

Orderly Network is excited to announce its revolutionary expansion to the Solana Network, after the successful deployment of its omnichain orderbook on the Solana Blockchain, which will enable both EVM and non-EVM users to trade perps from a single, shared orderbook. With a focus on unified liquidity—the cornerstone of Orderly Network’s solution offering to DeFi—the Orderly Unity initiative makes Solana the newest blockchain capable of giving consumers a fully omnichain trading experience. Without ever having to move their assets off of the parent network, Solana-based traders may now deposit their assets on Orderly and trade against counterparties on all other chains supported by Orderly from the same orderbook. The Solana integration is now operational on the testnet, and the mainnet is scheduled to launch in November. Orderly makes a significant advancement in building a DeFi ecosystem where everyone may trade any asset with ease on any platform by integrating Solana. Because of Co-Founder Ran Yi’s specialization in conventional finance, Orderly is able to portray itself as the Chicago Mercantile Exchange’s (CME) counterpart via Orderly Unity. Cross-netting capabilities and improved capital efficiency are achieved by deploying asset vaults on multiple chains, with all trades subsequently performed and settled on the Orderly Chain. The outcome is a hitherto unheard-of inclusive, trader-first strategy for DeFi’s growth, with Orderly taking the lead. With a focus on developing omnichain trading infrastructure that offers builders ready-to-use liquidity, Orderly has already been implemented on major chains like Base, Mantle, Ethereum Mainnet, OP, Polygon, Arbitrum, and now Solana. This completes an impressive market offering that will give traders better access to popular assets like memecoins. By providing a uniform trading infrastructure across all major chains, Orderly gives traders and exchanges access to more than 50 markets. Ran Yi, Orderly Network CoFounder stated: “We’re excited to see Orderly take its place as the first trading solution in DeFi to unite onchain perps trading for both EVM and non-EVM users in the same shared orderbook. This is in-line with our protocol’s charge forward: Orderly Unity. We’re on a mission to unify liquidity across all chains and create an environment of trade without limits.” Arjun Arora, Orderly Network COO stated: “Solana is renowned for its high throughput, low latency, and cost-effective transactions, making it an ideal network for the next phase of Orderly’s omnichain expansion. By deploying our omnichain vault on Solana, we are bringing a seamless perps trading experience to Solana’s vibrant ecosystem of traders, builders, and dApps. This expansion marks the first in the space to offer perpetuals to both EVM and non-EVM users within one unified orderbook, supporting our Orderly Unity mission of a truly omnichain DeFi ecosystem.” Orderly Network has had steady growth in 2024, surpassing their previous milestone of \$83 billion in total trading volume. This is the most recent in a series of beneficial, high profile integrations and initiatives.

As major cryptocurrencies like Bitcoin, Solana, and Dogecoin experience soaring prices, savvy investors are taking their profits and turning their attention to a new opportunity within the SUI ecosystem—Suirm (\$SUIR). With Bitcoin recently surpassing the \$68,000 mark, marking its highest level since late July, and the overall crypto market on an upward trajectory, the search for the next big investment leads to Suirm. Bitcoin’s Recent Surge and Market Dynamics Bitcoin’s recent ascent over \$68,000 has been catalyzed by various factors, including significant inflows into Bitcoin ETFs and a rise in market dominance to 58.91%—a peak last observed in April 2021. This surge reflects growing investor confidence and a renewed appetite for risk in the crypto markets. However, as the giants of the crypto world continue their upward march, many investors are exploring new avenues to diversify their portfolios and maximize returns. Why Investors Are Shifting to Suirm (\$SUIR) Amidst the market highs, Suirm is emerging as a compelling investment for those looking to diversify into memecoins with substantial growth potential. Unlike traditional investments, Suirm offers a unique mix of engaging community-driven dynamics and innovative financial mechanics, such as its deflationary token model which automatically reduces supply with every transaction, potentially driving up the value per token over time. Suirm: A New Era of SUI Memecoins Suirm is not just another memecoin; it’s a pioneer in the space on the SUI blockchain, offering a unique proposition with its deflationary model and robust community engagement strategies. As Bitcoin and other major cryptocurrencies are reaching new heights, Suirm presents an alternative for investors looking to capitalize on the next wave of crypto innovations. The Attraction of Suirm’s Presale The ongoing Suirm presale is rapidly gaining momentum, with over 19,000 SUI raised in just days. Investors are drawn to its low entry price and high potential for appreciation. As the crypto market thrives, the appeal of getting in early on a project like Suirm—with the prospect of significant returns—becomes increasingly attractive. The presale offers an exclusive opportunity to buy \$SUIR tokens at a substantial discount before its broader market launch, where it is set to debut on major exchanges at a higher valuation. How to Invest in Suirm Investors looking to take advantage of the potential upside in Suirm can participate in the presale by following these steps: Set Up a SUI-Compatible Wallet: Ensure you have a wallet that supports the SUI blockchain, such as SUI Wallet or Suet Wallet. Purchase \$SUI: Acquire \$SUI tokens from major cryptocurrency exchanges to use in the Suirm presale. Participate in the Presale: Visit suirm.com/sale to buy \$SUIR tokens. Follow the straightforward instructions to send your \$SUI and secure your tokens. Receive and Hold Your \$SUIR Tokens: Once the presale concludes, your tokens will be airdropped to your wallet, ready for the upcoming listings and trading. Conclusion: Don’t Miss the Suirm Opportunity As the crypto market continues its bullish run, diversifying into emerging coins like Suirm could not only enhance your portfolio but also position you for exceptional gains. Suirm is poised to become a standout in the meme coin market, potentially delivering impressive returns similar to early investments in now-major coins. Rexas Finance (RXS) is one of the best-rising altcoins in the market, alongside some other supportive recent trends that have provided more investment opportunities in the crypto and one such trader who had predicted it could be one of the tokens that would surpass Solana (SOL) among the rankings. Currently selling at \$ 0.06 in its ongoing presale, Rexas Finance is gaining the interest of the crypto community through its unique Real World Asset (RWA) tokenization offering. Considering that the cryptocurrency industry keeps changing with the entry of new projects, RXS seems to be the token that has a good future and therefore presents a low cost for its investors with a look of upside to a much higher value. Rexas Finance (RXS): A Platform For Real-World Assets Tokenization Rexas Finance Real World Asset (RWA) tokenization is one of the most attractive features of the company. This technology selects and stores the digitalization of static and dynamic assets in the form of property and non property. Old-age assets such as real estate, artworks, or even commodities can be decomposed into thinner pieces and offered to a larger marketer. With business expansion, Rexas Finance is helping to eliminate the barriers blocking asset ownership and generate liquidity in less liquid markets. The tokenization of RWA is picking up speed late because investors are factoring toward innovative ideas to buoy their portfolios. The use of restricting technologies enhances the safety and efficiency of asset exchange, which addresses various shortcomings of conventional asset management. Rexas Finance seeks to rectify the long-term problem of high barriers to the creation and trading of tokenized assets for experienced crypto traders and beginners. Why Rexas Finance (RXS) Could Rival Solana (SOL) Solana has climbed the ladder of being one of the fastest and most scalable blockchain platforms, having superb transaction speed and a wide range of decentralized applications (dApps) on deck. Nevertheless, the real estate asset token strategy by Rexas Finance is one of the many use cases that are totally different but will probably go a long way in attracting a lot of investors as well. The Rexas Finance platform allows users to create tokens from various assets and conduct trading in a blockchain. This transaction comes with advantages such as a high level of liquidity, large geographic markets, and low costs of transactions. There is also growing interest in such assets given the growth in demand for the Rexas Finance system solutions. Furthermore, the features of the system, such as democracy and integrity guaranteed by the technology of blockchain, are likely to win more individual and institutional investors. Although Solana has done quite well with decentralized apps, Rexas Finance aims to fill the gap in the tokenized assets sector, providing an alternate solution that meets other market demands. With the growing adoption of assets over the blockchain network, it is quite feasible to envisage Rexas Finance as one of the large players in that space, making it a threat to Solana. Growing Investor Enthusiasm and Presale Success Rexas Finance has already showcased the appeal of its platform by the success of the presale. Stage 4 is in progress, which is already reflecting the rise in the token price, which was the case in the earlier stages due to the favourable sentiments from the investors. The presale has brought in \$2,891,581, while 67,359,673 tokens have been sold. With the rising demand for these tokenized assets, it appears investors are making purchases of RXS in anticipation of high returns at high prices. It is apparent that the presale now fixes the price of \$0.06, which is the last price discount for the ripe investors of the tokens. Due to the next presale stage promising to up the price to \$0.07, many more people are anticipated to join in because of enhanced investor enthusiasm. Rexas Finance is equally encouraging such participation by conducting the Rexas Millionaire Giveaway, which is aimed at 20 participants and offers each \$50,000, which heats the project. Rexas Finance RWA Tokenization Adverse Activities and Future Outlook The supporters of Rexas Finance are also stepping up as it moves to be a leader in the Real World Asset tokenization field. Rexas Finance attracts attention due to growing interest from investors and its unique strategy, and it will be able to join such giants as Solana, opening new horizons for blockchain development. In the cryptocurrency market today, the RXS token is among the most promising opportunities for investment due to the prospects of the growth of its prices as the presale moves on and the development of the platform goes on. For those investors who want to add funds to a high-potential altcoin, Rexas Finance comes as a good bet. As we peer into the future and look at the blockchain industry, projects such as Rexas Finance, which is geared towards real utility, are bound to prosper. Currently going for \$0.06 below \$0.10 during the presale phase, RXS is quite a rare investment opportunity to own a project that has the potential to change the future of ownership and management of assets in the digital world. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/RexasIM> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. London, United Kingdom, October 16th, 2024, Chainwire Neon EVM Pioneers the Network Extension Category on Solana, Ushering in a New Era of Unified Growth. Neon EVM, a leading Ethereum Virtual Machine (EVM) on Solana, formally adopts Solana Network Extension as a product category, perfectly capturing the essence of this new category. Network Extensions fill a critical gap in the Solana ecosystem. By offering a formal category for projects that natively extend Solana’s functionalities, Neon EVM provides clarity to developers, investors, and users alike. Traditionally, the positioning resulted from the inherent nature of Neon EVM and various other projects (MagicBlock, MetaPlex, etc.) since these are not typical Layer 1 or Layer 2 blockchains. Unlike traditional rollups, L2s, or sidechains, Neon EVM is a program deployed directly on Solana’s blockchain and relies upon its settlement, consensus, and data availability. Today, this makes Neon EVM part of an emerging product category known as Network Extensions—a native, composable expansion of Solana’s core capabilities, stirring up debate. The controversy sparking the Network Extensions category Solana’s Network Extensions sparked controversy in September 2024, with co-founder Anatoly Yakovenko calling Ethereum’s L2 solutions “parasitic.” Yakovenko argued that L2s drain liquidity and fragment the ecosystem, a view echoed by Solana advocates who said L2s create a disjointed user experience. In contrast, Yakovenko claimed Solana’s Network Extensions are “natively composable” and enhance the core chain without pulling liquidity. Supporters emphasized that they are not disguised L2s but maintain a direct connection to Solana’s base layer, enabling seamless composability without Ethereum’s issues. Network Extensions differ fundamentally from L2s. Unlocking Seamless Ethereum Compatibility on Solana: Neon EVM as a Native Network Extension Solana sees its Network Extensions as specialised modules that broaden the L1 blockchain’s core functionalities. These extensions natively integrate with the Solana base layer, allowing new capabilities to be added while preserving the core performance and composability of the underlying L1 chain. Neon EVM epitomises this concept by enabling Ethereum compatibility for dApps while maintaining an execution environment with Solana. Neon isn’t a typical L2—it runs as an EVM (Ethereum Virtual Machine) on Solana’s blockchain, providing compatibility with Ethereum-based applications while remaining fully integrated with Solana’s L1. Unlike Optimistic or ZK Rollups, Neon doesn’t process transactions off-chain, but via Neon Proxy. Instead, it allows developers to deploy Ethereum dApps on Solana, leveraging Solana’s core capabilities and no Rust coding is needed. Neon EVM seamlessly integrates with Solana at the protocol level and maps Ethereum transactions directly into Solana instructions, leveraging Solana’s advanced Sealevel transactional infrastructure. As a result, dApps running on Neon EVM benefit from Solana’s high-throughput environment and unparalleled scalability, enabling parallel processing and efficient execution. This technology positions Neon EVM as a key player in enhancing the accessibility and composability of blockchain applications to the Solana ecosystem. The Solana Foundation team has reiterated Neon EVM’s role as a Network Extension on social media platform X, as seen in the post below, while Anatoly Yakovenko, co-founder of Solana, has clearly stated that Neon EVM is definitely not an L2. Davide Menegaldo, CCO of Neon EVM and highlights the importance of network extensions, stating, “Network Extensions offer a powerful way to enhance and augment the capabilities of blockchain networks like Solana without the downsides typically associated with traditional scalability solutions.” Menegaldo further takes a deep dive and explains the key to determining Network Extensions: “Unified Liquidity: By operating within the same liquidity pool, Network Extensions prevent the liquidity fragmentation that often occurs with Layer 2s or sidechains, ensuring a more unified and efficient ecosystem. -Enhanced User Experience: The user gets to use native wallets and tools with ease, abstracting away all complexities associated with multi-chain and fragmented environments. “Remains native to the host chain, extending core functionality: Network Extensions are deeply integrated into the base layer and do not compete with or directly overlap it. They expand Solana’s capabilities by adding new features, new execution environments, storage or consensus capabilities, NFT functionalities without replacing the core functionalities of the underlying Solana environment. Projects like MagicBlock with Ephemeral rollups, and MarginFi, are creating tools, services, and infrastructure that don’t always fit into well-defined single categories of L1 and L2 terminologies. To fully comply with the definition of Network Extensions, Neon EVM will abstract away the complexities of the EVM layer, ensuring a seamless experience for users. EVM developers can fast-track their deployment on Solana without needing to chart the complexities of Rust. Solana users can interact with these dApps through their preferred wallets, such as Phantom, Backpack, or Solflare, paying gas fees in Solana-native currency. This composable and intuitive user experience ensures that while the technology behind these applications is Ethereum-compatible, the end-user will benefit from a unified user experience “without even noticing the underlying Ethereum-like codebase powering the dApps. Neon EVM drives innovation in Solana, expanding beyond traditional blockchain models Network Extensions in the Solana ecosystem are setting a new precedent for how blockchain infrastructure can evolve beyond the traditional L1 and L2 models. As Solana continues its growth trajectory with Firedancer and

many upcoming updates, Neon EVM is poised to play a pivotal role in accelerating innovation, bringing unparalleled growth opportunities to developers and users alike. The future of blockchain is extensible, and Neon EVM is poised to lead the charge beyond the standard pathways. About Neon EVM Neon EVM is the first of its kindâ€”a Network Extension on Solanaâ€”designed to seamlessly integrate Ethereum Virtual Machine (EVM) compatibility into Solanaâ€™s high-performance ecosystem. By operating natively within Solanaâ€™s base layer, Neon EVM provides Ethereum developers with a fast, high-throughput pathway to deploy their EVM dApps on Solana, without the need for Rust coding, separate blockchain layers, or fragmented liquidity. It enhances the composability of dApps while preserving Solanaâ€™s core advantages. Neon EVM expands Solanaâ€™s capabilities, offering a unified experience where Ethereum-based projects can thrive with the speed and scalability Solana is known for. For more information about Neon EVM, users can visit neonevm.org and connect with the community on Twitter or Discord. Contact Marketing Manager Shailey Singh Neon EVM shailey@neonfoundation.io

- Solana has exhibited an additional 2.78% price increase in the last 24 hours. - The altcoin momentarily hit a high of \$158 since the beginning of October 1. The cryptocurrency market pendulum has prolonged its stay on the bullish end as price actions have continued to remain positive in the past week. Overall crypto market has recorded positive market cap and daily trading volume movements, particularly in the last 24 hours. Similarly, the prominent altcoin Solana has also retained on the bullish end. Meanwhile, other cryptocurrencies such as Bitcoin and Ethereum have shown progressive growth, reaching their previous trading levels. Solana has factored in a price increase of 2.78% in the past day despite strong bull-bear combats at the \$155 level. The altcoin had entered a price slump a few weeks ago and slipped out of investor attention. However, in the past few days, the tokenâ€™s surpassing \$150 for the first time in October and its price actions have garnered the sectorâ€™s spotlight. In the Asian evening hours of October 15, Solana was trading at \$153. As the day progressed, prices moved upward to hit a 16-day high of \$158.41. At the time of writing, SOL was trading at \$156.33 according to CMC data. On the other hand, when inferring the altcoinâ€™s daily price chart it has shown increased volatility. This is further highlighted by the RVI standing at 54.93 as per TradingView data. Solanaâ€™s bulls and bears have staged combats specifically in the past day as prices flitted between \$150 and the aforementioned high of \$158. Is a Solana Price of \$160 on the Horizon? As the bull market continues to set up fort, crypto analysts are expecting higher trading levels for leading cryptocurrencies. On these lines, Solana has begun to show signs of bullish price breakouts in the past few days. The tokenâ€™s short-term 9-day MA has moved closer to the long-term 21-day MA awaiting a bullish crossover. If the current positive momentum sustains then the altcoin bullish crossover can be expected to occur. Additionally, the recent upward movement has resulted in a buying market sentiment as highlighted by the RSI standing at 60.47, traversing from a recent oversold situation. Finally, on the last day, several Solana-based memecoins such as Book of Meme and Myro had shown significant growth on October 15.

As the crypto landscape evolves, questions loom over Solanaâ€™s future in a market once dominated by its meteoric rise. In 2021, SOL captured headlines with astonishing gains, captivating investors and positioning itself as a potential cryptocurrency. However, with increasing competition, network challenges, and shifting investor sentiment, many are starting to wonder if Solana has already peaked. This article explores the reasons why SOL may struggle to replicate its past glory and identifies the altcoin (Rexas Finance) poised to take the spotlight in the ever-changing digital asset arena. Solana (SOL): A Prime Long Gone In 2021, Solana reached an explosive level of growth because it was one of the few blockchains providing high throughput at low costs. However, the relations on the market have changed greatly since then. The Strong contender has very much worked and penetrated the market with high throughput performing blockchains making it especially hard for Solana to shine. On top of that, Solana was also struck with some technical hiccups including network downtimes and performance saturation issues which do force one to question its sustainability and scalability. The regulation of cryptocurrencies is also getting stricter by the dashed as parts have started implementing laws that are considered as roadblocks to the growth of Solana. In addition- The market has shifted its attitude concerning Solana as was the case in 2021 where all attention was to eager investing, into a more subdued approach aimed at investing in potential projects that have merit and are applicable in the real world. Market saturation and competition, technical issues, legal issues, and negative investor sentiment â€” these facts make one think that Solana is already out of its juncture and will not go to the moon 10,000% as it did in 2021. The remains of investors concreted towards this cryptocurrency will have no option but to look into other emerging altcoins that are promising to shoot up and take the position of Solana. Rexas Finance (RXS): Revolutionizing Asset Ownership in the Blockchain Era Rexas Finance seeking to change the world opened up the possibilities of tokenizing the property. It allows them to transform into their own and interchangeable assets, such as real estate, commodities, and even works of art. By owning these high-value cross-border assets in fractionalizations, Rexas hedge fund managers and high-net-worth individuals can spread their investment portfolio. Nowadays rather than being confined to a particular asset, users can possess diversities of assets, for instance, real estate properties and paintings, in such a way as relieving their investment in the digital economy. Welcome to Rexas Finance which will help you to emerge into the new age of possessions, where every asset will be given in parts and become an opportunity for many. Rexas Finance (RXS): The New Stage Taker Rexas Finance (RXS) is poised to replace Solana as the next big player in the cryptocurrency market due to its innovative approach to simplifying investment in real-world assets (RWA). By allowing users to invest in expensive assets fractionally, Rexas Finance eliminates the need for tedious paperwork and overcomes geographical limitations, making it as easy as purchasing cryptocurrency. The token is currently experiencing a significant surge, rocketing past the third phase of its presale with a 69.2% rise from stage one to stage three. Predictions indicate that RXS will achieve a 300% increase, reaching \$0.20, and an astounding 7400% increase by early 2025. As more people become aware of the benefits of owning fractional coins, the demand for RXS is expected to grow exponentially. Early investors are particularly well-positioned to benefit from additional lowering rates before the tokenâ€™s price becomes progressive, making Rexas Finance a compelling contender to take over Solanaâ€™s spotlight. Rexas Finance (RXS): Ensuring Long-Term Glory Rexas Finance is making waves to retain its glory as it has already raised over \$2.7 million in its just concluded stage 3 presale, with tokens at \$0.050. Stage 4 opens with each token at \$0.06. The tokenâ€™s innovative offerings, such as the Quickmint Bot and GenAI platforms, are driving significant adoption of token and NFT AI technology, attracting a large and growing clientele. Positioned to tap into burgeoning markets like DeFi and NFTs, Rexas Finance provides a robust ecosystem featuring the Rexas Launchpad for funding rounds and the Rexas AI Shield for smart contract security. By simplifying investment in real-world assets (RWA) to the ease of cryptocurrency purchasing, Rexas Finance allows users to invest in expensive assets fractionally, eliminating the need for cumbersome paperwork and overcoming geographical limitations. The token is currently surging past the third phase of its presale, with a 69.2% rise from stage one to stage three, and is predicted to achieve a 300% increase, reaching \$0.20, with an astounding 7400% increase by early 2025. The platform also raised a promotional giveaway of \$1 million for its community gifting 20 lucky participants the sum of \$50,000. This is done to enhance community participation on the platform during its presale session. Conclusion Solana grapples with its challenges and fading investor enthusiasm, Rexas Finance emerges as a formidable contender ready to seize the spotlight. By revolutionizing asset ownership through fractional tokenization, Rexas not only simplifies access to high-value investments but also addresses the demand for real-world asset integration in the crypto space. With a robust presale performance and innovative technology, Rexas Finance is positioned for exponential growth, potentially outperforming past giants like Solana. As the market continues to evolve, Rexas Finance stands out as a beacon for investors seeking promising opportunities in the new era of blockchain, marking a significant shift in the cryptocurrency narrative. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - SOL surpasses \$150 for the first time since October 1. - Open interest in the derivatives market mirrors the price uptrend. - Technical indicators suggest a potential 32% surge to \$201.55. Solana (SOL) has demonstrated remarkable resilience, breaching the \$150 threshold for the first time since October 1, signaling a potential reversal of its recent downtrend. This resurgence comes after a tumultuous start to the month, where initial optimism gave way to a sharp decline to \$136.90 just days after reaching \$160. The current price action, with SOL trading at \$155, suggests that the altcoin may be breaking free from the descending trendline that has constrained its movement since late July. This latest attempt marks the third try at overcoming key resistance levels, following failed breakthroughs at \$185 in late July and \$160 in late September. Open Interest complementâ€™s Solanaâ€™s price recovery Complementing SOLâ€™s price recovery, the Open Interest (OI) in the derivatives market has mirrored the altcoinâ€™s upward trajectory. OI, a crucial indicator of speculative activity, has returned to its October 1 peak of \$1.89 billion, coinciding with SOLâ€™s initial rally. This alignment of price action and rising OI typically signals increased market participation and growing confidence in a sustained bullish trend. Technical analysis of the daily chart reveals SOL approaching the \$159.42 resistance level. The Relative Strength Index (RSI) shows an upward trend, crossing above the 50.00 signal line, indicating bullish momentum. Additionally, the Supertrend indicator has flashed a buy signal, with its green area positioned below Solanaâ€™s price, further supporting the bullish narrative. Should these positive indicators hold, Solana could potentially surge by 32%, targeting the \$201.55 level. However, market participants must remain cognizant of potential hurdles.

Pepe (PEPE) and Dogecoin (DOGE) go head-to-head for meme coin supremacy, and all signs point to a Pepe (PEPE) victory. Meanwhile, WallitIQ (WLTIQ), a new Ethereum token, will soon knock Solana (SOL) off its fifth position in the crypto top 10. Aside from surpassing Solana (SOL), the AI altcoin is set to reward its early adopters with over 405% ROI in a few weeks if they buy its ongoing presale at \$0.017. WallitIQ (WLTIQ) Championing The Crypto-AI Revolution And The Evolution Of Crypto Wallets WallitIQ (WLTIQ) represents the evolution of DeFi wallets. The advanced crypto wallet improves on existing DeFi wallets by providing innovative solutions to the main problems plaguing these wallets. Security breaches, bad user experience, and usersâ€™ gaps in DeFi knowledge produce unique challenges with traditional crypto wallets. WallitIQ (WLTIQ) incorporates several artificial intelligence capabilities in its crypto wallet to solve these problems intuitively. WallitIQ (WLTIQ) uses AI-driven threat detection algorithms to monitor usersâ€™ wallet activity continuously. When the AI algorithm flags unusual activity, such as suspicious login attempts and unexpected transaction patterns, it sounds like instant alerts for the user to take necessary action. This proactive approach to security helps safeguard usersâ€™ assets and protect them from unauthorized and fraudulent access to their portfolios. WallitIQ (WLTIQ) features a flexible, user-friendly interface so users can easily find their way around the sleek and intuitive dashboard and windows. Having everything they need at their fingertips, be it charts, price updates, or portfolio summaries, helps users reduce the friction involved in managing their crypto assets, improving their user experience. WallitIQâ€™s (WLTIQ) AI-driven Smart Suggestions and Predictive Analytics use artificial intelligence and machine learning algorithms to boost usersâ€™ crypto experience with real-time suggestions based on market conditions and usersâ€™ behavioral analysis. The AI also analyzes historical data, trading volumes, and market sentiments to deliver actionable market trends and price movement forecasts so crypto traders can make better-informed decisions. WallitIQâ€™s (WLTIQ) AI-driven Smart Suggestions also help bridge the gap in DeFi knowledge that many crypto enthusiasts possess. By suggesting profitable opportunities like staking, yield farming, and liquidity pools, WallitIQ (WLTIQ) makes it easier for these novice traders to take full advantage of DeFi without getting bogged down in all the technical details. The Battle For Meme Coin And Altcoin Supremacy; Pepe (PEPE) Vs. Dogecoin (DOGE), WallitIQ (WLTIQ) Vs. Solana (SOL) Pepe (PEPE) has enjoyed a price resurgence along with Bitcoin (BTC) and the rest of the crypto market. With market conditions slowing down, the meme coin has dropped briefly to \$0.059205. Nevertheless, Pepe (PEPE) has gained more than fellow meme coin Dogecoin (DOGE). Dogecoin (DOGE) also gained in the brief crypto market resurgence. However, Dogecoin (DOGE) has only increased by about 4% from last month, a meager increase compared to Pepeâ€™s (PEPE) 20%. These conditions have the crypto community and meme coin traders that Pepe (PEPE) will overtake Dogecoin (DOGE) as the meme coin leader. Meanwhile, WallitIQ (WLTIQ) and Solana (SOL) battle in the alt-crypto scene. Solana (SOL) is losing its fifth place in the crypto top 10 as the crypto drops further below \$140. Solanaâ€™s (SOL) meager gains over the last month (only 4%) also weakened its spot on the crypto top 10. Meanwhile, the WallitIQ (WLTIQ) native tokenâ€™s expected 405% surge has convinced the crypto community that it will surpass Solana (SOL) soon. Buy The WallitIQ (WLTIQ) Presale To Position For Massive Gains Soon Leading analysts believe WallitIQ (WLTIQ) will trump the Pepe (PEPE) and Dogecoin (DOGE) meme coins and Solana (SOL) as early adopters race to invest in its token presale. The promise of huge gains and ROI and the tokenâ€™s extensive utility in the WallitIQ (WLTIQ) ecosystem uniquely position it for incredible success. Interested investors can buy the token presale now at \$0.017, the lowest it will ever be. Join the WallitIQ (WLTIQ) presale and community: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research. TheNewsCrypto is not accountable for any damage or loss related to content, products, or services stated in this press release.

- Solana surged 4%, showing signs of recovery and positive market sentiment. - Solana flipped 200 EMA, signaling a potential breakout from consolidation. Solana (SOL), one of the leading altcoins, gained the attention of traders today by surging 4% in the past 24 hours, hitting a one-week high of \$154. After a bearish week that saw its price drop below \$135, SOL has shown signs of recovery over the past two days, recording a 4.2% increase over the last seven days. At the time of writing, SOL is trading at \$152.91, with a 12% increase in trading volume, up 83% within the same period. Notably, 83% of the community remains bullish on Solanaâ€™s future. Solanaâ€™s price has been stuck between \$140 and \$160, as the altcoin failed to reclaim higher levels since hitting a local high of \$193. The current price action suggests that bears are keeping SOL in a consolidation range, preventing a breakout above \$160. However, technical indicators are turning positive. Analyst Coin Signals noted that Solana has flipped the 200 EMA on both daily and 4-hour timeframes, signaling a potential breakout from a symmetrical triangle. This could indicate the start of an uptrend, with SOL positioned for further gains. Meanwhile, Solanaâ€™s long/short ratio of 1.2 on the 4-hour chart indicates that traders are increasingly taking long positions, betting on price increases. This sentiment is supported by a positive DxDx Exchange Funding Rate and rising open interest, which has increased from \$649 million to \$712 million over the past week. What SOL Traders Should Look Up to? The technical indicators for

Solana suggest a bullish sentiment. The 9-day EMA stands at \$146, while the Relative Strength Index (RSI) is at 59, indicating it is nearing an overbought condition. Solana’s next key support level is around \$138, a critical threshold to monitor if selling pressure increases. Should the market rebound later this month, SOL could regain momentum as positive global liquidity trends continue to support major cryptocurrencies, including Solana.

- If the price manages to go past \$150 level, then it will likely test \$160 resistance level. - At the time of writing, SOL is trading at \$145.36, down 1.02% in the last 24 hours. Solana (SOL) has been drawing a lot of attention recently thanks to an upswing in positive social media sentiment, and the cryptocurrency industry as a whole is showing signs of rebound. Unverified reports that IT giant Apple is considering launching a project on the Solana Blockchain have piqued the interest of traders. There were five favorable remarks on Solana for every negative comment on social media on October 11, according to Santiment statistics. In the previous three weeks, this degree of positivity has not been seen before. Breakout in Either Direction Likely The fact that the price of Solana has stayed over \$140 indicates that it is becoming more resilient. In the next few weeks, traders will be watching to see whether the price of Solana (SOL) continues consolidation or if it regains momentum and heads above the \$150 mark. Not only that, but it has been trading within the same symmetric triangular pattern in the Solana price trend since September. When looking at the altcoin’s price behavior from a long-term perspective, this shows that it is weak. At the time of writing, SOL is trading at \$145.36, down 1.02% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 6.86%. The price found support at \$135 level recently, after facing severe selling pressure. However, bulls quickly drove the price up and it is now consolidating in the \$143-148 range. If the price manages to go past \$150 level, then it will likely climb further to test \$160 resistance level. However, if the bears drive the price below \$143 level, then it will likely test \$135 support level.

If you regret missing out on the massive rallies of Solana (SOL) and Fantom (FTM), there’s no need to worry. A new real-world asset (RWA) token called Rexas Finance (RXS) is quickly gaining momentum, and experts believe it could outperform both SOL and FTM in the coming years. Currently priced below \$0.10 in its presale, Rexas Finance offers an extraordinary opportunity for early investors to achieve significant returns, especially considering its potential for explosive growth in 2025. The Crazy Increase in Prices of SOL and FTM One of the valuable digital currencies Solana (SOL) managed to record one of the strongest and most furious bull runs in recent memory hitting a whopping 2,500% increase from a mere \$8 in 2023 to a high of \$209 in the year 2024. In the same way, a token called Fantom (FTM) recorded a shocking increase of 166.731% from \$0.0021 in 2020 to \$3.54 in 2021. Those rallies made it possible for early investors who bought the coin to reap satisfactory levels of profit. But even so, if you lose those chances, it is not too late to surf on the next vanned cryptocurrency as it has come. Rexas Finance (RXS), a newborn token in the RWA ecosystem, has a roadmap to surpass these historic price bumps as it gains traction in its presale stage. Why Rexas Finance RXS Will Outperform the Competitors by 2025 Rexas Finance is not a simple cryptocurrency for the sake of a coin; it’s a path-breaking initiative that is focused on changing the present scenario and bringing improved tokenization of real-world assets. The token has grown by over 100% across presale stages 1, 2, and 3 and is standing at the pre-sale stage 4 where the RXS token is now valued at \$0.060. As the presale increases, people or investors are likely to see Rexas Finance reaching the \$0.10 mark in the last presale phases and before getting listed at \$0.20. For those who choose to invest now, the amount of growth expected is mind-blowing. In fact, at listing RXS tokens of price \$0.060, investors will enjoy a return of 233.33% of investment made on buying the tokens when it’s listed at \$0.20. That is a decent return that includes no risk but that is just the tip of the iceberg. They argue that the figures could reach \$100 by the beginning of 2025 for investors who participate in early buying in the presale. Rexas Finance (RXS) – A Seamless Story In The Making From the figures of Rexas Finance’s presale, one can confidently trust the project’s success. The project is already in the final closure of the second presale period reaping over \$2,750,000 and eliminating 65,000,000 more RXS tokens showing a very high investor’s appetency. Investors have made 2x gains already in the completed stages. Every new presale stage increases the expectations surrounding Rexas Finance more and more. What makes Rexas Finance unique is that it is not simply another speculative token in circulation. The platform uses the ever-best invention of accelerating the process of liquefying assets like real estate, commodities, and other collectibles using blockchain technology. Bringing both blockchain and real-world assets together makes Rexas Finance one of the most powerful crypto which will in turn change the norm of finance and provide new avenues to invest. \$1,000,000 Giveaway: An Added Bonus for Early Investors As a pre-initial coin offering strategy to boost interest from investors, Rexas Finance is allocating an amount of \$1 Million in the form of a draw. The draw will take place when the sale of the Rexas Finance will commence. 20 winners will be rewarded with \$50,000 each. Simply investing at least \$100 at the presale and some tasks like submitting your ERC-20 wallet qualifies you to be among them. You may also enhance your opportunity to win by referring friends to the project. Conclusion: Don’t Miss Out on Rexas Finance (RXS) If you were not able to profit from the crazy run-ups in Solana or Fantom, now is your time to take advantage of the next great opportunity. Rexas Finance (RXS), whose price is under \$0.10 at the moment, possesses incredible upside potential that can change lives by the year 2025. With its presale success, innovative RWA tokenization model, and a community-driven \$1,000,000 giveaway, Rexas Finance is the token to watch. Don’t miss the chance to get in early and secure your stake in this groundbreaking project. - Solana sees 12% increase in daily active addresses since October 5. - New user influx drives 15% growth in daily first-time signers. - SOL price could target \$188.52 if network growth continues, or drop to \$110 if demand weakens. Solana, the Layer-1 blockchain platform, has experienced a notable resurgence in user activity over the past week, marking a significant turnaround from its recent slump. This revival is characterized by increases in both daily active addresses and new user onboarding, signaling a potential shift in the network’s trajectory and its native token’s market performance. The blockchain has witnessed a 12% uptick in unique addresses completing at least one transaction since October 5, reversing a prolonged downtrend that had previously pushed Solana’s revenue to multi-month lows. This resurgence comes as a welcome development following September’s reported decline in daily transactions, which had resulted in a 46% plunge in Solana’s revenue. New users flock to the Solana ecosystem Particularly noteworthy is the influx of new users to the Solana ecosystem. Data from Hello Moon reveals a 15% increase in daily unique first-time signers transacting on the network. This growth in new user adoption is a critical indicator of network expansion, potentially driving up SOL’s value, enhancing network liquidity, and fostering increased developer activity. The surge in network demand has already begun to impact Solana’s fee structure and revenue streams. Artemis data shows an 8% increase in total fees and revenue over the past week, reflecting the growing engagement with the platform. Currently trading at \$144, SOL has registered a modest 1% gain over the past week, maintaining its position just above the \$133.58 support level. As network activity continues to gain momentum, there’s potential for further price appreciation. Fibonacci Retracement analysis suggests that sustained network growth could propel SOL towards the \$188.52 mark.

Investors have transformed their meager investments into fortunes in the world of cryptocurrency. However, there are not as many stories as that of a crypto investor who held on to the altcoin Solana (SOL) to the peak price of \$260 in 2021, making a whopping \$70 million in the process. After going through several peaks and a recession with this top-performing crypto asset and showing levels of patience and belief like few have witnessed, this same investor is trending once again – this time mid of pouring \$50,000 into a new and different more promising token: Rexas Finance (RXS). The Solana Success Story Solana’s emergence as a dominant player over the past couple of years is one of the most interesting stories in the history of crypto. Having started operations in 2020, the platform became known rather quickly with regards to bringing very rapid transactions and very low fees, which prompted interest from both dApp developers and DeFi projects. In January 2021, Solana continued to go for \$2.50, and several investors at this stage of its history saw its utility yet to become what came after. During the same year, Solana rose in price to an unprecedented value of \$260 making 104x returns for those who made early investments. The bullish trend saw the investors make reasonable gains with even one crypto investor making close to \$70 million in Solana and still holding through the downfalls. This investor’s journey became fabled, becoming a lesson about the possibilities of time and a strong belief in a given cryptocurrency initiative. Rexas Finance (RXS): The New Bet At the moment, this same investor has the ambition to repeat this record, and Rexas Finance (RXS) is at the top of their new investment concept. Rexas Finance is a project centered around real-world asset (RWA) tokenization that allows investors to sell fractional ownership in physical assets such as real estate, commodities, and fine art via the blockchain. This novel strategy provides RXS with much-needed fundamental support, making it different from most speculating altcoins which lack utility soon. Rexas Finance has come to Stage 4 in its presale after a blistering sell-out of Stage 3. The ability or need for purchases was met mainly by the joined interest from retail and institutional investors on the presale with the RXS token valued at \$0.06 during this stage. The fact that the crypto investor has invested \$50,000 in Rexas Finance is a strong vote of confidence in the project’s prospects. This particular investor, who managed to hold onto Solana during the massive run, clearly understands how to pick high-growth potential projects and feels that Rexas Finance will be able to provide even higher returns. Why Rexas Finance Has Investors Excited Rexas Finance has been gaining a lot of traction among both seasoned and fresh investors thanks to a few critical factors. Its emphasis on real estate asset tokenization provides a realistic and beneficial scenario where people can participate in the ownership of pieces of real assets, hence making the investment realm a hybrid of virtual and real assets. The success of the presale with Stage 3 sold out quickly and Stage 4 commenced with 45,000,000 RXS tokens on offer at \$0.06. There is much potential to gain in investing at such a low price. In addition, a \$50,000 investment by the renowned crypto investor has also helped enhance investors’ confidence as whales are considered to be early investors in potential projects. With the cryptocurrency bull run of 2025 almost upon us, Rexas Finance is in the best position to exploit the current trends as people will be looking to invest more in real-world asset tokenization. It’s a timely and opportunistic investment. Rexas Finance has proven to be not only proficient in presale but has also come up with an interesting \$1 million giveaway to mobilize the forces of its community. In the context of the giveaway, 20 winners have an opportunity to obtain RXS tokens estimated at \$50,000 each, which makes it very tempting for early adopters to invest. Visit the Rexas Finance website today to learn more. Conclusion The crypto investor who made \$70 million by buying Solana at \$2.50 and selling it for \$260, is today placing his bets on Rexas Finance (RXS), putting down on the project the amount of \$50,000. Due to its emphasis on tokenizing real assets, considerable success during the presale, and increasing trust of investors, Rexas Finance (RXS) is positioning itself as a top performer in growth in the years to follow. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana trading in tight range between \$130 and \$140 - Technical analysis suggests potential breakout, with targets at \$150.54 or \$136. - Market sentiment and political factors could influence SOL’s future price action. Solana (SOL) finds itself at a critical juncture as it navigates a tight consolidation range, prompting market analyst Edward to anticipate a sudden movement. The cryptocurrency’s price has been oscillating between \$143.33 and \$144.70, creating a defined trading range that has caught the attention of traders and investors alike. Edward’s TradingView analysis highlights SOL’s current hesitation, with prices consistently testing both support and resistance levels. This consolidation pattern has set the stage for a potential breakout, which could determine Solana’s next significant trend. Solana price plunges to \$136 Two primary scenarios emerge from this technical setup. A bullish breakout above \$144.70 could propel SOL towards the next resistance level at \$150.54. Conversely, a bearish move below \$143.33 might trigger a pullback to \$137.25, establishing a crucial support level for traders to monitor. Beyond technical factors, broader market events and political developments could significantly influence Solana’s price trajectory. Market analyst Geoff Kendrick from Standard Chartered has made a bold prediction, suggesting that SOL could surge by up to 500% if Donald Trump wins the 2024 U.S. presidential election. This projection is based on expectations of a more favorable regulatory environment for cryptocurrencies under a Trump administration. Adding another layer of complexity to Solana’s market dynamics is the current bearish sentiment observed across the cryptocurrency landscape. Data from Santiment reveals that SOL, along with other top digital assets, has been subject to negative crowd narratives. The price of Solana has now plunged alongside the overall bearish market condition.

Solana’s smart money investors, known for their insightful early-stage market analysis have identified a potential XRP killer, ETFSwap (ETFS), which is poised to achieve a 1500x surge in value by November 2024. Their belief in this emerging XRP killer’s potential is fueled by its unique approach that bridges the gap between traditional and decentralized finance, bringing in an innovative, safe and transparent way for investors to trade tokenized ETFs. Why Solana Smart Money Investors Are Betting Heavily On ETFSwap (ETFS) ETFSwap (ETFS) is an Ethereum-based revolutionary crypto project that has captured the attention of Solana smart money investors and is hailed to be an XRP killer that will challenge the dominance of XRP in the crypto market. This decentralized blockchain platform offers investors the best of both worlds: the security of traditional finance combined with the transparency and accessibility of decentralized finance (DeFi). To enhance security, it uses advanced blockchain technology and is audited by Cyberscope, a key player in the cyber security and blockchain audit industry. Also, the ETFSwap (ETFS) team has concluded their KYC verification process conducted by a reliable smart contracts security audit firm called SolidProof. Solana smart money as well as other investors can trade and swap various tokenized ETFs confidently as all listed ETFs on the platform are backed with real-world assets and secured by Mica-compliant regulated investment banks. ETFSwap (ETFS): The XRP Killer Aiming For A 1500x Surge By November 2024 With the ETFSwap (ETFS) presale still ongoing and its

beta launch around the corner, this XRP killer has seen rapid adoption from Solana smart money and other investors all over the world, positioning it to become a major player in the DeFi space, with the potential to surge up to 1500x by 2025. Solana smart money investors are excited to finally have access to the benefits promised by this XRP killer. These benefits include 24/7 liquidity and market access, permissionless trading, early ETF listings, personalized ETF trading recommendations and governance rights to influence major decisions. In addition, they can bypass extra costs imposed by intermediaries and earn passive income with up to 87% APR yield when they stake their ETFS tokens. This XRP killer also allows investors to increase their trading positions by up to 10x during perpetual trading while enjoying discounted trading fees and reduced transaction fees. To promote fairness and reliability within the ETFSwap (ETFS) ecosystem, the distribution strategy of this XRP killer reserves 40% for public sale and 4% for the community. It is also designed to be a deflationary token so that its price can be maintained and regulated to avoid inflation. The much anticipated ETFSwap (ETFS) beta launch is around the corner and will give Solana smart money and other investors a peek into this XRP killer's innovative features. The first stage of this beta launch will allow users to participate in staking mechanisms, liquidity pools and swapping of all kinds of ETFS in full DeFi mode. Its second strange will follow after, introducing AI-driven features designed to help every investor in their decision-making. With AI tools such as ETF trackers, ETF screeners and ETF filters, these advanced tools will be able to perform predictive analysis and sentiment analysis to provide data-backed recommendations tailored to every investor's needs. Invest In This XRP Killer Now With ETFSwap (ETFS) presale in its final phase, this XRP killer is selling at a discounted rate of \$0.03846. This presale is ongoing and has sold over 500 million tokens with Solana smart money investors betting heavily on its potential to achieve a 260X price surge at the end of the presale and a 1500X increase in value by 2025. This is a final call for all investors to participate in the ETFS presale and be part of this potentially profit-maximizing crypto project. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. In the field of cryptocurrency, competition does not sleep, and investors at all times try to find any credible new projects with the potential for high returns. Rexas Finance (RXS) is one of those names that has been emerging of late gaining investors' attention and outshining other alternatives to Solana as an RWA crypto. Currently valued at \$0.060, Rexas Finance poses as the ideal cheapest cryptocurrency to purchase before the upward trend in the erratic market and the Solana whales have already positioned themselves. The Emergence of Rexas Finance (RXS): The Untapped Investor's Solution The innovation of Rexas Finance easily resonates with the masses in the crypto industry by exploiting the tokenization of real-world assets that have been developed on the platform as it combines the conventional assets of real estate, precious items, or any other goods to the blockchain. This new idea is becoming very popular as every presale phase is completed and early investors are rewarded with the chance to be the first in the line for the development within the crypto space that will be perhaps the next major. However, in the first level presale, investors bought RXS at \$0.030, and now Rexas Finance has grown tremendously already seated at a price level of \$0.060 in stage 4. For early investors, this translates to a 230% growth which is impressive given that the project is still trying to presale itself. However, the biggest wins are yet to come because it is anticipated that Rexas Finance will be listed at \$0.20 in early 2025. An Explanation Of Why Solana Whales Are Shifting To Rexas Finance For the unacquainted, whales are those persons and institutions who invest massive amounts of a particular asset. Which way the smart money goes is often signalled by the actions taken by the whales. The greatest attraction that these whales have for Rexas Finance is not only the price but also the growth prospects of this project. It is even projected by the market analysts that upon listing, Rexas Finance could break out by 6,700% with trading standing at around \$13.4 a piece of the RXS token two weeks after its official listing. But for those who will hold thousands of RXS tokens, it may very well be very lucrative, and this window of opportunity to enter at these low levels won't last for long. Rexas Finance (RXS): The Cheapest Crypto Asset To Buy Before The Exploitation Of The Market In preparation for this next bull run that the crypto market is anticipating, Rexas Finance is positioning itself as a go-to option for people who want to make more profit. The unique value proposition of real estate focused on this project sets it apart from other projects in the market, and its presale stages enable investors to be among the first to invest before a price increase. Rexas Finance is currently priced at \$0.060, which is one of the cheapest prices to buy into a project that may yield enormous rewards for investors. Quite hypothetically, let's say that RXS makes an impressive jump to \$13.4 for a token post-listing, then investors that come in now could enjoy 22,300% profits on their investment. This is a game-changing potential, and it is clear why whales are relocating their capital from established projects such as Solana towards Rexas Finance. Conclusion Rexas Finance is emerging as the best cheap cryptocurrency to buy at this stage before the market takes off. As of this writing the asset is selling at \$0.060 with projections of a 6,700% breakout, the project has a life-altering return in waiting for first-time investors. It is clear as Solana whales are making their move to Rexas, this RWA crypto is not some undiscovered diamond – it is already powerful and is going to be even more powerful. For investors wanting to place themselves ahead of the next bull run, Rexas Finance comes with an opportunity like no other. Time is of the essence, and due to the exponential growth that has the potential to occur, this is one of the impressive projects to follow in the crypto change. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- SUI ecosystem market cap reaches \$8.54 billion, with SUI at \$5.38 billion. - SUI ranks third in altcoin netflow, behind Ethereum and Solana. - The coin's dominance surges 270% to 0.27%, amid potential correction warnings. The SUI ecosystem has emerged as a focal point for investor attention this October, setting multiple records and outperforming many of its altcoin peers. While numerous cryptocurrencies struggle to maintain recovery momentum, SUI had achieved new all-time high of \$2.16, showcasing its robust market performance. CoinMarketCap data reveals that the SUI ecosystem's total market capitalization has surged to an impressive \$8.54 billion. SUI token itself accounts for \$5.3 billion of this valuation, while First Digital USD (FDUSD) contributes nearly \$3 billion. Daily trading volume across the ecosystem has exceeded \$6 billion, primarily driven by SUI and FDUSD activities. SUI ecosystem meme coins surge The ecosystem's growth extends beyond its primary assets, with meme coins on SUI experiencing a remarkable 170% increase in market cap since the beginning of October, now totaling over \$296 million. This trend mirrors the pattern seen in the Solana ecosystem's rise to popularity last year, as SUI holders reinvest in various protocols within the ecosystem. Artemis data further underscores SUI's growing appeal, ranking it third in altcoin netflow over the past month, trailing only Ethereum and Solana. Cross-ecosystem bridge transactions reveal that SUI accounts for over 9% of capital flow from Ethereum, highlighting the network's increasing activity and user adoption. SUI's market dominance (SUI.D) has seen a meteoric rise, surging 270% in the past two months to reach a new high of 0.27%. This increase in market share comes at a time when most other altcoins are experiencing declines, and Bitcoin dominance remains above 56%.

- Solana trading volume saw a 27% spike in the past 24H. - Potential bullish breakout could push Solana towards \$162 or beyond. Solana (SOL) experienced a 3.29% drop in the last 24 hours, trading at \$143.12 after reaching a six-day high of \$153 just yesterday. Despite this price drop, its trading volume surged by 28% within the same period. Over the past week, SOL has fallen by 9%, reflecting the broader market downturn. The global crypto market cap also saw a 2% dip, though trading volumes jumped 45%. Bitcoin and Ethereum followed a similar path, dropping by 3% and 8%, respectively, over the last seven days. Yet, amidst these declines, recent data from The Block revealed that Solana accounted for over 87% of all new tokens created in 2024. Solana launched 108,290 tokens from Sept. 24-30, out of a total of 129,080 across various chains. Much of this growth is attributed to the booming memecoin market, supported by simplified token creation platforms like pump.fun. Moreover, Anatoly Yakovenko, Solana's co-founder, acknowledged the evolving memecoin landscape, noting that memecoins have absorbed the energy of previous cycles like DeFi summer. This surge, he suggested, forces products to rely purely on value, which could benefit the industry. SOL Set For a Bullish Breakout? Despite the recent setbacks, analysts see potential for a bullish trend reversal. Crypto analysts point out that SOL is currently in a consolidation phase, hinting at a bullish pennant pattern. If a breakout occurs, the token could rise towards \$162 or even \$187. However, technical indicators like the MACD and RSI show a bearish trend, suggesting that SOL could first dip to \$127 before a potential recovery. The daily RSI is at 53, indicating that it is in a neutral situation. With the fear and greed index sitting at 54%, the market remains in a neutral state, leaving Solana's price action poised for movement in either direction. Highlighted News Of The Day Ethereum (ETH) Struggles to Break \$2.5K Amid Bearish Dominance

- Solana price recovers, outperforming Ethereum in the past 30 days. - SOL forms symmetric triangle pattern, trading between \$127 and \$155. - Technical indicators show mixed signals, with potential for both bullish and bearish scenarios. Solana (SOL) has demonstrated remarkable resilience in the face of recent market turbulence, staging a significant recovery following a sharp bearish pullback. The fifth-largest cryptocurrency by market capitalization has outpaced Ethereum's performance by approximately 8.5% over the past month, adding an impressive 16% to its valuation. This surge in value highlights the growing adoption and interest in Solana within the cryptocurrency ecosystem. Despite this positive momentum, SOL faces a formidable barrier in the form of resistance around the \$155 mark. This price point has repeatedly thwarted attempts at further upward movement, leaving market participants to speculate whether upcoming bullish catalysts or increased network activity could propel Solana beyond this crucial threshold. Solana surges modestly in 24 hours The past 24 hours have seen SOL record a modest 4% gain, accompanied by a trading volume of \$1.925 billion. However, zooming out to a weekly timeframe reveals a 5.17% decline, underscoring the token's recent volatility. Since September, Solana has been confined within a symmetric triangle pattern, a formation that often precedes significant price movements in either direction. Technical indicators present a mixed picture for SOL's near-term prospects. The Moving Average Convergence Divergence (MACD) histogram shows a consistent decline in its red component, with its averages hinting at a potential bullish convergence on the daily timeframe. Conversely, the Simple Moving Average (SMA) suggests an impending bearish crossover, adding an element of uncertainty to Solana's price outlook. Looking ahead, Solana's price trajectory hinges on its ability to overcome key resistance levels. A bullish scenario could see SOL retesting the \$155 resistance, with sustained momentum potentially driving the price towards the \$180 mark in the coming weeks.

October historically brings excitement in crypto, often with upward price movements. So, what crypto might be worth investing in now? Three contenders come to mind. Solana, despite notable progress, faces concerns about centralization, highlighted by recent whistleblower comments. Meanwhile, Uniswap's new wallet extension streamlines DeFi, enabling easier asset management across blockchains. However, BlockDAG is outpacing both. It recently raised \$10 million in just 72 hours, pushing its presale total to over \$90 million. Early holders have seen a remarkable ROI of 1,960%, sparking questions about the long-term potential of such rapid growth. Solana Faces Centralization Concerns: Potential Price Impact? Solana, currently priced around \$141.64, is primed for a breakout, possibly up to \$300. Yet, concerns have emerged regarding its structure. At the Token2049 conference, Edward Snowden suggested Solana's centralization poses unique risks, potentially impacting its value over time. While these concerns loom, Solana's ecosystem remains robust, and some analysts are still optimistic about its future. Uniswap Wallet Extension: Enhancing Accessibility in DeFi Uniswap's wallet has gained traction by simplifying DeFi for everyday users. Available on both mobile and desktop, the wallet allows for seamless asset management across different blockchains. With integrated features like in-app swaps and protection against Miner Extractable Value (MEV), it offers a secure trading experience, eliminating the need to switch between blockchains and empowering users to oversee their assets efficiently. BlockDAG Secures \$10M, with 13.8 Billion BDAG Coins Now in Circulation In a notable achievement, BlockDAG has surpassed \$10 million in just 72 hours—an accomplishment even established projects might find challenging. This surge is largely driven by major whales, some purchasing hundreds of thousands, even millions of dollars in BDAG within this brief window. As a result, BlockDAG's presale now exceeds \$90 million, with over 13.8 billion BDAG coins already sold. Two key drivers have fueled this success: First, BlockDAG's significant ROI, with early holders already seeing a 1,960% return in just months, raising discussions about future potential. With these short-term results, the long-term possibilities look promising. The second factor is BlockDAG's hybrid blockchain and directed acyclic graph (DAG) technology, providing a combination of speed, security, and decentralization. Given this momentum, BlockDAG appears set to become a prominent player. With a 1,960% ROI, its growth prospects look strong. Over 140,000 holders have joined, with whales further boosting demand, resulting in a rapid sell-out of batch 23. Now, batch 24 has launched at \$0.0206 per coin. Those interested might consider acting soon, as this batch could sell out even faster than the last. October 2024: What's the Top Crypto to Buy? Solana's trajectory remains interesting, despite ongoing centralization concerns. Many analysts remain positive about its potential. Meanwhile, Uniswap's wallet extension offers an accessible approach to multi-network asset management. As October 2024 unfolds, BlockDAG emerges as a standout. Its presale momentum—\$10 million in 72 hours and over \$90 million total—has attracted both whales and individual holders. With a significant ROI of 1,960% for early adopters, batch 24 is in high demand, priced at just \$0.0206 per coin. This batch is moving quickly, making now an opportune time to consider joining. - At the time of writing, SOL is trading at \$145.02, up 2.14% in the last 24 hours. - If the price manages to climb above \$149 level, then it will likely test \$160 resistance level. Since the introduction of Frankendancer, a new validator client, to the mainnet-beta, Solana's transaction throughput has skyrocketed to 40,000 TPS. Some have drawn parallels between this development and Cardano, a network that can only handle 1.3 TPS at the moment. In a post on X, crypto expert Marty Party

brought attention to this discrepancy, casting doubt on Cardano's claims of increased throughput. While Cardano claims on its website that its eUTXO mechanism can process hundreds of transactions/second in theory, real-world performance seems to be much lower. Brief Recovery Underway This week, the price of Solana price declined by almost 8% and is now trading between \$142-145 range. Holders of SOL shouldn't be too concerned about this decline, because the whole cryptocurrency market saw a slump. Although there is resistance near \$149, a prominent aspect is the emergence of higher lows, which suggests a bullish structure. Buyers are entering the market at greater and higher prices, indicating strength. At the time of writing, SOL is trading at \$145.02, up 2.14% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 15.52%. The present rising trend in SOL prices has been reinforced as a result of this advance, which has enabled price to reclaim the 200-day moving average. The SOL price has the makings of a full comeback thanks to rising network revenue and the appearance of positive chart patterns. If the price manages to climb above \$149 level, then it will likely climb further to test \$160 resistance level. However, if the brief bullish rally does not sustain and price falls below \$141 level, then it will likely test \$134 support level.

The cryptocurrency space has been quite lively as Rexas Finance (RXS) is garnering the attention of experts as a revolutionary real-world asset (RWA) market. Solana (SOL) and Ripple (XRP) are usual suspects that have dramatic price movements, whereas Rexas Finance approaches the combination of the blockchain and physical assets in a new way. Currently, RXS is in its presale stage 3 and is priced at \$0.050 after increasing 66.7% from stage 1. Investors have already invested more than \$2 million in the project, which has already sold more than 50 million tokens, well before its public listing at \$0.20 and earning 6x the profit on investment. Rexas Finance (RXS): A Revolution in the RWA Market Rexas Finance is eliminating all the barriers as it is providing a new concept of real-world asset tokenization, which is considered to have a market potential of the largest industries such as real estate, and commodities. Real estate alone is worth an approximate market of \$379.7 trillion and even more with commodities worth \$121.2 trillion like gold. Thanks to Rexas Finance, one can in a matter of seconds purchase or sell real-world assets whether it is a high-end penthouse in New York or gold bars in Dubai. Ownership of tokens is offered either as full tokens or fractional tokens making it possible for investors to participate from offshore locations. Furthermore, it is possible to easily create a few lines, without wonder, thanks to the simple unique Rexas Token Builder, but lets the users tokenize the assets for themselves. It can be as simple as offering a piece of art, land, or even a vintage car. This, however, is not the end of the project for the effective and efficient Launchpad is what this project is all about. It enables the users to seek or solicit funds for the assets using the token without leaving the confines of the world. The Future Looks Bright At this moment, it can be said that Rexas Finance (RXS) has already raised more than \$2 million in funds from its presale and has progressed through its first three quarters, starting from \$0.030 in stage 1 and now at \$0.050 in stage 3. The presale stage 3 is 78.25% completed and investors should expect a 20% jump in price as presale advances to stage 4 at \$0.060. There is a total supply of 1 billion RXS tokens and with that, the project's outlook is even more optimistic in the long run. But that's not all. The platform's reach that enables availability to an excess of trillions of dollars of markets puts Rexas Finance in an excellent position to bridge the real asset and blockchain technology divide. That is why experts predict that RXS will be able to fairly well, if not completely, break the RWA market. Soar of Solana (SOL) and Recovery of Ripple (XRP) Also, Solana (SOL) did not stay behind and has been on the rise for the last week; it surged 18% recouping from key support at \$135 to trade at \$158. Its smart contract and ever-growing NFT are inviting investor attention once again making it a fierce competitor amongst its peers in the crypto world. The chart goes down when XRP takes a tumble; however, Ripple continues to gain support at the important key support at \$0.55 and is up by 21%. And perhaps because of the developments within the XRP Ripple system, there has been volatility. I think. Seated comfortably at this strategic position makes one reason to keep the coin on the radar. Conclusion: Rexas Finance (RXS) Is The Next Big Thing. It would be naive to call Rexas Finance (RXS) merely another token draft that offers some practical services. It uses a green-friendly approach to raising revenues which is unlikely to be overturned in the future. Comparing the boom of Solana (SOL) and the recovery of Ripple (XRP), I would guess the most preferred investment in the future may be Rexas Finance because it seeks out game-changing opportunities coupled with high returns on investment. This amazing platform has no bounds. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Cardano's founder said in an X post that the Sui network is the preferable alternative. - Despite effusive appreciation for Sui, he insisted that Cardano is still the number one. Once again, Charles Hoskinson, founder of Cardano, has criticized the Solana network and lauded the Sui network. Despite Hoskinson's effusive appreciation for Sui, he insisted that Cardano is still the number one and provided reasons for his belief. A top layer-1 blockchain, Solana, isn't the best choice. Cardano's founder said in an X post that the Sui network is the preferable alternative. The disclosure of his reading about Sui preceded his comments. It was wonderful to witness the efforts of George Danezis (Sui's early contributor) come to reality, according to the Cardano founder. Also, he said that they should have a lot of success on the field. Aiming Gun at Solana Charles Hoskinson has criticized Solana before. And he will likely do it again as long as the similarity between Solana and Cardano remains. Even though Solana has a great ecosystem, he said earlier this year that it wasn't adding anything substantial to the network. At the same time, Hoskinson made fun of the developers rebooting the network to restore Solana's service after it went down in February of this year. In the past, he has also said that Solana wasted money on marketing instead of focusing on what customers really needed. In light of Edward Snowden's recent assertion that Solana is centralized, Charles Hoskinson has recently made a statement. If Solana is subject to governmental scrutiny, he said, anything built on top of the network might be quickly disrupted due to its centralization. Commenting on Sui, the creator of Cardano underscores the optimistic view of the network, which has permeated its native SUI token as well. Highlighted Crypto News Today: Nearly Half of US Voters Prioritize Pro-Crypto Candidates as per Poll

Renowned whales are starting to disclose their next large wagers for the anticipated bull run as the cryptocurrency market continues to rise from its recent lows. One such whale said to be valued at over \$70 million, has revealed his top three Solana substitutes (SOL). Although Solana's high-performance blockchain has shown promise, one investor thinks there are other opportunities where significant rewards might be realized. His best choices? Rexas Finance, Cardano, and XRP. Let's examine the reasons behind his interest in these three cryptocurrencies. Rexas Finance (RXS): Transforming Tokenization of Real-World Assets Rexas Finance is becoming a disruptive force in the blockchain space by providing a special platform that connects physical assets with virtual ones. Rexas stands out in the whale's portfolio by stressing asset tokenization, a field predicted to develop over \$500 trillion by 2030. Using blockchain technology, Rexas tokenizes actual assets such as gold, real estate, and other commodities allowing investors to buy, sell, and swap fractional ownership in these assets. This raises liquidity and openness and democratizes access to hitherto costly marketplaces. Rexas provides a range of features that go beyond tokenization in order to draw in both individual and institutional investors. While the Rexas Estate platform makes it easier to buy tokenized properties, the Rexas Launchpad enables projects to raise money for their tokenized assets. Furthermore, anyone can tokenize their own assets using the Rexas token generator, thereby expanding the platform's versatility. The project is at its third stage of presale, with tokens being offered at \$0.050. As the platform's ecosystem grows, early investors stand to make a great deal. The whale is particularly impressed with Rexas Finance because of its disruptive potential and capacity for general acceptance in the conventional financial industry, as well as the crypto sector. Cardano (ADA): A Strong Contender with Growing Momentum The second altcoin the whale is monitoring with good cause is Cardano (ADA). Cardano's emphasis on peer-reviewed research, scalability, and sustainability has helped it to be regularly among the top participants in the blockchain sector. Trading at \$0.401, ADA has lately seen a comeback in interest with a 15% increase in value over the past week, implying that the much-awaited positive momentum could at least be here. As a bullish reversal pattern emerged, the whale became interested in Cardano's charts. Technical signals like a bullish, engulfing candlestick pattern imply ADA is ready for a protracted climb. Retailers are demonstrating increasing interest in the asset; this is seen by the increase of active addresses, which just topped 130,000. ADA's open interest has also increased by more than 6%, suggesting growing confidence among potential traders. Cardano is a decent option for the approaching bull run because of its strong technical and basic potential. XRP: Ready for a Breakout? The whale is putting a lot on XRP, the third altcoin. XRP is still a big player in the cryptocurrency market despite US regulatory challenges, particularly with regard to cross-border transactions. Right now, the asset becomes interesting because of the rising conviction that XRP is poised to have a major breakthrough. According to a recent forecast by a market analyst, XRP can surge by 888% and hit \$31 if specific market criteria are satisfied. Recurring chart patterns that mimic XRP's incredible 2017 bull run are the source of this optimism. XRP may be preparing for another big move since it has touched an ascending support line several times. The crucial mark to keep an eye on is \$3.31; if XRP can recover this record high, it may start off a fresh purchasing spree that drives the asset closer to \$31. The allure of XRP extends beyond its technical architecture. Particularly with the approaching release of its stablecoin, Ripple USD (RUSD), Ripple is actively expanding its ecosystem. This stablecoin might significantly raise XRP demand by enabling cross-border transactions and connecting multinational financial institutions. Moreover, the rising Net Asset Value (NAV) of Grayscale's XRP Trust points to institutional interest in the asset growing. Now that regulatory certainty is beginning to appear, the whale is positioned such that XRP might be among the most unexpected shocks of the next bull run. Conclusion: A Diversified Bet on the Bull Run Although Solana is still a formidable player in the cryptocurrency market, this \$70 million whale believes that Rexas Finance, Cardano, and XRP have even more promise. While Cardano is an attractive option for long-term benefits because of its developing ecosystem and strong technological foundation, Rexas Finance offers innovative solutions for real-world asset tokenization. In spite of regulatory obstacles, XRP appears poised for a significant surge in value, rendering it a compelling choice for investors prepared to assume a degree of increased risk. These three altcoins provide a diversified way for investors to profit from market excesses while putting themselves in position for the next bull run. These assets could be the keys to significant returns in the upcoming months, with Rexas Finance setting the standard for innovation and XRP and Cardano displaying strong technical and fundamental signs. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. - At the time of writing, SOL is trading at \$136.18, down 2.95% in the last 24 hours. - If the price manages to go below \$132 level, then it will likely test \$127 support level. The expected impetus of the uptober has not yet materialized, despite investors' clinging expectations for a positive surge going into 2025. After a short upswing in September, investors' hopes were dashed as Bitcoin's value plummeted to \$60,000, causing altcoins to follow suit and leading to widespread market losses. Cryptocurrency prices have been under increasing selling pressure as a result of heightened Middle Eastern tensions, notably the confrontation between Iran and Israel. Severe Selling Pressure Matthew Dixon, CEO of Evai and an analyst, has highlighted the market activity of Solana (SOL) in a price analysis. Dixon discussed his opinions on X, suggesting that Solana's price may fall to \$102, a reduction of 25% from its current levels. This forecast is based on technical indicators, such as Fibonacci retracement levels and falling market conditions. Solana is confined to a parallel channel that is descending and has fallen below the channel's typical bands. It seems that the price is going to test the lower support in the higher time frame, which is around \$120, since the RSI is also producing another lower low. At the time of writing, SOL is trading at \$136.18, down 2.95% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 6.28%. The price has declined a whopping 13.15% in the last 7 days. The price failed to clear above \$160 level and have faced severe selling pressure ever since. If the price manages to go below \$132 level, then it will likely test \$127 support level. Breaking under this level, will likely see price testing \$120 support level. However, if the bulls manage to pull the price above \$143 level, then it will likely test \$150 resistance level.

- Solana hit a 12-day low amidst broader market downturn. - Bitcoin's decline impacts altcoins, with increased selling pressure observed. Solana (SOL) has not escaped the broader crypto market's bearish start to the highly anticipated uptober, hitting a 12-day low of \$142 with a 7% decline over the past 24 hours. This sharp drop in price aligns with the wider cryptocurrency market, which saw Bitcoin plunge to a two-week low of \$60,164, dragging altcoins down as investors react to escalating geopolitical tensions between Israel and Iran. Meanwhile, Solana's trading volume surged by 100%, reflecting a substantial increase in selling pressure as market sentiment turned negative. The total crypto market cap fell by 4.66% to \$2.15 trillion, while total market volume jumped by 52.59% to \$116.53 billion. In this landscape, Solana navigates significant headwinds as Ethereum (ETH) also plunged 7%, contributing to the overall decline of the overall altcoin. SOL's recent performance contrasts sharply with its bullish trend through September, where it saw gains following a series of network upgrades and growing adoption in decentralized finance (DeFi) and non-fungible tokens (NFTs). However, the war between Israel and Iran has caused a risk-off sentiment, with investors shifting towards traditional safe-haven assets like bonds, gold, and the US dollar. What Is Ahead For SOL? Despite the downturn, analysts are not discounting Solana's long-term potential. Historically, October has been a strong month for Bitcoin and altcoins alike, with average gains of 20%. However, the geopolitical situation and market liquidity concerns are influencing short-term market dynamics. Solana's next key support level stands around \$138, a critical threshold to watch if the selling pressure persists. Should the market rebound later in the month, SOL could regain momentum as positive global liquidity trends continue to support major cryptocurrencies, including Solana. For now, Solana investors remain cautious, keeping a close eye on global events and broader market sentiment. Highlighted News Of The Day Australia Seizes \$6M in Crypto Linked to International Crime

- At the time of writing, SOL is trading at \$147.04, down 5.06% in the last 24 hours. - If the price breaks below \$143 level, then it will likely test \$129 support level. Six Solana-based protocols now have more than \$1 billion in TVL, which is a first since Solana started. For the layer-1 blockchain network, Defillama data

shows that five protocolsâ€”Jito, Kamino, Jupiter, Raydium, Marinade, and Sanctumâ€”exceeded \$1 billion. As retail adoption increased, crypto community users praised SOL chain features like Blinks and Actions. Some contend that the majority of SOLâ€™s on-chain operations are driven by memecoin frenzy and quick transactions. Since September 6, the price of Solana has been steadily rising, outperforming both Bitcoin and Ethereum. When comparing Solana, Bitcoin, and Ethereum in Q3 2024, Ethereum had the weakest performance. Bitcoinâ€™s price increased by 1.55%, while the price of SOL rose by 6%. In contrast to the others, Ethereumâ€™s price dropped a staggering 23% in the third quarter. Bears in Control With each market recovery, SOL has been among the top-performing high-market-cap tokens, and the \$110 support level has shown to be quite resilient throughout market downturns. Meme coins in the Solana ecosystem have also been among the most resilient throughout recoveries. At the time of writing, SOL is trading at \$147.04, down 5.06% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 33.24%. The price was unable to break above the \$161 level and faced correction ever since. The price decline is in tandem with the overall crypto market downtrend. If the price manages to go above \$153 level, then it will likely retest \$161 resistance level. Breaking above this level, will likely see price climbing towards \$178 mark. However, if the price continues the bearish momentum and breaks below \$143 level, then it will likely test \$129 support level.

- If the price breaks below \$154 level, then it will likely test \$147 support level. - At the time of writing, SOL is trading at \$157.65, down 0.62% in the last 24 hours. With \$3.04 million active addresses per day, Solana is at the top of the list. This statistic sheds light on how active the networksâ€™ users are. The network has gained a lot of attention this year, especially during the meme coin craze, which has increased the number of users. New protocols have been introduced to the blockchain, such as Pump.fun, which has greatly enhanced the networkâ€™s meme coin trading capabilities. Also, more and more people are interested in investing in Solana after the launch of SOL liquid staking. However, significant selling from the Pump.fun fee account and a normal decline after a three-week surge are the likely causes of the increased selling pressure lately. In the last five days, the Pump.fun fee account has sold 122,250 SOL, which is about \$18.9 million, according to Lookonchain. The accountâ€™s activity has been substantial, as it has generated 773,617 SOL (equivalent to \$120.68 million) in revenue. The platformâ€™s revenue has been steadily rising as a result of the rising popularity of meme coins. So far, 398,313 SOL, or \$62.13M, have been sold via this account. Brief Correction Underway At the time of writing, SOL is trading at \$157.65, down 0.62% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 42.21%. The price recently climbed all the way till \$161 level and faced brief correction. The SOL price is up 8.84% in the last 7 days due to the recent rally. If the price manages to climb above the recent high of \$161 level, then it will likely climb further to test \$174 resistance level. Breaking above this level, will likely see price testing \$186 mark. Conversely, if the price breaks below \$154 level, then it will likely test \$147 support level.

Few crypto traders manage to turn a few investment opportunities into life-changing opportunities. Notably, one trader who flipped \$600k into \$1.5 million through riding the wave of Solana and Tron meme coins, is now making headlines for his new investment opportunities Rexas Finance (RXS). The crypto traderâ€™s recent move signals that Rexas Finance might be the next big project that is capable of providing even higher returns than previous meme coin successes. Why Rexas Finance Is Different Rexas Token Builder: Crypto users can tokenize their assets easily through Rexas Token Builder. Moreover, it eliminates the complexity of coding in the blockchain industry with ease, enabling users to launch tokens in just a minute. Rexas Launchpad: Users can begin the token funding using Rexas Launchpad. More so, the decentralized launchpad could offer a transparent and secure ecosystem for token sales on many blockchain networks. Rexas Estate: Users can now invest in real estate with the help of Rexas Finance (RXS). This platform helps crypto users worldwide to own real-world properties and earn passive income in stablecoins. RXS Token Presale RXS is the native token of Rexas Finance. RXS is an Ethereum-based ERC-20 token. The Rexas Finance token presale was started on September 8, 2024. Moreover, the project has raised over \$1,300K in funds. Currently, the presale price of Rexas Finance (RXS) is \$0.05. Furthermore, now is the opportunity to enter and grab a little of the future as the presale has started. Those who join early stand to benefit greatly as analysts estimate the project might mirror Shiba Inuâ€™s historic rally. Why This Traderâ€™s Move into Rexas Finance Matters With a history of turning small investments into millions, this crypto traderâ€™s shift toward Rexas Finance highlights the projectâ€™s potential to outperform meme coins like those on Solana and Tron. As tokenization of real-world assets gains traction, Rexas Finance is positioned to become a leader in this space, offering investors the chance to participate in a revolution that combines traditional finance with blockchain innovation. About Rexas (RXS) Rexas Finance is the userâ€™s gateway to the future of asset management. Rexas allows users to own or tokenize virtually any real-world asset, from real estate and art to commodities and intellectual property world-wide. With Rexas, users gain access to a world where asset liquidity and investment choices are boundless. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this Press Release does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- Solanaâ€™s Trading volume dropped 26.21%, standing at \$2.39B. - Key support at \$154.50, with resistance at \$158. Solana (SOL) is currently trading at \$157.21, reflecting a 0.22% increase in price. Its circulating supply is 468.83 million SOL, with a total supply of 585.38 million SOL. The market cap has decreased by 1.82%, bringing it to \$72.89 billion. Trading volume, which dropped by a significant 26.21% to \$2.39 billion, indicates a sharp decline in market activity. However, the Market Cap ratio of 3.34% still suggests moderate trading activity despite the overall volume decrease. Solanaâ€™s price has been relatively stable, with minimal fluctuations between \$155.46 and \$155.52 during this period. One whale sold 21M \$MOODENG for just 2.19 SOL (\$297) after panic selling, though itâ€™s currently valued at \$6.3 million. Another whale bought 6M \$MOODENG for 10,156 SOL (\$1.59 million) in the past 8 hours, suggesting that large-scale buying is still ongoing despite fluctuations in the market. Technical Indicators Showing Mixed Signals for Solana (SOL) Solanaâ€™s 9-period moving average sits at \$155.71, and the 21-period moving average at \$155.76. This minor difference between the two averages points to a neutral to slightly bearish trend. Solanaâ€™s key support level lies at \$154.50. Should the price break this level, it could test the \$152.80 mark, with a possible further drop toward \$150.00 if selling pressure intensifies. On the upside, the resistance level is at \$156.30. A breakout above this could push Solana toward \$158.50 and potentially even \$160.00. The Relative Strength Index (RSI) is currently at 51.86, indicating a neutral market sentiment, with Solana neither overbought nor oversold. The RSI average (14-day) stands at 56.18, slightly higher than the current RSI, reflecting some recent bullish momentum. However, the slight drop suggests the market could be cooling off. If the RSI falls below 50, a bearish trend may emerge, aligning with a potential price drop below support levels. Conversely, a rise in the RSI above 55 could signal renewed buying interest, possibly pushing Solana above resistance. Highlighted Crypto News Today Notcoin (NOT) Price Resumes Bullish Momentum Towards Month End

The presence of large organizations such as MicroStrategy is often seen to cause turmoil. Following the companyâ€™s recent raise of \$1.01 billion, and purchase of 7,420 Bitcoin, the cryptocurrency community has been watching out for what MicroStrategy is aiming at, and a question many people are also asking is, is it possible for Solana (SOL) to hit its \$300 target in 2024? While Solana continues its impressive run, there is another lesser-known competitor that is slowly making headway: Rexas Finance (RXS). Not to be deterred speculation around this often ignored rival has launched betting on a price of 2500% by early 2025, which just might be an avenue for net-savvy investors. Let us take in the new information that has emerged concerning the world of cryptocurrencies. MicroStrategy Makes A Major Move On Bitcoin Michael Saylorâ€™s declaration that MicroStrategy is a for-profit firm and the profits would come from Bitcoin only. As he bought Bitcoin this year, there was no surprise that the company had once again embarked on the buying spree. This is necessary to enable the companyâ€™s acquisition of as much bitcoin as possible. Between September 13 and 19, MicroStrategy bought 7420 BTC at an average price of \$61,750 for a total value of about \$458.2 million. Proceeds from the offering, which was closed on September 19, will also be used to sweep up \$500 million senior secured notes. To put it simply, they will now invest even more in the cryptocurrency and affirm that BTC will still reign as the top among other cryptos. Given such a sensational development, investors are left to wonder whether new development will have repercussions for other cryptos in particular Solana. All things considered, Solanaâ€™s upsurge has been nothing less than a rocket launch and more people are asking if it will come to the elusive \$300 by 2024. Solanaâ€™s \$300 Dream: A glass half empty or a glass half full? As of the time of writing this, the price of Solana (SOL) is \$143.16, and it is without a doubt one of the best-performing assets in the market today. The currency, however, last week hit a major barrier refusing to budge out of a critical resistance area of \$187. So what was this for Solanaâ€™s dream of hitting a whopping \$300 by 2024? Although it appears that the skyâ€™s the limit for Solana, it will take a miracle for the price to hit \$300 within the time frame. A lot of operational forecasts emphasize its impressive ecosystem evolution notably the decentralized finance (DeFi) and NFTs. But the market is very much a gamble. At the current price of \$143.16, Solanaâ€™s price only has to increase by more than 2 times within a short period, and \$300 pressure will be set on Solana. It is achievable but this would require a very stable market environment coupled with a high demand for its technology. That said, Solana can still prove to be a very good asset to long-term holders. For those, however, who look for more, and faster returns, an underrated rival might prove to be a better option for portfolio allocation. Rexas Finance (RXS): The Underdog with a 2500% Rally in the Crosshairs At the time Solana is trying to breach its resistance zones, Rexas Finance (RXS) is gradually building its popularity. Now selling at a mere \$0.050 in presale stage 3, Rexas Finance is positioning itself as a significant player in the RWA tokenization industry. Rexas allows you to purchase real estate, commodities, artworks, and any other real-world assets without leaving your house. You can even invest in tokens of expensive assets where you donâ€™t have to put in tens of millions to own a luxury condominium or an expensive antique. Itâ€™s possible to use Rexas Finance to make a small investment or a big investment, with no problems at all. The coin is priced at \$0.050, which is more than 66.7% from the presale stage in the first stage where it was at \$0.030, \$0.040 in stage two, and now priced at \$0.050 in stage three. For instance, once it goes live at \$0.20, an early investor can already realize a 300% return. According to Analysts, RXS will soar to high consensus estimates that give RXS a price target of \$5 in 2025, providing investors with a return of up to 2,500%. The Final Word: Rexas Finance is going to be the next big thing. As names such as MicroStrategy never tire of making wonderful news headlines with Insane Bitcoin purchases, and Solana struggles to hit the \$300 mark, Investing in Rexas Finance could be the dark horse of the pack to provide windfall profits. With its instantiation of tangible assets into the blockchain model and a presale price of just \$0.050, itâ€™s an opportunity one canâ€™t sleep over. If you are searching for a high-growth investment then you might want to consider Rexas Finance as it may just catapult to a 2,500% surge by early 2025. Donâ€™t miss it, now is that time. This could ensure that shortly, Rexas Finance would be part of the portfolio and most likely be one of the top gains in crypto. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

The crypto market is seeing some big changes before the next big market jump. PEPE, a popular meme coin, is struggling with lower price support. On the other hand, Solana might not hit another 10,000% increase like before, but experts think there are still smaller gains ahead in the next market rally. BlockDAG is ahead of the game, causing a rush to buy its native BDAG coin with the launch of its Testnet. This launch lets users try out tools like the blockchain explorer, faucet, and smart contracts. With over \$76.2 million raised and nearing \$600 million in presales, BlockDAG could deliver major returns for early buyers. Letâ€™s look at which cryptos could stand out in the next big rally. PEPE Price Drops by 14% PEPEâ€™s price support has dropped in recent weeks. After a small 5% rise to \$0.057, the coin entered a zone that could signal a rally. But this came after a hard month for meme coins, with PEPE falling by 14%. Even though itâ€™s been tough, some believe PEPE might bounce back and reach \$0.000013 by the fourth quarter. While the coin struggles, traders are watching for signs of new energy in this meme-driven market. Solana Forecast: Are Big Gains a Thing of the Past? Solana was a favorite among big investors in 2021 when its price shot up from \$1.50 to \$260. Now, analysts say the chance for another 10,000% rise might be gone. Solanaâ€™s market is more stable, and future growth may be slower due to the law of diminishing returns. Despite this, Solana still looks strong. Its ecosystem keeps growing, and investors are keeping an eye on its performance soon. BlockDAGâ€™s Testnet Stirs the Market: Can It Reach the \$600M Mark? BlockDAG is making waves with its Testnet launch, grabbing the attention of both developers and traders. The Testnet allows users to explore BlockDAGâ€™s ecosystem, testing tools like the blockchain explorer, faucet, and smart contracts. BDAG holders with at least 7,500 BDAG coins can move their coins from devnet to testnet, boosting BlockDAGâ€™s trustworthiness. This shows the strong technical base of the project and its potential to stand toe-to-toe with other big blockchains. Traders are rushing to the project, hoping to get in before prices climb higher. The presale has already raised \$76.2 million, with more than 13.1 billion coins sold, pushing the project closer to its \$600 million target by the end of the presale. The presaleâ€™s quick growth through 23 batches shows rising market faith, with each batch bringing a price increase. At this stage, in batch 23, BDAG is priced at \$0.0192, a big leap from its original \$0.001. Early buyers have already gained a huge 1820% return, but this might just be the beginning. Experts suggest early backers could see even larger profits, with the BDAG coin possibly hitting \$30 by 2030. With the presale moving swiftly, BlockDAG is becoming one of the most talked-about projects ahead of the next crypto bull run. Final Thoughts PEPEâ€™s price support has been unstable, dropping 14% in the last month, while Solanaâ€™s growth seems to be slowing. However, BlockDAG is taking the spotlight with its Testnet launch. With \$76.2 million already raised, it is closing in on the \$600 million presale target. Early backers have seen a massive 1820% return, but experts believe the profit potential is even greater. As the presale picks up speed, BlockDAG is emerging as a key player in the next crypto bull run. Act Now Before Prices Increase: - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghVMVU> Disclaimer: TheNewsCrypto does not endorse any content on this page. With many investors repositioning their assets in preparation for the bullish 2025 projected in the cryptocurrency market, especially looking at whether some of the

giant Solana (SOL) and Cardano (ADA) can still grow, most of these “giants” have been successful in the past. Even if Solana or Cardano has had some successes historically, both projects face very serious issues that can hinder any long-term growth. To stay profitable during the next crypto cycle, which will involve some turbulence once again, it is time to look for other young and promising projects such as Rexas Finance (RXS), which is being touted as the token with the highest returns in 2025. Solana (SOL): Soaring But with Great Risks Solana is on the list of the most interesting blockchain projects due to its very quick transaction processing and cheap costs, which is why it has been termed the “Ethereum Killer”. The platform rapidly transformed into a base for many dApps and NFT markets. Lately, though, network outages and congestion problems started to raise concerns about Solana’s relative scalability and network reliability. Even with such heavyweight partners as Visa offering settlements in USDC through the platform, Solana still proposed a PoH network which to some has many scalability concerns due to the inherent technical flaws of PoH that may, in the long term, be counterproductive. Now, the prospects of Solana cryptocurrency in such conditions are still good, because in terms of trading volumes, the coin ranks ninth among others, even though its price is only about \$145, nearly 50% less than its \$260 all-time high. Now the question is, has the platform been through the storm, and what now are the chances of achieving big returns in the future? For so long, Cardano (ADA) has remained proud of its academic quality, where it uses peer-reviewed innovations to enhance its operations. The reasons behind the long-awaited punch line integration of Cardano’s unique proof-of-stake and layered architecture have been burning as a much more affordable solution to Ethereum and Solana. However, Cardano’s prioritization of the well-conceived plan has come at the expense of adoption and innovation, especially by more nimble rivals. Even after such upgrades as the Alonzo hard fork, which brought smart contracts to ADA, the price of the coin is still below \$0.35 while its peak hit \$3.10. While such a strategy is good and worth exalting, the team behind Cardano has been left behind in the fast-growing crypto ecosystem. Thus, many believe that its prospects for growth in the next bull run will be relatively lower than other tokens with more exciting applications. Rexas Finance (RXS): The Next Bull Run Opportunity for Savvy Investors While the future of Solana and Cardano investments appears dim for long-term profitability, Rexas Finance (RXS) seems to be attracting investors and is expected to pay off during the 2025 bull run. Currently selling for \$0.05 in its Stage 3 presale, Rexas Finance has already garnered over \$1.3 million from the early presale of the Project. While Solana and Cardano revolve around decentralized applications and smart contracts, Rexas is spearheading the tokenization of Real-World Assets (RWA). The core value propositions of Rexas Finance’s platform are the asset tokenization of physical assets like real estate, art, and commodities, allowing investors to purchase tokenized fractions of such high-value assets. This capability of RWA has enabled Rexas Finance to go a step beyond most blockchain projects that only target the virtual market. RXS is projected to reach \$20 in 2025, potentially yielding a 12,000% return for early investors. Such resolute development of Rexas Investments makes it a worthy investment opportunity for those who wish to take advantage of the next bull run. The possibility of integrating physical and digital assets using blockchain technology gives the company long-term potential in terms of general expansion and market relevance, making it a good opportunity for growth in the evolving blockchain landscape. Conclusion: Time to Let Go of Solana and Cardano Now? Although Solana and Cardano continue to be relevant cryptocurrency platforms, their longevity is questionable as they are confronted with several disappointments in the areas of scalability and evolution. To investors anticipating above-average returns in the coming 2025 bull cycle, Rexas Finance offers an interesting alternative with its emphasis on the tokenization of real-world assets. Due to its presale momentum and enormous growth opportunity, Rexas Finance emerges as a high-return token that will spearhead the next phase of the revolution in cryptocurrencies. AllDomains, a leading name service provider enabling customizable top-level domains (TLDs) on the Solana blockchain, has officially launched the highly anticipated .solana TLD. As part of this initiative, 50% of all revenues generated from .solana domain sales will be shared with the Solana community, fostering deeper engagement and support for the ecosystem. Bridging the Gap Between Web2 and Web3 with Domains Web3 domains are transforming the way users and brands interact on the blockchain. By offering memorable, personalized addresses, they simplify wallet interactions, replacing the complex 15-character public keys provided by default. For brands, these domains turn community members into on-chain ambassadors, proudly representing brand identities across the rapidly growing Solana ecosystem. AllDomains continues to innovate, bridging the gap between traditional web2 domains and web3 identities. With bespoke multi-chain identity solutions, the company is expanding services across SVM, EVM, and Move-based blockchains. The launch of the .solana TLD cements AllDomains’ position as the leading name service provider on Solana, enhancing their domain offerings while rolling out community-driven incentives. Empowering the Solana Ecosystem As Solana sees an influx of new users daily, with limited options to personalize their on-chain identities, the .solana domain offers a new way for users to claim unique names. To prevent domain squatting and ensure availability for new users, domains will be renewed annually. Solana remains the fastest-growing blockchain ecosystem, with over 75.2 million active wallets and a year-high in Total Value Locked (TVL). AllDomains already powers branded domains for high-profile projects, including BONK, WEN, MonkeDAO, SuperTeam, and over 60 other TLDs. The hybrid web2 and web3 TLD, .id, is also a key part of AllDomains’ offering, in partnership with PANDI, helping to bring real-world assets (RWAs) to Solana’s NFT marketplaces. Additionally, AllDomains is integrated with some of Solana’s most popular wallets and decentralized applications (dApps), providing seamless accessibility to its services. A complete list of integrations is available on their website. “We believe this initiative will not only enhance the user experience on Solana but also for the first time in Web3 we are able to share the success of a TLD directly with our community,” said Claudio, Co-founder at AllDomains How to Claim Your .solana Domain: - Visit AllDomains’ official .solana page. - Search for your desired domain name. - Purchase the domain using a Solana wallet. About AllDomains: AllDomains is a leading name service provider that allows users to create customizable top-level domains (TLDs) on various blockchains, including Solana, SVM, EVM, and Move-based chains. Focused on bridging the gap between web2 and web3 domains, AllDomains provides users and brands with a seamless identity layer, empowering them to personalize and control their on-chain presence. With a wide portfolio of branded domains and a growing list of partnerships, AllDomains is revolutionizing how communities engage with blockchain technology. For more information, visit www.alldomains.id. Secondary Market Listings: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana reclaims \$150 mark, approaches \$155 resistance amid market recovery. - SOL leads daily user activity with 22.2 million active users. - Price targets: potential rise to \$181 and \$200, or retrace to support if bearish trend emerges. Solana (SOL) has emerged as a focal point in the ongoing cryptocurrency market recovery, successfully reclaiming the \$150 price level. As the altcoin approaches its critical resistance at \$155, market participants are closely monitoring SOL’s price action for signs of sustained bullish momentum. The past 24 hours have seen SOL record a modest 3% gain, accompanied by a robust trading volume of \$2.83 billion. This short-term performance contributes to an impressive 16.92% weekly surge, signaling growing buying pressure in the Solana ecosystem. Despite facing a 7% correction over the past month, SOL’s year-to-date return stands at a commendable 48.04%, underscoring its resilience and long-term growth potential. Solana outpaced others in daily user activity Beyond price action, Solana’s network metrics paint a picture of burgeoning adoption and utility. Recent data reveals that Solana has outpaced competing blockchains in daily user activity, boasting 22.2 million active users. This figure dwarfs that of its nearest competitor, Tron, which recorded 15.3 million active users. Other notable chains like BASE, Ronin, and Toncoin trail significantly behind, with 9.8 million, 8.11 million, and 7.08 million active users, respectively. This surge in user activity, documented on September 25th, suggests a growing preference for Solana’s infrastructure among developers and end-users alike. The network’s ability to attract and retain such a substantial user base could serve as a fundamental driver for SOL’s price appreciation in the coming months. Looking ahead, Solana’s price trajectory hinges on its ability to decisively breach the \$155 resistance level. A successful breakout could pave the way for a push towards the \$181 mark, with the potential to challenge SOL’s yearly high above \$200 in the fourth quarter. This bullish scenario would likely require sustained ecosystem growth and favorable market conditions.

With the onset of the fourth quarter of 2024, Bitgert, Solana, and Neiro are turning up the heat with their recent price movements. The lightspeed blockchain of Bitgert, the DeFi heavyweight that is Solana, and the meme magic of Neiro are the talk of the town. Which among the three gives it a promising future? Let’s dive into numbers to find out what makes Bitgert, Solana, and Neiro an excellent choice to take the charts in the upcoming week. Price Performances of Bitgert, Solana, and Neiro Bitgert climbed 8.19% between September 18-19, 2024. Solana surged 15.18% between September 18-20, 2024. Neiro also rose a whopping 20.39% between September 22-23, 2024. Bitgert had shown resilience with a rise of 5.63% between September 8-9, 2024. Solana was impressive at 9.98% between September 20-21, 2024. Neiro flexes five fingers at 13.51% between September 15-16, 2024. While all three coins show scattered moments of bullish momentum, the stability of uptick across multiple periods of Bitgert likely showcases a greater demand underneath. It goes for a steady climb backed by real-world utility and thus is most likely to see more sustainable gains compared to the price spikes seen in Solana and Neiro. Unique Features of Bitgert, Solana, and Neiro That Fuel the Fire Bitgert’s Brise Chain processes an impressive 100,000 transactions per second. Solana boasts 65,000 TPS with its innovative Proof-of-History mechanism. Neiro rides the hype train of the Doge family. Bitgert is virtually a user’s utopia with gas fees near zero. Solana has massive room for upside because of its bustling DeFi ecosystem, which entices serious cash into the treasury from investors. For Neiro, viral potential and community spirit are quite everything it can hope for. While Solana and Neiro each have something going for them, Bitgert offers both speed and affordability and is thus positioned to possibly appreciate into the future. Bitgert vs. Solana vs. Neiro: Who’s the Winning Real-World User? Bitgert’s ecosystem is complete with live utilities, with strenuous activities already occurring from its decentralized exchange and NFT marketplace. Solana, on the other hand, is home to popular DeFi platforms such as Serum and Raydium, while Neiro is still working on its utility outside of being a meme. From its 8k+ community members actively operating its products, actual adoption can be seen in Bitgert. While Solana may have strong activity in DeFi, the fact that Bitgert has been building a well-rounded ecosystem and is gradually growing its user base may be a pointer to long-term price growth. Your Trading Gameplan for the Weeks Ahead While both Solana and Neiro showcase promising directions in price, Bitgert leads by an advantage both in technology creation and in real-life applications, thereby setting the scene for possible market breakouts. If you’re someone looking to catch the next big move, here’s what you need to do: #1 Monitor trading volume for Bitgert and new partnerships. #2 Place buy alerts for all three coins to catch the next upward trend at an early stage. #3 Observe how Solana and Neiro react to market dynamics. - Buy \$BRISE on Bitgert website today. Visit bitgert.com Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. Now picture that it is the time for the ICO of the Solana (SOL) and the price was at \$0.22. Today the prices on the plate of the Solana bread at a whopping \$147.75. Quite a growth of 67,059%. Now what if I said that a similar situation is presented to you with Rexas Finance (RXS), the low-cap crypto currently trading at just \$0.05 at its phase three presale? Experts are predicting that this coin will experience a steep 25x jump once it is launched in the early parts of the year 2025. If you are searching for a crypto that will reach new heights, Rexas Finance may be the precious stone you have been looking for. Why Rexas Finance (RXS) Will Come Next After Solana (SOL) Rexas Finance makes it possible for everyone interested in real estate investment to go global and buy real estate of any type in various countries. It is even better in that you do not have to go for the entirety of the property. You can take a lesser share of ownership of the property depending on your investment threshold. This paves the way for all people be it ordinary would-be investors or real estate professionals to play in the real estate market. There’s no need to be wealthy or be part of an elite group to access profitable property markets anymore. Rexas Finance lets everyone buy real estate development projects from anywhere in the world and it’s as convenient as online shopping. The Price and Potential of Rexas Finance (RXS) As of now, the Rexas Finance (RXS) cryptocurrency is at the presale stage 3, which means, it sells for \$0.05. As soon as the value is listed to the higher exchanges at \$0.20 at the beginning of 2025, the analysts predict a rise of 25x in price which means approximately \$1 or above would be the normal pricing post-launch. If you had invested \$100 in the Solana blockchain at \$0.22, you would today be enjoying a return of over \$67,000. So, with similar images, how could a Rexas Finance investment on the same day in the future look like? One such image could now pay its investors handsomely in the future. Real Estate Investment from the Comfort of Your Home What Rexas Finance is doing interestingly is to simplify the whole process of investing in real estate around the world. One no longer has to worry about flying to different parts of the globe, confronting foreign legal regimes and systems, as well as the need to have huge capital for the purchase of real estate. With Rexas, you can purchase a fraction of a property, which can be anywhere—the latest apartment in New York City or a house on a tropical island. And the best part is when one doesn’t have to purchase the whole property. Even if you have \$500 to invest, that is okay. Rexas Finance allows you to invest in real estate by having a fraction of property which makes it possible to invest in properties in different areas and types. Conclusion: The Time to Act Is Now Rexas Finance (RXS) is a fantastic opportunity for people who have missed the early days of projects such as Solana. Considering these potential benefits and the uncanny way of raising funds for real estate from any nation of the world, Rexas Finance is set to usher in a new dimension in the world of property investment through the use of cryptocurrency. Then, add in a chance to scoop \$50,000 in the USDt contest, and you have one of the best avenues for altcoin investment in recent times. Avoid the urge to procrastinate until RXS achieves \$1 level, instead take action right now while the price level is at \$0.05 and establish yourself in this potential new venture. With or without experience in cryptocurrency Rexas Finance provides a different way for one to invest in the growing real estate sector of a global economy. Hurry up and do it now, and who could ever tell? In a couple of years, you might be patting yourself on the back for being in it at the right time, just as

many did when they joined Solana when it was an ICO. For more information about Rexas Finance (RXS) visit the links below: - Website: <https://rexas.com> - Win \$1 Million Giveaway: <https://bit.ly/Rexas1M> - Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> - Twitter/X: <https://x.com/rexasfinance> - Telegram: <https://t.me/rexasfinance> Disclaimer: TheNewsCrypto does not endorse any content on this page. Toncoin recently jumped 18% in just 72 hours, reaching \$5.42, while Solana remains bullish despite a \$24 million unstake event. Meanwhile, BlockDAG is quickly making a name for itself as the next potential crypto breakout. In a recent AMA, CEO Antony Turner revealed that 300 million BDAG coins will be available every month for early miners, presenting a significant opportunity for those ready to move quickly. This announcement follows BlockDAG's successful presale, which has raised \$75 million so far. Boosting the presale further the project launched its BDAG50 bonus code. The rush has already led to over 13.1 coins being sold in record time. Toncoin's 18% Price Surge: What's Next? Toncoin, the cryptocurrency tied to Telegram, saw a sharp price increase of 18% over 72 hours, hitting \$5.42. This surge came after Telegram CEO Pavel Durov's public address in France, sparking renewed interest in the token. Traders are closely watching a key resistance level at \$5.53. If Toncoin breaks through, it could push toward \$6.00. However, if it fails to break this barrier, consolidation around \$4.86 could be the likely outcome in the short term. Solana Remains Strong Despite \$24M Unstake Despite concerns over a wallet tied to the now-defunct FTX unstaking nearly \$24 million worth of SOL, Solana's bullish outlook continues. After 177,693 SOL was unstaked, fears of a potential selloff circulated. However, Solana has remained resilient, with the token rising 2.5% in the last 24 hours, reaching \$135.26. Community sentiment is still positive, with 77% of voters on CoinMarketCap showing optimism. Even with larger holdings from FTX/Alameda still staked, Solana's momentum appears steady. BlockDAG Launches Limited-Time BDAG50 Bonus Code BlockDAG is quickly gaining attention in the crypto world. Unlike many others, BlockDAG appears to have solved the balance between speed, security, and decentralization—an ongoing challenge for major players like Bitcoin and Ethereum. And this isn't just a theory. In just a few months, BlockDAG's presale raised over \$75 million, delivering a massive 1820% ROI to early adopters. During the recent AMA, CEO Antony Turner urged early adopters to jump in now to take advantage of the substantial mining rewards available. Why the rush? Mining rewards are at their highest in the project's early stages, but as more miners join and the available coins decrease, those rewards will diminish. With 300 million BDAG coins available per month for early miners, those who act quickly can maximize their returns before the reward pool begins to shrink. As the presale goes from strength the recently launched BDAG50 bonus code has boosted the presale pace further. The code will give a 50% bonus on all BlockDAG purchases till October 14th. The bonus code celebrates BlockDAG's successful Testnet launch and upcoming website and platform rebrand. On top of the immediate rewards, the long-term potential of BlockDAG is also drawing attention. Analysts predict a \$30 valuation by 2030. Given that BDAG is currently priced at just \$0.0192, early backers have the chance to see impressive returns in the coming years. It's no surprise that demand for BlockDAG's X Miner Series has surged. Over 12,000 miners have already been sold, bringing in over \$4.8 million, and the numbers keep rising. As more people get involved, competition for these mining rewards will only intensify. The message from the AMA is clear: the earlier you get involved, the greater the potential rewards. Could BlockDAG Be the Next Crypto to Break Out? While Toncoin's recent surge and Solana's steady bullish momentum have captured attention, BlockDAG's offering is hard to ignore. The opportunity to mine 300 million coins monthly in its early phase gives adopters a chance for significant returns before rewards start tapering off. With forecasts pointing to a \$30 price by 2030, BlockDAG is shaping up to be a strong contender for the next major crypto explosion. As competition heats up, those who act fast could stand to benefit the most. Learn About BlockDAG Act Now Before Prices Increase - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana shows signs of bullish reversal, aiming for \$150 and potentially \$169. - Rounding bottom pattern and double-bottom reversal evident in 4-hour chart. - Key resistance levels at \$149.32 and \$158.49, with support at \$130. Solana (SOL) finds itself at a pivotal juncture as the cryptocurrency market's broader recovery begins to decelerate. Despite this slowdown, underlying sentiment remains cautiously optimistic for the upcoming month, with Solana positioning itself for a potential breakout run. As Bitcoin and other top altcoins hover near crucial levels, all eyes are on SOL's ability to overcome key resistances and drive a bullish trend. The 4-hour chart reveals a compelling rounding-bottom reversal pattern, signaling a potential shift in Solana's price trajectory. This formation's neckline aligns with the 61.80% Fibonacci retracement level at \$158.49, presenting a significant hurdle for bulls to overcome. Adding weight to the bullish case, a golden crossover between the 50 and 200 exponential moving averages (EMAs) has materialized, with an impending bullish crossover between the 100 and 200 EMAs on the horizon. Solana forms double bottom reversal pattern Further bolstering the bullish narrative, a double-bottom reversal pattern has emerged within the \$140 to \$149 consolidation range. The neckline of this formation coincides with the 50% Fibonacci level at \$149.32, creating a confluent resistance zone that bulls must breach to confirm the reversal. Should Solana successfully overcome these barriers, price targets at the 78.60% and 100% Fibonacci levels (\$172 and \$192, respectively) come into focus. However, market participants must remain cognizant of potential downside risks. Failure to surpass the critical \$149 level could undermine the rounding-bottom reversal scenario, potentially leading to a retest of support around the 23.60% Fibonacci level near \$130. This support zone represents a crucial bulwark against deeper retracements. Zooming out to the daily timeframe, Solana's price action reveals a series of lower highs, forming a descending resistance line. Notable double-top reversals occurred near \$200 in March, \$183 in July, and \$159 in August. Despite these setbacks, the recent rounding reversal pattern suggests resilient bullish momentum. Since finding support in the \$117 demand zone, SOL has staged an impressive 18.50% recovery over the past 18 days.

- Solana price showed modest increase in the last 24 hours as per CMC data. - The Solana ecosystem's Solana Breakpoint saw widespread participation from the community. In the last 24 hours, the overall crypto market has taken a diversion from its recent bull run. Data from leading aggregators show mid-price dips in both leading cryptocurrencies and the overall market. However, the sector's daily trading volume managed to sustain its upward momentum. Meanwhile, the second largest altcoin, Solana, recorded a modest price increase of 2.27% over the past day. In the Asian morning hours of September 23, the token traded at \$147, after which it slid to an intraday low of \$142.13. However, following this, SOL attempted to recover its positive momentum and moved up to face resistance at the \$146 level before surpassing it. At the time of writing, the altcoin was trading at \$147 as per CMC data. Meanwhile, the token's daily trading volume surged by 9.40%. Solana, in the last few weeks, has not garnered market attention as investors remained focused on Bitcoin's intriguing activity. Additionally, SOL also had entered a consolidation phase at the \$134 level until the recent bull run. On the other hand, the Solana ecosystem witnessed several advancements during this time. Solana recently held the Solana Breakpoint event, which saw widespread participation from the community. Solana (SOL) Price Weekly Overview On inferring Solana's weekly price chart, the altcoin shows a 11.15% price increase over the last 7 days. At the beginning of the week, the token traded at the levels of \$131 and \$134. As the days progressed, Solana slid further to a weekly low of \$127.25. However, the altcoin took a bullish turn on September 20 and surpassed resistance at \$140 and \$142. Additionally, the token's short-term 9-day MA stands above the long-term 21-day MA indicating the current bull run. The recent price rally has also resulted in buying pressures among investors as highlighted by Solana's RSI standing at 57.73 as per TradingView data. Furthermore, the ecosystem, as aforementioned, saw several advancements in the past week. Notably, crypto-based travel platform Traval.com announced integrating Solana into the platform and rewarding users with the SOL token. Moreover, leading crypto exchange Coinbase also announced cbBTC integration with Solana. Highlighted Crypto News Today: Bybit Launches First Shariah-Compliant Crypto Islamic Account

Two of the largest cryptocurrencies, ADA and SOL, are currently witnessing a massive downward trend. It still makes sense to use these projects and deploy them, but now they are cast in the shade by a new upstart, Rexas Finance (RXS), which costs less than \$0.10 and has rapidly gained the attention of investors because of the prospects it bears. One analyst projects RXS to be bullish and could rise to as high as \$12 within the next five years, similar to what most who entered the Solana project in 2021 experienced. The Slow Motion of Solana and Cardano With its name becoming synonymous with instant transactions and lower fees, Solana has continued to enhance itself with new deployments like the Firedancer upgrade, which promises scalability enhancement. However, despite these advancements, the price action for SOL has been rather quiet. Trading at \$150 in September 2024, it is still far from its historical high. The same goes for Cardano (ADA), which has not experienced significant traction despite upgrades like the Leios Hard Fork and Voltaire. ADA is currently trading at approximately \$0.34, far from the bullish run envisioned by its investors. Both projects have commendable foundations but face strong competition from upcoming tokens like Rexas Finance, which offers new prospects and practicality. Rexas Finance (RXS): The \$12-bound Token Rexas Finance (RXS) targets the tokenization of Real World Assets (RWA), which include real estate properties and high-value items such as luxury collectibles. By offering sorely needed inclusiveness to these markets, including high-value properties and art, it absorbs institutional investors. Investors who previously thought, "Am not a multimillionaire investor; hence such a lucrative investment opportunity is closed for me," may change their minds with the availability of RXS tokens. Another reason that signifies the project's potential in the regular market is the presale results. Rexas Finance made history by raising \$1,400,001 in capital and selling 38 million tokens. The current presale price of \$0.05 is bound to appreciate as the project advances into other phases of development. Investors are rushing to this presale as they expect significant growth in the coming years. RXS is projected to reach \$12 by 2025, translating to 100x returns for early investors. Reasons Why Investors Are Changing Their Focus The gradual switch from well-performing tokens like Solana and Cardano to new ventures like Rexas Finance is driven by the quest for higher returns in the fast-developing market. Investing in Solana or Cardano is still good, but these tokens may no longer multiply as they did before due to rapidly changing market conditions. In contrast, Rexas Finance offers an opportunity to catch the early stages of a project with real-life use cases, placing it above tokens that mainly depend on market sentiment. Investors have not historically jumped at the chance to jump into projects embracing different concepts; however, that appears to be changing. With the growth of RWA tokenization, it will be impossible for Rexas Finance not to take a share of this market and grow fast just like Solana has grown over 10,000% in 2021. Rexas Finance To Hold A \$1 Million Giveaway To increase the demand for RXS tokens, especially during the presale period, Rexas Finance has recently announced a jaw-dropping giveaway of \$1 million. In this giveaway, 20 winners each obtain 50,000 USDT. New users will also be invited to the platform whose purpose is to enable average people to invest in real estate and other expensive assets such as luxury goods through the process of asset tokenization and trade them on the blockchain. To participate in the giveaway, the participants are required to log in to the official Rexas finance giveaway page and follow the instructions provided on the page. Such a giveaway demonstrates the intention of Rexas Finance, at the same time giving results in the soaring growth of the user community, and making RXS tokens look reasonable in the expanding RWA tokenization market. Conclusion For most markets such as Cardano (ADA) and Solana (SOL) growth has been harder than expected and their respective prices have faced multiple barriers. At the same time, Rexas Finance (RXS) presale is rapidly transforming into one of the hottest tokens. Its chart shows the potential to reach \$12. For investors looking for the next 100x opportunity, Rexas Finance could be the magic that multiplies their money in 2025. Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto market has been bullish for the last few weeks and according to some analysts, the next rally has kicked in. With Bitcoin touching the \$64K mark and settling at the support strong of \$60K, this can be a huge investment opportunity. Many cryptocurrencies can soar in 2024 but analysts believe that Bitgert's \$BRISE coin, Pepe Coin, and Solana are the most reliable ones. Bitgert's \$BRISE coin has given outstanding returns to its investors since its launch. But will it be able to leave behind the likes of Pepe Coin and Solana? Let us find out why Bitgert, Pepe Coin, and Solana could soar in 2024 and which coin we should choose. Solana vs Pepe Coin vs Bitgert Solana Solana is a high-performance blockchain platform built for a secure and rapid DeFi solution. With its introduction in 2020, Solana soon became popular as the Ethereum killer. Currently trading over \$125, Solana is a mid-cap token. With a transaction speed of over 65K TPS, it leaves behind Pepe coin with a great margin. Even the transaction fee Solana charges is \$0.01, making it faster and more economical when compared to Pepe Coin. Pepe Coin Pepe Coin is primarily inspired by the Pepe the Frog meme. Pepe Coin is popular in the meme community, which makes its use case limited when compared to full ecosystem blockchains like Solana and Bitgert. Pepe coin relies on Ethereum's transaction speed which is around 15 TPS. The Pepe coin is largely driven by community enthusiasts and speculative trading making it extremely volatile and less predictable. Bitgert Bitgert has become the first choice of investors and analysts alike. Bitgert works on the powerful layer-1 blockchain technology which uses the PoA (proof of authority) consensus mechanism. With the transaction speed of 100K TPS, Bitgert wins with a great margin. Even the transaction cost Bitgert charges is of no account when compared to Solana and Pepe Coin. With native capabilities like RWA marketplace, DEX, P2P Payment Gateway, and more Bitgert is way ahead of Solana and Pepe Coin as well. Bitgert's \$BRISE has shown remarkable potential with gains above 40,000% since its inception. Bitgert's \$BRISE will continue to rise in price due to its increased strategic partnerships and the most recent with XOOB and AtlasPad. In the past few weeks, Bitgert has added 4-5% in the market cap and 3-4% in pricing in the last 24 hours. Bitgert has robust fundamentals and strong growth potential, indicating over 200% increase in price in the near term. Conclusion Solana may be ahead in pricing when compared to Bitgert. The low transaction fee, high transaction speed, robust fundamentals and strong technological advances give Bitgert an edge over Solana and Pepe coins. So, if you have not invested in Bitgert yet, this is your chance to invest and see your portfolio soar. Buy \$BRISE on Bitgert website today. Visit bitgert.com Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. - The price has been facing brief selling pressure after climbing all the way to \$152 mark. - At the time of writing, SOL is trading at \$144.76, down 2.04% in the last 24 hours. The cryptocurrency market is always evolving. A major development recently took place with Solana (SOL). æSeeker,æ Solanaæ™s new Web3 mobile device, is poised to propel the network to the front of the digital era. A lot of people are talking about Solanaæ™s new Web3 mobile device, Seeker. It is believed that this gadget would greatly simplify the usage of decentralized applications (dApps). The technology allows for the integration of blockchain into mobile phones. The fact that Solana is making Web3 functionality easily accessible could pique the interest of both tech users and the general public. Brief Correction Underway Solana traders may breathe a sigh of relief for the time being, at least, since a death cross signal is no longer a possibility. It seemed like the 200-day and 50-day moving averages were going in the same direction. However, with the recent rebound it has been likely avoided. The death cross is usually a warning indicator that prices are about to fall much worse; however, Solana managed to dodge the catastrophe. At the time of writing, SOL is trading at \$144.76, down 2.04% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 2.93%. The price has been facing brief selling pressure after climbing all the way to \$152 mark. It recently broke the short-term support level at \$145. If the price manages to surge and stay above \$145 level, then it will likely re-test \$152 resistance level. Breaking above this level, will likely see price testing \$162 resistance level. However, if the price falls below \$141 level, then it will likely test \$130 support level.

Talk of Ripple ETFs and Solana ETFs has resurfaced as Grayscale prepares to launch a Ripple (XRP) Trust, and Bitwise CIO hints at preparations for Ripple ETFs at the firm. Meanwhile, ETFSwap (ETFS) is fortifying its ETF trading platform to help investors profitably trade the assets when they launch. ETFSwap (ETFS) Readies To Feature Ripple ETFs And Solana ETFs On Its Top-Notch Infrastructure The ETFSwap (ETFS) trading platform was created to provide investors and traders worldwide access to tokenized ETFs. The platform features all kinds of ETFs, including Spot Bitcoin and Spot Ethereum ETFs, and will eventually feature Ripple ETFs and Solana ETFs when they gain approval and are launched. ETFSwapæ™s (ETFS) collaboration with MiCA-compliant regulated investment banks allows ETFSwap (ETFS) to feature an exhaustive list of institutionally provided ETFs. This provision paves the way for ETFSwap (ETFS) to add more ETFs as they become available, so the platform will feature Ripple ETFs and Solana ETFs when they launch. This flexibility of choice helps investors hedge against losses by diversifying their portfolios across several relatively stable assets. Additionally, ETFSwapæ™s (ETFS) institutional connections allow investors to trade highly liquid institutional ETFs on a DeFi infrastructure, so they enjoy the perks of decentralization, such as transparency and security. Other DeFi benefits ETFSwap (ETFS) users enjoy are: 24/7 Market Access ETFSwap (ETFS) employs blockchain integration to give users 24/7 market coverage and access. This gives them incredible flexibility as they can place, edit, or close orders anytime and anywhere. True Borderless And Permissionless Trading ETFSwap (ETFS) eliminates the need for intermediaries or centralized exchanges and authorities as investors trade their preferred ETFs. This means investors do not need to complete KYC verification while signing up on the platform, and they can use ETFSwap (ETFS) from any location. Fully DeFi Mode Crypto Swaps ETFSwap (ETFS) offers a fully DeFi mode that allows investors and traders to swap Ripple (XRP), Solana (SOL), and all other cryptocurrencies directly on the platform without relying on centralized exchanges. This fosters transparency and gives users full control over their assets as they trade in a peer-to-peer environment. ETFSwap (ETFS) Equips Investors For Profitable Ripple ETFs And Solana ETFs Trading ETFSwap (ETFS) prepares traders and investors to trade Ripple ETFs and Solana ETFs profitably with its host of features and tools, which include: Advanced Trade Perpetuals ETFSwapæ™s (ETFS) perpetuals contracts help investors maximize their trading potential by multiplying their potential earnings by up to 10x. Meanwhile, efficient risk management measures mitigate the effects of adverse market dynamics on investorsæ™ capital. Access To Futures Trading ETFSwap (ETFS) features a suite of futures trading options, which allow traders and investors to speculate on ETFsæ™ price movements and make profits regardless of their direction. Additionally, futures and options trading on ETFSwap (ETFS) allows traders to multiply their potential earnings by up to 50x. Advanced Trading Tools ETFSwapæ™s (ETFS) advanced market-making algorithm tightens spreads and keeps slippage to the barest minimum so traders and investors always have optimal liquidity. The AI-powered ETF Screener and ETF Tracker use artificial intelligence to analyze vast market data and extract analytical insight to help investors make better-informed investment decisions. Conclusion As more crypto firms push for Solana ETFs and Ripple ETFs, and the SEC decides what to do with the proposals that will soon come streaming in, investors and traders can brace themselves by getting familiar with ETFSwap (ETFS). A good starting point is the ETFSwap (ETFS) token presale. The tokenæ™s tremendous profit potential has caught the eye of major investors who believe it will generate a 40,000 ROI. Use the code ETFS50 to gain a 50% discount and amass more tokens for maximum gains. For more information about the ETFS Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Osprey Funds is assisting the Solana meme coin team in launching the ETP in the US. - The team has also announced plans to launch the ETP before the year ends. Bonk Inu (BONK), a dog-themed meme coin and built on the Solana network, has now achieved a significant milestone in the world of cryptocurrency. The meme coin made history by announcing the debut of a BONK ETP in the United States, making it the first meme coin to do so. Market watchers in the cryptocurrency space are wondering whether the ETP launch would have a beneficial effect on the price of the asset in the future. The Bonk Inu (BONK) community is reportedly creating an ETP in the US, as reported at the most recent Solana Breakpoint, a multi-day event for developers and fans. The announcement went on to say that this is the very first move towards a BONK ETF. Long-term Prospects Looking Bright Osprey Funds, a firm located in New York, is assisting the Solana meme coin team in launching the ETP in the United States. The firm also assisted in the streamlining of one of the first Bitcoin ETFs and Solana Trust. The meme token community has also announced its plans to launch the ETP before the year ends. On the other hand, BONK is still the ticker, as stated in the statement. A tidal wave of confidence for the token has been triggered globally by preparations for a forthcoming ETP launch. Moreover, with the BONK ETP launch just around the corner, the meme coinæ™s long-term prospects are looking bright. To put it in perspective, the ETP launch is anticipated to pique the curiosity of more investors. Thus, leading to a fresh surge of capital into the tokenæ™s ecosystem. The assetæ™s long-term prospects have been further bolstered by the current price trend and the ETP launch. Many are keeping an eye on the currency in anticipation of any price changes. - Users may now take advantage of zero-fee transactions when booking travel by using the Solana network integration. - Additionally, user account wallets now support SOL, according to Travalala.com. Crypto-native travel platform Travalala.com, has said that it has extensively integrated the Solana network across the platform and will provide SOL travel rewards to users of its loyalty program. Following an AVA community vote, the integration will also see the deployment of AVAAæ™the token used to access the travel reward program on Travalala.com in conjunction with the AVA Foundationæ™deployed on Solana, making it the third network after Ethereum and BNB Chain where the AVA token may be accessible. Travel bookings utilizing assets on the Solana network, such as SOL itself and USDT, USDC, and more, are now possible for Solana users thanks to Travalala.comæ™s decision to offer support for the fourth-largest blockchain in the world by market capitalization. Travelers will soon be able to use the AVA Smart Program, the travel loyalty program accessible on Travalala.com, to get up to 10% of every booking back in SOL rewards as part of the extensive integration. As of right now, loyalty members may choose from a variety of travel reward alternatives based on their tier, including Bitcoin, AVA, and Travalala.com Travel Credits. SOL will only be the third reward token available inside the loyalty program. Additionally, user account wallets now support SOL, according to Travalala.com. Less than ten cryptocurrencies are supported natively by the account wallet, despite the fact that Travalala.com supports over 100 cryptocurrencies. Users may now take advantage of zero-fee transactions when booking travel by using the Solana network integration to make deposits and withdrawals of SOL, USDT, and USDC into their Travalala.com account. Juan Otero, CEO of Travalala.com stated: æThe Solana network has become one of the most-used blockchains due to its cost effectiveness and scalability. Not only is the amount of activity within the Solana ecosystem incredible, so is the creativity. As innovators at Travalala.com, the technologies that can be harnessed on the Solana network open significant avenues to build the next phase of travel.æ Beyond extending support for the Solana network and the soon-to-be SOL travel rewards, the connection goes beyond that. Travalala.com has pledged to embrace the Solana ecosystem and will develop products on the high throughput network to capitalize on Solanaæ™s cheap transaction costs and scalability. Going forward, Travalala.comæ™s development strategy will be centered on Solana, with the aim of developing products that increase the practical applications of the Solana ecosystem. The recent decision by Skyscanner to integrate Travalala.com, which makes its inventory of more than 2,200,000 hotels completely discoverable on Skyscanneræ™s platforms, is followed by Travalala.comæ™s integration with Solana. With this integration, Travalala.com became the first crypto-native travel platform to be included to Skyscanner, a website that receives 110 million monthly visitors and users complete 80 billion searches daily. Travalala.com, which was established in 2017, is the top crypto-native travel booking platform, including over 2,200,000+ properties across 230 countries, over 400,000 activities, and over 600 airlines worldwide. As an advocate for the use of cryptocurrencies, Travalala.com accepts more than 100 popular cryptocurrencies in addition to conventional payment options. For qualifying reservations booked on Travalala.com, Smart members may take advantage of extra savings and loyalty benefits in addition to the websiteæ™s amazing pricing via its Best Price Guarantee. Go to www.travalala.com to learn more about Travalala.com.

- Coinbase will launch its cbBTC token on Solana, enhancing DeFi activity on the blockchain. - The \$BONK ETP meme coin is entering the U.S. market, appealing to seasoned investors and newcomers. Hassan Ahmed, Country Director of Coinbase, announced at Solana Breakpoint 2024 held on September 20-21 in Singapore, that Coinbase plans to introduce its native cbBTC token to the Solana blockchain. This announcement has sparked excitement among crypto investors, as it signals a strategic expansion for the cbBTC token. Originally launched on the Ethereum network through Base, a Layer 2 scaling solution, cbBTC has gained traction among Bitcoin holders. The move to Solana could significantly enhance decentralized finance (DeFi) activity on this high-performance blockchain, which is renowned for its fast transaction speeds and low fees. As of September 19, 2024, data from Dune Analytics shows that the supply of cbBTC on Ethereum and Base stands at 1,090 and 879 respectively, totaling 1,969 tokens. This total supply is valued at approximately \$124.94 million. Notably, cbBTC is an ERC20 token that is backed 1:1 by Bitcoin held by Coinbase, ensuring its value stability. As of September 13, cbBTC reached a market cap of \$109M since its launch. The introduction of cbBTC on Solana not only expands its utility but also reflects Coinbaseæ™s commitment. To enhance the interoperability of digital assets across different blockchains. This initiative could attract more Bitcoin holders to explore DeFi opportunities, further integrating Bitcoin into the evolving crypto ecosystem. The launch date and additional details are yet to be revealed. Solana meme coin \$BONK ETP launches in the U.S The Solana meme coin \$BONK ETP is set to launch in the U.S. As a playful addition to the Solana ecosystem, \$BONK aims to tap into the growing trend of meme-based cryptocurrencies. This launch is expected to attract both seasoned investors and newcomers looking for fun and engaging investment opportunities. With Solanaæ™s fast transaction speeds and low fees, \$BONK ETP could further enhance the vibrant DeFi landscape, encouraging interaction and participation within the Solana community. Highlighted Crypto News Today: BingX Restores Withdrawals for Major Stolen Assets

The beauty of cryptocurrency is that almost anyone can make a fortune overnight, and usually, it all begins with predicting that something is going to be the next big thing before anyone else in the market does. Solana (SOL) is infamous for this æ what began as an unnoticed project in the blockchain realm has now grown into a colossus in the sector, netting those who invested in it early, incredible returns. That being said, for some who are late to the Solana party, there is little to worry about: there has been the development of a rival, which is a potential contender in financial terms to Solana. That rival is Rexas Finance (RXS). Currently trading under \$0.10, mediatory movements in the crypto space have seen its price fluctuate under its very low value making room for anyone who can invest the returns to be life-changing. Revolutionary Change in Rexas Finance (RXS) There is an early implication that Rexas Finance (RXS) and its protocols are going to offer stiff competition against Solana and hence, Iæ™m impressed by this. Currently, in presale, the token costs \$0.04 with a plan to rise to \$0.05 in the next stage. In the earlier days of Solanaæ™s development, projects investors believed were not going to prevail saw their pockets becoming deep as the value went up, and RXS is at a similar crossroads- underappreciated and discounted yet pregnant with opportunities. With these price increases, healthy underlying business, and increased usage of blockchain making numerous investors think it is time for Rexas Finance to take off, the chances just seem too bright. For those wishing to realize rapid and impressive profits, then this project offers the right opportunity. Key Catalysts for RXS Growth Rexas Finance (RXS) is in a comfortable position to compete favorably in the crypto space with great potential and several catalysts that offer growth. One of the most substantial of these growth resources is the Biomeos leadership tokenomics which seeks to incentivize early investors. At present, still in the presale phase, RXS price per unit is \$0.04 in the second stage currently with a prediction of increasing to \$0.05 in the third stage. This structure allows first-time investors to recoup their investments faster and also allows for even greater returns when the market is steady and grows further. The gradual increase in prices indicates the infant stage of RXS which is welcomed by new investors who want to make good use of its benefits. At the moment the platform has an active competition with a prize pool of 1 million dollars for the users and already has over 65,000 participants in it. Thanks to this user-propelled methodology users earn trust, loyalty, and excitement, and 20 lucky participants are set to receive \$50,000 USDT each. Such incentives serve to boost the appeal of RXS and this growth is rapidly transforming it into a major force in decentralized finance. Can Rexas Finance Make You Rich Enough to Quit Your 9-5 Job? There is always an investment risk as far as cryptocurrency investment is concerned due to its speculative nature but there are also opportunities that cannot be matched anywhere. Solana hardly existed for two years before everybody who invested in it stopped their 9-5 job. Similarly, due to Solanaæ™s recent market turbulence, Rexas Finance (RXS) has a similar growth curve with the right timing, right market, right opportunity, and right tokenomics. With its current price at less than a dollar and under \$0.10, early buyers might find themselves sitting on huge returns within a space of six months, stressing the ability to quit their 9-5 job if the returns come favorably. Yet, such steps should be carried out with the understanding that investments entail some level of risk. The nature of cryptocurrency is very volatile so even the best-growing projects can become recessionist. Nevertheless, it is still true

that for those who want to risk a little, Rexas Finance will provide an opportunity to do so, and in time some will obtain shares in the next big player in the cryptocurrency market. Conclusion Rexas Finance (RXS) is asserting itself as a potential competitor to Solana (SOL) at this point permitting investors to enter at only \$0.04. Based on the right circumstances in the market, even early investors may find themselves resigning from their 9-5 jobs within 6 months of the project. TheNewsCrypto recommends our readers to make decisions based on their own research.

The crypto market has seen some exciting moves recently. Pepe Coin (PEPE) is eyeing a 196% price target amid fluctuating market conditions. Meanwhile, Solana Foundation’s backing of a \$100M DePIN fund reinforces its position in decentralised infrastructure. While these projects are gaining attention, BlockDAG is making an even bigger splash with its recently launched Testnet, allowing developers to mint their BDAG coins using the Blockchain Faucet and transfer them via MetaMask. The Testnet has triggered increased momentum, with experts predicting BDAG could hit \$20 by 2027, offering up to 20,000x ROI potential. Pepe Coin (PEPE) Price Targets 196%: Is it Achievable? Pepe Coin (PEPE) has set an ambitious 196% price target. This meme coin has seen volatility, with price fluctuations throughout August and early September. Despite the recent flat market movement, optimism is growing due to a positive funding rate. However, caution remains, as the coin’s open interest has stayed flat at around \$79 million, indicating hesitation among investors. While the bullish setup known as the ‘falling wedge’ hints at a possible breakout, smaller retail investors are holding back, reflecting uncertainty in the market. If PEPE fails to break through key resistance levels, the coin could face another round of selling pressure. Solana Foundation Backs \$100 Million for Decentralised Projects Solana Foundation continues to support innovative blockchain projects, strengthening its place in the crypto industry. Recently, it backed a \$100 million fund focused on decentralised physical infrastructure networks (DePIN). DePIN technology allows projects to operate without owning or managing physical equipment, streamlining operations and cutting costs. While this initiative shows promise, there are concerns about scalability and how effectively these projects can be implemented. Some analysts suggest that the foundation’s rapid growth may lead to overextension, risking long-term sustainability. Excitement Builds as BlockDAG Testnet Lets Developers Mint BDAG Coins BlockDAG’s Testnet launch is creating excitement among blockchain developers. This marks a significant step for the project, as developers can now mint BDAG coins via the Blockchain Faucet. The Testnet allows BlockDAG holders to transfer the purchased BDAG coins seamlessly using MetaMask. For developers, this hands-on opportunity is invaluable. It provides a real-world glimpse into BlockDAG’s capabilities, sparking curiosity and drawing market attention. Only BDAG holders with 7,500 or more coins can migrate these coins from the devnet to the Testnet. This adds credibility and technical robustness to BlockDAG, giving it an edge over other blockchain projects. The ability to deploy smart contracts, mint NFTs, and stake coins further reinforces BlockDAG’s utility. For BDAG holders, this is a moment of validation, as it shows the project’s technical strength. This layer 1 blockchain is also making a mark with almost \$73.5 million in presale. BDAG coins have already surged in price by 1680%, now leading experts to predict it could hit \$20 by 2027, offering a 20,000x ROI potential to early supporters. So, with each batch seeing a remarkable price rise, BlockDAG’s 22nd batch is now about to be sold out, which will lead to a rise in price. Now is the ideal time to catch the opportunity before it goes out of reach. Final Say Pepe Coin (PEPE) is eyeing a 196% price target, and Solana Foundation is backing a \$100 million fund. BlockDAG is emerging as the standout opportunity. Its Testnet launch has sparked significant interest, allowing developers to mint BDAG coins and boosting excitement around its presale, which has already raised almost \$73.5 million. With a projected 20,000x ROI, BlockDAG offers a compelling reason to buy BDAG coins now. As other projects navigate uncertainty, BlockDAG’s momentum positions it as the best crypto to buy, making it an attractive option for those looking to maximize their returns. Act Now Before Prices Increase: - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockdagnetwork> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. - SOL trades above 20-day EMA and 50-day SMA, signaling strong upward momentum. - Announcement of Seeker phone boosts market sentiment and SOL price. - Price targets: potential rise to \$186.62 if \$160.15 resistance broken, or drop to \$131.47 if bearish trend emerges. Solana (SOL) finds itself in a potentially bullish position as it trades above two crucial moving averages, setting the stage for a possible breakout above the \$160 resistance level. This positive price action comes in the wake of exciting developments within the Solana ecosystem, particularly the announcement of the network’s second phone, Seeker. During the Token2049 event on September 19, Solana Labs unveiled plans for Seeker, slated for launch in 2025. Emmett Hollyer, Solana’s General Manager, emphasized that this new mobile device would address criticisms faced by its predecessor, Saga. The market’s enthusiastic response to this announcement has propelled SOL’s price above both its 20-day exponential moving average (EMA) and 50-day simple moving average (SMA). Solana shows strong short term momentum The 20-day EMA, a short-term indicator highly responsive to price fluctuations, currently sits below SOL’s trading price. This positioning signals robust short-term momentum, suggesting increased accumulation as buyers assert control over the market. Concurrently, SOL’s position above the 50-day SMA, a longer-term trend indicator, points to a sustained uptrend. This alignment of both short and long-term bullish signals has caught the attention of traders, potentially triggering a shift from short to long positions. Evidence of this sentiment shift can be seen in SOL’s aggregated funding rate, which has climbed to its highest level in nearly a month. The current funding rate of 0.0098% indicates a growing preference for long positions in Solana’s futures market. Further supporting the bullish narrative, Solana’s Chaikin Money Flow (CMF) has reached 0.26, its highest point since March. This elevated CMF reading suggests that the ongoing price rally is backed by genuine demand rather than mere speculation, signaling significant capital inflow into the SOL market. Looking ahead, if the current bullish momentum persists, Solana’s price could potentially breach the \$160.15 resistance level. A successful retest of this threshold could pave the way for a push towards \$186.62, representing a significant milestone in SOL’s recovery.

- Frankendancer launched on Solana mainnet, enhancing network performance. - Firedancer is currently on testnet, progressing towards full release. Jump Crypto’s much-anticipated validator client, ‘Frankendancer,’ has been successfully launched on Solana’s mainnet, as announced by Chief Science Officer Kevin Bowers during the Solana Breakpoint event in Singapore. Frankendancer is a prototype of Firedancer, a second independent validator client being developed by Jump Crypto to enhance Solana’s network performance and resilience. The launch follows the introduction of Agave, another validator client from the development firm Anza. It went live on Solana’s mainnet in August. Bowers emphasized the importance of having two independent validators for improved network redundancy, increased capacity, and reduced costs. ‘Performance is a prerequisite for reduced costs and increased capacity,’ he explained. Also, added that Agave’s success demonstrated the potential of these upgrades. Moreover, Bowers highlighted the significance of the Frankendancer launch, comparing it to turning a country road into an interstate highway. He called the development a ‘consumer science equivalent of civil engineering,’ reflecting the complexity. And potential impact of Firedancer on Solana’s infrastructure. In his keynote speech, Bowers also announced that Firedancer is currently running on the testnet, marking a significant step toward its full release. While no specific date for the Firedancer mainnet launch was revealed, its current viability on testnet signals the project’s progression toward completion. Agave To Release New Version Agave, the first independent validator client on Solana, has announced plans to release its v2.0 on Solana Mainnet-Beta in the weeks following Breakpoint 2024. This update includes major changes, including the removal of certain API endpoints, to improve performance. The unveiling of these validator clients represents a moment for Solana. The community thinks that Solana’s ambition to enhance the network’s stability, scalability, and overall performance, underscores the blockchain’s ambitions for long-term growth. Meanwhile, the Solana native token SOL is trading at \$150.68 with an 8% surge in the past 24 hours. And the trading volume is up 11% in the same timeline. Highlighted News Of The Day Arthur Hayes Moves \$1.26M in PENDLE as Token Hits 8-Day High

- Solana (SOL) has surpassed the \$150 zone, showing a 13% increase in the last 24 hours. - Jupiter Exchange has acquired SolanaFM, a data explorer, and Coinhall, a trading aggregator, to improve its data and infrastructure. The price of Solana’s native cryptocurrency, SOL, has surged by 13.16% in the past 24 hours, crossing the \$150 zone, crossing the \$150 zone, a level it struggled to breach for nearly 25 days. At the time of writing, SOL is priced at \$150.84 with a market cap of \$70 billion. Additionally, the daily trading volume of Solana has climbed over 10% to \$3.27 billion. Currently SOL price eye at the breakout above the \$160 zone. This upswing in SOL comes after Jupiter Exchange announced multiple strategic acquisitions during the 2024 Solana Breakpoint Conference. Jupiter Exchange acquired SolanaFM and Coinhall, two significant players in the Solana ecosystem. This move is expected to enhance Jupiter’s data and infrastructure capabilities, which will benefit its users with real-time insights. Jupiter Exchange Expands with Key Acquisitions and New Features Jupiter Exchange, one of the leading decentralized exchanges (DEX) on the Solana network, aims to leverage these acquisitions to expand its market presence. SolanaFM, a data explorer that raised \$4.5 million from SBI Group in 2022, will help users navigate Solana’s vast data landscape more effectively. In addition, Jupiter has plans to roll out Jupiter Mobile, a mobile app developed in collaboration with MoonPay. This app will enable seamless transactions using Apple and Google Pay without any platform fees, making it easier for new users to join the Solana ecosystem. Other exciting updates include the launch of Ape.Pro, an upgrade to its memecoin trading platform, and the introduction of Metropolis, a comprehensive API platform for developers. Jupiter’s own token has also seen a positive price jump. At the time of writing, the JUP price stood at \$0.8716, marking a 10% rise over the last 24 hours. This surge has positioned Jupiter as one of the top-performing tokens, with a trading volume exceeding \$126 million in the past day. Moreover, Jupiter has also acquired Ultimate Wallet, a self-custody crypto wallet firm, earlier this week. This addition enhances user security and convenience within the Solana ecosystem. The blockchain storage layer Xandem has announced that on September 20, 2024, it would make public its plan for growing Solana storage at Breakpoint 2024. Xandem will also formally announce the launch of the XAND token and provide information about its new storage-enabled liquid staking program at the prestigious Solana conference in Singapore. Xandem’s technology is intended to get over the drawbacks of Solana’s present storage approach and provide dapps access to almost infinite storage, enabling them to grow. If Solana were a ‘world computer,’ it’s ‘RAM’ would be its accounts. At Breakpoint 2024, Xandem will present their plan to complete the missing component of a full-fledged world computer ‘the ‘hard drive’ by using their scalable storage layer. A Cambrian Explosion of storage-enabled dapps is made possible by this discovery. ‘Xandem buckets,’ an exabyte+ scalable file system embedded directly into Solana RPC nodes, are introduced via the smart contract native storage layer. A decentralized network including hundreds of thousands of storage provider nodes (pNodes) will handle storage offloading, under the guidance of Solana validators with Xandem enabled. pNodes, validators, and liquid stakers will all benefit further from highly dynamic fee markets in SOL, which are intended to maximize storage profitability and efficiency. Tommy Johnson, early Solana builder, co-founder, and lead engineer at Armada stated: ‘A low-cost, decentralized storage solution will drastically expand the application landscape. It can unlock a new revenue stream for SOL validators and stakers. The Xandem solution will have an enormous impact on the growth of the Solana ecosystem.’ At Breakpoint 2024, further information on Xandem’s Solana scalability solution will be revealed. Furthermore, Xandem intends to use the occasion to introduce its storage-capable liquid staking platform. The platform, which is slated to launch on October 29, will collect future Xandem storage fees from xandSOL stakers. More information is available at <https://xandem.network>. Early adopters who stake with Xandem will be eligible for increased incentives of up to 10x. As a sponsor of the event, the Xandem team will have a booth at Solana Breakpoint 2024 in Singapore, where community members can get more information about important projects including the XAND token, liquid staking pool, and upcoming airdrops. October 8 is the date of the first airdrop snapshot, and October 29 is the debut date for the XAND token. In order to improve Solana’s programming model, Xandem will provide new storage primitives that will address the shortcomings of the present ‘account’ storage mechanism, which hasn’t been able to retain more than a few gigabytes per dapp. These restrictions pose a danger to the development of web3 apps on Solana. With over 4B transactions done on its community-run devnet, Xandem Labs, the principal developer of Xandem, has garnered substantial interest from Solana’s building community and funded \$2.8M to pursue its scaling solution. Xandem will preserve Solana’s decentralization and security while supporting a new generation of scalable web3 dapps. The goal of web3 company Xandem Labs is to build Solana’s scalable storage layer. Xandem, which is expected to debut its pNode network in early 2025, has already raised \$2.8 million from its community and is a key contributor to the world’s first storage-enabled liquid staking platform run by the XAND DAO.

- Solana’s native crypto SOL increased over 9.45%, rising from \$127 to \$139. - Solana has introduced its upcoming smartphone, the ‘Seeker,’ set to launch in 2025, featuring upgraded hardware. Today, Solana’s native token, SOL, displayed a significant price increase of over 9.45%, climbing from a low of \$127 to a high of \$139. This rally comes amid an exciting announcement from Solana Mobile, a subsidiary of Solana Labs, regarding the upcoming launch of their second crypto-focused smartphone, the ‘Seeker.’ ‘Solana Mobile unveils its second ‘crypto smartphone,’ ‘Solana Seeker,’ after surpassing 140K presales across 57 countries. ‘Solana’s new phone, expected to ship by mid-2025,’ gained traction following ‘memecoin airdrops that briefly covered its cost.’ ‘pic.twitter.com/5adX74qsX5’ TheNewsCrypto (@TheNewsCrypto) September 19, 2024 The new Solana-based mobile is set for release in 2025, with new upgrades in hardware, including an enhanced display, improved battery life, and better camera capabilities. The Seeker mobile has already grabbed considerable interest with over 140,000 presales across 57 countries. As users increasingly look for ways to access and utilize their digital assets seamlessly, the introduction of hardware like the Seeker could play a crucial role in cryptocurrency adoption. Further, analysts suggest that the combination of a solid product launch and the growing acceptance of cryptocurrencies could lead to sustained growth for SOL in the coming months. Current Market Overview and Technical Analysis of SOL At the time of writing, SOL traded at \$139.28, with a market cap of about \$64.97 billion. Additionally, the daily trading volume has surged by over 63%, reaching \$2.95 billion,

indicating heightened investor activity. According to the Solana price actions, the Chaikin Money Flow (CMF) stands at 0.18. This reflects strong buying interest and suggests that buyers are dominating the market. This positive momentum is further supported by the MACD, which shows a value of 0.63. This value indicating strong buying activity as it remains above the signal line of -0.34. Further, the cryptocurrency price is above the 9-day and 21-day MA. This indicates a strong upward trend, suggesting continued bullish momentum for the token. While analyzing the SOL/USD 4-hour chart, the altcoin is facing local resistance at \$145. This is a level it must get over to maintain an upward trajectory. Given the encouraging technical signals, a breakthrough above this resistance appears likely to lead SOL toward targets of \$157 and the key level of \$170. However, SOL previously ranged between \$183 and \$150, but it is currently consolidating below the \$150 mark.

In very audacious anticipation, Wall Street analysts have prepared a throne for Rexas Finance (RXS), an innovative real-world asset (RWA) tokenization platform, with a 7,500% survival capacity. The vision of Rexas Finance is such that it dwarfs even the key players of the present blockchain economy, including Solana and Cardano, in the next bull run. This is because Rexas Finance is already attracting both retail and institutional investors due to its disruptive potential as well as recent presale success. The first presale stage of the token, which provided RXS tokens at a price of a little \$0.03, was completed in less than three days with a total fund that exceeded 200,000 dollars. The rapid sellout of the transaction indicates the growing enthusiasm of investors towards blockchain technologies with real use cases, especially the emerging RWA tokenization market. What is RWA Tokenization? RWA tokenization fundamentally means turning something real; real estate, art, commodities, or any asset that has tangible value, and turning it into a digital token on a blockchain. Tokens stand for separate rights of ownership to (or use of) some tangibles, which can be as easily traded, bought, or sold as cryptocurrencies. Rexas Finance is taking the lead in this sector by facilitating the purchasing of valuable assets by ordinary investors. The development of blockchain technology makes it feasible to purchase properties on the platform from any position across the globe. Most importantly, it does not require the investors to acquire full ownership of the real estate, rather, they may acquire parts of the real estate that are proportionally equivalent to the amount which the investor is willing to commit. This enables anyone to possess assets, hence even the property market, which not many could afford before, has opportunities to be accessed. Having a Good Presale and Gaining the Enthusiasm of Potential Investors Every presale stage always ends in a winning vote and the same undefined feeling conversation regarding Rexas Finance's investor mood goes. That it was done in less than three days is an endorsement of the tremendous enthusiasm that people have for this project. Costing \$0.03 per token, the early investors were able to envisage great profit as the platform tackles major issues in the real estate industry, including liquidity, accessibility, and high entry costs. Rexas Finance's model is rather interesting as it solves a particular problem that is present in societies. Traditional real estate investments usually may require too much capital and are accompanied by high transactional costs. With Rexas Finance, even a small investor can buy a slice of a property, so they do not have to wait until they raise millions of dollars to diversify their portfolio. Why Investors Are Rushing In Several reasons can explain why there is a rush to procure Rexas Finance: Global Real Estate Access: Enhanced accessibility of the platform is perhaps the most attractive feature for the users because they can now invest in any piece of real estate available on the globe. Rexas Finance's tokenization platform enables users to invest in real estate located anywhere in the world without leaving their homes, whether a property in New York or Tokyo. Any use of blockchain supports the transparent and verifiable nature of various transactions, thus reassuring the investors. Dismissing the Traditional Way of Investing: The days when people hoard large amounts of money to buy real estate are long gone. At Rexas Finance, there is fractional ownership, which allows one to buy a small portion of a property. This opens the avenue for even small-scale investors who, after growing tired of stocks, wish to invest in real estate by investing a few hundred dollars, thereby making portfolio diversification easy for them. Liquidity and Flexibility: The stated objectives of real estate investment primarily include long-term capital appreciation with rental cash flows; however, one of the main disadvantages of this approach is the liquidity restriction. Investing in real estate, in most cases, is for the longer term. The exception comes when there is a need to sell the property, as usually, it is time-consuming. However, Rexas Finance allows real estate to be bought and sold as if it were a share or a cryptocurrency by the method of asset tokenization. This is what the real estate market has been missing - liquidity. Blockchain Technology in Action: Rexas Finance is not the next altcoin in the market; rather, it is a cutting-edge solution harnessed on this nonperforming asset. It addresses the needs of genuine investors and provides an easy, clear, and effective way of putting funds into physical properties. Such uniqueness of use makes Rexas Finance stand out among various altcoins in the market and therefore prepares it for exponential growth within the coming years. Conclusion In the competition among the giants of the blockchain market such as Solana and Cardano, Rexas Finance enters as a new player focused on providing a useful purpose within the sphere of crypto. Its innovative concept of RWA tokenization and the successful presale, on the other hand, the potential to widen the real estate investing market are essential elements that make it a desirable investment. The central and dealing which, according to Wall Street analysts, may expand by 7500%, RXS will no doubt be one of the loudest success stories in the upcoming bull market. If you are experienced in cryptocurrency trading or if you are just entering the market, Rexas Finance is very likely to give you the possibility to make investments in the promising future of asset tokenization. Rexas Finance is allowing such a new world of investment, global and decentralized nursing the comfort of owning real estate from anywhere and at any implementation barrier. For more information about Rexas Finance (RXS) visit the links below: Website: <https://rexas.com> Whitepaper: <https://rexas.com/rexas-whitepaper.pdf> Twitter/X: <https://x.com/rexasfinance> Telegram: <https://t.me/rexasfinance>

- The price found support at the \$121 mark and has had a brief rebound ever since. - At the time of writing, SOL is trading at \$134.07, down 2.06% in the last 24 hours. Using the cross-chain technology developed by the Wormhole Foundation, Worldcoin has announced the introduction of World ID integration for Solana. World ID now has even more possibilities for app developers thanks to the integration with Solana. Founder Anatoly Yakovenko of Solana made an unexpected reference to Satoshi in a recent tweet, stating that Solana is a Bitcoin L2 supported but not backed by Satoshi. Perhaps the Solana creator is alluding to a link between the two blockchains, or he is trying to say that Bitcoin is an inspiration for Solana's architecture. A -break-through moment and a surge in users have occurred on the Solana network after the blockchain implemented liquid staking. Bybit, a prominent cryptocurrency exchange, recently released a report claiming that the liquid-staked SOL will attract large numbers of users and speed up the process of retail users joining the ecosystem. Bears in Control There is mounting adverse sentiment for Solana (SOL), and the market activity suggests a possible drop. At the time of writing, SOL is trading at \$134.07, down 2.06% in the last 24 hours as per data from CMC. Moreover, the trading volume is down by 4.47%. The price found support at the \$121 mark and has had a brief rebound ever since. However, the price failed to clear above the \$140 mark recently and has been facing bearish pressure. In the near future, we may see Solana prices rise to the \$159 to \$163 region if they manage to break over the \$140 barrier and stay there. This would likely indicate the beginning of a bullish trend. Conversely, if the price falls below \$129 level, then it will likely retest \$121 support level. Breaking below this level, will likely see price testing \$110 support level.

Solana has long been the golden child of the blockchain world, dazzling developers and investors with its swift transaction speeds, impressive scalability, and cost-efficient operations. But as the blockchain universe keeps expanding with a slew of new contenders, BlockDAG is stepping up, hinting at a potential to offer 30,000x ROI for its holders. BlockDAG is blending top-tier technology with tight security and intuitive features, positioning itself as the new darling for tech developers and everyday users. Let's unpack the BlockDAG vs Solana showdown, examining why BlockDAG might just dethrone Solana and why it's becoming the platform of choice for meme coin ventures and other innovative blockchain projects. Speed & Scalability Face-off: BlockDAG vs. Solana Solana's claim to fame has been its ability to blitz through up to 65,000 transactions per second (TPS), making it the go-to infrastructure for decentralized apps (dApps) and decentralized finance (DeFi) projects. However, Solana's meteoric rise hasn't been without its hiccups - its network stability has been tested, with several outages sparking concerns over its reliability for the long haul. On the flip side, BlockDAG introduces a novel scalability solution. By adopting a Directed Acyclic Graph (DAG) architecture, it processes transactions in parallel, boasting what could be considered unlimited scalability. As more users join, BlockDAG is designed to handle the surge without a hitch, maintaining both speed and stability. Unlike Solana, BlockDAG's design smartly sidesteps any bottlenecks, ensuring that it holds up under any load. This robust infrastructure positions BlockDAG as a more reliable and sustainable platform going forward. Meme Coin Mastery: Why BlockDAG Outpaces Solana Meme coins have exploded onto the scene, captivating developers who rush to platforms known for quick and cheap transactions. Solana has been a hotspot for such activities. Yet, BlockDAG is carving out a niche here too, offering a slew of advantages that might make it the new favorite for developers. With BlockDAG's advanced low-code/no-code platforms, developers can whip up unique tokens with ease - no heavy coding required. This contrasts sharply with Solana's more technical demands, offering a breezier, more accessible route for creative developers aiming to launch the next big meme coin. Forecasting the Future: Solana and BlockDAG's Price Trajectory While Solana has hit highs of \$260, recent market tremors have raised eyebrows about its long-term standing. Meanwhile, BlockDAG's presale fireworks - with a cool \$72.5 million raised - signal it as a formidable player on the blockchain field. Market pundits are watching BDAG, BlockDAG's native coin, predicting it might turn out to be one of the few crypto assets that can return profits in the tune of 20,000x to 30,000x, given the platform's innovative edge and growing popularity, especially among developers and users keen on meme coins and dApps. Solana, currently around \$160, is at a crossroads, facing stiff resistance levels. Analysts whisper about potential dips unless it can keep its momentum. In contrast, BlockDAG's trajectory looks promising, buoyed by its technological prowess and presale success. Is BlockDAG the 'Solana Killer' Everyone's Talking About? Solana has indeed sculpted its mark on the blockchain landscape, but it's not without its flaws. Network issues, a hint of centralization, and complex tech have cracked open the door for a challenger. Enter BlockDAG - with its scalable, secure, and user-friendly approach, it's poised to possibly knock Solana off its perch. BlockDAG not only offers a robust platform for meme coins and other blockchain innovations but does so with an ease that makes it especially appealing for developers. Coupled with a burgeoning community and a vibrant start in presales, BlockDAG's future looks bright. For those hunting for a blockchain solution that doesn't just keep up but sets the pace, BlockDAG could well be your answer. Meme coins connected to large platforms like Solana (SOL) and Tron (TRX) have had declining returns in recent months, which analysts think will cause them to be no top selection for significant earnings in 2024. On the other hand, initiatives with practical value like Rexas Finance (RXS) are attracting both professionals and investors. Rexas Finance is developing as a better investment possibility as Real-World Asset (RWA) tokenization grows and leaves meme coins behind. Why Tron Meme Coins and Solana Are No Longer Appealing Unstable Demand for Markets Meme coins like Solana's Bonk (BONK) and Tron's Sundog (SUNDOG) flourished on speculative frenzy and community-driven trends. These coins have, nevertheless, battled to keep strong upward price momentum throughout time. Meme currencies have become more erratic without a clear use case to enable long-term expansion, but they usually see brief price bubbles driven by social media or celebrity endorsements. Many have doubt about their future profitability since their incapacity to sustain constant investor interest in a gloomy environment. Hype versus Substance Though somewhat common, meme coins are infamous for their extreme speculative nature. Investors are turning away from speculation in 2024 and towards initiatives with real-world value that offer concrete worth. Little more than entertainment value, Solana and Tron's meme coins restrict their capacity to maintain market demand. Meme coins are riskier decisions since their basis is lacking to support long-term expansion as market conditions get more erratic. The Emergence of Rexas Finance: a Powerful Substitute By contrast, Rexas Finance (RXS) is quickly becoming well-known for its emphasis on Real-World Asset (RWA) tokenization. Rexas Finance attracts investors with its practical use and real-world applications that provide the token's worth outside of speculation. Tokenize Real-World Assets (RWA) Rexas Finance emphasises tokenizing real-world assets such as real estate, fine art, and commodities, unlike meme currencies. By means of blockchain technology, RXS provides fractional ownership of valuable assets, therefore enabling a wider spectrum of investors access to them. This strategy is transforming the purchase, selling, and trading of assets so that even small investors can engage in markets once inaccessible. Over the next several years, the worldwide RWA tokenization market is predicted to reach trillion-dollar size. Rexas Finance leads this technological revolution by letting asset transactions be more transparent and liquid. Unlike meme coins, whose value is usually connected to speculative trading rather than intrinsic merit, this pragmatic use case distinguishes RXS. Excellent Presale Performance Rexas Finance indicated great investor confidence by raising over \$300,000 in its first presale stage. Priced under \$0.05, RXS tokens provide a reasonable starting place for investors wishing to enter early before the token's expected increase during the present Stage 2 of the presale. Once RXS gets listed on main exchanges, early adopters could experience 6x returns, a far more exciting prospect than many memecoins, which have stagnated. Institutional Interest Institutional interest is one of the main causes Rexas Finance is picking steam from. Rexas Finance provides a link between actual assets and blockchain technologies as more conventional financial institutions investigate blockchain and asset tokenization. Institutions' participation is fuelling demand for RXS tokens, therefore reinforcing its status as a fierce rival to initiatives like Solana and Tron, which have largely aimed to retail investors in their meme currency efforts. Why Rexas Finance Will Outpace MemeCoins in Q4 2024 Real-world Use and Utility Meme coins like Bonk and Sundog lack the real-world value required for steady increase over time. Conversely, Rexas Finance offers a defined use case with concrete applications in sectors such commodities and real estate. RXS is poised to take a bigger market share as investors search for initiatives providing more than simply speculative promise. Increasing RWA Market Driven by growing demand from both institutional and individual investors who see the promise of fractional ownership and liquidity in high-value markets, the RWA tokenization industry is expected to explode. Rexas Finance is positioned strategically to lead this industry; hence, it is a perfect investment for people looking for consistent returns in 2024 and forward. Reduced Risk, Increased Profit Rexas Finance provides a lower-risk starting point than the highly volatile meme coins with its present presale price under \$0.05. For those wishing to profit from the rising RWA tokenization trend, the possibility of 6x returns offers an appealing offer. RXS is set to offer more consistent and higher

Long-term returns as meme currencies continue to see market swings. Conclusion: Rexas Finance (RXS) Is the Top Choice for 2024 Although Solana (SOL) and Tron (TRX) are still powerful in the larger blockchain scene, their related meme coins are no longer among the top choices for notable earnings in 2024. Rather, institutional and individual investors are turning to initiatives like Rexas Finance with its real-world asset tokenization approach and robust market performance instead. Rexas Finance is a very interesting investment with real-world use and development potential based on its early-stage presale success and possibility for 6x gains. Investors seeking more than just speculative profit should monitor RXS closely as it strives to control the RWA tokenization market and maybe surpass meme currencies going forward. In the volatile world of cryptocurrencies, the moves of big players can sometimes provide information on the coming changes. Recently, one of the Solana (SOL) whales that has a significant amount worth \$90 million worth of SOL bags- sold some of it to buy a new and fast-growing token called Rexas Finance (RXS). This has allowed members of the crypto community to pay attention to Rexas Finance since it has now appeared able to rival Cardano ADA in the ranks of the top cryptocurrencies. But what is so appealing about Rexas Finance that has captured the interest of this Solana whale and many others? What is Rexas Finance (RXS)? Rexas Finance is disrupting the global ecosystem by innovating on the tokenization of real-world assets RWAs. Tokenization refers to digitizing reality by creating or converting into a digital object economic rights such as ownership of property or valuables like precious metals commodities or artistic work. This enables investors to purchase a share in the asset and deal in more assets than they would have without such assets which were not common before. Rexas Finance removes cross-border investment problems related to the illiquid and traditional real estate markets and opens a new world of opportunities to investors. One can either wish to buy a piece in real estate or invest in a prestigious work of art. There are no such restrictions with REXAS, which is very reassuring, which is why many say that it will press readership over such main ones as Cardano (ADA). Real-World Asset Tokenization: A Market Revolution The capital real estate market is the most considerable holder of the wealth globally over \$379 Trillion with estimation projecting the commodities market to reach \$121 Trillion by 2024. These markets are huge, but compared to the population of society, they are occupied mainly by a situation of a few ultra wealthy and institutions. This is where Rexas Finance comes in, using a full or a fractional ownership concept people around the world are able to access these markets where in the past only a few affluent individuals, A restricted number of institutions had access to. For instance, you can find yourself investing in a multi up to multi-billion dollars skyscraper without the requirement of investing millions. With Rexas Finance, investment in different types of Real Estate is made easier as the user is able to buy shares of such entities. The physical gold can also be bought for a small amount, in shares, just as any commodity can be bought and traded by external investors without actually owning the physical asset. This innovation transforms the state of affairs completely. It makes it possible to invest in opportunities which were not investable and is set to provide the liquid market for all and sundry. It is apparent that the market for tokenized assets is expansive thanks to Rexas Finance. Rexas Token Builder: A tool for all to convert their assets into Tokens. The Token Builder is one of the most notable features of Rexas Finance. If you need to use it, it is very simple, since you don't have to be technically savvy to follow the procedures. A real estate developer, an artist or a business person, if you have assets, you can use the Rexas platform to tokenize your assets and take them to the blockchain. In the case of Rexas Token Builder, the asset holder has the ability to create and offer for sale the tokens that the holder custom makes. These tokens represent interests in physical assets and can also be accommodated within the framework of the blockchain for trades to be made to promote liquidity among the investors across the globe. These opportunities are beneficial to creators and entrepreneurs who want to leverage blockchain technology without many technical skills. Rexas Launchpad: Fundraising for Tokenized Projects Rexas Finance also goes beyond just tokenization and has also developed the Rexas Launchpad from which creators and businesses raise funds for tokenization projects. This feature makes it easier for entrepreneurial minded individuals to get global investors and be able to realize their projects by use of the tokenization model. For instance, a property developer might sell shares in a new property development via tokenization to raise funds to develop the property. Investors get the chances of getting their money in high value within a short period while the creators and businesses are able to get money that is necessary for them to expand. This is where the Rexas Launchpad comes in and takes a good amount of the headache away from sourcing funds for tokenized endeavours. Rexas Estate: Real Estate Investment Change of Paradigm Rexas Estate is a particular segment of Rexas Finance's ecosystem that specializes in the real estate tokenization industry. Through the platform, properties situated across the globe can be bought, sold and fractional shares traded without any hassles. Investors no longer have to fear the exposure of investing in real estate due to high capital requirements as well the worries of managing the property. They can purchase tokenized real estate properties which come with the advantages of minimised risks, being liquid and earning without working. In terms of real estate development, Rexas Estate offers a novel approach to fundraising and access to investors globally. By turning buildings into crypto tokens, developers may identify fractional sales that would create growth potential from investors who would not have had such exposure in the previous marketplaces. The Total Addressable Market: The Skyâ€™s the Limit In addition, in the case of Rexas Finance the total addressable market TAM is hard to put into a cage! Rexas standing well within todayâ€™s multi-trillion dollar industries targeting real-estate, commodities, and fine art. While the supply on the market and on the blockchain remains inadequate, the capacity of growth is effectively priceless. These markets which were previously illiquid have now become accessible to investors and the prospects for Rexas Finance RXS to join the leagues of cryptocurrency top players are apparent. In almost every aspect of the project, this is why many experts feel that those early investors who enter during the presale have an opportunity to recoup returns of 6x in the RXS token. The total capital is 1 billion tokens with its ERC-20 standard; its growth-funding strategy RXS is characterized by the existence of a supporting ecosystem for its further growth. Closing the Gap Between Real-World Assets and Blockchain Bridging the gap between the assets and their application to blockchain technology, Rexas Finance is making headway. The two worlds always stood the way apart but Rexas is removing that barrier by considering that everything that can be found today in the real world is feasible on a blockchain. Anything is possible. Be it your cow fractionally owned, a parcel of land or an ownership of a share in a supported art piece among many others. However, instead of demonstrating their product and then courting big checks from VCs, Rexas has opted for a public presale. This goes a long way towards helping the public to embrace the changing financial technologies. By postponing the lure of attractive VC capital to advance a presale, retail holders stand a chance to come in early, grow in the project and benefit from it in the later years. Conclusion: 6x ROI and A Future Market Leader There is no denying why a Solana whale would decide to back such a revolutionary project such as Rexas Finance, with the momentum it has to date. Rexas Finance intends to take that fight to the level of not just competing with Cardano (ADA) but being at the forefront of a new era of decentralized finance through eternal native asset tokenization. Projections of returns in the region of 6x are indeed realistic to investors who come in during the presale phase, and increased interest from small time and larger institutional investors means that Rexas Finance is among the great bets in the crypto business. The chance is there, the time is right, join the revolution of the future and Invest in Rexas Finance today! Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this article does not represent any investment advice. TheNewsCrypto recommends our readers to make decisions based on their own research.

- Solana whale unstakes 106,213 SOL (\$14.3M) and deposits on Binance. - Increased market volatility reflected in widening Bollinger Bands. - Technical indicators suggest potential downtrend, with \$110 as bearish target and \$160.90 as bullish target. A prominent Solana whale unstaked a substantial amount of SOL tokens and transferred them to Binance. This move, likely motivated by profit-taking intentions, comes amidst intensifying volatility in the Solana market and growing bearish sentiment surrounding the altcoin. On-chain analyst Lookonchain reported early Friday that a Solana whale had unstaked 106,213 SOL, valued at approximately \$14.3 million, and deposited the tokens into Binance. Such large-scale transfers to exchanges often serve as precursors to significant price movements, typically signaling an impending sell-off that could impact the asset's market valuation. Moreover, the timing of this whale's action coincides with a noticeable spike in SOL market volatility. Also, Bollinger Bands, a key technical indicator, have widened considerably over the past month. Reflecting increased price fluctuations and market uncertainty. This heightened volatility may have prompted the whale's decision to unstake and potentially liquidate their position. Solana Derivative Traders Stay Cautious Following Whale's Move Furthermore, in response to the whale's maneuver, derivatives traders have shown signs of caution. The past 24 hours have seen a 40% drop in SOL's derivatives trading volume, accompanied by a 2% decline in open interest. However, those remaining active in the market appear to be leaning bullish, as evidenced by the positive funding rate of 0.0049%, suggesting a preference for long positions despite the overall bearish sentiment. Technical indicators paint a challenging picture for SOL's short-term prospects. The Parabolic Stop and Reverse (SAR) indicator displays bearish signals, with its dots positioned above the current price level. This configuration typically suggests an impending downtrend, as the SAR is designed to track trend direction and potential reversal points. Further compounding the bearish outlook, Solana's Directional Movement Index (DMI) shows the negative directional indicator (-DI) outpacing its positive counterpart (+DI). This arrangement indicates stronger negative momentum, reinforcing the notion that SOL's market trend remains in a downward trajectory.

- SOL nearly breaches \$126 support but shows signs of recovery. - Chaikin Money Flow (CMF) indicates increasing buying pressure. - Price targets: potential rise to \$155 and \$160, or drop to \$126 if \$137 resistance holds. Solana (SOL) finds itself at a critical juncture after narrowly avoiding a breach of its crucial \$126 support level, a price point that has safeguarded the cryptocurrency from major downturns since early March. As the digital asset shows signs of recovery, investors are keenly observing technical indicators for clues about a potential price rally. The Chaikin Money Flow (CMF) indicator, a key metric for gauging capital inflows and outflows, has recently displayed a notable uptick for Solana. This positive movement suggests consistent buying pressure, potentially foreshadowing a price surge. However, the persistence of negative netflows tempers this optimism, indicating ongoing capital outflows that could constrain the strength of any upward momentum. For a sustained rally to materialize, market participants are watching for the CMF to cross above the zero line, a move that would signal a shift to positive netflows and bolster confidence in Solana's price recovery. This transition could serve as a catalyst for increased buying activity and potentially trigger a more substantial price appreciation. Solana's MACD forms double bottom divergence pattern On a macro level, Solana's Moving Average Convergence Divergence (MACD) is forming a double-bottom divergence pattern, a technical formation often interpreted as a harbinger of trend reversal. This configuration suggests waning bearish momentum and the gradual ascendancy of bullish sentiment, offering long-term holders and traders cause for optimism. Solana's recent price action has been characterized by oscillations between \$186 and \$126, with current short-term consolidation occurring below the \$160 threshold. Trading at \$135, SOL is testing local resistance at \$137, a level it must surmount to maintain upward trajectory. Given the supportive technical indicators, a breakthrough above this resistance seems plausible, potentially paving the way for advances towards \$155 and the critical \$160 level.

- The FTX wallet holds 7.057 million SOL worth \$943 million in staking. - Solana marked a moderate gain over 2.75%, trading at \$135. The defunct crypto exchange, FTX, and its sister firm, Alameda Research reclaimed the dumped 177,693 SOL tokens, worth approximately \$24 million, from the Solana Proof-of-Stake (PoS) network. The exchange-affiliated wallet, H4yâ€¦gFZ, still holds a 7.057 million SOL in staking, valued around \$943 million. FTX was one of the biggest holders of Solana tokens before the bankruptcy in November 2022. Reportedly, a significant amount of their holdings might have already been sold off in over-the-counter (OTC) transactions. The recent movement of Solana by FTX's Alameda-affiliated wallet comes when former Alameda CEO Caroline Ellison is scheduled to appear for a hearing on September 24, after pleading guilty to her role in the fraud at FTX and Alameda Research. On the other hand, if the cryptocurrency exchange managed to repay the distressed investors in the beginning of the upcoming fourth quarter, the company might expedite its Solana sales to cover the needed funds. Moreover, the court ordered FTX to repay the credit of \$16 billion, which the company intends to facilitate in stablecoins. Reportedly, FTX has already begun receiving stablecoins, despite the possible legal hurdles from the US SEC on the matter. Additionally, in October 2023, FTX's bankruptcy estate staked \$122 million in SOL tokens. Along with this Solana activity, the estate also staked 3,200 Ethereum (ETH) worth around \$7.55 million. Will the SOL Rally Continue? Amid the slow crypto recovery led by the major tokens, Solana's price has a moderate gain over 2.75% in the past 24 hours. The asset currently trades at \$135.23 with a \$63.27 billion market cap. The altcoin's daily trading volume rallied by 10.15% of around \$2 billion, as per CMC data. The token opened the day trading at \$131.84, further noted a lowest trading range at \$128. Gradually, the asset climbed to a high of \$136.20. As per the technical chart of Solana, it is in brief bullish condition in the market. Highlighted Crypto News

- Solana sets new record with 5.4 million daily active addresses. - Upcoming Breakpoint conference could potentially boost SOL price. - Technical indicators suggest possible short-term decline before potential rally to \$169.63. Solana (SOL) has recently achieved a remarkable milestone, setting a new record for daily active addresses and sparking speculation about potential price appreciation. Despite this surge in network activity, SOL's price has remained under pressure, mirroring the broader altcoin market's struggles. As investors eye the upcoming Breakpoint conference, questions arise about SOL's ability to leverage these positive factors for a price rebound. On September 10, Solana's blockchain saw an unprecedented 5.4 million daily active addresses, according to data from Artemis. This metric, often considered a key indicator of a project's health and utility, signals robust user engagement and could potentially catalyze price growth by attracting investor interest. The imminent Breakpoint conference, scheduled for September 20-21, adds another layer of optimism to Solana's outlook. Historically, this event has correlated with positive price action for SOL. Solana daily chart presents a nuanced picture In 2023, the token experienced a significant rally from \$21 to \$65 in the weeks surrounding the conference. However, market conditions play a crucial role, as evidenced by the muted response during the 2022 bear market and the â€œbuy the rumor, sell the newsâ€ effect observed in 2021. From a technical perspective, Solana's daily chart presents a nuanced picture. The Stochastic Relative Strength Index (Stoch RSI) has entered overbought territory, with both the %K and %D lines surpassing the 80.00 threshold. This configuration typically

suggests an increased likelihood of a short-term price correction. Looking ahead, Solana’s price action could unfold in two primary scenarios. In the bearish case, SOL might dip below \$130, potentially finding support at \$127.78. Conversely, a bullish bounce from this level could propel the token above its 20 and 50-day Exponential Moving Averages, setting the stage for a potential rally towards \$169.63 ahead of the Breakpoint conference.

The cryptocurrency market is never short on buzz, and in 2024, two tokens are particularly gaining traction in the community: Solana (SOL) and Rexas Finance (RXS). A legendary crypto analyst recently shared their outlook on Solana, seeing a “somewhat upside” in the near future. However, the same expert also made a bold prediction, naming Rexas Finance (RXS) as the top Real-World Asset (RWA) coin of the year, spotlighting the project’s enormous potential. While Solana has earned a reputation as a leading Layer 1 blockchain with its fast transaction speeds and low fees, Rexas Finance is positioning itself as a pioneering force in the RWA tokenization space, making it the one to watch in 2024. Let’s dive deeper into why Rexas Finance is generating such excitement and how it stands out in the RWA sector. Solana’s “Upside” Potential Solana, known for its blazing speed and cost efficiency, has long been hailed as an “Ethereum killer.” In 2021, the network saw massive adoption from decentralized apps (dApps) and non-fungible token (NFT) projects. The legendary analyst highlighted that from a technical perspective, Solana’s current price of \$133.99 represents a pivotal moment in its price trajectory. The analyst noted the recent bullish movement shown in the candlestick chart, with green candles dominating the session, suggesting strong buying interest at lower levels. This is supported by a sharp rebound from the \$130 support level, indicating a solid floor where buyers are stepping in. The analyst further pointed out that for Solana to achieve the milestones above \$200, it would need to break past several psychological resistance levels, notably at \$140 and \$150, which could serve as critical thresholds for attracting further speculative interest and institutional investments. The presence of higher lows on the chart, as indicated by the upward trajectory of the candles in recent sessions, suggests an accumulation phase that might set the stage for a bullish breakout. However, the analyst’s bigger prediction for 2024 was reserved for Rexas Finance, labelling it the top RWA coin with the potential to revolutionize how we tokenize real-world assets on the blockchain. Rexas Finance (RXS): Leading the RWA Revolution in 2024 While Solana’s future holds promise, Rexas Finance is taking the crypto world by storm with its innovative approach to Real-World Asset (RWA) tokenization. According to the Rexas Finance whitepaper, the platform is designed to simplify and democratize the creation and management of digital tokens, particularly those representing real-world assets such as real estate, commodities, art, and more. Why Rexas Finance? Rexas Finance aims to unlock the value of tangible assets through tokenization, making illiquid assets more accessible to a global audience. Here’s why the project is emerging as a leader in the space: - Tokenization of Real-World Assets: As outlined in its whitepaper, Rexas Finance allows users to tokenize tangible assets, offering fractional ownership to smaller investors. This model enhances the liquidity of markets traditionally limited to high-net-worth individuals and institutions, such as real estate and fine art. - User-Friendly Tools: The Rexas Token Builder, a no-code token creation tool, enables users with no technical expertise to tokenize assets quickly and efficiently. This opens up tokenization to a broader audience, allowing more people to participate in previously inaccessible investment opportunities. - Enhanced Liquidity: By tokenizing real-world assets, Rexas Finance helps make these assets more liquid, enabling faster and more transparent transactions in markets that are typically slow-moving and expensive, such as real estate. - Global Access: Tokenization through Rexas Finance allows anyone, regardless of geographic location, to invest in high-value assets. This democratizes access to wealth-building opportunities that were once exclusive to large investors, making the platform a revolutionary force in the RWA space. What Makes Rexas Finance the Top RWA Coin? According to the legendary analyst, several factors contribute to Rexas Finance’s position as the top RWA coin of 2024: - Growing Market for RWAs: The market for tokenized real-world assets is estimated to reach trillions of dollars, with industries like real estate, commodities, and art showing massive potential for blockchain-based disruption. As Rexas Finance taps into these vast markets, it’s positioned to lead the charge in this growing sector. - 6x Potential in Presale: At a presale price of just \$0.03, Rexas Finance is already attracting significant investor interest. The whitepaper highlights that early investors could see returns of up to 6x as the platform gains adoption and the token becomes listed on major exchanges. This promising return on investment has positioned RXS as one of the hottest tokens to watch in 2024. - Innovative Ecosystem: Rexas Finance isn’t just focused on tokenization. Its broader ecosystem includes features like the Rexas Treasury, a multi-chain yield optimizer, and the Rexas Launchpad, which supports new and innovative crypto projects. These additional services further solidify Rexas Finance’s position as a top player in the crypto space. - Mainstream Adoption of Tokenization: With traditional finance increasingly looking to blockchain solutions for liquidity, transparency, and cost savings, tokenization is expected to become a key part of the future financial landscape. Rexas Finance is already at the forefront of this movement, providing the infrastructure needed for widespread adoption. The Analyst’s Prediction for 2024 With all these factors in play, the legendary analyst firmly believes that Rexas Finance (RXS) will lead the pack in the RWA tokenization sector in 2024. While they also see a “somewhat upside” for Solana (SOL) in the near term, it’s Rexas Finance that is poised to dominate in the long run, thanks to its innovative approach to tokenization and its wide-ranging ecosystem. The analyst’s bullish outlook on Rexas Finance isn’t just speculation. With strong fundamentals, a growing presale, and increasing attention from investors, the platform is already proving its value. As the global market for real-world asset tokenization expands, Rexas Finance has the potential to become a cornerstone of this burgeoning sector. Conclusion: Rexas Finance Set for a Breakout Year While Solana continues to make strides in the Layer 1 blockchain space, Rexas Finance (RXS) is emerging as the undisputed leader in RWA tokenization. Its accessible platform, innovative tools, and strong focus on real-world applications have made it the top choice for those looking to invest in tokenized assets. As more industries adopt blockchain technology to manage real-world assets, Rexas Finance is poised to become a key player in the broader financial ecosystem. For investors looking for the next big opportunity in crypto, Rexas Finance represents a unique chance to get in early on a project that could reshape the way we think about investing in real-world assets. With its low presale price, strong potential for returns, and visionary platform, Rexas Finance (RXS) is set to dominate 2024 and beyond. A renowned cryptocurrency analyst, known for accurately predicting Ethereum’s (ETH) drop below \$900 during the 2022 crypto winter, has recently labeled a new rival to Solana (SOL) as a “must-hold.” The analyst, active on X (formerly Twitter), had forecast Ethereum’s decline after it peaked near \$5,000 in late 2021, a prediction that proved correct due to adverse market conditions intensified by events such as the FTX collapse. As the crypto market moves through its latest transformation, the spotlight is now on this emerging competitor, Rexas Finance. Launched on September 8, 2024, the real-world asset tokenization platform raised over \$200,000 in just the first 24 hours of its presale, demonstrating strong initial interest from investors. Ethereum’s Fall to \$900 Ethereum, which approached a peak of \$4,891.70 in November 2021, experienced a dramatic fall to below \$900 by late 2022. This significant decline was influenced by a combination of factors including rising interest rates, which redirected investor interest, and the high-profile bankruptcy of the FTX exchange. The broader crypto market cooled off as a result, leading to Ethereum’s sharp downturn. The market’s slow recovery into 2023 and early 2024 has been marked by renewed optimism, partly driven by the approval of several bitcoin and Ethereum spot exchange-traded funds by the Securities and Exchange Commission. Solana’s Struggle and Future Predictions Solana, which surged to an all-time high of \$260 in November 2021, has faced challenges in maintaining its upward trajectory. Although SOL reached \$200 earlier this year, hopes for a new peak have dimmed as the coin has experienced a downturn. The analyst from X (formerly Twitter) who foresaw Ethereum’s plummet has suggested that Solana might fall further, with potential drops to as low as \$110. Rexas Finance Emerges as a Promising Investment Rexas Finance (RXS) has emerged as a significant new opportunity in the crypto market. Launched on September 8, 2024, Rexas Finance raised \$200,000 within the first 24 hours of its presale, highlighting strong early interest. The platform is revolutionizing the tokenization of real-world assets (RWA), converting physical assets like real estate and gold into digital tokens on the blockchain. The real estate market, valued at approximately \$379.7 trillion, and the commodities market, projected to reach \$121.2 trillion by 2024, present substantial opportunities for this technology. Rexas Finance allows users to buy and sell fractional ownership of real-world assets with ease, breaking down traditional barriers related to geographic location and high entry costs. This innovation not only enhances liquidity but also reduces transaction costs, promoting a more inclusive economic landscape. Comprehensive Features of Rexas Finance Rexas Finance incorporates several key features designed to enhance the tokenization process and provide comprehensive solutions. The Token Builder enables users to create and launch their own tokens without coding knowledge, supporting various standards like ERC-20 and ERC-721. The QuickMint Bot, integrated with platforms like Telegram and Discord, facilitates instant token creation through simple commands, allowing rapid market entry for new projects. Rexas Estate focuses on the tokenization of real estate, facilitating fractional ownership and improving liquidity in property investments. GenAI, an AI-driven platform, assists in creating and managing NFTs, offering tools for artwork generation and marketplace integration. AI Shield provides enhanced security for smart contracts through AI-powered audits and real-time monitoring. Additionally, the Treasury and DeFi components of Rexas Finance include a multi-chain yield optimizer and services like yield farming and staking. The Launchpad supports new cryptocurrency projects with tools for fundraising and community building, ensuring transparency and thorough project evaluations. Rexas Finance’s Stage 1 presale is underway with tokens priced at \$0.030 each, increasing to \$0.040 in the subsequent stage. Furthermore, a \$1 million giveaway is also in the works to drive investor engagement. The tokenomics of Rexas Finance include 42.5% allocated to the presale, 15% to liquidity, 10% to the treasury, 22.5% to staking, and smaller portions to marketing, the team, giveaways, and partners. Rexas Finance is dedicated to community involvement. While the project could have been easily launched with VC funding, it chose a decentralized approach to include everyone. Additionally, early investors stand to gain returns of at least 600% as the RXS token launches. Looking Ahead With its innovative approach to bridging real-world assets and blockchain technology, Rexas Finance is positioned as a significant player in the crypto market. The platform’s comprehensive feature set addresses key gaps in liquidity, transaction complexity, and regulatory compliance, setting the stage for substantial growth. Rexas Finance (RXS) stands out as a “must-hold” investment for those seeking to engage with the future of digital assets. Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana’s daily active addresses hit a record high of 5.4 million, showing a rise in trading activity and user engagement. - The blockchain has recorded over 41 million daily transactions, outpacing major rivals like Ethereum and BSC Chain. Solana’s blockchain is displaying a significant surge in trading activity, setting new records. The number of daily active addresses (DAA) on the Solana network has reached 5.4 million, the highest level ever recorded. This rise indicates increased engagement on the platform, with daily transactions exceeding 41 million, outpacing networks like Ethereum and Binance Smart Chain. Solana has also hit new highs with daily transactions, reaching over 40.3 million, outpacing major players like Ethereum and Binance Smart Chain (BSC). Further, the number of new addresses on Solana is rising, a sign of growing interest and adoption of the blockchain. Memecoin Dip and SOL Price Struggles Interestingly, while Solana’s transaction numbers are up, its memecoin marketplace, Pump.fun, has seen a downturn. Revenue from this memecoin launchpad dropped by 80% since late July. Previously, Pump.fun had contributed to Solana’s market momentum since its launch in January. The Launchpad platform is still operational and generates numerous memecoins on a daily basis. While the Pump.fun slowdown, leading meme coins in the marketplace like Dogwifhat (WIF) and Book of Meme (BOME) have captured the crypto community’s attention. WIF saw a 7% rise over the past week, reaching \$1.58, while BOME experienced a 5% increase, now trading at \$0.006389. However, Solana’s native token, SOL, continues to struggle, remaining range-bound amid a broader bearish market sentiment. At the time of writing, SOL trading at \$131 shows a decline of 2.42% over the past day. Daily trading volume has also decreased by over 20%, now at \$1.85 billion. This decline in SOL’s price follows a similar pattern seen in Bitcoin (BTC), which is struggling to hold above the \$58K zone. In summary, while Solana’s network activity and adoption are hitting new highs, the price of SOL remains under pressure, reflecting ongoing market challenges. Highlighted Crypto News Today

- Solana emerges as a potential candidate for the next spot ETF after Bitcoin and Ethereum. - Brazil approves Solana ETFs, but SEC rejects initial US attempts. - Futures ETF and regulatory changes could pave the way for Solana’s spot ETF approval. In the wake of Bitcoin and Ethereum spot ETF approvals in the United States, the cryptocurrency community has turned its attention to Solana as the potential next contender in the ETF race. As the fifth-largest cryptocurrency by market capitalization, Solana’s unique position in the crypto ecosystem has sparked discussions about its viability as an ETF underlying asset. The year 2024 has witnessed a seismic shift in the crypto-ETF landscape, with the SEC’s groundbreaking approval of Bitcoin spot ETFs in January, followed by Ethereum ETFs several months later. These developments have not only reshaped the industry but also opened the door for speculation about which digital asset might secure regulatory approval next. Solana’s candidacy for ETF approval stems from its commodity-like characteristics, distinguishing it from stablecoins like Tether or centrally controlled tokens like BNB. This classification aligns more closely with the SEC’s preference for ETFs based on assets that are not susceptible to manipulation by a single entity. Brazil approves two Solana ETFs Brazil’s recent approval of two Solana ETFs has provided an interesting test case for the asset’s potential in more stringent regulatory environments. However, the lackluster performance of Ethereum ETFs, which saw major outflows despite favorable market conditions, raises questions about the demand for altcoin ETFs in general. The SEC’s swift rejection of CBOE’s initial Solana ETF filings highlights the uphill battle facing potential issuers. Bloomberg analyst Eric Balchunas expressed skepticism about Solana’s chances under current SEC leadership, noting that the regulator dismissed the proposal before the formal review process could begin. Despite these setbacks, proponents like Matthew Sigel of VanEck argue for Solana’s eligibility based on legal precedents that could classify it as a commodity. This argument draws on a 2018 court case that established criteria for determining whether certain digital assets qualify as commodities. Looking ahead, industry experts suggest two potential pathways for Solana’s ETF aspirations: the approval of a futures-based ETF, which faces less regulatory scrutiny, or comprehensive crypto regulation reform from Congress.

- Solana (SOL) has shown resilience, maintaining support above \$120 and surging above 5.1%. - Whale activity, including significant withdrawals and purchases, has

impacted SOLâ€™s price. Solana has maintained a steady bullish trend over the past day, with the moving average at \$130.82, below its current trading value of \$133.84. The RSI is near neutral at 45.42, indicating a stable momentum. Recent whale activity has notably influenced Solanaâ€™s price in the last 24 hours. A whale purchased over 34,800 SOL, valued at \$4M, from Binance, around 16 hours ago. Since February, this whale has withdrawn 206,951 SOL worth \$29.3M from major exchanges like Binance and MEXC. The whale bought Solana at an average price of \$142 and has staked 115,135 SOL. Recently, Solana (SOL) dropped to \$121 but held around the \$120-\$125 support range. Despite recent market turbulence and a broader pullback, Solana showed strong network metrics with 397M weekly transactions and 12.78M active addresses. Solanaâ€™s token, SOL, experienced a significant 12% drop on September 4 due to a major sell-off by Pump.fun, which sold \$41.64 million worth of SOL. The last sale, on September 3, was for \$1.38M at \$134.46 per coin. SOL followed BTCâ€™s downward trend, moving from \$141 to \$124 before stabilizing at \$134. Pump.funâ€™s impact on SOLâ€™s price is uncertain, but the recent rebound suggests a temporary neutral condition amid bullish crypto sentiment. SOL Shows Resilience Amid Whale Activity Earlier, in July, as per Solscan, the same whale withdrew 17,485 SOL from Binance when the price was around \$150, valuing at \$2M. As per Lookonchain, it reveals the risks whales face during market fluctuations and their potential impact on token prices. Solana (SOL) has experienced a notable price increase, currently trading at \$134.66 with a 5.16% surge in the past 24 hours. Trading volume has spiked by 56.72%, indicating rising investor interest. Trading volume reached \$2 billion while the market cap surged over 4% reaching \$62B. If the upward momentum continues, SOL could target \$145 to \$150 range. The indicators suggests a possible upward breakout if bulls maintain support. Highlighted Crypto News Today: Metapha Deposits Ethereum To Binance Amid ETH Price Recovery Signals

- SOL price dropped to \$121, but bulls maintained support above \$120-\$125 range. - Solana network recorded 397 million weekly transactions, outperforming many altcoins. - Technical indicators suggest potential for bullish crossover and upward movement. Solana (SOL) has demonstrated remarkable resilience in the face of recent market turbulence, with its price action and network metrics painting a complex picture of challenges and opportunities. The slumpish market pushed SOL to test levels near \$121 amidst a surge in trading volume that exceeded \$3 billion. This price movement coincided with a broader market pullback, as overall crypto trading volume approached the \$100 billion mark. While many anticipated SOL to retreat further into the critical support zone between \$120 and \$125, bullâ€™s managed to maintain price levels above this range, potentially setting the stage for a resurgence of the assetâ€™s ascending trend. Solanaâ€™s underlying network performance continues to impress, solidifying its position as a formidable competitor to Ethereum. The platform recently achieved a milestone of over 397 million weekly transactions, coupled with an impressive 12.78 million weekly active addresses. Solana shows a nuanced outlook from a technical analysis perspective, SOLâ€™s price action presents a nuanced outlook. The cryptocurrency has repeatedly tested its support zone in recent weeks, with bulls consistently staging rebounds. However, the prolonged hovering around this support level for over a week suggests a potential weakening of bullish momentum. Adding to the technical complexity, a bearish crossover between the 50-day and 100-day moving averages has occurred, typically a bearish signal. Counterbalancing this, the Moving Average Convergence Divergence (MACD) indicator displays promising bullish possibilities, hinting at a potential positive crossover in the near future. Looking ahead, Solana appears poised for a potential bullish breakout, which could catalyze a healthy price run in the coming days. The key to this optimistic scenario lies in the bullâ€™s ability to reclaim the ascending support line.

Orbitt, a Solana project accelerator, has announced that Pump.Fun volume boosts are now supported by its market making service. In order to maximize the chances of project success, Orbitt MM will assist in raising the trading volume and awareness of Pump.Fun token launches. Orbitt MMâ€™s Pump.Fun integration is scheduled to be live on September 6. This will facilitate memecoin projectsâ€™ capacity to obtain the kind of volume that draws users and contributes to sustainability. Currently tailored for Pump.Funâ€™s token launchpad, Orbitt MM is often utilized by Solana token projects looking to boost volume. Pump.Fun communities and projects may reach a pre- and post-launch volume with more interest and funds inflows thanks to Orbitt MM. Additionally, it may be used in CTOs (community takeovers) to bring back Pump.Fun initiatives and provide original memecoin concepts the opportunity to get the exposure they deserve. When your token reaches Raydium after completing the bonding curve on Pump.Fun, Orbitt MM will automatically transition the volume-boosting process to Raydium. Artur GuliA,ski of Orbitt said: â€œPump.Fun has been a genuine gamechanger in democratizing access to the memes of production but has become a victim of its own success. Creators are no longer incentivized to build for the long-term, while quality projects are crowded out. Orbitt MM fixes that, allowing legitimate projects to attract higher volume that will distinguish them from the chasing pack and provide a foundation for success.â€ Based on fees, Pump.Fun is the most popular protocol in the world; its 24-hour revenues routinely exceeds the total revenue of the next 15 crypto protocols. It has lowered the hurdles to memecoin creation by enabling anybody to produce a token with a few clicks. A number of such no-code launchers have appeared on other blockchains as a result of its success. By helping communities to recognize projects that are genuine and have invested in a professional volume-boosting solution, Orbitt MM seeks to rebuild confidence in communities. This serviceâ€™s higher volume rise will have a snowball effect, drawing more users and lowering volatility. It will also allow memecoin developers to make clear that they plan to create over a longer time frameâ€™from pre-launch to post-launch and beyond.

- At the time of writing, SOL is trading at \$128.59, up 0.96% in the last 24 hours. - If the price manages to climb above \$136 level, then it will likely test \$151 resistance level. On September 6, the Crypto Fear & Greed Index, which measures market sentiment, dropped to 22. Investor confidence has taken a clear nosedive, since the indicator has not hit â€œextreme fearâ€ since mid-August. According to Arthur Hayes, the former CEO of BitMEX, Bitcoin may drop below \$50,000. On Friday, Hayes came clean about his short bet. The Solana ETF saga is concluded, meme coins have lost their allure, and altcoins are seeing a precipitous decline in value. After briefly testing the risky \$122 region, the SOL price has now retreated and climbed all the way till \$131 mark. The \$111 level may have been retested had the bears persisted. Attempts to \$151 may be revived if \$136 can be transformed into support under the present circumstances. As expected, the outcome will also depend on how the price of Bitcoin performs. General Pessimism Surrounding the Crypto Market The price of Solana (SOL) has been moving in a range recently. It hit \$122 overnight before recovering to \$131 mark. The short-term future of Solanaâ€™s price is unclear since it is stuck in a vital support area, moving sideways. Uncertainty around Bitcoin, a key player in the cryptocurrency market as a whole, has contributed significantly to the overall market dynamics, but the sideways trend has continued nonetheless. The general pessimism surrounding the crypto market is also keeping prices down. At the time of writing, SOL is trading at \$128.59, up 0.96% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 58.97%. If the price manages to climb above \$136 level, then it will likely test \$151 resistance level. However, if the bears drive the price below the recent support of \$122 level, then the price will likely test \$111 support level.

- The price of Bitcoin (BTC) fell precipitously as US job statistics fell short of expectations. - Despite the decline in prices, the volume of SOL trades increased significantly by 53.87%. Three Arrows Capital (3AC) cofounder Su Zhu recently wrote in an X post praising SOLâ€™s prospects. As the Breakpoint event draws near, Zhu projected that the price of Solana would rise. To set the scene, Solana hosts an annual conference called the Breakpoint event where ecosystem experts get together to talk about whatâ€™s new and how to go forward. Every year, prominent members of the crypto community, including developers, investors, and others, attend the event. Zhu is hopeful that SOL will climb since the community is becoming more and more excited about the eventâ€™s probable collaborations and major announcements. Bears in Total Control As new macroeconomic data reveals that US August employment statistics were weaker than anticipated, the crypto market carnage continues. The price of Bitcoin (BTC) fell precipitously as US job statistics fell short of expectations. At the moment, the price of Solana is following Bitcoinâ€™s declining trend. Solana (SOL) fell terribly to an intraday low of \$125 on September 6th, joining the majority of the top cryptocurrencies by market value in the red. Despite the decline in prices, the volume of trades increased significantly by 53.87%, going above \$2.8 billion. Despite the downturn, this increase in volume shows that purchasers are still out there. Nevertheless, it is possible that some investors are attempting to cash out or lock in gains due to the persistent price decline despite purchases. At the time of writing, SOL is trading at \$125.33, down 2.50% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 53.87%. If the price continues this bearish momentum and falls below \$122 support level, then it will likely test \$103 level. However, if the bulls could drive the price above \$138 level, then it will likely test \$150 resistance level.

The Solana Virtual Machine (SVM) ecosystemâ€™s leading innovator, Sonic SVM, has announced the public sale of HyperFuse Nodes, providing community members with an exclusive opportunity to take part in the quickly expanding SVM ecosystem. Purchasers of Nodes get access to State-of-the-Art SVM Technology, contributing to Multi-SVM ecosystem security and earning tokens. An essential part of the HyperGrid framework, HyperFuse Nodes provide operators the ability to verify state transitions and guarantee the effectiveness and security of the SVM ecosystem. Through this sale, individual investors have a unique opportunity to purchase Sonic Tokens at a lower valuation than what top venture capital companies were paid at Sonicâ€™s most recent \$12 million Series A funding round. The following are the main features of the HyperFuse Nodes sale, as stated on the documentation page: - Community Alignment: Priced below the Series A VC fully diluted valuation (FDV) are more than 30 percent of the 50,000 HyperFuse Nodes. The community is in a unique position to benefit from the networkâ€™s upside. - Early Entry into SVM Expansion: The growing SVM ecosystem, which includes Sonic SVMâ€™s remarkable user base of over 2 million wallets and 1.5 billion on-chain transactions, will initially benefit node operators. - Gaming Network Dividends: Because Sonic SVM already hosts over ten high-quality games and has partnerships with over 40 leading game studios, operators may take advantage of the growing Solana gaming market. - Strong Investor Backing: With the backing of titans of the industry like Bitkraft, OKX Ventures, and Galaxy Interactive, Sonic SVM has secured \$16 million in total to far. - Referral Rewards: Purchasers of nodes may benefit from instant cashback and further mining pool advantages via a profitable referral program. - Potential Airdrop Opportunities: Future airdrops for node operators are a possibility, however they have not been officially confirmed. Chris Zhu, CEO and co-founder at Sonic SVM stated: â€œHyperFuse Nodes represent a groundbreaking opportunity for community members to actively participate, and position themselves at the forefront of the Solana ecosystemâ€™s growth. Weâ€™re excited to open this door to our community members and partner ecosystems, allowing them to participate in the future of gaming and blockchain technology, and the beginning of a multi-SVM ecosystem on Solana â€ at an unprecedented entry point.â€ The sale of HyperFuse Nodes is as follows: - 9/16 â€ HyperFuse node raffle sale (24 hrs) This is the entry-level node tier, and it will be the first node sale on Delysiumâ€™s Nodpad. There are only limited quantities left; to learn more, click this link: [/www.nodpad.ai/] - 9/18 â€ HyperFuse node whitelist sale (24 hrs) Partners in the Sonic community as well as members of the Sonic community get whitelist codes. Accessible on https://node.sonic.game/ for whitelisted wallet addresses. - 9/19 â€ HyperFuse Public sale begins Accessible on https://node.sonic.game/ You may find out more about how to participate at https://hyperfusedocs.sonic.game/. In the Solana Virtual Machine ecosystem, Sonic SVM is a trailblazer, having launched the first gaming SVM on Solana utilizing HyperGrid. Sonic SVM is positioned to transform the interaction between gaming and blockchain technology on Solana thanks to its huge user base and solid support from prestigious investors like Bitkraft and Galaxy.

- Solana (SOL) price faced 20% drawdown after failing to break \$160 resistance. - Negative funding rate and historical CMF patterns suggest potential rebound. - Price targets: possible rise to \$160 if \$137 resistance is broken, or continued consolidation below \$137. Solana (SOL) finds itself at a critical juncture following weeks of heightened volatility and a 20% drawdown in late August. Despite multiple failed attempts to breach the \$160 resistance level, recent shifts in market behavior and key technical indicators suggest a potential rebound may be on the horizon, rekindling optimism among traders and analysts. A pivotal factor in assessing SOLâ€™s recovery prospects is the recent negative turn in the funding rate. This metric, which measures the cost of holding positions in the futures market, often serves as a barometer for market sentiment. Brian Quinlivan, Lead Analyst at Santiment, notes that the increasingly negative funding rate could signal an extreme in bearish sentiment, potentially setting the stage for a price reversal. Solana price dip could be temporary Complementing the funding rate analysis, the Chaikin Money Flow (CMF) indicator has established a notable pattern for SOL. Historically, when the CMF dips to -10.0, Solana tends to experience a rebound within seven to ten days. This recurring pattern suggests that recent price declines could be temporary, with the potential for increased capital inflows to drive prices higher in the near term. Broader macroeconomic factors also play a crucial role in shaping SOLâ€™s price trajectory. Continued growth in institutional interest and overall market participation could provide tailwinds for Solana, further bolstering the case for a potential price recovery. Currently trading at \$129, SOL has shown resilience by bouncing back from the \$126 support level. For Solana to resume its upward momentum, it must decisively break through the local resistance at \$137. A successful breach of this level could pave the way for a push towards the psychologically significant \$160 mark, a price point that has served as both support and resistance in previous consolidation phases.

- Bulls pushed for recovery and the price has climbed above the \$130 mark. - If the price manages to climb above \$134 level, then it will likely test \$140 resistance level. In response to claims that the Solana network is not decentralized, Solana Foundation executive director Dan Albert argued during a Korea Blockchain Week (KBW) 2024 panel that the ability to coordinate a patch does not prove that the network is centralized. The capacity to coordinate the correction of a defect, Albert said, does not prove the existence of a centralized network. However, the ability of the Solana Foundation to connect with the node operators allowed for the patch coordination. Being able to freely communicate with them is different from being centralized, the executive director said. Brief Recovery Witnessed For more than a week, Solana has been under intense selling pressure, which has accelerated its monthly collapse. Since Solanaâ€™s funding rate became negative around August 28, traders were expecting additional drops and were therefore mostly prepared for this one. Many short-term traders are focusing on the consolidation area of \$124â€\$140, seeing it as a chance to buy the dip. At the time of writing, SOL is trading at \$133.65, up 1.59% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 61.96%. The price lately found support at \$124 level, after recent decline. Bulls pushed for recovery and the price has climbed above the \$130 mark. If the price manages to climb above \$134 level, then it will likely test \$140 resistance level. However, if the bearish momentum continues and the price falls below \$127 level, then the price will retest \$124 level. Breaking below this level will likely see price going all the way

till \$118 support level.

- Solana’s price hit a month-low of \$122, hours ago. - Scammers exploit Solana’s token extension to burn users’ crypto holdings. The cryptocurrency market remains in a bearish phase, with the total market capitalization dropping by 4.33%, while trading volume has risen by 17%, reflecting increased activity despite the downturn. Bitcoin, the largest cryptocurrency by market cap, fell by 4.66%, leading a broader decline in altcoins. Ethereum dropped by 6%, hitting a 28-day low of \$2,313. Solana, another prominent altcoin, also hit a monthly low of \$122, marking an 18% decline over the past month. Solana has faced strong bearish pressure for over a week, intensifying its monthly downtrend. Traders were largely prepared for this drop, especially as Solana’s funding rate turned negative around August 28, indicating expectations of further declines. The consolidation range between \$126 and \$160 has become a focal point for short-term traders, who view it as an opportunity to capitalize on the price fluctuations. In the midst of this bearish sentiment, scammers have reportedly found a new way to exploit Solana users. According to Slogr, a member of Solana-based Jupiter’s Core Working Group, scammers have begun using an in-built Solana token extension to stealthily burn users’ tokens within seconds of purchase, adding to the challenges faced by the Solana community. Can SOL Recover From Bearish Pressure? On the technical front, the daily chart shows Solana entrenched in a bearish trend. The 9-day Exponential Moving Average (EMA) at \$135 and the current price at \$128. The daily Relative Strength Index (RSI) stands at 37, indicating strong selling pressure. Looking forward, if bullish momentum builds, resistance levels could be encountered at \$138 and \$149. However, if the bearish trend persists, Solana may see a further decline, with potential support at \$120. Traders and investors are closely monitoring these SOL price levels for signs of sustained bearish momentum or potential bullish reversals in the coming days. Highlighted News Of The Day FBI Warns of North Korean Scammers Aggressively Targeting Crypto Firms

Binance, the global blockchain ecosystem that powers the world’s biggest crypto exchange by trading volume and users, has announced the imminent launch of its Solana Staking product, Binance SOL Staking, which will go live later this September. With Binance Staked SOL (BNSOL), users will be able to securely stake their Solana (SOL) tokens on Binance while still having complete control over their assets. Users may effortlessly stake their SOL tokens using Binance SOL Staking, and in exchange they will obtain BNSOL, a liquid staking token that symbolizes their staked assets. With BNSOL, users may continue to get rewards for staking and still have the option to sell, lend, or spend their assets on other DeFi platforms and Binance products. Vishal Sacheendran, Head of Regional Markets at Binance stated: “As one of the first crypto exchanges to offer SOL liquid staking, Binance is providing a seamless and flexible way to earn rewards while allowing users to maintain full control over their staked asset. Unlike native staking, which locks up assets, BNSOL allows users to unlock liquidity, enjoy continuous reward accumulation, and seamlessly participate in both the Binance platform and the broader DeFi ecosystem, making it an ideal solution for those looking to maximize the potential of their staked Solana tokens.”

Binance SOL Staking enables users to take maximum use of the Solana tokens they have staked by providing: Dynamic Rewards: Staked SOL as well as the cumulative staking rewards over time will be represented by BNSOL. A dynamic APR that tracks commission-adjusted on-chain Solana staking rewards will be advantageous to users, guaranteeing competitive returns. Every Solana epoch, or approx every two days, the BNSOL:SOL conversion ratio will be changed to reflect the accumulated incentives and the growing value of BNSOL relative to SOL. Expanded Liquidity: BNSOL provides users with more freedom and usefulness by being able to be used not just within Binance’s ecosystem but also across a variety of DeFi apps. In accordance with their investment strategy, BNSOL holders will be free to trade, invest, farm, lend, and spend their tokens as they see fit. Flexible Redemption: Because of BNSOL’s flexibility, users may instantaneously redeem their tokens by trading them on the market or at any time, subject to a redemption waiting period. User-Friendly Process: With only one click, users may begin earning rewards using Binance’s simple and user-friendly staking process. Because of its simplicity, both inexperienced and seasoned users may utilize it. Using the original Stake Pool Program, which is run by Solana Labs and is a solid structure that has undergone several security company audits to guarantee complete money protection, Binance developed its Solana Staking product. Further confirming the Stake Pool Program’s dependability and security is the extensive validation that it has received from several liquid staking token (LST) providers. Users of Binance’s Solana Staking product may safely stake SOL tokens, get dynamic rewards, and utilize the flexible BNSOL token to unlock liquidity. Soon, Binance’s official social media channels and the Binance Announcement Channel will both reveal the official product launch date and further information.

- Some doubted the decentralization of the network due to the covert distribution of the patch. - Albert addressed that a security hole necessitated the deployment of a patch. At a Korea Blockchain Week (KBW) 2024 panel, Dan Albert, executive director of the Solana Foundation, pushed back against accusations that the Solana network is not decentralized, arguing that the capacity to coordinate a patch does not indicate that the network is centralized. The specifics of a serious vulnerability that might have stopped the network were revealed by Solana validator Laine on August 9th. Behind the scenes, the fix was managed by the validators. Who claimed that an attacker might use the vulnerability’s disclosure to take the network down via reverse engineering. Some doubted the decentralization of the network due to the covert distribution of the patch. And the cooperation that went into it. Coordination Over a Bug Fix Moreover, at the KBW 2024, Albert addressed a query by saying that a security hole necessitated the deployment of a patch. Also, the executive from Solana Foundation verified that the bug has the ability to trigger a liveness problem on the Solana mainnet. Albert countered that the ability to coordinate a bug fix does not indicate a centralized network. Albert conceded that some businesses run more than one node. Nevertheless, the patch coordination was made possible by the Solana Foundation’s capacity to communicate with the node operators. Whom he characterized as community and ecosystem actors. He went on to say that there were other times when they had talked with them. In the end, these validators pick which software to execute, according to the executive director. They have never requested that anybody use closed-source binaries, and Albert said that the patch was open-source. Albert stressed again that centralization is not the same as being able to freely connect with them. - Solana marked a spike of over 5%, trading at \$134. - Pump.fun, a Solana-based meme coin deployer, surpassed \$100 million in total revenue. The crypto market has witnessed bullish turns, with the market cap recording a 2.90% spike. Nonetheless, volatility has persisted over the past week. Solana (SOL), the fifth-largest cryptocurrency, has faced significant challenges throughout August, with its price dropping to \$110 – its lowest level in the past five months. SOL’s has briefly regained momentum in the last 24 hours with a 5.40% increase in price. Notably, in the early hours, SOL traded at a low of \$127.27. Despite struggling at \$130, the altcoin signaled a brief upside rally for the day and began climbing to the current price levels. At press time, Solana was trading at \$134.67, according to CMC data. Meanwhile, the whale transactions known for their substantial influence in the market created waves in the asset’s activity. The token might experience increased selling pressure, contributing to a recent decline in its market value. The loss of whale support could signal a period of price declines. According to on-chain data, a whale has offloaded 695K SOL, approximately worth \$99.5 million this year. Moreover, an average weekly sales of 19,306 SOL valued at \$2.76 million. Despite the massive sell-off, they hold a total of 1.88 million SOL (\$255.89M), currently staked. Notably, over the past 24 hours, Solana has recorded a \$6.77 million liquidation, as per Coinglass. On the other hand, a Solana-based meme coin deployer, Pump.fun, has surpassed \$100 million in total revenue with nearly 2 million tokens launched on the platform, as per Dune Analytics. Can SOL Reverse the Current Momentum? SOL has shown declining momentum in the last seven days, with an over 15% plunge. At the beginning of the week, the altcoin was trading in the \$158 range. The token’s price eventually fell sharply to a low of \$127.57. While zooming in at the technical chart of SOL, the daily relative strength index (RSI) is positioned at 47.81, entering into the neutral sentiment. Moreover, the asset’s daily frame suggests bullish momentum as the short-term 9-day and long-term 21-day moving averages are noted below the current price. Besides, the Chaikin Money Flow (CMF) indicator stays at 0.13, which indicates the increased money flow with selling pressure. Whereas, the trading volume has declined by 18%. The daily price chart indicates Solana’s significant support level to be found at the \$130.45 range. If the price breaks below this level, it could decline further, with the next target around \$126. On the other hand, if the asset’s price attempts a reversal, on the resistance side, the major resistance zone might range from \$140.28 to \$146. - Solana (SOL) struggles to break \$160 resistance, facing potential drop to \$126. - Technical indicators suggest peak bearish momentum, but historical patterns offer hope. - Recovery to \$169 possible with improved market sentiment and sustained buying interest. Solana (SOL) finds itself at a critical juncture as it grapples with formidable resistance at the \$160 level, having made two unsuccessful attempts to breach this threshold in August alone. While these setbacks have dampened short-term sentiment, the potential for recovery remains, contingent on a shift in investor outlook. However, the looming possibility of a retracement to \$126 continues to cast a shadow over SOL’s near-term prospects. Astute traders in the Solana ecosystem have demonstrated a keen awareness of the cryptocurrency’s recent price patterns, anticipating the recent downturn as funding rates pivoted from positive to negative around August 28. This shift in sentiment signaled a growing consensus among market participants that further declines were imminent, with many eyeing the \$126 level as a potential target. The well-defined consolidation range between \$126 and \$160 has emerged as a focal point for trading activity, offering opportunities for those adept at navigating short-term price fluctuations. This range, established through repeated tests since mid-April, has created a clear framework for trader expectations and strategy formulation. Can Solana break from its bearish momentum? Broader technical indicators paint a nuanced picture of Solana’s current market position. The Relative Strength Index (RSI) suggests that bearish momentum may be approaching its zenith, potentially setting the stage for a reversal. Historical precedent indicates that the RSI has often rebounded from similar levels, offering a glimmer of hope for SOL bulls. However, it’s crucial to note that while oversold conditions may be imminent, they do not guarantee an immediate price recovery. Solana’s recent price action has been decisively bearish, with a more than 20% decline over the past eight days following its failure to surmount the \$160 resistance. This retracement increases the likelihood of SOL revisiting the \$126 support level before any substantial recovery can materialize. While \$126 has previously served as a springboard for price rebounds, the recent inability to breach \$160 underscores the persistent bearish sentiment plaguing the asset. The repeated testing of the \$126 to \$160 range since mid-April has established a well-defined consolidation zone. Breaking out of this range would likely require a significant shift in broader market dynamics or a surge in Solana-specific fundamentals.

- Pump.fun has created 5,388 new tokens on Solana. - Solana (SOL) fell back at \$131, following a drop of 0.63% in the last 24 hours. Solana’s meme coin market has taken a sharp decline, with a 21.7% drop over the past week. The downturn comes as the popular token launchpad, Pump.fun, witnessed a drastic drop in user activity and new token creation. Recently, Pump.fun has created 5,388 new tokens on Solana, as per Dune Analytics. This represents a steady decline in activity from its peak, three weeks ago when the launchpad deployed 20,465 tokens in a single day. Decline in Meme Coin Prices The prominent meme coins on the network includes Dogwifhat (WIF), which is down by 0.24%, trading at \$1.47. Over the past week, it plunged by over 22%. BOOK OF MEME (BOME) has noted a decline of 1.05%, traded at \$0.005917. It was significantly down by over 20% in the past week. On the other hand, Bonk (BONK) and Popcat (POPCAT) are up by 0.66% and 5.62%, trading at \$0.0001702 and \$0.5701, respectively. The prices of some major tokens created by the protocol have fallen down coinciding with the Pump.fun statistics decline. A meme coin on Solana, Billy (BILLY) plunged over 15% in the past 24 hours, currently trading at \$0.02086. And over the week, the token was down by 34.37%. Ginnan The Cat (GINNAN) trading at \$0.051821, dropped by 21.18%, and Michi (MICH1) has spiked by 9.84%, trading at \$0.1125. Moreover, Solana (SOL) has fallen by 0.63%, trading at \$131.92, with the trading volume soared by 96.67% to \$2.43 billion, as per CMC data. Highlighted Crypto News \$305 Million Pulled from Crypto Investment Products This Week

- Solana ranked second in NFT sales volume behind Ethereum in August. - Significant declines in NFT buyers and sellers were noted in August. Solana’s [SOL] NFT market demonstrated notable resilience in August, emerging as the second-highest blockchain by NFT sales volume, only trailing behind Ethereum [ETH]. According to data from Coin98 Analytics, Ethereum recorded \$131 million in NFT sales, while Solana followed closely with \$79 million. Bitcoin [BTC] also made it to the top three, with monthly NFT sales reaching \$59 million. Despite Solana’s impressive ranking, a closer look at the metrics reveals a challenging month for the blockchain’s NFT ecosystem. The data showed a significant decline in activity, with the number of NFT buyers and sellers dropping by 36% and 33%, respectively. Additionally, Solana’s total transactions plummeted by over 50%, barely surpassing the 1 million mark. However, September may bring a turnaround for Solana’s NFT market. Recent data indicates a positive shift, with Solana’s NFT metrics showing signs of recovery over the past week. The blockchain’s NFT sales volume saw a 2.7% increase, reaching \$18 million. Moreover, the number of NFT buyers and sellers surged by 46% and 27%, respectively, suggesting renewed interest and a potential rebound in the NFT space. Strong Performance Ahead? While Solana’s NFT market appears to be stabilizing, the broader market sentiment for the altcoin remains cautious. In the past 24 hours, Solana’s price has dropped by 1.8%, settling at \$129. Despite the price decline, trading volume has surged by 112%, indicating heightened market activity and investor interest. As September unfolds, the Solana ecosystem will be closely watched to see if these positive trends continue, potentially setting the stage for a stronger performance in the months ahead. Investors and analysts alike are hopeful that the blockchain’s NFT market can build on its recent momentum and overcome the challenges faced in August. Highlighted News Of The Day

As Solana (SOL) memecoins experience a significant downturn, traders are witnessing substantial losses in value and are increasingly seeking refuge in more stable and promising investments. One hidden gem capturing their attention is RCO Finance (RCOF), a DeFi token that offers a unique blend of security and high returns. With the presale gaining significant traction, the RCOF token is projected to deliver returns as high as 1,460%. Investors Uncover RCO Finance’s Market Advantage Despite the bearish nature of the live crypto market, RCO Finance (RCOF) has been recording mammoth inflows. Market analysts predict further momentum as traders

pile into the AI-powered trading platform. So far, many theories have been put together to explain the RCOF movement, including the Ethereum ETF. However, many market experts attribute the growth to the increasing adoption of its flagship product, the Robo-Advisor. The Robo-advisor is designed to carry out trades systematically, even when market tension is at its peak. Powered by advanced algorithms and real-time data analytics, this AI-driven tool minimizes errors, thereby enhancing trading outcomes. Moreover, this innovative Robo-Advisor efficiently manages and optimizes portfolios across over 12,500 asset classes on the platform. The revolutionary trading tool ensures personalized responses tailored to individual financial goals by offering tailored strategies that align with the client's risk tolerance and investment objectives. SolidProof, one of the most popular smart contract auditing companies, works closely with RCO Finance to conduct regular audits of smart contracts and identify and then fix potential vulnerabilities. The DeFi trading platform is committed to creating a secure environment for financial services that users can trust. Solana (SOL) Memecoins Sink Further In Market Downturn The Solana (SOL) blockchain, once buoyed by the memecoin hype, is experiencing significant challenges as the initial frenzy around these tokens diminishes. Recent data indicates that Solana's daily transaction fees and market cap have dropped to multi-month lows, reflecting the cooling interest in memecoins. Additionally, the network's exposure to these highly speculative assets has become a considerable risk, as the volatility associated with memecoins can lead to sharp declines in network activity and value. The broader market downturn has exacerbated these issues, with many Solana-based memecoins seeing steep declines, contributing to what some analysts have called a "crypto bloodbath." This situation underscores the potential instability of blockchain ecosystems that rely heavily on speculative assets like memecoins. As a result, traders and investors are increasingly cautious, with some turning to more stable DeFi projects for better long-term prospects. RCO Finance Presale: A Window to 1,460% Gains The RCO Finance (RCOF) presale is currently underway. It presents investors with a unique opportunity to purchase tokens at a discounted rate of \$0.0344. Early interest has been impressive, with over \$1.6 million raised in the first two phases of the presale. By joining the RCO Finance ecosystem, investors gain access to various attractive benefits. These include additional RCOF tokens, reduced trading fees, tier-based rewards, voting rights, cash prizes, and passive income through staking dividends. RCO Finance has taken proactive measures to ensure long-term growth by locking 12% of the total token supply in a liquidity pool for three years and implementing a thoughtful vesting schedule to prevent sudden sell-offs upon market listing. This listing could yield over 1,460% ROI, with RCOF set to replicate BONK's year-to-date gains. What else are you waiting for? Get started today and use the promo code RCOF50 to receive a 50% discount off the current price! - At the time of writing, SOL is trading at \$133.45, down 2.69% in the last 24 hours. - If the price manages to fall below \$130 level, then it will likely test \$128 support level. Recent on-chain data has shown a concerning pattern involving a whale investment in Solana (SOL). Some have speculated that the anonymous investor may have been involved in a dump. After being caught unstaking and withdrawing a significant amount of SOL. In a post on X, the on-chain data analytics tool Lookonchain revealed the latest Solana whale behavior. The statistics indicate that on Wednesday, the whale or big institutional investor unstaked and withdrew 139,532 SOL, which is worth around \$19.5 million. At a loss of \$5.5 million, the whale later sent 139,447 SOL, which was valued around \$19.5 million, to the Binance crypto exchange. Bearish Momentum Dominating The situation is already complicated, and the whale migration is adding fuel to the fire. Since it occurs at the same time as SOL's recent downturn. There were ups and downs in the Solana price in August. After reaching a high of \$171 on July 31, SOL began the month trading around the \$150 level and then even recovering to \$160 level. But SOL swiftly lost most of its gains by August's conclusion, and declined under the \$135 range. At the time of writing, SOL is trading at \$133.45, down 2.69% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 10.02%. The price recently found support at \$130 level. If the price manages to fall below \$130 level, then it will likely test \$128 support level. Further decline will likely result in price testing \$117 support level. Conversely, if the price manages to break above \$136 level, then the price will likely climb further to test \$139 resistance level.

- Solana (SOL) drops 25% in a month, falling below key moving averages. - Technical indicators suggest continued bearish pressure and low buying interest. - Price targets: potential drop to \$133.64 or \$110, with \$148.27 as bullish recovery point. Solana (SOL) finds itself navigating turbulent waters as its value has plummeted by 25% over the past month, recently breaching critical technical support levels. This decline not only reflects SOL's ongoing struggle to overcome resistance but also signals a potential erosion of positive market sentiment, potentially paving the way for an extended downward price trajectory. A closer examination of SOL's one-day chart reveals a concerning development: on August 27, the cryptocurrency's price dipped below both its 20-day exponential moving average (EMA) and 50-day simple moving average (SMA). This occurred following an unsuccessful attempt to stabilize above these key technical indicators. With SOL currently trading at \$140, it sits well below its 20-day EMA of \$147.72 and 50-day SMA of \$155.74. These moving averages serve as crucial benchmarks for assessing an asset's price trend. In a downtrend scenario, they often transform into formidable resistance levels, presenting significant hurdles for price appreciation. SOL's inability to maintain a position above these averages throughout much of the month underscores the strength of the prevailing bearish sentiment. Can Solana make a comeback? A brief surge in buying pressure on August 24 momentarily pushed SOL above these moving averages, offering a glimmer of hope to bulls. However, this rally proved short-lived as profit-taking swiftly brought the price back down, further reinforcing the bearish narrative. The cryptocurrency's struggle to sustain momentum above these key levels highlights the lack of robust buying interest necessary to fuel a meaningful recovery. Complementing the bearish signals from moving averages, SOL's Relative Strength Index (RSI) paints an equally gloomy picture. Currently standing at 40.89 and trending downward, the RSI confirms the dearth of buying pressure in the market. This technical setup suggests that market participants are more inclined to offload their SOL holdings rather than accumulate, contributing to the persistent downward pressure on price.

- Solana drops to \$137, with potential for significant breakout. - TVL in Solana's DeFi ecosystem increases by 42% in August. Solana's recent resurgence was short-lived as the cryptocurrency succumbed to bearish pressure, dropping to a two-week low of \$137 today. Over the past 24 hours, SOL has declined by nearly 4%, with trading volume plummeting by 19%. The token has also experienced a 24% decrease over the past month. Despite the recent downturn, analysts believe that the fluctuating price range of Solana in recent days might be setting the stage for a major breakout. Meanwhile, the daily Relative Strength Index (RSI) is currently at 47, suggesting that SOL is approaching oversold territory. If Solana manages to break out of its current range, analysts predict a potential rise to the \$400-\$500 range, with possibilities extending towards \$800-\$1,000 or even higher. This optimistic outlook contrasts with the current bearish trend, where the 9-day Exponential Moving Average (EMA) is at \$146, and the daily RSI stands at 41, indicating that SOL is nearing an oversold condition. Meanwhile, the Total Value Locked (TVL) in Solana's DeFi ecosystem experienced significant growth in August. According to Defillama, TVL surged from \$3.82 billion to \$5.4 billion within three weeks, marking a 42% increase. This rise reflects growing confidence and participation in Solana's decentralized finance sector. SOL Short-term Analysis Currently, Solana's price is under bearish pressure, with resistance expected around \$156. If the bulls regain control, they may push the price toward the \$180 range. Conversely, if bearish momentum continues, SOL could potentially fall to \$129 and further to \$116. The cryptocurrency community remains vigilant, monitoring recent buying activity by large holders to determine whether it will stabilize the market or if further declines are likely. As Solana navigates this volatile phase, short-term predictions remain uncertain. Highlighted News Of The Day Solo Bitcoin Miner Bags Nearly \$200K Reward With Latest Block

In the digital world, success isn't just about the tech; it's about how well it brings people together. Sure blockchain innovations and complex algorithms are impressive, but the real magic of crypto lies in the communities it builds. Right now, everyone's keeping an eye on Solana's price prediction, which is seeing a bit of an uptick, while the Cardano community is excited about the upcoming upgrade launch. However, BlockDAG is turning heads with its new team video, which highlights the project's community-first approach that has helped raise over \$68.3 million in its presale. BlockDAG offers its community various ways to engage, from a recent \$2 million giveaway to the new TG Tap Miner, aiming to unite the community and break into the top 10 cryptos. Current Trends in Solana Price Prediction Solana Price Prediction has attracted attention lately, especially after an investor pulled a large amount of SOL from Binance. This move has made everyone sit up and take notice. Despite this shift, Solana's price has ticked up a little by 0.77%. Looking more closely at the Solana price prediction, the numbers provide a clearer picture. Solana is trading at \$144.68 with a solid market cap of \$65.02 billion. About 449.40 million SOL coins are in circulation from a max supply of 533.68 million. These numbers are key for anyone looking at Solana's market moves, especially with the market feeling a bit uncertain. Cardano Upgrade Launch Nears Completion The Cardano community is focused on the upcoming Cardano Upgrade Launch, scheduled for August 27. Most of the preparations are in place, and the final decision on this date will be made by August 23. The date was chosen based on the readiness of essential metrics, showing that the project is progressing smoothly. As the launch date approaches, all key components for the Cardano Upgrade Launch have been checked and are ready. If a change is needed, the next available launch date is September 3. Meanwhile, the increase in ADA's trading volume suggests growing interest in the upcoming changes. BlockDAG Team Video Spotlights Community Expansion Strategy The latest team reveal video by BlockDAG wasn't just an introduction to the world; it marked a major leap forward in their community-centered strategy, which is at the heart of the project's growth plan. In the video, Antony Turner, the founder and CEO, passionately discussed the importance of involving the community in expanding the BlockDAG ecosystem. He shared his excitement about starting a foundation in Switzerland to support the community. He plans to use money from early sales to fund projects, including grants that enable developers to introduce new ideas to the BlockDAG platform. BlockDAG isn't limited to just tech developers; it embraces everyone connected to the project, from casual users to key stakeholders. Turner also shared some thrilling news: the community has already grown to over 120,000 people, and with the presale bringing in \$68.3 million, they're well on their way to reaching a million members by the launch. BlockDAG is all about building a platform that's open and welcoming to everyone. From the \$2M giveaway to the latest TG Tap Miner play-to-earn game, BlockDAG is doing great things to bring the community together. Turner summed it up perfectly in the video saying, "Launching a successful blockchain is more than just the tech. It's about growing a community and building an ecosystem. These are the things we're putting in place for everyone's benefit." This reflects the core of BlockDAG's mission: to develop technology that's as focused on the people it serves as it is on its groundbreaking features. Final Note As we've seen, both Solana and Cardano are making waves in the crypto world. Solana's recent price increase of 0.77% has caught the attention of investors, while Cardano's upcoming upgrade has its community eagerly anticipating what's next. Meanwhile, BlockDAG is gaining momentum with its community-centered approach, which is showcased in its recently released team video. Instead of just focusing on technology, BlockDAG is actively engaging its users through initiatives like the \$2 million giveaway and the TG Tap Miner play-to-earn game. This approach has already led to over \$68.3 million raised in the presale, highlighting the strength of its growing community. Discover More About BlockDAG: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetwork> Official - Discord: <https://discord.gg/Q7BxgMvYU> Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana, the second-largest altcoin, showed a significant price dip in the last 24 hours. - The token's daily trading volume increased by 23.48% according to CMC data. In the cryptocurrency sector, volatility in prices is a daily occurrence. Despite that, significant movements in charts often tend to draw investors' attention. Relatedly, the second largest altcoin, Solana, showed such price movements. The token has seen a price drop of 4.54% in the last 24 hours. Solana, the native token of the Solana blockchain is prominent especially for its memecoin frenzy. Additionally, SOL, though stands as the fifth largest in market cap, holds huge community support following leading cryptocurrencies Bitcoin and Ethereum. In the past few weeks, the altcoin has shown interesting price movements. According to CMC data, Solana's price remained at a high of \$156.49 in the Asian afternoon hours of August 27. However, as the day progressed SOL took a bearish turn and prices slid to the previous resistance levels much to traders' dismay. Additionally, the token hit an intra-day low of \$143.32. At the time of writing, Solana was trading at \$147.11. Secondly, inferring the token's daily price chart, shows that its short-term 9-day MA still stands above the long-term 21-day MA. This indicates Solana's overall bullish trend, despite the one-day bearish takeover. Meanwhile, the recent bearish turn has seen SOL experiencing selling pressures once again after inching toward a neutral market sentiment. The token's RSI stands at 47.02 as per TradingView reports. What instigated the Current Solana Price Dip? In the last 24 hours, several cryptocurrencies including Solana have shown price dips. Notably, Bitcoin, after hitting \$65K flipped down to \$59K as per different sources. This bearish turn in the largest cryptocurrency was also reflected in the altcoin sector for altcoins such as Ethereum and Solana. Moreover, Solana's prices declined as aforementioned after a bullish weekly price rally. When zooming out, in the last 7 days, SOL shows a price performance of 3.93% increase. At the beginning of the week, the token was trading at a low of \$139. However, in the coming days, it showed price breakouts that propelled prices to a two-week high of \$162. Finally, if the token's current dip is brief then analysts expect Solana to reach new highs. On the other hand, in the case of a prolonged bearish trend, Solana might slide below \$140. Highlighted Crypto News Today:

An Ethereum (ETH) whale who has made hundreds of millions from investing in crypto turns to the ETFSwap (ETFS) and makes a huge investment in the Ethereum (ETH) token, which he regards as the best thing since Solana (SOL). ETFSwap (ETFS) Is The Perfect Asset To Give Investors Monumental Returns ETFSwap (ETFS), the Ethereum (ETH) token going more viral than major meme coins for its absolutely fantastic utility, continues pulling in heavyweight investors like a multi-millionaire Ethereum (ETH) whale. The ETFSwap (ETFS) provides easy access to exchange traded funds, giving crypto investors the opportunity to swap the very valuable Ethereum (ETH) token for tokenized institutional ETFs on a decentralized platform. The ETFSwap (ETFS) provides a one-of-a-kind market-making service that guarantees optimal

liquidity for investors and traders on the DeFi platform. The platform also offers reduced transaction fees and top-tier trading services that are customizable for individual users. And its active users can enjoy flexible risk management solutions, robust security measures, as well as high profit-yielding staking pools that reward up to 87% in annual percentage yields (APY) when investors buy and stake the platform's native ETFS token in ETF pools. Investors like the Ethereum Whale are given permissionless access when trading ETFS and can swap crypto ETFS with high-value traditional ETFs in the real estate and financial instruments sectors, as well as commodities, bonds, and stocks. The ETFSwap (ETFS) provides a hedge for its traders, and the Ethereum Whale is drawn to the available 10x leverage on trading options and other profitable multiple markets, which can significantly increase their trading profits by 30,000%. As well as 50x leverage available for trading any ETFs listed on the platform. Another unique feature of the Ethereum-based ETFSwap (ETFS) token is the provision of passive income opportunities that investors can access when they provide liquidity and engage in yield farming. This is an avenue for continuous profit-making that has caused the Ethereum whale to deposit a large amount of money into buying the ETFS tokens. The ETFSwap (ETFS) platform has been greatly buoyed by the launch and trading of spot crypto ETFS and has put intensive plans in place to launch its own ETF in 2025. Buying the platform's native ETFS token now offers a plethora of benefits to holders of the token and gives exclusive access to investment possibilities on the platform. Additionally, safety and transparency are guaranteed for all investors in the ETFSwap (ETFS) platform, as it has duly completed the KYC of its team members with SolidProof and also passed the audit of blockchain's leading security firm, Cyberscope. Taking the initiative to join savvy investors like the Ethereum whale and buy the ETFSwap (ETFS) tokens now at the presale price of \$0.01831 will be the most positive show of investment acumen. Ethereum Whales Finds Solana (SOL) Replica The Ethereum whale with a \$100,000,000 million in worth is no novice to the volatility of the crypto market, and his net worth is proof of a prudent investment strategy. The Ethereum whale sees the ETFSwap (ETFS) token at the low price of \$0.01831 as a major wealth generator just like Solana (SOL). Solana (SOL) launched sometime in the first quarter of 2020 with an initial price of \$0.9511. The price of Solana (SOL) went on to reach an impressive ATH of \$260.06 on 6 November 2021, and the Solana (SOL) network has gone on to become a revelation as a blockchain as well as a crypto asset. However, the Ethereum ecosystem has been immensely popular and also filled with a lot of liquidity due to the spot crypto ETF market. And the ETFSwap (ETFS) plays a major role in providing access for investors to trade these ETFS, and the Ethereum whale is confident that the Ethereum-based ETFSwap (ETFS) tokens will surge in price as a result of the value it brings into the crypto market. Conclusion: ETFSwap (ETFS) Is Highly Valuable To Ethereum Whale Investors The ETFSwap (ETFS) tokens are highly regarded by experts and analysts in the crypto space who have predicted an incredible future for the Ethereum-based token. The giant investment by the Ethereum whale is an indicator of the general value of the token, and the expected price rise in the coming bull run is an attraction that keeps drawing in crypto's top players. - Solana's bullish trend is supported by rising open interest and technical indicators. - Key resistance levels could determine Solana's ability to maintain momentum. Solana (SOL) has again captured attention with its recent price movements and significant whale activity. Yesterday, Solana hit a 17-day high of \$162, marking an 8% surge over the past seven days. Currently, SOL is trading at \$159, experiencing a modest 0.46% decline, while its trading volume has spiked by 24% in the last 24 hours. Market analysts point to these whale movements and technical indicators as signs that Solana may be on the cusp of a notable price rally. Just hours ago, two wallets withdrew 91,424 SOL, worth \$14.44 million, from Binance, later depositing the amount into Kamino. A whale purchased and staked 28,717 SOL in another significant transaction, valued at \$4.56 million. Such substantial whale accumulations have been observed over the past few weeks, adding fuel to Solana's bullish narrative. Prominent crypto analyst Ali suggests that if SOL exits its current accumulation phase, it could see a price surge of up to 33.15%, potentially pushing its value above \$200 shortly. Meanwhile, open interest (OI) in SOL has steadily risen, indicating increased trading activity and interest among retail traders. When Will SOL Hit \$200? Technically, Solana remains in a bullish trend, with the daily chart showing a 9-day Exponential Moving Average (EMA) at \$153.40. The Relative Strength Index (RSI) stands at 56, reflecting a neutral market condition. Key resistance levels for SOL are identified at \$173 and \$190, which, if breached, could pave the way for further gains. However, any bearish sentiment might see SOL retreating to \$150, with additional support at \$136. As Solana approaches these critical resistance levels, its ability to maintain momentum will be crucial. Traders and investors are closely watching for continued strength or potential reversals in the coming days, as the market speculates on SOL's chances of breaking the \$200 barrier. Highlighted News Of The Day

- Solana (SOL) faces declining institutional interest and weakening technical indicators. - Average Directional Index (ADX) falls below 25.0, signaling loss of trend strength. - Price consolidation between \$175 and \$126 likely, with potential for recovery if \$175 breached. Solana (SOL), once a darling of institutional investors, finds itself at a critical juncture as the third quarter of 2024 draws to a close. The cryptocurrency's recent price action and shifting investor sentiment paint a complex picture of its near-term prospects, challenging the sustainability of its previous uptrend. Technical analysis reveals a concerning development for SOL bulls. The Average Directional Index (ADX), a key indicator of trend strength, has dipped below the critical 25.0 threshold. This decline signals a major loss of momentum in Solana's uptrend, potentially paving the way for a period of consolidation or even a reversal. Without a clear directional bias, SOL may struggle to mount a convincing recovery, leaving it vulnerable to increased selling pressure. Solana's institutional interest shifts Compounding these technical woes is a notable shift in institutional interest. Large wallet holders, who had previously shown robust support for Solana, appear to be scaling back their positions. Data from CoinShares highlights this changing sentiment, with SOL recording a mere \$100,000 in inflows for the week ending August 24 - the lowest among its peer group. This tepid institutional appetite has contributed to substantial month-to-date outflows of \$34 million, raising questions about SOL's ability to attract and retain major investors in the current market climate. Despite these headwinds, Solana's price has managed to post a 24% gain over the past 20 days, bringing it to a current trading level of \$161. The cryptocurrency now finds itself at a critical juncture, holding above the \$156 support level while eyeing the formidable \$175 resistance. However, the confluence of waning trend strength and diminishing institutional interest could impede SOL's ability to breach this key barrier. Looking ahead, Solana's price action is likely to be characterized by continued consolidation between \$175 and \$126.

- Solana (SOL) hit \$160 after a brief spike of 1.68% in the last 24 hours. - A token unlock event, unlocking \$360.78 million worth of SOL, is scheduled in September. Solana (SOL), the fifth-largest cryptocurrency by market cap, has drawn out its marginal gains. After a 1.68% spike, SOL chose a brief bullish rally for the day, breaking the previous resistance levels. Over the last 24 hours, SOL managed to hit a high of \$162. Despite the surge, the SOL price did not rise further and instead dropped to a low of 155. Currently, SOL is trading at \$160. Amid this, SOL's daily trading volume has dropped by over 23.80%, standing at around \$2 billion, according to CMC data. According to on-chain data, a whale has created a new wallet and withdrawn 3,175 SOL, worth approximately \$508K. Notably, over the past 24 hours, Solana has experienced a \$4.28 million liquidation, as per Coinglass data. On the other hand, in August, the altcoin market recorded over \$2.26 billion in token unlocks. While looking into September, the total altcoin unlocks is expected to exceed \$2 billion again. An approximate \$340 million worth of SOL was unlocked into the market this month. Solana anticipates unlocking approximately \$360.78 million worth of SOL tokens in the next month. Can SOL Continue Defending the Bears? Evaluating the past month, Solana has declined by 8.92% and marked the monthly low at \$112. When looking at the weekly price momentum, a steady spike above 12% is noted. SOL climbed from the \$139 range to a high of \$162. Assuming SOL's revival, the initial resistance could be at \$168, and if the bullish sentiment sustains, the price will go high. Conversely, a strong bearish trajectory of SOL could take the price to immediate support at \$153. As per the 24-hour price chart, Solana's daily relative strength index (RSI) stood at 57.57, indicating the asset's presence in the neutral zone. Moreover, at the time of analysis, the token's short-term 9-day MA and long-term 21-day MA were at \$149 and \$148 respectively, below the current price, as per TradingView data. This displays SOL's brief slip into the bullish zone. Highlighted Crypto News Are Justin Sun's WBTC Withdrawals a Strategy or a Warning Sign?

- At the time of writing, SOL is trading at \$158.80, down 0.30% in the last 24 hours. - If the price manages to go past the \$160 mark, then it will likely rally towards \$164 level. Prominent on-chain analyst Ali Chart tweeted an optimistic forecast for Solana (SOL). His chart suggests that Solana is forming a bullish Adam & Eve pattern, which might portend a significant price gain. According to Ali, the cryptocurrency price can surge by almost 33%, reaching \$220, if SOL manages to surpass the critical resistance level of \$164. Given Solana's consistent resilience in the face of market fluctuations, this prediction has aroused the curiosity of the cryptocurrency sector. Eyeing Breakout Solana (SOL) is getting close to the important resistance zone of \$160, where it has lately seen a considerable price increase. The SOL price encountered resistance at this level last week and has been unable to break through since. On the other hand, new long positions have emerged, driving demand higher and causing the price to rise. Along with this, more and more traders began to wager on the price increase. After a weak start to the week, SOL recovered and eventually surpassed the \$150 round mark. The price also rose due to the discovery of a bullish crossing, and the recent dovish stance by the U.S Fed officials. At the time of writing, SOL is trading at \$158.80, down 0.30% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 14.06%. If the price manages to go past the \$160 mark, then it will likely rally towards the critical resistance level of \$164. Breaking above \$164 level, will likely propel the price towards the \$200 mark. However, if the price falls below \$155, then it will likely test \$152 support level. Further decline will likely result in price testing \$143 level.

- Solana price surpassed its resistance at \$145 in the last 24 hours. - The token's daily trading volume surged by 123.19% according to CMC data. Over the last 24 hours, in an interesting turn of events, the crypto market has begun to show bullish sentiments. The overall market cap has increased by 4.07% while daily trading volume surged 47.66%. Leading cryptocurrencies such as Bitcoin and Ethereum surpassed previous resistance levels and attempted price recovery. Notably, the second largest altcoin, Solana, has shown a price increase of 9.70% in the last 24 hours. At the beginning of the day, the token traded at a low of \$144. However, in the following hours, the token's prices began to spark bullish candles and surpassed several resistance levels at \$150 and \$155. At the time of writing, the token was trading at \$157.90 as per CMC data. Zooming out, over the past week, the altcoin struggled to see bullish takeovers of the trading cycles. Its weekly price performance stands at a 13.14% increase influenced by the bullish turn of the past day. Moreover, Solana's daily trading volume also showed a significant surge of 108%. On the other hand, while the expectations for spot Solana ETFs have been on the rise in the US, there hasn't been much progress from the SEC's side. Meanwhile, other countries have witnessed the launch of spot Solana ETFs. Will Solana (SOL) Witness a Price Breakout? According to TradingView data, the token's short-term 9-day MA stands above the long-term 21-day MA. This indicates the bullish turn in the last 24 hours. Moreover, the current price rally has also instigated a buying sentiment in the market. Solana's RSI standing at 75.37 highlights this market sentiment. Furthermore, if Solana manages to sustain this current positive momentum, it might witness price breakouts in the coming days. Relatedly, market analyst Ali stated on his X account that Solana might hit \$164. Meanwhile, Ethereum also surpassed its resistance at the \$2.6K level in the last 24 hours. Highlighted Crypto News Today:

- A big step in making this stablecoin more accessible has been Coinbase's decision. - On August 28, consumers will have access to this new development. Coinbase has announced that it would offer EURC, Circle's euro-backed stablecoin that integrates with Solana. With more and more eyes on the crypto industry, the stablecoin market is seeing more attention worldwide, prompting this move. It is worth mentioning that the most recent declaration follows the exchange's previous statement that customers would be able to convert Euro to EURC at a 1:1 ratio beginning this month. Major Boost for Users A big step in making this stablecoin more accessible has been Coinbase's decision to integrate EURC with Solana. The stablecoin will be much easier to use when the exchange decides to integrate EURC with Solana. Solana users will be able to transfer and receive Circle's euro-pegged stablecoin, according to the exchange. Many more customers, especially those looking to operate within a compliance framework, will be able to take advantage of Solana now that the exchange has decided to offer EURC. Coinbase has previously announced that customers will soon be able to convert Euros to EURC directly on the platform, fee-free. This change follows straight after that announcement. On August 28, consumers will have access to this new development, which provides a smooth and affordable choice. Furthermore, the need for trustworthy, fiat-pegged digital assets is driving the demand for stablecoins, which coincides with the development. Thanks to the addition of EURC transactions, Solana has become a popular platform among crypto market aficionados. Coinbase also announced the launch of a new EURC-USDC order book as part of this strategic expansion. The statement from yesterday states that it will be live on August 29. To significantly simplify trading for customers, this will take the place of the current EURC-EUR and EURC-USDC order books. Highlighted Crypto News Today: U.S Spot Bitcoin ETFs Witness \$65M Inflows Led by BlackRock's IBIT

The crypto well is brimming with opportunities in 2024, especially for those willing to look beyond the well-known giants like Bitcoin and Ethereum. Altcoins, or alternative cryptocurrencies, have been on fire as of late, offering unique technologies and growth potential. If you're thinking about diversifying your portfolio or jumping into the crypto scene for the first time, here are the top 5 altcoins you should seriously consider this year. 1. BlockDAG (BDAG) - The Future of Blockchain Technology Let's kick things off with BlockDAG, a name that's quickly gaining traction in the crypto world. The buzz around BlockDAG is more than just hype. The presale has already raised over \$67 million, and the token is currently priced at \$0.0178. With a planned launch price of \$0.05, early backers could see substantial returns. Some analysts are even predicting that BlockDAG could hit \$1 soon after its public launch. This isn't just wishful thinking; it's a projection based on the project's strong technological foundation and growing community support. Moreover, BlockDAG is making it easier for anyone to get involved in the crypto space by offering low-code or no-code tools for creating utility tokens, meme coins, and NFTs. This accessibility is a game-changer, allowing more people to tap into the potential of blockchain technology without needing a deep technical background. With its innovative approach, strong financial backing, and growing community, BlockDAG is more than just an altcoin to consider - it's one you don't want to miss out on this year. 2. Solana (SOL)

â€“ Speed and Scalability at Its Best Solana has been a standout in the crypto space, particularly known for its speed and low transaction costs. Itâ€™s often referred to as one of Ethereumâ€™s biggest competitors, and for good reason. Solanaâ€™s unique proof-of-history (PoH) combined with proof-of-stake (PoS) consensus mechanism allows it to process thousands of transactions per second, making it a preferred choice for developers and traders alike. 3. Cardano (ADA) â€“ A Leader in Sustainable Blockchain Solutions Cardano is another altcoin that has been making headlines, particularly for its focus on sustainability and scalability. Built on a proof-of-stake consensus mechanism, Cardano aims to provide a more efficient and eco-friendly alternative to traditional blockchain platforms. 4. Chainlink (LINK) â€“ Bridging Smart Contracts with Real-World Data Chainlink is not just another altcoin; itâ€™s a critical piece of infrastructure in the blockchain ecosystem. Chainlink provides decentralized oracles, which are essential for connecting smart contracts with real-world data. This functionality is crucial for the growth of decentralized finance (DeFi) and other blockchain-based applications. 5. Polkadot (DOT) â€“ Enabling Blockchain Interoperability Polkadot is a project that focuses on solving one of the biggest challenges in the crypto spaceâ€“interoperability between different blockchains. Created by Dr. Gavin Wood, one of the co-founders of Ethereum, Polkadot allows various blockchains to communicate and share information seamlessly. BlockDAG â€“ The Altcoin You Canâ€™t Afford to Ignore While all of these altcoins present exciting opportunities, BlockDAG stands out as the most compelling option of the year. Its cutting-edge technology, combined with a user-friendly approach to blockchain development, positions it as a leader in the crypto space. The ongoing presale success and the projected growth potential make BlockDAG not just an altcoin to consider, but the altcoin to watch in 2024. As the crypto market continues to evolve, BlockDAG is setting itself up as a game-changer. Whether youâ€™re a seasoned buyers or new to the world of cryptocurrencies, BlockDAG offers an opportunity thatâ€™s hard to pass up. Donâ€™t miss your chance to be part of what could be one of the most successful crypto projects in recent history. - The new token is designed to make cross-chain trade easier on the platform. - Magic Edenâ€™s desktop and mobile wallets will be the first to provide the ME token. Magic Eden is planning to introduce and use a utility token called â€œMEâ€“ on its Non-Fungible Token (NFT) marketplace. Importantly, the firm said that the ME Foundation is working on the tokenâ€™s development. The new token is designed to make cross-chain trade easier on the platform that is built on Solana. The ME token, as previously mentioned, is an asset representing cross-chain trading protocols and a Web3.0 consumer dApp. An official announcement states that the token will serve as an incentive for users, allowing them to instantly exchange assets on the largest chains. Major Step Forward Moreover, the group is banking on MEâ€™s compatibility with other protocols and dApps being a breeze to integrate. Also, this integration is planned for everyone, even as NFTs and Bitcoin-based Runes become better. The time for single chain maximalism has passed, says Matt Szencics of the ME Foundation. More than \$6 billion in trading volume has been recorded across several networks in Magic Eden, he said. When combined, these two metrics show that the NFT marketplace generates 60% of all income from NFTs and accounts for 80% of the number of trades in Bitcoin Ordinals and Runes. Magic Edenâ€™s desktop and mobile wallets will be the first to provide the ME token once it becomes live. Its release would be a significant milestone in the NFT marketplaceâ€™s recent history of transformation. Magic Eden launched a Bitcoin Runes platform in April, along with the release of their multi-chain self-custodial wallet, which supports Ethereum, Solana, Polygon, and Bitcoin. Users were able to purchase Runes and Ordinals and send Bitcoin to their Magic Eden wallets using the platform. Highlighted Crypto News Today: 33 Million Ripple Tokens Transferred To Binance: XRP Remains Steady

- Solanaâ€™s daily trading volume showed a 25.26% increase according to CMC data. - The altcoin is expecting to see a spot ETF launch as market speculations are on the rise. In the past 24 hours, the cryptocurrency market has shown bullish turns with market cap increasing 2.79% and daily trading volume surging 16.36%. Leading cryptocurrencies such as Bitcoin also showed price increases over the past day. However, the market over the past few weeks has remained uncertain with high volatility rates. Notably, the second-largest altcoin, Solana, has shown a price increase in the last 24 hours with a 2.10% increase in market cap. At Asian evening hours, SOL traded at a low of \$141.01. However, the token slid to an intra-day low of \$139.27 before prices began climbing to current levels. At the time of writing, Solana was trading at \$143.88 according to CMC data. Zooming out, over the past week Solanaâ€™s price charts show strong bull-bear combats as the altcoin showed high volatility. According to TradingView reports, Solanaâ€™s RVI stands at 53.43. This resulted in Solanaâ€™s weekly prices dangling between \$141 to \$149 levels. Additionally, the tokenâ€™s weekly price performance shows a 1.07% increase due to the bull-bear combat. In the last week, Solana was trading at a price of \$143, after which it proceeded to fall to a support level of \$136. However, with the bulls attempting to win the combat, prices climbed above \$140. Will Solana Bulls Make a Comeback? The altcoin has received mixed signals from market analystsâ€™ predictions. Some of the market experts believe that Solana might experience a bullish turn. Meanwhile, others have predicted an incoming price drop for the altcoin. If the token manages to surpass current resistance at \$145 and \$149 then it can experience a bull run surpassing \$150. On the other hand, according to TradingView data, Solanaâ€™s short-term 9-day MA stands below the long-term 21-day MA indicating an overall bearish trend. Relatedly, the tokenâ€™s RSI also stands at 45.35 as market sentiments still lean towards selling pressures. Meanwhile, Solana has received attention as it anticipates a spot ETF launch in the coming months. While the US SEC has shown strong resistance against a speedy approval, other countries have expressed alternate sentiments. Notably, on August 21, Brazil approved its second Solana ETF according to reports. Highlighted Crypto News Today:

Solana investors are concerned as they face an impending unlock of \$340 million worth of SOL tokens. With that many new tokens entering circulation, investors are concerned about increased selling pressure on Solana, which could drive the price down in an already volatile market. Meanwhile, the new ETFSwap (ETFS) presale has drawn in more investors as Solana records outflows. This trend could indicate a shift from current volatile conditions on the altcoin to a more promising opportunity in ETFSwap (ETFS). Investors Panic As Data Suggests Potential Sell-Off On Solana Data from TokenUnlocks suggests that Solana is set for the biggest altcoin token issuance of the month, which could significantly impact its price. The upcoming \$340 million token unlock has triggered a shift in Solanaâ€™s price action, causing traders and investors to pull back from the altcoin. Crypto analyst Wazz Crypto believes that the token unlocks have become aggressive over time, leading to accelerated sell-offs as holders realize that there is little demand for the continuously mined tokens. Although Solana bounced back to \$161 from its lows of \$112 caused by market-wide price dumps on August 5, the altcoin appears to remain on a bearish trend. Following \$182 million recorded outflows on Solana, according to data from Coinglass, the altcoin has experienced \$77 million in outflows since August 12. This data indicates the risk-averse approach by crypto investors in August, following the huge bearish hit at the beginning of the month. As of this writing, Solana (SOL) is trading at \$144, showing more than a 20% price decline from its monthly high of \$185. Experts believe that the upcoming \$340 million worth of SOL tokens further aggravates investment sentiment, which could only be restored if Bitcoin (BTC) leads a market recovery. That being, Solana investors are making a quick shift to ETFSwap (ETFS) in pursuit of profit. ETFSwap (ETFS) Poised As New Market Favorite For Huge Returns Crypto enthusiasts and experts alike have favored the new ETFSwap (ETFS) for its prospects despite current market conditions. The emerging blockchain platform is currently on presale, enabling early investors to get in for cheap ahead of the projected growth as a result of its innovative blockchain solution. ETFSwap (ETFS) emerges as an Ethereum-based platform trading and investing in tokenized ETFs. These tokenized assets will be backed by ETF securities across various sectors purchased on the traditional market. Leveraging the Ethereum blockchain for improved security, transparency, and efficient trading, the new ETF trading platform is poised to drive the future of DeFi. More so, ETFSwap (ETFS) captures the best of both centralized and decentralized markets, resulting in an ETF platform that favors investors from both markets. The new ETF trading platform offers crypto-compatibility and decentralized trading, which is a preferable feature for crypto investors. On the other hand, ETF investors who usually trade on traditional platforms can also benefit from the new features. Some of these include fast ETF settlements even outside of trading hours, 24/7 market coverage, easier access to liquidity via lending, crypto-to-ETF swaps, staking yields for passive income, lower trading costs, and many more. ETFSwap (ETFS) combines on-chain accessibility, variable investment conversion, and anonymity on a seamless, user-friendly platform. This platform will be available to interact with on the beta launch in a few weeks. The ETFSwap (ETFS) team has completed KYC verification by SolidProof, and the contract has gone live on the mainnet, preparing for a massive launch. Conclusion The bearish sentiment on Solana has led market momentum to the new ETFSwap (ETFS), which looks quite promising. Experts have predicted a potential 40,000% move on the presale token amid exciting prospects for real-world assets and ETF assets. Join the future of trading and buy ETFSwap (ETFS) on presale for \$0.01331 before the price rises to \$0.03846. - The removal of Instagram and X posts indicates that the platformâ€™s accounts have been restored. - The hackers informed people about the rug pull and made \$700,000 worth of SOL. Bad actors hacked the Instagram account of fast food giant McDonaldâ€™s and promoted a meme coin based on Solana. On his X (formerly Twitter) account, which is believed to have been compromised, the companyâ€™s director of marketing also published a relevant message. After hacking into McDonaldâ€™s Instagram account, the hacker posted about GRIMACE, a Solana-based meme coin. The hacker said that the corporation had released the meme coin on Solana. Which elicited a range of responses from the community. The assetâ€™s value surged in the hour after the publication before leveling out. Poor Light on Crypto Industry In addition, the fast food chainâ€™s director of marketing, Guillaume Huin, wrote a relevant post on the GRIMACE coin on X. The hacker went on to say that if individuals wanted the official Instagram account to follow them back, they could just drop their handles. The removal of both Instagram and X posts indicates that the platformâ€™s social profiles have been restored. The broader market push in the first quarter of 2024 has helped Solana meme coins gain traction this year. As more and more people get on the bandwagon for these tokens, the price of smaller and even new tokens has risen sharply. But in bear markets, meme coinsâ€™ prices decrease because of how the market as a whole feels about them. Moreover, after the occurrence, the hackers informed people about the rug pull. They changed the bio of McDonaldâ€™s Instagram account to say they made \$700,000 worth of SOL. The unscrupulous actorsâ€™ actions bring a poor light on the crypto industry, according to some crypto users who chastised them. Highlighted Crypto News Today: Polygon (MATIC) Breaks Out of Descending Trendline, Signaling Bullish Momentum

- Brazilâ€™s securities commission, the CVM, has approved a second Solana ETF this month. - Hashdex, a Brazil-based asset manager, will offer the new Solana ETF in partnership with investment bank BTG Pactual. Brazilâ€™s Securities and Exchange Commission (CVM) has greenlit a second Solana ETF, marking a notable step for crypto investments in the region. This new fund is set to be launched by asset manager Hashdex, a Brazil-based asset manager managing over \$962 million in assets, in collaboration with local investment bank BTG Pactual. This decision follows the CVMâ€™s earlier approval of Brazilâ€™s first Solana ETF by QR Asset earlier this month. According to the CVM database, the upcoming Solana ETF is currently in its pre-operational phase. The Solana ETF approval by Brazilâ€™s financial watchdog highlights the growing acceptance of digital assets in the country, creating more investment opportunities for Brazilian investors. U.S. Approval Process for Solana ETFs Faces Uncertainty Despite Brazilâ€™s proactive stance, the path for similar approvals in the U.S. is less clear. Both VanEck and 21Shares had filed for spot Solana ETFs in June, hoping to mirror Brazilâ€™s progress. However, recent developments have cast doubt on these efforts. Cboe Global Markets, which had initially filed the applications, has since removed them from its website. Bloombergâ€™s ETF analyst Eric Balchunas reported that these filings were never listed on the U.S. Securities and Exchange Commissionâ€™s (SEC) website, which has led to their withdrawal. As the U.S. gears up for the upcoming elections, the regulatory landscape for cryptocurrencies is poised for significant shifts. The outcome of the U.S. elections could play a pivotal role in shaping the future of cryptocurrency regulation and ETF approvals. Candidates and policymakers weigh in on crypto policies, which might impact regulatory decisions and the broader investment landscape. Key to this is the approval process for crypto-related exchange-traded funds, which remains uncertain amidst evolving political dynamics. However, Brazil Solana ETF news doesnâ€™t impact the Solana native cryptocurrency, SOL, which is currently trading at \$143. However, Solana has seen significant developments this year and has grabbed huge attention, largely driven by the rise of memecoins. Highlighted News Of The Day

- SEC rejected Cboeâ€™s Solana ETF filings over security concerns. - 21Shares paused efforts; VanEckâ€™s Solana ETF application still active. The U.S. Securities and Exchange Commission (SEC) has rejected Cboe BZXâ€™s 19b-4 filings for two proposed spot Solana ETFs, according to the reports. This decision led to the removal of the filings from the Cboe website and prevented them from being submitted to the Federal Register, halting any progress toward SEC approval. The rejections follow discussions between the SEC and ETF issuers regarding concerns that Solana may be classified as a security. This view aligns with the SECâ€™s stance in various court filings. The 19b-4 forms, which exchanges submit on behalf of issuers to initiate the SEC approval process, were thus never processed by the Federal Register, which would have triggered the approval timeline. At present, two issuers are pursuing Solana ETFs: 21Shares and VanEck. 21Shares has seemingly paused its efforts, as its S-1 form no longer appears in the SECâ€™s EDGAR filing system. In contrast, VanEckâ€™s S-1 form remains visible, and Matthew Sigel, head of research at VanEck, has confirmed that their application remains active. Despite the setbacks from the 19b-4 rejections, there is potential for reapplications or amendments. Audrey Belloff, head of communications at 21Shares, stated, â€œWe are unable to comment on the regulatory process at this time. We remain committed to expanding investor access to cryptocurrencies in the U.S. market and around the world.â€“ What does the Future Have in Store? The SECâ€™s actions were anticipated given its previous statements on Solanaâ€™s security status. Market experts, including Nate Geraci and Bloomberg Intelligenceâ€™s James Seyffart, have suggested that Solana ETFs may face extended delays or challenges under the current administration, with potential approval not expected before 2025. Meanwhile, neither VanEck, Cboe nor the SEC provided any official statements on this. Amid this, SOL is trading at \$146.06 with a 2.53% surge and the trading volume is up 18%, this mild surge comes in after a bearish week. Highlighted News Of The Day

- A fraudulent Chrome extension æBull Checkeræ is found targetting Solana users. The US SEC has delayed the approval of the Solana ETF, leading to the removal of 19b-4 forms. Solana users have been put on high alert following the discovery of a malicious Chrome extension named æBull Checker.æ This fraudulent extension, pretending to be a helpful tool for crypto traders, has been found to target Solana users. Specifically putting their digital assets at risk. Meow, the pseudonymous founder of Jupiter, made an official post on X. Security researchers uncovered that the æBull Checkeræ extension, once installed, gains access to usersæ private keys and seed phrases. With this sensitive information, cybercriminals can easily drain victimsæ wallets, potentially resulting in significant financial losses. The users affected by this have installed this extension becoming the main reason for the scam. The æBull Checkeræ extension reportedly advertised itself as a tool to help users track their Solana investments and market trends. However, its true purpose was far more sinister. Once installed, the extension would monitor usersæ activities on Solana-related websites and crypto exchanges. This extension had permission to read and change all the data on the website. It harvests valuable data and transmits it to the attackers. Jupiter advised Solana users to immediately check their browser extensions and remove æBull Checkeræ if found. Additionally, users who may have installed this extension should take immediate action to secure their funds by transferring them to a new, secure wallet. SEC Delays Solana ETF Approval The SEC has delayed approval for the Solana ETF, citing concerns about the cryptocurrencyæ security status. This has led to the removal of the related 19b-4 forms from CBOEæ website. Additionally, 21Sharesæ S-1 registration statement and the forms are no longer visible in the SECæ EDGAR system or the BZX Pending Rule Changes. Both applications initially filed on July 8, had yet to receive Notices of Filing from the SEC. This delay signals ongoing regulatory uncertainty surrounding the approval of cryptocurrency ETFs, highlighting the challenges faced by issuers in navigating the complex regulatory environment. Highlighted Crypto News today: Dogecoin Rallies as Trump Proposes Cabinet Role for Elon Musk

- Solana trades at \$146, marking a brief spike of 2.67% over the last 24 hours. - VanEck remains optimistic about its Solana ETF plans despite a regulatory filing setback. Solana (SOL), the fifth-largest altcoin by market cap, has extended its minimal gains. After a 2.67% spike in the last 24 hours, SOL hit the \$148 mark. Despite struggling to \$150, the altcoin signals a brief bullish rally for the day surpassing its previous resistance levels. The token opened the trading day at the \$143 level and eventually led to break the resistance at \$145. During this timeframe, SOL climbed a high of \$148.65. Amid this, SOLæ daily trading volume has increased by over 12%, standing at approximately \$2.17 billion. At the time of writing, SOL was trading at \$146.63, according to CMC data. There is increasing anticipation regarding the entry of Solana spot exchange-traded fund (ETF) into the financial market. Asset manager VanEckæ effort to launch a SOL ETF is in progress, despite the recent alterations in its regulatory paperwork. On X, VanEckæ head of digital assets research, Matthew Sigel, confirmed that the ETF launch is on schedule, even with the recent removal of the 19b-4 filing from Cboe Global Marketsæ regulatory filings. Meanwhile, the outflows of SOL exchange-traded products (ETPs) have risen negatively to the highest on record of \$39 million last week, as per CoinShares report. According to on-chain data, a massive whale has sold 20K SOL worth approximately \$2.9 million, within the last 24 hours. Moreover, it was found that the whale had sold 614K SOL, valued at around \$89 million, since January 15. Over the past 24 hours, Solana has experienced a \$7.17 million liquidation, as per Coinglass data. Will SOL Sustain at the Current Level? SOL has shown a moderate price performance in the last seven days, with a 2.13% spike. At the beginning of the week, the altcoin were trading in the \$145 range. In the following days, the tokenæ price fluctuated severely, climbing to a high of \$151 and falling to a low of \$137. If SOL manages to climb and break above the \$150 level, then it will likely test the \$161 resistance soon. However, if the price falls below the \$142 mark, it is likely to test the \$130 support level. Notably, the current price momentum of SOL triggered it to stay in the neutral market sentiment, as indicated by the RSI standing at 47.68. Besides, the current bearish trend is highlighted by the short-term 9-day MA standing below the long-term 21-day MA. Highlighted Crypto News Bitcoin Price Climbs Above \$60K Fueling Positive Market Sentiments

While Bitcoin (BTC) and Solana (SOL) struggle with volatile price movements and declining values, leaving investors uncertain about their prospects, DigiHorse (DIGI) remains resiliently bullish. The enthusiasm for DIGI stems from a series of positive developments within its gaming ecosystem, which seem to position it a step ahead of both SOL and BTC. Market Sentiment For Bitcoin Amid a challenging phase for altcoins, investors are cautiously optimistic that a resurgence in Bitcoin could positively impact the broader market sentiment. Despite the prevailing market trends suggesting a potential rally, investor confidence remains tepid. Bitcoin is currently at a key point, with analysts pointing to potential indicators that could cause a bullish trajectory in the coming weeks. SOLæ Slow Performance Dampens Investor Spirits Despite predictions by noted crypto analyst Carl Runefelt that SOL could reach new highs of \$163, the cryptocurrency has instead seen a decline to \$137.96. This drop has raised investor concerns regarding SOLæ stability for long-term investments. Nonetheless, a favorable reading from the Bitcoin Dominance chart might yet provide a reliable entry signal for altcoin investments. The Bitcoin Dominance chart is seen as a reliable metric for predicting alt seasons and market reversals, but currently, it does not seem to support a positive outlook for altcoins including SOL. DIGI Draws Investors With Compelling Benefits DIGI is currently surrounded by several developments that are catching the eye of investors. Some notable features among these are the early bird benefits and a lucrative referral system. The early bird perks are huge. Beyond the potential for a 22X return on investment at launch, early participants are also going to benefit from the coming DIGI airdrop, as detailed in its roadmap. Additionally, DigiHorse community members and DIGI token holders are currently benefiting from an active referral system. This program rewards users for each new person they introduce to the platform, thereby increasing their holdings of DIGI tokens. The enthusiasm for purchasing DIGI at these early stages is understandable, given the unprecedented low entry price. This opportunity will disappear once DIGI is officially live. For more information on DIGI and to acquire DIGI tokens, follow the links below: - Website: www.digihorseempires.io - Presale: Join Now - Twitter: Follow Us - Telegram:Join the Conversation Disclaimer: TheNewsCrypto does not endorse any content on this page. As the market shows signs of recovery, investor confidence in Polkadot (DOT) and Solana (SOL) remains shaky. While Polkadot is making a quiet recovery, hinting at potential bullish momentum, Solana faces ongoing concerns over centralization, causing skepticism among its supporters. With the broader market focused on recovery, BlockDAG has become a magnet for traders moving away from struggling assets like DOT and SOL. BlockDAGæ unique appeal lies in its innovative DAG technology, which addresses the bottlenecks faced by more conventional networks. The project has managed to attract significant attention, raising over \$66.7 million in its presale during a challenging market period. Antony Turner, the CEO, echoed the communityæ optimism in a recent interview, where he outlined the projectæ roadmap to success. Can Polkadot (DOT) Break Through the \$6.5 Resistance? Polkadot has faced headwinds recently, with DOT struggling to hold above the \$7 mark. Early August saw the price dip below its 20-day simple moving average (SMA), a clear indication that buyers couldnæ sustain the price at a critical level. This led to a drop to \$4.0 before the price managed to recover by approximately 3%. With DOT currently hovering around the \$4 mark, market sentiment remains bearish, and concerns about a potential sell-off are growing. Despite brief moments of optimism, Polkadot faces heavy selling pressure near the \$6.5 level, preventing it from moving higher. Opinions are split on its future, but the consensus is that Polkadot must break the \$6.5 barrier to restore investor confidence and possibly spark a larger rally. Solana Ecosystem: Facing Centralization Concerns The Solana ecosystem has been making waves, particularly after its trading volumes surpassed those of Ethereum, with an impressive \$55.876 billion transacted in the second week of August. This highlights Solanaæ growing popularity due to its high-speed transactions and low fees. However, concerns about centralization persist, particularly given the networkæ reliance on a limited number of validators. Additionally, Solana has faced several network outages, raising questions about its reliability. Despite these challenges, the developer community remains active and continues to attract attention, positioning Solana as a significant player in the blockchain space. BlockDAG Shines After AMA and Team Reveal Following a recent interview with CEO Antony Turner, the BlockDAG community has shown renewed enthusiasm for the project. Turner, with his deep expertise in technology and cryptocurrencies, shared key insights into BlockDAGæ growth strategy. He highlighted the introduction of a more consistent and stable halving process, which promises long-term sustainability and stability for holders. Turner emphasized that BlockDAG aims to smooth out the typical volatility experienced during halving events, making it an attractive option for holders seeking stability. The excitement continued with an engaging Ask Me Anything (AMA) session with the BlockDAG team. During the session, the leadership addressed questions from the community and provided insights into the networkæ plans. The team stressed that transparency and community involvement would be central to their operations, which significantly boosted market confidence. The presaleæ success, raising over \$66.7 million, is a testament to the strong market interest in the project. Early holders have already seen impressive gains, with BDAGæ price soaring by 1600% from the first presale batch to the current 21st batch. Final Thoughts As Polkadot (DOT) struggles to break the \$6.5 resistance and Solana grapples with centralization concerns, BlockDAG has emerged as a bright spot in the market. The projectæ presale has outpaced even some of the more established networks in attracting strong market interest. Under the guidance of CEO Antony Turner, BlockDAG is addressing the challenge of providing stability for miners and holders alike. The recent AMA session with the team has further solidified the projectæ position, signaling that BlockDAG is here to stay and poised to deliver significant returns for its community. - The CBOE website no longer has the Solana ETF filings. - If the SOL price breaks above \$150 level, then it will likely test \$163. Despite a recent low of \$137, the price of Solana (SOL) is showing substantial momentum. as the price is seeing a remarkable comeback. By ignoring the retail sector entirely, Solana is aiming for widespread institutional adoption. The introduction of a spot Solana exchange-traded fund (ETF) in the US is being considered by fund managers. Already, VanEck and 21Shares have shown interest in this product; nevertheless, there is now an obstacle. Unexpectedly, the CBOE website no longer has the Solana exchange-traded fund (ETF) filings. Which were made by asset management companies 21Shares and VanEck. In June, the two firms submitted S-1 paperwork in an effort to get the green light to start selling Solana ETFs. Brief Rebound A convincing analogy is made by crypto expert Kaleo between the present price trend of Solana and Ethereumæ performance in late 2020. This positive pattern that Ethereum displayed during its last bull cycle is being replicated by Solana, according to Kaleo. With a high point near \$200, Solana has shown a strong bullish trend from the start of the year. But the market has been up and down recently. And Solana had dropped all the way till \$113 on August 5. At the time of writing, SOL is trading at \$146, up 3.45% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 34.06%. The price found support at \$136 level on 16th August and has witnessed brief rebound. If the price manages to climb further and break above \$150 level, then it will likely test \$163 resistance level. However, if the price falls below the \$140 mark, then the price is likely to test \$136 support level.

The crypto market has been turbulent recently, with Cardano (ADA) facing a sharp 10% decline, while Solana (SOL) has been in the spotlight due to its significant rise. Amid these fluctuations, BlockDAG has been making strides with its consistent strategies and stability. Featuring an automated bonus system based on user ranks, BlockDAG has attracted over 100,000 committed holders. Its accessible dashboard not only facilitates portfolio monitoring but also stimulates competition, nurturing a thriving community. The success of BlockDAGæ presale, which saw a price jump of 1600%, highlights its potential as a leading cryptocurrency to buy. Analyzing Cardanoæ (ADA) 10% Price Decline Cardano has recently dropped 10%, a substantial fall that has caught the attention of investors tracking ADAæ performance. This decline reflects a bearish outlook in the market, signaling challenges in maintaining its previous upward momentum. Investors are currently evaluating this decrease, considering whether it offers a buying opportunity or if it suggests further downturns. This 10% fall has also triggered discussions on ADAæ future prospects, particularly as it faces intensified competition from other cryptocurrencies. Solanaæ (SOL) Surge: Breaking Past the \$186 Barrier? While Cardano faces its challenges, Solana is capturing attention with its notable market surge. Recently, SOL was trading around \$164, having earlier retreated from the critical \$186 resistance level. This dynamic indicates Solanaæ resilience and its capacity to rally despite resistance. Over the last three weeks, SOLæ value increased by nearly 45%, moving along an upward trajectory. Yet, this upward movement encountered resistance at \$186, leading to a dip below the 20-day Exponential Moving Average (EMA), a key marker of short-term trends. Market reactions to Solanaæ rise have been varied, with some anticipating continued volatility and others seeing potential for further growth. The critical support level at \$154 is crucial for determining SOLæ future direction, as market watchers look for signs of a positive turnaround. BlockDAGæ Auto Bonuses & Community Expansion BlockDAG is reshaping the crypto landscape with its innovative reward system and active community engagement. With over 100,000 backers, BlockDAG has cemented its role as a significant player in the market. A major draw is the automatic bonuses linked to user ranks, which are distributed as 2%, 4%, 6%, and 8% for ranks of Turtle, Fish, Shark, and Whale, respectively, enhancing each transaction with added rewards. The robust presale coin of BlockDAG has also highlighted its increasing popularity. Having raised a substantial \$66 million, this reflects strong market confidence. This financial endorsement underpins BlockDAGæ prospects, as the presale has demonstrated rapid growth, with the coin price jumping from \$0.001 to \$0.017æ a striking 1600% increase. This rapid ascent not only affirms the projectæ feasibility but also intensifies interest in BlockDAGæ continuing presale. Another appealing feature of BlockDAG is its user-friendly dashboard. This interface enables investors to track their ranks, bonuses, and overall investment performance in real-time, introducing transparency and fostering competition. These tools empower investors to actively engage in their investment journey, deepening their commitment to the projectæ success. What Sets BlockDAG Apart? In a market experiencing Cardanoæ 10% dip and Solanaæ complex rise, BlockDAG stands out as an appealing investment option. With more than 100,000 supporters and a successful presale raising \$66 million, BlockDAG demonstrates it is more than just a fleeting trend. Its tailored bonus system, aimed at rewarding and engaging the community, offers a competitive

advantage appealing to many investors. As BlockDAG continues to expand, it is evident that it is not merely keeping pace with the market but is also poised to become one of the top crypto investments this year. Invest in the BlockDAG Presale Now: Presale: <https://purchase.blockdag.network> Website: <https://blockdag.network> Telegram: <https://t.me/blockdagnetwork> Discord: <https://discord.gg/Q7BxghMvYu> Disclaimer: TheNewsCrypto does not endorse any content on this page. The cryptocurrency market is currently experiencing a significant resurgence, marked by solid gains across various digital assets. This positive sentiment is largely driven by renewed investor confidence and optimistic market conditions. Notably, major cryptocurrencies like Bitcoin and Ethereum have seen substantial increases in their values, indicating a bullish market sentiment. Amidst this development, Pawfury (PAW) is emerging as a presale project that's capturing the attention of savvy investors. With its promise of high returns and seemingly predictable patterns, Pawfury stands out in the volatile crypto landscape, offering a refreshing alternative to established tokens. Pawfury (PAW) is a New Top-Tier Contender Pawfury (PAW) is rapidly emerging as a top-tier contender in the cryptocurrency market. With its unique blend of advanced technology and practical utility, Pawfury (PAW) sets itself apart from other coins. Making it an attractive investment option. Backed by a strong and growing community and continuous development, Pawfury (PAW) demonstrates significant growth potential. This strategic positioning and innovative approach make Pawfury (PAW) a standout choice for investors looking for high returns in a competitive market. Optimism (OP): Community Debates and Market Implications Optimism (OP) is currently facing internal debates over the allocation of 30 million OP tokens for public goods funding. This controversy reflects the complexities of DAO governance and funding decisions. Source: TradingView The price of Optimism (OP) is influenced by these internal dynamics, with the community's decision potentially impacting its market value. Optimism (OP) faces the challenge of resolving its internal conflicts to maintain market confidence. Its future growth depends on the community's ability to navigate these governance issues. Avalanche (AVAX): Breaking Barriers and Eyeing New Heights Currently, Avalanche (AVAX) stands at a critical juncture in its market voyage. The token recently conquered an imposing resistance level of \$20.65, a barricade that had stunted its price for more than one year. Such a pivotal breakthrough transforms this resistance into a fresh support, while also paving way for significant upward trajectory and thus marking it as a crucial development on the graph of the Avalanche (AVAX) performance. Avalanche (AVAX) is trading within a range of \$13.29 to \$27.07, with the 10-day moving average of \$21.08 and the 100-day moving average of \$12.28. The support level is identified at \$5.2, while resistance levels are at \$32.75 and \$46.53. Looking ahead, if Avalanche (AVAX) sustains its position above the \$20.65 level, it could ignite a significant rally, potentially reaching a target of \$35, marking a 70% increase. In an extremely bullish scenario, Avalanche (AVAX) could even push towards the \$40 mark, doubling its value. However, a fall below the immediate support point could trigger a 22% decline towards the \$16 defense zone, highlighting the delicate balance in the market. Litecoin (LTC): The Silver to Bitcoin's Gold Shows Resilience Litecoin (LTC) is showing resilience throughout November, mirroring Bitcoin's uptrend with a neat 9% weekly gain and a 3% monthly increase. The performance of LTC, bolstered by recent developments like achieving over 1 million transactions in a single day, adds to its appeal. With its reserves pegged over 101%, Litecoin (LTC) is emerging as a safe and attractive opportunity, especially considering its similarities to Bitcoin, but with cheaper transactions. Sitting snugly between its support at \$61.48 and resistance at \$74.6, LTC is giving off mixed signals. The Simple Moving Averages (SMA) are huddled close at \$62.59 for the 10-day and \$66.51 for the 100-day, hinting at a potential tug-of-war between bulls and bears. The MACD barely whipsaws at 0.02, and the RSI lounges at a balanced 50.06. Solana (SOL): Navigating Price Volatility and Future Prospects The hourly chart of the SOL/USD pair shows a break below a rising channel with support at \$154. The pair dipped below the \$145 level and even tested the \$140 zone. A low was formed at \$141.29, and the price is now consolidating losses. The next major resistance is near the \$150 level or the 50% Fib retracement level of the downward move from the \$158 swing high to the \$141 low. A successful close above the \$150 resistance could set the pace for another steady increase. The next key resistance is near \$155. Any more gains might send the price toward the \$162 level. If SOL fails to rise above the \$150 resistance, it could start another decline. Initial support on the downside is near the \$142 level. The first major support is near the \$140 level. Arbitrum (ARB): Revolutionizing Ethereum's Scalability Arbitrum (ARB) boosts Ethereum's game by tackling steep fees and jam-packed networks, so everything runs smoother and won't cost you an arm and a leg. Arbitrum (ARB) cuts down on Ethereum's hefty fees and quickens transactions by handling them off the main chain. This method doesn't just scale things up, it also smooths out the experience for users, which could really get more people on board with using dApps within DeFi. Arbitrum (ARB) is trading in a range between \$0.54 and \$0.6. The 10-day Moving Average is at \$0.79, and the 100-day Moving Average is at \$0.61. Support levels are identified at \$0.5 and \$0.47, while resistance levels are at \$0.6 and \$0.74. Arbitrum (ARB) savvy tech chops and prime spot in the crypto world hint at a bright road ahead. Its compatibility with the Ethereum Virtual Machine (EVM) and the ability to seamlessly execute Ethereum functions positions it as a strong player in the L2 scaling solutions space. Arbitrum (ARB) has got to stay secure, fast, and keep drawing folks in if it wants to hold its own against rivals in the cutthroat world of DeFi. Bottom Line While Solana, Optimism, Arbitrum, Litecoin and Avalanche show potential in their respective niches, projects like Pawfury offer a glimpse of the innovative potential within the crypto space. By applying expert strategies and considering emerging presales, investors may find opportunities even in the most challenging market conditions.

- Solayer Labs launches Solana restaking protocol, backed by Binance Labs. - Investment aims to enhance Solana's security, network performance, and ecosystem growth. Solayer Labs has recently made headlines with the launch of its Solana restaking protocol on the mainnet, marking a significant milestone for the Solana ecosystem. This launch heralds the beginning of Solana's restaking era, with initial Asset Verification Systems (AVSs) including Bonk, SonicSVM, and HashKey Cloud. Moreover, in a recent financing round led by Binance Labs, Solayer Labs has secured substantial investment, although the financial details remain undisclosed. This funding round has attracted notable figures such as Anatoly Yakovenko, co-founder of Solana Labs, and Sandeep Nailwal, co-founder of Polygon. The newly launched protocol has made a notable impact. According to Lookonchain, within just nine hours of its mainnet launch, 1,439 stakers deposited 14,570 staked SOL. It was worth approximately \$2.13 million, to SonicSVM via Solayer Labs. Market watchers states that this early adoption underscores the protocol's immediate appeal. And it's potential to enhance the Solana ecosystem's security and performance through restaking. What Does Solayer Labs Aim for? Solayer Labs aims to optimize network bandwidth and bolster blockchain security. They have already amassed over \$150 million in Total Value Locked (TVL). It was from more than 70,000 unique deposit addresses since its Phase 1 launch. This has placed Solayer among the top 15 protocols within the Solana ecosystem. The investment from Binance Labs is seen as a strategic move to support the development and expansion of Solayer's protocol. By integrating additional protocols and addressing network congestion issues, it might play a crucial role in the evolution of decentralized finance (DeFi) on Solana. Jason, co-founder of Solayer Labs, recently expressed enthusiasm about the future. He emphasized that this investment is a key step towards achieving their vision of a robust and dynamic Solana ecosystem. The Solana community sees Binance Labs' backing as a testament to its potential. And a demonstration of its commitment to driving innovation within the blockchain space. Highlighted News Of The Day Crypto Exchange Binance Settles \$1.75M Penalty with Brazilian SEC

- Solana (SOL) forms lower highs and lows, indicating persistent bearish pressure. - Technical indicators suggest an impending bullish crossover. - Price targets include resistance levels at \$158, \$166, and potentially \$200. Solana (SOL) is struggling with conflicting market forces and technical indicators. The cryptocurrency's recent price action has been characterized by a series of lower highs and lows, a pattern typically associated with bearish sentiment. However, beneath this apparent weakness, signs of a potential bullish reversal are beginning to emerge, setting the stage for what could be a significant shift in Solana's trajectory. Despite the persistent downward pressure, Solana's bulls have managed to maintain a steep ascending trend, suggesting an undercurrent of buying interest that has persisted over an extended period. This resilience in the face of bearish headwinds hints at the possibility of a more substantial recovery on the horizon. Solana technical analysis shows interesting developments Technical analysis of SOL's chart reveals intriguing developments that could signal a change in fortune for the asset. The Ichimoku cloud, a comprehensive indicator that provides insight into trend direction and momentum, is showing signs of a potential bullish crossover. This technical event, if confirmed, could serve as a catalyst for renewed buying interest and upward price movement. Complementing the Ichimoku cloud's bullish inclinations, the Relative Strength Index (RSI) has rebounded from oversold territory, reaching more neutral levels despite intermittent selling pressure. This recovery in the RSI suggests a gradual shift in momentum that could support a sustained upward move in Solana's price. As Solana approaches a critical resistance zone between \$152 and \$158, the formation of hammer candles in recent trading sessions indicates a potential exhaustion of selling pressure. A decisive breach of this resistance area could pave the way for a test of the next significant hurdle at \$166, a level that, if surpassed, could signal a more robust bullish trend.

NIGGA COIN is an innovative meme coin built on the Solana (SOL) network, capturing massive attention within the global cryptocurrency community. As the presale draws to a close on August 17th at 9:00 AM, millions of dollars have already been raised, with countless investors recognizing the potential and future value of NIGGA COIN and rushing to participate. Investors are filled with confidence, knowing that listing is guaranteed immediately after the presale, offering potential profits right from the start. NIGGA COIN has already burned 90% of its total supply, a strategic decision that increases scarcity and maximizes the token's value in the market. Solana + NIGGA COIN = The Perfect Formula for Success NIGGA COIN, built on the Solana network, is rapidly growing due to its technical excellence and strong community, showing remarkable momentum, especially in the Asian market. NIGGA COIN is not just another meme coin; it's a recognized cryptocurrency in the global market, thanks to its innovative technology and strategic partnerships. NIGGA COIN goes beyond being just an investment opportunity; it's a cryptocurrency designed to promote cultural empowerment, economic freedom, and community-driven growth. It especially focuses on celebrating and supporting the Black community by partnering with Black cultural organizations, supporting educational initiatives, and funding projects that drive economic growth and empowerment within the Black community. Partnership with MEME Sol Labs NIGGA COIN is issued by MEME Sol Labs, a blockchain development company focused on creating innovative and impactful cryptocurrency projects. MEME Sol Labs is supported by EQT Ventures, providing the necessary funding to drive our mission forward. The name NIGGA stands for ~~Never~~ Ignorant, Getting Goals Accomplished, reflecting our mission to inspire and support individuals in achieving their goals. NIGGA COIN Following the Success of Top Meme Coins Just as meme coins like PEPE and Shiba Inu (SHIB) achieved massive success and made a significant impact on the global cryptocurrency market, NIGGA COIN is poised to become the next big player in the meme coin market. These successful examples suggest that NIGGA COIN is on track to make substantial achievements in the global crypto space. Another great example of success is MEW, which shows the potential for NIGGA COIN to achieve similar results. MEW succeeded in the cryptocurrency market through its strong community and innovative technology, and NIGGA COIN is leveraging these success stories to drive even greater growth. Special Bonus Event for the Final Presale As the final presale of NIGGA COIN approaches its end, a special event is underway where all participants from Round 8 onward will receive an additional 30% bonus in NNGG. This event makes NIGGA COIN an even more attractive investment opportunity, encouraging more investors to get involved. The Future of NIGGA COIN NIGGA COIN is a cryptocurrency designed to empower the Black community through blockchain technology, promoting economic freedom and celebrating Black culture. With strategic plans set for 2024, NIGGA COIN is on track for significant growth and aims to become a globally recognized cryptocurrency. The goal of NIGGA COIN is not just to provide returns to investors but to set a new standard in the cryptocurrency market through technological innovation and community power. NIGGA COIN is strengthening its position in the global market and is ready to grow alongside its investors. Visit the NIGGA COIN website and Wiki to learn more, and join the presale to be part of NIGGA COIN's future! Don't miss this opportunity to become part of the innovation. - PayPal's PYUSD stablecoin has grown significantly on Solana, surpassing its supply on Ethereum. - As of the latest data, the supply of PYUSD on Solana exceeds 377 million, while the supply on Ethereum stands at 359 million. PayPal's U.S. dollar-pegged stablecoin, PYUSD, has seen significant expansion since its inception, with its supply on Solana now exceeding that on Ethereum. In August 2023, PYUSD launched on Ethereum in partnership with custodian Paxos, and its initial supply grew to \$230 million by the end of the year. Due to the significant attention it has garnered in the crypto market, the stablecoin is set to expand its presence by introducing its supply on Solana in May 2024. Now the PYUSD supply has rapidly grown to over 377 million tokens, outpacing its Ethereum counterpart, which stands at 359 million. The increased availability of Solana can be attributed to its integration into decentralized exchanges like Jupiter and Orca. Currently, the total issuance of the stablecoin has surged to 739 million, marking it as the fourth-largest centralized stablecoin behind Tether (USDT), Circle (USDC), and First Digital (FUSD), as per CoinMarketCap data. Currently, the total market cap of PYUSD surged to 739 million, marking it as the fourth-largest centralized stablecoin. It trails behind Tether (USDT), Circle (USDC), and First Digital (FUSD). Also, the token has showcased strong trading activity with a 24-hour trading volume of \$32 million, further emphasizing its liquidity and adoption in the market. Increasing Crypto Adoption This growth reflects the broader trend of stablecoins gaining traction across different blockchain networks. It enhances liquidity and offers new opportunities for decentralized finance (DeFi) applications. Since the beginning of 2024, the Solana blockchain has been making significant waves in the crypto market. An increasing number of projects are launching, particularly in the memecoin sector. This surge in activity on Solana highlights its growing influence and potential in the crypto space. In addition, Bitcoin adoption across various countries has garnered increased visibility in the market. More nations integrate Bitcoin into their financial systems and regulatory frameworks. The broader acceptance and use of cryptocurrencies are being amplified. This is further boosting interest and engagement in the crypto ecosystem. Highlighted Crypto News Today

- Solana trades at \$146, marking a brief decline of 2.30% over the last 24 hours. - The daily relative strength index (RSI) stands at 44.10, approaching the neutral zone. Solana (SOL), the fifth-largest cryptocurrency by market cap, has extended its recent downward trend, failing to break out of the \$150 zone. As bears are overpowering the feud, SOL dropped down to a brief bearish zone at \$146. Notably, in the last 24 hours, after a 2.30% drop, SOL managed to record a high of \$150.81 and a low of \$142.06. The altcoin's daily trading volume has dropped down by 16.32% to \$2.74 billion. At press time, Solana was trading at \$146 with a market cap of \$68 billion, according to CoinMarketCap data. Meanwhile, Solana has witnessed a 24-hour liquidation of \$14.32 million, as per Coinglass data. Crypto community rooted for the launch of Solana spot ETFs in the US after BTC and ETH spot ETFs. On August 8, Brazil's Securities and Exchange Commission (CVM) approved the world's first Solana (SOL) spot ETF. Despite this ETF approval, Solana's price did not display a significant surge and instead hovered around the \$150 range. Can SOL Defeat the Bears? Looking at last month, Solana was trading at a high of \$193, and slipped down to \$112. Over the last week, the token displayed a brief spike of 4.81%, hitting \$162. Gradually, the price dipped into the \$140 range. Solana is in the bearish zone, as the short-term 9-day and 21-day moving averages are above the current price at \$147 and \$160, respectively. Additionally, the daily relative strength index (RSI) stands at 45.08, indicating the asset is approaching the neutral zone, as per TradingView data. Looking ahead, if SOL bulls regain control, the price could rise to a potential \$151 initially. Subsequent resistance might be found at \$157. However, if the bears overpower the bulls, it could fall back to \$137. Further declines will drive the SOL price to the \$132-\$130 range. Highlighted Crypto News

- Solana (SOL) experiences a 40% crash from \$193 to \$115, followed by a 40% recovery to \$163. - Technical indicators suggest growing downside risk, with key support at \$133. - SOL price faces potential drop to \$115 if \$133 support fails, or possible rally to \$180 if bullish momentum returns. Solana (SOL) finds itself at a critical juncture as the broader cryptocurrency market grapples with bearish sentiment and underwhelming performance in Bitcoin and Ethereum ETFs. The altcoin's recent price action has been nothing short of a rollercoaster, experiencing a dramatic 40% plunge from its peak of \$193 to a low of \$115, only to stage an equally impressive 40% recovery to \$163 within a mere three days. This V-shaped recovery initially rekindled bullish hopes, propelling SOL above both the 50 and 200 Exponential Moving Averages (EMAs) on the 4-hour chart. However, the euphoria proved short-lived as selling pressure intensified, pushing the price back below the psychologically important \$150 mark. Can Solana sustain the current level? The Fibonacci retracement levels offer insight into this reversal, with the 61.80% level acting as a formidable resistance point and triggering a retreat below the 38.20% Fibonacci level. Technical indicators paint a complex picture of SOL's current state. The Relative Strength Index (RSI) on the 4-hour timeframe has paused just short of oversold territory, suggesting potential for further downside before reaching extreme levels. Meanwhile, the EMAs have realigned in a bearish formation, with the 50 and 200 EMAs now serving as overhead resistance, further complicating SOL's path to recovery. The crucial 23.60% Fibonacci level at \$133 emerges as a pivotal point for Solana's near-term trajectory. A decisive breach below this threshold could pave the way for a retest of the recent \$115 low, potentially ushering in a new wave of bearish sentiment. Conversely, a successful defense of this level could provide the springboard for a bullish reversal, with \$150 and even \$180 becoming realistic targets in the weeks ahead.

- Solana breaches \$141 support, showing a bearish trend amid market decline. - Whale activity includes significant transfers to Coinbase and Binance. Solana, one of the leading altcoins, is facing an 8% decline amid an overall bearish market. The total cryptocurrency market cap has dropped by 4%, with Bitcoin, the dominant cryptocurrency, experiencing a similar 4% decline, currently trading at \$58,601. Despite the downturn, Solana has shown resilience in the past week. After hitting a five-month low of \$104, it quickly rebounded to \$163 within two days, defying bearish pressure. However, the past 24 hours have seen the bears regain control, pushing Solana down to \$140. Last week was a significant period for Solana, as it reached a new all-time high against Ether on August 7, with traders speculating a potential breakout to \$200, a level not seen since March. Additionally, Solana marked a milestone with the approval of its first spot ETF in Brazil, expected to launch within three months. Meanwhile, Solana whales have been making notable moves. Just hours ago, 200,345 SOL, valued at \$31 million, was transferred from an unknown wallet to Coinbase. Similarly, two days ago, another whale transferred 154,912 SOL, worth \$23 million, to Binance, indicating the major market activities. Analysts, observing SOL's monthly trajectory, suggest that despite the current bearish sentiment, Solana has the potential to bounce back. However, it may face challenges due to ongoing selling pressure. The current Relative Strength Index (RSI) currently stands at 45, suggesting the asset is nearing an oversold situation. What Can Be Expected from SOL? Solana's recent price action reflects a bearish trend, highlighted by its breach of the \$141 support level, with the 9-day Exponential Moving Average (EMA) being at \$149. Looking ahead, should bulls regain control, Solana could rise to \$163 initially, potentially moving further up to \$178. However, if bears overpower, it could retrace to \$129 and \$103 in a more pronounced decline. Highlighted News Of The Day Investors Brace for Volatility Ahead of US CPI Inflation Data Release

- At the time of writing, SOL is trading at \$148.92, down 3.86% in the last 24 hours. - If the price goes below \$143 level, then it will likely test \$137 support level. According to blockchain data tracker Whale Alert, Binance, a prominent cryptocurrency exchange, received a large transfer of Solana. A tweet from Whale Alert states that Binance received 154,912 SOL, with a value of \$23,928,285. However, the wallet's identity remains unidentified. When they plan to sell or trade their assets, whales' large cryptocurrency holdings often transfer them to exchanges. Because it occurs at the same time as a decrease in the price of Solana, this large transfer has garnered notice. Whale investors may be getting ready to cash out after Solana's recent price increase, because the cryptocurrency has been doing very well recently. Despite the lack of clarity around the transfer's reasons, investors will be keeping a careful eye on Solana's price and any other substantial fund transfers. Bears Making a Comeback The price of bitcoin was halted just below \$63,000, but despite a quick pullback, it has successfully defended the \$60,000 mark. Following eight consecutive days of declines, Solana recovered sharply from its August 5 low of \$112. The price of Solana surged on August 6 and 8, respectively, in response to the comeback, as buyers flooded the market. However, the bulls were forced to withdraw somewhat as the bounce encountered resistance near \$163. At the time of writing, SOL is trading at \$148.92, down 3.86% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 20.25%. The price recently broke below short-term support level at \$151. If the price continues to fall and goes below \$143 level, then it will likely decline further to test \$137 support level. However, if the bulls make a comeback and drive the price above \$157 level, then it will likely retest \$163 resistance level.

- Solana (SOL) price jumps in 24 hours, trading at \$157 range. - Technical indicators suggest bullish momentum, with potential to test \$181.50 and \$200 levels. - SOL's market cap is near Binance Coin's, requiring just over \$1 billion to surpass it. Solana (SOL) has demonstrated remarkable resilience, successfully breaking through key resistance levels and positioning itself for potential further gains. As the fifth-largest cryptocurrency by market capitalization, SOL's recent performance has sparked discussions about its prospects in the ongoing crypto bull run. Solana's price action has been nothing short of impressive, with the token recording a surge in the past 24 hours alone. This upward movement has propelled SOL to a trading price of \$157.24, accompanied by a robust trading volume of \$4.781 billion. The token's ability to retest and hold above the critical support level of \$127 has set the stage for its current bullish trajectory. Solana technical indicators show potential trajectory Technical indicators offer further insight into SOL's potential trajectory. The Simple Moving Average (SMA) has exhibited a bullish convergence on the daily timeframe, signaling an uptick in buying pressure for the SOL token. Complementing this, the Moving Average Convergence Divergence (MACD) indicator displays a consistent decline in its red histogram, with its averages hinting at an impending bullish crossover. These technical signals collectively paint an optimistic picture for Solana's short to medium-term prospects. Looking ahead, Solana's ability to maintain its position above the crucial \$155 support level will be pivotal in determining its near-term price action. Should the bulls successfully defend this threshold, SOL could set its sights on the \$181.50 resistance level.

In an unexpected twist, we've seen a surge in accounts and investments in Solana (SOL) and Ripple (XRP) following a disappointing market downturn that saw both cryptocurrencies drop 16.5% and 23% over the week. Similarly, RCO Finance has attracted investor attention, with its presale investments on the rise, sparking predictions of this Ethereum token priced at \$0.0343. The growing interest in these three coins has fueled speculation about their potential surge, and their on-chain activity suggests that something significant might be brewing. The Resilience of Solana (SOL) and Ripple (XRP) Amidst Market Challenges Even as the markets have shown a downside, Solana (SOL) has remained steadfast, displaying robust on-chain metrics in the background of the 20% fall in its market capitalization this past week. Analysts say that if Solana continues its present path, it will rebound. Contrary to the 65.6% drop in Q2 activity due to increasing costs and regulatory problems, Ripple's XRP still has optimistic price predictions of the \$0.42-\$0.58 range for August 2024 and possibly even as high as \$1.63 later in the year. RCO Finance (RCOF) Riding the Wave Amid the challenges faced by established tokens like Solana (SOL) and Ripple (XRP), RCO Finance (RCOF) is making a name for itself in the DeFi space. This emerging platform is gaining attention, particularly because of its innovative integration of artificial intelligence in managing investments. Despite the general market decline, RCOF has demonstrated notable growth. Currently in its presale phase, it is in a unique position to buck the trend, with analysts suggesting a potential return on investment of up to 1,700% once the token launches. The RCOF token offers significant value and utility within the platform, enabling users to buy and partially own over 150,000 assets through tokenization. Additionally, it provides opportunities for holders to earn passive income through staking and as collateral for loans in DeFi lending, creating avenues for further profit. What Gives RCO Finance the Growing Edge? Apart from a high ROI, the success of RCO Finance might be tied to several factors lacking in the DeFi space. Here are some potential reasons for its growth: Harnessing the Power of Advanced AI What really sets RCO Finance apart is its top-notch artificial intelligence, which enhances trading experiences. The AI robo-advisor makes this possible by processing the mammoth amount of market data available, offering its users real-time best investment decisions. AI, by spotting trends and executing trades automatically, reduces the inaccuracy due to the investor's emotional biases and may logically produce the much-desired but potentially lucrative outcome. Such a creative approach sets RCO Finance apart from most DeFi platforms. It operates automated trading strategies to suit the risk tolerance and investment goals of each investor, making it an excellent choice for both professional and beginner traders in this field. Comprehensive Investment Opportunities RCO Finance has invested in its diversification into various investments traditionally offered in zero investment. Most DeFi platforms are usually limited to only crypto, with RCOF giving its clients access to more than 150,000 financial assets, such as stocks, ETFs, bonds, and derivatives. Offering such a range of diverse choices supports different investment strategies and helps users build properly diversified portfolios that can withstand market fluctuations. By including real-world assets alongside digital currencies, RCO Finance appeals to a broader range of investors who may be hesitant to commit to crypto fully. This approach makes it easier for anyone to explore different investment options. Security and Transparency In an industry frequently challenged by security concerns and transparency issues, RCO Finance focuses on user safety. The RCOF tokens have been rigorously audited by SolidProof, a well-respected security firm, confirming the security and reliability of its smart contracts. To further enhance safety, RCO Finance uses Fireblocks for secure transactions, reassuring investors about the safety of their assets. The platform also emphasizes clear communication regarding its operations and the risks associated with investing. Pick RCOF Presale for an Over 17x ROI The RCO Finance (RCOF) token presale is underway, presenting a unique opportunity for early investors. Currently priced at \$0.0343, this presale gives participants access to 30% of daily revenue ahead of the platform's official launch. Investors could see significant returns. Projections estimate the token price may rise to between \$0.40 and \$0.60 at launch, potentially yielding around \$17000 ROI on a \$1,000 investment. Moreover, RCOF token holders can win cash prizes over \$100,000 and other valuable items, adding more appeal to the presale. With its innovative approach, RCOF offers an interesting prospect for those exploring decentralized finance. For more information about the RCO Finance (RCOF) Presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. - Solana (SOL) experiences a 10% upswing in 24 hours, reclaiming pivotal price zones. - Technical indicators suggest fading selling pressure and potential for continued uptrend. - Key resistance levels at \$160, \$175, and \$180 pose challenges for SOL's recovery. Solana (SOL) has demonstrated remarkable resilience in the face of recent market turbulence, staging a major recovery after a steep decline. The fifth-largest cryptocurrency by market capitalization has rebounded from its recent low near \$110, marking a dramatic turnaround that has caught the attention of market participants. Solana shows major surge, dethrones other altcoins. Currently oscillating between \$153 and \$155, SOL's price action suggests a delicate balance between bullish momentum and lingering bearish pressure. The token's recent performance has been nothing short of impressive, with a 10% surge in the past 24 hours catapulting it to the fifth position in terms of trading volume. This upswing comes on the heels of a severe correction that saw SOL shed over 50% of its value in less than a week. However, the current market structure indicates a potential shift in sentiment, with selling volume noticeably diminishing. Technical indicators offer further insight into SOL's potential trajectory. The Directional Movement Index (DMI) shows signs of an impending bullish crossover, with the positive and negative directional indicators (+DI and -DI) diverging. Complementing this, the Moving Average Convergence Divergence (MACD) histogram suggests a waning of selling pressure, potentially providing bulls with a solid foundation for sustained upward movement. Solana's price has now surged above the average range of its descending parallel channel, a development that opens up the possibility of testing higher resistance levels. The \$160 mark looms as the first significant hurdle, followed by more formidable resistance at \$175 and \$180. These levels have previously proven challenging for SOL, with multiple failed attempts to breach them in the past. Looking ahead, Solana's ability to maintain its upward momentum while navigating these key resistance zones will be crucial. The \$184 level stands out as a pivotal resistance point, representing a psychological and technical barrier.

The crypto market is in a wave of negative momentum, with the total market cap down 3% to \$2.9 trillion. Bitcoin and Ethereum have been at the forefront, with price

dips of 14% and 17%, respectively. Other altcoins like Solana (SOL) and Polkadot (DOT) have not been spared and have experienced price downturns. Amid these market moves, Pawfury (PAW) is garnering attention with its presale, touted as a promising opportunity for those looking for clearer returns in the often unpredictable crypto landscape. Pawfury (PAW) æ” The New Rising Star Pawfury (PAW) is making a significant impact as the newest entrant in the cryptocurrency market. Its innovative features and strong community backing have quickly positioned it as a formidable contender. Pawfury (PAW) is attracting substantial interest from investors seeking fresh opportunities. As it continues to gain traction, Pawfury (PAW) promises robust growth and a dynamic presence in the evolving crypto landscape. Join Presale at a Discount on the Official Site Staged Pricing Benefits for Pawfury Investors Pawfuryæ”s presale, designed with investor benefits in mind, ensures fair token distribution through its staged pricing structure. Early participants can purchase tokens at lower costs, thanks to the incremental pricing. This approach generates excitement and attracts capital, boosting liquidity and market stability. To celebrate its success, investors can now enjoy a 10% extra bonus on their first purchase on Pawfury using the promo code æ”EXTRA10Xæ” for a limited time. Presale is Live, Learn More About Major Benefits Solana (SOL): Battling Bearish Pressure Amid Support Breakdown Solana (SOL) experienced a price drop of over 8% in the last 24 hours. This decline led to a major breakdown of the crucial support level at \$157. With the support level breached, SOL is turning bearish, now heading towards the \$125 mark. This price drop is attributed to the breakdown of the support. Source: TradingView Despite the substantial liquidation in the last 24 hours, the upcoming liquidation levels are at \$146 on the lower side and \$162 on the higher side. If market sentiment remains unchanged and SOL drops to \$146, nearly \$40 million in long positions could be liquidated. Conversely, if the market sentiment shifts and SOL reaches \$162, nearly \$147 million in short positions could be liquidated. Expert technical analysis indicates that SOL is bearish, having broken down crucial support and the 200 Exponential Moving Average (EMA) in a 4-hour timeframe. Assets below the 200 EMA in this timeframe signal potential bearishness. Polkadot (DOT): Struggling Below Critical Levels Polkadot (\$DOT) has dropped double figures in the past week, slipping below its crucial trading level of \$5.00. This dip meant buyers were unable to take control of Polkadot (\$DOT), sending the coin down below its critical \$5.00 trading level. Source: TradingView However, indicators like the 3-10 day MACD oscillator are hinting at a possible deceleration in momentum, as the oscillator shows stalling signs around the \$4.75 area. This could mean that the ascent of DOT may require a strong catalyst to breach the \$4.85 resistance convincingly. Should the tide turn, the assetæ”s supports at \$4.52 and \$4.42 are the immediate cushions that may hold back a retreat. A slip below these could see Polkadot (DOT) testing the third support at \$4.35. Itæ”s critical to observe the moving averages as well; a sustained fall could see DOT challenging the \$4.18 level where the price has previously stalled. Conclusion: Opportunities Amid Market Turbulence The crypto market is currently bearish, with Solana and Polkadot, two major players, suffering major value losses. While Pawfury stands out among these options with its lucrative presale and 10% extra bonus, it is important that investors do their own research and due diligence. Thoroughly evaluating the risks, understanding market conditions, and considering individual financial situations will help ensure well-informed investment decisions. - Solana (SOL) experiences a price decline amid broader market downturn. - Institutional investors withdraw \$2.8 million from SOL in the week ending August 3. - Technical indicators suggest ongoing selling pressure, but critical support remains intact. Solana (SOL) has recently encountered substantial headwinds, mirroring the broader cryptocurrency marketæ”s downward trend. The digital assetæ”s value has seen a notable decrease over the past ten days, prompting a reassessment of its market position by various stakeholders. Solana Institutional Investors Respond to Market Shifts According to data from CoinShares, the week concluding on August 3 witnessed a significant outflow of institutional capital from crypto assets, totaling approximately \$528 million. While Bitcoin (BTC) accounted for the majority of these withdrawals, Solana also experienced a noticeable exodus of funds, with \$2.8 million being pulled out by institutional investors. Interestingly, other alternative cryptocurrencies did not record similar outflows during this period. This divergence highlights Solanaæ”s unique position in the market, placing it alongside major players like Bitcoin and Ethereum in terms of institutional interest and market dynamics. The Relative Strength Index (RSI), a key technical indicator, currently sits below the neutral 50.0 mark for Solana. This positioning suggests that selling pressure continues to exert influence on SOLæ”s price movements. The RSI, which ranges from 0 to 100, is often used to identify potential overbought or oversold conditions in asset prices. Despite the recent downturn, Solanaæ”s price has managed to maintain its position above a critical support level of \$126. This resilience in the face of significant selling pressure may provide a foundation for potential price stabilization or recovery in the near term. The recent market movements have invalidated a previously identified bullish double-bottom pattern in Solanaæ”s price chart. This pattern had suggested the possibility of a 31% rally, potentially driving SOLæ”s price to \$245. However, current market conditions have rendered this projection obsolete.

- Solana trades at \$140, marking an increase by 13.56% over the last 24 hours. - \$483M worth of SOL were transferred to Binance and Coinbase. Bitcoin (BTC) and Ethereum (ETH), the largest cryptocurrencies by market cap, have faced a critical and dramatic downturn that panicked the global crypto community. In the unforeseen market crash, BTC plummeted by 17%, hitting its 5-month-low at \$49K. Likewise, ETH recorded a severe drop of 24%, priced below the \$2.5K mark. The impact of the total declines resulted in a staggering \$1.04 billion worth of liquidations over the past 24 hours, pushing the global market cap below \$2 trillion for the first time since February. Dramatically, after yesterdayæ”s unexpected downturn, the global crypto market has started the day with a brief spike in prices. The altcoin Solana (SOL) was not spared in the market crash. The asset has dropped below \$115, losing over 21%. Currently, the asset is up by 13.56%. According to Whale Alert data, the crash fear led to a significant transfer of 3.13 million SOL worth around \$483 million to exchanges such as Binance and Coinbase within the last 24 hours. Over the past 24 hours, the token has been trading at a 5-month low of \$110.61, gradually showing price hikes. At the time of writing, SOL was trading at a price of \$140 with a market cap of \$65 billion. Meanwhile, Solanaæ”s trading volume exhibited a 73.44% increase and stayed at \$12.26 billion, as per CoinMarketCap data. Can the Bulls Dominate SOL Soon? Over the last seven days, Solana has shown a declining price movement of 23.09%. At the beginning of the week, SOL was trading at a high of \$182. The tokenæ”s price dived in the following days to \$111. The daily relative strength index (RSI) is 41.75, as per TradingView data, which hints the asset is approaching the neutral zone. The moving averages lying above the current price action, 9-day MA and 21-day MA noted at \$156 and \$166 respectively, indicate a bearish trend. Moreover, if a recovery occurs, SOL can test its initial resistance at the \$147 level. If the bullish momentum persists, the token might surge to face the subsequent resistance range between the \$151.26 and \$155.69. However, if the bears take over, the token might dive to find its major support at \$137.12. Further losses might take the price to the \$130 level. Highlighted Crypto News Is Bitcoin Aiming For Price Recovery Amid Mounting Selloffs?

- At the time of writing, SOL is trading at \$136.58, down 9.86% in the last 24 hours. - If the price manages to go below \$132 level, then it will likely fall towards \$127 level. For the first time to date, DEXs built on the Solana network surpassed those built on Ethereum, in terms of trading volume for the month of July. Solana had more daily trading volume than Ethereum for the whole month of July, according to DeFillama statistics for DEX volumes by blockchain. Ethereum came in second place for 17 days in a row last month. 30% of Julyæ”s crypto DEX volume came from protocols built on the Solana network, with Ethereum coming in second with 28.12%. By the end of the month, the total value of transactions processed by the exchanges on Ethereum was \$53.867 billion, while those on Solanaæ”s DeFi ecosystem processed \$56.849 billion. Bear Dominance After six days, it is fair to say that things have been somewhat hectic. While Solana seems to be having a rough time of it, Bitcoin, which hit \$70,000 earlier in the week, is fighting for a position above \$60,000. Although itæ”s market cap has dropped below \$70 billion once again, SOL has still maintained its ranking as per market cap. The S&P 500 has fallen for three weeks running, and the Nasdaq 100 has fallen 10% from its all-time highs last month, coinciding with the decline. At the time of writing, SOL is trading at \$136.58, down 9.86% in the last 24 hours as per data from CMC. Moreover, the market cap is down 8.97% to \$63.8 billion. If the price manages to go below \$132 level, then it will likely fall towards \$127 key support level. However, if things turn around and the price manages to climb above \$145 level, then it will likely test \$164 resistance level.

Amidst the fluctuating tides of the crypto market, a new contender has emerged, promising not just financial gains but also a delightful twist. Meet Sandwich (SAM), the viral memecoin on Solana thatæ”s cooking up a storm with its unique blend of humor, food, and blockchain technology. While Shiba Inu (SHIB) grabbed headlines in 2021, Sandwich is now the talk of the town, with analysts forecasting potential 50x returns. A Recipe for Success Sandwich isnæ”t just another memecoin; itæ”s a revolutionary concept that combines the fun of memes with the universal love for sandwiches. This innovative project aims to create the worldæ”s first blockchain-powered fast food chain, serving meme-inspired sandwiches. The Samdwich Coin, central to this vision, is more than just a cryptocurrency; itæ”s a ticket to a culinary crypto adventure. Viral Appeal and Community Power The projectæ”s rapid growth and unique approach have captivated both analysts and investors. With \$357,563.65 already raised towards a \$12,000,000 goal, the excitement around Sandwich is palpable. This buzz is fueled by the communityæ”s involvement in spreading the word and participating in events, fostering a strong and loyal user base. Beyond the Hype While yielding 50x return might seem ambitious, Sandwichæ”s comprehensive ecosystem and robust community support make it a strong contender. Unlike many meme coins that rely solely on speculative value, Sandwich is building a foundation for sustained growth through its strategic tokenomics and innovative approach. A Fast Food Revolution on the Blockchain Sandwichæ”s ultimate goal is to blend the humor of memes with the delight of gourmet sandwiches, creating a blockchain-fueled fast food revolution. Plans for Sandwich shop franchises are in the works, promising a unique menu that merges digital and culinary creativity. Every bite from a Samdwich shop wonæ”t just satisfy your taste buds; it will also add value to your crypto portfolio. Phase 2 Presale Frenzy Following a spectacular Phase 1 presale that sold out in under 60 seconds and raised over \$300,000, Sandwich has launched its Phase 2 presale. Bull investors are flocking to get a slice of the action via the presale phase 2, drawn by the proven success and the mouth-watering prospect of massive gains as early participants. Amid the robust presale performance, fair and unique tokenomics and ongoing frenzy over the project, the token is all set to yield 50x returns, as per several industry analysts. Conclusion As the meme coin market continues to evolve, Sandwich (SAM) is carving out a niche for itself. Its strategic approach, engaged community, and innovative concept make it a standout option for investors looking for both fun and substantial profits. The Sandwich revolution is just beginning, and has already taken the memecoin space by storm. - Solana trades at \$162, marking a decline over 3% in the last 24 hours. - Cypherpunk has purchased 23K additional SOL, currently holding 86,294 tokens worth \$21.6M. The crypto market seems littered after the Fedæ”s decision, resulting in increased volatility. Bitcoin and Ethereum have declined and slipped to their previous lows. Notably, Solana also stepped into bearish momentum after its brief upward breakout. SOL exhibited over -3% price decline in the past day, causing the token to fall to a low of \$157. Meanwhile, Solanaæ”s trading volume resulted in a 14.96% increase and stayed at \$4.05 billion. At press time, SOL was trading at \$162, as per CMC data. While analyzing Solanaæ”s weekly price action, it noted a 8.55% drop over the past week, with the assetæ”s lowest and highest price noted at \$159 and \$193, respectively. The current decline of SOL aligns with the daily Relative Strength Index (RSI) at 45.90, which indicates the asset is nearing the neutral zone. In addition, short-term 9-day MA and 21-day MA are found above the current price at \$176 and \$169, suggesting SOL is in the bearish zone. If the token slides down, the initial support can be found at \$157. Further losses might take the price to the range of \$150. Conversely, if bulls regain control over the bears, the potential resistance might be at \$170. As the bullish momentum persists, the subsequent resistance can be at \$176. Solana Holdings of Cypherpunk Cypherpunk Holdings, a Canada-based investment firm, has increased its Solana holdings. The firm has purchased about 23,000 additional SOL tokens, bringing its total to 86,294 worth approximately \$21.6 million. In a recent purchase last month, Cypherpunk increased its Solana investment to 63,000 tokens, worth around \$14 million, up from 6,131 in a short period of time. Moreover, Cypherpunkæ”s Solana validator has earned over 230 SOL worth \$57,639 in rewards since mid-June, showing the active involvement of the firm in the ecosystem. The firmæ”s Bitcoin holdings are sold out. It currently holds around 52 BTC, worth \$5.2 million, and has divested its entire stake in Animoca Brands. 44.79 BTC were used to exercise 20,000 SOL options, and the rest were sold for gross proceeds, according to its public filing. Highlighted Crypto News

- VanEck sees potential for Solana ETFs in the near future, contrasting with BlackRockæ”s cautious stance. - Regulatory environment and market maturity are key factors influencing the timeline for Solana ETF approval. - Industry players and regulators have divergent views on the readiness of Solana for ETF products. The possibility of Solana-based exchange-traded funds (ETFs) has emerged as a topic of heated discussion. VanEckæ”s Head of Digital Assets Research, Mathew Sigel, has taken a bullish stance, suggesting that Solana ETFs could materialize sooner than anticipated. This optimistic outlook stands in stark contrast to the more conservative approach adopted by industry giant BlackRock, which considers such a development premature at this juncture. Regulatory Hurdles for a Solana ETF Sigel points to the European market as a harbinger of whatæ”s to come, highlighting the existence of various crypto-based exchange-traded products (ETPs) already in circulation across the Atlantic. These include both single-coin offerings and diversified basket options, setting a precedent that Sigel believes could be replicated in the United States. However, the regulatory landscape in the US presents a formidable obstacle, with SEC Chair Gary Gensleræ”s stance serving as a significant hurdle to overcome. Drawing parallels between Solana and Ethereum, Sigel posits that the approval of an Ethereum ETF could pave the way for a Solana

counterpart. This perspective underscores the interconnected nature of cryptocurrency advancements and regulatory decisions, suggesting that breakthroughs for one digital asset could have cascading effects on others. The cryptocurrency community has not overlooked the potential impact of political changes on the regulatory environment. Donald Trump’s recent pledge to replace Gary Gensler as SEC chair, should he be elected president, has injected an additional layer of uncertainty into the equation. Such a change in leadership could potentially usher in a more crypto-friendly regulatory regime, altering the trajectory of ETF approvals. BlackRock’s digital asset head, Robert Mitchnick, offers a contrasting viewpoint, emphasizing the importance of market capitalization and asset maturity in ETF considerations. Mitchnick highlights the gap between leading cryptocurrencies like Bitcoin and Ethereum and smaller assets like Solana, suggesting that this disparity poses challenges for the near-term approval of a Solana ETF.

Optimism (OP) NFTs, Solana (SOL), and BlockDAG are capturing attention with their distinct market impacts. Optimism’s NFT trading has jumped to \$547,000, reflecting its ecosystem’s expansion. Solana’s performance reaffirms its place among top investments, backed by strong support levels. BlockDAG has bolstered its market standing with a leadership reveal that includes seasoned professionals from various tech and finance sectors. This has driven its presale beyond \$63.9 million, aiming for a \$600 million target. This article delves into how these events shape the broader crypto market. Optimism’s NFT Market Outlook Optimism’s NFTs saw a significant boost in trading, reaching \$547,000 this Tuesday, marking a 475% increase from the previous day as per Santiment’s data. At the same time, the DeFi space witnessed a 15% growth in total value locked within the last 30 days, while DEX transactions climbed by 17%, showcasing a broader adoption across the network. This upsurge in NFT sales, coupled with DeFi and DEX activities, underscores the expanding ecosystem of Optimism. Amid this vibrant activity, the price of OP rose to \$1.86, registering a robust growth of 8.21% over the month. Solana’s Ascend to New Heights Recently, Solana’s value shot up by 44%, soaring from \$128 to \$184 in a fortnight, then stabilizing to test support at \$173 and \$168. This positions SOL to potentially reach its local peak of \$210 and even chase its all-time high of \$260. Presently, SOL outshines other top cryptocurrencies, including Ethereum, in critical metrics, though it still falls short in market cap. It targets resistance levels at \$31 and \$45, indicating a potential extended bull run. BlockDAG’s Leadership Unveiling Elevates Presale to \$63.9 Million BlockDAG’s recent introduction of its core team marks a significant chapter in its growth, highlighting its challenge to cryptocurrency leaders like Solana and Ethereum. This major team unveiling has sparked enthusiasm across the crypto sector, reflected by a vigorous uptick in presale activity. CEO Antony Turner, with more than two decades of experience in sectors like Fintech and Crypto, steers the helm. His past leadership roles at SwissOne Capital and Axona-Analytics illustrate his deep expertise in driving innovation and addressing intricate technological and business challenges. Additionally, Chief Security Officer Youssef Khaoulaj, with his noted skills in smart contract auditing and security, upholds BlockDAG’s rigorous security standards, essential for the integrity of its operations. The advisory board, with Maurice Herlihy, a distinguished professor and blockchain advisor, and Steven Clarke-Martin, known for his work in blockchain and DAO innovations, strengthens BlockDAG’s technological and strategic depth. This announcement has considerably uplifted BlockDAG’s presale achievements, pushing its coin value to \$0.017, with over \$63.9 million raised and more than 10,000 miners sold. This presale drive propels BlockDAG towards its ambitious \$600 million target, demonstrating strong community trust and setting the stage for continued growth and innovation in the crypto world. Final Call The cryptocurrency sector is buzzing with significant growth across key platforms. The dramatic surge in Optimism’s NFT sales highlights wider network adoption and ecosystem growth. Meanwhile, Solana exhibits strong performance, solidifying its position as a leading crypto investment with potential new peaks ahead. However, BlockDAG’s strategic team reveal has captured the spotlight, significantly boosting its presale to over \$63.9 million. As BlockDAG marches towards a \$600 million goal, it emerges as a powerful contender against established cryptos like Solana and Ethereum, signaling a market ripe for further innovation and considerable growth. BlockDAG Presale: - Website: <https://blockdag.network> - Presale: <https://purchase.blockdag.network> - Telegram: <https://t.me/blockdagnetworkofficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Uniswap’s market sees heightened activity as it approaches a pivotal \$7.21 support level, propelled by a substantial whale acquisition of 1.43 million UNI tokens, indicative of a positive trend. Meanwhile, Solana (SOL) is in the spotlight due to its optimistic price prediction and the possibility of an ETF endorsement. Yet, it’s BlockDAG that’s drawing major attention in the realm of budding cryptocurrencies following its high-profile team announcement. BlockDAG has marked its territory with the most successful presale event in recent years. Following the announcement of former SwissOne Capital co-founder Antony Turner as CEO, projections show a potential massive return on investment, underlining the strong strategic direction and financial promise under Turner’s leadership. Uniswap’s Market Dynamics: Whale Movements Suggest Upcoming Price Rally Uniswap (UNI) is currently revisiting the crucial weekly support price at \$7.21, pointing towards potential market stability and an ascending trajectory. Recent blockchain analysis shows a significant investment by a whale, purchasing 1.43 million UNI tokens worth \$10.3 million, coinciding with a decrease in available UNI tokens on exchanges—a sign of market optimism. These dynamics, underscored by reduced token availability and major whale investments, forecast a positive future for Uniswap. With critical price levels at stake, if UNI holds above \$7.21, it could trigger further rises, although a fall below this level may temper bullish expectations. Solana’s Outlook: Potential ETF Approval and Market Observations Solana (SOL) captures interest with its favorable price forecast and potential ETF endorsement. Currently valued at \$179.82, Solana has grown by 6.75% in the last day alone, bringing its market cap close to \$83.55 billion. The price trend reveals a bullish “Three White Soldiers” pattern, suggestive of strong continuous gains. At the Bitcoin Conference 2024, opinions were divided regarding Solana’s ETF approval, with discussions revolving around regulatory hurdles and market readiness. Nonetheless, Solana’s quick transaction capability and decentralization make it a strong candidate for ETF consideration, promising a positive market trajectory. Investors are keenly observing Solana’s journey towards achieving ETF status. BlockDAG’s Leadership Announcement: Record Presale and Bright Prospects The recent introduction of BlockDAG’s executive team has significantly heightened investor trust, marking a crucial juncture in BDAG’s strategic journey. At the helm is CEO Antony Turner, whose extensive twenty-year background in fintech and cryptocurrency has played a pivotal role in shaping BlockDAG’s strategies and triumphs. Complementing Turner’s leadership is Chief Security Officer Youssef Khaoulaj, a proficient specialist in systems security and blockchain technology. Guided by this formidable duo, BlockDAG has realized the largest crypto presale of the past five years, amassing upwards of \$62.8 million and distributing 12.4 billion coins. Currently, in its 21st batch, the coins are priced at \$0.0164 each, marking a 1540% surge in value from the first batch. This remarkable presale achievement mirrors the market’s robust confidence in the team’s prowess and strategic vision. The disclosure of this elite team has solidified BlockDAG’s role as a prominent contender within the burgeoning cryptocurrency market. Financial experts are now forecasting a staggering massive ROI at the launch for those investing early, a forecast steadily gaining credence through the team’s demonstrated skills and the significant milestones already attained. This leadership, along with their strategic blueprint, prepares BlockDAG for sustained expansion and deepening investor trust. Final Say The recent disclosure of BlockDAG’s premier leadership team, alongside its historic presale success, sets it apart from other rising cryptocurrencies. While Solana’s predictions and Uniswap’s trading activity show promise, BlockDAG’s strategic expertise and the ambitious massive ROI forecast present a compelling case for investors looking for substantial, long-term growth. This positioning prepares BlockDAG for ongoing expansion and cements its role as a dynamic force in the field. - Solana witnessed a price rally that surpassed \$190 in the last few days. - ETF issuers have begun to submit their filings for a spot Solana ETF since the past month. The overall crypto market witnessed a slight price dip of 3.28% in the last 24 hours. Leading cryptocurrencies, Bitcoin and Ethereum also showed price declines going back to previous trading levels. Notably, the second largest altcoin, Solana also incurred bearish movements after the upward movements. According to CMC data, SOL exhibits a 5.53% price decline in the past day. This has caused the token to slide and find support at the \$180 level. At the beginning of the day, Solana was trading at \$191 having broken resistance at \$185 and \$190. However, as the day progressed, contrary to market expectations the token sparked bearish candles. Meanwhile, Solana’s trading volume factored in a 16.64% increase in daily trading volume. At the time of writing, SOL was trading at \$180.68. Notably, the altcoin hit a new milestone on July 27 as it surpassed BNB in market cap. The token is currently the fourth-largest cryptocurrency in the market. During that time, SOL also witnessed a price rally which caused the token to break multiple resistance levels and surpass \$190. What Awaits Solana Price in the Coming Months? Zooming out, over the past week SOL shows a 3.42% increase in market price, while its monthly performance shows a 28.78% hike. The token despite the brief price dip still stands on a bullish trajectory. Solana’s short-term 9-day MA stands above the long-term 21-day MA indicating the aforementioned upward trend as per TradingView reports. Moreover, the token’s recent bull run has sustained investor interest as indicated by the RSI standing at 61.71 referring to a buying sentiment in the market. However, SOL has shown increased volatility over the past few weeks. This is highlighted by the token’s RVI standing at 58.92. On the other hand, market analysts expect the token to witness price breakouts in the coming months. This is in accordance with market expectations for a spot Solana ETF following Ethereum. Notably, VanEck and 21Shares filed for the ETFs with the SEC in June. Highlighted Crypto News Today: Bitcoin Price Shows Mixed Signals Amid US Authorities BTC Moves

- Solana hits a three-month high and outperforms Binance Coin. - Strong on-chain metrics and growing active addresses signal robust network health. Solana (SOL) has drawn significant attention from traders amid the current market upheaval, buoyed by institutional support and a pro-crypto stance among politicians. These developments have bolstered confidence in the near future, with Bitcoin recently surging past \$69,000. Notably, Solana has demonstrated consistent performance, outperforming Binance Coin (BNB) in market cap last weekend to secure the fourth position. Today, Solana hit a three-month high of \$193, breaking the resistance at \$185. It is currently trading at \$193.10, a 6% increase. However, its trading volume has decreased by 28%, currently standing at \$89 million. Analysts remain bullish on Bitcoin, predicting it could surpass \$240 by August. Additionally, Solana’s Total Value Locked (TVL) has been on the rise since early 2024. Meanwhile, Solana’s on-chain metrics also show an upward trajectory, with active addresses reaching 2 million by mid-week. Analysts believe this growth indicates a robust and expanding user base, suggesting strong network health and the potential to attract further investment. These predictions instilled hope in the community of SOL surging past \$1000 at the year’s end. Solana Bulls For The Win? Solana’s recent price action reflects a bullish trend, with the potential to breach the \$211 resistance level and possibly test \$240 soon. However, the daily Relative Strength Index (RSI) at 63 indicates potential overbought pressure, which may lead to a correction. Conversely, should bears regain control, Bitcoin could retrace to \$115 initially, potentially falling further to \$104 in a more pronounced decline. In summary, Solana’s performance amid market chaos highlights its resilience and potential for further growth. With strong on-chain metrics and a bullish outlook from analysts, Solana seems well-positioned to continue its upward trajectory. However, caution is advised due to potential overbought conditions, which could lead to short-term price corrections. Investors should remain vigilant and consider market volatility when making investment decisions in Solana. Highlighted News Of The Day Can Bitcoin Break \$70K Before August Amid New US Crypto Plans?

- If the price climbs above \$188 level, then it will likely go all the way till \$203 level. - At the time of writing, SOL is trading at \$184.74, down 0.74% in the last 24 hours. In spite of the market’s general downturn, Solana has maintained its upward pricing trend. Solana reached a major milestone last week when its value surged enough to overtake Binance Coin (BNB) in terms of market capitalization. For over 24 hours, BNB Chain and Solana have been engaged in a violent back-and-forth. To be more precise, they have been trying to outdo one another in terms of market capitalization. While the aforementioned time was happening, the BNB chain overtook Solana for a short while, but Solana quickly got back to number four. There has been talk over whether or not fund issuers may apply for more cryptocurrency ETFs now that the Spot Bitcoin and Ethereum ETFs are trading. In particular, market watchers have wondered if the biggest asset manager in the world, BlackRock, would apply for spot exchange-traded funds (ETFs) for other altcoins, such as Solana. Consolidation Phase The previous four weeks saw a substantial increase in Solana transactions. During the same time period, the highest daily transaction count occurred on July 24th with 46.83 million. On July 28, however, the number of transactions on Solana fell to 42.21 million, a modest decline from their recent peak. At the time of writing, SOL is trading at \$184.74, down 0.74% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 37.93%. The price has been consolidating in a tight range. If the price climbs above \$188 level, then it will likely go all the way till \$203 resistance level. However, if the bears drive the price below \$182 level then the price will likely test \$179 short-term support level.

- Solana (SOL) price has shown notable surges in the past few weeks. - The token’s market cap flipped BNB making Solana the fourth largest cryptocurrency in the market. The second leading altcoin, Solana has witnessed bullish trends over the past few weeks. In the last 24 hours, the token caught market attention by flipping its competitor BNB token in market cap. This new milestone for SOL occurs amid the token’s surpassing its previous resistance levels. Meanwhile, other leading cryptocurrencies such as Bitcoin have also shown upward movements in the past day. According to CMC data, Solana has shown a 3.50% increase in daily price. At the beginning of the day, the token was trading at the \$178 level, after which it showed price hikes. The upward movement propelled SOL to surpass its resistance at \$185 momentarily after recent price dips. Notably, the altcoin’s bullish movement hit a two-month high of \$187.37 momentarily in the past day. While Solana’s market cap showed surges, the token’s daily trading volume declined by 28.34%. The token’s market cap stands at approximately \$86.2 billion after current

surges. At the time of writing, SOL was trading at \$184.91 according to CMC data. Moreover, amid the recent spot ETH ETF’s launch, SOL has seen the rise of speculations about a spot Solana ETF. This has sustained market attention, while the Solana memecoin frenzy has drawn to an end. In the months of May and June, the Solana ecosystem witnessed the launch of several celebrity memecoins. Will SOL Price Hit New Highs in the Coming Months? In the last seven days, Solana has shown a price performance of a 9.22% increase. At the beginning of the week, the altcoin was trading at \$168.56. In the following days, the token’s price progressed to current levels. Notably, the recent price hike has fueled a buying sentiment in the token, as indicated by the RSI standing at 64.84 as per TradingView reports. Moreover, the current bullish trend is highlighted by the short-term 9-day MA standing above the long-term 21-day MA. Additionally, SOL has crossed the resistance at the \$185 level, if the bulls sustain the positive momentum, the token might surge further to new highs. Notably the token might face resistance at \$185.47 and \$188.45. However, if the bears take over, the altcoin might slide to find support at the \$171.57 and \$159.59 levels. According to market analysts, SOL is expected to show bullish breakouts in the coming months hitting \$200. TheNewsCrypto analysts have predicted a bullish price of \$343.64 for Solana in 2024. Highlighted Crypto News Today:

The cryptocurrency arena recently witnessed a 13% rise in Solana (SOL) prices, spurred by expectations of a potential Solana ETF. Meanwhile, Dogecoin is garnering interest with projections indicating it could reach \$1 by 2029, though it currently struggles to exceed the \$0.20 threshold. Amidst these dynamics, BlockDAG’s X1 Miner app revolutionizes the crypto mining industry with an innovative mobile mining solution. The X1 Miner enables users to generate up to \$1 daily upon its launch easily. Having sold more than 9666 X series miners and raised over \$61 million in its presale, BlockDAG establishes itself as a formidable investment contender in the bullish crypto market. Solana (SOL) Prices: Insights on the Recent 13% Uplift Solana recently showcased a significant price increase, soaring over 13% within a week to a price point of \$160.94. This growth is aligned with forecasts by Bloomberg ETF analyst Eric Balchunas, who predicts the advent of Ethereum ETFs could pave the way for a Solana ETF. Technically, SOL displays a series of rising peaks and valleys, forming an upward trajectory on the 4-hour chart. This optimistic pattern pushed SOL past the resistance at \$157.65. However, should it fall below this threshold, SOL could potentially descend to \$146.40, especially with negative indicators from MACD and RSI. Dogecoin Price Projections: Is \$0.3751 Attainable? Dogecoin is in the spotlight with its anticipated price trajectory. Priced around \$0.20, it faces hurdles surpassing this mental block. Analysts predict it might reach up to \$0.3751 by the end of 2024, with a potential ascent to \$1 by 2029. Dogecoin’s path is marked by fluctuations, influenced by market forces and external factors like regulatory developments or endorsements by influential figures. Should the bullish trend continue through 2024, DOGE could test resistance levels at \$0.12730 and potentially ascend to \$0.155. Conversely, a bearish market could drag it down to \$0.101. Mining Simplified! Enhance Your Earnings with BlockDAG’s X1 App BlockDAG’s X1 Miner app emerges as a pioneering innovation in the crypto mining landscape. Accessible on the Apple store and merely 50 MB, this app facilitates mining up to 20 BDAG coins daily directly from mobile devices. By 2030, investors could potentially garner up to \$600 daily as BDAG coins are projected to hit \$30. The app is designed for user-friendliness and efficient performance, ensuring that mining does not deplete the device’s battery life. It incorporates an interactive feature that allows users to increase their mining rate by engaging a lightning button every 24 hours. A notable aspect of the X1 Miner app is its community-based model. Through referrals, users can significantly boost their earnings. Active participation by referred miners increases the original user’s mining rate, creating a synergistic environment. This referral mechanism has significantly contributed to the app’s popularity, evidenced by the sale of over 9666 miners. The app also features a leaderboard, showcasing the top 50 earners in real time and fostering competitive participation. Additionally, the resounding success of BlockDAG’s presale, which raised \$61 million from selling over 12.3 billion BDAG coins and an impressive \$3.9 million from miner sales, underscores its mining technology’s investor confidence and potential. Final Thoughts BlockDAG’s X1 Miner app is making waves as a transformative tool in mobile mining. With efficient battery management, daily interactive enhancements, and a dynamic referral system, it presents an unparalleled opportunity for users to potentially earn up to \$600 daily by 2030. As Solana and Dogecoin continue to attract attention with their price shifts, BlockDAG’s X1 Miner app stands out as a lucrative investment prospect. - Solana’s price has climbed over 8.48%, from \$165.93 to a high of \$180. - Ali Martinez predicts a 900% gain for Solana, which could drive its price up to \$1,000. As global crypto markets react to Bitcoin’s price surge and Ethereum ETF news, Solana (SOL) has come into the spotlight, with its price climbing to the \$180 zone. The latest buzz centers around the potential filing for a Solana ETF by Franklin Templeton, a prominent global asset management firm known for its optimistic view of Solana’s growing influence in cryptocurrency. This speculation follows similar moves by firms like VanEck and 21Shares, amplifying interest in Solana ETFs. Following the positive optimism, Solana’s price has displayed an uptick of over 8.48% in the past 24 hours, holding firm above the \$175 mark. On-chain analyst Ali Martinez predicts a potential 900% increase in SOL’s value, with the price reaching \$1,000. This projection is supported by recent price patterns similar to those seen in July 2021, which led to Solana’s all-time high of \$260 in November 2021. Solana (SOL) Technical Overview At the time of writing, SOL is trading at \$178, with a market cap of \$83 billion, and has shown an uptrend similar to BTC and ETH. According to the 24-hour Solana price prediction, the cryptocurrency has been trading above the \$170 and \$175 resistance levels. It has also surpassed the 50% Fibonacci retracement level of the downward move from the \$167 low to the \$180 high. Additionally, Solana’s price comfortably sits above the 21-day and 9-day moving averages, indicating positive momentum. Further, the RSI indicator is at 59, signaling that Solana is still in the neutral zone without reaching overbought conditions, indicating positive momentum. If the price of SOL continues to surge, it may face immediate resistance around the \$185 zone, with the next major hurdle at \$193. A decisive close above \$193 could pave the way for further gains, potentially pushing the price to \$300. Conversely, if Solana fails to break above the \$180 resistance, a straight decline could be on the horizon. Initial support is seen at \$170, with a significant support level standing at \$165. A drop below \$160 could lead to a further dip, possibly testing the \$150 range and beyond. Highlighted Crypto News Today

As Ethereum ventures into ETF prospects and Solana’s influential investors embark on new endeavours, the crypto world is abuzz with strategic plays. Amidst these activities, MOONHOP steals the limelight with its daring presale and tactical roadmap, designed to engage and transform the market dynamics. MOONHOP has developed an active community known as The Fluffle, boosting its visibility with a focus on strategic expansion and active community involvement. This dual approach positions MOONHOP as a compelling choice for those seeking to inject some drama and significant growth potential of up to 4900% into their crypto portfolios. Ethereum ETF: Its Potential Impact on Prices The anticipated introduction of a spot Ethereum ETF is sparking substantial conversation about Ethereum’s price future. Experts like Bitwise’s Matt Hougan predict that around \$15 billion might flow into the Ethereum market within 18 months of the ETF’s introduction, potentially elevating prices to near \$5,000. Reflecting on Bitcoin’s response to similar financial instruments, Ethereum might see similar growth patterns. With forecasts like VanEck’s projection of a \$22,000 value by 2030, the crypto community remains attentive as the SEC deliberates on the approval of Ethereum ETFs, preparing for possible market shifts. Adventures of Solana’s Giants in Cryptocurrency The Solana giants are venturing into new territories in the cryptocurrency ocean, steering away from meme tokens like BONK and WIF. Their latest adventure involves Rollblock (\$RBLK), a vibrant new challenger in the marketplace. This strategic shift demonstrates the giants’ continuous search for the next major breakthrough. With Rollblock generating more excitement and trading activity, the Solana giants actively dive into these new waters. Their talent for identifying potential projects like Rollblock underscores a strategic and thoughtful approach to the fluctuating cryptocurrency seas. MOONHOP’s Journey: Bouncing Towards Prosperity with a Bold Flair MOONHOP is quickly becoming a highlight in cryptocurrency with its ambitious roadmap and expected price jump. Starting with a strong presale, investors are snapping up tokens at the current price of \$0.014, building a lively community dubbed æThe Fluffle.æ This entry point is an excellent opportunity for newcomers to begin investing. MOONHOP’s journey is set to be exhilarating. It aims to make waves on social media and online platforms, where The Fluffle can participate in contests, airdrops, and engaging bunny-themed activities. Effective marketing strategies and collaborations with leading crypto influencers are poised to enhance its visibility, thrusting MOONHOP into the limelight and sparking discussions across the crypto community. The token’s upcoming launch on major decentralized exchanges marks a crucial milestone. It is expected to enhance accessibility and facilitate a smooth trading experience. This significant step is anticipated to prompt a 4900% rise in MOONHOP’s value, highlighting its potential as a meme token and a community-centric phenomenon! Moving forward, MOONHOP is geared toward additional growth by targeting centralized exchanges and maintaining The Fluffle’s excitement with more thrilling events and activities. Each phase of MOONHOP’s path offers financial prospects and an enjoyable and rewarding experience for all participants. Conclusion As Ethereum explores ETF opportunities and Solana’s giants explore new trends, MOONHOP exemplifies the crypto frenzy with its expected 4900% gains and vibrant community. This growth projection firmly underscores MOONHOP’s effective strategy and robust community backing. In a landscape of evolving market trends, MOONHOP stands out by merging fun, freedom, and financial growth. It appeals to both seasoned investors and new entrants. MOONHOP’s path is set for success and an exciting adventure in decentralized finance. - At the time of writing, SOL is trading at \$181.74, up 4.86% in the last 24 hours. - If the price manages to go past \$185 level, then it will likely test \$203 resistance level. Following the success of its spot Ethereum ETF, Franklin Templeton is now contemplating launching an ETF for Solana. On the first day of trading, spot Ethereum ETFs received \$107 million. According to a recent post, Franklin Templeton, who was among the first to provide a spot Bitcoin ETF in the U.S, is hopeful about the prospect of further cryptocurrency ETFs, such as a Solana product. Coincident with the introduction of their second cryptocurrency ETF, the Franklin Ethereum ETF (EZET), Franklin Templeton made a comment about possible Solana ETFs. A potential Solana ETF has been rumored in light of this optimistic forecast. Members of the community speculate that, after VanEck and 21Shares, Franklin Templeton may submit an application for a Solana ETF. Eyeing \$200 Mark Amidst the wild swings in the crypto market, Solana (SOL) made a sharp turn around and formed a bullish channel after retracing to \$171 level. Prior to this current market action, SOL’s price was above the \$180 barrier, suggesting a possible rally. Currently, the price of Solana is above the 100-day Simple Moving Average (SMA) on the 4-hour chart. Moreover, the price has rebounded and has once again reached above \$180 level. At the time of writing, SOL is trading at \$181.74, up 4.86% in the last 24 hours as per data from CMC. Moreover, the trading volume is down 14.41%. Notably, in the last 7 days the SOL price has surged a remarkable 15.70%. If the price manages to go past \$185 level, then it will likely climb further to test \$203 resistance level. However, if the price falls below \$171 level, then it will likely test \$168 support level.

- Franklin Templeton is bullish on Solana, citing its technological progress and increasing adoption. - Speculation is rising that Franklin Templeton may file for a spot Solana ETF. Franklin Templeton, a prominent global asset management firm, has expressed strong optimism about the future of Solana (SOL) within the cryptocurrency ecosystem. The firm’s enthusiasm has played an influential role in the recent launch of Bitcoin and Ethereum spot ETFs in the U.S. Besides Bitcoin and Ethereum, there are other exciting and major developments that we believe will drive the crypto space forward. Solana has shown major adoption and continues to mature, overcoming technological growing pains and highlighting the potential of high-throughput, æ æ” Franklin Templeton Digital Assets (@FTI.DA) July 23, 2024 Franklin Templeton highlighted Solana’s expanding influence in the crypto space. The firm expressed a positive outlook on Solana, noting its technological advancements and growing adoption. This suggests that Solana is overcoming previous challenges and is set for continued growth. Additionally, Franklin Templeton emphasized Solana’s high-throughput and monolithic architecture. That could play a significant role in shaping Solana’s future, potentially surpassing established giants like Bitcoin and Ethereum. Growing Anticipation for a Solana ETF The bullish sentiment comes soon after Franklin Templeton’s launch of its second-spot cryptocurrency ETF, the Franklin Ethereum ETF (EZET). This new ETF, with a management fee of 0.19%, is currently offered without fees for the first \$10 billion in assets until January 31, 2025. This follows the firm’s introduction of a spot Bitcoin ETF earlier this year, which was part of a broader trend that saw multiple issuers entering the Bitcoin ETF market, including major names such as Grayscale, BlackRock, and Fidelity. However, this positive outlook on Solana has sparked speculation that Franklin Templeton might soon file for a spot in the Solana ETF, following similar moves by VanEck and 21Shares. Nate Geraci, President of the ETF Store, has supported this notion, predicting that a Solana ETF could be within its scope. Further fueling these expectations, the Chicago Board Options Exchange (CBOE) has recently filed Form 19b-4s with the U.S. Securities and Exchange Commission (SEC), proposing a rule change for Solana ETFs. This submission has begun the public comment period and is expected to conclude with a decision by 2025. Highlighted News Of The Day Tron Network and Ethereum Show Massive Surges in On-Chain Activity

The Synergy Soirée, co-hosted by LBank and the Solana Superteam, brought together a vibrant mix of Solana and crypto experts, enthusiasts, and investors for an evening of networking, knowledge sharing, and celebration at The 44, located in Al Habtoor City, Dubai, United Arab Emirates. Held in an intimate setting with more than 40 attendees, the event provided a perfect blend of insightful discussions and social interactions. Attendees had the unique opportunity to engage directly with leading figures in the Solana ecosystem, discussing the latest developments, trends, and opportunities within the blockchain space. The evening was filled with meaningful conversations, where participants exchanged ideas and insights on the future of blockchain technology. The event successfully facilitated the exchange of

knowledge and fostered new professional relationships. In addition to the stimulating conversations, guests enjoyed a selection of exquisite foods and refreshments. The combination of good food, refreshing drinks, and engaging discussions made for a memorable evening. The Synergy Soirée was more than just a networking event; it was a celebration of the innovative spirit that drives the crypto community. The success of the evening was evident in the enthusiastic participation and the new connections forged among attendees. LBank’s initiative to co-host such an event with the Solana Superteam highlights their commitment to fostering a strong, connected community. As a leading global cryptocurrency exchange, LBank continues to drive innovation and collaboration within the blockchain space, creating opportunities for growth and development. The Synergy Soirée stands as a testament to the power of collaboration and the potential for growth within the blockchain and crypto space. About LBank Established in 2015, LBank is a premier global cryptocurrency trading platform, serving millions of users globally. Committed to security, innovation, and user satisfaction, LBank offers a seamless trading experience with a wide array of digital asset services. With a robust selection of cryptocurrencies and advanced trading features, LBank Exchange redefines digital asset trading, empowering users to navigate the dynamic crypto market confidently. - At the time of writing, SOL is trading at \$183.41, up 3.5% in the last 24 hours. - If the price manages to go above \$187 level, then it will likely test \$203 resistance level. On July 22, the price of Solana reached \$185, its highest point in the last two months, maintaining its bullish momentum, a climb of more than 3.5% in the previous 24 hours. Investors are becoming excited about the possibility of pro-crypto candidate Donald Trump winning, as the recent gains reflects on Joe Biden’s abrupt exit from the US presidential campaign. The current uptick in Solana’s price reflects investors’ belief that the Democratic Party, headed by US Vice President Kamala Harris, may have trouble defeating Trump in the upcoming presidential contest. Eyeing \$200 Mark Investors are curious as to if Solana is targeting the \$200 level by tomorrow, when trading for Spot Ethereum ETFs likely begins. At the time of writing, SOL is trading at \$183.41, up 3.5% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 33.49%. If the price manages to go above \$187 level, then it will likely climb all the way to test \$203 resistance level. However, if the price breaks below \$177 level, then it will likely test \$171 support level. Data reveals that other components of the ecosystem are also dominating the market, extending Solana’s (SOL) dominance this cycle beyond just its price. In earlier bull markets, Ethereum had a stranglehold. The Decentralized Exchange (DEX) volume of Solana, according to DeFillama, surpassed that of Ethereum and BNB Chain put together in the last 24 hours. Even though Ethereum and BNB Chain both have bigger weekly rises, Solana still managed to top the list. Solana had a \$2.24 billion DEX volume. Ethereum stands at \$1.41 billion, while BNB Chain is \$703.19 million.

Recent crypto market movements have seen Solana (SOL) price surge by 13%, driven by predictions of a potential Solana ETF. On the other hand, Dogecoin is capturing attention with forecasts suggesting it might hit \$1 by 2029 despite struggling to break past the \$0.20 mark recently. Amid these trends, BlockDAG’s X1 Miner app redefines the crypto mining game by offering innovative mobile mining solution. The X1 Miner allows users to earn up to \$1 per day at launch with minimal effort. With over 9499 units of X series miners sold and the presale raising over \$60.1 million, BlockDAG is not just another trend among the top bullish cryptos but a leading investment option. Solana (SOL) Price: Key Insights into Recent 13% Increase Solana (SOL) has recently experienced a remarkable price increase, pumping over 13% in the past week to trade at \$160.94. This surge follows a prediction by Bloomberg ETF analyst Eric Balchunas, who anticipates the launch of Ethereum ETFs leading to a Solana ETF. On the technical side, SOL has been forming higher highs and higher lows, creating an ascending channel on the 4-hour chart. This bullish pattern allowed SOL to surpass the resistance level at \$157.65. However, falling below \$157.65 could see SOL drop to \$146.40, especially with bearish signals emerging from MACD and RSI indicators. Dogecoin Price Forecast: Can it Achieve \$0.3751? Dogecoin (DOGE) is making headlines with its price predictions. Currently priced around \$0.20, DOGE faces challenges in breaking past this psychological barrier. Analysts forecast a maximum price of \$0.3751 by the end of 2024, with a potential surge to \$1 by 2029. However, Dogecoin’s journey is fraught with volatility, influenced by market trends and external factors like regulatory news or influencer statements. For 2024, if bullish momentum prevails, DOGE could see considerable gains, testing resistance levels at \$0.12730 and possibly reaching \$0.155. Conversely, bearish trends might push DOGE down to \$0.101. Mining Made Easy! Boost Earnings with BlockDAG’s X1 App BlockDAG’s X1 Miner app stands out as a groundbreaking innovation in the crypto mining space. Available on Apple store, this 50 MB app allows users to mine up to 20 BDAG coins daily directly from their phones. Investors could potentially earn up to \$600 daily with BlockDAG’s X1 Miner app when BDAG coins reach their projected price of \$30 by 2030. The app’s user-friendly interface and efficient performance ensure that mining activities do not drain the device’s battery. Users can enhance their mining rate by clicking the lightning button every 24 hours, making the app interactive and engaging. One of the key features of the X1 Miner app is its community-driven approach. Users can boost their earnings significantly by referring new miners. As the referred users actively mine, the original user’s mining rate increases, fostering a collaborative environment. This referral system has been instrumental in driving the app’s popularity, contributing to over 9499 miner sales. Additionally, the app’s leaderboard feature also adds a competitive edge, displaying the top 50 earners in real-time and encouraging more active participation. Moreover, BlockDAG’s presale has also seen phenomenal success, raising \$60.1 million from selling over 12.2 billion BDAG coins and a staggering \$3.9 million from the sale of over 9499 miner units. This success highlights investor confidence in BlockDAG’s vision and the potential of its mining technology. The presale’s success, coupled with the X1 miner app’s innovative features, makes BlockDAG a leading entity in the cryptocurrency market. Final Words BlockDAG’s X1 Miner app is emerging as a revolutionary tool for mobile mining. With features like efficient battery usage, daily engagement boosts, and a robust referral system, it offers a unique opportunity for users to earn up to \$600 daily when BDAG coins price reaches its \$30 by 2030 projection. The app’s success is mirrored by contributing in the sale of over 9499 miners and the substantial funds raised during the presale. As Solana and Dogecoin capture market attention with their price movements, BlockDAG’s X1 Miner app presents a compelling investment opportunity. - Solana has had a phenomenal breakthrough, with a 33% increase since July 4th. - If the price manages to go past \$188 level, then it will likely test \$200 resistance level. With a dramatic increase to \$177, Solana has lately captivated market participants. The price of Solana has risen by 40% from its monthly low of \$123. Traders and investors in the cryptocurrency market are feeling hopeful again, thanks to its strong upward trend. They are now waiting with bated breath for the price to potentially breach \$200 next week. Both Solana’s total value locked in DeFi projects and its stablecoin market value have climbed to \$5.13 billion and \$3.268 billion, respectively. More assets are being placed into the network as the TVL rises, which suggests that investors are becoming more confident and interested. The memecoin ecosystem of SOL has also seen a value growth of 12.4%. Strong Bullish Momentum A bullish pattern has formed on Solana’s chart, suggesting that the cryptocurrency may be targeting the \$1,000 price threshold, says crypto expert Ali Martinez. Also, Ali drew attention to the bull pennant formation in a price chart of Solana in a recent tweet. Santiment data shows that Solana has had a phenomenal breakthrough, with a 33% increase since July 4th. Despite this substantial price gain, the on-chain tracker found that some traders still had a lot of negative sentiment about Solana. At the time of writing, SOL is trading at \$177.02, up 1.75% in the last 24 hours as per data from CMC. Moreover, the trading volume is up 17.45%. In the last 7 days, the price of SOL is up 10.15%. If the price manages to go past \$188 level, then it will likely test \$200 resistance level. However, if the price declines and goes below \$171 level, then it will likely fall towards \$167 support level.

- Solana’s market price has shown bullish movements in the last seven days. - The token showed a 33.18% increase in daily trading volume according to CMC data. The overall crypto market witnessed a slight dip in both market cap and trading volume in the last 24 hours. Leading cryptocurrencies, Bitcoin and Ethereum also showed mild price dips after the recent bullish trends. Meanwhile, the second largest altcoin, Solana, showed bullish movements crossing the resistance levels, at the \$160 level. According to CMC data, Solana has shown a price increase of 2.05% over the past day. In the late hours of July 18, the token was trading at \$158, before witnessing a price dip. On July 19, prices dipped to an intra-day low of \$156.07. However, as the day progressed, SOL exhibited bullish candles and surpassed resistance at \$160. At the time of writing, the token is trading at \$162.87. Additionally, Solana’s daily trading volume also noted an increase of 33.18%. Moreover, the current bullish turn is further highlighted by the MA cross that occurred on July 15. Solana’s short-term 9-day MA stands above the long-term 21-day MA as per TradingView reports. Additionally, in line with expectations, this has instigated a buying sentiment in the market as indicated by the RSI standing at 61.09. Solana has shown notable price recovery signs in the past week after the market crash in July. Additionally, market speculations about a spot Solana ETF have risen. Prominent ETF issuers such as VanEck have begun filings for the ETFs with the SEC. Solana (SOL) Weekly Price Analysis In the last seven days, SOL has taken a bullish turn climbing from its previous support level of \$135. The token broke resistance at the \$140 and \$160 levels to reach current trading levels with a 19.92% increase in market price. Moreover, the token’s HMA (\$163) stands closer to the current trading price denoting the bullish turn. Solana, in the coming months, is expected to reach higher trading levels following the weekly breakout, according to market analysts. Additionally, TheNewsCrypto analysts have predicted that in case of a bullish trend sustenance and market momentum, the token might reach a bullish price near the \$400 level. Highlighted Crypto News Today:

The crypto market is currently experiencing a period of calm, with many speculators eagerly awaiting the next bull run. Altcoins, in particular, present a tantalizing investment opportunity. While still at attractive entry points, they teeter on the edge of a potential explosion in value. The imminent surge has investors scrutinizing which coins are poised for astronomical growth. One such altcoin is Solana, a high-speed blockchain network with massive potential. The burning question looms: Can Solana reach the \$1000 mark during the anticipated 2024 crypto bull run? This article delves into expert predictions and market analyses to uncover which cryptocurrencies might soar and why Solana is generating so much buzz. CYBRO Presale Achieves \$1.3 Million Milestone: A One-in-a-Million Investment Opportunity CYBRO is capturing the attention of crypto whales as its exclusive token presale quickly surges above \$1.3 million. This cutting-edge platform offers investors unparalleled opportunities to maximize their earnings in any market condition. Experts predict a potential ROI of 1200%, with CYBRO tokens available at a presale price of just \$0.03 each. This rare, technologically advanced project has already attracted prominent crypto whales and influencers, indicating strong confidence and interest. Holders of CYBRO tokens will enjoy lucrative staking rewards, exclusive airdrops, cashback on purchases, reduced trading and lending fees, and a robust insurance program within the platform. With only 21% of the total tokens available for this presale and approximately 25 million already sold, this is a golden opportunity for savvy investors to secure a stake in a project that’s truly one in a million. >>>Join CYBRO and aim for future returns up to 1200%<<< Bulls Eye Strong Potential for Solana (SOL) Recovery Solana’s price is currently ranging between \$134.38 and \$154.92. Despite a slight dip, the bullish patterns from 2021 suggest strong potential for growth. With the RSI at 52.42, there’s still room for upward momentum. If SOL breaks past the \$162.06 resistance level, it could target the next at \$182.60, a potential gain of about 18%. Recent price changes show a healthy 12.1% bump over the week and an impressive 70.12% rise in six months. The recent positive movement indicates that bulls may overpower bears soon, pushing prices higher. This promising setup mirrors past trends and hints at continued strong performance for Solana. Avalanche (AVAX) Ready for Lift-Off Amid Crypto Market Jitters Despite recent market turbulence, Avalanche (AVAX) is showing signs of potential growth. Its current price range is between \$24.83 and \$27.65. Bulls seem to be gaining strength as the price edges closer to the nearest resistance level of \$28.94. If it breaks through, the next target is \$31.75, representing a potential rise of around 17% from current levels. Although the coin shows a small monthly dip of 3.11%, a recent weekly gain of over 7% suggests renewed buying interest. With encouraging patterns from 2021, AVAX might be gearing up for an exciting run. Polkadot Gearing Up for a Breakout: Bulls to Take Charge? Polkadot is currently trading between \$5.85 and \$6.65, showing promise despite recent dips. Bulls and bears are closely matched, but bulls seem poised for action. Key resistance sits at \$6.98; breaking through could see DOT aiming for \$7.77, an almost 15% rise. Support holds at \$5.38, giving it a strong base. Indicators like RSI at around 35 and a low stochastic suggest the coin is undervalued, hinting at potential growth. Recent small gains also signal a shift in momentum. If these patterns hold, we could see a bullish trend similar to 2021. DOT fans might want to keep a close watch. NEAR Protocol Shows Promise for Major Gains Amid Market Fluctuations NEAR Protocol is currently trading between \$4.56 and \$5.87, highlighting an optimistic trend despite recent market dumps. Bulls seem to be gaining momentum as NEAR has surged by over thirty-one percent in just one week and over one hundred percent in six months. If the price breaks the nearest resistance level at \$6.34, it could soar towards the second resistance level at \$7.66, representing a potential increase of over fifty percent from current levels. With indicators like the Simple Moving Average (SMA) showing strength and a relatively low RSI, there’s significant room for continued upward movement for NEAR in this bull run. Conclusion SOL, AVAX, DOT, and NEAR have less immediate potential in the short-term market. CYBRO, a technologically advanced DeFi platform, offers investors unmatched opportunities to maximize earnings through AI-driven yield aggregation on the Blast blockchain. Features like high staking rewards, exclusive airdrops, and cashback on purchases provide a superior user experience with seamless deposits and withdrawals. Emphasizing transparency, compliance, and quality, CYBRO has garnered strong interest from crypto whales and influencers. - Site: <https://cybro.io> - Twitter: https://twitter.com/Cybro_io - Discord: <https://discord.gg/xFMGDpHrB> - Telegram: https://t.me/cybro_io Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. TheNewsCrypto recommend our readers to make decisions
