

businesses. Itâ€™s aims to diversify the AMM market and add additional features that Uniswap did not have before, such as providing higher rewards to network members through internal SUSHI tokens.

SushiSwap (SUSHI) Current Market Status According to CoinGecko, the SUSHI price is trading at \$8.06 with a 24-hour trading volume of \$198,655,422, at the time of writing. However, SUSHI has dropped by 6.8% in the last 24 hours. In addition, SUSHI has a circulating supply of 192,789,255 SUSHI coins. Currently, SUSHI trades in Binance, OKEx, Tokocrypto, FTX, and Huobi Global.

SushiSwap (SUSHI) Technical Analysis 2021 SushiSwap (SUSHI) holds the 66th position on CoinGecko right now. The recent development and upgrades might push SUSHI to reach new heights. Now, letâ€™s deep dive into the SUSHI technical analysis 2021. The daily time frame chart of SushiSwap (SUSHI) is shown below. A triple top is a bearish chart pattern. It is simple, defined by three different peaks formed at roughly the same level in the market. This pattern is a special form of the head and shoulders pattern. Just that the three peaks top around the same price levels the same way the double top does. The first peak on this chart occurred when the market trended for a period of time when the price fell again. The price returns to the same level as the first high, but buyers will not be able to gain enough momentum to drag the price down through resistance. The third peak is also formed in the same way. If they all reach the same price level, the price may fall or exceed the previous high. No matter what happens, each peak should have a decreasing volume. Currently, SUSHI is trading at \$8.5. After this, SUSHI may continue to fall or rise according to the direction of the breakout. With this pattern, SUSHI might reach the resistance level at \$22.83 soon. If the trend reverses, then the price of SUSHI may fall to \$6.

SushiSwap (SUSHI) RSI The below chart shows the relative strength index (RSI) of SUSHI. As shown in the above chart, RSI remains at 49.2. This shows that SUSHIâ€™s price is in a neither overbought state nor oversold state. However, this shows that traders can trade fearlessly.

SushiSwap (SUSHI) RVOL The below chart shows the Relative Volume of SUSHI. It is an indicator that indicates to traders how the current trading volume has changed over a period of time compared to the previous trading volume. Currently, the RVOL of SUSHI lies below the cutoff line which represents the weaker participants in the current trend.

SushiSwap (SUSHI) Moving Average SUSHIâ€™s Moving Average (MA) is shown in the chart below. MA supports traders to find trends. Currently, SUSHI is in a bearish state. However, SUSHI price touches 50 MA (short-term), and it has a high chance of moving above 50-MA level. Possibly, SUSHI can also move above 200 MA (long-term) soon. Once it moves above 50 MA and 200 MA level, it completely goes to a bullish state. Moreover, there is a high possibility of a trend reversal at any time.

SushiSwap (SUSHI) Price Comparison With Bitcoin The below chart shows the price comparison between SUSHI and BTC. From the chart, we can identify the trend of the BTC and SUSHI is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of SUSHI also increases or decreases respectively.

Conclusion With the ongoing developments and upgrades that are taking place within the SUSHI platform. SushiSwap has a great future ahead in this crypto market. However, SUSHI can reach new heights. Bullish SUSHI price prediction 2021 is \$13.75. As mentioned above, it may reach great heights, however reaching \$22.8 is also possible, if investors have decided that SUSHI is a good investment in 2021.

FAQ SUSHI is a governance token that enables community governance over the Sushi ecosystem, which means that SUSHI holders can use their tokens to vote on platform proposals to promote ecosystem initiatives. Itâ€™s native coin is SushiSwap. SUSHI is listed on many cryptocurrency exchanges that include Binance, OKEx, Tokocrypto, FTX, and Huobi Global. With the ongoing developments and upgrades within the SUSHI platform, it has the high possibility of reaching its ATH soon.

In the last several days, a bull surge was the narrative of the larger market. The impact was not universal, however, with several altcoins indicating a delayed reaction. Although Bitcoin, Ethereum, and Cardano appear to have gone past or strengthened close to their immediate strength. Other assets still need an accurate breakdown of the clasps. Surprisingly, the second category may also be XRP. Let us study the existing market structure of XRP and discover indicators of a constant tendency towards distinguishing reality from fantasy.

XRP Chart Update Source: TradingView After examining the daily maps of Bitcoin and Ethereum, they clearly define a different and more significant spike compared to their current bases. Unfortunately, XRP still has to surpass its prior low level. The crypto asset has consolidated in the previous four days alone below \$0.80. However, few measures seemed to emphasize another point of view. In the previous 24 hours, XRP has supported more than 3.5 billion dollars in daily trade, according to CoinGecko. Bitcoin and Ethereum just surpassed this amount (Tether is excluded). By extension, its trade volume was far larger than that of Cardano, Binance Coin, Dogecoin, etc.

Source: Santiment Currently, XRP investors in the short term are not entirely underwater as the ratio of 30-day MVRV shows a rentable time. The MVRV ratio of XRP at the moment was 11.63%, identical to the one week of May. Although this portion of the chain was positive, the difference between the active addresses and the price was not very nice.

Source: Santiment The divergence of daily active addresses between XRP and its price indicated a selling signal, as seen in the chart attached. This may be since, contrary to the price movement of the alt, daily active addresses have fallen. This isnâ€™t a favourable indicator for a competent bull rally. Perhaps not. XRP price in the past was not overly dependent on the chain performance. Thus the price will advance if other top assets start to rise. XRP may have tremendous opposition to other higher objectives, but the asset will probably continue to move ahead.

eToro extends its trading platform by listing one more digital asset, Shiba Inu (SHIB). Users of eToro are now able to trade and invest on SHIB after the listing of popular meme-coin â€œDOGEâ€. As the social trading platform, eToro plans to go public by the end of 2021 the company extends the listing

of its cryptocurrencies and crypto services. eToro listed Shiba Inu (SHIB) The world's leading multi-asset trading platform, eToro empowers its users to trade with a new meme token, Shiba Inu (SHIB). The users are happy to trade with SHIB after the listing of the dogecoin recently. Moreover, the listing of these digital currencies are due to the strong demand from its customers. Besides, the trading company is following the trend validating its users to trade and invest with various cryptocurrencies. As a note, eToro records more than 20 million registered users who are very eager to play with crypto space. Additionally, eToro clients are from different countries including EU, U.S and Australia and users supporting stocks, commodities, exchange-trading funds as well. Further, eToro CEO Yoni Assia announces, "eToro users will be able to interact with the popular meme coin as "Shiba (in millions) and this would offer customers with a clear understanding of the pricing in a regular, two-decimal-point format." eToro Plans To Go Public As a crypto affiliation company, eToro is planning to become a publicly-traded company by the end of 2021. The multi-asset investing company estimates an evaluation of over \$10 Billion to set to go public in the market. Further, eToro is in discussion to connect with a Special Purpose Acquisition Company (SPAC) called FinTech Acquisition Corp. V. to go public. However, when the company is traded in public it has possibilities to expand into new markets, increase the share profits. Thus the company can provide innovative plans to attract its customers worldwide. Along with this, eToro's CEO expects strong regulations and plans to impose new rules as a part of their business growth In July, Shiba Inu inaugurated its new exchange ShibaSwap DEX. The total value locked (TVL) surges more than \$1.5 billion in less than 48 hours at its launch. In contrast, the performance of ShibaSwap drops the TVL rate nearly to 80% at present. According to significant data from CoinGecko, the current TVL of ShibaSwap is \$409.39M at the time of writing.

- Bullish MAID price prediction ranges from \$0.72 to \$1.4. - The MAID price might also reach \$1.45. - MAID bearish market price prediction for 2021 is \$0.13. In MAID price prediction 2021, we use statistics, price patterns, ADX, and much other information about MAID to analyze the future movement of the cryptocurrency. MaidSafeCoin was launched in February 2006. It is a decentralized Internet project. According to the developer, its concept is several years earlier than Bitcoin (BTC). The SAFE network works similarly to the TOR network, which means that all online content is distributed and accessed via a peer-to-peer (P2P) mesh network. MAID is a SafeCoin token, a decentralized currency used in the SAFE decentralized network, supported by additional users' hard disk space, processing power, and data connection layer. Current Market Status of MaidSafeCoin (MAID) According to Coingecko, the price of MAID is \$0.71 with a 24-hour trading volume of \$1,424,532 at the time of writing. However, MAID has increased by 0.7% in the last 24 hours. Moreover, MAID has a circulating supply of 452,552,412 MAID coins. Currently, MAID trades in cryptocurrency exchanges such as HitBTC.

MaidSafeCoin (MAID) Price Prediction 2021 MaidSafeCoin (MAID) holds the 148th position on CoinGecko right now. MAID price prediction 2021 explained below with a weekly time frame. A flag pattern is a type of chart continuation pattern that shows candlesticks contained in a small parallelogram. It is an area of accumulation which shows a counter-trend move that follows after a sharp price movement. A flag pattern allows traders to enter the market in the middle of the trend. Currently, MAID is waving at \$0.7. After this, MAID may continue to fall or rise according to the direction of breakout. With this pattern, MAID might reach the resistance level at \$1.43 soon. If the trend reverses, then the price of MAID may fall to \$0.31. MaidSafeCoin (MAID) Support and Resistance Level The below chart shows the support and resistance level of MaidSafeCoin (MAID). From the above chart, it is observed that the following are the resistance and support level of MAID. - Resistance Level 1 " \$0.72 - Resistance Level 2 " \$1.45 - Support Level 1 " \$0.23 - Support Level 2 " \$0.13 The chart depicts the bullish performance of MAID over the previous month. However, this trend will continue to reach resistance level at \$1.45 soon. On the contrary, if the trend reversed then MAID might fall to \$0.23 presenting a bearish signal. MaidSafeCoin (MAID) Average Directional Index (ADX) Let us now look at MAID's Average Directional Index (ADX). In particular, the ADX assists traders in determining the strength of a trend rather than its direction. It can also be used to determine whether the market is changing or if a new trend is beginning. It is, however, linked to the Directional Movement Index (DMI). Moreover, the oscillator has a range of 0 to 100. In addition, a high value represents a strong trend, while a low value represents a weak trend. Furthermore, it is frequently combined with directional indicators. The above chart represents the ADX of MAID with the range at 25.12, so it indicates a strong trend. Conclusion MAID is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term MAID price prediction for 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$1.37 this year. However, this will only happen if MAID breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the MAID ecosystem, it could experience a great future ahead in 2021. It may reach \$0.74 soon and it might even reach high heights, however reaching \$1.45, if investors have planned that MAID is a good investment in 2021. - Bullish SUPER price prediction ranges from \$0.95 to \$2.92. - SUPER price might also reach \$3 soon. - SUPER bearish market price prediction for 2021 is \$0.29. In SuperFarm (SUPER) price prediction 2021, we use statistics, price patterns, ADX, and much other information about SUPER to analyze the future movement of the cryptocurrency. SuperFarm (SUPER) is cross-chain decentralized finance (DeFi) platform built to provide the launching of new non-fungible tokens (NFTs) without the need for programming. SuperFarm is developed to bring utility to any token by turning it into an NFT farm with no coding required. SuperFarm will also act as a link between crypto ecosystems and the gaming industry. According to CoinGecko, SuperFarm (SUPER) price is trading at \$0.7792 with a 24-hour trading volume of \$29,792,906, at the time of writing. However, SUPER has decreased by 0.78% in the last 24 hours. Moreover, SUPER has a circulating supply of 101,909,750.00 SUPER. Currently, SUPER trades in

cryptocurrency exchanges such as Binance, Hotcoin Global, HitBTC, ZT, and Gate.io. SuperFarm (SUPER) Price Prediction 2021 SuperFarm (SUPER) holds the 231st position on CoinGecko right now. SUPER price prediction 2021 is explained below with a daily time frame. The above chart shows the Descending Channel patterns. The descending channel pattern is the price action that occurs between the upward and downward trendlines. In addition, lower highs and lows constitute this price pattern. In the daily time frame chart, it is possible for SUPER to reach \$4.70 if the bull trend continues. Or else, if the price of the SUPER breaks the resistance level of \$1.52, it will fall to the next support level at \$0.35. So, the trend of the SUPER is based on the breakout. SuperFarm (SUPER) Support and Resistance Level The below chart shows the support and resistance level of SUPER. From the above daily time frames, it is clear the following are the resistance and support levels of SUPER. - Resistance Level 1 â€” \$0.95 - Resistance Level 2 â€” \$1.50 - Resistance Level 3 â€” \$2.92 - Support Level 1 â€” \$0.52 - Support Level 2 â€” \$0.29. The charts show that SUPER has performed a bullish trend over the past month. If this trend continues, SUPER might run along with the bulls overtaking its resistance level at \$2.92. Conversely, if the investors turn against the crypto, the price of SUPER might plummet to almost \$0.29, a bearish signal. SuperFarm (SUPER) Average Directional Index (ADX) Now letâ€™s look at the average directional index (ADX) of SUPER. ADX helps traders to determine the strength of a trend, not its actual direction. It can be used to determine if the market is changing or if a new trend is starting. However, it is related to the Directional Movement Index. Moreover, the oscillators range from 0 to 100. In addition, a high value represents a strong trend, while a low value indicates a weak trend. It is often used in combination with direction indicators. The above chart shows the ADX of SUPER stays above the range of 34.818, so it indicates a strong trend. Conclusion SUPER is one of the cryptos that keeps its ground against the bearish market. Furthermore, our long-term SUPER price prediction for 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$4.74 this year. However, this will only happen if SUPER breaks many past psychological resistances. Furthermore, with the ongoing developments and upgrades within the SUPER ecosystem, it could experience a great future ahead in 2021. It may reach \$2.92 soon and it might even reach high heights, however reaching \$3, if investors have planned that SUPER is a good investment in 2021. - BCB proposed significant Migration to Digital Payments - The move to virtual payments will involve the use of CBDC. - Brazil could be ready for a digital currency next year. Brazilian Central bank

(BCB) director, Joao Manoel Pinho de Mello, mentioned that a significant migration from fiat currency to digital means of payment will take place in the next few years. Accordingly, on Thursday during the group discussion on the potential of the digital real conducted by BCB, Mello noted that the move to virtual payments will involve the use of central bank digital currencies (CBDC). This, reported by the Brazilian financial newspaper, Valor Economico. More so, director of the Brazilian Central Bank, “We understand that the use of CBDC will occur in situations where it can bring greater efficiency and transparency to transactions. Whether from the retail perspective or its use by agents that make up the financial and payments industry”. Furthermore, Mello stated, if the project designed well, authorized digital currencies can expand financial inclusion and reduce the cost and time of cross-border payments. Also, he added that the operation needs maximum care in the choice of design and technologies to prevent form violations of data protection laws, bank runs, and cyberattacks. Brazilian central bank, director, Mello also declared that the use of cryptocurrencies among different countries has given special consideration to prevent unwanted substitutions of one country’s sovereign currency for that of another. Even more, the Central Bank of Brazil added, “According to the current BCB assessment, the conditions for the adoption of a Brazilian CBDC will achieved in two to three years”. Henceforth, the president of the central bank, Roberto Campos Neto, insisted that Brazil could be ready for a digital currency next year. Recommended for You

As always there still persists a certain group of people in the world who are totally against the concept of cryptocurrency in many terms. They tend to always put forth allegations speculated upon the industry. Yet, with the impeccable growth of the crypto industry in the past decade and the introduction of the crypto regulations widely, these anti-crypto individuals now protest for even more stringent regulations upon the industry. The Senator’s Letter The American Politician and the Senator of Massachusetts Elizabeth Warren sent a letter officially to the secretary of the United States Department of Treasury, Janet Yellen. Upon the letter, the Senator puts forth all her views on how the cryptocurrency industry poses to the nation’s financial situation. Accordingly, she states the majority of the retails and other markets are getting affected profusely due to the crypto industry. In addition, she states that the hedge funds which are all now profusely working upon the blockchain technology and with Decentralized Finance (Defi) are all completely lacking in terms of transparency. Also, she points out all the risks imposed on the banks with the provident shaft of all credits and cash liquidity flowing towards the cryptocurrency industry. Besides, she also adds soon it wouldn’t be even possible for banks to operate. Furthermore, the letter was sent on July 26 to the secretary. Novogratz’s Criticisms The CEO of Galaxy Investment Partners and the major crypto investor and billionaire, Mike Novogratz took on the senator on the social media platform Twitter on Tuesday. He completely criticized the anti-cryptocurrency views of the senator. In addition, he mentioned that the senator’s views and actions are totally not progressive to him. Furthermore, the billionaire points out that the cryptocurrency industry and banks should not be compared in any terms. Also, he points out banks possess fees of about \$12 billion in overdraft alone, many from ATM fees, and much more from account fees. On the contrary, he states amidst all this yet the senator says the crypto industry is taking over banks, where only a few percent are in the crypto industry comparing to banks. Moreover, the billionaire thrashes out that there wouldn’t be any sort of mortgage crisis if the banks were transparent, unlike the Defi. In addition, he points out how the Defi systems are completely transparent and automatic, in contradiction to that of the banks.

The role of digital assets is emerging tremendously every day. All financial giants, business magnets, and even general firms are adapting crypto services and digital assets. Notably, millions of transactions that take place in the industry cover more of cryptocurrencies. Many individuals are ready to make their payments digitally. As a result, Visa the global payments technology recently shared their profitable financial results for this quarter of 2021. The Chief Financial Officer of Visa Inc happily announces transactions through cryptocurrencies is the main source for the productive quarter of the year. The financial platform was busy transacting digital assets in April and May. Crypto Transactions Lands Off At present, the CFO of Visa Vasant Prabhu feels that transactions and payments through digital assets take a rest now. Crypto payments via Visa dropped down from the start of June. Gradually the business started to decline after a massive boom at the beginning of the third quarter. However, the pandemic crisis affected many firm’s economies, despite Visa producing profitable results for Q3 2021 he adds. Further, based on the economical report the CFO says, “Visa delivered another strong quarter as many key economies are well into a reopening-driven recovery. Visa grew net revenues 27% and non-GAAP EPS 41% while continuing to make investments in strategies that will drive future growth.” Additionally, he briefs about the report stating, the company estimates its net profit is \$6.1B, a surge of 27%. In comparison to the second quarter of the report, Visa spikes 47% in its revenue covering all of its incoming resources. As a note, the CFO says the rise of profit is mainly from crypto payments. Additional Crypto Features By observing immense results due to crypto-related services, Visa implements some new crypto services for its clients. The company holds a profit record of more than \$1 billion received through crypto-linked Visa cards. Besides, the firm’s more interest in new crypto features is because of the popular digital asset Bitcoin. The Visa community proposes bitcoin and other cryptocurrencies as “digital gold”, and works on providing more services to retain its customers. In regard to this, earlier this week Visa approved the first crypto card for its Australian users. All the customers from Australia are now able to use bitcoin and other virtual currencies with their new debit cards. More so, the Co-founder of Visa shares about the new application “CryptoSpend” for its Australian users. The biggest advantage of this app is that the users can pay as they go with crypto, without converting the money to fiat currencies. Thus, these interesting features and technology target all age customers to use these cryptocurrencies as their daily cup of tea. Recommended for You

In UMA Token (UMA) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about UMA to analyze the future movement of the cryptocurrency. UMA is a protocol for the creation of synthetic belongings based on the Ethereum (ETH) blockchain. The synthetic asset is a class of assets that represent various underlying assets and have the same value. UMA runs on top of Ethereumâ€™s blockchain and as a consequence, they are protected by the same proof-of-work hash function Ethash

UMA Token (UMA) Current Market Status According to CoinMarketCap, the UMA price is trading at \$8.61 with a 24-hour trading volume of \$28,511,481, at the time of writing. However, UMA has increased by 2.87% in the last 24 hours. In addition, UMA has a circulating supply of 62,019,747.43 UMA. Currently, UMA trades in Binance, OKEx, Huobi Global, ZG.com, and Hotcoin Global.

UMA Token (UMA) Technical Analysis 2021 UMA Token (UMA) holds the 105th position on CoinMarketCap right now. The recent development and upgrades might push UMA to reach new heights. Now, letâ€™s deep dive into the UMA technical analysis 2021. The daily time frame chart representing UMA Token (UMA) is shown below. The above chart shows the Wyckoff Phase theory. According to Wyckoffâ€™s theory, the price cycle of trading instruments includes four stages, they are accumulation, markup, distribution, and markdown. Accumulation Phase: The accumulation process is displayed in the chart in the form of a price range. In addition, the bulls gradually expanding, but they can still push up prices. The price pattern on the chart of WBTC is flat. Markup Phase: The bulls have enough power to push prices above the high end of the range. This indicates that the price is in the second phase and a bullish price pattern is being created on the chart. Distribution Phase: This is the third level of theory. The bear plan is now to regain control of the market. The price is currently flat on the chart, as in the accumulation process. The formation of higher and lower points in the chart indicates that the market is in the distribution stage. The lower profit margin is caused by price changes, which indicates that the market is currently in a selloff. Markdown Phase: After the Distribution phase, a price reduction process begins, just like a downward trend, which means that the bears have enough financial strength to pull the market down. When the price breaks through the lower level of the flat range of the horizontal distribution channel on the chart, a markdown will be confirmed. More so, UMA is currently in the accumulation phase, which indicates that they have more bearish days.

UMA Token (UMA) RSI The below chart shows the relative strength index (RSI) of UMA. Henceforth, as shown in the below chart, RSI remains at 46.79. This shows that UMAâ€™s price is in neither overbought nor oversold state. However, this shows that traders can trade fearlessly.

UMA Token (UMA) RVOL The below chart shows the Relative Volume of UMA. RVOL is an indicator that represents to traders how the current trading volume has changed over a period of time compared to the past trading volume. However, in the last week of June, it is found that the RVOL of UMA observed is weaker. Currently, the RVOL of UMA remains below the cutoff line, representing the weaker participants in the current trend.

UMA Token (UMA) Moving Average UMAâ€™s Moving Average (MA) is shown in the chart below. Moving Average is a part of technical analysis that supports traders to find trends. Even more, in the 50 MA (Short-term), the price of the UMA is in a bullish state, and it has broken the 200 MA. However, it will completely go to a bearish state. Currently, the price of UMA is trading below the 200 MA level so we can expect more bullish in the upcoming days.

UMA Token (UMA) Price Comparison With Bitcoin The below chart shows the price comparison between UMA and BTC. Accordingly, from the chart, we can identify the trend of the BTC and UMA is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of UMA also increases or decreases respectively.

Conclusion With the ongoing developments and upgrades that are taking place within the UMA platform. UMA has a great future ahead in this crypto market. However, UMA can reach new heights. Furthermore, bullish UMA price prediction 2021 is \$ 35.20. However, as mentioned above, it may reach great heights, however reaching \$36, if investors have decided that UMA is a good investment in 2021.

FAQ UMA is a protocol for the creation of synthetic belongings based on the Ethereum (ETH) blockchain. UMA is listed on many cryptocurrency exchanges that include Binance, OKEx, Huobi Global, ZG.com, and Hotcoin Global. - Shopify allows merchants to sell NFT directly to customers - The official NFT drop from Chicago Bulls. - The Bulls Legacy Collection will be launched more than six drops. On Monday, President of Shopify, Harley Finkelstein announced, Shopify is now enabling merchants on its platform to sell non-fungible tokens (NFT) directly to customers. Accordingly, Harley Finkelstein noted in his tweet that before Shopifyâ€™s move, it would have to sell NFTs through a third-party marketplace, forcing them to renounce control of the sale and the customer relationship. Moreover, he said that the official NFT drop from Chicago Bulls, revealed last week. This will set as the first example of tech used by a Shopify partner. The first Shopify merchants to offer NFTs will be the National Basketball Associationâ€™s Chicago Bulls. This launched an NFT Legacy Collection on a day featuring the franchiseâ€™s six world championship rings. Chicago Bulls NFT collection features digital collectibles inspired by the teamâ€™s six NBA championship wins since the 1990s. The Bulls Legacy Collection will launch more than six drops, with each token celebrating the teamâ€™s six iconic championship wins between 1991 and 1998. The first NFT launched on July 26 and has already sold out, with the second token scheduled to launch today. And the remaining four NFTs planned to launch over the next four days. The Bulls non-fungible tokens (NFTs) created on Dapper Labs Flow blockchain. This also used for Dapperâ€™s own NBA Top Shot platform. Even more, Shopifyâ€™s NFT support not limited to Flow. Furthermore, NFT is a kind of cryptocurrency that behaves like a deed of ownership to a digital item,

allowing scarcity for collectibles such as video clips, artwork, photos, tweets, and interactive video game items. Recommended for You

The Crypto industry is marching forward to higher levels as the world is very much interested in moving into the digital world. Financial giants, business whales, and millions of crypto enthusiasts are very eager to invest their assets into the crypto space. Through this, Coinbase Commerce is also encouraging its customers to pay through crypto payments. Coinbase's commercial platform allows its users to check out and spend in dogecoin (DOGE). Additionally, it reveals it will also accept six more cryptocurrencies as payment options. Coinbase Commerce Accepts DOGE A transparent financial network that helps merchants to accept and pay crypto anywhere in the world makes Coinbase Commerce unique. This decentralized network is the platform of Coinbase exchange listed by Nasdaq. Thus, this announcement clearly states that Dogecoin adoption is bubbling in the crypto market. Notably, Coinbase Commerce officially tweets saying, "Just a quick blast to let you know we're now accepting commerce payments in Dogecoin (DOGE)!" Earlier in June, Coinbase crypto exchange shared that it will support dogecoin (DOGE) on its platform. Thus, the users can now buy, sell, convert, send, receive, or store DOGE in all Coinbase supporting areas. However, in line with the customer's request to list more cryptocurrencies, the platform decided to accept dogecoins for its commerce payments. In addition, DOGE is also launched in Coinbase Pro for trading purposes. Cryptocurrencies on Coinbase Commerce Besides accepting the popular meme-coin (DOGE) the commercial platform also reveals to accept six more crypto assets. After dogecoin, the additional digital assets include, Bitcoin, Bitcoin cash, Dai, Ethereum, Litecoin, and USD Coin. In total, the website says it will accept seven cryptocurrencies for its commerce payments. Through this Doge proponents are happy to see, dogecoin is competing with top digital currencies like Bitcoin and Ethereum. The additional feature is, the Coinbase commerce enables the users to convert their crypto assets to fiat currencies like USD and Euro on the same platform. Moreover, Coinbase commerce offers a decentralized and a peer-peer mode of payments. Thus, the payment process is safe and is not accessible except by the merchant including Coinbase commerce. Therefore, Coinbase exchange is surpassing its platform spreading across globally. The exchange also plans to launch a crypto app store. On the other hand, listing on this platform and in commercial networks, DOGE is also spreading its presence in the market. Besides Elon Musk, the "Doge father" tweets and posts, the meme-coin is growing maturely in the crypto space attracting large users and businesses. Recommended for You

When it comes to cryptocurrency regulations almost all bodies of the crypto industry like the exchanges, blockchain platforms, wallet platforms, and NFT platforms, etc are all against it. However, one particular body insists the country which it is based upon to make more proper and clearer regulations furthermore. Blockchain Australia's Petition Being Australia's leading blockchain solutions provider, the views set forth by Blockchain Australia are quite vital for the nation. Accordingly, Blockchain Australia (BA) terms that the present regulations and regulatory body along with its codes are not efficient. In addition, the crypto regulations structure of Australia is not so effective, with many flaws and loopholes, says Blockchain Australia. In spite of this, Blockchain Australia (BA) has to Australia's Senate Select Committee in order to revise the crypto regulations on the act at present. Moreover, upon this petition, BA puts forth its three recommendations that would elevate the country's present technological advancements. The first recommendation of BA is that all the digital assets platforms and crypto exchanges have a breathing time period for adopting the new regulations passed from the jurisdiction. The second is that a completely new license has to be provided to these bodies which are different from the current Australian Financial Services license. The third is to provide better and safer harbor provisions for the crypto and digital assets platforms. Furthermore, the CEO of BA, Steve Vallas puts forth the recommendations if implemented will thrust the crypto industry of Australia, making it a role model for the world in terms of crypto regulations. Regarding Blockchain Australia Blockchain Australia is the country's leading platform when it comes to its blockchain technology. The sole aim of Blockchain Australia is to enhance the country by implementing blockchain technology throughout various sectors and other industries. Moreover, Blockchain Australia provides all sorts of solutions for all kinds of sectors throughout the country including the government too. In addition, it provides all kinds of blockchain applications and services from advising on the necessary blockchain technology apt for the customer to complete implementation of the blockchain technology upon their firm. In spite of all this, it lends its services to all kinds of customers, like new startups, professional industrialists, small sector enterprises, medium sector enterprises, and digital assets platforms too. Also, it extends internationally, for clients approaching them from all over the world. Recommended for You

Tesla, the manufacturer of the world's most popular electric cars, is yet to release its Q2 2021 earnings call report this Monday. Tesla plans to elucidate on its Bitcoin holdings in the upcoming financial results. So the entire crypto industry is patiently waiting for the disclosure from Tesla's position on its Bitcoin holdings in the second quarter. Tesla and Bitcoin The firm is planning to issue a brief advisory containing a link, which will be available on Tesla's Investor Relations website. Further Tesla will discuss the company's financial reports and the overall structure of its Q2 holdings in the webcast. More so, Tesla's earnings balance sheet is covering up with more Bitcoin (BTC) payments and transactions. In June, the CEO of Tesla, Elon Musk announced that the company will reignite Bitcoin transactions after a thorough confirmation of the energy consumption. As the bitcoin miners save 50% of clean energy with a positive future trend, Tesla is waving the green light for BTC payments. Earlier in February, Tesla revealed in an SEC meeting that it has bought \$1.5 billion worth of Bitcoin. Along with this the company also accepts bitcoin payments in exchanges for its products. Thus, this initiative will provide Tesla to liquidate its assets in cryptocurrency after the official start of accepting crypto payments. However, the crypto industry always has a great impact on the tweets and posts of Elon Musk. Thus the prices of the digital assets

will either surge or drop. For instance, when Musk planned to accept BTC payments he just added the word [#bitcoin](#) in his twitter bio. This reflected an immense price rise for bitcoin nearly up to \$44,200. On the other hand, in Mid- May, Musk shared that Tesla suspends bitcoin payments for its electric cars. Due to more energy consumption for bitcoin mining and for the environmental costs, Tesla declines the BTC payments. This made the bitcoin price drop 10% within 24-hours. Tesla's Bitcoin Holdings Moreover after a ["Do or Die"](#) situation whether to accept crypto payments or not, Musk smartly planned to test the crypto market. Notably, Tesla sold \$272 million of its BTC in Q1 2021 to examine the liquidity of the crypto market. On this note, Bitcoin prices slowly started to drop. However, Musk immediately shared that it was just a test to inspect if the market is capable of holding these types of huge sales. Recently, Musk participated in a popular ["B Word"](#) event which connects the concept to raise and embrace bitcoins. The major topics covered in the event were very supporting for the rise of BTC in the market. According to CoinMarketCap, the current price value of bitcoin is \$38,800.23 USD. With a surge of 14.70% in the value at the time of writing. Thus, Tesla again accepting Bitcoin as payment services has a huge power on the entire crypto industry. In specific Bitcoin (BTC) will surely reach its all time high by the end of 2021. Recommended for You

Bitcoin has slowly started to recover since the mid-week and today it reached nearly \$40,000 within a few hours. Bitcoin has been trying hard to rise for the past two months and now the price chart shows the uptrend momentum. Although, the start of the past week for bitcoin seems a depressing start. But from the mid-week BTC has taken five days to surge from hardly \$30,000 to \$34,000. Some analysts predicted the Bitcoin price actions and stated that BTC would reach \$36K by the end of the week. After being trapped in the depressing slope for a few months, BTC has recovered following the positive comments from Jack Dorsey, Elon Musk at the ["B Word"](#) conference. Moreover, Tesla CEO Elon Musk stated that he may resume BTC payment again for purchasing cars. At the time of writing, the trading price of BTC was \$38,069 which has surged more than 10%. Consequently, Bitcoin is listed as the top gainer for the past 24 hours among the top 30 crypto-assets, according to Coinmarketcap. Significantly, this quick surge of Bitcoin has pulled out some analysts to talk about BTC's bullish signal and its price chart. One popular crypto expert, Lark Davis has tweeted saying that BTC's price has again cracked above its 50-day moving average. [0000hhha!](#), [#bitcoin](#) just reclaimed the 50 day moving average! Nice! [pic.twitter.com/xpS3kiUV16](#) [Lark Davis \(@TheCryptoLark\)](#) July 26, 2021 Along with Bitcoin, Polkadot and Chainlink also joined the list of top gainers for the past 24-hours. Each surged over 10%, where Polkadot soared to nearly 15% and Chainlink raised to 13%. Elon Musk Activated Dogecoin After Elon Musk's tweet on July 25, a meme saying that ["Dogecoin is money"](#), the meme-currency saw a little surge. Despite his tweet, Dogecoin was up nearly 9% which is a single-digit gain for the day. And finally [pic.twitter.com/TcgwMSyJAY](#) [Elon Musk \(@elonmusk\)](#) July 25, 2021 According to Coinmarketcap, Dogecoin still holds its place within the top 10 by market rank. At the time of writing, DOGE has soared to 14% for the past 24-hours. On the whole, ETH is one of the leading cryptocurrencies in the market, still lacking in growth and struggles to display an uptrend. Ethereum is just posting a gain of 8% for the last 24-hours when other altcoins are making their huge move. As ETH follows the same suit of Bitcoin, it is expected to rise more in upcoming days. Recommended for You

- YooShi (YOOSHI) price spikes to over 40% in a day. - It is one of the hot trending GameFi tokens (Game + DeFi + DAO + NFT) on BSC. YooShi (YOOSHI) price spikes to over 40% in a day. According to CoinMarketCap, the YOOSHI price is \$0.000000144 with a 24-hour trading volume of \$3,001,251, at the time of writing. Trending GameFi Token YooShi is one of the hot trending GameFi tokens (Game + DeFi + DAO + NFT) on Binance Smart Chain (BSC). This boasts many impressive features. Moreover, it is developed with a burning mechanism, the total circulation supply of YooShi will be exponentially cut. More so, by combining the burning mechanism, innovative Auto-Liquidity function and NFT together, YooShi liquidity is enabled to increase rapidly. One of the most important features of YooShi to be noted is that it practices a large-scale decentralization which is rare for other tokens. Mixing these three outstanding features together, users are able to get a power house token out of the hands of anyone, except the community. Every popular game released by Game Pad will provide revenue to YooShi, and YooShi itself has over 200,000 users. In addition, the conversion of game users is not a problem. However, as long as YooShi grows bigger and bigger, many excellent games in the future will inevitably step into the YooShi ecosystem. This also solves the problem that blockchain games cannot be operated for a long time. Furthermore, the YooShi's future ecological richness will definitely increase the ceiling of its development. - Vitalik Buterin joined as one of the casts of ["Stoner Cats"](#). - Vitalik Buterin will voice a taxidermied cat named Catsindton. - To watch the first five-minute episode viewers have to purchase NFT. The New NFT web series, ["Stoner Cats"](#) produced by Hollywood actress Mila Kunis, already has a top list Hollywood cast including Jane Fonda, Chris Rock, and Ashton Kutcher. Also, the NFT web series is adding some crypto star power, Vitalik Buterin, a creator of Ethereum. Accordingly, Ethereum co-founder, Vitalik Buterin involved in this Ethereum documentary, he joined as one of the casts of ["Stoner Cats"](#) as the voice of Catsington, a taxidermied, monocle-sporting cat who advises the five living cats belonging to Ms. Stoner, a spunk octogenarian with Alzheimer's, whose magical strain of weed has somehow given her feline companions the ability to talk. Even more, in the web series, Stoner Cat is written before Buterin joined the cast. Morgan Beller, a general partner at venture firm NFX and the member of the team behind Stoner Cats, stated that he modified the role of Catsington to better fit his personality. Furthermore, each and every cast including Vitalik buterin will, paid in Ether. Beller joshed, ["We had to teach Jane Fonda how to set up a MetaMask wallet"](#). NFT Web Series ["Stoner Cats"](#) To watch the first five-minute episode of the Stoner Cats, viewers have to purchase a non-fungible token (NFT) that both virtual artwork of a roughly selected character from the show as well as a ticket to unlock all ["Stoner Cats"](#) episodes as they made. The NFTs will sell for 0.35

ETH nearly \$750. Depending on the level of funding the project receives at its initial NFT launch, each cast will paid an equal amount accordingly. For completing the season, the Stoner Cats team needs to reach at least 50% off its 10,240 NFT funding goal. More so, Stoner Cats is not only the first creative project to try crypto crowdfunding. At the beginning of this month the documentary team behind "Ethereum: The Infinite Garden" raised more than 1,000 ETH on Mirror. Striking their goals in less than three days. Crowdfunding through NFT sales allows for direct exchange between customers and developers, neglecting middlemen. And at some point, offering a bit of creative control to customers themselves. In addition, he gives out that they will be launching many new exciting and futuristic features for the exchange app. Furthermore, Tenev expresses that their entire team is working arduously in bringing up new features for their customers. Also, he reveals his plans on bringing their own crypto wallets as per their customer expectations. Despite the SEC not allowing them to launch their IPO, efforts are being made to soon launch them. Moreover, the CEO puts forth that their exchange will soon make it possible for their customers to transfer their assets in and out of their exchange platform. Recommended for You

- The bulls resumed control over the market making Bitcoin to a near three-week high. - BTC's market capitalization has increased above \$650 billion. The bulls resumed control over the market making Bitcoin (BTC) to a near three-week high nearing almost \$35,000. Moreover, BTC trades above the resistance level for the first time since May. According to CoinMarketCap, the BTC trades at \$34,426.87, with a 24-hour trading volume of \$20,328,608,436, at the time of writing. More so, Bitcoin seems to be in danger of further declines after it dropped below \$30,000 earlier in the week. However, this level was widely flagged by strategists as potentially spurring further dumps. Notably, the BTC price surged when Musk said he wants Bitcoin to succeed and that his space-exploration company SpaceX Inc. owns some, at the "The B Word" conference on Wednesday. Even more, Wood said corporations need to consider adding BTC to their balance sheets, however, Square Inc. CEO Jack Dorsey said the coin is resilient. Delta Exchange CEO Pankaj Balani said, "For the first time in many weeks we are seeing bullish signs here and expect Bitcoin to head toward the upper end of the \$30,000 to \$40,000 range." As such, BTC's market capitalization has increased above \$650 billion after dumping below \$600 billion earlier this week. Its dominance over the altcoins has also surged slightly to just over 46%. South Korea is moving forward with its regulatory investigation of unregistered digital currency exchanges. Thus as of late, asking foreign virtual-resource service providers to enlist with them to avoid close down. Financial Services Commission (FSC), some time ago known as Financial Supervisory Commission. It was expressed in April of this current year that all Korean digital currency exchanges would put themselves in danger. By being closed down on the off chance that they didn't enlist with the regulatory body. Presently, the FSC has proceeded to grow its regulatory domain of foreign virtual-resource service providers. The assertion proceeded to say that if digital currency exchanges continue to work without enlistment. Thus by a September cutoff time, administrators could confront jail sentences or face off fines: FSC revealed in a statement. It had sent a total of 27 warnings to virtual resource service providers: "For foreign VASPs that continue to operate without registration beyond the September 24 deadline, the KoFIU will notify them of their illegal activities and take actions such as blocking access to their websites to inhibit their illegal business operations," A Strict Regulatory Structure South Korea's set of experiences with digital currency has been generally turbulent. With regulatory authorities moving forward with their administrative investigation of exchanges. The fact that South Korea had an immense part in the 2017 crypto blast. It has prompted the need for a severe regulatory structure. Furthermore, keeping in mind that the public authority appears to have no plan to boycott cryptocurrencies. Therefore the guideline set up has made it hard for digital currency exchanges to stay with the most recent regulatory necessities. The worldwide spotlight on money laundering and digital currency fraud in crypto is especially perceptible in South Korea. Now with a progression of new guidelines being carried out that expect to stop digital currency forms of money from being utilized to finance unlawful exercises. These include enrolling with the regulator, presenting against money-laundering, keeping track of genuine names of clients, and making associations with centralized banks. Recommended for You

Whatsoever Elon Musk Tweets about becomes an escalated news! And that too linking them with the crypto industry by all means! Rather that's how minimalist minds throughout the world think so! In spite of this, Elon Musk's recent tweet reply to an Indian YouTuber's questions now ends up in a debate on Bitcoin (BTC) legalization in India. Elon Musk's Sarcastic Reply An Indian YouTuber by the name of Madan Gowri recently posted a tweet upon his official Twitter page tagging Elon Musk to it. Madan Gowri is quite an influential personality from Southern India who rose to fame through his YouTube vlogs. It's estimated that his YouTube channel, which also goes by the same name of his, has about 5.14 million subscribers so far. The YouTuber admits his utmost fascination towards Tesla products and its cars. Owing to this he tweets tagging the CEO of Tesla, Elon Musk to it. Furthermore, upon the tweet, he asks Elon Musk when he will be bringing his Tesla cars to India. In addition, he also requests Musk to launch them as soon as possible in India. The whole country took to amazement when Elon Musk obviously replied to Madan Gowri's tweet. Accordingly, Elon Musk replied that Tesla obviously wants to launch their cars in India. However, for such a large country, the export duties are too high, he adds. On the other hand, Musk sarcastically ridicules that all green vehicles are considered to be the same as petrol and diesel vehicles in India. Thus, Musk thrashes India completely by stating that this is to the fact the country totally fails miserably in understanding the climate change impacts. Musk's Depiction of BTC for India Such radical comments put forth by Elon Musk have for sure brought rise to various speculations. Upon one such is regarding the Bitcoin (BTC) legalization in India. In contradiction, few terms out that cryptocurrency and BTC legalization in India is an important factor for Elon Musk to bring forth Tesla cars to India. Moreover, if Musk decides firmly in bringing Tesla to India, then for sure there will be either direct or indirect impacts and inputs from his end towards the legalization bill which is still on hold in Indian jurisdiction. Furthermore, once India legalizes BTC, only then we could hear further news from Musk regarding Tesla for India. However, it's truly evident from the scourging replies that plans for Musk in bringing Tesla to India are not at present in his mind. Anyways, other sources throughout the automotive industry of India states that Tesla may probably launch in India by the year's end. Recommended for You

The crypto trading platform, FXT, witnessed its massive growth of ERC-20, the first token which was launched in January. It records about 1500% growth since the launch of token, following the success, the platform used the Binance Smart Chain (BSC) blockchain to create a second EXT token, BEP-20. The BEP-20 token is designed to reduce the transaction costs and settlement time. The debut into the new

blockchain will allow FXT to widen its performance and meet the customer's requirements. The FXT BEP-20 token is expected to replicate the success of its pioneer, the ERC-20 Token. Significantly, the ERC-20 based token has witnessed an impeccable success and growth in popularity since its launch in January 2021. A low entry price has gained investors and it has grabbed the attention of new crypto traders. ERC-20 has garnered more than 14,000 holders and a history of huge returns on investment. FXT's Future Goal Using BEP-20 FXT is a crypto-driven company which has an experienced team of finance officers, investment planners, and technical experts. The FXT Token ICO will be used to raise funds for the company. These funds will be used in company growth as well as in development and launch of blockchain-based platforms. The platform has completed the innovation of the BEP-20 token. Consequently, FXT intends to list the token on various crypto exchanges globally, to make the investment process easier. Additionally, since the launch of Ethereum blockchain, ERC-20 has risen to the top of the market capitalization performance. Keeping this huge success into count, the firm intends to release its second token to reach new heights. At the time of writing, FXT was trading at \$0.0087 and had a 24-hour trading volume of \$2,564,002. With a low entry price, the FXT Token is paving the way for potential investors to enter the cryptocurrency market. However, many people are in the urge of choosing the best crypto tokens. Above crypto tokens could be useful for users who makes research for investing in crypto. Recommended for You

During his feature note at the Ethereum Community Conference in Paris. Ethereum co-founder and lead developer Vitalik Buterin entreated the Ethereum people group to innovate beyond the limits of decentralized finance (DeFi). Depicting non-monetary utilities is the most fascinating piece of the vision of broadly useful blockchains. Furthermore, Buterin bemoaned those monetary applications as of now rule the Ethereum space. He diagrams a few non-monetary applications for Ethereum, including decentralized online media, identity confirmation, and validation, and retroactive public merchandise financing. Thus he has effectively started chipping away at public products financing. In a Wednesday blog entry co-wrote by Buterin, layer-two scaling arrangement Optimism promised to subsidize open-source improvement through a retroactive prizes convention, submitting all benefits created through sequencing to the drive. Buterin credits the Ethereum people group's distraction with DeFi to two principle factors. Nonetheless, Buterin offered that the test of high exchange charges is presently being tackled by Ethereum's developing environment of layer-two networks. With work to relieve exchange costs on Ethereum in progress. Buterin declared that this moment is the opportunity to start investigating. On how Ethereum can be utilized to handle different issues, expressing the Ethereum biological system needs to extend past making tokens. Which at the end assists with exchanging different tokens. Buterin Warns About Potential Risk In spite of noticing that monetary subsidiaries offer some worth to the sector. Buterin cautioned of the foundational hazard related with complex subordinate items, closing with, we should not simply do DeFi. Buterin additionally stressed the commonness of high charges in pushing the sector toward monetary applications, noting: "The degens can pay for it; the apes can pay for it; the orangutans can pay for it. But if we start talking about decentralized social media, where every tweet becomes an NFT, then that can't work if you have \$5.22 transaction fees." Buterin mentioned that these things are significant up to layer one and layer two. However, when you are at layer six, you're really expanding the monetary instability. And thus the danger that the whole thing will fall. Recommended for You

Furthermore, with the upcoming developments and upgrades within the BABYCAKE community, the BABYCAKE will reach more heights soon in the upcoming future. All-in-all, the price of BABYCAKE also could reach \$0.05 soon. Recommended for You

Words from prominent persons obviously matter in the Cryptocurrency industry. In fact, the majority of the industry runs upon their words, comments, and especially tweets. One such is the CEO of Twitter and Square Inc, Jack Dorsey. We all know he plays an avid role in the industry putting out his views, comments, and backing up support for Bitcoin (BTC). Jack Dorseyâ€™s Ridicules The tech entrepreneur and CEO of Twitter and Square Inc, Jack Dorsey took part in the â€”B Wordâ€” conference on June 22. He joined other two prominent figures, CEO of Tesla, Elon Musk, and CEO of Ark Investments, Cathie Wood. Upon the conference, Jack Dorsey gave out a rather bizarre statement regarding Bitcoin (BTC). He put out that Bitcoin (BTC) will for sure bring about world peace ultimately. In spite of such a comment from Jack Dorsey, it puzzled everyone. In addition, he justifies that BTC will bring world peace or at the least help in bringing the world peace. Furthermore, he continues if all the base foundations for BTC are rectified then all the rest will prevail. Also, he again intensifies that once the foundations are rectified the only final hope for BTC is to bring peace. Moreover, Dorsey states heâ€™s extraordinarily fascinated by the cryptocurrency industry as the community is upon following deep principles and guidelines. On Contrary, he also states the same cryptocurrency market cap community to be weird and hellish, and thatâ€™s the main reason why he loves the industry so much. Muskâ€™s Views on Review Usually, itâ€™s the Tesla man who always creates such bizarre and ridiculous comments. Rather now, Jack Dorsey steals his show though o the B-Word conference. Nevertheless, Elon Musk reveals that almost all of his companies own BTC, including himself. Also, he states, apart from him and his company Tesla, his other company the SpaceX, also owns BTC. Amidst all this, the shellings of Tesla banking about \$1.5 billion in BTC has been brought to light by the SEC last February. Yet, regarding SpaceX, not until Elon Musk himself spilled the beans on it. Apart from all this Musk also spilled out that he owns personally BTC, Ethereum (ETH), and his so dear altcoin, the Dogecoin (DOGE). In spite of all this, Musk admits his long interests in Decentralized Finance (DeFi). Maybe, Elon Musk is seeking to have a try in the DeFi industry too! Recommended for You - Jack Dorsey Announces Squareâ€™s New Business-TBD - Jack Dorsey CEO of Twitter Has Announced That One Of His Company Will Integrate Bitcoinâ€™s Lightning Network - Aave Plans To Build â€”Twitter on Ethereumâ€” - Twitter CEO Announces to Integrate Bitcoin Payment - Jack Dorsey Partners With Jay-Z to Create 500 BTC Blind Bitcoin Trust

Elon Muskâ€™s interest in the cryptocurrency space has been viral and continued through a conference. At the â€”B Wordâ€” conference held on Wednesday, Musk discloses SpaceXâ€™s Bitcoin Holdings. He shared details about his and his company holdings on cryptocurrencies. SpaceX, an aerospace company, one of his private firms, holds BTC and similarly, he personally owns BTC, ETH, and Dogecoin. Muskâ€™s support for meme-currency via Twitter was the talk of the town a few months ago. His craze on joke currency has helped the coin to surge â€”to the moonâ€”. As a matter of fact, the price of Bitcoin surged the most on Wednesday since mid-June. At one point, BTC was trading around \$32,000, up more than 10% in the past 24 hours. But that didnâ€™t stay or continue for a long time, those gains were later reduced to around 6%. Moreover, Bitcoinâ€™s price rise earlier on Wednesday, according to Quantum Economics founder Mati Greenspan, was due in part to the excitement of the event. Significantly, Tesla is â€”most likelyâ€” to resume accepting BTC for payments on purchasing cars. Musk stated that the networkâ€™s energy usage is improving and that Tesla is conducting additional research regarding BTC payments. Initially, Musk announced that Tesla would accept Bitcoin for payment in February. Due to concerns about the amount of energy required to mine it., Tesla suspended Bitcoin Payments in mid-May. The price of Bitcoin dropped right after the announcement followed by the market collapse. Muskâ€™s Favorite Topic â€”Dogecoinâ€” At the conference, Musk asked Jack Dorsey, the CEO of Twitter and Square, if he would accept Bitcoin as payment from Twitterâ€™s advertisers as support for cryptocurrency. In response, Dorsey stated that he is concerned about creating â€”economic incentives in the network itself without relying on advertising.â€” Consequently, the subject of his favorite cryptocurrency, about which he frequently tweets came into the sceneâ€”Dogecoin. Musk stated that the DOGE community is very humorous and â€”has great memes and loves dogs, and I love dogs and memesâ€. Musk added: â€”The most ironic and entertaining outcome would be for the cryptocurrency that began as a prank to mock cryptocurrencies to become the leading cryptocurrency.â€” Following the event, the price of Dogecoinâ€™s gains was scaled later the same day. The price surged up about 10% in the past 24 hours. Recommended for You

- Bullish ZEN price prediction ranges from \$60 to \$161.80. - ZEN price might also reach \$165 soon. - ZEN bearish market price prediction for 2021 is \$27.90. In Horizen (ZEN) price prediction 2021, we use statistics, price analysis, ADX, and many other information about ZEN to analyze the future trend of cryptocurrency. Horizen (ZEN) is an interoperable blockchain system, it was supported by decentralized

node infrastructure. It focuses on scalable data privacy and allows businesses and developers to custom build their own public or private blockchain using its unique sidechain technology. According to CoinGecko, the ZEN price is trading at \$46 with a 24-hour trading volume of \$29,833,977, at the time of writing. However, ZEN has increased by 7.59% in the last 24 hours. In addition, ZEN has a circulating supply of 11,322,456.25 ZEN. Currently, ZEN trades in cryptocurrency exchanges such as Binance, OKEx, CoinTiger, Huobi Global, and HitBTC. Horizen (ZEN) Price Prediction 2021 ZEN holds the 101st position on CoinGecko right now. ZEN price prediction 2021 explained below with a daily time frame. The above chart shows the Descending Triangle patterns. This pattern is an inverted version of the ascending triangle and is considered a breakout pattern. The bottom trendline should be horizontal and connect almost the same lows. The upward trendline decreases diagonally upward. The breakdown occurs when the price falls, and when the downtrend continues, it is supported by a lower horizontal trendline. The lower trendline that was once supported now becomes resistance. In the daily time frame chart, if the price of the ZEN breaks the resistance level of \$70, it will reach the target of \$128 and \$181. Or else, the price of the ZEN breakout will fall to the support level at \$38.90. So, the trend of the ZEN is based on the breakout. ZEN Support and Resistance Level The below chart shows the support and resistance level of ZEN. From the above daily time frames, it is clear the following are the resistance and support level of ZEN. - Resistance Level 1 â€” \$60 - Resistance Level 2 â€” \$89.30 - Resistance Level 3 â€” \$112.50 - Resistance Level 4 â€” \$161.80 - Support Level 1 â€” \$38.80 - Support Level 2 â€” \$27.90 - Support Level 3 â€” \$17.40 The charts show that ZEN has performed a bullish trend over the past month. If this trend continues, ZEN might run along with the bulls overtaking its resistance level at \$161.80. Conversely, if the investors turn against the crypto, the price of ZEN might plummet to almost \$27.90, a bearish signal. ZEN Average Directional Index (ADX) Now letâ€™s look at the average directional index (ADX) of ZEN. It is used to measure the overall strength of the trend and it is related to the Directional Movement Index (DMI). The oscillator ranges from 0 to 100. Moreover, a high price indicates a strong trend, and a low price shows a weak trend. It is often combined with directional indicators. The above chart shows the ADX of ZEN stays above the range of 35, so it indicates a strong trend. Conclusion ZEN is one of the cryptocurrencies that keeps its ground against the bear market. Furthermore, our long-term ZEN price prediction for 2021 is bullish. It has a huge possibility of overtaking its current all-time-high (ATH) of \$165.92 this year. However, this only happens when ZEN breaks a lot of past psychological resistance. Furthermore, with the ongoing developments and upgrades within the ZEN ecosystem, it could experience a great future ahead in 2021. It may reach \$161.80 soon and it might even reach high heights, however reaching \$165, if investors have planned that ZEN is a good investment in 2021. Disclaimer: The opinion expressed in this chart solely authorâ€™s. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Regardless of whether opening events had the option to start Bitcoin sell-offs straightforwardly. Yet the most exceedingly awful is effectively finished data shows. Bitcoin (BTC) is trending back despite the continuous Grayscale Bitcoin Trust (GBTC) opening events. Furthermore, most shares were as of now released. AS indicated by information from tracking resource Bybt, the leftover unlockings consolidated include fewer shares than those released only one-day last weekend. Sunday saw around 16,240 BTC worth of GBTC shares end their half-year lock-up period. The biggest such release in a solitary day. Moreover, the occasion saw a robust development, with contentions seething over its probable sway on the Bitcoin price. Mondayâ€™s BTC price fall was ideal when it came to GBTC, filling an account that an auction would follow such huge releases. Regardless of whether that was valid, Bitcoin hodlers presently have a silver lining. Unlockings are just booked until Aug. 25. And the remarkable shares are less in number than Sundayâ€™s tranche. As a general rule, nonetheless, supporting proof for unlockings bringing about sell-offs is deficient. As different mediums of sources pressurize Bitcoin markets themselves are truth be told, avoided with regards to such occasions altogether. Furthermore, GBTC shares canâ€™t be redeemed for BTC, which could then hypothetically be unloaded for cash or stablecoins. CEO Speaks Over GBTC performance Both Rothschild Investment Corp and Ark Invest have added to their possessions in July, the latter boosting its Bitcoin openness by an additional 310,000 shares. â€œGBTCâ€™s doing hundreds of millions of dollars a day in notional trading volume, and it really is the easiest way for many investors to add crypto exposure alongside stocks, bonds, ETFs, other things they may own,â€ Grayscale CEO Michael Sonnenshein told Bloomberg Monday. A review of organizations by asset manager Fidelity moreover uncovered positive long haul ways to deal with digital currency, with 71% of reactions arranging a market passage later on in the future. - HERO soars 80% in 24 hours. - Following HEROâ€™s first CEX listing on BitMart, the value surged. - Enables creation of NFTs from real-world works of art and collectibles. The price of Metahero has risen to \$0.015 for 65% within a day. This brings joy to the coin holders and are expecting a price hike in the upcoming days. The Metahero current price is \$0.015 with a trading volume of \$5,220,468, according to Coinmarketcap. In the last 24 hours, HERO has risen to 80% and is holding its market rank at 2600. Metahero Crypto is a deflationary digital currency with a transaction fee ranging from 0% to 10%. The token has a smart staking feature in which 0 to 2% of every transaction is redistributed to Meta hero Crypto holders. The Metahero project and its website was established on July 21, 2021. The firm has two strategic partners, the wolf studio and tenset whereas wolf studio is a global company in modeling technology and 3D scanning. Tenset is a platform that assists holders in obtaining consistent and high investment returns by investing funds. Primary Reasons for HEROâ€™s Price Surge As per the recent update, it is predicted that HEROâ€™s first CEX listing on major exchange â€œBitMartâ€ would be the reason for Metaheroâ€™s price hike. The top exchanges for trading HERO are ZT, Gate.io, Pancakeswap (V2), BitMart and CoinW. On July 19, Metahero announced its official listing on BitMart. The post stated that the first 1,000 users who purchase HERO for 100 USDT or more will receive 1,800 HERO each. More so, HERO was available on PancakeSwap from July5, 2021. The firm has also plans on

turner CEX listings in Q4 of this year to expand the network. Besides, each transaction automatically adds 0-6 percent to locked liquidity. Users can only use HERO to transact in their ecosystem for real world utility. Furthermore, with the surge in the price of HERO, the coin holders are excited to see the changes in values. Users expect that the coin could rally more in the upcoming days. Recommended for You

Allegations and charges filed on cryptocurrency exchanges by their very own users are not new to the industry though. Amidst such issues, the Coinbase cryptocurrency exchange, renowned and trusted all over the world now faces a trial in the court put forth by one of its very own users. A user filed a charge against Coinbase for guiding him wrong and making him invest in the exchange though, unnecessarily. Coinbase's \$1.2 Million Sweepstake Coinbase, also known as the Coinbase Global Inc, is a well-established cryptocurrency exchange of America, founded recently in the year 2012. Coinbase is one of the most prominent exchanges of America, headquartered and found in the nation itself. Upon a well-established market cap trade volume over the platform, Coinbase looks towards ways to expand itself. Likewise, Coinbase recently added the ever famous meme coin, the Dogecoin (DOGE) upon its platform. This move is likely in the hope of increasing and bringing in more users to the platform. Furthermore, on incorporating DOGE into their platform on June 3, Coinbase made a campaign to push DOGE traders upon the platform. Accordingly, Coinbase announced a sweepstake of about a whopping \$1.2 million. For this Coinbase forwarded an email to all of its users depicting the sweepstake offer and on the introduction of DOGE on its platform. For this, Coinbase used the tagline on its ad campaign "Trade Doge, Win Doge". In addition, Coinbase put out the submission of an index card with basic information like name, address and contact information for the users in order to participate in the sweepstake. David Suski's File Charge on Coinbase Upon this sweepstake, a user, David Suski took part in the sweepstake. In spite of taking part in the sweepstake, Suski alleged that Coinbase had deceived and made him invest \$100 in Dogecoin (DOGE) on its platform. He put forth the charges stating Coinbase failed to communicate properly on its ad campaign that taking part in the sweepstake is completely free of cost. In order to send the index card, it doesn't require the users to invest a minimum of \$100 on DOGE upon the Coinbase platform. Moreover, David Suski terms he already has over 1000 Dogecoins in another exchange platform and there's no need for him to again invest \$100 on DOGE. Furthermore, Coinbase misguided him and made him invest in the platform along with many such users. In spite of all this, Suski demands compensation of \$5 million from Coinbase upon the alleged and misguided ad campaign for the sweepstake. Recommended for You

John McAfee the computer software developer, coder, and the man who created the McAfee antivirus passed away recently last month on June 23. Upon his death, rather suicide in Spanish prison during his prison sentence. John McAfee is well known for his extreme fortunes of over \$100 million in extravagant luxury assets and cryptos too. However, he depicted himself before death that he's literally left out with nothing during his jail sentence, just before his death. John McAfee's History of Fortunes John McAfee, a renowned developer who took to a fortune on his widely acknowledged and proven antivirus software passed away while on his jail sentence in Spanish prison last month June 23. During his last moments, and on his final public interview McAfee broke down literally expressing his grieves. Accordingly, he put forth that the U.S. Federal authorities have confiscated all of his assets. Furthermore, he expressed grieving that he's left apparently with nothing left. In spite of all this, this news was put forth by Mark Eglinton, the author of John McAfee's biography. In addition, Mark Eglinton reveals that John McAfee came to such a condition that he was not even able to pay him for his works. Furthermore, Ellington revealed that McAfee said to him that financially he's in a worse situation than Eglinton himself. John McAfee lost most of his fortunes upon the crisis of 2008. Also, Ellington continued that John McAfee made many safe investments over the years. In addition, he built many extravagant mansions and bought many properties. However, he didn't even spend a night in many of these on the contrary. Despite all this, during the great recession of 2008 many of McAfee's properties were sold off and many occurred to only losses. McAfee's Cryptos and Allegations In spite of all success and after resigning from McAfee once, it was taken over by Intel, McAfee started more than ten different companies. He even was the CEO of a cryptocurrency platform too. Moreover, McAfee was alleged that he played ransom in making many altcoins and new emerging cryptos in taking them at higher prices through his comments and also destroying them through tweets bringing their prices down. He has played such radical games for many new initial coin offerings (ICOs). Furthermore, for all this McAfee received payments through various cryptos. Also, it's speculated he took part in bringing up Dogecoin (DOGE) too on his lists. However, where all his crypto savings went is still bizarre! Recommended for You

Bitcoin fell below \$30,000 for the first time since June 22, causing other coins to follow suit. According to CoinMarketCap data, the entire cryptocurrency market has lost nearly \$100 billion in 24 hours as of Tuesday. Most virtual coins have been struggling to bull for more than a week due to increased outflow and bearish market momentum. The most popular virtual coin in the world fell 6.6% to \$29,671.81 on July 20. Some other altcoins also follow the same track as BTC. One among the altcoins is the world's second-largest cryptocurrency, Ethereum. ETH was also under more pressure, falling nearly 9% and trading below \$1,800. All other popular altcoins fell between 8% and 14%, indicating widespread collapse in the cryptocurrency market. According to Annabelle Huang, a partner at Amber Group, a cryptocurrency financial services firm: "There are concerns about the quality and strength of the economic recovery, and broader risk assets, including high yields, have become weaker." This, combined with recent BTC (bitcoin) weakness, has only pushed the crypto market lower. Regulations on Major exchanges Major reasons for Bitcoin's price fall might be the renewed China's crackdown on cryptocurrency trading and mining. Besides, on July 17, Bitcoin mining had its fourth consecutive difficulty drop since May 29. Bitcoin mining is a high-energy process that facilitates bitcoin transactions and generates new coins. Significantly, China's Central Bank has warned its financial

sectors not to provide crypto services to customers. Although the strict actions this year from Chinese regulators pulled down the market of Bitcoin and BTC mining. Additionally, this triggered regulators all over the world to watch keenly on the crypto market. The largest cryptocurrency exchange, Binance, was banned in the UK last month for regulatory purposes and faced criminal charges. Following that other regulators in Canada, Singapore, and Japan also warned their authorities to follow-up the license to operate in the country. Besides, regulators have issued a warning against Binance. As a matter of fact, there's been a lot of regulatory focus on the crypto space.

In 0x (ZRX) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about ZRX to analyze the future movement of the cryptocurrency. 0x is an open-source protocol built on the Ethereum (ETH) blockchain that enables the peer-to-peer exchange of Ethereum-based tokens. This is also referred as a decentralized exchange (DEX). 0x protocol waits for all transactions to be settled off the blockchain before sending the orders on-chain to be settled. 0x's own Ethereum token (ZRX) has two main uses within the platform. The first use is for paying trading fees to Relayers for their services. And the other use is to allow ZRX token users to influence the blockchain's governance. 0x (ZRX) Current Market Status According to CoinMarketCap, the ZRX price is trading at \$0.5872 with a 24-hour trading volume of \$37,285,242, at the time of writing. However, ZRX has decreased by 4.47% in the last 24 hours. In addition, ZRX has a circulating supply of 845,323,730.63 ZRX. Currently, ZRX trades in Binance, OKEEx, CoinTiger, Huobi Global, and FTX. 0x (ZRX) Technical Analysis 2021 0x (ZRX) holds the 99th position on CoinMarketCap right now. The recent development and upgrades might push ZRX to reach new heights. Now, let's deep dive into the ZRX technical analysis 2021. The weekly time frame chart of 0x (ZRX) is shown below. The above chart shows the Higher High and Higher Low patterns. This pattern is an upward trend, and the value of tokens is generally increasing. As shown in the figure above, ZRX changed from a bearish to bullish trend at the beginning of this period. ZRX trades in a range of \$2.20. If the price breaks the trend line then it falls to the support level of \$0.55 0x (ZRX) RSI The below chart shows the relative strength index (RSI) of ZRX. As shown in the below chart, RSI remains at 33.31. This shows that ZRX's price is in a nearly oversold state. However, this shows that traders can trade carefully. 0x (ZRX) RVOL The below chart shows the Relative Volume of ZRX. RVOL is an indicator that represents to traders how the current trading volume has changed over a period of time compared to the past trading volume. Notably, in the last week of June, it is found that the RVOL of ZRX observed is weaker. Currently, the RVOL of ZRX remains below the cutoff line which represents the weaker participants in the current trend. 0x (ZRX) Moving Average ZRX's Moving Average (MA) is shown in the chart below. Moving Average is a part of technical analysis that supports traders to find trends. In the 50 MA (Short-term), the price of the ZRX is in a bullish state, and it has broken the 200 MA. However, it will completely go to a bearish state. Currently, the price of ZRX is trading below the 200 MA level so we can expect more bullish in upcoming days. 0x (ZRX) Price Comparison With Bitcoin The below chart shows the price comparison between ZRX and BTC. From the chart we can identify the trend of the BTC and ZRX is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of ZRX also increases or decreases respectively. Conclusion With the ongoing developments and upgrades that are taking place within the ZRX platform. 0x has a great future ahead in this crypto market. However, ZRX can reach new heights. Bullish ZRX price prediction 2021 is \$ 2.20. As mentioned above, it may reach great heights, however reaching \$3, if investors have decided that ZRX is a good investment in 2021. FAQ 0x (ZRX) is an open-source protocol built on the Ethereum (ETH) blockchain that enables the peer-to-peer exchange of Ethereum-based tokens. This is also referred to as a decentralized exchange (DEX). ZRX is listed on many cryptocurrency exchanges that include Binance, OKEEx, CoinTiger, Huobi Global, and FTX. With the ongoing developments and upgrades inside the ZRX platform, it has a high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. Cryptocurrency, blockchain, and non-fungible tokens (NFT) have now become a prominent part of the sports ecosystem. Starting from racing companies, NBA teams, baseball leagues, and furthermore all have incorporated blockchain technology and NFT through many terms. Upon this, now trophies are taking digital forms too. Ronaldo's Digital Trophy The international Portuguese team captain, Cristiano Ronaldo needs no introduction when it comes to the game of soccer. He has secured an everlasting place in the history of soccer. Furthermore, in the recent UEFA EURO 2020 series, the Portuguese captain has secured the top spot in the overall rankings. In spite of playing only in four matches in the UEFA EURO 2020 series, Ronaldo ranks the top by securing five goals. Besides topping the chart in Alipay Top Scorer rankings, Ronaldo will be receiving a trophy in a completely digital form. This will be the first-ever trophy being given in a digital form through blockchain. Moreover, the first-time trophies are handed in a digital form, denoting the influence of the crypto and blockchain era. In addition, Alipay will be the first to make trophies in digital form by using blockchain technology. Also, all the scores for the Alipay score rankings for the top three ranks will be directly incorporated into the AntChain blockchain. AntGroups Forecasts and History Upon all this, the CEO of AntGroup, Eric Jing presented his felicitations to Cristiano Ronaldo upon the top ranking in Alipay. In addition, the CEO states the use of blockchain technology for safeguarding such precious goal-scoring moments will surely be an epic feature. Also, the CEO reveals that it will continuously innovate and develop new attributes with blockchain technologies. In spite of all this, all these new innovative measures are all sought to bring the game even closer to their fans. With such futuristic plans together, it's also speculated AntGroup will be bringing in NFTs based on UEFA. As we all know many are now showing huge interest in cryptocurrencies across the whole world. Cryptocurrency investment has become one of the major investments for institutional investors. As a matter of fact, exchanges play as a bridge to make it possible. Exchanges are the main source for the huge success of the crypto market. A cryptocurrency exchange is a website where you can buy and sell cryptocurrency. You can use exchanges to convert one crypto to another, such as Bitcoin to Litecoin, or to buy crypto with regular currency, such as the US dollar. Exchanges display current market prices for the cryptocurrencies they provide. According to TradingView, the top cryptocurrency exchanges for the past 24-hours are Binance, Huobi Global, and Coinbase. These crypto exchanges are well-known and popular among traders over the globe. Top Crypto Exchanges Let's have a look at the top cryptocurrency exchanges in the last 24 hours. **Binance:** Binance Exchange is a leading cryptocurrency exchange based in Hong Kong that was founded in 2017. It places a strong emphasis on altcoin trading. Binance provides crypto-to-crypto trading in over 500 cryptocurrencies and virtual tokens, including Bitcoin (BTC), Ether (ETH), Litecoin (LTC), Dogecoin (DOGE), and its own Binance Coin (BNB). The native token of Binance platform is Binance Coin (BNB). The exchange also provides users with services that allow them to earn interest or transact with cryptocurrencies. It also provides programs to help miners and traders to decide while investing. Binance offers a crypto wallet in which traders can store their electronic funds. **Huobi Global:** Huobi Global is a leading virtual asset financial services. The founding team anticipated the blockchain industry's enormous potential to transform the future of the global financial system in 2013. They quickly founded Huobi.com intending to make the financial industry more efficient and wealth more accessible to everyone. Moreover, Huobi Global is committed to investigating investment opportunities. They offer trading and investing in over 100 digital assets. **Coinbase:** Coinbase has become a classic on-ramp for new crypto investors as it is the leading cryptocurrency exchange in the United States. The platform provides a wide range of services and products, including cryptocurrency investing, an advanced trading platform, custodial accounts for institutions, a wallet for retail investors, and its own US dollar stable coin. Coinbase, which was founded in 2012, is a properly regulated and authorized cryptocurrency exchange that serves all states in the United States except Hawaii. Significantly, Coinbase initially only allowed Bitcoin trading, but it quickly expanded to include other cryptocurrencies that met its decentralized criteria. Besides, Coinbase currently offers a wide range of investment and trading options, with plans to expand the list in the future. Thousands of people are showing interest in tracking their investments and learning how to trade cryptocurrencies. These exchanges will enable traders to calculate accurately and act accordingly. Consequently, new investors can learn how to trade using the exchange platforms' programs. Recommended for You

- Many beauty industries have shown recent interest in Bitcoin. - Ann McFerran said that her company now accepts BTC, ETH, and DOGE. - More brands began to understand the benefits of accepting cryptos as a payment method. Many beauty industries have shown recent interest in Bitcoin. CEO and founder of Glamnetic Ann McFerran, said that her company now accepts Bitcoin (BTC), Ethereum (ETH) and Dogecoin (DOGE) via a recent partnership with Bitcoin payment provider BitPay. Notably, Glamnetic is the first female-founded beauty brand to support digital asset payments. "The beauty industry is a sector where crypto payments aren't widely accepted. I wanted Glamnetic to be one of the first brands to support crypto payments. Since I am a huge believer in cryptocurrency and because I want to bring more women into the space." Moreover, recent data has revealed that 46 million people in the US plan to use cryptocurrency to pay for things like groceries or real estate. Even more, the payments giant Visa further revealed in July that its crypto-related cards processed over \$1 billion in total spending during the first half of this year. In addition, McFerran shared that she began crypto investment in 2017. Also, she noticed that the space heavily male-dominated. To McFerran's point, research firm BDC Consulting identified that only 8% of all crypto users were women in 2019. More so, after launching Glamnetic in July 2019, McFerran plans to incorporate crypto payments into the brand to encourage women to utilize digital currency. Yuvi Alpert, founder and CEO of Noamie, a jewelry company that also recently planned crypto payments. Added to this, he explained that the brand has presently only seen crypto sales with their female customers. Although this may be the case, identifying shows that the top products females are likely to spend digital assets on are travel and leisure, real estate and furniture or appliances. Moreover, the crypto payments could be slow to catch on in the beauty industry, brands incorporating digital asset transactions will likely gain a competitive advantage. As per Kon, more brands began to understand the benefits of accepting cryptocurrencies as a payment method. Recommended for You

- Elon Musk has pumped the price of Dogecoin. - DOGE price surged over 10% in a day after Musk's tweet. Elon Musk has pumped the price of the meme-based digital currency Dogecoin, tweeting that his son is "holding his doge like a champ". Elon can you confirm? pic.twitter.com/NgQjTOvN0d "Uncle Doge" (@AshleyIllusion1) July 17, 2021 Meanwhile, this tweet is the latest post made by Musk in 2021. However, the Dogecoin price dropped around 75% from its April peak. Notably, the DOGE price surged over 20% in a day after Musk's tweet. According to CoinMarketCap, the DOGE price is at \$0.189 with a 24-hour trading volume of \$2,611,216,868, at the time of writing. The above chart shows the falling wedge pattern of DOGE. More so, the falling wedge is a reversal pattern that appears during a downtrend. However, it happens when the price makes lower highs and lower lows, forming two contracting lines. Even more, the falling wedge usually precedes an upward reversal, which means users can look for potential buying opportunities. Over recent months, the price of the Bitcoin and crypto market has dropped sharply. In addition, there has been over \$300 billion lost in the overall crypto market since mid-June. Furthermore, the DOGE price is up nearly 6,000% on this time last year amid a broader crypto rally that has seen. Notably, earlier this year, Tesla announced that it has purchased \$1.5 billion of Bitcoin while Musk mentioned his rocket firm SpaceX will put a literal Dogecoin on the

literal moon. Recommended for You

- Bitcoin (BTC) price is expected to drop to \$20k, - BTC shows an Ascending Channel chart pattern. Bitcoin (BTC) price is expected to drop to \$20k, however, BTC shows a bearish trending signal. According to CoinMarketcap, the BTC price is at \$31,655.83 with a 24-hour trading volume of \$19,666,506,654, at the time of writing. BTC Price Could Drop to \$20k Soon Bitcoin is a decentralized digital currency originally explained in a 2008 whitepaper by a person, or a team of people, utilizing the alias Satoshi Nakamoto. Moreover, it was launched in January 2009. More so, Bitcoin is a peer-to-peer online digital which indicates that all transactions happen between equal, independent network participants, without the need for intermediary to facilitate them. Even more, BTC was created, as per Nakamoto's own words, to enable online payments to be sent via from one party to another without going via a financial institution. The above BTC chart shows the Ascending Channel pattern in the weekly time frame. An Ascending Channel is the price action that occurs between upper inclining equal trendlines. Moreover, higher highs and higher lows form this price pattern. The chart indicates the bearish performance of BTC in the upcoming month. However, this trend will break out and reach support level at \$19,600. On the contrary, if the trend reversed then BTC might surge to \$41,680 presenting a bullish signal. Furthermore, it is very clear that the price of BTC will drop nearly to \$20k soon. Major Bitcoin investors are expecting that it will be bullish, despite the crypto-market collapse. However, they expect the price of BTC to reach \$100,000 soon. Disclaimer: The opinion expressed in this chart solely author's. It does not interpreted as investment advice. TheNewsCrypto team encourages all to do their own research before investing. Recommended for You

As simple as it seems, Bitcoin (BTC) is considered a store of value. But the price of BTC over the week has dropped closer to \$30,000. While the same bearish signal does not apply to all other altcoins. On Friday, a number of smaller-cap altcoins were able to fight the bearish attack with double-digit gains before traditional markets closed for the weekend. When a group of altcoins follows Bitcoin in the market, there are some altcoins that outperform BTC. The market is witnessing some new altcoins which are outperforming the other leading cryptocurrencies. Likewise, the report from Trading View shows the top movers in the last 24 hours, which are NEM (XEM), Augur (REP), and District0x (DNT). Additionally, it has to be noted that four of the top gainers are layer-one protocol. It is a fascinating growth for altcoins whereas Ether is still shaky below \$2000. The community is waiting with bated breath to see if the upcoming London hard fork improves Ether price and the network's transaction process. Lately, investors have witnessed a lot of changes in the market, with unexpected coins surging within a short span. Following the hike of Shiba Inu, the market has welcomed many meme-coins, with some reaching highs and others disappearing. Surprisingly, the majority of the gainers in the last 24 hours are layer-one protocols. Besides, Cryptorank recently listed the top ten gainers in the tron system, providing investors with a clear picture. Current Statistics of XEM, REP, and DNT Let's have a look at the top gainers from the past 24 hours which are NEM, Augur, and District0x. NEM: The current trading price of XEM is \$0.157 with a trading volume of \$638,146,858. Besides, the token's volume increased to \$532 million and price surged 35%, on July 16. Augur: The current trading price of REP is \$22.47 with a trading volume of \$533,891,321. On July 13, the price of REP began to rise after the 24-hour trading volume increased from a daily average of \$17 million to more than \$521 million on July 14. Because of the sudden spike in trading volume, the price of REP increased by 57% from a low of \$14.60 to a high of \$22.97. District0x: At the time of writing, the price of DNT is \$0.121 with a 24-hour trading volume of \$36,913,358. On July 16, DNT's trading volume increased from \$3 million to more than \$60 million. As a result, the price surged 73% from \$0.112 to a high of \$0.193. District0x is a protocol that promotes itself as a "network of decentralised markets and communities". It specialises in assisting users in establishing their own decentralized autonomous organisations (DAO). Recommended for You

Pakistan is currently recording a boom in trading and mining cryptocurrency. Despite the challenges and risks in the crypto market, people are eager to learn how to mine and trade cryptocurrency in Pakistan. Surge of Crypto in Pakistan Cryptocurrency is the major topic revolving around the world today. It clearly shows that many people are exposing their interest to set into the digital world. Notably, trading and cryptocurrency mining is legal in Pakistan. And by knowing the crypto industry through social media and transactions of currencies via crypto exchanges people are ready to invest their money on digital assets. Moreover, the Financial Action Task Force (FATF) is an inter-governmental policy making committee who inspects money laundering and financial terrorism globally. As a note, Pakistan is under the grey list of countries during FATF inspection. Thus the FATF body discussed with the Pakistan legislators to regulate the crypto industry. In regards, the Pakistan authorities arranged a group to research and study about the cryptocurrency regulations. The watchdogs from FATF, federal ministers and heads of the country's intelligence agencies were also in the team. A partner at Oxford Frontier Capital and chairman of KASB Securities, Ali Farid Khwaja is one of the committee member shares that half of the committee members are not aware about the group and for what it is been working. But it is a good initiative to set up this committee to study the potential and flaws of cryptocurrencies. Additionally, he says, "The relevant bodies in the government who need to get things done are supporting it, and the promising thing is nobody wants to stand in the way of technical innovation." Huge Interest on Digital Assets Further, even the educational department in Pakistan showed more interest in the crypto industry. In February, Lahore University of Management Sciences received an amount worth \$4.1M to study technology in stacks. It is the study related to a blockchain network that connects Bitcoin to apps and smart contracts. Therefore, with all these interests from its people, the government started Pakistan based social media groups and websites. These online platforms teach people how to trade, invest and mine cryptocurrencies in the market. Also, many videos were put-up on YouTube and Facebook to explain the trading process. As a result, digital cryptocurrency exchanges like localbitcoins.com lists many

Pakistan traders on their platforms. And records thousands of transactions performed by the citizens. In addition, Binance and Binomo exchange apps have recently scored more downloads in the country. Thus, Ahmed proudly comments that, you cannot stop crypto, so the sooner Pakistan regulates things and joins the rest of the world, the better. Recommended for You

Anthony Pompliano shares that the digital euro is worthless and it is not bitcoin. The European central bank (ECB) is planning to launch a new project on digitalizing money. The bank converts the money from Bitcoin to the digital euro. The ECB Prepares Euro's Digital Future Due to the announcement from the ECB about the launch of digital euro, Pompliano dunks on the digital euro. The bitcoin bull says that the digital euro is not decentralized or it can change any Monetary procedures. Moreover, Pompliano feels since the order is from the European central bank it is unavoidable. In regards to this, there are debates stating that cryptocurrency breakdown is already evolving. (THREAD) We have decided to launch a project to prepare for possibly issuing a digital euro. We will look at how a digital euro could be designed and distributed to everyone in the euro area, as well as the impact it would have <https://t.co/KCf73qH0Z8> 1/3 [pic.twitter.com/eHvpFlH8sq](https://t.co/eHvpFlH8sq) " European Central Bank (@ecb) July 14, 2021 The European central bank (ECB) announces to launch the investigation phase of a digital euro project. Significantly, the digital euro supports the people to make easy payments with additional choices of how to pay and redeem. The Eurosystem issues digital money which is accessible to all the citizens and organizations. The President of ECB, Christine Lagarde says, "Our work aims to ensure that in the digital age citizens and firms continue to have access to the safest form of money, central bank money. Moreover, the digital euro would still be a euro: like banknotes but digital." In addition, the ECB implements the digital euro as a complement to cash. The digital currencies will connect as cash for all means of payments. Also, these digital euro's increase monetary sovereignty and the financial stability for the country. Thereby, diminishing the dependency on other digital payment options. Besides the risks in the financial securities, the ECB guarantees the people stating, privacy is a top priority for them. Pompliano Responds to ECB Plans According to the ECB plans, it wants the digital euro to be used in this new era. Thus, Digitalization has changed our lives and transformed how we pay. In response to this, Pompliano shares that many authorities and financial firms are against digital assets like Bitcoin. He adds, the CBDA's will not plan to bring a new era of monetary enlightenment. Instead, they just need to transform the activities according to technology. More so, Pompliano feels they are still going to create trillions of dollars and reduce the value of the currencies due to these technological factors. Therefore, as technology increases people, firms and businesses are moving into the digital world with digital currencies. Thus, a cashless economy is waiting as the cryptocurrencies are becoming the digital gold at present and towards the future. Recommended for You

- CircleSwap (CIR) token price has skyrocketed to \$0.63 surging over 100% in a day. - CircleSwap is a decentralized crypto trading firm that integrates Circle. CircleSwap (CIR) token price has skyrocketed to \$0.63 surging over 100% in a day. According to CoinMarketCap, the CIR price is at \$0.6138 with a 24-hour trading volume of \$3,665,704, at the time of writing. CircleSwap is a decentralized crypto trading and management firm that integrates Circle. Moreover, Circle is a group of like-minds and Swap which is a decentralized trading offering share of trust and benefits on the basis of transfer between individualized cryptocurrency. More so, the CircleSwap features a rich array of financial derivatives that adds liquidity mining, banking, and crypto hedging. Like other digital assets in the crypto industry, CIR can be traded on many exchanges. Users can get CIR tokens by purchasing them from digital asset exchange Gate.io. The crypto industry continues to revolutionize its technology to stay competitive against its competitors. Despite this market decline due to the pandemic, the volume of cryptocurrencies still increases every day. One of them is the CircleSwap (CIR) cryptocurrency. CIR has a bright future ahead of it in 2021. With the ongoing developments happening within the CIR ecosystem, as well as in the overall crypto market, we may see CIR reach new heights. Even more, it may even reach its new ATH if investors have decided that CIR is a good investment in 2021, along with mainstream cryptocurrencies like Bitcoin and Ethereum. Recommended for You

- Bitcoin millionaire Erik Finman Come up with Freedom Phone - In Freedom Phone, people use apps for free of censorship or tracking. - It failed to feature any manufacturer's specifications. Self-professed 22-year-old Bitcoin millionaire Erik Finman has come up with his smartphone, Freedom Phone. Erik Finman caused a minor stir on one of the social media Twitter this week when he posted a video pitching a Freedom Phone, he said let people use apps for free of censorship or tracking. Today I'm announcing the Freedom Phone. " ERIK FINMAN (@erikfinman) July 14, 2021 This is the first major pushback on the Big Tech companies that attacked us " for just thinking different. Complete with its own Uncensorable App Store & Privacy Features. We're finally taking back control. <https://t.co/t0Snuxncfd> [pic.twitter.com/Hykp08ITCQ](https://t.co/Hykp08ITCQ) Accordingly, in that video which Erik Finman posted on Twitter, he describes himself as "the youngest Bitcoin millionaire". And displays images of Abraham Lincoln and Martin Luther King to suggest they would have been redacted in the present political climate. Moreover, according to Freedom phone's website, Erik Finman's discovery comes with features like tracking blockers and an uncensorable app store. People can even download and access apps that banned on the other app stores like Google Play Store and Apple's App Store. Furthermore, on the company's official website Freedom Phone listed for \$499.99 and will start shipping from August. Also, the company slightly revealed the features of the Freedom phone, the phone will feature a 6-inch-screen and a great camera. Also, the phone has its OS software and contains lots of storage. But the exact storage space not yet revealed. More So, Erik Finman stated, "The Freedom Phone does everything your current phone does, except censor you and spy on you". Many Criticizing Freedom Phone Many of them stated Finman and his Freedom Phone failed to feature any manufacturer's specifications. And some of them suggested that the Freedom Phone was an exploit aimed at suckers. So you're telling me a "Freedom Phone" is basically a generic Android Device, with Parler, Telegram,

RUMBLE, OAN, NEWSROOM, DUCK DUCK GO and a VPN preloader at 01-2 (@thegreyrock) July 14, 2021 WOW. Yet, another new addition into the non-fungible token (NFT). And that too from the NBA sector. Such sorts of NFTs are nothing new, as each day sees a new NFT rise and introduction to the market. The official basketball team of Miami, the Miami Heat has been into the crypto and NFT sector for the past few months. Yet, it brings forth a new range of NFTs. Miami Heat's New NFT The Miami Heat is a predominant team in the NBA, has proved itself into the crypto and NFT leagues too. Accordingly, about a few months back the Miami Heat has partnered up with the cryptocurrency exchange FTX. Moreover, the recent highlight is the Miami Heat's new range of NFTs. These are said to be a completely new series solely based on the team's victory in the 2006 NBA championship. In addition, all these NFTs will be mostly pictures of the finals of the Miami Heat upon their victory and securing the NBA championship in the year 2006. Also, this series of NFTs is to be named the "15 Strong". Upon this, 15 Strong will compromise 127 unique tokens as NFTs. In spite of all this, the 15 Strong series will be based on the Ethereum blockchain completely. Apart from all this, the series will further include the winning moment of the 2006 NBA championship, the 2006 Miami Heat's banners, the tickets to the game, and furthermore. These NFTs could be brought upon the platform, Metamask. Also, the auction will take place on July 19. Miami Heat's Views The Digital Marketing head of Miami Heat, Jenifer Alvarez puts forth that their 15 Strong NFT series will be a unique one of its kind. Also, Jenifer states that they intend to connect both the past and the future with this NFTs series. She puts forth that this will surely be a collector's item, exclusively, valuable evidently. The NBA 2006 championship, denotes Miami Heat's first-ever victory in the NBA. They defeated the Dallas Mavericks with a score of 4-2. The name the "15 Strong" is inspired by the coach of the Miami Heat, Pat Riley, who coined the term in order to motivate the team. Recommended for You

The largest online broker, SelfWealth partners with the Australian Securities Exchange (ASX) to add cryptocurrencies on its platform by the end of 2021. It also enables the active users to trade the assets on its portal. SelfWealth Partners with ASX SelfWealth is the Australian share trading platform that empowers the investors to trade smarter without any brokerage fees. Today, the trading company happily announces the partnership with cryptocurrency exchange (ASX). It offers the access to the digital assets to the active Australian investors on the platform. We're excited to announce SelfWealth will add #crypto #investing as we make the transition from a #share #trading platform to a wealth creation platform. Learn all about our plans here! <https://t.co/17FQy8xIn0> " SelfWealth (@_selfwealth) July 12, 2021 Moreover, the collaboration with the crypto exchange platform enhances the Selfwealth to experience a new transformation. It is the transition from a share trading platform to a wealth creation platform. As per the announcement, SelfWealth plans to add 10 more cryptocurrencies on its platform to buy and sell the assets. The addition of new cryptos include the top cryptocurrency, Bitcoin and the second largest crypto, Ethereum. Further, the trading company considers to integrate these plans by the end of the year with an external wallet. This supports the investors to access the crypto in a safe and secure manner with low brokerage fees as well. The CEO of SelfWealth shares, "Being able to buy and sell crypto as well as trade local and U.S.-based shares using the ASX's Clearing House Electronic Subregister System, or CHES, on the same platform would be an Australian first." In addition, he states that the Australians show more interest in cryptocurrencies. And thereby looks out for a trusable platform to facilitate their investment decisions. Before the partnership, Selfwealth conducted a survey among 3500 customers about cryptocurrency trading. As per the data, 30% of the respondents already have crypto investments and 38% of respondents are eager to invest in crypto assets. Thus, with positive feedback and the interest in crypto for the public enabled the company to offer crypto investments for all the active users. Therefore, despite all crypto scams, the Australian Securities and Investments Commission waves a green signal for the local cryptocurrency industry. Recommended for You

Band Protocol is a decentralized blockchain platform which inaugurates its next version of network, "BandChain 2". The network supports the data providers to access and run nodes without any intermediaries. Band Protocol's New Version The blockchain platform provides high performance and it is built for the data oracles. The network is secure and scalable and connects real-world data and APIs to smart contracts. Moreover, some of the blockchain oracles like Band Protocol, ChainLink Challenger and other related oracles work to convert their internal data into digital smart contracts. Additionally, this enhances the decentralized finance (DeFi) platforms which are mostly linked to Ethereum networks. Further, the firm moves into this new phase as the current version is very expensive and consumes more energy. The present version runs on the Ethereum network which extracts more cost for all the transactions occurring in the platform. The CEO of band Protocol Soravis Srinawakoon shares his support to the launch saying, "You can see this play out with big players like Solana, Cosmos, Polkadot, BSC [Binance Smart Chain] and Terra. So we positioned ourselves to address the needs of these faster, cheaper and more scalable blockchains." Functions of "BandChain 2" The ideology behind the move into the new version is mainly for the data providers to access the nodes without any restrictions. Thus, the platform serves as a transparent and decentralized network. This enables the data providers to use the other data services like API3 and unique data oracle services. Significantly, the BandChain 2 is capable of bringing in more traditional players onto the network. It provides them the "Premium APIs" access where the firm is accessible to the economical

information directly. More so, Band Protocol becomes the first blockchain project to join the OpenAPI initiative. The APIs potential is to allow participants to access data and communicate to each other. Besides, Band Protocol maintains partnerships with Google, Microsoft and Bloomberg who are still working in progress. Thus, the new version might be a hurdle for the users to use. So Srinawakoon says, the team works for the possible ways to help the users to run data in the network. And the players can use existing infrastructure and make it easier to onboard them further. Thailand is one of the countries which have imposed serious and arduous regulations upon its crypto industry in recent times. Thailand is in fact more concerned about the financial security of the country rather than expanding and improvising developments through its crypto industry. Accordingly, Thailand now severely restricts payments in the form of cryptocurrencies. Bank of Thailand's Warnings Thailand is highly considerate of the out control of its crypto industry. The Country has imposed various restrictions upon the crypto industry and its usage. In addition, the crypto exchanges are the worst affected on behalf of these regulations by the Securities and Exchange Commission (SEC). In spite of all this, now the Bank of Thailand (BOT) has issued a public notice, rather than a warning notice in other terms. Accordingly, the warning notice reads, caution for all those who are using Digital Assets as the means of payments for any kinds of services or for goods. Furthermore, all this is a result of the Bank of Thailand's report published recently on the subject. The Central bank of the country reveals many established and blooming enterprises and companies are evidently demanding payments for either their goods or services in form of cryptocurrencies. Also, BOT states, Bitcoin (BTC) and Ethereum (ETH) are the two most cryptos in high demand and preference for the payments by the companies. Moreover, BOT states that it will be joining hands with the SEC in order to restrict such means of crypto payments. BOT's Justifications The BOT puts forth that cryptocurrency is not a legal tender for Thailand. In spite of this, any form of payment apart from the legal tender of course will not be accepted. On the other hand, the BOT states that using nonlegal tender forms of payments could lead to various complications and drawbacks. They depict it will be highly volatile for both parties. In addition, BOT states many concerns like price fluctuations, hacking, money concealing will be at their peak. Thailand's Crypto Regulations History The SEC of Thailand has devised numerous regulations in recent times upon the cryptocurrency exchanges. In addition, it has banned the exchanges from providing services of NFTs, Fan based tokens, and other meme-based cryptocurrencies like the Dogecoin (DOGE). Furthermore, about a week ago, the SEC of Thailand filed criminal charges and a complaint against the largest global cryptocurrency exchange, Binance. They point out Binance operates without any valid crypto license in the country. Recommended for You

The Parliament of the Economic Community of West African States (ECOWAS) raises a warning against the use of cryptocurrencies to all african crypto users. The refusal is for the usage of crypto in means of exchange and commerce. Moreover, the warning was issued after the joint committee meeting in Ouagadougou, Burkina Faso on July 10th, 2021. The African legislatures refuse to use these digital assets as they are more volatile and risky in the market. Further, the committee meeting summons the prospects of cryptocurrencies as a facilitator for investment to the crypto experts and the resource persons who were the participants of the meeting. Additionally, the joint committee advised the sub-region to avoid crypto-related payments without breaking the legal laws. Hence, the Parliament has cautioned against the use of cryptocurrencies as a means of exchange and commerce. It also reminds the users that these digital assets cannot be like e-cash as they are highly volatile. The Irregularity of Crypto The joint committee shared an example of the irregularity of the cryptocurrency in the market. For instance, the price value of Bitcoin drops extremely low which is an evolving topic in the market today. Thereby, the African legislators state that cryptocurrencies are not safe and secure, hence their use on the African continent is dangerous for various reasons. Another major issue for crypto volatility is that crypto transactions are irreversible. Only if the sender sends the asset across. The users can get back their asset only if the reciever agrees to send it back. More so, the committee says, "Among the risk factors identified is that cryptocurrency is insecure liquidity, given the shallow depth of the foreign exchange market and high concentration of assets. Thus a liquidity problem may arise." Therefore, with these many risky aspects in the cryptocurrencies, it cannot be entertained within the African region. Thus, the fluctuations of the assets may cause dangers to the users and to their valuable assets. Recommended for You

- Few crypto tokens that have been added to the CoinMarketCap. - Some of the crypto added includes ZORT, NFT, NODOGE, RBT, and StarL. There are crypto tokens that have been added to the CoinMarketCap, a crypto data aggregator site. However, some of the crypto added include ZORT, NEFTiPEDiA, NO DOGE, Robust Protocol, and StarLink. Recently Added Tokens Zort (ZORT) aim is to explain how automated crypto trading could be safe, more profitable, and more consistent than conventional trading processes for both personal and also institutional investors. Moreover, this platform is powered by years of historical market information and complex neural simulations which date back to 2016, our algorithms find and capitalize on the irrationality decision making and false pattern recognition of human crypto traders. However, by utilizing advanced AI and hive-mind neural networks, the platform will eliminate the obstacles inherent to crypto trading, making it highly profitable and accessible for everyone. NEFTiPEDiA (NFT) is a next-gen decentralized marketplace for digital investors. Moreover, it offers a user-friendly platform that is easier for all the artists to sell and validate their NFT links to the interested buyers. And it also serves as a long-term beneficiary platform for all the investors. Nodoge (NODOGE) DOGE is everywhere. It is all around us. Users can see it when users log onto CMC. Users can feel it when they trade and when whales like Elon tweet. Moreover, the DOGE is the world that has been pulled over users eyes to blind users from the truth. Robust Token (RBT) is a BEP-20 deflationary token on the Binance Smart Chain with a fixed total supply of 100,000 RBT and a 1% burn on all transactions that gets converted into Robust Reward Tokens (RBW). In addition, the RBW tokens

will be utilized to bootstrap all projects in the Robust Protocol Roadmap. StarLink (StarL) is a fully decentralized project which is moved by the community. Moreover, \$STARL was launched by a LEASH deployer accidentally. And he turned this into a community-owned project. No dev tokens & Liquidity Burnt, which means that no one can pull out the initial liquidity and no one can sell pre-mined tokens. Literally SAFU. Recommended for You

As a matter of fact, we all know that Bitcoin has experienced a market down for the past two months. As a result, the crypto market has collapsed and many other leading cryptocurrencies have followed Bitcoin and have been volatile. Major Bitcoin investors are expecting that it will be bullish and despite the fact of crypto-market collapse, many analysts are optimistic. Bitcoin's declining issuance and the fixed supply of 21 million coins would be the primary reason for investors' expectations. Traders frequently misunderstand these concepts because value and price expectations are easily erroneous. Bitcoin does not exist in a vacuum, despite what BTC maximalists believe. As a result, its price action is heavily influenced by the amount of dollars, euros, and yuans in circulation, as well as interest rates, real estate, equities, and commodities. Irrespective of the analysts' prediction, the price is entirely based on the market participants at that time. Contrary to popular belief, only 2.5 million Bitcoin are currently deposited on exchanges according to CryptoQuant data. When we compare this to the 10.7 million that has not moved in the last 12 months, we can conclude that long-term holders have no greater voice in the price. Call Option Analysis for Bitcoin's Future Significantly, when the difference between value and price becomes clear, then it would be easier to understand investors' expectations. In regards, why investors expect that Bitcoin would hit a \$100,00 or higher target by the end of 2021. Moreover, one should examine the calls (buy) available in the options market to properly define what odds are being the value for those prices. To summarise, assuming that investors are only buying ultra-bullish call options is naive and usually incorrect. In addition, professional investors continue to place a value of \$100,000 by the end of this year. This may appear excessive at this time, but Bitcoin's volatility is unpredictable. Besides, there is nearly a half-year ahead. - Aaron Arnold names a few crypto assets that he believes are quiet powerhouses. - Ethereum (ETH) has added five million unique addresses to its network. - Two top crypto BTC and ETH both attracted investments from Senator Pat Toomey. Crypto analyst Aaron Arnold names a few crypto assets that he believes are quiet powerhouses with the potential to take off once bullish momentum returns to the markets. Moreover, Cardano is leading in terms of average daily GitHub developments over the last 30 days, which represents that the development team works hard to improve its network, notes Arnold. According to CoinMarketCap, the ADA price is \$1.33 with a 24-hour trading volume of \$1,147,879,578, at the time of writing. Additionally, says Arnold, Ethereum (ETH) has added five million unique addresses to its network in the last 30 days. ETH gas prices dropped to the lowest rates since March 2020. More so, users can attribute this since the price dropped. However, Coinmetrics says Ethereum gas prices actually started declining before the price of ETH did because ETH has done some scaling this year. Arnold says that as demand for ETH grows, projects will spill over onto smaller blockchains and start building there. According to CoinMarketCap, the ETH price is \$2,108.26 with a 24-hour trading volume of \$19,846,870,225, at the time of writing. Two top crypto assets Bitcoin and Ethereum, which Arnold says have both attracted investments from Senator Pat Toomey (R-PA), the first senator on record to purchase crypto. According to CoinMarketCap, the BTC price is \$33,799.66 with a 24-hour trading volume of \$25,050,572,152, at the time of writing. Recommended for You

- Social platform TikTok Prohibited Crypto advertisements. - TikTok was a hotbed for Dogecoin (DOGE) hype. - Many of the social platform promotion ads sell false promises. On July 9 TikTok announced the prohibition of financial services products promotion including investment and cryptocurrency. According to an article from FT Adviser on July 8, promotional-based crypto content included among the now-verboten topic. Moreover, the new guidelines on sites that post-social videos especially stop users from posting promotional content about financial products. Despite the geographical location of the creator. Henceforth, FT Advisors, stated, "According to TikTok's branded content policy, the promotion of all financial services and products now prohibited globally". Accordingly, the platform noted its policy included, but not limited to, lending and management of money assets, cryptocurrency, foreign exchange, pyramid schemes, investment services and get rich quick schemes, including others. In 2020 TikTok was a hotbed for Dogecoin (DOGE) hype when the users shared related videos to get more individuals to jump on the bandwagon. Even more, in recent months, other social platform sites have also hosted financial markets discussions. Additionally, Martin Bamford, Informed Choice's client education head, stated, "We see a huge amount of this branded content on TikTok, usually from poorly informed commentators, who lure in followers with promises of riches. But in reality, are making their money off people signing up via affiliate links." The view is that many of the social platform promotion ads sell false promises to TikTok users. Conversely, it is unclear whether the TikTok ban applies to all ads of financial products or only the promotional ones. In addition, in 2018 Google had prohibited crypto ads. Recommended for You

The ever legendary Shaquille O'Neal, hall of fame for the NBA speculates on cryptocurrency. The pro basketball player says he doesn't believe in it and he still doubts the ethical values of the industry. Shaquille's Opinions The debate on whether cryptocurrency and all its related elements are legitimate has been going on for ages. But with the rise of the industry globally, many tend to indulge themselves in reaction to cryptocurrencies, one way or the other. Moreover, all these have in fact reduced the negative criticisms put forth by various financial critics and much more. However,

itâ€™s been quite a long time since a celebrity has ever thrashed and raised pessimistic comments upon the cryptocurrency industry. The ever legendary NBA hall of fame, Shaquille Oâ€™Neal is now the latest addition to this rare list. In a recent sports interview, he was questioned regarding his views upon crypto. Accordingly, Shaquille Oâ€™Nealâ€™s replies took everyone by surprise. The pro player states he doesnâ€™t believe in cryptocurrency at all. Also, he reveals he will invest only in what he firmly believes in, rather than in something imaginary. Consequently, he utters, he would never invest in any business which is too good to be real. On the other hand, he reveals that he has been approached many a time by many crypto officials with money even as high as \$9000,000 just for a single tweet from him up to their respective cryptocurrencies. With such radical market moves going on, Shaquille Oâ€™Neal questions the legitimacy of the entire crypto industry. Shaquille Oâ€™Nealâ€™s Personal Opinions Furthermore, Shaquille Oâ€™Neal states he still doesnâ€™t understand how the entire crypto industry operates. Also, he states many of his surrounded people in his circle or indirectly using him to impose for such crypto-based promotions. In addition, Shaquille Oâ€™Neal says that he wouldnâ€™t be part of any business which is difficult to explain. Also, he states, whatever he invests is for the benefit of his people and him, rather than increasing his financial income. Besides, he carries on many of the retired players, nearly 75% after the finish of their career usually end broke desperately. Also, he adds he doesnâ€™t want to end up on that list. Moreover, the NBA star is also a businessman evidently, but he yet did not reveal any further information regarding his business or investments. Recommended for you

- Coinbase has plunged from its No. 1 ranking on the App Store, now holding 16 place. - On April 14, Coinbase went public through a direct listing - The daily trading volume on the leading spot exchanges has dropped in 2021. Coinbase, US crypto exchange platform, has plunged from its No. 1 ranking on the App Store. This happened after the May crypto crash saw Bitcoin lose more than half its value, other coins nosedive as much as 63% in a week, and investors lose their euphoria. According to data from the blockchain software company The Block Crypto, the Coinbase ranked No. 1 on Appleâ€™s App Store on May 10 and May 11, however, the Coinbase is now No. 316. Coinbase went from rank 1 in App Store to nearly rank 300 in 2 months. pic.twitter.com/B4MtkqCoP6 â€” Steven (@Dogetoshi) July 6, 2021 On April 14, Coinbase went public through a direct listing, trading at \$381 per share, then surged to almost \$430 before falling back. On the same day, Bitcoin (BTC) broke above \$64,000 to hit a new all-time high. Neither bitcoin nor Coinbase has come close to those levels since. Coinbase shares were trading at \$230, as of this writing. Bitcoin was trading at \$33,508. Volatility has not been mainly good for Coinbaseâ€™s share price. CNBC reported, Jesse Pound wrote, â€œItâ€™s possible that over the longer term, Coinbaseâ€™s mainstreaming of crypto leads to greater adoption and higher highs for bitcoin, dogecoin and the rest. But for now, when the crypto exchange makes a move, it marks the peak of euphoria and has been a reliable sell signal.â€ The daily trading volume on the growing spot exchanges has dropped to the lowest in 2021. Moreover, one reason for the slowdown could be the stagnating market. Recommended for you

With the foresee developments adoring the blockchains, new decentralized cryptocurrency exchanges are being introduced almost every now and then. However, whether these Decentralized Exchanges (DEX) are truly legitimate is a completely different topic. Many prove to be scams, rising fear, and suspicions. Thrashing of ShibaSwap One such Decentralized Exchange (DEX) launched recently just about two days before, on Tuesday is the ShibaSwap. This DEX is completely based upon the Doge Coin (DOGE) follower and competitor, the Shiba Inu (SHIB). Elon Muskâ€™s dog theme maniacs have surely caught on fever. The SHIB was introduced solely to compete against the DOGE. However, the SHIB has played its fair share on rising speculations, spikes here and there in the market. Despite the quiet success, SHIB, brought out its DEX, ShibaSwap with mind-blowing offers and additives to the instant liquidity providers. As a result, the Total Value Locked (TVL) accounted for more than \$1 billion on the DEX within just 24 hours. Citing this, the most renowned and only one of its kind, the decentralized platform analyzer, reviewer, and critic, DeFi Safety put forth its views on ShibSwap. Also, they made it official through a Tweet on their official Twitter page on Wednesday. DeFi Safety abruptly thrashed ShibaSwap as the worst DEX so far ever. In addition, they gave it a score of just 3% out of 100%. Also, they just highlighted not to invest through ShibSwap, as it is the same as losing your money through a black hole! DeFi Safetyâ€™s Concerns DeFi Safety stated out clearly that, ShibSwap has failed in most of the 22 criteria of their analysis, out of which SHibSwap passed only two. In contradiction, ShibSwap secured a pass of 30%, the highest score it got ever on its white paper documents. Other than that, DeFi Safety declares ShibSwap as a complete failure. The author of the review, who is also the founder of Caliburn Consulting and SecuEth, Rex Hygate puts forth, the team behind ShibaSwap was kept anonymous. Furthermore, they lacked transparency and most of their documents were not intact. Also Hygate states, the public software repository is completely absent. There were no records of proper testing or development history for the codes. Finally, DeFi Safety stated that only if ShibaSwap submits and maintains transparency with regards to further proper documentation, they will consider raising ShibaSwapâ€™s review score. - Israel moves to seize 84 cryptocurrency wallets from Hamas. - Benjamin signed a seizure order for crypto wallets on July 7. - The militant organization has received a lot of cryptocurrencies. The Israeli authorities moved to seize 84 cryptocurrency wallets that can linked to the Hamas terrorist group. Israelâ€™s minister of defense, Benjamin Gantz, signed a seizure order for crypto wallets on July 7. Even more, the largest of several Palestinian militant Islamist groups is Hamas. Hamas runs the Gaza Strip and delegates a terrorist group by Israel, the US, the European Union, the UK, and other major world powers. Moreover, Elliptic, blockchain analytics, and forensics found that the approved addresses had received \$7.7 million in cryptocurrency. Hamasâ€™s militants have \$3.8 million value of Tether (USDT), \$3.3 million value of Bitcoin (BTC), \$51,129 value of Ether (ETH), and \$40,235 value of Dogecoin (DOGE). Hence more, those addresses and the associated wallets have added to

Elliptic's products. Enables the client to detect wallets and transactions linked to the terrorist group. More so, Elliptic noted many of the 84 addresses emphasized by Israel, already identified by Elliptic. As being associated with the Al-Qassam Brigades, the military wing of Hamas. The addresses used in the fundraising round raised over \$100,000 in Bitcoin between January 2019 and May 2021. Moreover, XRP (XRP), Cardano (ADA), Tron (TRX), Litecoin (LTC), and Binance Coin (BNB) have made a temporary appearance on the record of wallets topic to the seizure order. Henceforth, Tom Robinson, co-founder of Elliptic, declined to name the exchanges identified or specify whether Elliptic had worked with the Israeli government on tracing the wallets involved. Accordingly, during its latest clash with Israel the militant organization has received a lot of cryptocurrencies. Recommended for You

Tesla and SpaceX CEO Elon Musk's power over the cryptocurrency decreases in the market. Musk's tweet lost the fame to be a deciding factor over the prices of these digital assets. Crypto industry always has an effect on the tweet from the founder of Tesla. Musk's twitter post enabled the coins to skyrocket or even plunge in the crypto market. The investors and the traders now feel this influence of Musk is lost over crypto. For instance, Musk shared Tesla's investment of \$1.5 billion in Bitcoin and announced to accept payments for its electric cars and other products. This tweet pumped the price of Bitcoin more than 10 percent. Similarly, bitcoin price rose to 18% when Musk added "Bitcoin" to his twitter bio. In February, Musk tweeted, DOGE could be the future of cryptocurrency. The price of the meme-coin (DOGE) jumped over 50% within 24 hours. Besides, Musk planned to pump the price of a certain coin with his tweet. Last Friday, Musk's tweet about the "Baby Doge" increased the value of the coin by 130%. The tweet depicts the viral video in youtube titled "Baby Shark Dance." Baby Doge, doo, doo, doo, doo, doo, " Elon Musk (@elonmusk) July 1, 2021 Baby Doge, doo, doo, doo, doo, doo, Baby Doge, doo, doo, doo, doo, doo, Baby Doge Musk loses his Crypto Credibility However, the CEO of Tesla is losing his reliability in the crypto market. Notably there are some instances where he failed to be a deciding factor over crypto. The event of SNL in May organized by Musk created a huge hype for the meme-coin. The event let the users down with a fall of 25% in the price of DOGE. Despite multiple shouts from Musk the value of DOGE dropped. Another instance, Tesla suspends payments through Bitcoin due to great cost involved in bitcoin mining and transactions. This negative tweet declines 35% in the price of \$BTC. More so, Robinhood recently reported DOGE accounted for 34% in its crypto trading in the first quarter. Also says that it can affect the business if the price of dogecoin suddenly falls. However, Musk's recent tweet on July 2 failed to create an impact on the crypto price. The tweet explains, a man who ignores attractive women around him and only focuses on DOGE's exchange rate. This indeed did affect the price of DOGE and remained the same in the market. In addition, Crypto analyst Larry Cermak and founder of Quantum Economics Mati Greenspan replied to Musk's tweet in a funny way. Not even visible on the daily chart anymore. Barely noticeable on the 4h. pic.twitter.com/OYunic3Hed " Mati Greenspan (tweets "financial advice") (@MatiGreenspan) July 2, 2021 Therefore, the crypto community must have grown tired of Musk's tweets. Thus, it shows that investors are no longer interested to listen to one man's opinion to buy and sell their crypto assets. Recommended for You

Polkadog is a decentralized finance (DeFi) based meme offering project. The coin offers remuneration consequently to its holders by means of frictionless fee conveyance. On Tuesday, the venture declared the dispatch of its meme platform. The group behind the task asserted that the furthest down-the-line platform would carry gigantic freedoms to crypto fans. Besides, the project makers guarantee that it is 100% reasonable exchanging and draw in a few new and veteran financial backers alike. What Is a Polkadog Crypto Coin? Polkadog or the PDOG is a 100% community-owned and self-subsidized crypto project. Anybody, including the makers, should buy the coin to secure those coins. Remarkably, the coin's benefits produced from the deals stay inside the community. What's more, the factor assists the venture with progressing benefits. The platform has been presented on Uniswap, a decentralized exchange (DEX). The DEX is additionally one of a setup DeFi platform that upholds a huge number of exchanges identified with crypto consistently. Fair Start for Polkadog Without a pre-deal, the PDOG crypto coins took a more attractive beginning. Likewise, the undertaking utilized no approaches to raise support like financial investors or any private deals were allowed to it. The group behind the venture needs to keep things reasonable, thus they set 50k coins purchasing covers on the initial 21 days' deals. Quite, the factor guaranteed the group a level battleground and assisted with keeping whales and bots under control. Efforts of the Team With a blast, the crypto project started yet then, at that point settled following a couple of long periods of early deals. The group behind the venture bought the coins with a few wallets from individual assets to help the beginning up. Notwithstanding, we have noticed that a portion of their PDOG crypto coins gained at dispatch to ensure the venture has been burnt. Polkadog Coin Will Change To Polkaswap Polkadog's PDOG will before long, change to Polkaswap, another cross-chain stage that has likewise been based on the polkadog blockchain. In any case, the stage is as yet a work in progress. Then again, it is additionally realized that Polkaswap will before long launch in full on the SORA network. The trade will offer advantages like various chains to exchange together and a low trading expense of only 0.3% for every exchange. Additionally, the benefits will be reinvested to compensate the liquidity suppliers. For DOGE founders mean to take the crypto crown before the finish of the following year. To finish their objectives, they have added a few advantages of acquiring the PDOG coins. Recommended for You

In Aave (AAVE) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about AAVE to analyze the future movement of the cryptocurrency. Although the price has fallen in the last 24-hours, it's still trending in the crypto space. DOGE KILLER (LEASH) The creators of SHIB, who are also the creators of DOGE KILLER, made their first token popular. SHIB now has billions and trillions of users, and it is an experiment in decentralized spontaneous community building. LEASH was supposed to be a rebase token tied to the price of Dogecoin, which operates on the Ethereum platform. It has now been released and will not be suppressed. As previously stated, their goal for releasing a new coin is Bone Dogecoin Killer. According to Coinmarketcap, the current trading price of LEASH is \$2,293.72 with a trading volume of \$24,588,622 in the last 24-hours. The Doge Killer dropped to 8.94% in 24 hours while holding its position at 2550th place. The top exchanges for trading Doge Killer are Uniswap (V3), Jubi, Uniswap (V3), CoinW, and Bilaxy. In fact, LEASH has experienced tremendous growth in the market. Although the price has dropped in the last 24 hours, it is still trending in the cryptocurrency market. Small Love Potion (SLP) Small Love Potion (SLP) is an ERC-20 token used to breed new digital pets known as Axies on the Axie Infinity platform. This digital asset is a stand-in for experience points. Axie Infinity is a Pokémon-inspired digital pet universe built on the Ethereum blockchain, where anyone can earn token rewards for skilled gameplay and contributions to the ecosystem. According to Coinmarketcap, the current trading price of SLP is \$0.2169 with a trading volume of \$90,085,484 in the last 24-hours. The Small Love Potion soars to 25.81% in 24 hours while holding its position at 317th place. The SLP is available in top exchanges namely Binance, Hoo, Pionex, LBank, and CoinW. The current circulating supply of SLP coins is 404,090,637. With its advancements in the ecosystem, the token has the potential to skyrocket in the coming days. Recommended for You

Australia's crypto fund manager, Apollo Capital reveals the firm's year-to-date returns since the start of the year with 119% growth. The crypto fund avoids DOGE and DeFi crypto projects. Apollo Capital is a multi-strategy fund which invests in crypto assets. The firm is powering the next generation of computing infrastructure. The investment firm returned 119% this year without involving DeFi and DOGE projects. The Australian crypto hedge fund chooses Ethereum and Bitcoin based crypto projects and manages \$75M under management in just more than a year. Moreover, Bitcoin crypto projects earn 19.96% growth in year-to-date. The financial firm opts for cryptocurrency platforms mainly Ethereum, to avoid the new and emerging projects. Additionally, Apollo Capital verifies the blockchain platforms it invests with the help of external experts. They also cross-check the crypto teams to be highly programmed and well versed. Drawbacks of DeFi and DOGE projects Notably, the company is not ready to work with decentralized finance (DeFi) and the DOGE coins. Recently, WhaleFarm, a DeFi project, traded above \$200 on crypto exchange which wiped its worth close to zero within 2 days. So it is the easy-come and easy-go DeFi project in the market. More so, Mark Cuban says he got hit by losing his money trading a DeFi token called Titan. The investment in the token made him lose 60 USD which crashes to zero in one day. The company also adds, it's better to avoid meme coins as they are unstable and have zero actual utility. Therefore these pitfalls in DeFi and DOGE are the reasons why the investment firm is not ready to deal. And avoids these newer crypto projects as they are not strong in the crypto industry. Thus, Australia's leading crypto asset firm Apollo Capital feels Bitcoin and Ethereum will become the keys to open the success in the crypto fund market. It also prefers cryptocurrencies like Polkadot, Polygon and Solana to make good productivity in the market. Recommended for You

The non-fungible tokens (NFT), have played a huge role in the overall first half of 2021. Every month of this year has brought at least two NFTs into the market. The continuous addition of more and more NFTs to the market gave rise to speculations, whether the NFT market will reach a saturation level. Yet, the outcomes have been quite astonishing. NFT so far in 2021 The whole world evidently submerged into the non-fungible tokens (NFT). The market foresees numerous celebrities, movie stars, various giant MNCs, the Sports sector, and much more. Every week witnessed the release of a new NFT. In addition, many speculated the market for NFT will get diluted amidst all the news ones entering the market. Also, the developments and introduction of more and more advanced new blockchains enhanced more and more NFTs too. However, the year 2021 so far has just raised surprise in awe. The NFT market sales throughout the first quarter of 2021 saw a good account of \$1.24 billion. Also, the second quarter too saw a good account of sales, even better than the first quarter. The second quarter saw sales of about \$1.47 billion. On the contrary, the first quarter of last year, 2020 saw only about \$13.7 million. Such a massive rise from the first quarter of 2020 to the first quarter of 2021,

depicts the rise in interest upon the NFTs. NFTs vs. Crypto Prominent players in the NFT market, like the NBA Top Shot, OpenSea, all have contributed towards the growth of the NFT market. The NBA Top Shot touched a peak of an overall \$700 million. On the other hand, the OpenSea, a dominant NFT platform saw an all-time high of \$150 million. In addition, the Binance exchange recently launched its NFT exchange platform. This tends to bring more crowd towards the NFTs, evident to the reason of being more accessible and user friendly. Furthermore, all such highlights upon the NFTs and the recent records for the past 1 year now bring forth a question, are NFTs better than cryptocurrencies and Bitcoin (BTC)? A highly speculated topic that ought to bring more debates. Moreover, one point truly evident is the crypto market undergoes both bulls and bears, whereas investment upon NFTs, for sure will only raise your investment. NFTs never depreciate so easily, which at the same time depends more on the product on which it's based. Recommended for You

- Cardano (ADA) is expected to reach \$3. - ADA price has risen from its lows of \$1 on June 22 to \$1.41. By the end of July, the Cardano (ADA) is expected to reach \$3. However, there is few positive signals that will push ADA forward. July is off to a promising beginning, not only for Cardano but also for Bitcoin, Ethereum, and other altcoins. Notably, the ADA networks develops the platform for increased investor confidence by offering continuous upgrades focused on strengthening the blockchain. Moreover, the Cardano price has risen from its lows of \$1 on June 22 to \$1.41 by today according to CoinMarketCap. More so, the bullish trend on the ADA price approximated a target price of \$2 or higher. More so, the completion of the Goguen stage might be the catalyst for ADA to reach a new all-time high price. However, the highly anticipated fundamental breakthrough could push ADA to reach the next level. Added to this, ADA prices will break out past all-time highs soon. However, it might chart much higher to possible \$3 to \$5 territory if it enters the late stages of the bull market. Furthermore, Cardano is the third-generation blockchain. The Ethereum killer enables it to completely deploy its smart contract capabilities. Moreover, enabling it to host a wide range of decentralized apps (DApps). In addition to the proof-of-stake blockchain, IOHK CEO Charles Hoskinson tweeted on Twitter that there would be hundreds of assets, thousands of DApps, and many fascinating initiatives. The Philippine Stock Exchange (PSE) wants to be the stage for exchanging crypto resources when the country's regulators issue highly anticipated rules overseeing the work, as indicated by a report from CNN Philippines. PSE President and CEO Ramon Monzon disclosed to CNN that the administration previously discussed setting up a homegrown crypto exchange fourteen days prior. The PSE has both the exchanging framework and financial backer protection. Monzon said these are essential to exchange digital forms of money. Monzon revealed to CNN that mounting interest in digital currencies implies that the Philippines can't disregard them anymore. The PSE is, as of now, anticipating rules from the Philippine Securities and Exchange Commission (SEC). Which actually started looking for remarks from banks, financial backers, and the general population in 2019 on whether the nation should start assembling a homegrown crypto trade. The country's administration has generally been agreeable toward digital resources. However, the Philippine Central Bank has been straightforward. That it will not be considering the advancement of a central bank digital currency (CBDC) at any point shortly. Although it has authorized over twelve crypto exchanges to work in the country. Volatility is Appealing What's more, numerous Filipinos have gotten intrigued by crypto as an approach to bring in cash in the nation's striving economy. With play-to-secure crypto versatile games like Axie Infinity turning into a mainstream practice to acquire additional pay. Monzon revealed to CNN that he accepts the unpredictability of digital currencies as the thing that makes them appealing. This is why exchanging ought to occur under the watch of the PSE. Monzon said, "Moment wealth could be moment neediness as well" Recommended for You

In Avalanche (AVAX) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about AVAX to analyze the future movement of the cryptocurrency. Avalanche is an umbrella project for launching decentralized finance (DeFi) applications, financial assets, trading, and other services. Moreover, the project aims to be a global assets exchange, enabling anyone to launch or trade any form of asset and control it in a decentralized way utilizing smart contracts and other cutting-edge technologies. Developers at Ava Labs claim that Avalanche is the first smart contracts platform to offer transaction finalization in the way one second as standard. Moreover, the Avalanche launched its mainnet in September 2020. The platform's native token, AVAX, performs different tasks within Avalanche and also works as a rewards and payment system for users. Avalanche (AVAX) Current Market Status According to CoinMarketCap, the AVAX price is trading at \$11.83 with a 24-hour trading volume of \$65,423,598, at the time of writing. However, AVAX has decreased by 3.94% in the last 24 hours. In addition, AVAX has a circulating supply of 172,418,164.00 AVAX. Currently, AVAX trades in Binance, OKEx, Huobi Global, and many more. Avalanche (AVAX) Technical Analysis 2021 Avalanche (AVAX) holds the 47th position on CoinMarketCap right now. The recent development and upgrades might push AVAX to reach new heights. Now, let's deep dive into the AVAX technical analysis 2021. The weekly time frame chart of Avalanche (AVAX) is shown below. Wyckoff creates a price action market theory that is still widely utilized in trading today. According to the Wyckoff method, the price cycle of a traded instrument has four phases: accumulation, markup, distribution, and markdown. Accumulation Phase: The accumulation process is explained on the chart by a ranging price form. Moreover, the bulls receive power gradually, however, they are positioned to drive prices higher. More so, the fact that the accumulation phase is associated with the bulls gaining control, the price pattern on the chart is flat. Markup Phase: Bulls get enough traction to push the price above the upper limit of the range. This is a signal that the price has into the second stage and that a bullish price pattern is creating on the chart. Distribution Phase: This is the third stage of the theory. The bears are planning to retake control of the market during this phase. At this point, the price action on the chart is flat, as it was during the Accumulation process. A sustained failure of price to create higher bottoms on the chart is one indication that the market is in the Distribution stage. Lower tops are developed as a result of the price action, indicating that the market is currently in a selloff. Markdown Phase: Following the Distribution phase, the Markdown process performing as a downtrend begins. It implies that the bears have got sufficient financial power to move the market downward. The markdown is confirmed when the price breaks below the lower level of the horizontal distribution channel's flat range on the chart. Moreover, the AVAX is currently in the Accumulation Phase. This indicates that there will be more bearish days ahead. Avalanche (AVAX) RSI The below chart shows the relative strength index (RSI) of AVAX. As shown in the below chart, RSI remains at 42. This shows that AVAX's price is in a neither overbought nor oversold state. However, this shows that traders can trade fearlessly. Avalanche (AVAX) RVOL The below chart shows the Relative Volume of AVAX. RVOL is an indicator that represents to traders how the current trading volume has changed over a period of time compared to the past trading volume. Notably, in the last week of June, it is found that the RVOL of AVAX observed is weaker. Currently, the RVOL of AVAX remains below the cutoff line which represents the weaker participants in the current trend. Avalanche (AVAX) Moving Average AVAX's Moving Average (MA) is shown in the chart below. Moving Average is a part of technical analysis that supports traders to find trends. In the 50 MA (Short-term), the price of the AVAX is in a bearish state, and it has not broken the 200 MA. However, it will completely go to a bearish state. Currently, the price of AVAX is trading below the 200 MA level so we can expect more bullish in the upcoming days. Avalanche (AVAX) Price Comparison With Bitcoin The below chart shows the price comparison between AVAX and BTC. From the chart, we can identify the trend of the BTC and AVAX is moving at the same level as the trend. This indicates when the price of BTC increases or decreases, the price of AVAX also increases or decreases respectively. Conclusion With the ongoing developments and upgrades that are taking place within the AVAX platform. Avalanche has a great future ahead in this crypto market. However, AVAX can reach new heights. Bullish AVAX price prediction 2021 is \$15. As mentioned above, it may reach great heights, however reaching \$30, if investors have decided that AVAX is a good investment in 2021. FAQ Avalanche is an umbrella project for launching decentralized finance (DeFi) applications, financial assets, trading, and other services. AVAX is listed on many cryptocurrency exchanges that include Binance, OKEx, Huobi Global, and many more. It is present for trading against crypto-fiat coins, stablecoins, and other cryptocurrencies. With the ongoing

developments and upgrades inside the AVAX platform, it has a high possibility of reaching its ATH soon. Disclaimer: The opinion expressed in this chart solely author's. - The cryptocurrency giant Bitcoin (BTC) could drop to a maxim of \$10,000. - BTC spiked like a rocket and rocks with a 4 years of halvening cycle - BTC may drop down as low as \$7,000 in the capitulation phase. Clem Chamber, CEO of ADVFN which is a global financial investment information firm warned that "The cryptocurrency giant Bitcoin (BTC) could drop as high as \$10,000. The situation will only get worse" Chamber explained in a YouTube interview with Stansberry Research recently. BTC spiked like a rocket and rocks with a 4 years of halvening cycle. However, he mentioned that the price of BTC went up like a rocket, it came down like a rock repeating the pattern. Moreover, this is due to the same audience and the same driver, the same pattern is produced. More so, he also added that BTC may drop down as low as \$7,000 in the capitulation phase. However, it won't stay in this price range for a long time. In addition, he said the crypto winter has reached, but it is a chance to accumulate more bitcoins. Added to this, he noted that Elon Musk's remarks and China's regulations were noisy and convinced the market moves for technical reasons. Prior, the crypto enthusiast Scott Minerd who is the Chief investment officer of Guggenheim Partners, said CNBC in a recent interview with CNBC. Furthermore, he warned Bitcoin's true bottom was \$10,000. Even more, the market will only go back to a bull market after some years of consolidation, he adds. However, advising people who would like to invest in Bitcoin not to rush. BTC's Wyckoff Theory According to CoinGecko, the BTC price is \$35.6k with a 24-hour trading volume of \$24,565,669,099, at the time of writing. Wyckoff developed a price action market theory that is still widely used in trading today. According to the Wyckoff method, the price cycle of a traded instrument has four phases: accumulation, markup, distribution, and markdown. Accumulation Phase: The accumulation process is explained on the chart by a ranging price structure. Bulls are receiving power slowly, and as a result, they are positioned to drive prices higher. Despite the fact that the Accumulation stage is associated with the bulls gaining control, the price action on the chart is flat. Markup Phase: Bulls get enough traction to move the price above the upper limit of the range. This is a signal that the price has entered the second stage and that a bullish price

pattern is developing on the chart. Distribution Phase: This is the third stage of the theory. The bears are intending to retake control of the market during this phase. At this point, the price action on the chart is flat, as it was during the Accumulation process. A sustained failure of price to develop higher bottoms on the chart is one indication that the market is in the Distribution stage. Lower tops are created as a result of the price action, indicating that the market is currently in a selloff. Markdown Phase: Following the Distribution phase, the Markdown process takes place as a downtrend begins. It implies that the bears have got enough financial power to move the market downward. The markdown is confirmed when the price breaks below the lower level of the horizontal distribution channel's flat range on the chart. Moreover, the BTC is currently in the accumulation Phase. This indicates that there will be more bearish days ahead. Recommended for You

Interestingly, Indians were obsessed with buying gold because they believed it was an asset; some own 25,000 tonnes of gold. Within a month, Indian crypto investments have risen from nearly \$923 million to \$6.6 billion, according to Chainalysis. The gold investors were totally captivated by the crypto mantra that Bitcoin (BTC) is equal to gold resulting in conversion from gold to crypto assets. These investments are happening despite the fact that the country has banned cryptocurrency. A 32-year old entrepreneur, Rishi Sood has shared her experience gained from crypto investments. She has invested over a million rupees (\$13,400) in Bitcoin (BTC), Dogecoin (DOGE), and Ether (ETH) since December 2021, some of which she borrowed from her father. Moreover, she appears to be lucky with her timing as she cashed out some of her position when Bitcoin reached \$50,000 in February. Then she re-invested after the recent drop, allowing her to fund the international expansion of her education startup, Study Mate India. Sood stated: "I'd rather invest in cryptocurrency than gold. Crypto is more transparent than gold or property, and the returns are more rapid." Most Investors Tend To Invest in Crypto The 18-35 year age group is driving the increase in the number of crypto investors in India. According to the most recent World Gold Council data, Indian adults under the age of 34 have a lower appetite for gold than older investors. Sandeep Goenka, who co-founded ZebPay and spent several years representing the industry in regulatory discussions with the government, stated: "Because the process is so simple, they find it far easier to invest in cryptocurrency than gold. You go online, you can buy cryptocurrency, and unlike gold, you don't have to verify it." The current regulatory volatility is the primary issue in the Indian market to adopt crypto widely. Besides, the Supreme Court overturned a 2018 rule that prohibited banking institutions from trading in cryptocurrency last year. Significantly, India isn't the only country where regulators are working tirelessly to limit and crackdown on the cryptocurrency market. The UK Financial regulators banned Binance Market Ltd recently from engaging in any regulated business in the United Kingdom. Consequently, the Japanese FSA issued a regulatory warning on Binance for the act of money laundering. Similarly, Binance has ceased operations in Ontario, and the Monetary Authority of Singapore has directed regulators to "Follow up" on Binance. Despite the warnings and issues, many investors are confident and strong in crypto investments. Because of the regulators' hostility, many big investors are not opening up about their investments. However, growth is evident, particularly in trading. According to CoinGecko, daily trading on the top four crypto exchanges increased to \$102M from \$10.6M about a year ago. According to Chainalysis, the country lags far behind China's \$161 billion market. Today, growing adoption is another major indicator of the government's willingness to take a small risk in the consumer finance industry, which has been plagued by incidents of regulatory failure. Recommended for You - Indians Go Maniacs on Cryptocurrency & BTC With \$40 Billion on It - Cryptocurrency Becomes "The Digital Gold", Present and Towards Future - Steve Wozniak, Co-Founder of Apple Alludes Bitcoin as the Digital Gold - Indian Crypto Investment Raised Nearly 19,900% Over the Past Year - Aave Plans To Build "Twitter on Ethereum"

- CNBC conducted a Quarterly Survey from June 23rd to 30th. - 44% of experts and investors predict Bitcoin falls below \$30K in 2021. - Remaining expect BTC to spring back to its former glory. CNBC conducted a survey with 100 chief investment officers, equity strategists, portfolio managers, and CNBC contributors. The survey question was, "Where will Bitcoin be by the end of the year?" Answering to the question, out of 100%, 44% of the investors expect bitcoin to fall below \$30,00 at the year end. This was the highest rating percent among the other options. Moreover, the survey report shows 25% have respondents that bitcoin will surge up to \$40,000. The other 25% polled that BTC will shoot-up to \$50,000 in the market. The last 6% remained strong stating bitcoin will reach its former price of \$60,000. This least voting percent reminds about bitcoin reaching an all-time high over \$60,000 in April. 44% of respondents in #CNBCQuarterlySurvey say #bitcoin will be below \$30,000 at the end of the year. " Squawk Box (@SquawkCNBC) July 2, 2021 Where do you stand? #btc @andrewsorkin @BeckyQuick @JoeSquawk discuss: pic.twitter.com/zpPHtSaewK Further, in the digital world cryptocurrency plays a vital role in the market. The predictions and analysis of the assets can be shared only by playing with cryptos. Bitcoin is the top cryptocurrency still serving as king with true value against all hurdles and speculations. In addition, there are crypto players who invest in bitcoin even at harder times with huge price falls. Notably, many businesses have adopted Bitcoin and other cryptocurrencies as their means of usage. Bitcoin's Downward Trend Significantly, Bitcoin price continues to remain in a range of \$30,000 to \$35,000 in recent times. In the last week of June, BTC bottomed out to \$29,000 which made the investors feel low. Also, cryptocurrency crackdown in China is the main reason for the price drop. Along with banning cryptocurrency mining and bitcoin payments in Indonesia, Iran, UK, Japan is another cause for the BTC price dip in the market. With all these odds, the current price value of bitcoin is \$35,315.03 ranking the same top position in the crypto market. This energizes the traders to expect bitcoin to spring back to its former glory. However, the survey was conducted on a specific demographic and the result might not be an exact prediction. So the crypto investors must analyze the fluctuations and risks involved with cryptocurrency investing and the market status. Recommended for You

In Golem (GLM) Technical Analysis 2021, we use past statistics, price analysis, RSI, RVOL, and much other information about GLM to analyze the future movement of the cryptocurrency. Golem Network is a decentralized computation network, a new way to allocate excess computing power to those who need it, on-demand. It creates a peer-to-peer network in which users gather together to buy and sell computation equally and break down complex tasks into smaller subtasks in the network. Golem has no central authority, and no user is more or less important than another user.
