero's cross-chain messaging protocol with Celestia's data availability. Builders can quickly implement futures trading solutions and create a wide variety of financial products for traders using Orderly's cutting-edge on-chain orderbook and deep liquidity solutions. Through front-end interfaces linked to Orderly's sophisticated perps infrastructure Orderly reduces the risks involved in cross-chain bridging and wrapped asset transfer, freeing developers to concentrate on improving user experience. Polygon, Arbitrum, Optimism, Base, Ethereum mainnet, and Mantle are the six chains that Orderly now supports; Solana will be added shortly. This Avalanche expansion improves liquidity and expands access to the ecosystem by enabling traders on Avalanche to easily communicate with EVM and non-EVM traders from other well-known chains. This expansion

is an important turning point for Orderly Network and demonstrates its dedication to increasing liquidity availability and developing safer, more effective trading options. Orderly is positioned to link an even larger community of developers and traders by integrating with Avalanche, encouraging innovation and establishing new benchmarks for cross-chain trading in the future.

Bitcoin is signaling a potential surge, sparking renewed excitement in the cryptocurrency market. As the leading digital coin hints at a bullish movement, eyes are turning toward alternative cryptocurrencies that might be poised for significant gains. The anticipation of an altcoin upswing is fueling interest among those seeking the next standout performers in the crypto realm. Among these promising contenders is XYZVerse (XYZ), a unique memecoin that unites sports fans across various disciplines, blending meme culture with athletic enthusiasm in a community-driven ecosystem. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€” bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphants like BOME and WIF trailing in its wake. ðŸ’ Own the field, earn while the crowd plays ðŸ’ XYZ is more than just a benchmark in the meme coin game; itâ€™s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€™s massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. ðŸ’ Missed meme coin supercycle? ðŸ’ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOMEâ€™s 5,000% takeoff and WIFâ€™s 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot â€” currently undervalued, XYZ is going the distance to break new records! ðŸ’ Rallying the community, securing the win ðŸ’ XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystemâ€™s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live â€” donâ€™t miss out on this knockout 99,900% opportunity!<< Ethereum (ETH) Ethereum has revolutionized the blockchain world since its launch in 2015 by Vitalik Buterin. As the first to introduce smart contracts, it opened the door to a vast ecosystem of decentralized applications (dApps). These applications power everything from finance to gaming without the need for intermediaries. With Layer 2 solutions like Arbitrum and Polygon, Ethereum has enhanced transaction speeds and reduced costs, making the network more efficient. The shift to Proof-of-Stake with the Merge in 2022 marked a significant evolution, improving energy efficiency and scalability. Upcoming features like sharding aim to further boost performance, solidifying Ethereumâ€™s role at the forefront of blockchain innovation. Ether (ETH), the native currency of Ethereum, is central to this ecosystem. It facilitates transactions, rewards those who secure the network through staking, and acts as a valuable asset and collateral. Based on past price movements and patterns like the Bitcoin halving cycles, some predictions suggest that ETH could reach highs of \$6,580.53 next year and have a yearly low of \$2,700.31 by 2025. In the current market cycle, Ethereumâ€™s continuous development and strong community support make it stand out among cryptocurrencies. Compared to others, its commitment to decentralization and efficiency positions it as a promising option in the evolving digital landscape. XRP (XRP) Imagine sending money across the world as easily as sending an email. Thatâ€™s the promise of XRP, a cryptocurrency on the XRP Ledger. Created by Jed McCaleb, Arthur Britto, and David Schwartz, XRP is fast, low-cost, and open to everyone. With no central authority, transactions are quick, secure, and irreversible. You donâ€™t need a bank account to use it, making it accessible everywhere. XRPâ€™s goal is seamless money movement, no matter your location or currency. XRP could change how we think about payments. Its technology allows near-instant transfers with minimal fees, a big advantage over traditional systems and other cryptocurrencies. While some coins are stores of value, XRP aims to bridge currencies globally. In the current market, XRP stands out due to its real-world use cases and support from Ripple. Though crypto markets are volatile, XRPâ€™s focus on practical utility could make it attractive for those eyeing the future of digital payments. Solana (SOL) Solana is shaking up the blockchain world with its focus on speed and scalability. Like Ethereum and Cardano, it supports decentralized applications, known as dapps. What makes Solana stand out is its ability to process transactions quickly. This is great news for developers looking to build apps that need fast and reliable networks. At the heart of Solana is SOL, its native cryptocurrency. People use SOL to make transactions, run programs, and support the network. Those who help keep the network running earn rewards in SOL. The potential of Solana lies in its unique approach to handling more transactions without getting bogged down. Unlike some other platforms, it doesnâ€™t rely on sharding or adding extra layers to scale up. This means itâ€™s simpler and potentially more efficient. In the current market, SOL is catching the eye of investors and developers alike. With high capacity and speed, Solana could host products and services that need a lot of activity. Compared to older platforms that struggle with speed and high fees, Solana offers a promising alternative. For those watching market trends, SOL looks like an attractive option in todayâ€™s crypto landscape. Cardano (ADA) Cardano is making waves in the cryptocurrency world with its native token, ADA. Unlike many traditional blockchains, Cardano is built with sustainability and scalability at its core. It uses the Ouroboros proof-of-stake mechanism, which is far more energy-efficient than the energy-hungry proof-of-work models like Bitcoinâ€™s. This means Cardano can process transactions without the hefty environmental cost. Its innovative two-layer system separates transaction processing and smart contract computations. The Cardano Settlement Layer handles the transactions, while the Cardano Computing Layer manages smart contracts. This design allows Cardano to potentially process up to a million transactions per second, making it one of the fastest in the industry. In the current market, ADA stands out as a promising option. With growing concerns about the environmental impact of cryptocurrencies, Cardanoâ€™s green approach is attracting attention. While Ethereumâ€™s ETH has been a leader in smart contracts, Cardano offers a compelling alternative with lower fees and higher efficiency. The introduction of Cardano native tokens in March 2021 has expanded its capabilities, allowing for secure and cost-effective interactions with smart contracts. As decentralized finance apps, crypto tokens, and blockchain games continue to grow, Cardanoâ€™s sustainable platform positions ADA as a strong contender in the evolving crypto landscape. Conclusion ETH, XRP, SOL, and ADA are promising, but XYZVerse, the first all-sport memecoin, targets 20,000% growth by blending meme culture and sports in a community-driven ecosystem. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. Shiba Inu, once a sensation in the cryptocurrency arena, has seen a significant drop from its peak value, causing many to question its ongoing allure. As its momentum wanes, investors are on the lookout for fresh opportunities that could offer substantial returns. Emerging tokens are catching attention, showing promise to potentially outshine established players in the market. One such token is XYZVerse (XYZ), the first all-sport memecoin uniting fans across football, basketball, MMA, and eSports, aiming to become a cultural icon in both sports and crypto. Dominate the Field with XYZ: The Next Meme Coin Champion! The game is on, and XYZ is leading the charge in the meme coin arena! This sensational all-sports meme token has hit the market with unstoppable momentum, knocking out weak competitors and scammy cryptos. As it charges ahead, XYZ is set to deliver jaw-dropping gains, leaving the likes of BOME and WIF far behind. With eyes on a staggering 99,900% growth, XYZ is ready to claim the meme coin crown in the next crypto bull marathon! ðŸ’. Rule the game, cash in as the bets roll in ðŸ’. XYZ is the star player in XYZVerse â€” the ultimate fusion of sports thrill and meme culture. This community-centered ecosystem is the perfect playground for crypto degens and sports fans alike, offering everything from entertainment apps to prediction markets. Think back to Polymarketâ€™s \$1 billion trading volume during the US elections betting frenzy, and now picture that amplified with XYZVerse. With millions of sports bettors getting ready to jump into the action, opportunities for early investors in XYZ are really huge! XYZ is currently undervalued, and with major listings on the way, presale participants stand to secure life-changing gains. >>Donâ€™t miss your shot at being part of the XYZ winning team!<< Dogwifhat (WIF) Dogwifhat (WIF) is the latest dog-themed meme coin catching attention on the Solana blockchain. Inspired by the viral Dogwifhat meme, this coin embraces the fun and quirky side of internet culture. Meme coins like WIF are known for building strong communities around shared jokes and viral trends. They stand out by turning internet memes into digital assets, creating a sense of camaraderie among holders who enjoy being part of something humorous and light-hearted. What makes WIF interesting is its potential to grow within the vibrant Solana ecosystem. Solanaâ€™s fast and low-cost transactions could give WIF an edge over meme coins on other platforms. In a market where meme coins like Dogecoin and Shiba Inu have shown that community and hype can drive significant attention, WIF might attract those looking for the next big thing. While the crypto market is always unpredictable, and meme coins are especially volatile, the unique charm of Dogwifhat could make it an appealing choice for enthusiasts who appreciate both memes and the potential for high-risk, high-reward investments. Pepe (PEPE) PEPE is a new memecoin launched on Ethereum as a tribute to the famous Pepe the Frog internet meme created by Matt Furie. Embracing its roots, PEPE keeps things simple and fun, appealing to the crypto community with a no-tax policy and by being upfront about its lack of utility. In late April to May 2023, PEPE experienced an explosive surge, with its market cap reaching a peak of \$1.6 billion. Early holders saw astonishing gains, and the coin attracted a strong community of like-minded enthusiasts. The rise of PEPE has sparked what some call a â€”memecoin season,â€” with other meme-based cryptocurrencies experiencing wild price swings. PEPEâ€™s roadmap includes listings on major exchanges and a planned â€”memecoin takeover.â€” With the upcoming Bitcoin halving and hopes for a new bull run, many are keeping a close eye on PEPE. While itâ€™s uncertain how the coin will perform in the long term, its rapid ascent and dedicated following suggest it could continue to make waves in the current market cycle, much like Dogecoin and Shiba Inu did before it. Conclusion With SHIBâ€™s decline, alternatives like WIF and PEPE offer new prospects. Yet, XYZVerse (XYZ) stands out by merging memes and sports in a community-driven platform aiming for significant growth. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

Turning a small investment into a life-changing sum is the dream of many crypto enthusiasts. Meme coins have shown the potential to deliver extraordinary returns in a short time. Some emerging tokens are capturing attention with the possibility of explosive growth, offering chances to multiply an initial stake many times over. XYZVerse (XYZ), a pioneering memecoin merging sports fandom and internet culture, aims for huge growth by creating a community-driven platform where enthusiasts can engage and benefit. The All-Sports Meme Token You Canâ€™t Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution! Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets. Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election â€” now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding â€” and your rewards will slam dunk through the roof! >>>XYZ presale is your first-quarter chance to get in before the mind-blowing explosion!<<< In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOMEâ€™s 5,000% rise or WIFâ€™s 1,000% rally â€” XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here â€” get in before the crowd storms the field, and youâ€™ll be sitting on way bigger returns! Shiba Inu (SHIB) Shiba Inu (SHIB) is a cryptocurrency that started as a joke but is now turning heads. Inspired by Dogecoin, it sets itself apart by running on the Ethereum blockchain. This means it can work with many other apps and tools in the Ethereum world. Launched in August 2020 by someone named Ryoshi, SHIB began with a whopping one quadrillion tokens. Half of these tokens were given to Vitalik Buterin, one of the creators of Ethereum. He donated a big chunk to help with COVID relief in India and destroyed (or â€”burnedâ€”) 40% of the total tokens, making the remaining SHIB more valuable. Unlike Dogecoin, SHIBâ€™s connection to Ethereum allows it to do more than just be a meme. It has its own decentralized exchange called ShibaSwap, where people can trade tokens without a middleman. SHIB also plans to introduce its own platform for digital art (NFTs) and a system where holders can vote on decisions (a DAO). These developments show that SHIB wants to be more useful. In the current market, where people are looking for coins with real-world uses, SHIBâ€™s plans could make it more attractive to investors compared to other meme coins. Dogwifhat (WIF) Dogwifhat (WIF) is the latest dog-themed meme coin catching attention on the Solana blockchain. Inspired by the viral Dogwifhat meme, this coin embraces the fun and quirky side of internet culture. Meme coins like WIF are known for building strong communities around shared jokes and viral trends. They stand out

by turning internet memes into digital assets, creating a sense of camaraderie among holders who enjoy being part of something humorous and light-hearted. What makes WIF interesting is its potential to grow within the vibrant Solana ecosystem. Solana's fast and low-cost transactions could give WIF an edge over meme coins on other platforms. In a market where meme coins like Dogecoin and Shiba Inu have shown that community and hype can drive significant attention, WIF might attract those looking for the next big thing. While the crypto market is always unpredictable, and meme coins are especially volatile, the unique charm of Dogwifhat could make it an appealing choice for enthusiasts who appreciate both memes and the potential for high-risk, high-reward investments. Dogecoin (DOGE) Back in 2013, Dogecoin started as a joke. Billy Marcus and Jackson Palmer created it as a fun alternative to serious cryptocurrencies like Bitcoin. With a Shiba Inu dog as its logo, it quickly caught the internet's attention. Unlike Bitcoin, which is scarce, Dogecoin was made to be abundant. New coins are mined every minute, and there's no cap on how many can exist. In 2021, something surprising happened. Dogecoin's value soared, reaching over \$50 billion in market cap. Social media buzz, especially from Elon Musk, turned this meme coin into a top ten cryptocurrency. Now, people are asking if Dogecoin has real potential. Its technology isn't as advanced as some newer coins, but its strong community keeps it going. The limitless supply might seem like a problem, but it also means Dogecoin can stay affordable. In the current market, where many look for the next big thing, Dogecoin stands out for its simplicity and charm. While it may not have the cutting-edge features of other cryptocurrencies, its popularity and the backing of influential figures make it interesting to watch. Whether it's a good investment now depends on where you think the market is headed, but Dogecoin's journey shows that even a joke can turn into something serious. Pepe (PEPE) PEPE is a new memecoin launched on Ethereum as a tribute to the famous Pepe the Frog internet meme created by Matt Furie. Embracing its roots, PEPE keeps things simple and fun, appealing to the crypto community with a no-tax policy and by being upfront about its lack of utility. In late April to May 2023, PEPE experienced an explosive surge, with its market cap reaching a peak of \$1.6 billion. Early holders saw astonishing gains, and the coin attracted a strong community of like-minded enthusiasts. The rise of PEPE has sparked what some call a "memecoin season," with other meme-based cryptocurrencies experiencing wild price swings. PEPE's roadmap includes listings on major exchanges and a planned "memecoin takeover." With the upcoming Bitcoin halving and hopes for a new bull run, many are keeping a close eye on PEPE. While it's uncertain how the coin will perform in the long term, its rapid ascent and dedicated following suggest it could continue to make waves in the current market cycle. Much like Dogecoin and Shiba Inu did before it, PEPE has a strong potential. But XYZVerse combines sports and meme culture, aiming for massive growth and community-driven success. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. Sonic SVM is happy to announce that its Web3 Applayer, Sonic X has surpassed a critical milestone of 1 million KYC-verified users, representing a pivotal success in Web3 adoption via TikTok. This milestone emphasizes Sonic's dedication to establishing solid infrastructure and a user-friendly distribution platform, Sonic X, which allows TikTok users to simply interact in the decentralized web and explore blockchain-powered apps. With the help of Sonic X, a TikTok native game based on Sonic SVM, users can quickly find and engage with a variety of Web3 games in the comfortable setting of TikTok. The Sonic X team has made full use of account abstraction, resulting in a smooth and easy onboarding process for users who are not crypto-native. Although a Solana wallet is created automatically on the backend, users can play the games available on Sonic X without ever leaving the TikTok app by logging in with their TikTok account. Chris Zhu, Co-founder and CEO of Sonic stated: "Achieving 1 million KYC-verified users is a testament to Sonic's dedication to bridging the gap between mainstream social media and Web3. Sonic X was designed with accessibility and engagement in mind, and we're proud to have created an experience that brings the benefits of blockchain technology to a large, active audience on TikTok." This significant growth has been facilitated by the Applayer's distinctive features, which include an aggregation page for Web3 games, an interactive scoreboard for Sonic X's popular tap-to-earn game, and a task page where players can perform tasks for prizes. Sonic is positioned as a leader in Web3 gaming and social media engagement thanks to these tools, which create a rich and rewarding environment for users. The first game to be released on Sonic X to access the TikTok Applayer ecosystem was recently announced by Sonic. This milestone opens the door for a wider adoption of Web3 and decentralized technologies by reaffirming Sonic SVM's dedication to innovation and user engagement. With more plans to expand the Applayer's functionality and incorporate more Web3 applications that empower users, Sonic is continuing to build on this success. Go to the official Sonic SVM website to learn more about the Applayer.

FX Guys (\$FXG) is steadily becoming a leading contender in the DeFi space. The platform is capturing the attention of investors with its innovative offerings, and its Defi Tokens Price Protection As a leading DeFi platform, FX Guys has a lot to offer. From its innovative presale, to its comprehensive ecosystem possibilities have positioned \$FXG as the hottest buy of the year, outpacing top altcoins like SUI and GOAT! FX Guys Takes the Crypto Market by Storm: Over 100 Million Tokens Sold In just a few weeks since its debut, \$FXG's presale has been gaining momentum. With over 100 million tokens sold, the Defi token now ranks as the hottest buy of the year. But what makes \$FXG so special? \$FXG is the native token and backbone of the ground-breaking decentralized trading platform, FX Guys. One of the amazing features of this platform is its staking program. Offering up to 20% annual profit from the trading volume, FX Guys allows token holders to earn passive income while keeping their assets locked. It's perfect for those looking to make their crypto work for them. For ambitious traders, the platform offers a prop funding program that's hard to find elsewhere. Pass a trading challenge, and you could be managing a funded account worth up to \$500,000 with a generous profit split of 80/20 in favor of the trader. This makes FX Guys an ideal platform for skilled traders to scale their operations without risking personal capital. One of the biggest draws of FX Guys is its commitment to a truly decentralized trading environment. The platform cuts out buy and sell taxes, meaning more value for every dollar invested. Plus, there's no need for KYC verification. Users can simply connect their wallets and start trading or staking. The opportunities, simplicity, and privacy that FX Guys offers are what many traders have been waiting for in the crypto space. These features not only ensure the stability of FX Guys' platform but have also attracted thousands of users. Besides the growth potential of the Defi token price, these amazing perks alone set FX Guys apart from other tokens like SUI and GOAT. Sui's TVL Surge Hits \$1.135 Billion, But Defi Token Price Dips: What's Next? Sui's blockchain recently reached a significant milestone, with its Total Value Locked (TVL) hitting \$1.135 billion on October 15, 2024. This surge has positively impacted Sui's entire blockchain ecosystem, pushing its market cap to \$6.47 billion before slightly dipping to \$5.88 billion by October 20. However, despite Sui's impressive growth, the price performance of the SUI DeFi token has been bearish. Between October 15 and October 20, the token's value dropped by 8%, from \$2.24 to \$2.07. This decline is attributed to increased selling pressure from traders. Despite the dip, SUI has managed to hold steady near the \$2 mark, suggesting a level of resilience. Looking ahead, market analysts suggest that the strong blockchain fundamentals could support the token's stability with its growing TVL and steady blockchain performance. Experts predict SUI will likely maintain the \$2 level in the coming weeks, offering a solid foundation for future growth. GOAT's Potential Soars Amid Crypto.com Listing and Market Buzz Solana's meme coin, Goatseus Maximus (GOAT), has seen substantial price gains following the news of its listing on Crypto.com. Announced on October 16, 2024, the listing allows Crypto.com's extensive user base to trade GOAT with USD, EUR, and over 20 other fiat currencies, improving the token's market accessibility. Following its Crypto.com, GOAT's price surged by 176%, jumping from \$0.192 to \$0.531 between October 16 and October 19. Despite a subsequent 48% dip to \$0.276 by October 20, market projections remain optimistic. Given its growing market participation, analysts predict that GOAT could regain the \$0.5 level by the end of November. From Presale to Profit: The \$FXG Defi Token Price is Set to Surge With a 35% allocation from its total supply of 835 million \$FXG tokens on Ethereum's chain, the presale offers tokens at a discount that's hard to ignore. Stage 1 of the public presale is currently offering tokens at \$0.03, and by the time it hits the market at \$0.10, investors should expect more than a 200% gain. But the potential doesn't stop at price gains. \$FXG tokens offer access to exclusive trading challenges, the ability to pay for platform fees, and opportunities to earn even more through the platform's Trade Earn program, where each trade contributes to your token balance. With this real-world utility coupled with the FX Guys' platform's strategic market position, crypto market experts are expecting a 100% increase for the Defi token in 2025! To find out more about FX Guys follow the links below: Website | Whitepaper | Socials | Audit Exclusive FX Guys Promo Code: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Dogwifhat (WIF) price surged to \$3.09 with a 23.08% increase in the last 24 hours. - Trading volume spiked by 316.53%, reaching \$2.36 billion, signaling high interest. The meme-inspired cryptocurrency Dogwifhat (WIF) has been gaining substantial traction in recent market activity. At present, Dogwifhat's price stands at \$3.09, showing a 23.08% increase in the past 24 hours. Trading volume surged significantly, reaching \$2.36 billion, a remarkable 316.53% rise, which indicates high buying interest. Its market cap has grown to \$3 billion, with a market cap ratio of 77.55%, suggesting substantial engagement in circulating supply. Given the current technical setup, Dogwifhat's price has the potential to sustain its upward momentum. Should it break past the \$3.22 resistance, we could see an accelerated rally, driven by both technical factors and market sentiment. Can WIF Overcome Key Resistance? Dogwifhat's chart reveals critical indicators signaling possible future price action. The Price chart shows that the immediate support level for WIF lies around \$2.54. This level has previously held firm, indicating resilience. Conversely, the resistance level stands around \$3.22, and breaking past this point could signify a strong bullish move. Should the price breach this resistance, WIF could potentially rally further, drawing in additional investors and leading to new highs. If the price fails to surpass this resistance, a short-term pullback may occur, though the support at \$2.54 is expected to cushion significant declines. Dogwifhat's momentum indicators reveal strong upward trends. The Relative Strength Index (RSI) is currently at 65.91, nearing the overbought zone. This suggests strong buying momentum. Additionally, the RSI average stands around 49.34, slightly below the current RSI, suggesting that Dogwifhat may have additional upside potential if buying pressure continues. The moving averages reinforce the bullish outlook for Dogwifhat. The 9-day moving average recently crossed above the 21-day moving average, forming a bullish crossover. The 9-day moving average is currently positioned at \$2.38, while the 21-day moving average sits at \$2.40, both below the current price. This alignment of moving averages beneath the price level further underscores the prevailing bullish sentiment in the market. If these moving averages continue in an upward trajectory, they could provide additional support for WIF's price, solidifying its standing above the current support and resistance levels. However, with the RSI nearing overbought territory, traders may need to exercise caution for a possible consolidation or minor pullback. This anticipated pullback could allow the market to gather strength for a further bullish push, particularly if the price manages to maintain levels above the 9-day and 21-day moving averages. Highlighted Crypto News Today SUI Takes Another Chance at a Bull Run As Altcoin Season Begins

- Sui hit a new all-time high propelled by the current bull run in the crypto market. - The altcoin's daily trading volume surged by 55.15% as per CMC data. Several altcoins are rallying in price movements over the past week. After Bitcoin claimed new All time highs thrice in the last few days, the cryptocurrency market has proceeded onto a full bullish trend. Almost every cryptocurrency has hit new trading levels rising from its previous slumps or retracing to previous highs. Notably, one particular altcoin that has taken to the spotlight multiple times is Sui Network's SUI. Amid the Altcoin season beginning, as speculated by the community, SUI has once again shown signs of establishing a bullish comeback. Specifically, in the last 24 hours, the cryptocurrency has rallied 9.07% surpassing the \$3 milestone. At the beginning of the day, the altcoin was trading at the \$2.8 level before surpassing the aforementioned milestone. Additionally, SUI's daily trading volume has also surged by 55.15%. At the time of writing, Sui was trading at \$3.15 as per CMC data. Notably, the altcoin also hit a new ATH of \$3.28 in the last 24 hours, surpassing its previous high that stood at \$2.38. Contrary to other altcoins, SUI had initially begun its bull run during the month of September, although it was not linear. The altcoin witnessed several price dips that at times overshadowed the upward trend. However, SUI has now utilized the market momentum to pump its prices. This has once again drawn market attention to SUI. Will SUI Sustain its Bull Run? On inferring the technical indicators, the altcoin's Chaikin's Money Flow (CMF) value stands at a positive 0.30. This would highlight an increased flow of capital and subsequently, the existing upward trend. Furthermore, SUI's bull power indicator value lies at 1.5, while its bear power indicator value holds at a low of 0.44. This further confirms the sustenance of the bull run. On the other hand, the cryptocurrency has also exhibited increased volatility as per TradingView data. Its RVI stands at a high of 83.11. Thus, in order to further confirm its bull run, SUI prices must steady from the current fluctuations. Meanwhile, other altcoins such as DOGE and Solana have also shown upward movements in the past few days. Highlighted Crypto News

Today:

- Bitcoin crosses \$80,000 for the first time, with a market cap exceeding \$1.5 trillion. - BlackRock and Fidelity ETFs add over \$1.6 billion to Bitcoin, signaling institutional demand. Bitcoin's price has soared past the \$81,000 mark, setting a new record in market history, with the cryptocurrency reaching a market cap of over \$1.5 trillion just days after Donald Trump's election as President of the United States. Tokens including Ethereum, Dogecoin, and Cardano, have also seen notable gains, reflecting broader bullish sentiment in the crypto market. During his campaign, Trump promised to make the U.S. a global crypto leader, proposing a strategic Bitcoin reserve and pledging to appoint pro-crypto regulators. Since his victory on November 6, Bitcoin has surged by 15.65%, marking its best weekly performance since February. The current Bitcoin rally builds on a roughly 81% increase in 2024, spurred by strong demand for U.S.-based Bitcoin ETFs and interest rate cuts. This growth rate has positioned BTC as an outperformer relative to traditional investments like stocks and gold. ETF activity, particularly from BlackRock, has played a substantial role in this upward trend. BlackRock recorded its largest-ever Bitcoin inflow, adding \$1.2 billion in Bitcoin holdings last week. This influx signals institutional confidence in Bitcoin, further amplifying anticipation for a prolonged bull run, with analysts projecting that Bitcoin could approach the \$100,000 mark in the coming weeks. Bitcoin Withdrawals Surge as RSI Signals Bullish Momentum In a recent research note, Alex Thorn, head of research at Galaxy Digital, highlighted the potential for a "golden era" for crypto under Trump's administration. Trump's pro-crypto stance, combined with a team of crypto advocates, could lead to significant policy shifts benefiting the industry. Meanwhile, recent data on Binance reveals intensified withdrawals, suggesting that major holders are moving their assets off exchanges to secure them. In the past hour alone, five new wallets withdrew 745.5 BTC, worth \$59 million. Since November 6, a total of 32 fresh wallets have withdrawn 5,364 BTC, equating to \$425 million, reflecting a trend of heightened outflows from Binance. Technical analysis supports the bullish sentiment, with Bitcoin's Relative Strength Index (RSI) currently overbought at 78.67, indicating strong buying momentum. The 9-day and 21-day moving averages continue to trend upward, with recent crossovers reinforcing upward momentum. If Bitcoin breaks its nearest resistance level of \$82,000, it could continue its ascent toward the highly anticipated \$100,000 mark. On the downside, support levels stand at \$77,500 and \$74,700, where prices may find stability if a correction occurs.

- Bitcoin remains undervalued according to long-term indicators. - ETF inflows and strong technicals support continued growth. Bitcoin (BTC) reached an all-time high today, surging to \$77,000. Currently trading around \$76,683, BTC has seen a 0.96% increase over the past day, with a trading volume of approximately \$51.33 billion. This brings its market capitalization to \$1.52 trillion, holding a market cap ratio of 3.38%. The latest rally indicates sustained demand, supported by both technical indicators and substantial inflows into BTC-focused ETFs. The milestone is supported by several key indicators that suggest there's room for further growth, though caution is advised as the \$80,000 level could present some retracement risks. Recent ETF flows have added further volatility to Bitcoin's movements, especially amid the heightened focus during the U.S. election period. Notably, BTC ETFs saw their second-largest outflow on November 4, followed by record inflows on November 7. BlackRock, a prominent institutional investor, increased its BTC holdings by 16,254 BTC, valued at approximately \$1.25 billion, demonstrating solid support for Bitcoin's growth and fueling optimism among investors. This heightened crowd enthusiasm often signals overextension, which could lead to a retracement as profit-taking behavior sets in. The RSI, holding steady at 61.87, suggests moderate upward momentum, while the recent "Golden Cross" between the 50-day and 200-day moving averages indicates a bullish trend with potential for continued gains. The Five Indicators For BTC The Bitcoin Rainbow Chart, a long-term valuation tool, continues to show Bitcoin as undervalued, indicating potential for further price appreciation. The updated Rainbow2023 Chart places BTC in the "cheap" zone, suggesting that even at \$77K, Bitcoin may still be far from its peak. 1/ The price of Bitcoin experienced two major crashes in August! "Lookonchain (Lookonchain) August 29, 2024 will it keep dropping or bounce back from the bottom? Let's use 5 indicators to decide whether to escape from the Bitcoin top. pic.twitter.com/C3DZDFwcx Meanwhile, the Relative Strength Index (RSI) currently stands at 61.87, which is below the overbought threshold of 70. This implies that Bitcoin is not overbought territory and supports continued growth without signaling an immediate risk of reversal. However, this level should be monitored for potential changes with sentiment turning bullish. The 200-week Moving Average Heatmap further reinforces the possibility of additional upside, as Bitcoin remains in the "blue" zone, a signal that the price has not yet reached a top. This indicator suggests a favorable environment for holding or buying, pointing to further gains ahead. Likewise, the Cumulative Value Days Destroyed (CVDD) indicator, which typically highlights undervaluation, shows Bitcoin is still in a favorable buy zone, adding weight to the idea that BTC hasn't yet touched historically significant peak levels. The 2-Year MA Multiplier also indicates that Bitcoin is positioned for growth, as it remains between the red and green lines, a range that has traditionally signaled more upside potential. Bitcoin currently finds strong support around \$73,500, with resistance at \$77,280. Should BTC break through this resistance, the next target could be \$80,000. However, Santiment has observed increased FOMO (fear of missing out) among investors as Bitcoin approaches the \$80,000 mark. Highlighted Crypto News Today Vitalik Buterin Envisions a Wider Scope for Prediction Markets

The new L1 blockchain of the DTX Exchange has generated significant attention in the crypto space, which has propelled Chainlink (LINK) and Arbitrum (ARB) upwards. This announcement has investors expecting a reversal on numerous cryptocurrencies with analysts expecting DTX to reach \$2. The interest in DTX has risen as the trading platform plans to combine its high-frequency trading offering with a broad lineup of assets, including both conventional and innovative ones. Chainlink (LINK) Sees Gains Amid CCIP Mainnet Launch Chainlink (LINK) has been on an upward trend in the past few days, with the mainnet release of the Cross-Chain Interoperability Protocol (CCIP). Self-serve, decentralized deployment, zero-slippage transfer, and other usability improvements are also provided, and industry insiders are convinced that they will help Chainlink become more competitive in the cross-chain market. This week, Sergey Nazarov, the co-founder of Chainlink discussed the future of finance in the blockchain environment and the expanding cooperation between Chainlink and SWIFT at SmartCon. Link to Chainlink Goat Herd to continue reading, Chainlink has been collaborating with SWIFT to enable blockchain-based transactions on financial messaging on the SWIFT network. Pilot tests should start next year to enable banks to originate digital asset transactions over SWIFT. This initiative puts Chainlink at the forefront of the new blockchain finance stack, thus logically increasing the utilization of LINK as one of the foundational layers in the emerging ecosystem. Arbitrum (ARB) Faces Volatility Despite Positive Market Trends The ARB token, used in Arbitrum, an Ethereum Layer 2 scaling solution, has also declined in price and is currently trading at \$0.5, down from \$0.54 per token last week. However, there has been a recent slump in the trading activity in ARB but volumes of trading has been registered to have risen by 8% According to the analysis, it is evident that the enlargement of the Bollinger bands around ARB is due to high volatility and it will be attractive to short-term traders. Analysts believe in the possibility to witness further ARB's value increase knowing the increasing significance of Layer 2 solutions as Ethereum evolves. The market cap ranking for the current analysis is ranked putting the company in a strategic position in the market despite of the recent oscillations. DTX Exchange Presale Gains Momentum with Layer 1 Blockchain Launch DTX Exchange, which is in the fourth presale round at the moment, is benefiting from the novel Layer 1 blockchain called VulcanX. Some investors, in their funding early-stage funding, offered \$6.3 million to the platform, which is a good indication. The native token of the DTX ecosystem which will cost \$0.08 in the presale is set to rise to \$1 by the end of this year, furthermore, experts believe that DTX could skyrocket 1000%. DTX intends to combine the features of centralized and decentralized trading components for its users, wherein users get non-custodial storage, an on-chain order book, and wallet-based trading facilities. It will have both centralized and decentralized components to facilitate trading and provide access to over 100,000 financial instruments, including stocks, forex, commodities, and cryptocurrencies along with issuing and managing various financial products derived from them, such as contracts for difference and others. Additionally, the platform has a high-speed VulcanX blockchain that can process over 100,000 transactions per second thus catering to the needs of high-frequency traders. Experts Anticipate DTX Rally as Broader Crypto Market Shows Bullish Trends Analysts have highlighted the fact that the cryptocurrency could probably reach a high of \$2 in the coming months in line with trading activities on the DTX. This prediction is in line with other predictions observed in the cryptocurrency market, for instance, the bull's presentation for coins like Chainlink (LINK) and Ethereum (ETH). For instance, Ethereum is lately trading at over \$2,500 or thereabout and is predicted to head even higher with potential resistances expected to be around \$6,000. The DTX presale grants voting rights to token holders through staking, which will be meaningful to investors who like to engage. This governance model coupled with diversity in assets, and high-speed handling inherent in the adoption of exchange puts DTX in the right position in the decentralized financial (DeFi) industry. At the rate set by DTX, if they reach the projected uptick, then they are as valuable as tokens such as Dogecoin (DOGE) or even TRON (TRX). Therefore, as DTX Exchange is constantly adding new amenities to its VulcanX blockchain, fast growth may attract both institutional and retail investors, which means the emergence of a new market. The shifting political climate is stirring excitement in the cryptocurrency market. Memecoins are drawing attention as investors speculate on assets that could experience remarkable growth. With recent developments, certain digital tokens are poised to capture significant interest from traders looking for potential high-return opportunities. Among these promising contenders is XYZVerse (XYZ), a memecoin uniting sports fans across various disciplines in a unique ecosystem that blends meme culture with athletic passion. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction market. Picture this: Popcat, hitting \$1 billion in trading volume by the US Presidential Election XYZVerse ecosystem is set to keep expanding "and your rewards will slam dunk through the roof! >>>XYZ presale is your first-quarter chance to get in before the mind-blowing explosion!<<< In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME's 5,000% rise or WIF's 1,000% rally " XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here " get in before the crowd storms the field, and you'll be sitting on way bigger returns! Popcat (POPCAT) Remember the adorable cat that took the internet by storm in October 2020? POPCAT is back, but this time, it's making waves in the cryptocurrency scene. Inspired by the viral meme of Oatmeal, the cat with the hilarious open and closed mouth images, POPCAT has become a meme coin capturing the hearts of crypto enthusiasts. This token doesn't carry any financial promises or inherent value. It's all about fun and bringing a touch of joy to the often serious world of digital currencies. In a market filled with complex projects and high-stakes investments, POPCAT stands out by embracing simplicity and entertainment. While it doesn't boast groundbreaking technology or utility, its charm lies in its community and the smiles it brings. Similar to other meme coins like Dogecoin and Shiba Inu, POPCAT thrives on internet culture and community engagement. With the current market embracing meme tokens and the power of social media, POPCAT could be a delightful addition to the crypto conversation. It's not about financial gain but about being part of a lighthearted movement that's spreading positivity in the crypto space. Bonk Coin (BONK) BONK is a new memecoin on the Solana blockchain that's catching everyone's attention. With a cute Shiba Inu as its mascot, BONK aims to shake up the crypto world by giving power back to the community. Unlike other coins controlled by big investors, BONK is all about its users. It surged over 100% after getting listed on Coinbase, one of the largest crypto exchanges. In a bold move, the team behind BONK airdropped half of its total supply to 10,000 people in Solana's NFT and DeFi projects. By mid-December 2023, BONK had become the third-largest memecoin by market cap, soaring more than 10,000% since the start of the year. Despite the challenges that memecoins often face, like wild price swings and massive supply, BONK shows promise. It's becoming a key part of the growing Solana ecosystem with plans that include launching a decentralized exchange called Bonkswap. This integration sets it apart from other memecoins that lack real utility. In the current market cycle, where investors look for coins with strong communities and real-world use, BONK stands out. Compared to other memecoins, BONK's focus on empowering its users and building useful applications makes it an attractive option. As the crypto market evolves, BONK could be a coin to watch. Conclusion POPCAT and BONK are poised for significant gains, but XYZVerse (XYZ) uniquely unites sports fans in a community-driven memecoin aiming for massive growth and cultural impact. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

As political currents shift, meme-based cryptocurrencies are gaining newfound attention, with forecasts predicting substantial gains amid recent developments. A trio of these tokens stands out, poised for remarkable growth. Enthusiasts and investors are closely watching these assets, anticipating notable returns as they align with prevailing trends. Leading the way is XYZVerse (XYZ), a pioneering memecoin uniting fans of various sports and eSports, aiming to surpass previous market successes through a unique blend of meme culture and athletic enthusiasm. The All-Sports Meme Token You Can't Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where dreams can score big off the growing demand for prediction markets. Picture this: Polymarket hitting \$1 billion in trading volume during the US Presidential election. At the time, the hype of meme coins and the thrill of sports betting, with millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding and your rewards will slam dunk through the roof! >>>XYZ presale is your first-quarter chance to get in before the mind-blowing explosion!<<< In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME's 5,000% rise or WIF's 1,000% rally - XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here - get in before the crowd storms the field, and you'll be sitting on way bigger returns! Popcat (POPCAT) Remember the adorable cat that took the internet by storm in October 2020? POPCAT is back, but this time, it's making waves in the cryptocurrency scene. Inspired by the viral meme of Oatmeal, the cat with the hilarious open and closed mouth images, POPCAT has become a meme coin capturing the hearts of crypto enthusiasts. This token doesn't carry any financial promises or inherent value. It's all about fun and bringing a touch of joy to the often serious world of digital currencies. In a market filled with complex projects and high-stakes investments, POPCAT stands out by embracing simplicity and entertainment. While it doesn't boast groundbreaking technology or utility, its charm lies in its community and the smiles it brings. Similar to other meme coins like Dogecoin and Shiba Inu, POPCAT thrives on internet culture and community engagement. With the current market embracing meme tokens and the power of social media, POPCAT could be a delightful addition to the crypto conversation. It's not about financial gain but about being part of a lighthearted movement that's spreading positivity in the crypto space. Dogwifhat (WIF) Dogwifhat (WIF) is capturing hearts as the newest dog-themed meme coin on the Solana blockchain. Inspired by the viral Dogwifhat meme, WIF combines internet culture with cryptocurrency. Meme coins thrive on community and viral trends, often drawing from popular memes or pop culture moments. Dog-themed tokens, in particular, have a special place among crypto enthusiasts, adding a playful twist to the market. What sets WIF apart is its foundation on the Solana blockchain, known for fast transactions and low fees. This technology could give WIF an edge over other meme coins on slower networks. In the current market, where community-driven projects are gaining attention, WIF's growing popularity might make it stand out. While meme coins are unpredictable, the fun and engagement they offer can be appealing. Comparing WIF to other tokens, its unique meme origin and technological base could make it an attractive option for those looking to explore new trends. Conclusion POPCAT and WIF are promising, but XYZVerse is better: the first all-sport memecoin, aiming for 20,000% growth and uniting sports fans in a unique community. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- First Neiro On Ethereum (NEIRO) reached a new all-time high of \$0.002496. - The memecoin has been showing a consistent upward trend, with a 24-hour gain of over 22.5%. Today, Bitcoin (BTC) held steady at around \$76K during Asian trading hours on Friday after hitting an all-time high of \$76,943. Other leading altcoins such as Ethereum (ETH), Solana (SOL), Cardano (ADA), and Chainlink (LINK) also landed in the green chart, with the overall Market Fear & Greed Index reaching 72 (greed) out of 100, as per CMC data. Amid this surge, First Neiro On Ethereum (NEIRO), a relatively new memecoin, stole the spotlight, marking a 24-hour gain of over 22.5% and setting a new all-time high of \$0.002496. This record-breaking performance surpassed its previous high, reached just a day earlier on November 7. At the time of writing, NEIRO was trading at \$0.002365 with a market cap of \$994 million after dipping to an intraday low of \$0.002046. The memecoin operates on the Ethereum blockchain and has gained attention for its community-driven nature and a total supply of 1 billion tokens. With no buy or sell tax and no team tokens, NEIRO aims to maintain a decentralized and user-focused approach, drawing comparisons to popular tokens like Dogecoin (DOGE). While NEIRO made impressive strides, meme coins such as Dogecoin (DOGE), Shiba Inu (SHIB), and others only saw modest gains between 1% and 3%. NEIRO's 24-Hour Technical Outlook A closer look at NEIRO's technical chart shows a steady upward trend, with the 3-day moving average crossing above the 21-day moving average, a bullish signal in technical analysis. The Chaikin Money Flow (CMF) at 0.27 suggests positive buying pressure, indicating more money flowing into the asset. However, with an RSI of 80, NEIRO is showing signs of being overbought, which could lead to a price pullback. If this occurs, the memecoin could face initial support at \$0.001636, potentially pushing the price down to \$0.001239. Despite this, if the bullish momentum continues, the memecoin may push even higher, aiming for a new all-time high above \$0.0025. Highlighted Crypto News Today:

- BlockTower Capital's crypto investments' current valuation is \$16.3 million. - Uniswap (UNI) is the dominant DeFi token in the firm's portfolio. Crypto investment firm BlockTower Capital reportedly purchased \$7 million in prominent DeFi tokens from various crypto trading platforms in the last 12 hours, as tracked by blockchain analytics platform Lookonchain. As Lookonchain reports, the firm's acquisitions focused on two major tokens - Uniswap (UNI) and Aave (AAVE). Based on etherscan data, it acquired 489,791 UNI, valued at \$4.35 million, and 15,578 AAVE, worth \$2.86 million, from 5 different trading platforms. BlockTower Capital appears to be buying DeFi tokens. Lookonchain (lookonchain) November 8, 2024 In the past 8 hours, #BlockTowerCapital received 15,580 AAVE(\$2.87M) and 237,396 UNI(\$2.11M) from #Wintermute, #FalconX, #Cumberland, #B2C2Group, and #GalaxyDigital.https://t.co/8xgOWrHTJ2 pic.twitter.com/RQ0szdPFfW data revealed that BlockTower Capital bought 252,396 UNI and 3,256 AAVE from trading firm Wintermute, alongside 227,632 UNI from crypto brokerage FalconX. The firm also acquired 2,356 UNI and 12,322 AAVE from crypto market maker Cumberland, in addition to 2,356 UNI from Galaxy Digital and 5,051 UNI from B2C2 Group. Earlier in October, BlockTower executed a major EIGEN accumulation move. As per Lookonchain data, the firm traded Maker (MKR) for 653K EIGEN tokens. The current valuation of its crypto portfolio exceeds \$16.3 million, while the last 24-hour 15% token acquisitions streak didn't pass the time UNI traded at \$8.10 following a 2.2% rise. BlockTower Capital has supported several significant players in the industry, including Dapper Labs, Sky Mavis, Solana, Injective, and Synthetix. In 2024, it added Aptos Labs, Morpho, Centrifuge, and Midas to its portfolio. On the flip side, BlockTower has also experienced critical security breaches. In May 2024, its main hedge fund was compromised. The amount drained during this breach was not disclosed to the public, nor was the attacker apprehended. Before this, in February 2023, the firm suffered a \$1.55 million exploit, losing TrueFi tokens. Highlighted Crypto News Today Coinbase Launches Wrapped BTC on Solana Aiming to Enhance Access

- Jack Dorsey's Block shifts focus to Bitcoin mining hardware. - Q3 revenue of Block falls short at \$5.98 billion in revenue. Jack Dorsey's payment venture, Block, formerly Square, is making strides in its commitment to Bitcoin mining and its self-custody wallet, Bitkey. In its Q3 2024 shareholder letter, the firm mentioned the demand for its mining initiative, described as having a "strong product market fit." This announcement was followed by Trump winning the U.S. presidential election. In light of his promise to provide a more crypto-friendly environment in the U.S. during his election campaign. Bitcoin mining is one of the industries he pledged to support. Besides, the firm has been focusing on building a decentralized Bitcoin mining ecosystem, having completed the design of a 3-nanometer mining chip earlier this year. A partnership with Core Scientific was also announced to supply bitcoin mining hardware, further scaling the efforts. Jack Dorsey's Block restructuring comprised winding down its decentralized internet project, Web5, and scaling back investments in its music streaming service, Tidal. These cuts come after several layoffs across both divisions, reflecting a shift toward more profitable ventures, including crypto-focused initiatives. Notably, Tidal was acquired for \$300 million in 2021. It has struggled to meet its growth expectations, persuading the Block to reallocate resources to Bitcoin initiatives. Financial Performance In addition to its shareholder letter, Block reported its third-quarter financial results, with \$5.98 billion in revenue. It falls short of analysts' estimate of \$6.24 billion. Moreover, its stock initially plunged around 16% in after-hours trading on Thursday. For Q3, Jack Dorsey's Block reported \$2.25 billion in gross profit, up by 19% from a year ago. With a gross profit of \$1.31 billion, Block's Cash App businesses recorded a significant 21% increase compared to the same period last year. Simultaneously, the monthly active users of Cash App Card have increased by 11% to more than 24 million. Furthermore, Cash App's gross profit per monthly transacting active was \$75, compared to \$65 in the previous year. Highlighted Crypto News Coinbase Launches Wrapped BTC on Solana Aiming to Enhance Access

As the U.S. election approaches, new changes are expected in the cryptocurrency market, and investors are keen on them. Political events have influenced financial markets, and consequently, digital assets are likely to see the same. With ongoing growth from projects like IntelMarkets and IntelMarkets and recent public appearances from Binance's former CEO Changpeng Zhao (CZ), the market remains active, signaling potential opportunities for investors looking to capitalize on upcoming shifts. INTEL Markets Gains Momentum with Phoenix Wallet Launch Intel Markets recently completed a significant milestone by raising over \$6.1 million during its presale, now in the fourth round, priced at \$0.08 per INTL token. Following the launch of its Phoenix Wallet, INTL experienced a substantial 40% growth, drawing the attention of investors and market analysts alike. The Phoenix Wallet allows users to seamlessly trade, borrow, and send cryptocurrencies, enhancing user experience and attracting new participants. Aiming to provide trading capabilities for various types of assets in traditional and DeFi environments, IntelMarkets is built on the combination of centralized and decentralized exchange models. The platform has the functionality for leveraged trading of up to 1,000x and more than 120,000 assets, distinguishing it from other trading platforms. Notably, the platform's decentralized order book offers transparency and liquidity, a draw for traders seeking control over their transactions. As the U.S. election approaches, regulatory clarity on digital assets may also shape the crypto landscape. Clear regulatory frameworks could impact user adoption and growth for platforms like INTL, which offer high leverage. The recent Phoenix Wallet release positions INTL to benefit from any potential post-election increase in crypto demand. Binance Discusses Post-Prison Plans and Crypto Future Binance's former CEO Changpeng Zhao, also known as CZ, recently appeared publicly at Binance Blockchain Week in Dubai after serving a four-month sentence due to anti-money laundering violations. In his first appearance since his release, CZ shared insights on his time away and future ambitions, noting a renewed focus on investing and advancing digital education through his project, Giggle Academy. CZ's interview touched on his ongoing relationship with Binance and future involvement in the crypto sector. While CZ emphasized a desire to move forward, his appearance sparked renewed interest in Binance and its role in global cryptocurrency markets. As one of the most recognized figures in the industry, his insights are closely watched by investors and market participants who see Binance's trajectory as influential for the broader market. His continued support for the crypto community reinforces a bullish sentiment, especially as the industry navigates upcoming regulatory and political shifts. CZ's appearance coincides with heightened anticipation around the U.S. election. Given the potential for new regulatory policies to emerge from the political outcome, Binance and other large platforms could face opportunities and challenges in the months ahead. IntelMarkets' AI-Powered Platform to Disrupt Crypto Trading As IntelMarkets and Binance headlines, IntelMarkets has also captured market attention with its AI-driven trading platform, designed to empower new and experienced traders. IntelMarkets' platform leverages an enterprise-grade AI infrastructure on a proprietary L1 blockchain to streamline trade analysis and automate trading processes. This technology is built with the expertise of a high-caliber team, including professionals from MIT, Renaissance Technologies, and OpenAI. IntelMarkets provides a range of features to enhance trading efficiency. These include dual-chain trading on Solana and Ethereum networks, a powerful autopilot trading function, and quantum-proof security measures to protect transactions against potential threats. The platform's Rodeum AI, a system trained on over 100,000 data points to generate real-time trading insights offering users customizable and data-driven trading experience. This AI-centric approach differentiates IntelMarkets from other platforms by providing a scalable infrastructure for high-volume trading and rapid market analysis. IntelMarkets is currently in the fourth stage of its presale, with over \$1.6 million raised. The platform's development is timely, with analysts predicting substantial interest as investors seek reliable trading solutions amid potential post-election market volatility. Conclusion The U.S. election is shaping the crypto industry, with candidates Donald Trump and Kamala Harris showing differing views on cryptocurrency. Industry insiders predict clearer regulatory policies following the election, creating a structured landscape for crypto trading platforms. IntelMarkets, Binance, and IntelMarkets, each addressing unique market needs, would benefit from a post-election environment focusing on transparency, security, and accessibility. Sao Paulo,, Brazil, November 7th, 2024, Chainwire With 33 million subscribers on YouTube and a big total following across social media, Rezende Evil is stepping into the celebrity meme token scene. Rezende Evil is preparing to introduce a token of their own, joining a growing list of big names. In May, Iggy Azalea launched her token, \$MOTHER, which has since reached a market cap of \$136 million. As one of the best-performing debut tokens of recent times, \$MOTHER has demonstrated the potential for Web2 influencers to succeed in the token space, leveraging both the loyalty of their audiences and the inherently shareable, meme-worthy nature of their brands. Rezende Evilâ€™s forthcoming token, to be launched on the Solana blockchain, follows a fair launch format popularized within the meme token space. By adopting this approach, Rezende Evil aims to leverage their communityâ€™s loyalty and engagement, positioning \$RZND as a new addition to the celebrity meme token scene. The initial market cap of \$RZND is expected to be \$25,000. Comparison Graphic released by Rezende Evilâ€™s Social Media Team. An increasing number of celebrities are capitalizing on the celeb token and meme trend, achieving success as they tap into the momentum of the broader meme token popularity. With loyal communities and strong brands, celebrities have a potential foundation for their tokens to succeed. XCAD, which is the project powering this launch, enhances this trend by adding deeper meaning and utility, enabling fans to engage in token-based transactions that unlock potential experience-based benefits, bridging the Creator and fan relationship in new ways. Binance Researchâ€™s November 2024 Monthly Insights report looks at important performance factors and current developments in the cryptocurrency sector. The overall market capitalization of cryptocurrencies increased by 2.8% in October 2024, mostly as a result of robust BTC inflows brought on by spot ETF activity and positive U.S. employment statistics. Potential hazards were identified from outside sources, such as the Israel-Iran war and tetheraâ€™s alleged role in illicit finance. Since Bitcoin is now seen as both a risk-on asset and a macro hedge, its correlation with the S&P 500 increased. Supported by liquid staking and lending protocols, Solana had a 13.4% increase in total value locked (TVL), demonstrating its considerable momentum in decentralized finance (DeFi). Additionally, Solanaâ€™s simplicity of token creation using the launchpad pump.fun helped it grab a record 90.6% of all token launches in late October. Memecoins, which witnessed remarkable volume growth and four of the top five performing tokens were memes, have benefited greatly from this platformâ€™s democratization of token creation. As evidence of their ongoing appeal, memecoins now account for more than 12% of the top 50 cryptocurrencies by market valuation. After a six-month downturn, the NFT market shown resiliency with a 15.8% increase in monthly trading volume. While â€œmemecoinâ€ collections like Milady Maker had a noteworthy 144% gain in volume, more conventional collections like Bored Ape Yacht Club and Pudgy Penguins witnessed volume rises on Ethereum. Major blockchains like Bitcoin, Ethereum, and Solana had a decline in revenues, while minor networks like Mythos and Fantom saw significant increases. Rising application revenues are another finding in the report that points to real adoption outside of speculative trading. The majority of user-facing apps among the top revenue-generating protocols suggest that applications might account for a bigger portion of industry revenues in the future. This suggests a change in the marketâ€™s emphasis from infrastructure to application-level income, which might fuel the industryâ€™s subsequent surge in user expansion. The research looks forward to future events and token unlocks that may have an influence on market dynamics, as well as the effects of the U.S. presidential election on crypto legislation. Structural changes may result from regulatory clarity brought forth by the election, especially as more institutions investigate cryptocurrency investments. Furthermore, high-stakes international crises like Israel-Iran create unpredictability, and geopolitical variables continue to play a significant role, particularly as institutional interest in Bitcoin increases with spot ETFs. The analysis comes to the conclusion that the current developments in the crypto sector show a complicated, dynamic sector where growth is driven by both more recent cultural assets like memecoins and NFTs and more established macroeconomic tendencies. According to the available statistics, the cryptocurrency market is becoming more diverse, with both utility-driven and speculative assets coexisting and attracting a wider range of investors. It will be crucial to strike a balance between innovation and risk management as cryptocurrency markets continue to mature, particularly in light of the marketâ€™s needs for more accessibility and transparency as well as ongoing legislative changes. With new advancements in Bitcoinâ€™s function as an investment asset, DeFiâ€™s growth on networks like Solana, and growing user engagement in NFTs and on-chain apps, the November 2024 report, in short, highlights the marketâ€™s resilience in a difficult macro climate. These changes show that the cryptocurrency industry is developing and ready to handle both established economic forces and new digital trends. As technology advancements and legal frameworks improve, there is room for additional expansion.

- SEC files to dismiss Krakenâ€™s â€œfair noticeâ€ and â€œmajor questionsâ€ defenses. - Krakenâ€™s team criticizes timing as a tactic to dodge scrutiny. The U.S. Securities and Exchange Commission (SEC) is seeking to dismiss critical defences raised by crypto exchange Kraken in an ongoing lawsuit. In a motion filed in the Northern District Court of California, the SEC argued Kraken had received sufficient notice of potential securities violations. The legal team, however, labelled the timing of this filing as an â€œElection Day gambit,â€ asserting itâ€™s an attempt by the SEC to avoid scrutiny over its policies. The SECâ€™s motion targets Krakenâ€™s claims of â€œfair noticeâ€ and the â€œmajor questions doctrineâ€ defenses. These defenses are central to Krakenâ€™s arguments that it lacked clear regulatory guidance. According to Kraken, these issues highlight the need for better regulatory clarity and protection against what it sees as SEC overreach. Is the SEC Moving to Block Krakenâ€™s Defenses? Krakenâ€™s legal team asserts the SEC had previously warned it about securities classifications for certain crypto assets. The SEC believes dismissing these defenses will reduce repetitive litigation, narrow down the discovery scope, and save resources. The agencyâ€™s filing suggests that they should not be allowed to â€œre-litigateâ€ issues already addressed in similar cases. Michael Oâ€™Connor, Krakenâ€™s lead attorney, referenced the SECâ€™s earlier legal loss in the Ripple case, where a similar motion was denied. Oâ€™Connor criticized the SECâ€™s approach, accusing it of creating confusion through defective and inconsistent policies that have affected the broader crypto sector. Kraken also argues that the SEC has blocked its attempts to register with the agency. They say its efforts have been hindered under SEC Chair Gary Genslerâ€™s inconsistent enforcement. Krakenâ€™s defence further contests the SECâ€™s designation of 11 cryptocurrencies, including Solana (SOL) and Cardano (ADA), as securities. Recently, they requested a jury trial to examine these issues in full. The timing of the SECâ€™s filing, on Election Day, has prompted speculation about its motives. Rumors suggest Gensler may step down if thereâ€™s a change in administration, with analysts predicting that his departure could come by year-end. Highlighted Crypto News Today Who Will Replace Gary Gensler as the Next SEC Chair?

Cytonic, the worldâ€™s first multi-virtual-machine blockchain, today announced it has raised \$8.3 million in a seed funding round co-led by Lattice and Lemniscap, with participation from IOBC, Nomura, Lyrik, Public Works, Arthur Hayes and other notable investors. Developed by MultiVM Labs, Cytonic is a decentralized execution layer that tackles one of the blockchain industryâ€™s most pressing challenges: compatibility. As fragmentation across multiple chains continues to grow, developers and users face increasing barriers that limit the full potential of blockchain technology. Cytonic introduces the first Layer 1 blockchain capable of running multiple virtual machines within the same network layer while using shared storage. This breakthrough allows transactions involving different state transition functions (STFs) to be processed together within a single state transition. Currently, Cytonic is designed to be identical to both Ethereum and Solana, enabling all existing tooling, wallets, and decentralized applications (dApps) that operate on EVM and SVM chains to function seamlessly on Cytonic. Cytonic minimizes transaction fees and reduces waiting times for moving assets between chains, making decentralized applications more accessible and user-friendly. On the Cytonic blockchain, users can swap assets across different VMs atomically without fallback issues or cross-chain vulnerabilities. For example, users can swap Base tokens (ERC20) for Solana tokens (SPL) within the same liquidity pool on a single decentralized exchange (DEX), radically increasing capital efficiency. This approach fundamentally addresses interoperability challenges and vulnerabilities inherited from hundreds of different blockchain architectures, all while maintaining full compatibility with them. Having experienced firsthand how compatibility issues hinder growth across the crypto industry, Cytonic Founder Ivan Miskovic recognized the critical need for a solution that simplifies horizontal scaling for applications and addresses liquidity management challenges for users. Ivan, former Executive at Spin Labs, along with his co-executivesâ€Chelsea, former Partner at Foresight Ventures, and Badconfig, former Senior Engineer at Farawayâ€have years of experience building and investing in decentralized technologies across Bitcoin, Ethereum, Solana, Near, and other notable projects. United by a shared vision to resolve blockchainâ€™s compatibility challenges, the Cytonic team is dedicated to making on-chain interactions easier and more efficient for all participants. Thanks to its EVM and SVM compatibility, projects from any EVM or SVM chain can seamlessly migrate to Cytonic and tap into liquidity from different networks without the usual complexities of cross-chain operations or chain abstraction. This breakthrough in core infrastructure compatibility enables developers to deploy existing applications on Cytonic without rewriting any code, streamlining both development and growth processes. Projects can harness the unique strengths of different virtual machines while maintaining universal compatibility on the network. This not only simplifies the user experience but also reduces fragmentation, enhances ecosystem diversity, and makes blockchain technology more accessible and practical for widespread adoption. Ivan Miskovic, Founder of Cytonic, said: â€œSincere thanks to our investors for backing our vision to bridge the gaps between blockchains and unlock new opportunities for developers and users alike. We are enabling any wallet from any chain to store any type of asset on Cytonic, greatly simplifying user experiences and broadening accessibility at a critical juncture in the Web3 development cycle. We are just getting started.â€ Regan Bozman, GP at Lattice, said: â€œWe are proud to have co-led this \$8.3 million round for Cytonic. As the blockchain ecosystem continues to grow, many innovative projects struggle with liquidity and compatibility due to the diverse range of blockchains available. Cytonic is tackling these compatibility issues head-on, breaking down the silos between blockchains while promoting greater collaboration. Innovation, and adoption across the web3 space.â€ -ENDS- About Cytonic Cytonic is pioneering the first multi-virtual-machine blockchain, with a mission to seamlessly integrate diverse networks like Bitcoin, Ethereum, and Solana into a unified Layer 1 blockchain solution. Operating on a global scale, Cytonic ensures connectivity and interoperability across multiple decentralized networks. - Website: <https://www.cytonic.com/> - X: https://x.com/cytonic_com - Discord: <https://discord.gg/K3RgFY5S> - Media contact: lorcan@forewordventure.com Disclaimer: TheNewsCrypto does not endorse any content on this page. Many investors are looking for attractive assets that might provide exponential growth and maybe even generate generational wealth as the bull run picks steam. Now fast rising as the â€œXRP Killer,â€ Rexas Finance (RXS) is an original project thatâ€™s fast-rising. Rexas Finance is attracting both experienced investors and newbies alike with analysts projecting a startling 20,598% rise from its present pricing. Letâ€™s consider how its real-world asset tokenization (RWA) technology and user-friendly approach make this investment unique as we investigate why this project is taking off. Why Rexas Finance (RXS) Is Standing Out in the Crypto World Starting at merely \$0.030, Rexas Finance started its presale and has already risen to \$0.070 by presale stage 5, therefore obtaining a 134% gain, since it avoided venture capital and chose to offer tokens in a presale. Rising over \$5.5 million from over 160,000 enthusiastic investors, Rexas Finance is making ripples both on CoinMarketCap and CoinGecko. Furthermore evident from ambitions to open on three of the top 10 Tier 1 exchanges early in 2025 is Rexas Financeâ€™s position for notable expansion. If presale attendees get in early, the expected launch price is \$0.20, meaning they might make gains of almost 230%. Beyond these pleasing figures, Rexas Finance is transforming individualsâ€™ views of and handling of their assets. Rexas Finance lets users tokenize and trade actual assetsâ€from real estate to commoditiesâ€from a safe and accessible digital environment using its RWA tokenizing platform. Setting Rexas Finance distinct from both conventional cryptocurrencies and meme coins, this utility-driven model is attracting venture capital interest and offers a realistic answer to asset management and ownership. Potential to Soar: Could Rexas Finance Reach \$14.5? Rexas Financeâ€™s growth estimates are rather remarkable. Reaching a goal price of \$14.5 from a projected growth of 20,598%, this is not just hypeâ€rather, it is supported by a well-organized platform and strong investor demand. Should these estimates hold, an early investor who bought \$12,000 worth of RXS at \$0.030â€buying about 400,000 tokens, could see their initial investment surge to \$5.8 million by the time RXS reaches \$14.5. This kind of return might generate generational wealth by transforming a quite small initial investment into a life-changing sum. Rexas Financeâ€™s presale is a great chance for anyone wishing to profit on

this bull run and enter early. Now is a key time to join before the token releases at \$0.20 since the presale price of \$0.070 is projected to rise steadily with each step. The continuous \$1 million giveaway by Rexas Finance adds to the thrills. Comprising 160,845 submissions and counting, the competition gives 20 lucky winners access to \$50,000 in RXS tokens each. This makes even more motivation to participate in the presale as by posting and finishing activities on the Rexas Finance website investors can increase their chances. This endeavor goes beyond merely developing new crypto. The real-world asset tokenization platform of Rexas Finance has the ability to change the financial scene and democratize asset ownership by means of efficiency. Unlike many initiatives on the market, Rexas Finance blends technology and practicality, which is why market analysts are progressively hopeful about its long-term possibilities. The goal of Rexas Finance is to remove the complicated, expensive obstacles usually related to asset sales. Rexas Finance lets even nontechnical people develop, run, and trade asset-backed tokens by providing a flawless user experience. For those who see blockchain's long-term ability to upend sectors, this initiative marks an interesting new front line. The Bottom Line: Rexas Finance as a Generational Wealth Opportunity Rexas Finance is a special prospect in the crypto scene of today with a forecasted increase of 20,598%. For those who participate quickly and join the presale, there is a possibility for gains that might even surpass those of early XRP investors. Rexas Finance is a project worth looking at regardless of your level of experience with cryptocurrencies; its intriguing platform, active community, and outstanding presale performance appeal. Rexas Finance can very well be the golden ticket if you're committed to building riches this bull run. Seize your opportunity to travel this road. - Bitcoin soars post-election; crypto markets rally in Moonvember's bullish momentum. - Altcoins like Ethereum, Solana surge, breaking consolidation. While ætuptoberæ fell short of expectations, Novemberæ humorously dubbed æMoonvemberæ is keeping the bullish momentum alive. The recent U.S. election, where pro-crypto Donald Trump was re-elected, has spurred a significant impact across sectors, including cryptocurrency. Bitcoin, the largest cryptocurrency, hit a new all-time high, surging above \$76,000 just hours ago. It's currently trading at \$74,882, up a modest 0.45% over the past 24 hours and 4% over the past week. This bullish wave has also reignited interest in altcoins. Ethereum, often considered the leader among altcoins, saw a strong rise, climbing 10% in the past 24 hours. Trading volume increased by 38%, pushing ETH to a three-month high of \$2,878.75. Solana (SOL) Solana recorded a 3% increase in the past day, SOL trading at \$188.90, with trading volume up by 10%. SOL reached a two-month high of \$192, fluctuating between \$180 and \$191.79. over the week, SOL is up 9%. The 9-day Exponential Moving Average (EMA) is at \$174, and its daily Relative Strength Index (RSI) sits at a neutral 58. Analysts predict that if bullish momentum continues, SOL could reach \$204, though bearish pressure might push it down to \$157. XRP (XRP) XRP rose by 5% over the past 24 hours to \$0.5574, with trading volume increasing by 36%. It reached a one-month high of \$0.5739, fluctuating between \$0.5274 and \$0.55. Weekly gains stand at 7%. The 9-day EMA is at \$0.5301, and the RSI is in an overbought position at 70. If momentum holds, XRP could climb to \$0.6309, but sustained bearish trends might pull it back to \$0.4858. Chainlink (LINK) Chainlink saw a 5% increase in the past day, trading at \$12.39, with a 22% rise in trading volume. LINK reached a two-month high of \$13, moving between \$11.5 and \$12.6. The 9-day EMA is at \$12.4, with the RSI at a neutral 49. If bullish trends persist, LINK may reach \$13.3, though bearish movement could see it dip to \$10.2. As the market reacts to political shifts, the crypto sector remains cautiously optimistic about further gains in Moonvember. Highlighted News Of The Day US Strategic Bitcoin Reserve Gains Momentum Following Trump Victory

- Bitcoin's price has factored in an additional 1.17% increase over the last 24 hours. - The cryptocurrency's daily trading volume increased by 6.60% as per CMC data. Upon Trump's victory in the US elections, the crypto market welcomed a second day of bullish movements in the last 24 hours. On election day, the crypto market rallied following Bitcoin's 10% increase. Several altcoins also surged, reflecting the largest cryptocurrency. However, the market also showed increased volatility on Tuesday. In the last 24 hours, Bitcoin has been trading at the \$73,000 and \$74,000 levels. The cryptocurrency hit its new ATH at \$76,400 on November 6 having been pumped by the US elections. While the cryptocurrency's volatility showed a mild rise, it has now calmed down as suggested by the RVI standing at 36.27. Moreover, the asset's daily price chart shows that it has factored in an additional 1.17%. Its current price cycle has fluctuated between \$74.6K and \$74.8K. According to CMC data, at the time of writing, BTC was trading at \$74,755. Amid the Bitcoin pump the cryptocurrency's market sentiment has remained neutral after a brief stepping into the overbought situation. Presently, BTC's RSI stands at 67.15 as per TradingView data. Will Bitcoin Price Hit \$1M by Year End? The largest cryptocurrency has performed in relevance to market analysts' predictions. In the past few weeks, several members had predicted that BTC would surpass its previous ATH and hit the \$76K level during the US Elections. Following the token's unraveling according to expectations, experts have proceeded to analyze its future movements after the new levels. Moreover, the cryptocurrency's short-term 50-day MA has surpassed its long-term 200-day MA showing a golden crossover. This indicates that Bitcoin's price can be expected to witness more price breakouts in the coming days. Additionally, analyst Ali has predicted that Bitcoin might reach market tops within a period of 8 to 12 months following its new ATH. Furthermore, the community also expects the cryptocurrency to hit \$1 million by the end of 2024, as predicted by leading members in H1 2024. If Bitcoin's price continues its upward momentum undeterred by obstacles, then it might hit \$1 million by the end of 2024. Other altcoins such as Ethereum and Solana have also reflected Bitcoin's price movements in the past day. Highlighted Crypto News Today: US Strategic Bitcoin Reserve Gains Momentum Following Trump Victory

Investors are looking for cryptocurrencies that might provide decent profits while getting ready for the next bull run in the Bitcoin market. Six interesting altcoins here have special qualities together with considerable growth potential that might make them really valuable. RXS Finance (RXS) Rexas Finance has positioned itself at the forefront of the tokenization of RWAs (real-world assets) employing a multitude of new technologies including artificial intelligence and DeFi applied on Ethereum. Rexas Finance creates fractionalised liquid digital tokens from conventional assets such as real estate commodities collectibles and others therefore reducing the cost of access to high-value assets for the masses. With its fourth stage bringing \$5.45 million and now at the fifth stage with the tokens valued at \$0.07, the presale of the RXS token has shown promise. Based on the present listing, it is predicted to be launched for \$0.20 which implies it should rise at least 500% after being listed on tier 1 exchanges. Considering this, RXS is in the best position to observe a significant expansion in the upcoming bull run-dominating market. Along with Rexas GenAI, which lets one develop NFTs driven by artificial intelligence, we have the Rexas QuickMint Bots that can be readily combined with Telegram and Discord for basic token creation which makes RXS a reasonable investment for someone looking for a utility and upside. The \$1 million giveaway in RXS tokens, where 20 lucky participants win \$50,000 each by performing tasks also helps in increasing user interaction and boosting Rexas Finance's momentum. Notcoin (NOT) Notcoin (NOT), has shown promise with a 28% rise over the previous month. Actually, user adoption and interaction are clear-cut and seem to be supporting the worth of the coin. Given NOT transactions between the \$0.0175 and \$0.2 level, there is a lot of hype and enthusiasm and the coin might be headed toward a bullish phase. Should NOT overcome its \$0.019 resistance, the price may leap to \$0.05 or perhaps \$0.1 at best. In such cases, prices might revert to the \$0.018 level. With an RSI score of 42.68, the market in issue is also pretty erratic and opinions of it are rather dubious. Notcoin is therefore an excellent investment for those ready to go through large swings in the coin for notable possible gains. Mallconomy (WOOT) Combining the finest aspects of game, economy, and Metaverse together makes Mallconomy (WOOT) unique. It creates a spatial GameFi economy in a metaverse designed like a mall allowing brands, companies, and consumers to live in the metaverse, within a mall. Some of the metaverse's elements, such as a Launchpad and a Rewards App that would be combined in the appearance of a metaverse, progressively reveal themselves. WOOT seems to be a great prospect for significant expansion as the metaverse keeps getting acceptance based on its principles and user orientation. Dogecoin (DOGE) Although of late the price performance has been flat with both bulls and bears pulling with similar vigor, Dogecoin (DOGE) seems to have not lost most investors who support it as the top meme coin. Right now one DOGE coin's worth falls between fourteen and sixteen cents. Though it has seen small price changes, breaking the fifteen-cent level opens a whole new spectrum of possibilities including the coin landing on one dollar during a bull market. Dogecoin has community-driven backing, and the meme culture makes it relevant and indeed among the most valuable cryptocurrencies sought by retail investors seeking to make quick gains when the market has momentum. Ripple (XRP) Given that its price has been sitting around \$0.5 and looked good on the market as well, XRP may also have a chance, especially with the legal challenges against the SEC. If we view Ripple's price movement as an RSI model, XRP is expected to be positive near the end of the year. Ripple's token currently costs roughly \$0.6. Should Ripple's legal fight go in favor of XRP, we may find XRP near \$1 under increasing buying pressure from market players. The prospect of a spot XRP ETF, which will only grow as more control enters the market, has also excited investors. Litecoin (LTC). Being æthe silver to Bitcoin's gold,æ Litecoin has drawn a lot of comments; that concept has not altered since its launch. Along with its present marketing activities, it is also seeing another surge in popularity; the currency has recently undergone a halving event. Particularly as the market grows, the inexpensive prices and adaptability of the currency make it ideal for daily use as it expands. One of the coins most likely to reach all-time new highs in terms of price during a bull run is LTC since it is so widely used and a wonderful fit for any investor seeking dependability in cryptocurrencies. Conclusion With a promise of great gains during the next bull run, all these altcoins have a target audience and reason for use. Among the various initiatives, Rexas Finance distinguishes itself with its emphasis on the tokenization of real-world assets, therefore offering a broad use. The others either have already created blockchain solutions or hold special pitches in meme coins, or gaming. Investors could consider these altcoins as part of a larger basket aiming at a profit with the next crypto cycle. - BONK price surged over 17% trading at \$0.00002219. The trading volume of the asset has soared over 228% over the past 24 hours. The victory of Donald Trump in the U.S. elections impacted the overall cryptocurrency market. The largest cryptocurrency, Bitcoin has rallied more than 10% to its new all-time high of \$75K as Trump won the presidential race. Major assets have lifted their prices to new highs. The meme coins have marked significant gains across the market, prices are charted in double-digit increases. Notably, the Solana-based meme coin, BONK has gained a steady 17% in the last 24 hours. Notably, BONK recorded the lowest price at \$0.00001845, and the highest at \$0.00002287. At the press time, the meme coin traded at \$0.00002219 with a market cap of \$1.66 billion. Meanwhile, the daily trading volume of BONK has reached \$391 million, according to CoinMarketCap data. The upside trajectory of BONK over the past week recorded a 4.70% surge. But the meme coin fails to maintain the price momentum. It has fallen from \$0.00002170 to \$0.00001723. As per analyst analysis, BONK is at its lowest point in wave 2. For the price to go higher, it needs to break above \$0.0000262. If it does, the next target is \$0.0000899, expected for wave 3, indicating a strong upward move. What's Next for BONK Price? The current market sentiment of BONK is in the overbought zone, as the daily relative strength index is positioned at 74.47. The four-hour frame of the meme coin displays the short-term 9-day moving average above the long-term 21-day moving average. BONK's daily price chart suggests the ongoing upside correction. If the bullish momentum persists, the meme coin could likely test the resistance at \$0.00002372. Further gains might drive BONK to hit high targets. On the flip side, if BONK fails to hold its ground on the upside, the meme coin will slip to its support zone at \$0.00002105. A steady decline might appear if the meme coin falls back steadily. Besides, the Moving Average Convergence Divergence (MACD) indicator is found above the signal line, hinting at the asset's upward momentum and the incoming bull run. Meanwhile, the Chaikin Money Flow (CMF) is positioned at 0.18, indicating the increased money flow, and consequently, BONK's trading volume has surged by over 228%. Highlighted Crypto News

- The top 3 memecoin gainers are GOAT, NEIRO, and POPCAT (SOL). - Bitcoin reached an all-time high of \$75,361, driving optimism across the crypto market. The cryptocurrency market is displaying a vibrant surge, fueled by Bitcoin's recent climb to a new all-time high of \$75,361 following optimism sparked by Donald Trump's victory against Kamala Harris in the presidential race. At the time of writing, the global crypto market cap stands at \$2.47 trillion, marking a 7.88% increase in just 24 hours. Bitcoin's dominance has paved the way for a ripple effect, driving positive sentiment among altcoins, particularly in the memecoin sector. Among the top gainers in the memecoin space are Goatseus Maximus (GOAT), First Neiro

on Ethereum (NEIRO), and Popcat (SOL), all of which are soaring with impressive gains. Goatseus Maximus (GOAT) In the past 24 hours, GOAT price rose over 47.04%, and topped the gainers list, recording a high of \$0.7593. Also, the daily trading volume has seen a significant jump of over 108%, reaching \$282. The token now boasts a market cap of \$735 million, placing it at the 92nd spot in the crypto rankings. GOAT is one of the memecoins that was launched on the Solana blockchain in October and gained popularity with a strong following. The memecoin is still 19% below its all-time high of \$0.8837. But GOAT has surged by an eye-watering 653% in the last month. Further, the memecoin's key resistance was found at \$0.8095 and the nearby support at \$0.4204. First Neiro On Ethereum (NEIRO) Another memecoin catching the market's attention is First Neiro on Ethereum (NEIRO). That has jumped by 32.70% in the past 24 hours. The price surged from a low of \$0.001309 to a high of \$0.001764, driven by a massive 248% increase in its trading volume, which reached \$740 million. First Neiro on Ethereum is a meme coin inspired by Shiba Inu, continuing the legacy of Kabosu, the dog behind the original Dogecoin meme. The coin gained attention as it was linked to Neiro, another dog adopted by Kabosu's owner after her passing. On Oct 15, NEIRO recorded an all-time high of \$0.0023, which now seems like a distant memory, as the token is currently 24.53% off that peak. However, the ongoing rally has pushed the price to new highs. Currently, it's eyeing further resistance levels at \$0.001932 and \$0.0021. With support found near \$0.001278. Popcat (SOL) Last but not least, Popcat (SOL) has joined the surge, rising by 20% to trade at \$1.89. The token's price climbed from a low of \$1.28 to a high of \$1.60, with its trading volume spiking by 269% to \$269 million. The meme coin was launched in December 2023 on the Solana blockchain, inspired by the viral "Popcata" meme. POPCAT has gained 14% over the past month. Meanwhile, it has seen a 5% decline over the past week, as it hit an all-time high on Oct 29 at \$1.81. The token now faces initial resistance at \$1.75, with significant support around \$1.12. Highlighted Crypto News

Three cryptos are primed for unstoppable growth and poised to hit new all-time highs in November 2024. These promising assets are showing robust momentum, supported by innovative tech, increasing adoption, and expanding utility in key areas of the crypto space. With strategic partnerships and market demand on the rise, these coins are well-positioned to deliver impressive gains this month. Shiba Inu aims to develop a huge ecosystem in the crypto industry. More so, its ecosystem includes ShibaSwap, a decentralized exchange, and plans for Shibarium. Shibarium is a layer-2 blockchain solution that focuses on DeFi applications. In addition, the project has enabled NFTs and staking options, looking to add real-world uses and attract many users. Ripple (XRP) Crypto project Ripple (XRP) is again in the top trend as the SEC's deadline to appeal the latest court ruling comes, leaving less than 10 days for a decision that will significantly impact XRP's regulatory compliance. XRP hovers above the 50-day and 200-day EMAs, confirming bullish price trends. A break above \$0.60 would support a move to the post-final judgment high of \$0.6434. Furthermore, a return to \$0.6434 could give the bulls a run at \$0.70. Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas Finance enables users to own or tokenize digitally any real-world asset, from real estate to commodities, on a worldwide scale. With Rexas Finance, users can gain a market with endless asset investment opportunities. Rexas Token Builder: It is normally used to tokenize their real-world assets and commodities. To make it easy for individuals to digitalize their assets, Rexas Finance offers liquidity and new investment options for the crypto users. Rexas Estate: The project's one of the most exciting features is Rexas Estate which enables crypto users to co-own the real-world assets and earn passive income in stablecoins. Rexas GenAI & DeFi: It is mainly utilized by artists who can use Rexas GenAI to develop and tokenize digital artworks, while Rexas DeFi allows users to swap digital assets across multiple networks with ease. Rexas Treasury: A multi-chain yield optimizer that enables users to earn compound interest on their crypto deposits, which adds one more layer of financial utility to the project. Rexas Finance began the presale of the native token RXS on September 8, 2024. The total supply of RXS tokens is 1 billion. Rexas project has raised over \$5.45M until now, with the fourth stage of presale over. This presale event is important for the platform as it allows early investors to engage in what might turn into a revolutionary solution for RWA tokenization. Rexas Finance's \$1M Giveaway is live, offering a huge chance for early adopters to join the project's growth. With a current token price of \$0.06, the potential for a price increase indicates a good opportunity for investors. Moreover, Rexas Finance has been listed on CoinMarketCap and CoinGecko, the project will be soon listed on top tier 1 exchanges. About Rexas Finance (RXS) Rexas Finance is the user's gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. Singapore, Singapore, November 6th, 2024, Chainwire Foresight Ventures, the leading global Web3 investment firm, is thrilled to announce its strategic partnership with The Block to co-host the highly anticipated Emergence Conference, an event gathering all the bright minds to shape the future of the global cryptocurrency landscape. This world-class event is set to take place at the iconic Prague Congress Center from December 5 to 6, drawing industry leaders from across the globe. The event boasts a stellar lineup of executive speakers from the industry's top institutions, including Wintermute, a16z Crypto Solana, Binance, and Tether. Attendees will witness a confluence of groundbreaking ideas and strategies from these crypto pioneers, making Emergence one of the most significant conferences on the 2024 global crypto calendar. Designed to leverage The Block's unrivaled data and research platform, the Emergence Conference will serve as the ultimate conduit connecting critical segments of the cryptocurrency ecosystem. This unique event will act as a bridge between cutting-edge blockchain technology and institutional capital, aligning the interests of Wall Street with crypto-native enterprises to fuel innovation and growth. As a premier supporter of the event, Foresight Ventures is poised to elevate the dialogue by sharing its deep insights into the booming Asian crypto market. The firm will also provide go-to-market (GTM) guidance for Web3 startups seeking to scale in Asia, solidifying its role as a pivotal player in global crypto expansion. "We are dedicated to becoming a think-tank that garners ideas from East and West in the crypto landscape, facilitating the most innovative concepts to reach broader markets," said Forest Bai, Co-founder of Foresight Ventures. "Our collaboration with The Block empowers us to continue championing transformative initiatives that push the boundaries of the digital asset space. Together, we aim to catalyze the next wave of innovation that will reshape the global financial ecosystem." Larry Cermak, CEO of The Block, reiterated the event's significance: "With the significant amount of knowledge gathered on The Block's platform over the past 5 years, Emergence is more than just a conference; it is a strategic platform for high-level executives to be inspired by curated discussions on the most pressing challenges facing our industry. From navigating regulatory uncertainty to charting the future of crypto asset management, Emergence will be a crucial touchpoint for the decision-makers steering the direction of our rapidly evolving ecosystem." In addition to thought-provoking discussions and industry-shaping panels, Emergence will offer attendees an exclusive, world-class experience unlike any other. VIP participants will enjoy private dinners in some of Prague's most historic venues, including the iconic Prague Castle, fostering an intimate setting for key industry leaders to build connections and partnerships in an atmosphere steeped in history and grandeur. The event will explore cutting-edge themes, including technological challenges and opportunities shaping various blockchain ecosystems, and will foster deep discussions on scaling, decentralization, and transformative applications across the crypto space. Executives from major Layer One networks will collaborate on the future of decentralized finance, while exploring real-world use cases that are set to redefine industry standards. As the digital asset landscape continues to mature, Emergence will tackle the most imminent market developments and nuances, including the launch of spot Bitcoin ETFs and the evolving regulatory frameworks shaping the industry. Attendees will benefit from the insights of government officials, legal experts, and key industry figures, who will provide clarity on compliance strategies and the legislative changes that are poised to impact the market. With over 2,000 expected participants and more than 80 leading speakers, Emergence is poised to redefine the industry conference model, offering unparalleled access to some of the most influential voices in crypto. Interested participants can secure their tickets at emergence.xyz, while companies eager to explore exclusive sponsorship opportunities are encouraged to reach out using the contacts provided below. About Foresight Ventures Foresight Ventures is the leading global crypto venture capital firm, managing over \$400 million in AUM across 150+ investments. With a research-driven approach, Foresight Ventures bridges Eastern and Western markets, focusing on early-stage opportunities in Web3. Its diverse portfolio spans blockchain infrastructure, AI and consumer applications with investments in top companies like Bitget, Aptos, TON and Morph. Through its premier owned media network, including The Block, Foresight News, Coinness and BlockTempo, the firm provides exposure to transformative technologies that shape the future of financial ecosystems. Foresight Ventures backs the boldest upcoming innovations, encouraging concepts that challenge conventional platforms with real-life use cases built on emerging technologies. Dedicated to accelerating crypto adoption for billions of people worldwide, Foresight Ventures breaks down barriers empowering global financial freedom and inclusion to all. - Ethereum's price rose to \$2,596 with a 6.82% gain. - The global crypto market cap surged by 8.11%, reaching \$2.47T. The global crypto market cap surged to \$2.47 trillion, marking an 8.11% increase in the last 24 hours. Total crypto market volume soared to \$165.48 billion, reflecting a significant 95.70% surge in trading activity. DeFi's share of this volume stood at \$6.62 billion, accounting for 4.00% of the total crypto market's 24-hour volume. Stablecoins dominated with \$152.56 billion, representing 92.19% of the overall volume. Ethereum's price experienced an uptick, reaching \$2,596.01, up by 6.82% on the day. The asset's market cap rose to approximately \$313 billion, underscoring the renewed investor confidence in the cryptocurrency. Trading volume for Ethereum spiked, signalling an increase in market activity as traders reacted to the upward price movement. The market cap ratio remains robust, showcasing Ethereum's resilience within the broader crypto ecosystem. Ethereum (ETH) Holds Steady On November 5, spot Ethereum ETFs reported no net inflows or outflows, based on data from Farside Investors. This absence of change in investment flows was the fourth instance this year, aligning with similar occurrences on August 30, October 7, and October 9. This stability in ETF movements suggests a period of observation as investors await stronger directional cues. The technical chart reflects Ethereum's bullish momentum. The RSI stands at 68.11, indicating a near-overbought condition, which could hint at a potential correction if buying pressure diminishes. The RSI average hovers at 41.79, suggesting recent gains have pushed the metric higher. Moving averages display bullish crossovers; the 9-period MA is at \$2,461.66, while the 21-period MA sits at \$2,458.64, reflecting a short-term upward trend. Immediate support levels for Ethereum appear around \$2,480, with stronger support at \$2,400. On the upside, the primary resistance level stands at \$2,630. If Ethereum breaches this, it could target \$2,700, adding to the recent positive momentum. The surge in price and technical crossovers signal a bullish outlook, but traders should watch for RSI movements to anticipate potential pullbacks. Highlighted Crypto News Today Will President Donald Trump Deliver the Crypto Manifesto as Promised?

- Last month, Animoca Brands emerged as the top investor in crypto fundraising. - The total funds raised in the crypto space hit a 2-year-high in October 2024. Months after the Terra Luna collapse in Q2 2022, the pace of crypto fundraising slowed, falling below \$3 billion a level it has yet to regain. October 2024, however, marked a bullish trend by reaching a 28-month peak with \$2.45 billion in total fundraising. According to CryptoRank, total fundraising last month climbed by over 264.4% from September's \$672.27 million. There was a slight drop of 1.8% in VC rounds, falling from 111 to 109. From January to October, the crypto space saw total fundraising exceed \$8.08 billion. Of the different verticals, blockchain services dominated fundraising with \$1.25 billion. The social sector came next, raising \$578.15 million, followed by blockchain infrastructure at \$265.3 million, DeFi at \$143.2 million, and GameFi at \$102.85 million. Animoca Brands and Polygon Co-Founder In Lead Hong Kong-based Web3 VC giant Animoca Brands took the lead in the Uptober rally of the crypto fundraising arena with 9 deals. In addition to web3 gaming and DeFi, the company allocated funds to emerging narratives like DePIN and AI. October Venture: Animoca led all firms with 9 deals, followed by CMS (7) and Hack VC (6). "Messari (@MessariCrypto) November 4, 2024 Historically targeting Gaming and Collectibles, Animoca diversified into DeFi, DePIN, AI, and more this month.@ekramh and @xMert_ led angels with 5, ranking 14th. pic.twitter.com/3oUKj9mETq Among October's top 10 record makers stood two angel investors "Ekram Ahmed, Head of Marketing and Comms. of Celestia, and Mert Mumtaz, Helius Labs CEO. Both these investors

carried out 5 deals in the month. Remarkably, Animoca Brands stands at the top of the all-time list of investors, taking the first spot with 435 rounds. Meanwhile, Coinbase Ventures takes the second spot, boasting 416 funding rounds primarily in the exchange niche. Outlier Ventures comes in third, having made 326 investments in projects focused on developer tooling. Binance Labs follows with 398 investments, primarily in gaming, while NGC Ventures rounds out the list with 277 investments mainly in the exchange niche. On another note, Sandeep Nailwal, co-founder of Polygon, is reported by Messari as the top angel investor with 41 investments. Popular NFT investor Santiago R Santo, aka CryptoPunk 9159, holds the second position with 39 funding rounds. Notably, Solana co-founder Anatoly Yakovenko ranks fourth with 30 rounds, while Helius Labs CEO Mert Mumtaz occupies the sixth spot with 22 rounds. Here are some key events and facts to know about crypto fundraising in 2024: - In June 2024, crypto exchange Bitstamp was acquired by trading platform Robinhood for \$200 million. This is the largest merger & acquisition (M&A) to date. - In July 2024, Blockchain-led AI startup Sentient raised \$85 million in seed round, co-led by Peter Thiel's VC firm Founders Fund. - In August, IP-focused blockchain Story Protocol recorded \$80 million in a Series B round led by Andreessen Horowitz (a16z). - The United States has emerged as the leading jurisdiction in fundraising, with over \$3.08 billion raised across 180 rounds.

- SHIB has spiked by 5.30%, over the past 24 hours. - The daily trading volume of SHIB has surged by 43%. The crypto market exhibits mixed signals while assets are gaining and losing. Analysts anticipate the overall sentiment of the market to gain momentum post-US election. The largest cryptocurrency, Bitcoin is under bearish pressure, trading at \$68.7K. Notably, the dog-themed cryptocurrency, Shiba Inu (SHIB) is one among the top five gainers over the past 24 hours. The meme coin has gained over 5.30% and the trading day opened with the asset traded at \$0.00001675. The meme coin price began to climb and hit a high of \$0.00001771. At the time of writing, the meme coin traded at \$0.00001759, with the trading volume staying at around \$383 million, according to CMC data. Meanwhile, the market observed a liquidation of \$654K worth of Shiba Inu during this timeframe. SHIB has steadily declined by over 4.90% in the past week, charted in red. The meme coin slipped from the \$0.00001966 range to \$0.00001629. The volatile market occupied space for SHIB, for a possible reversal from the bearish momentum. On the other hand, around 6 billion SHIB tokens were burned in 195 transactions in October. Moreover, billions of SHIB were transferred to dead wallets and this reduces the total supply of SHIB. Can SHIB Gain More Ground? SHIB's technical indicators highlight the bullish sentiment. The moving average convergence divergence (MACD) line is settled above the signal line, inferring the current positive outlook, which might lead to the incoming bull run. Besides, the Chaikin Money Flow (CMF) indicator suggests an increased money flow as the value sits at 0.16. While the daily trading volume of SHIB has increased by over 43%. Moreover, the daily relative strength index (RSI) is positioned at 58.92, suggesting the neutral condition of the asset. In addition, the asset's short-term 9-day MA is found below the long-term 21-day MA. If the meme coin bulls sustain the upside momentum, the immediate resistance is likely to be found at \$0.00001812. Consequently, SHIB might test a higher resistance at the \$0.00001910 range. On the flip side, if SHIB fails to hold the bullish ground, the price might slip to the nearby support at \$0.00001681. The subsequent support of the meme coin could be found at \$0.00001587. - Sui Network's SUI has factored in an additional 2.26% price increase over the past day. - The altcoin's daily trading volume incurred a 5.58% dip as per CMC data. The crypto market has gone bearish in the last 24 hours, having been influenced by Bitcoin's returning to the \$68K level. The overall crypto market cap has dipped by 0.76% while its daily trading volume shows a 12.89% surge. Meanwhile, within the altcoin sectors, several cryptocurrencies have taken a bullish turn. Notably, Worldcoin and SUI, two altcoins that incurred recent price drops have shown signs of recovery in the past few days. Specifically, SUI has factored in an additional 2.26% price increase in the last 24 hours. In the Asian morning hours of November 4, the altcoin was trading at \$1.85 after which it surpassed the \$1.9 level. The altcoin incurred the aforementioned dip during the middle of October which it sustained for almost 10 days. At the time, SUI returned to the \$1.6 level, its previous trading level before the bull run. However, in the last few days, the cryptocurrency has begun to show bullish signs again and momentarily surpassed the \$2 level. At the time of writing, SUI was trading at \$1.93 as per CMC data. Additionally, the altcoin's RSI indicates a neutral market sentiment standing at 50.91 after briefly leaning towards an oversold situation. Will SUI Reach New Price Levels? Inferring to SUI's technical indicators, the altcoin shows positive signs. Its short-term 9-day MA stands close to the 21-day MA exhibiting potential for a bullish crossover as per TradingView data. In case of a continued bull run, SUI might face resistance at \$1.99 and \$2.14. Additionally, SUI's bull power indicator value stands at 5.45 while its bear power indicator value stands at 2.61. This suggests a positive sentiment for the altcoin and thus it can be expected to sustain the bull run. The price levels have also been inching closer to its PATH at \$2.36. Meanwhile, other altcoins such as Ethereum and Solana continue to combat consolidation or modest gains over the past few days. Highlighted Crypto News Today:

- Dogecoin (DOGE) climbed 11.42% on US Election Day, reaching an intraday high of \$0.1669. - Elon Musk fueled Dogecoin's rally by mentioning the Department of Government Efficiency (D.O.G.E.) during a podcast. On US Election Day, Dogecoin (DOGE) grabbed a spot in the cryptocurrency market, climbing over 11.42% in the last 24 hours and emerging as a top gainer. While major cryptocurrencies like Bitcoin (BTC) trade in red, DOGE's rise stands out as a beacon of optimism. The rally in the DOGE was triggered by comments from Elon Musk, who mentioned DOGE as an acronym for a potential Department of Government Efficiency (D.O.G.E.) during a podcast with Joe Rogan. At the time of writing, Dogecoin was priced at \$0.1669 (intraday high), up from a low of \$0.1498. Also, the daily trading volume surged over 51%, reaching \$3.14 billion. This rally signals a renewed interest in memecoins and community-driven tokens, often fueled by social media excitement and online communities. What makes this surge particularly intriguing is the potential connection to Donald Trump's presidential battle, bolstered by Elon Musk's involvement. Analysts suggest that DOGE could benefit significantly if Trump wins, especially following Musk's recent proposal for a department of Government Efficiency, a cleverly abbreviated to D.O.G.E. This initiative aims to streamline government spending, which could resonate with Dogecoin's community. What Do Recent Trends Reveal About Dogecoin's Price? Analyzing global market trends over the past week shows that many memecoins, including Shiba Inu (SHIB) and Pepe (PEPE), have displayed declines. Even Dogecoin faced some price fluctuations and closed the week at \$0.1446 after briefly peaking near \$0.17. However, the daily candlestick chart revealed significant price movements and spikes in trading volume, especially between Oct 29 and Nov 2. During this period, a sharp increase in Dogecoin's price was observed, followed by a pullback as the week progressed. Zooming in, the four-hour chart reveals a bullish trend, with the 9-day moving average crossing above the 21-day average. Currently, Dogecoin is trading above both the upper and basis lines of its Bollinger Bands, which further suggests upward momentum. However, the RSI is nearing overbought territory, which often signals a potential price correction. The TD Sequential indicator also shows a buy signal, hinting at a possible price rebound. Looking ahead, resistance is expected around \$0.1807, which will lead DOGE to levels not seen since April. However, if the excitement surrounding the elections fades, crucial support at \$0.1432 could come into play, with a further drop to \$0.1235 possible. For now, Dogecoin's ascent offers a glimmer of hope amid a fluctuating market. Highlighted Crypto News

- Crypto losses reached \$129M in October, driven by hacks and scams. - Radiant Capital suffered the biggest hit, losing over \$50 million. In October 2024, the crypto industry witnessed losses of \$129.6 million, driven by various security incidents, including exit scams, flash loan attacks, and significant exploits. According to Certik, a blockchain security firm, exit scams accounted for \$1.2 million, flash loan attacks led to \$1.5 million in losses, and a staggering \$127 million came from different exploits. One of the most notable incidents involved Radiant Capital, a lending protocol, which lost over \$50 million. The hack on October 16 compromised BNB Chain and Arbitrum markets. Radiant's investigation revealed that hackers used malware to infiltrate the devices of at least three core developers, gaining access to private keys and smart contracts. After the attack, Radiant Capital implemented security enhancements, including transferring protocol ownership to a timelock contract and adding a 72-hour buffer for changes. Meanwhile, a separate phishing incident on October 11 led to a crypto whale losing \$36 million in wrapped Ethereum (fWETH) after signing a fraudulent transaction. Additionally, the M2 crypto exchange fell victim to a hack on October 31, losing \$13.7 million in Bitcoin, Ether, and Solana. Despite the setback, M2 confirmed that customer funds were fully restored and security measures were improved. Other DeFi Projects Attack Ethereum's EigenLayer was exploited for \$5.7 million, with funds laundered through HitBTC and Bybit. Furthermore, decentralized finance platforms Tapioca DAO and Sunray Finance experienced private key compromises. Tapioca's attacker stole \$4.7 million via social engineering, exploiting the vesting contract to mint excess tokens. Sunray lost \$2.86 million after an attacker used a compromised key to upgrade a smart contract, minting and dumping SUN tokens. Although October's \$127 million in exploit losses marked a 2.91% increase from September's \$123.4 million, it reflected a significant decline from the \$324.7 million lost in May. These incidents underscore ongoing security challenges in the crypto sector, emphasizing the need for robust protection measures to safeguard assets. Highlighted News Of The Day Is Dogwifhat's Price Decline Signaling a Buying Opportunity?

- On the heels of their Marquee Party during Token2049 Singapore which saw a full house turnout of over 3,000 attendees from an overly-subscribed 8,000 signups, Tobì & Brent are bringing yet another massive bash, this time to Devcon Bangkok. - Co-hosted by early-stage Web3 VC fund TBV and revolutionary BTC blockchain network BitcoinOS. - Headlined by popular South Korean DJ SODA, who boasts a following of over 25 million fans and will be providing high-energy performances and a distinctive mix of EDM and electro house music. - The Best Event. Devcon BKK with TBV & BitcoinOS is set to be the highlight of Devcon Week in Bangkok. The premier event series, hosted by TBV (TB Ventures) and BitcoinOS, offers a unique blend of high-impact networking followed by the signature Web3 with Tobì & Brent's afterparty experience. Taking place at Portal on November 13th, amidst Bangkok's bustling nightlife, The Best Event is definitely not your traditional tech event. Serving up a unique recipe for celebration and connection, the packed mashup of networking, hackathons, music and high-value deal flows is going to make for some very unique and innovative bedfellows. Headlining the night is the illustrious South Korean DJ SODA, whose exhilarating performances and distinctive blend of EDM and electro house music have amassed a dedicated following of over 25 million fans. Add in nine more high-energy DJ sets and the mix of entrepreneurs, investors, developers, and key opinion leaders, and this social meets sonic meets tech odyssey is primed to emerge as the centerpiece of Devcon Week. Tobias Bauer, General Partner and Co-Founder of TBV shared, "Our Token2049 event was awesome, massive party vibes and an incredible network of industry heavyweights. The one thing we were missing was a quieter space for ongoing networking around the night so that's what we're bringing to Devcon Week. A legendary party, a hackathon, party buses, and exclusive networking the whole way through. So you there! Building the Web3 Community: The Tobì & Brent Phenomenon Since 2024, the Web3 with Tobì & Brent brand has become synonymous in the Web3 space with cultivating thriving communities and fostering genuine connections. The dynamic duo has garnered an overall following on Telegram and social media that numbers over 100,000, demonstrating their ability to organically unite VCs, LPs, projects, and industry enthusiasts. During their massively attended MARQUEE event during Token2049 Singapore which was headlined by internationally acclaimed DJ Dillon Francis, Tobì & Brent soft-launched TBV (TB Ventures), a VC fund focused on early-stage Web3 startups. Their events arm TBE (TB Events) has now curated The Best Event. Devcon BKK with TBV & BitcoinOS, offering yet another distinctive global Web3 rendezvous. It's a privilege to host these events and to see the quality of attendees that they draw. I'm proud of what we've been able to achieve with our event series, and it's in huge part thanks to our incredible partners and team. If there's one event to hit during Devcon week, this one is it," said Brent Fulfer, General Partner and Co-Founder of TBV, BitcoinOS. The Smart Contract Operating System for Bitcoin. The Best Event is also co-hosted by BitcoinOS, an operating system designed to create a unified, interconnected, barrier-free playground for innovation on Bitcoin. Using ZK (zero-knowledge) tech, developers can deploy any VM (virtual machine) to Bitcoin with the scalability of Ethereum, the interoperability of Cosmos, and the speed of Solana. Building the key missing tech that will finally allow Bitcoin's utility to extend beyond a store of value, the BitcoinOS team's successful verification of the first ZK proof on Bitcoin mainnet has opened the doors for trustless BTC bridging, and eventually an ecosystem of true Bitcoin rollups. This is the holy grail of Bitcoin scalability which will securely open the doors for over a trillion dollars of liquidity to merge with the Web3 ecosystem. The Best Networking. The Best Time. THE BEST EVENT. Right off DEVCON, the early party vibes will begin aboard the TBV and BOS party buses where buzzing anticipation and free flow drinks, which continue throughout the evening, make for an enjoyable seamless transit to Portal. Upon arrival, guests embark on the next exploration with four unique zones of immersive experiences. From networking over drinks and canapes, to a "drunken dev" hackathon, to an upscale bar with skyline views, the diverse atmospheres offer up ample networking opportunities. As the clock strikes nine, the Portal gates open to general admission, unleashing the torrents of energetic crowds while an all-star lineup of world-class DJs take to the main stage. With DJ SODA at the helm, whose high-octane performances and infectious rhythms have captivated fans worldwide, Portal will

be transformed into a pulsating epicenter of entertainment. The likes of Jade Rasif, a top Singaporean DJ famed for her high energy EDM sets; established Asian DJ, Nicole Chen, known for her stage presence; Your Crypto DJ, who has played on the same line-up as Don Diablo, Alesso, Dimitri Vegas and Like Mike; DJ Kim Sane, who has performed at the likes of Ultra Europe, and more æ“æ” each set, across 2 stages, will provide a unique auditory experience of eclectic styles, ensuring the vibe never drops across the nightæ”s festivities. As the night unfolds, connections with like-minded peers and pioneers from the Web3 community hold the potential to forge relationships that could spark collaborations that extend beyond the event. As a result, the event is a must-attend for anyone looking to connect with the leading voices and presales in the community. The event is supported by the Best in Web3 Co-hosted by TBV and BitcoinOS, æ“æ”The Best Eventæ” is proudly supported by leading Web3 companies, including Petastick, Fideum, Zekret, Vurse, FOMO Ventures, Matterblock, Freename, BoomFi, Biptap, Libera Global, Captain & Company, and BeWater. æ“æ”The Best Eventæ” is also supported by prominent players in the Web3 PR, media and influencer spaces, such as yourPRstrategist (YPRS), Crypto Banter, Asia Token Fund, Coinstelegram, European Kid, CoinsCapture, MediaX, Arcadia, Cryptopolitan, Coinfea, Key Difference Wire, The Coin Republic, ZEX PR Wire, Trader Brawl Media, and Tiger Mode Media as well as community partners like Unity Labs, Cryptocurrency PH, Crypto World Community, Unikorn, Founders Hub Network, Association Blockchain Asia, AdLunam, Nadmah, All Confs Bot, Clubout and more, which further amplify its reach. With its extensive network and high-profile partnerships, the event stands out as a key highlight of Devcon, attracting industry insiders and enthusiasts alike. Due to the high demand and limited capacity, guests are advised to arrive early, with doors opening at 8:00PM, to ensure entry as this event is first-come first-served. About TB Ventures (TBV) TBV is a venture capital fund investing in early-stage Web3 companies across Southeast Asia and North America. Supported by TBE (TB Events) and TBA (TB Advisory), TBV offers a comprehensive ecosystem and network of services that are underpinned by a 100k+ social following and 10k+ active TG community. - X: <https://x.com/tbvxyz> - LinkedIn: <https://www.linkedin.com/company/tbv-xyz> - Instagram: <https://www.instagram.com/tobiandbrent>

About TB Events (TBE) TB Events is a premier event series in the Web3 community, bringing together key industry figures for networking and collaboration. With a focus on fostering connections and sharing insights, these events serve as a hub for innovation and growth in the blockchain space. About BitcoinOS BitcoinOS is the ultimate upgrade to Bitcoin. Its breakthroughs in the use of ZK proofs allow it to embed any computation directly into Bitcoin transactions. This allows for a shared infrastructure layer of the first true Bitcoin L2s that feature total L1 security, trustless bridging, scalability, natively private transactions, and fully programmable tokens on Bitcoin OSæ”s modular infrastructure acts as an operating system that creates seamless interoperability among all L2s within the system. As such, BOS fully maintains Bitcoinæ”s network effects, and establishes a permissionless, peaceful paradigm for the original chain to evolve in layers without ever needing to fork its code. In recent weeks, Binance Coin (BNB) and Sui Network (SUI) investors have faced losses, leading many to buy into IntelMarkets (INTL), a new AI-driven crypto project attracting attention after raising over \$2 million in its private presale. IntelMarkets is considered among the top altcoins to buy for those seeking to rebound in the crypto market, especially as it gears up for significant growth in Q1 2025! Real-time data, Real Results: BNB Chain Integrates Chainlink for DeFi Success On October 25, 2024, BNB Chain announced the integration of Chainlink Data Streams on opBNB to improve DeFi applications across the BNB ecosystem. As the BNB community continues to expand, high-performance data feeds on opBNB could increase the adoption and effectiveness of DeFi solutions on BNB Chain. Chainlink Data Streams offers high-speed, low-latency data feeds, empowering DeFi applications on BNB Chain with real-time market information. This will improve performance and user experience across the ecosystem. In the last seven days after this development, BNBæ”s price has dipped by 2%, falling from \$594.15 to \$577.18 between October 25 and November 1, 2024, analysts predict a rebound for the DeFi coin, as it could hit the \$675.09 mark by early 2025. Coinbase Empowers Sui Network: USDC Now Just a Click Away On October 24, 2024, Coinbase announced it has launched USDC deposits and withdrawals on the Sui Network, allowing users to transfer USDC directly to their Sui wallets from Coinbase. This integration provides streamlined access to Suiæ”s rapidly growing ecosystem. As a DeFi coin, Sui will now benefit from increased liquidity, attracting more developers to build on the network. This move is likely to boost transaction volumes and drive Suiæ”s growth, placing it as a strong contender among the top altcoins in the crypto market. However, despite this promising integration, Suiæ”s price has seen a minor decline, slipping from \$1.989 to \$1.954 between October 24 and November 1, 2024. Yet, market sentiment remains optimistic, with predictions indicating that the DeFi coin could bounce back to reach \$2.77 by Q1 2025. AI-Powered Profits: Why INTL a New DeFi coin is the Talk of the Crypto Community As BNB and SUI investors grapple with recent losses, many are turning their attention to IntelMarkets, a new AI coin that has captured the interest of enthusiastic crypto lovers and investors. IntelMarketsæ”s ongoing presale is improving its reputation as one of the top altcoins available in the crypto market, offering a safe haven amid tough market conditions. The project is gaining traction for several key features, including its dual-chain capability and perpetual trading contracts. The dual-chain feature allows users to choose between the Solana and Ethereum blockchains, promoting cross-chain interaction. At the heart of IntelMarkets are its perpetual trading contracts, which enable traders to control larger positions with a relatively small initial investment. This feature also allows traders to implement various strategies, providing opportunities for higher returns compared to traditional spot trading. Additionally, IntelMarkets offers advanced tools that give users a competitive edge, with one of the most notable being a self-learning robot capable of automating routine tasks for investors. Currently, INTL is in stage 5 of its presale, priced attractively at \$0.045. As the presale continues, the DeFi coin is expected to launch at \$0.11, with investors anticipating a remarkable 217% ROI. \$2 Million and Rising: INTL Sparks Investor Excitement with Huge Presale Success Given the recent negative sentiments surrounding BNB and SUI, investors are becoming increasingly bullish on INTL after it raised over \$2 million in its private presale, making it a top DeFi coin to buy. The positive outlook for INTL suggests it could potentially 100x in Q1 2025, driven by active community participation and strong tokenomics. With its current price, it is among the top altcoin opportunities that investors need to look out for. Disclaimer: TheNewsCrypto does not endorse any content on this page. In a market overflowing with choices, Intel Markets rises as an innovative retail trading platform for both experts and newbie crypto enthusiasts. Intel Markets supports both the Ethereum and Solana blockchains along with combining superior insights from an AI-driven interface. This combination not only guarantees low latency and great security but also offers unmatched trading environment flexibility, therefore meeting the vital demands of todayæ”s investors. Empowering Traders with Advanced Tools Intel Markets provides traders with a powerful range of tools that go beyond the basics. The platform offers a massive leverage of 1000x, thereby significantly boosting usersæ” potential returns. Experienced investors find this feature appealing as it allows high-risk traders wishing to profit from market swings to do so. The platform, however, not only serves the high-stakes traders but also gives teaching tools and easy-to-use interfaces first priority so newbies may navigate the complexity of crypto trading. Real-time market data, advanced charting tools, and a range of order types to properly control risk comprise the whole trading package on the platform. Customizing their dashboards to fit their tactics helps traders make sure they have the data right at hand. Adapting to the fast-paced world of cryptocurrencies, where every second counts, depends on this degree of customizing and adaptability. AI-Driven Realizations for Intelligent TradeAI-Powered Insights for Smarter Trading Intel Markets sets itself out even further by including artificial intelligence insights. Using machine learning techniques, the platform instantly analyzes enormous volumes of market data to provide insights that guide traders in making choices. These AI-driven observations not only spot patterns but also forecast possible price swings, therefore giving consumers a competitive advantage in the market. Imagine now being able to use the same sophisticated analytics used by Enterprise-Level institutions, right now used by retail investors. This capacity helps users to improve their trading plans according to actual facts instead of gut emotions, therefore improving the chances of success in a turbulent market. Cutting-Edge Security with Route X21 Initiative The value of security changes as the scene of cryptocurrencies develops. With its Route X21 project, which presents quantum-proof security mechanisms, Intel Markets is aggressively meeting this requirement. Supported by a significant \$1 million grant meant to improve blockchain security, this project seeks to protect tradersæ” funds from future quantum computing risks, therefore endangering conventional encryption techniques. Intel Markets gains confidence from its customers by giving security first priority as it assures them that state-of-the-art technology protects their funds and trading. In a market where security lapses may cause catastrophic losses, this degree of confidence is very important. Presale Success: A Testament to Market Confidence With its presale performance, c has raised a whopping \$1.2 million and displayed great market interest. From its initial stages, the presale has witnessed a 300% increase in token price, indicating strong interest from institutional and individual investors alike. Early supporters of the platform are excited about its possibilities as Intel Markets is not just another trading venue but also a major participant in the direction of crypto trading. Those who missed out have become interested as investors who took part in the first presale phases started to reap profits. It is clear that one should become engaged as the platform is getting ready for full launch and expected more price hikes. Be a Part of the Revolution Intel Markets is opening the path for a new trading era as the cryptocurrency sector keeps evolving. For anybody trying to navigate the crypto terrain more successfully, its mix of sophisticated AI capabilities, thorough security safeguards, and user-centric approach makes it an interesting option. Intel Markets offers the tools required to flourish regardless of your level of experience trading. Donæ”t miss the chance to participate on this ground-breaking platform. Explore the presale options to guarantee your place in a trading ecosystem built for the future. Intel Markets lets you invest in a whole trading experience that stresses development, security, and user empowerment rather than just in a token. Discover More About IntelMarkets: - Presale: <https://intelmarketspresale.com/> - Buy Presale: <https://buy.intelmarketspresale.com/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. The world is still captivated by Shiba Inu (SHIB), trading around \$0.000007 and looking to hit its all-time high (ATH) of \$0.00008. SHIB is strong with its community-driven appeal, but for investors looking for big returns, the growth potential may not be as extensive. Rexas Finance (RXS), priced at \$0.060, on the other hand, is set to become a game changer and is being offered as an existing alternative to those willing to maximize their investments. According to projections, RXS could go up to \$17 by Q1 2025, which means that a \$1,000 investment today could return very well in six months. A new interest in innovative tokens may be the best time to look into the possibility of RXS. The Current Landscape of Shiba Inu (SHIB) The Shiba Inu has become one of the leading meme coins in the cryptocurrency space. SHIB was initially launched as an alternative to Dogecoin so it could be fun, but since then it has turned into a community it was built for and has developed a decent trading volume. Even though it is a popular token, SHIB has not been able to keep up with momentum in the market along with the volatility and the competition by the newer projects. Though SHIBæ”s price is currently hovering around \$0.000007, it seems like a tough uphill battle from there to its ATH of \$0.00008. Analysts say there is potential for growth but itæ”s unlikely a modest investment would turn into life-changing wealth unless the market shifts or catalysts. To illustrate, even if SHIB were to reach its ATH once more, an investment of \$1,000 would gain you the max of about \$12,500, far short of the million dollars that some investors dream about. Rexas Finance: A Revolutionary Opportunity Unlike Shiba Inu, Rexas Finance is not speculative at all, but rather a real-world, real utility, real innovation, and investment opportunity. Currently priced at just \$0.060 on their presale stage 4, RXS has already raised over \$5 million towards its \$5.45 million goal. Given the nature of this groundbreaking project, this presale phase has largely attracted the attention of investors eager to capitalize on the addressable market of this project. Rexas Finance wants to reinvent asset management by making real-world assets such as real estate, art, and commodities available to users for tokenization on a global scale. This is a truly innovative way of increasing liquidity, but a way of democratizing access to investment opportunities that were always reserved for the wealthy or institutional investors. The feature of Rexas Finance is its Token Builder which lets the users build tokens representing their real-world assets without any technical knowledge or even knowing how to code. This tool makes entry into the cryptocurrency space much simpler and extends participation for potential investors. Furthermore, Rexas Finance provides a Launchpad to engage in secure token sales across multiple blockchain ecosystems. Itæ”s a way of being transparent and building trust among creators and investors alike. In addition

to offering the platform's integration of **Rexas GenAI**, an AI tool for the creation of high-quality digital artworks, the platform plays into the rapidly growing **NFT market**. The Future of **Rexas Finance**: Aiming for \$17 **Rexas Finance's** future is very bright, analysts are predicting **RXS** can hit an incredible \$17 by Q1 2025. This projection is supported by several factors: growing demand for fractional ownership investment models from retail investors, increasing use of blockchain technology for asset management, and the growing trend of digital asset investment. As a presale stage for **RXS** tokens, we have already seen strong demand as 97.26% of target funds have been raised and nearly 107 million tokens have been sold, out of 110 million that are available. With more investors realizing the special position that **Rexas Finance** occupies, especially in tokenizing real-world assets, the likelihood of unprecedented price appreciation becomes more apparent. What attracts investors to **RXS** is not just that it has innovative features but also that its tokenomics is in favor. The total supply of 1 billion **RXS** tokens has been allocated across categories including presale, staking pools, liquidity provision, marketing efforts, and team incentives. This mindful tactic about distribution attempts to keep a healthy balance between supply and demand, and to maximize investor returns. Comparing **RXS** with **SHIB**: A Clear Choice **Rexas Finance** stands out as a more attractive investment by comparison to **Shiba Inu**, as **RXS** delivers a better investment opportunity for substantial returns in the cryptocurrency market. **SHIB** is largely based on community sentiment and speculative trading dynamics, whereas **RXS** is built over solid and practical fundamentals. However, **RXS** is an opportunity to invest in an exponential growth curve driven by real use cases for asset management and tokenization. The difference between **SHIB** being too dependent on meme culture and social media hype that can be unpredictable, **Rexas Finance**, on the other hand, is in the right place 'within the growing **DeFi** (Decentralized Finance) space that solves core problems with traditional investing. Additionally, as **Rexas Finance** plans additional development, such as exchange listings where **RXS** will be listed at a higher price, present investors might be well positioned for significant gains if they act now. **Media Contacts**: - Website: <https://rexas.com> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> - HalloweenGiveaway: <https://x.com/rexasfinance/status/1851983620765852009> Disclaimer: TheNewsCrypto does not endorse any content on this page. - **Dogwifhat (WIF)** has dropped by 15.78% over the week, now trading around \$2.06. - Analysts see a sweep of lows in **Dogwifhat** as it falls below support, with traders watching a demand zone at \$1.6 to \$1.8 for buying opportunities. At the end of October, **Bitcoin** soared near its all-time peak of \$73K and sparked a strong rally across the crypto market, particularly in the meme coin sector. Among the tokens drawing attention was **Dogwifhat (WIF)** but as November kicked off, the upbeat momentum began to wane. Currently, **Dogwifhat's** price is hovering around \$2.06, marking a 15.78% decline over the past week. Despite this dip, trading volume remains high, with approximately \$602 million flowing through the token, indicating sustained interest from traders. This downturn hasn't gone unnoticed by the crypto community. Well-known analyst **George** has weighed in, suggesting that the memecoin may continue to face headwinds. He points to a recent technical analysis where **WIF** dropped below its previous support level of \$2.15, a movement often referred to as 'sweeping lows.' This drop can trigger stop-loss orders, leading to further declines as weaker buying positions are eliminated. Traders are now focusing on a 'demand zone,' a critical area on the charts where buying interest typically resurfaces. This zone, ranging from \$1.60 to \$1.80, could present a prime buying opportunity if the price dips into this range. **George** says traders plan to enter a long position if **WIF** approaches this zone, anticipating a bounce back. Current Price Movement of **Dogwifhat** At the time of writing, **WIF** has slightly rebounded to \$2.08 after hitting an intraday low of \$1.96. However, it remains below the **Bollinger Bands' upper line**, indicating potential room for upward movement if it can break through these resistance levels. The **MACD** indicator is also showing signs of potential bullish momentum, with the current value at -0.089, just above the signal line at -0.095. Meanwhile, the **Relative Strength Index (RSI)** suggests that **WIF** may be oversold, hinting that a reversal could be on the horizon if buying pressure begins to build. As **Dogwifhat** navigates these challenges, traders will be keeping a close watch on critical support levels around the \$2 zone, with the hope of a rebound as the market continues to evolve. Highlighted News Of The Day

- **Ethereum** has factored in a modest price increase of 0.54% in the last 24 hours. - The altcoin has failed to show significant price movements after the August market crash. The cryptocurrency market has reverted to the month-beginning lull similar to previous cycles. After a brief attempt on Saturday to overcome price consolidation, the market hasn't shown much action in the last 24 hours. Meanwhile, the US crypto landscape is awaiting intriguing actions as external factors stand lined up that have previously influenced prices such as **FED** rate cuts and the US elections. The leading altcoin, **Ethereum**, continued its price descent over the weekend, hitting key support levels at \$2,400. Although in the last 24 hours, **ETH** has experienced a modest price increase of 0.54%, the token still remains at the \$2.4K level. The past day's price cycle began at the \$2,452 level and rose to \$2,470. According to **CMC** data, **Ethereum** was trading at \$2,460 at the time of writing. On the other hand, the cryptocurrency's daily trading volume has surged by 26.31%. Moreover, the cryptocurrency has seen major selloffs over the past few days as depicted by the **RSI** standing at 43.77. Additionally, prominent crypto trader **Wintermute** also made a major **ETH** movement a few hours ago. According to reports from the **Data Nerd**, an on-chain detective, **Wintermute** has deposited 29,317 **ETH** worth \$71.85 million into **Binance**. This has reduced his current **ETH** holdings to 4,921, as per **Arkham Intelligence** data. What Can Traders Expect from **Ethereum Price** Actions? Market analyst **Ali** known as **@ali_charts** analysed a recent risk-to-reward ratio for **ETH**. The analyst's X post shows a ratio ranging from a risk ratio of \$1,880 to a reward value that stands at \$3,190. The value suggests a major long-term X-ray of the altcoin, indicating the existence of a long-term uptrend through market capital trading data. Additionally, the cryptocurrency has also been experiencing increased volatility as depicted by its **RVI** values. Meanwhile, other cryptocurrencies such as **Solana** and **Bitcoin** have shown modest price increases in the past day.

Strategic investments in great ideas can pay off handsomely as we get ready for the expected 2025 bull run. Should you be ready to commit \$800 now, diversify among five well-selected cryptocurrencies and let them flourish until 2025, you could find that small investment becomes a \$1.6 million portfolio. **Rexas Finance (RXS)**, **Solana (SOL)**, **Ethereum (ETH)**, **Cardano (ADA)**, and **Ripple (XRP)** are the five altcoins to keep an eye on. They are perfect candidates for major advances in the next years since everyone has unique traits and development chances. **Rexas Finance (RXS)**: Asset Tokenizing Future Prospect Using blockchain technology to tokenize real-world assets (**RWA**), **Rexas Finance** is a novel initiative aiming at turning actual and intangible objects into digital tokens. By means of technologies that democratize investing possibilities, the platform solves inefficiencies in conventional finance including liquidity restrictions and excessive transaction costs. The project brings asset management into the digital age with its thorough ecosystem, which includes the **Rexas QuickMint Bot** for simple token creation and **Rexas GenAI** for AI-powered **NFT** generation. **Rexas Finance's** most recent placement on **CoinMarketCap (CMC)**, a significant event that raises token visibility and accessibility, further supports its growth potential. **Rexas Finance** is also launching a huge promotion, giving 20 lucky winners \$50,000 worth of **RXS** tokens, therefore encouraging community involvement and company awareness. Presale successes totaling over \$4.2 million and a current token price of \$0.06 mean **RXS** is expected to climb to \$0.20 by 2025. **Rexas Finance** is positioned for explosive expansion by drawing on the multi-trillion dollar financial assets sector. **Solana (SOL)**: Real-World Utility High-Speed Blockchain One high-performance blockchain well-known for its amazing scalability and low transaction costs is **Solana**. Capable of up to 65,000 transactions per second (**TPS**), **Solana** has evolved into a favorable platform for distributed apps (**dApps**), **DeFi** protocols, and **NFT** markets. Unlike other Layer-1 blockchains, its ecosystem keeps growing and draws developers and consumers searching for quick and reasonably priced answers. **Solana** is a good investment choice given the forthcoming upgrades in her infrastructure and her acceptance in several sectors. With **SOL's** current price much below its all-time high, it presents a profitable starting position. **SOL's** value is probably going to experience a significant increase by 2025 as more projects on **Solana** expand and the larger crypto market recovers, so perhaps generating great returns for early investors. **Ethereum (ETH)**: Smart Contract King With a great ecosystem of **DeFi** apps, **NFTs**, and **dApps** enabled by **Ethereum's** unchanging supremacy in the smart contract field, **Ethereum 2.0**, seeks to enhance scalability and lower energy usage by means of the proof-of-stake (**PoS**) consensus method. This improvement makes **Ethereum** more user-friendly for both developers and companies since it solves some of its main constraints, such as high gas fees, and network congestion. Buying **Ethereum** is a wager on **Web3**, **DeFi**, and distributed apps' ongoing expansion. **ETH's** price is predicted to rise steadily towards new highs by 2025 given its basic importance in the blockchain sector. Any long-term cryptocurrency portfolio should include **Ethereum** since the application of scaling solutions like Layer-2 technology will help to improve its market position. **Cardano (ADA)**: The Sustainable Blockchain Visionally Designed **Cardano** is a blockchain system stressing scalability, security, and environmental sustainability. Rooted in peer-reviewed research, its scientific method of development distinguishes it from other initiatives. **Cardano's** constant improvements including the **Alonzo** hard fork, which brought smart contract capabilities, continue to improve its utility and draw developers to creating **dApps** and **DeFi** solutions. With additional initiatives starting on its platform and rising user acceptance, the **Cardano** ecosystem is set for growth. Its ecologically friendly proof-of-stake system also fits rising worries about blockchain technology's effect on the surroundings. **ADA's** market value will rise as **Cardano's** utility and acceptance grow, hence it is a great option for anyone wishing to profit on a scalable, green blockchain solution by 2025. **Ripple (XRP)**: Bridging blockchain and traditional finance Designed to challenge the established financial system, **ripple's XRP** is meant to enable quick and cheap cross-border transfers. Notwithstanding its continuous legal conflict with the U.S. Securities and Exchange Commission (**SEC**), **Ripple** has kept broad use cases and alliances in development all around. The result of the court case could have a big effect on **XRP's** price; a positive decision probably will cause a notable surge. The practical value of **XRP**, especially in the remittance and payments sectors, defines its strength. **XRP** demand is projected to increase as more financial institutions embrace **Ripple's** technology. **XRP** might establish its leadership as a digital asset for worldwide transactions by 2025, particularly if large economies like the United States get legislative certainty. Why might **Rexas Finance** beat the market? Among these projects, **Rexas Finance** is unique because of its creative approach to actual asset tokenization and its all-encompassing ecosystem using blockchain and artificial intelligence. The continuous presale of the project and community projects including the \$1 million giveaway offer show a dedication to user involvement and expansion. Furthermore, the recent **CoinMarketCap** listing gives the project more exposure, therefore raising the possibility of increased investor interest and token price rise. **Rexas Finance** looks forward since it seeks to change the financial scene by providing solutions addressing market inefficiencies and creating new chances for regular investors. With a strong road map and aggressive development forecasts, **RXS** seems to offer among the chosen cryptocurrencies one of the best returns. Conclusion Investing in cryptocurrency calls for a readiness to take chances, done intelligently the results can be transformative. Investors can set themselves to profit from the next bull market by spreading \$800 among **Rexas Finance**, **Solana**, **Ethereum**, **Cardano**, and **Ripple**. From asset tokenizing and smart contracts to cross-border payments and environmentally friendly blockchain solutions, these five altcoins span a spectrum. If one keeps these assets until the end of 2025, a meager \$800 might become a \$1.6 million portfolio. Among them, **Rexas Finance** is particularly interesting for investors trying to maximize profits because of its original approach and fast expansion possibilities. For more information about **Rexas Finance (RXS)** visit the links below: - Website: <https://rexas.com> - Halloween Giveaway: <https://x.com/rexasfinance/status/1851983620765852009> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - **XRP** has shown an additional price drop in the last 24 hours following previous declines. - The altcoin's daily trading volume has decreased by 24.25% as per **CMC** data. In the last 24 hours, the overall crypto market has turned bullish as depicted by the market cap showing a 0.21% increase. The leading cryptocurrency **Bitcoin** has shown modest price hikes after it slid to the \$69K level. On the other hand, the regulatory landscape has depicted some actions as **Coinbase** reported the identification of **FDIC** (Federal Deposit Insurance Corporation) asking several banks to avoid crypto. Meanwhile, the **Ripple** ecosystem's native token, **XRP** has factored in an additional drop in price by 1.57%. In the past day, the token was trading at an intraday high of \$0.5230 before sliding down to a low of \$0.5093. At the time of writing, **XRP** was trading at \$0.5115 as per **CMC** data. Zooming out, over the past week, the cryptocurrency has witnessed increased volatility and a price drop of 0.28%. Some of its crucial high price points over the week include \$0.5273 and \$0.5303 before the altcoin began descending downwards. However, the aforementioned price points indicate a struggle to break resistance beyond the \$0.53 level and to rally further upwards. Meanwhile, the **Ripple** firm has been combating the infamous lawsuit against the **SEC** that has been prolonged for nearly 4 years. Recently, **Ripple** filed for a cross-appeal following the **SEC's** last-minute appeal. Where is the **XRP** Price Headed? On analyzing the altcoin's technical indicators, **XRP** shows bearish signals. The token's **RSI** stands at

Neiro Ethereum trades at \$0.09135, after gaining 15% in the last 24 hours. A crypto whale draws attention with massive Neiro Ethereum accumulation. The trading day opened with mixed signals, and the market cap reached \$2.33 trillion. Bitcoin, the largest cryptocurrency, continues to trade within the \$69 mark. Amid this, a whale has acquired nearly 8.02 million Neiro Ethereum tokens (NEIRO). The whale associated with the wallet address 0x944 withdrew NEIRO, worth \$782.74K, from the Bitget exchange. This transaction is the first instance of this particular whale accumulating NEIRO. Moreover, from the meme coins WOJAK and TURBO, the whale has earned hundreds of thousands of dollars in profit. On the other hand, in October, NEIRO had a strategic partnership with DWF Labs. This collaboration aims to enhance the token's market visibility, growth, and expand its user community. Further, this aims to place NEIRO in a significant role in the meme coin market. Price Movement of NEIRO Following this acquisition, the NEIRO price has witnessed a notable surge of 15%. In the morning hours, the asset traded at \$0.09328 and managed to climb to a high of \$0.1025. At press time, the token is trading at the \$0.09135 mark. Besides, the daily trading volume is positioned at around \$46.58 million, surging 43% according to CMC data. Zooming in at the weekly price chart of NEIRO, the asset has seen a 44% increase in price over the last 7 days. Trading at \$0.08329, the token is poised for a potential upside correction. Despite the asset's short-term gains, NEIRO has experienced a 13% price drop over the last 28 days. The asset began fluctuating severely but managed to trade within the current price level. The technical analysis of NEIRO displays the current bullish market sentiment, and the asset is in the neutral zone as the daily RSI is positioned at 51.43. Moreover, the asset's daily frame has placed the short-term 9-day moving average below the long-term 21-day moving average. Furthermore, the Moving Average Convergence Divergence (MACD) indicator of NEIRO sits above the signal line, suggesting the upside pressure and the incoming bullish trend. Highlighted Crypto News Can Solana Overcome Selling Pressure to Regain Bullish Momentum?

Bitcoin struggles to sustain gains, dropping below \$70K. While activity sparks concern, but accumulation trends suggest potential bullish recovery. Bitcoin (BTC) recently faced a sharp decline after touching impressive highs. On 30 October, BTC surged to \$73,500, continuing its pattern of "uptobera" gains. However, it failed to sustain momentum, slipping below the crucial \$70,000 level. As of now, Bitcoin is trading around \$69,561, reflecting a slight 0.07% uptick in the past 24 hours, while trading volume has dropped by 0.65%, according to CoinMarketCap data. Over the past week, Bitcoin recorded a 4% increase. Still, bearish sentiment crept back into the market following a significant 4% drop over the past 24 hours, likely influenced by whale activity. Whale Alerts reported a massive transfer of 8,000 BTC (valued at \$567 million) from an unknown wallet to Coinbase. Typically, such movements can spark concerns about sell-offs, but on-chain analysis from Lookonchain suggested a different scenario. A whale appeared to buy the dip, acquiring 550 BTC worth \$38.68 million. Nevertheless, Bitcoin's Relative Strength Index (RSI) showed a decline, reflecting weakened momentum. Meanwhile, Institutional leaders remain highly bullish on Bitcoin. For example, Michael Saylor, former CEO of MicroStrategy, commented recently that Bitcoin is succeeding faster than any monetary economic idea in the history of the world. Can Bitcoin Bulls Own the November? Technical indicators reveal mixed signals. The 9-day Moving Average (MA) remains above the 21-day MA, indicating bullish potential. Bitcoin's support sits near \$68,500; holding this level could push BTC back toward the \$73,000 mark. However, if it fails, a decline to \$66,000 could be on the horizon. Moreover, market sentiment indicators like the Fear and Greed Index also flashed "extreme greed" on Thursday. Historically, this has hinted at market corrections, and recent liquidations of over \$250 million in bullish futures further emphasize investor caution. With U.S. elections approaching and global economic uncertainties, BTC's outlook remains volatile. Bulls aim to break resistance at \$71,500, while bears threaten further losses if Bitcoin falters. Traders should monitor volume trends and macroeconomic factors closely. Highlighted News Of The Day

The M2 Exchange hack has lost around \$13 million. Hot wallets across Ethereum, Bitcoin, and Solana networks were targeted. The cryptocurrency exchange M2, regulated as a Multilateral Trading Facility (MTF) and custodian by the Financial Services Regulatory Authority (FSRA), hacked resulting in a loss of \$13 million from its hot wallets. The exchange, M2 operates on Ethereum, Bitcoin, and Solana. The hackers targeted M2's hot wallets connected to the internet for quick transactions. Following the breach, the exchange acted rapidly, securing the situation and restoring customer funds. M2 stated in its official announcement: "We would like to report that the situation has been fully resolved and customer funds have been restored. M2 has taken full responsibility for any potential losses, demonstrating our unwavering commitment to safeguarding our customers' interests." In addition, the exchange also introduced additional security measures and mentioned its cooperation with authorities to ensure intensive investigation and compliance. During the security breach, attackers stole funds from multiple blockchain networks, including Ethereum (ETH), Bitcoin (BTC), and Solana (SOL). The addresses linked to the stolen assets have been identified. The address for Ethereum is `0x68b69841c1444723e511899552488155e142`, and while the Bitcoin address is `1C9u4kH7wa38xKp8f9x14sak8Bw0j9u8n3yfj`, the theft address of Solana is `AEeekR0i4NvgQvNtUB8j7XkvG0S6B1rjfn3nq4w4QoL`. A Web 3.0 platform disclosed a suspicious address received 3.1 million USD, 97 million SHIB, and 1,378 ETH, which later swapped entirely to Aeth. Highlighted Crypto News

Experiencing missed chances with early-stage cryptocurrencies can leave many wishing they had acted sooner. Whether it was overlooking Bitcoin or delaying Solana, the regret is common: they should have capitalised earlier. Yet, every once in a while, a fresh prospect emerges. This time, it's BlockDAG (BDAG), a pioneering layer 1 blockchain intent on completely redefining the cryptocurrency landscape. Since its inception, BlockDAG has quickly achieved one milestone after another: accumulating \$195.4 million selling 14.6 billion coins and providing a staggering 2100% return to its early contributors. The recent test network debut has converted skeptics into supporters, with a grand promotional code offering a 100% bonus on all BDAG coin acquisitions. This has drawn significant attention from major buyers, including single purchases over \$3 million. Test Network Success: BlockDAG Proves Its Capability The testing phase is crucial for any digital currency project, this is where concepts either materialise or collapse. BlockDAG's test network introduction was a resounding success, showcasing the network's capability, speed, and scalability to developers and early adopters. The positive feedback from this community underscores BlockDAG's potential to address persistent challenges in blockchain technology. This strong performance builds excitement for an early main network launch, sparking interest among developers and cryptocurrency enthusiasts globally. BlockDAG Launches BDAG100: Grab 100% Bonus Today! In light of overwhelming demand and robust community backing, BlockDAG recently unveiled a new limited-time promotional code: BDAG100. This promotion provides a substantial benefit—a 100% bonus on BDAG coin purchases, doubling the value for early participants and eager supporters. This move celebrates BlockDAG's achievements and demonstrates its commitment to rewarding its community and boosting user involvement. By launching the BDAG100 bonus, BlockDAG seeks to attract

even more users to its thriving ecosystem, further propelling its growth and cementing its status in the competitive blockchain arena. This strategic initiative underscores BlockDAG's focus on innovation and community engagement, paving the way for continued prosperity and reach. The Stats Are In: BDAG's \$105.4M Presale & 2100% Surge BlockDAG's presale period has been transformative. Having raised \$105.4 million and with the BDAG coin price surging from \$0.001 to \$0.022, the presale strongly reflects the community's trust in BlockDAG's future prospects. This 2100% price rise since batch 1 demonstrates a solid belief in the long-term potential of BDAG. Large traders are making individual purchases of up to \$3 million, and retail participants are increasing, with many joining the presale each day. As the main network launch nears and presale batches sell out quicker with each round, BlockDAG's journey is marked by rapid progress and substantial support. Missed BDAG's 2100% Growth? Here's Your Next Chance! Those who joined BlockDAG in the first batch of presales are currently enjoying a remarkable 2100% gain, with BDAG's price reaching \$0.022 as batch 25 commenced. However, this doesn't mean new participants can't achieve impressive returns. With the upcoming main network launch and a projected price of \$30, those jumping at the current price of \$0.022 could see substantial profits. One thing to note: this price won't last long. With significant purchases happening under the ongoing 100% bonus code, BDAG's value could soar at any moment. While it might seem late to enter the presale, there's still an opportunity to secure a share of what could be a 30,000% return! If you act swiftly, learn about BlockDAG and act now before prices increase! Website: <https://blockdag.network> Presale: <https://purchase.blockdag.network> Telegram: <https://t.me/blockdagnetworkofficial> - Discord: <https://discord.gg/Q7BxgHMyvu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Zug, Switzerland, October 31st, 2024, Chainwire Chorus One, a leading provider of staking infrastructure for over 60 networks, today announced the launch of TON Pool, a new staking solution designed to simplify and optimize Toncoin staking for institutions and investors. With a focus on addressing the limitations of current staking models on the TON blockchain, TON Pool offers a flexible, cost-effective, and scalable staking solution that meets the needs of custodians, exchanges, wallets, and institutional investors. A solution to Toncoin's current staking limitations The TON blockchain is gaining traction as a powerful platform for decentralized applications, but existing Toncoin staking mechanisms such as the Nominator Pool and Single Nominator contracts present significant limitations for institutional players. According to the team, high minimum staking requirements, limited delegator capacity, and the operational complexity of managing multiple pools are key challenges that prevent large institutions from efficiently staking Toncoin at scale. Currently, they add, the Single Nominator contract requires a minimum of 300,000 TON, limiting accessibility for many institutions. Moreover, both staking models restrict the number of delegators and require manual management, resulting in higher transaction fees and reduced yields due to complex pool monitoring. Recognizing these limitations, Chorus One developed TON Pool, a solution specifically tailored for large-scale staking operations that eliminates inefficiencies and provides a more seamless staking experience. Key benefits of TON Pool - Optimized potential yields: By consolidating stakes and reducing transaction fees, TON Pool can maximize potential yields for institutions and their clients. - Unlimited delegators: Unlike traditional staking models that limit delegator capacity, TON Pool allows institutions to stake on behalf of an unlimited number of clients. - Low minimum stake: With a minimum of just 10 TON (vs. 300,000 TON in other models), TON Pool makes staking accessible to a broader range of users. - Effortless integration: Institutions can easily integrate TON Pool into their platforms, simplifying staking management and improving user experience. A simpler staking flow with TON Pool Compared to traditional staking models, TON Pool offers a much more streamlined staking process. Instead of requiring operators to create and manage multiple pools, TON Pool consolidates all staking into a single address. Customers delegate once, pay one transaction fee, and the platform handles all the technical complexities of distributing and managing the stake. "TON Pool is our response to the challenges institutions face when staking on the TON blockchain," said Brian Fabian Crain, CEO of Chorus One. "We built this solution to remove unnecessary steps, lower costs, and provide a scalable option for institutions that require a higher degree of flexibility. TON Pool makes staking more accessible, which we believe is essential to driving the TON ecosystem forward." How to contact for more details about TON Pool and to get exclusive discounted commission rates, users can reach out at staking@chorus.one, and sign up now to be among the first to experience streamlined, scalable Toncoin staking. About Chorus One Chorus One is a leading institutional staking provider, operating infrastructure for over 60 networks, including Ethereum, Cosmos, Solana, Avalanche, Near, and others. Since 2018, Chorus One has been at the forefront of the PoS industry, offering easy-to-use, enterprise-grade staking solutions, conducting industry-leading research, and investing in innovative protocols through Chorus One Ventures. As an ISO 27001-certified provider, Chorus One also offers slashing and double-signing insurance to its institutional clients. For more information, users can visit chorus.one or follow them on X (formerly Twitter), and LinkedIn. Contact Hari Iyer staking@chorus.one

Tokyo, Japan, October 31st, 2024, Chainwire Mawari Network, a spatial computing DePIN (Decentralized Physical Infrastructure Network), has announced a limited node license sale. Already a pioneer in immersive content, the node sale will make Mawari's 3D streaming technology more scalable and accessible for content creators and developers. This node sale will help create a global, decentralized spatial computing infrastructure as the market for extended reality devices like the Apple Vision Pro, Meta Orion, and Meta Quest 3 is projected to reach more than 100 million units in the next five years. As demand for immersive experiences grows, Mawari is building a network that can grow with it. Mawari's infrastructure is optimized for the demanding needs of immersive experiences, positioning Mawari as a key actor in the emerging multibillion-dollar spatial computing market. Called "a sleeping lion" by Samsung Next, Mawari is redefining and building the future of spatial computing. Its solution comprises the Spatial Streaming SDK and the Mawari Network. The SDK, supporting the Unity and Unreal engines, empowers developers to create seamless, immersive experiences. The Mawari Network, working in parallel, leverages a globally distributed network of GPU nodes to ensure low latency and optimal performance. The node license sale's objective is to help scale the network, optimize its global performance, and ensure its resiliency. "This node sale allows node operators to help bring 3D content to the world, and be rewarded for their efforts," said Luis Oscar Ramirez, Mawari's Founder & CEO. "The current cloud services didn't allow us to scale our proprietary spatial streaming technology, we researched ways to scale immersive content and found DePIN was clearly the best option. Now, we can allow our global community of node operators to participate in building out our critical node network alongside our community of developers and content creators." Mawari has worked with industry leaders, such as Deutsche Telekom, KDDI, Telefonica, Magic Leap, Netflix, Qualcomm, T-Mobile and dozens of other clients. The Solana Foundation recently selected Mawari for a grant, endorsing its roadmap for decentralized spatial computing. Backed by investors including Anfield LTD, Borderless Capital, 1k(x), and Samsung Next, and with veteran DePIN and web3 operator, Sean Carey, a co-founder of Helium, also joining its board, Mawari is the clear category leader. Node Sale Details The node sale is scheduled for Q4 2024, building out the Mawari Network's ability to perform compute-intensive tasks and efficiently deliver immersive 3D content on a global scale. The Mawari Network will be leveraging specialized GPUs around the world for advanced computation and streaming tasks, but a set of Guardian Nodes are needed to verify their work and the performance of the network overall as it serves multiple simultaneous immersive experiences. The node sale is for licenses to operate these critical Guardian Nodes. More specifically, Guardian Nodes' responsibilities include assessing critical performance indicators like latency, bandwidth, and content quality to maintain the high standards necessary for immersive, real-time experiences. By monitoring the Mawari network, the community-run Guardian Nodes will make it more performant and more resilient, ensuring it can scale securely as it grows. Details of the node license sale will be announced soon. About Mawari Mawari is setting the standard for decentralized spatial computing and immersive content delivery. The Mawari Network powers real-time streaming of immersive content through a global network of compute nodes. Mawari is optimizing XR for awe, creating unforgettable experiences and revolutionizing how creators engage audiences at scale. Mawari Network built the foundational technologies to power the next generation of interactive media, fully realizing the possibilities of virtual worlds existing seamlessly alongside our physical reality. Its core technology, the Mawari Engine and Spatial Streaming SDK, runs on the Mawari Network "the world's first and only DePIN (Decentralized Physical Infrastructure Network) that orchestrates storage, bandwidth, and rendering in real-time for spatial computing. Bypassing the rendering limitations of existing mobile devices and content delivery networks, Mawari's global network of compute nodes has already powered activations from digital fashion shows to concert visualizations. The Mawari Network's peer-to-peer architecture was purpose-built to scale spatial media streaming requirements with a community-centered ethos. Suilend, a DeFi lending and borrowing platform, has announced the launch of SpringSui, a new standard for liquid staking tokens (LSTs) on the Sui network. The introduction of SpringSui (SSUI), the first LST on Sui, is part of this standard. More developers will be able to engage in staking thanks to SSUI, which will also expand the Sui network's liquidity and yield-generating possibilities. The protocol-level upgrades SIP-31 and SIP-33, which establish a new token standard intended to speed up the expansion of LSTs on Sui, are the foundation for SpringSui. Suilend created SSUI, the first token used with this framework, to showcase the potential of SIP-33. Users who stake SUI using sSUI may utilize the LST that represents their staked assets on Suilend and other DeFi platforms. sSUI increases yield-generating possibilities on the Sui network while democratizing access to SUI staking. Although it has been slower to gain traction on Sui, where just 1.18% of native tokens are staked in LSTs, compared to 6.6% on Solana and 41% on Ethereum, liquid staking has grown to be a significant industry on Proof of Stake (PoS) networks like Ethereum and Solana. Rooter, founder of Suilend, shared his vision: "I think SpringSui will unlock a new era for liquid staking on Sui. The primary driver of growth for LSTs is leveraged staking, which will be turbocharged by SpringSui." Sam Blackshear, CTO of Mysten Labs, commented: "SIP-31 and SIP-33 are significant upgrades to Sui staking. Adding fungibility to staked tokens will improve the interoperability of existing use cases and enable some new ones. The Suilend team has done excellent work on both the theory and engineering behind these improvements." Through its instant unstaking feature, SIP-33 mitigates the dangers of depegging, hence improving the security of LST-backed collateral. Emma Zhong, Software Engineer at Mysten Labs, commented: "SIP-33's instant unstaking feature improves the safety of LSTs by minimizing depegging risks. This upgrade represents a major step in boosting the safety, efficiency, and accessibility of staking products across Sui's DeFi ecosystem." As industry leaders are paying attention since SpringSui's release represents a significant advancement for the Sui ecosystem. Kevin, Co-Founder and CTO of Aftermath Finance, shared his excitement: "We're excited to work with the Suilend team to make aSUI more streamlined, which unlocks our MEV-powered LST product." BL, Co-founder and CTO of Studio Mirai, added: "We're excited to partner with Suilend for the launch of SpringSui. SpringSui gives us the tools and means to deploy a custom LST specifically for the Studio Mirai community. We're looking forward to exploring the potential of community-driven LSTs and providing users with more control over their liquidity." The framework is open-sourced and accessible to all Sui developers in an effort to hasten the adoption of the SpringSui Standard and encourage liquid staking on Sui. The SpringSui Standard, developed by b3rpleys, a member of the Suilend team who also developed SIP-31 and SIP-33, will be advantageous to the Sui ecosystem as a whole. Prominent LST provider Aftermath has already pledged to include the SpringSui standard within their line of products. LST adoption is emphasized as a primary aim in Suilend's roadmap, and the release of SpringSui marks a significant advancement toward that objective. Suilend will provide a new platform that enables anybody to create and oversee their own LST in order to further this endeavor. The ability for LST operators to choose their own fees will promote a flexible and adaptable strategy for LST deployment on Sui. Suilend is improving its DeFi services with SpringSui, giving users more options to generate yield on Sui, and enticing other developers to provide creative LST solutions that will permit unrestricted liquidity movement across the network.

With Bitcoin (BTC) ETFs witnessing an unprecedented \$1.2 billion in inflows, a bullish tsunami is sweeping across the crypto market and preparing November as a record-breaking month for certain assets. IntelMarkets (INTL) is a rising star among the tokens ready to hit new all-time highs (ATH) with Solana (SOL) and Worldcoin (WLD) alongside. Each brings unique strengths and innovations, which helps to define them as absolutely necessary assets in this bullish landscape. Solana and Worldcoin leading from the front Solana has shown itself as a go-to for high-performance blockchain as the conventional banking sector embraces blockchain potential, particularly as NFT and DeFi ecosystems grow. Likewise, as usage rises, Worldcoin, which has slowly expanded using an ambitious approach to digital identification, is ready for the limelight. With both the tokens witnessing massive surge lately despite severe pullbacks, the present technical analysis points towards a robust rally towards a new ATH in November as per prominent analysts. Though Solana (SOL) and Worldcoin (WLD) provide unquestionable advantages for the crypto scene, IntelMarkets is establishing itself as a unique, strong competitor by combining high leverage, perpetual futures, and quantum-proof technology all meant to ensure the future of

crypto trading. IntelMarkets (INTL) Makes a Bold Entry Arriving in the market recently, IntelMarkets (INTL) is drawing a lot of interest with its dual-chain architecture and innovative security measures. While Worldcoin concentrates on building digital identities and established networks like Solana provide scalability and speed, INTL is carving out its own as a dual-chain exchange able to support both Ethereum and Solana. This architecture guarantees traders' ability to take use of both blockchains' capabilities as well as increases their flexibility. IntelMarkets is also ahead of the curve in addressing future security concerns with the Quantum-Proof Route X21 initiative, providing a safe trading environment appealing to both whales and retail traders seeking an advantage in a secure ecosystem. Ongoing Presale: Massive Opportunity The recent Bitcoin ETF inflows have set off a chain reaction that has institutional investors thinking about initiatives outside of just Bitcoin. Demand for high-potential, utility-based tokens is being driven by this evolution; INTL's presale has already seen a notable increase in involvement. With a presale price of \$0.036545, IntelMarkets offers a tempting starting point for investors looking for explosive growth. With the project's expected minimum listing price of \$0.11, early adopters might perhaps realize profits of over 200% at debut; many analysts believe that rewards could even be more on listing. Innovative Features IntelMarkets provides innovative tools meant to keep traders ahead of market fluctuations while AI-driven analytics powers its trading ecosystem. Customizable indicators, sophisticated charting, and AI-guided insights all meant to enable traders to make well-informed, data-based decisions are part of the platform's tool set. IntelMarkets lets users amplify possible profits by combining with a 1000x leverage option, thus appealing to traders wanting to maximize gains in this fast rising bull market. IntelMarkets also attends to the vital need for tamper-proof, secure data. The platform guarantees effective liquidity, accurate pricing, and fair trade execution by use of a central limit order book (CLOB) and strong oracle infrastructure. IntelMarkets is a tempting substitute for conventional exchanges because of its dedication to openness and integrity; particularly given its security measures and AI-powered analytics, which help it to be a leader in the exchange industry. Leveraging the Bullish Momentum For crypto investors, November looks to be a transforming month; IntelMarkets (INTL) is positioned to profit from this boom. IntelMarkets is more than just another exchange; it's a platform created for the future of finance with choices for leverage-driven trading, future-ready security models, and support for Ethereum and Solana. INTL, along with Solana and Worldcoin, is a high-potential asset for investors trying to maximize the current bull market as Bitcoin ETF inflows point to a new surge of investment into the sector. Investors and traders can make use of this bullish momentum and explore IntelMarkets (INTL) today to lead crypto's next great wave front and reap the rewards for being an early adopter. Discover More About IntelMarkets: - Presale: <https://intelmarketspresale.com/> - Buy Presale: <https://buy.intelmarketspresale.com/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: <https://x.com/intelmarkets> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. The fastest parallel MPC network in the world, Ika (previously dWallet Network), announced today that it has launched on Sui, a cutting-edge Layer 1 blockchain and smart contract platform. As an alternative to bridging, Ika provides safe interoperability across Ethereum, Bitcoin, Solana, Polygon, Avalanche, TON, and more. This empowers developers of Move smart contracts and offers improved foundational infrastructure, allowing institutional players to fully utilize Sui's leading decentralized technology. Ika addresses significant shortcomings in current MPC networks by using Sui's Mystici consensus and the innovative 2PC-MPC cryptographic method, providing previously unheard-of throughput performance with low latency, tremendous scalability, and zero-trust security. Numerous apps on the Sui blockchain are powered by Ika's ultra-fast MPC network, including: - Programmable Bitcoin: Ika offers programmable, secure DeFi and custody, opening up new possibilities for native BTC on Sui. - DeFi Interoperability: Ika brings liquidity from chains like Bitcoin and Ethereum to Sui with its sub-second speed and scalability, enabling instantaneous and secure operations across all web3 ecosystems. - Decentralized Custody: Ika provides unparalleled security for both institutional and individual customers by providing safe, decentralized custody solutions for digital assets on the Sui blockchain. - Chain Abstraction: Along with other Sui capabilities like zkLogin, Ika enables builders on Sui to abstract the intricacy of numerous chains for their customers, providing the ideal user experience. - AI Agent Guardrails: By offering secure MPC guardrails that prevent AI agents from having complete unrestricted power and protect user assets, Ika improves AI apps on Sui. Omer Sadika, Co-Founder of Ika stated: "Sui is the fastest execution venue for cross-chain programmable BTC, DeFi, decentralized custody, Chain Abstraction, and AI agent guardrails. We chose Sui because Ika is deeply aligned with Sui's core values of performance, speed, and decentralization." Soon, the IKA token will be natively available on the Sui blockchain, opening up additional decentralized security features and applications. IKA, the native token of the Ika MPC network, will be essential in sustaining its very quick and scalable infrastructure. It will also be used as payment for MPC signing services, facilitating smooth transactions across the Web3 realm. Adding the most promising MPC technology in blockchain to the fastest-growing L1 in Web3, Ika improves the ecosystem's overall security and scalability by using Sui's unparalleled speed and performance. Jameel Khalfan, Head of Ecosystem Development at Sui Foundation stated: "With Ika, more than \$2 trillion in digital assets can now be programmed via the Sui network. Ika's wide variety of use cases represents incredible potential for the Sui ecosystem." Today, Ika's alpha testnet is available on Sui; the mainnet launch is scheduled for December.

- Ethereum price has factored in a modest price increase in the last 24 hours. - The altcoin's daily trading volume has decreased by 5.61% as per CMC data. As another month ends, the crypto market's speculations have begun to turn into reality. Uptober has begun its upward rally, as evidenced by Bitcoin's current \$72K trading levels. Moreover, other altcoins have also followed in on the rally hitting new trading levels and YTD (year-to-date) increases. Meanwhile, the leading altcoin Ethereum has stagnated at its trading levels from the recent price drop. ETH has remained at the \$2K level for nearly three months, not having shown significant upward movements since the August market crash. In the last 24 hours, the cryptocurrency has factored in a modest increase of 0.98% raising from the \$2,615 level to the \$2,643 trading price. Additionally, Ethereum has also shown increased volatility in the last few days as indicated by the RVI standing at a high of 75.90. Subsequently, this volatility caused the token prices to hit an intraday high of \$2,681 after which it dropped to the current level. At the time of writing, Ethereum was trading at \$2,642 as per CMC data. On inferring Ethereum price's chart movements, the cryptocurrency shows amplified struggles to break from the \$2,600 consolidation phase. ETH has also further failed to utilize the market's positive momentum exhibited in the past few days. Will Ethereum Price Turn Bullish In the Coming Days? The altcoin, in order to witness bullish movements must manage to surpass the \$2,700 resistance and further resistance levels at \$3,000. If Ethereum utilizes the present upward movement to surpass the first resistance, it can be expected to turn bullish. Furthermore, the altcoin's Moving Average Convergence Divergence (MACD) depicts the signal line standing below the MACD line. While this highlights a negative sentiment, the signal line shows potential for a positive crossover. In case of such an occurrence then upward movements can be expected. Meanwhile, other cryptocurrencies such as Solana and SUI have shown notable upward movements. Additionally, the US spot ETH ETFs have also shown bullish movements by recording \$7.65 million in inflows as per Sosovalue data.

Whitefish, Montana, October 29th, 2024, Chainwire ARQ Securities is pleased to announce it has received its Digital Alternative Trading System (ARQ Securities ATS) and is launching the platform on Liquidity.io [today October 29th, 2024]. Liquidity.io is a cutting-edge platform designed to revolutionize the trading and settlement of private credit and private stock for accredited and institutional investors. It took nearly three years of extensive software development while acquiring all necessary regulatory approvals to finally take the platform live. Additionally, the Liquidity Transfer Agency bridges transactions to public blockchains like Solana, Polygon, and soon Avalanche. "The approval of our digital ATS license is a monumental step forward in our mission to transform the private markets," said Eric Choi, CEO of ARQ Securities. "Liquidity.io will provide institutional and accredited investors with unprecedented access to Private Assets that are hard to trade and settle. We are going to set a new standard for efficiency and liquidity in credit and private stock. We are excited to launch with over a billion dollars in Letters of Intent from key industry players and look forward to growing our pipeline of assets in 2025." "Liquidity.io creates a seamless and secure environment for trading private assets," added Ram Praturi, VP of Engineering at Liquidity.io. "By bridging our Liquidity Transfer Agency to Solana, Polygon, and soon Avalanche, we're ensuring transparency, interoperability, and flexibility for our issuers and investors." "ThinkEnergy Debuts as Liquidity.io's Inaugural Issuance: A Milestone in Sustainable Energy Investments With its groundbreaking refining technology that reduces CO2 emissions by 50%, ThinkEnergy exemplifies our commitment to investments that offer financial returns while positively impacting the global energy landscape. This opportunity allows investors to join ThinkEnergy's transformative mission toward a more sustainable and efficient energy sector. Focus on Private Credit and Private Stock Liquidity.io will initially concentrate on two key asset classes: private credit and private stock, offering institutional and accredited investors a streamlined and transparent way to trade these traditionally illiquid assets. The private credit market has seen significant growth, driven by investors seeking higher yields and diversification. However, the lack of standardized processes and limited transparency have been persistent challenges. Liquidity.io aims to address these issues by leveraging its digital platform to document and automate the trading and settlement processes, thereby reducing operational complexity and improving liquidity. Strategic Partnerships and Advanced Technology Over the past year, ARQ Securities has forged strategic partnerships with players in the private credit and private equity sectors, collecting over a billion dollars in Letters of Intent to list on the platform, including: - Leading private credit originators with significant portfolios, who have committed to listing their assets on Liquidity.io. - Multiple private companies seeking to provide liquidity options for their shareholders through the platform. - Various banks, broker-dealers, and registered investment advisors (RIAs) are interested in utilizing Liquidity.io for the efficient execution of private asset transactions. Looking Forward With the digital ATS license secured and the launch of Liquidity.io imminent, ARQ Securities is poised to transform the trading landscape for private credit and private stock markets. We encourage interested parties to contact us to explore listing opportunities and to discuss assets available on our platform at launch. If you manage a private asset class with complex settlement processes, we invite you to partner with us to automate these procedures. Our company is enthusiastic about fostering partnerships and seeking new opportunities to offer issuers and investors more efficient and transparent access. For more information or to discuss partnership opportunities, interested parties can contact: Eric Choi, ARQ Securities: CEO, <https://www.linkedin.com/in/eric-choi-18759241/> Austin Trombley, Satschel, Inc: CEO, <https://www.linkedin.com/in/austintrombley/> For more information about ARQ Securities and Liquidity.io, visit www.liquidity.io. About ARQ Securities: ARQ Securities LLC., a subsidiary of Satschel, Inc., is at the forefront of financial technology, dedicated to reshaping the future of securities trading through innovation and efficiency. With a focus on digital asset tokenization and alternative trading systems, ARQ Securities is committed to empowering issuers, brokers, and investors with cutting-edge platforms and solutions. Contacts CEO Eric Choi ARQ Securities echoi@arqsecurities.com CEO Austin Trombley Satschel, Inc. austin.trombley@satschel.com

As the cryptocurrency market anticipates yet another possible bull run in the year 2025, smart and shrewd investors have begun searching for inexpensive coins that, with very slight investments, can yield huge dividends. Here are five cryptocurrencies that can be bought for under \$0.50 and have the potential to skyrocket with returns of up to 20,000%. Rexas Finance (RXS) Rexas Finance (RXS) is rapidly gaining traction among crypto investors as one of the best cryptocurrencies concentrating on the tokenization of Real World Assets (RWAs). At a current price of only \$0.060, RXS is quite low, even by a third of its expected worth. With many analysts betting that as the project develops in terms of adoption, its worth will skyrocket. RXS investors can tokenize real-world assets, such as real estate, gold, and commodities on the RXS platform, tapping into huge and, up to now, undeveloped markets. Moreover, RXS has several key functions, including a token builder that makes it easy for app developers to create new tokens and a launchpad for companies to fund their tokenized assets. The growth prospects for RXS are enormous, and the market has hardly begun as it is ready for its formal launch with some estimated returns of 6x and more than 20,000% over the long run. Iron (TRX) Iron, which is valued at \$0.255, is a firm committed to building a decentralized web3 that has grown to love the app ecosystem with Tron's rapid transaction speeds and cost-efficient transactions, especially for those in the entertainment and content-sharing industries. Given the current trend, Tron is quickly sinking roots deeper into the DeFi and NFT sectors, which seem to be promising opportunities at the moment. Tron's efforts towards enhancing scalability and developers' accessibility to its products have the potential to increase its worth in the next bull cycle. Furthermore, its association with big brands and its increasing number of applications place TRX nicely under the \$0.50 support level. Cardano (ADA) Another cryptocurrency under \$0.50 that has snagged the attention of many investors is Cardano. Its current price is \$0.35. Cardano's all-time best price never sank too low because it is backed by a good trend of research regarding scalability, security, and sustainability for its blockchain, which is targeted toward real-life applications. There is a Hydra upgrade scheduled sometime, which might considerably increase the transaction speeds on

Cardano and make it one of the fastest blockchains by 2025. Despite being unable to shift price momentum recently, Cardano has firmly placed itself in the decentralized finance (DeFi) space alongside smart contract frameworks, giving vast hopes for its developers and investors, making it a worthwhile play for the years to come. Shiba Inu (SHIB) The Shiba Inu had its moment last year but is still continuously called the “Dogecoin Killer”. This community-kept coin has yet to lose appeal to retail investors. At this moment, Shiba Inu is being offered at a rate of \$0.00001831, which calls for a minimal amount of capital investment with significant returns: we go further to add that SHIB is bound to appreciate in the years to come thanks to technologies like ShibSwap, DEX, and initiatives for developing a DAO. BONK (BONK) With the latest trend of meme coins, here’s another one that has been getting quite popular as well as BONK. BONK’s low price of \$0.00002 and community focus have helped the coin gain a lot of traction. It is part of the Solana ecosystem and is being hailed as the next SHIB and DOGE for the tremendous growth it will be able to achieve in a market bull run. BONK has plans to create an NFT marketplace and expand its ecosystem further, which can potentially create demand in 2025. Like most of the other meme coins, the risk is higher but may be short-lived for investors with an appetite for risk because the popularity of meme coins will spike in the years to come, hence promising a healthy return on investment in BONK. Conclusion: Why Rexas Finance Is the Focus of Attention Although all five of these cryptocurrencies can be considered great to watch under the price tag of \$0.50, Rexas Finance (RXS) is the clear winner. Rexas focuses on the tokenization of real-world assets, which is different from the other projects on this list, and provides real usage and application beyond just speculation. With \$4 million raised in its presale and a projected 6x return upon the official launch, Rexas Finance is positioned perfectly to create phenomenal returns in the foreseeable future and should, therefore, be on the radar of every investor seeking long-term growth. For more information about Rexas Finance (RXS) visit the links below: Website: <https://rexas.com> - Win \$1 Million Giveaway! <https://bit.ly/RexasM> - Whitepaper: <https://rexas.com/Rexas-Whitepaper.pdf> - Twitter/X: <https://x.com/RexasFinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - A hacker breached Andy Ayrey’s X account, promoting the fraudulent Infinite Backrooms (IB) token. - Ayrey’s account remains compromised, raising ongoing concerns about security vulnerabilities on X. Truth Terminal founder Andy Ayrey faced a major security breach on his X account. The hacker used Ayrey’s account to promote a fraudulent token, raking in over \$600,000 before investors realized the scam. The token, named Infinite Backrooms (IB), quickly amassed hype and briefly reached a market cap of \$25 million, driven by Ayrey’s influence in the crypto space. Be cautious when buying tokens posted by celebrities on social media. @Lookonchain (@lookonchain) October 29, 2024 A hacker compromised @AndyAyrey’s (founder of @truth_terminal) account and posted about the token \$IB, making \$602.5K in less than 1 hour! <https://t.co/0BEyAuwQAg> pic.twitter.com/LRWKeNrvNN Truth Terminal, an AI-driven bot on X, has gained significant traction in the crypto community. It made headlines by amassing holdings exceeding \$1 million through donations and endorsements of popular memecoins. Including the \$GOAT token, which surged in popularity. The bot operates on a fine-tuned version of Claude 3 Opus, developed by Ayrey using personal writings and content from platforms like 4chan and Reddit. Hacker Exploits Account to Promote Scam Token The scheme began when the hacker, exploiting Ayrey’s account, posted the contract address for IB. The scammer’s account reportedly acquired 12.5% of the token supply before the announcement, costing around \$38,000. The token’s market cap surged as unsuspecting users bought in, leading to rapid profits for the hacker. Within 45 minutes, the hacker liquidated their IB holdings, netting \$602,500 and causing the token’s price to collapse by 98%. The token’s market cap fell to \$500,000 after the sell-off. Afterward, Ayrey temporarily regained access to his account. He explained in a now-deleted post that the hacker accessed his account through a SIM swap attack, compromising his mobile carrier. However, Ayrey’s account continued to exhibit unusual activity, raising doubts about its complete security. Ayrey later created a burner account to keep followers informed, reassuring them that the original Truth Terminal wallet was secured with a hardware key. Despite Ayrey’s efforts to regain control, the compromised X account continued to promote dubious tokens and links to a Telegram group. The hacker posted promises of airdrops and additional token launches, urging followers to share their Solana wallet addresses, raising security concerns. Highlighted Crypto News Today MicroStrategy’s Leveraged ETF Hits \$1B Amid Bitcoin Surge

Las Vegas, United States, October 29th, 2024, Chainwire Solana storage scaling solution Xandium has confirmed details of its forthcoming token launch and storage-enabled liquid staking program. On October 29, 16:00 UTC, the XAND token will officially launch, offering the Xandium community a way to participate in the network and earn rewards. The XAND token and LST launch will be accompanied by the first Xandium airdrop that will see 60M tokens issued to eligible users on October 29. A number of centralized and decentralized exchanges have committed to supporting the XAND token launch including Raydium and MEXC. The Xandium DAO is the vehicle that powers both the Xandium scalable storage layer that is currently being built, as well as the storage-enabled liquid staking solution launching October 29. The DAO captures both of these, which is a unique feature among such platforms. The XAND token offers complete governance over that DAO, which makes XAND one of the most utility-rich tokens on Solana. XAND rewards for early stakers of SOL into the storage-enabled liquid staking platform at <https://stake.xandium.network> will get 10x boosted XAND rewards which will result in ludicrous amounts of XAND rewards during the hyperdrive stage, defined as the stage when the pool has less than 30,000 SOL staked. The LST also carries another major innovation: it is the first multi-validator LST on Solana that programmatically shares block rewards. Xandium’s forthcoming storage solution will allow Solana programs to scale through enabling dapps to access exabytes of data. This will support new use cases, like porting data-rich web2 apps to fully decentralized web3 versions. Xandium solves the blockchain storage trilemma, being scalable, random access, and smart contract native at the same time. In order to demonstrate these capabilities, a dapp named Xandipedia is being worked on as a fully decentralized version of Wikipedia. Xandium’s smart contract native scalable storage layer has been designed to integrate directly into Solana RPC nodes. Data storage is offloaded to a network of decentralized pNodes (storage provider nodes) overseen by Xandium-aware Solana validator nodes. This will enable Solana dapps to access virtually unlimited storage that can be queried rapidly while maintaining a high degree of decentralization. About Xandium Xandium is a storage scaling solution for Solana and the world’s first storage-enabled liquid staking platform. Powered by the XAND token, Xandium is on track to launch its storage provider network in early 2025, delivering a breakthrough in decentralized Solana storage that will power a new wave of dapps. Learn more: Contact Founder Bernie Blume Xandium Labs hello@xandium.com

- On October 29, 60M tokens will be distributed to qualified users as part of the inaugural Xandium airdrop. - Dapps will be able to access exabytes of data thanks to Xandium’s upcoming storage solution. The specifics of Solana storage scaling solution Xandium’s upcoming token launch and storage-enabled liquid staking scheme have been revealed. The XAND token will formally debut on October 29 at 16:00 UTC, providing the Xandium community with a means of engaging with the network and earning rewards. On October 29, 60M tokens will be distributed to qualified users as part of the inaugural Xandium airdrop, which will coincide with the debut of the XAND token and LST. Raydium and MEXC are among the centralized and decentralized exchanges that have pledged to support the launch of the XAND token. The storage-enabled liquid staking solution that launches on October 29 and the Xandium scalable storage layer that is now being built are both powered by the Xandium DAO. Among these platforms, the DAO is unique in that it captures both of them. The XAND token is one of the most useful ones on Solana as it provides total governance over that DAO. The storage-enabled liquid staking platform at <https://stake.xandium.network> offers 10x boosted XAND rewards to early SOL stakers. This will result in absurdly high XAND rewards during the hyperdrive stage, which is when the pool has less than 30,000 SOL staked. Another significant novelty of the LST is that it is the first multi-validator LST on Solana to share block rewards programmatically. Dapps will be able to access exabytes of data thanks to Xandium’s upcoming storage solution, which will enable Solana applications to grow. New use cases, such as transferring data-rich web2 applications to completely decentralized web3 versions, will be supported by this. With its simultaneous scalability, random access, and native smart contract functionality, Xandium resolves the blockchain storage conundrum. A completely decentralized version of Wikipedia, called Xandipedia, is being developed as a dapp to showcase these possibilities. The scalable storage layer of Xandium’s smart contract native has been engineered to seamlessly connect with Solana RPC nodes. Offloading data to a network of decentralized pNodes (storage provider nodes) is done under the supervision of Xandium-aware Solana validator nodes. As a result, Solana dapps will have access to almost infinite storage that can be quickly queried while retaining a high level of decentralization.

- Bitcoin price has factored in an additional 4.70% price increase in the last 24 hours. - The cryptocurrency’s daily trading volume surged by 148.49% as per CMC data. The crypto space has been abuzz with activity as Bitcoin has rallied to hit the March 2024 trading levels. However, the altcoin sector has shown mixed signals in the last 24 hours. Ethereum has failed to utilize this positive momentum, but Solana, on the other hand, has hit the \$180 level. Notably, Bitcoin has experienced a 4.70% price increase over the last 24 hours and has hit the \$70K level. At the beginning of the day, on October 28, the cryptocurrency’s trading volume hit \$61.08 billion, a 158% increase from the previous day. According to a report by CMC, BTC was trading at \$67,817.28, up from \$65,717.28, with a 3.2% increase. The daily trading volume of the cryptocurrency hit \$61.08 billion, up from \$51.8 billion, a 17.7% increase. The weekly price chart shows that the cryptocurrency has traversed from the \$66K level with a similar price increase rate as of the past day at 4.91%. Previously, BTC had hit \$68,000 and then dropped to \$66,000. Meanwhile, the US spot Bitcoin ETFs have also shown bullish activities as inflows hit a weekly high of \$479.35 million as per Sosoalue data. BlackRock’s IBIT recorded the highest inflows at \$315.19 million. Where is Bitcoin Price Headed? On analyzing Bitcoin’s daily price chart, the cryptocurrency’s movements depict a rising wedge pattern breaking out into bullish movements. As per market experts’ opinion, the rising wedge is usually followed by a reduction in trading volume. However, the current price actions suggest that the Bitcoin price is breaking out of the pattern, as aforementioned. Moreover, Bitcoin’s bull-bear power indicator also shows coinciding indications. The bull power indicator’s value stands at 1.71, while its bear power indicator’s value stands at 0.29. This shows a positive trend in price and predicts more upward movements in the coming days. If Bitcoin sustains these predictions, then it can be expected to surpass its current ATH at \$73,750. This action can also result in members of the altcoin sector such as Solana and SOL reflecting the bull run and reaching new trading levels. Highlighted Crypto News Today:

November could be a game-changer for those watching the crypto market. Three lesser-known cryptocurrencies are poised for significant growth, with predictions pointing to potential 500% gains. This presents a rare opportunity for investors to explore these promising digital assets before they possibly take off. Dive in to discover which coins might skyrocket soon. CYBRO Presale Exceeds \$3 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.63 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct referees’ token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBRO’s DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that’s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%! Solana (SOL) Sees Recent Gains, Eyeing Resistance at \$181.71 Solana’s price has risen over 15% in the past week, now trading between \$153.50 and \$174.52. The coin shows positive momentum, with the 10-day Simple Moving Average at \$173.63, close to the 100-day average of \$169.63. If this trend continues, Solana could reach the nearest resistance level at \$181.71, a potential increase of around 5%. The Relative Strength Index at 45.80 indicates neutral market conditions, while the Stochastic value of 24.76 suggests the asset isn’t overbought. However, if the price dips, support may be found at \$139.67. Overall, Solana is showing signs of growth and could move higher in the short term. TRON (TRX) Approaches Key Level at \$0.17 with Strong Momentum TRON (TRX) is currently trading between \$0.15 and \$0.16, showing steady gains. Over the past month, its price has increased by more than 9%, and in the last six months, it’s up nearly 38%. The next key level is at \$0.17. If TRX moves above this point, it could continue to rise. Indicators suggest positive momentum without being overbought. The average price over the last 10 days is \$0.17, hinting at potential for more growth. If the price falls, support is expected at \$0.15 and then at \$0.14. Conclusion While coins like SOL and TRX

show limited short-term potential, CYBRO stands out as a remarkable opportunity. This advanced DeFi platform enables investors to enhance their earnings through AI-powered yield aggregation on the Blast Blockchain. With features such as attractive staking rewards, exclusive airdrops, and cashback on purchases, CYBRO delivers a superior user experience with seamless deposits and withdrawals. Its dedication to transparency, compliance, and quality distinguishes it in the market, attracting significant interest from crypto whales and influencers. As the bull run of 2024 unfolds, CYBRO presents a promising avenue for investors seeking substantial returns. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. Popo The Frog (\$FROP) is excited to announce significant updates that bolster its commitment to both its community and overall transparency. Key initiatives include a monumental 75% burn of its token supply and the renouncement of its contract, further enhancing security and trust among investors. The 75% Burn In a move to increase scarcity and value, Popo is burning 75% (3/4th) of its total token supply. Additionally, the team has renounced the contract, ensuring that no further changes can be made, thus providing a solid foundation of trust and reliability for all stakeholders. Burning helps combat inflation by reducing the total supply, ensuring that existing tokens maintain or even increase in value over time. This can potentially enhance trust among holders, signaling that the project team is committed to long-term value and is proactive in supporting the ecosystem. For meme coins specifically, which thrive on community engagement and hype, token burns can generate excitement and attract new investors, boosting trading activity. Furthermore, burns can be framed as community initiatives, fostering a sense of involvement and shared purpose among holders. Availability On Multiple Platforms \$FROP is now actively trading on MEXC, Raydium (Solana), and PancakeSwap, expanding accessibility and liquidity for the token. This multi-platform presence enhances the overall trading experience and opens doors for a wider audience of investors. Meme coins being available for trading on multiple platforms is important for several reasons. Firstly, it enhances accessibility, allowing a broader range of investors to buy and sell the token, which can drive up trading volume and liquidity. This increased exposure helps attract new users and fosters community growth. Additionally, trading on multiple platforms can reduce price volatility, as it allows for a more stable market environment. It also provides users with more options regarding trading pairs and transaction fees, which can enhance the overall user experience. Ultimately, multi-platform availability contributes to the legitimacy and sustainability of meme coins in the competitive crypto landscape. In \$FROPâ€™s case, it would potentially help position the meme coin as a serious contender to its biggest rival, Pepe The Frog (\$PEPE). What Else Does Popo Offer? Popo The Frog offers exciting staking opportunities, including â€œThe War Chest,â€™ which features flexible liquidity and fixed-term options, boasting potential returns up to 21,000% APR. This lucrative prospect aims to attract both new and existing investors. The roadmap includes vital milestones such as the launch of the official website, comprehensive contract audits, proactive community building, and strategic listings on major exchanges. Popo also continues to prioritize community engagement, with these strategic decisions aimed at fostering a more sustainable and attractive investment environment. About Popo The Frog Popo The Frog (\$FROP) is a pioneering meme token that has swiftly emerged as a symbol of community empowerment in the cryptocurrency landscape. By fostering a democratic approach, Popo values community input in shaping its future, aiming to build a decentralized ecosystem that champions digital freedom and economic prosperity. Essentially, \$FROP is more than just a meme token; it represents a community-driven approach to innovation in the cryptocurrency space. By embracing transparency and inclusivity, Popo aims to create a decentralized ecosystem that aligns with the aspirations of its community members. Visit Popo The Frogâ€™s official website, whitepaper, and its Telegram, Instagram, and X channels for more information and regular updates. Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. - October saw unexpected price dips for Bitcoin and altcoins. - Analysts highlight market unpredictability amid economic and regulatory pressures. October, often dubbed â€œUptoberâ€™ by crypto enthusiasts, turned out to be a disappointment for many in the cryptocurrency space. The anticipation of bullish momentum was palpable at the beginning of the month, with analysts predicting \$70K rally for Bitcoin (BTC) and other altcoins. However, as the month unfolded, the reality of price dips and relentless selling pressure set in, leaving investors grappling with unexpected losses. Bitcoin started October with a price of around \$65.5K, buoyed by hopes of institutional interest and a potential ETF approval. Yet, as the month progressed, BTC struggled to maintain support levels, ultimately falling below the critical \$59,500 mark. This dip was not an isolated incident; many altcoins, including Ethereum (ETH) and XRP (XRP), experienced significant declines as well. Ethereum, which began the month hovering around \$2,600, slipped to approximately \$2,300 by Octoberâ€™s end, marking a stark contrast to the bullish forecasts. Meanwhile, Analysts pointed to several factors contributing to this downturn. Market sentiment was impacted by macroeconomic pressures including rising interest rates and inflation concerns. Additionally, profit-taking from earlier gains, coupled with regulatory uncertainties, further exacerbated the bearish trend. Many bulls attempted to rally and defend support levels, but the relentless selling pressure proved overwhelming. No UPTober, But MOONvember? Looking ahead, the pressure now shifts to November. Traders and investors are left wondering whether this month will bring a reversal or further declines. While some analysts remain optimistic, citing historical trends where November has typically been bullish for Bitcoin, caution is warranted. With the market still grappling with economic uncertainties and the ever-looming threat of regulatory scrutiny, many will be watching closely to see if BTC and altcoins can reclaim their footing or if further dips await. As the crypto community braces for whatâ€™s to come, analysts agree that October has highlighted the unpredictability of this volatile market. They emphasize that November will be critical in determining the next direction for Bitcoin and its altcoin counterparts. It urges investors to remain vigilant and adaptable as they navigate these uncertain waters. Highlighted News Of The Day

- Polymarket shows Donald Trump leading Harris with a 66.6% chance of winning. - 75% of Americans believe cryptocurrency can enhance the economy. As the 2024 presidential election approaches, former President Donald Trump is emerging as a compelling candidate, particularly against the backdrop of current Vice President Kamala Harris. Trumpâ€™s policies, especially his strong support for cryptocurrency and innovative economic strategies, resonate with many voters seeking significant change. One of Trumpâ€™s pivotal initiatives is the launch of World Liberty Financial, a decentralized finance (DeFi) platform designed to democratize financial services. Set to raise \$300 million through a new token sale, this venture emphasizes his commitment to integrating cryptocurrency into everyday financial transactions. By positioning himself as a pioneer in this emerging sector, Trump appeals to younger, tech-savvy voters eager for a leader who understands the nuances of modern finance. I am honored to endorse @realDonaldTrump for President! <https://twitter.com/nd295MOJW> â€œ Thomas Massie for Congress (@MassieforKY) October 25, 2024 Moreover, Trumpâ€™s campaign has gained significant traction with endorsements from influential figures like Elon Musk. Musk recently stated he could help cut U.S. government spending by \$2 trillion should Trump be re-elected. This declaration resonates with voters frustrated by soaring national debt, which currently exceeds \$32 trillion. Polling data reflects Trumpâ€™s increasing popularity. According to Polymarket, a decentralized predictions platform, Trump holds a 66.6% probability of winning the presidency, compared to Harrisâ€™s 33.4%. This indicates a growing confidence among bettors and highlights Trumpâ€™s appeal, particularly in battleground states. While traditional polls may still show Harris with slight advantages, the betting odds suggest a different narrativeâ€™one where Trumpâ€™s message resonates more effectively with the electorate. Donald Trumpâ€™s Economic Revival Trumpâ€™s focus on economic revitalization and job creation is particularly crucial. His promises to bring manufacturing jobs back to the U.S. resonate with working-class voters who have felt the impacts of globalization. Recent surveys reveal that 70% of voters are concerned about job losses to overseas competitors. By advocating for American industry, Trump captures the sentiment of those who feel neglected by current policies. In contrast, Harrisâ€™s administration has faced criticism for its handling of inflation and economic recovery. With inflation rates remaining high, many Americans are feeling the pinch in their daily lives. Consequently, some voters may view Trumpâ€™s aggressive economic policies as a solution to their financial woes, while Harrisâ€™s approach appears less appealing to those prioritizing immediate economic stability. The issue of cryptocurrency also plays a significant role in shaping public opinion. A recent study indicates that 75% of Americans believe cryptocurrencies can boost the economy. Trumpâ€™s proactive stance on crypto is vital for appealing to younger voters and those frustrated with traditional banking systems. By emphasizing innovation and deregulation, Trump positions himself as a leader ready to harness the potential of digital currencies. Additionally, Trumpâ€™s ability to galvanize crowds at campaign events contrasts sharply with Harrisâ€™s lower-profile approach. Recent rallies have drawn thousands of supporters, showcasing a united front eager for change. This enthusiasm is crucial as election day approaches, as energized voters often translate into higher turnout. Trumpâ€™s assertive foreign policy also appeals to many voters. His stance on national security, which prioritizes American interests, resonates strongly in an era of geopolitical uncertainty. While Harris advocates for a more diplomatic approach, many Americans favor Trumpâ€™s tough stance on immigration and trade, viewing it as essential for safeguarding U.S. jobs and security. As the 2024 election draws near, Donald Trumpâ€™s commitment to cryptocurrency, fiscal responsibility, and economic revitalization positions him as a strong contender against Kamala Harris. His innovative policies and robust campaign strategies resonate with voters seeking meaningful change. As the electoral landscape continues to evolve, many Americans may find themselves leaning toward Trumpâ€™s vision for the future, especially in the face of ongoing economic challenges and concerns about government spending. The upcoming weeks will be crucial as both candidates ramp up their efforts to capture the electorateâ€™s support leading into November. Highlighted Crypto News Today Huge Solana (SOL) Rally Possible in 2025 According to This Analyst but Is it Realistic?

After reaching two market cap peaksâ€™in early April and late Mayâ€™meme coins appear to be rebounding, aiming to cross the \$60 billion threshold. If this happens, could 2024 witness a â€œMemeCoin Summerâ€™ before it concludes, influenced by the Halloween Effect? Numerous traders have succeeded in reaping lucrative gains over the past months by HODLing through the memecoin frenzy and zealously betting on price pumps. Remarkably, dominating market dynamics, Solana memecoins have ranked at the top in popularity and gains. Despite being extremely volatile and risky, memecoins have become one of the most preferred or adopted crypto assets among newbies and seasoned pros. This article will uncover mid- to small-cap memecoins that have shown a bullish trajectory over the past days and months. DISCLAIMER: The opinions expressed in this article are those of the author and do not constitute investment or financial advice. TheNewsCrypto team strongly advises all readers to conduct their own research and exercise caution before investing in memecoins. Letâ€™s delve into and briefly analyze the current market dynamics of the following popular memecoins. Moo Deng (MOODENG) | RANK (w.r.t MCap) | 219 | | CURRENT PRICE | \$0.2102 | | All-time High (ATH) | \$0.3428 (Sep 28, 2024) | | 7-DAY SURGE | 147.85% | | 30-DAY SURGE | 508.03% | MOODENG Solana-based memecoin inspired by the viral Thailand hippo took over the meme realm in early September and fueled quite a frenzy. Holding the 219-nth largest market capitalization â€œ \$207.46 millionâ€™ the hippo-themed memecoin trades at \$0.2097. MOODENG noted impressive rallies over the weekly and monthly timeframes: 147.85% and 508.03% respectively. However, over the past 24 hours, the memecoin plummeted 7.89%. Goatseus Maximus (GOAT) | RANK (w.r.t MCap) | 97 | | CURRENT PRICE | \$0.6517 | | All-time High (ATH) | \$0.6971 (Oct 24, 2024) | | 7-DAY SURGE | 75.97% | | 30-DAY SURGE | 566.64% | Goatseus Maximus (GOAT) was one of the most viral memecoin launches.
