

- Gaming: Solanaâ€™s scalability supports blockchain-based gaming applications. Lightchain AI - AI Model Training: Lightchain AI enables decentralized model training, preserving data privacy while advancing AI capabilities. - Predictive Analytics: Businesses can use Lightchain for real-time, AI-driven insights. - Data Marketplaces: Decentralized platforms allow users to securely buy and sell AI-ready datasets. Donâ€™t Miss the Blockchain Boat! The blockchain world is buzzing, and Solana and Lightchain AI are making waves in their own ways. Solanaâ€™s all about speed and ecosystem cred, but Lightchain AIâ€™s blend of AI smarts and eco-friendly vibes is shaking things up. With Lightchain AIâ€™s presale in full swing, nowâ€™s your chance to join a blockchain revolution thatâ€™s as smart as it is sustainable. Analysts are talking big gainsâ€”donâ€™t be the one left saying, â€œI shouldâ€™ve invested back then. â€™”- Hop on board: - Website: <https://lightchain.ai> - Whitepaper: <https://lightchain.ai/lightchain-whitepaper.pdf> - Twitter/X: <https://x.com/LightchainAI> - Telegram: <https://t.me/LightchainProtocol> Let Lightchain AI be your golden ticket to the blockchain big leagues. ðŸŒ™ Donâ€™t just investâ€”make it legendary! When it comes to the future of blockchain in 2025, two names are standing out above the restâ€”Lightchain AI and Solana. Both hold incredible potential, but they cater to different visions of blockchainâ€™s evolution. On one side, we have Lightchain AI, an emergent player bringing artificial intelligence (AI) into the blockchain realm with its revolutionary Proof of Intelligence (PoI) and Artificial Intelligence Virtual Machine (AIVM). On the other side, Solana boasts a well-established ecosystem known for lightning-speed transactions and scalability. But what truly sets them apart, and which is likely to dominate the future digital economy? Hereâ€™s an in-depth comparison to help investors, blockchain enthusiasts, and tech-savvy individuals make informed decisions. And if youâ€™re interested in getting ahead of the curve, donâ€™t miss the Lightchain AI presaleâ€”itâ€™s your chance to become part of this game-changing innovation. ðŸŒ™ Lightchain AI and Its Revolutionary Approach to Blockchain Letâ€™s open with what makes Lightchain AI an undeniable contender. By merging blockchain with AI, Lightchain AI positions itself as the blockchain of the future. Its unique selling points include the Proof of Intelligence (PoI), which rewards nodes for meaningful AI computations like model training and optimization, and the AI Virtual Machine (AIVM), a computational powerhouse enabling advanced AI-specific tasks on-chain. Why Investors Are Flocking to Lightchain AI: - Competitive Presale Pricing: With current prices at \$0.003 per LCAI token, the presale provides an extremely favorable entry point compared to established tokens like Solana. Early adopters stand to gain exponential returns as adoption grows. - Innovation-Driven Consensus Mechanism: Unlike Proof of Work (PoW) or Proof of Stake (PoS), PoI ensures network contributions are meaningful and energy-efficient. - AI-Enhanced Decentralization: From supporting AI application developers to fostering smart decentralized governance, Lightchain AI is the first protocol to place AI at the core of its architecture. Curious about its features? Check out the Lightchain AI Whitepaper for all the juicy details. A Weekly Pricing Look at Lightchain AI: Week 1 Price Prediction: ðŸŒ™, Expect Lightchain AIâ€™s presale price to hover around \$0.008 as presale traction increases from growing media attention and participation. Week 2 Price Prediction: ðŸŒ™- With rising FOMO, the token could jump to \$0.012, reflecting the excitement around its distinction as a truly AI-first blockchain protocol. Beyond: Given the roadmapâ€™s focus on a fully operational mainnet by mid-2025, market forecasts show room for Lightchain AI to achieve price momentum surpassing \$0.10+ within the presale window. A Snapshot of Lightchain AIâ€™s Innovation: - Proof of Intelligence (PoI) ensures secure, efficient transactions while incentivizing meaningful AI tasks. - AIVM powers AI-powered decentralized apps (dApps), making this protocol a go-to for projects integrating AI in blockchain systems. - Early adopters gain access to scalability advantages alongside ecosystem perks. ðŸŒ™ Want in before itâ€™s too late? Buy Lightchain AI Tokens now. Solanaâ€™s Case for Blockchain Dominance With a firm foothold in the blockchain space, Solana is renowned for its robust ecosystem, capable of processing over 65,000 transactions per second (TPS)â€”a mind-blowing throughput in comparison to most blockchain protocols. Solana is also synonymous with low fees, developer-friendly infrastructures, and a strong community base. But can it outpace an innovative newcomer like Lightchain AI? Why Investors Continue to Trust Solana: - Established Ecosystem: Solana is no rookie to the scene. From high-value NFT trades to DeFi platforms, its ecosystem provides immense utility and liquidity. - Price Stability: At \$240, Solana holds a commanding market position, though with a significantly higher entry price than Lightchain AI. - Scalability Without Sacrifice: Solanaâ€™s proof-of-history (PoH) model bolsters its high-speed transactions, making it a darling of high-performance blockchain enthusiasts. A Weekly Pricing Look at Solana: Week 1 Price Prediction: ðŸŒ™ Anticipated to retain its current standing at \$240, capitalizing on renewed market interest heading into 2025. Week 2 Price Prediction: ðŸŒ™ Solana could rise modestly to around \$255 with ecosystem updates and increased DeFi utility. Beyond: While Solana offers stability, volume, and utility, some experts argue its scalability model could face bottlenecks compared to Lightchain AIâ€™s dynamic PoI-powered approach. Solanaâ€™s Strengths in a Nutshell: - Proven Scalability using Proof-of-History. - A robust backing by developers providing long-term project stability. - A vibrant NFT and DeFi ecosystem that continuously pushes the boundaries of decentralized computing. Comparing Apples to Orangesâ€”or Solana to Lightchain AI? Still on the fence? No problem, hereâ€™s a side-by-side summary: | Feature | Lightchain AI | Solana | | Pricing (2025 Presale) | \$0.003 | \$240 | | Consensus Mechanism | Proof of Intelligence (PoI) | Proof of History (PoH) | | AI Integration | AIVM (Supports advanced AI dApps natively) | Limited | | Ecosystem | Emerging with potential perks for early adopters | Established, NFT- and DeFi-focused | | Speed and Scalability | Built for AI scalability with intelligent tasks | Over 65,000 TPS, programmable efficiency | The Investorâ€™s Dilemmaâ€”But a Decision Canâ€™t Wait Lightchain AI and Solana represent two distinct philosophies of blockchain innovation. While Solana offers battle-tested operations that cater heavily to retail trading, Lightchain AI stands as the futureâ€™s gateway for AI-integrative, intelligent blockchain solutions. For seasoned cryptocurrency investors or first-time buyers, itâ€™s a choice between stability and groundbreaking potential. Lightchain AI is already drawing global attention with its live presale and offers a fantastic entry point for anyone looking to position themselves at the forefront of blockchain-AI synergy. Feeling like youâ€™re in the know? Great! Grab your share of tomorrowâ€™s infrastructure today. ðŸŒ™ Useful Links to Get Started: Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is developing from a new and exciting angle as the altcoins season has presented some opportunities for making huge profits. Such behavior, however, is different for the likes of Ethereum (ETH) and Solana (SOL) since they have a sufficient price range and market cap, which is enough for further growth owing to their matured commodities. Still, one may expect altcoins to appreciate in the future as they are yet to be fully grown and are currently low-priced. Investors are looking towards loss-making ones as these have some genuine applications in addition to having respective innovative ecosystems. Such altcoins have appealing ecosystems as well as utility and growth potential. Of all the numerous tokens out there, these six are definitely worth considering. **Rexas Finance (RXS)** Rexas Finance has caught the focus of the bigger market as one of the first to dabble in the procurement of real-world asset tokenization. The platform makes it convenient and removes bottlenecks such as high retail investor liquidity when tokenizing physical assets. The RXS token powers several products, including the QuickMint Bot, which allows users to create tokens quickly and simply, and the multi-chain yield farming for Rexas Treasury. RXS is currently traded below \$1 and is in Stage 9 of its presale, at which the listing price is \$0.20. The projects have great potential for good returns because they are innovation-focused at utility. Rexas Finance (RXS) is not merely a currency. It can well be viewed as a solution to old-age finance problems. Itâ€™s creating an ecosystem that seems destined to succeed. **Ripple (XRP)** XRP is consolidating its place in global payments progressively. Ripple has already proven its fast and low-cost transactions, and recently, many financial companies have regained interest thanks to the legal clarity of the last cases. Its capacity to streamline cross-border financial transactions makes XRP a great buying opportunity during the altcoin season. Currently trading below \$1, XRP is supported by strong institutional partnerships and a desire to address genuine challenges in the financial industry. **Hedera (HBAR)** Hedera Hashgraph is an elegant and effective enterprise-grade blockchain with a revolutionary consensus. It has positioned itself in the supply chain, healthcare, and finance sectors and receives support from big names such as Google and IBM. The price is still very appealing since it is below 10 cents, and the business model has high scalability, which allows a great chance to turn into an effective blockchain solution for business needs. **Chainlink (LINK)** Chainlink is an Oracle network for smart contracts with active bridges to external data. The bridging purpose from off-chain data to on-chain applications has enabled Chainlink to perform satisfactorily in DeFi and other aspects. At this price level, between \$5 and \$15, the company will establish strong growth potential as it binds with enterprise solutions plus blockchain networks. **Avalanche (AVAX)** Transactions are fast and low-cost, making it possible to create new blockchains and institutions for Dapps. Another reason AVAX is the developersâ€™ choice is its engraving scalability design, which has the best support for cross-chain analytics. Given the active development of its ecosystem and the expansion of partnerships, Avalanche has every chance of becoming a strong second-tier altcoin. **Optimism (OP)** Optimism uses the L2 concept to provide a perfect scaling solution for the Ethereum network. Thanks to DeFi and NFT, your transaction costs and speeds are lower than most platforms offer. An employee of the Company can vote through its native governance token OP, which further stimulates investor interest. This is because of Optimismâ€™s promise to solve the Ethereum networkâ€™s scalability problem. **Conclusion** The altcoin season is a good time for investors to hedge against tokens that have use cases, are disruptive, and have good growth potential. In particular, Rexas Finance (RXS) is focused on reasonable applications that can fit anybodyâ€™s budget. In the meantime, also look at XRP, HBAR, and Chainlink. They are performing and filling the very frontier edges of the blockchain ecosystem, thus enabling strong action in the upcoming bull market. So, follow the necessary procedures and ensure that your investments correspond to your strategic financial goals to take advantage of this favorable period in the crypto market. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/RexasIM> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is experiencing explosive movements, with Ripple (XRP) being in the frontline, having risen by an astonishing 400%. In parallel to this outstanding growth, Lunex Network (LNX) has increased by 200% and has attracted the interest of traders and investors. Experts predict that the price of LNX could rise by 18x in the following months. In other news, the Solana coin could rise to \$400 soon. The altcoin had been on a downward trend in the past one week. Solana (SOL) Predicted To Reach New Peak Analyst Jelle notes that Solana (SOL) is forming a falling wedge pattern near the 25-EMA. A breakout could lead to a massive rally in the coming weeks. The expert also said the Solana coin is testing the mid-level of the RSI once again. According to Jelle, these technical indicators imply that the Solana token is likely to continue its upward price movement. They forecasted a price target of \$400-\$600. Another expert called [ScriptoTrader.eth](https://twitter.com/ScriptoTrader) predicts the Solana price could increase to \$500. However, his charts show the altcoin must remain above the crucial support at \$225. Meanwhile, Solanaâ€™s (SOL) price is well above \$200, but data obtained from CoinMarketCap reveals that it has dropped by 1.7% in the weekly chart and 9.2% in the biweekly timeframe. Its Fear and Greed Index is pointing to Extreme Greed. This means that investors are still positive about the cryptocurrency and its prospects in the future. **Ripple (XRP)** Shows Massive Gains The Ripple coin is one of the most performing tokens in the market currently. The Ripple crypto surprised market spectators when it increased from a low of \$1.34 to a weekly high of \$2.82, per CoinMarketCap. The token has given investors more than 400% returns in the last month. If this continues, the DeFi token has the potential to move past its previous high of \$3.84. Javon Marks has a positive outlook for Ripple XRP. He told his followers the cryptocurrencyâ€™s breakout above the \$2.47 level could propel it towards \$4.80. Javon Marks notes that holding above \$2.47 could open the path for more gains. At the moment, the sentiment surrounding Ripple (XRP) is bullish. Its RSI is in the overbought region. The VWMA (10) and Hull Moving Average (9) are also flashing buy signals which could mean more upward price movement. Investors Rush To Lunex Network (LNX) For Potential 10x Gains Lunex Network (LNX) is the latest project that is making waves in the DeFi market. Its presale growth shows that many investors are eager to become members of this new platform. The project has sold millions of tokens and has managed to raise over \$4 million in its funding round. In the future, experts expect that the value of Lunex could rise by 10x, such potential makes it a top crypto to buy at its current value of \$0.0036. Unlike most of its competitors, Lunex has a B2B payment gateway that allows sellers to accept cryptocurrency and receive fiat simultaneously. This feature provides companies with the chance to adopt crypto into their operations without the risks associated with managing cryptocurrencies. In addition, Lunex has a VIP plan for those clients who are more experienced in the field and such privileges as cashback for transactions and better staking services. Lunex also merges the idea of raising the earning potential with improved tools for those who may wish to have a complete crypto experience. In total, Lunexâ€™s business integration and VIP rewards are a good match. Moreover, the staking program is another interesting offer for investors who are willing to receive passive income from staking. In Conclusion **Ripple (XRP)**, Lunex Network, and Solana (SOL) are the market movers that investors should watch for massive growth. The large-scale movement of Ripple and Lunex Network indicates an upward trend that could lead to more gains in the coming months. Investors looking for the best cryptos to buy should consider them. You can find more information about Lunex Network (LNX) here: - Website: Lunex Network - Telegram: Join Our Telegram Community - Twitter: Follow Us On X

- Solana daily trading volume returns to November 22 peak levels - Open Interest reaches \$4.05B indicating growing market confidence - Technical support at \$226 could springboard another rally When analyzing cryptocurrency market movements, volume often tells a more complete story than price alone. Solanaâ€™s recent surge in daily trading volume to \$13 billion marks a significant milestone, matching levels last seen during its all-time high on November 22. This volume renaissance, accompanied by a price increase from \$230 to \$239, suggests growing market participation that could fuel further upward movement. Understanding Solana Volumeâ€™s Significance Trading volume serves as a critical indicator of market health and potential direction. While high volume doesnâ€™t guarantee price movement in either direction, its correlation with price trends often provides valuable insights. In the current scenario, SOLâ€™s rising volume coinciding with upward price movement

strengthens the case for continued appreciation. This positive correlation typically indicates genuine market interest rather than speculative activity. To gain a more comprehensive understanding of market dynamics, we must examine the Open Interest (OI), which has climbed to \$4.05 billion. This metric reveals more than just trading activity æ“ it shows the total value of open positions in Solanaæ“s derivatives market. While a common misconception links rising OI directly to buying pressure, the reality is more nuanced. The true significance lies in showing increased market participant commitment and confidence in taking positions. The daily Solana chart reveals an intriguing parallel to previous price action. Bulls are currently defending the \$226 support level, reminiscent of the November 17 scenario that preceded Solanaæ“s rally to \$264. This historical pattern, combined with increasing volume and healthy derivatives metrics, suggests the potential for another significant upward movement. While current indicators paint an optimistic picture, prudent traders should remain mindful of key support levels. A failure to maintain buying pressure could trigger a retracement to \$220, with further weakness potentially pushing prices toward \$196.

- SEC likely rejecting Solana spot ETFs over security classification concerns. - Crypto ETF approvals are unlikely under current SEC leadership, analysts suggest. The U.S. Securities and Exchange Commission (SEC) is set to reject applications for at least two Solana (SOL) spot exchange-traded funds (ETFs), according to Fox Business journalist Eleanor Terret. The regulatory body has reportedly notified at least two of the five prospective issuers about its decision, highlighting concerns about Solanaæ“s potential classification as a security. ØÿŠ“SC00P: Îæ“ve confirmed that the @SECGov has notified at least two of the five prospective issuers that it will reject their 19b4 filings for the \$SOL spot ETFs. æ“ Eleanor Terrett (@EleanorTerrett) December 6, 2024 The consensus here, Îæ“m told, is that the SEC wonæ“t entertain any new crypto ETFs under the current administration. Moreover, sources further suggest that the SEC is unlikely to approve any new cryptocurrency ETFs during the current administration. This decision comes amidst a wave of ETF filings from leading asset managers, including Grayscale Investments, VanEck, 21Shares, Bitwise, and Canary Capital, aiming to bring Solana-focused investment products to the market. Meanwhile, Grayscale Investments recently applied to convert its \$134.2 million Solana Trust into a spot ETF under the ticker GSOL. Other notable filings include VanEckæ“s application, which underscores Solanaæ“s scalability, speed, and cost-efficiency, positioning it as a competitor to Ethereum for payments, gaming, trading, and decentralized finance. No Approval Till 2025? The SECæ“s stance extends beyond Solana to other anticipated crypto ETFs, including those tied to XRP, raising concerns about broader regulatory obstacles. In August, the regulator formally rejected applications for two Solana spot ETFs by Cboe BZX, citing unresolved security classification concerns. Industry analysts, including James Seyffart, believe that SOL ETFs may not gain approval until 2025, contingent on potential leadership changes at the SEC. Despite the challenges, the surge in ETF applications reflects the growing momentum in the cryptocurrency sector and signals long-term optimism for digital asset investment products. Meanwhile, the SEC continues its aggressive stance on crypto regulation, opposing Binanceæ“s motion to dismiss a lawsuit alleging the operation of an unregistered securities exchange. The agency has also reiterated its claims that Binance sold unregistered securities, drawing criticism from industry leaders who view the legal battle as overreaching. Highlighted News Of The Day Phantom Wallet Integrates Transak to Boost Digital Asset Accessibility

- Solana stabilizes above \$221 support after recent all-time high - Funding rates remain positive, signaling sustained bullish sentiment - Bitcoin correlation drops to 0.43, suggesting potential independent rally In the wake of reaching its historic peak at \$264, Solana has entered a critical consolidation phase, finding equilibrium above the significant \$221 support level. This price action comes at an interesting juncture in the broader cryptocurrency market, as Bitcoinæ“s recent surge creates potential tailwinds for alternative cryptocurrencies. Understanding Solanaæ“s Current Market Sentiment The derivatives market provides valuable insight into trader sentiment through funding rates, which currently show strong positive readings. This metric serves as a key barometer of market confidence, as it effectively measures how much traders are willing to pay to maintain leveraged long positions. In essence, positive funding rates indicate that optimistic traders are paying pessimistic ones, reflecting a market-wide expectation of future price appreciation. The sustained positive funding rates during this consolidation phase are particularly noteworthy, as they suggest that traders maintain their bullish outlook even after the recent pullback from all-time highs. This persistent optimism often precedes significant price movements, as it indicates accumulated buying pressure waiting to be released. Perhaps the most intriguing aspect of Solanaæ“s current market position is its decreasing correlation with Bitcoin, which has fallen to 0.43. Historical analysis suggests that periods of reduced Bitcoin correlation often precede independent price rallies for Solana. This declining correlation indicates that Solanaæ“s price movements are becoming more autonomous, potentially allowing it to chart its own course regardless of Bitcoinæ“s direction. The current price structure shows SOL trading within a defined range between \$245 resistance and \$221 support. The upper boundary at \$245 represents a crucial level that, if breached, could catalyze momentum toward \$270. This potential move would not only establish new all-time highs but also confirm the marketæ“s readiness to support higher valuations. Conversely, the \$221 support level serves as a critical floor. A breach below this threshold would likely trigger a test of psychological support at \$200, potentially signaling a shift in market structure that could lead to extended consolidation or deeper retracement.

Today, Zeus Network announced that ZeusNode, the core infrastructure based on the Solana Virtual Machine (SVM), is live. With its first epoch well under way, Zeus has also released its whole roadmap for ZeusNodeæ“s cross-chain framework, which will easily integrate Bitcoin liquidity into Solanaæ“s blockchain. As the cornerstone of Zeus Networkæ“s cross-chain framework, ZeusNode presents its Guardian program, which establishes two separate categories of validators: Guardians and Institutional Guardians. While Institutional Guardians are designed for big organizations that can handle substantial amounts of BTC, Guardians may assign \$ZEUS to the network. ZeusNode Guardians use a Multi-Party Computation (MPC) model to make sure that Bitcoin transactions on Solana are safe and trustless. Guardians preserve the integrity of every transaction and uphold the networkæ“s security requirements while enabling smooth Bitcoin operations across Solanaæ“s blockchain using a decentralized validation and signing mechanism. While \$ZEUS deposits are locked for a six-month period to maintain network liquidity and security requirements, Institutional Guardians have freedom with their BTC deposits. Holders of \$ZEUS may also assign their tokens to Guardians, which helps to secure the network while rewarding them. ZeusNode uses a dynamic ratio mechanism linked to \$ZEUS delegation and SBTC liquidity as part of the networkæ“s scaling approach. To facilitate the onboarding of Bitcoin liquidity into the network, the initial \$ZEUS-to-BTC ratio is established at 20,000:1. In order to guarantee flexibility and response to market situations, this ratio dynamically changes whenever a Guardian hits a delegation level of 5,000,000 \$ZEUS, enabling infinite SBTC inflow capacity. Justin Wang, Co-founder and CEO of Zeus Network said: æ“Zeus Network and its Guardians are redefining Bitcoinæ“s liquidity utilization, providing permissionless pathways for Bitcoin integration on Solana. With these new pathways for investments and validation, Zeus is the go-to choice for Bitcoin holders and institutions looking to leverage Bitcoin in a high-performance environment.æ“ The first Epoch of the ZeusNode roadmapæ“s phased approach to capacity development is now in progress. - Epoch 1: Establishing a security foundation with a 25 BTC capacity and a 500,000 \$ZEUS delegation. - Epochs 2 and 3: Institutional Guardians are added, and the number of Guardians is increased to four, allowing for a total capacity of 1,100 BTC with up to 12,000,000 \$ZEUS delegated. - Epochs 4 and 5: Targeting 2,250 BTC inflow and delegating up to 25,000,000 \$ZEUS to onboard 1% of Bitcoin liquidity onto Solana, scaling to full capacity with 10 Guardians and several Institutional Guardians. - Epochs 6 and 7: Expanded asset capabilities and the integration of UTXO-based assets, such as \$DOGE, \$LTC, and \$KAS, open the door for smooth Bitcoin liquidity management on Solana. Zeus Network offers an interoperable solution for the Solana ecosystem, revolutionizing blockchain interaction. Zeus Network, which is powered by Solana Virtual Machine (SVM), enables Zeus Nodes to provide strong security and smooth data transfer. This endeavor makes it possible for Solana to emerge as the leading hub for all ecosystems, enthraling millions of people on many blockchains. By enabling interoperable communication amongst cross-chain dApps, Zeus Network enables complex apps and liquidity to interact with Solana in a decentralized, permissionless environment that is open to everyone.

- Solana is trading at \$237, marking a 5% gain over the past 24 hours. - SOL has witnessed a 24-hour liquidation of \$21.96 million. With multiple altcoins experiencing price breakouts, the crypto market is eyeing an approaching altcoin season. The chart reports the largest altcoin Ethereum (ETH), gained momentum, trading at \$3.7K. Looking at the altcoins, Solana (SOL) has experienced notable price fluctuations. Solana has reached its all-time high (ATH) of \$263.83 on November 23. SOLæ“s effort to reclaim the high has faced strong resistance. Eventually, the pullback has ignited anxiety about its potential corrections. Despite that, analysts anticipate that December will bring in more gains. Notably, the altcoin has spiked over 5%, with a \$112 billion market cap. At press time, Solana trades at \$237.33. The intra-day trading price of the altcoin is noted at \$240. SOL has witnessed a 24-hour liquidation of \$21.96 million, as per Coinglass data. Consequently, the daily trading volume of SOL has reached \$8.58 billion. Over the past thirty days, Solanaæ“s price has surged by over 47.30%. This upward trend pointed toward a price breakout and SOLæ“s outlook remained positive. The asset began trading in the \$161 range and later ascended to the current levels. On the other side, Pumpfun has deposited 100,000 SOL, worth \$23.45 million to Kraken. It has transferred a total of 998,869 SOL valued at \$200 million, selling 264,373 Solana for \$41.64 million USDC. To date, the entity has acquired 1,595,278 SOL, valued at \$381 million. Will Solana Break Through to New Highs? The four-hour price chart of Solana remarked the upside correction. As SOL holds above the \$230 threshold, a bullish outlook hovers around the market. If Solana jumps to the \$240 mark, it could target its crucial resistance at \$245.47. Breaking through this resistance would potentially push the altcoin toward its ATH of \$263.83. In case of a death cross formation, the price correction of Solana could intensify and test its support at \$232.11. A breach of this level might lead to steeper losses, plummeting toward the \$225 zone. Additionally, the technical indicators of SOL report the current bullish momentum by inferring the Moving Average Convergence Divergence (MACD) line. It has been settled over the signal line, indicating the incoming uptrend within the market. The Chaikin Money Flow (CMF) indicator is likely positioned at 0.10 suggesting the positive money flow, which also hints at a spike in Solanaæ“s demand ahead. In the meantime, SOLæ“s daily trading volume has increased by over 32.77%. Solanaæ“s market sentiment rests in the neutral zone, as the daily relative strength index (RSI) is found at 53.84. Also, the daily frame of SOL reveals the short-term 9-day moving average beneath the long-term 21-day moving average. Highlighted Crypto News Controversial Martial Law in South Korea Reversed by President Yoon

The cryptocurrency world is constantly evolving, with each year bringing new projects that captivate traders and investors. Solana has established itself as a high-speed, scalable blockchain, while Shiba Inu, a memecoin phenomenon, has leveraged its community-driven hype for impressive gains. But as the market grows more sophisticated, a new contender is emerging: Lightchain Protocol AI. Combining cutting-edge scalability, sustainability, and artificial intelligence (AI), Lightchain AI is positioning itself as a blockchain with the potential to rival both Solanaæ“s performance and Shiba Inuæ“s popularity. With its mainnet launch planned for mid-2025, the Lightchain presale offers an opportunity to secure Lightchain Tokens (LCAI) ahead of what could be the next major breakout in crypto. Lightchain AI: A New Era of Blockchain Innovation While Solana focuses on speed and Shiba Inu thrives on community momentum, Lightchain Protocol AI introduces a transformative approach that integrates blockchain with AI to solve real-world problems and enable intelligent decentralized applications (dApps). - Proof of Intelligence (PoI): A Smarter Consensus At the heart of Lightchain AI is its Proof of Intelligence (PoI) consensus mechanism. Unlike traditional mining or staking, PoI rewards nodes for performing AI computations such as real-time analytics and machine learning tasks. This not only secures the network but also advances AI technology in an environmentally sustainable way. - Artificial Intelligence Virtual Machine (AIVM): The Future of dApps The AIVM allows developers to build AI-driven dApps that can adapt, analyze, and automate. From predictive analytics to advanced DeFi solutions, Lightchain AI extends blockchain functionality far beyond what Solana and Shiba Inu currently offer. - Scalability and Reliability Solana is known for its speed but has faced challenges with network reliability under heavy load. Lightchain AIæ“s advanced sharding and Layer 2 scaling solutions ensure high throughput and consistent performance, making it a resilient choice for developers and enterprises. Why Lightchain AI Could Rival Solana and Shiba Inu - Smarter Blockchain Applications While Solana excels in high-speed transactions and Shiba Inu thrives on memetic appeal, Lightchain AI brings a utility-driven approach by integrating AI into blockchain, enabling smarter, more efficient applications across multiple industries. - Sustainability at Scale Energy efficiency is a growing concern in the crypto world. Lightchain AIæ“s PoI consensus eliminates the need for resource-heavy mining, positioning it as an eco-friendly blockchain for the future. - Early Investment Opportunity With its mainnet launch scheduled for mid-2025, December 2024 represents an ideal time for early investors to join the project through the Lightchain presale. This is a rare chance to secure tokens at entry-level pricing before widespread adoption. - Versatility Across Industries Unlike Shiba Inu, which is primarily a speculative asset, and Solana, which focuses on decentralized finance (DeFi), Lightchain AIæ“s AI-driven framework enables applications in diverse sectors, including healthcare, logistics, and supply chain management. Real-World Applications Driving Adoption - DeFi Innovation: Lightchain AI powers smarter DeFi platforms with AI-enhanced tools for lending, risk management, and automated trading strategies, setting a new standard for financial ecosystems. - Healthcare Solutions: Secure sharing of sensitive medical data and AI-driven diagnostics provide transformative potential for improving healthcare delivery and research. - Supply Chain Optimization: AI analytics enhance transparency, efficiency, and cost savings in logistics and global trade, creating smarter supply chains. How Lightchain AI Compares to Solana and Shiba Inu - Solana: Known for high-speed transactions, Solana is a strong performer but lacks the integrated AI capabilities and sustainability features of Lightchain AI. - Shiba Inu: A memecoin that thrives on community-driven hype, Shiba Inu has limited real-world utility compared to the innovative functionality of Lightchain AI. - Lightchain Protocol AI: Combining speed, AI integration, and sustainability, Lightchain AI offers unmatched versatility and the potential for widespread adoption across industries. Could Lightchain AI Deliver Massive Gains? With its focus on scalability, innovation, and sustainability, Lightchain Protocol AI is poised to challenge the dominance of Solana and capture the enthusiasm surrounding projects like Shiba Inu. Analysts are already highlighting its potential to redefine blockchainæ“s role in industries ranging from finance to logistics, making it a top contender for significant growth in 2024 and beyond. Join the Blockchain Revolution Donæ“t miss your chance to invest in a project thatæ“s redefining whatæ“s possible in crypto. Secure your Lightchain Tokens (LCAI) during the presale and join Lightchain Protocol AI, a blockchain designed to lead the next wave of innovation and massive gains. Explore More: - Website: <https://lightchain.ai> -

- Grayscale has filed with the SEC to convert its Solana Trust into a spot ETF. - Competitors like 21Shares and VanEck are also vying for spot Solana ETFs. Grayscale Investments has officially filed with the U.S. Securities and Exchange Commission (SEC) to convert its Grayscale Solana Trust (GSOL) into a spot exchange-traded fund (ETF) listed on NYSE Arca. Grayscale’s filing comes amid growing demand for cryptocurrency-based ETFs, a trend that gained momentum in early 2024 with the SEC’s approval of 11 spot Bitcoin ETFs. These ETFs sparked a market rally, with Bitcoin reaching a record high in March, followed by Ethereum-based ETFs later in the year. Solana’s recent market strength, coupled with its ecosystem’s expansion, has intensified interest in altcoin-based ETFs. The Grayscale Solana Trust, currently the largest SOL investment fund globally, manages \$134.2 million in assets, representing 0.1% of all SOL tokens in circulation. Grayscale anticipates that converting the trust into an ETF will improve liquidity, enhance price tracking, and offer investors regulated exposure to Solana. The Road Ahead for Solana ETFs Grayscale’s move aligns with similar efforts from asset managers such as VanEck, Bitwise, and Canary Capital, who have also filed for spot Solana ETFs. Market optimism has surged following the re-election of pro-crypto President Donald Trump and the anticipated appointment of a crypto-friendly SEC chair, Paul Atkin. The success of Grayscale’s previous ETF conversions Bitcoin in January and Ethereum in July offers a promising precedent. However, the performance of these ETFs has varied significantly. While Bitcoin ETFs recorded \$31 billion in net inflows, Ethereum ETFs have lagged, with cumulative net inflows of \$597.55 million as of December. News of the filing has fueled investor enthusiasm, with Solana’s price rising 3.62% to \$235. The asset has surged over 130% year-to-date, supported by increased DeFi activity and broader market confidence. If approved, Grayscale’s Solana ETF would mark the U.S.’s third crypto-based ETF and further cement the country’s position as a global leader in digital asset innovation. Highlighted Crypto News Today Tezos-Powered Uranium.io Launches, Unlocking Access to AI’s Essential Fuel

The cryptocurrency market is no stranger to surprises, and every year, a dark horse emerges to challenge the established giants. In December 2024, Lightchain Protocol AI is gaining traction as a blockchain that could rival heavyweights like Solana and Ripple (XRP). Combining blockchain’s decentralized power with artificial intelligence (AI), Lightchain AI is tackling the industry’s most persistent challenges and positioning itself as a leader in innovation. With analysts predicting significant gains for early investors, the Lightchain presale offers an opportunity to secure Lightchain Tokens (LCAI) and potentially ride the next big wave in crypto. What Makes Lightchain AI a Contender? While Solana has excelled in speed and Ripple dominates in cross-border payments, Lightchain AI introduces a more versatile approach. Its innovations aim to redefine the blockchain landscape by focusing on sustainability, scalability, and advanced AI integration. - Proof of Intelligence (PoI): A Smarter Consensus Unlike Ripple’s federated consensus or Solana’s Proof of History (PoH), Lightchain AI employs Proof of Intelligence (PoI). This unique consensus mechanism replaces traditional mining or staking with AI-driven tasks, such as real-time analytics and machine learning. This not only secures the network but also advances AI technology, offering dual-purpose utility while drastically reducing energy consumption. - Artificial Intelligence Virtual Machine (AIVM): AI at the Core The AIVM is a game-changer for developers, enabling them to build decentralized applications (dApps) that leverage AI for predictive modeling, automated decision-making, and real-time data processing. By integrating AI capabilities directly into the blockchain, Lightchain AI outpaces traditional platforms limited to simpler smart contracts. - Scalability That Matches Market Demands Solana’s speed has been its hallmark, but its network outages under heavy load have raised concerns. Lightchain AI addresses this with advanced sharding and Layer 2 solutions, enabling consistent and reliable high throughput for enterprise and retail users alike. Why Analysts Are Betting on Massive Gains - Real-World Utility Beyond Speculation While many blockchains rely on speculative value, Lightchain AI is designed for real-world applications. From financial services to healthcare and supply chain logistics, its AI-driven ecosystem ensures demand beyond the crypto sphere. - Early Adoption Advantage With its mainnet launch planned for late 2024, Lightchain AI is still in its growth phase. This early-stage opportunity gives investors the potential to capitalize on significant value appreciation as adoption accelerates. - Eco-Friendly Innovation Sustainability is becoming a non-negotiable for blockchain projects. Lightchain AI’s PoI mechanism reduces energy consumption, aligning it with global environmental goals and appealing to eco-conscious investors. Lightchain AI’s Key Use Cases - Decentralized Finance (DeFi): Smarter risk assessment, predictive analytics, and AI-powered trading platforms can revolutionize the DeFi space, attracting both individual and institutional users. - Healthcare: Secure sharing of medical data, enhanced diagnostics, and AI-driven research capabilities make Lightchain AI a natural fit for the healthcare industry. - Global Logistics: Real-time AI insights into supply chain inefficiencies and transparency ensure better management and cost savings for businesses worldwide. Solana, Ripple, and Now Lightchain AI Ripple has solidified its role in facilitating international payments, and Solana remains a go-to for high-speed decentralized applications. But Lightchain Protocol AI offers a holistic approach that combines the best of both platforms while introducing entirely new capabilities with AI integration. Its versatility makes it a viable contender for significant market share as blockchain adoption grows. For those seeking the next big opportunity in crypto, Lightchain Protocol AI stands out as a dark horse with the potential to rival Solana and Ripple. Secure your Lightchain Tokens (LCAI) during the presale and join a platform that’s redefining blockchain technology with innovation and purpose. The cryptocurrency sector is witnessing a bullish trend, with established players like Solana and Ethereum showing robust activity. Solana has achieved a market cap of \$120 billion due to its scalable solutions and minimal transaction costs. Although Ethereum might face short-term price dips, its dominance in smart contracts and forthcoming upgrades indicates sustained long-term growth. New presale projects are also seeing benefits from this bullish market. BlockDAG (BDAG), a new layer 1 cryptocurrency, is making remarkable strides as its presale approaches the \$154.5 million milestone. With its main net currently undergoing an audit phase and its limited-time BDAG250 bonus offer spurring increased demand, BlockDAG will likely reach its \$600 million goal soon if the current momentum holds. Let’s delve into how these three currencies are set to shape 2024 and which could emerge as the top cryptocurrency for 2024. Solana’s Market Cap Closes in on Ethereum The stability of Solana’s market cap is garnering interest as it approaches Ethereum’s market dominance, signaling the potential for substantial growth. Its \$120 billion market cap confirms its top-tier status and prospects for expansion, spurred by recent increases in daily network fees surpassing Ethereum’s. Thanks to its low fees and scalability, Solana is attracting a growing number of developers and institutional investors as Solana continues to enhance its blockchain technology, its market cap is expected to rise even further, solidifying its position as a strong blockchain player with a current price of \$253. Ethereum’s Potential Path: A Gradual Ascent While the Ethereum price forecast anticipates a potential near-term dip due to market corrections, the platform’s strong fundamentals suggest a resilient price increase over time. As Bitcoin edges towards the \$100,000 mark, Ethereum’s price is projected to experience a brief setback before ascending higher. Looking toward 2025, Ethereum’s price forecast remains positive. As the leading smart contract platform, anticipated upgrades are set to elevate its functionality and market standing. Despite potential market adjustments, Ethereum’s price is expected to climb by 2025. BlockDAG’s Journey Towards a \$600M Presale Objective: A Profitable Venture With Solana’s rising market cap and Ethereum’s sturdy performance, the crypto market’s bullish momentum is evident. However, BlockDAG is capturing significant attention with its remarkable bullish run. The demand for BDAG has escalated, with its presale now amassing over \$154.5 million, as each new batch of 16.7 billion coins sells faster than the last. Early supporters have witnessed a staggering 2240% surge in value, with BDAG’s price jumping from \$0.001 to \$0.0234. Predictions suggest BlockDAG’s bullish trend will continue to expand post-presale, with forecasts estimating BDAG could reach \$20 by 2027, intensifying the demand even further. BlockDAG’s latest BDAG250 bonus code brings an exciting 5-tier reward system designed to boost user engagement and BDAG holdings. Participants enjoy a 100% bonus on their first purchase, followed by an even more generous 130% bonus on the second. The remaining bonuses are shrouded in mystery, unlocked progressively with each additional purchase. This unique structure ensures users are consistently rewarded while maintaining anticipation for bigger surprises. By offering increasingly valuable bonuses, BlockDAG keeps participants motivated and invested, fostering long-term involvement. The BDAG250 bonus code represents a creative approach to driving excitement and growth within the crypto community. But the enthusiasm doesn’t end there. With BlockDAG’s main net development completed and now in the audit phase, the crypto community and developers are eagerly anticipating its launch. Once the audit is completed, testing will ensure the main net’s functionality and readiness. Closing Thoughts: Secure the Top Crypto for 2024 Solana’s consistent market cap rise, propelled by economical fees and scalable solutions, and Ethereum’s promising long-term outlook despite short-term dips highlight their potential. Meanwhile, BlockDAG stands out with its innovative technology and robust market achievements. Its presale is already nearing \$154.5 million and steadily progressing towards its \$600 million target, making it a formidable contender for the best cryptocurrency pick in 2024. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxgmWyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Cryptocurrency trends often ebb and flow between innovation and hype. Memecoins like Dogecoin and Shiba Inu have showcased the potential of community-driven success, while blockchains like Solana have demonstrated the power of high-performance scalability. But what if the next crypto breakthrough combined the virality of memecoins with the utility and innovation of advanced blockchains? Enter Lightchain Protocol AI, a blockchain that is rapidly gaining attention for its ability to blend cutting-edge artificial intelligence (AI) integration with unmatched scalability and sustainability. With its mainnet launch set for mid-2025, Lightchain AI has the potential to redefine the market. The Lightchain presale is now open, offering early adopters a chance to secure Lightchain Tokens (LCAI) and position themselves for the next big leap in crypto. Lightchain AI: More Than a Memecoin Phenomenon While memecoins rely on speculative trading and social momentum, Lightchain Protocol AI is a platform designed to solve real-world challenges. Combining AI, scalability, and sustainability, Lightchain AI introduces features that go far beyond the typical offerings of traditional cryptocurrencies. - Proof of Intelligence (PoI): Redefining Consensus Lightchain AI’s Proof of Intelligence (PoI) mechanism replaces traditional mining and staking with AI computations such as machine learning tasks and real-time analytics. This makes the blockchain both energy-efficient and purpose-driven, contributing to advancements in AI technology while securing the network. - Artificial Intelligence Virtual Machine (AIVM): A Game-Changer for dApps The AIVM allows developers to build decentralized applications (dApps) with built-in AI functionality. From predictive analytics to automation and data-driven decision-making, Lightchain AI empowers dApps to operate smarter and faster than ever before. - Unmatched Scalability Lightchain AI employs advanced sharding and Layer 2 solutions, ensuring high transaction throughput without congestion. This scalability positions it as a blockchain capable of supporting enterprise-level applications across diverse industries. Why Lightchain AI Stands Out - A Shift Toward Utility Memecoins like Dogecoin thrive on community-driven hype, but their utility is often limited. Lightchain AI combines the marketability of crypto with real-world functionality, attracting developers and enterprises alike. - Sustainability at Scale As the crypto market faces increasing scrutiny over its environmental impact, Lightchain AI’s energy-efficient PoI mechanism positions it as a green alternative for blockchain development. - AI Integration for Smarter Solutions Lightchain AI’s integration of AI opens doors to new possibilities in decentralized applications, offering more advanced tools for sectors like finance, healthcare, and logistics. - Early Investment Opportunity With its mainnet launch planned for mid-2025, Lightchain AI is still in its growth phase. The presale offers investors a rare chance to secure tokens early and benefit from the platform’s anticipated adoption. Applications Driving Lightchain AI’s Potential - Decentralized Finance (DeFi): Lightchain AI enhances DeFi with AI-powered tools for risk assessment, trading optimization, and lending platforms. - Healthcare: Privacy-preserving data sharing and AI-enhanced diagnostics transform healthcare delivery and research. - Supply Chain Optimization: AI-driven analytics improve efficiency, transparency, and cost-effectiveness in global logistics. How Lightchain AI Compares to Solana and Memecoins - Solana: Known for its speed and scalability, Solana has been a leader in high-performance blockchains but lacks the advanced AI capabilities of Lightchain AI. - Memecoins: Tokens like Dogecoin and Shiba Inu thrive on community engagement but lack the real-world applications and scalability of platforms like Lightchain AI. - Lightchain Protocol AI: Combining the scalability of Solana with advanced AI integration, Lightchain AI offers a unique proposition that bridges innovation with real-world utility. Will Lightchain AI Redefine Crypto After Solana? As blockchain technology continues to evolve, Lightchain Protocol AI is emerging as a platform that addresses the crypto market’s most pressing needs. With its ability to deliver scalable, sustainable, and intelligent solutions, analysts are predicting that Lightchain AI could be the next big name in blockchain—combining the appeal of memecoins with the utility of advanced platforms like Solana. Be Part of the Future Secure your Lightchain Tokens (LCAI) during the presale and join a project that’s redefining what’s possible in the crypto world. Lightchain Protocol AI isn’t just another blockchain—it’s the future of decentralized innovation. - Solana faces price pullback, but investor interest remains strong. - RSI above 50 signals the potential for bullish momentum. Solana (SOL), a prominent altcoin that surged 37% over the past month, reaching an all-time high of \$264 just nine days ago, is now witnessing a decline in momentum. Currently, SOL is trading at \$229.06, marking a 3% drop in the last 24 hours. This downturn coincides with XRP overtaking Solana as the fourth-largest cryptocurrency by market capitalization. Meanwhile, despite the price retreat, investor sentiment around Solana remains optimistic. On-chain analytics reveal strong activity among long-term holders, with significant outflows from exchanges amounting to \$182.5 million since 23 November 2024. This trend indicates accumulation by whales and long-term investors, a positive signal of confidence in Solana's long-term prospects. From a technical standpoint, Solana's Relative Strength Index (RSI) holds above the neutral mark of 50, suggesting residual bullish momentum. Analysts highlight the crucial support level at \$221. Should SOL maintain this threshold, it may rebound towards \$245, potentially setting the stage for a reattempt at its recent ATH of \$264. However, a drop below \$221 could lead to deeper corrections, testing support at \$201 and dampening investor confidence. Solana Bulls In a Chaotic Phase Market activity further underscores the sustained interest in Solana. A Binance long-to-short ratio of 2.77 reveals that nearly 73.5% of top traders maintain long positions, reinforcing the bullish narrative. Additionally, trading volumes have jumped by 14.56% in the last 24 hours, reflecting heightened market engagement. However, the broader crypto market dynamics add pressure. Solana faces stiff competition as Ethereum and XRP show robust upward momentum, raising questions about Solana's ability to sustain its position. Furthermore, a bearish head-and-shoulders pattern on Solana's four-hour chart signals potential risks if SOL fails to break the \$245 resistance decisively. In conclusion, while Solana's price trajectory has faced headwinds, its active network participation and investor interest indicate resilience. Whether the altcoin can regain its upward momentum will depend on its ability to hold key support levels and navigate challenging market conditions. Highlighted News Of The Day New Report Highlights Stablecoins Could Capture 10% of US Dollar Supply

The crypto market is riding a wave of growth, driven by significant progress and upward trends across key blockchain platforms. With Solana's DEX trading volume hitting an astounding \$100 billion in a month and Avalanche displaying a favorable price trajectory, the scene is ripe for prime crypto ventures. Amidst this market boom, BlockDAG (BDAG) emerges as a standout player. It has vaulted past the \$152.5 million mark in its presale, with industry watchers foreseeing a surge to \$30 by 2030. The excitement builds with BlockDAG's Black Friday event, offering a whopping 150% additional coins with the code BLACKFRIDAY150a—arguably the season's best deal in crypto. Solana's Trading Volume Achieves Historic Highs Solana's decentralized exchange (DEX) has witnessed a monumental \$100 billion trading volume within a month, a testament to its robust platform. Famed for its minimal fees and swift transactions, Solana continues to attract traders looking for effective trading solutions. This surge underscores the increasing allure of Solana's DeFi ecosystem, with entities like Orca and Raydium enhancing liquidity and fostering wider adoption. Predictions suggest Solana could reach between \$350 and \$500 by the end of 2024, affirming its leadership in the crypto domain. Avalanche Price Forecast: Bright Future Ahead? Recent evaluations of Avalanche reveal a promising upward trend, with a 28.3% increase in the last week alone, and a further 6.28% rise over the past month. With its price currently at \$43.5, Avalanche draws attention with its distinctive algorithm and quick processing capabilities. By the close of 2025, Avalanche is projected to soar to \$418, supported by its technological advances and broader market trends. This forecast underscores the platform's potential and its capacity to leverage growing adoption and innovation in the crypto sphere. BlockDAG's Swift Expansion Enhances \$30 Projections, Seize a 150% Bonus Opportunity! The cryptocurrency market is riding a wave of optimism, highlighted by Solana's trading volume exceeding \$100 billion in a single month and Avalanche's positive price trends predicting notable increases. BlockDAG is emerging as a formidable force in this thriving environment with substantial growth potential. BlockDAG's presale recently hit an impressive milestone, surpassing \$152.5 million. With Batch 26 pricing BDAG coins at \$0.0234 and having sold over 16.6 billion coins, the trajectory of BlockDAG's growth is unprecedented. Analysts see BDAG potentially hitting \$30 by 2030, fueled by this rapid expansion. Now, consider the impact for purchasers using the ongoing Black Friday bonus code, offering an extra 150% for the next two days—a prime chance to build lasting wealth. The strategic roadmap for this project includes pivotal upgrades like the completion of its Mainnet development, which is currently in the audit phase and drawing keen interest from blockchain developers keen to tap into this advanced architecture. Furthermore, the X1 Miner app continuously integrates new miners into BlockDAG's ecosystem. This app allows users to mine up to 20 BDAG coins daily on their smartphones without heavy battery or data use. With over 200,000 active users, the app's popularity underscores BlockDAG's expansive and engaged community. These developments make BlockDAG a highly attractive option for large-scale buyers. Analysts project a \$30 valuation for BDAG coins by 2030. As developers and miners gravitate towards the network, BlockDAG solidifies its position as a leading presale in the cryptocurrency market. Leading the Crypto Charge: BlockDAG at the Forefront BlockDAG's presale is setting new standards with extraordinary incentives like the 150% Black Friday bonus, having already amassed over \$152.5 million. This surge positions BlockDAG on a path that could lead to a monumental breakthrough. With a potential target price of \$30 by 2030, fueled by its robust core and increasing developer interest, BlockDAG's prospects look bright. While Solana breaks records with its trading volume and Avalanche experiences significant price growth, BlockDAG captures unparalleled market interest. Positioned as the top presale crypto of 2024, BlockDAG's batches are quickly snapped up, supported eagerly by blockchain developers, and boosted by the widespread adoption of the X1 Miner app. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gq/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Hailed as the new Solana (SOL), Rexas Finance is an ambitious claim supported by its creative approach to Real World Asset (RWA) tokenization. Rexas Finance is transforming the management of tangible and intangible assets in the digital economy, much as Solana upset blockchain technologies with its speed and scalability. Leading the trend in democratizing asset ownership with a user-friendly platform and strong ecosystem, Rexas Finance lets people and companies easily tokenize assets. Rexas Finance is a fierce competitor for the title of ætternet big altcoin as its presale picks steam and its features continue to attract investor interest.æ Does it meet the hype, though? Let's explore what distinguishes Rexas Finance and the reasons you can find worth in your \$1,000 expenditure right now. Rexas Finance (RXS) Ecosystem: Groundwork for Success The success of Rexas Finance stems mostly from its ecosystem, which blends modern tools with a simple user interface. From generating original tokens to securely handling complicated transactions, the platform provides a spectrum of tools meant to streamline asset tokenization. Among its remarkable elements are: Regardless of technical ability, Rexas Token Builder lets users easily design and release their tokens. Eliminating obstacles to entrance lets people and companies tokenize anything from intellectual property to real estate. Revolutionizing access, the QuickMint Bot connects with Telegram and Discord so users may mint tokens straight from their smartphones. This function guarantees flawless engagement for newbies as well as seasoned investors. Rexas Finance uses artificial intelligence to streamline NFT creation so users may create original digital art and automatically deploy contracts. By lowering the complexity usually connected with NFTs, this invention makes them available to anyone. Rexas Finance's first concerns are security and financial optimization under AI Shield and Treasury. While the Treasury function finds and maximizes yield prospects across blockchain networks, guaranteeing investor funds perform harder and smarter, the AI Shield protects smart contracts. Like Solana's early ecosystem support for distributed apps, Rexas Launchpad offers a safe environment for creative blockchain startups to acquire capital and exposure, therefore promoting innovation within the field. Comparison to Solana's Use Case Rexas Finance is bringing access and creativity to RWA tokenization, much as Solana brought efficiency and scalability to distributed apps. Solana was popular with developers and investors since it could manage transactions at lightning speed with low costs, hence driving its explosive rise. Rexas Finance addresses asset management gaps using blockchain, thus improving liquidity, transparency, and worldwide access for asset owners, so reflecting this trend. Rexas Finance is promoting itself as the preferred platform for tokenizing physical and digital assets, whereas Solana has become a favored platform for decentralized finance (DeFi) and NFTs. This common attention to practical uses emphasizes how likely Rexas Finance is to reach comparable success. Presale Momentum and Community Engagement With its presale approach—which avoids conventional venture capital financing—Rexas Finance has drawn investor interest. Originally launched on September 8, the token has seen over 233% growth; meanwhile, Stage 8 of the presale is almost finished with 89.23% of tokens sold at \$0.10 apiece. Selling 258,762,493 tokens out of a total supply of 290,000,000, the project has so raised \$17,626,475 out of its \$20,750,000 aim. Interest has been piqued even more by the platform's \$1,000,000 Rexas millionaire gift. With more than 325,728 entries, this program has drawn a varied spectrum of participants, therefore encouraging community involvement and increasing demand for RXS tokens. As the market for cryptocurrencies starts a bull run, experts estimate Rexas Finance might climb up to 40x during its first significant leap. Should these predictions come true, a \$1,000 investment at the present token price of \$0.10 may result in \$40,000. The Certik audit from Rexas Finance, new listings on CoinMarketCap and CoinGecko, and its leadership in the unexplored RWA tokenizing sector are among the elements inspiring this hope. Conclusion: Is Rexas Finance the Right Investment for You? Rexas Finance epitomizes the creativity and promise that have historically propelled the largest triumphs in the cryptocurrency sector. Its strong ecosystem, dedication to practical uses, and outstanding presale performance set it out as a project with great promise. Rexas Finance presents a convincing chance for investors looking for the next Solana to enter an emerging sector with a rather modest entrance fee and great upside potential. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

Officially starting stage 8 of its presale at \$0.10, Rexas Finance (RXS) has attracted notable interest from prominent Solana (SOL) and Ripple (XRP) investors. Rexas Finance is among the most interesting new cryptocurrencies having raised over \$17.6 million and sold more than 259 million tokens. This article discusses three reasons why top holders are aggressively accumulating Rexas Finance. Revolutionizing Real-World Asset Tokenization The core value proposition of Rexas Finance lies in its offering of real-world assets in a tokenized form. Its game-changing ecosystem allows potential investors to acquire fractional ownership in real assets such as properties, artworks, and commodities. Rexas Finance uses blockchain technology to dissolve such problems as high entry thresholds and asset management inefficiencies. This way of doing things has huge effects on fields like real estate that have had trouble with funding and openness in the past. By adding tokenization to its platform, Rexas Finance not only makes these markets more open to everyone, but it also makes it possible for deals to happen easily around the world. Top holders from Solana and Ripple are especially interested in this utility because it offers growth that goes beyond short-term trading. Real-world uses make a project more long-lasting, so it can still be useful even when the market is down. Strong presale performance combined with ecosystem growth and real-world asset tokenizing makes RXS an intriguing replacement for whales seeking significant gains. Its rather cheap presale price of \$0.10 provides an amazing starting point even if its unique use cases ensure long-term sustainability. Strong Financial Backing and Transparent Audits Another strong reason for RXS's success is that it did very well financially during the presale. The token has raised over \$17.6 million and is in high demand among both retail and institutional investors. Its Certik audit guarantees investors a safe, well-designed smart contract infrastructure, therefore enhancing its reputation. This degree of openness distinguishes Rexas Finance in a sector sometimes beset with questions about security and dependability. Moreover, the sales of more than 259 million tokens show society's trust in the idea. Such substantial participation reveals the appeal of Rexas Finance as a token with integrated value, transparency, and development prospects. Furthermore, another important factor influencing market demand is the way the project combines actual asset tokenization into its ecosystem. Rexas Finance presents a special mix of utility and profitability by generating fresh income sources via creative blockchain projects. RXS is positioned to profit from the global asset tokenization industry, which is expected to expand tremendously; hence, its listing price is ready for a notable rise. Major Listings and Ecosystem Development Rexas Finance's listing on CoinMarketCap and CoinGecko marks a significant milestone in its development. Building visibility and guaranteeing liquidity—two key elements for long-term success—depends on these platforms. Investors also find an excellent attraction in the ecosystem itself. Its purpose is to combine tokenized assets with decentralized financial systems, therefore providing utility beyond speculative trading. Rexas Finance has positioned itself as a leader in a fast-changing field by bridging blockchain and conventional financing. Top investors in Solana and Ripple, accustomed to projects with extensive ecosystems, view Rexas Finance as an excellent opportunity to diversify their holdings. They have the opportunity to enter a rapidly growing sector that has the potential to transform the purchasing, selling, and management of assets. Although Solana and Ripple are still powerhouses in the crypto scene, their mature ecosystems limit space for exponential expansion. Rexas Finance, on the other hand, presents a ground-floor chance in a token with transforming power. Conclusion Rexas Finance (RXS) is on track to revolutionize the cryptocurrency space as it enables asset tokenization to be easily utilized in real life. Thanks to strong financial performance, audit transparency, and major exchange listings, it has established itself as a go-to platform for high-ranking Solana and Ripple investors. The financial market consistently employs innovative strategies, positioning Rexas Finance as the next leading project by connecting the blockchain with real-world applications. For Rexas Finance investors, the project boasts an impressive position and offers an attractive opportunity with prices at \$0.10 for more growth potential in the decentralized finance space. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Solana (SOL) has been a cornerstone of innovation in the blockchain space, but its investors are now setting their sights on something new and exciting: Lightchain Protocol AI. This groundbreaking platform is blending blockchain and artificial intelligence (AI) to create a decentralized ecosystem poised to disrupt multiple industries. With its native token, LCAI, gaining incredible momentum during its December presale, investors are flocking to join what could be the next big thing in

crypto. Don't miss your chance"join the LCAI presale today. The Allure of Lightchain Protocol AI for Solana Investors Solana has earned its reputation as a fast and efficient blockchain ideal for decentralized finance (DeFi) and NFTs. However, Lightchain Protocol AI offers something entirely different: the seamless integration of blockchain and AI to address challenges like scalability, privacy, and centralized control in AI development. By doing so, it opens the door to use cases that extend far beyond the typical applications of blockchain. Central to Lightchain's innovation is its Artificial Intelligence Virtual Machine (AIVM), a specialized computational layer designed to handle complex AI tasks like training models and performing real-time data analysis. This is coupled with the Proof of Intelligence (PoI) consensus mechanism, which rewards network participants for contributing computational power toward AI-related workloads rather than simply staking or mining. For Solana investors, Lightchain Protocol AI represents an opportunity to diversify into a sector that is rapidly growing and ripe for disruption. Why LCAI Is Capturing Investor Attention The LCAI token is at the heart of the Lightchain Protocol AI ecosystem, offering both utility and long-term value through its deflationary tokenomics. As the platform's native currency, LCAI is used for governance, staking, and accessing AI services within the ecosystem. Here's why it's creating such a buzz: - Strong Tokenomics: A portion of transaction fees is burned, reducing the total supply of LCAI over time. This deflationary model creates scarcity and drives value appreciation. - Utility Across the Ecosystem: LCAI powers the AI services provided by the AIVM, from decentralized model training to real-time inference tasks. - Community-Driven Governance: Token holders actively participate in shaping the platform's future, ensuring transparency and fairness. - Early Entry Opportunity: With its presale still underway, early adopters can secure LCAI at a discounted rate before its value potentially skyrockets. For investors accustomed to Solana's growth potential, LCAI provides a fresh avenue to explore the intersection of AI and blockchain technology. What Sets Lightchain Apart from Solana While Solana is known for its speed and efficiency in handling financial transactions, Lightchain Protocol AI is focused on a different mission: decentralizing and democratizing artificial intelligence. The AIVM and PoI systems are specifically designed to address the unique computational needs of AI, making Lightchain a natural choice for developers and enterprises seeking scalable and privacy-preserving solutions. Additionally, Lightchain's integration of advanced cryptographic techniques like Zero-Knowledge Proofs (ZKPs) and homomorphic encryption ensures that sensitive AI computations remain secure. These features make it particularly attractive to industries where data privacy is paramount, such as healthcare, finance, and logistics. For Solana investors, the chance to diversify into a platform with such a distinct focus is a compelling reason to turn toward Lightchain Protocol AI. December's Exploding Presale: Why Timing Is Critical The LCAI presale is generating massive interest, with both institutional and retail investors rushing to secure their share of this promising token. The presale stage offers a unique opportunity to enter at the ground floor of a project that has the potential to revolutionize decentralized AI. With Solana whales already showing interest, the presale is expected to accelerate as more investors recognize the value of Lightchain Protocol AI. The buzz around LCAI is not just speculation; it's backed by cutting-edge technology, a clear roadmap, and a growing community of developers and supporters. Why You Should Act Now Lightchain Protocol AI is quickly becoming the talk of the crypto world, and its December presale is the perfect opportunity to get involved. As Solana investors and crypto whales flock to this groundbreaking project, demand for LCAI is only going to grow. By joining now, you position yourself to benefit from what could be one of the most transformative projects in blockchain and AI. Secure your LCAI tokens today and be part of the decentralized AI revolution. Stay Connected with Lightchain Protocol AI For more information and updates, check out the following resources: - Website: <https://lightchain.ai> - Whitepaper: <https://lightchain.ai/lightchain-whitepaper.pdf> - Twitter/X: <https://x.com/lightchainai> - Telegram: <https://t.me/LightchainProtocol> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana witnessed a positive momentum in its price action in the past day after recent dips. - The altcoin's daily trading volume has surged by 14.22% as per CMC data. As the community eases into a pro-crypto world, several altcoins take to the spotlight every other day. With price actions stealing the show, other sectors such as DeFi, and ETPs also attempt to draw investors' attention. Meanwhile, in the regulatory sector, Russia has passed a law structuring crypto taxations and has exempted it from VATs. When turning our eyes to the altcoin sector, a tail-to-tail race greets the community this afternoon. While Solana makes small strides to recover from its most recent price dip, Ripple's XRP has begun a steady bullish rally. Solana, in the last 24 hours, has factored in a modest 2.55% price increase. In the afternoon hours of November 29, the altcoin was trading at a low of \$237 before climbing upwards. SOL also hit an intra-day high of \$246.78 before reaching current levels. At the time of writing, the altcoin was trading at \$243.97 as per CMC data. Zooming out, over the past week, Solana had experienced bearish movements as prices fell to support at \$222. Following the descent, the altcoin attempted to climb back and has managed to reach current levels thus indicating signs of recovery in the coming days. Meanwhile, several Solana-based altcoins such as BONK have shown notable bullish performances this past week. Although there were increased liquidations in the past day, SOL's RSI of 62.24 indicates a neutral market sentiment as per TradingView data. Will Solana Sustain its Position as Second Largest Altcoin? In the last 24 hours, as aforementioned, XRP has been rallying getting closer to Solana in market cap. In the case of Solana not showing significant increases XRP might flip the altcoin state market analysts. Meanwhile, looking at SOL's RSI it suggests that the cryptocurrency might witness upward movements in the coming days. Additionally, Solana's Moving Average Convergence Divergence (MACD) signal line stands below the MACD line. While this suggests a downward trend, the signal line with current movements is inching towards a crossover. If Solana's price sustains the positive momentum, it can be expected to remain the second-largest altcoin in the market. Meanwhile, Bitcoin and Ethereum have also shown similar price movements in the past day. With modest gains, the cryptocurrencies have also shown signs of price recovery. Highlighted Crypto News Today: HYPE Token Price Jumps Over 100% After \$1.6B Hyperliquid Airdrop

- Solana drops 10% from ATH, triggering \$64M in long liquidations - Open interest hits weekly low of \$3.34B, signaling reduced market confidence - Technical analysis suggests crucial battle at \$231.54 support level Solana's recent price action has created a challenging environment for bullish traders, with the cryptocurrency experiencing a notable correction from its all-time high of \$264.63 reached on November 22. The 10% decline over the past week has triggered a cascade of market effects that warrant careful analysis to understand the potential path forward. Understanding Solana's Liquidation Cascade The Solana market retreat has had a particularly severe impact on leveraged traders, resulting in \$64 million worth of long position liquidations. To understand the significance of this figure, imagine a domino effect where each forced sale puts additional downward pressure on the price, potentially triggering more liquidations. This self-reinforcing cycle can accelerate price declines as traders scramble to exit positions before incurring further losses. Perhaps even more telling than the liquidation data is the substantial decline in open interest, which has fallen to a weekly low of \$3.34 billion. This SOL metric serves as a barometer for market confidence - when it drops during a price decline, it suggests traders are not just closing losing positions but actively choosing to stay on the sidelines rather than opening new ones. The Awesome Oscillator has begun generating red histogram bars, providing technical confirmation of the market's bearish shift. This indicator compares short-term and long-term momentum, and its current reading suggests the immediate price pressure has turned decisively negative. This technical signal aligns with the broader market narrative of waning bullish momentum. The immediate focus for traders now turns to the crucial support level at \$231.54. A breach below this threshold could accelerate the decline toward \$205.56. However, the market remains dynamic, and a revival in buying interest could still drive prices back toward the recent all-time high of \$264.63, though current indicators suggest such a move would face significant resistance.

For those looking for some of the most profitable prospects the cryptocurrency market offers, Solana (SOL), which surged following the FTX meltdown in late 2022 and turned early investor losses into large returns, is a perfect illustration of this. Should you have invested \$1,000 in Solana at the time of the FTX fall, that investment would be worth \$30,240 now, a startling 3,024% gain. Though many people are drawn to Solana's amazing comeback, another cryptocurrency is under development that could either copy or perhaps surpass Solana's price increase: Rexas Finance (RXS). Rexas Finance, the next big participant in the cryptocurrency market, is ready to provide comparable large profits in just 60 days and maybe even more. The Crash of FTX and Solana's Peak In November 2022 FTX, a cryptocurrency platform abruptly halted its operations causing turmoil in the sphere. This event triggered a chain reaction, in the market resulting in a drop in the value of cryptocurrency assets. Affected resources included Solana, the platform most severely impacted due to its strong relationship with Sam Bankman-Fried and FTX. After the crash, the market price for Solana declined sharply, with the value dropping to approximately \$8. Still, what transpired was rather extraordinary. As the market recovered, Solana started to heal; by mid-2023, SOL had jumped to over \$200, a reflection of an amazing price rise of more than 2,400% from its bottom during the crisis. Investors who bought Solana during its fall were immensely wealthy thanks to this comeback, and the token became among the most sought-after assets on the market. Solana's quick recovery following FTX has shown that, in the cryptocurrency market, particularly when you can purchase at times of market uncertainty and panic, huge profits are not only feasible but also reasonable. Many investors have been motivated by Solana's success story to search for like prospects in the market; Rexas Finance is now a contender for the next major cryptocurrency that might follow Solana's lead. Rexas Finance (RXS): The "Next SOL" Possessing 3,000%+ Potential Among the most exciting new cryptocurrencies available in the cryptocurrency market, Rexas Finance is fast acquiring popularity. Real-world asset (RWA) tokenization which lets digital representations of real-world assets including real estate, commodities, and intellectual property is the main emphasis of the project. By providing more liquidity, openness, and worldwide investor accessibility, this invention could completely transform conventional finance. Rexas Finance's impressive presale which has raised over \$16.3 million in just under 3 months has already attracted interest. The platform offers solutions for simple access to tokenized real-world assets, therefore catering to both institutional and retail investors. Along with a rising need for distributed finance (DeFi) solutions, the presale success positions Rexas Finance for notable expansion in the not-too-distant future. Rexas Finance is still in its early years, but it is a prime contender for rapid expansion because of its creative approach to asset tokenization and ability to democratize access to several financial markets. At its Stage 8 presale, the altcoin is now valued at \$0.10; analysts estimate that in just 60 days or less, it will surge rapidly. Particularly for early investors, a 3,000%+ return is most definitely within reach if the project performs like Solana in its early years. Rexas Finance's possibility for quick expansion adds even more appeal. Solana's comeback took around a year, while Rexas Finance is well suited to achieve a comparable leap in only 60 days. The strong community support and a high degree of innovation of the project, together with the growing demand for tokenized assets, could cause a rise in both price and acceptance. Thanks to its appealing value proposition, presale momentum, and growing public interest in blockchain-based finance solutions, analysts estimate Rexas Finance may see a notable rise in the next sixty days. With possible returns of up to 3000%. Once the market catches up to the vision of the project, investors who enter now during the presale could enjoy gains comparable to those who bought Solana during the FTX crisis. A Rare Opportunity to Multiply Your Investment Should you have paid \$1,000 in Solana during the FTX crisis, you would be sitting on \$30,240 today a phenomenal return that emphasizes the amazing prospects the cryptocurrency market has. Rexas Finance is now ready to rise as the next Solana-style success narrative in the cryptocurrency field. Rexas Finance has the power to either copy or even surpass Solana's expansion in the next few months with its innovative method of tokenizing real-world assets and great momentum. Rexas Finance offers a rare chance for investors seeking the next great cryptocurrency to rapidly multiply their money. Those who invest early in RXS could experience amazing gains that either equal or exceed Solana's historical run, given just 60 days till the next phase of development. Take advantage of the opportunity to participate on the ground floor of what might be the next big cryptocurrency to enter the scene. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana faces strong resistance with high liquidation risk at \$246 - Chaikin Money Flow indicates increasing selling pressure - Technical analysis suggests potential drop to \$222-\$200 range Solana (SOL) has encountered significant headwinds in its attempt to reach new historic highs, with the price consolidating around \$238. A comprehensive analysis of multiple technical indicators suggests that the cryptocurrency might face additional downward pressure in the near term. The liquidation heatmap, a sophisticated tool for understanding potential price movements, reveals critical price levels that could influence SOL's trajectory. This indicator currently shows a high concentration of liquidity at two key levels: resistance at \$246 and support at \$225. The heatmap's color gradient, shifting from purple to yellow in these regions, signals significant order book activity. With current trading volumes remaining subdued, these levels become particularly significant as potential price targets. Solana CMF enters downward trend Adding to the bearish outlook, the Chaikin Money Flow (CMF) metric has entered a concerning downward trend. This technical indicator, which measures the flow of capital in and out of an asset, suggests that selling pressure is mounting. The declining CMF reading typically precedes price decreases as it reflects diminishing buying interest and increasing capital outflows from the market. Perhaps most tellingly, Solana's Balance of Power (BoP) indicator has moved into negative territory on the daily timeframe. This transition is particularly significant because the BoP directly compares bullish and bearish market forces. Its current negative reading suggests that sellers have gained the upper hand in the ongoing price battle. Looking at potential price targets, the Fibonacci retracement levels provide a framework for possible support zones. Should the current bearish pressure persist, SOL could test the 23.6% retracement level near \$222. In a more severe scenario, the price might extend its decline toward the psychologically important \$200 level. However, a revival in buying interest could still invalidate this bearish outlook, potentially pushing SOL toward \$265. The convergence of these technical signals suggests that investors should carefully monitor these key levels, particularly the crucial \$225 support, as they may determine SOL's next significant move.

The crypto market is buzzing with significant developments, making certain altcoins the ones to watch. Solana (SOL) is stirring up the market with the potential for a substantial rally by 2025, driven by DeFi growth and broad market interest. ChainLink (LINK) is emerging as a vital utility token, boosting its role in enabling

cross-chain operations. In this dynamic environment, BlockDAG (BDAG) is capturing attention. A recent AMA highlighted the completion of its mainnet development and the transition to the audit phase, marking a crucial step forward in blockchain innovation. With a remarkable 2,240% ROI already delivered, BlockDAG's rapid ascent is solidifying its position in the digital currency sector. Solana's 2025 Price Prospects: Anticipating a 5x Increase Solana's price forecast for 2025 continues to excite the crypto community as experts predict a fivefold increase. Driven by positive market dynamics and ongoing DeFi expansion, Solana has reached new heights, recently peaking at \$220, bolstered by significant technical support like its position above the 50-SMA at \$161.32. Standard Chartered suggests that Solana's price could climb above \$720 under favorable conditions, spurred by encouraging political trends. The likelihood of Solana surpassing its peers has sparked further enthusiasm, supported by its growing ecosystem and keen market interest. Solana remains a central focus for those looking to leverage emerging opportunities in the crypto market. Chainlink Evolution: Emerging as a Key Gas Token Recent updates have positioned Chainlink at the forefront of blockchain innovation, with LINK now serving as a universal gas token via the Cross-Chain Interoperability Protocol (CCIP). This advancement enhances LINK's utility by enabling users to handle network fees with LINK or exchange other assets through decentralized platforms. Crypto experts believe this could elevate LINK's price beyond its previous high of \$22.87, highlighting its increasing importance in facilitating cross-chain interactions. The updates underscore Chainlink's role in promoting blockchain interoperability and attracting market attention. As LINK becomes a core component of the Chainlink ecosystem, its continued adoption is expected to spur further growth, making it a prominent player in the blockchain arena. BlockDAG AMA Ignites Crypto Excitement! BlockDAG's latest AMA has the crypto community abuzz, showcasing its rapid advancement and visionary plans. The session highlighted key achievements, including the completion of its mainnet development and the move into the audit phase. Supporters were excited as the team outlined strategies that reinforce BlockDAG's leadership potential in the blockchain arena. The presale is setting records, with over \$150 million raised and 16.4 billion coins sold. Early participants have witnessed a remarkable 2,240% ROI, demonstrating the project's strong market presence. Priced at \$0.0234 in batch 26, BlockDAG offers a prime opportunity for entry at this time. The BULLRUN100 bonus, which is ending in a few hours and doubles coin purchases, has heightened the excitement. This promotion has drawn a flurry of crypto enthusiasts looking to maximize their growth with BlockDAG. Additionally, early access to purchased coins via airdrop is gaining importance as the mainnet launch approaches. While Solana and Chainlink capture interest with their DeFi and interoperability progress, BlockDAG is quickly becoming a recognized name. With its impressive technical milestones, strong presale performance, and active community, it is emerging as a standout choice for crypto in 2024. The Standout Crypto to Watch in 2024 As Solana's DeFi expansion suggests a potential 5x rally by 2025 and Chainlink enhances interoperability with its universal gas capabilities, the crypto market is bustling with opportunities for savvy participants. BlockDAG has distinguished itself as a transformative force in the blockchain sphere. Its mainnet development is complete, with \$150 million raised, 16.4 billion coins sold, and an outstanding 2,240% ROI. BlockDAG's momentum is palpable. The BULLRUN100 bonus adds to the anticipation of the mainnet launch. For those searching for a mix of modern technology, vibrant community involvement, and substantial growth prospects, BlockDAG represents the future of blockchain technology. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market is heating up, and altcoin enthusiasts are watching closely as Solana, Cardano, and XRP continue to dominate. However, seasoned investors know the importance of identifying the next big movers early. Two projects making waves are Rexas Finance (RXS) and Dogecoin, each offering unique value propositions and market opportunities. While Solana and Cardano focus on blockchain efficiency, and XRP tackles cross-border payments, Rexas Finance revolutionizes real-world asset tokenization, and Dogecoin leverages massive community support and speculative momentum. Dogecoin Solidifies Its Position in the Market Dogecoin recently hit a three-year high of \$0.48, driven by speculation around Elon Musk's plans for X Payments on his platform. Over the past month, Dogecoin's value surged by 219%, with daily trading volumes peaking at \$15.4 billion. These numbers solidify its place as the third-most traded cryptocurrency, reflecting strong investor interest. The price jump follows technical indicators showing continued strength, with analysts predicting Dogecoin could reach \$0.65 to \$1.25 soon. Even with a temporary pullback to \$0.41 due to market cooling, Dogecoin maintains its position as a key player in the meme coin category. Investors see potential long-term targets of up to \$3.60, especially if integration with Musk's payment system materializes. As Dogecoin gains traction, its influence across the crypto market remains undeniable. Rexas Finance Leading Asset Tokenization Rexas Finance (RXS) emerges as a transformative force in the crypto market, offering solutions for tokenizing real-world assets like real estate, gold, and art. Investors can purchase fractional ownership of high-value assets, enabling unprecedented access to lucrative markets. For instance, a professional in Asia can invest in a commercial property in Europe, earning passive income without leaving home. This model unlocks global opportunities for ordinary investors previously limited to institutional players. The RXS ecosystem includes tools like the Rexas Token Builder, allowing users to tokenize assets seamlessly, and the QuickMint Bot, which simplifies the process further via platforms like Telegram. Additionally, the Rexas Launchpad supports projects raising funds through token sales, making the platform a one-stop solution for real-world asset tokenization. Whether dealing with real estate, commodities, or collectibles, Rexas Finance bridges traditional markets with blockchain technology. RXS is an ERC-20 token with a total supply of 1 billion tokens. Its allocation strategy prioritizes accessibility, with 42.5% reserved for a public presale. This approach stands out, as the team opted against raising capital through venture capitalists, ensuring public involvement in this financial revolution. The presale has already raised \$15,296,894, selling out stages 1-6 swiftly and pushing the price up threefold to \$0.99 per token in stage 7. Early buyers can anticipate significant returns, with prices projected to increase further by launch. Certik-audited for security and listed on CoinMarketCap and CoinGecko, Rexas Finance is gaining credibility and visibility. The project also features a \$1 million giveaway, allowing participants to win up to \$50,000 USDT each by completing tasks and referring friends. As RXS prepares for listings on three top-tier exchanges, its market potential continues to grow, with predictions of reaching double-digit valuations by early 2025. Conclusion The current altcoin season presents a unique opportunity for investors seeking to diversify beyond established projects like Solana, Cardano, and XRP. Dogecoin's renewed momentum and Rexas Finance's innovative asset tokenization model demonstrate the potential for significant returns. With RXS bridging traditional assets to blockchain networks and Dogecoin capturing speculative interest, both coins are poised to redefine market expectations. As altcoins continue to soar, seizing the opportunity to invest in these projects could unlock unparalleled growth for savvy investors. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- SOL trades at \$236.39 with a \$112.24 billion market cap, showing strong investor interest. - Solana leads in active addresses, DEX volumes, and TVL, capturing 45% of the DEX market. Solana (SOL) has captured investor attention with its impressive performance in the last week. Currently Solana is trading at \$236.34, SOL has experienced a 2.32% dip in the last 24 hours but remains a dominant force in the crypto market. Its market cap stands at \$112.24 billion, with a 24-hour trading volume of \$5.28 billion, indicating strong market activity. Despite slight corrections, SOL's upward trajectory reflects growing investor confidence. Recent data shows Solana surpassing Ethereum in critical metrics like active addresses, decentralized exchange (DEX) volumes, and total value locked (TVL). Solana now accounts for 45% of the DEX market share and boasts a \$121 billion TVL. Investors are optimistic about its trajectory, fueled by its partnerships, like Zeus Network, for DeFi and cross-chain connectivity. Solana's ecosystem growth strengthens its competitive edge. It handles 65,000 transactions per second, making it a top choice for decentralized applications. Solana's partnerships enhance its usability, attracting developers and institutions. Analysts believe ETF approval could further boost adoption and price performance. Key Technical Levels for Solana Analyzing Solana's chart, the Relative Strength Index (RSI) currently stands at 58.75, hovering near the neutral zone, while the RSI average is at 69.46, indicating slightly reduced bullish momentum. The price remains above key moving averages, with the 9-day MA at \$244.39 and the 21-day MA at \$229.37, forming a bullish crossover pattern. This suggests the potential for further upside if support levels hold. SOL faces a major resistance zone at \$245, a level it has tested multiple times without a definitive breakout. A successful breach above this level could propel the price towards new highs around \$260 and beyond. On the downside, \$229 serves as immediate support. A failure to hold this level might lead to a drop toward \$210, signaling caution for short-term traders. Solana is positioned for continued growth, supported by its ecosystem, performance metrics, and market sentiment. If trends persist, SOL could reach \$1,500, aligning with its bullish trajectory. However, volatility remains a key risk for investors.

- Solana price drops 12% from ATH of \$264.63 - Short positions surge to \$6 billion, outpacing longs - Critical support at 20-day EMA could determine next move Solana (SOL) has encountered significant selling pressure following its recent ascent to an all-time high of \$264.63 on November 24. Currently trading at \$232.72, the cryptocurrency has experienced a 12% retracement, prompting a notable shift in market sentiment and trading behavior. The derivatives market paints a particularly telling picture of current market sentiment. Data from Coinglass reveals that short positions have accumulated to a substantial \$6 billion, significantly overshadowing long positions which stand at \$5.38 billion. Mounting Market Pressure Tests Solana's Resilience This imbalance is reflected in the long/short ratio of 0.96, indicating that traders are increasingly positioning themselves for further downside movement. Social sentiment metrics further reinforce the bearish outlook, with the weighted sentiment indicator registering -0.40. This negative reading suggests that market discussions are dominated by cautious or pessimistic perspectives, typically associated with reduced trading activity as participants attempt to minimize potential losses during uncertain market conditions. From a technical analysis standpoint, SOL faces a crucial test at its 20-day Exponential Moving Average (EMA), currently situated at \$226.52. This indicator has served as reliable dynamic support since October 11, making its potential breach particularly significant. A decisive move below this level could trigger accelerated selling pressure, potentially driving prices toward the \$205.56 support zone. However, the market remains dynamic, and a shift in sentiment could still propel SOL back toward its recent all-time high of \$264.63. The coming days will be crucial in determining whether current bearish positioning proves prescient or premature.

- Solana-based meme coin ChillGuy token's price surged by around 30% today. - Crypto exchanges KuCoin and Bitget listed the CHILLGUY token causing the price rise. - ChillGuy token gave 38,399x return to a trader, as per the Lookonchain analytics platform. The latest Solana-based meme coin "Just a Chill Guy" is making waves in the industry with its cool nature. Adding to its "whatever" attitude, Chill Guy token listing on major crypto exchanges such as Bybit, KuCoin, and others is causing the price surge. ChillGuy token mentions from influential figures such as Elon Musk are further grabbing attention from people on social media. While social platforms are buzzing with this trending meme coin and analyzing who is "chilling", the token is recording new all-time highs, soaring on an upward trajectory. ChillGuy token's price rose by around 30% in the last 24 hours and is currently trading above the \$0.58 price level. If you are wondering what this ChillGuy token is and why its price is skyrocketing, read on! Just a Chill Guy on Solana Blockchain As its name suggests, CHILLGUY token is a just a chill guy token introduced on the Solana blockchain. It is inspired by a popular internet meme, featuring a super relaxed anthropomorphic dog with hands in his pockets. The meme token is radiating a cool vibe that doesn't make a big deal out of anything. ChillGuy token was first introduced on Nov 15, 2024, with a starting price of around \$0.3. After rising to \$0.5 price level a week after its launch, it witnessed a continuous downturn until the present price surge. Today, the token is trading at more than \$0.58, recording an overall price increase of 50%. Why Did the Chill Guy Token Price Soar 30% Today? Source: CoinMarketCap There are multiple reasons for the ongoing price rise of Just a Chill Guy token. One of the noteworthy reasons is the availability of these tokens on major crypto exchange platforms such as Bybit, Bitget, KuCoin, Crypto.com and others. Both KuCoin and Bitget announced their CHILLGUY token listing today. You can hate a chill guy, but they'll keep building. pic.twitter.com/XaIGloFmLV "Just a chill guy (@chillguyco)" November 27, 2024 Adding to the social media buzz around the ChillGuy token, Elon Musk replied to a tweet mentioning the Chill Guy meme and calling it "the new figurehead of racists" with ROFL emojis. Elon Musk is popular in the crypto industry, being known for his Dogecoin support with Doge memes on X. By joining the chill guy meme, he played a fair share in further increasing the attention around this Solana meme coin. As a result new token listings and social media buzz around the meme token, Chill Guy token soared around 30% today. While the 24-hour trading volume crossed the \$270 million mark, market capitalization is standing above \$580 million, with a 30% increase in the last 24 hours. Final Thoughts Turned \$160 into \$6.14M, a 38,399x return! "Lookonchain (@lookonchain)" November 27, 2024 12 days ago, this trader spent only 0.75 \$SOL(\$160) to buy 12.5M CHILLGUY on <https://t.co/DrKlYnPqgY>, and then sold 2.8M CHILLGUY for 149 \$SOL(\$35.4K). #CHILLGUY The trader still holds 9.62M CHILLGUY(\$6.1M), with a total profit of "pic.twitter.com/a5tPaB3kPt As per Lookonchain on-chain analytics platform, a trader reportedly made 38,399x returns with ChillGuy token. He bought 12.5M CHILLGUY tokens, spending 0.75 \$SOL around 12 days ago. Then, he sold 2.8M CHILLGUY today for 140 \$SOL, making a whopping 38,399x. Apparently, he still holds 9.62M CHILLGUY. On another note, Chill Guy token is currently facing controversy and risks due to legal action from Phillip Banks, the original creator behind the Chill Guy meme. Earlier this week, Banks posted on X, saying chill guy has been legally copyrighted. No matter the price surge and the hype behind the token, ChillGuy is a meme coin. And, meme coins are known for their extreme price fluctuations and short-term hype. It is only a matter of time Just a Chill Guy falls behind in a heap of meme coins. In case, you invested in this meme token, trade wisely and exit before it hits the road! Highlighted Crypto News Today:

- Solana's DEX volume surge strengthens its position in DeFi and market share. - Key resistance levels at \$271 and \$309 could trigger further price gains. Solana (SOL) has captured the attention of the cryptocurrency market, soaring to an all-time high of \$265 on November 23, 2024. This surge comes amid a broader bullish trend in the market, driven by Bitcoin's ascent towards \$100,000. Notably, in the past month, Solana-based tokens have seen remarkable gains, with some even

doubling in value. As a result, Solana’s market capitalization has surpassed \$121 billion, further solidifying its position in the crypto ecosystem. Moreover, a significant driver of Solana’s momentum is its thriving decentralized exchange (DEX) ecosystem. With daily trading volumes exceeding \$6 billion, Solana’s DEXs now command 45% of the market share, outperforming competitors like Ethereum and Binance Coin (BNB). The blockchain’s low transaction fees and high throughput have made it a popular alternative, further reinforcing its presence in decentralized finance (DeFi). Solana’s Total Value Locked (TVL) recently reached \$9.35 billion, overtaking BNB Chain, and positioning it as a leading player in DeFi. However, analysts caution that Solana is nearing critical resistance levels. While the coin is currently trading at \$261, analysts have identified key resistance at \$271 and \$309. Should Solana break above these levels, it could push toward new all-time highs. On the other hand, concerns about overbought conditions and the nearing upper limit of the Relative Strength Index (RSI) suggest that a short-term market correction could be on the horizon. SOL To Hit \$500? Despite these risks, Solana’s bullish momentum remains strong. The network has recorded an unprecedented \$109.8 billion in monthly DEX trading volume, a 109% surge from October’s \$52.5 billion. Analysts speculate that Solana’s price could soon hit \$500, driven by continued investor confidence and growing adoption within the DeFi space. While the path ahead may be volatile, Solana’s robust ecosystem and record trading activity set the stage for its continued growth. Highlighted News Of The Day

This past week in the cryptocurrency sector has been lively, with multiple digital currencies catching the interest of the market. Optimism (OP) faced challenges in gaining support, Solana memecoins added new enthusiasm to the market, and BlockDAG (BDAG) presale kept its strong pace, soaring to \$124 million. This is attributed to BlockDAG’s BULLRUN100 promotion, which will soon end, offering a doubling of BDAG coin purchases and early access to its airdrop. With the completion of BlockDAG’s mainnet development and the project entering the audit stage, anticipation is growing. BlockDAG is quickly becoming a hot topic and a top crypto pick before 2025. Recent Optimism (OP) Price Analysis The recent price analysis for Optimism (OP) reveals a tough time for the cryptocurrency, facing significant sell-offs. OP encountered a steep decline after failing to break past the \$1.80 level, resulting in a more than 6% fall and driving the price below the 20 and 50-day SMAs to \$1.61. The last week saw OP’s value decrease, with reductions of 5.52% and 4.29%, taking the price under \$1.50 and eventually to \$1.45. Despite these declines, Optimism shows signs of a slight recovery, managing to hold above \$1.40 as the market tries to bounce back. The analysis suggests that OP might continue to see narrow price fluctuations as it seeks stable footing. Solana Memecoins: Increased Interest in BONK & MEW Solana Memecoins are currently making waves, drawing more interest from market participants. Activity on the Solana network is robust, with notable memecoins such as BONK, MEW, and WIF gaining momentum. The rapid growth of these tokens is fueling discussions about their potential to reach new highs. BONK, in particular, is nearing a critical juncture after establishing a firm pattern near the 50-day EMA and now challenging the 200-day EMA. These tokens, thriving from Solana’s DeFi and DEX trading activity, show significant promise for profit in this market cycle, as the community looks towards a market rebound. BlockDAG’s BULLRUN100 Offer Boosts Engagement “Only 2 Days Left! BlockDAG’s current BULLRUN100 promotion, concluding in 2 Days, provides an exceptional opportunity for purchasers to double their BDAG coins, adding a 100% bonus on each acquisition. This has significantly sparked interest in the ongoing presale. Additionally, this promotion grants early access to the airdrop. Early participants have witnessed remarkable returns, with an ROI of 2240% from the beginning of the presale. Currently, the BDAG coin is valued at \$0.0234, with the presale amassing almost \$150 million from selling more than 16.4 billion coins across 26 batches. This offer not only bolsters BDAG holders’ positions but is also timely, with the mainnet development completed and its launch forthcoming. As the mainnet launch approaches, early access to the coins becomes more valuable. Furthermore, with the BULLRUN100 offer providing a 100% bonus, purchasers effectively receive additional BDAG coins at no extra cost. Consequently, individuals previously hesitant are now rapidly engaging with BlockDAG, capitalizing on this opportunity. This influx is propelling the presale to unprecedented levels, positioning it as a prime acquisition before 2025. Final Analysis This week has seen a variety of outcomes in the cryptocurrency sector. Optimism has encountered significant challenges, struggling to maintain support and experiencing a substantial price drop to below \$1.50. In contrast, Solana memecoins have injected a wave of excitement, with tokens like BONK and MEW gaining prominence within the Solana ecosystem. Yet, it is BlockDAG that has truly captivated attention. With its numbers climbing steadily and the introduction of the BULLRUN100 offer, participants are doubling their coin holdings instantly while also securing early access to airdrops. The success of BlockDAG’s presale, combined with the completion of its mainnet development, is drawing attention from those eager to engage with potentially groundbreaking opportunities. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkofficial> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana trades at \$233, reflecting a loss of 8.91% over the past 24 hours. - SOL has witnessed a 24-hour liquidation of \$24.68 million. As the cryptocurrency market anticipates for the upcoming altcoin season, several assets have shown price breakouts. At press time, the trading charts shows mixed trends, as Bitcoin (BTC) and Ethereum (ETH) is trading on the downside at \$93.4K and \$3.3K, respectively. Turning to altcoins, Solana (SOL) hit a new all-time high (ATH) of \$263.83 on November 23, by breaking multiple resistance levels. Analysts speculate a potential breakout following this surge toward \$300. Notably, over the past 24 hours, Solana recorded a loss of over 8.91%, trading at \$233. The asset has visited its intra-day low of \$231.61. However, following this, the altcoin choose to trade on the downside. Concurrently, Solana has witnessed a 24-hour liquidation of \$24.68 million, as per Coinglass data. And the daily trading volume of the altcoin has reached \$7.16 billion. The weekly price chart of SOL has recorded a moderate loss of 4.16%. The altcoin began trading at \$244.75. SOL price fluctuates between the \$250 and \$230 mark. On the other side, Solana has surpassed \$100 billion in its decentralized exchange (DEX) volume, recording \$109.8 billion in DEX trading volume. The surge comes with the gains of meme coins like PNOT, BONK and GOAT. Downside Risks Emerge for Solana Solana’s four-hour price chart reports the downside correction. The price movements of the altcoin could retreat the price to the \$227 mark. If the selling pressure intensifies, the SOL price might plummet steeper to the \$200 range. On the flip side, if the bullish momentum of the altcoin reestablished, it could rise toward the \$236.84. With Solana maintaining its position at the upper trendline, it could potentially reach its higher target of \$250. Moreover, SOL is 11.87% away from hitting a new all-time high. The current market sentiment of Solana rests in the oversold zone, as the daily relative strength index (RSI) is positioned at 35. In addition, the 24-hour frame of SOL displays the short-term 9-day moving average beneath the long-term 21-day moving average. Solana’s technical analysis discloses the ongoing bearish outlook by inferring the Moving Average Convergence Divergence (MACD). The MACD line is found beneath the signal line, hinting at the impending downtrend and the fading buying pressure within the market. Besides, the money flow toward the asset has decreased as the Chaikin Money Flow (CMF) indicator is laid at -0.34. It further highlights the dominance of selling pressure in the market. In the meantime, the daily trading volume of Solana has surged by over 29.86%. Highlighted Crypto News Ethereum (ETH) Breaks Free From Consolidation and Surges Toward \$3.5K Mark

- A community reward event with a maximum prize pool of 100,000 HSK and 500,000 Sonic Rings will be launched. - Sonic SVM technology’s creative potential and Hashkey Global’s licensed compliance benefits will be fully utilized. Hashkey Global, a licensed virtual asset exchange, has partnered with Sonic, a layer-2 network in the Solana ecosystem. Sonic will be a Web3 partner of Hashkey Global. The two sides will work together around the Solana ecosystem to provide users of digital assets and global players better creative experiences. Hashkey Global will provide Sonic’s worldwide community with more dependable and compliant digital asset services by using Hashkey’s robust trading resources and community scale. A community reward event with a maximum prize pool of 100,000 HSK and 500,000 Sonic Rings will be launched as part of this partnership. The first TikTok Web3 Applayer to be released on Solana, Sonic was created especially for games and apps and is assisting in attracting the next billion users. Through HSK, Hashkey Global links people worldwide with higher-quality projects and is dedicated to advancing the success of the global Web3 ecosystem. Through this partnership, Sonic SVM technology’s creative potential and Hashkey Global’s licensed compliance benefits will be fully used to provide consumers a safer and more effective trading experience. Ben El-Baz, Managing Director of Hashkey Global, stated: “This collaboration marks an exciting step forward in our mission to enhance the Web3 experience for global players and digital asset users. Together, we are committed to fostering a dynamic and compliant digital asset landscape that empowers users and drives the next wave of innovation in the gaming sector.” Chris Zhu, CEO of Sonic SVM, stated: “This partnership with Hashkey Global represents a significant milestone in our mission to make Web3 gaming accessible to everyone. By tapping into Sonic X, Hashkey is able to access a whole new set of userbase, millions of them via TikTok. We see this as first of many exciting collaborations to come between our two firms.” Hashkey Global and Sonic are launching a collaborative rewards campaign with a total prize pool of 100,000 HSK and 500,000 SONIC RINGS to commemorate the debut of the HSK token. To obtain 5 HSK and 25 Sonic Rings, participants must complete KYC verification using the invitation link in the SonicX app. Additionally, a first deposit of any amount following KYC completion earns an additional 25 Sonic Rings and 5 HSK. There will be two stages to the rewards: Rewards are given out on November 26 to those who finish activities between 10:00 (UTC) on November 22 and 23:59 (UTC) on November 25 as part of Phase 1. Within seven days following the campaign’s conclusion, phase two entails awarding the remaining prizes. The Hashkey Global accounts of the participants will get a direct credit for all rewards. For more information on the campaign, please stay tuned for official announcement. The flagship digital asset exchange of the Hashkey Group, Hashkey Global, provides consumers worldwide with licensed digital asset trading services and becomes one of the fastest-growing cryptocurrency exchanges in 2024. The Bermuda Monetary Authority has granted Hashkey Global a license to provide popular trading and service products including LaunchPad, contracts, leverage, and more. For more details, please visit global.hashkey.com. Follow Hashkey on X, Telegram, and Discord.

- Solana’s monthly DEX volume reached \$109.8 billion in November. - Daily transaction volume on Solana averages 53 million, showcasing its scalability. Solana has achieved a major milestone as its decentralized exchange (DEX) volume surpassed \$100 billion in November. According to DeFiLlama, Solana recorded \$109.8 billion in DEX trading volume, doubling Ethereum’s \$55 billion. The network also posted a remarkable 100% increase from October’s \$52.5 billion, showcasing its dominance in DeFi. This growth is driven by Solana’s unmatched scalability, memecoin activity and low transaction fees fueling over \$5 billion in daily trading volume. Solana processes 53 million daily transactions, far outpacing other blockchains with less than 5 million. With 107.5 million active addresses in November, Solana might break October’s record of 123 million. These numbers highlight its expanding user base and efficiency in handling high transaction loads. Token platforms like Pump.fun and Raydium also contributed to this momentum. Both platforms generated record monthly fees of \$71.5 million and \$182 million, respectively. The ecosystem’s rapid development reflects growing market confidence in Solana’s ability to lead DeFi innovation. SOL’s Price and Market Overview Solana (SOL) currently trades at \$255.72, up 0.56% in the last 24 hours. Its market cap stands at \$121.40 billion, with a circulating supply of 474.73 million SOL. Trading volume surged by 6.03%, reaching \$5.51 billion. The volume-to-market cap ratio of 4.55% signals healthy liquidity. SOL faces resistance at \$256.70 and support at \$252.25. A breakout above \$256.70 could push the price towards \$260 or higher. However, a dip below \$252.25 may lead to further declines. The Relative Strength Index (RSI) is at 55.51, near the neutral zone, indicating balanced buying and selling pressure. The RSI average aligns closely, confirming a steady trend. Moving averages (9-day and 21-day) show a bullish crossover, supporting upward momentum. With strong fundamentals and technical indicators favoring growth, Solana could maintain its DeFi dominance and attract more institutional and retail participants. Highlighted Crypto News Today Hong Kong’s ZA Bank Opens Crypto Trading for Retail Investors in Asia

- \$2.9M in \$PYTH stolen via zero-transfer phishing on Solana. - Scammers swapped stolen \$PYTH for \$SOL, consolidating stolen funds. A recent phishing attack on the Solana blockchain has led to the theft of 7 million PYTH tokens, valued at approximately \$2.9 million. PeckShield, a blockchain security firm, identified the incident as a “zero-transfer poisoning attack.” The stolen tokens were swapped for 11,000 SOL before being consolidated into another wallet. In this type of attack, scammers exploit user trust by initiating zero-value transactions to create deceptive activity logs. These tactics mislead users into authorising malicious transactions, resulting in asset loss. This method has become increasingly sophisticated on Solana, where phishing attacks often bypass traditional transaction simulations to avoid detection. Moreover, the compromised PYTH tokens were swapped into SOL, consolidating the stolen funds into a wallet beginning with 3eFh8N and ending in ZNyt. Solana is currently trading at 254.71, reflecting a slight 0.11% decline in value over the past day. Meanwhile, PYTH tokens have gained 6% in value, trading at \$0.4589 during the same period. Scams On Solana The attack highlights the rising risks of phishing scams on Solana, which has been a frequent target of such exploits. According to Scam Sniffer, over \$4 million in digital assets were stolen in recent months through phishing methods on Solana. These incidents often involve malicious smart contracts, fake transaction simulations, and disguised approval requests, preying on unsuspecting users. Cybersecurity experts stress the importance of vigilance in interacting with blockchain ecosystems. They recommend users double-check transaction details, avoid interacting with unknown links or airdrops, and utilise enhanced transaction simulation tools to identify potential threats. As blockchain networks like Solana continue to evolve, security remains a critical concern. This attack serves as a reminder of the vulnerabilities in decentralised ecosystems and the need for proactive measures to safeguard digital assets. To avoid falling victim to similar scams, users should stay cautious and adopt robust security practices. Highlighted News Of The Day

Two well-known names in the field, Solana (SOL) and Dogecoin (DOGE) keep running for relevance in the always-changing crypto landscape. DOGE wants to use its meme-powered community to outperform Solana’s market capitalization, but smart investors are focusing elsewhere—toward Rexas Finance (RXS), a potential project transforming the tokenization of real-world assets (RWA.). Rexas Finance, in its seventh presale stage, is establishing itself as a useful, utility-driven cryptocurrency combining blockchain technology with actual applications. Unlike DOGE and SOL, which are constrained by their own stories, RXS offers a convincing value proposition that gets investors eager about its possibilities. Presale of Rexas Finance (RXS): a Golden Prospect Offering tokens at \$0.09 apiece, Rexas Finance is in the seventh presale round. Early investors saw great potential in this stage, hence it has already attracted a lot of interest. Having raised around

\$12 million in previous presale events, RXS is expected to rank among the most successful presale initiatives of the year. Given the expected listing price of \$0.20â€¢that is, a possible 122% gain at launchâ€¢the presale presents a great opportunity for investors to obtain tokens at a reasonable price. Designed to run

Rexas Financeâ€¢s ecosystem, the RXS token powers the tokenizing, trading, and management of actual assets. Rexas Finance democratizes access to otherwise illiquid markets by providing fractional ownership of assets including real estate, commodities, and antiques. Forward-looking investors who understand the platformâ€¢s ability to upend established finance are drawn to this creative approach. Recent listings on CoinMarketCap (CMC) and CoinGecko have significantly elevated Rexas Financeâ€¢s visibility among cryptocurrency enthusiasts. These platforms, known for tracking crypto prices, market caps, and trends, serve as go-to resources for investors. Being featured on CMC and CoinGecko not only bolsters Rexas Financeâ€¢s credibility but also allows a broader audience to monitor its progress and evaluate its potential. For RXS, the listings represent a significant turning point since they improve the availability of the token and draw more retail and institutional investors. Growing community interest and more awareness of Rexas Finance are driving a fast acceleration of the momentum around it. One million giveaway: creating a vibrant community Rexas Finance started a \$1 million giving initiative to encourage community development and involvement. This program allows 20 winners to win \$50,000 worth of RXS tokens, providing an interesting incentive for both current and prospective members of the ecosystem. Participants in the giveaway have to finish a set of chores including turning in their ERC20 wallet address and recommending friends to get extra entries. This gamified approach not only encourages involvement but also fosters community tiesâ€¢a vital component for the long-term viability of projects. Rexas Finance is drawing more people as word of the giveaway gets out, therefore raising its token value and acceptance. Certificate Audit: A Security Seal of Trust Based on its latest smart contract audit by top blockchain security company Certik, Rexas Finance stands out for stressing security and openness. The audit by Certik guarantees that the RXS ecosystem is free from vulnerabilities and coding mistakes, thus providing investors with peace of mind about the protection of their money. The Certik audit gives Rexas Finance a competitive edge in a field too frequently rife with hackers and frauds. Apart from improving the projectâ€¢s reputation, the audit appeals to institutional investors who give security top priority. Rexas Finance is raising a great benchmark for other developing initiatives by giving trust and openness top priority. Why Would Investors Choose Rexas Finance Rather than DOGE and SOL? Solana and Dogecoin offer advantages, both projects have restrictions that make Rexas Finance a more interesting option for those looking for long-term increase: Though DOGE gains from a strong community and sporadic celebrity sponsorships, its lack of utility beyond being a joke coin limits its growth possibilities. Projects with clear, practical uses are being more and more sought by investors, something DOGE presently lacks. Solana (SOL) has gained recognition for its low-cost, fast blockchain, but its centralized approach and regular outages cause questions. Although it draws developers, its scalability problems could make it more difficult for it to stay dominant over the long term. Rexas Finance (RXS) on the other hand provides a clear value proposition by means of actual asset tokenization. Its capacity to close the distance between blockchain technology and conventional banking sets it apart in the DeFi scene. The Rexas QuickMint Bot and Rexas GenAI for NFT creation help to further appeal to a wide audience with the platformâ€¢s user-friendly features. Conclusion While Dogecoin may be trying to top Solana in market capitalization during this cycle, Rexas Finance offers a considerably more appealing prospect for investors past buzz and conjecture. A rising ecosystem, creative approach to real-world asset tokenization, and investor-focused projects help RXS to rapidly become the token of choice for anyone looking for utility and development. Rexas Finance is prepared to take the front stage in the bitcoin market as the presale picks up steam and the project reaches fresh benchmarks, therefore displacing DOGE and SOL. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexxas.com> - Win \$1 Million Giveaway: <https://bit.ly/RexasIM> - Whitepaper: <https://rexxas.com/rexxas-whitepaper.pdf> - Twitter/X: <https://x.com/rexxasfinance> - Telegram: <https://t.me/rexxasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - The HIO Music platform has attracted more than 6 million licensed songs and has targeted over 100 million units by the end of 2025. - Currently, in the beta stage, the HIO Music platform has been rewarding users with OG points that will heavily influence the upcoming airdrop. - The app is live and accessible on the Apple App Store, Google Play, and Solana Sagaâ€¢s Dapp store, where users can listen to and upload music for free. HIO Music (\$HIO), a fast-growing social music platform that leverages the Solana (SOL) network, has announced the date for its highly anticipated airdrop. According to the announcement, HIO Music, formerly Helios, will undertake the token generation event (TGE) on November 29, 2024. The HIO Music team has remained laser-focused and dedicated to ensuring a seamless token airdrop. The HIO Music app is already available in major outlets including Solanaâ€¢s Saga Dapp store. Currently, the HIO music application is in the beta stage and will charge users \$10 percent for premium subscriptions. Closer Look at \$HIO Token and Expected Use Cases According to the projectâ€¢s whitepaper, the \$HIO token will play a crucial role in the mainstream adoption of the HIO Music platform. Furthermore, the token will be used to reward both HIO Music users and content creators in a fair manner. Already, the HIO Music platform has partnered with SAN Sound to give away Nomad Earbuds to top communities on the Solana network in preparation for the upcoming \$HIO token launch. â€¢The intention to recognize the artist as a vital underpinning of our culture and our lives, and to recognize that compensation of such energy as crucial for all of our welfare, is what attracts me to the HIO model,â€¢ Will Oldham aka Bonnie â€¢Princeâ€¢ Billy, noted. In order for HIO Music users to get access to the \$HIO token airdrop, several activities must be completed. The HIO Music platform is currently issuing OG points to users for actively engaging with the content. For instance, HIO Music platform users earn 50 OG points for referring and inviting more users. The holders of HIO tokens will be able to stake and earn passively after the upcoming airdrop. In a bid to motivate users to lock more funds, the team noted that the largest 5,000 staked accounts will receive access to all content on HIO without a monthly fee, with the group updated quarterly. Growing Ecosystem The HIO Music platform has grown to a vibrant music streaming with more than 6 million unique and licensed songs. Through focusing on giving value to the community, unlike traditional streaming platforms, HIO Music is well positioned to disrupt the vast industry in the coming years, via the Solana blockchain. HIO Music targets to onboard more than 100 million songs by late 2025. â€¢Web3 is about giving power back to creators, and HIO is leading the charge with a platform that benefits both artists and fans. HIO Music isnâ€¢t just about streamingâ€¢itâ€¢s building an entire ecosystem for creators and listeners,â€¢ Ryder Havdale, Founder of HIO Music, said in a statement. The HIO Music platform supports NFT mints due to the strategic launch on the Solana mainnet. The platformâ€¢s users can access crypto payments from NFTs via EukaPay, a Toronto-based web3 protocol enabling businesses to send and accept crypto payments. In the near term, the HIO Music team intends to roll out a social feed, ticketing system, and advertising suite.

- Solana price has hit a new all-time-high in the last few hours as its bullish rally accelerates. - The altcoinâ€¢s daily trading volume has surged 57.73% as per CMC data. Our optimistic sector is receiving its rewards quickly this cycleâ€¢Bitcoin hits a new ATH at \$99K. The cryptocurrencyâ€¢s bull run has reflected much attention back to market prices. While investors look around for what prompted this cycle, glad tidings have arrived within the regulatory sector as well. The present SEC Chair and crypto-hostile Gary Gensler announced his step down in January. Meanwhile, the altcoin sector has gone through a frenzy, with its own upward movements propelled by Bitcoinâ€¢s bull run. The second largest altcoin, Solana, has rallied to hit a new ATH, surpassing its previous high three years ago. In the past day, SOL recorded an 8.49% price increase beginning its rally from a low of \$241, and broke several resistance levels. Moreover, the resistance levels include the \$246 and \$250 levels. At the time of writing, SOL was trading at \$261.37 as per CMC data. Its previous all-time-high was \$260 which the altcoin hit on November 7, 2021. Solanaâ€¢s price activity has drawn market attention to the altcoin as community members watch closely the actions of the two cryptocurrencies rallying forward. Zooming out, over the past 7 days, Solana shows a 27.23% price increase. At the beginning of the week, the cryptocurrency was trading at a low of \$208 after which it progressed to current levels. Additionally, in the past day, ETF issuers such as Bitwise filed their registrations for a Solana ETF. Will Solanaâ€¢s Price Continue its Bull Run? On inferring its price data and technical indicators, Solanaâ€¢s bull run is further highlighted. The altcoinâ€¢s price movements trace an ascending channel pattern. This indication suggests a continuation of upward movements. Thus Solana can be expected to sustain its bull run in the coming days. Additionally, the tokenâ€¢s Moving Average Convergence Divergence (MACD) shows the signal line standing above the MACD line. This further highlights the upward trend and is also supported by the RSI standing at 78.40, an overbought market situation. Meanwhile, in the past day, XRP has also rallied after SEC chair Gensler announced his step down. Highlighted Crypto News Today: Is Bitcoin Ready to Hit 100K After Reaching a New ATH 99.3K?

While many eyes are on big names like Solana and AVAX, a new player is taking center stage. CYBRO is making remarkable strides, outperforming its rivals and turning heads in the crypto world. Its rapid rise suggests a significant shift in the market. Thereâ€¢s a compelling story behind this emergent leader thatâ€¢s waiting to be explored. CYBRO: Your Multichain Gateway to Unmatched Crypto Gains! ðŸ™€ Welcome to the world, where CYBRO is redefining the rules of crypto investing and putting GIGA PROFITS within your reach. As a multichain platform designed to enhance yield opportunities across multiple blockchains, CYBRO maximizes your crypto earnings like never before. Whether youâ€¢re farming yield, stacking ETH, or just HODLing for those epic returns, this is the token for those who know how to win. ðŸ™€ CYBROâ€¢s Presale is Hot and Approaching \$4 Million!ðŸ™€ CYBROâ€¢s presale is skyrocketing and inching toward the \$4 million mark â€¢ and thereâ€¢s a reason for that. At just \$0.04, youâ€¢re getting in at a massive discount before the token hits the market at \$0.06. Over 11,000 holders have already joined the alpha squad, and theyâ€¢re stacking rewards like never before! Why CYBRO? Because Winning is the Only Option. ðŸ™€ Hereâ€¢s why the community is rallying around CYBRO: Hereâ€¢s why the community is rallying around CYBRO: - Yield Farming: Top-tier user interface with multiple strategies to farm APY and Points - Multichain capabilities: flexibility and access to diverse yield opportunities - Effortless Deposits and Withdrawals: Easy in, easy out, so youâ€¢re always in control of your funds. - AI-Powered: Create AI-tailored portfolios, built for your preferences and optimal performance. ðŸ™€Early Investors Win BigðŸ™€ Donâ€¢t wait until prices soar! By investing now, youâ€¢ll not only benefit from immediate growth potential but also unlock weekly ETH rewards and participate in community-driven airdrops. Early adopters are already seeing gains, and you can too! Join CYBRO today and secure your place in this fast-growing ecosystem. The future belongs to those who act nowâ€¢donâ€¢t miss your chance before prices skyrocket! ðŸŽ‰Get in Early, Reap the Rewards with CYBRO!ðŸŽ‰ Solana: A Scalable Blockchain Platform for Decentralized Applications Solana is a blockchain platform designed for scalability, providing a base for decentralized applications alongside platforms like Ethereum and Cardano. It aims for faster transactions and offers flexible development options in multiple programming languages. SOL is its native cryptocurrency, essential for facilitating transactions, running programs, and rewarding network supporters. The coin holds value by underpinning the Solana ecosystem, supporting users and developers in accessing a range of projects. Solana avoids sharding or second-layer solutions, focusing instead on a high-capacity network. This approach seeks to attract developers and investors interested in hosting products and services with high activity. Avalanche (AVAX): Eco-Friendly Blockchain with Low Fees and High Throughput Avalanche, known as AVAX, is a Layer-1 blockchain that is eco-friendly. It offers low transaction fees and can process up to 4,500 transactions per second. Users can launch customizable Subnets on this platform. Avalanche uses a hybrid consensus mechanism that combines classical and Nakamoto principles, aiming for transaction finality in less than two seconds. The platform consists of three interoperable chains: X-Chain, C-Chain, and P-Chain. These chains support various operations like transactions and smart contract executions. AVAX is the native token and is essential within the ecosystem. It is used for transaction fees, securing the network through staking, and operating multiple Subnets. AVAX demonstrates strong utility in payments, staking, and enabling the creation of custom tokens and blockchains. Conclusion Although Solana (SOL) and Avalanche (AVAX) may have less short-term potential, CYBRO has emerged as a leading platform in the ongoing bull market. CYBRO is an advanced DeFi platform utilizing AI-powered yield aggregation on the Blast blockchain. It offers features such as staking rewards, exclusive airdrops, and cashback on purchases, enhancing the user experience with seamless deposits and withdrawals. Emphasizing transparency, compliance, and quality, CYBRO has attracted interest from investors and influencers. Its combination of innovative technology and user-friendly features positions it as a notable project in the current market. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFM6DQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. As Bitcoin reaches unprecedented heights and the crypto market buzzes with excitement, investors are seeking the next big opportunity. Established tokens are attracting attention, but a new contender may emerge as the standout star in this bullish landscape. XYZVerse (XYZ), a groundbreaking memecoin, unites sports fans across football, basketball, and more. Aiming for remarkable growth, it could surpass recent market successes and capture the spotlight in the crypto world. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€¢ bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. ðŸ’ Own the field, earn while the crowd plays ðŸ’ XYZ is more than just a benchwarmer in the meme coin game; itâ€¢s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€¢s massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption ðŸ’ Missed meme coin supercycle? ðŸ’ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOMEâ€¢s 5,000% takeover and WIFâ€¢s 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot â€¢ currently undervalued, XYZ is going the distance to break new records! ðŸ’ Rallying the community, securing the win ðŸ’ XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystemâ€¢s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans

for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. The XYZ presale is live æ“ donæ”t miss out on this knockout 99,900% opportunity! XRP (XRP) XRP has seen significant gains recently. In the past week, its price jumped by 76.19%. Over the last month, it climbed by 101.38%. Looking back six months, XRPæ”s price has grown by 107.91%. Currently, the price ranges between \$0.66 and \$1.36. This upward movement suggests XRP might continue to rise. The 10-day simple moving average is \$1.10, while the 100-day average is \$1.07. This close range indicates steady growth. The relative strength index is at 46.63, which is neutral. This suggests there is room for the price to move higher without being overbought. If SOL continues to rise, it could test the nearest resistance level at \$267.85, which is about a 6% increase from current prices. Breaking this could lead to the second resistance at \$308.83, representing a further 15% gain. On the downside, support is found at \$185.89, about 12% below current levels, and then at \$144.91. Given the recent performance, SOL might be poised to reach new heights. Solana (SOL) Solana (SOL) has been on a remarkable ascent. In the past week alone, its price has climbed by 8.87%. Over the past month, SOL skyrocketed by \$1.74%. Even looking back six months, it has increased by 36.95%. Currently, SOL is trading between \$211.69 and \$252.67, reflecting growing investor interest. Technical indicators suggest this momentum might continue. The 10-day Simple Moving Average is \$243.25, slightly above the 100-day average of \$230.85. This points to a short-term bullish trend. The Relative Strength Index sits at 52.46, indicating SOL isnæ”t overbought or oversold. With a Stochastic value of 36.11 and a MACD level of 0.6938, there are signs of potential upward movement. If SOL continues to rise, it could test the nearest resistance level at \$267.85, which is about a 6% increase from current prices. Breaking this could lead to the second resistance at \$308.83, representing a further 15% gain. On the downside, support is found at \$185.89, about 12% below current levels, and then at \$144.91. Given the recent performance, SOL might be poised to reach new heights. Conclusion XRP and Solana are promising in this bull run, but XYZVerseæ”s all-sport memecoin could outperform them with its unique mix of sports enthusiasm and meme culture. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana trades at \$244, gaining over 2.80%. - Solana has experienced \$14.86 million in liquidations over the past 24 hours. Bitcoin (BTC) crosses above the \$98K mark, setting a new all-time high at \$98,342. The BTC rally has altered the altcoin market, causing major assets, except Ethereum (ETH), to gain momentum. Among them, Solana has broken through its crucial resistance above \$230. Notably, the altcoin has a moderate spike of 2.82%. With a \$116 billion market cap, Solana trades at \$244.81. The intra-day trading price of SOL is noted at \$237. Later, the asset has climbed to the current trading level. Meanwhile, Solana has witnessed a 24-hour liquidation of \$14.86 million, as per Coinglass data. Consequently, the daily trading volume of SOL has reached \$7.72 billion. Inferring the weekly price chart, Solana has recorded a 13.20% gain. The asset began trading at the downsideæ”\$215.63. As days progressed, the altcoin gained momentum and jumped to a high of \$248.19. Can SOL Rise Above Bearish Pressure? The ongoing market sentiment of Solana rests in the neutral zone, as the daily relative strength index (RSI) is found at 57.66. In addition, the daily frame of SOL displays the short-term 9-day moving average beneath the long-term 21-day moving average. SOLæ”s four-hour price chart pointed out the downside correction. The current trading momentum has the potential to pull the price back to the nearby support level of \$232.57. If the price plunges even deeper, SOL might slip to a low in the \$225 range. On the flip side, where the bullish momentum retrieves its lost strength, SOL could likely mount to the \$253.71 mark. Further upside correction might drive the price of Solana even higher. Moreover, The asset is just 6.96% away from hitting a new all-time high at \$260.06. In addition, Solanaæ”s technical indicators exposed the current bearish momentum, inferring the Moving Average Convergence Divergence (MACD) line. It is perhaps positioned below the signal line, indicating the forthcoming downtrend within the market. The Chaikin Money Flow (CMF) indicator is found at 0.03 suggesting a brief positive money flow, which also highlights a possible spike in demand ahead. In the meantime, the daily trading volume of SOL has soared by over 17%. Highlighted Crypto News Why Is Ethereum (ETH) Stalling at \$3.1K While Bitcoin Surges?

- Bitwise has submitted an S-1 form for a spot Solana ETF. - Solana is trading at \$241, following a moderate spike of 3.18%. The leading asset manager and ETF issuer, Bitwise Investment, has officially filed the S-1 form titled æ“BITWISE SOLANA ETFæ” with the U.S. Securities and Exchange Commission (SEC) in Delaware on November 20, 2024. This filing positioned Bitwise with other asset managers, such as VanEck and Canary Capital, to directly expose investors to Solana, the fourth-largest cryptocurrency by market capitalization. Bitwiseæ”s move likely reflects the growing institutional interest in Solana. Matthew Sigel, VanEckæ”s Head of Digital Asset Research, mentioned the potential approval of a Solana ETF by the end of 2025, predicting æ“overwhelmingly highæ” odds of regulatory clearance. Moreover, he believes the political landscape might be crucial in the SECæ”s stance on crypto-related ETFs. Sigel pointed out that the Trump presidency, starting in January 2025, could appoint the new SEC chair. It will potentially ease the regulatory barriers for crypto ETFs. On the other hand, ETF analysts like James Seyffart and Eric Balchunas havenæ”t commented on Bitwiseæ”s filing. With its Solana ETF filing, Bitwise enters the race to expand crypto investment options in the U.S. market. If this ETF is approved, it could fuel further adoption of Solanaæ”s blockchain technology. Price Momentum of Solana As the market is highly volatile, Bitcoin (BTC) will soon hit \$100K, as analysts predict. This likely impacted the altcoins. Among them, Solana (SOL) currently trades at \$241.81 with a moderate spike of 3.18% over the past 24 hours. The asset has visited its lowest trading price at \$230.34 over the day. SOL is 9.14% away from hitting an all-time high. A steady upside correction will push the price to new highs. At press time, the assetæ”s technical indicators disclose a negative outlook, with the Moving Average Convergence Divergence (MACD) line found below the signal line, forecasting bearish sentiment in the market. Highlighted Crypto News

- Solana faces resistance at \$246 and support at \$231. - Potential bearish crossover between 50-day and 200-day MAs. Solana (SOL) is trading at \$235.69, marking a 3.11% decline in the past 24 hours. The cryptocurrency has a market capitalization of \$111.87 billion, with a market cap ratio of 6.20%. Over the last day, trading volume has dropped 11.03% to \$6.88 billion. Despite this dip, Solana remains the fourth-largest cryptocurrency by market cap, solidifying its role as a key player in the crypto ecosystem. A recent surge in speculative activity caught the communityæ”s attention. One trader turned 2 SOL (\$462) into \$988,000 within three hours through \$QUANT, a live-streamed pump-and-dump token. This highlights the speculative frenzy in altcoins. A young creator launched the \$Quant coin during a live stream and sold it for 128 \$SOL (\$39K), earning a profit of \$29.6K. The \$1 million \$Quant he sold is now valued at \$4 million. He later created \$lucy and \$sorry coins, selling them for an additional profit of 103 \$SOL (\$24K). Solana in the Current Market Based on current price action, Solanaæ”s immediate resistance lies at \$246. If the price breaks above this level, the next potential target is \$260, a level that aligns with historical price action and Fibonacci retracements. However, failure to surpass \$246 could keep the price consolidated in a narrow range. On the downside, support is firmly established at \$231. If SOL breaches this critical level, the price could decline further, with the next significant support zone around \$220. Such a drop might test tradersæ” confidence in maintaining bullish positions. The RSI currently stands at 50.80, slightly below its average of 64.14. This reflects a weakening of bullish momentum, as the RSI moving toward the neutral zone suggests a balance between buying and selling pressure. A sustained RSI below 50 would indicate a shift in market sentiment toward bearishness, potentially signalling further downside movement. Solanaæ”s 50-day moving average (MA) is at \$241, while its 200-day MA is at \$225. The narrowing gap between these two levels signals a potential bearish crossover. If the 50-day MA crosses below the 200-day MA, this would confirm a æ“death cross,æ” a historically bearish signal that often precedes extended downtrends. However, the price remains above the 200-day MA, indicating that the long-term trend is still positive. Traders should closely watch for this crossover, as it could significantly influence Solanaæ”s near-term trajectory. If Solana manages to break above \$246 and hold that level, the price could aim for \$260, with a potential extension toward \$275 if bullish momentum accelerates. Highlighted Crypto News Today Will Cardano (ADA) Reclaim \$1 as Whale Interest Grows?

- BONK hits a new ATH of \$0.00005916, surpassing dogwifhat (WIF) to become the largest Solana memecoin by market cap. - South Koreaæ”s largest crypto exchange, Upbit, lists BONK in its Korean Won trading market. Today, BONK, the leading Solana-based memecoin, has made a significant breakthrough. It reached a new all-time high of \$0.00005916, surpassing dogwifhat (WIF) to become the largest Solana-based memecoin by market cap. Currently, it holds the position of the fourth largest meme coin in the overall cryptocurrency ranking. Adding to the excitement, South Koreaæ”s largest crypto exchange, Upbit, has announced the listing of BONK on its Korean Won trading market, further increasing its visibility and accessibility. BONK has successfully broken free from the prolonged bear trend, where it struggled to surpass the \$0.00003 level since late July. The æ“Ichimoku Cloud chart confirms a strong uptrend for BONK,æ” signaling that the bulls are in control. At the time of writing, BONK is priced at \$0.00005643 (22% increase) and has a market cap of \$4.23 billion. Additionally, its daily trading volume has surged by 94.91% in the last 24 hours, reaching \$2.88 billion. Technical Analysis and Short-Term Outlook for BONK According to the BONK/USDT trading pair, the memecoinæ”s price has returned higher in the intraday levels, confirming the breach of the pivotal resistance at \$0.00005003, which led the way to the all-time high. This move is supported by the upward short-term trend, with positive pressure from trading above the 50-day SMA (\$0.00002603). Also, the positive signals from the RSI on the 4-hour price chart suggest there is room for further upside. Moreover, the MACD line crossing above the signal line indicates strong bullish momentum, suggesting that the price may be poised to move upward. This crossover suggests that the short-term price momentum is stronger than the longer-term momentum. Therefore, more gains for BONK are expected. Currently, it settles firmly above \$0.000055, targeting the resistance at \$0.00006325. However, on the daily chart, an RSI of 82 indicates that the asset is overbought and may be due for a potential price correction or consolidation. In that case, BONK could fall to immediate support at the 9-day SMA of \$0.00005307, or even to \$0.00004316, which could lead the memecoin to fall below \$0.00003253. For insights on BONKæ”s long-term move, keep an eye on TheNewsCryptoæ”s BONK price prediction. Highlighted Crypto News Today Stablecoins Hit Record High Supply Hinting Further Bullish Momentum

- Solana futures open interest hits record \$4.7 billion - Technical indicators show overbought conditions - Price faces crucial resistance at \$245 before potential ATH Solanaæ”s (SOL) remarkable price rally has brought it within striking distance of its all-time high, though the cryptocurrency faces significant technical hurdles. As traders pile into SOL positions, market indicators present a mixed outlook for the leading altcoin. Solana Hits Record-Breaking Market Interest Futures Open Interest for Solana has surged to an unprecedented \$4.7 billion, signaling massive trader participation in the ongoing rally. This milestone demonstrates growing market confidence, even as the asset confronts key resistance levels. æ“The surge in open interest approaching \$5 billion reflects heightened trader optimism,æ” market analysts noted. æ“However, the divergence between price action and market positioning raises important considerations.æ” The Relative Strength Index (RSI) has entered overbought territory, historically a precursor to price corrections. This technical signal, combined with the substantial open interest, suggests potential near-term volatility. SOL currently trades just below the crucial \$245 resistance level, the final barrier before a potential new all-time high above \$260. A successful breach could trigger further upside, while failure might lead to a retest of \$221 support. æ“The \$245 level represents a critical juncture for Solanaæ”s immediate future,æ” technical analysts observed. æ“Converting this resistance to support could pave the way for new historic highs.æ” Despite overbought conditions, Solanaæ”s macro momentum remains strong, supported by increasing adoption and positive market sentiment. Traders are closely monitoring whether SOL can maintain its upward trajectory or if a cooling period is necessary before continuing its ascent.

The year 2024 is concluding, and BlockDAG, Solana, and Tron are making significant impacts in the cryptocurrency market. Solana is drawing interest with the anticipation of a pioneering ETF approval, while Tron has reported an exceptional \$577 million in quarterly earnings, further bolstering its DeFi ecosystem through a new partnership with Chainlink. BlockDAG (BDAG) has been capturing attention with its notable \$122.5 million presale, a limited-time 100% bonus which is ending in 10 days, and news of its mainnet development completion, which promises to elevate its standing in the market. These three crypto initiatives are at the forefront of the industryæ”s current news cycle. Solana Eyes ETF Market Entry Solana is on the brink of a major development with the potential approval of an ETF, following the successful introduction of Ether ETFs. Analysts are optimistic about Solanaæ”s entry into the ETF market, which could significantly raise its visibility and improve institutional market access. With a market valuation of \$82 billion and a leading role in the tokenization of real-world assets, Solana continues to highlight its fast transaction capabilities and cost-effective framework. The hope for an ETF approval by March 2025 depends on navigating regulatory challenges, including SEC endorsements and legal categorizations. Success in this arena could mark a transformative moment for Solana, enhancing both liquidity and its reputation. Tronæ”s Q3 Earnings Outshine Peers Tronæ”s recent performance has been impressive, with a record \$577 million in revenue for the third quarter of 2024, surpassing established players like Bitcoin and Ethereum in quarterly profits. A significant portion of this revenue, around 74%, was generated from staking operations, with the remainder from token-burning activities. Moreover, Tron has adopted Chainlinkæ”s oracle services, departing from its prior provider to enhance the dependability of its DeFi offerings. This collaboration is part of the Chainlink Scale initiative, with Tronæ”s DAO managing initial costs to facilitate oracle network operations. These strategic moves are reinforcing Tronæ”s role as a prominent figure in DeFi, appealing to those interested in robust, functional blockchain technologies. BlockDAGæ”s Presale Success and Upcoming Mainnet Completion While Solana eyes a transformative ETF and Tron breaks revenue records, BlockDAG has quickly become a center of attention with its remarkable presale achievements and cutting-edge DAG technology. It has successfully raised over \$122.5 million, selling more than 15.3 billion coins, indicating strong community backing and trust. With coins in its 26th batch priced at \$0.0234, early participants have seen returns of up to 2240% from the initial batch. BlockDAG stands out with a 100% bonus code, allowing buyers to double their coin count and secure an early airdrop by using the code BULLRUN100 during purchase. This offer has greatly boosted demand, attracting both newcomers and experienced traders alike. There are only 10 days remaining in the validity of the project. Moreover, BlockDAGæ”s mainnet development has been completed on November 14th, set to showcase its pioneering DAG-PoW hybrid technology designed for fast, scalable transactions. Coupled with a refreshed website and vigorous community interaction, BlockDAG is shaping up to be a project to watch. With its rapid expansion, notable partnerships, and an ambitious \$600 million presale target, experts are suggesting that BDAG coins could

soon reach over \$30. This project is quickly becoming a highlight of this bull market. The Bottom Line Solana’s potential ETF could significantly broaden its appeal, especially among institutional players. Tron, with its high revenue and strategic DeFi moves, is demonstrating the potential for sustained growth. BlockDAG, however, differentiates itself with a robust presale, groundbreaking technology, and enticing offers like the 100% bonus and the imminent finalization of the mainnet development. As 2024 comes to a close, those scouting for promising crypto projects should keep a close eye on BlockDAG for its dynamic ecosystem and strong community engagement. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana trades at \$243.46, just 8.5% away from its all-time high of \$260. - Memecoin-driven DApps generated record-breaking fees, boosting ecosystem activity. Solana (SOL) is currently trading at \$243.46, marking a 10.44% surge in the last 24 hours. The trading volume has skyrocketed to \$10.17 billion, reflecting a massive 101.66% increase and signalling heightened investor interest. With a market cap of \$115.55 billion, Solana is now one of the strongest contenders in the crypto market. Its volume-to-market-cap ratio stands at 8.80%, which further emphasizes its increasing market liquidity. Impressively, Solana is just 8.5% away from reclaiming its all-time high price of \$259, last reached in November 2021. The return of memecoin mania has propelled Solana-based decentralized applications (DApps) to record-breaking performance. On November 17, Raydium, a popular automated market maker, generated \$11.31 million in fees. Similarly, the liquid staking protocol Jito recorded its third-highest daily revenue of \$9.87 million, demonstrating the ecosystem’s vitality. Other Solana-based protocols also saw impressive earnings. For instance, pump.fun, a memecoin launchpad, collected \$1.65 million in fees, while Photon, a Telegram trading bot for memecoins, reported \$2.36 million in revenue. This surge in activity coincides with SOL reaching its highest price level since November 2021, signaling renewed investor enthusiasm. Notably, Solana’s market cap has risen by 44% since its previous all-time high, despite inflationary pressures from token issuance. The increase stems from the protocol’s reward mechanism, which mints new SOL tokens to incentivize stakers. Bullish Indicators For SOL Solana’s price action suggests a strong bullish trend. The 9-day moving average (MA) at \$220.48 has crossed above the 21-day MA at \$195.68, confirming a bullish crossover. This crossover is a widely recognized signal for continued upward momentum. The current resistance level stands at \$244, while support is found at \$220. If Solana breaks above resistance, the price could target an all-time high of \$259. Conversely, a failure to hold support may lead to a pullback toward \$195, offering a potential re-entry point for traders. The Relative Strength Index (RSI) is at 76, signaling overbought conditions but underscoring strong buying pressure. The RSI average of 69.84 further highlights bullish sentiment. However, traders should be cautious, as overbought levels often lead to short-term price corrections. Breaking above the \$244 resistance could allow Solana to test and potentially surpass its \$260 all-time high. On the other hand, a short-term pullback might provide a buying opportunity around \$220 or lower. Solana remains a standout performer, with robust fundamentals and technical indicators pointing to sustained momentum. Highlighted Crypto News Today Can Bitcoin Overcome Sell Pressure to Hit \$100K?

A well-known trader from the Solana network has identified a little-known cryptocurrency with the potential for massive growth. This expert predicts that this hidden asset could skyrocket by up to 10,000%. Following the excitement around recent market movers, attention is now turning to this emerging token that promises significant returns for early investors. CYBRO Presale Exceeds \$4 Million: A One-in-a-Million Multichain Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$4 million. This next-generation DeFi platform offers investors unparalleled opportunities to enhance crypto earnings across multiple blockchains. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.04 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct referees’ token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBRO’s DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 100 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that’s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Solana’s Scalable Blockchain: A Foundation for Decentralized Apps Solana is a blockchain platform focused on scalability, offering a foundation for decentralized applications alongside competitors like Ethereum and Cardano. It stands out with architectural choices aimed at faster transactions and flexible development options across multiple programming languages. SOL, Solana’s native cryptocurrency, is central to its ecosystem, facilitating transactions, running custom programs, and rewarding network supporters. The SOL coin holds value as it underpins the operation of the Solana ecosystem, rewarding participants and allowing users access to a suite of projects on Solana. Solana avoids sharding or second-layer solutions for scalability, aiming to attract developers and investors with its high-capacity network and potential for hosting high-activity products and services. Exploring SUI: A Scalable and User-Friendly Blockchain Platform SUI is a layer-1 blockchain platform designed for global adoption. It offers a secure, powerful, and scalable development environment. At its core, SUI uses a novel object-centric data model and the Move programming language to address inefficiencies in current blockchain systems. SUI focuses on user experience by removing common barriers in blockchain interactions. Through innovations like zkLogin, sponsored transactions, and programmable transaction blocks, SUI ensures that applications are accessible and easy to use. SUI aims to set a higher standard for user experience in Web3. Conclusion In conclusion, while established coins like SOL and SUI may offer steady growth, their short-term potential appears limited. In contrast, CYBRO emerges as a standout opportunity. As an advanced DeFi platform, CYBRO provides investors with unique ways to boost their earnings using AI-driven yield aggregation on the Blast blockchain. Its features include attractive staking rewards, special airdrops, and cashback on purchases. Users enjoy a smooth experience with easy deposits and withdrawals. With a strong focus on openness, compliance, and quality, CYBRO is attracting significant attention from major crypto investors and influencers. This positions CYBRO as a promising project in the current market. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana has exhibited a price increase of 4.58% in the last 24 hours. - The altcoin’s daily trading volume has dipped by 25.46% reflecting leading cryptocurrencies. With the coming of the AltSeason, several cryptocurrencies have shown price breakouts. Trading charts show new highs and price levels entering new ranges that were previously unvisited. This bullish market has rewarded the prolonged patience that the community held over the past months. Speaking of altcoins, the second largest ecosystem’s native token, Solana has resumed its bullish trend. The cryptocurrency has shown struggles to break resistance at the \$220 level, having tested it several times over the past week. This recent price cycle has seen the token take another chance to hit \$220. Inferring its daily price chart, 24 hours ago, Solana was trading at \$209.54 after which it proceeded to fall further to an intra-day low of \$204.48. However, following this, the altcoin sparked bullish candles and rallied to current trading levels. At the time of writing, Solana was trading at \$219.49 as per CMC data. Meanwhile, Solana-based memecoins have shown increased activity over the past week. Tokens such as dogwifhat, BONK, and Popcat have surged in price in the last 24 hours as well. However, it is Peanut the Squirrel (PNUT) that stole the show this month with significant price increases. Will Solana Price Rally to \$300? When analyzing Solana’s price movements in the past two months, the altcoin shows an ascending triangle pattern followed by a price breakout. This pattern is stated to be a characteristic of an ongoing bullish trend. The price breakout suggests that the price movement has coincided with market analysts’ predictions. Additionally, Solana’s Moving Average Convergence Divergence (MACD) shows the signal line standing above the MACD line. This indicates a positive trend in the market highlighting SOL’s possibility to break current resistance at \$220. The altcoin, as aforementioned, has tested \$220 nearly five times in the past week before receding downwards. Moreover, the cryptocurrency’s RSI stands close to an overbought situation at 69.77 as per TradingView data. This further elucidates the positive market sentiment among investors. Highlighted Crypto News Today:

Investing \$500 today and watching it grow into \$1 million by 2025 might seem like a dream, but the fast-paced crypto world makes it possible. As Solana’s success sparks competition, new platforms are emerging with the potential for massive returns. Uncover five standout alternatives that could be the key to extraordinary gains in the next few years. CYBRO Presale Exceeds \$4 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$4 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.04 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct referees’ token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBRO’s DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 100 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that’s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Chainlink (LINK): Bridging Smart Contracts and Real-World Data Chainlink is a decentralized oracle network that connects smart contracts with real-world data. It allows smart contracts to access external information like data feeds, APIs, and systems outside the blockchain. Chainlink ensures data accuracy through a reputation system for its data providers. Its process involves oracles retrieving data, aggregating it for accuracy, and securely delivering it to smart contracts. Chainlink uses both on-chain and off-chain components for efficient data handling. The LINK token is vital in this ecosystem. It rewards node operators for providing data, supports staking to secure the network, and serves as payment for data services. This makes Chainlink a key player in enhancing smart contract capabilities. Avalanche (AVAX) – Layer-1 Blockchain with Customizable Subnets Avalanche is a Layer-1 blockchain that is eco-friendly and offers low fees. It can process up to 4,500 transactions per second and allows users to launch customizable subnets. Its hybrid consensus mechanism combines classical and Nakamoto principles, achieving transaction finality in less than 2 seconds. The platform includes three interoperable chains—X-Chain, C-Chain, and P-Chain—which handle transactions and smart contracts. AVAX, the native token, is used for transaction fees, securing the network through staking, and operating subnets. The technology enables payments, staking, and the creation of custom tokens and blockchains within its ecosystem. Aave: Decentralized Lending and Borrowing on Ethereum Aave is a cryptocurrency in the decentralized finance space. It offers a system on the Ethereum blockchain where users can lend, borrow, and earn interest on crypto assets without intermediaries. The platform uses smart contracts to manage assets, ensuring trust through code. Aave supports lending and borrowing of 17 cryptocurrencies. Borrowers receive aTokens representing their loan and earn interest. A notable feature is flash loans, which are instant and require no collateral but must be repaid within the same blockchain block. AAVE tokens play a role in the ecosystem, offering benefits like fee waivers and voting rights on protocol changes. The Safety Module provides a staking mechanism for risk mitigation. SUI: A New Layer-1 Blockchain Aiming for Global Adoption Sui is a layer-1 blockchain platform designed to meet global adoption needs. It offers a secure, powerful, and scalable development platform. At its core, Sui uses a novel object-centric data model and the Move programming language. This approach addresses inefficiencies found in other blockchain architectures. Sui focuses on user experience by removing common barriers in blockchain interactions. With features like zkLogin, sponsored transactions, and programmable transaction blocks, Sui aims to make Web3 applications more accessible and user-friendly. Conclusion With the bull run of 2024 in full swing, investors are searching for assets with high growth potential. While LINK, AVAX, AAVE, and SUI present interesting opportunities, they may show less promise in the short term. CYBRO stands out as a remarkable option. As a technologically advanced DeFi platform on the Blast blockchain, CYBRO offers investors unique ways to maximize earnings through AI-powered yield aggregation. Features like lucrative staking rewards, exclusive airdrops, and cashback on purchases enhance the user experience. CYBRO ensures seamless deposits and withdrawals, prioritizing transparency, compliance, and quality. Attracting strong interest from crypto whales and influencers, CYBRO emerges as a promising project in the evolving crypto market. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. The blockchain arena is currently experiencing a significant transformation with BlockDAG’s debut, a presale platform that not only delivers groundbreaking technological innovations but also pioneers a distinctive approach to community involvement. This analysis delves into how BlockDAG (BDAG) measures up against the

established technologies of Kaspa and Solana, which are renowned for their superior speed and processing capabilities. Weâ€™re exploring BlockDAGâ€™s potential to set new blockchain standards and establish a fresh paradigm for user and community benefits in the crypto market. Kaspa Elevates Blockchain with Rapid, Parallel Transaction Capabilities In the blockchain industry, Kaspa shines with its use of a directed acyclic graph (DAG), which enables exceptionally swift and parallel transaction processing. This foundational technology places Kaspa at the forefront of processing speed, providing a notable advantage in a marketplace that prioritizes efficiency. The DAG architecture equips Kaspa to manage a growing number of transactions simultaneously, a substantial edge over traditional blockchain systems that handle transactions sequentially. This feature allows Kaspa to scale effectively to meet surging demands without the typical bottlenecks that impede other networks during high-traffic periods. Consequently, Kaspa emerges as an ideal solution for applications that demand quick transaction confirmations, appealing especially to industries like financial services, gaming, and digital marketplaces. Solanaâ€™s Speed Revolution: How PoH & PoS Propel Blockchain Efficiency Solana sets itself apart in blockchain efficiency with its unique proof-of-history (PoH) consensus mechanism, ingeniously combined with proof-of-stake (PoS). This hybrid consensus model is pivotal to Solanaâ€™s framework, enabling it to process transactions at breakneck speedsâ€”a critical benefit in an industry where rapid transaction processing is key to user satisfaction and application functionality. The PoH element of Solanaâ€™s consensus mechanism functions by creating a historical record that verifies an event that has occurred at a certain time. This innovation minimizes the need for an extensive process of consensus across all nodes regarding the sequence of events. Coupled with PoS, it not only safeguards the network but also greatly enhances the speed of transaction processing, empowering Solana to handle tens of thousands of transactions per second. BlockDAG: Pioneering the Blockchain Frontier BlockDAG is making rapid strides in the blockchain sector by masterfully blending state-of-the-art technology with a dynamic community engagement strategy. This method is proving fruitful, as demonstrated by its recent presale success, which raised a notable \$121.5 million. This achievement has not only garnered significant trust among pioneers and enthusiasts but also hinted at its promising market future. BlockDAGâ€™s modern technology is fine-tuned to enhance the blockchain user experience, focusing on speeding up transactions and decreasing delaysâ€”areas where it directly competes with established giants like Kaspa and Solana. The launch of its testnet is a crucial step in this direction, offering an opportunity to refine the networkâ€™s features and guarantee top-notch performance in practical scenarios. By potentially outpacing Kaspa and Solana in transaction speed and efficiency, BlockDAG is on track to redefine blockchain standards. Additionally, the launch of the BULLRUN100 bonus code underlines BlockDAGâ€™s dedication to its community. This bold promotion provides a 100% bonus on BDAG coin purchases, effectively doubling the participantsâ€™ stakes and providing them early access to exclusive features and future events. This initiative is designed to richly reward early adopters, boosting engagement and commitment within the BlockDAG ecosystem. These efforts underscore BlockDAGâ€™s commitment to both technological innovation and community building, distinguishing it in a competitive field. The team is not only developing a high-caliber blockchain but also fostering a community-centric ecosystem that values and appreciates its members. This holistic strategy ensures that as BlockDAG evolves, it remains an attractive option for those looking for a mix of cutting-edge technology and rewarding community interactions, establishing it as a formidable contender in the dynamic blockchain arena. The Bottom Line While Kaspa and Solana are known for their speed and capacity, BlockDAG is set to shake up the blockchain sector with its fresh and modern approach. By emphasizing both technological prowess and community advantages, BlockDAG isnâ€™t merely competing in the marketâ€”itâ€™s looking to revolutionize it. As the blockchain field progresses, the strategic integration of newcomers like BlockDAG could ignite a new era in blockchain technology, potentially establishing new performance and engagement benchmarks. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. As the cryptocurrency landscape shifts, a new wave of altcoins is gaining significant attention. November introduces tokens that promise innovation and show potential for remarkable growth. From enhancing decentralized solutions to revolutionizing community engagement, these digital assets are positioning themselves as notable contenders in the market, stirring interest among investors and enthusiasts alike. Among these is XYZVerse (XYZ), a memecoin uniting sports fans across disciplines, aiming to outperform predecessors with its fusion of meme culture and sports enthusiasm. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€”bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. ðŸˆˆ Own the field, earn while the crowd plays ðŸˆˆ XYZ is more than just a warmup in the meme coin game; itâ€™s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment (DApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€™s massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. ðŸŸ’ Missed meme coin supercycle? ðŸŸ’ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOMEâ€™s 5,000% takeoff and WIFâ€™s 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot â€”currently undervalued, XYZ is going the distance to break new records! ðŸŸ† Rallying the community, securing the win ðŸŸ† XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystemâ€™s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live â€”donâ€™t miss out on this knockout 99,900% opportunity!<< Filecoin (FIL) Filecoin (FIL) has shown notable price movements recently. In the past week, its price surged by 24.02%, and over the month, it increased by 18.02%. However, over the last six months, the price declined by 26.96%. This pattern indicates recent positive momentum but also reflects earlier losses. These gains suggest potential for further growth. The Relative Strength Index stands at 57.26, indicating the coin is not yet overbought. The Stochastic oscillator is high at 91.96, suggesting a possible short-term correction. The MACD is slightly negative at -0.0273, hinting at bearish momentum. Based on these indicators, the price might consolidate before rising further. Currently, Filecoin trades between \$3.50 and \$4.73. The nearest resistance is at \$5.19. If it breaks this level, the price could reach \$6.42, which would be an increase of around 36% from \$4.73. The nearest support is at \$2.73; dropping to this level would be a decrease of about 42%. The 10-day and 100-day simple moving averages are \$4.05 and \$4.19, showing the price is close to its averages. This may indicate the market is awaiting a catalyst for a significant move. Stacks (STX) Stacks (STX) has seen significant price movement recently. Over the past week, its price surged by 32.52%, showing strong upward momentum. In the past month, it increased by 16.30%, indicating sustained growth. Even over the past six months, STX posted a gain of 1.70%. This upward trend suggests growing interest and confidence among investors. The current price of STX ranges between \$1.53 and \$1.99. The nearest resistance level is at \$2.16. If the coin breaks through this point, it could target the second resistance level at \$2.61, which would be an increase of about 31% from the current upper range. On the downside, the nearest support level is at \$1.25. A drop to this level would mean a decrease of around 18% from the current lower range. The second support sits at \$0.7909, representing a more significant decline if the market turns bearish. Technical indicators show mixed signals. The Relative Strength Index (RSI) stands at 58.00, suggesting that STX is approaching overbought territory but hasnâ€™t reached it yet. The Stochastic indicator is high at 92.59, indicating that the coin may be overbought and could face a price correction soon. The MACD level is slightly negative at -0.009806, which could signal a potential shift in momentum. With the 10-day and 100-day Simple Moving Averages close at \$1.94 and \$1.93 respectively, STX seems to be consolidating. Investors are watching to see if it can maintain its momentum and break through resistance levels in the coming days. Solana (SOL) SOL has grown significantly lately. Its price increased nearly 30% in the past week and almost 47% over the past month. Over six months, it rose about 36%. This recent upward trend is drawing attention from investors. Currently, Solana trades between \$171.70 and \$231.97. It is approaching the resistance level at \$253. If it goes above this point, it could reach the next resistance at \$314, which is over a 35% increase from current levels. The support levels are at \$133.24 and \$72.98, which may prevent large price drops. Technical indicators show that Solanaâ€™s price may keep climbing. The RSI is 63.23, suggesting more room to grow before itâ€™s overbought. The Stochastic is high at 94.94, pointing to strong buying interest. The 10-day and 100-day moving averages are both around \$210, which supports the upward trend. The MACD level is 0.5497, which is positive. Based on this data, Solana could continue to rise and may go past its resistance levels soon. Pepe (PEPE) Pepe (PEPE) has been on a remarkable upward trend recently. Over the past week, its price surged by 123.89%. Looking back over a month, it climbed 98.20%, and over six months, itâ€™s up by 91.48%. This consistent growth shows that PEPE is gaining traction and interest among investors. Currently, PEPEâ€™s price ranges between \$0.0000990343 and \$0.00001431. Itâ€™s approaching its nearest resistance level at \$0.00001629. If it breaks through this point, the next target could be the second resistance at \$0.00002157. On the downside, the nearest support level is at \$0.000005738, which might act as a safety net if the price dips. Technical indicators suggest positive momentum. The 10-day Simple Moving Average is \$0.00001538, higher than the 100-day average of \$0.00001276, indicating a short-term upward trend. The Relative Strength Index (RSI) is at 83.56, and the Stochastic is 86.79, both in the overbought territory. The MACD level of 0.000001239 also supports the bullish outlook. However, these high indicators could hint at a potential correction ahead. Conclusion FIL, STX, SOL, and PEPE are promising, but XYZVerse (XYZ) stands out, merging sports and memes with a community-driven platform aiming for massive growth and long-term success. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. Rexas Finance (RXS), the rising Solana (SOL) competitor, is capturing attention as it approaches the \$0.10 milestone. Analysts predict an astonishing surge, with potential gains reaching 11,350%, catapulting RXS beyond the \$10 mark. This ambitious forecast positions RXS as a powerful contender in the crypto space, rivaling established players with its innovative approach to tokenizing real-world assets. The momentum behind RXSâ€™s current presale success and strong community backing underscores the rapid timeline for this exponential growth, fueling investor anticipation and solidifying its reputation as a must-watch altcoin for 2025. Rexas Finance (RXS) Rexas Finance is a blockchain-based project that explores the revolutionary potential of real-world assets (RWA) tokenization. As asset management and digital finance go through significant shifts, Rexas Finance will act as a trailblazing project developed to make crypto management and creation simple, especially real-world assets. Moreover, asset tokenization involves shifting rights to a crypto asset, enhancing any asset to be indicated and traded digitally. More so, the innovation enhances asset liquidity, transparency, and accessibility. All in all, tokenization provides many benefits: it increases liquidity by enabling illiquid assets such as real estate or art to be separated into smaller units, it reduces disturbances like geographic location, and also it enables transparency and security. Key Features of Rexas Finance Rexas Token Builder: Crypto users can tokenize their assets easily through Rexas Token Builder. Moreover, it easily eliminates the complexity of coding in the blockchain industry, enabling users to launch tokens in just a minute. Rexas Launchpad: Users can begin the token funding using Rexas Launchpad. More so, the decentralized launchpad could offer a transparent and secure ecosystem for token sales on many blockchain networks. Rexas Estate: Users can now invest in real estate with the help of Rexas Finance (RXS). This platform helps crypto users worldwide own real-world properties and earn passive income through stablecoins. Rexas Financeâ€™s \$1M Giveaway is live, offering a huge chance for early adopters to join the projectâ€™s growth. All in all, the Rexas Finance project has not reached any Venture Capital for funds, instead, the project initiated a presale to raise funds, enabling opportunities for all crypto users all across the world. Furthermore, the presale of RXS tokens began on September 8, 2024, with a total supply of 1 billion tokens. As of now, Rexas Finance has already raised over \$6M, and 75% of the fifth stage of the presale has been sold out. About Rexas Finance (RXS) Rexas Finance is the userâ€™s gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property worldwide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana (SOL) rose 7.02% to \$222.02, reflecting a broader market rally. - DEX volume set a new record, surpassing \$5 billion. The global crypto market cap has surged to \$3.01 trillion, reflecting a 4.04% daily increase. Total market volume stands at \$302.64 billion, up 2.70%. Bitcoin (BTC) recently achieved a new all-time high of \$93,434, and Ethereum (ETH) rallied past \$3,300. Additionally, Solanaâ€™s decentralized exchange (DEX) trading volume has surpassed \$5 billion daily for three consecutive days, a record milestone. Solana (SOL) is trading at \$222.02, up 7.02% in the past 24 hours. Its trading volume has reached \$11.05 billion, marking a 3.85% increase, while its market cap is now \$104.79 billion with a market cap ratio of 10.53%. This rise comes amid broader crypto market gains. While activity indicates increased interest in the Solana ecosystem. A prominent whale recently spent a total of 12,400 SOL (\$2.7 million) to acquire two tokens: WIF and BONK. Specifically, the whale purchased 406,000 WIF at \$3.87 per token, spending 7,200 SOL (equivalent to \$1.57 million). The whale also bought 29.32 billion BONK tokens at \$0.0000387, investing an additional 5,200 SOL (\$1.13 million). Such large transactions reflect confidence in the Solana ecosystem and signal potential growth in token demand, especially for projects related to Solana. Is Solanaâ€™s Uptrend Set to Persist? Solana shows notable resistance at \$228, with key support around \$215. If SOL can break above the \$228 resistance, it could signal a move toward the \$240 level, inviting more buying interest. However, a drop below the \$215 support could indicate potential downside pressure, with a possible decline toward the \$200 mark. The Relative Strength Index (RSI) for Solana is currently at

56.35, while the average RSI stands at 61.87. This RSI reading suggests a neutral trend, indicating that buying and selling pressures are balanced. Since the RSI is neither in overbought nor oversold territory, it implies that Solana might sustain its current levels unless influenced by significant market changes. This stability in RSI is a sign of potential price consolidation before any decisive breakout or breakdown. Moving averages add further insight into Solana's price movement. The 50-day moving average is currently positioned above the 200-day moving average, forming a bullish crossover that supports the ongoing upward trend. This crossover suggests long-term bullish momentum, with buyers showing sustained interest in Solana. Highlighted Crypto News Today Will Dogecoin Cool Down After Its 9th Consecutive Bullish Day?

Memecoin Meets Gaming: SOLCAT's Pre-Launch Interactive Jungle Adventure Sets New Standards for Engagement In an exciting leap forward for memecoins, SOLCAT is set to make history as the first memecoin on Solana to debut with a fully live, interactive AAA game at pre-launch. Scheduled for November 18 at 1 PM EST, SOLCAT invites users to join a unique, immersive experience: an exclusive jungle-themed game where participants can collect coins, win prizes, and engage with the community before the token goes public. SOLCAT's live game allows early adopters to step into a gamified world, collect rewards, and compete in a high-energy environment, redefining what it means to join a pre-launch. This innovative approach is designed to foster community, incentivize engagement, and build excitement as SOLCAT gears up to hit the market. Engagement Beyond Memes: Gameplay Rewards & Community Building SOLCAT goes beyond the standard memecoin strategy, focusing on creating genuine engagement through gameplay rather than relying solely on viral marketing. With a development team that includes veterans from the well-known game Heroes of Mavia's a project with a fully diluted valuation exceeding \$400 million, SOLCAT is designed to capture attention, keep players engaged, and reward early supporters in a truly unique way. Phase 2 Expansion and Exchange Listings for Broader Reach Following its presale and token generation event, SOLCAT has secured listings on major exchanges like MEXC and Bitmart, ensuring liquidity and accessibility for investors. The team has outlined a strategic development roadmap, with Phase 2 slated to include 1v1 and tournament-style gameplay that will deepen the game's competitive aspect and offer more reward opportunities. SOLCAT also integrates seamlessly with Twitter to encourage organic community content, supporting continuous growth. A New Chapter for Memecoins: SOLCAT Sets Itself Apart SOLCAT aims to redefine the memecoin landscape, combining the viral appeal of past memecoin successes with a sustainable roadmap and genuine utility. This project is set to resonate with fans of previous viral hits like Popcat while pushing the envelope in community-driven engagement and development. Mark your calendar for November 18 at 1 PM EST. Join the presale, dive into the live game, and connect with the SOLCAT community on Telegram at t.me/solcatgame. This could be the next big wave in memecoins, and now's your chance to be part of it from day one. About SOLCAT SOLCAT is an innovative project on the Solana blockchain, combining the world of memecoins with the excitement of live AAA gaming at pre-launch. With an experienced development team, strategic exchange partnerships, and a comprehensive roadmap, SOLCAT is committed to offering unique engagement opportunities, sustainable growth, and rewards for its community. Investor enthusiasm is rising for Solana as market watchers anticipate a significant price surge. However, attention is shifting to a new contender that promises to challenge Solana's dominance. The crypto landscape is buzzing with speculation about which digital assets are poised for impressive growth, sparking curiosity among traders and enthusiasts alike. Amid this excitement, XYZVerse emerges as a pioneering memecoin that unites sports fans, aiming to outshine other tokens that have achieved remarkable gains. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition's "bullshit" coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WTF trailing in its wake. Own the field, earn while the crowd plays XYZ is more than just a benchmarker in the meme coin game; it's creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarket's massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. Missed meme coin supercycle? By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOME's 5,000% takeoff and WIF's 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot currently undervalued, XYZ is going the distance to break new records! Rallying the community, securing the win XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem's direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live! don't miss out on this knockout 99,900% opportunity!<< Solana (SOL) Solana is a blockchain platform that focuses on speed and scalability. It's a foundation for decentralized applications, like Ethereum and Cardano. But Solana stands out because it aims for faster transactions and flexible development options. Developers can use multiple programming languages to build on it. SOL is Solana's native cryptocurrency. It's central to the ecosystem, helping to run programs, process transactions, and reward those who support the network. Solana's potential lies in its unique approach to scalability. Unlike some platforms, it doesn't use sharding or second-layer solutions. Instead, it handles a high number of transactions on its main network. This makes it attractive for developers who want to build high-activity products and services. In the current market, SOL draws interest due to its technological strengths and expanding ecosystem. Compared to other coins like Ethereum, which faces scalability challenges, Solana offers a faster alternative. As the crypto market trends towards scalable and efficient networks, Solana positions itself as a strong contender. Conclusion While Solana gains investor interest, XYZVerse (XYZ) emerges as a pioneering memecoin uniting sports fans, aiming for massive growth with its unique, community-driven ecosystem. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. This bull market has brought a fresh wave of opportunities for crypto enthusiasts. With top projects surging and new players catching attention, it's an exciting time to explore the best options to consider. While several tokens are making headlines, some stand out for their innovative tech and potential returns. From the high-speed performance of BlockDAG to the established strength of Bitcoin and the rapid transactions of Solana, there's something for every investor. Here, we'll dive into the top choices that have shown solid growth potential in this market, starting with BlockDAG, a leading option that's making a strong case. 1. BlockDAG (BDAG) BlockDAG is setting new standards with a unique hybrid model that merges blockchain and Directed Acyclic Graph (DAG) technology. This approach allows BlockDAG to achieve high-speed transactions while maintaining decentralization and security. Having already raised over \$120.5 million in its presale, BlockDAG has captured the market's interest with its scalability-focused network, designed to handle massive transaction loads. This combination of tech innovation and strong financial backing places BlockDAG as a top contender in the crypto scene. What's exciting about BlockDAG is its potential for broader applications across industries that need fast, secure transactions. As it prepares for its mainnet release and potential exchange listings, the project is poised for significant momentum. BlockDAG's strong presale performance, combined with its vision for a scalable and efficient ecosystem, makes it a project to watch as the bull market unfolds, with high expectations for future growth. 2. Bitcoin (BTC) Bitcoin remains a staple in the crypto world, and this bull market has only reinforced its strength. Currently trading around \$86,128, Bitcoin has shown impressive resilience and consistent growth. Its position as the original and most widely recognized cryptocurrency makes it a reliable choice, especially with recent developments like the approval of multiple Bitcoin ETFs in the U.S., making it easier for traditional investors to access BTC. The demand continues to grow, supported by its established reputation and substantial institutional interest. With a market cap of over \$1.7 trillion, Bitcoin remains an essential choice for those looking for stability and potential long-term value. 3. Solana (SOL) Solana is a popular pick among crypto enthusiasts for its high transaction speed and low fees. Trading around \$209, Solana has a market cap exceeding \$100 billion, making it one of the largest networks by valuation. This blockchain has attracted numerous projects in decentralized finance (DeFi) and non-fungible tokens (NFTs), providing a strong foundation for future growth. Solana's ecosystem continues to expand, fueled by developer support and innovative applications. Its swift transaction processing and scalable infrastructure make it a solid option for those seeking an alternative to Ethereum. With an expanding network and growing adoption, Solana is a strong contender for this bull market. 4. Cardano (ADA) Cardano is another promising option, especially with recent upgrades aimed at strengthening its decentralized governance. Currently trading around \$0.57, Cardano has seen a significant price surge, largely driven by ongoing development. The network's recent "Changé" hard fork has set the stage for enhanced smart contract functionality and voting mechanisms, which can attract new projects and developers. Cardano's unique layered architecture focuses on security and scalability, distinguishing it from other platforms. As it continues to evolve, with upcoming partner chains adding to its ecosystem, Cardano is one to consider for those looking to tap into a future-ready blockchain with a committed development team. Key Insights This bull market is offering a variety of options across different types of projects. BlockDAG stands out with its innovative approach and high-speed network, making it an exciting choice for those seeking a project with scalability at its core. Bitcoin remains a reliable option for stability, while Solana and Cardano offer unique benefits within their ecosystems. Each of these projects brings something unique to the table, catering to a range of interests and investment strategies. As the market continues to evolve, these cryptos could be key players, bringing strong growth potential to those who explore them. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Investors are once again weighing possible high-return tokens as the next crypto bull run looms. Popular picks Solana (SOL) and Ripple (XRP) could not provide the rapid profits ambitious investors are looking for. Rather, Rexas Finance (RXS) is fast becoming a possible game-changer alternative coin. With a fast-advancing presale and outstanding fundraising successes, Let's explore the reasons SOL and XRP aren't high-return bull run picks, but Rexas Finance has drawn major interest and should yield life-changing rewards in the next three months. Limited Growth Potential of Solana and Ripple Although Solana and Ripple have outstanding histories, some restrictions could limit their ability for exponential development. A negative attitude towards XRP resulting from Ripple's continuous legal conflicts with the SEC limits its future development capacity. Although Ripple has made headway in securing finance industry alliances, among other things, regulatory uncertainty still limits its advancement. This element can reduce XRP's performance during the forthcoming bull run, hence making it less tempting to investors looking for large returns in the next three months. Solana is known for its creative developments and high-performance blockchain, but it has had technical problems, such as network outages. These outages make people worry about how reliable the network is, especially as the number of users increases. Also, SOL is already worth a lot of money, so making huge percentage gains might be hard, which makes it less appealing as a high-growth investment. New projects, on the other hand, like Rexas Finance, are still in their early stages but could yield big profits as they grow. Maturity Reduces the Potential Upside Both Solana and Ripple have substantial market values as established cryptocurrencies, which makes attaining exponential development more difficult. Widely used and reasonably priced, Solana and Ripple help to lower the possibility of abrupt price swings. These tokens have already seen a significant increase and would require extraordinary innovations to yield profits on par with those of newly proposed enterprises. They might thus not provide the high reward potential investors are looking for in a bull run with fast speed. Rexas Finance, on the other hand, offers a special possibility for investors ready to risk on a bright new initiative. RXS is positioned to offer significant returns in a short period, with a presale price still below \$0.10. Rexas Finance (RXS): A High-Growth Contender Rexas Finance has quickly turned into a fascinating investment possibility. RXS is in its fifth presale stage now and has already reached important benchmarks, rising to \$0.07. With about \$5.8 million raised and almost 115.9 million tokens sold, the presale is gathering steam and drawing institutional as well as retail investors. Such remarkable early successes show the faith Rexas Finance has in its capacity to provide exceptional returns. Two main sites that improve Rexas Finance's exposure among the crypto community are CoinMarketCap and CoinGecko, from which it has also obtained listings. These entries give Rexas Finance more credibility and indicate that it passed the first screening on these respectable websites. As Rexas Finance enters its following presale phases and final launch, the listing gives it more visibility and can draw a bigger pool of investors. Growing in repute, RXS is likely to be among the most discussed altcoins in the forthcoming bull market. Rexas Finance's development path reminds me of early-stage investments yielding large profits. Rexas Finance allows early adopters to profit on its inexpensive entrance point since its presale price is still less than \$0.10. Once it formally starts and gets more visible, there is more chance of a notable price rise. According to analysts, the currency might yield returns much higher than more established cryptocurrencies if Rexas Finance keeps acting as it has in the next three months. Conclusion Both Solana and Ripple have strong reputations, but the fact that they are mature and have limits may stop their growth during the next bull run. Rexas Finance stands out as a strong option for buyers who want to make huge returns in a short amount of time. Rexas Finance has set itself up as a high-potential investment ready to take advantage of the coming bull market with a strong presale performance and smart ads. Early investors in Rexas Finance will benefit from its ambitious plan and low entry price as the company continues to grow. If you're ready to take advantage of the chance, Rexas Finance could give you returns that

are very rare in the crypto market right now. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance>

Solana’s capability to head the DeFi sector has come under scrutiny. The platform has been promoting itself as capable of global-scale transactions on a single chain, but now it’s looking at Layer 2 solutions to improve scalability. Its recent shift from a single-chain model to network extensions has raised concerns about Solana’s ability to serve as a global financial backbone. Meanwhile, FXGuys (\$FXG) has become one of the high-potential altcoins on investors’ watchlists. Investment interest in FXGuys continues to grow stronger, showing its potential to outperform in Q4. Thanks to its innovative DeFi offerings, FXGuys is getting massive support, making it the best crypto to buy now. Solana’s (SOL) Reach For DeFi Dominance Might Not Happen Solana’s scaling approach has shifted, with the platform moving from a monolithic single-chain model to Layer 2 solutions known as network extensions. They’ve discovered that they can’t process global transactions independently and adopted Ethereum’s successful L2 strategy. Unfortunately, centralization and scalability issues are still big issues for Solana. Some of Solana’s barriers are technical bottlenecks, such as its dependence on a single client and the delayed release of Firedancer, its second client. These issues have affected its capacity to carry out decentralized operations and increased its need for high bandwidth. Frequent outages and lack of protocol-level final backup have created centralization risks and limited accessibility. Concerns over Solana’s insider-heavy token distribution also complicate its goal of decentralization, as roughly 98% of initial allocations were insider-held. With large firms like Coinbase and Visa backing Ethereum’s L2 solutions, the shift toward Ethereum’s ecosystem suggests Solana’s market share could diminish. Although it’s still one of the trending altcoins, Solana’s potential for DeFi dominance faces growing doubt among investors. FXGuys (\$FXG) Offerings Shows Strong Appeal As The Best Crypto To Buy Now FXGuys is a prop firm with a DeFi-focused approach that combines prop trading benefits with a unique Trade2Earn. By holding \$FXG tokens, traders gain access to a prop account with up to \$500,000 in capital, allowing them to participate in crypto and forex markets. Each trade rewards users with additional \$FXG tokens, providing a recurring income stream for active traders. The platform also offers staking rewards, with 20% of the trading revenue allocated to \$FXG token holders who stake their assets. This model aligns well with the goals of passive investors seeking steady returns, making FXGuys the best crypto to buy in the DeFi market. FX Guys’ innovative offering of no KYC requirements and quick payouts in crypto has earned it the support of investors worldwide. The FXGuys presale is currently in the first stage, selling \$FXG tokens at just \$0.03. This low entry price has attracted lots of attention, with investors expecting gains as \$FXG targets a listing price of \$0.1. As one of the top trending altcoins, FXGuys is positioned to become a top DeFi platform, offering life-changing returns for those investing early. Conclusion Although Solana’s shift to Layer 2 solutions has raised questions about its capability, SOL is bullish. Meanwhile, the FX Guys continue winning investor interest with their innovative DeFi features. With its presale success and strong investor support, FXGuys stands out as one of the high-potential altcoins for those looking to profit from DeFi growth in Q4. To find out more about FXGuys follow the links below: Website | Whitepaper | Socials | Audit Exclusive FXGuys Promo Code: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana’s surge faces market fluctuations and 8% price correction. - SOL remains 15.7% below its all-time high, but bullish. Solana (SOL) captivated the crypto community as it recently surged above \$225, hitting its highest point in nearly three years. This rally, which briefly brought SOL’s market cap into the coveted \$100 billion club, marks a significant milestone in the ongoing bullish phase called ‘Moonvember.’ Despite an overall 8% weekly increase, recent market shifts tempered the celebration, with Solana experiencing a 7% decline in the past 24 hours as the global crypto market cap fell 3.7%. Despite the 24-hour setback, SOL’s performance over the past week still showcases the strong sentiment. Notably, SOL remains 21% below its all-time high of \$259, achieved in November 2021. Recent analysis suggests that if Solana maintains its hold above the \$200 level—a barrier breached for the first time in six months—the asset could continue its upward trajectory, especially with key support in the \$180–\$200 range. Moreover, Solana’s Open Interest (OI) hit a record \$4.28 billion earlier in the month but has since dropped by 5.18%, suggesting a possible shift toward profit-taking. Simultaneously, the trading volume surged by over 55%, highlighting strong ongoing interest despite slight bearish indicators, including a long/short ratio near 0.95. These mixed signals indicate a balance between bullish enthusiasm and caution. SOL Price And Demand Adding to the dynamics, approximately 524,030 SOL tokens (worth \$110.25 million) are set for release, an increase that may slightly affect price momentum if demand does not keep pace. However, this minor influx into the circulating supply is unlikely to significantly impact SOL’s price given the current market strength. Looking forward, analysts predict a potential continuation of the rally, with some speculating that Solana could break into a long-term uptrend reminiscent of its 2021 performance. If historical patterns hold, SOL could potentially reach a \$1,000 valuation, especially given the strong trading volume and recent breakout above key resistance levels. Highlighted News Of The Day Bitget Re-enters UK Market with 150 Tokens Following FCA Approval

The cryptocurrency market is buzzing with anticipation as 2024 draws to a close, marked by a resurgence in activity across major digital assets. Bitcoin, the stalwart of the sector, hovers close to its all-time high, sparking renewed optimism among investors. Meanwhile, Solana continues to showcase its prowess as a high-performance blockchain, maintaining robust development interest despite a recent dip in trading prices. Litecoin has captured attention with the filing of its first ETF by Canary Capital, signaling potential institutional adoption and underscoring its relevance in the evolving financial landscape. Yet, amidst these established names, BlockDAG has emerged as a surprising leader in the presale market, raising over \$120.5 million and turning heads with its innovative DAG-PoW technology. With a lucrative 100% bonus offer and a mainnet nearing completion, BlockDAG positions itself as a unique contender poised for substantial growth in a competitive market. Is BlockDAG the Dark Horse of 2024? Here’s why It Just Might Be In November 2024, BlockDAG emerged as a significant player in the cryptocurrency landscape, achieving remarkable milestones that underscore its growing influence. The project has successfully raised over \$120.5 million during its presale, with each BDAG coin priced at \$0.022 in its 25th batch, reflecting a substantial 2100% return on investment since its inception. A key factor contributing to this success is BlockDAG’s innovative hybrid blockchain technology, which combines the benefits of Directed Acyclic Graph (DAG) structures with traditional blockchain mechanisms. This approach enhances scalability and transaction throughput, addressing common limitations in existing blockchain systems. To further incentivize early adopters, BlockDAG has introduced a limited-time 100% bonus offer. By using the code BULLRUN100 at checkout, investors can double their BDAG coin purchases, significantly boosting their potential returns. Looking ahead, BlockDAG is on track to complete its mainnet development by November 14th, 2024. This milestone is expected to enhance the platform’s functionality and attract a broader user base, solidifying its position in the competitive crypto market. These developments highlight BlockDAG’s commitment to innovation and its potential for substantial growth, making it a noteworthy contender in the booming cryptocurrency sector. Litecoin’s ETF Move: The Game-Changer Investors Have Been Waiting For Litecoin has recently attracted attention following the announcement by Canary Capital of an S-1 filing with the U.S. Securities and Exchange Commission (SEC) for the first-ever Litecoin ETF. This move positions Litecoin as a serious player in the investment sector, potentially paving the way for greater institutional involvement. The introduction of an ETF could bolster Litecoin’s liquidity and appeal, providing investors with a regulated vehicle for direct exposure. Currently trading around \$72, Litecoin is navigating a challenging market phase after breaking below an ascending trendline, hinting at the potential for further downside. Despite recent price pressures, the push towards an ETF underscores Litecoin’s ongoing relevance and its reputation as a reliable, enterprise-ready digital asset. Solana Rides Bullish Momentum Amid US Election Results ‘Price Target at \$210’ Following the recent US election, Solana (SOL) has seen a boost in investor confidence, fueling its price momentum. Known for its speed and low fees, Solana is gaining from the positive market conditions, with two other emerging cryptos also turning green and catching investor interest. Technical indicators present a largely optimistic outlook. The Relative Strength Index (RSI) sits at 65.87, reflecting a neutral stance, while momentum indicators like the Awesome Oscillator and momentum levels show buy signals. Moving Averages across short and long terms also lean toward buy, signaling an ongoing upward trend. Key resistance levels for SOL are set around \$190 and \$211, while support sits at \$161. If SOL continues this rally and breaks past \$190, it could potentially reach \$210–\$220 in the near term, providing an encouraging forecast for investors. Conclusion As November 2024 unfolds, the crypto market is bustling with notable developments. Litecoin is making headlines with Canary Capital’s groundbreaking ETF filing, suggesting potential for increased institutional adoption, though recent price trends present challenges. Solana remains a major player, showcasing its growth since 2020 and maintaining its reputation for scalability and efficiency, despite recent price dips. Meanwhile, BlockDAG has emerged as a formidable contender with its record-breaking \$120.5 million presale and unique DAG-PoW hybrid technology that promises enhanced scalability. The project’s limited-time 100% bonus offer and a mainnet nearing completion position it for potential significant gains. - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMYyu>

As the cryptocurrency market heats up, the hunt is on for the next digital asset that could deliver astonishing returns. Investors who missed out on earlier successes are eyeing a new altcoin priced at a fraction of a cent. This emerging token has the potential to mirror the impressive gains of previous market leaders, and it’s capturing the attention of those looking for significant growth opportunities. XYZVerse (XYZ) emerges as a pioneering memecoin that unites sports fans across football, basketball, MMA, and more, aiming to outperform past crypto successes with its unique blend of meme culture and sports enthusiasm. The All-Sports Meme Token You Can’t Afford to Bench! XYZ is your exclusive VIP pass to a sports-driven, meme-fueled revolution. Think of it as the MVP of the XYZVerse ecosystem, where degens can score big off the growing demand for prediction markets. Picture this: Polymarket hitting \$1 billion in trading volume during the US presidential election – now throw in the hype of meme coins and the thrill of sports betting. With millions of sports fans ready to hit the field and cash in the XYZVerse ecosystem is set to keep expanding – and your rewards will slam dunk through the roof! >>>XYZ presale is your first-quarter chance to get in before the mind-blowing explosion!<<< In 2024, meme coins are the undisputed champions of the crypto world, and XYZ is set to crush the competition. With potential thousand-fold returns that will blow past the finish line, the presale plan draws a hefty 99,900% growth by the TGE. Forget about BOME’s 5,000% rise or WIF’s 1,000% rally – XYZ is here to outscore them all! With upcoming listings on major CEX and DEX platforms, rock-solid defense in the form of audited smart contracts, and a fully vetted team, XYZ is already ahead of the game. The first-mover advantage is key here – get in before the crowd storms the field, and you’ll be sitting on way bigger returns! Solana (SOL) Solana is a blockchain platform built for speed and scalability. Unlike some of its competitors like Ethereum and Cardano, Solana focuses on handling many transactions quickly. This makes it a strong foundation for decentralized applications, or dapps. Its unique architecture allows for fast transactions and lets developers use different programming languages. At the heart of Solana is SOL, its native cryptocurrency. SOL is used to make transactions, run programs, and reward those who support the network. The SOL coin holds real value in the Solana ecosystem. It rewards network participants and gives users access to many projects on Solana. Unlike some others, Solana doesn’t use sharding or second-layer solutions to scale up. This makes it attractive to developers and investors who want a high-capacity network. In the current market, SOL looks promising. Its ability to handle high activity could make it a top choice for hosting products and services. Compared to other coins, SOL offers speed and flexibility, which could set it apart in the growing crypto market. Conclusion Coins like SOL are promising, but XYZVerse (XYZ) combines sports and memes, aiming for massive growth and offering early investors significant potential in this bull run. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana marked a spike of over 5%, trading at \$217. - SOL’s market cap sits at \$102.80 billion. The global crypto market turned bullish, with the total market cap climbing 9.37% to \$2.98 trillion. In the Asian trading hours, Bitcoin (BTC) hit its new all-time high at \$89,604, while Ethereum (ETH) rallied above \$3.3K. This shift has ignited optimism in the market, driving a bullish outlook. Notably, the altcoin Solana (SOL) has experienced a 5.80% price gain. Over the last 24 hours, SOL has hit a high of \$223.22. At press time, it is trading at the \$217.25 mark. For the first time, SOL has surpassed the \$100 billion market capitalization mark. Currently, it sits at \$102.80 billion. A few days back, the market cap dominance of SOL hit a new high at 3.81%. During this time, CMC data revealed that SOL’s daily trading volume was \$10.74 billion. Meanwhile, Solana has witnessed a 24-hour liquidation of \$21.56 million. The altcoin’s price momentum saw a surge of over 36% in the past seven days. Solana began trading in the \$160.30 range. Eventually, the asset’s price steadily climbed to the current price level. Can Solana Maintain its Upward Trajectory? As SOL’s Moving Average Convergence Divergence (MACD) line settles above the signal line, Solana’s four-hour technical chart has inferred an upside pressure and an impending positive sentiment. In addition, the Chaikin Money Flow (CMF) indicator, positioned at 0.20, indicates a positive money flow with buyers having the upper hand. Meanwhile, the trading volume has surged by 25.97%. Besides, the altcoin is in the overbought zone in the market, as suggested by the daily relative strength index (RSI), which is found at 71.41. Moreover, the daily frame of Solana exhibits the short-term 9-day MA above the long-term 21-day MA. Assuming further revival of Solana, the asset’s bull might push the price to a potential \$223 level. The prolonged upside trajectory of SOL could

trigger the price to hit \$230. SOL could reach unprecedented levels, according to analysts, if its upside momentum remains strong. On the support side, a bearish trajectory of SOL could likely pull back the price to the \$211 range. Further declines in Solana might drive the price to dip even lower to the \$205 mark.

Highlighted Crypto News Binance Surpasses \$5 Billion in November Inflows, Hits Record \$130B in User Assets

The cryptocurrency market is full of noise as many major altcoins are expected to break required levels and reach all-time highs (ATH). Solana, Dogecoin, and Cardano are coins that analysts expect to be the stars as we enter the new year. The forecast is based on broad factors, such as the onset of a bull trend, fresh technical setups, and increased demand for blockchain applications. There is a strong possibility that these coins will be breaking new ATH, and their projections for January 2025 are also strong. To add to the mix, Rexas Finance (RXS) seems to be aiming big and could beat all of them in the next cycle. Solana (SOL): Ready to Move Big Currently, the price of Solana stands around \$187.47 with a market capital of \$88.3 billion as of 6 November 2024. Technically speaking, SOL appears to be forming a rounding bottom, a commonly known bullish reversal sign that often appears at the end of a downtrend as buying pressure resumes. In a positive turn of events, SOL is appreciably close to dethroning its previous all-time high of \$260. Predictions regarding Solana's movements in 2025 appear to be very favorable, considering the estimates regarding its value could see it starting somewhere between the range of \$170 and \$265. This is not surprising, given the firm fundamentals of the coin. As one of the most efficient blockchains available, the supply of Solana keeps rising, making it suitable for DeFi applications as well as NFT marketplaces. The strong interest in Solana from developers poses a positive scenario for the future, with increasing demand as it can process numerous transactions at a low cost. Dogecoin (DOGE): Rising on Community Support At the time of writing, Dogecoin is priced at \$0.1945, with a total market cap of \$28.5 billion. A vast chunk of the population still continues to support the token. A similar pattern can also be seen in the Dogecoin chart: a rounding bottom pattern, which signifies the confidence investors have and the momentum building towards it surpassing its previous highs. Given its history of being endorsed by many notable figures and its community-powered market, if the current market setup persists, Dogecoin may see a breakout. Considering Dogecoin's distinct appeal in the market along with its devoted followers, the prediction is that by early 2025 it would be able to rise to new levels. The target price of DOGE has been set to open at \$0.345, with a high of \$0.567. While speculative, Dogecoin's network continues to receive traction in transactional usage, especially for small transfers and tipping, strengthening its proposition as a quick and cheap currency for transactions. Cardano (ADA): Here For Long Term Expansion Cardano, priced at \$0.35, has a market cap of around \$11.98 billion. ADA is currently undergoing a price-neutral change, with the Fear & Greed Index at 69, indicating that buyers are still looking to buy Cardano coins. Cardano's last notable price increase occurred during the bull market of 2020, and predictions for this unyielding asset are 20x higher than its current value by January 2025. Experts say Cardano is expected to witness another price surge during the first quarter of 2025. Due to its strong focus on a rigorous, peer-reviewed development process and decentralized governance, ADA's future growth forecast is thoughtful and stable. As its ecosystem further develops, with an expanding usage of Cardano applications and network staking, ADA could experience considerable price changes. Rexas Finance (RXS): Ready to Spearhead the Revolution Rexas Finance (RXS) is a relatively late entrant to the crypto space but is already making waves. It is certainly in contention to eclipse the prospects of Cardano, Solana, and Dogecoin. Rexas Finance's focus on real-world asset tokenization allows smooth transactions and investment in tangible asset classes like real estate and precious metals. Established as a low-priced coin, RXS has quickly gained a significant market presence, showing signs of upward momentum that could outshine its competitors. In its presale offering, RXS succeeded in raising at least \$5.9 million, setting it apart from competitors with tokenomics designed to sustain growth and reward early participants. RXS's token distribution model allocates a significant percentage to presale and user development, ensuring the platform's long-term viability. Additionally, it offers the Rexas Token Builder for asset tokenization and Rexas DeFi, allowing users to provide liquidity or enhance yield farming. Why RXS is Predicted to Shine in 2025 According to the Rexas Finance roadmap, blockchain and real-world assets will be the primary focus. Many people are investing in the presale rounds, and now, they have everything ready for their decentralized applications to launch in RXS. RXS's asset-backed tokenization model is highly competitive, offering blockchain-based investment opportunities with reduced volatility, unlike typical cryptocurrency investments. Some analysts estimate RXS could reach a 25x increase, providing a range of financial services and integrating real investments into blockchain. Conclusion: RXS Is At The Top As the market prepares for what could be a spectacular 2025, Solana, Dogecoin, and Cardano appear positioned to perform well and reach new ATHs. However, Rexas Finance (RXS) seems well-prepared with a sound approach and clear growth vision, making it a worthwhile addition to any portfolio. Investors seeking high-growth opportunities might find RXS appealing as it breaks through blockchain technology barriers with strong tokenomics plans. While ADA, DOGE, and SOL will remain popular, RXS offers the best return on investment, making it a must-buy for investors targeting the bull market era for maximum returns. With SUI recently surpassing major players like Solana and Ethereum in net inflows, the blockchain is proving its growing dominance in the crypto space. Against this backdrop (\$ZZZZCAT), an innovative project on the SUI blockchain, is drawing strong investor interest as its presale gains traction (\$ZZZZCAT) stands out with its unique Proof of Meme concept, combining the viral fun of meme culture with real, tangible value for participants. Early adopters benefit from exclusive rewards, including game airdrops, positioning them for significant gains in this dynamic, community-driven project. What Makes SnoozeCat (\$ZZZZCAT) Unique? Game Airdrop for Early Adopters To encourage early participation in the presale, SnoozeCat (\$ZZZZCAT) has launched an interactive game where players can win rewards. Participants must register on the game platform using the wallet address they used for the presale on SUI. Players who earn up to 10,000 \$ZZZZCAT in the game qualify for the SnoozeCat airdrop, which can be swapped or traded as a \$SUI pair on the Cetus exchange. This initiative highlights SnoozeCat's (\$ZZZZCAT) commitment to blending fun with financial incentives. - Play and Earn: SnoozeCat Game Proof of Meme Concept Explained SnoozeCat (\$ZZZZCAT) introduces the Proof of Meme concept, which leverages the viral power of meme culture while delivering tangible value. Community members create and share memes, and those that resonate most with the community or achieve viral status are rewarded. This system ensures that engagement isn't just fun but also rewarding, encouraging active participation and making meme-sharing more meaningful. How It Works: - Create and Share Memes: Members submit memes aligned with the SnoozeCat (\$ZZZZCAT) theme. - Community Voting: The most popular memes are determined by community votes. - Receive Rewards: Winning meme creators receive incentives, fostering an ecosystem driven by creativity and interaction. Built on the SUI Blockchain SnoozeCat (\$ZZZZCAT) runs on SUI's fast and eco-friendly blockchain, enabling smooth transactions and scalability. This technology backs SnoozeCat's (\$ZZZZCAT) ambition for long-term growth and community engagement. Presale Details: - Total Supply: 1 Billion \$ZZZZCAT Tokens - Community Allocation: A significant portion is reserved for early adopters. - Presale Status: Ongoing Join now for early access! - Listing Platform: Cetus Protocol, ensuring trading opportunities post-launch. How to Join the SnoozeCat (\$ZZZZCAT) Presale: - Set Up Your Wallet: Download an SUI-compatible wallet such as SUI Wallet or Suiet Wallet. - Get \$SUI Tokens: Purchase \$SUI from major exchanges like Binance or Coinbase. - Participate in the Presale: - Register and Play the Game: Use your presale wallet address to register for the SnoozeCat Game and aim to earn up to 10,000 \$ZZZZCAT for airdrop eligibility. About SnoozeCat (\$ZZZZCAT) SnoozeCat (\$ZZZZCAT) is not just another meme coin; it's a project that combines community-driven fun with sustainable tokenomics. Through its Proof of Meme concept and game-based airdrop, SnoozeCat (\$ZZZZCAT) redefines how meme coins engage with their audiences. Using SUI's efficient blockchain, SnoozeCat (\$ZZZZCAT) ensures an enjoyable and valuable experience. Join the Presale Stay connected with SnoozeCat (\$ZZZZCAT) on Twitter and join the Telegram Community for the latest news and updates. Bittensor (TAO) price volatility is palpable, with a recent low of \$407 swiftly rebounding to \$432. Solana (SOL) is on the rise too, climbing past \$167. Both digital currencies are tethered to the broader market, notably Bitcoin's dramatic price shifts. When Bitcoin climbs, they ascend; when it falls, they plummet. Meanwhile, BlockDAG (BDAG) strides on, undeterred by these external market gyrations. With a presale haul of over \$116 million, its focus on technological innovation and community bonding is clear. A standout feature is the TG Tap Miner, capturing the attention of over 70,000 users. This Telegram-based game rewards participants with Tap Points, soon to be exchangeable for BDAG coins at the launch of the main network. BlockDAG's strategy to harness internal capabilities instead of swaying with market currents marks it as a go-to for those desiring dependable growth and enduring value. Bittensor's Price Rollercoaster Bittensor (TAO) has witnessed wild swings, nosediving below \$500 and moving below its 50-day SMA. The price dropped over 5% to \$493 on Wednesday, slid further to \$484 by Thursday, and down to \$462 on Friday. On Saturday, it tumbled yet again by 5.4%, falling to \$437 and bottoming out at \$407 on Sunday. Although the trend appeared bearish, the latest uptick may suggest a turn towards stability. Solana's Ascent Toward \$200 As Solana (SOL) gains momentum, recently exceeding \$167, the crypto community buzzes with talk of reaching \$200. This surge parallels Bitcoin's rally, igniting widespread optimism. Solana's significant activity surge on decentralized exchanges (DEX) has seen volumes hitting \$11.86 billion weekly, surpassing even Ethereum's layer-2 volumes. The balanced demand in SOL futures shows robust trading interest. However, Solana's reliance on the larger market mood means that the pursuit of consistent price gains continues. 70,000+ Users Dive Into BlockDAG's TG Tap Miner Well-known cryptos like Bittensor and Solana frequently feel the impact of broad market swings and macroeconomic shifts. These fluctuations can often result in frustrating losses, rather than gains, for those involved. For those searching for a more predictable venture, emerging ventures like BlockDAG bring a wave of excitement. Built on a foundation of technological innovation and community involvement, BlockDAG thrives away from the tumult of the external markets. Take, for example, the TG Tap Miner game on Telegram. Participants earn Tap Points by catching falling balls, with each point convertible into BDAG coins once BlockDAG's main network is up and running. This engaging and straightforward game has not only been a fun way for users to increase their holdings but also a social one, as inviting friends boosts their earning potential. This has propelled the TG Tap Miner's user base beyond 70,000. BlockDAG's presale has turned heads too. Within just a few months, it amassed over \$116 million, distributed 15 billion coins, and yielded a remarkable 2,100% return to its earliest backers. With its focus on community and a robust ecosystem, it's no wonder that an increasing number of crypto enthusiasts are flocking to BlockDAG, looking for both stability and excitement. Which Crypto Will Take the Lead? While Bittensor is making a slow comeback and Solana continues its steady ascent, their vulnerability to external market conditions makes it a cautious choice for some. BlockDAG, on the other hand, bucks this trend, fostering growth from within its own ecosystem, untouched by the broader market's fluctuations. Its TG Tap Miner not only captivates users but also strengthens its community. So far, BlockDAG's presale has not only succeeded in raising over \$116 million but has also delivered an astonishing 2,100% return to those who got in early. For those weary of the unpredictability that comes with market-dependent cryptos, BlockDAG offers a stable and invigorating alternative. Website: <https://blockdag.network> Presale: <https://purchase.blockdag.network> Telegram: <https://t.me/blockdagnetwork> Official Discord: <https://discord.gg/Q7BxghMVyu>

The crypto investment scene is rapidly evolving, incorporating cutting-edge advancements from finance to AI. Investors are rallying behind projects that can swiftly pivot and upscale as the influx of new crypto enthusiasts grows. While Solana might stumble, BlockDAG (BDAG) is sprinting ahead, adeptly overcoming challenges in this very arena. Users have encountered disruptions with Solana, casting doubt on its decentralization claims. Meanwhile, BlockDAG has made quick adaptation and scalability its hallmark. Solana's Rapid Rise to Fame Launched in 2020, Solana has quickly captured the market with its lightning-fast transaction speeds and minimal fees, becoming the go-to for developers and users who prioritize efficient, high-volume transactions. It leverages Proof of History (PoH) and Proof of Stake (PoS) to accelerate processes, making it perfect for NFTs and gaming apps. Yet, Solana's remarkable speed is not without its downsides. It has faced occasional network blackouts and decentralization challenges, which have sparked debates about its reliability and resilience. BlockDAG: Shaking Up the Standard BlockDAG has soared in the crypto sphere, largely thanks to its integration of Directed Acyclic Graph (DAG) technology with Proof of Work (PoW), a formula that promises scalability and security. BlockDAG's DAG configuration allows for the simultaneous processing of multiple transactions, a stark contrast to the sequential approach of traditional blockchains. This capability significantly boosts transaction capacity, tackling a major scalability challenge head-on. PoW adds a layer of security by demanding computational work to verify transactions, defending the network against potential threats while maintaining high efficiency. The overwhelming success of BlockDAG's presale, amassing over \$116 million with 15 billion coins sold and yielding a staggering 2100% ROI for early holders, underscores the burgeoning interest in its technology. Currently in its 25th batch, BlockDAG's ongoing presale continues to draw buyers, striving to become a frontrunner in blockchain speed and security. Who Faces Greater Scalability Hurdles? BlockDAG's adoption of the Directed Acyclic Graph (DAG) structure not only distinguishes it in scalability but also enhances its robustness, enabling it to handle large transaction volumes efficiently. Unlike Solana, which claims high transactions per second but has encountered significant operational challenges, including outages and bottlenecks at critical times, BlockDAG's architecture cleverly avoids such drawbacks. It enables parallel processing of transactions, which significantly boosts its scalability and ensures network stability. This strategic configuration allows BlockDAG to sustain high performance levels as demand escalates, avoiding the operational hiccups that Solana experiences. As BlockDAG's network grows, its distinctive technology supports a scalable framework that meets the increasing requirements of both users and developers. Questioning Solana's Decentralization BlockDAG champions decentralization, promoting broad-based participation in securing the network, free from the stringent hardware requirements that platforms like Solana impose. Although Solana is quicker, it demands expensive setup for validators, reducing accessibility and pushing toward a more centralized framework. With only about 2,000 active validators, control within Solana tends to cluster among those who can afford the steep operational costs. In stark contrast, BlockDAG's use of DAG and PoW supports a more inclusive and decentralized framework, enabling wider participation and bolstering security and resilience by diluting the potential for control by any single entity. BlockDAG's steadfast dedication to genuine decentralization makes it especially attractive to crypto traders focused

on a transparent and equitable network. Key Insights As the crypto landscape swells with new users, developers, and traders, the emphasis on speed and scalability becomes paramount. Solana struggles with efficient scaling, while BlockDAG is engineered for growth from the ground up. BlockDAG emphasizes seamless, continuous operations, steering clear of the stability issues that occasionally hamper Solana. This proactive, future-ready strategy keeps the market buzzingâ€”BlockDAG isnâ€™t just planning for whatâ€™s next; itâ€™s preemptively solving potential problems. With BDAG coins priced enticingly at just \$0.022 each, it presents an irresistible option for those in search of a network designed to thrive amid growing demand and adapt seamlessly to future market shifts. Website: <https://blockdag.network> Presale: <https://purchase.blockdag.network> Telegram: <https://t.me/blockdagnetwork> Official Discord: <https://discord.gg/Q7BxghMVyu>

- Solana reaches \$201.19 before slight pullback to \$197.67 - Technical indicators show bullish momentum with multiple crossovers - Network TVL approaches yearly high at \$6.855 billion with \$3.67 million in daily fees The fourth-largest cryptocurrency by market capitalization demonstrates sustained bullish momentum as it challenges significant psychological barriers supported by robust network metrics and technical formations. With a market capitalization reaching \$94 billion, Solanaâ€™s recent price action suggests potential for continued upward movement. Solana technical patterns align Price action reveals an inverted head and shoulders pattern completion, with current movements representing a post-retest phase following support at the 50% Fibonacci level (\$159.54). The recovery phase has produced four consecutive positive daily candles, translating to a 26.39% price appreciation from recent lows. Solana Technical indicators present compelling evidence for sustained momentum, featuring both MACD bullish crossover and golden cross formations between key moving averages. However, the 100-day SMAâ€™s position below the 200-day average suggests medium-term sentiment requires further confirmation. Fibonacci extension analysis projects potential targets at \$224 and \$253, corresponding to 1.272 and 1.618 extension levels, respectively. Support established at \$183.65 (78.60% Fibonacci retracement) provides a foundation for possible healthy retests during the upward trajectory. SOL network fundamentals reinforce positive price action as Total Value Locked (TVL) approaches \$7.248 billion, currently standing at \$6.855 billion. Daily fee collection of \$3.67 million, generating \$1.83 million in revenue, indicates robust network utilization and growing demand for SOL tokens. The convergence of technical formations, network metrics, and market positioning creates a compelling case for continued strength, though careful monitoring of key support levels remains crucial for maintaining bullish market structure.

Julia Ramirez, a 22-year-old finance major at New York University, has recently hit the jackpot in an unexpected way. An early investor in BONK, the Solana meme coin that skyrocketed in popularity earlier this year, Julia watched her modest initial investment explode in value as BONKâ€™s price surged. Now, with BONK price volatility settling, sheâ€™s shifting her focus to BlockDAG, a new player in the cryptocurrency scene. Believing that BlockDAG has similar growth potential, Julia is all in, inspired by BlockDAGâ€™s technological promise and its recent BULLRUN100 bonus offer, which gives a 100% bonus on all coin purchases and early access to an airdrop. Letâ€™s dive into Juliaâ€™s journey, her decision to pivot to BlockDAG, and what makes BlockDAG an attractive choice for crypto enthusiasts. From BONK to BlockDAG: Juliaâ€™s Crypto Journey Julia first heard about BONK from friends in her college finance club, who were abuzz with stories of â€œmeme coinâ€ success. Inspired by Dogecoinâ€™s rise, BONK captured the internetâ€™s attention as a Solana meme coin with a distinctive appeal. Taking a leap of faith, Julia invested \$500, hoping to see modest returns. However, as BONK price soared, Julia found herself sitting on \$45,000, a life-changing sum for a college student. But BONKâ€™s journey was volatile. With BONK price dipping as quickly as it surged, Julia knew it was time to look for a more stable yet promising opportunity. Thatâ€™s when she discovered BlockDAG, a Layer 1 blockchain merging blockchain and Directed Acyclic Graph (DAG) technology for high-speed, decentralized transactions. She believes BlockDAG could replicate the success of BONK but with more sustainable growth, especially given BlockDAGâ€™s innovative technology and recent advancements. Why BlockDAG? Key Features and Benefits BlockDAG has quickly gained attention in the crypto community, distinguishing itself with a combination of blockchain and DAG technology, setting it apart from traditional blockchains. This unique setup allows BlockDAG to process transactions faster, positioning it as a competitor to networks like Solana, but with greater scalability. In addition to its technological appeal, BlockDAG has attracted a wave of users through its community-focused initiatives. For example, its TG Tap Miner game has drawn over 70,000 players, promoting social engagement and rewards through gaming. The companyâ€™s X1 Miner app also reached a milestone with over 200,000 downloads, showing a strong user base eager for decentralized applications. Julia sees BlockDAGâ€™s community-centric approach as a sign of long-term potential, which makes her confident in moving her investments there. Adding to this momentum is BlockDAGâ€™s latest BULLRUN100 bonus offer, which provides buyers a 100% bonus on their coin purchases, plus early access to its anticipated airdrop. Julia plans to take advantage of the BULLRUN100 bonus, believing this incentive could fuel BlockDAGâ€™s growth by attracting more users and expanding its community, much like BONK attracted meme coin enthusiasts. The Roadmap and Community Engagement BlockDAGâ€™s roadmap is another factor that caught Juliaâ€™s attention. Following the completion of its presale, which raised over \$105.5 million and yielded a remarkable 2100% return for early participants, BlockDAG is preparing for its mainnet test phase launch on November 14, 2024. The mainnet will undergo testing before going live, an important step in ensuring reliability and scalability. The BULLRUN100 bonus, a limited-time offer, has drawn a lot of interest from crypto enthusiasts, particularly those looking for the next big thing after the BONK price rally. Julia is excited about the opportunity to get early access to BlockDAGâ€™s airdrop, seeing it as a chance to increase her holdings while being part of a promising project from the start. As a student familiar with the potential for explosive growth in the crypto world, sheâ€™s confident that BlockDAGâ€™s roadmap and strategic incentives position it well to replicate, if not surpass, BONKâ€™s success. Looking Ahead: Can BlockDAG Match BONKâ€™s Success? For Julia and others eyeing the crypto market, BlockDAG offers a compelling alternative to traditional meme coins. While BONKâ€™s Solana meme coin rise was driven largely by internet hype and market speculation, BlockDAG is grounded in practical technology and has shown a clear commitment to building a lasting ecosystem. The combination of scalability, high-speed transactions, and community-driven applications makes BlockDAG stand out. Plus, the BULLRUN100 bonus offers an attractive entry point for buyers looking to maximize their initial investments, a sentiment that has resonated strongly with early adopters. Julia sees BlockDAG as a coin that not only has the potential to match the initial gains she saw with BONK but also sustain those gains over time. Key Insights Julia Ramirezâ€™s journey from a modest BONK investment to a serious commitment to BlockDAG is a reflection of the evolving interests in the crypto space. While BONK price fluctuations highlighted the risks of meme coins, BlockDAGâ€™s innovative approach and community-oriented incentives, such as the BULLRUN100 bonus, offer a fresh avenue for growth. With BlockDAGâ€™s mainnet launch just around the corner and its presale success showcasing strong demand, Julia is optimistic about whatâ€™s to come. For those inspired by Juliaâ€™s story, BlockDAG represents a potential â€œnext big thingâ€ in the crypto world. Whether it reaches the heights of BONK or blazes its own trail, one thing is clear: BlockDAG is positioning itself as a serious player in a market thatâ€™s always looking for the next breakthrough. And as Julia gears up for another exciting journey in crypto, sheâ€™s hopeful that BlockDAG could be the investment that, once again, makes her future a little brighter Website: <https://blockdag.network> Presale: <https://purchase.blockdag.network> Telegram: <https://t.me/blockdagnetwork> Official Discord: <https://discord.gg/Q7BxghMVyu>

Cryptocurrencies have a history of remarkable surges during pivotal times, rewarding early adopters with substantial gains. Notably, previous market shifts saw digital assets like Ethereum and Solana achieve impressive growth. Now, seasoned analysts are turning their attention to a fresh wave of altcoins that might be on the brink of significant breakthroughs, capturing the interest of investors seeking the next big opportunity in the crypto sphere. Among these emerging contenders is XYZVerse (XYZ), a pioneering memecoin uniting sports fans across various disciplines, aiming for exponential growth and a vibrant, community-driven ecosystem. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€” bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. ðŸ’ Own the field, earn while the crowd plays ðŸ’ XYZ is more than just a benchwarmer in the meme coin game; itâ€™s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€™s massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. ðŸ’ Missed meme coin supercycle? ðŸ’ By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOMEâ€™s 5,000% takeoff and WIFâ€™s 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot â€” currently undervalued, XYZ is going the distance to break new records! ðŸ’ Rallying the community, securing the win ðŸ’ XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystemâ€™s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live â€” donâ€™t miss out on this knockout 99,900% opportunity!<< POL (ex-Matic) POL, the Polygon Ecosystem Token, is central to the thriving Polygon network. It plays a key role in various operations within this blockchain ecosystem. Token holders can stake POL, which means they lock up their tokens to support the networkâ€™s security and operations. In return, they earn rewards based on the amount they stake. POL also empowers users to participate in governance. Holders have the right to vote on proposals that influence the development and direction of Polygon. Additionally, POL grants access to exclusive services and features within the ecosystem, offering unique opportunities not available to everyone. As Polygon continues to expand, the potential for POL might increase. Its multiple uses â€” staking, governance, and access to special services â€” could drive demand for the token. In the current market, tokens that offer utility and community involvement are gaining attention. Compared to other coins, POLâ€™s role in a growing network like Polygon may make it stand out. With the cryptocurrency market evolving, observing how POL fits into emerging trends could be worthwhile. Near Protocol (NEAR) NEAR Protocol is a platform designed to help developers create and launch decentralized applications. Founded by Alex Skidanov and Illia Polosukhin, it has raised over \$20 million from major investors. NEAR uses sharding to improve efficiency and scalability, making it faster and more cost-effective. It operates on a distributed network, like a decentralized version of centralized data storage systems. Key features include Nightshade, a sharding solution that boosts performance, the Rainbow Bridge, which allows tokens to move between NEAR and Ethereum, and Aurora, a Layer 2 solution that leverages Ethereumâ€™s technology for better speed and lower fees. NEARâ€™s technology has the potential to make decentralized applications more accessible and user-friendly. By improving speed and reducing costs, it could attract more developers and users. In the current market, where scalability and low fees are crucial, NEAR stands out. Compared to other platforms like Ethereum, NEAR offers solutions to common problems like high fees and slow transactions. With the ongoing interest in decentralized apps and scalable solutions, NEAR looks like a promising option. Its focus on interoperability and developer support could give it an edge in the competitive crypto space. Sui (SUI) Sui is a new blockchain platform thatâ€™s changing the game. Itâ€™s built to be secure, powerful, and ready for global use. Sui uses a unique way of handling data focused on objects. This approach, along with the safe Move programming language, fixes problems found in other blockchains. Sui gives developers a strong foundation to build on. But Sui isnâ€™t just about tech. It puts users first. Many find blockchain hard to use, but Sui aims to change that. With features like zkLogin, sponsored transactions, and programmable transaction blocks, Sui makes blockchain apps easier and friendlier. It sets a new standard for how people interact with Web3. In todayâ€™s market, Sui stands out. While many coins struggle with scalability and user experience, Sui tackles these issues head-on. Its focus on strong tech and ease of use gives it an edge. Compared to others, Suiâ€™s approach may appeal to developers and users alike. As blockchain evolves, platforms that prioritize user experience are likely to shine, and Sui fits that trend. Jupiter (JUP) Jupiter is making waves in the decentralized finance (DeFi) world as a leading platform on the Solana blockchain. Specializing as a decentralized exchange (DEX) aggregator, Jupiter pools liquidity from various sources to ensure seamless and efficient token swaps. This means users can trade tokens at the best possible rates, benefiting from Solanaâ€™s high-speed and low-cost transactions. Jupiterâ€™s user-friendly platform has become a go-to choice for many looking to navigate the expansive Solana ecosystem. The potential for Jupiterâ€™s growth is significant. By focusing on liquidity aggregation, the platform enhances trading efficiency, a key factor in the fast-paced DeFi market. While many projects are vying for attention, Jupiterâ€™s innovative approach sets it apart. Its commitment to improving user experience and expanding its offerings positions it well in the current market cycle. Compared to other coins and platforms, Jupiter stands out for its practicality and forward-thinking strategy, making it an attractive option for those interested in the future of DeFi on Solana. Conclusion POL, NEAR, SUI, and JUP are promising, but XYZVerse (XYZ) unites sports fans in a memecoin poised for massive growth and community-driven success. You can find more information about XYZVerse (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. A new wave of cryptocurrencies has the potential to turn modest investments into substantial wealth by 2025. Prominent tokens like Solana, XRP, WIF, and emerging projects are capturing the attention of investors seeking significant returns. The crypto landscape is ripe with opportunities, and certain digital assets are positioned for remarkable growth in the near future. XYZVerse, the first all-sport memecoin, aims for a staggering 20,000% growth, uniting sports fans and striving to outperform tokens like PEPE and MOG. Score Big with XYZ: The New Meme Coin Heavyweight The fans are losing it! The XYZ token is in the crypto ring, landing blows on the competition â€” bullshit coins, worthless farming schemes, and scam projects. Like a true champ, this first-ever all-sports meme token has fought its way through the bear market with fearless momentum and shows no signs of slowing down. With eyes set on a roaring thousand-fold growth, XYZ is destined to leave the 2024 meme coin triumphant like BOME and WIF trailing in its wake. ðŸ’ Own the field, earn while the crowd plays ðŸ’ XYZ is more than just a benchwarmer in the meme coin game; itâ€™s creating the ultimate playing field with XYZVerse, where the thrill of sports meets the energy of meme culture. With a roadmap equipped with entertainment dApps, prediction markets, and sports betting options, XYZ is poised to draw in millions of gamblers ready to join the action. Remember Polymarketâ€™s

massive \$1 billion trading volume during the US election betting fever? XYZ is gearing up for an even bigger win in the GameFi arena, letting its stakeholders cash in on the perfect combo of meme coin vibes, sports hype, and crypto mass adoption. ðŸ™Š Missed meme coin supercycle? ðŸ™Š By capitalizing on the ever-expanding gambling niche, XYZ is set to become the G.O.A.T of meme coins. BOM– 5,000% takeoff and WIF– 1,000% year-to-date rally are now relics of the past because XYZ is set to explode by over 9,900% after the TGE and outshine its sensational predecessors. Get in the game early to secure your spot – currently undervalued, XYZ is going the distance to break new records! ðŸ™Š Rallying the community, securing the win ðŸ™Š XYZVerse will be the MVP in this bull run, giving the community the control to call the plays and steer the ecosystem–s direction. Active contributors will receive airdropped XYZ tokens as a reward for their dedication. With rock-solid tokenomics and plans for both CEX/DEX listings, XYZ is positioned for a championship run, ensuring a steady revenue flow and consistent token burns to keep the scoreboard in favor of a strong price and a thriving community. >>The XYZ presale is live – don–t miss out on this knockout 99,900% opportunity!<< Solana (SOL) SOL has been on a remarkable run recently. In the past week alone, its price jumped by 18.31%. Looking at the monthly picture, SOL has surged by 38.97%, and over the last six months, it boasts a gain of 37.12%. Currently trading between \$152.45 and \$177.86, Solana is demonstrating strong momentum in the crypto market. Technical indicators suggest this upward trend might continue. The Relative Strength Index sits at 66.38, indicating that SOL is approaching overbought territory but still has room to grow. The MACD level is positive at 2.992, and the Stochastic oscillator reads 78.44, both pointing toward continued bullish momentum. The 10-day and 100-day Simple Moving Averages are at \$198 and \$177.11 respectively, suggesting that the short-term trend is aligning with the longer-term movement. Dogwifhat faces resistance at \$2.98. Breaking this level could increase the price by about 18% from the current high. The next resistance is at \$3.71, presenting a potential 46% gain. On the downside, the nearest support is at \$1.51. Falling below this could lead to the second support at \$0.77, a drop of around 57%. Traders will watch these levels to predict the coin–s next move. Dogwifhat (WIF) Dogwifhat (WIF) has seen its price decrease steadily. In the past week, it dropped by 1.95%. Over the last month, it fell by 4.98%. In six months, the price declined by 22.31%. The current price ranges between \$1.79 and \$2.53. This downward trend shows that market sentiment remains cautious. Technical indicators send mixed signals. The Relative Strength Index is at 47.14, which is neutral. The Stochastic value is low at 16.55, suggesting the coin might be oversold. This could lead to a price rebound. The 10-day Simple Moving Average is \$2.37, slightly above the 100-day SMA at \$2.22. This indicates short-term bearish momentum. Dogwifhat faces resistance at \$2.98. Breaking this level could increase the price by about 18% from the current high. The next resistance is at \$3.71, presenting a potential 46% gain. On the downside, the nearest support is at \$1.51. Falling below this could lead to the second support at \$0.77, a drop of around 57%. Traders will watch these levels to predict the coin–s next move. Conclusion With the bull run in motion, SOL, WIF, and XYZVerse (XYZ), merging meme culture and sports, could transform modest investments into significant returns by 2025. You can find more information about XYZVersus (XYZ) here: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- Coinbase has deployed its very first token – cbBTC on the Solana ecosystem. - The token is aimed at improving Bitcoin accessibility and enhancing DeFi adoption. The crypto market has progressed further in its bullish movements, with Bitcoin steady at the \$75K level. Meanwhile, the community has begun speculating on new regulatory leadership and other changes that would follow suit after the US elections. Amid this spur of activity, Coinbase has deployed its very first token on Solana. The US-based cryptocurrency exchange announced on X that it has launched a wrapped BTC token – the cbBTC, an SPL token. cbBTC is backed by Bitcoin in a 1:1 ratio, for which the Bitcoins will be held in Coinbase custody, as stated by the exchange. Moreover, the wrapped BTC is currently trading at a price of \$76,441, with Coinbase having deployed 135.58 of the cbBTC. Additionally, the digital asset has already seen a transfer volume of \$4.04 million, according to Solscan data. Coinbase had announced its plans to launch a wrapped BTC previously during the Breakpoint 2024 event in September. The exchange, through the launch of this new digital asset, discussed plans to improve user accessibility to Bitcoin. How has Coinbase Launched the Wrapped Bitcoin? The crypto exchange plans to enhance the adoption of Bitcoin within the DeFi sector. Some of its partners include Jupiter Exchange, Raydium Protocol, and Phoenix Trade. The digital asset is also deployed in Kamino Finance, which stated that the cbBTC is set to become a flagship asset on Solana. Coinbase recently announced the launch of a new engineering hub in Singapore. This hub is expected to support the local developers– ecosystem. Furthermore, the crypto exchange drew market attention when it revealed the FDIC–s restricting crypto access in banks. Meanwhile, the crypto exchange is also one among the firms that have been battling regulatory issues through the SEC lawsuit. Recently, on October 29, Coinbase demanded an apology from the SEC for the regulator–s frivolous cases. Highlighted Crypto News Today:

- SOL reaches \$196, marking highest level since July - Technical indicators show strong momentum with RSI at 66.87 - Price targets \$210.03 year-to-date high with key resistance at \$193.34 Recent political developments in the United States have triggered significant movement in cryptocurrency markets, particularly affecting Solana–s price trajectory. The digital asset currently demonstrates strong technical positioning as it approaches critical resistance levels. Solana technical analysis and market dynamics Trading activity shows SOL maintaining position above its 20-day exponential moving average, traditionally interpreted as a bullish market signal. This technical formation suggests sustained buying pressure and potential for continued upward momentum as traders respond to broader market catalysts. The Relative Strength Index provides additional confirmation of market strength, registering 66.87 on the scale. This reading indicates robust momentum without entering overbought territory, potentially leaving room for further price appreciation before technical warnings emerge. Market participants now focus on the crucial \$193.34 resistance level, representing the final significant hurdle before SOL can challenge its year-to-date peak of \$210.03. Sustained trading volume and continued buying pressure appear necessary for breaking through these key price points. However, market observers note potential risks to this bullish scenario. Any significant decline in buying momentum or increase in profit-taking activity could trigger a retracement below \$186.40, with further support levels established around \$171.78. The convergence of political developments and technical strength creates an intriguing market dynamic for Solana–s short-term prospects. Trading patterns suggest maintained bullish sentiment while approaching critical price levels that may determine near-term direction.

- Crypto exchange Binance announces the rollout of Solana (SOL/USDT) options for next week. - The exchange initiated a transaction of 2 million SOL in the last 24 hours. Binance, the largest centralized crypto exchange by volume, has announced the launch of Solana – SOL/USDT –options on its Options Trading platform, starting from November 12. This announcement comes at a time when SOL is experiencing a surge in investor anticipation of its potential to reach a new all-time high (ATH). As per the update, SOLUSDT daily and weekly options will go live on the platform next Tuesday at around 8 AM UTC. Notably, these options are MiCA-compliant, European-based contracts, meaning they can only be exercised on the expiration date. Trading crypto options is equivalent to getting the right, but not the obligation, to buy or sell a specific cryptocurrency at a predetermined price before/on a set expiration date. They provide traders with a way to speculate on price movements in the crypto market. Meanwhile, as part of its wallet liquidity management, Binance transferred over 2 million SOL – worth over \$374.82 million – from its cold wallet to its hot wallet. Will Solana (SOL) Enroute to Its ATH? Over the past 24 hours, Solana (SOL) recorded a rally towards its 3-month high of \$191.95. However, at present, the rally has cooled down to 0.64%. As per the analysis, the current trend appears to be bullish, as indicated by an emerging positive histogram on the moving average convergence divergence (MACD). But how far is the altcoin from its all-time high? Solana hit its all-time high (ATH) of \$260 on November 6, 2021. The current price is down nearly 27.6% from the ATH. On March 18, 2024, the altcoin reached \$210 but failed to set a new high thereafter. On the ATH day in 2021, with 471.57 million SOL in circulation, Solana had a market cap of \$87.87 billion. Currently, according to CMC, over 301.21 million SOL are in circulation, with a market cap of \$88.5 billion. In the upcoming days, SOL may face key resistance and support levels based on the cues it picks up. If the SOL price sustains above \$171.52 without dipping below it, the altcoin could rise to test resistance levels like \$195.85 and \$204.50. On the other hand, if a downward breach occurs, SOL may continue its bearish momentum toward critical support levels at \$159.30 and \$144.35. Highlighted Crypto News Today Is the Crypto Bull Run Here to Stay in Moonvember?

Cryptocurrency enthusiasts typically seek out high-potential investments, and the current market trends are brimming with options. Solana (SOL) is experiencing a boost from hefty transaction volumes and a dynamic meme coin community. Meanwhile, Aptos (APT) is gaining traction with its recent USDT integration, which is enhancing DeFi liquidity and functionality. Yet, it–s BlockDAG that–s grabbing headlines with its presale reaching a whopping \$113.5 million, as its latest brand video showcases its superiority over other big players like Ethereum and Solana. With its current 100% bonus offer, BlockDAG (BDAG) is tempting crypto fans to double their assets, setting itself up as one of the leading cryptocurrencies for 2024 and gaining a significant competitive edge. Solana–s Market Value Jumps 15% Recently, Solana–s market performance has been noteworthy, with a 15% price increase over the last month, pushing its market cap to an impressive \$81 billion. This surge is fueled by robust demand within its thriving meme coin environment, with daily trading volumes averaging \$2.4 million, indicating a consistent rise in network activity. However, some market watchers caution that Solana–s swift price increase might find it hard to sustain momentum amidst wider market dynamics. They also suggest that the meme coin market–s volatility could potentially destabilize Solana–s growth. APT–s 10% Rise Post-USDT Integration Aptos has also seen significant movement, with a 10% price rise following the integration of USDT, which has injected new vigor into its DeFi system, enabling more transactions with lower fees and quicker speeds. Nonetheless, the network–s substantial dependency on stablecoin integration poses concerns regarding its ability to maintain long-term, natural growth without further innovations. Market analysts also hint that Aptos might encounter obstacles that could restrict its price potential. BlockDAG–s Presale Crossed \$113.5M & Counting! Envision grabbing a slice of the next big crypto phenomenon before it erupts–BlockDAG presents just such a moment. While Solana and Aptos have captured headlines with their robust growth and strategic USDT integration, BlockDAG is trailblazing with its explosive presale success. In just a few months, this top contender has amassed over \$113.5 million by offloading more than 14.8 million BDAG coins. This has not only garnered the attention of over 170,000 unique members but also vastly widened its global influence, making blockchain technology more accessible. Early holders in BDAG have seen a monumental 2100% increase from the initial pricing of \$0.001, sending ripples of excitement throughout the crypto community. Currently, in its 25th batch, BDAG coins are valued at \$0.022 each, showcasing the project–s exceptional growth prospects. Market analysts attribute this impressive trajectory to its avant-garde DAG technology and thorough roadmap. The brand–s latest video demonstrates its supremacy over behemoths like Bitcoin, Solana, Ethereum, and Kaspa, emphasizing its unparalleled transaction speed and scalability that continually attract a large following. Sweetening the deal is BlockDAG–s exclusive, time-limited 100% bonus offer, which allows participants to double their BDAG coins using the code BDAG100. This promotion responds to numerous community requests on social media and celebrates Bitcoin–s recent high, nearing its peak value. This compelling offer lets both new and current holders instantly amplify their BDAG stakes, potentially doubling their returns. However, this chance is quickly slipping away as the current presale batch nears its end, likely leading to a price spike and possibly making BDAG difficult to obtain. Now is the prime time to leap into this swiftly expanding venture and capitalize on the temporary 100% bonus offer. 2024–s Top Cryptocurrency Investments As Solana soars with its increased transaction volumes and APT benefits from the USDT integration, BlockDAG–s presale achievements, surpassing \$113.5 million, distinguish it as a lucrative crypto coin. With its fleeting 100% bonus, BlockDAG extends a rare chance for traders to enhance their portfolios. As the sales of BlockDAG–s presale batches advance swiftly, those on board early are already witnessing considerable gains. For those eyeing substantial growth, BlockDAG–s cutting-edge technology and robust community backing secure its spot as a leading cryptocurrency for 2024. Presale: <https://purchase.blockdag.network> Website: <https://blockdag.network> Telegram: <https://t.me/blockDAGnetwork> Discord: <https://discord.gg/Q7BxghMVyu>

- Solana (SOL) has flipped Binance Coin (BNB) in market cap, claiming the fourth spot in the rankings. - Bitcoin–s all-time high of \$75,011 has driven a bullish trend around the crypto market. The global crypto market turned bullish in Asian trading hours as Bitcoin (BTC) hit a new all-time high of around \$75,011.06, which the cryptocurrency recorded an hour ago. This new turn has sparked optimism and led to a positive note for the altcoins. Among them, Solana (SOL) has surpassed Binance Coin (BNB) in terms of market cap, claimed the fourth spot, and entered the top-tier crypto rankings. Solana–s market cap now stands at \$87.9 billion, whereas BNB–s stands at \$84.12 billion. Solana–s impressive 17% rally comes from its 24-hour open interest, which surged 24.69%, reaching \$3.64 billion. At the time of writing, SOL has surged to an intraday high of \$186, inching closer to the \$200 level last seen in April 2024, when the market was at its peak. If Solana breaks the \$200 resistance, it could be on track to reach its all-time high of \$260, a level it recorded back in November 2021. The bullish outlook on Solana and the crypto market was activated by the U.S. election results. According to the report, Donald Trump won the presidency against Kamala Harris. Solana–s Technical Outlook Signals Bullish Momentum The bullish trend is more visible with a strong technical outlook. Zooming in on Solana–s four-hour chart reflects ongoing positive market sentiment, with the asset in a strong position as the daily RSI sits in the 72 range. In strong upward trends, assets can remain in overbought conditions for extended periods. Moreover, the asset–s daily chart indicates the short-term 50-day moving average is above the long-term 200-day moving average, forming a Golden Cross. Further, the Moving Average Convergence Divergence (MACD) indicator for Solana is well above the signal line in the SOL/USDT four-hour trading pair, suggesting a continued bullish trend. Additionally, the Chaikin Money Flow (CMF) line at 0.21, indicates a positive money flow, with buyers currently having the upper hand. Whereas, the trading volume has spiked by 127.06%. With a daily trading volume soaring Solana–s momentum shows no sign of slowing. If it closes above \$200, the next targets could be \$220 and \$246, even pushing toward \$260. However, as the RSI enters the buying zone, a short-term pullback or consolidation may occur–but not immediately.

- Solana trades at \$159, marking a brief decline of 1.82% over the last 24 hours. - The market observed a liquidation of \$11.43 million worth of SOL. The prevailing cryptocurrency market sentiment is uncertain. This week is crucial for the overall market in light of the US election. Historically, Bitcoin and other major altcoins have displayed positive momentum after the US presidential election. The market anticipates a similar picture, with the assets potentially hitting new

highly after the election. The fifth-largest cryptocurrency, Solana (SOL), remains in a consolidation phase as the broader crypto market’s momentum is at a critical juncture. Despite a steady surge over the last month, SOL is currently grappling to enter the bullish territory. Notably, over the last 24 hours, SOL lost over 1.82%. The asset managed to hit a high of \$164.71. Despite the surge, the price did not rise further and instead dropped to a low of 155.17. At press time, SOL is trading at \$159.91, and the daily trading volume has increased by 12.80%, standing at around \$2.86 billion. Meanwhile, Solana has witnessed a 24-hour liquidation of \$11.43 million, as per Coinglass data. On the other hand, a crypto whale, with approximately \$87 million in profits, has sold 92K Solana tokens worth \$14.58 million. Since November 1, the whale has offloaded a total of 357,070 SOL, valued at approximately \$58.54 million. The whale still holds 52,089 JitoSOL and 126,548 SOL. Can Solana Conquer the Bears? As SOL’s Moving Average Convergence Divergence (MACD) indicator settles beneath the signal line, indicating a downside pressure and an impending bearish trend, Solana’s four-hour technical chart reflects the current negative market sentiment. Besides, the altcoin is approaching the neutral zone in the market, as suggested by the daily relative strength index (RSI), which is positioned at 40.26. Moreover, the asset’s daily frame displays the short-term 9-day moving average below the long-term 21-day moving average. Assuming SOL’s revival, the asset’s price could rise to a potential \$163 range initially. Subsequent resistance might be found at \$167. Analysts predict SOL could reach the \$185 to \$200 range if its upward momentum continues. However, a strong bearish trajectory of SOL could take the price to immediate support at \$154. Further declines will drive the altcoin’s price to slip even lower to the \$150 range. Disclaimer: The opinion expressed in this chart is solely the author’s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

Pro traders know that it’s quite a struggle to find a trading platform that addresses their real issues—like slow transactions, high commissions, and a lack of advanced tools. But DTX Exchange (DTX) has hopped onto the crypto stage as the best trading platform with its advanced analysis and trading tools. And that’s exactly why Binance (BNB) and Solana (SOL) users are jumping ships. Continue reading as we discuss the many reasons behind this shift in focus from Binance and Solana to DTX Exchange! DTX Exchange Introduces Industry-Leading Analysis and Trading Tools DTX Exchange is the new talk of the town, particularly among BNB and Solana enthusiasts. That’s because its advanced analysis and trading tools bring the best of traditional and decentralized trading to one place. It is a perfect blend of centralized efficiency and decentralized security. In fact, you should consider DTX Exchange your go-to platform if you are looking for transparency, reliability, and in-depth analytics to inform your trading strategies. One amazing feature is DTX Exchange’s on-chain analytics and trading signals. It brings real-time data and actionable insights to your screen. These tools help traders like you make decisions based on market trends. That means the uncertainties of volatile conditions are reduced. And if you are concerned about liquidity issues, DTX Exchange integrates distributed liquidity pools. This way, DTX Exchange minimizes slippage and creates a smoother experience when buying and selling across various asset classes. As a non-custodial platform, DTX addresses the long-standing issue of asset security by allowing you to retain control of your private keys. So, you get to have no risks commonly associated with centralized exchanges. And with the additional advantage of social and copy trading features, new traders can learn by following and replicating the strategies of the pros on the platform. Binance Burns 1.7 Million Tokens, But BNB Remains Under Pressure BNB recently managed to break past \$600. It stirred hope among holders for a climb toward its all-time high. But the optimism was short-lived. After crossing the psychological barrier, BNB quickly corrected and now trades at \$579, down 2.15% over the past week. Even Binance’s latest token burn, totaling over 1.7 million BNB—around \$1 billion in value—couldn’t stave off the dip. This quarterly burn removed 1.22% of BNB’s supply, yet market forces continue to keep BNB under pressure. While BNB faces a tough road ahead, analysts suggest the next bull cycle is on the horizon and expect BNB to rally past \$700 by year-end. Yet, when it comes to profit potential, BNB’s gains might still lag behind opportunities at DTX Exchange, where advanced trading tools and high-growth projections have many investors shifting their gaze. Solana’s Daily Revenue Touches 2.5 Million After Seven Months Solana recently achieved a milestone in daily revenue. The blockchain hit \$2.5 million on October 24, 2024—its highest since March, according to Artemis data. This revenue, fueled by gas fees from the blockchain’s increased activity, points to Solana’s continued popularity among users. Following this positive sign, SOL’s price also rallied. The Solana coin broke past \$180 on October 29. But the climb didn’t last long; SOL quickly corrected and is currently trading at \$169, down 2.35% over the past week. For hopeful holders, the \$200 mark remains a distant reality. Market experts predict SOL may close the year around \$180 instead. Meanwhile, the DTX Exchange is drawing in some SOL holders with its advanced trading tools. DTX is a superb alternative for those looking for higher returns as Solana’s upward momentum takes a breather. The DTX Presale Raises Over \$6 Million! The DTX token improves user engagement on the platform through various utilities. This includes trading fee payments, access to premium features, staking, and even governance. What’s more, holding DTX tokens also unlocks loyalty rewards. Now in Stage 4 at \$0.08—a 300% increase from its Stage 1 price of \$0.02—the DTX token promises an attractive 50% gain by its launch price of \$0.12. This upward trend, alongside strong demand, has driven the presale past \$6.6 million as of the present stage. The best part is DTX’s growth potential after its listing. The forecasts hint at a mouth-watering 10,000% price pump right after it lists on major exchanges! Learn more: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana achieved record 123 million monthly active addresses, a 42% increase. - Memecoins and platforms drive user engagement and trading volume growth. Solana (SOL) is riding a wave of growth, achieving its highest-ever monthly active address count in October. The network recorded over 123 million active addresses, marking a 42% increase from September. This surge highlights a striking rise in user engagement, up from just 12.7 million active addresses in January. Fueling this activity is a booming memecoin market on Solana, driven by platforms like Pump.fun, a memecoin creation app, and the decentralized exchange Raydium. Pump.fun raked in over \$30.5 million in revenue last month, while Raydium reported \$30 billion in trading volume. Andreessen Horowitz’s State of Crypto report underscored Solana’s appeal, showing over 100 million monthly active addresses, far outpacing Ethereum’s 57 million. Justin Daethan of Keyrock emphasized Solana’s speed and low fees, which are particularly attractive for high-frequency traders. He noted that Solana’s efficiency draws users who seek affordable transactions, a contrast to Ethereum’s often high fees. Adding to the excitement is the rise of AI-themed memecoins like Goatseus Maximus (GOAT), which have captivated users and led to a flurry of new token launches. SOL Whales And Price Moments Simultaneously, a Solana whale recently made headlines, selling \$44 million worth of SOL on Binance and making colossal profits. On-chain data from Lookonchain revealed the whale bought 500,862 SOL for \$11.81 million between August and October. These holdings have now ballooned to \$81.14 million. Despite the major selloff, the whale still holds over \$45 million in SOL-related assets, sparking optimism for further price gains. Trading at \$162, SOL is up 12% this month, and analysts see potential for more, despite current levels still being well below its peak of \$260. Highlighted News Of The Day Bitcoin Drop Sparks \$350M Liquidations Ahead of U.S. Election

Imagine if you could go back in time and purchase Solana (SOL) for just \$0.50. Many think Rexas Finance (RXS) is offering now a comparable prospect. Publically supporting Rexas Finance, a top 10 Solana investor, has made connections between the early Solana days and the growing potential of RXS. Rexas Finance has positioned itself as a leader in the crypto industry with its creative approach to real-world asset tokenization, therefore offering a convincing investment option for individuals wishing to profit from the next wave of digital assets. Introducing Rexas Finance (RXS) Leading the way in real-world asset tokenization, Rexas Finance enables consumers to tokenize a range of physical assets—from real estate and art to goods and intellectual property—on a worldwide basis. Rexas Finance builds a more inclusive and open investing environment by using blockchain technology, therefore enabling more liquidity and access to once-unexplored markets. Rexas Finance is fundamentally focused on streamlining the asset tokenizing process. Designed with user experience in mind, the platform makes it simple for both people and companies to develop, run, and trade asset-backed tokens. Rexas Finance provides a new benchmark for how assets can be seen and traded by removing the conventional complexity connected with asset management using strong tools and a user-friendly interface. The Value of Early Contribution The support of a top 10 Solana investor provides a major confirmation of Rexas Finance’s promise. Those who invest in RXS now could see comparable benefits, much as early Solana investors profited as the blockchain platform grew in appeal. The Solana investor underlined that Rexas Finance not only closes a significant market gap but also has the technology foundation to enable its great ambitions. Rexas Finance seeks to democratize asset ownership so that everyone may engage in a market traditionally open only to a small number. Investors who recall how fast and dramatically Solana’s value jumped will find the same promise in RXS. Currently, at its presale stage, strategic action is to generate money without depending on conventional venture capital sources. This strategy helps to build a strong community of early adopters and investors in the vision of the project. With RXS tokens selling fast and reflecting the early excitement around Solana, the presale has acquired amazing popularity. Rexas Finance is in Stage 4 of its presale right now; tokens run \$0.060. Strong investor interest is shown by the presale’s already over \$5 million raising. Early presale sales in less than a month yielded over 100% gains for participants. This momentum emphasizes the increasing faith in Rexas Finance as a viable investment choice. Rexas Finance also added another incentive, which is the Rexas Millionaire Giveaway, whereby twenty fortunate winners will each get \$50,000 worth of RXS tokens, therefore encouraging community involvement. This project is a means to include possible investors and inspire them to participate in the presale, not only a show-off. The gift gives the investing process an interesting new perspective and increases its appeal to people to guarantee their holdings before prices climb. Listings on CoinMarketCap and CoinGecko help to build credibility. Rexas Finance’s latest CoinMarketCap and CoinGecko listings further help inspire investor trust. Among the Bitcoin community, these sites are quite well-liked since they provide insightful analysis of different initiatives together with useful information. Being highlighted on such platforms helps Rexas Finance establish a stronger reputation and facilitates tracking of the market dynamics and performance of the token for possible investors. Rexas Finance depends much on these listings since they highlight its presale and attract a lot of interest for it. More investors are expected to enter the field as the project gets more well-known, therefore generating a positive feedback loop that can drive the price of RXS higher. Conclusion Supported by a top 10 Solana investor and with the great momentum created during its presale, Rexas Finance (RXS) offers an appealing prospect reminiscent of the early Solana days. The possibility for large returns on investment becomes more evident as the platform keeps innovating in the real-world asset tokenizing domain. Investing in RXS now could feel like traveling back in time to purchase SOL at \$0.50—an opportunity not to miss—for anyone wishing to profit from the next wave of cryptocurrency innovation. The cryptocurrency market is teeming with developments as top coins like Solana, BNB, Cardano, and BlockDAG display notable advancements and dynamic pricing. These cryptocurrencies each bring unique benefits to the table, potentially boosting a well-rounded investment portfolio. Solana is actively expanding its ecosystem, BNB remains a core component of the Binance exchange, and Cardano continues to progress in its decentralization. Meanwhile, BlockDAG stands out due to its strong presale performance and recent technological improvements, marking it as a significant player in the market. 1. BlockDAG: Rapid Rise in the Crypto World BlockDAG (BDAG) has been making headlines with its revolutionary blockchain technology, designed to offer scalability and swift transactions, positioning it among the top cryptocurrencies to consider purchasing. Currently in Batch 25 of its presale, BlockDAG has raised over \$111 million, drawing attention from both individual and institutional traders due to its decentralized framework. Its recent testnet launch underscores the capabilities of its Layer 1 blockchain, enabling the minting of BDAG coins and experimentation with smart contracts, invigorating its community. Furthermore, BlockDAG’s ongoing promotional offer of a 100% bonus with the code “BDAG100A” effectively doubles the gains of early participants, enhancing its appeal. Priced at \$0.022 with a remarkable 2100% surge and 14.6 billion coins sold, BlockDAG is gearing up for its mainnet release, making it a compelling option that could rival established giants like Solana and Kaspa with its combination of high-speed transactions and a robust ecosystem. 2. Solana: Expansive Ecosystem Development Solana’s ecosystem is rapidly expanding, currently hosting over 400 projects, which has elevated its position as one of the top cryptos to buy. Its recent partnership with Dubai’s DMCC crypto center underscores its commitment to broadening its influence, particularly in the Middle East, fostering blockchain innovation in the region. With ETFs showing increased institutional interest, Solana’s valuation could climb if it maintains its blockchain efficiency. Priced at \$168, Solana presents itself as a valuable long-term growth asset. 3. BNB: Central to Binance’s Operations BNB remains crucial to Binance’s operations, offering trading discounts and facilitating transactions within the ecosystem. The coin’s recent engagements, including an incubation event linking new projects with potential investors, spotlight its innovative approach. With the BDAG100 bonus and minimal withdrawal fees on associated platforms, BNB is trading at \$577, suggesting its readiness for potential upward trends, reaffirming its status as a top investment choice. 4. Cardano: Advancements in Governance Cardano distinguishes itself with the recent implementation of the Chang hard fork, enhancing governance that allows ADA holders more influence over network updates, pushing it toward fuller decentralization. Cardano continues to grow, introducing AI-driven projects like Atua AI to optimize efficiency. Despite a current price of \$0.35 facing downward pressures, Cardano’s dedication to research-based development keeps it in the lead as a significant crypto player. Key Insights Solana, BNB, Cardano, and BlockDAG each offer unique advantages, positioning them as leading cryptocurrencies in the current market. BlockDAG is gaining traction with its expanding community and rapid transaction capabilities, Solana is broadening its network, BNB is centered on utility, and Cardano is enhancing its governance model. Looking ahead to 2025, the ongoing development of these coins suggests they will remain attractive to traders keen on the dynamic shifts within the cryptocurrency landscape. BlockDAG is making waves in the blockchain scene, aiming to match up with big names like Ethereum and Solana by solving key problems in the crypto world such as scalability, speed, and decentralization. Ethereum is known for having a high Total Value Locked (TVL), showing its strength in decentralized finance (DeFi). Solana’s ecosystem is packed with a variety of applications and games, thriving in its sector. BlockDAG (BDAG) is stepping up to meet these same needs but with improved solutions. By mixing blockchain with Directed Acyclic Graph (DAG) technology, BlockDAG is developing a quick platform, that can handle a lot of activity, and keeps things decentralized, merging proven methods with new possibilities. Ethereum and Solana Are Trend Setters Ethereum and Solana stand out in the blockchain world, each bringing something special to the table. Ethereum’s TVL shows the high value it holds within DeFi applications, attracting billions of dollars which highlights the trust and liquidity it offers. Its wide-ranging DeFi ecosystem lays a strong foundation for countless decentralized applications (dApps) and has attracted a large following of developers, investors, and regular users. Yet, Ethereum’s growing popularity also brings challenges like increasing transaction fees and network congestion. The launch of Ethereum 2.0 seeks to fix these problems, but there’s still a need for faster solutions. Solana offers a different take on scalability with its high-speed, low-cost setup that has made it a standout for tasks needing quick transactions, especially in gaming and NFTs. The Solana ecosystem is vibrant, and packed with applications and services that enjoy its fast and efficient setup, making it a go-to for projects that handle lots of transactions in real-time. However, the structure of Solana’s network has come under fire, particularly regarding its stability. BlockDAG’s Modern Fusion: Merging Blockchain with DAG BlockDAG’s strategy uniquely merges the decentralized nature of blockchain with the efficiency of Directed Acyclic Graph (DAG) technology. This approach is designed to manage large numbers of transactions economically. The architecture offers several benefits: it scales like Solana’s fast system, secures transactions as reliably as Ethereum, and avoids the common traffic jams that slow down networks. Essentially, BlockDAG delivers the best of both worlds, meeting the growing needs of blockchain users and paving the way for significant expansion. A critical test for BlockDAG was its recent testnet phase, which effectively showed that the system could support heavy transaction loads without the typical delays that affect networks like Ethereum during busy periods. Participants in the test noted the fast transaction times and the system’s stability, enhancing trust that BlockDAG’s framework could compete with Ethereum’s Total Value Locked (TVL) growth and keep pace with Solana’s rapidly growing ecosystem. With its blend of blockchain and DAG technologies, BlockDAG is developing a flexible infrastructure that can grow to meet future demands. Mapping BlockDAG’s Future: Key Steps to Mainnet Test Phase BlockDAG has laid out a clear roadmap with important steps toward entering the mainnet test phase. After a successful presale that raised over \$109 million, BlockDAG is now focusing on growing its community and forming partnerships to meet its objectives with solid financial support. Here’s a breakdown of what’s ahead: Refining the Testnet: Having completed the testnet phase, BlockDAG is now refining its network. This stage includes tweaking the system based on feedback from users to make sure it is robust and easy to use. Test phase of the Mainnet: The test phase of BlockDAG’s mainnet is a crucial next step. This phase is critical: BlockDAG must demonstrate its ability to handle large-scale operations, fast transactions, and real-world applications. The mainnet will fully enable users to utilize DeFi applications, NFTs, and other decentralized applications that are thriving within the Ethereum and Solana environments. Expanding Through Partnerships: Once the mainnet is active, BlockDAG plans to broaden its network by partnering with existing DeFi and NFT platforms. Its infrastructure, comparable to Ethereum’s capacity and Solana’s speed, positions BlockDAG as an attractive platform for developers seeking a versatile and efficient alternative. Engaging the Community: An example of BlockDAG’s community engagement is the TG Tap Miner game, where players earn Tap Points that can be converted into BDAG coins. This not only draws people into BlockDAG’s ecosystem but also builds a dedicated group of supporters. Initiatives like these are crucial for fostering a loyal user base that will promote broader adoption. Focusing on Diverse Buyers: The success of BlockDAG’s presale, which included a 100% bonus, has effectively drawn both casual traders and institutional buyers. BlockDAG continues to appeal to a wide range of backers, ensuring a strong community that provides the necessary financial support and presence to maintain momentum on its roadmap. BlockDAG’s Competitive Edge in the Blockchain Domain Ethereum currently dominates blockchain finance with its high Total Value Locked (TVL), and Solana is renowned for its rapid application performance. However, BlockDAG is set on combining the best of both worlds. Its strategic roadmap recognizes the shortcomings in both the Ethereum and Solana platforms and proposes a solution that offers Ethereum’s robust stability alongside Solana’s operational efficiency. If BlockDAG’s mainnet matches the success of its testnet, it has a solid chance to rival Ethereum’s TVL and establish itself within the Solana ecosystem as a formidable alternative. BlockDAG aims to be more than just another blockchain; it seeks to establish a scalable foundation that adapts to user needs without losing the decentralized, secure essence that defines blockchain technology. Through this approach, BlockDAG aspires not only to compete with Ethereum and Solana but also to enhance their offerings, possibly marking itself as a key player to watch in the future. With the finalization of BlockDAG’s mainnet on the horizon, anticipation within the crypto community is palpable. The success of BlockDAG could herald a new era in blockchain technology, where scalability and decentralization successfully coexist. In the competitive crypto market, where many tokens promise groundbreaking potential, Rexas Finance (RXS) has positioned itself uniquely, raising a remarkable \$5.45 million in its ongoing presale. Rexas Finance not only draws attention with its token’s functionality but also challenges Ethereum’s dominance in real-world asset tokenization. The project recently sold out the fourth stage of its presale, capturing the interest of both institutional and everyday investors alike. Now entering the fifth stage, the RXS token price has risen to \$0.07. With projections of a 2.8x increase when the token launches, Rexas Finance highlights a strategic path to growth that captures widespread attention in the crypto space. Revolutionizing Asset Ownership Rexas Finance brings a bold approach to tokenizing real-world assets (RWAs) by targeting significant markets like real estate, commodities, and art. Tokenization on this platform means anyone can purchase a fractional share of high-value assets from property in major cities to ownership in precious metals right from their devices. This capability could reshape real estate ownership, transforming high-barrier investments into accessible, liquid assets. At the core of Rexas Finance’s offering is the Rexas Token Builder, a streamlined tool enabling individuals and businesses to tokenize their own real-world assets. Whether it’s real estate, stocks, or rare collectibles, asset owners can easily create a digital token that reflects a proportional stake in the asset. Supporting this ecosystem, the Rexas Launchpad allows projects to raise funds directly from investors by launching their tokens on the platform. Innovative Features and Growing Demand Rexas Finance introduces the Rexas QuickMint Bot and Rexas GenAI, two cutting-edge tools designed to simplify the tokenization process. The QuickMint Bot, accessible on Telegram and Discord, allows users to mint tokens quickly and across multiple blockchain platforms. This solution is compatible with Ethereum-based networks, further solidifying Rexas Finance’s reputation as an adaptable and user-friendly platform in the tokenization field. Meanwhile, Rexas GenAI offers advanced analytics for asset evaluation, supporting informed investment decisions on a broad range of real-world assets. As a listed token on CoinMarketCap and CoinGecko, Rexas Finance gains visibility among a vast global audience. Such listings not only expand its reach to millions of potential investors but also boost credibility, drawing higher liquidity and engagement to the project. Competitive Position and Presale Milestones Setting new standards in presales, Rexas Finance surpassed the \$5 million mark with a strategic decision to hold a public sale rather than a VC-backed launch. This approach underscores the project’s commitment to inclusivity, inviting individual investors to participate in the development and future success of the platform. The presale, which sold out in the first four stages, has maintained a steady momentum, now entering Stage 5 with an impressive demand that continues to drive token value upwards. Currently, investors can access RXS at \$0.07 per token, with those entering Stage 5 poised to see a 2.8x return by the time of launch. Beyond presale success, Rexas Finance plans to launch on three top-tier exchanges, reinforcing its commitment to market accessibility and liquidity. The Path Forward: Rexas Finance’s Rising Influence With a presale that has rapidly raised \$5.45 million and its extensive market reach, Rexas Finance stands poised to lead the RWA tokenization sector. Each stage of its presale has showcased the platform’s appeal, and its listing on major platforms like CoinMarketCap and CoinGecko cements its standing among top crypto projects. As RXS prepares for its full launch, investors eye the potential for significant returns and the opportunity to participate in a growing trend toward digital asset ownership. With the promise of launching on multiple top-tier exchanges, Rexas Finance aims to create long-term value, positioning itself as a catalyst for change in both blockchain and traditional asset markets. - Solana (SOL) trades at \$166 after losing 0.10% in the last 24 hours. - The market observed a liquidation of \$13.61 million worth of SOL. The cryptocurrency market has been in a brief bearish turn over the past 24 hours. The assets have lost their momentum and began to slide down. Nonetheless, the current market volatility is unpredictable, with mixed signals. Solana (SOL), the fifth-largest cryptocurrency, has faced the downturn and lost over 0.10%. Over the last 24 hours, SOL managed to hit a high of \$173.85. Despite the surge, the price couldn’t rise further and instead dropped to a low of \$164. At press time, Solana is trading at the \$166 mark. Amid this, SOL’s daily trading volume is positioned at around \$2.85 billion, according to CMC data. Zooming in at the price momentum of SOL, a 0.10% spike is marked over the last seven days. The altcoin began trading in the \$166.64 range. Eventually, the token’s price climbed to a high of \$182.97. On the other hand, on-chain data reveals the Pump.fun platform’s fee account has recently sold 90,000 SOL, worth \$15 million. To date, the platform has earned 1,993,493 SOL, valued at around \$184 million in total revenue, out of which it has sold 635,843 SOL at an average price of \$159. Will Solana’s Price Rebound Soon? Solana’s four-hour technical chart highlights the ongoing negative market sentiment, and the asset is in its weak position as the daily RSI sits in the 38 range. Moreover, the asset’s daily frame indicates the short-term 9-day moving average below the long-term 21-day moving average. The Moving Average Convergence Divergence (MACD) indicator of Solana is positioned below the signal line, suggesting downside pressure and the incoming bearish trend. Besides, the Chaikin Money Flow (CMF) line stays at -0.33, which indicates the decreased money flow with selling pressure. Whereas, the trading volume has spiked by 1.80%. The price of SOL could test the immediate support level at \$163.55. The price might plunge further to a low in the \$159 range if the selling pressure grows. On the flip side, if the bullish momentum regained strength, SOL could jump to the \$169.91 mark. Further correction on the upside might push the price to a high of \$173.27. Disclaimer: The opinion expressed in this chart is solely the author’s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing. Highlighted Crypto News Ethereum Sustains Bearish Trend at \$2.5K Despite High Volatility

- Solana DEX Raydium’s token RAY records the highest gains in October 2024. - The MemeFi wave propelled the upside of DEX volume within the Solana ecosystem. Had Bitcoin not rallied to \$73.5K, October would likely be remembered as Rektober rather than Uptober. Several altcoins also experienced notable rallies on the charts. Among them, Raydium (RAY) staged an impressive price jump of a 115% spike over 30 days. RAY, the native token of Raydium, a decentralized exchange (DEX) on Solana, surged to its 30-month high at \$3.618 on October 27. The altcoin jumped to this peak from \$1.66, recorded at the start of last month. Closely examining the daily price chart, one can observe a bullish sign in late October a golden cross. The short-term 50-day moving average (50MA) has overtaken the long-term 200-day moving average (200MA), pointing to a potential bullish rally for this altcoin. At the time of writing, the Solana token Raydium (RAY) is trading at \$3.45 after experiencing a 15.7% increase in the last 24 hours. During this price surge, the altcoin’s trading volume also rose by 37.78% to \$103.34 million. Uptober Trajectory of Solana DEX Raydium RAY’s upswing is closely linked to the rise of Raydium. The Solana DEX saw impressive rallies across various metrics this October. These growth spikes are largely credited to the upside of MemeFi aka memecoin frenzy. Notably, the total value locked (TVL) in Raydium soared from \$1.123 billion on September 30 to its 35-month high of \$2.08 billion. Additionally, Raydium recorded an impressive 170.7% rally in one of the most important metrics DEX volume. Before the start of October, it stood at \$671.8 million, a 11.6% market share and then rose to \$1.819 billion on October 23. Currently, this largest Solana DEX holds a market share of 16.6%. | RAYDUM’s SURGE REPORT (OCTOBER) | | Total Value Locked (TVL) | 85.75% | Volume | 170.7% | Fees | 306.1% | Revenue | 324.3% | Thirdly, Raydium marked an impressive 324.3% surge in its revenue generation. In September, the Solana DEX earned over \$836.66K and grew this figure to \$3.55 million by October. Furthermore, the fees generated by the DEX rose by 306.1% during the month, climbing from \$16.06 million to \$65.22 million.

SOL, one of the most popular cryptocurrencies, has maintained its appeal to traders and investors. A lot of people are now wondering if SOL can reach \$250 without testing its critical \$120 support level given its price swings, market dynamics, and shifting ecology. One can determine whether this rally is sustainable or if a correction is inevitable by examining the technical and market dynamics. Solana’s Technical Landscape In the medium to long term, SOL is presently trading inside a well-established horizontal trend channel, which offers important information about its price moves. When the price fluctuates between support and resistance levels without firmly committing to an upward or downward trend, horizontal channels are suggestive of consolidation stages. The token in SOL’s case fluctuates between a resistance level at \$184 and a support level of \$120. A substantial price move would probably be anticipated if either of these levels were decisively broken. Additionally, SOL recently completed an inverse head and shoulders pattern, a well-known bullish reversal pattern, which is a favorable indication. This breakout happened as Solana broke through the barrier level of \$158, indicating a possible ascent to \$250. Historically, when accompanied by robust trade volumes and market sentiment, an inverted head and shoulders breakout frequently signals the beginning of a bullish rise. With sustained momentum, the token may reach \$250 or more after approaching its resistance level of \$184. The crucial query still stands, though: is it possible for Solana to reach this lofty price level without

retesting its \$120 support? Will SOL Test \$120 Support? Whether Solana will drop back before hitting \$250 is a major worry for investors, especially given the potential for retesting the \$120 support level. Markets are never risk-free, even while the technical indicators now in use suggest bullish momentum. The price of Solana is consolidating between two horizontal levels, making what looks to be a rectangular shape. Buyers and sellers are engaged in a struggle created by the upper limit at \$184 and the lower support at \$120. The subsequent leg of Solana's price journey would be determined by a break of either level. Given its strength close to its present price, Solana might not need to test the \$120 support level in order to reach the \$250 target. The inverse head and shoulders pattern's bullish breakout and the lack of strong sell pressure at the \$158 mark, which had been a crucial resistance point, support this. However, market conditions are subject to change, and Solana may be forced to retest its lower support if there are unanticipated market shocks or more widespread cryptocurrency downturns. **Rexas Finance (RXS)** provides a strong substitute whereas Solana struggles with the issue of evaluating its support levels. RXS is drawing interest as the next major player in the cryptocurrency market because of its quick price increase without worrying about support tests. In contrast to Solana, which might yet have to test its \$120 support, Rexas Finance has shown consistent and encouraging growth, as seen by a twofold price increase in less than a month following the start of its presale. **Rexas Finance (RXS): A Rising Star Without the Support Fears** Rexas Finance (RXS) allows users to tokenize real-world assets anywhere, creating a revolutionary approach to blockchain utility. It is priced at \$0.06 during its 4th presale stage, with the project selling out stages 1, 2, and 3 ahead of schedule, raising over \$5 million. Less than 10% of the tokens remain before the presale enters stage 5, where the price will increase to \$0.07. The team behind Rexas Finance made the strategic decision to avoid venture capital funding, opting instead to allow the public to participate in the project's growth. This community-focused approach has only strengthened the token's position in the market. Furthermore, its listing on platforms like CoinMarketCap and CoinGecko has fueled price momentum, with a \$1M giveaway still ongoing, rewarding early participants. With predictions pointing towards a 10,000% surge in the coming months, Rexas Finance (RXS) presents a unique investment opportunity. It has the potential to surpass Solana's gains without the fear of a downtrend, making it an attractive alternative for investors looking for a stable and rewarding crypto asset. Solana's price journey towards \$250 is promising, especially with the positive signals from technical patterns. However, investors should remain vigilant about the possibility of testing the \$120 support level. Meanwhile, for those seeking a more stable yet explosive growth opportunity, Rexas Finance (RXS) is the crypto to watch. Don't miss out on the chance to be part of this revolutionary investment in Rexas Finance today. - Solana has shown a price drop of 4.90% in the last 24 hours after the recent price increases. - The altcoin's daily trading volume has increased by 5.67% as per CMC data. The cryptocurrency market has witnessed a minor bear resistance in the past day, as digital asset prices have dunked. On the other hand, the crypto regulatory landscape has sprung to action as another month begins. A recent report released shows that the US SEC has charged the crypto sector with penalties worth \$400 million since April 2021. Meanwhile, Bitcoin has incurred a 3.91% price dip and slid to the \$69K level. Following this, the altcoin sector has also mirrored price actions. Notably, the altcoin Solana also showed a 4.90% price dip retracing to the \$166 level yet again. At the beginning of the day, the token was trading at a high of \$176 before bearish candles took over. Furthermore, SOL hit an intraday low of \$165.05 following the \$176 high after which it began rising to current levels. Additionally, the altcoin has exhibited increased volatility over the past day. At the time of writing, Solana was trading at \$166.75 as per CMC data. Zooming out, over the past week Solana shows a 3.11% price dip despite the past few days' rally. The altcoin initiated its upward movement this week from the price level of \$173. After this, it rallied further to hit a weekly high of \$183.04 until the recent price dip. Solana Price Monthly Overview On inferring Solana's monthly price chart it shows a significant 12.81% increase. This results from the altcoin climbing up from its previous support level of \$148 to the aforementioned highs. Moreover, despite increased volatility as indicated by the RVI standing at 53.84, the token has managed to break several resistance levels. Furthermore, Solana's Moving Average Convergence Divergence (MACD) shows a bearish crossover in the past day, as the MACD line stands over the MACD line as per TradingView data. However, the crossover seems quite recent as depicted in the chart which indicates that SOL can still recover from the brief dip. If Solana manages to turn positive then it can be expected to return to the previous price rally. Meanwhile, other altcoins such as Ethereum and XRP have also shown negative price actions in the past day. Highlighted Crypto News Today: Bears Dominate Global Crypto Market as Ethereum Hits Critical Levels

- Solana trades at \$170, needing double digit gain to reach \$200 milestone - Technical indicators suggest overbought conditions with CMF above 20.0 - Critical resistance at \$186 poses challenge while support levels await at \$161 and \$155 Solana's recent price action has captured market attention as it edges toward the significant \$186 resistance level, a price point that has consistently triggered reversals since mid-May. The cryptocurrency's journey toward the psychological \$200 barrier faces mounting technical challenges despite sustained momentum. Solana Technical Indicators Paint Complex Picture The Chaikin Money Flow indicator currently hovers above the 20.0 threshold, historically signaling peak inflow conditions that often precede significant profit-taking events. This elevated reading suggests mounting pressure from investors potentially preparing to secure gains, which could impact Solana's upward trajectory. Market momentum measurements reveal concerning signals, particularly in the Relative Strength Index, which has reached the critical 70.0 level. This overbought condition typically precedes market corrections, casting doubt on Solana's ability to maintain its bullish stance near crucial resistance zones. The five-month persistence of the \$186 barrier represents a formidable challenge for Solana's immediate prospects. Should this resistance level hold firm, market participants anticipate potential retracements to established support at \$161, with a secondary cushion at \$155 marking a critical threshold for maintaining bullish market structure. Nevertheless, broader market dynamics could override these technical warnings. A successful breach of the \$186 resistance would invalidate current bearish signals, potentially catalyzing momentum toward the coveted \$200 mark. This scenario would require significant buying pressure to overcome existing technical headwinds and established resistance levels. Trading volumes and market sentiment remain key factors in determining whether SOL can defy technical indicators and continue its upward movement. The interplay between these market forces will likely determine the cryptocurrency's short-term price direction as it navigates this critical juncture.

The chances for spectacular expansion are sometimes brief and discriminating investors are in search of interesting substitutes for more established coins. Although Solana (SOL) has attracted a lot of interest for its outstanding features, a smart crypto trader has highlighted a less expensive substitute: Rexas Finance (RXS) which he thinks might reach an incredible \$19 by 2025. Rexas Finance, trading barely under \$0.10, is positioned to provide significant gains as compared to the ever-pricey Solana. Solana's Present Situation Solana is a blockchain network that is constantly accruing fanfare for its fast transactions at low costs. The native cryptocurrency, Solana, enables users to save \$1000 apps (short for distributed apps) and DeFi instances as it can support thousands of transactions per second through a hybrid of Proof of History and Proof of Stake. This scalability ensures that the network will satisfy increasing levels of demand without becoming congested, thereby furthering its significance in the blockchain space. SOL lately has good momentum, ranging between \$153.50 and \$174.52, and is now above the 100-day simple moving average (SMA) of \$158.09. Indicating possible upward movement, the Relative Strength Index (RSI) at 56.88 points to opportunity for development before reaching overbought levels. Should SOL surpass the resistance level at \$181.71, it might aim at \$202.73, thereby reflecting a possible 16% increase. Solana seems in a good position to profit from a positive market with increases of 13.63% over the past month and 12.79% during the previous week. Notwithstanding its accomplishment, the crypto trader wonders if SOL can maintain these price levels for the best investment returns. Rexas Finance (RXS): A Potential Substitute Now enter Rexas Finance, a project reinventing asset management by allowing almost any real-world asset from real estate and art to commodities and intellectual property to be tokenized. Investors using Rexas Finance enter a world where investment possibilities and asset liquidity are almost endless. This creative platform is going to transform the investing scene and increase inclusiveness, openness, and efficiency. Rexas Finance is in the middle of its presale right now; Stage 4 sells at \$0.060 per RXS coin. With \$4,249,775 raised out of the intended \$5,450,000, this stage is already 81.81% filled. Selling 89,996,235 tokens and with a next-stage price of \$0.070, the window of opportunity is rapidly closing. Projected by analysts as a \$0.20 listing price, this offers investors who grab this opportunity over 233% returns. The Rexas Millionaire Giveaway adds to the buzz around Rexas Finance. Twenty lucky winners of this program have the opportunity to individually receive RXS tokens valued at \$50,000. Rexas Finance increases community involvement and drive among possible investors by rewarding participation in the presale. Investors who want to join must send their ERC20 wallet addresses and finish particular activities to increase involvement. Referrals allow for extra entries, thereby building a gripping story that motivates additional people to join the Rexas Finance ecosystem. Many are willing to fund this developing initiative because of the possibility of large profits and the potential to earn precious tokens. Projected Gains: RXS Against SOL By the end of 2025, the crypto trader projects Rexas Finance might soar to \$19. We can figure out the possible gains by computing the percentage rise from \$0.06 to \$19. The return on investment for this rise is shockingly 31,667%. Should RXS reach the \$19 threshold, someone who invests \$100 at the current presale price would have \$31,767. On the other hand, although Solana's present trading price is outstanding, at this point there seems minimal possibility for comparable exponential expansion. If SOL at \$158 were to rise to \$202.73, the return would be somewhat meager: about 28% a far cry from what Rexas Finance could provide. In summary Although Solana (SOL) is a strong participant in the crypto market, its present price range could not yield the best returns that investors want. For those wishing to profit from the growing asset tokenization trend, Rexas Finance (RXS) offers a special chance instead. Rexas Finance is a shockingly low alternative with its potential to reach \$19 by 2025, which appeals more to smart investors trying to maximize their earnings in the always-changing cryptocurrency scene. It would be interesting to observe how these two initiatives compete and which will provide the best value to investors in the next few years as the crypto market develops. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - SOL retraces to \$170 level after hitting 3-month high of \$180, while maintaining 13% monthly gains. - Analyst identifies bullish flag pattern with ambitious targets ranging from \$383 to \$829. - Technical indicators suggest potential short-term pullback with \$147 support level in focus. Solana's latest market performance presents a complex picture of immediate retracement amidst broader bullish signals. The cryptocurrency recently touched \$180, marking its highest point since January, before experiencing a correction to the \$170 range. Despite this pullback, SOL maintains an impressive 14% monthly gain, aligning with Bitcoin's upward momentum toward historical highs. This sustained strength has caught the attention of market analysts, particularly Xanrox, who identifies a developing bullish flag pattern. Solana shows temporary consolidation phase The pattern formation suggests a temporary consolidation phase, visible on the three-day chart timeframe. Drawing from Elliott Wave analysis, Xanrox highlights how Solana's previous wave (3) delivered exceptional returns exceeding 2,600% last year, setting the stage for an anticipated wave (5) advance. Fibonacci retracement levels provide specific price targets for this potential upward movement. The initial objective sits at \$383.39 for Solana, corresponding to the 0.382 Fibonacci level and representing a 119.9% increase from the current breakout point. However, shorter-term analysis reveals developing weakness patterns on the four-hour chart. Technical indicators point toward a possible retest of the \$147 support level before any significant upward movement resumes. The Relative Strength Index currently registers at 71, while the Stochastic Oscillator reads 81.2, both suggesting overbought conditions that typically precede price corrections.

- The Solayer Labs' sUSD is backed by United States short-term Treasury Bills (T-Bills) and is pegged to the US dollar. - In addition to payments, sUSD can be used across different Solana's DeFi platforms. - The holders of sUSD will earn up to 4 percent yield that is distributed automatically to users Solana (SOL) network-based, Solayer Labs, a fast-growing restaking protocol with more than \$281 million in total value locked (TVL), has announced the launch of its yield-bearing restaking stablecoin dubbed Solayer USD (sUSD). Backed by the United States short-term Treasury Bills (T-Bills), the sUSD intends to offer the crypto market a unique alternative to the existing stablecoins, which do not offer a yield to holders. Solayer USD (sUSD) represents a new era in stablecoins, being the first to offer yield-bearing features backed by U.S. T-bills within the Solana ecosystem that can be restaked, as the announcement noted. Why Solayer USD (sUSD) Stands Out in the Stablecoins Market Space Announced during this year's Solana Break Point event, the Solayer Labs' sUSD has attracted significant attention from the web3 space. Moreover, the Solana network has registered a bee-hive of on-chain activities in the recent past, fueled by organic DeFi growth. Notably, the Solayer's sUSD is minted through a non-custodial Request for Quote (RFQ) protocol, which manages the conversion of Circle's USDC into sUSD. The sUSD minting process involves the purchase of U.S. Treasury Bills with the help of USDC and later secured through partnerships with Real World Asset (RWA) liquidity providers. According to the company, the Solayer USD (sUSD) Stablecoin users can begin minting on October 30, whereby the project is set to kickstart with a market cap of \$20 million. Solayer Labs confirmed that the first \$10k deposit will earn a 10x boost. Through backing sUSD with the US short-term T-bills, Solayer Labs has managed to assure its stablecoin holders a 4 percent yield, which is automatically distributed to the wallets. The Solayer Labs' sUSD was initially introduced to pre-approved financial institutions and accredited investors to ensure protocol stability. The restaking of Solayer USD (sUSD) helps secure decentralized financial (DeFi) platforms (exo AVSs), which taps into the proof-of-stake consensus mechanisms from the Solana network. Notably, the Solayer Labs' sUSD was developed through the use of the Token2022 program, a token extension management on the Solana network that supports interest-bearing processes. As a result, Solayer Labs' sUSD can provide consistent interest payments while still observing utmost security pegged to the U.S. dollar through a rebasing mechanism. Market Picture Amid the notable growth of the Solana network, which has outstripped Ethereum (ETH) in on-chain activities, the Solayer Labs is well positioned to grow exponentially in the near term. Moreover, Solayer Labs is backed by reputable web3 investors including Binance Labs, Hack VC, and Polychain Capital, among others. In mid-August this year, Solayer Labs raised \$12 million in a seed funding round led by Polychain Capital, thus achieving a total valuation of about \$80 million. Consequently, Solayer Labs

has managed to launch several products and attracted more than 155k users who have deposited on its network to restake. In addition to the SUSD, Solayer Labs recently collaborated with Bitget exchange to launch a liquid restaking token dubbed BG SOL.

Solana (SOL) is catching attention with its steady climb toward the \$200 mark, which is drawing in traders eager for big gains. Meanwhile, Dogwifhat (WIF) is leading the meme coin pack with a 5% rally, showing that meme coins still have a place in this market. With both SOL and WIF on the rise, traders are looking for smarter ways to stay ahead. IntelMarkets is emerging as a top choice. Itâ€™s more than just an exchange since its AI-powered trading bots have trained on over 100,000 data points, giving users a real advantage. As prices move fast, IntelMarkets helps investors make the most of cryptoâ€™s latest trends. Solana (SOL) Surges: Pushing Towards the \$200 Milestone Solana Price (SOL) is gaining serious attention as SOL nears the \$200 mark. Experts note a surge in interest, with Solanaâ€™s market cap now over \$83 billion and a trading volume jump of almost 32% in the last 24 hours. Analysts say this momentum comes from positive signals, including the 200-day moving averages, which point to strong growth potential for SOL. Many believe Grayscaleâ€™s recent inclusion of SOL in its Digital Large Cap Fund now part of a mixed crypto ETF has boosted the Solana (SOL) appeal. This step could attract more mainstream investors adding to the optimism around Solanaâ€™s (SOL) future. Reports also show that the Solana (SOL) total value locked has topped \$6 billion, the highest since 2022 which is reinforcing confidence among investors. If this trend continues, some experts think Solana Price could cross \$190 soon. With 83% of SOL staked and solid backing, the outlook remains strong. Dogwifhatâ€™s (WIF) 5% Rally: Leading the Charge in the Memecoin Market Dogwifhat (WIF) is quickly climbing the ranks of the memecoin world, sitting just behind Dogecoin (DOGE) and Shiba Inu (SHIB) as a top contender. Its unique â€œdog in a hatâ€ branding has captured a growing fan base, especially as the market hints at a possible bull run. Investors are drawn to its playful image, which has added to its recent surge in popularity. Currently trading around \$2.40, WIF has seen a single-day growth of nearly 5%. Reports show that its trading volume has jumped by almost 49% to over \$300 million, indicating a rise in interest. Many see this increase in volume as a positive sign pointing to strong market demand. Analysts believe WIFâ€™s popularity could keep it in the spotlight. As more traders look toward meme coins, Dogwifhatâ€™s humor and increasing liquidity might attract even more attention especially if the market trend stays positive. IntelMarkets (INTL): Helping Traders Make the Most of Cryptoâ€™s Latest Moves IntelMarkets (INTL) is gaining traction in the crypto world by pairing AI with blockchain, giving traders smart tools to stay ahead. In Stage 4 of its token sale, IntelMarkets (INTL) raised over \$1.6 million, showing strong interest from investors. People are noticing how IntelMarkets (INTL) makes it easier to trade with automated strategies, which can be a big help in rapid markets. With about 10% of Stage 4 tokens already sold, the current token price is around \$0.036, and itâ€™s set to rise in the next round. IntelMarkets (INTL) lets traders set up strategies that act instantly, a key advantage during market surges. This use of AI for real-time decisions is catching attention, especially among traders who want data-backed tools. Experts believe that IntelMarkets (INTL) could become a popular choice for both beginners and pros. Its AI insights and blockchain access mean traders can simplify their moves without missing out on strategy. As the token sale continues, IntelMarkets (INTL) seems well-positioned to bring in more users looking to stay sharp in the crypto space. Discover More About IntelMarkets: - Presale: <https://intelmarketspresale.com/> - Buy Presale: <https://buy.intelmarketspresale.com/> - Telegram: <https://t.me/IntelMarketsOfficial> - Twitter: https://x.com/intel_markets Disclaimer: TheNewsCrypto does not endorse any content on this page. - SOL reaches \$180, first time since July. - Chaikin Money Flow at 0.28 and MFI above 80 suggest overbought conditions. - Price targets: potential retreat to \$161.81, or direct push to \$200 if \$185 breaks. Solana (SOL) has achieved a major milestone, touching the \$180 mark for the first time since July, sparking widespread speculation about its potential to reach \$200. While this surge demonstrates impressive momentum, technical indicators suggest the possibility of a consolidation phase before further advances. The Chaikin Money Flow (CMF) indicator provides crucial insight into SOLâ€™s current market dynamics. Reading 0.28, the CMF has entered overbought territory, surpassing the typical threshold of 0.20. While this level confirms strong buying support for the recent price movement, it also signals potential exhaustion in buying pressure. A price correction for Solana is impending Complementing the CMFâ€™s warning signals, the Money Flow Index (MFI) has exceeded 80.00, further confirming overbought conditions. This technical setup traditionally suggests that a price correction or consolidation phase may be necessary before continuing upward momentum. Daily chart analysis reveals Solanaâ€™s successful breakout from an ascending triangle pattern, with price action retesting the \$180 level. However, the \$185 supply zone looms as a significant hurdle, having previously triggered a 30% correction. This historical resistance level could force a retracement to \$161.81 before any sustained push toward \$200. Despite these cautionary signals, the possibility of a direct move to \$200 remains if bulls can decisively breach the \$185 resistance level. Such a scenario would require sustained buying pressure and likely coincide with broader market strength.

- SOLâ€™s 50-day SMA approaching golden cross with 200-day SMA. - Chaikin Money Flow at 0.24 and Bull Bear Power at 16.57 support bullish outlook. - Price targets: potential surge to \$210.18 if \$188.74 resistance breaks. Solana (SOL) stands on the cusp of a significant technical development as its 50-day Simple Moving Average approaches a golden cross with the 200-day SMA. This imminent bullish signal could potentially catalyze a push beyond the \$200 mark, a level unseen for several months. Technical analysis of the SOL/USD daily chart reveals the 50-day SMA (blue line) verging on a crossover above the 200-day SMA (yellow line). The 50-day SMA, serving as a short-term trend indicator, provides insight into recent price momentum, while the 200-day SMA reflects longer-term market sentiment. Their impending intersection signals a potential shift from bearish to bullish market dynamics. Solanaâ€™s CMF maintains positive outlook Supporting this bullish setup, Solanaâ€™s Chaikin Money Flow (CMF) maintains a positive trajectory at 0.24. This reading suggests strong capital inflows into the SOL market, with buying pressure consistently outpacing selling activity. The sustained positive CMF indicates robust demand and validates the current upward price momentum. Further reinforcing the optimistic outlook, Solanaâ€™s Bull Bear Power indicator registers a robust 16.57. This positive reading reflects a market dominated by buying pressure, suggesting that bulls currently maintain control over price action. The confluence of these technical indicators strengthens the case for potential upward movement. Currently trading at \$174, Solana maintains position above crucial support at \$171.91. A continued hold above this level could facilitate a push toward the \$188.74 resistance. Breaking this barrier could potentially propel SOL towards \$210.18, a price point last visited on March 18. A failure to maintain the \$171.91 support could trigger a retreat to \$160.09, with further weakness potentially testing the \$148.27 level.

- Solanaâ€™s Bullish Momentum Sustains Amid Strong Social and Whale Interest. - Scalability Issues, Centralization Risks Challenge Solanaâ€™s Global Backbone Viability. Solana (SOL) has been on an upward trajectory, defying the overall â€œUptoberâ€ slump that hit many altcoins. Recently, Solana reached a three-month high at \$179, marking a 13% increase in the past month and a 2% rise within 24 hours, with trading volumes also up by 28%. The question remains, can this rally continue into 2025, as analysts predict. Technical indicators currently suggest bullish momentum. The Moving Average Convergence Divergence (MACD) line shows a bullish crossover, and Solanaâ€™s Relative Strength Index (RSI) stands at 63, indicating strong buying interest without approaching overbought levels. Such technical trends suggest SOL could continue to climb in the near term, boosted by the increased attention from social channels and whale investors. Notably, Solanaâ€™s social engagement has risen to 3.97%, enhancing its appeal within the crypto community. Snags in the Solana Bull Run Despite Solanaâ€™s growth, analyst Ryan Berckmans raises concerns regarding the blockchainâ€™s capacity to sustain its momentum. Berckmans highlights that Solana shifted its initial â€œmonolithicâ€ approach to accommodate Layer 2 (L2) solutions. Although marketed as an L1 network capable of handling vast transactions, Solana now offers â€œNetwork Extensionsâ€ akin to L2s. This shift underscores a potential limitation in itâ€™s scalability as a global financial backbone. A major constraint, according to Berckmans, is Solanaâ€™s dependency on a single client, Agave Rust. For a decentralized, global-scale network, three independent clients with balanced stake distribution are often recommended. Itâ€™s second client, Firedancer, faces delays due to a lack of comprehensive protocol specifications and support from the research community. Moreover, Solanaâ€™s high bandwidth requirements â€œ10Gbps upload speeds â€ could introduce centralization risks that challenge its scalability. While it has shown resilience and growth potential, significant obstacles remain. As major corporations like Coinbase and Visa adopt Ethereum L2 solutions, SOL may struggle to position itself as a global financial network. For now, its trajectory remains cautiously optimistic, though achieving a price rally in 2025 may depend on overcoming these critical infrastructure and decentralization hurdles. Highlighted News Of The Day Mog Coin Price Prediction 2024: Will MOG Enter Top 100 To Get Listed on Binance?

- Bitcoin (BTC) and the altcoins have shown significant price actions in the crypto market. - The overall crypto marketâ€™s daily trading volume surged by 22.63% as per CMC data. The worldwide cryptocurrency market has seen bullish movements in the past day instilling optimism in members of the community. The overall crypto market has shown a 1.43% increase in market cap and a 22.63% surge in daily trading volume. Meanwhile, the regulatory landscape has not shown much activity over the last 24 hours. While price actions have remained positive, as aforementioned, investors as always the tendency have focused on the top cryptocurrencies in the past day. Bitcoin, Solana and Sui are the three top sought after digital assets since yesterday. This article outlines these asset and altcoinsâ€™ price actions in detail. Bitcoin (BTC) In the last 24 hours, Bitcoin has shown a bullish movement of 1.78% price increase retracing its bull run to the \$68K level. In the Asian afternoon hours of October 27, BTC traded at a low of \$66,996. Following this, the crypto asset began sparking bullish candles to reach current trading levels. At the time of writing, BTC was trading at \$68,293 as per CMC data. Moreover, the cryptocurrencyâ€™s short-term 9-day MA stands above the long-term 21-day indicating the overall bullish trend. If Bitcoin continues in this upward direction, it can be expected to face resistance at \$69,276 and \$71,690. In response to Bitcoinâ€™s current price movements, the altcoin sector has also shown price increases in the crypto market. Solana (SOL) The second largest ecosystemâ€™s native token, Solana, has begun to show progressive upward price movements. In the past day, the altcoin has recorded a 1.53% price increase sustaining this weekâ€™s upward trend. On October 27, SOL was trading at \$173 levels before moving upwards to current levels. At the time of writing, Solana was trading at \$177.65 as per TradingView data. On inferring its weekly chart, Solana shows a significant price increase of 6.37%. At the weekâ€™s beginning, SOL traded at a low of \$161.81, following which it progressed to current levels. The altcoinâ€™s SMA stands below the price indicating the bullish trends. Sui Network (SUI) This particular altcoin has garnered much crypto market attention primarily for its price movements. SUI had shown significant price breakouts in the past month which led to increased investorsâ€™ attention. However, the token has shown downward movements in the last few days amid increased volatility. In the last 24 hours, SUI has recorded a price drop of 3.51% as displayed on its daily price chart. The past week has seen a further significant drop as SUI dumped by 17.38% in prices. The bearish takeover bought prices down from a high of \$2.07 to current levels. At the time of writing, the altcoin was trading at \$1.72. Highlighted Crypto News Today: Mog Coin Price Prediction 2024: Will MOG Enter Top 100 To Get Listed on Binance?

- The Global crypto market cap rose by 0.44% to \$2.29 trillion today. - Uptober disappointed, failing to deliver the expected gains in the crypto market. The Global cryptocurrency market cap currently stands at \$2.29 trillion, a slight 0.44% gain in the past day. Over the last 24 hours, trading volumes reached \$50 billion, up by 5.80%. DeFi trading volumes accounted for \$3.28 billion of this, or 6.76% of the daily total, while stablecoins made up 88.96% of volume, totaling \$44.48 billion. Bitcoinâ€™s market dominance rose slightly to 58.32%, reinforcing its position as the market leader. October, typically a bullish month for the crypto market often dubbed â€œUptoberâ€ did not live up to expectations this year. While optimism drove prices initially, the anticipated upward momentum waned. Investors are now looking toward November with cautious optimism, hoping for stronger trends. Bitcoin (BTC) Bitcoin is trading at \$67,784.02, marking a 1.08% increase in the price over the past 24 hours. BTCâ€™s market cap has risen to \$1.34 trillion, a 1.11% gain. Trading volume in the last 24 hours reached \$18.87 billion, representing a surge of 19.76% and a volume-to-market-cap ratio of 1.41%. The fully diluted valuation (FDV) stands at \$1.42 trillion, and BTC has a circulating supply of 19.77 million coins out of a max supply of 21 million. Technically, BTC remains in a bullish phase, with its 9-day moving average (\$67,603.55) above the 21-day moving average (\$65,960.81). The RSI at 59.81 indicates moderate buying pressure, but the key resistance at \$70,000 could act as a psychological barrier. Should BTC break above this level, it may climb toward \$72,000. However, a fall below \$67,000 could bring it down to \$65,000. Ethereum (ETH) Ethereum is priced at \$2,483.46, with a 24-hour gain of 0.25%. Its market cap sits at \$299.02 billion, reflecting a similar percentage increase. ETHâ€™s 24-hour volume stands at \$11.28 billion, a modest 3.03% rise, giving it a volume-to-market-cap ratio of 3.77%. With a total and circulating supply of 120.40 million ETH, Ethereumâ€™s FDV mirrors its market cap at \$299.01 billion. ETH opened October at around \$2,400, saw a boost to \$2,600 mid-month, but has since stabilized. Its 9-day MA of \$2,557.42 is above the 21-day MA of \$2,540.19, indicating short-term bullish sentiment. A push past the \$2,800 resistance could send ETH toward \$3,000. If support at \$2,400 holds, this trend may continue. Solana (SOL) Solana is trading at \$173.45, a 0.73% price up in the last day. Its market cap of \$81.57 billion saw a 0.75% gain. With a 24-hour volume of \$2.68 billion, up 22.13%, the volume-to-market-cap ratio is 3.27%. SOLâ€™s FDV is at \$101.89 billion, with a total supply of 587.40 million SOL and a circulating supply of 470.29 million. SOL started October near \$170 and surged past \$175 mid-month. The 9-day MA for SOL is above the 21-day MA, signaling bullish momentum. If it breaks the \$180 resistance, SOL could target \$190. Failure to hold support around \$170 may result in a pullback to \$165. Dogecoin (DOGE) Dogecoin price is at \$0.1421, a 3.21% increase in the past 24 hours. Its market cap has grown to \$20.82 billion, up by 3.36%, with a volume surge of 81.53% to \$1.47 billion, reflecting a high volume-to-market-cap ratio of 7.05%. DOGEâ€™s FDV is \$20.85 billion, with a total and circulating supply of 146.55 billion DOGE. DOGE began October at \$0.1350, and mid-month saw a jump to \$0.1400. The 9-day MA is above the 21-day MA, suggesting bullish momentum. If DOGE breaks the \$0.1500 resistance, it could aim for \$0.1600. However, a drop below the \$0.1400 support may push it back to \$0.1300. Ripple (XRP) XRPâ€™s price is at \$0.5133, with a 0.16% daily increase and a market cap of \$29.16 billion, a slight 0.28% gain. Trading volume is at \$548.68 million, yielding a 1.88% volume-to-market cap ratio. XRPâ€™s FDV sits at \$51.29 billion, with most of its supply (56.81 billion out of 99.99 billion) in circulation. XRP remains below its 9-day and 21-day MAS, suggesting a bearish sentiment. Key support is around \$0.5000, with resistance at \$0.5334; a break above could hint at bullish potential. Shiba Inu (SHIB) SHIB, trading at \$0.0001687, rose by

0.77% in the last day. Its market cap of \$9.94 billion increased by 0.61%. SHIBâ24-hour trading volume is \$172.81 million, reflecting strong market interest and a 1.74% volume-to-market-cap ratio. With nearly all of its total 589.52 trillion supply circulating, SHIB is highly liquid. After opening October at \$0.000016, SHIB saw stability through mid-month, suggesting a period of consolidation rather than volatility. Breaking its \$0.00002200 resistance could revive bullish momentum. As November approaches, the crypto market remains cautiously optimistic. While Uptober underperformed, Bitcoin and Ethereum hold bullish indicators, with significant resistance levels to test. Altcoints like Solana, Dogecoin, XRP, and SHIB show unique trading patterns, with Solana and Dogecoin displaying bullish momentum. XRP and SHIB appear more stable, reflecting established investor bases. Market fundamentals and technical signals will guide these assetsâ trajectories in a volatile landscape, with investors hopeful for Novemberâs performance. Highlighted Crypto News Today Floki, Shiba Inu, and Pepe Will Flip DogeCoin in Upcoming Bull Run

An emerging AI-powered token is drawing interest with its potential to climb from \$0.035 to \$100. Could this digital asset overtake prominent coins like TRX and Solana in the expected altcoin boom of 2025? With artificial intelligence at its core, this cryptocurrency may be set to revolutionize the industry. The crypto community watches as this new player aims to reshape the market. CYBRO: Your Gateway to Unmatched Crypto Gains! Ö Welcome to the world, where CYBRO is redefining the rules of crypto investing and putting GIGA PROFITS within your reach. Built on the revolutionary Blast blockchain, CYBRO maximizes your crypto earnings like never before. Whether youâre farming yield, stacking ETH, or just HODDLING for those epic returns, this is the token for those who know how to win. Ö CYBROâs Presale is Hot and Approaching \$3 Million!Ö CYBROâs presale is skyrocketing and inching toward the \$3 million mark â and thereâs a reason for that. At just \$0.035, youâre getting in at a massive discount before the token hits the market at \$0.06. Thatâs an easy 140% ROI for those who jump in early. Over 9,000 holders have already joined the alpha squad, and theyâre stacking rewards like never before! Why CYBRO? Because Winning is the Only Option. Ö Hereâs why the community is rallying around CYBRO: - Yield Farming: Top-tier user interface with multiple strategies to farm APY and Points. - Built on Blast: Native yield with an APY of 4% for ETH and 5% for stablecoins. - Effortless Deposits and Withdrawals: Easy in, easy out, so youâre always in control of your funds. - AI-Powered: Create AI-tailored portfolios, built for your preferences and optimal performance. Ö Early Investors Win BigÖ Donât wait until prices soar! By investing now, youâll not only benefit from immediate growth potential but also unlock weekly ETH rewards and participate in community-driven airdrops. Early adopters are already seeing gains, and you can too! Join CYBRO today and secure your place in this fast-growing ecosystem. The future belongs to those who act nowâ donât miss your chance before prices skyrocket! >>Ö Zget in Early, Reap the Rewards with CYBRO!Ö <<Ö TRON (TRX) Shows Steady Growth: Will It Reach \$0.17 Soon? TRON (TRX) is trading between \$0.15 and \$0.16, showing steady growth over the past 6 months with a 36.58% increase. The 10-day and 100-day simple moving averages are both at \$0.16, indicating a stable trend. The Relative Strength Index (RSI) is 54.31, suggesting the coin is neither overbought nor oversold. The nearest resistance level is \$0.17; if TRX breaks this, it could see further gains. With a recent 5.57% rise over the past month, TRX might aim for the second resistance level. However, if the price dips below \$0.15, the next support is at \$0.14. Solana Nears Resistance Level, Potential for Further Growth Solana (SOL) is trading between \$153.50 and \$174.52. In the last week, it gained over 9%. Over the past month, it increased by about 17%. The price is approaching the resistance level at \$181.71. If it breaks this level, it may reach the next resistance at \$202.73, which is about a 12% increase from the current price. The RSI is near 60, showing the market is not overbought yet. The 10-day and 100-day simple moving averages are close, suggesting steady growth. The MACD level is slightly negative, indicating possible consolidation. Solana could see further growth if it moves past the resistance. Conclusion In the midst of the current bull run, CYBRO emerges as a standout in the crypto space. Unlike TRX, SOL, ADA, and DOT, which show less potential for rapid gains in the short term, CYBRO offers investors exceptional opportunities. Its AI-powered yield aggregation on the Blast blockchain maximizes earnings efficiently. Features such as generous staking rewards, exclusive airdrops, and cashback on purchases enhance the user experience. Seamless deposits and withdrawals add to its appeal. With a strong focus on transparency, compliance, and quality, CYBRO attracts significant interest from crypto whales and influencers. This positions CYBRO as a leading project poised to surpass its competitors in the upcoming altcoin boom. - Site: <https://cybro.io> - Twitter: https://twitter.com/cybro_io - Discord: <https://discord.gg/xFMGQDPHrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana (SOL) has shown strong performance, climbing over 12% in the past week. - The global crypto market faced selling pressure, leading to a 2% decline in market cap in the past 24 hours. The crypto market has faced a wave of selling pressure, with many major digital assets slipping into the red over the last 24 hours, leading to a 2% dip in the total market cap. This week has been marked by sharp price swings, as Octoberâs rally began to lose steam and left bulls struggling to hold their ground. Among the turmoil, however, a few altcoins have still managed to stand out, with Solana (SOL), TRON (TRX), and Uniswap (UNI) showcasing notable performances over the past week. Solana has been one of the stronger performers despite the broader market correction. Over the past week, SOL surged more than 12%, hitting a high of \$179 before pulling back to around \$168.64 at the time of writing. While it has retraced from a weekly high, this latest price shows a slight recovery from its intraday low of \$160.04. The trading volume for SOL also jumped by over 44%, reaching a remarkable \$44.95 billion, reflecting continued investor engagement. Can Solana Overcome Short-Term Pressure On the technical front, the current MACD setup for Solana, with the MACD line at 0.53 below the Signal line at 1.76 but both above the Zero line at -1.24, suggests a temporary dip in momentum within a broader uptrend. This setup indicates that while Solana may experience short-term bearish pressure, the overall trend remains positive, potentially signaling consolidation before another upward move. Next the Relative Strength Index (RSI) at 58.25, SOL is in a neutral-to-slightly-bullish zone, suggesting moderate buying interest and the potential for further gains if demand picks up. Key support for Solana is currently around \$155, and if it breaks through the \$180 resistance, it could set its sights on reaching \$193 or even \$220. While there may be some short-term pressure, the long-term outlook for SOL appears strong. Highlighted News Of The Day

- SOL gains 13% in a week, reaching \$174 amid stable trading. - Analyst identifies potential Wyckoff distribution pattern on weekly chart. - \$125 support breach could signal broader market exit, possible within two months. Solanaâs recent market performance has sparked both optimism and caution among analysts, with a notable warning emerging about potential bearish signals. Despite a strong 13% weekly gain pushing the price to \$174, technical analysis suggests the possibility of a significant market shift. TradingView analyst Cecilionas has identified Solana as a crucial market indicator, citing its impressive history of serving as a leading signal for broader crypto market movements. SOLâs previous 600% surge following a 300-day accumulation phase demonstrates its potential influence on market sentiment. Can Solana plunge to \$125 support? The weekly chart analysis reveals what appears to be a Wyckoff distribution pattern, a technical formation often preceding significant price declines. The 0.786 Fibonacci retracement level at \$125 emerges as a critical support point, with its potential breach serving as a possible trigger for market-wide selling pressure. Technical indicators offer mixed signals about SOLâs immediate future. The Relative Strength Index (RSI) reading of 67.72 approaches but remains below the overbought threshold of 70, suggesting strong but potentially cooling buying momentum. Meanwhile, the Moving Average Convergence Divergence (MACD) maintains a bullish stance, though the converging signal lines hint at stabilizing momentum. Recent whale activity adds another layer to Solanaâs market dynamics. A significant movement of 32,695 SOL from Binance into various meme coins suggests shifting investment strategies among large holders. Furthermore, Pump.funâs sale of 40,000 SOL tokens and substantial fee accumulation indicates active profit-taking within the ecosystem.

The crypto market is heating up as Solana leads a robust bull run, soaring past \$162 and aiming for higher targets like \$180 and \$195. Meanwhile, Polygon (POL) remains stable, consistently trading around \$0.37, demonstrating resilience amid market fluctuations. On the other hand, in the presale space, BlockDAG (BDAG) shows impressive progress, surpassing the \$102 million mark. Moreover, the recent appointment of Jeremy Harkness as CTO, with his extensive expertise in blockchain and data analytics, has enhanced buyer confidence in the project. Letâs explore how these trends are reshaping the landscape of decentralized finance. Solana Bull Run: Whatâs Next? The Solana bull run has cleared a key hurdle at \$162, showing signs of further growth. The price is now above the important resistance level, indicating that Solana may continue climbing toward the \$180 mark. The Solana bull run could extend to the \$195 resistance if the upward momentum remains strong. Immediate resistance is at \$175, which could slow down progress. Moreover, the ongoing Solana bull run suggests that the market looks positive as it heads closer to \$195. Polygon (POL) Price: Whatâs Next? The Polygon (POL) price has moved sideways for the past two months. The price has hovered between \$0.37 and \$0.42. Over the last week, it has stayed within a narrow range from \$0.36 to \$0.37. Right now, the Polygon price remains at \$0.37, indicating a steady trend. On the 4-hour chart, the Polygon (POL) price is hovering between the \$0.36 support and \$0.38 resistance levels, seemingly awaiting a clearer directional cue from traders. BlockDAG Presale Breaks \$102M Mark as New CTO Steps In BlockDAG, a top decentralized crypto in 2024, is making big waves. It has already exceeded its initial presale goal, raising a substantial \$102 million, and is now swiftly moving towards its \$600 million target. This indicates BlockDAGâs significant growth and the strength of its foundation. Since its launch, BlockDAGâs coin value has surged by an impressive 1960%, showing itâs firmly on track with its plans. Adding to the excitement, Jeremy Harkness has taken the role of new CTO. Jeremy is deeply knowledgeable about decentralized technology, which means he understands blockchain intricacies and how to apply them effectively. His background in data analytics is a great advantage, aiding him in making smart decisions that guide BlockDAGâs strategy forward. BlockDAG is capturing attention in the crypto market due to its technological advancements and growing base of supporters. The strong community interest and the success of its ongoing presale are positioning it as a solid choice for those seeking a reliable crypto investment. Analysts are now predicting that BDAGâs value could hit \$20 by 2027. As it edges closer to the \$600 million goal, BlockDAG is certainly a name to watch in the cryptocurrency space. Top Decentralized Crypto in 2024? As we round off our discussion, Solana continues to ascend, and Polygon shows stable performance. However, BlockDAG captures real attention, as its presale has soared beyond \$102 million. Moreover, Jeremy Harknessâs appointment as CTO further increases BlockDAGâs momentum. This strategic move is sparking rapid growth and engaging more people in its community. Analysts are now predicting it might reach \$20 by 2027. Missing out this opportunity could mean potentially passing up a golden ticket in the crypto universe. Join BlockDAG Presale Now: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagNetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- Solanaâs trading volume is down 20% in the past 24 hours. - Solana faces increased sell pressure despite recent bullish momentum. Solana (SOL) is currently trading at \$173, reflecting a slight decline of 0.49% over the past 24 hours, with trading volume down 20%. Despite this recent downturn, SOL has gained approximately 13% in the last week, previously hitting a three-month high of \$179. The bullish momentum seen over the past two weeks has sparked expectations of increased sell pressure, leading to a notable surge in short positions. Meanwhile, in the last five days, SOL has experienced intensified selling pressure, as traders look to secure profits following its impressive rally. Data from Coinglass indicates that over \$7 million worth of short positions were liquidated within the last 24 hours, with shorts accounting for 64.54% of market activity during this period. Furthermore, the long/short ratio for SOL dropped from 1.05 on September 20 to 0.95, before recently rising to 1.1, highlighting a significant increase in short positions. The altcoin recently surpassed a resistance range between \$161 and \$163, spurred by heightened short liquidations. At the time of writing, SOL is priced at \$174 but has entered overbought territory according to the Relative Strength Index (RSI), indicating potential for intensified sell pressure. Nevertheless, the cryptocurrency is eyeing a new resistance zone at \$185, following a significant increase in open interest, which surged to \$3.26 billion, the highest since April. Network Growth And Resistance Levels Amid this volatility, the Solana-based decentralized exchange Raydium (RAY) has drawn attention for surpassing Ethereum in fee collection, reflecting increasing activity within the Solana ecosystem. RAY has seen a remarkable 36% price surge over the past week, positioning it at a seven-month high of \$2.94. As SOL grapples with sell pressure, traders remain cautious. A potential drop below the critical support level of \$161 could trigger significant liquidations, leading to further declines. Conversely, a breakthrough at \$175 might pave the way for a rally towards \$186, offering a glimmer of hope for bullish sentiment in the near term. Highlighted News Of The Day

- BNB trading at \$592, up 87% YTD but 18% below all-time high. - Technical indicators show formation of bullish ascending triangle. - Price targets: potential rise to \$730, or drop to \$564 if \$602 resistance holds. Binance Coin (BNB) appears poised to mirror Solanaâs impressive price action, despite its larger market capitalization. Technical indicators suggest BNB could be on the cusp of a significant breakout that would propel it beyond its previous peak reached in July. While the broader cryptocurrency market shows signs of hesitation, Solana has demonstrated strength with a 4% gain in the past 24 hours. This decoupling from general market sentiment has caught the attention of analysts, who see similar potential in BNBâs current market position. Interestingly, BNBâs Weighted Sentiment has entered negative territory, according to Santiment data. This contrarian indicator often precedes significant price movements, as excessive pessimism can signal a potential reversal point. The divergence between market sentiment and technical indicators creates an intriguing setup for potential price appreciation. BNBâs CMF shows rising strength Supporting the bullish case, the Chaikin Money Flow (CMF) on BNBâs daily chart shows increasing strength. This technical indicator, which measures buying and selling pressure through capital flows, suggests sustained accumulation rather than distribution. Such patterns typically precede upward price movements, potentially supporting a push beyond the \$600 mark. Technical analysis reveals an ascending triangle formation in BNBâs price structure. This bullish continuation pattern, characterized by a horizontal resistance line and rising support trendline, often signals growing buyer strength. The patternâs persistence suggests limited downside risk, though the 61.8% Fibonacci resistance level at \$602 remains a crucial hurdle. Should buying pressure persist and overcome the \$602 resistance, BNB could potentially surge 25% to reach \$730. However, market participants must remain vigilant to the possibility of rejection at this key level,

which could trigger a retracement to \$564.

Owing to their speed of transactions, low costs, and high scalability, Solana is now ranked among the few top blockchains. A concept somewhat different from other platforms is interesting for dApp developers and NFT creators because Solana can handle up to 65,000 transactions in one second. With the evolution of the crypto market, the price of SOL is still a major focus of investors as they are keen to see when the token will reach \$500. Though market conditions, competition, and technology improvements still cause uncertainties, several price forecasts indicate a positive future for Solana over the next ten years. SOL Current Market Position and Price History First introduced in April 2020 at a low price range of \$0.50 to \$0.90, Solana became rather popular right away. Early in 2021, it had exceeded \$10; by November of that year, it peaked. The explosive climb of the token matched the enthusiasm of the wider crypto market. However, the start of a global market downturn saw SOLâ€™s price drop from its high and level down to lower values. Solanaâ€™s comeback in growth in 2023 resulted in a positive momentum that carried through into 2024. Technical markers point to a bright future for SOL. A recent breakout over a local diagonal resistance line and further positive signals from Moving Averages, MACD, and the Parabolic SAR point to ongoing upward momentum. Still, there are other obstacles ahead, including a “death cross,” a bearish technical indication that can endanger the continuous bull run. Forecasts of prices for 2024â€™2030: Will SOL reach \$500? Many sources point to Solanaâ€™s long-term prospects being still bright. Wallet Investor forecasts, for instance, a consistent increase in the value of the token; projections show an average price of \$178.83 by the end of 2024, \$300.89 by 2025, and \$545.48 by 2027. Forecasting SOL at \$276.63 by 2024â€™s closure, \$332.68 in 2025, and maybe as high as \$1,030.23 by the end of 2030, DigitalCoinPrice holds the same opinion. These forecasts imply that if the platform keeps increasing its user base and expanding its ecosystem, \$500 would be within reach for SOL during the next five years. Constant improvements in Solanaâ€™s network, including the Solana Virtual Machine (SVM), which raises interoperability with Ethereum-based distributed apps, help to accentuate Solanaâ€™s possibilities. This development can propel more acceptance, so SOL can reach important pricing targets like \$500. Achieving such goals, however, would also rely on overcoming the economic environment of the larger market and the rivalry from other blockchain systems. Although Solanaâ€™s future seems bright, for those looking to optimize gains, Texas Finance (RXS) might have even better possibilities. Texas Finance addresses the fast-expanding market for real-world asset (RWA) tokenization, whereas Solana concentrates on general blockchain scalability. Texas Finance solves a special market demand that can result in significant profits for investors by giving traditional assets such as real estate, commodities, and collectibles digital representation and trading capability. Texas Finance (RXS): Another Choice Made Especially for Investors Real-world asset tokenization opens fresh investing prospects and democratizes access to markets once out of reach for many people. Enhanced liquidity and fractional ownership help more diverse types of investors engage in asset management more easily. Launching token projects is made easier by the Texas QuickMint Bot, which facilitates token creation using popular chat apps such as Telegram and Discord. This simplicity of use can draw nontechnical consumers eager to enter the cryptocurrency market. Beyond tokenization, Texas Finance provides solutions driven by artificial intelligence that include Texas GenAI for NFT development and Texas AI Shield for smart contract audits. These elements not only increase value but also enhance security and simplify processes inside the ecosystem. The project has garnered strong investor interest, raising over \$4.2 million in its ongoing presale stage 4 and selling approximately 90 million tokens. With 82% of the presale completed, RXS offers early investors a promising opportunity for significant returns, targeting a potential 500x price surge post-listing. Why Might Texas Finance Make a Better Investment? Although Solana is a respectable blockchain with a strong ecosystem, Texas Finance distinguishes itself with its emphasis on tokenizing actual assets, a market expected to have trillions of worth. Texas Finance serves an underprivileged niche by bridging the gap between conventional finance and the blockchain, hence maybe allowing investors more upside. The way the initiative combines artificial intelligence technologies, strategic alliances, and a creative approach to user involvement sets it even more for notable expansion. Moreover, Texas Financeâ€™s legitimacy in the crypto community is enhanced by its already confirmed placement on CoinMarketCap. Texas Finance is a good substitute for investors wishing to build generational wealth as it has a lower initial investment cost than Solana, which already boasts a big market capitalization. Conclusion Driven by the technical improvements of the platform and further developments, Solanaâ€™s \$500 aim could be reachable in the next years. Reaching this price will, however, need negotiating obstacles including possible bearish market indications and competition. Solana offers a good investment possibility; yet, Texas Finance makes a more convincing case because of its emphasis on real-world asset tokenization, creative ideas, and strategic presale approach. Investors searching for the next great thing in the crypto realm should give RXS, a token with not just great market needs but also notable potential some thought. Texas Finance might provide the generational wealth prospects many people are looking for by positioned at the junction of blockchain technology and conventional asset management. About Texas Finance :- - Website: <https://rexas.com> Disclaimer: TheNewsCrypto does not endorse any content on this page. A new artificial intelligence cryptocurrency, priced at just \$0.035, is capturing attention in the crypto world. Drawing comparisons to the early days of blockchain platforms like Polygon and Solana, some believe it could see significant growth before the next market surge. This low-cost token might be the next big thing to watch. CYBRO Presale Soars Past \$3 Million: A One-in-a-Million NeoBank Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge NeoBank offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In addition to tokens, CYBRO introduces special Points, offering even more opportunities for investors. Holders of these Points will automatically participate in the CYBRO Airdrop, where the more Points you hold, the more tokens you will receive. CYBRO distributes up to 1 million Points weekly, which can be earned by investing in DeFi Vaults in the CYBRO app. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project thatâ€™s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Solana (SOL) Exhibits Steady Growth Amid Positive Market Indicators Solana (SOL) is trading between \$153.50 and \$174.52, showing a 6.76% increase over the past week and 12.53% over the month. The coin is approaching its nearest resistance level at \$181.71, with the potential to test the second resistance at \$202.73. The Simple Moving Averages indicate stability, with the 10-day SMA at \$166.87 and the 100-day SMA at \$160.59. Technical indicators like RSI at 57.23 and MACD at 0.43 suggest moderate bullish momentum. If this trend continues, Solana could see further gains. However, the nearest support levels at \$139.67 and \$118.65 may come into play if the price retraces. Ex-MATIC (POL) Nears Support at \$0.35 Amid Continued Slide Ex-MATIC (POL) is trading between \$0.37 and \$0.39, down 2.26% over the past week and 10.62% over the past month. The price is nearing support at \$0.35, with a second support level at \$0.33. Technical indicators show bearish momentum; the MACD level is negative at -0.002. The RSI stands at 37.07, suggesting itâ€™s approaching oversold conditions. If the price falls below \$0.35, it could decline to \$0.33. On the upside, if it rebounds, resistance levels are at \$0.40 and \$0.43, the latter representing about a 10% gain from current prices. Overall, the trend indicates caution, as the coin has lost 47.85% over six months. Conclusion While coins like SOL and POL show less potential in the short term, CYBRO emerges as a technologically advanced DeFi platform offering investors unparalleled opportunities to maximize their earnings through AI-powered yield aggregation on the Blast blockchain. With features such as lucrative staking rewards, exclusive airdrops, and cashback on purchases, CYBRO ensures a superior user experience characterized by seamless deposits and withdrawals. Emphasizing transparency, compliance, and quality, CYBRO stands out as a promising project with strong interest from crypto whales and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana achieves \$6 billion TVL for first time since January 2022. - Price consolidates around \$165, facing resistance at \$168. - Target: potential rise to \$180 by early November, with support at \$160-\$161. Solana, ranking fifth among cryptocurrencies by market capitalization, continues to demonstrate remarkable resilience despite current market headwinds. While the price struggles to maintain momentum above \$165, the ecosystemâ€™s underlying strength suggests potential for significant upward movement in the near term. The platform has achieved a remarkable milestone, reaching \$6 billion in Total Value Locked (TVL) for the first time since January 2022. This dramatic increase from previous lows below \$500 million reflects growing trader confidence and broader ecosystem adoption. The flourishing meme coin activity within the Solana network has further contributed to maintaining positive momentum. Solana shows potential bullish pattern Currently facing resistance around \$168, SOLâ€™s price action suggests a potential bullish continuation pattern. A successful breakout could trigger a rally towards \$176, with further potential to reach \$191. However, this optimistic scenario depends on bullsâ€™ ability to overcome the prevailing bearish trend. Technical analysis of the 4-hour chart indicates an imminent pullback, with the price testing local support at \$164.55. Increasing sell-side pressure suggests a possible retreat to the rising wedgeâ€™s lower support, coinciding with a crucial zone between \$160 and \$161. Despite these short-term challenges, technical indicators appear primed for a potential bullish reversal. The accumulation of selling pressure heading into the weekend could mark a significant support level. This timing could prove advantageous, as the final week of each month typically brings increased volatility. Market observers anticipate SOL potentially closing October above \$170, with momentum possibly carrying the price to \$180 in early November 2024.

- Solana trades at \$165 after a brief spike in the last 24 hours. - A potential bullish breakout might push SOL above \$170. The crypto market has stepped into a positive outlook as the price movement of assets has recovered in the past few days. Eventually, the overall market has lost its momentum and the market cap has reached \$2.29 trillion. The fifth-largest altcoin, Solana (SOL) has marked a 0.80% spike and struggling to trade in the bullish outlook for the day. Notably, in the early hours, SOL traded at a high of \$170.76. Despite maintaining the price momentum, Solana signaled a brief downside rally and began plunging to the current price levels. At press time, Solana trades at \$165.87 with the daily trading volume plummeting by over 5.65%, standing at around \$3.25 billion, according to CMC data. On the other hand, SOL has shown positive momentum in the last seven days, with a 6.45% spike. At the beginning of the week, SOL was trading at \$156 and eventually, it climbed to a high of \$170. Meanwhile, the total value locked (TVL) of Solana reached \$6.468 billion recently, marking its peak since January 2022. Whatâ€™s Ahead for SOL Price? The four-hour technical chart of SOL highlights the current negative market sentiment and the altcoin is in the neutral zone. Moreover, Solanaâ€™s daily frame indicates the short-term 9-day moving average above the long-term 21-day moving average. The Moving Average Convergence Divergence (MACD) line of SOL is positioned below the signal line, suggesting the downside pressure and the incoming bearish trend. Besides, the Chaikin Money Flow (CMF) indicator stays at 0.15, which indicates the increased money flow with selling pressure. Looking at the price chart of SOL, it could test the immediate support level at \$161. The price might further dip to a low of \$156 range if the selling pressure grows. Conversely, if the bullish momentum returns, SOL could bounce to the \$169 mark. Further upside correction will likely push the price to a high of \$174. Disclaimer: The opinion expressed in this chart is solely the authorâ€™s. It does not represent any investment advice. TheNewsCrypto team encourages all to do their own research before investing.

Top restaking protocol on the Solana network, Solayer, has announced BGSOL, a liquid restaking token (LRT), which was developed through a strategic collaboration between Bitget Exchange and Solayer Labs. Designed to redefine how exchanges leverage liquid staking, BGSOL offers a new approach to staking on Solana by combining user rewards with direct support for Bitgetâ€™s suite of services. Exchange-Backed LRTs BGSOL represents a big step forward in the evolution of liquid staking, which has already established itself as a pillar in DeFi infrastructure on Solana. BGSOL differs from other liquid staking tokens due to its innovative synergy with Bitgetâ€™s platform, offering a model that benefits both individual users and the exchange itself. As users convert their SOL to BGSOL, they not only earn staking rewards but also contribute to Bitgetâ€™s operations through automatic delegation to its Autonomous Validation System (AVS). The collaboration between Bitget and Solayer ensures that the staked assets are directly integrated into Bitgetâ€™s transaction services, resulting in faster transactions and improved security across its on-chain products. By automating this process, BGSOL creates a streamlined solution that enhances the efficiency of Bitgetâ€™s ecosystem while maintaining the flexibility that users expect from liquid staking. This launch follows the previous success of BNSOL and bBSOL, two other liquid restaking tokens introduced earlier by Binance and Bybit in partnership with Solayer. These tokens have already demonstrated the value of exchange-backed LRTs, allowing users to earn rewards while benefiting from faster transaction speeds on Solana. With this latest development, Bitget continues to push the boundaries of what LRTs can achieve. Blueprint for Future Growth One of BGSOLâ€™s standout features is the seamless access and ease of redemption it offers to users. By converting SOL to BGSOL on Bitget, users instantly begin to accrue staking rewards, all while keeping their assets liquid. This flexibility is key to BGSOLâ€™s appeal, as users can participate in DeFi activities without being tied down by lock-up periods. The fast and simple process of converting BGSOL back to SOL also ensures that users can manage their liquidity with minimal hassle. Beyond its user-friendly interface, BGSOL introduces a synergistic LRT model that sets a new standard for the integration of staking tokens into broader DeFi ecosystems. The automatic delegation of staked assets not only supports Bitgetâ€™s operations but also enhances the overall security and performance of Solanaâ€™s network. This integrated approach presents a blueprint for other exchanges looking to build similarly innovative and mutually beneficial liquid staking models.

In the competitive landscape of altcoins, Zig Network (ZIG) is gaining attention with its innovative approach to blockchain technology. While established coins like Cardano (ADA) and Solana (SOL) have dominated the market for years, Zig Network (ZIG) offers a fresh perspective on how cryptocurrencies can deliver value to their

communities. Letâ€™s examine how Zig Network (ZIG) compares to these established players and why it may be a worthwhile addition to your investment portfolio. Cardano (ADA): A Long Journey with Marketing Challenges Cardano (ADA) is renowned for its research-backed blockchain technology. However, one of its primary challenges has been visibility. Influential figures in the community, such as Rick McCracken, have pointed out that Cardanoâ€™s marketing efforts have not kept pace with its technological advancements. Despite a market capitalization exceeding \$12 billion, critics argue that Cardano lacks the engagement seen with some newer coins. In contrast, Zig Network (ZIG) is targeting early adopters and has made a strong market entry, particularly appealing due to its low price of \$0.01. Additionally, its revenue model incentivizes users by allowing them to profit based on their active participation in the network, rather than being solely dependent on market fluctuations. Solana (SOL): Market Stability Amid Price Concerns Unlike many cryptocurrencies, Solana (SOL) has maintained relative price stability in recent months. Despite potential lows around \$50, its value has not dropped significantly, and the total value locked in its ecosystem has increased by 56%. However, while investors are hopeful for a breakout, uncertainties remain. Compared to the volatility associated with Solana (SOL), Zig Network (ZIG) offers a unique proposition. Its decentralized governance structure empowers token holders, allowing them to participate in critical decisions about the platform. This feature is particularly attractive to investors who desire greater control over their assets and returns. Why Zig Network (ZIG) Holds Growth Potential Zig Network (ZIG) is carving out a distinct niche in the cryptocurrency landscape with its innovative revenue-sharing model that rewards early adopters. Unlike traditional altcoins, which rely heavily on market dynamics for profit, Zig Network (ZIG) provides long-term compensation based on user participation, fostering a more equitable reward system. Furthermore, its decentralized governance model gives token holders a voice in essential platform decisions, enhancing its community-driven appeal. As new investors seek projects with real-world applications and fair reward distribution, Zig Network (ZIG) presents a compelling alternative to major altcoins like Cardano (ADA) and Solana (SOL). With its current market price at just \$0.01, it is an attractive option for those looking to invest early in a project poised for significant growth in 2024. To learn more about Zig Network (ZIG), please explore the links below: Disclaimer: TheNewsCrypto does not endorse any content on this page. - SOL price up 5% in a week, trading at \$164. - Key resistance levels: \$171, \$186.32, and \$200. - Open Interest at \$2.31 billion, highest since August 1. Solana (SOL) has emerged as a standout performer in the cryptocurrency market, registering a decent 5% price increase over the past week. Currently trading at \$164, SOL finds itself on the cusp of a crucial resistance level at \$171. A successful breach of this threshold could potentially catalyze further upward movement, with subsequent targets at \$186.32 and the psychologically important \$200 mark. Technical analysis of SOLâ€™s one-day chart reveals compelling evidence of surging demand for the altcoin. The Relative Strength Index (RSI), a key momentum indicator, currently stands at 68.59 and is trending upward. While this reading approaches overbought territory (typically considered above 70), it signifies sustained buying pressure that has been driving SOLâ€™s price appreciation. Solanaâ€™s open interest surges Complementing the RSIâ€™s bullish signal, Solanaâ€™s Open Interest has experienced a dramatic surge, reaching \$2.31 billion â€” its highest level since August 1. This metric, which has risen 29% since October 18, measures the number of outstanding derivative contracts. The simultaneous increase in open interest and price typically indicates a robust uptrend supported by significant market participation. Notably, the composition of this rising open interest appears to favor long positions, as evidenced by Solanaâ€™s positive funding rate of 0.012%. This metric suggests that traders are predominantly betting on further price appreciation rather than a decline, potentially setting the stage for continued upward momentum. Looking ahead, if SOL maintains its current trajectory, a breach of the \$171.74 resistance level could pave the way for further gains. The next significant hurdle lies at \$186.32, with a potential push towards \$209.90 â€” a price point not seen since March â€” should bullish sentiment persist.

An important announcement has set the stage for a possible rise in Solanaâ€™s value. Meanwhile, Cybro and Toncoin are also positioned for growth. This development has caught the attention of investors and enthusiasts alike. Discover what is driving these expectations and what it could mean for the crypto market. CYBRO Presale Exceeds \$3 Million: A One-in-a-Million Next GEN DeFi Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, CYBRO has introduced a referral program. It offers 12% commissions from direct refereesâ€™ token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in USDT, and referees receive double CYBRO Points on their first deposit using the referral code. In addition to its token offering, CYBRO has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the CYBRO Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in CYBROâ€™s DeFi Vaults. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project thatâ€™s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Solana Shows Upward Momentum; Eyes Resistance at \$162.09 Solana (SOL) is trading between \$138.03 and \$154.93, gaining 10.02% in the past week and 16.12% over the past month. The price is approaching the nearest resistance level at \$162.09. A move above this could see SOL targeting the second resistance at \$179.00, suggesting potential upside of around 16%. The RSI stands at 52.36, indicating neutral momentum, while the MACD level of 0.25 points to slight bullishness. The price is near both the 10-day and 100-day simple moving averages at \$153.22 and \$153.91, signaling consolidation. If the price drops, support levels are at \$128.27 and \$111.36. Toncoin Nears Resistance at \$5.58 Amid Bullish Signals Toncoin is trading between \$4.99 and \$5.39, showing a 1.81% increase over the past week. The price is approaching the resistance level at \$5.58. Technical indicators like the Relative Strength Index at 58.88 and a MACD level of 0.007 suggest bullish momentum. However, the Stochastic oscillator at 81.74 indicates overbought conditions, which might lead to a short-term pullback. If Toncoin breaks above \$5.58, it could target the next resistance at \$5.98, offering potential gains. Failing to break resistance might see the price testing support at \$4.80. The coin is near its 10-day and 100-day moving averages, reflecting its recent stability. Overall, Toncoin shows signs of possible growth but faces key resistance ahead. Conclusion Solana (SOL) is expected to experience growth following recent developments, and Toncoin (TON) also shows potential for gains. However, the standout opportunity lies with CYBRO. As a technologically advanced DeFi platform, CYBRO offers investors exceptional opportunities to enhance their earnings through AI-powered yield aggregation on the Blast blockchain. With features such as attractive staking rewards, exclusive airdrops, and cashback on purchases, CYBRO provides a superior user experience with smooth deposits and withdrawals. Focusing on transparency, compliance, and quality, CYBRO emerges as a promising project attracting significant interest from major crypto investors and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana trades at \$166, after gaining over 4.87% over the last 24 hours. - The market witnessed SOLâ€™s 24-hour liquidation of \$11.28 million. The cryptocurrency market has been through bullish turns, with the market cap reaching \$2.36 trillion. Major assets are striving to recover in the second half of October. In particular, Solana (SOL), the fifth-largest cryptocurrency, has drawn out its gains by 4.87%. SOL chose a bullish rally for the day, breaking the nearby resistance levels. Notably, Solana opened the trading day within the \$159 range, and eventually the altcoin managed to hit a high of \$171.43. At press time, SOL is trading at \$166.64 with its daily trading volume increased by over 114%, standing at around \$3.70 billion, according to CMC data. SOL has shown a positive outlook in the last seven days, with an over 8.95% gain. At the beginning of the week, the altcoin was trading at \$152. The tokenâ€™s price severely fluctuated and reached the \$157 mark. On the other hand, a whale has sold 22,726 SOL worth \$3.86 million at a price peak. This whale is particularly known for buying Solana at low prices and selling it at its peak price. Despite the recent sale, the whale currently holds a 29K SOL value at \$3.33 million. Will Solana Sustain at the Current Level? The four-hour technical chart of SOL suggests the asset is likely to step into the overbought zone in the market, as the daily relative strength index (RSI) sits at 69.45. In addition, the short-term 9-day moving average standing above the long-term 21-day moving average, suggests the current positive momentum. Looking ahead, Solanaâ€™s Moving Average Convergence Divergence (MACD) line is currently positioned above the signal line, highlighting the upward momentum. As per the daily price chart, SOL could test the nearby support at \$159 and the price might further dip to a low of \$153 mark. These levels play a crucial role in securing its price. If the bullish momentum persists and it gains strength, SOL could bounce up to the \$171 level. The next target might be \$176. This momentum would confirm the prolonged bullish sentiment. Highlighted Crypto News

Smart crypto investors are always searching for promising new altcoins with potential, like Solana. Investors who cashed in on Solana know the value of investing in such projects in the early stages. RCO Finance (RCOF) is turning heads for its focus on decentralized finance (DeFi) and innovative blockchain solutions. Investors who should have noticed the benefits of early access to Solana (SOL) see RCO Finance as a fresh opportunity. Much like Solana, RCOF can deliver exponential returns for current investors. An Overview of Solanaâ€™s Explosive Growth Solana was only sometimes a high-performing crypto. SOL initially traded at \$0.95, quickly gaining traction and rising to an all-time high of \$260 in 2021. This incredible growth was due to Solanaâ€™s ability to solve key problems in the blockchain space. It became a go-to for developers and investors by revolutionizing transaction speed and scalability. Early investors who recognized SOLâ€™s potential were rewarded with astronomical returns as its price surged. A \$500 investment when Solana was trading at \$0.95 got you about 526 SOL tokens. When the token skyrocketed to \$260 a piece, your investment grew to about \$136,760. The key takeaway from Solanaâ€™s success story is the importance of timing. Entering high-quality projects early on can lead to surprising returns, and a similar opportunity presents itself with RCO Finance. Investing \$500 in RCOF could yield the same results as Solana. RCO Financeâ€™s Potential: How it Mirrors Solanaâ€™s Early Days RCOFâ€™s fundamentals suggest it is on a growth trajectory similar to Solanaâ€™s. But what exactly makes RCOF so special? RCO Finance is leveraging cutting-edge technology to offer an all-in-one DeFi ecosystem. It aims to streamline DeFi services like lending, staking, and yield farming, making them more accessible and user-friendly. Just as Solana distinguished itself with speed and scalability, RCOFâ€™s user-centric approach positions it as a leader in the next wave of blockchain innovation. The RCO Finance platform is powered by artificial intelligence (AI) and machine learning (ML), offering tools that simplify investing. Its AI-powered robo-advisor, a personal investment consultant, analyzes market data to create tailored strategies. The robo-advisor provides dynamic portfolio management, adjusting in real time to market trends, reducing dependence on traditional advisors, and enhancing decision-making. The platform offers extensive asset access with over 120,000 financial instruments. This collection includes digital and real-world assets (RWAs), which they can purchase using cryptocurrency. This democratization of RWAs eliminates the tiresome process of crypto-fiat conversion, making it easier for users to diversify their portfolios and access traditional investment opportunities without intermediaries. RCOF has already secured key partnerships that could drive its growth even further. These collaborations help extend its reach and integrate with other major blockchain ecosystems, boosting its visibility and utility. As more projects build on and interact with the RCOF platform, demand for its token will rise significantly. Regarding market potential, RCO Finance is addressing the growing demand for AI-powered DeFi services, a sector showing signs of massive growth in the coming years. As DeFi projects continue to attract significant investment, projects like RCOF, offering the most comprehensive and scalable solutions and regulatory compliance through regular audits, will come out on top. RCOFâ€™s combination of advanced technology, strategic partnerships, and user-centric approach makes it a strong contender for such success. Unlock Massive Returns With RCOF For investors, the real question is: What could a \$500 investment in RCOF yield? Early investors, like Solanaâ€™s early investors, stand to make significant returns based on its projected growth. If RCOF experiences similar growth, a small initial investment could grow exponentially, offering substantial upsides for those willing to act now. With its presale currently underway, you can secure RCOF tokens at a low price of \$0.034. Act quickly and secure your tokens and the chance to maximize your returns. Now is the moment to take action. Take your chance to get the massive returns that early investors in Solana experienced. For more information about the RCO Finance (RCOF) Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. An analyst who foresaw Solanaâ€™s surge from \$3 to \$200 now predicts that five other cryptocurrencies could grow 100-fold in the next six months. This forecast comes from someone with a proven record in crypto predictions. Learn which altcoins could skyrocket and why this expert is so confident in their potential. CYBRO Presale Soars Past \$3 Million: A One-in-a-Million NeoBank Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This cutting-edge NeoBank offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In addition to tokens, CYBRO introduces special Points, offering even more opportunities for investors. Holders of these Points will automatically participate in the CYBRO Airdrop, where the more Points you hold, the more tokens you will receive. CYBRO distributes up to 1 million Points weekly, which can be earned by investing in DeFi Vaults in the CYBRO app. Holders of CYBRO tokens will enjoy

lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 80 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project thatâ€™s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Cardano (ADA): Scalable and Sustainable Blockchain for Smart Contracts Cardano is a major cryptocurrency offering a flexible and scalable blockchain platform for smart contracts. It enables the creation of decentralized finance apps, tokens, and games. Its native coin, ADA, allows users to store value, make payments, and stake on the network. Cardano stands out for its sustainable approach, using the Ouroboros proof-of-stake mechanism for energy efficiency. Unlike energy-intensive proof-of-work models, this makes it environmentally friendly. The blockchain is innovatively divided into two layers: one for transactions and another for smart contracts. This design enhances transaction processing capability, potentially handling up to a million transactions per second. Cardanoâ€™s native tokens provide secure, low-fee interactions with smart contracts, improving efficiency and scalability. XRP: A Borderless Cryptocurrency with Fast and Secure Transactions XRP is a cryptocurrency supported by the XRP Ledger. It is designed to be fast, low-cost, and open. Transactions on the XRP Ledger are borderless and resistant to censorship or counterfeiting. XRP operates on a decentralized system without a central authority, making transactions irreversible and secure. It does not require a bank account for settlements, which can make it accessible to many people. XRP was created by Jed McCaleb, Arthur Britto, and David Schwartz. The initial supply was 100 billion, with 80 billion gifted to Ripple for further development. Ripple uses XRP to improve network liquidity and support the ecosystem. The name XRP comes from â€œripple credits,â€ reflecting its aim to facilitate seamless payment transfers across various currencies. Arbitrumâ€™s ARB Token Enhances Ethereum with Layer-2 Scaling Solution Arbitrumâ€™s ARB token offers a path to enhance Ethereumâ€™s scalability and efficiency. Developed by Offchain Labs, Arbitrum is a Layer-2 solution that increases transaction speed and privacy. By employing optimistic rollups, it improves smart contract performance and lowers execution costs. ARB serves as a governance token, enabling holders to influence network decisions and engage in ecosystem development. With 10 billion initial tokens and a 2% maximum annual inflation rate, ARB is distributed among investors, DAOs, individual wallets, a DAO Treasury, and team members. The Arbitrum DAO oversees allocations, fostering a decentralized framework. Litecoin: A Faster, Scalable Alternative for Everyday Transactions Litecoin is a cryptocurrency created by Charlie Lee, a former Google engineer. It was designed to be a faster and more scalable alternative to Bitcoin. Litecoin aims to improve transaction speeds and prevent mining centralization. It uses a Scrypt hashing algorithm. Transactions are faster with a block time of 2.5 minutes. There is a larger coin supply of 84 million coins. Litecoin positions itself as â€œthe silver to Bitcoinâ€™s goldâ€ for everyday transactions and micropayments. It has a focus on innovation, with upgrades like the Mimblewimble extension for enhanced privacy and scalability. Despite competition, Litecoinâ€™s lower fees, faster transactions, and continuous improvements give it a unique place in digital finance. It offers a user-friendly and efficient payment solution. Conclusion While coins like ADA, XRP, ARB, and LTC show potential, their short-term growth may be limited. In contrast, CYBRO, an advanced DeFi platform, offers investors exceptional opportunities to boost their earnings through AI-driven yield aggregation on the Blast blockchain. With attractive staking rewards, exclusive airdrops, and cashback on purchases, CYBRO provides a superior user experience with seamless deposits and withdrawals. By focusing on transparency, compliance, and quality, CYBRO emerges as a promising project attracting significant interest from major crypto investors and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. In our analysis of 2024â€™s top crypto projects, we start with Tron, which has been a beacon of stability in the volatile cryptocurrency market. Tron has successfully maintained its value, consistently trading above the \$0.1560 mark against the US Dollar. This steady performance showcases Tronâ€™s resilience, which has not only outpaced competitors but also shown potential signs of further upward movement. Moving on, Solanaâ€™s prospects are looking increasingly promising. Market predictions suggest that Solana may ascend to new heights if it successfully breaks through the \$144 resistance level. This optimism is fueled by its recent recovery, navigating past significant support levels and indicating a positive trend in its trading behavior. Amid these developments, BlockDAG (BDAG) presale phase is making substantial strides, with the goal of reaching \$600 million within sight, and nearly \$100 million already secured. The rapid pace of this presale has sparked significant anticipation of a notable increase in BlockDAGâ€™s value. Analysts have projected that by 2027, BlockDAGâ€™s value might escalate to \$20, marking it as an intriguing opportunity for those looking for impactful ventures within the crypto space. Tronâ€™s Stability: A Model of Resilience Tron continues to demonstrate commendable stability, maintaining a strong position above the \$0.1560 level. This consistent performance is noteworthy, especially when compared to the broader cryptocurrency fluctuations, including Bitcoin. After a brief dip, Tron swiftly rebounded, surpassing the \$0.1600 resistance and peaking at \$0.1618 before a slight retraction. Despite this, Tron continues to hold well above critical support levels, trading around \$0.1580. This is aligned with key technical indicators like the 100-hourly simple moving average, reinforcing a stable outlook for Tron as it prepares for potential future advancements. Solanaâ€™s Market Dynamics: Poised for Growth? Recently, Solana tested the \$135 support level and has begun to rebound from earlier setbacks. As it approaches the \$144 resistance mark, there is growing optimism that it might achieve bullish momentum, which could significantly influence its market trajectory. After surpassing intermediate resistance levels at \$146 and \$148, Solana reached up to \$152 before encountering a pullback, mirroring trends seen in other major cryptos such as Bitcoin and Ethereum. Currently, Solana has successfully regained positions above the \$140 mark. The forthcoming resistance near \$144 will be crucial in determining whether Solana can maintain its upward trajectory or if it will face another corrective phase. BlockDAGâ€™s Presale Nears Historic \$600 Million Amid Strong Market Interest BlockDAG is quickly making headlines in the cryptocurrency world with its extraordinary presale achievements. The platform is nearing the significant \$100 million mark, tracking towards an ambitious \$600 million target in just two months. Already with over \$98 million secured, BlockDAG is on its way to becoming one of the largest presales in the history of cryptocurrency. This remarkable progress underscores the robust interest and confidence in the BlockDAG ecosystem. Distinguishing itself from other blockchain projects, BlockDAG employs a pioneering Proof of Work consensus mechanism. As a frontrunner in Layer 1 blockchain technology, BlockDAG appeals to those eager to explore cutting-edge developments. The rapid sell-out of each presale batch further highlights the intense activity and keen interest in the project. Currently in its 24th batch, BlockDAG offers coins at an accessible price of \$0.0206. As the presale advances, anticipation is mounting, stimulating discussions about the future potential of BDAG. Analysts have speculated that BlockDAGâ€™s value could climb to \$20 by 2027, reflecting its rapid growth trajectory and expanding community engagement. Crypto enthusiasts are keeping a close eye on BlockDAGâ€™s progress. Early supporters have already witnessed a significant return on their initial engagement, with a 1960% ROI being reported. With BDAG coins still available at a relatively low price, the current phase presents a timely opportunity for new participants to engage with a project that could offer substantial future rewards. 2024â€™s Top Cryptocurrencies: Stability and Growth In our overview of the cryptocurrency market, Tron continues to demonstrate remarkable stability, consistently maintaining a value above the \$0.1560 mark. This consistent performance showcases Tronâ€™s resilience amidst ongoing market fluctuations. Meanwhile, Solana is experiencing a promising recovery. Following a period of testing crucial support levels, its price predictions are now trending higher, signaling a potentially strong rebound. BlockDAGâ€™s presale is experiencing consistent growth, establishing it as a key player among the top crypto projects. As it rapidly approaches the monumental \$600 million goal, the presale phase could conclude soon. Those considering engaging with BlockDAG might find this an opportune moment to participate, potentially positioning themselves to benefit from future value increases as the project continues to expand and evolve. Discover More About BlockDAG: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagNetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. As we delve into the leading crypto projects of 2024, we start with Tron, which is showcasing remarkable stability in the market. Tron continues to hold its value, consistently staying above the \$0.1560 mark against the US Dollar, suggesting a stable trajectory in comparison to other cryptocurrencies. Turning our focus to Solana, the outlook is increasingly positive. Analysts are optimistic about Solanaâ€™s potential to climb higher, eyeing a breakthrough past the \$144 resistance level that could set the stage for new highs. Amid these developments, BlockDAG (BDAG) is making significant strides in its presale phase, rapidly approaching the \$100 million mark and setting its sights on a monumental \$600 million goal. This swift progression is sparking anticipation among crypto enthusiasts, with projections estimating BlockDAGâ€™s value could ascend to \$20 by 2027, marking it as a standout coin for those looking for significant opportunities in the crypto landscape. Tron Shows Resilience in the Market Tron is demonstrating resilience, maintaining its value well above the \$0.1560 threshold. This stability is particularly notable as it surpasses even Bitcoinâ€™s performance under similar conditions. Tron recently rebounded above the \$0.1600 resistance level, achieving a high of \$0.1618 before undergoing a slight correction. Despite this, Tron remains robust, trading around \$0.1580 and holding strong against major technical benchmarks like the 100-hourly simple moving average, indicating sustained stability as the market anticipates its next move. Whatâ€™s on the Horizon for Solana? Solana, after touching the \$135 support base, is beginning to reverse its earlier losses. With its sights set on overcoming the \$144 resistance mark, Solana could potentially gather bullish momentum. A successful move beyond this point may significantly alter its trading pattern, signaling a positive trend. Having surged past \$146 and \$148, Solana reached up to \$152 before experiencing a pullback, mirroring trends observed in Bitcoin and Ethereum. Currently, Solana is regaining strength, pushing back above the \$140 mark. The forthcoming resistance near \$144 will be crucial in determining whether Solana can sustain its recovery or if it might face another setback. BlockDAG Presale Approaches Historic \$600M Goal with Remarkable Speed BlockDAG is swiftly gaining the spotlight in the cryptocurrency world with its unprecedented presale journey. Rapidly approaching the \$100 million mark, the platform is on a fast track towards an ambitious \$600 million target within merely two months. Having already accumulated over \$98.7 million, BlockDAG is poised to become one of the most significant presales in the history of cryptocurrency, reflecting robust interest and confidence within the BlockDAG ecosystem. Distinctive from other blockchain initiatives, BlockDAG employs a modern Proof of Work consensus mechanism, establishing its leadership in Layer 1 blockchain technology. This innovative approach has attracted a wave of enthusiasts keen to partake in BlockDAGâ€™s advanced offerings. The overwhelming demand is evident as each batch of presale coins has been swiftly purchased, signaling strong activity and engagement within the community. Currently, in its 24th batch of presale, BlockDAG offers coins at the competitive price of \$0.0206. With the presale advancing, anticipation among the community is heightening, leading to widespread speculation about the potential future value of BDAG. Analysts are envisioning a price target of \$20 by 2027, bolstered by the projectâ€™s rapid progression and growing user base. Crypto enthusiasts are keeping a close eye on BlockDAGâ€™s scale-up efforts, and early participants are already benefiting from a 1960% ROI. With BDAG coins still available at a relatively low price, now presents a timely opportunity for new participants to engage with a project that could offer significant returns in the future. 2024â€™s Top Cryptos Overview In other crypto news, Tron continues to demonstrate resilience, consistently maintaining a value above the \$0.1560 threshold, showcasing remarkable stability in a fluctuating market. Meanwhile, Solana is making strides in its recovery, with price predictions looking optimistic as it navigates past crucial support levels. As for BlockDAG, its rapid and steady presale growth not only marks it as a standout in the crowded crypto market but also suggests that the closing of its presale could be imminent. Those contemplating acquiring BlockDAG coins may find it prudent to act swiftly, potentially adding a transformative asset to their holdings as the project continues to expand and evolve. In the crypto market, two names have recently caught the attention of top traders: Solana (SOL) and Sui (SUI). Both tokens have experienced notable price movements, with experts suggesting itâ€™s time to take profits. As traders seek the next big altcoin play, the rise of innovative platforms like Rexas Finance (RXS) presents new opportunities in asset tokenization. Solana Struggles to Hold Key Resistance Solana (SOL) has faced a series of challenges in recent days, struggling to break past the \$163 resistance level. After three attempts since August, the token has seen a 13.4% dip from its local high of \$161.8. Despite this, SOL remains bullish on longer timeframes, with key support at \$134 holding firm. The A/D indicator shows consistent buying activity since July, yet the volume near resistance zones poses concerns. The lack of breakout volume suggests a potential pullback, but SOL holders remain optimistic. If resistance is cleared, the next target sits at \$187. However, without an increase in volume, the chances of further upward movement are limited. Sui Faces Correction After Rapid Surge Sui (SUI), another token that captured the marketâ€™s attention, recently faced difficulty maintaining its value above the \$2 mark. The token had surged over 100% in a short period but has since corrected by about 3%, currently trading at \$1.8757. Despite this dip, SUI is still up by a significant 140% this year, with a market cap of \$5.155 billion. The tokenâ€™s performance has been supported by the Simple Moving Average (SMA), indicating a bullish sentiment. However, the Moving Average Convergence Divergence (MACD) signals rising bearish momentum, suggesting caution. A break above \$2.2 could trigger a bullish reversal, but failure to maintain this level might result in a deeper drop to the \$1.6060 support. Rexas Finance Pioneers Asset Tokenization Rexas Finance (RXS) is leading the charge in real-world asset tokenization, allowing investors to own fractions of assets like real estate and commodities with just a click. By removing traditional barriers, such as high entry costs and lack of liquidity, Rexas Finance makes it possible for anyone to invest in assets from anywhere in the world. At the heart of Rexas Finance is its tokenization suite, designed to make asset tokenization accessible to all. The Rexas Token Builder allows users to tokenize anything from real estate to financial assets. This feature provides unparalleled liquidity, giving investors flexibility like never before. Additionally, the Rexas QuickMint Bot simplifies the minting process through

platforms like Telegram and Discord, enabling users to create tokens with ease. For projects looking to raise funds, the **Rexas Launchpad** provides a dedicated platform for token sales, helping new ventures attract investors and fuel growth. Tokenomics and Presale Success **Rexas Finance** has also attracted significant investor attention through its public presale. Unlike other projects that rely on venture capital, **Rexas** opted for a public presale to allow everyday investors to participate in this financial revolution. Now in stage 4, with tokens priced at \$0.06, the total amount raised stands at \$3,447,227. Investors at this stage are looking at a 3.3x return upon launch. **Rexas Finance** is also offering a \$1 million giveaway, where 20 winners stand a chance to win \$50,000 USDT each by completing simple tasks like referring friends and submitting wallet addresses. Final Thoughts: **Rexas Finance** Positioned for Success As traders contemplate the future of altcoins like **Solana** and **Sui**, **Rexas Finance** offers a fresh alternative with its innovative approach to real-world asset tokenization. By enabling seamless ownership of assets through blockchain, **Rexas Finance** is setting a new standard in the crypto market. With strong presale results, advanced tools for tokenization, and a growing community of investors, **RXS** is the next big altcoin play. Majuro, Marshall Island, October 18th, 2024, Chainwire Ape On, the most secure and efficient token launch platform, is reshaping decentralized finance (DeFi) on the **Solana** blockchain. With its unique token locking feature powered by **Jupiter Lock**, Ape On is designed to provide unmatched security and transparency, making it the best and safest way to launch and buy tokens in the crypto space. Token Locking for Enhanced Transparency Ape On offers a revolutionary token locking mechanism that allows project creators to lock their tokens for a designated period, ensuring that investors are protected from early token dumps. This powerful feature builds long-term trust between creators and the community, making Ape On the safest platform for investors to participate in early-stage projects. With token locking, investors can confidently engage in projects knowing their investments are secure. As the most trusted platform for launching and buying tokens, Ape On sets a new standard in the **Solana** ecosystem, as said Joe George, CMO of Ape On. Our token locking feature guarantees that creators are committed, while investors have the peace of mind that their assets are protected from potential market manipulation. Addressing Solana's DeFi Needs As DeFi continues to evolve, Solana's low transaction fees and high-speed processing make it an ideal environment for innovative platforms like Ape On. However, despite its technical strengths, Solana's ecosystem needs secure, transparent investment methods to encourage long-term participation and project stability. Ape On's token lock and transparent launch process fill this gap by promoting fairness and trust in the growing **Solana** ecosystem. Ape On is more than just a token launchpad; it's a secure, community-driven platform that ensures both creators and investors are protected, as George added. We're proud to be the safest and best place to launch and buy tokens in the entire crypto market. Additional Platform Features - Badge System for Transparency: Ape On introduces a badge system that provides clear project status updates, offering investors easy-to-understand indicators for assessing a project's reliability. - Influencer and Creator Rewards: Ape On also incentivizes influencers and creators, sharing 20% of liquidity provider rewards with influencers who help onboard users to the platform, and 10% with token creators. - Cost-Effective and Fast Launches: With Solana's low transaction costs, Ape On makes launching tokens fast and affordable for creators, ensuring a smooth deployment process within seconds. Mainnet Launch on 20th October Ape On is set to go live on mainnet on October 20th, with RPC infrastructure powered by **Helius Labs**, locked and ready for the big day. The platform's debut on mainnet marks the beginning of a new chapter in secure token launches on **Solana**. About Ape On Ape On is a next-generation platform on the **Solana** blockchain, offering the best and safest way to launch and buy tokens. With its **Jupiter**-powered token locking mechanism, Ape On provides security and transparency, setting the gold standard for token launches in DeFi. By focusing on long-term stability and community trust, Ape On fosters growth in the crypto ecosystem. For more information, users can visit Ape On or follow Ape On on Twitter Contact CMO Joe George Ape On hell@apeon.it

Newcastle upon Tyne, United Kingdom, October 18th, 2024, Chainwire Today marks the official launch of **KERORO**, a new meme coin built on the **Solana** blockchain, which has debuted with a market cap of \$4.5 million. Positioned within the meme coin market, **KERORO** draws on Solana's high-speed, low-cost transaction capabilities to establish itself as a community-driven project. **KERORO's** Vision and Mission **KERORO**, inspired by the iconic character known for its charm and cultural impact, brings a fresh, vibrant energy to the cryptocurrency world. With its roots firmly planted in the **Solana** blockchain, known for its high performance and efficiency, **KURORO** is not just a coin; it's a cultural phenomenon that promises to redefine the meme coin narrative. Key Features of **KERORO** - Community-Driven: At the heart of **KERORO** is a vibrant community that believes in the power of unity and fun. The project is designed to bring people together, fostering a sense of belonging and participation. - Innovative Technology: Leveraging Solana's high throughput and low transaction costs, **KERORO** ensures that every transaction is swift, secure, and cost-effective. This technological edge positions **KURORO** as a leader in the meme coin space. - Cultural Resonance: **KERORO** taps into a rich vein of internet culture, resonating with a new generation of investors who value creativity, humor, and community over traditional financial metrics. Market Performance and Expectations Since its launch, **KERORO** has seen an enthusiastic response, with its market cap quickly soaring to \$4.5 million. The **KERORO** team expects that **KERORO's** market cap could increase in the coming weeks due to its growing popularity and the unique dynamics of meme coin markets. Trading Information **KERORO** is available for trading on major **Solana**-based exchanges such as **Jupiter**, **Bullx**, and **Raydium**. Users interested in the project can trade **KERORO** and join the community through its social media channels and online platforms **KERORO's** Telegram: <https://t.me/kerorocult> **KERORO's** X: <https://x.com/kerorocult> Contract Address: [226TocwZktddxVe9kXCb3j3A33926CDiut5k3a9Apump](https://t.me/kerorocult) About **KERORO** **KERORO** is more than just a meme coin; it's a celebration of community, creativity, and the spirit of the internet. Built on **Solana**, **KERORO** aims to bring joy and opportunity to all its holders, proving that finance can be both serious business and serious fun. Big investors are quietly buying four altcoins with huge growth potential. One of them, a token costing just \$0.035, could outperform **Solana** in the next bull market. What makes these cryptocurrencies so special? Uncover the reasons behind this stealth accumulation and how it might lead to exceptional gains. **CYBRO** Presale Exceeds \$3 Million: A One-in-a-Million Next **GEN DeFi** Investment Opportunity **CYBRO** is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$3 million. This next-generation DeFi platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with **CYBRO** tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. In another exciting update, **CYBRO** has introduced a referral program. It offers 12% commissions from direct referees' token purchases, 3% from second-level referees, and 2% from third-level referees. Rewards are distributed weekly in **USDT**, and referees receive double **CYBRO** Points on their first deposit using the referral code. In addition to its token offering, **CYBRO** has introduced a Points system, further enhancing investor incentives. Holders of these Points will automatically qualify for participation in the **CYBRO** Airdrop, with token distribution tied directly to the number of Points held. The platform allocates up to 1 million Points on a weekly basis, which investors can accrue through positions in **CYBRO's** DeFi Vaults. Holders of **CYBRO** tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 64 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that's truly one in a million. >>>Join **CYBRO** and aim for future returns up to 1200%<<< **Kaspa** Introduces **BlockDAG** and **GHOSTDAG** to Proof-of-Work Cryptocurrencies **Kaspa** is a proof-of-work cryptocurrency that uses the **GHOSTDAG** protocol. Unlike traditional blockchains, **GHOSTDAG** allows blocks created in parallel to coexist and orders them in consensus. This means **Kaspa's** blockchain is a **blockDAG**. The approach enables secure operation while maintaining very high block rates, currently one block per second, with very short confirmation times dominated by internet latency. **Kaspa** includes features like **Reachability** to query the **DAG's** topology and block data pruning. It also supports **SPV** proofs and subnetworks, simplifying implementation of layer 2 solutions. **Kaspa** introduces new possibilities in proof-of-work cryptocurrencies with its innovative technology. **Aptos: A Scalable Blockchain Built with Safety and Flexibility in Mind** **Aptos** is a new layer-one blockchain designed to be scalable, safe, and reliable. It aims to address high transaction fees and network congestion seen in blockchains like **Ethereum** before it transitioned to **Proof-of-Stake**. Developed by **Aptos Labs**, founded by core contributors from **Diem** (a Meta initiative), it uses a **Proof-of-Stake** consensus mechanism. **Aptos** focuses on scalability and employs the **Move** programming language for smart contracts, emphasizing safety and flexibility. It supports a wide range of **Web3** applications. **Aptos** has the potential to make an impact in the blockchain space by providing an efficient and adaptable platform for developers and users alike. **Sui: A Layer-1 Blockchain Focused on Global Adoption and User Experience** **Sui** is a layer-1 blockchain platform designed for global adoption. It offers a secure and scalable development platform using a novel object-centric data model and the **Move** programming language. This approach addresses inefficiencies in existing blockchain architectures. **Sui** prioritizes user experience by removing common barriers in blockchain interactions. With innovations like **zkLogin**, sponsored transactions, and programmable transaction blocks, **Sui** aims to create a higher standard for user experience in **Web3**, making applications more accessible and user-friendly. Conclusion In the current bull market, while coins like **KAS**, **APT**, and **SUI** show potential, they may offer less short-term growth. In contrast, **CYBRO** emerges as a standout opportunity. As an advanced DeFi platform on the **Blast** blockchain, it provides investors with exceptional ways to maximize earnings through **AI**-powered yield aggregation. Features such as lucrative staking rewards, exclusive airdrops, and cashback on purchases enhance the user experience, ensuring seamless deposits and withdrawals. With a focus on transparency, compliance, and quality, **CYBRO** attracts significant interest from crypto whales and influencers, positioning itself as a promising project in the dynamic crypto arena. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDQPhrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. The closing months of 2024 are crucial for investors on the lookout for promising cryptocurrency opportunities. Among the array of choices, three coins are shining brightly in the current market. **Solana** is exhibiting steady growth, signalling an optimistic price outlook. In addition, **Shiba Inu (SHIB)** is making waves with a remarkable 5% increase in its price value. In the presale sector, **BlockDAG** is gaining impressive traction, with its presale approaching a remarkable \$99 million. Investors are flocking to this project, as **BlockDAG** has extended its 50% bonus offer until October 21 due to high demand. As **BlockDAG** aims to finish the year strong, it is positioning itself as a top contender in the cryptocurrency landscape for 2024. **Solana Price Outlook: Anticipating Future Trends** **Solana** has made impressive advancements in the cryptocurrency landscape. Initially launched as a promising initiative, it quickly gained traction thanks to its rapid transaction speeds and impressive scalability. The **Solana** price outlook indicates various possibilities, but its historical performance hints at continued growth. In 2021, **Solana** surged past \$200 from a significantly lower starting point, attracting considerable attention. As we look to the future, the **Solana** price outlook presents some uncertainty, yet its foundational technology suggests the potential for long-term progress. Investors and analysts are keenly observing market trends and possible regulatory shifts that could influence the **Solana** price outlook. **Shiba Inu (SHIB) Price Value Perspective** **Shiba Inu (SHIB)** is currently displaying encouraging signs, with its price at \$0.00001797, reflecting a notable 5% increase. This rise in the **Shiba Inu (SHIB)** price aligns with the overall upward trend in the cryptocurrency market, driven by **Bitcoin's** ascent to around \$62,000. The rapid changes within the market are fueling optimism about **SHIB's** growth potential. Looking forward, the speculation surrounding **SHIB** reaching the \$1 milestone continues to capture interest. Despite recent market fluctuations, the positive momentum and a 5% increase indicate the potential for significant gains in the **Shiba Inu (SHIB)** price value. Investors remain vigilant, as the market's unpredictable nature calls for a balanced sense of optimism. **BlockDAG Presale Surges with 50% Bonus Extension** Time is running out for those keen on the **BlockDAG** network as it nears its mainnet launch. There's a unique opportunity to acquire **BlockDAG** at a low price of \$0.0206 in batch 24, but the main highlight is the limited-time 50% bonus on **BDAG** coins. The exciting news is that this bonus offer, which was originally scheduled to end on October 14, has been extended until October 21 due to high demand! After this date, the bonus will no longer be available, making this a crucial time for interested buyers. Crypto enthusiasts are taking advantage of this opportunity. With **BlockDAG** presale batches quickly selling out, the **BDAG** coin is poised for significant value after the launch and major exchange listings. This excitement has led to **BlockDAG's** presale raising nearly \$99 million, with over 14.3 billion **BDAG** coins sold, establishing it as one of the most successful presales in the crypto space. The outlook for **BlockDAG** continues to look promising. Early investors are likely to reap considerable rewards, especially those who purchased **BDAG** during Batch 1, who have already enjoyed returns of 1960%. This figure is expected to increase as each batch sells out, reinforcing the positive outlook for early supporters. It underscores why **BlockDAG** is seen as a leading cryptocurrency to watch for 2024. With the presale anticipated to conclude in the coming months, this is the prime opportunity for buyers to acquire **BDAG** coins. Why? The value of **BDAG** is projected to rise sharply on trading platforms shortly after its launch. Make The Smart Crypto Choice Which cryptocurrency is the best bet for the upcoming year? For buyers, joining crypto still in the presale phase, such as **BlockDAG**, appears to be the smartest choice. While **Solana** and **Shiba Inu** are certainly performing well, **BlockDAG** is currently at its lowest price and is protected from sudden market fluctuations, making it a top candidate for 2024. It has the potential to experience significant growth once it launches. Remember how **BTC** gained momentum after its introduction? **BlockDAG** is positioned to follow a similar trajectory, especially with the ongoing rise in **BDAG** coin value during its presale phase. Discover More About **BlockDAG**: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMvyy> Disclaimer: TheNewsCrypto does not endorse any content on this page.
