

Those studying the cryptocurrency market for potential high performers are considering HBAR Hamster Network and BlockDAG (BDAG). However, the underlying data points towards a straightforward conclusion. HBAR's recent surge related to ETF activity quickly diminished. Plus Hamster Network's Layer-2 launch on TON provides possibilities for blockchain gaming but remains speculative dependent on widespread adoption and ongoing developer contributions. BlockDAG however demonstrates tangible progress and practical application. With over \$200 million generated in its presale more than 18.6 billion BDAG coins distributed, and a 2,380% increase for early participants, BDAG's progress is supported by business partnerships, a complete audit before its main network launch, and upcoming listings on major exchanges. BlockDAG's combination of technology, practical use, and rapid market acceptance makes it a strong contender among the three.

HBAR Price Fluctuations: Can Market Interest Sustain Its Value? Hedera's HBAR coin attracted attention when Nasdaq filed to list an ETF that includes the coin. This news resulted in a nearly 10% increase, with prices reaching \$0.226. However, the increase was short-lived. Within 24 hours, HBAR dropped 7%, now trading around \$0.190, prompting questions about the rally's durability. Technical indicators suggest that sellers are currently more active. Both the indicators Balance of Power (BoP) and Chaikin Money Flow (CMF) indicate potential further declines increasing concern among investors. If this trend continues, HBAR could decrease to \$0.169. However, there's potential for recovery. Should market participation increase prices could rise to \$0.247 offering potential gains for those anticipating a market shift. With the ETF filing still awaiting approval this decrease could be an opportunity for those expecting a renewed increase if market sentiment changes.

Hamster Kombat's Layer-2 Blockchain Launch: Is It a Potential Shift in Web3 Gaming? Hamster Kombat has launched the Hamster Network a gaming-focused Layer-2 blockchain built on The Open Network (TON). This initiative aims to provide a quick affordable and scalable solution for decentralized gaming applications, leveraging TON's security and growing ecosystem. Developers can easily integrate their decentralized applications onto the Hamster Network thanks to its compatibility with TON's existing smart contracts. The network includes features such as an integrated digital wallet a decentralized exchange (DEX) and a cross-chain bridge improving user experience and developer versatility. With Telegram supporting TON and providing access to its large user base Hamster Network could quickly gain traction in the Web3 space. The project's testing initiative Hamster Boost allows users to participate and earn rewards, highlighting the team's focus on community-driven growth. Observers should pay close attention to Hamster Network's combination of scalability, low costs, and ecosystem support could position it as a leader in blockchain-based gaming. The BlockDAG analysis shows that community driven growth is a key factor.

CEX Listings & Beyond: BlockDAG's Path to Market Dominance BlockDAG's recent updates confirmed why current participation is advantageous. With the presale reaching over \$200 million and more than 18.6 billion BDAG coins sold at \$0.0248, early participants are anticipating substantial gains as the price increases towards its next milestone. With a \$600 million presale target and upcoming listings on major exchanges, the opportunity for maximum returns is diminishing. The current batch is Batch 27. The BlockDAG network is making consistent progress. Several developments reinforce BlockDAG's positive outlook. The team has accelerated a complete audit, with results expected before the main network launch increasing confidence in its security. Business partnerships focusing on supply chain and financial services are underway, positioning BDAG for practical use beyond initial interest. Developer grants and an upcoming validator program aim to enhance ecosystem utility, while mobile application updates, including a referral program, encourage user engagement. Regulatory licenses are being pursued to expand global reach. The BlockDAG team is taking steps to ensure long term stability. With strong interest from institutions advanced technology and a clear plan for market adoption BDAG is not just another presale it's developing into a significant opportunity. Early participants stand to gain the most as BlockDAG approaches a potential increase in value.

In Conclusion While HBAR deals with temporary ETF interest and Hamster Network aims to establish itself in Web3 gaming BlockDAG's growth strategy provides tangible results. Its presale's rapid progress towards a \$600 million target combined with developer incentives business collaborations and an audited secure network gives BDAG a market advantage. HBAR's technical challenges and Hamster Network's early-stage uncertainty make their paths less predictable for experts and investors thus causing uncertainty among them. Meanwhile BlockDAG's structured plan expanding global reach through regulatory compliance and increasing institutional interest create a compelling case for early adoption. With exchange listings approaching and technological advantages designed for scalability and practical use, BDAG presents the best opportunity for significant gains before its price increases beyond current participation levels.

- Hamster Kombat announced the launch of its Hamster Network, the first gaming-focused Layer-2 blockchain built on The Open Network (TON), on February 25.
- The new network is designed to offer high-speed, scalable, and low-cost infrastructure for decentralized gaming apps by leveraging TON's technology and virtual machine for seamless dApp integration.
- Hamster Network features an integrated wallet, a canonical bridge, and a dedicated DEX, while community participation is encouraged through its Hamster Boost initiative for stress-testing the platform.
- Telegram-based tap-to-earn game Hamster Kombat has marked a milestone with the launch of its Hamster Network on February 25. Built on The Open Network (TON), the new network represents the first Layer-2 solution specifically tailored for gaming within the TON ecosystem. The platform is designed to provide a highly scalable and cost-effective infrastructure for decentralized gaming applications, enhancing the Web3 gaming experience.
- **High-Performance Features and Integration with TON** According to a statement on X, Hamster Kombat's announcement emphasizes its partnership with TON to leverage its advanced technology. The network is powered by TON's Virtual Machine, ensuring full compatibility with existing smart contracts on TON,

which allows developers to migrate their dApps with minimal modifications. All proof records generated by the Network are posted to TON's Layer-1 blockchain, ensuring robust security and decentralization. In addition, the infrastructure includes an integrated wallet, a canonical bridge, and a dedicated decentralized exchange, setting the stage for multiple developers to build innovative gaming experiences. Despite the launch of Hamster Network, the market impact on Hamster Kombat's native token (HMSTR) has been modest. As of now, HMSTR is trading at \$0.0017 level. While the token's price has not yet reflected the excitement surrounding the new network, the long-term potential remains promising as the platform gains traction within the rapidly growing blockchain gaming space. With Telegram's recent commitment to TON as its exclusive crypto infrastructure provider, the enhanced ecosystem could soon drive significant adoption and value for gaming-focused projects.

Exciting developments are happening in the crypto world despite a dip in the broader market! The Hamster Combat (HMSTR) Coin aims to reach \$0.10 by 2025, thanks to its efforts to create a unified gaming ecosystem, capturing the interest of analysts and gamers alike. Meanwhile, despite its recent price fall, PEPE Coin still holds potential for a significant rally as some hold onto hope for a breakout. At the same time, BlockDAG (BDAG) has reached an impressive milestone, attracting 100,000 users to its TG TAP Miner! The TG TAP Miner is a key player, merging gaming, mining, and significant financial possibilities into one compelling package. The pace is quickening, and BlockDAG is proving to be unstoppable. Hamster Combat Coin Targets Gaming & VR Leadership Hamster Combat Coin is stirring considerable excitement as it aims to be a dominant force in the gaming and virtual reality sectors. By facilitating smooth transactions within games, it's drawing attention with predictions of reaching \$0.10 by 2025. If it leverages strategic partnerships well, its integration into the thriving \$200 billion gaming market might just be its winning strategy. Despite stiff competition, proponents of Hamster Combat Coin believe it distinguishes itself by nurturing an interconnected gaming network. An uptick in its adoption could position this novel crypto as a dark horse in the gaming arena. PEPE Coin Dips But Eyes Comeback The price of PEPE Coin has dipped, aligning with a broader market retreat. Currently priced at \$0.00002117 after a downward trend, it still has potential to rebound. Overcoming the \$0.000026 resistance level could signal a bullish recovery, despite the uncertainty spurred by ongoing Federal Reserve discussions. PEPE's enduring trading volumes suggest that it still retains a dedicated following, eager to see if it can defy expectations and regain its upward trajectory. BlockDAG's TG Tap Miner Gain Momentum: A New Era in Crypto Gaming and Earnings BlockDAG's TG TAP Miner has rapidly gained traction, reaching over 100,000 users and making its mark in the crypto gaming world. Part of the larger BlockDAG ecosystem, this miner provides an exciting way for users to mine BDAG coins, engaging the crypto gaming community. This increase in activity coincides with BlockDAG's presale surpassing \$172 million, with the coin price now at \$0.0234 and 17.5 billion coins distributed, delivering an impressive 2240% surge in value to early participants. The miner's popularity extends beyond mere numbers. It is closely linked to the anticipation surrounding BlockDAG's Mainnet, which is in its audit phase, and its ability to consistently enhance user gains. The TG TAP Miner combines engaging gameplay with real financial rewards, setting a new standard in the crypto gaming space. As BlockDAG aims for a \$600 million presale goal, growing enthusiasm from large-scale accumulators and institutions is bolstering its momentum. For those looking for the top crypto to acquire right now, BlockDAG and its TG TAP Miner present an excellent choice. Once the Mainnet is operational, the miner is expected to drive significant demand, further cementing BlockDAG's status as a key player. Crypto enthusiasts, miners, and traders are rallying behind BlockDAG's presale, eager for its ecosystem to reshape the gaming and blockchain landscapes. BlockDAG: Top Crypto Buy & Mine In a fluctuating crypto market, standout initiatives are forging paths to significant growth. Hamster Combat Coin is capturing interest with its gaming-centric ecosystem within the lucrative \$200 billion gaming market. Although PEPE Coin has stumbled recently, its robust trading volume suggests a potential resurgence. BlockDAG steals the spotlight, however. The TG TAP Miner's landmark of 100,000 users, coupled with its synthesis of gaming, mining, and financial incentives, keeps the community engaged and expectant. As the Mainnet launch approaches and institutional interest heightens, BlockDAG isn't just one to watch; it's the one to be part of. - Presale: <https://purchase.blockdag.network> - Website: <https://blockdag.network> - Telegram: <https://t.me/blockDAGnetworkOfficial> - Discord: <https://discord.gg/Q7BxghMVyu> Disclaimer: TheNewsCrypto does not endorse any content on this page. Blockchain gaming is undergoing a transformative change, merging engaging gameplay with decentralized benefits. Hamster Kombat has introduced a CEO feature that allows players to manage game studios and develop games, advancing beyond simple crypto transactions. OMERTA combines AAA gaming with blockchain features, providing players with real asset ownership and attracting both traditional gamers and crypto enthusiasts. Meanwhile, BlockDAG (BDAG)'s TG Miner allows for the accumulation of BDAG coins through gameplay, with its significant presale success highlighting its appeal among gamers and crypto buyers alike. Hamster Kombat Revamps Game Strategy with New CEO Feature "What's in It for Players? Hamster Kombat is transforming its gameplay with a thrilling update that allows players to step into the shoes of a CEO in the virtual gaming world. This major shift comes after its initial season focused on cryptocurrency exchange management. The new chapter empowers players with enhanced control over game studios and financial strategies, including hiring staff and launching successful games. This update not only broadens the gameplay experience but also integrates player feedback to offer more autonomy in token management. By allowing players to retain tokens within the game's ecosystem and promising future rewards for sustained engagement, Hamster Kombat is strengthening player purchase in the game. The developers have further bolstered trust within their community by publishing wallet addresses for vested tokens, enhancing transparency and addressing previous distribution concerns.

OMERTA: Leading the Future of Blockchain Gaming As the blockchain gaming market is projected to reach over \$65 billion by 2027, OMERTA stands poised to carve its niche in this booming sector. It eschews the typical Play-to-Earn model for a richer integration of AAA gaming quality with the perks of blockchain technology, giving players ownership of in-game assets and a stake in the game's economy. This blending of high-quality gaming with the financial benefits of blockchain technology is attracting a diverse audience, from casual gamers to blockchain enthusiasts. OMERTA not only provides an absorbing gaming experience but also offers tangible value from gameplay, positioning it at the forefront of the next wave of gaming innovations, enticing those eager to partake in this cutting-edge gaming revolution.

BlockDAG's TG Miner: Play, Earn, and Elevate Your BDAG Holdings BlockDAG is redefining the gaming experience with its TG Miner game, providing a thrilling way for users to gather BDAG coins through Telegram. Engage in fun-filled, one-minute sessions where players burst falling balls to score Tap Points. These points are then transformable into BDAG coins, turning a simple game into a productive endeavor to augment your crypto collection. But TG Tap Miner is more than just a game—it's a strategic platform for enhancing your crypto reserves. Players have the opportunity to amass up to 7,000 Tap Points daily, offering a significant avenue to increase BDAG accumulations. The inclusion of a referral program, rewarding 4,000 Tap Points for each new participant you bring into the fold, not only boosts individual gains but also cultivates a vibrant community tethered to the BlockDAG ecosystem. What distinguishes BlockDAG is its utilization of cutting-edge Directed Acyclic Graph (DAG) technology paired with a Proof-of-Work (PoW) consensus mechanism. This combination enhances scalability, security, and decentralization, elements that are pivotal to BlockDAG's potential for substantial returns. Having already raised over \$100 million by batch 24, with early participants experiencing up to a 1960% ROI, TG Tap Miner stands out as an indispensable tool for maximizing BDAG holdings. This presents a prime opportunity for those eager to amplify their position in this pioneering Layer 1 blockchain initiative.

The Bottom Line As the blockchain gaming industry rapidly grows, projected to reach \$65 billion by 2027, standout games like Hamster Kombat, OMERTA, and BlockDAG's TG Miner are leading this innovative wave. Hamster Kombat has introduced a CEO role, OMERTA combines high-quality gaming with decentralized markets, and BlockDAG offers an engaging way to earn BDAG coins through its TG Miner game. With BlockDAG's presale already generating \$100 million and offering significant returns, these games not only provide entertainment but also a chance for early participants to gain significantly from blockchain advancements. Every day new trends come along in the world of cryptocurrency and it is apparent firsthand that the rise in pricing or growth in utility is not always the concentrating aspect of innovation, market sentiment, and enlargement within the community. Just recently, it came to light that Rexas Finance (RXS) has become the most sought-after cryptocurrency on the internet, leaving even Hamster Kombat (HMSTR) and NEIRO behind. Such achievement emphasizes not only the increasing pace of Rexas Finance's expansion but also the transformation underway across the entire cryptocurrency market.

A New Player in the Market In the fast-developing field of Real World Asset (RWA) tokenization, Rexas Finance claims to be the dominant player. Most of the cryptocurrencies are either centered around speculation and trading or simply a meme, but Rexas Finance is unique and interesting. The platform allows ordinary individuals to become investors by offering a solution to tokenize real estate assets. Such innovations have made Rexas Finance unique in an already saturated market because they help in easy asset tokenization. The boom in the interest of Rexas Finance can be linked to more than one factor, such as the use of advanced technology, the convenience of the resources, and the attention paid to safety and legal requirements. In contrast to Hamster Kombat and NEIRO, which sell themselves on the creativity of their themes or formats, Rexas Finance is based on a clear intention to change the place of assets in the modern world.

Why Relational Real-World Asset Tokenization is Interesting The other core space of inspiration for the development of Rexas Finance is access to the asset, as it is owned by many people. The ecosystem offers services that allow both individuals and corporations to easily issue, market, manage, and exchange assets in the form of tokens. This aspect of user focus is especially important in recent times when most of the investors are looking for projects that will make a difference rather than projects that are spraying cash. By using blockchain technology, transparency and transaction fees as well as security are improved, making Rexas Finance a nice place to invest. Because the current financial systems have been criticized for their inefficiencies and excessive operations devoid of transparency, there is going to be a continuous inclination toward solutions that are just like the ones offered by Rexas Finance.

Engaging the Community The presale has already produced impressive results, with Rexas Finance collecting huge sums within a short period. The current stage of the presale is stage four and a price of \$ 0.060 has been set for each RXS token and the target of \$ 2,750,000 has been achieved. Looking at the community support for Rexas Finance, the business is expected to continue growing, which may in turn lead to increased search interest and presence in the market. Rexas Finance also strategized on how best to engage the community as they build their brand and extend their reach. Initiatives such as the Rexas Millionaire Giveaway promotion have fanned the interest of potential investors. Tempting with impressive reward packages and urging people to sign up for the presale has put Rexas Finance in the hearts of many people. This tactic promotes interest in the project as well as making it in the high-competition market of cryptocurrency. Consequently, Rexas Finance has managed to win over investors who want more than just the same old meme coin. By having a precise objective and the involvement of many people, Rexas Finance is creating a name for itself in a fierce market environment.

Looking Ahead: The Future of Rexas Finance There seems to be no end to the undeterred momentum behind the works of Rexas Finance.

Following the incredible presale and the ever-increasing number of searches regarding the project on Google, the project has bright prospects in the years ahead. Regarding passive return models, investors' expectations are indeed very optimistic, where a potential rally will be at 4600% by 2025 seems achievable. As Rexas Finance evolves and improves its business operations alongside the trends in the market, there is a well-anticipated market niche in cryptocurrency. A plethora of a strong tech base, focusing on the community, and articulating the vision of the asset tokenization give Rexas Finance a competitive edge against its rivals such as Hamster Kombat and NEIRO. Finally, Rexas Finance has overtaken all the other pastes as the most "Googled" cryptocurrency, showing a shift in the attention of investors to the development of the projects, applicable in practice. The crypto market is growing and as such, the development will center more on giving real-life alternatives to real-life problems. With the said objectives of bringing funds to the masses and connecting them with the concerned, Rexas Finance is not just another trend; it is how today's society invests in cryptocurrencies. As the crypto and gaming industries evolve, BlockDAG, Bitrue's Hamster Kombat, and OMERTA are capturing the spotlight with innovative approaches to blockchain technology. BlockDAG is making waves with its TG Tap Miner, an exciting game within Telegram that rewards players with BDAG coins, creating a seamless connection between gaming and cryptocurrency. Meanwhile, Bitrue's Hamster Kombat is set for a grand launch, and OMERTA is taking blockchain gaming to new heights with its AAA graphics and player-driven economies. Each of these projects offers unique opportunities for growth and engagement in Web3. BlockDAG's TG Tap Miner Goes Viral in October "Best Passive Income Opportunity" BlockDAG is making waves in the crypto space with its innovative Layer 1 proof-of-work consensus mechanism, utilizing a Directed Acyclic Graph (DAG) structure to push the boundaries of blockchain technology. Its latest offering, the BlockDAG TG Tap Miner, is an exciting and rewarding game available directly within the Telegram app. This engaging platform allows users to earn BDAG coins by participating in game sessions every two hours, giving players continuous opportunities to increase their rewards. Players can enhance their earnings by purchasing BDAG coins during the presale, unlocking special boxes and boosters to elevate their gameplay. By completing in-game tasks and inviting friends to join, participants can earn additional bonuses and climb the global leaderboard, competing with others to demonstrate their tapping skills. With seamless integration on both iOS and Android, no downloads are required—simply play, tap, and start earning rewards. BlockDAG's TG Tap Miner adds real-world value to gaming by allowing users to convert earned points into BDAG coins, positioning itself as a leader in the intersection of gaming and cryptocurrency. Offering a unique experience, BlockDAG continues to attract attention from both crypto enthusiasts and gamers alike, solidifying its place as a top-tier player in the passive income landscape. Bitrue Unveils Exciting Hamster Kombat Campaign Ahead of HMSTR Token Release Bitrue, a leading cryptocurrency exchange, is launching a unique campaign to celebrate the upcoming release of the Hamster Kombat (HMSTR) token. The Hamster Kombat token generation event (TGE) is scheduled for September 26, 2024, and has already generated massive interest in the crypto world. Hamster Kombat, which debuted earlier this year, has gained a significant following, and its public launch is expected to be one of the biggest events in the Web3 space. Bitrue is offering exclusive opportunities for users through its two launchpools, allowing participants to earn a total of 80,000 HMSTR without investing capital. OMERTA Gains Traction The blockchain gaming industry is rapidly evolving, and OMERTA is emerging as a key player in this space. As blockchain gaming is projected to surpass \$65 billion by 2027, the demand for engaging, player-driven experiences continues to rise. OMERTA aims to bridge the gap between traditional gaming and blockchain by offering high-quality gameplay combined with decentralized, player-owned economies. With AAA graphics powered by Unreal Engine 5, OMERTA promises a visually stunning experience that rivals mainstream games. Its non-inflationary tokenomics ensure long-term value, and the multi-chain architecture provides a scalable, future-proof platform. Concluding Insights From BlockDAG's seamless integration of gaming and crypto rewards with the TG Tap Miner to Bitrue's highly anticipated Hamster Kombat token launch, and OMERTA's visually stunning blockchain gaming platform, each of these projects is reshaping its respective field. BlockDAG offers players a continuous stream of rewards, merging fun with real-world value, while Bitrue's Hamster Kombat campaign provides users an exciting chance to earn tokens ahead of the official release. OMERTA, with its high-quality gameplay and decentralized economies, is setting new standards in blockchain gaming, appealing to both gamers and crypto enthusiasts. As the demand for innovative Web3 solutions grows, these projects are leading the charge, offering unique opportunities for engagement and long-term growth. Victoria, Seychelles, September 27th, 2024, Chainwire Bitget, the world's leading cryptocurrency exchange and Web3 company, has announced the listing of Hamster Kombat (HMSTR) on its spot trading platform, offering users an opportunity to benefit from a substantial rewards pool and rebates. This campaign, spanning from September 26, 10:00 PM to October 3, 10:00 PM (UTC+8), aims to engage users with a total prize pool of 12,500,000 HMSTR tokens and up to 25% in rebates for eligible participants. During this promotion, users can enjoy zero fees when purchasing crypto using a credit or debit card

or through cash conversion after topping up their fiat balance via bank deposit. This initiative aims to make crypto trading more accessible and appealing, especially for those new to the Bitget platform. By simplifying the process and minimizing costs, Bitget is enhancing the user experience, allowing more traders to explore and engage with the HMSTR token. Participants need to register for the promotion through the designated "Register Now" button to qualify. As the campaign progresses, users who buy crypto during the promotion period can potentially earn up to a 25% rebate in HMSTR tokens. The rebate amount is based on the participant's trading volume relative to the total trading volume of all users involved in the campaign. This creates an environment that not only rewards active traders but also encourages higher engagement with the HMSTR listing. The total prize pool of 12,500,000 HMSTR tokens will be distributed on a first-come, first-served basis, emphasizing the importance of prompt participation. The distribution of rewards will take place within five business days following the conclusion of the campaign, ensuring transparency and efficiency in the reward allocation process. However, it's crucial to note that this campaign is exclusively available for newly registered Bitget users. Sub-accounts, institutional users, API traders, and market maker accounts are not eligible for this promotion, maintaining fairness in the campaign's structure. The listing of Hamster Kombat (HMSTR) on Bitget's spot trading platform shows the exchange's commitment to expanding its portfolio and providing users with opportunities to engage in diverse crypto projects. As HMSTR garners more attention within the crypto community, this campaign serves as a strategic step in introducing new assets and fostering active trading. By offering zero fees and substantial rebates, Bitget provides its users and traders with added incentives. The HMSTR listing and its accompanying promotional campaign present a significant opportunity for traders to explore the token's potential while benefiting from Bitget's user-centric approach to crypto trading. To participate in the campaign for HMSTR, please visit [here](#). About Bitget Established in 2018, Bitget is the world's leading cryptocurrency exchange and Web3 company. Serving over 45 million users in 100+ countries and regions, the Bitget exchange is committed to helping users trade smarter with its pioneering copy trading feature and other trading solutions. Formerly known as BitKeep, Bitget Wallet is a world-class multi-chain crypto wallet that offers an array of comprehensive Web3 solutions and features including wallet functionality, swap, NFT Marketplace, DApp browser, and more. Bitget inspires individuals to embrace crypto through collaborations with credible partners, including legendary Argentinian footballer Lionel Messi and Turkish National athletes Buse Tosun (Wrestling world champion), Samet GÃ¼mÃ¼ÅŸ (Boxing gold medalist) and A'lkin Ayda'n (Volleyball national team). Tonkeeper, the leading non-custody wallet for TON's blockchain ecosystem, has announced its Battery feature support for Hamster Kombat. Millions are anticipated to join the TON ecosystem as a result of this enormous cryptocurrency airdrop. To provide consumers who want complete management over their cryptocurrency assets with a smooth non-custodial experience, Tonkeeper has teamed up with Hamster Kombat. The Hamster Kombat token airdrop is anticipated to be the biggest onboarding event in TON's history, with over 300 million users. With the help of quests and upgrades, users of the crypto "mini-app" Telegram game may advance from a naive hamster to the CEO of a cryptocurrency exchange. Web3 players have found it to be a tremendous hit. For instance, the Hamster Kombat Telegram community has more than 52 million members. Users of Tonkeeper who get airdropped HMSTR tokens will have access to the wallet's novel Battery feature. By doing this, players may utilize airdropped HMSTR tokens to "charge" their Battery. These tokens can then be used to pay for network transaction fees, such as TON gas. With the use of this Battery system, transaction management is made easier and consumers are spared the anxiety of gas costs. Daniel Cawrey, Tonkeeper's Chief Strategy Officer stated: "Airdrops from Telegram mini-apps like Hamster Kombat are crucial to onboarding new users into crypto. Tonkeeper Battery is an important feature for new entrants. Battery allows us to provide a user experience on par with custodial wallets without controlling any user funds. We believe in the "not your keys, not your coins" concept at Tonkeeper, and we want to give our users the best non-custody experience possible." The Hamster Kombat airdrop, which highlights how well-suited TON's scalable network is for hosting web3 games, will be a significant driver of TON growth. It is anticipated that the TON network would see transaction loads of up to 1,000 transactions per second (tps), which will be greater than anything observed in the history of its blockchain. In a typical day of regular chain activity, the TON blockchain typically processes 135 tps. Cawrey, who has written several books about crypto and is a former CoinDesk editor added: "It's time for crypto natives to buckle up for the ride, we are going where no blockchain has ever gone before in terms of user adoption. We look forward to talking more about this behind-the-scenes journey with the public after we get this Hamster airdrop rocket fired up and running." After peak airdrop loads decrease, customers will be able to use the battery, perhaps around October 1, 2024. The leading non-custodial wallet on the TON blockchain is Tonkeeper, a product of Ton Apps Group, which has over 34 million monthly active users (MAUs). To handle token and NFT fees, the firm has developed innovations like Tonkeeper Battery. Furthermore, Tonkeeper has the biggest developer platform on TON, TON API, which is used by an extensive range of projects throughout TON's ecosystem.

- Telegram-based game Hamster Kombat has launched its token on Binance. - The HMSTR token has a maximum supply of 100 billion. Hamster Kombat (HMSTR) token is set to debut on Binance today at 12 pm UTC and 5.30 pm IST. It is a Telegram-based crypto game that allows users to mine Hamster coins by

staking Binance Coin (BNB) and FDUSD. The Hamster Kombat token will also be available for trading on other platforms like Bybit, Bitget, Gate.io, and KuCoin. Users can start trading HMSTR against Bitcoin (BTC), Tether (USDT), and any other tokens on Binance Convert at zero fees within the one hour of the token being live on Binance Spot. The HMSTR token has a maximum supply of 100 billion, and 75% of this value is for the airdrop aiming to reward the community members and early players. However, only 60% have been distributed, with the other 15% coming in a future token distribution. An airdrop distribution of 3 billion HMSTR occurs in the Binance Launchpool. Recently, the game developers announced that out of 300 million players, only 131 million had qualified for the airdrop, which makes it 65% rejection rate of players for an airdrop of 300 billion tokens. Additionally, 2.3 million player accounts blocked for cheating by the game developers. On the other hand, Bybit provided early access to pre-market trading that started on July 8, 2024. During the pre-launch period, HMSTR tokens traded at \$0.01023 per token, allowing participants to speculate on the value of their holding

Highlighted Crypto News Singaporean SBI DM Plans to List Digital Assets on German Firm 21X

Bybit, the world's second-largest cryptocurrency exchange by trading volume, proudly presents the HAMSTER Virtual Card, a vivid, distinctive design that adds excitement to your daily crypto transactions. This amusing addition, which will be available from September 24 to October 21, is timed to coincide with the imminent debut of \$HMSTR on September 26, 2024. It allows users to fully immerse themselves in the Hamstermania while still enjoying seamless cryptocurrency convenience. The HAMSTER Bybit Virtual Card is a combination of style, functionality, and security. Whether you're a novice to cryptocurrency or an experienced investor, you can easily access Bybit's extensive array of crypto services and showcase your passion for the HAMSTER token thanks to this distinctive design.

Hamstermania Meets Crypto Convenience: Through the HAMSTER Virtual Card, Bybit customers have an eye-catching and distinctive method to keep track of their cryptocurrency spending. This unique design perfectly integrates with the Bybit Card's superior security and simplicity, adding a playful touch to the world of cryptocurrency. For consumers who want to mix style with the utility of cryptocurrency payments, it's ideal. Unlocking Your Exclusive HAMSTER Card: New Bybit Users: - Sign up for a Bybit account: - Apply for a Bybit Card using the referral code: BYBITHAMSTER. - Instantly enjoy your exclusive HAMSTER Virtual Card! Existing Bybit Users: - Sign up to get updates on the HAMSTER Virtual Card design. - In three (3) days, your new card design will be available. The playful HAMSTER design speaks to the excitement and community spirit within the crypto world, while our Bybit Card ensures seamless, secure, and rewarding transactions. This is the perfect opportunity for our users to enjoy both style and practicality in their everyday crypto experience."

- TON blockchain prepares for a surge in users from Hamster Kombat. - Validators urged to monitor systems as millions of players mint HMSTR. The Open Network (TON) blockchain is gearing up for an unprecedented influx of users as the popular Web3 game, Hamster Kombat, prepares to onboard millions of players. On September 25, a Telegram channel for TON validators, developers, and integrators issued a warning about an anticipated spike in bandwidth demand, urging validators to ensure high availability for the influx of Hamster Kombat users minting the game's new coin, HMSTR. Starting September 26 at 10:00 UTC, validators are advised to remain vigilant. The Hamster Kombat project boasts over 100 million monthly active users, making this a unique event in the blockchain industry. Moreover, the announcement emphasized the critical role validators play in maintaining blockchain quality, stating, "The quality of validators directly affects the quality of the blockchain. We appreciate your participation in The Open Network." To facilitate real-time support from September 26 to 29, validators are encouraged to join the "TON Status" Telegram channel and to implement any urgent fixes or resources within one hour if needed. Past Concerns And Future Anticipations Concerns have arisen from past experiences, with community members drawing parallels to the DOGS memecoin airdrop in August 2024, which caused significant network congestion and outages. During the DOGS airdrop, the TON blockchain experienced a loss of consensus among validators due to a surge in transactions. It processes over 20 million transactions within three days. The incident highlighted the need for enhanced validator preparedness, especially with the upcoming Hamster Kombat coin launch. In addition to the increased user engagement, the Hamster Kombat team recently unveiled its roadmap for the remainder of 2024. It includes plans to integrate external payment systems and launch new games. The game has already gained significant traction, claiming to have banned 2.3 million users for cheating. It reflects its commitment to maintaining fair play within its rapidly expanding ecosystem.

Highlighted News Of The Day WazirX Secures Four Month Moratorium After Two Months Post Hack

Hamster Kombat, the largest tap-and-earn game on Telegram, is making its community very excited as it completes its first season of offering in-game rewards. As expected, this end of the season is significant as it is just before the long-awaited aforementioned launch and airdrop of HMSTR token on September 26, 2024. Its participants have now spotted this token as the next big opportunity. The End of Season 1 And The HMSTR Token Airdrop In terms of the overall development of Hamster Kombat, the finalization of Season 1 is the turning point. Players should know by now that until September 20th, they must work on trying to gather as many achievements in the game as possible, as these achievements will be turned into HMSTR tokens during the end of the season. The in-game panel that is visible to every participant reads "Season 1 ends on September 20. Hurry up to level up!" There is a huge player base for the game Hamster Kombat as last month reported 94 million active users and 300 million total global players. On September 26, Hamster Kombat will be launching its HMSTR token on The Open Network (TON) and will perform an airdrop for all its loyal players at the same time. Certainly, this event will probably be among the largest token giveaways in recent history especially because the game has such a large player base.

Rexas Finance (RXS): The Next Big Opportunity Spotted By Hamster Kombat Participants Just as the HMSTR token is snatching most of the community's focus, shrewd players and

investors in Hamster Kombat are focusing on another possible jackpot –“ Rexas Finance (RXS). Rexas Finance has already proved its mettle by creating a unique avenue where the tokenization of physical assets is made possible. Rexas Finance’s relentless progress and success of recently held presales can arguably be used to analyze the future potential of Rexas Finance. It did not take long for the project’s Stage 2 presale to fully sell out and it was able to raise an astonishing \$1,250,000, and the next level is already at \$0.05 and counting. For Stage 1, however, its raised amount of \$450,000 was made in less than 3 days comprising 3 active days indicating overwhelming participation and traction from investors. Rexas Finance promises participants a 4x return on investment from a Stage 3 presale price of \$0.05 to a listing price of \$0.20. There is so much lucrative potential in this, coupled up with the new way of approaching asset tokenization that has made several participants of Hamster Kombat treat Rexas Finance as the next best bet. At present, the Rexas Finance investor as well as the participant is equally attracted to the \$1 million prize giveaway, which is currently active on Rexas Finance’s website. There is a huge prize pool for a \$1 million sweepstake, which offers 20 prizes of \$50,000 each, to its lucky participants. Over 72,000 contestants have already signed up for the raffle for Rexas Finance, which has made its target to be completed in 132 days from now, making the market grow rapidly. Blockchain Technology: Reshaping Investment Opportunities As with their other operational strategies, the HMSTR token from Hamster Kombat and the cryptocurrency RXS from Rexas Finance have a development rationale that is commonplace in the blockchain industry. With the help of Hamster Kombat, players can earn rewards even without personally implementing any technical innovations –“ within the decentralized finance –“ DeFi realm. At this time, Rexas Finance has breath-taking visions on the way how any assets can be stored, managed, and divided into tradeable portions lowering the barriers to investing in various assets. To participate in Hamster Kombat, the HMSTR tokens airdrop, and the Rexas finance presale are two notable events that seek to take advantage of the convergence of gaming and defi. The two platforms highlight different aspects of the future of ownership and management of digital assets beyond physical assets supported by traditional finance but rather by blockchain and decentralized parameters. Conclusion With the end of Hamster Kombat Season 1 and the HMSTR token waiting there for the launch, it is time to say that the community is ready for a new chapter of the game whether it is getting new rewards or new opportunities. At the same time, Rexas Finance is positioning itself as one of the leaders of the DeFi market, allowing participants of Hamster Kombat and other investors to participate in a revolutionary movement. - Hamster Kombat made an announcement discussing tokenomics for the HMSTR airdrop. - The Telegram-based blockchain game has gained immense popularity since its launch. In the last 24 hours, the cryptocurrency sector witnessed a spur in activity after the weekend. Notably, the Democratic candidate, Kamala Harris’s pro-crypto statement caused a wave of relief among community members who anticipated for her silence to end. Additionally, Hamster Kombat revealed the token allocations for their token drop scheduled after the end of the game’s Season 1. Notably, the prominent Telegram-based crypto game Hamster Kombat announced the allocations for its Season 1 token airdrop. According to the team’s official announcement, out of 300 million people 131 million individuals qualified for the airdrop. The token airdrop is expected to occur on September 26. Additionally, the team also stated that 2.3 million users were disqualified on the premises of cheating. Another 30.6 million users are yet to choose their withdrawal methods as per the announcement. The Hamster Kombat revealed that it would be allocating 75% of the 100 billion \$HMSTR tokens to the community. Moreover, out of the tokens reserved for the community, 60% are allocated for the Season 1 airdrop. The remaining 15% will be dropped during Season 2, which the team is planning. Within the 60% HMSTR tokens, 88.75% are for immediate airdrop while the remaining will be vested and unlocked later. What Influenced Hamster Kombat’s Popularity? The blockchain clicker game, Hamster Kombat was launched in March 2024 and immediately garnered attention from the web3 community. The game, as aforementioned, has reached 300 million users during a span of six months. Additionally, Hamster Kombat also announced increasing features for the game’s season 2. Meanwhile, the HMSTR token is set to launch in the coming days with the airdrop. Notably, the largest crypto exchange Binance has listed the game’s token in its launch pool. However, in the month of July, Hamster Kombat witnessed attackers with phishing scams targeting its players. Finally, Binance also launched a mega campaign page for Hamster Kombat’s \$HMSTR token recently on September 21 as per reports. Highlighted Crypto News Today:

- Users will have the option to lock their BNB and FDUSD tokens in order to farm HMSTR. - There will be a seven-day farming period that concludes on September 25, 2024. Binance announced the inclusion of Hamster Kombat (HMSTR) to its Launchpool platform on Thursday, September 12, 2024. Additionally, the HMSTR token will be listed on the exchange’s platform later on. The newly released gaming token has scored a major triumph with this. Binance customers will have the option to lock their BNB and FDUSD tokens in order to farm HMSTR tokens beginning September 19, 2024. There will be a seven-day farming period that concludes on September 25, 2024. Users will have the opportunity to earn Hamster Kombat airdrop throughout this period, and they will be distributed via the exchange’s farming mechanism. Multiple Trading Pairs Available The total quantity of Hamster Kombat (HMSTR) tokens is 100 billion HMSTR, for perspective. The Launchpool program will distribute 3 billion HMSTR, or 3% of the total supply, as incentives. Users who lock BNB will get 2.55 billion tokens, or 85% of this amount. The remaining 15%, or 450 million tokens, will go to holders of FDUSD. On September 26, 2024, at 12:00 UTC, Binance will launch trading for HMSTR. Multiple trading pairings will be available for it, such as HMSTR/USDT, HMSTR/BNB, HMSTR/FDUSD, and HMSTR/TRY. Additionally, a –seed– tag will be attached to the token to denote its recent listing. With the inclusion of HMSTR to Binance’s –Super Earn–

program, users may lock tokens for a certain term and earn a special annual percentage rate (APR), in addition to the Launchpool farming. There will be a 7-day restricted period for customers to receive the special APR incentives with HMSTR, however the actual APR will be declared later. Highlighted Crypto News Today: Legislators Probe SEC Chair Gensler Over Political Bias in Hiring

As the saying goes, every dog has its day, and in the world of cryptocurrencies, DOGS price is no exception. The DOGS™ price has recently witnessed a noticeable uptick, sparking interest worldwide. Simultaneously, anticipation grows for the upcoming Hamster Kombat launch, setting the stage for potential breakthroughs. Alongside this, BlockDAG has been quite active on the strategic front. It has secured impressive partnerships with soccer giants Borussia Dortmund and Inter Milan, significantly enhancing its visibility and impact globally. These collaborations have already fueled a \$72.5 million presale success, and there are hints of another major partnership in the pipeline, keeping the excitement alive. As BlockDAG navigates these developments, the integration of sports and blockchain innovations seems ready for a bright future. DOGS Price: What's Driving the Movement? The DOGS price saw a significant 22% jump after the news of Telegram CEO Pavel Durov's release from jail, but the excitement appears to be fading. Despite the initial surge, the market sentiment remains uncertain. A drop in Open Interest rates suggests that some investors are pulling back, indicating a cautious stance. Currently, the DOGS price trades around \$0.0014, slightly below its peak of \$0.0016. With equal buying and selling volume, the market holds a neutral position. If sentiment shifts, the DOGS price could rise again, but further declines cannot be ruled out if weak market conditions continue. Anticipation Builds for Hamster Kombat Launch The Hamster Kombat launch remains scheduled for September 26th, despite internal disagreements within the team. This decision has created a mix of excitement and concern among the players. While some eagerly await the launch, others are uncertain about how these internal issues might affect the game's future. With the Hamster Kombat's launch approaching, the game's popularity continues to rise, aided by its integration with Telegram. More than 300 million users have engaged with the game, reflecting its wide appeal despite delays. As the launch date nears, the community and market remain attentive, balancing cautious optimism with curiosity. BlockDAG's Winning Goal: Deal with Premier League Club Next? BlockDAG is making big moves by teaming up with famous soccer clubs like Inter Milan and Borussia Dortmund. These partnerships are doing more than just putting BlockDAG's name next to famous soccer clubs; they're actively drawing sports fans into the blockchain world. By offering fans unique memorabilia and VIP experiences, BlockDAG is creating real excitement. This approach enhances BlockDAG's visibility and introduces blockchain technology to a whole new crowd of sports enthusiasts who might not otherwise engage with crypto. But BlockDAG's not stopping here. Rumours are swirling about another significant partnership, possibly with a Premier League club, which could further expand these fan-focused initiatives. As BlockDAG prepares for its next big play, the sports and blockchain worlds watch eagerly to see how high this team can soar. With BlockDAG's presale rocketing past \$72.5 million, it's clear that these partnerships are making a big impact. Analysts now predict that BlockDAG could reach its ambitious \$600 million target in the upcoming batches much sooner than expected. Additionally, BlockDAG is rolling out various reward plans for its holders and new joiners, making it a great time to get involved. This ensures that the community remains engaged and keeps BlockDAG at the forefront. Wrapping Up! While DOGS price exhibits typical digital currency volatility, shifting from peaks of interest to market hesitations, Hamster Kombat gears up for a launch that could redefine blockchain gaming. But BlockDAG is making strategic advances, securing notable partnerships that enhance its visibility and position it as a forward-thinking leader in the blockchain space. BlockDAG's partnerships with soccer giants like Borussia Dortmund and Inter Milan and an upcoming deal with a Premier League Club showcase its knack for blending sports fandom with blockchain technology. As the crypto market expands, BlockDAG remains a player to watch. - OKX confirms the listing of Hamster Kombat's HMSTR token. - Key game features include daily bonuses, NFT integration, and a virtual crypto market simulation. Hamster Kombat, a fast-growing Telegram-based crypto game, is making waves in the gaming world with its unique play-to-earn model. Launched in March 2024, the game has quickly gained traction, attracting over 300 million players within its first five months. Hamster Kombat brings players into the role of a hamster CEO managing a fictional crypto exchange, providing both fun and strategic gameplay. Following the success of the Notcoin clicker game, Hamster Kombat has taken centre stage, offering a real-world twist through its integration with The Open Network (TON). This integration not only ensures fast and secure transactions but also facilitates the upcoming Hamster Kombat token (HMSTR) airdrop. Scheduled for September 26, 2024, the airdrop will reward players with real, tradable cryptocurrency tokens based on their in-game achievements. Hamster Kombat's Key Features Since its launch, Hamster Kombat has introduced several exciting features that have contributed to its popularity. The game's daily combo promotion offers players 5 million in-game Hamster coins for specific upgrades, boosting their virtual exchange's treasury. In addition, each hamster character in the game functions as a non-fungible token (NFT), allowing players to trade or sell them in the marketplace. The game also offers a real-world crypto market simulation, where players manage a virtual exchange, reflecting the actual dynamics of the crypto industry. With a referral system, players can earn additional rewards by inviting friends to join, further enhancing engagement and participation. The developers are actively working on future expansions, including potential NFT and Metaverse features, positioning Hamster Kombat for long-term growth. Hamster Kombat's team unveiled its updated whitepaper on July 30, 2024,

outlining the HMSTR tokenomics. A significant portion, 60% of the total token supply, is allocated for airdrops to the game's players. This event is designed to encourage ongoing participation and reward active players. On August 28, 2024, Hamster Kombat confirmed the September 26, 2024, date for its token generation event (TGE) and airdrop. Players who have accumulated in-game Hamster coins will be able to convert them into HMSTR tokens. These tokens will be tradable on TON, allowing players to turn their virtual achievements into real-world value. OKX Listing and Future Outlook OKX, a leading cryptocurrency exchange, has announced that it will list Hamster Kombat's HMSTR token. This listing, confirmed on August 30, 2024, marks a significant milestone for the game, bringing greater visibility to its ecosystem. The listing on OKX will provide more liquidity for the token, making it accessible to a wider audience of crypto investors. The future of Hamster Kombat looks bright as it continues to expand its reach in the play-to-earn space. The game's rapid growth, integration with TON, and the upcoming HMSTR airdrop position it as a promising contender in the crypto gaming industry. Highlighted Crypto News Today Solo Bitcoin Miner Bags Nearly \$200K Reward with Latest Block

The Play-to-Earn sector is swiftly emerging as a thrilling frontier in the cryptocurrency market. Hamster Kombat and Gala Games are at the forefront, both of which have garnered attention for their straightforward ways of earning digital currencies. The buzz around the Hamster Kombat airdrop and the growth of the GALA ecosystem are significant, but now, a new player, BlockDAG, is stepping up to shake things up with its TG Tap Miner game hosted on Telegram. This innovative game is quickly gaining traction, catalyzing the expansion of the BlockDAG ecosystem and establishing BDAG as a prime cryptocurrency asset. Let's explore why BlockDAG is set to eclipse its competitors in cash flow and redefine the future of Play-to-Earn crypto games. Hamster Kombat's Rocky Road: Delays and Internal Strife Recently, Hamster Kombat has encountered notable hurdles, with internal disputes leading to significant delays and growing unease within its community. AD.RU, a prominent investor, poured \$600,000 into the venture and secured an additional \$1 million, expecting to receive 25% of the project's equity. Contrarily, Hamster Kombat's project manager dismissed these expectations, sparking potential legal battles. Moreover, the resignation of Nikita Anuriev, the former marketing director, over broken promises about his share, has added to the turmoil. This discord has pushed back the much-anticipated Hamster Kombat airdrop, originally slated for August 2024. Consequently, the value of the HMSTR token plummeted over 50%, dropping from \$0.26 to \$0.169 on OKX and \$0.187 on ByBit, which casts shadows over the project's future prospects. \$TREZ Energizes the GALA Ecosystem Gala Games is broadening its horizons in the Play-to-Earn arena with the rollout of the \$TREZ token, which is poised to enrich the GALA ecosystem. The \$TREZ litepaper reveals plans for this token to be at the heart of a new wave of Telegram mini-app web3 games. It will be issued on either GalaChain, the TON Blockchain, or both, with a ceiling of 100 billion tokens. The distribution strategy involves seasonal and daily rewards, aimed at boosting player engagement through various in-game tasks and referrals. The introduction of \$TREZ is crafted to inject vibrancy into the GALA ecosystem, encouraging ongoing interaction within its games, thereby knitting a tighter, more dynamic community around Gala's expanding web3 gaming suite. BlockDAG's TG Tap Miner Game: Tap into Big Wins BlockDAG's TG Tap Miner is carving out a notable presence in the Play-to-Earn crypto games landscape, offering an enticing mix of mobile gaming and cryptocurrency rewards. Players gather Tap Points by engaging with falling balls in 1-minute gaming bursts every two hours. These points can then be exchanged for BDAG tokens, blending enjoyment with economic advantage. Game boosters such as Thunderstorm, Time Travel, and Rocket amplify the potential for earnings. TG Tap Miner transcends mere gameplay; it acts as a conduit to the wider BlockDAG ecosystem. Its referral program adds allure, granting 4,000 Tap Points for every new player brought into the game. Daily, players can amass between 6,000 and 7,000 Tap Points, paving the path for consistent financial returns for those immersed in the Play-to-Earn crypto games market. The game's swift ascent in popularity isn't shocking, considering BlockDAG's staggering \$68.5 million raised in its presale, with early backers enjoying a 1680% return on their funds. As BlockDAG's network matures, the BDAG coin's value is anticipated to climb, positioning the TG Tap Miner game as not just a source of fun but a strategic avenue for building a robust BDAG portfolio. With its captivating gameplay, solid community backing, and the potential for significant financial rewards, TG Tap Miner is redefining standards in the Play-to-Earn crypto games arena. Key Insights Amidst the internal tumult at Hamster Kombat and the expansion of the GALA ecosystem, BlockDAG's TG Tap Miner is drawing widespread attention. This game has nurtured a strong community, with BDAG tokens experiencing a meteoric 1680% surge since the presale began. With more than \$68 million raised and offering a pleasurable, lucrative gaming experience, BlockDAG is marking its territory in the crypto world. As Hamster Kombat grapples with delays, BlockDAG presents an inviting, innovative opportunity for individuals to engage with and profit from the cryptocurrency sector. Telegram has turned into a hotbed for Play-to-Earn (P2E) games, blending fun with profit-making opportunities. A host of P2E games now dot the platform, each boasting unique incentives. But which reigns supreme? Notcoin initially made waves as a Telegram P2E trailblazer but has seen its prices wobble recently. Similarly, Hamster Kombat faces backlash from its community, potentially axing its token airdrop amid internal discord. Despite these shifts, BlockDAG has launched "TG Tap Miner" on Telegram, a game where players earn "Tap Points" that convert into BDAG coins. With its compelling gameplay and varied rewards, BlockDAG's TG Tap Miner could soon lead the P2E pack. Token Airdrop Madness: Is Hamster Kombat's Future at Risk? Hamster Kombat, a crowd-favorite in the P2E realm, is tangled in internal strife that threatens its upcoming HMSTR token airdrop. Prominent investors have

openly criticized the game's management for not meeting financial promises. This unrest has triggered a sharp drop in the pre-market value of HMSTR tokens. Despite pledges to distribute 60% of the tokens to its players, the future of this airdrop hangs in the balance as the team grapples with these challenges. Notcoin's Rollercoaster Prices: What's Ahead? Notcoin has recently seen its prices swing wildly. After a downturn, the cryptocurrency rebounded, hitting \$0.01087, signaling a hopeful turn in market sentiment after a turbulent week. This recovery is driven by a spike in investor interest, as evidenced by the Relative Strength Index (RSI) tipping above the neutral mark, pointing to robust buying activity. Projections indicate Notcoin might climb to \$0.013 if the buying spree persists, though it risks a setback if sellers dominate. BlockDAG's Dynamic Entry into Telegram's P2E Scene with 'TG Tap Miner' BlockDAG has made a striking entrance into the Telegram P2E arena with its innovative 'TG Tap Miner,' designed for those with quick reflexes and strategic minds. The game melds exciting gameplay with the potential for BDAG cryptocurrency earnings. Players are thrust into a race against the clock, tapping through a stream of falling balls from the glistening Emerald Ball to the sought-after Diamond Ball. Each session offers a chance to accumulate Tap Points, which are exchangeable for BDAG coins. Enhancing the excitement, BlockDAG introduces boosters like Thunderstorm, Time Travel, and Rocket to amplify tap points. Plus, players can gain extra points through rewards and referrals, with higher points leading to more BDAG coins. Points can be exchanged for BDAG coins via BlockDAG's website at a set rate once the platform officially launches. 'TG Tap Miner' invites gamers to join BlockDAG's journey, a project already creating a stir in the crypto sphere since its presale. Armed with the latest blockchain technology, superior products, and a clear roadmap, BlockDAG is capturing the attention of crypto pundits who foresee it reaching the \$1 mark soon. Engaging in TG Tap Miner allows players to join an expanding community of 120K, promising significant returns through an immersive gaming experience. The Next Titan in P2E Gaming! As Notcoin and Hamster Kombat navigate through their own turmoil, BlockDAG introduces a game-changer with 'TG Tap Miner.' Boasting high ROI potential and unique rewards, this game stands out as a top choice for Telegram gamers. Players can tap, earn, and power through the game, transforming every click into potential earnings, positioning BlockDAG as the new leader in the P2E gaming frontier. - The phishing assaults were recently detected by the cybersecurity company Kaspersky. - The clicker game is attracting 4-5M new users per day, as per the creator of Telegram. Scammers and other bad actors prey on Hamster Kombat players in an effort to cash in on the game's massive popularity. Phishing attempts are being directed against users of the rapidly expanding mobile game Hamster Kombat, which is hosted on the Telegram platform. In these types of assaults, con artists use psychological manipulation to get their targets to do their bidding. The security expert Olga Svistunova reports that the phishing assaults were recently detected by the cybersecurity company Kaspersky. According to Svistunova, once hackers have the users' credentials, they are able to successfully launch assaults. Moreover, attackers may steal data, blackmail, and send false communications after they get access to personal accounts using credentials. Although the Russian market is the primary focus of this scam, international con artists may use the same tactics to entice victims. Banking on Massive Growth Furthermore, after only 81 days, Hamster Kombat has 239 million players, making it one of the most successful mobile games of all time. The clicker game is attracting four to five million new users per day, according to Pavel Durov, creator of Telegram. Thus, making it one of the world's fastest-growing digital services. Scammers attempting to steal cryptocurrency have also begun targeting the popular clicker game by distributing false information about upcoming airdrops. According to Svistunova of Kaspersky, the purpose of the fraudulent Hamster Kombat airdrops is to get users' crypto wallet information. Scammers steal crypto wallet information by delivering phony airdrops of Hamster cryptocurrency, capitalizing on the appeal of free cryptocurrency. Also, con artists trick people into giving them access to their cryptocurrency wallets by setting up phishing sites that offer discounted Hamster tokens. Highlighted Crypto News Today:

While Dogecoin struggles with a 20% drop, the crypto community is buzzing with excitement over Hamster Kombat. This addictive game is catching the attention of crypto enthusiasts so much that it's set to launch its HMSTR token on The Open Network (TON). But the chatter doesn't stop there. A certain 'bunny' is causing a stir in the memecoin market. Known for its cute appeal and fierce profit potential, this bunny promises a whopping 50x ROI for early adopters. This financial powerhouse is MOONHOP, hailed as this year's standout meme coin. Dogecoin's Market Challenge: A Bearish Outlook Dogecoin is currently on a slippery slope, with its price forecast showing a downward trend, now perilously close to \$0.1. Despite a 20% recovery from recent lows on July 5th, Dogecoin's stability is uncertain, as it teeters on the edge. Even with a slight rebound, Dogecoin might just circle around or dip even lower. The critical watch zones are between \$0.0775 and \$0.082. While the daily RSI suggests caution, there's a slight influx of capital, as indicated by the CMF. Dogecoin enthusiasts need to brace for potentially rough waters ahead. Hamster Kombat's Token Excitement Hamster Kombat is racing up the popularity charts, much like a hamster spinning its exercise wheel. Telegram's CEO Pavel Durov announced a whopping 239 million user sign-ups for this engaging tap-to-earn game. The anticipation is high, as HMSTR tokens are soon to be launched on The Open Network (TON). Bybit has even begun pre-market trading for HMSTR, allowing users to speculate ahead of its official launch. With millions of new players joining daily, Hamster Kombat has become so popular that it prompted government warnings about its addictive nature. Get 'Hoppy' with MOONHOP's 50x ROI Promise It's time to spotlight MOONHOP, the newest and cutest member of the crypto circus! This little bunny

isn't just about adorable antics; it's a serious financial venture promising to lead you out of the dark tunnels of the crypto world into a luminous future. MOONHOP's presale is just the beginning, offering \$MHOP coins at just \$0.01 each. This early investment could skyrocket to \$0.50 per coin at launch, potentially delivering a stunning 50x ROI. Think of it as your golden ticket to a financial wonderland. And there's an extra treat: a lucrative referral program to expand its already bustling community, affectionately known as The Fluffle. MOONHOP's marketing strategies include alliances with influential figures in the space to amplify its reach. Already, MOONHOP's presale has raised an impressive \$917K at just \$0.01 per coin in stage 1. With only a few coins left, this is a golden moment for early investors aiming for massive gains. To Infinity & Beyond with MOONHOP As the meme coin narrative unfolds, Dogecoin remains a player, and Hamster Kombat takes bold steps with its token. However, with an incredible roadmap and 50x ROI potential, MOONHOP is the meme coin everyone's eager to snag. These coins are selling fast, so don't miss out. So, fasten your space belts, grab some carrots, and jump onto the MOONHOP bandwagon before it's too late! With MOONHOP, every leap is an exciting part of the journey to prosperity. Happy investing! - Amidst the first airdrop scheduled this month, a second airdrop is already in the works. - The makers of Hamster Kombat believe they are creating something lasting. It would seem that among "clicker" games hosted on Telegram, Hamster Kombat is unrivaled, with over 250 million users. Despite the first airdrop for Hamster Kombat scheduled for this month. Little details about the game's origins or developers have been revealed. Thus, leading crypto enthusiasts to wonder what's next for the game. The creators of the tap-to-earn cryptocurrency game Hamster Kombat answered several questions sent by The Block via email, touching on the game's history and offering some speculation about its potential future. In contrast to other project developers, who have distanced themselves from previous versions of their games, the makers of Hamster Kombat believe they are creating something lasting. Sasha, creator of Notcoin—the first cryptogame on Telegram to use the clicker model—recently spoke with The Block about his doubts about the genre's viability. Second Airdrop Already in the Works Moreover, earning prizes by clicking is the objective of Hamster Kombat, same as in the first version of Notcoin. Playing as the head of a made-up cryptocurrency exchange, players in Hamster Kombat try to amass virtual cash by running their made-up virtual company. With Hamster Kombat and Notcoin, unlike other cryptocurrency-based games, all you have to do to play is download the messaging program Telegram, which is now in use by about 1 billion people globally. Millions of people are presumably playing Hamster Kombat with the expectation that the game would airdrop tokens to them so they may convert their in-game currency into real money. The makers of Hamster Kombat waxed enthusiastic when questioned about the game's prospects of survival. Especially, after the initial airdrop scheduled for later this month. A second airdrop is already in the works, they said. Highlighted Crypto News Today: Is ETH Price Set to Fall as Ethereum Exceeds Bitcoin in Liquidation?

- Users are able to set quotations and conduct transactions at specified prices on the platform. - The exact launch date of the spot market for the Hamster Kombat token is still up in the air. Bybit, a crypto exchange, is showing its backing for new projects on The Open Network (TON). By allowing pre-market trading of the token for the world record-breaking game Hamster Kombat. On July 8, Bybit made an official announcement about the launching of the Hamster Kombat (HMSTR) token on its Bybit Pre-Market Trading over-the-counter (OTC) market. Users are able to set quotations and conduct transactions at specified prices on the platform. Which is perfect for trading new tokens before they are officially listed. The release states that trading for HMSTR began on July 8 at 10:00 am UTC on Bybit's pre-market OTC platform. According to the exchange, information on the delivery timetable will be shared soon. Banking on Ongoing Frenzy Bybit emphasized that the addition of HMSTR tokens to its pre-market platform is a major advancement. Giving users the opportunity to acquire HMSTR tokens prior to their listing for spot trade. Although HMSTR is already available for trade on Bybit Pre-Market, the exact launch date of the spot market for the Hamster Kombat token is still up in the air. At the time of writing, the pre-market price of HMSTR, as reported in Tether, has been fluctuating between around \$0.001 and \$0.1, according to data from Bybit Pre-Market Trading. Players assume the position of CEO of a virtual crypto exchange in the tap-to-earn game Hamster Kombat, which is available on the Telegram platform. The developers of Hamster Kombat claim that their game has reached 150 million players at the third-fastest rate in history since its inception in March 2024, and the game has been consistently smashing engagement records since then. Highlighted Crypto News Today: Will These Ethereum Whale Transfers Lower The Chances of Recovery?

A report released by MEXC, a leading global crypto exchange, indicates that airdrop campaigns account for approximately one-third of new user registrations during peak months. The numbers showcase the effectiveness of airdrops as a marketing instrument that crypto projects can leverage to attract new audiences and bootstrap engagement. The report also highlights the importance of ongoing structural shifts taking place in the industry across regions, as well as user motivation swings. Key Takeaways: - Peak user acquisition rates driven by airdrops reach up to 35% in certain months. - User behavior is influencing airdrop campaign participation through deeper mobile penetration and the involvement of gamification mechanisms. - 76% of users who sign up via airdrop campaigns remain on the platform, with 18% becoming active traders and 58% trading occasionally. - The CIS region leads in terms of involvement at 67%, followed by Southeast Asia at 51%, and South Asia at 32%. - Airdrops are evolving into a means of financial inclusion, in addition to acting as an effective marketing instrument. MEXC

analyzed user behavior during airdrop campaigns and identified a significant shift in the audience. While regions with low levels of access to banking services previously served as the main source of airdrop participants, the latest report indicates that new channels of user onboarding are ousting the trend. Gamification and Tap-to-Earn games in mobile-based Telegram channels are taking center stage as key registration sources for users with no previous experience in crypto. For instance, games like Hamster Kombat attracted over 70 million users, other notable examples of similar grade being Notcoin and Yescoin. According to the data compiled as a result of the research, users who received their first airdrop tokens demonstrated varying degrees of continued involvement in the crypto industry. As many as 18% maintained active trading patterns and delved deeper into crypto services, 58% traded occasionally, while 24% were one-off users, withdrawing their funds without further engagement in trading. The users who evolve into active traders showcase an average daily trading volume above \$58,000, with select ones achieving \$31 million. Regional segmentation of the users attracted via airdrops shows that the CIS is in a leading position, with 67% of the total, followed by Southeast Asia at 51%, and South Asia with 32%. The results of the analysis correlate with low levels of access to banking services in the given regions. They also align with data provided by Chainalysis, which positioned India, Vietnam, and the Philippines as the countries in Asia with the highest rates of crypto adoption, driven by low levels of banking services access and rapid spread of internet coverage in rural areas. The limited financial inclusion of the countries in the indicated regions into the international banking system paves the way for cryptocurrencies to act as alternative means of payment both abroad and within domestic economies. Users participating in airdrops either withdraw them to fiat or use them for their needs. Pakistan and the Philippines are leading in this regard. The report released by MEXC highlights the prominent role airdrops are occupying in the evolving crypto landscape, transforming from a marketing action into a separate instrument for user engagement. The ability to attract 35% new user registrations via airdrops in select regions like the CIS and Asia is a powerful factor acting in favor of using the given approach to expanding the crypto industry and advancing its maturity. About MEXC Founded in 2018, MEXC is committed to being "Your Easiest Way to Crypto." Serving over 36 million users across 170+ countries, MEXC is known for its broad selection of trending tokens, everyday airdrop opportunities, and low trading fees. Our user-friendly platform is designed to support both new traders and experienced investors, offering secure and efficient access to digital assets. MEXC prioritizes simplicity and innovation, making crypto trading more accessible and rewarding. Kingstown, Saint Vincent and the Grenadines, March 10th, 2025, Chainwire Revolutionizing User Engagement and Token Launches, Yescoin Sets Sights on 100 Million Users by 2025. Yescoin has announced its anticipated public sale, hosted exclusively on the Yescoin Foundation website on March 11 at 17.00 UTC. With a public sale valuation set at 35 million FDV, Yescoin is set to redefine how blockchain technology delivers tangible value to everyday users, while ensuring that every interaction is both fun and rewarding. In today's fast-paced Web3 ecosystem, mini-apps like Notcoin, Hamster Kombat, and Catizen have demonstrated the massive potential of gamified experiences, capturing millions of users and achieving billion-dollar market caps. Yet, many of these platforms have struggled to meet reward expectations, leaving early adopters disillusioned. Yescoin directly addresses these challenges by offering multiple engaging ways to earn tokens and unlock exclusive prizes. Key Features of the Yescoin Platform Earn by Tapping: - Users can tap on their screens to mine Yescoin tokens, with the option to enhance mining power through various in-game power-ups. Two-Tier Referral System: - The platform offers a referral structure where those inviting new participants can receive a 10% bonus. Additionally, new users who join through a referral link receive an extra 10% in tokens, ensuring mutual benefits for both referrers and invitees. Contests, Quests, and Games: - Participate in daily challenges, interactive contests, and engaging games provide additional opportunities to accumulate Yescoin tokens. Wheel of Fortune: - Yescoin points can be used to spin a prize wheel featuring a reward pool of up to \$2.4 million. Each spin guarantees a prize, which may include USDT, additional Yescoin tokens, or valuable in-game power-ups. Collaborative Earning: - Bonuses can be earned when referred users and their connections win prizes, creating a network-driven incentive system. With over 13 million registered users and an ambitious target of reaching 100 million by 2025, Yescoin is built on the principle that small, daily actions can accumulate into life-changing rewards. Community Sale Opportunity The public sale is a unique opportunity for early backers to join a platform designed for long-term growth and equitable token distribution. The YES Token is central to the Yescoin ecosystem, powering its on-chain rewards network. It drives a dynamic digital economy by aligning incentives for users and advertisers, turning everyday interactions into real value, and fostering a sustainable, fair future for on-chain earnings. Sale Schedule: 11 March 17:00 UTC yescoin.foundation For further details and to participate in the sale, users can visit the Yescoin Foundation website. About Yescoin Yescoin is a groundbreaking Web3 platform that transforms everyday interactions into rewarding experiences. By mining Yescoin through simple tasks, engaging games, and community challenges, users can potentially unlock tokens and exclusive prizes, making rewards accessible in minutes a day. The pre-market is leading the trend in 2025, and Unich is launching a decentralized pre-market platform to allow investors to seize early trading opportunities for promising projects. Pre-Market

Potential The crypto pre-market is attracting significant attention, with successful projects like Pudgy Penguins, Usual Protocol, Magic Eden, Ethena, and Hamster Kombat generating returns of 300%-400% for early investors. However, barriers like price volatility, lack of transparency, and high fees deter many from entering the market. Unichain's Solution Unich developed a decentralized OTC (over-the-counter) platform that facilitates trading of tokens and Protocol Points for projects before their Token Generation Event (TGE). This ensures security, low fees, and transparency through smart contracts. The platform provides a seamless experience, from P2P trading to unique features like the Cashout Function and Bid Function. Mainnet Launch and Airdrop Unich will launch its Mainnet on December 30, 2024, with a \$500 million UN airdrop (50% of the total supply). Early participants can earn FD Points, redeemable for \$UN after the TGE. Their airdrop event has attracted over 1 million sign-ups, presenting an opportunity for early users to engage in platform trading. Don't miss the chance to participate in the Airdrop! Visit here What is Unich? Unich is an advanced blockchain platform optimized for the pre-market crypto trading experience. It allows investors to trade tokens before listings, featuring one-tap P2P trading, a Cashout Function, and a Bid Function. Beyond tokens, Unich supports trading of Points, convertible into tokens after TGE. Unich expands beyond an OTC platform, encompassing a pre-market, point-market, options OTC market, and integrations with AI, centralized exchanges (CEXs), and decentralized exchanges (DEXs). With strategic partnerships and substantial investments, Unich is building a Web2 and Web3 ecosystem, leading the pre-market space.

Unich Highlights - P2P Trading: Unich's smart contract-powered P2P trading allows users to buy and sell tokens even before the TGE. This feature makes OTC trading for the pre-market secure, transparent, and cost-effective with near-zero slippage. - Easy Withdrawals with Cashout Function: Unich's unique Cashout Function avoids locking collateral throughout the trading process. Users can quickly exit positions and withdraw funds before the transaction is finalized, minimizing waiting periods or permanent asset lock-ups in case of project delays. - Professional Interface: The platform supports both mobile and web apps, allowing users to download and trade directly from their phones. The trading experience mimics leading CEX platforms on a decentralized platform, with instant "Buy" or "Sell" transactions. - Easy Order Matching with Bid Function: Unich's Bid Function empowers users to proactively find trading partners and execute trades at desired prices. This system enables quick and optimized order matching, benefiting investors looking to capitalize on pre-market price fluctuations. Tokenomics and \$UN \$UN is Unich's native token, used for paying fees, staking rewards, and governance. With 50% of the total supply allocated to the community via the airdrop, Unich aims to maximize user value. - Ticker: \$UN - Total Supply: 1,000,000,000 \$UN - Network: Solana

Distribution	Category	Allocation	Tokens	Ecosystem
23%	Core Contributors	230,000,000		
20%	Investors & Advisors	70,000,000		
50%	Airdrop	500,000,000		

Investors and Partners Unich raised \$2 million from angel investors. With over 30 strategic partners, including Kima Network, Gamic, Vemp Horizon, and EverReach Labs, Unich solidifies its leadership position in the pre-market space. Product Roadmap Following the Mainnet launch, Unich plans to expand features, including Options OTC Market, Freedom Market, AI integration, CEX and DEX integrations. Unich's testnet attracted over 1 million sign-ups and successfully hosted a \$20,000 Bug Bounty event. Unich's Commitment With the Mainnet launch, Unich promises collaborations with leading projects like Pump.fun, Backpack, Solayer, and Revenge, offering early trading opportunities to investors. Follow and Stay Updated Follow Unich's official channels for the latest updates. Visit the links below for more information: - Unich Website: <https://unich.com> - Unich Twitter (X): https://x.com/unich_com - Unich Analysis: <https://analysis.unich.com/vi/> - Unich Telegram Channel: <https://t.me/Unichcom> Disclaimer: TheNewsCrypto does not endorse any content on this page. The crypto global market has witnessed plenty of developments and twists in the year 2024, right from Bitcoin's long-awaited goal of \$100K to even the approval of Bitcoin ETFs. January: The SEC Approves Bitcoin ETFs The U.S. SEC has approved 11 Bitcoin ETFs. Now, the investment community can own the assets indirectly through ETFs without necessarily buying and owning a bitcoin. Similar to a stock fund, this means people do not need digital wallets or platforms such as Binance or Coinbase to buy their share of cryptocurrencies. It has been considered the biggest step for the crypto industry, especially for large firms such as BlackRock and Fidelity, which backed the move. The approval increases the accessibility of Bitcoin to everyday investors and strengthens institutional confidence. However, the SEC cautions that Bitcoin investing still involves risks like market manipulation and fraud. While this decision simplifies Bitcoin investment, potential investors are urged to remain cautious. It's a big win for mainstream crypto adoption but with a reminder to proceed carefully. Anyhow Gargensler tweeted it was not official. What This Means for Bitcoin's Price In 2022, the price of Bitcoin went to \$16,000. Immediately after the announcement by the SEC, the price of Bitcoin jumped to about \$46,500. According to experts, this ETF will inflow billions of dollars into the market and could push Bitcoin's price up to \$100,000. According to some predictions, with the approval of ETF, the market might see \$50 to \$100 billion in new investments this year. But others fear that ETFs could make Bitcoin even more volatile and riskier, especially for retirement savers. While ETFs may stabilize the market, they may increase risks for ordinary investors. February: Telegram Launched Tap-to-Earn Tap-to-earn games in the Telegram application are among the most trending for 2024, attracting significant audiences and valuations. Contrary to the play-to-earn concept, tap-to-earn is free, and one requires only a smartphone and some tapping to earn rewards. These games are simple, easy to access, and derive money from advertisements rather than from new players. But critics claim the games might end up feeling shallow, and the players could get bored easily if there is nothing deeper to experience. Now is the time of change for Web3 gaming because people can easily enter games with zero financial risk. From NOT COIN to Hamster Kombat revolution. Since the games are somewhat simple, ad-dependent, the long-term future is not sure. However, there

are several projects trying to improve features and diversity. Large market caps and almost zero profit. March: Bitcoin Hits \$73,097 Bitcoin has reached a record-breaking all-time high of \$73,097, fueled by the rising adoption of Bitcoin ETFs and growing interest from institutional investors. AI Tokens AI tokens are rapidly gaining attention in the crypto industry, by the excitement surrounding OpenAI's Sora, a technology that creates hyper-realistic videos from text prompts. Major AI-based projects like Fetch.ai, SingularityNET, and Bittensor (TAO) are on the top list, with Bittensor holding the first place in the AI token market with a market cap over \$25 billion. Bittensor is an open-source protocol that uses blockchain to build a decentralized machine-learning network. Render (RNDR) and Fetch.ai (FET) also have gained significantly, with Render peaking at \$13.50 and Fetch.ai at \$2.55, showing a strong performance in the sector. As AI-driven projects continue to thrive, the AI coin market is experiencing rapid momentum. With NVIDIA's growth being driven by AI, the market for computational power and blockchain solutions is expanding. Fetch.ai, Render, and Bittensor are all capitalizing on the increasing demand for AI in blockchain technology, offering decentralized solutions for tasks such as automating everyday activities and digital creation. April: Bitcoin Halving Event Bitcoin's fourth halving occurred on April 19, 2024, reducing the rewards of its miners from 6.25 BTC down to 3.125 BTC, thereby increasing the scarcity of Bitcoin. This created so much market activity, with users spending more than \$2.4 million in fees to secure transactions. The deflationary effect of the halving could have the long-term effect of raising Bitcoin's price; nonetheless, its price is still at \$64,000 to \$65,000, with short-term ups and downs due to uncertainty in the market and Federal Reserve decisions. The halving has directly affected miners by cutting down their revenues, which might alter the mining scenario. In the past, Bitcoin's price had risen after the halvings, but this time, regulatory and market factors may alter the trend. Experts believe that the halving, along with that development, among others. May: Ethereum ETF Approved Following the approval and launch of Bitcoin Exchange Traded Funds (ETFs) in January 2024, the U.S. Securities and Exchange Commission (SEC) approved eight Ethereum ETFs for listing and trading on SEC-regulated exchanges on May 23, 2024. July: WazirX Hack In July 2024, Indian crypto exchange WazirX suffered a massive cyberattack, losing \$235 million. Hackers were still able to breach the secure multisig wallet system of WazirX even though it had a Gnosis Safe wallet, which requires 4 out of 6 signatures, whitelisted addresses, and hardware wallets. The hackers manipulated the system by changing the wallet to a malicious smart contract, which bypassed both the multisig and the whitelist. They also manipulated how the transaction would look so that the required signers were deceived into signing it. This hack illustrates how challenging securing Web3 projects can be, even with state-of-the-art safeguards. It underlines the need for deep security audits and continuous improvements in security systems to prevent such advanced attacks in the future. August: Market Crash The sharp market crash on 5 August 2024 was driven by a combination of factors, primarily the unexpected rate hike by the Bank of Japan and a concerning US job report. The rate hike disrupted the yen carry trade, leading to a sell-off in global markets, with significant losses in major indices like the Nikkei 225 and Nasdaq. Weak US jobs data that also reported a less-than-expected payroll growth and a rising unemployment rate, intensified the recession fears. It was a global economic signal with a mix that led to very dramatic rises in market volatility and was well demonstrated by the spikes of the Cboe Volatility Index, VIX. The impact on the markets spread beyond stock into forex and commodities markets, underlining the interrelated nature of the financial systems around the world. The US dollar fell as the market rebalanced its bets on Federal Reserve rate cuts, while the yen gained as Japan's policy turn shifted. Commodities such as copper, gold, and crude oil also tumbled, echoing a general unease in the economy. However, the volatility in markets is anticipated to continue until markets adjust to the changes. Data on key upcoming US CPI and jobs reports would play a vital role in how the market behaves in the coming days. Token2049 September Token2049, scheduled for September 18-19, 2024, at Singapore's Marina Bay Sands, is all set to become one of the biggest global events in crypto and Web3. More than 20,000 attendees from 150 countries with 500 side events across a week from September 16-22 will get to listen to some of the biggest leaders, such as Balaji Srinivasan, Binance's Richard Teng, and Solana's Anatoly Yakovenko. Outside of talks, visitors can participate in interactive experiences like AI-generated art, virtual reality, and even padel and rock climbing for an entertaining, participatory experience. What makes Token2049 different is its focus on community and inclusivity within Web3. Some of the event's options include the Women in Blockchain Alliance Breakfast and Borderless Summit with the aim of making a space that is quite exclusive in the crypto world, more diverse and inclusive. Held during the Formula 1 Singapore Grand Prix, the event will be a unique mesh of high-octane racing and cutting-edge blockchain tech. Token2049 is one that unifies the world of cryptocurrency and forges the future. November: Trump Wins Presidency Donald Trump, a strong proponent of crypto, emerged victorious in the U.S. presidential election. His victory created shockwaves in the crypto market, with most investors being optimistic about his administration. Many believed that his administration would be lenient in terms of regulations, cut taxes for cryptocurrency mining operations, and perhaps even create a national Bitcoin reserve. These potential changes were viewed as a major boost for the crypto industry, fueling expectations of a more favorable environment for digital assets and further driving market confidence. December: Bitcoin Crosses \$100,000 Bitcoin reached a huge milestone by breaking through the \$100,000 mark and reaching a new high of \$105,000 by December 4. This surge with open interest in Bitcoin futures exceeding \$40 billion. The record price gave Bitcoin the stature of a global asset and strengthened interest in the cryptocurrencies as a viable alternative investment. This marked a milestone that not only defined the victory for Bitcoin. But also cemented its growing dominance in the financial space, garnering more attention from institutional and retail investors alike. National Bitcoin Reserve Proposed The Trump administration proposed the introduction of a national Bitcoin reserve, where this would be sort of a gold reserve but, in this case, with Bitcoins as part of the U.S. monetary system. In this same time frame, more than 132 countries tested or introduced Central Bank Digital Currencies with China leading on its digital yuan, making the digital yuan accessible to 260 million wallets within 25 cities in China, Europe started testing its digital euro. Exactly as VanEck had predicted. Impact: These

developments marked a significant shift in the global financial landscape, with Bitcoin gaining legitimacy as a sovereign asset and potentially becoming a cornerstone of future economic policy. The growing adoption of CBDCs highlighted the increasing importance of digital currencies backed by governments, potentially reshaping global financial systems. This convergence of the national reserve Bitcoin and the newly emerging CBDCs has started questioning the future money, privacy issues with the adoption of digital currencies within cross-border, and the position it will give the Bitcoin as central to the emerging monetary system. FED rate cuts Federal Reserve Jerome Powell announced two quarter-point reductions in the future, reducing Fed funds to 4.50%. However, he also made clear that the Fed is not allowed to own Bitcoin and has no plans to change laws regarding cryptocurrency ownership. Powell's comments caused a major shake-up in the crypto market, with Bitcoin dropping below \$100K, hitting around \$98,000. While the rate cut was expected, Powell's cautious stance on future cuts and his dismissal of Bitcoin as part of the central bank's reserves. Which dampened investor confidence, sending Bitcoin and other major cryptocurrencies into a decline. The crypto market reacted strongly to Powell's remarks. And with Bitcoin dropping over 6% and other coins like Ethereum, XRP, Solana, and Dogecoin losing value. The total market value of cryptocurrencies fell by 4%, down to \$3.5 trillion, and traders saw heavy liquidations. Despite this, Bitcoin recovered a bit and had gone up to surpass \$101,000. It reached a record high of \$108,000 earlier in the week. Meanwhile, pro-crypto President-elect Donald Trump promised to make the U.S. the "crypto capital of the planet, weighing in as other investors mull over the implications of both leaders' stances.

The magic of GameFi has enormous potential, because after all, what gamer wouldn't enjoy being paid for doing the very thing they love most? We only need to look at the success of eSports to see the truth in that. GameFi expands the concept beyond the very best, professional gamers, giving everyone the opportunity to "play-and-earn", and the growing popularity of some of these games is attracting serious attention from crypto investors. Let's take a look at some of the hottest crypto gaming topics to watch as we head into 2025, focusing on games that boast fast-growing user bases and have lots of plans in store for the months ahead. ALICE My Neighbor Alice is a metaverse game that introduces non-crypto natives to the concept of creating virtual worlds they fully own while collaborating with its thriving community of like-minded souls. It's all about making blockchain features more accessible to a wider audience who might be unfamiliar with concepts like non-fungible tokens through social activities like beekeeping, collecting insects, farming, fishing and building. ALICE has made some big gains in the last 30 days, with its value increasing 27.74% to \$1.43, boosting the token's market cap to \$97.87 million, underscoring the high demand and huge potential for a token that's only just beginning to make its presence felt. In a recent Coingecko event, My Neighbor Alice's business director Antonio Palma revealed that the project has big ambitions heading into 2025, with plans to revamp its token economy, introduce one-click onboarding on any device, and forge partnerships with key players in the blockchain gaming space " moves that should all help to boost the game's user base and increase demand for ALICE tokens. MAVIA Heroes of Mavia is a fantasy-based mobile-first strategy game built on the Ronin Layer-2 network atop of Ethereum, where players can buy or conquer virtual land, develop it, build castles and towns, create armies and battle their opponents in an effort to grow their virtual empire. It's another fast-growing, low market cap game that has seen steady growth over the last month. MAVIA, its native token, is currently valued at \$1.59, having gained 9.12% in that time, and there is huge room for further growth. Its market cap currently stands at just \$61.57 million, up 17.84% in the last month, which suggests that interest in the game is rising fast. It also boasts a strong community, with more than 600,000 followers on Discord and an extremely active social media presence. The developers recently introduced a new Hero, called Warlord, to aid players in setting up their defenses and planning strategic attacks on their rivals. According to Heroes of Mavia's official X account, the introduction of Warlord promises to "shake up the meta" for ranked battles. HMSTR As the top tap-to-earn game on the TON blockchain, Hamster Kombat captured the imagination earlier this year, growing its enthusiastic audience of Telegram tappers to over 300 million since launching earlier this year. The simple, addictive nature of its tap-tap-tap game mechanic has made it one of the hottest properties in the Web3 gaming world, and the price of HMSTER continues to reflect that. HMSTER is up 20.35% in the last month to \$0.004068 per coin and still has a relatively low market cap of \$262.18 million. More importantly, it boasts a daily average trading volume of \$96.59 million, which suggests that the game remains a hotbed of economic activity. GREE As a mobile gaming platform, GREE offers a library of several play-to-earn games that enable players to own their in-game assets within a common universe. It's most popular title, WatBird, has emerged as one of the most popular games on Telegram, exceeding 3 million daily active users. With more than 100 million registered users and 10 million connected wallets, GREE claims to have successfully onboarded thousands of newcomers to the Web3 world, and it has high hopes of accelerating this trend with several hot new titles set to launch on its platform in the coming year. The GREE token is currently valued at \$0.0112, up 7.93% in the last month. While that may lag the pace of growth seen in other popular tokens, GREE still has an extremely low market cap of just \$15.15 million, which singles the platform out as one that has lots of untapped potential. PIXEL The PIXEL token is the native governance token of Pixels, a play-to-earn game inspired by Minecraft and hosted on the Ronin Layer-2 network. It's another metaverse-style game that sees players buy and sell virtual land plots where they can build unique structures and landscapes, explore, battle other players and collaborate on activities such as crafting or playing minigames. PIXEL is one of the fastest-growing tokens in the Web3 gaming universe, up 39.09% in the last month and it has grown its market cap to a healthy \$271.83 million, which is higher than many other blockchain games. Even so, with a daily average trading volume of \$102.43 million, it shows that a good portion of those tokens are in circulation, indicative of a red-hot in-game economy.

Toncoin (TON) is showing strong momentum, with predictions pointing towards a significant price rise by 2025. Analysts anticipate that the token could hit \$15, driven by its increasing adoption and

growing utility within the network. Meanwhile, a cheaper alternative is also gaining ground, offering investors a faster and more accessible route to substantial returns. Toncoin's Price Potential Currently priced around \$5.19, Toncoin is navigating the broader fluctuations within the crypto market. Despite recent downward pressures, including a 1.5% intraday loss and challenges related to geopolitical tensions, the token has shown resilience. The network's rapid adoption is a key indicator of future growth. The number of unique addresses holding Toncoin has surged beyond 100 million, reflecting an over 2,225% increase in less than a year. This exponential user growth, coupled with the integration of popular gaming tokens such as Hamster Kombat, has strengthened Toncoin's ecosystem, positioning it for sustained growth. Further bolstering Toncoin's potential is the sharp rise in its Total Value Locked (TVL), which saw a 26% increase, climbing from \$317.2 million to \$402 million in the last month. This surge signals heightened investor confidence, with more assets being locked into decentralized finance (DeFi) protocols within the TON network. As user participation increases, the demand for Toncoin, used for transaction fees and staking, is expected to rise, driving its price towards the predicted \$15 mark by 2025. **Rexas Finance: Leading Real-World Asset Tokenization** Rexas Finance (RXS) is revolutionizing how investors access and control real-world assets through blockchain. With a focus on tokenizing industries like real estate, gold, and art, the platform enables users to buy full or fractional ownership of these assets with just one click. Investors from anywhere in the world can now own a percentage of high-value assets, like real estate properties, that were traditionally limited to large capital holders. For example, someone in Asia can now own a share of a restaurant in Europe and earn passive income through tokenization, breaking down geographic and financial barriers. The platform's token builder allows users to tokenize their assets, while the Rexas launchpad provides a space for new projects to raise funds through token offerings. Additionally, Rexas QuickMint Bot simplifies the process of minting tokens across multiple blockchains, making asset tokenization accessible to a wider audience. Backed by the ERC-20 token standard, Rexas Finance has issued 1 billion tokens, with presale already raising \$4.15 million. The presale is in its fourth stage, offering tokens at \$0.06, with investors seeing a 2x price increase since the earlier stages. Investors entering at this stage can expect a 3.3x return upon launch. This presale success reflects strong demand, with stages 1 to 3 swiftly raising \$2.75 million. Furthermore, the Rexas Finance platform offers comprehensive tools that simplify the process of tokenization for investors. The Rexas AI Shield and GenAI also enhance security and efficiency across transactions, ensuring that the platform remains at the forefront of blockchain innovation. Rexas Finance's credibility is boosted by its listing on CoinMarketCap, one of the most widely used crypto data platforms, enhancing its visibility and community engagement. Moreover, the ongoing \$1M giveaway is another enticing offer. Twenty lucky winners have a chance to win \$50,000 USDT each, further fueling interest in the project. **Final Thoughts** While Toncoin is on track to reach \$15 by 2025, Rexas Finance offers a faster route to growth for investors looking to tap into the tokenization of real-world assets. With a presale price of just \$0.06 and the potential for 3.3x returns at launch, Rexas Finance is well-positioned to capitalize on the growing trend of asset tokenization. Both Toncoin and Rexas Finance are poised to redefine their respective markets, offering unique opportunities for investors looking to stay ahead in the evolving crypto space. Victoria, Seychelles, October 11th, 2024, Chainwire Bitget, a leading cryptocurrency exchange and Web3 company, announces a significant feature launch, Telegram App Centre, curating over 600 Telegram mini-apps all in one place, making it the most comprehensive page on the market outside of Telegram. This feature enables users to discover and interact with the latest airdrop opportunities, trending communities, and play-to-earn games directly from within their Bitget accounts. Bitget's new Telegram Mini-App page offers a seamless user experience, allowing individuals to explore a wide array of applications while trading on the platform. This initiative offers faster access to innovative apps and streamlined participation in airdrops, providing users with unique opportunities to engage with emerging projects in the blockchain space shortening the search processes. Telegram boasts nearly 1 billion global users, and the TON ecosystem is rapidly rising, supported by over \$425 million in Total Value Locked (TVL) and hundreds of millions of daily active users. Bitget's latest feature integration positions the platform as a vital entry point for those looking to explore the expanding ecosystem, bringing them closer to decentralized applications, bots, and tools that have the potential to reshape how users interact with the Web3 world. Bitget's Telegram Mini-App hub complements its broader support for the TON ecosystem, which includes priority listings of prominent tokens like DOGS, Hamster Kombat, and Notcoin, a \$20 million TON Ecosystem Fund to promote early-stage blockchain projects and the \$30 million investment into the TON blockchain. The integration of these apps provides users with seamless access to key developments and play-to-earn opportunities that drive mass adoption of blockchain technologies. Gracy Chen, CEO of Bitget, expressed enthusiasm about the feature launch: "Our focus has always been on creating a seamless user experience by integrating the best blockchain innovations into our platform. The Telegram App Centre is a significant step towards providing users with access to the most promising apps and airdrop opportunities, facilitating them to fully capture first-hand information within the growing TON ecosystem." For more information about Bitget's Telegram Mini-App page and to explore over 600 decentralized applications on TON, users can visit here. About Bitget Established in 2018, Bitget is the world's leading cryptocurrency exchange and Web3 company. Serving over 45 million users in 150+ countries and regions, the Bitget exchange is committed to helping users trade smarter with its pioneering copy trading feature and other trading solutions. Formerly known as BitKeep, Bitget Wallet is a world-class multi-chain crypto wallet that offers an array of comprehensive Web3 solutions and features including wallet functionality, swap, NFT

Marketplace, DApp browser, and more. Bitget inspires individuals to embrace crypto through collaborations with credible partners, including being the Official Crypto Partner of the World's Top Professional Football League, LALIGA, in EASTERN, SEA and LATAM market, as well as a global partner of Turkish National athletes Buse Tosun Açıkgöz (Wrestling world champion), Samet Gökçe (Boxing gold medalist) and Alkan Aydoğan (Volleyball national team). For more information, users can visit: Website | Twitter | Telegram | LinkedIn | Discord | Bitget Wallet For media inquiries, users can contact: media@bitget.com

Sonic SVM, a Solana-based blockchain gaming Layer-2 infrastructure firm, has developed the first Web3 game with an embedded wallet on TikTok, the world's most popular video sharing app. With the help of its embedded wallet, the new game SonicX makes it easier for TikTok users to get started and introduces them to the advantages of Web3 and decentralization. The first atomic SVM L2 built to support sovereign game economies that finalize on Solana is Sonic SVM. It is powered by HyperGrid, a core technology developed by Mirror World to support Solana grids, which allows developers to implement unique Sonic Solana Virtual Machine (SVM) chains that provide significant scalability benefits. Building on the popularity of "tap-to-earn" games like Notcoin and Hamster Kombat on Telegram, SonicX is an HTML5 clicker game. Users may start playing the game right away since it's embedded within the TikTok app. They only need to touch the screen to create rings that are hosted on-chain. Players will be able to earn more blockchain-based incentives, such as cryptocurrency and NFTs, by gathering rings. The game's inbuilt wallet offers account abstraction features that enable players easily recover their passwords without having to handle private keys. To begin, users just need to sign in using their TikTok account. From there, the blockchain will record all of their accomplishments and the rings they earn. Along with completing daily tasks and moving up the game's leaderboard, players may get extra rewards by recommending friends. With \$12 million in funding, Sonic SVM is building a foundation for Solana's blockchain gaming industry. It has created a cutting-edge Solana infrastructure that developers can use to build game-specific rollups, or Layer-2 networks that group transactions off-chain to execute them more quickly and at a reduced cost. This is an area that is ready to expand. Due in part to the emergence of blockchains specifically targeted at gaming, such as Immutable X, Solana has mostly gone unnoticed by blockchain game creators, despite the fact that it is already a formidable power in DeFi, where its expanding ecosystem rivals Ethereum's. Sonic SVM dramatically increases Solana's speed and scalability with its innovative architecture, which makes use of the Sonic Virtual Machine and HyperGrid, a strong horizontal scaling framework. This makes Solana the perfect network for Web3 games. The ability to quickly export one's private key for use with other Web3 apps in the Solana ecosystem is a fundamental benefit of SonicX's integrated wallet. Chris Zhu, Co-founder & CEO, commented: "The way we simplified the SonicX login flow on TikTok allows us to tap into a totally new set of users globally. We are eager to further improve the user experience in TikTok and provide the same capabilities to tons of Solana applications." The introduction of SonicX on TikTok demonstrates how much account abstraction wallets may hasten the adoption of Web3. More than 120,000 TikTok users have already been onboarded into Web3 for the first time since its introduction last month.

- OKX exchange has opened the deposits of PayPal's PayPal USD stablecoin. - PayPal USD (PYUSD) is the sixth largest stablecoin in the market. The cryptocurrency market has seen a spur of activity in the last 24 hours. While the Uptober bull run has not begun yet, prices have declined. Meanwhile, cryptocurrency firm Ripple has reaffirmed its vow to battle with the SEC. Amid traders' significant losses and partnerships, as aforementioned, the sector showed increased activity. Notably, a prominent crypto exchange, OKX announced that it would begin listing the PayPal-based stablecoin, PayPal USD (PYUSD). The exchange stated that the spot trading for the asset would commence on Thursday, October 3. Specifically, PYUSD deposits were opened in the UTC morning hours, following which trading will begin at 12.00 pm UTC. Additionally, the stablecoin withdrawals on OKX are scheduled to begin on Friday, October 4. OKX is a significant cryptocurrency exchange in the Asian region and has seen several advancements in the past few months. Recently, the exchange announced the listing of the prominent crypto game Hamster Kombat's HMSTR token. Moreover, the exchange also has taken measures to prevent security concerns. In this regard, the exchange announced the banning of Tornado cash transactions which was subject to several criticisms. How Does the OKX Listing Benefit PayPal USD Stablecoin? PayPal's stablecoin PYUSD was launched in 2023 and recently, the stablecoin has reached several significant milestones. Recently, in July, the PYUSD surpassed \$500 million in market cap and has also risen to become the sixth-largest stablecoin. Additionally, the recent listing helps the stablecoin expand to new regions and provide accessibility to users worldwide. The crypto asset is backed by the US dollar and is currently trading at \$0.9999 with a 0.2% increase in the past day as per CMC data. Moreover, in the recent past months, stablecoins have garnered market attention and have shown significant increases in trading volume and market cap. Some of the leading stablecoin issues such as Tether and Circle have also ventured into new projects within the community. Highlighted Crypto News Today: Metaplanet Expands Bitcoin Reserves with Sale of 233 BTC Put Options

Seasoned altcoins like Toncoin (TON) and Avalanche (AVAX) have performed decently in this trading year. However, a crypto project, ETFSwap (ETFS), that emerged recently has stood out, outshining Toncoin (TON) and Avalanche (AVAX) in the market. Popularly referred to as "Uniswap killer" by

experts and the crypto community, ETFSwap (ETFS) has raised over \$4 million in its presale and is nearing a massive milestone. Experts claim that ETFSwap's (ETFS) presale ROI is over 100x what investors will yield from Toncoin (TON) and Avalanche (AVAX). Uniswap Killer ETFSwap (ETFS) To Skyrocket After Listing ETFSwap (ETFS) is a new altcoin that has quickly earned the term "Uniswap killer" due to its unique features and excellent presale performance in the crypto market. Operating on the Ethereum blockchain, ETFSwap (ETFS) tokenizes exchange-traded funds, making them more accessible to every investor. This innovative approach allows traditional investors to enjoy the benefits of decentralization and diversify into other modern ETF asset types. As a market maker, the DeFi platform makes trading fun by allowing investors to continuously trade in short- and long-term options without expiration dates. Investors can also maximize their returns by amplifying their trades by at least 10x, a feature that sets ETFSwap (ETFS) apart from other altcoins. Beyond that, ETFSwap (ETFS) has plans to launch its own ETF in 2025. This reflects its foresight and commitment to driving the revolution of tokenized exchange-traded funds (ETFs). Similarly, it shows its reliability as a sustainable investment, providing investors with a sense of security and confidence. Investors can stake and earn passively on the ETFSwap (ETFS) platform. By adding their assets to liquidity pools, investors gain yield as the volume of the pools grows. Moreover, investors are provided with liquidity for swap trading across markets when they stake a portion of their assets. Interestingly, ETFSwap (ETFS) is designed with exquisite AI algorithms that analyze data, sentiments, patterns, and trends to predict and recommend bullish ETF investment options to investors. CyberScope has audited ETFSwap's smart contracts, and no threats were found. SolidProof has also run a KYC on its team, upholding its transparency and reliability. Toncoin Price Predicted To Spike Amid Airdrop Toncoin (TON), a popular network associated with Telegram, has been on a constant upward rise recently. This positive outlook is likely to result from the trending Hamster Kombat project. Toncoin blockchain is the official minting site for Hamster Kombat, and it has caught massive momentum in recent days. Interestingly, Hamster Kombat has over 100 million monthly active users, meaning that Toncoin (TON) will be an integral aspect of the project. Data on CoinGecko shows that Toncoin (TON) experienced an increase of 3.0% and 4.1% in the last seven days and 24 hours, respectively. If Toncoin (TON) keeps the momentum, it could eventually hit an all-time high of \$10 in the coming weeks. However, even if TON reaches that massive price, its ROI still isn't near ETFSwap's. At the time of writing, Toncoin (TON) trades for \$5.91 (per CoinGecko). Can Avalanche Surpass \$30? Avalanche (AVAX) hovered around the \$28 mark thrice in the last seven days. Avalanche (AVAX) has seen torrid market periods since the start of the year. However, recently, the blockchain seems to be on a path towards a bull run. Data on CoinGecko reflects that Avalanche (AVAX) saw an increase of 11.5% and 5.7% in the last seven days and 24 hours, respectively. AVAX holders are curious whether Avalanche will go to the moon or keep wobbling around the \$28 mark. Crypto analysts, however, claim that AVAX would have to hold a sustained upward momentum to observe a key pivot to determine if Avalanche can reach and surpass \$30. While we await the development, Avalanche (AVAX) investors seeking to diversify into other projects are encouraged to buy the ETFS token during its presale to enjoy massive gains when it gets listed. Final Thoughts: Buy The Uniswap Killer At This Low Price In Its Presale Buying the ETFSwap (ETFS) token now, priced at only \$0.03846 in its ongoing presale, is a must for investors who want a fruitful end to 2024. Experts predict the Uniswap killer will sell for \$6 immediately after it gets listed on tier-1 crypto exchanges in the coming days. This translates to a 15,400% return on investment, outshining Toncoin (TON) and Avalanche (AVAX). For more information about the ETFS presale: Disclaimer: TheNewsCrypto does not endorse any content on this page. The content depicted in this press release does not represent any investment advice. - Bitcoin gained by 3%, trading at \$65.3K. - BTC has entered into the greed zone in the market. The beginning of September was crucial for Bitcoin (BTC) which failed to flaunt notable price movements. BTC has faced difficulty maintaining a rally above the \$58K mark. The recent price momentum suggests that the leading cryptocurrency might be on the verge of a brief bullish trend. The bears continue restraining the bulls from making a vital move, and the asset is at a critical juncture, with its price hovering around \$65,000. Over the last 24 hours, the BTC price recorded a mild gain of 3%. Notably, the asset hit a peak of \$65,790, and a low is noted at \$63,324. Meanwhile, it is pivotal to note the BTC's market sentiment in the greed zone as the Fear and Greed Index stays at 61. At press time, BTC traded at \$65,315, with its daily trading volume increasing by 49.13% to \$37.13 billion, as per CMC data. Over the last 24 hours, according to Coinglass data, Bitcoin has witnessed a liquidation of \$40.44 million. On the other hand, as per the on-chain data, a whale has withdrawn 3,501 Bitcoins worth \$221.39 million from the Binance exchange in the past three days. Three hours ago, the massive whale began its fourth Bitcoin accumulation wave. In addition, the current holdings are estimated at 4,062 BTC, worth \$262.2 million. Can BTC Price Surge to New Highs? Bitcoin started trading in the \$63.8K range when the week began, with a 2.25% spike. As days progressed, the token's price continued to trade within the \$62.5K range. The downside pressure breaks, and BTC soars to a high of \$64.6K. Looking ahead, the asset is likely to pass through crucial pressure to break through the current price levels. If the bear hold strengthens, the nearby support level might be found at \$64,472. On the other hand, if BTC regains the upward momentum, it could likely test the initial resistance at \$66,066. Meanwhile, Bitcoin's price momentum continues to stay in the neutral sentiment, as the daily relative strength index (RSI) stands at 65.71. Notably, the short-term 50-day MA is found at \$63,542, and the long-term 200-day MA at \$59,832, below the current price.

- Binance Founder and former CEO Changpeng Zhao (CZ) will be released early on Friday. - The cryptocurrency community speculates a bullish price movement resulting from the founder's release. Crypto traders worldwide welcomed an astonishing report that stated CZ's early release from prison. This news comes amid a circumstance when the crypto market is witnessing increased volatility. Leading

cryptocurrencies are laying the groundwork to establish a full-fledged bull run, while bears pose hurdles. Notably, Binance Founder and former CEO Changpeng Zhao's release from the Californian prison was scheduled for Sunday, September 29. However, due to the release date falling on a weekend, inmates are usually allowed to leave prison early. Thus, the community speculates his release on Friday, September 27. Moreover, the Binance Founder was given a four-month prison sentence for non-compliance to anti-money laundering laws within the Binance exchange. CZ served two months in a minimum security prison, before being shifted to Long Beach, California. In the past few months, the community has been anticipating his release. Several traders also went further, expecting CZ's release to cause a bullish run within the crypto market. Specifically, prominent community member, Lark Davis (@TheCryptoLark) was one of the traders who stated that bullish movements might occur in October post CZ's release. How Will Binance Founder CZ's Release Affect Crypto Price Action? In the last 24 hours, the overall crypto market has incurred a positive momentum as Bitcoin and altcoins sparked bullish candles. Zooming out, the past few days have seen a gradual price increase often deterred by downward movements. Nevertheless, Bitcoin reached the \$65K mark after nearly a month of trading at lower levels. Additionally, if the Binance Founder's release does manage to propel prices as speculated by the community, it might aid cryptocurrencies in witnessing price breakouts. Bitcoin and Ethereum are expected to test new levels in the coming months according to market analysts. Meanwhile, Binance welcomes its founder's release amid several other regulatory turmoil. The crypto exchange is still battling with the Nigerian SEC for the release of Executive Tigran Gambaryan. On the other hand, Binance also recently settled with Indian regulatory bodies for GST Tax and anti-money laundering concerns. Highlighted Crypto News Today:

- Four victims or family members of victims of state-sponsored terrorism have sued the U.S. DOJ in federal court. - The lawsuit accuses the DOJ of improperly delaying or withholding the distribution of funds from Binance's \$4.3 billion settlement. The U.S. Department of Justice (DOJ) is facing a lawsuit from four individuals, including victims and relatives of state-sponsored terrorism. They accuse the DOJ of delaying and improperly withholding funds from a \$4.3 billion settlement involving Binance. The plaintiffs are seeking compensation for the victims. The lawsuit, submitted on September 25 in a Washington, D.C., federal court, claims that the DOJ has not deposited the allocated amount into the Victims of State Sponsored Terrorism Fund, as required by law. Under the Victims of State Sponsored Terrorism Act, 100% of criminal proceeds and 75% of civil proceeds from cases like Binance's are supposed to go into this fund. However, according to the plaintiffs, the DOJ has only transferred \$898.6 million so far; it's less than what they believe should be allocated. They also claim that the DOJ plans to allocate at least \$1.5 billion from Binance's settlement to a crime victims fund. However, the plaintiffs argue that this allocation is not legally permissible. The plaintiffs seek a court order to ensure that the DOJ deposits all proceeds from Binance's case into the fund for victims of state-sponsored terrorism. The lawsuit also named the Commodity Futures Trading Commission, Attorney General Merrick Garland, and other government agencies as defendants. Binance Settlement Overview Since the end of 2023, Binance's \$4.3 billion settlement stems from a series of violations, including breaches of banking and sanctions laws. As part of this settlement, the company agreed to pay a \$1.8 billion criminal fine and a \$2.5 billion forfeiture. Founder Changpeng Zhao also pleaded guilty to a felony charge concerning violations of the Bank Secrecy Act. He paid a \$50 million penalty and resigned from his position in Binance. In April, he received a four-month jail sentence and set to be released on September 29. Highlighted News Of The Day

- DOGE has spiked by 4.48%, over the past 24 hours. - The meme coin continued to stay in the neutral zone. Top meme coins in the market are recovering from their recent lows. Among them, the dog-themed meme coin, Dogecoin (DOGE), has been seemingly in bullish mode. In the last 24 hours, the meme token gained over 4.48% and trades within the \$0.11 range. The DOGE price's peak and low were recorded at \$0.1146 and \$0.1071, respectively. At the time of writing, DOGE traded at \$0.1137, with its daily trading volume increasing by 32.16% to \$937 million, as per CMC data. Ali charts reveal that Dogecoin has recently surged past the critical \$0.111 resistance level, a price point where 62,270 addresses hold over 36 billion DOGE tokens. This upward momentum suggests a growing bullish trend in the market. With no major supply walls ahead, the next target could be \$0.150. Additionally, the recent rise in DOGE's adoption, supported by Elon Musk's continued influence, could likely contribute to sustained price growth. Will the Bullish Momentum Sustain? The upward momentum of DOGE has continued over the past month and week. In the last thirty days, the asset gained over 8.50%. However, this bullish sentiment reflected on the weekly chart that displayed a 9.21% spike, from \$0.1043 to \$0.1103. The technical indicators of DOGE suggest the asset has surpassed the bearish trend. The short-term 9-day and the long-term 21-day moving averages are found below the current price momentum. Moreover, the asset is in the neutral zone, as the daily relative strength index (RSI) stands at 69.27. At press time, the asset's price break past the \$0.1140 mark might signal the bull cycle. DOGE may test the major resistance at the \$0.1171, a crucial area for bulls. A rebound from this level allows the asset to recover, but losing it could drive the price toward the \$0.1134 support zone. Highlighted Crypto News

The arrest of CEO Pavel Durov in France in August impacted the messaging app Telegram. Circumstances changed and a policy was reversed. The app will now share users' IP addresses and phone numbers with the government for criminal investigations. How do you think this will play out for their user numbers? There's one notable fact to be brought to your notice. Early this month, Telegram flexed hitting a milestone of 950 million monthly users. Who or what deserves the credit for this? The less-complex 'tap-to-earn' games synced with Telegram mini-apps are probably blowing up the stats. These games succeeded in onboarding a swarm of users to the platform. Most importantly, their 'airdrop seasons' generated quite a buzz, blending anticipation with scrutiny for some. It's time to explore tap-to-earn games within the Telegram gaming ecosystem powered by The Open Network (TON)

blockchain. Top Telegram-Based Tap-to-Earn Web3 Games

1. NOTCOIN | ORIGIN | November 2023 [closed beta]; January 1, 2024 [public launch] | | USER BASE | 35 million accounts | | DEVELOPER | Open Builders | Notcoin debuted and swiftly became a viral Telegram T2E clicker game, allowing users to tap an animated coin for rewards. Following its success, it launched sub-games, including the six-week Lost Dogs game in partnership with Lost Dogs Co. Currently, players can engage with Not Pixels, the sub-game developed alongside Pixelverse. Notcoin's Not Pixels Gameplay In this game, you compete with multiple players to paint a 1000x1000 pixel canvas (1 million pixels) to earn tokens. The more pixels you paint, the more tokens you accumulate. All players are treated equally and cannot draw their own lines, structures, or place images. Token's Market: This viral Telegram T2E gaming project launched its native token NOT in May 2024. The token's airdrop was considered as one of the biggest airdrops of this year. Currently, over 102.47 billion NOT tokens hold a market cap of \$843 million. At the time of writing, NOT traded at \$0.008234 â€” a price range that is 71.47% down from its peak in June (\$0.02896). Remarkably, in that ATH month, NOT recorded a market cap of \$3 billion.
2. HAMSTER KOMBAT | ORIGIN | March 26, 2024 | | USER BASE | 300 million accounts | | DEVELOPER | Anonymous | If you're a T2E pro or addict, you probably know that Hamster Kombat isn't a combat game but is more like Notcoin. Hamster Kombat is a "crypto exchange CEO simulator" available as a mini-game app on Telegram. Like Notcoin, it's a tap-to-earn game where you tap your hamster to earn in-game coins while also enjoying perks from daily missions, combos, and a referral system. Hamster Kombat's Gameplay: Well, in Hamster Kombat, you play the role of the CEO of a fictional crypto exchange in the hamster realm. Your goal is to level up your startup to the top. By tapping, you invest in marketing, licenses, talent, product development, and so on. Besides tapping, you complete daily combos and tasks, claim daily rewards, and multiply your in-game revenue to build your crypto exchange within the game. Just like every other game, the character's skin clothing, and other accessories can be acquired, and personalized on their profile. Token Airdrop: - Following the closure of Season One's in-game earnings on Sep. 20, the project is headed for the token generation event (TGE) on Sep. 26. - This season, over 60 billion HMSTR are being distributed. Only 131 million users (44% of the current user base) are eligible for this airdrop. - The project has entered an "Interlude Season" prepping for Season 2. Recent Updates: - Over 2.3 million user accounts were banned and labeled as "cheaters", leading to the recovery of 6.8 billion tokens. - Binance Launchpool has been running a major campaign for the HMSTR listing since last Saturday.
3. CATIZEN | ORIGIN | March 2024 | | USER BASE | 39 million total users; 18 million MAU | | DEVELOPER | Pluto Studio | This one on the list aims to replace mindless tapping with meaningful swipes. Catizen is a Telegram-native mini web3 game app based on a swipe-to-earn model. In this feline-themed game, players swipe to breed cats in a cat caf  and earn in-game currency, which will later help them claim CATI token airdrops. Catizen's Gameplay: As a player of the game, you run a cat caf  that welcomes feline-loving visitors who come to pet and buy cats. You start with a level one cat, which is worth some vKITTY, the in-game currency. To upgrade your cats, simply swipe cats of the same level. When a visitor buys a cat, you earn vKITTY points based on the cat's level. You can then claim CATI tokens corresponding to the value of your vKITTY points. Token's Market and Upcoming Airdrops: - Notably, CATI has a fixed cap of 1 billion tokens. On September 20, the token was launched and is trading on prominent exchanges such as Binance, OKX, Bybit, Gate.io, KuCoin, Bitget, Crypto.com, and MEXC. - The community was enraged and criticized Catizen for dropping the Season 1 token allocation from 43% to 34%, and then to an initial 15% of the total token supply. The next 19% will be distributed through the "Catizen Airdrop Pass." - Currently, over 305 million CATI tokens are circulating in the crypto market with a cap of \$192.9 million. On the first trading day, CATI hit a high of \$1.11. At the time of writing, it traded for \$0.7743. - As per a recent announcement regarding CATI allocation, the project hinted at a potential 19 airdrop season, spanning over 4 years and 8 months. Recent Updates: - On September 20, CATI began trading on Binance. - Catizen announced its collaboration crypto payment network Alchemy Pay on Tuesday. - Coinbase announced the launch of CATI's perpetual futures on its International Exchange and Advanced platform on September 26.
4. X EMPIRE | ORIGIN | July 2024 | | USER BASE | 40 million users | | DEVELOPER | Anonymous | X Empire, formerly Musk Empire, has joined the Telegram tap-to-earn game troop as a look-alike of Hamster Kombat. But this one is an "Elon Musk simulator" game. Players gain control of a virtual version of Elon Musk or an image and earn rewards simply by tapping on it. X Empire's Gameplay: As a player, you get to choose from various avatars "multiple versions of Elon Musk; "Premium" options like Kim Kardashian, a muscle-bound Doge and "Epic" options like Vitalik Buterin and Pavel Durov. The main gameplay (mining) involves tapping your avatar to earn in-game currency until your energy runs out, after which you wait for it to refill. You can use your coins to upgrade Musk and his workforce, enhancing attributes like ethics and leadership for passive income, which continues to accumulate even when the game is closed, though only for three hours. A unique feature is the "City" tab, allowing players to engage in Rock Paper Scissors battles and invest in daily stocks for potential returns. Players can also solve a daily riddle for extra rewards. Token Airdrop: - The project has announced 690 billion as the total supply cap of its native token X. Reportedly, it is launching on the TON blockchain. - The mining phase of the game ends on September 30, as noted on the app's loading screen. Hence, the token's airdrop is expected to commence by the end of September or early October. - 70% of the tokens are allocated for miners and vouchers whereas the rest 30% is for new users and the subsequent phases. There isn't any lockup or vesting period on the tokens. Recent Updates: - As of Sep. 23, the project has sold over 60,000 NFT vouchers, granting userbase access to 4 billion tokens. - Reportedly, over 12.5 million wallets became eligible for the upcoming airdrop as of Sep 21. Disclaimer: The above article is for informational purposes only, and the opinions expressed are solely those of the author. TheNewsCrypto advises readers to conduct their own research before investing or making any decisions.

- DOGS trades below its 50-day moving average, indicating a bearish trend. - Rising volume and user engagement point to a potential upside for DOGS. DOGS, a memecoin on the TON blockchain, has experienced a 10.15% decline, now trading at \$0.0008492. Earlier today, DOGS hit an all-time low of

\$0.0008095 over the last 24 hours but rebounded by 4.89%. The current market cap of DOGS stands at \$440.7 million. Its 24-hour trading volume has surged by 79.39%, totaling \$200.4, making it the 38th most traded coin. The Market Cap ratio is 43.72%, highlighting increased trading activity despite the price drop. DOGS has a circulating supply of 516.75 billion, representing 93.95% of its total 550 billion DOGS. This high percentage suggests that most tokens are already in the market, contributing to its market dynamics. DOGS's Volume Spike and Technical Analysis The memcoin is trading below its 50-day moving average of \$0.000900, indicating a short-term bearish trend. Its 200-day moving average of \$0.0011 suggests a weaker long-term outlook. The next key support level is near \$0.000800, just below today's low, while resistance is at \$0.000944, touched earlier today but not sustained. The RSI is currently at 45, showing that DOGS is neither oversold nor overbought, with sentiment leaning slightly bearish. The recent 79.39% volume spike suggests rising interest in the token despite the price decline, signaling either an upcoming trend reversal or heightened volatility. Both DOGS and Toncoin (TON) are gaining traction due to ecosystem advancements. Binance's Launchpool has boosted TON's profile, with games like Catizen (CATI) and HamsterCombat (HMSTR) adding to the ecosystem. These developments have significantly increased new and active users, pushing TON's total addresses to 2.89 million. Following its airdrop, DOGS saw a 500% increase in holders, now ranking third in unique wallet addresses on the TON blockchain, surpassing Ethereum and USDT. This surge caused a six-hour downtime on the TON network due to high demand. Analysts predict a bullish breakout for the memecoin, with a potential upside to \$0.001108. DOGS continues to navigate a volatile market, but growing user engagement and technical indicators point to possible rebounds, driven by the expanding TON ecosystem. Highlighted Crypto News Today Is Ethereum Poised to Break Through the \$2.7K Barrier?

- In the first week of September, the number of daily active TON addresses soared to 3 million. - TON has also seen a rise in the volume of on-chain trades, particularly in the stablecoin market. With its active addresses lately surpassing industry-leading blockchains, the Open Network (TON) protocol has continued to achieve amazing growth. In the first week of September, the number of daily active TON addresses soared to 3 million, according to statistics from the industry research portal IntoTheBlock. The research showed that this was more than the total number of active addresses on Ethereum and Bitcoin, two of the most prominent Layer 1 networks. Developers, investors, and users have taken notice of TON's meteoric rise in popularity over the last few months, establishing it as a serious player in the blockchain industry. Surge in USDT Trade Volumes Not only has the number of active addresses increased, but TON has also seen a rise in the volume of on-chain trades, particularly in the stablecoin market. As of now, the blockchain is one of the most active networks in terms of USDT trade volumes. On September 9, TON had an astounding \$1.2 billion USDT trading volume, with 1.5 million individual holders, according to IntoTheBlock. Yet, with a trading volume of \$98.1 billion reported on Sept. 9, Tron continues to be the largest blockchain for USDT trading. With \$34.3 billion, Ethereum came in second. Analysts claim that the increase in TON's USDT trading shows that TON users are becoming more interested in adoption. Tether, the USDT's issuer, debuted the stablecoin on TON in early April. Notcoin and Hamster Kombat are just two of the many popular TON-based decentralized apps (dApps) that have helped propel the network forward. In recent months, the TON blockchain has seen an uptick in user engagement due to these tap-to-earn initiatives. Highlighted Crypto News Today: IMF Releases Guidelines for Boosting CBDC Adoption with REDI Framework

With the ability to transform even a small investment into a fortune, the cryptocurrency market has seen a growth in popularity. Three coins—Dogs, Toncoin (TON), and Rexas Finance (RXS)—have drawn interest from investors lately. Your portfolio might reach \$75,000 in five months if you invest \$750 in these emerging stars. Here's a deeper look at the market waves these coins are making. Rexas Finance (RXS): Pioneer Real-World Asset Tokenization with Huge Presale Success With its ground-breaking method of tokenizing real-world assets, Rexas Finance (RXS) has created waves and opened up a plethora of prospects for investors. The presale has been really remarkable. RXS racked up \$450,000 in under 72 hours, selling out its first presale stage and increasing to \$0.04 in the second phase. This shows a 33% increase, demonstrating the increasing investor confidence in the coin. Rexas distinguishes itself by democratizing access to valuable assets such as art, commodities, and real estate. Furthermore, Rexas removes the conventional obstacles to global investment by permitting fractional ownership of these assets. Unmatched advantages offered by Rexas include a user-friendly UI and robust security measures. With a restricted total supply of 1 billion RXS and deliberate allocations to guarantee consistent growth, its tokenomics are favourable to investors. With a possible listing price of \$0.20, early investors are already expecting substantial gains at the current price of \$0.04. For investors looking to increase their investment quickly, RXS is an appealing choice because it guarantees returns of at least 6 times. Toncoin (TON): Expecting a 75% Increase With its consistent upward trend, Toncoin (TON) has the potential to climb by 75% in the upcoming months. Important advancements like Binance's Launchpool for Telegram's tap-to-earn games, which has raised TON's profile, are driving this surge. The launch of Catizen (CATI) and HamsterCombat (HMSTR) via Binance's Launchpool has greatly increased the number of new users joining the TON ecosystem. The number of new and current Toncoin addresses has increased dramatically, peaking at 950,000 and stabilizing at 2.89 million, respectively. The robust network growth indicated by this rise in user interaction adds to the positive momentum of TON. The price dynamics of TON also point to a significant breakout. Following a decline from \$8.22 to \$4.5, TON saw a resurgence and the recovery of the 200-day Exponential Moving Average, which created the conditions for additional upside. Investors expecting huge returns are watching Toncoin, which has the potential to cross the \$10 threshold by Q4. DOGS: 500% Increase in Holders in Just Two Weeks Only a few days after its airdrop, DOGS has taken the cryptocurrency world by storm, ranking third by holder count. It surpassed Ethereum and USDT in the number of unique wallets on the TON blockchain in just two weeks. The coin's great community popularity is demonstrated by this astonishing growth, which shows a 500% increase in holder count in a short period of time. Due to the popularity of the airdrop, DOGS, the TON network

experienced its largest-ever six-hour downtime due to a rush of users. Valued at \$523 million and trading at \$0.001013, DOGS demonstrates tenacity in an industry where well-established projects frequently hold a monopoly. Its breakout from a falling wedge pattern indicates an impending bull run; analysts predict a possible increase to \$0.001108. With its playful nature and active community involvement, DOGS is a unique meme coin with significant development potential that will diversify your investment portfolio. How to Partake in Rexas Finance's Presale for 600% Returns Participating in the ongoing Rexas Finance (RXS) presale is simple and presents investors with a profitable opportunity. The RXS presale is currently in its second stage. Tokens can be purchased for \$0.04 at this time, with a 25% increase in price scheduled to occur in the following stage at \$0.05. This is how to begin:

- Go to the official Rexas Finance website
- Register for an account if you haven't already.
- Connect your chosen cryptocurrency wallet, like MetaMask or Trust Wallet, to the platform. Make sure your wallet can hold ERC-20 tokens.
- Decide how much you want to invest, then use recognized cryptocurrencies to complete the transaction. After the transaction has been validated, your wallet will receive the RXS tokens.

Investors who participate in the presale now stand to get at least 600% of their investment back when RXS lists at \$0.20 after the presale. Seize the 10,000% Growth Potential With Toncoin, DOGS, and Rexas Finance, the cryptocurrency market presents a unique opportunity to greatly multiply your investment. These coins are leading the way for revolutionary growth in addition to flourishing in their own sectors. With these three currencies' rapid development trajectories, a combined \$750 investment could possibly produce \$75,000 in just five months. The time has come to set your portfolio for massive returns in the cryptocurrency space.

Pulling out all the stops, BlockDAG is gearing up for its testnet with dev release 116. This update brings targeted data retrieval, fast Redis storage, seamless microservice communication, and dedicated workers for better synchronisation. Every enhancement is crafted to make the platform faster and more efficient, with smarter data fetching, quicker access, and streamlined task management. As BlockDAG moves quickly toward the testnet launch, it keeps its community in the loop with each development step, building anticipation for what's coming next. Targeted Time-Based Data Retrieval As BlockDAG prepares for its testnet, dev release 116 brings some handy updates to make data retrieval more efficient using scheduled cron jobs. The system now runs a daily fetch every 24 hours, pulling in the latest transactions to ensure users have the most up-to-date information. Weekly fetches gather data over the past seven days, showing trends and user behaviour. Meanwhile, the yearly fetch compiles a full year's worth of data, which is vital for long-term analysis and meeting regulatory needs. By breaking down the data this way, the process becomes smoother, reducing the load on the databases. High-Speed Access with Redis Storage To enhance data access speed, all the data fetched by these cron jobs is stored in Redis, a fast in-memory data store designed for quick data retrieval. With this setup, data can be accessed in less than a millisecond, taking a huge load off the main database. This allows the main database to concentrate on more complex tasks like write operations and other critical functions. Plus, Redis's ability to scale through clustering means it can handle growing transaction volumes, keeping performance high as BlockDAG continues to expand. Data Preprocessing and Filtering Further, the dev release 116 brings advanced data preprocessing and filtering into the cron jobs. This extra step fine-tunes the data before it even gets to Redis, removing duplicates, ensuring everything is accurate, and formatting it for faster access. This careful preprocessing ensures that the data stored is clean, validated, and ready to use immediately, enhancing the reliability and speed of our data retrieval system even more. Optimised Synchronization BlockDAG is making its platform even smoother. The latest update introduces dedicated workers to improve synchronization. This change separates block and transaction processing into different specialized workers. Now, block workers handle tasks like validating new blocks, checking rules, and updating the blockchain. At the same time, transaction workers verify transactions, ensure they follow network rules, and update digital signatures. By giving each worker a specific job, the system cuts down delays and speeds up processing, making everything faster and more efficient. Microservice Communication Additionally, dev release 116 showcases the architecture that allows for dynamic resource allocation, adding or moving workers as needed. An intelligent load balancer manages this flexible scaling, ensuring the system can handle sudden spikes in transactions without overloading any worker. Furthermore, a strong message queue system helps different microservices, like block and transaction processors, communicate smoothly. This setup boosts fault tolerance and scalability, keeping everything running efficiently. Speed Optimization & Analytics with Redis In addition, Redis plays a vital role in the system. It goes beyond simple caching, serving as the backbone for real-time analytics and fast data access. Key metrics like transaction rates and user activity levels are stored in Redis, allowing for instant analytics and quick system monitoring. This setup ensures that critical data is always available, enhancing the user experience with features like instant notifications and real-time updates. Moreover, Redis's flexible data expiry and replication strategies maintain top performance and data integrity, even during heavy traffic. Looking Forward BlockDAG's dev release 116 is a clear step toward its testnet launch, bringing valuable enhancements like targeted data retrieval, high-speed storage, and streamlined synchronisation. These updates aren't just technical tweaks; they're designed to make the platform faster, more efficient, and ready for growth. As the community eagerly awaits what's next, it's notable that BlockDAG has already raised over \$71.9M in its presale in batch 22, reflecting strong support and anticipation for the journey ahead. Act Now Before Prices Increase:

- Stuart Alderoty notes that the agency acknowledges that 10 tokens are not securities. - Binance has until October 11 to submit a notice of consent or an objection. The United States Securities and Exchange Commission (SEC) has asked the court to amend its complaint in its ongoing case against Binance, Binance.US, and co-founder Changpeng Zhao. In the matter of SEC v. Payward, the submission was made in reaction to a district court judgment that denied Kraken's petition to dismiss. Reacting, Ripple CLO Stuart Alderoty notes that the agency acknowledges that 10 tokens are not securities in and of themselves. And regrets using "crypto asset securities" in some situations. The United States Securities and Exchange Commission, as the plaintiff in the case SEC vs. Binance, has moved to expand the first complaint to include "crypto asset securities." Clarified Position Over "Crypto Asset Securities" Phrase For the court's reference, the regulator has filed the following: the judgment refusing the defendants' request to dismiss in the Kraken vs. SEC action; a redline matching the PAC to the original complaint; and the PAC itself, which has not yet been published on generally known legal databases. In response to the SEC's request, Binance has until October 11 to submit a notice of consent or an objection. In order to maintain control over the cryptocurrency sector, the agency continues with its strategy of regulating via enforcement. Moreover, Paul Grewal, chief legal officer (CLO) of Coinbase, went to X to reveal a footnote from the SEC's proposed revised complaint against Binance. He brought attention to the fact that "The SEC regrets any confusion it may have invited." Due to its frequent and inaccurate claims that ten tokens, including SOL, ADA, and MATIC, are securities. He referred to Stuart Alderoty, Ripple's chief legal officer, in the post, saying that the SEC has changed its approach or clarified its position on the phrase "crypto asset securities." Highlighted Crypto News Today:

- Ethereum faces sustained bearish pressure with declining market volume and volatility. - Whales steadily accumulate ETH, indicating long-term bullish expectations. Ethereum, the leading altcoin, has experienced a sustained bearish trend, with a 14% decline in the past month. Currently trading at \$2,353, the cryptocurrency saw a modest dip of 0.31% over the past 24 hours, while its trading volume plummeted by 30%. This comes with the overall market volume dropping by 19%. According to Greeks.live, 127,000 ETH options are set to expire, with a Put Call Ratio of 0.73, a Max Pain point at \$2,400, and a notional value of \$298 million. Market volatility expectations are declining, as seen in the drop in major term implied volatilities. With the Federal Reserve expected to implement a 25 bps rate cut next week, the Max Pain point aligns closely with Ethereum's price. September has proven particularly weak for Ethereum, which continues to underperform. The ETH/BTC exchange rate fell below the long-term support level of 0.04, signalling that Bitcoin may remain the dominant force in the next bull market. In addition, Ethereum network fees dropped to \$3.1 million for the week ending August 31, the lowest level in over four years. Despite these challenges, whale investors have been steadily accumulating ETH, with their holdings approaching 48% of the circulating supply. A notable transaction saw 80,000 ETH, worth approximately \$187.5 million, transferred from Binance to Binance Beacon Deposit. Can ETH Bulls Give A Comeback? The daily chart shows ETH entrenched in a bullish trend, with Ethereum facing critical resistance at \$2,477 and \$2,678. Should bearish sentiment persist, ETH could fall to \$2,222, with potential support at \$2,102. As Ethereum navigates these key levels, its ability to sustain momentum will be pivotal in the coming days. Traders are closely watching for signs of strength or further declines. Highlighted News Of The Day

- TON Ventures launches \$2.5M accelerator amid blockchain turmoil. - Telegram CEO's arrest impacts Toncoin and TON ecosystem. TON Ventures has launched a new \$2.5 million accelerator program to attract developers to the \$12 billion TON blockchain, originally developed by messaging app Telegram. The three-month program, which will support five startups, comes at a tumultuous time for the TON ecosystem. The blockchain's recent challenges stem from the arrest of Telegram CEO Pavel Durov in France. Durov's arrest, related to allegations of failing to prevent criminal activities on Telegram, has sent shockwaves through the TON community. Since his arrest, Toncoin's price has plummeted over 22% from its August high, and the total value locked (TVL) in it has dropped 56% to \$348 million. TON Blockchain, now separate from Telegram following a 2020 settlement with the U.S. Securities and Exchange Commission, is overseen by the Foundation. While led by former Foundation executives, TON Ventures operates independently, focusing on venture activities and developer support. Despite these setbacks, key crypto venture capitalists remain committed to the project. "The fundamental case for it remains compelling," stated a CoinFund representative, highlighting the enduring potential of the blockchain, research suggests. What is Behind And Ahead TON? A significant driver of TON's growth is its deep connection with Telegram's user base, which boasts 950 million active users. According to Sophia Rusconi, head of the TON Accelerator, the blockchain's expansion reflects only a fraction of Telegram's potential as a distribution platform. Rusconi emphasized the importance of tap-to-earn games, like Hamster Combat, which have attracted millions of users by rewarding engagement. Meanwhile, the network recently surpassed 1 billion transactions, with over half of that volume occurring in the last three months. However, the blockchain has faced technical challenges, including two outages linked to the DOGS token airdrop, which disrupted network consensus. As it navigates these obstacles, the ecosystem's resilience and the support of its backers will be critical to its future success. Highlighted News Of The Day 21Shares Launches Bitcoin Wrapper on Ethereum Introducing 21BTC

- TON blockchain processed 46 million transactions in a week amid DOGS airdrop. - DOGS token faces volatility; TON down 2.32% amid market pressures. The TON blockchain processed an unprecedented 46 million transactions in a single week, according to blockchain analytics firm IntoTheBlock. This surge in activity has been largely attributed to the recent excitement surrounding the DOGS token airdrop. The TON blockchain processed over 46 million transactions last week, driven by the excitement

surrounding the \$DOGS airdrop. pic.twitter.com/Iu0yCKMkVX IntoTheBlock (@intotheblock) September 2, 2024 DOGS, a memecoin linked to the Telegram community, has been at the center of this activity. Despite initial enthusiasm, DOGS has faced significant volatility. The token is currently trading at \$0.001117, reflecting a 9.72% drop in the last 24 hours, with trading volume up 32% over the same period. The current price represents a 31.69% decline from its all-time high of \$0.001644, reached on August 28, 2024. Meanwhile, the TON blockchain itself has not been immune to market pressures. Toncoin (TON), the native token of the network, is trading at \$5.21, down 2.32% in the last 24 hours. The decline follows the overall crypto market downturn and coincides with disruptions on the TON network, which experienced two halts last week due to the overwhelming transaction load from the DOGS airdrop. Challenges Faced by TON Family Adding to the challenges, Telegram, the encrypted messaging app associated with TON, is under investigation in South Korea. Authorities are probing potential online sex crimes on the platform following the arrest of Telegram CEO Pavel Durov last month. The South Korean Cyber Investigation Bureau has launched the probe, though they have declined to comment publicly. Despite the turbulence, the TON blockchain has resumed normal operations. The TON Foundation confirmed on August 28 that the network is back online after a disruption caused by abnormal congestion linked to the DOGS airdrop. As the Hamster Kombat team prepares for another airdrop, TON is bracing for further network stress. Highlighted News Of The Day Cardano Initiates Chang Upgrade Granting Governance ADA Token

- OKX's Singapore entity secures a full Major Payment Institution (MPI) license. - OKX appoints Gracie Lin, a former MAS official, as CEO to drive the company's expansion in Singapore. OKX, a global cryptocurrency spot, and derivatives exchange which is now fully licensed in Singapore, hires former Monetary Authority of Singapore (MAS) officials as local CEO. OKX's Singapore entity OKX SG received the full Major Payment Institution (MPI) license from the Monetary Authority of Singapore. This allows them to offer digital payment tokens and cross-border money transfer services. The exchange on its official post stated, "To lead our charter in Singapore as a key global digital asset hub, we've appointed Gracie Lin as CEO of OKX SG." In addition, Lin previously held positions at the MAS, Grab, and GIC. According to her LinkedIn page, Lin was at MAS between 2005 and 2015. Where she reached the post of deputy director and head of money markets. She then worked as a Vice president of business management in GIC from 2017 to 2018. Lin has worked in Grab for 5 years. She has pursued a bachelor's degree at the University of Chicago and a Master's Degree at Yale University. Hong, President of OKX stated that over the last ten years, the exchange has been focusing on building a better future through responsible innovations. "We are grateful for achieving these milestones in Singapore as a team," she says. OKX Announced Listings of HMSTR Token OKX has announced the listing of the HMSTR token on its exchange, offering users the opportunity to trade this emerging cryptocurrency. Hamster Kombat is a Telegram-based crypto game, which has over 300 million players. This listing is to bring greater visibility to its ecosystem. It will also provide more liquidity for the token. The listing comes as part of OKX's ongoing efforts to expand its portfolio and provide traders with access to a diverse range of digital assets. HMSTR, a token gaining attention for its unique features and growing community, will be available in several trading pairs. Highlighted crypto News Today: FTX Faces SEC Objections Over Cryptocurrency Repayments

- Orderly Network's official discord was hacked 2 days after it launched its ORDER token. - The platform continues to run its "Road to The Order" campaign, encouraging user participation. - The Witness Chain's discord was hacked today, marking the fifth crypto platform to fall victim to these scams. On August 24, 25, and 29, the Discord channels of Polygon, Avalanche, Zksync, and Orderly Network were compromised. In each case, hackers used the channels to distribute harmful links, posing a significant risk to users. On Aug 29, Orderly Network's official Discord channel was compromised. The protocol recently launched its new ORDER token and staking program. Hackers posted a fraudulent airdrop claim link, which likely led to a phishing site. The Orderly team quickly warned users on X and Telegram, advising them not to click on any links until the situation was resolved. In addition, Orderly Network, a DeFi aggregator, has been expanding its staking program, promising to pay 60% of its net revenue to participants who stake their ORDER tokens. Despite the hack, the platform continues to run its "Road to The Order" campaign, encouraging user participation through gamified rewards. Polygon's Discord hack, saw attackers sharing links that, once clicked, tricked users into believing they were interacting with security agents. One unfortunate user lost \$150K worth of Ethereum through these malicious links. Witness Chain Joins Growing List of Discord Hack Victims The Witness Chain Discord channel was reportedly hacked today, marking the fifth crypto company this month to fall victim to a discord scam. Also, Pankaj Agarwal, a core contributor to the project, quickly warned members, urging, "Please do not click on any links posted there!". Fortunately, an hour later, he announced that the Discord server had been recovered and secured. Moreover, phishing schemes have become common in crypto, with bad actors frequently targeting the social media accounts of companies, and influencers, sharing harmful links. Therefore, in 2024 alone, an estimated \$1.2B has been lost to crypto hacks and scams, according to ImmuneFi. The recent surge in Discord hacks serves as a reminder of the importance of security in the crypto landscape. Highlighted Crypto News Today: Coinbase Achieves Milestone with First AI-to-AI Crypto Transaction

- BounceBit V2 will launch in September 2024, enhancing its CeDeFi platform. - BounceBit will expand into Bitcoin staking, DeFi, AI, and gaming sectors. BounceBit (BB), a Bitcoin restaking chain project, will release its BounceBit V2 in September 2024. The company announced this update on X, highlighting a significant overhaul to its centralized decentralized finance (CeDeFi) platform and BounceClub. The focus will be on improving the user experience and adding new tools for smart contract deployment. The upcoming version will introduce enhanced features for DeFi, AI, and gaming sectors. Through the BTCfi feature, users will be able to engage in Bitcoin staking projects via BounceClub, expanding the platform's appeal to more investors. BounceBit V2 aims to offer efficient operations and diversify

investment strategies, making the ecosystem more robust. According to Odaily, It has codenamed this upgrade and is set to launch various new functionalities. The upgrade will also improve the utility of the \$BB token with the introduction of CeDeFi SaaS tools and AI agents. BounceBit V2 to Enhance Ecosystem Activities BounceBit CeDeFi V2 will streamline smart contract and asset management with automated and manual options. It will boost ecosystem activities within BounceClub by integrating more DeFi, AI, and gaming functionalities. The upcoming launch positions it to offer diverse opportunities, attracting more participants to its ecosystem. BounceBit V2 is expected to strengthen the CeDeFi platform and provide users with better tools and investment avenues. The launch will help them capitalize on the growing interest in Bitcoin staking and smart contract technologies. Highlighted Crypto News Today OKX Announces Listing of Hamster Kombat's HMSTR Token

- Specifically, it illustrates how TON's close partnership with Telegram is propelling adoption. - The integration of TON-based decentralized apps with Telegram has been very successful so far. In its first TON ecosystem report, Bybit's the second-biggest cryptocurrency exchange globally based on trading volume's updated readers on The Open Network's progress toward bringing almost one billion Telegram users into the Web3 realm. The report emphasizes how TON's mass-market strategy for ecosystem growth is making positive strides. Specifically, it illustrates how TON's close partnership with Telegram is propelling adoption via a thriving network of casual games that lure users in with incentives based on cryptocurrency. TON & Telegram: A Unique Value Proposition Because of its strategic cooperation with Telegram, the well-known messaging service with almost one billion users worldwide, TON stands apart from other blockchains. Although there is a great deal of unrealized potential for additional adoption, the integration of TON-based decentralized apps with Telegram has been very successful so far. According to the report, TON aims to enroll thirty percent of Telegram's user base by the year 2028. Over that period, 500 million people will join Telegram, whose monthly active user base is expected to reach 1.5 billion. With just 277 million distinct wallets on Ethereum, reaching this milestone would be a major step forward for Web3 in terms of widespread adoption. TON has made considerable strides toward that objective so far, completing an average of 800,000 daily transactions and attracting around 280,000 daily active users on its network. According to the report, Bitcoin has gained 60% over the same time, while Toncoin (TON) has gained more than 200%, ranking it among the top performing cryptocurrencies this year. With a \$17.5 billion market cap, TON is now the fifth-most valuable Layer-1 network overall. Seamless Web3 Onboarding The report delves into TON's approach to integrating its native, self-custodial cryptocurrency wallet, TON Space, with Web3 onboarding for Telegram users. Following its launch in November 2023, the integration was an overwhelming success, with 800,000 accounts being established in just three months. By the end of April 2024, that number had risen to almost 6 million. The second key component of TON's approach is its emphasis on Telegram Mini-Apps, which seek to duplicate WeChat's Mini Programs' achievements in China. Because Telegram's Mini-Apps are embedded inside the Telegram app, they provide a smooth onboarding experience. "Tap-to-Earn" games, including Notcoin and Hamster Kombat, dominate its collection of Telegram Mini-Apps. These games mix very addictive gameplay with cryptocurrency-based monetary rewards, giving players tremendous incentives to keep coming back for more. Additionally, Telegram encourages users to learn more about the decentralized finance space by offering a plethora of rapidly expanding DeFi Mini-Apps for crypto trading and staking. Bybit's report indicates that the aforementioned techniques have shown remarkable success, indicating that TON, with the innovative integration of Web3 features, has the potential to emulate WeChat's success and emerge as the next big thing in the SuperApp space. A Viable Path To Mainstream Adoption The report adds that TON is uniquely positioned to pave a trail for mass adoption with a genuine route for millions of users to explore the world of digital assets and decentralization by incorporating Web3 experiences into an existing successful app.

On its Spot trading platform, Bybit's the second-largest cryptocurrency exchange globally based on trading volume's is listing the much awaited \$DOGS token. At 12:00 UTC on August 26, 2024, the listing will go live. Bybit's commitment to provide the newest and most interesting tokens to its worldwide trading community is reflected in this new version. Bybit, as one of the recommended cryptocurrency exchanges for the \$DOGS airdrop, is dedicated to providing the freshest and most intriguing tokens to its worldwide trading community. The \$DOGS token, which is a component of the TON-blockchain-based \$DOGS project, has attracted millions of users and grown to be a major force in the tap-to-earn sector. Their airdrop has already been claimed by more than 8 million verified users. Because of its sudden surge in popularity, \$DOGS is now in direct rivalry with other well-known memecoins such as Hamster Kombat. In a very short span, the official Telegram group for the project gained 80 percent more members, increasing the total number of subscribers to approximately 16 million. The rapid increase is evidence of the community's unwavering support and the potential for more development in the future. In order to honor this momentous launch, Bybit has introduced a variety of exclusive promotions, which have a combined prize pool of 3,410,000,000 DOGS: Token Splash: Deposit and Earn For new users, this event is open from August 19, 2024, 4:00 UTC until September 9, 2024, 9:00 UTC. Participants may trade or deposit DOGS. Each of the first 10,000 people to finish the tasks will get 192,500 DOGS. Token Splash: Trade to Earn A portion of the 550,000,000 DOGS prize pool will be distributed to users that trade at least 500 USDT worth of DOGS on Spot starting August 23, 2024, at 12:00 UTC. The maximum reward per user will be 30,000,000 DOGS. Referral Boost Get 25,000 DOGS for each successful referee, up to a maximum of 20 referees, when you bring friends to join Bybit Token Splash using your referral code between August 19 and September 9, 2024. Affiliate Exclusive Affiliates may recommend as many new users as they want to the \$DOGS Token Splash, and if they do it within that time frame, they will get 50,000 DOGS for each successful referral. Wednesday Airdrop & Hot Coin Extravaganza Furthermore, from August 23 to August 30, 2024, Bybit will be hosting the Hot Coin Extravaganza with 237,500,000 DOGS and the Wednesday Airdrop with 350,000,000 DOGS. With its extensive features and intuitive layout, Bybit's Spot trading platform is unique in the

cryptocurrency space. It has excellent liquidity, cutting-edge trading tools, and easy integration for both new and seasoned traders. Bybit continues to be the industry leader in crypto trading, offering cheap costs and a stellar reputation.
